- Based on the information gathered during the on-site assessment and a, Bureau Veritas has conducted an analysis of the energy usage of all equipment, and identified which equipment is using the most energy and what equipment upgrades may be necessary. As a result, equipment upgrades, or replacements are identified that may provide a reasonable return on the investment and improve maintenance reliability.

Energy Audit Process

- Interviewing staff and review plans and past upgrades
- Performing an energy audit for each use type
- Performing a preliminary evaluation of the utility system
- Analyzing findings, utilizing ECM cost-benefit worksheets
- Making preliminary recommendations for system energy improvements and measures
- Estimating initial cost and changes in operating and maintenance costs based on implementation of energy efficiency measures
- Ranking recommended cost measures, based on the criticality of the project and the largest payback

9. Utility Analysis

Establishing the energy baseline begins with an analysis of the utility cost and consumption of the facility. Utilizing the historical energy data and local weather information, we evaluate the existing utility consumption and assign it to the various end-uses throughout the buildings. The Historical Data Analysis breaks down utilities by consumption, cost, and annual profile.

This data is analyzed, using standard engineering assumptions and practices. The analysis serves the following functions:

- Allows our engineers to benchmark the energy and water consumption of the facilities against consumption of efficient buildings of similar construction, use and occupancy.
- Generates the historical and current unit costs for energy and water
- Provides an indication of how well changes in energy consumption correlate to changes in weather.
- Reveals potential opportunities for energy consumption and/or cost reduction. For example, the analysis may indicate that there is excessive, simultaneous heating and cooling, which may mean that there is an opportunity to improve the control of the heating and cooling systems.

By performing this analysis and leveraging our experience, our engineers prioritize buildings and pinpoint systems for additional investigation during the site visit, thereby maximizing the benefit of their time spent on-site and minimizing time and effort by the customer's personnel.

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used the utility rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data from the client.

Estimated Utility Rates	
Electricity	Water & Sewer
$0.30/kWh	$8.36/CCF

The data analyzed provides the following information: 1) breakdown of utilities by consumption, 2) cost and annual profile, 3) baseline consumption in terms of energy/utility at the facility, 4) the Energy Use Index, or BTU/SF, and cost/SF. For multiple water meters, the utility data is combined to illustrate annual consumption for each utility type.

Electricity

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used the electric rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data from the client.

Water and Sewer

The City of Glendora satisfies the water and sewer requirements of the facility. The billing for the water and sewer is monthly.

Note: No water and sewer utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used a rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data.

Energy Star Portfolio Manager Facility Summary

Bureau Veritas uses the Portfolio Manager tool developed by the Federal Environmental Protection Agency to track relative energy uses of buildings by property type. This tool allows the input of a facility's historic utility data to be compared with normalized data of a large database of its peer facilities.

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas will complete energy benchmarking on receipt of the actual data from the client.

10. Operations & Maintenance Plan

The quality of the maintenance and the operation of the facility's energy systems have a direct effect on its overall energy efficiency. Energy-efficiency needs to be a consideration when implementing facility modifications, equipment replacements, and general corrective actions. The following is a list of activities that should be performed as part of the routine maintenance program for the property. These actions will ensure that the energy conservation measures identified in this report will remain effective. The following general recommendations should be continued or implemented.

Building Envelope

1. Ensure that the building envelope has proper caulking and weather stripping.
2. Patch holes in the building envelope with foam insulation and fire rated caulk around combustion vents
3. Inspect building vents semiannually for bird infestation.
4. Inspect windows monthly for damaged panes and failed thermal seals

Heating and Cooling

1. Ensure the duct work in unconditioned space is un-compromised and well insulated
2. Duct cleaning is recommended every 10 years. This should include sealing of ducts using products similar to 'aero-seal'
3. Ensure that the air dampers are operating correctly
4. Return vents should remain un-obstructed and be located centrally.
5. Temperature settings reduced in unoccupied areas and set points seasonally adjusted.
6. Evaporator coils and condenser coils should be regularly cleaned to improve heat transfer
7. Refrigerant pipes should be insulated with a minimum of ¾" thick Elastometric Rubber Pipe Insulation
8. Ensure refrigerant pressure is maintained in the condensers
9. Change air filters on return vents seasonally. Use only filters with 'Minimum Efficiency Rating Value'(MERV) of 8

Central Domestic Hot Water

1. Never place gas fired water heaters adjacent to return vents so as to prevent flame roll outs
2. Ensure the circulation system is on timer to reduce the losses through re-circulation
3. Ensure all hot water pipes are insulated with fiberglass insulation at all times
4. Replacement water heater should have Energy Factor (EF)>0.9
5. Tank-type water heaters flushed annually.

Lighting

1. Use energy efficient replacement lamps (LEDs)
2. Clean lighting fixture reflective surfaces and translucent covers.
3. Ensure that timers and/or photocells are operating correctly on exterior lighting

11. Certification

City of Glendora (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Historical Society Museum, 314 North Glendora Avenue, Glendora, California 91741, the “Property”. It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager’s walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling, or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose an Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property’s original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

Pre-Survey Questionnaire

BV FACILITY CONDITION ASSESSMENT: PRE-SURVEY QUESTIONNAIRE

Building / Facility Name: Historical Society Museum

Name of person completing form: Karen Garcia

Title / Association w/ property: VP

Length of time associated w/ property: 14

Date Completed: 11/6/2023

Phone Number:

Method of Completion: DURING - verbally completed during assessment

Directions: Please answer all questions to the best of your knowledge and in good faith. Please provide additional details in the Comments column, or backup documentation for any ***Yes*** responses.

Data Overview		Response		
1	Year(s) constructed	Constructed: 1913	Renovated: 2020	Removed carpeting in main hall and installed terrazzo floors
2	Building size in SF	4,200 **SF**		
3	Major Renovation/Rehabilitation		Year	Additional Detail
		Facade	None	
		Roof	2023	
		Interiors	2023	
		HVAC	2022	Upgraded security system
		Electrical	None	
		Site Pavement	None	
		Accessibility	None	
4	List other significant capital improvements (focus on recent years; provide approximate date).	None		
5	List any major capital expenditures planned/requested for the next few years. Have they been budgeted?	Unknown		
6	Describe any on-going extremely problematic, historically chronic, or immediate facility needs.	Unknown		

Mark the column corresponding to the appropriate response. Please provide additional details in the Comments column, or backup documentation for any ***Yes*** responses. (**NA** indicates "*Not Applicable*", **Unk** indicates "*Unknown*")

	Question	Response				Comments
		Yes	No	Unk	NA	
7	Are there any problems with foundations or structures, like excessive settlement?		X			
8	Are there any wall, window, basement or roof leaks?		X			
9	Has any part of the facility ever contained visible suspect mold growth, or have there been any indoor air quality complaints?		X			
10	Are your elevators unreliable, with frequent service calls?				X	
11	Are there any plumbing leaks, water pressure, or clogging/backup issues?		X			
12	Have there been any leaks or pressure problems with natural gas, HVAC piping, or steam service?		X			
13	Are any areas of the facility inadequately heated, cooled or ventilated? Poorly insulated areas?		X			
14	Is the electrical service outdated, undersized, or problematic?		X			
15	Are there any problems or inadequacies with exterior lighting?		X			
16	Is site/parking drainage inadequate, with excessive ponding or other problems?		X			
17	Are there any other unresolved construction defects or significant issues/hazards at the property that have not yet been identified above?		X			
18	ADA: Has an accessibility study been previously performed? If so, when?		X			
19	ADA: Have any ADA improvements been made to the property since original construction? Describe.		X			
20	ADA: Has building management reported any accessibility-based complaints or litigation?		X			
21	Are any areas of the property leased to outside occupants?		X

BV Project Number: 158691.23R000-029.379

Abbreviated Accessibility Checklist					
Facility History & Interview					
Question		Yes	No	Unk	Comments
1	Has an accessibility study been previously performed? If so, when?		X		
2	Have any ADA improvements been made to the property since original construction? Describe.		X		
3	Has building management reported any accessibility-based complaints or litigation?		X		

Abbreviated Accessibility Checklist

Parking

OVERVIEW OF ACCESSIBLE PARKING AREA

CLOSE-UP OF SIGNAGE & ADJACENT AISLE

	Question	Yes	No	NA	Comments
1	Does the required number of standard ADA designated spaces appear to be provided ?		X		Markings and pole signage are missing
2	Does the required number of van-accessible designated spaces appear to be provided ?	X			
3	Are accessible spaces on the shortest accessible route to an accessible building entrance ?	X			
4	Does parking signage include the International Symbol of Accessibility ?		X		
5	Does each accessible space have an adjacent access aisle ?	X			
6	Do parking spaces and access aisles appear to be relatively level and without obstruction ?	X			

Abbreviated Accessibility Checklist

Exterior Accessible Route

ACCESSIBLE PATH

2ND PATHWAY

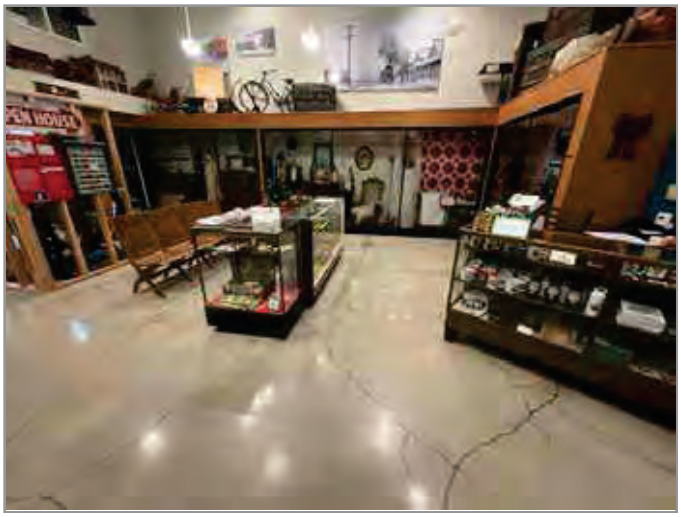
	Question	Yes	No	NA	Comments
1	Is an accessible route present from public transportation stops and municipal sidewalks on or immediately adjacent to the property ?	X			
2	Does a minimum of one accessible route appear to connect all public areas on the exterior, such as parking and other outdoor amenities, to accessible building entrances ?	X			
3	Are curb ramps present at transitions through raised curbs on all accessible routes?			X	
4	Do curb ramps appear to have compliant slopes for all components ?			X	
5	Do ramp runs on an accessible route appear to have compliant slopes ?			X	
6	Do ramp runs on an accessible route appear to have a compliant rise and width ?			X	

7	Do ramps on an accessible route appear to have compliant end and intermediate landings ?			✕	
8	Do ramps and stairs on an accessible route appear to have compliant handrails?			✕	
9	For stairways that are open underneath, are permanent barriers present that prevent or discourage access?			✕	

Abbreviated Accessibility Checklist

Building Entrances

MAIN ENTRANCE



ADDITIONAL ENTRANCE

	Question	Yes	No	NA	Comments
1	Do a sufficient number of accessible entrances appear to be provided ?	X			
2	If the main entrance is not accessible, is an alternate accessible entrance provided?	X			
3	Is signage provided indicating the location of alternate accessible entrances ?		X		
4	Do doors at accessible entrances appear to have compliant maneuvering clearance area on each side ?	X			
5	Do doors at accessible entrances appear to have compliant hardware ?	X			
6	Do doors at accessible entrances appear to have a compliant clear opening width ?	X			

7	Do pairs of accessible entrance doors in series appear to have the minimum clear space between them ?	✕			
8	Do thresholds at accessible entrances appear to have a compliant height ?	✕			

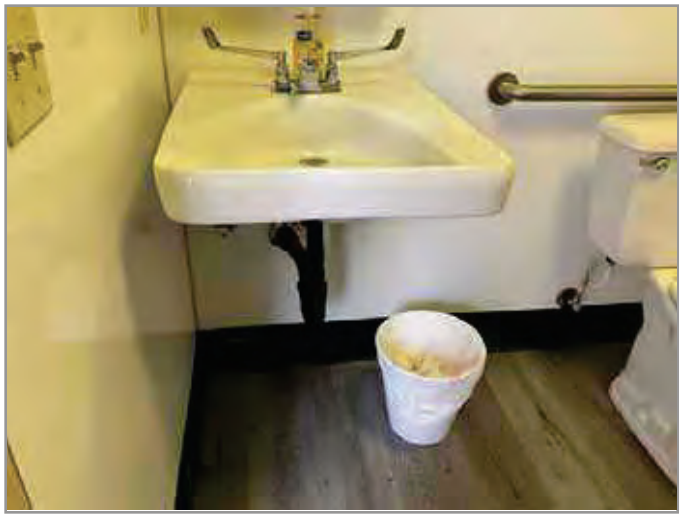
Abbreviated Accessibility Checklist

Interior Accessible Route

ACCESSIBLE INTERIOR PATH

DOOR HARDWARE

	Question	Yes	No	NA	Comments
1	Does an accessible route appear to connect all public areas inside the building ?	X			
2	Do accessible routes appear free of obstructions and/or protruding objects ?	X			
3	Do ramps on accessible routes appear to have compliant slopes ?			X	
4	Do ramp runs on an accessible route appear to have a compliant rise and width ?			X	
5	Do ramps on accessible routes appear to have compliant end and intermediate landings ?			X	
6	Do ramps on accessible routes appear to have compliant handrails ?			X	



7	Are accessible areas of refuge and the accessible means of egress to those areas identified with accessible signage ?			X	
8	Do public transaction areas have an accessible, lowered service counter section ?			X	
9	Do public telephones appear mounted with an accessible height and location ?			X	
10	Do doors at interior accessible routes appear to have compliant maneuvering clearance area on each side ?	X			
11	Do doors at interior accessible routes appear to have compliant hardware ?	X			
12	Do non-fire hinged, sliding, or folding doors on interior accessible routes appear to have compliant opening force ?			X	
13	Do doors on interior accessible routes appear to have a compliant clear opening width ?	X			

Abbreviated Accessibility Checklist

Public Restrooms

TOILET STALL OVERVIEW

SINK, FAUCET HANDLES AND ACCESSORIES

	Question	Yes	No	NA	Comments
1	Do publicly accessible toilet rooms appear to have a minimum compliant floor area ?	X			
2	Does the lavatory appear to be mounted at a compliant height and with compliant knee area ?	X			
3	Does the lavatory faucet have compliant handles ?	X			
4	Is the plumbing piping under lavatories configured to protect against contact ?		X		Missing knee wraps
5	Are grab bars provided at compliant locations around the toilet ?	X			
6	Do toilet stall doors appear to provide the minimum compliant clear width ?	X			

7	Do toilet stalls appear to provide the minimum compliant clear floor area ?	✕			
8	Where more than one urinal is present in a multi-user restroom, does minimum one urinal appear to be mounted at a compliant height and with compliant approach width ?			✕	
9	Do accessories and mirrors appear to be mounted at a compliant height ?	✕

Appendix J:
Energy Audit Glossary of Terms

Glossary of Terms and Acronyms

ECM – Energy Conservation Measures are projects recommended to reduce energy consumption. These can be No/Low-cost items implemented as part of routine maintenance or Capital Cost items to be implemented as a capital improvement project.

Initial Investment – The estimated cost of implementing an ECM project. Estimates typically are based on R.S. Means Construction cost data and Industry Standards.

Annual Energy Savings – The reduction in energy consumption attributable to the implementation of a particular ECM. These savings values do not include the interactive effects of other ECMs.

Cost Savings – The expected reduction in utility or energy costs achieved through the corresponding reduction in energy consumption by implementation of an ECM.

Simple Payback Period –The number of years required for the cumulative value of energy or water cost savings less future non-fuel or non-water costs to equal the investment costs of the building energy or water system, without consideration of discount rates.

EUL – Expected Useful Life is the estimated lifespan of a typical piece of equipment based on industry accepted standards.

RUL – Remaining Useful Life is the EUL minus the effective age of the equipment and reflects the estimated number of operating years remaining for the item.

SIR - The savings-to-investment ratio is the ratio of the present value savings to the present value costs of an energy or water conservation measure. The numerator of the ratio is the present value of net savings in energy or water and non-fuel or non-water operation and maintenance costs attributable to the proposed energy or water conservation measure. The denominator of the ratio is the present value of the net increase in investment and replacement costs less salvage value attributable to the proposed energy or water conservation measure. It is recommended that energy-efficiency recommendations be based on a calculated SIR, with larger SIRs receiving a higher priority. A project typically is recommended only if the SIR is greater than or equal to 1.0, unless other factors outweigh the financial benefit.

Life Cycle Cost - The sum of the present values of (a) **I**nvestment costs, less salvage values at the end of the study period; (b) Non-fuel operation and maintenance costs: (c) Replacement costs less salvage costs of replaced building systems; and (d) Energy and/or water costs.

Life Cycle Savings – The sum of the estimated annual cost savings over the EUL of the recommended ECM, expressed in present value dollars.

Building Site Energy Use Intensity - The sum of the total site energy use in thousands of Btu per unit of gross building area. Site energy accounts for all energy consumed at the building location only not the energy consumed during generation and transmission of the energy to the site.

Building Source Energy Use Intensity – The sum of the total source energy use in thousands of Btu per unit of gross building area. Source energy is the energy consumed during generation and transmission in supplying the energy to your site.

Building Cost Intensity - This metric is the sum of all energy use costs in dollars per unit of gross building area.

Greenhouse Gas Emissions - Although there are numerous gases that are classified as contributors to the total for Greenhouse Emissions, the scope of this energy audit focuses on carbon dioxide (CO_2). Carbon dioxide enters the atmosphere through the burning of fossil fuels (oil, natural gas, and coal), solid waste, trees and wood products, and also as a result of other chemical reactions (e.g., manufacture of cement).

Significant/Systemic Findings and Deficiencies

Historical Summary

The La Fetra Senior Center was originally constructed in 1933. The northern section of the building was added in 1996. The facility is used as a senior citizen center and administrative office.

Architectural

There are two types of roofing at the property. The asphalt shingle roofing appears to be in overall fair condition and adequately maintained. The flat roofing has had a history of leaks around the northwest corner and near the skylights. The leaks are reportedly repaired as they occur. The exterior wood shake wall has areas of paint chipping throughout. Exterior painting is planned for the near reserve term. Also, there is an exterior wooden staircase between the two building sections that has been recommended for removal due to its poor structural integrity.

The interior finishes are replaced on an as needed basis. The point of contact mentioned that the carpet would be replaced in the near future. Ceiling leak damage was observed in the newer building section. Repair of the damage is recommended during the reserve term. Typical lifecycle-based replacements for the interior and exterior finishes are budgeted and anticipated.

Mechanical, Electrical, Plumbing and Fire (MEPF)

The HVAC system for the newer building section consists of rooftop packaged units while the older building section is conditioned by split systems and gas furnaces. The packaged units were replaced in 2016-2018 and appear to be in good condition. The furnace in the attic was inaccessible during the on-site visit, but the point of contact mentioned that it was undersized for the space. Replacement with an appropriately sized unit is recommended at the end of its useful life.

The electrical system is controlled by a main switchboard and distribution panel. Lighting in the building has been upgraded with LED fixtures.

Domestic hot water is supplied by gas storage tank water heaters. The water heater in the kitchen was replaced in 2022 and is in good condition. Typical commercial plumbing fixtures are utilized in the restrooms.

There is a fire alarm system only for the newer building section. The older section uses smoke detectors. Fire suppression consists of fire extinguishers and a kitchen suppression system.

Site

The parking lot asphalt pavement has isolated sections of cracking that are recommended for repair. Mature tree growth was observed above the roof of the older building section. Trimming/removal of the trees is recommended to prevent damage to the roof. Concrete cracking was observed on the stairs to the older building section and may become a trip hazard. Repair is recommended. Site lighting appears to be adequate for the facility's needs.

Recommended Additional Studies

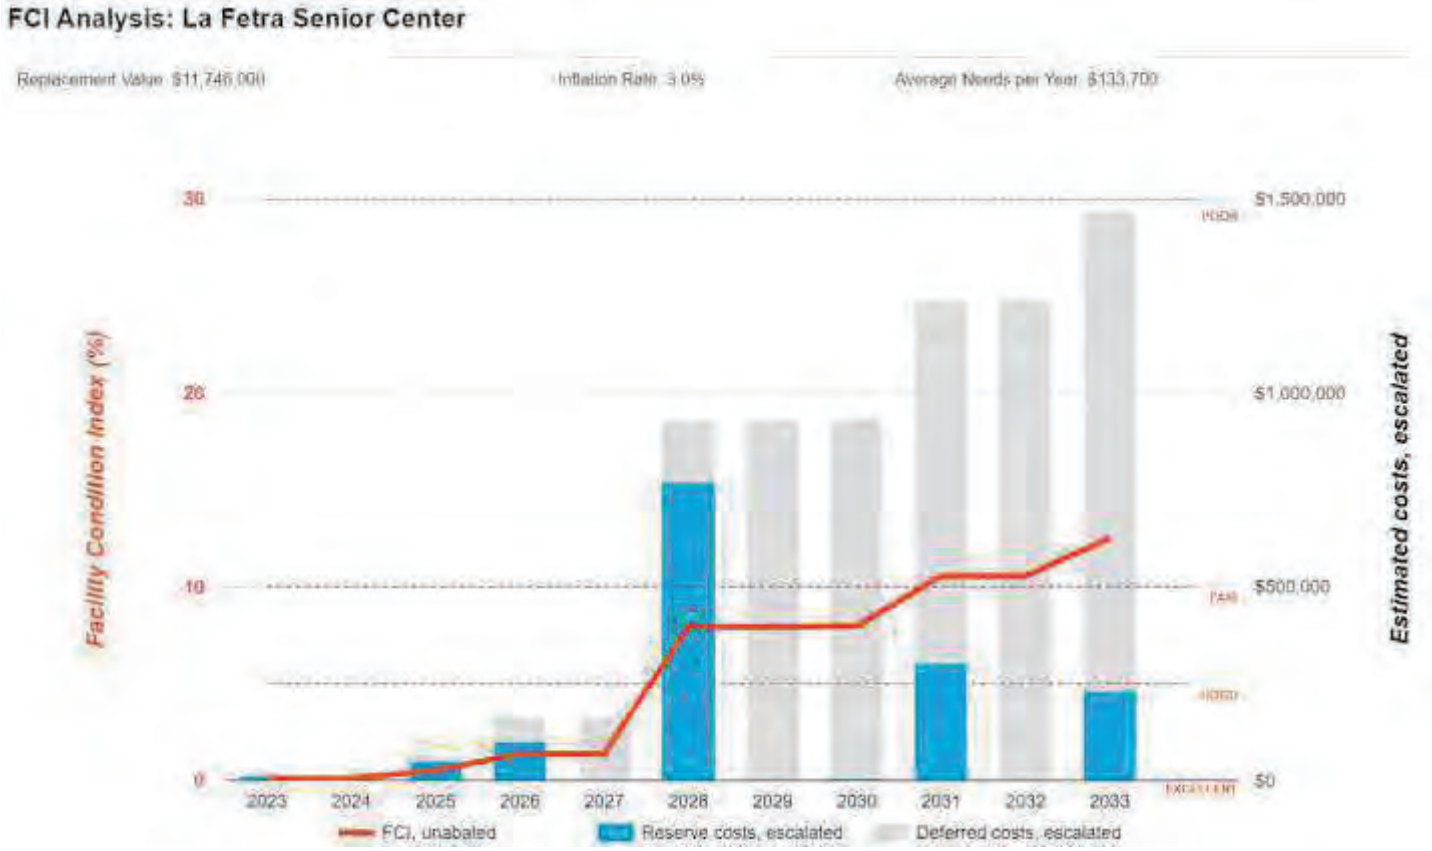
Cracking was observed on the interior ceiling, walls, and basement wall. While there have been no reported issues of building movement, the facility is quite old and may have potential issues. A professional engineer must be retained to analyze the existing condition, provide recommendations and, if necessary, estimate the scope and cost of any required repairs. The cost of this study is included in the cost tables. A budget allocation based on the area of the building is included in the tables, awaiting the outcomes of the engineering study on the foundation.

Facility Condition Index (FCI)

One of the major goals of the FCA is to calculate each building's Facility Condition Index (FCI), which provides a theoretical objective indication of a building's overall condition. By definition, the FCI is defined as the ratio of the cost of current needs divided by current replacement value (CRV) of the facility. The chart below presents the industry standard ranges and cut-off points.

FCI Ranges and Description	
0 – 5%	In new or well-maintained condition, with little or no visual evidence of wear or deficiencies.
5 – 10%	Subjected to wear but is still in a serviceable and functioning condition.
10 – 30%	Subjected to hard or long-term wear. Nearing the end of its useful or serviceable life.
30% and above	Has reached the end of its useful or serviceable life. Renewal is now necessary.

The deficiencies and lifecycle needs identified in this assessment provide the basis for a portfolio-wide capital improvement funding strategy. In addition to the current FCI, extended FCI's have been developed to provide owners the intelligence needed to plan and budget for the "keep-up costs" for their facilities. As such the 3-year, 5-year, and 10-year FCI's are calculated by dividing the anticipated needs of those respective time periods by current replacement value. As a final point, the FCI's ultimately provide more value when used to relatively compare facilities across a portfolio instead of being over-analyzed and scrutinized as stand-alone values. The table below summarizes the individual findings for this FCA:



FCI Analysis | La Fetra Senior Center(1933)

Replacement Value	*Total SF*	*Cost/SF*
$ 11,746,000	*16,780*	*$ 700*

	Est Reserve Cost	FCI
Current	$ 11,500	**0.1 %**
3-Year	$ 161,300	1.4 %
5-Year	$ 930,700	7.9 %
10-Year	$ 1,469,800	12.5 %

The vertical bars below represent the year-by-year needs identified for the site. The orange line in the graph below forecasts what would happen to the FCI (left Y axis) over time, assuming zero capital expenditures over the next ten years. The dollar amounts allocated for each year (blue bars) are associated with the values along the right Y axis.

Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason or rationale for the recommended replacement, repair, or other corrective action. This is the "why" part of the equation. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the "best" fit, typically the one with the greatest significance.

Plan Type Descriptions

Safety	■	An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk.
Performance/Integrity	■	Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.
Accessibility	■	Does not meet ADA, UFAS, and/or other handicap accessibility requirements.
Environmental	■	Improvements to air or water quality, including removal of hazardous materials from the building or site.
Retrofit/Adaptation	■	Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.
Lifecycle/Renewal	■	Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.

Plan Type Distribution (by Cost)

2. Building and Site Information

Systems Summary

System	Description	Condition
Structure	Conventional wood frame structure over basement foundation (older section) Steel frame with concrete-topped metal decks over concrete slab (newer section)	Good
Façade	Primary Wall Finish: Wood siding Secondary Wall Finish: Stone veneer Windows: Aluminum, wood	Poor
Roof	Primary: Flat construction with single-ply EPDM membrane Secondary: Sloped construction with asphalt shingles	Fair
Interiors	Walls: Painted gypsum board, ceramic tile, vinyl Floors: Carpet, ceramic tile, VCT, vinyl sheeting, quarry tile Ceilings: ACT, painted gypsum board	Fair
Elevators	Passenger: one hydraulic car serving all two floors	Fair
Plumbing	Distribution: Copper supply and cast-iron waste and venting Hot Water: Gas water heaters with integral tanks Fixtures: Toilets, urinals, and sinks in restrooms	Fair
HVAC	Non-Central System: Packaged units, split systems and furnaces	Good
Fire Suppression	Fire extinguishers, kitchen hood system	Fair

Systems Summary

Electrical	Source and Distribution: Main switchboard and panel with copper wiring Interior Lighting: LED Emergency Power: None	Fair
Fire Alarm	Alarm panel with smoke detectors, heat detectors, alarms, strobes, pull stations, back-up emergency lights, and exit signs	Fair
Equipment/Special	Commercial kitchen	Fair
Site Pavement	Asphalt lots with limited areas of concrete aprons and pavement and adjacent concrete sidewalks, curbs, ramps, and stairs	Fair
Site Development	Property entrance signage Limited park benches, picnic tables, trash receptacles	Fair
Landscaping and Topography	Limited landscaping features including lawns, trees, bushes, and planters Irrigation present Low to moderate site slopes throughout	Fair
Utilities	Municipal water and sewer Local utility-provided electric and natural gas	Good
Site Lighting	Pole-mounted: LED Building-mounted: LED	Good
Ancillary Structures	None	--
Accessibility	Presently it does not appear an accessibility study is needed for this property.	
Key Issues and Findings	Leaky skylights, exterior wall paint chipping, exterior staircase removal, interior building cracking, ceiling leak damage, isolated asphalt pavement cracking, concrete stairs cracking, mature tree growth	

Systems Expenditure Forecast

System	Immediate	Short Term (1-2 yr)	Near Term (3-5 yr)	Med Term (6-10 yr)	Long Term (11-20 yr)	TOTAL
Structure	-	$7,400	$630,300	-	$11,600	$649,300
Facade	-	$32,000	-	$2,200	$237,200	$271,400
Roofing	-	$3,700	$95,700	$28,300	-	$127,700
Interiors	-	$1,500	$85,900	$192,900	$449,300	$729,600
Conveying	-	-	-	$15,400	$115,700	$131,100
Plumbing	-	-	$1,900	$6,500	$599,100	$607,500
HVAC	-	-	$2,200	$52,800	$392,000	$447,000
Fire Protection	-	-	-	$5,800	-	$5,800
Electrical	-	-	-	-	$1,048,400	$1,048,400
Fire Alarm & Electronic Systems	-	-	-	$89,900	-	$89,900
Equipment & Furnishings	-	-	$53,200	$77,800	$71,500	$202,500
Site Utilities	-	-	-	$34,800	$42,900	$77,700
Site Pavement	-	$5,300	-	$5,800	$67,800	$78,900
Site Development	$2,000	-	-	$27,000	$6,300	$35,400
Follow-up Studies	$9,500	-	-	-	-	$9,500
TOTALS (3% inflation)	**$11,500**	**$49,900**	**$869,200**	**$539,100**	**$3,041,900**	**$4,511,600**

3. Property Space Use and Observed Areas

Areas Observed

The interior spaces were observed in order to gain a clear understanding of the property's overall condition. Other areas accessed included the site within the property boundaries, the exterior of the property, and the roofs.

Key Spaces Not Observed

All key areas of the property were accessible and observed.

4. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the checklists that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance
- Only a representative sample of areas was observed
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance
- Itemized costs for individual non-compliant items are not included in the dataset
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance

The facility was originally constructed in 1933. The facility was substantially renovated in 1996 and widespread accessibility improvements appear to have been implemented at that time.

During the interview process with the client representatives, no complaints or pending litigation associated with potential accessibility issues was reported.

No detailed follow-up accessibility study is currently recommended since no major or moderate issues were identified at the subject site. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

5. Purpose and Scope

Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

Condition Ratings	
Excellent	New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Good	Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Fair	Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.
Poor	Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life.
Failed	Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.
Not Applicable	Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.

Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Review maintenance records and procedures with the in-place maintenance personnel.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

6. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means, CBRE Whitestone,* and *Marshall & Swift,* Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

Definitions

Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

7. Energy Audit

The purpose of this Energy Audit is to provide La Fetra Senior Center with a baseline of energy usage, the relative energy efficiency of the facility, and specific recommendations for Energy Conservation Measures. Information obtained from these analyses may be used to support a future application to an Energy Conservation Program, Federal and Utility grants towards energy conservation, as well as support performance contracting, justify a municipal bond-funded improvement program, or as a basis for replacement of equipment or systems

The energy audit consisted of an onsite visual assessment to determine current conditions, itemize the energy consuming equipment (i.e. Boilers, Make-Up Air Units, DWH equipment); review lighting systems both exterior and interior; and review efficiency of all such equipment. The study also included interviews and consultation with operational and maintenance personnel. The following is a summary of the tasks and reporting that make up the Energy Audit portion of the report.

The following is a summary of the tasks and reporting that make up the Energy Audit portion of the report.

Energy and Water Using Equipment

- Bureau Veritas has surveyed the common areas, offices, maintenance facilities and mechanical rooms to document utility-related equipment, including heating systems, cooling systems, air handling systems and lighting systems.

Building Envelope

- Bureau Veritas has reviewed the characteristics and conditions of the building envelope, checking insulation values and conditions. This review also includes an inspection of the condition of walls, windows, doors, roof areas, insulation and special use areas. Where we anticipated significant losses, we utilized infrared thermographs to analyze heat loss across the envelope.

Recommendations for Energy Savings Opportunities

- Based on the information gathered during the on-site assessment, the utility rates, as well as recent consumption data and engineering analysis, Bureau Veritas has identified opportunities to save energy and provide probable construction costs, projected energy/utility savings and provide a simple payback analysis.

Analysis of Energy Consumption

- Based on the information gathered during the on-site assessment and a, Bureau Veritas has conducted an analysis of the energy usage of all equipment, and identified which equipment is using the most energy and what equipment upgrades may be necessary. As a result, equipment upgrades, or replacements are identified that may provide a reasonable return on the investment and improve maintenance reliability.

Energy Audit Process

- Interviewing staff and review plans and past upgrades
- Performing an energy audit for each use type
- Performing a preliminary evaluation of the utility system
- Analyzing findings, utilizing ECM cost-benefit worksheets
- Making preliminary recommendations for system energy improvements and measures
- Estimating initial cost and changes in operating and maintenance costs based on implementation of energy efficiency measures
- Ranking recommended cost measures, based on the criticality of the project and the largest payback

8. Energy Conservation Measures

Bureau Veritas has conducted an Energy Audit on La Fetra Senior Center. The study included a review of the building's construction features, historical energy and water consumption and costs, review of the building envelope, HVAC equipment, heat distribution systems, lighting, and the building's operational and maintenance practices.

Bureau Veritas has evaluated four Energy Conservation Measures (ECMs) for this property. The savings for each measure are calculated using standard engineering methods followed in the industry, and detailed calculations for ECM are provided in Appendix H for reference. A 10% discount in energy savings was applied to account for the interactive effects amongst the ECMs. In addition to the consideration of the interactive effects, Bureau Veritas has applied a 15% contingency to the implementation costs to account for potential cost overruns during the implementation of the ECMs.

Recommended Energy Conservation Measures: Financial Impact	
Total Projected Initial ECM Investment	$7,422 *(In Current Dollars)*
Estimated Annual Cost Savings Related to ECMs	$1,930 *(In Current Dollars)*
Net Effective ECM Payback	3.85 years

Bureau Veritas screens ECMs using two financial methodologies. ECMs which are considered financially viable must meet both criteria.

1. Simple Payback Period –The number of years required for the cumulative value of energy or water cost savings less future non-fuel or non-water costs to equal the investment costs of the building energy or water system, without consideration of discount rates. ECMs with a payback period greater than the Expected Useful Life (EUL) of the project are not typically recommended, as the cost of the project will not be recovered during the lifespan of the equipment. These ECMs are recommended for implementation during future system replacement. At that time, replacement may be evaluated based on the premium cost of installing energy efficient equipment.

$$Simple\ Payback = \frac{Initial\ Cost}{Annual\ Savings}$$

Bureau Veritas screens and categorizes all the ECM's as per the 24 CFR 905 regulation requirements based on their payback, but only those ECM's are recommended for implementation that have a Savings to Investment Ratio ≥1.0.

Financialy methodology used to determine the Savings to Investment Ratio is as follows:

2. Savings-to-Investment Ratio (SIR) – The savings-to-investment ratio is the ratio of the present value savings to the present value costs of an energy or water conservation measure. The numerator of the ratio is the present value over the estimated useful life (EUL) of net savings in energy or water and non-fuel or non-water operation and maintenance costs attributable to the proposed energy or water conservation measure. The denominator of the ratio is the present value of the net increase in investment and replacement costs less salvage value attributable to the proposed energy or water conservation measure. It is recommended that energy efficiency recommendations should be based on a calculated SIR, with larger SIRs receiving a higher priority. A project is typically only recommended if SIR is greater than or equal to 1.0, unless other factors outweigh the financial benefit.

$$SIR = \frac{Present\ Value\ (Annual\ Savings, i\%, EUL)}{Initial\ Cost}$$

Bureau Veritas has identified four Energy Conservation Measures (ECM) for this property. The basis for an ECM recommendation is a payback of less than the remaining useful life of the system or component. Recommended energy efficiency improvements and the installed cost estimates for recommended energy efficiency measures are provided in the following table:

Energy Conservation Measures					
Priority	Brief Description	Initial Investment	Annual Savings	Payback Period *(years)*	Component EUL *(years)*
1	Install Low Flow Faucet Aerators	$125	$747	0.17	10
2	Retrofit Flush Tank Toilets to Dual Flush	$416	$179	2.33	20
3	Install Low Flow Tankless Restroom Fixtures	$2,140	$625	3.42	15
4	Upgrade Split Heating and Cooling System	$3,773	$593	6.36	18

9. Utility Analysis

Establishing the energy baseline begins with an analysis of the utility cost and consumption of the facility. Utilizing the historical energy data and local weather information, we evaluate the existing utility consumption and assign it to the various end-uses throughout the buildings. The Historical Data Analysis breaks down utilities by consumption, cost and annual profile.

This data is analyzed, using standard engineering assumptions and practices. The analysis serves the following functions:

- Allows our engineers to benchmark the energy and water consumption of the facilities against consumption of efficient buildings of similar construction, use and occupancy.
- Generates the historical and current unit costs for energy and water
- Provides an indication of how well changes in energy consumption correlate to changes in weather.
- Reveals potential opportunities for energy consumption and/or cost reduction. For example, the analysis may indicate that there is excessive, simultaneous heating and cooling, which may mean that there is an opportunity to improve the control of the heating and cooling systems.

By performing this analysis and leveraging our experience, our engineers prioritize buildings and pinpoint systems for additional investigation during the site visit, thereby maximizing the benefit of their time spent on-site and minimizing time and effort by the customer's personnel.

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used the utility rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data from the client.

Estimated Utility Rates		
Electricity	Natural Gas	Water and Sewer
$0.30/kWh	$2.24/therm	$8.36/CCF

The data analyzed provides the following information: 1) breakdown of utilities by consumption, 2) cost and annual profile, 3) baseline consumption in terms of energy/utility at the facility, 4) the Energy Use Index, or BTU/SF, and cost/SF. For multiple water meters, the utility data is combined to illustrate annual consumption for each utility type.

Electricity

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used the electric rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data from the client.

Natural Gas

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used the natural gas rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data.

Water and Sewer

The City of Glendora satisfies the water and sewer requirements of the facility. The billing for the water and sewer is monthly.

Note: No water and sewer utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used a rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data.

End Use Energy Distribution

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas will complete end use energy distribution on receipt of the actual data from the client.

Energy Star Portfolio Manager Facility Summary

Bureau Veritas uses the Portfolio Manager tool developed by the Federal Environmental Protection Agency to track relative energy uses of buildings by property type. This tool allows the input of a facility's historic utility data to be compared with normalized data of a large database of its peer facilities.

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas will complete energy benchmarking on receipt of the actual data from the client.

10. Operations & Maintenance Plan

The quality of the maintenance and the operation of the facility's energy systems have a direct effect on its overall energy efficiency. Energy-efficiency needs to be a consideration when implementing facility modifications, equipment replacements, and general corrective actions. The following is a list of activities that should be performed as part of the routine maintenance program for the property. These actions will ensure that the energy conservation measures identified in this report will remain effective. The following general recommendations should be continued or implemented.

Building Envelope

1. Ensure that the building envelope has proper caulking and weather stripping.
2. Patch holes in the building envelope with foam insulation and fire rated caulk around combustion vents
3. Inspect building vents semiannually for bird infestation
4. Inspect windows monthly for damaged panes and failed thermal seals
5. Repair and adjust automatic door closing mechanisms as needed.

Heating and Cooling

1. Pilot lights on furnaces be turned off in summer
2. All preventive maintenance should be performed on all furnaces, which would include cleaning of burners and heat exchanger tubes.
3. Ensure that the combustion vents exhaust outside the conditioned space and the vent dampers are functional.
4. Ensure the duct work in unconditioned space is un-compromised and well insulated
5. Duct cleaning is recommended every 10 years. This should include sealing of ducts using products similar to 'aero-seal'
6. Ensure that the air dampers are operating correctly
7. Return vents should remain un-obstructed and be located centrally.
8. Temperature settings reduced in unoccupied areas and set points seasonally adjusted.
9. Evaporator coils and condenser coils should be regularly cleaned to improve heat transfer
10. Refrigerant pipes should be insulated with a minimum of ¾" thick Elastometric Rubber Pipe Insulation
11. Ensure refrigerant pressure is maintained in the condensers
12. Change air filters on return vents seasonally. Use only filters with 'Minimum Efficiency Rating Value'(MERV) of 8

Central Domestic Hot Water

1. Never place gas fired water heaters adjacent to return vents so as to prevent flame roll outs
2. Ensure the circulation system is on timer to reduce the losses through re-circulation
3. Ensure all hot water pipes are insulated with fiberglass insulation at all times
4. Replacement water heater should have Energy Factor (EF)>0.9
5. Tank-type water heaters flushed annually.

Lighting

1. Utilize bi-level lighting controls in stairwells and hallways.
2. Use energy efficient replacement lamps (LEDs)
3. Clean lighting fixture reflective surfaces and translucent covers.
4. Ensure that timers and/or photocells are operating correctly on exterior lighting
5. Use occupancy sensors for offices and other rooms with infrequent occupancy

Existing Equipment and Replacements

1. Ensure that refrigerator and freezer doors close and seal correctly
2. Ensure kitchen and bathroom exhaust outside the building and the internal damper operates properly
3. Ensure that bathroom vents exhaust out
4. Office/ computer equipment either in the "sleep" or "off" mode when not used

11. Certification

The City of Glendora (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of La Fetra Senior Center, 333 East Foothill Boulevard, Glendora, California 91741, the “Property”. It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager’s walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property’s original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

Pre-Survey Questionnaire

BV FACILITY CONDITION ASSESSMENT: PRE-SURVEY QUESTIONNAIRE

Building / Facility Name: La Fetra Senior Center

Name of person completing form: Ryan Hacecky

Title / Association w/ property: Facilities Maintenance Supervisor

Length of time associated w/ property: 2 years

Date Completed: 12/11/2023

Phone Number: 626.672.6306

Method of Completion: INTERVIEW - verbally completed during interview

Directions: Please answer all questions to the best of your knowledge and in good faith. Please provide additional details in the Comments column, or backup documentation for any ***Yes*** responses.

Data Overview		Response		
1	Year(s) constructed	Constructed	Renovated	1933 for front . Late 90's for rear
2	Building size in SF	**SF**		
3	Major Renovation/Rehabilitation		Year	Additional Detail
		Facade		
		Roof		
		Interiors		
		HVAC		
		Electrical		
		Site Pavement		
		Accessibility		
4	List other significant capital improvements (focus on recent years; provide approximate date).			
5	List any major capital expenditures planned/requested for the next few years. Have they been budgeted?	Exterior wall painting, carpet, roof deck renovation		
6	Describe any on-going extremely problematic, historically chronic, or immediate facility needs.			

Mark the column corresponding to the appropriate response. Please provide additional details in the Comments column, or backup documentation for any ***Yes*** responses. (**NA** indicates "*Not Applicable*", **Unk** indicates "*Unknown*")

	Question	Response				Comments
		Yes	No	Unk	NA	
7	Are there any problems with foundations or structures, like excessive settlement?		X			
8	Are there any wall, window, basement or roof leaks?	X				Roof leaks. Repaired as they occur
9	Has any part of the facility ever contained visible suspect mold growth, or have there been any indoor air quality complaints?		X			
10	Are your elevators unreliable, with frequent service calls?		X			
11	Are there any plumbing leaks, water pressure, or clogging/backup issues?		X			
12	Have there been any leaks or pressure problems with natural gas, HVAC piping, or steam service?		X			
13	Are any areas of the facility inadequately heated, cooled or ventilated? Poorly insulated areas?		X			
14	Is the electrical service outdated, undersized, or problematic?		X			System is up to date. But transformer needs to be updated to increase voltage.
15	Are there any problems or inadequacies with exterior lighting?		X			
16	Is site/parking drainage inadequate, with excessive ponding or other problems?		X			
17	Are there any other unresolved construction defects or significant issues/hazards at the property that have not yet been identified above?		X			
18	ADA: Has an accessibility study been previously performed? If so, when?		X			
19	ADA: Have any ADA improvements been made to the property since original construction? Describe.	X				
20	ADA: Has building management reported any accessibility-based complaints or litigation?		X			
21	Are any areas of the property leased to outside occupants?		X

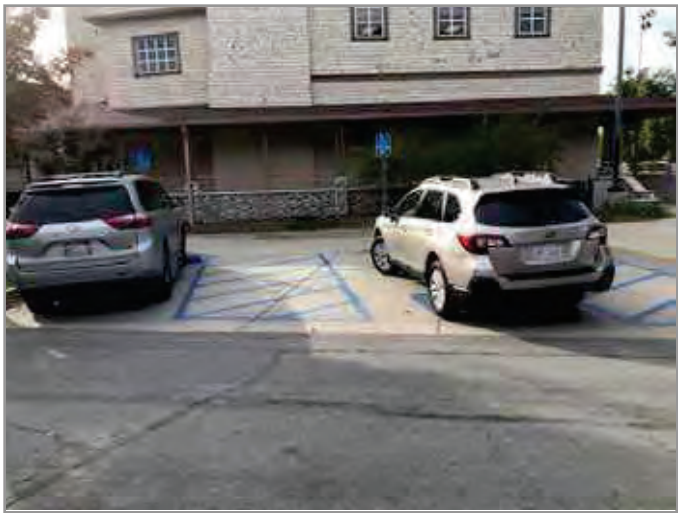
Visual Checklist - 2010 ADA Standards for Accessible Design



Property Name: La Fetra Senior Center

BV Project Number: 158691.23R000-030.379

Abbreviated Accessibility Checklist					
Facility History & Interview					
	Question	Yes	No	Unk	Comments
1	Has an accessibility study been previously performed? If so, when?		X		
2	Have any ADA improvements been made to the property since original construction? Describe.	X			
3	Has building management reported any accessibility-based complaints or litigation?		X		

Abbreviated Accessibility Checklist

Parking

OVERVIEW OF ACCESSIBLE PARKING AREA

2ND AREA OF ACCESSIBLE PARKING

	Question	Yes	No	NA	Comments
1	Does the required number of standard ADA designated spaces appear to be provided ?	X			
2	Does the required number of van-accessible designated spaces appear to be provided ?	X			
3	Are accessible spaces on the shortest accessible route to an accessible building entrance ?	X			
4	Does parking signage include the International Symbol of Accessibility ?	X			
5	Does each accessible space have an adjacent access aisle ?	X			
6	Do parking spaces and access aisles appear to be relatively level and without obstruction ?	X			

Abbreviated Accessibility Checklist

Exterior Accessible Route

ACCESSIBLE RAMP

CURB CUT

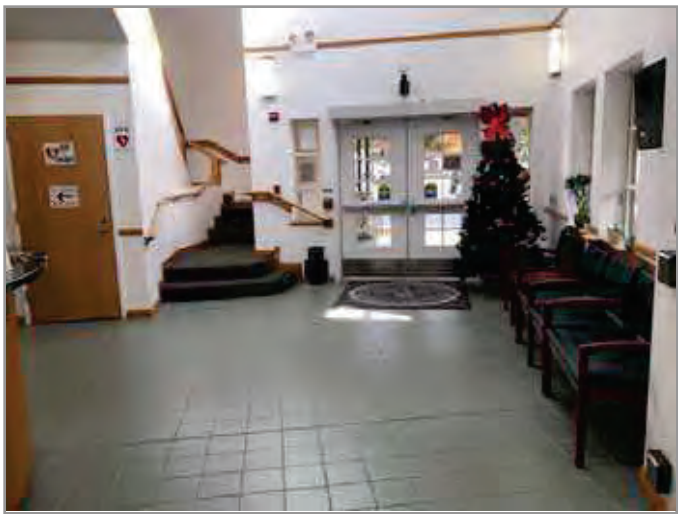
	Question	Yes	No	NA	Comments
1	Is an accessible route present from public transportation stops and municipal sidewalks on or immediately adjacent to the property ?	X			
2	Does a minimum of one accessible route appear to connect all public areas on the exterior, such as parking and other outdoor amenities, to accessible building entrances ?	X			
3	Are curb ramps present at transitions through raised curbs on all accessible routes?	X			
4	Do curb ramps appear to have compliant slopes for all components ?	X			
5	Do ramp runs on an accessible route appear to have compliant slopes ?	X			
6	Do ramp runs on an accessible route appear to have a compliant rise and width ?	X			

7	Do ramps on an accessible route appear to have compliant end and intermediate landings ?	X			
8	Do ramps and stairs on an accessible route appear to have compliant handrails?	X			
9	For stairways that are open underneath, are permanent barriers present that prevent or discourage access?			X	

Abbreviated Accessibility Checklist

Building Entrances

ACCESSIBLE ENTRANCE



AUTOMATIC DOOR OPENER

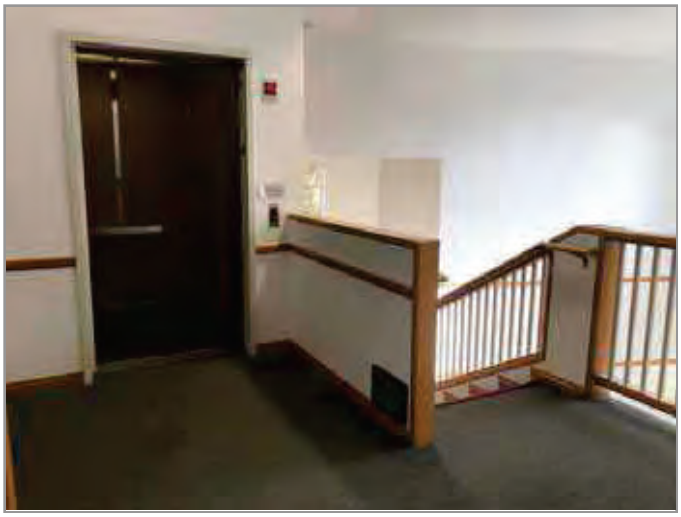
	Question	Yes	No	NA	Comments
1	Do a sufficient number of accessible entrances appear to be provided ?	X			
2	If the main entrance is not accessible, is an alternate accessible entrance provided?			X	
3	Is signage provided indicating the location of alternate accessible entrances ?	X			
4	Do doors at accessible entrances appear to have compliant maneuvering clearance area on each side ?	X			
5	Do doors at accessible entrances appear to have compliant hardware ?	X			
6	Do doors at accessible entrances appear to have a compliant clear opening width ?	X			

7	Do pairs of accessible entrance doors in series appear to have the minimum clear space between them ?			X	
8	Do thresholds at accessible entrances appear to have a compliant height ?	X			

Abbreviated Accessibility Checklist

Interior Accessible Route

ACCESSIBLE INTERIOR PATH



DOOR HARDWARE

	Question	Yes	No	NA	Comments
1	Does an accessible route appear to connect all public areas inside the building ?	X			
2	Do accessible routes appear free of obstructions and/or protruding objects ?	X			
3	Do ramps on accessible routes appear to have compliant slopes ?			X	
4	Do ramp runs on an accessible route appear to have a compliant rise and width ?			X	
5	Do ramps on accessible routes appear to have compliant end and intermediate landings ?			X	
6	Do ramps on accessible routes appear to have compliant handrails ?			X	

7	Are accessible areas of refuge and the accessible means of egress to those areas identified with accessible signage ?			X	
8	Do public transaction areas have an accessible, lowered service counter section ?			X	
9	Do public telephones appear mounted with an accessible height and location ?			X	
10	Do doors at interior accessible routes appear to have compliant maneuvering clearance area on each side ?	X			
11	Do doors at interior accessible routes appear to have compliant hardware ?	X			
12	Do non-fire hinged, sliding, or folding doors on interior accessible routes appear to have compliant opening force ?	X			
13	Do doors on interior accessible routes appear to have a compliant clear opening width ?	X			

Abbreviated Accessibility Checklist

Elevators

LOBBY LOOKING AT CABS (WITH DOORS OPEN)

IN-CAB CONTROLS

	Question	Yes	No	NA	Comments
1	Are hallway call buttons configured with the “UP” button above the “DOWN” button?	X			
2	Is accessible floor identification signage present on the hoistway sidewalls on each level ?	X			
3	Do the elevators have audible and visual arrival indicators at the lobby and hallway entrances?	X			
4	Do the elevator hoistway and car interior appear to have a minimum compliant clear floor area ?	X			
5	Do the elevator car doors have automatic re-opening devices to prevent closure on obstructions?	X			
6	Do elevator car control buttons appear to be mounted at a compliant height ?	X			

7	Are tactile and Braille characters mounted to the left of each elevator car control button ?	✕			
8	Are audible and visual floor position indicators provided in the elevator car?	✕			
9	Is the emergency call system on or adjacent to the control panel and does it not require voice communication ?	✕			

Abbreviated Accessibility Checklist

Public Restrooms

TOILET STALL OVERVIEW

SINK, FAUCET HANDLES AND ACCESSORIES

	Question	Yes	No	NA	Comments
1	Do publicly accessible toilet rooms appear to have a minimum compliant floor area ?	X			
2	Does the lavatory appear to be mounted at a compliant height and with compliant knee area ?	X			
3	Does the lavatory faucet have compliant handles ?	X			
4	Is the plumbing piping under lavatories configured to protect against contact ?	X			
5	Are grab bars provided at compliant locations around the toilet ?	X			
6	Do toilet stall doors appear to provide the minimum compliant clear width ?	X			

7	Do toilet stalls appear to provide the minimum compliant clear floor area ?	✕			
8	Where more than one urinal is present in a multi-user restroom, does minimum one urinal appear to be mounted at a compliant height and with compliant approach width ?	✕			
9	Do accessories and mirrors appear to be mounted at a compliant height ?	✕

ECM EXPLANATION:

By reducing the flow of water coming from the restroom faucets, aerators can generate energy savings at low cost and with easy installation. The savings generated would be in the form of reduced water and sewer costs and at the same time aerators would save energy by reducing the demand for hot water. The average faucet has a flow rate of about 2 to 4 GPM. Adding a screw-in faucet aerator reduces the flow to 0.5 to 1.5 GPM in the bathroom and 2.2 GPM in the kitchen. In addition to saving energy and water, the "foamier" water that comes from faucet aerators wets objects better than water from a faucet with no aerator, which tends to bounce off the object rather than thoroughly wetting it.

BV recommends replacing the proposed faucet aerators with new low flow aerators as mentioned above. The proposed ECM shall also result in an annual energy saving in form of reduction in water heating bills.

ECM EXPLANATION:

The highest water utilization at any home/office occurs in the restrooms. It is estimated that on an average a normal human being uses the restroom at least four times a day. Keeping with the global water conservation objectives, federal law prohibits use of any new water closet flushes over 1.6 GPF.

Existing toilets can be retrofitted with pressure-assisted flush technology to reduce the flush rate to 1.0 GPF or less. Though water efficient these toilets make considerable amount of noise as this involves release of pressurized air during the course of flushing. Thus making them unpopular among residential properties.

Thus BV recommends replacing the existing high flow toilets with new low flow 1.28GPF rated flush tank toilets, which are comparatively more water efficient at the same time considerably quiter as compared to the pressure assisted technology retrofitted toilets.

ECM EXPLANATION:

The highest water utilization at any home/office occurs in the restrooms. It is estimated that on an average a normal human being uses the restroom at least four times a day. Keeping with the global water conservation objectives, federal law prohibits use of any new water closet flushes over 1.6 GPF. At the same time the '1992 EpACT' mandates all new Urinals to have a maximum 1.0 GPF flush valves on urinals.

BV recommends replacing all urinals above 1.0 GPF with a new 0.5 GPF or lesser urinals. At the same time BV also recommends replacing all the water closets having a GPF rating of 1.6 and over with low flow water closet fixtures equipped with dual flush valves.

In case the property doesn't wish to replace the entire water closet fixtures, BV recommends retrofitting all the tankless water closet flush fixtures with new dual flush fixtures that would result in a 30% water savings per flush for liquid wastes, while retaining the same flush rate for solid wastes.

Disclaimer: PREPARED BY BUREAU VERITAS (BV). FEBRUARY 2022 INFORMATION CONTAINED IN THIS DOCUMENT IS PRIVILEGED AND CONFIDENTIAL "TRADE SECRET" AND IS THE SOLE PROPERTY OF BV. THIS MATERIAL MUST BE CONSIDERED PRIVELEDGED AND CONFIDENTIAL BY ALL PARTIES PRIVY.

ECM DESCRIPTION:

Advances in compressor and condenser technology have allowed for the development of more efficient air conditioning systems. As a result cooling can be provided at the same rate, with a lower energy input. Energy efficiency ratio (EER) is the ratio of cooling output to power input. Seasonal energy efficiency ratio (SEER) is an adjusted figure based on the length of the cooling season. A higher EER or SEER indicates a more efficient unit which can provide the same cooling capacity while consuming less energy. The minimum standard for air conditioner performance in most areas is currently 13 SEER as required by the 2006 International Energy Conservation Code. Units rated at 16 SEER (14 EER) or better qualify for Energy Star certification.

BV recommends replacing all the identified air conditioners with the new proposed high efficiency air conditioners as mentioned above.

Summary:

Initial Investment: $3,773 Simple Payback: 6.36 Yrs

Energy Cost Savings: $593

Appendix I:
Lighting System Schedule

Note : All lighting has been upgraded to LED

Appendix J:
Energy Audit Glossary of Terms

Glossary of Terms and Acronyms

ECM – Energy Conservation Measures are projects recommended to reduce energy consumption. These can be No/Low cost items implemented as part of routine maintenance or Capital Cost items to be implemented as a capital improvement project.

Initial Investment – The estimated cost of implementing an ECM project. Estimates typically are based on R.S. Means Construction cost data and Industry Standards.

Annual Energy Savings – The reduction in energy consumption attributable to the implementation of a particular ECM. These savings values do not include the interactive effects of other ECMs.

Cost Savings – The expected reduction in utility or energy costs achieved through the corresponding reduction in energy consumption by implementation of an ECM.

Simple Payback Period –The number of years required for the cumulative value of energy or water cost savings less future non-fuel or non-water costs to equal the investment costs of the building energy or water system, without consideration of discount rates.

EUL – Expected Useful Life is the estimated lifespan of a typical piece of equipment based on industry accepted standards.

RUL – Remaining Useful Life is the EUL minus the effective age of the equipment and reflects the estimated number of operating years remaining for the item.

SIR - The savings-to-investment ratio is the ratio of the present value savings to the present value costs of an energy or water conservation measure. The numerator of the ratio is the present value of net savings in energy or water and non-fuel or non-water operation and maintenance costs attributable to the proposed energy or water conservation measure. The denominator of the ratio is the present value of the net increase in investment and replacement costs less salvage value attributable to the proposed energy or water conservation measure. It is recommended that energy-efficiency recommendations be based on a calculated SIR, with larger SIRs receiving a higher priority. A project typically is recommended only if the SIR is greater than or equal to 1.0, unless other factors outweigh the financial benefit.

Life Cycle Cost - The sum of the present values of (a) Investment costs, less salvage values at the end of the study period; (b) Non-fuel operation and maintenance costs: (c) Replacement costs less salvage costs of replaced building systems; and (d) Energy and/or water costs.

Life Cycle Savings – The sum of the estimated annual cost savings over the EUL of the recommended ECM, expressed in present value dollars.

Building Site Energy Use Intensity - The sum of the total site energy use in thousands of Btu per unit of gross building area. Site energy accounts for all energy consumed at the building location only not the energy consumed during generation and transmission of the energy to the site.

Building Source Energy Use Intensity – The sum of the total source energy use in thousands of Btu per unit of gross building area. Source energy is the energy consumed during generation and transmission in supplying the energy to your site.

Building Cost Intensity - This metric is the sum of all energy use costs in dollars per unit of gross building area.

Greenhouse Gas Emissions - Although there are numerous gases that are classified as contributors to the total for Greenhouse Emissions, the scope of this energy audit focuses on carbon dioxide (CO_2). Carbon dioxide enters the atmosphere through the burning of fossil fuels (oil, natural gas, and coal), solid waste, trees and wood products, and also as a result of other chemical reactions (e.g., manufacture of cement).

A-2. Park Findings and Deficiencies

Historical Summary

Ole Hammer Park was developed in 1975 and renovated in 2011 with the addition of the playground. Historic aerial photos show a park on this site as early as 1964, and agricultural use before then.

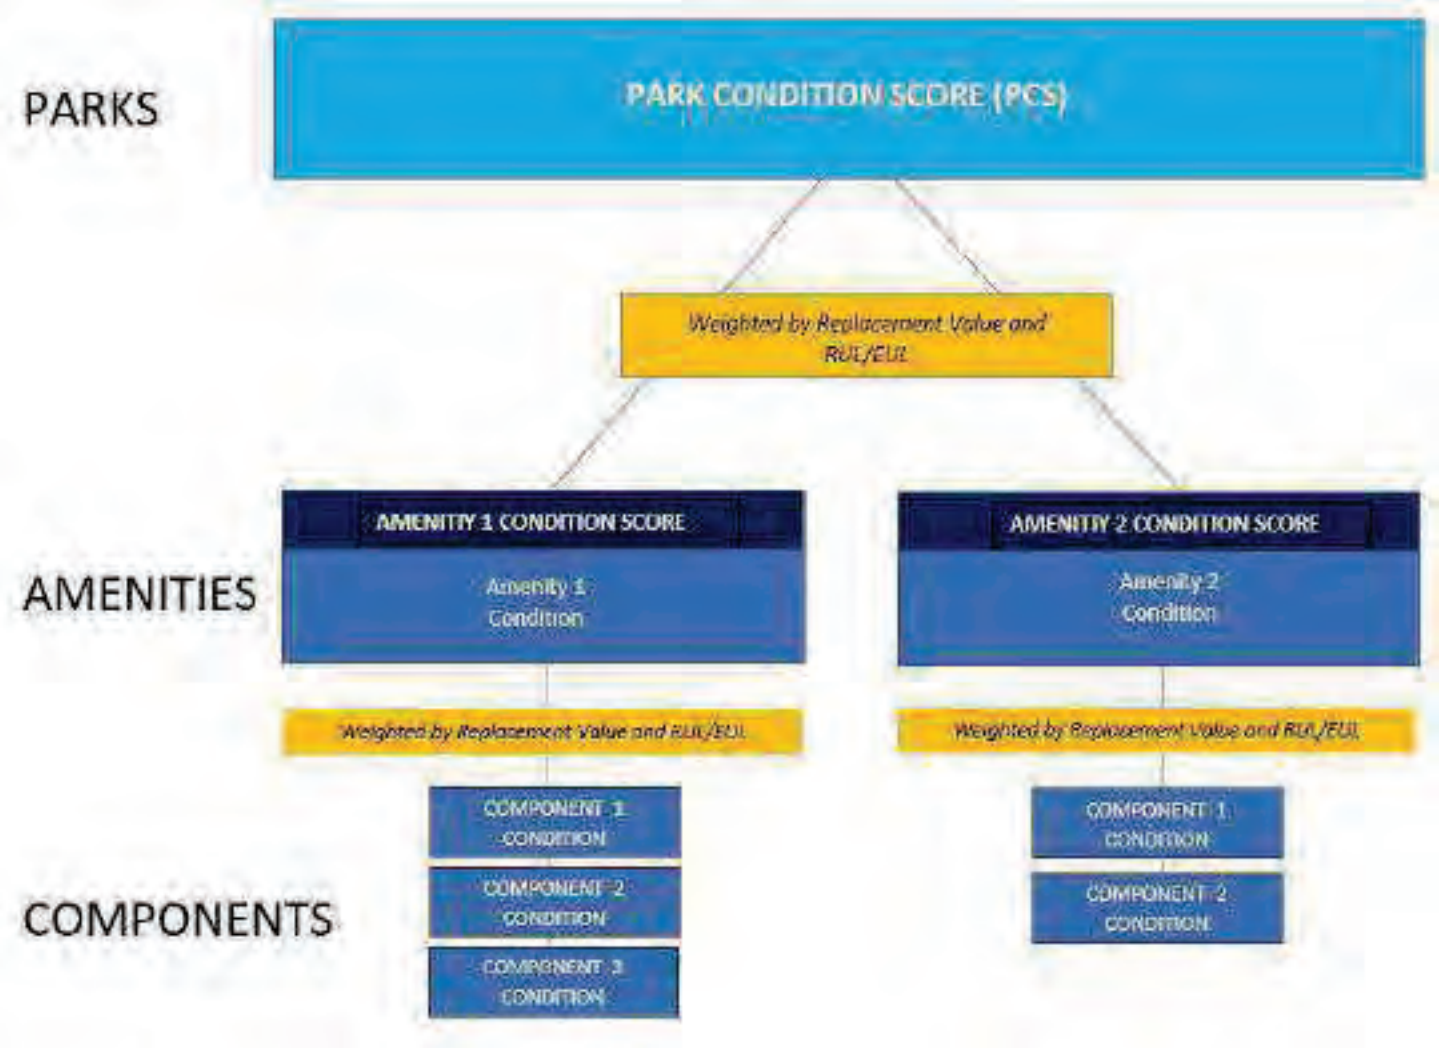
Amenities and General Site

Ole Hammer Park features a playground, volleyball court, and picnic areas. The picnic areas include amenities such as picnic tables, rentable BBQ grills, and trash cans. The park assets are generally in good to fair condition. Typical lifecycle replacements are recommended.

Recommended Additional Studies

No additional studies recommended.

B. Amenities and General Site



B-1. Prioritization Methodology

Park Condition Score (PCS) and Amenity Condition Score (ACS)

A major goal of the Facility Condition Assessment (FCA) is to benchmark individual parks with other parks within the portfolio, and amenities with other amenities either within the same park and across the portfolio. To achieve a rating for each park, the Park Condition Score (PCS) is developed; similarly, an Amenity Condition Score (ACS) is used to compare amenities.

To assist in the overall prioritization effort, the following terms are used at the Component and Amenity level:

- **Component:** individual elements of the amenity or park that are evaluated and assigned conditions and GPS coordinates. Examples of components include benches, trash receptacles, tennis nets, playground surfaces, or split-rail fencing.
- **Amenity:** defined as a group of components that constitute a major feature of the park, logically grouped together by purpose and/or proximity. Examples of an amenity include a basketball court, a softball field, a dog park, picnic area, or playground.
- **Current Renewal Value (CRV):** the cost in today's dollars of the major constituent parts that make up the whole:
  - for Parks: CRV = renewal cost of all **developed** amenities within it (land value is excluded)
  - for Amenities: CRV = renewal cost of all significant components within it

The Amenity Condition Score (ACS) is a score calculated from an algorithm comprising a weighted average of the conditions of all the components within it.

AMENITY CONDITION SCORE (ACS) FORMULA = SUM [Remaining Value / Renewal Value (RenV) of combined components]

Remaining value = RenV multiplied by RUL/EUL

The Park Condition Score (PCS) is the total score for a single park property calculated from the sum of the Amenity Condition Scores (ACSs) for each amenity within the park.

PARK CONDITION SCORE FORMULA = SUM [Remaining Value]/ SUM [Renewal Value]

B-2. Park Prioritization Metrics

Park Condition Score (PCS) and Amenity Condition Score (ACS)

A major goal of the Facility Condition Assessment (FCA) is to benchmark individual parks with other parks within the portfolio, and amenities with other amenities either within the same park and across the portfolio. To achieve a rating for each park, the Park Condition Score (PCS) is developed; similarly, an Amenity Condition Score (ACS) is used to compare amenities.

The PCS and ACS metrics have been developed so that the higher the score, the less the park or amenity needs short term financial attention, due to its relative condition. The lower the score, the more attention is needed. An increasingly low score indicates an increased need to address deficiencies, provide replacements or make essential repairs. The lower the score, the more the amenity or park requires renewal or replacement. Both PCS and ACS scores range from 0 to 100.

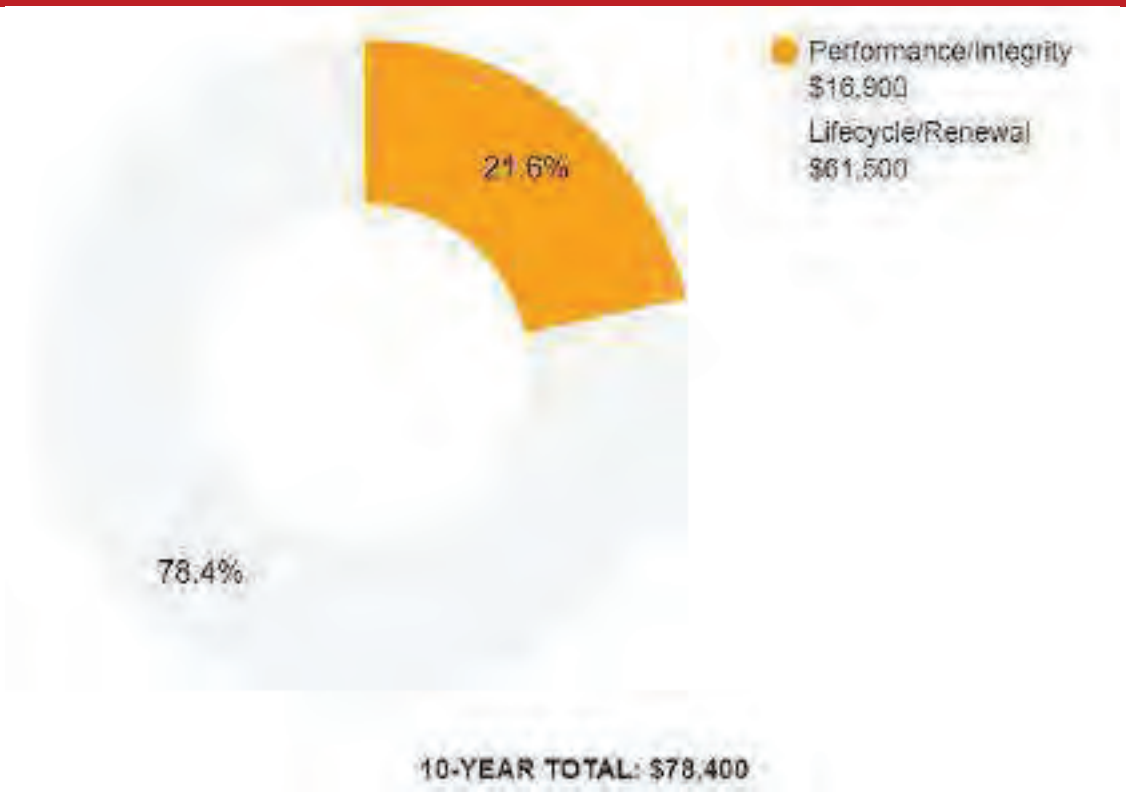
The color coding reflects the score definition. Higher scores are assigned a sliding scale of green, with 100 assigned the deepest green. Yellow indicates a condition in the middle of the range, with yellow green in the high mid ranges, and yellow red in the low mid ranges. Scores in the low range are assigned a sliding scale of red, with 0 assigned the deepest red.

FAILED CONDITION - 0 _____ EXCELLENT CONDITION -100

The table on the following page shows the PCS condition score of this park, along with the ACS condition score of each amenity within the park:

Ole Hammer Park	OVERALL CONDITION SCORE **41**	TOTAL ACRES: REPLACEMENT VALUE: **$ 197,500** REMAINING VALUE: **$ 81,874** SAFETY ISSUES: **0** FAILED COMPONENTS: **0**

B-3. Plan Types (Amenities and General Site)



Each line item in the cost database is assigned a Plan Type, which is the primary reason for the recommended replacement, repair, or other corrective action. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the best fit, typically the one with the greatest significance. See the *Purpose* description in the *Purpose and Scope* section for an explanation of Component Type.

Plan Type Descriptions		
Safety	■	An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk.
Performance/Integrity	■	Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.
Accessibility	■	Does not meet ADA, UFAS, and/or other accessibility requirements.
Environmental	■	Improvements to air, water, or soil quality, including removal of hazardous materials from the site.
Retrofit/Adaptation	■	Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.

Plan Type Descriptions

Lifecycle/Renewal	■	Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.

Plan Type Distribution (by Cost) – Timeframe 10 Years

B-4. Immediate Needs (Amenities and General Site)

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

BV did not identify any immediate needs associated with the amenities or general park areas at this site.

B-5. Key Findings (Amenities and General Site)

Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

The numerical scoring of condition as shown in the Key Findings is based on a 0-100 scale, as illustrated below:

- 0 - Replacement has none or very low impact on park operations
- 33 – Replacement has low impact on park operations
- 66 - Replacement has medium impact on park operation
- 100 - Failing, safety or code requirement component with high impact on park operations

Sidewalk in Poor condition.

Concrete, Small Areas/Sections
Ole Hammer Park Park

Uniformat Code: G2030
Recommendation: **Replace in 2025**

Priority Score: **85.8**

Plan Type:
Performance/Integrity

Cost Estimate: $14,900

**$$$**$

The concrete sidewalks show signs of wear, with cracks and displaced sections posing potential tripping hazards. To enhance safety, it's recommended to consider replacing these affected areas. - AssetCALC ID: 7193376

Drinking Fountain in Poor condition.

Site
Ole Hammer Park Park Center

Uniformat Code: D2010
Recommendation: **Replace in 2024**

Priority Score: **83.9**

Plan Type:
Performance/Integrity

Cost Estimate: $1,000

**$$**$$

The drinking fountain is aged and inoperable. - AssetCALC ID: 7193381

B-6. Playgrounds

Amenity B

Amenity Type	Playground		
Amenity Location	Park center		
Overall Condition	Fair		
Component	*Description*	*Quantity*	*Condition*
Play Structure	Multipurpose, Small	2 EA	Fair
Play Structure	Multipurpose, Medium	1 EA	Fair
Playground Surfaces	Rubber, Chips 3" Depth	3000 SF	Fair / etc
Key Issues and Findings	Absence of lighting		

B-7. Volleyball Court

Amenity C			
Amenity Type	Athletic Courts		
Amenity Location	Park East or Park Front Elevation		
Overall Condition	Fair

Playfield Surfaces	Sand, 3" Depth	3000 SF	Fair
Sports Apparatus	Volleyball, Net with Posts and Anchors	1 EA	Fair
Key Issues and Findings	Absence of lighting		

B-8. General Site

General Site			
Amenity Type	General SIte		
Amenity Location	Throughout park		
Overall Condition	Fair		
Component	*Description*	*Quantity*	*Condition*
Drinking Fountain	Site	1 EA	Poor
Park Bench	Precast Concrete	2 EA	Fair
Campground Accessories	Grill, Pedestal-Style	2 EA	Fair
Picnic Table	Wood	2 EA	Fair
Picnic Table	Precast Concrete	3 EA	Fair
Trash Receptacle	Medium-Duty Metal	4 EA	Fair
Bollard	Plastic	2 EA	Fair
Backflow Preventer	Domestic Water	1 EA	Fair

General Site

Portable Toilet	Ancillary Building	1 EA	Fair
Fences and Gates	Fence, Metal Tube 6'	20 LF	Fair
Sidewalk	Concrete, Large Areas	10000 SF	Fair
Sidewalk	Concrete, Small Areas	500 SF	Poor
Landscaping and Topography	Heavy landscaping features; irrigation present Low to moderate site slopes throughout		
Storm Water Management	Retention ponds		
Key Issues and Findings	Minor sidewalk cracking, absence of site lighting, malfunctioning drinking fountain		

C. Property Space Use and Observed Areas

Areas Observed

All key areas of the property were accessible and observed.

Key Spaces Not Observed

None.

D. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of "areas of public accommodations" and "public facilities" on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the checklists that are included in the Accessibility appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance.
- Only a representative sample of areas was observed.
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance.
- Itemized costs for individual non-compliant items are not included in the dataset.
- For any "none" boxes checked or reference to "no issues" identified, that alone does not guarantee full compliance.

Ole Hammer Park: Accessibility Summary

Facility	*Year Built/ Renovated*	*Prior Study Provided?*	*Major/Moderate Issues Observed?*
Playgrounds	2011	No	No
Volleyball Court	Unknown	No	No
General Site	1975	No	No

No information about complaints or pending litigation associated with potential accessibility issues was provided during the interview process.

The facility was originally constructed in 1975. The facility has not since been substantially renovated.

No costs or detailed follow-up study are currently recommended, as no potential accessibility issues were identified. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

E. Purpose and Scope

Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes construction systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of construction systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

Condition Ratings	
Excellent	New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Good	Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Fair	Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.
Poor	Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life.
Failed	Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.
Not Applicable	Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.

Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of existing systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Review maintenance records and procedures with the in-place maintenance personnel.
- Observe the exterior amenities of the property, including individual site elements. Building observations include interior areas, the significant mechanical, electrical and elevator equipment rooms, and roofs.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key facts about the portfolio.

F. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means, CBRE Whitestone,* and *Marshall & Swift,* Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

Definitions

Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Amenities and General Site and Facilities sections of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

G. Energy Audit

The purpose of this Energy Audit is to provide Ole Hammer Park with a baseline of energy usage, the relative energy efficiency of the facility, and specific recommendations for Energy Conservation Measures. Information obtained from these analyses may be used to support a future application to an Energy Conservation Program, Federal and Utility grants towards energy conservation, as well as support performance contracting, justify a municipal bond-funded improvement program, or as a basis for replacement of equipment or systems.

The park contains no energy-consuming features, therefore no energy conservation analysis was performed.

H. Certification

The City of Glendora (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Ole Hammer Park, 359 North Live Oak Avenue, Glendora, California 91741, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

Pre-Survey Questionnaire

BV FACILITY CONDITION ASSESSMENT: PRE-SURVEY QUESTIONNAIRE

Building / Facility Name: Ole Hammer Park

Name of person completing form: Michael Sledd

Title / Association w/ property: Assistant Director, Public Works / Oversee M+O

Length of time associated w/ property: 3yrs

Date Completed: 1/2/2024

Phone Number: (626) 224-3802

Method of Completion:

Directions: Please answer all questions to the best of your knowledge and in good faith. Please provide additional details in the Comments column, or backup documentation for any ***Yes*** responses.

	Data Overview	Response		
1	Year(s) constructed	Constructed: 1975	Renovated: 2011	
2	Building size in SF	73,325 SF		
3	Major Renovation/Rehabilitation		Year	Additional Detail
		Facade	NA	
		Roof	NA	
		Interiors	NA	
		HVAC	NA	
		Electrical		
		Site Pavement		
		Accessibility		
4	List other significant capital improvements (focus on recent years; provide approximate date).	Playground; 2011		
5	List any major capital expenditures planned/requested for the next few years. Have they been budgeted?	None at this time		
6	Describe any on-going extremely problematic, historically chronic, or immediate facility needs.	N/A		

Mark the column corresponding to the appropriate response. Please provide additional details in the Comments column, or backup documentation for any **Yes** responses. (**NA** indicates "*Not Applicable*", **Unk** indicates "*Unknown*")

	Question	Response				Comments
		Yes	No	Unk	NA	
7	Are there any problems with foundations or structures, like excessive settlement?				X	
8	Are there any wall, window, basement or roof leaks?				X	
9	Has any part of the facility ever contained visible suspect mold growth, or have there been any indoor air quality complaints?				X	
10	Are your elevators unreliable, with frequent service calls?				X	
11	Are there any plumbing leaks, water pressure, or clogging/backup issues?				X	
12	Have there been any leaks or pressure problems with natural gas, HVAC piping, or steam service?		X			
13	Are any areas of the facility inadequately heated, cooled or ventilated? Poorly insulated areas?				X	
14	Is the electrical service outdated, undersized, or problematic?					
15	Are there any problems or inadequacies with exterior lighting?				X	
16	Is site/parking drainage inadequate, with excessive ponding or other problems?				X	
17	Are there any other unresolved construction defects or significant issues/hazards at the property that have not yet been identified above?				X	
18	ADA: Has an accessibility study been previously performed? If so, when?		X			
19	ADA: Have any ADA improvements been made to the property since original construction? Describe.		X			
20	ADA: Has building management reported any accessibility-based complaints or litigation?		X			
21	Are any areas of the property leased to outside occupants?		X

Visual Checklist - 2010 ADA Standards for Accessible Design

Property Name: Ole Hammer Park

BV Project Number: 158691.23R000-031.379

Abbreviated Accessibility Checklist					
Facility History & Interview					
	Question	Yes	No	Unk	Comments
1	Has an accessibility study been previously performed? If so, when?		X		
2	Have any ADA improvements been made to the property since original construction? Describe.		X		
3	Has building management reported any accessibility-based complaints or litigation?		X		

Abbreviated Accessibility Checklist

Exterior Accessible Route

ACCESSIBLE PATH

2ND PATHWAY

	Question	Yes	No	NA	Comments
1	Is an accessible route present from public transportation stops and municipal sidewalks on or immediately adjacent to the property ?	X			
2	Does a minimum of one accessible route appear to connect all public areas on the exterior, such as parking and other outdoor amenities, to accessible building entrances ?	X			
3	Are curb ramps present at transitions through raised curbs on all accessible routes?			X	
4	Do curb ramps appear to have compliant slopes for all components ?			X	
5	Do ramp runs on an accessible route appear to have compliant slopes ?			X	
6	Do ramp runs on an accessible route appear to have a compliant rise and width ?			X	

7	Do ramps on an accessible route appear to have compliant end and intermediate landings ?			✕	
8	Do ramps and stairs on an accessible route appear to have compliant handrails?			✕	
9	For stairways that are open underneath, are permanent barriers present that prevent or discourage access?			✕	

Abbreviated Accessibility Checklist

Public Restrooms

RESTROOM ACCESSORIES

TOILET STALL OVERVIEW

	Question	Yes	No	NA	Comments
1	Do publicly accessible toilet rooms appear to have a minimum compliant floor area ?		X		Rented port-a-potty provided, not accessible type
2	Does the lavatory appear to be mounted at a compliant height and with compliant knee area ?			X	
3	Does the lavatory faucet have compliant handles ?			X	
4	Is the plumbing piping under lavatories configured to protect against contact ?			X	
5	Are grab bars provided at compliant locations around the toilet ?			X	
6	Do toilet stall doors appear to provide the minimum compliant clear width ?			X	

7	Do toilet stalls appear to provide the minimum compliant clear floor area ?			✕	
8	Where more than one urinal is present in a multi-user restroom, does minimum one urinal appear to be mounted at a compliant height and with compliant approach width ?			✕	
9	Do accessories and mirrors appear to be mounted at a compliant height ?			✕	

Abbreviated Accessibility Checklist

Playgrounds & Swimming Pools

PLAYGROUND SURFACE

ACCESSIBLE ROUTE TO PLAYGROUND

	Question	Yes	No	NA	Comments
1	Is there an accessible route to the play area / s?		X		Accessible surface does not extend to play equipment - poured play surface would provide accessibility
2	Has the play area been reviewed for accessibility ?		X		
3	Are publicly accessible swimming pools equipped with an entrance lift ?			X

Campus Findings and Deficiencies

Historical Summary

The Transportation Center Building and Garage were constructed in 1995. No recent renovations have been done at the property.

Architectural

The roofing at both buildings is original. The point of contact has reported a history of roof leaks that are repaired as they occur. Evidence of roof leaks was observed in the garage through the interior ceiling tears. Roof replacement is recommended in the near reserve term. Little to no cracking was observed on the exterior walls. However, the walls are stained in multiple locations and are recommended for repainting. According to the point of contact, there are no issues with building movement or settlement. Due to the age of the building though, routine maintenance checks on the foundation are recommended.

The interior finishes are replaced on an as needed basis. Typical lifecycle based interior and exterior finish replacements are budgeted and anticipated in the reserve term.

Mechanical, Electrical, Plumbing and Fire (MEPF)

The HVAC system consists of split system air conditioners and furnaces that are controlled by a programmable thermostat. The HVAC components are original and have aged extensively past their expected useful lives. Replacement with energy efficient units is recommended in the reserve term. The electrical system is controlled by a switchboard that also appears original. Domestic hot water is supplied by a gas storage tank water heater that was replaced in 2021 and is in good condition. Typical commercial plumbing fixtures are utilized in the restrooms. Fire suppression consists of fire extinguishers and nearby fire hydrants.

Site

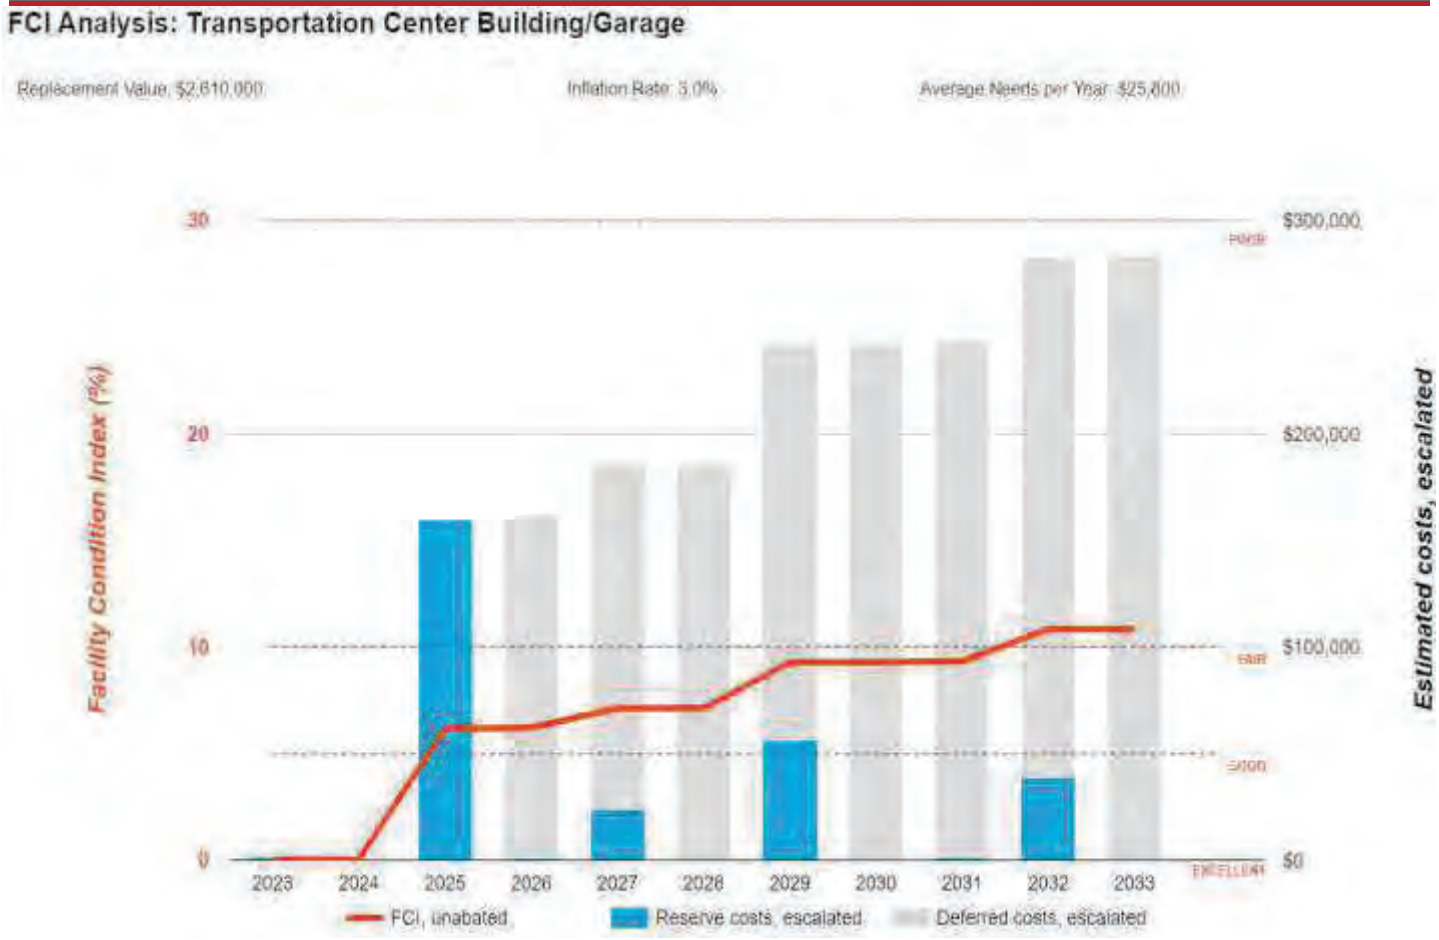
There is an asphalt parking lot in the front and a concrete lot at the side of the Transportation Center Building. The asphalt and concrete pavement are in overall fair condition with little to no areas of cracking. Site lighting appears to be adequate for the facility’s needs.

Recommended Additional Studies

No additional studies recommended at this time.

Facility Condition Index (FCI)

One of the major goals of the FCA is to calculate each building's Facility Condition Index (FCI), which provides a theoretical objective indication of a building's overall condition. By definition, the FCI is defined as the ratio of the cost of current needs divided by current replacement value (CRV) of the facility. The chart below presents the industry standard ranges and cut-off points.



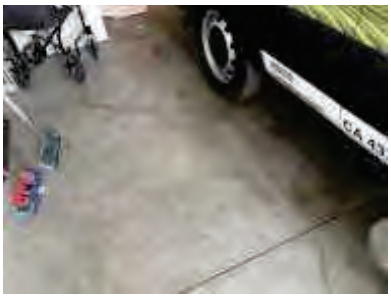
FCI Ranges and Description	
0 – 5%	In new or well-maintained condition, with little or no visual evidence of wear or deficiencies.
5 – 10%	Subjected to wear but is still in a serviceable and functioning condition.
10 – 30%	Subjected to hard or long-term wear. Nearing the end of its useful or serviceable life.
30% and above	Has reached the end of its useful or serviceable life. Renewal is now necessary.

The deficiencies and lifecycle needs identified in this assessment provide the basis for a portfolio-wide capital improvement funding strategy. In addition to the current FCI, extended FCI's have been developed to provide owners the intelligence needed to plan and budget for the "keep-up costs" for their facilities. As such the 3-year, 5-year, and 10-year FCI's are calculated by dividing the anticipated needs of those respective time periods by current replacement value. As a final point, the FCI's ultimately provide more value when used to relatively compare facilities across a portfolio instead of being over-analyzed and scrutinized as stand-alone values. The table below summarizes the individual findings for this FCA:

Facility (year built)	Cost/SF	Total SF	Replacement Value	Current	3-Year	5-Year	10-Year
Transportation Center Building/Garage / Garage (1995)	$375	1,090	$408,750	0.0%	11.2%	11.2%	15.6%
Transportation Center Building/Garage / Transportation Center Building (1995)	$700	3,256	$2,279,200	0.0%	5.1%	6.1%	8.8%

The vertical bars below represent the year-by-year needs identified for the site. The orange line in the graph below forecasts what would happen to the FCI (left Y axis) over time, assuming zero capital expenditures over the next ten years. The dollar amounts allocated for each year (blue bars) are associated with the values along the right Y axis.

Needs by Year with Unaddressed FCI Over Time



Immediate Needs

Facility/Building	Total Items	Total Cost

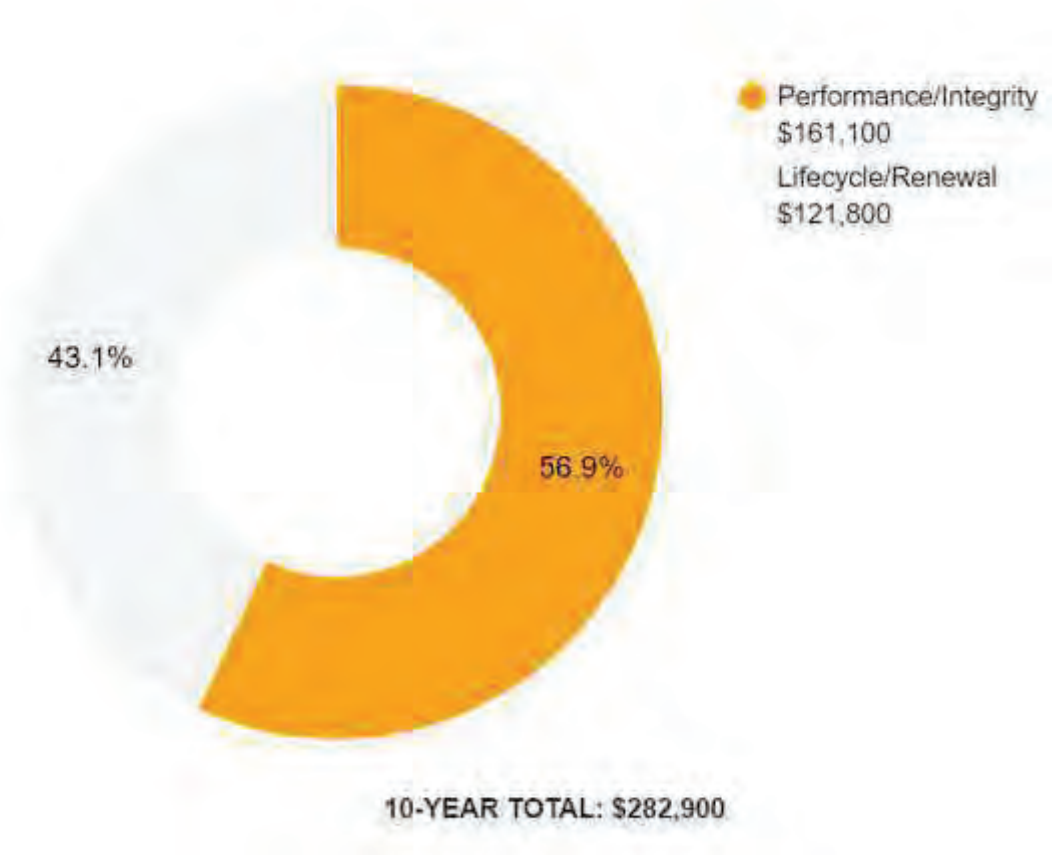
Ceiling tears caused by roof leaks - AssetCALC ID: 7169632



Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason or rationale for the recommended replacement, repair, or other corrective action. This is the "why" part of the equation. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the "best" fit, typically the one with the greatest significance.

Plan Type Descriptions

Safety	■	An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk.
Performance/Integrity	■	Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.
Accessibility	■	Does not meet ADA, UFAS, and/or other handicap accessibility requirements.
Environmental	■	Improvements to air or water quality, including removal of hazardous materials from the building or site.
Retrofit/Adaptation	■	Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.
Lifecycle/Renewal	■	Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.

Plan Type Distribution (by Cost)

2. Garage

Garage: Systems Summary		
Address	410 East Dalton Avenue, Glendora, California 91741	
Constructed/Renovated	1995	
Building Size	1,090 SF	
Number of Stories	One	
System	*Description*	*Condition*
Structure	Masonry bearing walls and steel framed roof	Good
Façade	Painted concrete and stone veneer	Poor
Roof	Gable construction with clay/concrete tiles	Poor
Interiors	Walls: Painted CMU Floors: Unfinished Ceilings: Painted gypsum board	Fair
Elevators	None	--
Plumbing	None	--
HVAC	None	--

Garage: Systems Summary

Fire Suppression	Hydrants, fire extinguishers	Fair
Electrical	Source and Distribution: Main panel with copper wiring Interior Lighting: HPS Emergency: none	Fair
Fire Alarm	Smoke detectors only	Fair
Equipment/Special	Electric vehicle charger	Fair
Accessibility	Presently it does not appear an accessibility study is needed for this property.	
Key Issues and Findings	Roof is aged and leaky, stained exterior walls, interior ceiling tears, concrete floor cracking	

Garage: Systems Expenditure Forecast

TOTALS (3% inflation)	**-**	**-**	**$1,200**	**$18,800**	**$63,200**	**$83,200**

*Totals have been rounded to the nearest $100.

5. Property Space Use and Observed Areas

Areas Observed

The interior spaces were observed in order to gain a clear understanding of the property's overall condition. Other areas accessed included the site within the property boundaries, and the exterior of the property.

Key Spaces Not Observed

All key areas of the property were accessible and observed.

6. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the checklists that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance
- Only a representative sample of areas was observed
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance
- Itemized costs for individual non-compliant items are not included in the dataset
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance

The facility was originally constructed in 1995. The facility has not since been substantially renovated.

During the interview process with the client representatives, no complaints or pending litigation associated with potential accessibility issues were reported.

No detailed follow-up accessibility study is currently recommended since no major or moderate issues were identified at the subject site. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

7. Purpose and Scope

Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

Condition Ratings	
Excellent	New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Good	Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Fair	Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.
Poor	Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life.
Failed	Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.
Not Applicable	Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.

Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Review maintenance records and procedures with the in-place maintenance personnel.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

8. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means, CBRE Whitestone,* and *Marshall & Swift,* Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

Definitions

Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

9. Energy Audit

The purpose of this Energy Audit is to provide Transportation Center Building/Garage with a baseline of energy usage, the relative energy efficiency of the facility, and specific recommendations for Energy Conservation Measures. Information obtained from these analyses may be used to support a future application to an Energy Conservation Program, Federal and Utility grants towards energy conservation, as well as support performance contracting, justify a municipal bond-funded improvement program, or as a basis for replacement of equipment or systems

The energy audit consisted of an onsite visual assessment to determine current conditions, itemize the energy consuming equipment (i.e. Boilers, Make-Up Air Units, DWH equipment); review lighting systems both exterior and interior; and review efficiency of all such equipment. The study also included interviews and consultation with operational and maintenance personnel. The following is a summary of the tasks and reporting that make up the Energy Audit portion of the report.

The following is a summary of the tasks and reporting that make up the Energy Audit portion of the report.

Energy and Water Using Equipment

- Bureau Veritas has surveyed the common areas, offices, maintenance facilities and mechanical rooms to document utility-related equipment, including heating systems, cooling systems, air handling systems and lighting systems.

Building Envelope

- Bureau Veritas has reviewed the characteristics and conditions of the building envelope, checking insulation values and conditions. This review also includes an inspection of the condition of walls, windows, doors, roof areas, insulation and special use areas. Where we anticipated significant losses, we utilized infrared thermographs to analyze heat loss across the envelope.

Recommendations for Energy Savings Opportunities

- Based on the information gathered during the on-site assessment, the utility rates, as well as recent consumption data and engineering analysis, Bureau Veritas has identified opportunities to save energy and provide probable construction costs, projected energy/utility savings and provide a simple payback analysis.

Analysis of Energy Consumption

- Based on the information gathered during the on-site assessment and a, Bureau Veritas has conducted an analysis of the energy usage of all equipment, and identified which equipment is using the most energy and what equipment upgrades may be necessary. As a result, equipment upgrades, or replacements are identified that may provide a reasonable return on the investment and improve maintenance reliability.

Energy Audit Process

- Interviewing staff and review plans and past upgrades
- Performing an energy audit for each use type
- Performing a preliminary evaluation of the utility system
- Analyzing findings, utilizing ECM cost-benefit worksheets
- Making preliminary recommendations for system energy improvements and measures
- Estimating initial cost and changes in operating and maintenance costs based on implementation of energy efficiency measures
- Ranking recommended cost measures, based on the criticality of the project and the largest payback

10. Historical Energy and Water Performance Metrics

Utility Data Tabulation Methodology

The baseline utility consumption data for the proper has been developed by aggregating the consumption from one electric meter, one gas meter, and one water meter.

Data Limitation:
No assumptions were made in tabulation of the utility data for the purposes of the audit.

The cost associated with the utility consumption at the building was not made available to Bureau Veritas at the time of report compilation. As a result, Bureau Veritas has modeled the approximate rate based on the utility company published tariff for commercial institutions. Bureau Veritas will update the report on receipt of the actual data from the client.

Utilities Metering at Glance	
Number of electric meters observed	One
Number of gas meters observed	One
Number of domestic water meter observed	One

Average Utility Rates		
Electricity	Natural Gas	Water and Sewer
$0.30/kWh	$2.24/therm	$8.36/CCF

Electricity

Note: No utility data was received by Bureau Veritas from the housing authority at the time of report compilation. As a result, Bureau Veritas has used the electric rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data from the housing authority.

Natural Gas

Note: No utility data was received by Bureau Veritas from the housing authority at the time of report compilation. As a result, Bureau Veritas has used the natural gas rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data from the housing authority.

Water and Sewer

The City of Glendora satisfies the water and sewer requirements of the facility.

Note: No water and sewer utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used a rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data.

End Use Energy Distribution

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas will complete end use energy distribution on receipt of the actual data from the client.

Energy Star Portfolio Manager Facility Summary

Bureau Veritas uses the Portfolio Manager tool developed by the Federal Environmental Protection Agency to track relative energy uses of buildings by property type. This tool allows the input of a facility's historic utility data to be compared with normalized data of a large database of its peer facilities.

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas will complete energy benchmarking on receipt of the actual data from the client.

11. Energy Conservation Measures

Bureau Veritas has conducted an Energy Audit on Transportation Center Building/Garage. The study included a review of the building's construction features, historical energy and water consumption and costs, review of the building envelope, HVAC equipment, heat distribution systems, lighting, and the building's operational and maintenance practices.

Bureau Veritas has evaluated four Energy Conservation Measures (ECMs) for this property. The savings for each measure are calculated using standard engineering methods followed in the industry, and detailed calculations for ECM are provided in Appendix H for reference. A 10% discount in energy savings was applied to account for the interactive effects amongst the ECMs. In addition to the consideration of the interactive effects, Bureau Veritas has applied a 15% contingency to the implementation costs to account for potential cost overruns during the implementation of the ECMs.

The following table summarizes the recommended ECMs in terms of description, investment cost, energy consumption reduction, and cost savings.

Recommended Non-Renewable Energy Conservation Measures: Financial Impact	
Total Projected Initial ECM Investment	$18,717 *(In Current Dollars)*
Estimated Annual Cost Savings Related to ECMs	$6,120 *(In Current Dollars)*
Net Effective ECM Payback	3.06 years

Key Metrics to Benchmark the Subject Property's Energy Usage Profile

- Building Site Energy Use Intensity - The sum of the total site energy use in thousands of Btu per unit of gross building area. Site energy accounts for all energy consumed at the building location only not the energy consumed during generation and transmission of the energy to the site.
- Building Source Energy Use Intensity – The sum of the total source energy use in thousands of Btu per unit of gross building area. Source energy is the energy consumed during generation and transmission in supplying the energy to your site.
- Building Cost Intensity - This metric is the sum of all energy use costs in dollars per unit of gross building area.
- Greenhouse Gas Emissions - Although there are numerous gases that are classified as contributors to the total for Greenhouse Emissions, the scope of this energy audit focuses on carbon dioxide (CO_2). Carbon dioxide enters the atmosphere through the burning of fossil fuels (oil, natural gas, and coal), solid waste, trees and wood products, and also as a result of other chemical reactions (e.g., manufacture of cement).

Energy Conservation Measures Screening:

Bureau Veritas screens ECMs using two financial methodologies. ECMs which are considered financially viable must meet both criteria.

1. Simple Payback Period –The number of years required for the cumulative value of energy or water cost savings less future non-fuel or non-water costs to equal the investment costs of the building energy or water system, without consideration of discount rates. ECMs with a payback period greater than the Expected Useful Life (EUL) of the project are not typically recommended, as the cost of the project will not be recovered during the lifespan of the equipment. These ECMs are recommended for implementation during future system replacement. At that time, replacement may be evaluated based on the premium cost of installing energy efficient equipment.

$$Simple\ Payback = \frac{Initial\ Cost}{Annual\ Savings}$$

2. Savings-to-Investment Ratio (SIR) – The savings-to-investment ratio is the ratio of the present value savings to the present value costs of an energy or water conservation measure. The numerator of the ratio is the present value over the estimated useful life (EUL) of net savings in energy or water and non-fuel or non-water operation and maintenance costs attributable to the proposed energy or water conservation measure. The denominator of the ratio is the present value of the net increase in investment and replacement costs less salvage value attributable to the proposed energy or water conservation measure. It is recommended that energy efficiency recommendations should be based on a calculated SIR, with larger SIRs receiving a higher priority. A project is typically only recommended if SIR is greater than or equal to 1.0, unless other factors outweigh the financial benefit.

$$SIR = \frac{Present\ Value\ (Annual\ Savings, i\%, EUL)}{Initial\ Cost}$$

Bureau Veritas has identified four Energy Conservation Measures (ECMs) for this property.

List of Recommended Energy Conservation Measures For Transportation Center Building/Garage

		Description of ECM	Location	Labor Cost	Material Cost	Projected Initial Investment	Utility Company Incentive	Net Projected Initial Investment	Estimated Annual Energy & Water Savings				Total Energy Savings	Total Green House Gas Savings	Estimated Utility Cost Savings	Estimated Annual O&M Savings	Total Estimated Annual Cost Savings	Simple Payback	S.I.R.	Life Cycle Savings	Expected Useful Life (EUL)
						(a)	(b)	C=(a-b)	Natural Gas	Electricity	Demand Reduction	Water									
				($)	($)	($)	($)	($)	(Therms)	(kWh)	(KW)	(kGal)	(Mmbtu)	($MtCO_2$/Yr)	($)	($)	($)	(Yrs.)		($)	(Yrs.)
1	Title:	Install Low Flow Faucet Aerators	Location: Transportation Center Building	$23	$24	$47	$0	$47	20	0	0	4	2	0.10	$44	$0	$93	0.51	16.78	$742	10.00

12. Operations & Maintenance Plan

The quality of the maintenance and the operation of the facility's energy systems have a direct effect on its overall energy efficiency. Energy-efficiency needs to be a consideration when implementing facility modifications, equipment replacements, and general corrective actions. The following is a list of activities that should be performed as part of the routine maintenance program for the property.

Building Envelope

- ✓ Ensure that the building envelope has proper caulking and weather stripping.
- ✓ Patch holes in the building envelope with foam insulation and fire rated caulk around combustion vents
- ✓ Inspect building vents semiannually for bird infestation
- ✓ Inspect windows monthly for damaged panes and failed thermal seals
- ✓ Repair and adjust automatic door closing mechanisms as needed.

Heating and Cooling

- ✓ Pilot lights on furnaces and boilers be turned off in summer
- ✓ All preventive maintenance should be performed on all furnaces and boilers, which would include cleaning of burners and heat exchanger tubes.
- ✓ Ensure that the combustion vents exhaust outside the conditioned space and the vent dampers are functional
- ✓ Ensure that the control valves are functioning properly before start of every season
- ✗ Ensure steam traps are functional before start of each heating season
- ✗ Ensure use of chemical treatment for boiler make up water
- ✗ Ensure boiler outside temperature re-set is set to 55F
- ✗ Ensure use of chemical treatment for cooling tower water to prevent corrosion
- ✓ Ensure the duct work in unconditioned space is un-compromised and well insulated
- ✓ Duct cleaning is recommended every 10 years. This should include sealing of ducts using products similar to 'aero-seal'
- ✓ Ensure use of economizer mode is functional and used
- ✓ Ensure that the outside air dampers actuators are operating correctly
- ✓ Ensure air coils in the AHU and FCA's are pressure washed annually
- ✓ Return vents should remain un-obstructed and be located centrally
- ✓ Temperature settings reduced in unoccupied areas and set points seasonally adjusted.
- ✓ Evaporator coils and condenser coils should be regularly cleaned to improve heat transfer
- ✓ Refrigerant pipes should be insulated with a minimum of ¾" thick Elastomeric Rubber Pipe Insulation
- ✓ Ensure refrigerant pressure is maintained in the condensers
- ✓ Change air filters on return vents seasonally. Use only filters with 'Minimum Efficiency Rating Value'(MERV) of 8

Central Domestic Hot Water Heater

- ✓ Never place gas fired water heaters adjacent to return vents so as to prevent flame roll outs
- ✓ Ensure the circulation system is on timer to reduce the losses through re-circulation
- ✓ Ensure all hot water pipes are insulated with fiberglass insulation at all times
- ✓ Replacement water heater should have Energy Factor (EF)>0.9

- ✓ Tank-type water heaters flushed annually.

Lighting Improvements

- ✓ Utilize bi-level lighting controls in stairwells and hallways.
- ✓ Use LED replacement lamps
- ✓ Clean lighting fixture reflective surfaces and translucent covers.
- ✓ Ensure that timers and/or photocells are operating correctly on exterior lighting
- ✓ Use occupancy sensors for offices and other rooms with infrequent occupancy

Existing Equipment and Replacements

- ✓ Ensure that refrigerator and freezer doors close and seal correctly
- ✓ Ensure kitchen and bathroom exhaust outside the building and the internal damper operates properly
- ✓ Ensure that bathroom vents exhaust out
- ✓ Office/ computer equipment either in the “sleep” or “off” mode when not used

Key

x	Maintenance Measure is Not Applicable For the Given Facility
✓	Maintenance Measure is Applicable For the Given Facility

13. Certification

The City of Glendora (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Transportation Center Building/Garage, 410 East Dalton Avenue, Glendora, California 91741, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

Energy Audit Glossary of Terms

Glossary of Terms and Acronyms

ECM – Energy Conservation Measures are projects recommended to reduce energy consumption. These can be No/Low cost items implemented as part of routine maintenance or Capital Cost items to be implemented as a capital improvement project.

Initial Investment – The estimated cost of implementing an ECM project. Estimates typically are based on R.S. Means Construction cost data and Industry Standards.

Annual Energy Savings – The reduction in energy consumption attributable to the implementation of a particular ECM. These savings values do not include the interactive effects of other ECMs.

Cost Savings – The expected reduction in utility or energy costs achieved through the corresponding reduction in energy consumption by implementation of an ECM.

Simple Payback Period –The number of years required for the cumulative value of energy or water cost savings less future non-fuel or non-water costs to equal the investment costs of the building energy or water system, without consideration of discount rates.

EUL – Expected Useful Life is the estimated lifespan of a typical piece of equipment based on industry accepted standards.

RUL – Remaining Useful Life is the EUL minus the effective age of the equipment and reflects the estimated number of operating years remaining for the item.

SIR - The savings-to-investment ratio is the ratio of the present value savings to the present value costs of an energy or water conservation measure. The numerator of the ratio is the present value of net savings in energy or water and non-fuel or non-water operation and maintenance costs attributable to the proposed energy or water conservation measure. The denominator of the ratio is the present value of the net increase in investment and replacement costs less salvage value attributable to the proposed energy or water conservation measure. It is recommended that energy-efficiency recommendations be based on a calculated SIR, with larger SIRs receiving a higher priority. A project typically is recommended only if the SIR is greater than or equal to 1.0, unless other factors outweigh the financial benefit.

Life Cycle Cost - The sum of the present values of (a) Investment costs, less salvage values at the end of the study period; (b) Non-fuel operation and maintenance costs: (c) Replacement costs less salvage costs of replaced building systems; and (d) Energy and/or water costs.

Life Cycle Savings – The sum of the estimated annual cost savings over the EUL of the recommended ECM, expressed in present value dollars.

Building Site Energy Use Intensity - The sum of the total site energy use in thousands of Btu per unit of gross building area. Site energy accounts for all energy consumed at the building location only not the energy consumed during generation and transmission of the energy to the site.

Building Source Energy Use Intensity – The sum of the total source energy use in thousands of Btu per unit of gross building area. Source energy is the energy consumed during generation and transmission in supplying the energy to your site.

Building Cost Intensity - This metric is the sum of all energy use costs in dollars per unit of gross building area.

Greenhouse Gas Emissions - Although there are numerous gases that are classified as contributors to the total for Greenhouse Emissions, the scope of this energy audit focuses on carbon dioxide (CO_2). Carbon dioxide enters the atmosphere through the burning of fossil fuels (oil, natural gas, and coal), solid waste, trees and wood products, and also as a result of other chemical reactions (e.g., manufacture of cement).

CLIENT DELIVERY: Please delete all pages from here going forward. These are internal notes for our PM's only.

Executive Summary Examples:

Example 1 (various):

Historical Summary

(STRAIGHTFORWARD EXAMPLE): The high school campus was originally constructed in 1977 and the gymnasium building was added in 2006. The original buildings were completely renovated at the time of the gymnasium construction.

Architectural

(STRAIGHTFORWARD EXAMPLE): The original buildings were completely renovated at the time of the gymnasium construction, including the exterior and interior finishes, as well as complete roof and window replacement. For all the buildings, only typical lifecycle interior finish, exterior finish, and roof membrane replacements are budgeted and anticipated.

(SLIGHTLY MORE ROBUST EXAMPLE): The three-story office building was constructed in 1987. The stucco façade was refinished in 2012 while the windows, storefront glazing, and roof are original. The roof membrane shows signs of significant wear, with evidence of leakage throughout the top floor, and requires replacement. The interior finishes have been regularly replaced during tenant change-overs and are generally the responsibility of the tenants. The lobby finishes are dated and budgeted for replacement.

The neighboring fire station was recently constructed in 2008. Only typical lifecycle interior finish, exterior finish, and roof membrane replacements are budgeted and anticipated.

Mechanical, Electrical, Plumbing & Fire (MEPF)

(STRAIGHTFORWARD EXAMPLE): Most MEPF systems and components are original to the 1999 campus construction and have been well-maintained since that time. Some HVAC and plumbing components such as pump motors and terminal units have required isolated replacements and are nearing the end of their anticipated lifecycles. The MEPF infrastructure itself is generally in good working condition with no major expenditures anticipated in the short term.

(COMPLICATED/HISTORICAL EXAMPLE): The original portion of the campus was supplied by steam generated from a dedicated central plant in the early 1960's. That plant was abandoned in 1992 when most HVAC systems were converted over to packaged rooftop units, with much-needed cooling capability provided. These RTU's are reportedly still functioning well but are nearing the end of their lifecycle. The newer buildings, Washington Hall (1997) and Jefferson Hall (1999), are served by local boiler and chiller plants feeding air handlers and VAV's. Major component replacements for those buildings are budgeted in the long term.

Although the HVAC systems of the older buildings were renovated in 1992 (per above), the rest of the MEPF infrastructure in those buildings has not; the electrical and (galvanized iron) plumbing systems are original and in dire need of replacement. In addition, these buildings lack fire suppression systems, and although each building is likely 'grandfathered' a full fire sprinkler system retrofit for each is highly recommended.

Site

(GENERALLY KEEP SITE SIMPLE): The parking lots and sidewalks have been periodically repaved and sectionally replaced as-needed over the years. The west parking lot has developed numerous potholes and heavy surface wear and should be milled and overlaid. The playgrounds and sport courts are generally in good condition.

Example 2 (portfolio: credit unions… VERY THOROUGH & ROBUST):

Historical Summary: The credit union facilities consist of a combination of single-story and multi-story branches and administrative offices. The facilities were constructed between 1960 and 2014. The majority of the older facilities have undergone partial or complete renovations since construction or acquisition.

Architectural: Almost all facilities consist of wood frame construction on concrete slabs with integral footings. In general, the structures appear to be sound, with no significant areas of settlement or structural-related deficiencies observed. Evidence of structural settlement was observed at the Redmond branch, which is potentially related to fuel-contaminated soil. The exterior envelope systems and components were observed to be performing adequately at the majority of the small-branch sites. Issues with the building envelope, such as roof leaks, wall leaks, failed glazing seals, deteriorated weatherstripping, and other deficiencies, were primarily observed at the older multi-story facilities. Additional studies as well as budgetary costs for repairs have been provided to address these issues. Interior finishes vary in age, and have been well maintained throughout the facilities. Finishes have been replaced as needed, and are anticipated for lifecycle replacement based on useful life and normal wear.

MEPF: The HVAC equipment varies in age throughout the sites. Individual systems, such as split-system furnaces and condensing units, as well as rooftop packaged units, are replaced as needed. The older, multi-story facilities mainly consist of central systems with water-source heat pumps or VAV units. These systems are generally older and are comprised of original equipment or components that are exceedingly aged. Climate control within both the smaller branch banks and larger branch/office buildings is reported to be oftentimes challenging. HVAC renovations, which include upgrade of antiquated and/or undersized equipment, are recommended for a significant portion of the facilities to improve comfort within the interior spaces.

In general, the plumbing systems are adequate to serve the facilities, with equipment and fixtures updated as needed. The domestic water service within the downtown facility is antiquated, with evidence of leaks observed at the domestic piping. The domestic hot water service at the downtown facility consists of original equipment and is inadequate. Lifecycle replacement of original domestic water and sanitary sewer systems is anticipated within the older facilities.

Electrical service equipment and systems are original for the majority of the facilities and are anticipated for lifecycle replacement within the older facilities. Interior lighting consists mainly of T-8 linear fluorescent and CFL fixtures and lamps, with LED upgrades in some areas.

The majority of the facilities are protected by a hard-wired fire alarm system. These systems vary in age, and some facilities lack strobes, pull stations, illuminated exit signs, emergency lighting, and other modern life safety devices. The fire alarm systems at Edmonds, Mukilteo, Everett, and Kent are very limited or nonexistent. Building wide fire suppression (sprinkler) systems were observed within the multi-story facilities only. Fire suppression is provided to the small branch banks by fire extinguishers and on-site fire hydrants. It is recommended that the bank branch buildings be retrofit with sprinkler systems for life-safety system modernization. The elevator machinery and controls within the Pacific Avenue and Downtown buildings are original to construction and should be considered for modernization in the near future.

Site: In general, the sites have been well maintained. The majority of the sites contain moderate to heavy landscaping, which are served by in-ground irrigation systems. The asphalt paved parking areas and drive aisles are well maintained as a result of frequent sealing and striping. A significant portion of the site lighting has been upgraded to LED, and it is recommended that the remaining lighting is upgraded to improve energy efficiency. A section of sanitary sewer line at Bothell is problematic and requires an additional study and repairs. An additional study and repairs are also required at the Edmonds branch related to the soil contamination and associated building settlement.

Recommended Additional Studies: 10 - Downtown: The POC identified locations of active wall leaks throughout the interior spaces. These leaks appear to be related to moisture penetration at the exterior concrete walls. Additionally, there is an active roof leak within the 1st floor executive conference room, which appears to be related to issues with the built-in gutter system. A professional consultant must be retained to analyze the existing condition, provide recommendations and, if necessary, estimate the scope and cost of any required repairs. The cost of this study is included in the cost tables. A budgetary cost allowance for associated repairs is also included.

14 - Edmonds: According to Point of Contact, there has been an issue with fuel oil contamination in the soil on the property due to a previous gas station or bus barn. There has been litigation and oil sampling which is due to expire. Currently there are two soil sample hole patches that have failed and are lifting due to possible soil water saturation. There is also a foundation settlement issue which is potentially related to the fuel-saturated soil. A professional consultant must be retained to analyze the existing condition, provide recommendations and, if necessary, estimate the scope and cost of any required repairs. The cost of this study is included in the cost tables. A budgetary cost allowance for associated repairs is also included.

Some areas of the facility were identified as having major or moderate accessibility issues. Bureau Veritas recommends a study be performed to take measurements, provide additional itemized details, research local requirements, and, if necessary, estimate the scope and cost of any required improvements. The cost of this study is included in the cost tables. Due to the lack of measurements and itemized findings at this point in time, the costs for any possible subsequent repairs or improvements are not currently included

Example 3 (campus: country club):

Historical Summary: The facility was original constructed in 1948 and was renovated in 2007. The fitness center was constructed in 2007 during the renovation of the original buildings and site.

Architectural: The buildings consist of wood framed construction on concrete slabs. The majority of the interior and exterior building components were replaced during the 2007 renovation. Renovations to the clubhouse kitchen and dining areas were performed in 2015. The exterior enclosures consist of painted wood siding, aluminum windows and main entry doors, and steel service doors. Roofs primarily consists of hip asphalt shingle assemblies, with flat modified bitumen and single-ply roofs at mechanical well locations. Standing water and deteriorated plywood siding were observed at the upper mechanical well roof of the Fitness Center. The majority of the interior finishes and fixtures were replaced in 2007 and are anticipated for lifecycle replacement. Renovation of the locker room interiors is anticipated for spring of 2019.

MEPF: The majority of the MEPF systems and components are original to the 2007 renovation and construction. Heating and cooling are provided by rooftop packaged units and split system furnaces and condensing units. There is an unsupported natural gas line at the packaged unit located at the upper mechanical well roof of the Fitness Center. Domestic hot water is provided by local domestic water heaters, a portion of which have been replaced since construction. A main switchboard located within the Pool Pump House distributes power to local main distribution panels located in each building. Buildings are protected by both fire alarm and fire sprinkler systems. Lifecycle replacement of the majority of the MEPF and pool equipment is anticipated.

Site: The site consists of both paved and unpaved parking areas. The asphalt paved parking lots and driveways have areas of surface cracking and heavy weathering throughout. The asphalt sidewalks are heavily deteriorated, with significant areas of cracking and uneven pavement. The majority of the site lighting consists of energy inefficient metal halide and high-pressure sodium fixtures and lamps. Isolated areas of the concrete pool decking are cracked and spalled. The mortar joints at the pool copings are deteriorated and separating. The concrete bleachers at Pool 1 are heavily deteriorated.

Example 4 (campus: country club):

Historical Summary: The Old House was originally a farmhouse built in 1936 and the facility was converted to a country club with a golf course when the Main Clubhouse was constructed in 1956. The golf and tennis pro shops were erected during the 1970's and the fitness center and maintenance building were recently added in 2001 during a significant renovation of the entire facility.

Architectural: Short term recommendations include replacement of the original antiquated windows at the Old House and replacements of the aged and leaky roofs at the Old House as well as the tennis and golf pro shops. In the basement of the Main Clubhouse, there are water intrusion issues and associated rusting of steel joists and metal decking that need to be further investigated and addressed. The warped and dry-rotted wood window and door trim of the Main Clubhouse should also be replaced. For all the buildings, typical lifecycle replacements of the interior and exterior finishes are budgeted and anticipated.

MEPF: The MEPF systems and infrastructure vary significantly in age; while some components were replaced and upgraded during the 2001 renovations, many remain older, with some still original to the construction dates of each building. Most boilers, furnaces, rooftop units, and split systems are dated 1990 and newer, but many air handlers are older and are in need of refurbishment or replacement. Most piping is original, and the 1970 galvanized iron found in the Golf Pro Shop is particularly concerning and recommended for replacement. The facility's electrical infrastructure is considered somewhat aged but still functional, with the most significant shortcoming being the lack of emergency power. Since management reports occasional outages, installation of an emergency generator is recommended. With the exception of the Main Clubhouse and Fitness Center, all other buildings would benefit from a refresh of the fire alarm systems in addition to fire suppression system retrofits (currently lacking).

Site: As an active country club facility renovated in 2001, most of the pavement and site features range from good to fair condition, generally correlating with age. There are limited areas of paving exhibiting extensive cracking, with the worst areas in the service yard, within the dumpster area, and along some of the concrete golf course paths. The chain link fencing throughout the golf course has numerous failing sections. In terms of accessibility upgrades, the site stairs and ramp serving the Main Clubhouse appear to require an update to achieve compliance.

Example 5 (campus: senior residential… VERY THOROUGH & ROBUST):

Historical Summary: The site was developed as a senior residential community around 1963. Three of the original casita buildings remain from the original development. In the 2000's a major improvement project was initiated, during which the large multi-resident buildings were constructed, including the 1000, 5000 and 6000 independent living buildings, the 7000 assisted living building, and the 8000 skilled nursing building. The other large multi-resident building, 3000, was built circa the 1990's. Improvements to the clubhouse/administration buildings and the Pavilion were also undertaken in the 2000's. The Yoshi Center is the newest building, dating from 2013. This historical information was obtained from the Maricopa County Assessor's records and from historical aerial photographs in addition to information provided by property management.

Architectural: As the majority of the buildings are fifteen years old or newer, few components in these buildings have required replacement. Excellent maintenance practices have kept the buildings in good condition, but some components are beginning to show wear and are approaching the end of their expected lifespan. The older buildings have been well maintained, with components and finishes replaced regularly as needed. Roofs on the older and newer buildings have been recoated with a reflective foam coating within recent years except for 5000 and 6000; on 6000, the cap sheet is wearing, and roof coating will be required in the short term. Most exterior and interior finishes are in better condition than would be expected for their ages. The windows on the 3000 building are older aluminum-clad wood and are separating, binding, and hard to close; some have been replaced, but the rest will require replacement in the short term. No other significant problems were observed. Typical lifecycle based interior and exterior finish replacements are budgeted and anticipated. The cost tables include common area building items only; finishes and building components within resident rooms, and site improvements other than the pool, were excluded from this assessment.

MEPF: The HVAC systems generally consist of rooftop package units or split systems, with auxiliary systems that include ductless split systems, rooftop exhaust fans, and evaporative coolers. The 8000 building has a central cooling system with two rooftop chillers. The chillers were included in this assessment, and were reported to have had some pipe leaks, as well as having had the system controls and two circulating pumps replaced. The other HVAC equipment was not evaluated during this assessment.

The electrical systems in the older buildings were replaced in the early 2000's, as evidenced by manufacture dates on the electrical panels, and the building electrical systems appeared to be overall in fair condition. Although most of the elevators are not excessively aged, they reportedly require weekly service calls. Bureau Veritas recommends an elevator consultant be retained to evaluate the elevators to determine the source of problems and recommend further repairs or replacement. The elevator cab finishes appear to be generally in fair condition, except that the interior cab panels in the 7000 building elevators are scratched.

Plumbing systems generally consist of copper supply piping and cast iron waste pipe. The 3000 building reportedly has PVC/ABS piping. Both electric and natural gas water heaters are present, and most water heaters had a manufacture date of 2011 or later. The casita buildings reportedly have galvanized water supply piping and cast iron waste piping, and there are some problems with leaking supply pipes and clogged drain lines. Due to the age and condition of the plumbing systems in these older buildings, replacement is recommended. No other major issues were observed or reported.

The fire alarm and suppression systems appear to be in fair condition. Inspection tags are current. Typical lifecycle replacements and ongoing maintenance will be required.

Site: Site maintenance appears to be excellent, and site improvements and landscaping are generally in good condition. Sidewalks are free of cracks and heaving, and asphalt pavement has been regularly maintained with seal coating and striping, with only a few areas of significant cracking in the main parking lot. The swimming pool however is about 25 years old and is deteriorating, with persistent problems of crumbling plaster, and replacement is recommended.

Campus Overview and Assessment Details

General Information	
Property Type	Recreation
Number of Buildings	Two
Main Address	435 and 437 East Dalton Avenue, Glendora, California 91741
Site Developed	Rotary Scout Hut: 1965 Youth Center: 1965
Current Occupants	City of Glendora
Date(s) of Visit	December 14, 2023
Management Point of Contact	City of Glendora, Ryan Hacecky, Facilities Maintenance Supervisor 626.672.6306 rhacecky@cityofglendora.org
On-site Point of Contact (POC)	same as above
Assessment and Report Prepared By	Carl Alejandro
Reviewed By	Usama Anwar Technical Report Reviewer For Mary Venable Program Manager mary.venable@bureauveritas.com 800.733.0660 x7292719

Campus Findings and Deficiencies

Historical Summary

The Finkbiner Park Rotary Scout Hut and Youth Center buildings were originally constructed in 1965.

Architectural

The roofs of the Rotary Scout Hut and Youth Center are both sloped and have asphalt shingle finishes. There are no reported or observed roof leaks at the Rotary Scout Hut. The Youth Center has had roof leaks in the past, but they have since been repaired. The roof fascia has also been weathered and deteriorated. Roof replacement is recommended in the reserve term. The exterior walls of the Rotary Scout Hut exhibited little to no areas of cracking. The Youth Center exterior walls appear to be painted regularly. However, Isolated areas of brick cracking and a hole exposing wiring were observed on the brick veneer walls. Repair of the damaged areas is recommended. Minor stucco cracking near the windows was also observed and recommended for repair as part of the routine maintenance program. According to the point of contact, there are no issues with building movement or settlement. However, due to the age of the buildings, routine maintenance checks on the foundation are recommended.

The interior finishes are replaced on an as needed basis and appear to be regularly maintained. At the Youth Center, the ceiling tiles in the kitchen area have been damaged by roof leaks. Typical lifecycle based interior and exterior finish replacements are anticipated and budgeted in the reserve term.

Mechanical, Electrical, Plumbing and Fire (MEPF)

Both buildings are conditioned by split systems. The Youth Center HVAC system also consists of a packaged unit and thru-wall air conditioners. The HVAC components are all mostly aged but still functioning. One of the thru-wall air conditioners has damaged fins and is recommended for replacement. According to the point of contact, programmable thermostats are used at both buildings.

The electrical system is controlled by main distribution panels located in each building. Lighting in the Youth Center was upgraded with LED fixtures.

Domestic hot water is supplied by gas storage tank water heaters. The water heater in the Scout Hut appears to have been replaced in 2018, and the unit at the Youth Center was installed in 2001. Replacement for both water heaters is expected in the reserve term. Typical commercial plumbing fixtures are utilized in the restrooms.

Fire suppression consists of fire extinguishers and nearby fire hydrants. Smoke detectors are used in both buildings.

Site

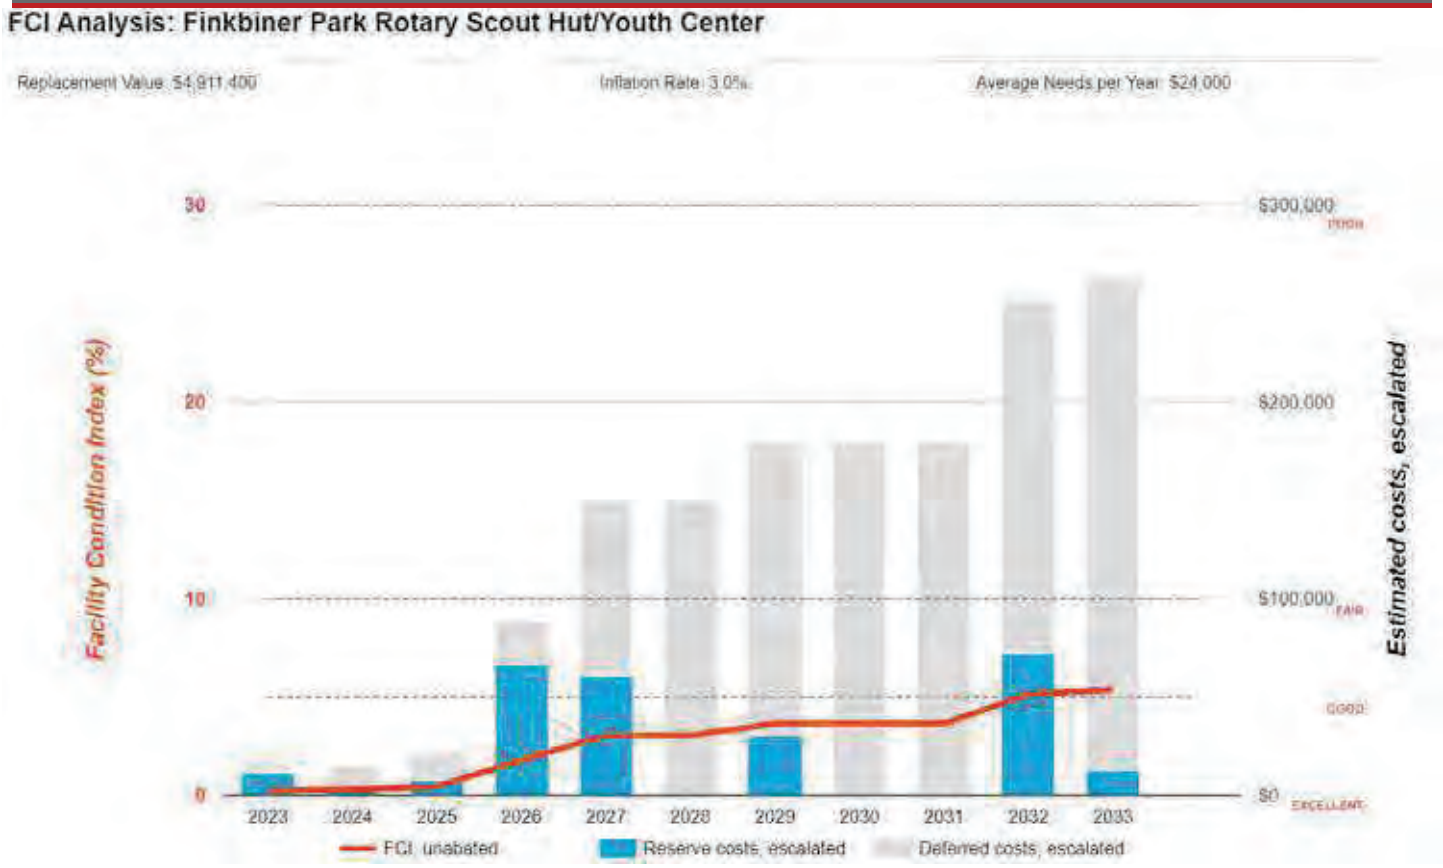
Site elements for Rotary Scout Hut and Youth Center were assessed as part of the Finkbiner Park Facilities report (158691.23R000.014.379).

Recommended Additional Studies

No additional studies recommended at this time.

Facility Condition Index (FCI)

One of the major goals of the FCA is to calculate each building's Facility Condition Index (FCI), which provides a theoretical objective indication of a building's overall condition. By definition, the FCI is defined as the ratio of the cost of current needs divided by current replacement value (CRV) of the facility. The chart below presents the industry standard ranges and cut-off points.



FCI Ranges and Description	
0 – 5%	In new or well-maintained condition, with little or no visual evidence of wear or deficiencies.
5 – 10%	Subjected to wear but is still in a serviceable and functioning condition.
10 – 30%	Subjected to hard or long-term wear. Nearing the end of its useful or serviceable life.
30% and above	Has reached the end of its useful or serviceable life. Renewal is now necessary.

The deficiencies and lifecycle needs identified in this assessment provide the basis for a portfolio-wide capital improvement funding strategy. In addition to the current FCI, extended FCI's have been developed to provide owners the intelligence needed to plan and budget for the "keep-up costs" for their facilities. As such the 3-year, 5-year, and 10-year FCI's are calculated by dividing the anticipated needs of those respective time periods by current replacement value. As a final point, the FCI's ultimately provide more value when used to relatively compare facilities across a portfolio instead of being over-analyzed and scrutinized as stand-alone values. The table below summarizes the individual findings for this FCA:

Facility (year built)	Cost/SF	Total SF	Replacement Value	Current	3-Year	5-Year	10-Year
Finkbiner Park Rotary Scout Hut/Youth Center / Rotary Scout Hut (1965)	$650	2,956	$1,921,400	0.0%	1.3%	1.3%	4.1%
Finkbiner Park Rotary Scout Hut/Youth Center / Youth Center (1965)	$650	4,600	$2,990,000	0.4%	2.1%	4.1%	6.2%

The vertical bars below represent the year-by-year needs identified for the site. The orange line in the graph below forecasts what would happen to the FCI (left Y axis) over time, assuming zero capital expenditures over the next ten years. The dollar amounts allocated for each year (blue bars) are associated with the values along the right Y axis.

Needs by Year with Unaddressed FCI Over Time

Immediate Needs

Facility/Building	Total Items	Total Cost

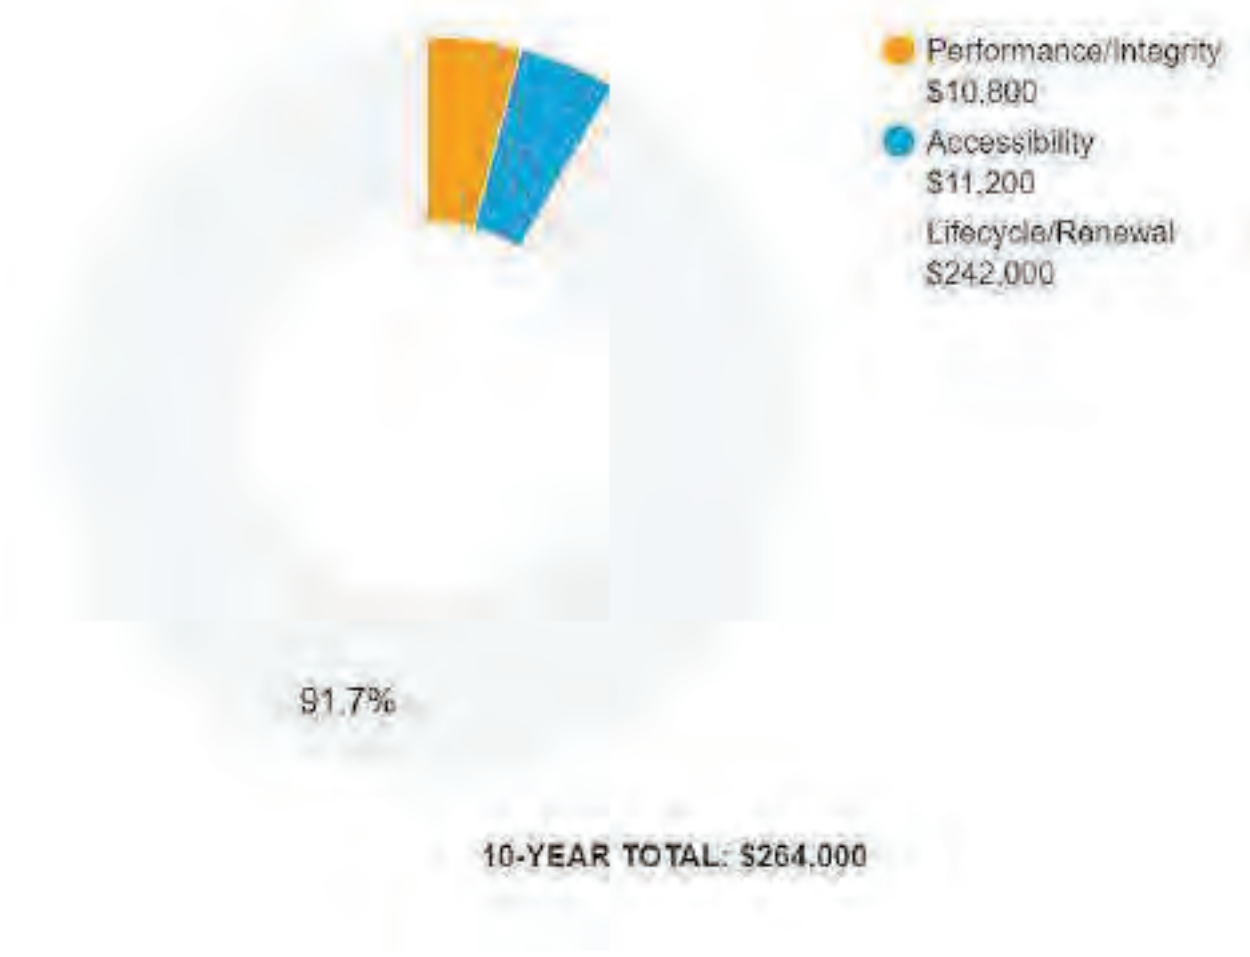
Ceiling leak in kitchen. Tiles are falling off - AssetCALC ID: 7181069



Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason or rationale for the recommended replacement, repair, or other corrective action. This is the "why" part of the equation. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the "best" fit, typically the one with the greatest significance.

Plan Type Descriptions		
Safety	■	An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk.
Performance/Integrity	■	Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.
Accessibility	■	Does not meet ADA, UFAS, and/or other handicap accessibility requirements.
Environmental	■	Improvements to air or water quality, including removal of hazardous materials from the building or site.
Retrofit/Adaptation	■	Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.
Lifecycle/Renewal	■	Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.

*Totals have been rounded to the nearest $100.

The orange line in the graph below forecasts what would happen to the FCI (left axis) over time, assuming zero capital expenditures. The capital expenditures for each year (blue bars) are associated with the dollar amounts along the right Y axis.

Needs by Year with Unaddressed FCI Over Time

4. Site Summary

Site Information

Lot Size	0.56 acres (estimated)	
Parking Spaces	57 total spaces all in open lots; one of which is accessible	
S ste	*escription*	*Con ition*
Pavement/Flatwork	Asphalt lots with areas of concrete and concrete sidewalks and curbs	Fair
Site Development	Building mounted signage	Fair
Landscaping and Topography	Moderate landscaping features Irrigation present Low to moderate site slopes throughout	Fair
Utilities	Municipal water and sewer Local utility-provided electric and natural gas	Good
Site Lighting	Pole-mounted: LED Building-mounted: LED	Fair
Ancillary Structures	None	--
Accessibility	Presently it does not appear an accessibility study is needed for the exterior site areas. See Appendix C.	
Key Issues and Findings	Issues addressed in Finkbiner Park Facilities report (158691.23R000-014.379)	

Note: Site assets collected as part of Finkbiner Park Facilities report (158691.23R000-014.379)

5. Property Space Use and Observed Areas

Areas Observed

The interior spaces were observed in order to gain a clear understanding of the property's overall condition. Other areas accessed included the site within the property boundaries and the exterior of the property.

Key Spaces Not Observed

All key areas of the property were accessible and observed.

6. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of "areas of public accommodations" and "public facilities" on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the checklists that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance
- Only a representative sample of areas was observed
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance
- Itemized costs for individual non-compliant items are not included in the dataset
- For any "none" boxes checked or reference to "no issues" identified, that alone does not guarantee full compliance

The facility was originally constructed in 1965. The facility has not since been substantially renovated.

During the interview process with the client representatives, no complaints or pending litigation associated with potential accessibility issues were reported.

A detailed follow-up accessibility study is included as a recommendation because potential moderate to major issues were observed at the subject site. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

7. Purpose and Scope

Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

Condition Ratings	
Excellent	New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Good	Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Fair	Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.
Poor	Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life.
Failed	Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.
Not Applicable	Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.

Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Review maintenance records and procedures with the in-place maintenance personnel.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

8. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *S eans C itestone* and *ars all Swift* Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

Definitions

Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safet* or *Perfor ance ntegrit* Plan Types, are considered Immediate Needs.

Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effecti e age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

9. Energy Audit

The purpose of this Energy Audit is to provide Finkbiner Park Rotary Scout Hut/Youth Center with a baseline of energy usage, the relative energy efficiency of the facility, and specific recommendations for Energy Conservation Measures. Information obtained from these analyses may be used to support a future application to an Energy Conservation Program, Federal and Utility grants towards energy conservation, as well as support performance contracting, justify a municipal bond-funded improvement program, or as a basis for replacement of equipment or systems

The energy audit consisted of an onsite visual assessment to determine current conditions, itemize the energy consuming equipment (i.e. Boilers, Make-Up Air Units, DWH equipment); review lighting systems both exterior and interior; and review efficiency of all such equipment. The study also included interviews and consultation with operational and maintenance personnel. The following is a summary of the tasks and reporting that make up the Energy Audit portion of the report.

The following is a summary of the tasks and reporting that make up the Energy Audit portion of the report.

Energy and Water Using Equipment

- Bureau Veritas has surveyed the common areas, offices, maintenance facilities and mechanical rooms to document utility-related equipment, including heating systems, cooling systems, air handling systems and lighting systems.

Building Envelope

- Bureau Veritas has reviewed the characteristics and conditions of the building envelope, checking insulation values and conditions. This review also includes an inspection of the condition of walls, windows, doors, roof areas, insulation and special use areas. Where we anticipated significant losses, we utilized infrared thermographs to analyze heat loss across the envelope.

Recommendations for Energy Savings Opportunities

- Based on the information gathered during the on-site assessment, the utility rates, as well as recent consumption data and engineering analysis, Bureau Veritas has identified opportunities to save energy and provide probable construction costs, projected energy/utility savings and provide a simple payback analysis.

Analysis of Energy Consumption

- Based on the information gathered during the on-site assessment and a, Bureau Veritas has conducted an analysis of the energy usage of all equipment, and identified which equipment is using the most energy and what equipment upgrades may be necessary. As a result, equipment upgrades, or replacements are identified that may provide a reasonable return on the investment and improve maintenance reliability.

Energy Audit Process

- Interviewing staff and review plans and past upgrades
- Performing an energy audit for each use type
- Performing a preliminary evaluation of the utility system
- Analyzing findings, utilizing ECM cost-benefit worksheets
- Making preliminary recommendations for system energy improvements and measures
- Estimating initial cost and changes in operating and maintenance costs based on implementation of energy efficiency measures
- Ranking recommended cost measures, based on the criticality of the project and the largest payback

10. Historical Energy and Water Performance Metrics

Utility Data Tabulation Methodology

The baseline utility consumption data for the proper has been developed by aggregating the consumption from two electric meters, two gas meters, and two water meters.

Data Limitation:
No assumptions were made in tabulation of the utility data for the purposes of the audit.

The cost associated with the utility consumption at the building was not made available to Bureau Veritas at the time of report compilation. As a result, Bureau Veritas has modeled the approximate rate based on the utility company published tariff for commercial institutions. Bureau Veritas will update the report on receipt of the actual data from the client.

Utilities Metering at Glance	
Number of electric meters observed	Two
Number of gas meters observed	Two
Number of domestic water meter observed	Two

Average Utility Rates		
Electricity	Natural Gas	Water & Sewer
$0.30/kWh	$2.24/therm	$8.36/CCF

Electricity

Note: No utility data was received by Bureau Veritas from the housing authority at the time of report compilation. As a result, Bureau Veritas has used the electric rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data from the housing authority.

Natural Gas

Note: No utility data was received by Bureau Veritas from the housing authority at the time of report compilation. As a result, Bureau Veritas has used the natural gas rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data from the housing authority.

Water and Sewer

The City of Glendora satisfies the water and sewer requirements of the facility.

Note: No water and sewer utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used a rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data.

End Use Energy Distribution

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas will complete end use energy distribution on receipt of the actual data from the client.

Energy Star Portfolio Manager Facility Summary

Bureau Veritas uses the Portfolio Manager tool developed by the Federal Environmental Protection Agency to track relative energy uses of buildings by property type. This tool allows the input of a facility's historic utility data to be compared with normalized data of a large database of its peer facilities.

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas will complete energy benchmarking on receipt of the actual data from the client.

11. Energy Conservation Measures

Bureau Veritas has conducted an Energy Audit on Finkbiner Park Rotary Scout Hut/Youth Center. The study included a review of the building's construction features, historical energy and water consumption and costs, review of the building envelope, HVAC equipment, heat distribution systems, lighting, and the building's operational and maintenance practices.

Bureau Veritas has evaluated five Energy Conservation Measures (ECMs) for this property. The savings for each measure are calculated using standard engineering methods followed in the industry, and detailed calculations for ECM are provided in Appendix H for reference. A 10% discount in energy savings was applied to account for the interactive effects amongst the ECMs. In addition to the consideration of the interactive effects, Bureau Veritas has applied a 15% contingency to the implementation costs to account for potential cost overruns during the implementation of the ECMs.

The following table summarizes the recommended ECMs in terms of description, investment cost, energy consumption reduction, and cost savings.

Recommended Non-Renewable Energy Conservation Measures: Financial Impact	
Total Projected Initial ECM Investment	$33,235 *n Current ollars*
Estimated Annual Cost Savings Related to ECMs	$6,854 *n Current ollars*
Net Effective ECM Payback	4.85 years

Key Metrics to Benchmark the Subject Property's Energy Usage Profile

- Building Site Energy Use Intensity - The sum of the total site energy use in thousands of Btu per unit of gross building area. Site energy accounts for all energy consumed at the building location only not the energy consumed during generation and transmission of the energy to the site.
- Building Source Energy Use Intensity – The sum of the total source energy use in thousands of Btu per unit of gross building area. Source energy is the energy consumed during generation and transmission in supplying the energy to your site.
- Building Cost Intensity - This metric is the sum of all energy use costs in dollars per unit of gross building area.
- Greenhouse Gas Emissions - Although there are numerous gases that are classified as contributors to the total for Greenhouse Emissions, the scope of this energy audit focuses on carbon dioxide (CO_2). Carbon dioxide enters the atmosphere through the burning of fossil fuels (oil, natural gas, and coal), solid waste, trees and wood products, and also as a result of other chemical reactions (e.g., manufacture of cement).

Energy Conservation Measures Screening:

Bureau Veritas screens ECMs using two financial methodologies. ECMs which are considered financially viable must meet both criteria.

1. Simple Payback Period –The number of years required for the cumulative value of energy or water cost savings less future non-fuel or non-water costs to equal the investment costs of the building energy or water system, without consideration of discount rates. ECMs with a payback period greater than the Expected Useful Life (EUL) of the project are not typically recommended, as the cost of the project will not be recovered during the lifespan of the equipment. These ECMs are recommended for implementation during future system replacement. At that time, replacement may be evaluated based on the premium cost of installing energy efficient equipment.

$$Simple\ Payback = \frac{Initial\ Cost}{Annual\ Savings}$$

2. Savings-to-Investment Ratio (SIR) – The savings-to-investment ratio is the ratio of the present value savings to the present value costs of an energy or water conservation measure. The numerator of the ratio is the present value over the estimated useful life (EUL) of net savings in energy or water and non-fuel or non-water operation and maintenance costs attributable to the proposed energy or water conservation measure. The denominator of the ratio is the present value of the net increase in investment and replacement costs less salvage value attributable to the proposed energy or water conservation measure. It is recommended that energy efficiency recommendations should be based on a calculated SIR, with larger SIRs receiving a higher priority. A project is typically only recommended if SIR is greater than or equal to 1.0, unless other factors outweigh the financial benefit.

$$SIR = \frac{Present\ Value\ (Annual\ Savings, i\%, EUL)}{Initial\ Cost}$$

Bureau Veritas has identified five Energy Conservation Measures (ECMs) for this property.

List of Recommended Energy Conservation Measures For Finkbiner Park Rotary Scout Hut/Youth Center

		Description of ECM	Location	Labor Cost	Material Cost	Projected Initial Investment	Utility Company Incentive	Net Projected Initial Investment	Estimated Annual Energy & Water Savings				Total Energy Savings	Total Green House Gas Savings	Estimated Utility Cost Savings	Estimated Annual O&M Savings	Total Estimated Annual Cost Savings	Simple Payback	S.I.R. 12. Operations & Maintenance Plan

The quality of the maintenance and the operation of the facility's energy systems have a direct effect on its overall energy efficiency. Energy-efficiency needs to be a consideration when implementing facility modifications, equipment replacements, and general corrective actions. The following is a list of activities that should be performed as part of the routine maintenance program for the property.

Building Envelope

- ✓ Ensure that the building envelope has proper caulking and weather stripping.
- ✓ Patch holes in the building envelope with foam insulation and fire rated caulk around combustion vents
- ✓ Inspect building vents semiannually for bird infestation
- ✓ Inspect windows monthly for damaged panes and failed thermal seals
- ✗ Repair and adjust automatic door closing mechanisms as needed.

Heating and Cooling

- ✓ Pilots lights on furnaces and boilers be turned off in summer
- ✓ All preventive maintenance should be performed on all furnaces and boilers, which would include cleaning of burners and heat exchanger tubes.
- ✓ Ensure that the combustion vents exhaust outside the conditioned space and the vent dampers are functional
- ✓ Ensure that the control valves are functioning properly before start of every season
- ✗ Ensure steam traps are functional before start of each heating season
- ✗ Ensure use of chemical treatment for boiler make up water
- ✗ Ensure boiler outside temperature re-set is set to 55F
- ✗ Ensure use of chemical treatment for cooling tower water to prevent corrosion
- ✓ Ensure the duct work in unconditioned space is un-compromised and well insulated
- ✓ Duct cleaning is recommended every 10 years. This should include sealing of ducts using products similar to 'aero-seal'
- ✓ Ensure use of economizer mode is functional and used
- ✓ Ensure that the outside air dampers actuators are operating correctly
- ✓ Ensure air coils in the AHU and FCA's are pressure washed annually
- ✓ Return vents should remain un-obstructed and be located centrally
- ✓ Temperature settings reduced in unoccupied areas and set points seasonally adjusted.
- ✓ Evaporator coils and condenser coils should be regularly cleaned to improve heat transfer
- ✓ Refrigerant pipes should be insulated with a minimum of ¾" thick Elastomeric Rubber Pipe Insulation
- ✓ Ensure refrigerant pressure is maintained in the condensers
- ✓ Change air filters on return vents seasonally. Use only filters with 'Minimum Efficiency Rating Value'(MERV) of 8

Central Domestic Hot Water Heater

- ✓ Never place gas fired water heaters adjacent to return vents so as to prevent flame roll outs
- ✓ Ensure the circulation system is on timer to reduce the losses through re-circulation
- ✓ Ensure all hot water pipes are insulated with fiberglass insulation at all times
- ✓ Replacement water heater should have Energy Factor (EF)>0.9
- ✓ Tank-type water heaters flushed monthly

Lighting Improvements

- ✓ Utilize bi-level lighting controls in stairwells and hallways.
- ✓ Use LED replacement lamps
- ✓ Clean lighting fixture reflective surfaces and translucent covers.
- ✓ Ensure that timers and/or photocells are operating correctly on exterior lighting
- ✓ Use occupancy sensors for offices and other rooms with infrequent occupancy

Existing Equipment and Replacements

- ✓ Ensure that refrigerator and freezer doors close and seal correctly
- ✓ Ensure kitchen and bathroom exhaust outside the building and the internal damper operates properly
- ✓ Ensure that bathroom vents exhaust out
- ✓ Office/ computer equipment either in the “sleep” or “off” mode when not used

13. Certification

The City of Glendora (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Finkbiner Park Rotary Scout Hut/Youth Center, 435 and 437 East Dalton Avenue, Glendora, California 91741, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose an Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

Abbreviated Accessibility Checklist					
Facility History & Interview					
Question		Yes	No	Unk	Comments
1	Has an accessibility study been previously performed? If so, when?			X	
2	Have any ADA improvements been made to the property since original construction? Describe.			X	
3	Has building management reported any accessibility-based complaints or litigation?		X		

Abbreviated Accessibility Checklist

Parking

OVERVIEW OF ACCESSIBLE PARKING AREA

CLOSE-UP OF STALL

	Question	Yes	No	NA	Comments
1	Does the required number of standard ADA designated spaces appear to be provided ?	X			
2	Does the required number of van-accessible designated spaces appear to be provided ?		X		
3	Are accessible spaces on the shortest accessible route to an accessible building entrance ?	X			
4	Does parking signage include the International Symbol of Accessibility ?	X			
5	Does each accessible space have an adjacent access aisle ?	X			
6	Do parking spaces and access aisles appear to be relatively level and without obstruction ?		X		Cracking at ADA space observed

Abbreviated Accessibility Checklist

Exterior Accessible Route

ACCESSIBLE RAMP

CURB CUT

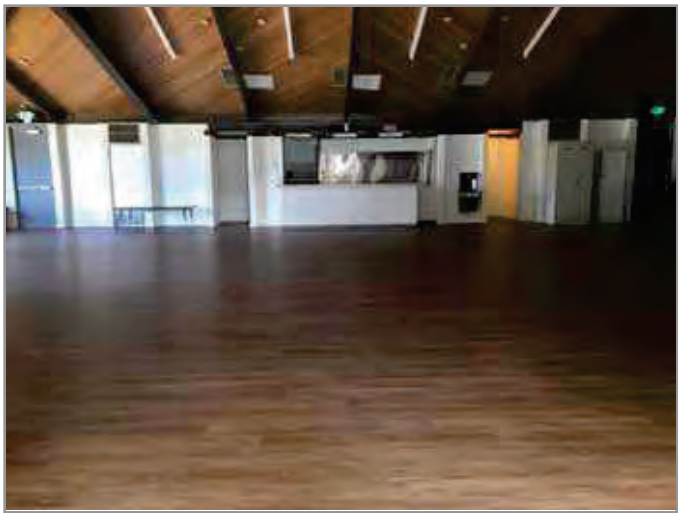
	Question	Yes	No	NA	Comments
1	Is an accessible route present from public transportation stops and municipal sidewalks on or immediately adjacent to the property ?	X			
2	Does a minimum of one accessible route appear to connect all public areas on the exterior, such as parking and other outdoor amenities, to accessible building entrances ?	X			
3	Are curb ramps present at transitions through raised curbs on all accessible routes?	X			
4	Do curb ramps appear to have compliant slopes for all components ?	X			
5	Do ramp runs on an accessible route appear to have compliant slopes ?	X			
6	Do ramp runs on an accessible route appear to have a compliant rise and width ?	X			

7	Do ramps on an accessible route appear to have compliant end and intermediate landings ?	X			
8	Do ramps and stairs on an accessible route appear to have compliant handrails?	X			
9	For stairways that are open underneath, are permanent barriers present that prevent or discourage access?			X	

Abbreviated Accessibility Checklist

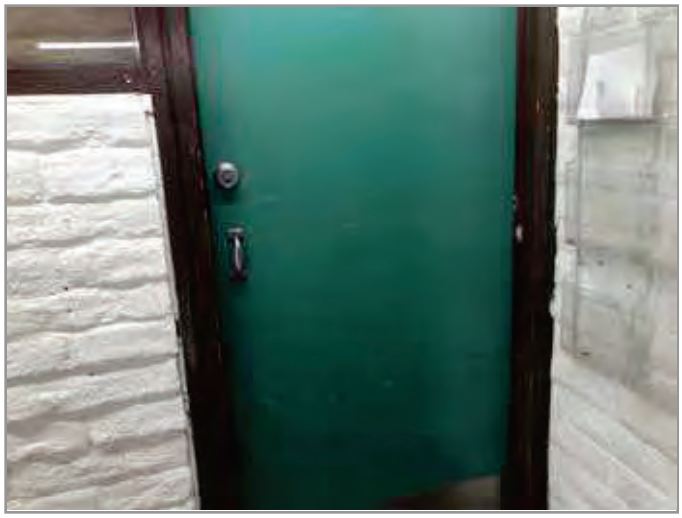
Building Entrances

MAIN ENTRANCE



DOOR HARDWARE

	Question	Yes	No	NA	Comments
1	Do a sufficient number of accessible entrances appear to be provided ?	X			
2	If the main entrance is not accessible, is an alternate accessible entrance provided?			X	
3	Is signage provided indicating the location of alternate accessible entrances ?			X	
4	Do doors at accessible entrances appear to have compliant maneuvering clearance area on each side ?	X			
5	Do doors at accessible entrances appear to have compliant hardware ?	X			
6	Do doors at accessible entrances appear to have a compliant clear opening width ?	X			



7	Do pairs of accessible entrance doors in series appear to have the minimum clear space between them ?			X	
8	Do thresholds at accessible entrances appear to have a compliant height ?	X			

Abbreviated Accessibility Checklist

Interior Accessible Route

ACCESSIBLE INTERIOR PATH

DOOR HARDWARE

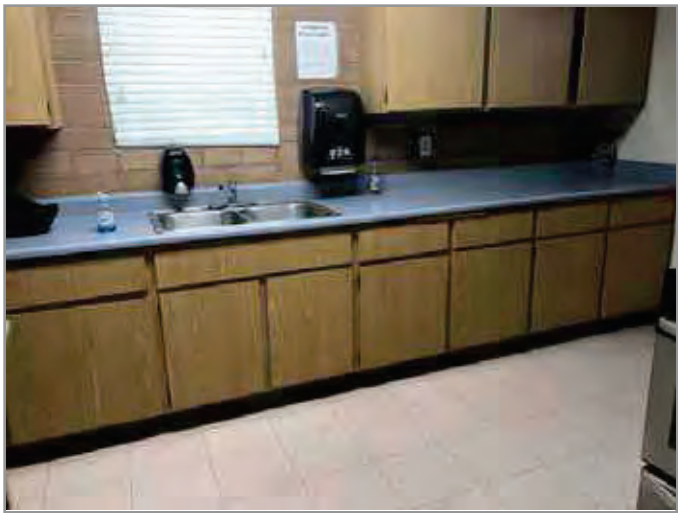
	Question	Yes	No	NA	Comments
1	Does an accessible route appear to connect all public areas inside the building ?	X			
2	Do accessible routes appear free of obstructions and/or protruding objects ?	X			
3	Do ramps on accessible routes appear to have compliant slopes ?			X	
4	Do ramp runs on an accessible route appear to have a compliant rise and width ?			X	
5	Do ramps on accessible routes appear to have compliant end and intermediate landings ?			X	
6	Do ramps on accessible routes appear to have compliant handrails ?			X	

7	Are accessible areas of refuge and the accessible means of egress to those areas identified with accessible signage ?			X	
8	Do public transaction areas have an accessible, lowered service counter section ?			X	
9	Do public telephones appear mounted with an accessible height and location ?			X	
10	Do doors at interior accessible routes appear to have compliant maneuvering clearance area on each side ?	X			
11	Do doors at interior accessible routes appear to have compliant hardware ?	X			
12	Do non-fire hinged, sliding, or folding doors on interior accessible routes appear to have compliant opening force ?	X			
13	Do doors on interior accessible routes appear to have a compliant clear opening width ?	X			

Abbreviated Accessibility Checklist

Public Restrooms

TOILET STALL OVERVIEW



SINK, FAUCET HANDLES AND ACCESSORIES

	Question	Yes	No	NA	Comments
1	Do publicly accessible toilet rooms appear to have a minimum compliant floor area ?		X		No accessible toilets in Youth Center
2	Does the lavatory appear to be mounted at a compliant height and with compliant knee area ?	X			
3	Does the lavatory faucet have compliant handles ?	X			
4	Is the plumbing piping under lavatories configured to protect against contact ?		X		
5	Are grab bars provided at compliant locations around the toilet ?		X		Not in Youth Center
6	Do toilet stall doors appear to provide the minimum compliant clear width ?		X		Not in Youth Center

7	Do toilet stalls appear to provide the minimum compliant clear floor area ?		X		Not in Youth Center
8	Where more than one urinal is present in a multi-user restroom, does minimum one urinal appear to be mounted at a compliant height and with compliant approach width ?			X	
9	Do accessories and mirrors appear to be mounted at a compliant height ?	X			

Abbreviated Accessibility Checklist

Kitchens/Kitchenettes

KITCHEN OVERVIEW

OVEN WITH CONTROLS

	Question	Yes	No	NA	Comments
1	Do kitchens/kitchenettes appear to have a minimum compliant path of travel or area of maneuverability ?	X			
2	Are the appliances centered for a parallel or forward approach with adequate clear floor space ?	X			
3	Is there an accessible countertop/preparation space of proper width and height ?	X			
4	Is there an accessible sink space of proper width and height ?	X			
5	Does the sink faucet have compliant handles ?	X			
6	Is the plumbing piping under the sink configured to protect against contact ?	X			

7	Are the cooktop/range controls front-mounted (or in a location that does not require reaching across the burners) ?	X

ECM EXPLANATION:

By reducing the flow of water coming from the restroom faucets, aerators can generate energy savings at low cost and with easy installation. The savings generated would be in the form of reduced water and sewer costs and at the same time aerators would save energy by reducing the demand for hot water. The average faucet has a flow rate of about 2 to 4 GPM. Adding a screw-in faucet aerator reduces the flow to 0.5 to 1.5 GPM in the bathroom and 2.2 GPM in the kitchen. In addition to saving energy and water, the "foamier" water that comes from faucet aerators wets objects better than water from a faucet with no aerator, which tends to bounce off the object rather than thoroughly wetting it.

BV recommends replacing the proposed faucet aerators with new low flow aerators as mentioned above. The proposed ECM shall also result in an annual energy saving in form of reduction in water heating bills.

ECM EXPLANATION:

The highest water utilization at any home/office occurs in the restrooms. It is estimated that on an average a normal human being uses the restroom at least four times a day. Keeping with the global water conservation objectives, federal law prohibits use of any new water closet flushes over 1.6 GPF.

Existing toilets can be retrofitted with pressure-assisted flush technology to reduce the flush rate to 1.0 GPF or less. Though water efficient these toilets make considerable amount of noise as this involves release of pressurized air during the course of flushing. Thus making them unpopular among residential properties.

Thus BV recommends replacing the existing high flow toilets with new low flow 1.28GPF rated flush tank toilets, which are comparatively more water efficient at the same time considerably quiter as compared to the pressure assisted technology retrofitted toilets.

ECM EXPLANATION:

The highest water utilization at any home/office occurs in the restrooms. It is estimated that on an average a normal human being uses the restroom at least four times a day. Keeping with the global water conservation objectives, federal law prohibits use of any new water closet flushes over 1.6 GPF. At the same time the '1992 EpACT' mandates all new Urinals to have a maximum 1.0 GPF flush valves on urinals.

BV recommends replacing all urinals above 1.0 GPF with a new 0.5 GPF or lesser urinals. At the same time BV also recommends replacing all the water closets having a GPF rating of 1.6 and over with low flow water closet fixtures equipped with dual flush valves.

In case the property doesn't wish to replace the entire water closet fixtures, BV recommends retrofitting all the tankless water closet flush fixtures with new dual flush fixtures that would result in a 30% water savings per flush for liquid wastes, while retaining the same flush rate for solid wastes.

ECM DESCRIPTION:

Advances in compressor and condenser technology have allowed for the development of more efficient air conditioning systems. As a result cooling can be provided at the same rate, with a lower energy input. Energy efficiency ratio (EER) is the ratio of cooling output to power input. Seasonal energy efficiency ratio (SEER) is an adjusted figure based on the length of the cooling season. A higher EER or SEER indicates a more efficient unit which can provide the same cooling capacity while consuming less energy. The minimum standard for air conditioner performance in most areas is currently 13 SEER as required

BV recommends replacing all the identified air conditioners with the new proposed high efficiency air conditioners as mentioned above.

Summary:

Initial Investment: $26,382 Simple Payback: 4.28 Yrs

Energy Cost Savings: $6,167

Appendix J:
Energy Audit Glossary of Terms

Glossary of Terms and Acronyms

ECM – Energy Conservation Measures are projects recommended to reduce energy consumption. These can be No/Low cost items implemented as part of routine maintenance or Capital Cost items to be implemented as a capital improvement project.

Initial Investment – The estimated cost of implementing an ECM project. Estimates typically are based on R.S. Means Construction cost data and Industry Standards.

Annual Energy Savings – The reduction in energy consumption attributable to the implementation of a particular ECM. These savings values do not include the interactive effects of other ECMs.

Cost Savings – The expected reduction in utility or energy costs achieved through the corresponding reduction in energy consumption by implementation of an ECM.

Simple Payback Period –The number of years required for the cumulative value of energy or water cost savings less future non-fuel or non-water costs to equal the investment costs of the building energy or water system, without consideration of discount rates.

EUL – Expected Useful Life is the estimated lifespan of a typical piece of equipment based on industry accepted standards.

RUL – Remaining Useful Life is the EUL minus the effective age of the equipment and reflects the estimated number of operating years remaining for the item.

SIR - The savings-to-investment ratio is the ratio of the present value savings to the present value costs of an energy or water conservation measure. The numerator of the ratio is the present value of net savings in energy or water and non-fuel or non-water operation and maintenance costs attributable to the proposed energy or water conservation measure. The denominator of the ratio is the present value of the net increase in investment and replacement costs less salvage value attributable to the proposed energy or water conservation measure. It is recommended that energy-efficiency recommendations be based on a calculated SIR, with larger SIRs receiving a higher priority. A project typically is recommended only if the SIR is greater than or equal to 1.0, unless other factors outweigh the financial benefit.

Life Cycle Cost - The sum of the present values of (a) **I**nvestment costs, less salvage values at the end of the study period; (b) Non-fuel operation and maintenance costs: (c) Replacement costs less salvage costs of replaced building systems; and (d) Energy and/or water costs.

Life Cycle Savings – The sum of the estimated annual cost savings over the EUL of the recommended ECM, expressed in present value dollars.

Building Site Energy Use Intensity - The sum of the total site energy use in thousands of Btu per unit of gross building area. Site energy accounts for all energy consumed at the building location only not the energy consumed during generation and transmission of the energy to the site.

Building Source Energy Use Intensity – The sum of the total source energy use in thousands of Btu per unit of gross building area. Source energy is the energy consumed during generation and transmission in supplying the energy to your site.

Building Cost Intensity - This metric is the sum of all energy use costs in dollars per unit of gross building area.

Greenhouse Gas Emissions - Although there are numerous gases that are classified as contributors to the total for Greenhouse Emissions, the scope of this energy audit focuses on carbon dioxide (CO_2). Carbon dioxide enters the atmosphere through the burning of fossil fuels (oil, natural gas, and coal), solid waste, trees and wood products, and also as a result of other chemical reactions (e.g., manufacture of cement).

Campus Findings and Deficiencies

Historical Summary

The Corporate Yard Office/Garage/Locker Building property was originally constructed in 1965.

Architectural

The roof on the Locker Building appears to be in overall fair condition with no reported roof leaks. Little to no areas of exterior wall cracking were observed on the Locker Building. The roof on the Office/Garage Building appears to be quite aged and deteriorated. Roof replacement is expected during the reserve term. Exterior wall paint chipping and cracking were observed in isolated locations around the building. According to the point of contact, there have been no issues with building movement or settlement. However, due to the age of the buildings, routine maintenance checks on the foundation are recommended.

The interior finishes are replaced on an as needed basis. A few small areas of interior wall cracking were observed in the garage and are recommended for repair. Typical lifecycle based interior and exterior finish replacements are recommended during the reserve term.

Mechanical, Electrical, Plumbing and Fire (MEPF)

Heating is provided in the Locker Building by a wall mounted furnace and in the Office/Garage Building by suspended unit heaters and. Cooling is provided by thru wall air conditioners. The HVAC components appear to be in adequate working condition. The electrical systems are controlled by main distribution panels. The panel in the Locker Building was replaced in 2020. Lighting was upgraded in the garage with LED fixtures. Domestic hot water is supplied only in the Locker Building by a storage tank water heater. The water heater was replaced in 2018. Fire suppression consists of individual fire extinguishers.

Site

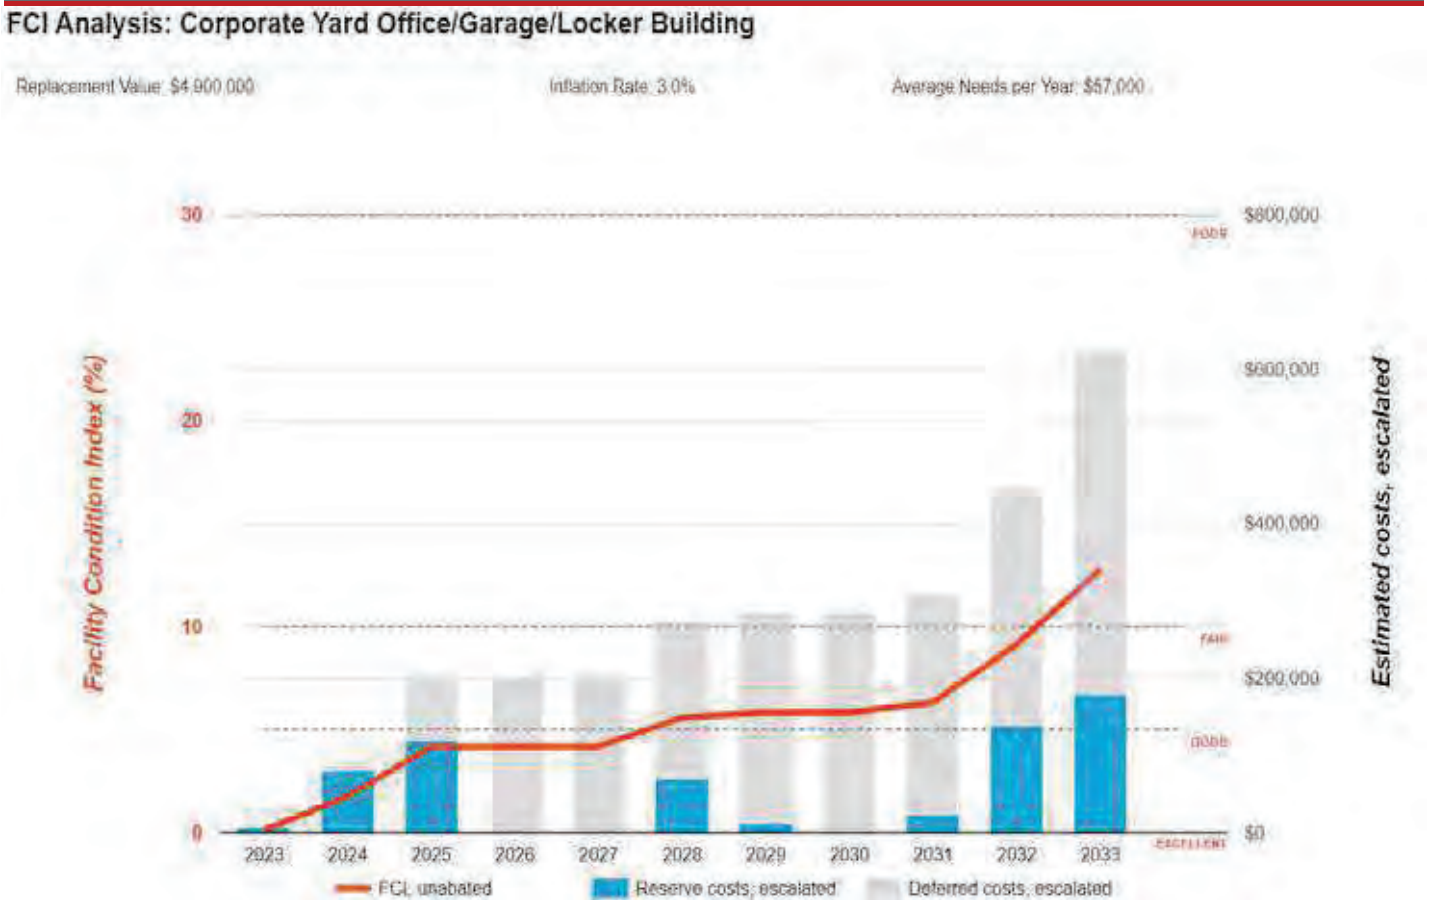
The asphalt pavement has significant areas of alligator cracking. There is also a linear crack on the concrete pavement between the Office/Garage Building and the Locker Building. Repair/replacement of the pavement is recommended. Site lighting appears to be adequate for the facility’s needs.

Recommended Additional Studies

No additional studies recommended at this time.

Facility Condition Index (FCI)

One of the major goals of the FCA is to calculate each building's Facility Condition Index (FCI), which provides a theoretical objective indication of a building's overall condition. By definition, the FCI is defined as the ratio of the cost of current needs divided by current replacement value (CRV) of the facility. The chart below presents the industry standard ranges and cut-off points.



FCI Ranges and Description	
0 – 5%	In new or well-maintained condition, with little or no visual evidence of wear or deficiencies.
5 – 10%	Subjected to wear but is still in a serviceable and functioning condition.
10 – 30%	Subjected to hard or long-term wear. Nearing the end of its useful or serviceable life.
30% and above	Has reached the end of its useful or serviceable life. Renewal is now necessary.

The deficiencies and lifecycle needs identified in this assessment provide the basis for a portfolio-wide capital improvement funding strategy. In addition to the current FCI, extended FCI's have been developed to provide owners the intelligence needed to plan and budget for the "keep-up costs" for their facilities. As such the 3-year, 5-year, and 10-year FCI's are calculated by dividing the anticipated needs of those respective time periods by current replacement value. As a final point, the FCI's ultimately provide more value when used to relatively compare facilities across a portfolio instead of being over-analyzed and scrutinized as stand-alone values. The table below summarizes the individual findings for this FCA:

Facility (year built)	Cost/SF	Total SF	Replacement Value	Current	3-Year	5-Year	10-Year
Corporate Yard Office/Garage/Locker Building / Locker Building	$700	1,500	$1,050,000	0.0%	0.0%	2.4%	11.6%
Corporate Yard Office/Garage/Locker Building / Office/Garage	$700	5,500	$3,850,000	0.1%	3.2%	4.3%	10.1%

The vertical bars below represent the year-by-year needs identified for the site. The orange line in the graph below forecasts what would happen to the FCI (left Y axis) over time, assuming zero capital expenditures over the next ten years. The dollar amounts allocated for each year (blue bars) are associated with the values along the right Y axis.

Needs by Year with Unaddressed FCI Over Time

Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason or rationale for the recommended replacement, repair, or other corrective action. This is the "why" part of the equation. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the "best" fit, typically the one with the greatest significance.

Plan Type Descriptions		
Safety	■	An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk.
Performance/Integrity	■	Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.
Accessibility	■	Does not meet ADA, UFAS, and/or other handicap accessibility requirements.
Environmental	■	Improvements to air or water quality, including removal of hazardous materials from the building or site.
Retrofit/Adaptation	■	Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.
Lifecycle/Renewal	■	Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.

Plan Type Distribution (by Cost)

2. Locker Building

Locker Building: Systems Summary

Address	440 South Loraine Avenue; Glendora, California	
Constructed/Renovated	1965	
Building Size	1,500 SF	
Number of Stories	One	
S ste	*escription*	*Con ition*
Structure	Masonry bearing walls with metal framed roof	Good
Façade	Painted CMU with vinyl windows	Fair
Roof	Gable construction with metal finish	Fair
Interiors	Walls: Painted drywall Floors: Vinyl sheeting, ceramic tile Ceilings: Painted drywall, wood paneling and ACT	Fair
Elevators	None	--
Plumbing	Copper supply and cast iron waste and venting Gas water heater Toilets, urinals, and sinks in the restrooms	Fair
HVAC	Individual thru wall air conditioners and furnace	Fair

Locker Building: Systems Summary

Fire Suppression	Fire extinguishers only	Fair
Electrical	Source and Distribution: Fed from Paint & Sign Shop with copper wiring Interior Lighting: T-8, T-12 Emergency: none	Fair
Fire Alarm	Smoke detectors	Fair
Equipment/Special	None	--
Accessibility	Presently it does not appear an accessibility study is needed for this property.	
Key Issues and Findings	No key issues observed

Needs by Year with Unaddressed FCI Over Time

4. Site Summary

Site Information

Lot Size	3.40 acres (estimated)	
Parking Spaces	35 total spaces all in open lots; one of which is accessible	
S ste	*escription*	*Con ition*
Pavement/Flatwork	Asphalt lots with areas of concrete	Poor
Site Development	Building-mounted signage, CMU wall fencing	Fair
Landscaping and Topography	No significant landscaping features Irrigation not present Low to moderate site slopes throughout	Fair
Utilities	Municipal water and sewer Local utility-provided electric	Good
Site Lighting	Building-mounted: LED	Fair
Ancillary Structures	None	--
Accessibility	Presently it does not appear an accessibility study is needed for the exterior site areas. See Appendix C.	
Key Issues and Findings	Severe asphalt alligator cracking, concrete pavement cracking	

Site: Systems Expenditure Forecast

System	Immediate	Short Term (1-2 yr)	Near Term (3-5 yr)	Med Term (6-10 yr)	Long Term (11-20 yr)	TOTAL
Fire Alarm & Electronic Systems	-	-	-	$17,000	-	$17,000
Site Development	-	-	$2,100	$1,200	-	$3,300
Site Pavement	$1,500	$80,400	-	$12,000	$30,000	$123,900
TOTALS (3% inflation)	**$1,500**	**$80,400**	**$2,100**	**$30,100**	**$30,000**	**$144,100**

*Totals have been rounded to the nearest $100.

5. Property Space Use and Observed Areas

Areas Observed

The interior spaces were observed in order to gain a clear understanding of the property's overall condition. Other areas accessed included the site within the property boundaries and the exterior of the property.

Key Spaces Not Observed

All key areas of the property were accessible and observed.

6. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of "areas of public accommodations" and "public facilities" on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e., city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities.
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the checklists that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance
- Only a representative sample of areas was observed
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance
- Itemized costs for individual non-compliant items are not included in the dataset
- For any "none" boxes checked or reference to "no issues" identified, that alone does not guarantee full compliance

The facility was originally constructed in 1965. The facility has not since been substantially renovated.

During the interview process with the client representatives, no complaints or pending litigation associated with potential accessibility issues was reported.

No costs or detailed follow-up study are currently recommended since this facility is not accessible to the general public, and all workers presently employed at the facility are required to possess a degree of physical ability that makes full compliance infeasible and currently unnecessary. Accessibility accommodations will reportedly be made when and if specific needs arise. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

7. Purpose and Scope

Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

Condition Ratings	
Excellent	New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Good	Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Fair	Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.
Poor	Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life.
Failed	Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.
Not Applicable	Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.

Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include a review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Review maintenance records and procedures with the in-place maintenance personnel.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

8. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *S eans C itestone* and *ars all Swift* Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

Definitions

Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safet* or *Perfor ance ntegrit* Plan Types, are considered Immediate Needs.

Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning the system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effecti e age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

9. Energy Audit

The purpose of this Energy Audit is to provide Corporate Yard Office/Garage/Locker Building with a baseline of energy usage, the relative energy efficiency of the facility, and specific recommendations for Energy Conservation Measures. Information obtained from these analyses may be used to support a future application to an Energy Conservation Program, Federal and Utility grants towards energy conservation, as well as support performance contracting, justify a municipal bond-funded improvement program, or as a basis for replacement of equipment or systems

The energy audit consisted of an onsite visual assessment to determine current conditions, itemize the energy consuming equipment (i.e. Boilers, Make-Up Air Units, DWH equipment); review lighting systems both exterior and interior; and review efficiency of all such equipment. The study also included interviews and consultation with operational and maintenance personnel. The following is a summary of the tasks and reporting that make up the Energy Audit portion of the report.

The following is a summary of the tasks and reporting that make up the Energy Audit portion of the report.

Energy and Water Using Equipment

- Bureau Veritas has surveyed the common areas, offices, maintenance facilities and mechanical rooms to document utility-related equipment, including heating systems, cooling systems, air handling systems and lighting systems.

Building Envelope

- Bureau Veritas has reviewed the characteristics and conditions of the building envelope, checking insulation values and conditions. This review also includes an inspection of the condition of walls, windows, doors, roof areas, insulation and special use areas. Where we anticipated significant losses, we utilized infrared thermographs to analyze heat loss across the envelope.

Recommendations for Energy Savings Opportunities

- Based on the information gathered during the on-site assessment, the utility rates, as well as recent consumption data and engineering analysis, Bureau Veritas has identified opportunities to save energy and provide probable construction costs, projected energy/utility savings and provide a simple payback analysis.

Analysis of Energy Consumption

- Based on the information gathered during the on-site assessment and a, Bureau Veritas has conducted an analysis of the energy usage of all equipment, and identified which equipment is using the most energy and what equipment upgrades may be necessary. As a result, equipment upgrades, or replacements are identified that may provide a reasonable return on the investment and improve maintenance reliability.

Energy Audit Process

- Interviewing staff and review plans and past upgrades
- Performing an energy audit for each use type
- Performing a preliminary evaluation of the utility system
- Analyzing findings, utilizing ECM cost-benefit worksheets
- Making preliminary recommendations for system energy improvements and measures
- Estimating initial cost and changes in operating and maintenance costs based on implementation of energy efficiency measures
- Ranking recommended cost measures, based on the criticality of the project and the largest payback

10. Historical Energy and Water Performance Metrics

Utility Data Tabulation Methodology

The baseline utility consumption data for the proper has been developed by aggregating the consumption from one electric meter and one water meter.

Data Limitation:
No assumptions were made in tabulation of the utility data for the purposes of the audit.

The cost associated with the utility consumption at the building was not made available to Bureau Veritas at the time of report compilation. As a result, Bureau Veritas has modeled the approximate rate based on the utility company published tariff for commercial institutions. Bureau Veritas will update the report on receipt of the actual data from the client.

Utilities Metering at Glance	
Number of electric meters observed	One
Number of gas meters observed	-
Number of central steam meters observed	-
Number of domestic water meter observed	One

Average Utility Rates		
Electricity	Natural Gas	Water & Sewer
$0.30/kWh	$2.24/therm	$8.36/CCF

Electricity

Note: No utility data was received by Bureau Veritas from the housing authority at the time of report compilation. As a result, Bureau Veritas has used the electric rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data from the housing authority.

Natural Gas

Note: No utility data was received by Bureau Veritas from the housing authority at the time of report compilation. As a result, Bureau Veritas has used the natural gas rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data.

Water and Sewer

The City of Glendora satisfies the water and sewer requirements of the facility.

Note: No water and sewer utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used a rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data.

End Use Energy Distribution

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas will complete end use energy distribution on receipt of the actual data from the client.

Energy Star Portfolio Manager Facility Summary

Bureau Veritas uses the Portfolio Manager tool developed by the Federal Environmental Protection Agency to track relative energy uses of buildings by property type. This tool allows the input of a facility's historic utility data to be compared with normalized data of a large database of its peer facilities.

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas will complete energy benchmarking on receipt of the actual data from the client.

11. Energy Conservation Measures

Bureau Veritas has conducted an Energy Audit on Corporate Yard Office/Garage/Locker Building. The study included a review of the building's construction features, historical energy and water consumption and costs, review of the building envelope, HVAC equipment, heat distribution systems, lighting, and the building's operational and maintenance practices.

Bureau Veritas has evaluated three Energy Conservation Measures (ECMs) for this property. The savings for each measure are calculated using standard engineering methods followed in the industry, and detailed calculations for ECM are provided in Appendix H for reference. A 10% discount in energy savings was applied to account for the interactive effects amongst the ECMs. In addition to the consideration of the interactive effects, Bureau Veritas has applied a 15% contingency to the implementation costs to account for potential cost overruns during the implementation of the ECMs.

The following table summarizes the recommended ECMs in terms of description, investment cost, energy consumption reduction, and cost savings.

Recommended Non-Renewable Energy Conservation Measures: Financial Impact	
Total Projected Initial ECM Investment	$1,350 *n Current ollars*
Estimated Annual Cost Savings Related to ECMs	$1,151 *n Current ollars*
Net Effective ECM Payback	1.17 years

Key Metrics to Benchmark the Subject Property's Energy Usage Profile

- Building Site Energy Use Intensity - The sum of the total site energy use in thousands of Btu per unit of gross building area. Site energy accounts for all energy consumed at the building location only not the energy consumed during generation and transmission of the energy to the site.
- Building Source Energy Use Intensity – The sum of the total source energy use in thousands of Btu per unit of gross building area. Source energy is the energy consumed during generation and transmission in supplying the energy to your site.
- Building Cost Intensity - This metric is the sum of all energy use costs in dollars per unit of gross building area.
- Greenhouse Gas Emissions - Although there are numerous gases that are classified as contributors to the total for Greenhouse Emissions, the scope of this energy audit focuses on carbon dioxide (CO_2). Carbon dioxide enters the atmosphere through the burning of fossil fuels (oil, natural gas, and coal), solid waste, trees and wood products, and also as a result of other chemical reactions (e.g., manufacture of cement).

Energy Conservation Measures Screening:

Bureau Veritas screens ECMs using two financial methodologies. ECMs which are considered financially viable must meet both criteria.

1. Simple Payback Period –The number of years required for the cumulative value of energy or water cost savings less future non-fuel or non-water costs to equal the investment costs of the building energy or water system, without consideration of discount rates. ECMs with a payback period greater than the Expected Useful Life (EUL) of the project are not typically recommended, as the cost of the project will not be recovered during the lifespan of the equipment. These ECMs are recommended for implementation during future system replacement. At that time, replacement may be evaluated based on the premium cost of installing energy efficient equipment.

$$Simple\ Payback = \frac{Initial\ Cost}{Annual\ Savings}$$

2. Savings-to-Investment Ratio (SIR) – The savings-to-investment ratio is the ratio of the present value savings to the present value costs of an energy or water conservation measure. The numerator of the ratio is the present value over the estimated useful life (EUL) of net savings in energy or water and non-fuel or non-water operation and maintenance costs attributable to the proposed energy or water conservation measure. The denominator of the ratio is the present value of the net increase in investment and replacement costs less salvage value attributable to the proposed energy or water conservation measure. It is recommended that energy efficiency recommendations should be based on a calculated SIR, with larger SIRs receiving a higher priority. A project is typically only recommended if SIR is greater than or equal to 1.0, unless other factors outweigh the financial benefit.

$$SIR = \frac{Present\ Value\ (Annual\ Savings, i\%, EUL)}{Initial\ Cost}$$

Bureau Veritas has identified three Energy Conservation Measures (ECMs) for this property.

List of Recommended Energy Conservation Measures For CORPORATE YARD OFFICE/GARAGE/LOCKER Building

		Description of ECM	Location	Labor Cost	Material Cost	Projected Initial Investment	Utility Company Incentive	Net Projected Initial Investment	Estimated Annual Energy & Water Savings				Total Energy Savings	Total Green House Gas Savings	Estimated Utility Cost Savings	Estimated Annual O&M Savings	Total Estimated Annual Cost Savings	Simple Payback	S.I.R.	Life Cycle Savings	Expected Useful Life (EUL)

12. Operations & Maintenance Plan

The quality of the maintenance and the operation of the facility's energy systems have a direct effect on its overall energy efficiency. Energy-efficiency needs to be a consideration when implementing facility modifications, equipment replacements, and general corrective actions. The following is a list of activities that should be performed as part of the routine maintenance program for the property.

Building Envelope

- ✓ Ensure that the building envelope has proper caulking and weather stripping.
- ✓ Patch holes in the building envelope with foam insulation and fire rated caulk around combustion vents
- ✓ Inspect building vents semiannually for bird infestation
- ✓ Inspect windows monthly for damaged panes and failed thermal seals
- ✗ Repair and adjust automatic door closing mechanisms as needed.

Heating and Cooling

- ✗ Pilots lights on furnaces and boilers be turned off in summer
- ✗ All preventive maintenance should be performed on all furnaces and boilers, which would include cleaning of burners and heat exchanger tubes.
- ✗ Ensure that the combustion vents exhaust outside the conditioned space and the vent dampers are functional
- ✗ Ensure that the control valves are functioning properly before start of every season
- ✗ Ensure steam traps are functional before start of each heating season
- ✗ Ensure use of chemical treatment for boiler make up water
- ✗ Ensure boiler outside temperature re-set is set to 55F
- ✗ Ensure use of chemical treatment for Colling tower water to prevent corrosion
- ✗ Ensure the duct work in unconditioned space is un-compromised and well insulated
- ✗ Duct cleaning is recommended every 10 years. This should include sealing of ducts using products similar to 'aero-seal'
- ✗ Ensure use of economizer mode is functional and used
- ✗ Ensure that the outside air dampers actuators are operating correctly
- ✗ Ensure air coils in the AHU and FCA's are pressure washed annually
- ✗ Return vents should remain un-obstructed and be located centrally
- ✓ Temperature settings reduced in unoccupied areas and set points seasonally adjusted.
- ✓ Evaporator coils and condenser coils should be regularly cleaned to improve heat transfer
- ✓ Refrigerant pipes should be insulated with a minimum of ¾" thick Elastomeric Rubber Pipe Insulation
- ✓ Ensure refrigerant pressure is maintained in the condensers
- ✓ Change air filters on return vents seasonally. Use only filters with 'Minimum Efficiency Rating Value'(MERV) of 8

Central Domestic Hot Water Heater

- ✓ Never place gas fired water heaters adjacent to return vents so as to prevent flame roll outs
- ✓ Ensure the circulation system is on timer to reduce the losses through re-circulation
- ✓ Ensure all hot water pipes are insulated with fiberglass insulation at all times
- ✓ Replacement water heater should have Energy Factor (EF)>0.9
- ✓ Tank-type water heaters flushed annually.

Lighting Improvements

- ✓ Utilize bi-level lighting controls in stairwells and hallways.
- ✓ Use LED replacement lamps
- ✓ Clean lighting fixture reflective surfaces and translucent covers.
- ✓ Ensure that timers and/or photocells are operating correctly on exterior lighting
- ✓ Use occupancy sensors for offices and other rooms with infrequent occupancy

Existing Equipment and Replacements

- ✓ Ensure that refrigerator and freezer doors close and seal correctly
- ✓ Ensure kitchen and bathroom exhaust outside the building and the internal damper operates properly
- ✓ Ensure that bathroom vents exhaust out
- ✓ Office/ computer equipment either in the “sleep” or “off” mode when not used

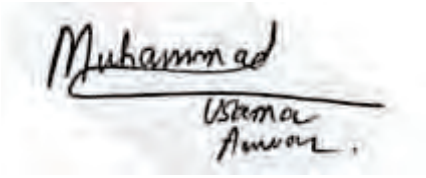
x	Maintenance Measure is Not Applicable For the Given Facility
✓	Maintenance Measure is Applicable For the Given Facility

13. Certification

The City of Glendora (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Corporate Yard Office/Garage/Locker Building, 440 South Loraine Avenue, Glendora, California 91741, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.



No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose an Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

ECM EXPLANATION:

By reducing the flow of water coming from the restroom faucets, aerators can generate energy savings at low cost and with easy installation. The savings generated would be in the form of reduced water and sewer costs and at the same time aerators would save energy by reducing the demand for hot water. The average faucet has a flow rate of about 2 to 4 GPM. Adding a screw-in faucet aerator reduces the flow to 0.5 to 1.5 GPM in the bathroom and 2.2 GPM in the kitchen. In addition to saving energy and water, the "foamier" water that comes from faucet aerators wets objects better than water from a faucet with no aerator, which tends to bounce off the object rather than thoroughly wetting it.

BV recommends replacing the proposed faucet aerators with new low flow aerators as mentioned above. The proposed ECM shall also result in an annual energy saving in form of reduction in water heating bills.

Summary:

Initial Investment: $47 Estimated Annual Cost Savings: $48 Simple Payback Period (Yrs): 0.98

ECM EXPLANATION:

The highest water utilization at any home/office occurs in the restrooms. It is estimated that on an average a normal human being uses the restroom at least four times a day. Keeping with the global water conservation objectives, federal law prohibits use of any new water closet flushes over 1.6 GPF. At the same time the '1992 EpACT' mandates all new Urinals to have a maximum 1.0 GPF flush valves on urinals.

BV recommends replacing all urinals above 1.0 GPF with a new 0.5 GPF or lesser urinals. At the same time BV also recommends replacing all the water closets having a GPF rating of 1.6 and over with low flow water closet fixtures equipped with dual flush valves.

In case the property doesn't wish to replace the entire water closet fixtures, BV recommends retrofitting all the tankless water closet flush fixtures with new dual flush fixtures that would result in a 30% water savings per flush for liquid wastes, while retaining the same flush rate for solid wastes.

Appendix J:
Energy Audit Glossary of Terms

Glossary of Terms and Acronyms

ECM – Energy Conservation Measures are projects recommended to reduce energy consumption. These can be No/Low cost items implemented as part of routine maintenance or Capital Cost items to be implemented as a capital improvement project.

Initial Investment – The estimated cost of implementing an ECM project. Estimates typically are based on R.S. Means Construction cost data and Industry Standards.

Annual Energy Savings – The reduction in energy consumption attributable to the implementation of a particular ECM. These savings values do not include the interactive effects of other ECMs.

Cost Savings – The expected reduction in utility or energy costs achieved through the corresponding reduction in energy consumption by implementation of an ECM.

Simple Payback Period –The number of years required for the cumulative value of energy or water cost savings less future non-fuel or non-water costs to equal the investment costs of the building energy or water system, without consideration of discount rates.

EUL – Expected Useful Life is the estimated lifespan of a typical piece of equipment based on industry accepted standards.

RUL – Remaining Useful Life is the EUL minus the effective age of the equipment and reflects the estimated number of operating years remaining for the item.

SIR - The savings-to-investment ratio is the ratio of the present value savings to the present value costs of an energy or water conservation measure. The numerator of the ratio is the present value of net savings in energy or water and non-fuel or non-water operation and maintenance costs attributable to the proposed energy or water conservation measure. The denominator of the ratio is the present value of the net increase in investment and replacement costs less salvage value attributable to the proposed energy or water conservation measure. It is recommended that energy-efficiency recommendations be based on a calculated SIR, with larger SIRs receiving a higher priority. A project typically is recommended only if the SIR is greater than or equal to 1.0, unless other factors outweigh the financial benefit.

Life Cycle Cost - The sum of the present values of (a) **I**nvestment costs, less salvage values at the end of the study period; (b) Non-fuel operation and maintenance costs: (c) Replacement costs less salvage costs of replaced building systems; and (d) Energy and/or water costs.

Life Cycle Savings – The sum of the estimated annual cost savings over the EUL of the recommended ECM, expressed in present value dollars.

Building Site Energy Use Intensity - The sum of the total site energy use in thousands of Btu per unit of gross building area. Site energy accounts for all energy consumed at the building location only not the energy consumed during generation and transmission of the energy to the site.

Building Source Energy Use Intensity – The sum of the total source energy use in thousands of Btu per unit of gross building area. Source energy is the energy consumed during generation and transmission in supplying the energy to your site.

Building Cost Intensity - This metric is the sum of all energy use costs in dollars per unit of gross building area.

Greenhouse Gas Emissions - Although there are numerous gases that are classified as contributors to the total for Greenhouse Emissions, the scope of this energy audit focuses on carbon dioxide (CO_2). Carbon dioxide enters the atmosphere through the burning of fossil fuels (oil, natural gas, and coal), solid waste, trees and wood products, and also as a result of other chemical reactions (e.g., manufacture of cement).

A-2. Park Findings and Deficiencies

Historical Summary

Willow Springs Park is located on the corner of Willow Springs Place and Willow Springs Lane. The date of development of the park was not provided or documented during the inspection.

Amenities and General Site

The amenities at Willow Springs Park include a rentable picnic site, a children's playground, and a small walking trail for the community. The ancillary structure at the park consists of an equipment storage building. The park features moderate landscaping with an on-site irrigation system ensuring proper watering for the planted areas. Other assets identified on the site comprise a drinking fountain, concrete sidewalks, and a monument sign marking the park entrance. In general, every site element is well maintained, and each asset is budgeted for replacement over the reserve term.

Architectural

There are no architectural assets identified on the site.

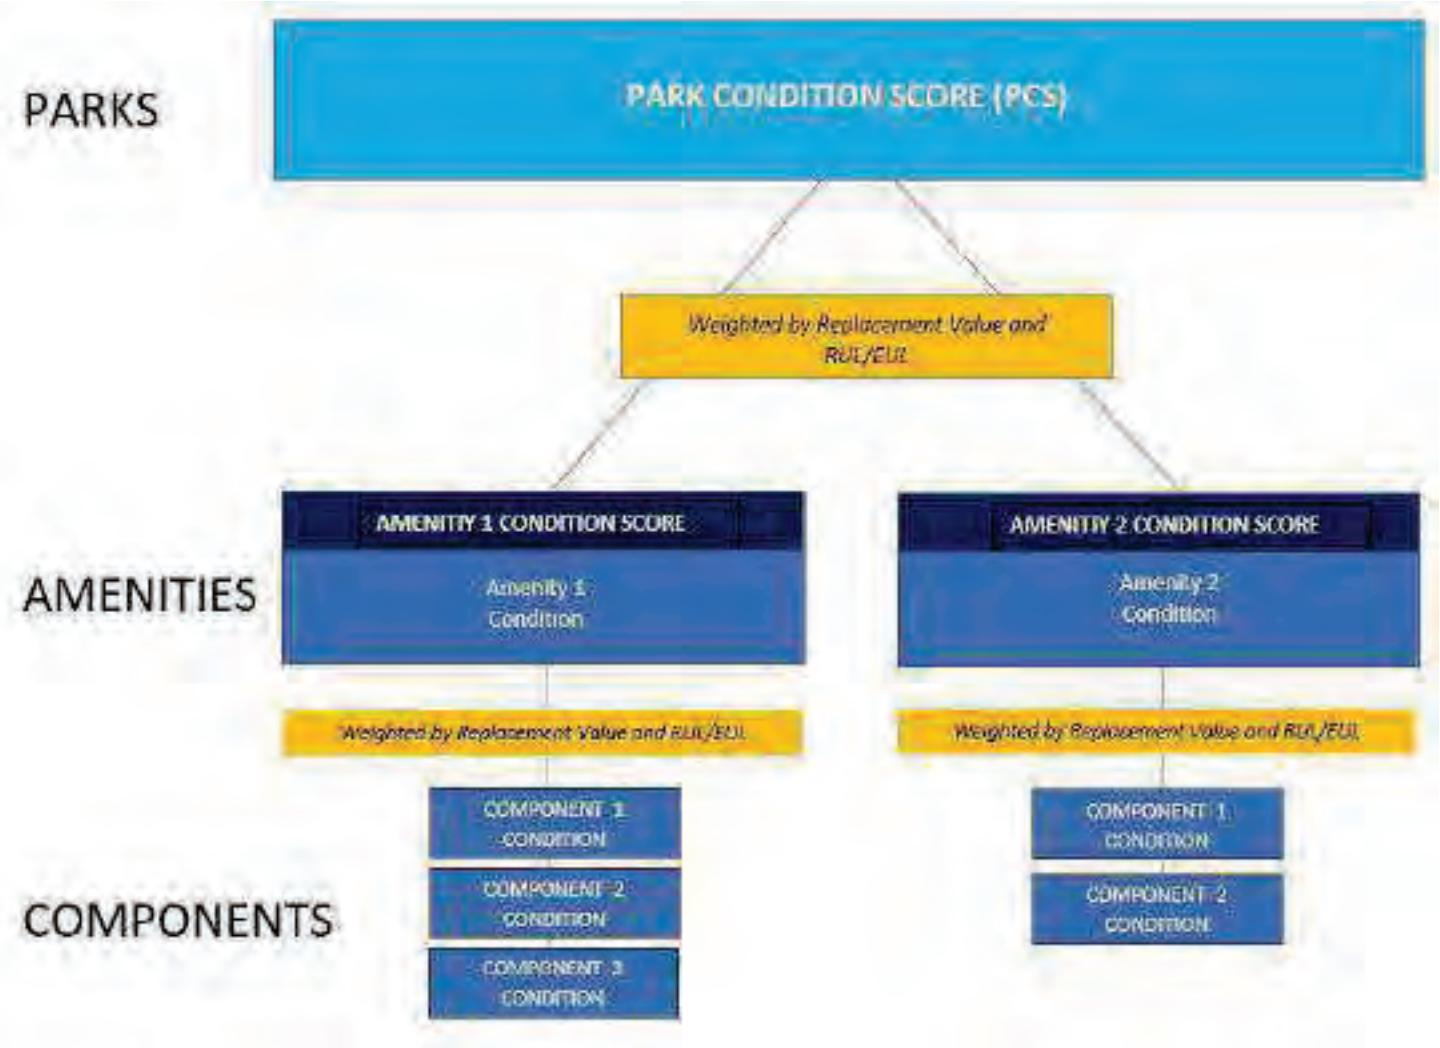
Mechanical, Electrical, Plumbing and Fire (MEPF)

There are no MEPF assets identified on the site.

Recommended Additional Studies

No additional studies recommended at this time.

B. Amenities and General Site



B-1. Prioritization Methodology

Park Condition Score (PCS) and Amenity Condition Score (ACS)

A major goal of the Facility Condition Assessment (FCA) is to benchmark individual parks with other parks within the portfolio, and amenities with other amenities either within the same park and across the portfolio. To achieve a rating for each park, the Park Condition Score (PCS) is developed; similarly, an Amenity Condition Score (ACS) is used to compare amenities.

To assist in the overall prioritization effort, the following terms are used at the Component and Amenity level:

- **Component:** individual elements of the amenity or park that are evaluated and assigned conditions and GPS coordinates. Examples of components include benches, trash receptacles, tennis nets, playground surfaces, or split-rail fencing.
- **Amenity:** defined as a group of components that constitute a major feature of the park, logically grouped together by purpose and/or proximity. Examples of an amenity include a basketball court, a softball field, a dog park, picnic area, or playground.
- **Current Renewal Value (CRV):** the cost in today's dollars of the major constituent parts that make up the whole:
  - for Parks: CRV = renewal cost of all **developed** amenities within it (land value is excluded)
  - for Amenities: CRV = renewal cost of all significant components within it

The Amenity Condition Score (ACS) is a score calculated from an algorithm comprising a weighted average of the conditions of all the components within it.

AMENITY CONDITION SCORE (ACS) FORMULA = SUM [Remaining Value / Renewal Value (RenV) of combined components]

Remaining value = RenV multiplied by RUL/EUL

The Park Condition Score (PCS) is the total score for a single park property calculated from the sum of the Amenity Condition Scores (ACSs) for each amenity within the park.

PARK CONDITION SCORE FORMULA = SUM [Remaining Value]/ SUM [Renewal Value]

B-2. Park Prioritization Metrics

Park Condition Score (PCS) and Amenity Condition Score (ACS)

A major goal of the Facility Condition Assessment (FCA) is to benchmark individual parks with other parks within the portfolio, and amenities with other amenities either within the same park and across the portfolio. To achieve a rating for each park, the Park Condition Score (PCS) is developed; similarly, an Amenity Condition Score (ACS) is used to compare amenities.

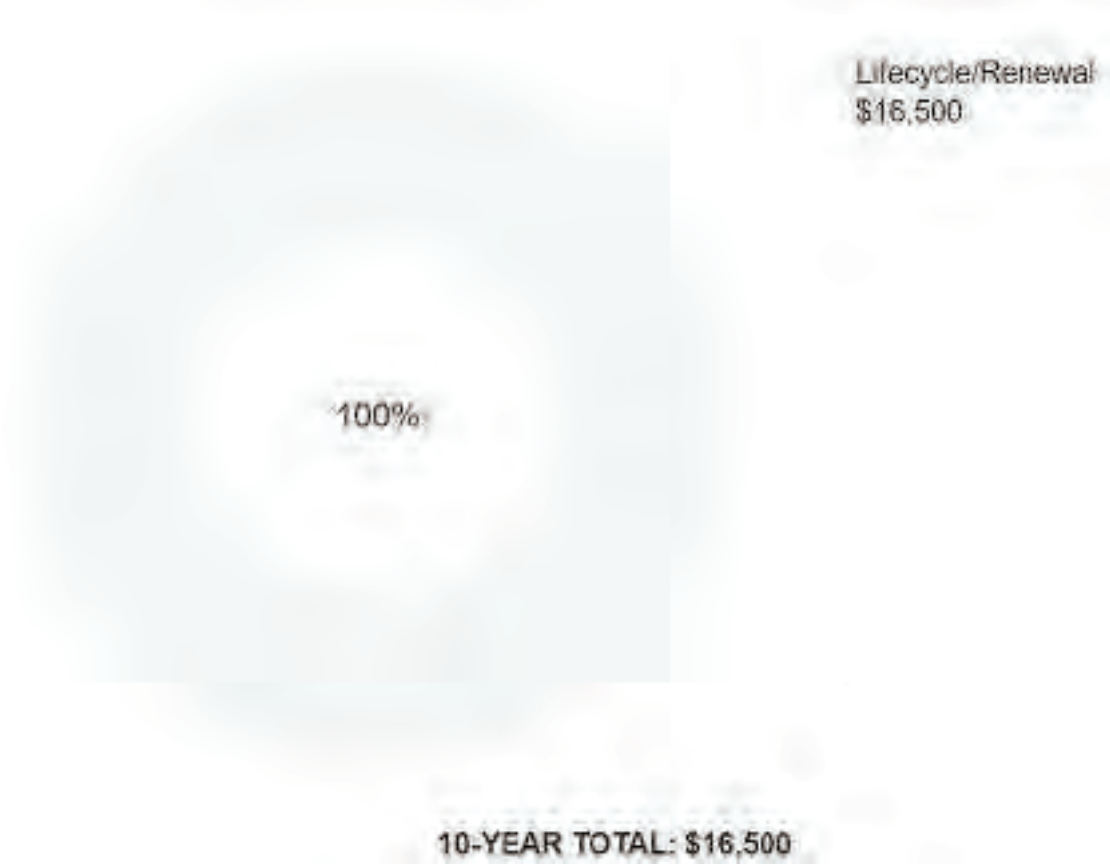
The PCS and ACS metrics have been developed so that the higher the score, the less the park or amenity needs short term financial attention, due to its relative condition. The lower the score, the more attention is needed. An increasingly low score indicates an increased need to address deficiencies, provide replacements or make essential repairs. The lower the score, the more the amenity or park requires renewal or replacement. Both PCS and ACS scores range from 0 to 100.

The color coding reflects the score definition. Higher scores are assigned a sliding scale of green, with 100 assigned the deepest green. Yellow indicates a condition in the middle of the range, with yellow green in the high mid ranges, and yellow red in the low mid ranges. Scores in the low range are assigned a sliding scale of red, with 0 assigned the deepest red.

FAILED CONDITION - 0 _____ EXCELLENT CONDITION -100

The table on the following page shows the PCS condition score of this park, along with the ACS condition score of each amenity within the park:

Willow Springs Park	OVERALL CONDITION SCORE **75**	TOTAL ACRES: REPLACEMENT VALUE: $ 287,575 REMAINING VALUE: $ 217,073 SAFETY ISSUES: 0 FAILED COMPONENTS: 0
Playground	COND. SCORE **81**	REPLACEMENT VALUE: $ 64,475 REMAINING VALUE: $ 52,130
General Site	COND. SCORE **74**	REPLACEMENT VALUE: $ 223,100 REMAINING VALUE: $ 164,943



B-3. Plan Types (Amenities and General Site)

Each line item in the cost database is assigned a Plan Type, which is the primary reason for the recommended replacement, repair, or other corrective action. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the best fit, typically the one with the greatest significance. See the *Purpose* description in the *Purpose and Scope* section for an explanation of Component Type.

Plan Type Descriptions

Safety	■	An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk.
Performance/Integrity	■	Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.
Accessibility	■	Does not meet ADA, UFAS, and/or other accessibility requirements.
Environmental	■	Improvements to air, water, or soil quality, including removal of hazardous materials from the site.
Retrofit/Adaptation	■	Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.
Lifecycle/Renewal	■	Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.

Plan Type Distribution (by Cost) – Timeframe 10 Years

B-4. Immediate Needs (Amenities and General Site)

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

BV did not identify any immediate needs associated with the amenities or general park areas at this site.

B-5. Key Findings (Amenities and General Site)

Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

The numerical scoring of condition as shown in the Key Findings is based on a 0-100 scale, as illustrated below:

- 0 - Replacement has none or very low impact on park operations
- 33 – Replacement has low impact on park operations
- 66 - Replacement has medium impact on park operation
- 100 - Failing, safety or code requirement component with high impact on park operations

BV did not identify any key findings associated with the amenities or general park areas at this site.

B-6. Playground

Playground			
Asset Type	Playground		
Asset Location	Middle of park		
Overall Condition	Good		
Component	*Description*	*Quantity*	*Condition*
Play Structure	Swing Set, 4 Seats, Replace	1 EA	Fair
Play Structure	Multipurpose, Small, Replace	1 EA	Good
Playfield Surfaces	Chips Rubber, 3" Depth, Replace	2850 SF	Good
Play Structure	Multipurpose, Large, Replace	1 EA	Good
Pole Light Fixture with Lamps	any type 30' High, with LED Replacement, Replace/Install	1 EA	Good
Accessibility	Potential accessibility issues were not observed at this asset. Refer to Appendix D and the previous study for more details.		
Key Issues and Findings	No key issues observed		

B-7. General Site

General Site			
Asset Type	General site		
Asset Location	Throughout park		
Overall Condition	Good		
Component	*Description*	*Quantity*	*Condition*
Picnic Table	Precast Concrete, Replace	3 EA	Good
Sidewalk	Masonry Pavers, Replace	2720 SF	Good
Irrigation System	Pop-Up Spray Heads, Commercial, Replace/Install	45990 SF	Good
Drinking Fountain	Exterior/Site, Metal Pedestal, Replace	1 EA	Good
Trash Receptacle	Medium-Duty Metal or Precast, Replace	1 EA	Fair
Picnic Table	Precast Concrete, Replace	1 EA	Fair
Campground Accessories	Grill, Pedestal-Style, Replace	1 EA	Good
Signage	Property, Monument, Replace/Install	1 EA	Good

General Site			
Trash Receptacle	Medium-Duty Metal or Precast, Replace	1 EA	Good
Irrigation System	Control Panel, Replace	1 EA	Good
Sidewalk	Concrete, Small Areas/Sections, Replace	2750 SF	Good
Shed/Gazebo/Shade Structure	Wood or Metal-Framed, Basic/Minimal, Replace	550 SF	Good
Landscaping and Topography	Moderate landscaping features. Irrigation present Low to moderate site slopes throughout		
Storm Water Management	Surface drainage to developed and undeveloped surroundings		
Accessibility	Potential accessibility issues were not observed at this asset. Refer to Appendix D and the previous study for more details.		
Key Issues and Findings	No key issues observed		

C. Property Space Use and Observed Areas

Areas Observed

All the site areas were observed in order to gain a clear understanding of the facility's overall condition.

Key Spaces Not Observed

All key areas of the property were accessible and observed.

D. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of "areas of public accommodations" and "public facilities" on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the checklists that are included in the Accessibility appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance.
- Only a representative sample of areas was observed.
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance.
- Itemized costs for individual non-compliant items are not / are included in the dataset.
- For any "none" boxes checked or reference to "no issues" identified, that alone does not guarantee full compliance.

The date of construction of the park is unspecified. It appeared that the park has not since been substantially renovated.

The following table summarizes the accessibility conditions of the exterior amenities in the park:

Park Name: Accessibility Summary

Facility	*Year Built/ Renovated*	*Prior Study Provided?*	*Major/Moderate Issues Observed?*
Playground	Unidentified	Unknown	No
General Site	Unidentified	Unknown	No

During the interview process with the client representatives, no complaints or pending litigation associated with potential accessibility issues within the park were reported.

No detailed follow-up accessibility studies are included as recommendations since no major or moderate issues were identified at any of the park amenities and facilities. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct, and manage the corrections.

E. Purpose and Scope

Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes construction systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of construction systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

Condition Ratings	
Excellent	New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Good	Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Fair	Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.
Poor	Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed, or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life.
Failed	Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.
Not Applicable	Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.

Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of existing systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Review maintenance records and procedures with the in-place maintenance personnel.
- Observe the exterior amenities of the property, including individual site elements. Building observations include interior areas, the significant mechanical, electrical and elevator equipment rooms, and roofs.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key facts about the portfolio.

F. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means, CBRE Whitestone,* and *Marshall & Swift,* Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

Definitions

Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Amenities and General Site and Facilities sections of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

G. Energy Audit

The purpose of this Energy Audit is to provide Willow Springs Park with a baseline of energy usage, the relative energy efficiency of the facility, and specific recommendations for Energy Conservation Measures. Information obtained from these analyses may be used to support a future application to an Energy Conservation Program, Federal and Utility grants towards energy conservation, as well as support performance contracting, justify a municipal bond-funded improvement program, or as a basis for replacement of equipment or systems.

The energy audit consisted of an onsite visual assessment to determine current conditions, itemize the energy consuming equipment (i.e. Boilers, Make-Up Air Units, DWH equipment); review lighting systems both exterior and interior; and review efficiency of all such equipment. The study also included interviews and consultation with operational and maintenance personnel. The following is a summary of the tasks and reporting that make up the Energy Audit portion of the report.

The following is a summary of the tasks and reporting that make up the Energy Audit portion of the report.

Energy and Water Using Equipment

- Bureau Veritas has surveyed the common areas, offices, maintenance facilities and mechanical rooms to document utility-related equipment, including heating systems, cooling systems, air handling systems and lighting systems.

Building Envelope

- Bureau Veritas has reviewed the characteristics and conditions of the building envelope, checking insulation values and conditions. This review also includes an inspection of the condition of walls, windows, doors, roof areas, insulation, and special use areas.

Recommendations for Energy Savings Opportunities

- Based on the information gathered during the on-site assessment, the utility rates, as well as recent consumption data and engineering analysis, Bureau Veritas has identified opportunities to save energy and provide probable construction costs, projected energy/utility savings and provide a simple payback analysis.

Analysis of Energy Consumption

- Based on the information gathered during the on-site assessment and a, Bureau Veritas has conducted an analysis of the energy usage of all equipment, and identified which equipment is using the most energy and what equipment upgrades may be necessary. As a result, equipment upgrades, or replacements are identified that may provide a reasonable return on the investment and improve maintenance reliability.

Energy Audit Process

- Interviewing staff and review plans and past upgrades
- Performing an energy audit for each use type
- Performing a preliminary evaluation of the utility system
- Analyzing findings, utilizing ECM cost-benefit worksheets
- Making preliminary recommendations for system energy improvements and measures
- Estimating initial cost and changes in operating and maintenance costs based on implementation of energy efficiency measures
- Ranking recommended cost measures, based on the criticality of the project and the largest payback

H. Historical Energy and Water Performance Metrics

Utility Data Tabulation Methodology

Establishing the energy baseline begins with an analysis of the utility cost and consumption of the facility. Utilizing the historical energy data and local weather information, we evaluate the existing utility consumption and assign it to the various end-uses throughout the buildings. The Historical Data Analysis breaks down utilities by consumption, cost, and annual profile.

This data is analyzed, using standard engineering assumptions and practices. The analysis serves the following functions:

- Allows our engineers to benchmark the energy and water consumption of the facilities against consumption of efficient buildings of similar construction, use and occupancy.
- Generates the historical and current unit costs for energy and water
- Provides an indication of how well changes in energy consumption correlate to changes in weather.
- Reveals potential opportunities for energy consumption and/or cost reduction. For example, the analysis may indicate that there is excessive, simultaneous heating and cooling, which may mean that there is an opportunity to improve the control of the heating and cooling systems.

By performing this analysis and leveraging our experience, our engineers prioritize buildings and pinpoint systems for additional investigation during the site visit, thereby maximizing the benefit of their time spent on-site and minimizing time and effort by the customer's personnel.

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used the utility rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data from the client.

Estimated Utility Rates	
Electricity	Water and Sewer
$0.30/kWh	$8.36/CCF

The data analyzed provides the following information: 1) breakdown of utilities by consumption, 2) cost and annual profile, 3) baseline consumption in terms of energy/utility at the facility, 4) the Energy Use Index, or BTU/SF, and cost/SF. For multiple water meters, the utility data is combined to illustrate annual consumption for each utility type.

Electricity

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used the electric rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data from the client.

Water and Sewer

The City of Glendora satisfies the water and sewer requirements of the facility. The billing for the water and sewer is monthly.

Note: No water and sewer utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used a rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data.

Energy Star Portfolio Manager Facility Summary

Bureau Veritas uses the Portfolio Manager tool developed by the Federal Environmental Protection Agency to track relative energy uses of buildings by property type. This tool allows the input of a facility's historic utility data to be compared with normalized data of a large database of its peer facilities.

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. Hence energy benchmarking for the facility cannot be evaluated at this time. Bureau Veritas will update the report on receipt of the actual data.

I. Energy Conservation Measures

There are no substantial electro-mechanical assets identified at the site, hence no energy conservation measure plans can be evaluated for the facility.

Bureau Veritas has identified no Energy Conservation Measures (ECMs) for this property.

J. Operations & Maintenance Plan

There are no substantial electro-mechanical assets identified at the site, hence no operations and maintenance plans can be devised for the facility.

K. Certification

City of Glendora (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Willow Springs Park, 515 North Willow Springs Lane, Glendora, California 91741, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling, or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

Energy Audit Glossary of Terms

Glossary of Terms and Acronyms

ECM – Energy Conservation Measures are projects recommended to reduce energy consumption. These can be No/Low cost items implemented as part of routine maintenance or Capital Cost items to be implemented as a capital improvement project.

Initial Investment – The estimated cost of implementing an ECM project. Estimates typically are based on R.S. Means Construction cost data and Industry Standards.

Annual Energy Savings – The reduction in energy consumption attributable to the implementation of a particular ECM. These savings values do not include the interactive effects of other ECMs.

Cost Savings – The expected reduction in utility or energy costs achieved through the corresponding reduction in energy consumption by implementation of an ECM.

Simple Payback Period –The number of years required for the cumulative value of energy or water cost savings less future non-fuel or non-water costs to equal the investment costs of the building energy or water system, without consideration of discount rates.

EUL – Expected Useful Life is the estimated lifespan of a typical piece of equipment based on industry accepted standards.

RUL – Remaining Useful Life is the EUL minus the effective age of the equipment and reflects the estimated number of operating years remaining for the item.

SIR - The savings-to-investment ratio is the ratio of the present value savings to the present value costs of an energy or water conservation measure. The numerator of the ratio is the present value of net savings in energy or water and non-fuel or non-water operation and maintenance costs attributable to the proposed energy or water conservation measure. The denominator of the ratio is the present value of the net increase in investment and replacement costs less salvage value attributable to the proposed energy or water conservation measure. It is recommended that energy-efficiency recommendations be based on a calculated SIR, with larger SIRs receiving a higher priority. A project typically is recommended only if the SIR is greater than or equal to 1.0, unless other factors outweigh the financial benefit.

Life Cycle Cost - The sum of the present values of (a) Investment costs, less salvage values at the end of the study period; (b) Non-fuel operation and maintenance costs: (c) Replacement costs less salvage costs of replaced building systems; and (d) Energy and/or water costs.

Life Cycle Savings – The sum of the estimated annual cost savings over the EUL of the recommended ECM, expressed in present value dollars.

Building Site Energy Use Intensity - The sum of the total site energy use in thousands of Btu per unit of gross building area. Site energy accounts for all energy consumed at the building location only not the energy consumed during generation and transmission of the energy to the site.

Building Source Energy Use Intensity – The sum of the total source energy use in thousands of Btu per unit of gross building area. Source energy is the energy consumed during generation and transmission in supplying the energy to your site.

Building Cost Intensity - This metric is the sum of all energy use costs in dollars per unit of gross building area.

Greenhouse Gas Emissions - Although there are numerous gases that are classified as contributors to the total for Greenhouse Emissions, the scope of this energy audit focuses on carbon dioxide (CO_2). Carbon dioxide enters the atmosphere through the burning of fossil fuels (oil, natural gas, and coal), solid waste, trees and wood products, and also as a result of other chemical reactions (e.g., manufacture of cement).

Property Overview and Assessment Details

General Information	
Property Type	Restroom Building
Main Address	600 East Gladstone Street, Glendora, California 91741
Site Developed	1965
Site Area	8.46 acres (estimated)
Parking Spaces	56 (estimated) total spaces all in open lots; two of which are accessible
Building Area	700 square feet
Number of Stories	One above grade
Outside Occupants/Leased Spaces	None
Date(s) of Visit	November 7, 2023
Management Point of Contact	City of Glendora, Michael Sledd, Assistant Public Works Director 626.914.8248 msledd@cityofglendora.org
On-site Point of Contact (POC)	Hugo Soltero 626.672.6311
Assessment and Report Prepared By	Usama Anwar
Reviewed By	Carl Alejandro Technical Reviewer Carl.Alejandro@bureauveritas.com 800.733.0660 x7296236
AssetCalc Link	Full dataset for this assessment can be found at: https://www.assetcalc.net/

Significant/Systemic Findings and Deficiencies

Historical Summary

Gladstone Park Restrooms building was originally built in 1965. It is located to the south of Gladstone Park. No major renovations were reported or observed during inspection.

Architectural

The small restroom building appeared to have slab on grade foundation. No structural deficiencies were observed. The pitched roof has layers of asphalt shingles that are free of any visible damage. The exterior façade is finished with glazed masonry units that showed no cracking and spalling issues due to water infiltration. The restroom floors and interior walls are finished with ceramic tiles. All the architectural assets are budgeted for replacement at the end of the expected useful life.

Mechanical, Electrical, Plumbing and Fire (MEPF)

The building is not equipped with any HVAC system. The plumbing fixtures are plumbed well with no reported issues of plumbing failures or leakages. No domestic hot water is supplied to the building. The electrical distribution network is satisfactory to meet the required demand load, and interior lighting fixtures consist of horizontally installed wall packs and surface mounted can-lights. Wall mounted fire extinguishers are mounted by the interior wall for fire protection.

Site

Site maintenance appears to be well-maintained, and site improvements and landscaping are generally in good condition. Sidewalks are free of cracks and heaving, and asphalt pavement has been regularly maintained.

Recommended Additional Studies

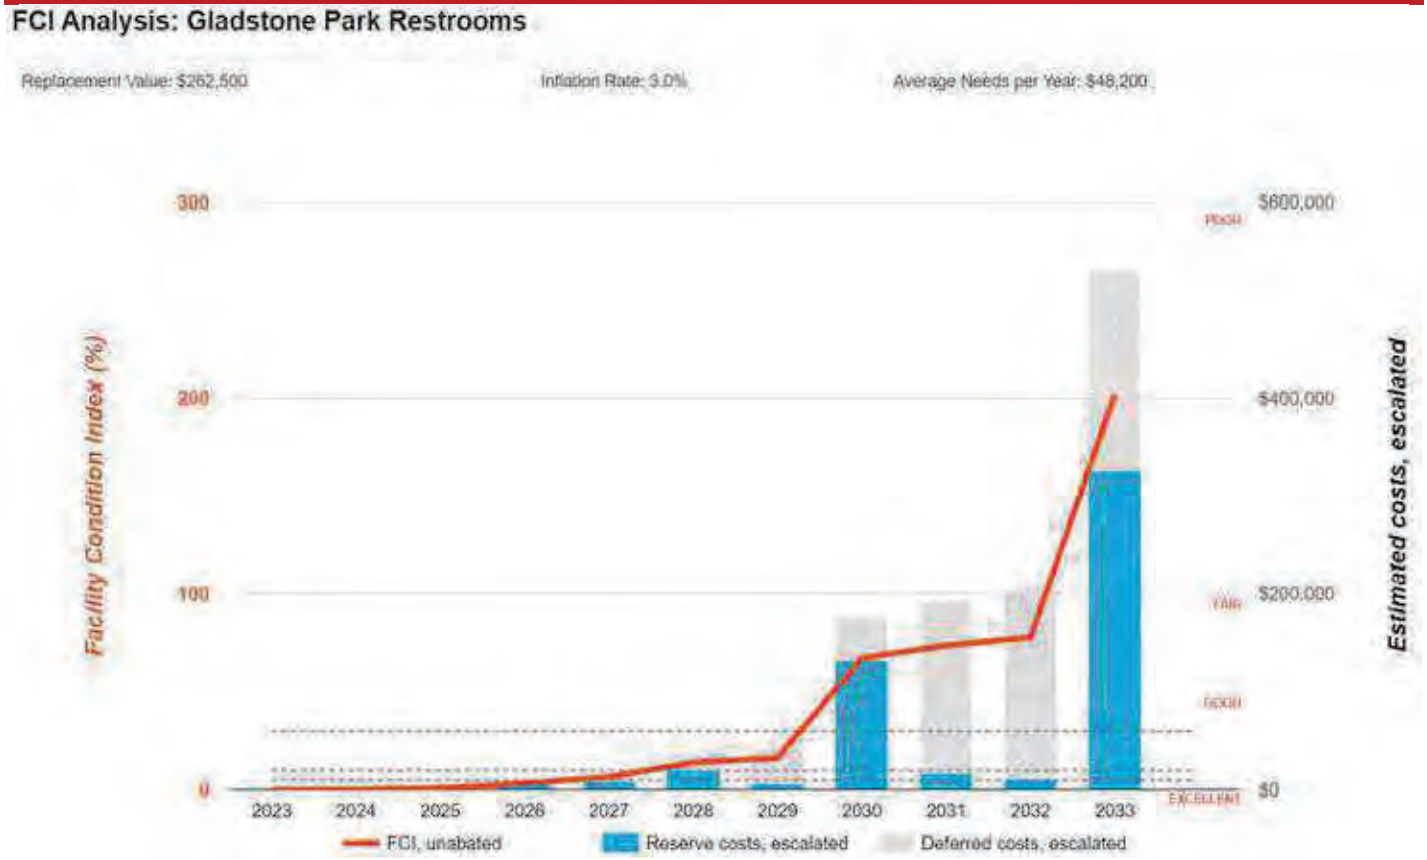
No additional studies recommended at this time.

Facility Condition Index (FCI)

One of the major goals of the FCA is to calculate each building's Facility Condition Index (FCI), which provides a theoretical objective indication of a building's overall condition. By definition, the FCI is defined as the ratio of the cost of current needs divided by current replacement value (CRV) of the facility. The chart below presents the industry standard ranges and cut-off points.

FCI Ranges and Description	
0 – 5%	In new or well-maintained condition, with little or no visual evidence of wear or deficiencies.
5 – 10%	Subjected to wear but is still in a serviceable and functioning condition.
10 – 30%	Subjected to hard or long-term wear. Nearing the end of its useful or serviceable life.
30% and above	Has reached the end of its useful or serviceable life. Renewal is now necessary.

The deficiencies and lifecycle needs identified in this assessment provide the basis for a portfolio-wide capital improvement funding strategy. In addition to the current FCI, extended FCI's have been developed to provide owners the intelligence needed to plan and budget for the "keep-up costs" for their facilities. As such the 3-year, 5-year, and 10-year FCI's are calculated by dividing the anticipated needs of those respective time periods by current replacement value. As a final point, the FCI's ultimately provide more value when used to relatively compare facilities across a portfolio instead of being over-analyzed and scrutinized as stand-alone values. The table below summarizes the individual findings for this FCA:



FCI Analysis | Gladstone Park Restrooms

Replacement Value	*Total SF*	*Cost/SF*
$ 262,500	*700*	*$ 375*

	Est Reserve Cost	FCI
Current	$ 0	**0.0 %**
3-Year	$ 9,100	3.4 %
5-Year	$ 37,400	14.2 %
10-Year	$ 530,200	202.0 %

The vertical bars below represent the year-by-year needs identified for the site. The orange line in the graph below forecasts what would happen to the FCI (left Y axis) over time, assuming zero capital expenditures over the next ten years. The dollar amounts allocated for each year (blue bars) are associated with the values along the right Y axis.

Needs by Year with Unaddressed FCI Over Time

Immediate Needs

BV did not identify any immediate needs with the property.

Key Findings

Supplemental Components in Poor Condition.

Hand Dryer, Restroom
Gladstone Park Restrooms

Uniformat Code: D3060
Recommendation: **Replace in 2025**

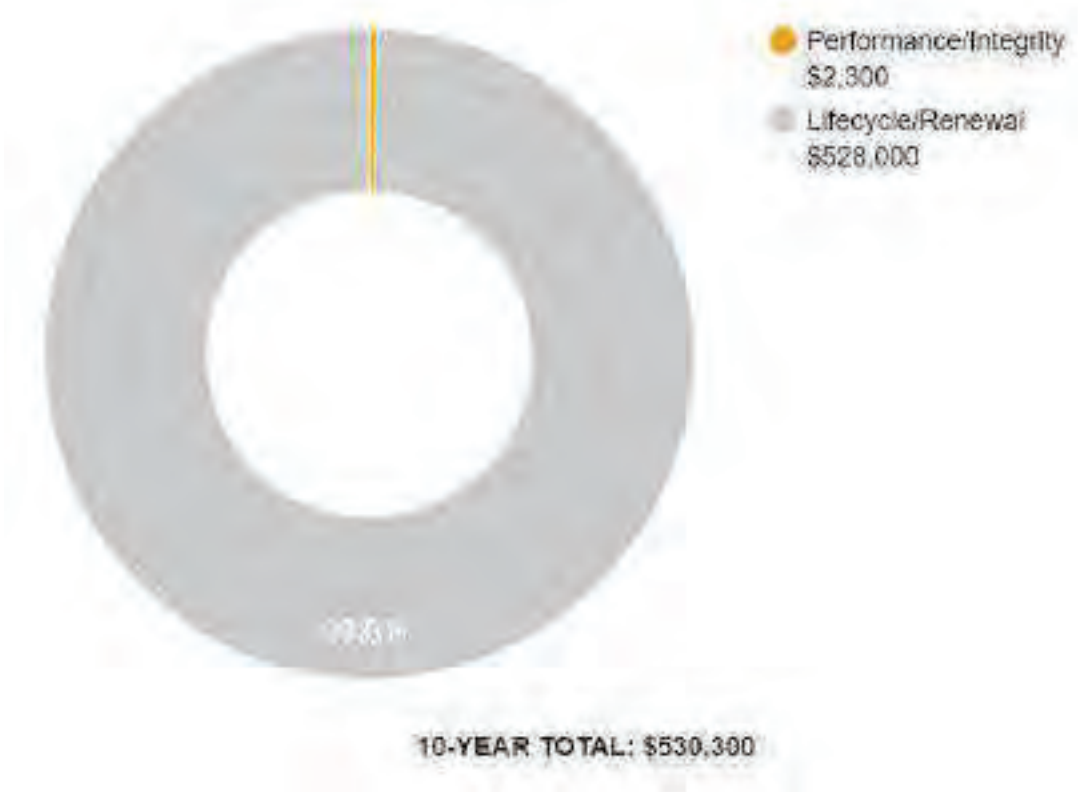
Priority Score: **85.7**

Plan Type: Performance/Integrity

Cost Estimate: $2,200

**$$**$$

Not functional - AssetCALC ID: 7052027



Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason or rationale for the recommended replacement, repair, or other corrective action. This is the "why" part of the equation. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the "best" fit, typically the one with the greatest significance.

Plan Type Descriptions

Safety	■	An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk.
Performance/Integrity	■	Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.
Accessibility	■	Does not meet ADA, UFAS, and/or other accessibility requirements.
Environmental	■	Improvements to air or water quality, including removal of hazardous materials from the building or site.
Retrofit/Adaptation	■	Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.
Lifecycle/Renewal	■	Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.

Plan Type Distribution (by Cost)

2. Building and Site Information

Systems Summary

S ste	escription	Con ition
Structure	Masonry bearing walls with wood roof deck supported by wood joists and concrete slab foundation	Good
Façade	Primary Wall Finish: CMU Secondary Wall Finish: Wood siding	Fair
Roof	Gable construction with asphalt shingles	Fair
Interiors	Walls: Painted CMU, ceramic tile Floors: Ceramic tile Ceilings: Wood paneling	Fair
Elevators	None	--
Plumbing	Distribution: Copper supply and cast-iron waste and venting Hot Water: None Fixtures: Toilets, urinals, and sinks in restrooms	Fair
HVAC	None	--
Fire Suppression	Fire extinguishers only	Fair

Systems Summary

Electrical	Source & Distribution: Main panel with copper wiring Interior Lighting: LED Emergency Power: None	Fair
Fire Alarm	Smoke detectors with exit signs only	Fair
Equipment/Special	None	--
Site Pavement	Asphalt lots with limited areas of concrete aprons and pavement and adjacent concrete sidewalks, curbs, ramps, and stairs	Excellent
Site Development	Property entrance signage Playgrounds and basketball field with site lights Moderately furnished park benches, picnic tables, and trash receptacles	Fair
Landscaping and Topography	Moderate landscaping features including lawns, trees, bushes, and planters Irrigation present Low to moderate site slopes throughout	Fair
Utilities	Municipal water and sewer Local utility-provided electric	Fair
Site Lighting	Pole-mounted: LED Building-mounted: LED	Fair
Ancillary Structures	None	--
Accessibility	Presently it does not appear an accessibility study is needed for this property. See Appendix D.	
Key Issues and Findings	Non-operational hand dryer in the men’s restroom	

Systems Expenditure Forecast

System	Immediate	Short Term (1-2 yr)	Near Term (3-5 yr)	Med Term (6-10 yr)	Long Term (11-20 yr)	TOTAL
Facade	-	-	$8,500	-	$16,700	$25,200

TOTALS (3% inflation)	**-**	**$2,300**	**$35,100**	**$492,800**	**$242,000**	**$772,200**

*Totals have been rounded to the nearest $100.

3. Property Space Use and Observed Areas

Areas Observed

The interior spaces were observed in order to gain a clear understanding of the property's overall condition. Other areas accessed included the site within the property boundaries and the exterior of the property.

Key Spaces Not Observed

All key areas of the property were accessible and observed.

4. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the checklists that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance
- Only a representative sample of areas was observed
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance
- Itemized costs for individual non-compliant items are not included in the dataset
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance

The facility was originally constructed in 1965.The facility has not since been substantially renovated.

During the interview process with the client representatives, no complaints or pending litigation associated with potential accessibility issues were reported.

No detailed follow-up accessibility study is currently recommended since no major or moderate issues were identified at the subject site. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

5. Purpose and Scope

Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

Condition Ratings	
Excellent	New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Good	Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Fair	Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.
Poor	Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed, or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life.
Failed	Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.
Not Applicable	Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.

Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Review maintenance records and procedures with the in-place maintenance personnel.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

6. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *S eans C itestone* and *ars all Swift* Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effecti e age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct, and manage the corrections.

Definitions

Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safet* or *Perfor ance ntegrit* Plan Types, are considered Immediate Needs.

Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

7. Energy Audit

The purpose of this Energy Audit is to provide Gladstone Park Restrooms with a baseline of energy usage, the relative energy efficiency of the facility, and specific recommendations for Energy Conservation Measures. Information obtained from these analyses may be used to support a future application to an Energy Conservation Program, Federal and Utility grants towards energy conservation, as well as support performance contracting, justify a municipal bond-funded improvement program, or as a basis for replacement of equipment or systems.

The energy audit consisted of an onsite visual assessment to determine current conditions, itemize the energy consuming equipment (i.e. Boilers, Make-Up Air Units, DWH equipment); review lighting systems both exterior and interior; and review efficiency of all such equipment. The study also included interviews and consultation with operational and maintenance personnel. The following is a summary of the tasks and reporting that make up the Energy Audit portion of the report.

The following is a summary of the tasks and reporting that make up the Energy Audit portion of the report.

Energy and Water Using Equipment

- Bureau Veritas has surveyed the common areas, offices, maintenance facilities and mechanical rooms to document utility-related equipment, including heating systems, cooling systems, air handling systems and lighting systems.

Building Envelope

- Bureau Veritas has reviewed the characteristics and conditions of the building envelope, checking insulation values and conditions. This review also includes an inspection of the condition of walls, windows, doors, roof areas, insulation, and special use areas. Where we anticipated significant losses, we utilized infrared thermographs to analyze heat loss across the envelope.

Recommendations for Energy Savings Opportunities

- Based on the information gathered during the on-site assessment, the utility rates, as well as recent consumption data and engineering analysis, Bureau Veritas has identified opportunities to save energy and provide probable construction costs, projected energy/utility savings and provide a simple payback analysis.

Analysis of Energy Consumption

- Based on the information gathered during the on-site assessment and a, Bureau Veritas has conducted an analysis of the energy usage of all equipment, and identified which equipment is using the most energy and what equipment upgrades may be necessary. As a result, equipment upgrades, or replacements are identified that may provide a reasonable return on the investment and improve maintenance reliability.

Energy Audit Process

- Interviewing staff and review plans and past upgrades
- Performing an energy audit for each use type
- Performing a preliminary evaluation of the utility system
- Analyzing findings, utilizing ECM cost-benefit worksheets
- Making preliminary recommendations for system energy improvements and measures
- Estimating initial cost and changes in operating and maintenance costs based on implementation of energy efficiency measures
- Ranking recommended cost measures, based on the criticality of the project and the largest payback

8. Energy Conservation Measures

Bureau Veritas has conducted an Energy Audit on Gladstone Park Restrooms. The study included a review of the building's construction features, historical energy and water consumption and costs, review of the building envelope, HVAC equipment, heat distribution systems, lighting, and the building's operational and maintenance practices.

Bureau Veritas has evaluated one Energy Conservation Measures (ECM) for this property. The savings for each measure are calculated using standard engineering methods followed in the industry, and detailed calculations for ECM are provided in Appendix H for reference. A 10% discount in energy savings was applied to account for the interactive effects amongst the ECMs. In addition to the consideration of the interactive effects, Bureau Veritas has applied a 15% contingency to the implementation costs to account for potential cost overruns during the implementation of the ECMs.

Recommended Energy Conservation Measures: Financial Impact	
Total Projected Initial ECM Investment	$72 *n Current ollars*
Estimated Annual Cost Savings Related to ECMs	$57 *n Current ollars*
Net Effective ECM Payback	1.28 years

Bureau Veritas screens ECMs using two financial methodologies. ECMs which are considered financially viable must meet both criteria.

1. Simple Payback Period –The number of years required for the cumulative value of energy or water cost savings less future non-fuel or non-water costs to equal the investment costs of the building energy or water system, without consideration of discount rates. ECMs with a payback period greater than the Expected Useful Life (EUL) of the project are not typically recommended, as the cost of the project will not be recovered during the lifespan of the equipment. These ECMs are recommended for implementation during future system replacement. At that time, replacement may be evaluated based on the premium cost of installing energy efficient equipment.

$$Simple\ Payback = \frac{Initial\ Cost}{Annual\ Savings}$$

Bureau Veritas screens and categorizes all the ECM's as per the 24 CFR 905 regulation requirements based on their payback, but only those ECM's are recommended for implementation that have a Savings to Investment Ratio ≥1.0.

Financialy methodology used to determine the Savings to Investment Ratio is as follows:

2. Savings-to-Investment Ratio (SIR) – The savings-to-investment ratio is the ratio of the present value savings to the present value costs of an energy or water conservation measure. The numerator of the ratio is the present value over the estimated useful life (EUL) of net savings in energy or water and non-fuel or non-water operation and maintenance costs attributable to the proposed energy or water conservation measure. The denominator of the ratio is the present value of the net increase in investment and replacement costs less salvage value attributable to the proposed energy or water conservation measure. It is recommended that energy efficiency recommendations should be based on a calculated SIR, with larger SIRs receiving a higher priority. A project is typically only recommended if SIR is greater than or equal to 1.0, unless other factors outweigh the financial benefit.

$$SIR = \frac{Present\ Value\ (Annual\ Savings, i\%, EUL)}{Initial\ Cost}$$

Bureau Veritas has identified one Energy Conservation Measures (ECM) for this property. The basis for an ECM recommendation is a payback of less than the remaining useful life of the system or component. Recommended energy efficiency improvements and the installed cost estimates for recommended energy efficiency measures are provided in the following table:

Energy Conservation Measures					
Priority	Brief Description	Initial Investment	Annual Savings	Payback Period *ears*	Component EUL *ears*
1	Install Low Flow Faucet Aerators	$63	$63	1.00	10

9. Utility Analysis

Establishing the energy baseline begins with an analysis of the utility cost and consumption of the facility. Utilizing the historical energy data and local weather information, we evaluate the existing utility consumption and assign it to the various end-uses throughout the buildings. The Historical Data Analysis breaks down utilities by consumption, cost, and annual profile.

This data is analyzed using standard engineering assumptions and practices. The analysis serves the following functions:

- Allows our engineers to benchmark the energy and water consumption of the facilities against consumption of efficient buildings of similar construction, use and occupancy.
- Generates the historical and current unit costs for energy and water
- Provides an indication of how well changes in energy consumption correlate to changes in weather.
- Reveals potential opportunities for energy consumption and/or cost reduction. For example, the analysis may indicate that there is excessive, simultaneous heating and cooling, which may mean that there is an opportunity to improve the control of the heating and cooling systems.

By performing this analysis and leveraging our experience, our engineers prioritize buildings and pinpoint systems for additional investigation during the site visit, thereby maximizing the benefit of their time spent on-site and minimizing time and effort by the customer's personnel.

Note: No electric utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used the utility rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data from the client.

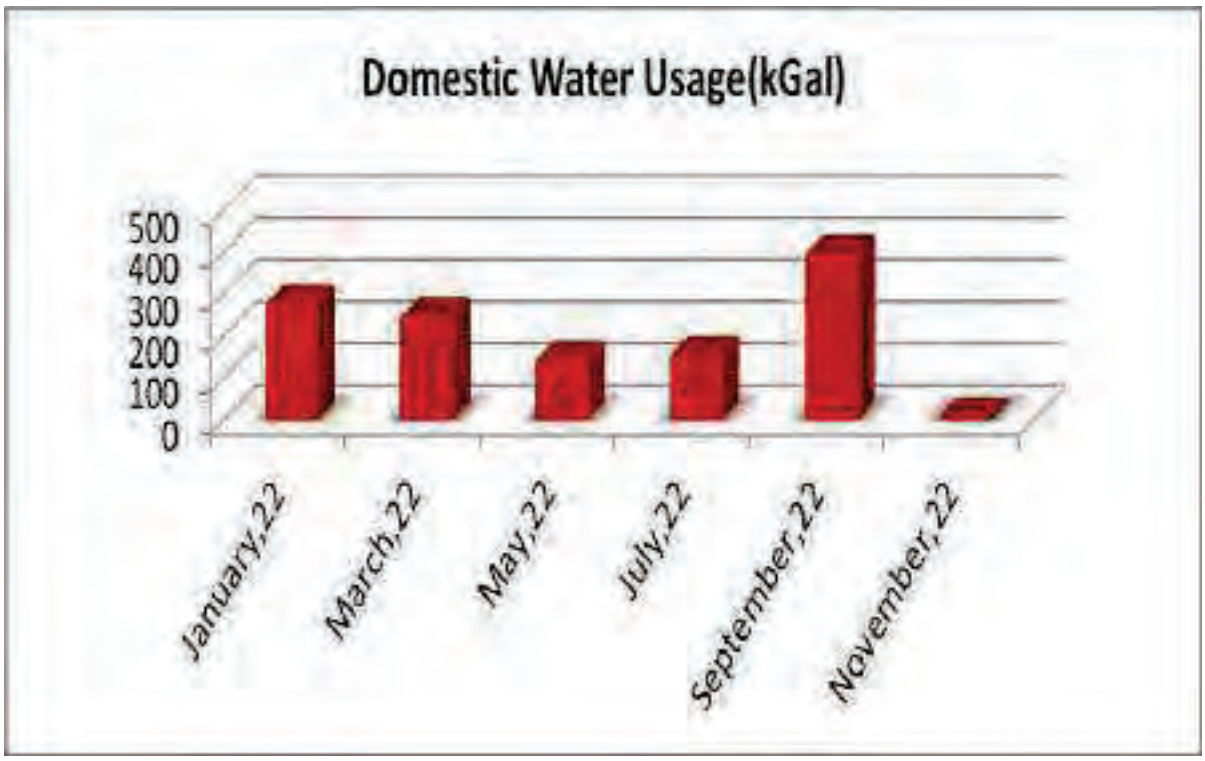
Estimated Utility Rates	
Electricity	Water and Sewer
$0.30/kWh	$8.36/CCF

The data analyzed provides the following information: 1) breakdown of utilities by consumption, 2) cost and annual profile, 3) baseline consumption in terms of energy/utility at the facility, 4) the Energy Use Index, or BTU/SF, and cost/SF. For multiple water meters, the utility data is combined to illustrate annual consumption for each utility type.

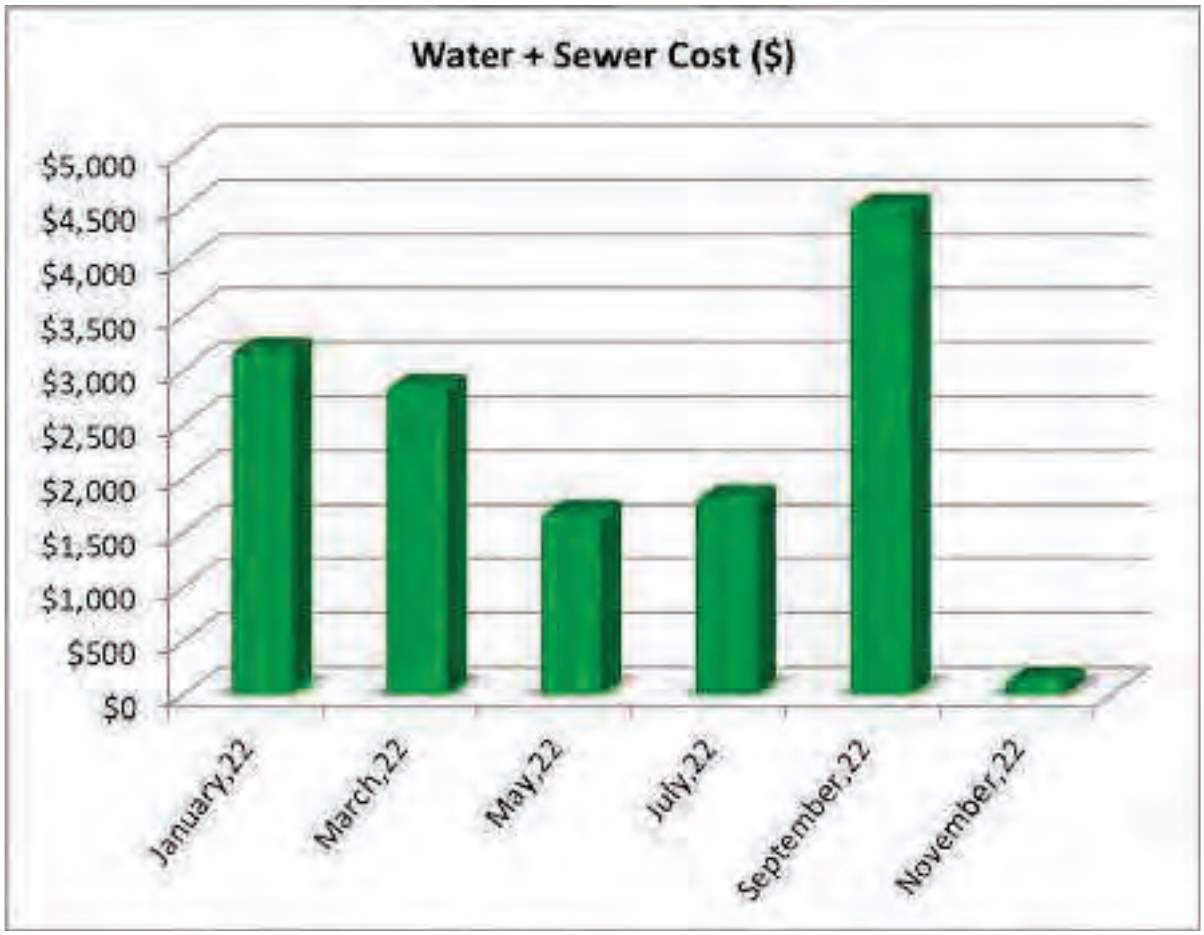
Electricity

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used the electric rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data from the client.

Water and Sewer



The City of Glendora satisfies the water and sewer requirements of the facility. The billing for the water is bi-monthly.



The water consumption pattern remains more or less flat over the 12-month period.

Based on the 2022 water usage and costs provided, the average blended price paid during the year was $11.18/kGal. The total annual consumption for the 12-month period analyzed is 1,266 kGal for a total cost of $14,145 kGal.

. Water and Sewer Consumption and Cost Data			
Billing Month	Consumption (kGal)	Unit Cost (per kGal)	Total Cost
January,22	284	$11.18	$3,177
March,22	254	$11.18	$2,842
May,22	150	$11.18	$1,672

10. Operations & Maintenance Plan

The quality of the maintenance and the operation of the facility's energy systems have a direct effect on its overall energy efficiency. Energy-efficiency needs to be a consideration when implementing facility modifications, equipment replacements, and general corrective actions. The following is a list of activities that should be performed as part of the routine maintenance program for the property. These actions will ensure that the energy conservation measures identified in this report will remain effective. The following general recommendations should be continued or implemented.

Building Envelope

- Ensure that the building envelope has proper caulking and weather stripping.
- Patch holes in the building envelope with foam insulation and fire rated caulk around combustion vents
- Inspect building vents semiannually for bird infestation

Lighting

- Use energy efficient replacement lamps (LEDs)
- Clean lighting fixture reflective surfaces and translucent covers.
- Ensure that timers and/or photocells are operating correctly on exterior lighting

11. Certification

City of Glendora (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Gladstone Park Restrooms, 600 East Gladstone Street, Glendora, California 91741, the “Property”. It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager’s walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling, or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose an Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property’s original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

Energy Audit Glossary of Terms

Glossary of Terms and Acronyms

ECM – Energy Conservation Measures are projects recommended to reduce energy consumption. These can be No/Low cost items implemented as part of routine maintenance or Capital Cost items to be implemented as a capital improvement project.

Initial Investment – The estimated cost of implementing an ECM project. Estimates typically are based on R.S. Means Construction cost data and Industry Standards.

Annual Energy Savings – The reduction in energy consumption attributable to the implementation of a particular ECM. These savings values do not include the interactive effects of other ECMs.

Cost Savings – The expected reduction in utility or energy costs achieved through the corresponding reduction in energy consumption by implementation of an ECM.

Simple Payback Period –The number of years required for the cumulative value of energy or water cost savings less future non-fuel or non-water costs to equal the investment costs of the building energy or water system, without consideration of discount rates.

EUL – Expected Useful Life is the estimated lifespan of a typical piece of equipment based on industry accepted standards.

RUL – Remaining Useful Life is the EUL minus the effective age of the equipment and reflects the estimated number of operating years remaining for the item.

SIR - The savings-to-investment ratio is the ratio of the present value savings to the present value costs of an energy or water conservation measure. The numerator of the ratio is the present value of net savings in energy or water and non-fuel or non-water operation and maintenance costs attributable to the proposed energy or water conservation measure. The denominator of the ratio is the present value of the net increase in investment and replacement costs less salvage value attributable to the proposed energy or water conservation measure. It is recommended that energy-efficiency recommendations be based on a calculated SIR, with larger SIRs receiving a higher priority. A project typically is recommended only if the SIR is greater than or equal to 1.0, unless other factors outweigh the financial benefit.

Life Cycle Cost - The sum of the present values of (a) **I**nvestment costs, less salvage values at the end of the study period; (b) Non-fuel operation and maintenance costs: (c) Replacement costs less salvage costs of replaced building systems; and (d) Energy and/or water costs.

Life Cycle Savings – The sum of the estimated annual cost savings over the EUL of the recommended ECM, expressed in present value dollars.

Building Site Energy Use Intensity - The sum of the total site energy use in thousands of Btu per unit of gross building area. Site energy accounts for all energy consumed at the building location only not the energy consumed during generation and transmission of the energy to the site.

Building Source Energy Use Intensity – The sum of the total source energy use in thousands of Btu per unit of gross building area. Source energy is the energy consumed during generation and transmission in supplying the energy to your site.

Building Cost Intensity - This metric is the sum of all energy use costs in dollars per unit of gross building area.

Greenhouse Gas Emissions - Although there are numerous gases that are classified as contributors to the total for Greenhouse Emissions, the scope of this energy audit focuses on carbon dioxide (CO_2). Carbon dioxide enters the atmosphere through the burning of fossil fuels (oil, natural gas, and coal), solid waste, trees and wood products, and also as a result of other chemical reactions (e.g., manufacture of cement).

A-2. Park Findings and Deficiencies

Historical Summary

Big Tree Park was developed in the early 1970s. In 2010, the City of Glenora expanded the park and built a large wood gazebo. In 2016, another expansion increased the park's area by 15,000 square feet. This expansion included the replacement of fencing and the implementation of drought-tolerant landscaping updates. Currently, the park covers an overall area of 25,000 square feet.

Amenities and General Site

The existing amenities at the community park include a wooden gazebo, unpaved walking trails, and pre-cast picnic benches. The site area is planted with seasonal planters. The site boundaries are fenced by vinyl fencing. The other assets identified at the site include a park entrance monument sign and pole mounted lights. Overall, every site element is well maintained, and each asset is budgeted for replacement over the reserve term.

Architectural

There are no architectural assets identified on the site.

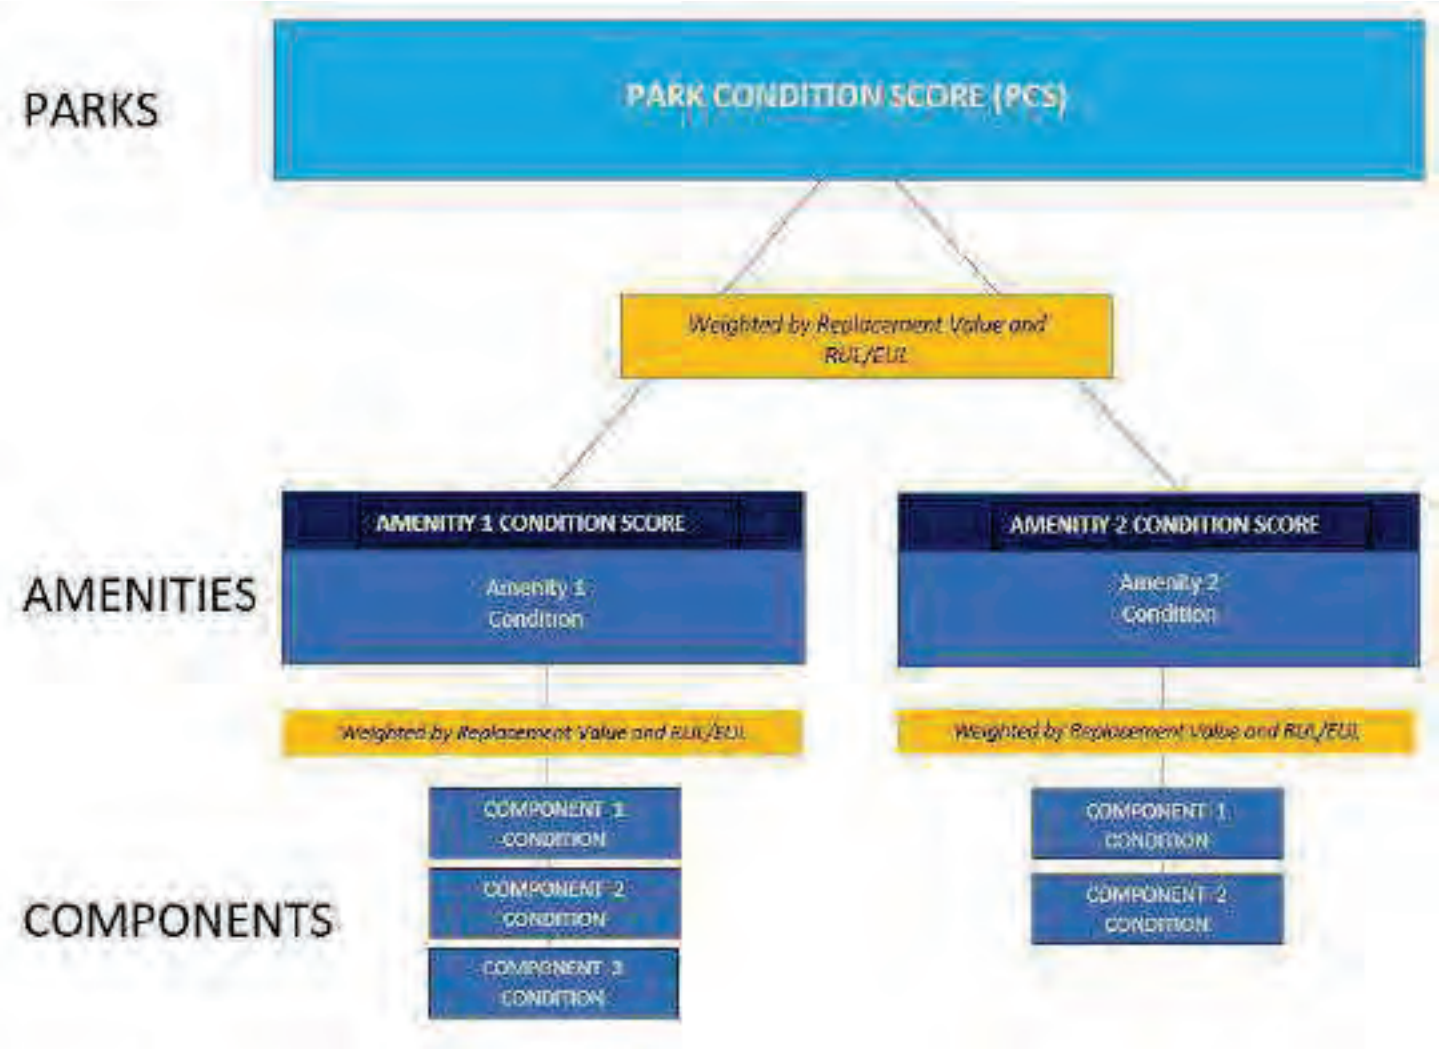
Mechanical, Electrical, Plumbing and Fire (MEPF)

There are no MEPF assets identified on the site.

Recommended Additional Studies

No additional studies recommended at this time.

B. Amenities and General Site



B-1. Prioritization Methodology

Park Condition Score (PCS) and Amenity Condition Score (ACS)

A major goal of the Facility Condition Assessment (FCA) is to benchmark individual parks with other parks within the portfolio, and amenities with other amenities either within the same park and across the portfolio. To achieve a rating for each park, the Park Condition Score (PCS) is developed; similarly, an Amenity Condition Score (ACS) is used to compare amenities.

To assist in the overall prioritization effort, the following terms are used at the Component and Amenity level:

- **Component:** individual elements of the amenity or park that are evaluated and assigned conditions and GPS coordinates. Examples of components include benches, trash receptacles, tennis nets, playground surfaces, or split-rail fencing.
- **Amenity:** defined as a group of components that constitute a major feature of the park, logically grouped together by purpose and/or proximity. Examples of an amenity include a basketball court, a softball field, a dog park, picnic area, or playground.
- **Current Renewal Value (CRV):** the cost in today's dollars of the major constituent parts that make up the whole:
  - for Parks: CRV = renewal cost of all **developed** amenities within it (land value is excluded)
  - for Amenities: CRV = renewal cost of all significant components within it

The Amenity Condition Score (ACS) is a score calculated from an algorithm comprising a weighted average of the conditions of all the components within it.

AMENITY CONDITION SCORE (ACS) FORMULA = SUM [Remaining Value / Renewal Value (RenV) of combined components]

Remaining value = RenV multiplied by RUL/EUL

The Park Condition Score (PCS) is the total score for a single park property calculated from the sum of the Amenity Condition Scores (ACSs) for each amenity within the park.

PARK CONDITION SCORE FORMULA = SUM [Remaining Value]/ SUM [Renewal Value]

B-2. Park Prioritization Metrics

Park Condition Score (PCS) and Amenity Condition Score (ACS)

A major goal of the Facility Condition Assessment (FCA) is to benchmark individual parks with other parks within the portfolio, and amenities with other amenities either within the same park and across the portfolio. To achieve a rating for each park, the Park Condition Score (PCS) is developed; similarly, an Amenity Condition Score (ACS) is used to compare amenities.

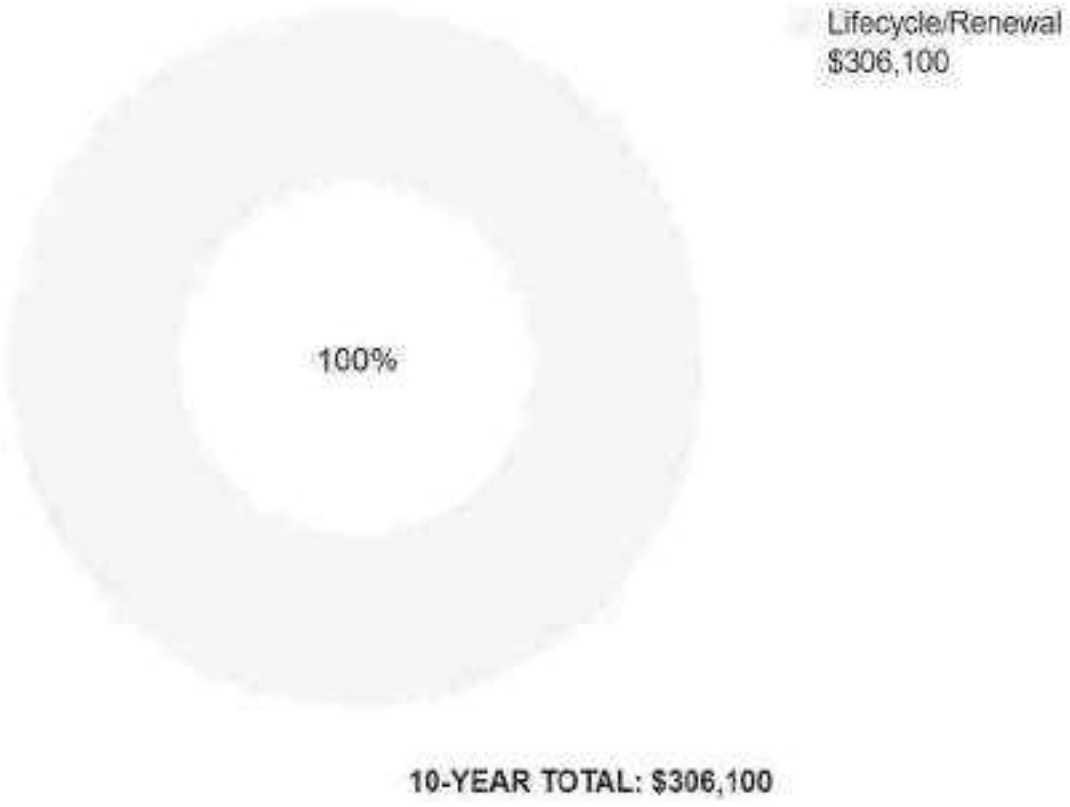
The PCS and ACS metrics have been developed so that the higher the score, the less the park or amenity needs short term financial attention, due to its relative condition. The lower the score, the more attention is needed. An increasingly low score indicates an increased need to address deficiencies, provide replacements or make essential repairs. The lower the score, the more the amenity or park requires renewal or replacement. Both PCS and ACS scores range from 0 to 100.

The color coding reflects the score definition. Higher scores are assigned a sliding scale of green, with 100 assigned the deepest green. Yellow indicates a condition in the middle of the range, with yellow green in the high mid ranges, and yellow red in the low mid ranges. Scores in the low range are assigned a sliding scale of red, with 0 assigned the deepest red.

FAILED CONDITION - 0 _____ EXCELLENT CONDITION -100

The table on the following page shows the PCS condition score of this park, along with the ACS condition score of each amenity within the park:

Big Tree Park	OVERALL CONDITION SCORE **38**	TOTAL ACRES: REPLACEMENT VALUE: $ 260,330 REMAINING VALUE: $ 97,978 SAFETY ISSUES: 0 FAILED COMPONENTS: 0
General Site	COND. SCORE **38**	REPLACEMENT VALUE: $ 260,330 REMAINING VALUE: $ 97,978



B-3. Plan Types (Amenities and General Site)

Each line item in the cost database is assigned a Plan Type, which is the primary reason for the recommended replacement, repair, or other corrective action. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the best fit, typically the one with the greatest significance. See the *Purpose* description in the *Purpose and Scope* section for an explanation of Component Type.

Plan Type Descriptions

Safety	■	An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk.
Performance/Integrity	■	Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.
Accessibility	■	Does not meet ADA, UFAS, and/or other accessibility requirements.
Environmental	■	Improvements to air, water, or soil quality, including removal of hazardous materials from the site.
Retrofit/Adaptation	■	Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.
Lifecycle/Renewal	■	Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.

Plan Type Distribution (by Cost) – Timeframe 10 Years

B-4. Immediate Needs (Amenities and General Site)

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

BV did not identify any immediate needs associated with the amenities or general park areas at this site.

B-5. Key Findings (Amenities and General Site)

Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

The numerical scoring of condition as shown in the Key Findings is based on a 0-100 scale, as illustrated below:

- 0 - Replacement has none or very low impact on park operations
- 33 – Replacement has low impact on park operations
- 66 - Replacement has medium impact on park operation
- 100 - Failing, safety or code requirement component with high impact on park operations

BV did not identify any key findings associated with the amenities or general park areas at this site.

B-6. General Site

General Site			
Asset Type	Community Park		
Asset Location	Throughout Park		
Overall Condition	Good		
Component	*Description*	*Quantity*	*Condition*
Sidewalk	Brick/Masonry Pavers, Replace	5240 SF	Fair
Fences and Gates	Fence, Vinyl 6', Replace	320 LF	Fair
Park Bench	Precast Concrete, Replace	3 EA	Good
Parking/Roadway Lighting	Pole-Mounted, any type with LED, Replace	6 EA	Good
Bollard	Concrete or Metal, Replace	4 EA	Fair
Picnic Table	Precast Concrete, Replace	3 EA	Good
Shed/Gazebo/Shade Structure	Wood or Metal-Framed, Basic/Minimal, Replace	580 SF	Fair
Irrigation System	Pop-Up Spray Heads, Commercial, Replace/Install	18950 SF	Fair

General Site			
Signage	Property, Monument, Replace/Install	1 EA	Good
Trash Receptacle	Medium-Duty Metal or Precast, Replace	2 EA	Fair
Irrigation System	Control Panel, Replace	1 EA	Fair
Sidewalk	Concrete, Large Areas, Replace	1700 SF	Good
Signage	Exterior/Site, Guide and Directional Pole-Mounted, Replace/Install	2 EA	Good
Drinking Fountain	Exterior/Site, Metal Pedestal, Replace	1 EA	Fair
Landscaping and Topography	Moderate landscaping features. Irrigation present Low to moderate site slopes throughout		
Storm Water Management	Surface drainage to developed and undeveloped surroundings		
Accessibility	Potential accessibility issues were not observed at this asset.		
Key Issues and Findings	None identified at this time of assessment		

C. Property Space Use and Observed Areas

Areas Observed

All the site areas were observed in order to gain a clear understanding of the facility's overall condition.

Key Spaces Not Observed

All key areas of the facility were accessible and observed.

D. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of "areas of public accommodations" and "public facilities" on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the checklists that are included in the Accessibility appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance.
- Only a representative sample of areas was observed.
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance.
- Itemized costs for individual non-compliant items are not / are included in the dataset.
- For any "none" boxes checked or reference to "no issues" identified, that alone does not guarantee full compliance.

The park was originally constructed in early 1970s. The park has been substantially renovated in 2010 and 2016.

During the interview process with the client representatives, no complaints or pending litigation associated with potential accessibility issues within the park were reported.

No detailed follow-up accessibility studies are included as recommendations since no major or moderate issues were identified at any of the park amenities and facilities. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

E. Purpose and Scope

Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes construction systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of construction systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

Condition Ratings	
Excellent	New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Good	Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Fair	Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.
Poor	Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed, or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life.
Failed	Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.
Not Applicable	Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.

Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of existing systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Review maintenance records and procedures with the in-place maintenance personnel.
- Observe the exterior amenities of the property, including individual site elements. Building observations include interior areas, the significant mechanical, electrical and elevator equipment rooms, and roofs.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key facts about the portfolio.

F. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means, CBRE Whitestone,* and *Marshall & Swift,* Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct, and manage the corrections.

Definitions

Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Amenities and General Site and Facilities sections of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

G. Energy Audit

The purpose of this Energy Audit is to provide Big Tree Park with a baseline of energy usage, the relative energy efficiency of the facility, and specific recommendations for Energy Conservation Measures. Information obtained from these analyses may be used to support a future application to an Energy Conservation Program, Federal and Utility grants towards energy conservation, as well as support performance contracting, justify a municipal bond-funded improvement program, or as a basis for replacement of equipment or systems.

The energy audit consisted of an onsite visual assessment to determine current conditions, itemize the energy consuming equipment (i.e. Boilers, Make-Up Air Units, DWH equipment); review lighting systems both exterior and interior; and review efficiency of all such equipment. The study also included interviews and consultation with operational and maintenance personnel. The following is a summary of the tasks and reporting that make up the Energy Audit portion of the report.

The following is a summary of the tasks and reporting that make up the Energy Audit portion of the report.

Energy and Water Using Equipment

- Bureau Veritas has surveyed the common areas, offices, maintenance facilities and mechanical rooms to document utility-related equipment, including heating systems, cooling systems, air handling systems and lighting systems.

Building Envelope

- Bureau Veritas has reviewed the characteristics and conditions of the building envelope, checking insulation values and conditions. This review also includes an inspection of the condition of walls, windows, doors, roof areas, insulation, and special use areas.

Recommendations for Energy Savings Opportunities

- Based on the information gathered during the on-site assessment, the utility rates, as well as recent consumption data and engineering analysis, Bureau Veritas has identified opportunities to save energy and provide probable construction costs, projected energy/utility savings and provide a simple payback analysis.

Analysis of Energy Consumption

- Based on the information gathered during the on-site assessment and a, Bureau Veritas has conducted an analysis of the energy usage of all equipment, and identified which equipment is using the most energy and what equipment upgrades may be necessary. As a result, equipment upgrades, or replacements are identified that may provide a reasonable return on the investment and improve maintenance reliability.

Energy Audit Process

- Interviewing staff and review plans and past upgrades
- Performing an energy audit for each use type
- Performing a preliminary evaluation of the utility system
- Analyzing findings, utilizing ECM cost-benefit worksheets
- Making preliminary recommendations for system energy improvements and measures
- Estimating initial cost and changes in operating and maintenance costs based on implementation of energy efficiency measures
- Ranking recommended cost measures, based on the criticality of the project and the largest payback

H. Historical Energy and Water Performance Metrics

Utility Data Tabulation Methodology

Establishing the energy baseline begins with an analysis of the utility cost and consumption of the facility. Utilizing the historical energy data and local weather information, we evaluate the existing utility consumption and assign it to the various end-uses throughout the buildings. The Historical Data Analysis breaks down utilities by consumption, cost, and annual profile.

This data is analyzed, using standard engineering assumptions and practices. The analysis serves the following functions:

- Allows our engineers to benchmark the energy and water consumption of the facilities against consumption of efficient buildings of similar construction, use and occupancy.
- Generates the historical and current unit costs for energy and water
- Provides an indication of how well changes in energy consumption correlate to changes in weather.
- Reveals potential opportunities for energy consumption and/or cost reduction. For example, the analysis may indicate that there is excessive, simultaneous heating and cooling, which may mean that there is an opportunity to improve the control of the heating and cooling systems.

By performing this analysis and leveraging our experience, our engineers prioritize buildings and pinpoint systems for additional investigation during the site visit, thereby maximizing the benefit of their time spent on-site and minimizing time and effort by the customer's personnel.

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used the utility rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data from the client.

Estimated Utility Rates	
Electricity	Water and Sewer
$0.30/kWh	$8.36/CCF

The data analyzed provides the following information: 1) breakdown of utilities by consumption, 2) cost and annual profile, 3) baseline consumption in terms of energy/utility at the facility, 4) the Energy Use Index, or BTU/SF, and cost/SF. For multiple water meters, the utility data is combined to illustrate annual consumption for each utility type.

Electricity

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used the electric rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data from the client.

Water and Sewer

The City of Glendora satisfies the water and sewer requirements of the facility. The billing for the water and sewer is monthly.

Note: No water and sewer utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used a rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data.

Energy Star Portfolio Manager Facility Summary

Bureau Veritas uses the Portfolio Manager tool developed by the Federal Environmental Protection Agency to track relative energy uses of buildings by property type. This tool allows the input of a facility's historic utility data to be compared with normalized data of a large database of its peer facilities.

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. Hence energy benchmarking for the facility cannot be evaluated at this time. Bureau Veritas will update the report on receipt of the actual data.

I. Energy Conservation Measures

Bureau Veritas has conducted an Energy Audit on Big Tree Park. The study included a review of the building's construction features, historical energy and water consumption and costs, review of the building envelope, HVAC equipment, heat distribution systems, lighting, and the building's operational and maintenance practices.

Bureau Veritas has evaluated one Energy Conservation Measures (ECMs) for this property. The savings for each measure are calculated using standard engineering methods followed in the industry, and detailed calculations for ECM are provided in Appendix H for reference. A 10% discount in energy savings was applied to account for the interactive effects amongst the ECMs. In addition to the consideration of the interactive effects, Bureau Veritas has applied a 15% contingency to the implementation costs to account for potential cost overruns during the implementation of the ECMs.

The following table summarizes the recommended ECMs in terms of description, investment cost, energy consumption reduction, and cost savings.

Recommended Non-Renewable Energy Conservation Measures: Financial Impact	
Total Projected Initial ECM Investment	$103 *(In Current Dollars)*
Estimated Annual Cost Savings Related to ECMs	$234 *(In Current Dollars)*
Net Effective ECM Payback	0.44 years

Key Metrics to Benchmark the Subject Property's Energy Usage Profile

- Building Site Energy Use Intensity - The sum of the total site energy use in thousands of Btu per unit of gross building area. Site energy accounts for all energy consumed at the building location only not the energy consumed during generation and transmission of the energy to the site.
- Building Source Energy Use Intensity – The sum of the total source energy use in thousands of Btu per unit of gross building area. Source energy is the energy consumed during generation and transmission in supplying the energy to your site.
- Building Cost Intensity - This metric is the sum of all energy use costs in dollars per unit of gross building area.
- Greenhouse Gas Emissions - Although there are numerous gases that are classified as contributors to the total for Greenhouse Emissions, the scope of this energy audit focuses on carbon dioxide (CO_2). Carbon dioxide enters the atmosphere through the burning of fossil fuels (oil, natural gas, and coal), solid waste, trees, and wood products, and also as a result of other chemical reactions (e.g., manufacture of cement).

Energy Conservation Measures Screening:

Bureau Veritas screens ECMs using two financial methodologies. ECMs which are considered financially viable must meet both criteria.

1. Simple Payback Period –The number of years required for the cumulative value of energy or water cost savings less future non-fuel or non-water costs to equal the investment costs of the building energy or water system, without consideration of discount rates. ECMs with a payback period greater than the Expected Useful Life (EUL) of the project are not typically recommended, as the cost of the project will not be recovered during the lifespan of the equipment. These ECMs are recommended for implementation during future system replacement. At that time, replacement may be evaluated based on the premium cost of installing energy efficient equipment.

$$Simple\ Payback = \frac{Initial\ Cost}{Annual\ Savings}$$

2. Savings-to-Investment Ratio (SIR) – The savings-to-investment ratio is the ratio of the present value savings to the present value costs of an energy or water conservation measure. The numerator of the ratio is the present value over the estimated useful life (EUL) of net savings in energy or water and non-fuel or non-water operation and maintenance costs attributable to the proposed energy or water conservation measure. The denominator of the ratio is the present value of the net increase in investment and replacement costs less salvage value attributable to the proposed energy or water conservation measure. It is recommended that energy efficiency recommendations should be based on a calculated SIR, with larger SIRs receiving a higher priority. A project is typically only recommended if SIR is greater than or equal to 1.0, unless other factors outweigh the financial benefit.

$$SIR = \frac{Present\ Value\ (Annual\ Savings, i\%, EUL)}{Initial\ Cost}$$

Bureau Veritas has identified one Energy Conservation Measures (ECM) for the site. The basis for an ECM recommendation is a payback of less than the remaining useful life of the system or component. Recommended energy efficiency improvements and the installed cost estimates for recommended energy efficiency measures are provided in the following table:

Energy Conservation Measures					
Priority	Brief Description	Initial Investment	Annual Savings	Payback Period *(years)*	Component EUL *(years)*
1	Upgrade Site Lighting to LED	$89	$260	0.34	15

J. Operations & Maintenance Plan

The quality of the maintenance and the operation of the facility's energy systems have a direct effect on its overall energy efficiency. Energy-efficiency needs to be a consideration when implementing facility modifications, equipment replacements, and general corrective actions. The following is a list of activities that should be performed as part of the routine maintenance program for the property. These actions will ensure that the energy conservation measures identified in this report will remain effective. The following general recommendations should be continued or implemented.

Lighting

1. Use energy efficient replacement lamps (LEDs).
2. Clean lighting fixture reflective surfaces and translucent covers.
3. Ensure that timers and/or photocells are operating correctly on exterior lighting.

.

K. Certification

City of Glendora (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Big Tree Park, 665 South Santa Fe Avenue, Glendora, California 91741, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling, or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

Appendix K:
Energy Audit Glossary of Terms

Glossary of Terms and Acronyms

ECM – Energy Conservation Measures are projects recommended to reduce energy consumption. These can be No/Low cost items implemented as part of routine maintenance or Capital Cost items to be implemented as a capital improvement project.

Initial Investment – The estimated cost of implementing an ECM project. Estimates typically are based on R.S. Means Construction cost data and Industry Standards.

Annual Energy Savings – The reduction in energy consumption attributable to the implementation of a particular ECM. These savings values do not include the interactive effects of other ECMs.

Cost Savings – The expected reduction in utility or energy costs achieved through the corresponding reduction in energy consumption by implementation of an ECM.

Simple Payback Period –The number of years required for the cumulative value of energy or water cost savings less future non-fuel or non-water costs to equal the investment costs of the building energy or water system, without consideration of discount rates.

EUL – Expected Useful Life is the estimated lifespan of a typical piece of equipment based on industry accepted standards.

RUL – Remaining Useful Life is the EUL minus the effective age of the equipment and reflects the estimated number of operating years remaining for the item.

SIR - The savings-to-investment ratio is the ratio of the present value savings to the present value costs of an energy or water conservation measure. The numerator of the ratio is the present value of net savings in energy or water and non-fuel or non-water operation and maintenance costs attributable to the proposed energy or water conservation measure. The denominator of the ratio is the present value of the net increase in investment and replacement costs less salvage value attributable to the proposed energy or water conservation measure. It is recommended that energy-efficiency recommendations be based on a calculated SIR, with larger SIRs receiving a higher priority. A project typically is recommended only if the SIR is greater than or equal to 1.0, unless other factors outweigh the financial benefit.

Life Cycle Cost - The sum of the present values of (a) Investment costs, less salvage values at the end of the study period; (b) Non-fuel operation and maintenance costs: (c) Replacement costs less salvage costs of replaced building systems; and (d) Energy and/or water costs.

Life Cycle Savings – The sum of the estimated annual cost savings over the EUL of the recommended ECM, expressed in present value dollars.

Building Site Energy Use Intensity - The sum of the total site energy use in thousands of Btu per unit of gross building area. Site energy accounts for all energy consumed at the building location only not the energy consumed during generation and transmission of the energy to the site.

Building Source Energy Use Intensity – The sum of the total source energy use in thousands of Btu per unit of gross building area. Source energy is the energy consumed during generation and transmission in supplying the energy to your site.

Building Cost Intensity - This metric is the sum of all energy use costs in dollars per unit of gross building area.

Greenhouse Gas Emissions - Although there are numerous gases that are classified as contributors to the total for Greenhouse Emissions, the scope of this energy audit focuses on carbon dioxide (CO_2). Carbon dioxide enters the atmosphere through the burning of fossil fuels (oil, natural gas, and coal), solid waste, trees and wood products, and also as a result of other chemical reactions (e.g., manufacture of cement).

Property Overview and Assessment Details

General Information	
Property Type	Restroom Building
Main Address	701 East Mauna Loa Avenue, Glendora, California 91741
Site Developed	1973
Site Area	1.33 acres (estimated)
Parking Spaces	56 total spaces all in open lots; two of which are accessible
Building Area	374 square feet
Number of Stories	One above grade
Outside Occupants/Leased Spaces	None
Date(s) of Visit	November 7, 2023
Management Point of Contact	City of Glendora, Michael Sledd, Assistant Public Works Director 626.914.8248 msledd@cityofglendora.org
On-site Point of Contact (POC)	Hugo Soltero 626.672.6311
Assessment and Report Prepared By	Usama Anwar
Reviewed By	Carl Alejandro Technical Reviewer Carl.Alejandro@bureauveritas.com 800.733.0660 x7296236
AssetCalc Link	Full dataset for this assessment can be found at: https://www.assetcalc.net/

Significant/Systemic Findings and Deficiencies

Historical Summary

South Hills Park Restrooms building was originally built in 1973. It is located to the eastern end of the park. No major renovations were reported or observed during inspection.

Architectural

The building is made of concrete masonry units and has a gated entrance to both men and women restrooms. The structural components appeared free of any deficiencies. The building roof is covered with low-pitched modified bitumen layers. No physical damage to the roof was directly visible, however it is covered with a large tree planted at its back. Excessive debris can cause excessive damage to the roof and cause moisture to become trapped, leading to structural damage. Hence, trimming of the tree is recommended to protect the rooftop and exterior facade. The exterior façade is finished with glazed masonry units that show no cracking and spalling issues due to water infiltration. The restroom floors are covered with ceramic tiles that exhibit no signs of degradation. All the architectural assets are budgeted for replacement at the end of the expected useful life.

Mechanical, Electrical, Plumbing and Fire (MEPF)

No HVAC system is installed in the building. Corrosion-resistant stainless steel plumbing fittings and fixtures are installed in the restrooms. The plumbing fixtures are plumbed well with no reported issues of plumbing failures or leakages. No domestic hot water is supplied to the building. A pole-mounted secondary transformer feeds and satisfies the low-voltage distribution system in the building to meet electrical load. Wall pack lights illuminate the interior spaces of the building. No fire protection system was identified in the building. An anticipatory cost for all the MEPF assets is anticipated.

Site

Asphalt parking lot and concrete paved sidewalks constitute the flatwork of the site. Sidewalks are free of cracks and heaving, and asphalt pavement has been regularly maintained. A small play area containing play components and park benches is present next to the restroom building. Two small dog parks are also located at the western boundary of the park. Overall, site maintenance appears to be well-maintained, and site improvements and landscaping are generally in good condition.

Recommended Additional Studies

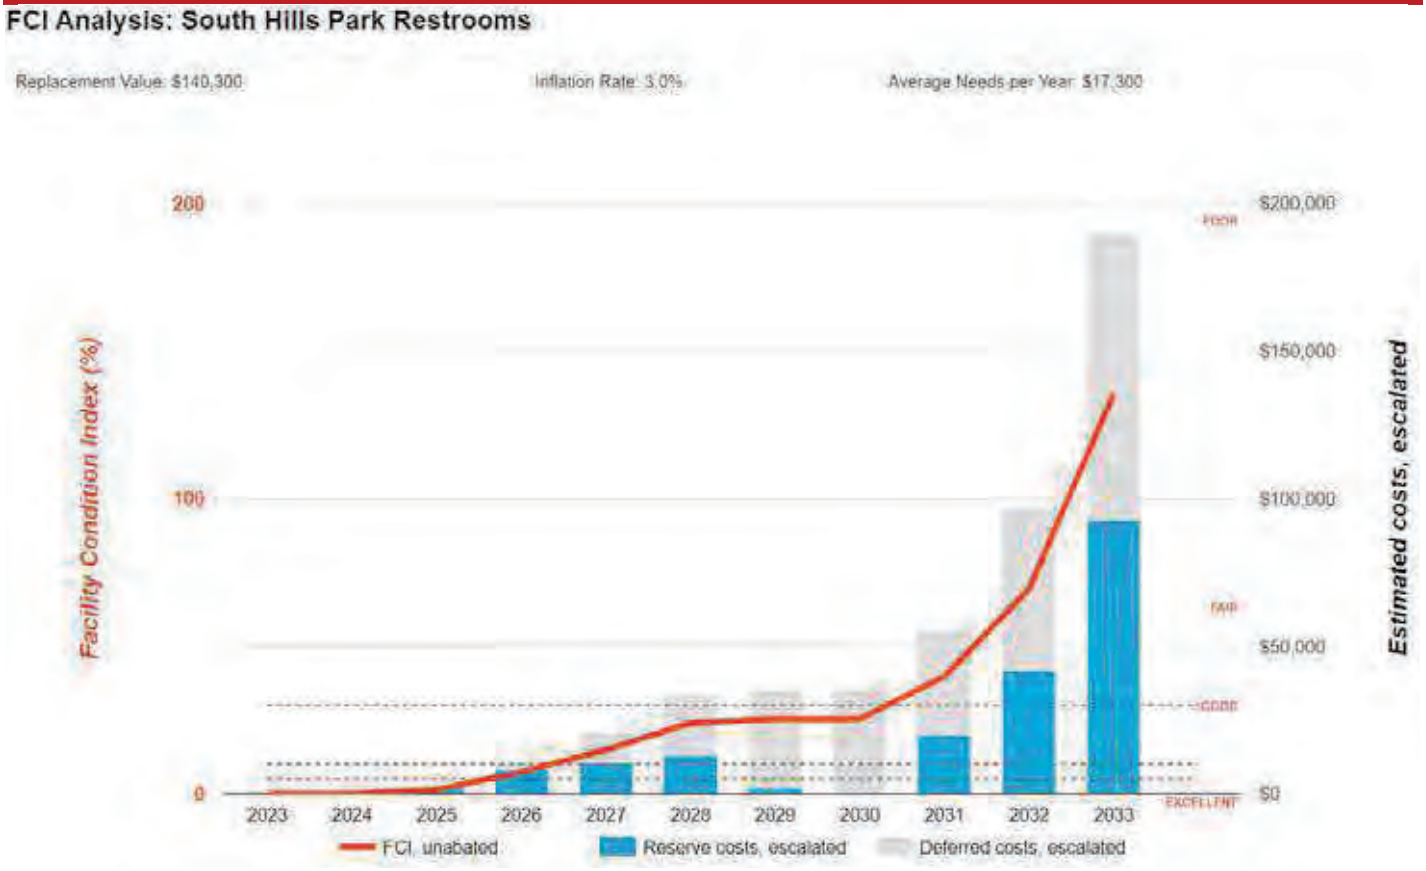
No additional studies recommended at this time.

Facility Condition Index (FCI)

One of the major goals of the FCA is to calculate each building's Facility Condition Index (FCI), which provides a theoretical objective indication of a building's overall condition. By definition, the FCI is defined as the ratio of the cost of current needs divided by current replacement value (CRV) of the facility. The chart below presents the industry standard ranges and cut-off points.

FCI Ranges and Description	
0 – 5%	In new or well-maintained condition, with little or no visual evidence of wear or deficiencies.
5 – 10%	Subjected to wear but is still in a serviceable and functioning condition.
10 – 30%	Subjected to hard or long-term wear. Nearing the end of its useful or serviceable life.
30% and above	Has reached the end of its useful or serviceable life. Renewal is now necessary.

The deficiencies and lifecycle needs identified in this assessment provide the basis for a portfolio-wide capital improvement funding strategy. In addition to the current FCI, extended FCI's have been developed to provide owners the intelligence needed to plan and budget for the "keep-up costs" for their facilities. As such the 3-year, 5-year, and 10-year FCI's are calculated by dividing the anticipated needs of those respective time periods by current replacement value. As a final point, the FCI's provide more value when used to relatively compare facilities across a portfolio instead of being over-analyzed and scrutinized as stand-alone values. The table below summarizes the individual findings for this FCA:



FCI Analysis | South Hills Park Restrooms

Replacement Value	*Total SF*	*Cost/SF*
$ 140,300	*374*	*$ 375*

	Est Reserve Cost	FCI
Current	$ 0	0.0 %
3-Year	$ 10,300	7.3 %
5-Year	$ 33,700	24.0 %
10-Year	$ 190,100	135.5 %

The vertical bars below represent the year-by-year needs identified for the site. The orange line in the graph below forecasts what would happen to the FCI (left Y axis) over time, assuming zero capital expenditures over the next ten years. The dollar amounts allocated for each year (blue bars) are associated with the values along the right Y axis.

Needs by Year with Unaddressed FCI Over Time

Immediate Needs

BV did not observe any immediate needs at the property.

Key Findings

Wall Finishes in Poor Condition.

Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason or rationale for the recommended replacement, repair, or other corrective action. This is the "why" part of the equation. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the "best" fit, typically the one with the greatest significance.

Plan Type Descriptions

Safety	■	An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk.
Performance/Integrity	■	Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.
Accessibility	■	Does not meet ADA, UFAS, and/or other accessibility requirements.
Environmental	■	Improvements to air or water quality, including removal of hazardous materials from the building or site.
Retrofit/Adaptation	■	Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.
Lifecycle/Renewal	■	Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.

Plan Type Distribution (by Cost)

2. Building and Site Information

Systems Summary

System	Description	Condition
Structure	Masonry bearing walls with wood roof deck supported by wood joists and concrete slab foundation	Good
Façade	Wall Finish: Painted Brick	Fair
Roof	Flat construction with modified bituminous finish	Fair
Interiors	Walls: Painted gypsum board and brick, ceramic tile Floors: Ceramic tile Ceilings: Wood paneling	Fair
Elevators	None	--
Plumbing	Distribution: Copper supply and cast-iron waste and venting Hot Water: None Fixtures: Toilets, urinals, and sinks in restrooms	Fair
HVAC	None	--
Fire Suppression	None	--

Systems Summary

Electrical	Source & Distribution: Main panel with copper wiring Interior Lighting: LED Emergency Power: None	Fair
Fire Alarm	Smoke detectors with exit signs only	Fair
Equipment/Special	None	--
Site Pavement	Asphalt lots with limited areas of concrete aprons and pavement and adjacent concrete sidewalks and curbs	Fair
Site Development	Property entrance signage Playgrounds and dog parks Moderately furnished with park benches and trash receptacles	Fair
Landscaping and Topography	Significant landscaping features including lawns, trees, bushes, and planters Irrigation present Low to moderate site slopes throughout	Fair
Utilities	Municipal water and sewer Local utility-provided electric	Fair
Site Lighting	Pole-mounted: LED	Fair
Ancillary Structures	None	--
Accessibility	Presently it does not appear an accessibility study is needed for this property. See Appendix D.	
Key Issues and Findings	Stained interior walls	

Systems Expenditure Forecast

System	Immediate	Short Term (1-2 yr)	Near Term (3-5 yr)	Med Term (6-10 yr)	Long Term (11-20 yr)	TOTAL
Facade	-	-	$7,700	-	$10,300	$17,900
Roofing	-	-	-	$12,300	-	$12,300

HVAC	-	-	$4,900	-	$6,600	$11,600
Electrical	-	-	-	$1,400	$13,300	$14,700
Site Pavement	-	-	$4,900	$5,700	$107,600	$118,200
Site Development	-	$1,300	$8,500	$79,400	$92,600	$181,800
Site Utilities	-	-	-	$49,300	-	$49,300
TOTALS (3% inflation)	-	**$2,000**	**$31,700**	**$156,400**	**$276,300**	**$466,400**

*Totals have been rounded to the nearest $100.

3. Property Space Use and Observed Areas

Areas Observed

The interior spaces were observed in order to gain a clear understanding of the property's overall condition. Other areas accessed included the site within the property boundaries and the exterior of the property.

Key Spaces Not Observed

All key areas of the property were accessible and observed.

4. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the checklists that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance
- Only a representative sample of areas was observed
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance
- Itemized costs for individual non-compliant items are not included in the dataset
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance

The facility was originally constructed in 1973.The facility has not since been substantially renovated.

During the interview process with the client representatives, no complaints or pending litigation associated with potential accessibility issues were reported.

No detailed follow-up accessibility study is currently recommended since no major or moderate issues were identified at the subject site. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

5. Purpose and Scope

Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

Condition Ratings	
Excellent	New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Good	Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Fair	Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.
Poor	Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed, or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life.
Failed	Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.
Not Applicable	Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.

Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Review maintenance records and procedures with the in-place maintenance personnel.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

6. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *S eans C itestone* and *ars all Swift* Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effecti e age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct, and manage the corrections.

Definitions

Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safet* or *Perfor ance ntegrit* Plan Types, are considered Immediate Needs.

Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short-Term window but will not be pushed 'irresponsibly' (too far) into the future.

7. Energy Audit

The purpose of this Energy Audit is to provide South Hills Park Restrooms with a baseline of energy usage, the relative energy efficiency of the facility, and specific recommendations for Energy Conservation Measures. Information obtained from these analyses may be used to support a future application to an Energy Conservation Program, Federal and Utility grants towards energy conservation, as well as support performance contracting, justify a municipal bond-funded improvement program, or as a basis for replacement of equipment or systems.

The energy audit consisted of an onsite visual assessment to determine current conditions, itemize the energy consuming equipment (i.e. Boilers, Make-Up Air Units, DWH equipment); review lighting systems both exterior and interior; and review efficiency of all such equipment. The study also included interviews and consultation with operational and maintenance personnel. The following is a summary of the tasks and reporting that make up the Energy Audit portion of the report.

The following is a summary of the tasks and reporting that make up the Energy Audit portion of the report.

Energy and Water Using Equipment

- Bureau Veritas has surveyed the common areas, offices, maintenance facilities and mechanical rooms to document utility-related equipment, including heating systems, cooling systems, air handling systems and lighting systems.

Building Envelope

- Bureau Veritas has reviewed the characteristics and conditions of the building envelope, checking insulation values and conditions. This review also includes an inspection of the condition of walls, windows, doors, roof areas, insulation, and special use areas. Where we anticipated significant losses, we utilized infrared thermographs to analyze heat loss across the envelope.

Recommendations for Energy Savings Opportunities

- Based on the information gathered during the on-site assessment, the utility rates, as well as recent consumption data and engineering analysis, Bureau Veritas has identified opportunities to save energy and provide probable construction costs, projected energy/utility savings and provide a simple payback analysis.

Analysis of Energy Consumption

- Based on the information gathered during the on-site assessment and a, Bureau Veritas has conducted an analysis of the energy usage of all equipment, and identified which equipment is using the most energy and what equipment upgrades may be necessary. As a result, equipment upgrades, or replacements are identified that may provide a reasonable return on the investment and improve maintenance reliability.

Energy Audit Process

- Interviewing staff and review plans and past upgrades
- Performing an energy audit for each use type
- Performing a preliminary evaluation of the utility system
- Analyzing findings, utilizing ECM cost-benefit worksheets
- Making preliminary recommendations for system energy improvements and measures
- Estimating initial cost and changes in operating and maintenance costs based on implementation of energy efficiency measures
- Ranking recommended cost measures, based on the criticality of the project and the largest payback

8. Energy Conservation Measures

Bureau Veritas has conducted an Energy Audit on South Hills Park Restrooms. The study included a review of the building's construction features, historical energy and water consumption and costs, review of the building envelope, HVAC equipment, heat distribution systems, lighting, and the building's operational and maintenance practices.

Bureau Veritas has evaluated one Energy Conservation Measure (ECM) for this property. The savings for each measure are calculated using standard engineering methods followed in the industry, and detailed calculations for ECM are provided in Appendix H for reference. A 10% discount in energy savings was applied to account for the interactive effects amongst the ECMs. In addition to the consideration of the interactive effects, Bureau Veritas has applied a 15% contingency to the implementation costs to account for potential cost overruns during the implementation of the ECMs.

Recommended Energy Conservation Measures: Financial Impact	
Total Projected Initial ECM Investment	$36 *n Current ollars*
Estimated Annual Cost Savings Related to ECMs	$28 *n Current ollars*
Net Effective ECM Payback	1.28 years

Bureau Veritas screens ECMs using two financial methodologies. ECMs which are considered financially viable must meet both criteria.

1. Simple Payback Period –The number of years required for the cumulative value of energy or water cost savings less future non-fuel or non-water costs to equal the investment costs of the building energy or water system, without consideration of discount rates. ECMs with a payback period greater than the Expected Useful Life (EUL) of the project are not typically recommended, as the cost of the project will not be recovered during the lifespan of the equipment. These ECMs are recommended for implementation during future system replacement. At that time, replacement may be evaluated based on the premium cost of installing energy efficient equipment.

$$Simple\ Payback = \frac{Initial\ Cost}{Annual\ Savings}$$

Bureau Veritas screens and categorizes all the ECM's as per the 24 CFR 905 regulation requirements based on their payback, but only those ECM's are recommended for implementation that have a Savings to Investment Ratio ≥1.0.

Financialy methodology used to determine the Savings to Investment Ratio is as follows:

2. Savings-to-Investment Ratio (SIR) – The savings-to-investment ratio is the ratio of the present value savings to the present value costs of an energy or water conservation measure. The numerator of the ratio is the present value over the estimated useful life (EUL) of net savings in energy or water and non-fuel or non-water operation and maintenance costs attributable to the proposed energy or water conservation measure. The denominator of the ratio is the present value of the net increase in investment and replacement costs less salvage value attributable to the proposed energy or water conservation measure. It is recommended that energy efficiency recommendations should be based on a calculated SIR, with larger SIRs receiving a higher priority. A project is typically only recommended if SIR is greater than or equal to 1.0, unless other factors outweigh the financial benefit.

$$SIR = \frac{Present\ Value\ (Annual\ Savings, i\%, EUL)}{Initial\ Cost}$$

Bureau Veritas has identified one Energy Conservation Measure (ECM) for this property. The basis for an ECM recommendation is a payback of less than the remaining useful life of the system or component. Recommended energy efficiency improvements and the installed cost estimates for recommended energy efficiency measures are provided in the following table:

Energy Conservation Measures					
Priority	Brief Description	Initial Investment	Annual Savings	Payback Period *ears*	Component EUL *ears*
1	Install Low Flow Faucet Aerators	$31	$31	1.00	10

9. Utility Analysis

Establishing the energy baseline begins with an analysis of the utility cost and consumption of the facility. Utilizing the historical energy data and local weather information, we evaluate the existing utility consumption and assign it to the various end-uses throughout the buildings. The Historical Data Analysis breaks down utilities by consumption, cost, and annual profile.

This data is analyzed using standard engineering assumptions and practices. The analysis serves the following functions:

- Allows our engineers to benchmark the energy and water consumption of the facilities against consumption of efficient buildings of similar construction, use and occupancy.
- Generates the historical and current unit costs for energy and water
- Provides an indication of how well changes in energy consumption correlate to changes in weather.
- Reveals potential opportunities for energy consumption and/or cost reduction. For example, the analysis may indicate that there is excessive, simultaneous heating and cooling, which may mean that there is an opportunity to improve the control of the heating and cooling systems.

By performing this analysis and leveraging our experience, our engineers prioritize buildings and pinpoint systems for additional investigation during the site visit, thereby maximizing the benefit of their time spent on-site and minimizing time and effort by the customer's personnel.

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used the utility rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data from the client.

Estimated Utility Rates	
Electricity	Water and Sewer
$0.30/kWh	$8.36/CCF

The data analyzed provides the following information: 1) breakdown of utilities by consumption, 2) cost and annual profile, 3) baseline consumption in terms of energy/utility at the facility, 4) the Energy Use Index, or BTU/SF, and cost/SF. For multiple water meters, the utility data is combined to illustrate annual consumption for each utility type.

Electricity

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used the electric rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data from the client.

Water and Sewer

The City of Glendora satisfies the water and sewer requirements of the facility. The billing for the water and sewer is monthly.

Note: No water and sewer utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used a rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data.

Energy Star Portfolio Manager Facility Summary

Bureau Veritas uses the Portfolio Manager tool developed by the Federal Environmental Protection Agency to track relative energy uses of buildings by property type. This tool allows the input of a facility's historic utility data to be compared with normalized data of a large database of its peer facilities.

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has not evaluated the energy benchmarking for the facility. Bureau Veritas will update the report on receipt of the actual data.

10. Operations & Maintenance Plan

The quality of the maintenance and the operation of the facility's energy systems have a direct effect on its overall energy efficiency. Energy-efficiency needs to be a consideration when implementing facility modifications, equipment replacements, and general corrective actions. The following is a list of activities that should be performed as part of the routine maintenance program for the property. These actions will ensure that the energy conservation measures identified in this report will remain effective. The following general recommendations should be continued or implemented.

Building Envelope

- Ensure that the building envelope has proper caulking and weather stripping.
- Patch holes in the building envelope with foam insulation and fire rated caulk around combustion vents
- Inspect building vents semiannually for bird infestation

Lighting

- Use energy efficient replacement lamps (LEDs)
- Clean lighting fixture reflective surfaces and translucent covers.
- Ensure that timers and/or photocells are operating correctly on exterior lighting

11. Certification

City of Glendora (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of South Hills Park Restrooms, 701 East Mauna Loa Avenue, Glendora, California 91741, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling, or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose an Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

Energy Audit Glossary of Terms

Glossary of Terms and Acronyms

ECM – Energy Conservation Measures are projects recommended to reduce energy consumption. These can be No/Low cost items implemented as part of routine maintenance or Capital Cost items to be implemented as a capital improvement project.

Initial Investment – The estimated cost of implementing an ECM project. Estimates typically are based on R.S. Means Construction cost data and Industry Standards.

Annual Energy Savings – The reduction in energy consumption attributable to the implementation of a particular ECM. These savings values do not include the interactive effects of other ECMs.

Cost Savings – The expected reduction in utility or energy costs achieved through the corresponding reduction in energy consumption by implementation of an ECM.

Simple Payback Period –The number of years required for the cumulative value of energy or water cost savings less future non-fuel or non-water costs to equal the investment costs of the building energy or water system, without consideration of discount rates.

EUL – Expected Useful Life is the estimated lifespan of a typical piece of equipment based on industry accepted standards.

RUL – Remaining Useful Life is the EUL minus the effective age of the equipment and reflects the estimated number of operating years remaining for the item.

SIR - The savings-to-investment ratio is the ratio of the present value savings to the present value costs of an energy or water conservation measure. The numerator of the ratio is the present value of net savings in energy or water and non-fuel or non-water operation and maintenance costs attributable to the proposed energy or water conservation measure. The denominator of the ratio is the present value of the net increase in investment and replacement costs less salvage value attributable to the proposed energy or water conservation measure. It is recommended that energy-efficiency recommendations be based on a calculated SIR, with larger SIRs receiving a higher priority. A project typically is recommended only if the SIR is greater than or equal to 1.0, unless other factors outweigh the financial benefit.

Life Cycle Cost - The sum of the present values of (a) **I**nvestment costs, less salvage values at the end of the study period; (b) Non-fuel operation and maintenance costs: (c) Replacement costs less salvage costs of replaced building systems; and (d) Energy and/or water costs.

Life Cycle Savings – The sum of the estimated annual cost savings over the EUL of the recommended ECM, expressed in present value dollars.

Building Site Energy Use Intensity - The sum of the total site energy use in thousands of Btu per unit of gross building area. Site energy accounts for all energy consumed at the building location only not the energy consumed during generation and transmission of the energy to the site.

Building Source Energy Use Intensity – The sum of the total source energy use in thousands of Btu per unit of gross building area. Source energy is the energy consumed during generation and transmission in supplying the energy to your site.

Building Cost Intensity - This metric is the sum of all energy use costs in dollars per unit of gross building area.

Greenhouse Gas Emissions - Although there are numerous gases that are classified as contributors to the total for Greenhouse Emissions, the scope of this energy audit focuses on carbon dioxide (CO_2). Carbon dioxide enters the atmosphere through the burning of fossil fuels (oil, natural gas, and coal), solid waste, trees and wood products, and also as a result of other chemical reactions (e.g., manufacture of cement).

Campus Findings and Deficiencies

Historical Summary

The Centennial Heritage Park Facilities were originally constructed in 1895. The property is a historical preservation that provides tours seasonally.

Architectural

The buildings have wood framed structures with asphalt shingle roofs and exterior wood siding walls. The last roof replacement occurred at the Hamilton House about fifteen years ago. The Storage Shed building's roof was damaged by a falling tree. This has resulted in roof leaks that are recommended for repair during the reserve term. The other building roofs are in overall fair condition. Exterior wall painting appears to be done on an as needed basis. Paint chipping was observed in various areas on the Hamilton House. Exterior wood chipping and deterioration was observed at the Print Shop Barn. Repair is recommended. According to the point of contact, there are no issues with building movement or settlement. However, due to the age of the facilities, routine maintenance checks on the foundation are recommended.

The interior finishes are replaced on an as needed basis. The ceiling in the restroom of the Storage Building has been damaged by roof leaks and is recommended for repair/replacement. Typical lifecycle based interior and exterior finish replacements have been budgeted for the reserve term.

Mechanical, Electrical, Plumbing and Fire (MEPF)

There are no HVAC components at the property. The electrical system is controlled by a main panel at the side of the Hamilton House. The other buildings are fed by this panel. Domestic hot water is supplied to the private restroom in the Storage Building by an electric storage tank water heater. There is a working plumbing system in the Hamilton House, but it is not in use. Fire suppression consists of individual fire extinguishers.

Site

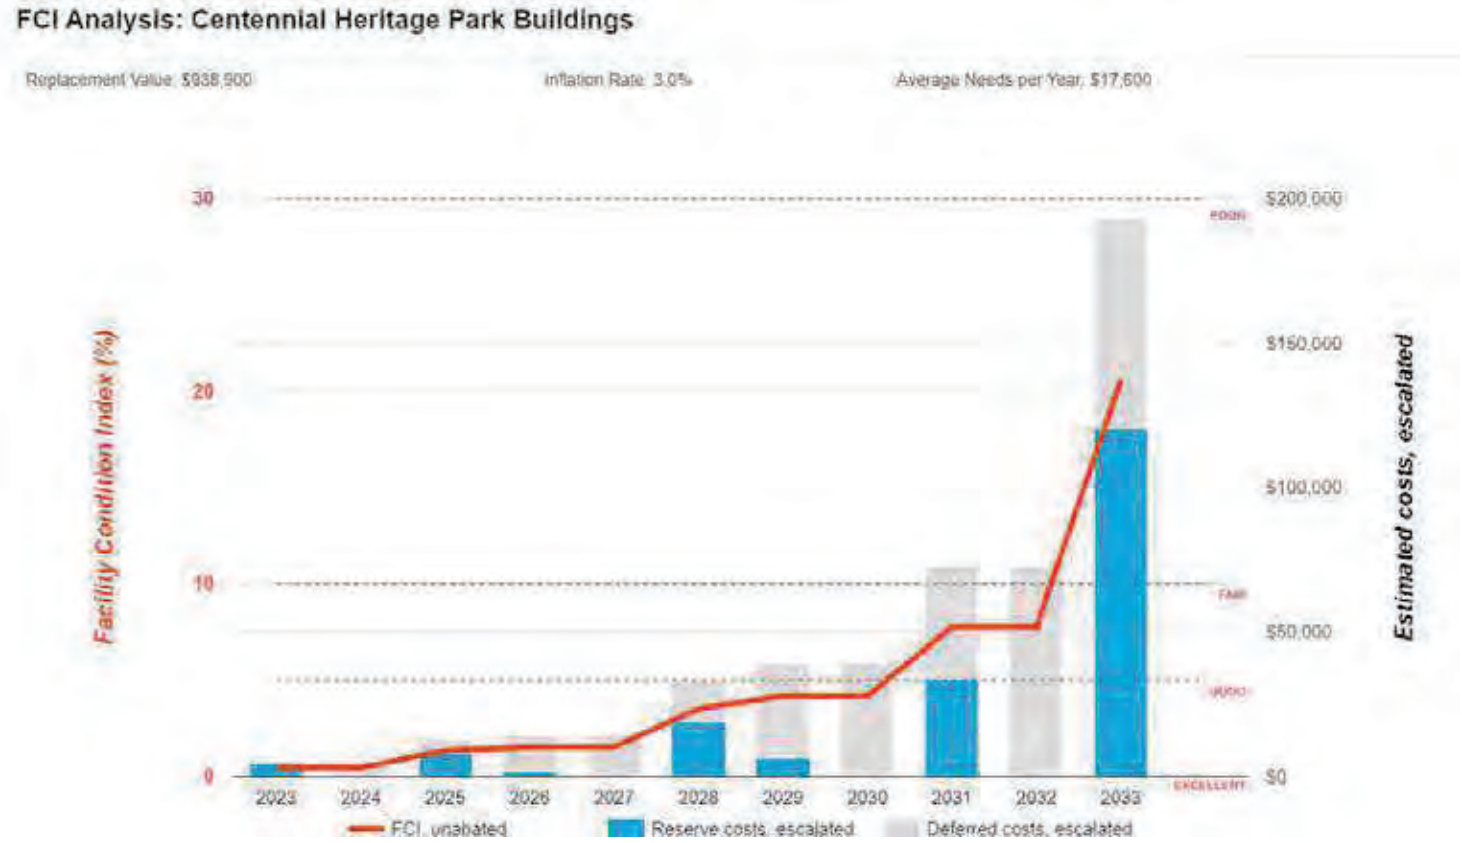
There is no designated parking area at the site. The outdoor furnishings at the picnic area vary in age and condition. Site lighting appears to be adequate for the facility's needs.

Recommended Additional Studies

No additional studies recommended at this time.

Facility Condition Index (FCI)

One of the major goals of the FCA is to calculate each building's Facility Condition Index (FCI), which provides a theoretical objective indication of a building's overall condition. By definition, the FCI is defined as the ratio of the cost of current needs divided by current replacement value (CRV) of the facility. The chart below presents the industry standard ranges and cut-off points.



FCI Ranges and Description	
0 – 5%	In new or well-maintained condition, with little or no visual evidence of wear or deficiencies.
5 – 10%	Subjected to wear but is still in a serviceable and functioning condition.
10 – 30%	Subjected to hard or long-term wear. Nearing the end of its useful or serviceable life.
30% and above	Has reached the end of its useful or serviceable life. Renewal is now necessary.

The deficiencies and lifecycle needs identified in this assessment provide the basis for a portfolio-wide capital improvement funding strategy. In addition to the current FCI, extended FCI's have been developed to provide owners the intelligence needed to plan and budget for the "keep-up costs" for their facilities. As such the 3-year, 5-year, and 10-year FCI's are calculated by dividing the anticipated needs of those respective time periods by current replacement value. As a final point, the FCI's ultimately provide more value when used to relatively compare facilities across a portfolio instead of being over-analyzed and scrutinized as stand-alone values. The table below summarizes the individual findings for this FCA:

Facility (year built)	Cost/SF	Total SF	Replacement Value	Current	3-Year	5-Year	10-Year
Centennial Heritage Park Buildings / Citrus Snack Stand	$375	50	$18,750	0.0%	0.0%	5.2%	68.4%
Centennial Heritage Park Buildings / Englehart Shed	$375	200	$75,000	0.0%	0.0%	4.1%	33.8%
Centennial Heritage Park Buildings / Hamilton House	$450	1,267	$570,150	0.0%	1.2%	2.1%	14.2%
Centennial Heritage Park Buildings / Print Shop Barn	$375	500	$187,500	0.9%	0.9%	4.7%	7.9%
Centennial Heritage Park Buildings / Storage Shed	$350	250	$87,500	0.7%	3.4%	5.9%	7.3%

The vertical bars below represent the year-by-year needs identified for the site. The orange line in the graph below forecasts what would happen to the FCI (left Y axis) over time, assuming zero capital expenditures over the next ten years. The dollar amounts allocated for each year (blue bars) are associated with the values along the right Y axis.

Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason or rationale for the recommended replacement, repair, or other corrective action. This is the "why" part of the equation. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the "best" fit, typically the one with the greatest significance.

Plan Type Descriptions

Safety	■	An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk.
Performance/Integrity	■	Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.
Accessibility	■	Does not meet ADA, UFAS, and/or other handicap accessibility requirements.
Environmental	■	Improvements to air or water quality, including removal of hazardous materials from the building or site.
Retrofit/Adaptation	■	Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.
Lifecycle/Renewal	■	Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.

Plan Type Distribution (by Cost)

Interiors	$600	-	$100	$200	$100	$1,000
Plumbing	-	-	$900	-	$5,800	$6,700
Electrical	-	-	-	$1,000	$8,700	$9,800
TOTALS (3% Inflation)	**$600**	**$1,500**	**$3,100**	**$1,200**	**$25,900**	**$32,300**

*Totals have been rounded to the nearest $100.

The orange line in the graph below forecasts what would happen to the FCI (left axis) over time, assuming zero capital expenditures. The capital expenditures for each year (blue bars) are associated with the dollar amounts along the right Y axis.

Needs by Year with Unaddressed FCI Over Time

7. Site Summary

Site Information

Lot Size	1.24 acres (estimated)	
Parking Spaces	No designated parking	
System	*Description*	*Condition*
Pavement/Flatwork	No pavement	--
Site Development	Building-mounted signage, chain link fencing	Fair
Landscaping and Topography	Heavy landscaping features Irrigation present Low to moderate site slopes throughout	Fair
Utilities	On-site well and septic tank Local utility-provided electric	Fair
Site Lighting	Pole-mounted: LED Building-mounted: LED	Fair
Ancillary Structures	Storage shed	Fair
Accessibility	Presently it does not appear an accessibility study is needed for the exterior site areas. See Appendix C.	
Key Issues and Findings	Mature tree leaning on Englehart Shed	

Site: Systems Expenditure Forecast

System	Immediate	Short Term (1-2 yr)	Near Term (3-5 yr)	Med Term (6-10 yr)	Long Term (11-20 yr)	TOTAL
Plumbing	-	-	-	-	$12,100	$12,100
Special Construction & Demo	-	-	-	-	$10,600	$10,600
Site Development	$2,200	-	$1,000	$35,700	$31,600	$70,500
Site Utilities	-	-	-	$13,600	$8,100	$21,700
TOTALS (3% Inflation)	**$2,200**	-	**$1,000**	**$49,300**	**$62,400**	**$114,900**

* Totals have been rounded to the nearest $100.

8. Property Space Use and Observed Areas

Areas Observed

The interior spaces were observed in order to gain a clear understanding of the property's overall condition. Other areas accessed included the site within the property boundaries and the exterior of the property.

Key Spaces Not Observed

All key areas of the property were accessible and observed.

9. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities.
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the checklists that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance
- Only a representative sample of areas was observed
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance
- Itemized costs for individual non-compliant items are not included in the dataset
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance

The facility was originally constructed in 1895. The facility has not since been substantially renovated.

During the interview process with the client representatives, no complaints or pending litigation associated with potential accessibility issues was reported.

A detailed follow-up accessibility study is included as a recommendation because potential moderate to major issues were observed at the subject site. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

10. Purpose and Scope

Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

Condition Ratings	
Excellent	New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Good	Satisfactory as-is. A component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Fair	Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.
Poor	Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed, or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life.
Failed	Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.
Not Applicable	Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.

Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Review maintenance records and procedures with the in-place maintenance personnel.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

11. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means, CBRE Whitestone,* and *Marshall & Swift,* Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

Definitions

Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

12. Energy Audit

The purpose of this Energy Audit is to provide Centennial Heritage Park Facilities with a baseline of energy usage, the relative energy efficiency of the facility, and specific recommendations for Energy Conservation Measures. Information obtained from these analyses may be used to support a future application to an Energy Conservation Program, Federal and Utility grants towards energy conservation, as well as support performance contracting, justify a municipal bond-funded improvement program, or as a basis for replacement of equipment or systems.

The energy audit consisted of an onsite visual assessment to determine current conditions, itemize the energy consuming equipment (i.e. Boilers, Make-Up Air Units, DWH equipment); review lighting systems both exterior and interior; and review efficiency of all such equipment. The study also included interviews and consultation with operational and maintenance personnel. The following is a summary of the tasks and reporting that make up the Energy Audit portion of the report.

The following is a summary of the tasks and reporting that make up the Energy Audit portion of the report.

Energy and Water Using Equipment

- Bureau Veritas has surveyed the common areas, offices, maintenance facilities and mechanical rooms to document utility-related equipment, including heating systems, cooling systems, air handling systems and lighting systems.

Building Envelope

- Bureau Veritas has reviewed the characteristics and conditions of the building envelope, checking insulation values and conditions. This review also includes an inspection of the condition of walls, windows, doors, roof areas, insulation and special use areas. Where we anticipated significant losses, we utilized infrared thermographs to analyze heat loss across the envelope.

Recommendations for Energy Savings Opportunities

- Based on the information gathered during the on-site assessment, the utility rates, as well as recent consumption data and engineering analysis, Bureau Veritas has identified opportunities to save energy and provide probable construction costs, projected energy/utility savings and provide a simple payback analysis.

Analysis of Energy Consumption

- Based on the information gathered during the on-site assessment and a, Bureau Veritas has conducted an analysis of the energy usage of all equipment, and identified which equipment is using the most energy and what equipment upgrades may be necessary. As a result, equipment upgrades, or replacements are identified that may provide a reasonable return on the investment and improve maintenance reliability.

Energy Audit Process

- Interviewing staff and review plans and past upgrades
- Performing an energy audit for each use type
- Performing a preliminary evaluation of the utility system
- Analyzing findings, utilizing ECM cost-benefit worksheets
- Making preliminary recommendations for system energy improvements and measures
- Estimating initial cost and changes in operating and maintenance costs based on implementation of energy efficiency measures
- Ranking recommended cost measures, based on the criticality of the project and the largest payback

13. Historical Energy and Water Performance Metrics

Utility Data Tabulation Methodology

The baseline utility consumption data for the proper has been developed by aggregating the consumption from one electric meter.

Data Limitation:

No assumptions were made in tabulation of the utility data for the purposes of the audit.

The cost associated with the utility consumption at the building was not made available to Bureau Veritas at the time of report compilation. As a result, Bureau Veritas has modeled the approximate rate based on the utility company published tariff for commercial institutions. Bureau Veritas will update the report on receipt of the actual data from the client.

Utilities Metering at Glance	
Number of electric meters observed	One
Number of gas meters observed	-
Number of domestic water meter observed	-

Average Utility Rates		
Electricity	Natural Gas	Water and Sewer
$0.30/kWh	N/A	N/A

Electricity

Note: No utility data was received by Bureau Veritas from the housing authority at the time of report compilation. As a result, Bureau Veritas has used the electric rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data from the housing authority.

Natural Gas

Not applicable. There is no natural gas service provided to the facility.

Water and Sewer

The property has an on-site well and septic tank.

End Use Energy Distribution

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas will complete end use energy distribution on receipt of the actual data from the client.

Energy Star Portfolio Manager Facility Summary

Bureau Veritas uses the Portfolio Manager tool developed by the Federal Environmental Protection Agency to track relative energy uses of buildings by property type. This tool allows the input of a facility's historic utility data to be compared with normalized data of a large database of its peer facilities.

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas will complete energy benchmarking on receipt of the actual data from the client.

14. Energy Conservation Measures

Bureau Veritas has conducted an Energy Audit on Centennial Heritage Park Facilities. The study included a review of the building's construction features, historical energy and water consumption and costs, review of the building envelope, HVAC equipment, heat distribution systems, lighting, and the building's operational and maintenance practices.

There are few electro-mechanical components at the property, and lighting has already been upgraded with LED bulbs. Therefore, there does not appear to be an opportunity for energy savings at this time.

15. Operations and Maintenance Plan

The quality of the maintenance and the operation of the facility's energy systems have a direct effect on its overall energy efficiency. Energy-efficiency needs to be a consideration when implementing facility modifications, equipment replacements, and general corrective actions. The following is a list of activities that should be performed as part of the routine maintenance program for the property.

Building Envelope

- ✓ Ensure that the building envelope has proper caulking and weather stripping.
- ✓ Patch holes in the building envelope with foam insulation and fire rated caulk around combustion vents
- ✓ Inspect building vents semiannually for bird infestation
- ✓ Inspect windows monthly for damaged panes and failed thermal seals
- ✗ Repair and adjust automatic door closing mechanisms as needed.

Heating and Cooling

- ✗ All preventive maintenance should be performed on all furnaces and boilers, which would include cleaning of burners and heat exchanger tubes.
- ✗ Ensure that the combustion vents exhaust outside the conditioned space and the vent dampers are functional
- ✗ Ensure that the control valves are functioning properly before start of every season
- ✗ Ensure steam traps are functional before start of each heating season
- ✗ Ensure use of chemical treatment for boiler make up water
- ✗ Ensure boiler outside temperature re-set is set to 55F
- ✗ Ensure use of chemical treatment for cooling tower water to prevent corrosion
- ✗ Ensure the duct work in unconditioned space is un-compromised and well insulated
- ✗ Duct cleaning is recommended every 10 years. This should include sealing of ducts using products similar to 'aero-seal'
- ✗ Ensure use of economizer mode is functional and used
- ✗ Ensure that the outside air dampers actuators are operating correctly
- ✗ Ensure air coils in the AHU and FCA's are pressure washed annually
- ✗ Return vents should remain un-obstructed and be located centrally
- ✗ Temperature settings reduced in unoccupied areas and set points seasonally adjusted.
- ✗ Evaporator coils and condenser coils should be regularly cleaned to improve heat transfer
- ✗ Refrigerant pipes should be insulated with a minimum of ¾" thick Elastomeric Rubber Pipe Insulation
- ✗ Ensure refrigerant pressure is maintained in the condensers
- ✗ Change air filters on return vents seasonally. Use only filters with 'Minimum Efficiency Rating Value'(MERV) of 8

Central Domestic Hot Water Heater

- ✗ Never place gas fired water heaters adjacent to return vents so as to prevent flame roll outs
- ✓ Ensure the circulation system is on timer to reduce the losses through re-circulation
- ✓ Ensure all hot water pipes are insulated with fiberglass insulation at all times
- ✓ Replacement water heater should have Energy Factor (EF)>0.9
- ✓ Tank-type water heaters flushed annually.

Lighting Improvements

- ✓ Utilize bi-level lighting controls in stairwells and hallways.
- ✓ Use LED replacement lamps
- ✓ Clean lighting fixture reflective surfaces and translucent covers.
- ✓ Ensure that timers and/or photocells are operating correctly on exterior lighting
- ✓ Use occupancy sensors for offices and other rooms with infrequent occupancy

Existing Equipment and Replacements

- ✗ Ensure that refrigerator and freezer doors close and seal correctly
- ✓ Ensure kitchen and bathroom exhaust outside the building and the internal damper operates properly
- ✓ Ensure that bathroom vents exhaust out
- ✗ Office/ computer equipment either in the “sleep” or “off” mode when not used

Key

✗	Maintenance Measure is Not Applicable For the Given Facility
✓	Maintenance Measure is Applicable For the Given Facility

16. Certification

The City of Glendora (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Centennial Heritage Park Facilities, 725 East Mauna Loa Avenue, Glendora, California 91740, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

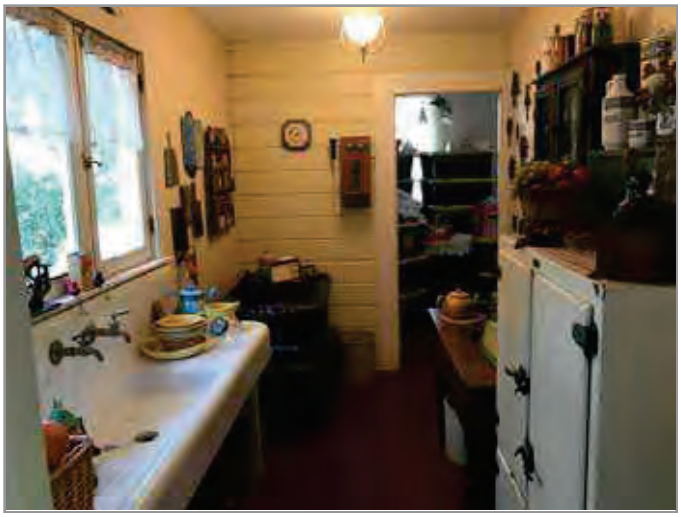
6	Do ramp runs on an accessible route appear to have a compliant rise and width ?			X	

7	Do ramps on an accessible route appear to have compliant end and intermediate landings ?			✕	
8	Do ramps and stairs on an accessible route appear to have compliant handrails?			✕	
9	For stairways that are open underneath, are permanent barriers present that prevent or discourage access?			✕	

Abbreviated Accessibility Checklist

Building Entrances

HAMILTON HOUSE ENTRANCE



ENGLEHART SHED ENTRANCE

	Question	Yes	No	NA	Comments
1	Do a sufficient number of accessible entrances appear to be provided ?		X		
2	If the main entrance is not accessible, is an alternate accessible entrance provided?		X		
3	Is signage provided indicating the location of alternate accessible entrances ?			X	
4	Do doors at accessible entrances appear to have compliant maneuvering clearance area on each side ?			X	
5	Do doors at accessible entrances appear to have compliant hardware ?		X		
6	Do doors at accessible entrances appear to have a compliant clear opening width ?		X		

7	Do pairs of accessible entrance doors in series appear to have the minimum clear space between them ?			X	
8	Do thresholds at accessible entrances appear to have a compliant height ?		X		

Abbreviated Accessibility Checklist

Interior Accessible Route

INTERIOR PATH

NON COMPLIANT MANEUVERING SPACE

	Question	Yes	No	NA	Comments
1	Does an accessible route appear to connect all public areas inside the building ?		X		Non compliant maneuvering space
2	Do accessible routes appear free of obstructions and/or protruding objects ?		X		
3	Do ramps on accessible routes appear to have compliant slopes ?			X	
4	Do ramp runs on an accessible route appear to have a compliant rise and width ?			X	
5	Do ramps on accessible routes appear to have compliant end and intermediate landings ?			X	
6	Do ramps on accessible routes appear to have compliant handrails ?			X	

7	Are accessible areas of refuge and the accessible means of egress to those areas identified with accessible signage ?			X	
8	Do public transaction areas have an accessible, lowered service counter section ?			X	
9	Do public telephones appear mounted with an accessible height and location ?			X	
10	Do doors at interior accessible routes appear to have compliant maneuvering clearance area on each side ?		X		
11	Do doors at interior accessible routes appear to have compliant hardware ?		X		
12	Do non-fire hinged, sliding, or folding doors on interior accessible routes appear to have compliant opening force ?	X			
13	Do doors on interior accessible routes appear to have a compliant clear opening width ?		X

Appendix H:
Energy Conservation Measures Calculations

Note: There are few electro-mechanical components at the property, and the lighting has already been upgraded with LED bulbs. Therefore, there does not appear to be an opportunity for energy savings at this time.

Appendix I:
Lighting System Schedule

Note : All Lighting is LED hence the Lighting System Schedule is not available for this facility.

Appendix J:
Energy Audit Glossary of Terms

Glossary of Terms and Acronyms

ECM – Energy Conservation Measures are projects recommended to reduce energy consumption. These can be No/Low cost items implemented as part of routine maintenance or Capital Cost items to be implemented as a capital improvement project.

Initial Investment – The estimated cost of implementing an ECM project. Estimates typically are based on R.S. Means Construction cost data and Industry Standards.

Annual Energy Savings – The reduction in energy consumption attributable to the implementation of a particular ECM. These savings values do not include the interactive effects of other ECMs.

Cost Savings – The expected reduction in utility or energy costs achieved through the corresponding reduction in energy consumption by implementation of an ECM.

Simple Payback Period –The number of years required for the cumulative value of energy or water cost savings less future non-fuel or non-water costs to equal the investment costs of the building energy or water system, without consideration of discount rates.

EUL – Expected Useful Life is the estimated lifespan of a typical piece of equipment based on industry accepted standards.

RUL – Remaining Useful Life is the EUL minus the effective age of the equipment and reflects the estimated number of operating years remaining for the item.

SIR - The savings-to-investment ratio is the ratio of the present value savings to the present value costs of an energy or water conservation measure. The numerator of the ratio is the present value of net savings in energy or water and non-fuel or non-water operation and maintenance costs attributable to the proposed energy or water conservation measure. The denominator of the ratio is the present value of the net increase in investment and replacement costs less salvage value attributable to the proposed energy or water conservation measure. It is recommended that energy-efficiency recommendations be based on a calculated SIR, with larger SIRs receiving a higher priority. A project typically is recommended only if the SIR is greater than or equal to 1.0, unless other factors outweigh the financial benefit.

Life Cycle Cost - The sum of the present values of (a) **I**nvestment costs, less salvage values at the end of the study period; (b) Non-fuel operation and maintenance costs: (c) Replacement costs less salvage costs of replaced building systems; and (d) Energy and/or water costs.

Life Cycle Savings – The sum of the estimated annual cost savings over the EUL of the recommended ECM, expressed in present value dollars.

Building Site Energy Use Intensity - The sum of the total site energy use in thousands of Btu per unit of gross building area. Site energy accounts for all energy consumed at the building location only not the energy consumed during generation and transmission of the energy to the site.

Building Source Energy Use Intensity – The sum of the total source energy use in thousands of Btu per unit of gross building area. Source energy is the energy consumed during generation and transmission in supplying the energy to your site.

Building Cost Intensity - This metric is the sum of all energy use costs in dollars per unit of gross building area.

Greenhouse Gas Emissions - Although there are numerous gases that are classified as contributors to the total for Greenhouse Emissions, the scope of this energy audit focuses on carbon dioxide (CO_2). Carbon dioxide enters the atmosphere through the burning of fossil fuels (oil, natural gas, and coal), solid waste, trees and wood products, and also as a result of other chemical reactions (e.g., manufacture of cement).

Property Overview and Assessment Details

General Information	
Property Type	Scout Cabin
Main Address	Big Dalton Canyon Road, Glendora, California 91741
Site Developed	1970
Site Area	0.36 acres (estimated)
Parking Spaces	No designated parking area
Building Area	1,309 SF
Number of Stories	One above grade
Outside Occupants / Leased Spaces	None
Date(s) of Visit	December 21, 2023
Management Point of Contact	City of Glendora, Mr. Michael Sledd, Assistant Public Works Director 626.914.8248 msledd@cityofglendora.org
On-site Point of Contact (POC)	Hugo Soltero 626.672.6311
Assessment and Report Prepared By	Usama Anwar
Reviewed By	Carl Alejandro Technical Reviewer carl.alejandro@bureauveritas.com 800.733.0660 x7296236

Significant/Systemic Findings and Deficiencies

Historical Summary

The Girl Scout Cabin was constructed in 1970. The building is located across the street from the park's day camp area. The facility has not undergone any renovations since it was built.

Architectural

The hut-shaped structure is constructed with a concrete masonry framework featuring wooden siding and decks, all topped with metal roof finishes. The roof has a partially barrel-shaped design at the rear and a flat structure at the front-facing side. Stains resulting from mildew and algae growth have appeared on the metal finishes on the rear elevations. Therefore, it is recommended to clean the affected areas to preserve the integrity of the finishes. The facade features original steel doors, wooden doors, and wooden-framed windows, all covered with aluminum shutters. The interior floors are covered with vinyl sheeting and VCT tiles that show significant wear and require replacement in the near future. A budgetary cost for typical life-cycle based replacement of interior and exterior finishes is anticipated.

Mechanical, Electrical, Plumbing and Fire (MEPF)

The building is not equipped with any HVAC system. The plumbing fixtures are properly installed, and there have been no reported issues of plumbing failures or leakages. The domestic hot water heater appears to have deteriorated over the years and has exceeded its expected useful life; hence, a budgeted cost is included for near replacement. A low-voltage distribution panel satisfies the electrical load of the building, and the interior lighting system consists of surface mounted T8 fluorescent lighting fixtures. Fire protection is provided by a wall mounted fire extinguisher. A smoke detector was not observed during the on-site visit and is recommended to be installed. An anticipatory cost for all the MEPF assets is anticipated.

Site

Concrete sidewalks are the only flatwork surfaces identified at the site. Potential trip hazards due to cracked pavement were identified at the main entrance which require resurfacing in the near future. The facility is accessed via a pedestrian bridge located adjacent to the main street. In general, the site appears to be regularly maintained, and typical lifecycle replacements are budgeted over the reserve term.

Recommended Additional Studies

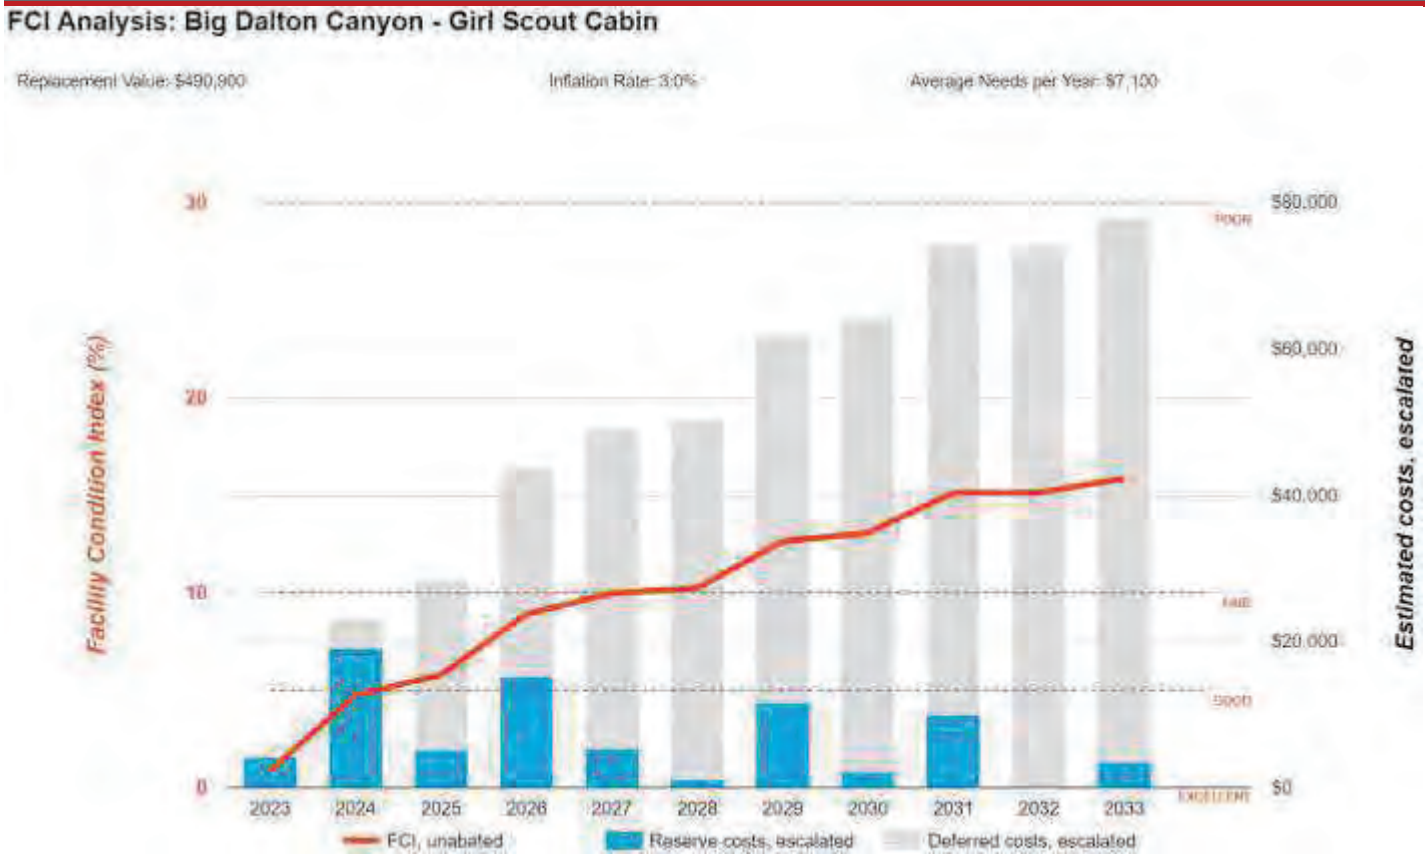
Some areas of the facility were identified as having major or moderate accessibility issues. Bureau Veritas recommends a study be performed to take measurements, provide additional itemized details, research local requirements, and, if necessary, estimate the scope and cost of any required improvements. The cost of this study is included in the cost tables. Due to the lack of measurements and itemized findings at this point in time, the costs for any possible subsequent repairs or improvements are not currently included.

Facility Condition Index (FCI)

One of the major goals of the FCA is to calculate each building's Facility Condition Index (FCI), which provides a theoretical objective indication of a building's overall condition. By definition, the FCI is defined as the ratio of the cost of current needs divided by current replacement value (CRV) of the facility. The chart below presents the industry standard ranges and cut-off points.

FCI Ranges and Description	
0 – 5%	In new or well-maintained condition, with little or no visual evidence of wear or deficiencies.
5 – 10%	Subjected to wear but is still in a serviceable and functioning condition.
10 – 30%	Subjected to hard or long-term wear. Nearing the end of its useful or serviceable life.
30% and above	Has reached the end of its useful or serviceable life. Renewal is now necessary.

The deficiencies and lifecycle needs identified in this assessment provide the basis for a portfolio-wide capital improvement funding strategy. In addition to the current FCI, extended FCI's have been developed to provide owners the intelligence needed to plan and budget for the "keep-up costs" for their facilities. As such the 3-year, 5-year, and 10-year FCI's are calculated by dividing the anticipated needs of those respective time periods by current replacement value. As a final point, the FCI's ultimately provide more value when used to relatively compare facilities across a portfolio instead of being over-analyzed and scrutinized as stand-alone values. The table below summarizes the individual findings for this FCA:



FCI Analysis | Big Dalton Canyon - Girl Scout Cabin(1940)

Replacement Value	*Total SF*	*Cost/SF*
$ 490,900	*1,309*	*$ 375*

	Est Reserve Cost	FCI
Current	$ 4,300	0.9 %
3-Year	$ 43,700	8.9 %
5-Year	$ 50,300	10.2 %
10-Year	$ 77,800	15.8 %

The vertical bars below represent the year-by-year needs identified for the site. The orange line in the graph below forecasts what would happen to the FCI (left Y axis) over time, assuming zero capital expenditures over the next ten years. The dollar amounts allocated for each year (blue bars) are associated with the values along the right Y axis.

Needs by Year with Unaddressed FCI Over Time

Recommendation: **Evaluate/Report in 2024**

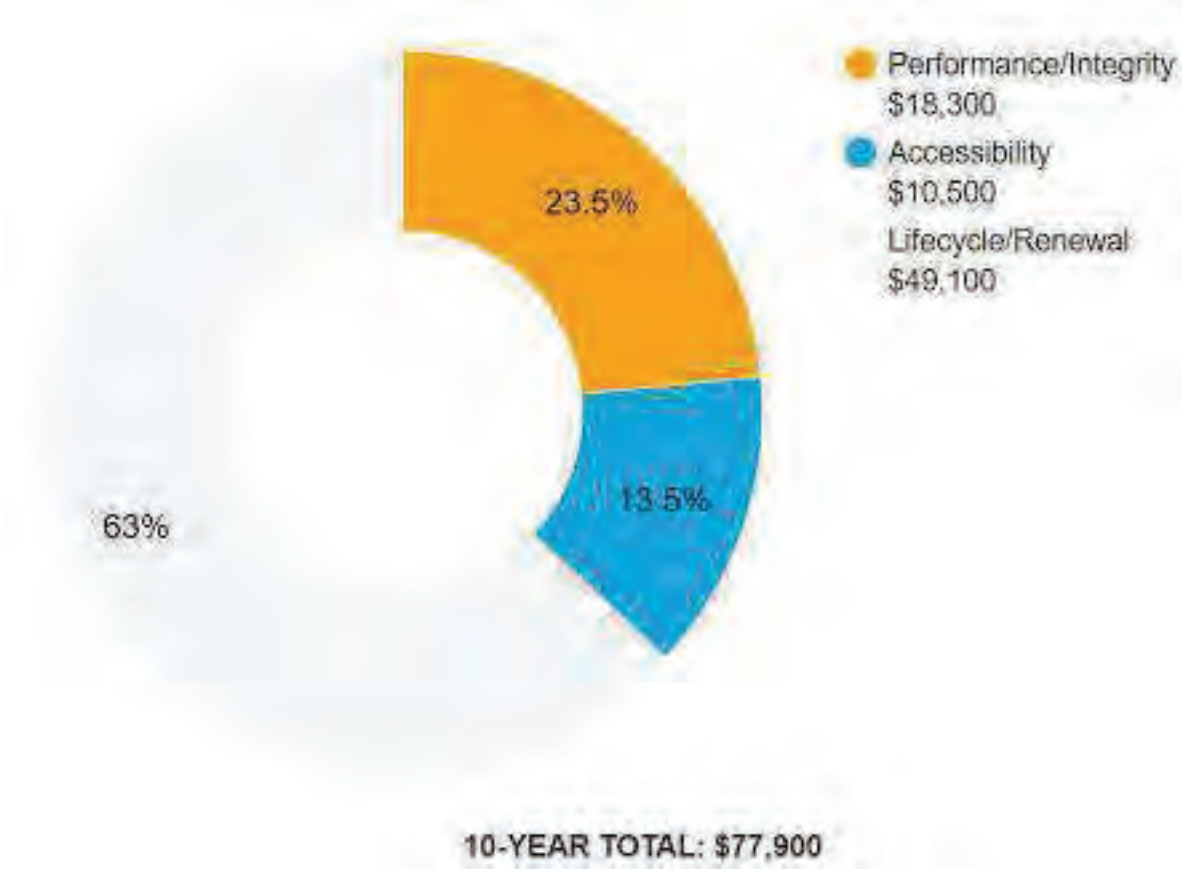
Priority Score: **63.9**

Plan Type: Accessibility

Cost Estimate: $10,100

**$$$**$

Moderate and major accessibility issues were observed on-site - AssetCALC ID: 7336211



Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason or rationale for the recommended replacement, repair, or other corrective action. This is the "why" part of the equation. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the "best" fit, typically the one with the greatest significance.

Plan Type Descriptions

Safety	■	An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk.
Performance/Integrity	■	Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.
Accessibility	■	Does not meet ADA, UFAS, and/or other accessibility requirements.
Environmental	■	Improvements to air or water quality, including removal of hazardous materials from the building or site.
Retrofit/Adaptation	■	Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.
Lifecycle/Renewal	■	Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.

Plan Type Distribution (by Cost)

2. Building and Site Information

Systems Summary

System	Description	Condition
Structure	Masonry bearing walls with wood roof deck supported by wood joists and slab on grade foundation	Good
Façade	Primary Wall Finish: Wood siding Secondary Wall Finish: Brick Tertiary Wall Finish: Metal siding Doors: Steel and Wood	Fair
Roof	Partially curved and partially flat construction with metal finish	Fair
Interiors	Walls: Wood paneling, gypsum board and ceramic tile Floors: VCT tiles and vinyl sheeting Ceilings: wood paneling	Poor
Elevators	None	--
Plumbing	Distribution: Copper supply and cast-iron waste and venting Hot Water: Electric water heater with integral tank Fixtures: Toilets and sinks in all restrooms	Poor
HVAC	None	--
Fire Suppression	Fire extinguishers only	Fair
Electrical	Source and Distribution: Main panel with copper wiring Interior Lighting: T8 fluorescent lights Emergency Power: None	Fair

Systems Summary

Fire Alarm	Smoke detectors only	Fair
Equipment/Special	None	--
Site Pavement	Concrete sidewalks	Fair
Site Development	Wooden-framed pedestrian bridge	Good
Landscaping and Topography	Moderate landscaping features including trees and bushes Irrigation not present Low to moderate site slopes throughout	Fair
Utilities	Municipal water and sewer Local utility-provided electric	Fair
Site Lighting	Building-mounted: Jelly Jar LED	Fair
Ancillary Structures	None	--
Accessibility	Potential moderate/major issues have been identified at this property and a detailed accessibility study is recommended. See Appendix D.	
Key Issues and Findings	Aged water heater, mildew on exterior metal finishes, damaged exterior doors, stained and peeling interior floors, missing smoke detectors	

Systems Expenditure Forecast

System	Immediate	Short Term (1-2 yr)	Near Term (3-5 yr)	Med Term (6-10 yr)	Long Term (11-20 yr)	TOTAL
Facade	$4,000	$2,000	$5,600	$11,000	$29,800	$52,400
Roofing	-	-	-	-	$60,200	$60,200
Interiors	-	$9,700	$2,700	-	$63,900	$76,300
Plumbing	-	$1,300	$7,400	$6,200	$4,800	$19,700
HVAC	-	-	$800	-	$1,200	$1,900
Electrical	-	-	-	$10,100	$10,300	$20,400
Fire Alarm & Electronic Systems	$200	-	-	$300	$400	$900
Equipment & Furnishings	-	-	$5,300	-	$1,000	$6,300
Site Pavement	-	$800	-	-	$2,600	$3,500
Site Development	-	-	-	-	$310,900	$310,900
Accessibility	-	$10,400	-	-	-	$10,400
TOTALS (3% inflation)	**$4,200**	**$24,200**	**$21,800**	**$27,600**	**$485,200**	**$563,000**

3. Property Space Use and Observed Areas

Areas Observed

The interior spaces were observed in order to gain a clear understanding of the property's overall condition. Other areas accessed included the site within the property boundaries, the exterior of the property, and the roof.

Key Spaces Not Observed

All key areas of the property were accessible and observed.

4. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the checklists that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance
- Only a representative sample of areas was observed
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance
- Itemized costs for individual non-compliant items are not included in the dataset
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance

The facility was originally constructed in 1970.The facility has not since been substantially renovated.

During the interview process with the client representatives, no complaints or pending litigation associated with potential accessibility issues were reported.

A detailed follow-up accessibility study is included as a recommendation because potential moderate to major issues were observed at the subject site. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

5. Purpose and Scope

Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

Condition Ratings	
Excellent	New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Good	Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Fair	Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.
Poor	Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed, or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life.
Failed	Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.
Not Applicable	Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.

Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Review maintenance records and procedures with the in-place maintenance personnel.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

6. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means, CBRE Whitestone,* and *Marshall & Swift,* Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct, and manage the corrections.

Definitions

Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

7. Energy Audit

The purpose of this Energy Audit is to provide Big Dalton Canyon - Girl Scout Cabin with a baseline of energy usage, the relative energy efficiency of the facility, and specific recommendations for Energy Conservation Measures. Information obtained from these analyses may be used to support a future application to an Energy Conservation Program, Federal and Utility grants towards energy conservation, as well as support performance contracting, justify a municipal bond-funded improvement program, or as a basis for replacement of equipment or systems.

The energy audit consisted of an onsite visual assessment to determine current conditions, itemize the energy consuming equipment (i.e. Boilers, Make-Up Air Units, DWH equipment); review lighting systems both exterior and interior; and review efficiency of all such equipment. The study also included interviews and consultation with operational and maintenance personnel. The following is a summary of the tasks and reporting that make up the Energy Audit portion of the report.

The following is a summary of the tasks and reporting that make up the Energy Audit portion of the report.

Energy and Water Using Equipment

- Bureau Veritas has surveyed the common areas, offices, maintenance facilities and mechanical rooms to document utility-related equipment, including heating systems, cooling systems, air handling systems and lighting systems.

Building Envelope

- Bureau Veritas has reviewed the characteristics and conditions of the building envelope, checking insulation values and conditions. This review also includes an inspection of the condition of walls, windows, doors, roof areas, insulation, and special use areas. Where we anticipated significant losses, we utilized infrared thermographs to analyze heat loss across the envelope.

Recommendations for Energy Savings Opportunities

- Based on the information gathered during the on-site assessment, the utility rates, as well as recent consumption data and engineering analysis, Bureau Veritas has identified opportunities to save energy and provide probable construction costs, projected energy/utility savings and provide a simple payback analysis.

Analysis of Energy Consumption

- Based on the information gathered during the on-site assessment and a, Bureau Veritas has conducted an analysis of the energy usage of all equipment, and identified which equipment is using the most energy and what equipment upgrades may be necessary. As a result, equipment upgrades, or replacements are identified that may provide a reasonable return on the investment and improve maintenance reliability.

Energy Audit Process

- Interviewing staff and review plans and past upgrades
- Performing an energy audit for each use type
- Performing a preliminary evaluation of the utility system
- Analyzing findings, utilizing ECM cost-benefit worksheets
- Making preliminary recommendations for system energy improvements and measures
- Estimating initial cost and changes in operating and maintenance costs based on implementation of energy efficiency measures
- Ranking recommended cost measures, based on the criticality of the project and the largest payback

8. Energy Conservation Measures

Bureau Veritas has conducted an Energy Audit on Big Dalton Canyon - Girl Scout Cabin. The study included a review of the building's construction features, historical energy and water consumption and costs, review of the building envelope, HVAC equipment, heat distribution systems, lighting, and the building's operational and maintenance practices.

Bureau Veritas has evaluated four Energy Conservation Measures (ECMs) for this property. The savings for each measure are calculated using standard engineering methods followed in the industry, and detailed calculations for ECM are provided in Appendix H for reference. A 10% discount in energy savings was applied to account for the interactive effects amongst the ECMs. In addition to the consideration of the interactive effects, Bureau Veritas has applied a 15% contingency to the implementation costs to account for potential cost overruns during the implementation of the ECMs.

Recommended Energy Conservation Measures: Financial Impact	
Total Projected Initial ECM Investment	$3,666 *(In Current Dollars)*
Estimated Annual Cost Savings Related to ECMs	$571 *(In Current Dollars)*
Net Effective ECM Payback	6.42 years

Bureau Veritas screens ECMs using two financial methodologies. ECMs which are considered financially viable must meet both criteria.

1. Simple Payback Period –The number of years required for the cumulative value of energy or water cost savings less future non-fuel or non-water costs to equal the investment costs of the building energy or water system, without consideration of discount rates. ECMs with a payback period greater than the Expected Useful Life (EUL) of the project are not typically recommended, as the cost of the project will not be recovered during the lifespan of the equipment. These ECMs are recommended for implementation during future system replacement. At that time, replacement may be evaluated based on the premium cost of installing energy efficient equipment.

$$Simple\ Payback = \frac{Initial\ Cost}{Annual\ Savings}$$

Bureau Veritas screens and categorizes all the ECM's as per the 24 CFR 905 regulation requirements based on their payback, but only those ECM's are recommended for implementation that have a Savings to Investment Ratio ≥1.0.

Financialy methodology used to determine the Savings to Investment Ratio is as follows:

2. Savings-to-Investment Ratio (SIR) – The savings-to-investment ratio is the ratio of the present value savings to the present value costs of an energy or water conservation measure. The numerator of the ratio is the present value over the estimated useful life (EUL) of net savings in energy or water and non-fuel or non-water operation and maintenance costs attributable to the proposed energy or water conservation measure. The denominator of the ratio is the present value of the net increase in investment and replacement costs less salvage value attributable to the proposed energy or water conservation measure. It is recommended that energy efficiency recommendations should be based on a calculated SIR, with larger SIRs receiving a higher priority. A project is typically only recommended if SIR is greater than or equal to 1.0, unless other factors outweigh the financial benefit.

$$SIR = \frac{Present\ Value\ (Annual\ Savings, i\%, EUL)}{Initial\ Cost}$$

Bureau Veritas has identified four Energy Conservation Measures (ECM) for this property. The basis for an ECM recommendation is a payback of less than the remaining useful life of the system or component. Recommended energy efficiency improvements and the installed cost estimates for recommended energy efficiency measures are provided in the following table:

Energy Conservation Measures					
Priority	Brief Description	Initial Investment	Annual Savings	Payback Period *(years)*	Component EUL *(years)*
1	Upgrade Building Lighting to LED and Install Automatic Lighting Controls	$745	$311	2.39	15
2	Install Low Flow Faucet Aerators	$544	$158	3.44	10
3	Retrofit Flush Tank Toilets to Dual Flush	$416	$42	9.98	20
4	Replace Existing Water Heater With New Energy Efficient Units	$1,483	$124	11.98	18

9. Utility Analysis

Establishing the energy baseline begins with an analysis of the utility cost and consumption of the facility. Utilizing the historical energy data and local weather information, we evaluate the existing utility consumption and assign it to the various end-uses throughout the buildings. The Historical Data Analysis breaks down utilities by consumption, cost, and annual profile.

This data is analyzed, using standard engineering assumptions and practices. The analysis serves the following functions:

- Allows our engineers to benchmark the energy and water consumption of the facilities against consumption of efficient buildings of similar construction, use and occupancy.
- Generates the historical and current unit costs for energy and water
- Provides an indication of how well changes in energy consumption correlate to changes in weather.
- Reveals potential opportunities for energy consumption and/or cost reduction. For example, the analysis may indicate that there is excessive, simultaneous heating and cooling, which may mean that there is an opportunity to improve the control of the heating and cooling systems.

By performing this analysis and leveraging our experience, our engineers prioritize buildings and pinpoint systems for additional investigation during the site visit, thereby maximizing the benefit of their time spent on-site and minimizing time and effort by the customer's personnel.

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used the utility rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data from the client.

Estimated Utility Rates	
Electricity	Water and Sewer
$0.30/kWh	$8.36/CCF

The data analyzed provides the following information: 1) breakdown of utilities by consumption, 2) cost and annual profile, 3) baseline consumption in terms of energy/utility at the facility, 4) the Energy Use Index, or BTU/SF, and cost/SF. For multiple water meters, the utility data is combined to illustrate annual consumption for each utility type.

Electricity

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used the electric rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data from the client.

Water and Sewer

The City of Glendora satisfies the water and sewer requirements of the facility. The billing for the water and sewer is monthly.

Note: No water and sewer utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used a rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data.

Energy Star Portfolio Manager Facility Summary

Bureau Veritas uses the Portfolio Manager tool developed by the Federal Environmental Protection Agency to track relative energy uses of buildings by property type. This tool allows the input of a facility's historic utility data to be compared with normalized data of a large database of its peer facilities.

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. Hence energy benchmarking for the facility cannot be evaluated at this time. Bureau Veritas will update the report on receipt of the actual data.

10. Operations & Maintenance Plan

The quality of the maintenance and the operation of the facility's energy systems have a direct effect on its overall energy efficiency. Energy-efficiency needs to be a consideration when implementing facility modifications, equipment replacements, and general corrective actions. The following is a list of activities that should be performed as part of the routine maintenance program for the property. These actions will ensure that the energy conservation measures identified in this report will remain effective. The following general recommendations should be continued or implemented.

Central Domestic Hot Water

1. Ensure the circulation system is on timer to reduce the losses through re-circulation
2. Ensure all hot water pipes are insulated with fiberglass insulation at all times
3. Replacement water heater should have Energy Factor (EF)>0.9
4. Tank-type water heaters flushed annully.

Lighting

1. Use energy efficient replacement lamps (LEDs)
2. Clean lighting fixture reflective surfaces and translucent covers.
3. Ensure that timers and/or photocells are operating correctly on exterior lighting
4. Use occupancy sensors for the rooms with infrequent occupancy

11. Certification

City of Glendora (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Big Dalton Canyon - Girl Scout Cabin, Big Dalton Canyon Road, Glendora, California 91741, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling, or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

Appendix J:
Energy Audit Glossary of Terms

Glossary of Terms and Acronyms

ECM – Energy Conservation Measures are projects recommended to reduce energy consumption. These can be No/Low cost items implemented as part of routine maintenance or Capital Cost items to be implemented as a capital improvement project.

Initial Investment – The estimated cost of implementing an ECM project. Estimates typically are based on R.S. Means Construction cost data and Industry Standards.

Annual Energy Savings – The reduction in energy consumption attributable to the implementation of a particular ECM. These savings values do not include the interactive effects of other ECMs.

Cost Savings – The expected reduction in utility or energy costs achieved through the corresponding reduction in energy consumption by implementation of an ECM.

Simple Payback Period –The number of years required for the cumulative value of energy or water cost savings less future non-fuel or non-water costs to equal the investment costs of the building energy or water system, without consideration of discount rates.

EUL – Expected Useful Life is the estimated lifespan of a typical piece of equipment based on industry accepted standards.

RUL – Remaining Useful Life is the EUL minus the effective age of the equipment and reflects the estimated number of operating years remaining for the item.

SIR - The savings-to-investment ratio is the ratio of the present value savings to the present value costs of an energy or water conservation measure. The numerator of the ratio is the present value of net savings in energy or water and non-fuel or non-water operation and maintenance costs attributable to the proposed energy or water conservation measure. The denominator of the ratio is the present value of the net increase in investment and replacement costs less salvage value attributable to the proposed energy or water conservation measure. It is recommended that energy-efficiency recommendations be based on a calculated SIR, with larger SIRs receiving a higher priority. A project typically is recommended only if the SIR is greater than or equal to 1.0, unless other factors outweigh the financial benefit.

Life Cycle Cost - The sum of the present values of (a) Investment costs, less salvage values at the end of the study period; (b) Non-fuel operation and maintenance costs: (c) Replacement costs less salvage costs of replaced building systems; and (d) Energy and/or water costs.

Life Cycle Savings – The sum of the estimated annual cost savings over the EUL of the recommended ECM, expressed in present value dollars.

Building Site Energy Use Intensity - The sum of the total site energy use in thousands of Btu per unit of gross building area. Site energy accounts for all energy consumed at the building location only not the energy consumed during generation and transmission of the energy to the site.

Building Source Energy Use Intensity – The sum of the total source energy use in thousands of Btu per unit of gross building area. Source energy is the energy consumed during generation and transmission in supplying the energy to your site.

Building Cost Intensity - This metric is the sum of all energy use costs in dollars per unit of gross building area.

Greenhouse Gas Emissions - Although there are numerous gases that are classified as contributors to the total for Greenhouse Emissions, the scope of this energy audit focuses on carbon dioxide (CO_2). Carbon dioxide enters the atmosphere through the burning of fossil fuels (oil, natural gas, and coal), solid waste, trees, and wood products, and also as a result of other chemical reactions (e.g., manufacture of cement).

1.2. Plaza Bus Stop Findings and Deficiencies

Historical Summary

The Bus Stop Plaza in the city of Glendora was initially developed in 1994 and underwent a renovation in 2005, during which it underwent a complete redesign. Public restrooms were added, and all ADA requirements were met.

Amenities and General Site

The plaza is a meticulously designed space for the Glendora community, allowing residents to enjoy various areas. Its geometric and clean design creates an organized layout with different sections. In the western zone, there is a seating area with tables and chairs, inviting people to gather or simply take a break comfortably during lunchtime. Another section features a circular terrace with benches and, towards the back, public restrooms—all designed with ADA considerations in mind. The entire plaza is thoughtfully planned and designed to meet ADA standards. The lighting, vegetation, and landscape are well-considered, and the contemporary modern public furniture imparts a sense of sophistication and cleanliness to the plaza.

Architectural

The Bus Stop Plaza features an ancillary structure encompassing approximately 400 sq ft, housing bathrooms, electrical components, and control panels. This small building, constructed with CMU walls and a gable-type roof adorned with clay tiles, boasts interior finishes comprising ceramic tile flooring and walls, along with a painted flat surface on both walls and ceilings. The plaza floor exhibits a combination of concrete and pavers, incorporating various patterns to delineate designated areas, transitions, seating zones, and circulation spaces.

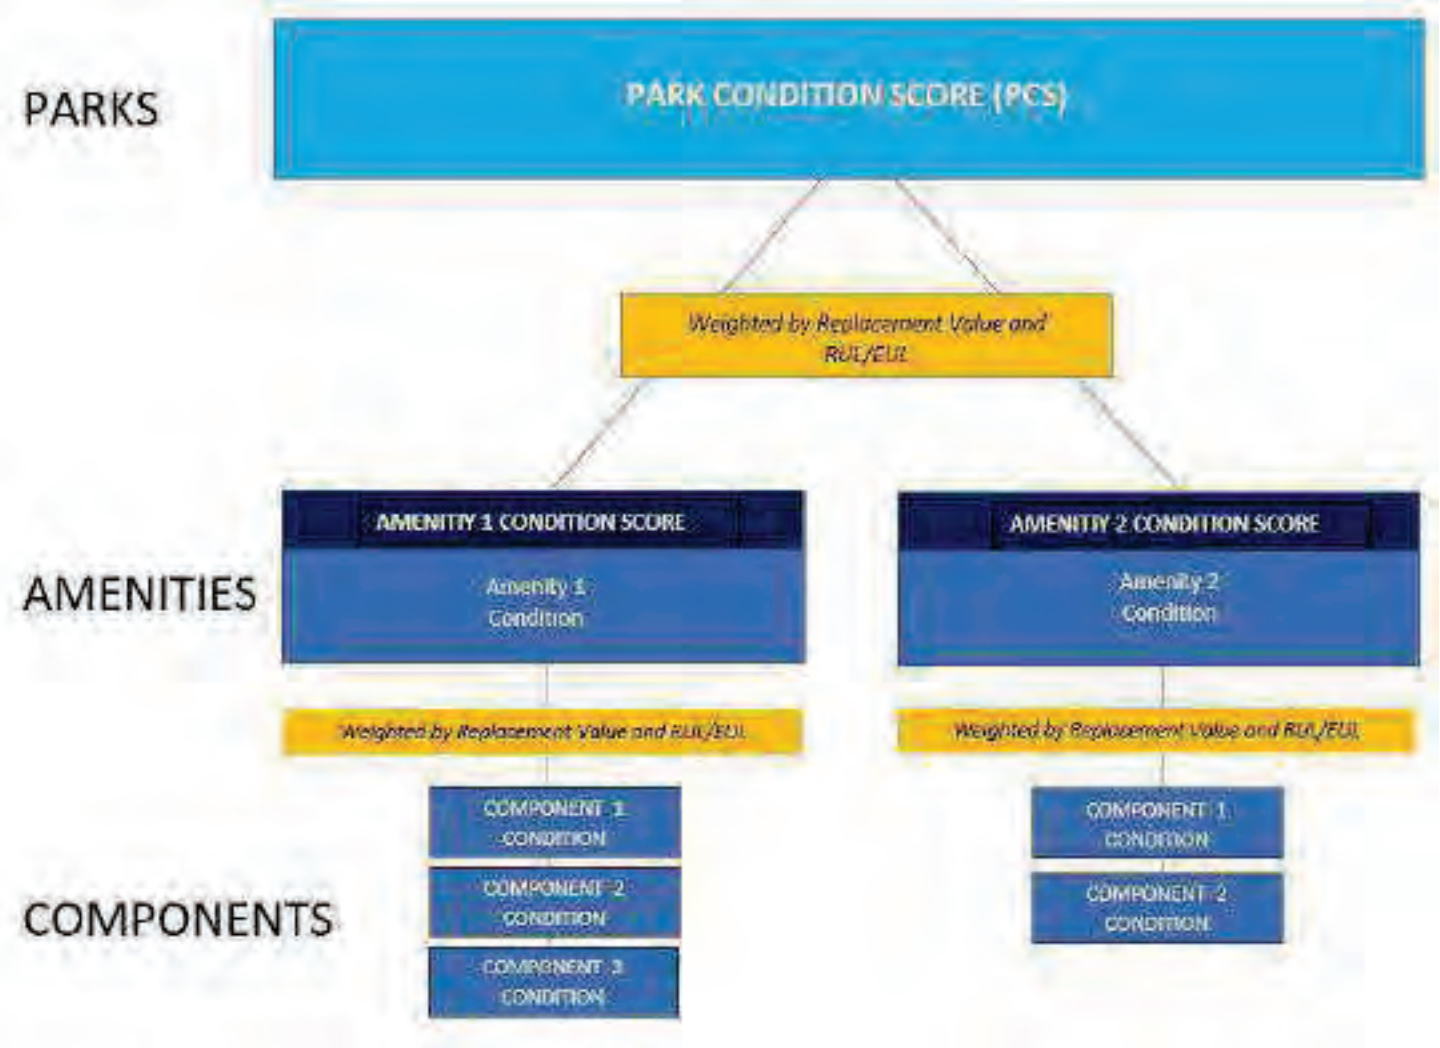
Mechanical, Electrical, Plumbing and Fire (MEPF)

Fundamentally, the MEPF system of the plaza bus stop in Glendora encompasses the plumbing components of the bathrooms, as well as the irrigation system for the shrubs and planters throughout the plaza. On the other hand, the electrical system includes minimal lighting in the bathrooms and an exterior lighting system for the entire plaza, featuring various types of illumination detailed in the report.

Recommended Additional Studies

No additional studies recommended at this time.

2. Amenities and General Site



2.1. Prioritization Methodology

Urban Trail Condition Score (PCS) and Amenity Condition Score (ACS)

A major goal of the Facility Condition Assessment (FCA) is to benchmark individual parks with other parks within the portfolio, and amenities with other amenities either within the same park and across the portfolio. To achieve a rating for each park, the Park Condition Score (PCS) is developed; similarly, an Amenity Condition Score (ACS) is used to compare amenities.

To assist in the overall prioritization effort, the following terms are used at the Component and Amenity level:

- **Component:** individual elements of the amenity or park that are evaluated and assigned conditions and GPS coordinates. Examples of components include benches, trash receptacles, tennis nets, playground surfaces, or split-rail fencing.
- **Amenity:** defined as a group of components that constitute a major feature of the park, logically grouped together by purpose and/or proximity. Examples of an amenity include a basketball court, a softball field, a dog park, picnic area, or playground.
- **Current Renewal Value (CRV):** the cost in today's dollars of the major constituent parts that make up the whole:
  - for Parks: CRV = renewal cost of all **developed** amenities within it (land value is excluded)
  - for Amenities: CRV = renewal cost of all significant components within it

The Amenity Condition Score (ACS) is a score calculated from an algorithm comprising a weighted average of the conditions of all the components within it.

AMENITY CONDITION SCORE (ACS) FORMULA = SUM [Remaining Value / Renewal Value (RenV) of combined components]

Remaining value = RenV multiplied by RUL/EUL

The Park Condition Score (PCS) is the total score for a single park property calculated from the sum of the Amenity Condition Scores (ACSs) for each amenity within the park.

PARK CONDITION SCORE FORMULA = SUM [Remaining Value]/ SUM [Renewal Value]

2.2. Plaza Prioritization Metrics

Park Condition Score (PCS) and Amenity Condition Score (ACS)

A major goal of the Facility Condition Assessment (FCA) is to benchmark individual parks with other parks within the portfolio, and amenities with other amenities either within the same park and across the portfolio. To achieve a rating for each park, the Park Condition Score (PCS) is developed; similarly, an Amenity Condition Score (ACS) is used to compare amenities.

The PCS and ACS metrics have been developed so that the higher the score, the less the park or amenity needs short term financial attention, due to its relative condition. The lower the score, the more attention is needed. An increasingly low score indicates an increased need to address deficiencies, provide replacements or make essential repairs. The lower the score, the more the amenity or park requires renewal or replacement. Both PCS and ACS scores range from 0 to 100.

The color coding reflects the score definition. Higher scores are assigned a sliding scale of green, with 100 assigned the deepest green. Yellow indicates a condition in the middle of the range, with yellow green in the high mid ranges, and yellow red in the low mid ranges. Scores in the low range are assigned a sliding scale of red, with 0 assigned the deepest red.

FAILED CONDITION - 0 _____ EXCELLENT CONDITION -100

The table on the following page shows the PCS condition score of this park, along with the ACS condition score of each amenity within the park:

Plaza Bus Stop	OVERALL CONDITION SCORE **49**	TOTAL ACRES: REPLACEMENT VALUE: $ 379,020 REMAINING VALUE: $ 185,858 SAFETY ISSUES: 0 FAILED COMPONENTS: 0

2.3. Plan Types (General Site)

Each line item in the cost database is assigned a Plan Type, which is the primary reason for the recommended replacement, repair, or other corrective action. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the best fit, typically the one with the greatest significance. See the *Purpose* description in the *Purpose an Scope* section for an explanation of Component Type.

Plan Type Descriptions

Safety	An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk.
Performance/Integrity	Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.
Accessibility	Does not meet ADA, UFAS, and/or other accessibility requirements.
Environmental	Improvements to air, water, or soil quality, including removal of hazardous materials from the site.
Retrofit/Adaptation	Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.
Lifecycle/Renewal	Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.

Plan Type Distribution (by Cost) – Timeframe 10 Years

2.4. Immediate Needs (General Site)

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safet* or *Perfor ance ntegrit* Plan Types, are considered Immediate Needs.

BV did not identify any immediate needs associated with the general site.

2.5. Key Findings (General Site)

Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

The numerical scoring of condition as shown in the Key Findings is based on a 0-100 scale, as illustrated below:

- 0 - Replacement has none or very low impact on park operations
- 33 – Replacement has low impact on park operations
- 66 - Replacement has medium impact on park operation
- 100 - Failing, safety or code requirement component with high impact on park operations

Bureau Veritas did not identify any key findings for this site.

2.6. General Site

General Information

Asset Type	Public Plaza
Asset Location	At Downtown right by 158 Glendora Avenue
Overall Condition	Good

Co ponent	*escription*	*uantit*	*Con ition*

General Information

Landscaping and Topography	Limited landscaping features and planters; irrigation present
Storm Water Management	Surface drainage to developed surroundings
Accessibility	Potential accessibility issues were not observed at this asset. Refer to Appendix D and the previous study for more details.

General Site

Co ponent	*escription*	*uantit*	*Con ition*
Pole Light Fixture with Lamps	any type 20' High, with LED Replacement, Replace/Install	6 EA	Fair
Park Bench	Metal Powder-Coated, Replace	6 EA	Good
Planter Boxes	Pre-Manufactured, High-End, Replace	12 LF	Good
Park Bench	Wood/Composite/Fiberglass, Replace	4 EA	Good
Picnic Table	Metal Powder-Coated, Replace	13 EA	Good
Trash Receptacle	Medium-Duty Metal or Precast, Replace	2 EA	Fair
Stairs	Concrete, Exterior, Replace	380 SF	Good
Roadways	Signage, Guide and Directional, Replace/Install	2 EA	Good
Floodlights	Floodlights, 90 W, Replace/Install	14 EA	Fair
Site Walkway Fixture with Lamp	Bollard Style, Replace/Install	37 EA	Fair
Roofing	Clay/Concrete Tile, Replace	540 SF	Fair
Bike Rack	Fixed 1-5 Bikes, Replace	2 EA	Good

General Information

Distribution Panel	120/208 V, Replace	1 EA	Fair
Sidewalk	Concrete, Small Areas/Sections, Replace	4600 SF	Good
Irrigation System	Drip System, Replace/Install	1100 SF	Fair
Trash Receptacle	Medium-Duty Metal or Precast, Replace	2 EA	Good
Clock	Pole Clock, Digital Time Control Clock and Photosensor, Replace	1 EA	Fair
Sidewalk	Brick/Masonry Pavers, Replace	2700 SF	Good
Backflow Preventer	Domestic Water, Replace	1 EA	Fair
Drinking Fountain	Exterior/Site, Precast Pedestal, Replace	1 EA	Fair
Ramp	Concrete, Exterior, Replace	740 SF	Fair

3. Restroom Building

4. Facility Condition Index (FCI)

One of the major goals of the FCA is to calculate each building's Facility Condition Index (FCI), which provides a theoretical objective indication of a building's overall condition. By definition, the FCI is defined as the ratio of the cost of current needs divided by current replacement value (CRV) of the facility. The chart below presents the industry standard ranges and cut-off points.

FCI Ranges and Description	
0 – 5%	In new or well-maintained condition, with little or no visual evidence of wear or deficiencies.
5 – 10%	Subjected to wear but is still in a serviceable and functioning condition.
10 – 30%	Subjected to hard or long-term wear. Nearing the end of its useful or serviceable life.
30% and above	Has reached the end of its useful or serviceable life. Renewal is now necessary.

The deficiencies and lifecycle needs identified in this assessment provide the basis for a portfolio-wide capital improvement funding strategy. In addition to the current FCI, extended FCI's have been developed to provide owners the intelligence needed to plan and budget for the "keep-up costs" for their facilities. As such the 3-year, 5-year, and 10-year FCI's are calculated by dividing the anticipated needs of those respective time periods by current replacement value. As a final point, the FCI's ultimately provide more value when used to relatively compare facilities across a portfolio instead of being over-analyzed and scrutinized as stand-alone values. The table below summarizes the individual findings for this FCA:

FCI Analysis | Plaza Bus Stop / Restroom Building

Replacement Value	*Total SF*	*Cost/SF*
$ 198,800	*0*	*$ 375*

	Est Reserve Cost	FCI
Current	$ 0	0.0 %
3-Year	$ 0	0.0 %
5-Year	$ 1,800	0.9 %
10-Year	$ 23,700	11.9 %

5. Plan Types (Buildings)

Each line item in the cost database is assigned a Plan Type, which is the primary reason or rationale for the recommended replacement, repair, or other corrective action. This is the “why” part of the equation. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the “best” fit, typically the one with the greatest significance.

Plan Type Descriptions

Safety	■	An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk.
Performance/Integrity	■	Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.
Accessibility	■	Does not meet ADA, UFAS, and/or other handicap accessibility requirements.
Environmental	■	Improvements to air or water quality, including removal of hazardous materials from the building or site.
Retrofit/Adaptation	■	Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.
Lifecycle/Renewal	■	Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.

Plan Type Distribution (by Cost) – Timeframe 10 Years

6. Immediate Needs (Buildings)

No immediate needs were identified.

7. Key Findings (Buildings)

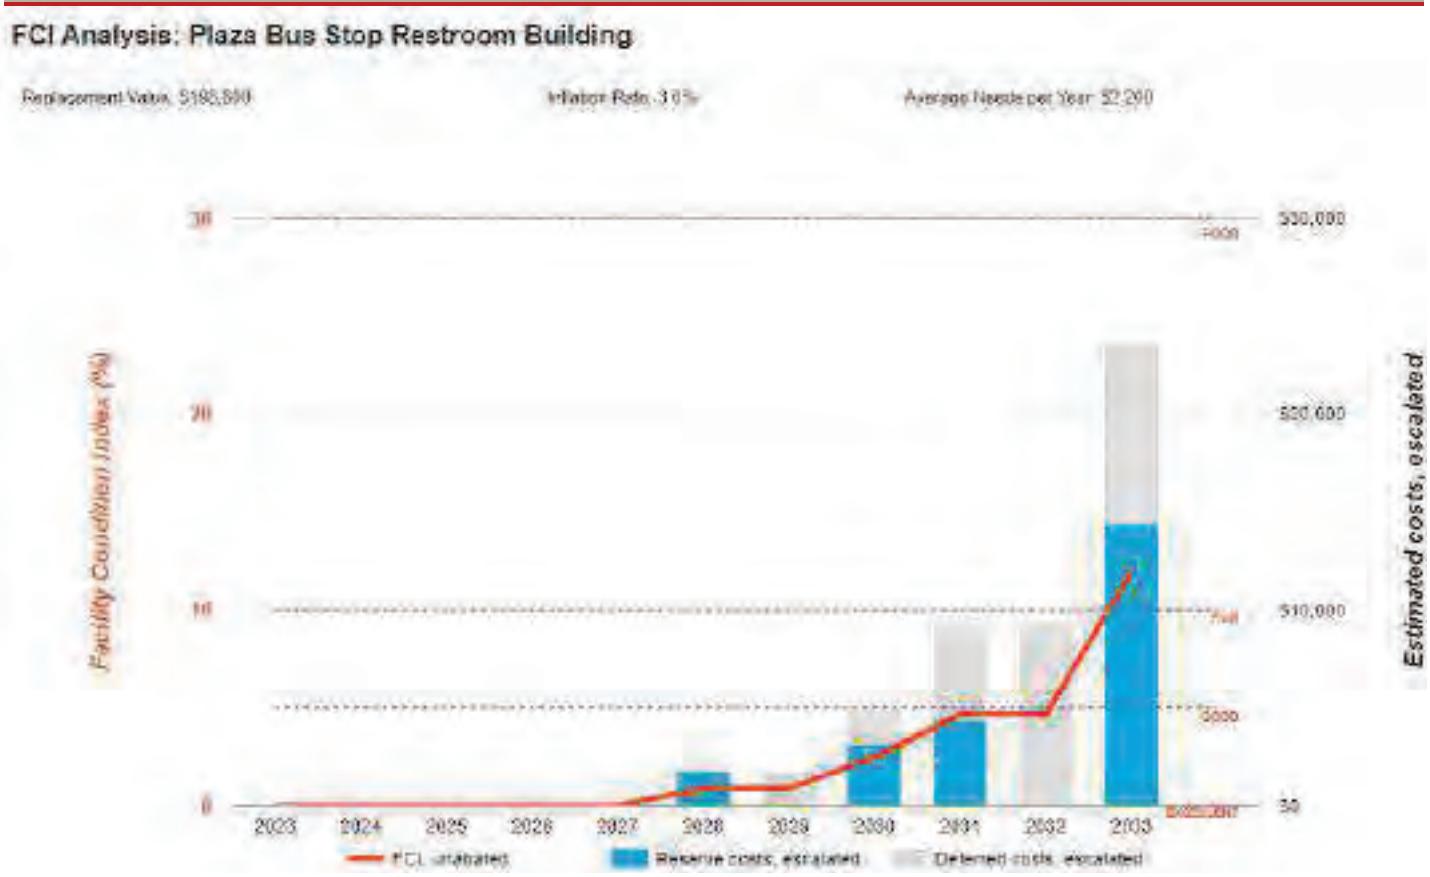
No immediate needs were identified.

8. Restroom Building

Building 1: Systems Summary		
Constructed/Renovated	2005	
Building/Group Size	530 SF	
Number of Stories	One above grade	
S ste	*escription*	*Con ition*
Structure	Masonry bearing walls with wood roof deck supported by wood framing	Good
Façade	Primary Wall Finish: CMU Secondary Wall Finish: Stone veneer Windows: Glass block	Good
Roof	Primary: Gable construction with clay tiles	Fair
Interiors	Walls: Painted gypsum board, ceramic tile Floors: Ceramic tile Ceilings: Painted gypsum board	Good
Elevators	None	--

Building 1: Systems Summary

Plumbing	Distribution: Copper supply, waste not observed Hot Water: None Fixtures: Toilets, urinals, and sinks	Fair
HVAC	None	--
Fire Suppression	None	--
Electrical	Source & Distribution: Main panel	Fair
Fire Alarm	None	--
Equipment/Special	None	--
Accessibility	Presently it does not appear an accessibility study is needed for this building. See Appendix D.	
Key Issues and Findings	None observed at time of assessment.	



Restroom Building: Systems Expenditure Forecast

System	Immediate	Short Term (1-2 yr)	Near Term (3-5 yr)	Med Term (6-10 yr)	Long Term (11-20 yr)	TOTAL
Facade	-	-	-	-	$19,600	$19,600
Interiors	-	-	$1,700	-	$62,800	$64,500
Plumbing	-	-	-	$12,000	-	$12,000
Electrical	-	-	-	$7,600	$15,900	$23,500
Site Utilities	-	-	-	$2,400	-	$2,400
TOTALS (3% inflation)	-	-	**$1,700**	**$21,900**	**$98,300**	**$121,900**

*Totals have been rounded to the nearest $100.

The vertical bars below represent the year-by-year needs identified for the building. The orange line in the graph below forecasts what would happen to the FCI (left Y axis) over time, assuming zero capital expenditures over the next ten years. The dollar amounts allocated for each year (blue bars) are associated with the values along the right Y axis.

Needs by Year with Unaddressed FCI Over Time

9. Property Space Use and Observed Areas

Areas Observed

Most of the spaces were observed in order to gain a clear understanding of the property's overall condition. Other areas accessed included the site within the property boundaries, the exterior of the property, and the roof.

Key Spaces Not Observed

All key areas of the property were accessible and observed.

10. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the matrix included in the Accessibility appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance.
- Only a representative sample of areas was observed.
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance.
- Itemized costs for individual non-compliant items are not // are included in the dataset.
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance.

The plaza was originally constructed in 1994. It is not clear whether any accessibility features have been added since its original construction.

11. Purpose and Scope

Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes construction systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of construction systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

Condition Ratings	
Excellent	New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Good	Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Fair	Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.
Poor	Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life.
Failed	Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.
Not Applicable	Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.

Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of existing systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Review maintenance records and procedures with the in-place maintenance personnel.
- Observe the exterior amenities of the property, including individual site elements.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key facts about the portfolio.

12. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *S eans C itestone* and *ars all Swift* Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

12.1. Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effecti e age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

12.2. Definitions

Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safet* or *Perfor ance ntegrit* Plan Types, are considered Immediate Needs.

Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Amenities and General Site and Facilities sections of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

13. Certification

The City of Glendora (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Plaza Bus Stop, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose an Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

A. Parking Lot Executive Summary

A-1. Parking Lot Overview and Assessment Details

General Information	
Park Type	Parking Lot
Number of Buildings	None
Main Address	Mountain View and Cullen Avenue Glendora, California 91740
Site Developed	Unknow
Site Area	0.7 acres (estimated)
Parking Spaces	58 total spaces all in open lots; 5 of which are accessible
Outside Occupants/Leased Spaces	Grace Episcopal Church
Date(s) of Visit	November 14, 2023
Management Point of Contact	Michael Sledd, Assistant Public Works Director City of Glendora 626.914.8248 msledd@cityofglendora.org
On-site Point of Contact (POC)	Unescorted
Assessment and Report Prepared By	Alvaro Bedoya
Reviewed By	Mary Venable, CEM, RA Program Manager Mary.venable@bureauveritas.com 800.733.0660 x7292719
AssetCalc Link	Full dataset for this assessment can be found at: https://www.assetcalc.net/

A-2. Parking Lot Stop Findings and Deficiencies

Historical Summary

The facility, whose construction records are unavailable, is strategically positioned to incentivize people to park their vehicles and opt for public transportation for the rest of their commute. This approach aims to alleviate traffic congestion and advocate for sustainable transportation alternatives. Presently, the facility is under lease to a church, but the city of Glendora is overseeing its management.

Amenities and General Site

The asphalt-built parking lot has a capacity for approximately 58 cars in total, including 5 ADA spaces. On its northwest side, there is landscaped area with proper irrigation, and for illumination, it is equipped with three LED light poles. On the southeast side, there are two bus stops shade structures, two metal benches, and its corresponding trash bin.

Architectural

The parking lot contains no structures or significant built assets.

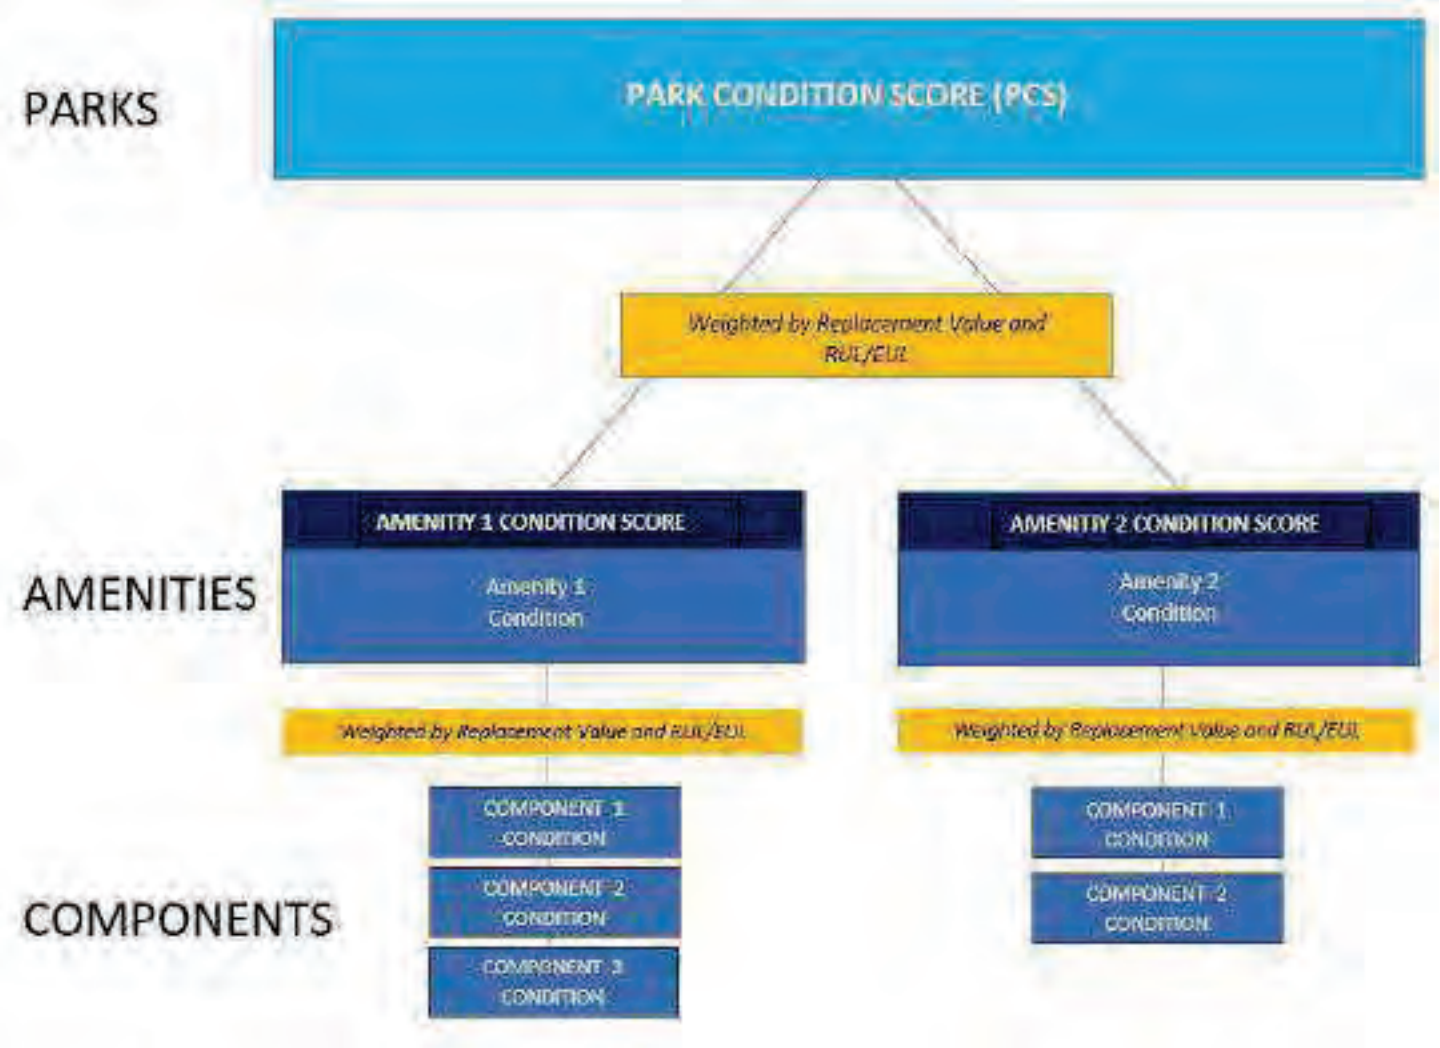
Mechanical, Electrical, Plumbing and Fire (MEPF)

The MEPF system of the parking lot is basic, and we only identified power supply for its exterior lighting. As for its plumbing system component, it is solely dedicated to the irrigation system for the landscaped area.

Recommended Additional Studies

No additional studies recommended at this time.

B. Amenities and General Site



B-1. Prioritization Methodology

Parking Lot Condition Score (PCS) and Amenity Condition Score (ACS)

A major goal of the Facility Condition Assessment (FCA) is to benchmark individual parks with other parks within the portfolio, and amenities with other amenities either within the same park and across the portfolio. To achieve a rating for each park, the Park Condition Score (PCS) is developed; similarly, an Amenity Condition Score (ACS) is used to compare amenities.

To assist in the overall prioritization effort, the following terms are used at the Component and Amenity level:

- **Component:** individual elements of the amenity or park that are evaluated and assigned conditions and GPS coordinates. Examples of components include benches, trash receptacles, tennis nets, playground surfaces, or split-rail fencing.
- **Amenity:** defined as a group of components that constitute a major feature of the park, logically grouped together by purpose and/or proximity. Examples of an amenity include a basketball court, a softball field, a dog park, picnic area, or playground.
- **Current Renewal Value (CRV):** the cost in today's dollars of the major constituent parts that make up the whole:
  - for Parks: CRV = renewal cost of all **developed** amenities within it (land value is excluded)
  - for Amenities: CRV = renewal cost of all significant components within it

The Amenity Condition Score (ACS) is a score calculated from an algorithm comprising a weighted average of the conditions of all the components within it.

AMENITY CONDITION SCORE (ACS) FORMULA = SUM [Remaining Value / Renewal Value (RenV) of combined components]

Remaining value = RenV multiplied by RUL/EUL

The Park Condition Score (PCS) is the total score for a single park property calculated from the sum of the Amenity Condition Scores (ACSs) for each amenity within the park.

PARK CONDITION SCORE FORMULA = SUM [Remaining Value]/ SUM [Renewal Value]

B-2. Parking Lot Prioritization Metrics

Park Condition Score (PCS) and Amenity Condition Score (ACS)

A major goal of the Facility Condition Assessment (FCA) is to benchmark individual parks with other parks within the portfolio, and amenities with other amenities either within the same park and across the portfolio. To achieve a rating for each park, the Park Condition Score (PCS) is developed; similarly, an Amenity Condition Score (ACS) is used to compare amenities.

The PCS and ACS metrics have been developed so that the higher the score, the less the park or amenity needs short term financial attention, due to its relative condition. The lower the score, the more attention is needed. An increasingly low score indicates an increased need to address deficiencies, provide replacements or make essential repairs. The lower the score, the more the amenity or park requires renewal or replacement. Both PCS and ACS scores range from 0 to 100.

The color coding reflects the score definition. Higher scores are assigned a sliding scale of green, with 100 assigned the deepest green. Yellow indicates a condition in the middle of the range, with yellow green in the high mid ranges, and yellow red in the low mid ranges. Scores in the low range are assigned a sliding scale of red, with 0 assigned the deepest red.

FAILED CONDITION - 0 _____ EXCELLENT CONDITION -100

The table on the following page shows the PCS condition score of this park, along with the ACS condition score of each amenity within the park:

B-3. Plan Types (Amenities and General Site)

Each line item in the cost database is assigned a Plan Type, which is the primary reason for the recommended replacement, repair, or other corrective action. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the best fit, typically the one with the greatest significance. See the *Purpose* description in the *Purpose an Scope* section for an explanation of Component Type.

Plan Type Descriptions

Safety	An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk.
Performance/Integrity	Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.
Accessibility	Does not meet ADA, UFAS, and/or other accessibility requirements.
Environmental	Improvements to air, water, or soil quality, including removal of hazardous materials from the site.
Retrofit/Adaptation	Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.
Lifecycle/Renewal	Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.

Plan Type Distribution (by Cost) – Timeframe 10 Years

B-4. Immediate Needs (Amenities and General Site)

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safet* or *Perfor ance ntegrit* Plan Types, are considered Immediate Needs.

BV did not identify any immediate needs associated with the amenities or general park areas at this site.

B-5. Key Findings (Amenities and General Site)

Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

The numerical scoring of condition as shown in the Key Findings is based on a 0-100 scale, as illustrated below:

- 0 - Replacement has none or very low impact on park operations
- 33 – Replacement has low impact on park operations
- 66 - Replacement has medium impact on park operation
- 100 - Failing, safety or code requirement component with high impact on park operations

No key findings were identified.

B-6. Parking Lot

General Information		
Asset Type	Parking Lot	
Asset Location	Mountain View and Cullen Avenue Glendora, California 91741	
Overall Condition	Fair	
Co ponent	*escription*	*Con ition*
Site Pavement	Asphalt lots with limited areas of concrete aprons and pavement and adjacent concrete sidewalks	Fair
Site Development	Parking Lot entrance signage; Limited park bench and bus stop shade structures	Good
Landscaping and Topography	Limited landscaping features including lawns, trees, Irrigation present	Fair

General Information

Utilities	Municipal water and sewer Local utility-provided electric	Fair
Storm Water Management	Surface drainage to developed surroundings	
Accessibility	Potential accessibility issues were not observed at this asset. Refer to Appendix D and the previous study for more details.	
Key Issues and Findings	None	

General Site

Co ponent	*escription*	*uantit*	*Con ition*
Irrigation System	Control Panel, Replace	1 EA	Fair
Pole Light Fixture with Lamps	any type 30' High, with LED Replacement, Replace/Install	3 EA	Good
Irrigation System	Drip System, Replace/Install	7500 SF	Fair
Bus Stop	Metal-Framed, Standard, Replace	32 SF	Fair
Parking Lots	Pavement, Asphalt, Mill and Overlay	4150 SF	Fair
Bus stop	Metal-Framed, Standard, Replace	32 SF	Fair
Trash Receptacle	Medium-Duty Metal or Precast, Replace	1 EA	Fair
Park Bench	Metal Powder-Coated, Replace	2 EA	Fair
Signage	Property, Monument, Replace/Install	1 EA	Good
Bike Rack	Fixed 1-5 Bikes, Replace	1 EA	Fair

General Site			
Lighting Controls	Dimming Panel, Digital Time Control Clock and Photosensor, Replace	1 EA	Fair
Sidewalk	Concrete, Small Areas/Sections, Replace	940 SF	Good

C. Property Space Use and Observed Areas

Areas Observed

Most of the site was observed in order to gain a clear understanding of the property's overall condition. Other areas accessed included the site within the property boundaries, the exterior of the property.

Key Spaces Not Observed

All key areas of the property were accessible and observed.

D. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of "areas of public accommodations" and "public facilities" on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the matrix that are included in the Accessibility appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance.
- Only a representative sample of areas was observed.
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance.
- Itemized costs for individual non-compliant items are not included in the dataset.
- For any "none" boxes checked or reference to "no issues" identified, that alone does not guarantee full compliance.

The parking lot was originally estimated constructed in 1980s. The parking lot has not since been substantially renovated at least there is no record of any improvements being made or any information about it.

E. Purpose and Scope

Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes construction systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of construction systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

Condition Ratings	
Excellent	New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Good	Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Fair	Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.
Poor	Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life.
Failed	Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.
Not Applicable	Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.

Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of existing systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Review maintenance records and procedures with the in-place maintenance personnel.
- Observe the exterior amenities of the property, including individual site elements.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key facts about the portfolio.

F. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *S eans C itestone* and *ars all Swift* Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

G-1. Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effecti e age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

G-2. Definitions

Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safet* or *Perfor ance ntegrit* Plan Types, are considered Immediate Needs.

Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Amenities and General Site and Facilities sections of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

G. Certification

The City of Glendora (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Church Parking Lot at E Mountain View & Cullen Ave. Glendora, CA 91741, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose an Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

A. Baseball Field Executive Summary

A-1. Baseball Field Overview and Assessment Details

General Information	
Park Type	Baseball Field
Number of Buildings	1 Ancillary building
Main Address	857 North Loraine Avenue. Glendora, California 91741
Site Developed	1990 (estimated)
Site Area	2.4 acres (estimated)
Parking Spaces	76 total spaces all in open lots; 5 of which are accessible
Outside Occupants/Leased Spaces	None
Date(s) of Visit	November 14, 2023
Management Point of Contact	Michael Sledd, Assistant Public Works Director City of Glendora 626.914.8248 msledd@cityofglendora.org
On-site Point of Contact (POC)	Unescorted
Assessment and Report Prepared By	Alvaro Bedoya

A-2. Baseball Field Stop Findings and Deficiencies

Historical Summary

The baseball field at George Manooshian Park in Glendora was originally established in the 1990s and has not seen any renovations since its inception. There is no recorded evidence of improvements, and no information has been provided regarding any upgrades or enhancements.

Amenities and General Site

The site is essentially a baseball field equipped with the standard necessities for baseball practice, including a fenced field, foul poles, a scoreboard, and two dugouts—one for the home team and another for the visiting team. There are also two seating sections for spectators. Additionally, the field features a parking area on its west side, basic lighting, and, finally, situated behind home plate, a small ancillary building utilized for storage which could not be accessed. The components are generally in fair condition. The parking lot striping is faded, and there are previously sealed longitudinal cracks and deteriorated portions of the asphalt surface. Milling and overlaying of the parking lot, along with a seal coat and new striping, is recommended

Architectural

The Baseball Field contains no structures or significant built assets.

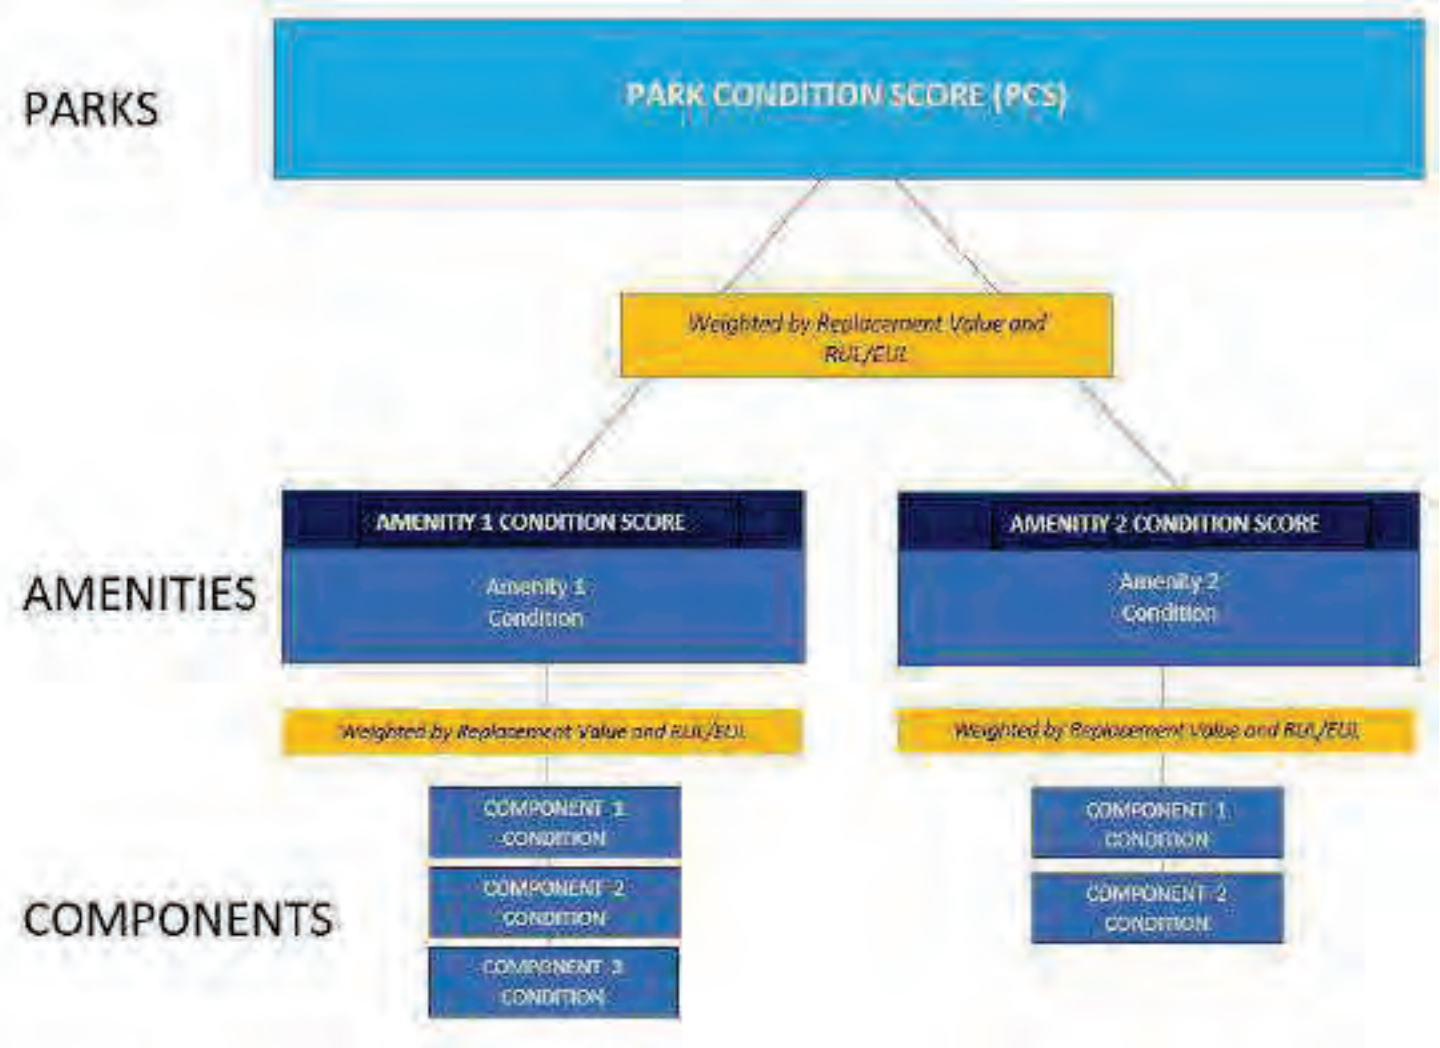
Mechanical, Electrical, Plumbing and Fire (MEPF)

The MEPF (Mechanical, Electrical, Plumbing, and Fire Protection) components for the Manooshian City Baseball Field primarily involve the electrical aspect, catering to the lighting and scoreboard. Located on the north side of the property, there is a backflow preventer. However, it is worth noting that the field lacks irrigation and water fountains.

Recommended Additional Studies

No additional studies recommended at this time.

B. Amenities and General Site



B-1. Prioritization Methodology

Baseball Field Condition Score (PCS) and Amenity Condition Score (ACS)

A major goal of the Facility Condition Assessment (FCA) is to benchmark individual parks with other parks within the portfolio, and amenities with other amenities either within the same park and across the portfolio. To achieve a rating for each park, the Park Condition Score (PCS) is developed; similarly, an Amenity Condition Score (ACS) is used to compare amenities.

To assist in the overall prioritization effort, the following terms are used at the Component and Amenity level:

- **Component:** individual elements of the amenity or park that are evaluated and assigned conditions and GPS coordinates. Examples of components include benches, trash receptacles, tennis nets, playground surfaces, or split-rail fencing.
- **Amenity:** defined as a group of components that constitute a major feature of the park, logically grouped together by purpose and/or proximity. Examples of an amenity include a basketball court, a softball field, a dog park, picnic area, or playground.
- **Current Renewal Value (CRV):** the cost in today's dollars of the major constituent parts that make up the whole:
  - for Parks: CRV = renewal cost of all **developed** amenities within it (land value is excluded)
  - for Amenities: CRV = renewal cost of all significant components within it

The Amenity Condition Score (ACS) is a score calculated from an algorithm comprising a weighted average of the conditions of all the components within it.

AMENITY CONDITION SCORE (ACS) FORMULA = SUM [Remaining Value / Renewal Value (RenV) of combined components]

Remaining value = RenV multiplied by RUL/EUL

The Park Condition Score (PCS) is the total score for a single park property calculated from the sum of the Amenity Condition Scores (ACSs) for each amenity within the park.

PARK CONDITION SCORE FORMULA = SUM [Remaining Value]/ SUM [Renewal Value]

B-2. Field Prioritization Metrics

Park Condition Score (PCS) and Amenity Condition Score (ACS)

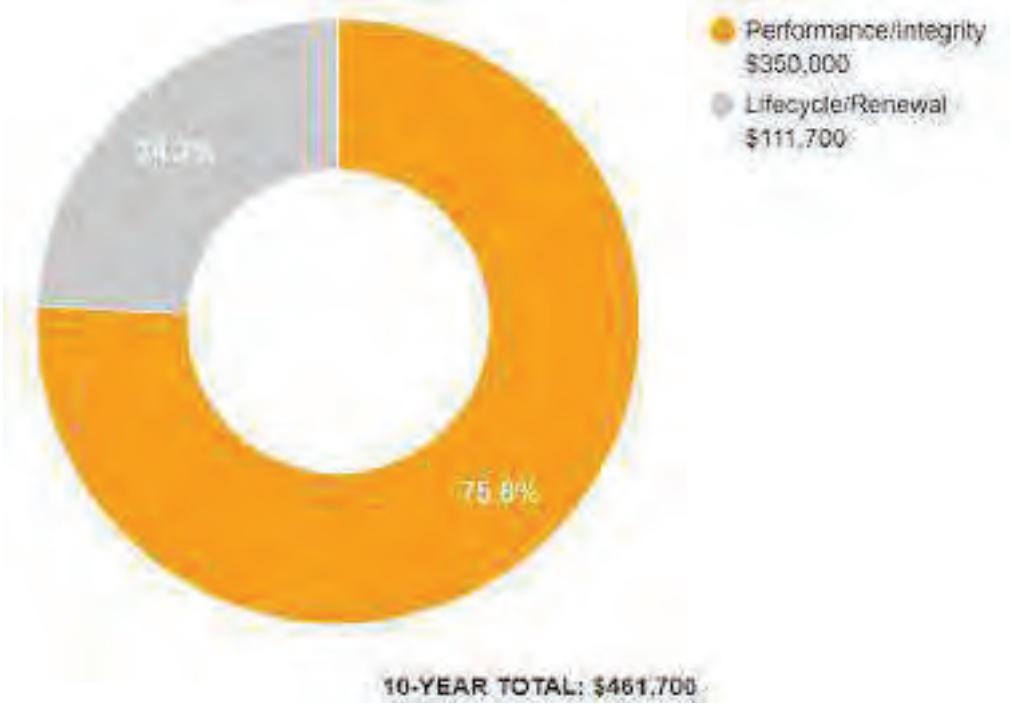
A major goal of the Facility Condition Assessment (FCA) is to benchmark individual parks with other parks within the portfolio, and amenities with other amenities either within the same park and across the portfolio. To achieve a rating for each park, the Park Condition Score (PCS) is developed; similarly, an Amenity Condition Score (ACS) is used to compare amenities.

The PCS and ACS metrics have been developed so that the higher the score, the less the park or amenity needs short term financial attention, due to its relative condition. The lower the score, the more attention is needed. An increasingly low score indicates an increased need to address deficiencies, provide replacements or make essential repairs. The lower the score, the more the amenity or park requires renewal or replacement. Both PCS and ACS scores range from 0 to 100.

The color coding reflects the score definition. Higher scores are assigned a sliding scale of green, with 100 assigned the deepest green. Yellow indicates a condition in the middle of the range, with yellow green in the high mid ranges, and yellow red in the low mid ranges. Scores in the low range are assigned a sliding scale of red, with 0 assigned the deepest red.

FAILED CONDITION - 0 _____ EXCELLENT CONDITION -100

The table on the following page shows the PCS condition score of this park, along with the ACS condition score of each amenity within the park:



City Baseball Field at Manooshian	OVERALL CONDITION SCORE: 23	TOTAL ACRES: REPLACEMENT VALUE: $ 386,790 REMAINING VALUE: $ 89,231 SAFETY ISSUES: 0 FAILED COMPONENTS: 0
Baseball diamonds	COND. SCORE: 39	REPLACEMENT VALUE: $ 193,240 REMAINING VALUE: $ 75,511
General Site	COND. SCORE: 7	REPLACEMENT VALUE: $ 193,550 REMAINING VALUE: $ 13,720

B-3. Plan Types (Amenities and General Site)

Each line item in the cost database is assigned a Plan Type, which is the primary reason for the recommended replacement, repair, or other corrective action. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the best fit, typically the one with the greatest significance. See the *Purpose* description in the *Purpose an Scope* section for an explanation of Component Type.

Plan Type Descriptions		
Safety		An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk.
Performance/Integrity		Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.
Accessibility		Does not meet ADA, UFAS, and/or other accessibility requirements.
Environmental		Improvements to air, water, or soil quality, including removal of hazardous materials from the site.
Retrofit/Adaptation		Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.
Lifecycle/Renewal		Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.

Plan Type Distribution (by Cost) – Timeframe 10 Years

B-4. Immediate Needs (Amenities and General Site)

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safet* or *Perfor ance ntegrit* Plan Types, are considered Immediate Needs.

Facility/Building	Total Items	Total Cost
City Baseball Field at Manooshian	1	$29,800
Total	**1**	**$29,800**

City Baseball Field at Manooshian

ID	Location	Location Description	UF Code	Description	Condition	Plan Type	Cost
7189604	City Baseball Field at Manooshian	Site	G2020	Parking Lots, Pavement, Asphalt, Seal & Stripe	Poor	Performance/Integrity	$29,800
Total (1 items)							**$29,800**

B-5. Key Findings (Amenities and General Site)

Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

The numerical scoring of condition as shown in the Key Findings is based on a 0-100 scale, as illustrated below:

- 0 - Replacement has none or very low impact on park operations
- 33 – Replacement has low impact on park operations
- 66 - Replacement has medium impact on park operation
- 100 - Failing, safety or code requirement component with high impact on park operations

Parking Lots in Poor condition.

Pavement, Asphalt
City Baseball Field at Manooshian Site

Uniformat Code: G2020
Recommendation: **Seal and Stripe in 2023**

Parking Lots	Pavement, Asphalt, Mill and Overlay	49000 SF	Poor
Parking Lots	Pavement, Asphalt, Seal and Stripe	49000 SF	Poor

C. Property Space Use and Observed Areas

Areas Observed

Most of the field was observed in order to gain a clear understanding of the property's overall condition. Other areas accessed included the site within the property boundaries, the exterior of the property.

Key Spaces Not Observed

Areas of note that were either inaccessible or not observed for other reasons are listed here:

- Ancillary storage building; locked no key.

D. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of "areas of public accommodations" and "public facilities" on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the matrix included in the Accessibility appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance.
- Only a representative sample of areas was observed.
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance.
- Itemized costs for individual non-compliant items are not included in the dataset.
- For any "none" boxes checked or reference to "no issues" identified, that alone does not guarantee full compliance.

The baseball field was originally estimated constructed in 1990s. The baseball field has not since been substantially renovated.

No detailed follow-up accessibility studies are included as recommendations since no major or moderate issues were identified at any of the park amenities and facilities. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

E. Purpose and Scope

Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes construction systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of construction systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

Condition Ratings	
Excellent	New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Good	Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Fair	Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.
Poor	Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life.
Failed	Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.
Not Applicable	Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.

Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of existing systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Review maintenance records and procedures with the in-place maintenance personnel.
- Observe the exterior amenities of the property, including individual site elements.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key facts about the portfolio.

F. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *S eans C itestone* and *ars all Swift* Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

G-1. Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effecti e age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

G-2. Definitions

Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safet* or *Perfor ance ntegrit* Plan Types, are considered Immediate Needs.

Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Amenities and General Site and Facilities sections of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

G. Certification

Th City of Glendora (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of City Baseball Field at Manooshian, the “Property”. It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager’s walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose an Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property’s original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

A. Urban Trail Executive Summary

A-1. Urban Trail Overview and Assessment Details

General Information	
Park Type	Urban Trail System
Number of Buildings	None
Main Address	Sunflower and Gladstone Street, Glendora, California 91740
Site Developed	2018
Site Area	2.5 acres (estimated)
Outside Occupants/Leased Spaces	None
Date(s) of Visit	November 13, 2023
Management Point of Contact	Michael Sledd, Assistant Public Works Director City of Glendora 626.914.8248 msledd@cityofglendora.org
On-site Point of Contact (POC)	Unescorted
Assessment and Report Prepared By	Alvaro Bedoya
Reviewed By	Mary Venable, CEM, RA Program Manager Mary.Venable@bureauveritas.com 800.733.0660 x7292719
AssetCalc Link	Full dataset for this assessment can be found at: https://www.assetcalc.net/

A-2. Urban Trail Findings and Deficiencies

Historical Summary

The inauguration of the Glendora Urban Trail, spanning one mile, took place on June 23, 2018. This trail represents the initial phase of a larger urban trail system, totaling 2.5 miles, projected to extend from Louie Pompei Memorial Sports Park to Grand Avenue. The trail is designed with the community in mind, providing a space for residents to walk or ride their bicycles freely, away from the confines of the street.

General Site

The path encompasses a 10-foot-wide asphalt trail with a designated two-way lane. Running along the northern edge is the San Dimas Wash canal, while the southern border connects to the backyards of the neighborhood residences, all safeguarded by a chain-link fence on both sides. The trail is equipped with three iron gates: one at the trailhead and two flanking each side of the Loui Pompei Park parking area. Adjacent to the western park entrance, you'll find two concrete picnic tables, and across the street from the trail's west entrance, on a triangular plot, three concrete benches are positioned. Notably, the trail is enhanced by five monument signs.

Architectural

The Glendora Urban Trail contain no structures or significant built assets.

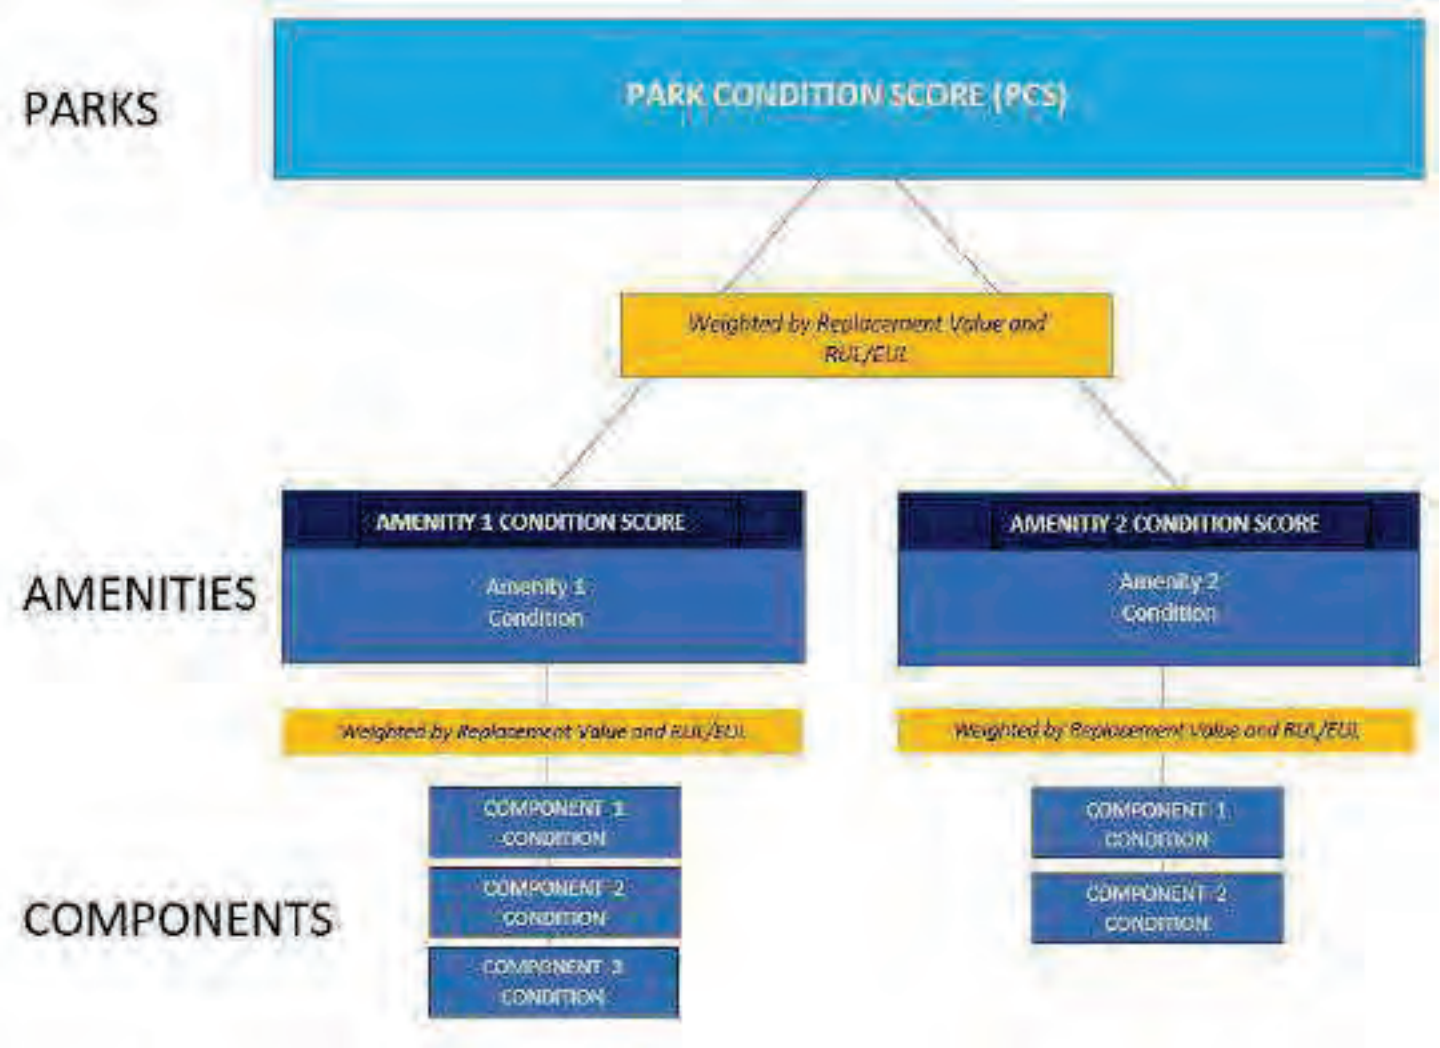
Mechanical, Electrical, Plumbing and Fire (MEPF)

The Glendora Urban Trail lacks MEPF (Mechanical, Electrical, Plumbing, and Fire Protection) elements or significant mechanical assets, except for a minor irrigation triangle located on the opposite side from the trail's starting point. It's worth highlighting that no lighting or drinking fountains were identified along the trail, which could be considered advantageous if added.

Recommended Additional Studies

No additional studies recommended at this time.

B. Amenities and General Site



B-1. Prioritization Methodology

Urban Trail Condition Score (PCS) and Amenity Condition Score (ACS)

A major goal of the Facility Condition Assessment (FCA) is to benchmark individual parks with other parks within the portfolio, and amenities with other amenities either within the same park and across the portfolio. To achieve a rating for each park, the Park Condition Score (PCS) is developed; similarly, an Amenity Condition Score (ACS) is used to compare amenities.

To assist in the overall prioritization effort, the following terms are used at the Component and Amenity level:

- **Component:** individual elements of the amenity or park that are evaluated and assigned conditions and GPS coordinates. Examples of components include benches, trash receptacles, tennis nets, playground surfaces, or split-rail fencing.
- **Amenity:** defined as a group of components that constitute a major feature of the park, logically grouped together by purpose and/or proximity. Examples of an amenity include a basketball court, a softball field, a dog park, picnic area, or playground.
- **Current Renewal Value (CRV):** the cost in today's dollars of the major constituent parts that make up the whole:
  - for Parks: CRV = renewal cost of all **developed** amenities within it (land value is excluded)
  - for Amenities: CRV = renewal cost of all significant components within it

The Amenity Condition Score (ACS) is a score calculated from an algorithm comprising a weighted average of the conditions of all the components within it.

AMENITY CONDITION SCORE (ACS) FORMULA = SUM [Remaining Value/Renewal Value (RenV) of combined components]

Remaining value = RenV multiplied by RUL/EUL

The Park Condition Score (PCS) is the total score for a single park property calculated from the sum of the Amenity Condition Scores (ACSs) for each amenity within the park.

PARK CONDITION SCORE FORMULA = SUM [Remaining Value]/SUM [Renewal Value]

B-2. Trail Prioritization Metrics

Trail Condition Score (PCS) and Amenity Condition Score (ACS)

A major goal of the Facility Condition Assessment (FCA) is to benchmark individual parks with other parks within the portfolio, and amenities with other amenities either within the same park and across the portfolio. To achieve a rating for each park, the Park Condition Score (PCS) is developed; similarly, an Amenity Condition Score (ACS) is used to compare amenities.

The PCS and ACS metrics have been developed so that the higher the score, the less the park or amenity needs short term financial attention, due to its relative condition. The lower the score, the more attention is needed. An increasingly low score indicates an increased need to address deficiencies, provide replacements or make essential repairs. The lower the score, the more the amenity or park requires renewal or replacement. Both PCS and ACS scores range from 0 to 100.

The color coding reflects the score definition. Higher scores are assigned a sliding scale of green, with 100 assigned the deepest green. Yellow indicates a condition in the middle of the range, with yellow green in the high mid ranges, and yellow red in the low mid ranges. Scores in the low range are assigned a sliding scale of red, with 0 assigned the deepest red.

FAILED CONDITION - 0 _____ EXCELLENT CONDITION -100

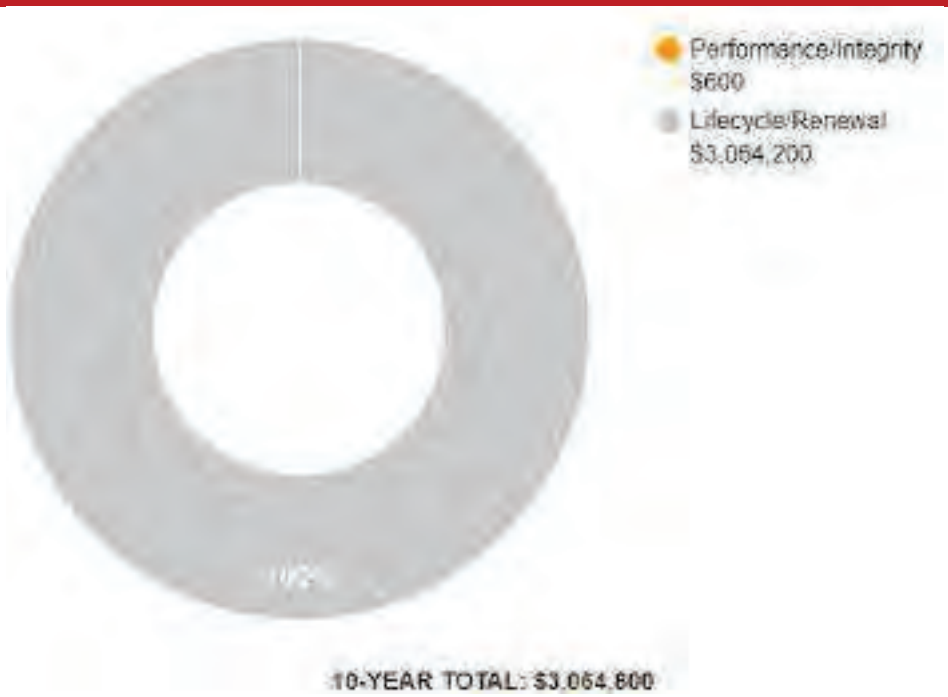
The table on the following page shows the PCS condition score of this park, along with the ACS condition score of each amenity within the park:

Glendora Urban Trail

OVERALL CONDITION SCORE **74**

TOTAL ACRES:
REPLACEMENT VALUE: $ 212,576
REMAINING VALUE: $ 156,682
SAFETY ISSUES: 0
FAILED COMPONENTS: 0

B-3. Plan Types (Amenities and General Site)



Each line item in the cost database is assigned a Plan Type, which is the primary reason for the recommended replacement, repair, or other corrective action. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the best fit, typically the one with the greatest significance. See the *Purpose* description in the *Purpose an Scope* section for an explanation of Component Type.

Plan Type Descriptions		
Safety	■	An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk.
Performance/Integrity	■	Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.
Accessibility	■	Does not meet ADA, UFAS, and/or other accessibility requirements.
Environmental	■	Improvements to air, water, or soil quality, including removal of hazardous materials from the site.
Retrofit/Adaptation	■	Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.

Plan Type Descriptions

Lifecycle/Renewal	■	Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.

Plan Type Distribution (by Cost) – Timeframe 10 Years

B-4. Immediate Needs (Amenities and General Site)

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safet* or *Perfor ance ntegrit* Plan Types, are considered Immediate Needs.

BV did not identify any immediate needs associated with the amenities or general park areas at this site.

B-5. Key Findings (Amenities and General Site)

Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

The numerical scoring of condition as shown in the Key Findings is based on a 0-100 scale, as illustrated below:

- 0 - Replacement has none or very low impact on park operations
- 33 – Replacement has low impact on park operations
- 66 - Replacement has medium impact on park operation
- 100 - Failing, safety or code requirement component with high impact on park operations

B-6. Urban Trail

General Information			
Asset Type	Trail		
Asset Location	Between 1380 South Sunflower Avenue and Louie Pompei Memorial Sport Park		
Overall Condition	Good		
Co ponent	*escription*	*uantit*	*Con ition*
Landscaping and Topography	Limited landscaping features; irrigation present Low to moderate site slopes throughout		
Storm Water Management	Surface drainage to developed and undeveloped surroundings		
Accessibility	Potential accessibility issues were not observed at this asset. Refer to Appendix D and the previous study for more details.		
Key Issues and Findings	None		

C. Property Space Use and Observed Areas

Areas Observed

All areas of the trail were observed in order to gain a clear understanding of the property's overall condition.

Key Spaces Not Observed

There were no inaccessible areas.

D. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of "areas of public accommodations" and "public facilities" on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the matrix that are included in the Accessibility appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance.
- Only a representative sample of areas was observed.
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance.
- Itemized costs for individual non-compliant items are included in the dataset.
- For any "none" boxes checked or reference to "no issues" identified, that alone does not guarantee full compliance.

The park was originally constructed in 2018. The trail has not since been substantially renovated.

No detailed follow-up accessibility study is currently recommended since no complete apartment unit conversions are needed and the budgetary sum of the corrective costs identified at the subject site is less than $10,000. Reference the appendix for specific data, photos, and the checklist associated with this limited accessibility survey.

E. Purpose and Scope

Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes construction systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of construction systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

Condition Ratings	
Excellent	New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Good	Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Fair	Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.
Poor	Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life.
Failed	Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.
Not Applicable	Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.

Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of existing systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Review maintenance records and procedures with the in-place maintenance personnel.
- Observe the exterior amenities of the property, including individual site elements. Building observations include interior areas, the significant mechanical, electrical and elevator equipment rooms, and roofs.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key facts about the portfolio.

F. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *S eans C itestone* and *ars all Swift* Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

F-1. Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effecti e age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

F-2. Definitions

Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safet* or *Perfor ance ntegrit* Plan Types, are considered Immediate Needs.

Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Amenities and General Site and Facilities sections of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

G. Certification

The City of Glendora (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of the Glendora Urban Trail, located at Sunflower and Gladstone Street, Glendora, California 91740, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose an Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

1. Executive Summary

Portfolio Overview and Assessment Details

General Information	
Property Type/s	Street medians
Number of Medians	124

Locations	Address
Amelia Triangle (1)	Island at I/S of Amelia Avenue and Country Club Drive
Auto Center Drive (3)	Lone Hill east to 210 Overpass (north and south sides)
Baseline Road (4)	Barranca Avenue. east to Glendora Avenue. including access medians
Baseline Access Medians (2)	north of the center median on Baseline Road at the 210 freeway on-ramp
Danehurst Avenue (1)	Across from 825 Danehurst Avenue N/A Nothing to Collect
Edgemont Island (1)	140 North Edgemont Place - Island at the end of cul-du-sac
Glendora Avenue (6)	Baseline north to East Walnut Avenue
Glenwood Island (1)	Across from 366 North Glenwood Avenue
Grand Avenue (38)	Arrow Highway to Sierra Madre
Jenifer and Mauna Loa (1)	Across from 702 South. Jenifer Avenue
Kregmont Avenue (4)	Between Palm Avenue and Rose Drive
Lone Hill Avenue (10)	Gladstone to just north of Route 66
Palopinto Island (1)	Across from 1852 Palopinto Avenue
Route 66 (45)	Barranca Avenue east to Cataract Avenue (Inc. access median)
Woodcroft Island (1)	Across from 338 East Woodcroft Avenue

Portfolio-Level Findings and Deficiencies

Historical Summary

This survey investigates the condition and significant capital assets of the street medians throughout the City of Glendora. The medians are of varying ages.

Architectural

The street medians contain no structures or significant built assets.

Mechanical, Electrical, and Plumbing (MEP)

Medians throughout the City contain limited MEP equipment, primarily irrigation equipment and some lighting for street signs. Major streetlights are owned by the power company and are excluded from this survey. The irrigation equipment is generally in good condition with no significant issues observed.

Site

Medians are generally landscaped with water-conserving shrubs and trees, which were observed to be in good condition overall. Some medians are hardscaped with stone rubble, without plantings. In general, the medians have been well maintained, and routine maintenance is recommended.

Recommended Additional Studies

No additional studies recommended at this time.

Facility Condition Index (FCI)

One of the major goals of the FCA is to calculate each building's Facility Condition Index (FCI), which provides a theoretical objective indication of a building's overall condition. By definition, the FCI is defined as the ratio of the cost of current needs divided by current replacement value (CRV) of the facility. The chart below presents the industry standard ranges and cut-off points.

FCI Ranges and Description	
0 – 5%	In new or well-maintained condition, with little or no visual evidence of wear or deficiencies.
5 – 10%	Subjected to wear but is still in a serviceable and functioning condition.
10 – 30%	Subjected to hard or long-term wear. Nearing the end of its useful or serviceable life.
30% and above	Has reached the end of its useful or serviceable life. Renewal is now necessary.

The deficiencies and lifecycle needs identified in this assessment provide the basis for a portfolio-wide capital improvement funding strategy. In addition to the current FCI, extended FCI's have been developed to provide owners the intelligence needed to plan and budget for the "keep-up costs" for their facilities. As such the 3-year, 5-year, and 10-year FCI's are calculated by dividing the anticipated needs of those respective time periods by current replacement value. As a final point, the FCI's ultimately provide more value when used to relatively compare facilities across a portfolio instead of being over-analyzed and scrutinized as stand-alone values. The table below summarizes the individual findings for this FCA:

Note: the FCI scores for this portfolio are based on the value of the improvements only, not including curbs. Thus the FCI shown in the illustrations below represent the recurring costs of capital replacements plus inflation for deferred costs.

Facility	Replacement Value	Current	3-Year	5-Year	10-Year
Street Medians / Amelia Triangle	$3,770	0.0%	0.0%	126.6%	313.1%
Street Medians / Auto Center Drive	$19,600	0.0%	0.0%	45.1%	208.9%
Street Medians / Baseline Access Medians	$6,500	0.0%	0.0%	102.5%	188.6%
Street Medians / Baseline Road	$32,840	0.0%	0.0%	44.3%	196.4%
Street Medians / Edgemont Island	$7,000	0.0%	138.7%	138.7%	287.9%
Street Medians / Glendora Avenue	$16,000	0.0%	24.2%	32.0%	236.8%
Street Medians / Glenwood Island	$5,000	0.0%	0.0%	0.0%	193.6%
Street Medians / Grand Avenue	$369,000	0.0%	5.3%	54.1%	189.4%
Street Medians / Jenifer & Mauna Loa	$4,000	0.0%	0.0%	0.0%	134.9%
Street Medians / Kregmont Avenue	$16,200	0.0%	0.0%	68.6%	199.3%
Street Medians / Lone Hill Avenue	$94,000	0.0%	9.9%	58.2%	202.6%
Street Medians / Palopinto Island	$6,200	0.0%	0.0%	11.2%	212.5%
Street Medians / Route 66	$508,000	0.0%	0.4%	24.5%	187.4%
Street Medians / Woodcroft Island	$4,000	0.0%	0.0%	0.0%	194.9%

Immediate Needs

No immediate needs were identified.

Portfolio Level Key Findings

Backflow Preventer in Poor condition.

Domestic Water
Grand Avenue Street Medians Grand Avenue M13

Uniformat Code: D2010
Recommendation: **Replace in 2024**

Priority Score: **84.8**

Plan Type: Performance/Integrity

Cost Estimate: $2,100

**$$**$$

Under construction - AssetCALC ID: 7014604

Medians in Poor condition.

Aggregate/gravel, Surface Gravel
Glendora Avenue Street Medians Glendora Avenue M5

Uniformat Code: G2020
Recommendation: **Replenish in 2024**

Priority Score: **84.8**

Plan Type: Performance/Integrity

Cost Estimate: $1,500

**$$**$$

Under construction needs to be finished - AssetCALC ID: 7014561

Medians in Poor condition.

Aggregate/gravel, Surface Gravel
Glendora Avenue Street Medians Glendora Avenue M4

Uniformat Code: G2020
Recommendation: **Replenish in 2024**

Priority Score: **84.8**

Plan Type: Performance/Integrity

Cost Estimate: $500

**$$**$$

Under construction needs finish - AssetCALC ID: 7014685

Medians in Poor condition.

Aggregate/Stone, Surface Gravel
Lone Hill Avenue Street Medians Lonehill Avenue M9

Uniformat Code: G2020
Recommendation: **Replenish in 2024**

Priority Score: **84.8**

Plan Type: Performance/Integrity

Cost Estimate: $6,400

**$$**$$

Without a surface median and in need of finishing - AssetCALC ID: 7008648

Medians in Poor condition.

Aggregate/Stone, Stones on curb
Grand Avenue Street Medians Grand Avenue M12A

Uniformat Code: G2020
Recommendation: **Replenish in 2024**

Priority Score: **84.8**

Plan Type: Performance/Integrity

Cost Estimate: $1,500

**$$**$$

Under construction - AssetCALC ID: 7014658

Medians in Poor condition.

Aggregate/gravel, Surface Gravel
Glendora Avenue Street Medians Glendora Ave M3

Uniformat Code: G2020
Recommendation: **Replenish in 2025**

Priority Score: **84.7**

Plan Type: Performance/Integrity

Cost Estimate: $1,700

**$$**$$

Under construction, needs finish - AssetCALC ID: 7014582

Backflow Preventer in Poor condition.

Domestic Water
Route 66 Street Medians M21

Uniformat Code: D2010
Recommendation: **Replace in 2025**

Priority Score: **84.7**

Plan Type: Performance/Integrity

Cost Estimate: $2,100

**$$**$$

Leaking - AssetCALC ID: 7009616

Irrigation System in Poor condition.

Drip System
Grand Avenue Street Medians Grand Avenue M12

Uniformat Code: G2080
Recommendation: **Replace/Install in 2024**

Priority Score: **81.8**

Plan Type: Performance/Integrity

Cost Estimate: $6,700

**$$**$$

Under Construction - AssetCALC ID: 7014719

Irrigation System in Poor condition.

Drip System
Grand Avenue Street Medians Grand Avenue M13

Uniformat Code: G2080
Recommendation: **Replace/Install in 2025**

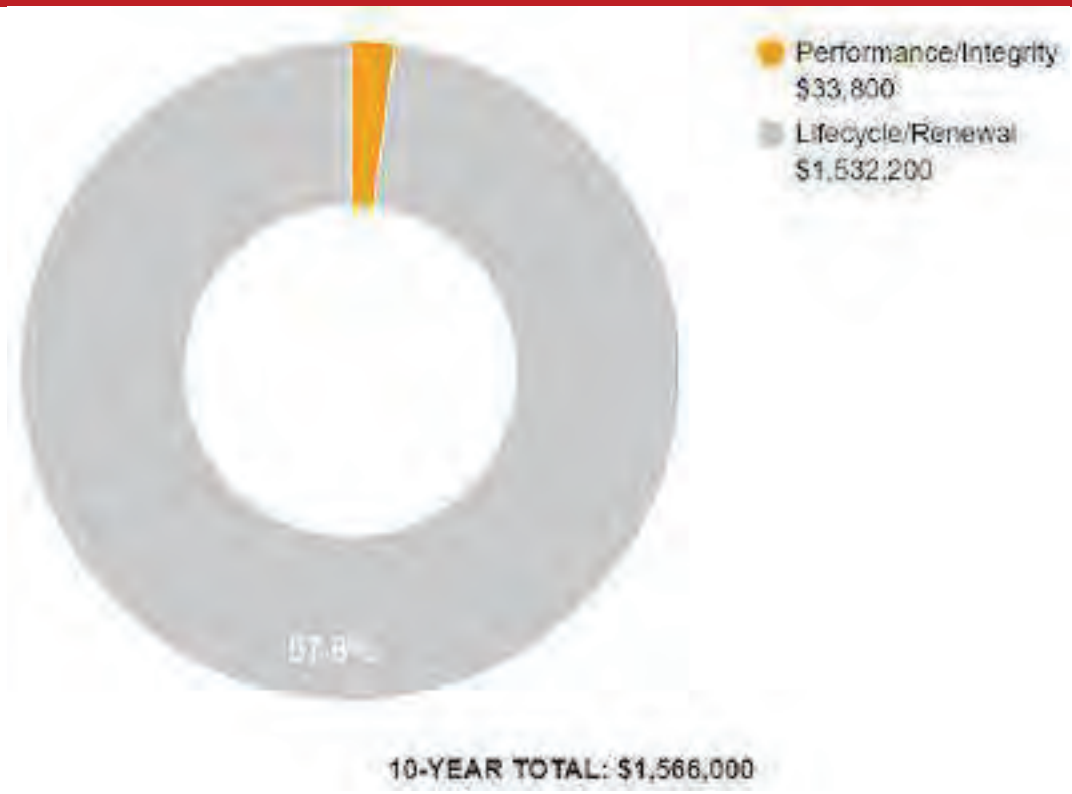
Priority Score: **81.7**

Plan Type: Performance/Integrity

Cost Estimate: $5,800

**$$**$$

Under construction - AssetCALC ID: 7014697



Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason or rationale for the recommended replacement, repair, or other corrective action. This is the “why” part of the equation. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the “best” fit, typically the one with the greatest significance.

Plan Type Descriptions

Safety	An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk.
Performance/Integrity	Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.
Accessibility	Does not meet ADA, UFAS, and/or other accessibility requirements.
Environmental	Improvements to air or water quality, including removal of hazardous materials from the building or site.
Retrofit/Adaptation	Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.
Lifecycle/Renewal	Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.

Plan Type Distribution (by Cost)

1 – MEDIAN OVERVIEW

2 – LANDSCAPING

16. Property Space Use and Observed Areas

Areas Observed

All of the listed medians were observed in order to gain a clear understanding of the properties' overall condition.

17. ADA Accessibility

Section is not applicable. None of the medians contain pedestrian walkways.

18. Purpose and Scope

Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

Condition Ratings	
Excellent	New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Good	Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Fair	Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.
Poor	Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life.
Failed	Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.
Not Applicable	Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.

Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Observe a representative sample of the spaces to gain a clear understanding of the properties' overall condition.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

19. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means, CBRE Whitestone,* and *Marshall & Swift,* Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

Definitions

Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

Key Findings

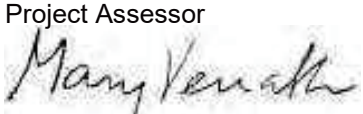
In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

20. Certification

The City of Glendora (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of City of Glendora Medians, Multiple Locations, Glendora, California, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.



The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

Attachment F

Overview of California Municipal Finance: Property Taxes, Bonds, and Key Propositions

1. Municipal Finance and Property Taxes

Municipal finance in California primarily relies on property taxes, sales taxes, and fees for municipal services. Historically, property taxes have been a vital revenue source for cities, funding essential services including public safety, parks, libraries, and infrastructure.

2. Proposition 13 (1978)

Proposition 13 significantly limited California cities' revenue-raising ability by:

- Capping property taxes at 1% of assessed valuation.
- Limiting annual increases in assessed valuation to 2%, unless a property is sold or substantially improved.
- Requiring a two-thirds voter approval for new local taxes, including bond measures funded by property taxes.

This proposition dramatically constrained local government budgets, shifting reliance to alternative revenue sources.

3. Proposition 46 (1986)

Proposition 46 reaffirmed local governments' ability to issue General Obligation (GO) bonds funded by property tax increases for capital improvements such as parks, public buildings, infrastructure, and emergency services facilities. However, these GO bonds require two-thirds (66.7%) voter approval.

4. Voting Requirements for Facility Bond Measures and Parcel Tax Measures

Under current law:

- City council-initiated General Obligation bond measures require a two-thirds (66.7%) voter approval.
- City council-initiated parcel tax measure for infrastructure improvements requires a two-thirds (66.7%) voter approval. This type of measure is typically for a specific duration of time (e.g. 20 to 40 years); proceeds can be used to issue debt if that is an allowable use noted in the proposed ordinance.

5. Citizen Initiatives and the 50% Threshold

Recent court decisions, notably City of Upland v. California Cannabis Coalition (2017), clarified by subsequent litigation, established that citizen-sponsored initiatives placed on the ballot by voter petitions only require a simple majority (50% + 1) for approval. This significantly lowers the threshold and provides a strategic advantage for community groups or citizens seeking to fund municipal projects or impose special taxes without the higher barrier of two-thirds voter approval. Specific examples of special parcel tax measures that passed under the 50%+1 citizen initiative legal framework are Measure G in San Francisco (2018) and Measure AA in Oakland (2018).

Overview of California Municipal Finance: Property Taxes, Bonds, and Key Propositions

6. ACA 5 (2024) and its Failure to Pass

ACA 5, placed on the November 2024 ballot, proposed reducing the voter approval threshold for certain municipal infrastructure bond measures initiated by local governments from two-thirds to 55%. The failure of ACA 5 maintained the existing high threshold of two-thirds voter approval, preserving the status quo. Consequently, the dynamic established by Proposition 13 and Proposition 46 remains unchanged, continuing the significant hurdle cities face when seeking voter approval for infrastructure funding.

Summary of Voting Thresholds Post-ACA 5 Failure

Measure Origin	**Required Approval**
City Council-Initiated GO Bonds or Parcel Tax	**Two-thirds (66.7%)** voter approval
Citizen-Initiated Bonds/Special Taxes/Parcel Tax	**Simple majority (50% + 1)** voter approval

Key Implications:

- Proposition 13 and Proposition 46 continue to restrict cities' financial flexibility.
- Citizen initiatives remain a powerful tool for circumventing the two-thirds requirement.
- The failure of ACA 4 to pass maintains the challenging environment for city-sponsored infrastructure funding, reinforcing the importance of citizen-led initiatives in municipal finance.

7. Potential Changes to the Tax Landscape

In May 2025, the Howard Jarvis Taxpayers Association (HJTA) submitted two ballot measures to the California Attorney General's Office, which is the first step to prepare a petition to circulate for signatures to place them on the ballot next year. Both measures are titled the Save Proposition 13 Act of 2026:

- The first version would eliminate changes to Proposition 13 that have been created through the courts (e.g. Upland decision)
- It would require special local taxes to be approved by two-thirds of voters and the elected officials of the local government. It would also bar local governments from increasing general property taxes in their communities.
- The first version would void all property taxes enacted prior to the passage of the measure that were not approved by two-thirds of voters.
- The only difference in the second version of the ballot measure is that it removes the retroactivity section noted above.

These measures are similar to a HTJA sponsored measure that the California Supreme Court removed from the ballot last year after Governor Newsom filed a lawsuit against it. The proposed changes "are within the electorate's prerogative to enact," Justice Goodwin Liu wrote, "but because those changes would substantially alter our basic plan of government, the proposal cannot be enacted by initiative. It is instead governed by the procedures for revising our

Constitution" — whereby proposed revisions must be submitted to voters by a supermajority of the Legislature or a constitutional convention.

Bond Feasibility Survey

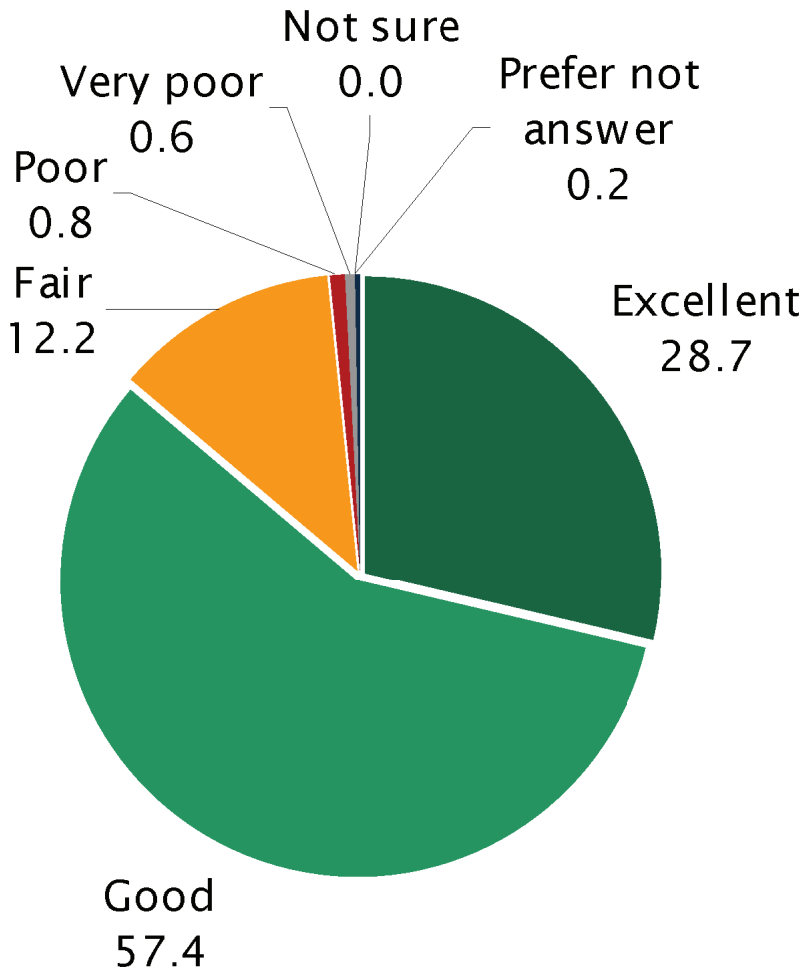
Conducted for the
City of Glendora

Presented By
Timothy McLarney Ph.D.

8/20/2024

TrueNorth Research

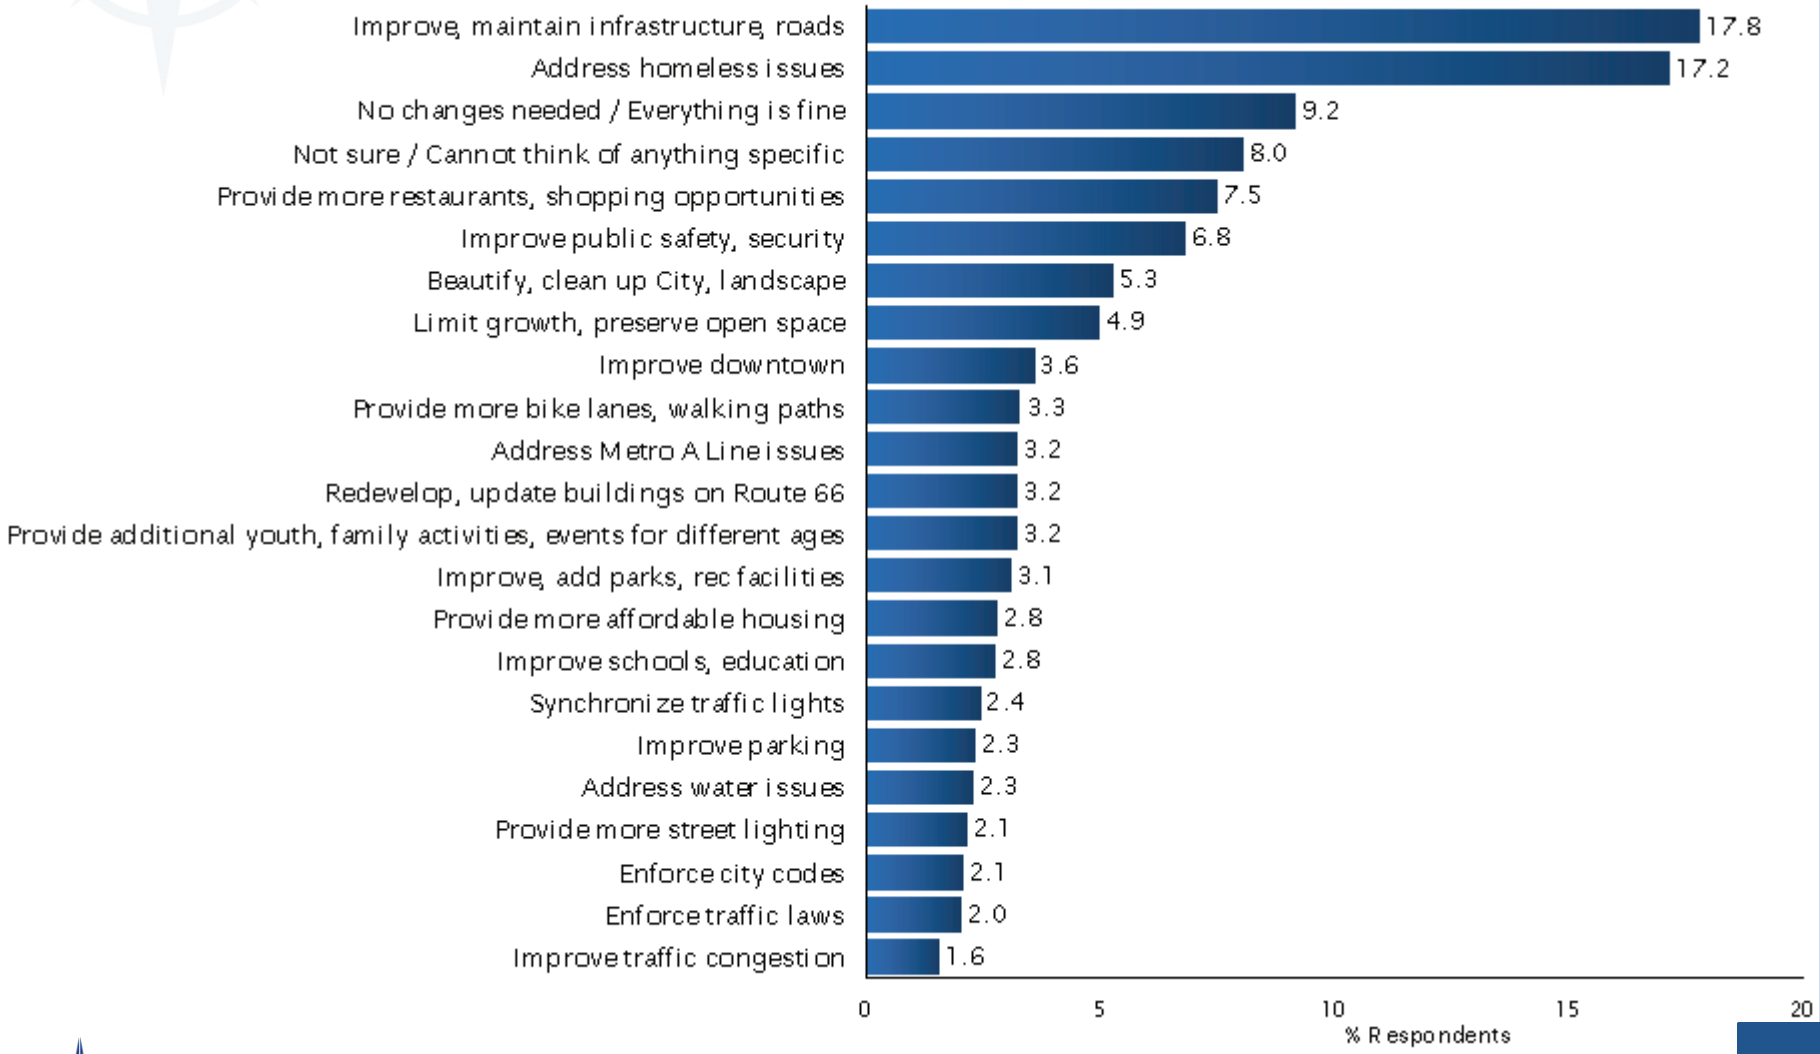
PURPOSE OF STUDY



- Determine if a bond measure is feasible
- Identify how to create a measure consistent with community priorities
- Gather information needed for communications & outreach

TRUENORTH RESEARCH

METHODOLOGY OF STUDY



- **How did we select voters to survey?**
  - Stratified & Clustered Random Sample of likely voters (2024) using age, gender, partisanship, household party type, and sub-geographies
  - Ensures balanced, representative sample of likely voters
- **How did we recruit participation?**
  - Personalized email, text, and telephone calls
  - PINs to restrict access and ensure one complete per respondent
- **How were voters able to share their opinions?**
  - Secure, PIN-protected website that scales to the device
  - Telephone (land line or mobile)
- **What was the sample size?**
  - 600 completed interviews – split sample
  - Overall margin of error of ± 4% @ 95% level of confidence

CHANGES TO IMPROVE CITY

TRUENORTH RESEARCH

OVERALL SATISFACTION

TrueNorth Research

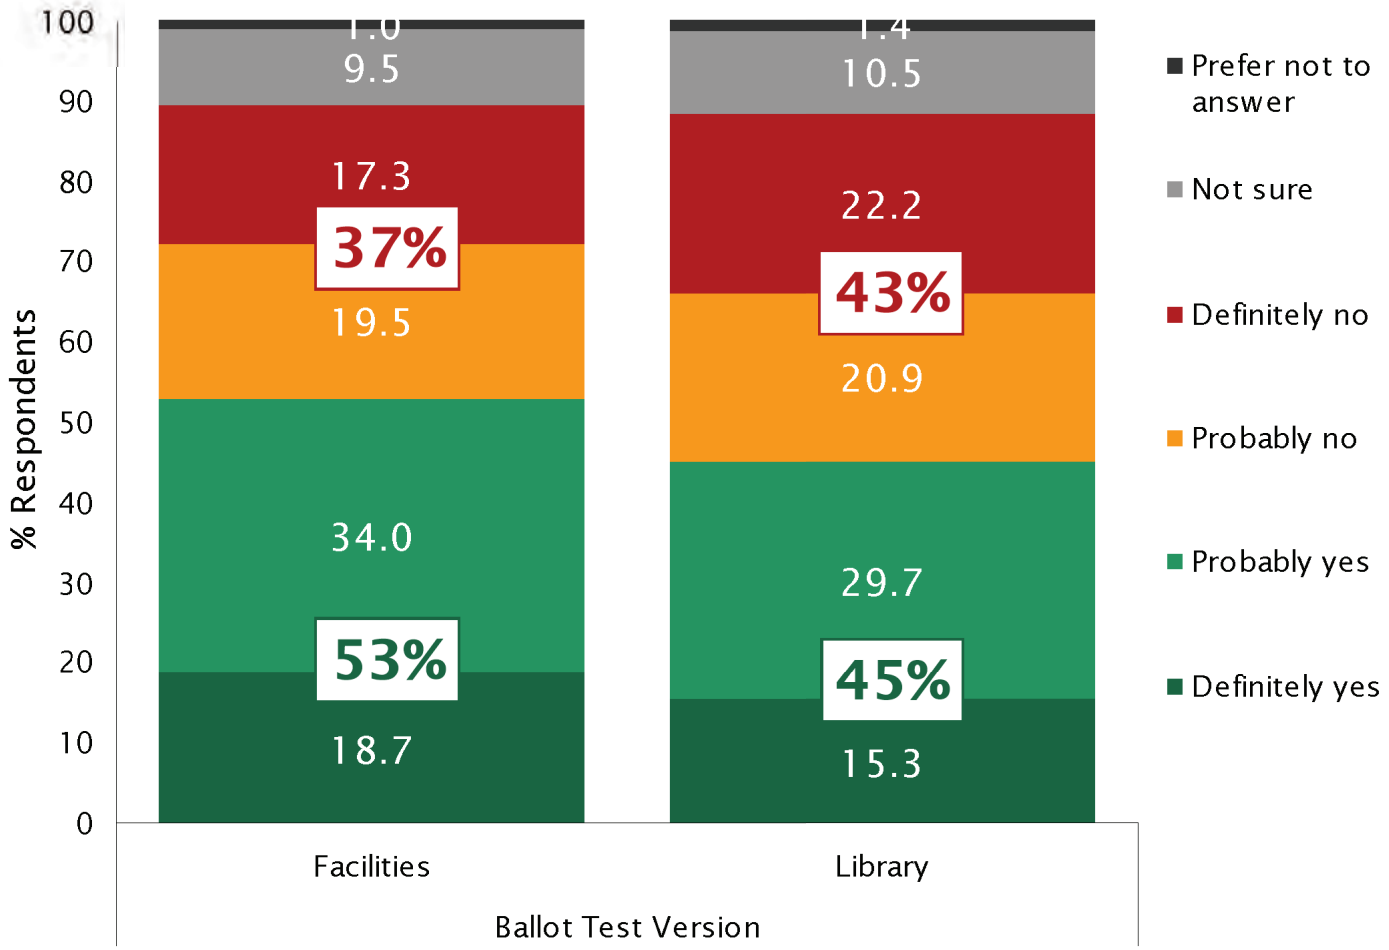
INITIAL BALLOT TEST: FACILITIES

In order to:

- Repair, expand, and upgrade aging community facilities including the Glendora Library, Senior Center, Teen Center, City Hall, and Recreation, Police and Public Works facilities
- Fix faulty roofs, plumbing, electrical, and ventilation
- And improve safety and access for seniors/disabled residents

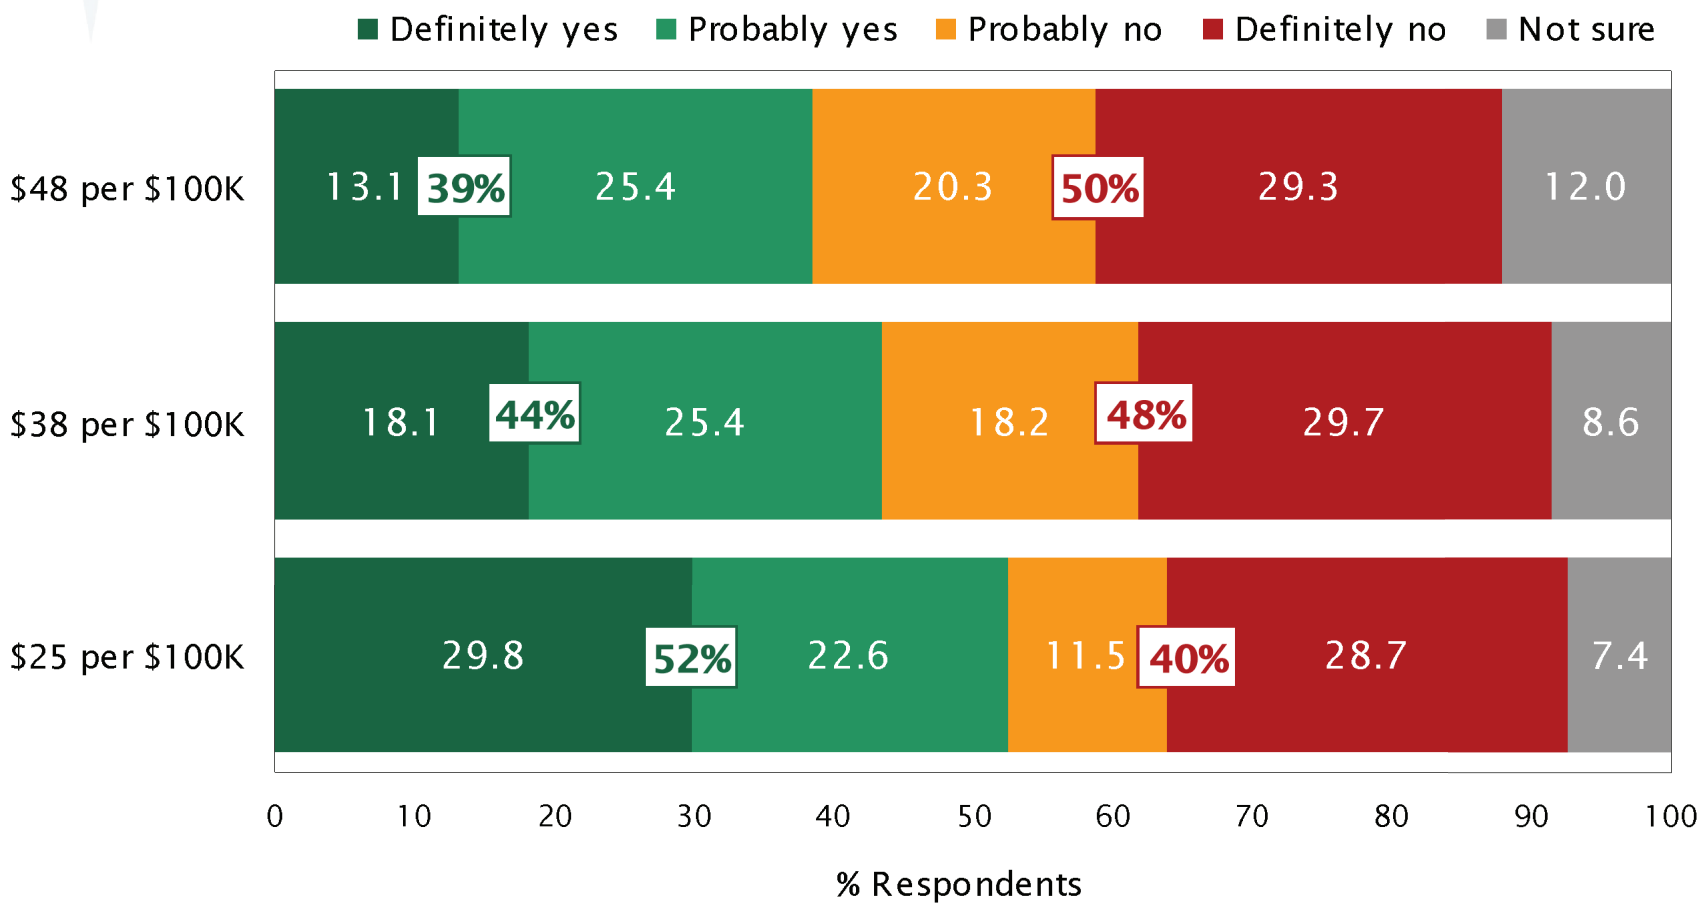
Shall the City of Glendora's measure authorizing $150 million in bonds at legal rates be adopted, levying 48 dollars per 100 thousand dollars assessed value (9 million dollars annually) while bonds are outstanding, with citizen oversight and all money locally controlled?

INITIAL BALLOT TEST: LIBRARY



In order to:

- Repair, modernize, and expand the Glendora Library with improved spaces for collaboration, community programs and events, computers/technology learning center, studying, training, and expanded book/resource collections to serve residents of all ages
- Fix faulty roofs, electrical, ventilation
- And improve access for seniors/disabled



Shall the City of Glendora's measure authorizing $70 million in bonds at legal rates be adopted, levying 25 dollars per 100 thousand dollars assessed value (4 million dollars annually) while bonds are outstanding, with citizen oversight and all money locally controlled?

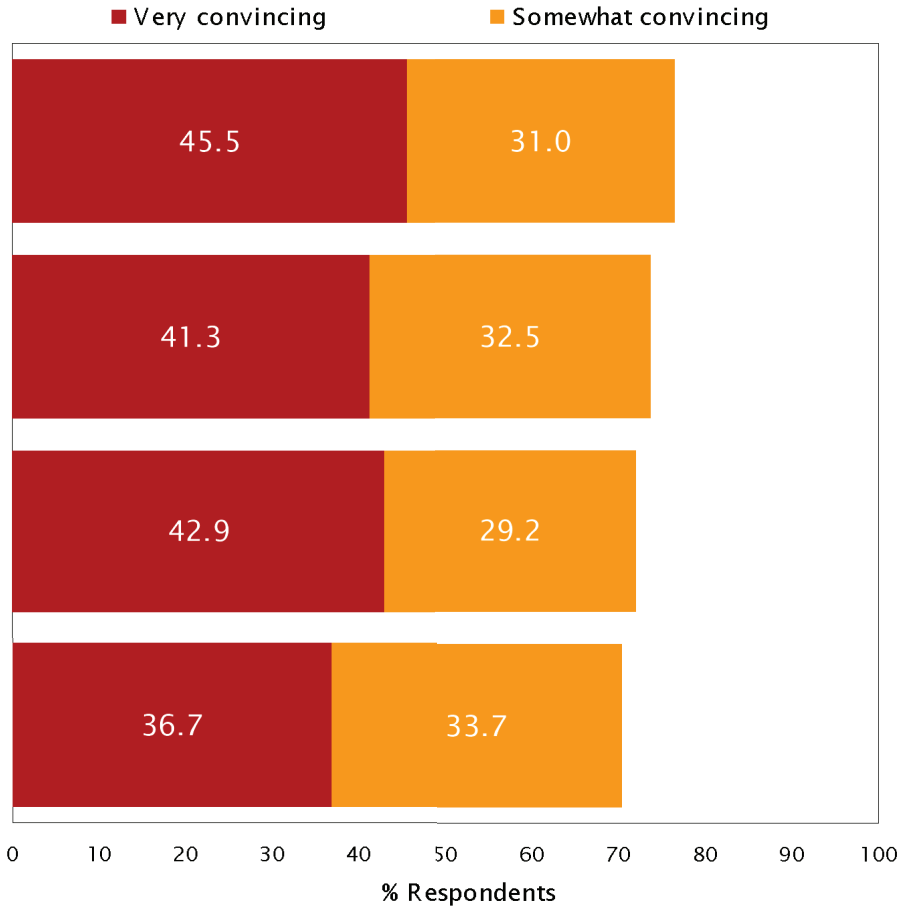
POSITIVE ARGUMENTS: LIBRARY

TRUENORTH RESEARCH

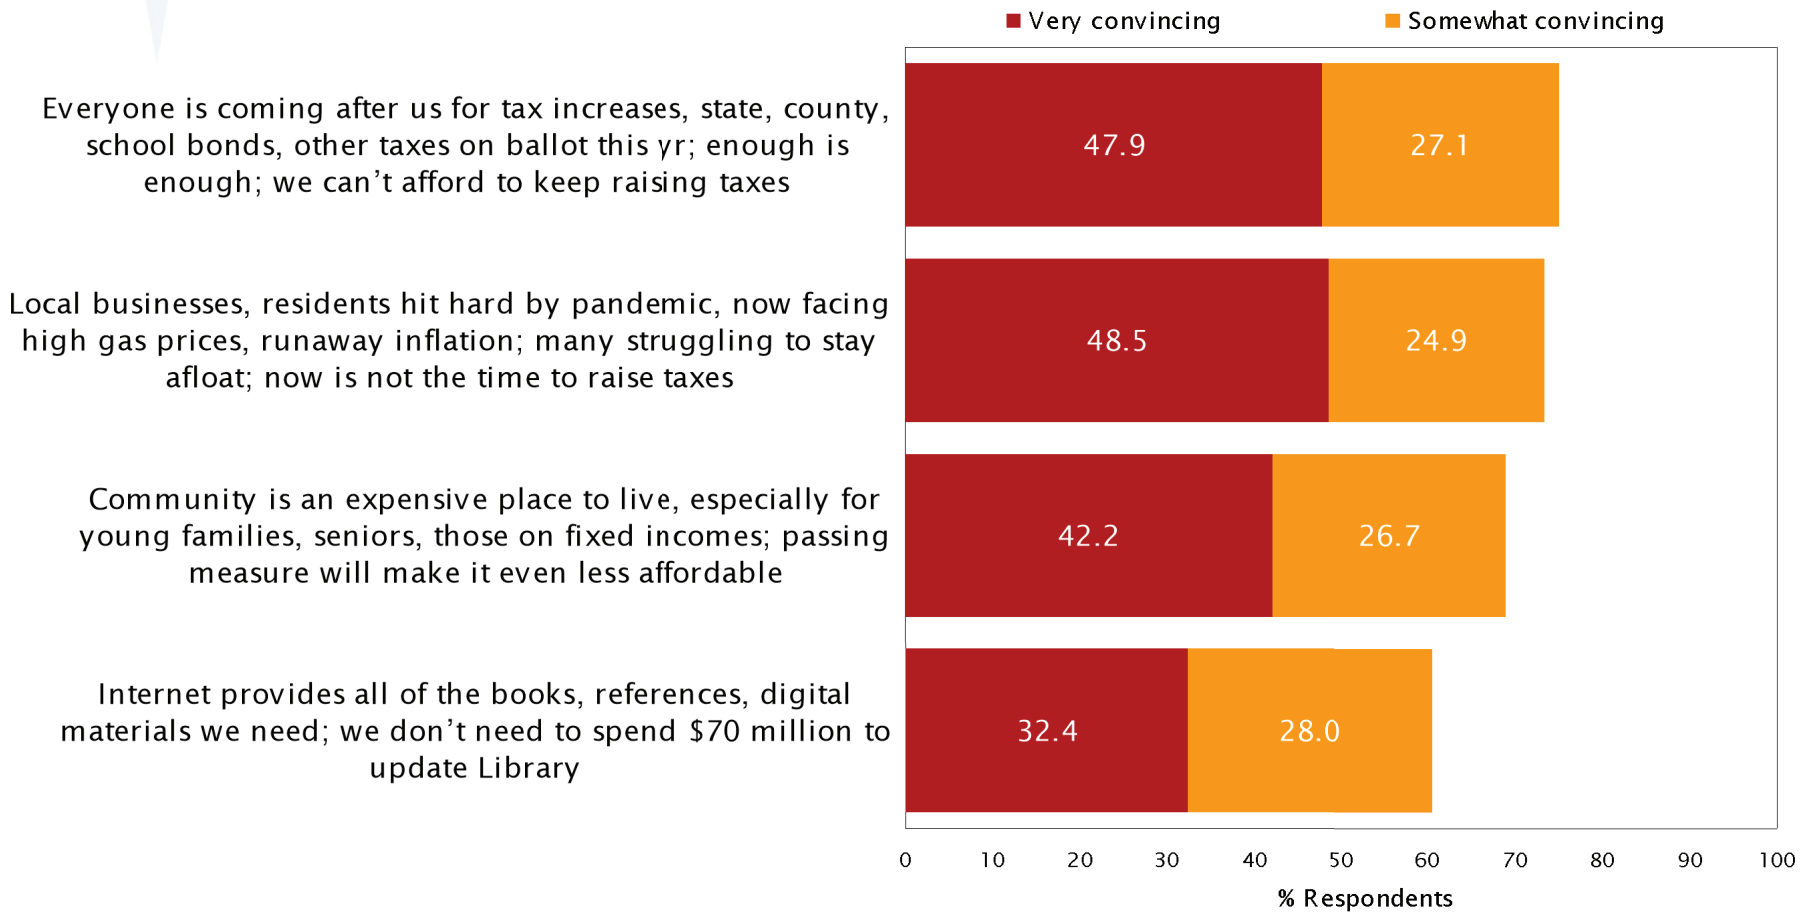
INTERIM BALLOT TEST



NEGATIVE ARGUMENTS: FACILITIES

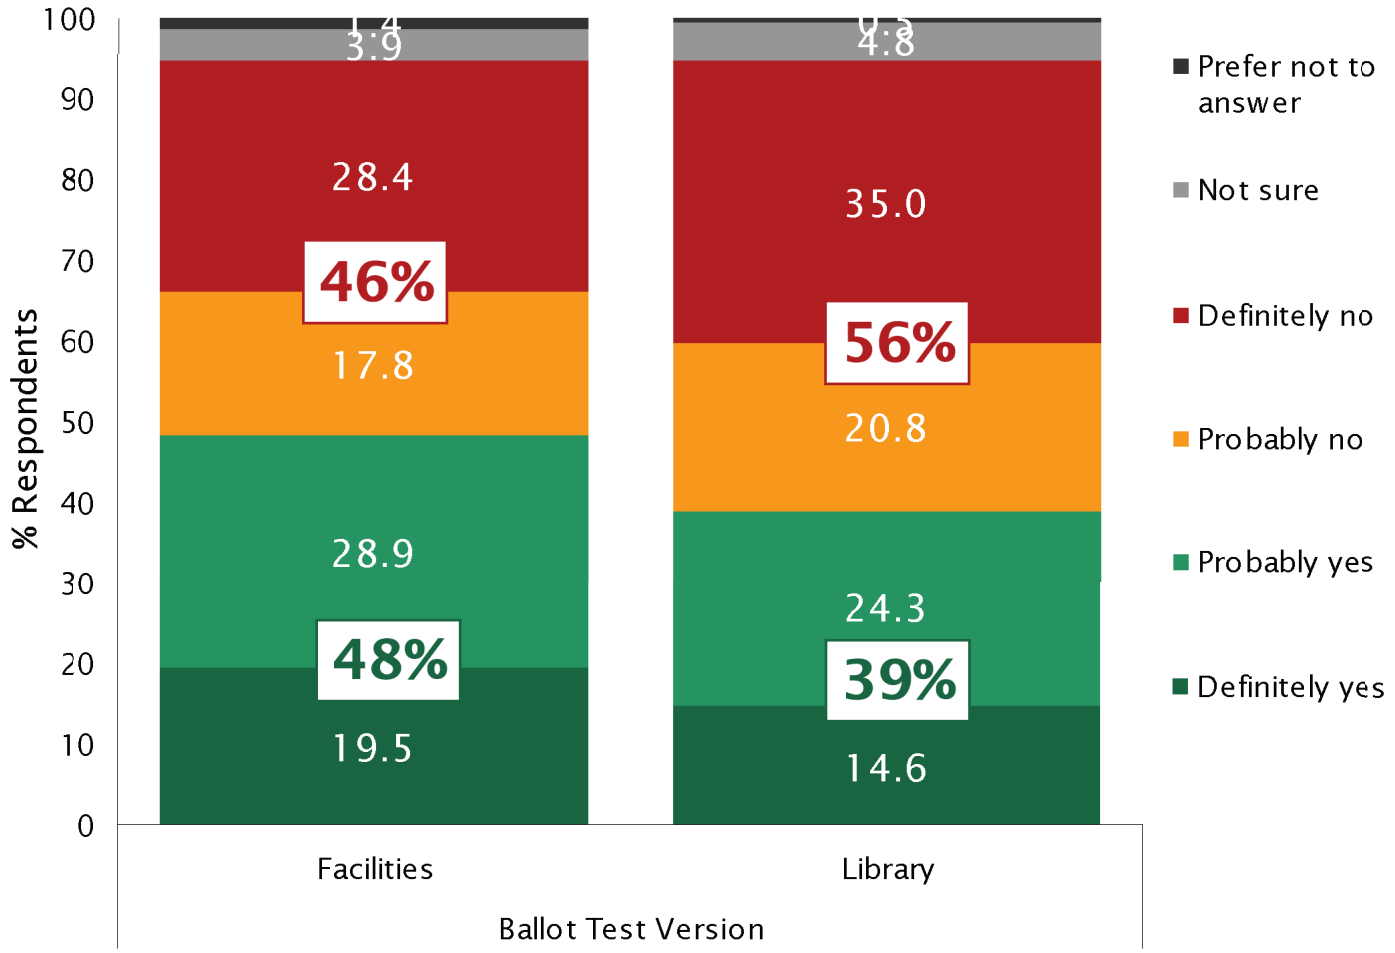
City raised local sales tax five years ago, generated over $20M in extra revenue; should use that money to fix community facilities rather than asking voters for another tax increase

Everyone is coming after us for tax increases, state, county taxes, school bonds, other taxes on ballot this year; enough is enough; we can't afford to keep raising taxes



Local businesses, residents hit hard by pandemic, now facing high gas prices, runaway inflation; many struggling to stay afloat; now is not time to raise taxes

Community is an expensive place to live, especially for young families, seniors, those on fixed incomes; passing measure will make it even less affordable



TRUENORTH RESEARCH

NEGATIVE ARGUMENTS: LIBRARY

TRUENORTH RESEARCH

FINAL BALLOT TEST

KEY CONCLUSIONS

Does a bond appear to be feasible under current CA law? *No, but if Proposition 5 passes it is a game changer.*

Positive Signs

- Voters understand the need to repair/maintain facilities and infrastructure
- Popular projects and improvements
- Solid positive arguments

Challenges

- Two-thirds threshold under current law
- Tax rate sensitivity
- Opposition arguments resonate (-4%)
- Electoral climate: Hyper-partisanship, statewide initiatives, & overlapping measures.
- Potential for AB1416 impacts

ORDINANCE NO. _____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF GLENDORA ORDERING THE SUBMISSION OF A PROPOSITION INCURRING BONDED INDEBTEDNESS TO THE QUALIFIED VOTERS OF THE CITY OF GLENDORA AT A [SPECIAL/REGULAR] MUNICIPAL ELECTION TO BE HELD ON ____ AND CONSOLIDATED WITH THE ____ ELECTION, FOR THE PURPOSE OF FINANCING THE COST OF THE CONSTRUCTION, REHABILITATION, REPAIR AND IMPROVEMENTS TO THE _____, LOCATED IN THE CITY

WHEREAS, the City of Glendora (the "City") is a municipal corporation duly organized and existing under the Constitution and laws of the State of California; and

WHEREAS, the City desires to undertake certain public infrastructure improvements for certain City facilities, consisting of the construction, repair, improvements, and/or rehabilitation (the "Improvements") of the Glendora Public Library and _____ (collectively, the "City Facilities"); and

WHEREAS, the City is authorized to call an election for the proposition of incurring a bonded indebtedness and to issue such bonds to finance the Improvements to the City Facilities pursuant to certain provisions of the California Government Code, including Article 1 of Chapter 4 of Division 4 of Title 4 (commencing with Section 43600) and Article 4.5 of Chapter 3 of Part 1 of Division 2 of Title 5 (commencing with Section 53506) (collectively, the "Bond Laws"); and

WHEREAS, the City intends to issue its general obligation bonds (the "Bonds") under and pursuant to the Bond Laws to finance the cost of the Improvements to the City Facilities; and

WHEREAS, under existing law, approval of the Bonds requires 2/3 of the voters in the City voting on the proposition to vote in favor; and

WHEREAS, pursuant to Government Code Section 43603, when a city planning commission and the legislative body approve a group of improvements, constituting a city plan, the legislative body may submit a single bond measure covering the entire group of improvements; and

WHERAS, the Glendora Planning Commission and the City Council have previously approved the City Facilities as a group of improvements; and

SAMPLE

WHEREAS, pursuant to Government Code Section 43607, the City has adopted Resolution No. ____ on ____, by a two-thirds vote of its members determining that the public interest and necessity demand the completion of the Improvements to the City Facilities; and

WHEREAS, the City desires that a measure be presented to the voters related to the issuance of the Bonds for the Improvements to the City Facilities; and

WHEREAS, concurrently herewith, the City is adopting Resolution No. ____ ("Resolution Calling Election"), calling the election which provides the measure to be presented to the voters related to the issuance of the Bonds ("Measure"); and

WHEREAS, if the Measure is approved by the requisite number of affirmative votes, the City will be authorized to issue the Bonds.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF GLENDORA DOES ORDAIN AS FOLLOWS:

1. Purpose and Intent. Pursuant to the authority provided by the Bond Laws and the California Elections Code, the City Council proposes to order the submission of a proposition authorizing the City to issue the Bonds to the qualified voters of the City at the [special/regular] municipal election to be held on _____. The [special/general] municipal election shall be consolidated with any other elections to be held on such date in the County of Los Angeles.

2. Findings. The City Council hereby makes the following findings with respect to the Measure for the Bonds:

(i) The City Planning Commission pursuant to Resolution No. ___ adopted on _____ and the City Council, pursuant to Resolution No. ___ adopted on ___have approved the City Facilities as a group of Improvements to in order to finance the Improvements in one measure.

(ii) On ____, the City Council adopted, by a two-thirds vote of all its members, a resolution entitled "A Resolution of the City Council of the City of Glendora Determining that the Public Interest and Necessity Demand the Construction and Improvement of the City Facilities, and its Financing Through the Issuance of General Obligation Bonds," pursuant to which the City Council has found and determined that the public interest and necessity demand the issuance of the Bonds to finance the Improvements to the City Facilities.

(iii) In order to provide for the issuance by the City of the Bonds, it is necessary for the City Council to adopt an ordinance ordering the submission of the proposition of incurring bonded indebtedness for such purpose to the qualified voters of the City at a [special/regular] municipal election.

SAMPLE

(iv) The City Council desires to submit said Measure the qualified voters of the City at the [special/regular] election to be held in the City on _____, and to consolidate the bond election with other elections held within the City on that date.

3. Call for Election. The City Council hereby orders that there be submitted to the qualified voters of the City a proposition on incurring bonded indebtedness for the purposes set forth in this Ordinance, at the consolidated election to be held on _____.

4. Ballot Proposition. The City Council hereby submits to the qualified voters of the City, at the [special/regular] election to be held on _____, a proposition on issuing the Bonds. The statement of the Measure shall be in substantially the form set forth in the Resolution Calling Election.

5. Object and Purpose of Bonds. The object and purpose of the Bonds is to finance some or all of the costs of the Improvements to the City Facilities. The authorized Improvements also include all work and expenditures necessary and incidental to the City Facilities described above. Examples of such work and expenditures include, but are not limited to: costs of design, engineering, architect and other professional services, inspections, site preparation, utilities, landscaping, construction management and other planning and permitting, legal, accounting and similar costs; a customary construction contingency; demolition and disposal of existing structures; rental or construction of storage facilities and other space on an interim basis for materials and other equipment and furnishings displaced during construction; addressing unforeseen conditions revealed by construction or renovation, and other necessary improvements required to comply with existing building codes and other applicable law, including the Americans with Disabilities Act; costs of the bond election; bond issuance costs; project administration during the duration of the Improvements; and financing and interest costs on the Bonds.

The final costs, locations, designs, layouts and other components of the Improvements to the City Facilities will be determined as plans are finalized, construction bids are awarded, and the Improvements are completed. Therefore, the City Council cannot guarantee that the Bonds will provide sufficient funds to allow completion of all needed Improvements.

6. Estimated Cost of Improvements. The estimated cost of the Improvements to the City Facilities is $_____. The estimated cost includes legal or other fees, the costs of printing the Bonds, and other costs and expenses incidental to or connected with the authorization, issuance and sale of the Bonds. To the extent the Improvements to the City Facilities financed are revenue-producing public works, the cost of the Improvements may also include bond interest estimated to accrue during the construction period and for a period of not to exceed 12 months after completion of construction.

7. Principal Amount of Bonds. The aggregate principal of the Bonds shall not exceed $_____.

SAMPLE

8. Maximum Interest Rate. The maximum rate of interest to be paid on the Bonds shall be the statutory maximum of 12% per annum. Said interest shall be payable semiannually, except that interest for the first year after the date of the Bonds may be made payable at the end of said year.

9. Issuance and Sale of Bonds. The City proposes to issue and sell the Bonds pursuant to the Bond Laws, in one or more series, in the maximum amount and for the objects and purposes set forth above if the requisite number of qualified voters voting on the proposition vote in favor thereof. The Bonds will be general obligations of the City payable from and secured by ad valorem taxes levied and collected in the manner prescribed by the laws of the State of California. The revenue generated from the ad valorem tax levied and collected will be used for the payment of debt service on the Bonds. All of the Bonds shall be equally and ratably secured, without priority, by the taxing power of the City.

10. Manner of Conducting Election. The election on the Bonds held on _____ shall be held and conducted, election officers appointed, voting precincts designated, ballots printed, polls opened and closed, ballots counted, and returned, returns canvassed, results declared, and all other proceedings incidental to and connected with the election shall be regulated and done in accordance with the provisions of law regulating the election with which it is consolidated.

11. Procedure for Voting on Proposition. Ballots for the election shall be provided in the form and in the number provided by law. Voters shall be provided an opportunity to vote for or against the proposition on the ballot, in accordance with procedures to be adopted by the authorized officers of the County of Los Angeles (the "County") charged with conducting the election.

12. Accountability Requirements. The City Council hereby adopts the following accountability requirements relating to the Bonds:

(i) The proceeds from the sale of the Bonds shall be used only for the purposes specified in this Ordinance.

(ii) The proceeds from the sale of the Bonds shall only be spent on projects and programs that serve the jurisdiction of the City.

(iii) [The City shall conduct an annual, independent performance audit to ensure that the Bond funds are expended pursuant to the local program specified in clause (i) and (ii).]

(iv) [The City shall appoint a citizens' oversight committee to ensure that Bond proceeds are expended only for the purposes described in the measure approved by the voters. Members appointed to the oversight committee shall receive educational training about bonds and fiscal oversight.]

SAMPLE

(v) A separate account shall be created and held by the City, into which the proceeds of the Bonds shall be deposited and applied solely for the purpose of financing the Improvements to the City Facilities.

(vi) The City's Director of Finance shall file a report with the City Council at least annually showing the amount of Bond proceeds collected and expended, and the status of the Improvements.

13. Identification of Tax. The tax imposed by this measure is an ad valorem tax levied upon taxable real property in the City, and will be used to pay the principal and interest on the Bonds.

14. Official Actions. The Mayor, the City Manager, the Director of Finance, the City Clerk, and any of their designees, are hereby authorized to execute any documents and to perform all acts necessary to place the Measure on the ballot.

15. Interpretation. The provisions of this Ordinance, being necessary for the health, welfare, and safety of the City and its residents, are to be liberally interpreted to carry out its purposes. No error, irregularity or informality, and no neglect or omission of any officer, in any proceeding taken related to the submission of the proposition incurring bonded indebtedness to the qualified voters of the City shall void or invalidate any such proceeding, any Bonds issued by the City or any levy of ad valorem taxes to pay principal of and interest on the Bonds.

16. Publication of Ordinance. This Ordinance shall be published once a day for at least seven days in a newspaper published at least six days a week in the City, or once a week for two weeks in a newspaper published less than six days a week in the City. The first of said publications shall, in either event, be within 15 days after the adoption of this Ordinance. If there are no such newspapers, it shall be posted in three public places in the City for two succeeding weeks.

17. Effective Date. In accordance with Section 36937(a) of the California Government Code, this Ordinance shall become effective immediately, as an ordinance relating to an election, upon its adoption by two-thirds vote of all the members of this City Council.

18. CEQA. Placing the Measure on the ballot is a fiscal and administrative activity that is exempt from California Environmental Quality Act ('CEQA") review pursuant to CEQA Guidelines Sections 15378(b)(4) and (b)(5) because it involves fiscal and administrative activities that will not result in direct or indirect changes to the environment.

19. SEVERABILITY. If any section, subsection, sentence, clause, or phrase of this Ordinance is for any reason held to be invalid or unconstitutional by a decision of any court of any competent jurisdiction, such decision shall not affect the validity of the remaining portions of this Ordinance. The City Council hereby declares that it would have passed this

SAMPLE

Ordinance, and each and every section, subsection, sentence, clause and phrase thereof not declared invalid or unconstitutional without regard to whether any portion of the Ordinance would be subsequently declared invalid or unconstitutional. The provisions of this Ordinance are declared to be severable.

20. CERTIFICATION. The City Clerk shall certify to the passage and adoption of this Ordinance, and shall make a minute of the passage and adoption thereof in the records of and the proceedings of the City Council at which the same is passed and adopted.

ORDINANCE NO. ____.

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF GLENDORA PROVIDING FOR A SPECIAL PARCEL TAX TO FUND THE CONSTRUCTION, REPAIR, IMPROVEMENTS, AND/OR REHABILITATION OF THE _____, GLENDORA PUBLIC LIBRARY AND _____

WHEREAS, the City of Glendora (the "City") is a municipal corporation duly organized and existing under the Constitution and laws of the State of California; and

WHEREAS, the City desires to undertake certain public infrastructure improvements for certain City facilities, consisting of the construction, repair, improvements, and/or rehabilitation (the "Improvements") of the Glendora Public Library and _____ (collectively, the "City Facilities"); and

WHEREAS, the City is authorized to call an election for the proposition of incurring a special parcel tax to finance the Improvements constituting public infrastructure of the City pursuant to certain provisions of the Article 3.7 of Chapter 4 of Part 1 of Division 2 of Title 5 of the Government Code (Sections 53720-53730) and the California Constitution XIII A, Section 4 and XIII D, Section 3(a)(2) ("collectively, the "Laws"); and

WHEREAS, the City intends to submit a special parcel tax measure to the voters (the "Measure") pursuant to the Elections Code and the Laws to finance the cost of the Improvements to the City Facilities; and

WHEREAS, under existing law, approval of the Measure requires two-thirds (2/3) of the voters in the City voting on the Measure to vote in favor; and

WHEREAS, if the Measure is approved by the requisite number of affirmative votes, the City will be authorized to levy the special parcel tax for the purposes set forth herein.

NOW THEREFORE, THE CITY COUNCIL OF THE CITY OF GLENDORA DOES HEREBY ORDAIN AS FOLLOWS:

SECTION 1: PURPOSES

It is the intent of the City Council of the City of Glendora in adopting this Ordinance to provide for a parcel tax to be imposed as a special tax for the Improvement of the City Facilities.

SECTION 2: AMENDMENT TO THE MUNICIPAL CODE

Chapter 3.56 is hereby added to the City of Glendora Municipal Code to read in its entirety as follows:

SAMPLE

"CHAPTER 3.56 CITY FACILITIES IMPROVEMENT TAX"

SECTION 3.56.010 TITLE

The Title of this Chapter shall be the "City Facilities Improvement Tax Ordinance of the City of Glendora"

SECTION 3.56.020 AUTHORITY TO ADOPT MEASURE

This chapter and the tax authorized herein is adopted pursuant to the provisions of Article 3.7 of Chapter 4 of Part 1 of Division 2 of Title 5 of the Government Code (Sections 53720-53730) and the California Constitution Articles XIII A, Section 4 and XIII D, Section 3(a)(2). The tax authorized herein is special parcel tax.

SECTION 3.56.030 PURPOSES

The purpose of this chapter is to provide a method of financing the Improvements to the City Facilities, as defined herein.

SECTION 3.56.040 DEFINITIONS

"Assessor's Parcel" means a lot or parcel of land that is identifiable by an Assessor's Parcel Number by the County Assessor of the County.

"Assessor's Parcel Number**"** means an identification number assigned to a parcel by the County Assessor of the County.

"City Facilities" means the Glendora Public Library, _____ and ____.

"County" means the County of Los Angeles.

"Fiscal Year" means the period from and including July 1st of any year to and including the following June 30th.

"Improvements" means the construction, repair, improvement, rehabilitation, furnishing and equipping of the City Facilities.

"Maximum Special Parcel Tax" shall have the meaning given thereto in Section 3.56.050.

"Property" means a lot or a parcel of land or any parcel with an Assessor's Parcel Number or, if no number, clearly identifiable as a parcel as determined by the City Engineer by May 1 of the year preceding of the Fiscal Year in which the tax will be levied. [TO CONFIRM]

"Special Parcel Tax" means the special parcel tax levied on properties in the city pursuant to the terms of this chapter.

SECTION 3.56.050 MAXIMUM TAX RATE/METHOD OF ASSESSMENT

(1) Maximum Rate: Each Fiscal Year commencing in Fiscal Year [2026-2027], each Assessor's Parcel of Property within the city shall be subject to a maximum tax in an amount of $___ [Per parcel/Per Acre/Per Square Foot] (the "Maximum Special Parcel Tax"). The Maximum Special Parcel Tax shall increase annually on July 1 of each Fiscal Year by two percent (2%) per year.

(2) Annual Levy: The city may levy the Special Parcel Tax annually by resolution on all non-exempt properties in the city. In any year, the city may by resolution levy at a rate lower than the Maximum Special Parcel Tax; provided however that, the Maximum Special Parcel Tax shall continue to increase as provided in subsection (1) above.

(3) Apportionment: Unless exempt, every Assessor's Parcel in the city shall be subject to the tax at the same rate. [TBD: CONFIRM WHETHER THE CITY SEEKS TO ONLY CHARGE DEVELOPED PARCELS]

SECTION 3.56.060 EXEMPTIONS

(1) The following parcels shall be exempt from the tax provided by this chapter.

(a) Assessor's Parcels which are owned by, encumbered by or restricted in use by the State of California, Federal or other local governments, including school districts, water districts, the City of Glendora and other government agencies; and

(b) Assessor's Parcels which are exempted from property taxes by law.

(2) [The City Council may from time to time by Council resolution adopt exemptions to the tax measures set further herein to the extent such exemptions are consistent with applicable law. The City Council may provide for a method of claiming certain exemptions. Examples of possible exemptions may include seniors, low-income housing, places of worship, and _____][CITY TO CONFIRM WHETHER TO EXEMPT THESE AND OTHERS]

SECTION 3.56.070 COLLECTION

Pursuant to Government Code section 53087.4, any Special Parcel Tax authorized under this chapter shall be collected by the tax collector of the County. The tax shall be collected in the same manner as ordinary ad valorem property taxes are collected and shall be subject to the

same penalties and the same procedure, sale, and lien priority in case of delinquency as is provided for ad valorem taxes. However, the city may collect the Special Parcel Tax at different time or in a different manner if necessary to meet its financial obligations.

Any charges made by such tax collector shall be paid out of funds deducted from the gross proceeds of the tax.

SECTION 3.56.080 INCREASE APPROPRIATIONS LIMIT

Pursuant to California Constitution Article XIIIB, the appropriations limit for the city of Glendora will be increased by the aggregate sum collected by levy of this Special Parcel Tax in each of the years covered by this chapter.

SECTION 3.56.090 FUNDING AND EXPENDING PROCEEDS

Proceeds of the Special Parcel Tax levied under this chapter shall be deposited into a special fund dedicated to the Improvements for the City Facilities. Eligible costs include (a) financing, planning, engineering, and legal fees incurred with respect to the Improvements for the City Facilities, (b) costs related to preparation of the Ordinance enacting this chapter and the election of the Special Parcel Tax, (c) costs of the Improvements to the City Facilities, and (d) costs of administering this Ordinance and the Special Parcel Tax provided for herein. [TBD – WHETHER TO INCLUDE OPERATING COSTS]

SECTION 3.56.100 SEVERABILITY

If any provision of this chapter or the application thereof to any person or circumstance is held invalid, such invalidity shall not affect any other provisions or applications, and to this end the provisions this chapter are declared to be severable.

SECTION 3.56.110 DURATION, AMENDMENT OR REPEAL

The City shall levy the Special Parcel Tax for a period of forty (40) years. The Special Parcel Tax shall expire on June 30, ____. a tax under this chapter shall expire with the fiscal year ____ending June 30,____. The City may enter into obligations for the purposes of financing the Improvements to the City Facilities for a period not to exceed the term.

Pursuant to Elections Code Section 9217, the City Council shall have and retain the right and authority to amend provisions of this chapter to in any manner that does not increase the Maximum Special Parcel Tax, or otherwise constitute a tax increase for which voter approval is required by Article XIII C of the California Constitution.

SECTION 3.56.120 ACCOUNTABILITY

The following accountability requirements shall apply to the Special Parcel Tax:

(i) The proceeds from the Special Parcel Tax shall be used only for the purposes specified in this chapter.

(ii) The proceeds from the tax shall only be spent on projects and programs that serve the jurisdiction of the City.

(iii) [The City shall conduct an annual, independent performance audit to ensure that the tax funds are expended pursuant to the purposes specified in clause (i) and (ii).]

(iv) [The City shall appoint a citizens' oversight committee to ensure that the tax is expended only for the purposes described in the measure approved by the voters. Members appointed to the oversight committee shall receive educational training about taxes and fiscal oversight.]

(v) A separate account shall be created and held by the City, into which the proceeds of the tax shall be deposited and applied solely for the purpose of financing the Improvements.

(vi) The City's Director of Finance shall file a report with the City Council at least annually showing the amount of tax collected and expended, and the status of the Improvements.

SECTION 3.56.110 APPEALS

Any property owner claiming that the amount or application of the taxes levied hereunder are not correct may file a written notice of appeal with the City not later than twelve months after having paid the first installment of the tax that is disputed. The Finance Director shall promptly review the appeal, and if necessary, meet with the property owner, consider written and oral evidence regarding the amount of the tax, and rule on the appeal. If the Finance Director's decision requires that the tax for an Assessor's Parcel be modified or changed in favor of the property owner, a cash refund shall not be made, but an adjustment shall be made to the Special Parcel Tax on that Assessor's Parcel in the subsequent Fiscal Year(s). The Finance Director at his/her discretion may also consider refunding the amount or alternate methods of crediting the change in favor of the property owner.

SECTION 3.56.120 INTERPRETATION

Interpretations may be made by the Council by ordinance or resolution for purposes of

clarifying any vagueness or ambiguity in this chapter. This chapter shall be interpreted liberally to effect the purposes hereof."

SECTION 3 APPROVAL

This Ordinance shall require passage by a 4/5ths vote of the City Council in compliance with the provisions of Section 53724(b) of the California Government Code, and shall be posted at City Hall after its second reading by the City Council for at least 30 days, and shall not become effective unless approved by a two-thirds majority of the voters voting on the measure at an election to be held on _____.

SECTION 4 SEVERABILITY

If any section, subsection, sentence, clause, or phrase of this Ordinance is for any reason held to be invalid or unconstitutional by a decision of any court of any competent jurisdiction, such decision shall not affect the validity of the remaining portions of this Ordinance. The City Council hereby declares that it would have passed this Ordinance, and each and every section, subsection, sentence, clause and phrase thereof not declared invalid or unconstitutional without regard to whether any portion of the ordinance would be subsequently declared invalid or unconstitutional. The provisions of this Ordinance are hereby declared severable.

SECTION 5. CEQA

Placing the tax measure on the ballot is a fiscal and administrative activity that is exempt from California Environmental Quality Act ("CEQA") review pursuant to CEQA Guidelines Sections 15378(b)(4) and (b)(5) because it involves fiscal and administrative activities that will not result in direct or indirect changes to the environment.

LOS ANGELES COUNTY
REGISTRAR-RECORDER/COUNTY CLERK

County Ballot Initiative Frequently Asked Questions

Initiating and Submitting an Initiative

How do I start an initiative in Los Angeles County?

Initiating an initiative in Los Angeles County involves drafting a proposed law or changes to law and creating a petition outlining the specifics. Initiative proponents can start the process by submitting to the Registrar-Recorder/County Clerk (RR/CC) the written text of the proposed law, a Notice of Intention (NOI) to circulate a petition in the County, along with a request for ballot title and summary (to be prepared by County Counsel). This would start the initiative process which involves preparation of the ballot title and summary, publication of the NOI and ballot title and summary, and filing of the Proof of Publication before the initiative petition can be circulated in the County for the gathering of signatures. Once the petition is ready for circulation and the circulation period commences, proponents have 180 days to secure a sufficient number of signatures on the petition and file the petition with the RR/CC to qualify the initiative measure for the ballot. The petition must meet the legal requirements set by the California Elections Code and California Code of Regulations.

What are the key elements needed in an initiative petition?

An initiative petition should have a clear, concise, and legally compliant statement of the proposed law. It requires the inclusion of a ballot title and a summary prepared by County Counsel and the precise text of the proposed initiative measure.

What are the steps to submitting an initiative petition?

The key steps to submitting an initiative petition include: (1) Proponents' filing of an NOI with the written text of the proposed law and request for ballot title and summary with the RR/CC; (2) The preparation of the ballot title and summary by County Counsel following RR/CC's review and acceptance for filing of the documents submitted by proponents; (3) Publication of NOI and ballot title and summary by proponents; (4) Filing of Proof of Publication by proponents; and (5) If requested by proponents, review and finalizing of the petition format between RR/CC and proponents. Once the petition is deemed ready for circulation and all the legal requirements are met, the proponents have 180 days to circulate the petition for signatures by the registered voters in the County and file the petition with the RR/CC.

If the number of signatures on the petition submitted to the RR/CCC equals or exceeds the minimum number of signatures required, RR/CC will examine and verify the signatures on the petition within 30 business days. The minimum number of signatures required to qualify a County initiative measure for the ballot is a number equal to not less than 10% of all votes cast in the County for all candidates for Governor at the last gubernatorial election preceding the publication of the NOI.

Circulation of Petitions

Who can circulate petitions for signatures?

Pursuant to the California Elections Code, the process of circulating petitions to gather signatures is open to persons who are 18 years of age or older. Typically, any registered voter can participate in the circulation of a petition.

What are the requirements for gathering signatures?

Every sheet of the petition requires a declaration by the circulator affirming that the signatures were collected while the circulator was present.

Is there a deadline for gathering signatures?

Yes, initiative petitions have a specific timeframe within which signatures must be gathered. Once the petition is deemed ready for circulation and all the legal requirements are met, the proponents have 180 days to circulate the petition for signatures by the registered voters in the County and file the petition with the RR/CC. It is essential to ensure that all signatures are collected and filed with the RR/CC at one time within the designated period.

Can someone sign the petition more than once?

No, each voter is allowed to sign the initiative petition only once.

Petition Signature Verification

How are petition signatures verified?

The RR/CC verifies each signature submitted on the petition against the voter's signature(s) and other information in the voter's registration records. This process involves checking the eligibility and registration status of each signer.

What factors might cause a signature to be invalid?

Signatures can be invalidated for various reasons, including, but not limited to, being ineligible, not registered to vote in the relevant district, the residence address on the petition differs from the voter's registration record, or the signature on the petition does not match the signature(s) on the voter's registration record.

What happens if the required number of signatures is not met?

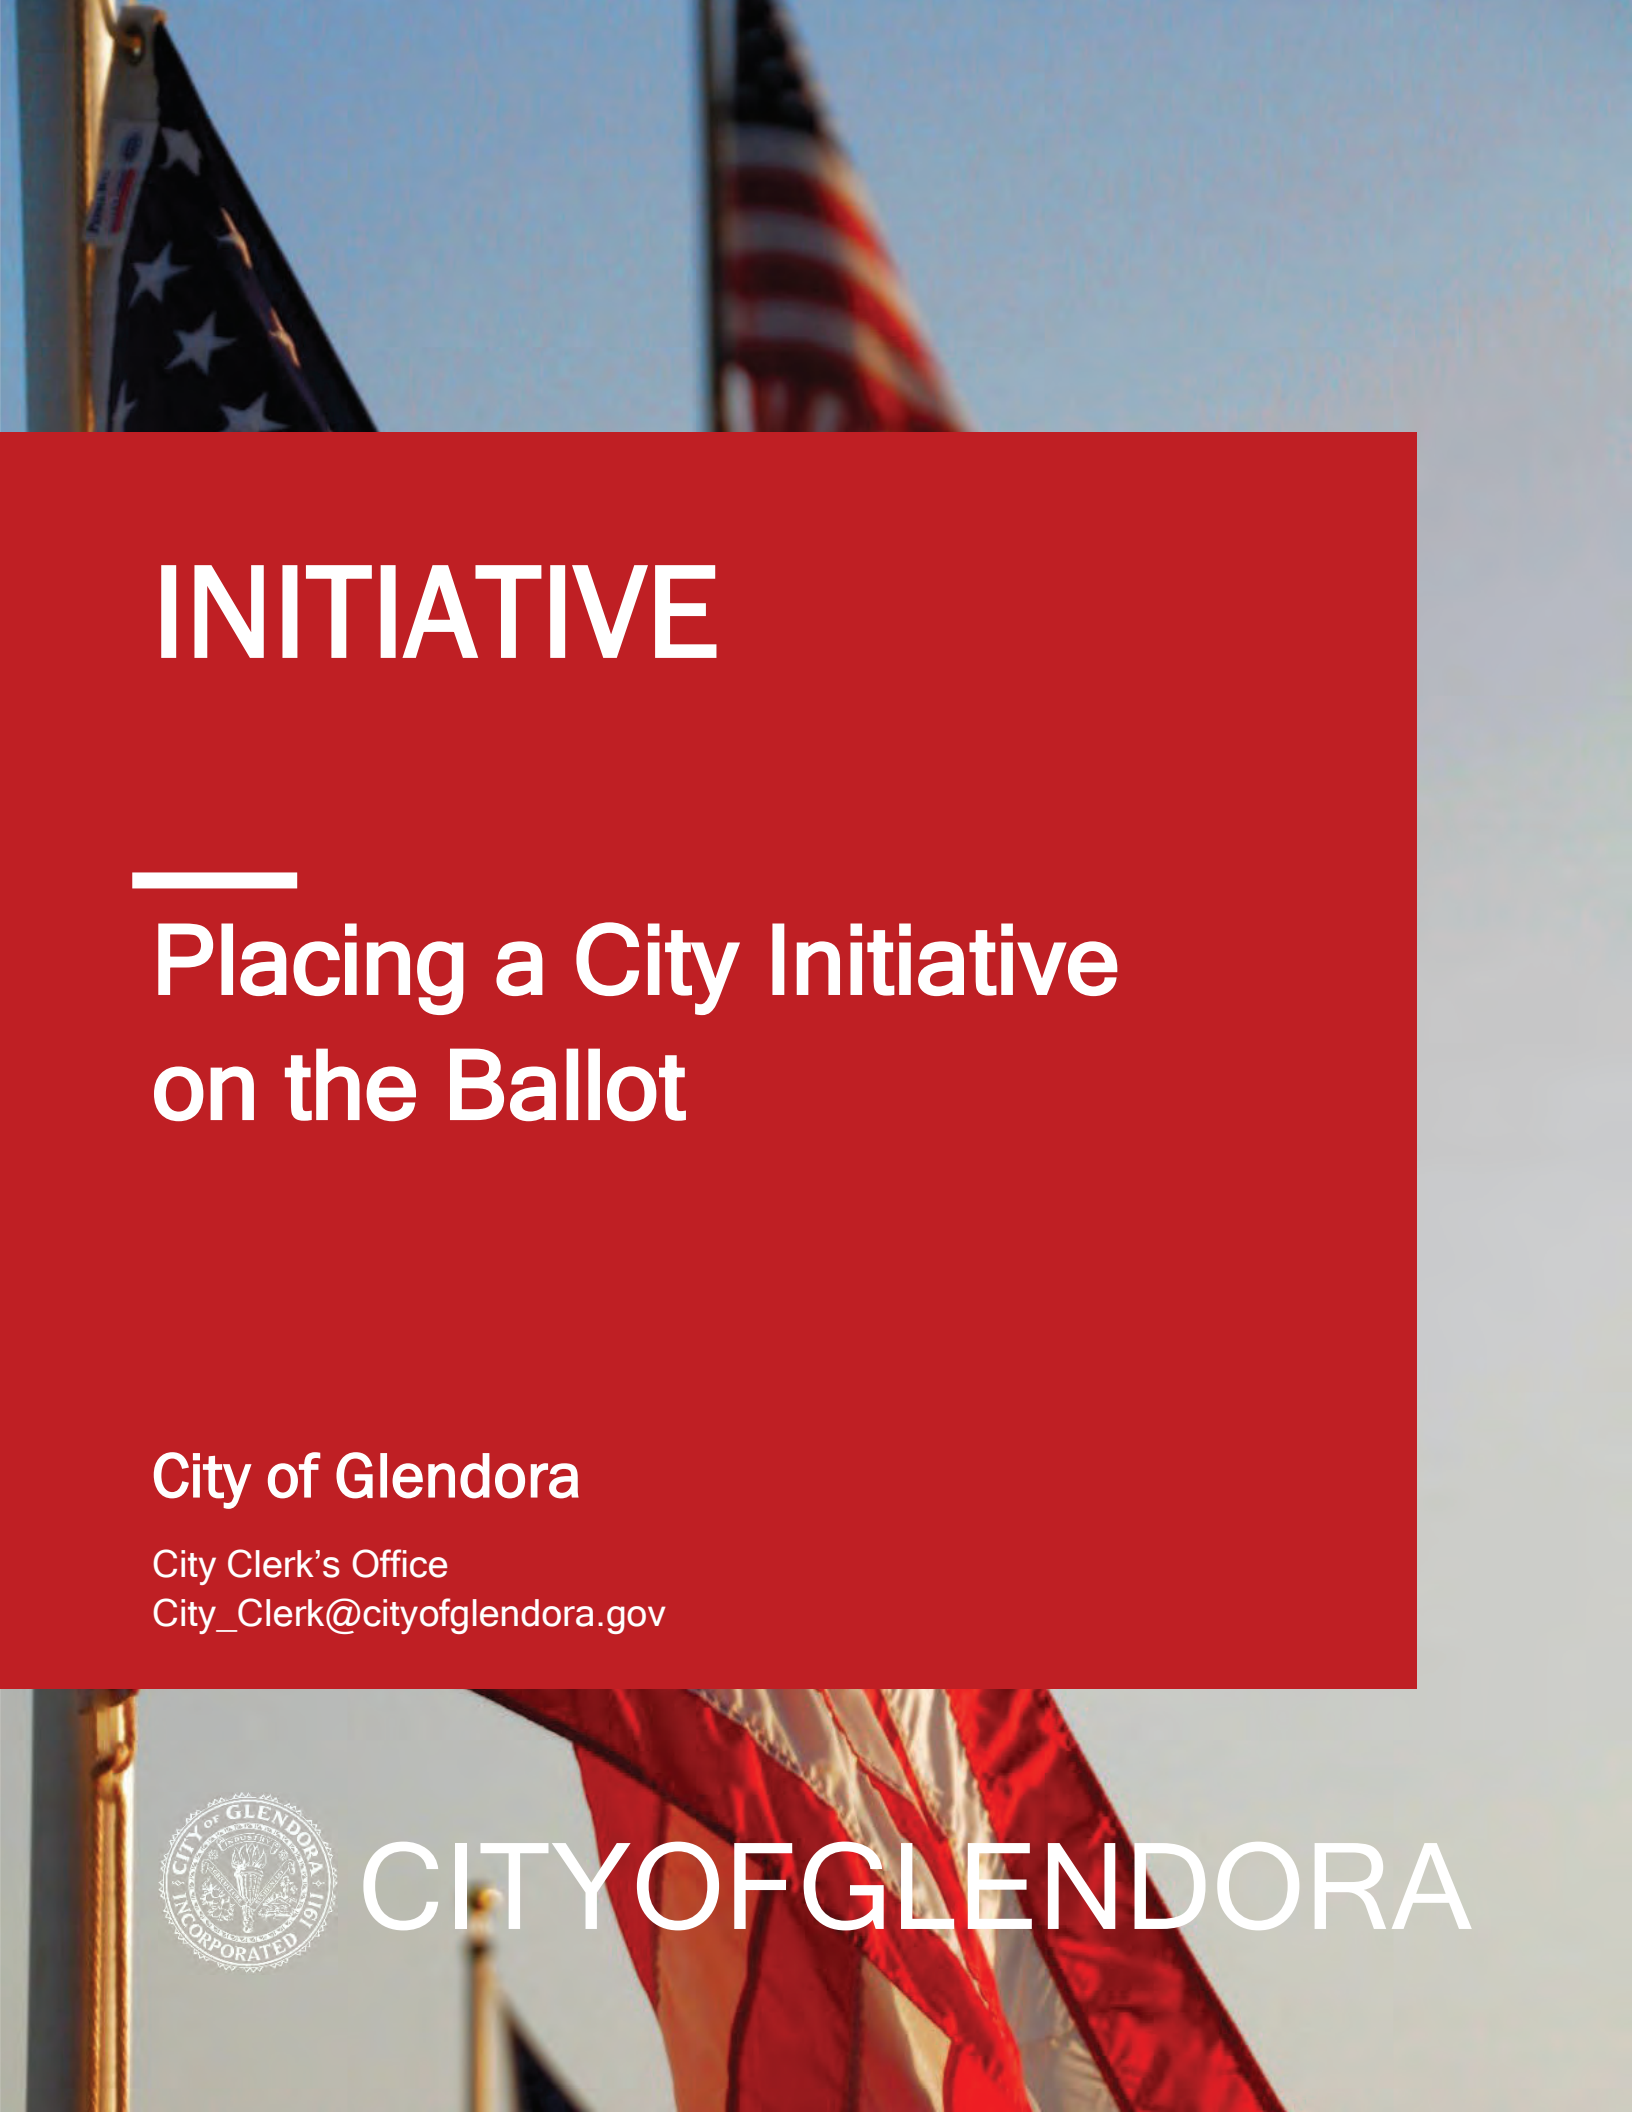
An initiative petition must contain a certain number of valid signatures to qualify the initiative measure for the ballot. If the initiative petition falls short of the required number, it cannot qualify for the ballot.

What happens if a signature is found to be invalid during the verification process?

Any invalidated signatures during the verification process are not counted toward the required number of valid signatures. If too many signatures are invalidated, the initiative might fail to qualify.

Qualification

How many signatures are needed for an initiative to qualify?



The number of signatures required to qualify a County initiative measure for the ballot is the number not less than 10% of all votes cast in the County for all candidates for Governor at the last gubernatorial election preceding the publication of the NOI. Note that the minimum signature threshold varies depending on the type of initiative at issue (e.g., state initiative, district initiative), and different statutory requirements apply. Depending on the type of initiative, the number of required signatures can be based on the percentage of voters who voted in an election or the percentage of voters in the jurisdiction affected by the proposed initiative.

Can an initiative be withdrawn after submission?

Yes, an initiative proponent can withdraw an initiative at any time before the 88th day before the election.

What determines if an initiative qualifies?

An initiative qualifies for the ballot when the initiative petition successfully garners the required number of valid signatures within the statutorily prescribed period. Additionally, the proposed initiative must conform to all legal prerequisites and criteria to be eligible for the ballot.

Preface

The initiative petition process empowers voters to propose, amend or repeal certain legislative actions like City Ordinances and the Municipal Code of the City of Glendora. A successful petition places the issue in question before a vote of the people. The rules governing the initiative process are set forth in the California Elec. Code Section 9200 *et seq.* (Elec. Code), as well as applicable provisions of the California Government Code.

Initiatives require considerable planning to ensure all steps are completed according to legal requirements. The general process requires completion of numerous essential tasks including: development of the proposed ordinance, filing and posting a notice of intent to circulate a petition, preparation of petitions, gathering of petition signatures, verification of the petitions/signatures, signature count certification, and coordination and submittal of the petitions to the County for certification.

To calculate deadlines for the aforementioned tasks, proponents should select a target election date. Proponents should also bear in mind that all required actions by the City to place the initiative on the ballot must be taken by the **88th day** before the election.

The information provided in this booklet serves to provide general information only and should not be relied on as legal advice or solely relied upon in lieu of independent counsel.

The City Clerk is the local election official. The Los Angeles County Registrar of Voters serves as the county elections official.

CITY CLERK'S OFFICE CONTACT INFORMATION
Kathleen R. Sessman, City Clerk/Communications Director
116 E. Foothill Boulevard, Glendora, CA 91741
(626) 914-8210
City_Clerk@cityofglendora.gov

Steps and Timelines

The process for a citizen initiative petition is outlined in the California Election Code and is the process that would need to be followed, refer to sections 9200-9226 and 9600-9610, http://leginfo.legislature.ca.gov/faces/home.xhtml

Important Deadline Reminder: It is suggested that petitions be submitted a minimum of **134 days** before the election to provide for processing required by State law. All requisite processing of the initiative petitions must occur no later than the **88th** day before the election to appear on the ballot. This includes verification of signatures, Council action, additional publication, etc.

STEP	TASKS
Step 1	**Proponent Meet With The City Clerk** • Discuss the Initiative Process • Identify an Election Date, and • Discuss Timelines and Deadlines for Filings.
Step 2	**Develop The Written Text Of The Proposed Initiative** • Proponents develop the written text of the proposed initiative. • Los Angeles County recommends that the proposed initiative be created as an Ordinance, NOT a Resolution. • Tip: It's strongly advised for proponent(s) are encouraged to meet with an election attorney to discuss the details of the proposed measure.
Step 3	**File Notice Of Intent To Circulate Initiative With The Clerk's Office** • Schedule an appointment with the Office of the City Clerk to file a Notice of Intent and other required documentation. • Documents Required: o Notice of Intent o Request for preparation of a Title and Summary o Full written text of proposed initiative • The $200 filing fee is not required in the City of Glendora.
Step 4	**City Attorney Drafts Language Of The Proposed Title and Summary (15 Days)** • The City Attorney will draft the full text of the **Title and Summary** to be used for circulating the petitions and to go on the ballot. There are time periods within the Elections Code to bring a challenge to the Title and Summary.
Step 5	**Publish Notice Of Intent To Circulate The Petition** • Proponents must publish both the **Notice of Intent** and **Title and Summary** in a local newspaper prior to gathering signatures. • Proponents must also file proof of publication with the City Clerk during regular business hours within 10 days of the publication date.
Step 6	**Format of Petition** • **The proponents are responsible for the preparation and printing of the petition.** • **The format of an initiative petition is specified by law, refer to California Elec. Code § 9203 (b) for legal format requirements.** • **This guidebook summarizes the key format requirements for a petition. However, proponents are advised to refer to the most current California Elec. Code for the details of formatting a petition according to law.**

STEP	TASKS
Step 7	**Circulation Of Petitions – Gathering Of Signatures (180 Days)** • Proponents may begin circulating the petitions for signatures after publication/posting of the title and summary. • Petition must be submitted within **180 days** from the date of receipt of the **Title and Summary**
Step 8	**Submission Of Petitions To The City Clerk – Prima Facie Count** • Proponents must file signatures with the City Clerk for a prima facie count. • Signatures can be submitted no later than **180 days** from the date the proponents received the **Title and Summary**.
Step 8	**County Verification (30 business days)** • The Los Angeles County Registrar of Voters verifies each signature.
Step 9	**Petition Certification and City Council Action (14 Days)** • The City Council exercises one of three options if sufficient signatures are verified: 1. Adopt the ordinance, without alteration, within 10 days of petition certification 2. Immediately order an election 3. Order a report pursuant to Elec. Code Section 9212. When the report is presented to the City Council, the Council must either adopt the ordinance within 10 days, or order an election.
Step 10	**Coordination Of Other Required Election Activities** Call of Election, Legal and Financial Analysis, Post notice of the election & deadlines for arguments and rebuttals, Receipt and selection of arguments, Receipt of rebuttals, etc..
Step 11	**Submission Of Required Elections Documents To Los Angeles County Registrar Of Voters**
Step 12	**Election Day**
Step 13	**Ordinance Implementation** If the initiative receives the required number of votes, it becomes law 10 days after the election results are certified. Conflicting measures adopted simultaneously will default to the measure with the highest affirmative vote count.

*Please note that this fact sheet is intended to be advisory only. The Elections Division strongly recommends that proponents consult with an attorney on the initiative process including technical requirements for the format of initiative petitions. The Division's receipt of an initiative petition is not an indication that the petition meets all legal requirements.

Understanding the Process

An initiative is a proposal to establish a new city law or amend an existing one. To qualify, proponents must gather the required number of voter signatures. Once qualified, the proposal is either considered by the City Council or placed on the ballot for a public vote.

Key Steps in the Initiative Process:

- Filing the Notice of Intention and Statement of Reasons
- Receiving the Ballot Title and Summary
- Publishing the Notice of Intention, Ballot Title, and Summary
- Collecting Voter Signatures
- Submitting the Petition for Verification
- City Council Action to either adopt the measure or place it on the ballot

This guide is intended to help Glendora residents understand and navigate the initiative petition process. It provides an overview of key steps and requirements but does not serve as a legal document. Proponents are solely responsible for preparing and printing petitions that comply with legal standards. While this guide outlines formatting requirements, users should consult the most current version of the California Elec. Code for complete legal details and any recent updates. [Elec. Code § 9203(b)]

It is highly recommended that proponents seek advice from an election attorney to effectively manage the complexities of the process.

Please note: This guide is distributed with the understanding that the Office of the City Clerk of the City of Glendora is not providing legal advice. It should not be used as a substitute for legal counsel. Proponents are responsible for ensuring they have the most current information, including any changes in laws or procedures that may occur after this guide's publication.

Municipal Initiative 101

Types of Petitions in the City of Glendora

The Glendora residents have three main petition tools to participate in the legislative process and hold elected officials accountable:

- **Municipal Initiative**
  A municipal initiative allows residents to propose a new city ordinance. To begin the process, an initiative petition must be signed by a specified number of registered voters, as outlined in the California Elec. Code (§ 9201), and filed with the Glendora City Clerk. Once submitted, the City Council may either adopt the ordinance or place it on the ballot for voter consideration.

- **Municipal Referendum**
  A municipal referendum gives voters the power to challenge and potentially overturn an ordinance passed by the City Council. To qualify, a referendum petition must be filed with the City Clerk within 30 days after the ordinance's adoption and before it becomes effective.

- **Municipal Recall**
  A municipal recall petition allows voters to remove an elected city official from office before the end of their term. This process, authorized by the California Constitution since 1911, reflects the public's right to hold officials accountable. Recall petitions must be filed with the City Clerk and follow procedures established in state law.

Who to Contact

- **City of Glendora Petitions (Initiative, Referendum, Recall):**

  The City Clerk serves as the official contact for all local petition matters and oversees the circulation and filing process.

- **Countywide Initiative Petitions:**

  For petitions affecting county-level issues, contact the Los Angeles County Registrar of Voters. More information is available at lavote.gov.

How Long Does the Petition Process Take?

- The process begins when the Notice of Intention is filed with the City Clerk.

- The Los Angeles County Registrar recommends that petitions be submitted at least 134 days before an election to allow enough time for required steps such as signature verification, public notice, and City Council action.
- All necessary steps must be completed no later than the 88th day prior to the election for the measure to appear on the ballot.

- A sample timeline is available to provide a general overview of how long the process may take. Please note that timelines can vary depending on the specifics of each petition effort.
  📌 Sample Timeline

When to File

Signatures shall be secured and the petition shall be presented to the Registrar of Voters office for filing within 180 days from the date of receipt of the title and summary, or after termination of any action for a writ of mandate and, if applicable, after receipt of an amended title or summary or both, whichever occurs later. (EC 9110)

Filing Procedure

The petition must be filed by the proponents, or by any person or persons authorized in writing by the proponents. All sections of the petition must be filed in at one time. Any sections of the petition not filed, will be voided for all purposes. Once filed, no petition section can be amended except by court order.

After the petition is filed, the Elections Official determines the total number of signatures on the petition. This is called the "Raw Count." If it is determined that the number of signatures equals or is in excess of the minimum number of signatures required, the petition will be examined. However, if it is determined that the number of signatures does not equal or exceed the minimum number of signatures required, no further action will be taken. (EC 9113)

Who Are the Proponents of the Petition?

The proponents, or sponsors, of a petition are a committee of five registered voters of the City of Glendora. Their full names and addresses must appear on the petition.

How Are Petition Signatures Verified?

Signatures are verified by comparing those on the petition with voter signatures on file with the Los Angeles County Registrar/Recorder. Verification continues until:

- A sufficient number of valid signatures is confirmed, or
- The petition is deemed insufficient.

Under Elec. Code § 9030(d), election officials may use a random sampling method to verify a portion of the signatures, instead of checking everyone.

Signature Requirements

In order to qualify for adoption or submittal to the voters of the proposed measure, the proponents must obtain signatures of 10% of the voters of the City according of the last report of registration by the Los Angeles County Elections Official to the Secretary of State, pursuant to Elec. Code § 2187, effective at the time the notice specified in Elec. Code § 9202 was published. [Elec. Code § 9215]

Getting Started

How to Initiate a City Ballot Measure

- You begin the city initiative process by filing with the Glendora City Clerk a Notice of Intention to circulate an initiative petition.
- The Notice of Intent must include the names and business or residence addresses of at least one but not more than five proponents of the petition and may include a printed statement, not exceeding 500 words in length, stating the reasons for the proposed petition. The City Clerk will verify the word count at the time you submit your Notice of Intent.
- Following verification, the City Clerk will forward Notice of Intent, proposed initiative, and the request to prepare a title and summary to City Attorney for action.

How to Prepare to File Notice of Intention!

- Determine if the issue is an allowable topic for a city initiative.
- The Glendora City Clerk can provide you with helpful information to assist you in understanding the steps necessary to initiate, circulate, and file City initiative petitions.
- Consult with an election attorney for guidance and assistance. It is incumbent upon proponents to follow the petition process as directed in the Elec. Code.
- Proponent(s) should seek assistance in drafting the text of the proposed law.
    - Private counsel;
    - Write the text themselves; or
    - Obtain assistance from the Office of Legislative Counsel or the City Attorney in drafting the language of the proposed law. Proponent(s) must submit a written request signed by 25 or more electors. If the Legislative Counsel determines that there is a reasonable probability the proposed initiative measure will eventually be submitted to the voters, the Legislative Counsel will draft the proposed law. (Government Code § 10243)
- Become familiar with the process by reading this handbook, Elec. Code Sections 9200 through 9226, and call the Glendora City Clerk at (626) 914-8210, if you have specific questions.
- Draft the following documents:
  a. Notice of Intent

Notices of Intent should be in substantially the following form:

NOTICE OF INTENT TO CIRCULATE PETITION

Notice is hereby given by the persons whose names appear hereon of their intention to circulate the petition within the City of Glendora for the purpose of qualifying for the ballot an initiative measure entitled *[insert title]* for the *[insert desired election date]* ballot.

A statement of the reasons of the proposed action as contemplated in the petition is as follows: *[insert a 500-word maximum statement outlining the reasons for the proposed petition. The statement is optional. The notice shall contain the printed name, signature, and business or residence address of at least one, but not more than five, proponents. §9104]*

📌 Direct Link: Notice of Intention Sample

b. Write text of the measure (Ordinance format recommended by LA County).
- 1st Step: The first step in the process of qualifying an initiative measure is to write the text of the proposed law.
  Proponent(s) may:
  1. Seek the assistance of their own private counsel to help draft the text of the proposed law, or
  2. They may choose to write the text themselves, or
  3. The proposed initiative measure's proponent(s) may also obtain assistance from the Office of Legislative Counsel in drafting the language of the proposed law. Proponent(s) must submit a written request signed by 25 or more electors. If the Legislative Counsel determines that there is a reasonable probability the proposed initiative measure will eventually be submitted to the voters, the Legislative Counsel will draft the proposed law. (Government Code § 10243)

c. Statement of the Purpose of the Measure:
- Optional but recommended.
- Cannot exceed 500 words.

📌 Direct Link: Word Count Guidelines

d. Written request for a Ballot Title and Summary
e. Proponents' names and address (Election Code §9202)
f. $200 filing fee (Glendora does not require)

NOTE: There is no established fee in the City of Glendora for submitting a Notice of Intention to circulate a City Initiative.

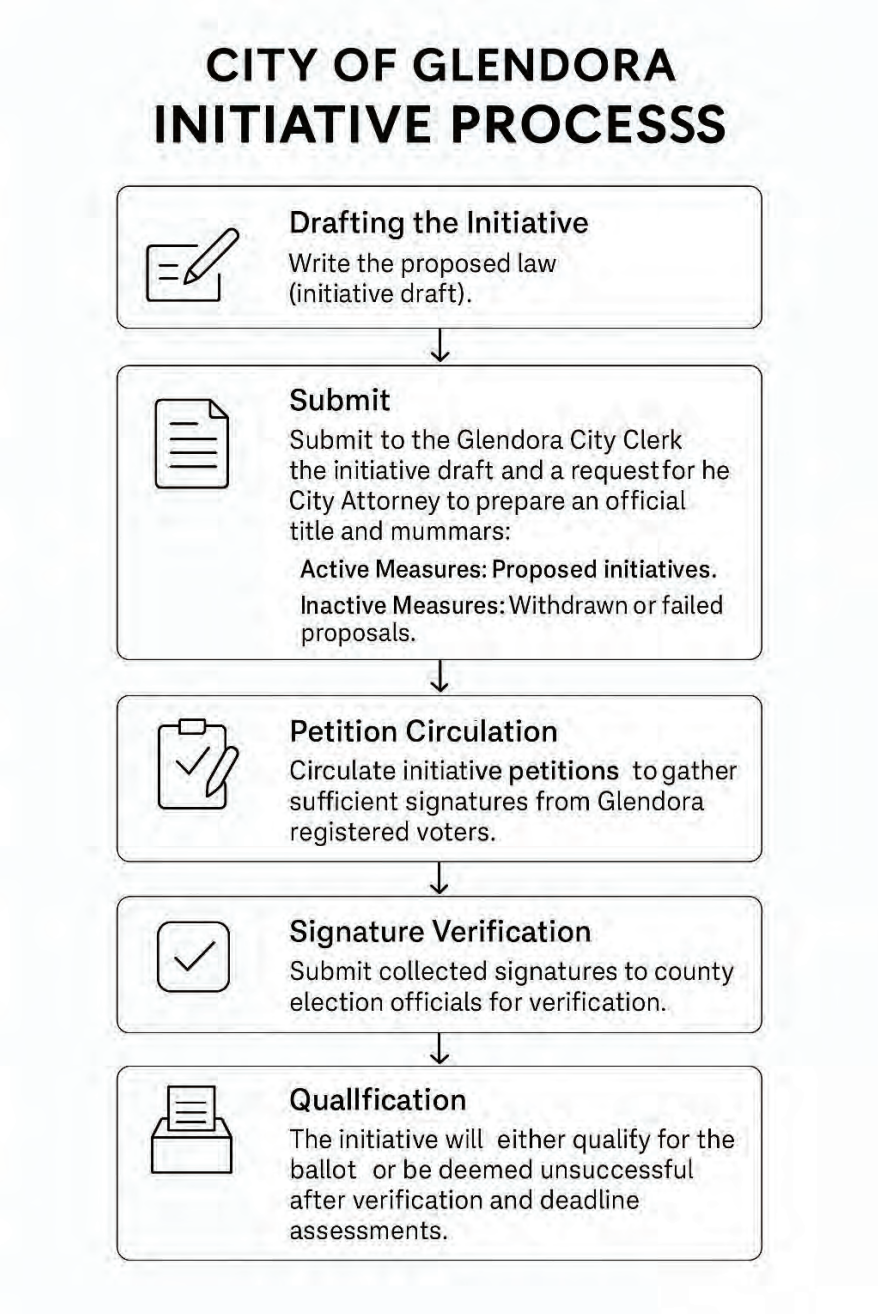
What is Required at the Time the Notice of Intention is filed:

1st. Notice of Intention that is signed by at least one (1), but not more than three (3) proponents. **Elec. Code §9202(a)**

2nd. The written text of the initiative (may include a written statement of 500 words or less, stating the reasons for the proposed petition). **Elec. Code §9202(a)**

3rd. A written request for a Ballot Title and Summary to be prepared. This request must include one of the proponents' name and address. **Elec. Code §9203**

4th. An executed and signed Statement of Acknowledgement that it's a misdemeanor under state law to knowingly or willfully allow the signatures on an initiative petition to be used for any purpose other than qualification of the proposed measure for the ballot. **Elec. Code §9608**



📌 Direct Link: Proponents Statement of Acknowledgement

City Initiative Process

A City initiative, also known as an ordinance initiative petition, allows citizens to propose a new law for a vote by the registered voters of Glendora.

Ballot initiatives give voters the power to directly shape government actions by expressing the majority will.

HIGH-LEVEL OVERVIEW OF INITIATIVE PROCESS:

INITIATIVE TIMELINES

📌 Direct Link: Sample Timelines

📌 Direct Link: Timeline E- Dates Only

STEP BY STEP OF INITIATIVE PROCESS

Filing of Notice of Intent

Proponents must file an official notice of intent to circulate a petition. The notice of intent must be accompanied by the written text of the initiative and may include a written statement of 500 words or less, stating the reasons for the proposed petition. The notice shall be signed by at least one (1), but not more than three (3), proponents. *[Elec. Code §9202 (a)]*

Notices of intent should be in substantially the following form:

NOTICE OF INTENT TO CIRCULATE PETITION

Notice is hereby given by the persons whose names appear hereon of their intention to circulate the petition within the City of Glendora for the purpose of qualifying for the ballot an initiative measure entitled *[insert title]* for the *[insert desired election date]* ballot.

A statement of the reasons of the proposed action as contemplated in the petition is as follows: *[insert a 500-word maximum statement outlining the reasons for the proposed petition. The statement is optional. The notice shall contain the printed name, signature, and business or residence address of at least one, but not more than five, proponents. §9104]*

Any person filing a notice of intent with the City Clerk shall pay a filing fee to be established by the legislative body not to exceed two hundred dollars ($200) to be refunded to the filer if, within one year of the date of filing the notice of intent, the City Clerk certifies the sufficiency of the petition. [Election Code § 9202 (b)]. The $200 filing fee **is not** required in the City of Glendora.

Ballot Title and Summary

Any person who is interested in any proposed measure shall file a copy of the proposed measure with the City Clerk with a request that a ballot title and summary be prepared. The request shall be accompanied by the address of the person proposing the measure. The City Clerk shall immediately transmit a copy of the proposed measure to the City Attorney. Within 15 days after the proposed measure is filed, the City Attorney shall provide and return the City Clerk a ballot title for the summary of the proposed measure. [Elec. Code § 9203(a)]

The City Clerk shall furnish a copy of the ballot title and summary to the person filing the proposed measure. [Elec. Code § 9203(b)]

Outline of Exact Process:

- ☐ Immediately upon the request from the proponent to prepare a Ballot Title and Summary, the City Clerk will transmit a copy of the proposed measure to the City Attorney.
- ☐ Within 15 days after the proposed measure is filed, City Attorney will provide the Ballot Title and Summary to the City Clerk.
- ☐ The Ballot Title may differ from any other title of the proposed measure and shall express in 500 words or less the purpose of the measure.
- ☐ In providing the Ballot Title, City Attorney shall give a true and impartial statement of the purpose of the proposed measure in such language that the Ballot Title shall neither be an argument, nor be likely to create prejudice, for or against the proposed measure.
- ☐ The City Clerk will furnish a copy of the Ballot Title and Summary to the proponent(s).
- ☐ Any elector of the City may seek a writ of mandate requiring the Ballot Title or Summary prepared by the City Attorney to be amended. The Court shall expedite hearing on the writ. A peremptory writ of mandate shall be issued only upon clear and convincing proof that the Ballot Title or Summary is false, misleading, or inconsistent with the requirements of Elec. Code § 9204.

Format of Petition

Proponents are responsible for the preparation and printing of the petition. The format of an initiative petition is specified by law. This guidebook summarizes the format requirements for a petition. However, proponents are advised to refer to the most current California Elec. Code for the details of formatting a petition according to law and/or to consult an elections attorney.

Elections Officials required by law to receive or file in their offices any initiative or referendum petition shall not receive or file any initiative or referendum petition not in conformity with this article [Election Code § 9015].

Things to Remember:

- The proponents are responsible for the preparation and printing of the petition.
- The format of an initiative petition is specified by law.
- Proponent(s), prior to its circulation, must place upon each section of the petition, above the text of the proposed measure and across the top of each page of the petition on which signatures are to appear, in roman boldface type not smaller than 11-point, the ballot title prepared by the City Attorney. In addition, the text of the measure shall also be printed on the Petition in type not smaller than 8-point. [Elec. Code § 9203 (b)]

This section summarizes the format requirements for a petition. However, proponents are advised to refer to the most current California Elec. Code for the details of formatting a petition according to law.

Official Top Funders Sheet [Elec. Code § 101 and 107]

For any initiative petition for which the circulation is paid for by a committee formed pursuant to Government Code 82013, an Official Top Funders disclosure shall be included on the petition or in a separate document presented to a prospective signer of the petition.

Elections officials are not required to verify the accuracy of the information or to reapprove the petition upon any updates the committee makes.

The Official Top Funders Sheet must be in 14-point black roman type on a plain, contrasting background, centered horizontally, except as described. The text shall not be condensed or have spacing between characters reduced to be narrower than a normal roman type. [Elec. Code § 107(a)(1)]

The top of the sheet shall have the text “OFFICIAL TOP FUNDERS. Valid only for”, followed by a m Government Code § 84501(c) were last confirmed. [Elec. Code §107(a)(2).] This information shall be boldface and at least 16-point type. Next, separated by a blank horizontal line, shall be the title of the initiative or referendum as it appears on the petition, in all capital letters. [Elec. Code § 107(a)(3).]

Heading of Petition

The heading of the proposed measure must be in boldface type in substantially the following format:

> **INITIATIVE MEASURE TO BE DIRECTLY SUBMITTED TO THE VOTERS**
>
> The city attorney has prepared the following title and summary of the chief purpose and points of the proposed measure:
>
> **(Here set forth the title and summary prepared by the city attorney. This title and summary must also be printed across the top of each page of the petition where signatures are to appear).**

Sections of the Petition

A petition may have several sections. Each petition consists of sections which are separate, identical parts of the petition. Each section must contain the full title and summary of the measure, the text and space for signatures and a circulator's declaration.

Each section of the petition must contain:

- The circulating title and summary and the full text of the proposed initiative measure. [Elec. Code 9207].
- The ballot title and summary shall be in at least 11-point roman type, and
- The full text of the proposed initiative measure shall be in at least 8-point type.
- Each page on which signatures are to appear must contain a copy of the circulating title and summary and the unique identifier provided by the Elections Official

Please refer to the Elec. Code for the required specifications.

Pages of the Petition

Each section of a petition consists of two or more pages which may be printed on front and back. Each page of the petition must contain a copy of the City Attorney's ballot title and summary printed in roman boldface type, not smaller than a 11-point font size. The ballot title and summary must be clearly separated from the text of the measure. The text of the measure must be printed in a font size not smaller than 8-point.

The heading of the proposed measure shall be in substantially the following form:

Initiative Measure to be Submitted Directly to the Voters

The City Attorney has prepared the following title and summary of the chief purpose and points of the proposed measure:

(Here set forth the title and summary prepared by the City Attorney. This title and summary must also be printed across the top of each page of the petition whereon signatures are to appear.) (Elec. Code § 9203 (b))

Signature Portion

The petition must have enough room for the signature of each signer as well as their printed name, residence address, and city name. Signature spaces must be numbered consecutively beginning with the number 1 and continuing through the number of signatures allotted to each section. A minimum space of one inch must be left after each name for the use of the Registrar of Voters.

The petition format shall be substantially in the following form and shall contain the notice to the public in 11-point type, prior to that portion of the petition for voter's signatures: (Elec. Code § 101)

NOTICE TO THEPUBLIC

THIS PETITION MAY BE CIRCULATED BY A PAID SIGNATURE GATHERER OR A VOLUNTEER. SIGNERS HAVE THE RIGHT TO ASK. (EC 101)

REGISTERED VOTERS ONLY

			Official Use Only

	5. Print Your Name: _____ DO NOT SIGN UNLESS you have seen Official Top Funders sheet and its month is still valid. Sign: _____	Residence Address ONLY: _____ City: _____ Zip: _____	

Publication and Filing of Publication Affidavit

The proponents must publish (at least once) the notice of intention and the title and summary of the initiative in a newspaper "of general circulation." The City's official paper for legal notices is San Gabriel Valley Examiner. [Elec. Code § 9205(a), 9256]

If there is no adjudicated newspaper of general circulation, the notice and the title and summary shall be published at least once, in a newspaper circulated within the city and adjudicated as being of general circulation within the county in which the city is located and the notice, title, and summary shall be posted in three (3) public places within the city, which places shall be those utilized for the purpose of posting ordinances. [Elec. Code § 9205(b), 9256]

If the proponents request the City's site for posting, they must submit a formal request for posting.

How to request City's site for posting:

- Email the City Clerk at City_Clerk@cityofglendora.gov
- Email must be received 24 hours prior to the requested posting date (holidays & weekends excluded).
- Email must include:
  1. The date proponent(s) want Notice posted.
  2. A request to post notice at the City's three (3) legal posting sites
  3. The Notice of Intention and the title and summary of the proposed measure.

After Publication

After publication of the Notice of Intention and Title and Summary, the petition may be circulated. Each petition section (page) must comply with the requirements and contain a copy of the Notice of Intention, Title and Summary, and Full Text of Initiative.

- Within ten (10) days after the date of publication or posting of the notice of intention and title and summary, the proponents are required to file a copy of the notice and title and summary as published or posted together with an affidavit made by a representative of the newspaper which the notice was published with the City Clerk. [Elec. Code § 9206. 9256]

Circulation of Petition – Gathering of Signatures

Who May Circulate the Petition

A person who is a voter or who is qualified to register to vote in the county may circulate an initiative or referendum petition anywhere within the state. [Elec. Code § 102, 106 and 9021]

- Petition circulators must be 18 years of age or older.

When to Circulate the Petition

Before circulating a petition, proponent(s) must:

- Publish the Notice of Intention and the Title and Summary of the initiative at least once in a newspaper of general circulation in the City; and
- File Proof of Publication with the Glendora City Clerk Clerk's office;
- Only after publication of the Notice of Intention and Title and Summary, the petition may be circulated.
  Reminder: Each petition section (page) must comply with the requirements of Sections 100, 104, 9020 and 9105 of the Elec. Code and contain a copy of the Notice of Intention, Title and Summary, and Full Text of Initiative.

Circulators

The petition may be circulated by a number of individuals carrying separate, identical parts of the petition called sections. Each petition circulator who obtains signatures must complete the attached declaration to the petition.

Prior to allowing a person to circulate an initiative petition for signatures, **the person, company official, or other organizational officer who is in charge of signature gathering shall execute and submit** to the proponent(s) a signed statement that reads as follows [Elec. Code § 9609]:

I, ___, acknowledge that it is a misdemeanor under state law (Section 18650 of the Elections Code) to knowingly or willfully allow the signatures on an initiative petition to be used for any purpose other than qualification of the proposed measure for the ballot. I certify that I will not knowingly or willfully allow the signatures for this initiative to be used for any purpose other than qualification of the measure for the ballot.

(Signature of Official) ____

Dated this _____ day of _____, 20__

This statement shall be kept on file by the proponent(s) for not less than eight months after the certification of the results of the election for which the petition qualified or, if the measure did not qualify, eight months after the deadline for submission of the petition to elections officials. [Elec. Code § 9609(b)]

In addition, **all paid circulators shall execute and submit** to the person, company official, or other organizational officer who is in charge of signature gathering a signed statement, prior to soliciting signatures on an initiative petition, that reads as follows (Elec. Code § 9610):

I, ___, acknowledge that it is a misdemeanor under state law (Section 18650 of the Elections Code) to knowingly or willfully allow the signatures on an initiative petition to be used for any purpose other than qualification of the proposed measure for the ballot. I certify that I will not knowingly or willfully allow the signatures for this initiative to be used for any purpose other than qualification of the measure for the ballot.

(Signature of Official) ____

Dated this _____ day of _____, 20__

This statement shall be kept on file by the person, company official, or other organizational officer who is in charge of signature gathering for not less than eight months after the certification of the results of the election for which the petition qualified or, if the measure did not qualify, eight months after the deadline for submission of the petition to Election Officials. Unpaid circulators do not need to provide a signed statement. [Elec. Code § 9610(b)(c)]

Council Actions During Circulation

During the circulation of the petition, or before taking any action to either submit the initiative to the voters or enact the ordinance, the City Council may refer the initiative to any city staff for review and a report on its effect and fiscal impact. The report shall be presented to the City Council no later than 30 days after certification of the petition's sufficiency by the elections official to the City Council. [Elec. Code § 9212]

The City Council may request a report on the proposed initiative measure on any or all of the following:

1. Its fiscal impact
2. Its effect on the internal consistency of City's general and specific plans
3. Its effect on the use of land, the impact on the availability and location of housing, and the ability of the city to meet its regional housing needs
4. Its impact on funding for infrastructure of all types
5. Its impact on the community's ability to attract and retain business and employment
6. Its impact on the uses of vacant parcels of land
7. Its impact on agricultural lands, open space, traffic congestion, existing business districts, and developed areas designated for revitalization
8. Any other matters the council requests to be in the report

The report shall be presented to the City Council within the time prescribed by the Council but no later than 30 days after the elections official certifies the sufficiency of the petition.

Facial Examination – Prima Facie Count

If the city clerk determines, after a prima facia examination, that the petition does not have sufficient signatures or does not satisfy the format requirements imposed by the Elections Code, the petition is returned to the filer. If the petition is in proper form and appears to have sufficient signatures, the petition is accepted by the city clerk and turned over the Los Angeles County Registrar who conducts the signature verification to determine if the measure qualified.

To qualify an initiative, the petition must be signed by not less than 10% of the registered voters of the city, or in a city with less than 1,000 registered voters, by 25% of voters or 100 voters, whichever is less.

Examination of Signature

Signature Verification Process

Information regarding the signature verification process can be found in California Code of Regulations section 20960 and is available on the Secretary of State's website at: 20960. Signature Verification Process

- When verifying the signatures on a petition, the Registrar compares the signatures on the petition with those on the affidavits of registration. If the signature on the petition does not match the one on the affidavit, it is rejected.

- As part of the verification process, the Registrar also determines whether the residence address on the petition is the same as the residence address on the affidavit of registration. If the addresses are different, incomplete, or missing, the signature is rejected. [Elec. Code § 105]

Within 30 working days from the date of filing, the Los Angeles County Registrar-Recorder/County Clerk shall verify the signatures thereon either from a 100% check or a random sampling.

Random Sampling

The random sampling shall include an examination of at least 500, or 3% of the signatures, whichever is greater. If the statistical sampling shows that the number of valid signatures is within 95 to 110 percent of the number of signatures of qualified voters needed to declare the petition sufficient, the County Elections Official shall, within 60 days from the date of the filing of the petition, excluding Saturdays, Sundays, and holidays, examine and verify each signature filed. If the total number of valid signatures is less than 95 percent of the signatures required to qualify the initiative measure, the proposed initiative measure fails to qualify for the ballot.

The Los Angeles County Registrar-Recorder/County Clerk shall certify as to the sufficiency or insufficiency of the petition.

1. If the petition is insufficient, no action is taken.
2. If the petition is sufficient, the elections official will certify the results to the City Council at their next "regular" meeting. The signatures on a petition which has been certified are not public information. [Elec. Code § 9115]
   NOTE: Supplemental petitions are not permitted

Council Action if Petition is Sufficient

If the initiative petition is signed by not less than 10% of the voters of the City according to the last report of registration by the county elections official to the Secretary of State, the City Council shall do one of the following: [Elec. Code § 9215]

Option 1: Adopt the ordinance without alteration

Option 2: Submit the ordinance without alteration to the voters

Option 3: Order a report pursuant to Elec. Code § 9212

When legally possible, the election **may be consolidated with the next statewide election occurring not less than 88 days** after the date of the order of election. If the governing body calls a **special election**, the election shall be **held not less than 88 days nor more than 103 days** after the order of the election.

Note: The proponent(s) of an initiative may withdraw the initiative at any time before the 88th day before the election, whether or not the petition has already been found sufficient by the elections official.

Legal and Financial Impartial Analysis

Whenever a city measure qualifies for a place on the ballot, the governing body may direct the city elections official to transmit a copy of the measure to the city attorney, unless the organization or salaries of the office of the city attorney are affected. The city attorney shall prepare an impartial analysis of the measure showing the effect of the measure on the existing law and the operation of the measure. The analysis shall include a statement indicating whether the measure was placed on the ballot by a petition signed by the requisite number of voters or by the governing body of the city. If the measure affects the organization or salaries of the office of the city attorney, the governing board may direct the city elections official to prepare the impartial analysis. The analysis shall be printed preceding the arguments for and against the measure. The analysis shall not exceed 500 words in length.

If the entire text of the measure is not printed on the ballot, nor in the voter information guide, there shall be printed immediately below the impartial analysis, in no less than 10-point bold type, a legend substantially as follows:

“The above statement is an impartial analysis of Ordinance or Measure ____. If you desire a copy of the ordinance or measure, please call the elections official's office at (insert telephone number) and a copy will be mailed at no cost to you.” [Elec. Code §9280]

Arguments and Rebuttals

Direct Arguments

Direct arguments for or against measures will be submitted to the City Clerk at a date no later than 14 days from the calling of the election. Direct Arguments shall not exceed three hundred (300) words. [Elec. Code § 9282 (b, c), 9286]

Rebuttal Arguments

The author or majority of the authors of an argument relating to a city measure may prepare and submit a rebuttal argument or may authorize in writing another other person or persons to prepare, submit, or sign the rebuttal argument. [Elec. Code §9285(a)(2)]

- Rebuttal arguments shall not exceed 250 words. [Elec. Code § 9285(a)(3)]
- Rebuttal arguments shall not be signed by more than five (5) persons, shall be printed in the same manner as a direct argument, and shall immediately follow the direct argument which it seeks to rebut. [Elec. Code § 9285(a)(5)]

When the arguments for and against the measure have been selected, the City Clerk shall provide a copy of the argument in favor to the author of the argument against and a copy of the argument against to the author(s) of the argument in favor. The authors may then prepare rebuttal arguments. A rebuttal argument relating to a City measure shall be filed with the City Clerk no later than 10 days after the final filing date for primary arguments. Rebuttal arguments shall not exceed two hundred and fifty (250) words. [Elec. Code § 9285]

Argument/Rebuttal Signatures

Each argument and rebuttal must be accompanied by the printed name and signature of the person(s) submitting it, or if submitted on behalf of an organization, the name of the organization and the printed name and signature of at least one of its principal officers on the form provided by the City Clerk. No more than 5 signatures/names will be printed with the argument or rebuttal. [Elec. Code §9283]

Public Review Periods

10-Day Public Inspection of All Materials

The Office of the City Clerk will make all materials available for public inspection in the City Clerk's Office for a period of ten (10) calendar days immediately following the filing deadline for submission of all materials. Anyone may request a copy of the materials. [Elec. Code § 9295]

Ordinance

Requirements for Ordinance to become effective

If a majority of the voters voting on a proposed ordinance vote in its favor, the ordinance will become a valid and binding ordinance of the city. The ordinance will be considered as adopted upon the date that the vote is declared by the City Council, and will go into effect 10 days after that date. [Elec. Code § 9217]

Conflicting Ordinances

If the provisions of two or more ordinance adopted at the same election conflict, the ordinance receiving the highest number of affirmative votes shall control. [Elec. Code § 9221]

Repeal of Ordinance

No ordinance that is either proposed by initiative petition and adopted by the vote of the legislative body of the city without submission to the voters, or adopted by the voters, shall be repealed or amended except by a vote of the people, unless provision is otherwise made in the original ordinance. [Elec. Code § 9217]

NOTICE OF INTENT TO CIRCULATE PETITION

Notice is hereby given by the persons whose names appear hereon of their intention to circulate the petition within the City of Glendora for the purpose of qualifying an initiative measure that will enact a bond proposition to fund public infrastructure improvements and upgrades throughout the City.

A statement of the reasons for the proposed action as contemplated in the petition is as follows:

The purpose of the proposed initiative is to authorize the issuance of bonds to finance much-needed public infrastructure projects, including but not limited to addressing structural deficiencies, upgrading and enhancing City facilities, improving parks and community centers, and expanding public spaces, services, and amenities available to Glendora residents.

The proposed measure would establish a bond indebtedness to fund critical infrastructure and facility improvements across the City. These include, but are not limited to:

- Addressing structural deficiencies;
- Improvements to City Infrastructure
- Renovations and improvements to public safety facilities and public library;
- Enhancements to parks, trails and open space; and
- Modernization, renovations and improvements of other City-owned facilities.

A key feature of this measure is its commitment to expanding the range, quality, and availability of City services and facilities — not only repairing what exists, but building and expanding to meet the evolving needs of Glendora's residents.

To ensure transparency and fiscal responsibility, the measure includes strict accountability provisions:

- Independent financial and performance audits;
- Citizen oversight through a public committee;
- A prohibition on using bond funds for City salaries, employee benefits, or operational expenses, with the exception of capped project administration costs (no more than 5% of total proceeds).

This measure was developed by [insert name of committee, organization, or individual proponents] to invest in Glendora's future, and with the goal of securing long-term investments in Glendora's public infrastructure and quality of life to meet current infrastructure demands, and ensure access to high-quality public spaces and services for generations to come.

CITY FACILITIES UPDATE

(CONTINUATION OF MARCH 2025 CONVERSATION)

CITY COUNCIL

JUNE 24, 2025

ADAM RAYMOND, CITY MANAGER

CITY FACILITY CAPITAL NEEDS UPDATE

OVERVIEW

REPORT OUTLINES HISTORICAL CHALLENGES FOR CITIES, GLENDORA'S DEFERRED MAINTENANCE, FUNDING GAPS, ELECTION TIMING

- More than $250M required to modernize city facilities
- Council is recommended to receive this update and provide direction to staff, as necessary

STRATEGIC FRAMEWORK

FOCUS AREAS FOR INFRASTRUCTURE RENEWAL

NEW + REVITALIZED FACILITIES

- Civic Center transformation
  - Action 3.1: Develop Funding Models
  - Action 3.3: Implement Space Planning
  - Action 3.4: New Construction / Renovation

HISTORICAL CONTEXT

DECADES OF DEFERRED MAINTENANCE

JULY 2002, LA TIMES ARTICLE

“UPSCALE SUBURB WARNED ITS BEAUTY IS ONLY SKIN DEEP”

CURRENT CHALLENGES

- Over $50M invested since 2020
- Modernization costs are approximately $250M
  - Facilities in need include Library, Police Station, Teen Center, Senior Center, Public Works Facilities, and City Hall

INFRASTRUCTURE CHALLENGES STATEWIDE

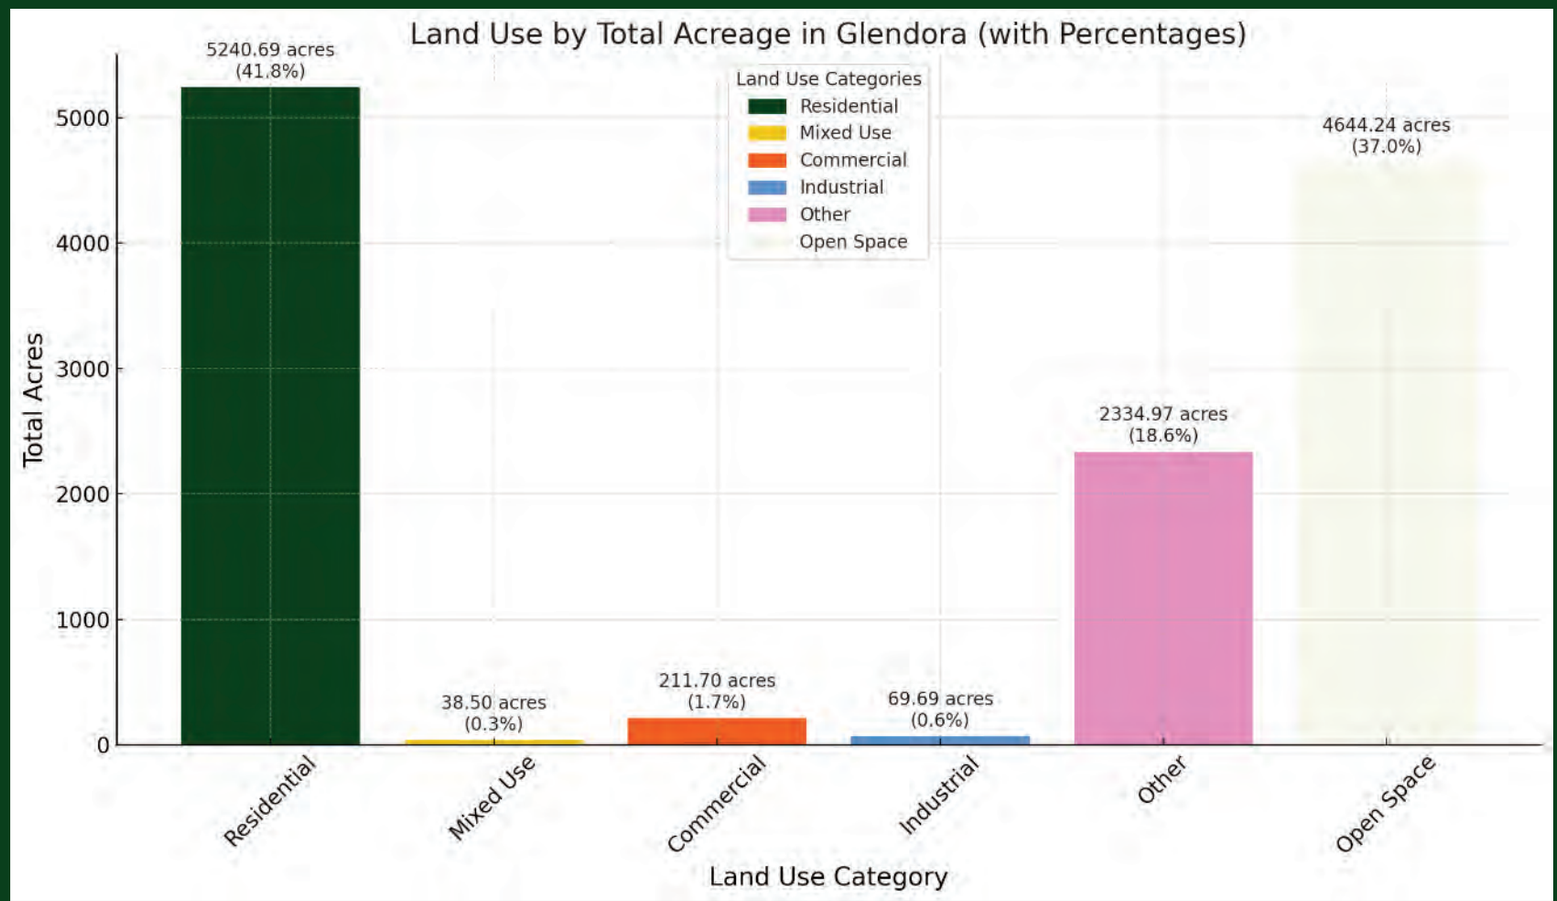
POST-WWII GROWTH → MODERN-DAY STRAIN

1950S–70S SUBURBAN EXPANSION CREATED VAST INFRASTRUCTURE NETWORKS

- Simultaneous aging → mass maintenance backlog
- Federal aid declined; cities struggle with outdated systems

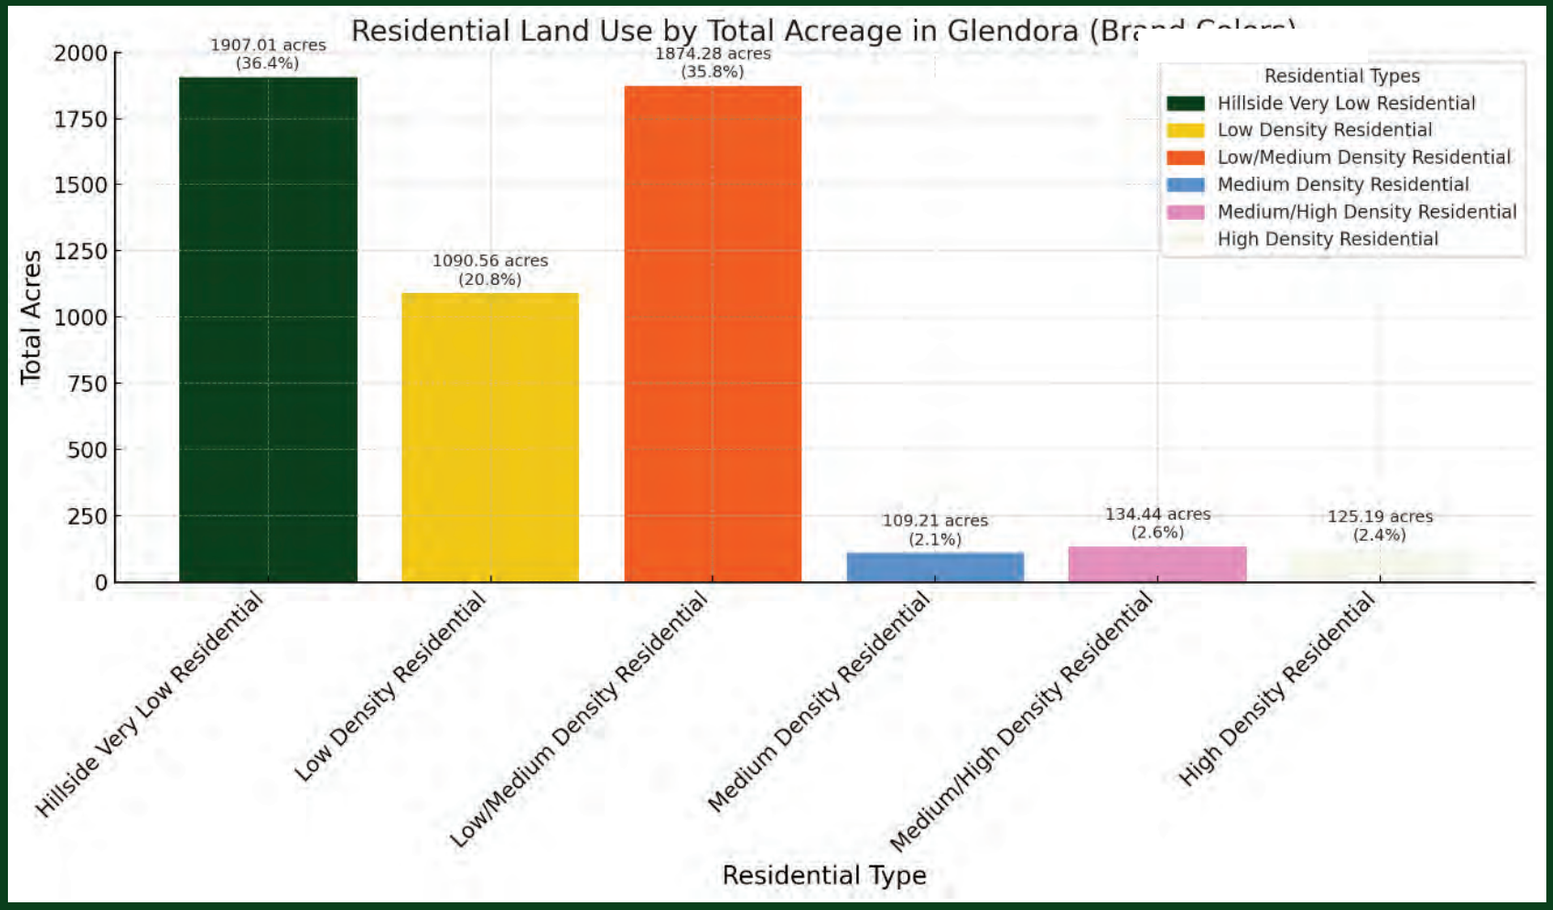
LOCAL PRESSURES IN GLENDORA

ZONING AND DEVELOPMENT REALITIES



90%+ OF HOUSING IS SINGLE-FAMILY

- Limited commercial corridors; underperforming shopping centers
- Recent planning tools: Housing Element, General Plan Update, Station Area Vision



FISCALIZATION OF LAND USE POST PROP 13

- City's prioritized sales tax generating businesses over housing
- State's housing mandates at odds with decades of zoning practices
- Major shift is consumer spending ⟶ online and higher end experiences

LOCAL PRESSURES IN GLENDORA

LOCAL PRESSURES IN GLENDORA

POPULATION SNAPSHOT

SLOWING/REVERSAL OF GROWTH, BUT INFRASTRUCTURE STILL AGING

470%
39 years

1,141%
50 years

3%
25 years

- **1911 (700)** – *City of Glendora is incorporated*
- **1950 (3,988)**
- **1960 (20,752)**
- **1970 (31,380)** – *In the late 1960's the City publishes its General Plan for year 1990 and anticipates a population of 80,000 and student enrollment growing from approximately 9,000 students to 25,000 students.*
- **1980 (38,500)**
- **2000 (49,502)**
- **Present (51,209)** – *This is a reduction from a peak of 52,506 in 2020.*

THE COST OF UNDERINVESTMENT

STRUCTURAL FAILURES IN CITY BUILDINGS

A SAMPLE LIST INCLUDES:

- Library: Failing torsional load on beams, failure of support columns
- La Fetra Center: Condemned stairwell
- City Hall: New roof and foundation

FUNDING LIMITATIONS

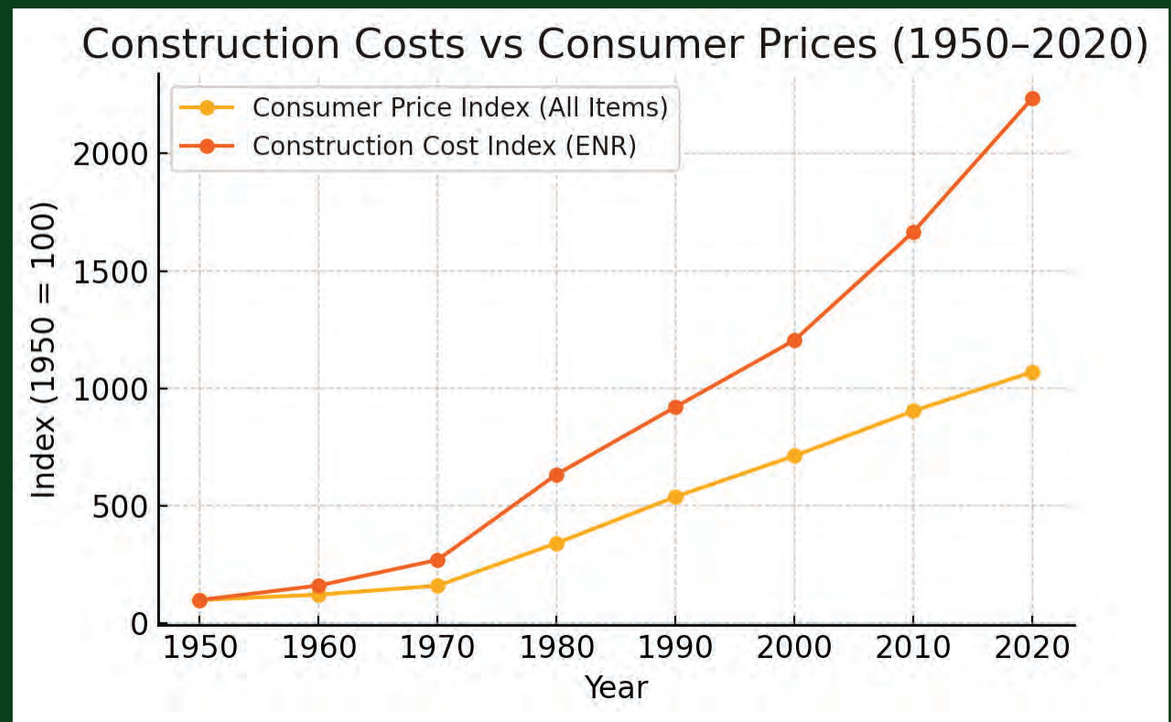
STATE & FEDERAL SUPPORT INADEQUATE

CITIES SPEND 7X-9X MORE THAN THE FEDS ON INFRASTRUCTURE

- Glendora lacks CFD's, sufficient development impact fees, or water capacity charges
- Proposition 13 limits City's ability to raise property tax-based revenue
  - Police Station and Library both built through increased in property tax

GLENDORA'S GENERATIONAL INVESTMENT

CITY HAS MADE SIGNIFICANT INVESTMENTS, BUT THEY ARE NOT ENOUGH

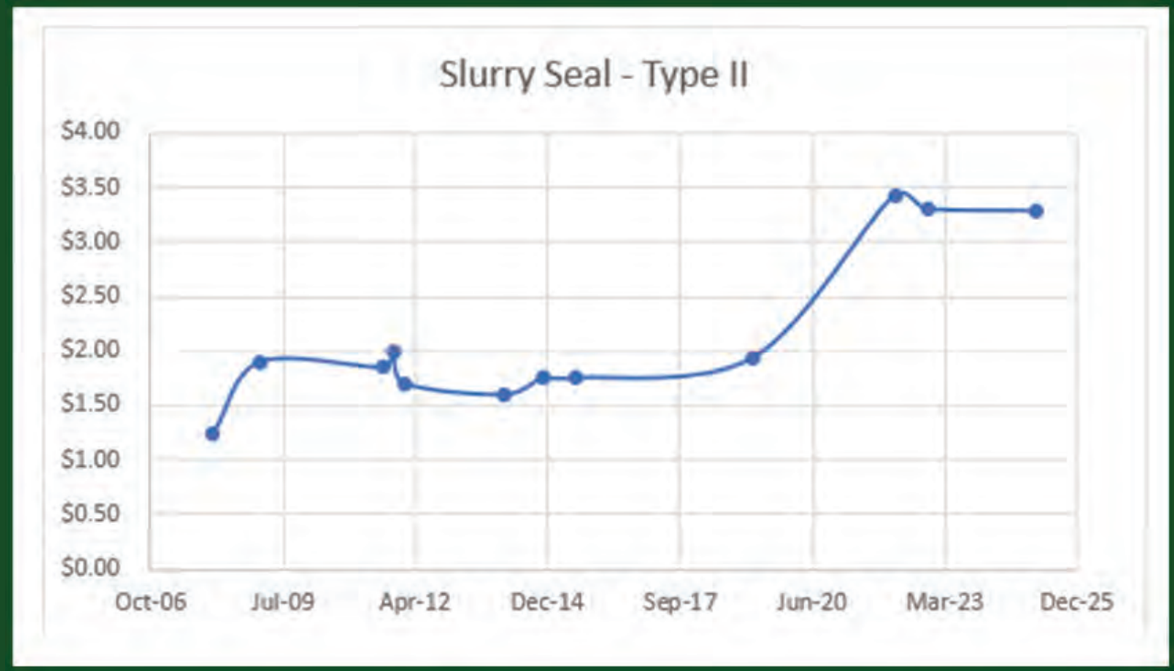


- 2020-2024: $50M invested
- 2025-2030: 76 projects planned, totaling $108M
- Funded through Measures E/Z, Grants ($60M+), Water Assessment, Federal and Local funds
- Notable investments include Finkbiner Park, Louie Pompei Park, Bennett Ave Water Project, Bender/Carter Project, School Site Intersections, and Library Structural Analysis

COST ESCALATION TRENDS

SHARE RISE IN PROJECT EXPENSES

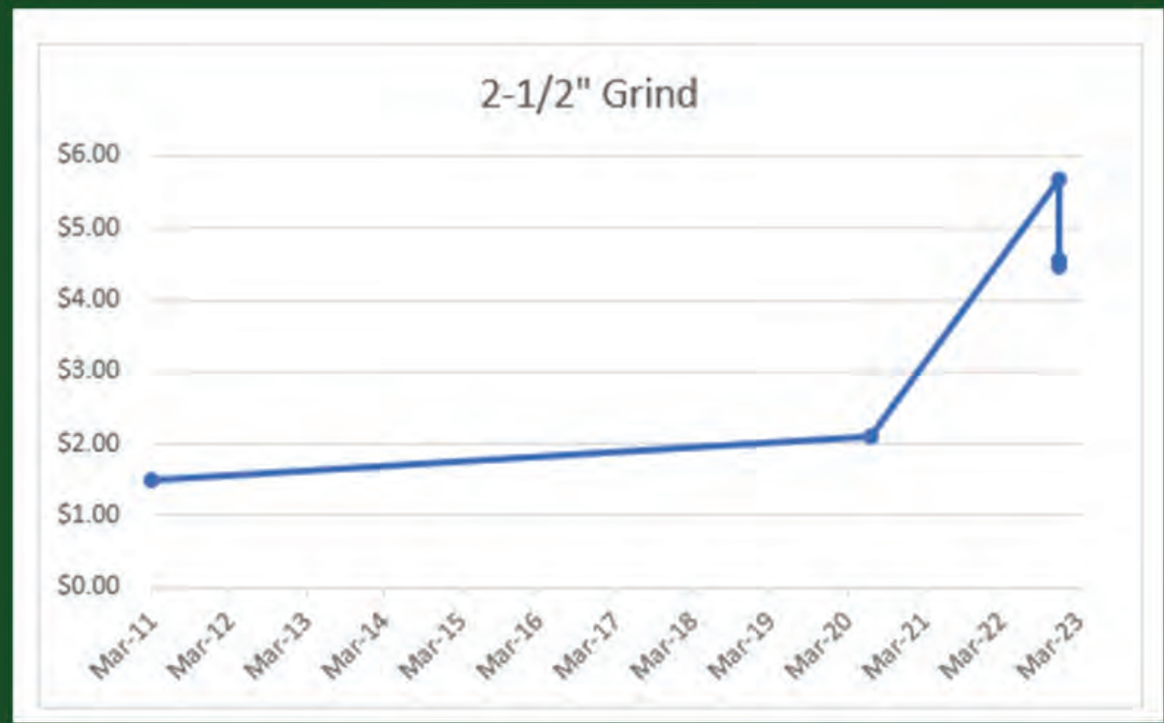
CPI VS CONSTRUCTION CPI



- Construction cost indices have increased about 22–25x since 1950
- General CPI has risen around 12x since 1950
- This divergence is very impactful ⟶ initial growth vs replacement/rehab

COST ESCALATION TRENDS

SHARE RISE IN PROJECT EXPENSES

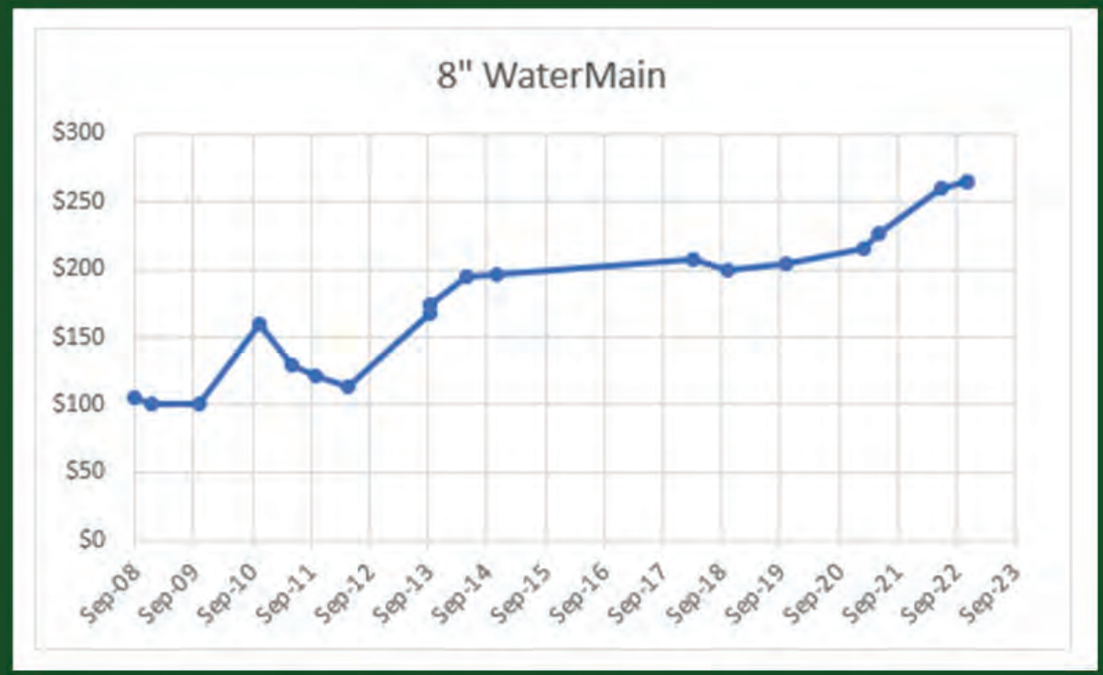


SLURRY SEAL: $2.00 → $3.30/SQ YD (60%+ INCREASE SINCE 2020)

COST ESCALATION TRENDS

SHARE RISE IN PROJECT EXPENSES

2.5” GRIND & OVERLAY: $2.10 → $5.00/SQ FT (OVER 100% INCREASE SINCE 2020)



COST ESCALATION TRENDS

SHARE RISE IN PROJECT EXPENSES

WATERMAIN REPLACEMENTS: $200 → $265/FT (UP 30%+ SINCE 2020)

- Benefits of combining water and street projects saves an estimated $65/FT or 30%

ELECTION-BASED FUNDING STRATEGIES

REVENUE MEASURE FRAMEWORK

TWO PATHS: REVENUE MEASURE FOR INFRASTRUCTURE

- City Council-Initiated: Requires 2/3 vote
- Citizen-Led Initiative: Simple majority (50%+1)
- August 2024 survey: 53% support for citywide bond / parcel tax, 45% for Library-only

GENERAL OBLIGATION BOND VS PARCEL TAX – KEY DIFFERENCES

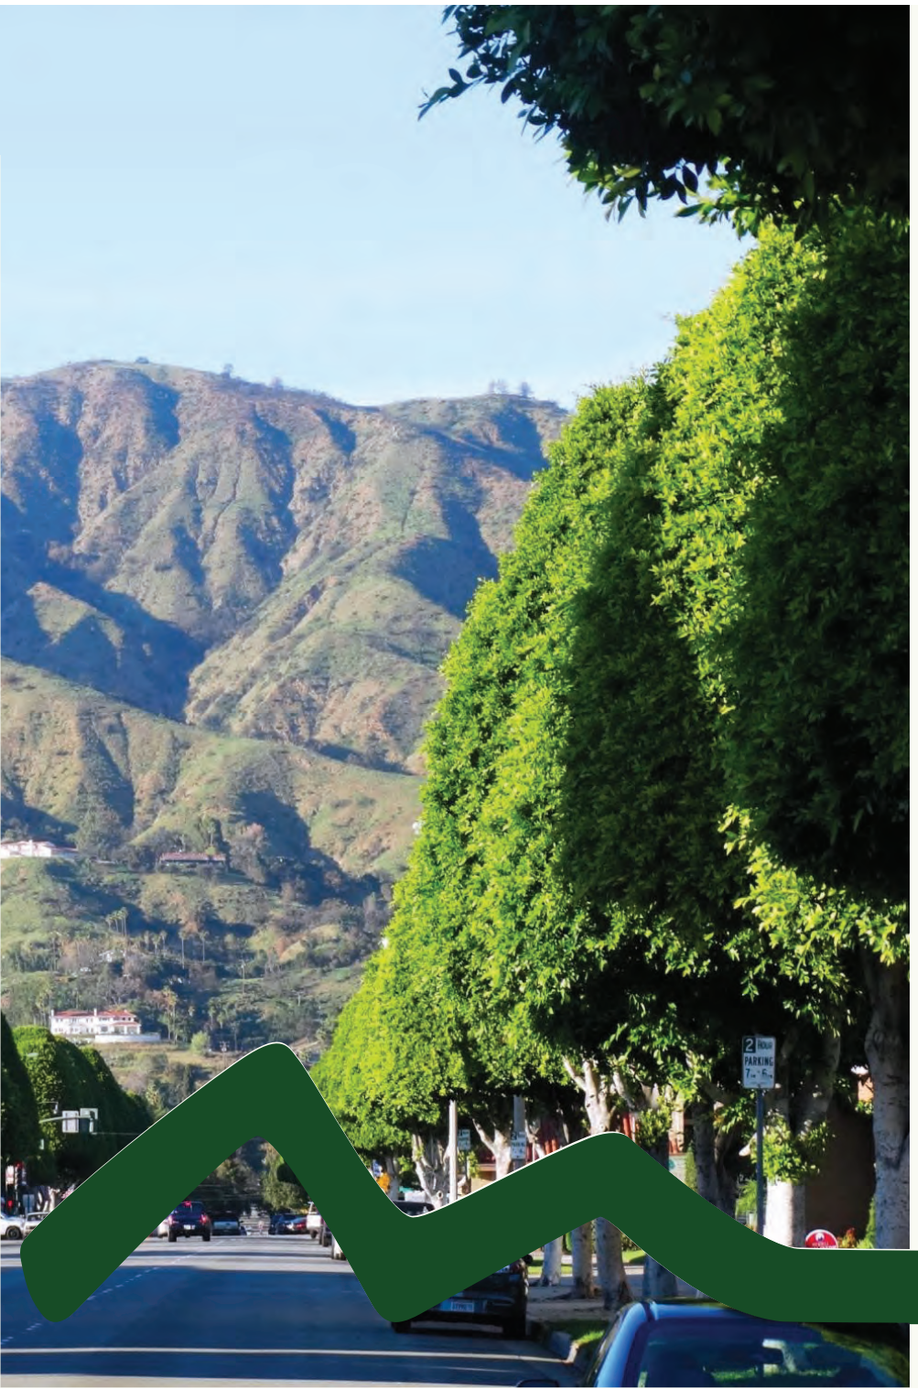
FEATURE	GO BOND TAX MEASURE	PARCEL TAX MEASURE
Purpose / Use of Funds	Capital improvements only (e.g., buildings, roads, parks)	Capital projects (e.g. buildings, roads, parks) and operating expenses (e.g., maintenance)
Funding Mechanism	Bonds issued and repaid over time	Tax revenue collected directly from parcels
Tax Type	Ad valorem tax based on assessed property value, square footage, parcel type, etc.	Typically, a flat rate or tiered formula per parcel.
Who Pays	Property owners based on tax type	All parcel owners, regardless of value. exceptions to the tax can include those that meet certain income requirements, seniors, etc.
Voter Approval Threshold	2/3 majority for cities (55% for school bonds under Prop 39). Possibility of (50%+1) on a citizen initiative.	2/3 majority under Prop 13 for City Council approved ballot measure 50%+1 for citizen initiative.
Flexibility of Use	Restricted to voter-approved infrastructure projects.	Flexible: Can fund capital projects, programs, maintenance, services, and debt.
Debt Involvement	Yes – city takes on debt and repays it over time.	Proceeds may be pledged to a lease financing or an installment sale financing, associated with a revenue bond or a certificate of participations.
Duration / Term	Typically, 15–40 years	Can be temporary (e.g., 10 to 40 years) or ongoing
Security / Backing	Backed by ad valorem tax levied every year; legally obligated to repay	Optional; funds collected annually

CITIZEN INITIATIVE PROCESS

TIMELINE & REQUIREMENTS

12-TO-18-MONTH PROCESS

- 3,600 signatures required (10% of voters)
- Final deadline: 88 days before election
- Full guide available from City Clerk



FUTURE OUTLOOK

CONTINUING COMMUNITY CONVERSATION

FACILITY MODERNIZATION IS ESSENTIAL FOR QUALITY SERVICE

- Past generations funded public safety & library via bonds
- We continue to plan for the future with civic center plans forthcoming, and Public Work's Yard plans underway
- Today's leaders must consider similar community investments for future generations of Glendorans
  - City has effectively spent existing resources
  - Significant successes with grant/appropriation awards
  - Continue to make generational investments

DESPITE THESE EFFORTS, WE ARE STILL FALLING BEHIND

RECOMMENDATIONS

That the City Council:

1. Receive a report on capital needs of City facilities, options to fund those needs, and election timelines; and
2. Provide direction to staff, as necessary.

STAFF REPORT

TO:	**Mayor and Council Members**	**DATE:**	**September 9, 2025**
FROM:	**City Manager**	**DISTRICT(S):**	**Citywide**
SUBJECT:	**Civic Center Update**		

RECOMMENDATION

That the City Council:

1. Receive a report on civic center renderings and cost estimates; and,
2. Provide direction to staff.

STRATEGIC FOCUS AREAS

- New + Revitalized Facilities
  - Action 3.1 City Council directs funding methodology on new or revitalized civic center
  - Action 3.3 Complete space planning assessment in coordination with citywide facility assessment
  - Action 3.4 Determine if the Civic Center should be a remodel or new build

EXECUTIVE SUMMARY

Over the past five years, Glendora has invested more than $50 million in parks, streets, and water infrastructure. Despite these efforts, many core facilities—including the Library, Police Station, Teen Center, Senior Center, City Hall, Transportation Center, and Public Works Yard—require modernization. Deferred maintenance is estimated at $50 million, with more than $250 million needed to create modern, accessible workspaces for staff and community spaces for the public in all City facilities.

Community surveys show general support for a citywide facility bond, though current backing (53%) falls short of the two-thirds threshold required for a City-led effort; a citizen-led measure, however, may require only a simple majority.

In March 2025, the City Council directed staff to obtain cost estimates for a dedicated Civic Center project. The DLR Group has since provided renderings and rough order of magnitude (ROM) construction estimates of approximately $125 million. Staff now seeks City Council input and direction on the proposed Civic Center project.

LEGISLATIVE HISTORY / PREVIOUS ACTIONS

Over the past three years, many public meetings and discussions have been held on facility needs by the City Council, Board of Library Trustees, Community Services Commission, and Planning Commission. The items noted in this section are highlights of the ongoing community dialogue on city facility needs.

On January 10, 2023, the City Council awarded a contract to Myers Houghton and Partners, Inc. (MHP) to perform in-depth structural analysis and evaluation of the Library's suitability for major renovations and initial visioning activities.

On September 12, 2023, the City Council received an update on the results of the comprehensive water system assessment, including information on future water rates. The water assessment identified more than $350 million in projects needed over the next 30 years, with $30 million being programmed for completion over the first five years.

On January 9, 2024, the City Council held a discussion on a the MHP Library assessment/visioning analysis and discussed funding options. Following discussion, the City Council directed staff to complete an overall condition analysis of major City facilities and undertake a community survey soliciting public input on a possible revenue measure.

On January 30, 2024, the City Council approved a Master Joint Use Agreement with the Glendora Unified School District (GUSD). While the agreement largely stipulates use of existing facilities and services provided by the City, the agreement does provide for better maintenance of GUSD Facilities and outlines a partnership methodology for joint capital upgrades (i.e., Glendora High School Aquatics Center).

On August 27, 2024, the City Council was provided the results of a community survey on a potential citywide and/or Library specific revenue measure. The survey, completed by True North Research, documented initial support for a citywide facility measure (53%) as opposed to Library specific bond measure (45%). Additionally, the survey highlighted the two highest quality of life improvements in the City as improving infrastructure/roads (17.8%) and addressing homelessness (17.2%).

On November 5, 2024, the Statewide ballot measure – ACA 5 – ballot failed (55% no). The State measure would have lowered the threshold for issuing facility bonds for cities and related local agencies, from 66.6% (2/3) to 55% (same as schools).

On November 12, 2024, the City Council approved an agreement with IDS Group, Inc. for Architectural, Engineering and Consultant Services for the City Corporate Yard Improvement Project in an amount not to exceed $725,581. The City will need to identify an estimated $13-15 million for the construction portion of the project, which will rehabilitate existing space and add a new building to increase the usable space by 10,000 square feet.

On February 25, 2025, the City Council received the FY 2024-25 Mid-Year Budget Update that documented approximately $50 million in current facility needs (e.g. new roofs, HVAC, etc.) that would largely keep City facilities as is. To significantly improve the City's facilities to a modern standard and better meet current and future operational needs, the estimated costs would total more than $250 million.

On March 11, 2025, the City Council was provided with a comprehensive report on City facility capital needs, deferred maintenance, cost increases in capital projects, and funding options. As part of the discussion, the City Council directed staff to return with more specific needs and cost estimates for the civic center, which includes, the Library, Police Department, City Hall, and parking.

DISCUSSION

The City of Glendora is committed to improving its quality of life, with recent Strategic Plans prioritizing investment in parks, trails, streets, sidewalks, water systems, and civic facilities. Community surveys consistently identify infrastructure and homelessness as the City's most pressing challenges. Over the past five years, more than $50 million has been invested in capital projects, including major park renovations, facility upgrades, and miles of street and water improvements.

Despite these efforts, decades of underinvestment have left the City with $50 million in deferred maintenance and over $250 million in needed modernization to create accessible, modern facilities for residents and staff. Funding these improvements remains difficult, as State and Federal support has declined and restrictions from Proposition 13 and related measures limit local resources.

While initial community surveys show 53% support for a citywide facility measure and 45% for a Library-specific measure, these levels fall short of the two-thirds voter approval required for a City-sponsored bond. A citizen-led initiative, however, may pass with a simple majority, offering the most viable path forward to address long-standing facility needs, including critical upgrades at the Library and other community spaces.

Past City Council actions noted in the Legislative History portion of this report offer detailed analyses of many aspects of the information noted above. To provide the community with as much detailed information as possible, the City Council directed staff to return with a comprehensive look at costs associated with a Civic Center project at its March 11, 2025 meeting. To this end, staff contracted with the DLR Group to provide renderings (Attachment A) and ROM cost estimates (Attachment B) for a Civic Center project that addresses the Library, Police Department, City Hall, Council Chambers, and parking.

Over the course of two months, City staff met with the DLR Group to discuss what a Civic Center project would entail. As part of its work, the DLR Group carried out a thorough evaluation of all existing civic center facilities. This included reviewing as-built plans, site visits, incorporating findings from the Library structural analysis and visioning exercise, analyzing space planning needs, and studying site constraints such as the grade change between Glendora Avenue and Vista Bonita. These technical evaluations were paired with broader community and urban design considerations, including the planned First/Last Mile improvements along Glendora Avenue and the City's overarching goal of ensuring the Civic Center campus more directly relates to the street. This effort was intended to strengthen the physical and visual connection between the Glendora Village and the Metro A Line station, bridging a key corridor.

The conceptual design takes inspiration from Glendora's historic 1921 City Hall, using it as an architectural reference point. At the same time, the vision balances this reference point with the community's desire for a future-ready flexible facilities that will serve residents for the next century. The resulting architectural style blends classic civic character with contemporary amenities and design standards.

A central focus of the conceptual plan is the maximization of public space. The design incorporates a new and improved plaza area at the heart of the campus, envisioned as a flexible and vibrant gathering place. This plaza could host a wide range of community events and programs throughout the year, strengthening the Civic Center's role as both a functional seat of government and a lively public destination.

While the renderings present an exciting vision, it is important to note that this is only a conceptual plan based on identified needs and opportunities for the Civic Center campus only - it is not a part of any other visioning plan, nor are any outlying buildings a part of this effort. For the project to move forward, it will require additional vetting, further refinement, and most importantly, robust public feedback and support. This concept serves as a starting point for community conversation, giving residents and stakeholders a shared framework to react to, discuss, and shape.

Recently, City staff met with a small group of residents who are interested in the City's efforts to improve its civic facilities. At that meeting, the conceptual renderings and a rough cost estimate were shared to get some early feedback before bringing the information to the full City Council in a public setting. It was explained that these materials were still in conceptual/draft form and not yet ready for wide release. Unfortunately, they were shared publicly ahead of schedule, and some of the information included was incomplete or inaccurate and lacked the proper context.

FISCAL IMPACT

After decades of underinvestment, the City has made over $50 million in improvements in the past five years, including water projects, new streets and sidewalks, major park renovations, and facility upgrades. While these investments have greatly improved quality of life, rising capital costs and the continued deterioration of aging facilities—such as the civic complex, public works yard, Library, City Hall, and Police Department—require the City to consider new funding strategies.

Since Proposition 13, the City has had limited financial flexibility to fund major facility projects. Over the past three years, staff have undertaken structural assessments, space planning, and community visioning to better understand facility needs. Moving forward, meaningful community engagement will be essential as leaders explore the possibility of a facility bond to replace and modernize critical infrastructure, much like City leaders did more than 50 years ago to support future generations.

As part of its work, the DLR Group prepared a rough order of magnitude (ROM) cost estimate for the conceptual project (Attachment B). The estimate places total construction cost at approximately $125 million. This figure accounts for premiums related to phasing and occupancy, as well as escalation costs to the anticipated midpoint of construction in 2028. It is important to note that this is a preliminary ("high-level") estimate intended to provide a sense of scale for the project. Actual project costs will continue to be refined based on the feedback received and market conditions.

ROM Cost Estimate

August 15, 2025

City of Glendora
Civic Revitalization

Glendora, CA

Prepared for DLR Group

INTRODUCTION

BASIS OF ESTIMATE

This Cost Estimate is based on ROM diagrams dated August 1, 2025, along with verbal and written guidance from the design team.

ESTIMATE MARK UPS

The following markups are included in this estimate:

1)	General Conditions	Included in unit costs	
2)	Overhead and Profit (OH&P)	Included in unit costs	
3)	Bonds & Insurance	Included in unit costs	
4)	Design Contingency	Included in unit costs	
5)	Phasing / Occupancy Premium	10.00%	
6)	Escalation to MOC, 07/08/28	15.26%	Construction start January 2027 with 36 months duration
	Escalation projections per annum:		
	2025	5.00%	
	2026	5.00%	
	2027	5.00%	
	2028	5.00%	

EXCLUSIONS

The following items are excluded in this estimate.

1) Professional fees, inspections and testing.
2) Escalation beyond the midpoint of construction, July 2028.
3) FF and E, unless specifically referenced in this estimate.
4) Plan check fees and building permit fees.
5) Construction/Owner's contingency costs.
6) Construction management fees.
7) Soft costs.
8) Hazardous material removal.
9) Asbestos abatement / hazardous material removal.
10) Off-site work.
11) Night time and weekends work.
12) Accelerated construction schedule.
13) Hazardous material removal.

ITEMS AFFECTING COST ESTIMATE

Items that may change the estimated construction cost may include but are not limited to the following:

1) Unforeseen sub-surface condition.
2) Any changes to the scope of work not included in this report. We recommend updating the estimate to capture the value of any changes.
3) Sole source procurement.
4) Any changes or delay from the projected construction schedule.

CLARIFICATIONS

1) This estimate is based on the assumption of a competitive bid environment by a minimum of four at the General Contractor and the Subcontractor level.
2) This estimate assumes the use of prevailing wages. The estimate does not include a PLA or CSWPA.
3) This estimate assumes design-bid-build delivery method.

CIVIC CENTER UPDATE

CITY COUNCIL

SEPTEMBER 9, 2025

CITY MANAGER'S OFFICE

STRATEGIC FOCUS AREAS

Goal 3: New + Revitalized Facilities

- **Action 3.1: Funding methodology for Civic Center**
- **Action 3.3: Complete space planning assessment**
- **Action 3.4: Remodel vs. new build decision**

EXECUTIVE SUMMARY

- $50M invested in infrastructure over past 5 years
- $50M deferred maintenance + $250M modernization need
- Community survey: 53% support (below 2/3 threshold)
- Citizen-led initiative could pass with majority
- DLR Group renderings & ROM estimate: $125M

LEGISLATIVE HISTORY/PREVIOUS ACTIONS

➢ **January 2023**	Library assessment (MHP)
➢ **September 2023**	Water system assessment ($350M need)
➢ **January 2024**	Library funding discussion & survey
➢ **August 2024**	Survey: 53% support citywide measure
➢ **November 2024**	ACA 5 failed (bond threshold)
➢ **February 2025**	$50M deferred maintenance, $250M modernization need
➢ **March 2025**	Comprehensive update on capital project costs, revenue measures, and facility needs. City Council requested Civic Center cost estimates

DISCUSSION

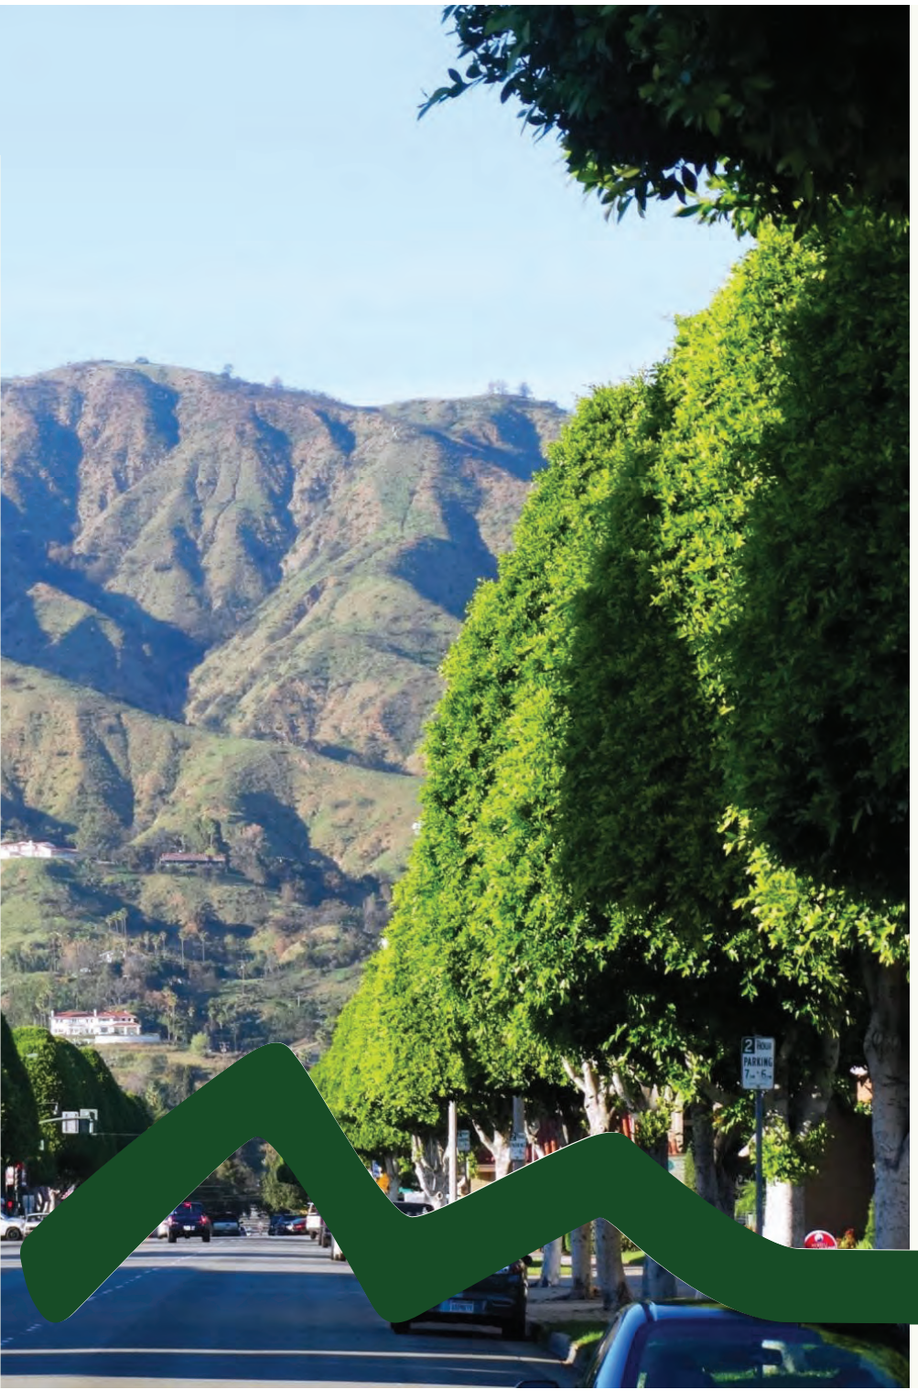
- Glendora invested $50M in capital projects in 5 years
- Facilities remain outdated and inefficient
- DLR Group conceptual plan: Library, Police, City Hall, Parking
- Design blends 1921 City Hall style with modern needs
- New plaza as public hub linking Village & Metro A Line
- Early drafts circulated prematurely; need structured review

PROJECT DETAILS

- **City Hall**
  - 1921 Building renovated
  - 9,000 square foot addition
- **Library**
  - New Building
  - 50,000 square foot
- **Plaza**
  - Amphitheater Seating
  - 24,000 square feet
- **Police Station**
  - 8,000 square foot addition
  - Six additional parking spaces
- **Parking Garage**
  - Three levels (one below grade)
  - 202 total parking spaces

Glendora

Glendora



Glendora

Glendora

FISCAL IMPACT

- Estimated construction cost: $125M (ROM, 2028 midpoint)
- Funding limited by Prop 13 restrictions
- Facility bond or similar revenue measure may be necessary
- Balance $50M deferred maintenance with $250M modernization need

RECOMMENDATIONS

That the City Council:

1. Receive a report on the civic center renderings and cost estimates; and,

2. Provide direction to staff.

INITIATIVE MEASURE TO BE SUBMITTED DIRECTLY TO THE VOTERS

The City of Glendora's City Attorney has prepared the following ballot title and summary of the chief purpose and points of the proposed measure pursuant to California Elections Code section 9203.

BALLOT TITLE

An Initiative Ordinance Authorizing a Special Parcel Tax to Fund the Construction, Repair, Rehabilitation, and Improvements to Facilities and Buildings Owned by the City of Glendora

SUMMARY

The proposed measure would authorize the City of Glendora ("City") to levy and collect a special parcel tax in order to fund the construction, repair, improvement, and rehabilitation, of buildings and facilities owned by the City, including the Police Department, parks and community facilities, the City Library, City Hall, the City public works yard and transportation yard, and other existing or future City-owned facilities.

The measure would authorize the City Council to levy a special parcel tax on all properties within the City, subject to the maximum rates and exemptions set forth below. Each year, commencing on July 1, 2027, the City Council may determine whether to levy the tax and the amount of the tax to be levied, but such tax amounts cannot exceed the Maximum Special Parcel Tax rate (as defined below).

The "Maximum Special Parcel Tax" rates for fiscal year 2027–2028 are as follows:

- Single-Family Residential Parcels: $0.19 per square footage of buildings and structures located on such parcel(s).
- Single-Family Attached Residential Parcels (i.e., residential development of up to 4 units, including ADUs, JADUs, and SB9 units): $0.19 per square footage of buildings and structures located on such parcel(s).
- All Other Developed Parcels (i.e., multifamily residential development of 5 units or more, commercial developments, and other properties developed for non-residential purposes): $0.27 per square footage of buildings and structures located on such parcel(s).
- Vacant Parcels: $150 per parcel.

Beginning in fiscal year 2028–2029, the Maximum Special Parcel Tax rates shall increase by 2 percent annually. The special parcel tax actually levied in any year by the City shall be determined pursuant to a resolution adopted by the City Council, but shall not exceed the applicable Maximum Special Parcel Tax rates for such year.

Parcels owned by governmental entities and parcels otherwise exempt from ad valorem property taxation under state law are exempt from the special parcel tax. The City Council may adopt additional exemptions as permitted by law.

The measure authorizes the City to levy the special parcel tax for a period of 35 years. After the 35-year period, the Maximum Special Parcel Tax will be automatically reduced by one-half unless the voters approve an amendment or otherwise determine to discontinue the tax.

The measure provides that the tax will be collected by the County Tax Collector in the same manner as ad valorem property taxes, including the same penalties, procedures, sale, and lien priority in cases of delinquency. All revenues generated from the tax must be deposited into a special fund and used solely for authorized purposes, including planning, engineering, financing, audits and administration. Funds may not be used for general City staff salaries, except for staff working exclusively on authorized projects. Oversight requirements include a City Council appointed citizens' oversight committee, annual public reporting, and an independent annual performance audit. Property owners may appeal the calculation or application of the tax through a City-administered appeal process.

Passage of this measure requires the affirmative vote of a simple majority (50% +1) of qualified voters.

Dated: December 22, 2025

Danny Aleshire
City Attorney
City of Glendora

CITY OF GLENDORA

INITIATIVE MEASURE TO BE SUBMITTED TO THE VOTERS

ORDINANCE NO. _____

AN ORDINANCE OF THE CITY OF GLENDORA, AMENDING TITLE 3 (REVENUE AND FINANCE) OF THE GLENDORA MUNICIPAL CODE IN ORDER TO ADOPT A SPECIAL PARCEL TAX TO FUND THE CONSTRUCTION, REPAIR, IMPROVEMENTS, AND REHABILITATION OF CITY FACILITIES

WHEREAS, pursuant a petition signed by residents in the City of Glendora ("City"), California Constitution Article II, Sections 9200 et. seq. of the California Elections Code (the "Law") the City is authorized to call an election for the proposition of incurring a special parcel tax to finance improvements to certain public infrastructure of the City; and

WHEREAS, this Ordinance, if adopted, proposes a special parcel tax measure initiated by a citizen committee, to finance the costs for the construction, repair, improvements, and rehabilitation to certain facilities owned by the City as further described in this Ordinance.

THE PEOPLE OF THE CITY OF GLENDORA DO HEREBY ORDAIN AS FOLLOWS:

SECTION 1: PURPOSES

The People of the City of Glendora ("City") desire the City to undertake certain public infrastructure improvements consisting of the repair, improvements, construction and/or rehabilitation of the following City facilities: the Glendora Police Department, City parks and community facilities, the Glendora Library, the Glendora City Hall, and the City public works yard and transportation yard.

It is the intent of the People of the City of Glendora in adopting this Ordinance to provide for a parcel tax, to be imposed as a special tax solely for the above-described improvements to the City Facilities (as defined specifically herein). The People of the City of Glendora hereby declare that providing additional funding to ensure the appropriate level of funding for the City Facilities through a special parcel tax for the purposes set forth in this Ordinance constitutes a municipal affair. The People of the City hereby further declare their desire for this Ordinance to coexist with any similar tax measures adopted by the City, County of Los Angeles, or the State of California.

SECTION 2: AMENDMENTS TO THE GLENDORA MUNICIPAL CODE

The Glendora Municipal Code ("GMC") is hereby amended by adding a new Chapter 3.56 to read in its entirety as follows:

"CHAPTER 3.56 CITY FACILITIES IMPROVEMENT TAX

SECTION 3.56.010 TITLE

The Ordinance codified in this chapter shall be known as the "Glendora City Facilities Improvement and Construction Tax Ordinance".

SECTION 3.56.020 AUTHORITY

This Ordinance is enacted in accordance with the authority granted by Article II, Section 11 of the California Constitution and California Elections Code section 9200 *et seq*. This Ordinance is initiated by citizens of the City of Glendora under the initiative power. Under currently law, California Cannabis Coalition v. City of Upland (2017) and subsequent cases such as City of Fresno v. Fresno Building Healthy Communities (2020), tax measures initiated by citizens may pass with a majority voter threshold. The parcel tax authorized herein is a special tax, and is not an ad valorem property tax. To the extent that the California Constitution or state law is amended on or after the date that this Ordinance is passed by voters to change or create additional voting requirements in order to implement or to continue to implement this Ordinance, the People of Glendora declare their intent that such amendments should be applied prospectively only and not apply to, or in any way affect, this Ordinance.

SECTION 3.56.030 PURPOSES

The purpose of this chapter is to provide a method of financing the Improvements to the City Facilities, as defined herein.

SECTION 3.56.040 DEFINITIONS

"Assessor's Parcel" means a lot or parcel of land that is identifiable by an Assessor's Parcel Number by the County Assessor of the County.

"Assessor's Parcel Number" means an identification number assigned to a parcel by the County Assessor of the County.

"Building(s)" shall mean any structure having a roof supported by columns or by walls and designed for shelter or housing of any person, chattel or property of any kind. The word "Building" shall include the term "Structure" as defined herein.

"City" means the City of Glendora.

"City Facilities" means the Glendora Police Department, City parks and community facilities the Glendora Library, the City Hall, the City public works yard and/or the transportation yard, and any other existing or future structures owned by the City and used by Glendora staff or residents.

"County" means the County of Los Angeles.

"Fiscal Year" means the period from and including July 1st of any calendar year until June 30 of the following calendar year. For reference, County property taxes for a fiscal year, are, pursuant to current state law collected in two equal installments which become delinquent on December 10 and April 10 of the Fiscal Year.

"Improvements" means the construction, reconstruction, repair, improvement, rehabilitation, furnishing, and equipping of the City Facilities.

"Maximum Special Parcel Tax" shall have the meaning given thereto in Section 3.56.050.

"Other Developed Parcel(s)" means any Property used for multi-family (five (5) or more) residential units, commercial, and/or other non-residential purposes.

"Property(ies)" means a lot or a parcel of land or any parcel with an Assessor's Parcel Number or, if no number, clearly identifiable as a parcel as determined by the City Engineer by May 1 of the year preceding the Fiscal Year in which the tax will be levied.

"Property Category" means the applicable classification assigned herein to Property within the City based on its use (i.e., either a Single Family Residential Parcel, a Single Family Residential Parcel Attached, an Other Developed Parcel, or a Vacant Parcel).

"Single Family Residential Parcel" means a Property which is improved with one residential unit. A Single Family Residential Parcel shall include any Property which is improved with one primary dwelling unit and all applicable accessory dwelling units, including junior accessory dwelling units and applicable SB9 units.

"Single Family Residential Parcel Attached" means a Property with is improved with a residential unit that is attached to another residential unit in a group of four or less. Any residential unit that is attached to more than three additional residential units, shall be considered multi-family housing and will be included in the definition of "Other Developed Parcels". The term, Single Family Residential Parcel Attached will include any Property which is improved with one primary dwelling unit and all applicable accessory dwelling units, including junior accessory dwelling units and applicable SB9 units.

"Special Parcel Tax" means the special parcel tax levied on Properties in the City pursuant to the terms of this chapter.

"Square Footage" shall mean the total gross horizontal areas of all floors, including usable basement and cellars, below the roof and within the out surface of the main walls of buildings (or the center lines of party walls separating such buildings or portions thereof) or within lines drawn parallel to and two feet within the roof line of any building or portion thereof without walls.

"Structure(s)" shall mean anything constructed or erected, the use of which requires location on the ground or attachment to something having location on the ground.

"Vacant Parcel" means a Property that is not improved with any Building, Structure, or other development.

SECTION 3.56.050 MAXIMUM TAX RATE/METHOD OF ASSESSMENT

(1) Maximum Rate: Each Fiscal Year commencing in Fiscal Year 2027, each Assessor's Parcel / Property within the City shall be subject to a maximum Special Parcel Tax in the amounts set forth below (each, as applicable, the "Maximum Special Parcel Tax").

A. Single Family Residential Parcels: the City Council is hereby authorized to impose a Special Parcel Tax in the amount of $0.19 per Square Footage of any Buildings located on a Single-Family Residential Parcel.

B. Single Family Residential Parcels Attached: the City Council is hereby authorized to impose a Special Parcel Tax of $0.19 per Square Footage of any Buildings located on a Single-Family Residential Parcel Attached.

C. Other Developed Parcels: the City Council is hereby authorized to impose a Special Parcel Tax of $0.27 per Square Footage of any Buildings located on any Other Developed Parcels.

D. Vacant Parcels: the City is hereby authorized to impose a Special Parcel Tax of $150 per parcel of Property that is a Vacant Parcel.

The Maximum Special Parcel Tax shall increase annually on July 1 of each Fiscal Year commencing in Fiscal Year 2028 by two percent (2%) per Fiscal Year.

(2) Annual Levy: The City Council of the City may levy a Special Parcel Tax annually by resolution on all non-exempt Properties in the City. In any Fiscal Year, the City Council, may by resolution levy at a rate lower than the Maximum Special Parcel Tax; provided however that, the Maximum Special Parcel Tax shall continue to increase as provided in subsection (1) above.

(3) Apportionment: Unless exempt, every Property in the City shall be subject to the Special Parcel Tax at the same rate assigned for the applicable Property Category.

SECTION 3.56.060 EXEMPTIONS; REFUNDS AND ADJUSTMENTS

(1) The following Properties shall be exempt from the tax provided by this chapter.

(a) Properties which are owned by, encumbered by, or restricted in use by the State of California, Federal or other local governments or agencies, including school districts, water districts, the City of Glendora, and other governmental agencies; and

(b) Properties which are exempted from ad valorem property taxes by law.

(2) The City Council may, from time to time, by ordinance adopt exemptions to the Special Parcel Tax set forth herein to the extent such exemptions are consistent with applicable law. The City Council shall establish the procedures and guidelines for Property owners to apply for, and be granted, the exemptions identified in this section, and other terms regarding the provisions for claiming certain exemptions. Examples of possible exemptions may include, but are not limited to churches / places of worship, senior housing, and/or affordable / low-income housing. The City Council may add temporary or permanent exemptions to the Special Parcel Tax but may not remove or narrow exemptions permitted by this Ordinance. The City Council may not increase the tax burden on any taxpayer category except as permitted by this Ordinance without a vote of the electorate.

(3) The City Council may, by ordinance or resolution, establish procedures and guidelines relating to refunds, adjustments, delinquencies, appeals, and other processes and procedures for the administration of the Special Parcel Tax.

SECTION 3.56.070 COLLECTION

Pursuant to California Government Code Section 53087.4, any Special Parcel Tax authorized under this chapter shall be collected by the tax collector of the County. The Special Parcel Tax shall be collected in the same manner as ordinary ad valorem property taxes are collected and shall be subject to the same penalties and the same procedure, sale, and lien priority in case of delinquency as is provided for ad valorem taxes. However, the City Council of the City may authorize the collection of the Special Parcel Tax at a different time or in a different manner as allowed by law.

Any charges made by the tax collector of the County shall be paid out of funds deducted from the gross proceeds of the Special Parcel Tax.

The amount of any Special Parcel Tax, penalty, and interest imposed by this Ordinance will be deemed a debt to the City. Any owner of a Property that owes money under the provisions of this Ordinance, and to the extent the money is not collected through the tax collector of the County, will be liable to the City for the recovery of such amount.

In any Fiscal Year, the City may elect not to have the Special Parcel Tax collected by the County tax collector. In such case, the City shall bill, administer and collect the Special Parcel Tax directly, and the Finance Director of the City shall develop billing procedures for billing the Special Parcel Tax directly in the event the City determines to bill the tax directly.

SECTION 3.56.080 INCREASE APPROPRIATIONS LIMIT

Pursuant to California Constitution Article XIII B, the appropriations limit for the City will be increased by the aggregate sum collected by levy of the Special Parcel Tax in each of the years covered by this chapter.

SECTION 3.56.090 FUNDING AND EXPENDING PROCEEDS; REPORTING

Proceeds of the Special Parcel Tax levied under this chapter shall be deposited into a special fund dedicated to the Improvements for the City Facilities and the eligible expenses and costs set forth in this section.

Monies in such special fund may be expended for the following purposes: (a) financing, planning, engineering, and legal fees incurred with respect to the Improvements for the City Facilities, (b) all costs of the Improvements to the City Facilities, (c) financing the Improvements to the City Facilities; including issuance of bonds, loans, contracts, service agreements, leases, installment sale agreements or other obligations or indebtedness secured by the Special Parcel Tax revenues ("Obligations"), and (d) costs of administering this chapter and the Special Parcel Tax

provided for herein, including (i) any audit with respect to the use of the monies in the special fund, (ii) any reporting obligation with respect to the Special Parcel Tax, the Improvements, the City Facilities, and/or the monies in the special fund, (iii) costs associated with developing ordinances, resolutions, and regulations to implement the provisions of this chapter, (iv) costs associated with the collection of the Special Parcel Tax through the County or by any other method of collection of the Special Parcel Tax as may be approved by the City Council, and (v) cost associated with administering, monitoring, and enforcing the provisions of this chapter, including reimbursement to the City for legal fees and expenses for any legal defense in the event any of the provisions of this chapter are legally challenged, or if the use of the monies in the special fund are legally challenged. Proceeds of the tax shall not be used for City staff salaries with the exception of payments or reimbursements to the City for actual, verifiable costs of City staff performing work on, or necessary and incidental to the projects funded by the tax and the oversight and accountability elements required under this chapter.

The City Clerk or City Finance Director shall (i) prepare and present to the City Council an annual report identifying all receipts into and all expenditures out of the special fund in accordance with Section 50075.3 of the California Government code (or such successor provision), and (ii) prepare and provide to the relevant state authority any information required under Section 12463.2(b) of the California Government Code (or such successor provision).

SECTION 3.56.100 SEVERABILITY

If any provision of this chapter or the application thereof to any person or circumstance is held invalid, such invalidity shall not affect any other provisions or applications, and to this end the provisions this chapter are declared to be severable.

SECTION 3.56.110 DURATION, AMENDMENT, OR REPEAL

The City shall levy the Special Parcel Tax for a period of thirty-five (35) years, at which time the rate will be reduced by half unless amended or otherwise ended by voters. The City may enter into obligations for the purposes of financing the Improvements to the City Facilities for a period not to exceed the term.

Pursuant to California Elections Code Section 9217, the City Council shall have and retain the right and authority to amend provisions of this chapter to in any manner that does not increase the Maximum Special Parcel Tax, or otherwise constitute a tax increase for which voter approval is required.

The Special Parcel Tax shall not be repealed, to the extent that such repeal (pursuant to an initiative or other action), would cause the City to violate the Contract's clause of the Constitution of the United States or similar clauses in the California Constitution.

SECTION 3.56.120 ACCOUNTABILITY

The following accountability requirements shall apply to the Special Parcel Tax:

(i) The proceeds from the Special Parcel Tax shall be used only for the purposes specified in this chapter.

(ii) The proceeds from the tax shall only be spent on City Facilities within the jurisdiction of the City.

(iii) The City shall conduct an annual, independent performance audit to ensure that the tax funds are expended pursuant to the purposes specified in clause (i) and (ii).

(iv) The City shall appoint a citizens' oversight committee to ensure that the tax is expended only for the purposes described in the measure approved by the voters. The committee shall meet as needed but a minimum of twice per year. The committee shall contain five (5) members appointed by the City Council, consisting of one member representing residential parcel owners, one member representing Other Developed Parcels, one member representing business entities, and two members at large. Members appointed to the oversight committee shall receive educational training about taxes and fiscal oversight.

(v) A separate account shall be created and held by the City, into which the proceeds of the Special Parcel Tax shall be deposited and applied solely for the purpose of financing the Improvements.

(vi) The City's City Clerk or Director of Finance shall file a report with the City Council at least annually showing the amount of the Special Parcel Taxes collected and expended, and the status of the Improvements.

SECTION 3.56.130 APPEALS

Any property owner claiming that the amount or application of the taxes levied hereunder are not correct may file a written notice of appeal with the City not later than twelve months after having paid the first installment of the tax that is disputed. The City's Finance Director shall promptly review the appeal, and if necessary, meet with the property owner, consider written and oral evidence regarding the amount of the tax, and rule on the appeal. If the City's Finance Director's decision requires that the tax for an Assessor's Parcel be modified or changed in favor of the property owner, a cash refund shall not be made, but an adjustment shall be made to the Special Parcel Tax on that Assessor's Parcel in the subsequent Fiscal Year(s). The City's Finance Director at his/her discretion may also consider refunding the amount or alternate methods of crediting the change in favor of the property owner.

SECTION 3.56.140 INTERPRETATION

Interpretations may be made by the City Council by ordinance or resolution for purposes of clarifying any vagueness or ambiguity in this chapter. This chapter shall be interpreted liberally to effect the purposes hereof." Interpretations shall be made to preserve the validity of this Special Parcel Tax and to comply with applicable constitutional restrictions.

SECTION 3. LEGAL DEFENSE

The People of Glendora desire that this Ordinance, if approved by the voters and thereafter challenged in court, be defended by the City. The People, by approving this Ordinance, hereby declare that the proponent(s) of this Ordinance have a direct and personal stake in defending this Ordinance from constitutional or statutory challenges to this Ordinance's validity or implementation. In the event that the City elects not to defend this Ordinance in any legal challenge, the official proponents shall have standing to intervene and defend the measure. The City may reimburse proponents solely for reasonable litigation expenses upon a finding by the City Council and certification by the City Attorney that such expenditures are permissible under State law and do not constitute a gift of public funds. The rate of indemnification shall be no more than the amount it would cost the City to perform the defense itself.

SECTION 4. CONFLICTING MEAURES

If this Ordinance and one or more conflicting measures appear on the same City ballot, the provisions of this Ordinance that receives the greater number of affirmative votes will prevail in its entirety, and the other measure or measures shall be null and void. If this Ordinance is approved by the voters but superseded by law by another conflicting measure approve by the voters at the same election, and the conflicting ballot measure is later held to be invalid, this Ordinance shall be self-executing and will be given full force and effect.

SECTION 5. EFFECTIVE DATE

This Ordinance shall become effective upon its approval by a simple majority of electors voting on this Ordinance.

SECTION 6. SEVERABILITY

If any section, subsection, sentence, clause, or phrase of this Ordinance is for any reason held to be invalid or unconstitutional by a decision of any court of any competent jurisdiction, such decision shall not affect the validity of the remaining portions of this Ordinance. The voters hereby declare that they would have passed this Ordinance, and each and every section, subsection, sentence, clause and phrase thereof not declared invalid or unconstitutional without regard to whether any portion of this Ordinance would be subsequently declared invalid or unconstitutional. The provisions of this Ordinance are hereby declared severable.

CITY CLERKS OFFICE
CITY OF GLENDORA

NOTICE OF INTENT TO CIRCULATE PETITION

Notice is hereby given by the persons whose names appear hereon of their intention to circulate the petition within the City of Glendora for the purpose of qualifying an initiative measure that will enact a parcel tax proposition to fund renovating, improving and construction of needed City facilities for the November 3, 2026 ballot named the "Glendora City Facilities Improvement and Construction Tax Ordinance".

A statement of the reasons for the proposed action as contemplated in the petition is as follows:

The purpose of the proposed initiative is to authorize the creation of a parcel tax to finance much-needed structural deficiencies, upgrading and enhancing City facilities, improving parks and community centers, and expanding public spaces and amenities available to Glendora residents.

The proposed measure would establish a parcel tax to fund critical facility improvements across the City. These include, but are not limited to:

- Addressing structural deficiencies;
- Improvements to City Infrastructure
- Renovations and improvements to public safety facilities and public library;
- Enhancements to parks, trails and open space; and
- Modernization, renovations and improvements of other City-owned facilities.

A key feature of this measure is its commitment to expanding the range, quality, and availability of City services and facilities - not only repairing what exists, but building and expanding to meet the evolving needs of Glendora's residents.

To ensure transparency and fiscal responsibility, the measure includes strict accountability provisions:

- Independent financial and performance audits;
- Citizen oversight through a public committee;
- A prohibition on using parcel tax funds for City salaries, employee benefits, or operational expenses, with the exception of any direct expenses that have been created solely for any identified projects.

This measure was developed by the Facilities Restructuring of Glendora (F. R. O. G.) committee whose proponents are Joseph (Joe) Cina & James (Jim) Nakano to invest in Glendora's future, and with the goal of securing long-term investments in Glendora's public infrastructure and quality of life to meet current demands, and ensure access to high-quality public spaces and services for generations to come.

NOTICE OF INTENTION
AUTHORIZED REPRESENTATIVE DESIGNATION

An Authorized Representative Designation is required whenever the proponents want another individual—to submit filings, receive official communications, or act on their behalf in any part of the initiative submission process.

I/We, the undersigned proponent(s), hereby designate Gary Boyer as our Authorized Representative for purposes of the initiative measure titled:

the "Glendora City Facilities Improvement and Construction Tax Ordinance"

By signing below, I/We authorize Gary Boyer to:

1. Submit the Notice of Intention to the City Clerk on behalf of all listed proponents.
2. Receive and accept all official communications, including the Ballot Title and Summary prepared by the City Attorney.
3. Submit, withdraw, and otherwise act on behalf of the proponents in all matters relating to the filing, processing, and submission of initiative documents as required by the California Elections Code.
4. Coordinate the submission of petition sections following signature collection.

This authorization remains valid for this initiative measure unless revoked in writing by a majority of the listed proponents.

Authorized Representative:

Name: GARY BOYER Signature: [signature] Date: 12/11/25

Proponents Approval of Authorized Representative (each Proponent must sign):

Name: JAMES NAKANO Signature: [signature] Date: 12/11/25

CIVIC CENTER UPDATE

CITY COUNCIL
JANUARY 13, 2026
CITY MANAGER'S OFFICE

LEGISLATIVE HISTORY/PREVIOUS ACTIONS

➢ **January 2023**	Library assessment (MHP)
➢ **September 2023**	Water system assessment ($350M need)
➢ **January 2024**	Library funding discussion & survey
➢ **August 2024**	Survey: 53% support citywide measure
➢ **November 2024**	ACA 5 failed (bond threshold)
➢ **February 2025**	$50M deferred maintenance, $250M modernization need
➢ **March 2025**	Comprehensive update on capital project costs, revenue measures, and facility needs. City Council requested Civic Center cost estimates

LEGISLATIVE HISTORY/PREVIOUS ACTIONS

- **April 2025** — Unanimous approval of 2025-2027 Strategic Plan
- **June 2025** — Update on deferred maintenance of City facilities, information on revenue measures, historical land use decisions, and update on recent infrastructure investments
- **September 2025** — City Council review of Civic Center renderings and costs
- **December 2025** — Approval of DLR Group amendment to implement City Council direction from September Civic Center discussion

WE HAVE BEEN HERE BEFORE

- **January 1963 Civic Center Visioning Plan: AWA Architects**

  - Focused on current and future community needs

  - Identified significant City Hall structural issues

- **Prior to building of Current Police Station and Library**

  - Police Station built through voter approved measure in 1965

  - After failed Library revenue measure in 1955, City moved Fire Department operations to the County and used pre-Prop 13 property tax increases to finance current library building in 1969

Upscale Suburb Warned Its Beauty is Only Skin Deep

"It's a fairly well-to-do suburb with multimillion-dollar mansions in the foothills and a bustling commercial center, but Glendora's infrastructure is crumbling, and the city cannot afford repairs."

"But experts say Glendora's current financial difficulties are far from unique among the state's more than 500 cities. Public spending on infrastructure in California has declined more than 75% since the 1960s."

WHY THIS DISCUSSION MATTERS

- **Glendora prioritizes quality of life through investment in core infrastructure**
- **Recent Strategic Plans consistently emphasize:**
  - Parks, trails, streets, sidewalks
  - Water systems
  - Civic and public safety facilities
- **Community surveys identify infrastructure and homelessness as top challenges**
- **$50+ million invested in capital improvements over the last five years**

THE INFRASTRUCTURE CHALLENGE

- **Decades of underinvestment have resulted in:**
  - $50 million in deferred maintenance
  - $250+ million in facility modernization needs
- **Facilities must meet:**
  - Accessibility
  - Safety
  - Seismic
  - Operational standards
- **State and Federal funding has declined significantly**
- **Significant changes to local revenue landscape (e.g. Prop 13)**

BACKGROUND ON DETAILED CITY COUNCIL DISCUSSIONS

- **Attachment A:** Deferred Maintenance on City Facilities, Capital Needs, Historical Capital Cost Increases, and Funding Options (March 11, 2025)

- **Attachment B:** Update on City Facilities and Capital Needs, Historical Land Use and Population discussion, and Revenue Measure Options (June 24, 2025)

- **Attachment C:** Initial Civic Center Renderings and Rough Order of Magnitude Costs (September 9, 2025)

Note: These attachments also contain information from other City Council discussions: library structural assessment, history of current civic center, changes in public finance, revenue measure community survey, etc.

LIBRARY STRUCTURAL ASSESSMENT AND VISIONING (JANUARY 2023-JANUARY 2024)

- **First comprehensive library evaluation in decades (MHP Study)**
  - Structural and seismic deficiencies
  - Aging mechanical, electrical, plumbing systems
  - Building envelope limitations
- **Many deficiencies are systemic, not solvable with minor repairs**
- **Functional constraints limit modern service delivery**
  - Youth and teen programming
  - Group study and meeting space
  - Technology and digital learning

Glendora

BROADER FACILITIES CONVERSATION

- **Council recognized:**

  - Addressing one facility alone creates long-term challenges

  - City Hall, Police, community centers, and public works yards face similar issues

- **Direction given to:**

  - Explore funding options

  - Align investments with community priorities

  -Conduct a community survey on potential revenue measures

COMMUNITY FACILITIES SURVEY (AUGUST 2024)

- **Statistically valid survey conducted by True North Research**
- **Key findings:**
  - Strong value placed on infrastructure investment
  - 53% support for a citywide facilities measure
  - 45% support for a Library-only measure
- **Below 2/3 threshold for City-sponsored bond**
- **Reinforced need for:**
  - Public education
  - Transparency

CITYWIDE CAPITAL NEEDS AND CONTEXT

- **Facilities, streets, and utilities largely built 1950s–1970s**
  - Aging simultaneously across systems
- **Post WWII Suburban development patterns:**
  - High infrastructure costs per capita
  - Lack of ongoing revenue to maintain/replace streets roads
  - Limited development impact fees to replace City facilities
  - Limited commercial tax base
- **Water system alone requires $350 million over next 30 years**
- **Facilities needs remain substantial despite recent investments**

RECENT INVESTMENTS & COST PRESSURES

- **Measures E/Z, significant grants, and strategic use of capital funds have enabled:**
  - $60+ million invested since 2020
  - $108+ million in programmed future projects
- **City's construction costs have often doubled since 2019**
- **State and Federal fund for infrastructure have decreased by over 50% in last 20+ years**
- **Each dollar now delivers less infrastructure value**
- **Gap between needs and resources continues to widen**

CIVIC CENTER CONCEPTUAL WORK

- **DLR Group engaged to prepare:**
  - High-level conceptual renderings
  - Rough Order of Magnitude (ROM) cost estimates
- **Scope includes:**
  - Library, Police Department, City Hall, Council Chambers, and Parking
- **Urban design considerations:**
  - Glendora Avenue
  - First/Last Mile improvements
  - Village and Metro A Line connectivity

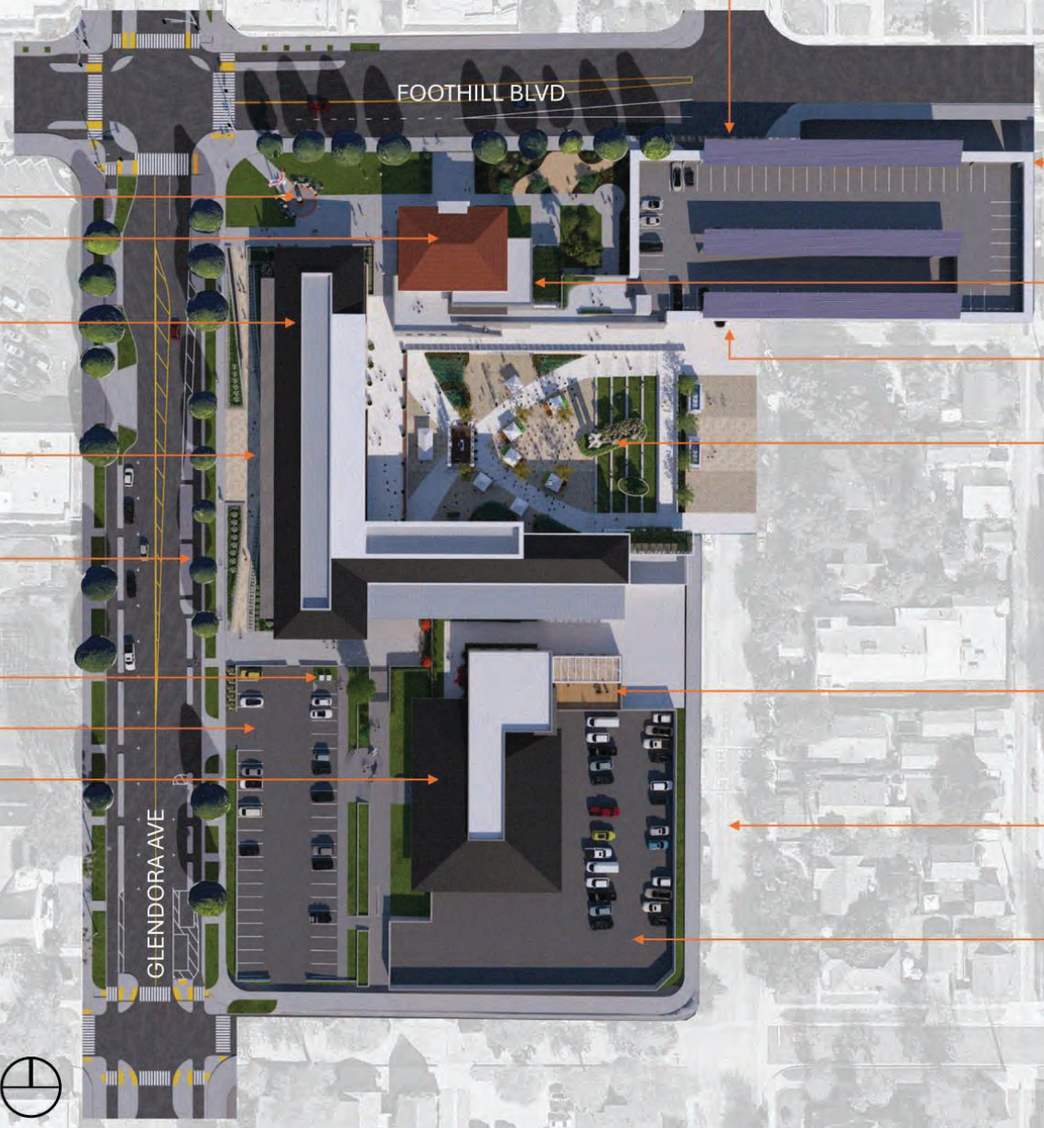
CIVIC CENTER PRELIMINARY COST ESTIMATE

- **ROM construction cost of $125 million:**
  - Phasing and occupancy premiums
  - Escalation to 2028 construction midpoint
- **High-level estimate only, costs subject to:**
  - Community feedback
  - Market conditions
  - Refinement over time

CIVIC CENTER CONCEPTUAL WORK

- **Excerpt from September 2025 Staff Report:**

"This concept serves as a starting point for community conversation, giving residents and stakeholders a shared framework to react to, discuss, and shape."



CIVIC CENTER CITY COUNCIL FEEDBACK

- **Renderings are:**
  - Conceptual and exploratory
  - Not a final design or commitment
- **Emphasis on:**
  - Clear assumptions, cost uncertainty, fiscal responsibility, phasing options
- **Historic City Hall as inspiration —not prescription**
- **Balance placemaking with:**
  - Core services, operational efficiency, and affordability

PROJECT DETAILS

- **City Hall**
  - 1921 Building renovated
  - 9,000 square foot addition
  - Demo of Council Chambers and office space to allow room for parking and library
- **Library**
  - New Building
  - 50,000 square foot
- **Plaza**
  - Amphitheater Seating
  - 24,000 square feet
- **Police Station**
  - 8,000 square foot addition
  - Six additional parking spaces
- **Parking Garage**
  - Three levels (one below grade)
  - 202 total parking spaces

UPDATED CIVIC CENTER WALKTHROUGH

POTENTIAL CITIZEN INITIATIVE (NOVEMBER 2026 TARGET)

- **Notice of Intent received December 11, 2025**
- **Proposed special parcel tax**
  - Based on square footage
  - Variable by property type
  - Restricted to City facility capital improvements
- **Accountability measures:**
  - Independent audits
  - Annual reporting
  - Citizen oversight committee
- **Estimated revenue: $8–$9 million annually**
  - Authority for City Council to reduce amounts, and exempt certain property, which would lower estimated revenues

POTENTIAL CITIZEN INITIATIVE BALLOT PROCESS & CITY COUNCIL ROLE

- **Ballot title and summary issued December 22, 2025 by City Attorney**
- **3,700 signatures required within 180 days**
- **If qualified, City Council may:**
  - Oppose
  - Support
  - Take no position

STRATEGIC FOCUS AREAS

Goal 3: New + Revitalized Facilities

- **Action 3.1: Funding methodology for Civic Center**
- **Action 3.3: Complete space planning assessment**
- **Action 3.4: Remodel vs. new build decision**

- *Focus of agenda item: Actions 3.1 and 3.4*

FINANCIAL CONTEXT

- **$125M project debt service: $9–$10 million annually**
- **$9 million is 16% of General Fund and Measures E/Z**

  - Equivalent to total operating cost of Recreation & Human Services, Library, City Manager, City Clerk, Human Resources, Finance and Risk Management

  - Police, Public Works, and Community & Economic Development represent approximately 70% of all General Fund and Measure E/Z funds

FUNDING METHODOLOGY OPTIONS

1. Pursue City-sponsored ballot measure (2026 or beyond)
2. Modify service levels to free General Fund and Measure E/Z capacity
3. Wait-and-see approach on citizen initiative, and continue to seek grants
4. Combination or alternative direction

CIVIC CENTER DESIGN DIRECTION OPTIONS

1. Adopt revised conceptual drawings as baseline
2. Direct further refinements
3. Take a new project approach
4. Combination of options

RECOMMENDATIONS

That the City Council:

1. Receive a report on updated civic center renderings, cost estimates, and funding scenarios; and
2. Provide direction to staff in accordance with the 2025-2027 Strategic Plan New+Revitalized Facilities Goal relating to the Civic Center: Actions 3.1 (funding methodology) and Action 3.4 (new/remodel).

STAFF REPORT

TO:	**Mayor and Council Members**	**DATE:**	**February 24, 2026**
FROM:	**City Manager**	**DISTRICT(S):**	**Citywide**
SUBJECT:	**Use of One-Time Funds**		

RECOMMENDATION
That the City Council:

1. Receive an overview on one-time funding opportunities; and
2. Provide direction, as needed.

STRATEGIC FOCUS AREAS
Goal 3 - New + Revitalized Facilities
Goal 4 - Sustainable Infrastructure

EXECUTIVE SUMMARY
Over the past decade, Glendora restored its financial stability by addressing a $3–$4 million structural deficit through voter-approved sales tax measures, pension restructuring, and stronger reserve and capital funding policies. These reforms earned the City a AAA bond rating and enabled targeted investments in infrastructure, public safety, and homelessness response aligned with community priorities. With the recent passage of Measure Z and a continued focus on long-term planning, the City remains committed to fiscal discipline while carefully balancing limited resources against ongoing service and infrastructure needs.

At the January 13, 2026, staff committed to returning to the City Council with a broader conversation regarding one-time uses of available resources during or after the mid-year budget update. This discussion will outline existing one-time funds, document how the City has prepared for future fiscal challenges, and provide examples of how those funds could be utilized. For the past seven years, the City Council has supported a transparent, policy driven dialogue that reflects the City Council's continued commitment to thoughtful decision making and its ongoing work alongside staff to strengthen Glendora's financial foundation, address decades of differed maintenance, and improve the community for years to come.

LEGISLATIVE HISTORY / PREVIOUS ACTIONS
At the January 13, 2026, staff committed to returning to the City Council with a broader conversation regarding one-time uses of available resources during or after the mid-year budget update.

On February 24, 2026, the City Council received the FY 2025-2026, mid-year budget update (same meeting this this agenda item).

DISCUSSION

During the city facility and infrastructure discussion on January 13, 2026, staff committed to returning to the City Council with a broader conversation regarding one-time uses of available resources in concert with the mid-year budget update. This discussion will outline existing one-time funds, provide context on how the City has prepared for future fiscal challenges, and provide examples of how those funds could be utilized. These examples, will represent policy decisions/direction of the City Council.

For the better part of a decade, the City of Glendora has undertaken a deliberate and disciplined transformation of its fiscal policies, allowing the City to confront long-standing challenges, while positioning the organization for long-term stability. In fiscal years 2017-18 and 2018-19, the City projected General Fund deficits exceeding $1 million annually. As leadership transitioned and deeper analysis was conducted, it became clear that the structural imbalance was far more significant, at closer to $3–$4 million per year. Recognizing the seriousness of the situation, the City had already convened a citizen advisory committee to evaluate paths to financial sustainability, including land sales, operational efficiencies, service reductions, outsourcing and potential revenue enhancements.

The committee ultimately recommended that the City Council place a local sales tax measure on the ballot. While the typical local measure is 1.0%, Los Angeles County's Measure H had already claimed 0.25%, limiting the City's available rate. In 2019, the City Council placed Measure E, a 0.75% sales tax, before the voters, and the measure was approved. Concurrently, the City issued a Pension Obligation Bond (POB), generating annual savings of more than $1 million and significantly improving long-term pension cost predictability.

With the passage of Measure E and the issuance of the POB, the City Council directed staff to modernize Glendora's fiscal framework. Updated fiscal policies were adopted that aligned with the City's strategic plan and reflected a commitment to weathering an uncertain economic future. These changes included strengthening the General Fund Reserve, establishing a discretionary capital projects fund/reserve, shoring up internal service funds (e.g. Fleet, Technology, etc.) and intentionally setting aside resources for future pension obligations. Together, these policies represented foundational change by acknowledging both the scale of past under-investment and the need for sustained discipline in future years to address infrastructure demands, service expectations, and the uncertain fiscal landscape in California. These foundational changes would allow the City time to make significant policy decisions during recessions without immediate impacts to services, and the possibility to address certain facility needs during emergencies.

The results of this fiscal stewardship have been significant. Glendora earned an AAA bond rating for its General Fund, an achievement shared by fewer than 20 cities statewide, validating the City Council's long-term approach to financial governance. In the years that followed, the City continued its stewardship of taxpayer money. The City made significant investments in technology and modernized its operations, eliminating duplicative functions, restructuring departments to better serve the public, and expanding strategic use of the private sector in hard to recruit service areas. At the same time, the City undertook comprehensive assessments of its infrastructure systems, including water, parks/trails, trees, streets, facilities, and technology (infrastructure studies).

Guided by the principle that "what gets funded gets done," the City has relied on scientifically valid community surveys, foundational infrastructure studies, and City Council direction to shape multi-year strategic plans. These plans are directly integrated into the annual budget and departmental work programs, ensuring alignment between community priorities, fiscal decisions, and staff efforts. The outcomes have been measurable and, in many respects, historic. For the first time in decades, overall street conditions improved from one decade to the next, albeit minimal. Chronic vacancy challenges have been mitigated, with targeted investments in public safety, recreation and human services, public works, and water—each directly tied to community quality of life and safety concerns.

Nowhere is this philosophy more evident than in the City's recent investments in public safety and homelessness response. Community feedback consistently identified emergency responsiveness, neighborhood safety, and visible homelessness impacts as top priorities. In response, the City Council made intentional, ongoing investments in people and systems. These investments include additional sworn police officers, added dispatch personnel to improve response times, enhanced emergency operations and preparedness capacity, and the creation and expansion of a Community Impact Team focused on proactive engagement and community problem solving. The City has also increased funding for service providers and regional partnerships to address homelessness through outreach, case management, and supportive services, enforcement, and clean-up. Together, these investments reflect a shift from reactive responses to a more coordinated, data informed, and professional approach aligned with community expectations.

Despite this progress, significant challenges remain. The impacts of homelessness, increasing state mandates, loss of local control, insurance, and the absence of a permanent funding source for capital improvements continue to place pressure on City finances. While Glendora has made generational investments in infrastructure over the past five to seven years, decades of under-investment cannot be reversed overnight. These efforts have been strengthened by the successful pursuit of tens of millions of dollars in grants and state and federal appropriations, supporting projects ranging from parks and first/last-mile improvements to school site traffic safety and signalized intersections.

Recognizing the importance of keeping local dollars local, the City Council placed Measure Z on the November 2024 ballot, a 0.25% sales tax measure designed to preserve local revenue capacity and offset prior countywide tax measures. Glendorans understood and supported this need, with affirmative election results materially above those of Measure E. Measure Z reflects the City Council's continued commitment to fiscal sustainability and local control, by keeping funds local and ensuring that Glendora remains positioned to fund essential services and community priorities in an increasingly constrained fiscal environment.

That same forward looking mindset is reflected in the City's current Strategic Plan, adopted in early 2025. The plan continues to direct staff to actively pursue additional and diversified revenue opportunities, including potential development in the South Hills area, strategic economic development investments, and redevelopment opportunities at underutilized sites owned by other governmental agencies and the City itself. Many of these actions were originally recommended to the City Council during the citizen committee meetings in 2018 and 2019. These efforts underscore the ongoing work of the City Council and staff to responsibly grow the City's revenue base while remaining consistent with the City Council's other long-term planning goals.

Due to the City's fiscal reforms, the City has some capacity to consider one-time investments; resources that would not exist without the foundational changes made years earlier. However, these same resources are needed to address competing priorities, including streets, parks, city facilities and long-term financial resilience.

Discretionary One-Time Funding Breakdown

The General Fund, Pension Stabilization Fund, Measures E/Z Fund, GUSD JUA Fund, and Capital Projects Fund are discretionary funding sources for the City. Staff evaluated each fund, taking note of:

- Fund balance/ reserve levels;
- Ability of re-prioritization of capital projects;
- One-time funding from property sales;
- Future development opportunities of other local agencies; and
- Options for strategic use of amounts set aside for pension and other post-employment benefit costs.

Attachment A to this report provides a detailed analysis of one-time funding opportunities. The report is broken down by two-year budget cycle (FY 2025-2027, FY 2027-2029, and FY 2029-2031) and by major category (e.g. fund balance/reserves, reallocation of CIP, property development, pension/OPEB reserves, etc.).

Available Fund Balance/Use of Reserves

Currently, the City has approximately $18.3 million in the General Fund Reserve. The General Fund reserve policy requires a minimum of 30% to maximum of 45% of prior year operational expenditures; currently the City maintains a 40% reserve level. The reserve policy range represents the ability to fund approximately 3 to 6 months of General Fund operations in the absence of any other revenue received. The amount of General Fund reserve in excess of the minimum (30%) is approximately $4.58 million. In addition to the General Fund, the City's has an estimated $2.28 million in fund balance in the Measures E/Z fund that can be used for discretionary purposes. During the FY 2027-2029 and FY 2029-2031 two year budget cycles, staff anticipates additional Measures E/Z fund balance of $569,000 and $260,000 respectively.

The use of General Fund reserves and Measures E/Z fund balance can impact the City's bond rating and operational flexibility during an economic downturn. Without reserves at certain levels, future borrowing costs may be higher and the City may have to look at more immediate/significant service cuts to the community in lieu of targeted use of reserves during major emergencies or economic downturns. Ample reserves allows the City Council time to make targeted, policy oriented service reductions when needed.

Reallocation of CIP

Staff has identified an opportunity for the City Council to reallocate approximately $1.9 million of existing projects to other priorities, if needed. Currently, the City's discretionary capital projects fund has approximately $1 million in projects aimed at the civic center (e.g. Council chamber remodel/expansion, civic center roofing, etc.).

The City and Glendora Unified School District (GUSD) have a long history of partnering on community assets (e.g. middle school parks, high school pool, etc.). GUSD has a current pool renovation project, in which the City has contributed $600,000 to the $4 million dollar project. Additionally, the City Council approved an additional contribution of up to $900,000 that is dependent on the City's financial performance through June 30, 2027.

As the City's civic center project is not underway and the GUSD pool project came in under budget ($5.8 million down to $4 million), funding may be reallocated. The City Council may also want to explore the use of the $900,000 pool project funding, to leverage the recent $1.2 million federal appropriate the City helped GUSD secure for the Sandburg Middle School track and lighting project. The future project area at Sandburg Middle School operates as a City park after 4pm.

Disposition/Sale of City Owned Properties

The sale of the San Jose site provided the City with $3.99 million. The City Council previously allocated $1 million of these proceeds to achieve initiatives in the City's strategic and economic development action plans (8/27/2024), leaving $2.99 million for future use. Additionally, staff anticipates an estimated $2.1 million to be received by June 30, 2027 for the sale of the Dale site. This funding will be dependent upon approval of a development in accordance with the City's standards and actions by the Planning Commission and City Council.

With the sale of San Jose and Dale project sites, staff anticipates a total of approximately $5.1 million available within the next 16 months, with approximately $3 million available now.

Pension/OPEB Reserves

Through the direction and approval of the City Council, staff have set up Section 115 Trusts and Reserves for future pension liabilities, including CalPERS unfunded accrued liability (UAL), future pension obligation bond (POB) payments, and

Below is a summary of the totals included on Attachment A and described above.

One-Time Discretionary Funding By Two-Year Budget Cycle	Totals FY 2025-27	FY 2027-29	FY 2029-31
Available Fund Balance/Reserves	$ 6,860,000	$ 569,000	$ 260,000
Reallocation of CIP	$ 1,900,000	$ -	$ -
Property Sales	$ 5,120,000	$ 4,000,000	$ 4,000,000
Pension Set Aside	$ 13,820,000	$ 240,000	$ 180,000
OPEB Set Aside	$ 4,080,000	$ 80,000	$ 60,000
Grand Totals	**$ 31,780,000**	**$ 4,889,000**	**$ 4,500,000**

Future Policy Considerations

Due to the City's fiscal reforms, over the past seven years the City has created capacity to consider one-time investments; resources that would not exist without the foundational changes made years earlier. However, these same resources are needed to address competing priorities, including streets, parks, city facilities and long-term financial resilience. The City's current strategic plan includes action items to quantify facility needs and identify funding opportunities for streets and city facilities. Below are examples of policy areas the City Council may need to take into consideration when discussing one-time use of discretionary funds:

- Strategic use of one-time funds for street improvements to bridge existing gap of $3-3.5 million to raise PCI from a 63 to a 70 over the next seven years.
- Possible targeted use of one-time funds now, back-filled with future funding opportunities (e.g. sale of property, development of local agency owned property). This policy direction could be used for either streets or city facilities.
- Pay-down of future POB obligations in 2029 to free up $1.5 million in cash flow savings that could be used for another priority (e.g. streets).
- Prioritization of city facility needs (e.g. public works yard, library, roofing needs, etc.).
- Impacts on operational flexibility and services to the community during economic downturns, without ability to use general fund or pension reserves.
- Impacts on future liabilities with more or less funding for street/sidewalk projects.
- Impacts of bond ratings and future borrowing costs with the use of reserves.

The City Council is well versed in the need to utilize one-time funding in the most efficient manner possible. For example, in May 2023, the City Council received a report estimating approximately $8 million in needs, subject to further study (e.g. waterproofing, footings, etc.), for moderate repairs to the Library, including plumbing, electrical, mechanical, and structural upgrades. When a potential grant opportunity requiring a significant City match of up to $4 million was ultimately unavailable, the City Council and Library Board unanimously concluded that committing $8–$10+ million for a repair project with no guarantee of resolving underlying facility issues was not the most prudent course at that time. This decision was not a reflection of the Library's importance, but rather an example of the careful fiscal policy trade-offs required when limited resources must address multiple critical needs. As the City reviews the opportunities and costs for a significant civic center renovation aimed to address decades of issues for future generations of Glendorans, the City Council has continued to evaluate the needs of many infrastructure challenges, including streets, the Library and the City's public works yard - the use of one-time funding will assist with that analysis.

Other Financial Information

This report focuses on the use of one-time discretionary funding sources. In full acknowledgment that governmental or "fund" accounting can be difficult to understand, staff developed two additional attachments to this report. Attachment C covers the City's investment portfolio and Attachment D addresses how the various city funding sources must be used. As always, the goal is to provide information to those who would like to educate themselves on City finances in the most transparent and easy to understand method possible.

FISCAL IMPACT

There is no fiscal impact associated with the recommendations in this report. As City Council direction on the use of one-time funds is provided, staff will evaluate the fiscal impact of each policy decision on the City. Generally, impacts from the use of one-time funding are:

- Limited operational flexibility during future economic downturns (impacts on service delivery);
- Diminished ability to address one-time infrastructure issues;
- Downgrade of bond rating (increased borrowing costs);

ENVIRONMENTAL DETERMINATION

There is no CEQA impacts associated with the recommendations in this report.

NOTES

1	The General Fund reserve policy is a minimum of 30% to maximum of 45% of prior year operational expenditures. Total of $4.6 million is the amount in excess of the reserve minimum (30%). The amount in the Measure E/Z fund balance is available in it's entirety ($2.3 million). The City's Reserve Policy provides the City Council time to make decisions in economic downturns or funding loss from the State of California without significant impacts to service delivery to the community. Further this funding provides a stabilization to meet debt requirements, which partially resulted in the City's AAA bond ratings. Per the existing financial policies of the City Council, when General Fund revenues exceed expenditures it allows the City to set aside monies in reserve, future capital projects, stabilization of CalPERS pension/OPEB costs, as well as general liabilities, worker's compensation, fleet maintenance and technology costs. More specifically, when revenues exceed expenditures, the City's financial policies allocated that amount at the following percentages 50% to the Capital Projects Fund, 30% to the PERS Rate Stabilization Fund, 10% to OPEB Section 115 Trust (held in General Fund) and 10% to Internal Service Funds.
2	The City and Glendora Unified School District (GUSD) have a long history of partnering on community assets (e.g. middle school parks, high school pool, etc.). GUSD has a current pool renovation project, in which the CIty has contributed $600,000 to the $3.9 million dollar project. Additionally, the City Council approved an additional contribution of up to $900,000 that is dependent on the City's financial performance through June 30, 2027.
3	The sale of the San Jose site provided the City with $3.99 million. The City Council previously allocated $1 million of these proceeds to achieve initiatives in the City's strategic and economic development action plans (8/27/2024).
4	Staff anticipated an estimated $2.1 million to be received by June 30, 2027 for the sale of the Dale site. This funding will be dependent upon approval of a development in accordance with the City's standards and actions by the Planning Commission and City Council.
5	Amounts represent possible funding received through sale and development of land owned other local agencies over the next five years.
6	These funds are generally restructured and may only be used to pay for CalPERS retirement costs (Pension) or reimburse qualifying retired employees' medical premiums (OPEB). The monies may be accessed by the City to pay for specific liabilities, requiring certification of the expense. Currently, the City's CalPERS unfunded accrued liability (UAL) is $21.7 million, which is anticipated to be reduced to $10.3 million next year with CalPERS better than anticipated asset returns. Additionally, the City has an other post employment benefits (OPEB) liability of approximately $5.6 million. Finally, the City has an outstanding pension obligation bond principal amount of approximately $51 million.
7	These funds are generally restricted. Currently, these funds have been set aside for investment in the Section 115 Trusts as cash on hand/liquidity allows through the City Council Adopted General Fund Reserve Policy. The monies may be accessed immediately by the City until they are invested in the Section 115 Trusts, at which time they may only be used to offset future/current pension liabilities. See note 6 with respect to pension and OPEB liabilities outstanding.

ONE-TIME FUNDING

FISCAL YEAR 2025-2026

CITY MANAGER'S OFFICE / FINANCE DEPARTMENT
CITY COUNCIL MEETING: FEBRUARY 24, 2026
KYLE JOHNSON, FINANCE DIRECTOR
ADAM RAYMOND, CITY MANAGER

EXECUTIVE SUMMARY

- Glendora has restored financial stability over the last seven years
  - Addressed $3–$4M structural deficit
  - Voter-approved Measures E & Z
  - Pension restructuring (POB)
  - Significantly strengthened reserve, liability and capital funding policies
  - Modernized city/departmental operations
  - Earned AAA bond rating

EXECUTIVE SUMMARY

- Results have been significant
  - Generational investments in infrastructure
  - Improved street conditions (PCI upward trend, albeit small), reversing decades of decline
  - Significant investments in public safety, homelessness
  - Reduced chronic vacancies
  - Major investments in technology
  - $50+ million in grant revenues (e.g. Finkbiner stormwater, intersections, first/last mile)

LEGISLATIVE HISTORY

- January 13, 2026 – Staff committed to broader one-time funding discussion
- February 24, 2026 – Mid-Year Budget Update

EXECUTIVE SUMMARY

- Glendora has restored financial stability over the last seven years
  - Addressed $3–$4M structural deficit
  - Voter-approved Measures E & Z
  - Pension restructuring (POB)
  - Strengthened reserves and capital funding policies
  - Earned AAA bond rating

FUTURE POLICY CONSIDERATIONS

- Examples of policy areas the City Council may need to take into consideration when discussing one-time use of discretionary funds:
  - Strategic use of one-time funds for street improvements to bridge existing gap of $3-3.5 million to raise PCI from a 63 to a 70 over the next seven years.
  - Possible targeted use of one-time funds now, backfilled with future funding opportunities (e.g. Sale of property, development of local agency owned property). This policy direction could be used for either streets or city facilities.
  - Pay-down of future POB obligations in 2029 to free up $1.5 million in cash flow savings that could be used for another priority (e.g. Streets).

FUTURE POLICY CONSIDERATIONS

- Examples of policy areas the City Council may need to take into consideration when discussing one-time use of discretionary funds:
  - Prioritization of city facility needs (e.g. public works yard, library, roofing needs, etc.).
  - Impacts on operational flexibility and services to the community during economic downturns, without ability to use general fund or pension reserves.
  - Impacts on future liabilities with more or less funding for street/sidewalk projects.
  - Impacts of bond ratings and future borrowing costs with the use of reserves.

OTHER FINANCIAL INFORMATION

- Government “fund” accounting is difficult to understand
    - Attachment C – Overview of City’s investment portfolio and what funding is for
    - Attachment D – Overview of the various funding sources and what is discretionary and what is not

RECOMMENDATIONS

THAT THE CITY COUNCIL:

1. RECEIVE AN OVERVIEW ON ONE-TIME FUNDING OPPORTUNITIES; AND
2. PROVIDE DIRECTION, AS NEEDED.

Why the City's $125 Million Cash and Investment Balance Isn't a Giant Piggy Bank

Executive Summary

The City of Glendora maintains approximately $125 million in pooled cash and investments. While that number may sound like unrestricted money available for any purpose, the vast majority of those funds are legally restricted, contractually committed, or reserved for specific uses.

Government fund accounting requires that dollars collected for one purpose (such as water, gas tax, grants, or development fees) may only be used for that specific purpose.

In practical terms, the City's cash pool operates like a collection of labeled envelopes rather than a single checking account.

- Most funds already have assigned jobs (infrastructure projects, utility operations, debt payments, grants, and emergency reserves).
- Only a portion of the total represents flexible General Fund resources used for core services like police, public works, development, parks, and libraries.
- Fund accounting can feel unusual and overly complex, but it exists to ensure transparency, legal compliance, fiscal stability, and protection of taxpayer dollars.

It's One Vault, But Many 'Envelopes'

The $125 million is pooled together for investment purposes (*to maximize interest earnings*). Internally, it is divided into separate funds, each with its own legal purpose.

Think of it like having a mortgage account, a college fund, a car repair fund, and a 'don't touch or the auditors (IRS in personal/business world) will appear' fund — all at the same bank. Many dollars are legally restricted:

- Gas tax revenue – Must be used for streets and transportation.
- Water fees – Must be used for water systems.
- Risk management funds – Must be used for future liabilities.
- Grant funds – Must be used exactly as specified by the grant.
- Debt proceeds – Must be used for legally approved projects.

Using these funds for anything else is not just discouraged — it is illegal.

Some Money Is Already Spoken For

- Funds may already be committed to contracts approved by the City Council.
- Capital projects underway have funding set aside.
- Required reserves must be maintained for financial stability.
- Some balances represent liabilities already owed (pensions, invoices, deposits).

Cities Must Maintain Reserves

- Emergencies, natural disasters, and economic downturns happen.
- Maintaining reserves protects the City's credit rating.
- Strong reserves help avoid sudden service cuts or tax increases.

Spending reserves simply because cash exists would be like spending your emergency savings because your checking account looks full. Likewise, a full checkbook does not indicate cash/savings exists or are available to be spent.

Why Fund Accounting Feels So Confusing

- Businesses focus on profit.
- Families can focus on cash flow and savings.
- Governments focus on legal purpose and public accountability.

Instead of one checking account, cities manage dozens of funds that must balance independently. It may feel rigid, but this structure ensures transparency, accountability, and compliance with law.

What Is Actually Flexible?

Only a portion of the total cash pool represents General Fund dollars that can support core services such as:

- Police
- Parks
- Library
- Development
- General City operations

Even those funds must cover ongoing operational costs, not one-time wish lists.

Timing Matters: Revenues and Expenses Don't Arrive Together

Another important piece of the puzzle is timing. The City operates year-round, but revenues do not all arrive evenly throughout the year.

- Property tax revenue is typically received in installments (primarily December and April).
- Sales tax receipts are received monthly but based on prior activity.
- Grant funds are often reimbursed after the City has already spent the money.
- Utility revenues fluctuate based on usage and billing cycles.

This means the City must carefully manage cash flow to ensure bills, payroll, and contract payments are made on time, even when major revenues have not yet arrived.

In many cases, especially with state and federal grants, the City must front the money for a project and then submit documentation to receive reimbursement. So, while a grant may be awarded for a project, the cash almost never arrives before the expenses occur.

Due to these timing differences, maintaining adequate cash balances is critical. The presence of cash in the investment pool does not mean the funds are surplus, it often means the City is responsibly managing timing differences between when money is received and when it must be spent.

Bottom Line

When you hear that the City has $125 million in the bank, it does not mean the City has $125 million available for discretionary spending.

It means the City responsibly manages multiple legally restricted and purpose-driven funds, which have timing challenges with revenues and expenses, in an organized, accountable, and carefully monitored way to protect the community's financial stability.

City of Glendora
Where Does the $125 Million Go?
(And Why We Can't Just Spend It on Whatever We Want)

How Glendora Actually Builds a Budget (Hint: It's Not Guesswork)

Before we talk about funding sources, restrictions, and why we can't repave every street tomorrow, it's important to understand Glendora does not budget one year at a time and hope for the best. Sound financial management requires:

- Multi-year financial planning
- Ongoing financial monitoring
- Frequent financial reporting
- Prompt corrective action when necessary
- Long-term financial health strategies

In other words, we do not steer the City by looking only through the rearview mirror.

Glendora adopts a two-year budget to provide greater certainty for the City Council, departments, employees, and the public regarding ongoing funding and staffing for programs and services.

Even more importantly, we include a Five-Year Financial Projection for:

- The General Fund
- Measures E/Z
- The Water Fund(s)

This allows the City to evaluate the long-term impact of policy decisions during the budget process. If a decision creates structural imbalance three years from now, we see it coming. And ideally, we fix it before it becomes tomorrow's headline.

Layered on top of that are our guiding documents, which include but are not limited to:

- Community Surveys
- City Council Strategic Plans
- Pavement Condition Index (PCI)
- Parks Master Plan
- Water Master Plan

Policy sets direction. Data sets priorities. The budget follows both.

The approximately $125 million annual budget is not a wish list. It is a structured financial response to adopted goals, infrastructure needs, and legal requirements. What gets funded, gets done.

Why We Can't Just Spend $125 Million on Anything We Want
When people hear '$125 million budget,' it can sound like a very large, very flexible piggy bank.

It is not.

The City operates roughly 60 separate funds divided into six major fund types. Think of the budget as one vault filled with dozens of labeled envelopes. Each envelope has a name, a job, and in many cases, a very strict set of rules.

Gas tax must be used for streets. Water fees must stay in water. Grant funds must follow grant rules. Debt must be paid on schedule.

Using restricted funds for unrelated purposes is not creative budgeting, it is illegal. And auditors do not accept 'but it seemed like a good idea at the time.' The City would know, we get audited by 10+ agencies on an annual basis.

The Six Fund Types (Also Known as The Envelopes)

1. General Fund, Measures E/Z and GUSD JUA – The Flexible Ones (Sort Of)
The General Fund supports police, parks, the library, public works operations, administration, and community development.

It represents approximately 45% of the City's total annual budget, or roughly $56.5 million of the $125 million total.

It is the most flexible fund — but even it is largely committed to ongoing expenses such as employees, contracts, and services to the community. The Police Department, Public Works Department and Community and Economic Development comprise approximately65% of the General Fund.

So yes, it is flexible. But it is also very, very busy.

2. Special Revenue Funds – The Rule Followers
Restricted by State law, Federal law, local ordinance, or voter approval, these funds must be used only for specific purposes such as transportation, grants, or development-related infrastructure.

They represent approximately $15.9 million, or 13% of the total budget.

They are not available for general operations — no matter how compelling the proposal.

3. Capital Project Funds – The Builders

Dedicated to long-term infrastructure improvements and major projects.

These funds help ensure we invest today without undermining tomorrow's operating stability.

4. Debt Service Funds – The Bill Payers
Used exclusively to repay bond obligations and capital lease agreements.

Debt payments are contractual commitments. They are not optional. They are not flexible. They are simply due.

5. Enterprise Fund (Water) – The Utility Business
Funded by water rates and legally restricted to water operations and infrastructure.

The Water Fund represents approximately $31.4 million, or 25% of the total annual budget.

Water customers pay for water, not for everything else.

6. Internal Service Funds – The Behind-the-Scenes Team
Support internal operations such as insurance, technology, and fleet management.

They may not get headlines, but without them, things break — both literally and financially.

Bottom Line
The City does not have $125 million available for discretionary spending.

It manages a system of legally restricted, contractually obligated, purpose-driven funds. We are guided by multi-year planning, ongoing monitoring, and long-term financial strategies.

Fund accounting may feel rigid. That is intentional.

It protects taxpayers, preserves infrastructure, supports responsible planning, and ensures today's decisions do not become tomorrow's financial problem.

STAFF REPORT

TO:	**Mayor and Council Members**	**DATE:**	**March 24, 2026**
FROM:	**City Manager**	**DISTRICT(S):**	**Citywide**
SUBJECT:	**Information on Citizen Ad-Hoc Committees, City Council Sub-Committees, and Direction on the Use of One-Time Funds**		

RECOMMENDATION

That the City Council:

1. Receive a report on citizen ad-hoc committees and city council sub-committees and provide direction, as necessary; and
2. Provide direction, as necessary, on the use of one-time funds.

STRATEGIC FOCUS AREAS

Goal 3 - New + Revitalized Facilities

Goal 4 - Sustainable Infrastructure

EXECUTIVE SUMMARY

At the January 13, 2026 City Council meeting, staff committed to returning with a broader discussion regarding the potential use of one-time resources as part of the FY 2025-26 mid-year budget update. On February 24, 2026, the City Council received a report on available one-time funding and discussed potential approaches for evaluating future capital needs and funding priorities. During the discussion, the Council considered the possibility of establishing either a citizen ad-hoc advisory group or a City Council subcommittee to further examine facility and infrastructure needs and related funding strategies. The Council ultimately voted to receive and file the report and directed staff to return with additional information regarding how such a group might be structured and what policy questions the Council may wish to consider.

This report provides background information to assist the City Council in evaluating whether to establish a citizen advisory body or a City Council subcommittee to review facility and infrastructure issues. It outlines how citizen advisory groups typically function, summarizes past examples of similar advisory committees established by the City, and provides examples from other cities that have used advisory groups to study civic facilities and infrastructure planning. The report also presents several policy considerations for the City Council related to governance structure, potential membership qualifications, and the scope of work should the Council choose to establish a group to further evaluate the City's facilities, infrastructure needs, and potential use of one-time funding.

LEGISLATIVE HISTORY / PREVIOUS ACTIONS

At the January 13, 2026 City Council meeting, during a comprehensive city facility and civic center discussion, staff committed to returning to the City Council with a broader conversation regarding one-time uses of available resources with the mid-year budget update for FY 2025-26.

On February 24, 2026, the City Council received a report on one-time funding. During City Council discussion following the presentation, the City Council discussed the possibility to creating a citizen ad-hoc or city council sub-committee to discuss capital related matters. Ultimately, the City Council moved to receive and file the report on one-time funding and staff pledged to return to City Council with an item on a possible capital improvement ad-hoc/sub-committee on March 24, 2026.

DISCUSSION

On February 24, 2026, in response to direction form the City Council in January 2026, staff presented a report on one-time funding. The City Council did not provide direction for the use of one-time funding; a copy of the staff report and all exhibits can be found at Attachment A.

Additionally, during the City Council discussion that followed the presentation on one-time funding, the City Council discussed the possibility to creating a citizen ad-hoc or city council sub-committee to discuss facility and infrastructure related matters. Ultimately, the City Council moved to receive and file the report on one-time funding and staff pledged to return to City Council with an item on how a city council sub-committee or citizen ad-hoc group may operate and what policy questions the City Council may wish to consider.

This report provides a general overview of citizen ad-hoc groups and city council sub-committees, including prior City Council actions on these matters over the past ten years. Additionally, the report will include policy questions/direction the City Council may need to address in order to move forward with use of one-time funds, or the establishment of group to further study the City's facilities/infrastructure and related funding challenges.

What Are Citizen Advisory/Ad-Hoc Groups in Cities?

Citizen advisory groups (often called advisory boards, commissions, ad-hoc committees, or task forces) are bodies composed primarily of residents that:

- Study specific issues or policy areas;
- Gather input, research, and community feedback;
- Provide recommendations to the City Council (or staff) on policies, plans, or programs; and
- Do not have significant decision-making authority; they are advisory in nature, not legislative.

These groups vary widely in scope. Currently, the City has several ongoing committees/boards including the Planning Commission, Water Commission, Library Board, Recreations and Human Services Commission, and the Business Improvement District Board.

Can Council Members Serve on Citizen Advisory Bodies?

As a general rule, council members cannot serve as voting members or active participants of advisory boards, commissions, or committees that are appointed by the City Council. This is to avoid conflicts with the City Council's role in policy making and oversight. Advisory groups exist to provide independent advice. Allowing city council members to vote would blur the line between legislative policy decision-making (Council) and citizen advisory input.

While not common, some cities have appointed city council liaison(s) for citizen advisory boards, commissions, task forces, etc. including, but not limited to, San Ramon, Dublin, and Beverly Hills. In these cities, appointment of a liaison is done in conjunction with other City Council assignments.

Has the City Council Previously Appointed a Citizen Advisory Body Outside of the City's Standing Board and Commissions?

From time to time, the City Council has appointed various citizen advisory committees/groups. The establishment of these groups requires significant staff resources in order to provide the information and support necessary. Over the past ten years, the City Council has created two such citizen advisory groups, including a citizen ad-hoc committee on revenue and expenditures and an ad-hoc citizen advisory group on antique streetlights.

<u>Citizen Ad-Hoc Committee: Revenue Options and Expenditures (April 2018 through December 2020)</u>

During a strategic planning workshop on January 25, 2018, the City Council and Executive Team discussed the ongoing concern that current revenue sources and longer-term projections would not keep pace with the anticipated expenditure trends. It was anticipated the City would begin experiencing multi-million dollar shortfalls in FY 2018-19 and beyond.

As part of the discussion, the City Council discussed the possibility of seeking community input by the creation of a citizen's advisory panel; it was established that then Mayor Thompson and former Council Member Nelson would explore the issue further. On April 10, 2018, then Mayor Thompson and former Council Member Nelson formally presented an agenda item recommending the creation of an ad-hoc citizen's advisory committee to evaluate the following:

- *Why there may be a [revenue] problem.*
- *How and/or what might be recommended to create new revenue sources.*
- *Are there other ways to address the "problem."*

It was recommended that the committee be comprised of between 15-21 persons with a diverse background; however, a financial background, especially with public entities should be highly valued. The ad-hoc group was open to city residents and city business owners, the vast majority of the appointments were ultimately residents.

Each city council member appointed two members to the panel. The remaining seats of the panel were selected similar to the appointment process for the City's commissions/boards. Additionally, the Council determined that the citizen ad-hoc committee would have an appointed chair and vice-chair; the primary staff liaison was the Finance Director and Community Development Director.

On May 16, 2018, 20 members were appointed to the Ad-Hoc Citizen's Advisory Committee by the City Council; Michael Holmes was appointed as the Committee Chair and Cliff Hamlow was appointed the Vice-Chair.

The first meeting was held on June 7, 2018. The group met approximately twice per month through early September 2018. Based upon information gathered, the committee was unanimous in its decision to present a preliminary report to the city council on September 11, 2018, recommending that the City should immediately take steps to conduct a special election for a sales and use tax initiative in November 2018. A final report was delivered to the City Council in November 2019.

On December 8, 2020, the City Council held a follow-up agenda item on the November 2019 Final Report as part of the City's 2020-2023 Strategic Plan. The final report included, but was not limited to historical staffing levels, outsourcing opportunities, land sales, and revenue measures. The ad-hoc committee was comprehensive in its efforts to understand and address the City's current and historical funding challenges; several of the additional items in the report (e.g. San Jose, South Hills, and outsourcing) have been topics of conversation and action since the issuance of the report in 2019. The City Council noted the option for the group to be reengaged, if needed in the future. A copy of the Final Report from November 2019, can be found at Attachment B.

<u>Ad-Hoc Antique Streetlights Citizen Committee (May 2022 through June 2023)</u>

On May 10, 2022, the City Council authorized staff to develop an ad-hoc process for a group of no more than 11 people to begin a feasibility dialogue around the restoration of the City's antique streetlights. Additionally, the group was tasked with the creation of an antique streetlight maintenance assessment district. To assist the process and formation of an assessment district, the City Council authorized staff to engage an engineering firm, bringing the total funded project budget to $1,629,950 ($1,500,000 from Senator Portantino and $129,650 in discretionary capital funds).

On June 14, 2022, the City Council discussed and approved the creation of an Ad-Hoc Antique Streetlight Citizen's Advisory Panel (Ad-Hoc Panel), with a mission to:

"*Engage residents in a dialogue to determine the interest and feasibility of renovating the antique streetlights, and potential support for the creation of an antique streetlight maintenance assessment district*."

On August 23, 2022, the City Council appointed nine applicants as members of the Ad-Hoc Antique Streetlight Citizen's Advisory Panel, directed that one seat would be open for a representative from the Glendora Historical Society, and appointed Patrick Hollanders as Chair (with direction to have the Vice Chair chosen by the ad-hoc committee).

The ad-hoc committee met on six occasions in 2022 (September 8 and 29, October 20, November 10, and December 1 and 21). Each of the Ad-Hoc Antique Street Light's meetings was open to the public, broadcast virtually (via Zoom), with agendas and supporting materials published to a project webpage created on the City's website. The webpage also included information on the schedule of meetings, historical information on the antique streetlights, the timeline of City Council actions related to the antique streetlights, as well as responses to the questions posed by members of the ad-hoc committee.

On January 24, 2023, the City Council was provided an update on the antique streetlight project, which included testimony and recommendations of the Ad-Hoc Antique Streetlight Citizen Committee. After debate, the City Council directed staff to re-evaluate the project, meet with the City's consultants and past bidders, look at timelines, and come back to the City Council with possible options moving forward.

On March 28, 2023, the City Council directed staff to move forward with the formation of the antique streetlight district during the current fiscal year. In order to stay within the $100 to $200 per year recommendation of the ad-hoc committee for the first two or three years, the project required a General Fund or Measure E/Z loan to the proposed district for approximately $601,000 at 0% interest over 30-years; this was on top of the $1.63 million the City already allocated to the project.

On April 11, 2023, the City Council adopted a resolution to call for a vote on the establishment of an antique streetlight district and confirmed that if the vote failed, the antique streetlights would be removed. The vote occurred on June 13, 2023, with 65% of the vote opposing the establishment of a new district. This was the third failure to establish a district, following up on efforts in 2007 and 2008.

Ultimately, the antique streetlights were removed in 2023. In subsequent years, utilizing funds already set aside for the antique streetlights, staff has worked to salvage and refurbish as many lights as possible for use in a future project along Glendora Avenue (Foothills to the A-Line station).

Can Council Members serve on a City Council Ah-Hoc Committee?

The City Council may form sub-committees or sub-groups that include one or two council members at the City Council's direction. In order to avoid Brown Act violations, no more than two council members can serve on a city council ad-hoc committee at one time.

Note that an ad-hoc committee is differentiated from a standing committee, in that it is not permanent, but rather temporary, formed to address a specific short term task or project, and dissolves once the issue is addressed or completed.

Has the City Council Previously Appointed a Council Sub-Committee?

The City Council recently appointed Mayor Pro Tem Davis and Councilmember Allawos to a sub-committee that focused on the 1762 Dale Rd. affordable housing project with Mercy Housing. The group was appointed in mid 2025 and provided their insight to the City Council in early 2026. Meeting cadence for both council members, staff and Mercy Housing, was typically monthly.

The City Council used the sub-committees insight during project negotiations associated with the exclusive negotiating agreement (ENA) with Mercy (Phase 1). This insight assisted with the City Council's direction on the project, funding options, housing mix, and community engagement. This included visiting other Mercy developments and participating in community meetings. Staff anticipates the Mercy Housing project at 1762 Dale will continue moving through the development process, with hearing at the Planning Commission and City Council over the next 12-18 months.

Examples of Citizen Advisory Groups Focused on Facilities & Infrastructure

Generally, cities that appoint limited duration citizen ad-hoc or city council sub-committees do so for reasons unique to each City. While topics may be consistent across certain cities (e.g., pensions, infrastructure, etc.), the issues cities face are often as unique as the cities themselves. Below are two examples of cities that have established advisory groups to assist cities with civic centers and city facilities.

Rancho Palos Verdes – Civic Center Advisory Committee

The Rancho Palos Verdes Civic Center Advisory Committee (CCAC) was created by the City Council in March 2017 to help guide development of a long-term plan for the City's Civic Center campus at Upper Point Vicente Park. The seven member committee was formed following a 2016 citywide survey that showed resident interest in improving or redeveloping the aging civic facilities. Comprised of resident appointees serving in an advisory role, the CCAC provides recommendations to the City Council on the design, program, and financial considerations associated with redevelopment of the Civic Center site.

The committee generally meets monthly in public meetings (which generally adhere to Brown Act regulations), where members review conceptual designs, evaluate potential civic and community facilities, and discuss financing and implementation strategies. Meetings often include presentations from consultants and staff, along with opportunities for public input and community engagement. Through these meetings and workshops, the CCAC helped shape the proposed program and layout for a redeveloped Civic Center campus, including City Hall facilities, community spaces, and park amenities. The City Council approved the Civic Center Master Plan program framework in October 2019, establishing the foundation for future design and implementation.

The Civic Center project faces several ongoing challenges and policy considerations. The existing civic buildings date largely to the 1950s Nike missile site, creating issues related to aging infrastructure, ADA compliance, and functional limitations for modern municipal operations. At the same time, the City must balance community expectations for new civic and recreational amenities with the financial realities of a major capital project, including funding strategies, project scope, and potential phasing. Determining an affordable and achievable redevelopment plan while maintaining public support remains the central issue for the committee and City Council as planning continues.

Hermosa Beach – Civic Facilities Project Advisory Group

The Hermosa Beach Civic Facilities Project Advisory Group was formed by the City Council in February 2024 to assist the City Manager in evaluating options for addressing the City's aging municipal facilities. The group was established after the Council identified significant concerns with the condition and functionality of several civic facilities, including City Hall, the Police Department building, and the Public Works maintenance yard. The advisory group's role was to review facility needs, analyze potential redevelopment options, and provide strategic guidance to the City Manager and City Council on possible approaches to replacing or renovating the City's civic infrastructure.

The group consisted of approximately a dozen volunteer community members selected by the City Manager for their professional experience in areas such as municipal management, construction, engineering, finance, planning, and community leadership. Rather than forming a formal Brown Act committee, the City structured the advisory group as an informal working group, allowing members to collaborate and review technical information outside of traditional public meeting requirements. The advisory group met several times over the course of roughly eight months, during which members reviewed prior facility assessments, toured existing civic buildings, evaluated operational needs, and discussed financing strategies and potential redevelopment scenarios.

Through this process, the advisory group developed several key recommendations for the City Council. The group concluded that replacement of the Public Works maintenance yard should be the City's highest near-term priority, citing operational limitations and safety concerns at the existing facility. For the broader civic campus, the group identified several potential approaches, including renovating and expanding existing facilities, constructing a new consolidated civic center at a different site, or pursuing a phased hybrid approach that would combine renovation with selective new construction. The group also recommended that the City pursue one major civic facilities project at a time and continue additional cost analysis and community outreach before making final decisions on long-term civic center redevelopment.

Draft City Council Policy Considerations

Historically, the City Council has provided specific direction to citizen ad-hoc committees and City Council sub-committees to review and provide recommendations to the City Council. If established, the work plan, and financial guardrails of such a group will determine the amount of staff resources, use of consultants, and timeline. In order to assist the City Council with discussion on this topic, staff have developed a list of draft policy considerations for the City Council (Attachment C).

The draft decision matrix is organized by policy question. Each policy questions is broken down by options for City Council consideration and what implications those options have on the policy directive to staff. Below is an excerpt from the decision matrix that may be used by the City Council:

Step	Policy Question	Options for Council Consideration	Policy Implicatio
1	Does the City Council wish to establish a group to study the City's facilities and/or infrastructure needs?	A. Yes – establish a review group B. No – continue review through regular and additional Council meetings C. Combination – City Council makes certain decisions now and established a review group to study specific issues/topics	Establishing a group may allo analysis and community input the timeline. Handling within C maintains speed and direct po The City Council may also est workshop schedule to discuss item (e.g., every third Tuesday month).
2	If yes, what structure should the group have?	A. Citizen Ad-Hoc Committee B. City Council Subcommittee C. Combination – Citizen Ad-Hoc Committee with City Council liaison(s)	Citizen Committee may increa engagement and provide addi technical input. City Council Subcommittee al direct Council oversight and fa coordination with staff. A Cou Subcommittee could meet wit from time to time to solicit inpu recommendations.
2A	If Citizen Ad-Hoc Committee: What qualifications should applicants possess?	Experience in: • Large-scale infrastructure projects • Public Contracts / Prevailing Wage • Transportation / streets • Engineering or construction management • Finance / capital planning • Project management • Community representation	Establishing qualifications ens expertise while maintaining co representation.

FISCAL IMPACT

There is no fiscal impact associated with the recommendations in this report. As City Council direction on the use of one-time funds is provided, staff will evaluate the fiscal impact of each policy decision on the City. Generally, impacts from the use of one-time funding are:

- Limited operational flexibility during future economic downturns (impacts on service delivery);
- Diminished ability to address one-time infrastructure issues; and

- Downgrade of bond rating (increased borrowing costs).

If the City Council moves forward with a city council sub-committee or a citizen ad-hoc committee, fiscal impacts associated with staff time, consultants, etc. will be contingent upon the work plan set by the City Council.

ENVIRONMENTAL DETERMINATION
There are no CEQA impacts associated with the recommendations in this report.

STAFF REPORT

TO:	**Mayor and Council Members**	**DATE:**	**February 24, 2026**
FROM:	**City Manager**	**DISTRICT(S):**	**Citywide**
SUBJECT:	**Use of One-Time Funds**		

RECOMMENDATION
That the City Council:

1. Receive an overview on one-time funding opportunities; and
2. Provide direction, as needed.

STRATEGIC FOCUS AREAS
Goal 3 - New + Revitalized Facilities
Goal 4 - Sustainable Infrastructure

EXECUTIVE SUMMARY
Over the past decade, Glendora restored its financial stability by addressing a $3–$4 million structural deficit through voter-approved sales tax measures, pension restructuring, and stronger reserve and capital funding policies. These reforms earned the City a AAA bond rating and enabled targeted investments in infrastructure, public safety, and homelessness response aligned with community priorities. With the recent passage of Measure Z and a continued focus on long-term planning, the City remains committed to fiscal discipline while carefully balancing limited resources against ongoing service and infrastructure needs.

At the January 13, 2026, staff committed to returning to the City Council with a broader conversation regarding one-time uses of available resources during or after the mid-year budget update. This discussion will outline existing one-time funds, document how the City has prepared for future fiscal challenges, and provide examples of how those funds could be utilized. For the past seven years, the City Council has supported a transparent, policy driven dialogue that reflects the City Council's continued commitment to thoughtful decision making and its ongoing work alongside staff to strengthen Glendora's financial foundation, address decades of differed maintenance, and improve the community for years to come.

LEGISLATIVE HISTORY / PREVIOUS ACTIONS
At the January 13, 2026, staff committed to returning to the City Council with a broader conversation regarding one-time uses of available resources during or after the mid-year budget update.

On February 24, 2026, the City Council received the FY 2025-2026, mid-year budget update (same meeting this this agenda item).

DISCUSSION

During the city facility and infrastructure discussion on January 13, 2026, staff committed to returning to the City Council with a broader conversation regarding one-time uses of available resources in concert with the mid-year budget update. This discussion will outline existing one-time funds, provide context on how the City has prepared for future fiscal challenges, and provide examples of how those funds could be utilized. These examples, will represent policy decisions/direction of the City Council.

For the better part of a decade, the City of Glendora has undertaken a deliberate and disciplined transformation of its fiscal policies, allowing the City to confront long-standing challenges, while positioning the organization for long-term stability. In fiscal years 2017-18 and 2018-19, the City projected General Fund deficits exceeding $1 million annually. As leadership transitioned and deeper analysis was conducted, it became clear that the structural imbalance was far more significant, at closer to $3–$4 million per year. Recognizing the seriousness of the situation, the City had already convened a citizen advisory committee to evaluate paths to financial sustainability, including land sales, operational efficiencies, service reductions, outsourcing and potential revenue enhancements.

The committee ultimately recommended that the City Council place a local sales tax measure on the ballot. While the typical local measure is 1.0%, Los Angeles County's Measure H had already claimed 0.25%, limiting the City's available rate. In 2019, the City Council placed Measure E, a 0.75% sales tax, before the voters, and the measure was approved. Concurrently, the City issued a Pension Obligation Bond (POB), generating annual savings of more than $1 million and significantly improving long-term pension cost predictability.

With the passage of Measure E and the issuance of the POB, the City Council directed staff to modernize Glendora's fiscal framework. Updated fiscal policies were adopted that aligned with the City's strategic plan and reflected a commitment to weathering an uncertain economic future. These changes included strengthening the General Fund Reserve, establishing a discretionary capital projects fund/reserve, shoring up internal service funds (e.g. Fleet, Technology, etc.) and intentionally setting aside resources for future pension obligations. Together, these policies represented foundational change by acknowledging both the scale of past under-investment and the need for sustained discipline in future years to address infrastructure demands, service expectations, and the uncertain fiscal landscape in California. These foundational changes would allow the City time to make significant policy decisions during recessions without immediate impacts to services, and the possibility to address certain facility needs during emergencies.

The results of this fiscal stewardship have been significant. Glendora earned an AAA bond rating for its General Fund, an achievement shared by fewer than 20 cities statewide, validating the City Council's long-term approach to financial governance. In the years that followed, the City continued its stewardship of taxpayer money. The City made significant investments in technology and modernized its operations, eliminating duplicative functions, restructuring departments to better serve the public, and expanding strategic use of the private sector in hard to recruit service areas. At the same time, the City undertook comprehensive assessments of its infrastructure systems, including water, parks/trails, trees, streets, facilities, and technology (infrastructure studies).

Guided by the principle that "what gets funded gets done," the City has relied on scientifically valid community surveys, foundational infrastructure studies, and City Council direction to shape multi-year strategic plans. These plans are directly integrated into the annual budget and departmental work programs, ensuring alignment between community priorities, fiscal decisions, and staff efforts. The outcomes have been measurable and, in many respects, historic. For the first time in decades, overall street conditions improved from one decade to the next, albeit minimal. Chronic vacancy challenges have been mitigated, with targeted investments in public safety, recreation and human services, public works, and water—each directly tied to community quality of life and safety concerns.

Nowhere is this philosophy more evident than in the City's recent investments in public safety and homelessness response. Community feedback consistently identified emergency responsiveness, neighborhood safety, and visible homelessness impacts as top priorities. In response, the City Council made intentional, ongoing investments in people and systems. These investments include additional sworn police officers, added dispatch personnel to improve response times, enhanced emergency operations and preparedness capacity, and the creation and expansion of a Community Impact Team focused on proactive engagement and community problem solving. The City has also increased funding for service providers and regional partnerships to address homelessness through outreach, case management, and supportive services, enforcement, and clean-up. Together, these investments reflect a shift from reactive responses to a more coordinated, data informed, and professional approach aligned with community expectations.

Despite this progress, significant challenges remain. The impacts of homelessness, increasing state mandates, loss of local control, insurance, and the absence of a permanent funding source for capital improvements continue to place pressure on City finances. While Glendora has made generational investments in infrastructure over the past five to seven years, decades of under-investment cannot be reversed overnight. These efforts have been strengthened by the successful pursuit of tens of millions of dollars in grants and state and federal appropriations, supporting projects ranging from parks and first/last-mile improvements to school site traffic safety and signalized intersections.

Recognizing the importance of keeping local dollars local, the City Council placed Measure Z on the November 2024 ballot, a 0.25% sales tax measure designed to preserve local revenue capacity and offset prior countywide tax measures. Glendorans understood and supported this need, with affirmative election results materially above those of Measure E. Measure Z reflects the City Council's continued commitment to fiscal sustainability and local control, by keeping funds local and ensuring that Glendora remains positioned to fund essential services and community priorities in an increasingly constrained fiscal environment.

That same forward looking mindset is reflected in the City's current Strategic Plan, adopted in early 2025. The plan continues to direct staff to actively pursue additional and diversified revenue opportunities, including potential development in the South Hills area, strategic economic development investments, and redevelopment opportunities at underutilized sites owned by other governmental agencies and the City itself. Many of these actions were originally recommended to the City Council during the citizen committee meetings in 2018 and 2019. These efforts underscore the ongoing work of the City Council and staff to responsibly grow the City's revenue base while remaining consistent with the City Council's other long-term planning goals.

Due to the City's fiscal reforms, the City has some capacity to consider one-time investments; resources that would not exist without the foundational changes made years earlier. However, these same resources are needed to address competing priorities, including streets, parks, city facilities and long-term financial resilience.

Discretionary One-Time Funding Breakdown

The General Fund, Pension Stabilization Fund, Measures E/Z Fund, GUSD JUA Fund, and Capital Projects Fund are discretionary funding sources for the City. Staff evaluated each fund, taking note of:

- Fund balance/ reserve levels;
- Ability of re-prioritization of capital projects;
- One-time funding from property sales;
- Future development opportunities of other local agencies; and
- Options for strategic use of amounts set aside for pension and other post-employment benefit costs.

Attachment A to this report provides a detailed analysis of one-time funding opportunities. The report is broken down by two-year budget cycle (FY 2025-2027, FY 2027-2029, and FY 2029-2031) and by major category (e.g. fund balance/reserves, reallocation of CIP, property development, pension/OPEB reserves, etc.).

Available Fund Balance/Use of Reserves

Currently, the City has approximately $18.3 million in the General Fund Reserve. The General Fund reserve policy requires a minimum of 30% to maximum of 45% of prior year operational expenditures; currently the City maintains a 40% reserve level. The reserve policy range represents the ability to fund approximately 3 to 6 months of General Fund operations in the absence of any other revenue received. The amount of General Fund reserve in excess of the minimum (30%) is approximately $4.58 million. In addition to the General Fund, the City's has an estimated $2.28 million in fund balance in the Measures E/Z fund that can be used for discretionary purposes. During the FY 2027-2029 and FY 2029-2031 two year budget cycles, staff anticipates additional Measures E/Z fund balance of $569,000 and $260,000 respectively.

The use of General Fund reserves and Measures E/Z fund balance can impact the City's bond rating and operational flexibility during an economic downturn. Without reserves at certain levels, future borrowing costs may be higher and the City may have to look at more immediate/significant service cuts to the community in lieu of targeted use of reserves during major emergencies or economic downturns. Ample reserves allows the City Council time to make targeted, policy oriented service reductions when needed.

Reallocation of CIP

Staff has identified an opportunity for the City Council to reallocate approximately $1.9 million of existing projects to other priorities, if needed. Currently, the City's discretionary capital projects fund has approximately $1 million in projects aimed at the civic center (e.g. Council chamber remodel/expansion, civic center roofing, etc.).

The City and Glendora Unified School District (GUSD) have a long history of partnering on community assets (e.g. middle school parks, high school pool, etc.). GUSD has a current pool renovation project, in which the City has contributed $600,000 to the $4 million dollar project. Additionally, the City Council approved an additional contribution of up to $900,000 that is dependent on the City's financial performance through June 30, 2027.

As the City's civic center project is not underway and the GUSD pool project came in under budget ($5.8 million down to $4 million), funding may be reallocated. The City Council may also want to explore the use of the $900,000 pool project funding, to leverage the recent $1.2 million federal appropriate the City helped GUSD secure for the Sandburg Middle School track and lighting project. The future project area at Sandburg Middle School operates as a City park after 4pm.

Disposition/Sale of City Owned Properties

The sale of the San Jose site provided the City with $3.99 million. The City Council previously allocated $1 million of these proceeds to achieve initiatives in the City's strategic and economic development action plans (8/27/2024), leaving $2.99 million for future use. Additionally, staff anticipates an estimated $2.1 million to be received by June 30, 2027 for the sale of the Dale site. This funding will be dependent upon approval of a development in accordance with the City's standards and actions by the Planning Commission and City Council.

With the sale of San Jose and Dale project sites, staff anticipates a total of approximately $5.1 million available within the next 16 months, with approximately $3 million available now.

Pension/OPEB Reserves

Through the direction and approval of the City Council, staff have set up Section 115 Trusts and Reserves for future pension liabilities, including CalPERS unfunded accrued liability (UAL), future pension obligation bond (POB) payments, and

Below is a summary of the totals included on Attachment A and described above.

One-Time Discretionary Funding By Two-Year Budget Cycle	Totals FY 2025-27	FY 2027-29	FY 2029-31
Available Fund Balance/Reserves	$ 6,860,000	$ 569,000	$ 260,000
Reallocation of CIP	$ 1,900,000	$ -	$ -
Property Sales	$ 5,120,000	$ 4,000,000	$ 4,000,000
Pension Set Aside	$ 13,820,000	$ 240,000	$ 180,000
OPEB Set Aside	$ 4,080,000	$ 80,000	$ 60,000
Grand Totals	**$ 31,780,000**	**$ 4,889,000**	**$ 4,500,000**

Future Policy Considerations

Due to the City's fiscal reforms, over the past seven years the City has created capacity to consider one-time investments; resources that would not exist without the foundational changes made years earlier. However, these same resources are needed to address competing priorities, including streets, parks, city facilities and long-term financial resilience. The City's current strategic plan includes action items to quantify facility needs and identify funding opportunities for streets and city facilities. Below are examples of policy areas the City Council may need to take into consideration when discussing one-time use of discretionary funds:

- Strategic use of one-time funds for street improvements to bridge existing gap of $3-3.5 million to raise PCI from a 63 to a 70 over the next seven years.
- Possible targeted use of one-time funds now, back-filled with future funding opportunities (e.g. sale of property, development of local agency owned property). This policy direction could be used for either streets or city facilities.
- Pay-down of future POB obligations in 2029 to free up $1.5 million in cash flow savings that could be used for another priority (e.g. streets).
- Prioritization of city facility needs (e.g. public works yard, library, roofing needs, etc.).
- Impacts on operational flexibility and services to the community during economic downturns, without ability to use general fund or pension reserves.
- Impacts on future liabilities with more or less funding for street/sidewalk projects.
- Impacts of bond ratings and future borrowing costs with the use of reserves.

The City Council is well versed in the need to utilize one-time funding in the most efficient manner possible. For example, in May 2023, the City Council received a report estimating approximately $8 million in needs, subject to further study (e.g. waterproofing, footings, etc.), for moderate repairs to the Library, including plumbing, electrical, mechanical, and structural upgrades. When a potential grant opportunity requiring a significant City match of up to $4 million was ultimately unavailable, the City Council and Library Board unanimously concluded that committing $8–$10+ million for a repair project with no guarantee of resolving underlying facility issues was not the most prudent course at that time. This decision was not a reflection of the Library's importance, but rather an example of the careful fiscal policy trade-offs required when limited resources must address multiple critical needs. As the City reviews the opportunities and costs for a significant civic center renovation aimed to address decades of issues for future generations of Glendorans, the City Council has continued to evaluate the needs of many infrastructure challenges, including streets, the Library and the City's public works yard - the use of one-time funding will assist with that analysis.

Other Financial Information

This report focuses on the use of one-time discretionary funding sources. In full acknowledgment that governmental or "fund" accounting can be difficult to understand, staff developed two additional attachments to this report. Attachment C covers the City's investment portfolio and Attachment D addresses how the various city funding sources must be used. As always, the goal is to provide information to those who would like to educate themselves on City finances in the most transparent and easy to understand method possible.

FISCAL IMPACT

There is no fiscal impact associated with the recommendations in this report. As City Council direction on the use of one-time funds is provided, staff will evaluate the fiscal impact of each policy decision on the City. Generally, impacts from the use of one-time funding are:

- Limited operational flexibility during future economic downturns (impacts on service delivery);
- Diminished ability to address one-time infrastructure issues;
- Downgrade of bond rating (increased borrowing costs);

ENVIRONMENTAL DETERMINATION

There is no CEQA impacts associated with the recommendations in this report.

NOTES

1	The General Fund reserve policy is a minimum of 30% to maximum of 45% of prior year operational expenditures. Total of $4.6 million is the amount in excess of the reserve minimum (30%). The amount in the Measure E/Z fund balance is available in it's entirety ($2.3 million). The City's Reserve Policy provides the City Council time to make decisions in economic downturns or funding loss from the State of California without significant impacts to service delivery to the community. Further this funding provides a stabilization to meet debt requirements, which partially resulted in the City's AAA bond ratings. Per the existing financial policies of the City Council, when General Fund revenues exceed expenditures it allows the City to set aside monies in reserve, future capital projects, stabilization of CalPERS pension/OPEB costs, as well as general liabilities, worker's compensation, fleet maintenance and technology costs. More specifically, when revenues exceed expenditures, the City's financial policies allocated that amount at the following percentages 50% to the Capital Projects Fund, 30% to the PERS Rate Stabilization Fund, 10% to OPEB Section 115 Trust (held in General Fund) and 10% to Internal Service Funds.
2	The City and Glendora Unified School District (GUSD) have a long history of partnering on community assets (e.g. middle school parks, high school pool, etc.). GUSD has a current pool renovation project, in which the CIty has contributed $600,000 to the $3.9 million dollar project. Additionally, the City Council approved an additional contribution of up to $900,000 that is dependent on the City's financial performance through June 30, 2027.
3	The sale of the San Jose site provided the City with $3.99 million. The City Council previously allocated $1 million of these proceeds to achieve initiatives in the City's strategic and economic development action plans (8/27/2024).
4	Staff anticipated an estimated $2.1 million to be received by June 30, 2027 for the sale of the Dale site. This funding will be dependent upon approval of a development in accordance with the City's standards and actions by the Planning Commission and City Council.
5	Amounts represent possible funding received through sale and development of land owned other local agencies over the next five years.
6	These funds are generally restructured and may only be used to pay for CalPERS retirement costs (Pension) or reimburse qualifying retired employees' medical premiums (OPEB). The monies may be accessed by the City to pay for specific liabilities, requiring certification of the expense. Currently, the City's CalPERS unfunded accrued liability (UAL) is $21.7 million, which is anticipated to be reduced to $10.3 million next year with CalPERS better than anticipated asset returns. Additionally, the City has an other post employment benefits (OPEB) liability of approximately $5.6 million. Finally, the City has an outstanding pension obligation bond principal amount of approximately $51 million.
7	These funds are generally restricted. Currently, these funds have been set aside for investment in the Section 115 Trusts as cash on hand/liquidity allows through the City Council Adopted General Fund Reserve Policy. The monies may be accessed immediately by the City until they are invested in the Section 115 Trusts, at which time they may only be used to offset future/current pension liabilities. See note 6 with respect to pension and OPEB liabilities outstanding.

ONE-TIME FUNDING

FISCAL YEAR 2025-2026

CITY MANAGER'S OFFICE / FINANCE DEPARTMENT
CITY COUNCIL MEETING: FEBRUARY 24, 2026
KYLE JOHNSON, FINANCE DIRECTOR
ADAM RAYMOND, CITY MANAGER

EXECUTIVE SUMMARY

- Glendora has restored financial stability over the last seven years
  - Addressed $3–$4M structural deficit
  - Voter-approved Measures E & Z
  - Pension restructuring (POB)
  - Significantly strengthened reserve, liability and capital funding policies
  - Modernized city/departmental operations
  - Earned AAA bond rating

EXECUTIVE SUMMARY

- Results have been significant
  - Generational investments in infrastructure
  - Improved street conditions (PCI upward trend, albeit small), reversing decades of decline
  - Significant investments in public safety, homelessness
  - Reduced chronic vacancies
  - Major investments in technology
  - $50+ million in grant revenues (e.g. Finkbiner stormwater, intersections, first/last mile)

LEGISLATIVE HISTORY

- January 13, 2026 – Staff committed to broader one-time funding discussion
- February 24, 2026 – Mid-Year Budget Update

EXECUTIVE SUMMARY

- Glendora has restored financial stability over the last seven years
  - Addressed $3–$4M structural deficit
  - Voter-approved Measures E & Z
  - Pension restructuring (POB)
  - Strengthened reserves and capital funding policies
  - Earned AAA bond rating

Reserve [7]			
Grand Totals	**$ 31,780,000**	**$ 4,889,000**	**$ 4,500,000**

FUTURE POLICY CONSIDERATIONS

- Examples of policy areas the City Council may need to take into consideration when discussing one-time use of discretionary funds:
  - Strategic use of one-time funds for street improvements to bridge existing gap of $3-3.5 million to raise PCI from a 63 to a 70 over the next seven years.
  - Possible targeted use of one-time funds now, backfilled with future funding opportunities (e.g. Sale of property, development of local agency owned property). This policy direction could be used for either streets or city facilities.
  - Pay-down of future POB obligations in 2029 to free up $1.5 million in cash flow savings that could be used for another priority (e.g. Streets).

FUTURE POLICY CONSIDERATIONS

- Examples of policy areas the City Council may need to take into consideration when discussing one-time use of discretionary funds:
  - Prioritization of city facility needs (e.g. public works yard, library, roofing needs, etc.).
  - Impacts on operational flexibility and services to the community during economic downturns, without ability to use general fund or pension reserves.
  - Impacts on future liabilities with more or less funding for street/sidewalk projects.
  - Impacts of bond ratings and future borrowing costs with the use of reserves.

OTHER FINANCIAL INFORMATION

- Government “fund” accounting is difficult to understand
    - Attachment C – Overview of City’s investment portfolio and what funding is for
    - Attachment D – Overview of the various funding sources and what is discretionary and what is not

RECOMMENDATIONS

THAT THE CITY COUNCIL:

1. RECEIVE AN OVERVIEW ON ONE-TIME FUNDING OPPORTUNITIES; AND
2. PROVIDE DIRECTION, AS NEEDED.

Why the City's $125 Million Cash and Investment Balance Isn't a Giant Piggy Bank

Executive Summary

The City of Glendora maintains approximately $125 million in pooled cash and investments. While that number may sound like unrestricted money available for any purpose, the vast majority of those funds are legally restricted, contractually committed, or reserved for specific uses.

Government fund accounting requires that dollars collected for one purpose (such as water, gas tax, grants, or development fees) may only be used for that specific purpose.

In practical terms, the City's cash pool operates like a collection of labeled envelopes rather than a single checking account.

- Most funds already have assigned jobs (infrastructure projects, utility operations, debt payments, grants, and emergency reserves).
- Only a portion of the total represents flexible General Fund resources used for core services like police, public works, development, parks, and libraries.
- Fund accounting can feel unusual and overly complex, but it exists to ensure transparency, legal compliance, fiscal stability, and protection of taxpayer dollars.

It's One Vault, But Many 'Envelopes'

The $125 million is pooled together for investment purposes (*to maximize interest earnings*). Internally, it is divided into separate funds, each with its own legal purpose.

Think of it like having a mortgage account, a college fund, a car repair fund, and a 'don't touch or the auditors (IRS in personal/business world) will appear' fund — all at the same bank. Many dollars are legally restricted:

- Gas tax revenue – Must be used for streets and transportation.
- Water fees – Must be used for water systems.
- Risk management funds – Must be used for future liabilities.
- Grant funds – Must be used exactly as specified by the grant.
- Debt proceeds – Must be used for legally approved projects.

Using these funds for anything else is not just discouraged — it is illegal.

Some Money Is Already Spoken For

- Funds may already be committed to contracts approved by the City Council.
- Capital projects underway have funding set aside.
- Required reserves must be maintained for financial stability.
- Some balances represent liabilities already owed (pensions, invoices, deposits).

Cities Must Maintain Reserves

- Emergencies, natural disasters, and economic downturns happen.
- Maintaining reserves protects the City's credit rating.
- Strong reserves help avoid sudden service cuts or tax increases.

Spending reserves simply because cash exists would be like spending your emergency savings because your checking account looks full. Likewise, a full checkbook does not indicate cash/savings exists or are available to be spent.

Why Fund Accounting Feels So Confusing

- Businesses focus on profit.
- Families can focus on cash flow and savings.
- Governments focus on legal purpose and public accountability.

Instead of one checking account, cities manage dozens of funds that must balance independently. It may feel rigid, but this structure ensures transparency, accountability, and compliance with law.

What Is Actually Flexible?

Only a portion of the total cash pool represents General Fund dollars that can support core services such as:

- Police
- Parks
- Library
- Development
- General City operations

Even those funds must cover ongoing operational costs, not one-time wish lists.

Timing Matters: Revenues and Expenses Don't Arrive Together

Another important piece of the puzzle is timing. The City operates year-round, but revenues do not all arrive evenly throughout the year.

- Property tax revenue is typically received in installments (primarily December and April).
- Sales tax receipts are received monthly but based on prior activity.
- Grant funds are often reimbursed after the City has already spent the money.
- Utility revenues fluctuate based on usage and billing cycles.

This means the City must carefully manage cash flow to ensure bills, payroll, and contract payments are made on time, even when major revenues have not yet arrived.

In many cases, especially with state and federal grants, the City must front the money for a project and then submit documentation to receive reimbursement. So, while a grant may be awarded for a project, the cash almost never arrives before the expenses occur.

Due to these timing differences, maintaining adequate cash balances is critical. The presence of cash in the investment pool does not mean the funds are surplus, it often means the City is responsibly managing timing differences between when money is received and when it must be spent.

Bottom Line

When you hear that the City has $125 million in the bank, it does not mean the City has $125 million available for discretionary spending.

It means the City responsibly manages multiple legally restricted and purpose-driven funds, which have timing challenges with revenues and expenses, in an organized, accountable, and carefully monitored way to protect the community's financial stability.

City of Glendora
Where Does the $125 Million Go?
(And Why We Can't Just Spend It on Whatever We Want)

How Glendora Actually Builds a Budget (Hint: It's Not Guesswork)

Before we talk about funding sources, restrictions, and why we can't repave every street tomorrow, it's important to understand Glendora does not budget one year at a time and hope for the best. Sound financial management requires:

- Multi-year financial planning
- Ongoing financial monitoring
- Frequent financial reporting
- Prompt corrective action when necessary
- Long-term financial health strategies

In other words, we do not steer the City by looking only through the rearview mirror.

Glendora adopts a two-year budget to provide greater certainty for the City Council, departments, employees, and the public regarding ongoing funding and staffing for programs and services.

Even more importantly, we include a Five-Year Financial Projection for:

- The General Fund
- Measures E/Z
- The Water Fund(s)

This allows the City to evaluate the long-term impact of policy decisions during the budget process. If a decision creates structural imbalance three years from now, we see it coming. And ideally, we fix it before it becomes tomorrow's headline.

Layered on top of that are our guiding documents, which include but are not limited to:

- Community Surveys
- City Council Strategic Plans
- Pavement Condition Index (PCI)
- Parks Master Plan
- Water Master Plan

Policy sets direction. Data sets priorities. The budget follows both.

The approximately $125 million annual budget is not a wish list. It is a structured financial response to adopted goals, infrastructure needs, and legal requirements. What gets funded, gets done.

Why We Can't Just Spend $125 Million on Anything We Want
When people hear '$125 million budget,' it can sound like a very large, very flexible piggy bank.

It is not.

The City operates roughly 60 separate funds divided into six major fund types. Think of the budget as one vault filled with dozens of labeled envelopes. Each envelope has a name, a job, and in many cases, a very strict set of rules.

Gas tax must be used for streets. Water fees must stay in water. Grant funds must follow grant rules. Debt must be paid on schedule.

Using restricted funds for unrelated purposes is not creative budgeting, it is illegal. And auditors do not accept 'but it seemed like a good idea at the time.' The City would know, we get audited by 10+ agencies on an annual basis.

The Six Fund Types (Also Known as The Envelopes)

1. General Fund, Measures E/Z and GUSD JUA – The Flexible Ones (Sort Of)
The General Fund supports police, parks, the library, public works operations, administration, and community development.

It represents approximately 45% of the City's total annual budget, or roughly $56.5 million of the $125 million total.

It is the most flexible fund — but even it is largely committed to ongoing expenses such as employees, contracts, and services to the community. The Police Department, Public Works Department and Community and Economic Development comprise approximately65% of the General Fund.

So yes, it is flexible. But it is also very, very busy.

2. Special Revenue Funds – The Rule Followers
Restricted by State law, Federal law, local ordinance, or voter approval, these funds must be used only for specific purposes such as transportation, grants, or development-related infrastructure.

They represent approximately $15.9 million, or 13% of the total budget.

They are not available for general operations — no matter how compelling the proposal.

3. Capital Project Funds – The Builders

Dedicated to long-term infrastructure improvements and major projects.

These funds help ensure we invest today without undermining tomorrow's operating stability.

4. Debt Service Funds – The Bill Payers
Used exclusively to repay bond obligations and capital lease agreements.

Debt payments are contractual commitments. They are not optional. They are not flexible. They are simply due.

5. Enterprise Fund (Water) – The Utility Business
Funded by water rates and legally restricted to water operations and infrastructure.

The Water Fund represents approximately $31.4 million, or 25% of the total annual budget.

Water customers pay for water, not for everything else.

6. Internal Service Funds – The Behind-the-Scenes Team
Support internal operations such as insurance, technology, and fleet management.

They may not get headlines, but without them, things break — both literally and financially.

Bottom Line
The City does not have $125 million available for discretionary spending.

It manages a system of legally restricted, contractually obligated, purpose-driven funds. We are guided by multi-year planning, ongoing monitoring, and long-term financial strategies.

Fund accounting may feel rigid. That is intentional.

It protects taxpayers, preserves infrastructure, supports responsible planning, and ensures today's decisions do not become tomorrow's financial problem.

V.5.4

BACKGROUND

This Report is submitted by the City of Glendora's Ad Hoc Committee (Committee). Each volunteer-resident member of the Committee was appointed by the City Council to review, study, and ask questions regarding the city's near- and long-term financial viability. And, where practical, make specific recommendations regarding revenue enhancement and expense reductions.

The City of Glendora offers exceptional housing, award-winning schools and a dynamic 'small town' business climate, along with fiscally-minded governance all of which are strong factors in the ongoing success of the City's local economy.

The City has a long tradition of strong, local fiscal management including maintaining a high level of service with a fairly low tax burden (when compared to neighboring cities).[1] Unfortunately, many cities in California are struggling to maintain basic services as funding pressure, through increased structural costs for pensions, regulatory mandates, and general cost increases have outpaced revenues.

Expense Reductions

The City has been in the forefront of expense reductions including a decrease in staffing levels by 23% since 2009 (which included a reduction in staffing of the Police Department by 14%).[2] The City has been diligent in its efforts to reduce pension related expenditures, for example, by implementing lower benefit levels for new employee pension plans before it was required by the Public Employees' Pension Reform Act ("PEPRA").[3] PEPRA resulted in further reductions of pension benefits for new employees. The intent of these expense reductions was to:

1. Maintain a structurally balanced budget in which recurring revenues equal or exceed recurring expenditures. This process provides financial stability for the city in the long-term.
2. A budget that is not structurally balanced is one balanced through the use of one-time resources such as fund balance, asset lease proceeds or borrowing and/or using non-recurring, one-time revenues. Such methods portend financial difficulties and is **not** a sustainable practice; and,
3. Maintain the core services of public safety, utilities, street and road maintenance, community services, and, to keep public areas accessible and available.

Even with these staffing reductions, service levels have remained fairly consistent across all departments. However, without a definitive course of future action, the city's financial future remains uncertain.

Please note: all footnote links referenced in this report were verified and active as of October 18, 2019.

Seeking a Solution—Creation of the Ad Hoc Committee (*Citizen's Advisory Panel*)
As a matter of regular practice for many years, the City Council, City Manager, and Department Heads meet periodically to review and update the city's Strategic Plan. During such a meeting on January 25, 2018, this group discussed the ongoing concern that current revenue sources and longer-term projections would not keep pace with the anticipated expenditure trends.[4]

This Strategic Planning Group, led by the City Council, discussed the possibility of seeking community input by the creation of a citizen's advisory panel; it was established that then Mayor Thompson and Councilmember Nelson would further explore this issue. On April 10, 2018, Mayor Thompson and Councilmember Nelson formally presented to the city council an agenda item recommending the creation of an Ad-Hoc Citizen's Advisory Committee to evaluate the following:[5]

- *Why there may be a [revenue] problem.*
- *How and/or what might be recommended to create new revenue sources.*
- *Are there other ways to address the "problem."*
- *The committee summarized it this way, "Increase Revenues and Reduce Expenditures."*

It was recommended that the committee be comprised of between 15-21 persons with a diverse background. However, a financial background, especially with public entities should be highly valued. It would be open to city residents and city business owners.

Each Councilmember would appoint two members to the panel. The remaining seats of the panel (5 to 11) would be from the public at-large and be selected similar to the appointment process for Commissions/Boards. The City Council would appoint a Chair and Vice-Chair of the Ad-hoc Committee and the primary staff liaison would be the Finance Director.

The City Council voted unanimously to adopt the recommendations of this agenda item.[6]

SELECTION OF MEMBERS
After the agenda item was approved, the city began soliciting applications from members of the community who wished to serve on the committee.[7] This subsequently resulted in the City Council appointing, on May 16, 2018, twenty members to the Ad-Hoc Citizen's Advisory Committee. Michael Holmes was appointed as the Committee Chair and Cliff Hamlow as the Vice-Chair.

[4] See City of Glendora's Strategic Planning Retreat (http://www.cityofglendora.org/home/showdocument?id=21645), where [see pages 7 of 9] the three-year goal under "Maintain Financial Stability" was to "Develop and recommend to the City Council for consideration the appointment of a Citizen's Advisory Panel to report on possible new revenue sources to address funding needs."
[5] See the May 16, 2018, City of Glendora Council Agenda: http://www.cityofglendora.org/home/showdocument?id=24727.
[6] Ibid.
[7] For example, see this ad in the Glendora City News dated May 1, 2018: https://glendoracitynews.com/2018/05/01/applicants-wanted-for-glendora-financial-ad-hoc-committee/

OVERVIEW OF COMMITTEE MEETINGS

The first meeting was held on June 7, 2018.[8] Mayor Thompson attended and spoke at the beginning of the meeting. In response to a question from the committee, he clarified that the committee could also evaluate **cost saving items as well as revenue sources**.[9] (emphasis added) Over the next eleven months, the committee met a total of eleven times which included a tour of various city owned properties.

Committee Chair Holmes ran the meetings. Finance Director June Overholt attended all the meetings to present information and data, answer questions and serve as a resource to the committee. City Manager Jeffers and subsequently City Manager Raymond attended selected meetings to serve as a resource. Agendas and minutes were kept of each meeting and posted on the city's website.[10]

UNDERSTANDING THE FINANCIAL CONCERNS

From the meetings, the data, and the discussions that followed, the committee learned that:[11, 12]

- Since 2009, a number of City positions have been eliminated.
- The city had outsourced more than twenty different types of services to save costs.
- City fees are evaluated on an annual basis as a part of the budget process.
- Department heads (police chief, public works directors, etc.) are held accountable for the finances of their department.
- Rising pension costs are probably the most significant expense issue the city faces.[13] The committee learned that:
  - ✓ Glendora was one of the first cities to add a second pension tier for new employees. This results in cost savings over time.
  - ✓ All members of city employment groups now contribute a greater share of their paychecks to help pay for pension cost.
  - ✓ In 2013, the state of California enacted the *Public Employees' Pension Employee Reform Act* (PEPRA).[14] This law revised benefits for new employees and modified some potential benefits of current employees. This is projected over time to result in significant cost savings across the state and for the city of Glendora. However, the manner in which pension costs are calculated, the city will not realize the benefits of these lower costs for another ten to fifteen years.[15]

---

[8] Subsequent meetings were held in 2018 on: Jun 20, Jul 11, Jul 25, Aug 16, Aug 29, Sep 6, Sep 12, Oct 24, and April 10, 2019.
[9] The Committee's meetings, agendas, minutes and presentations may be found at: http://www.cityofglendora.org/departments/government/boards-commissions-and-committees/ad-hoc-committee. Plus, Mayor Thompson's input was included in personal notes taken and various recollections at the same meeting.
[10] See: http://www.cityofglendora.org/departments/government/boards-commissions-and-committees/ad-hoc-committee
[11] There are excellent City of Glendora financial and budgetary resources found here: http://www.cityofglendora.org/departments-services/finance/finance-reports
[12] For example, in documents provided by the City, full time equivalent employment (FTE's) for FY 2009 were 316.64 positions, while the proposed budget for FY 2019 showed 245.26 FTE's—a 22.5% staffing reduction over approximately ten years. See: http://www.cityofglendora.org/home/showdocument?id=23243 (page 30).
[13] Op. cit. (see: foot note 11 within the referenced document)
[14] For a summary of the PEPRA go to https://www.calpers.ca.gov/docs/forms-publications/summary-pension-act.pdf. According to PERS: "The improvement in funded status has generally reduced the risk that plans will fall to low funding levels. However, employer contribution levels are climbing and this is potentially increasing financial stress on some employers. When combined with some of the environmental changes discussed in the report, this is an area of concern for the future. In addition to the overall level of the contributions, **sudden sharp increases in employer contribution rates remain a concern as well. The greatest risk to the system continues to be the ability of employers to make their required contributions.** However, with few exceptions, employers are currently up-to-date with their contribution requirements." [emphasis added]
[15] For a detailed primer on the City's history with CalPERS and its ongoing funding obligations, please see: http://www.cityofglendora.org/home/showdocument?id=23245

Current and Future Revenue Challenges

The committee discussed and/or received many detailed presentations from city staff, a private consulting company, and from committee members who had conducted their own research on a variety of topics. In addition:

- The Committee received and discussed an overview of the City of Glendora's organizational structure, which included detailed financial data on the different types of funding—along with various restrictions imposed by the state and federal governments,
- The FY 2018-19 budget (which at the time of our meetings was being discussed and reviewed by the City Council), and, projected revenue and deficit forecasts.
- The Committee received a detailed overview of the city's future budget challenges.
- Current and projected pension costs were studied in great detail, particularly how amortization calculations and the projected impacts of unfunded pension liabilities impact city revenues.
- The Committee reviewed the city's General Fund key revenue sources consisting of: Property Tax and Sales Tax.
- The Committee also studied Capital Improvement Funding, the impacts of deferred maintenance—both in streets, public facilities (property and buildings), vehicles and equipment—and related expenses to individual departments.
- Potential Revenue and Expense reductions were also reviewed and prioritized. This included recommendations for citywide cost saving activities and potential service delivery changes.
- The committee learned about the city's anticipated revenue concerns—and was presented a benchmark, the 'Great Recession,' for comparison.[16] Starting after 2008, the city's revenues have recovered and were generally increasing each year. However, *expenditures were increasing at a much greater rate* and the city was facing a $500,000 budget shortfall in fiscal year 2019. This was projected to increase to more than $2,000,000 by FY 22-23 and will continue for the next ten to fifteen years until the shortfall begins decreasing.[17] The primary causes of this budgetary "structural deficit" are:
  - ✓ Rising employee pension costs. Changes in CalPERS "discount" (also known as the "assumed rate of return") rate doubles the City's costs and revisions with a *reduction* in the amortization period;
  - ✓ Loss of redevelopment funding due to state legislative action;
  - ✓ Increasing state and federal mandates with no additional funding being provided for implementation;[18]
  - ✓ Reliance on special revenues for operating costs (like asset forfeiture).
  - ✓ Fundamental changes in the retail economic environment due to a significant increase in online sales and subsequent loss of sales tax revenue
  - ✓ Natural and cyclical economic fluctuations;
  - ✓ Employee Negotiations;
  - ✓ Ongoing infrastructure needs: deferred maintenance of the streets and public facilities; and
  - ✓ Reliance on special revenues for operating costs such as asset forfeiture, franchise fees, permits, fees, etc.

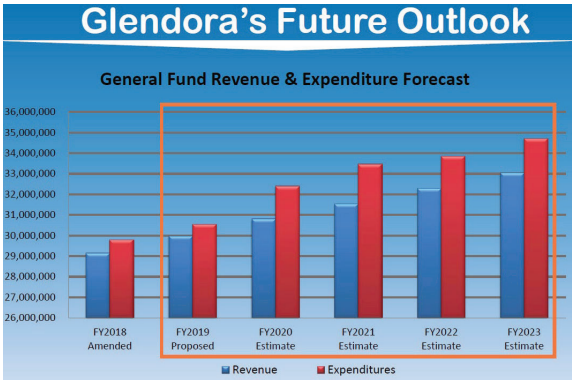
[16] According to the Federal Reserve, "the Great Recession began in December 2007 and ended in June 2009, which makes it the longest recession since World War II." See: https://www.federalreservehistory.org/essays/great_recession_of_200709

[17] For a complete background and overview of the projected budget deficit, please see the materials from the June 7, 2019, Ad Hoc Citizens Advisory Committee found here: http://www.cityofglendora.org/home/showdocument?id=23243

[18] See: http://www.cityofglendora.org/home/showdocument?id=23319, specifically on page 19, for a discussion regarding "California Ballot Initiatives Influencing Local Government Finances."

We also learned that Glendora is not unique in this predicament. A significant number of cities in California are experiencing almost identical budget issues.[19]

BASIS FOR THE COMMITTEE'S RECOMMENDATIONS



Options

1. Focus on issues that would ***significantly*** increase revenues and/or ***reduce*** costs. The projected annual budget deficit was in the $500,000 (FY 2019 to nearly $2,000,000 range estimated by FY 2023].[20] The chart below indicates the projected structural imbalance in the City's General Fund.

	Actual FY 16-17	Amended FY 17-18	ESTIMATE FY 18-19	ESTIMATE FY 19-20	ESTIMATE FY 20-21	ESTIMATE FY 21-22	ESTIMATE FY 22-23
Total Revenues	30,861,831	29,147,522	30,101,731	30,396,761	31,116,306	31,855,501	32,615,657
Total Expense	29,846,566	29,776,431	30,440,563	32,285,833	33,339,182	33,712,352	34,563,703
Operating Surplus or (Deficit)	$ 1,015,265	$ (628,909)	$ (338,832)	$ (1,889,073)	$ (2,222,876)	$ (1,856,851)	$ (1,948,046)
Budget Surplus goal = 1.0% of Exp.	243,369	266,255	285,730	286,955	313,336	324,709	335,635
Net Surplus/(Deficit)	*771,896*	*(895,145)*	*(624,563)*	*(2,176,028)*	*(2,536,212)*	*(2,181,560)*	*(2,283,680)*
Beginning Available Fund Balance		12,306,072	11,677,163	11,338,331	9,449,258	7,226,382	5,369,531
Ending Available Fund Balance		**11,677,163**	**11,338,331**	**9,449,258**	**7,226,382**	**5,369,531**	**3,421,486**
Working Cap. Reserve (45% of exp.)		11,981,471	12,857,859	12,912,975	14,100,128	14,611,905	15,103,564
Above/(Below) Maximum Reserve goal		*(304,289)*	*(1,519,528)*	*(3,463,717)*	*(6,873,746)*	*(9,242,374)*	*(11,682,078)*

For example, the suggestion of minor revenue increases, such as doubling a $10 fee, would not solve the budget issue.

2. Conduct a broad, higher level view if there appeared to be the potential of a significant revenue increase or cost savings, and then, recommend that the city council take steps to explore the issue in greater detail.

The reason is that some solutions would require significant resources in staff time, expenses, and community input that were outside the scope and the time commitment of the Committee's assignment.

For example, if the Committee recommended the sale of a city park (a one-time revenue increase) so it could be replaced, for example, with a residential development (accompanied by an on-going increase in property tax revenue); many other factors would come into play. For example: Does the community want this? Town hall meetings/surveys would need to be done. What is the environmental impact? A study would need to be commissioned. Are there utility (i.e., water, electric issues)? What is the potential for lawsuits? What is the cost / impact to the infrastructure (streets, sewers, etc.) vs the property tax increase? How are police, fire, and school services affected, etc.?

[20] See: http://www.cityofglendora.org/home/showdocument?id=23243 and http://sirepub.ci.glendora.ca.us/sirepub/cache/2/ylghxpg2mmhdy52qtvkzxoyc/340754090220191124372 95.PDF

The committee determined to pursue a broader scope of recommendations and not focus one issue.

SEEKING SOLUTIONS—EXPENSE REDUCTIONS

Pension Bond Refinancing

- Pension costs were studied in detail and how amortization calculations and the projected impacts of unfunded pension liabilities impact city revenues.
- The committee learned that the city could take steps to issue a bond that would pay off the city's unfunded pension liability to CalPERS. The creation of the bond would lower the amount of money the city pays due to the difference in interest rates (this is comparable to refinancing a home mortgage at a lower interest rate).
- As the committee was meeting, the city council was taking action to issue a pension bond.[21]

➢ ***The committee concurred with this course of action.***

Contracting-Out City Services

The committee reviewed and discussed very basic information on potential cost savings for outsourcing the City's Police Department to the Los Angeles County Sheriff's Department. The committee also received information on potential cost savings for the possibility of outsourcing the library to the Los Angeles County Library system. In addition, we noted that some local cities outsource Public Works and Community Services.

Outsourcing

Item	Pros	Cons
Glendora Police Department and the Los Angeles County Sheriff's Department[22]	• Possible reduction in budget costs due to consolidation of services with Los Angeles County, i.e., economies of scale (personnel, vehicles, equipment, training, facilities) • "Fix" the cost of services • The availability of additional resources	• Less local control over police-led efforts and initiatives • Decreased staffing levels • Turnover in personnel • Unable to control rising costs because the county oversees contract negations. • The cost versus the services provided can vary greatly • Clarity of reporting—allegiance to County or City? • Long-time city sentiment recognizes the good job the Glendora PD is doing[23] • Lack of community engagement • Prioritization of calls • Response times

[21] The City Council authorized issuing POBs [Pension Obligation Bonds] to address the City's $57.5 million unfunded accrued liability ("UAL") for employee pensions provided through the California Public Employees' Pension System ("CalPERS"). See the City Council agenda item, dated March 12, 2019 at: http://www.cityofglendora.org/home/showdocument?id=25033. There was excellent news in conjunction with this subsequent bond sale in August 2019, as the city obtained a 'AAA' bond rating from Standard and Poor's on the proposed Pension Obligation Bonds! **Glendora is now among one of fifteen cities with debt outstanding that have achieved this credit rating in California.** S&P specifically noted "the local economy, the financial performance of the City, and City management with particular focus on financial policies and practices, as major factors in determining the credit rating." See: https://www.standardandpoors.com/en_AU/web/guest/article/-/view/type/HTML/id/2281522

[22] For a very rough cost analysis and using the Los Angeles County Sheriff's contract with the city of San Dimas, see the notes from the committee meeting of July 25, 2018, p. 33, at http://www.cityofglendora.org/home/showdocument?id=23323.

[23] See a list of community surveys which rate police (emergency) services at: http://www.cityofglendora.org/departments-services/city-manager/glendora-community-survey-results. Consistently, the surveys indicate that local residents note that providing police services is the most or among the most important of the City of Glendora services.

City Library[24]	Potential reductions in overall costs (please note, the actual savings have yet to be identified and/or quantified)	• Outsourcing could lead to reduced service • Underserving of populations more difficult to reach • It was suggested that the City currently operates its library at less cost than the County
Community Services and Public Works	Potential reductions in overall costs (please note, the actual savings have yet to be identified and/or quantified)	Outsourcing could lead to reduced service

The committee felt strongly that any consideration for outsourcing would require significant study, by the City Council, and community input.

➢ ***It is recommended that the City Council and city staff recognize that the city <u>may have</u> potential cost savings by outsourcing any of these four departments.***

SEEKING SOLUTIONS—REVENUE INCREASES

The Committee also received information on legislation and court cases relating to sales and use tax, and additional revenue enhancement options. An excellent presentation was made by Mr. Lloyd de Llamas, of HDL, a firm that specializes in public agency revenue management services including sales tax, property tax, lodging tax, business license and tax, and tax, economic development.[25] With the background from Mr. de Llamas and city staff, the committee discussed three potential revenue sources—i.e., tax increases—that could potentially bring in between $1,000,000 and $5,000,000 in additional annual revenue. Any of these revenue sources would assist in reducing the projected structural budget deficit that the city is facing.

Each of these options would require voter approval, to pass as prescribed by state law.[26]

1. <u>Property (Parcel) Tax Increase</u>
   The committee had several concerns with this:
   A) Property owners would bear the cost of this. Renters would not; and
   B) Based upon when a property was last sold, property tax obligations could vary significantly amongst neighbors who owned properties of comparable value. It was also noted that the Glendora Unified School District has proposed several property tax measures in recent years; the last one failed.[27] This was indicative that the Glendora community may **<u>not</u>** be supportive of another property tax measure.

Calculation	Amount
Total Parcels	16,157
Government Owned	(4)
Exempt	(486)
Total Taxable Parcels	15,667
If Tax is $32	$501,344
If Tax is $64	$1,002,688
If Tax is $128	$2,005,376
If Tax is $256	$4,010,752

[24] For additional background on the outsourcing the library, see: http://www.cityofglendora.org/home/showdocument?id=23323
[25] For background and the expertise of Mr. de Llamas and his firm, refer to: https://www.hdlcompanies.com/
[26] For example, a *Parcel Tax* requires a 2/3's voter approval. A *Transaction (Sales)* Tax, requires at least a 50% plus 1 vote, a *User Utility Tax* requires at least a 50% plus 1 vote. For additional background, see: http://www.cityofglendora.org/home/showdocument?id=24470
[27] See https://www.sgvtribune.com/2017/11/08/after-measure-gg-fails-glendora-unified-will-regroup-to-find-new-funding/ and https://ballotpedia.org/Glendora_Unified_School_District,_Bond_Issue,_Measure_GG_(November_2017). For this to pass a 55% supermajority was required for approval. The final vote was: 2,763 **NO** [52.89%] and 2,461 **YES** [47.11%].

2. Utility Tax

This would affect both property owners and renters. However, utilities are a necessity and increases in utility prices would negatively affect low-income households and seniors on fixed incomes. However, this remains a viable source of potential revenues:

Glendora Quick Analysis on UUT

	1%		UUT 8%	UUT 6%	UUT 4%
UUT-Television(Cable)	96,000		768,000	576,000	384,000
UUT - Water	218,500		1,748,000	1,311,000	874,000
UUT - Suburban	20,000		160,000	120,000	80,000
UUT-Telephone/Mobile			-	-	-
UUT-Electric	441,563		3,532,501	2,649,375	1,766,250
UUT-Gas	90,000		720,000	540,000	360,000
Total UUT Revenue	**770,063**		**6,928,501**	**5,196,375**	**3,464,250**
Approximately 13,500 Water Accounts		Annual Impact	513.22	384.92	256.61
		Monthly Impact	42.77	32.08	21.38

3. Sales Tax Increase

This would apply equally and is based upon how much you purchase or lease of tangible personal property. Real property and services are excluded—it is charged only when sold to the end user. In Glendora, 85% of the sales tax revenue is generated by 5% of businesses. The committee also learned that due primarily to the Glendora Marketplace, Diamond Ridge, and Wal Mart retail centers, that more than 50% of sales tax revenue is collected from non-residents who shop in Glendora. In essence, non-residents would be helping to pay for city services while they were shopping in Glendora.[28]

The committee also learned that the state sales tax rate is set by state law at 10.25% and cannot be increased under current law.[29, 30] The last tax increase was Los Angeles County's "Measure H" to support the homeless.[31] The Measure H increase is estimated to generate about $1,500,000 from the city of Glendora, yet, Los Angeles County controls the money and Glendora receives approximately $100,000 each year![32]

Conclusions Related to Revenue Enhancements:

The committee determined that the sales tax increase (No. 3 above) was the best option:

- It is a tax paid regionally and not borne entirely by the City's residents.
- This tax has a statutory cap of 10.25%. Currently, the tax is set at 9.5%. This leaves an opportunity for a 0.75% increase.
- A proposed increase would be competitive with what other local cities have done or are proposing to implement.
- If a sales tax increase was approved by local voters, **all the revenue would stay with the city under local control**.

[28] For an excellent overview of the sales tax process in California and its impacts to Glendora see the July 25, 2018 Ad Hoc Committee meeting presentation at: http://www.cityofglendora.org/home/showdocument?id=23323

[29] https://en.wikipedia.org/wiki/Sales_and_use_taxes_in_California

[30] See: http://www.westerncity.com/article/primer-california-city-revenues-part-two-major-city-revenues

[31] See: here. A **yes** vote was a vote in favor of authorizing a 0.25 percent county sales tax for 10 years in order to fund homeless services and prevention. A 2/3 vote (66.7%) was required for the approval of Measure H and the measure passed with 69.34% of the vote cast.

[32] For comprehensive detail on the city's revenue stream, see: http://www.cityofglendora.org/home/showdocument?id=23120

Sales Tax Description	Rate
Sate of CA - General Fund	3.6875%
State of CA - General Fund	0.2500%
State of CA - Local Public Safety	0.5000%
State of CA - Local Health and Social Services	0.5000%
State of CA - Local Revenue Fund	1.0625%
Local Agency (Country Transpiration Fund)	0.2500%
Local Agency (City of Glendora)	1.0000%
Statewide Base Sales and Use Tax Rate	*7.2500%*
Los Angeles County Measure H Homeless (LACH) - 10/1-2017	0.2500%
Los Angeles County Metro Transportation Authority (LAMT) - 7/1/2009	0.5000%
Los Angles County Traffic Improvement Plan (LAMA) - 7/1/2017	0.5000%
Los Angeles County Transportation Commission (LACT) - 7/1/2017	0.5000%
Los Angeles County Transportation Commission (LATC) - 4/1/1991	0.5000%
Existing District Tax Additions To Sales Tax Rate	*2.2500%*
Base Sales Tax Charged Throughout Los Angeles County	*9.5000%*
Ad-Hoc Committee Recommended Increase	0.7500%
***Total Proposed Local Sales Tax Rate**	**10.2500%**
Note: California has a minimum sales tax of 7.25 percent (state mandate). Counties, municipalities, and districts are allowed to increase the sales tax in specific jurisdictions up to a combined total of 10.25 percent. In Glendora, the County of Los Angeles has already taken 2.25% of the allowable 3% threshold.	

As the committee was meeting, we learned that eleven cities in Los Angeles County had placed sales tax increase initiatives on the Nov 2018 ballot. However, it was too late for a Glendora ballot initiative to be placed on the Nov 2018 ballot; but the committee learned that the city could place, within the prescribed process, a sales tax increase on the ballot as early as March 2019. If Glendora waited for the November 2019 election, it could possibly compete with state and county initiatives that would 'override' Glendora's initiative if both were approved.

- ***Based upon this information, the committee was unanimous in its decision to present a preliminary report to the city council on Sep. 11, 2018 recommending that while the committee was still in-progress, the city should immediately take steps to conduct a special election for a sales tax initiative.***[33]

The city council subsequently chose to follow this course of action and the sales tax initiative (Measure E) was passed by the voters on March 5, 2019. The estimated revenue increase each year is estimated at $3.7M to $4M in Year-1 and $5M after being fully implemented.[34]

[33] http://www.cityofglendora.org/residents/online-videos (after accessing this site, you will then need to search for the Tuesday, Sep. 11, 2018 City Council meeting). More specifically, the action directed the City Attorney to prepare legislation for the September 25, 2018, City Council meeting to place a measure on the March 2019 ballot to seek a three-quarter cent increase in the City's sales (transaction) tax rate, from 9.5% to 10.25%; and, recommend the Ad-Hoc Citizens Advisory Committee continue to work with City staff on identifying expenditure efficiencies and other potential revenue enhancements.

[34] See: https://ballotpedia.org/Glendora,_California,_Measure_E,_General_Sales_Tax_(March_2019)

POTENTIAL DEVELOPMENT OF CITY-OWNED PARCELS

The committee inquired about the potential for one-time revenue increases by selling 'excess' city property. A summary of the discussion is provided below:

Potential Development	Pros	Cons
Glen Oaks Golf Course[35]	• A significant source of one-time revenue, roughly estimated at $12.5 million for the sale of the of the land, for example, to a developer. • Also, it is anticipated that the annual property tax revenue, if the property were developed into a residential development for example, would exceed the current leasing income.[36]	• The city would lose a public golf course, an activity that many find as a positive community attribute and the development would significantly alter the neighborhood, which may or may not be welcome. • The golf courses' open space and aesthetic qualities would be significantly altered by a large-scale development.
"San Jose tract" (just north of the current city yard)[37]	• Source of one-time revenue and recurring property taxes if it was sold and replaced by residential development. • It is estimated that some 30+ single-family residential homes could be built on this property.	• There are the concerns associated with any proposed development to vacant land and local impacts on the nearby residents, traffic flow, etc.
South Hills Wilderness Park[38]	• Significant source of one-time revenue and recurring property taxes if it was sold and replaced by residential development. • Large enough that some development could take place and yet still retain its general "open space" nature.	• There are concerns associated with any development like this and local impacts on the nearby residents. • Open space and zoning issues.
Carlyle E. Linder Equestrian Park[39]	• A source of one-time revenue and recurring property taxes if it was sold and replaced by residential development.	• There are concerns associated with any development like this and local impacts on the nearby residents. • Open space and zoning issues.

➢ ***It is recommended that the City Council and city staff recognize that the city has potential sources of one-time and ongoing (annual property tax) revenues depending on how the properties are utilized.***

---

[35] See: http://www.cityofglendora.org/home/showdocument?id=7230, specifically Section 3.2, page 3. "Glen Oaks Municipal Golf Course, located at the southwest corner of Glendora Avenue and Dawson Avenue provides a three-par, nine-hole golf course with night lighting, driving range and a putting practice green. A golf pro shop, coffee shop, community meeting room, restrooms are also located on-site, comprising approximately 19.79 acres. Glen Oaks Golf Course is under the same lease and shares facilities with the adjacent Dawson Park."

[36] The lease, with PW Golf Management initiated in 2009, was extended for an additional five years commencing July 1, 2019. The lessee, it appears from the documentation, is responsible for improvements and upkeep. The city's staff report dated April 24, 2019, notes 18.68 acres which differs from the "Open Space" report by a little more than an acre (see footnote no. 30 in that report). Also, refer to the April 24, 2019, City Council agenda's staff report and supporting documentation.

[37] The so-named "San Jose Tract," is adjacent to the city yards and is approximately five acres in size and could accommodate up to 30 single family homes (from personal notes taken at the Aug. 16, 2018, Ad Hoc meeting with the information provided by city staff).

[38] Op. cit.: p. 7. The South Hills Wilderness Area, designated as an open space, is comprised of 248.5 acres located north of the 210 Freeway, east of Glendora Avenue, West of Los Cerritos and south of Route 66. South Hills Park and the undeveloped northern terminus of Bonnie Cove Avenue provide access to the trail system of the South Hills Wilderness Park.

[39] Ibid, p. 4. "Carlyle E. Linder Equestrian Park, located on Glendora Mountain Road and Boulder Springs Drive, is a 2.11-acre equestrian facility with a riding rink [and] training rink..." The Equestrian Park provides access to the primary equestrian trailhead for Big Dalton Wilderness Park."

COMMITTEE RECOMMENDATIONS

Summary of Recommendations:

1. The committee concurred with the City Council's course of action issuing *Pension Obligation Bonds* to address the City's unfunded accrued liability [see page 7].

2. It is recommended that the City Council and city staff recognize that the city may have potential cost savings by outsourcing any of these four departments: *Community Services, Library, Police,* and, *Public Works* [see page 8].

3. Based upon this information, the committee was unanimous in its decision to present a preliminary report to the city council on Sep. 11, 2018 recommending that while the committee was still meeting, the city should immediately take steps to conduct a special election for a sales tax initiative. [See page 10; *approved by the Council and approval granted by the citizens of Glendora on March 5, 2019*]

4. The City Council is accountable to manage the City's finances in a prudent manner; the committee recommends that the Council consider appointing a group of representative residents to review from time to time the expenditures of Measure E revenues. This advisory group would sunset after five years [see pages 8-10].

5. It is recommended that the City Council and city staff recognize that the city has potential sources of one-time and ongoing (annual property tax) revenues depending on how the properties are developed [see page 11].

Measure E Follow-up

The committee met after Measure E passed. While Measure E is a significant source of revenue for the city and will balance the structural deficit, the city still faces potential and significant financial issues.[40] These include:

- ✓ Infrastructure costs such as the streets being in need of repair/maintenance. In order to meet the best practices of street maintenance, some $60,000,000 would be needed.
- ✓ The city faces a potential cost in the millions due to federal waste water compliance laws.
- ✓ The economy will eventually go into a recession and that will affect sales tax revenues.

[40] The ballot question for "Measure E" asked: "*To maintain existing City services including public safety, youth/adult programs, fix streets/potholes, address quality of life issues, maintain library services, address rising pension costs, implement technology projects, and improve the financial health of the City, shall the Measure be adopted approving an ordinance enacting a three-quarters percent (0.75%) transactions and use tax providing approximately $5,000,000 annually in general revenue, to be levied until ended by the voters with all funds staying local, for Glendora?*" The vote was taken on March 5, 2019). The measure, to pass, required a majority of votes cast. With the final: "YES:" 3,524 [53.67%] to "NO:" 3,042 [46.33%]. See: https://www.lavote.net/ElectionResults/Text/3983

IN SUMMARY

Like many surrounding cities, the City of Glendora takes a measure of civic pride in its ability to exercise prudent fiscal management and local control to maintain and enhance the quality of life for all Glendora residents, businesses, and those that work here and frequent our retail establishments.

The City of Glendora's AD Hoc Committee has undertaken an in-depth budgeting overview, long-range financial planning, and, resource allocations discussions with city staff and outside experts. During our discussions, the Committee discussed a variety of topics, expenditure reductions, revenue enhancements, and potential outsourcing of city services. In the end, we could not guarantee that the services and benefits enjoyed by the residents could be maintained.

Also, the committee:

- Reviewed the budget and available fiscal resources—and how those resources are allocated to the city from the federal, state, the county governments and from local residents and local businesses.
- Reviewed and assessed current, past and future expenditures and revenues. This was done to identify or consider possible re-allocation or reduction of these revenues and expenditures.
- The Committee acknowledges the City's past practices of strong fiscal management including maintaining a high level of service with a fairly low city tax burden on the community compared to neighboring cities. Past actions include a reduction in staffing levels by 23% since 2009, which included a reduction in staffing of the Police Department by 14%. The City has been diligent in its efforts to reduce pension related expenditures, by implementing lower benefit levels for new employee pension plans before it was required by the Public Employees' Pension Reform Act. PEPRA resulted in further reductions of pension benefits for new employees. Even with staffing reductions, service levels have remained fairly consistent across all departments.
- Had extensive in-depth discussions, with information provided by the city and outside experts, to ensure that our requests and questions were properly covered and that our ideas for solutions to City financial issues have the proper foundational support.
- The Ad Hoc Committee was committed to provide the City Council and the residents with strong fiscal recommendations to help keep our City financially solvent and better positioned to react to external conditions not created or largely controlled by the City of Glendora
- Our most significant recommendation was for the City Council to take bold action in quickly moving forward to place, what became known as Measure E, on the March 5, 2019 ballot. This measure passed—*but not by much*!
- There are several longer-term recommendations that would require more detailed study and community input as future City Councils may need to consider additional revenue sources necessary to balance the City's budget.

# # #

The Chair and Vice-Chair would like to acknowledge:

- *The many hours each committee member spent in a number of meetings, asking questions, and earnestly seeking on their own time, information, and clarification as to what was best for the future of Glendora.*
- *We could not have done it without members of the Glendora City staff for their diligent efforts to answer questions, provide data, and assist us in keeping the process moving forward.*
- *We appreciate the City Council having the foresight to recognize that this issue needed to be reviewed and that any solutions offered be coordinated in a careful and thoughtful manner.*

ATTACHMENT C

Draft City Council Decision Matrix – Infrastructure and Facilities Review Group

This decision matrix is intended to guide City Council discussion on: (1) one-time funding; and (2) whether to establish a group to study the City's facilities and infrastructure needs, and if so, how that group should be structured, scoped, and guided financially and operationally.

Step	Policy Question	Options for Council Consideration	Policy Implications
1	Does the City Council wish to establish a group to study the City's facilities and/or infrastructure needs?	A. Yes – establish a review group B. No – continue review through regular and addition Council meetings C. Combination – City Council makes certain decisions now and established a review group to study specific issues/topics	Establishing a group may allow deeper analysis and community input but extends the timeline. Handling within Council maintains speed and direct policy control. The City Council may also establish a workshop schedule to discuss a specific item (e.g. every third Tuesday of the month).
2	If yes, what structure should the group have?	A. Citizen Ad-Hoc Committee B. City Council Subcommittee C. Combination – Citizen Ad-Hoc Committee with City Council liaison(s)	Citizen Committee may increase public engagement and provide additional technical input. City Council Subcommittee allows more direct Council oversight and faster coordination with staff.
2A	If Citizen Ad-Hoc Committee: What qualifications should applicants possess?	Experience in: • Large-scale infrastructure projects • Public Contracts / Prevailing Wage • Transportation / streets • Engineering or construction management • Finance / capital planning • Project management • Community representation	Establishing qualifications ensures relevant expertise while maintaining community representation.
2B	If Council Subcommittee: Who should serve?	Two Councilmembers selected by Council consensus	Determines the level of Council leadership and responsibility for guiding the review.
3	What is the purpose and scope of the group's work?	A. Review of City facilities only B. Review facilities and streets/roads C. Conduct a comprehensive review of all major capital assets (facilities, streets/roads, water, etc.)	A broader scope increases complexity and timeline. If only facilities are selected, City Council policy direction is needed on infrastructure priorities (e.g. streets vs facilities)
3A	Should the group review previously presented information?	A. Yes – review all facilities-related information previously presented to Council, Library Board, and the public B. No – focus only on new or updated information	Reviewing prior material ensures continuity but may extend review time or the number of necessary public meetings.

ATTACHMENT C

Step	Policy Question	Options for Council Consideration	Policy Implications
4	Should the group review the adopted 2025–2027 Strategic Plan and recommend modifications to infrastructure-related priorities?	A. Yes – evaluate and recommend changes B. No – maintain Strategic Plan priorities as adopted	Provides staff clarify on alignment of infrastructure decisions with broader City Council priorities.
5	Should the group recommend prioritization among infrastructure categories (e.g., streets vs facilities)?	A. Yes – recommend prioritization B. No – provide information only; prioritization remains with Council	Prioritization recommendations may help guide funding decisions but involve policy tradeoffs.
6	What financial framework should guide the review?	A. Focus only on projects fundable immediately with available one-time funds B. Evaluate all projects in the adopted Five-Year Capital Improvement Program (CIP)	Narrow financial scope allows quicker decisions; broader review supports long-term planning, but may delay certain projects underway. Caution is advised on project delays, as recent CPI impacts are material.
7	What policy direction should guide the use of one-time funding?	Direction may include: • Reserve some funding for future street projects • Reserve funding for facility improvements • Allocate all available funding now	Determines long-term fiscal flexibility and project sequencing.
8	Is the City Council open to allocating one-time funding toward non-capital programs or initiatives?	A. Yes – allow some allocation to programs B. No – limit one-time funds to capital infrastructure projects	Clarifies whether one-time revenues should be strictly capital-focused.
8A	How much funding should be considered for use of one-time funds?	Council may specify a maximum amount or percentage of available one-time funds: A. $5 million an under (conservative) B. $5-8 million (moderate) C. $8-$12 million (moderate+) D. $12+ million (aggressive)	Establishes fiscal guardrails for policy decisions. Options A & B would allow for future financial flexibility during economic downturn and likely does not impact bond rating. Option C allows for moderate financial flexibility during economic downturns (e.g. one-year of flexibility). Option D limits flexibility on community service impacts and likely impacts bond ratings.
9	What is the desired timeline for the group's work and recommendations?	A. Short-term (3–4 months) B. Medium-term (6–9 months) C. Comprehensive review (12-24 months) D. Combination of timeframes depending on workplan of group.	Shorter timeline accelerates decisions but will limit analysis; longer timeline allows deeper evaluation. Generally, citizen ad-hoc groups have required between 9 months and two years.

ONE TIME FUNDING & ADVISORY GROUP OPTIONS

CITY MANAGER'S OFFICE
CITY COUNCIL MEETING
MARCH 24, 2026
ADAM RAYMOND, CITY MANAGER

BACKGROUND

January 13, 2026

- Council requested discussion on use of one-time funds (city facility and civic center discussion)

February 24, 2026

- Council received report on one-time funding (Mid-Year Budget Update)
  - Motion from Council to Receive and File Report
  - Staff agreed to return with information on advisory groups
  - No action taken on use of one-time funds

CITIZEN ADVISORY / AD-HOC GROUPS

Typically composed of residents who:

- Study specific issues or policy areas
- Gather input, research, and community feedback
- Provide recommendations to the City Council (or staff) on policies, plans, or programs
- Generally, do not have significant decision-making authority (advisory, not legislative)

Currently the City has several standing committees / boards:

- Planning Commission
- Water Commission
- Library Board
- Recreation and Human Services Commission
- Business Improvement District (BID) Board

These efforts require significant staffing resources, with coordinated community engagement

RECENT CITIZEN ADVISORY COMMITTEES

Revenue Options & Expenditures Committee (2018 – 2020):

- Bi-monthly meetings: All information was publicly available (20 members)
- Studied long-term fiscal challenges
- Provided recommendations on revenue and cost strategies
- Initial Recommendations in 2018 (Measure E)
- Final Report issued in November 2019 (land sales, outsourcing, revenue measure, historical staff)
- Last check-in with City Council in December 2020 (strategic plan)

RECENT CITIZEN ADVISORY COMMITTEES

Antique Streetlight Advisory Panel (2022 – 2023):

- Regular meeting intervals: All information was publicly available, and meetings were broadcast (10 members)
- Evaluated restoration feasibility
- Provided recommendations regarding assessment district (targeted annual rate, additional city contribution of money)
- Final vote on establishment of lighting district failed 35% to 65% (followed votes in 2007 and 2008)
- Antique lights will be part of future project along Glendora Avenue leverage funding (restoration, first/last mile)

CITY COUNCIL SUB-COMMITTEE

Typically composed of two council members:

- Study specific issues or policy areas;
- Gather input, research, and community feedback;
- Provide recommendations to the City Council on policies, plans, or programs; and
- Decision-making authority dependent on City Council direction for sub-committee
- Brown Act issues with more than two members assigned to sub-committee

These efforts may require significant staffing resources depending on scope and depth of review

RECENT CITY COUNCIL SUB-COMMITTEES

Dale Affordable Housing Project with Mercy Housing (2025-2026):

- Mayor Pro-Tem Davis and Councilmember Allawos
- Monthly meetings with staff and Mercy Housing
- Field trips, review of housing product types, populations served, and fiscal challenges
- Provided recommendations to City Council in furtherance of Mercy ENA (Phase I)

POTENTIAL GOVERNANCE STRUCTURES

Option 1 – Citizen Ad-Hoc Committee:

- Additional community representation
- Broader engagement and expertise (typically with new topics)

Option 2 – City Council Subcommittee:

- Two councilmembers
- Direct coordination with staff
- Faster review process (generally)

Option 3 – Hybrid Approach:

- Citizen committee with Council liaison (passive, not active engagement in meetings)

DRAFT CITY COUNCIL DECISION MATRIX

Guide City Council discussion on:

- One-time Funding
- Whether to establish a group to study the City's facilities and infrastructure needs, and if so, how that group should be structured, scoped, and guided financially and operationally

DRAFT CITY COUNCIL DECISION MATRIX

Step	Policy Question	Options for Council Consideration	Policy Implications
1	Does the City Council wish to establish a group to study the City's facilities and/or infrastructure needs?	A. Yes – establish a review group B. No – continue review through regular and addition Council meetings C. Combination – City Council makes certain decisions now and established a review group to study specific issues/topics	Establishing a group may allow deeper analysis and community input but extends the timeline. Handling within Council maintains speed and direct policy control. The City Council may also establish a workshop schedule to discuss a specific item (e.g. every third Tuesday of the month).
2	If yes, what structure should the group have?	A. Citizen Ad-Hoc Committee B. City Council Subcommittee C. Combination – Citizen Ad-Hoc Committee with City Council liaison(s)	Citizen Committee may increase public engagement and provide additional technical input. City Council Subcommittee allows more direct Council oversight and faster coordination with staff.
2A	If Citizen Ad-Hoc Committee: What qualifications should applicants possess?	Experience in: • Large-scale infrastructure projects • Public Contracts / Prevailing Wage • Transportation / streets • Engineering or construction management • Finance / capital planning • Project management • Community representation	Establishing qualifications ensures relevant expertise while maintaining community representation.
2B	If Council Subcommittee: Who should serve?	Two Councilmembers selected by Council consensus	Determines the level of Council leadership and responsibility for guiding the review.

DRAFT CITY COUNCIL DECISION MATRIX

Step	Policy Question	Options for Council Consideration	Policy Implications
3	What is the purpose and scope of the group's work?	A. Review of City facilities only B. Review facilities and streets/roads C. Conduct a comprehensive review of all major capital assets (facilities, streets/roads, water, etc.)	A broader scope increases complexity and timeline. If only facilities are selected, City Council policy direction is needed on infrastructure priorities (e.g. streets vs facilities)
3A	Should the group review previously presented information?	A. Yes – review all facilities-related information previously presented to Council, Library Board, and the public B. No – focus only on new or updated information	Reviewing prior material ensures continuity but may extend review time or the number of necessary public meetings.
4	Should the group review the adopted 2025–2027 Strategic Plan and recommend modifications to infrastructure-related priorities?	A. Yes – evaluate and recommend changes B. No – maintain Strategic Plan priorities as adopted	Provides staff clarity on alignment of infrastructure decisions with broader City Council priorities.
5	Should the group recommend prioritization among infrastructure categories (e.g., streets vs facilities)?	A. Yes – recommend prioritization B. No – provide information only; prioritization remains with Council	Prioritization recommendations may help guide funding decisions but involve policy tradeoffs.
6	What financial framework should guide the review?	A. Focus only on projects fundable immediately with available one-time funds B. Evaluate all projects in the adopted Five-Year Capital Improvement Program (CIP)	Narrow financial scope allows quicker decisions; broader review supports long-term planning but may delay certain projects underway. Caution is advised on project delays, as recent CPI impacts are material.

DRAFT CITY COUNCIL DECISION MATRIX

Step	Policy Question	Options for Council Consideration	Policy Implications
7	What policy direction should guide the use of one-time funding?	Direction may include: • Reserve some funding for future street projects • Reserve funding for facility improvements • Allocate all available funding now	Determines long-term fiscal flexibility and project sequencing.
8	Is the City Council open to allocating one-time funding toward non-capital programs or initiatives?	A. Yes – allow some allocation to programs B. No – limit one-time funds to capital infrastructure projects	Clarifies whether one-time revenues should be strictly capital-focused.
8A	How much funding should be considered for use of one-time funds?	Council may specify a maximum amount or percentage of available one-time funds: A. $5 million an under (conservative) B. $5-8 million (moderate) C. $8-$12 million (moderate+) D. $12+ million (aggressive)	Establishes fiscal guardrails for policy decisions. Options A & B would allow for future financial flexibility during economic downturn and likely does not impact bond rating. Option C allows for moderate financial flexibility during economic downturns (e.g. one-year of flexibility). Option D limits flexibility on community service impacts and likely impacts bond ratings.
9	What is the desired timeline for the group's work and recommendations?	A. Short-term (3–4 months) B. Medium-term (6–9 months) C. Comprehensive review (12-24 months) D. Combination of timeframes depending on workplan of group.	Shorter timeline accelerates decisions but will limit analysis; longer timeline allows deeper evaluation. Generally, citizen ad-hoc groups have required between 9 months and two years.

COUNCIL DIRECTION

Fiscal Impact:

- There is no fiscal impact associated with the recommendations in this report.
- As City Council direction on the use of one-time funds is provided, staff will evaluate the fiscal impact of each policy decision on the City.

RECOMMENDATION

That City Council:

1. RECEIVE A REPORT ON CITIZEN AD-HOC COMMITTEES AND CITY COUNCIL SUB-COMMITTEES AND PROVIDE DIRECTION, AS NECESSARY; AND
2. PROVIDE DIRECTION, AS NECESSARY, ON THE USE OF ONE-TIME FUNDS.

STAFF REPORT

TO:	**Mayor and Council Members**	**DATE:**	**April 28, 2026**
FROM:	**City Manager**	**DISTRICT(S):**	**Citywide**
SUBJECT:	**Workshop Framework and One-Time Funding Direction**		

RECOMMENDATION

That the City Council:

1. Provide direction on the make-up, focus, structure, and timing of the three workshops in the series;
2. Receive a presentation on available one-time funding, including total dollar amounts by category and budget cycle;
3. Provide direction on the priorities for the use of one-time funds, including but not limited to: current city facility upgrades and maintenance, streets and roads, and larger capital projects such as the Library and Corporate Yard;
4. Provide any other direction to staff as deemed appropriate.

STRATEGIC FOCUS AREAS

Goal 3: New + Revitalized Facilities
Goal 4: Sustainable Infrastructure

EXECUTIVE SUMMARY

On March 24, 2026, the City Council unanimously directed staff to conduct a series of three City Council workshops, one each month, to:

- Evaluate the use of one-time funds,
- Review current capital needs and facility conditions,
- Explore funding options including grants and private financing, and
- Consider the potential formation, scope, and structure of a future advisory committee, if needed.

Staff is seeking additional direction on the make-up, focus, structure and timing the three workshops. Additionally staff is requesting additional direction on one-time funding, including total dollar amounts priorities for the use of those funds. This direction, if provided, will allow staff to provide a more comprehensive list of options for City Council consideration during the workshops.

LEGISLATIVE HISTORY / PREVIOUS ACTIONS

Date	Action

January 13, 2026	During a comprehensive city facility and civic center discussion, staff committed to returning with a broader conversation regarding one-time uses of available resources with the mid-year budget update.
February 24, 2026	City Council received a report on one-time funding. The City Council discussed the possibility of creating a citizen ad-hoc or City Council Sub-Committee to discuss capital-related matters. The City Council voted 5–0 to receive and file the report; no direction was given on the use of one-time funds. Staff pledged to return with information on advisory groups.
March 24, 2026	Staff presented a report on citizen ad-hoc committees, City Council Sub-Committees, and direction on the use of one-time funds. A motion to immediately fund the Corporate Yard in phases did not move forward. A subsequent motion by Councilmember Thompson, seconded by Mayor Fredendall, to conduct a series of three City Council workshops (one each month) passed unanimously 5–0. The workshops are to evaluate the use of one-time funds, review current capital needs and facility conditions, explore funding options including grants and private financing, and consider the potential formation, scope, and structure of a future advisory committee, if needed.

DISCUSSION

Workshop Series Framework

Staff recommends the following framework for the three-workshop series, consistent with the City Council's March 24, 2026 direction. After reviewing the comments by the City Council and reviewing the current status of various projects with applicable departments, staff is recommending the City Council consider workshops over the next 6-7 months in order to allow for current evaluations and assessments to be completed to ensure policy decisions are made with all available information. For example, staff is currently working with MHP Structural Engineers on an update to the 2023 Library Structural Assessment and with IDS Group, Inc. and Public Works staff on possible phasing of the Public Works Yard. Staff anticipates these reviews to be completed in late summer.

As presented, the draft schedule for workshops would also allow staff adequate time between workshops to complete works associated with City Council direction provided to staff at each workshop.

Workshop	Recommended Focus
Workshop 1 *(no later than June 2026)*	1. *How We Got Here:* Overview of strategic plans, community surveys, polling, infrastructure/facility needs and related information shared with the public over the past 5 years. 2. *One-Time Funding*: a. Finalized dollar amount b. Adopted list of specific projects c. Timelines

Workshop	Recommended Focus
Workshop 2 *(no later than September 2026)*	1. *Library* a. Historical Overview b. Recap of Repairs and Structural Assessments c. Updated Structural Assessment d. Estimated Costs e. Continuation of services during a project f. Funding Options 2. *Public Works Yard* a. Historical Overview b. Update of Construction Drawings and Environmental Work c. Possible Phasing Opportunities / Service Delivery Impacts d. Funding Options *3. Follow-up from Workshop 1*
Workshop 3 *(no later than December 2026)*	1. *Funding Options* a. Grants b. Land Sales c. Issuance of Debt d. Other 2. *Potential Formation of a Future Advisory Committee* a. Scope, structure, and timing of a future citizen advisory committee *3. Follow-up from Workshops 1 & 2* *4. Next Steps*

Available One-Time Funding

On February 24, 2026, staff presented a comprehensive overview of anticipated one-time discretionary funding opportunities. The following table summarizes the available one-time funding by category and budget cycle; the amounts represent categorical totals that exist across several funds, including the General Fund, Measure E/Z, GUSD JUA, and Pension Reserve. Further, totals are additive. If no action was taken, at the end of FY 2031, estimated one-time available funds would be $41,169,000. A detailed breakdown of these amounts is included on Attachment A.

Funding Source	FY 2025–27	FY 2027–29	FY 2029–31
Available Fund Balance/Reserve	$6,860,000	$569,000	$260,000
Reallocation of CIP / Re-prioritization of Projects	$1,900,000	—	—
Property Sales	$5,120,000	$4,000,000	$4,000,000
Pension Set Aside	$13,820,000	$240,000	$180,000
OPEB Set Aside	$4,080,000	$80,000	$60,000
TOTALS	**$31,780,000**	**$4,889,000**	**$4,500,000**

Fiscal Guardrails for One-Time Funding

The March 24, 2026 staff report presented a Decision Matrix with options for the amount of one-time funding the City Council may wish to consider. The amounts below are available for use now. Generally, impacts from the use of one-time funding include: limited operational flexibility during future economic downturns; diminished ability to address one-time infrastructure issues; and potential downgrade of bond rating resulting in increased borrowing costs.

Option	Amount	Policy Implications
A – Conservative	$5 million and under	Allows for future financial flexibility during economic downturn; likely does not impact bond rating
B – Moderate	$5–$8 million	Allows for future financial flexibility during economic downturn; likely does not impact bond rating
C – Moderate+	$8–$12 million	Allows for moderate financial flexibility during economic downturns (e.g., one year of flexibility)
D – Aggressive	$12+ million	Limits flexibility on community service impacts and likely impacts bond ratings

Depending on the amount selected, staff can make recommendations on where those funds would come from, and what strategies can be used to replace them, if possible. For example, if the City Council selected $10 million in one-time funding, a possible allocation could be:

Amount	Source of Funding
$1,000,000	General Fund Reserve
$2,000,000	Measure E/Z Fund Balance
$2,100,000	San Jose Sale
$4,000,000	Pension Reserve. Direction could be given to replenish funding with a future local agency property development anticipated in the FY 2027-2029 two-year budget cycle.
$900,000	Reallocation of CIP
$10,000,000	**TOTAL**

Priority Categories for One-Time Funding

Since 2018, the City has implemented broad organizational and operational reforms to modernize service delivery, improve efficiency, and address long-standing deferred maintenance. Key changes included restructuring departments, centralizing functions, outsourcing landscape maintenance, and creating a dedicated Building Services Division. These efforts reduced costs - most notably saving over $500,000 annually in landscape services - while increasing service levels, improving coordination, and enabling a more proactive approach to maintaining parks, streets, and facilities. Staffing was strategically realigned, with total positions reduced from 18 to 16, while shifting resources toward field operations and direct service delivery, allowing the City to do more with fewer overall staff.

Savings and efficiencies were reinvested into critical infrastructure, significantly increasing funding for facilities, streets, and maintenance programs. Facilities spending grew from about $350,000 in 2018 to $1.4 million annually today, while non-major project street maintenance and pavement preservation programs expanded from approximately $15,000 in 2018 to $1,000,000 in the current budget, to improve long-term roadway conditions. Overall, the City has increased net annual maintenance-related investment by approximately $2 million annually, reflecting a deliberate policy to reinvest in core assets. While meaningful progress has been made, the City continues to face ongoing challenges related to decades of deferred maintenance.

Staff recommends the City Council discuss and provide direction, if possible, on priorities for the use of one-time funds. Based on prior City Council discussions and community input, the following categories are presented for consideration of prioritization.

Current City Facility Upgrades/Maintenance

Deferred maintenance on City facilities is estimated at approximately $50 million, with an investment of more than $250 million needed to bring facilities to levels that would provide for modern work-spaces and greater accessibility to the public. Facility Condition Assessments conducted by Bureau Veritas identified deficiencies across multiple City facilities, including roofing, exterior walls, electrical systems, HVAC, and parking lots.

The conversation on facilities needs over the past five years has been robust, and while the City has made significant strides, under investment and lack of more dedicated funding will continue to strain the City's ability to more thoroughly address its facilities.

Streets/Roads

Community surveys consistently identify streets and infrastructure among the City's most pressing challenges. The City has made generational investments in infrastructure over the past seven years, including improved street conditions with an upward Pavement Condition Index (PCI) trend, reversing decades of decline. However, decades of under-investment cannot be reversed overnight - the City Council has identified a need for an additional $3-$3.5 million in annual funding to improve streets from a PCI of 63 to a PCI of 70.

Larger Capital Projects

Library: The MHP Structural Engineers Library Structural Assessment and Visioning Study identified significant structural and seismic deficiencies, aging mechanical, electrical, and plumbing systems, and building envelope limitations that materially affect the Library's long-term viability. In 2023 these costs were estimated at $8.5 million. Community survey results showed that residents place a high value on infrastructure investment, though a Library-only measure received comparatively lower support (45%) than a citywide facilities measure (53%). Currently, the City is working with MHP Structural Engineers on an update to the 2023 report, which will more fully incorporate past structural assessments from the 1980's and significant work done in 2003 and 2004. Additionally, the report will included updated cost estimates, including seismic/structural improvements needed for the City's emergency operations center to remain at the location. In line with City Council direction, staff is currently working with the State on a budget appropriation to help address more than 50 years of documented facility issues.

Corporate Yard: The City Corporate Yard at 1250 Vladimir Street houses the Streets, Facilities, and Fleet Divisions, with plans to relocate the Parks, Trees, and Landscape Division to the site. A facility assessment determined that existing buildings are outdated and obsolete, with inadequate restrooms and insufficient office, training, and non-existent traffic management system space. The recommendation was to demolish existing buildings and construct four new buildings totaling approximately 18,310 square feet. The grand total construction cost estimate, including bonds and escalation, was approximately $12.6 million. The City Yard Improvements are budgeted in the City's 5-year Capital Improvement Program, with $1,046,650 budgeted for FY 2025. The City Council approved a Professional Service Agreement with IDS Group, Inc. in the amount of $725,581 for design and construction documents. At this time, no funding source exists for the completion of the construction phase and staff is working to find solutions for a phased approach.

FISCAL IMPACT

There is no fiscal impact associated with the recommendations in this report. As City Council direction on the use of one-time funds is provided, staff will evaluate the fiscal impact of each policy decision on the City.

ENVIRONMENTAL DETERMINATION

There is no CEQA impacts associated with the recommendations in this report. As City Council direction on one-time funding and larger projects is provided, staff will evaluate possible CEQA impacts

NOTES

1	The General Fund reserve policy is a minimum of 30% to maximum of 45% of prior year operational expenditures. Total of $4.6 million is the amount in excess of the reserve minimum (30%). The amount in the Measure E/Z fund balance is available in it's entirety ($2.3 million). The City's Reserve Policy provides the City Council time to make decisions in economic downturns or funding loss from the State of California without significant impacts to service delivery to the community. Further this funding provides a stabilization to meet debt requirements, which partially resulted in the City's AAA bond ratings. Per the existing financial policies of the City Council, when General Fund revenues exceed expenditures it allows the City to set aside monies in reserve, future capital projects, stabilization of CalPERS pension/OPEB costs, as well as general liabilities, worker's compensation, fleet maintenance and technology costs. More specifically, when revenues exceed expenditures, the City's financial policies allocated that amount at the following percentages 50% to the Capital Projects Fund, 30% to the PERS Rate Stabilization Fund, 10% to OPEB Section 115 Trust (held in General Fund) and 10% to Internal Service Funds.
2	The City and Glendora Unified School District (GUSD) have a long history of partnering on community assets (e.g. middle school parks, high school pool, etc.). GUSD has a current pool renovation project, in which the CIty has contributed $600,000 to the $3.9 million dollar project. Additionally, the City Council approved an additional contribution of up to $900,000 that is dependent on the City's financial performance through June 30, 2027.
3	The sale of the San Jose site provided the City with $3.99 million. The City Council previously allocated $1 million of these proceeds to achieve initiatives in the City's strategic and economic development action plans (8/27/2024).
4	Staff anticipated an estimated $2.1 million to be received by June 30, 2027 for the sale of the Dale site. This funding will be dependent upon approval of a development in accordance with the City's standards and actions by the Planning Commission and City Council.
5	Amounts represent possible funding received through sale and development of land owned other local agencies over the next five years.
6	These funds are generally restructured and may only be used to pay for CalPERS retirement costs (Pension) or reimburse qualifying retired employees' medical premiums (OPEB). The monies may be accessed by the City to pay for specific liabilities, requiring certification of the expense. Currently, the City's CalPERS unfunded accrued liability (UAL) is $21.7 million, which is anticipated to be reduced to $10.3 million next year with CalPERS better than anticipated asset returns. Additionally, the City has an other post employment benefits (OPEB) liability of approximately $5.6 million. Finally, the City has an outstanding pension obligation bond principal amount of approximately $51 million.
7	These funds are generally restricted. Currently, these funds have been set aside for investment in the Section 115 Trusts as cash on hand/liquidity allows through the City Council Adopted General Fund Reserve Policy. The monies may be accessed immediately by the City until they are invested in the Section 115 Trusts, at which time they may only be used to offset future/current pension liabilities. See note 6 with respect to pension and OPEB liabilities outstanding.

WORKSHOP SERIES DIRECTION & ONE-TIME FUNDING PRIORITIES

CITY MANAGER'S OFFICE
CITY COUNCIL MEETING
APRIL 28, 2026
ADAM RAYMOND, CITY MANAGER

RECOMMENDATION

THAT THE CITY COUNCIL:

1. Provide direction on the make-up, focus, structure, and timing of the three workshops in the series;
2. Receive a presentation on available one-time funding, including total dollar amounts by category and budget cycle;
3. Provide direction on priorities for the use of one-time funds — including current city facility upgrades and maintenance, streets and roads, and larger capital projects; and
4. Provide any other direction to staff as deemed appropriate.

EXECUTIVE SUMMARY

ON MARCH 24, 2026, COUNCIL UNANIMOUSLY DIRECTED STAFF TO CONDUCT THREE MONTHLY WORKSHOPS

- Evaluate the use of one-time funds
- Review current capital needs and facility conditions
- Explore funding options including grants and private financing
- Consider potential formation of a future advisory committee

Staff is seeking direction on workshop focus, timing, and one-time funding priorities.

LEGISLATIVE HISTORY

JANUARY 13, 2026

CIVIC CENTER DISCUSSION

Staff committed to returning with a broader conversation on one-time uses of available resources.

FEBRUARY 24, 2026

ONE-TIME FUNDING REPORT

Council received report; voted 5–0 to receive and file. No direction given on use of funds.

MARCH 24, 2026

WORKSHOP SERIES APPROVED

Council unanimously directed staff (5–0) to conduct three monthly workshops.

WORKSHOP SERIES FRAMEWORK

WORKSHOPS 1 & 2

Workshop 1 — No later than June 2026

HOW WE GOT HERE

- OVERVIEW OF STRATEGIC PLANS, COMMUNITY SURVEYS, POLLING, AND INFRASTRUCTURE/FACILITY NEEDS SHARED WITH THE PUBLIC OVER THE PAST 5 YEARS

ONE-TIME FUNDING

- FINALIZED DOLLAR AMOUNT
- ADOPTED LIST OF SPECIFIC PROJECTS
- TIMELINES

Workshop 2 — No later than September 2026

LIBRARY

- HISTORICAL OVERVIEW, RECAP OF REPAIRS, UPDATED STRUCTURAL ASSESSMENT, ESTIMATED COSTS, CONTINUATION OF SERVICES, FUNDING OPTIONS

PUBLIC WORKS YARD

- HISTORICAL OVERVIEW, UPDATE OF CONSTRUCTION DRAWINGS AND ENVIRONMENTAL WORK, POSSIBLE PHASING OPPORTUNITIES, FUNDING OPTIONS

FOLLOW-UP FROM WORKSHOP 1

WORKSHOP 3 — NO LATER THAN DECEMBER 2026

FUNDING OPTIONS

- GRANTS
- LAND SALES
- ISSUANCE OF DEBT
- OTHER OPTIONS

POTENTIAL FUTURE ADVISORY COMMITTEE

- SCOPE, STRUCTURE, AND TIMING OF A FUTURE CITIZEN ADVISORY COMMITTEE

FOLLOW-UP & NEXT STEPS

- FOLLOW-UP FROM WORKSHOPS 1 & 2
- IMPLEMENTATION NEXT STEPS

AVAILABLE ONE-TIME FUNDING

AVAILABLE ONE-TIME FUNDING

Funding Source	FY 2025–27	FY 2027–29	FY 2029–31
Available Fund Balance / Reserve	$6,860,000	$569,000	$260,000
Reallocation of CIP / Re-prioritization	$1,900,000	—	—
Property Sales	$5,120,000	$4,000,000	$4,000,000
Pension Set-Aside	$13,820,000	$240,000	$180,000
OPEB Set-Aside	$4,080,000	$80,000	$60,000
TOTALS*	**$31,780,000**	**$4,889,000**	**$4,500,000**

** Totals are additive. For example, if no action was taken, at the end of FY 2031, estimated one-time available funds would be $41,169,000*

** Totals span the General Fund, Measure E/A, GUSD JUA, and Pension Reserve. See Attachment A for detailed breakdown.*

FISCAL GUARDRAILS — FOUR OPTIONS

Lower-Risk Options

OPTION A — CONSERVATIVE (≤ $5M)

- PRESERVES FINANCIAL FLEXIBILITY DURING DOWNTURNS
- LIKELY NO BOND RATING IMPACT

OPTION B — MODERATE ($5M–$8M)

- PRESERVES FINANCIAL FLEXIBILITY DURING DOWNTURNS
- LIKELY NO BOND RATING IMPACT

Higher-Impact Options

OPTION C — MODERATE+ ($8M–$12M)

- ALLOWS MODERATE FLEXIBILITY DURING DOWNTURNS (~1 YEAR)
- LIKELY NO BOND RATING IMPACT

OPTION D — AGGRESSIVE ($12M+)

- LIMITS SERVICE FLEXIBILITY; MAY IMPACT BOND RATINGS
- MAY REDUCE FUTURE CAPACITY FOR INFRASTRUCTURE NEEDS

SAMPLE $10M ALLOCATION

EXAMPLE: $10 MILLION ALLOCATION

- ILLUSTRATIVE ONLY
- PENDING COUNCIL DIRECTION ON TARGET AMOUNT AND PRIORITIES
- PENSION RESERVE DRAW COULD BE REPLENISHED THROUGH FUTURE LOCAL-AGENCY PROPERTY DEVELOPMENT IN FY 2027–29

Amount	Source of Funding
$1,000,000	General Fund Reserve
$2,000,000	Measure E/Z Fund Balance
$2,100,000	San Jose Sale
$4,000,000	Pension Reserve
$900,000	Reallocation of CIP
$10,000,000	**TOTAL**

PRIORITY CATEGORIES

REFORM & EFFICIENCY SINCE 2018

ORGANIZATIONAL & OPERATIONAL REFORMS

- RESTRUCTURED DEPARTMENTS AND CENTRALIZED FUNCTIONS
- OUTSOURCED LANDSCAPE MAINTENANCE — SAVING $500K+ ANNUALLY
- CREATED A DEDICATED BUILDING SERVICES DIVISION
- INCREASED SERVICE LEVELS AND IMPROVED COORDINATION

STRATEGIC STAFFING REALIGNMENT

- TOTAL POSITIONS REDUCED FROM 18 TO 16
- RESOURCES SHIFTED TOWARD FIELD OPERATIONS AND DIRECT SERVICE DELIVERY
- ENABLED A MORE PROACTIVE APPROACH TO MAINTAINING PARKS, STREETS, AND FACILITIES
- *DOING MORE WITH FEWER OVERALL STAFF*

REINVESTMENT IN CORE ASSETS

FACILITIES SPENDING

- $350K IN 2018 → $1.4M ANNUALLY TODAY

STREET MAINTENANCE & PAVEMENT PRESERVATION

- NON-MAJOR PROJECT PROGRAMS GREW FROM $15K IN 2018 TO $1M IN THE CURRENT BUDGET
- TARGETED TO IMPROVE LONG-TERM ROADWAY CONDITIONS

NET ANNUAL INVESTMENT

- INCREASED BY APPROXIMATELY $2 MILLION ANNUALLY

PROGRESS & REMAINING CHALLENGES

- REFLECTS A DELIBERATE POLICY TO REINVEST IN CORE ASSETS
- MEANINGFUL PROGRESS MADE — BUT DECADES OF DEFERRED MAINTENANCE REMAIN

COUNCIL DIRECTION REQUESTED

- DISCUSS AND PROVIDE DIRECTION, IF POSSIBLE, ON PRIORITIES FOR THE USE OF ONE-TIME FUNDS
- CATEGORIES PRESENTED ARE BASED ON PRIOR COUNCIL DISCUSSIONS AND COMMUNITY INPUT

FACILITIES & STREETS

Current City Facility Upgrades / Maintenance

- $50 MILLION IN DEFERRED MAINTENANCE ON CITY FACILITIES
- $250 MILLION+ NEEDED TO MODERNIZE WORKSPACES AND IMPROVE PUBLIC ACCESSIBILITY
- BUREAU VERITAS FACILITY CONDITION ASSESSMENTS IDENTIFIED DEFICIENCIES IN ROOFING, EXTERIOR WALLS, ELECTRICAL, HVAC, AND PARKING LOTS
- SIGNIFICANT PROGRESS MADE; CONTINUED UNDER-INVESTMENT WILL STRAIN FUTURE CAPACITY

Streets & Roads

- CONSISTENTLY IDENTIFIED IN COMMUNITY SURVEYS AS A TOP PRIORITY
- GENERATIONAL INVESTMENT OVER PAST SEVEN YEARS; UPWARD PCI TREND REVERSING DECADES OF DECLINE
- $3–$3.5 MILLION ANNUALLY IN ADDITIONAL FUNDING NEEDED TO MOVE PCI FROM 63 TO 70
- DECADES OF UNDER-INVESTMENT CANNOT BE REVERSED OVERNIGHT

LARGER CAPITAL PROJECTS — LIBRARY & CORPORATE YARD

LIBRARY

- MHP STRUCTURAL ENGINEERS IDENTIFIED SIGNIFICANT STRUCTURAL AND SEISMIC DEFICIENCIES, AGING MEP SYSTEMS, AND BUILDING ENVELOPE LIMITATIONS
- 2023 ESTIMATE: $8.5 MILLION IN STRUCTURAL AND MECHINAL UPGRAGES; UPDATED ASSESSMENT AND COSTS IN PROGRESS
- UPDATED REPORT WILL INCLUDE SEISMIC/STRUCTURAL IMPROVEMENTS TO PRESERVE THE EMERGENCY OPERATIONS CENTER
- COMMUNITY SURVEY: 45% SUPPORT LIBRARY-ONLY MEASURE VS. 53% FOR CITYWIDE FACILITIES

CORPORATE YARD

- 1250 VLADIMIR STREET: HOUSES STREETS, FACILITIES, FLEET; PARKS/TREES/LANDSCAPE TO BE RELOCATED TO SITE
- ASSESSMENT: EXISTING BUILDINGS OUTDATED AND OBSOLETE; INADEQUATE RESTROOMS, OFFICE, AND TRAINING SPACE
- RECOMMENDATION: DEMOLISH AND REBUILD FOUR NEW BUILDINGS TOTALING ~18,310 SQ FT
- CONSTRUCTION ESTIMATE: ~$12.6 MILLION
- IDS GROUP DESIGN AND CONSTRUCTION DOCUMENTS AGREEMENT ($725,581) APPROVED
- NO FUNDING SOURCE IDENTIFIED FOR CONSTRUCTION; STAFF EXPLORING PHASED APPROACH

REQUESTED DIRECTION

Staff respectfully requests City Council direction on:

1. **Workshop Series —** Confirm make-up, focus, structure, and timing of the three workshops.
2. **One-Time Funding —** Select a target amount (Options A–D) or other amount.
3. **Priorities —** Indicate priorities across facility upgrades, streets & roads, and larger capital projects.
4. **Other Direction —** Any additional direction to staff as deemed appropriate.

No fiscal impact associated with the recommendations. Fiscal and CEQA impacts of specific policy decisions will be evaluated as direction is provided.

BIG DALTON CANYON CAMPGROUND/RESTROOMS

The Big Dalton Canyon Park Campground was originally developed in 1970. Since the site was constructed, there have been no significant renovations. The existing facilities at the campground include a wooden-framed gazebo, a small camping area, and a restroom building. The site area is furnished with picnic tables, precast spectator seating, camping grills, and a drinking fountain. Access is provided by a pedestrian bridge located by Big Dalton Canyon Road.

Recently Completed Work ($2,000)

- Replaced water supply and drain lines to the sinks in restroom building.

Recommended Improvements (2026-2030)

Description	Estimated Cost
Restroom Building: Interior and exterior paint, replace toilets, sinks, and hand dryers, and install new LED lighting fixtures to increase energy efficiency and reduce maintenance costs.	$30,853
Site: Replace free standing drinking fountain.	$3,280
Total:	**$34,133**

BIG DALTON CANYON PARK DAYCAMP/RESTROOMS

The site includes two buildings, the Day Camp Cabin and the Restroom Building. Additionally, there is a picnic area equipped with picnic tables and recycling bins for trash disposal. Many of the MEPF (Mechanical, Electrical, Plumbing, and Fire Protection) components were original to the structures at the time of the facilities assessment. The buildings are not heated or cooled. Domestic hot water is supplied by an electric water heater.

Recently Completed Work (11,200)

Daycamp Building

- Painting, exterior and interior
- Replaced suspended ceiling tiles
- Replaced cabinets, countertops and sink
- Replaced water supply and drain lines
- Replaced electrical wiring and switches
- Upgraded lighting to LED panels

Restroom Building

- Installed shut-off valve in pipe chase
- Replaced water supply and drain lines to restroom sinks

Recommended Improvements (2026-2030)

Daycamp Building

Description	Estimated Cost
Replace electric distribution panel, 120/208 V, 200 Amp	$4,371
Replace commercial water heater, electric (12 kW)	$27,105
Replace metal roof	$21,994
Prep and paint or seal floors	$2,538
Total:	**$56,008**

Restroom Building

Description	Estimated Cost
Replace wiring, switches, receptacles, and light fixtures	$4,625
Prep & paint interior and exterior walls, floors, and ceilings	$15,488
Replace Toilet Partitions	$4,371
Replace water supply and drain lines, sinks, toilets, and urinals	$31,914
Replace metal roof	$13,071
Replace Retaining Wall	$45,905
Total:	**$115,374**

Grand Total:	**$171,382**

BIG DALTON GIRL SCOUT CABIN

The Girl Scout Cabin was constructed in 1970. The building is located across the street from the park's day camp area. The hut-shaped structure is constructed with a concrete masonry framework featuring wooden siding and decks, all topped with metal roof finishes. The facade features original steel doors, wooden doors, and wooden-framed windows, all covered with aluminum shutters. The interior floors are covered with vinyl sheeting and VCT tiles that show significant wear and require replacement in the near future.

Recently Completed Work

- Routine maintenance

Recommended Improvements (2026-2030)

Girl Scout Cabin

Description	Estimated Cost
Prep and paint exterior walls, replace wood windows, replace aluminum window screens, replace exterior solid core wood door, and replace exterior steel door.	$25,571
Prep and paint interior walls, replace interior hollow core doors, and replace vinyl floor tiles.	$14,749
Restroom remodel, including toilet, sink, vanity, exhaust fan, vinyl flooring and related fixtures and equipment.	$13,409
Replace plumbing system including hot and cold water supply, drains and residential hot water heater.	$4,382
Kitchen remodel, including new sink, cabinets and countertop.	$12,101
Minor exterior concrete flatwork	$1,190
Total:	**$71,402**

BIG DALTON CANYON RESIDENCES

The property was built in 1934-1936 and is also called “Rock House”. The existing main residence (Residence 1) consists of one bedroom and one bathroom. Additionally, there is a master retreat suite (Residence 2) that features its own private entrance and has a bedroom with an attached bathroom. The facility was previously used as a residence but has remained closed and unoccupied for several years.

Recently Completed Work

Residence 1

- Minimal Maintenance

Residence 2

- Minimal Maintenance

Site

- Minimal Maintenance

Recommended Improvements (2026-2030)

The nature of improvements will depend upon the intended use of the structure. Items listed below represent necessary work to maintain the existing configuration and functionality only.

Residence 1

Description	Estimated Cost
Prep and paint/refinish all interior walls, ceilings, and trim. Prep and paint all painted exterior surfaces. Replace bathtub, toilet and sink in restroom.	$17,232
Wood floors: Strip and refinish	$28,855
Replace vinyl floors	$5,447
Replace toilet and sink in restroom.	$3,933
Replace electric panel	$12,022
Replace plastic laminate countertop	$1,093
Total:	**$68,582**

Residence 2

Description	Estimated Cost
Replace solid-core wood exterior door.	$1,530
Paint walls, ceilings, and trim.	$7,104
Refinish epoxy coated floors.	$18,362
Replace vinyl sheeting.	$1,530
Replace bathtub, toilet, and sink in restroom.	$9,398
Total:	**$37,924**

Site

Description	Estimated Cost
Asphalt Pavement: Grind, overlay and stipe	$37,096
Concrete: Remove and replace	$11,922
Total:	**$49,018**

Grand Total:	**$155,524**

BUS PLAZA

The Bus Plaza in the city of Glendora was initially developed in 1994 and underwent renovation in 2005. Public restrooms were added, and all ADA requirements were met.

Recently Completed Work ($7,800)

- LED Lighting Retrofit
- Paint
- Restroom Upgrades: Interior Paint, Sinks, Hand Dryers, and Other Fixtures

Recommended Improvements (2026-2030)

Description	Estimated Cost
Mechanical, Electrical, Plumbing Systems	
• Electrical: Replace Area Lighting	$136,670
• Electrical: Replace Restroom Building Lighting Control	$3,760
• Plumbing: Replace Backflow Preventer and Drinking Fountain	$9,918
Total:	**$150,348**

CARLYLE E. LINDER EQUESTRIAN PARK

Carlyle E. Linder Equestrian Park covers 5.7 acres and provides a location for walks and horse riding. The amenities include a picnic area, unpaved parking, and a building housing restroom and a snack bar. No notable issues were identified regarding the façade and structural components within the building. All architectural elements of restrooms were renovated in 2018. The overall condition of the interior finishes is considered fair to good, and the interior construction is evidently well-maintained. Recommendations are limited to routine lifecycle replacements.

Recently Completed Work ($9,900)

Restroom/Concession Building

- Restroom interior painting completed
- Plumbing system replaced

Recommended Improvements (2026-2030)

Restroom/Concession Building

Description	Estimated Cost
Exterior Paint	$5,902
Kitchen Floors: Refinish	$1,214
Restroom: Replace Vinyl Flooring	$3,061
Replace Residential Water Heater	$1,202
Total:	**$11,379**

Site

Description	Estimated Cost
Replace Drinking Fountain in Picnic Area	$3,280
Entrance road: Grind, Overlay and Restripe	$33,662
Replace Park Benches	$3,936
Repair Irrigation System, Including Controllers and Valves	$39,347
Total:	**$80,225**

Grand Total:	**$91,604**

CENTENNIAL HERITAGE PARK

The Centennial Heritage Park Facilities were originally constructed in 1895. The property is a historical preservation site that provides tours seasonally.

The buildings have wood framed structures with asphalt shingle roofs and exterior wood siding walls. The Storage Shed building's roof was damaged by a falling tree. The other building's roofs are in fair condition.

Recently Completed Work ($1,300)

Englehart Shed

- Removed fallen tree

Recommended Improvements (2026-2030)

Description	Estimated Cost
Citrus Snack Stand	
• Restore wood framed window	$5,028
• Interior and exterior paint	$464
• Replace Vinyl Flooring	$766
Englehart Shed	
• Interior and exterior paint	$3,933
Hamilton House	
• Interior and exterior paint	$15,703
Print Shop Barn	
• Repair exterior walls	$2,404
• Exterior paint	$2,623
• Refinish interior wood paneling	$6,558
Storage Shed	
• Replace roof	$2,076
• Paint interior and exterior, including ceiling repair	$3,619
• Replace residential water heater	$1,202
Site	
• Replace picnic tables and benches	$3,936
Total:	**$48,312**

CHAMBER OF COMMERCE

The Chamber of Commerce building was constructed in 1940.

Recently Completed Work ($17,480)

- LED Lighting Retrofit
- New roofing
- Interior Paint
- New Carpeting

Recommended Improvements (2026-2030)

Description	Estimated Cost
Building Exterior	
• Paint	$7,379
Mechanical, Electrical, Plumbing Systems	
• Residential Water Heater: Replace	$2,579
• Toilets: Replace	$2,777
• HVAC System: Replace	$16,265
Total:	**$29,000**

CITY HALL

City Hall was built in 1921. Originally, the building contained a library, jail, and administrative offices. The council chambers were added to the east side of the building in 1990. No major renovations have been made since the date of the last addition.

The building has a non-central HVAC system that consists of three rooftop packaged units, split systems, and gas furnaces to heat and cool the interior spaces throughout the facility. Most of the condensing units utilize R-22 refrigerant that has been phased out due to its detrimental impact on the environment. In addition, the majority of the HVAC units have exceeded their expected useful life.

Recently Completed Work ($771,590)

- Bottle fill station installation
- Council Chamber roof repair
- Council Chamber paint and carpet
- Council restroom upgrades
- City Clerk renovation/relocation
- Engineering reconfiguration
- HVAC
    - Replaced upper floor gas furnace
    - Replaced upper floor split system
    - Replaced basement split system
- Paint and Carpet: Main lobby, stairwells, and upper floor landing
- Repair of roof over ground floor restroom
- Security system upgrades
- Sewer relining
- Water heater replacement (Council side)

Recommended Improvements (2026-2030)

Description	Estimated Cost
Building Exterior	
• Replace windows	$194,789
• Replace exterior doors	$8,015
• Roof repair/replacement not noted above	$477,154

Description	Estimated Cost

GLADSTONE PARK

The Gladstone Park Restroom building was originally built in 1965. It is located to the south of Gladstone Park.

The small restroom building has a slab on grade foundation. The pitched roof has layers of asphalt shingles that are free of any visible damage. The exterior façade is finished with glazed masonry units that show no cracking and spalling issues due to water infiltration. The restroom floors and interior walls are finished with ceramic tiles.

Recently Completed Work ($27,425)

- LED Lighting Retrofit
- Restored "Lion" Drinking Fountain
- Installed Electric Pedestal

Active Facilities, Streets, and Water Projects

Active Capital Improvement Projects

Active capital improvement projects are grouped below by phase of delivery to provide a clear understanding of current progress and upcoming milestones, including projects under construction, in procurement, and in planning, design, or environmental review.

Construction and Implementation

La Fetra Center Staircase Replacement

City Council awarded the construction agreement for the staircase replacement project on March 24, 2026. Replacing the staircase is essential to provide a safe and code-compliant second emergency exit, as required by Building and Safety, and to ensure the facility maintains adequate fire and life-safety protection. (CIP Budget: $384,265)

Lone Hill Street Improvement

Replacement and realignment of roadway infrastructure along Lone Hill, including right-of-way coordination with Caltrans. Bids were received in April 2026, with construction award anticipated for City Council on June 9, 2026. Construction is expected to begin in October 2026. (CIP Budget: $1,878,103, Funded through Prop C and STLP)

Highway Safety Improvement Program (HSIP) Cycle 11, Traffic Signal Modifications

Upgrades to pedestrian crossing, and intersection safety features at eight priority intersections, primarily along Gladstone St., Barranca Ave, and Route 66. The construction agreement has been awarded and is currently awaiting procurement of materials with completion expected by summer. (CIP Budget: $1,733,580 - HSIP Grant Funded)

Glendora People Movement Project – San Dimas Wash Trail

This project consists of four distinct projects: three urban trails and first and last mile improvements. Construction of the San Dimas Wash Trail component has been awarded by the San Gabriel Valley Council of Governments (SGVCOG), with construction anticipated to begin before the end of the fiscal year. (Component Budget $5,623,000, project managed through the SGVCOG and primarily grant funded, City Contribution $1,817,000)

Bidding & Procurement

Police Department Lobby Remodel (Phase I)

Improvements to the entrance lobby doors to enhance ADA accessibility, public interface, and security. The Request for Proposal (RFP) has been issued, with bids received in late April 2026. Staff anticipates bringing the construction award to City Council in June 2026. (CIP Budget: $380,475)

Active Facilities, Streets, and Water Projects

Lone Hill Bridge at San Dimas Wash Improvements

The project includes bridge sealing to prevent corrosion, repainting of the bridge rail to improve visibility, and pavement grinding and overlay along the northeast side of the bridge. These improvements help maintain the bridge's safety and long-term condition. Design for this project is complete and under Caltrans review. Upon approval from Caltrans, an RFP will be issued for the construction phase. (CIP Budget: $279,564, Funded through Road Maintenance Repair Act (RMRA) and Highway Bridge Replacement Program)

Planning, Design & Environmental

Glendora Avenue Water and Street Improvement

Comprehensive upgrade of water main and full street rehabilitation, including pavement, sidewalks, Americans with Disabilities Act (ADA) compliant ramps, and traffic signal enhancements along Glendora Avenue from Gladstone to Route 66. Design is currently underway, with completion anticipated in FY 2027. (CIP Budget: $806,172 - design only)

Colorado Avenue Water and Street Improvement

Comprehensive water main upgrade and street rehabilitation from Glendora Avenue to Le Mar Park and adjacent streets. Design is 90% complete with completion anticipated at the end of June (FY 2026). The RFP/Bid advertisement is anticipated to be released in the summer of 2026 with construction targeted for early 2027. (CIP Budget: $5,596,500)

Cypress Avenue Water and Street Improvement

Comprehensive water main upgrade and street rehabilitation east of Loraine between Leadora Avenue and Bennett Avenue. This project is currently at 90% design with a target design completion at the end of June (FY 2026). The RFP/Bid advertisement is targeted for summer 2026, with construction expected to begin in late 2026. (CIP Budget: $6,839,166)

North Glendora Reservoir Replacement

Improvements to access and site infrastructure associated with the City's reservoir, including access road and supporting utility work. The project is currently awaiting final access road design and completion of the Mitigated Negative Declaration (MND) for City Council consideration. Environmental review has identified sensitive biological constraints that are being addressed as part of the permitting process. Following Council approval, the project will be advertised for construction. (CIP Budget: $8,408,334)

Highway Safety Improvement Program (HSIP) Cycle 12, Traffic Signal Modifications

Upgrades and modernization of pedestrian crossing, and intersection safety features at ten priority intersections, primarily along Route 66. The design award agreement was

issued on March 10th, with design completion expected by the end of this calendar year. (HSIP Award of $2,074,590)

Glendora People Movement Project – First/Last Mile Improvements

Design of First and Last mile improvements associated with the newly opened Metro station along Glendora Avenue and Foothill Boulevard is ongoing, with completion of design anticipated by late summer. (Component Budget $10,346,000; project managed through the SGVCOG and primarily grant funded, City Contribution $1,108,000)

Finkbiner Park Stormwater Capture Project

Installation of an underground stormwater treatment and infiltration facility beneath the softball field to capture runoff and improve water quality. Since the previous update, the Mitigated Negative Declaration (MND) has been approved by City Council. The project is currently advancing through regulatory permitting, with a consultant working to obtain the required 408 Permit due to its proximity to the Little Dalton Wash. Construction is anticipated to begin in late 2027. (CIP Budget: $23,755,692, Funded through Measure W)

South Hills Bike Park

This project will develop a bicycle park facility in the South Hills area adjacent to Glendora Avenue, featuring trails, a pump track, and supporting amenities. Civil engineering design is currently at 60%, with completion anticipated by June 2026. In addition, environmental comments from the public review process are being reviewed and addressed. (CIP Budget: $2,725,500, Largely Grant Funded)

City Yard Improvement Project

This project improves the layout, access, and functionality of the City Yard to support operations. Design and construction drawings are now complete. The next phase includes environmental clearance and development of a phased construction approach to align with available funding. (CIP Budget: $725,581 - Design and Construction Drawings Only)

Police Department Lobby Remodel (Phase II)

Meetings for design planning for Phase II of the Police Department Lobby Remodel have begun. Phase II will evaluate lobby reconfiguration and restroom improvements, with design planning expected to begin shortly. (CIP Budget: $171,268)

ADA Self Evaluation and Transition Plan

The Citywide ADA Self-Evaluation has been completed. Staff is working with the consultant to establish priorities and develop the Transition Plan to address identified barriers, with completion expected by the end of 2026. (CIP Budget: $329,825)

Active Facilities, Streets, and Water Projects

Stormwater Master Plan

A comprehensive plan to guide improvements to the City's stormwater infrastructure. Since the previous update, the contract has been awarded and the Master Plan is currently under development, with completion anticipated by the end of 2026. (CIP Budget: $250,000, Funded through Measure W)

Other Active Projects

The projects below are not included in the Capital Improvement Program. These projects are scheduled to be completed in Fiscal Year 2026/27 utilizing both contractors and City staff.

Bottle Fill Stations

Water bottle filling stations will be installed at City Hall (3), La Fetra Center (1), Parks Yard (1), Streets Yard (1), and Recreation and Human Services facility (1). The work is currently being scheduled with the City's on-call plumbing contractor. ($100,000)

Police Department HVAC Repairs

This project will be completed in two phases. Phase 1 includes the fabrication and installation of a new stainless-steel plenum for the cooling tower. The new stainless-steel plenum will be extended out to clear the roof soffit above to minimize damage from the cooling tower discharge air. Phase 2 includes the removal and replacement of the brazed plate heat exchanger condensers for both chillers. ($65,000)

San Gabriel Plant Roof Repair

This project includes the replacement of the roofs on the storage building and Well 12E building at the San Gabriel Water Production facility. The scope of work includes the addition of intake louvers at the Well 12E building to improve ventilation. ($75,000)

Sierra Madre Water Yard Warehouse Roof Repair

This project includes the replacement of the roof on the warehouse building at the Sierra Madre Water Yard. ($75,000)

Proposed Street Segments and Estimated Citywide PCI Impact

Street Segment	Description	Estimated Cost	2025 Segment Avg. PCI	Approx. Area (SF)	Citywide PCI After Improvement *
Route 66					
Barranca Ave to Grand Ave	2" Grind & and Overlay	$1,150,000	36	175,000	63.91

* The 2025 Pavement Management Program (PMP) determined Citywide average PCI to be 63.2. The Citywide PCI After Segment Improvement is an estimate factoring in proposed segment improvement, streets improved and/or those programmed to be improved prior to the end of 2027, and continued deterioration of the overall street network. The estimate does not include the City's annual Road Maintenance and Rehabilitation (RMRA) funded slurry seal program. Once the FY 2026-2027 slurry seal streets are identified, the annual slurry seal program is expected to further positively impact the Citywide PCI by approximately 0.6 to 0.9 PCI points, depending on the final street segments selected, existing PCI conditions, bid pricing and square footage treated.

Preventative Maintenance / Slurry Seal Impact**

Preventative Maintenance Program	Funding Status	Estimated Cost	Approx. Area (SF)	Est. Citywide PCI Impact	Included in "Citywide PCI After Improvement" Column?
Annual Slurry Seal Program	Funded w/ RMRA	$500,000	900,000	Adds 0.6 – 0.9	No
Additional Slurry Seal Program	**Optional Council Allocation**	**$500,000**	**900,000**	**Adds 0.6 – 0.9**	**No**

** If Council allocates an additional $500,000 toward expanded slurry seal, staff estimates that approximately 800,000 to 1,000,000 additional square feet of pavement could be treated, resulting in an additional estimated Citywide PCI benefit of approximately 0.6 to 0.9 PCI points. This estimate is for planning-level comparison only and is not included in the "Citywide PCI After Segment Improvement" column in the above table.

WORKSHOP 1: FOUNDATION AND FUNDING

June 16, 2026

RECOMMENDATION

What Staff Is Recommending

That the City Council:

1. **Provide direction** on how one-time funds should be allocated among major categories, specific projects or priorities, or a combination of both.

Scope of tonight's decision: Allocation of $8–$12 million in one-time funds, directed to streets and existing City facilities. Per prior City Council direction, the Library and Public Works Yard are not part of this discussion; they are the focus of Workshop 2.

Strategic Focus Areas

GOAL 3

New + Revitalized Facilities

Develop new and enhanced facilities including a modern civic center and improved Public spaces that foster connectivity, accessibility, and civic pride.

GOAL 4

Sustainable Infrastructure

Sustainable Infrastructure Plan and construct infrastructure that enhances street conditions, expands trail connectivity, improves traffic safety and mobility, upgrades water systems, and ensures compliance with regulatory standards for a resilient and accessible community

Strategic Plan progress to date

53	Actions completed (50%)
48	In progress (46%)
4	Not yet started (4%)
105	Total plan actions

EXECUTIVE SUMMARY

Where Glendora Stands Today

Stability restored

Organizational modernization, Measures E & Z, and pension restructuring eliminated a $3.5–$4M deficit and earned a AAA bond rating.

Needs remain

Significant facility, street, and infrastructure needs persist — well documented through years of studies and assessments.

A rare opportunity

Fiscal prudence created one-time funding capacity to address a meaningful share of those needs — without a new tax.

A MULTI-YEAR DISCUSSION, BROKEN INTO THREE FOCUSED MEETINGS

A Three-Workshop Series

YOU ARE HERE

01

Workshop 01 • June 16

Foundation & Funding

Reviews how five years of strategic planning, public engagement, and facility assessments shaped today's priorities. City Council to provide direction on $8–$12M in one-time funds for streets and/or facilities.

02

Workshop 02 • July 21

Library & Public Works Yard

The City's two most significant facility needs — structural assessments, repair vs. replacement costs, phasing options, and service-continuity considerations.

03

Workshop 03 • Sept 15

Funding Options & Next Steps

Grants, land sales, and debt issuance to pay for the work — plus the potential structure of a citizen-led advisory committee.

WORKSHOP 1 ANSWERS TWO QUESTIONS

Where We've Been — and What Comes Next

1

How did the City get here?

Five years of strategic planning, community surveys, facility assessments, infrastructure studies, pavement data, and Council direction. This is not the beginning of the conversation — it is the culmination of years of diligent work.

2

How should $8–$12M be allocated?

City Council provides policy-level direction on allocation among major categories, specific projects or priorities, or a combination of both.

SECTION ONE

How We Got Here

1

A fiscal turnaround, five years of study and engagement, and a deliberate decision to reinvest savings back into the City's core assets.

LOS ANGELES TIMES • JULY 5, 2002

“Upscale Suburb Warned Its Beauty Is Only Skin Deep”

> *It's a fairly well-to-do suburb with multimillion-dollar mansions in the foothills and a bustling commercial center, but* ***Glendora's infrastructure is crumbling, and the city cannot afford repairs.***
>
> — Los Angeles Times, July 5, 2002

~$100M in repairs identified for the city-owned water system

$22M more needed for City streets

$15.6M total in reserve — the City could not afford the work

“The sewer pipes are collapsing, the water pipes are collapsing… nothing's being done. This isn't Watts, this is Glendora.” — former councilman, 2002

THE SAME NEEDS — A DIFFERENT POSITION TO ACT FROM

What Has Changed Since 2002

Then — 2002

- An auditor identified ~$122M in water and street needs the City could not afford.
- Just $15.6M in reserve; a $4M water fund.
- Officials “long aware” of the problems but “unwilling to act.”
- Statewide, infrastructure spending had fallen 75% since the 1960s.

Now — 2026

- A $3.5–$4M structural deficit eliminated; a AAA bond rating earned.
- Voter-approved Measures E & Z plus pension restructuring stabilized finances.
- Organizational modernization (2019–21) freed ~$2M/year for reinvestment.
- For the first time in a generation, the City can fund $8–$12M of needs now.

THE FOUNDATION BENEATH TODAY'S DISCUSSION

The Fiscal Turnaround

Over the past seven years, Glendora restored financial stability by addressing a structural deficit through voter-approved measures, pension restructuring, organizational efficiencies, and stronger financial policies.

$3.5–$4M

structural deficit eliminated

AAA

bond rating earned

E & Z

voter-approved measures (2019, 2025)

+$2M

reinvested in maintenance annually

Organizational Modernization, 2019–2021

Since 2018, the City restructured departments, centralized functions, outsourced landscape maintenance, and created a dedicated Facilities Division. These reforms didn't just balance the budget — they generated recurring savings the City Council deliberately reinvested into public safety, streets, parks, and facilities.

EFFICIENCY SAVINGS, REINVESTED IN THE COMMUNITY

The Modernization Dividend

Public Safety

Measure E/Z funded the Police Department's Community Impact Team — 16.5% drop in serious (Part A) crime from 2023–2025.

A Dedicated Facilities Division

Created and staffed entirely through efficiency savings — moving the City from reactive repairs to planned, assessment-driven maintenance.

Preventative Maintenance

Net annual maintenance investment increased by ~$2M: facilities from $350K to $1.4M, and street preservation from $15K to $1M.

A Stable Workforce

All bargaining units settled through 2028; ~15 “boomerang” employees returned, citing culture change and professional management.

THIS IS NOT THE BEGINNING OF THE CONVERSATION

Years of Study, Engagement & Direction

JAN 2023	SEP 2023	JAN 2024	AUG 2024	FEB 2025
Library Structural Analysis	**Water System Assessment**	**Facility Needs + Survey**	**True North Survey**	**Mid-Year Update**
In-depth structural evaluation of the Library awarded to Myers Houghton & Partners.	Identified $350M+ in projects over 30 years; ~$30M programmed in the first five.	City Council directs a Citywide facility condition analysis and a community survey.	Community priorities and revenue-measure feasibility presented to the City Council.	~$50M in current facility needs; $250M+ in estimated modernization documented.

MAR 2025	APR 2025	DEC 2025	JAN 2026	APR 2026
Capital Needs Report	**FY25–27 Strategic Plan**	**2025 Pavement Program**	**Civic Center Renderings**	**Workshop Framework**
Comprehensive report on facility needs, deferred maintenance, and funding options.	Goals 3 & 4 adopted: New + Revitalized Facilities and Sustainable Infrastructure.	City Council directs staff to find $3–$3.5M/yr to raise PCI from 63 to 70 in seven years.	City Council adopts renderings as a starting point and directs grant pursuit.	City Council approves the three-workshop series and an $8–$12M one-time funding range.

SECTION TWO

Audited. Every Year.

2

Every dollar is reviewed by independent auditors and regulatory agencies — confirming that the City follows the rules and spends responsibly.

FY 2024–25 AUDIT & OVERSIGHT ENGAGEMENTS

Seven Layers of Independent Review

Clean — "Unmodified" opinion on the Annual Comprehensive Financial Report

AAA — Bond rating — the highest available

7 — Independent audit & agreed-upon-procedure engagements

1. **Annual Comprehensive Financial Report (ACFR)**
2. **Single Audit of Federal Grants**
3. **CA Housing Successor Compliance Audit**
4. **GANN Appropriations Limit (Prop 111)**
5. **City Investment Policy compliance**
6. **Metro Local Funds (Prop A/C, Measure M/R)**
7. **AQMD / AB 2766 Clean Air Fund**

Conducted under GAAP, GASB, and Government Auditing Standards by Badawi & Associates, CPAs. The Measure W (Safe Clean Water) fund is audited within the ACFR, with added oversight from LA Metro and SCAQMD. Measure E/Z spending is reported line-by-line for full transparency.

SECTION THREE

The Decision Before You

3

Fiscal discipline created a one-time opportunity. The question for City Council is how to direct it toward the community's most enduring priorities.

TRUE NORTH RESEARCH — COMMUNITY SURVEYS SINCE 2011

What the Community Is Telling Us

84%

rate Glendora's quality of life excellent or good

#1

streets & roads — the most durable priority since 2011

55%

satisfaction with road maintenance — down 8 points since 2022

70%

say the City manages its finances well

Priorities and cost-sensitivity, together

Residents consistently rank streets and infrastructure as the top quality-of-life priority, and view aging facilities as well beyond their service life, favoring basic repairs, safety, and code compliance.

At the same time, “taxes are already too high” was the leading reason residents hesitated on a bond measure (53% support; below the two-thirds threshold). This is exactly why one-time funding fits this moment: it addresses the community's most enduring priorities without a new tax burden.

PRESENTED FEBRUARY 24, 2026 — RECEIVED & FILED 5–0

One-Time Funding Capacity

Funding Source	FY 25–27	FY 27–29	FY 29–31
Available Fund Balance / Reserve	$7.02M	$0.37M	$0.47M
Reallocation of CIP / Re-prioritization	$5.90M	—	—
Property Sales	$5.12M	$4.00M	$4.00M
Pension Set-Aside	$14.5M	$0.22M	$0.21M
OPEB Set-Aside	$4.36M	$0.078M	$0.09M
Totals	**$36.9M**	**$4.67M**	**$4.77M**

$46.34M

estimated one-time funds available by the end of FY 2031 if no action is taken.

City Council has framed $8–$12M for streets and facilities.

Not all sources carry the same flexibility, timing, or risk. Pension and OPEB set-asides, property sales, and reserves each come with their own considerations — staff will match the right source to each project.

SECTION FOUR

City Facilities

4

For the first time in decades, the City is maintaining its buildings on a plan — not just reacting to the next failure.

BUREAU VERITAS FACILITY CONDITION ASSESSMENT (FCA)

A Plan for Every Building

The FCA reviewed roofing, exteriors, accessibility, safety, electrical, HVAC, plumbing, and site systems across City facilities — documenting deferred maintenance and projecting repair needs over time.

~$50M

in maintenance needs identified over 20 years

$10.5M

recommended for the 2026–2030 period

Updated Cost Basis

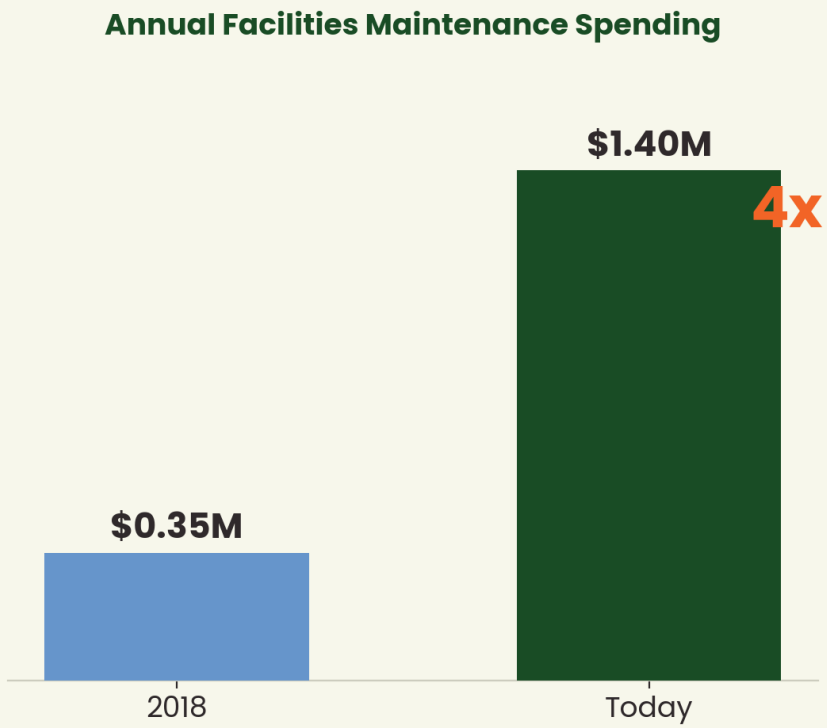
adjusted to reflect recent project pricing — the original cost estimates proved too low

Covers City Hall, the Library/Police Station, La Fetra Center, Finkbiner Park, Crowther Teen & Family Center, Big Dalton, and other City-owned sites — a structured, five-year starting point for prioritizing near-term work.

A NEW OPERATING MODEL FOR FACILITY MAINTENANCE

From Reactive to Planned

The Old Way



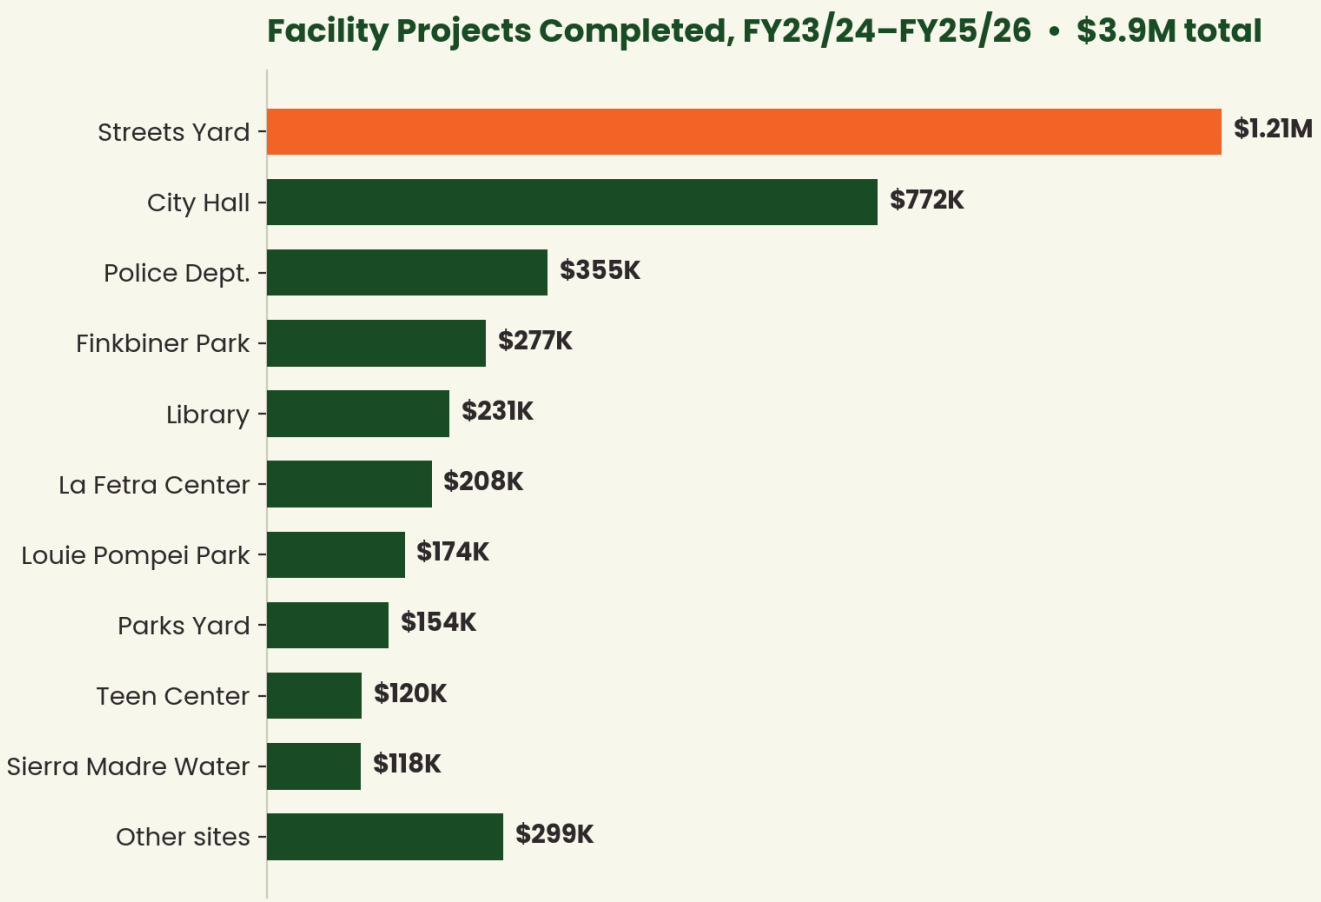
- Largely reactive — the City fixed what broke, when it broke.
- No dedicated maintenance team and no structured work plan.
- Deferred maintenance accumulated quietly for decades.
- Costs escalated as small problems grew into major failures.

The New Way

- A dedicated Facilities Division: a Supervisor, a Lead, and Maintenance Workers.
- ~75% of the team's time directed to assessment-identified priorities.
- Flexibility retained for urgent safety, code, and operational needs.
- Created and staffed entirely through reinvested efficiency savings.

THE INVESTMENT BEHIND THE NEW MODEL

Maintaining Like We Haven't in Decades



4x increase in annual facilities maintenance spending since 2018.

$1.4M invested in facility maintenance each year — up from ~$350K.

$4M in facility projects already completed across the City (FY23/24–FY25/26).

NOT EVERY REPAIR WAS IN THE ASSESSMENT — NEEDS ARISE

$4 Million Already Invested

Real work, already done

Roof and HVAC replacements, electrical and plumbing upgrades, ADA and safety improvements, asbestos remediation, security systems, and LED retrofits **— across 19 City facilities.**

Some were assessment-driven; others arose unexpectedly from safety, code, or service needs.

A SIGNATURE NEED — TO BE DETAILED IN WORKSHOP 2

The Library: Built 1972

Today — ongoing water intrusion & structural deficiencies

Built in 1972
Bidwell Plaza serves as the roof over most of the lower/main floor.

Water intrusion
Historic and ongoing water infiltration on the main library floor.

Structural analysis
An in-depth evaluation assessed suitability for renovation and a future second story.

Per City Council direction, one-time funds are NOT being used for the Library or Public Works Yard — those are the focus of Workshop 2.

THE SCALE OF WHAT REMAINS

Even After All of This — Still Not Enough

~$50M

in current facility needs documented to Council

$250M+

in estimated longer-term modernization needs

↑ %/yr

construction inflation is outpacing original FCA assumptions

The completed work and increased investment are real and meaningful — but they address a fraction of the total need. The one-time funding decision is about how far we can responsibly stretch the resources we have.

SECTION FIVE

Streets & Roads

5

The community's most durable priority — and the place where sustained reinvestment has finally flattened the curve of deterioration.

2025 PAVEMENT MANAGEMENT PROGRAM (BUCKNAM)

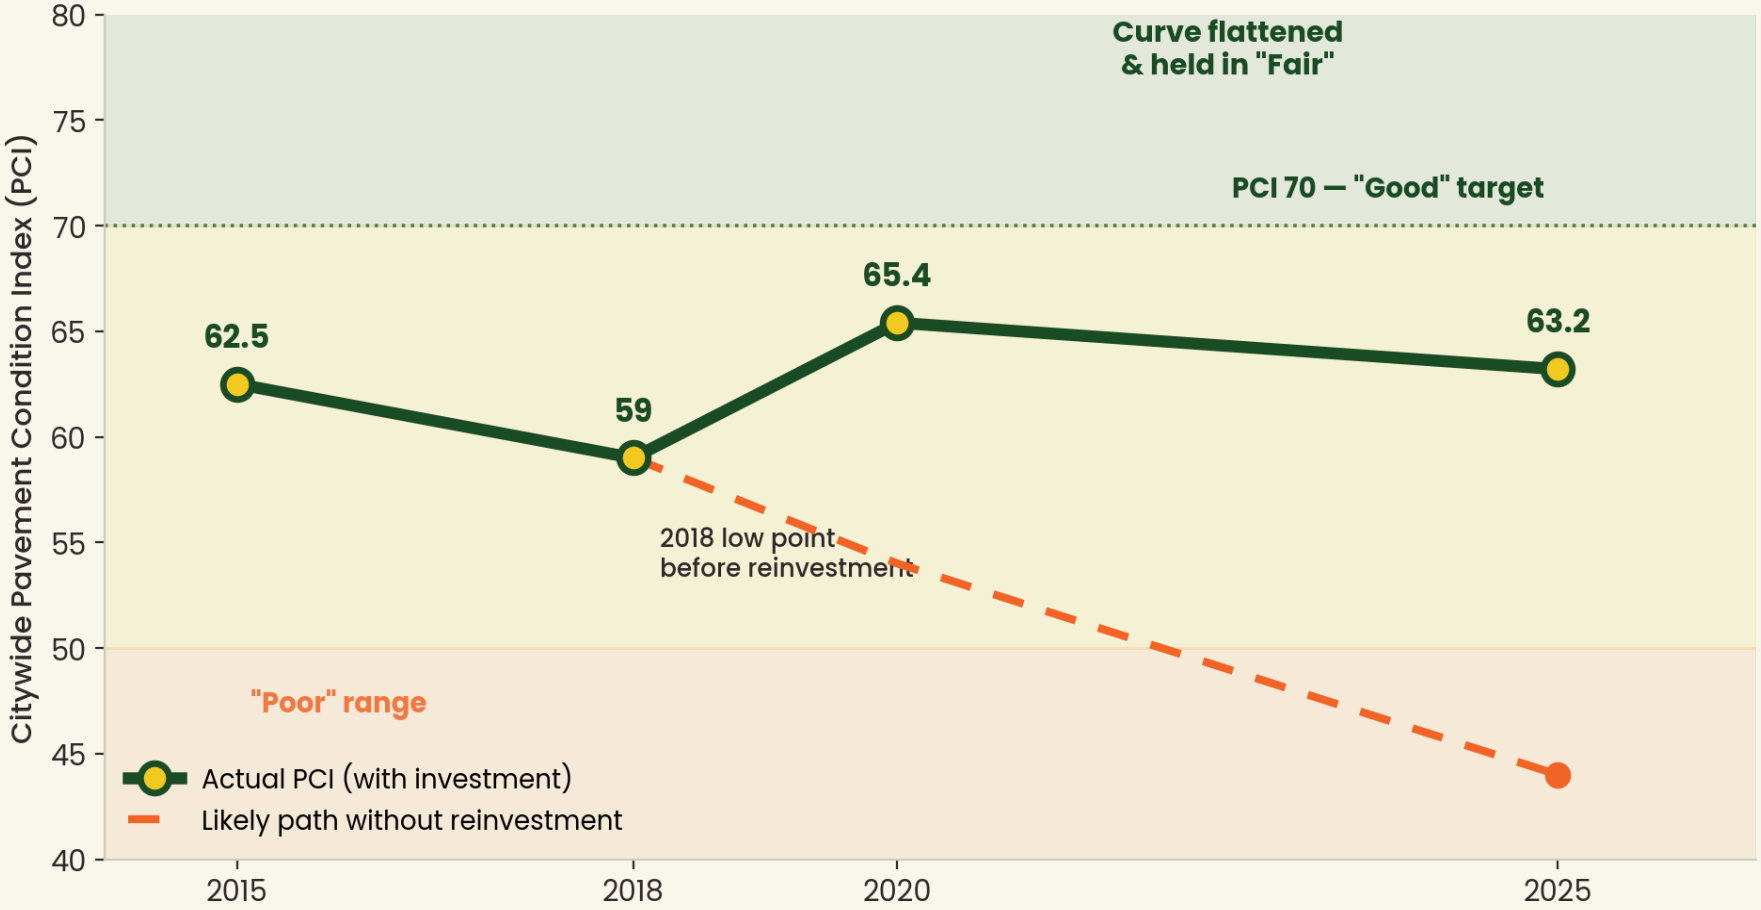
A $439 Million Asset

$439M
estimated network replacement value

163.4
centerline miles of streets & alleys

63.2
Citywide PCI — a "Fair" network

30.6M
square feet of pavement



Condition of the network today

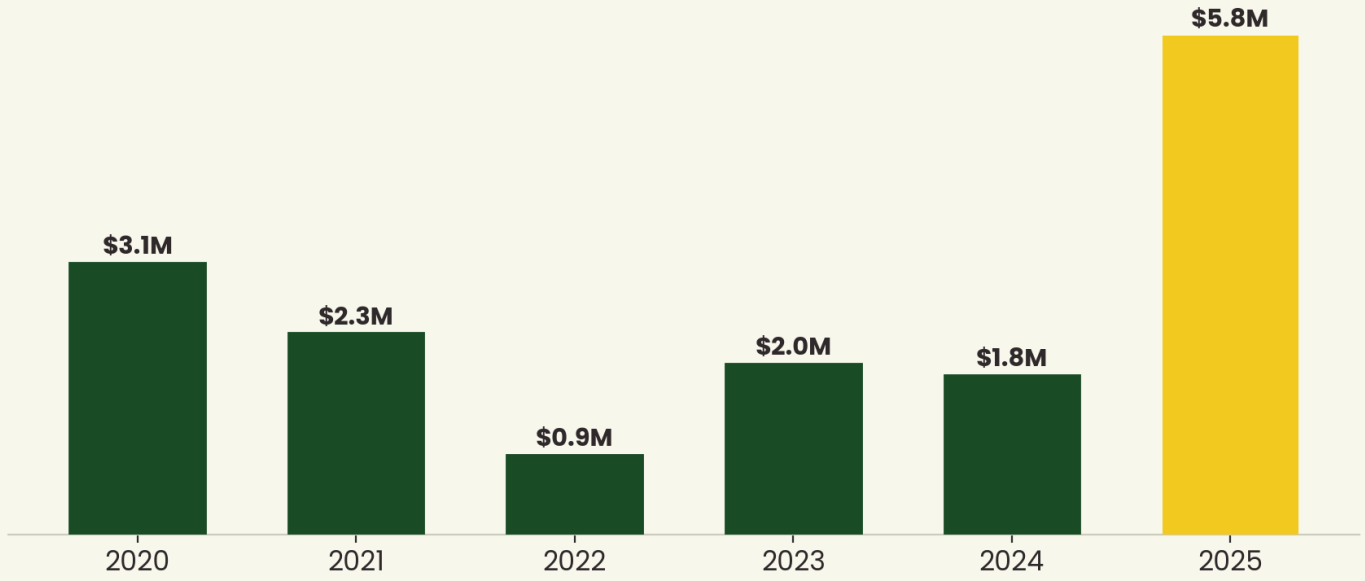
46% of the network is now Poor to Very Poor — more than half of local streets require overlay or reconstruction.

THE HEADLINE OF THE STREETS STORY

We Finally Flattened the Curve

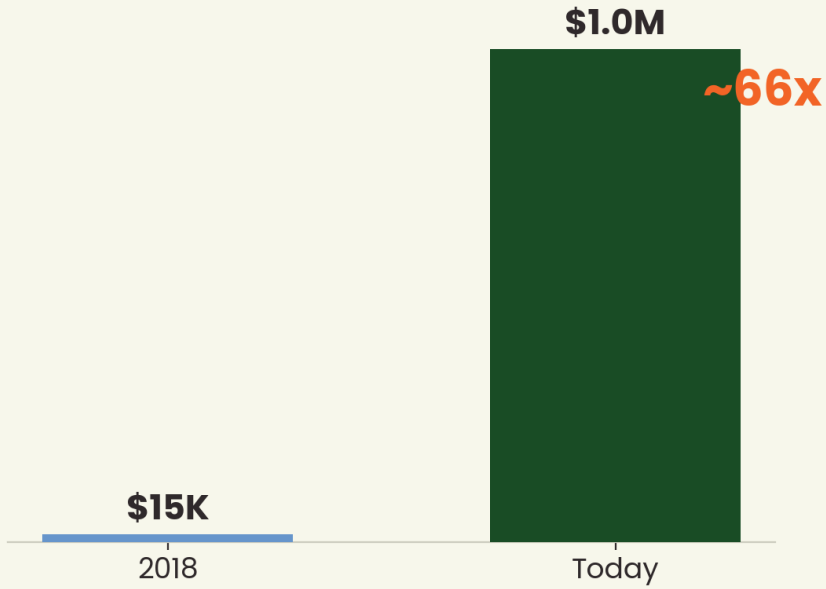
Holding the line is the win

PCI fell to 59 in 2018 — the low point before reinvestment.



Recent arterial investment lifted the network back into “Fair” and has held it there.

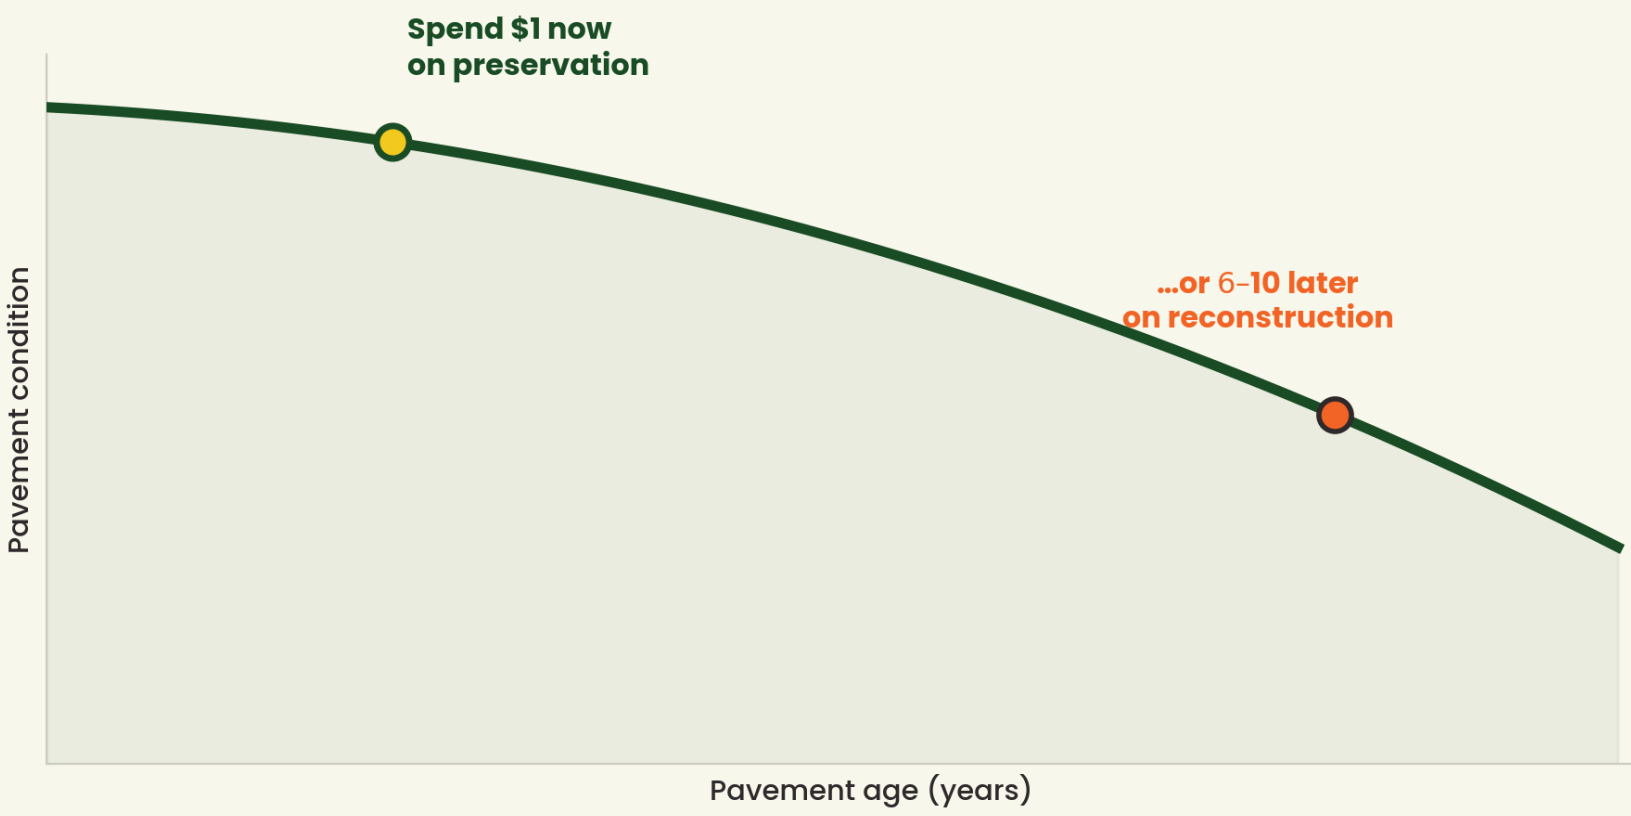
Without that work, the network would have slid into the “Poor” range.



DIRECT RESULT OF REINVESTED MODERNIZATION SAVINGS

We Put Real Money Behind It

Capital Street Improvement Investment by Year



Annual Street Preventative Maintenance

Annual preventative street maintenance grew from $15,000 in 2018 to $1,000,000 today — a deliberate policy to preserve good streets before they fail.

THE ECONOMICS OF PAVEMENT

Why We Treat Good Streets First

$1 : $6–10

Every $1 spent early on preservation avoids $6–$10 in reconstruction once a street fails.

“Good streets are the cheapest to preserve and provide the highest return on investment.”

A COORDINATED INFRASTRUCTURE APPROACH

Proposed Street Segments

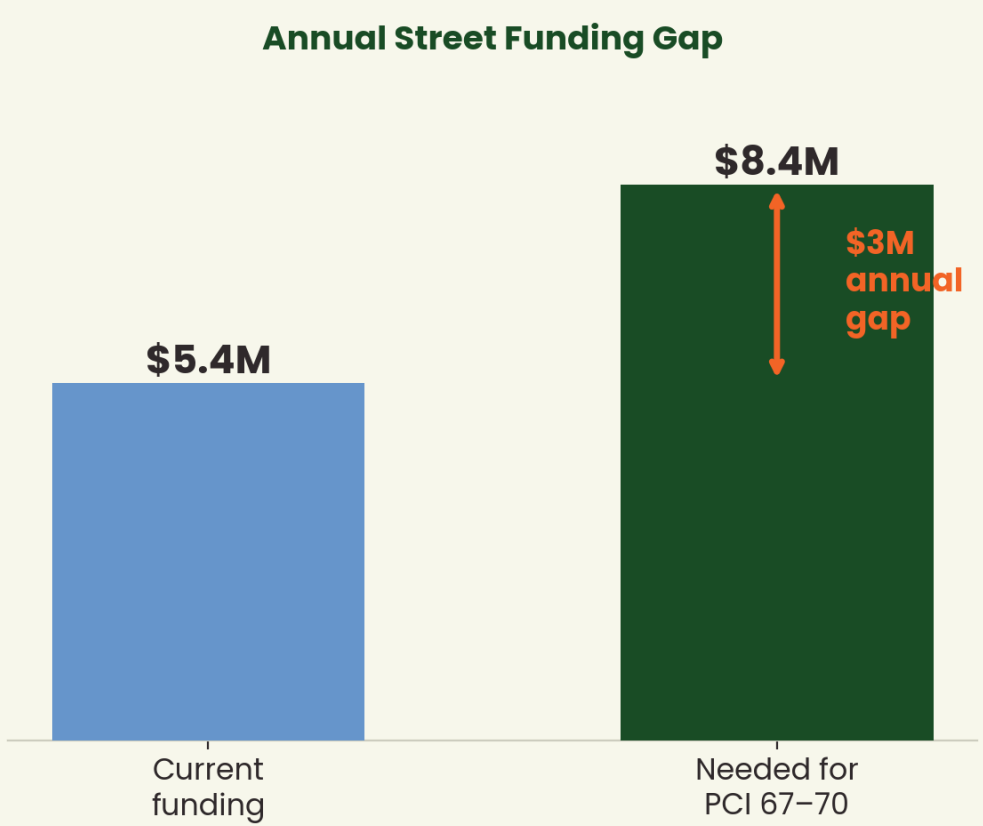
How segments were selected

Coordinate with water work
Combine street and water projects so mains are replaced before paving — never cut into new pavement.

Address low-PCI streets
Treat deteriorating segments before they slide further and require costly reconstruction.

Prioritize major corridors
Route 66, Grand Avenue, and Valley Center Avenue serve residents, businesses, commuters, and visitors citywide.

Standalone-ready segments
Streets with no near-term water work are the best candidates for immediate paving.



~$18.175M

in total street options — intentionally larger than the $8–$12M range, to give City Council a full menu to choose from.

Why Citywide PCI barely moves
Even meaningful corridor investments touch only a fraction of 163.4 miles and 30.6M sq. ft. The rest of the network keeps aging — so sustained annual funding, not one-time projects alone, is what raises the Citywide score.

AND YET — IT IS STILL NOT ENOUGH

The Gap Still to Bridge

$3M annual shortfall between current funding ($5.4M) and the $8.4M needed to reach PCI 67–70.

53% of the network — 86.6 miles — now requires overlay or reconstruction.

7 yrs of sustained $8.4M/year investment needed to move from “Fair” to “Good.”

How Should $8–$12M Be Allocated?

Streets & Roads

A preliminary menu of street segments totaling ~$18.175M — selected by PCI, community benefit, project readiness, and coordination with planned water work.

Additional allocation toward slurry seal project.

City Facilities

~$10.5M of FCA-recommended maintenance for 2026–2030 across City Hall, La Fetra, Finkbiner, the Teen Center, and other sites.

Not part of this decision: Consistent with City Council direction, one-time funds will not be used for the Library or Public Works Yard. Those projects — with their own phasing and long-term funding implications — are the focus of Workshop 2.

FOR THE RECORD

Fiscal Impact & Environmental Determination

Fiscal Impact

There is no immediate fiscal impact from receiving this report or participating in Workshop 1. Future City Council direction on the use of one-time funds will require fiscal analysis based on the amount, source, timing, and purpose of the funding.

Environmental Determination

This workshop and report are not a “project” under the California Environmental Quality Act (CEQA) — the action consists of receiving information, discussing priorities, and providing direction. Any future project approvals will be evaluated for environmental review as required.

Next steps: Following Council direction, staff will refine project scopes and cost estimates, confirm utility coordination and sequencing, identify funding sources, and return with the necessary budget, CIP, or project-specific actions.

Workshop 1: Foundation & Funding

Questions & City Council discussion
