CITY COUNCIL

6:00 PM SPECIAL MEETING

Tuesday, June 16, 2026
Glendora Public Library Bidwell Forum
140 Glendora Avenue, Glendora

AGENDA

CALL TO ORDER

ROLL CALL

NEW BUSINESS

1. **Workshop 1: Foundation and Funding**

   Recommended Action for the City Council:

   — 1. Provide direction on how one-time funds should be allocated among major categories, specific projects or priorities, or a combination of both.

ADJOURNMENT

Date Posted: June 10, 2026 03:46 pm

STAFF REPORT

TO:	**Mayor and Council Members**	**DATE:**	**June 16, 2026**
FROM:	**Public Works**	**DISTRICT(S):**	**Citywide**
SUBJECT:	**Workshop 1: Foundation and Funding**		

RECOMMENDATION

That the City Council:

1. Provide direction on how one-time funds should be allocated among major categories, specific projects or priorities, or a combination of both.

STRATEGIC FOCUS AREAS

Goal 3 - New + Revitalized Facilities
Goal 4 - Sustainable Infrastructure

EXECUTIVE SUMMARY

Over the past several years, the City has restored financial stability through organizational modernization reforms, voter-approved Measures E and Z, pension restructuring, and strengthened reserve / capital funding policies. These actions helped the City address a prior structural deficit of $3.5-$4 million, earn a AAA bond rating, and make targeted generational investments in infrastructure, public safety, homelessness response, technology, and capital projects. Despite these efforts, significant facility, street/road, and infrastructure needs remain. The City's fiscal prudence will allow the City Council to make decisions on the use of one-time funding opportunities to partially address these infrastructure challenges. The one-time funds must be evaluated carefully because the use at significant levels may reduce future fiscal flexibility, limit the City's ability to respond to economic downturns, or affect future borrowing costs.

Community survey results have also shaped this discussion. The 2024 True North Research survey showed 53% initial support for a Citywide facility bond measure and 45% support for a Library-specific bond measure. The same survey identified infrastructure/roads and homelessness as the top two quality-of-life improvement priorities. However, the 53% support level was below the two-thirds threshold required for a City-initiated general obligation bond. A citizen-led effort would have required only a simple majority if it qualified for the ballot; however, the citizen-led effort that had begun to explore a potential facilities measure has since ceased. As a result, the City's near-term discussion is focused on how to responsibly use available one-time resources, while continuing to evaluate longer-term funding options.

At the April 28, 2026 City Council meeting, the City Council approved the format of a three-workshop series intended to assist the City Council in evaluating the use of one-time funds, address current facility, street/road needs, identify major projects (e.g. Library), discuss funding opportunities, and discuss the establishment of a citizen advisory committee. The workshop series is intended to break a multi-year, complex discussion into three focused meetings.

- *Workshop 1: Foundation & Funding* will focus on how the City arrived at this point, including prior strategic planning efforts, community surveys, facility assessments, infrastructure studies, pavement management data, capital improvement planning, and City Council direction. Workshop 1 will also include review of one-time funding and a preliminary list of project options and estimated costs for City Council consideration.
- *Workshop 2: Library & Public Works Yard* will focus primarily on the Library and Corporate Yard/Public Works Yard, two of the City's most significant facility needs. This discussion is expected to include structural assessments, updated facility condition information, estimated costs, potential phasing opportunities, service continuity considerations, and any remaining follow-up items from Workshop 1.
- *Workshop 3: Funding Options & Next Steps* will focus on grants, land sales, debt issuance, other potential funding strategies, implementation of next steps, and the potential structure of a future citizen-led advisory committee, if desired. Workshop 3 would also provide an opportunity to address any follow-up items from Workshops 1 and 2.

The City Council has previously discussed an $8 million to $12 million range for use of one-time funds, aimed at facility and street/road issues; specific direction was provided to not utilize one-time funds for the Library and Public Works Yard. Those facilities will be discussed separately during Workshop 2 due to their larger scope, structural considerations, phasing needs, and long-term funding implications. Therefore, the primary policy question for Workshop 1 is how those funds should be prioritized on facilities and streets/roads.

To support the discussion on street/roads and facilities, staff will provide preliminary project options and estimated costs to help the City Council determine whether the one-time funding should be weighted toward streets/roads, existing facilities, or other City Council priorities. These materials are intended to help the City Council provide policy direction on the specific projects or project areas that should be prioritized for one-time funding.

Staff is seeking direction on which projects or project areas the City Council would like included in the one-time funding package, such as specific street segments, facility maintenance priorities, or categories of work identified in the Facility Condition Assessment. Following City Council direction, staff will refine project scopes, cost estimates, sequencing, funding sources, and delivery timelines for future budget, CIP, or project-specific actions.

LEGISLATIVE HISTORY / PREVIOUS ACTIONS

Over the past several years, the City Council has received multiple reports and presentations related to facility conditions, infrastructure needs, community priorities, funding options, pavement needs, and the use of one-time resources. Attachments A to N, included detailed information about much of the information previously presented to the City Council and Glendora Community, through council meetings and workshops. Rather than restating each prior report in full, staff has summarized the key actions below:

Date	Action/Topic	Summary
01/10/2023	Library Structural Analysis	City Council awarded a contract to Myers Houghton and Partners, Inc. to perform an in-depth structural analysis and evaluation of the Library's suitability for major renovations and initial visioning activities. (Attachment A)
09/12/2023	Water System Assessment	City Council received an update on the comprehensive Water System Assessment, which identified more than $350 million in projects needed over the next 30 years, with approximately $30 million programmed over the first five years. (Attachment B)

01/09/2024	Library Assessment/Facility Needs	City Council discussed the MHP Library assessment and directed staff to complete an overall condition analysis of major City facilities and undertake a community survey regarding a possible revenue measure. (Attachment C)
01/30/2024	GUSD Master Joint Use Agreement	City Council approved a Master Joint Use Agreement with Glendora Unified School District, including a partnership methodology for joint capital upgrades such as the Glendora High School Aquatics Center. (Attachment D)
08/27/2024	True North Community Survey	City Council received community survey results regarding potential Citywide and/or Library-specific revenue measure options and broader quality-of-life priorities. (Attachment E)
11/05/2024	ACA 5 Statewide Ballot Measure	Statewide ballot measure ACA 5 failed. The measure would have lowered the voter threshold for certain local facility bond measures from two-thirds to 55%
11/12/2024	Corporate Yard Design Contract	City Council approved an agreement with IDS Group, Inc. for architectural, engineering, and consultant services for the design and construction plans of the City Corporate Yard Improvement Project. (Attachment F)
02/25/2025	FY 24/25 Mid Year Budget Update	City Council received information documenting approximately $50 million in current facility needs and more than $250 million in estimated modernization needs. (Attachment G)
03/11/2025	City Facilities capital Needs and Funding Options	City Council received a comprehensive report regarding facility capital needs, deferred maintenance, cost increases, capital projects, and funding options. (Attachment H)
04/22/2025	FY 2025-2027 Strategic Plan	City Council approved the Strategic Plan, including goals related to New + Revitalized Facilities and Sustainable Infrastructure. (Attachment I)
12/09/2025	2025 Pavement Management Program	City Council received the 2025 Pavement Management Program Update prepared by Bucknam Infrastructure Group, Inc; City Council direction for staff to identify additional funding opportunities of $3 to 3.5 million annually to increase the City's PCI score from a 63 to a 70 over the next 7 years. (Attachment J)

01/13/2026	Civic Center Revitalization and Funding Methodology	City Council received updated Civic Center renderings, rough order of magnitude cost estimates, and funding scenarios. The City Council unanimously adopted the Civic Center renderings as starting point for future public engagement ad directed staff to seek grant opportunities for the project. (Attachment K)
02/24/2026	Use of One-Time Funds	City Council received a report on one-time funding opportunities and voted 5–0 to receive and file the report. (Attachment L)
03/24/2026	Advisory Group Options and One-Time Funds	City Council discussed citizen ad hoc committees, City Council subcommittees, and the use of one-time funds. Council unanimously directed staff to conduct a series of three workshops. (Attachment M)
04/28/2026	Workshop Framework and One-Time Funding Direction	Staff presented the proposed workshop framework and available one-time funding information. The City Council approved the use of one-time funding in the amount of $8-12 million. (Attachment N)

DISCUSSION

The City's facility, street, and infrastructure needs have been discussed through multiple staff reports, public meetings, strategic planning sessions, community surveys, facility assessments, pavement management updates, and capital planning efforts. As the needs are significant and involve multiple funding sources, policy trade-offs, and timing considerations, the City Council directed staff to structure the discussion into three workshops rather than one single City Council meeting. Below is a summary of each workshop:

- *Workshop 1: Foundation & One-Time Funding (June 16):* This kickoff session reviews how five years of strategic planning, public engagement, and facility assessments have shaped the conversation around one-time spending priorities. The City Council will provide staff direction on how to spend approximately $8-$12 million on street/road and facility projects.
- *Workshop 2: Library & Public Works Yard (July 21):* Building on the first workshop, this meeting digs into the specifics of the Library and Public Works Yard building, covering past and current structural assessments, estimated costs for repair/replacement, and possible phasing approaches.
- *Workshop 3: Funding Options & Next Steps (September 15):* The final workshop explores how to pay for the infrastructure and facility work needed in Glendora — including grants, land sales, and debt issuance. This workshop will also explore the possibility of establishing a citizen's advisory committee, and the role they may play.

Purpose of Workshop 1

Workshop 1 is intended to answer two primary questions.

1. How did the City get here?

The first part of the workshop will summarize the City's prior work, including strategic planning, community surveys, facility assessments, infrastructure studies, pavement management data, prior capital improvement planning, and City Council direction.

This background is important because the current discussion is not the beginning of a policy discussion. For the last several years, in conjunction with strategic planning efforts, the City has completed multiple studies and assessments that have identified significant needs across City facilities, streets, water infrastructure, parks, trails, trees, technology, and other capital assets. The City has also increased its investment in capital improvements and maintenance over time, including increased appropriations to preventative street maintenance, the Capital Improvement Program and the creation of a dedicated Facilities Division.

The Bureau Veritas Facility Condition Assessment is one of the primary tools used to understand and prioritize City facility maintenance needs. The assessment identified deferred maintenance and capital repair needs across City facilities and is available on the City website at https://www.cityofglendora.gov/City-Hall/Facility-Documents. Attachments O, P, Q, R, and S show the priority items identified for each facility over the next five years, work that has already been completed, dollar amounts by category and task, and remaining needs.

As noted in the presentation and attachments, not every facility repair completed in recent years was specifically identified in the assessment. Some projects arose unexpectedly or became necessary due to safety, operational, code, or service delivery needs. Those completed projects will be identified separately so the City Council and public can see both the planned assessment-driven work and the additional work that has been completed as needs arose.

2. How should the $8 million to $12 million one-time funding package be allocated?

The second part of the workshop will focus on allocation strategy. The City Council has already discussed a general one-time funding range of approximately $8 million to $12 million. Workshop 1 is intended to help determine how that funding should be divided among competing capital needs.

The City Council has options on how to allocate the $8 million to $12 million. The City Council could direct that a certain amount be allocated toward facilities, a certain amount toward streets, and a certain amount toward other capital priorities. The City Council could also identify specific projects it wants included, such as a particular street segment, facility repair, or capital project. Or, it could be a combination of both.

Once that direction is provided, staff would prepare or refine the project list, confirm cost estimates, evaluate sequencing, coordinate with operational needs, and return with any required budget amendments, CIP updates, or project approvals.

Community Survey and Public Funding Context

The City periodically commissions independent, scientifically representative community surveys from True North Research to understand resident priorities and satisfaction across the community as a whole, rather than relying on the views of those most motivated to speak at any given moment. Because these surveys have been conducted consistently since 2011, they provide a reliable multi-year record for guiding capital and budget decisions. The two most recent studies, the 2025 Community Opinion Survey and the 2024 Facility and Bond Feasibility Survey, show that residents continue to rate Glendora's quality of life highly (84% excellent or good).

In all surveys undertaken since 2011, improving streets, roads, and infrastructure stands out as the community's most durable priority, ranking among residents' top five unprompted quality of life concerns in six of the seven surveys. Predictably, satisfaction with street and road maintenance has fallen, down eight points since 2022 to 55%; this measure is one of the strongest drivers in the recent weakening of the overall quality of life score in the City. The 2024 public survey work also found the City's facilities to be well beyond their service life, with residents most strongly favoring basic repairs, safety, and code compliance over expansion.

Infrastructure priorities exist alongside clear cost sensitivity. Despite high confidence that the City manages its finances well (70% excellent or good), "taxes are already too high" was the leading reason residents hesitated to support a bond measure (53% overall support for citywide facilities). This is precisely why one-time funding, available through the City's fiscal prudence and efficiency measures, is well suited to the decision before the City Council at the first workshop. Directing funds to streets/roads, and aging facilities would respond to the community's most consistent and enduring priorities, target the area most closely tied to overall satisfaction, and do so without the new tax burden residents have signaled reluctance to accept. The survey evidence does not dictate how to split the funding between facilities and streets, but it strongly affirms that both rank among the community's highest priorities for investment.

Available One-Time Funding

On February 24, 2026, staff presented a comprehensive overview of anticipated one-time discretionary funding opportunities. The funding categories included available fund balance/reserves, potential reallocation of CIP funding, property sales, pension set-aside funds, and OPEB set-aside funds. That analysis documented cumulative one-time funds of $41.2 million would be available by the end of FY 2030-31.

With the completion of the FY 2024-25 audited financial statements recently presented to the City Council, the Finance and Public Works Departments are presenting an updated listing of available one-time funding:

Funding Source (FY27 Mid-Cycle Budget, with FY25 Audit Completion)	**FY 2025 - 2027**	**FY 2027 - 2029**	**FY 2029 - 2031**
Available Fund Balance/Reserve	$7,020,000	$376,030	$470,000
Reallocation of CIP / Re-prioritization	$5,900,000	-	-
Property Sales	$5,120,000	$4,000,000	$4,000,000
Pension Set-Aside	$14,500,000	$215,000	$210,000
OPEB Set-Aside	$4,360,000	$78,000	$90,000
Totals	**$36,900,000**	**$4,669,030**	**$4,770,000**

If no action is taken, estimated one-time available funds at the end of FY 2031 would be approximately $46.3 million ($36.90M+4.67M+$4.77M). This represents an increase of approximately $5.1 million over the February 2026 figures.

The largest change is a reallocation of $4.13 million of existing capital projects. Specifically, given the workshop is focused on facility and street/road projects, staff wanted the to provide the City Council with a chance to re-allocate facility projects that are not currently underway. As this funding is available now, it was important to present this opportunity to the City Council for consideration. The projects and amounts are as follows:

- HVAC Replacements ($556,000)
- Future Parks Projects ($750,000)
- Library Plaza/HVAC ($1,000,000)
- Citywide Roof Replacement ($1,265,000)
- Rock House ($555,500)

With the close of FY 2024-25, the City's financial policies dictate unspent funding in the General Fund is allocated to reserves, future pension obligations, and capital projects. Following this process, the City's set aside for future pension obligations and reserves increased by approximately $1 million.

Although these amounts identify potential one-time funding capacity, not all sources carry the same level of flexibility, timing, or risk. Some funds may be more readily available, while others may be tied to future property sales, future development activity, pension-related liabilities, OPEB obligations, reserve policy considerations, or replacement funding strategies. As specific projects are identified, staff will further evaluate the appropriate funding source or combination of sources.

Facility Assessment and Facility Investment

The Bureau Veritas Facility Condition Assessment (FCA) was prepared to help the City understand the condition of its facilities, identify deferred maintenance, and prioritize repair and replacement needs over time. The assessment reviewed major facility components to assess the current condition and project future maintenance costs related to various building systems including roofing, exterior conditions, accessibility, safety, electrical systems, HVAC, plumbing, site improvements, and other facility components. The work program outlined in the FCA is to maintain the facilities in their current configuration and for their current uses. Upgrades required for new or expanded programs or services is not included in the FCA. The FCA assumed 3% annual inflation for construction costs and identified maintenance needs totaling approximately $50 Million over twenty years (Attachment O).

The FCA Recommended Maintenance Summary (Attachment P) identifies approximately $10.5 million in recommended maintenance needs for the 2026–2030 period across multiple City facilities. Since the FCA was prepared, staff has completed approximately $4 million of work across multiple facilities (Attachment Q). Based on actual costs from recently completed projects, staff has found that the original FCA estimates, which used a 3% annual escalation factor, were too low when compared to actual current project pricing. For planning purposes, the five-year recommended maintenance summary has been adjusted using a higher escalation factor (8%) to better reflect recent construction cost experience and current market conditions.

The current FCA summary includes recommended maintenance needs for facilities such as City Hall, the Library/Police Station, La Fetra Center, Finkbiner Park facilities, Crowther Teen and Family Center, Big Dalton facilities, and other City-owned sites. These recommendations are not intended to represent every future facility need, but they provide a structured starting point for prioritizing near-term maintenance and repair work over the next five years.

Moving forward, staff intends to use the FCA as a more formal work planning tool. The Facilities Division will be directed to spend approximately 75% of its time addressing items identified in the assessment, while maintaining flexibility to respond to urgent, safety-related, operational, or unforeseen facility needs. At full staffing, the Facilities Division consists of a five-person team: one Supervisor, who manages projects, work planning, and field assignments; one Lead Maintenance Worker; and three Maintenance Workers. The City is currently recruiting for one Maintenance Worker position; otherwise, the team is substantially in place. It should be noted that the Facilities Division was created and staffed through reinvestment of efficiency savings experienced through city modernization efforts completed in 2019 through 2021.

This approach is intended to move the City from a largely reactive facility maintenance model toward a more planned, prioritized, and assessment-driven model over time.

Streets and Pavement Management

The 2025 Pavement Management Program (PMP) provides the City with updated pavement condition data and helps guide the selection of future street improvement projects. The PMP evaluates the pavement condition of the City’s street network, identifies the Citywide Pavement Condition Index, and provides a data-driven basis for selecting streets for rehabilitation, preservation, and reconstruction.

The City's pavement network has an estimated replacement value of approximately $439 million and includes approximately 163.4 centerline miles of streets and alleys. The 2025 PMP identified a Citywide weighted PCI of 63.2, compared to 62.5 in 2015, 59 in 2018, and 65.4 in 2020, keeping the network in the "Fair" range. Earlier assessments in 2015 and 2018 did not include alleys, which would have slightly lowered those PCI scores. The report also notes that 32% of streets are in Good to Very Good condition, 22% are Fair, and 46% are Poor to Very Poor, reinforcing the need for continued reinvestment.

Maintaining an annual investment near $8.4M would allow the City to improve PCI, slow deterioration, and reduce long-term costs. Current pavement funding averages $5.4 million per year, creating an annual $3 to $3.5 million shortfall compared to what is needed to reach PCI 70 over the next seven years. In addition to the annual funding of $5.4 million, an additional $1 million was allocated for annual preventative maintenance was added to the budget since 2018; it was previously $15,000. Similar to the facilities investments, these additional funding amounts are a direct result of City Council approved reinvestment of savings achieved through organizational modernization efforts undertaken in 2019-2021.

Pavement conditions continue to deteriorate over time, making it essential for staff to take a strategic approach to project selection. The City cannot rely solely on a "worst-first" approach. Instead, staff must balance streets with low PCI scores, streets that are good candidates for cost-effective preservation, major corridors that provide broader community-wide benefits, and opportunities to coordinate street work with other infrastructure needs.

Proposed Street Improvement Segments

The preliminary proposed street segments included for Workshop 1 (Attachment S) were selected using a coordinated infrastructure approach that considers pavement condition, community-wide benefit, project readiness, available funding, and the timing of future underground utility work. Staff reviewed the 2025 PMP data, including PCI scores and recommended treatment types, together with known water infrastructure priorities and planned capital projects.

A key consideration in selecting the street segments presented is whether a street is expected to require near-term water main replacement or other underground utility work. When feasible, the City combines street and water projects so that water infrastructure can be replaced before pavement improvements are completed. This approach avoids the inefficient practice of paving a street only to later cut into the new pavement for utility work. Coordinating these projects allows the City to stretch limited ratepayer, transportation, and capital funds further by reducing duplicate construction costs, minimizing repeated disruption to residents and businesses, and extending the useful life of the completed street improvement.

The proposed street segments generally fall into one or more of the following categories: streets with low PCI scores that should be addressed before they deteriorate further; major corridors and community connectors that provide broader citywide benefit; and street segments where no near-term water project is currently anticipated, making them more appropriate candidates for standalone pavement investment. In contrast, some streets with poor pavement conditions may not be recommended for immediate standalone paving if water infrastructure work is anticipated in the near future.

Several of the proposed segments, including Route 66 and Grand Avenue, serve a broad cross-section of residents, businesses, commuters, and visitors. Improvements to these corridors would provide a community-wide benefit beyond a localized residential street improvement. The list also includes segments with very low PCI scores, including portions of Route 66 and Valley Center Avenue, where timely investment can help address deteriorated pavement conditions before costs increase further.

The preliminary street project list is not intended to represent a final recommendation or a commitment to fund all listed segments. Rather, the list provides the City Council with a menu of street options, estimated costs, current segment PCI values, treatment types, pavement areas, and estimated Citywide PCI impacts to support discussion regarding how much of the $8 million to $12 million one-time funding package should be allocated toward streets.

The estimated citywide PCI impact shown in the table may appear modest when compared to the level of investment. This is because the proposed street segments represent only a portion of the City's overall pavement network, which includes approximately 163.4 centerline miles and more than 30.6 million square feet of pavement. While improved segments may be restored to a higher PCI, the much larger portion of the network not included in the project continues to age and deteriorate by approximately [1% / year]. As a result, even meaningful investments in major corridors may have only a modest visible impact on the citywide PCI average unless the City continues making sustained annual investments in pavement maintenance and rehabilitation.

The estimated PCI impacts shown in Attachment S are based on the 2025 PMP Citywide PCI baseline, adjusted to account for street projects completed after the PMP field assessment, projects currently in design and programmed to be completed before the end of 2027, the proposed segment improvements and continued deterioration of the overall street network. The estimated PCI shown, however, does not include the future positive impact of the FY 2026-2027 annual slurry seal project funded with Road Maintenance and Rehabilitation Account (RMRA) funds because the specific street segments for that project have not yet been identified. Once those streets are selected, the Citywide PCI would be expected to be further positively impacted by approximately 0.6 to 0.9 PCI points.

In addition to the annual RMRA-funded slurry seal program, the City Council may also choose to allocate a portion of the one-time funding toward expanded preventive maintenance. An additional allocation of approximately $500,000 toward slurry seal could treat an additional estimated 800,000 to 1,000,000 square feet of pavement and could further improve the Citywide PCI by approximately another 0.6 to 0.9 PCI points, depending on the final street segments selected, existing pavement conditions, bid pricing, and total square footage treated. This additional slurry seal option is not included in the Citywide PCI After Segment Improvement estimates shown in Attachment S.

The full list of proposed street options totals approximately $18.175 million, which exceeds the currently discussed one-time funding range. This is intentional, as it provides the City Council with a broader set of options to consider rather than limiting discussion to a single staff-selected package.

Based on City Council direction, staff will further refine the proposed street package, confirm utility coordination, evaluate project sequencing, and return with any necessary budget, CIP, or project-specific actions.

Preliminary Project Options for One-Time Funding Consideration

As part of this report and Workshop 1 discussion, staff has prepared preliminary project options for City Council consideration. The options are intended to support discussion regarding how the previously discussed $8 million to $12 million in one-time funds should be prioritized among streets, facilities, and other capital needs.

The project options include estimated costs and general project descriptions. They are not intended to represent a final staff recommendation at this stage. Rather, they provide the City Council with a practical framework to compare potential investments and provide policy-level direction on the preferred allocation of funds.

Following City Council discussion and direction, staff will prepare and refine the project list, confirm cost estimates where needed, identify potential funding sources, and return with implementation options as part of the remaining workshop series or future City Council actions.

FISCAL IMPACT

There is no immediate fiscal impact associated with receiving this report or participating in Workshop 1. However, future City Council direction regarding the use of one-time funds will require fiscal analysis based on the amount, source, timing, and purpose of the funding.

ENVIRONMENTAL DETERMINATION

This workshop and staff report are not a project under the California Environmental Quality Act because the action consists of receiving information, discussing priorities, and providing direction to staff. Any future project approvals will be evaluated for environmental review as required.

STAFF REPORT

TO:	**MAYOR AND COUNCIL MEMBERS**	**DATE:**	**JANUARY 10, 2023**
FROM:	**PUBLIC WORKS**	**DISTRICT(S):**	**CITYWIDE**
SUBJECT:	**APPROVE A CONTRACT AGREEMENT WITH MYERS HOUGHTON & PARTNERS, INC. FOR THE LIBRARY STRUCTURAL ANALYSIS AND OPTIONS FOR VERTICAL EXPANSION PROJECT (STRATEGIC PLAN ITEM 46-IMCIF)**		

RECOMMENDATION

That the City Council:

1. Approve an Agreement with Myers Houghton & Partners, Inc. for the Library Structural Analysis and Options for Vertical Expansion project in the amount of $215,941 and a 10% contingency in the amount of $21,595, for a total contract not to exceed $237,536;
2. Authorize the City Manager or his designee to execute the Agreement with Myers Houghton & Partners, Inc., including minimal and/or non-substantive changes; and
3. Approve a supplemental appropriation from the Capital Projects Fund 321 to the project in the amount of $88,651.

EXECUTIVE SUMMARY

The Glendora Public Library (Library) was built in 1972, and various studies have been conducted to address structural deficiencies and recommend repairs. Most recently, a preliminary assessment was conducted on the roof framing system and slab that form the base of the Bidwell Plaza (Plaza). Based on the issues identified, and long-term planning discussions, it was decided that more in-depth assessment was necessary to better inform decisions around the Library building's future.

A Request for Proposals (RFP) process was conducted for in-depth structural analysis and evaluation of the Library's suitability for major renovations, including a potential second-story addition. Five proposals were received, and based on evaluations and interviews, staff determined Myers Houghton and Partners, Inc.'s (MHP) proposal best meets the City's needs.

Staff recommends that City Council award MHP an agreement in the amount of $215,941.00, authorize staff to execute the agreement and any change orders in an amount not to exceed 10% of the original contract sum, for a potential total of $237,535.10, and authorize staff to appropriate an additional $88,650.81 towards the project budget from Capital Projects Fund 321.

LEGISLATIVE HISTORY / PREVIOUS ACTIONS

The Library is a two-story reinforced concrete and concrete masonry structure with 27,000ft^2 of covered area next to Glendora City Hall. The Bidwell Plaza serves as the majority of the lower floor's roof. Construction was completed in 1972, and since then various studies have been conducted to address structural deficiencies and recommend repairs. Issues with water infiltrating the main Library floor after rain events have existed essentially since the Library's initial construction, with notes from as early as 1978 referencing ongoing repairs to the Plaza and water leaks being less than in previous years. The most recent major exterior renovations were completed in 2004, reinforcing the north-side load-bearing wall and supporting columns, and resurfacing the Plaza.

DISCUSSION

As an initial design step for the planned Bidwell Plaza Renovation and Library Building Exterior Weather Proofing capital improvement project, City staff contracted with JMDiaz, Inc. in 2021 to assess the feasibility of adding a shade structure to the Plaza. While conducting the first site visit, visible cracking was noted in the beam system of the Library ceiling. Based on discussions, a decision was made to modify the scope of the existing assessment to perform a preliminary evaluation of the entire structure.

This was completed in June 2022, and based upon its findings, a more comprehensive evaluation of the Library is recommended, including more in-depth structural analysis with material testing. Beyond potential structural issues, other infrastructure improvements, remodeling, and modernization needs have also already been identified, and should be considered when evaluating the building's overall suitability for major renovations from a functional and financial standpoint. They include but are not limited to an anticipated overhaul of the entire heating, ventilation, and air conditioning (HVAC) system, significantly reconfiguring the interior, at minimum effectively repairing the Plaza area, or more ideally either adding a second floor where the current Plaza is, or enriching it with shade and other amenities that would bring additional loading and anchoring requirements.

On September 22, 2022, a Request For Proposals (RFP) was issued via QuestCDN with a due date of October 20,2022. Along with the typical public advertising, staff directly contacted all on-call consultant companies to make them aware of the RFP, as well as other qualified firms with whom the City had past positive experiences.

On October 5, 2022, staff conducted a pre-submittal job walk with 15 representatives from 12 different consultant firms. During this walk, City staff and prospective consultants physically visited the Library, visually inspected the building, and clarified any inquiries regarding the project scope of work raised at that time. Subsequently, five qualified firms submitted proposals. Interviews with the submitting firms' representatives were conducted by Public Works and Library staff during the first week of November, and the overall proposals were then independently evaluated based on experience, project understanding, and deliverability of the project, as well as responses to any follow up questions.

Based on the evaluation, MHP's proposal was selected as best meeting the needs of the City. MHP will work with the City to develop the scope and estimated costs for:

(1) Repair, seismic strengthening, and renovation of the existing Library and Plaza,

(2) Repair, seismic strengthening, and renovation of the existing Library structure, including added support for the addition of a second floor and/or other potential structurally significant Plaza improvements, and

(3) Demolition and construction of a new Library.

MHP will collaborate with the City to understand the existing conditions, and the needs and goals of the City for the Library. Existing space utilization mapping, shelving footprint mapping, and Building Code assessment will be completed as part of project. A final report, including cost estimates is anticipated by the end of April 2023.

FISCAL IMPACT

Sufficient funding is available in the Capital Projects Fund Reserve to fund the additional appropriation in the amount of $88,651.

ENVIRONMENTAL DETERMINATION

This project is categorically exempt from the California Environmental Quality Act provisions pursuant to Section 15302(c). The Notice of Categorical Exemption is attached for City Council as Attachment A.

Re: Request for Proposal – Library Structural Analysis and Options for Vertical Expansion

MHP, Inc. Structural Engineers (MHP) is pleased to submit our response to RFP Quest No. 8299133 for professional services to conduct an in-depth structural analysis of the existing library structure including material testing, geotechnical investigation, and assessment of the feasibility of a second-floor addition. We are confident the enclosed Statement of Qualifications with our team of sub-consultants will thoroughly highlight our ability to support The City of Glendora in fulfilling the outlined scope of services.

MHP, Inc. Structural Engineers is a Long Beach based structural engineering consulting firm that provides a broad range of services, including structural design, seismic risk assessment, and seismic strengthening for commercial, institutional, education, and civic buildings. MHP has an experienced staff of 43 professionals including 24 licensed Civil & Structural Engineers. We have a high-level of structural engineering expertise in areas such as seismic evaluation and strengthening, structural condition assessment, computer modeling, non-linear analysis, code development, peer review, and performance-based engineering (such as ASCE/SEI 41).

MHP has extensive experience working with institutional and government clients and is aware of the responsibilities our civic clients have to their constituents and the necessary oversight and demands on the City's consultants. As with our on-call contract for Glendora, MHP holds several other on-call contracts for public agencies and institutions such as NASA-JPL, County of Los Angeles, and several California State Universities, providing valuable experience for our service to cities like Glendora. The proposed library feasibility assessment is perfectly aligned with our particular experience in seismic evaluation and strengthening projects for various cities throughout Southern California.

MHP's Lead Project Manager, Kyle White will be responsible for overseeing the project team and will maintain primary knowledge and control of all tasks associated with the project. He will participate in all meetings and discussions and will be very well-versed in the details and specifics of the project. Kyle will interact directly with City staff and our team of subconsultants to ensure conformance with the project guidelines, schedules, and applicable code requirements. Kyle has extensive experience in evaluation and retrofit of all building types, including many complex projects, from the conceptual design stage involving extensive material testing and geotechnical investigation, selection of a strengthening approach, and through construction completion. Kyle is an excellent communicator and facilitator, and has experience presenting seismic evaluation, retrofit, and feasibility study findings and recommendations to City Councils.

In order to fulfill the outlined scope of services for the City of Glendora Library project, MHP has assembled a team of subconsultants that will assist us in meeting the project needs. Our consultant team is as follows:

- **Pfeiffer Architects** will serve as Project Architect. Pfeiffer's planners and designers are among the most experienced professionals focused on academic libraries in practice in the U.S. today. Led by Gili Meerovitch and Stephanie Kingsnorth, this practice has experience in strategic facilities planning for a broad spectrum of libraries for public and private institutions across North America.

- **P2S, Inc.** will provide Mechanical, Electrical, and Plumbing consultation. Their expertise in providing sustainable engineering solutions throughout California and beyond for over 31 years make them an asset to the team. They have specific project experience with library renovations and seismic strengthening.
- **ENGEO** will provide Geotechnical and Site Seismic Hazard analysis. The engineers and semiologists at ENGEO have developed precise methodologies for performing seismic hazard and site-response analyses for new structures and existing buildings. Their approach allows structural engineers to provide optimized earthquake engineering, typically resulting in significantly more efficient superstructure designs in seismically active urban environments.
- **Accu-Test Structural Laboratories of Calabasas** will provide materials testing and laboratory services. For the last 30 years, day or night, Accu-Test have been actively involved in structural testing, investigations, inspections, and building construction related operations for Commercial, Industrial, and Historical buildings.
- **Cumming** will serve as Cost Estimator for the project. Cumming has completed more than 2,100 projects for city- and county-operated facilities. These projects have involved parks, public spaces, city halls, civic centers, libraries, offices, community centers, public works, among many others.

The Project Team is available to commence the project immediately upon approval by the City Council and Notice to Proceed.

MHP looks forward to utilizing our past 49 years of experience, and our commitment to safe buildings, to provide Structural Engineering and Project Management Services for the City of Glendora. All information included in this SOQ is accurate and current.

Sincerely,

Lance Kenyon

Lance Kenyon, M.S., S.E, CA S3399
President and Principal

2. Work Experience

1. **Project Name: Beverly Hills City Hall – Seismic Evaluation & Strengthening**
   - **Description:** Starting in 2018, MHP has supported the City of Beverly Hills through the development of a phased seismic strengthening program for the historic City Hall. MHP conducted an initial ASCE/SEI 41-13 seismic evaluation and developed a conceptual phased strengthening design which was presented to and accepted by City Council. The first phase of strengthening, which addresses the stability of the central tower and included materials testing scope, was completed in 2022. City Hall remained operational throughout the strengthening work. Included in the project were substantial non-structural upgrades and the addition of a new rooftop event space. The second phase of strengthening will incorporate base isolation to enhance resiliency and protect the historic structure.
   - **References:** RAW Intl, Roland Wiley, rwiley@rawinternational.com, (213) 622-4993
     City of Beverly Hills, Mandana Motahari, AIA, mmotahari@beverlyhills.org, (310) 288-2866
   - **Final Contract Amount:** $11M
   - **Duration:** 2018-present

2. **Project Name: CSULB Center for Student Success – Seismic Evaluation & Strengthening**
   - **Description:** The project consisted of the evaluation, renovation, and addition to a two-story classroom/science building over basement, constructed in the 1950s and enclosing approximately 80,000 sq. ft. The structure is split into seismically separated West and East wings. MHP provided detailed ASCE/SEI 41-13 seismic evaluation, feasibility study and retrofit concept development, support for major renovation, and overall seismic strengthening. Detailed structural analysis and strategic strengthening through shotcrete and fiber-reinforced polymer overlay permitted the addition of a new second story classroom and gathering space.
   - **References:** AECOM, Mark McVay, Design Principal, Mark.McVay@aecom.com, (714) 567-2400
     CSU Long Beach, Mark Zakhour, Associate Vice President, Beach Building Services,
     mark.zakhour@csulb.edu, (562) 985-7592
   - **Final Contract Amount:** $29M
   - **Duration:** 2 years

3. **Project Name: 100 Wilshire – Seismic Evaluation Using Non-Linear Methods**
   - **Description:** The project consisted of the ASCE/SEI 41-17 seismic evaluation of a 255,000-sq. ft., 21-story office tower over three levels of subterranean parking. The project objective was to demonstrate compliance with the City of Santa Monica mandatory seismic retrofit ordinance for non-ductile concrete (NDC) buildings. Initial linear analysis indicated substantial strengthening needs. Ultimately, an ASCE/SEI 41-17 Tier 3 comprehensive non-linear dynamic analysis was completed to evaluate the structure and establish compliance. Materials testing was conducted within the occupied building to determine existing construction details and material properties.
   - **References:** Douglas Emmett, Robert Lutes, Senior Vice President, rlutes@douglasemmett.com, (310) 985-0726
   - **Final Contract Amount:** $230,000 (SE Fee)
   - **Duration:** 1 year

4. **Project Name: Jet Propulsion Laboratory Bldg. 183 Seismic Evaluation & Strengthening**
   - **Description:** Bldg. 183 is a nine-story building constructed in the late 1960's. Starting in 2016, MHP has provided evaluation and feasibility study services for the project to establish an efficient strengthening design which could be implemented for the building to achieve Immediate Occupancy structural performance without impacting operations within this Mission Critical structure. The seismic strengthening approach consists of the addition of external buckling-restrained braced frames, shotcrete overlay on the existing masonry walls, and the addition of a 60-foot-tall concrete buttress shear wall. The project is currently permitted and awaiting the start of construction.
   - **References:** Jet Propulsion Laboratory, Daniel Novak, Facilities Engineering & Construction Daniel.Novak@parsons.com, (818) 354-2396
   - **Final Contract Amount:** $466,000 (SE Fee)
   - **Duration:** 2 years

5. **Project Name: 1202 3rd Street Promenade – Seismic Evaluation & Strengthening**
   - **Description:** MHP supported the Client, Federal Realty, in evaluating code seismic retrofit requirements for repositioning an existing retail/office building in Santa Monica. The scope included code review, feasibility studies for various proposed occupancies, meetings with the head of building and safety, and ultimately resulted in a major seismic upgrade and replacement of the first and second floors of the building to accommodate a heavier live load for the fitness tenant and to facilitate the seismic retrofit design.
   - **References:** Adam Van Dale, Federal Realty avandale@federalrealty.com , (310) 414-5287
   - **Final Contract Amount:** $14M
   - **Duration:** 18-months

6. **Project Name: Long Beach Police Department East Division Police Department Substation**
   - **Description:** The project consists of a comprehensive seismic evaluation and complete renovation of a 1960's brick and masonry L-shaped building with one and two-story portions, including a high roof assembly space. The structure was converted from an Army Reserve office/classroom building to the new Long Beach Police Department East Division Sub-Station.
   - **References:** Environ Architecture, Alan Burks, alan@environarch.com, (562) 495-7110 x2
   - **Final Contract Amount:** $4.5M
   - **Duration:** 3 years

7. **Project Name: Armory Arts Collective – Seismic Evaluation & Strengthening**
   - **Description:** MHP has completed code research, discussions with the City of Long Beach building department and preliminary design for a major renovation to the National Guard Armory at 854 E. 7th Street. The proposed mixed residential/education project does not increase the code Risk Category for the building, therefore per the Existing Building Code only a wall anchorage seismic upgrade is required. A preliminary design for the renovation and strengthening has been completed.
   - **References:** Studio One Eleven, Michael Bohn, Senior Principal, mbohn@studio-111.com (562) 901-1500
   - **Final Contract Amount:** Pending
   - **Duration:** Construction pending

8. **Project Name: 9665 Wilshire – Seismic Evaluation & Strengthening**
   - **Description:** MHP conducted an ASCE/SEI 41 Tier 3 comprehensive evaluation of the building during acquisition and subsequently completed a performance-based, non-linear analysis for the building using time-history records for the specific site conditions. In addition, MHP designed a fluid viscous damper retrofit, exterior modernizations of the lobby, and exterior plaza and ground floor elevations of the building. The retrofit approach was strategically selected to allow the building to remain occupied and operational during construction.
   - **References:** Douglas Emmett, Robert Lutes, Senior Vice President, rlutes@douglasemmett.com, (310) 985-0726
   - **Final Contract Amount:** $2.6M
   - **Duration:** 2 years

9. **Project Name: The Pacifican – Seismic Strengthening**
   - **Description:** The project consists of a six-story non-ductile concrete condominium building encompassing a total of 32-units constructed circa 1977 in Santa Monica, California. The building has two parking levels below street level, and an outdoor, in-ground pool. Total lot square footage is approximately 22,484 square feet. Initial linear analysis indicated substantial strengthening needs to attain compliance with the Santa Monica Seismic Retrofit Ordinance. MHP has undertaken non-linear dynamic analysis including the effects of soil-structure interaction to assist in reducing the extent and impacts of strengthening.
   - **References:** Pacifican Homeowner's Association, Bruce Weyne, bruceweyne@hotmail.com (310) 999-5134
   - **Final Contract Amount:** TBD
   - **Duration:** 2019-present

10. **Project Name: 16633 Ventura Blvd, Encino, CA – Seismic Strengthening**
    - **Description:** The project consists of a 14-story office building constructed circa 1970. 14 elevated floors are comprised of ten office levels stacked over three parking levels and one at-grade parking level. The project is subject to the requirements of the Los Angeles Non-Ductile Concrete Ordinance. Initial linear analysis methods indicated substantial strengthening needs which would have impacted tenant operations. To mitigate this, MHP is employing non-linear analysis methods to assist in reducing strengthening needs and facilitate the use of fluid viscous dampers. This approach allows nearly the entirety of the strengthening work to be completed outside of tenant and office spaces. The adjacent parking structure is being retrofit to allow the addition of a new parking level while attaining compliance with the Ordinance.
    - **References:** Michael John Klein, mike@mkjk.net, (818) 707-0433
    - **Final Contract Amount:** TBD
    - **Duration:** 2019-present

3. Project Understanding & Approach

Overall

This important project consists of two distinct phases, each with unique needs. The City will benefit greatly by selecting a team of design professionals with both significant seismic retrofit experience and experience with library design and programming. The team will work with the City to develop the scope and estimated cost for each of the following three options: repair and seismic strengthening of the existing library structure, repair and strengthening of the library structure including support for the addition of a second floor, and construction of a new standalone library. Based on the study outcomes and in further consultation with the design professionals, the City will be able to objectively weigh the options and determine the optimal path forward for their needs.

Phase 1 - Evaluation of Existing Structure

The first phase of the project primarily includes structural evaluation of the existing library structure. The goal of this study is to provide a comprehensive structural evaluation per ASCE/SEI 41-17 methodology and a technical report that describes to the City the current condition of the library building and any repair or strengthening work required to meet the City's continued use and seismic resiliency goals. This phase will include development and implementation of a Materials Testing and Condition Assessment Program and completion of an appropriate Geological Investigation and report. The Structural Engineer must have significant experience conducting building assessments, performing comprehensive seismic evaluations, coordinating development of geotechnical/site seismic hazard analysis scope and materials testing programs to facilitate an efficient strengthening design. Clear and accessible communication is a must to ensure that the City understands the range of options for seismic performance goals, where the existing building stands with respect to those goals, and the potential options for enhancing the seismic performance of their building. MHP has extensive and demonstrated experience facilitating similar successful projects with public and private entities.

In addition to the structural scope, other infrastructure, remodeling and modernization considerations will be addressed by the consultant team. Architectural and MEP systems affected by strengthening or repair scope will be evaluated, as will potential upgrades to HVAC systems and desired reconfiguring of the main floor spaces, upstairs meeting room and kitchen area, and enriching the existing roof plaza area with shade and other amenities.

Conceptual plans for the seismic and structural work, a technical report and a professional cost estimate for the work will be deliverables to the city, along with all supporting materials (geotechnical report, testing results, photos).

Phase 2 – Feasibility of Second Story Addition

The second phase or task (which is anticipated to overlap the first phase) includes determining the feasibility and cost of expanding the second floor with an addition. The scope of the second phase is currently broadly defined, as numerous options exist to configure the new and existing spaces, and the implications to structural and seismic systems, MEP systems, accessibility, exiting and sustainability are unknown. While this scope includes detailed and complex structural and seismic evaluation per ASCE/SEI 41-17 methodology, successful completion will require significant expertise, leadership, and experience of the Project Architect and MEP Engineers as well. The project team will work with the City to refine and develop the City's vision for the future of the library and addition, including infrastructure, remodeling and modernization needs.

Architectural scope will include visioning workshops, information gathering, program analysis and concept development to identify an expanded facility and program in line with current library standards and the City's needs. MEP scope will consider system capacities for both the second floor addition and existing floor areas as a new system may be sized to serve the entire building.

Deliverables to the City will include:

- Conceptual plans for the addition and for repairs/modifications to the existing building. Plans shall include conceptual level architectural, structural and seismic systems, and MEP systems for the expanded building (AutoCAD and pdf).
- Technical report with structural analysis of the building per ASCE/SEI 41 methodology (Draft and Final, word and pdf).
- Geotechnical report.
- Materials Testing report and results.
- Additional supporting materials as requested (photos, meeting notes, inspection reports).
- Professional cost estimates for the work including:
    - Mitigation of Existing Building Structure items
    - Second Story Addition
    - Construction of a brand new library of similar size

Recommended Deviations from RFP General Scope of Work

- It is recommended that the Geotechnical and Material Testing scopes of work be considered as estimated budgets, pending the development of formal scope of work documents for these team members (fixed fee quotes have been received for Material Testing and Cost Estimating).
- It is recommended that the fee structure for Phase 2 include an Optional Scope for Concept Development of the Addition Exterior Aesthetic (see Pfeiffer Proposed Optional Services III F). Development of Exterior Aesthetics for the addition could be extended to a future phase.
- The proposed Scopes of Service are comprehensive and may be appropriate for this complex project. However, adjustments in proposed scopes and fees to fit within the City's anticipated budget can be accommodated.

4. Scope and Services

The scope and services to be provided during the course of the project are described below. The project is divided into two phases or tasks: Evaluation of the Existing Structure and Feasibility of Second Story Addition. Timing and duration of some tasks will overlap as depicted in the Project Schedule.

Phase 1: Evaluation of Existing Structure

Prior to starting Phase 1, an ASCE/SEI 41 Structural Performance Objective will be established for the existing library building in consultation with the City. The Performance Objective consists of a pairing of one or more Seismic Hazard Levels with Structural and Non-Structural Performance Levels. This will be discussed in detail at the initiation of the project.

a. Preparation of Condition Assessment and Material Testing Program

In-situ material properties often vary from those specified on original design drawings. For example, concrete continues to cure well after the 28-day strength has been confirmed and may have considerable additional compressive strength. Additionally, it is common to discover that conditions in the field do not perfectly match the conditions depicted on the available design drawings. Due to these facts, a Material Testing and Condition Assessment Program ("MTCAP") in accordance with ASCE/SEI 41 will be developed in order to confirm in-situ material properties and existing construction detailing. The extent of the MTCAP is defined by ASCE/SEI 41 based on the Performance Objective for the project and is typically subject to Plan Review to attain concurrence on the extent of testing.

- **Deliverable:** Structural Testing Plan

b. Site Visit

Site visits will be conducted along with City representatives and Accu-Test to facilitate preparation of a detailed bid for the testing and laboratory work. Sampling locations will be confirmed along with testing schedule (confirm if off-hours/overnight work will be required).

- **Deliverable:** Fee Proposal from Accu-Test

c. Execute Material Testing Program

Upon NTP for testing contract, Accu-Test will complete core extraction and compressive strength laboratory testing.

d. Geotechnical Investigation & Seismic Hazard Analysis

Based on the project Performance Objective and preliminary seismic evaluation findings, a geotechnical scope of work will be developed in consultation with the City. At this time, it is anticipated that Geotechnical work will consist of limited confirmatory borings, shear wave velocity profiling for site classification, and site-specific ground motion hazard assessment. Further scope may be added at a later date, pending the findings of the evaluation and feasibility study.

- **Deliverables:** Geotechnical Scope of Work (by MHP), Fee Proposal from ENGEO, Geotechnical Investigation Report from ENGEO

e. Complete Structural Analysis and Evaluation, Prepare Conceptual Repair and Retrofit Drawings, Prepare Evaluation Report & Cost Estimate

A Tier 3 comprehensive seismic evaluation will be completed using the linear analysis provisions of ASCE/SEI 41-17 to establish current anticipated seismic performance of the existing building. Where required to meet the selected project Performance Objective, conceptual plans for strengthening will be provided. A cost estimate will be prepared based on the conceptual strengthening plans. The findings and basis for the recommended strengthening approach will be documented in an engineering report. Draft documents will be provided to the City for review and comment. Final documents will be issued once City comments have been incorporated.

- **Deliverables:** Conceptual Strengthening Plans, Cost Estimate, and Engineering Report

Phase 2: Feasibility of Second Story Addition
The project team will work with the City to refine and develop the City's vision for the future of the library and addition, including infrastructure, remodeling and modernization needs. Conceptual plans will be developed and cost estimates will be completed. Phase 2 scope of services is subject to further evaluation in consultation with the City prior to finalizing. It is anticipated that the City and project team will have consistent communication via virtual and in-person meetings during this phase, eliminating the need for numerous intermediate deliverables.

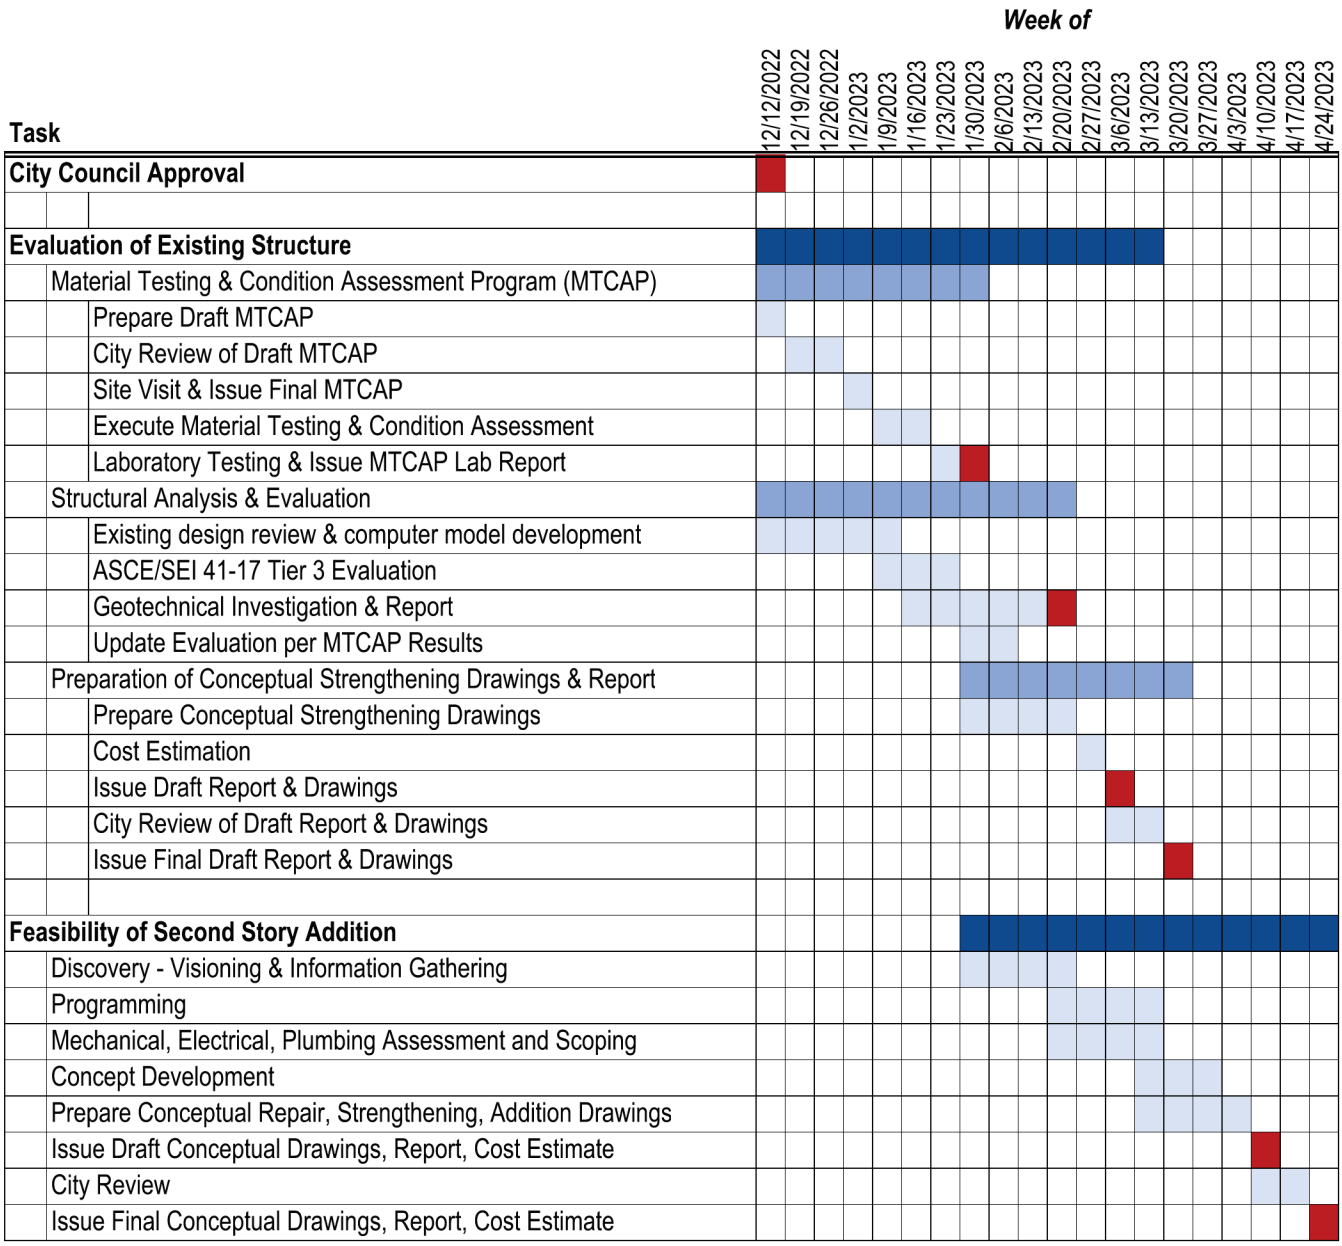
a. **Discovery – Visioning, Information Gathering, Programming**
The Project Architect will collaborate with the City to understand the existing conditions, and the needs and goals of the City for the existing library and second story addition. Existing space utilization mapping, shelving footprint mapping, and Building Code Assessment will be completed. Review library findings, reports, and recommendations made to date. Establish programming needs.

b. **Structural Evaluation of Existing Structure and Second Story Addition**
A Tier 3 comprehensive seismic evaluation will be completed using the linear analysis provisions of ASCE/SEI 41-17 for the retrofit structure with second story addition. Material properties and geotechnical and seismic hazard findings from Phase 1 will be utilized.

c. **Mechanical, Electrical, and Plumbing systems Assessment and Scoping**
Infrastructure and systems upgrade needs for both existing library and addition will be defined.

d. **Prepare Conceptual Repair, Strengthening, and Addition Drawings, Final Report & Cost Estimate**
Based on the results of items "a" through "c", conceptual Architectural, Structural, and MEP drawings will be developed as appropriate. A cost estimate will be prepared based on the conceptual plans. The findings and basis for the recommended approach will be documented in a project report. Draft documents will be provided to the City for review and comment. Final documents will be issued once City comments have been incorporated.
    - **Deliverables:** Conceptual Strengthening Plans, Cost Estimate, and Engineering Report

5. Schedule



The Project Team is available to commence the project immediately upon approval by the City Council and notice to proceed (NTP). A detailed draft project workplan and schedule is provided below for both the Evaluation of Existing Structure scope and the Feasibility of Second Story Addition Scope. The overall schedule proposes completion of both Scopes in April of 2023, assuming a December 13, 2022 NTP date. This proposed schedule is provided as a draft, subject to review and acceptance by the City. Some portions of the schedule can be shortened or modified as desired to fit the City's needs. Project dates are listed on a weekly basis, with Monday's date listed.

The draft schedule proposes 14 weeks for the Evaluation of the Existing Structure Scope, including site visit, Material Testing and Condition Assessment Program ("MTCAP", completed after hours), structural evaluation, reporting, retrofit concept drawings, cost estimation, and City review periods at designated milestones. This phase will predominantly involve Structural, Testing, Geotechnical, and Cost Estimation consultants.

The draft schedule proposes 13 weeks for the Feasibility of Second Story Addition Scope. This scope requires the full services of an Architect to understand and develop the City's goals, assess current building conditions, desired improvements, programming, accessibility, and space planning needs. The schedule also considers assessment and consultation to be provided by Mechanical, Electrical, and Plumbing consultant to assess the City's needs for new systems within the existing Library in support of a potential added story.

The Feasibility of Second Story Addition Scope overlaps somewhat with the Evaluation of Existing Structure Scope. This is based on the expectation that the structural needs for the strengthening of the existing library will be well-understood toward the end of the Evaluation phase, allowing for knowledgeable discussion of the potential options for the Second Story Addition.

DRAFT PROJECT WORKPLAN AND SCHEDULE

Library Planners & Designers

pfeiffer — A PERKINS EASTMAN STUDIO

Pfeiffer, a Perkins Eastman Studio, is an architectural studio offering architecture, interior design, planning and programming services to create buildings and environments that strengthen community of learners through inclusive and equitable learning experiences.

Pfeiffer's planners and designers are among the most experienced of those focused on academic libraries in practice in the U.S. today. Led by Gili Meerovitch, this practice has experience in strategic facilities planning for a broad spectrum of libraries for public and private institutions across North America.

Our experience with an array of higher education institutions such as the *University at Buffalo*, *UCLA*, *Yale*, *University of Washington*, *University of Oklahoma*, *Illinois State University* and *Georgia State University*, informs our understanding of advanced research, learning support, academic integration, and collection management initiatives that universities are undertaking, along with their associated service and space implications.

Our active involvement with ALA/Core and ACRL, including facilities committee leadership, and continual participation in industry conferences, keeps us in touch with library colleagues, abreast of the challenges libraries are facing and solutions that may have broader applicability.

Our Services

Our proven design process is characterized by a collaborative approach with our clients and consultants, based on experience and driven by exploration.

We offer a comprehensive set of services to take a project from a client's need to a built reality:

- Visioning
- Programming
- Feasibility Studies & Cost Analysis
- Strategic Master Planning
- Implementation Planning
- Test-fits
- Architectural & Interior design
- Space Planning
- Historic Renovation & Preservation
- Adaptive Reuse
- Construction Administration
- Furniture, Furnishings and Equipment (FF&E)
- Art & Signage Selection & Installation Support

FIRM PROFILE
P2S INC.

Designing a better future, every day.

P2S Inc. has brought forward-thinking, sustainable engineering solutions to California and beyond for over 31 years. We take client dreams and make them reality with inventive, sustainable solutions fueled by the desire to make the future a better place. We believe innovative, responsible design is more than cost savings and efficiency, it's the promise of a brighter, greener future that begins today.

ENGEO
Expect Excellence

EARTHQUAKE ENGINEERING

Founded in 1971, ENGEO has helped companies and public agencies manage their project development risk, drive down construction costs, and improve schedules. ENGEO is an employee-owned firm of approximately 350 geotechnical and civil engineers, geologists, hydrologists, water resources engineers and other specialists. The company serves a diverse range of public and private clients on very complex projects across the world.

Design and retrofit of buildings in the urban cores of seismically vulnerable regions present a number of unique seismic, geotechnical, geologic, and constructability challenges. The engineers and semiologists at ENGEO developed precise methodologies for performing seismic hazard and site-response analyses for new structures and existing buildings. These approaches allow us to provide optimized earthquake engineering, typically resulting in much more efficient superstructure designs in seismically active urban environments.

ENGEO provides earthquake engineering services, including ergodic and non-ergodic seismic-hazard analysis, site-response analysis, ground-motion studies, and soil-structure interaction evaluation to support performance-based design of high-rise buildings.

ACCU-TEST STRUCTURAL LABORATORIES, INC.
TESTING • INSPECTION • ENGINEERS • RESEARCH Tel: 818.591.3555
23915 Ventura Boulevard • Calabasas, California 91302 Admin Fax: 818.591.3557

CURRICULUM VITAE OF: SATINDER S. SETHEE, Ph.D.
SSethee@AccuTestSL.com

POSITION: Principal Testing Engineer

EDUCATION: Ph.D. Structural Engineering, University of Toronto 1974
M.S. Structural Engineering, University of Toronto 1968

PROFESSIONAL AFFILIATIONS

Member Special Committee: ASTM C15.04.06 "Nondestructive Structural Evaluation of Masonry" Task Group
Structural Engineers Association of Southern California
American Standards Testing and Materials (ASTM)
American Society of Civil Engineers (ASCE)
American Concrete Institute (ACI)
Association of Professional Engineers of B.C. Canada 1975
Association of Professional Engineers of Ontario, Canada 1969
Member of Technical Paper Selection Committee for "Conference of Nondestructive Evaluation of Civil Structures and Materials," May 1992.

BACKGROUND

45-years' experience in the field of Civil/Structural Engineering and Construction. For the last 30 years actively involved in structural testing, investigations, inspections, and building construction related operations for Commercial, Industrial, and Historical buildings. Prior 15 years devoted to structural design, construction project engineer, application of computer programs for structural analysis, teaching, and research.

PROFESSIONAL EXPERIENCE

Principal Testing Engineer; Accu–Test Structural Laboratories, Inc., L.A. (1987 – present)

Responsible for the management and operation of the independent testing laboratory. Supervise the work of staff engineers, construction inspectors, and testing technicians. The company provides laboratory testing, on–site testing and investigations, and construction inspection services. Primary activities relate to testing of structural elements and construction materials, such as concrete, masonry, steel, welds, tiles, and composites.

Define and implement standard testing procedures in accordance with ASTM, UBC, AWS, LA Building Code, and given engineering specifications. Direct testing operations, data analysis, computations, and comparison of test results to required standards. Instruct and train engineers, inspectors, and testing technicians to gain proficiency in their respective roles.

Formulated and supervised specialized testing programs for over 30 historical buildings; directed investigative testing for over 200 significant buildings; supervised inspection and testing services for over 50 construction projects. In connection with the seismic retrofit projects, have directed testing of numerous masonry, concrete, and steel structures. Authored over 70 important technical reports.

Direct failure analyses studies and forensic examinations. Provide research and consulting services to investigate excessive distress situations in buildings, structural elements, and mechanical parts. Render expert testimony for legal cases.

CUMMING
Building Value Through Expertise

Firm Profile

Cumming Management Group, Inc. (Cumming) is a privately held corporation founded in California in 1996. Cumming is a leader in providing project consulting services to the A/E/C industry, including cost and project management, planning and scheduling, and construction dispute resolution. Now in its 26th year of business, Cumming has more than 1,400 team members within 52 office locations, which provide services to clients around the world. Throughout its history, the company has remained focused on one goal: to assist its clients in managing the critical issues of time and cost from conception through closeout. With an understanding of program goals and expectations, a suite of solution-oriented services is provided to meet the project needs.

For this project, Cumming will serve as cost consultant. Cumming's cost group is one of the largest providers of cost estimating and management services in the U.S., including a skilled team of in-house MEP cost specialists. Cumming works on more than 400 estimates each month, delivering unparalleled experience in this discipline. Core cost management services include budgeting, milestone cost estimating, value analysis, cost validation, peer review, and change order evaluation.

Project Experience – Municipal

Cumming's project experience includes the completion of assignments in support of architects, engineers, owners, and others. Specifically, Cumming has completed **more than 2,100 projects for city- and county-operated facilities**. These projects have involved parks, public spaces, city halls, civic centers, police/fire facilities, libraries, offices, community centers, animal shelters, transit centers, operations and maintenance facilities, and public works, among others.

MATERIAL TESTING (Accu-Test) – Quote	12,000	
GEOTECHNICAL (ENGEO) – Allowance	12,000	
SUBTOTAL OTHER SERVICES (ALLOWANCE / FIXED QUOTE)		**40,000**

TOTAL PROPOSED FEE	**215,941**

General Exclusions

* Detailed Project Program and Room Data Sheets
* Library Collection Analysis
* Tours/Site visits to other libraries
* Extensive Code Analysis
* Hazardous Materials Evaluation & Testing
* Sustainability Checklist
* Technical specifications
* Fundraising Materials

Exclusions (MEP)

* Electrical, plumbing, technology, & fire protection upgrade scope/costs (other than work required to accommodate structural work) will be covered by cost estimator with allowance.
* Electrical service for library and site water, sewer, and storm drain utilities are assumed adequate to serve the proposed expansion. In the event existing service(s) is(are) near capacity, an allowance(s) can be made by cost estimator for service upgrade(s).
* Schematic design & study for exterior site elements beyond the second floor expansion scope are excluded.

NOTE

The Fee Proposal is "not-to-exceed" and includes all direct and indirect costs including labor, employee benefits, mileage, equipment, materials, insurance, and reproduction costs

DocuSign Envelope ID: 2370403C-34DA-4BCC-897E-F18C7F131442

AGREEMENT FOR CONTRACT SERVICES
BETWEEN THE CITY OF GLENDORA AND
MYERS HOUGHTON & PARTNERS, INC.

THIS AGREEMENT FOR CONTRACT SERVICES (herein "Agreement") is made and entered into this _____ day of _____ by and between the CITY OF GLENDORA, a California municipal corporation ("City") and MYERS HOUGHTON & PARTNERS, INC., a California Corporation ("Consultant"). City and Consultant may be referred to, individually or collectively, as "Party" or "Parties."

RECITALS

A. City has sought, by issuance of a Request for Proposals or Invitation for Bids, the performance of the services defined and described particularly in Article 1 of this Agreement.

B. Consultant, following submission of a proposal or bid for the performance of the services defined and described particularly in Article 1 of this Agreement, was selected by the City to perform those services.

C. Pursuant to the City of Glendora's Municipal Code, City has authority to enter into and execute this Agreement.

D. The Parties desire to formalize the selection of Consultant for performance of those services defined and described particularly in Article 1 of this Agreement and desire that the terms of that performance be as particularly defined and described herein.

OPERATIVE PROVISIONS

NOW, THEREFORE, in consideration of the mutual promises and covenants made by the Parties and contained herein and other consideration, the value and adequacy of which are hereby acknowledged, the parties agree as follows:

ARTICLE 1. SERVICES OF CONSULTANT

1.1 Scope of Services.

In compliance with all terms and conditions of this Agreement, the Consultant shall provide those services specified in the "Scope of Services" attached hereto as Exhibit "A" and incorporated herein by this reference, which may be referred to herein as the "services" or "work" hereunder. As a material inducement to the City entering into this Agreement, Consultant represents and warrants that it has the qualifications, experience, and facilities necessary to properly perform the services required under this Agreement in a thorough, competent, and professional manner, and is experienced in performing the work and services contemplated herein. Consultant shall at all times faithfully, competently and to the best of its ability, experience and talent, perform all services described herein. Consultant covenants that it shall follow professional standards in performing the work and services required hereunder and that all materials will be both of good quality as well as fit for the purpose intended. For purposes of this Agreement, the phrase "professional standards" shall mean those standards of practice customarily exercised by reputable engineers performing similar work under similar circumstances.

DocuSign Envelope ID: 2370403C-34DA-4BCC-897E-F18C7F131442

1.2 Consultant's Proposal.

The Scope of Service shall include the Consultant's scope of work or bid which shall be incorporated herein by this reference as though fully set forth herein. In the event of any inconsistency between the terms of such proposal and this Agreement, the terms of this Agreement shall govern.

1.3 Compliance with Law.

Consultant shall keep itself informed concerning, and shall render all services hereunder in accordance with, all ordinances, resolutions, statutes, rules, and regulations of the City and any Federal, State or local governmental entity having jurisdiction in effect at the time service is rendered.

1.4 California Labor Law.

If the Scope of Services includes any "public work" or "maintenance work," as those terms are defined in California Labor Code section 1720 *et seq.* and California Code of Regulations, Title 8, Section 16000 *et seq.*, and if the total compensation is $1,000 or more, Consultant shall pay prevailing wages for such work and comply with the requirements in California Labor Code section 1770 *et seq.* and 1810 *et seq*., and all other applicable laws, including the following requirements:

(a) Public Work. The Parties acknowledge that some or all of the work to be performed under this Agreement is a "public work" as defined in Labor Code Section 1720 and that this Agreement is therefore subject to the requirements of Division 2, Part 7, Chapter 1 (commencing with Section 1720) of the California Labor Code relating to public works contracts and the rules and regulations established by the Department of Industrial Relations ("DIR") implementing such statutes. The work performed under this Agreement is subject to compliance monitoring and enforcement by the DIR. Consultant shall post job site notices, as prescribed by regulation.

(b) Prevailing Wages. Consultant shall pay prevailing wages to the extent required by Labor Code Section 1771. Pursuant to Labor Code Section 1773.2, copies of the prevailing rate of per diem wages are on file at City Hall and will be made available to any interested party on request. By initiating any work under this Agreement, Consultant acknowledges receipt of a copy of the Department of Industrial Relations (DIR) determination of the prevailing rate of per diem wages, and Consultant shall post a copy of the same at each job site where work is performed under this Agreement.

(c) Penalty for Failure to Pay Prevailing Wages. Consultant shall comply with and be bound by the provisions of Labor Code Sections 1774 and 1775 concerning the payment of prevailing rates of wages to workers and the penalties for failure to pay prevailing wages. The Consultant shall, as a penalty to the City, forfeit two hundred dollars ($200) for each calendar day, or portion thereof, for each worker paid less than the prevailing rates as determined by the DIR for the work or craft in which the worker is employed for any public work done pursuant to this Agreement by Consultant or by any subcontractor.

(d) Payroll Records. Consultant shall comply with and be bound by the provisions of Labor Code Section 1776, which requires Consultant and each subconsultant to: keep accurate payroll records and verify such records in writing under penalty of perjury, as specified in Section 1776; certify and make such payroll records available for inspection as provided by Section 1776; and inform the City of the location of the records.

(e) Apprentices. Consultant shall comply with and be bound by the provisions of Labor Code Sections 1777.5, 1777.6, and 1777.7 and California Code of Regulations Title 8, Section 200 *et seq.* concerning the employment of apprentices on public works projects. Consultant shall be responsible for compliance with

DocuSign Envelope ID: 2370403C-34DA-4BCC-897E-F18C7F131442

these aforementioned Sections for all apprenticeable occupations. Prior to commencing work under this Agreement, Consultant shall provide City with a copy of the information submitted to any applicable apprenticeship program. Within sixty (60) days after concluding work pursuant to this Agreement, Consultant and each of its subconsultants shall submit to the City a verified statement of the journeyman and apprentice hours performed under this Agreement.

(f) Eight-Hour Work Day. Consultant acknowledges that eight (8) hours labor constitutes a legal day's work. Consultant shall comply with and be bound by Labor Code Section 1810.

(g) Penalties for Excess Hours. Consultant shall comply with and be bound by the provisions of Labor Code Section 1813 concerning penalties for workers who work excess hours. The Consultant shall, as a penalty to the City, forfeit twenty-five dollars ($25) for each worker employed in the performance of this Agreement by the Consultant or by any subcontractor for each calendar day during which such worker is required or permitted to work more than eight (8) hours in any one calendar day and forty (40) hours in any one calendar week in violation of the provisions of Division 2, Part 7, Chapter 1, Article 3 of the Labor Code. Pursuant to Labor Code section 1815, work performed by employees of Consultant in excess of eight (8) hours per day, and forty (40) hours during any one week shall be permitted upon public work upon compensation for all hours worked in excess of 8 hours per day at not less than one and one-half (1½) times the basic rate of pay.

(h) Workers' Compensation. California Labor Code Sections 1860 and 3700 provide that every employer will be required to secure the payment of compensation to its employees if it has employees. In accordance with the provisions of California Labor Code Section 1861, Consultant certifies as follows:

> "I am aware of the provisions of Section 3700 of the Labor Code which require every employer to be insured against liability for workers' compensation or to undertake self-insurance in accordance with the provisions of that code, and I will comply with such provisions before commencing the performance of the work of this contract."

Consultant's Authorized Initials _____DS lk_____
Lance Kenyon, President

(i) Consultant's Responsibility for Subcontractors. For every subcontractor who will perform work under this Agreement, Consultant shall be responsible for such subcontractor's compliance with Division 2, Part 7, Chapter 1 (commencing with Section 1720) of the California Labor Code, and shall make such compliance a requirement in any contract with any subcontractor for work under this Agreement. Consultant shall be required to take all actions necessary to enforce such contractual provisions and ensure subcontractor's compliance, including without limitation, conducting a review of the certified payroll records of the subcontractor on a periodic basis or upon becoming aware of the failure of the subcontractor to pay his or her workers the specified prevailing rate of wages. Consultant shall diligently take corrective action to halt or rectify any such failure by any subcontractor.

1.5 Licenses, Permits, Fees and Assessments.

Consultant shall obtain at its sole cost and expense such licenses, permits and approvals as may be required by law for the performance of the services required by this Agreement. Consultant shall have the sole obligation to pay for any fees, assessments and taxes, plus applicable penalties and interest, which may be imposed by law and arise from or are necessary for the Consultant's performance of the services required by this Agreement, and

DocuSign Envelope ID: 2370403C-34DA-4BCC-897E-F18C7F131442

shall indemnify, defend and hold harmless City, its officers, employees or agents of City, against any such fees, assessments, taxes, penalties or interest levied, assessed or imposed against City hereunder.

1.6 Familiarity with Work.

By executing this Agreement, Consultant warrants that Consultant (i) has thoroughly investigated and considered the scope of services to be performed, (ii) has carefully considered how the services should be performed, and (iii) fully understands the facilities, difficulties and restrictions attending performance of the services under this Agreement. If the services involve work upon any site, Consultant warrants that Consultant has or will investigate the site and is or will be fully acquainted with the conditions there existing, prior to commencement of services hereunder. Should the Consultant discover any latent or unknown conditions, which will materially affect the performance of the services hereunder, Consultant shall immediately inform the City of such fact and shall not proceed except at Consultant's risk until written instructions are received from the Contract Officer.

1.7 Care of Work.

The Consultant shall adopt reasonable methods during the life of the Agreement to furnish continuous protection to the work, and the equipment, materials, papers, documents, plans, studies and/or other components thereof to prevent losses or damages, and shall be responsible for all such damages, to persons or property, until acceptance of the work by City, except such losses or damages as may be caused by City's own negligence.

1.8 Further Responsibilities of Parties.

Both parties agree to use reasonable care and diligence to perform their respective obligations under this Agreement. Both parties agree to act in good faith to execute all instruments, prepare all documents and take all actions as may be reasonably necessary to carry out the purposes of this Agreement. Unless hereafter specified, neither party shall be responsible for the service of the other.

1.9 Additional Services.

City shall have the right at any time during the performance of the services, without invalidating this Agreement, to order extra work beyond that specified in the Scope of Services or make changes by altering, adding to or deducting from said work. No such extra work may be undertaken unless a written order is first given by the Contract Officer to the Consultant, incorporating therein any adjustment in (i) the Contract Sum for the actual costs of the extra work, and/or (ii) the time to perform this Agreement, which said adjustments are subject to the written approval of the Consultant. Any increase in compensation of up to ten percent (10%) of the Contract Sum or $50,000, whichever is less; or, in the time to perform of up to one hundred eighty (180) days, may be approved by the Contract Officer. Any greater increases, taken either separately or cumulatively, must be approved by the City Council. It is expressly understood by Consultant that the provisions of this Section shall not apply to services specifically set forth in the Scope of Services. Consultant hereby acknowledges that it accepts the risk that the services to be provided pursuant to the Scope of Services may be more costly or time consuming than Consultant anticipates and that Consultant shall not be entitled to additional compensation therefor. City may in its sole and absolute discretion have similar work done by other Consultants. No claims for an increase in the Contract Sum or time for performance shall be valid unless the procedures established in this Section are followed.

1.10 Special Requirements.

Additional terms and conditions of this Agreement, if any, which are made a part hereof are set forth in the "Special Requirements" attached hereto as Exhibit "B" and incorporated herein by this reference. In the event

DocuSign Envelope ID: 2370403C-34DA-4BCC-897E-F18C7F131442

of a conflict between the provisions of Exhibit "B" and any other provisions of this Agreement, the provisions of Exhibit "B" shall govern.

ARTICLE 2. COMPENSATION AND METHOD OF PAYMENT.

2.1 Contract Sum.

Subject to any limitations set forth in this Agreement, City agrees to pay Consultant the amounts specified in the "Schedule of Compensation" attached hereto as Exhibit "C" and incorporated herein by this reference. The total compensation, including reimbursement for actual expenses, shall not exceed **$215,941.00 (Two-Hundred Fifteen Thousand, Nine-Hundred Forty-One Dollars)** (the "Contract Sum"), unless additional compensation is approved pursuant to Section 1.9.

2.2 Method of Compensation.

The method of compensation may include: (i) a lump sum payment upon completion; (ii) payment in accordance with specified tasks or the percentage of completion of the services, less contract retention; (iii) payment for time and materials based upon the Consultant's rates as specified in the Schedule of Compensation, provided that (a) time estimates are provided for the performance of sub tasks, (b) contract retention is maintained, and (c) the Contract Sum is not exceeded; or (iv) such other methods as may be specified in the Schedule of Compensation.

2.3 Reimbursable Expenses.

Compensation may include reimbursement for actual and necessary expenditures for reproduction costs, telephone expenses, and travel expenses approved by the Contract Officer in advance, or actual subcontractor expenses of an approved subcontractor pursuant to Section 4.5, and only if specified in the Schedule of Compensation. The Contract Sum shall include the attendance of Consultant at all project meetings reasonably deemed necessary by the City. Coordination of the performance of the work with City is a critical component of the services. If Consultant is required to attend additional meetings to facilitate such coordination, Consultant shall not be entitled to any additional compensation for attending said meetings.

2.4 Invoices.

Each month Consultant shall furnish to City an original invoice for all work performed and expenses incurred during the preceding month in a form approved by City's Director of Finance. By submitting an invoice for payment under this Agreement, Consultant is certifying compliance with all provisions of the Agreement. The invoice shall contain all information specified in Exhibit "C", and shall detail charges for all necessary and actual expenses by the following categories: labor (by sub-category), travel, materials, equipment, supplies, and sub-contractor contracts. Sub-contractor charges shall also be detailed by such categories. Consultant shall not invoice City for any duplicate services performed by more than one person.

City shall independently review each invoice submitted by the Consultant to determine whether the work performed and expenses incurred are in compliance with the provisions of this Agreement. Except as to any charges for work performed or expenses incurred by Consultant which are disputed by City, or as provided in Section 7.3, City will use its best efforts to cause Consultant to be paid within forty-five (45) days of receipt of Consultant's correct and undisputed invoice; however, Consultant acknowledges and agrees that due to City warrant run procedures, the City cannot guarantee that payment will occur within this time period. In the event any charges or expenses are disputed by City, the original invoice shall be returned by City to Consultant for

DocuSign Envelope ID: 2370403C-34DA-4BCC-897E-F18C7F131442

correction and resubmission. Review and payment by City for any invoice provided by the Consultant shall not constitute a waiver of any rights or remedies provided herein or any applicable law.

2.5 Waiver.

Payment to Consultant for work performed pursuant to this Agreement shall not be deemed to waive any defects in work performed by Consultant.

ARTICLE 3. PERFORMANCE SCHEDULE

3.1 Time of Essence.

Time is of the essence in the performance of this Agreement.

3.2 Schedule of Performance.

Consultant shall commence the services pursuant to this Agreement upon receipt of a written notice to proceed and shall perform all services within the time period(s) established in the "Schedule of Performance" attached hereto as Exhibit "D" and incorporated herein by this reference. When requested by the Consultant, extensions to the time period(s) specified in the Schedule of Performance may be approved in writing by the Contract Officer but not exceeding one hundred eighty (180) days cumulatively.

3.3 Force Majeure.

The time period(s) specified in the Schedule of Performance for performance of the services rendered pursuant to this Agreement shall be extended because of any delays due to unforeseeable causes beyond the control and without the fault or negligence of the Consultant, including, but not restricted to, acts of God or of the public enemy, unusually severe weather, fires, earthquakes, floods, epidemics, quarantine restrictions, riots, strikes, freight embargoes, wars, litigation, and/or acts of any governmental agency, including the City, if the Consultant shall within ten (10) days of the commencement of such delay notify the Contract Officer in writing of the causes of the delay. The Contract Officer shall ascertain the facts and the extent of delay, and extend the time for performing the services for the period of the enforced delay when and if in the judgment of the Contract Officer such delay is justified. The Contract Officer's determination shall be final and conclusive upon the parties to this Agreement. In no event shall Consultant be entitled to recover damages against the City for any delay in the performance of this Agreement, however caused, Consultant's sole remedy being extension of the Agreement pursuant to this Section.

3.4 Term.

Unless earlier terminated in accordance with Article 7 of this Agreement, this Agreement shall continue in full force and effect until completion of the services but not exceeding one (1) year from the date hereof, except as otherwise provided in the Schedule of Performance (Exhibit "D").

DocuSign Envelope ID: 2370403C-34DA-4BCC-897E-F18C7F131442

ARTICLE 4. COORDINATION OF WORK

4.1 Representatives and Personnel of Consultant.

The following principals of Consultant ("Principals") are hereby designated as being the principals and representatives of Consultant authorized to act in its behalf with respect to the work specified herein and make all decisions in connection therewith:

Lance Kenyon, President

Ken O'Dell, Secretary

It is expressly understood that the experience, knowledge, capability and reputation of the foregoing principals were a substantial inducement for City to enter into this Agreement. Therefore, the foregoing principals shall be responsible during the term of this Agreement for directing all activities of Consultant and devoting sufficient time to personally supervise the services hereunder. All personnel of Consultant, and any authorized agents, shall at all times be under the exclusive direction and control of the Principals. For purposes of this Agreement, the foregoing Principals may not be replaced nor may their responsibilities be substantially reduced by Consultant without the express written approval of City. Additionally, Consultant shall utilize only competent personnel to perform services pursuant to this Agreement. Consultant shall make every reasonable effort to maintain the stability and continuity of Consultant's staff and subcontractors, if any, assigned to perform the services required under this Agreement. Consultant shall notify City of any changes in Consultant's staff and subcontractors, if any, assigned to perform the services required under this Agreement, prior to and during any such performance.

4.2 Status of Consultant.

Consultant shall have no authority to bind City in any manner, or to incur any obligation, debt or liability of any kind on behalf of or against City, whether by contract or otherwise, unless such authority is expressly conferred under this Agreement or is otherwise expressly conferred in writing by City. Consultant shall not at any time or in any manner represent that Consultant or any of Consultant's officers, employees, or agents are in any manner officials, officers, employees or agents of City. Neither Consultant, nor any of Consultant's officers, employees or agents, shall obtain any rights to retirement, health care or any other benefits which may otherwise accrue to City's employees. Consultant expressly waives any claim Consultant may have to any such rights.

4.3 Contract Officer.

The Contract Officer shall be **Associate Civil Engineer** or such person as may be designated by the City Manager. It shall be the Consultant's responsibility to assure that the Contract Officer is kept informed of the progress of the performance of the services and the Consultant shall refer any decisions which must be made by City to the Contract Officer. Unless otherwise specified herein, any approval of City required hereunder shall mean the approval of the Contract Officer. The Contract Officer shall have authority, if specified in writing by the City Manager, to sign all documents on behalf of the City required hereunder to carry out the terms of this Agreement.

4.4 Independent Consultant.

Neither the City nor any of its employees shall have any control over the manner, mode or means by which Consultant, its agents or employees, perform the services required herein, except as otherwise set forth herein.

DocuSign Envelope ID: 2370403C-34DA-4BCC-897E-F18C7F131442

City shall have no voice in the selection, discharge, supervision or control of Consultant's employees, servants, representatives or agents, or in fixing their number, compensation or hours of service. Consultant shall perform all services required herein as an independent contractor of City and shall remain at all times as to City a wholly independent contractor with only such obligations as are consistent with that role. Consultant shall not at any time or in any manner represent that it or any of its agents or employees are agents or employees of City. City shall not in any way or for any purpose become or be deemed to be a partner of Consultant in its business or otherwise or a joint venturer or a member of any joint enterprise with Consultant.

4.5 Prohibition Against Subcontracting or Assignment.

The experience, knowledge, capability and reputation of Consultant, its principals and employees were a substantial inducement for the City to enter into this Agreement. Therefore, Consultant shall not contract with any other entity to perform in whole or in part the services required hereunder without the express written approval of the City. In addition, neither this Agreement nor any interest herein may be transferred, assigned, conveyed, hypothecated or encumbered voluntarily or by operation of law, whether for the benefit of creditors or otherwise, without the prior written approval of City. Transfers restricted hereunder shall include the transfer to any person or group of persons acting in concert of more than twenty five percent (25%) of the present ownership and/or control of Consultant, taking all transfers into account on a cumulative basis. In the event of any such unapproved transfer, including any bankruptcy proceeding, this Agreement shall be void. No approved transfer shall release the Consultant or any surety of Consultant of any liability hereunder without the express consent of City.

ARTICLE 5. INSURANCE AND INDEMNIFICATION

5.1 Insurance Coverages.

Without limiting Consultant's indemnification of City, and prior to commencement of any services under this Agreement, Consultant shall obtain, provide and maintain at its own expense during the term of this Agreement, policies of insurance of the type and amounts described below and in a form satisfactory to City.

(a) General liability insurance. Consultant shall maintain commercial general liability insurance with coverage at least as broad as Insurance Services Office form CG 00 01, in an amount not less than $1,000,000 per occurrence, $2,000,000 general aggregate, for bodily injury, personal injury, and property damage. The policy must include contractual liability that has not been amended. Any endorsement restricting standard ISO "insured contract" language will not be accepted.

(b) Automobile liability insurance. Consultant shall maintain automobile insurance at least as broad as Insurance Services Office form CA 00 01 covering bodily injury and property damage for all activities of the Consultant arising out of or in connection with Services to be performed under this Agreement, including coverage for any owned, hired, non-owned or rented vehicles, in an amount not less than $1,000,000 combined single limit for each accident.

(c) Professional liability (errors & omissions) insurance. Consultant shall maintain professional liability insurance that covers the Services to be performed in connection with this Agreement, in the minimum amount of $1,000,000 per claim and in the aggregate. Any policy inception date, continuity date, or retroactive date must be before the effective date of this Agreement and Consultant agrees to maintain continuous coverage through a period no less than three (3) years after completion of the services required by this Agreement.

(d) Workers' compensation insurance. Consultant shall maintain Workers' Compensation Insurance (Statutory Limits) and Employer's Liability Insurance (with limits of at least $1,000,000).

DocuSign Envelope ID: 2370403C-34DA-4BCC-897E-F18C7F131442

(e) Subcontractors. Consultant shall include all subcontractors as insureds under its policies or shall furnish separate certificates and certified endorsements for each subcontractor. All coverages for subcontractors shall include all of the requirements stated herein.

(f) Additional Insurance. Policies of such other insurance, as may be required in the Special Requirements in Exhibit "B".

5.2 General Insurance Requirements.

(a) Proof of insurance. Consultant shall provide certificates of insurance to City as evidence of the insurance coverage required herein, along with a waiver of subrogation endorsement for workers' compensation. Insurance certificates and endorsements must be approved by City's Risk Manager prior to commencement of performance. Current certification of insurance shall be kept on file with City at all times during the term of this Agreement. City reserves the right to require complete, certified copies of all required insurance policies, at any time.

(b) Duration of coverage. Consultant shall procure and maintain for the duration of this Agreement insurance against claims for injuries to persons or damages to property, which may arise from or in connection with the performance of the Services hereunder by Consultant, its agents, representatives, employees or subconsultants.

(c) Primary/noncontributing. Coverage provided by Consultant shall be primary and any insurance or self-insurance procured or maintained by City shall not be required to contribute with it. The limits of insurance required herein may be satisfied by a combination of primary and umbrella or excess insurance. Any umbrella or excess insurance shall contain or be endorsed to contain a provision that such coverage shall also apply on a primary and non-contributory basis for the benefit of City before the City's own insurance or self-insurance shall be called upon to protect it as a named insured.

(d) City's rights of enforcement. In the event any policy of insurance required under this Agreement does not comply with these specifications or is canceled and not replaced, City has the right but not the duty to obtain the insurance it deems necessary and any premium paid by City will be promptly reimbursed by Consultant or City will withhold amounts sufficient to pay premium from Consultant payments. In the alternative, City may cancel this Agreement.

(e) Acceptable insurers. All insurance policies shall be issued by an insurance company currently authorized by the Insurance Commissioner to transact business of insurance or that is on the List of Approved Surplus Line Insurers in the State of California, with an assigned policyholders' Rating of A- (or higher) and Financial Size Category Class VI (or larger) in accordance with the latest edition of Best's Key Rating Guide, unless otherwise approved by the City's Risk Manager.

(f) Waiver of subrogation. All insurance coverage maintained or procured pursuant to this agreement shall be endorsed to waive subrogation against City, its elected or appointed officers, agents, officials, employees and volunteers or shall specifically allow Consultant or others providing insurance evidence in compliance with these specifications to waive their right of recovery prior to a loss. Consultant hereby waives its own right of recovery against City, and shall require similar written express waivers and insurance clauses from each of its subconsultants.

(g) Enforcement of contract provisions (non-estoppel). Consultant acknowledges and agrees that any actual or alleged failure on the part of the City to inform Consultant of non-compliance with any requirement imposes no additional obligations on the City nor does it waive any rights hereunder.

DocuSign Envelope ID: 2370403C-34DA-4BCC-897E-F18C7F131442

(h) Requirements not limiting. Requirements of specific coverage features or limits contained in this section are not intended as a limitation on coverage, limits or other requirements, or a waiver of any coverage normally provided by any insurance. Specific reference to a given coverage feature is for purposes of clarification only as it pertains to a given issue and is not intended by any party or insured to be all inclusive, or to the exclusion of other coverage, or a waiver of any type. If the Consultant maintains higher limits than the minimums shown above, the City requires and shall be entitled to coverage for the higher limits maintained by the Consultant. Any available insurance proceeds in excess of the specified minimum limits of insurance and coverage shall be available to the City.

(i) Notice of cancellation. Consultant agrees to oblige its insurance agent or broker and insurers to provide to City with a thirty (30) day notice of cancellation (except for nonpayment for which a ten (10) day notice is required) or nonrenewal of coverage for each required coverage.

(j) Additional insured status. General liability policies shall provide or be endorsed to provide that City and its officers, officials, employees, and agents, and volunteers shall be additional insureds under such policies. This provision shall also apply to any excess/umbrella liability policies.

(k) Prohibition of undisclosed coverage limitations. None of the coverages required herein will be in compliance with these requirements if they include any limiting endorsement of any kind that has not been first submitted to City and approved of in writing.

(l) Separation of insureds. A severability of interests provision must apply for all additional insureds ensuring that Consultant's insurance shall apply separately to each insured against whom claim is made or suit is brought, except with respect to the insurer's limits of liability. The policy(ies) shall not contain any cross-liability exclusions.

(m) Pass through clause. Consultant agrees to ensure that its subconsultants, subcontractors, and any other party involved with the project who is brought onto or involved in the project by Consultant, provide the same minimum insurance coverage and endorsements required of Consultant. Consultant agrees to monitor and review all such coverage and assumes all responsibility for ensuring that such coverage is provided in conformity with the requirements of this section. Consultant agrees that upon request, all agreements with consultants, subcontractors, and others engaged in the project will be submitted to City for review.

(n) Agency's right to revise specifications. The City reserves the right at any time during the term of the contract to change the amounts and types of insurance required by giving the Consultant ninety (90) days advance written notice of such change. If such change results in substantial additional cost to the Consultant, the City and Consultant may renegotiate Consultant's compensation.

(o) Self-insured retentions. Any self-insured retentions must be declared to and approved by City. City reserves the right to require that self-insured retentions be eliminated, lowered, or replaced by a deductible. Self-insurance will not be considered to comply with these specifications unless approved by City.

(p) Timely notice of claims. Consultant shall give City prompt and timely notice of claims made or suits instituted that arise out of or result from Consultant's performance under this Agreement, and that involve or may involve coverage under any of the required liability policies.

(q) Additional insurance. Consultant shall also procure and maintain, at its own cost and expense, any additional kinds of insurance, which in its own judgment may be necessary for its proper protection and prosecution of the work.

DocuSign Envelope ID: 2370403C-34DA-4BCC-897E-F18C7F131442

5.3 Indemnification.

To the full extent permitted by law, Consultant agrees to indemnify, defend and hold harmless the City, its officers, employees and agents ("Indemnified Parties") against, and will hold and save them and each of them harmless from, any and all actions, either judicial, administrative, arbitration or regulatory claims, damages to persons or property, losses, costs, penalties, obligations, errors, omissions or liabilities whether actual or threatened (herein "claims or liabilities") that may be asserted or claimed by any person, firm or entity arising out of or in connection with the negligent performance of the work, operations or activities provided herein of Consultant, its officers, employees, agents, subcontractors, or invitees, or any individual or entity for which Consultant is legally liable ("indemnitors"), or arising from Consultant's or indemnitors' reckless or willful misconduct, or arising from Consultant's or indemnitors' negligent performance of or failure to perform any term, provision, covenant or condition of this Agreement, and in connection therewith:

(a) Consultant will defend any action or actions filed in connection with any of said claims or liabilities and will pay all costs and expenses, including legal costs and attorneys' fees incurred in connection therewith;

(b) Consultant will promptly pay any judgment rendered against the City, its officers, agents or employees for any such claims or liabilities arising out of or in connection with the negligent performance of or failure to perform such work, operations or activities of Consultant hereunder; and Consultant agrees to save and hold the City, its officers, agents, and employees harmless therefrom;

(c) In the event the City, its officers, agents or employees is made a party to any action or proceeding filed or prosecuted against Consultant for such damages or other claims arising out of or in connection with the negligent performance of or failure to perform the work, operation or activities of Consultant hereunder, Consultant agrees to pay to the City, its officers, agents or employees, any and all costs and expenses incurred by the City, its officers, agents or employees in such action or proceeding, including but not limited to, legal costs and attorneys' fees.

Consultant shall incorporate similar indemnity agreements with its subcontractors and if it fails to do so Consultant shall be fully responsible to indemnify City hereunder therefore, and failure of City to monitor compliance with these provisions shall not be a waiver hereof. This indemnification includes claims or liabilities arising from any negligent or wrongful act, error or omission, or reckless or willful misconduct of Consultant in the performance of professional services hereunder. The provisions of this Section do not apply to claims or liabilities occurring as a result of City's sole negligence or willful acts or omissions, but, to the fullest extent permitted by law, shall apply to claims and liabilities resulting in part from City's negligence, except that design professionals' indemnity hereunder shall be limited to claims and liabilities arising out of the negligence, recklessness or willful misconduct of the design professional. The indemnity obligation shall be binding on successors and assigns of Consultant and shall survive termination of this Agreement.

ARTICLE 6. RECORDS, REPORTS, AND RELEASE OF INFORMATION

6.1 Records.

Consultant shall keep, and require subcontractors to keep, such ledgers, books of accounts, invoices, vouchers, canceled checks, reports, studies or other documents relating to the disbursements charged to City and services performed hereunder (the "books and records"), as shall be necessary to perform the services required by this Agreement and enable the Contract Officer to evaluate the performance of such services. Any and all such documents shall be maintained in accordance with generally accepted accounting principles and shall be complete and detailed. The Contract Officer shall have full and free access to such books and records at all times during

DocuSign Envelope ID: 2370403C-34DA-4BCC-897E-F18C7F131442

normal business hours of City, including the right to inspect, copy, audit and make records and transcripts from such records. Such records shall be maintained for a period of three (3) years following completion of the services hereunder, and the City shall have access to such records in the event any audit is required. In the event of dissolution of Consultant's business, custody of the books and records may be given to City, and access shall be provided by Consultant's successor in interest. Notwithstanding the above, the Consultant shall fully cooperate with the City in providing access to the books and records if a public records request is made and disclosure is required by law including but not limited to the California Public Records Act.

6.2 Reports.

Consultant shall periodically prepare and submit to the Contract Officer such reports concerning the performance of the services required by this Agreement as the Contract Officer shall require. Consultant hereby acknowledges that the City is greatly concerned about the cost of work and services to be performed pursuant to this Agreement. For this reason, Consultant agrees that if Consultant becomes aware of any facts, circumstances, techniques, or events that may or will materially increase or decrease the cost of the work or services contemplated herein or, if Consultant is providing design services, the cost of the project being designed, Consultant shall promptly notify the Contract Officer of said fact, circumstance, technique or event and the estimated increased or decreased cost related thereto and, if Consultant is providing design services, the estimated increased or decreased cost estimate for the project being designed.

6.3 Ownership of Documents.

All drawings, specifications, maps, designs, photographs, studies, surveys, data, notes, computer files, reports, records, documents and other materials (the "documents and materials") prepared by Consultant, its employees, subcontractors and agents in the performance of this Agreement shall be the property of City and shall be delivered to City upon request of the Contract Officer or upon the termination of this Agreement, and Consultant shall have no claim for further employment or additional compensation as a result of the exercise by City of its full rights of ownership use, reuse, or assignment of the documents and materials hereunder. Any use, reuse or assignment of such completed documents for other projects and/or use of uncompleted documents without specific written authorization by the Consultant will be at the City's sole risk and without liability to Consultant, and Consultant's guarantee and warranties shall not extend to such use, reuse or assignment. Consultant may retain copies of such documents for its own use. Consultant shall have the right to use the concepts embodied therein. All subcontractors shall provide for assignment to City of any documents or materials prepared by them, and in the event Consultant fails to secure such assignment, Consultant shall indemnify City for all damages resulting therefrom. Moreover, Consultant with respect to any documents and materials that may qualify as "works made for hire" as defined in 17 U.S.C. § 101, such documents and materials are hereby deemed "works made for hire" for the City.

6.4 Confidentiality and Release of Information.

(a) All information gained or work product produced by Consultant in performance of this Agreement shall be considered confidential, unless such information is in the public domain or already known to Consultant. Consultant shall not release or disclose any such information or work product to persons or entities other than City without prior written authorization from the Contract Officer.

(b) Consultant, its officers, employees, agents or subcontractors, shall not, without prior written authorization from the Contract Officer or unless requested by the City Attorney, voluntarily provide documents, declarations, letters of support, testimony at depositions, response to interrogatories or other information concerning the work performed under this Agreement. Response to a subpoena or court order shall not be considered "voluntary" provided Consultant gives City notice of such court order or subpoena.

DocuSign Envelope ID: 2370403C-34DA-4BCC-897E-F18C7F131442

(c) If Consultant, or any officer, employee, agent or subcontractor of Consultant, provides any information or work product in violation of this Agreement, then City shall have the right to reimbursement and indemnity from Consultant for any damages, costs and fees, including attorney's fees, caused by or incurred as a result of Consultant's conduct.

(d) Consultant shall promptly notify City should Consultant, its officers, employees, agents or subcontractors be served with any summons, complaint, subpoena, notice of deposition, request for documents, interrogatories, request for admissions or other discovery request, court order or subpoena from any party regarding this Agreement and the work performed there under. City retains the right, but has no obligation, to represent Consultant or be present at any deposition, hearing or similar proceeding. Consultant agrees to cooperate fully with City and to provide City with the opportunity to review any response to discovery requests provided by Consultant. However, this right to review any such response does not imply or mean the right by City to control, direct, or rewrite said response.

ARTICLE 7. ENFORCEMENT OF AGREEMENT AND TERMINATION

7.1 California Law.

This Agreement shall be interpreted, construed and governed both as to validity and to performance of the parties in accordance with the laws of the State of California. Legal actions concerning any dispute, claim or matter arising out of or in relation to this Agreement shall be instituted in the Superior Court of the County of Los Angeles, State of California, or any other appropriate court in such county, and Consultant covenants and agrees to submit to the personal jurisdiction of such court in the event of such action. In the event of litigation in a U.S. District Court, venue shall lie exclusively in the Central District of California, in the County of Los Angeles, State of California.

7.2 Disputes; Default.

In the event that Consultant is in default under the terms of this Agreement, the City shall not have any obligation or duty to continue compensating Consultant for any work performed after the date of default. Instead, the City may give notice to Consultant of the default and the reasons for the default. The notice shall include the timeframe in which Consultant may cure the default. This timeframe is presumptively thirty (30) days, but may be extended, though not reduced, if circumstances warrant. During the period of time that Consultant is in default, the City shall hold all invoices and shall, when the default is cured, proceed with payment on the invoices. In the alternative, the City may, in its sole discretion, elect to pay some or all of the outstanding invoices during the period of default. If Consultant does not cure the default, the City may take necessary steps to terminate this Agreement under this Article. Any failure on the part of the City to give notice of the Consultant's default shall not be deemed to result in a waiver of the City's legal rights or any rights arising out of any provision of this Agreement.

7.3 Retention of Funds.

Consultant hereby authorizes City to deduct from any amount payable to Consultant (whether or not arising out of this Agreement) (i) any amounts the payment of which may be in dispute hereunder or which are necessary to compensate City for any losses, costs, liabilities, or damages suffered by City, and (ii) all amounts for which City may be liable to third parties, by reason of Consultant's acts or omissions in performing or failing to perform Consultant's obligation under this Agreement. In the event that any claim is made by a third party, the amount or validity of which is disputed by Consultant, or any indebtedness shall exist which shall appear to be the basis for a claim of lien, City may withhold from any payment due, without liability for interest because of such withholding, an amount sufficient to cover such claim. The failure of City to exercise such right to deduct

DocuSign Envelope ID: 2370403C-34DA-4BCC-897E-F18C7F131442

or to withhold shall not, however, affect the obligations of the Consultant to insure, indemnify, and protect City as elsewhere provided herein.

7.4 Waiver.

Waiver by any party to this Agreement of any term, condition, or covenant of this Agreement shall not constitute a waiver of any other term, condition, or covenant. Waiver by any party of any breach of the provisions of this Agreement shall not constitute a waiver of any other provision or a waiver of any subsequent breach or violation of any provision of this Agreement. Acceptance by City of any work or services by Consultant shall not constitute a waiver of any of the provisions of this Agreement. No delay or omission in the exercise of any right or remedy by a non-defaulting party on any default shall impair such right or remedy or be construed as a waiver. Any waiver by either party of any default must be in writing and shall not be a waiver of any other default concerning the same or any other provision of this Agreement.

7.5 Rights and Remedies are Cumulative.

Except with respect to rights and remedies expressly declared to be exclusive in this Agreement, the rights and remedies of the parties are cumulative and the exercise by either party of one or more of such rights or remedies shall not preclude the exercise by it, at the same or different times, of any other rights or remedies for the same default or any other default by the other party.

7.6 Legal Action.

In addition to any other rights or remedies, either party may take legal action, in law or in equity, to cure, correct or remedy any default, to recover damages for any default, to compel specific performance of this Agreement, to obtain declaratory or injunctive relief, or to obtain any other remedy consistent with the purposes of this Agreement. Notwithstanding any contrary provision herein, Consultant shall file a statutory claim pursuant to Government Code Sections 905 et seq. and 910 et seq., in order to pursue a legal action under this Agreement.

7.7 Termination Prior to Expiration of Term.

This Section shall govern any termination of this Contract except as specifically provided in the following Section for termination for cause. The City reserves the right to terminate this Contract at any time, with or without cause, upon thirty (30) days' written notice to Consultant, except that where termination is due to the fault of the Consultant, the period of notice may be such shorter time as may be determined by the Contract Officer. In addition, the Consultant reserves the right to terminate this Contract at any time, with or without cause, upon sixty (60) days' written notice to City, except that where termination is due to the fault of the City, the period of notice may be such shorter time as the Consultant may determine. Upon receipt of any notice of termination, Consultant shall immediately cease all services hereunder except such as may be specifically approved by the Contract Officer. Except where the Consultant has initiated termination, the Consultant shall be entitled to compensation for all services rendered prior to the effective date of the notice of termination and for any services authorized by the Contract Officer thereafter in accordance with the Schedule of Compensation or such as may be approved by the Contract Officer, except as provided in Section 7.3. In the event the Consultant has initiated termination, the Consultant shall be entitled to compensation only for the reasonable value of the work product actually produced hereunder. In the event of termination without cause pursuant to this Section, the terminating party need not provide the non-terminating party with the opportunity to cure pursuant to Section 7.2.

DocuSign Envelope ID: 2370403C-34DA-4BCC-897E-F18C7F131442

7.8 Termination for Default of Consultant.

If termination is due to the failure of the Consultant to fulfill its obligations under this Agreement, City may, after compliance with the provisions of Section 7.2, take over the work and prosecute the same to completion by contract or otherwise, and the Consultant shall be liable to the extent that the total cost for completion of the services required hereunder exceeds the compensation herein stipulated (provided that the City shall use reasonable efforts to mitigate such damages), and City may withhold any payments to the Consultant for the purpose of set-off or partial payment of the amounts owed the City as previously stated.

7.9 Attorneys' Fees.

If either party to this Agreement is required to initiate or defend or made a party to any action or proceeding in any way connected with this Agreement, the prevailing party in such action or proceeding, in addition to any other relief which may be granted, whether legal or equitable, shall be entitled to reasonable attorney's fees. Attorney's fees shall include attorney's fees on any appeal, and in addition a party entitled to attorney's fees shall be entitled to all other reasonable costs for investigating such action, taking depositions and discovery and all other necessary costs the court allows which are incurred in such litigation. All such fees shall be deemed to have accrued on commencement of such action and shall be enforceable whether or not such action is prosecuted to judgment.

ARTICLE 8. CITY OFFICERS AND EMPLOYEES: NON-DISCRIMINATION

8.1 Non-liability of City Officers and Employees.

No officer or employee of the City shall be personally liable to the Consultant, or any successor in interest, in the event of any default or breach by the City or for any amount which may become due to the Consultant or to its successor, or for breach of any obligation of the terms of this Agreement.

8.2 Conflict of Interest.

Consultant covenants that neither it, nor any officer or principal of its firm, has or shall acquire any interest, directly or indirectly, which would conflict in any manner with the interests of City or which would in any way hinder Consultant's performance of services under this Agreement. Consultant further covenants that in the performance of this Agreement, no person having any such interest shall be employed by it as an officer, employee, agent or subcontractor without the express written consent of the Contract Officer. Consultant agrees to at all times avoid conflicts of interest or the appearance of any conflicts of interest with the interests of City in the performance of this Agreement.

No officer or employee of the City shall have any financial interest, direct or indirect, in this Agreement nor shall any such officer or employee participate in any decision relating to the Agreement which affects her/his financial interest or the financial interest of any corporation, partnership or association in which (s)he is, directly or indirectly, interested, in violation of any State statute or regulation. The Consultant warrants that it has not paid or given and will not pay or give any third party any money or other consideration for obtaining this Agreement.

8.3 Covenant Against Discrimination.

Consultant covenants that, by and for itself, its heirs, executors, assigns, and all persons claiming under or through them, that there shall be no discrimination against or segregation of, any person or group of persons on account of race, color, creed, religion, sex, gender, sexual orientation, marital status, national origin, ancestry or other protected class in the performance of this Agreement. Consultant shall take affirmative action to insure

DocuSign Envelope ID: 2370403C-34DA-4BCC-897E-F18C7F131442

that applicants are employed and that employees are treated during employment without regard to their race, color, creed, religion, sex, gender, sexual orientation, marital status, national origin, ancestry or other protected class.

8.4 Unauthorized Aliens.

Consultant hereby promises and agrees to comply with all of the provisions of the Federal Immigration and Nationality Act, 8 U.S.C. § 1101 *et seq.*, as amended, and in connection therewith, shall not employ unauthorized aliens as defined therein. Should Consultant so employ such unauthorized aliens for the performance of work and/or services covered by this Agreement, and should any liability or sanctions be imposed against City for such use of unauthorized aliens, Consultant hereby agrees to and shall reimburse City for the cost of all such liabilities or sanctions imposed, together with any and all costs, including attorneys' fees, incurred by City.

ARTICLE 9. MISCELLANEOUS PROVISIONS

9.1 Notices.

Any notice, demand, request, document, consent, approval, or communication either party desires or is required to give to the other party or any other person shall be in writing and either served personally or sent by prepaid, first-class mail, in the case of the City, to the City Manager and to the attention of the Contract Officer (with her/his name and City title), City of Glendora, 116 E. Foothill Blvd., Glendora, California 91741-3380, and in the case of the Consultant, to the person(s) at the address designated on the execution page of this Agreement. Either party may change its address by notifying the other party of the change of address in writing. Notice shall be deemed communicated at the time personally delivered or in seventy-two (72) hours from the time of mailing if mailed as provided in this Section.

9.2 Interpretation.

The terms of this Agreement shall be construed in accordance with the meaning of the language used and shall not be construed for or against either party by reason of the authorship of this Agreement or any other rule of construction which might otherwise apply.

9.3 Counterparts.

This Agreement may be executed in counterparts, each of which shall be deemed to be an original, and such counterparts shall constitute one and the same instrument.

9.4 Integration; Amendment.

This Agreement including the attachments hereto is the entire, complete and exclusive expression of the understanding of the parties. It is understood that there are no oral agreements between the parties hereto affecting this Agreement and this Agreement supersedes and cancels any and all previous negotiations, arrangements, agreements and understandings, if any, between the parties, and none shall be used to interpret this Agreement. No amendment to or modification of this Agreement shall be valid unless made in writing and approved by the Consultant and by the City Council. The parties agree that this requirement for written modifications cannot be waived and that any attempted waiver shall be void.

9.5 Severability.

DocuSign Envelope ID: 2370403C-34DA-4BCC-897E-F18C7F131442

In the event that any one or more of the phrases, sentences, clauses, paragraphs, or sections contained in this Agreement shall be declared invalid or unenforceable by a valid judgment or decree of a court of competent jurisdiction, such invalidity or unenforceability shall not affect any of the remaining phrases, sentences, clauses, paragraphs, or sections of this Agreement which are hereby declared as severable and shall be interpreted to carry out the intent of the parties hereunder unless the invalid provision is so material that its invalidity deprives either party of the basic benefit of their bargain or renders this Agreement meaningless.

9.6 Warranty & Representation of Non-Collusion.

No official, officer, or employee of City has any financial interest, direct or indirect, in this Agreement, nor shall any official, officer, or employee of City participate in any decision relating to this Agreement which may affect his/her financial interest or the financial interest of any corporation, partnership, or association in which (s)he is directly or indirectly interested, or in violation of any corporation, partnership, or association in which (s)he is directly or indirectly interested, or in violation of any State or municipal statute or regulation. The determination of "financial interest" shall be consistent with State law and shall not include interests found to be "remote" or "noninterests" pursuant to Government Code Sections 1091 or 1091.5. Consultant warrants and represents that it has not paid or given, and will not pay or give, to any third party including, but not limited to, any City official, officer, or employee, any money, consideration, or other thing of value as a result or consequence of obtaining or being awarded any agreement. Consultant further warrants and represents that (s)he/it has not engaged in any act(s), omission(s), or other conduct or collusion that would result in the payment of any money, consideration, or other thing of value to any third party including, but not limited to, any City official, officer, or employee, as a result of consequence of obtaining or being awarded any agreement. Consultant is aware of and understands that any such act(s), omission(s) or other conduct resulting in such payment of money, consideration, or other thing of value will render this Agreement void and of no force or effect.

Consultant's Authorized Initials _____DS_____

Lance Kenyon, President

The persons executing this Agreement on behalf of the parties hereto warrant that (i) such party is duly organized and existing, (ii) they are duly authorized to execute and deliver this Agreement on behalf of said party, (iii) by so executing this Agreement, such party is formally bound to the provisions of this Agreement, and (iv) that entering into this Agreement does not violate any provision of any other Agreement to which said party is bound. This Agreement shall be binding upon the heirs, executors, administrators, successors and assigns of the parties.

EXHIBIT "A"

SCOPE OF SERVICES

I. Consultant will perform the following Services:

A. Phase 1: Evaluation of Existing Structure

Prior to starting Phase 1, an ASCE/SEI 41 Structural Performance Objective will be established for the existing library building in consultation with the City. The Performance Objective consists of a pairing of one or more Seismic Hazard Levels with Structural and Non-Structural Performance Levels. This will be discussed in detail at the initiation of the project.

a. Preparation of Condition Assessment and Material Testing Program

A Material Testing and Condition Assessment Program ("MTCAP") in accordance with ASCE/SEI 41 will be developed in order to confirm in-situ material properties and existing construction detailing. The extent of the MTCAP is defined by ASCE/SEI 41 based on the Performance Objective for the project and is typically subject to Plan Review to attain concurrence on the extent of testing.

b. Site Visit

Site visits will be conducted along with City representatives and Accu-Test to facilitate preparation of a detailed bid for the testing and laboratory work. Sampling locations will be confirmed along with testing schedule (confirm if off-hours/overnight work will be required).

c. Execute Material Testing Program

Upon NTP for testing contract, Accu-Test will complete core extraction and compressive strength laboratory testing.

d. Geotechnical Investigation & Seismic Hazard Analysis

Based on the project Performance Objective and preliminary seismic evaluation findings, a geotechnical scope of work will be developed in consultation with the City. At this time, it is anticipated that Geotechnical work will consist of limited confirmatory borings, shear wave velocity profiling for site classification, and site-specific ground motion hazard assessment. Further scope may be added at a later date, pending the findings of the evaluation and feasibility study.

e. Complete Structural Analysis and Evaluation, Prepare Conceptual Repair and Retrofit Drawings, Prepare Evaluation Report & Cost Estimate

DocuSign Envelope ID: 2370403C-34DA-4BCC-897E-F18C7F131442

A Tier 3 comprehensive seismic evaluation will be completed using the linear analysis provisions of ASCE/SEI 41-17 to establish current anticipated seismic performance of the existing building. Where required to meet the selected project Performance Objective, conceptual plans for strengthening will be provided. A cost estimate will be prepared based on the conceptual strengthening plans. The findings and basis for the recommended strengthening approach will be documented in an engineering report. Draft documents will be provided to the City for review and comment. Final documents will be issued once City comments have been incorporated.

B. Phase 2: Feasibility of Second Story Addition

The project team will work with the City to refine and develop the City's vision for the future of the library and addition, including infrastructure, remodeling and modernization needs. Conceptual plans will be developed and cost estimates will be completed. Phase 2 scope of services is subject to further evaluation in consultation with the City prior to finalizing. It is anticipated that the City and project team will have consistent communication via virtual and in-person meetings during this phase, eliminating the need for numerous intermediate deliverables.

a. Discovery – Visioning, Information Gathering, Programming

The Project Architect will collaborate with the City to understand the existing conditions, and the needs and goals of the City for the existing library and second story addition. Existing space utilization mapping, shelving footprint mapping, and Building Code Assessment will be completed. Review library findings, reports, and recommendations made to date. Establish programming needs.

b. Structural Evaluation of Existing Structure and Second Story Addition

A Tier 3 comprehensive seismic evaluation will be completed using the linear analysis provisions of ASCE/SEI 41-17 for the retrofit structure with second story addition. Material properties and geotechnical and seismic hazard findings from Phase 1 will be utilized.

c. Mechanical, Electrical, and Plumbing systems Assessment and Scoping

Infrastructure and systems upgrade needs for both existing library and addition will be defined.

d. Prepare Conceptual Repair, Strengthening, and Addition Drawings, Final Report & Cost Estimate

Based on the results of items "a" through "c", conceptual Architectural, Structural, and MEP drawings will be developed as appropriate. A cost estimate will be prepared based on the conceptual plans. The findings and basis for the recommended approach will be documented in a project report. Draft documents will be provided to the City for review and comment. Final documents will be issued once City comments have been incorporated.

DocuSign Envelope ID: 2370403C-34DA-4BCC-897E-F18C7F131442

e. New Standalone Library Building Comparative Cost Estimate

Scoping narrative and conceptual cost estimate will be prepared for a new standalone library building. The cost estimate will be used for comparison to the cost of the retrofit/addition to the existing library building.

II. As part of the Services, Consultant will prepare and deliver the following tangible work products to the City:

- Develop and execute the Structural Testing Plan.
- Geotechnical Investigation Report.
- Conceptual Strengthening Plans, Cost Estimate, and Engineering Report for Existing Library Building.
- Conceptual Strengthening Plans, Cost Estimate, and Engineering Report in consideration of second- story addition.
- Cost Estimate for a new standalone building.

Detailed deliverables are included in the proposal.

III. In addition to the requirements of Section 6.2, during performance of the Services, Consultant will keep the City appraised of the status of performance by delivering the following status reports:

A. N/A

IV. All work product is subject to review and acceptance by the City, and must be revised by the Consultant without additional charge to the City until found satisfactory and accepted by City.

V. Consultant will utilize the following personnel to accomplish the Services:

A. N/A

DocuSign Envelope ID: 2370403C-34DA-4BCC-897E-F18C7F131442

	SUBTOTAL OTHER SERVICES (ALLOWANCE / FIXED QUOTE)			**40,000**
TOTAL PROPOSED FEE				**215,941**

III. Within the budgeted amounts for each Task, and with the approval of the Contract Officer, funds may be shifted from one Task subbudget to another so long as the Contract Sum is not exceeded per Section 2.1, unless Additional Services are approved per Section 1.9.

IV. The City will compensate Consultant for the Services performed upon submission of a valid invoice. Each invoice is to include:

DocuSign Envelope ID: 2370403C-34DA-4BCC-897E-F18C7F131442

A. Line items for all personnel describing the work performed, the number of hours worked, and the hourly rate.

B. Line items for all materials and equipment properly charged to the Services.

C. Line items for all other approved reimbursable expenses claimed, with supporting documentation.

D. Line items for all approved subcontractor labor, supplies, equipment, materials, and travel properly charged to the Services.

V. The total compensation for the Services shall not exceed the Contract Sum as provided in Section 2.1 of this Agreement.

VI. The Consultant's billing rates for all personnel are attached as Exhibit C-1.

Introduction

The City of Glendora (City) has requested that JMD and Cho Design Associates, Inc. (CDA), review and provide a preliminary assessment of the structural elements of the City's Public Library roof slab and framing system that forms the base of the Bidwell Plaza. It is our understanding that the City desires to add a permanent shade structure to the existing Bidwell Plaza that is on top of the roof of the Glendora Public Library. During the initial investigation to add a shade structure to the existing roof, it was noted that there were some cracks in the existing concrete roof system and some water intrusion into the library. A preliminary assessment of the concrete roof system was requested by the City. This assessment includes the plaza deck and library roof system.

Purpose and Scope

The goal of the project is to provide the City with a preliminary structural engineering assessment/investigation of the City's existing Public Library roof slab and framing system that forms the base of the Bidwell Plaza in terms of its utility and possible hazards. CDA conducted a site visit to assess the overall structural condition of the library's roof framing system and slab. A summary of our findings and recommendations is included in this Preliminary Condition Assessment Report.

Description

Based on as-built plans provided by the City, the existing library facility and Bidwell Plaza was completed in 1972. The library is a two-story reinforced concrete and concrete masonry (CMU) structure located next to the City of Glendora City Hall at the southeast corner of Glendora Boulevard and W. Foothill Avenue.

Data Collection and Review

The following documents and information have been received from the City and reviewed in association with this project:

- As-built plans for *Glendora Public Library*, prepared by Anthony & Langford Architects, dated September 5, 1970, consisting of 30 sheets.
- As-built plans for *Glendora Public Library – Voluntary Upgrade*, dated June 2003 prepared by Jeff Coronado, S.E.
- As-built plans for *Glendora Public Library – Plaza Demo and Resurfacing*, undated, prepared by Jeff Coronado, S.E.

No other plans or reports are available for our review.

Review of As-Built Plans and Reports

Cho Design Associates conducted a review of the as-built plans provided by City. According to the as-built plans for the facility, the main floor and structure was designed utilizing concrete with a required minimum compressive strength of 3,000 psi at 28 days and Grade 40 reinforcing steel. The building envelope consists of cast-in-place concrete and CMU walls with a wood roof framing system. No structural calculations or geotechnical reports were available for our review as a part of this project.

In 2003 and 2004 the library went through extensive structural modifications to reinforce the structure and its foundation to bring the building into compliance with the current codes and standards at the

time. The 2003 project reinforced the north wall and the supporting columns. The 2004 project addressed the plaza's deteriorating concrete surface and water infiltration by replacing its water-proof membrane and adding a lightweight concrete topping on the existing deck. It appears that the 2004 project may have also repaired some roof slab cracks with epoxy injection. We did not find any plans or specifications to document that this was to be done as a part of the project, only what we observed in some project construction photos provided by the City.

Based on information from the City, the concrete deterioration at the library has been an ongoing for some time and generally consist of cracks in the concrete beams and roof slab surfaces. There appears to be some water infiltration into the main library after rain events, located primarily in the north-east section of the library ceiling. This study only includes a representative visual assessment of the surface defects, a review of the as-built plans and evaluation of the City's historical observations.

Preliminary Condition Assessment

A visual condition assessment of the surface defects was conducted at the library on March 29, 2022 and was limited to a representative sampling of the beams and slabs above the drop ceiling.

Our preliminary investigation consisted of physically accessing each area by removing the drop ceiling panels and visually inspecting the surfaces for deterioration. Most of the concrete deterioration consisted of minimally to moderately cracked concrete surfaces. We did not observe anything that would indicate an immediate underlying structural problem in the areas with the deteriorated concrete surface areas. We also employed the use of a rotary percussion hammer to check for areas of delamination or other structural defects that were not noticeably visible. Generally, the underlying surface of the concrete was found to be sound, with no visual evidence of delamination or spalling. The main area of obvious deterioration are the numerous superficial cracks throughout the roof beams and roof slabs of the library (Figures 1 and 2). The majority of these are not thought to be a serious issue since they were small and there was no evidence of major seepage, leakage or corrosions stains that were noted on the concrete. There are however several locations where the epoxy repaired cracks are exhibiting some sort of leakage and staining (Figures 5 and 6). There also appears to be some new cracks that may have occurred after the 2004 repairs. Some of these new cracks in the slab are showing signs of water infiltration and staining, but there was no indication of corrosion of the beam or slab reinforcing from the water infiltration (Figures 7, 8, 9 and 10). These cracks are thought to be new because they are large enough so they should have been repaired during the epoxy injection process of the other cracks, or they were smaller back then and have developed into larger cracks since the 2004 project.

There are also several areas where there are large cracks in the main girders. These cracks exceed 0.06" (1.5mm) in width which is the accepted threshold for a reasonable crack width of 0.016" (0.41mm) (Figures 3 and 4). No other significant structural issues were noted during our representative assessment of the library beams and slab system.

The following are some representative photos of the typical cracks and other defects that were found during our preliminary visual assessment. A complete set of photos taken during our visual assessment is included in Appendix "A" of this report.

Figure 10 – Close-up of Waffle Slab Crack (Main Reading Area)

Conclusions

In summary, the concrete beams, roof slab and overall structural systems of the library and plaza base are generally in sound structural condition, but there are some issues that needs to be addressed to maintain the structural integrity of the facility. Based on our initial visual inspection and evaluation, the library roof and slab and plaza base needs to have the crack issues addressed. These repairs should not require the library to be shut down.

The American Concrete Institute (ACI) publishes document ACI 224R-01 "Control of Cracking in Concrete Structures". Table 4.1 from that document provides a general guideline for reasonable crack widths for reinforced concrete elements under service loads. Acceptable crack widths range from 0.004 in. (0.1 mm) to 0.016 in. (0.41 mm), with smaller widths for concrete in wet or aggressive environments and larger crack widths for drier exposures. For the City's library, the 0.016" (0.41 mm) is considered an acceptable crack width.

Table 4.1—Guide to reasonable* crack widths, reinforced concrete under service loads

Exposure condition	Crack width	
	in.	mm
Dry air or protective membrane	0.016	0.41
Humidity, moist air, soil	0.012	0.30
Deicing chemicals	0.007	0.18
Seawater and seawater spray, wetting and drying	0.006	0.15
Water-retaining structures†	0.004	0.10

* It should be expected that a portion of the cracks in the structure will exceed these values. With time, a significant portion can exceed these values. These are general guidelines for design to be used in conjunction with sound engineering judgement.
†Exclusing nonpressure pipes.

There are numerous cases where the crack width exceeds the reasonable limit of 0.016" as presented in the table above and needs to be addressed. Many of the cracks are less than that and do not pose any real issues.

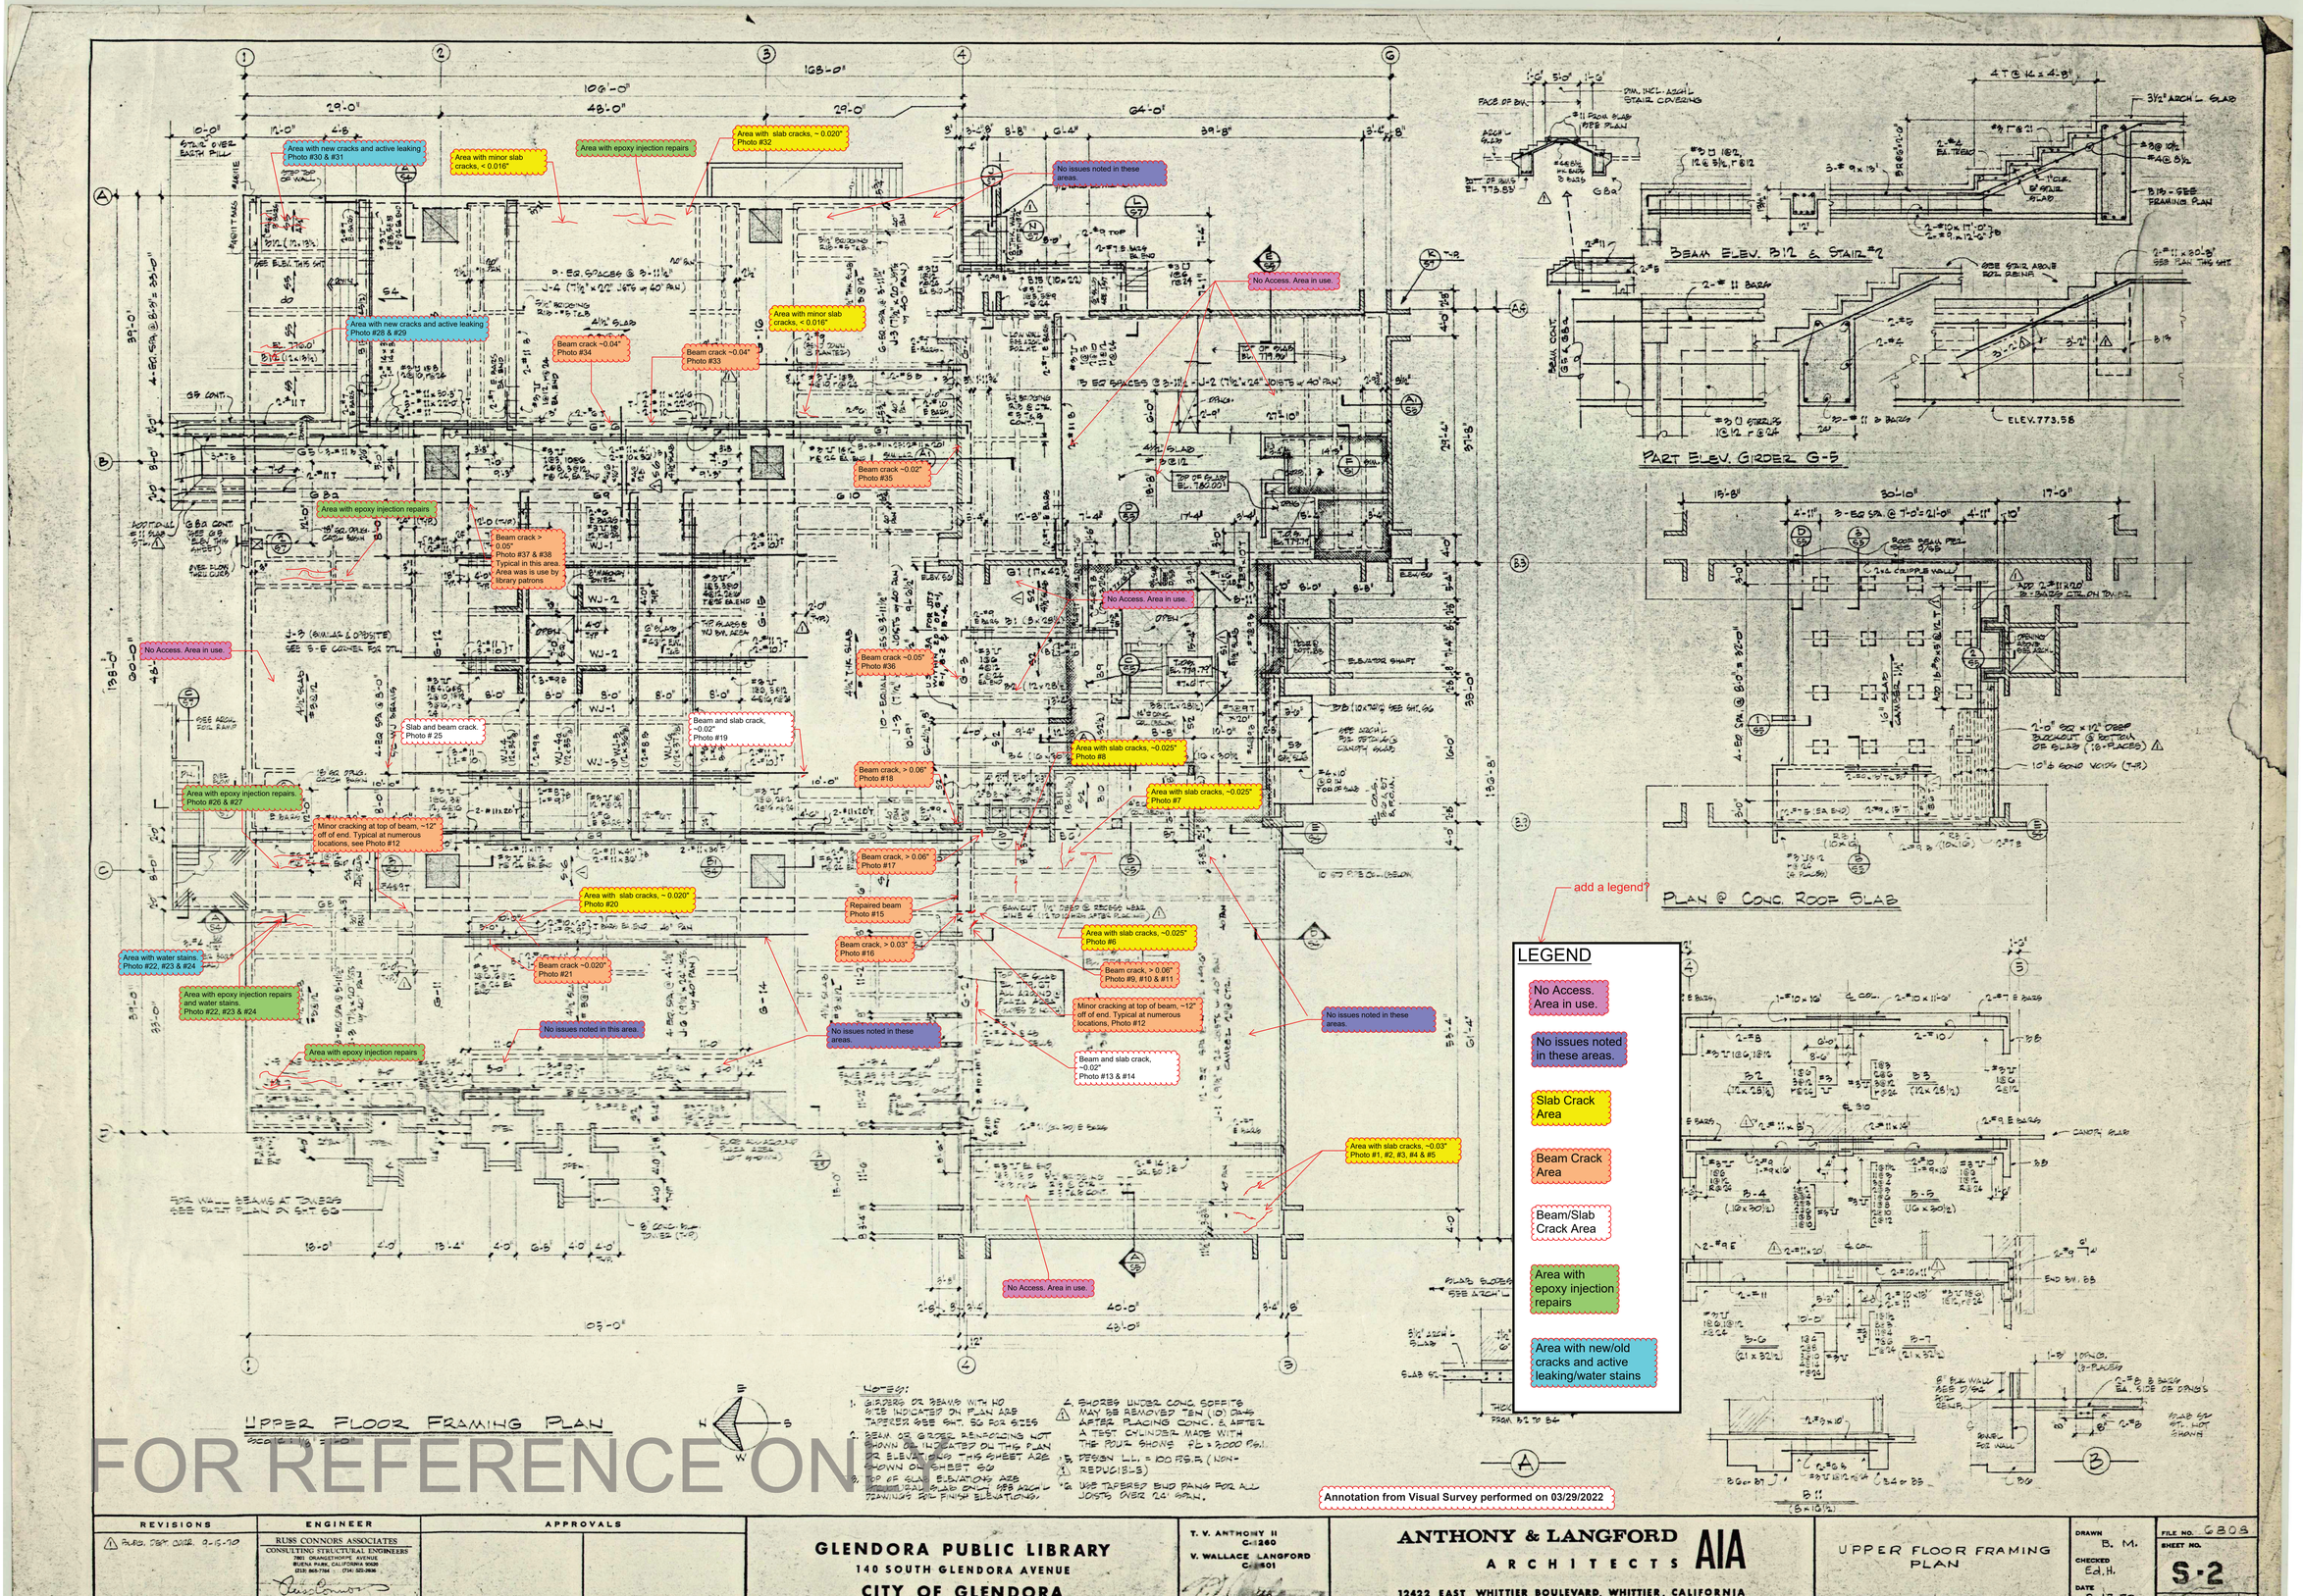
The condition of the unexposed reinforcing steel could not be assessed, because the level of inspection for this project did not include destructive testing, no conclusion was drawn for the condition of the unexposed reinforcing steel.

No visual evidence of carbonation or alkali-silica reactivity or other issues were apparent. Laboratory testing for these issues is beyond the scope for this project.

A plot showing the approximate locations of the representative photos and cracks is included in Appendix "A" along with a complete photo log.

Recommendations

We recommend that City initiate a full extensive survey of the roof and slab of the library to fully document the repair needs for this facility as soon as possible to minimize any further damage.



At this time, the following items are recommended:

- Comprehensive Field Survey: Perform a comprehensive field survey, assessment and evaluation of the entire library roof slab and beam system. This survey should fully document the size and location of all cracks. Any additional defects such as spalling, delamination or pop-outs should also be noted.
- Final Repair Plans: Prepare comprehensive plans, details and specifications for the repair and rehabilitation of all defects noted in the Comprehensive Field Survey above.

DRAFT PROJECT WORKPLAN AND SCHEDULE

FISCAL IMPACTS

Item (All amounts from Fund 321 – Capital Projects Fund)	Item Amount
Preliminary condition assessment total costs (completed)	($41,115.71)
MHP Proposal Amount	($215,941.00)
MHP Agreement Contingency (10%)	($21,594.10)
Total Costs	($278,650.81)
FY2021/23 Adopted Two-Year Budget Project Funding	$190,000.00
Appropriation Needed	$88,650.81

RECOMMENDATIONS

That the City Council:

1. Award an agreement with Myers Houghton & Partners, Inc. for the Library Structural Analysis and Options for Vertical Expansion project in the amount of $215,941.00;
2. Authorize the City Manager or his designee to execute the agreement with Myers Houghton & Partners, Inc., including minimal and/or non-substantive changes;
3. Authorize the Public Works Director to execute any necessary change orders in an amount not to exceed 10% ($21,594.10) of the original contract amount, for a potential total agreement amount of $237,535.10; and
4. Authorize the Administrative Services Director to appropriate $88,650.81 using Capital Projects Fund 321 towards project budget.

STAFF REPORT

TO:	**Mayor and Council Members**	**DATE:**	**September 12, 2023**
FROM:	**City Clerk**	**DISTRICT(S):**	**CITYWIDE**
SUBJECT:	**Update on the City of Glendora Water Infrastructure Assessment and Rate Study**		

RECOMMENDATION

That the City Council:

1. Adopt the Water Master Plan; and
2. Provide direction for the consideration of water rates.

STRATEGIC FOCUS AREAS

- Goal 5: Improve and Maintain the City's Infrastructure and Facilities (IMCIF)

EXECUTIVE SUMMARY

Over the past year, the City has been conducting a water utility infrastructure assessment to identify and prioritize the maintenance and repairs of water utility pipelines and facilities. Based on the information gathered, it has been determined that the City's water system needs nearly $350 million in repairs and replacements. In order to fund these projects and ongoing operations, a rate study was completed to establish a fair and equitable distribution of costs to the consumers. The findings of these studies are outlined in the report for the City Council and Water Commission to consider and provide staff with direction to move forward.

LEGISLATIVE HISTORY / PREVIOUS ACTIONS

Resolution CC2016-32

On September 12, 2016, the City mailed customer notices regarding Resolution No. CC2016-32, which included water rate adjustments to occur between 2017 and 2021.

Proposition 218

Proposition 218, (California Constitution Article XIII D), was enacted in 1996 for the purpose of setting rates and fees which are reasonable and proportional to the cost of providing service. The requirements for fairness are:

a. Revenues derived from fees and charges (such as water and sewer rates) shall not exceed the funds required to provide the property related service.

b. Fees and charges shall not be used for any purpose other than that for which they were imposed.

c. Fees and charges shall not exceed the proportional cost of service attributable to the parcel upon which it is imposed.

d. Service for which a fee is being imposed must actually be used by, or immediately available to the owner of the property in question.

e. A written notice of the proposed fees and charges shall be mailed to the record owner of each parcel at least 45 days prior to the public hearing, when the agency considers all written protests the charge.

   - A public agency cannot adopt increases in fees and charges above those included in

Proposition 218 notice

California Assembly Bill 1668

Assembly Bill 1668 (AB1668) requires reduction in indoor residential water use:

- Until January 1, 2025: 55 gallons per capita per day
- Beginning January 1, 2025: 52.5 gallons per capita per day
- Beginning January 1, 2030: 50.0 gallons per capita per day

DISCUSSION

The City of Glendora (City) owns and operates a potable water system serving an area of approximately 11 square miles and provides water service to a population of about 45,550. The primary source of supply is local groundwater from the Upper San Gabriel Canyon Sub-basin and the Glendora Sub-basin of the Main San Gabriel Basin (Main Basin). The supply is supplemented with imported water from Three Valleys Municipal Water District. The City's existing potable water system consists of the following:

- Seventeen (17) hydraulic pressure zones (12 open, 3 on hydropneumatic systems, and two closed)
- Approximately 210 miles of pipeline, 1-inch to 30-inch
- Eight (8) Active Groundwater Wells
- 29 Storage Reservoirs
- 20 Pump Stations (45 pumps)
- Three (3) Hydropneumatic Systems
- Three (3) Pressure Regulating Stations
- 1,760 Fire Hydrants
- 13,500 customer meters

Water Master Plan

In April 2023, the Water Master Plan was finalized by AKM Consulting Engineers. The document is a comprehensive planning guide for improving and upgrading the City's existing water system. In doing so, it identifies and prioritizes $350 Million in Capital Improvement Projects.

Vertical Facility Assessments were conducted as part of the master plan effort to evaluate the condition and to develop recommendations for each well, pump station, and storage reservoir. As-built plans, maintenance records, pump curves and efficiency tests, reservoir dive reports, and other available historical information were reviewed as part of the assessments. City staff members were interviewed by and accompanied AKM staff on tours of each facility. The Vertical Facility Assessments resulted in the recommendation of improvement projects with a total estimated cost of $158M.

The Water Master Plan effort also included the development of a Pipe Replacement Program. Pipe improvement projects were developed based on a comprehensive risk assessment, discussion with operation and maintenance staff, review of main break data, and review of pipes that provide service to facilities where water service is essential (hospitals, fire facilities, dialysis centers etc). The risk assessment included the use of artificial intelligence and machine learning (AI-ML) technology to develop the Likelihood of Failure (LoF) and the evaluation of the Consequence of Failure (CoF). The Pipe Replacement Program included recommendations for pipe replacement projects with a total estimated cost of $183M.

Hydraulic Analyses were conducted to assess the water system's ability to meet average day, maximum day, peak hour, and maximum day plus fire flow demands. A hydraulic model was developed and calibrated to field conditions. The model was utilized to identify system hydraulic deficiencies. Recommended improvements based on the hydraulic analyses included projects with a total estimated cost of $9M.

Water Rate Study

The proposed water rate was developed to ensure the City is able to deliver clean, safe, and reliable water on demand. The proposed rate structure is designed to be fair and equitable while also encouraging water conservation. The water rates are an investment back into the system to make critical upgrades and repairs to the water infrastructure as identified in the Water Master Plan.

Fund Analysis

Although the City has made many efforts to improve operations by leveraging technology to make certain operations more efficient, the cost of doing business has increased significantly. The Consumer Price Index (CPI) increased 5.9% in January 2021 and 7.2% for January 2022, for a combined inflation rate of approximately 13% just in the last two years. The last rate study was conducted in 2016 and was implemented between January 2017 through January 2022. However, rates have not increased since January 2021. Bids for capital improvement projects are coming in over budget by 5%-10%. The shortage of materials and the demand for labor has had a major impact on the cost of infrastructure improvements. On top of the cost of doing business, scarce supplies and the cost of water over the last two years from Metropolitan Water District has increased 11% for Tier 1 treated water and 24% for Tier 2 treated water. The following table is the adopted FY 2024 Operating Budget for the Water Fund:

	Adopted FY 2024 Budget
REVENUES	
Water Charges	$ 19,115,500
Purchased Water	2,030,000
Energy	1,700,000
Misc Revenue Interest	332,375
Total Revenues	$ 23,177,875
EXPENDITURES	
Production	$ 4,102,519
Transmission & Distribution	2,911,479
Customer Service	1,307,261
Administration	2,327,399
Support	3,505,197
Conservation	1,120,432
Replenishment/Import Water	3,648,950
Energy	1,700,000
Debt Service	2,584,222
Transfers Out CIP	3,000,000
Total Expenditures	$ 26,207,459
Gain (Loss)	$ (3,029,584)

Additionally, historical data from Fiscal Year 2020-2021 was reviewed when developing the expenditures for this study. Projections were made with the best available planning data. The future expenditures were developed from the utility agencies (Three Valleys Municipal Water District, Main San Gabriel Valley Watermaster, Southern California Edison, Azusa Light and Water) projections and the consumer price index (CPI). The expenditures include the following:

a. Groundwater: The City's eight (8) wells extract groundwater from the Main Basin. The Main San Gabriel Valley Watermaster manages the Operating Safe Yield (OSY) that regulates the allowable groundwater extractions. The City's groundwater supply was based on 6,408 AFY (4.75% of OSY).

b. Imported Water: The City can supplement the groundwater supply with imported water from Three Valleys Municipal Water District (TVMWD) and/or Covina Irrigating Company. The imported water supply was based on 1,916 AFY from TVMWD.

c. Energy Supply: Southern California Edison (SCE) and Azusa Light and Water provide power to the booster pump stations and wells.

d. Debt Service: The City's existing water fund debt service includes the 2012 Series A CSCDA Revenue Bonds, 2016 Series A Water Revenue Bond, and 2019 Pension Obligation Series A Bond. The proposed rate structure also includes the issuance of a new bond totaling $15M, which will fund part of the future CIP.

e. Historical Water Fund Expenditures: The remaining water expenditures were based on historical Water Fund expenditures and include: Water Administration, Water Customer Service, Support, Transmission and Distribution, Production, and Water Conservation.

f. Capital Improvement Program: The rate structure is based on $30M of improvement projects being implemented over the next five years. The improvement project cost estimates are based on 2023 projections and were increased by the CPI for the next five years. $15M of the projects are planned to be funded through future bond issuance, and $15M are planned to be funded through revenue generated from the consumption charges.

Proposed Rate Structure

The updated revenue model was used to project revenues using various rate structures. The scenarios evaluated included: various consumption tiers, various CIP project implementation schedules, elevation charges for operation and maintenance expenses for customers in hydraulic zones at higher elevations; and different rates for customers with very high-water consumption. The proposed bi-monthly rate structure was developed to be fair and equitable and to encourage water conservation. The proposed rate structure includes the following:

a. Meter Connection Charge is a fixed charge based on the equivalent residential units (ERUs). ERUs represent the average water usage by a single-family residential dwelling unit (customers with 5/8-inch and 3/4-inch meters). Customers with larger meter sizes were assigned ERUs reflecting the ratio of the average water usage by meter size to that of average usage for customers with 5/8-inch and 3/4-inch meters. The revenue generated for the meter connection charge was developed to fund the fixed expenditures, existing and future debt service, and 50% of the operation and maintenance related expenditures. The proposed bi-monthly Meter Connection Charges are summarized in Table 1.

Table 1: Bi-Monthly Meter Connection Charge

Meter Size	Current Rate	Proposed 2024	Proposed 2025	Proposed 2026	Proposed 2027	Proposed 2027
5/8 & 3/4 inch	$88.57	$85.38	$87.94	$90.58	$93.30	$96.10
1 inch	$115.14	$134.23	$138.26	$142.40	$146.68	$151.08
1.5 inch	$191.20	$257.07	$264.78	$272.73	$280.91	$289.33
2 inch	$274.57	$413.67	$426.08	$438.86	$452.03	$465.09
3 inch	$407.43	$984.31	$1,013.84	$1,044.25	$1,075.58	$1,107.85
4 inch	$620.04	$984.31	$1,013.84	$1,044.25	$1,075.58	$1,107.85
6 inch	$1,080.63	$2,160.61	$2,225.43	$2,292.19	$2,360.96	$2,431.79
8 inch	$1,523.49	$2,160.61	$2,225.43	$2,292.19	$2,360.96	$2,431.79

b. Consumption Rates are based on the amount of water used and the cost of energy to pump water to higher elevations.

The proposed rate structure includes four (4) consumption tiers to promote water conservation. The estimated revenue will fund the expenditures for groundwater, purchased water, production, water conservation, and 50% of the capital improvement projects. The consumption thresholds between each tier were based on the SB1668 indoor water use goal, minimum month consumption by meter size, and the existing rate structure's Baseline Allocation Threshold Units. The proposed consumption thresholds are summarized in Table 2.

Elevation Rates are broken up by four (4) zone classes, which were established as part of this study to assign the costs fairly and equitably. Each Zone consists of the following hydraulic zones:

Zone A: 1, 1RB, 1RA
Zone B: 2, 1A, 1B
Zone C: 3, 1BH1, 2H1, 2H2

The energy expenditures that are required to pump water to the higher zone classes and 50% of the operation and maintenance expenditures are expected to be funded through the elevation rates. The development of the elevation rates included the evaluation of historical energy expenditures by zone class, operation and maintenance expenditures, and consumption data by zone class.

The cost per CCF for water and energy is summarized in Table 3.

Table 2: Bi-Monthly Consumption Tiers (CCF)

	CURRENT		PROPOSED			
Meter Size	Tier 1	Tier 2	Tier 1	Tier 2	Tier 3	Tier 4
5/8 & 3/4 inch	1 - 38	39+	1 - 12	13 - 38	39 - 76	77+
1 inch	1 - 67	68+	1 - 18	19 - 67	68 - 134	135+
1.5 inch	1 - 134	135+	1 - 42	43 - 134	135 - 268	269+
2 inch	1 - 220	221+	1 - 64	65 - 220	221 - 440	441+
3 inch	1 - 838	839+	1 - 181	182 - 419	420 - 838	839+
4 inch	1 - 1,316	1,317+	1 - 181	182 - 658	659 - 1,316	1,317+
6 & 8 inch	1 - 4,682	4,683+	1 - 328	329 - 2,341	2,342 - 4, 682	4,683+

Table 3: Consumption Rates for Water & Elevation (CCF)

	CURRENT			**PROPOSED**				
Zone	Tier 1	Tier 2	Elevation	Tier 1	Tier 2	Tier 3	Tier 4	Elevation
A	$2.98	$4.90	$0.24	$1.75	$2.68	$3.61	$4.54	0.22
B	-	-	$0.36	-	-	-	-	$1.02
C	-	-	$0.58	-	-	-	-	$2.06
D	-	-	$1.41	-	-	-	-	$3.41

Table 4 below provides for the total cost per unit of water used in each zone. The amount per unit of water used is calculated by adding the water cost and the elevation cost as provided in the tables above.

Table 4: Total Consumption Rates for 5/8 & 3/4 inch meter (Tier + Elevation)

	CURRENT		PROPOSED			
Zone	Tier 1 (0-38)	Tier 2 (39+)	Tier 1 (0-12)	Tier 2 (13-38)	Tier 3 (39-76)	Tier 4 (77+)
A	3.22	5.14	$1.97	$2.90	$3.83	$4.76
B	3.34	5.26	$2.77	$3.70	$4.63	$5.56
C	3.56	5.48	$3.81	$4.74	$5.67	$6.60
D	4.39	6.31	$5.16	$6.09	$7.02	$7.95

Water bills are calculated by adding the Meter Charge and calculating the amount of water used based on the cost per unit. For example, the bill for a single-family residence located in Zone A with a 3/4 inch meter who used 45 units of water over two months, would be calculated at the proposed rate as follows:

Meter Charge		Zone A Tier 1 (0-12)		Zone A Tier 2 (13-38)		Zone A Tier 3 (39-45)		Total Bi-Monthly
$85.38	+	(12*$1.97)	+	(26*$2.90)	+	(7*$3.83)	+	$211.23

Master Fee Schedule

In June 2021, the City last updated the Master Fee Schedule, per City Resolution CC-2021-33. The City currently has 29 master fees to recover the cost of the services provided. The proposed master fee schedule is based on the estimated cost of service and includes 46 fees from 11 fee categories. The recommended fees were developed from the projected time to provide the services and the City's staff hourly rates. Meters, meter boxes, locks, and other material fees were based on actual costs. All fees are projected to be increased by the CPI, for each fiscal year. The proposed master fee schedule is included in Attachment B.

Next Steps and Timeline

If the City Council and the Water Commission are in agreement with the proposed adjustments to the water rate, the next steps would be to direct staff to begin the process of implementing the water rate plan. The tentative timeline would be:

End of September - Mail out Proposition 218 Notices
October 2023 - Conduct Community Workshops as necessary
November 2023 - Conduct Public Hearing to adopt proposed water rates
January 1, 2024 - New water rates to go into effect.

FISCAL IMPACT

The proposed rate structure included $30M in CIP projects that are to be implemented over the next five years. The updated revenue model was used to calculate the average bills for each customer using the existing and proposed rate structures.

ENVIRONMENTAL DETERMINATION

This activity is not a "project" as defined by Section 21065 of the Public Resources Code or Sections 15060(c)(2), 15060(c)(3), and 15378 of the CEQA Guidelines.

- Defensible
- Revenue stability and predictability
- Affordability
- Promote Water Conservation

Legislative History and Previous Actions

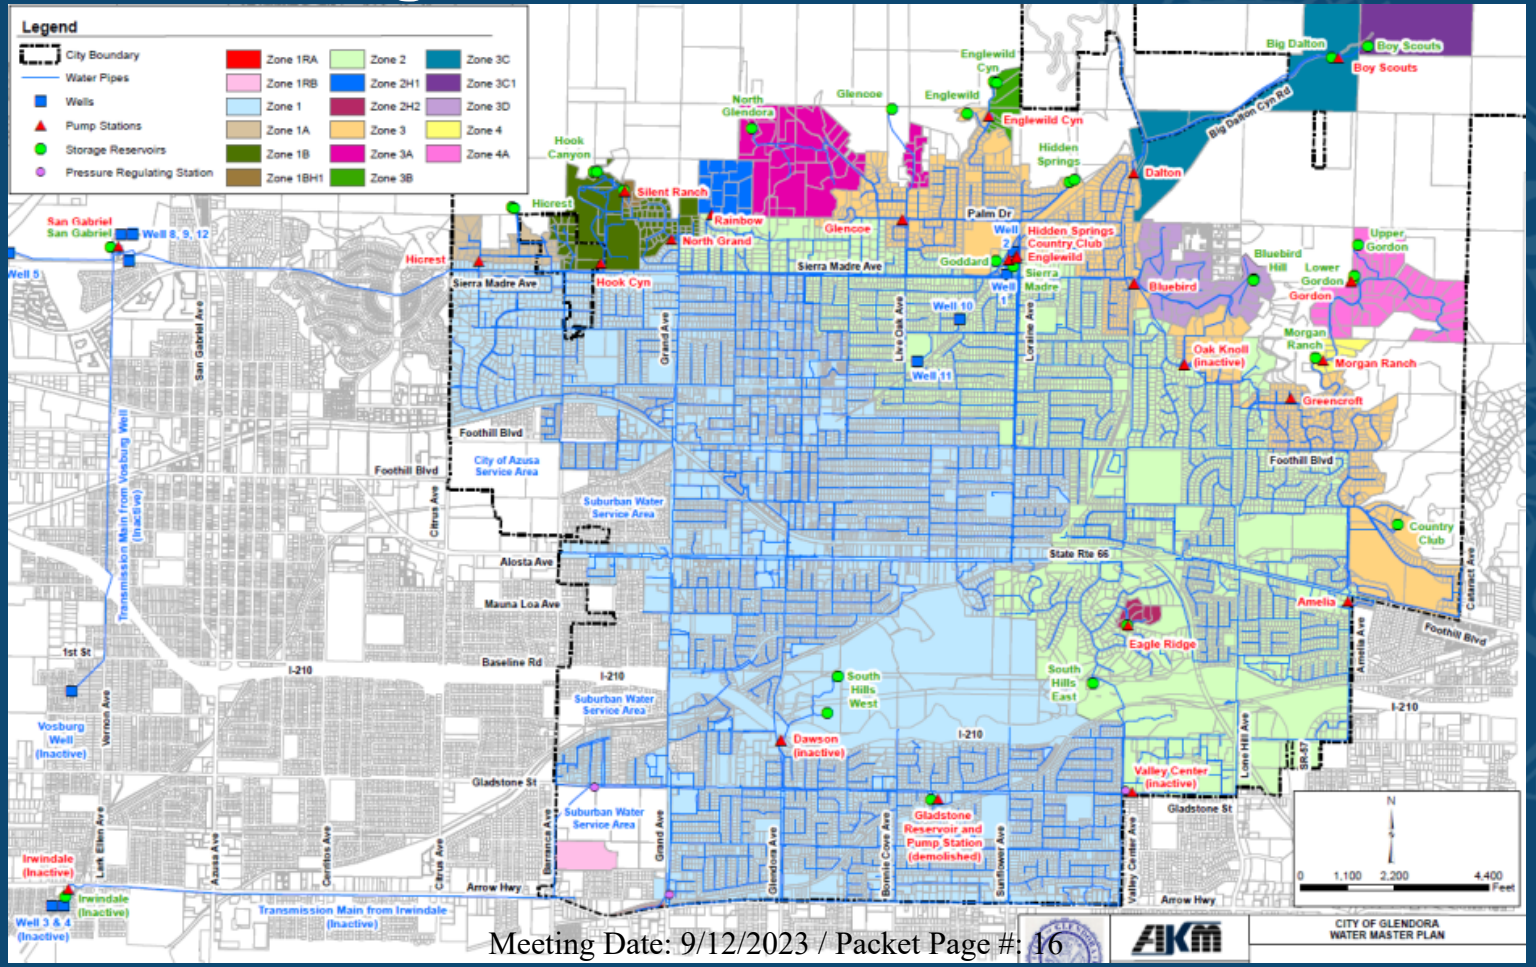
- November 1996: State adoption of Prop 218
- July 2016: Last rate study and adoption by Glendora
- May 2018: State adoption of AB 1668 / SB 606 – Water Conservation
- January 2021: Last water rate adjustment
- April 2023: Completion of Water Infrastructure Assessment

Glendora's Water System

- Service Area: 11 Sq. Miles
- Population of 45,551
- 13,500 Customer Meters

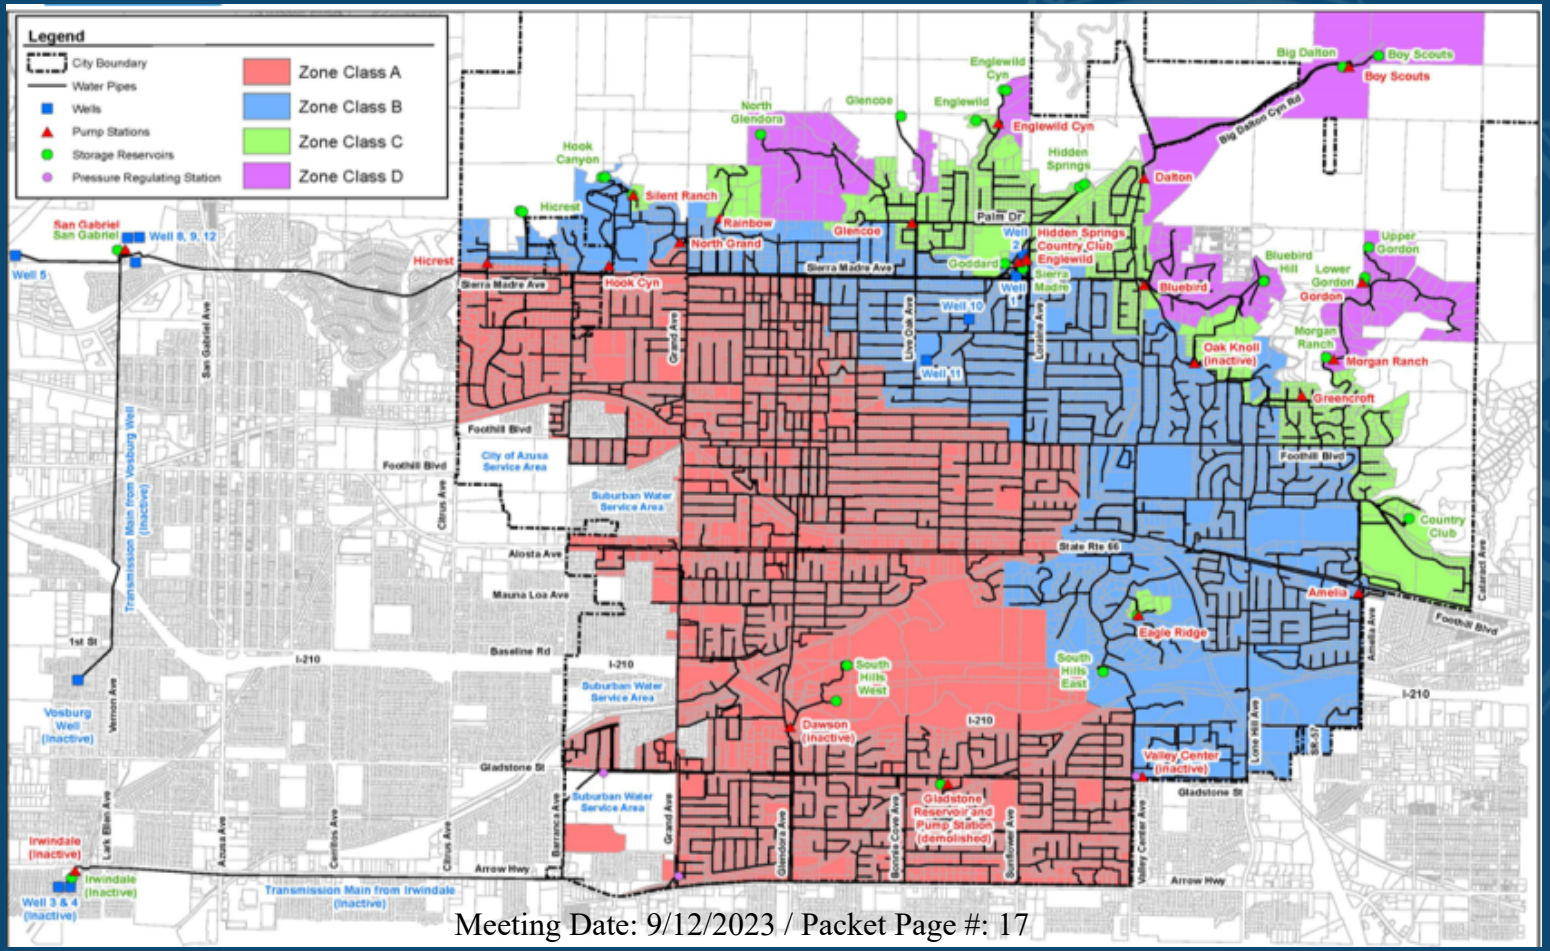
Water System

- 210 miles of water mains
- 8 Active wells
- 29 Reservoirs
- 20 Booster Stations
- 2 Disinfection Plants



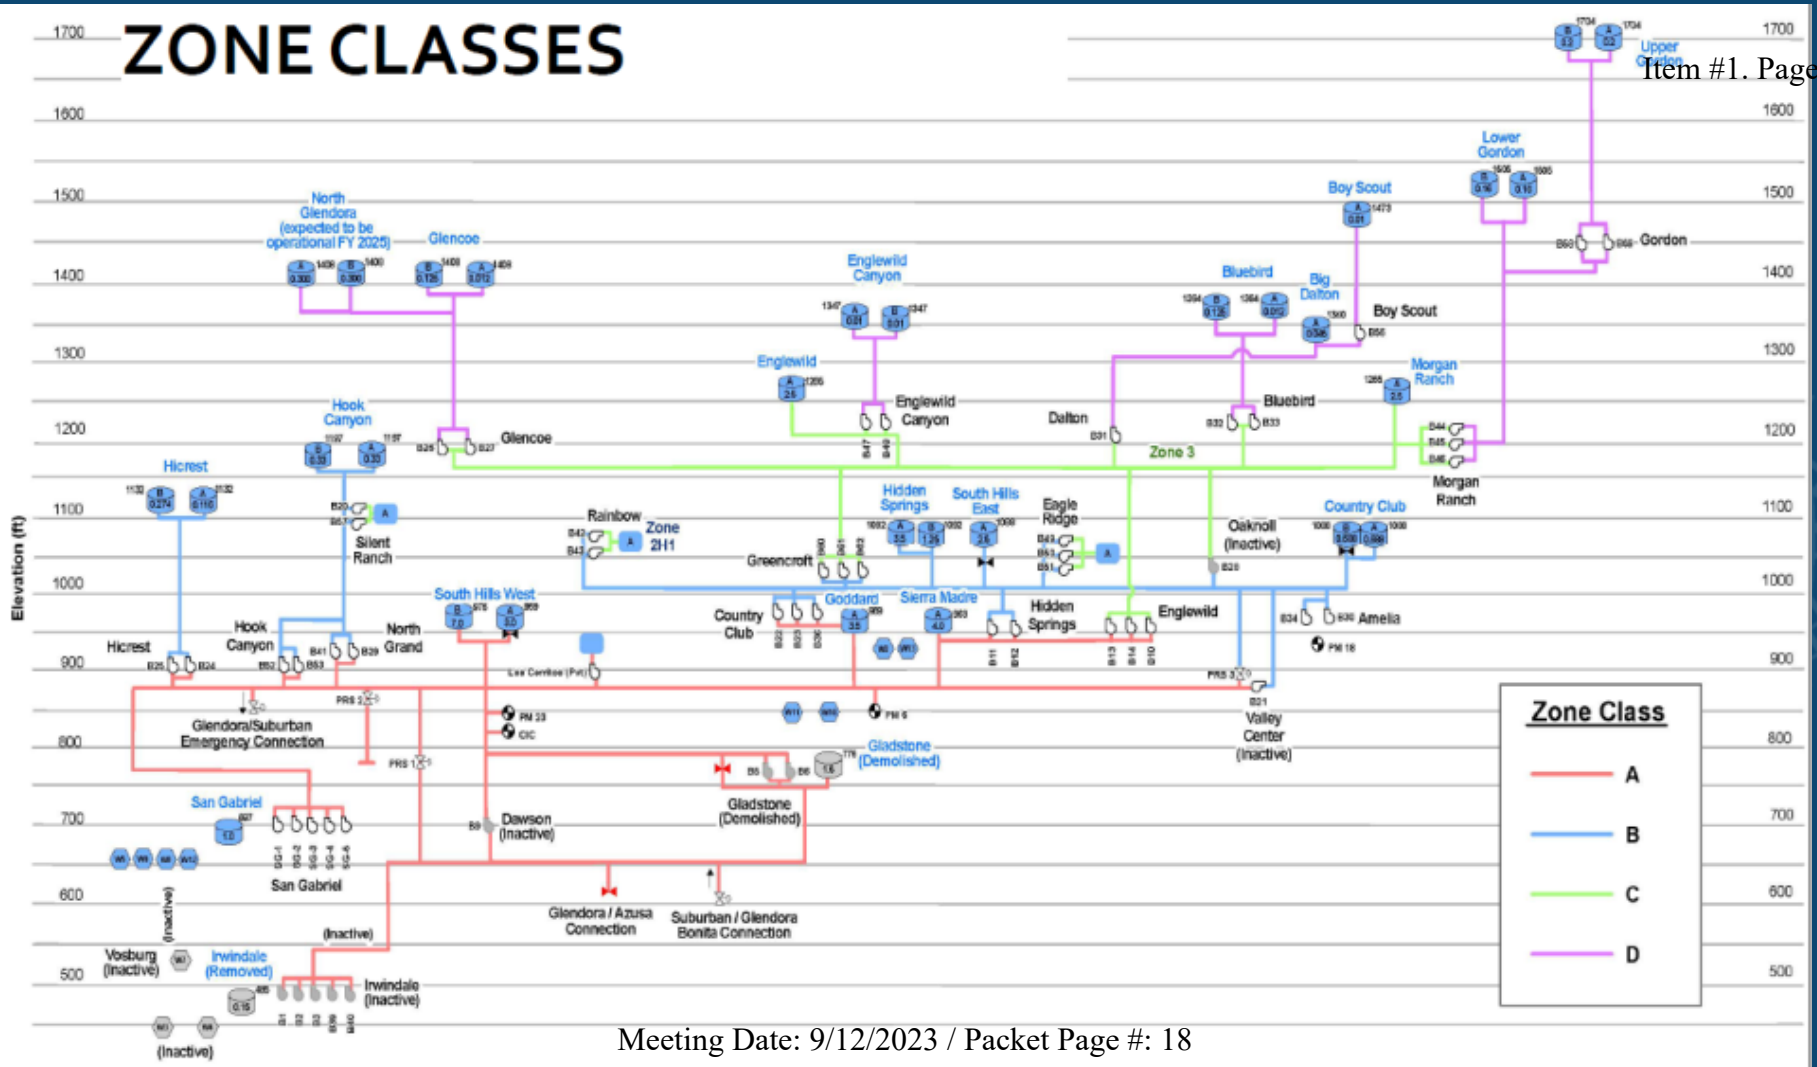
Glendora's Water Supply

- 90-95% local groundwater from the Main San Gabriel Basin
  - Pumping rights
  - Basin El: 227.4 ft as of September 1, 2023
    - 43 ft increase from last year or 344,000 Acre-feet of water *(1 AF = 326,000 gals)*



- 5-10% imported from Metropolitan Water District ("MWD")

- Western states water supplies challenged by prolonged drought



Existing Pressure Zones – 17 Zone Classes

Proposed Pressure Zones – 4 Primary Zone Classes

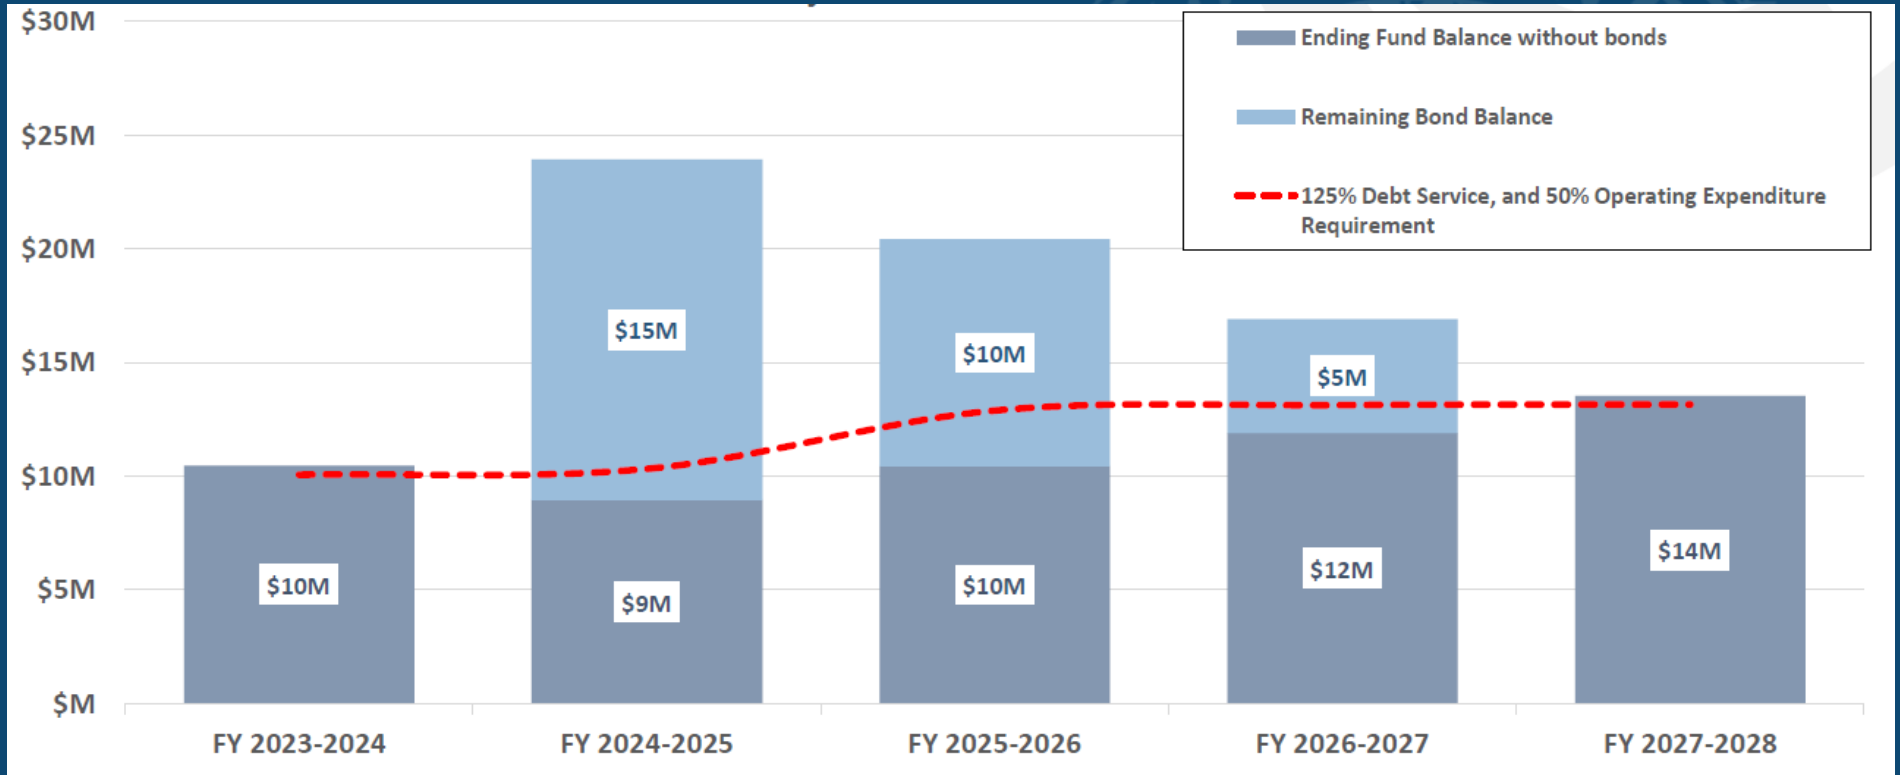
- Replenish/Import Water
- Energy
- Debt Service
- Capital Improvement

- Reserves are used to balance the budget

Water Fund Budget Detail



Revenues	Amount
Water Charges	$15,274,287
Replenish/Import Water	$3,648,950
Energy	$1,700,000
Total Revenues	**$23,177,875**

Expenditures	Amount
Operations & Maintenance	$15,274,287
Replenish/Import Water	$3,648,950
Energy	$1,700,000
Debt Service	$2,584,222
Capital Projects	$3,000,000
Total Expenditures	**$26,207,459**

How a dollar is spent

Water Fund Balance (Reserves)

Elements of the Water Rate

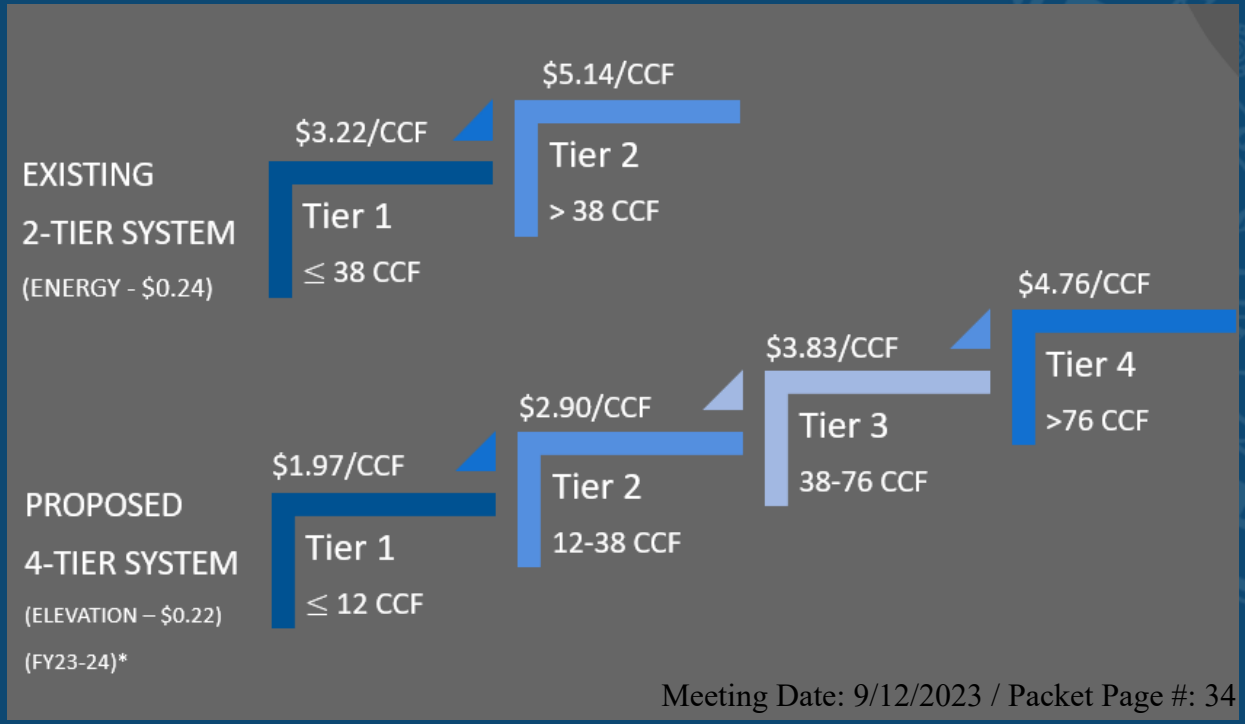
Consumption Charge ($/ccf)	Volumetric charge that covers water delivered and portions of the CIP and O&M
Elevation Charge ($/ccf)	Volumetric charge that covers energy
Meter Connection Charge ($/Bi-Month)	Fixed charge that covers meter maintenance and customer service, portions of debt service, salaries, and benefits

Consumption Tiers

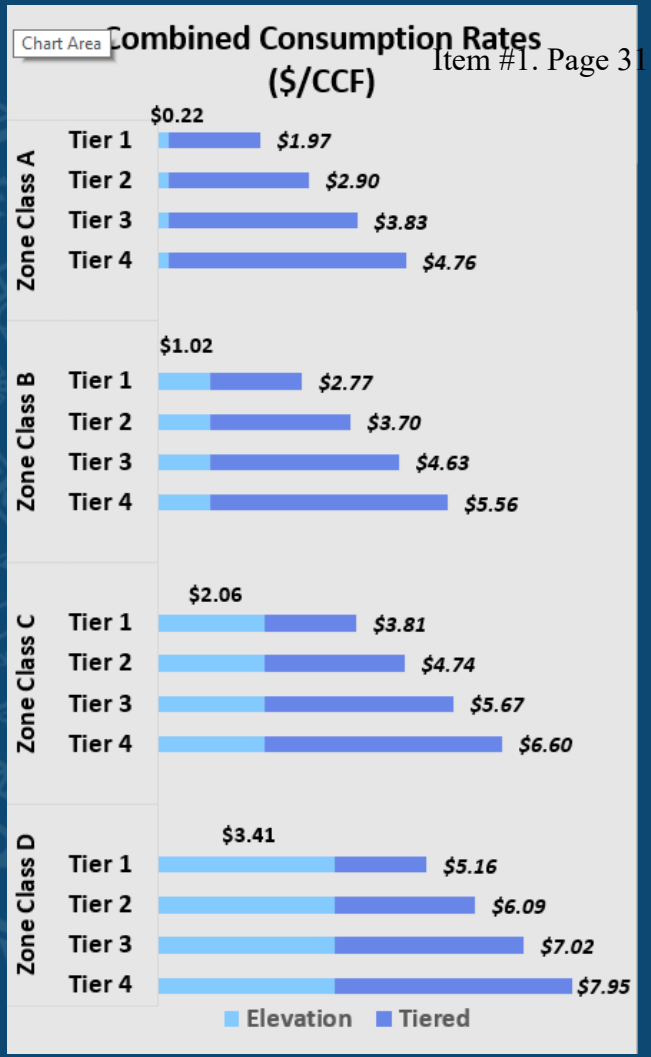
Meter Size (inches)	Current		Proposed			
	Tier 1 (CCF)	Tier 2 (CCF)	Tier 1 (CCF)	Tier 2 (CCF)	Tier 3 (CCF)	Tier 4 (CCF)
5/8	0-38	> 38	0-12	13-38	39-76	> 76
3/4	0-38	> 38	0-12	13-38	39-76	> 76
1	0-67	> 67	0-18	19-67	68-134	> 134
1 1/2	0-134	> 134	0-42	43-134	135-268	> 268
2	0-220	> 220	0-64	65-220	221-440	> 440
3	0-838	> 838	0-181	182-419	420-838	> 838
4	0-1316	> 1316	0-181	182-658	659-1316	> 1316
6	0-4682	> 4682	0-328	329-2341	2342-4682	> 4682
8	0-4682	> 4682	0-328	329-2341	2342-4682	> 4682

Consumption Rates

		Consumption Rates ($/CCF)				
		Tier 1	Tier 2	Tier 3	Tier 4	Annual % Increase
Current		$ 2.98	$ 4.90	N/A	N/A	
Proposed	Year 1	$ 1.75	$ 2.68	$ 3.61	$ 4.54	
	Year 2	$ 1.80	$ 2.76	$ 3.72	$ 4.68	3%
	Year 3	$ 1.86	$ 2.84	$ 3.83	$ 4.82	3%
	Year 4	$ 1.91	$ 2.93	$ 3.94	$ 4.96	3%
	Year 5	$ 1.97	$ 3.02	$ 4.06	$ 5.11	3%



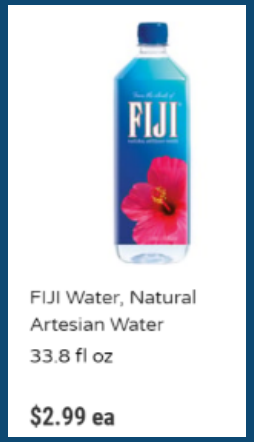
Elevation Charges



All Meter Sizes

		Elevation Rates ($/CCF)				
		Zone Class A	Zone Class B	Zone Class C	Zone Class D	Annual % Increase
Current		$ 0.24	$ 0.36	$ 0.58	$ 1.41	
Proposed	Year 1	$ 0.22	$ 1.02	$ 2.06	$ 3.41	
	Year 2	$ 0.23	$ 1.06	$ 2.13	$ 3.52	3%
	Year 3	$ 0.24	$ 1.10	$ 2.20	$ 3.63	3%
	Year 4	$ 0.25	$ 1.14	$ 2.27	$ 3.74	3%
	Year 5	$ 0.26	$ 1.18	$ 2.34	$ 3.86	3%

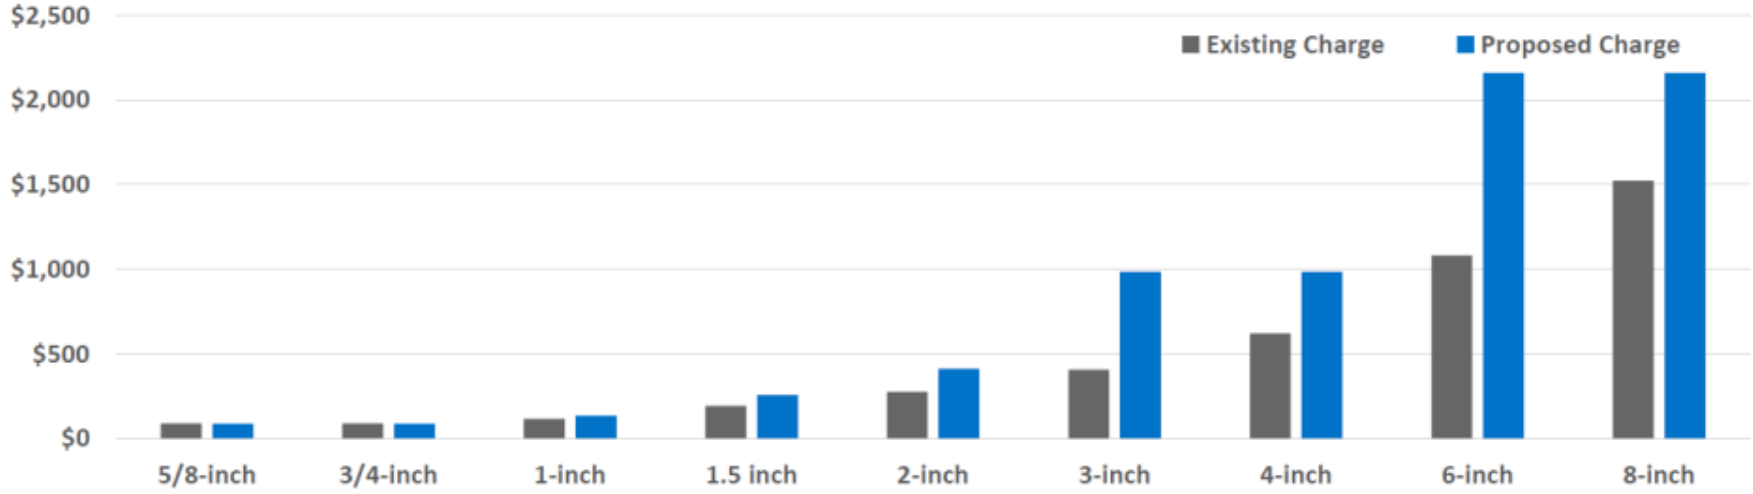
Proposed Water Rates



5/8” & 3/4” Customer in Zone Class A

What is a “Billing Unit”

- 748 Gallons



Meter Connection Rates

All Zone Classes

	5/8-inch	3/4-inch	1-inch	1.5 inch	2-inch	3-inch	4-inch	6-inch	8-inch
Existing	$88.57	$88.57	$115.14	$191.20	$274.57	$407.43	$620.04	$1,080.63	$1,523.49
Proposed	$85.38	$85.38	$134.23	$257.07	$413.67	$984.31	$984.31	$2,160.61	$2,160.61
# Meters	639	10,982	1,369	392	468	32	30	6	11

Next Steps

Council Workshop NO.1
Sept 2023
Proposition 218 Notice mailed
Oct 2023
Community Workshop
(Oct 2023)
Public Hearing
(Nov 2024)
Implementation
(Jan 2024)

Recommendations

1) Adopt the Water Master Plan,

2) Provide direction for the consideration of water rates and fees

SECTION ES
EXECUTIVE SUMMARY

ES-1 Introduction

The City of Glendora (City) provides potable water service to residential, commercial, industrial, public parks and schools. The City recognizes its responsibility to efficiently meet the customers' needs with long range planning efforts. By reviewing its existing water system and future needs, the City can continue to maintain a high service level and reliability in its water system in a cost effective and fiscally responsible manner. This report is intended to update the domestic water analysis and to provide a comprehensive planning guide for improving and upgrading the City's domestic water system through the year 2040.

ES-2 Water Service Area

The City's water service area, shown on Figure ES-1, covers approximately 11 square miles, predominantly within the City of Glendora corporate boundaries. The southwesterly portion of the City, generally south of Foothill Boulevard and west of Grand Avenue is served water by the City of Azusa or Suburban Water Systems.

The service area is comprised of residential, commercial, and industrial land uses with most of the available flat land developed. The majority of the developed area consists of residential single-family homes. Currently, there are about 26 future developments/re-developments planned. Most are multi-family residential, mixed use developments, or medical/commercial building expansions (see Table 2-1).

Per the City's 2020 Urban Water Management Plan (UWMP, 2020), the water service area population was 45,551 in 2020 and is projected to have a growth of 5.6% from 2020 to 2045. The 2045 service area population is expected to be about 48,093.

ES-3 Water Supply Analysis

The City maintains a diverse water supply portfolio to be able to meet its regular and peak demands while ensuring all water quality requirements and regulations are met. The City's water supply portfolio consists primarily of groundwater and is supplemented with imported water. The City's annual water production and purchase for the past ten years is shown on Figure ES-2.

Groundwater

The City has 8 active wells with a total capacity of 9,254 gpm (14,927 AFY). The groundwater is extracted from the Main San Gabriel Basin (Main Basin) and associated sub-basins. The City currently has 6,178 acre-feet per year (4.75261 percent of the annual safe yield of the basin as determined by the Water Master) of prescribed groundwater rights as part of the 1973 Main Basin Adjudication. In 2021, the City pumped 8,447 acre-feet, which represents approximately 81% of its demands.

Details of the City's groundwater rights are provided in Section 3-2, San Gabriel Basin hydrogeologic conditions in Section 3-3;

Annual Water Production and Purchase

Imported Water

The City is a member agency of the Three Valley's Municipal Water District (TVMWD). TVMWD is one of twenty-six-member agency wholesalers of Metropolitan Water District of Southern California (MWD) that provides imported water to the Southern California region via the Colorado River Aqueduct (CRA) and the State Water Project (SWP) systems.

The City has three active turnout connections (PM-6, PM-18, and PM-23) that is fed from MWD's Upper Feeder. PM-6, PM-18, and PM-23 have maximum capacities of 15 cfs, 10 cfs, and 15 cfs, respectively, for a total maximum capacity of 40 cfs (28,979 AFY). In 2021, the City used 1,975 acre-feet, which represents approximately 19% of its demands.

Covina Irrigating Company

The City owns a connection with the Covina Irrigating Company (CIC) with a maximum capacity of 3.3 cfs (2,390 AFY). CIC can provide supplemental water to the City via treated surface water and pumped groundwater from the Main Basin. In 2021, the City did not use any water from CIC, but has a historical average use of 22 AFY.

Potential Local Groundwater Supply Development

The City's existing average day water demands of 10,390 AFY closely approximate the current well field system production capacity (14,927 AFY per efficiency tests). With the increasing cost of imported water and increasing demands, it is advantageous for the City to maximize its groundwater pumping to meet the average day and peak season demands through enhanced groundwater pumping and evaluate other groundwater supply development options.

The City should consider Well 3, Well 4, and Well 7 (Vosburg) as potential future supply sources to provide redundancy and offset the cost of using treated imported water. The City is currently working with TVMWD on an updated study with the most current information. The updated study should be based on:

- Constructing two (2) new wells to replace the existing Well 3 and Well 4, which are over 100 years old.
- Abandonment of the existing Wells 3 and 4
- Constructing a new nitrate and perchlorate treatment plant based on the most current water quality data
- Constructing a new forebay reservoir
- Constructing a new booster pump station to pump the effluent to the San Gabriel Plant
- Constructing a new discharge pipe to the San Gabriel Plant, utilizing rehabilitated portions of the existing Vosburg Well discharge pipe at the 210 Freeway crossing, as well as channel and railroad crossings. The existing 18-inch discharge line is abandoned due to its deteriorated condition and the Gladstone Reservoir has been demolished
- Constructing a standby generator with an automatic transfer switch to operate the facility during commercial power outages
- Constructing a new well to replace Well 7 (Vosburg Well)
- Abandonment of Well 7
- Constructing a new discharge pipe from the new Well 7 to the Irwindale Treatment Plant

Cost estimates for the possible future well development and associated facilities are estimated at $85 Million without Well 7 (see Table 3-3) and $125 Million with Well 7 (see Table 3-4). Grant and loan options for the project are discussed in detail in Section 3-4.1.

Water Supply Reliability

Over the past several years, the Main Basin has experienced a reduction in groundwater levels due to decreased stormwater replenishment and longer lasting droughts. The Water Master estimates that local runoff used for groundwater replenishment has decreased over the last 10 years on average to about 55,000 acre-feet per year when compared to the historical 40-year average (years 1970 to 2010) of 111,000 acre-feet per year. In consideration of water supply reliability, cyclic storage and conjunctive use agreements are discussed Section 3-5.1.2; MWD untreated water availability is discussed in Section 3-5.1.3; recharge using recycled water and stormwater capture is discussed in Section 3-6; water banking is discussed in Section 3-7; water conservation and rationing is discussed in Section 3-8; and Main Basin water rights purchases is discussed in Section 3-9.

Recommendations

Water supply reliability is a critical component to the City's future water portfolio. Managing all the integrated parts of this portfolio will establish the most cost-effective approach to ensuring reliable service to the customers. The following are recommendations for the City to consider in implementing the City's future water supply portfolio:

1. Construction of additional groundwater wells

2. Support of projects that increase the Main Basin OSY
3. Maximize the City's cyclic storage account
4. Continue to consider replacing Well 3, Well 4, and Well 7 (Vosburg) as potential future supply source
5. Continue to work with its customers to ensure mandatory conservation restrictions are implemented and conservation rebates are readily available
6. Reach out to the non-municipal Main Basin Groundwater right holders to gage their interest in selling their groundwater rights.
7. Actively participate in TVMWD and Main Basin Water Policy decisions

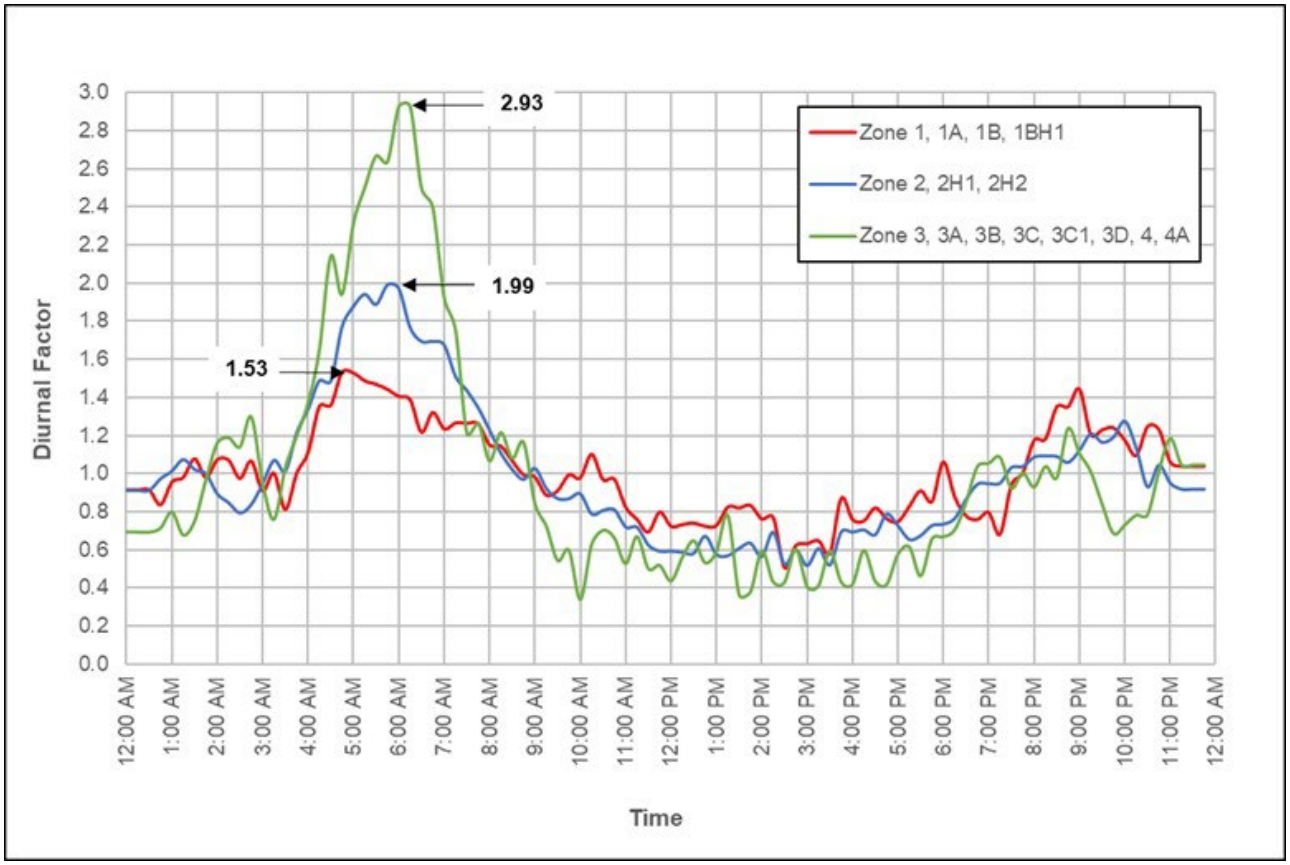
ES-5 Water Use

The City of Glendora's total annual water production and purchase from 2012 to 2021, shown on Figure ES-1, ranged from 9,288 AFY to 13,156 AFY. The Governor declared a State of Emergency in January 2014 due to severe drought conditions in California. As a result, water conservation measures were implemented and the City's water demand began to decline due to its customers conscientious water conservation efforts. The drought emergency declaration was lifted in April 2017. However, California soon fell back into drought conditions in 2018 and 2020-2021. In the last five years, the demands have rebounded slightly, but not to the same level as it had once been in the early 2010's. Over the past five years, the total production and purchase has stayed relatively steady and averaged about 10,390 AFY (9.28 mgd).

The City's annual non-revenue water has been declining over the base five years. Since 2018-2019, the non-revenue water percentage has been within industry standard (10 percent or less). It is assumed that as the City completes more and more replacement of pipe, this will reduce the number of water line breaks each year and possible undetected leaks, which in turn will reduce the non-revenue water volume.

Water Demand Variation

Demand variations through a year are influenced by seasonal effects such as temperature, humidity, and precipitation. System demand variations throughout a day are influenced by the customer base and the daily lifestyles of the customers.



Typical of most Southern California communities, the City's water consumption exhibits a distinct seasonal pattern. Peak and low monthly consumption occur during the dry summer months and wet winter months, respectively. The maximum month and minimum month factors are estimated to be 1.40 and 0.44 times the average day demand, respectively.

Within any given month, demand can vary based on usage patterns (i.e., weekend usage is typically different than weekdays) and other factors such as irrigation schedules. The maximum demand day occurring over the course of the year is an important parameter for planning purposes as required source of supply is based on this demand. The maximum day demand factor is estimated to be 1.50 times the average day demand. The maximum day demand is therefore estimated to be about 15,585 AFY (9,664 gpm or 13.92 MGD).

Knowledge of accurate demand variations over a 24-hour period is essential for proper analysis of water systems. For this study, hourly demand variations were represented by the development of

diurnal demand curves for various hydraulic zones. The diurnal demand curves were employed in determining the adequacy of the sources of supply, pumping facilities, reservoirs, and the transmission/distribution facilities. The average weekday diurnal demand curves developed for this study are shown on Figure ES-3.

Figure ES-3
Diurnal Demand Curves

Future Demands

A total of 223,840 gpd of average water use is estimated to be added throughout the service area in the future. This is based on future known developments (see Table 4-7) and developed water unit demand factors (see Table 4-6).

A summary of the existing and future water system demands is shown in Table ES-1.

Table ES-1
Water System Demands and Peaking Factors

Demand Description	Existing Demand			Future Demand			Peaking Factor[1]
	(gpm)	(mgd)	(AFY)	(gpm)	(mgd)	(AFY)	
Minimum Month[2]	2,835	4.08	4,572	2,903	4.18	4,682	0.44
Average Day[3]	6,442	9.28	10,390	6,598	9.50	10,641	1.00
Maximum Month[4]	9,019	12.99	14,546	9,237	13.30	14,897	1.40
Maximum Day[5]	9,663	13.92	15,585	9,897	14.25	15,961	1.50
Maximum Day, Peak Hour[6]	16,828	24.23	27,140	17,234	24.82	27,795	2.61

[1] *Specific Demand = Average Day Demand x Peaking Factor*

[2] *Minimum Month Factor is the lowest factor from 2012-2021*

[3] *Average Day Demand is the average from 2017-2021*

[4] *Maximum Month Factor is the highest factor from 2012-2021*

[5] *Maximum Day Factor in 2021 was 1.43 based on water meter data. A slightly conservative factor of 1.5 was selected for planning purposes.*

[6] *Maximum Day, Peak Hour Demand is calculated in hydraulic model utilizing developed diurnal patterns for each zone*

ES-6 Existing System

The existing water system is shown on Figure ES-4. The hydraulic schematic of the existing system is shown on Figure ES-5. The City operates and maintains the following potable water facilities:

- Four (4) primary pressure zones; Thirteen (13) secondary zones
- 210 miles of water mains (including hydrant laterals), 1-inch through 30-inches in diameter
- About 1,800 Fire hydrants
- 13,483 water meters (Table 5-1)
- Eight (8) active wells
- Twenty-nine (29) storage reservoirs with a total volume of 34.6 MG
- Twenty (20) booster pump station (3 of them serve hydropneumatic systems)
- Three (3) hydropneumatic tanks
- Three (3) pressure regulating stations
- Four (4) imported water connections
- Four (4) inter-agency connections

Transmission and Distribution System

The existing water system includes approximately 210 miles of transmission and distribution pipe that ranges in size from 1-inch through 30-inches. The majority of the pipe is 6-inches (36.9%) or 8-inches (29.4%) in diameter. Most of the pipe is made of ductile iron (39.6%). The pipes date back to the early 1900's with most of it constructed in the 1950's and 1960's (41.8%).

Wells

The total well capacity is currently about 11,800 gpm or 17.0 mgd. Well information and characteristics are provided in Table 5-3.

Figure ES-5

Storage Tanks

The City's water system includes twenty-nine (29) active storage reservoirs ranging in capacity from 10,000 gallons to 7.00 million gallons (MG). There are three (3) hydropneumatic tanks ranging in size from 3,000 gallons to 10,000 gallons. The total reservoir capacity is about 34.6 MG. The characteristics of each existing storage reservoirs and hydropneumatic tanks are shown in Table 5-4.

Booster Pump Stations

There are twenty (20) booster pump stations in existing water system. Three of the stations serve water to hydropneumatic systems. Details of each booster pump station are summarized in Table 5-5.

Pressure Regulating Stations

The City's water system consists of three (3) pressure regulating stations as listed in Table 5-6. PRS2 is regularly operating to feed lower pressure Zone 1RA from pressure Zone 1. The other two facilities normally remain closed.

Imported Water Connections

The City has access to imported water through the four (4) connections listed in Table 5-7. The City's goal is to maximize the use of groundwater to the extent possible and limit the amount of imported water that is drawn from these connections.

Emergency Connections

The City's water system has four (4) emergency connections with neighboring cities or water utilities. These inter-agency connections allow the City to obtain water from or provide water to adjacent water systems. The inter-agency connections and their locations are listed in Table 5-8. Each connection has to be manually activated.

ES-6 Performance Evaluation Criteria

Performance criteria are established to evaluate the adequacy of various water system components through a systematic analysis, and to identify necessary improvements to the system for inclusion in a Capital Improvement Program (CIP). For the City's water system, these criteria are generally in accordance with the California Code of Regulations, Title 22. This includes service pressures, storage capacity, and sources of supply. Other criteria are based on federal, state and local jurisdictional requirements. The performance evaluation criteria is summarized in Table ES-2. Details of the criteria can be found in Section 6.

Table ES-2
Performance Evaluation Criteria

Item	Description	Criteria	Existing Requirement	Future Requirement
1	Source of Supply	Maximum Day Demand from Groundwater Sources	13.27 mgd	13.57 mgd
2	a. Operational Storage	30% of Maximum Day Demand	3.98 MG	4.07 MG
	b. Emergency Storage	100% Average Day Demand	9.28 MG	9.49 MG
	c. Fire Suppression Storage	Highest Fire Flow Requirement		
	Single Family Residential	1,250 gpm for 2 hours	0.15 MG	0.15 MG
	Single Family Residential with Hillside Exposure	2,500 gpm for 2 hours	0.30 MG	0.30 MG
	Multi-Family Residential	2,500 gpm for 2 hours	0.30 MG	0.30 MG
	Commercial	3,500 gpm for 3 hours	0.63 MG	0.63 MG
	Industrial	4,000 gpm for 4 hours	0.96 MG	0.96 MG
3	Wells	Casing and screen sizing should meet maximum velocity requirements		
		Flow meters, discharge pressure gauges, and telemetry equipment for alarm and status notification at each site.		
4	Booster Pump Stations	For open zones with sufficient fire demand storage, the pump capacity into the zone must meet maximum day demands for the zone itself as well as any zones it provides water to. Well supply and imported water directly supplying the zone can be included in the pump capacity.		
		For open zones that do not have sufficient fire demand storage, the pump capacity into the zone must meet maximum day plus fire demands for the zone itself as well as any zones it provides water to. Well supply and imported water directly supplying the zone can be included in the pump capacity.		
		For closed zones, the pump capacity into the zone must meet maximum day plus fire demands or peak hour demands, whichever is greater. A separate fire pump can be installed to meet the fire flow requirements.		
		Stand-by pump equal in size to the largest duty pump		
		Flow meters, suction and discharge pressure gauges, and telemetry		
		Provisions for emergency power at all stations		
5	Static Pressures	Minimum 40 psi		
		Desired 50-70 psi		
		Maximum 80 psi		
6	Dynamic Pressures	Minimum 40 psi during Maximum Day and Peak Hour Demand		

Table ES-2 (Continued)
Performance Evaluation Criteria

Item	Description	Criteria	Existing Requirement	Future Requirement
7	Minimum Pipe Size (New Mains and Replacement Mains)	8-inch to the last hydrant		
8	Maximum Velocities	7 fps at Maximum Day and Peak Hour Demand		
		10 fps at Maximum Day plus Fire Flow Demand		
9	Fire Flow Demand and Pressures[1]	Single Family Residential	1,500 gpm for 2 hours	
		Single Family Residential with Hillside Exposure (located within LA County Very High Fire Hazard Severity Zone)	2,500 gpm for 2 hours	
		Multi-Family Residential	2,500 gpm for 2 hours	
		Commercial	3,500 gpm for 3 hours	
		School	3,500 gpm for 3 hours	
		Industrial/Manufacturing	4,000 gpm for 4 hours	

[1] *Fire flow demand must be maintained with 20 psi minimum pressure at the fire hydrant outlet.*

ES-7 Hydraulic Model

A computer model of the City's water system was developed in the Innovyze InfowaterPro software platform. It was utilized to aid in the evaluation of the adequacy of the existing facilities under the current and future supply and demand conditions.

Generally, the model development steps included the following:

1. Utilize the City's existing hydraulic model which was updated in 2017 as the basis for the model geometry
2. Update pipeline geometry through review of as-built plans, atlas sheets and discussions with engineering and operations staff
3. Verify and complete pipe information (pressure zone, diameter, length, roughness)
4. Verify and complete junction information (pressure zone, elevations)
5. Add detailed facility data (wells, pump stations, reservoirs, and imported water connections)
6. Add facility information (dimensions and water level for tanks, pump curves for booster pumps and wells, and aquifer levels for well pump suction levels)
7. Determine and assign demands to model junctions
8. Develop and assign diurnal demand curves to model junctions
9. Assign controls to facilities (pump start and stop conditions, imported water connection settings)

Details regarding the model development are included in Section 7.

ES-8 Model Calibration

The existing water system model was calibrated to verify the accuracy of the model, system configuration, and the hydraulic parameters utilized. The general calibration methodology was to gather as much system information as possible from available SCADA system data and pressure and reservoir level measuring equipment temporarily installed in the field. This information was then used for input into the model as well as comparison of model and field results. Typical indicators of an accurate model include the following:

- Pressure differences of five (5) percent or less
- Well and booster pump station flow differences of five (5) percent or less
- Reservoir level differences of 1 foot or less

The calibration period, the time period in which SCADA data and pressure data was collected in the field, was from May 25, 2022 to June 15, 2022. A 24-hour period was selected to represent normal demand and operating conditions during the calibration period. "Normal conditions" means that there were no noticeable anomalies and/or significant variation in the flows and pressures that could indicate an unusual event such as a fire or a main break. The calibration day was selected to be June 7, 2022.

All of the typical indicators of an accurate model were met after performing the calibration of City's existing water system model. Details regarding the model development are included in Section 8.

ES-9 System Hydraulic Analysis

The established performance evaluation criteria detailed in Section 6 and the calibrated hydraulic model were utilized in analyzing the system and evaluating its adequacy under average day, maximum day, peak hour, and maximum day plus fire flow conditions. Analysis of the City's source of supply, storage, and pumping facilities were also conducted. Existing and future system deficiencies were identified and mitigation projects were formulated based upon the results of the model runs, the facility analysis, and input from City staff. Proposed projects were added in the hydraulic model to test the operation of the system after implementation. The results of the analyses were used in formulating the capital improvement program.

Source of Supply

The criterion established requires the City's source of supply to be equal to one maximum day demand. For the City of Glendora, this means that under current demand conditions, the City should have an existing source of supply capacity of 9,215 gpm (13.27 mgd). In the future, with increased demands, the City should have a source supply capacity of 9,361 gpm (13.48 mgd).

The City's groundwater supply is shown in Table ES-3. Using design capacities, the total supply is 11,800 gpm which exceeds the existing and future source of supply requirement. Using the current capacities based off of recent efficiency tests, the total supply is 9,254 gpm which just meets the existing requirement. The City currently does often meet the maximum day demands by utilizing one of the imported water connections (PM-18/Amelia BPS).

The imported water connections have a total capacity of 19,434 gpm as shown in Table ES-4, which exceeds the existing and future source of supply requirement. These connections are primarily planned to be utilized during peak demand periods and emergencies.

Table ES-3
Groundwater Supply

Source of Supply	Design Capacity (gpm)	Current Capacity (gpm)	Efficiency Test Date
Well 2	500	525	2/15/22
Well 5	2,200	1,709	6/9/21
Well 8	1,500	1,090	2/15/22
Well 9	1,300	1,410	2/15/22
Well 10	600	530	2/15/22
Well 11	1,200	940	2/15/22
Well 12	3,100	2,100	4/11/22
Well 13	1,400	950	3/26/21
Total	**11,800**	**9,254**	

Table ES-4
Imported Water Connection Capacities

Source of Supply	Maximum Capacity (cfs)	Maximum Capacity (gpm)
Three Valleys Municipal Water District		
PM-6	15.0	6,732
PM-18	10.0	4,488
PM-23	15.0	6,732
Covina Irrigating Company		
CIC	3.3	1,481
Total	**43.3**	**19,434**

Storage

The system overall has a surplus of 1.447 million gallons of storage (See Table 9-3). The storage for each zone was also analyed and the following observations were made:

1. Zone 1, 1RA, & 1RB has sufficient storage with a calculated storage surplus of 3.37 MG.
2. Zone 1A has a storage deficit of 0.062 MG.
3. Zone 1B & 1BH1 has sufficient storage with a calculated storage surplus of 0.055 MG.
4. Zone 2, 2H1, & 2H2 has sufficient storage with a calculated storage surplus of 1.628 MG.
5. Zone 3 has sufficient storage with a calculated storage surplus of 2.117 MG.
6. Zone 3A has a storage deficit of 0.100 MG.
7. Zone 3B has a storage deficit of 0.302 MG.
8. Zone 3C & 3C1 has a storage deficit of 0.285 MG.
9. Zone 3D has a storage deficit of 0.281 MG.
10. Zone 4 has a storage deficit of 0.087 MG.
11. Zone 4A has a storage deficit of 0.133 MG.

The zones with storage deficits are primarily zones in the higher elevations of the service area with small demands. The fire suppression storage criteria is the dominant portion of the total required storage. It is often infeasible to construct larger storage tanks in these zones. It is therefore recommended that hydraulic studies and preliminary design studies be conducted to determine if fire flow pumps and/or larger capacity pumps can be installed at the pump stations that provide water to these zones.

The existing available storage system wide is estimated at 24.428 MG. The future average day and maximum day demands are estimated at 9.385 MG and 14.078 MG, respectively. In the event of an extreme emergency, without any well supply or imported water supply, the water system would be able to provide water to customers for about 2.6 average demand days or 1.7 maximum demand days. If an emergency is expected to last any longer, the customers would have to cut back on water use until supply sources can be implemented again.

Pumping and Supply Analysis by Hydraulic Zone

The pumping and supply analysis by hydraulic zone is shown in Table 9-4.

For open zones with sufficient fire demand storage, the pump capacity into the zone must meet the maximum day demands for the zone itself and any other zones it provides water to. Well supply and imported water directly supplying the zone can be included in the pump capacity. This criteria applies to the pump capacity into Zone 1, 2, and 3 because there is plenty of storage in the reservoirs in these zones. The pump capacity meets the criteria of one maximum day demand for Zone 1, 2, and 3.

For open zones that do not have sufficient fire demand storage, the pump capacity into the zone must meet maximum day plus fire demands for the zone itself as well as any zones it provides water to. Well supply and imported water directly supplying the zone can be included in the pump capacity. This criteria applies to the pump capacity into Zone 1A, 1B, 3A, 3B, 3C, 3D, 4, and 4A. The pump capacity does not meet the criteria of maximum day plus fire demand for any of these zones.

For closed zones, the pump capacity into the zone must meet maximum day plus fire demands or peak hour demands, whichever is greater. A separate fire pump can be installed to meet the fire flow requirements. This criteria applies to the pump capacity into Zone 1BH1, 2H1, and 2H2. The pump capacity does not meet the criteria of maximum day plus fire demand for any of these zones.

The zones that do not meet the pumping capacity criteria are the zones with low daily demands. These zones generally do not have large reservoirs because the demands are low. It would be difficult to turn over the water in a large reservoir on a daily basis with such low demands. Water would become stagnant and water quality would degrade.

In all of the zones that do not meet the pumping capacity criteria, the pumping capacity into the zone exceeds the maximum day demands of the service zone. The fire flow demand is the dominant portion of the required pumping capacity. In lieu of constructing more and/or larger storage reservoirs in these zones, it is recommended that hydraulic studies and preliminary design studies be conducted to determine if fire flow pumps and/or larger capacity pumps can be installed at the pump station that provide water to these zones. These studies go hand in hand with the studies recommended for zones with storage deficits.

System Pressures and Velocities

The hydraulic model was utilized to analyze the existing and future system under various demand conditions.

Service pressures exceed 80 psi (maximum pressure allowed per the plumbing code without a pressure regulator) throughout the system. City staff reports that all services in these areas of high pressures have pressure regulators installed.

There is just one location in the system that experiences a maximum velocity between 7 and 8 feet. This is within the 24-inch pipe downstream of the San Gabriel Booster Pump Station. Although the velocity is predicted by the model to exceed the criteria, the exceedance is very minimal and therefore it is not believed to be a major issue. No action is recommended.

Fire Flow Analysis

The fire flow analysis was conducted utilizing the existing maximum day demand scenario. Fire flow demands were applied at all fire hydrant locations in the model. If the fire node was located near multiple land use types, the highest fire flow demand was utilized. The fire flow criterion requires a residual pressure of 20 psi at the fire hydrant outlet. Since the City's hydraulic model only includes the location of the hydrant connection with the mainline and not the hydrant itself, a residual pressure of 26 psi is utilized for analysis purposes. It is estimated that there will be about 6 psi loss from the water main, through a typical 6-inch hydrant lateral to the fire hydrant outlet.

If the residual pressure criteria was still not met utilizing multiple hydrants in a certain area, improvement recommendations were developed, which either include a pipe size increase, pipe looping, and/or addition or relocation of fire hydrants. There are areas where fire flows can be increased if the hydrant is connected to a larger pipe or a pipe in an upper zone, located nearby. The fire flow improvement locations are shown on Plate 9-1.

Additional Hydraulic Improvements

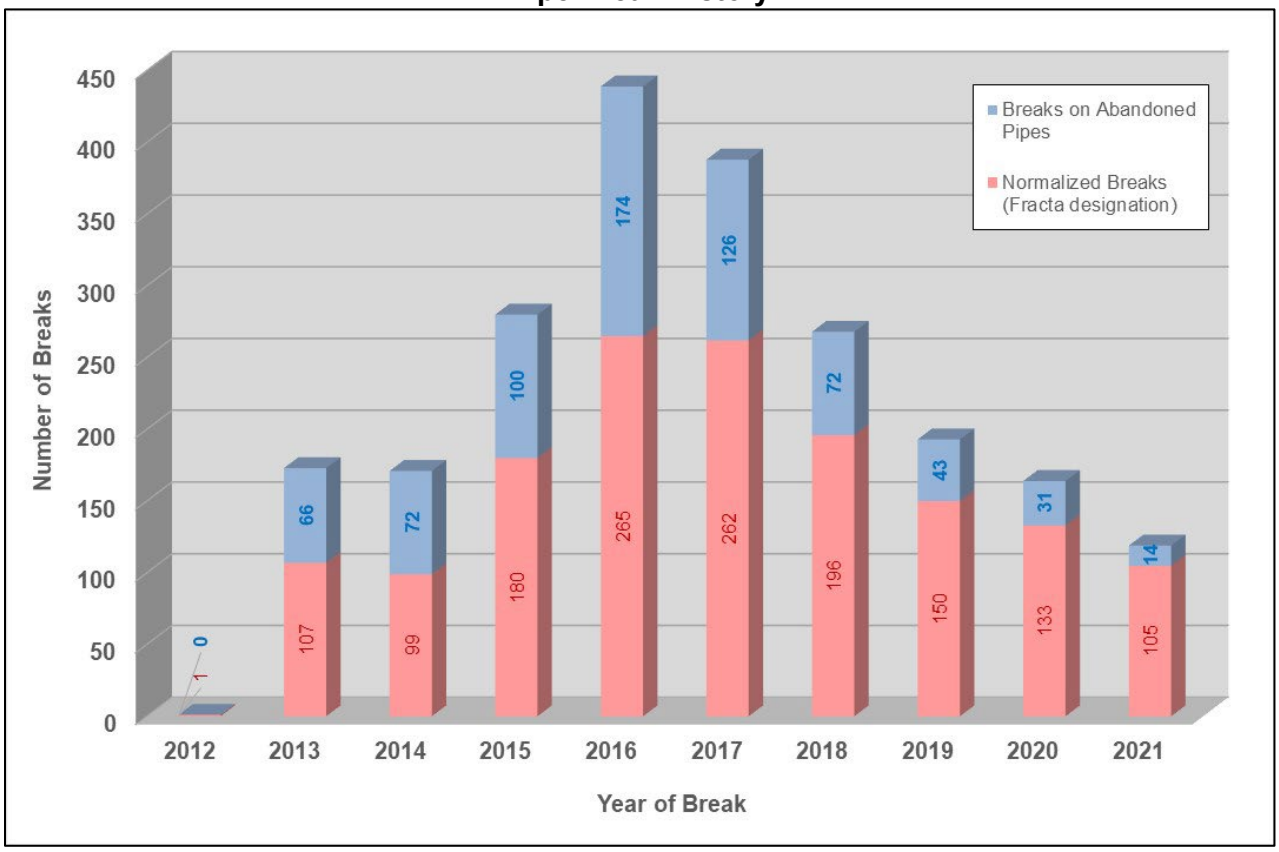
Additional hydraulic improvements are recommended based on staff interviews:

1. Looping of pipes in Zone 3D (Bluebird Reservoirs and BPS) to improve hydraulics and fire flow availability.
2. Extension of pipes in North Glendora Avenue in Zone 3A for future customers.
3. A connection at Bennet Avenue and Parkview Terrace to improve hydraulics and fire flow availability.

The additional improvement locations are shown on Plate 9-1.

Water Age Analysis

The water age analysis was conducted utilizing the existing average day demand scenario for a 90 day period. Generally, Zone 1 was found to have the lowest water age (1 to 5 days) in the system because the source of supply is constantly providing water directly into Zone 1. The area of Zone 1 south of the 210 Freeway has higher water age than the rest of the zone, ranging from 5 to 10 days. Water age in the higher zones generally range up to 15 days. Water age in Zone 3C and 3C1 exceeds 15 days due to minimal demands.



Generally, a water age of 7 days or less is desired. Mixers can help in reducing water age and improving water quality and have been recommended for several reservoirs. Newly constructed reservoirs should include mixers in the future.

ES-10 Pipe Replacement Program

According to the 2021 Drinking Water Report Card, developed by the American Society of Civil Engineers, the national average break rate ranged between 10 breaks per 100 miles of pipe per year to 37 breaks per 100 miles of pipe per year.

The break records show that the City's water system has experienced about 225 breaks per year between 2017 and 2021, summarized in Figure ES-6. This equates to 107 breaks per year per 100 miles of pipe (225 breaks / 2.1 hundred miles of pipe), which is much greater than the national average.

Figure ES-6
Pipe Break History

Based on a review of the City's as-built plans from the last 10 years, the City has been replacing an average of 10,300 feet of pipe annually (1% of the total system). It is recommended that the City continue implementing an annual pipe replacement program to reduce the number of water breaks each year.

For this Master Plan study, the recommended pipe replacement program was developed based on historical breaks and leak records, a risk assessment, problematic areas identified by City staff, and critical facility (hospitals, police stations, fire stations, etc) locations. These project recommendations were developed independently of the hydraulic analyses.

Risk Assessment

Risk assessments have become more important as the average age of infrastructure in Southern California has increased and more breaks have occurred. The Water Research Foundation describes the main objectives of an effective risk assessment as one that includes:

1. Reduction in the number and cost of failures, by identifying high-risk assets and enabling cost-effective, targeted, proactive remedies

2. Extension of the useful life of assets, by distinguishing those that are merely old from those that are truly impaired
3. Reduction in uncertainties, enabling confident answers to question from the public and others

Risk relates to the probability of something bad happening, or the likelihood of a negative impact occurring, and over time, a water distribution system will experience water breaks or leaks. These failures in a water system can be caused by multiple factors such as pipe age, pipe material, pipe bedding, water characteristics, external loads (from traffic or soils), soil characteristics, and/or weather. Some of the primary goals of a water utility are to prevent catastrophic failures from occurring, address breaks and leaks as quickly as possible, and continue to provide reliable and safe water to its customers while minimizing disruptions to service.

Risk is the combination of both Likelihood of Failure (LoF) and Consequence of Failure (CoF). It takes into account the asset's physical condition, as well as the impact that its failure would have on system performance. LoF refers to the probability of failure based on the pipe features, surrounding area attributes, and historical pipe break data. CoF is the combination of direct and indirect impacts on the vicinity and community due to a potential asset failure.

The pipeline risk assessment includes an evaluation of various elements that affect the LoF and CoF.

Artificial intelligence, machine learning (AI-ML) technology was used to calculate the LoF for the pipeline risk assessment. Contracted by AKM, Fracta provided the software as a service (SaaS) solution to develop the LoF scores.

The CoF elements were modeled in the Fracta online platform, using the widely accepted triple bottom line (TBL) framework, which is a method that categorizes the consequence of failure as social, economic, and environmental factors.

Details of the risk assessment can be found in Section 10.

Pipe Priorities

Pipe priorities were developed by looking at the total risk score, historical pipe break data, LoF scores, City pipe concerns, and pipes near critical facilities (businesses or operations where water service is essential, such as hospitals, police facilities, fire facilities, dialysis centers, and care facilities). Pipe priorities are categorized as follow:

- Pipe Priority 1 projects include pipes with the following:
  - Total Risk scores in the top 1% of the total system length
  - History of pipe breaks (9 or more breaks between 2012 and 2021)
  - LoF scores greater than 75% probability of breaking in the first year.
- Pipe Priority 2 projects include pipes with the following:
  - Total Risk scores between 1.1% and 5% of the total system length
  - History of pipe breaks (Between 3 and 8 breaks between 2012 and 2021)
  - LoF scores greater than 75% probability of breaking in the second year.
- Pipe Priority 3 projects include pipes with the following:
  - Total Risk scores between 5.1% and 20% of the total system length
  - History of pipe breaks (2 breaks between 2012 and 2021)

- LoF scores greater than 75% probability of breaking in the fifth year.
- Pipes of concern
- Pipes near critical facilities

Project Recommendations

Project recommendations were generally developed to include groups of pipes in the same general vicinity. The project priority was based on the highest individual pipe priority within each group of pipes and are categorized as Project Priority 1, Project Priority 2, and Project Priority 3.

The individual projects within each priority group were prioritized based on discussions with the City regarding historical condition concerns, the total pipe CoF values within each project, and the results from the hydraulic analyses.

As the Priority 1 projects in the pipe replacement program are implemented, it is recommended that the City reevaluate the lower Priority 2 and 3 projects with newer current leak and break data. The pipe priority and project recommendations should be updated at that time.

The pipe replacement projects are shown on Plate 10-2 and summarized in Table 10-6. The detailed project summary data is included in Appendix 10-1.

The total Pipe Replacement Program costs are as follows:

Priority 1 Projects	101,400 feet	$64.8M
Priority 2 Projects	67,900 feet	$43.4M
Priority 3 Projects	100,100 feet	$75.0M
Total	**269,300 feet**	**$183.1M**

ES-11 Facility Assessments

As a part of the Master Plan work, each well, pump station, and storage reservoirs was evaluated to assess its condition and develop improvement recommendations. As-built plans, sanitary survey reports, maintenance records, pump curves and efficiency tests, dive reports, and other available historical information were reviewed as a part of the evaluation. City staff was interviewed by and accompanied AKM staff on tours of each facility as well.

Details of all assessments and recommendations can be found in Section 11, Appendix 11-1 and Appendix 11-2.

ES-12 Capital Improvement Program

The Capital Improvement Program (CIP) consists of projects that will enhance the distribution system to meet the established criteria, properly maintain the system's assets, and replace the facilities that have reached the end of their useful lives. The goal of the CIP is to provide the City of Glendora with a long-range planning tool for implementing its water system improvements in an orderly manner and a basis for financing of these improvements. In order to accomplish this goal, it is necessary to estimate project costs of the recommended system improvements, establish a basis, and prioritize the projects.

It should be noted that some of the improvements recommended herein are conceptual in nature based on existing available information. Therefore, they should not be considered as absolute for

final design. Further analysis and refinement will be necessary prior to commencing work on the final plans, specifications and estimates package for each project. Detailed preliminary design studies should be prepared to select the final design projects.

Pipeline Replacement Cost Estimates

Proposed pipe replacement project costs are planning level estimates based upon recent information provided by the City for similar projects and include contingencies for this planning level study. Specific alignments and refined cost estimates should be developed as part of the preliminary design phase for each recommended project.

The following construction costs were utilized for the Fire Flow Improvements (Table 9-6), Additional Hydraulic Improvements (Table 9-7) and the Pipe Replacement Program Projects (Table 10-6).

1. Pipeline replacement cost = $50 per diameter inch per foot of pipe. The replacement costs are based on pipeline replacement projects between Fiscal Year 2018-2019 and Fiscal Year 2020-2021.
2. Addition of a fire hydrant to an existing water main or reconnection of a fire hydrant lateral to an existing water main = $15,000
3. Valve replacement = $10,000

The total project costs include construction, contingency, design and administrative, and construction management and inspection costs. The individual cost components are calculated as follows:

1. Construction Cost = Unit Cost x Recommended Units
2. Design and Administrative Cost = 15% of the Construction Cost
3. Construction Management Cost = 15% of the Construction Cost
4. Contingency Cost = 20% of the Construction Cost
5. Total Project Cost = Construction Cost + Design and Administrative Cost + Construction Management Cost + Contingency Cost

   Total Project Cost = 1.5 x Construction Cost

Facility Improvement Costs

The recommended facility improvement cost estimates (Table 11-3) are based upon recent project experience and include contingencies for this planning level study.

The total project costs include construction, contingency, design and administrative, and construction management and inspection costs. The individual cost components are calculated as follows:

1. Construction Cost = Unit Cost x Recommended Units
2. Design and Administrative Cost = 20% of the Construction Cost
3. Construction Management Cost = 15% of the Construction Cost
4. Contingency Cost = 20% of the Construction Cost
5. Total Project Cost = Construction Cost + Design and Administrative Cost + Construction Management Cost + Contingency Cost

Total Project Cost = 1.55 x Construction Cost

The design cost is set at a higher percentage for facility improvements than it is for pipeline improvements. It is expected that facility improvements will require preliminary design studies and hydraulic analysis that will result in a higher design cost than the pipeline improvements.

Construction costs are expected to fluctuate as changes occur in the economy. These costs should therefore be reevaluated and updated annually based upon Engineering News Record (ENR) Index for the Los Angeles area (ENRLA), with the base ENRLA Index of 14,033.31 for February 2023.

Project Priorities

The primary consideration in establishing project priorities for the capital improvement program list must always be given to the health, safety and welfare of the public and the customers.

The fire flow improvement projects provided in Table 9-6 are listed in order of priority based on the degree of the fire deficiency identified in the hydraulic model analysis described in Section 9.

The pipe replacement program projects provided in Table 10-6 are listed in order of priority based on the risk assessment described in Section 10.

The facility improvements are provided in Tables 11-1 through 11-4 by facility site. The improvements are sorted by priority in Appendix 11-2.

Although recommended projects are assigned a priority based on the analysis conducted for this Master Plan study, the City should review the prioritization and adjust it annually to respond to changed conditions and to take advantage of concurrent construction, such as street paving projects or adjacent infrastructure work.

The recommendations and cost estimates are guidelines for the City to plan future projects and financing. Preliminary design and more detailed hydraulic studies may lead to changes in project definitions and costs as well as priorities.

Capital Improvement Program Summary

The total Capital Improvement Program costs are as follows:

Fire Flow Pipe Improvement Projects (Table 9-6)	$ 8,638,800
Additional Hydraulic Improvement Projects (Table 9-7)	$ 762,000
Pipe Replacement Program Costs – Priority 1 (Table 10-6)	$64,772,867
Pipe Replacement Program Costs – Priority 2 (Table 10-6)	$43,393,241
Pipe Replacement Program Costs – Priority 3 (Table 10-6)	$74,960,553
Well Improvement Costs (Table 11-1)	$35,003,650
Reservoir Improvement Costs (Table 11-2)	$52,757,349
Booster Pump Station Improvement Costs (Table 11-3)	$55,468,300
Miscellaneous Water Facility Improvement Costs (Table 11-4)	$14,169,624
Total CIP Cost	**$349,926,085**

Irwindale Facility

Possible redevelopment of Wells 3, 4, and 7 and upgrades to the Irwindale Facility are discussed in Section 3-4.1. Potential costs are provided in Tables 3-3 and 3-4. It is estimated that upgrades to the Irwindale Water Treatment Facility, including Well 3 and 4 would cost about $84 Million. If redevelopment and construction of Well 7 is included in the project, the cost would increase to about $127 Million. These costs were not included in the CIP as a study was underway at the time of the Master Plan and funding options were being considered.

Short Term Capital Improvement Projects

Many high priority projects have been identified through this Water Master Plan Update. It is going to take time for the City to address all the recommended projects. In the short term (next five years), the following projects are considered to be the highest priority and should be addressed by the City as soon as possible:

1. Tank Mixers
2. Reservoir Roof Railings
3. SAFT Climb Ladders for Reservoirs
4. Hatch Replacements or Additional Hatches for Reservoirs
5. Ventilation Improvements for Reservoirs
6. Overflow Outlet Structure at Hidden Springs B
7. Replace Security Fence at Morgan Ranch A
8. Comprehensive SCADA Upgrade Assessment
9. North Glendora Reservoir Replacement
10. Comprehensive Valve Assessment
11. Evaluation of Infiltration at Valley Center B21
12. Valve Replacement Program
13. Reconstruct Suction Line at Sierra Madre B
14. Site Improvements at Big Dalton A
15. Access Road Improvements at South Hills West A
16. Access Road Improvements at Glencoe B
17. Add Retaining Wall at Glencoe B
18. Remove Existing Boy Scout Pump Station and Reservoir
19. Construct Above Ground Tank with Mixer to Replace Boy Scout Reservoir
20. Add Chlorine Analyzer at Sierra Madre B
21. Remove/relocate IT Equipment from Roof at South Hills East A
22. Comprehensive Standby Power Assessment
23. Interior and Exterior Coating at Upper Gordon B

24. Interior and Exterior Coating at Upper Gordon A
25. Fire Flow Improvement Pipeline Projects, listed in order of priority in Table 9-6
26. Additional Hydraulic Improvements, listed in Table 9-7
27. Priority 1 Pipe Replacement Projects, listed in Table 10-6 and Appendix 10-1

SECTION 1
INTRODUCTION

1-1 Purpose

The City of Glendora (City) provides potable water service to residential, commercial, industrial, public parks and schools. The City recognizes its responsibility to efficiently meet the customers' needs with long range planning efforts. By reviewing its existing water system and future needs, the City can continue to maintain a high service level and reliability in its water system in a cost effective and fiscally responsible manner. This report is intended to update the domestic water analysis and to provide a comprehensive planning guide for improving and upgrading the City's domestic water system through the year 2040.

1-2 Previous Studies

Previous studies completed and utilized in the development of this Water Master Plan include the following:

- *2021 LWS Sanitary Survey, February 2022*
- *2020 Urban Water Management Plan, June 2021*
- *2017 Water System Master Plan, July 2017*
- *City of Glendora, 2013-2021 Housing Element*
- *Glendora Community Plan 2025, Land Use Element*

1-3 Scope of Work

The scope of work for this study consists of the following:

Task 1 – Project Management

Task 2 – Data Collection and Review

Task 3 – Water Demand Analysis

Task 4 – Water Supply analysis

Task 5 – Planning Criteria

Task 6 – Water System Condition Assessment

Task 7 – Water Quality Analysis

Task 8 -- Hydraulic Model of Water System

Task 9 – Existing System Hydraulic Analysis

Task 10 – Future Water System Hydraulic Analysis

Task 11 – Capital Improvement Program

Task 12 – Pipeline Replacement Program

Task 13 – Water Master Plan Development

Task 14 – Water Master Plan Final Report

1-4 Organization of Report

The Glendora Water Master Plan describes and documents the totality of the project effort, including the methodology for developing the hydraulic model and system analysis and recommendations for system improvements. A brief outline of the report is as follows:

Section ES: Executive Summary
Section 1: Introduction
Section 2: Water Service Area
Section 3: Water Supply Analysis
Section 4: Water Use
Section 5: Existing System
Section 6: Performance Evaluation Criteria
Section 7: Hydraulic Model
Section 8: Model Calibration
Section 9: System Hydraulic Analysis
Section 10: Pipeline Replacement Program
Section 11: Facility Assessments
Section 12: Capital Improvement Program

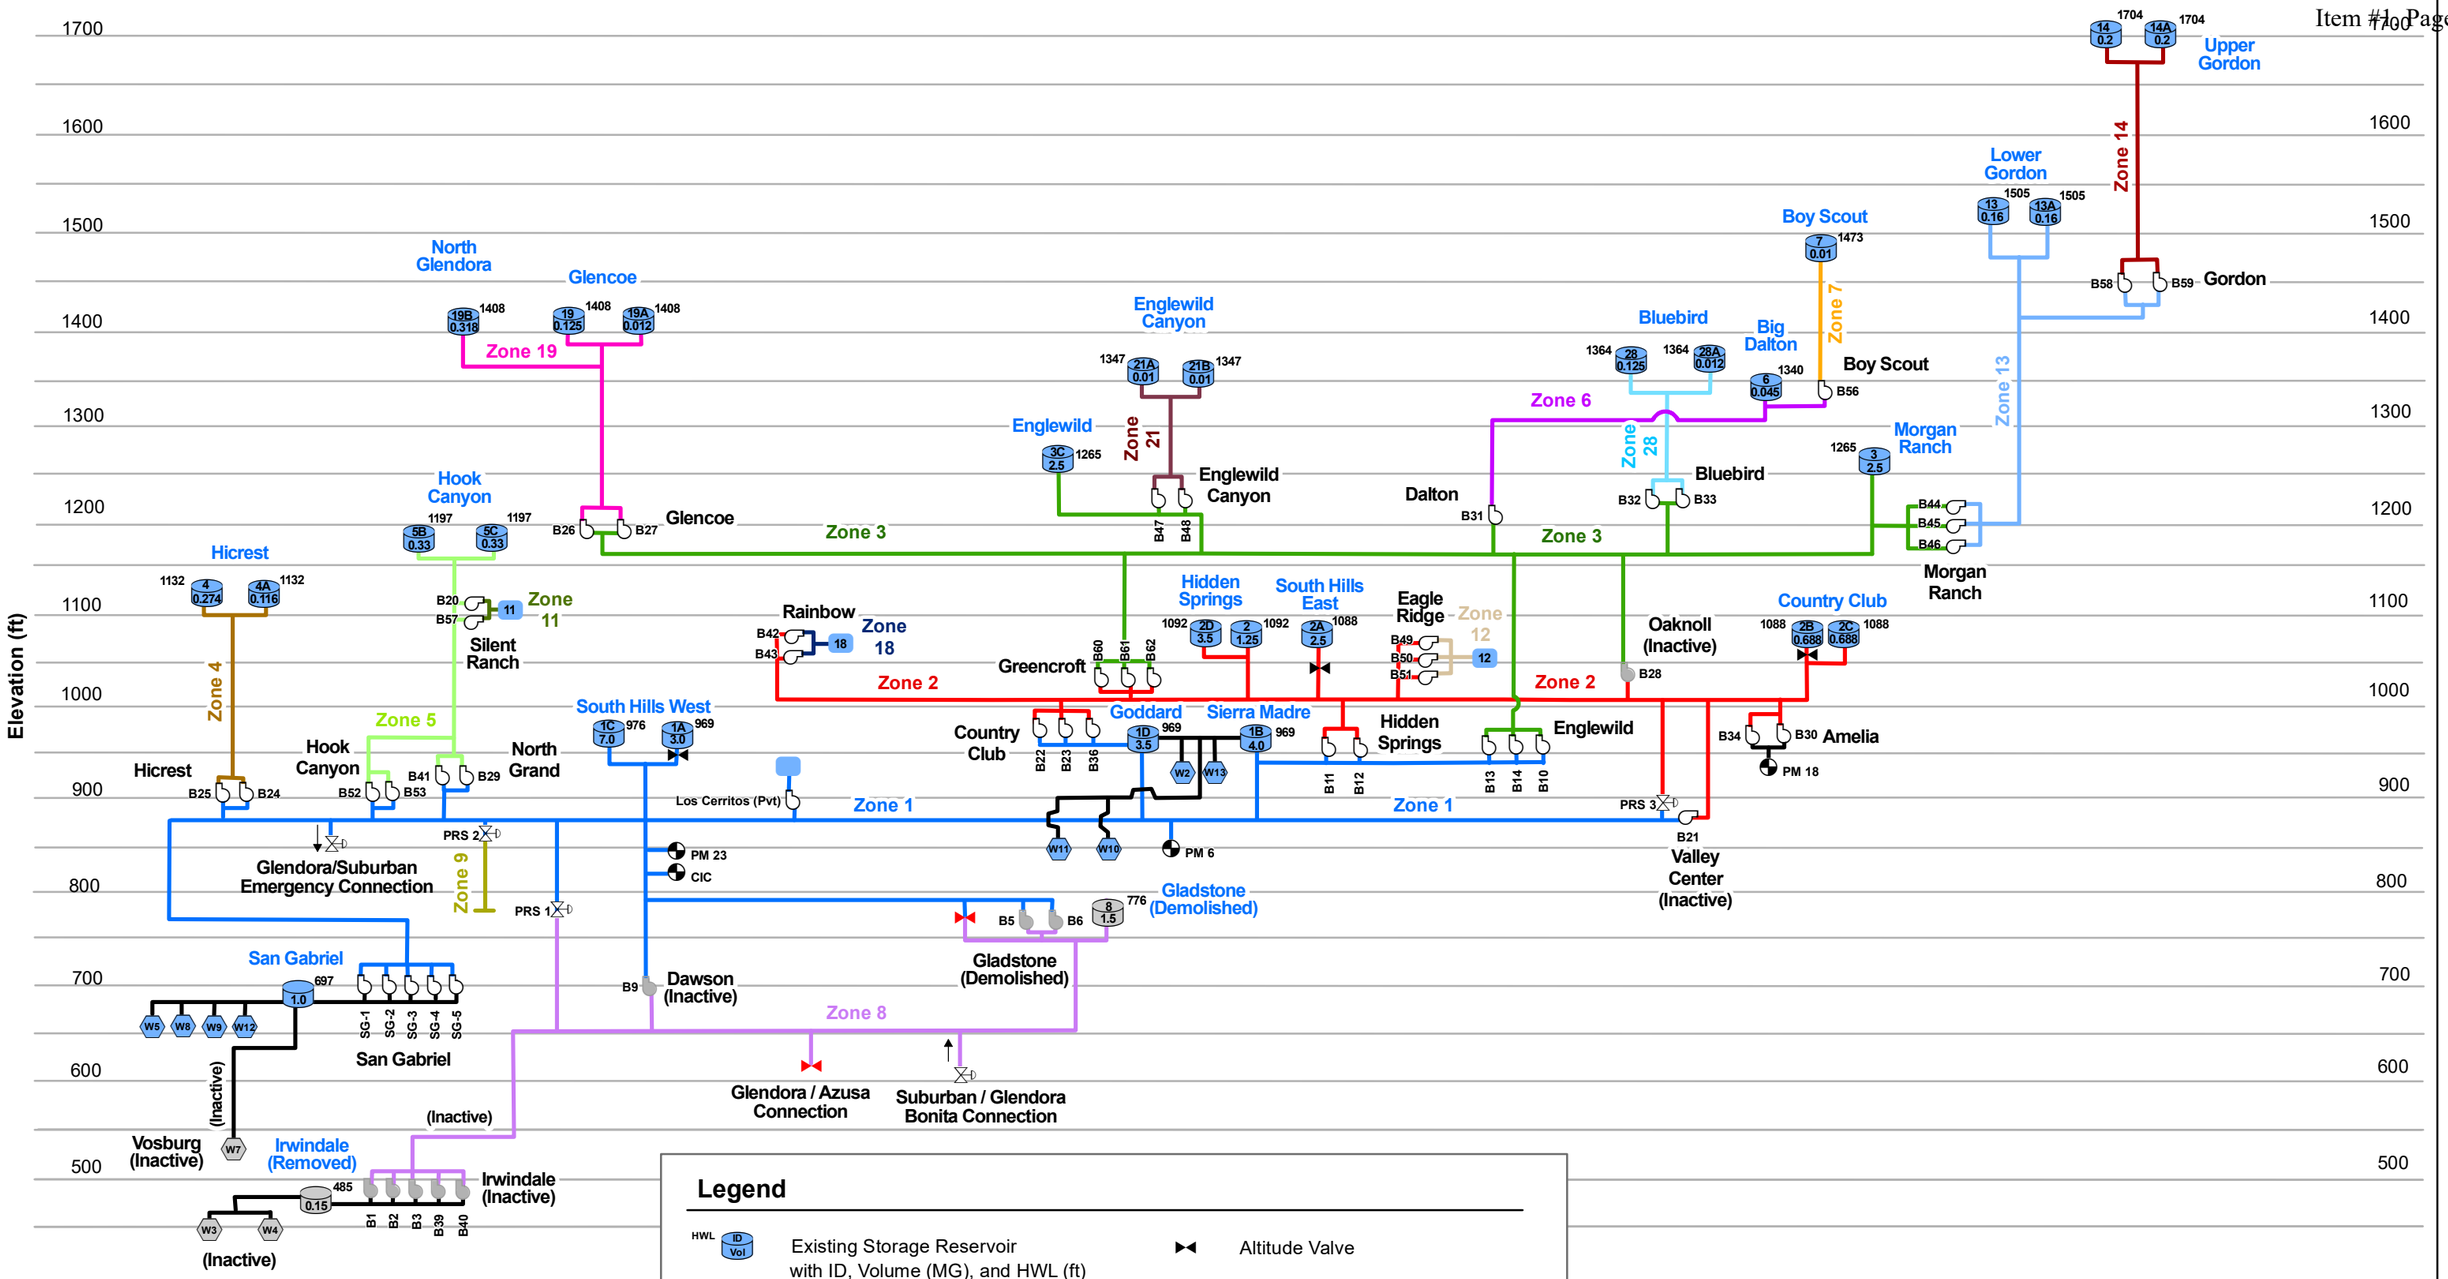
1-5 Hydraulic Zoning Nomenclature Modifications

As part of the Water Master Plan, the hydraulic Zone IDs have been renamed to simplify the zone naming, reducing it to four primary zones, and create terminology that describes the zones in relation to each other. The old Zone IDs and the new Zone IDs are provided in Table 1-1. The four primary zones are generally the zones with the greatest demand. The smaller zones that are provided water from the primary zones were assigned an associated name (i.e. Zone 1A is provided water from Zone 1). The old ID system is shown on Figure 1-1. The new ID system is shown on Figure 1-2. The remainder of the Water Master Plan report utilizes the new ID system.

The old Reservoir IDs were related to the old Zone IDs. Therefore, the Reservoir IDs were also modified. The reservoirs are now named with their common name (i.e. Hidden Springs, Hicrest, Country Club, etc.) and a letter identifier. Pump IDs were maintained, as they are not associated with zones.

The future hydraulic schematic is shown on Figure 1-3. The only difference is the North Glendora Reservoir site. In the future, there will be two North Glendora Reservoirs that will replace the current one. See Section 11-3 for more details.

1-6 Acknowledgements



AKM Consulting Engineers would like to express their sincere appreciation to the following individuals for their valuable assistance and support throughout the preparation of this study:

- Chisom Obegolu, Assistant Director of Public Works
- Ron Nichka, Water Production Supervisor
- Dale Wert, Water Division Manager
- Alexis Escobar, Civil Engineering Assistant
- Myla Decastro, Finance Management Analyst
- Doug Leumann, Water Production Lead Operator
- Marcelle Sams, George E. Booth Company Inc. (SCADA)

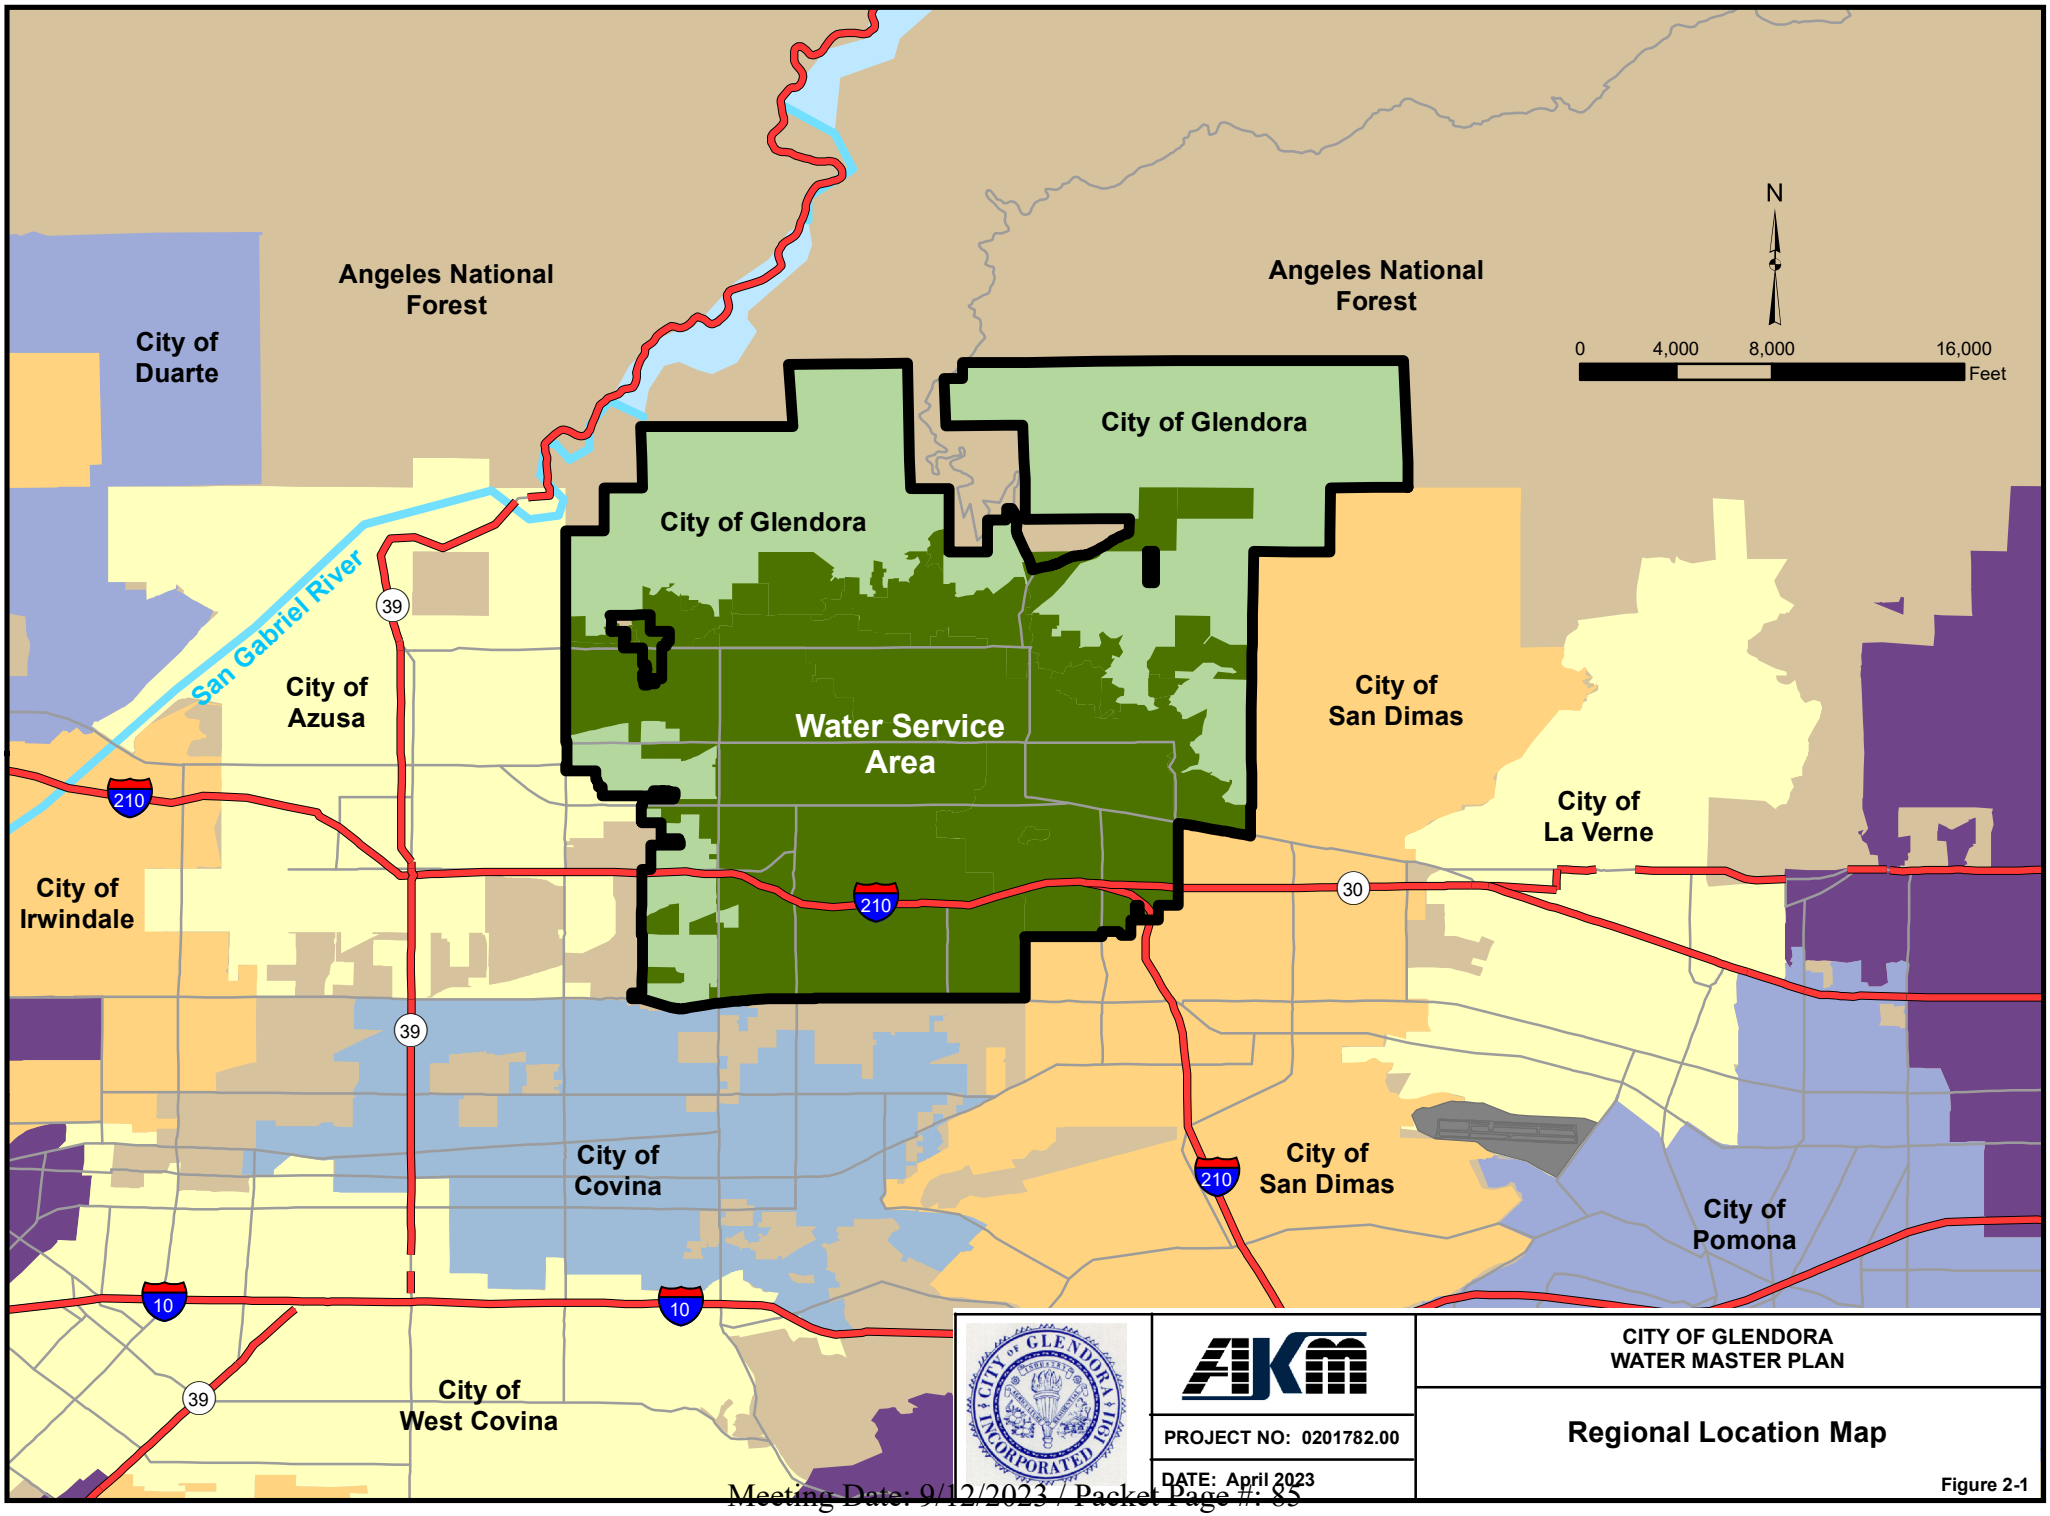
SECTION 2
WATER SERVICE AREA

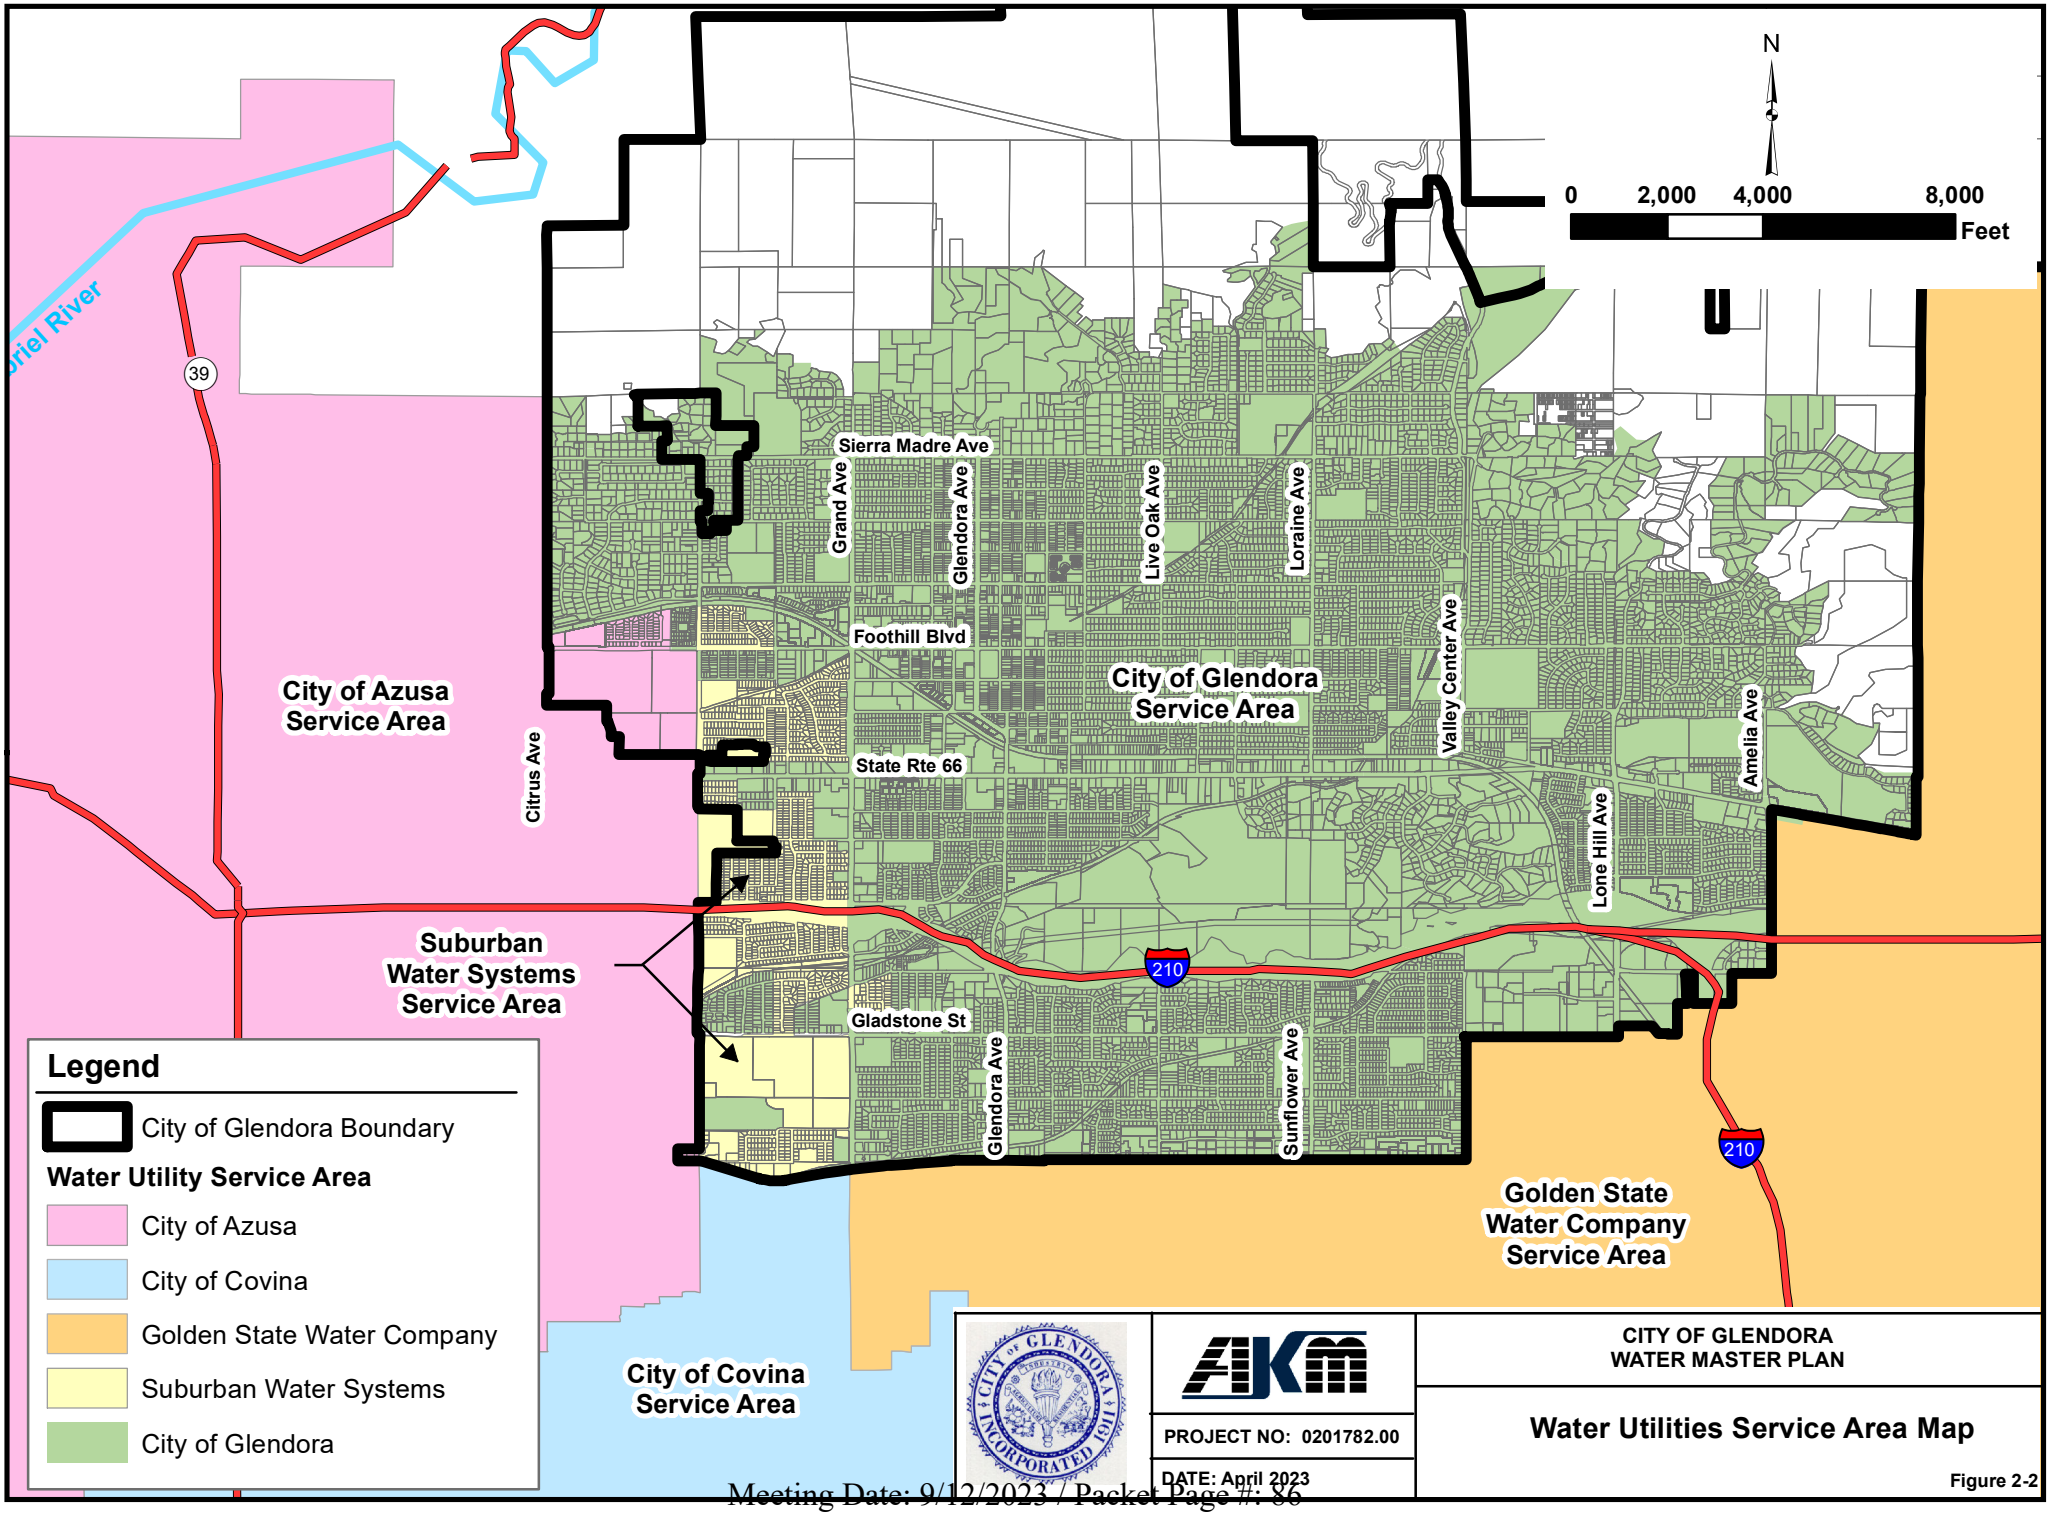
2-1 Location

The City of Glendora's (City) water service area is located in northeasterly Los Angeles County (County), approximately 21 miles northeast of downtown Los Angeles, and predominantly within the City of Glendora. The City lies within the San Gabriel Valley with the foothills of the San Gabriel Mountains along the northern portion of the City, which includes the Angeles National Forest. The City is bounded by the Cities of Azusa to the west, Covina to the south, and San Dimas to the east as well unincorporated portions of Los Angeles County. Interstate 210 is the primary regional freeway providing access into and out of the City. The primary east-west circulation routes within the City are Sierra Madre Avenue, Foothill Boulevard, Route 66 (Alosta Avenue) and Gladstone Street. The primary north-south routes are Grand Avenue and Glendora Avenue.

The water service area, shown on Figure 2-1, covers approximately 11 square miles within the City of Glendora. The City of Glendora, including unincorporated County areas within its sphere of influence encompasses about 20 square miles. The southwesterly portion of the City, generally south of Foothill Boulevard and west of Grand Avenue is served water by the City of Azusa or Suburban Water Systems. The local water utility service areas are shown on Figure 2-2.



2-2 Topography and Geology



The City has varying terrain with elevations ranging between 620 and 1400 feet above mean sea level (amsl). The northern one-sixth of the City contains the foothills of the San Gabriel Mountains and includes part of the Angeles National Forest. The natural terrain in this area is in slope which exceeds 25 percent. Most of the remainder of the City has a moderate slope, generally 2 to 5 percent in a southwesterly direction. The exception is South Hills Park in the south-central portion of the City, where elevations range from about 750 feet to above 1200 feet with natural slopes for the most part exceeding 25 percent.

Glendora is located at the foot of the San Gabriel Mountains on an upper alluvial fan of the San Gabriel Valley. This setting produces two major terrain types within the City: alluvial fan and foothill. The valley consists of a roughly bowl-shaped depression in the bedrock, filled over millions of years with alluvial deposits. Most of the alluvium deposited within this depression is debris from the San Gabriel Mountains, washed and blown from the sides of the mountains over time

The valley soils are predominantly members of the Hanford Series. The soils in this series are well-drained or somewhat excessively drained soils that have formed in granitic alluvium. The Hanford soils in the Glendora area are chiefly fine sandy loam or gravelly sandy loam. Runoff is slow to medium for this soil, and the hazard of erosion is slight to moderate. The amount of gravel in the gravelly variety ranges from 20 to 35 percent, by volume.

Bedrock units are exposed in the San Gabriel Foothills and the South Hills. Three types of bedrock are prevalent: 1) sedimentary units of sandstone and siltstone; 2) volcanic lavas, tuffs, and mixtures of both; and 3) an igneous-metamorphic complex of resistant crystalline rocks.

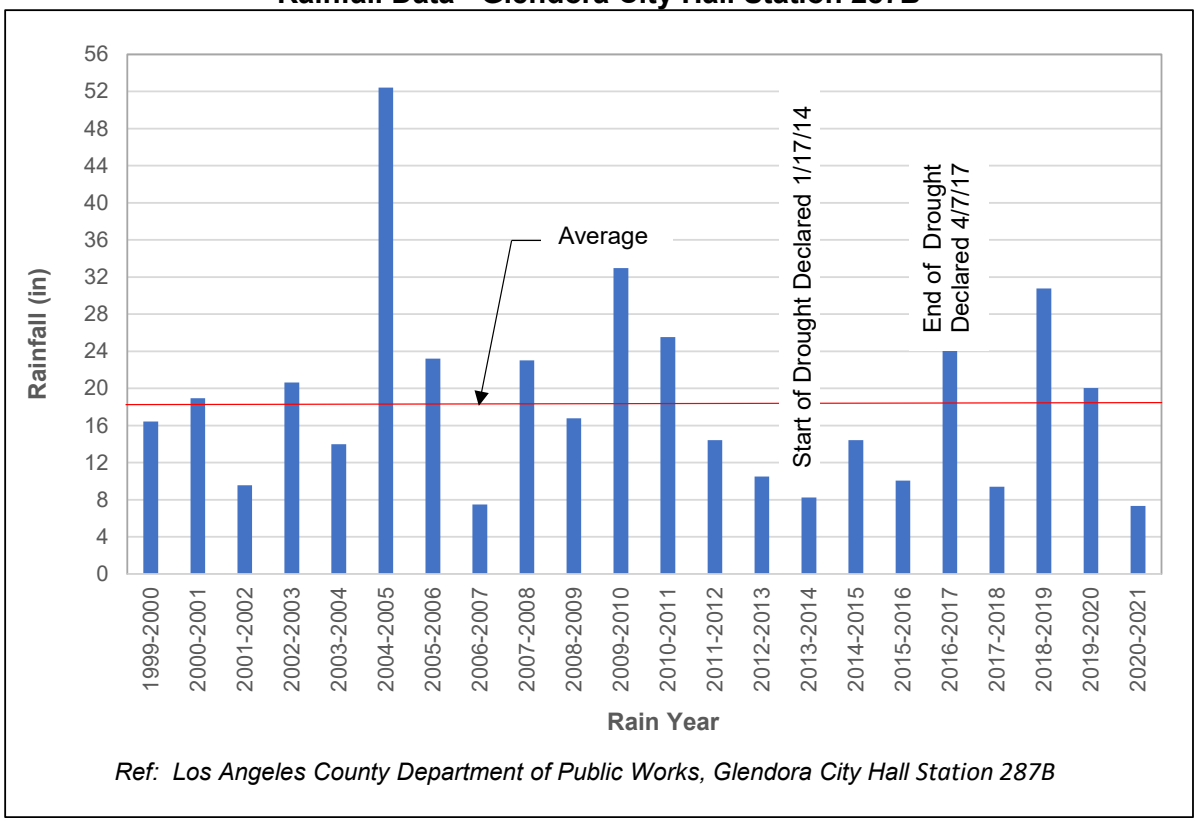
2-3 Climate



The climate in the area is typical of Southern California with generally mild temperatures, virtually no days below freezing, and plenty of sunshine throughout the year. The warmest months are typically experienced in August with an average maximum temperature of 91° F. The coolest months are typically experienced in December and January with an average minimum temperature of 38.5° F.

Rainfall at the Los Angeles County Department of Public Works, Glendora City Hall Station 287B between rain year 2000-2001 and 2020-2021 is shown in Figure 2-3. The average annual rainfall of about 18.7 inches occurred primarily during the winter months, between December and March.

The state of California declared a Drought State of Emergency on January 17, 2014 as rainfall and snowfall in the state had been well below average for the prior five to seven years. Even though the drought was officially declared at an end on April 7, 2017, rainfall and snowfall levels continued to remain low until rain year 2018-2019 when California experienced an unusually wet year.

Climate change is expected to result in more variable weather patterns throughout California in the future. This variability may lead to longer and more severe droughts and floods, which will present significant challenges to California water supply conditions.

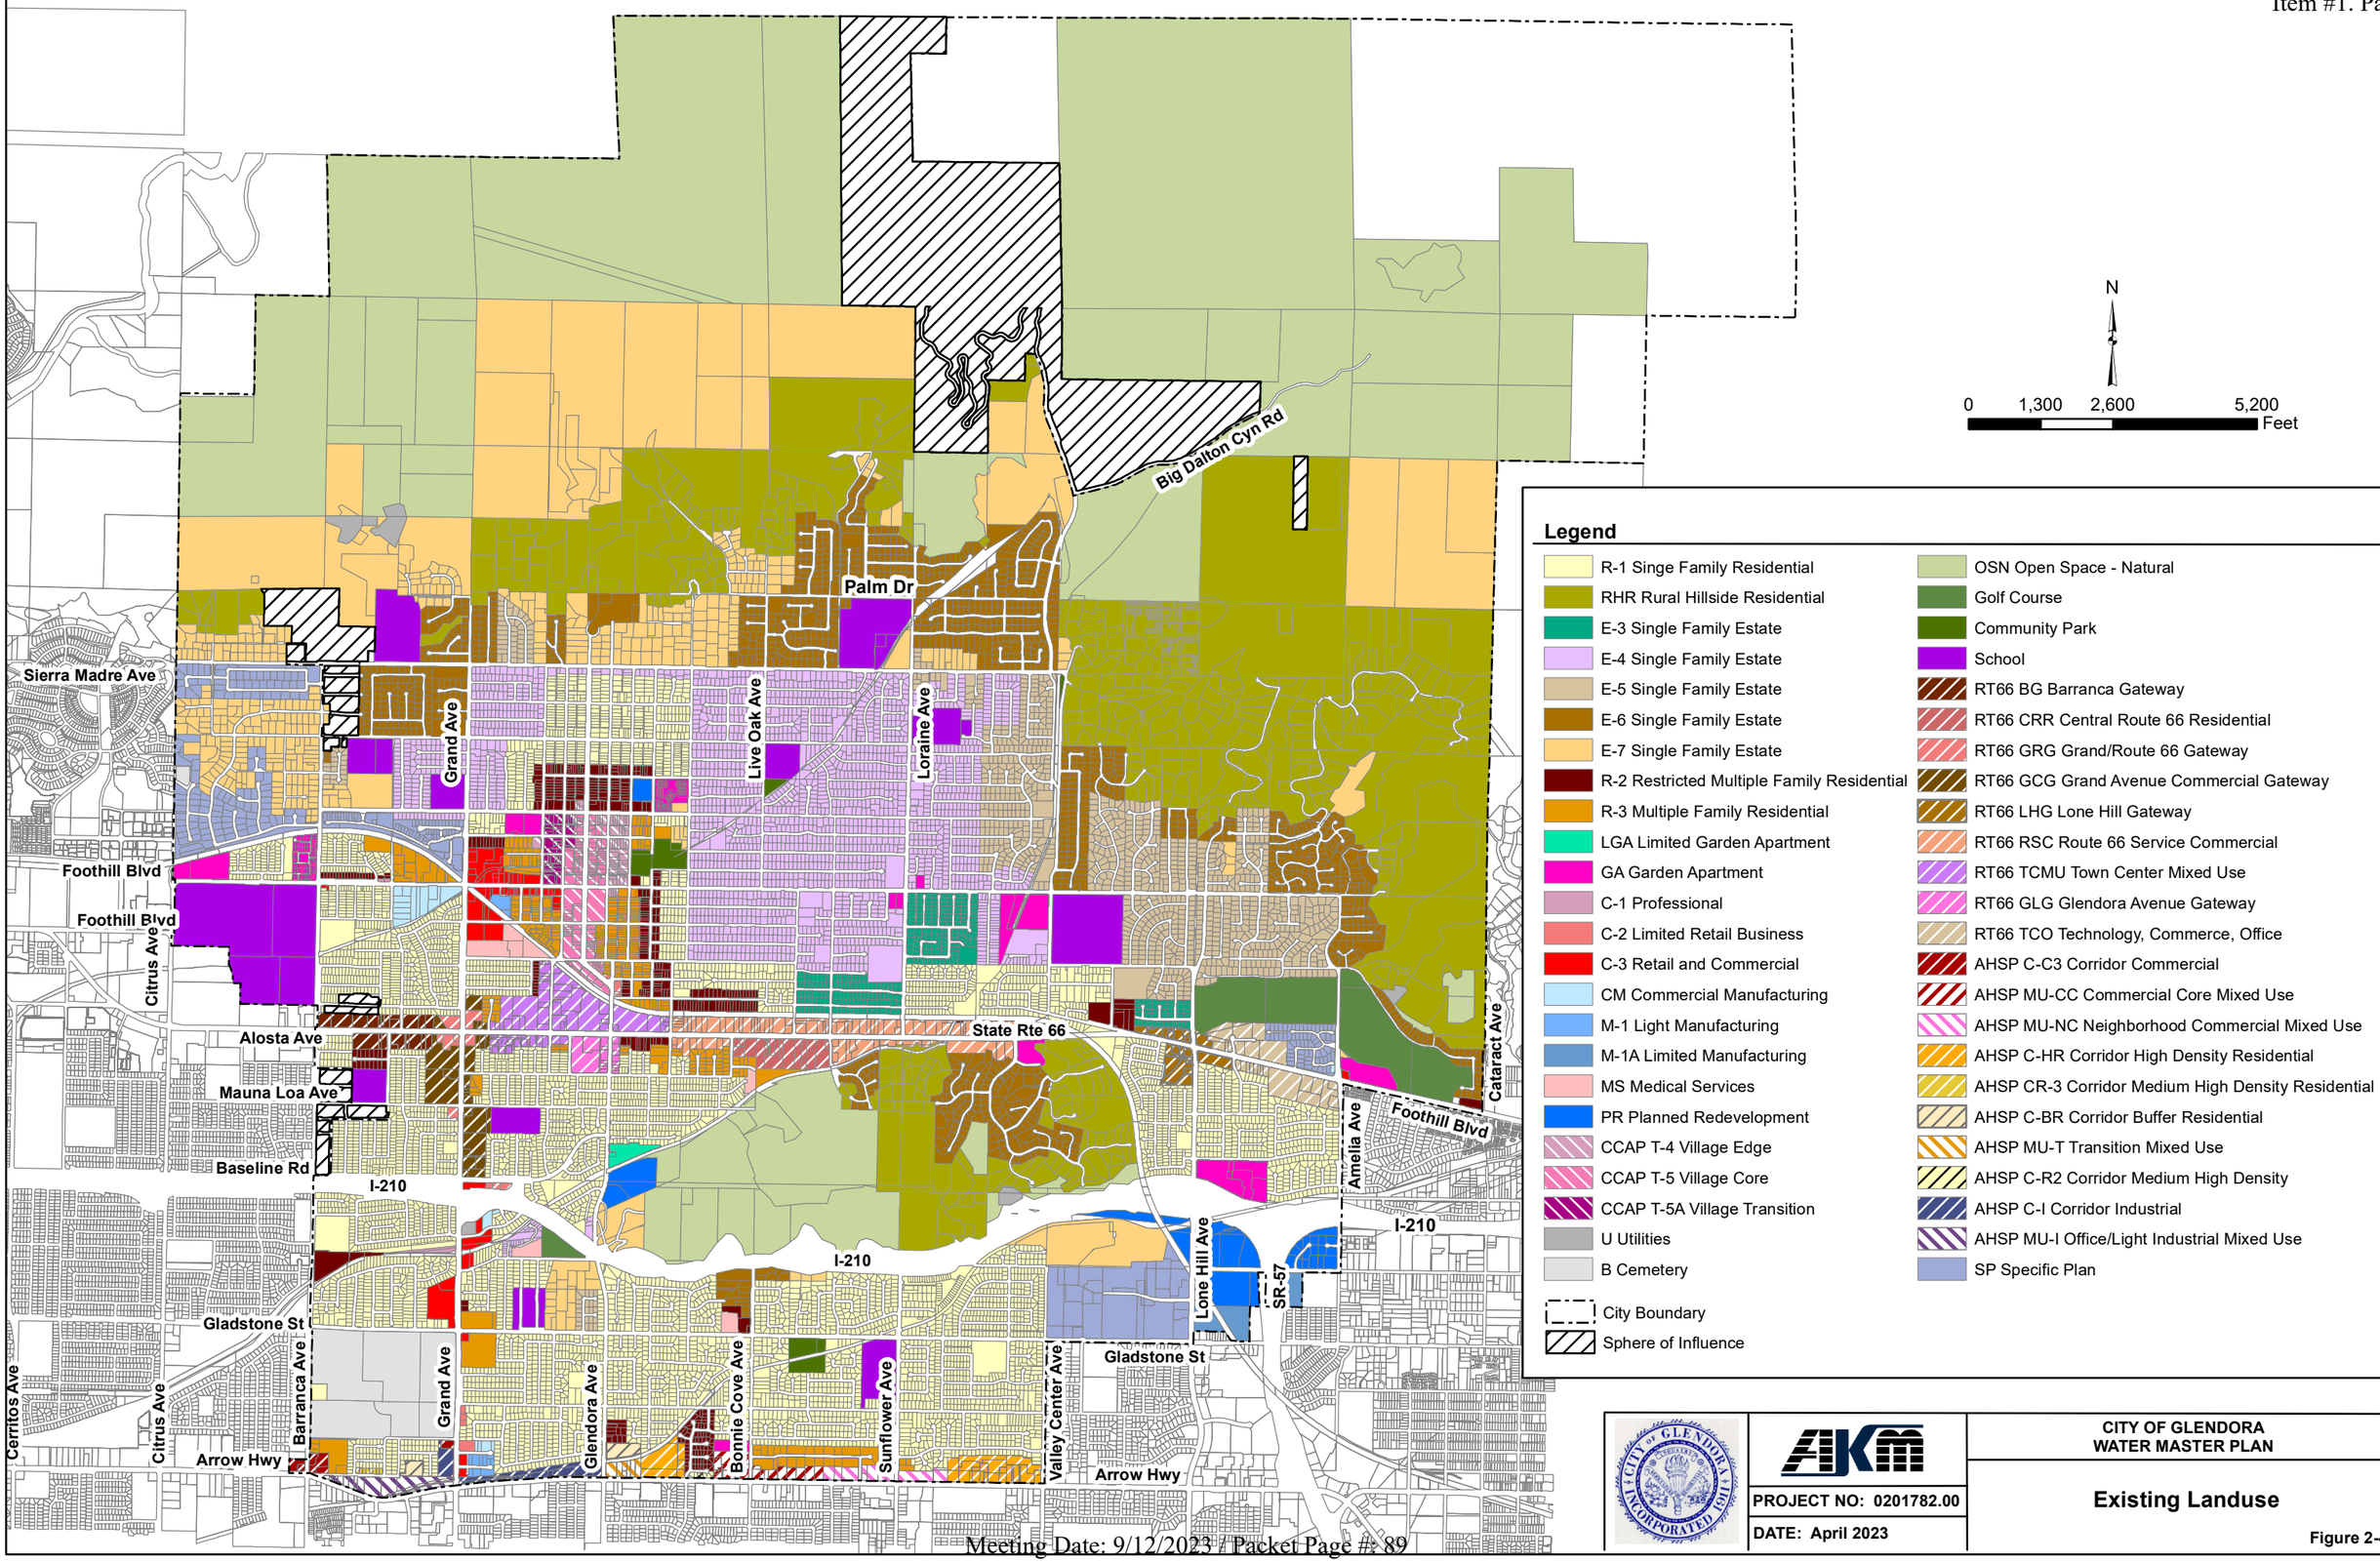
Ref: Los Angeles County Department of Public Works, Glendora City Hall Station 287B

2-4 Land Use

The City is comprised of residential, commercial, and industrial land uses with most of the available flat land developed. The majority of the developed area consists of residential single-family homes.



Per the City's 2025 Land Use Element, "The City is almost completely developed with only 0.3 percent of developable land remaining vacant. The fully developed state of the City means that most services are sufficiently available to new growth occurring or expected to occur on underutilized parcels and in redevelopment areas within the City". New high end housing development is occurring in the hillside areas where it is typically more difficult to develop. Higher density infill is planned along Route 66.

The existing land uses in the study area are shown on Figure 2-4. Future known development areas are shown in Table 2-1 and on Figure 2-5.

Figure 2-5

2-5 Population

The historical population growth for the City of Glendora is shown in Table 2-2. This population data is based upon information developed by the California Department of Finance and based on U.S. Census Bureau data.

Table 2-2
City of Glendora Population

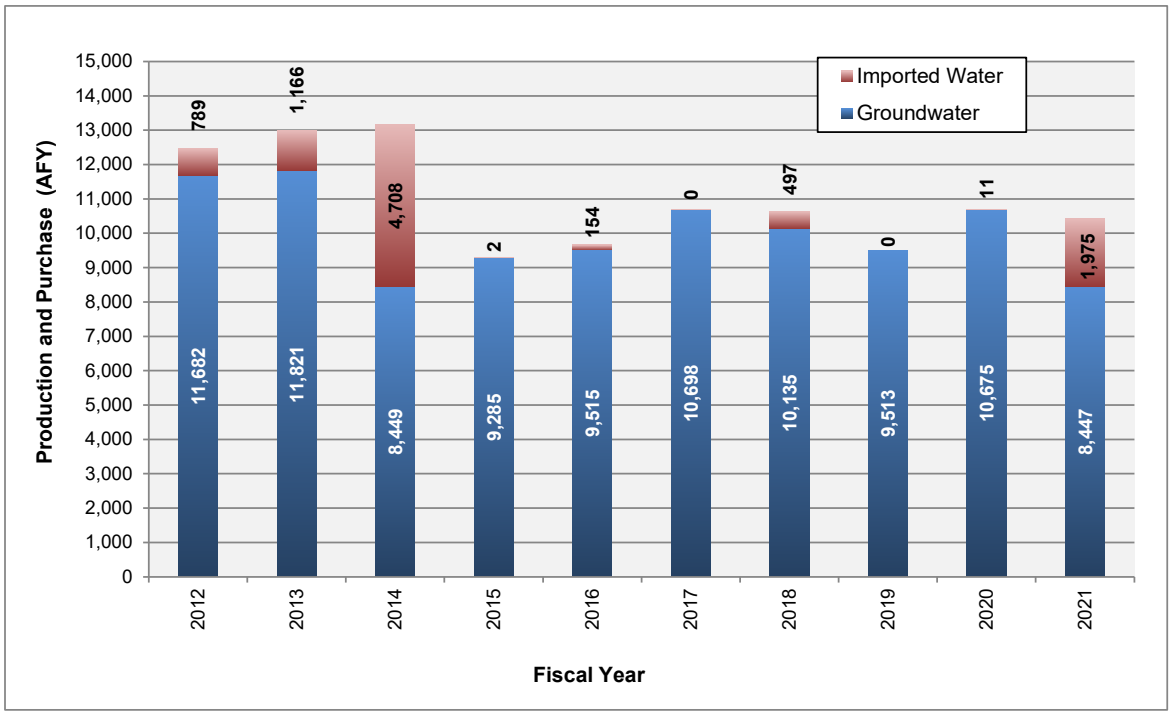
Year	Population[1]	10-year % Growth
1920[a]	2,028	-
1930[a]	2,761	26.5
1940[a]	2,822	2.2
1950[a]	3,988	29.2
1960[a]	20,752	80.8
1970[a]	31,349	33.8
1980[a]	38,654	18.9
1990[a]	47,828	19.2
2000[a]	49,415	3.2
2010[b]	50,073	1.3
2020[b]	52,558	4.7
2021[b]	51,569	-1.9

[a] *Ref: California Department of Finance, Table E-5 which is based on U.S. Census Bureau data*

[b] *Ref: U.S. Census Bureau (https://www.census.gov)*

The population in the City of Glendora exploded in the 1950's and grew steadily up to 1990. In the past three decades, the growth has slowed significantly. This is supported by the fact that the City of Glendora has become nearly built-out.

The 2021 population within the City was 51,569 persons. The total number of housing units was 18,504 dwelling units *(Ref: California Department of Finance, Table E-5*). This is equivalent to 2.79 persons per dwelling unit with a 4.4% vacancy rate.



Per the City's 2020 Urban Water Management Plan (UWMP, 2020), the water service area population was 45,551 in 2020 and is projected to have a growth of 5.6% from 2020 to 2045. The 2045 service area population is expected to be about 48,093. The difference in population between the City of Glendora and its water service area can be attributed to the fact that there are small portions of the City that are provided water service by an adjacent agency.

SECTION 3
WATER SUPPLY ANALYSIS

3-1 Water Supply Sources

The City of Glendora (City) maintains a diverse water supply portfolio to be able to meet its regular and peak demands while ensuring all water quality requirements and regulations are met. The City's water supply portfolio consists primarily of groundwater and is supplemented with imported water. The City's annual water production and purchase for the past ten years is shown on Figure 3-1. The following is an overview of the City's water supplies and associated capacities.

Figure 3-1
Annual Water Production and Purchase

3-1.1 Groundwater

The City has 8 active wells with a total capacity of 9,254 gpm (14,927 AFY). The groundwater is extracted from the Main San Gabriel Basin (Main Basin) and associated sub-basins. The City currently has 6,178 acre-feet per year (4.75261 percent of the annual safe yield of the basin as determined by the Water Master) of prescribed groundwater rights as part of the 1973 Main Basin Adjudication. In 2021, the City pumped 8,447 acre-feet, which represents approximately 81% of its demands.

3-1.2 Imported Water

The City is a member agency of the Three Valley's Municipal Water District (TVMWD). TVMWD is one of twenty-six-member agency wholesalers of Metropolitan Water District of Southern California (MWD) that provides imported water to the Southern California region via the Colorado River Aqueduct (CRA) and the State Water Project (SWP) systems.

The City has three active turnout connections (PM-6, PM-18, and PM-23) that is fed from MWD's Upper Feeder. PM-6, PM-18, and PM-23 have maximum capacities of 15 cfs, 10 cfs, and 15 cfs, respectively, for a total maximum capacity of 40 cfs (28,979 AFY). In 2021, the City used 1,975 acre-feet, which represents approximately 19% of its demands.

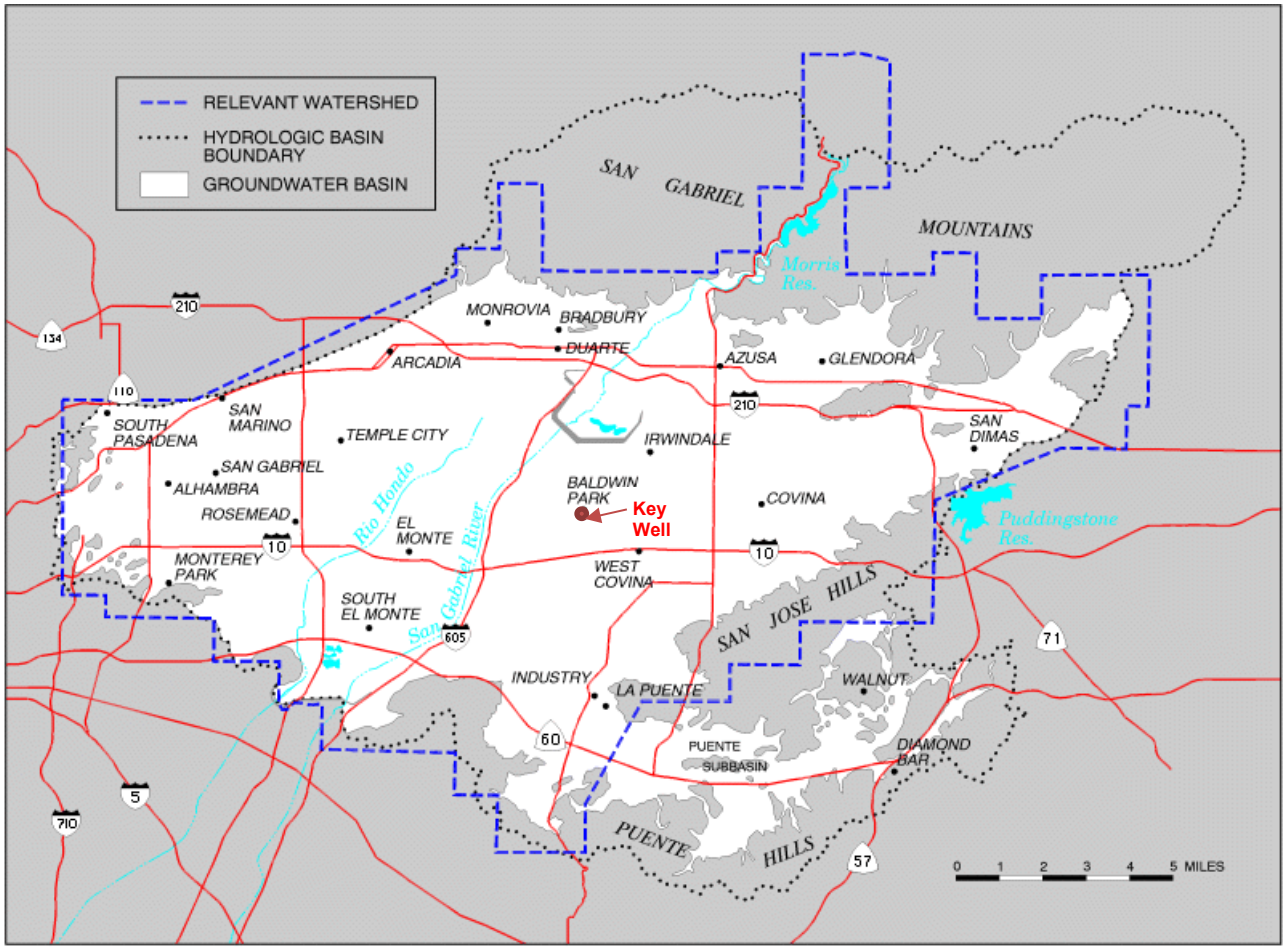
3-1.3 Covina Irrigating Company

The City owns a connection with the Covina Irrigating Company (CIC) with a maximum capacity of 3.3 cfs (2,390 AFY). CIC can provide supplemental water to the City via treated surface water and pumped groundwater from the Main Basin. In 2021, the City did not use any water from CIC, but has a historical average use of 22 AFY.

3-2 Existing Groundwater Rights

The Main San Gabriel Basin (Main Basin) lies in eastern Los Angeles County, California. The watershed coincides with a portion of the upper San Gabriel River watershed, and the groundwater basin underlies most of the San Gabriel Valley. The surface area of the Main Basin is approximately 167 square miles. The Main Basin is bounded by the San Gabriel Mountains to the north, San Jose Hills to the east, Puente Hills to the south, and by a series of hills and the Raymond Fault to the west. The watershed is drained by the San Gabriel River and Rio Hondo, a tributary of the Los Angeles River. Figure 3-2 provides an overview of the Main Basin.

The City has rights to pump groundwater from the Main Basin, which involves extensive governance and monitoring overseen by the Main San Gabriel Basin Water Master (Water Master), legal compliance, and ultimately usage by the Pumpers. The following is a summary of the Main Basin water rights and the associated tools that allow navigation for the extraction of groundwater from the Main Basin.



3-2.1 Judgements

Two main judgements dictate pumping from the Main Basin. These judgements are summarized as follows:

- *Long Beach Judgement*: The Long Beach Judgement was established in September 1965. This judgement requires that the area downstream from Whittier Narrows (Lower Area) receive an annual usable quantity of water from the San Gabriel River system made up of surface flow, subsurface flow and any water exported to the Lower Area. Any deficiency of usable water to the lower area is guaranteed by the Upper Area through the form of imported water purchased by the Water Master. The Long Beach Judgement also mandated oversight management through the formation of the San Gabriel River Water Master which is a separate entity from the Main Basin Water Master. The two Water Masters work collaboratively to ensure compliance with the Long Bach Judgement.
- *Main Basin Judgement*: The Main Basin Judgement was entered into in January 1973. This Judgement resulted in the adjudication of the Main Basin. The Main Basin Judgement provides for the replacement of water extracted from the Main Basin beyond a Party's annual right established as part of the adjudication. The Main Basin Judgement is overseen by the Water Master. The Water Master establishes an annual Operating Safe Yield (OSY) which defines the maximum quantity of water each pumper is allocated to pump free of a replacement water

assessment. If a Pumper pumps beyond its allocation, it must provide Supplemental Water that is spread into the Main Basin and pay the associated replacement water assessment.

Figure 3-2
San Gabriel Main Basin

3-2.2 Operating Safe Yields and Water Rights

The OSY defines the amount of groundwater each Pumper within the Main Basin can pump free of being charged the replacement water assessment. The Main Basin is estimated to have approximately 8.7 million acre-feet of usable storage based on a 1916 groundwater elevation of 329 feet at the Baldwin Park Key Well (Key Well). While this is an extraordinary amount of storage, and like all groundwater basins, it must be monitored, managed, and pumping limitations must be enforced to ensure the overall health of the basin and associated groundwater levels.

There are several critical factors in the OSY calculation that determine the annual amount of water that can be extracted by the Pumpers from the Main Basin. These factors include the current and projected groundwater elevation at the Key Well, which represents the water stored in the Main Basin. A one-foot change in elevation at the Key Well represents approximately 8,000 acre-feet of stored water (refer to Section 3-3 for more details on Main Basin Storage). Other factors included in the OSY calculation include consideration of Main Basin hydrologic conditions (e.g., rainfall, storage of

local run-off in surface reservoirs, conservation, stormwater runoff, etc.), availability of Supplemental Water, Cyclic Storage quantities, and Carry-over Rights. Since 1973 the OSY has ranged from a maximum of 240,000 acre-feet per year (years 2005-2006) to a low of 130,000 acre-feet per year, recently adopted by the Main Basin Water Master for fiscal years 2023 through 2027.

The City's groundwater right of the established OSY is 4.75261 percent which yields a pumping right of 6,178 acre-feet per year through fiscal year 2027. The higher the OSY, the greater the City's groundwater pumping right. The City's pumping rights since 2012 in association with the established OSY and the future OSY for fiscal years 2023 to 2027 is shown in Table 3-1.

Table 3-1
Historical Operating Safe Yield

Fiscal Year	OSY (AFY)	City Water Right (AFY)
2012	210,000	9,980
2013	200,000	9,505
2014	180,000	8,555
2015	150,000	7,129
2016	150,000	7,129
2017	150,000	7,129
2018	150,000	7,129
2019	150,000	7,129
2020	150,000	7,129
2021	150,000	7,129
2022	150,000	7,129
2023-2027	130,000	6,178

Over the past 10 years, the City's pumping allocation has been reduced by approximately 3,800 acre-feet per year or 38%. The Water Master is collaboratively managing the Main Basin health to ensure longevity of future water supplies with several competing challenges (e.g., increased demands, drought, etc.). This decrease will result in the pumping of additional groundwater at an increased cost due to the replacement water assessment and/or use of more imported water.

3-2.3 Assessments

As a Pumper within the Main Basin, the City is required per the Main Basin Judgement to pay assessments to fund basin management, administrative, and replenishment activities. The following is a summary of the various Main Basin assessments:

- ***Replacement Water Assessment***: This assessment is applied when a Pumper exceeds pumping beyond its allocated water right from the Main Basin.
- ***Resource Development Assessment***: This assessment is applied unilaterally across all Pumpers for every acre-feet of pumping from the Main Basin to support the purchase of supplemental imported water to augment natural recharge for the benefit of the basin.
- ***In-Lieu Assessment***: This assessment is applied to Pumpers who take imported water in-lieu of pumping their groundwater rights to assist in promoting health of basin management to maintain groundwater levels in specific parts of the basin.
- ***Administration Assessment***: This assessment is applied unilaterally across all Pumpers for every acre-feet of pumping from the Main Basin to support the administrative functions of the Water Master.
- ***Make-up Water Assessment***: This assessment is applied to all Pumpers when the required amount of water cannot be naturally delivered to the Lower Area as determined by the San Gabriel River Water Master.

Table 3-2 provides an overview of the fiscal years 2022 and 2023 Main Basin assessments.

The City pays each of the respective assessments based on the conditions in which they pump groundwater. As long as the City stays within its pumping right allocation, the City pays the Resource

Development Assessment and the Administration Assessment for a total of $192 per acre-foot for fiscal year 2022. Pumping beyond the City's groundwater right cost $1,091 per acre-feet in 2022.

Table 3-2
Main Basin Assessments

Assessment Description	FY 2022 ($/AF)	FY 2023 ($/AF)
Resource Development	$175	$175
In-Lieu	$8	Not Determined
Administration	$17	Not Determined
Make-up Water	$0	Not Determined
Replacement Water	$899	$955

3-3 San Gabriel Basin Hydrogeologic Conditions

In addition to the regional vastness of the Main Basin demonstrated on Figure 3-2, the Main Basin supports a robust hydrogeologic aquifer that allows tremendous storage of groundwater.

3-3.1 Basin Characteristics

The Main Basin is divided into two main parts, the Main Basin and the Puente Subbasin. While the Puente Subbasin is hydraulicly connected to the Main Basin, it is not considered to be part of the Main Basin management and thus not under the purview of the Water Master. The Main Basin principal water-bearing formations are unconsolidated and semi-consolidated sediments which range in size from coarse gravel to fine-grained sands. While there are clay lenses throughout the Main Basin, there is not a uniform clay layer to form an impenetrable barrier. Thus, the Main Basin operates as an unconfined aquifer. The Main Basin ranges in depth from 800 feet (San Dimas area) above sea level to 2,200 feet below sea level (South El Monte area). Wells located in the deeper regions of the Main Basin have water bearing formations of approximately 4,000 feet and wells in the shallower regions have water bearing formations of approximately 200-300 feet. Wells located in the deeper formations provide greater yields then wells located in the shallower regions.

3-3.2 Sub-Basins

There are several sub-basins within the Main Basin. The two main sub-basins within the Main Basin that most affect the City are the Glendora Sub-basin and the Canyon Sub-basin.

The Glendora Sub-basin is located in the northeastern region of the Main Basin. It is primarily defined by the faults of the Sierra Madre Fault system, which is an east-west fault system spanning from northeast of San Dimas and westerly to the Sawpit Canyon near Monrovia. These faults dictate the groundwater movement between the Glendora Basin and the Main Basin. The City pumps part of its water supply from this location of the Main Basin. These wells typically yield less water due to the shallow nature of the basin in this area.

The Canyon Basin is located in the northern region of the Main Basin. Its boundaries are also defined by the Sierra Madre Fault system, which is generally located along the southerly base of the San Gabriel Mountains. Like the Glendora Sub-basin, these faults dictate the movement of water into the Main Basin. The City, along with other Pumpers, produce groundwater from this region of the basin. Groundwater elevations in this part of the basin can be sensitive to drought conditions which have varied by more than 90 feet during extensive drought seasons.

A detailed discussion of the Main Basin hydrogeology can be found in the "Planned Utilization of Ground Water Basins, San Gabriel Valley, Appendix A: Geo-hydrology" (DWR, 1966).

3-3.3 Flow Characteristics

Water flow within the Main Basin is generally from a northeasterly to southwesterly direction. The various faults influence how water moves throughout the basin. The general direction of flow through the Basin is shown on Figure 3-3.

Groundwater does not flow between the Raymond Basin and the Main Basin due to the impervious nature of the Raymond Fault. Water flows into the Whittier Narrows is governed by the Long Beach Judgement as discussed in Section 3-2. The natural flow tendency, permeability, and optimum soil conditions (e.g., sands and gravels) of the Main Basin allows its Pumpers to produce cost effective water and allow the required amount of water to flow into the Lower Area.

3-3.4 Storage

Storage within the Main Basin is estimated to be approximately 8.7 million acre-feet per the 1916 groundwater elevation of 329.1 feet as measured at the Key Well, and as low as 7.4 million acre-feet per the 2018 groundwater elevation of 169.4 feet as measured at the Key Well. An overview of the Key Well groundwater elevations from 1997 to present is shown on Figure 3-4.

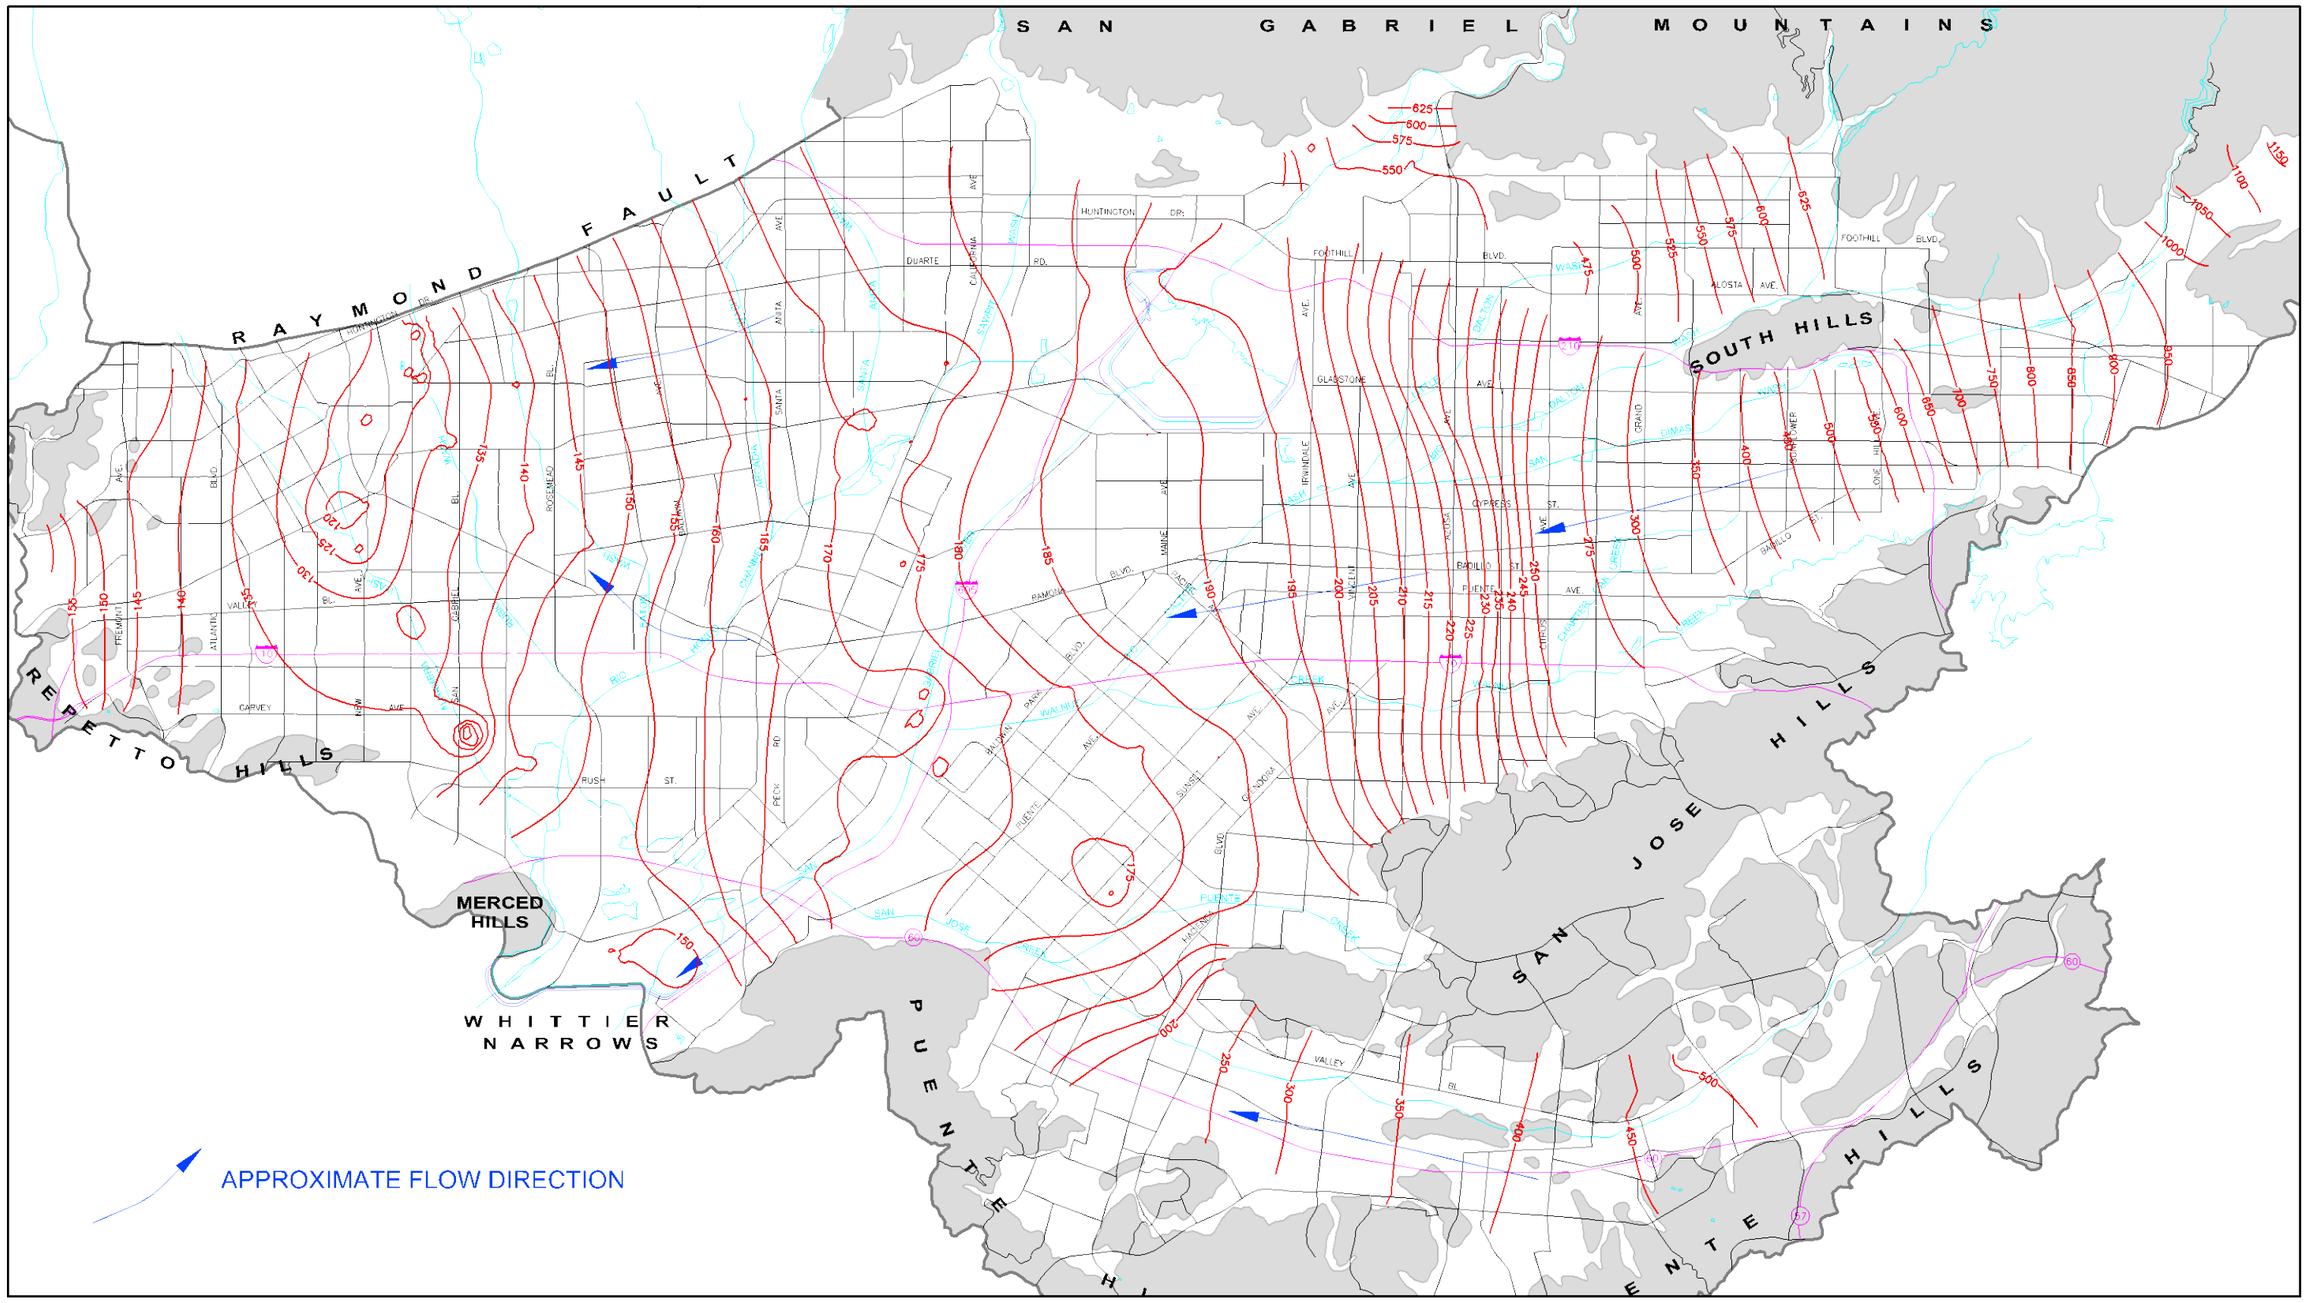
A key metric used by the Water Master in managing the basin is to maintain a 200-foot groundwater elevation at the Key Well. There is a distinct correlation between the Key Well elevation and sufficient water supplies for Pumpers to maintain a high OSY to maximize their pumping right allocations each year (refer to Table 3-1). As seen on Figure 3-4, groundwater levels in the Key Well clearly diminish in drought years such as 2015. The OSY was reduced from 180,000 acre-feet in 2014 to 150,000 acre-feet in 2015 and 130,000 acre-feet in 2023. Reduced groundwater levels and associated OSY has a direct effect on the City's ability to pump cost-effective groundwater.

3-3.5 Main Basin Replenishment

The Main Basin has four major sources of replenishment. These sources include incidental rainfall recharge throughout the San Gabriel Valley, stormwater recharge through percolation, imported water recharge through percolation via spreading grounds, and natural river recharge along the various rivers and tributaries. Stormwater capture and recharge and imported water recharge are performed via spreading basins across the Main Basin and are operated by the Los Angeles County Department of Public Works. Some spreading basin are multi-purpose and can spread both imported water and captured stormwater, while others are used purely for imported water.

The ability to measure groundwater recharge quantities is difficult, thus requiring estimates for many of the recharge activities. Imported water recharge is performed with somewhat of a quantifiable amount due to the metering of imported water. Stormwater capture is performed with a rough estimate as stormwater is captured and released in measured quantities. The Main Basin Water Master provides an overall recharge amount to the Main Basin each year knowing that it is a rough estimate and relies heavily on the Key Well elevation to determine the overall health of the Main Basin. Since 1973, it is estimated that approximately 7.5 million acre-feet has been recharged into the Main Basin through natural recharge, treated groundwater clean-up, cyclic storage, and resource development water recharge. The Water Master estimates that historical stormwater recharge has declined over the past decade on average from 111,000 acre-feet per year to approximately 55,000 acre-feet per year making it essential to find other water sources to make-up this shortfall.

Figure 3-3
Main Basin Groundwater Flow



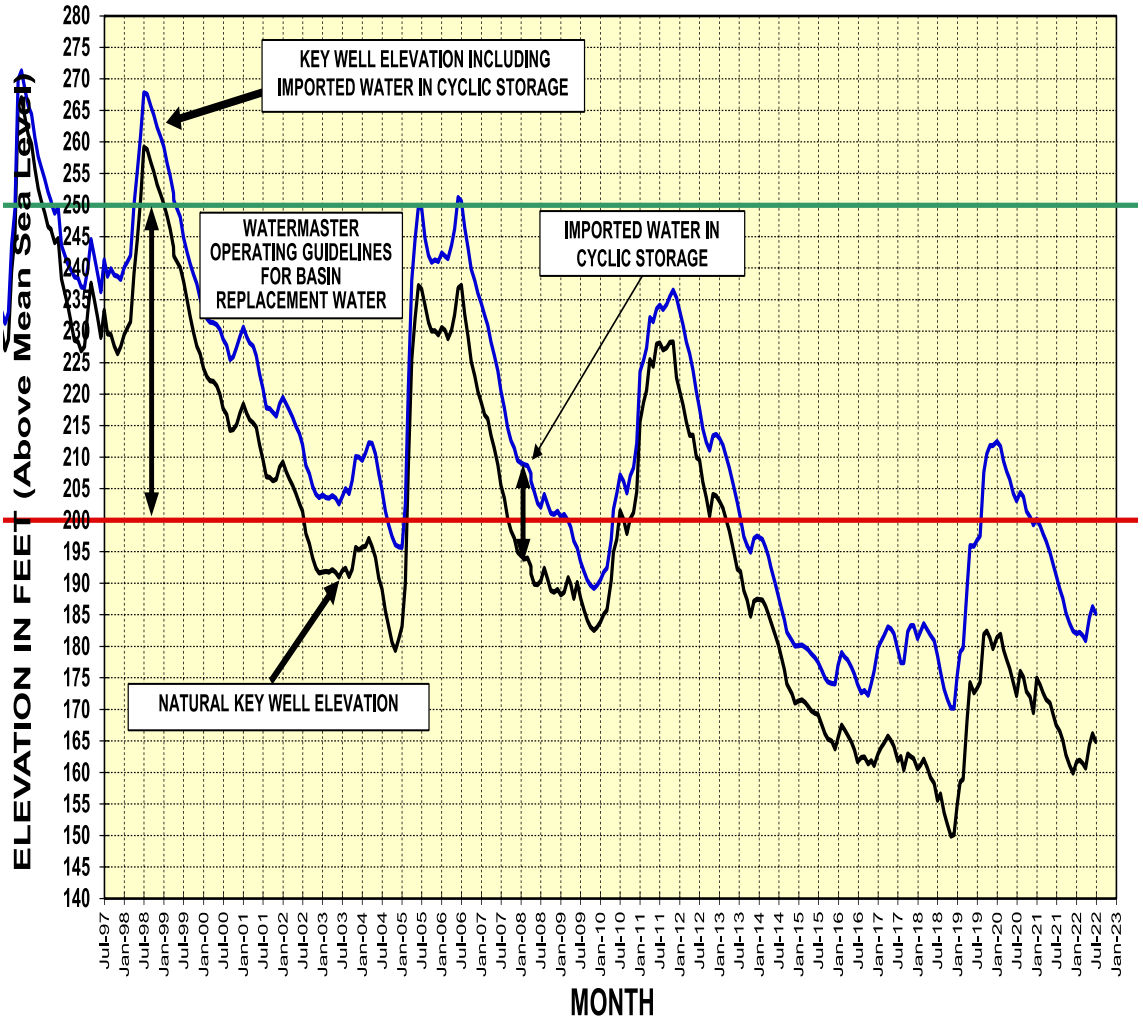


Figure 3-4
Baldwin Park Key Well Elevations

Each of the Main Basin imported water wholesalers (Three Valleys Municipal Water District (TVMWD), San Gabriel Valley Municipal Water District (SGVMWD), and the Upper San Gabriel Valley Municipal Water District (USGVMWD)) have cyclic storage agreements with the Water Master to purchase and store untreated imported water when it becomes available to help offset the cost impacts of having to purchase replacement water. Many of the Pumpers also have individual cyclic storage agreements. Cyclic storage results in an overall benefit to the Main Basin with increasing groundwater levels and lower operating costs to Pumpers. The City has a Cyclic Storage Agreement to store 5,500 acre-feet of water.

3-4 Potential Local Groundwater Supply Development

The City's existing average day water demands of 10,390 AFY closely approximate the current well field system production capacity (14,927 AFY per efficiency tests). With the increasing cost of imported water and increasing demands, it is advantageous for the City to maximize its groundwater pumping to meet the average day and peak season demands through enhanced groundwater pumping and evaluate other groundwater supply development options. Groundwater Supply Development Options are discussed below.

3-4.1 Irwindale Facility - Well 3 and Well 4 Groundwater Development

The Irwindale Facility, which includes Wells 3 and 4, as well as the Irwindale Reservoir and Irwindale Booster Pump Station, has been inactive for over 20 years. Historically, when Well 3 and Well 4 were in operation, groundwater was pumped into the Irwindale Reservoir and then pumped up to the Gladstone Reservoir, which was a forebay for the Gladstone Booster Pump Station that pumped water into the Zone 1 system (see hydraulic schematic shown on Figure 5-2). The Gladstone Reservoir and Booster Pump Station have since been demolished.

Well 3 was constructed in 1923 and last operated in FY 1999-2000. Well 4 was constructed in 1920 and last operated in FY 1991-1992. Both wells ceased operation due to nitrate concentrations above the Maximum Contaminant Level (MCL) of 10 milligrams per liter (mg/l). Perchlorate levels are also elevated in the groundwater.

In 2017, TVMWD evaluated the opportunity to increase groundwater supply for its member agencies and reduce the use of imported water. This evaluation focused on repurposing the City's now inactive Wells 3 and 4 and considering other agencies that could be served water from these two wells. At the time, it was estimated that Wells 3 and 4 could pump approximately 4,250 gpm or 6,200 acre-feet per year based on historical pumping data. The study made several specific assumptions, some of which are no longer valid. These include the use of the Irwindale Pump Station, the 18" pipeline between the Irwindale Pump Station and Gladstone Reservoir, and Gladstone Booster Pump Station. These facilities are no longer in use or have been demolished.

The City should consider Well 3, Well 4, and Well 7 (Vosburg) as potential future supply sources to provide redundancy and offset the cost of using treated imported water. The City is currently working with TVMWD on an updated study with the most current information. The updated study should be based on:

- Constructing two (2) new wells to replace the existing Well 3 and Well 4, which are over 100 years old.
- Abandonment of the existing Wells 3 and 4
- Constructing a new nitrate and perchlorate treatment plant based on the most current water quality data
- Constructing a new forebay reservoir
- Constructing a new booster pump station to pump the effluent to the San Gabriel Plant
- Constructing a new discharge pipe to the San Gabriel Plant, utilizing rehabilitated portions of the existing Vosburg Well discharge pipe at the 210 Freeway crossing, as well as channel and railroad crossings. The existing 18-inch discharge line is abandoned due to its deteriorated condition and the Gladstone Reservoir has been demolished
- Constructing a standby generator with an automatic transfer switch to operate the facility during commercial power outages
- Constructing a new well to replace Well 7 (Vosburg Well)
- Abandonment of Well 7
- Constructing a new discharge pipe from the new Well 7 to the Irwindale Treatment Plant

Cost estimates for the possible future well development and associated facilities are provided in Table 3-3 and 3-4. Table 3-4 includes a new well to replace Well 7 (Vosburg Well).

Table 3-3
Irwindale Facility Cost Estimate without Well 7

Facility Name	Recommendations	Recommendation Notes	Construction Cost Estimate for Improvements	Design & Administration Cost ($)	Construction Management Cost ($)	Contingency Cost ($)	Total Project Cost ($)
Well 3 and Well 4 (2,500 gpm each)	Drill new Well 3		$ 2,000,000	$ 400,000	$ 300,000	$ 400,000	$ 3,100,000
	Equip new Well 3		$ 3,000,000	$ 600,000	$ 450,000	$ 600,000	$ 4,650,000
	Drill new Well 4		$ 2,000,000	$ 400,000	$ 300,000	$ 400,000	$ 3,100,000
	Equip new Well 4		$ 3,000,000	$ 600,000	$ 450,000	$ 600,000	$ 4,650,000
Existing Wells 3 and 4	Abandon existing Wells 3 and 4		$ 500,000	$ 100,000	$ 75,000	$ 100,000	$ 775,000
Treatment Plant	Nitrate and perchlorate vessels (28, 12 ft diameter)	Need 8 vessels for nitrates and 8 vessels for perchlorate	$ 8,000,000	$ 1,600,000	$ 1,200,000	$ 1,600,000	$ 12,400,000

		Total	**$ 80,926,000**	**$ 16,185,200**	**$ 12,138,900**	**$ 16,185,200**	**$ 125,435,300**

This project will allow utilization of the City's full adjudicated water rights when the Pure Water Southern California Project (Pure Water Project) extension to the area is completed. The Pure Water Project is a regional recycled water program led by MWD that will provide up to 150 million gallons per day of treated Title 22 recycled water to the MWD service area from the Los Angeles County Sanitation District's Joint Water Pollution Control Plant (JWPCP) located in Carson California. Figure 3-5 identifies the tentative alignment and quantities of recycled water that will be distributed throughout the MWD service area to select locations and basins.

Figure 3-5
MWD Pure Water Program

The Main Basin Water Master has indicated that up to 80,000 AFY of additional recharge into the Main Basin could be accepted. An additional benefit of this project is that it will increase the reliability of groundwater supplies and reduce the emergency storage needs for the system. Section 3-6.1.2 provides an overview of the Pure Water Project.

Current Grant/Loan Options for the City of Glendora:

1. **County of Los Angeles Flood Control District's (LACFCD) Safe Clean Water Program (SCWP):** The LACFCD's SCWP invests approximately $280 million annually into multi-benefit stormwater capture projects and programs. The SCWP is designed to conserve billions of gallons of stormwater that would otherwise be lost to the ocean when it rains, and to do so in a manner that improves the livability and resilience of LA County's communities through development of green space, recreational opportunities, and other enhancements. The SCWP strongly promotes regional collaboration, prioritizes investment in disadvantaged communities, and favors projects that employ nature-based elements.

   As of January 2023, $670 million in Regional Program funding has been allocated to 101 projects, 14 scientific studies, 41 feasibility studies, and 12 watershed coordinators across the 9 watershed areas. This includes $530 million towards projects that benefit disadvantaged communities, and also leverages an additional $542 million from other funding sources. Information about the planned and funded projects by watershed area and fiscal year is

available on the LACFCD's online Stormwater Investment Plan tool (https://portal.safecleanwaterla.org/sip-tool/).

For the Regional Program, an annual Call for Projects is conducted to solicit project proposals, the fourth of which closed on July 31, 2022. The Municipal Program 40% local return is distributed annually to the 86 municipalities within the LACSD boundaries. This funding is utilized by the municipalities for development of their own local multi-benefit stormwater capture projects and programs and may be used to contribute to regional-scale projects.

2. **State Water Resources Control Board Division of Financial Assistance, Proposition 1, Groundwater Grant Program (GWGP):** Proposition 1 was passed by voters in November 2014 and provided $900 million for a Groundwater Sustainability Program (Assembly Bill 1471, Chapter 10). The SWRCB will administer $670 million to prevent and cleanup contamination of groundwater that serves (or has served) as a source of drinking water. The funds are available as grants.

   The SWRCB adopted the Proposition 1 Groundwater Grant Program Guidelines (Guidelines) on May 18, 2016, and adopted amendments to the Guidelines on December 19, 2017 and February 2, 2021. Rounds 1 and 2 money for planning and implementation projects have been distributed. Round 3 project solicitations were due in late 2021 and preliminary awards were to be provided in Fall 2022 and grant agreement executions were to be in early 2023. Round 4 is currently potential, but is based on the State of California budget which currently is in a deficit. If Round 4 is funded, then City of Glendora could apply for Planning or Implementation of the Irwindale Project depending on how SWRCB arranges Round 4 grants to be distributed.

3. **Metropolitan Water District (MWD) Local Resource Program (LRP):** MWD provides financial incentives for the development of water recycling, groundwater recovery, and seawater desalination projects. Projects can include water recycling, groundwater recovery, and seawater desalination.

   There are three incentive payment options which includes:

   1) Sliding scale incentives up to $340/AF over 25 years;

   2) Sliding scale incentives up to $475/AF over 15 years, or

   3) fixed incentive up to $305/AF over 25 years.

   The City of Glendora can apply for MWD LRP funding for the Irwindale Project, but the application would be required to be submitted to MWD via TVMWD as the MWD member agency.

3-4.2 New Groundwater Wells

With the rising cost of MWD Tier 1 volumetric water, there is an increasing need to develop alternative water supplies and groundwater pumping capacity options. One such option is for the City to consider construction of additional groundwater wells to achieve the following objectives:

3-4.2.1 Maximize Groundwater Pumping Rights

Maximizing groundwater pumping rights is key to minimizing water supply costs. Groundwater pumping is traditionally the most cost-effective part of the City's water supply portfolio. Currently, the City has the ability to pump their entire share of the adjudicated pumping rights (6,178 AFY at an OSY of 130,000 acre-feet) with an overall well capacity of 9,254 gpm or 14,927 AFY (see Table 5-3). However, in future years when the Main Basin OSY rebounds to a higher level (e.g., 250,000 AFY), the City could be challenged to pump their entire adjudicated pumping right of 11,881 AFY.

When comparing adjudicated pumping cost of $192 per AF (2022/2023) in assessments plus operational costs (assumes $70 per AF for chemicals and energy) totaling $262 per AF to that of using imported water at a cost of $1,209 per AF (2023) there is a cost savings of approximately $947 per AF. For every 1,000 AF of adjudicated groundwater pumping recognized, there is a cost savings of approximately $947,000. The City's ability to pump adjudicated groundwater during peak demand seasons is a critical component to maximizing its adjudicated pumping rights and minimizing water supply costs when considering unplanned outages due to mechanical failures, routine maintenance, water quality challenges and other unplanned events.

3-4.2.2 Pump 100% of Demands with Groundwater

With the stress on all water supplies throughout the Southern California region, it becomes critical for the City to be able to meet 100% of its demands to provide local water reliability to its customers.

The cost to pump beyond the City's adjudicated water right is more expensive due to the Main Basin Replacement Water Assessment. The cost of pumping more than the adjudicated groundwater right is shown in Table 3-5.

Table 3-5
Pumping Costs above Adjudicated Water Right

Cost Description	$/AF
1. Replacement Water Assessment (2023)	$955
2. Resource Development Assessment (2023)	$175
3. Pumping Costs (Chemicals & Energy)[1]	$70
Total Costs	**$1,200**

[1] *Estimated cost*

While the cost of pumping above the adjudicated pumping water cost of $1,200 per AF is similar to that of imported water at a cost of $1,209 per AF, the City would have 100% water reliability being able to meet all of its water demands through a groundwater supply portfolio. Coupling this with a Cyclic Storage Program would assist in reducing water supply costs and provide the City with the ability to meet its customers' demands when regional water supply constraint conditions occur. The City's ability to use cyclic storage would assist in offsetting future imported water costs. Every 1,000 AF of cyclic storage used for the Replacement Water Assessment would result in approximately $60,000 in savings for the first year, assuming a 5% MWD rate increase. Subsequent years of cyclic storage use would save even greater amounts with additional MWD rate increases.

Development of a new groundwater well is a significant capital investment. The following planning guidelines are recommended for consideration in development of any future groundwater wells:

- Properly locate in Main Basin to achieve high yield

- Integration to appropriate distribution system pressure zone
- Property acquisition (0.5 acre minimum)
- Ensure acceptable groundwater quality to minimize additional treatment
- Equip well with automated controls for remote operation and monitoring to minimize labor and ensure high water quality performance
- Allow two to three years for planning, design, construction, and project start-up.

Cost of new wells in the Southern California area vary depending on several factors (e.g., well depth, property costs, proximity to distribution system, on-site facilities, water quality, required treatment, automation complexity, etc.). An order of magnitude planning estimate is $6 million to $9 million excluding distribution system pipelines and storage. A new well that produces 2,000 gpm (3,226 AFY) with an amortization of 4% at 30 years would cost $108 to $161 per AF for a $6M to $9M well project, respectively.

3-5 Future Groundwater and Imported Water Availability

3-5.1 Groundwater

3-5.1.1 Main Basin Conditions

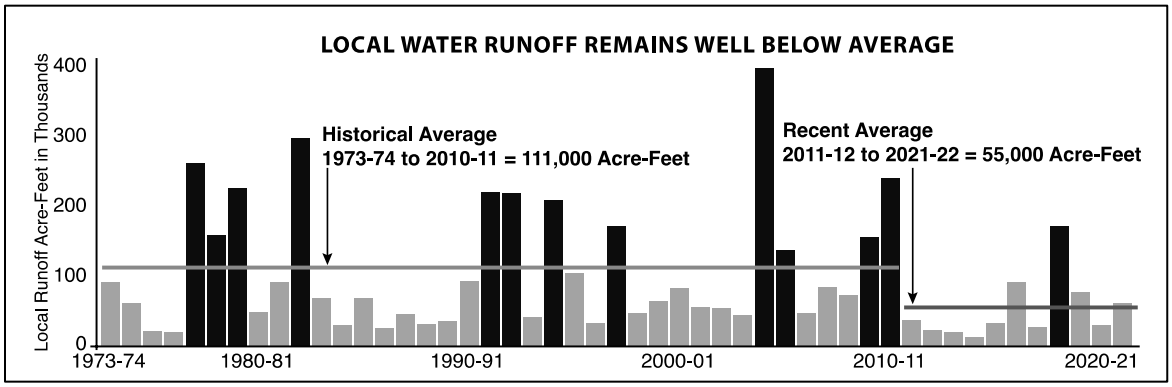
The Main Basin continues to be the region's main water supply source for numerous retail agencies making up a majority of their supply source. Over the past several years, the Main Basin has experienced a reduction in groundwater levels due to decreased stormwater replenishment and longer lasting droughts. The Water Master estimates that local runoff used for groundwater replenishment has decreased over the last 10 years on average to about 55,000 acre-feet per year when compared to the historical 40-year average (years 1970 to 2010) of 111,000 acre-feet per year as illustrated on Figure 3-6.

This condition is further evidenced by the Key Well elevation being approximately 180 feet below mean sea level (see Figure 3-4). Even with the extensive conservation efforts put forth by retail agencies and resulting water demands trending downward since 2006 (see Figure 3-7), the Main Basin continues to struggle to maintain a Key Well elevation above 200 feet, which is the minimum goal of the Water Mater to allow higher OSYs.

As such, the Main Basin Water Master has taken proactive basin management actions in collaboration with Pumpers to address the replenishment shortfall and increase the overall health of the Main Basin as follows:

- Implemented Resource Development Assessment to purchase additional untreated imported water when available;
- Kept OSY low for eight consecutive years to increase replacement water demand;
- Increased cyclic storage with MWD for pre-delivery of 180,000 acre-feet over last 5 years;
- Encouraged Pumpers to purchase Cyclic Storage water to use for replacement water when over-pumping occurs; and
- Participated in the development of the Pure Water Program to bring up to 80,000 acre-feet per year to the Main Basin

Figure 3-6
Main Basin Historical Runoff



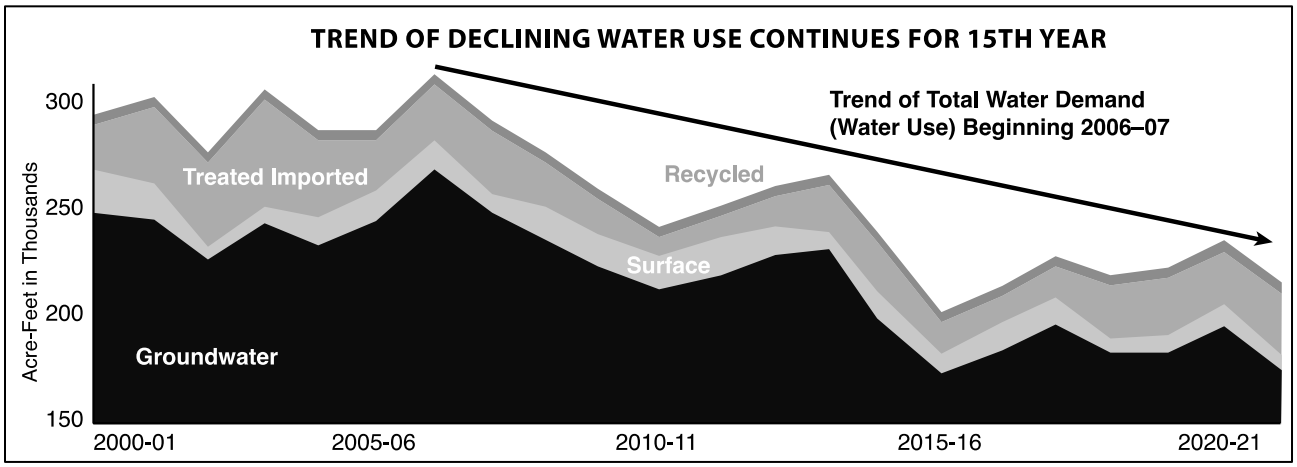


Figure 3-7
Historical Water Demand Trends

3-5.1.2 Cyclic Storage and Conjunctive Use Agreements

Cyclic Storage and Conjunctive Use Agreements allow the storage of untreated imported water in a groundwater basin to be used at a later time. The main difference between the two types of agreements is that the ownership of the water stored under a Conjunctive Use structure is by the imported water wholesaler (e.g., MWD) for use at such a time as they deem necessary and can be extracted and used for distribution, whereas, the water stored under a Cyclic Storage Agreement is pre-purchased by the Water Master or water wholesaler for storage in the basin with deliveries taken over a varying time period for long-term use to stay within the storage basin . The Water Master has implemented both types of storage programs within the Main Basin to support increased groundwater elevations and to assist Pumpers in offsetting cost for Replacement Water.

In 2017, the Water Master entered into a Cyclic Storage agreement with MWD and Upper District for the delivery of 80,000 acre-feet with payment to occur over the succeeding five year period. In 2019, the Water Master, along with area water wholesalers, extended the 2017 agreement for an additional 110,000 acre-feet of untreated imported water for storage into the basin. This cyclic storage water has been used by the Water Master for replacement water, resource development water, and overall

basin replenishment. The Water Master is being proactive in procuring imported untreated replenishment water when it becomes available.

In 2019, the City entered into a Cyclic Storage agreement with the Water Master for 5,500 acre-feet. As of December 2022, there was a balance of 39.42 acre-feet of water stored in the City's cyclic storage account. The City has used this cyclic storage water to offset the cost for over-pumping of their adjudicated groundwater rights in various years. It is recommended that the City not only continue with this practice but increase its cyclic storage quantity to allow for over-pumping of their adjudicated groundwater rights for a minimum of a 3-year period to help offset MWD rate increases that will be imposed on water wholesalers and retailers over the next several years and provide 100% local reliability. While over-pumping adjudicated groundwater rights is a cost-effective strategy, the City does have physical limitations of over-pumping during peak demand periods (e.g., Summer and fall) and when groundwater basin levels drop resulting in less production yield from its various wells. Thus, it is recommended that the City develop additional wells that would allow for maximum production during peak demand seasons and in hydro-geologically beneficial areas of the Basin where lower groundwater elevations would yield sufficient well production as recommended in Section 3-10.1

3-5.1.3 MWD Untreated Water Availability

MWD untreated water availability varies each year depending on several factors including availability of SWP Table A allocation levels, rainfall conditions, levels in MWD reservoirs and the drought conditions in Southern California. In times of challenging water supply and drought conditions, MWD has the ability to enact its Water Shortage Contingency Plan (WSCP), which has multiple tools to manage decreased water supplies. One of the primary tools is to enact its Water Supply Allocation Plan (WSAP) which has ten levels and can reduce water deliveries across its wholesalers' base from 5 percent up to 50 percent. During the 2015 drought, MWD enacted the WSAP to manage its water supply deliveries across its wholesalers to provide equitable distribution to meet demands.

The SWP Table A allocation differs each year and also may change over the course of the year. Beginning with an initial allocation that is based primarily on a conservative dry hydrology, current storage and releases to be made through the year to meet SWP contractual and regulatory obligations, the allocation may change over winter and through spring to reflect the actual and forecast water supply. Table 3-6 illustrates SWP Historical Table A, showing allocations from 1996 to the present.

[1] Presents all allocation announcements for water years 1996 to the present. Data for earlier years can be found in Bulletin 132 or the 1967-1995 summary.

[2] The 11/29/06 initial allocation of 60% for 2007 remained unchanged for that year, as documented in Notice to Contractors (NTC) 07--06.

[3] The 2022 initial allocation is 0% of Table A; however, DWR is committed to supply contractor's unmet minimum health and safety needs, per NTC 21-07.

[4] The 2022 final allocation is 5% of Table A, and supplying contractors unmet human health and safety needs, per NTC 22-03.

[5] The 2023 initial allocation is 5% plus health and safety, per NTC 22-04.

Untreated water availability is planned for in MWD's Integrated Resource Plan (IRP). MWD's forecasted groundwater replenishment demands per the 2015 MWD IRP is shown in Table 3-7. The 2020 MWD IRP is currently in development.

MWD's 2015 IRP plans for diminishing groundwater replenishment supplies starting in 2020 and holding constant for a 20-year period is shown in Table 3-7. It should be noted that groundwater replenishment supplies will decrease during times of drought as water supplies are moved around MWD's service area based on the WSAP needs for equitable distribution. The WSAP assumes that groundwater replenishment can be deferred or minimized during drought years to accommodate

more immediate treated imported water demands. The last ten year historical groundwater replenishment in the Main Basin is shown in Table 3-8.

Table 3-7
MWD IRP Forecasted Demands (AFY)

Demand on Metropolitan	2016 Demands (AFY)	2020 Demands (AFY)	2025 Demands (AFY)	2030 Demands (AFY)	2035 Demands (AFY)	2040 Demands (AFY)
Consumptive Use	1,423,000	1,689,000	1,750,000	1,791,000	1,840,000	1,879,000
Seawater Barrier	16,000	5,000	2,000	2,000	2,000	2,000
Replenishment	214,000	166,000	166,000	166,000	166,000	166,000
Total Demand on Metropolitan	**1,653,000**	**1,860,000**	**1,918,000**	**1,959,000**	**2,008,000**	**2,047,000**

MWD untreated imported groundwater replenishments have varied from a low of 13,371 acre-feet per year to a maximum of 99,265 acre-feet per year with an average of approximately 52,000 acre-feet per year.

The City is a sub-member agency of MWD through their regional water wholesaler TVMWD. In fiscal year 2020, approximately 10,849 acre-feet of untreated imported water was delivered into the Main Basin by TVMWD. This replenishment water was a combination of cyclic storage and resource development water.

The volatility of available MWD untreated imported water will continue to be a challenge for MWD and its member agencies. Other sources of replenishment water are necessary, as such, recycled water will need to become a significant contributor to Main Basin replenishment to ensure continued use of the City's full adjudicated groundwater pumping rights.

Table 3-8
10-Year Main Basin Replenishment Supplies

Fiscal Year	Local Runoff (AFY)	Replenishment Water (AFY)	Total Replenishment (AFY)
2012	39,100	57,846	96,946
2013	24,600	44,678	69,278
2014	21,900	36,717	58,617
2015	14,500	41,519	56,019
2016	35,200	60,092	95,292
2017	92,200	91,316	183,516
2018	29,400	55,115	84,515
2019	173,500	99,265	272,765
2020	79,700	54,736	134,436
2021	32,700	18,287	50,987
2022	29,300	13,371	42,671
Total	**572,100**	**572,942**	**1,145,042**

3-6 Potential for Recharge Using Recycled Water and Stormwater Capture

The City does not currently have a recycled water program. The City has the potential to participate in recycled water development in multiple ways as follows:

3-6.1 Recycled Water

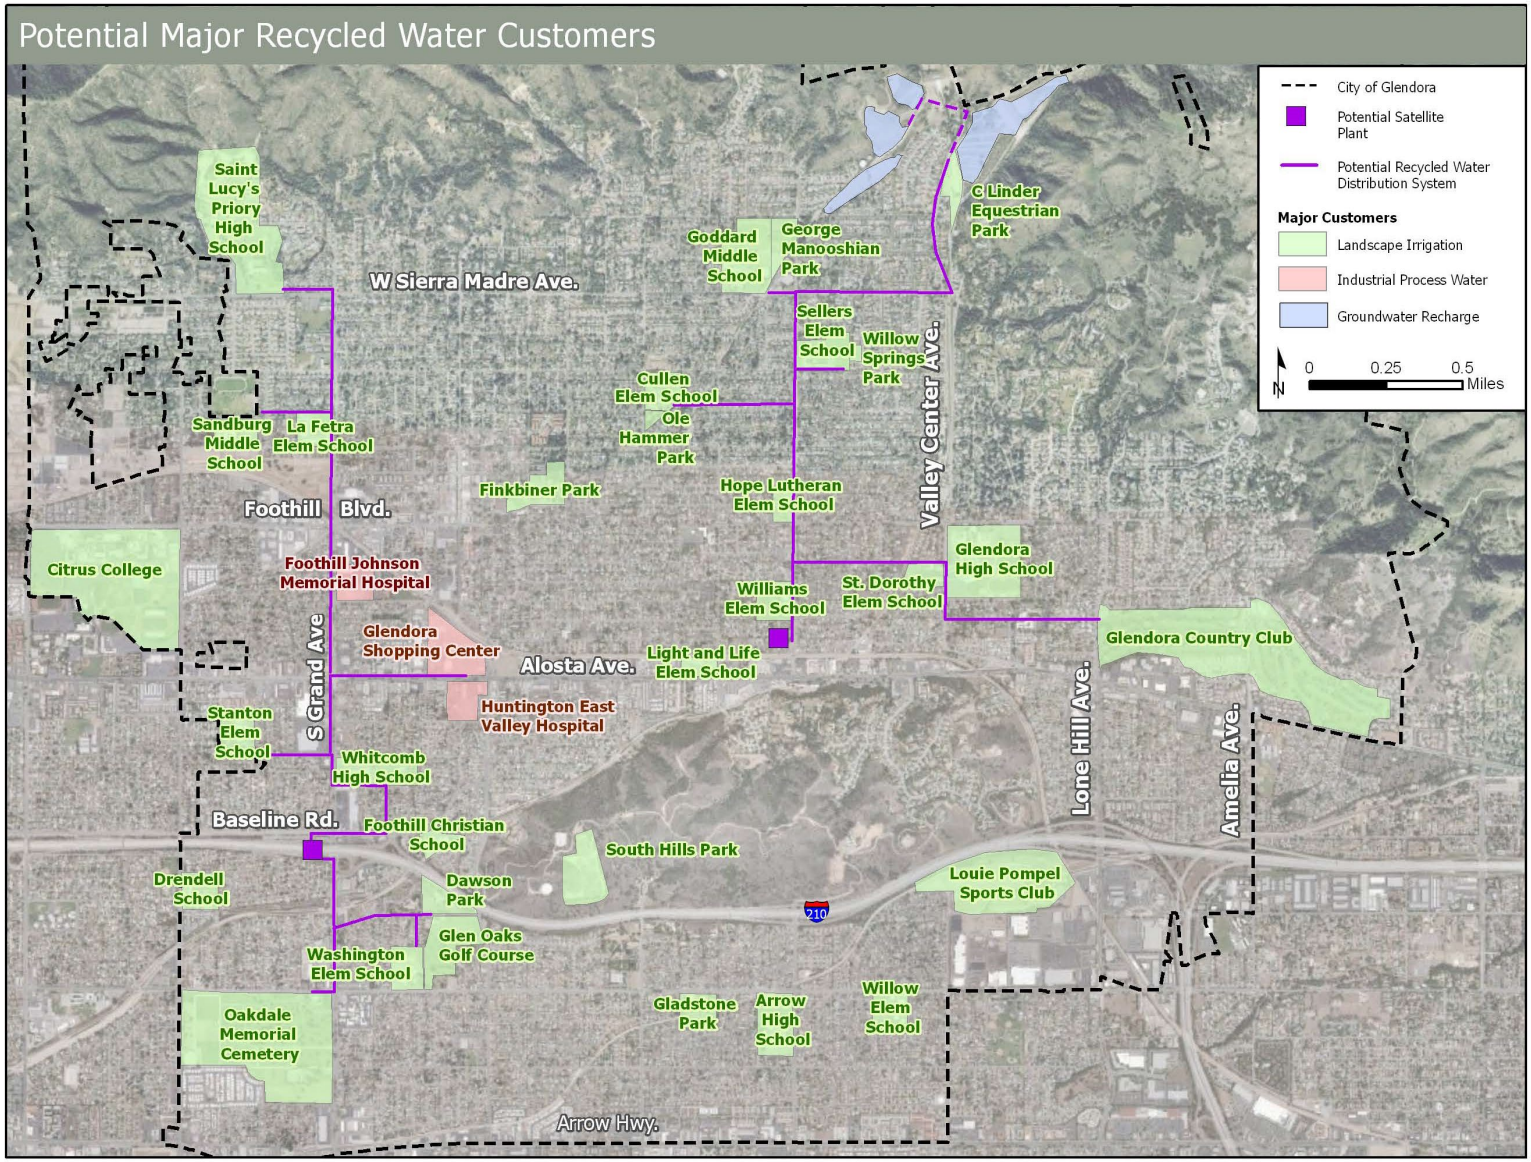
3-6.1.1 Direct Water Recycling

The City can participate in developing its own recycled water program via a) the scalping of wastewater flows from its sanitary sewer system; or 2) receiving water from LACSD's San Jose Creek Water Reclamation Plant. Direct Water Recycling primarily focuses on providing recycled water for customer uses for irrigation or industrial manufacturing uses.

- ***Wastewater Scalping***: This approach would require the construction of a Title 22 treatment system and "Purple Pipe" distribution system to specific customers throughout its service area. Typical customers would include irrigation for parks, schools and medians, industrial process water for commercial customers, and potentially groundwater recharge. Treatment technology would include either membrane bioreactors (MBR) or conventional treatment systems. An example of a recycled water scalping system, associated distribution purple pipeline and potential customers is shown on Figure 3-8.
- ***Regional Distribution***: This approach would receive water from LACSD's San Jose Creek Water Reclamation Plant, which is located approximately 10 miles away. This would require the construction of a regional transmission main and local purple pipe distribution infrastructure as shown on Figure 3-8. The focus of this water recycling approach would be to primarily serve City customers with retail needs to offset imported water usage.

  The City evaluated recycled water opportunities and determined that direct water recycling was not cost-effective to serve local customers due to the required dedicated infrastructure and the minimal effect on offsetting imported water demands.

3-6.1.2 Regional Recycled Water Recharge



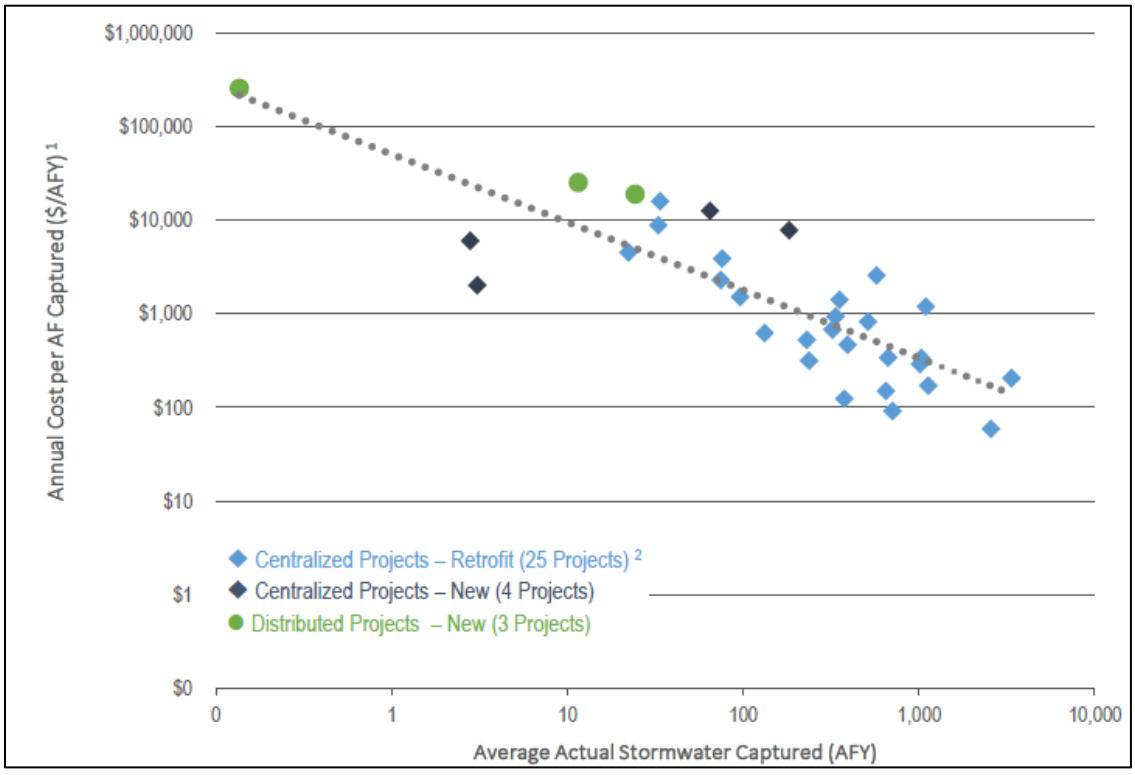
MWD is developing a regional recycled water project titled Pure Water Southern California (Pure Water) in partnership with Los Angeles County Sanitation District (LACSD). This program will produce up to 150 mgd and provide groundwater recharge to several groundwater basins throughout Southern California. The Water Master indicates that up to 80,000 acre-feet per year of highly purified treated recycled water will be used to recharge the Main Basin. This recharge will significantly assist in restoring Main Basin water levels to allow Pumpers to more fully use their adjudicated water rights. The project is currently in the environmental scoping and permitting process and is expected to be producing water as early as 2028.

3-6.2 Stormwater

Water supply availability continues to heighten the awareness and use of existing water supplies and the focus on developing new source water alternatives. Stormwater capture projects are being considered by agencies at a local level and regional basis as an additional water supply alternative. Stormwater capture projects use local stormwater discharges that would normally be discharged to a river or ocean via city or county-maintained storm drain systems and instead use this water for groundwater replenishment in local groundwater basins, irrigation water at municipal/commercial sites, and other similar uses.

Various agencies have ventured into the stormwater capture arena with the development of local and regional projects. The Southern California Water Coalition (SCWC) published a 2018 whitepaper that assessed stormwater capture projects of varying magnitude across the Southern California region. The goal of the SCWC whitepaper (Whitepaper) was to identify stormwater capture volumes, costs, benefits, and project performance across the region to better make future project decisions. The Whitepaper assessed 32 of the 54 identified stormwater capture projects of varying sizes from 6 agencies.

Figure 3-8
Example Recycled Scalping System and Customers



The Whitepaper categorizes stormwater projects into three main definitions as follows:

- **Centralized for Recharge**: Projects which capture rainfall and stormwater runoff from natural and engineered drainage systems and stored in centralized facilities such as spreading basins and recharge basins for the managed replenishment of local groundwater basins.
- **Distributed for Recharge**: Projects which retain rainfall and stormwater runoff on site (at end user locations) to infiltrate into and replenish local groundwater basins. Examples of distributed recharge projects include green streets, park retrofits, permeable pavement and bio-swales.

Distributed for Direct Use: Projects which capture and store rainfall and stormwater runoff on site (at end user locations) which is then used to meet non-potable demands. Examples include stormwater capture using rain grading, tanks and cisterns, permeable pavement, and parkway basins. In some instances, stormwater capture for direct use may be used to meet potable demands as well.

The Whitepaper analysis determined that the cost and size of stormwater capture projects were core attributes in developing cost impactful projects. The cost of constructing and operating stormwater projects versus the stormwater yield captured is shown on Figure 3-9.

Figure 3-9
SCWP Unit Cost by Amount of Stormwater Captured

There are tremendous financial and institutional benefits to the larger Centralized for Recharge types of projects that produce an overall lower cost water supply. The overall findings of the Whitepaper analysis are as follows:

- Capital costs totaled $132 million for the 32 projects

- Costs of the projects range from $59 per acre-foot to more than $250,000 per acre-foot
- Median costs for distributed projects are $25,000 per acre-foot and new centralized projects are $6,900 per acre-foot
- The average stormwater captured for all 32 projects during the 11-year period was 13,400 AFY

The whitepaper analysis supports the findings of several local stormwater capture projects that have been completed or in process by local Los Angeles County municipalities.

In 2018, Los Angeles County voters passed Measure W to fund the Safe Clean Water Program (SCWP). The SCWP's purpose is to provide regional direction to capturing stormwater to reduce reliance on imported water, provide enhanced water quality in stormwater discharges, and improve flood control management. The SCWP management is divided into nine watershed area steering committees that drive direction over regional projects. The City is part of the Upper San Gabriel Valley River Region. The SCWP is funded by a private parcel tax for properties within the Los Angeles County Flood Control District (LACFCD) service area. Fifty percent of funds are distributed proportionally to tax revenues collected for regional projects within that watershed region and forty percent are distributed directly to local municipalities proportional to tax revenues collected within their boundary.

Each year, participants of the SCWP file an annual report detailing the proposed projects they plan to implement. The City's stormwater capture projects and proposed budget is summarized in Table 3-9.

Table 3-9
Proposed City Stormwater Capture Projects

Expenditure Type	Name	Budget
Program 1	NPDES Programs Administration	$408,000
Program 2	Stormwater Master Plan	$172,000
Project 1	Green Street Feasibility Study	$15,000
Project 2	Finkbiner Park Stormwater Capture Project	$50,000
Project 3	Street Yard Roof Addition Project	$95,000
Project 4	Storm Drain Inlet Trash Capture Device Installation	$115,000
O&M Activity	Drywell, and Pervious Pavement Cleaning	$25,000
Community Outreach/Engagement Activity	Community Outreach	$9,200
	Total	**$889,600**

The aforementioned projects primarily consist of distributed for recharge or direct use types of projects which will yield minimal recharge volume to the basin.

In consideration of the most cost-effective type of groundwater recharge project with maximum benefits to the City, the Pure Water Program will provide the greatest value to the City's long-term water supply portfolio. Furthermore, this program is being developed at a rapid pace considering the size and span of the program, environmental processes, and stakeholders. It is recommended that the City support the Water Master's efforts in developing this project to fruition.

3-7 Water Banking

Water Banking has become an additional water portfolio management tool for many western US states to address declining water supplies and increased costs of imported water. Water banking allows for the storage of surplus surface water in a groundwater basin for use at a later time. In concept, water banking appears to be a practical approach to enhancing and diversifying a water agency's water supply portfolio. However, due to the Southern California geography, complicated water rights issues, groundwater basin management requirements, and the ability to physically take delivery of banked water, there are numerous complex and costly hurdles to overcome to be involved in water banking.

Water banking opportunities for Southern California occur mostly in the Kern County area at the southern tip of the central valley near Bakersfield California in the San Joaquin Valley's Groundwater Basin (SJV Basin). It is estimated that the SJV Basin can store up to 10 million acre-feet with approximately 1.5 million acre-feet available to the Kern Water Bank.

Various agencies have formed water banking projects within the SJV Basin. The largest being the Kern Water Bank. The Kern Water Bank (KWB) consists of six core agencies operating under a Joint Powers Authority to store water from the Central Valley Project (CVP) and SWP. The water is primarily used to serve local agricultural and residential demands. However, several large California water agencies have also contracted with various members of the KWB to bank water for later recovery and use during dry years. For example, the Semitropic Water Storage District (SWSD), a KWB JPA member, stores up to one million acre-feet for several water agencies such as MWD. Being the largest storage partner, MWD has storage rights within the SJV Basin up to 350,000 acre-feet compared to the San Diego County Water Authority (SDCWA) which has storage rights up to 30,000 acre-feet. SWSD indicates that they are expanding their water banking capacity and are seeking additional partners.

Other Southern California water agencies have developed their own water banking storage facilities within the SJV Basin through land purchases, construction of spreading basins, and groundwater recovery facilities. SWP and CVP water is purchased from water right holders for water banking during available wet years. The capital investment in these facilities has been several million dollars over the past twenty years. Taking physical delivery of the banked water remains one of the most challenging hurdles to water banking.

Most Southern California agencies involved in water banking take delivery of the physical water through exchanges with MWD or a SWP Contractor. The other option is to wheel the physical water through the MWD transmission infrastructure and take physical delivery of the actual water. There are numerous MWD requirements in addition to wheeling costs involved in transferring physical banked water through MWD's transmission system. The wheeling costs per MWD are based on a negotiated amount and at the discretion of the General Manager to determine if sufficient capacity exists within the MWD transmission system to wheel water during the desired time frame. Wheeling costs are also potentially subject to MWD Capacity and Readiness-to-Serve (RTS) charges.

Water banking can be a proactive way to ensure water supply reliability to the City. However, there is no guarantee that the banked water can be delivered in the time frame it is needed or at a reasonable cost. Water banking is a more robust long-term water supply portfolio management tool than a short-term tool. For example, in December 2021, MWD agreed to purchase 4,200 acre-feet

of SDCWA banked water in the SWSD system for $983 per acre-feet. SDCWA purchased the banked water in 2008 for approximately $285 per acre-feet.

Water banking is not recommended as a short-term viable approach for the City given the numerous challenges associated with taking delivery of the banked water and the high costs. More immediate and local water supply reliability approaches are available (e.g., Pure Water Program groundwater recharge, cyclic storage purchases, etc.) to balancing the City's long-term water supply portfolio than water banking. Should the City desire to proceed with water banking supply enhancements, it is recommended that the City engage a qualified consultant knowledgeable in water banking specifics to guide the City through the process of establishing a storage water bank.

3-8 Water Conservation and Rationing

3-8.1 Water Conservation

Water conservation has been at the forefront as an alternative water supply for several decades, helping communities meet increasing water demands while populations grow and businesses develop. The City, like many agencies across the country, have partnered with customers and regulatory agencies to find innovative ways to reduce water use while ensuring sufficient supplies and minimizing increasing costs.

In 1996, the City started its compliance roadmap of the State of California's SB X7-7 law to achieve a reduction of 20% of its demands by 2020 or to achieve 95% of the applicable state hydrologic region target as set forth in the State's 20x2020 Water Conservation Plan. To achieve 95% of the South Coast Hydrologic Region target, the City's 2020 target was established as shown in Table 3-10.

Table 3-10
SBX7-7 Target and Performance

2020 Target (GPCD)	2020 Actual (GPCD)
218	194

The City has not only achieved their 2015 interim SB X7-7 target goals, it has also achieved its 2020 ultimate target goals. The City's extensive conservation efforts have been a core part in obtaining this performance.

The City's exceptional water conservation performance achievements have been a result of its offering of a wide array of varying conservation programs. The residential conservation programs have included low flow fixture replacements, low-flow toilet retrofits, turf replacement, smart irrigation controller replacements, high efficiency clothes washer replacements, and rain barrel/cistern programs. Additionally, the City has instituted conservation rates that encourage customers to use less water based on a two-tiered volumetric system.

The commercial conservation programs have included low-flow toilet retrofits, commercial turf replacement, and replacement of traditional urinals with waterless urinals. The aforementioned programs have been essential in achieving each of the City's SB X7-7 target compliance.

Like all new water supply development, these conservation efforts have come with a significant capital investment. Unlike traditional water supply projects that construct and operate tangible assets (e.g., treatment plants, wells, pipelines, reservoirs, etc.), water conservation typically has minimal to no tangible conventional assets, and as such, can be difficult to quantify its costs and impacts. A 2015 Pacific Institute study titled "The Cost of Alternative Water Supply and Efficiency Options in California" attempted to examine several years of conversation program costs across California and translate

them into dollars per acre-feet savings. The following are costs associated with Residential Water Efficiency Measures:

Several of the traditional water conservation measures have a remarkable return on capital investment as shown in Table 3-11. For example, the cost of retrofitting residential toilets (3.5 gpf to 1.27 gpf) provides an overall relative cost savings in the long-term when considering the amount of water that is saved over the lifecycle of the toilet. However, when evaluating retrofitting toilets with more efficient flows (e.g., 1.6 gpf to 1.27 gpf) there is a large capital cost associated with this effort ranging from $1,200 to $4,600 per acre-feet. Similarly, the cost to perform landscape conversion at $5 per square foot has a larger per acre-feet cost than landscape conversion at $2 per square foot. The difference between these two costs is a result of converting a fully healthy lawn with a low usage landscape versus a conversion of a lawn that had already perished and needed replacement.

Table 3-11
Cost of Alternative Water Supply and Efficiency Options in California (Residential)

Residential Water Efficiency Measures

Efficiency Measure	Potential Statewide Water Savings (acre-feet per year)	Device Water Savings (gallons per device per year)	Cost of Conserved Water ($ per acre-foot)		Notes
			Low	High	
Toilet	290,000	4,700	-$630	-$190	3.5 gpf to 1.28 gpf
		680	$1,200	$4,600	1.6 gpf to 1.28 gpf
Showerhead	170,000	1,400	-$3,000	-$2,800	2.5 to 2.0 gpm
Clothes washer	270,000	7,100	-$760	-$190	
Dishwasher	11,000	410	$12,000	$19,000	
Landscape conversion	870,000 – 2,000,000	19 – 25	-$4,500	-$2,600	$2 per square foot
			$580	$1,400	$5 per square foot

Several of the same types of water conservation efforts used on the residential sector also have tremendous success in the commercial non-residential sector as shown in Table 3-12. Showerhead retrofits, clothes washer replacements, and landscape conversions (at $2 per square foot) have all yielded long-term cost savings and several thousands of potable acre-feet per year in increased water supply.

Water conservation has made significant contributions to increasing water supply for a growing population. However, there are continuing challenges associated with water conservation efforts as follows:

A. **Market Penetration**: Water conservation efforts have been ongoing for several decades. While water conservation has had significant impacts in freeing up additional water supply for growth, much of the traditional water conservation efforts have been implemented across the City as a result of excellent outreach and regulatory changes in the plumbing codes. As such, it is increasingly more difficult to achieve that next level of water conservation savings without tremendous impacts to costs and customers' standards of living.

Table 3-12
Cost of Alternative Water Supply and Efficiency Options in California (Non-Residential)

Non-residential Water Conservation and Efficiency Measures

Efficiency Measure	Device Water Savings (gallons per device per year)	Cost of Conserved Water ($ per acre-foot)		Notes
		Low	High	
Toilet	5,200	-$680	-$70	3.5 to 1.28 gpf
	750	$1,800	$6,500	1.6 to 1.28 gpf
Urinal	2,700	$970	$1,800	0.71 to 0.125 gpf
Showerhead	4,300	-$3,000	-$2,800	2.5 to 2.0 gpm
Faucet aerators	1,600	-$1,200	-$700	2.2 to 1.0 gpm
Pre-rinse spray valve	7,000	-$1,700	-$1,200	2.2 to 1.42 gpm
Medical steam sterilizer modification	450,000 – 650,000	-$1,300	-$1,200	
Food steamer	53,000	-$14,000	-$13,000	Boiler-based to connectionless
Ice machine	13,000	-$3,600	-$1,100	
Waterless wok	170,000	-$1,000	-$880	
Clothes washer	36,000	-$1,600	-$1,100	Top-loader to front-loader
Landscape conversion	19 – 25	-$4,500	-$2,600	Assumes $2 per square foot
		$580	$1,400	Assumes $5 per square foot
Rotary nozzle	2,100 – 4,000	$190	$1,000	
Water broom	50,000	$160	$340	

B. Wastewater Impacts: While there have been extensive efforts put into water conservation efforts on the potable water use arena, there has been minimal effort put into the impacts water conservation has had on wastewater management. While water conservation has achieved significant water savings, this has resulted in increased operational challenges in wastewater treatment, conveyance costs and recycled water costs. Older wastewater treatment and conveyance systems were designed for a minimum of 100 to 125 gallons per capita per day (gpcd). When compared to the proposed State of California indoor wastewater discharge goals of 55 gpcd by 2025 and 52.5 gpcd by 2030, this presents operational challenges in additional treatment costs (e.g., more energy, chemicals, and labor). In some instances, entire infrastructure has had to be replaced to accommodate lower wastewater flows. Much of the older sewer infrastructure was originally designed for 2 feet per second velocities and now must be designed for 3 to 4 feet per second to achieve the same cleansing velocity with lower sewer flows, thus, requiring more lift stations and associated pumping and energy costs.

C. Cost: The development of additional water supplies is traditionally more costly than existing sources. Similarly, the same is true for water conservation efforts. The City has achieved remarkable success in implementing water conservation. However, the next level of water conservation will require innovation and will be more costly than the traditional water conservation efforts recognized to date as the existing market reaches maturity and full market penetration with traditional devices.

Water conservation continues to play a core part of the City's water supply portfolio. Moving forward, water conservation programs will continue to be offered. However, as these traditional water conservation efforts are reaching implementation maturity, there will be less additional water savings recognized from this part of the water supply portfolio. Additionally, increased water conservation results in an impact to future recycled water production.

3-8.2 Water Rationing

On June 1, 2022, the City implemented Stage 3 of its Water Shortage Contingency Plan (WSCP). The primary objective of Stage 3 is to reduce water use by 20 percent. Glendora's average use is 150 gpcpd. Therefore, Stage 3 requires each resident to reduce water usage by about 30 gpcpd to comply.

The WSCP Stage 3 mandatory restrictions include the following:

- Outdoor watering is restricted between 8 am- 5 pm
  - Watering limited to 3 days per week
  - Watering limited to 5 minutes per station.
  - Irrigation systems with drip irrigation are given an exception for an additional 15 minutes as long as there is no runoff.
- No washing down sidewalks or driveways.
- No excessive runoff from landscape irrigation that causes water flow onto an adjoining sidewalk, driveway, street, alley, or gutter.
- No outdoor watering during and 48 hours following measurable rainfall.
- No washing motor vehicles with a hose, unless the hose is fitted with a shut-off nozzle.

ADDITIONAL RESTRICTIONS: FOR BUSINESSES

- Restaurants, cafes, and bars can only serve water to customers upon request.
- Hotels and motels must display a notice providing guests with the option of choosing not to have towels and linens laundered daily.

While MWD implemented a water shortage emergency in April 2022 for all SWP dependent member agencies, it has yet to enact its Water Supply Allocation Plan. SWP dependent member agencies have been mandated to restrict watering to one day per week. TVMWD is part of the MWD water shortage emergency, restricting water usage to one day per week. Thus, the MWD conservation mandates override the City's WSCP limiting water to 3 days per week.

Implementation of the WSCP and associated water rationing will continue until such time that the State declares the drought is over and sufficient rainfall and stormwater capture has occurred to replenish local water supplies. Additional WSCP levels and mandatory restrictions could also be implemented should the drought persist and available water supplies become even more restricted.

3-9 Main Basin Water Rights Purchases

The City's most cost-effective water supply is its groundwater pumping from the Main Basin. As discussed in Section 3-2, maximizing the City's Main Basin groundwater pumping rights is critical to

ensuring local water reliability. With a prescriptive right of 4.75261 percent, acquiring additional Main Basin groundwater rights would help ensure continued water reliability at a more cost-effective rate then using imported water supplies.

There are a total of 78 entities with pumping rights within the Main Basin. Sixty-eight (68) Pumpers have a total groundwater right of 76.46119 percent and 10 Integrated Pumpers have a total groundwater right of 23.53881 percent. The largest users (e.g., > 1%) of each category are shown in Table 3-13.

Table 3-13
Largest Main Basin Groundwater Rights Users

Main Basin Pumper	Percent Ground-water Right
Suburban Water Systems	12.59998
San Gabriel Valley Water Co.	10.49247
California Domestic	6.26154
Cal American-San Marino	4.74431
City of Alhambra	4.45876
City of Arcadia	4.23099
City of Whittier	4.18519
City of Monterey Park	3.39216
Pellissier Irrevocable QTIP Trust	3.28384
Valley County Water District	3.01517
Golden State Water_S.G.V. District	2.92105
San Gabriel County Water District	2.73019
City of El Monte	1.40888
IBY Property Owner, LLC	1.20047
Hanson Aggregates West, Inc.	1.17094
Sunny Slope Water Co.	1.1277
Subtotal	**67.22364**

Main Basin Pumper	Percent Ground-water Right
Azusa Valley Water Co.	5.06299
City of Glendora	4.75261
Covina Irrigating Co.	3.22577
City of Monrovia	3.09472
County of Los Angeles	1.88292
City of Azusa	1.84988
Cal American (Durate)	1.84634
Golden State Water Co. - San Dimas District	1.73984
Subtotal	**23.45507**
Total	**90.67871**

Sixteen (16) of the sixty-eight (68) Pumpers make up 67.22364 percent and eight (8) of the ten (10) Integrated Pumpers make up 23.45507 percent of the Main Basin groundwater pumping rights for a total of twenty-six (26) Pumpers holding 90.67871 percent of total Main Basin groundwater pumping rights. Thus, 9.32129 percent of groundwater pumping rights are held by fifty-two (52) smaller and mostly non-municipal entities. In 2016, the City was successful in securing additional groundwater rights from Monrovia Nursery Company and CV Santa Rosa Investments for a total addition of 194 acre-feet.

With an OSY of 130,000 acre-feet, there is approximately 12,118 acre-feet available from non-municipal Pumpers that could have an interest in selling these groundwater rights as they become available, or these entities decide they no longer have a need for them. A one percent acquisition of additional groundwater pumping rights would yield an additional 1,300 to 2,500 acre-feet per year with an OSY of 130,000 to 250,000 acre-feet OSY, respectively.

It is recommended that the City actively engage these smaller groundwater right entities to gauge their interest in selling their Main Basin rights.

3-10 Recommendations

Water supply reliability is a critical component to the City's future water portfolio. Managing all the integrated parts of this portfolio will establish the most cost-effective approach to ensuring reliable service to the customers. The following are recommendations for the City to consider in implementing the City's future water supply portfolio combined with the other sections of this Master Plan.

3-10.1 Construct Groundwater Wells

Construction of additional groundwater wells will allow the City to meet current and future demands that take into account future development projects, accessory dwelling units, unforeseen outages, maintenance issues, and increased water reliability. Construction of new wells will also allow the City to pump 100% of their demands during regionally challenged water supply restrictions. Construction of new wells should follow the general criteria outlined in Section 3-4.

3-10.2 Support Groundwater Projects that Increase Main Basin Operating Safe Yield

Support of projects that increase the Main Basin OSY will result in greater pumping rights availability to the City. Projects the City should consider include the MWD Pure Water Program that will provide significant recharge of the Main Basin of up to 80,000 acre-feet per year using purified recycled water. Other projects for consideration include local stormwater capture projects that result in recharge of the Main Basin in significant quantities.

3-10.3 Maximize Cyclic Storage to Offset Imported Water Cost

Maximizing the City's cyclic storage account will assist in offsetting increased imported water costs. It is recommended that the City purchase a minimum of 3-years of supplemental untreated imported water to store in their cyclic storage account to offset future MWD imported water rate increases. This approach will allow the City to over pump groundwater and replace it with cyclic storage water purchased in prior years, thus, minimizing the need to take more expensive imported water that experiences a rate increase of approximately 5% per year on average. It should be noted that while using cyclic storage is a cost-effective strategy, the City does have physical pumping limitations during peak demand periods (e.g., Summer and fall) and when groundwater basin levels drop resulting in less production yield from its various wells. Thus, it is critical for the City to develop additional well pumping capacity to recognize the benefits of cyclic storage and full groundwater pumping rights during high demand seasons.

3-10.4 Conduct Updated Study of Well 3, Well 4, and Well 7

It is recommended that the City continue to consider replacing Well 3, Well 4, and Well 7 (Vosburg) as potential future supply sources to provide redundancy and offset the cost of using treated imported water. The City is currently working with TVMWD on an updated study with the most current information.

3-10.5 Continue Implementing Water Conservation Measures to Reduce Water Demands

It is recommended the City continue to work with its customers to ensure mandatory conservation restrictions are implemented and conservation rebates are readily available.

3-10.6 Pursue the Purchase of Additional Main Basin Groundwater Rights

It is recommended that the City reach out to the non-municipal Main Basin Groundwater right holders to gage their interest in selling their groundwater rights. A one percent increase in groundwater rights will result in an additional 1,300 AFY to 2,500 AFY. This effort could result in a significant cost savings to the City each year in regards to the water budget.

3-10.7 Actively Participate in TVMWD and Main Basin Water Policy Decisions

The City's active involvement in regional policy decisions will help minimize future water rate increases. The Water Master determines each year how much replenishment water will be purchased and spread and the associated assessment costs. The City's input into this process will allow collaboration on future rate increases, setting of OSY levels, and assessment policies that are implemented that result in lower costs to Basin Pumpers.

SECTION 4
WATER USE

4-1 Historical Annual Water Use

The City of Glendora's total annual water production and purchase from 2012 to 2021, shown in Figure 4-1 and Table 4-1, ranged from 9,288 AFY to 13,156 AFY. The Governor declared a State of Emergency in January 2014 due to severe drought conditions in California. As a result, water conservation measures were implemented and the City's water demand began to decline due to its customers conscientious water conservation efforts. The drought emergency declaration was lifted in April 2017. However, California soon fell back into drought conditions in 2018 and 2020-2021. In the last five years, the demands have rebounded slightly, but not to the same level as it had once been in the early 2010's. Over the past five years, the total production and purchase has stayed relatively steady and averaged about 10,390 AFY (9.28 mgd).

4-2 Non-Revenue Water

As with most water providers, the City typically produces/purchases more water than the total quantity measured by the customer meters. The difference between production/purchase and water billing data is considered non-revenue water. The City calculates and reports non-revenue water to the Department of Water Resources each year. The non-revenue water ranged from 853 AFY in FY 2020-2021 to 1604 AFY in FY 2016-2017 as shown in Table 4-2. The discrepancy is typically due to the differences in the accuracies of the few large meters which measure purchases and production, and the thousands of small customer meters which measure sales. Non-revenue water can also be due to unmeasured uses such as fire flows, water main flushing and other maintenance related tasks. The remainder may be due to leaks from the system. The City's annual non-revenue water has been declining over the base five years. Since 2018-2019, the non-revenue water percentage has been within industry standard (10 percent or less). It is assumed that as the City completes more and more replacement of pipe, this will reduce the number of water line breaks each year and possible undetected leaks, which in turn will reduce the non-revenue water volume.

Table 4-2
Non-Revenue Water

Fiscal Year	Non-Revenue Water	
	AFY	%
2016-2017	1,603.6	16.3
2017-2018	1,479.3	13.9
2018-2019	726.5	7.6
2019-2020	195.4	2.2
2020-2021	853.3	8.0
Average	**971.6**	**9.6**

4-3 Water Demand Variations

Demand variations through a year are influenced by seasonal effects such as temperature, humidity, and precipitation. System demand variations throughout a day are influenced by the customer base and the daily lifestyles of the customers. In primarily residential areas, the peak demands within a day typically occur in the morning hours between 6:00 am and 9:00 am, when customers wake to begin their daily routine, with a secondary peak occurring in the evening. In largely commercial and industrial areas, the peaks may occur mid-day or the demand may even remain relatively constant throughout the workday. For this study, the variations are expressed as a ratio to the average demand, with the average demand being equal to one.

4-3.1 Monthly Demand Variations

Typical of most Southern California communities, the City's water consumption exhibits a distinct seasonal pattern. Peak and low monthly consumption occur during the dry summer months and wet winter months, respectively. Historic monthly production data was used to analyze monthly demand variations. The monthly demand factors are shown in Table 4-3. The highest water use typically occurs in July or August. The lowest water use typically occurs in December thru March. The highest and lowest monthly demand factors were found to be 1.82 and 0.44, respectively. A graph of the historic monthly demand factors (monthly demand/average monthly demand) is illustrated on Figure 4-2.

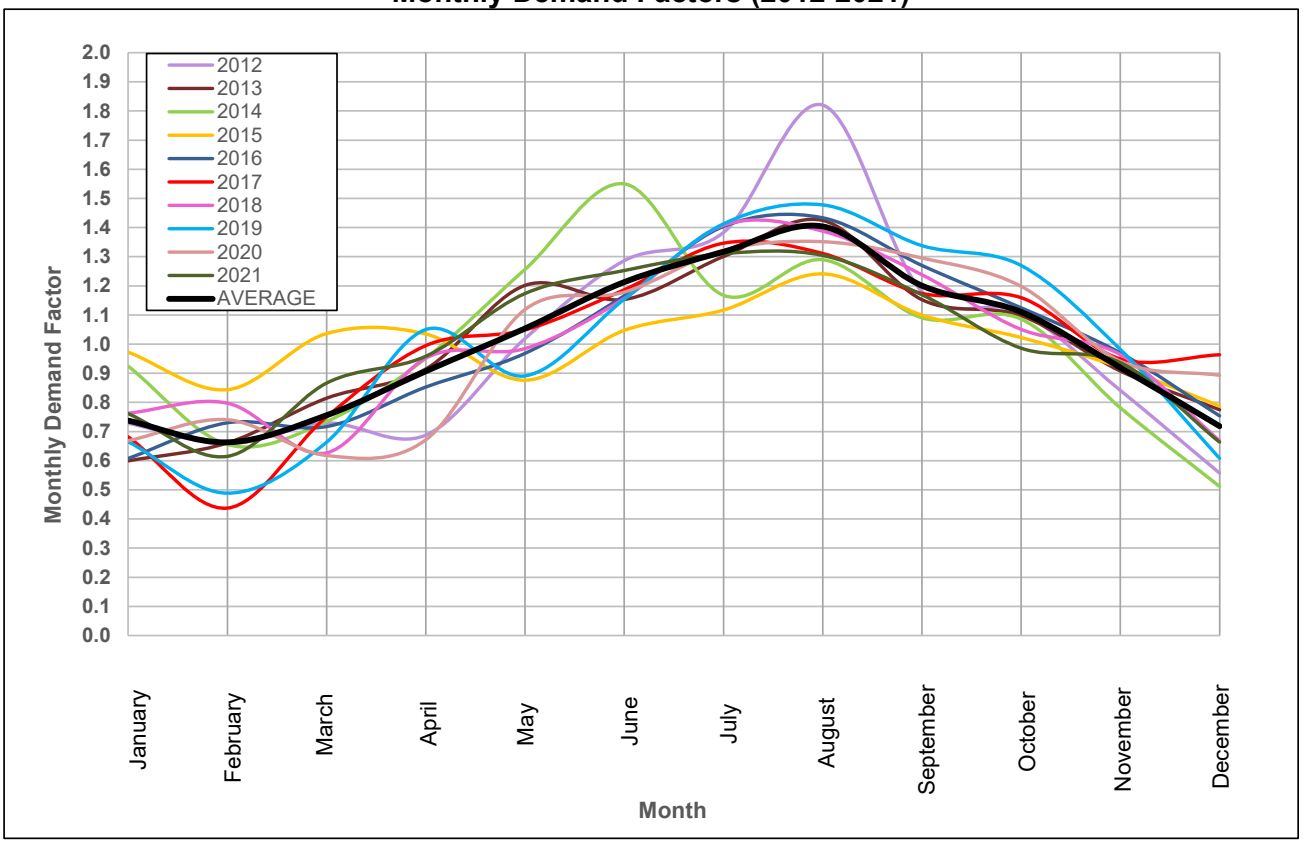

Table 4-3
Monthly Water Production and Demand Factors (2012-2021)

Month	2012 (AF)	Monthly Demand Factor	2013 (AF)	Monthly Demand Factor	2014 (AF)	Monthly Demand Factor	2015 (AF)	Monthly Demand Factor	2016 (AF)	Monthly Demand Factor	2017 (AF)	Monthly Demand Factor

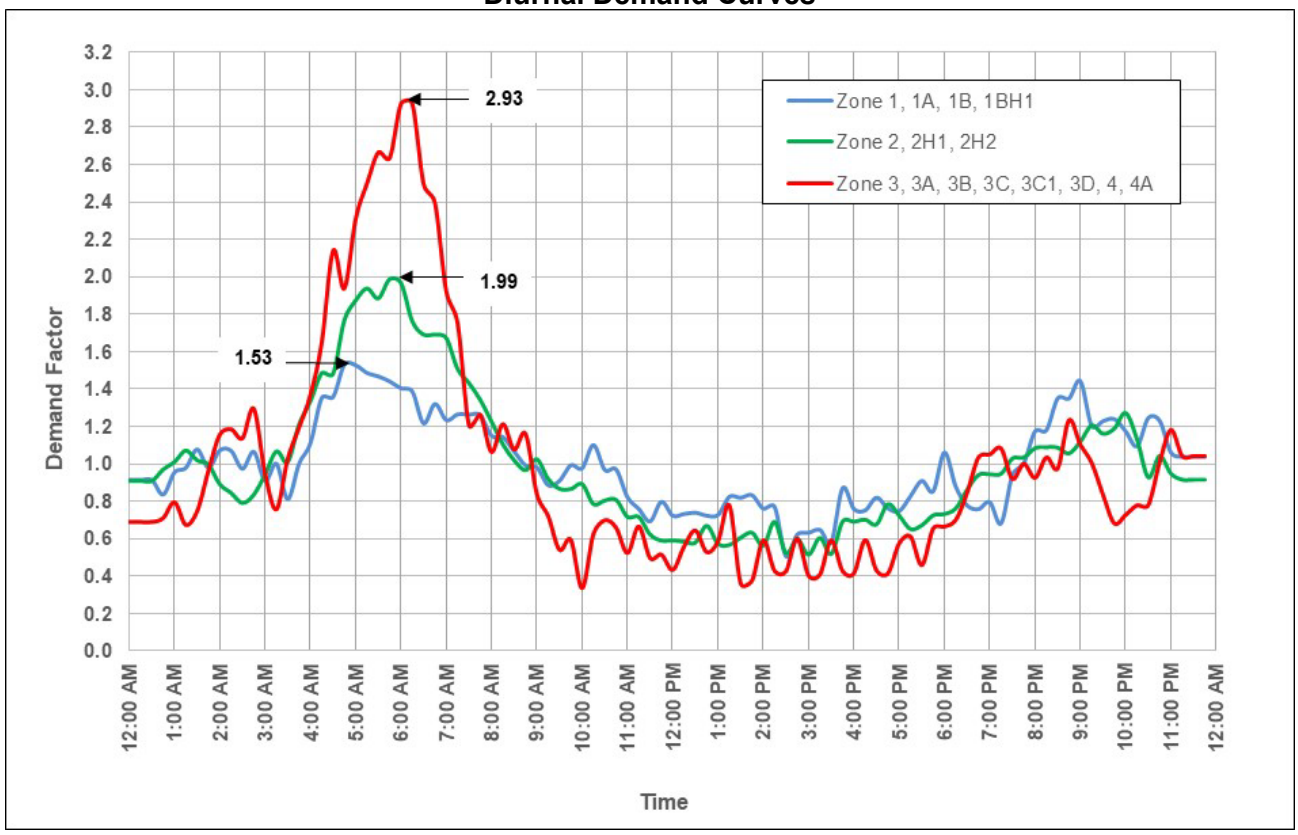
Note: Peak month factors are highlighted in red. Minimum month factors are highlighted in green.

Figure 4-2
Monthly Demand Factors (2012-2021)

4-3.2 Daily Demand Variations

Within any given month, demand can vary based on usage patterns (i.e., weekend usage is typically different than weekdays) and other factors such as irrigation schedules. The maximum demand day occurring over the course of the year is an important parameter for planning purposes as required source of supply is based on this demand. The maximum daily demand for 2021 was determined to be about 12.19 mgd when the data was extracted from the City's Advanced Metering Instrumentation (AMI) system data. Adjusted up to production values (production was about 9.3% higher than billing data in August 2021), the maximum daily demand is estimated to be 13.27 mgd.



4-3.3 Hourly Demand Variations

Knowledge of accurate demand variations over a 24-hour period is essential for proper analysis of water systems. For this study, hourly demand variations were represented by the development of diurnal demand curves for various hydraulic zones. The diurnal demand curves were employed in determining the adequacy of the sources of supply, pumping facilities, reservoirs, and the transmission/distribution facilities.

The hourly water usage for various zones was determined based upon data collected from the City's SCADA system from May 26, 2022 through June 16, 2022. The facility flow meters, pump flows, and water levels in the reservoirs were utilized in calculating the demands and demand factors in 5-minute

increments over a typical 24-hour period. The average weekday diurnal demand curves developed are shown on Figure 4-3.

Figure 4-3
Diurnal Demand Curves

4-4 Existing System Demands and Peaking Factors

It is important to evaluate a water system during various incremental peak demands. Typically, a water system is designed to meet the maximum demands placed on it. The system components must be designed to provide these demands as they occur. Maximum month and maximum day demands are important factors in determining a system's supply capability. Maximum day demands usually dictate the design criteria for both system transmission, storage needs, and pump capacity requirements. Peak hour criterion is a measure of the system's overall adequacy with respect to its transmission and distribution elements, as well as its operational storage capacity. The City of Glendora's water system demands utilized in this study are shown in Table 4-4.

The City's existing water demands must be established in order to evaluate the current status of the water system infrastructure with respect to pump capacities, storage requirements, pipe velocities and system pressure. The demand estimates used in this study are shown in Table 4-5 by zone.

Table 4-4
Water System Demands and Peaking Factors

Demand Description	Existing Demand (gpm)	Existing Demand (mgd)	Existing Demand (AFY)	Peaking Factor[1]
Minimum Month[2]	2,835	4.08	4,572	0.44
Average Day[3]	6,442	9.28	10,390	1.00
Maximum Month[4]	9,019	12.99	14,546	1.40
Maximum Day[5]	9,664	13.92	15,585	1.50
Maximum Day, Peak Hour[6]	16,828	24.23	27,140	2.61

[1] Specific Demand = Average Day Demand x Peaking Factor

[2] Minimum Month Factor is the lowest factor from 2012-2021

[3] Average Day Demand is the average from 2017-2021

[4] Maximum Month Factor is the highest factor from 2012-2021

[5] Maximum Day Factor in 2021 was 1.43 based on water meter data. A slightly conservative factor of 1.5 was selected for planning purposes.

[6] Maximum Day, Peak Hour Demand is calculated in hydraulic model utilizing developed diurnal patterns for each zone

Minimum Month Demand - The minimum month peaking factor was determined from the City's annual production and purchase records from 2012 through 2021 and is estimated as 0.44 times the average month demand. This demand typically occurs in winter months and is estimated at 2,835 gpm (4.08 mgd).

Average Day Demand - The existing system average day demand (ADD) is based on the City's average daily production and purchase data for the last five years (2017 through 2021). The average day demand is 6,442 gpm (9.28 mgd).

Maximum Month Demand - The maximum month peaking factor was determined from the City's annual production and purchase records from 2012 through 2021 and is estimated as 1.40 times the average month demand. This demand typically occurs in winter months and is estimated at 9,019 gpm (12.99 mgd).

Maximum Day Demand - Daily AMI data was provided for August 2021. The highest demand seen was 12.19 mgd occurred on August 2, 2021. This number was increased to 13.32 mgd account for system losses. The percentage increase was calculated by comparing the total production data to the total billing data for the month of August 2021. The maximum day demand factor for 2021 was calculated to be 1.43.

The maximum day demand (MDD) factor for this Master Plan Study was conservatively set at 1.50 for planning purposes. Therefore, the MDD is estimated at 9,664 gpm (13.92 mgd).

Peak Hour Demand – Modeled peak hour demands were based upon the diurnal demand curves illustrated on Figure 4-3. The overall peak hour system demand is estimated to be 2.61 times the average day demand or 16,828 gpm (24.23 mgd). This factor varies by zone depending on the diurnal curve.

Table 4-5
Existing Water Demands by Zone

Zone	Minimum Month[1]		Average Day[2]		Maximum Month[3]		Maximum Day[4]		Peak Hour[5]

[1] *Minimum Month Demand shown is calculated using maximum month factor of 0.44.*

[2] *Average Day Demand based on 2017 through 2021 production and purchase records*

[3] *Maximum Month Demand shown is calculated using maximum month factor of 1.40.*

[4] *Maximum Day Demand shown is calculated using maximum day factor of 1.50.*

[5] *Peak Hour Demand shown was calculated in the hydraulic model utilizing the diurnal curves for each zone. The peak does not happen at the same time in each zone, therefore the total system peak was determined utilizing the hydraulic model.*

4-5 Water Unit Demand Factors

Water unit demand factors were developed from billing data (January 2020 – December 2021) and associated land use information. It is assumed that this water use represents some bounce-back from the end of the drought and thus it is believed to be representative of post-drought or more "normal" conditions.

The proposed potable water unit demand factors are shown in Table 4-6. These demand factors can be used to estimate future development water use if more detailed information is not available.

Table 4-6
Water Unit Demand Factors

Landuse	Density (du/ac)	Max Lot Size (sq ft)	Demand Factor		
			[1]Min gpd/du	[2]Min gpd/ac	[3]Min gpd/tsf
RHR	0-1	43,560	1,500	850	-
E-7 Single family Residential	1-3	Varies	1,000	1,600	-
E-6 Single family Residential	1-3	12,500-15,000	850	2,000	-
E-5 Single family Residential	1-4	10,500	650	2,100	-
E-4 Single family Residential	1-5	8,500	550	2,100	-
E-3 Single family Residential		8,000	450	2,100	-
R-1 Single family Residential		7,500	400	2,000	-
R-2 Restricted Multiple Family Residential	6-10	-	300	1,800	-
R-3 Multiple-Family Residential	10-30	-	150	900	-
Commercial	-	-	-	2,000	200
MS- Medical Services	-	-	-	3,400	350

[1] The gpd/du should be used if the number of dwelling units is known

[2] The residential gpd/ac will vary based on the density. Use minimum gpd/ac if number of dwelling units is not known.

[3] The commercial gpd/tsf is based on typical planning values seen in the Southern California

4-6 Future Demands

4-6.1 Future Development Demands

The future demands were developed by adding the estimated demands of future known development projects (provided by City staff) to the existing demands. Future development demands are shown in Table 4-7. A total of 223,840 gpd of future average water use is estimated to be added throughout the service area. The projected future water system demands by zone are shown in Table 4-8.

Table 4-7
Future Development Demands

No.	Project Name / Location	Zone	Future Land Use	Area (ac)	Future Dwelling Units (du)	Average Density (du/ac)	Future Building Area (sf)	Unit Demand Factor	Future Average Demand (gpd)	Project Status
1	1121 E Arrow Hwy	1	Multi-Family Residential	0.34	19	55.9		150 gpd/du	2,850	Proposed

[1] *Minimum Month Demand shown is calculated using maximum month factor of 0.44.*

[2] *Average Day Demand based on 2017 through 2021 production and purchase records*

[3] *Maximum Month Demand shown is calculated using maximum month factor of 1.40.*

[4] *Maximum Day Demand shown is calculated using maximum day factor of 1.50.*

[5] *Peak Hour Demand shown was calculated in the hydraulic model utilizing the diurnal curves for each zone. The peak does not happen at the same time in each zone, therefore the total system peak was determined utilizing the hydraulic model.*

4-6.2 Reduction in Indoor Water Use

Senate Bill 606 and Assembly Bill1668 require reduction in indoor residential water use to 55 gallons per capita per day (gpcd) by January 1, 2025, and 52.5 gpcd by January 1, 2030.

In 2021, the total residential water use was about 328,097,679 CF and the service area population was 45,551. This equates to an average demand of approximately 148 gpcd. This includes outdoor irrigation.

Typically, indoor water use is about 70 gpcd. In order to meet the SB606 and AB1668 requirements, the City's residents need to reduce their water use by about 17.5 gpcd (70 gpcd – 52.5 gpcd) by 2030. The total reduction citywide would therefore be about 797,140 gpd.

4-6.3 Accessory Dwelling Units

In California, the housing production has not kept pace with the population growth for the last decade. The lack of housing has impacted affordability and caused the average housing cost to rise significantly. Accessory dwelling units (ADUs) provide an alternative to the traditional housing type. ADUs are significantly less expensive to build and offer benefits that address common development barriers such as affordability and environmental quality. ADUs are constructed on parcels with existing or proposed housing so they don't require new land, dedicated parking, or other costly infrastructure.

New policies that went into effect January 1, 2020 are making ADUs even more affordable to build, in part by limiting the development impact fees and relaxing zoning requirements are as follows:

1. AB 68: A long and detailed bill covering multiple ADU rule changes including permitting adding ADUs and Junior Accessory Dwelling Units (JADUs) to single family properties
2. SB 13: Includes a provision to prohibit a local agency from imposing an owner-occupant requirement for an ADU or main residence until 7/25/22.
3. AB 670: Mandates that neither Home Owners Associations (HOAs) nor property Covenants, Conditions and Restrictions (CC&R) can reasonably prohibit development of an ADU or JADU.
4. AB 881: Includes provisions to permit ADUs in multi-family dwelling structures.
5. AB 587: Permits ADUs to be sold separately from primary residence if the property was developed by a qualified non-profit corporation and certain affordable housing requirements are met for the ADU sale.
6. AB 671: Requires local agencies to include a plan that incentives and promotes the creation of ADUs that can be offered at affordable rent in its housing element.

California Senate Bill 9 (SB9) became law January 1, 2022. It amended Section 66452.6 and added Sections 65852.21 and 66411.7 of the California Government Code relating to land use and subdivisions. SB 9 provides two new pathways for homeowners to create additional dwelling units: subdivide a single family lot and build up to two residential units on each or add residential units on lots that are not split. Under SB 9, local agencies must ministerially approve applications without discretionary review.

There are currently 11,312 single family residential water meters in the system. The City approved 33 ADUs (0.29% of total single family units) in 2021 and 31 ADUs (0.27% of total single family units) in 2022, respectively. Although, currently the number of ADUs are a small percentage of the total, it is expected that the number of ADUs will continue to trend upwards and increase in subsequent years.

The City is anticipating that between now and 2030, a maximum of 1,000 new residential dwelling units will be built, including ADUs. This means that the City is expecting a maximum of about 8.8 percent of the total 11,213 single family parcels to construct an ADU.

For planning purposes, the future demand increase due to ADUs can be estimated depending on the percentage of single family parcels that are assumed to add an ADU in the future. If an average ADU has an occupancy of two people, the total ADU demand would be estimated at about 105 gpd (2 x 52.5 gpcd). Possible demand increases are calculated as follows:

1. If 10% of the total 11,312 single family parcels add an ADU = 1,131 ADUs
   Additional demand = 1,131 ADU x 105 gpd/ADU = 118,755 gpd =133 AFY

2. If 20% of the total 11,312 single family parcels add an ADU = 2,262 ADUs
   Additional demand = 2,262 ADU x 105 gpd/ADU = 237,510 gpd = 266 AFY

3. If 30% of the total 11,312 single family parcels add an ADU = 3,394 ADUs
   Additional demand = 3,394 ADU x 105 gpd/ADU = 356,370 gpd = 399 AFY

The City's 2020 Urban Water Management Plan (UWMP) estimated an increase in population from 45,551 in 2020 to 48,093 in 2045 per SCAG data. The residential demands are expected to increase from 7,864 AFY in 2020 to 8,301 AFY in 2045. This is an increase of 437 AFY or 390,000 gpd.

Based on the aforementioned ADU demand estimates and 2020 UWMP demand projections, it is reasonable to assume that the indoor water reduction (797,140 gpd +/-) will exceed the demand increase expected due to future ADUs (118,755 gpd to 356,370 gpd) or the projected increase in population (390,000 gpd).

4-7 Water Conservation

At the time of this report writing, California was in its third consecutive year of severe drought and the state continued its emergency regulations to safeguard the remaining water supplies. The City of Glendora therefore implemented Stage 3 of its Water Shortage Contingency Plan. Stage 3 went into effect June 1, 2022 with the primary objective of reducing water consumption by 20% from 2020. To meet the 20% goal, water customers are asked to reduce water usage by 30 gallons per person, per day. The following restriction apply to all water customers:

1. No watering between 8 AM and 5 PM (Monday – Sunday)
   a. Watering limited to 3 days per week
   b. Watering limited to 5 minutes per station. Irrigation systems with drip irrigation are given an exception for an additional 15 minutes as long as there is no runoff
2. No washing down sidewalks or driveways
3. No excessive runoff from landscape irrigation that causes water to flow onto an adjoining sidewalk, driveway, street, alley, or gutter.
4. No excessive runoff from landscape irrigation that causes water to flow onto an adjoining sidewalk, driveway, street, alley, or gutter.
5. No outdoor watering during and 48 hours following measurable fainfall
6. No washing motor vehicles with a hose, unless the hose is fitted with a shut-off nozzle.
7. 20% water reduction (30 gallons per person, per day_
8. Restaurants, cafes, and bars can only serve water to customers upon request

9. Hotels and motels must display a notice providing guest with the option of choosing not to have towels and linens laundered daily

The City maintains water conservation information on their website for viewing by the public (https://www.cityofglendora.org/departments-services/public-works/water/water-conservation).

A Water Conservation Guidebook can be downloaded from the website. It provides a list of the Stage 3 water restrictions, non-functional turf guidelines, rebate program information, instructions on how to use the water meter customer portal to track water consumption, instructions on how to save trees during a drought, water use efficiency and conservation tips, and coloring pages for kids.

SECTION 5
EXISTING SYSTEM

5-1 General

The City of Glendora (City) operates and maintains the following potable water facilities:

- Four (4) primary pressure zones; Thirteen (13) secondary zones
- 210 miles of water mains (including hydrant laterals), 1-inch through 30-inches in diameter
- About 1,800 Fire hydrants
- 13,483 water meters (Table 5-1)
- Eight (8) active wells
- Twenty-nine (29) storage reservoirs with a total volume of 34.6 MG
- Twenty (20) booster pump station (3 of them serve hydropneumatic systems)
- Three (3) hydropneumatic tanks
- Three (3) pressure regulating stations
- Four (4) imported water connections
- Four (4) inter-agency connections

The existing water system is shown on Figure 5-1. The hydraulic schematic of the existing system is shown on Figure 5-2.

5-4 Wells

The total well capacity is currently about 11,800 gpm or 17.0 mgd. Well information and characteristics are provided in Table 5-3.

5-5 Storage Reservoirs and Hydropneumatic Tanks

The City's water system includes twenty-nine (29) active storage reservoirs ranging in capacity from 10,000 gallons to 7.00 million gallons (MG). There are three (3) hydropneumatic tanks ranging in size from 3,000 gallons to 10,000 gallons. The total reservoir capacity is about 34.6 MG. The characteristics of each existing storage reservoirs and hydropneumatic tanks are shown in Table 5-4.

5-6 Booster Pump Stations

There are twenty (20) booster pump stations in existing water system. Three of the stations serve water to hydropneumatic systems. Details of each booster pump station are summarized in Table 5-5.

HC = Horizontal Centrifugal SUB = Submersible
VT = Vertical Turbine

5-7 Pressure Regulating Stations

The City's water system consists of three (3) pressure regulating stations as listed in Table 5-6. PRS2 is regularly operating to feed lower pressure Zone 1RA from pressure Zone 1. The other two facilities normally remain closed.

Table 5-6
Pressure Regulating Stations

ID	Location	Size (in)	High Pressure Zone	Low Pressure Zone
PRS1	Gladstone St east of Barranca Ave		1	1RB
PRS2	Grand Ave south of Carson Dr		1	1RA
PRS3	Gladstone St east of Valley Center Dr		2	1

5-8 Imported Water Connections

The City has access to imported water through the four (4) connections listed in Table 5-7. The City's goal is to maximize the use of groundwater to the extent possible and limit the amount of imported water that is drawn from these connections.

Table 5-7
Imported Water Connections

Name	Location	Status	Zone	Minimum Capacity (cfs)	Maximum Capacity (cfs)
Three Valleys Municipal Water District (TVMWD) / MWD Upper Feeder					
PM-6	Sierra Madre Ave, east of Little Dalton Wash	Active	1	1.5	15
PM-18	Amelia Ave, south of Foothill Blvd	Active	2	1.0	10
PM-23	Sierra Madre Ave, east of Wabash Ave	Active	1	1.5	15
Covina Irrigating Company (CIC)					
CIC	Arrow Hwy, btw Grand Ave and Glendora Ave	Active	1		3.3

~~5-9~~ Emergency Connections

The City's water system has four (4) emergency connections with neighboring cities or water utilities. These inter-agency connections allow the City to obtain water from or provide water to adjacent water systems. The inter-agency connections and their locations are listed in Table 5-8. Each connection has to be manually activated.

Table 5-8
Emergency Connections

Agency	Location	Size (in)	Direction of Flow
Suburban Water Systems	Bonita Dr east of Barranca Ave	8	To the City
Suburban Water Systems	Foothill Blvd west of Grand Ave	8	To Other Agency
Golden State Water Company	Amelia Ave north of E Baseline Rd	12	To Other Agency
City of Azusa	Barranca Ave south of Gladstone St	-	To Other Agency

SECTION 6
PERFORMANCE EVALUATION CRITERIA

6-1 General

Performance criteria are established to evaluate the adequacy of various water system components through a systematic analysis, and to identify necessary improvements to the system for inclusion in a Capital Improvement Program (CIP). For the City of Glendora's (City) water system, these criteria are generally in accordance with the California Code of Regulations, Title 22. This includes service pressures, storage capacity, and sources of supply. Other criteria are based on federal, state and local jurisdictional requirements.

This section details the performance evaluation criteria which will serve as a benchmark for evaluating the City's water system. The criteria is summarized in Table 6-1.

Table 6-1
Performance Evaluation Criteria

Item	Description	Criteria	Existing Requirement	Future Requirement
1	Source of Supply	Maximum Day Demand from Groundwater Sources	13.27 mgd	13.57 mgd
2	a. Operational Storage	30% of Maximum Day Demand	3.98 MG	4.07 MG
	b. Emergency Storage	100% Average Day Demand	9.28 MG	9.49 MG
	c. Fire Suppression Storage	Highest Fire Flow Requirement		
	Single Family Residential	1,250 gpm for 2 hours	0.15 MG	0.15 MG
	Single Family Residential with Hillside Exposure	2,500 gpm for 2 hours	0.30 MG	0.30 MG
	Multi-Family Residential	2,500 gpm for 2 hours	0.30 MG	0.30 MG
	Commercial	3,500 gpm for 3 hours	0.63 MG	0.63 MG
	Industrial	4,000 gpm for 4 hours	0.96 MG	0.96 MG
3	Wells	Casing and screen sizing should meet maximum velocity requirements		
		Flow meters, discharge pressure gauges, and telemetry equipment for alarm and status notification at each site.		

Table 6-1 (Continued)
Performance Evaluation Criteria

Item	Description	Criteria	Existing Requirement	Future Requirement
4	Booster Pump Stations	For open zones with sufficient fire demand storage, the pump capacity into the zone must meet maximum day demands for the zone itself as well as any zones it provides water to. Well supply and imported water directly supplying the zone can be included in the pump capacity.		
		For open zones that do not have sufficient fire demand storage, the pump capacity into the zone must meet maximum day plus fire demands for the zone itself as well as any zones it provides water to. Well supply and imported water directly supplying the zone can be included in the pump capacity.		
		For closed zones, the pump capacity into the zone must meet maximum day plus fire demands or peak hour demands, whichever is greater. A separate fire pump can be installed to meet the fire flow requirements.		
		Stand-by pump equal in size to the largest duty pump		
		Flow meters, suction and discharge pressure gauges, and telemetry		
		Provisions for emergency power at all stations		
5	Static Pressures	Minimum 40 psi		
		Desired 50-70 psi		
		Maximum 80 psi		
6	Dynamic Pressures	Minimum 40 psi during Maximum Day and Peak Hour Demand		
7	Minimum Pipe Size (New Mains and Replacement Mains)	8-inch to the last hydrant		
8	Maximum Velocities	7 fps at Maximum Day and Peak Hour Demand		
		10 fps at Maximum Day plus Fire Flow Demand		
9	Fire Flow Demand and Pressures[1]	Single Family Residential	1,500 gpm for 2 hours	
		Single Family Residential with Hillside Exposure (located within LA County Very High Fire Hazard Severity Zone)	2,500 gpm for 2 hours	
		Multi-Family Residential	2,500 gpm for 2 hours	
		Commercial	3,500 gpm for 3 hours	
		School	3,500 gpm for 3 hours	
		Industrial/Manufacturing	4,000 gpm for 4 hours	

[1] *Fire flow demand must be maintained with 20 psi minimum pressure at the fire hydrant outlet.*

6-2 Source of Supply

Any potable water system should be capable of meeting all demands imposed upon it. This can be achieved through multiple supply sources, storage, or a combination of both. Generally, the determination is based upon supply availability, existing storage capacity, and cost. It is prudent to secure water supplies from multiple sources so that demands can be met at reasonable levels when one or more water sources are not available.

California Code of Regulations Related to Drinking Water require a minimum source of supply to meet the service area's maximum day demand. Additionally, since the City serves more than 1,000 meters, the system must be capable of providing four hours of peak hourly demand through a combination of source capacity, storage capacity, and emergency source capacity.

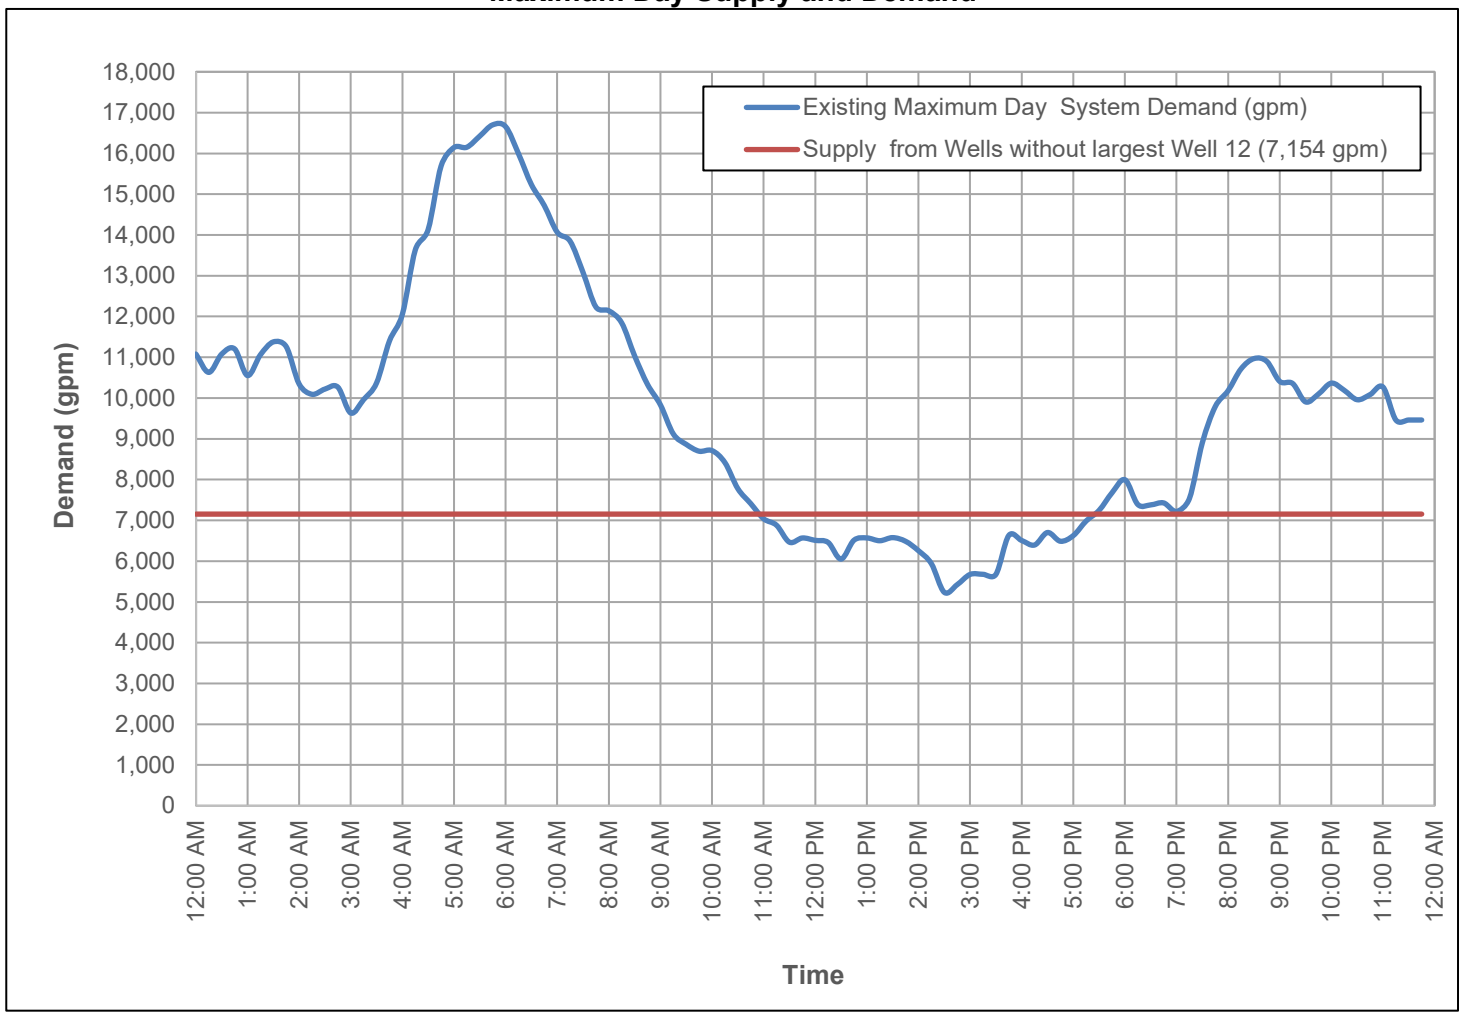
The City's water supply is a combination of local groundwater and imported water. Whenever possible, the City plans to supply the system with 100 percent groundwater in the future. Therefore, although imported water is available, it would be prudent for the source of supply criterion to be met solely by the City's groundwater well capacity.

The criterion for source of supply is to provide one maximum day demand (MDD). Water from storage reservoirs will be utilized to regulate hourly fluctuations in demand (operational storage) and to provide fire flow demand (fire suppression storage). This allows the City the ability to operate their system independently in the event that the imported water service is disrupted for an extended period of time.

Imported water will be utilized to supplement the groundwater supply if multiple wells are out of operation for maintenance or in an emergency. It is highly unlikely that all the City's wells would be out of service at one time, but it is recommended that wells be equipped with permanent generators or portable generator connections. One maximum day demand (MDD) of imported water capacity is more than sufficient.

6-3 Storage

For a water system, three categories of storage are of importance: operational, emergency, and fire suppression. The system is evaluated to determine its ability to meet established storage criteria, anticipated to be met with reservoir capacity and groundwater supplies.



6-3.1 Operational Storage

Operational storage serves to equalize variations in sources of supply and demand over short periods of time (daily or weekly). Utilizing the daily demand hydrograph, the component of operational storage accounts for the difference in supply and demand.

In order to calculate the operational storage need, the total well capacity or supply was plotted against the maximum day demand curve as shown on Figure 6-1. The difference between the two curves is the amount of operational storage expected to be needed on a daily basis.

The well capacity of 7,154 gpm is based on the largest capacity well (Well 12) being out of service. The maximum day demand (MDD) is 9,213 gpm or 13.27 mgd. The operational storage needed is calculated to be 3.9 million gallons. This is about 28.5 percent of the maximum day demand. Therefore, for planning purposes, the operational storage criteria is conservatively set at 30 percent of the maximum day demand.

Figure 6-1
Maximum Day Supply and Demand

6-3.2 Emergency Storage

Emergency storage is used in the event of an interruption in the primary water supply source. It is assumed that most outages can be mitigated within 7 days. Accordingly, many agencies that depend solely on imported water utilize 7 average days of storage as their emergency storage criterion. It is reasonable to expect that groundwater sources will be available during an outage of the imported water supply. Therefore, the required emergency storage volumes may typically be reduced by an agency's groundwater supply capacity.

The City of Glendora's emergency storage volume can be reduced by the actual production capacity of its wells. The only requirement would be that the facilities be capable of pumping the water needed during an emergency from the wells to the higher zones. Since the City's well capacity of 7,545 gpm exceeds the existing average day demand (6,442 gpm), the emergency storage criteria is set to one average day demand.

Operational and fire storage shall be available for each individual zone while emergency storage shall be available system-wide. Again, the only the requirement is that the facilities are capable of moving the water needed during an emergency, from the location of the storage to all other zones.

6-3.3 Fire Suppression Storage

Fire suppression storage, shown in Table 6-1, is the volume required to supply the service area with the required fire flows, which range from 1,500 gpm to 4,000 gpm for a duration of two (2) to four (4) hours. The greatest volume required for fire suppression storage is 0.96 MG.

6-4 Wells

New wells should be designed in accordance with the Water Well Standards: State of California Bulletin 74-81 and Bulletin 74-90 (supplement to Bulletin 74-81) and their updates, the most-recent American Water Works Association (AWWA) standard A -100, State Water Resources Control Board, Orange County County Health Care Services, and sound engineering judgment.

The pumps should be placed low enough so that subsequent lowering should not be necessary. All well screens should be below the pump intake to preclude cascading of water into the well casing even with the lowest expected pumping water level. The casing diameter shall be at least 4 inches larger than the largest pump bowl/column pipe dimension, and maximum velocity shall not exceed 5 feet per second (fps). Total screen area should be sized to maintain a velocity of less than 0.1 fps at the maximum anticipated flow. Additionally, the casings diameters should be selected to allow lining the wells in the future without losing capacity. The use of higher grade materials, such as stainless steel, should be considered to increase the useful life of all future wells.

The well design should include a 4-inch diameter camera tube extending to below the pump suction elevation, a sounding tube, a separate air line with a depth gauge and an air connection and depth to water transducer. Flow meters, high and low discharge pressure switches, pressure gauges and transducers, and telemetry equipment should be included to continuously monitor the wells. Permanent emergency generators with automatic transfer switches should be considered at each future well site. At minimum, new sites should include manual transfer switched and portable generator connections. Soft start bypass should be provided for each variable frequency drive so that a pump can be operated when its variable frequency drive (VFD) is out of service.

6-5 Booster Pump Stations

For open zones with sufficient fire demand storage, the pump capacity into the zone must meet the maximum day demands for the zone itself and any other zones it provides water to. Well supply and imported water directly supplying the zone can be included in the pump capacity.

For open zones that do not have sufficient fire demand storage, the pump capacity into the zone must meet maximum day plus fire demands for the zone itself as well as any zones it provides water to. Well supply and imported water directly supplying the zone can be included in the pump capacity.

For closed zones, the pump capacity into the zone must meet maximum day plus fire demands or peak hour demands, whichever is greater. A separate fire pump can be installed to meet the fire flow requirements.

Preliminary design reports (PDR) should be developed prior to the design and construction of a new pump station or an upgrade to a pump station. At a minimum, the PDR should address pump station location, system hydraulics, demands and pressures, pump selections, design criteria, equipment selection, construction issues, cost estimates, and scheduling. The pump station firm capacity, number of pumps, and type of pumps should also be evaluated and determined during the development of the PDR.

All future booster pump stations must incorporate a standby pump of the same size as the largest duty pump. This ensures that there is a replacement for the largest duty pump during maximum day demand conditions, while one of the pumps at the station is being repaired or replaced. It typically takes pump manufacturers 12 to 16 weeks for delivery of a new pump and motor unit once the order is placed and shop drawings are approved.

The pump stations should be equipped with modern pump controllers, flow meters, suction and discharge pressure gauges, high and low discharge pressure switches, low suction pressure switch, proper isolation valves, and telemetry equipment. Flow meters and pressure gauges are essential tools for monitoring pump performance and demand conditions in the service area. Telemetry equipment is used to remotely monitor the status of the facility, and notify personnel in the event of a failure.

Pump stations should be constructed of fireproof materials and provided with peripheral sprinkler systems to prevent fire damage. Furthermore, power to the pump stations should be provided through underground service to minimize possibility of damage during fires. Pump stations with electric motors should be equipped with standby generators and automatic transfer switches to operate them during commercial power outages.

6-6 System Pressures

Most water utilities set 60 to 80 pounds per square inch (psi) as the average static pressure throughout the system. The water system shall also be capable of maintaining a minimum residual pressure of 40 psi during the peak hour demand. A residual pressure of 20 psi must be maintained at the fire hydrant outlet in developed areas during maximum day demand plus fire flow conditions (Re: California Regulations Related to Drinking Water, Chapter 16, Section 64602).

Static pressures should not exceed 80 psi, except where system operating conditions and geographical conditions warrant a higher pressure. In areas where pressures exceed 80 psi, the Uniform Plumbing Code requires customers to install “an approved type pressure regulator preceded by an adequate strainer” on their service connections to protect domestic plumbing and water heaters.

6-7 Transmission and Distribution System Pipelines

The distribution system shall be sized and designed to provide redundant service at adequate pressures for normal use as well as at fire flow conditions. In most cases, this can be accomplished by looping the system. Looping through easements or other areas which are not easily accessible shall be avoided. Provisions shall be made for supplying a service zone from at least two sources, where feasible.

In order to maintain adequate system pressures and prolong the life of the system pipes, flow velocities shall be limited. The system should operate at velocities of 1 to 3 feet per second (fps) normally, with a maximum velocity of 7 fps during intermittent peak flows. The pipe velocity during maximum day plus fire flow demands should not exceed 10 fps.

All new and replacement mains should be constructed with a minimum diameter of 8-inches, except 6-inch pipe can be used past the last fire hydrant at a dead-end. The existing pipes must be sized to provide adequate fire flows at the required hydrant outlet pressure of 20 psi while the maximum velocity criteria is not exceeded under maximum day plus fire flow demand conditions. These pipe size recommendations should be adhered to for all new design and construction projects, as well as any waterline replacement/upgrade projects.

6-8 Fire Suppression

The City of Glendora has adopted the California Fire Code, 2019 Edition per the Glendora, California Municipal Code Section 18.04.010. The fire flow requirements used for this study are therefore based upon the requirements of the California Fire Code (2019).

Table 6-2 is a summary of the selected fire flow and hydrant location criteria for the various land uses within the service area. These requirements were established as performance evaluation criteria and used in developing system improvement recommendations.

Table 6-2
Fire Flow and Fire Hydrant Location Criteria

Land Use	Flow (gpm)	Duration (hrs)	Residual Pressure at Hydrant Outlet (psi)	Minimum Number of Hydrants Required	Average Spacing between Hydrants (ft)	Maximum Distance From Hydrant to any Point on Lot Frontage (ft)
Single Family Residential	1,500	2	20	1	500	250
Single Family Residential with Hillside Exposure (located within LA County Very High Fire Hazard Severity Zone)	2,500	2	20	3	450	225
MultiFamily Residential	2,500	2	20	3	450	225
Commercial	3,500	3	20	4	350	210
School	3,500	3	20	4	350	210
Industrial	4,000	4	20	4	350	210

For specific future development planning and design, the criteria should be adjusted on a case by case basis per the latest California Fire Code. The requirements in the California Fire Code are specific to each building on a given parcel of land and based on several factors, including land use, building construction methods and materials, and whether or not automatic sprinklers are present. These specific requirements are shown in Table 6-3.

As this Master Plan is a planning level document, an evaluation of whether California Fire Code requirements are met at each parcel was not performed. Instead, minimum fire flow requirements at each hydrant are selected as a function of land use. The minimum required fire flow at each hydrant was generally based on the adjacent land use having the highest fire flow requirement.

Table 6-3
Minimum Required Fire Flow and Flow Duration for Buildings

Fire Flow Calculation Area (sq. ft.)					Fire Flow (gpm)[c]	Flow Duration (hrs)
Type IA and IB[b]	Type IIA and IIIA[b]	Type IV and V-A[b]	Type IIB and IIIB[b]	Type V-B[b]		
0-22,700	0-12,700	0-8,200	0-5,900	0-3,600	1,500	2
22,701-30,200	12,701-17,000	8,201-10,900	5,901-7,900	3,601-4,800	1,750	
30,201-38,700	17,001-21,800	10,901-12,900	7,901-9,800	4,801-6,200	2,000	
38,701-48,300	21,801-24,200	12,901-17,400	9,801-12,600	6,201-7,700	2,250	
48,301-59,000	24,201-33,200	17,401-21,300	12,601-15,400	7,701-9,400	2,500	
59,001-70,900	33,201-39,700	21,301-25,500	15,401-18,400	9,401-11,300	2,750

83,701-97,700	47,101-54,900	30,101-35,200	21,801-25,900	13,401-15,600	3,250	
97,701-112,700	54,901-63,400	35,201-40,600	25,901-29,300	15,601-18,000	3,500	
112,701-128,700	63,401-72,400	40,601-46,400	29,301-33,500	18,001-20,600	3,750	
128,701-145,900	72,401-82,100	46,401-52,500	33,501-37,900	20,601-23,300	4,000	4
145,901-164,200	82,101-92,400	52,501-59,100	37,901-42,700	23,301-26,300	4,250	
164,201-183,400	92,401-103,100	59,101-66,000	42,701-47,700	26,301-29,300	4,500	
183,401-203,700	103,101-114,600	66,001-73,300	47,701-53,000	29,301-32,600	4,750	
203,701-225,200	114,601-126,700	73,301-81,100	53,001-58,600	32,601-36,000	5,000	
225,201-247,700	126,701-139,400	81,101-89,200	58,601-65,400	36,001-39,600	5,250	
247,701-271,200	139,401-152,600	89,201-97,700	65,401-70,600	39,601-43,400	5,500	
271,201-295,900	152,601-166,500	97,701-106,500	70,601-77,000	43,401-47,400	5,750	
295,901-Greater	166,501-Greater	106,501-115,800	77,001-83,700	47,401-51,500	6,000	
-	-	115,801-,125,500	83,701-90,600	51,501-55,700	6,250	
-	-	125,501-135,500	90,601-97,900	55,701-60,200	6,500	
-	-	135,501-145,800	97,901-16,800	60,201-64,800	6,750	
-	-	145,801-156,700	106,801-113,200	64,801-69,600	7,000	
-	-	156,701-167,900	113,201-121,300	69,601-74,600	7,250	
-	-	167,901-179,400	121,301-129,600	74,601-79,800	7,500	
-	-	179,401-191,400	129,601-138,300	79,801-85,100	7,750	
-	-	191,401-Greater	138,301-Greater	85,101-Greater	8,000	

For SI: 1 square foot = 0.0929 m^2, 1 gallon per minute = 3.785 L/m, 1 pound per square inch = 6.895 kPa.

a. The minimum required fire flow shall be allowed to be reduced by 25 percent for Group R

b. Types of construction are based on the *California Building Code*

Types I and II = noncombustible materials
Types III = exterior walls are noncombustible materials; interior elements are any material permitted by code
Types IV = exterior walls are noncombustible materials; interior elements are solid or laminated wood
Types V = any materials permitted by code

c. Measured at 20 psi at hydrant outlet

6-9 Service Life of Facilities

All facilities have useful lives for which relatively trouble-free service can be expected. Once exceeded, these facilities become less reliable, expensive to maintain and are subject to failure. Therefore, facility age is considered in the assessment of all water systems and in formulating future replacement projects.

The determination of the useful life is dependent upon multiple considerations. Table 6-4 shows the useful lives that are generally accepted as prudent planning criteria. They shall be one of the considerations in determining the phasing of facility replacement.

Table 6-4
Planning Criteria for Facility Useful Life

Facility	Useful Life (Years)
Steel Reservoirs	40
Concrete Reservoirs	50
Lines and Coated Ductile Iron / Steel Pipe	50
PVC Pipe	50
Asbestos Cement Pipe	50
Cast Iron and Steel Pipe (Lining or coating of non-current practice)	35
Pump Stations / Wells / Treatment Facilities	
Structure	50
Piping	40
Valves	20
Mechanical	15
Electrical	15
Well Casing	20 - 60

SECTION 7
HYDRAULIC MODEL

7-1 General

A computer model of the City's water system was developed in the Innovyze InfowaterPro software platform. It was utilized to aid in the evaluation of the adequacy of the existing facilities under the current and future supply and demand conditions.

Generally, the model development steps included the following:

1. Utilize the City's existing hydraulic model which was updated in 2017 as the basis for the model geometry
2. Update pipeline geometry through review of as-built plans, atlas sheets and discussions with engineering and operations staff
3. Verify and complete pipe information (pressure zone, diameter, length, roughness)
4. Verify and complete junction information (pressure zone, elevations)
5. Add detailed facility data (wells, pump stations, reservoirs, and imported water connections)
6. Add facility information (dimensions and water level for tanks, pump curves for booster pumps and wells, and aquifer levels for well pump suction levels)
7. Determine and assign demands to model junctions
8. Develop and assign diurnal demand curves to model junctions
9. Assign controls to facilities (pump start and stop conditions, imported water connection settings)

The City's existing hydraulic model was used as the basis of the geometry of the model. As-built plans were used to add the pipes constructed since the model was last updated in 2017. Water system facilities (reservoirs, pump stations, wells, and connections) were added to the model based on as-built construction plans and provided facility information, such as pump curves, efficiency tests, ground water levels, and operational controls.

The model includes the potable water pipelines that are owned by the City. Water service laterals are not included. Modeling information associated with each pipe includes diameter, length, and roughness factor. Other pipe information included in the model database are year of installation, pressure zone, pipe material, as-built plan reference file, and tract name. Modeling information associated with each junction includes ground elevation, water demand, and diurnal pattern of demand. Model junction elevations were obtained from publicly available 2015-2016 LARIAC Lidar DEM data for the Los Angeles Region.

7-2 Demand Distribution

7-2.1 Existing Demands

The City provided water billing data with coordinates for each service meter. The meter locations were plotted in GIS and service laterals were created to connect the meter points to the mainline within the associated pressure zone. This enabled each water meter and its demand to be assigned to the closest model junction ID

The existing demand distribution was based upon water meter data provided for January 2020 through December 2021. After the demands were loaded onto model junctions, they were adjusted so that the total demand matched the existing water production estimates (see Table 4-3) for all analysis scenarios (average day, maximum day, etc.). This method of distributing demands inherently accounted for any high water users within the existing service area as well as non-revenue water. The water demands are assigned to the following database fields within the model:

- Demand Type 1: Residential – Single Family
- Demand Type 2: Residential - Multi
- Demand Type 3: Future Customers
- Demand Type 4: Commercial
- Demand Type 5: Irrigation
- Demand Type 6: Government
- Demand Type 7: Golf
- Demand Type 8: Undetermined (User Type "#NA" in consumption data)
- Demand Type 9: Institution
- Demand Type 10: High Water Users

While these land-use based demand types were not utilized in the current analysis, they were assigned to separate demand categories within the model so that future analyses might be able to make use of the information.

7-2.2 Future Demands

The future demands were calculated individually for known planned future developments, based on land uses and water demand factors shown in Table 4-6. The calculated demands, shown in Table 4-7, were then input manually into the model at appropriate model junctions.

7-3 Diurnal Curves

The developed diurnal demand curves discussed in Section 4-3.3 were specified at each node.

7-4 Model Scenarios

The accuracy of the hydraulic model for the existing system was verified during the calibration process, as described in Section 8 of this report. Within the model software, new data sets and query sets were created to represent different operating conditions.

Data sets change as conditions in each scenario need to be changed. For example, separate demand sets were created to represent the various demand conditions. Separate control sets were created to define the initial status and controls of facilities. The data sets associated with each scenario are shown in Table 7-1 and Table 7-2.

Table 7-1
Existing Model Scenarios and Data Sets

Data Set	Calibration Day Scenario (CALIBRATION)	Existing Scenarios				
		Average Day Demand Scenario (EXISTING_AVGDAY)	Maximum Day Demand Scenario (EXISTING_MAXDAY)	Maximum Day Demand Plus Fire Flow Scenario (FF_EX_MAXDAY, global)	Maximum Day Demand Scenario plus Multi-Fire Flow Scenario (FF_MULTI_EX_MAYDAY)	Maximum Day Demand Scenario with Fire Improvements (IMPROVE_FF_EX_MAXDAY)
Demand Set	CALIBRATION_DAY	EXISTING_AVGDAY	EXISTING_MAXDAY	EXISTING_AVGDAY	EXISTING_MAXDAY	EXISTING_AVGDAY
Tank Set	BASE	BASE	BASE	BASE	BASE	BASE
Reservoir Set	BASE	BASE	BASE	BASE	BASE	BASE
Pump Set	BASE	BASE	BASE	BASE	BASE	BASE
Pipe Set	BASE	BASE	BASE	BASE	BASE	BASE
Valve Set	BASE	BASE	BASE	BASE	BASE	BASE
Control Set	BASE	EXISTING	EXISTING	EXISTING	EXISTING	IMPROVE_EXISTING
Logical Set	BASE	EXISTING	EXISTING	EXISTING	EXISTING	EXISTING
Facilty Set	CALIBRATION_EXISTING	EXISTING	EXISTING	EXISTING	EXISTING	FF_IMPROVE_EXIST_MAXDAY

Table 7-2
Future Model Scenarios and Data Sets

Data Set	Future Scenarios	
	Minimum Month (FUTURE_MINDAY)	Maximum Day Fire Flow Global (FUTURE_ MAXDAY)
Demand Set	FUTURE_ MINDAY	FUTURE_ MAXDAY
Tank Set	BASE	BASE
Reservoir Set	BASE	BASE
Pump Set	BASE	BASE
Pipe Set	BASE	BASE
Valve Set	BASE	BASE
Control Set	FUTURE	FUTURE
Fireflow Set	BASE	GLOBAL_FF
Logical Set	FUTURE	FUTURE
Facilty Set	FUTURE	FUTURE

The following scenarios were created:

1. Model Calibration Day Scenario (CALIBRATION)
2. Existing Average Day Demand Scenario (EXISTING_AVGDAY)
3. Existing Maximum Day Demand Scenario (EXISTING_MAXDAY).
4. Existing Maximum Day Fire flow Global (FF_EX_MAXDAY)
5. Existing Maximum Day Fire flow using multiple hydrants (FF_MUTI_EX_MAXDAY)

   This scenario was utilized for running fire flow analysis at multiple fire hydrants at the same time in select areas where the analysis didn't meet the fire criteria using just one hydrant.
6. Existing Maximum Day Fire flow using multiple hydrants including hydraulic improvements (IMPROVE_FF_EX_MAXDAY)
7. Future Maximum Day Demand Scenario (FUT_MAXDAY)
8. Future Minimum Day Demand Scenario (FUT_MINDAY)

The aforementioned scenarios were used to evaluate system performance with respect to pressures, pipe velocities, and fire flow availability. The system analysis and results are described in Section 9

7-5 Facility Model Characteristics and Control Settings

7-5.1 Storage Reservoirs

All active storage reservoirs are included in the hydraulic model. The reservoirs are designated as "tanks" because they have a known finite volume and water surface levels that change with time as water flows into or out of them. (Note the model software defines "reservoirs" as sources of water that remain at a constant water level irrespective of the flow. They have an unlimited volume and are generally used to represent a lake or other inexhaustible supply source.)

The storage reservoir characteristics input in the model are shown in Table 7-3. For reference, the previously used reservoir names are included in the model as information in the *Description* field.

7-5.2 Wells

The City's water system currently has eight (8) active wells. Four are located at the San Gabriel facility in the City of Azusa. Four are located within the system and pump water to the City's water yard which is the site of the Sierra Madre and Goddard Reservoirs (Zone 1). The normal operation control settings of the wells are shown in Table 7-4.

Groundwater levels at the wells were represented in the model by constant level, unlimited capacity reservoirs. The groundwater levels were based on the June 2022 groundwater level readings. The groundwater levels were adjusted in the model to reach a more accurate match in terms of discharge pressure, flow, and system pressure.

7-5.3 Booster Pump Stations

The booster pump station control settings are shown in Table 7-5. These controls were developed by reviewing SCADA data, as well as interviews with City operations staff.

Table 7-3
Storage Reservoir Characteristics

Pressure Zone	Reservoir Name	New Model ID	Bottom Elevation (ft)	Model Tank Type	Model Tank Diameter (ft)	Model Tank Minimum Level (ft)	Model Tank Maximum Level (ft)	Existing and Future Conditions Initial Tank Level (ft)

[a] To simulate the VFD, additoinal controls are used to adjust the pump setting when a third pump is on or off

7-5.4 Imported Water Connections

Imported water connections were input in the model, but are generally only used in max day demand periods. The settings shown in Table 7-6.

Table 7-6
Imported Water Connection Controls

ID	To Zone	Model ID	All Scenarios
PM-6	1	-	Not used
PM-18	2	B30 and B34	Pumps about 1500 gpm when the Reservoir 2C level falls below 8 feet, and turns off when Reservoir 2C level rises above 14 feet
PM-23	1	-	Not used

7-6 Friction Factors

The pipeline friction factors used in the hydraulic model are shown in Table 7-7. Other factors that affect the pipe roughness coefficient include the number of connections to the pipe, the quality of construction, and the number of bends and tees. A direct correlation between pipe age and material has not clearly been defined at the time of this study. It has often been found that the pipe roughness coefficient depends heavily on the corrosiveness of the water conveyed and pipe velocities.

Table 7-7
Pipe Roughness Coefficients

Pipe Diameter	Pipe Roughness Coefficient
4-inch	100
6-inch	120
8-10 inch	130
12-16 inch	140
18-30 inch	145

SECTION 8
MODEL CALIBRATION

8-1 General

The existing water system model was calibrated to verify the accuracy of the model, system configuration, and the hydraulic parameters utilized. The general calibration methodology was to gather as much system information as possible from available SCADA system data and pressure and reservoir level measuring equipment temporarily installed in the field. This information was then used for input into the model as well as comparison of model and field results. Typical indicators of an accurate model include the following:

- Pressure differences of five (5) percent or less
- Well and booster pump station flow differences of five (5) percent or less
- Reservoir level differences of 1 foot or less

8-2 Supervisory Control and Data Acquisition (SCADA) Data

Supervisory Control and Data Acquisition (SCADA) information was collected from May 25, 2022 through June 15, 2022 and used in calibrating the 24-hour extended period simulation. The following data was provided in 1 minute intervals.

- Reservoirs - water levels
- Well Pumps - flows
- Booster Pumps – flows
- Imported Water Connections – flows
- Pressures:
    a. Hicrest Booster Pump Station discharge pressure
    b. San Gabriel Booster Pump Station discharge pressure
    c. Silent Ranch Booster Pump Station suction and discharge pressures
    d. Eagle Ridge Booster Pump Station suction and discharge pressures
    e. Englewild Booster Pump B13 discharge pressure

8-3 Field Collected Data

In addition to the data available via the SCADA system, pressure data was collected in the field by installing pressure data loggers on twenty-eight (28) fire hydrants during the calibration period. The selected locations were scattered throughout the service area, as shown on Figure 8-1, in order to obtain representative pressure measurements in each pressure zone. Some locations were specifically selected near pump stations where pressures were not collected through the SCADA system.

The Englewild Canyon Reservoir levels are currently not collected in SCADA. Therefore, a water level data logger was installed in one of the reservoirs to record reservoir levels during the calibration period.

CITY OF GLENDORA
WATER MASTER PLAN

PROJECT NO: 0201782.00

DATE: April 2023

Pressure Data Logger Locations

Figure 8-1

Pump station flows throughout Glendora's water system are not recorded in the SCADA system. For the calibration period, Meter Master equipment was installed on select flow meters at the following locations:

- Englewild Booster Pump Station, flow meter for Pump B10
- Hidden Springs Booster Pump Station, combined meter for Pumps B11 and B12
- Glencoe Booster Pump Station, combined meter for Pumps B26 and B27
- North Grand Booster Pump Station, flow meter for Pump B41
- Hook Canyon Booster Pump Station, flow meter for Pump B52
- Hook Canyon Booster Pump Station, flow meter for Pump B53
- Englewild Canyon Booster Pump Station, combined meter for Pumps B47 and B48

It was requested that Pump B14 at the Englewild Booster Pump Station not be operated during normal system demands, because there isn't any power at the site to connect Meter Master equipment and monitor the flows through the pump. It was also requested that City staff log daily flows at pump stations during the calibration period. Flow logs were provided for Hook Canyon, Hidden Springs, Englewild, Eagle Ridge, and North Grand Booster Pump Stations.

8-4 Calibration Period

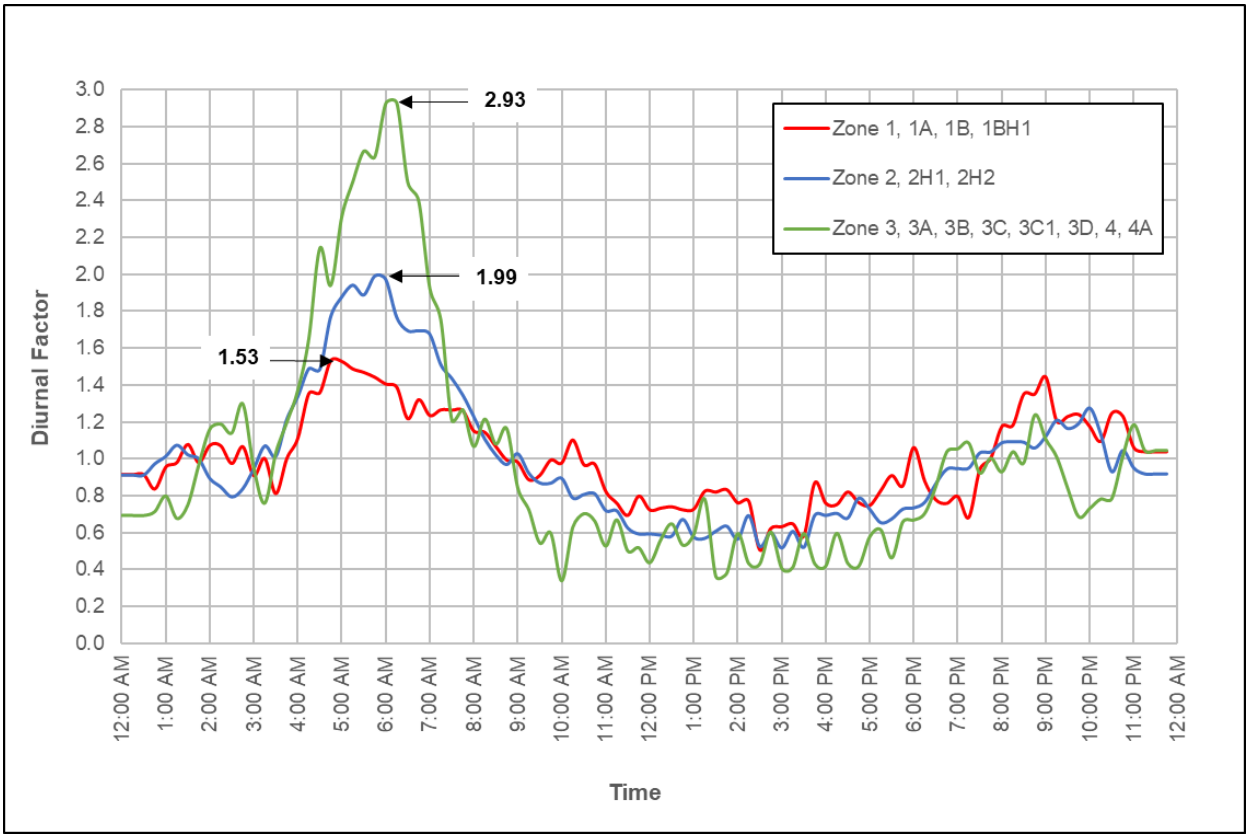
The calibration period, the time period in which SCADA data and pressure data was collected in the field, was from May 25, 2022 to June 15, 2022. A 24-hour period was selected to represent normal demand and operating conditions during the calibration period. "Normal conditions" means that there were no noticeable anomalies and/or significant variation in the flows and pressures that could indicate an unusual event such as a fire or a main break. The calibration day was selected to be June 7, 2022.

8-5 Demand Allocation

Demand allocation for the calibration scenario was based on the average distribution represented by the water billing data during the period January 2020 through December 2021. The demands were globally adjusted to match the total average daily supply entering the system (well flow + imported water flow +/- water from reservoirs) during the calibration period.

8-6 Zonal Diurnal Curves

Diurnal patterns were created for the major zones (i.e. Zone 1, Zone 2, and Zone 3). The smaller zones that are supplied water by Zones 1, 2, and 3 were included in the calculation of the overall diurnal pattern for that zone.



Water usage within each zone were determined based upon data collected from the City's SCADA system during the calibration period. The flow from the wells, pump stations, and imported water connections, and water levels in the reservoir were utilized in calculating the total amount of water used in each zone in 15-minute increments.

The three major zonal diurnal demand curves, shown on Figure 8-2, are grouped as follows:

1. The demands in Zone 1, 1A, 1B, and 1BH1 are grouped and assigned the same diurnal demand curve.

2. The demands in Zone 2, 2H1, and 2H2 are grouped and assigned the same diurnal demand curve.
3. The demands in Zone 3, 3A, 3B, 3C, 3C1, 3D, 4, and 4A are grouped and assigned the same diurnal demand curve.

Figure 8-2
Diurnal Demand Curves

High water users (HWUs), listed in Table 8-1, were identified based on monthly billing data for June 2021. Some customers in smaller zones that account for a large percentage of the water use within the zone were also identified. The water use of these customers were removed from the diurnal pattern calculations and then individual diurnal patterns were developed for each of these customers using the City's Advanced Metering Instrumentation (AMI) data.

The AMI data for customers in Zone 1RA and Zone 1RB was utilized to develop separate diurnal patterns for those two small zones.

Table 8-1
High Water Users

No	Customer ID (SDP)	Customer Name	Average Demand June 2022 (gpm)	Average Demand June 7, 2022 (gpm)	Zone

24	81664753	Arrow High School	11.2	0.2	1

8-7 Wells

The City records static water levels and pumping water levels monthly at each well. The groundwater elevation at each well was calculated by subtracting the pumping water level from the ground surface elevation and input into the hydraulic model. The well flows for the calibration period are shown in Appendix 8-1.

For most wells, an on/off pattern was used to turn the well on and off by time and the adjusted pump curves for each well were utilized to determine the flows. For Well 5 and Well 12, a flow pattern was used to simulate the actual flow produced from these wells during calibration period. This is due to the fact that the model cannot simulate the VFD controls of these wells, hindering the ability to use controls or on/off patterns to calibrate these facilities.

An additional loss was added to the discharge of Well 10 to match calibration day flow values.

8-8 Imported Water Connections

Imported water connections were not utilized during the calibration period, therefore remained off in the calibration model simulation.

8-9 Booster Pump Stations

Booster Pump Stations were set up similar to the wells for the calibration scenario. Pumps were given specified on/off times in the model and utilized the adjusted pump curves were utilized to determine the flows. Because of model limitations, San Gabriel Pump 3 is controlled with a flow pattern based on discussion with City Staff about how this pump is generally operated with the other San Gabriel pumps. The pump station flows for the calibration period are shown in Appendix 8-2**.**

City staff reports that the valves downstream of the Country Club Pump Stations are throttled to increase the head so that the pumps run more efficiently. The throttled valves are accounted for in the model as a loss on the pipes just downstream of each pump to obtain the desired flows and discharge pressures.

The Morgan Ranch Booster Pump Station does not have a flow meter so the pumped flows could not be measured in the field. The pump curves were adjusted in the model to pump a flow amount that made the water levels in the Lower Gordon Reservoirs match as closely as possible with SCADA data.

Hydropneumatic system pumps use pressure head controls provided by the City to turn on at the low pressure settings and off at the high pressure settings as follows:

- Silent Ranch Booster Pumps (Zone 1BH1) – high pressure 110 psi, low pressure 45 psi
- Rainbow Booster Pumps (Zone 2H1) – high pressure 50 psi, low pressure 15 psi
- Eagle Ridge Booster Pumps (Zone 2H2) – high pressure 90 psi, low pressure 80 psi

The following pumps were not in use during the calibration period:

- San Gabriel Booster Pump 2 and Pump 5
- Country Club Booster Pump B22
- Englewild Booster Pump B13 and B14
- Valley Center Booster Pump B21
- Hicrest Booster Pump B24
- Hook Canyon Booster Pump B53
- North Grand Booster Pump B29 and B41
- Hidden Springs Booster Pump B11 and B12
- Greencroft Booster Pump B61
- Morgan Ranch Booster Pump B44
- Bluebird Booster Pump B32
- Glencoe Booster Pump B27

- Gordon Booster Pump B58
- Dalton Booster Pump B31
- Englewild Canyon Booster Pump B48 (unknown which pump was in use during calibration but only one pump was used)

8-10 Reservoirs

The initial reservoir levels were set to match those of the initial calibration period (June 7, 2022). The reservoir levels for the calibration period are shown in Appendix 8-3. The comparison of SCADA data versus model data is shown on each figure. Most reservoir levels in Zone 1, Zone 2, and Zone 3 were within 1 foot throughout the calibration period which is evidence of a well calibrated model.

8-10.1 Country Club Reservoir Levels

The Country Club Reservoirs A (0.688 MG) and Country Club B (0.688 MG) water levels did not always match within 1 foot. The levels matched relatively well for the first six hours of the simulation (See Figure 8-3 and 8-4). At about six in the morning, the Country Club Pump Station turned on (See Figure 8-5 and 8-6) and this is when the reservoir levels start to diverge. In reality, water fills the Country Club Reservoirs six feet over the next 18 hours. In the model, the water is not able to get to the reservoirs due to the pipe sizes and distance from the Country Club Booster Pump Station. Amelia Pump Station is close to the Country Club Reservoirs but SCADA confirmed that this pump station was not on during the calibration period. It was not providing water to Zone 2.

Figure 8-3

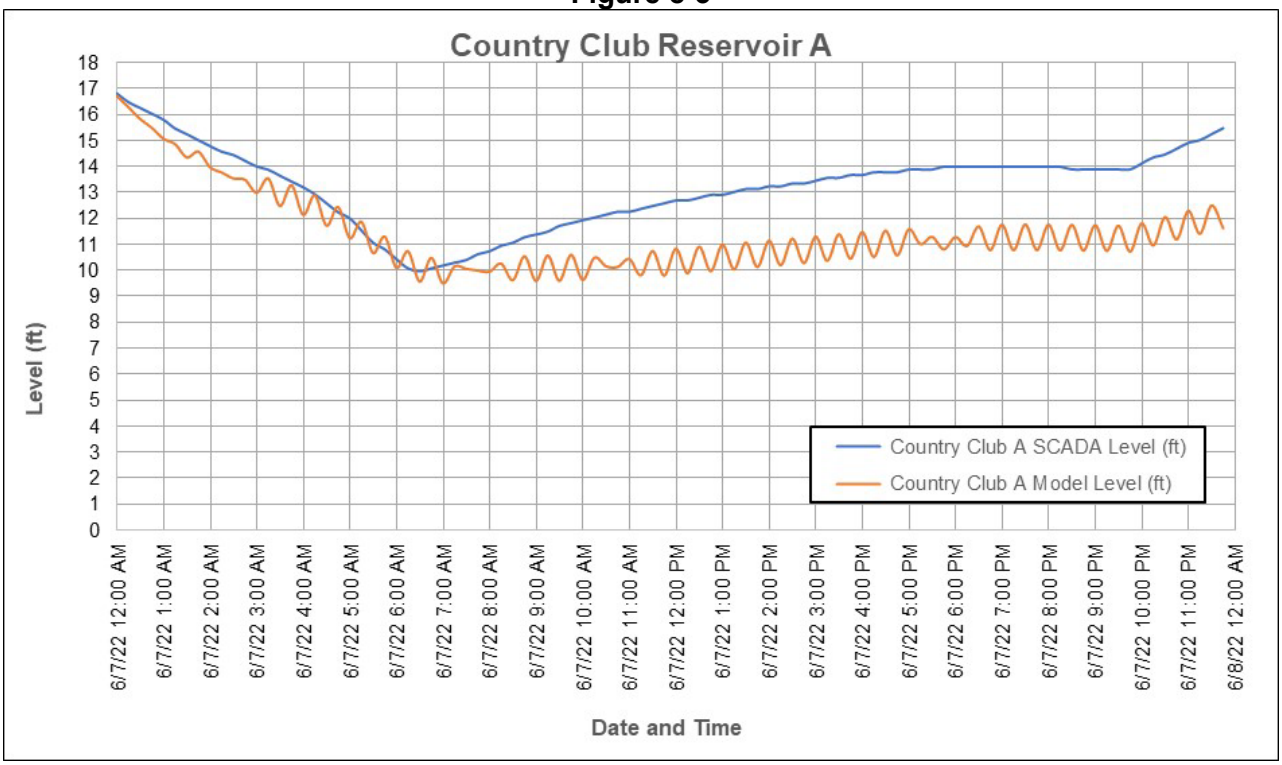

Figure 8-4

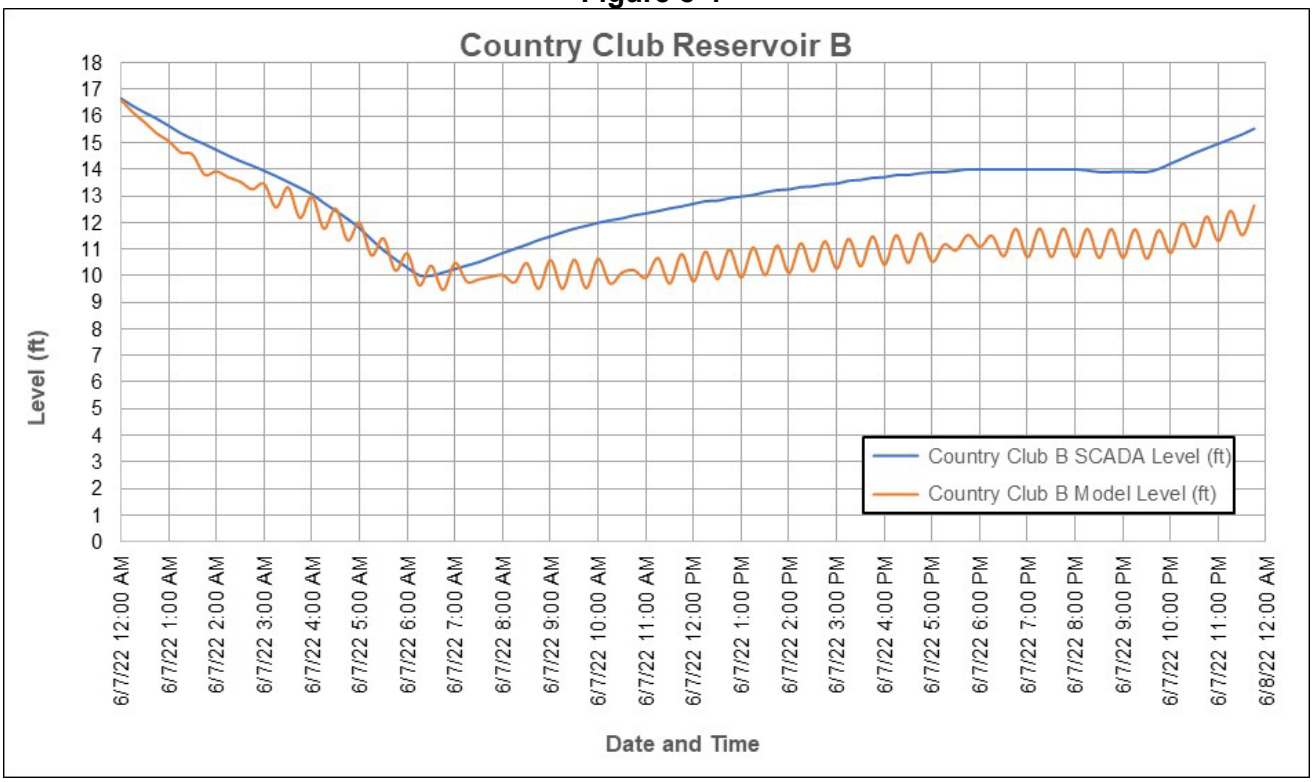

Figure 8-5

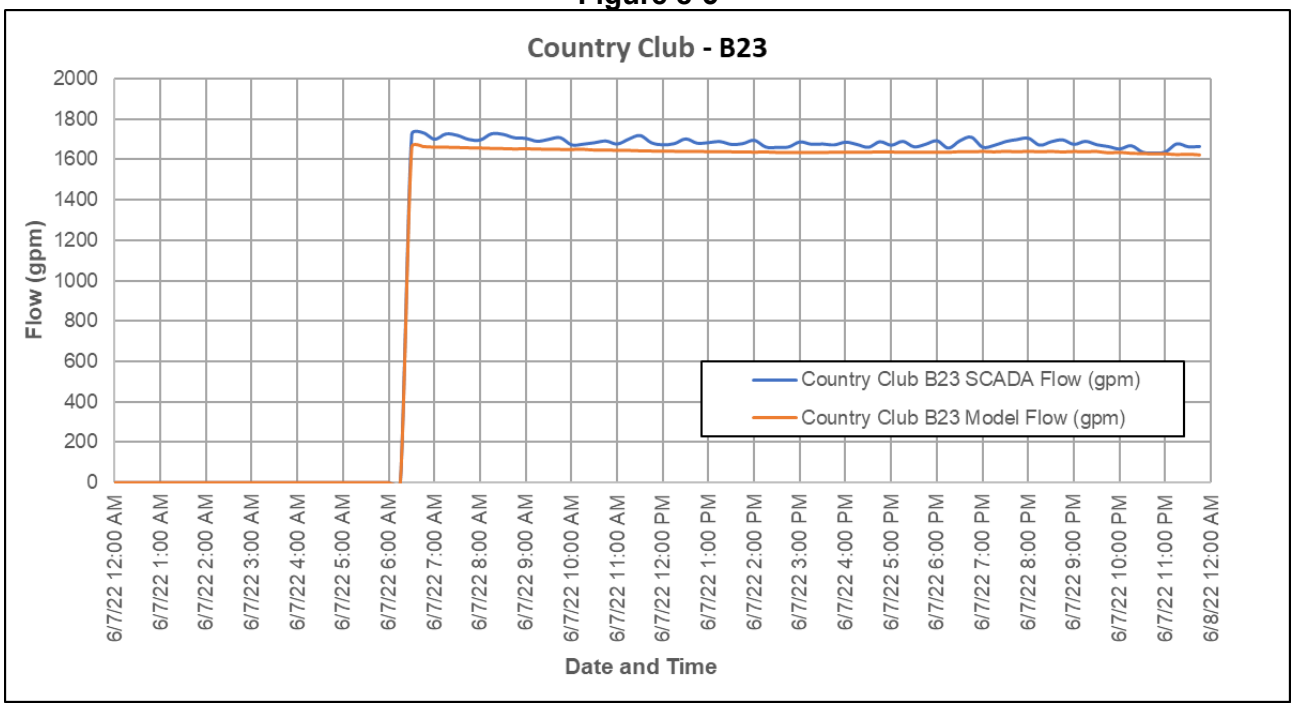

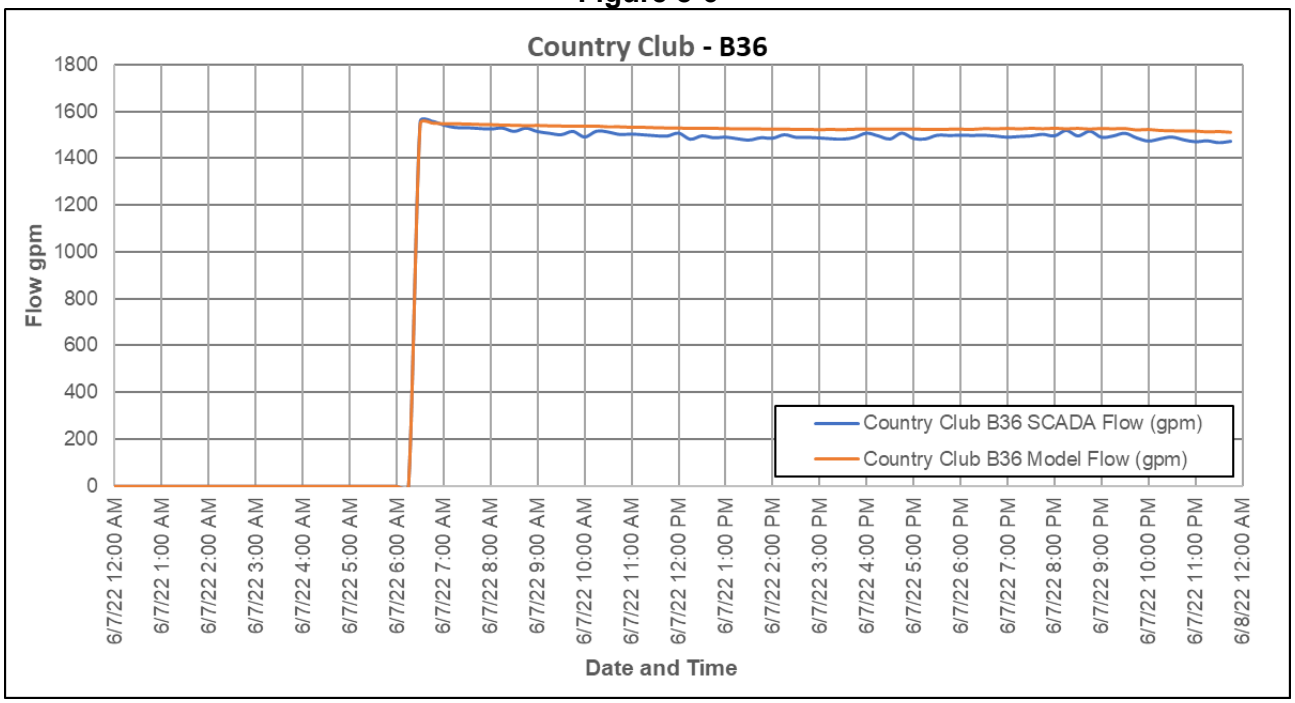

Figure 8-6

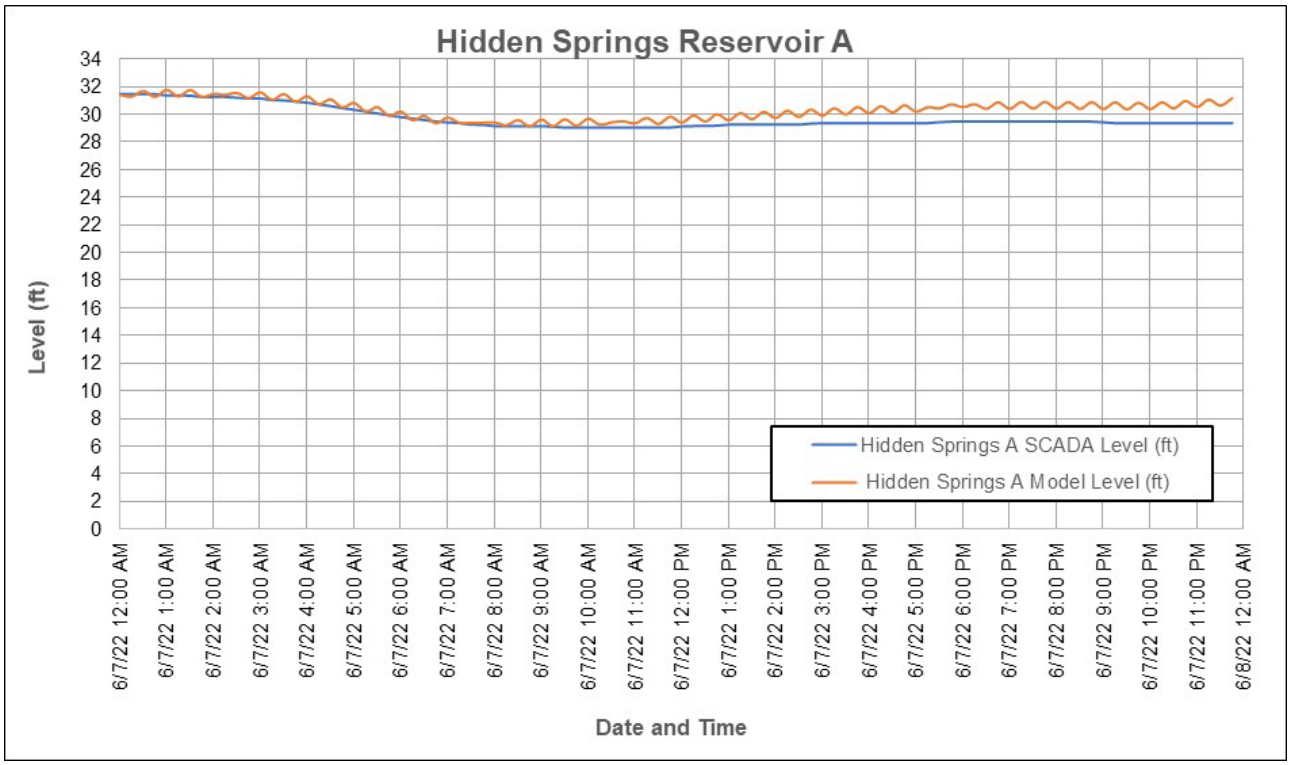
The Country Club Reservoir A and B are both 0.688 MG tanks located on the far southeast side of Zone 2. The model is not able to get enough water into the reservoirs. AKM tried to determine the reason for the discrepancy in the reservoir levels recorded in the field versus the model predicted reservoir levels. Typically, a discrepancy like this might be due to incorrect demands, diurnal patterns, reservoir dimensions or elevations, system pipe sizes and connectivity, and/or unknown closed or partially closed valves in the system. All of these possibilities were explored.

Since the Zone 1 and Zone 3 reservoir levels match well and the Zone 2 and Zone 3 booster pump flows match well, it is believed that the demands and diurnal patterns are accurate. The model is predicting higher reservoir levels than the field data showed at the Country Club Reservoirs. One possibility explored was if a major transmission line was missing from the system mapping. City staff reviewed the system pipes and sizes and could not identify any errors. It is still possible that there are some incorrect pipe sizes or connectivity issues within the mapping of the system. The City is currently in the process of developing a detailed Water GIS of the entire system. It is recommended that the hydraulic model be updated after the completion of the Water GIS and the model be recalibrated.

It was also noted that Hidden Springs Reservoirs A (3.5 MG) and B (1.25 MG) have higher water levels in the model than the field collected data (See Figure 8-7 and Figure 8-8). The difference is not extreme because the reservoirs are large in volume. But it is possible that the model is conveying water to the Hidden Springs Reservoirs instead of the Country Club Reservoirs due to incorrect pipe geometry and connectivity.

Figure 8-7



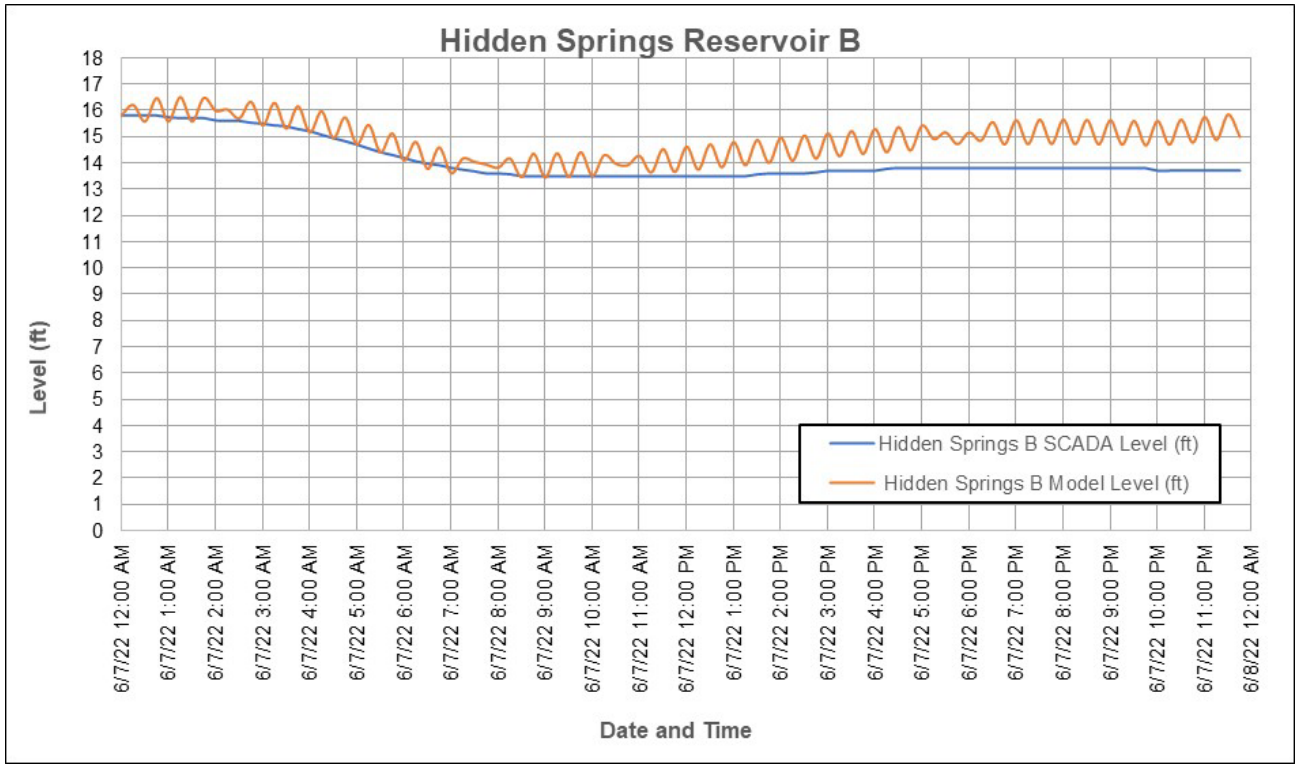


Figure 8-8

8-10.2 Glencoe Reservoir Levels

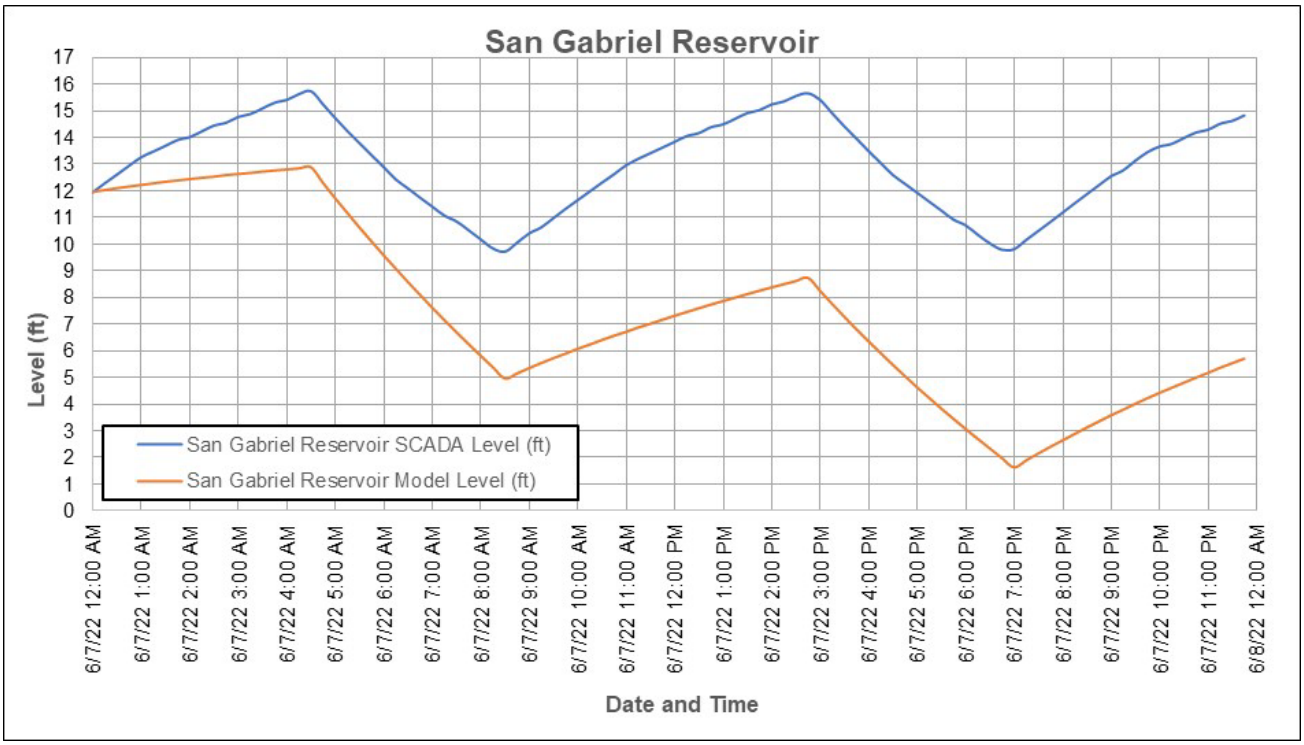
Additional losses were added near the Glencoe Reservoirs to match levels compared to SCADA. After interviews with City Operations staff, it was verified that these pipes are old and could be corroded or have partially closed valves, adding to the normal losses through the distribution system pipes.

8-10.3 Reservoir Levels of Small Upper Zones

Zones 1A, 1B, 3A, 3B, 3C, 3D, 4, and 4A have smaller demands and smaller reservoirs. This makes the development of a diurnal pattern specific to the zone much more difficult because the calculations need to be more precise. The exact time and flow from the pump stations and the exact changes in the reservoir levels are needed to calculate the demands at every desired time step.

For this study, an attempt was made to develop specific diurnal patterns for all the smaller zones. Many times, the calculations resulted in negative demands which means water entering the zone but not being used. In reality, all demands should be positive when calculating a diurnal pattern. Since specific diurnal patterns could not be developed for each of the small zones, the areas were considered a part of the larger zone that supplies water to it and the same diurnal pattern used in the larger zone was applied to the small zone. The hydraulic zones were grouped as follows for developing the diurnal patterns used in this Master Plan Study:

1. Zone 1, Zone 1A, Zone 1B, and Zone 1BH1
2. Zone 2, Zone 2H1, and Zone 2H2
3. Zone 3, Zone 3A, Zone 3B, Zone 3C, Zone 3C1, Zone 3D, Zone 4, and Zone 4A



For the recommended hydraulic studies (see Section 9) in the smaller zones, the following is recommended prior to the studies so that a specific diurnal pattern can be developed for each zone and so the hydraulic model can be refined/calibrated for the study zone:

1. Collect AMI data for the zone in small time intervals (5 minutes or less) for the study period
2. Calibrate flow meters
3. Ensure that flow meters are hooked up to the SCADA system and flows can be recorded in small time intervals (5 minutes or less) for the study period
4. Calibrate water level sensors
5. Ensure that the water levels in reservoirs can be recorded in the SCADA at small changes in water levels and at the exact times that they occur for the study period

8-10.4 San Gabriel Reservoir Levels

The well flows and San Gabriel Booster Pump Station flows were matched in the model as close as possible to the SCADA data provided. When this was done, the San Gabriel Reservoir levels did not match well. The levels in the model are not maintained as shown on Figure 8-9. It seems as if the well supply is insufficient. Well 8 flows ramp up in the model, trying to compensate for the low supply but it is still not enough. It is recommended that the well flow meters and reservoir level sensors be tested and/or calibrated to determine the discrepancy.

Figure 8-9

8-11 System Pressures

The comparison of field collected data to model data at each of the pressure data logger locations is shown in Table 8-2. All model pressures were within 5 percent of the field collected pressures recorded during the calibration period. The three pressure data loggers that malfunctioned during the field calibration period are noted in the table. The average pressures difference at each location was less than 5 percent.

The pressure data comparison graphs are shown in Appendix 8-4.

8-12 Fire Hydrant Testing

Fire hydrant flow tests were conducted at six (6) locations on June 9, 2022. The sites were selected to help further calibrate the model. The fire hydrant flow test locations were chosen near five (5) of the twenty-eight (28) portable pressure data loggers, described in Section 8-3, and then one additional site was chosen where new loggers were installed. The loggers recorded the static pressure and residual pressure once the nearby hydrants were opened. The six (6) hydrant test locations are shown on Figure 8-10.

Following the hydrant flow tests, the recorded field flow rates were applied to the model calibration scenario at the time of day in which the hydrant test was performed. A comparison of the recorded flows and pressures and the model results and corresponding recommendations are included in Table 8-3.

The pressure drop (difference between static and residual pressure at the nearby hydrant) was used for comparison purposes to verify the model. The pressure drop comparison is slightly skewed at each location because the model does not include the fire hydrant laterals. Other potential factors that may contribute to the differences in results include: corrosion in fire hydrant laterals, partially closed valves at the hydrants or in the system, inaccurate model node elevations versus actual field elevations, and inaccuracies in the hydrant testing equipment.

Test location 4 data is suspect. The static pressure at the nearby hydrant was recorded as 73.2 psi. The pressure at the test hydrant and in the model is in the vicinity of 100 psi. The nearby hydrant is actually lower in elevation than the test hydrant, so the pressure should be higher than 100 psi. It is possible that the hydrant valve was not fully opened during the flow test. This test data was therefore not considered in verifying the calibration of the model.

The difference in pressure drop between the field data and model data was less than 4 psi at all hydrant testing locations except for test location 4 which was disregarded. This difference is within acceptable limits for a well calibrated hydraulic model.

SECTION 9
SYSTEM HYDRAULIC ANALYSIS

9-1 General

The established performance evaluation criteria (Section 6) and the calibrated hydraulic model were utilized in analyzing the system and evaluating its adequacy. The system model was calibrated by simulating actual system conditions and adjusting the model (Section 8). The model was then utilized to analyze the existing system under average day, maximum day, peak hour, and maximum day plus fire flow conditions. Analysis of the City's source of supply, storage, and pumping facilities were also conducted (Sections 9-2 to 9-4).

Existing and future system deficiencies were identified and mitigation projects were formulated based upon the results of the model runs, the facility analysis, and input from City staff. Proposed projects were added in the hydraulic model to test the operation of the system after implementation. The results of the analyses were used in formulating the capital improvement program (Section 12).

9-2 Source of Supply

The criterion established requires the City's source of supply to be equal to one maximum day demand, For the City of Glendora, this means that under current demand conditions, the City should have an existing source of supply capacity of 9,215 gpm (13.27 mgd). In the future, with increased demands, the City should have a source supply capacity of 9,361 gpm (13.48 mgd).

The City's groundwater supply is shown in Table 9-1. Using design capacities, the total supply is 11,800 gpm which exceeds the existing and future source of supply requirement. Using the current capacities based off of recent efficiency tests, the total supply is 9,254 gpm which just meets the existing requirement. The City currently does often meet the maximum day demands by utilizing one of the imported water connections (PM-18/Amelia BPS).

The imported water connections have a total capacity of 19,434 gpm as shown in Table 9-2, which exceeds the existing and future source of supply requirement. These connections are primarily planned to be utilized during peak demand periods and emergencies.

Table 9-1
Groundwater Supply

Source of Supply	Design Capacity (gpm)	Current Capacity (gpm)	Efficiency Test Date
Well 2	500	525	2/15/22
Well 5	2,200	1,709	6/9/21

Covina Irrigating Company		
CIC	3.3	1,481
Total	**43.3**	**19,434**

9-3 Storage

9-3.1 Operational Storage Criteria

The City's operational storage criteria is set at 25 percent of the maximum day demand.

9-3.2 Emergency Storage Criteria

The City's emergency storage criteria is set at one average day demand. For a system that depends mostly on groundwater supplies, this amount of emergency storage is adequate and is primarily for response in operations due to a loss of a major source of supply.

9-3.3 Fire Suppression Storage

Fire suppression storage is the volume required to supply the service area with the required fire flows, which range from 1,500 gpm for a duration of two (2) hours to 4,000 gpm for a duration of four (4) hours. The maximum fire suppression storage required in any of the City's hydraulic zones is 0.96 million gallons.

9-3.4 Storage Analysis

The storage analysis by hydraulic zone and system wide is illustrated in Table 9-3. The existing available storage for each zone is calculated by adding the effective volume of each reservoir, utilizing the high water level and an assumption of a minimum water level of five feet in each reservoir.

The system overall has a surplus of 1.447 million gallons of storage. The following observations are made about the storage of each zone:

1. Zone 1, 1RA, & 1RB has sufficient storage with a calculated storage surplus of 3.37 MG.
2. Zone 1A has a storage deficit of 0.062 MG.
3. Zone 1B & 1BH1 has sufficient storage with a calculated storage surplus of 0.055 MG.
4. Zone 2, 2H1, & 2H2 has sufficient storage with a calculated storage surplus of 1.628 MG.
5. Zone 3 has sufficient storage with a calculated storage surplus of 2.117 MG.
6. Zone 3A has a storage deficit of 0.100 MG.
7. Zone 3B has a storage deficit of 0.302 MG.
8. Zone 3C & 3C1 has a storage deficit of 0.285 MG.
9. Zone 3D has a storage deficit of 0.281 MG.
10. Zone 4 has a storage deficit of 0.087 MG.
11. Zone 4A has a storage deficit of 0.133 MG.

The zones with storage deficits are primarily zones in the higher elevations of the service area with small demands. The fire suppression storage criteria is the dominant portion of the total required storage. It is often infeasible to construct larger storage tanks in these zones. It is therefore recommended that hydraulic studies and preliminary design studies be conducted to determine if fire flow pumps and/or larger capacity pumps can be installed at the pump stations that provide water to these zones.

Table 9-3
Storage Analysis

	Zone 1, 1RA, 1RB	Zone 1A	Zone 1B, 1BH1	Zone 2, 2H1, 2H2	Zone 3	Zone 3A	Zone 3B	Zone 3C, 3C1	Zone 3D	Zone 4	Zone 4A	Total System

[4]Operational Storage (MG)	2.340	0.020	0.048	1.339	0.394	0.046	0.004	0.004	0.027	0.005	0.047	4.223
Fire + Emergency + Operational (MG)	8.500	0.363	0.455	5.276	2.231	0.449	0.314	0.313	0.387	0.315	0.453	22.981
[5]Existing Available Storage (MG)	11.870	0.301	0.510	6.904	4.348	0.349	0.012	0.028	0.106	0.228	0.320	24.428
Storage Surplus / Deficit (MG)	**3.370**	**-0.062**	**0.055**	**1.628**	**2.117**	**-0.100**	**-0.302**	**-0.285**	**-0.281**	**-0.087**	**-0.133**	**1.447**

[1] Highest fire flow demand required
[2] Fire flow demand x Fire flow duration
[3] Emergency Storage = average day demand
[4] Operational Storage = 30% of maximum day demand
[5] Existing Available Storage = Effective Storage of Reservoirs assuming minimum level of 5 feet in each reservoir

The existing available storage system wide is estimated at 24.428 MG. The future average day and maximum day demands are estimated at 9.385 MG and 14.078 MG, respectively. In the event of an extreme emergency, without any well supply or imported water supply, the water system would be able to provide water to customers for about 2.6 average demand days or 1.7 maximum demand days. If an emergency is expected to last any longer, the customers would have to cut back on water use until supply sources can be implemented again.

9-4 Pumping and Supply Analysis by Hydraulic Zone

The pumping and supply analysis by hydraulic zone is shown in Table 9-4.

For open zones with sufficient fire demand storage, the pump capacity into the zone must meet the maximum day demands for the zone itself and any other zones it provides water to. Well supply and imported water directly supplying the zone can be included in the pump capacity. This criteria applies to the pump capacity into Zone 1, 2, and 3 because there is plenty of storage in the reservoirs in these zones. The pump capacity meets the criteria of one maximum day demand for Zone 1, 2, and 3.

For open zones that do not have sufficient fire demand storage, the pump capacity into the zone must meet maximum day plus fire demands for the zone itself as well as any zones it provides water to. Well supply and imported water directly supplying the zone can be included in the pump capacity. This criteria applies to the pump capacity into Zone 1A, 1B, 3A, 3B, 3C, 3D, 4, and 4A. The pump capacity does not meet the criteria of maximum day plus fire demand for any of these zones.

For closed zones, the pump capacity into the zone must meet maximum day plus fire demands or peak hour demands, whichever is greater. A separate fire pump can be installed to meet the fire flow requirements. This criteria applies to the pump capacity into Zone 1BH1, 2H1, and 2H2. The pump capacity does not meet the criteria of maximum day plus fire demand for any of these zones.

The zones that do not meet the pumping capacity criteria are the zones with low daily demands. These zones generally do not have large reservoirs because the demands are low. It would be difficult to turn over the water in a large reservoir on a daily basis with such low demands. Water would become stagnant and water quality would degrade.

In all of the zones that do not meet the pumping capacity criteria, the pumping capacity into the zone exceeds the maximum day demands of the service zone. The fire flow demand is the dominant portion of the required pumping capacity. In lieu of constructing more and/or larger storage reservoirs in these zones, it is recommended that hydraulic studies and preliminary design studies be conducted to determine if fire flow pumps and/or larger capacity pumps can be installed at the pump station that provide water to these zones. These studies go hand in hand with the studies recommended for zones with storage deficits.

Table 9-4
Pumping and Supply Analysis by Zone

Zone Pumped Into	Zone Type	Sufficient Fire Storage? [a] *Modeled as a demand off Zone 3C. Zone 3C1 pipes not modeled*

[b] *Modeled as a demand off of Zone 1. Zone 1RB pipes not modeled. HGL/Pressure to Zone 1RB not knov*

[c] *Hydropneumatic systems - hydraulic grade based on high and low pressure setpoints of the tank*

The maximum pressures throughout the system are shown graphically on Figure 9-1. Service pressures exceed 80 psi (maximum pressure allowed per the plumbing code without a pressure regulator) throughout the system. City staff reports that all services in these areas of high pressures have pressure regulators installed.

9-5.2 System Velocities

The maximum velocities in the distribution pipes are shown on Figure 9-2. There is just one location in the system that experiences a maximum velocity between 7 and 8 feet. This is within the 24-inch pipe downstream of the San Gabriel Booster Pump Station. Although the velocity is predicted by the model to exceed the criteria, the exceedance is very minimal and therefore it is not believed to be a major issue. No action is recommended.

9-6 Fire Flow Analysis

The fire flow analysis was conducted utilizing the existing maximum day demand scenario. Fire flow demands, listed in Table 6-1, were applied at all fire hydrant locations in the model. If the fire node was located near multiple land use types, the highest fire flow demand was utilized.

The fire flow criterion requires a residual pressure of 20 psi at the fire hydrant outlet. Since the City's hydraulic model only includes the location of the hydrant connection with the mainline and not the hydrant itself, a residual pressure of 26 psi is utilized for analysis purposes. It is estimated that there will be about 6 psi loss from the water main, through a typical 6-inch hydrant lateral to the fire hydrant outlet. Initially, the fire flow simulation is run globally and the entire fire flow demand is applied to a fire hydrant connection. This initially identifies the areas with low residual pressures as shown on Figure 9-3.

In reality, firefighting often takes place by using multiple fire hydrants with each providing approximately 1,000 gpm to 1,200 gpm of flow. Therefore, the next step in the analysis was to apply fire flow demand to multiple hydrants in the areas identified with low residual pressures and rerun the analysis. Often, the system was then able to meet the fire flow demands and provide the minimum residual pressure of 26 psi at the fire hydrant connection point.

If the residual pressure criteria was still not met utilizing multiple hydrants in a certain area, improvement recommendations were developed, which either include a pipe size increase, pipe looping, and/or addition or relocation of fire hydrants. There are areas where fire flows can be increased if the hydrant is connected to a larger pipe or a pipe in an upper zone, located nearby.

The fire flow improvement locations are shown on Plate 9-1. Detailed descriptions of the recommended improvements are provided in Table 9-6.

9-7 Additional Hydraulic Improvement Recommendations

Additional hydraulic improvements are recommended based on staff interviews:

1. Looping of pipes in Zone 3D (Bluebird Reservoirs and PS) to improve hydraulics and fire flow availability.
2. Extension of pipes in North Glendora Avenue in Zone 3A for future customers.
3. A connection at Bennet Avenue and Parkview Terrace to improve hydraulics and fire flow availability.

The additional improvement locations are shown on Plate 9-1.

FF-V10	3C	Zone Fire Deficiency	Detailed hydraulic study recommended for Zone 3C (Dalton PS/ Big Dalton Res). See Vertical Assessment Improvement Project Recommendations for estimated costs.											
FF-V11	3	Zone Fire Deficiency	Detailed hydraulic study recommended for the Zone 3 homes, located along Wildwood Canyon, with low system pressures. Conduct an investigation of the pressures experienced at the existing properties and what fire flow is available to each property (i.e. private hydropneumatic systems). If additional homes are being considered by the City/developers, a booster pump station may be needed adjacent the Country Club Reservoirs to provide future supply and fire protection. Another option may be a future connection to the City of San Dimas system when the development along Brasada Lane is completed.										$ 90,000

9-8 Water Age Analysis

The water age analysis was conducted utilizing the existing average day demand scenario for a 90 day period. Water age in the reservoirs is shown in Table 9-8. Generally, a water age of 7 days or less is desired. Mixers can help in reducing water age and improving water quality and have been recommended for several reservoirs. Newly constructed reservoirs should include mixers in the future.

Table 9-8

[1] *See Facility Assessment Section 11 and Capital Improvement Program Section 12 for recommendations*

The water age throughout the system is depicted on Figure 9-4. Generally, Zone 1 has the lowest water age (1 to 5 days) in the system because the source of supply is constantly providing water directly into Zone 1. The area of Zone 1 south of the 210 Freeway has higher water age than the rest of the zone, ranging from 5 to 10 days. Water age in the higher zones generally range up to 15 days. Water age in Zone 3C and 3C1 exceeds 15 days due to minimal demands.

The highest water age is seen in the model at endpoints in the system (i.e. stubouts, cul-de sacs, areas without looping, etc.) or in areas where there was no demand placed in the hydraulic model. This happened when for instance, there was a master meter for a development but the demand could only be placed in the model at one location. In reality, there are several services pulling water from the system at different locations. If individual services were all to be modeled, the water age analysis results would be different.

Another instance is when the service lateral was not located close to the end of the pipe on a cul-de sac. In this case the demand was placed at the next model node and no demand was placed at the actual end point of the pipe. If the demand was placed at the end of the pipe, the water age analysis results would be different and likely water age would be similar to the surrounding model nodes.

DATE: April 2023

Figure 9-4

SECTION 10
PIPE REPLACEMENT PROGRAM

10-1 General

According to the 2021 Drinking Water Report Card, developed by the American Society of Civil Engineers, the national average break rate ranged between 10 breaks per 100 miles of pipe per year to 37 breaks per 100 miles of pipe per year.

The break records show that the City of Glendora's (City) water system has experienced about 225 breaks per year between 2017 and 2021. This equates to 107 breaks per year per 100 miles of pipe (225 breaks / 2.1 hundred miles of pipe), which is much greater than the national average.

Based on a review of the City's as-built plans from the last 10 years, the City has been replacing an average of 10,300 feet of pipe annually (1% of the total system). It is recommended that the City continue implementing an annual pipe replacement program to reduce the number of water breaks each year.

For this Master Plan study, the recommended pipe replacement program was developed based on historical breaks and leak records, a risk assessment, problematic areas identified by City staff, and critical facility (hospitals, police stations, fire stations, etc) locations. These project recommendations were developed independently of the hydraulic analyses described in Section 9.

10-2 Risk Assessment

Risk assessments have become more important as the average age of infrastructure in Southern California has increased and more breaks have occurred. The Water Research Foundation describes the main objectives of an effective risk assessment as one that includes:

1. Reduction in the number and cost of failures, by identifying high-risk assets and enabling cost-effective, targeted, proactive remedies
2. Extension of the useful life of assets, by distinguishing those that are merely old from those that are truly impaired
3. Reduction in uncertainties, enabling confident answers to question from the public and others

Risk relates to the probability of something bad happening, or the likelihood of a negative impact occurring, and over time, a water distribution system will experience water breaks or leaks. These failures in a water system can be caused by multiple factors such as pipe age, pipe material, pipe bedding, water characteristics, external loads (from traffic or soils), soil characteristics, and/or weather. Some of the primary goals of a water utility are to prevent catastrophic failures from occurring, address breaks and leaks as quickly as possible, and continue to provide reliable and safe water to its customers while minimizing disruptions to service.

Risk is the combination of both Likelihood of Failure (LoF) and Consequence of Failure (CoF). It takes into account the asset's physical condition, as well as the impact that its failure would have on system performance. LoF refers to the probability of failure based on the pipe features, surrounding area attributes, and historical pipe break data. CoF is the combination of direct and indirect impacts on the vicinity and community due to a potential asset failure.

The pipeline risk assessment includes an evaluation of various elements that affect the LoF and CoF.

Artificial intelligence, machine learning (AI-ML) technology was used to calculate the LoF for the pipeline risk assessment. Contracted by AKM, Fracta provided the software as a service (SaaS) solution to develop the LoF scores.

The CoF elements were modeled in the Fracta online platform, using the widely accepted triple bottom line (TBL) framework, which is a method that categorizes the consequence of failure as social, economic, and environmental factors.

10-3 Likelihood of Failure (LoF)

The City's risk assessment was developed using artificial intelligence, machine learning (AI-ML) technology to develop LoF scores. The main goal was to prioritize the likelihood of the system pipes to fail by using historical failure patterns (break data), surrounding area attributes (environmental and demographics), and pipe features (size, material, and year of construction). This data was embedded into the Fracta LoF module, which is a complex AI based and ML algorithm that uses historical and geospatial data to calculate LoF scores for the system pipes. The LoF score is a percentage that predicts which pipe segments will have the highest risk of breaking in the upcoming 1 year, 2 years, 3 years, and 5 years.

10-3.1 Pipe Asset Data

The pipe asset data was developed from the pipe geometry included from the previous hydraulic model prepared in 2017. The geometry was updated with current as-built plans. The pipe diameter, material, length and year of installation were imported into Fracta's AI-ML LoF module. Where the pipe material and/or year of installation information was missing, the Fracta proprietary imputation algorithm was used to fill in the missing data, primarily using the adjacent pipe data.

10-3.2 Global Data

In addition to the pipe asset data from the City's geodatabase, the AI-ML LoF module incorporates global variables to perform the LoF analysis, including but not limited to roads, soil type, trains, population density, built density, distance from water, precipitation, and temperature. Fracta obtains this data from Federal, State, and other public sources/agencies such as U.S. Geological Survey (USGS), U.S. Department of Agriculture (USDA), and the U.S. Census Bureau.

10-3.3 Pipe Break Data

Water main break history is a good indicator of the quality of a pipe's condition. The City's pipe break data was provided from 2012 to 2021.

It should be noted that the LoF module training and validation include the evaluation of pipes that were abandoned and replaced. The pipe breaks, associated to those abandoned pipes, were also included in the training of the LoF module. After the training was completed, the abandoned pipes and breaks were removed from the LoF module, which is necessary for developing the LoF scores for the "normalized" pipes. The normalized break locations are shown on Figure 10-1. The break summary data is shown on Figure 10-2.

10-3.4 LoF Module Training

The LoF module finds correlations between the City's pipe asset data, the global data, and the City's comprehensive pipe break data to calculate the pipe LoF percent scores.

CITY OF GLENDORA
WATER MASTER PLAN

Pipe Break Locations

PROJECT NO: 0201782.00
DATE: April 2023

Figure 10-1

Figure 10-2
Pipe Break History

The LoF module was trained and validated by evaluating the pipe break data between 2012 to 2020. The data for 2021 was not included when developing the LoF scores during the training period. The actual 2021 break data was compared to the initial LoF scores to train the model. Once the training and validation was completed all break data was inputted into the model and used to develop the final LoF scores.

The Fracta LoF module can utilize LoF data, such as pipe asset and break data, from nearby agencies to incorporate into the LoF module. This is particularly useful when there is very little break data. Based on the results of the LoF training exercise, it was determined that the City's local LoF module was better at predicting the 2021 breaks that were initially withheld from the module. All LoF analysis is based on this local module.

The Fracta AI-ML module identified the following to be the most influencing LoF risk factors:

- Pipe Material
- Major Roads
- Distance from Water
- Number of Breaks
- Pipe Diameter
- Population Density
- Elevation
- Train
- Major Roads
- Slope
- Built Density
- Soil

Fracta's AI-ML algorithms evaluate many large and complex datasets containing more variables than a human can process. The algorithms "learn" as more and more data is available and inputted into the program. AI-ML is an efficient way to incorporate large amounts of data and improve on results.

Within the LoF module, all pipes are grouped by similar LoF risk factors. Pipe age and pipe break data is not identified as LoF risk factors. This data is used by the AI-ML module to prioritize the LoF risk factors and identify the pipe grouping used to develop the LoF scores for the City's entire system.

10-3.5 Likelihood of Failure Results

The AI-ML model generates LoF scores which are the calculated percentage that the pipe segments will break in the upcoming 1 year, 2 years, 3 years and 5 years. The summary of the pipes by LoF score is shown in Table 10-1. The LoF scores for each pipe are shown on Figure 10-3.

Table 10-1

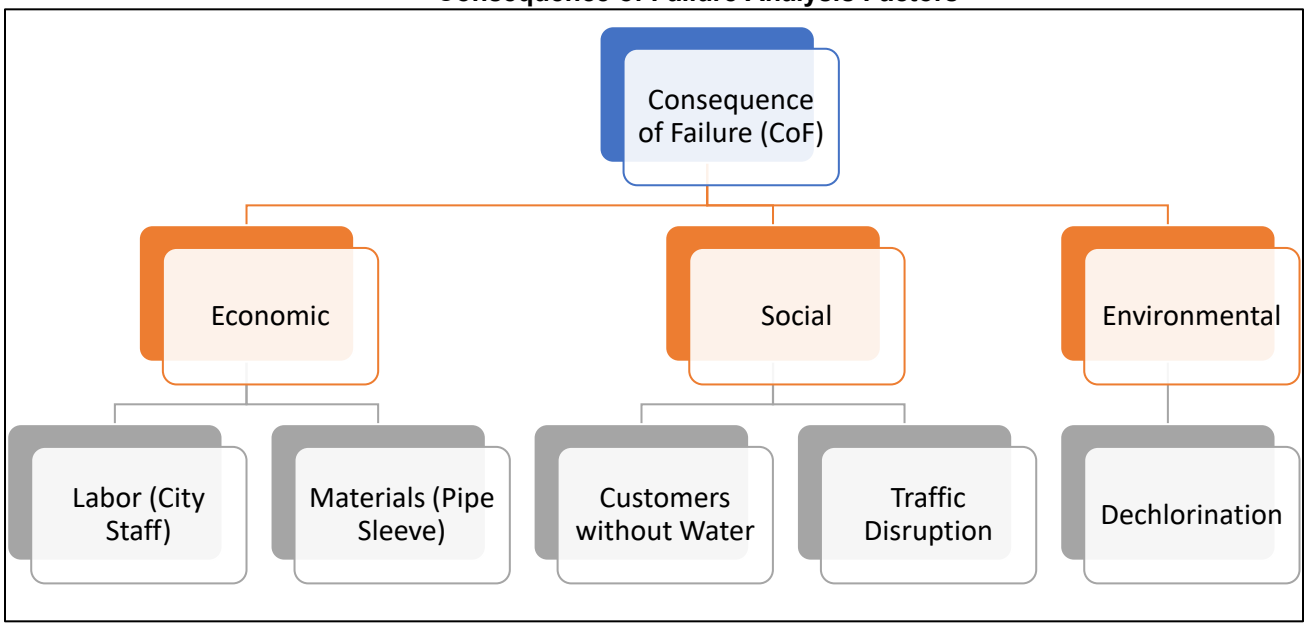
Likelihood of Failure Scores



PROJECT NO: 0201782.00
DATE: April 2023

Figure 10-3

10-4 Consequence of Failure (CoF)

The CoF analysis involves quantifying the estimated losses associated with damage that might occur when a pipe fails. This is done by modeling the CoF using the widely accepted triple bottom line (TBL) framework, which is a method that categorizes the consequences of failure as social, economic, and environmental factors as shown on Figure 10-4.

Figure 10-4
Consequence of Failure Analysis Factors

The CoF scores are the costs associated with a pipe break. The scores were developed for all pipes using Fracta's CoF module. The CoF factors included with this risk assessment include the following:

1. **Economic CoF**: This component reflects the impact that the utility would incur directly due to the repair cost of the failed pipe, which include the labor and materials costs.
2. **Social CoF**: This component reflects the impact of the pipe failure for the public and has two subcomponents: customers without water service and traffic disruption.
3. **Environmental CoF**: This component reflects the potential damage that is caused by a pipe break, which includes the discharge of chlorine treated water.

10-4.1 Economic CoF Factors

The cost to repair a pipe break varies depending on the necessary equipment, depth of the pipe break, amount of water loss, and other factor specific to each circumstance. City operation and maintenance staff report that the typical main break response procedure includes a repair of the pipe using sleeve repair clamps. The costs associated with the repair work are the labor and materials cost as follows:

- Labor Costs are based on a typical repair time of 5 hours and the following O&M Staff rates
  - 1 Water Utility Leadworker with $75.88/hour rate
  - 4 Water Utility Worker II with $64.39/hour rate

- Materials costs are based on the pipe sleeve repair clamp costs that are summarized in Table 10-2.

10-4.2 Social CoF Factors

The social component to the CoF score includes the customer without water service due to potential outages at each of the City's pipes. Fracta's CoF module calculates these indirect costs by estimating the number of customers within a 160 feet radius of each pipe. Fracta's module uses 2010 Topologically Integrated Geographic Encoding and Referencing (Tiger) data from the American Census Bureau to calculate the population density. An indirect cost of $50 per person is attributed to each pipe, which accounts for the social impact the pipe break has on the affected customers.

In addition to customers without water, traffic disruption also contributes to the social component of the CoF score. Water that overflows on the street and pipe repairs caused by pipe breaks are causes for increased traffic disruptions when there is a pipe break. Fracta's CoF module calculates the indirect cost based on pipe size, as shown in Table 10-3. Fracta's cost estimates are based on publicly available bid results and costing documents for project traffic control and rerouting.

Table 10-2
Pipe Sleeve Repair Clamp Cost by Diameter

Pipe Diameter	Pipe Sleeve Repair Clamp Cost ($)
Less than 4"	$360
4.0" to 7.9"	$1,200
8.0" to 15.9"	$3,480
16.0" to 23.9"	$6,360
24.0" to 29.9"	$6,480
Greater than 30"	$6,600

Table 10-3
Traffic Disruption Costs

Pipe Diameter	Traffic Disruption Cost ($)
Less than 4"	$600
4.0" to 7.9"	$600
8.0" to 15.9"	$1,500
16.0" to 23.9"	$2,000
24.0" to 29.9"	$3,000
Greater than 30"	$4,000

10-4.3 Environmental CoF Factors

The affected water bodies are generally far from the City's service area. Catch basins and storm drains are distributed throughout the service area and will capture all discharged flow from a pipe break. For these reasons, the proximity of a failed pipe to the affected water bodies is irrelevant when developing the CoF score.

The quantity of chlorine treated water is a more reasonable element to evaluate the environmental CoF. The chemical costs to dechlorinate the water from a pipe break was estimated by the discharged flow, which vary by pipe diameter. The environmental costs are shown in Table 10-4.

Table 10-4
Dechlorination Chemical Costs

Pipe Diameter	Pipe Sleeve Cost ($)
Less than 4"	$30
4.0" to 7.9"	$115
8.0" to 15.9"	$460
16.0" to 23.9"	$1,030
24.0" to 29.9"	$1,600
Greater than 30"	$2,300

10-5 Risk

Fracta's Total Risk module combines the LoF scores (%) and the CoF scores ($) to provide a total risk score. The total risk score is a dollar amount that takes into consideration the monetized consequence of failure and the percentage of when each pipe is predicted to fail.

Risk is calculated as the product of the LoF and CoF.

Risk = Likelihood of Failure (LoF) x Consequence of Failure (CoF)

Fracta's LoF scores, predicting which pipe segments will have the highest risk of breaking in the upcoming 1 year were used to develop the total risk scores. The summary of the pipes by total risk score is shown in Table 10-5. The total risk scores of each pipe are shown on Figure 10-5.

Table 10-5
Total Risk Summary Table

Total Risk[1]	Pipe Count	Length (ft)
Top 1%	28	11,124
1.1% - 5.0%	133	44,130
5.1% -20.0%	557	166,840
Greater than 20.0%	5,226	890,396
Total	**5,944**	**1,112,491**

[1] *Percent of total, prioritized by Total Risk score*

10-6 City Pipe Concerns

There are locations throughout the City's water system, shown on Figure 10-6, that are known to be difficult to provide routine and emergency operation and maintenance. The majority of these pipes are located within private right-of-ways and are difficult to access. City staff are extremely concerned about these locations, and therefore the pipes were included in the pipe replacement program. If the pipes in these areas were identified as high risk and recommended for replacement, the pipe was increased in priority to account for the City staff's concerns.

10-7 Critical Facilities

Critical facilities include those businesses or operations where water service is essential, such as hospitals, police facilities, fire facilities, dialysis centers, and care facilities. The locations of critical facilities (identified by City staff) are shown on Figure 10-7.

The City will make all efforts to ensure that the critical facilities are provided reliable water service. The pipes near these critical facilities were included in the pipe replacement program. If these pipes areas were identified as high risk and recommended for replacement, the pipe was increased in priority to account for the City staff's concerns.

10-8 Pipe Priorities

Pipe priorities were developed by looking at the total risk score, historical pipe break data, LoF scores, City pipe concerns, and pipes near critical facilities. Pipe priorities are categorized as follow:

- Pipe Priority 1 projects include pipes with the following:
  - Total Risk scores in the top 1% of the total system length
  - History of pipe breaks (9 or more breaks between 2012 and 2021)
  - LoF scores greater than 75% probability of breaking in the first year.
- Pipe Priority 2 projects include pipes with the following:
  - Total Risk scores between 1.1% and 5% of the total system length
  - History of pipe breaks (Between 3 and 8 breaks between 2012 and 2021)
  - LoF scores greater than 75% probability of breaking in the second year.
- Pipe Priority 3 projects include pipes with the following:
  - Total Risk scores between 5.1% and 20% of the total system length
  - History of pipe breaks (2 breaks between 2012 and 2021)
  - LoF scores greater than 75% probability of breaking in the fifth year.
  - Pipes of concern
  - Pipes near critical facilities

Critical Facility Locations

Figure 10-7

Pipe replacement project priorities were increased for pipes that are identified by the City to have operation and maintenance concerns, as described in Section 10-6. Priorities are also increased for pipes near a critical facility, as described in Section 10-7. The individual pipe priorities are shown on Plate 10-1.

10-9 Project Recommendations

It should be noted that some of the improvement recommendations herein are conceptual in nature based on existing available planning information. Therefore, they should not be considered as absolute for final design.

Proposed pipe replacement projects costs are planning level estimates. Specific alignments and refined cost estimates should be developed as part of the preliminary design phase for each recommended project.

10-9.1 Recommended Improvement Costs

The recommended improvement cost estimates are based upon recent information for similar projects and include contingencies for this planning level study. The pipeline replacement costs are based upon $50 per diameter inch per foot. The replacement costs are based on pipeline replacement projects between Fiscal Year 2018-2019 and Fiscal Year 2020-2021.

The total project cost includes construction, contingency, design and administrative, and construction management and inspection costs. The individual cost components are calculated as follows:

1. Construction Cost = (pipe length (ft)) x (Improvement diameter size (in)) x ($50/diam-in/foot)
2. Design and Administrative Costs = 15% of the Construction Costs
3. Construction Management Costs = 15% of the Construction Costs
4. Contingency Costs = 20% of the Construction Costs
5. Total Project Cost = Construction Cost + Design and Administrative Costs + Construction Management Costs+ Contingency Cost

   Total Project Cost = 1.5 x Construction Costs

10-9.2 Project Development

Projects were generally developed to include groups of pipes in the same general vicinity. The project priority was based on the highest individual pipe priority within each group of pipes and are categorized as Project Priority 1, Project Priority 2, and Project Priority 3.

The individual projects within each priority group were prioritized based on discussions with the City regarding historical condition concerns, the total pipe CoF values within each project, and the results from the hydraulic analyses.

As the Priority 1 projects in the pipe replacement program are implemented, it is recommended that the City reevaluate the lower Priority 2 and 3 projects with newer current leak and break data. The pipe priority and project recommendations should be updated at that time.

The pipe replacement project locations are shown on Plate 10-2 and summarized in Table 10-6. The detailed project summary data is included in Appendix 10-1.

The total Pipe Replacement Program costs are as follows:

Priority 1 Projects	101,400 feet	$64.8M
Priority 2 Projects	67,900 feet	$43.4M
Priority 3 Projects	100,100 feet	$75.0M
Total	**269,300 feet**	**$183.1M**

Table 10-6
Pipe Replacement Project Summary Table

Project Priority 1			
Priority	Project ID	Project Length (ft)	Project Total Cost ($)
1	1058	770	$692,896
2	1051	1,277	$765,953
3	1026	2,136	$1,281,881
4	1065	1,273	$763,533

SECTION 11

FACILITY ASSESSMENTS

11-1 General

As a part of the Master Plan work, each well, pump station, and storage reservoirs was evaluated to assess its condition and develop improvement recommendations. As-built plans, sanitary survey reports, maintenance records, pump curves and efficiency tests, dive reports, and other available historical information were reviewed as a part of the evaluation. City staff was interviewed by and accompanied AKM staff on tours of each facility as well.

11-2 Wells

The City's water system consists of eight (8) active wells. Wells 5, 8, 9, and 12 are located at the San Gabriel Plant in Azusa. Groundwater is first pumped into the San Gabriel Reservoir and then into Zone 1 via the San Gabriel Booster Pump Station. Wells 2, 10, 11, and 13 pump groundwater to Goddard and Sierra Madre Reservoirs, located at the City's Water Yard.

The assessments were based on field site investigations, discussions with City staff, review of as-built plans, pump curves and efficiency tests, installation reports, and Sanitary Survey reports. Detailed notes of the well assessments and recommendations can be found in Appendix 11-1. The recommendations are summarized in Table 11-1 at the end of this section. The total cost of the well improvements is estimated at about $46.2 Million.

Some of the common recommendations at booster pump stations include the following:

- Well rehabilitation – brush and clean, dual swab mechanical, focus intake pumping, and pumping development
- Replace discharge piping and valves
- Addition of automatic pump to waste
- Conduct dual-cam downhole video survey

It is recommended that Well 2 and Well 13 be converted to submersible pumps and that standby generators be added on-site.

Well rehabilitation is recommended for Well 8 and Well 9. This includes dual swab brushing and cleaning, focus intake pumping, and pumping development.

It is recommended that Well 10 and Well 11 be demolished and that a new well be drilled and equipped to replace them. Standby generators and wellhead nitrate treatment will be required.

The Capital Improvement Program (CIP) includes recommendations and costs for improvements for Well 5 to extend its useful life and bring the facility up to the standard code. In the future, the City would like to study the possibility of a new well site on the City owned property adjacent the golf course. The study should determine the exact location and size of the potential well site. The groundwater quality and the size of the discharge piping should also be evaluated. The cost of a new well and dishcarge piping is included in the CIP.

Well rehabilitation and improvement recommendations are included for Well 2, 8, 9, 12, and 13.

11-3 Storage Reservoirs and Hydropneumatic Tanks

The City's water system consists of twenty-nine (29) active storage reservoirs and three (3) hydraopneumatic tanks. There are sixteen (16) welded steel tanks, five (5) bolted steel tanks, and eight (8) concrete reservoirs.

The assessments were based on field site investigations, discussions with City staff, review of as-built plans, dive inspection reports, and review of Sanitary Survey reports. Detailed notes of the reservoir assessments and recommendations can be found in Appendix 11-2. The recommendations are summarized in Table 11-2 at the end of this section. The total cost of the reservoir improvements is estimated at about $52.8 Million.

Some of the common recommendations at multiple storage reservoirs include the following:

- Addition of a mixer
- Addition of a railing around the roof
- Addition of a SAFT climb to ladder
- Ladder cage repairs
- Replacement of interior and/or exterior ladders
- Hatch replacement or addition of hatch
- Ventilation improvements

North Glendora Reservoir B is recommened to be demolished and replaced with two new tanks. This reservoir has numerous and significant leaks at the connections of the bolted steel plates. Past repair work has not prevented the leakage. A corrective plan of action was submitted to the Department of Drinking Water (DDW) by the City in February 2022. Preliminary design of the replacement tanks is underway and is expected to be completed in FY 2023. Construction is scheduled for FY 2024 through FY 2025.

It is recommended that the existing South Hills West Reservoir A be demolished and that a new 3 MG steel reservoir be constructed to replace it. Due to the elevation difference between the South Hills West Reservoir A and B sites, it is recommended that a detailed study of these two reservoirs be conducted during the design phase of the new reservoir to evaluate how the two reservoirs should be operated together. The high water elevation of the South Hills West Reservoir A is 969 feet. The high water elevation of the South Hills West Reservoir B is 976 feet. Therefore, the top 7 feet of the South Hills West Reservoir B is not useable.

It is recommended that the Boy Scouts Reservoir A be removed from service. The City should construct an above ground non-potable water tank with a mixer. The tank would be filled whenever the Boy Scout camp is occupied and the water would only be used for the restrooms.\

Recoating or replacement of the hydropnuematic tanks (Silent Ranch A, Eagle Ridge A, and Rainbow A) are recommended unless it is determined that the tank can be removed by constructing additional piping and a pressure relief valve connected to an adjacent zone. This should be determined during the preliminary design study of the booster pump stations and hydropneumatic systems.

The Bluebird Hill Reservoirs B and A is recommended to be demolished and replaced. An increase in volume is recommended if space allows for it. This should be determined by conducting a detailed

hydraulic analysis of Zone 3D and preliminary design study of the Bluebird Booster Pump Station and Bluebird Hill Reservoirs B and A.

11-4 Booster Pump Stations

The City's water system consists of twenty (20) booster pump stations. Three of the stations serve water to hydropneumatic systems.

The assessments were based on field site investigations, discussions with City staff, review of as-built plans, pump curves and efficiency tests, and Sanitary Survey reports. Detailed notes of the booster pump stations assessments and recommendations can be found in Appendix 11-3. The recommendations are summarized in Table 11-3 at the end of this section. The total cost of the booster pump station improvements is estimated at about $55.5 Million.

Some of the common recommendations at booster pump stations include the following:

- Addition of permanent standby generator
- Raise pump base to 18" above floor
- Electrical upgrades
- Addition of a fire pump

11-4.1 Hydraulic Studies

A preliminary design study should be conducted for designs of all major water facilities. There are several areas of the service area that require detailed hydraulic studies prior to implementing improvement projects at booster pump stations and/or storage reservoirs providing water for these specific areas. It must be ensured that the demands (daily and fire flow) and required pressures will be met under all conditions. These areas are primarily the smaller zones with lower demands and located in the hillsides. The hydropneumatic systems are included in these areas as well. The number of pumps, pump capacities, reservoir sizes, etc. should be determined during the preliminary design studies.

The detailed hydraulic studies are needed due to storage, pumping, and fire flow deficiencies (see Section 9-3.4, 9-4, and 9-6) identified during the analysis completed for this Master Plan. The recommended hydraulic studies are as follows:

1. Zone 1A – The Zone 1A storage requirement is 0.360 MG. The existing available storage at Hicrest Reservoirs B and A is a total of 0.301 MG. The Hicrest Booster Pump Station has a firm capacity of about 458 gpm. The fire flow requirement for Zone 4 is 2,500 gpm for 2 hours, which will drain the reservoirs. It is recommended that Zone 4 be studied to determine the best way to meet the daily demands of the zone as well as the fire flow requirements.
2. Zone 3C – The Zone 3C storage requirement is 0.313 MG. The existing available storage at Big Dalton Reservoir A and is a total of 0.028 MG. The Dalton Booster Pump Station has a capacity of about 1100 gpm. The fire flow requirement for Zone 3C is 2,500 gpm for 2 hours.

   Water is pumped via Dalton Booster Pump Station to Big Dalton Reservoir A. The water in the reservoir is primarily used to fill up trucks for fire fighting purposes and is pumped to Boy Scout Reservoir A during the summer months when the Boy Scout camp is in use. It is

recommended that Zone 3C be studied to determine the best way to meet the daily demands of the zone as well as the fire flow requirements.

3. Zone 1BH1 – Zone 1BH1 is a hydropneumatic system, provided water via the Silent Ranch Booster Pump Station. The fire flow requirement for Zone 1BH1 is 2,500 gpm for 2 hours. The Zone 1BH1 maximum day plus fire demand is 2,537 gpm. The firm capacity of the Silent Ranch Booster Pump Station is 180 gpm.

   It is recommended that a study be undertaken to determine if the hydropneumatic system should be replaced with two duty pumps and variable frequency drives at the Silent Ranch Booster Pump Station and a connection to Zone 1B with a pressure relief valve or if the existing pump station and hydropneumatic tank should remain in place with needed replacements/upgrades. The recommended Zone 1B loop in North Silent Ranch Road should also be evaluated. It is intended to provide fire protection to a portion of the Zone 1BH1 service area via Zone 1B.

4. Zone 2H2 – Zone 2H2 is a hydropneumatic system, provided water via the Eagle Ridge Booster Pump Station. The fire flow requirement for Zone 2H2 is 2,500 gpm for 2 hours. The Zone 2H2 maximum day plus fire demand is 2,510 gpm. The firm capacity of the Eagle Ridge Booster Pump Station is 670 gpm.

   It is recommended that a study be undertaken to determine if the hydropneumatic system should be replaced with two duty pumps with variable frequency drives and a fire pump at the Eagle Ridge Booster Pump Station and a connection to Zone 2 with a pressure relief valve or if the existing pump station and hydropneumatic tank should remain in place with needed replacements/upgrades.

5. Zone 4 – The Zone 4 storage requirement is 0.314 MG. The existing available storage at Lower Gordon Reservoirs B and A is a total of 0.228 MG. The Morgan Ranch Booster Pump Station has a firm capacity of about 545 gpm. The fire flow requirement for Zone 4 is 2,500 gpm for 2 hours. It is recommended that Zone 4 be studied to determine the best way to meet the daily demands of the zone as well as the fire flow requirements.

   The City is also concerned about redundancy since there is only one distribution line providing water from Morgan Ranch Booster Pump Station to the Lower Gordon Reservoirs and Gordon Booster Pump Station which provides water to Zone 4A. The City would like to explore the possibility of a parallel distribution line or a connection to Zone 3D through the Bluebird Preserve.

6. Zone 4A – The Zone 4A storage requirement is 0.445 MG. The existing available storage at Upper Gordon Reservoirs B and A is a total of 0.320 MG. The Gordon Booster Pump Station has a firm capacity of about 435 gpm. The fire flow requirement for Zone 4A is 2,500 gpm for 2 hours. It is recommended that Zone 4A be studied to determine the best way to meet the daily demands of the zone as well as the fire flow requirements.

   The City would also like an elevation study to first be conducted to determine how much future development/expansion can occur in Zone 4A.

7. Zone 2H1 – Zone 2H1 is a hydropneumatic system, provided water via the Rainbow Booster Pump Station. The fire flow requirement for Zone 2H1 is 2,500 gpm for 2 hours. The Zone

2H1 maximum day plus fire demand is 2,513 gpm. The firm capacity of the Rainbow Booster Pump Station is 227 gpm.

It is recommended that a study be undertaken to determine if the hydropneumatic system should be replaced with two duty pumps with variable frequency drives and a fire pump at the Rainbow Booster Pump Station and a connection to Zone 2 with a pressure relief valve or if the existing pump station and hydropneumatic tank should remain in place with needed replacements/upgrades.

8. Zone 3A – The Zone 3A storage requirement is 0.442 MG. The existing available storage at the existing Zone 3A Reservoirs is a total of 0.349 MG. The Glencoe Booster Pump Station has a firm capacity of about 470 gpm. The fire flow requirement for Zone 3A is 2,500 gpm for 2 hours.

   The replacement for North Glendora Reservoir B was under design while this Master Plan study was being completed. It is planned to replace the current reservoir with two new ones. A preliminary design report should be prepared for the replacement of the Glencoe Booster Pump Station, utilizing the new North Glendora Reservoirs design. The study should also consider the future customer line extension in North Glendora Avenue (See Project G-P03 on Figure 9-4).

9. Zone 3B – The Zone 3B storage requirement is 0.314 MG. The existing available storage at Englewild Canyon Reservoirs A and B is a total of 0.012 MG. The Englewild Canyon Booster Pump Station has a firm capacity of about 32 gpm. The fire flow requirement for Zone 3B is 2,500 gpm for 2 hours. It is recommended that Zone 3B be studied to determine the best way to meet the daily demands of the zone as well as the fire flow requirements.

10. Zone 3D – The Zone 3D storage requirement is 0.383 MG. The existing available storage at Bluebird Reservoirs B and A is a total of 0.106 MG. The Bluebird Booster Pump Station has a firm capacity of about 110 gpm. The fire flow requirement for Zone 3D is 2,500 gpm for 2 hours. It is recommended that Zone 3D be studied to determine the best way to meet the daily demands of the zone as well as the fire flow requirements.

    Improvements to consider for the hydraulic study include the following:

    - Upsize about 3,000 feet of pipe from 6-inch to 10-inch from the Bluebird Booster Pump Station to the Bluebird Reservoirs
    - Pipe replacement projects (See Plate 10-2)
    - Replace pump station with 2 duty pumps and 1 fire pump
    - Replace reservoirs and increase volume, if possible
    - Create loop east of Bluebird Road and south of Bluebird Reservoirs (See Project G-P01 on Figure 9-4)
    - Create loop through Mountain Lane (See Project G-P02 on Figure 9-4)

11-5 Water Yard Facility

The recommended improvements related to the City's water yard facility (~$7.0 Million) are as follows and listed in Table 11-4 at the end of this section:

1. Additional and upgraded camera system
2. Warehouse replacement and potential relocation
3. Parking improvements
4. NPDES/spoils/washout relocation
5. Solid security fence installation around facility
6. Standby generator
7. Chemical building upgrades

11-6 San Gabriel Yard

The recommended improvements related to the City's San Gabriel Yard facility (~$4.2 Million) are as follows and listed in Table 11-4 at the end of this section:

1. Installation of camera system
2. Higher walls around the perimeter
3. Additional generator capacity
4. Chlorination system improvements, including vault flood sensors, seismic upgrades, scrubber installation assessment, sump pump upgrade, connection to SCADA, chlorine well injection line design and replacement, and 2 pumps and skids
5. Surge tank evaluation

11-7 General Water System Improvement Recommendations

Improvement recommendations for the water system (~$2.8 Million) are as follows and listed in Table 11-4 at the end of this section:

1. Assess and maintain Well 5 and Well 7 easements for future use
2. Comprehensive SCADA upgrade assessment
3. Comprehensive standby power assessment
4. Comprehensive valve assessment
5. Valve replacement program

11-8 Project Priorities

The projects are provided for each recommendation in Tables 11-1 through 11-4. The priorities are based on the condition observed in the field, discussions with City staff, and health and safety concerns for the public and operations staff.

The projects are grouped by facility site in Tables 11-1 through 11-4. Appendix 11-2 provides the project recommendations by priority instead of grouped by project site.

Table 11-1
Well Improvement Recommendations

Facility Type	Facility Name	Recommendations	Recommendation Notes	Priority	Construction Cost Estimate for Improvements	Design & Administration Cost ($)	Construction Management Cost ($)	Contingency Cost ($)	Total Project Cost ($)
Well	Well 2	Convert to Submersible pump		Medium	$ 300,000	$ 60,000	$ 45,000	$ 60,000	$ 465,000
		Conduct Casing Inspection Thickness Measurement (CITM) Survey		Medium	$ 20,000	$ 4,000	$ 3,000	$ 4,000	$ 31,000
		Conduct dual-cam downhole video survey		Medium	$ 2,000	$ 400	$ 300	$ 400	$ 3,100
		Add 100 kW standby generator and Automatic Transfer Switch	Individual standby generator cost was added for CIP purposes. Additionally, a study should be conducted to determine the standby power size for the site.	Medium	$ 200,000	$ 40,000	$ 30,000	$ 40,000	$ 310,000
		Replace Switchboard, MCC, Control Panel		Medium	$ 450,000	$ 90,000	$ 67,500	$ 90,000	$ 697,500
		Construct Rollaway Building, Site Improvements		Medium	$ 300,000	$ 60,000	$ 45,000	$ 60,000	$ 465,000
		Add automatic pump to waste		Medium	$ 80,000	$ 16,000	$ 12,000	$ 16,000	$ 124,000
		Replace discharge piping and valves		Medium	$ 120,000	$ 24,000	$ 18,000	$ 24,000	$ 186,000
Well	Well 5	Construct Building, Site Improvements	Conduct project when golf course is updated	Low-Medium	$ 400,000	$ 80,000	$ 60,000	$ 80,000	$ 620,000
		Conduct CCTV Inspection, Casing Inspection Thickness Measurement (CITM) Survey		Low-Medium	$ 20,000	$ 4,000	$ 3,000	$ 4,000	$ 31,000
		Conduct dual-cam downhole video survey		Low-Medium	$ 2,000	$ 400	$ 300	$ 400	$ 3,100
		Replace discharge piping and valves		Low-Medium	$ 100,000	$ 20,000	$ 15,000	$ 20,000	$ 155,000
		Add a level transducer		Low-Medium	$ 15,000	$ 3,000	$ 2,250	$ 3,000	$ 23,250
		Add automatic discharge to waste	At pump head	Low-Medium	$ 30,000	$ 6,000	$ 4,500	$ 6,000	$ 46,500
		Electrical upgrades	30 years old; need to replace VFD, starters, controls, etc.	Low-Medium	$ 250,000	$ 50,000	$ 37,500	$ 50,000	$ 387,500
		* Feasibility Study for new well location	Study to determine exact location and size of site, as well as evaluate the groundwater quality and well constructability at selected site.	Low	$ 200,000	$ 40,000	$ 30,000	$ 40,000	$ 310,000
		Replace discharge piping and resize	Replace at 3000 feet of pipe at end of useful life; estimated size is 16-inch	Low	$ 2,400,000	$ 480,000	$ 360,000	$ 480,000	$ 3,720,000
Well	Well 8	Conduct Casing Inspection Thickness Measurement (CITM) Survey		Medium	$ 20,000	$ 4,000	$ 3,000	$ 4,000	$ 31,000
		Conduct dual-cam downhole video survey		Medium	$ 2,000	$ 400	$ 300	$ 400	$ 3,100
		New stainless steel liner		Medium	$ 420,000	$ 84,000	$ 63,000	$ 84,000	$ 651,000
		Well rehabilitation	Brush and clean, dual swab mechanical, focus intake pumping, and pumping development	Medium	$ 300,000	$ 60,000	$ 45,000	$ 60,000	$ 465,000

Table 11-1 (Continued)
Well Improvement Recommendations

Facility Type	Facility Name	Recommendations	Recommendation Notes	Priority	Construction Cost Estimate for Improvements	Design & Administration Cost ($)	Construction Management Cost ($)	Contingency Cost ($)	Total Project Cost ($)
Well	Well 9	Conduct Casing Inspection Thickness Measurement (CITM) Survey		Medium	$ 20,000	$ 4,000	$ 3,000	$ 4,000	$ 31,000
		Conduct dual-cam downhole video survey		Medium	$ 2,000	$ 400	$ 300	$ 400	$ 3,100
		New stainless steel liner		Medium	$ 420,000	$ 84,000	$ 63,000	$ 84,000	$ 651,000
		Well rehabilitation	Brush and clean, dual swab mechanical, focus intake pumping, and pumping development	Medium	$ 300,000	$ 60,000	$ 45,000	$ 60,000	$ 465,000
Well	Well 10	Demolish existing well		Medium	$ 200,000	$ 40,000	$ 30,000	$ 40,000	$ 310,000
		* Drill new well		Medium	$ 1,800,000	$ 360,000	$ 270,000	$ 360,000	$ 2,790,000
		* Equip new well with standby generator		Medium	$ 3,500,000	$ 700,000	$ 525,000	$ 700,000	$ 5,425,000
		* Construct wellhead nitrate treatment		Medium	$ 1,200,000	$ 240,000	$ 180,000	$ 240,000	$ 1,860,000
Well	Well 11	Demolish existing well		Low	$ 100,000	$ 20,000	$ 15,000	$ 20,000	$ 155,000
		Drill new well		Low	$ 1,800,000	$ 360,000	$ 270,000	$ 360,000	$ 2,790,000
		* Equip new well with standby generator		Low	$ 3,500,000	$ 700,000	$ 525,000	$ 700,000	$ 5,425,000
		* Construct wellhead nitrate treatment		Low	$ 1,200,000	$ 240,000	$ 180,000	$ 240,000	$ 1,860,000
Well	Well 12	Conduct Casing Inspection Thickness Measurement (CITM) Survey		Medium-High	$ 20,000	$ 4,000	$ 3,000	$ 4,000	$ 31,000
		Well rehabilitation	Brush and clean, dual swab mechanical, focus intake pumping, and pumping development	Medium-High	$ 300,000	$ 60,000	$ 45,000	$ 60,000	$ 465,000
		New stainless steel liner		Medium-High	$ 300,000	$ 60,000	$ 45,000	$ 60,000	$ 465,000
		Upgrade electrical and controls		Medium-High	$ 400,000	$ 80,000	$ 60,000	$ 80,000	$ 620,000
		Manual transfer switch and portable generator		Medium-High	$ 20,000	$ 4,000	$ 3,000	$ 4,000	$ 31,000
		Raise pump base to 18" above floor		Medium-High	$ 40,000	$ 8,000	$ 6,000	$ 8,000	$ 62,000
		Replace discharge piping	Reuse valves	Medium-High	$ 70,000	$ 14,000	$ 10,500	$ 14,000	$ 108,500
		New Well Building and floors		Medium-High	$ 400,000	$ 80,000	$ 60,000	$ 80,000	$ 620,000
Well	Well 13	Convert to Submersible pump		Medium	$ 420,000	$ 84,000	$ 63,000	$ 84,000	$ 651,000
		New Building	Includes new water source for chlorine	Medium	$ 500,000	$ 100,000	$ 75,000	$ 100,000	$ 775,000
		Add 300 kW standby generator and Automatic Transfer Switch	Individual standby generator cost was added for CIP purposes. Additionally, a study should be conducted to determine the standby power size for the site.	Medium	$ 400,000	$ 80,000	$ 60,000	$ 80,000	$ 620,000
		Add water chiller (for chlorine line)		Medium	$ 40,000	$ 8,000	$ 6,000	$ 8,000	$ 62,000
				Total Well Improvement Costs	**$ 22,583,000**	**$ 4,516,600**	**$ 3,387,450**	**$ 4,516,600**	**$ 35,003,650**

**Includes preliminary design report / detailed hydraulic analysis / study*

Table 11-2
Reservoir Improvement Recommendations

Facility Type	Facility Name	Recommendations	Recommendation Notes	Priority	Construction Cost Estimate for Improvements	Design & Administration Cost ($)	Construction Management Cost ($)	Contingency Cost ($)	Total Project Cost ($)
Reservoir	San Gabriel (1.0 MG)	* Construct new inlet header to reservoir and underground vault	Includes Preliminary Design Report	Low	$ 800,000	$ 160,000	$ 120,000	$ 160,000	$ 1,240,000
Reservoir	South Hills West A (3.0 MG)	Demolish existing reservoir	Suspected hazmat abatement i.e., lead, asbestos, etc.	High	$ 1,000,000	$ 200,000	$ 150,000	$ 200,000	$ 1,550,000
		* Construct new 3 MG steel reservoir	Include detailed study of how to construct and limit impact on Reservoir 1C	High	$ 5,000,000	$ 1,000,000	$ 750,000	$ 1,000,000	$ 7,750,000
		Access road improvements	Asphalt road to site about 2300 feet	High	$ 1,380,000	$ 276,000	$ 207,000	$ 276,000	$ 2,139,000
Reservoir	South Hills West B (7.0 MG)	Add mixer		High	$ 200,000	$ 40,000	$ 30,000	$ 40,000	$ 310,000
		Add solar power with back-up generator	2 mixers	Medium	$ 120,000	$ 24,000	$ 18,000	$ 24,000	$ 186,000
		Ventilation and Active Ventilation improvements	Add blowers and vents	High	$ 200,000	$ 40,000	$ 30,000	$ 40,000	$ 310,000
		Chlorine injection/monitoring	Cut into roof	Medium	$ 60,000	$ 12,000	$ 9,000	$ 12,000	$ 93,000
		Access road improvements		Medium	$ 240,000	$ 48,000	$ 36,000	$ 48,000	$ 372,000
		Add safety/fall protection along stairs access		High	$ 100,000	$ 20,000	$ 15,000	$ 20,000	$ 155,000
		Security improvements (cameras)		Medium	$ 100,000	$ 20,000	$ 15,000	$ 20,000	$ 155,000
Reservoir	Sierra Madre A (4.0 MG)	Add SAFT climb to ladder		High	$ 10,000	$ 2,000	$ 1,500	$ 2,000	$ 15,500
		Add railing around roof		High	$ 80,000	$ 16,000	$ 12,000	$ 16,000	$ 124,000
		Reconstruct suction line		High	$ 300,000	$ 60,000	$ 45,000	$ 60,000	$ 465,000
		Ventilation and Active Ventilation improvements	Add blowers and vents	High	$ 150,000	$ 30,000	$ 22,500	$ 30,000	$ 232,500
		Add mixer		High	$ 120,000	$ 24,000	$ 18,000	$ 24,000	$ 186,000
		Add chlorine analyzer off suction line and connect to SCADA		High	$ 60,000	$ 12,000	$ 9,000	$ 12,000	$ 93,000
		Site improvements	Add retaining wall along north side of reservoir; about 200 feet long x 20 feet high	Low	$ 600,000	$ 120,000	$ 90,000	$ 120,000	$ 930,000
		Add a drop down nitrate analyzer	Currently only on top. Want another that just sits 2-3 feet from the floor	Low	$ 80,000	$ 16,000	$ 12,000	$ 16,000	$ 124,000
Reservoir	Goddard A (3.5 MG)	Add mixer		High	$ 150,000	$ 30,000	$ 22,500	$ 30,000	$ 232,500
		Add railing around roof		High	$ 76,000	$ 15,200	$ 11,400	$ 15,200	$ 117,800
		Additional ventilation	2 additional vents	High	$ 100,000	$ 20,000	$ 15,000	$ 20,000	$ 155,000
		Add solar power and backup generator		Medium	$ 100,000	$ 20,000	$ 15,000	$ 20,000	$ 155,000
		Replace nitrate analyzer		Medium	$ 30,000	$ 6,000	$ 4,500	$ 6,000	$ 46,500
Reservoir	South Hills East A (2.5 MG)	Add mixer		High	$ 150,000	$ 30,000	$ 22,500	$ 30,000	$ 232,500
		Add CL2 injection points/monitoring to SCADA		Medium	$ 60,000	$ 12,000	$ 9,000	$ 12,000	$ 93,000
		Larger vent		High	$ 50,000	$ 10,000	$ 7,500	$ 10,000	$ 77,500
		Solar power/generator		Medium	$ 100,000	$ 20,000	$ 15,000	$ 20,000	$ 155,000
		Remove/relocate IT equipment from the roof.		High	$ 200,000	$ 40,000	$ 30,000	$ 40,000	$ 310,000
		Replace interior and exterior ladder		High	$ 50,000	$ 10,000	$ 7,500	$ 10,000	$ 77,500
		Add railing around roof		High	$ 43,000	$ 8,600	$ 6,450	$ 8,600	$ 66,649
		Exterior ladder cage		High	$ 16,000	$ 3,200	$ 2,400	$ 3,200	$ 24,800

Table 11-2 (Continued)
Reservoir Improvement Recommendations

Facility Type	Facility Name	Recommendations	Recommendation Notes	Priority	Construction Cost Estimate for Improvements	Design & Administration Cost ($)	Construction Management Cost ($)	Contingency Cost ($)	Total Project Cost ($)
Reservoir	Hidden Springs A (1.25 MG)	Add mixer		High	$ 150,000	$ 30,000	$ 22,500	$ 30,000	$ 232,500
		Improve ventilation		High	$ 50,000	$ 10,000	$ 7,500	$ 10,000	$ 77,500
		New ladder with SAFT climb		High	$ 75,000	$ 15,000	$ 11,250	$ 15,000	$ 116,250
		Add railing around roof		High	$ 35,000	$ 7,000	$ 5,250	$ 7,000	$ 54,250
		Overflow outlet structure	Interim Improvement	High	$ 80,000	$ 16,000	$ 12,000	$ 16,000	$ 124,000
		Demolish Reservoir		Low	$ 1,000,000	$ 200,000	$ 150,000	$ 200,000	$ 1,550,000
Reservoir	Hidden Springs B (3.5 MG)	Spot repair and paint		Low-Medium	$ 50,000	$ 10,000	$ 7,500	$ 10,000	$ 77,500
		Add mixer		High	$ 150,000	$ 30,000	$ 22,500	$ 30,000	$ 232,500
		Improve ventilation		High	$ 50,000	$ 10,000	$ 7,500	$ 10,000	$ 77,500
		Add railing around roof		High	$ 42,000	$ 8,400	$ 6,300	$ 8,400	$ 65,100
		Replace interior coating	Evaluate existing coating first. Cost to replace coating included for budgeting purposes.	Low-Medium	$ 870,000	$ 174,000	$ 130,500	$ 174,000	$ 1,348,500
Reservoir	Country Club South A (0.688 MG)	Demolish reservoir		High	$ 700,000	$ 140,000	$ 105,000	$ 140,000	$ 1,085,000
		Construct new 0.75 MG reservoir		High	$ 3,500,000	$ 700,000	$ 525,000	$ 700,000	$ 5,425,000
		Relocate electrical for the site		High	$ 50,000	$ 10,000	$ 7,500	$ 10,000	$ 77,500
		Site improvements	Separated out site improvements in case it is needed before reservoir reconstruction	High	$ 200,000	$ 40,000	$ 30,000	$ 40,000	$ 310,000
Reservoir	Country Club North B (0.688 MG)	Add mixer		High	$ 150,000	$ 30,000	$ 22,500	$ 30,000	$ 232,500
Reservoir	Morgan Ranch A (2.5 MG)	Add mixer		High	$ 150,000	$ 30,000	$ 22,500	$ 30,000	$ 232,500
		Repair Brick wall separation and gutter		Low	$ 60,000	$ 12,000	$ 9,000	$ 12,000	$ 93,000
		Repair expansion joint material		Low	$ 50,000	$ 10,000	$ 7,500	$ 10,000	$ 77,500
		Replace overflow piping	Dive Report mentions replacement in the next year	Low	$ 30,000	$ 6,000	$ 4,500	$ 6,000	$ 46,500
		Repair cracking in southwest corner		Low	$ 100,000	$ 20,000	$ 15,000	$ 20,000	$ 155,000
		Replace internal joint material		Low	$ 60,000	$ 12,000	$ 9,000	$ 12,000	$ 93,000
		Replace underdrain monitoring vault lid		Low	$ 10,000	$ 2,000	$ 1,500	$ 2,000	$ 15,500
		Add SAFT climb to ladder		High	$ 20,000	$ 4,000	$ 3,000	$ 4,000	$ 31,000
		Replace security fence		High	$ 50,000	$ 10,000	$ 7,500	$ 10,000	$ 77,500
Reservoir	Englewild A (2.5 MG)	Add mixer		High	$ 150,000	$ 30,000	$ 22,500	$ 30,000	$ 232,500
		Solar/generator		Low-Medium	$ 100,000	$ 20,000	$ 15,000	$ 20,000	$ 155,000
		Seal railing connection to roof		High	$ 10,000	$ 2,000	$ 1,500	$ 2,000	$ 15,500
		Miscellaneous site improvements	Landscaping and asphalt	Low-Medium	$ 70,000	$ 14,000	$ 10,500	$ 14,000	$ 108,500
		Replace exterior ladder with SAFT climb.		High	$ 20,000	$ 4,000	$ 3,000	$ 4,000	$ 31,000
Reservoir	Hicrest B (0.274 MG)	Miscellaneous coating repairs	Include corrosion consultant review of cathodic protection system adjustment box	Low	$ 50,000	$ 10,000	$ 7,500	$ 10,000	$ 77,500
Reservoir	Hicrest A (0.116 MG)	Miscellaneous coating repairs	Include corrosion consultant review of cathodic protection system adjustment box	Low	$ 50,000	$ 10,000	$ 7,500	$ 10,000	$ 77,500

Table 11-2 (Continued)
Reservoir Improvement Recommendations

Facility Type	Facility Name	Recommendations	Recommendation Notes	Priority	Construction Cost Estimate for Improvements	Design & Administration Cost ($)	Construction Management Cost ($)	Contingency Cost ($)	Total Project Cost ($)
Reservoir	Hook Cyn A (0.33 MG)	Interior coating repairs		Low	$ 80,000	$ 16,000	$ 12,000	$ 16,000	$ 124,000
		Redo caulking		Low	$ 2,000	$ 400	$ 300	$ 400	$ 3,100
		Add railing around roof		High	$ 25,000	$ 5,000	$ 3,750	$ 5,000	$ 38,750
		Ladder cage repairs		High	$ 10,000	$ 2,000	$ 1,500	$ 2,000	$ 15,500
		Add second hatch		High	$ 30,000	$ 6,000	$ 4,500	$ 6,000	$ 46,500
		Site paving repairs		Low	$ 12,500	$ 2,500	$ 1,875	$ 2,500	$ 19,375
Reservoir	Hook Cyn B (0.33 MG)	Interior coating repairs		Low	$ 80,000	$ 16,000	$ 12,000	$ 16,000	$ 124,000
		Redo caulking		Low	$ 2,000	$ 400	$ 300	$ 400	$ 3,100
		Add railing around roof		High	$ 25,000	$ 5,000	$ 3,750	$ 5,000	$ 38,750
		Ladder cage repairs		High	$ 10,000	$ 2,000	$ 1,500	$ 2,000	$ 15,500
		Add second hatch		High	$ 30,000	$ 6,000	$ 4,500	$ 6,000	$ 46,500
		Site paving repairs		Low	$ 12,500	$ 2,500	$ 1,875	$ 2,500	$ 19,375
Reservoir	Big Dalton A (0.045 MG)	Change out existing BIF level sensor that runs on phone line to level transducer		Low	$ 15,000	$ 3,000	$ 2,250	$ 3,000	$ 23,250
		Coating interior and exterior		Low	$ 180,000	$ 36,000	$ 27,000	$ 36,000	$ 279,000
		SCADA upgrade with cellular data		Low	$ 100,000	$ 20,000	$ 15,000	$ 20,000	$ 155,000
		Add mixer		High	$ 100,000	$ 20,000	$ 15,000	$ 20,000	$ 155,000
		Site improvements	Retaining wall about 80 ft long x 10 ft high	High	$ 120,000	$ 24,000	$ 18,000	$ 24,000	$ 186,000
		Add railing around roof		High	$ 10,000	$ 2,000	$ 1,500	$ 2,000	$ 15,500
		Power solar/generator		Low	$ 100,000	$ 20,000	$ 15,000	$ 20,000	$ 155,000
Reservoir	Boy Scouts A (0.01 MG)	Remove existing pump station and reservoir.	Disconnect discharge pipe and fill with concrete	High	$ 50,000	$ 10,000	$ 7,500	$ 10,000	$ 77,500
		Build above ground tank to be filled and water used only for restrooms while Boy Scout camp is occupied.	Exact size to be determined based on maximum number of people	High	$ 250,000	$ 50,000	$ 37,500	$ 50,000	$ 387,500
		Tank mixer		High	$ 50,000	$ 10,000	$ 7,500	$ 10,000	$ 77,500
Reservoir	Silent Ranch A	* Replace hydropneumatic tank		High	$ 150,000	$ 30,000	$ 22,500	$ 30,000	$ 232,500
		* Construct about 200 feet of 8-inch pipe, pressure relief valve and vault, connected to Zone 5.	Use in case hydropneumatic tank is not replaced	High	$ 240,000	$ 48,000	$ 36,000	$ 48,000	$ 372,000
Reservoir	Eagle Ridge A	* Recoat hydropnuematic tank		High	$ 50,000	$ 10,000	$ 7,500	$ 10,000	$ 77,500
		* Add Pressure Relief line and valve to Zone 2 (about 200 feet of 8-inch pipe and valve vault)	Use in case hydropneumatic tank is not replaced	High	$ 240,000	$ 48,000	$ 36,000	$ 48,000	$ 372,000
Reservoir	Lower Gordon B (0.16 MG)	Exterior coating/interior coating		Low	$ 400,000	$ 80,000	$ 60,000	$ 80,000	$ 620,000
		Hatch replacement and new hatch	Move hatch away from access ladder and add second hatch	High	$ 80,000	$ 16,000	$ 12,000	$ 16,000	$ 124,000
		Ventilation improvements		High	$ 20,000	$ 4,000	$ 3,000	$ 4,000	$ 31,000
		Add railing around roof		High	$ 25,000	$ 5,000	$ 3,750	$ 5,000	$ 38,750
Reservoir	Lower Gordon A (0.16 MG)	Exterior coating/interior coating		Low	$ 400,000	$ 80,000	$ 60,000	$ 80,000	$ 620,000
		Hatch replacement and new hatch	Move hatch away from access ladder and add second hatch	High	$ 80,000	$ 16,000	$ 12,000	$ 16,000	$ 124,000
		Ventilation improvements		High	$ 20,000	$ 4,000	$ 3,000	$ 4,000	$ 31,000
		Add railing around roof		High	$ 25,000	$ 5,000	$ 3,750	$ 5,000	$ 38,750

Table 11-2 (Continued)
Reservoir Improvement Recommendations

Facility Type	Facility Name	Recommendations	Recommendation Notes	Priority	Construction Cost Estimate for Improvements	Design & Administration Cost ($)	Construction Management Cost ($)	Contingency Cost ($)	Total Project Cost ($)
Reservoir	Upper Gordon B (0.20 MG)	Interior coating		Medium	$ 300,000	$ 60,000	$ 45,000	$ 60,000	$ 465,000
		Exterior coating		Medium	$ 250,000	$ 50,000	$ 37,500	$ 50,000	$ 387,500
		Add cathodic protection		Medium	$ 50,000	$ 10,000	$ 7,500	$ 10,000	$ 77,500
		Replace interior ladders		High	$ 20,000	$ 4,000	$ 3,000	$ 4,000	$ 31,000
Reservoir	Upper Gordon A (0.20 MG)	Interior coating		Medium	$ 300,000	$ 60,000	$ 45,000	$ 60,000	$ 465,000
		Exterior coating		Medium	$ 250,000	$ 50,000	$ 37,500	$ 50,000	$ 387,500
		Add cathodic protection		Medium	$ 50,000	$ 10,000	$ 7,500	$ 10,000	$ 77,500
		Replace interior ladders		High	$ 20,000	$ 4,000	$ 3,000	$ 4,000	$ 31,000
Reservoir	Rainbow A	* Recoat hydropneumatic tank		High	$ 100,000	$ 20,000	$ 15,000	$ 20,000	$ 155,000
		* Add about 350 feet of 8-inch pipe, pressure relief valve and vault, connected to Zone 2.	Use in case hydropneumatic tank is not replaced	High	$ 300,000	$ 60,000	$ 45,000	$ 60,000	$ 465,000
Reservoir	Glencoe B (0.125 MG)	Site maintenance outside fence perimeter	Clear brush in front of overflow/drain	Low	$ 80,000	$ 16,000	$ 12,000	$ 16,000	$ 124,000
		Access road improvements	Regrading and asphalt whole road, about 1000 feet	High	$ 600,000	$ 120,000	$ 90,000	$ 120,000	$ 930,000
		Add railing around roof		High	$ 16,000	$ 3,200	$ 2,400	$ 3,200	$ 24,800
		Add retaining wall on north side of site		High	$ 80,000	$ 16,000	$ 12,000	$ 16,000	$ 124,000
		Add flexible coupling to overflow pipe		Low	$ 20,000	$ 4,000	$ 3,000	$ 4,000	$ 31,000
Reservoir	Glencoe A (0.0125 MG)	Add railing around roof		High	$ 8,000	$ 1,600	$ 1,200	$ 1,600	$ 12,400
		Add flexible coupling to overflow pipe		Low	$ 20,000	$ 4,000	$ 3,000	$ 4,000	$ 31,000
Reservoir	North Glendora B (0.318 MG)	* Replace reservoir with two tanks	Includes generator and solar	High	$ 5,000,000	$ 1,000,000	$ 750,000	$ 1,000,000	$ 7,750,000
Reservoir	Englewild Cyn A (0.01 MG)	Add railing around roof		High	$ 16,000	$ 3,200	$ 2,400	$ 3,200	$ 24,800
		Replace interior and exterior coating		Low	$ 100,000	$ 20,000	$ 15,000	$ 20,000	$ 155,000
		Add SCADA levels/power		Low	$ 80,000	$ 16,000	$ 12,000	$ 16,000	$ 124,000
Reservoir	Englewild Cyn B (0.01 MG)	Add railing around roof		High	$ 16,000	$ 3,200	$ 2,400	$ 3,200	$ 24,800
		Replace interior and exterior coating		Low	$ 100,000	$ 20,000	$ 15,000	$ 20,000	$ 155,000
		Add SCADA levels/power		Low	$ 80,000	$ 16,000	$ 12,000	$ 16,000	$ 124,000
Reservoir	Bluebird Hill B (0.125 MG)	* Replace reservoirs; increase volume if possible	Purchase property for one or both new reservoirs; Cost estimated for one 0.44 MG	Medium	$ 2,500,000	$ 500,000	$ 375,000	$ 500,000	$ 3,875,000
Reservoir	Bluebird Hill A (0.0125 MG)		Cost estimated for one 0.135 MG on existing property and includes demolition	Medium	$ 800,000	$ 160,000	$ 120,000	$ 160,000	$ 1,240,000
			Total Reservoir Improvement Costs		**$ 34,037,000**	**$ 6,807,400**	**$ 5,105,550**	**$ 6,807,400**	**$ 52,757,349**

**Includes preliminary design report / detailed hydraulic analysis / study*

Table 11-3
Booster Pump Station Improvement Recommendations

Facility Type	Facility Name	Recommendations	Recommendation Notes	Priority	Construction Cost Estimate for Improvements	Design & Administration Cost ($)	Construction Management Cost ($)	Contingency Cost ($)	Total Project Cost ($)
Booster Pump Station	San Gabriel (SG-1, SG-2, SG-3, SG-4, SG-5)	Add 18 pulse VFDs for 250 hp pumps (x2)		Medium-High	$ 360,000	$ 72,000	$ 54,000	$ 72,000	$ 558,000
		Add 18 pulse VFDs for 350 hp pumps (x2)		Medium-High	$ 600,000	$ 120,000	$ 90,000	$ 120,000	$ 930,000
		3000 amp ATS		Medium-High	$ 500,000	$ 100,000	$ 75,000	$ 100,000	$ 775,000
		Electrical improvements	Dependent on VFDs	Medium-High	$ 500,000	$ 100,000	$ 75,000	$ 100,000	$ 775,000
Booster Pump Station	Englewild (B13, B14, B10)	Replace electrical panel		Medium-High	$ 400,000	$ 80,000	$ 60,000	$ 80,000	$ 620,000
		Site Improvements	Concrete floor and drainage	Medium-High	$ 40,000	$ 8,000	$ 6,000	$ 8,000	$ 62,000
		Replace suction line	12-inch suction	Medium-High	$ 180,000	$ 36,000	$ 27,000	$ 36,000	$ 279,000
		Suction isolation valves	3	Medium-High	$ 30,000	$ 6,000	$ 4,500	$ 6,000	$ 46,500
		Replace pump barrels	25 feet	Medium-High	$ 180,000	$ 36,000	$ 27,000	$ 36,000	$ 279,000
		Coating		Medium-High	$ 10,000	$ 2,000	$ 1,500	$ 2,000	$ 15,500
		SCADA improvements		Medium-High	$ 30,000	$ 6,000	$ 4,500	$ 6,000	$ 46,500
Booster Pump Station	Hidden Springs (B11, B12)	Replace suction line	14 inch suction	Medium-High	$ 210,000	$ 42,000	$ 31,500	$ 42,000	$ 325,500
		Suction isolation valves		Medium-High	$ 45,000	$ 9,000	$ 6,750	$ 9,000	$ 69,750
		Replace pump barrels	25 feet	Medium-High	$ 120,000	$ 24,000	$ 18,000	$ 24,000	$ 186,000
		Replace conduits below floor		Medium-High	$ 40,000	$ 8,000	$ 6,000	$ 8,000	$ 62,000
		Replace electrical panels		Medium-High	$ 250,000	$ 50,000	$ 37,500	$ 50,000	$ 387,500
		Replace motors		Medium-High	$ 120,000	$ 24,000	$ 18,000	$ 24,000	$ 186,000
		Replace Cla pump control valves		Medium-High	$ 50,000	$ 10,000	$ 7,500	$ 10,000	$ 77,500
		Replace flow meters	Add flow meter to each discharge line	Medium-High	$ 40,000	$ 8,000	$ 6,000	$ 8,000	$ 62,000
		Site Improvements	Concrete floor and drainage	Medium-High	$ 40,000	$ 8,000	$ 6,000	$ 8,000	$ 62,000
		SCADA improvements		Medium-High	$ 30,000	$ 6,000	$ 4,500	$ 6,000	$ 46,500
Booster Pump Station	Silent Ranch (B20, B57) HP	* *Loop of Zone 5 with about 500 feet of 8-inch pipe through Zone 11 service area (N. Silent Ranch Dr)*	Zone 5 loop will allow 2500 gpm fire flow to be provided from Zone 5 with residual pressures above 26 psi to the Zone 11 service area	High	$ 200,000	$ 40,000	$ 30,000	$ 40,000	$ 310,000
		* Rebuild PS - Include 2 duty pumps with VFDs	~60 gpm pumps; once a certain pressure is reached, reduce speed and provide a pressure relief to Zone 5 (option if no HP tank desired)	High	$ 480,000	$ 96,000	$ 72,000	$ 96,000	$ 744,000
		Standby generator		High	$ 120,000	$ 24,000	$ 18,000	$ 24,000	$ 186,000
Booster Pump Station	Valley Center (B21)	Evaluate reason for infiltration	Could just need new seal and relocate existing drainage facilities	High	$ 20,000	$ 4,000	$ 3,000	$ 4,000	$ 31,000
		Replace pump station	Includes SCADA and electrical	Low	$ 720,000	$ 144,000	$ 108,000	$ 144,000	$ 1,116,000

Table 11-3 (Continued)
Booster Pump Station Improvement Recommendations

Facility Type	Facility Name	Recommendations	Recommendation Notes	Priority	Construction Cost Estimate for Improvements	Design & Administration Cost ($)	Construction Management Cost ($)	Contingency Cost ($)	Total Project Cost ($)
Booster Pump Station	Hicrest (B24, B25)	Permanent standby power/generator		Medium	$ 120,000	$ 24,000	$ 18,000	$ 24,000	$ 186,000
		Electrical upgrades		Medium	$ 200,000	$ 40,000	$ 30,000	$ 40,000	$ 310,000
		Raise pump base to 18" above floor		Medium	$ 40,000	$ 8,000	$ 6,000	$ 8,000	$ 62,000
		Replace discharge piping and valves		Medium	$ 80,000	$ 16,000	$ 12,000	$ 16,000	$ 124,000
		* Add 2500 gpm fire pump	Additional pump or upgrade existing pumps to aide in storage deficit	Medium	$ 800,000	$ 160,000	$ 120,000	$ 160,000	$ 1,240,000
Booster Pump Station	Glencoe (B26, B27)	Misc. interim imps. - Add ladder extension		Medium	$ 5,000	$ 1,000	$ 750	$ 1,000	$ 7,750
		Misc. interim imps. - Spring asst. lid on mtr vlt		Medium	$ 20,000	$ 4,000	$ 3,000	$ 4,000	$ 31,000
		Int. imp, - Vault flooded alarm		Medium	$ 10,000	$ 2,000	$ 1,500	$ 2,000	$ 15,500
		* Replace pump station w/ 2 duty pumps plus 2500 gpm fire pump	Include complete vault reconfiguration and replacement	Medium	$ 4,800,000	$ 960,000	$ 720,000	$ 960,000	$ 7,440,000
Booster Pump Station	Hook Canyon (B52, B53)	Add permanent 125 kW generator		Medium	$ 150,000	$ 30,000	$ 22,500	$ 30,000	$ 232,500
		Raise pump base to 18" above floor		Medium	$ 40,000	$ 8,000	$ 6,000	$ 8,000	$ 62,000
		200 Amp Switchboard		Medium	$ 60,000	$ 12,000	$ 9,000	$ 12,000	$ 93,000
		200 Amp ATS		Medium	$ 60,000	$ 12,000	$ 9,000	$ 12,000	$ 93,000
		MCC with 2 x 50 HP VFD/SSMCs		Medium	$ 150,000	$ 30,000	$ 22,500	$ 30,000	$ 232,500
		Control Panel		Medium	$ 100,000	$ 20,000	$ 15,000	$ 20,000	$ 155,000
Booster Pump Station	Dalton (B31)	Electrical panel upgrades		Medium	$ 300,000	$ 60,000	$ 45,000	$ 60,000	$ 465,000
		Approximately 1000' of discharge piping (16 inch)		Medium	$ 800,000	$ 160,000	$ 120,000	$ 160,000	$ 1,240,000
		Add permanent generator		Medium	$ 120,000	$ 24,000	$ 18,000	$ 24,000	$ 186,000
		* Replace pump with 2 new pumps		Medium	$ 360,000	$ 72,000	$ 54,000	$ 72,000	$ 558,000
Booster Pump Station	Bluebird (B32, B33)	* Replace pump station - 2 duty pumps (25 hp) 300 gpm and 1 fire pump (200 hp) 2500 gpm		Medium-High	$ 2,160,000	$ 432,000	$ 324,000	$ 432,000	$ 3,348,000
		Add permanent generator (300 kW)		Medium-High	$ 300,000	$ 60,000	$ 45,000	$ 60,000	$ 465,000
		Building (720 sq ft)		Medium-High	$ 576,000	$ 115,200	$ 86,400	$ 115,200	$ 892,800
		* Construct 3,000 feet of 10-inch pipe	This includes replacing the 6-inch pipe from the pump station to the reservoirs. Other improvements in Zone 28 are included in the Pipe Replacement Projects.	Medium-High	$ 1,500,000	$ 300,000	$ 225,000	$ 300,000	$ 2,325,000
Booster Pump Station	Rainbow (B42, B43) HP	* Replace PS - Add 2 duty pumps VFDs + fire pump (2500 gpm)	~60 gpm pumps; Investigate new site for pump station and standby generator	High	$ 3,600,000	$ 720,000	$ 540,000	$ 720,000	$ 5,580,000
		Standby generator		High	$ 200,000	$ 40,000	$ 30,000	$ 40,000	$ 310,000
		Add to SCADA	On/Off and pump flows	High	$ 100,000	$ 20,000	$ 15,000	$ 20,000	$ 155,000
		Upsize and replace pipes from Sierra Madre Ave to Rainbow Pump Station	Cost included in Pipe Replacement Plan Project ID 1001	High	$ -	$ -	$ -	$ -	$ -

Table 11-3 (Continued)
Booster Pump Station Improvement Recommendations

Facility Type	Facility Name	Recommendations	Recommendation Notes	Priority	Construction Cost Estimate for Improvements	Design & Administration Cost ($)	Construction Management Cost ($)	Contingency Cost ($)	Total Project Cost ($)
Booster Pump Station	Morgan Ranch (B44, B45, B46)	Add vault for meter and pump control valve		Medium	$ 120,000	$ 24,000	$ 18,000	$ 24,000	$ 186,000
		* Add 2500 gpm fire pump	Includes pump and motor, electrical, and pipeline improvements	Medium	$ 600,000	$ 120,000	$ 90,000	$ 120,000	$ 930,000
		Add permanent generator (300kW)		Medium	$ 300,000	$ 60,000	$ 45,000	$ 60,000	$ 465,000
		Electrical improvements	ATS, MCC for fire pump, and replace existing electrical service	Medium	$ 400,000	$ 80,000	$ 60,000	$ 80,000	$ 620,000
		* Redundancy Enhancement Study	Additional parallel pipe or connection to Zone 28	Medium	$ 100,000	$ 20,000	$ 15,000	$ 20,000	$ 155,000
Booster Pump Station	Englewild Canyon (B47, B48)	Add permanent generator (10kW) and ATS	Interim improvement	Medium-Low	$ 150,000	$ 30,000	$ 22,500	$ 30,000	$ 232,500
		Update electrical system	Interim Improvement	Medium-Low	$ 150,000	$ 30,000	$ 22,500	$ 30,000	$ 232,500
		Connect to SCADA	Interim Improvement	Medium-Low	$ 60,000	$ 12,000	$ 9,000	$ 12,000	$ 93,000
		Construct new pump station - two 60 gpm duty pumps and one fire pump (2500 gpm, 125 hp)	Includes new generator	Medium-Low	$ 3,600,000	$ 720,000	$ 540,000	$ 720,000	$ 5,580,000
		* Install new 10-inch pipeline from pump station to reservoirs (about 1600 feet)	This assumes relocation of pump station near Englewild Reservoir site	Medium-Low	$ 800,000	$ 160,000	$ 120,000	$ 160,000	$ 1,240,000
Booster Pump Station	Country Club (B22, B23, B36)	Lowering the suction header	For 200 feet suction line at 36 inch for all three pump stations	Medium-High	$ 720,000	$ 144,000	$ 108,000	$ 144,000	$ 1,116,000
		Replace suction header isolation valves	3 butterfly valves	Medium-High	$ 150,000	$ 30,000	$ 22,500	$ 30,000	$ 232,500
		Replace electrical panels		Medium-High	$ 400,000	$ 80,000	$ 60,000	$ 80,000	$ 620,000
		Replace suction line	16 inch suction	Medium-High	$ 240,000	$ 48,000	$ 36,000	$ 48,000	$ 372,000
		Suction isolation valves		Medium-High	$ 45,000	$ 9,000	$ 6,750	$ 9,000	$ 69,750
		Replace pump barrels	25 feet	Medium-High	$ 180,000	$ 36,000	$ 27,000	$ 36,000	$ 279,000
		* Replace pumps		Medium-High	$ 300,000	$ 60,000	$ 45,000	$ 60,000	$ 465,000
		Site Improvements	Concrete floor and drainage	Medium-High	$ 40,000	$ 8,000	$ 6,000	$ 8,000	$ 62,000
Booster Pump Station	Eagle Ridge (B49, B50, B51) HP	* Rebuild PS - Add 2 duty pumps with VFDs + fire pump (2500 gpm)	~60 gpm pumps; once a certain pressure is reached, reduce speed and provide a pressure relief to Zone 2 near intersection of Beaverbrook Lane and Eagle Ridge (option if no HP tank desired).	High	$ 900,000	$ 180,000	$ 135,000	$ 180,000	$ 1,395,000
		Upgrade electrical and controls		High	$ 300,000	$ 60,000	$ 45,000	$ 60,000	$ 465,000
		Standby generator		High	$ 200,000	$ 40,000	$ 30,000	$ 40,000	$ 310,000
Booster Pump Station	Boy Scout (B56)	Remove existing pump station and reservoir. Construct above ground non-potable water tank to be filled as needed. Th water will only be used for restrooms while Boy Scout camp is occupied.	See Boy Scout Reservoir Recommendations	High		$ -	$ -	$ -	$ -

Table 11-3 (Continued)
Booster Pump Station Improvement Recommendations

Facility Type	Facility Name	Recommendations	Recommendation Notes	Priority	Construction Cost Estimate for Improvements	Design & Administration Cost ($)	Construction Management Cost ($)	Contingency Cost ($)	Total Project Cost ($)
Booster Pump Station	Gordon (B58, B59)	Replace discharge pipes with 6 inch		Low	$ 70,000	$ 14,000	$ 10,500	$ 14,000	$ 108,500
		Miscellaneous improvements (access hatch replacement, elevate pipe supports)		Low	$ 20,000	$ 4,000	$ 3,000	$ 4,000	$ 31,000
		* Add fire pump (2500 gpm, 250 HP)		Low	$ 420,000	$ 84,000	$ 63,000	$ 84,000	$ 651,000
		Electric Service upgrade		Low	$ 100,000	$ 20,000	$ 15,000	$ 20,000	$ 155,000
		New MCC and controls for fire flow pump		Low	$ 200,000	$ 40,000	$ 30,000	$ 40,000	$ 310,000
		Add 400 kW permanent generator		Low	$ 300,000	$ 60,000	$ 45,000	$ 60,000	$ 465,000
		400 Amp ATS		Low	$ 80,000	$ 16,000	$ 12,000	$ 16,000	$ 124,000
Booster Pump Station	Greencroft (B60, B61,	Add permanent generator 200 kW		Low	$ 300,000	$ 60,000	$ 45,000	$ 60,000	$ 465,000
		200 Amp ATS		Low	$ 100,000	$ 20,000	$ 15,000	$ 20,000	$ 155,000
Booster Pump Station	North Grand (B29, B41)	Demolition		Medium	$ 100,000	$ 20,000	$ 15,000	$ 20,000	$ 155,000
		Building (600 sq ft)		Medium	$ 480,000	$ 96,000	$ 72,000	$ 96,000	$ 744,000
		Pumps and motors (60 HP, 800 gpm)		Medium	$ 300,000	$ 60,000	$ 45,000	$ 60,000	$ 465,000
		Piping and valves		Medium	$ 300,000	$ 60,000	$ 45,000	$ 60,000	$ 465,000
		Upgrade 6-inch suction and discharge pipes to 10-inch	About 500 feet of pipe through easement	Medium	$ 375,000	$ 75,000	$ 56,250	$ 75,000	$ 581,250
		Electrical		Medium	$ 600,000	$ 120,000	$ 90,000	$ 120,000	$ 930,000
		150 kW permanent generator		Medium	$ 200,000	$ 40,000	$ 30,000	$ 40,000	$ 310,000
		Site improvements	Access and site paving	Medium	$ 120,000	$ 24,000	$ 18,000	$ 24,000	$ 186,000
			Total Booster Pump Station Improvement Costs		**$ 35,786,000**	**$ 7,157,200**	**$ 5,367,900**	**$ 7,157,200**	**$ 55,468,300**

**Includes preliminary design report / detailed hydraulic analysis / study*

Table 11-4
Miscellaneous Water Facility Improvement Recommendations

Facility Type	Facility Name	Recommendations	Recommendation Notes	Priority	Construction Cost Estimate for Improvements	Design & Administration Cost ($)	Construction Management Cost ($)	Contingency Cost ($)	Total Project Cost ($)
Miscellaneous	Zone 14	* Hydraulic Elevation Assessment Study	For future development on east side of Gordon Highlands	Low	$ 100,000	$ 20,000	$ 15,000	$ 20,000	$ 155,000
Miscellaneous	San Gabriel Yard	* Assess and Maintain Well 5 and Well 7 Easements for future use		Low	$ 50,000	$ 10,000	$ 7,500	$ 10,000	$ 77,500
Miscellaneous	San Gabriel Yard	* Surge Tank Evaluation	Evaluate size, location, and configuration	Low	$ 120,000	$ 24,000	$ 18,000	$ 24,000	$ 186,000
Miscellaneous	San Gabriel Yard	Add additional generator capacity (2mW)	Relocate existing generator to Sierra Madre	Medium-High	$ 2,000,000	$ 400,000	$ 300,000	$ 400,000	$ 3,100,000
Miscellaneous	San Gabriel Yard	Higher walls	About 600 feet	Medium-High	$ 120,000	$ 24,000	$ 18,000	$ 24,000	$ 186,000
Miscellaneous	San Gabriel Yard	Install camera system		Medium-High	$ 60,000	$ 12,000	$ 9,000	$ 12,000	$ 93,000
Miscellaneous	San Gabriel Yard	Chlorination system improvements	Chlorine Room - vault flood sensors Seismic upgrades, scrubber installation assessment, sump pump, connection to SCADA, chlorine well injection line design and replacement, and 2 pumps and skids	Medium-High	$ 350,000	$ 70,000	$ 52,500	$ 70,000	$ 542,500
Miscellaneous	Water Yard Facility	Additional and upgraded camera system for Water Yard Facility.		Medium	$ 200,000	$ 40,000	$ 30,000	$ 40,000	$ 310,000
Miscellaneous	Water Yard Facility	Warehouse replacement and potential relocation	New building, same size, relocated	Medium	$ 2,400,000	$ 480,000	$ 360,000	$ 480,000	$ 3,720,000
Miscellaneous	Water Yard Facility	* Parking improvements (covered parking)	Include study for all water yard improvements associated with creating more parking	Medium	$ 150,000	$ 30,000	$ 22,500	$ 30,000	$ 232,500
Miscellaneous	Water Yard Facility	NPDES/ spoils/ washout relocation	Need curbs, buffers, clarifiers to minimize impact to storm drain	Medium	$ 250,000	$ 50,000	$ 37,500	$ 50,000	$ 387,500
Miscellaneous	Water Yard Facility	Solid security fence installation around facility		Medium	$ 270,000	$ 54,000	$ 40,500	$ 54,000	$ 418,500
Miscellaneous	Water Yard Facility	* Standby generator for the Water Yard Facility.	Transfer generator from San Gabriel to Water Yard	Medium	$ 1,000,000	$ 200,000	$ 150,000	$ 200,000	$ 1,550,000
Miscellaneous	Water Yard Facility	Chemical Building Upgrades	Rectifier replacement, A/C circulation, replace chlorine feed line for analyzer and 3 pumps and skids	Medium	$ 240,000	$ 48,000	$ 36,000	$ 48,000	$ 372,000
Miscellaneous	Water System	* Comprehensive SCADA Upgrade Assessment		Low	$ 150,000	$ 30,000	$ 22,500	$ 30,000	$ 232,500
Miscellaneous	Water System	* Comprehensive Standby Power Assessment		Low	$ 150,000	$ 30,000	$ 22,500	$ 30,000	$ 232,500
Miscellaneous	Distribution System	* Comprehensive Valve Assessment	Assumes 3,250 valves, 90% under 16-inch, 10% 16-inch and larger	High	$ 331,500	$ 66,300	$ 49,725	$ 66,300	$ 513,825
Miscellaneous	Distribution System	Valve Replacement Program	Includes existing inoperable valves. Assumes 40 valves replaced in the next 5 years	High	$ 1,200,000	$ 240,000	$ 180,000	$ 240,000	$ 1,860,000
				Miscellaneous Improvement Costs	**$ 9,141,500**	**$ 1,828,300**	**$ 1,371,225**	**$ 1,828,300**	**$ 14,169,325**
				Grand Total	**$ 108,747,500**	**$ 21,749,500**	**$ 16,312,125**	**$ 21,749,500**	**$ 168,558,624**

**Includes preliminary design report / detailed hydraulic analysis / study*

SECTION 12
CAPITAL IMPROVEMENT PROGRAM

12-1 General

The Capital Improvement Program (CIP) consists of projects that will enhance the distribution system to meet the established criteria, properly maintain the system's assets, and replace the facilities that have reached the end of their useful lives. The goal of the CIP is to provide the City of Glendora with a long-range planning tool for implementing its water system improvements in an orderly manner and a basis for financing of these improvements. In order to accomplish this goal, it is necessary to estimate project costs of the recommended system improvements, establish a basis, and prioritize the projects.

It should be noted that some of the improvements recommended herein are conceptual in nature based on existing available information. Therefore, they should not be considered as absolute for final design. Further analysis and refinement will be necessary prior to commencing work on the final plans, specifications and estimates package for each project. Detailed preliminary design studies should be prepared to select the final design projects.

12-2 Project Cost Estimates

12-2.1 Pipeline Replacement Cost Estimates

Proposed pipe replacement project costs are planning level estimates based upon recent information provided by the City for similar projects and include contingencies for this planning level study. Specific alignments and refined cost estimates should be developed as part of the preliminary design phase for each recommended project.

The following construction costs were utilized for the Fire Flow Improvements (Table 9-6), Additional Hydraulic Improvements (Table 9-7) and the Pipe Replacement Program Projects (Table 10-6).

1. Pipeline replacement cost = $50 per diameter inch per foot of pipe. The replacement costs are based on pipeline replacement projects between Fiscal Year 2018-2019 and Fiscal Year 2020-2021.
2. Addition of a fire hydrant to an existing water main or reconnection of a fire hydrant lateral to an existing water main = $15,000
3. Valve replacement = $10,000

The total project costs include construction, contingency, design and administrative, and construction management and inspection costs. The individual cost components are calculated as follows:

1. Construction Cost = Unit Cost x Recommended Units
2. Design and Administrative Cost = 15% of the Construction Cost
3. Construction Management Cost = 15% of the Construction Cost
4. Contingency Cost = 20% of the Construction Cost
5. Total Project Cost = Construction Cost + Design and Administrative Cost + Construction Management Cost + Contingency Cost

   Total Project Cost = 1.5 x Construction Cost

Construction costs are expected to fluctuate as changes occur in the economy. These costs should therefore be reevaluated and updated annually based upon Engineering News Record (ENR) Index for the Los Angeles area (ENRLA), with the base ENRLA Index of 13,033.31 for February 2023

12-2.2 Facility Improvement Costs

The recommended facility improvement cost estimates (Table 11-3) are based upon recent project experience and include contingencies for this planning level study.

The total project costs include construction, contingency, design and administrative, and construction management and inspection costs. The individual cost components are calculated as follows:

1. Construction Cost = Unit Cost x Recommended Units
2. Design and Administrative Cost = 20% of the Construction Cost
3. Construction Management Cost = 15% of the Construction Cost
4. Contingency Cost = 20% of the Construction Cost
5. Total Project Cost = Construction Cost + Design and Administrative Cost + Construction Management Cost + Contingency Cost

   Total Project Cost = 1.55 x Construction Cost

The design cost is set at a higher percentage for facility improvements than it is for pipeline improvements. It is expected that facility improvements will require preliminary design studies and hydraulic analysis that will result in a higher design cost than the pipeline improvements.

Construction costs are expected to fluctuate as changes occur in the economy. These costs should therefore be reevaluated and updated annually based upon Engineering News Record (ENR) Index for the Los Angeles area (ENRLA), with the base ENRLA Index of 14,033.31 for February 2023.

12-3 Project Priorities

The primary consideration in establishing project priorities for the capital improvement program list must always be given to the health, safety and welfare of the public and the customers.

The fire flow improvement projects provided in Table 9-6 are listed in order of priority based on the degree of the fire deficiency identified in the hydraulic model analysis described in Section 9.

The pipe replacement program projects provided in Table 10-6 are listed in order of priority based on the risk assessment described in Section 10.

The facility improvements are provided in Tables 11-1 through 11-4 by facility site. The improvements are sorted by priority in Appendix 11-2.

Although recommended projects are assigned a priority based on the analysis conducted for this Master Plan study, the City should review the prioritization and adjust it annually to respond to changed conditions and to take advantage of concurrent construction, such as street paving projects or adjacent infrastructure work.

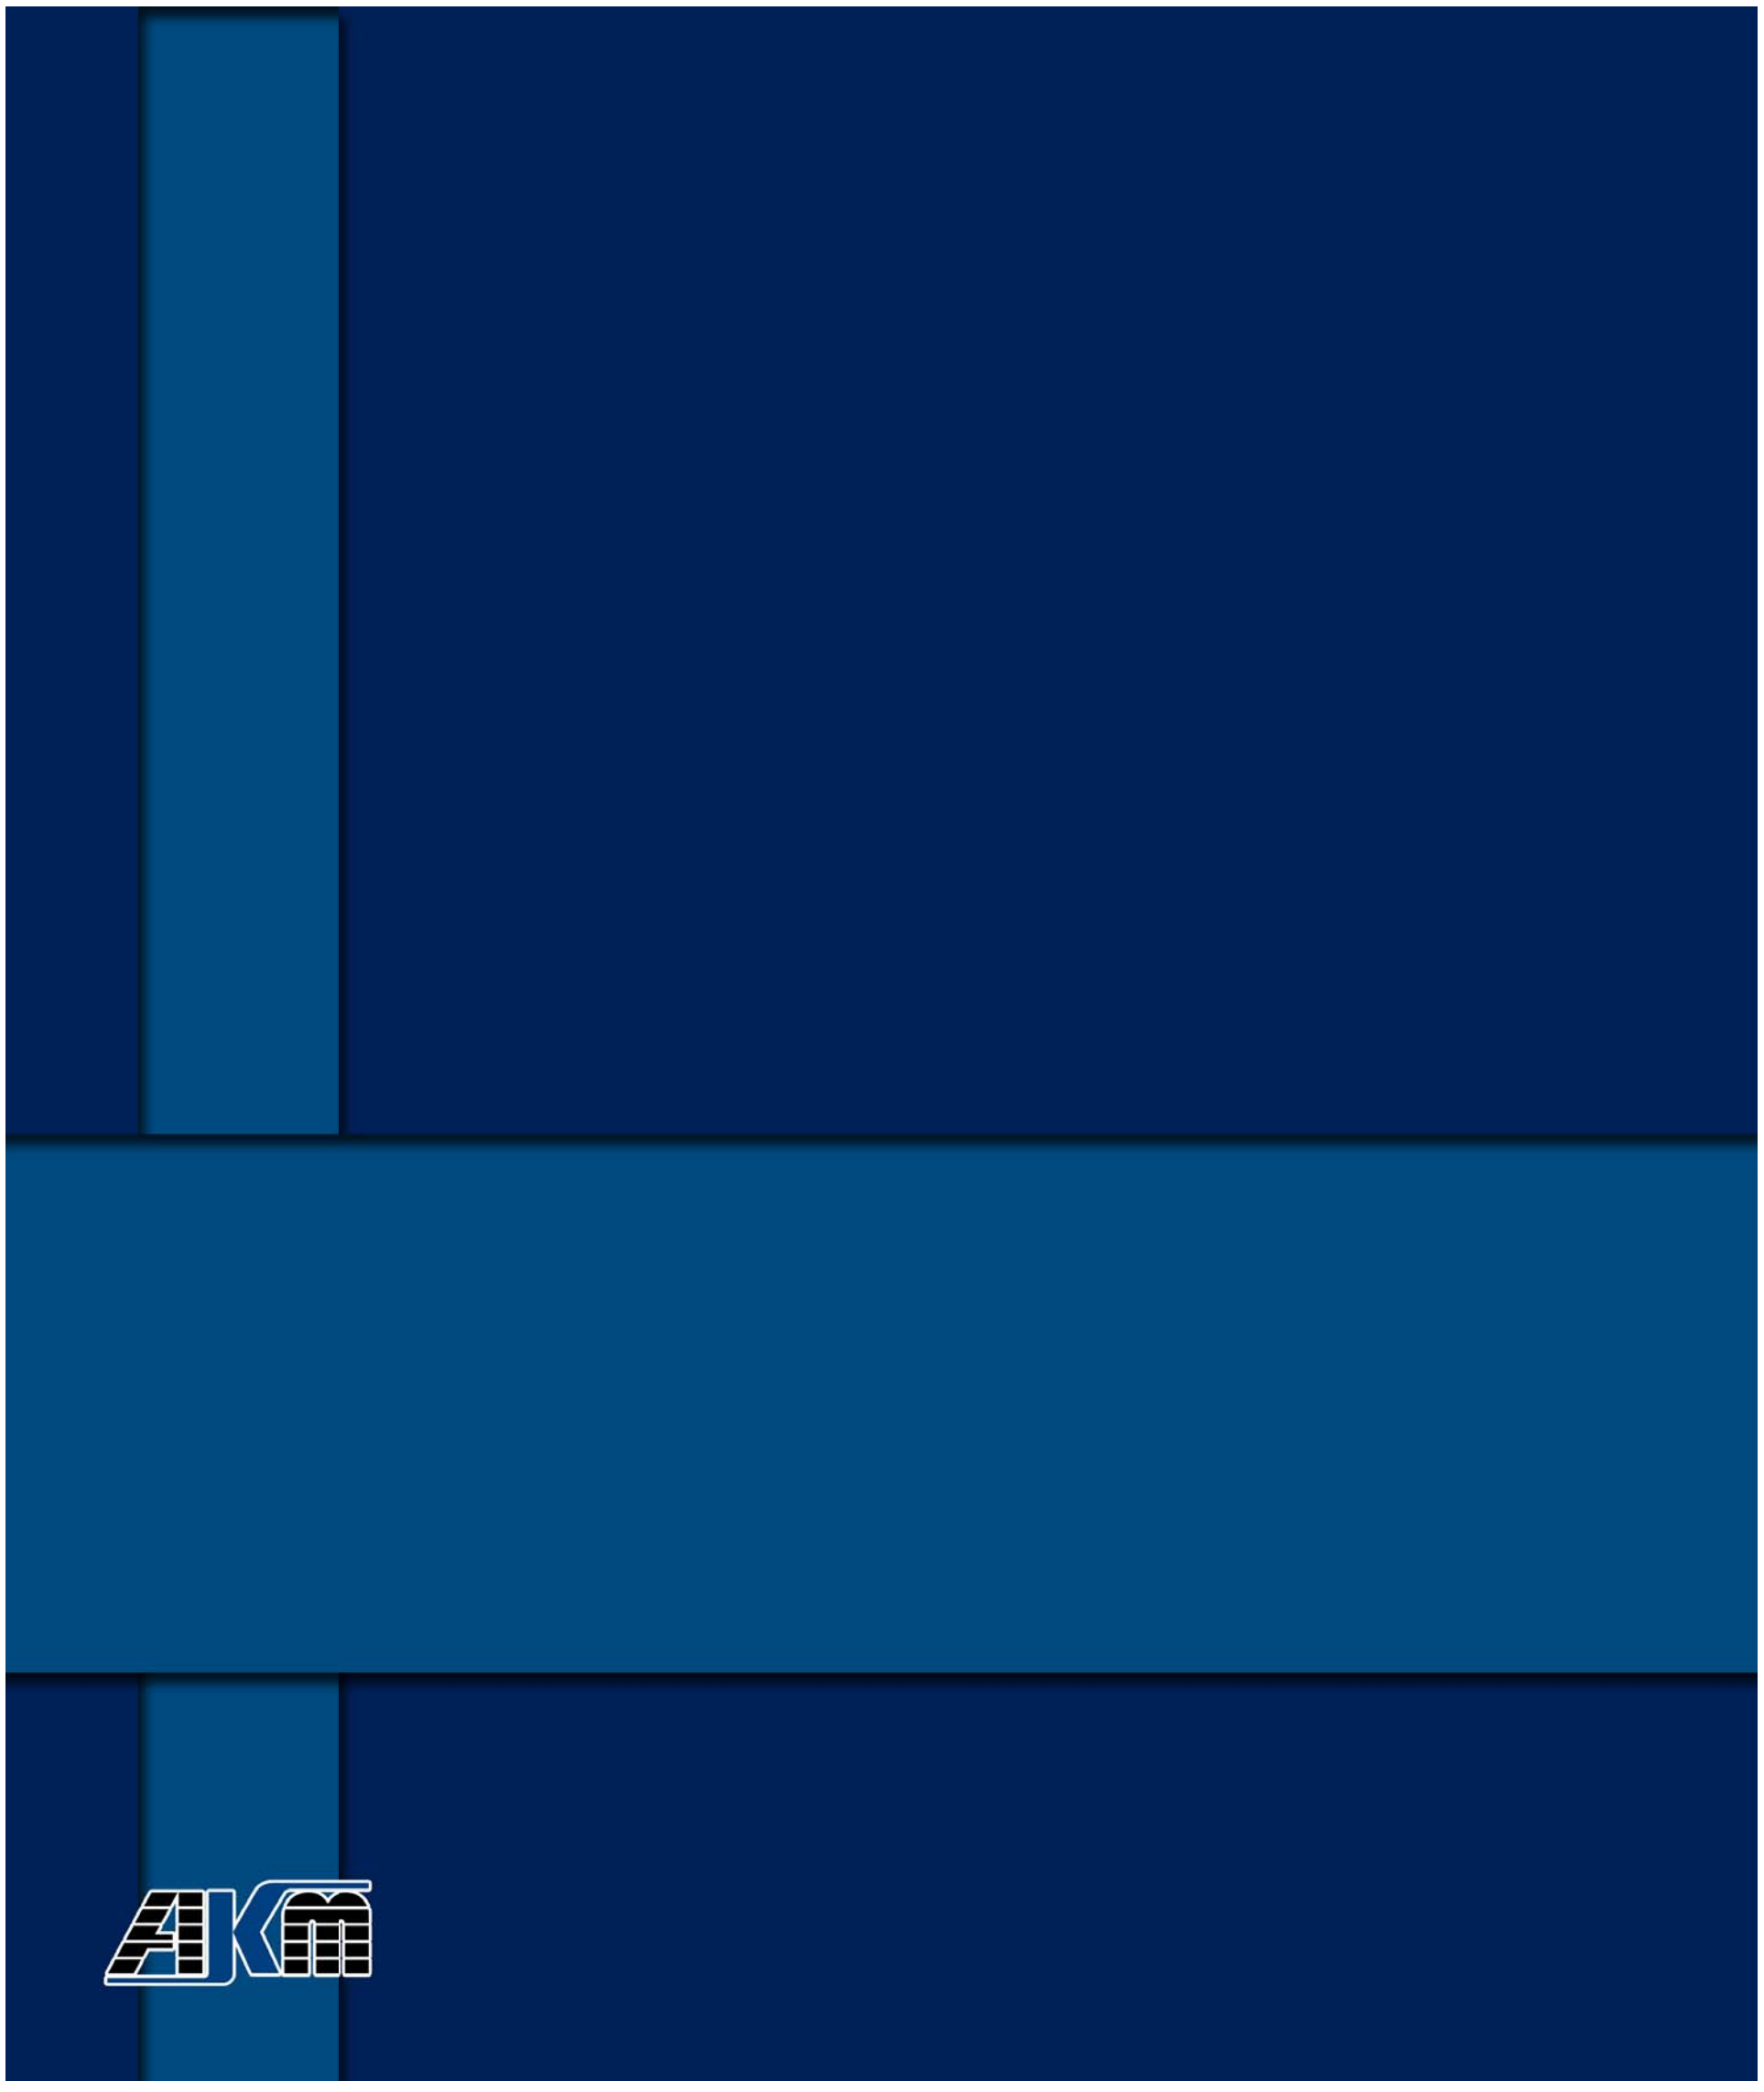
The recommendations and cost estimates are guidelines for the City to plan future projects and financing. Preliminary design and more detailed hydraulic studies may lead to changes in project definitions and costs as well as priorities.

12-4 Capital Improvement Program Summary

The total Capital Improvement Program costs are as follows:

Fire Flow Pipe Improvement Projects (Table 9-6)	$ 8,638,800
Additional Hydraulic Improvement Projects (Table 9-7)	$ 762,000
Pipe Replacement Program Costs – Priority 1 (Table 10-6)	$64,772,867
Pipe Replacement Program Costs – Priority 2 (Table 10-6)	$43,393,241
Pipe Replacement Program Costs – Priority 3 (Table 10-6)	$74,960,553
Well Improvement Costs (Table 11-1)	$35,003,650
Reservoir Improvement Costs (Table 11-2)	$52,757,349
Booster Pump Station Improvement Costs (Table 11-3)	$55,468,300
Miscellaneous Water Facility Improvement Costs (Table 11-4)	$14,169,624
Total CIP Cost	**$349,926,085**

12-5 Irwindale Facility



Possible redevelopment of Wells 3, 4, and 7 and upgrades to the Irwindale Facility are discussed in Section 3-4.1. Potential costs are provided in Tables 3-3 and 3-4. It is estimated that upgrades to the Irwindale Water Treatment Facility, including Well 3 and 4 would cost about $84 Million. If redevelopment and construction of Well 7 is included in the project, the cost would increase to about $127 Million. These costs were not included in the CIP as a study was underway at the time of the Master Plan and funding options were being considered.

12-6 Short Term Capital Improvement Projects

Many high priority projects have been identified through this Water Master Plan Update. It is going to take time for the City to address all the recommended projects. In the short term (next five years), the following projects are considered to be the highest priority and should be addressed by the City as soon as possible:

1. Tank Mixers
2. Reservoir Roof Railings
3. SAFT Climb Ladders for Reservoirs
4. Hatch Replacements or Additional Hatches for Reservoirs
5. Ventilation Improvements for Reservoirs
6. Overflow Outlet Structure at Hidden Springs E
7. Replace Security Fence at Morgan Ranch A
8. Comprehensive SCADA Upgrade Assessment
9. North Glendora Reservoir Replacement
10. Comprehensive Valve Assessment
11. Evaluation of Infiltration at Valley Center B21

12. Valve Replacement Program
13. Reconstruct Suction Line at Sierra Madre B
14. Site Improvements at Big Dalton A
15. Access Road Improvements at South Hills West A
16. Access Road Improvements at Glencoe B
17. Add Retaining Wall at Glencoe B
18. Remove Existing Boy Scout Pump Station and Reservoir
19. Construct Above Ground Tank with Mixer to Replace Boy Scout Reservoir
20. Add Chlorine Analyzer at Sierra Madre B
21. Remove/relocate IT Equipment from Roof at South Hills East A
22. Comprehensive Standby Power Assessment
23. Interior and Exterior Coating at Upper Gordon B
24. Interior and Exterior Coating at Upper Gordon A
25. Fire Flow Improvement Pipeline Projects, listed in order of priority in Table 9-6
26. Additional Hydraulic Improvements, listed in Table 9-7
27. Priority 1 Pipe Replacement Projects, listed in Table 10-6 and Appendix 10-1

STAFF REPORT

TO:	**Mayor and Council Members**	**DATE:**	**January 9, 2024**
FROM:	**Library**	**DISTRICT(S):**	**City-Wide**
SUBJECT:	**Discussion of Library Structural Assessment, Visioning, and Funding Options**		

RECOMMENDATION

That the City Council:

1. Discuss and provide direction to staff as needed regarding:
   a. Scope of Council's recommended project(s) related to Library building;
   b. Scope of Council's recommended associated project(s) at other facilities specified by Council;
   c. Production of any related architectural concept drawings as desired;
   d. Position on funding options for recommended project(s);
   e. Public polling data as needed; AND.
2. In support of directed activities, specify any needed parameters authorizing:
   a. City Manager, or his designee, to execute Professional Services Agreements; and,
   b. Appropriation of necessary funds.

STRATEGIC FOCUS AREAS

- Goal 1: Implement Strategic Economic Development (ISED)
- Goal 5: Improve and Maintain the City's Infrastructure and Facilities (IMCIF)
- Goal 4: Enhance and Modernize the Organization (EMO)
- Goal 2: Maintain Financial Stability and Sustainability (MFSS)

EXECUTIVE SUMMARY

The current Glendora Public Library building was funded and built in the environment of the early 1970s. Recent structural and programmatic analyses indicate that significant retrofitting/repairs and additional square footage are now needed. Different project costs, estimated to range from approximately $1 million to as high as $70 million, could overwhelm the City's current financial resources. As a result, the City could consider an alternative funding option to facilitate any proposed improvements – a bond issuance, a revenue measure, or a combination thereof.

LEGISLATIVE HISTORY / PREVIOUS ACTIONS

- 2021: City staff contracted with JMDiaz, Inc. to assess the feasibility of adding a shade structure to the Plaza. Based upon the findings of that preliminary evaluation, a more comprehensive evaluation of the Library was recommended.
- November 2021: City Council and Board of Library Trustees each received a briefing on structural anomalies that appear in the City's library building and discussed ways in which the City might address those structural anomalies.
- June 2022: City Council and Board of Library Trustees each received a privileged and confidential briefing regarding a possible threat to public services or facilities (not a threat posed by violence,

but a threat as defined by Government Code section §54957), questions were asked and answered, and no reportable action was taken.

- January 2023: City Council awarded a contract to Myers Houghton and Partners, Inc. (MHP) to perform in-depth structural analysis and evaluation of the Library's suitability for major renovations, including a potential second-story addition, initial visioning activities, and conceptual design for a second story addition.
- February 2023: City administration solicited proposals to conduct surveys on Library planning and revenue measure feasibility; estimated costs were included in the FY 2023/24 & 2024/25 Two-Year Budget process.
- May 2023: City Council again received a briefing involving a potential threat to public services or public facilities; and directed staff to combine slab work, electrical, HVAC, A/C, plumbing, and structural maintenance repairs with no other significant improvements in the amount of $8 million for round 2 of the California State Library's Building Forward Library Facilities Improvement Program.
- November 2023: At a special joint meeting, a privileged and confidential presentation was provided to City Council and the Board of Library Trustees. Direction was provided to staff to schedule a Special Meeting on Tuesday, December 5, 2023, with no further to reportable action.
- December 2023: At a Special Meeting, the Board of Library Trustees held a discussion of Library structural assessment, visioning, and funding options.

DISCUSSION

Current Library Building

- After a decade of various funding-measure activity, a new Library facility project gained momentum from 1967-1969.
- In 1970, a Joint Powers Authority (JPA) was created between the City and Glendora Unified School District, eventually resulting in the sale of $950,000 in Lease Revenue Bonds.
- Groundbreaking occurred in late 1970 and the building opened in 1972, anticipated to serve the City for 35 years.
- The 1970s pre-Proposition 13 environment allowed the City to adjust its own property taxes in the years that followed.
- Recent structural analyses of the 1972 building now indicate that significant retrofitting/repairs are needed, and events on the Plaza are currently limited to 500 people with equipment.

Library Building for Next 35-50 years

- Structural analysis also included Library stakeholder visioning sessions, led by architectural consultants.
- Programmatic assessment of the current building identified issues ranging from lack of visibility to inadequate HVAC, lighting, and usable space.
- Desirable Library building spaces and uses were identified and assigned square footage for a near-future structure, with the emphasis being on architectural solutions that would support timely and responsive layout changes moving forward.
- Conceptual models for adding approximately 20,000 more square feet to the existing structure were created, and construction cost estimates were in line with total project cost estimates provided to Council in May (total costs approximately $30 million to $45 million).
- Other options from repair to replacement are estimated at approximately $1 million to $70 million in total costs.

Political and Fiscal Environment

- Glendora was not selected for funding from California State Library's Building Forward Library Facilities Improvement Program.
- Glendora Unified School District study showed a "$140 million bond measure for GUSD is worthy of future planning and consideration."

- Options for funding a Library building project include citizen-initiated and City-initiated measures.
- Other options currently assessed to be too limiting, or to be more viable for adding value than full-project funding: new JPAs, private/public partnerships, and naming-rights sponsorships/donations.
- Surveys regarding public receptivity can be designed to ask about a single type of funding, or to compare different funding proposals; turnaround time is approximately 50 days.

Please refer to presentation materials for additional detail.

FISCAL IMPACT

There is no fiscal impact associated with the discussion itself. Should there be any resulting staff direction, recommendation is for Council to set parameters guiding any related appropriations or other funding measures. The largest fiscal impact would arise from any resulting capital projects, which could range from approximately $1 million to $70 million for a single facility. Depending on the direction provided by the City Council and the order of magnitude of the proposed improvements, they could overwhelm the City's current financial resources. As a result, the City could consider an alternative funding option to facilitate the proposed improvements – a bond issuance, a revenue measure, or a combination thereof.

OVERVIEW

- Current Library building
- Building to serve another 35 to 50 years
- Political and fiscal environment

CURRENT LIBRARY BUILDING

- Timeline of Building
- Political Partnerships and Disagreements
- Public Finance and Local Control

1955 – LIBRARY BOND BALLOT MEASURE

RESOLUTION NO. 1182

RESOLUTION OF THE CITY COUNCIL OF THE CITY OF GLENDORA, CALIFORNIA, STATING THE RESULT OF THE CANVASS OF ELECTION RETURNS OF THE SPECIAL BOND ELECTION HELD NOVEMBER 29, 1955.

BOND PROPOSITION: Shall the City of Glendora incur a bonded indebtedness in the principal amount of $185,000 for the purpose of the acquisition and construction by said city of a certain municipal improvement, to wit: a public library building together with landscaping and off-street parking facilities therefor and including the acquisition of all furniture, furnishings, equipment and other property necessary therefor?

Consolidated Voting Precinct	Yes	No	Total

1965 – POLICE BOND BALLOT MEASURE

RESOLUTION NO. 65-064

RESOLUTION OF THE CITY COUNCIL OF THE CITY OF GLENDORA, CALIFORNIA, DECLARING THE RESULT OF THE CANVASS OF ELECTION RETURNS OF SPECIAL BOND ELECTION HELD IN SAID CITY ON JUNE 8, 1965.

PUBLIC SAFETY BOND PROPOSITION: Shall the City of Glendora incur a bonded indebtedness in the principal amount of $790,000 for the purpose of the acquisition and construction by said city of the following municipal improvements (said improvements having been approved by the City Planning Commission on April 20, 1965 and by the City Council of said city on April 20, 1965, as constituting a City Plan), to wit: (a) a building to provide quarters for the police department and city jail, with vehicle parking therefor and the planting and landscaping of grounds, and the acquisition of furniture, furnishings, equipment and other property necessary therefor; and (b) additions to the fire fighting system of the city, including a fire headquarters station and one fire substation, and including the planting and landscaping of grounds and vehicle parking therefor, and including the acquisition of any real property, furniture, fixtures, apparatus, equipment and other property necessary therefor?

BACKGROUND

- 1967 and 1968
  - New library facility project gains momentum
  - Library expansion is a continual process
    - Reading Room
    - City Hall Space (1912)
    - City Hall Annex (1930)
    - City Hall Annex Expansion (1955)

BACKGROUND

- 1968 and 1969
  - Annexations, population growth, school impacts
  - Library space needs to be solved by a new building
  - City's new 1990 General Plan, anticipates:
    - Population growing from 30,000 to 80,000
    - Student enrollment growing from 9,175 to 25,350

1968 Letter From City to GUSD

A SUMMARY OF MAJOR BENEFITS PROJECTED TO BE AVAILABLE TO THE GLENDORA UNIFIED SCHOOL DISTRICT AS A RESULT OF ITS PARTICIPATION IN THE JOINT POWERS AGENCY WITH THE CITY OF GLENDORA FOR THE PURPOSES OF CONSTRUCTING A PUBLIC LIBRARY FACILITY

With the population increase, the information explosion and the dearth of funds available to schools at this time, an increasing number of school districts are being gradually forced to re-direct their students and teachers from their own school-operated, inadequately-equipped and stocked libraries to the cities' public library facilities for both basic and in-depth research materials. This development has been accepted as a permanent situation by many librarians and is considered a challenge that must be met and surmounted.

The aforementioned situation is especially valid in the Glendora Planning Area. 9,175 students presently attend the thirteen schools administered by the Glendora Unified School District. The Gruen Associates Glendora, California General Plan, 1990 projects a 1990 student population for the Planning Area of 25,350. A study made by the Glendora Planning Department indicates that 85% or 21,547 of these 25,350 students will be attending schools in the Glendora Unified School District.

BACKGROUND

- February 1969
  - City Council authorized City Manager to apply for library grant funds to build a new facility
  - City Council calls for a general obligation library bond measure should the funds be awarded ($785,000)

BACKGROUND

- September 1969
  - City Council updated on Library financing
  - City Council cancels election for library facility bonds, citing bond market uncertainty and uncertain tax law litigation (e.g. 2/3 vs 50 +1)
  - City Council hires a financial consultant and authorizes architect to continue work

BACKGROUND

- November/December 1969
  - State/Federal funding denied
  - City moves forward with “ultramodern” library design
    - 28,000 sqft, down from 33,000 sqft
    - Approximately $1.1 million including design, land acquisition, and furnishings
    - Anticipated to serve the City for 35 years

BACKGROUND

- Late 1969 through early 1970
  - Effort by a Mrs. Everett Cloutman, to require a vote to issue bonds to build a new library
    - Petition gathered 1,136 signatures, required 1,376 signature.
    - Supported by one Councilmember (Isensee)

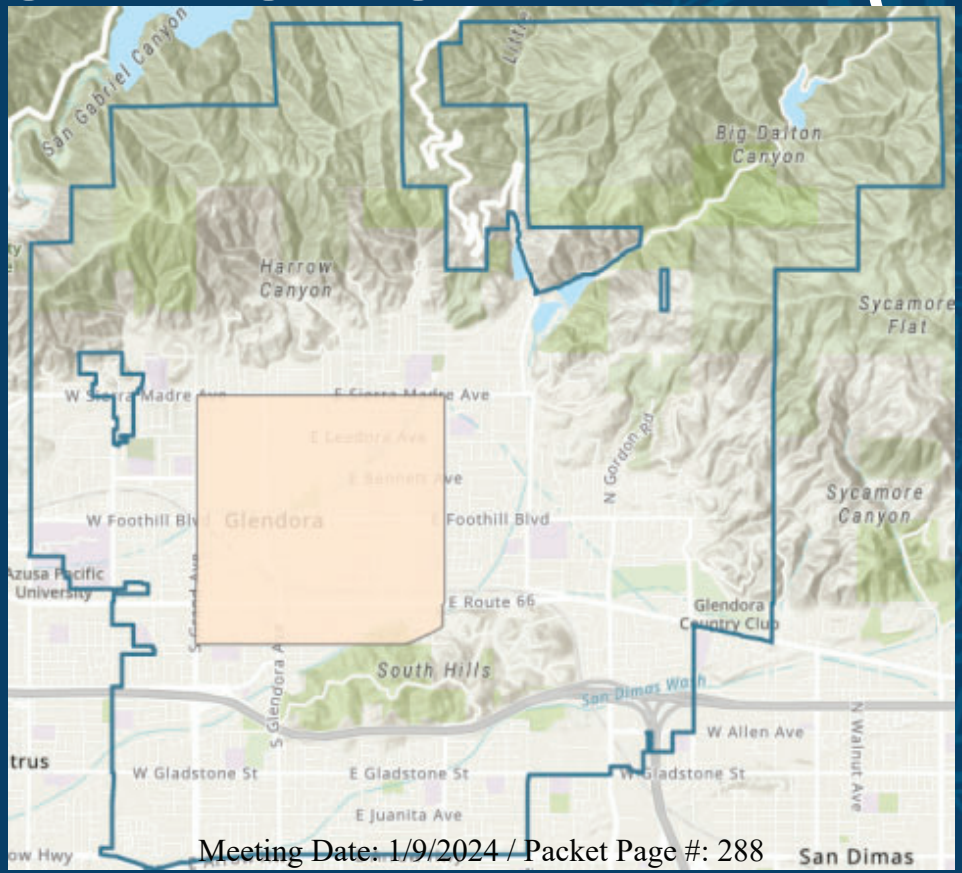
BACKGROUND

- July 1970
  - Creation of Glendora Library Authority
    - Joint Powers Authority between City and Glendora Unified School District
    - Ability to issue debt
    - Acknowledgement of growing school population

BACKGROUND

- October/November 1970
  - City Council approves “Glendora Library Ground Lease” and “Glendora Library Sublease”
    - Agreement with Glendora Library Authority
    - Term coincides with issuance of bonds
    - Payment is equivalent to debt service ($81,000/year)

BACKGROUND



- November 1970
  - Library Authority completes sale of $950,000 in Lease Revenue Bonds
    - Bank of America
    - Approximately 7% for 30 years
    - $81,000 annual debt service payment

BACKGROUND

- November 1970
  - Groundbreaking
- February 1972
  - Grand opening and dedication of Library

BUDGET AND CITY FINANCES

- February 1969 SGV Tribune article on library bond measure funding

Financed through a joint powers agreement between the city and school district, the library was a result of funds saved when the city's fire department merged with the county. The city's savings of $120,000 annually will go toward completing payments on the library.

  - "Yes" and "No" – Homeowners didn't see decreased costs

Subject: Recommended budget for the 1972-73 fiscal year

Cities all over the nation and especially in California are facing the greatest revenue-expenditure gap in history. All but about 10 million of America's 200 plus million people now live in urban areas and demand ever more costly urban services. Yet cities are expected and required to operate using antiquated and inadequate revenue producing sources. Nation wide, according to the National Leggue of Cities, city services cost about $12 billion more than they cost five years ago. Most of these increased costs are not controllable--like cost-of-living pay increases.

In Glendora, for example, police costs in 1967-68 were $424,736 excluding fringe benefits. The proposed budget recommends that $739,048 (based on 1971-72 salary rates) be spent for police services, an increase in five years of $314,312, or 74%. Yet property taxes to the City increased only $306,065, or 45% in the same period ($676,720 to an estimated $982,785).

What is needed, in my judgment, is a reordering of national and state priorities and a resturcturing of the revenue sources to provide adequate financial support for cities so that the 95 of every hundred Americans--city dwellers--can have the quality of life they want, deserve, and really are already paying for but in many cases not getting.

Fortunately the problem in Glendora, though critical, has not reached the conditions now existing in many cities. The quality of life in Glendora is high yet the level of City property taxes is low compared to our neighboring cities. Only Rosemead, Arcadia and El Monte of the 14 cities in our area have lower city tax rates than Glendora.

Comparison of 1971-72 Tax Rates -
Selected San Gabriel Valley Cities

Claremont	2.33 1.39
San Dimas	1.99
Monrovia	1.92
South Pasadena	1.86
Monterey Park	1.73
West Covina	1.72
Alhambra	1.60
Covina	1.49
Azusa	1.45
Glendora	1.38
Duarte (est.)	1.38
Arcadia	1.25
Rosemead	1.14
El Monte	1.10

(Average: $1.56, or 13% higher than Glendora)

PROP 9 (1968) AND PROP 13 (1978)

California Proposition 9 was on the ballot as an initiated constitutional amendment in California on November 5, 1968. It was **defeated**.

A **"yes"** vote supported decreasing the ad valorem tax on property so that the sum of the tax and ad valorem special assessments on the property does not exceed 1% of the market value of the property.

A **"no"** vote opposed decreasing the ad valorem tax on property so that the sum of the tax and ad valorem special assessments on the property does not exceed 1% of the market value of the property.

RESOLUTION NO. 68-072

A RESOLUTION OF THE COUNCIL OF THE CITY OF GLENDORA OPPOSING THE CALIFORNIA INITIATIVE AMENDMENT ON PROPERTY TAX LIMITATION ("WATSON AMENDMENT")

Election results

California Proposition 9		
Result	Votes	Percentage
Yes	2,146,010	31.95%
✖ **No**	**4,570,097**	**68.05%**

WHEREAS, it is the opinion of the Glendora City Council that the proposed amendment is an irresponsible approach to the problem of tax reform because, in part, it misleads the public into believing there will be a tax decrease when, in fact, a massive tax shift requiring a significant State tax increase will result; the State income tax would have to be tripled and the State sales tax quadrupled to cover the revenue deficit created by this measure; the bonding capacity of the City of Glendora would be limited so that no further bonds can be issued to finance future city construction on a pay as you go basis; and

PROP 9 (1968) AND PROP 13 (1978)

California Proposition 13 was on the ballot as an initiated constitutional amendment in California on June 6, 1978. It was **approved**.

A **"yes"** vote supported this constitutional amendment to:

* require that properties be taxed at no more than 1 percent of their full cash value shown on the 1975-1976 assessment rolls and limit annual increases of assessed (taxable) value to the inflation rate or 2 percent, whichever was less.
* upon the transfer of properties, allow them to be reassessed at one percent of their sale price and reset the limit on annual increases of assessed value.
* prohibit the state legislature from enacting new taxes on the value or sale of properties.
* require a two-thirds vote of the state legislature to increase non-property taxes.
* require local governments to refer special taxes to the ballot and require a two-thirds vote of electors.
* make the state government responsible for distributing property tax revenue among local governments.

A **"no"** vote opposed this constitutional amendment to require that properties be taxed at no more than 1 percent of their full cash value shown on the 1975-1976 assessment rolls and limit annual increases of assessed (taxable) value to the inflation rate or 2 percent, whichever was less, and make other changes to tax-related provisions of the California Constitution.

Election results

California Proposition 13

Result	Votes	Percentage
✔ **Yes**	**4,280,689**	64.79%
No	2,326,167	35.21%

CURRENT LIBRARY BUILDING

Structural Analysis

- Ongoing building-related issues
  - Structural deficiencies & water intrusion

CURRENT LIBRARY BUILDING

- 2021: Preliminary structural assessment completed by JMDiaz, Inc.
  - Visible cracking in beam system noted
- 2023: Myers Houghton and Partners, Inc. (MHP) contracted to perform in-depth structural analysis
  - Initial visioning activities
  - Conceptual design for second story addition

CURRENT LIBRARY BUILDING

- MHP structural analysis – Findings
  - Other than wall anchorage upgrades, seismic strengthening not warranted
  - Minor-to-moderate cracking throughout the library's main roof structure
  - Plaza waterproofing membrane may be compromised
  - Live load and soil bearing pressure concerns with some girders and pad footings

CURRENT LIBRARY BUILDING

- MHP structural analysis – Recommendations
  - Significant retrofitting/repairs needed
  - Bidwell Plaza
    - passive use okay
    - currently not being used for public assembly events of over 500 people with equipment
  - Waterproofing consultant should be retained

NEXT 35 - 50 YEARS

Programmatic visioning

- Part of MHP's second phase:
  - evaluation of the feasibility of vertical expansion of the building
  - working with Library stakeholders to identify the intended use of the expanded space

NEXT 35 - 50 YEARS

Programmatic visioning

- architectural consultant
- seven workshops
- MHP, Library, Board of Library Trustees, GPL Friends Foundation, City Manager' s office, and Public Works Department

NEXT 35 - 50 YEARS

Programmatic visioning

- Initial inputs
  - Library's current strategic framework
  - Projected population and per-capita square footage allocation
    - Expected 45,000 to 52,500 gross square feet
    - Currently about 30,000 square feet
  - Environmental scan

NEXT 35 - 50 YEARS

Programmatic visioning

- GPL proposed Library building spaces of the future
  - Customer-Driven Workspaces
  - Public Assembly Spaces
  - Library-Mediated Public Workspace
  - Fulfillment Center Services
  - Small Private / Semi-Private Spaces
  - Physical Content Showroom

NEXT 35 - 50 YEARS

Programmatic visioning

- GPL proposed Library building spaces of the future, continued
  - Leisure Spaces – Relaxation
  - Library Services
  - Additional Library Services and Capacity Including: Preservation/Archival storage, Public Access Technologies, Food Service, Event Catering
  - Flexible Future Space: Uncharted Possibilities
  - Infrastructure

NEXT 35 - 50 YEARS

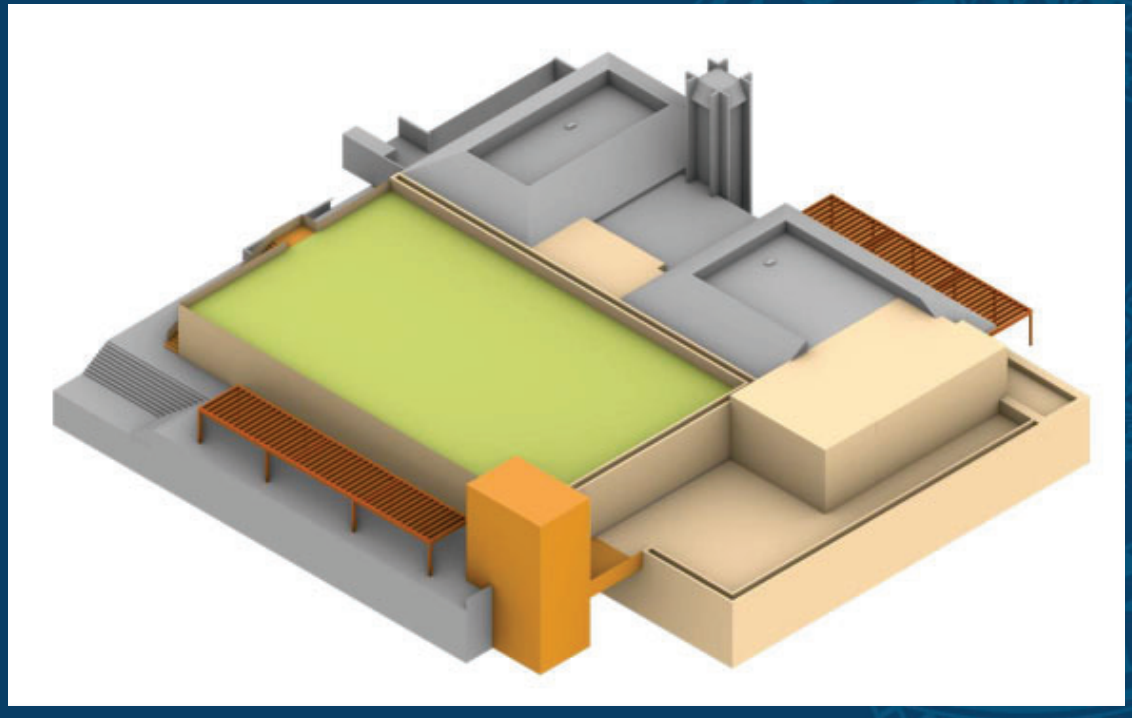
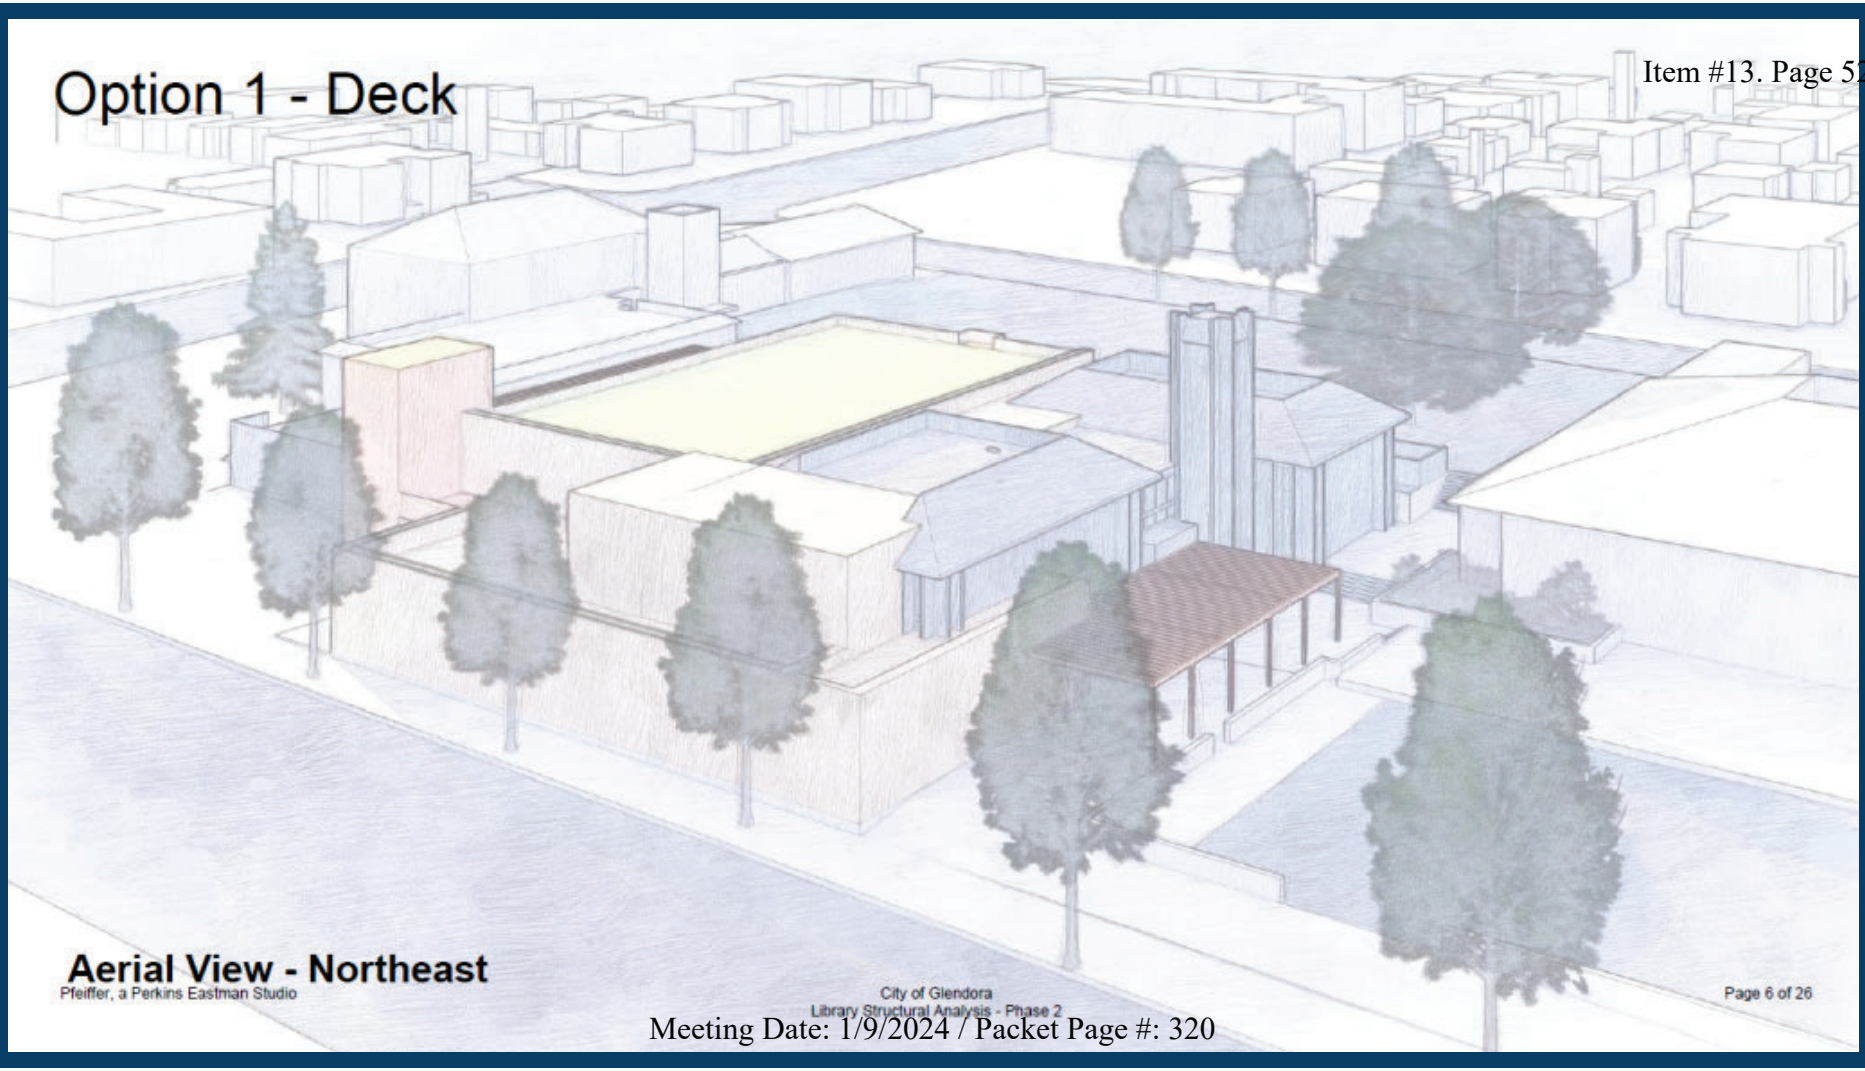
Programmatic visioning



- Roast of the current building
  - no visibility of the activities happening inside
  - entry process dark and non-intuitive
  - several areas where the existing environment fails to meet current codes
  - electrical connectivity in the building is inadequate
  - temperature control and ventilation pose challenges
  - water leaks have been a persistent issue since the library' s opening
  - lighting systems are outdated and require an upgrade
  - Library staff workplace is small, overcrowded, and lacks natural daylight
  - clear shortage of storage space

NEXT 35 - 50 YEARS



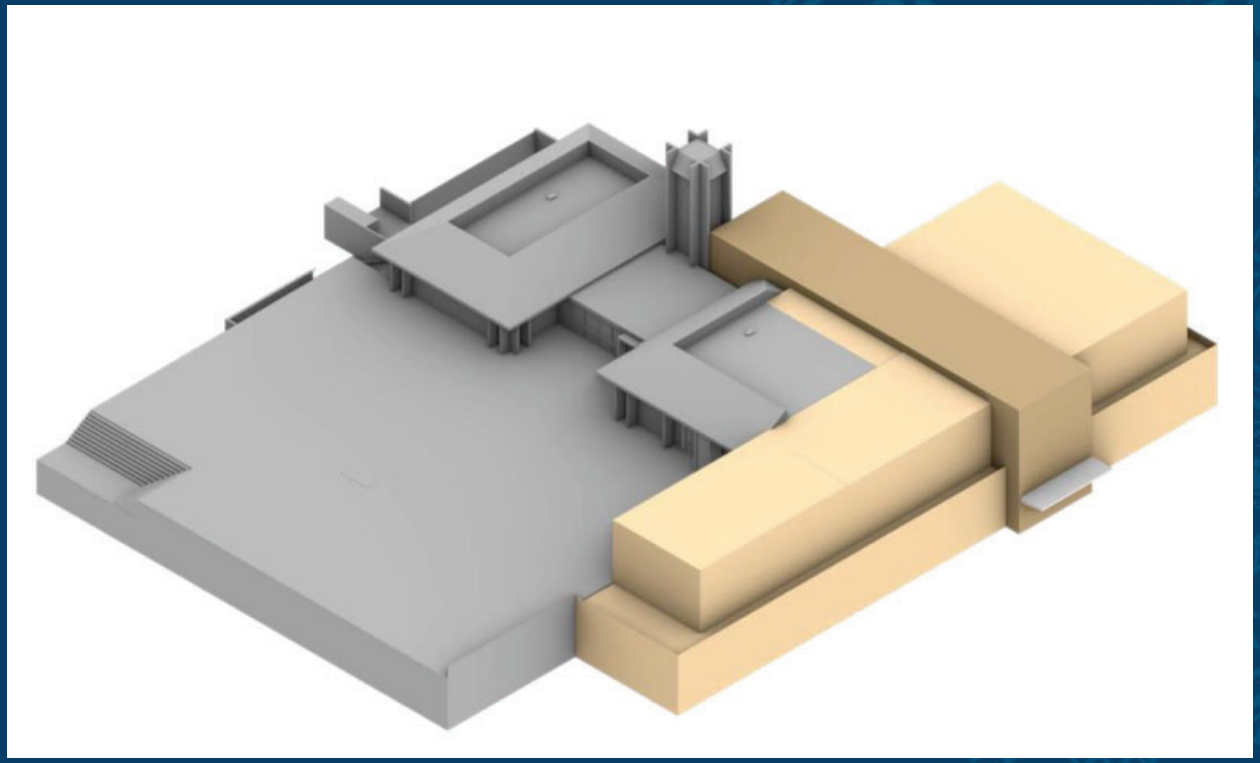
Programmatic visioning

- "The Deck" Concept
  - second story over the existing Plaza deck
  - 2-story addition on the Glendora Avenue side
  - $20.6M

NEXT 35 - 50 YEARS

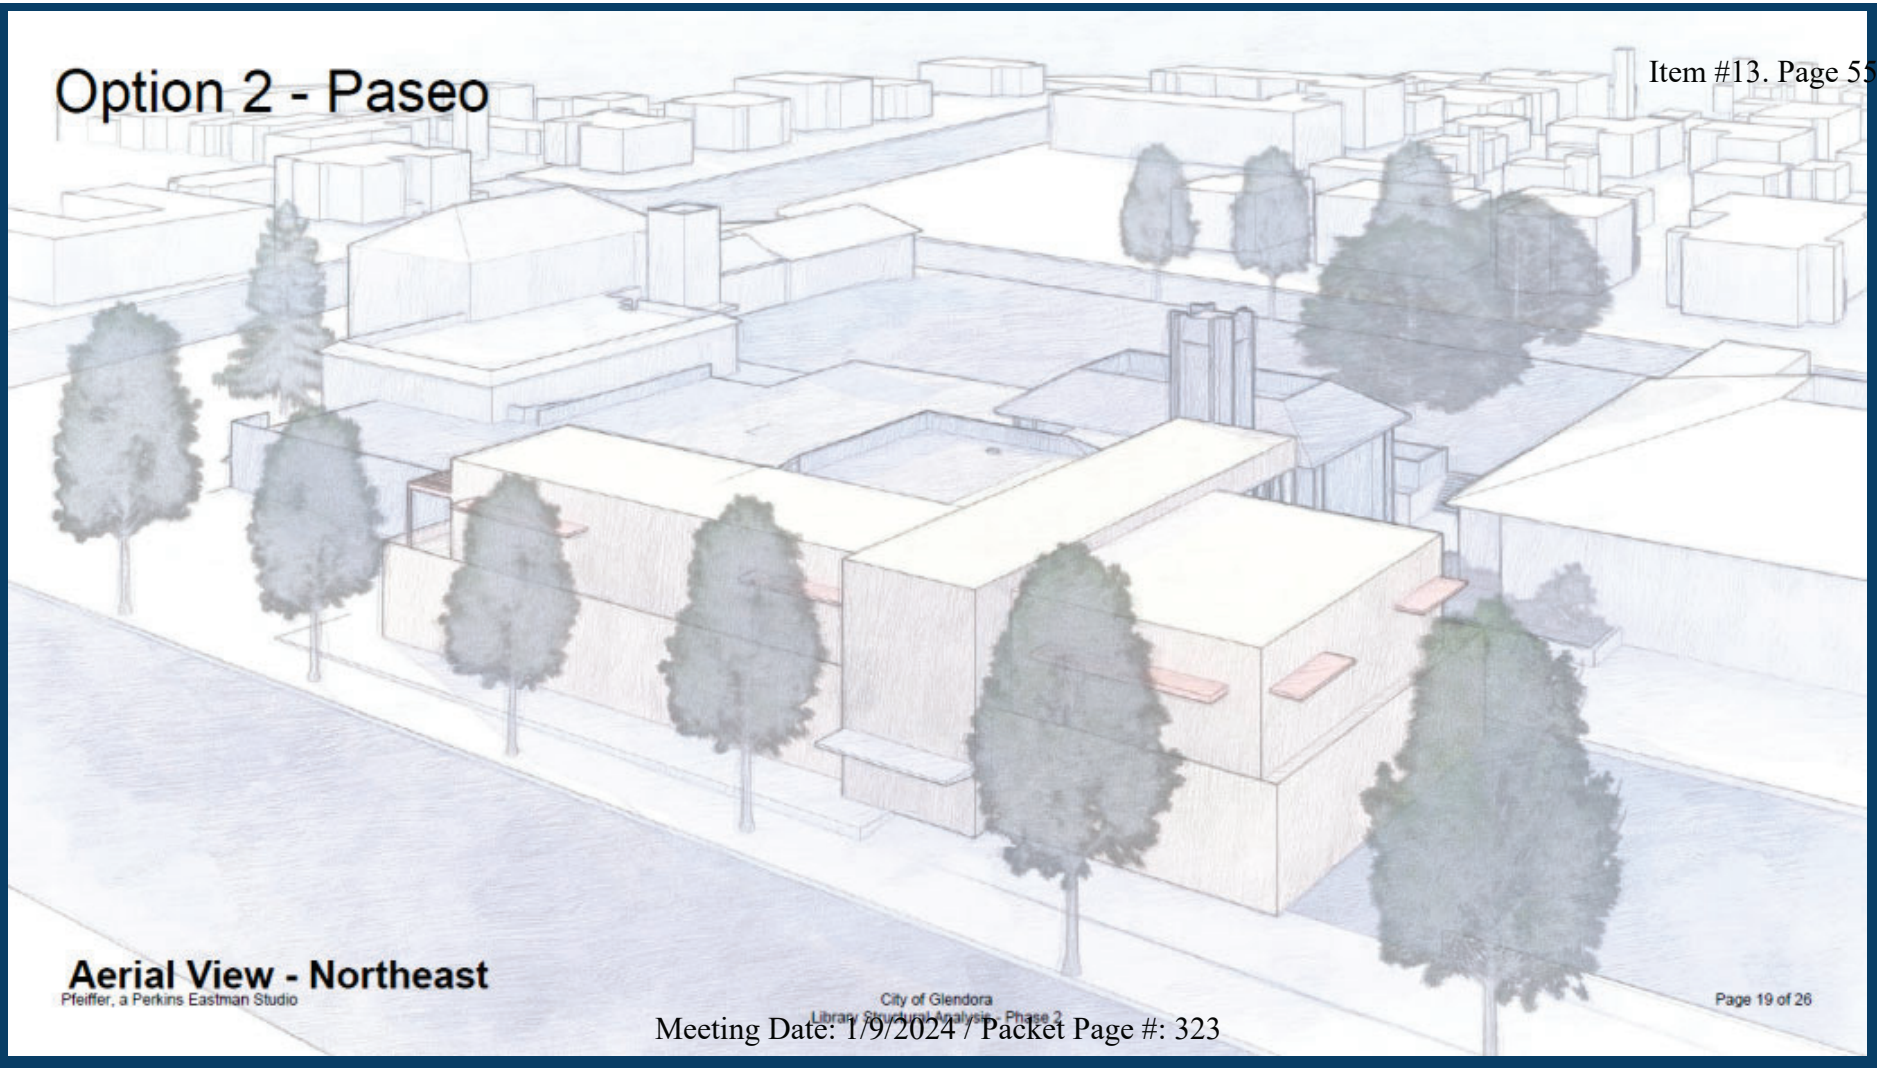
Option 1 - Deck

Aerial View - Northeast



Pfeiffer, a Perkins Eastman Studio

NEXT 35 - 50 YEARS



Programmatic visioning

- "The Paseo" Concept
  - Block A extends the library building towards Glendora Avenue
  - Block C is situated to the south and occupies a small portion of the existing library building and Police Station parking lot
  - The Paseo (Block B), is an architectural atrium-like space that captures abundant natural light during the day
  - $23.0M*

NEXT 35 - 50 YEARS

Option 2 - Paseo

Aerial View - Northeast

Pfeiffer, a Perkins Eastman Studio

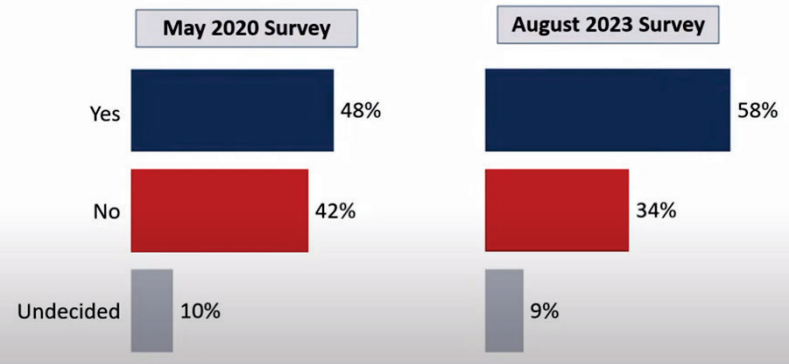
NEXT 35 - 50 YEARS

- Structural
- Infrastructure improvements
- Remodeling
- Modernization

NEXT 35 - 50 YEARS

Project Type	*Estimated Total Cost Range*
Current facility MEP renovation	$1.3M - $1.95M
Basic structural repairs of existing building (gravity load repairs to strength beams and repair cracks)	$2.9M - $4.35M
Weatherproofing Bidwell Plaza (topping slab & membrane replacement)	$900K - $1.35M
Combined basic critical maintenance repairs w/no other significant improvements	$5.1M – $7.65M
Known critical maintenance items & 2nd story expansion, but minimal other modernization or upgrades of existing facility.	$16.4M – $24.6M
Known critical maintenance items & comprehensive modernization and upgrades of existing facility, but no expansion.	$18.6M – $27.9M
Known critical maintenance items, comprehensive modernization and upgrades of existing facility, & expansion of 2nd story.	$29.9M – $44.9M
New Building or Replacement/Reconstruction	$35.8M - $71.6M+

POLITICAL & FISCAL ENVIRONMENT



Grant funding

- Building Forward Round Two
  - "not selected for funding at this time"
  - "wasn’t among the facilities with the highest poverty levels, as determined by the California Poverty Measure"

POLITICAL & FISCAL ENVIRONMENT

Glendora Unified School District – October 23, 2023

Nearly six-in-ten voters support a potential measure to provide funds for classroom repairs, upgrades and safety improvements for GUSD – up 10 points from May 2020.

FM3 Q. How would you vote on this measure: would you vote yes in favor of the measure or no to oppose it? **($140 million bond measure)**

Conclusions and Next Steps

- A $140 million bond measure for GUSD is worthy of future planning and consideration.
- Next steps include:
  - Now – June 2024: Develop and implement plan to communicate with voters to educate about the District's needs and goals
  - March – June 2024: Finalize project list, tax rate statement and resolution for balloting materials
  - May 2024: Follow-up survey to get up-to-date information on community attitudes before placement
  - June 2024: Board decision on bond measure placement (*Deadline is August 8, 2024)*
  - August 2024 – November 5, 2024: District provides information about the contents of the measure; outside campaign

FM3 RESEARCH

POLITICAL & FISCAL ENVIRONMENT

Funding options and watch-list items

- Citizen-initiated
- City-initiated
- Approval requirements
- Other considerations

POLITICAL & FISCAL ENVIRONMENT

- Citizen-initiated funding
  - legal precedent for this:
    - group of citizens proposing
    - special property tax
    - by initiative
  - majority vote
  - would take about a year (signature gathering period is six months)
  - Watch list: Taxpayer Protection and Government Accountability Act ("Taxpayer Act")

POLITICAL & FISCAL ENVIRONMENT

- City-initiated funding
  - could be at a special or general election
  - approval requirements follow
  - watch list: ACA 1 (Constitutional Amendment)

POLITICAL & FISCAL ENVIRONMENT

Local Level	Governing Body Approval	Voter Approval
City or county "general" taxes (revenues used for unrestricted purposes)	If consolidated with a regularly scheduled election of members of the legislative body: • 2/3 for transactions & use taxes • Other taxes: 2/3 for general law cities; majority for charter cities. If not consolidated, unanimous declaration of "emergency" required.	Majority

CaliforniaCityFinance.com Source: Adapted from CALFACTS, Legislative Analyst's Office

POLITICAL & FISCAL ENVIRONMENT

Local Level	Governing Body Approval	Voter Approval
City or county "special" taxes (revenues used for specific purposes)	Majority (2/3 for transactions & use taxes)	2/3
All school or special district taxes	Majority	2/3
General obligation bonds	Majority	2/3[b]
Other debt	Majority	None

CaliforniaCityFinance.com Source: Adapted from CALFACTS, Legislative Analyst's Office

POLITICAL & FISCAL ENVIRONMENT

Local Level	Governing Body Approval	Voter Approval
Property assessments	Majority	Majority of affected property owners. Votes weighted by assessment liability
Property—related fees	Majority	2/3 of voters or majority of affected property owners[c]
Fees—all other	Majority	None

CaliforniaCityFinance.com Source: Adapted from CALFACTS, Legislative Analyst's Office

POLITICAL & FISCAL ENVIRONMENT

- Other funding
  - Joint Powers Authority (JPA) (e.g., with a school district)
    - unlikely that a library would fit within the definition
  - Private/public partnership
    - Burbank exploring, to supplement State grant funds
  - Adding value
    - Smaller naming-rights sponsorships/donations for building features

POLITICAL & FISCAL ENVIRONMENT

Potential timelines

- Survey
  - ~50 days
- Citizen-proposed
  - Recommended if Nov. 2024 election: Notice of Intention by Dec. 22, 2023
- City-proposed
  - For Nov. 2024 election: Last day for City Council to call election and transmit resolution is Aug. 9, 2024

RECOMMENDATIONS

That the City Council:

1. Discuss and provide direction to staff as needed regarding:
    a. Scope of Council's recommended project(s) related to Library building;
    b. Scope of Council's recommended associated project(s) at other facilities specified by Council;
    c. Production of any related architectural concept drawings as desired;
    d. Position on funding options for recommended project(s);
    e. Public polling data as needed; AND,
2. In support of directed activities, specify any needed parameters authorizing:
    a. City Manager, or his designee, to execute Professional Services Agreements; and,
    b. Finance Director to appropriate necessary funds.

STAFF REPORT

TO: MAYOR AND COUNCIL MEMBERS
PRESIDENT AND BOARD MEMBERS

DATE: JANUARY 30, 2024

FROM: CITY MANAGER'S OFFICE

DISTRICT(S): NOT APPLICABLE

SUBJECT: CONSIDERATION OF A MASTER JOINT USE AGREEMENTS BETWEEN THE CITY AND GLENDORA UNIFIED SCHOOL DISTRICT

RECOMMENDATION

That the City Council and the Glendora Unified School District Board of Education:

1. Approve the Master Joint Use Agreement between the City and Glendora Unified School District;
2. Authorize the City Manager and Superintendent to execute the Master Joint Use Agreement including making minor non-substantive changes; and
3. Direct staff to work to implement the Master Joint Use Agreement effective July 1, 2024.

CITY OF GLENDORA STRATEGIC FOCUS AREAS

- Goal 4: Enhance and Modernize the Organization (EMO)
  - Objective 4 – Develop and approve an updated Glendora Unified School District memorandum of understanding.

EXECUTIVE SUMMARY

The City and Glendora Unified School District (District) have entered into several agreements over the decades. These agreements have served to expand the relationship between both agencies to the benefit of the community. The purpose of the Master Joint Use Agreement is twofold. It is intended to reaffirm the longstanding collaboration and partnership between the City and District by incorporating all other agreements. And, it streamlines and clarifies City and District responsibilities related to the scheduling and coordination of sports fields and facilities, cost sharing of maintenance obligations, cost sharing of capital improvements, the implementation of a common fee for the use of sports fields and facilities, crossing guard services, and the cost of the school resource officer program, including additional as needed public safety services.

LEGISLATIVE HISTORY / PREVIOUS ACTIONS

In 1962, the City and District entered into an agreement "for the purpose of sponsoring and promoting community recreation programs and activities." To this end, it facilitated broad access to District buildings, grounds, playfields, as well as the swimming pool. The City was granted the authority to develop and improve areas with District approval. Admissions or user fees could be assessed by the City for use of District facilities.

In 1970, the City and District worked to establish the Glendora Library Authority (GLA). This was a joint venture to construct a new public library. The GLA was empowered with the authority to acquire, construct, maintain, operate, and lease public library buildings and related facilities, including through the issuance of debt. In short order, the City entered into a ground lease with the GLA. The GLA subsequently issued revenue bonds totaling $950,000 for construction of the facility. The GLA then entered into a sublease with the City for which the City paid rent to the GLA to offset the debt issued by the GLA. The result of this joint venture is the existing City library facility.

In 2001, the City and District jointly worked towards the development of the Aquatics Center. The City contributed $500,000 to the project, and the pool would be made available for City related recreation activities for 1,760 hours annually. The City agreed to reimburse the District maintenance costs in a manner proportionate to the normal and ongoing costs of operating the pool, while also agreeing to proportionally share the costs for capital related improvements.

In 2001, the City and District entered into an agreement to work for the development of the Multi-Purpose Events Center (Center). This facility was developed to further support the District's educational purposes, and youth and community groups. While the District was responsible for scheduling all uses at the facility, the Center was to be made available to the community no less than 20 hours per week. All costs related to the operation of the Center would be borne by the sponsoring group.

In 2006, the City and District entered into an agreement to establish the School Resource Officer Program. The City agreed to provide the services of one sworn officer to serve as the School Resource Officer and be on campus when Glendora High School was in session. Other ancillary duties – daytime curfew enforcement, youth-related crime, outreach efforts, and the like – were also outlined. The District is responsible for reimbursing the City 50% of the actual cost (as defined) incurred during an 11-month period each year.

In 2011, the City entered into an agreement with All City Management Services for the provision of crossing guard services. Of the 14 locations where crossing guards would operate, 12 are for District locations (the remaining two locations serve the Charter Oak Unified School District). The District is responsible for reimbursing the City 50% of the cost to provide crossing guard services for half of the locations serving the District.

In 2013, the City and District attempted to comprehensively update and merge all previous agreements into a single document. Additionally, it outlined specific maintenance provisions for certain sports fields and facilities, including George Manooshian Park and Sandburg Middle School Park. The agreement was not completed.

In 2013, the City entered into an agreement with American Little League that authorized the non-exclusive use of designated sports fields in exchange for undertaking certain specific responsibilities, which included the installation, maintenance, and repair of all fencing; field maintenance (weeding, planting, maintaining, mowing of turf); watering; lining and marking of fields; and other general maintenance activities. The agreement was in place for a five year period, with options for renewals; the agreement was not renewed in 2018.

In 2019, the City and District entered into an agreement for the provision of professional library services. The scope of this limited agreement enabled City library staff to advise the District on the selection and ordering of library books, consult regarding school library services and activities, and participate in meetings.

On November 3, 2022, a Joint City Council – Board of Education Meeting was held to discuss the historical relationship between the City and District. The City Council and Board of Education reviewed and discussed a new framework of an agreement that would supersede and replace all previous agreements, and lay the groundwork for continued collaboration to benefit the Glendora community. Staff was directed to prepare a draft document for future consideration.

DISCUSSION

The purpose of the Master Joint Use Agreement (Agreement) is twofold. It is intended to reaffirm the longstanding collaboration and partnership between the City and District by incorporating all other agreements currently in effect between the City and District that include the mutual use of sports fields and facilities, school resource officer program, crossing guard program, and library. Notwithstanding, all other agreements are superseded and replaced by the terms and conditions outlined in the proposed

Agreement. This proposed Agreement further defines City and District responsibilities related to the scheduling and coordination of sports fields and facilities, cost sharing of maintenance obligations, cost sharing of capital improvements, the development of a common fee for use of the sports fields and facilities, and the cost for the school resource officer program, including additional as needed public safety services.

The terms for each of the components of the proposed Agreement are detailed in the attachments to the Agreement. A summary of the terms is provided below:

- General Provisions
  - Capital Projects – The City and District commit to working collaboratively to identify ways in which to fund necessary capital projects for the sports fields and facilities identified in the Agreement. Payment arrangements will be handled on a project-by-project basis.
  - Priority of Use – The District shall have exclusive use and control of sports fields and facilities. The City shall have the next priority of use, in scheduling City-affiliated athletic activities.
  - Governance – The City and District will meet on a quarterly basis to review revenues and expenditures for all costs related to the implementation of this Agreement. The City will assume responsibility for the preparation of all invoicing.
  - Common Fee for Sports Fields and Facility Use – The City and District will develop and implement a common fee or set of fees that local non-profit sports leagues will be required to pay to help offset ongoing maintenance costs, including water and electricity. The common fee will be based on a comparative analysis of the field and facility costs in other nearby jurisdictions. The City and District may consider individual agreements with local non-profit sports leagues, in lieu of the common fee, to facilitate mutually agreed improvements and/or ongoing maintenance.
  - Indemnification – The City and District will mutually indemnify each other. However, the City and District will each assume liability for its own activities when in use of the sports fields and facilities.
  - Periodic Review – The Agreement shall be in effect for a two-year pilot period, with the option to renew every three years thereafter.

- Sports Fields and Facilities
  - Coordinating Responsibility – The City will assume coordinating responsibility of the use of District sports fields and facilities included in the Agreement as it relates to the local non-profit sports leagues and City-affiliated athletic activities.
  - Aquatics Center – The District retains coordinating responsibility for the Aquatics Center. The City will contribute to the maintenance (as defined) of the Aquatics Center in a manner proportional to its use.
  - Other Facilities or Sports Fields – The City and District will work to schedule and facilitate facility use on an as needed basis, based on availability, and be determined on a case by case basis.
  - Maintenance – The City will contribute to the maintenance costs (as defined) of sports fields and facilities used to accommodate local non-profit sports leagues and City-affiliated athletic activities in a manner proportional to its use. The City will install meters to track water use on all fields when in use by the local non-profit sports leagues and City-affiliated athletic activities. The District will install meters to track electricity use on all fields used by the local sports leagues. To fully understand the actual costs related to the maintenance of the sports fields, the City, as part of the two-year pilot program, will assume complete responsibility for the landscaping maintenance of all sports fields, and will work with the District to coordinate maintenance activities.
  - Sandburg and Goddard Middle School North Field Areas – the north field areas of each campus will become accessible to the public beginning at 4 p.m. on school days and act as a public park, unless otherwise used with priority by the District. These areas will remain closed to public access until such time.
  - Tennis Courts – the tennis courts at Goddard Middle School will be open for public use from dawn to dusk, unless otherwise used with priority by the District. The tennis courts at Glendora

High School will become accessible to the public at 5 p.m. on school days, unless otherwise used with priority by the District.

- School Resource Officer Program
  - Officers – The City agrees to provide the services of 1.6 full-time equivalent sworn police officers to serve as the School Resource Officers (SRO) for the District. The allocation of staffing resources for this program will be determined based on the operational needs of the Glendora Police Department (GPD). The City shall supervise the activities of the SROs through the command structure of the GPD.
  - Reimbursement of Costs – The District agrees to reimburse the City 50% of the actual cost (as defined) incurred by the City in employing the SRO during a ten-month period each fiscal year. The District will increase its reimbursement of actual costs to 75% over the next five years, by five percent annually (as outlined in the agreement).
  - Additional Police Services – The District will submit a Request for Special Services to the GPD if additional police services are needed to support any single District activity or event beyond normal SRO duties. The District will reimburse the City the actual cost of such request as is outlined in the Request for Special Police Services Application.
  - If the District wishes to increase the number of FTEs for the SRO Program, the District will be responsible for all costs associated with the officers and necessary equipment, both one-time and ongoing. Any request to increase the number of FTEs for the SRO Program will require a minimum five-year commitment of ongoing financial support from the District.

- Crossing Guard Program
  - Locations – identifies 13 locations where crossing guard services are currently for the District.
  - Reimbursement of Costs – The City and District will share the total costs for the crossing guard program equally.

- Library Services
  - Services Provided – the City will provide certain professional library services related to the operation of the District's school library services (as defined).
  - Reimbursement of Costs – The District shall reimburse the City by the hour for services provided based on the fully burdened compensation rate for a Senior Librarian. The total not to exceed amount is three hours per quarter, unless there is prior written authorization from the Superintendent to the Library Director.

Following City Council and Board of Education consideration of the proposed Agreement, City and District staff will begin the work to implement the common fee for sports fields and facility use. This work will include a review of similar type fees currently being implemented in the surrounding region. Local sports leagues will also be engaged as part of this process. Staff will return to the City Council and Board of Education for final approval of the fee before it is assessed.

FISCAL IMPACT

The fiscal impact of the proposed Agreement is not fully known at this time. Unlike the various issue-specific agreements previously entered into, this Agreement would establish a new governance structure whereby the City would assume responsibility for tracking all revenues and expenditures related to the terms of this agreement, and would prepare the resulting invoice. Should the reconciliation of revenues and expenditures result in a balance owed to the City, the City would issue an invoice to the District. Mutually agreed to capital related costs would not be included in this invoice.

ENVIRONMENTAL DETERMINATION

There is no environmental impact associated with this report.

MASTER JOINT USE AGREEMENT

THIS MASTER JOINT USE AGREEMENT ("Agreement"), is made and entered into this day of_____, 2024 (the "Effective Date"), by and between the GLENDORA UNIFIED SCHOOL DISTRICT, hereinafter referred to as "District," and the CITY OF GLENDORA, hereinafter referred to as "City"; and each of the City and District are hereinafter referred to individually as a "Party" and/or both collectively as the "Parties."

RECITALS

A. WHEREAS, the Parties have entered into this Agreement to update and combine previous agreements between the Parties detailing the terms of use for fields and facilities, the school resource officer program, crossing guard services program, and library services. The Parties have determined that this Agreement is in the interest and welfare of the community of the City of Glendora;

B. WHEREAS, the District and the City each own facilities, the use of which can be shared by each Party and the community. Each Party has selected specific locations to be identified as joint use fields and facilities;

C. WHEREAS, the Parties intend, by this Agreement, to establish the terms and conditions for capital improvements, maintenance, and uses of selected fields and facilities by the Parties or the community;

D. WHEREAS, the Parties agree that coordinated and cooperative scheduling of selected fields and facilities is the best way to maximize benefits to the community as a whole, while ensuring that they are maintained as sustainable community assets;

E. WHEREAS, the Parties agree that ensuring the safety of all students and personnel at every District educational facility is of great importance to the community;

F. WHEREAS, as the District does not maintain a school law enforcement agency pursuant to Section 39670(b) of the California Education Code, and as such, the District has requested the services of a School Resources Officer from the City;

G. WHEREAS, the City, through the Glendora Police Department, is ready and willing to provide the services of sworn peace officers to serve as School Resource Officers;

H. WHEREAS, the City administers a crossing guard services program, through a contract with a vendor to ensure safe crossing for all schools within the City, including 13 locations for the 2023-2024 school year near and adjacent to District campuses, which will be reviewed annually to identify needs;

I. WHEREAS, the City and District have a longstanding history of collaboration and partnership and this Agreement is intended to further that relationship;

J. WHEREAS, this Agreement supersedes and replaces all other agreements currently in

effect between the Parties related to the use, maintenance, and capital improvements of the City and District with respect to the Facilities and Services (as defined below); and

K. NOW THEREFORE, in consideration of the mutual promises contained herein, the City and the District do agree as follows:

TERMS AND CONDITIONS

1. GENERAL PURPOSE

The purpose of this Agreement is twofold. It is intended to reaffirm the longstanding collaboration and partnership between the City and District by incorporating all other agreements currently in effect between the City and District that include the mutual use of sports fields and facilities, school resource officer program, crossing guard program, and library services (collectively, the "Facilities and Services"). As such all other agreements between the Parties with respect to the Facilities and Services are hereby superseded and replaced by the terms and conditions outlined herein. This Agreement further defines the City's and District's responsibilities related to the scheduling and coordination of sports fields and facilities, cost sharing of maintenance obligations, cost sharing of capital improvements, the development of a common fee for use of the sports fields and facilities, and cost for the school resource officer program, including related as needed public safety services.

The terms for each of the elements of this Agreement can be found in the following Attachments:

Attachment A: Use of Sports Fields and Facilities
Attachment B: School Resource Officer Services and Glendora Police Department Support
Attachment C: Crossing Guard Services
Attachment D: Library Services

2. CAPTIAL IMPROVEMENTS

City and District will work collaboratively to identify ways in which to fund necessary capital improvements to the sports fields and facilities identified in this Agreement (the "Sports Fields and Facilities").

All capital improvements shall only be effectuated following the express written permission of the City and the District. Approval by the City or District must be given in writing prior to commencing any construction activity on such capital improvements set forth in this Agreement. All necessary permits and approvals, from the requisite approving authorities, will need to have been secured prior to any construction activity occurring with respect to such capital improvements. All costs related to the capital improvements will be borne by the City or District as shall be mutually agreed to by the Parties.

3. PRIORITY OF USE

The District shall have exclusive use and control of the District-owned Sports Fields and Facilities as required to provide educational services and programs. The City shall have the next priority for use of the District-owned Sports Fields and Facilities in scheduling City-affiliated athletic activities and other City functions.

4. TERM

This Agreement shall continue in full force and effect until terminated by either Party. This Agreement may be terminated by either the City or District, with one-hundred eighty (180) day prior written notice to the other Party, provided, however, that no such termination shall affect or modify any rights, duties, or obligations of either Party arising from its acts or omissions prior to such termination.

5. GOVERNANCE, COORDINATION, AND REIMBURSEMENT OF COSTS

Any and all persons using the Sports Fields and Facilities shall abide by all applicable state and federal laws and regulations as well as local City and District policies, administrative regulations, and applicable codes of conduct.

The City and District will meet on a quarterly basis, or as needed, to discuss and coordinate operations and scheduling the use of the Sports Fields and Facilities, and make any adjustments as necessary. To the extent possible, the District will provide the City with a schedule of all District-related events. The City will submit schedules for all City-related athletic activities and local non-profit sports leagues to the District. The District will work with the City to coordinate all City-affiliated athletic activities and local non-profit sports leagues before any other agency, organization, or sports/club league. The Sports Fields and Facilities will be available Monday through Saturday, with no activities scheduled on Sundays to allow fields to rejuvenate to the extent possible; activities may be scheduled on Sundays as agreed to by the District and City. After 4 p.m. Monday through Friday, at designated locations, the City will assume coordinating responsibility in scheduling City affiliated athletic activities and other City functions.

The District shall notify the City in advance of any additional events proposed for the District-owned Sports Fields and Facilities, which were not originally scheduled and conflict with a City or related use, as soon as practical. To the extent possible, such District events shall take priority over any other previously scheduled events. The City shall notify the District of any additional events scheduled at City-owned Sports Fields and Facilities, not originally scheduled and that conflict with a District use, as soon as practical. To the extent possible, such City events shall take priority over any other previously scheduled events.

Quarterly, the City and District will meet to review revenues and expenditures related to the costs outlined in this Agreement for the preceding three months. The

City shall assume responsibility for the preparation of the invoice. Should the review of revenues and expenditures result in a balance owed to the City, the District will use its best effort to cause the City to be paid within thirty (30) days of receipt of the City's invoice.

The quarterly invoice will not include agreed upon capital improvement projects; those payment arrangements will be handled as agreed to in writing by both Parties on a project-by-project basis. All records related to invoicing will be available for review and audit respectively.

6. INSURANCE

Each Party shall procure and maintain general liability insurance at its sole expense to protect against loss from liability imposed by law for damages on account of bodily injury, including death therefrom, suffered or alleged to be suffered by any person or persons, and also to protect against loss from liability imposed by law for damages to any property. Such liability and property damage insurance shall be maintained in full force and effective throughout the term of the Agreement and any extension(s) thereof in an amount no less than three million dollars ($3,000,000) for liability and property. Any deductibles or self-insured retentions must be declared.

Both Parties agree to exchange insurance documents annually.

7. COMMON FEE FOR SPORTS FIELDS AND FACILITY USE

City and District agree to develop and implement a common fee or set of fees that local non-profit sports leagues will be required to pay to help offset the ongoing maintenance costs, including water and electricity, associated with use of the Sports Fields and Facilities. The common fee will be established by the City and District based on a comparative analysis of field and facility costs in other nearby jurisdictions. This fee will be developed in accordance with all applicable rules and laws, including Proposition 218 and Proposition 26.

The City and District may consider individual agreements with local non-profit sports leagues, in lieu of the common fee, to facilitate mutually agreed improvements and ongoing maintenance to the Sports Fields and Facilities. Under such arrangements for locations pursuant to this Agreement, both the City and District will be parties to the agreement with the applicable non-profit sports league and/or entity using the Sports Fields and Facilities.

User fees for outside groups, not City-affiliated or a local non-profit sports league, for use of the Sports Fields and Facilities, will be determined by the City and District and be billed directly to the user group. The City and District agree to share the Sports Fields and Facilities at no additional charge to each Party unless otherwise noted in this Agreement.

8. INDEMNIFICATION AND HOLD HARMLESS

The City shall defend, indemnify, and hold the District, its officers, employees, and agents harmless from and against any and all liability, loss, expense, attorneys' fees, or claims from injury or damages, arising out of the City's performance of the terms set forth in this Agreement but only in proportion to and to the extent such liability, loss, expense, attorneys' fees, or claims for injury or damages are caused by or result of the negligent or intentional acts or omissions of the City, its officers, agents, or employees (for the avoidance of doubt, the City's performance under this Agreement shall specifically include the City's use of any District-owned Sports Fields and Facilities).

The District shall defend, indemnify, and hold the City, its officers, employees, and agents harmless from and against any and all liability, loss, expense, attorneys' fees, or claims from injury or damages, arising out of the District's performance of the terms set forth in this Agreement but only in proportion to and to the extent such liability, loss, expense, attorneys' fees, or claims for injury or damages are caused by or result of the negligent or intentional acts or omissions of the District, its officers, agents, or employees (for the avoidance of doubt, the District's performance under this Agreement shall include the District's use of any City-owned Sports Fields and Facilities).

9. POLICIES AND PROCEDURES

The City and District shall share information for the use of the Sports Fields and Facilities which shall include, without limitation, the following: (a) the names, phone numbers, and e-mails of persons authorized by each Party to resolve operational issues relating to this Agreement, (b) the establishment of records regarding this Agreement, and (c) the dedicated administrative and operational personnel to effectuate the terms of this Agreement. Each Party agrees that after use of a sports field or facility, the Party that used such facility will clean the facility.

10. DISPUTE RESOLUTION

In the event of a dispute between the City and District with respect of the interpretation, implementation, and operation of this Agreement, the District Superintendent or its designee and the City Manager or its designee shall meet to attempt to resolve the dispute. Disputes concerning this Agreement, including but not limited to the interpretation, implementation, and operation of this Agreement, which have not been resolved between the Parties, including disputes involving money and liability, shall be referred to a non-binding mediation in accordance with the following procedure:

To initiate the mediation process, the Parties shall prepare a list of mediators and attempt to agree on one of the mediators on the list. If the Members cannot reach agreement on one of the mediators on the list within ten (10) days, each shall nominate one mediator, and the two nominees shall jointly choose a mediator. The

Parties shall meet with the mediator on at least three occasions within a thirty (30)-day period in an attempt to resolve the dispute. In the event the Parties are unable to resolve the dispute within thirty (30) days after the mediator is named, the process shall be deemed unsuccessful, subject to the ability of the Parties to extend the mediation period by mutual agreement. If the mediation is unsuccessful, then the Members may pursue arbitration in accordance with the rules of the American Arbitration Association.

11. PERIODIC REVIEW

This Agreement shall be in effect for an initial two (2) year period commencing upon the Effective Date (as defined above) (the "Initial Term"). Prior to the expiration of the Initial Term, representatives of the District and the City shall informally confer to review the terms of this Agreement and shall have the option to renew the Initial Term of this Agreement for an additional three (3) years. This Agreement is a living document; representatives of the District and City may establish procedures to administer this Agreement from time to time for proposed amendments to any part of this Agreement or its addenda.

Amendments must be approved by both governing bodies and once approved shall be implemented within one-hundred eighty (180) days of approval.

12. NOTICES

Notices required or permitted to be given by a Party hereunder shall be sufficiently given if made in writing and delivered either personally or by certified mail, postage prepaid, to the other Party at the following address or to such other address as may be designated from time to time in a written notice given pursuant hereto by the concerned Party. A notice may be sent via email so long as the notice is also given in the manner set forth above. The Parties' notice addresses are as follows:

13. MISCELLANEOUS

(a) SEVERABILITY

If any section, clause, or phrase of the Agreement or the application thereof to any Party or any other person or circumstance is for any reason held to be invalid by a final decision of a court of competent jurisdiction, it shall be deemed severable and the remainder of the Agreement or the application of such provisions to any other Party or through other persons or circumstances

shall not be affected thereby.

(b) NON-ASSIGNABILITY OF PARTICIPATING INTERESTS

The rights and duties of any Party to this Agreement shall not be assignable or transferable to any other party.

(c) SECTION HEADINGS

The section headings herein are for the convenience of the Parties only and shall not be deemed to govern, limit, modify, or in any manner affect the scope, meaning, or intent of the provisions or language of this Agreement.

(d) LAWS OF CALIFORNIA

This Agreement shall be interpreted, construed and governed both as to validity and to performance of the Parties in accordance with the laws of the State of California. Legal actions concerning any dispute, claim or matter arising out of or in relation to this Agreement shall be instituted in the Superior Court of the County of Los Angeles, State of California..

(e) COOPERATION

The Parties hereby agree to cooperate with each other in carrying out the purposes and objectives of this Agreement.

(f) SUCCESSORS

The Agreement shall be binding upon and shall ensure to the benefit of the successors of the Parties hereto.

(g) AUTHORITY.

The persons executing this Agreement on behalf of the Parties hereto warrant that they are duly authorized to execute and deliver this Agreement on behalf of said Party, and the entering into this Agreement does not violate any provision of any other agreement to which said Party is bound.

(h) COUNTERPARTS.

This Agreement may be executed in any number of counterparts, each of which shall be deemed an original, but all of which when taken together shall constitute one and the same instrument. Each of the Parties intend to be bound by the signatures on the telecopied, .pdf or other electronically delivered document, and are aware that the other Party will rely on the telecopied, .pdf or other electronically delivered signatures, and hereby wave any defenses to the enforcement of the terms of this Agreement based on the form of signature.

(i) ATTORNEYS' FEES.

If either Party to this Agreement is required to initiate or defend or made a party to any action or proceeding in any way connected with this Agreement, the prevailing party in such action or proceeding shall be entitled to reasonable attorneys' fees incurred in such action or proceeding, in addition to any other relief which may be granted. Otherwise the Parties shall each be responsible for its own attorneys' fees with respect to the terms of this Agreement.

[REMAINDER OF PAGE IS INTENTIONALLY LEFT BLANK]

IN WITNESS WHEREOF, the Parties hereto have executed this Agreement on the date and year first-above written.

ATTACHMENT A – USE OF SPORTS FIELDS AND FACILITIES

1. This section is intended to include the use of fields and facilities at the following District and City sites:

   a. Cullen Elementary School – sports fields
   b. Glendora High School – tennis courts and Aquatics Center
   c. Goddard Middle School – sports fields, tennis courts, and gymnasium
   d. La Fetra Elementary School – sports fields
   e. Sandburg Middle School – sports fields, gymnasium
   f. Sellers Elementary School – sports fields
   g. Stanton Elementary School – sports fields
   h. Whitcomb High School – sports fields
   i. Williams Educational Center – sports fields (will become available for use when a fence is installed to separate the main campus from the sports fields)
   j. Finkbiner Park – sports fields, bandshell, shade structure, and Scout Hut
   k. Pompei Park – sports fields
   l. Teen Center – volleyball courts, basketball courts, meeting room

2. City would assume coordinating responsibility for the use of District sports fields and facilities included in this Agreement as it relates to the local non-profit sports leagues and City-affiliated athletic activities. The City will coordinate with the District on the availability of sports fields and facilities. District would retain coordinating responsibility for the Aquatics Center.

3. District-related activities and events will preempt all City-affiliated athletic activities and local non-profit sports leagues. The District will work with the City to schedule all other City-affiliated athletic activities and local non-profit sports leagues before any other agency, organization, or sports league.

4. The City will contribute to the maintenance costs of sports fields and facilities used to accommodate local non-profit sports leagues and City-affiliated athletic activities in a manner proportional to its use. Maintenance costs would mean landscaping, watering, lighting, and cleaning. City will install meters to track water use on all fields used by the local non-profit sports leagues and City-affiliated athletic activities. The District will install meters to track electricity use on all fields used by the local sports leagues.

   To best understand the actual costs related to the maintenance of the sports fields, the City, as part of a two-year pilot program, will assume complete responsibility for the landscaping maintenance of all sports fields. In coordination with the District, the City will contract with a third party for this service and track all expenses. The City and District will meet on a quarterly basis to review these costs.

5. The District will be responsible for the maintenance and operation of the Aquatics Center. The City will contribute to the maintenance of the Aquatics Center in a manner proportional to its use. Maintenance would mean those costs incurred for the operation of the facility while in use by the City. The City shall coordinate with the District for staffing, as

necessary, during the time when the facility is used for City-sponsored activities and events.

6. Should any other facility or sports field be needed, the District and City will work cooperatively to schedule and facilitate its use based on availability, including any necessary support. Such requests will be considered on a case-by-case basis.

7. The north side of Sandburg Middle School and Goddard Middle School will become accessible to the public beginning at 4 p.m. on school days and act as a public park, unless otherwise used with priority by the District. These areas will remain closed to public access until such time and will remain open until dusk unless otherwise approved by the City and District.

8. The tennis courts at Goddard Middle School will be open for public use from dawn to dusk, unless otherwise used with priority by the District.

9. The tennis courts at Glendora High School will become accessible to the public at 5 p.m. on school days, unless otherwise used with priority by the District. These courts will remain closed to public access until 5 p.m. and will remain open until dusk unless approved by the City and District.

10. The City and District will meet quarterly to discuss operations and scheduling of facilities, and make any adjustments as necessary.

11. The City and District agree to develop and implement a standard agreement for the local non-profit sports leagues that includes a code of conduct and outlines the minimum level of responsibility each local sports league must adhere to.

ATTACHMENT B – SCHOOL RESOURCE OFFICER SERVICES AND GLENDORA POLICE DEPARTMENT SUPPORT

1. The City agrees to provide the services of 1.6 full-time equivalent (FTE) sworn police officers to serve as the School Resource Officer (SRO) for the District. The allocation of staffing resources will be determined based on the operational needs of the Glendora Police Department subject to the review and approval of the Chief of Police.

2. The City shall supervise the activities of the SRO through the command structure of the Glendora Police Department (GPD).

3. District shall appoint a designated individual to interface with GPD regarding activities of the SRO and to interface with such officer in accordance with a joint operating protocol developed between GPD and the District. The designated individual will work with the SRO to create a mutually acceptable list of tasks, duties, and schedule for the SRO. The acceptable list of tasks, duties, schedule shall be approved by the Chief of Police for GPD. The District Superintendent and Chief of Police shall meet on a quarterly basis to adjust SRO activities as is needed.

4. At all times during the term of this Agreement, the SRO shall be an employee of the City, under the supervision and control of the City, not an employee or agent of the District, and the City shall assume responsibility for the activities of the SRO.

5. During the term of the Agreement, the District agrees to reimburse the City 50% of the actual cost incurred by the City in employing the SRO during an 10-month period each fiscal year. The District agrees to increase its reimbursement of actual costs to 75% over the next five years by five percent annually (2025: 55%; 2026: 60%; 2027: 65%; 2028: 70%; 2029: 75%). For the purpose of the Agreement, “actual cost” shall be defined as the SRO’s salary and benefits, including, but not limited to, health insurance, life insurance, dental insurance, vision insurance, pension, and the educational/special incentives.

6. The City shall, at its expense, provide the SRO with a vehicle and equipment necessary for performing the duties required of the SRO.

7. Services will normally be provided during the regular school year and during summer school sessions as needed. The SRO may be utilized for other duties, including but not limited to, daytime curfew enforcement, youth related crimes, outreach programs, enforcement, and other related duties when school is not in session or when the officer’s duties as SRO do not occupy the officer fully, based on the needs of the City.

8. If additional police services are needed to support any single District activity or event beyond normal SRO duties (i.e. Board meeting, football game, assembly), the District will submit a Request for Special Services to the GPD. In consultation with the District, the GPD will evaluate the request and determine the appropriate level of police services needed. The District will reimburse the City the actual cost of such request, as outlined in the Request for Special Police Services Application.

9. If the District wishes to increase the number of FTEs for the SRO Program, the District shall submit such a request in writing to the City. The City will evaluate the request and prepare a plan that details the estimated cost of the request for the District's consideration. The District will be responsible for all costs associated with the officers and necessary equipment, both one-time and ongoing. Any request to increase the number of FTE for the SRO Program will require a minimum five-year commitment of ongoing financial support from the District.

10. Should the District desire to contract with a vendor for security services for any District related activity, the District will consult with the City ahead of selecting the vendor to ensure adequate security services are provided. review and assess the proposed security plan to ensure a mutually beneficial outcome.

ATTACHMENT C – CROSSING GUARD SERVICES

1. The City, through the Glendora Police Department, will administer the crossing guard program and contract with a qualified service provider for this service.

2. The City and District will meet annually to review the crossing guard program, to evaluate and discuss any potential changes to the program. Crossing guard services will be provided during a morning shift and an afternoon shift of each school day, with start and stop times determined by City and District staff.

3. There are currently 13 crossing guard locations serving the District. These include the following:

    a. Live Oak / Leadora
    b. Live Oak / Whitcomb
    c. Sierra Madre / Live Oak
    d. Sierra Madre / Northridge
    e. Bennett / Grand
    f. Bennett / Trayer (during construction)
    g. Grand / Foothill
    h. Bennett / Barranca
    i. Bennett / East of Barranca
    j. Sierra Madre / Lorraine
    k. Leadora / Lorraine
    l. Mauna Loa / Vecino
    m. Amelia / Route 66

4. The City and District will equally share the total cost of the crossing guard program for crossing guard locations within the District.

ATTACHMENT D – LIBRARY SERVICES

1. The City will provide the District with certain professional services related to the operation of the District's school library services, as set forth below.

2. The services to be performed by the City involve strictly advising District Administration on the selection and ordering of library books, general consulting regarding school library services and activities, and participating with the District Library Technician meetings, not to exceed four during the fiscal year.

3. The City-assigned personnel for this Agreement shall have no direct or indirect supervisorial authority or responsibility relating to any District employees, officers, agents or volunteers.

4. All City personnel providing any of the services shall be selected at the discretion of the City and supervised by the Library Director.

5. City personnel providing the services under this Agreement shall at all times be under the City's exclusive direction and control.

6. The District shall pay the City by the hour for services provided based on the fully burdened compensation rate for a Senior Librarian. The actual hourly rate can be adjusted by the City at any time based on actual increases to the fully burdened compensation rate. The total not to exceed amount is three hours per quarter, unless there is prior written authorization from the Superintendent of the District to the Library Director. The Library Director may decline a proposed increase in hours based on staffing availability.

City of Glendora & Glendora Unified School District

Master Joint Use Agreement

Joint City Council – Board of Education Meeting

January 30, 2024

CityOfGlendora.org

AGREEMENTS OVER THE YEARS

- Joint Use of Sports Fields and Facilities
- Library
  - Facility
  - Professional Services
- School Resource Officer Program
- Crossing Guard Program

JOINT USE OF SPORTS FIELDS AND FACILITIES

- 1962 Agreement
  - "for the purpose of sponsoring and promoting community recreation programs and activities."
  - Broad agreement facilitating access to GUSD school buildings, grounds, playfields, and swimming pool
  - City granted authority to develop and improve areas, with GUSD approval
  - City could charge admissions or user fees

JOINT USE OF SPORTS FIELDS AND FACILITIES

- Aquatics Center – 2001
  - City contributed $500,000 to the project
  - Pool to be available 14.5 hours per day (7 a.m. to 9:30 p.m.)
  - City entitled to no less than 1,760 hours of use of the facility
  - City to reimburse GUSD a proportionate amount of the normal and ongoing costs of operation of the pool
  - Proportional costs for capital improvements
  - Term of the agreement is for the life of the facility

JOINT USE OF SPORTS FIELDS AND FACILITIES

- Multi-Purpose Events Center – 2001
  - Intended to support GUSD's educational purposes, and youth and community groups
  - Term: 40 years; automatic 5-year renewals thereafter
  - GUSD schedules all use of the facility
  - Center to be available to the community no less than 20 hours per week
  - Center use costs borne by the sponsoring group

JOINT USE OF SPORTS FIELDS AND FACILITIES

- Joint Use Agreement – 2013
  - Comprehensive attempt to update and combine previous agreements
    - Combined Multi-Purpose Events Center, Aquatics Center, and Schools (fields/facilities), Tennis Courts (GHS) and Crowther Teen Center
  - Outlined specific maintenance provisions for certain fields/facilities
    - George Manooshinan Park
    - Sandburg Middle School Park

JOINT USE OF SPORTS FIELDS AND FACILITIES

- American Little League (ALL) – 2013
  - Agreement between the City and ALL
  - Authorized non-exclusive use for a period of 5 years (option for renewals)
  - Outlined specific responsibilities for ALL:
    - Installation, maintenance and repair of all fencing
    - Field maintenance (weeding, cleaning, planting/maintaining/mowing turf)
    - Field watering
    - General maintenance
    - Lining and marking of field
  - Ensured public access to field when not in use by ALL
  - Agreement not renewed in 2018

LIBRARY

- Glendora Library Authority (1970)
  - Scope:
    - Joint venture to construct a public library to provide necessary library services
    - GLA given authority to acquire sites and to acquire, construct, maintain, operate and lease public library buildings and related facilities
    - GLA governed by the Glendora Library Commission (five members)
  - Outcome:
    - City entered a ground lease with the GLA
    - GLA issued Revenue Bonds totaling $950,000 (principal amount)
    - GLA entered a sublease with the City, for which the City paid rent to the GLA
  - Term:
    - July 7, 1970 – July 7, 2020, or until all revenue bonds are paid off (whichever date is earlier)

LIBRARY

- Professional Library Services (2019)
  - Scope:
    - Advise GUSD on the selection and ordering of library books
    - Consult regarding school library services and activities
    - Participate in library technician meetings
  - Term:
    - July 1, 2019, and will continue thereafter from year to year unless terminated by one of the parties
  - Cost:
    - Based on the fully burdened compensation rate for a Senior Librarian, not to exceed 3 hours per quarter (unless adjusted)

SCHOOL RESOURCE OFFICER PROGRAM

- Agreement entered in 2006
  - City agreed to provide the services of one sworn officer to serve as an SRO
    - 1.5 FTE have been allocated
  - Scope:
    - On campus all days GHS is in session
    - Other related responsibilities include daytime curfew enforcement, youth-related crimes, outreach programs, football games, Board Meetings
  - GUSD responsible for 50% of the actual cost incurred by the City during an 11-month period each year

CROSSING GUARD PROGRAM

- Pre-2011
  - Staffed by 15 part-time crossing guards; supplemented by police cadets, police auxiliaries, and community service officers as needed
  - Hired, trained, and supervised by the GPD Traffic Bureau
  - 16 total locations, 14 of which were for GUSD
  - Cost (per year)
    - Total annual cost: $147,806.70 (2011)
      - School Districts reimbursed the City approximately $29,362.50
    - Funding for 7 locations was split between the City and GUSD
    - Funding for 8 locations was covered by the City
    - Funding for 1 location was covered by Charter Oak

CROSSING GUARD PROGRAM

- 2011 (All City Management Services)
  - Term: August 2, 2011 – June 30, 2015
    - Four-year extension: June 30, 2015 – June 30, 2019
  - 14 total locations
    - GUSD: 12
    - Charter Oak: 2
  - Cost (per year)
    - City: $109,380.38
    - School Districts Split: $25,864.87

CROSSING GUARD PROGRAM

- 2019 (All City Management Services)
  - Term: July 1, 2019 – June 30, 2020
    - Up to four additional one-year extensions available
  - 14 total locations
    - GUSD: 12
    - Charter Oak: 2
  - Cost (per year)
    - Total Not to Exceed Cost: $222,804.80
    - Fiscal Year 2021/22 Actual Cost: $200,065.60

MASTER JOINT USE AGREEMENT

- Based on the Framework presented in November 2022
  - Supersedes and replaces all other agreements
  - Streamlines and clarifies
- Topic Areas
  - Sports Fields/Facilities
  - School Resource Officers/GPD Support
  - Crossing Guards
  - Library

MASTER JOINT USE AGREEMENT

- General Provisions
  - Capital Projects: City and District to work collaboratively
  - Priority of Use: District, then City
  - Governance
  - Common Fee for Sports Field and Facility Use
  - Indemnification : Time of Use

MASTER JOINT USE AGREEMENT

- Sports Fields and Facilities
  - Coordinating Responsibility (City)
  - Maintenance
    - City will contribute to maintenance costs in a manner proportional to its use
    - Water meter installation
    - Electric meter installation
    - Two-Year Pilot Program: City will assume landscape maintenance responsibility

MASTER JOINT USE AGREEMENT

- School Resource Officer Program
  - 1.6 full-time equivalent sworn police officers
  - District to reimburse City 50% of the actual cost
    - Reimbursement will increase to 75% over the next five years
  - Additional Police Services
  - Increase in SRO Program services
    - District responsible for all costs (one-time and ongoing)
    - Minimum five-year commitment

MASTER JOINT USE AGREEMENT

- Crossing Guard Program
  - Service provided at 13 locations
  - Program costs shared equally

MASTER JOINT USE AGREEMENT

- Library Services
  - Provision of professional library services
  - District to reimburse the City by the hour (not to exceed three hours per quarter)

MASTER JOINT USE AGREEMENT

- What's Next?
  - Staff to work on implementation of the common fee
    - Comparative analysis of fees in surrounding jurisdictions
    - Engage local sports leagues
    - Will require subsequent approval by City and District
  - Quarterly meetings between City and District
    - Status Updates

RECOMMENDATIONS

That the City Council and Board of Education:

1. Approve the Master Joint Use Agreement between the City and Glendora Unified School District;
2. Authorize the City Manager and Superintendent to execute the Master Joint Use Agreement including making minor non-substantive changes; and
3. Direct staff to work to implement the Master Joint Use Agreement effective July 1, 2024.

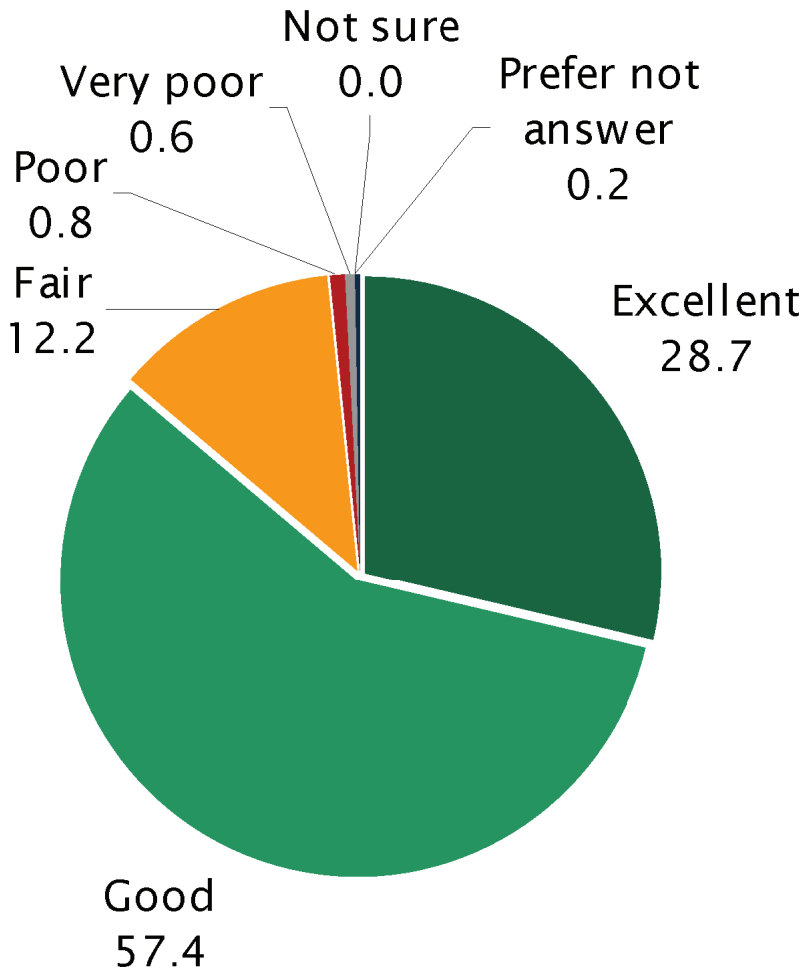
Bond Feasibility Survey

Conducted for the
City of Glendora

Presented By
Timothy McLarney Ph.D.

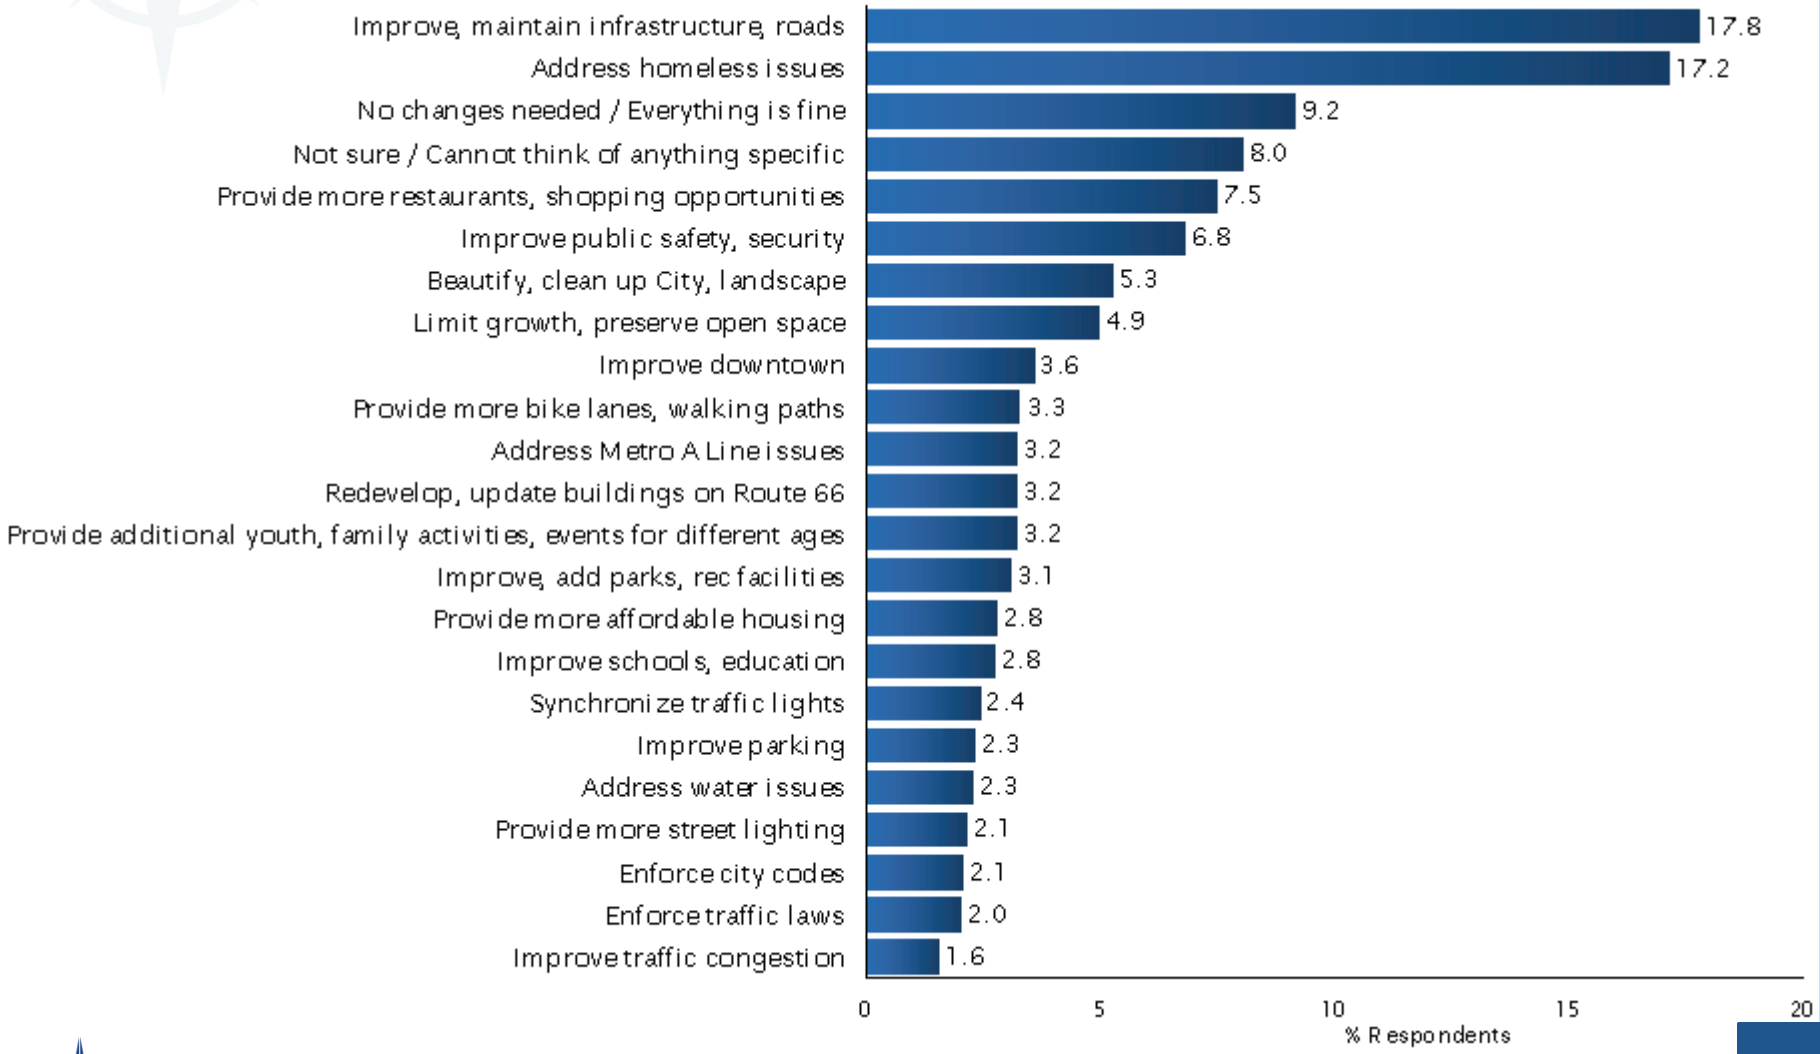
8/20/2024

TrueNorth Research



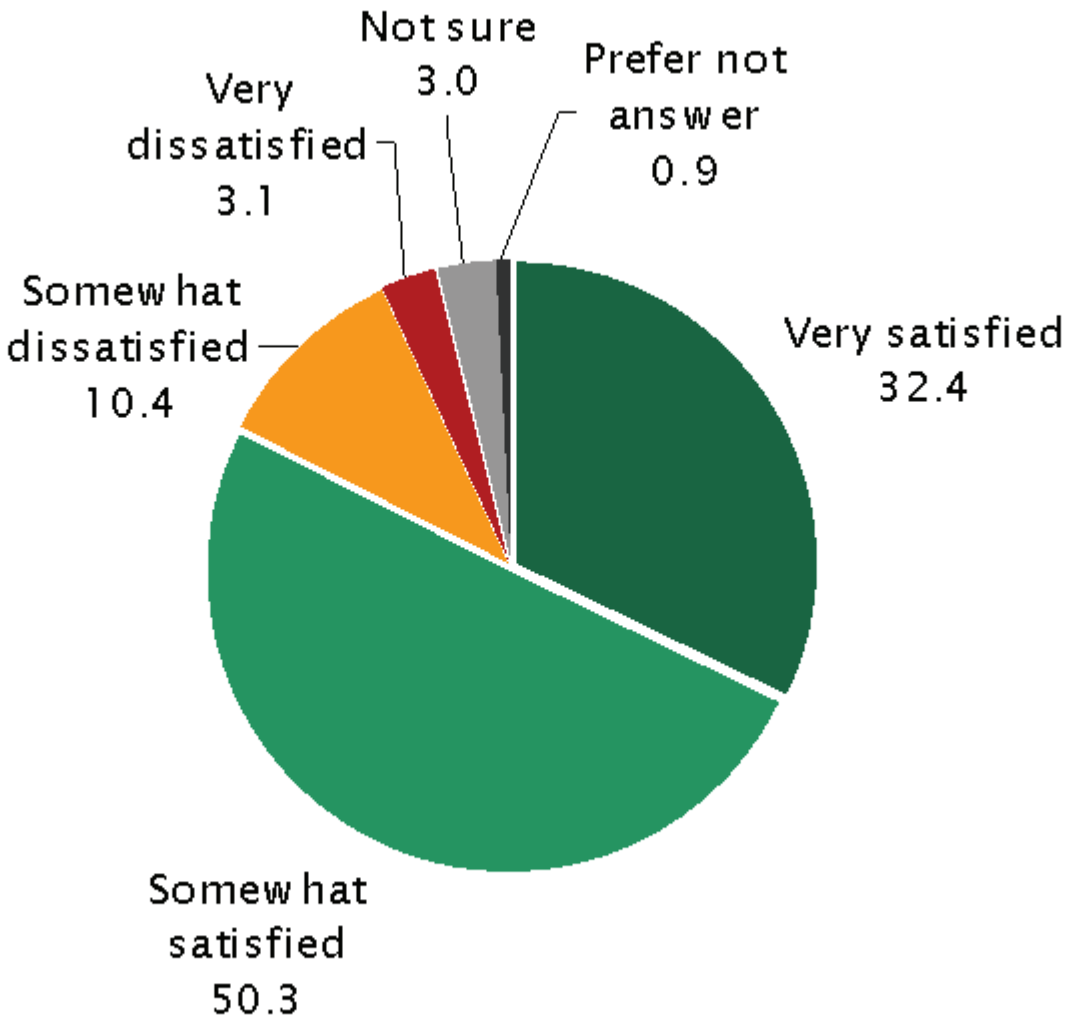
PURPOSE OF STUDY

- Determine if a bond measure is feasible
- Identify how to create a measure consistent with community priorities
- Gather information needed for communications & outreach



METHODOLOGY OF STUDY

- **How did we select voters to survey?**
  - Stratified & Clustered Random Sample of likely voters (2024) using age, gender, partisanship, household party type, and sub-geographies
  - Ensures balanced, representative sample of likely voters
- **How did we recruit participation?**
  - Personalized email, text, and telephone calls
  - PINs to restrict access and ensure one complete per respondent
- **How were voters able to share their opinions?**
  - Secure, PIN-protected website that scales to the device
  - Telephone (land line or mobile)
- **What was the sample size?**
  - 600 completed interviews – split sample
  - Overall margin of error of ± 4% @ 95% level of confidence



QUALITY OF LIFE

CHANGES TO IMPROVE CITY

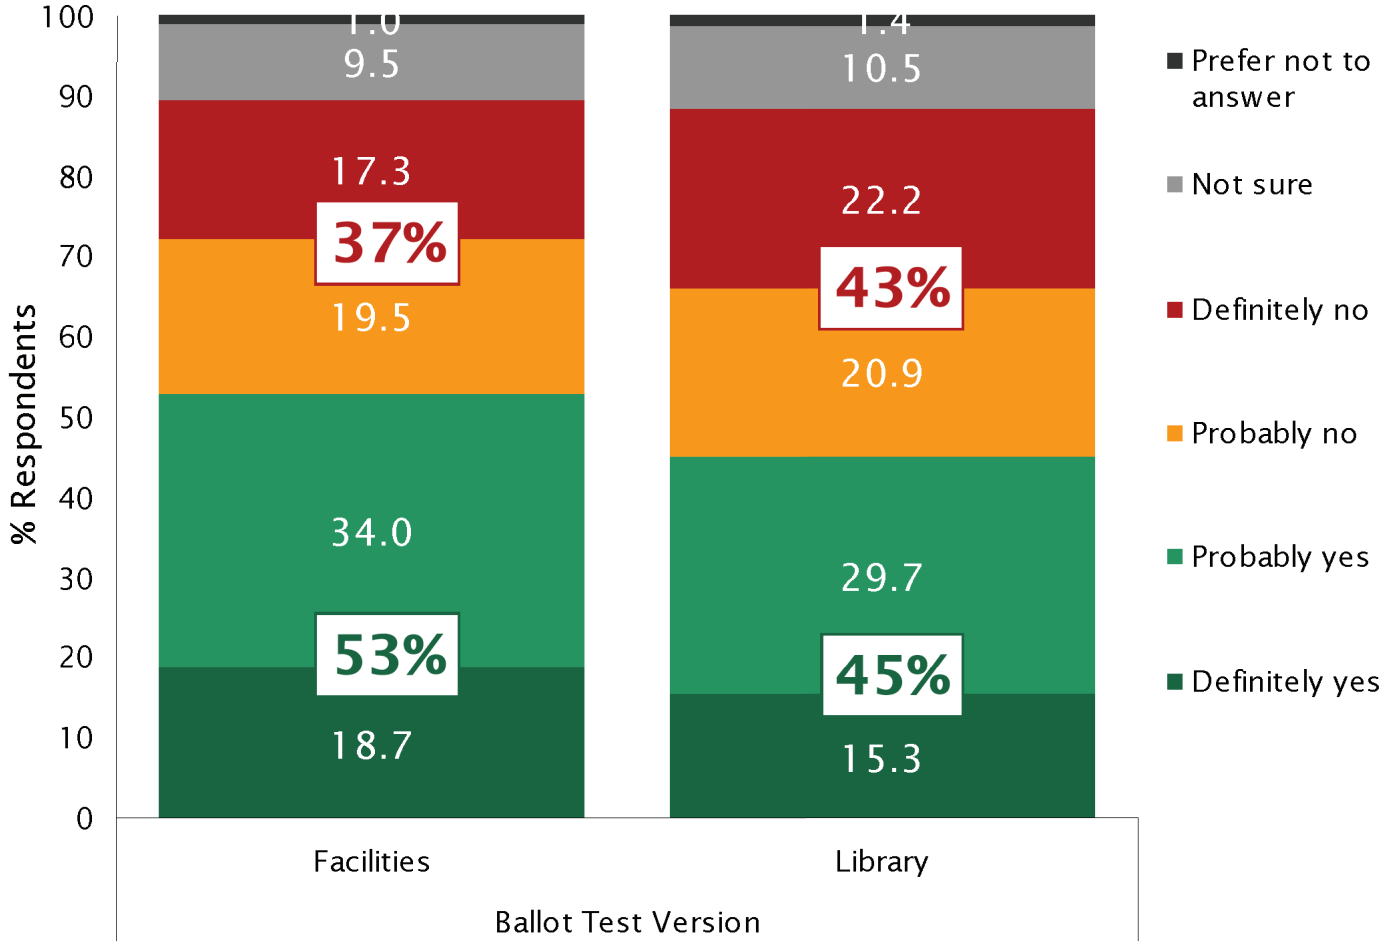
OVERALL SATISFACTION

INITIAL BALLOT TEST: FACILITIES

In order to:

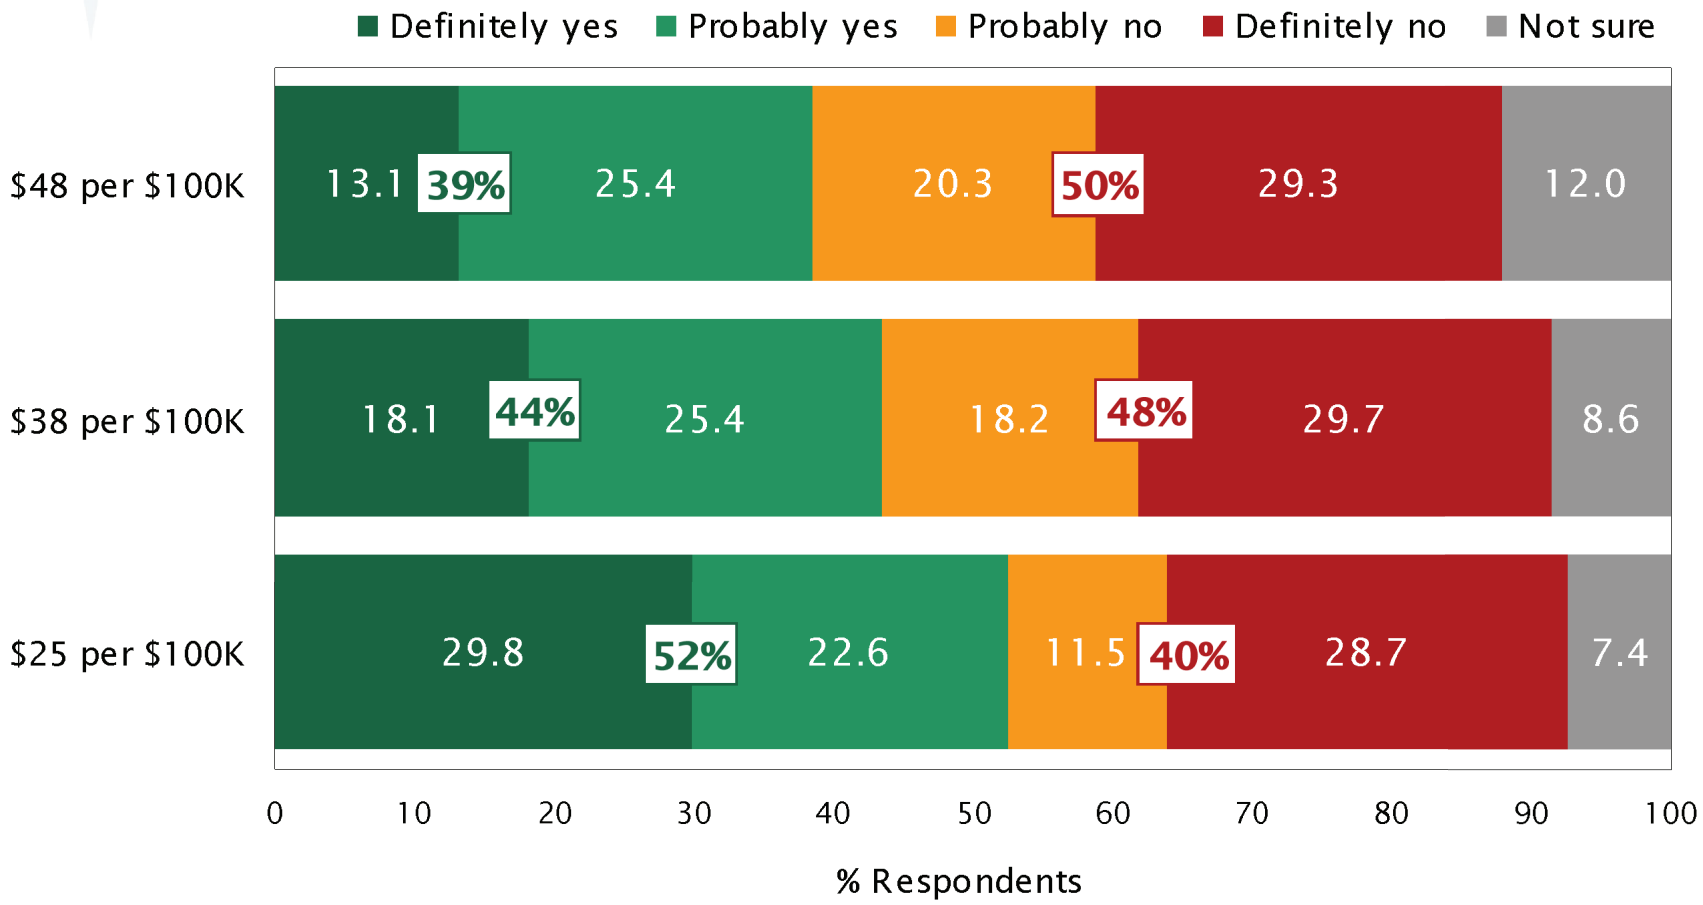
- Repair, expand, and upgrade aging community facilities including the Glendora Library, Senior Center, Teen Center, City Hall, and Recreation, Police and Public Works facilities
- Fix faulty roofs, plumbing, electrical, and ventilation
- And improve safety and access for seniors/disabled residents

Shall the City of Glendora's measure authorizing $150 million in bonds at legal rates be adopted, levying 48 dollars per 100 thousand dollars assessed value (9 million dollars annually) while bonds are outstanding, with citizen oversight and all money locally controlled?



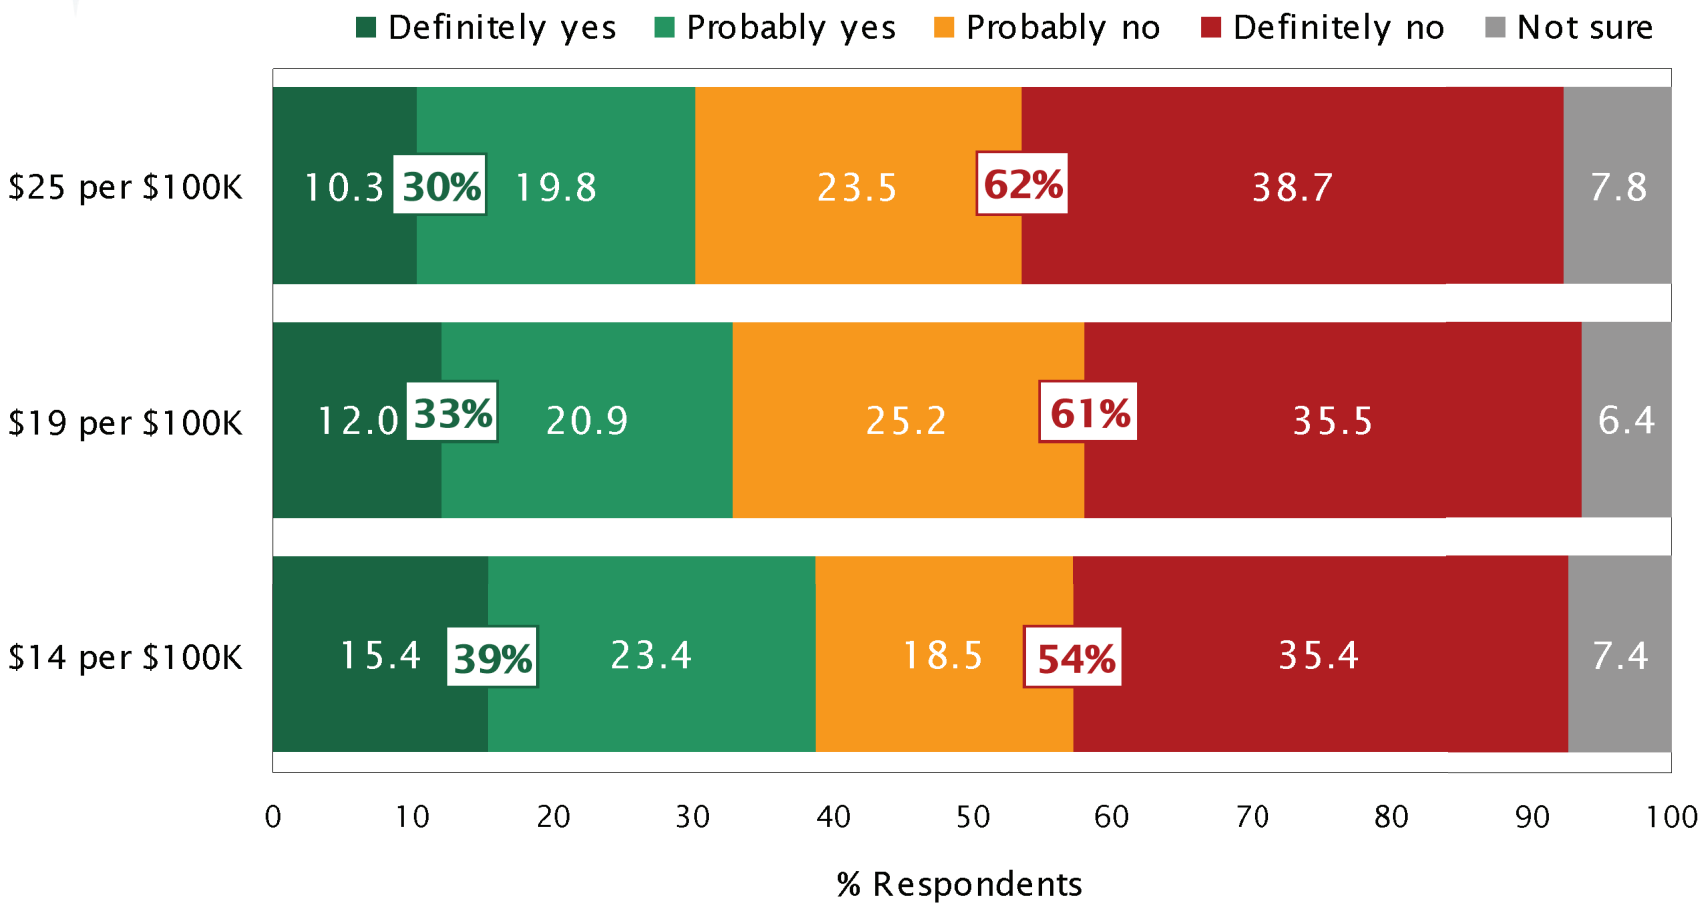
INITIAL BALLOT TEST: LIBRARY

In order to:

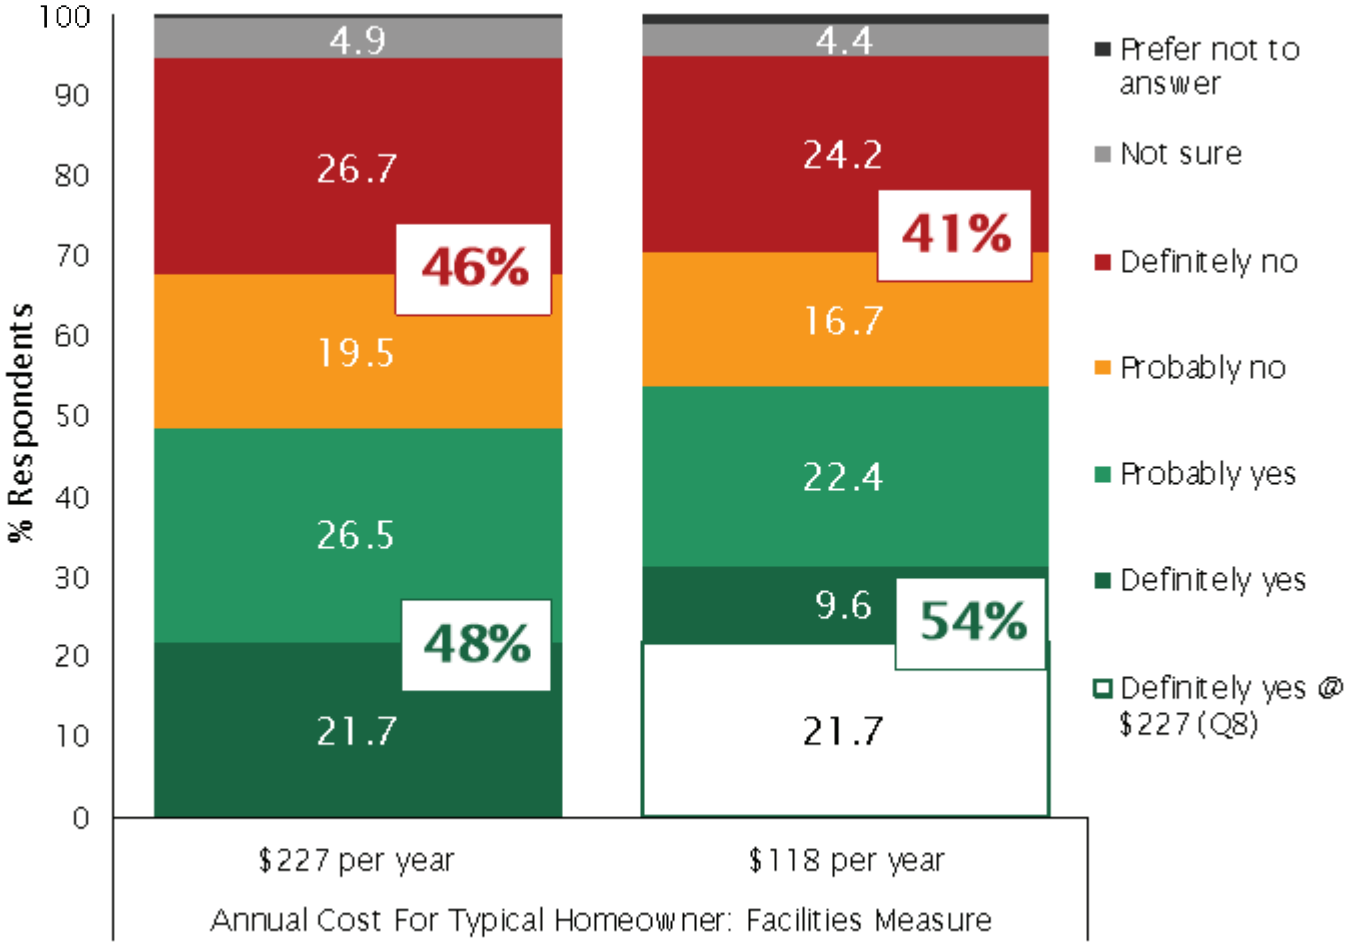


- Repair, modernize, and expand the Glendora Library with improved spaces for collaboration, community programs and events, computers/technology learning center, studying, training, and expanded book/resource collections to serve residents of all ages
- Fix faulty roofs, electrical, ventilation
- And improve access for seniors/disabled

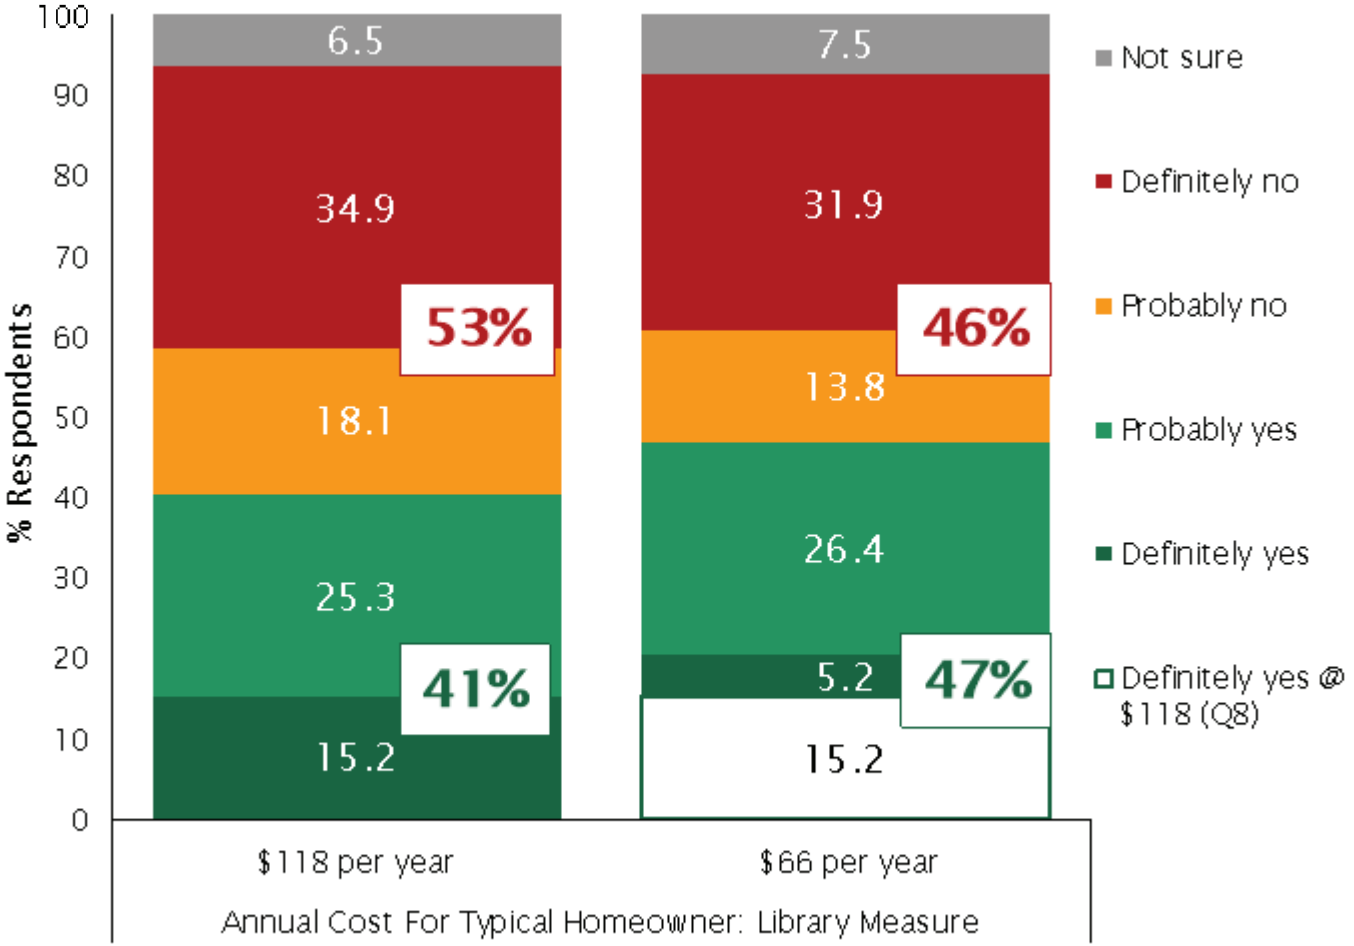
Shall the City of Glendora's measure authorizing $70 million in bonds at legal rates be adopted, levying 25 dollars per 100 thousand dollars assessed value (4 million dollars annually) while bonds are outstanding, with citizen oversight and all money locally controlled?



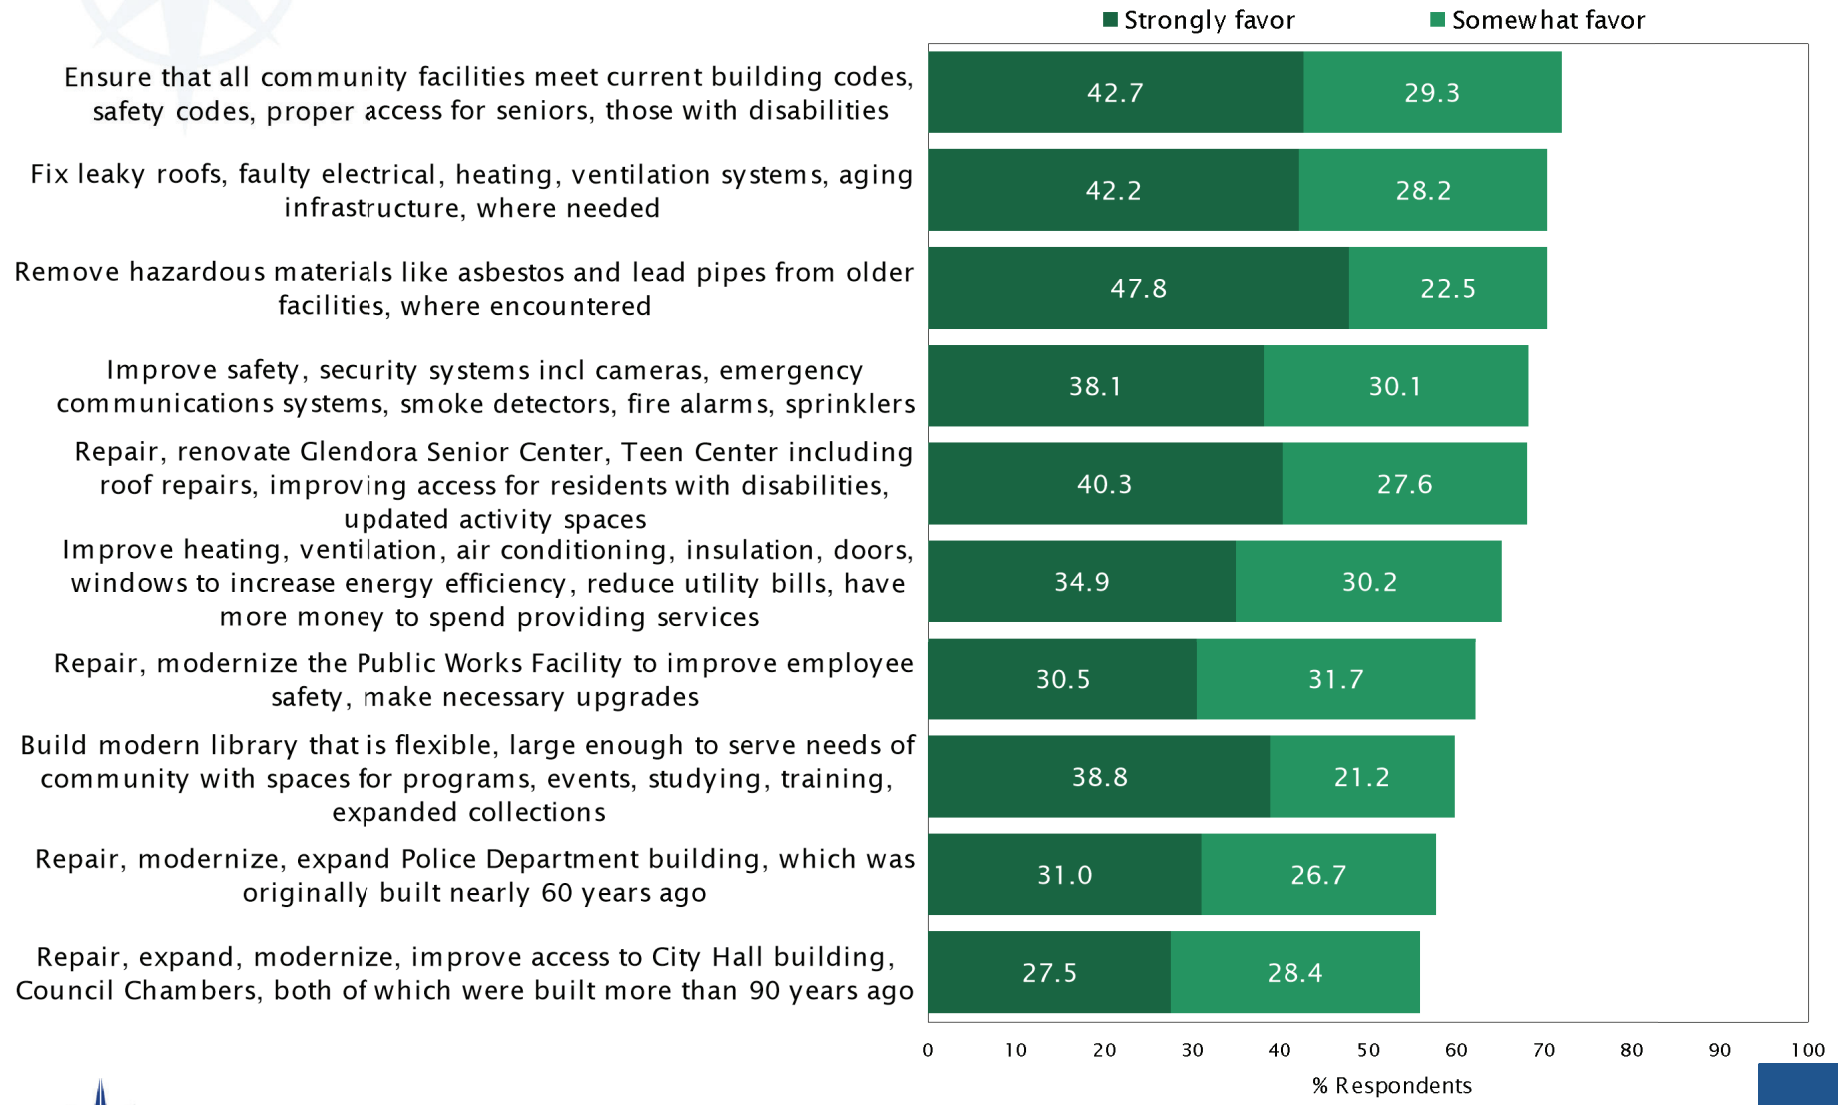
INITIAL BALLOT TEST



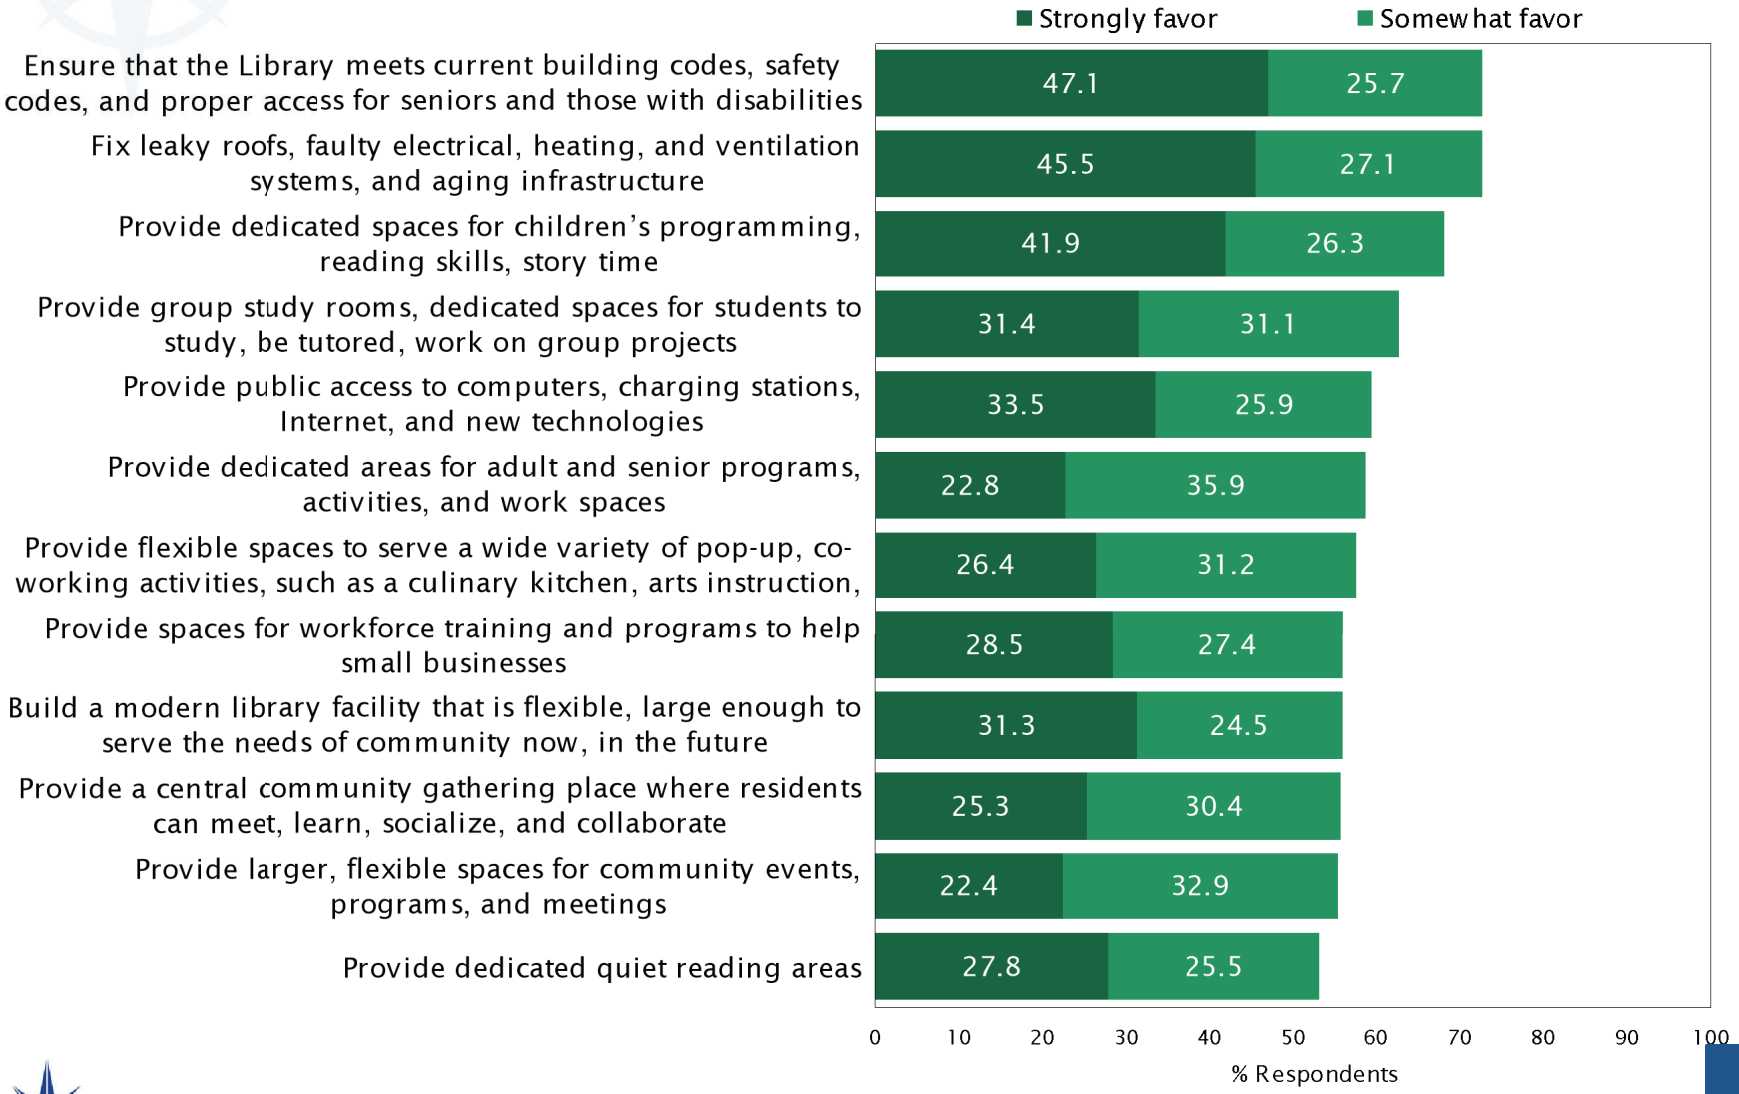
TAX THRESHOLD: FACILITIES



TAX THRESHOLD: LIBRARY

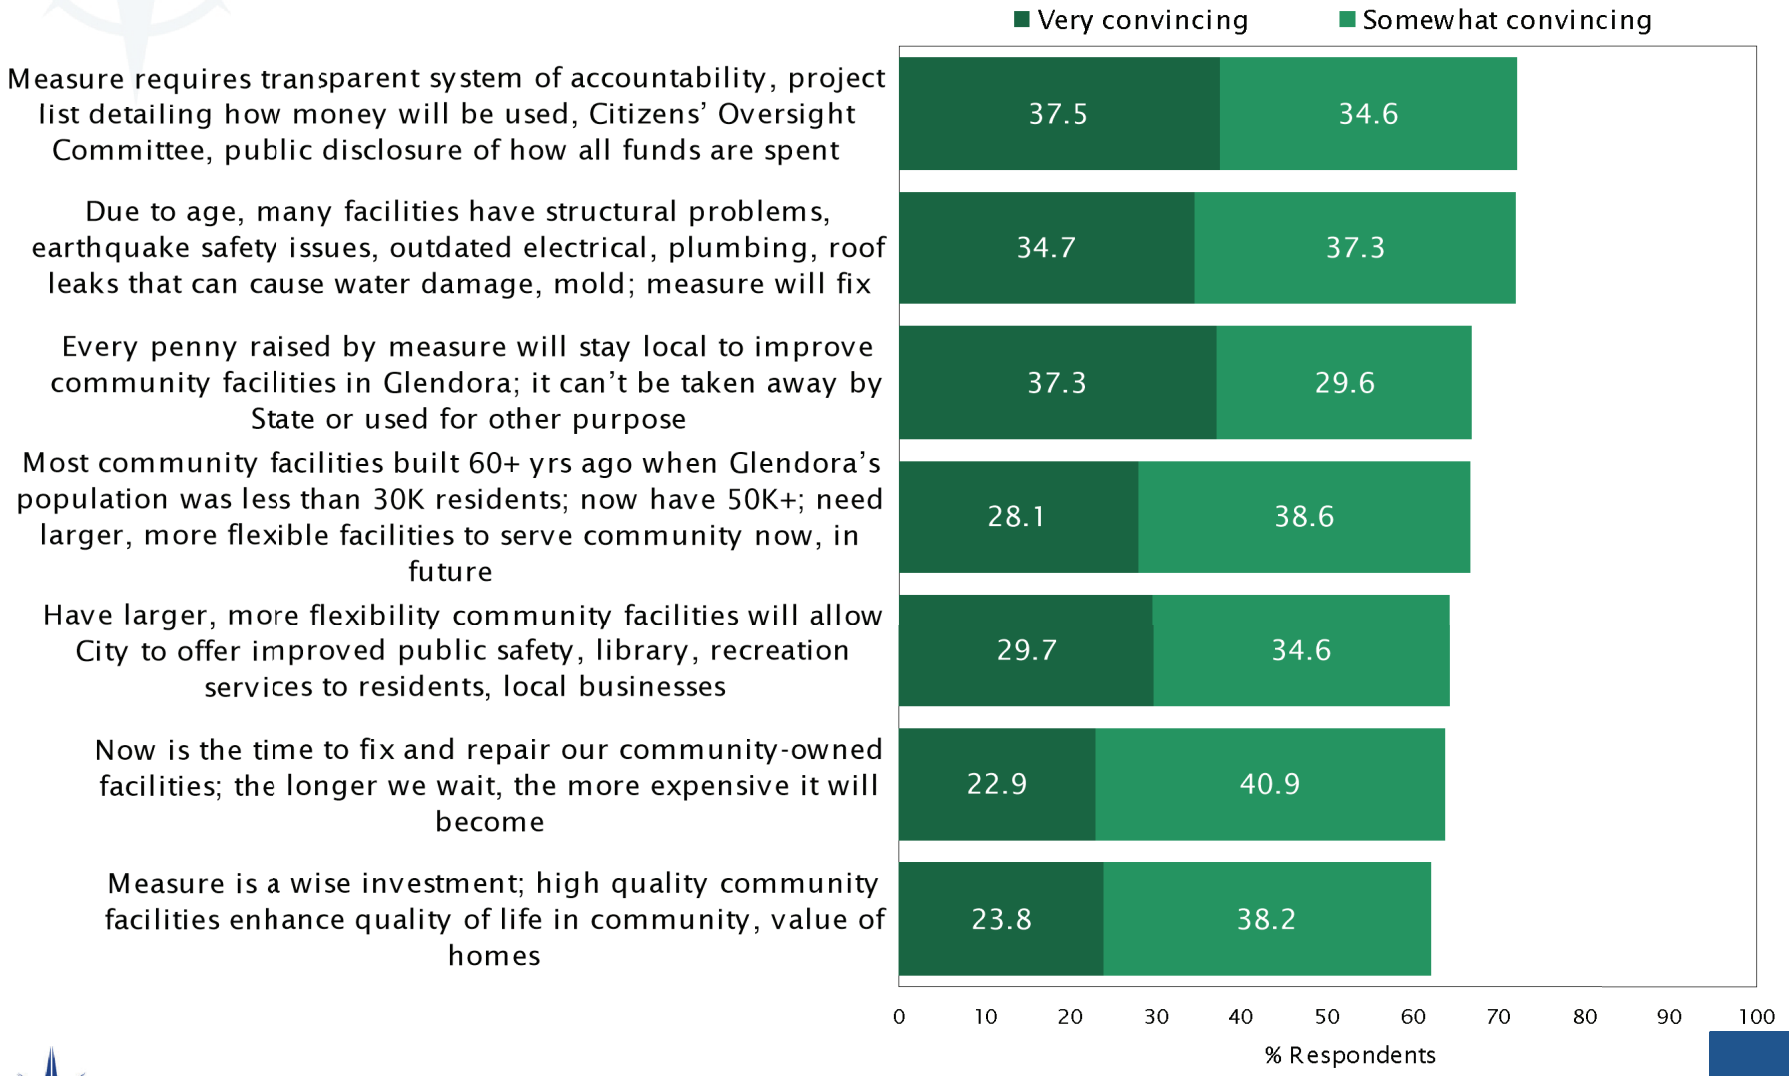


ANNUAL COST FOR HOMEOWNER: FACILITIES

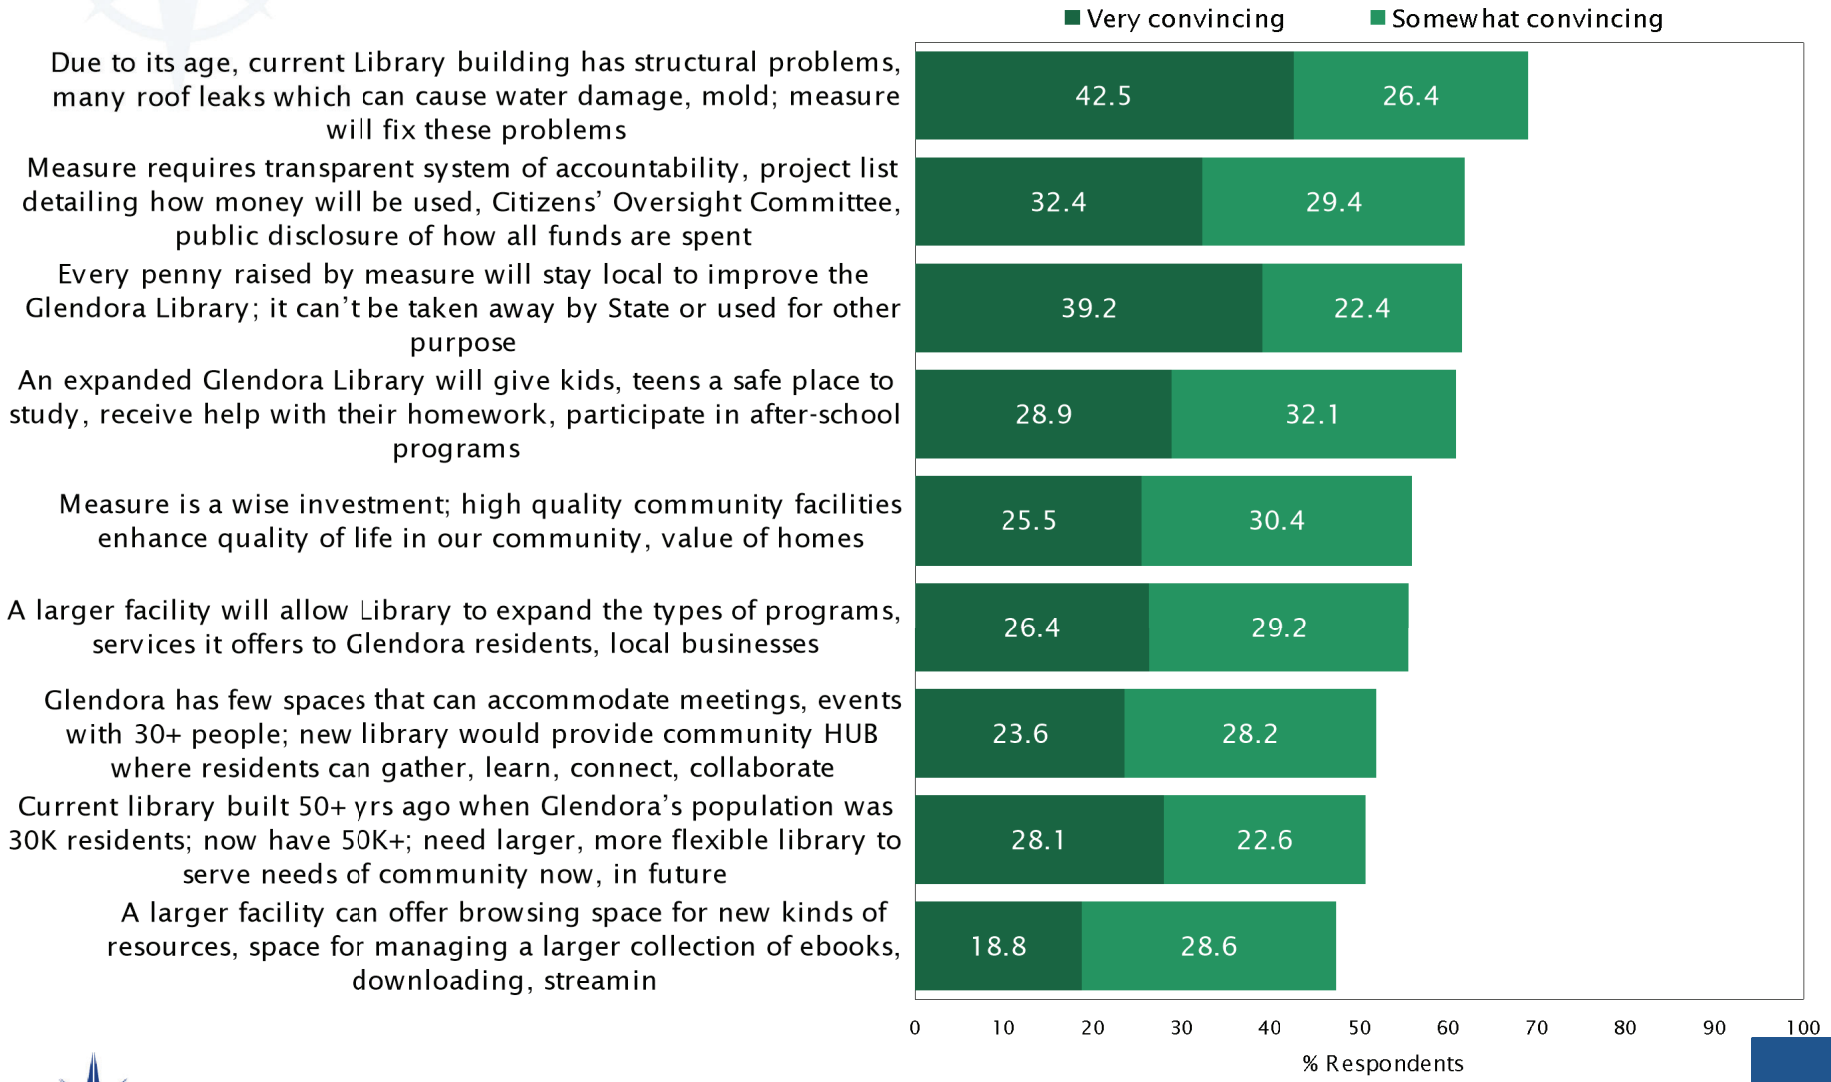


ANNUAL COST FOR HOMEOWNER: LIBRARY

PROJECTS & IMPROVEMENTS: FACILITIES

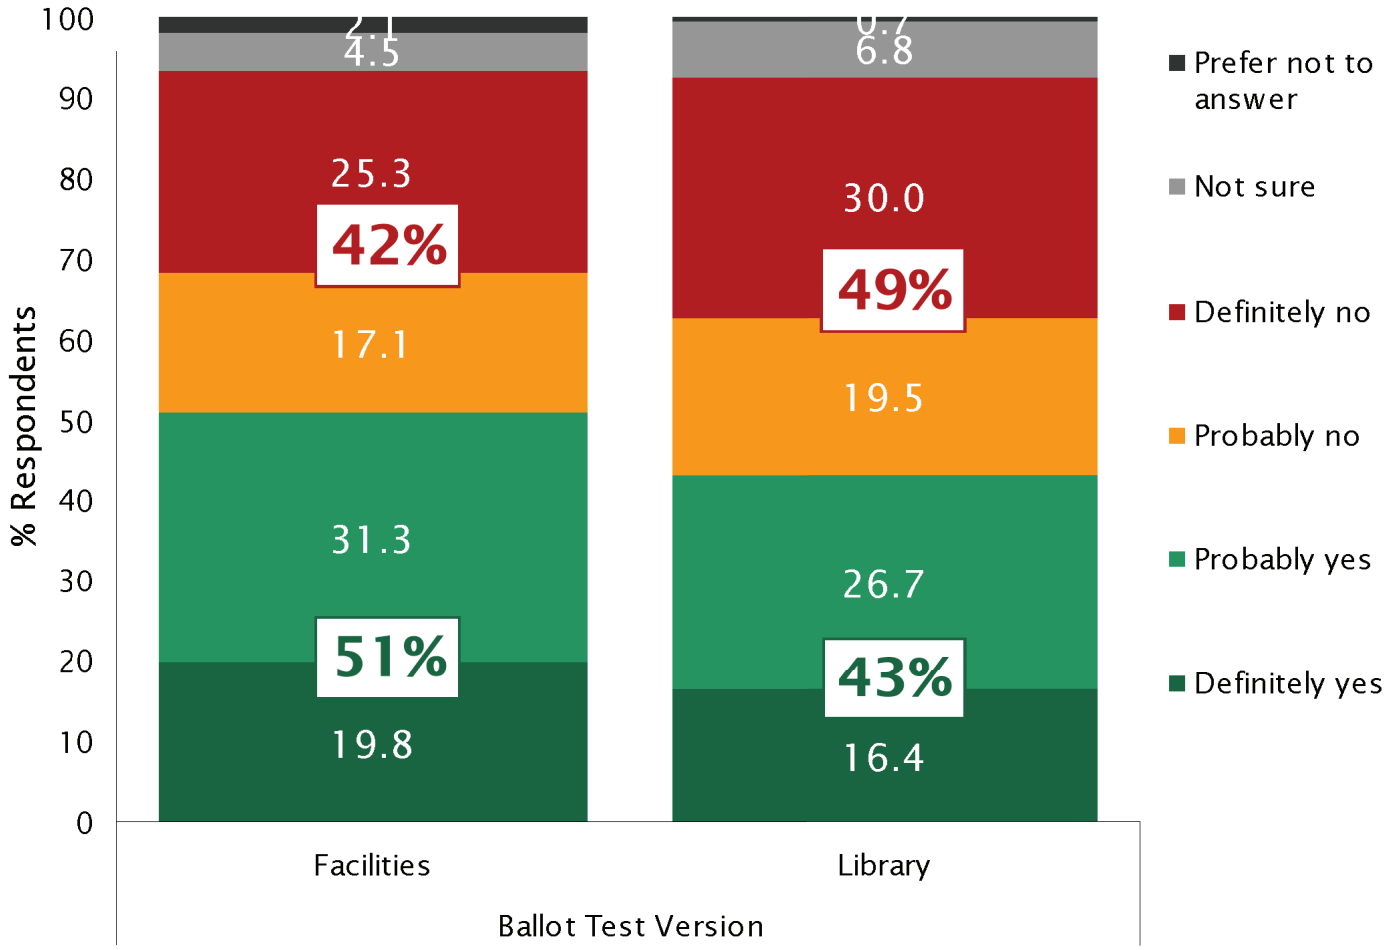


PROJECTS & IMPROVEMENTS: LIBRARY



TRUENORTH RESEARCH

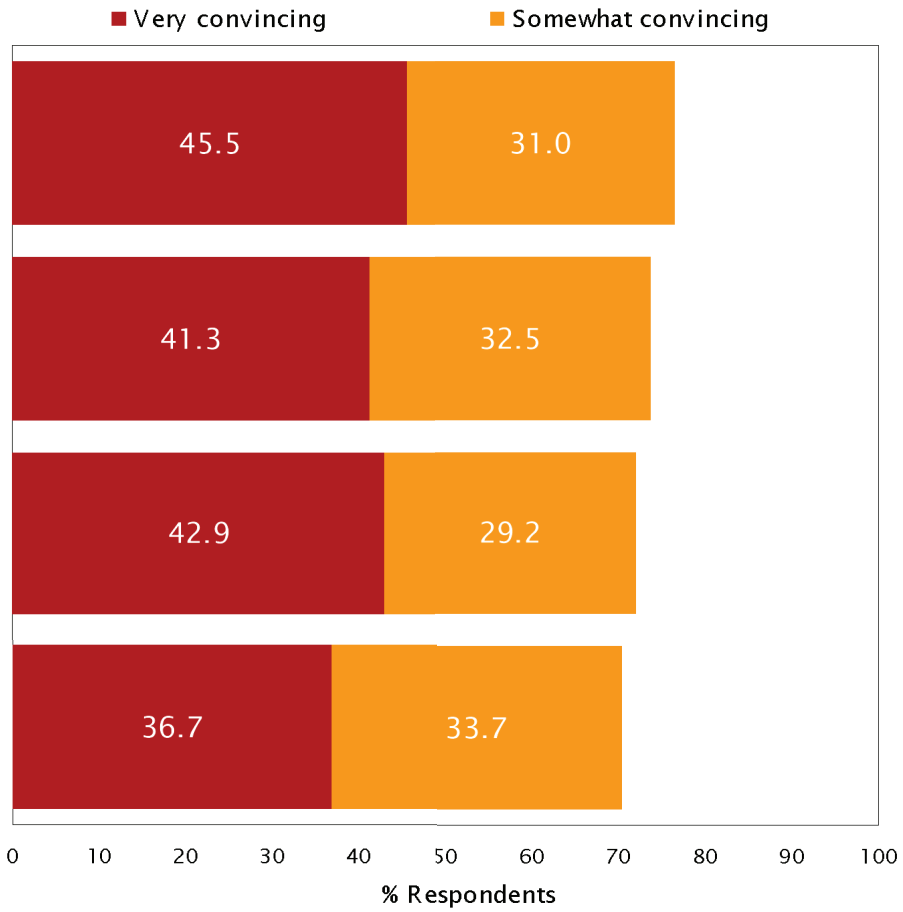
POSITIVE ARGUMENTS: FACILITIES



TRUENORTH RESEARCH

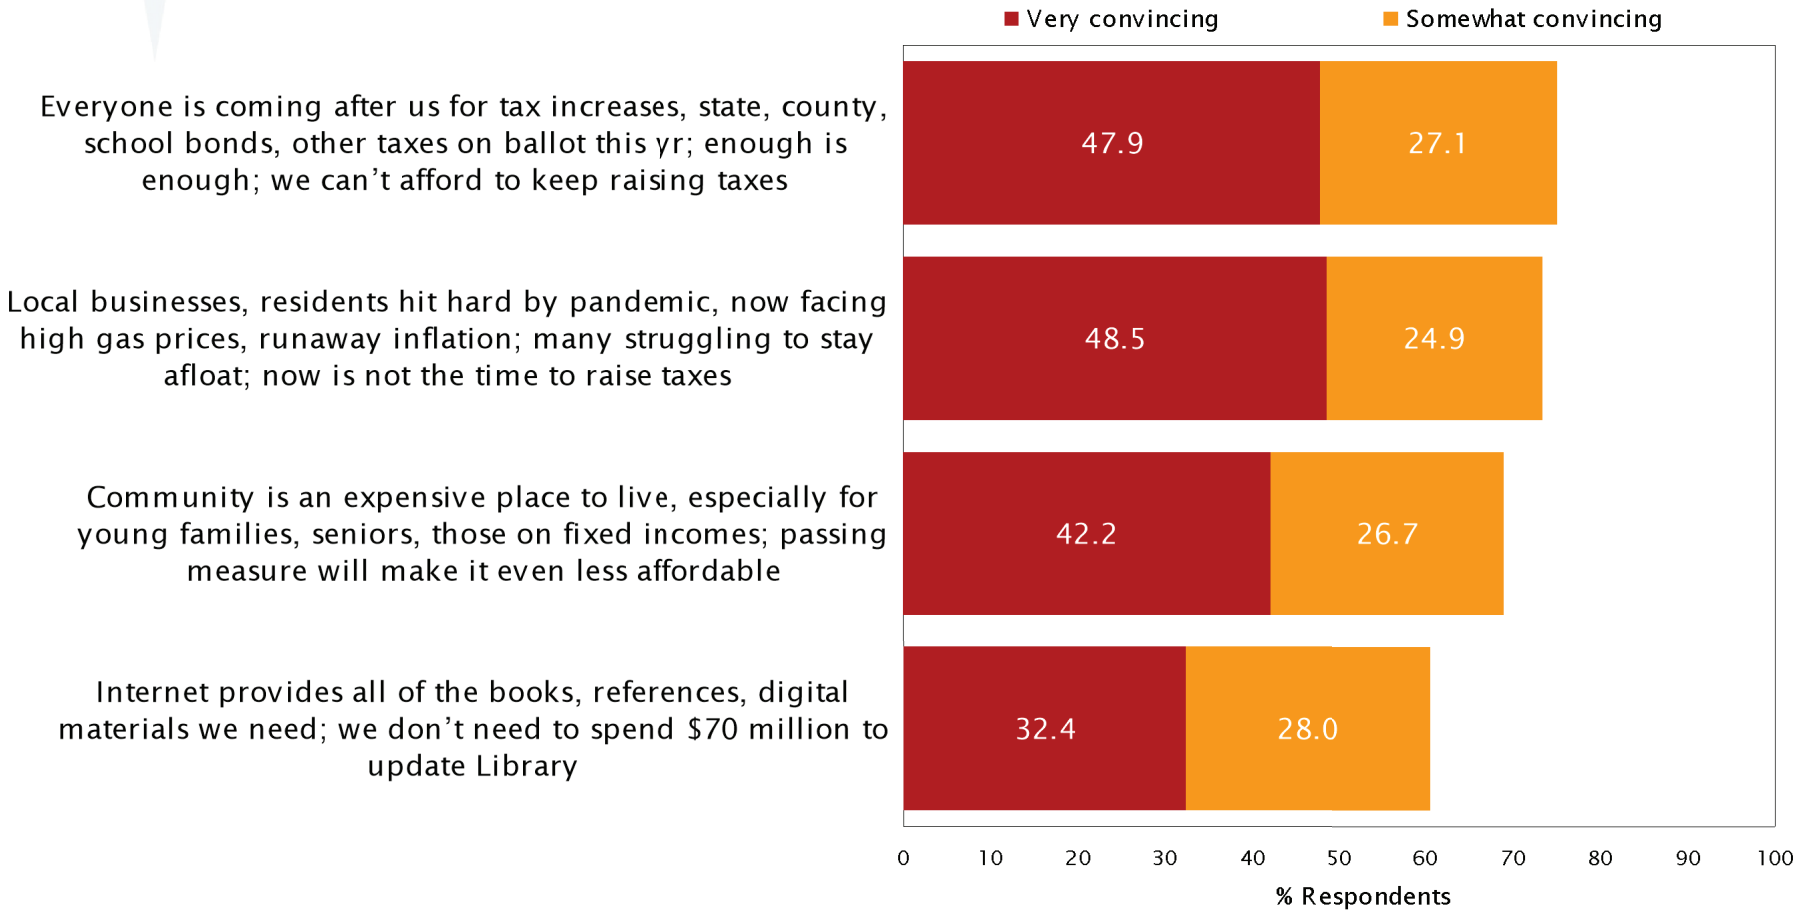
POSITIVE ARGUMENTS: LIBRARY

INTERIM BALLOT TEST



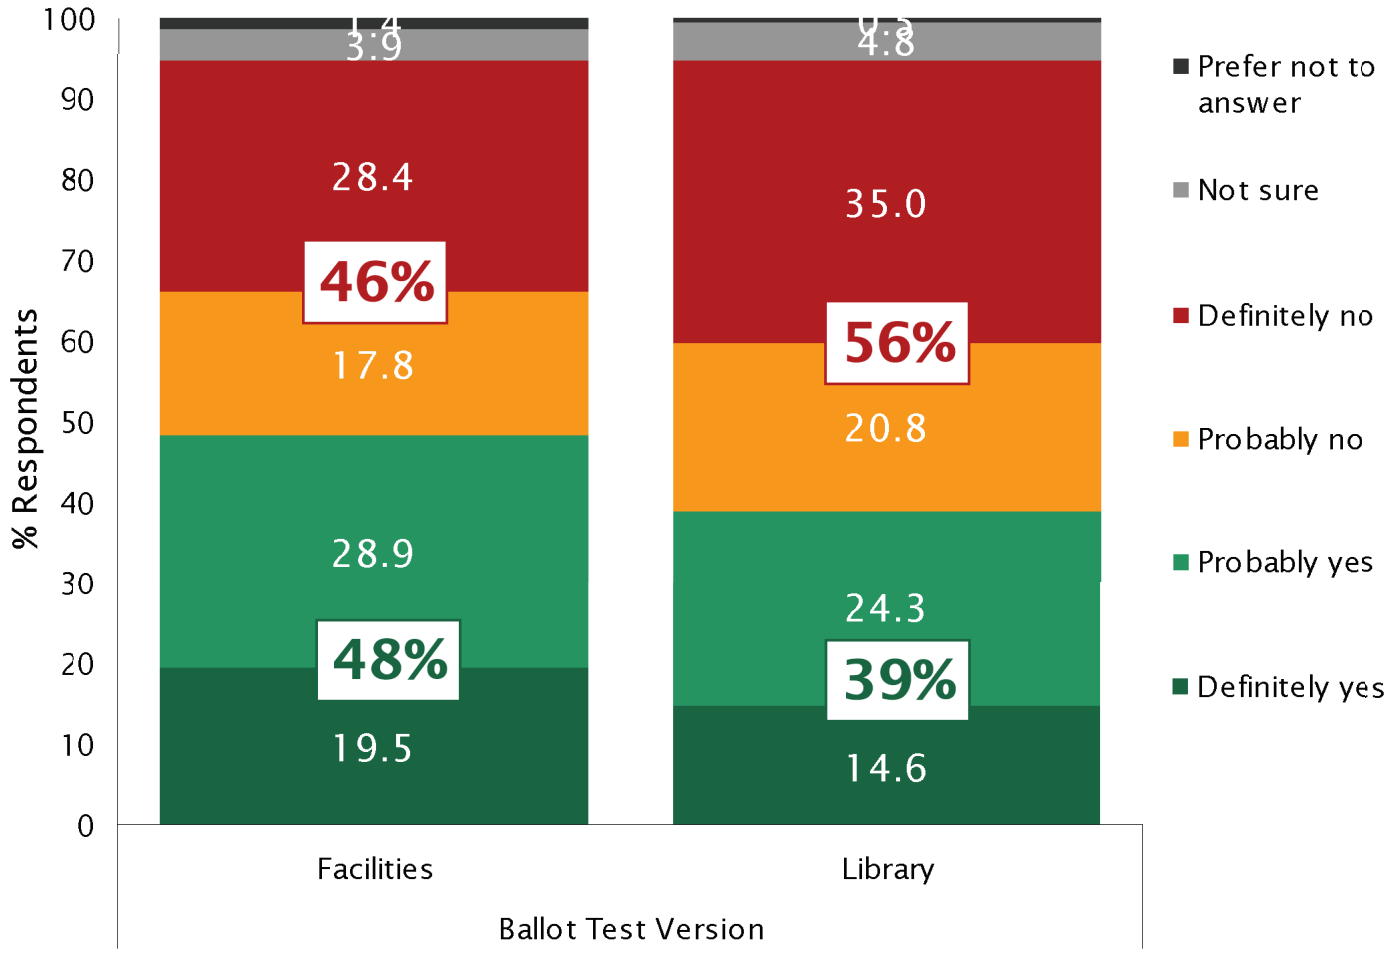
NEGATIVE ARGUMENTS: FACILITIES

City raised local sales tax five years ago, generated over $20M in extra revenue; should use that money to fix community facilities rather than asking voters for another tax increase



Everyone is coming after us for tax increases, state, county taxes, school bonds, other taxes on ballot this year; enough is enough; we can't afford to keep raising taxes

Local businesses, residents hit hard by pandemic, now facing high gas prices, runaway inflation; many struggling to stay afloat; now is not time to raise taxes



Community is an expensive place to live, especially for young families, seniors, those on fixed incomes; passing measure will make it even less affordable

NEGATIVE ARGUMENTS: LIBRARY

FINAL BALLOT TEST

KEY CONCLUSIONS

Does a bond appear to be feasible under current CA law? *No, but if Proposition 5 passes it is a game changer.*

Positive Signs

- Voters understand the need to repair/maintain facilities and infrastructure
- Popular projects and improvements
- Solid positive arguments

Challenges

- Two-thirds threshold under current law
- Tax rate sensitivity
- Opposition arguments resonate (-4%)
- Electoral climate: Hyper-partisanship, statewide initiatives, & overlapping measures.
- Potential for AB1416 impacts

STAFF REPORT

TO: Mayor and Council Members **DATE:** November 12, 2024

FROM: Public Works **DISTRICT(S):** 4

SUBJECT: **Approve an Agreement with IDS Group, Inc. for Architectural, Engineering and Consultant Services for the City Corporate Yard Improvement Project in an amount not to exceed $725,581**

RECOMMENDATION

That the City Council:

1. Award an Agreement for Contract Services to IDS Group, Inc., in the not to exceed amount of $725,581; and
2. Authorize the City Manager or his designee to execute the agreement, including any minimal and/or non-substantive changes.

STRATEGIC FOCUS AREAS

- Goal 4: Enhance and Modernize the Organization (EMO)
- Goal 5: Improve and Maintain the City's Infrastructure and Facilities (IMCIF)

EXECUTIVE SUMMARY

The City Corporate Yard at 1250 St. Vladimir St. serves as the primary storage facility for construction materials, equipment, and vehicles. It houses the Streets, Facilities, and Fleet Divisions, with plans to relocate the Parks, Trees, and Landscape Division to the site as well. A facility analysis completed by IDS Group, Inc. determined that the four existing buildings on the site are outdated and obsolete. The analysis concluded that demolishing the current structures and constructing four new buildings would be more cost-effective than attempting to renovate the existing ones and provide for a more efficient setup. Conceptual drawings, plans, reports, and cost estimates for the improvements are complete. The next required step is design refinement, construction documents and permit approvals, followed by the preparation and release of an RFP for construction and the actual construction completion. This item seeks approval to enter into an agreement with IDS Group, Inc. for services that will complete and assist with those next steps.

LEGISLATIVE HISTORY / PREVIOUS ACTIONS

On December 8, 2022, the Public Works Department released a Request for Proposal for the preparation of concept drawings, plans, and cost estimates for improvements of the City's Corporate Yard.

On May 31, 2023, a Notice to Proceed with a task order to include site evaluation, conceptual and schematic design for corporate yard improvements was issued to IDS Group, Inc. under the On Call Professional Service Agreement between the City of Glendora and IDS Group, Inc. dated 02/09/2022. The City is in receipt of the deliverables including the conceptual design, schematic design, and cost estimates.

DISCUSSION

Improvements for the City Corporate Yard (City Yard) are included within the City's current planned and budgeted 5-year Capital Improvement Program. Offices for the Streets, Fleet, and Facilities Maintenance are currently located at the City Yard. The improvements will provide needed improvements, increase efficiency, and provide additional offices to accommodate moving the Parks, Trees and Landscape

Division to the site.

On December 8, 2022, a Request for Proposal (RFP) was released to solicit professional services for a site analysis, conceptual plans for necessary improvements and a cost estimate. Three proposals were received in the amounts of $279,990, $353,310, and $595,439. The proposal received from IDS Group, Inc. (IDS), was in the lowest dollar amount. In addition, the City already had an On-Call Professional Service Agreement (On-Call Agreement) in place with IDS, however the On-Call Agreement was limited to a not to exceed total of $150,000 per calendar year. To expedite the start of the scope of work and utilize the in place On-Call Agreement, the City was able to modify the Scope of Work with IDS, while still including all the essential components (site analysis, conceptual and schematic design, and cost estimate) for a revised total amount of $142,677. A Notice to Proceed was then issued on May 31, 2023.

IDS performed a site analysis and determined that it would be most cost effective to demo the four existing buildings and start from scratch. This would include the construction of a new office building that includes compliant restroom facilities, break room and meeting space. Three additional shop buildings would be constructed to accommodate material storage, fleet maintenance, and working areas for the staff as described in the table below. While all existing buildings will be demolished, the existing gas pump stations will remain in place. In August of 2023, IDS provided the City with five proposed site plans; after review of the five site plans, Option 2 was selected as the preferred option. The selected option, included as Attachment B, includes four new buildings positioned in an "L" shape providing a neat and efficient traffic flow through the site. The four buildings together total 18,310 +/- square feet (SF), a considerable increase compared to the existing buildings.

BUILDING SUMMARY				
Building		**Existing Square Feet**	**Proposed Square Feet**	**Occupancy**
Building 1 Office	New Construction (2 Story)	1,203 +/-	7,500 +/-	Offices for Facility Maintenance, Streets, Parks, Trees, and Landscape
Building 2 Garage/ Fleet Maintenance	New Construction	4,346 +/-	5,510 +/-	Office for Fleet Maintenance, Garage for maintenance and repair, Carwash Station
Building 3 Sign & Tire Storage Workshops	New Construction	1,200 +/-	1,800 +/-	Paint/Sign Shop and Tire Storage
Building 4 Facility Shops	New Construction	1,521 +/-	3,500 +/-	Workshop space for wood and metal
Total:		8,270 +/-	**18,310 +/-**	

The next step in moving forward with completion of the City Yard improvement project is refinement of the schematic design for the selected option, CEQA analysis and preparation of final architectural, engineering and construction documents to apply for applicable permits.

With the On-Call Agreement still in place and with IDS's knowledge of the proposed site plan, the City requested a proposal from IDS to complete the next required steps. The proposal received is included in the proposed Agreement included as Attachment C, as Exhibit "A-1" and is summarized as follows:

Project Review and Schematic Design Refinement:	$ 71,836
Design Development:	$213,551
Construction Documents:	$325,168
Agency Review and Approvals:	$ 31,802
	$642,357

The timeline for the above noted scope of work is expected to be approximately eight months from the start date. The proposal also included an additional option for assistance with the RFP process for construction services, and assistance with construction oversight. The additional cost for these services is as follows:

Construction Bid Assistance:	$11,752
Construction Administration:	$71,472
	$83,224

Professional services for design and construction documents combined with assistance for the RFP process for construction and construction administration comes to $725,581.

Preparation of Design and Construction Documents:	$642,357
Construction BID Assistance and Construction Administration:	$ 83,224
Total:	**$725,581**

Staff recommends that the City Council award IDS with a Professional Service Agreement in the amount of $725,581 to facilitate the City Corporate Yard Improvement Project. While the formal procurement process was not undertaken, Glendora Municipal Code (GMC) Section 2.40.100 (Procurement of Services) provides the ability for the City to award the Agreement without a formal procurement process. Paragraph (12) of GMC Section 2.40.100 states that "When approved by the designee, the city requires services not subject to the PCC, which are of such a nature that suitable technical or performance specifications describing them are not readily available and cannot be developed in a timely manner to meet the needs of the city, in which case the designee shall be authorized to negotiate with any person or persons for the procurement thereof upon the price, terms and conditions deemed by the designee to be in the best interest of the city and in doing so may utilize informal procurement or negotiated procurement process." Furthermore, the requested services are not subject to the PCC's competitive bidding requirements. Under the Public Contract Code (PCC) § 4526, architectural and engineering (A&E) services are exempt from competitive bidding requirements. Instead of the traditional bidding process, the Qualifications-Based Selection (QBS) method is used for A&E services. This process evaluates firms based on their qualifications and expertise rather than cost.

It is of staff's opinion that as the originating firm for the conceptual design, IDS has the expertise and is the best qualified consultant for the required services. In addition, based on their proposal submitted in response to the initial RFP, IDS has demonstrated their ability to offer the best price and satisfactorily perform the City Corporate Yard Improvement Project.

The City Yard Improvements are budgeted in the City's 5-year Capital Improvement Program with $1,046,650 budgeted for the current FY 2025. A total of $9,187,485 (including the $1,046,650 budgeted in the FY 2024-25 Mid-Cyle Budget) was estimated for the completion of the project in the 5-Year Capital Improvement Program. Early cost estimates suggest completion of the project as proposed will come to approximately $12,609,486 (Attachment D), while this number exceeds the budgeted amount, consideration should be given to the notable increase in overall building size of the proposed project. Staff will make every effort to select design features and processes aimed at reducing the dollar amount as staff continues to refine the construction documents, incorporating value engineering principles where applicable. The building total of the existing site is approximately 8,270 SF whereas the new proposed buildings will total more than double that area at 18,310 SF. An appropriation of additional funding will be requested at the time an award of construction agreement is presented to the City Council for consideration.

FISCAL IMPACT

The Adopted FY 2024-25 Mid-Cycle Budget includes $1,046,650 for this project in Capital Projects Fund 301, project number 5625101.

City Yard Improvements Project Budget	**$1,046,650**
Preparation of Design and Construction Documents	$642,357

Construction BID Assistance and Construction Administration	$83,224
Requested expenditure including contingency	**$725,581**
Remaining available budget	*$321,069*

As previously noted, future costs associated with construction of the project (outside of engineering, plans, etc.) will need to be budgeted. At this time, no funding source exists for the completion of this project, and other major facility needs. As this project moves forward, staff will continue to work to identify funding for the construction phase of this and other City projects.

ENVIRONMENTAL DETERMINATION

The approval of an agreement for design and construction documents does not provide approval of the project; this item is therefore covered by the commonsense exemption under Section 15061(b)(3) of the California Environmental Quality Act.

SCHEMATIC DESIGN

PROJECT DESCRIPTION

The Glendora Corporate Yard Improvements project consists of site and building upgrades for the city's main yard for storage of construction material, equipment, and vehicles. The project plans for four new buildings replacing four older, obsolete buildings that will be demolished. The four new building comprise of 1) Office Building for both Facility and Maintenance staff in addition to Parks and Trees Department, 2) Fleet Maintenance Garage for maintenance and repair of county vehicles, 3) Sign Shop and Tire Storage Building and 4) Facility Workshops for both wood and metal. The Parks and Trees Department will move to the corporate yard and will require new permanent facilities for offices and equipment storage. The site will also include a Vehicle Washing Station with a pressure washer. The site will also have an emergency backup generator.

The site is located along the north side of what will be the LA Metro line with single-family residential surrounding on the east, north and west sides. The main entrance is off of a cul-de-sac from St. Vladamir Street from the east side with a possible secondary entrance off of Walnut St. from the north side. An existing access gate will remain that opens up to the rail right-of-way on the southeast corner of the site. Site improvements will include the repaving of approximately 159,149 SF of existing asphalt paving. Various subgrade utilities pass though the site including a large drainage channel (Big Dalton Wash) that bisects the site from north to south, along with domestic water, SS lines, and gas and power lines.

AGREEMENT FOR CONTRACT SERVICES

By and Between

CITY OF GLENDORA

and

IDS GROUP, INC.

AGREEMENT FOR CONTRACT SERVICES BETWEEN THE CITY OF GLENDORA AND IDS GROUP, INC.

THIS AGREEMENT FOR CONTRACT SERVICES (herein "Agreement") is made and entered into this 12th day of November, 2024 by and between the City of Glendora, a California municipal corporation ("City") and IDS GROUP, INC., a California corporation ("Consultant"). City and Consultant may be referred to, individually or collectively, as "Party" or "Parties."

RECITALS

A. City has sought, by issuance of a Request for Proposals or Invitation for Bids, the performance of the services defined and described particularly in Article 1 of this Agreement.

B. Consultant, following submission of a proposal or bid for the performance of the services defined and described particularly in Article 1 of this Agreement, was selected by the City to perform those services.

C. Pursuant to the City of Glendora's Municipal Code, City has authority to enter into and execute this Agreement.

D. The Parties desire to formalize the selection of Consultant for performance of those services defined and described particularly in Article 1 of this Agreement and desire that the terms of that performance be as particularly defined and described herein.

OPERATIVE PROVISIONS

NOW, THEREFORE, in consideration of the mutual promises and covenants made by the Parties and contained herein and other consideration, the value and adequacy of which are hereby acknowledged, the Parties agree as follows:

ARTICLE 1. SERVICES OF CONSULTANT

1.1 Scope of Services.

In compliance with all terms and conditions of this Agreement, the Consultant shall provide those services specified in the "Scope of Services" attached hereto as Exhibit "A" and incorporated herein by this reference, which may be referred to herein as the "services" or "work" hereunder. As a material inducement to the City entering into this Agreement, Consultant represents and warrants that it has the qualifications, experience, and facilities necessary to properly perform the services required under this Agreement in a thorough, competent, and professional manner, and is experienced in performing the work and services contemplated herein. Consultant shall at all times faithfully, competently and to the best of its ability, experience and talent, perform all services described herein. Consultant covenants that it shall follow the highest professional standards in performing the work and services required hereunder and that all materials will be both of good quality as well as fit for the purpose intended. For purposes of this Agreement, the phrase "highest professional standards" shall mean those

standards of practice recognized by one or more first-class firms performing similar work under similar circumstances.

1.2 Consultant's Proposal.

The Scope of Services shall include the Consultant's scope of work or bid which shall be incorporated herein by this reference as though fully set forth herein. In the event of any inconsistency between the terms of such proposal and this Agreement, the terms of this Agreement shall govern.

1.3 Compliance with Law.

Consultant shall keep itself informed concerning, and shall render all services hereunder in accordance with, all ordinances, resolutions, statutes, rules, and regulations of the City and any Federal, State or local governmental entity having jurisdiction in effect at the time service is rendered.

1.4 California Labor Law.

If the Scope of Services includes any "public work" or "maintenance work," as those terms are defined in California Labor Code section 1720 *et seq.* and California Code of Regulations, Title 8, Section 16000 *et seq.*, and if the total compensation is $1,000 or more, Consultant shall pay prevailing wages for such work and comply with the requirements in California Labor Code section 1770 *et seq.* and 1810 *et seq*., and all other applicable laws, including the following requirements:

(a) Public Work. The Parties acknowledge that some or all of the work to be performed under this Agreement is a "public work" as defined in Labor Code Section 1720 and that this Agreement is therefore subject to the requirements of Division 2, Part 7, Chapter 1 (commencing with Section 1720) of the California Labor Code relating to public works contracts and the rules and regulations established by the Department of Industrial Relations ("DIR") implementing such statutes. The work performed under this Agreement is subject to compliance monitoring and enforcement by the DIR. Consultant shall post job site notices, as prescribed by regulation.

(b) Prevailing Wages. Consultant shall pay prevailing wages to the extent required by Labor Code Section 1771. Pursuant to Labor Code Section 1773.2, copies of the prevailing rate of per diem wages are on file at City Hall and will be made available to any interested party on request. By initiating any work under this Agreement, Consultant acknowledges receipt of a copy of the Department of Industrial Relations (DIR) determination of the prevailing rate of per diem wages, and Consultant shall post a copy of the same at each job site where work is performed under this Agreement.

(c) Penalty for Failure to Pay Prevailing Wages. Consultant shall comply with and be bound by the provisions of Labor Code Sections 1774 and 1775 concerning the payment of prevailing rates of wages to workers and the penalties for failure to pay prevailing wages. The Consultant shall, as a penalty to the City, forfeit two hundred dollars ($200) for each calendar day, or portion thereof, for each worker paid less than the prevailing rates as determined by the

DIR for the work or craft in which the worker is employed for any public work done pursuant to this Agreement by Consultant or by any subcontractor.

(d) Payroll Records. Consultant shall comply with and be bound by the provisions of Labor Code Section 1776, which requires Consultant and each subconsultant to: keep accurate payroll records and verify such records in writing under penalty of perjury, as specified in Section 1776; certify and make such payroll records available for inspection as provided by Section 1776; and inform the City of the location of the records.

(e) Apprentices. Consultant shall comply with and be bound by the provisions of Labor Code Sections 1777.5, 1777.6, and 1777.7 and California Code of Regulations Title 8, Section 200 *et seq.* concerning the employment of apprentices on public works projects. Consultant shall be responsible for compliance with these aforementioned Sections for all apprenticeable occupations. Prior to commencing work under this Agreement, Consultant shall provide City with a copy of the information submitted to any applicable apprenticeship program. Within sixty (60) days after concluding work pursuant to this Agreement, Consultant and each of its subconsultants shall submit to the City a verified statement of the journeyman and apprentice hours performed under this Agreement.

(f) Eight-Hour Work Day. Consultant acknowledges that eight (8) hours labor constitutes a legal day's work. Consultant shall comply with and be bound by Labor Code Section 1810.

(g) Penalties for Excess Hours. Consultant shall comply with and be bound by the provisions of Labor Code Section 1813 concerning penalties for workers who work excess hours. The Consultant shall, as a penalty to the City, forfeit twenty-five dollars ($25) for each worker employed in the performance of this Agreement by the Consultant or by any subcontractor for each calendar day during which such worker is required or permitted to work more than eight (8) hours in any one calendar day and forty (40) hours in any one calendar week in violation of the provisions of Division 2, Part 7, Chapter 1, Article 3 of the Labor Code. Pursuant to Labor Code section 1815, work performed by employees of Consultant in excess of eight (8) hours per day, and forty (40) hours during any one week shall be permitted upon public work upon compensation for all hours worked in excess of 8 hours per day at not less than one and one-half (1½) times the basic rate of pay.

(h) Workers' Compensation. California Labor Code Sections 1860 and 3700 provide that every employer will be required to secure the payment of compensation to its employees if it has employees. In accordance with the provisions of California Labor Code Section 1861, Consultant certifies as follows:

> "I am aware of the provisions of Section 3700 of the Labor Code which require every employer to be insured against liability for workers' compensation or to undertake self-insurance in accordance with the provisions of that code, and I will comply with such provisions before commencing the performance of the work of this contract."

Consultant's Authorized Initials _____
Said Hilmy, Principal

(i) Consultant's Responsibility for Subcontractors. For every subcontractor who will perform work under this Agreement, Consultant shall be responsible for such subcontractor's compliance with Division 2, Part 7, Chapter 1 (commencing with Section 1720) of the California Labor Code, and shall make such compliance a requirement in any contract with any subcontractor for work under this Agreement. Consultant shall be required to take all actions necessary to enforce such contractual provisions and ensure subcontractor's compliance, including without limitation, conducting a review of the certified payroll records of the subcontractor on a periodic basis or upon becoming aware of the failure of the subcontractor to pay his or her workers the specified prevailing rate of wages. Consultant shall diligently take corrective action to halt or rectify any such failure by any subcontractor.

1.5 Licenses, Permits, Fees and Assessments.

Consultant shall obtain at its sole cost and expense such licenses, permits and approvals as may be required by law for the performance of the services required by this Agreement. Consultant shall have the sole obligation to pay for any fees, assessments and taxes, plus applicable penalties and interest, which may be imposed by law and arise from or are necessary for the Consultant's performance of the services required by this Agreement, and shall indemnify, defend and hold harmless City, its officers, employees or agents of City, against any such fees, assessments, taxes, penalties or interest levied, assessed or imposed against City hereunder.

1.6 Familiarity with Work.

By executing this Agreement, Consultant warrants that Consultant (i) has thoroughly investigated and considered the scope of services to be performed, (ii) has carefully considered how the services should be performed, and (iii) fully understands the facilities, difficulties and restrictions attending performance of the services under this Agreement. If the services involve work upon any site, Consultant warrants that Consultant has or will investigate the site and is or will be fully acquainted with the conditions there existing, prior to commencement of services hereunder. Should the Consultant discover any latent or unknown conditions, which will materially affect the performance of the services hereunder, Consultant shall immediately inform the City of such fact and shall not proceed except at Consultant's risk until written instructions are received from the Contract Officer.

1.7 Care of Work.

The Consultant shall adopt reasonable methods during the life of the Agreement to furnish continuous protection to the work, and the equipment, materials, papers, documents, plans, studies and/or other components thereof to prevent losses or damages, and shall be responsible for all such damages, to persons or property, until acceptance of the work by City, except such losses or damages as may be caused by City's own negligence.

1.8 Further Responsibilities of Parties.

Both Parties agree to use reasonable care and diligence to perform their respective obligations under this Agreement. Both Parties agree to act in good faith to execute all instruments, prepare all documents and take all actions as may be reasonably necessary to carry out the purposes of this Agreement. Unless hereafter specified, neither party shall be responsible for the service of the other.

1.9 Additional Services.

City shall have the right at any time during the performance of the services, without invalidating this Agreement, to order extra work beyond that specified in the Scope of Services or make changes by altering, adding to or deducting from said work. No such extra work may be undertaken unless a written order is first given by the Contract Officer to the Consultant, incorporating therein any adjustment in (i) the Contract Sum for the actual costs of the extra work, and/or (ii) the time to perform this Agreement, which said adjustments are subject to the written approval of the Consultant. Any increase in compensation of up to ten percent (10%) of the Contract Sum or $50,000, whichever is less; or, in the time to perform of up to one hundred eighty (180) days, may be approved by the Contract Officer. Any greater increases, taken either separately or cumulatively, must be approved by the City Council. It is expressly understood by Consultant that the provisions of this Section shall not apply to services specifically set forth in the Scope of Services. Consultant hereby acknowledges that it accepts the risk that the services to be provided pursuant to the Scope of Services may be more costly or time consuming than Consultant anticipates and that Consultant shall not be entitled to additional compensation therefor. City may in its sole and absolute discretion have similar work done by other Consultants. No claims for an increase in the Contract Sum or time for performance shall be valid unless the procedures established in this Section are followed.

1.10 Special Requirements.

Additional terms and conditions of this Agreement, if any, which are made a part hereof are set forth in the "Special Requirements" attached hereto as Exhibit "B" and incorporated herein by this reference. In the event of a conflict between the provisions of Exhibit "B" and any other provisions of this Agreement, the provisions of Exhibit "B" shall govern.

ARTICLE 2. COMPENSATION AND METHOD OF PAYMENT.

2.1 Contract Sum.

Subject to any limitations set forth in this Agreement, City agrees to pay Consultant the amounts specified in the "Schedule of Compensation" attached hereto as Exhibit "C" and incorporated herein by this reference. The total compensation, including reimbursement for actual expenses, shall not exceed $725,581 (Seven Hundred Twenty Five Thousand, Five Hundred Eighty One Dollars) (the "Contract Sum"), unless additional compensation is approved pursuant to Section 1.9.

2.2 Method of Compensation.

The method of compensation may include: (i) a lump sum payment upon completion; (ii) payment in accordance with specified tasks or the percentage of completion of the services, less contract retention; (iii) payment for time and materials based upon the Consultant's rates as specified in the Schedule of Compensation, provided that (a) time estimates are provided for the performance of sub tasks, (b) contract retention is maintained, and (c) the Contract Sum is not exceeded; or (iv) such other methods as may be specified in the Schedule of Compensation.

2.3 Reimbursable Expenses.

Compensation may include reimbursement for actual and necessary expenditures for reproduction costs, telephone expenses, and travel expenses approved by the Contract Officer in advance, or actual subcontractor expenses of an approved subcontractor pursuant to Section 4.5, and only if specified in the Schedule of Compensation. The Contract Sum shall include the attendance of Consultant at all project meetings reasonably deemed necessary by the City. Coordination of the performance of the work with City is a critical component of the services. If Consultant is required to attend additional meetings to facilitate such coordination, Consultant shall not be entitled to any additional compensation for attending said meetings.

2.4 Invoices.

Each month Consultant shall furnish to City an original invoice for all work performed and expenses incurred during the preceding month in a form approved by City's Director of Finance. By submitting an invoice for payment under this Agreement, Consultant is certifying compliance with all provisions of this Agreement. The invoice shall contain all information specified in Exhibit "C", and shall detail charges for all necessary and actual expenses by the following categories: labor (by sub-category), travel, materials, equipment, supplies, and sub-contractor contracts. Sub-contractor charges shall also be detailed by such categories. Consultant shall not invoice City for any duplicate services performed by more than one person.

City shall independently review each invoice submitted by the Consultant to determine whether the work performed and expenses incurred are in compliance with the provisions of this Agreement. Except as to any charges for work performed or expenses incurred by Consultant which are disputed by City, or as provided in Section 7.3, City will use its best efforts to cause Consultant to be paid within forty-five (45) days of receipt of Consultant's correct and undisputed invoice; however, Consultant acknowledges and agrees that due to City warrant run procedures, the City cannot guarantee that payment will occur within this time period. In the event any charges or expenses are disputed by City, the original invoice shall be returned by City to Consultant for correction and resubmission. Review and payment by City for any invoice provided by the Consultant shall not constitute a waiver of any rights or remedies provided herein or any applicable law.

2.5 Waiver.

Payment to Consultant for work performed pursuant to this Agreement shall not be deemed to waive any defects in work performed by Consultant.

ARTICLE 3. PERFORMANCE SCHEDULE

3.1 Time of Essence.

Time is of the essence in the performance of this Agreement.

3.2 Schedule of Performance.

Consultant shall commence the services pursuant to this Agreement upon receipt of a written notice to proceed and shall perform all services within the time period(s) established in the "Schedule of Performance" attached hereto as Exhibit "D" and incorporated herein by this reference. When requested by the Consultant, extensions to the time period(s) specified in the Schedule of Performance may be approved in writing by the Contract Officer but not exceeding one hundred eighty (180) days cumulatively.

3.3 Force Majeure.

The time period(s) specified in the Schedule of Performance for performance of the services rendered pursuant to this Agreement shall be extended because of any delays due to unforeseeable causes beyond the control and without the fault or negligence of the Consultant, including, but not restricted to, acts of God or of the public enemy, unusually severe weather, fires, earthquakes, floods, epidemics, quarantine restrictions, riots, strikes, freight embargoes, wars, litigation, and/or acts of any governmental agency, including the City, if the Consultant shall within ten (10) days of the commencement of such delay notify the Contract Officer in writing of the causes of the delay. The Contract Officer shall ascertain the facts and the extent of delay, and extend the time for performing the services for the period of the enforced delay when and if in the judgment of the Contract Officer such delay is justified. The Contract Officer's determination shall be final and conclusive upon the Parties to this Agreement. In no event shall Consultant be entitled to recover damages against the City for any delay in the performance of this Agreement, however caused, Consultant's sole remedy being extension of this Agreement pursuant to this Section.

3.4 Term.

Unless earlier terminated in accordance with Article 7 of this Agreement, this Agreement shall continue in full force and effect until completion of the services but not exceeding three years from the date hereof (the "Term"), except as otherwise provided in the Schedule of Performance (Exhibit "D"). The City Manager may, at his/her sole discretion, extend the Term for two additional one-year terms.

ARTICLE 4. COORDINATION OF WORK

4.1 Representatives and Personnel of Consultant.

The following principals of Consultant ("Principals") are hereby designated as being the principals and representatives of Consultant authorized to act in its behalf with respect to the work specified herein and make all decisions in connection therewith:

Said Hilmy, Principal

Rami Elhassan, Principal

It is expressly understood that the experience, knowledge, capability and reputation of the foregoing principals were a substantial inducement for City to enter into this Agreement. Therefore, the foregoing principals shall be responsible during the term of this Agreement for directing all activities of Consultant and devoting sufficient time to personally supervise the services hereunder. All personnel of Consultant, and any authorized agents, shall at all times be under the exclusive direction and control of the Principals. For purposes of this Agreement, the foregoing Principals may not be replaced nor may their responsibilities be substantially reduced by Consultant without the express written approval of City. Additionally, Consultant shall utilize only competent personnel to perform services pursuant to this Agreement. Consultant shall make every reasonable effort to maintain the stability and continuity of Consultant's staff and subcontractors, if any, assigned to perform the services required under this Agreement. Consultant shall notify City of any changes in Consultant's staff and subcontractors, if any, assigned to perform the services required under this Agreement, prior to and during any such performance.

4.2 Status of Consultant.

Consultant shall have no authority to bind City in any manner, or to incur any obligation, debt or liability of any kind on behalf of or against City, whether by contract or otherwise, unless such authority is expressly conferred under this Agreement or is otherwise expressly conferred in writing by City. Consultant shall not at any time or in any manner represent that Consultant or any of Consultant's officers, employees, or agents are in any manner officials, officers, employees or agents of City. Neither Consultant, nor any of Consultant's officers, employees or agents, shall obtain any rights to retirement, health care or any other benefits which may otherwise accrue to City's employees. Consultant expressly waives any claim Consultant may have to any such rights.

4.3 Contract Officer.

The Contract Officer shall be the Assistant Public Works Director, or such person as may be designated by the City Manager. It shall be the Consultant's responsibility to assure that the Contract Officer is kept informed of the progress of the performance of the services and the Consultant shall refer any decisions which must be made by City to the Contract Officer. Unless otherwise specified herein, any approval of City required hereunder shall mean the approval of the Contract Officer. The Contract Officer shall have authority, if specified in writing by the City Manager, to sign all documents on behalf of the City required hereunder to carry out the terms of this Agreement.

4.4 Independent Consultant.

Neither the City nor any of its employees shall have any control over the manner, mode or means by which Consultant, its agents or employees, perform the services required herein,

except as otherwise set forth herein. City shall have no voice in the selection, discharge, supervision or control of Consultant's employees, servants, representatives or agents, or in fixing their number, compensation or hours of service. Consultant shall perform all services required herein as an independent contractor of City and shall remain at all times as to City a wholly independent contractor with only such obligations as are consistent with that role. Consultant shall not at any time or in any manner represent that it or any of its agents or employees are agents or employees of City. City shall not in any way or for any purpose become or be deemed to be a partner of Consultant in its business or otherwise or a joint venturer or a member of any joint enterprise with Consultant.

4.5 Prohibition Against Subcontracting or Assignment.

The experience, knowledge, capability and reputation of Consultant, its principals and employees were a substantial inducement for the City to enter into this Agreement. Therefore, Consultant shall not contract with any other entity to perform in whole or in part the services required hereunder without the express written approval of the City. In addition, neither this Agreement nor any interest herein may be transferred, assigned, conveyed, hypothecated or encumbered voluntarily or by operation of law, whether for the benefit of creditors or otherwise, without the prior written approval of City. Transfers restricted hereunder shall include the transfer to any person or group of persons acting in concert of more than twenty five percent (25%) of the present ownership and/or control of Consultant, taking all transfers into account on a cumulative basis. In the event of any such unapproved transfer, including any bankruptcy proceeding, this Agreement shall be void. No approved transfer shall release the Consultant or any surety of Consultant of any liability hereunder without the express consent of City.

ARTICLE 5. INSURANCE AND INDEMNIFICATION

5.1 Insurance Coverages.

Without limiting Consultant's indemnification of City, and prior to commencement of any services under this Agreement, Consultant shall obtain, provide and maintain at its own expense during the ~~term~~ Term of this Agreement, policies of insurance of the type and amounts described below and in a form satisfactory to City.

(a) General liability insurance. Consultant shall maintain commercial general liability insurance with coverage at least as broad as Insurance Services Office form CG 00 01, in an amount not less than $1,000,000 per occurrence, $2,000,000 general aggregate, for bodily injury, personal injury, and property damage. The policy must include contractual liability that has not been amended. Any endorsement restricting standard ISO "insured contract" language will not be accepted.

(b) Automobile liability insurance. Consultant shall maintain automobile insurance at least as broad as Insurance Services Office form CA 00 01 covering bodily injury and property damage for all activities of the Consultant arising out of or in connection with the services to be performed under this Agreement, including coverage for any owned, hired, non-owned or rented vehicles, in an amount not less than $1,000,000 combined single limit for each accident.

(c) Professional liability (errors & omissions) insurance. Consultant shall maintain professional liability insurance that covers the Services to be performed in connection with this Agreement, in the minimum amount of $1,000,000 per claim and in the aggregate. Any policy inception date, continuity date, or retroactive date must be before the effective date of this Agreement and Consultant agrees to maintain continuous coverage through a period no less than three (3) years after completion of the services required by this Agreement.

(d) Workers' compensation insurance. Consultant shall maintain Workers' Compensation Insurance (Statutory Limits) and Employer's Liability Insurance (with limits of at least $1,000,000).

(e) Subcontractors. Consultant shall include all subcontractors as insureds under its policies or shall furnish separate certificates and certified endorsements for each subcontractor. All coverages for subcontractors shall include all of the requirements stated herein.

(f) Additional Insurance. Policies of such other insurance, as may be required in the Special Requirements in Exhibit "B".

5.2 General Insurance Requirements.

(a) Proof of insurance. Consultant shall provide certificates of insurance to City as evidence of the insurance coverage required herein, along with a waiver of subrogation endorsement for workers' compensation. Insurance certificates and endorsements must be approved by City's Risk Manager prior to commencement of performance. Current certification of insurance shall be kept on file with City at all times during the term of this Agreement. City reserves the right to require complete, certified copies of all required insurance policies, at any time.

(b) Duration of coverage. Consultant shall procure and maintain for the duration of this Agreement insurance against claims for injuries to persons or damages to property, which may arise from or in connection with the performance of the Services hereunder by Consultant, its agents, representatives, employees or subconsultants.

(c) Primary/noncontributing. Coverage provided by Consultant shall be primary and any insurance or self-insurance procured or maintained by City shall not be required to contribute with it. The limits of insurance required herein may be satisfied by a combination of primary and umbrella or excess insurance. Any umbrella or excess insurance shall contain or be endorsed to contain a provision that such coverage shall also apply on a primary and non-contributory basis for the benefit of City before the City's own insurance or self-insurance shall be called upon to protect it as a named insured.

(d) City's rights of enforcement. In the event any policy of insurance required under this Agreement does not comply with these specifications or is canceled and not replaced, City has the right but not the duty to obtain the insurance it deems necessary and any premium paid by City will be promptly reimbursed by Consultant or City will withhold amounts sufficient to pay premium from Consultant payments. In the alternative, City may cancel this Agreement.

(e) Acceptable insurers. All insurance policies shall be issued by an insurance company currently authorized by the Insurance Commissioner to transact business of insurance or that is on the List of Approved Surplus Line Insurers in the State of California, with an assigned policyholders' Rating of A- (or higher) and Financial Size Category Class VI (or larger) in accordance with the latest edition of Best's Key Rating Guide, unless otherwise approved by the City's Risk Manager.

(f) Waiver of subrogation. All insurance coverage maintained or procured pursuant to this agreement shall be endorsed to waive subrogation against City, its elected or appointed officers, agents, officials, employees and volunteers or shall specifically allow Consultant or others providing insurance evidence in compliance with these specifications to waive their right of recovery prior to a loss. Consultant hereby waives its own right of recovery against City, and shall require similar written express waivers and insurance clauses from each of its subconsultants.

(g) Enforcement of contract provisions (non-estoppel). Consultant acknowledges and agrees that any actual or alleged failure on the part of the City to inform Consultant of non-compliance with any requirement imposes no additional obligations on the City nor does it waive any rights hereunder.

(h) Requirements not limiting. Requirements of specific coverage features or limits contained in this section are not intended as a limitation on coverage, limits or other requirements, or a waiver of any coverage normally provided by any insurance. Specific reference to a given coverage feature is for purposes of clarification only as it pertains to a given issue and is not intended by any party or insured to be all inclusive, or to the exclusion of other coverage, or a waiver of any type. If the Consultant maintains higher limits than the minimums shown above, the City requires and shall be entitled to coverage for the higher limits maintained by the Consultant. Any available insurance proceeds in excess of the specified minimum limits of insurance and coverage shall be available to the City.

(i) Notice of cancellation. Consultant agrees to oblige its insurance agent or broker and insurers to provide to City with a thirty (30) day notice of cancellation (except for nonpayment for which a ten (10) day notice is required) or nonrenewal of coverage for each required coverage.

(j) Additional insured status. General liability policies shall provide or be endorsed to provide that City and its officers, officials, employees, and agents, and volunteers shall be additional insureds under such policies. This provision shall also apply to any excess/umbrella liability policies.

(k) Prohibition of undisclosed coverage limitations. None of the coverages required herein will be in compliance with these requirements if they include any limiting endorsement of any kind that has not been first submitted to City and approved of in writing.

(l) Separation of insureds. A severability of interests provision must apply for all additional insureds ensuring that Consultant's insurance shall apply separately to each insured

against whom claim is made or suit is brought, except with respect to the insurer's limits of liability. The policy(ies) shall not contain any cross-liability exclusions.

(m) Pass through clause. Consultant agrees to ensure that its subconsultants, subcontractors, and any other party involved with the services who is brought onto or involved in the services by Consultant, provide the same minimum insurance coverage and endorsements required of Consultant. Consultant agrees to monitor and review all such coverage and assumes all responsibility for ensuring that such coverage is provided in conformity with the requirements of this section. Consultant agrees that upon request, all agreements with consultants, subcontractors, and others engaged in the services will be submitted to City for review.

(n) City's right to revise specifications. The City reserves the right at any time during the Term of this Agreement to change the amounts and types of insurance required by giving the Consultant ninety (90) days advance written notice of such change. If such change results in substantial additional cost to the Consultant, the City and Consultant may renegotiate Consultant's compensation.

(o) Self-insured retentions. Any self-insured retentions must be declared to and approved by City. City reserves the right to require that self-insured retentions be eliminated, lowered, or replaced by a deductible. Self-insurance will not be considered to comply with these specifications unless approved by City.

(p) Timely notice of claims. Consultant shall give City prompt and timely notice of claims made or suits instituted that arise out of or result from Consultant's performance under this Agreement, and that involve or may involve coverage under any of the required liability policies.

(q) Additional insurance. Consultant shall also procure and maintain, at its own cost and expense, any additional kinds of insurance, which in its own judgment may be necessary for its proper protection and prosecution of the work.

5.3 Indemnification.

To the full extent permitted by law, Consultant agrees to indemnify, defend and hold harmless the City, its officers, employees and agents ("Indemnified Parties") against, and will hold and save them and each of them harmless from, any and all actions, either judicial, administrative, arbitration or regulatory claims, damages to persons or property, losses, costs, penalties, obligations, errors, omissions or liabilities whether actual or threatened (herein "claims or liabilities") that may be asserted or claimed by any person, firm or entity arising out of or in connection with the negligent performance of the work, operations or activities provided herein of Consultant, its officers, employees, agents, subcontractors, or invitees, or any individual or entity for which Consultant is legally liable ("indemnitors"), or arising from Consultant's or indemnitors' reckless or willful misconduct, or arising from Consultant's or indemnitors' negligent performance of or failure to perform any term, provision, covenant or condition of this Agreement, and in connection therewith:

(a) Consultant will defend any action or actions filed in connection with any of said claims or liabilities and will pay all costs and expenses, including legal costs and attorneys' fees incurred in connection therewith;

(b) Consultant will promptly pay any judgment rendered against the City, its officers, agents or employees for any such claims or liabilities arising out of or in connection with the negligent performance of or failure to perform such work, operations or activities of Consultant hereunder; and Consultant agrees to save and hold the City, its officers, agents, and employees harmless therefrom;

(c) In the event the City, its officers, agents or employees is made a party to any action or proceeding filed or prosecuted against Consultant for such damages or other claims arising out of or in connection with the negligent performance of or failure to perform the work, operation or activities of Consultant hereunder, Consultant agrees to pay to the City, its officers, agents or employees, any and all costs and expenses incurred by the City, its officers, agents or employees in such action or proceeding, including but not limited to, legal costs and attorneys' fees.

Consultant shall incorporate similar indemnity agreements with its subcontractors and if it fails to do so Consultant shall be fully responsible to indemnify City hereunder therefore, and failure of City to monitor compliance with these provisions shall not be a waiver hereof. This indemnification includes claims or liabilities arising from any negligent or wrongful act, error or omission, or reckless or willful misconduct of Consultant in the performance of professional services hereunder. The provisions of this Section do not apply to claims or liabilities occurring as a result of City's sole negligence or willful acts or omissions, but, to the fullest extent permitted by law, shall apply to claims and liabilities resulting in part from City's negligence, except that design professionals' indemnity hereunder shall be limited to claims and liabilities arising out of the negligence, recklessness or willful misconduct of the design professional. The indemnity obligation shall be binding on successors and assigns of Consultant and shall survive termination of this Agreement.

ARTICLE 6. RECORDS, REPORTS, AND RELEASE OF INFORMATION

6.1 Records.

Consultant shall keep, and require subcontractors to keep, such ledgers, books of accounts, invoices, vouchers, canceled checks, reports, studies or other documents relating to the disbursements charged to City and services performed hereunder (the "books and records"), as shall be necessary to perform the services required by this Agreement and enable the Contract Officer to evaluate the performance of such services. Any and all such documents shall be maintained in accordance with generally accepted accounting principles and shall be complete and detailed. The Contract Officer shall have full and free access to such books and records at all times during normal business hours of City, including the right to inspect, copy, audit and make records and transcripts from such records. Such records shall be maintained for a period of three (3) years following completion of the services hereunder, and the City shall have access to such records in the event any audit is required. In the event of dissolution of Consultant's business, custody of the books and records may be given to City, and access shall be provided by

Consultant's successor in interest. Notwithstanding the above, the Consultant shall fully cooperate with the City in providing access to the books and records if a public records request is made and disclosure is required by law including but not limited to the California Public Records Act.

6.2 Reports.

Consultant shall periodically prepare and submit to the Contract Officer such reports concerning the performance of the services required by this Agreement as the Contract Officer shall require. Consultant hereby acknowledges that the City is greatly concerned about the cost of work and services to be performed pursuant to this Agreement. For this reason, Consultant agrees that if Consultant becomes aware of any facts, circumstances, techniques, or events that may or will materially increase or decrease the cost of the work or services contemplated herein or, if Consultant is providing design services, the cost of the project being designed, Consultant shall promptly notify the Contract Officer of said fact, circumstance, technique or event and the estimated increased or decreased cost related thereto and, if Consultant is providing design services, the estimated increased or decreased cost estimate for the project being designed.

6.3 Ownership of Documents.

All drawings, specifications, maps, designs, photographs, studies, surveys, data, notes, computer files, reports, records, documents and other materials (the "documents and materials") prepared by Consultant, its employees, subcontractors and agents in the performance of this Agreement shall be the property of City and shall be delivered to City upon request of the Contract Officer or upon the termination of this Agreement, and Consultant shall have no claim for further employment or additional compensation as a result of the exercise by City of its full rights of ownership use, reuse, or assignment of the documents and materials hereunder. Any use, reuse or assignment of such completed documents for other projects and/or use of uncompleted documents without specific written authorization by the Consultant will be at the City's sole risk and without liability to Consultant, and Consultant's guarantee and warranties shall not extend to such use, reuse or assignment. Consultant may retain copies of such documents for its own use. Consultant shall have the right to use the concepts embodied therein. All subcontractors shall provide for assignment to City of any documents or materials prepared by them, and in the event Consultant fails to secure such assignment, Consultant shall indemnify City for all damages resulting therefrom. Moreover, Consultant with respect to any documents and materials that may qualify as "works made for hire" as defined in 17 U.S.C. § 101, such documents and materials are hereby deemed "works made for hire" for the City.

6.4 Confidentiality and Release of Information.

(a) All information gained or work product produced by Consultant in performance of this Agreement shall be considered confidential, unless such information is in the public domain or already known to Consultant. Consultant shall not release or disclose any such information or work product to persons or entities other than City without prior written authorization from the Contract Officer.

(b) Consultant, its officers, employees, agents or subcontractors, shall not, without prior written authorization from the Contract Officer or unless requested by the City Attorney, voluntarily provide documents, declarations, letters of support, testimony at depositions, response to interrogatories or other information concerning the work performed under this Agreement. Response to a subpoena or court order shall not be considered "voluntary" provided Consultant gives City notice of such court order or subpoena.

(c) If Consultant, or any officer, employee, agent or subcontractor of Consultant, provides any information or work product in violation of this Agreement, then City shall have the right to reimbursement and indemnity from Consultant for any damages, costs and fees, including attorney's fees, caused by or incurred as a result of Consultant's conduct.

(d) Consultant shall promptly notify City should Consultant, its officers, employees, agents or subcontractors be served with any summons, complaint, subpoena, notice of deposition, request for documents, interrogatories, request for admissions or other discovery request, court order or subpoena from any party regarding this Agreement and the work performed there under. City retains the right, but has no obligation, to represent Consultant or be present at any deposition, hearing or similar proceeding. Consultant agrees to cooperate fully with City and to provide City with the opportunity to review any response to discovery requests provided by Consultant. However, this right to review any such response does not imply or mean the right by City to control, direct, or rewrite said response.

ARTICLE 7. ENFORCEMENT OF AGREEMENT AND TERMINATION

7.1 California Law.

This Agreement shall be interpreted, construed and governed both as to validity and to performance of the Parties in accordance with the laws of the State of California. Legal actions concerning any dispute, claim or matter arising out of or in relation to this Agreement shall be instituted in the Superior Court of the County of Los Angeles, State of California, or any other appropriate court in such county, and Consultant covenants and agrees to submit to the personal jurisdiction of such court in the event of such action. In the event of litigation in a U.S. District Court, venue shall lie exclusively in the Central District of California, in the County of Los Angeles, State of California.

7.2 Disputes; Default.

In the event that Consultant is in default under the terms of this Agreement, the City shall not have any obligation or duty to continue compensating Consultant for any work performed after the date of default. Instead, the City may give notice to Consultant of the default and the reasons for the default. The notice shall include the timeframe in which Consultant may cure the default. This timeframe is presumptively thirty (30) days, but may be extended, though not reduced, if circumstances warrant. During the period of time that Consultant is in default, the City shall hold all invoices and shall, when the default is cured, proceed with payment on the invoices. In the alternative, the City may, in its sole discretion, elect to pay some or all of the outstanding invoices during the period of default. If Consultant does not cure the default, the City may take necessary steps to terminate this Agreement under this Article. Any failure on the

part of the City to give notice of the Consultant's default shall not be deemed to result in a waiver of the City's legal rights or any rights arising out of any provision of this Agreement.

7.3 Retention of Funds.

Consultant hereby authorizes City to deduct from any amount payable to Consultant (whether or not arising out of this Agreement) (i) any amounts the payment of which may be in dispute hereunder or which are necessary to compensate City for any losses, costs, liabilities, or damages suffered by City, and (ii) all amounts for which City may be liable to third parties, by reason of Consultant's acts or omissions in performing or failing to perform Consultant's obligation under this Agreement. In the event that any claim is made by a third party, the amount or validity of which is disputed by Consultant, or any indebtedness shall exist which shall appear to be the basis for a claim of lien, City may withhold from any payment due, without liability for interest because of such withholding, an amount sufficient to cover such claim. The failure of City to exercise such right to deduct or to withhold shall not, however, affect the obligations of the Consultant to insure, indemnify, and protect City as elsewhere provided herein.

7.4 Waiver.

Waiver by any party to this Agreement of any term, condition, or covenant of this Agreement shall not constitute a waiver of any other term, condition, or covenant. Waiver by any Party of any breach of the provisions of this Agreement shall not constitute a waiver of any other provision or a waiver of any subsequent breach or violation of any provision of this Agreement. Acceptance by City of any work or services by Consultant shall not constitute a waiver of any of the provisions of this Agreement. No delay or omission in the exercise of any right or remedy by a non-defaulting party on any default shall impair such right or remedy or be construed as a waiver. Any waiver by either Party of any default must be in writing and shall not be a waiver of any other default concerning the same or any other provision of this Agreement.

7.5 Rights and Remedies are Cumulative.

Except with respect to rights and remedies expressly declared to be exclusive in this Agreement, the rights and remedies of the Parties are cumulative and the exercise by either Party of one or more of such rights or remedies shall not preclude the exercise by it, at the same or different times, of any other rights or remedies for the same default or any other default by the other Party.

7.6 Legal Action.

In addition to any other rights or remedies, either Party may take legal action, in law or in equity, to cure, correct or remedy any default, to recover damages for any default, to compel specific performance of this Agreement, to obtain declaratory or injunctive relief, or to obtain any other remedy consistent with the purposes of this Agreement. Notwithstanding any contrary provision herein, Consultant shall file a statutory claim pursuant to Government Code Sections 905 et seq. and 910 et seq., in order to pursue a legal action under this Agreement.

7.7 Termination Prior to Expiration of Term.

This Section shall govern any termination of this Agreement except as specifically provided in the following Section for termination for cause. The City reserves the right to terminate this Agreement at any time, with or without cause, upon thirty (30) days' written notice to Consultant, except that where termination is due to the fault of the Consultant, the period of notice may be such shorter time as may be determined by the Contract Officer. In addition, the Consultant reserves the right to terminate this Agreement at any time, with or without cause, upon sixty (60) days' written notice to City, except that where termination is due to the fault of the City, the period of notice may be such shorter time as the Consultant may determine. Upon receipt of any notice of termination, Consultant shall immediately cease all services hereunder except such as may be specifically approved by the Contract Officer. Except where the Consultant has initiated termination, the Consultant shall be entitled to compensation for all services rendered prior to the effective date of the notice of termination and for any services authorized by the Contract Officer thereafter in accordance with the Schedule of Compensation or such as may be approved by the Contract Officer, except as provided in Section 7.3. In the event the Consultant has initiated termination, the Consultant shall be entitled to compensation only for the reasonable value of the work product actually produced hereunder. In the event of termination without cause pursuant to this Section, the terminating party need not provide the non-terminating party with the opportunity to cure pursuant to Section 7.2.

7.8 Termination for Default of Consultant.

If termination is due to the failure of the Consultant to fulfill its obligations under this Agreement, City may, after compliance with the provisions of Section 7.2, take over the work and prosecute the same to completion by contract or otherwise, and the Consultant shall be liable to the extent that the total cost for completion of the services required hereunder exceeds the compensation herein stipulated (provided that the City shall use reasonable efforts to mitigate such damages), and City may withhold any payments to the Consultant for the purpose of set-off or partial payment of the amounts owed the City as previously stated.

7.9 Attorneys' Fees.

If either Party to this Agreement is required to initiate or defend or made a party to any action or proceeding in any way connected with this Agreement, the prevailing party in such action or proceeding, in addition to any other relief which may be granted, whether legal or equitable, shall be entitled to reasonable attorneys' fees. Attorneys' fees shall include attorneys' fees on any appeal, and in addition a party entitled to attorney's fees shall be entitled to all other reasonable costs for investigating such action, taking depositions and discovery and all other necessary costs the court allows which are incurred in such litigation. All such fees shall be deemed to have accrued on commencement of such action and shall be enforceable whether or not such action is prosecuted to judgment.

ARTICLE 8. CITY OFFICERS AND EMPLOYEES: NON-DISCRIMINATION

8.1 Non-liability of City Officers and Employees.

No officer or employee of the City shall be personally liable to the Consultant, or any successor in interest, in the event of any default or breach by the City or for any amount which

may become due to the Consultant or to its successor, or for breach of any obligation of the terms of this Agreement.

8.2 Conflict of Interest.

Consultant covenants that neither it, nor any officer or principal of its firm, has or shall acquire any interest, directly or indirectly, which would conflict in any manner with the interests of City or which would in any way hinder Consultant's performance of services under this Agreement. Consultant further covenants that in the performance of this Agreement, no person having any such interest shall be employed by it as an officer, employee, agent or subcontractor without the express written consent of the Contract Officer. Consultant agrees to at all times avoid conflicts of interest or the appearance of any conflicts of interest with the interests of City in the performance of this Agreement.

No officer or employee of the City shall have any financial interest, direct or indirect, in this Agreement nor shall any such officer or employee participate in any decision relating to the Agreement which affects her/his financial interest or the financial interest of any corporation, partnership or association in which (s)he is, directly or indirectly, interested, in violation of any State statute or regulation. The Consultant warrants that it has not paid or given and will not pay or give any third party any money or other consideration for obtaining this Agreement.

8.3 Covenant Against Discrimination.

Consultant covenants that, by and for itself, its heirs, executors, assigns, and all persons claiming under or through them, that there shall be no discrimination against or segregation of, any person or group of persons on account of race, color, creed, religion, sex, gender, sexual orientation, marital status, national origin, ancestry or other protected class in the performance of this Agreement. Consultant shall take affirmative action to insure that applicants are employed and that employees are treated during employment without regard to their race, color, creed, religion, sex, gender, sexual orientation, marital status, national origin, ancestry or other protected class.

8.4 Unauthorized Aliens.

Consultant hereby promises and agrees to comply with all of the provisions of the Federal Immigration and Nationality Act, 8 U.S.C. § 1101 *et seq.*, as amended, and in connection therewith, shall not employ unauthorized aliens as defined therein. Should Consultant so employ such unauthorized aliens for the performance of work and/or services covered by this Agreement, and should any liability or sanctions be imposed against City for such use of unauthorized aliens, Consultant hereby agrees to and shall reimburse City for the cost of all such liabilities or sanctions imposed, together with any and all costs, including attorneys' fees, incurred by City.

ARTICLE 9. MISCELLANEOUS PROVISIONS

9.1 Notices.

Any notice, demand, request, document, consent, approval, or communication either Party desires or is required to give to the other Party or any other person shall be in writing and either served personally or sent by prepaid, first-class mail, in the case of the City, to the City Manager and to the attention of the Contract Officer (with her/his name and City title), City of Glendora, 116 E. Foothill Blvd., Glendora, California 91741-3380, and in the case of the Consultant, to the person(s) at the address designated on the execution page of this Agreement. Either Party may change its address by notifying the other party of the change of address in writing. Notice shall be deemed communicated at the time personally delivered or in seventy-two (72) hours from the time of mailing if mailed as provided in this Section.

9.2 Interpretation.

The terms of this Agreement shall be construed in accordance with the meaning of the language used and shall not be construed for or against either party by reason of the authorship of this Agreement or any other rule of construction which might otherwise apply.

9.3 Counterparts.

This Agreement may be executed in counterparts, each of which shall be deemed to be an original, and such counterparts shall constitute one and the same instrument. Each of the parties intend to be bound by the signatures on any telecopied, .pdf or other electronically delivered document, and are aware that the other party will rely on the telecopied, .pdf or other electronically delivered signatures, and hereby waive any defenses to the enforcement of the terms of this Agreement based on the form of signature.

9.4 Integration; Amendment.

This Agreement including the attachments hereto is the entire, complete and exclusive expression of the understanding of the Parties. It is understood that there are no oral agreements between the Parties hereto affecting this Agreement and this Agreement supersedes and cancels any and all previous negotiations, arrangements, agreements and understandings, if any, between the parties, and none shall be used to interpret this Agreement. No amendment to or modification of this Agreement shall be valid unless made in writing and approved by the Consultant and by the City Council. The Parties agree that this requirement for written modifications cannot be waived and that any attempted waiver shall be void.

9.5 Severability.

In the event that any one or more of the phrases, sentences, clauses, paragraphs, or sections contained in this Agreement shall be declared invalid or unenforceable by a valid judgment or decree of a court of competent jurisdiction, such invalidity or unenforceability shall not affect any of the remaining phrases, sentences, clauses, paragraphs, or sections of this Agreement which are hereby declared as severable and shall be interpreted to carry out the intent of the Parties hereunder unless the invalid provision is so material that its invalidity deprives either Party of the basic benefit of their bargain or renders this Agreement meaningless.

9.6 Warranty & Representation of Non-Collusion.

No official, officer, or employee of City has any financial interest, direct or indirect, in this Agreement, nor shall any official, officer, or employee of City participate in any decision relating to this Agreement which may affect his/her financial interest or the financial interest of any corporation, partnership, or association in which (s)he is directly or indirectly interested, or in violation of any corporation, partnership, or association in which (s)he is directly or indirectly interested, or in violation of any State or municipal statute or regulation. The determination of "financial interest" shall be consistent with State law and shall not include interests found to be "remote" or "noninterests" pursuant to Government Code Sections 1091 or 1091.5. Consultant warrants and represents that it has not paid or given, and will not pay or give, to any third party including, but not limited to, any City official, officer, or employee, any money, consideration, or other thing of value as a result or consequence of obtaining or being awarded any agreement. Consultant further warrants and represents that (s)he/it has not engaged in any act(s), omission(s), or other conduct or collusion that would result in the payment of any money, consideration, or other thing of value to any third party including, but not limited to, any City official, officer, or employee, as a result of consequence of obtaining or being awarded any agreement. Consultant is aware of and understands that any such act(s), omission(s) or other conduct resulting in such payment of money, consideration, or other thing of value will render this Agreement void and of no force or effect.

Consultant's Authorized Initials _____

SCOPE OF SERVICES

I. Consultant will perform the following services:

Consultant will provide Architectural and Engineering Design Services for the City of Glendora Corporate Yard improvements project. The services shall include the schematic design refinements, design development, construction documents and permit approvals for agencies having jurisdiction over the project.

A detailed description of such services is shown in the proposal attached hereto as Exhibit "A-1".

II. As part of the services, Consultant will prepare and deliver the following tangible work products to the City:

A. An updated timeline with dates for completion of the services within the schedule provided in Exhibit "D-1".

B. Documents with all information listed in Exhibits "A-1" and "D-1".

III. Consultant will utilize the following personnel to accomplish the services:

A. Project Principal: Said Hilmy, PE, Ph. D., LEED AP

B. Principal Architect: John Siber, AIA

C. Project Manager: Quentin Montrie, LEEP AP

Subject: **R1 Proposal to Provide Architectural and Engineering Design Services for the City of *Glendora Corporate Yard Improvements***
1250 Saint Vladimir St., Glendora, CA 91740
Proposal submitted under *On Call Professional Service* Agreement dated *02/09/2022*

Dear Mr. Wittkopf,

We are pleased to submit this proposal to provide Architectural and Engineering design services for the City of Glendora Corporate Yard Improvements project. The scope of services includes the schematic design refinements, design development, construction documents and permit approvals from agencies having jurisdiction.

Project Description

The Glendora Corporate Yard Improvements project consists of site and building upgrades for the city's main yard for storage of construction material, equipment, and vehicles. The project plans for four new buildings replacing four older, obsolete buildings that will be demolished. The four new building comprise of 1) Office Building for both Facility and Maintenance staff in addition to Parks and Trees Department, 2) Fleet Maintenance Garage for maintenance and repair of county vehicles, 3) Sign Shop and Tire Storage Building and 4) Facility Workshops for both wood and metal. The Parks and Trees Department will move to the corporate yard and will require new permanent facilities for offices and equipment storage. The site will also include a Vehicle Washing Station with a pressure washer. The site will also have an emergency backup generator.

1 Peters Canyon Rd., Ste.130, Irvine, CA 92606 | tel. 949.387.8500 | fax. 949.387.0800 | www.idsgi.com

EXHIBIT "A-1"
SCOPE OF SERVICES

The site is located along the north side of what will be the LA Metro line with single-family residential surrounding on the east, north and west sides. The main entrance is off of a cul-de-sac from St. Vladamir Street from the east side with a possible secondary entrance off of Walnut St. from the north side. An existing access gate will remain that opens up to the rail right-of-way on the southeast corner of the site. Site improvements will include the repaving of approximately 159,149 SF of existing asphalt paving. Various subgrade utilities pass though the site including a large drainage channel (Big Dalton Wash) that bisects the site from north to south, along with domestic water, SS lines, and gas and power lines.

As part of this development strategy, we anticipate the following scope of work:

- Demolition/removal of all existing site buildings and structures (excluding an existing fueling station).
- Demolition of existing site asphalt and concrete paving.
- Construction of three new CMU block wall buildings. Capping and reconnecting all site utility lines to service all site and building elements.
- New site asphalt paving to replace demolished site paving.
- A new electrical system for all buildings to accommodate power, lighting, and HVAC systems.
- Installation of gas lines, feeding off existing line leading into site.
- Installation of new building HVAC systems.
- Construction of a new partition with a man door that separates the high- and low bays.
- Providing code-required access compliance improvements to include the following:
    - An accessible on-site parking adjacent to the buildings.
    - An accessible Path of Travel (POT) connecting the accessible on-site parking to building entry doors.
    - An accessible Path of Travel within the building commencing with the accessible building entry and terminating at the furthest point from the entry.
    - Restroom facilities with code-required accessible features.

Scope of IDS Services and Deliverables

Our scope of services consists of providing architectural and engineering design and construction administration services in support of the project's intended work, according to the following:

- Conduct site visits to document existing building/systems.
- Attend biweekly meetings with the County's project team as needed.
- Attend City Board meeting(s) to present design progress.

Project Initiation/SD Review/Design Development Phase:

- Refine the Final Schematic Design to draft Design Development phase level documents
- Provide Code analysis and design describing our findings and laying out options.
- Complete Design Development documents including the data, exhibits, analysis, and cost estimating.
- Incorporate meetings and workshops as set forth in the RFP.

EXHIBIT "A-1"
SCOPE OF SERVICES

50% Construction Document Phase:

- Meet with County Building Planning and Fire to review the proposed work.
- Prepare preliminary Design Documents and submit to the County for over-the-shoulder review.
- Prepare 50% Construction Documents, which incorporate County's preliminary Design comments, and submit them to the County for review.
- Prepare draft CSI Format Technical Specifications.
- Incorporate meetings and workshops as set forth in the RFP.

Final Construction Documents/Plan Review Phase:

- Prepare 100% CD incorporating all County's 50% CD comments and other revisions and submit to plan review agencies having jurisdiction over the project for their review and approvals.
- Prepare and submit a construction cost estimate.
- Complete and submit final CSI Format Technical Specifications.
- Provide technical support during plan check submittal and review through permit ready to issue. Revise documents as required.
- Incorporate plan check corrections into the final/ approved Construction Documents' drawings and specifications.

Future Phases during Bidding & Construction (not included in base sum)

Bid and Construction Administration Support Phase:

Provide bid and Construction Administration support services:

- Review and provide written responses to the contractor's requests for information.
- Review and process shop drawings and submittals
- Attend site/construction progress meetings to review construction progress (maximum of 11 site meetings). We presume that the City Project Manager will conduct the meetings and prepare the meeting minutes.
- Provide punch list and project close-out assistance.
- Prepare Record Drawings based on Contractor redlines.

Exclusions and Assumptions:

- City will provide available as-built architectural, structural, and MEP drawings for our use.
- Existing vehicle fueling station is not part of this project.
- Utility connections are assumed to be within site boundaries.
- Site access improvements assume accessible parking adjacent to the building and POT from parking to the building only; documentation and design for accessible POT from the public way to the building excluded.
- Electrical distribution and emergency systems upgrades outside of our scope of work above are excluded.

EXHIBIT "A-1"
SCOPE OF SERVICES

- Fire alarm design, modifications, and/or interfaces outside of our scope of work above are excluded.
- Automatic fire sprinkler system design is not included in our scope.
- Plan check submittal and permit fees are not included in our fee.
- Additional design work due to Value Engineering/Peer Review is excluded.
- Remedial permit approvals for work previously performed and for which there is no record of a permit are excluded.
- Testing for the presence of hazardous materials of any kind and mitigation requirements for the same is not included.
- Documentation and/or work done in the north site entrance and driveway is excluded.
- Analysis, review, design, strengthening, retrofit, etc. of structural load support and/or lateral force resisting systems not directly related to architectural or MPE elements of this project are excluded.
- Our construction administration proposed fee is based on a construction duration not exceeding one year, including not-to-exceed 11 site meetings. More meetings will be held via teleconferencing.
- Commissioning of equipment or systems is excluded.

Project Phase Schedule

• Schematic Design Review	5 Weeks from NTP
• Design Development	8 weeks from SD Review sign-off
• Client Review	Client's discretion – Estimated at 1 Weeks
• Construction Documents	12 Weeks from DD Review sign-off
• Permit Approval	6 weeks estimated for permit approval

Fee Proposal

We propose to provide the services outlined in the Scope of Work within this proposal for a lump sum amount of **$642,357** as identified below including plotting and reproduction expenses.

The above total fee is broken down per phase as follows:

- Project Review & Schematic Design Refinement $71,836
- Design Development.....$213,551
- Construction Documents.....$325,168
- Agency Reviews and Approvals.....$31,802
- TOTAL FEE $642,357

EXHIBIT "A-1"
SCOPE OF SERVICES

Future Phases During Bidding & Construction

• Bid Assistance	Client's Discretion (estimating 9 weeks)
• Construction Administration	Estimating approx. 1 year to completion

- Bid Assistance.....$11,752
- Construction Administration.....$71,472
- TOTAL $83,224

Thank you for the opportunity to provide our services to you. Please don't hesitate to email at quentin.montrie@idsgi.com or call us (949) 387-8500 if you require further information regarding this proposal. We look forward to working with you on this project.

Sincerely,

IDS Group, Inc.

Quentin Montrie AIA LEED AP
Lead Design Architect

(Superseding Contract Boilerplate)

Added text is indicated in ***bold italics***, deleted text is indicated in ~~strikethrough~~.

N/A

EXHIBIT "C"

SCHEDULE OF COMPENSATION

I. Consultant shall perform the following tasks at the following rates:

A. Project Review, Design and Development:

• Project Review & Schematic Design Refinement:	$71,836
• Design Development:	$213,551
• Construction Documents:	$325,168
• Agency Reviews and Approvals:	$31,802
Subtotal:	**$642,357**

B. Bidding and Construction:

• Bid Assistance:	$11,752
• Construction Administration:	$71,472
Subtotal:	**$83,224**
Total:	**$725,581**

II. Within the budgeted amounts for each Task, and with the approval of the Contract Officer, funds may be shifted from one Task subbudget to another so long as the Contract Sum is not exceeded per Section 2.1, unless Additional Services are approved per Section 1.9.

III. The City will compensate Consultant for the services performed upon submission of a valid invoice. Each invoice is to include:

A. Line items for all personnel describing the work performed, the number of hours worked, and the hourly rate.

B. Line items for all materials and equipment properly charged to the Services.

C. Line items for all other approved reimbursable expenses claimed, with supporting documentation.

D. Line items for all approved subcontractor labor, supplies, equipment, materials, and travel properly charged to the Services.

IV. The total compensation for the services shall not exceed the Contract Sum as provided in Section 2.1 of this Agreement.

V. The Consultant's billing rates for all personnel are attached as Exhibit "C-1".

EXHIBIT "C-1"

CONSULTANT BILLING RATES

Title – Association	Hourly Rate
Principal	$210
Associate Principal	$196
Senior Project Manager | Associate	$185
Project Manager	$173
Senior Architect or Engineer	$161
Senior Cost Estimator	$149
Project Architect or Engineer	$149
Designer Architect or Engineer	$132
Engineering Designer - BIM	$116
Two Man Survey Crew	$276
Architectural Job Captain | Designer	$110
CAD Drafting Engineer | Architect	$99
Office Administration	$61

Expenses such as, but not limited to, plan check fees, permits, inspections, testing services, title company fees, special delivery charges, plotting/ presentation boards, maps, aerial photographs, and reprographics/ illustrations that may be required for community or other stakeholder presentation, shall be billed to the owner at Consultant's direct cost plus 5%.

EXHIBIT "D"

SCHEDULE OF PERFORMANCE

I. Consultant shall perform all services timely in accordance with the following schedule:

Description	Days to Perform
A. Schematic Design Review	**5 weeks from Notice to Proceed**
B. Design Development (DD)	**8 weeks from review sign off**
C. Client Review	**Estimated 1 week**
D. Construction Documents	**12 weeks from DD review sign off**
E. Permit Approval	**6 weeks estimated**
F. Bid Assistance	**Estimated 9 weeks**
G. Construction Administration	**Estimated 1 year**

A detailed description of the Consultant's Schedule is shown in the proposal attached hereto as Exhibit "D-1".

II. The Contract Officer may approve extensions for performance of the services in accordance with Section 3.2.

NEXT STEPS

- Refinement of the Schematic Design
- CEQA Analysis
- Preparation of Final Architectural, Engineering & Construction Documents
- Included in the City's 5 Year CIP Plan, $1,046,650 budgeted for FY2025
- IDS On Call Agreement - Staff requested a proposal:

Project Budget:	**$1,046,650**
Project Review and Schematic Design Refinement:	$71,836
Design Development:	$213,551
Construction Documents:	$325,168
Agency Review and Approvals:	$31,802
Construction Bid Assistance:	$11,752
Construction Administration:	$71,472
Total Contract Amount:	$725,581
Remaining Available Project Budget:	**$321,069**

RECOMMENDATION:

THAT THE CITY COUNCIL:

1. Award an Agreement for Contract Services to IDS Group, Inc., in the not to exceed amount of $725,581; and
2. Authorize the City Manager or his designee to execute the agreement, including any minimal and/or non-substantive changes.

STAFF REPORT

TO: Mayor and Council Members **DATE:** February 25, 2025

FROM: Finance **DISTRICT(S):** Citywide

SUBJECT: Conduct a Mid-Year Budget Review and Adopt a Joint Resolution amending the Fiscal Year 2024-25 Budget

RECOMMENDATION

That the City Council, Successor Agency and Housing Authority:

1. Adopt a Joint City Council Resolution entitled, "A RESOLUTION OF THE CITY COUNCIL, SUCCESSOR AGENCY AND HOUSING AUTHORITY AMENDING THE FY 2024-25 FISCAL BUDGET PER THE MID-YEAR REVIEW RECOMMENDATIONS."

STRATEGIC FOCUS AREAS

- Goal 2: Maintain Financial Stability and Sustainability (MFSS)

EXECUTIVE SUMMARY

Staff has reviewed the Adopted and Amended FY 2024-25 Maintenance and Operations Budget and has determined that the following adjustments are necessary to continue providing quality services to the community:

Fund	Revenue Proposed Adjustment	Expenditure Proposed Adjustment
General Fund	1,087,134	677,594
Pension Stabilization	(129,749)	-
Measure E	(570,000)	(570,000)
GUSD JUA	650,000	650,000
Measure Z	700,000	700,000
Library Friends Foundation	11,827	26,270
Prop A Transit	-	25,000
State Gas Tax	-	38,860
Grants	-	4,500
Step OTS Grants	125,000	125,000
Capital Projects	(216,249)	334,500
Water Operations	-	626,549
Worker's Compensation	(43,250)	-
Technology	-	210,291
Vehicle Replacement	-	353,650

Revenue adjustments in the General Fund are mainly attributed to the decrease in sales tax assumptions. Third quarter sales in Glendora were 8.2% down compared to the same time period in 2023. Consumers are more cautious about spending on non-essential products and projects. As such, there has been a decrease in sales for autos, fuel-service stations, and building and construction.

However, an increase to the refuse franchise fee, interest income, and the Measure Z transfer-in will offset the decrease in sales tax. Other changes to revenues include miscellaneous accounting adjustments and reimbursement for police services.

Other expenditure adjustments in the General Fund include accounting for overtime costs due to train testing of the A Line, costs associated with Glendora Unified School District Joint Use Agreement, account for the recent amendment to the animal control contract, and Glendora Village decor.

LEGISLATIVE HISTORY / PREVIOUS ACTIONS

On June 11, 2024, the City Council adopted the FY 2024-25 Mid-Cycle Budget and approved the appropriations for FY 2024/25. The recommended changes included in the Mid-Year Review increase or decrease the annual budgeted revenues, appropriations, and available resources (starting balance) of several funds, and therefore require City Council approval.

DISCUSSION

The Mid-Year Budget Review process includes review and analysis by each department and Finance staff. A complete list of the recommended adjustments for each fund is attached as Exhibit A to the Resolution.

AVAILABLE RESOURCES SUMMARY

The Available Resources Summary includes the mid-year adjustments total by fund providing an overview of each fund showing available beginning balances, budgeted revenues and expenditures, and the projected ending available balance.

GENERAL FUND

Revenues

Staff recommends a net increase in revenues in the amount of $586,234. The adjustments are due to:

- $300,000 increase in refuse franchise fee collections,
- $700,000 increase for the transfer in of Measure Z revenue,
- $700,000 decrease in sales tax based on the sales tax consultant's economic outlook which forecasts higher costs as a result of increased business operating costs and a decrease in consumer spending,
- $300,000 A-Line Police Department reimbursements for security during train testing, and
- Decreases in Transfers-in from Measure E consistent with sales tax decreases.

Detailed Revenue Adjustments are attached in Exhibit A to the Budget Resolution.

Expenditures

The expenditure budget increased by a net $677,594. The primary components of the increase are due to:

- Glendora Unified School District Joint Use Agreement (GUSD JUA) of $190,500 (for Goddard Middle School pavement repairs and school resources officer cost offsets in the new GUSD JUA Fund 105); and
- Police Department of $206,644 (for change in contract with IVHS and change in accounting process for the City). The most recent amendment to the IVHS contract, approved by City Council on June 11, 2024, removed the guaranteed revenue provision. With the removal of this provision the City is updating to reflect the revenue collected and full cost of the contract in its revenue and expenditure budgets. This change is consistent with other contracts that function similarly and best practices for government accounting.
- Community Development of $100,000 for the installation of décor for the Glendora Village.

Overall, with the adjustments, the General Fund is balanced and the City meets the reserve policy requirements.

SPECIAL REVENUE FUNDS

Special Revenues are restricted in their use. The mid-year budget adjustments are recommended to acknowledge receipt of revenues or to update the budget based on current information. The mid-year

adjustments provide an updated perspective on how the fund is performing, whether there are sufficient reserves and/or revenues to cover the expenditure budget previously approved. The majority of these funds are for grants or special funding awarded to the City. The adjustments recommended cover the following categories:

- Adding revenue budget for actual special income received or to be received; and
- Adding/reducing budgeted expenditures to match actual spending and revenue adjustments.

CAPITAL PROJECTS

The mid-year budget adjustments requested at this time, in the amount of $334,500, are for GUSD accounting updates for the new GUSD JUA Fund, purchase of street, gateway, and wayfinding signs, grant application assistance and a Citywide traffic study. With the City Council approval of the GUSD JUA on January 30, 2024 the City Council authorized the creation of one fund to track all related revenues and expenditures. The GUSD pool contribution was originally budgeted in the Capital Projects Fund 301 however, with the creation of GUSD JUA Fund 105 the budget and actual contribution payment requires a decrease in the Capital Projects Fund budget and an increase in the GUSD JUA Fund budget to both receive the reserves for the payment that was issued on October 25, 2024 and to reflect the appropriation in GUSD JUA Fund 105.

ENTERPRISE FUNDS

Water Operations Fund revenues and expenditures for FY2025 are on track with budget projections. The primary operational expenditures being requested is related to contract services for emergency repairs, adding one full-time water conservation officer, and high school meter replacements. The Water Capital Fund does not have any changes with mid-year.

INTERNAL SERVICE FUNDS

The Internal Service Funds include Worker's Compensation, Liability Insurance, Technology and Vehicles. The revenues in these funds come from charges to the departments/funds receiving their services.

Liability Insurance experienced some challenges procuring affordable programs in the insurance pool. As part of ICRMA, the City has leveraged the economies of scale in the pool; however, insurance rates continue to climb. Staff continues to review and evaluate insurance for the City and is making continued efforts to mitigate costs while focusing on managing risk and exposure. Staff will bring forth insurance options for the City to consider in March 2025.

The largest adjustments for the Internal Services Funds are in the Technology Fund and the Vehicle Replacement Fund. The Technology Fund is increasing software and hardware line items in the amount of $210,290 for backup systems, agenda management and ArcGIS subscriptions. The Vehicle Replacement Fund is for the repair of Vactor Truck 1 and purchase of 2 small pickups and a grounds utility task vehicle in the amount of $240,000.

MULTI-YEAR BUDGET PROJECTIONS

The Multi-Year Budget Forecasts have been updated with the mid-year review assumptions and adjustments. The forecasts are updated with the following focus areas to anticipate:

- The General Fund is being impacted by a reduction in sales tax of $1.35 million and increases in insurance costs of $1 to $1.5 million.
- Community support is needed for City facility improvements.
- Critical opportunity to further address homelessness through the development of housing and supportive services in Glendora.
- Continue with aggressive capital improvements throughout the City.
- Significant private investment will continue throughout the City.
- City employee negotiations will commence as current contracts expire over the next year.

These forecasts are a tool for future decisions by placing an emphasis on the long-term impacts of policy decisions. Based on conservative assumptions, the General Fund, Measure E and the Enterprise Water Funds are balanced and demonstrate the stable financial condition of each of these major funds for future

planning and in the event of a catastrophic event.

PERSONNEL
The following positions were added or had a title change:

- Water Conservation Officer: (Effective January 1, 2025 Making Conservation a California Way of Life Regulation)

CONCLUSION
The Mid-Year budget review process is a part of managing a dynamic City. Financial planning is done with the best available information at the time it is prepared, however, the economy, elections, shopping trends, and legislation can change our planning assumptions quickly.

FISCAL IMPACT

The effects of these adjustments will be to change estimated revenues and/or expenditures as presented in the attachments. The net impact of these adjustments is shown on the Available Resources Summary. Despite challenges ahead, the City remains in a strong financial position to address key strategic iniatives

RESOLUTION
CC 2025-___ CC 2025-____(SA) HA 2025-___

A RESOLUTION OF THE CITY COUNCIL, SUCCESSOR AGENCY AND HOUSING AUTHORITY OF THE CITY OF GLENDORA, CALIFORNIA, AMENDING ITS 2024-25 FISCAL BUDGET PER THE MID-YEAR REVIEW RECOMMENDATIONS

CITY COUNCIL, SUCCESSOR AGENCY,
AND HOUSING AUTHORITY
City of Glendora, California

WHEREAS, in accordance with Glendora Municipal Code Section 2.08.070, it is the City's Manager's duty to prepare and submit a proposed annual budget and salary plan to the Glendora City Council; and

WHEREAS, in accordance with Glendora Municipal Code Section 2.09.040, it is the City's Manager's duty to prepare and submit any revisions or amendments to the classified service positions and job descriptions to the Glendora City Council; and

WHEREAS, the City Manager submitted a proposed budget to the Glendora City Council for Fiscal Year 2024-25 commencing July 1, 2025; and

WHEREAS, the budget for fiscal year 2024-25 of the City of Glendora has been adopted by this Council in its original form, and said budget will need to be amended at times to fulfill the goals of the City; and

WHEREAS, the budget is reviewed during a Mid-Year Review process that results in recommended budget adjustments to reflect unforeseen changes in revenue or expenditure requirements that require City Council approval;

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF GLENDORA HEREBY RESOLVES AS FOLLOWS:

SECTION 1. The City Council does hereby approve the Mid-Year Adjustments as detailed in Exhibit "A".

SECTION 2. The City Council, as Successor Agency to the Glendora Community Redevelopment Agency, is amending the revenue and expenditure budget applicable to the Successor Agency as identified in "Exhibit A". The City Council hereby determines and declares that the City of Glendora, its General Fund, and all of its other accounting funds shall NOT be obligated to finance or fulfill any Successor Agency obligations in any manner.

SECTION 3. Per the City of Glendora adopted financial policies, the City Manager is authorized to transfer appropriations between departments or functions, provided that no change is made in the total amount of the annual budget of any single fund.

SECTION 4. The Mayor Shall sign and the City Clerk shall certify to the passage and adoption of this resolution shall enter the same in the Book of Original Resolutions and that this resolution shall take effect and be in force on this date.

SECTION 5. The City Clerk is hereby directed to forward a copy of this resolution to the Finance Director.

PASSED, APPROVED AND ADOPTED by the City Council, Successor Agency, and Housing Authority of the City of Glendora this __ day of February, 2025.

NOTES:

2 Numbers from consultant indicate steady increases in property tax.

3 FY25 reduction due to sluggish third quarter 2024 tax filings and mixed short-term performance (primarily in the Autos/Transportation, Building/Construction, Food/Drugs, Fuel/Service, and Consumer Goods sectors).

4 Franchise Fees are projected to remain relatively consistent with programmed increases for Refuse. Business License & TOT are projected to remain consistent.

5,6 The revenues are projected to be relatively consistent with some programmatic increases anticipated for Licenses & Permits related to the Citywide Fee Study and enhanced parking enforcement tools.

7 Rental activity has stabilized and the City's investments are trending in a positive direction. FY26 and beyond, interest earnings show minor decreases as the future interest rate environment is uncertain.

8 Development has continued and steady increases are projected with the citywide fee study. The current economic and insurance environments create uncertainty around future development.

9 FY25 & Beyond expected to be consistent. Primary components of this line are Recreation contract classes and programs.

10 FY24 DOF approved $200K for ROPS administrative amount, City assumes $100K for FY25 and $25K for FY26 and beyond. FY25 Includes one-time adjustment for Gold Line police services overtime reimbursement.

11 Based on actual results at the end of the fiscal year to represent the "subsidy" amount from Measures E/Z to balance the General Fund and meet the contingency reserve requirements.
FY24 amended budget was $3.7 million actual transfer/"subsidy" needed is $2.8 million (if there are savings in the General Fund this will result in a "subsidy" less than the amount projected to cover budgeted expenditures).

12,13,14 Salaries/Benefits/Retirement for FY25 include ongoing costs of the recent realignments. FY26 and beyond include assumptions for upcoming negotiations.

15 FY25 includes one-time items like Village Décor and traffic engineering services. Future years assumptions include additional use of contracted services to maintain service levels.

16,17 These costs are related to internal services funds. Fluctuation due to capital outlay needs in Information Technology and City Fleet. Assumes city achieves insurance savings with change in SIR approach.

18 The City holds elections in November of even calendar years.

19,20 Includes debt service payment for the 2019 POBs, lease pmts on the energy efficiency projects & Landscape Maintenance Fund subsidy, and GUSD JUA offsets for crossing guard costs.

21 Amount required from the operating results to maintain 30%-45% contingency reserve.

22 The City's General Fund Reserve Policy is a minimum of 30% to maximum of 45% of prior year operational expenditures.
The Contingency Reserve Contribution is added to the beginning available balance to reach the ending available balance.

NOTES:

2,3 FY25 reduction due to sluggish third quarter 2024 tax filings and mixed short-term results in Autos/Transportation, Building/Construction, Food/Drugs, Fuel/Service, and Consumer Goods sectors.

4 The City's investments are trending in a positive direction. FY26 and beyond, interest earnings show minor decreases as the future interest rate environment is uncertain.

5,6,7 Salaries/Benefits/Retirement for FY25 include ongoing costs of the recent realignments. FY26 and beyond include assumptions for upcoming negotiations.

8 Includes $335K to $380K for Homelessness Progams for FY 2026 and beyond. City staff is actively looking for grants to recover these anticipated costs.

9 Transfer to cover General Fund deficit and meet the contingency reserve policy limits.

10 Transfer for cost offset of GUSD JUA for police department provided services.

11 Transfer for fairshare of pension obligation bond debt service cost.

12,13 The City has taken a more active approach to budgeting for the reserve policy that provides funding for capital projects, pension stabilization, subsidies for internal service funds, and
14,15 OPEB 115 Trust. These transfers may be updated based on actual results at the end of the fiscal year.

50% to the Capital Projects Fund, 30% to the PERS Rate Stabilization Fund, 10% to OPEB Section 115 Trust and 10% to Internal Service Funds.

Forecast is based on budgeted amounts and may fluctuate with actual results as of June 30.

Assumes amounts available for capital projects, pension reserve and internal service funds are moved to those funds in accordance with the Reserve Policy

16 This line represents funding for Finkbiner Park Playground, Restroom and Tennis/Pickleball in FY2023-24.

NOTES:

1,2 Rate Study Adopted December 2023 according to Infrastructure Assessment.

3 Sales to other companies, depends on the water demand from other water company

4 Primarily interest earnings, forecasted conservatively due to uncertain interest rate environment.

5 Includes Cyclic Storage program budget of $2.7 million. FY24 did not include any expenditures in the program and the Water Division is re-evaluating participation level of for future years.

6,8 Water Customer Service shows re-alignment of personnel costs between FY24 and FY25.

9 Includes Vehicle Fund allocation of direct charge for vehicle purchases and indirect charges for maintenance and repairs.

10 Cost of water personnel, water assessments, cost of water conservation grant programs and costs related to the divisions supporting the water fund (i.e Finance, Human Resources, etc.).

12 Debt Service includes the 2012 CSCDA Water Revenue Bonds, 2016 Water Revenue Bonds and the 2019 Pension Obligation Bonds. Debt service of $1.9 million Infrastructure Bond

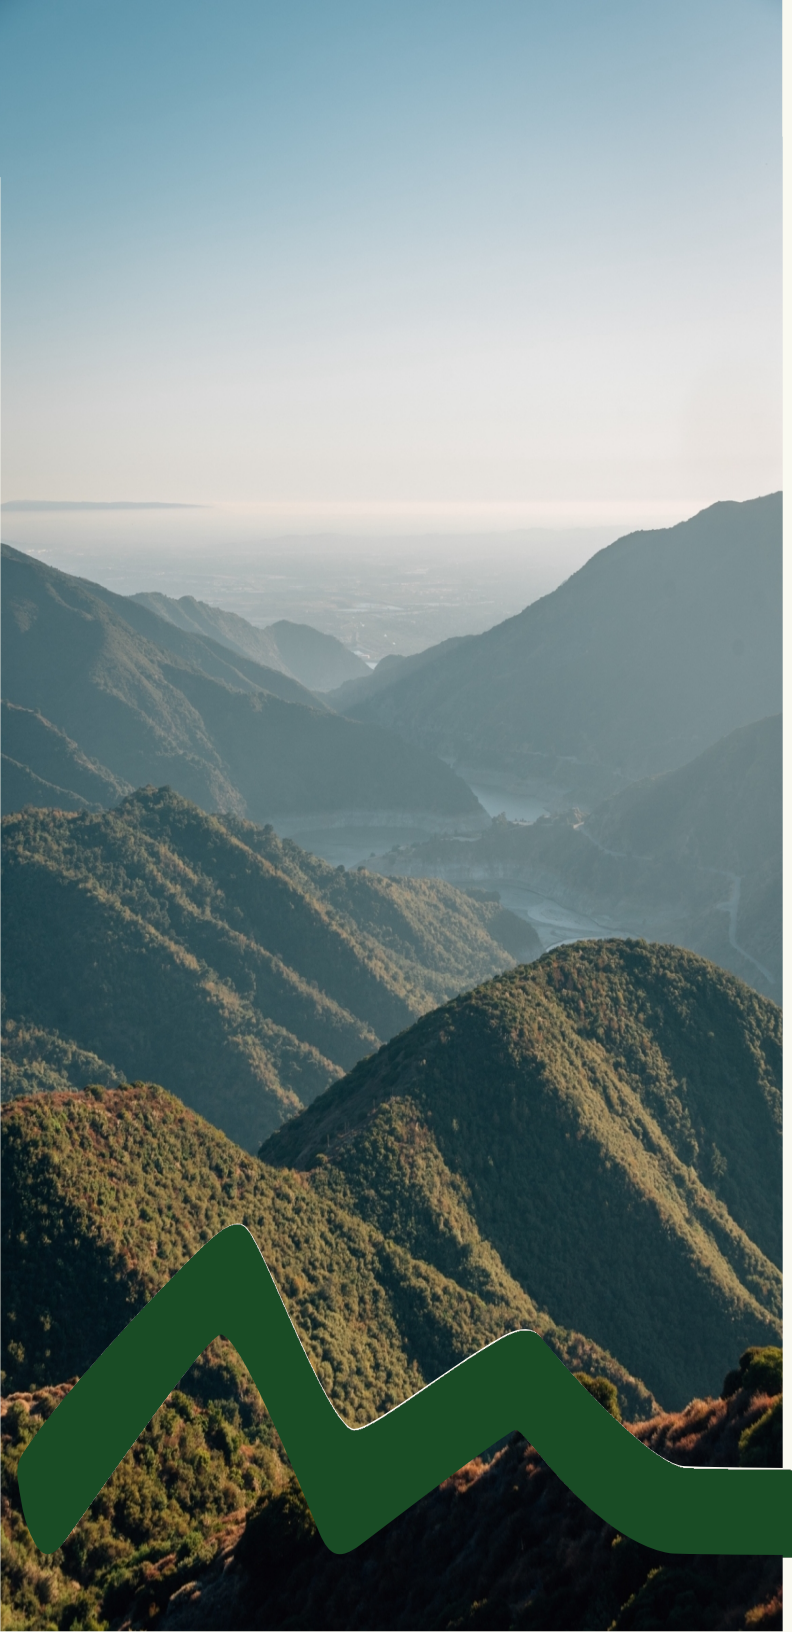
13,16 Amount based on Water Fund Reserves Policy where the Water Operations Working Capital and Catastrophic Reserve (adopted by Resolution No. 2010-49) shall be in an amount equal to the cost to fund operations for a six-month period in the event of a catastrophic event and remaining amounts are transferred from the Water Operations to the Water Capital Projects Fund.

14 Transfers for Citywide Energy Efficiency Project debt service & to LMD's to supplement zones.

15 Water Fund Reserves Policy (adopted by Resolution No. 2010-49) equal to the cost to fund operations for a six-month period.

17 Primarily interest earnings, forecasted conservatively due to uncertain interest rate environment.

18 Revenue Bond Issuance $15 million to fund CIP. The City is monitoring the economy and issuance conditions. Issuance may occur during FY27.



MID-YEAR BUDGET REVIEW
FISCAL YEAR 2024-2025

FINANCE DEPARTMENT

CITY COUNCIL MEETING

FEBRUARY 25, 2024

KYLE JOHNSON & FINANCE DIRECTOR

MID-YEAR REVIEW PROCESS

The Mid-Year Review process includes review and analysis by all City Departments and is part of managing a dynamic City. Financial planning/forecasting is done with the best available information at the time, however, the economy, elections, shopping trends, and legislation can change our planning assumptions quickly.

The review resulted in common Mid-Year budget adjustment scenarios summarized below.

- Some revenue trends exceed or will not meet the budget.
- Revenues have been received but there was no budget (typically grant funding).
- Expenditure increases requested due to identified needs subsequent to budget adoption.
- Expenditure decreases due to changes in activity (often related to reduction in revenue).

GENERAL FUND & MEASURE E/Z SUMMARY

FUND	ESTIMATED BEGINNING BALANCE 07/01/2024	FY 2025 AMENDED BUDGET REVENUES	FY 2025 MID-YEAR ADJUSTMENT REVENUES	FY 2025 AMENDED BUDGET EXPENDITURES	FY 2025 MID-YEAR ADJUSTMENT EXPENDITURES	ESTIMATED ENDING BALANCE 06/30/2025
GENERAL FUND	17,593,331	44,008,121	1,087,134	44,018,261	677,594	17,992,731
MEASURES E/Z	-	9,071,600	130,000	9,071,600	130,000	-
TOTAL	**17,593,331**	**53,079,721**	**1,217,134**	**53,089,861**	**807,594**	**17,992,731**

REVENUE ADJUSTMENTS:

- NON-DEPARTMENTAL: $1,350,000 DECREASE IN SALES TAX & MEASURE E BASED ON CONSULTANT OUTLOOK.
- NON-DEPARTMENTAL: $300,000 INCREASE IN FRANCHISE FEES REFUSE BASED ON TREND.
- NON-DEPARTMENTAL: $324,900 INCREASE IN INTEREST INCOME
- TRANSFERS IN: $700,000 INCREASE BASED ON ESTIMATED MEASURE Z COLLECTIONS.

EXPENDITURE ADJUSTMENTS:

- GUSD JUA: $190,500 INCREASE FOR OFFSETS OF GODDARD PAVEMENT REPAIRS AND SCHOOL RESOURCE OFFICER COSTS.
- POLICE: $206,644 INCREASE FOR CHANGE IN ACCOUNTING FOR IVHS CONTRACT.
- COMMUNITY DEVELOPMENT: $100,000 INCREASE FOR GLENDORA VILLAGE DÉCOR.

OVERALL, WITH THE ADJUSTMENTS, THE GENERAL FUND IS BALANCED AND THE CITY MEETS THE RESERVE POLICY REQUIREMENTS.

FY 2024-25 MID-YEAR REVIEW AND THE APPROACHING FY2025 – 2027 TWO-YEAR BUDGET

- Impacts of severe weather events and the reacting insurance landscape.
- Unknown of shifting federal policies related to funding for City infrastructure projects.
- Community support is needed for City facility improvements.
- Critical opportunity to further address homelessness through the development of housing and supportive services in Glendora.
- Continue with aggressive capital improvements throughout the City.
- Significant private investment will continue throughout the City.
- City employee negotiations will commence as current contracts expire over the next year.

FROM:	**City Manager**	**DISTRICT(S):**	**Citywide**

SUBJECT: City Facilities Capital Needs and Funding Options

RECOMMENDATION

That the City Council:

1. Receive a report on capital needs of City facilities and options to fund those needs; and
2. Provide direction to staff, as necessary.

STRATEGIC FOCUS AREAS

- Goal 2: Maintain Financial Stability and Sustainability (MFSS)
- Goal 5: Improve and Maintain the City's Infrastructure and Facilities (IMCIF)

EXECUTIVE SUMMARY

Over the past five years, the City has completed more than $50 million in capital projects. These projects have included significant investments in parks, streets, and water infrastructure. Despite these generational investments, significant needs exist to bring existing City facilities, including the Library, Police Station, Teen Center, Senior Center, City Hall, Transportation Center, and Public Works Maintenance Yard to modern standards.

Deferred maintenance on City facilities is currently estimated at approximately $50 million, with an investment of more than $250 million needed to bring facilities to levels that would provide for modern workspaces and greater accessibility to the public.

Past surveys on these issues signal general support for a comprehensive, citywide facility bond. The initial support level for a potential facility bond (53%) is lower than the two-thirds (66.6%) vote threshold required should the City wish to pursue this measure on its own. Should the measure be undertaken through a citizen-led effort, the vote threshold for the facility bond would be a simple majority (50%+1).

LEGISLATIVE HISTORY / PREVIOUS ACTIONS

Over the past three years, many public meetings and discussions have been held on facility needs by the City Council, Board of Library Trustees, Community Services Commission, and Planning Commission. The items noted in this section are highlights of the continued community dialogue on city facility needs.

On January 10, 2023, the City Council awarded a contract to Myers Houghton and Partners, Inc. (MHP) to perform in-depth structural analysis and evaluation of the Library's suitability for major renovations and initial visioning activities.

On September 12, 2023, the City Council received an update on the results of comprehensive water system assessment, including information on future water rates. The water assessment identified more than $350 million in projects needed over the next 30 years, with $30 million being programmed for completion over the first five years.

On January 9, 2024, the City Council held a discussion on a the MHP Library assessment/visioning analysis and discussed funding options. Following discussion, the City Council directed staff to complete an overall condition analysis of major City facilities and undertake a community survey soliciting public input on a possible revenue measure.

On January 30, 2024, the City Council approved a Master Joint Use Agreement with the Glendora Unified School District (GUSD). While the agreement largely stipulates use of existing facilities and services provided by the City, the agreement does provide for better maintenance of GUSD Facilities and outlines a partnership methodology for joint capital upgrades (e.g. GUSD High School Aquatics Center).

On August 27, 2024 (Attachment B), the City Council was provided the results of a community survey on a potential citywide and/or Library specific revenue measure. The survey, completed by True North Reasearch, documented initial support for a citywide facility measure (53%) as opposed to Library specific bond measure (45%). Additionally, the survey highlighted the two highest quality of life improvements in the City as improving infrastructure/roads (17.8%) and addressing homelessness (17.2%).

On November 5, 2024, the Statewide ballot measure – ACA 5 – ballot failed (55% no). The State measure would have lowered the threshold for issuing facility bonds for cities and related local agencies, from 66.6% (2/3) to 55% (same as schools).

On November 12, 2024 (Attachment C), the City Council approved an agreement with IDS Group, Inc. for Architectural, Engineering and Consultant Services for the City Corporate Yard Improvement Project in an amount not to exceed $725,581. The City will need to identify an estimated $13-15 million for the construction portion of the project, which will rehabilitate existing space and add a new building to increase the usable space by 10,000 square feet.

On February 25, 2025, the City Council received the FY 2024-25 Mid-Year Budget Update that documented approximately $50 million in current facility needs (e.g. new roofs, HVAC, etc.) that would largely keep City facilities as is. In order to significantly improve the City's facilities to modern standards and better meet current and future operational needs, the estimated costs would total more than $250 million.

DISCUSSION

The City is committed to finding ways to better the quality of life of its residents and business community. The 2023-2025 Strategic Plan, and the proposed 2025-2027 Strategic Plan, both require significant City resources to be allocated to improving the City's infrastructure, including parks, trails, streets, sidewalks, water, and facilities. These efforts are recognized by the public through the City's community survey process; the most recent of which has identified infrastructure and homelessness as the top two quality-of-life improvements needed.

Over the past five years, the City has completed more than $50 million in capital projects, including significant park transformations (e.g. Finkbiner and Louie Pompei), facility upgrades (e.g. Council Chambers), and miles of street and water infrastructure. Despite these generational investments, the City still faces impacts from decades of underinvestment. More specifically, many California cities are faced with diminishing State and Federal funding opportunities for critical infrastructure; the landscape of funding critical infrastructure and civic facilities has drastically changed over the past 50-years (e.g. Prop 13).

Over 50 years ago, Glendora was growing quickly – leadership was investing in infrastructure, building community spaces, and planning for a city that was anticipated to exceed 80,000 people, with over 20,000 school aged children, by the year 2000. While the City has experienced several larger developments over the past decade, the rapid growth experienced from the 1960's through the 1980's, has largely stopped. The City's population (approximately 50,000 people) has remained relatively flat for the last 20 years, with declines in three of the past five years.

As noted previously, the City has spent several years documenting and analyzing the facility and infrastructure needs of the community. Despite significant capital investment over the past five years, total deferred maintenance on City facilities is anticipated to cost approximately $50 million, with an investment of more than $250 million needed to bring facilities to levels that would provide for modern workspaces and greater accessibility to the public.

Outside of a revenue bond measure, the City does not have the financial resources to complete all of the needed facility upgrades. For example, the current state of the Library building, a critical and highly regarded location (and service provider), requires tens of millions in renovations to address significant structural challenges (Attachment A). The City has explored and applied for grant opportunities, worked with legislators for federal and state earmarks, and searched for other available funding sources. Recent changes at the federal level have created additional challenges and uncertainty with regard to funding, including earmark funding previously committed to the City (GPD police radio replacement project); new funding opportunities for discretionary facility and related infrastructure through the Federal government or as a passthrough from the State are highly unlikely.

Attachment D to this report provides a summary of property tax changes, dating from Proposition 13 in 1978 to the failure of ACA 5 in November 2024. In summary:

- Proposition 13 (1978) and Proposition 46 (1986) restrict cities' financial flexibility.
- Citizen-led initiatives are a viable mechanism to avoid the two-thirds voting threshold.
- The failure of ACA 5 to pass maintains the challenging environment for city-sponsored infrastructure funding, reinforcing the importance of citizen-led initiatives in municipal finance.

Measure Origin	Required Approval
City Council-Initiated GO Bonds	**Two-thirds (66.7%)** voter approval
Citizen-Initiated Bonds/Special Taxes	**Simple majority (50% + 1)** voter approval

The August 2024 community survey (Attachment B) on a possible citywide and/or Library specific revenue measure documented initial support for a citywide facility measure (53%) as opposed to Library specific bond measure (45%). It is unlikely that the City would be able to garner enough support for a City Council initiated facility bond measure; however, should the measure be undertaken through a citizen-led effort, there is an improved likelihood of its passage.

The process for a citizen initiative petition is outlined in the California Elections Code is outlined in Sections 9200-9226 and 9600-9610: http://leginfo.legislature.ca.gov/faces/home.xhtml

It is suggested that petitions be submitted a minimum of 134 days before the election to provide for the processing required by State law. All requisite processing of the initiative petitions must occur no later than the 88th day before the election to appear on the ballot. This includes verification of signatures, City Council action, and additional publication requirements, among other items.

To qualify for placement on the ballot, 10% of the registered voters of the city (according to the last report of registration by the county elections official) must be gathered. There are approximately 35,000 registered voters in the City of Glendora. A Frequently Asked Questions (FAQ) document about the citizen initiative process can be found as Attachment E.

FISCAL IMPACT

After decades of underinvestment in streets, roads, and City facilities, the City has invested more than $30 million in water projects, new streets/sidewalks, major park improvements, and facility upgrades over the last two years, and more than $50 million over the last five. While these generational improvements were necessary and critical to the quality of life in Glendora, the City faces difficult decisions moving forward. With rapid increases in capital costs since 2020, and the continued deterioration of key facilities (e.g. civic complex, public works yard, etc.), the City Council will need to consider a facility bond. The changing landscape of municipal finance post Proposition 13 does not allow the City to fund critical facilities, such as the ones in use today (e.g. Library, City Hall, Police Department, etc.). Over the past three years, the City has funded structural assessments, space planning, and community visioning of key City facilities. With the inability to fund facility needs from existing funding sources, the City will need to meaningfully engage its residents as we consider replacing aging City facilities. Similar to the decisions made by City leaders more than 50 years ago, current leaders will need to ask the community to fund improvements so future generations of Glendorans can experience the same quality of life enjoyed by the existing community and those that came before us.

There is no fiscal impact associated with the recommendations in this report. Based on City Council direction, staff with provide the fiscal impacts of future policy decisions.

BACKGROUND

- 1967 and 1968
  - New library facility project gains momentum
  - Library expansion is a continual process
    - Reading Room
    - City Hall Space (1912)
    - City Hall Annex (1930)
    - City Hall Annex Expansion (1955)

BACKGROUND

- 1968 and 1969
  - Annexations, population growth, school impacts
  - Library space needs to be solved by a new building
  - City's new 1990 General Plan, anticipates:
    - Population growing from 30,000 to 80,000
    - Student enrollment growing from 9,175 to 25,350

1968 Letter From City to GUSD

A SUMMARY OF MAJOR BENEFITS PROJECTED TO BE AVAILABLE TO THE GLENDORA UNIFIED SCHOOL DISTRICT AS A RESULT OF ITS PARTICIPATION IN THE JOINT POWERS AGENCY WITH THE CITY OF GLENDORA FOR THE PURPOSES OF CONSTRUCTING A PUBLIC LIBRARY FACILITY

With the population increase, the information explosion and the dearth of funds available to schools at this time, an increasing number of school districts are being gradually forced to re-direct their students and teachers from their own school-operated, inadequately-equipped and stocked libraries to the cities' public library facilities for both basic and in-depth research materials. This development has been accepted as a permanent situation by many librarians and is considered a challenge that must be met and surmounted.

The aforementioned situation is especially valid in the Glendora Planning Area. 9,175 students presently attend the thirteen schools administered by the Glendora Unified School District. The Gruen Associates Glendora, California General Plan, 1990 projects a 1990 student population for the Planning Area of 25,350. A study made by the Glendora Planning Department indicates that 85% or 21,547 of these 25,350 students will be attending schools in the Glendora Unified School District.

BACKGROUND

- February 1969
  - City Council authorized City Manager to apply for library grant funds to build a new facility
  - City Council calls for a general obligation library bond measure should the funds be awarded ($785,000)

BACKGROUND

- September 1969
  - City Council updated on Library financing
  - City Council cancels election for library facility bonds, citing bond market uncertainty and uncertain tax law litigation (e.g. 2/3 vs 50 +1)
  - City Council hires a financial consultant and authorizes architect to continue work

BACKGROUND

- November/December 1969
  - State/Federal funding denied
  - City moves forward with “ultramodern” library design
    - 28,000 sqft, down from 33,000 sqft
    - Approximately $1.1 million including design, land acquisition, and furnishings
    - Anticipated to serve the City for 35 years

BACKGROUND

- Late 1969 through early 1970
  - Effort by a Mrs. Everett Cloutman, to require a vote to issue bonds to build a new library
    - Petition gathered 1,136 signatures, required 1,376 signature.
    - Supported by one Councilmember (Isensee)

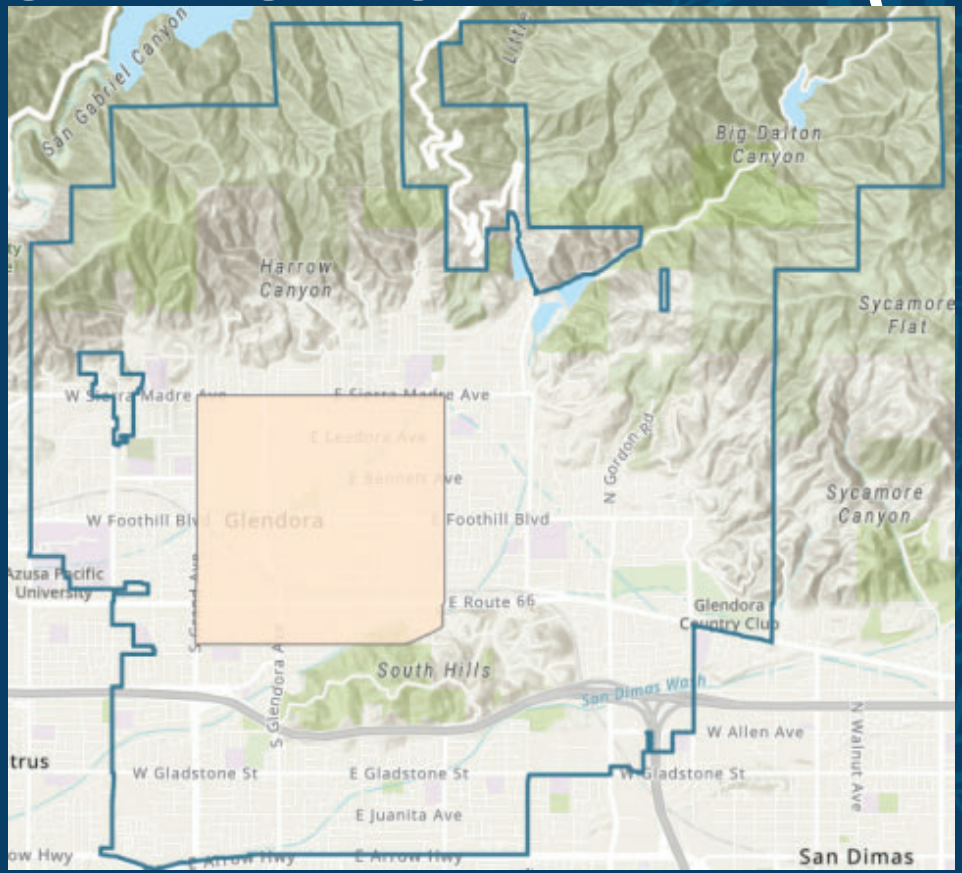
BACKGROUND

- July 1970
  - Creation of Glendora Library Authority
    - Joint Powers Authority between City and Glendora Unified School District
    - Ability to issue debt
    - Acknowledgement of growing school population

BACKGROUND

- October/November 1970
  - City Council approves “Glendora Library Ground Lease” and “Glendora Library Sublease”
    - Agreement with Glendora Library Authority
    - Term coincides with issuance of bonds
    - Payment is equivalent to debt service ($81,000/year)

BACKGROUND



- November 1970
  - Library Authority completes sale of $950,000 in Lease Revenue Bonds
    - Bank of America
    - Approximately 7% for 30 years
    - $81,000 annual debt service payment

BACKGROUND

- November 1970

19,502 cities in the US. Glendora ranks approximately 775th by population

BUDGET AND CITY FINANCES

- February 1969 SGV Tribune article on library bond measure funding

Financed through a joint powers agreement between the city and school district, the library was a result of funds saved when the city's fire department merged with the county. The city's savings of $120,000 annually will go toward completing payments on the library.

  - "Yes" and "No" – Homeowners didn't see decreased costs

Subject: Recommended budget for the 1972-73 fiscal year

Cities all over the nation and especially in California are facing the greatest revenue-expenditure gap in history. All but about 10 million of America's 200 plus million people now live in urban areas and demand ever more costly urban services. Yet cities are expected and required to operate using antiquated and inadequate revenue producing sources. Nation wide, according to the National Leggue of Cities, city services cost about $12 billion more than they cost five years ago. Most of these increased costs are not controllable--like cost-of-living pay increases.

In Glendora, for example, police costs in 1967-68 were $424,736 excluding fringe benefits. The proposed budget recommends that $739,048 (based on 1971-72 salary rates) be spent for police services, an increase in five years of $314,312, or 74%. Yet property taxes to the City increased only $306,065, or 45% in the same period ($676,720 to an estimated $982,785).

What is needed, in my judgment, is a reordering of national and state priorities and a resturcturing of the revenue sources to provide adequate financial support for cities so that the 95 of every hundred Americans--city dwellers--can have the quality of life they want, deserve, and really are already paying for but in many cases not getting.

Fortunately the problem in Glendora, though critical, has not reached the conditions now existing in many cities. The quality of life in Glendora is high yet the level of City property taxes is low compared to our neighboring cities. Only Rosemead, Arcadia and El Monte of the 14 cities in our area have lower city tax rates than Glendora.

Comparison of 1971-72 Tax Rates -
Selected San Gabriel Valley Cities

Claremont	2.33	1.39
San Dimas	1.99	
Monrovia	1.92	
South Pasadena	1.86	
Monterey Park	1.73	
West Covina	1.72	
Alhambra	1.60	
Covina	1.49	
Azusa	1.45	
Glendora	1.38	
Duarte (est.)	1.38	
Arcadia	1.25	
Rosemead	1.14	
El Monte	1.10	

(Average: $1.56, or 13% higher than Glendora)

PROP 9 (1968) AND PROP 13 (1978)

California Proposition 9 was on the ballot as an initiated constitutional amendment in California on November 5, 1968. It was **defeated**.

A **"yes"** vote supported decreasing the ad valorem tax on property so that the sum of the tax and ad valorem special assessments on the property does not exceed 1% of the market value of the property.

A **"no"** vote opposed decreasing the ad valorem tax on property so that the sum of the tax and ad valorem special assessments on the property does not exceed 1% of the market value of the property.

RESOLUTION NO. 68-072

A RESOLUTION OF THE COUNCIL OF THE CITY OF GLENDORA OPPOSING THE CALIFORNIA INITIATIVE AMENDMENT ON PROPERTY TAX LIMITATION ("WATSON AMENDMENT")

Election results

California Proposition 9		
Result	Votes	Percentage
Yes	2,146,010	31.95%
✖ **No**	**4,570,097**	**68.05%**

WHEREAS, it is the opinion of the Glendora City Council that the proposed amendment is an irresponsible approach to the problem of tax reform because, in part, it misleads the public into believing there will be a tax decrease when, in fact, a massive tax shift requiring a significant State tax increase will result; the State income tax would have to be tripled and the State sales tax quadrupled to cover the revenue deficit created by this measure; the bonding capacity of the City of Glendora would be limited so that no further bonds can be issued to finance future city construction on a pay as you go basis; and

PROP 9 (1968) AND PROP 13 (1978)

California Proposition 13 was on the ballot as an initiated constitutional amendment in California on June 6, 1978. It was **approved**.

A **"yes"** vote supported this constitutional amendment to:

* require that properties be taxed at no more than 1 percent of their full cash value shown on the 1975-1976 assessment rolls and limit annual increases of assessed (taxable) value to the inflation rate or 2 percent, whichever was less.
* upon the transfer of properties, allow them to be reassessed at one percent of their sale price and reset the limit on annual increases of assessed value.
* prohibit the state legislature from enacting new taxes on the value or sale of properties.
* require a two-thirds vote of the state legislature to increase non-property taxes.
* require local governments to refer special taxes to the ballot and require a two-thirds vote of electors.
* make the state government responsible for distributing property tax revenue among local governments.

A **"no"** vote opposed this constitutional amendment to require that properties be taxed at no more than 1 percent of their full cash value shown on the 1975-1976 assessment rolls and limit annual increases of assessed (taxable) value to the inflation rate or 2 percent, whichever was less, and make other changes to tax-related provisions of the California Constitution.

Election results

California Proposition 13

Result	Votes	Percentage
✔ **Yes**	**4,280,689**	64.79%
No	2,326,167	35.21%

CURRENT LIBRARY BUILDING

Structural Analysis

- Ongoing building-related issues
  - Structural deficiencies & water intrusion

CURRENT LIBRARY BUILDING

- 2021: Preliminary structural assessment completed by JMDiaz, Inc.
  - Visible cracking in beam system noted
- 2023: Myers Houghton and Partners, Inc. (MHP) contracted to perform in-depth structural analysis
  - Initial visioning activities
  - Conceptual design for second story addition

CURRENT LIBRARY BUILDING

- MHP structural analysis – Findings
  - Other than wall anchorage upgrades, seismic strengthening not warranted
  - Minor-to-moderate cracking throughout the library's main roof structure
  - Plaza waterproofing membrane may be compromised
  - Live load and soil bearing pressure concerns with some girders and pad footings

CURRENT LIBRARY BUILDING

- MHP structural analysis – Recommendations
  - Significant retrofitting/repairs needed
  - Bidwell Plaza
    - passive use okay
    - currently not being used for public assembly events of over 500 people with equipment
  - Waterproofing consultant should be retained

NEXT 35 - 50 YEARS

Programmatic visioning

- Part of MHP's second phase:
  - evaluation of the feasibility of vertical expansion of the building
  - working with Library stakeholders to identify the intended use of the expanded space

NEXT 35 - 50 YEARS

Programmatic visioning

- architectural consultant
- seven workshops
- MHP, Library, Board of Library Trustees, GPL Friends Foundation, City Manager' s office, and Public Works Department

NEXT 35 - 50 YEARS

Programmatic visioning

- Initial inputs
  - Library's current strategic framework
  - Projected population and per-capita square footage allocation
    - Expected 45,000 to 52,500 gross square feet
    - Currently about 30,000 square feet
  - Environmental scan

NEXT 35 - 50 YEARS

Programmatic visioning

- GPL proposed Library building spaces of the future
  - Customer-Driven Workspaces
  - Public Assembly Spaces
  - Library-Mediated Public Workspace
  - Fulfillment Center Services
  - Small Private / Semi-Private Spaces
  - Physical Content Showroom

NEXT 35 - 50 YEARS

Programmatic visioning

- GPL proposed Library building spaces of the future, continued
  - Leisure Spaces – Relaxation
  - Library Services
  - Additional Library Services and Capacity Including: Preservation/Archival storage, Public Access Technologies, Food Service, Event Catering
  - Flexible Future Space: Uncharted Possibilities
  - Infrastructure

NEXT 35 - 50 YEARS

From: Tour the Revamped Stanley A. Milner Library | Edify. (edifyedmonton.com)

NEXT 35 - 50 YEARS

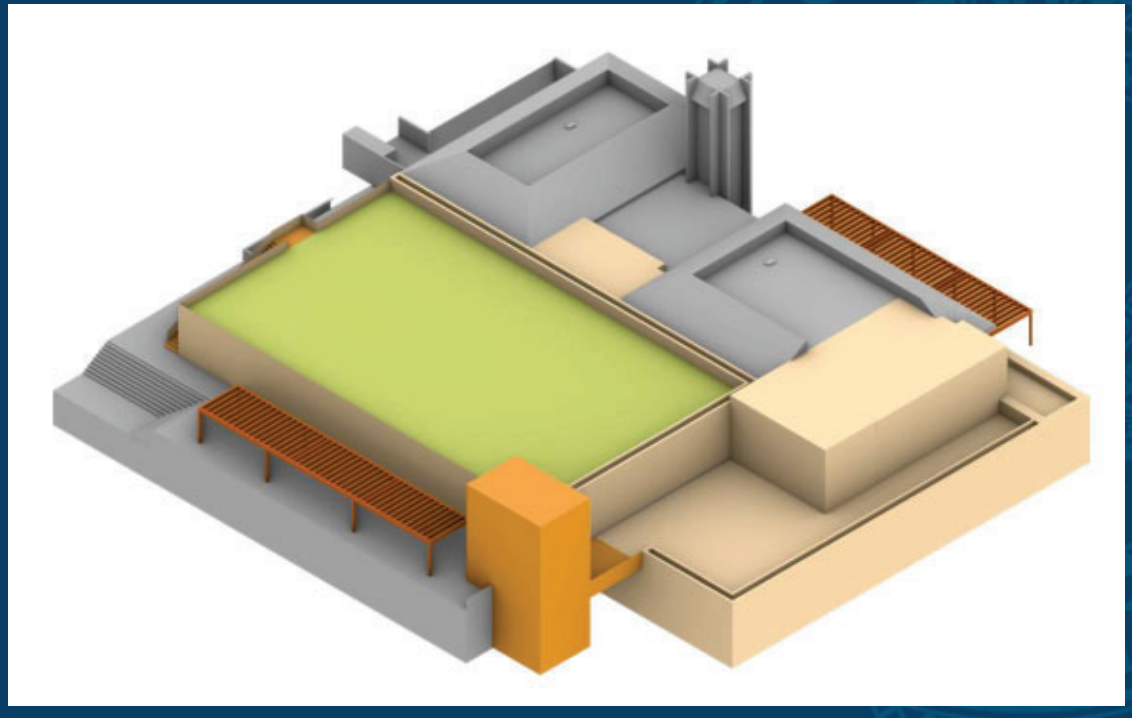
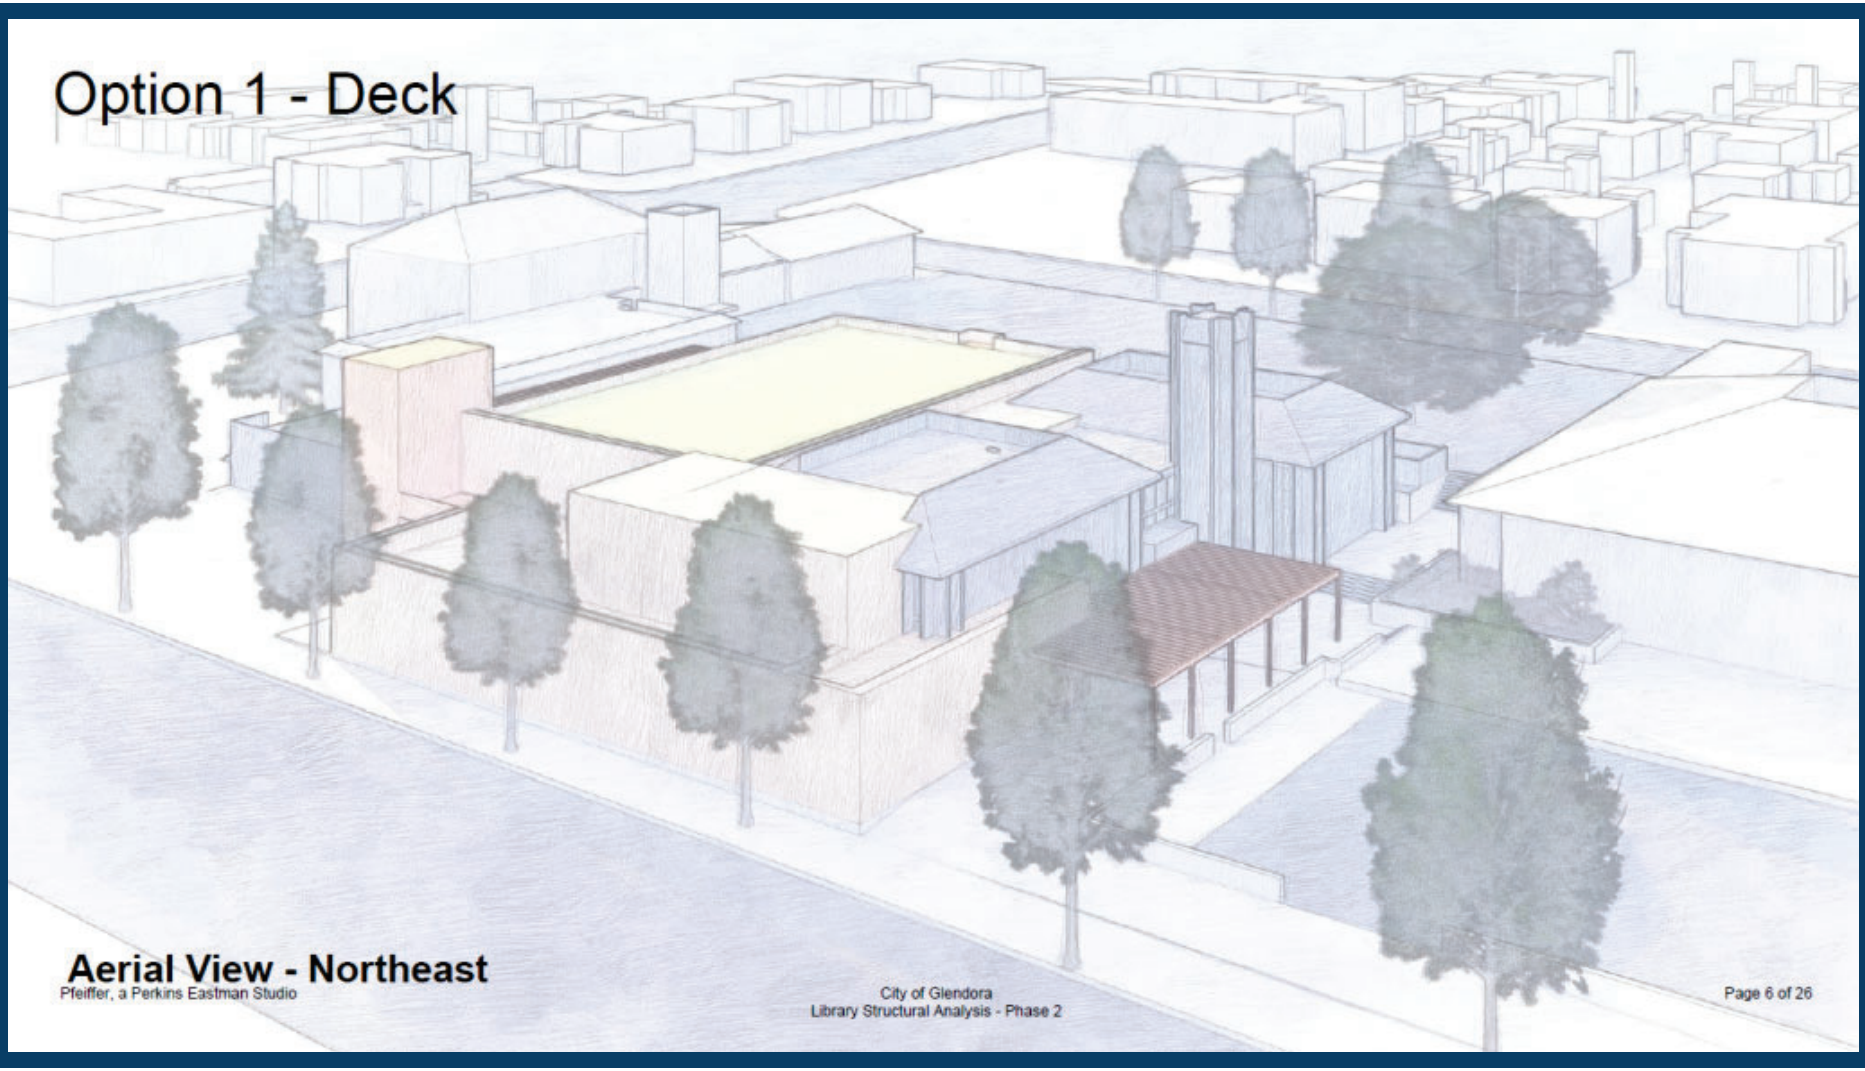
Programmatic visioning



- Roast of the current building
  - no visibility of the activities happening inside
  - entry process dark and non-intuitive
  - several areas where the existing environment fails to meet current codes
  - electrical connectivity in the building is inadequate
  - temperature control and ventilation pose challenges
  - water leaks have been a persistent issue since the library' s opening
  - lighting systems are outdated and require an upgrade
  - Library staff workplace is small, overcrowded, and lacks natural daylight
  - clear shortage of storage space

NEXT 35 - 50 YEARS



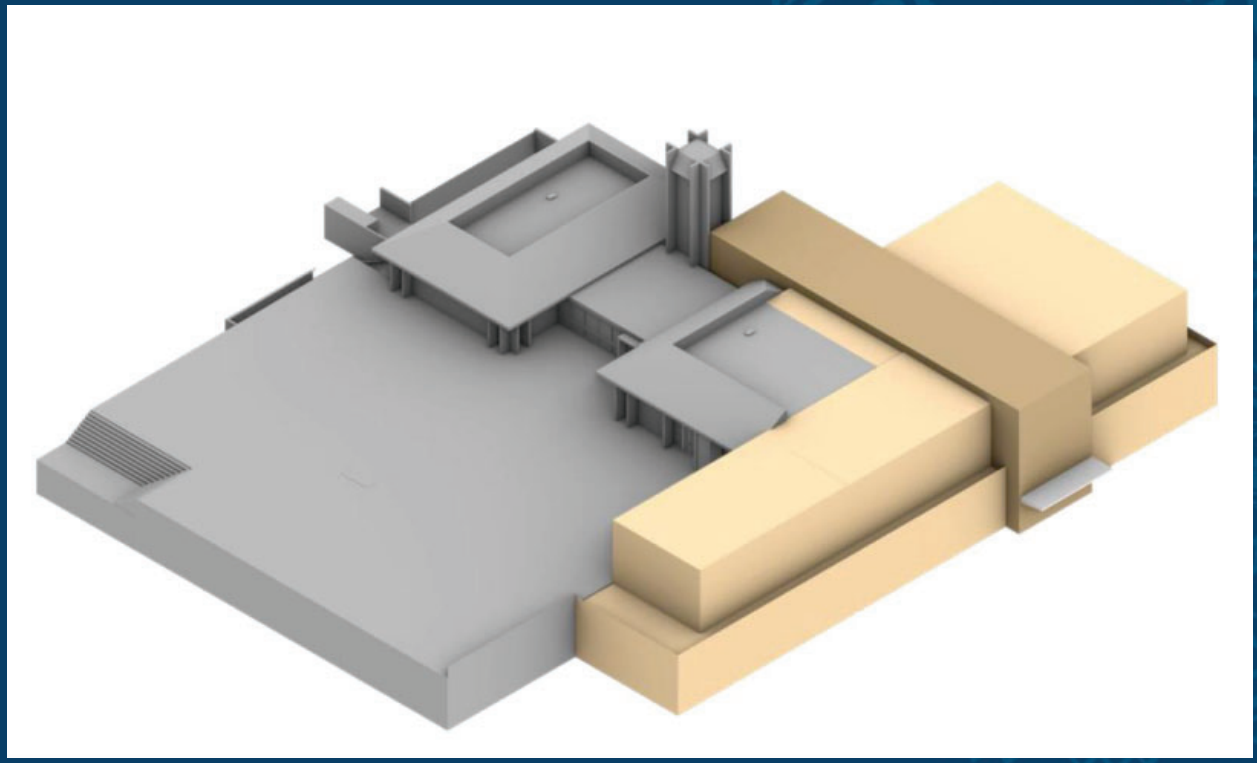
Programmatic visioning

- "The Deck" Concept
  - second story over the existing Plaza deck
  - 2-story addition on the Glendora Avenue side
  - $20.6M

NEXT 35 - 50 YEARS

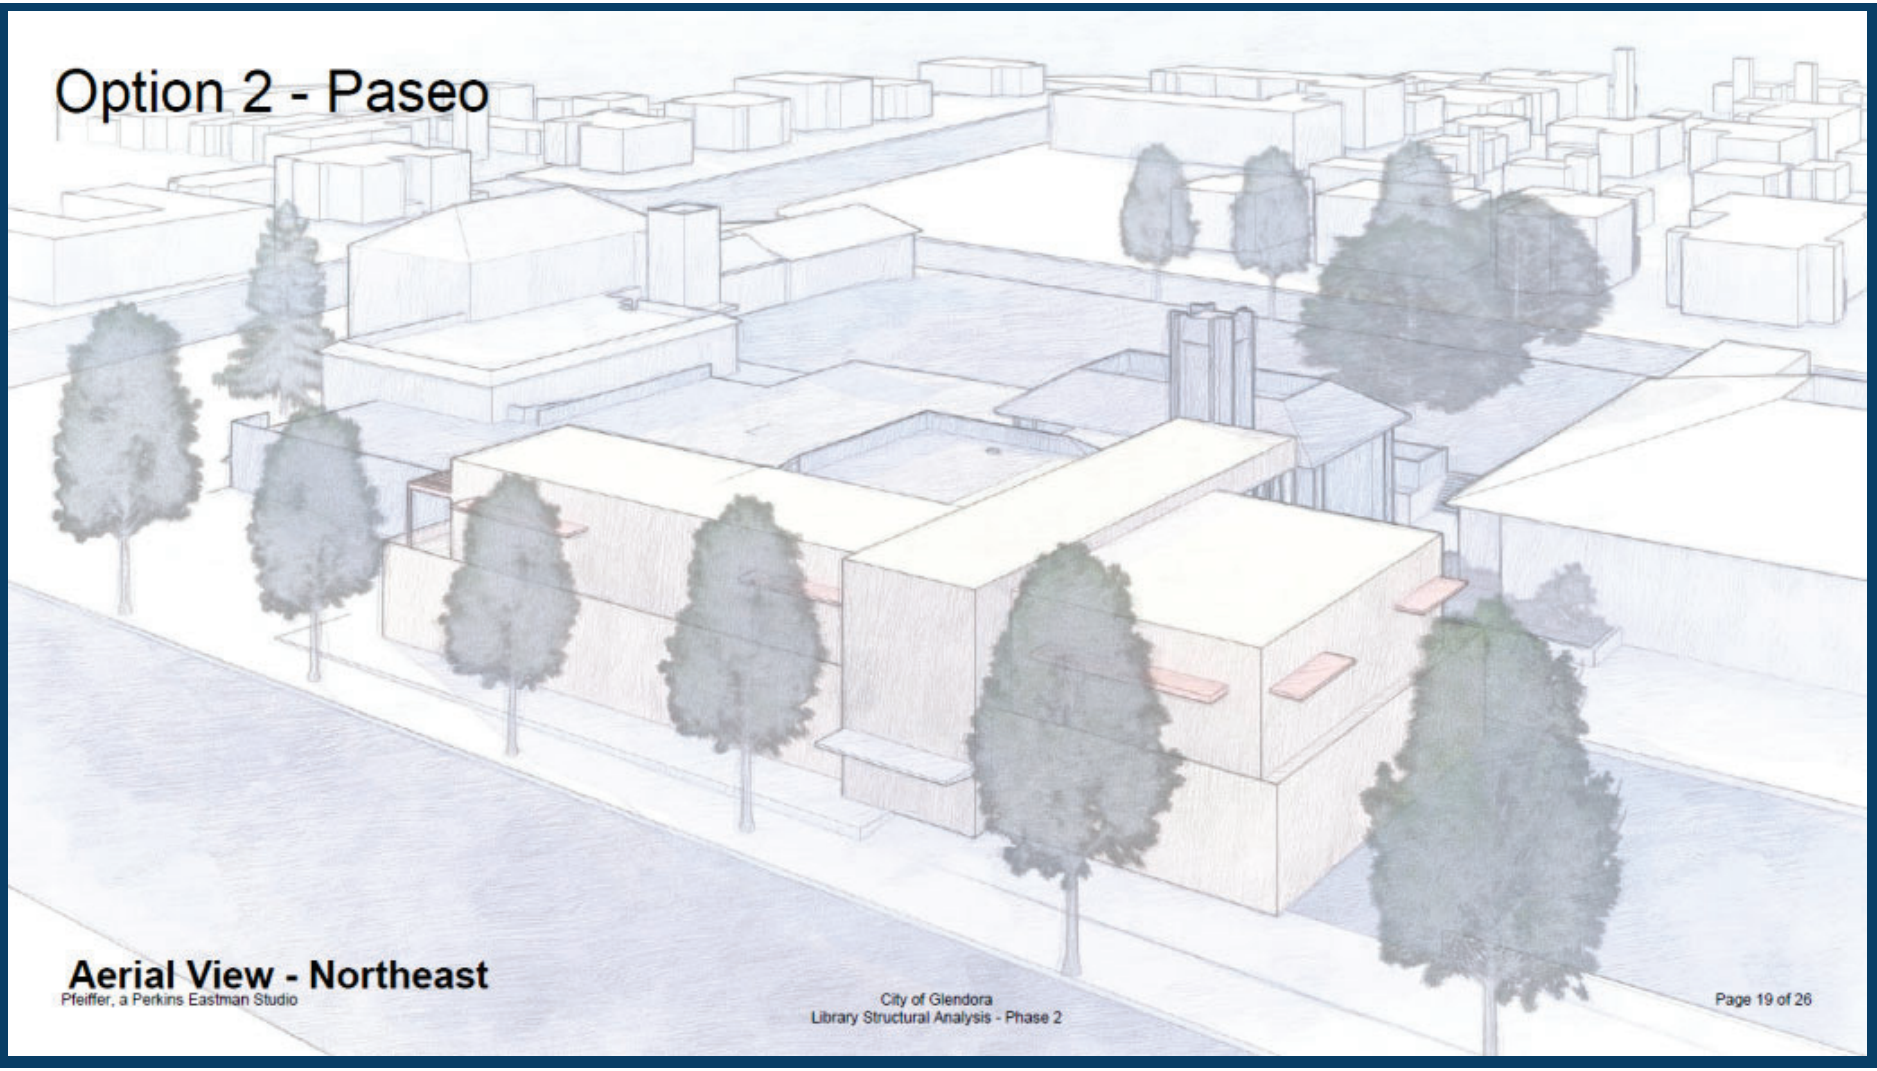
Option 1 - Deck

Aerial View - Northeast



Pfeiffer, a Perkins Eastman Studio

NEXT 35 - 50 YEARS



Programmatic visioning

- "The Paseo" Concept
  - Block A extends the library building towards Glendora Avenue
  - Block C is situated to the south and occupies a small portion of the existing library building and Police Station parking lot
  - The Paseo (Block B), is an architectural atrium-like space that captures abundant natural light during the day
  - $23.0M*

NEXT 35 - 50 YEARS

Option 2 - Paseo

Aerial View - Northeast

Pfeiffer, a Perkins Eastman Studio

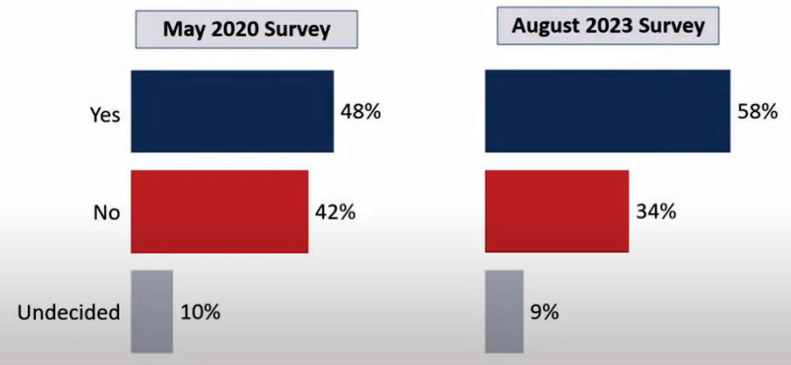
NEXT 35 - 50 YEARS

- Structural
- Infrastructure improvements
- Remodeling
- Modernization

NEXT 35 - 50 YEARS

Project Type	*Estimated Total Cost Range*
Current facility MEP renovation	$1.3M - $1.95M
Basic structural repairs of existing building (gravity load repairs to strength beams and repair cracks)	$2.9M - $4.35M
Weatherproofing Bidwell Plaza (topping slab & membrane replacement)	$900K - $1.35M
Combined basic critical maintenance repairs w/no other significant improvements	$5.1M – $7.65M
Known critical maintenance items & 2nd story expansion, but minimal other modernization or upgrades of existing facility.	$16.4M – $24.6M
Known critical maintenance items & comprehensive modernization and upgrades of existing facility, but no expansion.	$18.6M – $27.9M
Known critical maintenance items, comprehensive modernization and upgrades of existing facility, & expansion of 2nd story.	$29.9M – $44.9M
New Building or Replacement/Reconstruction	$35.8M - $71.6M+

POLITICAL & FISCAL ENVIRONMENT



Grant funding

- Building Forward Round Two
  - "not selected for funding at this time"
  - "wasn’t among the facilities with the highest poverty levels, as determined by the California Poverty Measure"

POLITICAL & FISCAL ENVIRONMENT

Glendora Unified School District – October 23, 2023

Nearly six-in-ten voters support a potential measure to provide funds for classroom repairs, upgrades and safety improvements for GUSD – up 10 points from May 2020.

FM3 Q. How would you vote on this measure: would you vote yes in favor of the measure or no to oppose it? **($140 million bond measure)**

Conclusions and Next Steps

- A $140 million bond measure for GUSD is worthy of future planning and consideration.
- Next steps include:
  - Now – June 2024: Develop and implement plan to communicate with voters to educate about the District's needs and goals
  - March – June 2024: Finalize project list, tax rate statement and resolution for balloting materials
  - May 2024: Follow-up survey to get up-to-date information on community attitudes before placement
  - June 2024: Board decision on bond measure placement (*Deadline is August 8, 2024)*
  - August 2024 – November 5, 2024: District provides information about the contents of the measure; outside campaign

FM3 RESEARCH

POLITICAL & FISCAL ENVIRONMENT

Funding options and watch-list items

- Citizen-initiated
- City-initiated
- Approval requirements
- Other considerations

POLITICAL & FISCAL ENVIRONMENT

- Citizen-initiated funding
  - legal precedent for this:
    - group of citizens proposing
    - special property tax
    - by initiative
  - majority vote
  - would take about a year (signature gathering period is six months)
  - Watch list: Taxpayer Protection and Government Accountability Act ("Taxpayer Act")

POLITICAL & FISCAL ENVIRONMENT

- City-initiated funding
  - could be at a special or general election
  - approval requirements follow
  - watch list: ACA 1 (Constitutional Amendment)

POLITICAL & FISCAL ENVIRONMENT

Local Level	Governing Body Approval	Voter Approval
City or county "general" taxes (revenues used for unrestricted purposes)	If consolidated with a regularly scheduled election of members of the legislative body: • 2/3 for transactions & use taxes • Other taxes: 2/3 for general law cities; majority for charter cities. If not consolidated, unanimous declaration of "emergency" required.	Majority

CaliforniaCityFinance.com Source: Adapted from CALFACTS, Legislative Analyst's Office

POLITICAL & FISCAL ENVIRONMENT

Local Level	Governing Body Approval	Voter Approval
City or county "special" taxes (revenues used for specific purposes)	Majority (2/3 for transactions & use taxes)	2/3
All school or special district taxes	Majority	2/3
General obligation bonds	Majority	2/3[b]
Other debt	Majority	None

CaliforniaCityFinance.com Source: Adapted from CALFACTS, Legislative Analyst's Office

POLITICAL & FISCAL ENVIRONMENT

Local Level	Governing Body Approval	Voter Approval
Property assessments	Majority	Majority of affected property owners. Votes weighted by assessment liability
Property—related fees	Majority	2/3 of voters or majority of affected property owners[c]
Fees—all other	Majority	None

CaliforniaCityFinance.com Source: Adapted from CALFACTS, Legislative Analyst's Office

POLITICAL & FISCAL ENVIRONMENT

- Other funding
  - Joint Powers Authority (JPA) (e.g., with a school district)
    - unlikely that a library would fit within the definition
  - Private/public partnership
    - Burbank exploring, to supplement State grant funds
  - Adding value
    - Smaller naming-rights sponsorships/donations for building features

POLITICAL & FISCAL ENVIRONMENT

Potential timelines

- Survey
  - ~50 days
- Citizen-proposed
  - Recommended if Nov. 2024 election: Notice of Intention by Dec. 22, 2023
- City-proposed
  - For Nov. 2024 election: Last day for City Council to call election and transmit resolution is Aug. 9, 2024

RECOMMENDATIONS

That the City Council:

1. Discuss and provide direction to staff as needed regarding:
    a. Scope of Council's recommended project(s) related to Library building;
    b. Scope of Council's recommended associated project(s) at other facilities specified by Council;
    c. Production of any related architectural concept drawings as desired;
    d. Position on funding options for recommended project(s);
    e. Public polling data as needed; AND,
2. In support of directed activities, specify any needed parameters authorizing:
    a. City Manager, or his designee, to execute Professional Services Agreements; and,
    b. Finance Director to appropriate necessary funds.

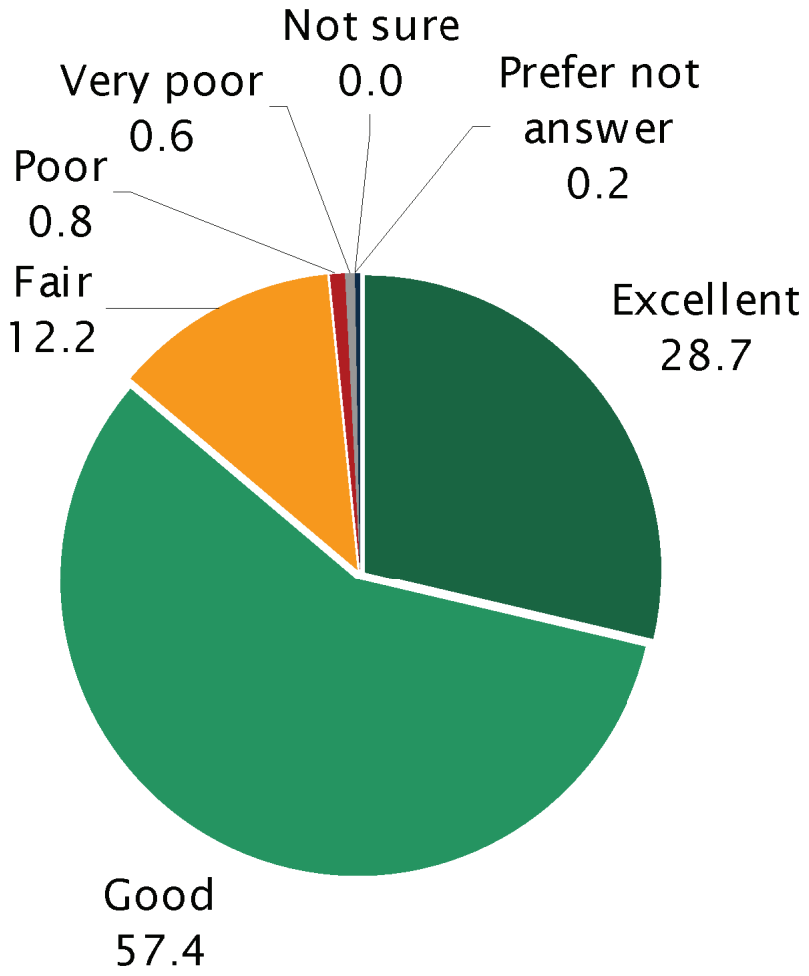
Bond Feasibility Survey

Conducted for the
City of Glendora

Presented By
Timothy McLarney Ph.D.

8/20/2024

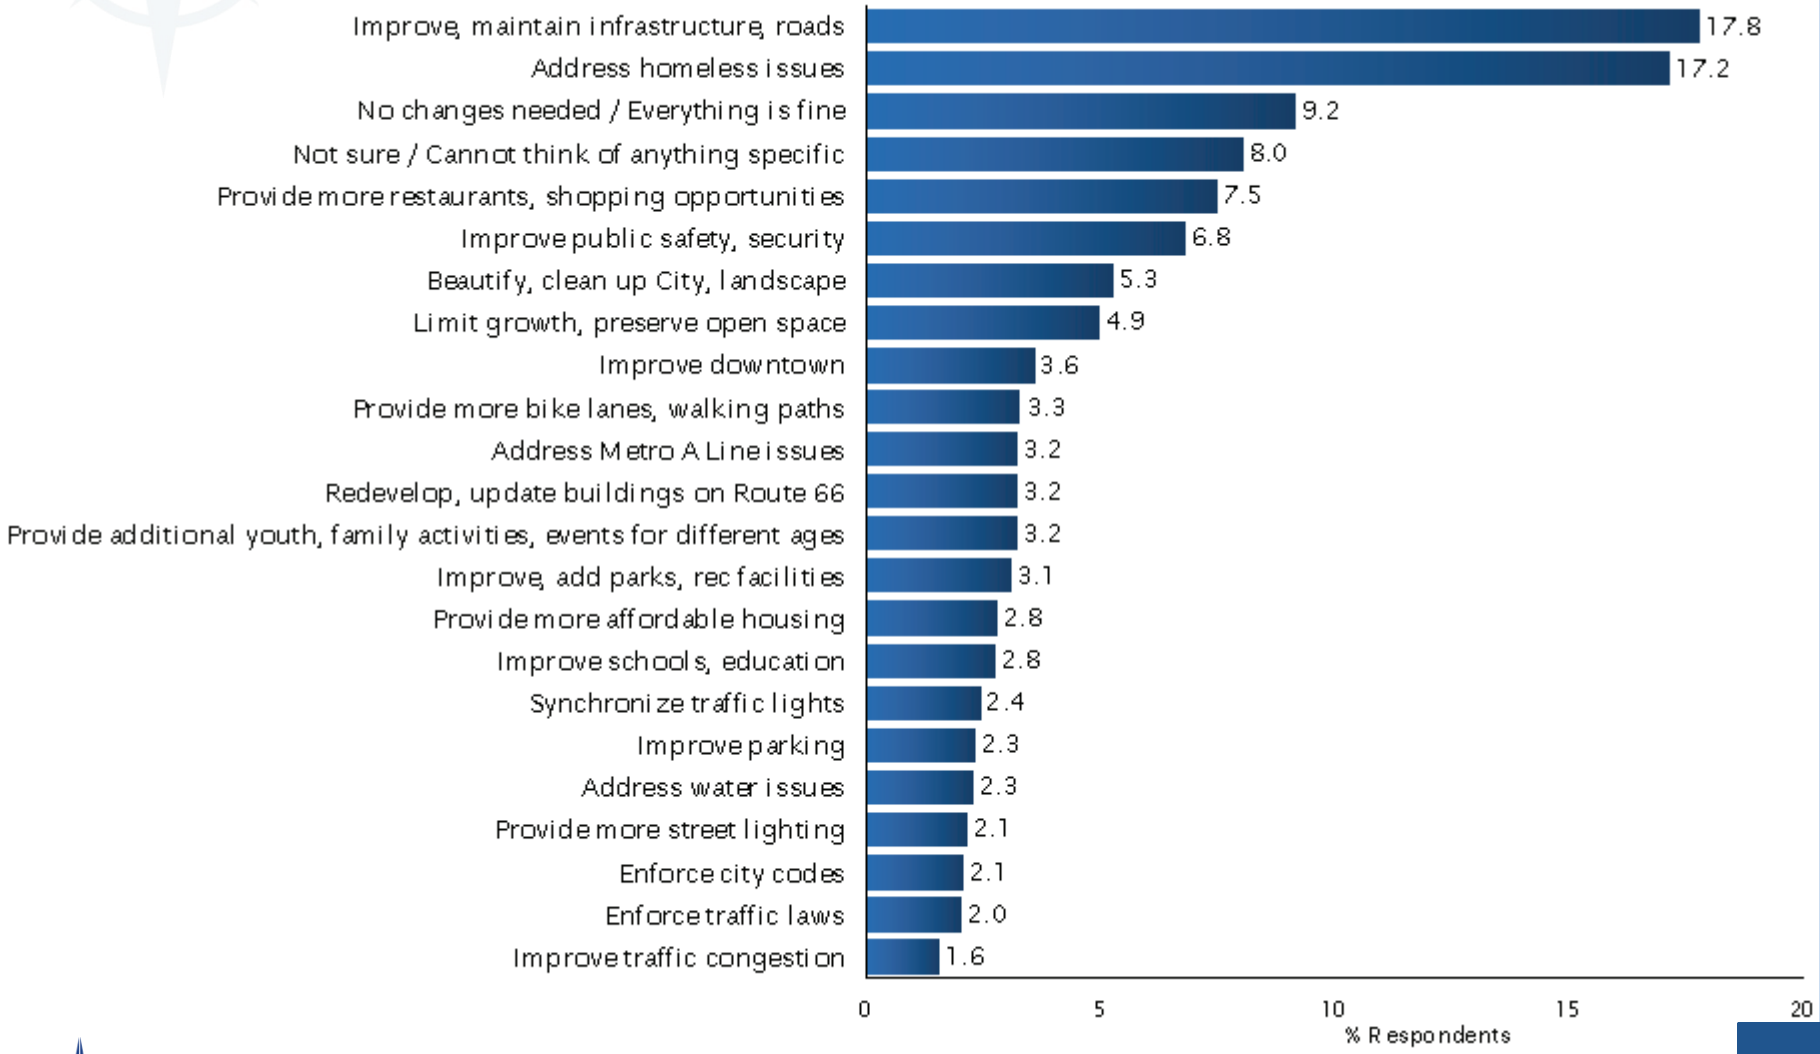
TrueNorth Research



PURPOSE OF STUDY

- Determine if a bond measure is feasible
- Identify how to create a measure consistent with community priorities
- Gather information needed for communications & outreach

METHODOLOGY OF STUDY



- **How did we select voters to survey?**
  - Stratified & Clustered Random Sample of likely voters (2024) using age, gender, partisanship, household party type, and sub-geographies
  - Ensures balanced, representative sample of likely voters
- **How did we recruit participation?**
  - Personalized email, text, and telephone calls
  - PINs to restrict access and ensure one complete per respondent
- **How were voters able to share their opinions?**
  - Secure, PIN-protected website that scales to the device
  - Telephone (land line or mobile)
- **What was the sample size?**
  - 600 completed interviews – split sample
  - Overall margin of error of ± 4% @ 95% level of confidence

TRUENORTH RESEARCH

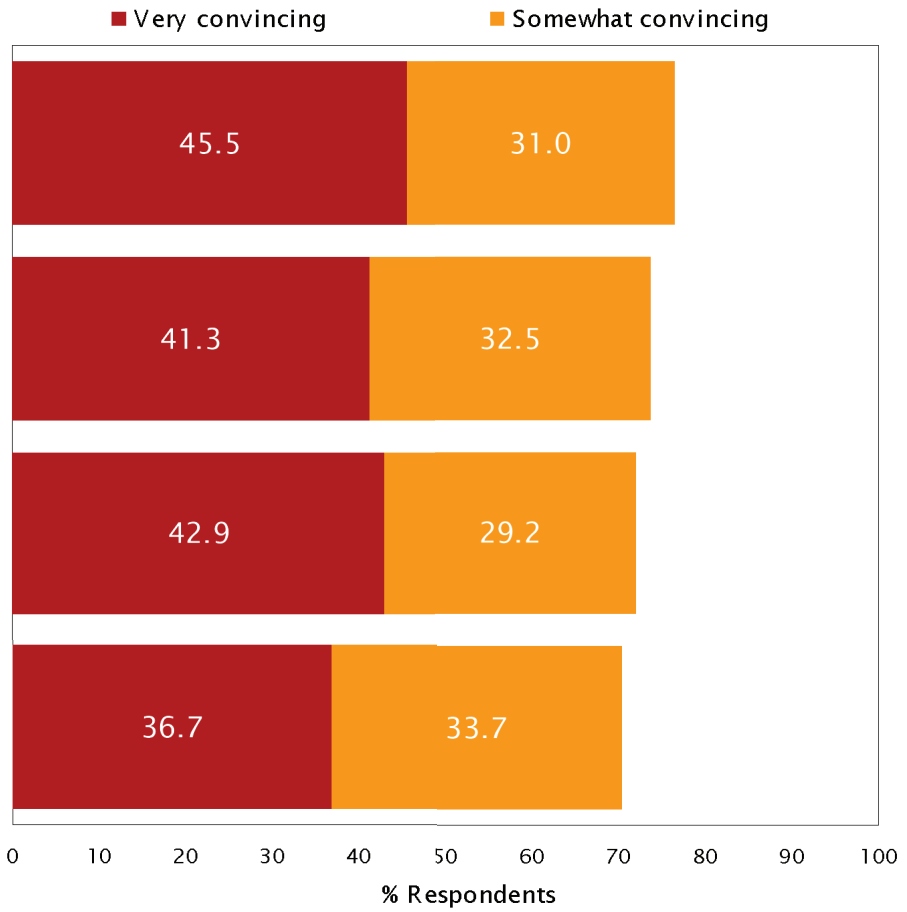
POSITIVE ARGUMENTS: LIBRARY

TRUENORTH RESEARCH

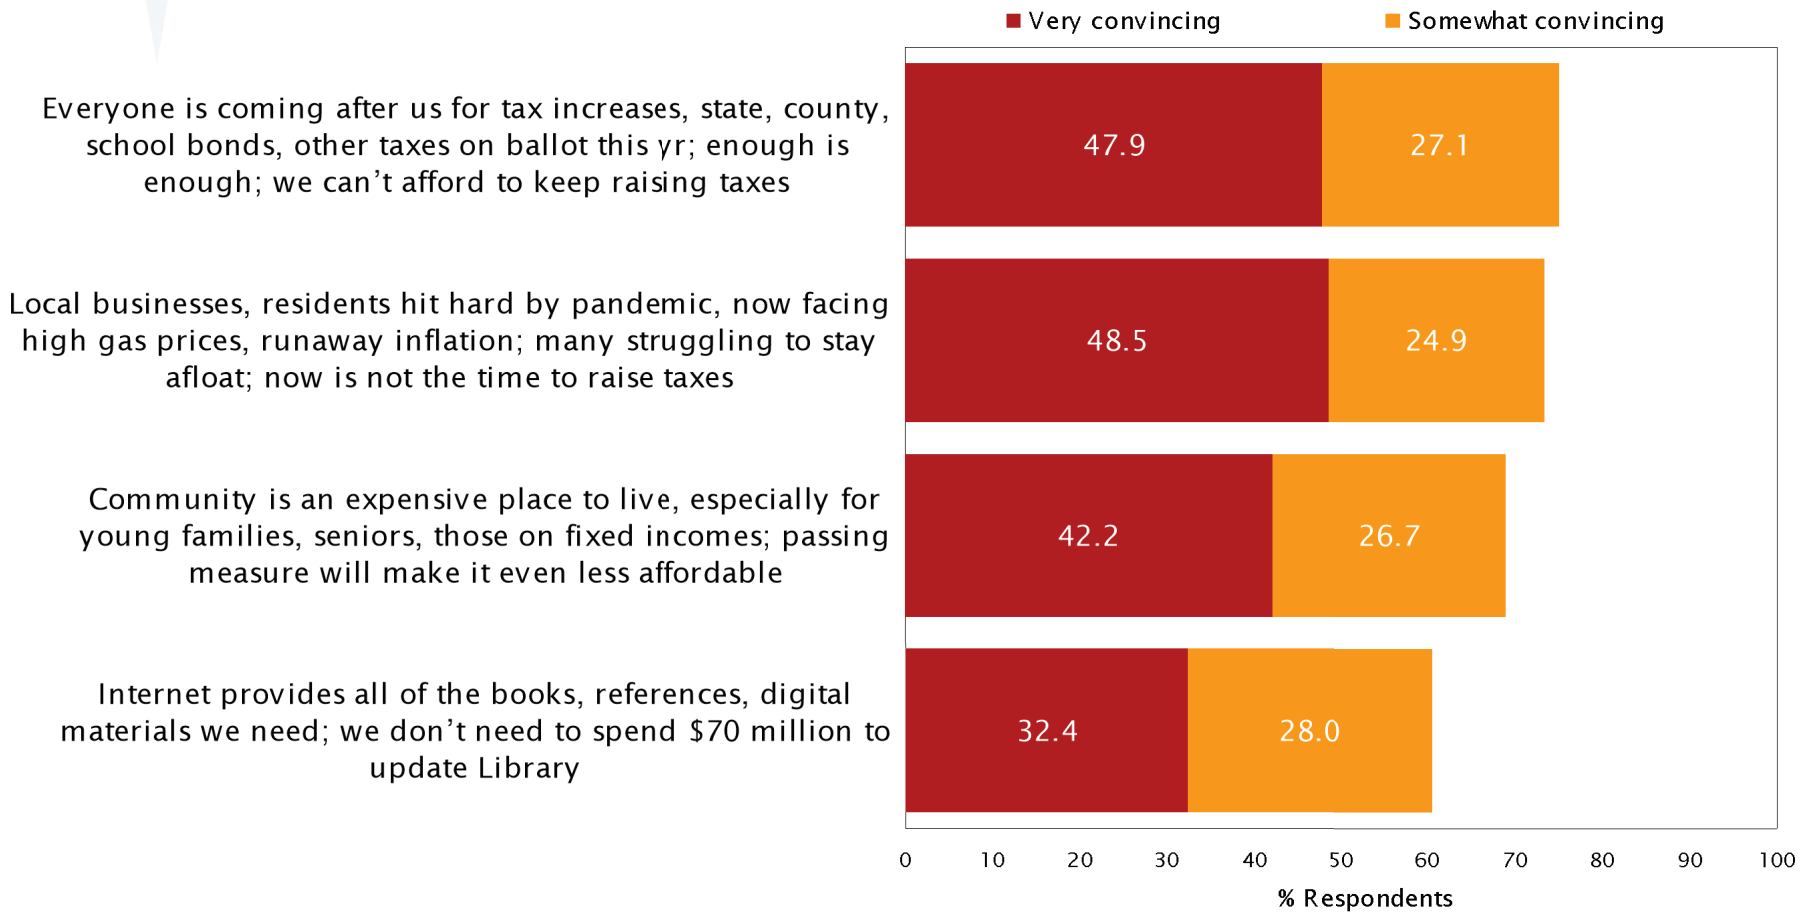
INTERIM BALLOT TEST



NEGATIVE ARGUMENTS: FACILITIES

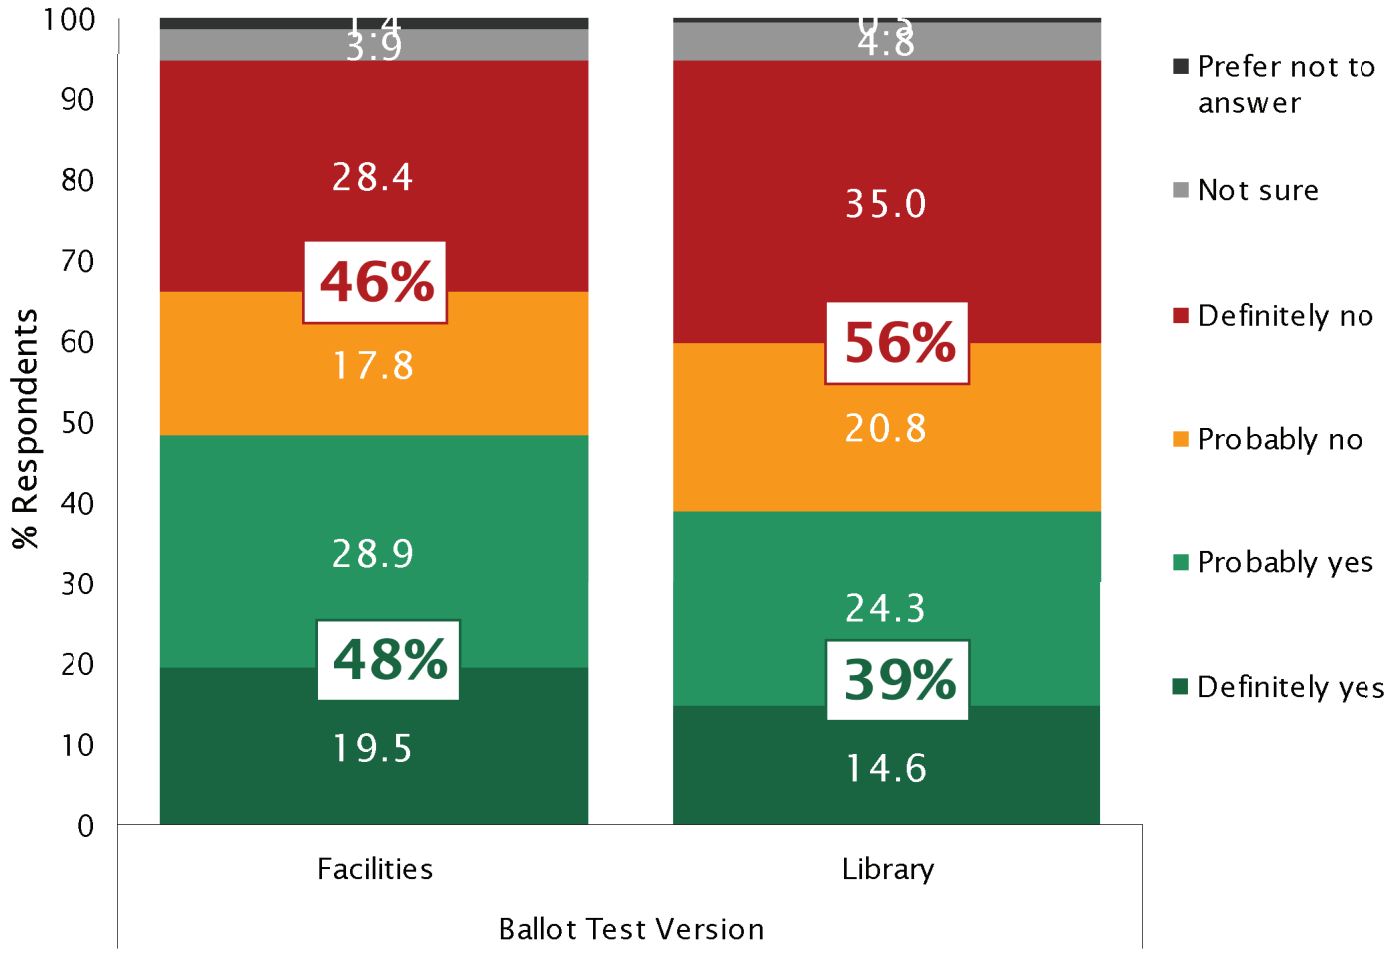
City raised local sales tax five years ago, generated over $20M in extra revenue; should use that money to fix community facilities rather than asking voters for another tax increase

Everyone is coming after us for tax increases, state, county taxes, school bonds, other taxes on ballot this year; enough is enough; we can't afford to keep raising taxes



Local businesses, residents hit hard by pandemic, now facing high gas prices, runaway inflation; many struggling to stay afloat; now is not time to raise taxes

Community is an expensive place to live, especially for young families, seniors, those on fixed incomes; passing measure will make it even less affordable



TRUENORTH RESEARCH

NEGATIVE ARGUMENTS: LIBRARY

TRUENORTH RESEARCH

FINAL BALLOT TEST

KEY CONCLUSIONS

Does a bond appear to be feasible under current CA law? *No, but if Proposition 5 passes it is a game changer.*

Positive Signs

- Voters understand the need to repair/maintain facilities and infrastructure
- Popular projects and improvements
- Solid positive arguments

Challenges

- Two-thirds threshold under current law
- Tax rate sensitivity
- Opposition arguments resonate (-4%)
- Electoral climate: Hyper-partisanship, statewide initiatives, & overlapping measures.
- Potential for AB1416 impacts

Remaining Available Project Budget:	**$321,069**

RECOMMENDATION:

THAT THE CITY COUNCIL:

1. Award an Agreement for Contract Services to IDS Group, Inc., in the not to exceed amount of $725,581; and
2. Authorize the City Manager or his designee to execute the agreement, including any minimal and/or non-substantive changes.

Attachment D

Overview of California Municipal Finance: Property Taxes, Bonds, and Key Propositions

1. Municipal Finance and Property Taxes

Municipal finance in California primarily relies on property taxes, sales taxes, and fees for municipal services. Historically, property taxes have been a vital revenue source for cities, funding essential services including public safety, parks, libraries, and infrastructure.

2. Proposition 13 (1978)

Proposition 13 significantly limited California cities' revenue-raising ability by:

- Capping property taxes at 1% of assessed valuation.
- Limiting annual increases in assessed valuation to 2%, unless a property is sold or substantially improved.
- Requiring a two-thirds voter approval for new local taxes, including bond measures funded by property taxes.

This proposition dramatically constrained local government budgets, shifting reliance to alternative revenue sources.

3. Proposition 46 (1986)

Proposition 46 reaffirmed local governments' ability to issue General Obligation (GO) bonds funded by property tax increases for capital improvements such as parks, public buildings, infrastructure, and emergency services facilities. However, these GO bonds require two-thirds (66.7%) voter approval.

4. Voting Requirements for Facility Bond Measures

Under current law:

- City council-initiated General Obligation bond measures require a two-thirds (66.7%) voter approval.

5. Citizen Initiatives and the 50% Threshold

Recent court decisions, notably City of Upland v. California Cannabis Coalition (2017), clarified by subsequent litigation, established that citizen-sponsored initiatives placed on the ballot by voter petitions only require a simple majority (50% + 1) for approval. This significantly lowers the threshold and provides a strategic advantage for community groups or citizens seeking to fund municipal projects or impose special taxes without the higher barrier of two-thirds voter approval.

6. ACA 5 (2024) and its Failure to Pass

ACA 5, placed on the November 2024 ballot, proposed reducing the voter approval threshold for certain municipal infrastructure bond measures initiated by local governments from two-thirds to

Overview of California Municipal Finance: Property Taxes, Bonds, and Key Propositions

55%. The failure of ACA 5 maintained the existing high threshold of two-thirds voter approval, preserving the status quo. Consequently, the dynamic established by Proposition 13 and Proposition 46 remains unchanged, continuing the significant hurdle cities face when seeking voter approval for infrastructure funding.

Summary of Voting Thresholds Post-ACA 5 Failure

Measure Origin	Required Approval
City Council-Initiated GO Bonds	**Two-thirds (66.7%)** voter approval
Citizen-Initiated Bonds/Special Taxes	**Simple majority (50% + 1)** voter approval

Key Implications:

- Proposition 13 and Proposition 46 continue to restrict cities' financial flexibility.
- Citizen initiatives remain a powerful tool for circumventing the two-thirds requirement.
- The failure of ACA 4 to pass maintains the challenging environment for city-sponsored infrastructure funding, reinforcing the importance of citizen-led initiatives in municipal finance.

LOS ANGELES COUNTY
REGISTRAR-RECORDER/COUNTY CLERK

County Ballot Initiative Frequently Asked Questions

Initiating and Submitting an Initiative

How do I start an initiative in Los Angeles County?

Initiating an initiative in Los Angeles County involves drafting a proposed law or changes to law and creating a petition outlining the specifics. Initiative proponents can start the process by submitting to the Registrar-Recorder/County Clerk (RR/CC) the written text of the proposed law, a Notice of Intention (NOI) to circulate a petition in the County, along with a request for ballot title and summary (to be prepared by County Counsel). This would start the initiative process which involves preparation of the ballot title and summary, publication of the NOI and ballot title and summary, and filing of the Proof of Publication before the initiative petition can be circulated in the County for the gathering of signatures. Once the petition is ready for circulation and the circulation period commences, proponents have 180 days to secure a sufficient number of signatures on the petition and file the petition with the RR/CC to qualify the initiative measure for the ballot. The petition must meet the legal requirements set by the California Elections Code and California Code of Regulations.

What are the key elements needed in an initiative petition?

An initiative petition should have a clear, concise, and legally compliant statement of the proposed law. It requires the inclusion of a ballot title and a summary prepared by County Counsel and the precise text of the proposed initiative measure.

What are the steps to submitting an initiative petition?

The key steps to submitting an initiative petition include: (1) Proponents' filing of an NOI with the written text of the proposed law and request for ballot title and summary with the RR/CC; (2) The preparation of the ballot title and summary by County Counsel following RR/CC's review and acceptance for filing of the documents submitted by proponents; (3) Publication of NOI and ballot title and summary by proponents; (4) Filing of Proof of Publication by proponents; and (5) If requested by proponents, review and finalizing of the petition format between RR/CC and proponents. Once the petition is deemed ready for circulation and all the legal requirements are met, the proponents have 180 days to circulate the petition for signatures by the registered voters in the County and file the petition with the RR/CC.

If the number of signatures on the petition submitted to the RR/CCC equals or exceeds the minimum number of signatures required, RR/CC will examine and verify the signatures on the petition within 30 business days. The minimum number of signatures required to qualify a County initiative measure for the ballot is a number equal to not less than 10% of all votes cast in the County for all candidates for Governor at the last gubernatorial election preceding the publication of the NOI.

Circulation of Petitions

Who can circulate petitions for signatures?

Pursuant to the California Elections Code, the process of circulating petitions to gather signatures is open to persons who are 18 years of age or older. Typically, any registered voter can participate in the circulation of a petition.

What are the requirements for gathering signatures?

Every sheet of the petition requires a declaration by the circulator affirming that the signatures were collected while the circulator was present.

Is there a deadline for gathering signatures?

Yes, initiative petitions have a specific timeframe within which signatures must be gathered. Once the petition is deemed ready for circulation and all the legal requirements are met, the proponents have 180 days to circulate the petition for signatures by the registered voters in the County and file the petition with the RR/CC. It is essential to ensure that all signatures are collected and filed with the RR/CC at one time within the designated period.

Can someone sign the petition more than once?

No, each voter is allowed to sign the initiative petition only once.

Petition Signature Verification

How are petition signatures verified?

The RR/CC verifies each signature submitted on the petition against the voter's signature(s) and other information in the voter's registration records. This process involves checking the eligibility and registration status of each signer.

What factors might cause a signature to be invalid?

Signatures can be invalidated for various reasons, including, but not limited to, being ineligible, not registered to vote in the relevant district, the residence address on the petition differs from the voter's registration record, or the signature on the petition does not match the signature(s) on the voter's registration record.

What happens if the required number of signatures is not met?

An initiative petition must contain a certain number of valid signatures to qualify the initiative measure for the ballot. If the initiative petition falls short of the required number, it cannot qualify for the ballot.

What happens if a signature is found to be invalid during the verification process?

Any invalidated signatures during the verification process are not counted toward the required number of valid signatures. If too many signatures are invalidated, the initiative might fail to qualify.

Qualification

How many signatures are needed for an initiative to qualify?

The number of signatures required to qualify a County initiative measure for the ballot is the number not less than 10% of all votes cast in the County for all candidates for Governor at the last gubernatorial election preceding the publication of the NOI. Note that the minimum signature threshold varies depending on the type of initiative at issue (e.g., state initiative, district initiative), and different statutory requirements apply. Depending on the type of initiative, the number of required signatures can be based on the percentage of voters who voted in an election or the percentage of voters in the jurisdiction affected by the proposed initiative.

Can an initiative be withdrawn after submission?

Yes, an initiative proponent can withdraw an initiative at any time before the 88th day before the election.

What determines if an initiative qualifies?

An initiative qualifies for the ballot when the initiative petition successfully garners the required number of valid signatures within the statutorily prescribed period. Additionally, the proposed initiative must conform to all legal prerequisites and criteria to be eligible for the ballot.

CITY FACILITIES UPDATE

CITY COUNCIL
MARCH 11, 2025
ADAM RAYMOND, CITY MANAGER

BACKGROUND

- **Current Strategic Plan and Draft 2025-2027 Strategic Plan**
  - Requires significant resources to be directed to public infrastructure
  - $50 million in completed projects over the past 5-years
    - Miles of streets, sidewalks, and water infrastructure replaced
    - Upgrades to Parks (e.g. Louie Pompei, playgrounds) and facilities (e.g. Council chambers)

- **Documenting City Facility and Infrastructure Needs (Summary Listing)**
  - January 2023 - Contract to Myers Houghton and Partners, Inc. (MHP)
    - In-depth structural analysis/evaluation and initial visioning activities

  - September 2023 – Comprehensive water system evaluation
    - $350 million in projects needed over the next 30 years
    - $30 million programmed for completion in next five years

BACKGROUND

➢ Documenting City Facility and Infrastructure Needs (Con't)

- January 2024 - Discussion on the MHP Library assessment/visioning analysis and funding options
  - Staff directed to complete an overall condition analysis of major City facilities and survey the community for public input on a possible revenue measure

- January 2024 - the City Council approved a Joint Use Agreement MOU with Glendora Unified School District (GUSD)
  - Outlines a partnership methodology for joint capital upgrades (e.g. GUSD High School Aquatics Center)

- August 2024 - Results of a community survey on a possibility citywide and/or Library specific revenue measure
  - Initial support for a citywide facility measure (53%) as opposed to Library specific bond measure (45%)
  - Two highest quality of life improvements in the City are improving infrastructure/roads (17.8%) and addressing homelessness (17.2%)

BACKGROUND

➢ Documenting City Facility and Infrastructure Needs (Con't)

- November 2024 - ACA 5 ballot measure failed (55% no)
  - Would have lowered the threshold for issuing facility bonds for cities from 66.7% (2/3) to 55% (same as schools)

- November 2024 – Agreement with IDS Group, Inc. for Architectural, Engineering and Consultant Services for the City Corporate Yard Improvement Project
  - Increase the usable space by 10,000 sqft; project not funded

- February 2025 - FY 2024-25 Mid-Year Budget Update
  - $50 million in current facility needs (e.g. new roofs, bathrooms, HVAC, etc.)
  - $250+ million needed to significantly improve the City's facilities to modern standards and address current operational needs

FACILITY FUNDING

➢ Current Financial Overview

- Funding for needed investment in upgraded and new facilities does not exist.
  - Rapid growth planned 50 years ago slowed
  - Lack of development impact fees to replace existing facilities
  - Major changes to property tax based revenue measures begain with Prop 13 in 1978

- February 2025 - FY 2024-25 Mid-Year Budget Update
  - City's overall financial position remains stable thanks to Measure E/Z
  - Decreasing sales tax revenues ($1.35 million)
  - Increasing insurance costs ($1-1.5 million)
  - Unknown impacts of Federal spending reductions (e.g. police radios)

FACILITY FUNDING

➢ Current Financial Overview

- Funding for needed investment in upgraded and new facilities does not exist.
  - Rapid growth planned 50 years ago slowed
  - Lack of development impact fees to replace existing facilities
  - Major changes to property tax based revenue measures begain with Prop 13 in 1978

- February 2025 - FY 2024-25 Mid-Year Budget Update
  - City's overall financial position remains stable thanks to Measure E/Z
  - Decreasing sales tax revenues ($1.35 million)
  - Increasing insurance costs ($1-1.5 million)
  - Unknown impacts of Federal spending reductions (e.g. police radios)
  - New administration is pushing to eliminate tax-exempt bonds, increasing costs of issuing debt and thereby limiting project scope

REVENUE MEASURE

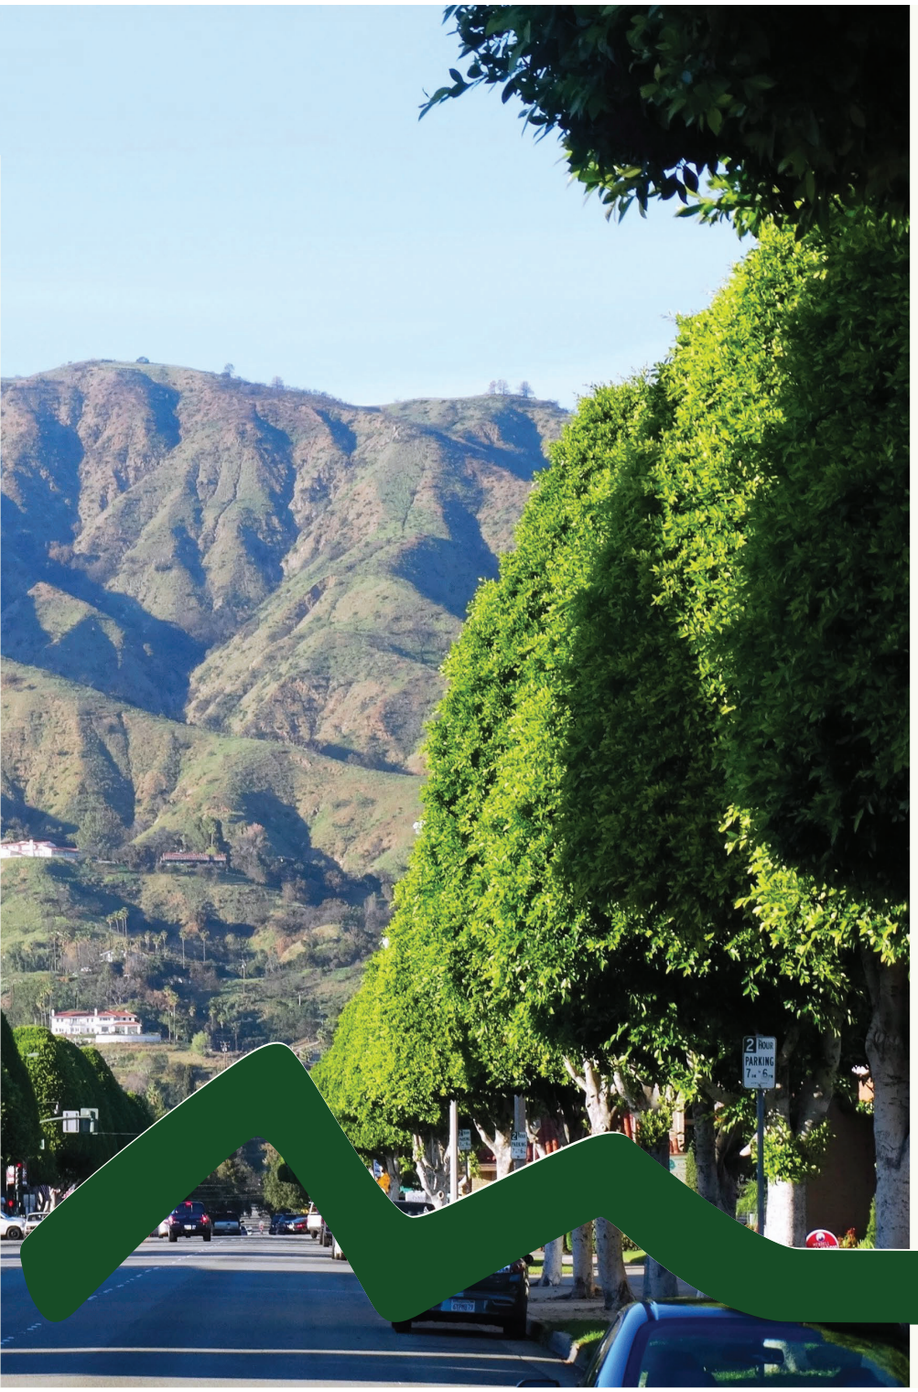
➢ Revenue Measures

- Proposition 13 (1978) and Proposition 46 (1986) continue to restrict cities' financial flexibility
  - City Council initiated revenue measure for general obligation bonds (e.g. facility bond measure) requires two-thirds (66.7%) voter approval

- Citizen-led initiatives are a viable mechanism to avoid the two-thirds voting threshold
  - Community survey on citywide facility bonds shows an initial success at this required threshold (53%)

- The failure of ACA 5 to pass maintains the challenging environment for city-sponsored infrastructure funding
  - Would have allowed for a city-initiated revenue measure to require 55%, similar to school bond requirements

Glendora



REVENUE MEASURE

➢ Citizen Initiative Process

- Outlined in the California Elections Code in sections 9200-9226 and 9600-9610

- Petitions must be submitted a minimum of 134 days before the election
  - Processing of the initiative petitions must occur no later than the 88th day before the election

- To qualify for placement on the ballot, 10% of the registered voters in the City must be gathered
  - Approximately 35,000 registered voters in the City of Glendora

RECOMMENDATIONS

That the City Council:

1. Receive a report on capital needs of City facilities and options to fund those needs; and
2. Provide direction to staff, as necessary.

STAFF REPORT

TO:	**Mayor and Council Members**	**DATE:**	**April 22, 2025**
FROM:	**City Manager**	**DISTRICT(S):**	**Not Applicable**

SUBJECT: Consideration of Approval for the 2025-2027 Strategic Plan

RECOMMENDATION

That the City Council:

1. Approve the 2025 - 2027 Strategic Plan.

STRATEGIC FOCUS AREAS

- SubURBAN Living
- Glendora as a Destination
- New + Revitalized Facilities
- Sustainable Infrastructure
- Staff + Technology

EXECUTIVE SUMMARY

In order to provide the City Council, City Staff, and Glendora Community with insight into the strategic policy initiatives of the City, the City Council adopts a multi-year strategic plan. The 2025-2027 Strategic Plan takes into account recent City Council review of the draft plan, past strategic planning efforts, recent community survey data, updated financial projections, infrastructure assessments, and other master planning documents.

Coinciding with the City's two-year budget process, the multi-year plan allows for a "what gets funded, gets done" methodology; elements of the plan are incorporated into employee workplans to engage staff at all levels of the organization. Updates on the strategic plan are provided quarterly. The current strategic planning cycle kicked off with a two-day City Council workshop in December 2024, continued with a one-day executive staff workshop in February 2025, and concluded with City Council review and requested changes in March 2025.

The City Council has previously received a progress update on the 2023-2025 Strategic Plan and is being requested to consider adoption of the 2025-2027 Strategic Plan.

LEGISLATIVE HISTORY / PREVIOUS ACTIONS

The City of Glendora has undertaken strategic planning efforts for many years. Since 2020, the City Council has transitioned from six-month to multiple year plans for better alignment with the City's budgeting process and engagement of City staff.

The 2023-2025 Strategic Plan was adopted on April 11, 2023. Periodic updates to the plan have been provided to the City Council via presentations under Special Items during City Council meetings, as part of the budget process, and through City Council workshops.

The 2025-2027 strategic planning cycle began with a City Council strategic planning workshop that was held on December 2-3, 2024. On March 25, 2025, the City Council reviewed and provided comments on the Draft 2025-2027 Strategic Plan.

DISCUSSION

To guide strategic policy initiatives and ensure alignment across the organization, the City Council adopts a multi-year strategic plan that integrates community survey data, financial forecasts, infrastructure assessments, and master planning documents. This strategic plan, timed with the City's two-year budget cycle, emphasizes the principle that "what gets funded, gets done," embeds plan outcomes into employee workplans and provides for quarterly progress updates. The current strategic plan, adopted in April 2023, will end in June 2025.

The 2023-2025 Strategic Plan includes seven goals, which are broken down into objectives and further into tasks. The policy goals included in the plan have been consistent with past strategic planning efforts for more than five years. A detailed analysis of the progress to date can be found at Attachment A, a summary is included below:

GOAL	# OF OBJ.	TASKS			
		Complete	In-Progress	Not Started	Totals
Goal 1: Implement Strategic Economic Development	*9*	24	11	2	37
Goal 2: Maintain Financial Stability and Sustainability	*5*	14	4	0	18
Goal 3: Enhance Employee Development and Retention	*3*	9	6	0	15
Goal 4: Enhance and Modernize the Organization	*12*	30	21	3	54
Goal 5: Improve and Maintain Infrastructure and Facilities	*8*	9	16	2	27
Goal 6: Implement Strategic Homelessness Solutions	*4*	15	0	0	15
Goal 7: Enhance Community Engagement and Presence	*8*	18	3	1	22
Totals	***49***	**119**	**61**	**8**	**188**
		63.3%	*32.4%*	*4.3%*	

Since the 2023-2025 Strategic Plan's adoption in April 2023, the City has completed a significant portion of the plan, including more than $30 million in street/sidewalk/water/park projects, updated housing and economic development plans, and commenced major technology projects. Attachment A not only provides a comprehensive update it also links the "In-Progress" and "Not-Started" items in the current plan to the 2025-2027 Strategic Plan Attachment B.

The 2025-2027 strategic planning cycle began with a Special City Council meeting in early December 2024. To assist with the development of new strategic goals, the City engaged SSW Consulting to facilitate a two-day workshop with the City Council. The culmination of the two days included the development of five new strategic goal areas.

- **SubURBAN Living:** Foster intentional urbanization through increased targeted housing density, revitalized commercial areas, and enhanced services and infrastructure that supports a livable community for all.
- **Glendora as a Destination:** Attract visitors through strategic marketing, promotion of local businesses, and enhanced connectivity between attractions for a seamless destination experience.
- **New + Revitalized Facilities:** Develop new and enhanced facilities including a modern civic center and improved public spaces that foster connectivity, accessibility, and civic pride.
- **Sustainable Infrastructure:** Plan and construct infrastructure that enhances street conditions, expands trail connectivity, improves traffic safety and mobility, upgrades water systems, and ensures compliance with regulatory standards for a resilient and accessible community.
- **Staff + Technology:** Strengthen City operations through investment in staff and technology improvements.

In early February 2025, SSW Consulting led a one-day workshop with the City's Executive Team to further the efforts started by the City Council. During this session, the Executive Team added Actions/Indicators that will achieve the Goals and Outcomes crafted by the City Council. Further, the Executive Team added additional Outcomes/Actions/Indicators from the City's current strategic plan to ensure critical projects underway are continued and funded.

The City Council reviewed the Proposed 2025-2027 Strategic Plan on March 25, 2025, and provided additional direction, which has been incorporated into Attachment B. The document is intended to provide the reader with an understanding of the major policy goals of the City Council, a summary of expected outcomes, and high-level details on major actions undertaken by City staff that will be used to measure progress. The Plan also includes a summary of how the plan was adopted.

The 2025-2027 Strategic Plan includes five new City Council Goals broken down into measurable Outcomes. Those Outcomes are further refined by specific Actions and Indicators that provide depth and perspective to the reader and allow staff to measure and report progress of each Goal area in a transparent manner. Each Action/Indicator is assigned to a Department/Division and given an estimated date of completion.

Below is an example of how the 2025-2027 Strategic Plan is organized:

> GOAL: SubURBAN Living: Foster intentional urbanization through increased targeted housing density, revitalized commercial areas, and enhanced services and infrastructure that supports a livable community for all (*one of five new City Council Goals*).
>
> > OUTCOME: A complete eco-system to support the homeless population and improve access to support tools (*one of four outcomes under the SubURBAN Living Goal*)
> >
> > > ACTION: Formalize interdependence of our partners who serve homeless community (*One of three actions listed under the Complete Eco-System Outcome)*
> > >
> > > > INDICATOR: Prepare an assessment of service providers – 2025 Q2: Recreation and Human Services, Library, and Police Department *(one of two indicators under the Formalize interdependence action item*)

The 2025-2027 Strategic Plan is robust. While staffing capacity, financial resources, and a changing political landscape may limit the ultimate number of actions taken, the plan will further the City Council's policy goals and achieve many of the expected outcomes.

FISCAL IMPACT

There is no fiscal impact associated with the recommendations included in the report. Each item included in this plan will have its own fiscal impact; those impacts will be included in the FY 2025-2027 Two Year Budget and provided with each City Council action, where applicable.

ENVIRONMENTAL DETERMINATION

There is no CEQA impact associated with the recommendation action. Should individual strategic plan action have CEQA impacts, those will be provided with each City Council and/or Committee recommended action.

GOAL 1: Implement Strategic Economic Development

	ITEM	STATUS	DRAFT 2025-2027 STATEGIC PLAN	NOTES
Objective 01: Update the Economic Development Action Plan to facilitate development/attraction of desired housing and commercial venues/restaurants/office in the City.				
	~~Task 1: Host a public workshop on modern economic development practices.~~	Completed		
	~~Task 2: Create an incentive package for identified industry clusters.~~	Completed		
	~~Task 3: Identify top 10 economic leakage opportunities.~~	Completed		
	~~Task 4: Re-branding and marketing of the City with materials and media.~~	Completed		
	~~Task 5: Evaluate Staffing needs based on City Council priorities.~~	Completed		
	Task 6: Identify changes necessary to Route 66 and Arrow Highway Specific Plans to attract projects.	In-Progress	Included	*SubURBAN Living* - General Plan Update and Economic Action Plan
	~~Task 7: Identify private property owners who want to work with the City.~~	Completed		
Objective 02: Continue Comprehensive General Plan Update (Long-Term).				
	Task 1: Complete Safety and Environmental Justice sections.	In-Progress	Included	*SubURBAN Living* - General Plan Update
	Task 2: Prepare for remaining sections and issue an RFP for consultants to begin working in 2025.	In-Progress	Included	*SubURBAN Living* - General Plan Update
Objective 03: Complete Village projects.				
	~~Task 1: Complete Business Improvement District changes.~~	Completed		
	~~Task 2: Complete Meda Avenue and Bus Plaza improvements.~~	Completed		
	~~Task 3: Complete Outdoor Dining Program.~~	Completed		
	Task 4: Complete outdoor sign, display rules and regulations.	Not Started	Not Included	*Glendora as a Destination* includes a way-finding assessment
	Task 5: Complete policy for use of public space in Village.	In-Progress	Included	*Glendora as a Destinatio* n - Working with Chamber and *Bid & New+Revitalized Facilities* - Improved public spaces
Objective 04: Create a Vision and Development Plan for the Village/Gold Line area.				
	Task 1: Complete conceptual development plans for future housing and commercial developments.	In-Progress	Included	*SubURBAN Living* - Station Development Vision
	~~Task 2: Identify key sites for targeted development.~~	Completed		
	Task 3: Identify daytime vs nighttime needs.	In-Progress	Included	*SubURBAN Living* - Station Development Vision
	Task 4: Approve certain allowances and incentives for targeted businesses.	In-Progress	Included	*SubURBAN Living* - Station Development Vision and General Plan Update
	Task 5: Coordinate community-based place marking to include Civic buildings.	In-Progress	Included	*SubURBAN Living* - Station Development Vision and *New + Revitalized Facilities* - New or revitalized Civic Center
Objective 05: Sixth Cycle Housing Element follow-up.				
	~~Task 1: Complete rezoning required for density increases.~~	Completed		
	~~Task 2: Implement 31 action items approved by City Council and Planning Commission.~~	Completed		
	Task 3: Develop objective design standards (ODS).	In-Progress	Included	*SubURBAN Living* - General Plan Update
	Task 4: Identify and implement areas of CEQA streamlining.	Not Started	Included	*SubURBAN Living* - General Plan Update
	~~Task 5: Identify and implement affordable housing programs and incentives.~~	Completed		
	Task 6: Update subdivision code.	In-Progress	Included	*SubURBAN Living* - General Plan Update
~~**Objective 06: Complete disposition of San Jose site.**~~				
	~~Task 1: Follow required HCD process for disposition of City property.~~	Completed		
	~~Task 2: Identify best use for site.~~	Completed		
	~~Task 3: Identify a developer or buyer to move forward with best use.~~	Completed		
~~**Objective 07: Develop and implement a comprehensive public art policy.**~~				
	~~Task 1: Survey of surrounding cities' public art programs.~~	Completed		
	~~Task 2: Complete summary of Glendora's public art policies.~~	Completed		
	~~Task 3: Finalize City Council feedback on recommendations for a comprehensive public art plan.~~	Completed		
~~**Objective 08: Prioritize City investment to compliment City priorities and programs.**~~				

		~~Task 1: Finalize approach to the preparation of the City's Capital Improvement Plan (CIP).~~	Completed		
		~~Task 2: Facilitate investment in City parks and facilities to promote greater access and use.~~	Completed		
		~~Task 3: Ensure foundational plans are included in future development decisions.~~	Completed		
	Objective 09: Consider possible annexation of County islands within the City's sphere of influence.				
		~~Task 1: Provide overview of annexation process through LAFCO.~~	Completed		
		Task 2: Development of Cost of Services Study.	In-Progress	Included	*SubURBAN Living* - Determination of annexations
		~~Task 3: Identify population changes with possible new residents and comparison to current population trends.~~	Completed		

GOAL 2: Maintain Financial Stability and Sustainability	ITEM	STATUS	DRAFT 2025-2027 STATEGIC PLAN	NOTES
	Objective 01: Safeguard long term security of revenues to fund core public services.			
	Task 1: Conduct a comprehensive fee study to ensure that fees and rates are adequate.	In-Progress	Not Included	Current fee study is underway and will be completed/implemented by January 2026
	~~Task 2: Ongoing review and update of fees and rates in a timely manner.~~	Completed		
	~~Task 3: Pursue alternative sources of funding.~~	Completed		
	~~Task 4: Leverage public/private/non-profit partnerships to augment service delivery options.~~	Completed		
	~~Task 5: Pursue additional grant funding opportunities.~~	Completed		
	Task 6: Evaluate the appropriate balance of land uses.	In-Progress	Included	*SubURBAN Living* - General Plan Update
	~~Task 7: Consider re-establishment of assessment districts for landscaping and lighting.~~	Completed		
	Objective 02: Enhance fiscal responsibility for the use of resources.			
	~~Task 1: Implement new finance software (Tyler) and train city staff.~~	Completed		
	~~Task 2: Actively manage investments to maximize returns for cash on hand.~~	Completed		
	~~Task 3: Optimize the budget process to be more transparent.~~	Completed		
	~~**Objective 03: Enhance the City's risk management program.**~~			
	~~Task 1: Provide frequent updates and reports to stakeholders to address problematic areas in the City.~~	Completed		
	~~Task 2: Proactively address areas of concern through needs assessment and CIP.~~	Completed		
	~~Task 3: Conduct monthly safety training for all employees.~~	Completed		
	~~Task 4: Complete annual audits (financial, liability, and worker's compensation).~~	Completed		
	Objective 04: Develop a program to proactively address ongoing management and operations of City assets to maximize use of local resources.			
	Task 1: Prepare plans specific to City assets to evaluate the total cost of ownership and operations.	In-Progress	Included	*Glendora as a Destination* - South Hills Highest and Best Use and *New + Revitalized Facilities* - New or revitalized civic center and Improved public spaces
	~~Task 2: Take necessary steps to participate in the Uniform Public Construction Cost Accounting Act program.~~	Completed		
	Objective 05: Continue developing affiliation between the City and Glendora Public Library Friends Foundation.			
	Task 1: Implement the elements of the Memorandum of Understanding, including technology transition.	In-Progress	Not Included	*Staff + Technology* goal areas does not specifically mention the final phases of this project, which will still be a work-in-progress by staff.
	~~Task 2: Assess the impact to the City's budget of absorbing the costs related to some ongoing programming, services and content for the public and platforms.~~	Completed		

GOAL 3: Enhance Employee Development and Retention	ITEM	STATUS	DRAFT 2025-2027 STATEGIC PLAN	NOTES
	Objective 01: Create a positive work experience and support employee work-life balance through engagement and wellness.			
	~~Task 1: Establish a Wellness Committee to deploy programs that will create exceptional experiences.~~	Completed		
	Task 2: Initiate a Performance Management Program to motivate and develop employees.	In-Progress	Included	*Staff + Technology* - Stable workforce
	~~Task 3: Deploy Human Resources software that will enhance accessibility to employment actions.~~	Completed		
	~~Task 4: Continue efforts to engage employees with more employee centric program benefits.~~	Completed		
	Task 5: Conduct employee satisfaction survey.	In-Progress	Included	*Staff + Technology* - Stable workforce
	~~Task 6: Evaluate all positions for remote work ability.~~	Completed		
	Objective 02: Attract, recruit, and retain qualified and diverse individuals to the organization.			
	~~Task 1: Initiate diversity, equity, inclusion (DEI) training and programs.~~	Completed		
	~~Task 2: Enhance marketing and communication strategies to expand outreach to candidates.~~	Completed		
	Task 3: Develop a Succession Plan that grows and develops internal staff.	In-Progress	Included	*Staff + Technology* - Stable workforce
	~~Task 4: Offer learning and development opportunities that include training, academies, coaching, etc.~~	Completed		
	Task 5: Enhance the onboarding experience to include training and exposure to all City departments.	In-Progress	Included	*Staff + Technology* - Stable workforce
	~~Task 6: Establish a formal internship/apprenticeship program to develop the next generation of employees.~~	Completed		
	Objective 03: Maintain positive working relationships with City's labor groups.			
	Task 1: Update and provide training on personnel rules and regulations.	In-Progress	Included	*Staff + Technology* - Stable workforce
	Task 2: Monitor and revise MOU's, as appropriate.	In-Progress	Included	*Staff + Technology* - Stable workforce
	~~Task 3: Evaluate and modernize organizational structure and positions.~~	Completed		

GOAL 4: Enhance and Modernize the Organization

	ITEM	STATUS	DRAFT 2025-2027 STATEGIC PLAN	NOTES
Objective 01: Update Urban Forestry Manual.				
	~~Task 1: Issue a RFP for a consultant to assist the City with updating of the Urban Forestry Manual.~~	Completed		
	Task 2: Review frequency of grid trimming against best practices and funding available.	In-Progress	Included	*New + Revitalized Facilities* - urban Forestry Manual
	Task 3: Review fees associated with development.	In-Progress	Included	*New + Revitalized Facilities* - urban Forestry Manual
	Task 4: Present preliminary finding of draft plan to City Council and possibly Planning Commission.	In-Progress	Included	*New + Revitalized Facilities* - urban Forestry Manual
	Task 5: Incorporate final document, where necessary, into the various development and CIP processes.	In-Progress	Included	*New + Revitalized Facilities* - urban Forestry Manual
Objective 02: Create a communications strategic plan.				
	Task 1: Define the vision and purpose of the City's communications plan.	In-Progress	Included	*Glendora as a Destination* - Implement Strategic Communications Plan
	Task 2: Develop the framework for creating a Communications Task Force, comprised of multiple departments.	In-Progress	Included	*Glendora as a Destination* - Implement Strategic Communications Plan
	Task 3: Evaluate unique ways to engage the City Council and Board/Commissions in robust information sharing.	Not Started	Included	*Glendora as a Destination* - Implement Strategic Communications Plan
	Task 4: Evaluate unique ways to communicate with different groups in town.	Not Started	Included	*Glendora as a Destination* - Implement Strategic Communications Plan
	Task 5: Develop a strategic communications and marketing outline for the next two to four years.	In-Progress	Included	*Glendora as a Destination* - Implement Strategic Communications Plan
	~~Task 6: Find ways to engage the community through feedback and other forms of communication/outreach.~~	Completed		
~~**Objective 03: Develop and enhance City branding.**~~				
	~~Task 1: Develop a City "tagline" to utilize in the branding of City.~~	Completed		
	~~Task 2: Create/update style guide and incorporate into overall communication strategy.~~	Completed		
	~~Task 3: Redesign/organize City's website to make it intuitive for all constituents.~~	Completed		
	~~Task 4: Revised website will incorporate additional opportunities for the community to stay informed.~~	Completed		
~~**Objective 04: Develop and approve an updated Glendora Unified School District memorandum of understanding.**~~				
	~~Task 1: Return to City Council and Board of Trustees with updates in 2023.~~	Completed		
	~~Task 2: Ensure adopted plan incorporates feedback from 2022 City Council / Board of Trustee Joint Meeting.~~	Completed		
	~~Task 3: Ensure updated MOU explores expansion of field accessibility, school site locations, etc.~~	Completed		
	~~Task 4: Return to City Council and Board of Trustees for approval in December 2023 to January 2024.~~	Completed		
	~~Task 5: Review funding options for site improvements, including user fees and possible bond measures.~~	Completed		
Objective 05: Update Administrative Manual (long-term).				
	Task 1: Complete review of all policies.	In-Progress	Not Included	Project will continue at a lower priority level as time permits
	Task 2: As needed, meet and confer with City's bargaining groups.	In-Progress	Not Included	Project will continue at a lower priority level as time permits
	Task 3: As needed, present policies to City Council for approval.	In-Progress	Not Included	Project will continue at a lower priority level as time permits
Objective 06: Complete enterprise resource planning (ERP – Finance/HR/Payroll) system, land management/permitting system, and asset management with City mobile application implementation.				
	Task 1: Deploy and configure the software to automate and streamline manual processes.	In-Progress	Included	*Staff + Technology* - Completed software implementation

	Task 2: Clean and migrate complete and accurate data.	In-Progress	Included	*Staff + Technology* - Completed software implementation
	Task 3: Test the system and train all users.	In-Progress	Included	*Staff + Technology* - Completed software implementation
	Task 4: Go Live with core software modules.	In-Progress	Included	*Staff + Technology* - Completed software implementation
	Task 5: Provide public outreach to community on access ability to make payments, submit work requests.	Not Started	Included	*Staff + Technology* - Completed software implementation
~~Objective 07: Complete implementation of ESRI geographic information system (GIS).~~				
	~~Task 1: Finalization of base layer used for all City uses.~~	Completed		
	~~Task 2: Deployment of ESRI tools to City staff.~~	Completed		
	~~Task 3: Establish process for layer development and maintenance.~~	Completed		
	~~Task 4: Determine what additional tools are needed for deployment to the public.~~	Completed		
~~Objective 08: Continue with technology modernization.~~				
	~~Task 1: Issue a request for proposal (RFP) for an updated, internet based, phone system.~~	Completed		
	~~Task 2: Continue with movement of legacy infrastructure to the cloud to improve performance and redundancy.~~	Completed		
	~~Task 3: Prepare for a 311 communication system.~~	Completed		
~~Objective 09: Continue to evaluate City's organization structure to further enhance service delivery.~~				
	~~Task 1: Restructure departments and divisions to be more customer service oriented.~~	Completed		
	~~Task 2: Practice proactive solutions that are oriented to reflect community needs.~~	Completed		
	~~Task 3: Compare City's services to the private sector to determine the best way to provide services.~~	Completed		
	~~Task 4: Timing of changes to coincide with the budget process.~~	Completed		
Objective 10: Support and implement short and long-term continued access to the world of ideas as facilities for the Library are assessed and modernized.				
	~~Task 1: Complete Library structural assessment.~~	Completed		
	Task 2: Determine long and short-term impacts of necessary building changes.	In-Progress	Included	*New + Revitalized Facilities* - New or Revitalized Civic Center
	Task 3: Identify funding opportunities for capital and services necessary to continue Library services.	In-Progress	Included	*New + Revitalized Facilities* - New or Revitalized Civic Center
	Task 4: Identify opportunities for services to be modified, as needed.	In-Progress	Included	*New + Revitalized Facilities* - New or Revitalized Civic Center
Objective 11: Increase access to information with implementation of usable digital services and centralized records.				
	Task 1: Create citywide data entry standards.	In-Progress	Included	*Staff+Technology* - Accessible and enhanced City services
	Task 2: Transition OnBase ECM to cloud based solution.	In-Progress	Included	*Staff+Technology* - Accessible and enhanced City services
	~~Task 3: Migrate Police Department data from legacy systems.~~	Completed		
	Task 4: Research the feasibility of a centralized record system.	In-Progress	Included	*Staff+Technology* - Accessible and enhanced City services
	Task 5: Complete the citywide digitization and document imaging project.	In-Progress	Included	*Staff+Technology* - Accessible and enhanced City services
~~Objective 12: For the Library, ensure continued access to Glendora-specific information sources through local history digitization initiatives.~~				
	~~Task 1: Assess any intersection with City Clerk digitization efforts.~~	Completed		
	~~Task 2: Manage initial GPL Friends Foundation grant.~~	Completed		
	~~Task 3: Identify initial targets for digitation.~~	Completed		
	~~Task 4: Address initial copyright/permission needs.~~	Completed		
	~~Task 5: Identify vendors and move forward with selection.~~	Completed		
	~~Task 6: Expand geographic based access to community resources.~~	Completed		

GOAL 5: Improve and Maintain Infrastructure and Facilities

	ITEM	STATUS	DRAFT 2025-2027 STATEGIC PLAN	NOTES
Objective 01: Improve & Maintain Infrastructure/Facilities				
	~~Task 1: Consider solar panels at older facilities that need roof improvements.~~	Completed		
	Task 2: Evaluate artificial turf installation at various parks to promote greater water conservation.	In-Progress	Included	*Sustainable Infrastructure* - Implemented Water Master Plan
	Task 3: Update Public Works' standard specifications to incorporate sustainable materials and practices.	In-Progress	Included	*Sustainable Infrastructure* - various outcomes and actions will cover this item
	Task 4: Complete space planning and facility needs assessment.	In-Progress	Included	*New+Revitalized Facilities* - Complete space planning assessment
~~Objective 02: Implement the Water Division infrastructure assessment.~~				
	~~Task 1: Reconsider the Five-Year CIP in light of Water infrastructure needs.~~	Completed		
	~~Task 2: Implement water rate adjustments to fund improvements to the water infrastructure.~~	Completed		
	~~Task 3: Develop engineering capabilities to support the unique water infrastructure needs.~~	Completed		
Objective 03: Build and expand upon existing infrastructure to improve mobility options throughout the City.				
	Task 1: Pursue grant and budget appropriation opportunities to fully fund the People Movement Project.	In-Progress	Included	*Sustainable Infrastructure* - Complete People Movement project
	Task 2: Develop a comprehensive plan to improve and update the City's traffic signal infrastructure.	In-Progress	Included	*Sustainable Infrastructure* - Traffic signal modernization
	Task 3: Update the Citywide traffic study to account for post-pandemic mobility patterns.	In-Progress	Included	*SubURBAN Living* - General Plan
	Task 4: Update the City Pavement Management Plan and facilitate street improvements.	In-Progress	Included	*Sustainable Infrastructure* - Improved PCI ratings for streets
	Task 5: Explore the feasibility of constructing a pedestrian oriented bridge over the flood control channel.	In-Progress	Included	*Sustainable Infrastructure* - Complete People Movement project
Objective 04 : Develop and implement a Citywide beautification program.				
	Task 1: Consider establishing area-wide beautification events to address potential compliance issues.	Not Started	Not Included	
	Task 2: Enlist the support of non-profit partners to assist residents improve their properties.	Not Started	Not Included	
	Task 3: Leverage existing City water conservation programs to facilitate landscape improvements	In-Progress	Not Included	
	Task 4: Work with community-based partners to grow community cleanup days and activities	In-Progress	Not Included	
Objective 05: Undertake a comprehensive update to the City's sign code to promote local businesses and community assets, and limit visual clutter.				
	Task 1: Create a directional signage design standard to enhance various community assets.	In-Progress		
	~~Task 2: Replace and/or refurbish existing historic district signs.~~	Completed		
	~~Task 3: Update the City's sign code in manner that ensures compliance with recent legal determinations.~~	Completed		
Objective 06 : Continue with the modernization of the City's fleet and related infrastructure.				
	Task 1: Develop a five-year plan for the replacement of all City vehicles.	In-Progress	Included	
	Task 2: Pursue grant funding for acquisition of electric and other zero-emission vehicles/infrastructure.	In-Progress	Included	
	Task 3: Pursue grant funding to expand the availability of public electric vehicle charging infrastructure.	In-Progress	Included	
Objective 07 : Update the Parks and Trails Master Plan to guide the development of parks and recreational facilities in the City.				
	Task 1: Develop a South Hills Wilderness Park Plan with to turn it into an active outdoor recreation.	In-Progress	Included	*New + Revitalized Facilities* - Improved public spaced and *Glendora as a Destination* - Determine highest and best use for South Hills
	Task 2: Develop an Urban Forest Master Plan, providing guidance for long-term and day-to-day management.	In-Progress	Included	*New + Revitalized Facilities* - Improved public spaced

		~~Task 3: Pursue grant funding and budget appropriation requests for City's park improvements.~~	Completed		
	~~Objective 08: Continue exploring the feasibility of restoring the operability of the antique streetlight system to working condition.~~				
		~~Task 1: Evaluate the bid package to consider alternative approaches that may reduce the project cost.~~	Completed		
		~~Task 2: Ballot property owners within proposed antique streetlight district to establish annual assessment.~~	Completed		

GOAL 6: Implement Strategic Homelessness Solutions	ITEM	STATUS	DRAFT 2025-2027 STATEGIC PLAN	NOTES
	~~Objective 01: Strengthen outreach and engagement activities.~~			
	~~Task 1: Recruit, hire, and train a Human Services Coordinator, responsible for coordinating homelessness.~~	Completed		
	~~Task 2: Collect and analyze data to prioritize operational needs for critical service gaps in the City.~~	Completed		
	~~Task 3: Establish program budgets that address different areas of homelessness.~~	Completed		
	~~Objective 02: Evaluate the establishment and expansion of collaborative regional programs among cities in the surrounding region to address the challenge of homelessness.~~			
	~~Task 1: Explore feasibility of restarting the development of a sub-regional homeless housing and services.~~	Completed		
	~~Task 2: Engage public agency partners to develop short- and long-term housing and service options.~~	Completed		
	~~Task 3: Find ways to prioritize assistance to individuals experiencing homelessness locally.~~	Completed		
	~~Task 4: Evaluate sites for acquisition to implement localized solutions for homeless individuals.~~	Completed		
	~~Objective 03: Pursue ongoing funding opportunities to support and supplement local resources to address the challenge of homelessness.~~			
	~~Task 1: Continue to engage public agency partners to pursue fair share of funding to support homelessness.~~	Completed		
	~~Task 2: Explore funding opportunities through community-based and non-profit organizations.~~	Completed		
	~~Task 3: Advocate for and pursue ongoing funding opportunities for housing and services.~~	Completed		
	~~Objective 04 : Update the Homelessness Strategic Plan to reflect the scope of the programs currently underway and assess gaps in the City's response model.~~			
	~~Task 1: Explore and expand partnerships with non-profit organizations working to address homelessness.~~	Completed		
	~~Task 2: Reassess current programs to determine efficacy.~~	Completed		
	~~Task 3: Continue the development of housing and service options based on the needs of homeless individuals.~~	Completed		
	~~Task 4: Explore the use of technology to better collect, track, and report data.~~	Completed		
	~~Task 5: Investigate SGVCOG Care Team Model~~	Completed		

GOAL 7: Enhance Community Engagement and Presence		ITEM	STATUS	DRAFT 2025-2027 STATEGIC PLAN	NOTES
	~~Objective 01: Build trusting relationships with the community that sustain cohesive communities.~~				
		~~Task 1: Establish a "Season of Service" Program that allows everyone to collaborate on community projects.~~	Completed		
		~~Task 2: Develop civic awareness through an intentional citywide approach to departmental volunteering.~~	Completed		
		~~Task 3: Enhance staff membership and presence in community organizations.~~	Completed		
	Objective 02: Communicate and expand the number of opportunities that residents and businesses can engage and give back to their community.				
		Task 1: Develop a centralized citywide volunteer program.	In-Progress	Included	
		Task 2: Expand and create local adopt-a-park, street, and related programs.	Not Started	Included	
		~~Task 3: Look for internship opportunities with local high schools.~~	Completed		
		Task 4: Develop a large, yearly City-sponsored beautification/volunteer day/event.	In-Progress	Included	
	~~Objective 03: Work with the Glendora Chamber of Commerce to transition the State of the City from a daytime event to an evening event.~~				
		~~Task 1: Work with the Chamber to allow greater access to the community.~~	Completed		
		~~Task 2: Invite groups that typically receive an individual updates.~~	Completed		
		~~Task 3: Identify a facility to hold the event.~~	Completed		
	~~Objective 04 : Review City events for possible changes and expansion.~~				
		~~Task 1: Add a multi-cultural event.~~	Completed		
		~~Task 2: Consideration of a 4th of July event~~	Completed		
	~~Objective 05: Review opportunities to for Code Enforcement to be more proactive to address certain key issues raised by the City Council and community.~~				
		~~Task 1: Evaluate staffing needs for additional work.~~	Completed		
		~~Task 2: Determine areas of concern and develop work plans for staff.~~	Completed		
	~~Objective 06: Address quality of life issues along Arrow Highway corridor.~~				
		~~Task 1: Explore partnerships with LA County, City of Covina and City of Azusa.~~	Completed		
		~~Task 2: Develop and implement options for addressing homelessness.~~	Completed		
		~~Task 3: Develop and implement options for addressing illegal vending.~~	Completed		
	Objective 07: For the Library, support connections to information and other human services, guiding services and partnership development, through Library and partner conducted surveys.				
		Task 1: Determine what information should be surveyed periodically and what should be situational.	In-Progress	Not Included	*New + Revitalized Facilities* - New or Revitalized Civic Center will include the need to survey additional City services. This project will continue under the scope of the larger Civic Center project.
	~~Objective 08: Crime prevention through environmental design, implementation and enforcement.~~				
		~~Task 1: Add sworn management staff member to project review team (development process).~~	Completed		
		~~Task 2: Create standard conditions for development project types to address public safety considerations.~~	Completed		
		~~Task 3: Engage existing businesses and residents when areas of concern arise.~~	Completed		
		~~Task 4: Establish an outreach program to crime victims to help eliminate future and re-occurring issues.~~	Completed

Introduction

The City of Glendora is pleased to present a summary of its December 2024 Council Retreat.

On December 2-3, 2024 the City Council and leadership team met to gain a deeper understanding of the current community and organizational landscape. The goal was to refine strategic goals that would guide the organization over the next two years.

To facilitate this process, the City engaged SSW Consulting, a professional facilitation and strategic planning firm. The retreat aimed to achieve the following:

- Facilitate a team-building experience that fosters a strong and cohesive team among Council and staff
- Review the roles of policymakers and administration in the Council-Manager form of government and discuss expectations/agreements that will strengthen the partnership between staff and Council to advance the goals
- Review the Council's past goals , highlight successes we can build on and challenges we can learn from
- Build a shared understanding of the current community/organizational context and the progress status of the Council's current goals to inform the goal refinement
- Develop a refined set of goals for July 1, 2025-June 30, 2027, with clear, measurable outcomes to guide the Council and organization

Before the retreat, SSW Consulting conducted individual outreach interviews with members of City Council, as well as a leadership team survey. This information helped shape the retreat agenda to ensure a productive and engaging experience.

During the retreat, staff and Council members worked to refine last year's goals, considering progress made and emerging priorities. They collaborated to assess the community and organizational context and develop clear and measurable goals. The Executive team refined the goals on February 10th, and the Council approved the 2025-2027 Strategic Plan summary on March 25th.

To ensure implementation, the plan is incorporated into the City's two-year budget, reflecting Glendora's "What gets funded, gets done" approach. The City's staffing plans include elements of the strategic plan to ensure staff at all levels are following the framework set by the Council and implemented by staff.

Glendora City Council gathers every 2 years to review and refine their goals. They receive quarterly progress updates from staff throughout the biennium. The City appreciates the engagement and participation of the Council and staff. The team looks forward to working together to advance these goals.

Goal-Setting Process

To guide their efforts during the July 1, 2025 – June 30, 2027 fiscal period, Glendora City Council and Staff worked together to define their strategic priorities. This process involved setting overarching goals, identifying desired outcomes, and developing supporting actions with measurable indicators. For clarity, these essential components are defined below.

Goals (or Goal Areas): Broad, overarching focus areas guiding City and Council efforts and resource allocation over a defined period. They represent key priorities, providing a strategic framework and communicating overall ambitions to stakeholders, influencing decision-making.

Outcomes: Specific, measurable, achievable, relevant, and time-bound (SMART) results the City aims to achieve within each goal area. They translate broad goals into concrete targets, clarifying success and focusing efforts on tangible results within defined timeframes.

Actions: Specific projects, programs, initiatives, policies, or operational changes the City undertakes to achieve desired outcomes. These are the concrete steps to achieve the outcomes moving the City toward its goals.

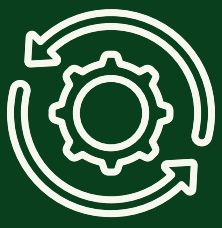
Indicators: The indicators are specific deliverables or milestones that indicate progress or completion within each action. They detail the work required, with timelines and assigned departments, enabling granular tracking of progress within actions and contributing to broader outcome and goal achievement.

Glendora

2025-2027 GOALS

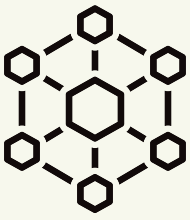
SubURBAN Living

Foster intentional urbanization through increased targeted housing density, revitalized commercial areas, and enhanced services and infrastructure that supports a livable community for all.



Glendora as a Destination

Attract visitors through strategic marketing, promotion of local businesses, and enhanced connectivity between attractions for a seamless destination experience.



New + Revitalized Facilities

Develop new and enhanced facilities including a modern civic center and improved public spaces that foster connectivity, accessibility, and civic pride.

Sustainable Infrastructure

Plan and construct infrastructure that enhances street conditions, expands trail connectivity, improves traffic safety and mobility, upgrades water systems, and ensures compliance with regulatory standards for a resilient and accessible community

Staff + Technology

Strengthen City operations through investment in staff and technology improvements.

Goal 1: SubURBAN Living

Foster intentional urbanization through increased targeted housing density, revitalized commercial areas, and enhanced services and infrastructure that supports a livable community for all.

Outcome 1: Increased targeted housing density and housing options at all income levels

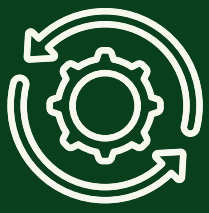
City Council Work Session	2025 Q1	CM
ACTION 3.2: NEW TRANSPORTATION FACILITY		
New paving and potentially a new modular building	TBD	Public Works / Finance
ACTION 3.3: COMPLETE SPACE PLANNING ASSESSMENT		
Contact vendors and receive proposals	2026 Q2	PW / Finance / CMO
Vendor selection	2026 Q3	PW / Finance / CMO
Coordination with citywide facility assessment.	2026 Q3	All
ACTION 3.4: DETERMINE IF NEW OR REMODEL		
Consolidate study/ civic center Coordination of results from citywide facility/space assessments	2026 Q1	Admin / IT /PW / Finance / CMO / PD / Library
ACTION 3.5: SERVICE IMPACT PLANNING		
Develop plans for service delivery for departments impacted by renovations and new buildings	As Needed	Admin / IT /PW / Finance / CMO / PD / Library

Goal 3: New + Revitalized Facilities

Outcome 2: Improved Public Spaces

INDICATORS	TIMELINE	LEAD
ACTION 3.6: COMPLETION OF URBAN FORESTRY MANUAL		
Conduct community outreach Council	2025 Q2	Public Works
ACTION 3.7: ADA TRANSITION PLAN		
Will provide an assessment of ADA deficiencies and a plan to tackle and work towards compliance.	2026 Q4	Public Works
ACTION 3.8: COMPLETION OF THE PARKS MASTER PLAN		
Will provide an assessment of our park facilities deficiencies and a plan to tackle and work towards updating them.	2026 Q2	Recreation and Human Services and Public Works



Goal 3: New + Revitalized Facilities

Outcome 3: Give Back to the Community

INDICATORS	TIMELINE	LEAD
ACTION 3.9: DEVELOP A CENTRALIZED CITYWIDE VOLUNTEER PROGRAM		
Program is completed and becomes central location for all local groups to solicit volunteer assistance	In progress /ongoing	Human Resources
ACTION 3.10: EXPAND AND CREATE LOCAL ADOPT-A-PARK, STREET, AND RELATED PROGRAMS		
Implement new program	2025 Q4	Recreation & Human Services
ACTION 3.11: DEVELOP A LARGE, YEARLY CITY-SPONSORED BEAUTIFICATION/VOLUNTEER DAY OR EVENT		
Establish a city-sponsored beautifcation project	2025 Q4	Human Resources

Goal 4: Sustainable Infrastructure

Plan and construct infrastructure that enhances street conditions, expands trail connectivity, improves traffic safety and mobility, upgrades water systems, and ensures compliance with regulatory standards for a resilient and accessible community

Outcome 1: Improved PCI ratings for streets

INDICATORS	TIMELINE	LEAD
ACTION 4.1: COMPLETE PAVEMENT MANAGEMENT PROGRAM STUDY		
Final report to Council	2025 Q4	Public Works
Determine goal PCI rating + funding opportunities	2025 Q4	Public Works

Goal 4: Sustainable Infrastructure

Outcome 2: Complete People Movement project

INDICATORS	TIMELINE	LEAD
ACTION 4.2: SAN DIMAS WASH URBAN TRAIL		
Enter into an Amended MOA with the SGVCOG to administer and deliver the People Movement Project	2024 Q3	Public Works
Provide Outreach	Ongoing	Public Works
Release RFP for Construction and complete the San Dimas Urban Trail	2026 Q1	Public Works
ACTION 4.3: FIRST LAST MILE IMPROVEMENTS (GLENDORA AVE AND FOOTHILL BLVD.)		
Complete Design	2026 Q1	Public Works
Refurbish Antique Street Lights	2025 Q4	Public Works
Release RFP for Construction and complete the First Last Mile Improvements	2027 Q2	Public Works
ACTION 4.4: LITTLE DALTON AND BIG DALTON WASH TRAIL		
Identify funding	2024 Q3	PW / Finance / CMO
Public outreach	Ongoing	Public Works / CMO
Complete Design - USACE 408 Permit - Environmental Clearance - Use Agreements / Easements	TBD	Public Works

Goal 4: Sustainable Infrastructure

Outcome 3: Traffic signal modernization

INDICATORS	TIMELINE	LEAD
ACTION 4.5: TRAFFIC AND SPEED SURVEY		
Completion of survey will determine changes needed	2025 Q3	Public Works / PD
ACTION 4.6: COMPREHENSIVE SIGNAL INVENTORY		
Create a GIS Layer for signals	2025 Q4	Public Works / IT
ACTION 4.7: SIX INTERSECTIONS IN THE PROCESS OF UPDATING		
LA County completing work	2025 Q4	Public Works
ACTION 4.8: HIGHWAY IMPROVEMENT SAFETY PROGRAM		
8 intersections for Cycle 11 - requesting funding from Caltrans.	2027 Q2	Public Works

Goal 4: Sustainable Infrastructure

Outcome 4: National Pollution Discharge Elimination System

INDICATORS	TIMELINE	LEAD
ACTION 4.9: MS4 PERMIT COMPLIANCE		
Trash Discharge Prohibitions Compliance	2026 Q3	Public Works
Stormwater Master Plan	2026 Q1	Public Works
Finkbiner Park Stormwater Capture Project	TBD	Public Works

Goal 4: Sustainable Infrastructure

Outcome 5: Implemented Water Master Plan

INDICATORS	TIMELINE	LEAD
ACTION 4.10: CONTRACT WITH A CONSULTANT		
For Completion of a water infrastructure assessment and plan (Water Infrastructure Plan)	2025 Q4	Public Works
ACTION 4.11: GLENDORA WATER AND STREET IMPROVEMENTS		
Completion of plans, specifications and cost estimate	2026 Q1	Public Works
Complete Construction	TBD	Public Works / Finance
ACTION 4.12: COLORADO WATER AND STREET IMPROVEMENTS		
Completion of plans, specifications and cost estimate, Complete Construction	2027 Q1	Public Works
ACTION 4.13: CYPRESS WATER AND STREET IMPROVEMENTS		
Completion of plans, specifications and cost estimate, Complete Construction	2027 Q1	Public Works
ACTION 4.14: NORTH GLENDORA RESERVOIR		
Replace existing with new reservoir.	2027 Q1	Public Works

Goal 4: Sustainable Infrastructure

Outcome 6: Modernization of the City's Fleet

INDICATORS	TIMELINE	LEAD
ACTION 4.15: DEVELOP A PLAN FOR THE REPLACEMENT OF ALL CITY VEHICLES		
Prepare Initial Five Year Plan	2025 Q4	Public Works
ACTION 4.16: PURSUE GRANT FUNDING FOR THE ACQUISITION OF ELECTRIC VEHICLES AND INFRASTRUCTURE		
Identify and apply for funding opportunities	Ongoing	Public Works
ACTION 4.17: PURSUE GRANT FUNDING TO EXPAND AVAILABILITY OF PUBLIC ELECTRIC VEHICLE CHARGING INFRASTRUCTURE		
Identify and apply for funding opportunities; issue RFP for deployment	Ongoing	Public Works

Goal 5: Staff + Technology

Strengthen City operations through investment in staff and technology improvements.

Outcome 1: Stable Workforce

INDICATORS	TIMELINE	LEAD
ACTION 5.1: UPDATE PERSONNEL POLICIES AND REGULATIONS		
Prepare draft	2025 Q2	Human Resources
Meet + confer with employee groups	2025 Q2	Human Resources
Council approval	2025 Q4	Human Resources
ACTION 5.2: ASSESS SERVICE DELIVERY AND EMPLOYEE TOTAL COMPENSATION PACKAGE		
MOU negotiations/ new employee engagements	2025 Q2	CMO, Human Resources, Finance
Public safety - professional staff MOU's	2025 Q4	CMO, Human Resources, Finance
Hours of operation	2026 Q1	CMO – lead / Admin / IT /PW / Finance / CMO / PD / Library / Comm. Dev. / Rec. & HS / City Clerk
ACTION 5.3: FORMALIZE THE HUMAN RESOURCES LIFE CYCLE		
Develop an employee handbook	2026 Q1	Human Resources
Establish a formal employee orientation/ on-boarding process	2025 Q4	Admin - HR - lead/ CMO / IT /PW / Finance / CMO / PD / Library / Comm. Dev. / Rec. & HS / City Clerk
Develop a Succession Plan to identify existing staff for additional development	2026 Q2	Admin - HR - lead/ CMO / IT /PW / Finance / CMO / PD / Library / Comm. Dev. / Rec. & HS / City Clerk
Conduct periodic employee surveys, both citywide and department specific, as needed	2025 Q3	Human Resources
Supervisory/manager academy	2026 Q1	Rita + Marie

Goal 5: Staff + Technology

Outcome 2: Accessible and enhanced City services

INDICATORS	TIMELINE	LEAD
ACTION 5.4: DELIVER MORE CITY SERVICES USING TECHNOLOGY		
Civic Access app/311	2026 Q2	IT
Deployment of city services kiosk	2026 Q3	IT
Citywide parking application	2025 Q4	IT/PD
ACTION 5.5: COMPLETE CITYWIDE DIGITIZATION EFFORTS		
Complection of document imaging project, including standardized data entry standards, and unified management system	2026 Q2	City Clerk - PD / Comm. Dev.
ACTION 5.6: DEVELOP A FRAMEWORK FOR DATA UTILIZATION FOR DECISION-MAKING (SMART CITY)		
Development of draft framework for data utilization +	2026 Q4	IT
Council work session	2026 Q4	IT

Goal 5: Staff + Technology

Outcome 3: Completed software implementation

INDICATORS	TIMELINE	LEAD
ACTION 5.7: INCREASE THE NUMBER OF GIS LAYERS AND APPLICATIONS		
Operations specific information Go Live of community dashboard	2026 Q4	All
Go live of community dashboard	2026 Q2	All

STAFF REPORT

TO:	**Mayor and Council Members**	**DATE:**	**December 9, 2025**
FROM:	**Public Works**	**DISTRICT(S):**	**Citywide**
SUBJECT:	**Update on Citywide Pavement and Sign Study, and Review of Pavement Management Program**		

RECOMMENDATION
That the City Council:

1. Receive and file the 2025 Pavement Management Program Update prepared by Bucknam Infrastructure Group, Inc.

STRATEGIC FOCUS AREAS
- Action 4.1 Complete Pavement Management Program Study

EXECUTIVE SUMMARY
Citywide infrastructure continues to be a core priority for Glendora. Results from the 2025 Community Survey conducted by True North Research, Inc. reaffirm that residents view improving streets, roads, and related infrastructure as one of the most important actions the City can take to enhance quality of life. In December 2024, the City Council and Executive Leadership Team met to refine strategic goals and develop the updated FY 2025–2027 Strategic Plan. Included in Goal #4, 'Sustainable Infrastructure,' is the directive to complete an update to the Citywide Pavement Management Program (PMP).

A Pavement Management Program (PMP) evaluates pavement conditions across all City-maintained streets and alleys, providing data-driven funding scenarios to maintain or improve road network conditions over time. Following a competitive Request for Proposals (RFP) process, the City Council awarded an agreement to Bucknam Infrastructure Group, Inc. on January 14, 2025. Bucknam previously completed the 2020 PMP, bringing continuity and expertise to the City's pavement evaluation and forecasting efforts.

The 2025 Citywide PMP Final Report presents a comprehensive assessment of Glendora's entire street network, including pavement condition evaluations, maintenance and rehabilitation needs, and projected performance under various funding scenarios. The City's current Pavement Condition Index (PCI) is 63.2, placing it within the 'Fair' range. The PMP provides cost estimates, recommended treatment strategies, and a five- to seven-year implementation horizon, serving as a technical foundation for future Capital Improvement Program (CIP) planning and funding decisions. The data and recommendations contained in the 2025 PMP will be evaluated alongside the City's Water Master Plan to develop a coordinated five-year Capital Improvement Program (CIP). This integrated analysis will allow staff to identify and prioritize street, water, and combined utility-paving projects, to further leverage the City's resources.

LEGISLATIVE HISTORY / PREVIOUS ACTIONS
The Citywide Pavement Management Plan Update is included in the FY 2025 Approved Budget.

The last two Pavement Management Plan updates were completed in 2020 and 2015. The 2015 PMP was completed by Omnis, Inc. The 2020 PMP was completed by Bucknam Infrastructure Group, Inc.

DISCUSSION

The Pavement Management Program (PMP) provides the City with a data-driven tool to assess roadway conditions, identify maintenance and rehabilitation needs, and prioritize projects based on cost-effectiveness and lifecycle performance. This update fulfills the Los Angeles County Metropolitan Transportation Authority (Metro) requirement that cities maintain an up-to-date pavement condition inventory to remain eligible for Proposition C Local Return funding.

The City's pavement network represents one of its most valuable assets, with an estimated replacement value of approximately $439 million. The network includes roughly 163.4 centerline miles—equivalent to over 30.6 million square feet (SF)—of streets and alleys, categorized by functional classification as follows:

Type	Miles		Square Feet	
Local / Residential	112.2	69%	19,757,439	64%
Arterial / Collector	45.0	28%	10,310,492	34%
Alleys	6.2	4%	573,612	2%
Totals	**163.4**		**30,641,543**	

For context of the report, the following definitions and examples of street types are useful:

- Local or Residential: connects individual properties to the broader roadway network; i.e. Glenwood Avenue, Wabash Avenue, Jenifer Avenue.
- Collector: serves to move traffic from a local street to arterial streets; i.e. Ada Avenue, Leadora Avenue, Loraine Avenue, Valley Center Avenue, Sierra Madre Avenue, Live Oak Avenue.
- Arterial: a street for which the primary function is to move vehicles from one section of the City to another, i.e. Route 66, Grand Ave, Gladstone Avenue, Glendora Ave, Auto Centre Drive, Lone Hill Avenue.

For the 2025 street network assessment survey, the pavement condition index (PCI) was calculated for each segment to reflect overall pavement condition. The PCI values range between "0" and "100". A PCI of "0" would correspond to a badly deteriorated pavement with virtually no remaining life, while a PCI of "100" would correspond to a pavement with proper engineering design and construction at the beginning of its life cycle, which is fundamentally a new street.

As shown in the table below, 32% of the City streets condition are classified as Good to Very Good; 22% is classified as Fair and 46% are classified as Poor to Very Poor. The data confirms that Glendora has maintained a stable overall network condition, but the data also highlights the importance of continued reinvestment to prevent further decline. While recent arterial overlay projects have helped sustain the City pavement network above the 60 PCI range, more than half of the City's local streets now require overlay or reconstruction to reach a healthier, preventive-maintenance level. By maintaining consistent annual funding for slurry seal and overlay programs, the City can raise its overall PCI, reduce costly deferred maintenance, and preserve long-term value in its $439 million pavement network. Deferred maintenance refers to pavement repairs or rehabilitation that are needed but postponed due to limited funding. As these projects are delayed, pavement conditions continue to deteriorate, resulting in higher future repair costs and a growing backlog of work required to restore the network to an acceptable condition.

2025 PCI Distribution by Street Classification	2020

Condition	PCI Range	Art/Coll Miles	% of Art/Coll	Local Miles	%of Local	Alley Miles	% of Alleys	Total Miles	% of Network	% of Network
Very Good	**86-100**	6.7	**15%**	17.6	**16%**	2.3	**37%**	26.6	**16%**	20%
Good	**75-85**	6.9	**15%**	18.4	**16%**	0.6	**10%**	25.9	**16%**	13%
Fair	**40-74**	11.5	**26%**	24.7	**22%**	0.4	**6%**	36.6	**22%**	28%
Poor	**41-59**	11.8	**26%**	34.1	**30%**	0.9	**15%**	46.8	**29%**	27%
Very Poor	**0-40**	8.1	**18%**	17.4	**16%**	2.0	**32%**	27.5	**17%**	12%
		45.0		112.2		6.2		163.4		

The following table summarizes the 2025 PCI values by street classification and compares them to 2020 conditions. While the overall network remains in the “Fair” range, the data shows that certain classifications require continued investment to prevent further decline and support long-term system health.

Street Classification	Mileage	Square Feet	PCI 2025	PCI 2020
Arterial/Collector	45.0	10,310,492	**63.3**	67.6
Local	112.2	19,757,439	**63.2**	64.2
Alley	6.2	573,612	**60.2**	67.5
Citywide	163.4	30,641,543	**63.2**	65.4

The City’s pavement network currently maintains a “Fair” condition rating with a weighted PCI of 63.2, a small decrease from 65.4 in 2020. In 2015, the PCI was listed at 62.5 and in 2018 the PCI was 59. Over the last seven years, significant efforts have led to an improved street condition. Although the 2025 PCI represents a minor reduction from 2020, the overall network condition remains stable. While the numerical change appears small, maintaining stability has required significant ongoing investment; without these continued efforts, the PCI would likely have declined more substantially. It should be noted, the 2015 and 2018 totals did not include alleys, which would have lowered the overall PCI by a small amount.

Pavement is a dynamic structure where deterioration is constantly occurring. It should also be noted, that the difference between 63.2 (2025) and 65.4 (2020) is minor and not visually noticeable to the untrained eye. Between 2020 and 2025, multiple street projects have been completed to keep the condition at Fair, if not for these projects, the PCI would be notably less, potentially falling into a poor status. In addition, several water and street improvement projects are currently in design, including Colorado, Cypress, Glendora, and Lone Hill. These projects represent nearly 1,000,000 square feet of pavement, and once completed, will significantly strengthen the City’s overall PCI.

To ensure the most effective and efficient use of available resources, the PMP aligns maintenance and rehabilitation strategies to pavement condition categories. This approach ensures that each dollar invested produces the maximum lifecycle benefit. The following summarizes the principal treatment types applied across the network, ranging from preventive surface seals to full reconstruction.

General Repairs – Stop Gap (Localized Maintenance); PCI range – 20 to 95

For this maintenance type, small, localized surface treatments are utilized as “holding action” solutions (stop gaps) to delay the need for pavement structural strengthening. This typically includes activities such as crack sealing, Asphalt Concrete (AC) deep patching, AC skin patching, Portland Cement Concrete (PCC) slab replacement, grinding and leveling.

Slurry Seals (Global Maintenance); PCI range – 60 to 85

Slurry seal is a preventative maintenance measure to slow the deterioration of streets. It is a surface treatment applied to pavements with minimal surface distress to provide new wearing surfaces and extend pavement life. The process generally consists of a mixture of conventional or latex-modified emulsified asphalt, well-graded fine aggregate, mineral filler and water placed over an existing AC surface; slurry seal application life cycles are averaging 4 to 5 years. Type II Slurry is recommended for Local streets.

Microsurfacing (Global Maintenance); PCI Range 60 to 85

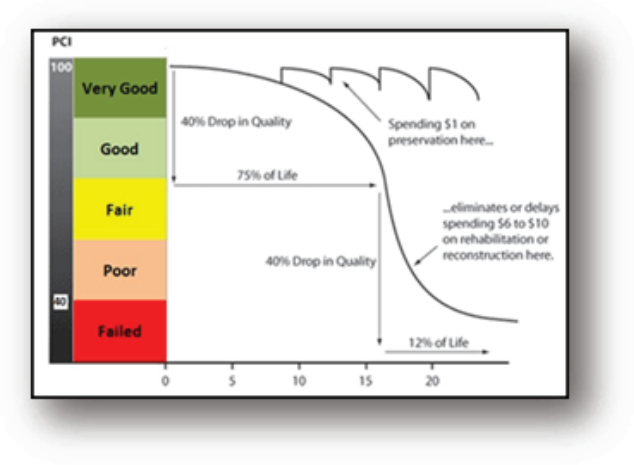
Microsurfacing is similar to slurry seal. It consists of the application of a mixture of water, asphalt emulsion, aggregate (very small, crushed rock), and chemical additives to an existing asphalt concrete pavement surface. Polymer is commonly added to the asphalt emulsion to provide better mixture properties. The major difference between slurry seal and microsurfacing is in how they “break” or harden. Slurry relies on evaporation of the water in the asphalt emulsion. The asphalt emulsion used in microsurfacing contains chemical additives which allow it to break without relying on the sun or heat for evaporation to occur. Thus, microsurfacing is an application that hardens quicker than slurry seals and can be used when conditions would not allow slurry seal to be successfully placed. Streets that have a lot of shade and streets that have a lot of traffic are good candidates for microsurfacing (*source - LA County of Public Works*).

Cape Seals (Global Maintenance); PCI Range – 40 to 65

This is an application of a single layer of asphalt binder to a road surface immediately followed by a single layer of cover aggregate (chips). The single layer chip seal is then followed with a slurry seal application; Conventional cape seal application life-cycles are averaging 6 to 7 years. For sections that have lower PCI’s in this range, leveling courses should be considered. City is currently considering this application as an alternative cost-saving tool.

Overlays (Major Maintenance); PCI range – 20 to 65

AC Overlay – Placement of a layer of hot-mixed asphalt concrete over the existing pavement surface (may include pavement fabric). Grinding (milling) is performed prior to the overlay to reduce the total height of asphalt and assure alignment with existing gutter lines. This also includes “dig-outs” and crack sealing prior to the application of an overlay. This treatment provides a new wearing surface and increased structural strength to the pavement section. A conventional overlay should be designed for a ten-year life.



Asphalt Rubber Hot-Mix Overlay - The ASTM definition is: Asphalt-Rubber is a blend of asphalt cement, reclaimed tire rubber and certain additives in which the rubber component is at least 15% by weight of the total blend and has reacted in the hot asphalt cement sufficiently to cause swelling of the rubber particles. Specifically, using crumb rubber modified binders in pavement application benefit local agencies in that cities find:

- Pavement resists cracking by being more flexible;
- Cost savings come from a longer life cycle (from Bucknam’s experience typically 20% longer), decreased maintenance and the use of less material;
- Improvement in skid resistance;
- Decreased noise;
- It provides long-lasting color contrast for marking and striping; and
- Life Cycles are averaging 8 to 12 years.

Reconstruction (Major Maintenance); PCI range – 0 to 20

A reconstruction project is required when slurry seals or overlays won't be adequate and generally indicates that the structural integrity of the asphalt, base and sometimes soil have failed. Reconstruction of an existing pavement section includes demolition and removal of the asphalt to a prescribed depth, grading, sub-base compaction, application of a binder/surface course followed by the placement of a conventional flexible pavement section using a structural AC Hot Mix, ARHM or full depth asphalt. Each classification of road has a typical design cross-section based on anticipated traffic loading. Generally, reconstructed streets have a life of 25 to 30 years, but if properly maintained using slurry seals and overlays, street life can exceed 50 years. Reconstruction resets a roadway section PCI to 100 and restarts the life-cycle deterioration curve of the section.

As pavement ages, the City's pavement management system forecasts deterioration over time to identify when cost-effective maintenance should occur. The analysis demonstrates that performing timely preventive maintenance significantly extends pavement life and minimizes long-term costs. As illustrated in the accompanying chart, for every $1 spent early on preservation treatments, the City can avoid spending $6 to $10 on the same pavement area if repairs are deferred just a few years and the condition deteriorates. This principle explains why the City often addresses streets that may appear to be in relatively good condition first - these preventive treatments are far more cost-effective and help preserve the overall network condition, whereas severely deteriorated streets require costly reconstruction once they have reached the end of their useful life.

Below is the summary of Capital Street Improvement projects from the last five years, since the 2020 survey. Street maintenance treatments include slurry seal, overlays and reconstruction of the pavement.

Capital Improvement Projects (Streets)		
Fiscal Year/Project	**Sq. Ft.**	**Actual / Budget**
2020		
Ada Street Rehabilitation	385,358	$853,384
Leadora Resurfacing Construction	157,884	$335,837
Lone Hill Ave Improvements Phase 2	125,000	$1,010,264
Citywide Slurry Seal Project, FY 2019/2020	783,486	$178,823
W. Laxford / Vecino Street Improvements	77,698	$255,687

Citywide Reactive Repairs/Maintenance*	-	$500,000
2020 Totals	**1,529,426**	**$3,133,995**
2021		
Bonita Ave and Dale Road	104,517	$288,459
Dike Lane and Other Street Rehabilitation	157,815	$342,652
Loraine Avenue Street Rehabilitation	423,688	$1,186,781
Citywide Reactive Repairs/Maintenance*	-	$500,000
2021 Totals	**686,020**	**$2,317,892**
2022		
Dawson/Pennsylvania/Washington	82,500	$324,419
Leadora Resurfacing Design	-	$90,701
Citywide Reactive Repairs/Maintenance*	-	$500,000
2022 Totals	**82,500**	**$915,120**
2023		
Citywide Slurry Seal Project, FY 2022	475,000	$174,850
Cullen Ave. Water and Street Improvements	50,000	$560,733
Laxford, Cossacks, St. Valdimir Street Rehabilitation	120,000	$735,695
Citywide Reactive Repairs/Maintenance*	-	$500,000
2023 Totals	**645,000**	**$1,971,278**
2024		
CDBG Bender, Carter, et. al Water and Street Improvements	225,000	$678,335
Citywide Slurry Seal Project, FY 2023	512,124	$150,585
Eagle Ridge Water and Street Improvements – Emergency Project	30,380	$222,300
Citywide Reactive Repairs/Maintenance*	-	$790,000
2024 Totals		**$1,841,220**

2025		
Amelia Ave, Country Club, Lone Hill & Cumberland Water & Street	211,000	$931,956
Bennett, Washington, Westridge and Bender Water and Street	311,000	$2,080,000
CDBG Grind and Overlay	107,000	$1,074,485
Citywide Slurry Seal Project, FY 2024/2025	1,289,195	$402,100
Glendora Ave Street Paving – Emergency Project	79,520	$200,000
Mauna Loa Water and Street	211,000	$513,600
Citywide Reactive Repairs/Maintenance*	-	$550,000
2025 Totals	**2,208,715**	**$5,752,141**
* Citywide Reactive Repairs/Maintenance refers to on demand repairs such as filling potholes, rain related damage, crack sealing and emergency repairs from unplanned water leaks.		

In addition to planned capital street improvement projects, the City also invests on average more than half a million annually in personnel and materials focused on reactive street improvements, addressing potholes, rain-related damage, crack sealing and emergency repairs from unplanned water leaks. By maintaining consistent funding for both proactive and reactive maintenance programs, the City can raise its overall PCI toward a healthier range and extend pavement life.

To accomplish the aforementioned improvements, and to support ongoing and future street resurfacing, the City relies on a variety of dedicated funding sources that specifically include street improvements among their restricted uses. These sources include Gas Tax, Prop 1B, Proposition C, Road Maintenance and Rehabilitation Account (RMRA), Measure M, Measure R, Community Development Block Grant (CDBG), and Surface Transportation Program-Local (STP-L).

The table below provides a snapshot of projected revenues from each of these sources. The figures represent total revenues by fund; while only a portion of these dollars is used for pavement renovation, the remainder supports other eligible transportation improvements such as sidewalks, curbs and gutters, ADA upgrades, traffic signal maintenance, signage, and related mobility and safety enhancements. Together these amounts provide an overview of the funding available to support the City's streets and transportation infrastructure.

Revenues Available by Fund				
Fund	**FY 2024***	**FY 2025****	**FY 2026****	**FY 2027****
Gas Tax	$2,079,738	$2,311,500	$2,038,400	$2,133,400
Proposition C	$1,175,566	$1,230,100	$1,136,760	$1,136,760
RMRA	$1,404,619	$1,377,800	$1,411,540	$1,411,540
Measure M	$997,250	$1,045,100	$949,948	$949,948
Measure R	$884,576	$908,800	$833,370	$833,370
CDBG	$61,061	$461,509	$444,625	$275,000***
STP-L	$4,021	$3,200	$3,000	$3,000
Total:	$6,606,831	$7,338,009	$6,817,643	$6,743,018

*Actual Revenue
**Projected Annual Revenues per the 2025 – 2027 Adopted Two Year Budget
*** Estimated

Although these dedicated revenues support ongoing maintenance, they are not sufficient on their own to fully address the City's long-term pavement needs. Glendora is a largely built-out community with limited opportunities for new residential or commercial development, resulting in minimal collection of Development Impact Fees (DIFs) or other development-related revenues. Unlike jurisdictions experiencing substantial growth, the City does not receive significant new funding from development activity to help offset roadway rehabilitation costs. As a result, the City relies almost entirely on its restricted transportation funding sources to maintain and improve the street network, contributing to a growing gap between available revenues and projected pavement needs.

The City's Water Fund can be an additional source when water infrastructure improvements occur as part of a project. In such cases, the Water Fund typically covers the cost of restoring one lane of pavement directly above completed water-system work. The Capital Improvement Project table referenced earlier includes some pavement restored as part of water projects, however water-related costs are not always itemized between water-system work and pavement restoration. As a result, pavement restored through Water Fund contributions may not show the corresponding Water Fund dollar amount, and the actual investment in the City's pavement network may be higher that what is reflected. Water Fund contributions also do not appear in the revenue table above, as they are project dependent and not tracked as a consistent, standalone funding source.

In addition to the restricted transportation funds, Measures E and Z provide important voter-approved revenue streams that help sustain City operations. Since adoption, these measures have strengthened overall fiscal stability and indirectly supported capital improvement efforts by increasing General Fund capacity. Measure E has also directly funded over $4 million in capital projects. While these revenues are not dedicated to streets, the City Council may consider future allocations toward pavement improvements as part of broader policy and budget discussions.

Budget Projections / Modeling Scenarios

A key component of developing a Pavement Management Program (PMP) is modeling the City's existing pavement conditions against available and projected budgets to evaluate how various funding levels affect overall network performance and deferred maintenance. This modeling allows the City to demonstrate the return on investment from different treatment strategies—such as slurry seals, cape seals, grind-and-overlay, and alternative rehabilitation applications—and to plan funding allocations that provide the greatest long-term benefit. The development of this program considered four budget scenarios: funding required to maintain the PCI at 63 and funding required to improve the current PCI of 63 to 65, 67, and 70.

Maintain PCI 63

In order to maintain the overall PCI of 63, an average annual budget of $5.58 million, for a total of $27,916,500 will be required over the five-year period. The "Maintain PCI 63" Budget program incorporates pavement sections that have a functional class of Arterial (A, C) and Local (R) utilizing slurry, overlay, and reconstruction maintenance techniques. While the PCI will remain at 63, the deferred maintenance will increase from $46.8 million to $78.8 million at the end of the five-year period, notably adding to the costs to repair the pavement network.

Plan Year	PCI	Slurry Seal	Overlay	Funds ($)	Deferred Maint.
2025 PMP	63.2				$46,785,500
2025 - 2026	63.0	$384,500	$5,211,800	$5,596,300	$48,265,400

2026 – 2027	64.0	$1,521,400	$4,011,300	$5,532,700	$41,877,400
2027 – 2028	63.0	$1,211,200	$4,459,800	$5,671,000	$50,505,100
2028 – 2029	63.0	$634,200	$4,816,600	$5,450,800	$58,840,300
2029 - 2030	63.0	$500,400	$5,165,300	$5,665,700	**$78,805,100**
		$4,251,700	$23,664,800	**$27,916,500**	

Reach PCI 65

In order to increase PCI from 63.2 to 65, the "Reach PCI 65" scenario, an average annual budget of $6.48 million per year for slurry, overlay and reconstruction maintenance will be required. While the PCI increases, deferred maintenance across the entire pavement network will increase from $46.8 million to $76.4 million at the end of the five year period.

Plan Year	PCI	Slurry Seal	Overlay	Funds ($)	Deferred Maint.
2025 PMP	63.2				$46,785,500
2025 - 2026	64.0	$412,500	$3,715,400	$4,127,900	$48,469,800
2026 – 2027	64.0	$1,556,400	$3,844,200	$5,400,600	$42,032,100
2027 – 2028	64.0	$1,315,500	$6,381,100	$7,706,600	$48,457,300
2028 – 2029	64.0	$864,700	$6,151,400	$7,016,100	$58,037,400
2029 - 2030	65.0	$587,700	$7,567,900	$8,155,600	**$76,438,600**
		$4,736,800	$27,670,000	**$32,406,800**	

Reach PCI 67

To target a PCI goal of 67, the "Reach PCI 67" scenario will require an average annual budget of approximately $8.38 million for each of the next five years, a total of $41,902,200. The City's weighted PCI would increase from 63.2 to 67**;** deferred maintenance would grow from $46.8 million to nearly $72.0 million, largely due to the high volume of streets already in need of overlay or reconstruction. To sustain long-term progress, the City should continue to place emphasis on the local street network, which accounts for about 65% of the total pavement area, while maintaining steady investment in arterial corridors using eligible funding sources such as Proposition C, SB 1, Measure M, and Measure R.

Plan Year	PCI	Slurry Seal	Overlay	Funds ($)	Deferred Maint.
2025 PMP	63.2				$46,785,500
2025 - 2026	65.0	$353,900	$8,077,900	$8,431,800	$45,981,800
2026 – 2027	66.0	$1,498,000	$6,712,800	$8,210,800	$37,202,800
2027 – 2028	67.0	$1,250,400	$7,123,400	$8,373,800	$41,467,500
2028 – 2029	67.0	$797,500	$7,602,800	$8,400,300	$51,084,600
2029 - 2030	67.0	$522,100	$7,963,400	$8,485,500	**$71,951,900**
		$4,421,900	$37,480,300	**$41,902,200**	

Reach PCI 70

Building upon the scenario to "Reach PCI 70" extends the projection to seven years and targets a weighted PCI of 70 through an average annual investment of $8.42 million. This approach would yield a stronger overall improvement while keeping deferred maintenance growth comparatively stable, from $46.8 million to $63.0 million.

Plan Year	PCI	Slurry Seal	Overlay	Funds ($)	Deferred Maint.
2025 PMP	63.2				$46,785,500
2025 - 2026	65.0	$353,900	$8,077,900	$8,431,800	$45,981,800
2026 – 2027	66.0	$1,498,000	$6,712,800	$8,210,800	$37,202,800
2027 – 2028	67.0	$1,250,400	$7,123,400	$8,373,800	$41,467,500
2028 – 2029	68.0	$951,400	$7,981,800	$8,933,200	$47,761,500
2029 - 2030	70.0	$859,700	$8,451,100	$9,310,800	$56,642,600
2030 – 2031	70.0	$678,600	$7,134,500	$7,813,100	$61,353,900
2031 - 2032	70.0	$651,000	$7,222,200	$7,873,200	**$62,987,600**

		$6,243,000	$52,703,700	**$58,946,700**	

The majority of the City's pavement network has a PCI rating below 65; accordingly, all four investment scenarios prioritize grind and overlay treatments. Once major rehabilitation projects are completed during the initial program years, the City can transition to a neighborhood-based preventive maintenance strategy, applying localized slurry and cape seals every five or more years following rehabilitation. This approach enhances cost efficiency, supports predictable multi-year scheduling, and reduces long-term reconstruction costs by preserving pavements in good condition.

Conversely, if the City were to reduce annual investment to approximately $2 million, major rehabilitation efforts would be further delayed, causing deferred maintenance to rise sharply to an estimated $122.2 million after seven years. The overall network PCI would decline to roughly 56, clearly demonstrating the cost-benefit of timely maintenance and sustained reinvestment.

The following table brings together all modeled funding scenarios to illustrate how varying investment levels influence overall network condition. This consolidated view provides a basis for selecting the funding strategy that best aligns with the City's desired service level.

Program	PCI Target	# of Years	Average Annual Investment	Total Program Investment
$2 Million / Yr	56	7	$2 M	$14,000,000
Maintain 63 PCI	63	5	$5.58 M	$27,916,500
Reach PCI 65	65	5	$6.48 M	$32,406,800
Reach PCI 67	67	5	$8.38M	$41,902,200
Reach PCI 70	70	7	$8.42M	$58,946,700

Looking Forward

Maintaining consistent annual investment near the $8 million level, combined with systematic, neighborhood-based preventive maintenance will allow the City to improve its overall network condition, slow deterioration rates, and minimize the long-term financial impacts of deferred maintenance.

While an annual investment of approximately $8 million represents a significant commitment, it is considered a fiscally prudent strategy. If funding is available, even through the strategic use of reserve or one-time funds, this level of investment will substantially reduce deferred maintenance liabilities by addressing pavement deterioration early, thereby avoiding the exponentially higher costs that occur when streets fall into a lower condition.

Through internal budget analysis, staff has identified that the City is currently budgeting an average of approximately $5.4 million per year for pavement rehabilitation. In contrast, the funding required to reach a target PCI of 67 or 70 ranges from $8.3 to $8.4 million per year. This results in an annual shortfall of approximately $3 million.

Increasing the annual allocation by this amount and planning for investment levels of roughly $8.4 million per year through FYs 2031 and 2032 would position the City to reach a PCI of 67 or 70, align with long-term asset management best practices, and preserve the condition of the City's pavement network.

The following tables compare current budgeted levels with the funding required under both the "Reach 67" and "Reach 70" scenarios, highlighting the gap that must be addressed to achieve these targets.

Funding Gap Summary "Reach 67"			
Fiscal Year	**5 Year CIP & Staff Budgeted Amount***	**Funds Needed to Reach PCI 67**	**Additional Amount Required to Reach PCI 67**
FY 2026**	$9,446,814	$8,431,800	($1,015,014)
FY 2027	$5,554,872	$8,210,800	$2,655,928
FY 2028	$7,967,482	$8,373,800	($406,318)
FY 2029	$1,944,755	$8,400,300	$6,455,545
FY 2030	$2,049,000	$8,485,500	$6,436,500
5 Year Total:	$26,962,923	$41,902,200	**$14,939,277**
Avg/Year:	$5,392,585	$8,380,440	**+ $2,987,855 / year**
* Includes $500,000 in Reactive Repairs/Maintenance ** Includes Carry Forward			

Funding Gap Summary "Reach 70"			
Fiscal Year	**5 Year CIP & Staff Budgeted Amount***	**Funds Needed to Reach PCI 70**	**Additional Amount Required to Reach PCI 70**
FY 2026**	$9,446,814	$8,431,800	($1,015,014)
FY 2027	$5,554,872	$8,210,800	$2,655,928
FY 2028	$7,967,482	$8,373,800	($406,318)
FY 2029	$1,944,755	$8,933,200	$6,988,445
FY 2030	$2,049,000	$9,310,800	$7,261,800
FY 2031		$7,813,100	$7,813,100
FY 2032		$7,873,200	$7,873,200
7 Year Total:	$26,962,923	$58,946,700	**$31,983,777**
Avg/Year:	$5,392,585	$8,420,957	**+ $3,028,343 / year**

* Includes $500,000 in Reactive Repairs/Maintenance
** Includes Carry Forward

The City has done an admirable job maintaining its overall pavement network in the 'Fair' range (based on existing funding levels), with a relatively stable PCI since 2020. This demonstrates the effectiveness of consistent investment and well-planned maintenance programs. However, to move the City's network into the 'Good' range and realize long-term cost savings, it is important to continue increasing annual funding levels toward the $8.4 million target. Achieving this higher PCI category will improve ride quality, enhance public satisfaction, and further extend the useful life of the City's $439 million pavement network.

As the City evaluates strategies to address the projected annual funding gap, it is important to note that the actual shortfall may vary year to year. When street projects include water-system improvements, the Water Fund may offset certain paving costs, reducing the amount required from transportation funding sources for those specific projects. Conversely, projects without water work will not receive this supplemental funding. Additionally, the PMP's recommended annual investment of approximately $8 million reflects construction (hard) costs only. While many soft costs—such as engineering, inspection, and project management—are already accommodated within existing City resources, larger or more complex projects may require contracted design or support services, which could increase total program costs in certain years. These considerations will be incorporated into future CIP development as staff aligns the PMP with the Water Master Plan and available funding capacity.

Staff recommends that the City Council receive and file the *Final Report – Update of the Pavement Management Program (Citywide)* prepared by Bucknam Infrastructure Group, Inc. The updated Pavement Management Program provides a robust, data-driven framework that will serve as a valuable planning and budgeting tool, enabling staff to make data-driven decisions and to justify future funding requests for pavement maintenance and rehabilitation.

Staff will review the findings of the 2025 PMP alongside the Water Master Plan and compare both against the City's existing five-year Capital Improvement Program (CIP). This side-by-side analysis will help identify any recommended modifications to the CIP schedule or project sequencing, which staff will bring forward to the City Council for consideration.

FISCAL IMPACT

The preparation of the PMP report was included in the FY 2024-25 Adopted Mid-Cycle Budget. The City Council approved an agreement with Bucknam Infrastructure Group, Inc. in the amount of $174,879, plus a 10% contingency, for a total of $192,367, funded through Capital Project Fund 301.

Any additional funding needs associated with achieving a specific PCI target will be presented to the City Council during future budget or CIP discussions, based on Council direction.

ENVIRONMENTAL DETERMINATION

There are no CEQA impacts associated with the recommendations in this report.

Subject: **Final Report - Update of the Pavement Management Program**

Dear Maliha:

As part of the 2025 Update of the Pavement Management Program for the City of Glendora, *Bucknam Infrastructure Group, Inc. (Bucknam)* is pleased to submit the Final Report for the City's pavement network.

The information contained in this report was used to develop the recommended improvement program for the pavement network. The report covers the following categories:

- **Executive Summary (Section I)**
- **Pavement Management Program Capital Improvement Program Recommendations (Section II)**
- **Pavement Conditions For Each Segment in the Network (PCI Report – Section III)**
    - The Pavement Condition Index report shows the present condition of each street in the pavement network. In addition, the report shows the basic geometry of each street segment.
- **Forecast Maintenance / Rehabilitation (FMR) Reports (Section IV)**
    - Recommended Maintenance and Rehabilitation Strategies
      The recommended maintenance and rehabilitation strategies were used to generate the FMR and were based on our 2025 inspections. Additionally, we have assessed and incorporated unit cost and maintenance application practices/types with our strategies.
    - Projected Projects based on M&R Strategies
      The FMR projects the street maintenance/rehabilitation activities recommended for the next several years; broken down by fiscal year to show the necessary annual funding levels needed for the Arterial / Collector, Local and Alley networks.

Our thorough analysis of previous and current Glendora PMP strategies enabled our staff to make proactive recommendations to the City's pavement CIP. All comments received from the City have been incorporated in the reports that follow. It has been a pleasure working with you and the City on updating your Pavement Management Program. We look forward to the continued success of this project and future teamwork with City staff.

Sincerely,

Bucknam Infrastructure Group, Inc.

SECTION I
EXECUTIVE SUMMARY

2025 UPDATE OF PAVEMENT MANAGEMENT PROGRAM

This report reflects the continued dedication and proactive management of the City's Pavement Management Program (PMP), it Public Works staff and upper management; the last major update to the City's PMP was performed in 2020. As the City of Glendora continues to show limited growth with its population, demographics, infrastructure and maintenance needs, the street network has been running parallel as the system matures and capital street projects widen streets. Today, the City is currently using the StreetSaver PMP software to manage the pavement network. This system is essential to the City in that it assists Public Works staff in capturing funding for its arterial street system as well as cost-effectively manages the local network through proactive maintenance and scheduling. Under this project, the City has incorporated the development of a unique Pavement Management – GIS layer that will assist the City in spatially analyzing pavement conditions and other attribute information that resides in the StreetSaver database.

The Glendora PMP has been implemented to assist City personnel in identifying current conditional data on the City's street network. Additionally, it allows the PMP team to develop cost-effective maintenance/rehabilitation strategies to maintain a desirable level of pavement performance on a network scale, while optimizing the expenditure of limited fiscal resources. City staff also provided key information pertaining to the ongoing maintenance that has occurred throughout the City since 2020. In doing this, we were tasked to generate an updated Capital Improvement Program report that identified recommendations and deficiencies in the current operating and maintenance efforts put forth by the City.

For the 2025 project, our staff surveyed all routes within the network to assist the City in complying with Los Angeles County MTA (METRO) PMP requirements and analyzed historical maintenance operations. Specifically, the program provides administrators and maintenance personnel with:

- The present condition status of the pavement network (arterial, collector, and local streets), as a whole and of any grouping or individual component within the City;
- A ranked list of all streets, or segments of streets, by condition within the network;
- Rehabilitation/maintenance needs of each street segment by year;
- An optimized priority maintenance and rehabilitation program based on cost/benefit analysis and various levels of funding;
- Optimum annual budget levels for pavement maintenance for the current and the following five (5) years;
- Prediction of the future performance of the City's pavement network and each individual street section;
- Updated PMS data to assist the City with GASB 34 compliance; and
- Pavement network and conditional data presented in **ArcGIS** that is compatible with City's existing GIS Enterprise

Pavement is a dynamic structure where deterioration is constantly occurring; thus the pavement management system needs to be updated on a regular basis to reflect these changes in pavement conditions, pavement maintenance histories, and maintenance strategies based upon budgetary constraints. In our approach to develop the City's forecasted maintenance recommendations we worked with Glendora staff in identifying unit costs for all maintenance practices used on an annual basis. Currently, based upon the City's maintenance practices and their associated unit costs, the total replacement value of the pavement network is $439,094,000 This value clearly indicates that the City's pavement network is the most valuable and essential asset to Glendora. The City's use of slurry seal, ARHM Overlay and R&R practices are typically applied at a five year, ten year and 25 year frequency respectively. These frequencies are typical but the City may see increases in deterioration rates due to environmental, load and high average daily traffic (ADT) volumes. For example, high ADT volumes along one of Glendora's arterial streets will increase deterioration rates for a previously applied AC Overlay compared to a small local street. These deterioration rates are monitored through frequent inspections and functional class deterioration analysis within the City's PMP database.

This report reflects our findings and recommendations for the PMP and the current state of the City's pavement network. Furthermore, we have recommended detailed funding and maintenance strategies for the arterial/collector and residential networks for next several fiscal years.

A. CITY'S PAVEMENT NETWORK

Within the Glendora Arterial/Collector pavement management network consist of approximately 45.0 section miles of streets, 10,310,492 SF of pavement that is made up of 195 sections. The Local network consists of approx. 112.2 section miles of streets, 19,757,439 SF of pavement which consists of 897 sections. The Alley network consists of approx. 6.2 section miles of streets, 573,612 SF of pavement and 86 sections. Combined, the entire network consists of 163.4 section miles of streets, 30,641,543 SF and 1,178 total pavement sections.

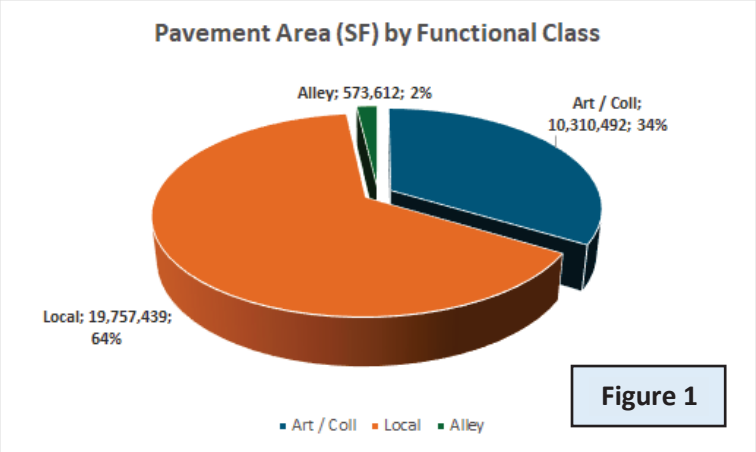

Figure 1

The City's pavement network is broken down into manageable groups that have similar characteristics, such as pavement rank, surface type and logical segmentation. Pavement segments are identified by their branch and section numbers. Pavement "branches" that have a common usage, such as Foothill Blvd, defines a "branch" within StreetSaver. Pavement "sections" are pavement segments within the defined branch that have consistent pavement rankings, construction/maintenance histories and use. Representative inspection samples are then selected and visually surveyed to locate distress data.

This data is used to calculate the pavement sections Pavement Condition Index (PCI) which includes distress type, extent of the distress and its severity. The PCI is a condition rating that ranges from 100 (a new pavement section or recently overlaid or reconstructed) to 0 for a section that

has structurally failed and deteriorated dramatically. Weighted average PCI of a given area/zone = pavement section PCI * its own area divided by the total square footage of the given area/zone. Table 1 summarizes the section conditions found within the City of Glendora pavement network by rank.

- **The weighted average PCI for the City of Glendora ARTERIAL / COLLECTOR network is 63.3**
- **The weighted average PCI for the City of Glendora LOCAL network is 63.2**

The weighted PCI value associated with the Arterial and Local routes shown through our survey analysis is timely in that it demonstrates that a moderate amount of preventive, slurry seal, and overlay work will be needed over the next several years to sustain the level of condition (PCI) at a "manageable" level.

Condition	PCI Range	Art / Coll	% of Art / Coll	Local	% of Locals	Alleys	% of Alleys	Total	% of Network
Very Good	86-100	6.7	15%	17.6	16%	2.3	37%	26.6	16%
Good	75-85	6.9	15%	18.4	16%	0.6	10%	25.9	16%
Fair	60-74	11.5	26%	24.7	22%	0.4	6%	36.6	22%
Poor	41-59	11.8	26%	34.1	30%	0.9	15%	46.8	29%
Very Poor	0-40	8.1	18%	17.4	16%	2.0	32%	27.5	17%
		45.0		112.2		6.2		163.4	

Table 1 – Condition Distribution by Section Mileage for All Streets

Rank	Mileage	SF	PCI 2025	PCI 2020
Art / Coll	45.0	10,310,492	63.3	67.6
Local	112.2	19,757,439	63.2	64.2
Alley	6.2	573,612	60.2	67.5
Citywide	163.4	30,641,543	63.2	65.4

Table 2 – Network Findings / Summary

B. CURRENT CITYWIDE CONDITIONS (ARTERIALS AND LOCALS)

The overall condition of the City's pavement network is "Fair" with a weighted average PCI of 63.2 based on the surface area of each segment. The distribution of the City's overall pavement network is shown in Section III of this report (Condition Distribution).

For comparison, Bucknam performed 2024-25 pavement management studies for several other Los Angeles County agencies and have included their weighted PCI values; South Pasadena (63.8), Sierra Madre (76.5), Duarte (77.3) and Compton (58.0).

As shown above, a large majority of segments are evenly distributed through three condition categories (Very Good to Fair). For a network to be in a "preventive" condition status you would typically see Very Good to Fair section percentage totals at the 60% to 70% range; Glendora's network currently shows 54% of its sections within these PCI ranges. These findings indicate that the annual PMP funding levels have not been ample enough, over the past several years, to improve the overall PCI above

70+. If a 70+ PCI is achieved it will allow Public Works managers/staff to proactively establish preventive and rehabilitation schedules that will generate further high-value ROI for the City. At a minimum, to sustain this asset, continued amounts of overlay rehabilitation and slurry seal maintenance needs to be budgeted for and performed across all areas of the pavement network.

As shown in Table 1, over 68% of the City's entire network falls within the fair to very poor condition categories based on the PCI findings, highlighting the need for continued funding of proactive slurry seal & overlay projects. More overlay rehabilitation activity will increase the City's overall weighted PCI while reducing deferred maintenance costs in future fiscal years. Overlay projects applied to appropriate, qualifying segments is necessary to improve the City's network and achieve a preventive condition status as described above. A network-wide preventive condition status is typically a network with a weighted average PCI over 75.

Regarding the Local network, detailed inspection analysis shows that 29% (32.4 miles) of the Local pavement networks require slurry seal maintenance activity while 55% (62.2 miles) requires overlay rehabilitation or full reconstruction.

With the major amount of Local sections needing rehabilitation the City should proactively appropriate the necessary amount of annual overlay funding to improve the network to a higher condition level. The Local network will continue to be a major contributor to the high amount of deferred rehabilitation cost burdens unless appropriate pavement funding is applied.

In regard to the Arterial / Collector network, detailed inspection analysis shows that 31% (13.9 miles) of the pavement network requires slurry seal maintenance activity while 54% (24.4 miles) requires overlay rehabilitation or full reconstruction. Over the past three years the Arterial / Collector weighted PCI has sustained its PCI at moderate level of condition (60+). This is due to the considerable amount of arterial CIP overlay projects that have been applied to the network since 2022. With the overall arterial PCI in the low-60's, proactive planning and application of scheduled overlay projects needs to be initiated.

Through our assessment of the City's annual pavement management budget allocation needs (Tables 3 & 4 below) we have identified the necessary annual funding levels to maintain or improve the City's PCI by FY 2030.

This PMP update recommends pavement strategies for each segment based on the existing surface conditions. However, as large overlay and reconstruction projects are considered for funding, the City should make a final determination of the segment-specific pavement management approach based on subgrade R-values, structural design, and distress severities and extents.

PCI conditions reflect "surface" conditions; additional sub-surface data such as coring data, R-Values and ground penetrating radar (GPR) will provide the City with enhanced AC/PCC structural data that will assist in project prioritization.

Our 2025 findings indicate that the PMP network has been able to sustain a mid-60 PCI but continues to need improvement. This is evident in the decrease of the citywide weighted PCI since 2021 and projected increase of deferred maintenance/rehabilitation projects through FY 2030. As the City strives to implement a stronger preventive state of M&R, cost efficient Arterial/Local rehabilitation and proactive use of available SB1/Gas Tax/Prop. C/Measure M/Measure R overlay funding should remain the focus.

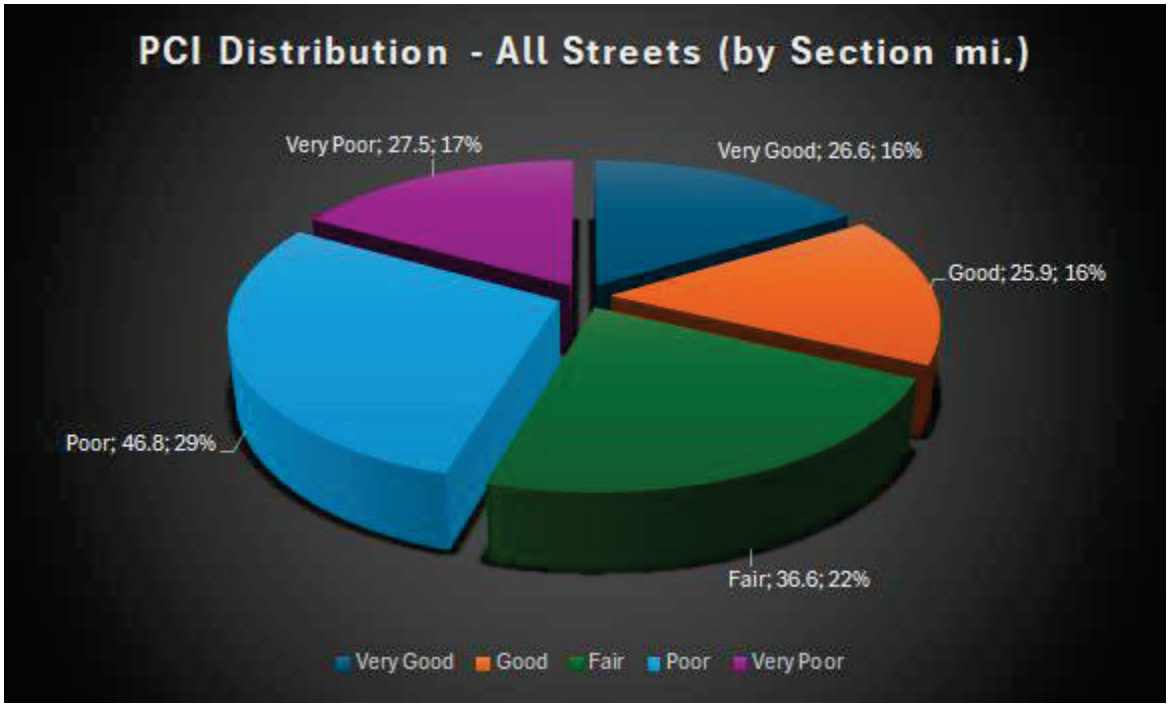

Figure 2 – PCI Distribution by Section Mileage for All Streets

C. MAINTENANCE / REHABILITATION STRATEGY DEVELOPMENT

Based on the results of the condition survey and input from the City, pavement maintenance/rehabilitation strategies were developed. From the onset, the City and Bucknam staff identified a distribution of City maintenance funds that would be applied to the network over the next five years. This was based upon the desire to prevent the decrease in street conditions and not allow an increase in the maintenance backlog funds over the five-year program.

Through our assessment and discussions with the City we were requested to identify what level of funding would be required to maintain the current PCI as well as identify the level of funding needed to increase the PCI to 70. With this approach, Bucknam has recommended a "minimal level of service" which creates a major dividing line in determining between preventive maintenance and major pavement rehabilitation.

Generally within pavement management programs, a PCI range between 55 to 70 determines the threshold of when preventive or major overlay rehabilitation is activated. Based on the City's weighted average PCI, condition distribution, maintenance practices, our team has identified a

PCI of "65" as the minimum level of service. This means, in most cases, that any pavement section with a PCI greater than 65 will be recommended for preventive maintenance (i.e. slurry seal). This recommendation is indicated in Table 6, Section II.

Bucknam developed two multi-year Capital Improvement Programs for the City based on the pavement records, yearly capital expenditures, available funding and the most recent 2025 inspections. These recommendations and results are shown in Section II of this report where, for example, we have demonstrated what level of funding is necessary to improve the current weighted condition level of 63.2 to a level of 70 by FY 2030.

As shown above in Figure 2, 38% of the City's streets are in Good to Fair condition. These sections will be targeted for "preventive" maintenance within our Capital Improvement Program (CIP) recommendations. The reasoning in doing this is to extend the life cycles of those "good" pavement sections which accrues capital saving to aggressively rehabilitate those pavement sections that are below the "minimal level of service".

In order to achieve the most effective and optimum program for the City, certain strategies have been selected and/or analyzed. Below is a listing of the maintenance activities utilized in strategy development. Each activity is representative of the typical types of work that can be programmed as part of the long-term maintenance requirements of the City's street network.

General Repairs-Stop Gap (Localized Maintenance*); PCI Range – 20 to 95

For this maintenance type, small localized surface treatments are utilized as "holding action" solutions (stop gaps) to delay the need for pavement structural strengthening. They typically include activities such as crack sealing, AC deep patching, AC skin patching, PCC slab replacement, grinding and leveling.

Microsurfacing - (Global Maintenance*); PCI Range – 60 to 85

Microsurfacing is similar to slurry seal. It consists of the application of a mixture of water, asphalt emulsion, aggregate (very small crushed rock), and chemical additives to an existing asphalt concrete pavement surface. Polymer is commonly added to the asphalt emulsion to provide better mixture properties. The major difference between slurry seal and microsurfacing is in how they "break" or harden. Slurry relies on evaporation of the water in the asphalt emulsion. The asphalt emulsion used in microsurfacing contains chemical additives which allow it to break without relying on the sun or heat for evaporation to occur. Thus, microsurfacing is an application that hardens quicker than slurry seals and can be used when conditions would not allow slurry seal to be successfully placed. Streets that have a lot of shade and streets that have a lot of traffic are good candidates for microsurfacing (*source - LA County of Public Works*).

Slurry Seals (Global Maintenance*); PCI Range – 60 to 85

Surface treatments applied to pavements with minimal surface distress to provide new wearing surfaces and extend pavement life. Generally consists of a mixture of conventional or latex-modified emulsified asphalt, well-graded fine aggregate, mineral filler and water placed over an existing AC surface; Slurry seal application life-cycles are averaging 4 to 5 years. Type II Slurry is recommended for Local streets.

Cape Seals (Global Maintenance*); PCI Range – 40 to 65

This is an application of a single layer of asphalt binder to a road surface immediately followed by a single layer of cover aggregate (chips). The single layer chip seal is then followed with a slurry seal application; Conventional cape seal application life-cycles are averaging 6 to 7 years. For sections that have lower PCI's in this range, leveling courses should be considered. City is currently considering this application as an alternative cost-saving tool.

Overlays (Major Rehabilitation*); PCI Range – 20 to 65

AC Overlay – Placement of a layer of hot-mixed asphalt concrete over the existing pavement surface (may include pavement fabric). Grinding (milling) is performed prior to the overlay to reduce the total height of asphalt and assure alignment with existing gutter lines. This also includes "dig-outs" and crack sealing prior to the application of an overlay. This treatment provides a new wearing surface and increased structural strength to the pavement section. A conventional overlay should be designed for a ten-year life.

Asphalt Rubber Hot-Mix Overlay - The ASTM definition is: Asphalt-Rubber is a blend of asphalt cement, reclaimed tire rubber and certain additives in which the rubber component is at least 15% by weight of the total blend and has reacted in the hot asphalt cement sufficiently to cause swelling of the rubber particles. Specifically, using crumb rubber modified binders in pavement application benefit local agencies in that cities find:

- Pavement resists cracking by being more flexible;
- Cost savings come from a longer life cycle (from Bucknam's experience typically 20% longer), decreased maintenance and the use of less material
- Improvement in skid resistance;
- Decreased noise; and
- It provides long-lasting color contrast for marking and striping
- Life cycles are averaging 8 to 12 years

Reconstruction (Major Rehabilitation*); PCI Range – 0 to 20

Reconstruction of an existing pavement section includes demolition and removal of the asphalt to a prescribed depth, grading, sub-base compaction, application of a binder/surface course followed by the placement of a conventional flexible pavement section using a structural AC Hot Mix, ARHM or full depth asphalt. Each classification of road has a typical design cross-section based on anticipated traffic loading. Reconstruction resets a roadway section PCI to 100 and restarts the life-cycle deterioration curve of the section.

*Localized, Global and Major maintenance activities are default terms used within the StreetSaver pavement software. Specific pavement repair applications are placed within each maintenance activity in order to develop multi-year maintenance forecast recommendations.

D. ANNUAL BUDGET PROJECTIONS

The budgeting process was approached with the following in mind; generate two unique work programs for the next five (5) to seven (7) years based upon actual road pavement conditions in order to:

1. Identify the required annual citywide budget to "Reach PCI 67 within three years and maintain through five years;

2. Identify the required annual citywide budget to "Reach PCI 70 within five years and maintain through seven years;

Based on current and future pavement maintenance needs, two annual work programs have been prepared and summarized below. Both budget scenario demonstrate slurry seal and rehabilitation funding levels needed to maintain a PCI of 67.

Plan Year	PCI	Slurry Seal	Overlay	Total $	Deferred Maint.
	63.2				$46,785,500
2025-26	65.0	$353,900	$8,077,900	$8,431,800	$45,981,800
2026-27	66.0	$1,498,000	$6,712,800	$8,210,800	$37,202,800
2027-28	67.0	$1,250,400	$7,123,400	$8,373,800	$41,467,500
2028-29	67.0	$797,500	$7,602,800	$8,400,300	$51,084,600
2029-30	67.0	$522,100	$7,963,400	$8,485,500	$71,951,900
		$4,421,900	$37,480,300	$41,902,200	

Table 3 – Budget Projection Demonstrating Results to Reach PCI 67 w/i Five Yrs

Plan Year	PCI	Slurry Seal	Overlay	Total $	Deferred Maint.
	63.2				$46,785,500
2025-26	65.0	$353,900	$8,077,900	$8,431,800	$45,981,800
2026-27	66.0	$1,498,000	$6,712,800	$8,210,800	$37,202,800
2027-28	67.0	$1,250,400	$7,123,400	$8,373,800	$41,467,500
2028-29	68.0	$951,400	$7,981,800	$8,933,200	$47,761,500
2029-30	70.0	$859,700	$8,451,100	$9,310,800	$56,642,600
2030-31	70.0	$678,600	$7,134,500	$7,813,100	$61,353,900
2031-32	70.0	$651,000	$7,222,200	$7,873,200	$62,987,600
		$6,243,000	$52,703,700	$58,946,700	

Table 4 – Budget Projection Demonstrating Results to Reach PCI 70 w/i Seven Yrs

Our findings above demonstrate the continued ROI that will result if proper annual funding is applied. By applying approximately $8,380,400/yr ($41,902,200 over five years); the City will see positive results with overall PCI, reduction in deferred preventive maintenance and overlay rehabilitation.

Additional detail and breakdown of budget projections are demonstrated in Section IV of this report. All work program budgets generated are presented in terms of current 2025 dollars. All repair recommendations were based on distresses observed at the time of the field survey. These are recommendations are to be used as "the best case scenario" for improving the City of Glendora street network.

E. QUALITY CONTROL EFFORTS

Quality control efforts for this PMP update begin at the notice-to-proceed; this involved a full assessment of the previous PMP final reports, spreadsheets as well as available GIS data associated with the City of Glendora street network.

As indicated in our scope of work, Bucknam performed numerous quality control checks in the field during survey efforts. Field check efforts were performed at the end of each week of survey; 10% of the pavement inspection set was resurveyed by a second team to ensure the quantities and distress types were collected properly (approx. 16 miles).

Through our field survey efforts and true area pavement section calculations we adjusted section lengths, widths and true area SFs to enhance PMP section accuracies (this resulted in minor Arterial/Collector, Local section mile / total SF area adjustments).

F. FINDINGS AND RECOMMENDATIONS

Arterials / Collectors

The actual workload requirements identified indicate that the Arterial street network is currently in "Fair" condition (PCI = 63.3). To sustain this condition, it is critical that preventive maintenance and overlay rehabilitation activities are funded at the levels identified in Table 4 to maintain the network weighted average PCI value to within the "Fair" condition category.

Our arterial/collector findings for conditional data and recommendations for revenue expenditures are shown below:

- The Arterial/Collector network has a weighted PCI of 63.3;
- Currently, 54% of the arterial network (approx. 24.4 miles) qualify for overlay/reconstruction maintenance; 31% (approx. 13.9 miles) qualify for slurry seal maintenance;
- At a minimum, Arterial/Collector maintenance projects should focus on achieving and maintaining a PCI of 63+ within the next five years;
    - Develop a proactive fiscal and planned approach to identify arterial/collector overlay projects based on the deterioration modeling within StreetSaver;
    - Maintain arterial/collector revenues at the levels shown within the Section IV Forecast Maintenance & Rehabilitation (FMR) Report for a minimum of five years to generate the results identified within this report;
- Reassess/re-evaluate the arterial/collector rehabilitation budget programs every two years to improve on CIP forecasts for 2025-26 and beyond to ensure the results shown in Table 3 and 4;
- Perform pavement inspections on the arterial/collector network every three years to build a solid planning model within StreetSaver/MyRoads® to track PCI deterioration;
- Demonstrated budget shown in Table 4 is sufficient to improve the Arterial weighted to a 70 PCI due to the necessary increased overlay funding. Additionally, the citywide deferred maintenance decreases from a level of $46.8 million to $63.0 after five years;
    - Unique budget scenarios created in StreetSaver calculate annual deferred maintenance amounts based on the available/projected budget applied and section SF's that fall within preventive, slurry seal, overlay and reconstruction PCI ranges;
- Bucknam recommends that the City proactively budget overlay rehabilitation projects at the levels shown in Table 4 in order to improve upon the conditions found today as well as minimize the impact of a moderate increase deferred maintenance across the City.

Locals

The actual workload requirements identified indicate that the Local street network is currently in "Fair" condition (PCI = 63.2). To improve this condition, it is essential that preventive maintenance and overlay activities are funded at the levels identified in Table 4 to increase the network weighted average PCI value within the "Good" category.

Our Local findings for conditional data and recommendations for revenue expenditures are shown below:

- The Local network has a weighted PCI of 63.2;
- Currently, 55% of the Local network (approx. 62.2 miles) require overlay/reconstruction rehabilitation; 29% (approx. 32.4 miles) require slurry seal maintenance;
- At a minimum, Local maintenance projects should focus on achieving and maintaining a weighted PCI above a level of 63+ within the next five years;
    - Current Local Forecast Maintenance & Rehabilitation (FMR) recommendations should be followed as shown in Section IV of this report;
    - Develop a proactive fiscal and planned approach to identify Local overlay projects based on the deterioration modeling within StreetSaver;
- Increase Local revenues at the levels shown within the Section IV Forecast Maintenance/Rehabilitation (FMR) Report for a minimum of five years to generate the results identified within this report;
- Reassess/re-evaluate the Local rehabilitation budget programs every two years to improve on budget forecasts for 2025-26 and beyond to ensure the results shown in Table 3 or 4;
- Perform pavement inspections on the Local network every three years to build a solid planning model within StreetSaver/MyRoads® to track PCI deterioration;
- Demonstrated budget shown in Table 4 is sufficient to improve the Local weighted to a 70 PCI due to the necessary increased overlay funding. Additionally, the citywide deferred maintenance decreases from a level of $46.8 million to $63.0 after five years;
    - Unique budget scenarios created in StreetSaver calculate annual deferred maintenance amounts based on the available/projected budget applied and section SF's that fall within preventive, slurry seal, overlay and reconstruction PCI ranges;
- Bucknam recommends that the City allocates budget for overlay rehabilitations at the levels shown in Table 4 in order to improve upon the conditions found today as well as greatly reduce the impact of deferred maintenance across the City.

SECTION II
PAVEMENT MANAGEMENT PROGRAM – CAPITAL IMPROVEMENT PROGRAM

Bucknam Infrastructure Group, Inc. (Bucknam) performed the following services in accordance with the scope of services that was contracted with the City of Glendora. As a quick overview, the following tasks were performed to complete the work over the past several months:

2025 Pavement Management Scope of Work:

Task 1: Project Kickoff - Data Assessment / Management
Task 2: Update of Work History Activities
Task 3: Pavement Condition Survey (approx. 163.4 miles)
Task 4: Budgetary Analysis and Capital Improvement Reports
Task 5: Executive Summary and Final CIP Reports
Task 6: Mapping of the Pavement Network

A. 2025 PAVEMENT MANAGEMENT PROGRAM UPDATE

As a part of the 2025 update of the pavement management program, a major element of work was to complete a comprehensive assessment of the existing street network and PMP database utilized by the City. This included assessing the City's existing 2022 StreetSaver dataset, GIS, street naming conventions and work history information.

Work history information was provided by the City in the form of completed bid documents, institutional knowledge, .pdf files and Excel documents. This information was entered into the proper pavement segments that match the limits of those projects.

Table 5 demonstrates PCI ranges utilized for PCI calculations and budgetary reporting. Once a pavement inspection is complete, a PCI is calculated for each pavement section. Each PCI calculated falls within a defined PCI range category (Very Good, Poor, etc.). Furthermore, a weighted PCI was calculated for each functional class within the network (arterials and locals).

The PCI is a condition rating that ranges from 100 (a new pavement section or recently overlaid or reconstructed) to 0 for a section that has structurally failed and deteriorated dramatically. Weighted average PCI of a given area/zone equals the pavement sections PCI multiplied by its own area then divided by the total square footage of the given area/zone. This information can also be represented through StreetSaver to show how much square footage or percentage of area falls within a PCI range category.

PCI Range	Condition
86-100	Very Good
75-85	Fair
60-74	*Fair (2025 City of Glendora = 63.2)*
41-59	Poor
0-40	Very Poor

Table 5 - PCI Range

These condition ranges are defined by the Army Corps of Engineers (USACE) and utilized within the StreetSaver software. The summary of all roads condition data and their representative PCI's can be seen in the Pavement Condition Report in Section III.

B. MAINTENANCE / REHABILITATION STRATEGY ASSIGNMENTS

The City was requested to provide a pavement maintenance list that demonstrated what pavement applications were currently being used and to provide their associated unit costs; from there a Maintenance Strategy Table was defined within the system that provided recommended actions to the specific repair needs of a street or a grouping of streets.

Maintenance / Rehabilitation Strategy Assignments

All Streets			
PCI Range	**Description**	**Unit Cost/SF**	**Unit Cost/SY**
20-100 Varies by Activity	Preventative, Stop Gap, Patching	Varies by Activity	Varies by Activity
65-85	Type II Slurry (Locals)	$0.80/SF	$7.20/SY
65-85	Type II Slurry (Arterials)	$1.05/SF	$9.45/SY
Minimal Level of Service (65)			
40-65	Cape Seal (Locals)	$2.10/SF	$18.90/SY
20-65	2" Grind / Overlay (Local)	$4.50/SF	$40.50/SY
20-65	2" Grind / Overlay (Arterial)	$5.30/SF	$47.70/SY
20-65	2.5" Grind-ARHM Overlay (Arterial)	$6.70/SF	$60.30/SY
0-20	AC Reconstruction (Locals)	$13.25/SF	$119.25/SY
0-20	AC Reconstruction (Arterials)	$16.00/SF	$144.00/SY
0-20	PCC Reconstruction	$28.20/SF	$253.80/SY
25% Contingency included within All Unit Costs			

Table 6 – Maintenance / Rehabilitation Strategy Assignments

The Maintenance / Rehabilitation Strategy Assignments, shown in Table 6, was developed to identify the most critical segments in each of the work programs (Arterial, Collector and Local). Segment priorities were established by determining the range of PCI's requiring first attention based on the relative value of each segment's PCI, thus maximizing the annual maintenance budget. Also, distress

quantity, area extent, type and severity were critical elements in the decision process for recommending maintenance. The assignment table is used as a guide within StreetSaver to recommend maintenance, however, further assessment by City staff and/or outside parties can override maintenance/rehabilitation recommendations. This can be done by reviewing and assessing distress extents and their weighted percentages.

Once the strategy assignments were set within the system, budgets and work assignments were generated for each work program on an annual basis. Using pavement deterioration curves for each type of pavement surface and class of road, both current year and future years work requirements for each pavement segment within the City were determined. In forecasting the maintenance requirements in future years, the current PCI value is reduced annually for each pavement segment based on the StreetSaver deterioration curves within the City's database.

Likewise, maintenance activities performed in a given year increase the PCI value as they are applied to the segment. The overall program is dynamic in that each strategy consists of a cyclic series of actions that simulates the pavement anticipated life cycle.

Strategy Assignment Notes

1. Unit cost values were assessed and reviewed by City staff and benchmarked with neighboring LA County cities;
2. 25% contingency costs were applied to pavement material costs; additional soft costs that were not included were:
    a. Mobilization / demobilization
    b. Right-of-way improvements
    c. Curb & gutter improvements
    d. ADA ramp improvement
    e. Utility improvement
    f. Tree removals
3. Bucknam applied a 4% inflation rate on the annual budget within forecast maintenance & rehabilitation projections (Section IV)

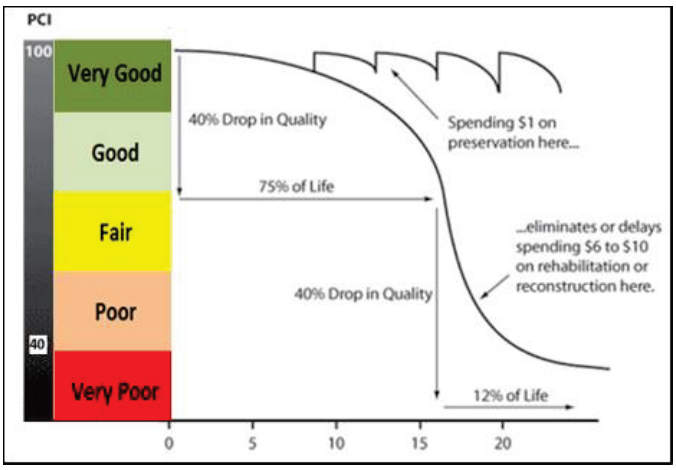

Figure 3 – Sample Pavement Life Cycle

C. MULTI-YEAR ANNUAL WORK PROGRAM PROJECTIONS

The goal of these projections is to assist City policy makers in utilizing the recommendations of the StreetSaver system. By using the City of Glendora's current budgets and maintenance practices the system will develop "section unique" improvements and strategies. Qualifying segments will be tied to a specific fiscal year. As shown in the following pages, we have assessed the budgets that have been projected to meet the maintenance and rehabilitations needed to maximize the City's return on investment. The budget forecasting goal for the City network focused on:

- Establishing a proactive, achievable multi-year Maintenance & Rehabilitation Program;
- Developing a preventive maintenance program; and
- Selecting the most cost-effective repairs based on City strategies

REACH PCI 67 BUDGET (5-YR) – The Reach PCI 67 budget was generated for the City to demonstrate what level of annual funding is required to achieve a PCI of 67 within three (3) years and to sustain it through five (5) years (FY 2025-2030).

REACH PCI 70 BUDGET (7-YR) – The Reach PCI 70 budget was generated for the City to demonstrate what level of annual funding is required to achieve a PCI of 70 within five (5) years and to sustain it through seven (7) years (FY 2025-2032).

***All multi-year budget projections include a 4% inflation rate for the term of the budget forecast**.*

ARTERIAL-COLLECTOR / LOCAL BUDGET PROJECTIONS

REACH PCI 67 BUDGET PROGRAM (FIVE YEAR MODEL)

The first key step in developing a proactive PMP is to model the City's existing conditions against a projected and/or available budgets. In doing this, PCI performance, deferred maintenance and pavement application uses are able to benchmarked and demonstrated in a positive or negative result. With the City striving to show proactive maintenance across all City pavements and neighborhoods, a budget program was generated to show the greatest return on investment through the application of slurry seal, cape seal, grind & overlay and alternative overlay rehabilitation.

The "Reach PCI 67 Budget" program incorporates pavement sections that have a functional class of Arterial (A, C) and Local (R).

Plan Year	PCI	Slurry Seal	Overlay	Total $	Deferred Maint.
	63.2				$46,785,500
2025-26	65.0	$353,900	$8,077,900	$8,431,800	$45,981,800
2026-27	66.0	$1,498,000	$6,712,800	$8,210,800	$37,202,800
2027-28	67.0	$1,250,400	$7,123,400	$8,373,800	$41,467,500
2028-29	67.0	$797,500	$7,602,800	$8,400,300	$51,084,600
2029-30	67.0	$522,100	$7,963,400	$8,485,500	$71,951,900
		$4,421,900	$37,480,300	$41,902,200	

Table 7 – Resulting Conditions Based on Reach PCI 67 Budget (FY 2025-2030)

Referring to Table 7, it is noted that the weighted PCI increases annually through the five-year projection (63.2 to 67.0). If the City utilizes an average annual budget of $8,380,400/yr for slurry, overlay, and reconstruction maintenance as shown above, the overall conditions will "increase by 6%". However, the City will see a moderate 54% increase in the amount of deferred maintenance (mostly overlay rehabilitation). The annual deferred maintenance total increases from $46.8 million to $72.0 million at the end of the five-years. These results should be monitored as the City's performs major rehabilitation over the next several years.

We recommend that a stronger focus be placed on the Local network improvements due to the fact that the Local network accounts for 65% of the total AC/PCC SF across the City. We still recommend consistent maintenance/rehabilitation to the Arterial network (i.e. localized patching, ARHM through the use of Proposition C, SB1 Measure M and Measure R funds) and this is shown within our reporting in Section IV. But again, with the Local network showing a higher degree of negative results, a new focus for neighborhood area maintenance and proactive overlays should be considered.

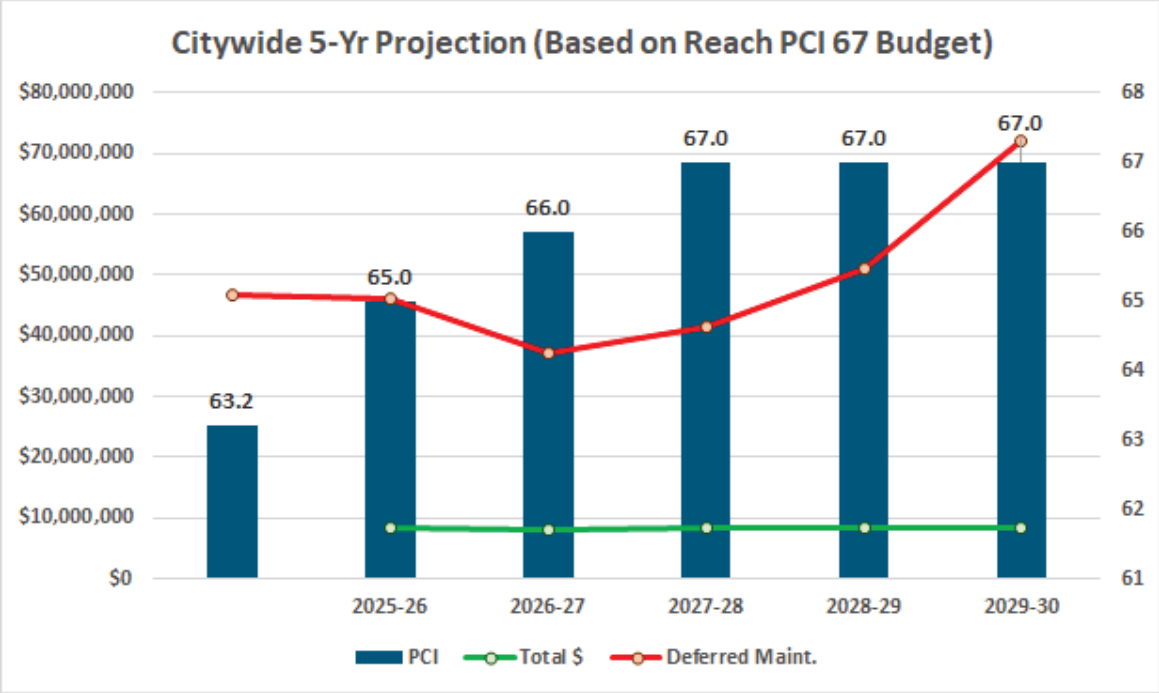

Figure 4 – Resulting Network PCI (Increase PCI 67 Budget – 5 Yrs)

The resulting "increase of the weighted PCI" shown above for the entire network demonstrates how not applying ample/appropriate capital funds to specific areas of the network allows the City's pavement conditions to improve at a rate that is conducive to a successful PMP. Additionally, even with the limited budget, the City should continue to assess and consider the implementation of localized maintenance (i.e. Cape Seal, alternative Fiber Reinforced Asphalt, High Density Mineral Bond (HDMB) applications, deep patching, leveling courses, crack sealing, etc.) prior to any major slurry seal and/or overlay rehabilitation. By performing stop gap measures to individual pavement sections the overall performance of the sections condition will improve over time and sustain itself longer than if no preventive maintenance was performed.

If the City were to reduce their annual funding to a level of $2,000,000/yr major overlay projects would continue to be delayed thus increasing the overall deferred maintenance to a level of $122.2 million after seven years and the overall PCI would drop to 56.

REACH PCI 70 BUDGET PROGRAM (SEVEN YEAR MODEL)

Utilizing the City's previous Reach PCI 67 Budget scenario as a benchmark, our goal under this model is to increase the current 2025 weighted PCI of 63 to 70 through a seven-year program. This model will demonstrate the necessary funding needed each fiscal year to achieve this goal. The "Reach PCI 70" program incorporates pavement sections that have a functional class of Arterial (A, C) and Local (R).

Plan Year	PCI	Slurry Seal	Overlay	Total $	Deferred Maint.
	63.2				$46,785,500
2025-26	65.0	$353,900	$8,077,900	$8,431,800	$45,981,800
2026-27	66.0	$1,498,000	$6,712,800	$8,210,800	$37,202,800
2027-28	67.0	$1,250,400	$7,123,400	$8,373,800	$41,467,500
2028-29	68.0	$951,400	$7,981,800	$8,933,200	$47,761,500
2029-30	70.0	$859,700	$8,451,100	$9,310,800	$56,642,600
2030-31	70.0	$678,600	$7,134,500	$7,813,100	$61,353,900
2031-32	70.0	$651,000	$7,222,200	$7,873,200	$62,987,600
		$6,243,000	$52,703,700	$58,946,700	

Table 8 – Necessary Annual Funding to Increase PCI to 70

Referring to Table 8, it is noted that the weighted PCI improves throughout the seven-year projection (63.2 to 70.0). Furthermore, the annual deferred maintenance total shows a minor increase from $46.8 million to $63.0 million at the end of the five-years (35% decrease); moderately lower than the previous budget scenario. If the City utilizes an average annual budget of $8,421,000/yr for slurry, overlay, and reconstruction projects as shown above, the City will be able to make a significant improvement to the overall PCI conditions while properly managing the annual deferred backlog amounts.

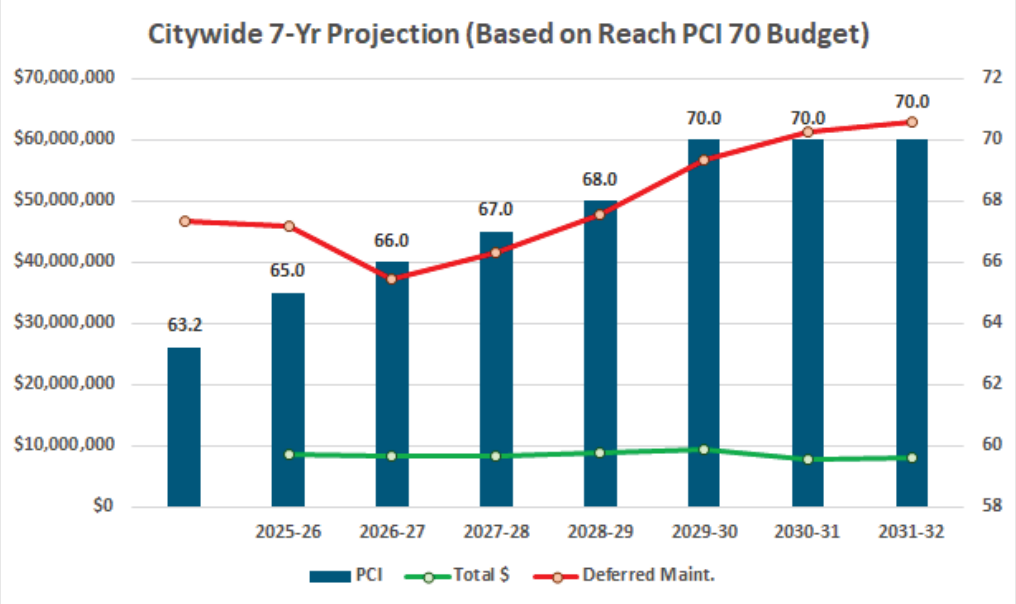

Figure 5 – Resulting Network PCI (Increase PCI 70 Budget – 7 Yrs)

Once the City has performed the recommended pavement rehabilitation projects for FY 2025-26 through 2027-28; the City should consider establishing a Local slurry / cape seal maintenance "neighborhood" strategy for several reasons. First, preventive maintenance applications applied five plus (5+) years after rehabilitation, like those mentioned above, will help to sustain high levels of condition while reducing annual expenditures. Secondly, with a citywide Zone neighborhood methodology established, four beneficial impacts occur:

1) Planned / Maintenance areas are addressed through a multi-yr maintenance cycle which creates a dedicated project schedule for City staff and constituent inquiries;
2) Deferred overlay rehabilitation can be addressed in a more effective manner due to accrued savings of revenues (reduced construction logistical costs, volume-based costs, etc.)
3) A preventive maintenance strategy is more cost-effective in a long-term PMP rather than implementing a maintenance approach that addresses only the "worst-first" streets.
4) All maintenance alternatives are available due to the increased funding and focused maintenance per year.

The Local maintenance model that has been developed under the "Reach PCI 67" budget can be used as a benchmark to monitor the City's annual budget allocations as the network continues to mature and age; the proper amount of funding for overlay rehabilitation needs to be the City's highest priority.

Again, it is recommended that the City continue to monitor the deterioration rates for the applications of Grind & Overlay, Cape Seal and Type II slurry seal to ensure the City is generating the greatest return-on-investment and extend life-cycles; this should be done through frequent inspections and deterioration studies.

DEFERRED MAINTENANCE

Delaying repairs on streets where pavement conditions indicate a need creates deferred maintenance. Deferred maintenance includes pavement maintenance, rehabilitation and reconstruction projects that are needed across the entire network, but cannot be performed due to the lack of available funding. These delayed projects are then pushed to the next budget cycle incurring higher unit costs/SF. The actual repairs that are being deferred are often referred to as a "backlog".

As maintenance/rehabilitation is deferred, the opportunity to apply life extending preventive pavement applications is lost and the ultimate cost of rehabilitation multiples.

ADDITIONAL BUDGET SCENARIOS

Per the request of the City, two (2) additional budget scenarios were generated.

REACH PCI 65 BUDGET PROGRAM (FIVE YEAR MODEL)

The "Reach PCI 65 Budget" program incorporates pavement sections that have a functional class of Arterial (A, C) and Local (R).

Plan Year	PCI	Slurry Seal	Overlay	Total $	Deferred Maint.
	63.2				$46,785,500
2025-26	64.0	$412,500	$3,715,400	$4,127,900	$48,469,800
2026-27	64.0	$1,556,400	$3,844,200	$5,400,600	$42,032,100
2027-28	64.0	$1,315,500	$6,391,100	$7,706,600	$48,457,300
2028-29	64.0	$864,700	$6,151,400	$7,016,100	$58,037,400
2029-30	65.0	$587,700	$7,567,900	$8,155,600	$76,438,600
		$4,736,800	$27,670,000	$32,406,800	

Table 9 – Necessary Funding to Reach PCI 65 Budget (FY 2025-2030)

Referring to Table 9, it is noted that the weighted PCI slightly increases through the five-year projection (63.2 to 65.0). If the City utilizes an average annual budget of $6,481,400/yr for slurry, overlay, and reconstruction maintenance as shown above, the overall conditions will "increase by 3%". However, the City will see a moderate 63% increase in the amount of deferred maintenance (mostly overlay rehabilitation). The annual deferred maintenance total increases from $46.8 million to $76.4 million at the end of the five-years.

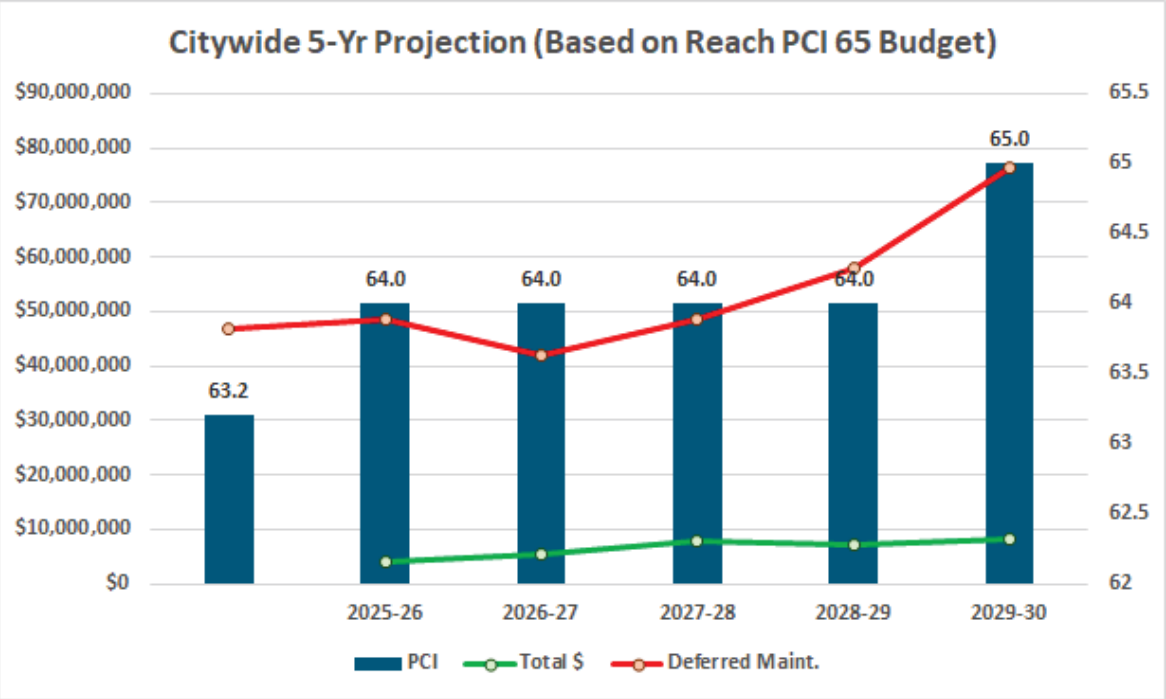

Figure 6 – Resulting Network PCI (Increase PCI 65 Budget – 5 Yrs)

MAINTAIN CURRENT PCI 63 BUDGET PROGRAM (FIVE YEAR MODEL)

The "Reach PCI 65 Budget" program incorporates pavement sections that have a functional class of Arterial (A, C) and Local (R).

Plan Year	PCI	Slurry Seal	Overlay	Total $	Deferred Maint.
	63.2				$48,785,500
2025-26	63.0	$384,500	$5,211,800	$5,596,300	$48,265,400
2026-27	64.0	$1,521,400	$4,011,300	$5,532,700	$41,877,400
2027-28	63.0	$1,211,200	$4,459,800	$5,671,000	$50,505,100
2028-29	63.0	$634,200	$4,816,600	$5,450,800	$58,840,300
2029-30	63.0	$500,400	$5,165,300	$5,665,700	$78,805,100
		$4,251,700	$23,664,800	$27,916,500	

Table 10 – Necessary Funding to Maintain PCI of 63

Referring to Table 10, it is noted that the weighted PCI sustains annually at a conditional level of 63 through the five-year projection. If the City utilizes an average annual budget of $5,583,300/yr for slurry, overlay, and reconstruction maintenance as shown above, the overall PCI will remain at today's conditions. Additionally, the City will see a moderate 68% increase in the amount of deferred maintenance (mostly overlay rehabilitation). The annual deferred maintenance total increases from $46.8 million to $78.8 million at the end of the five-years.

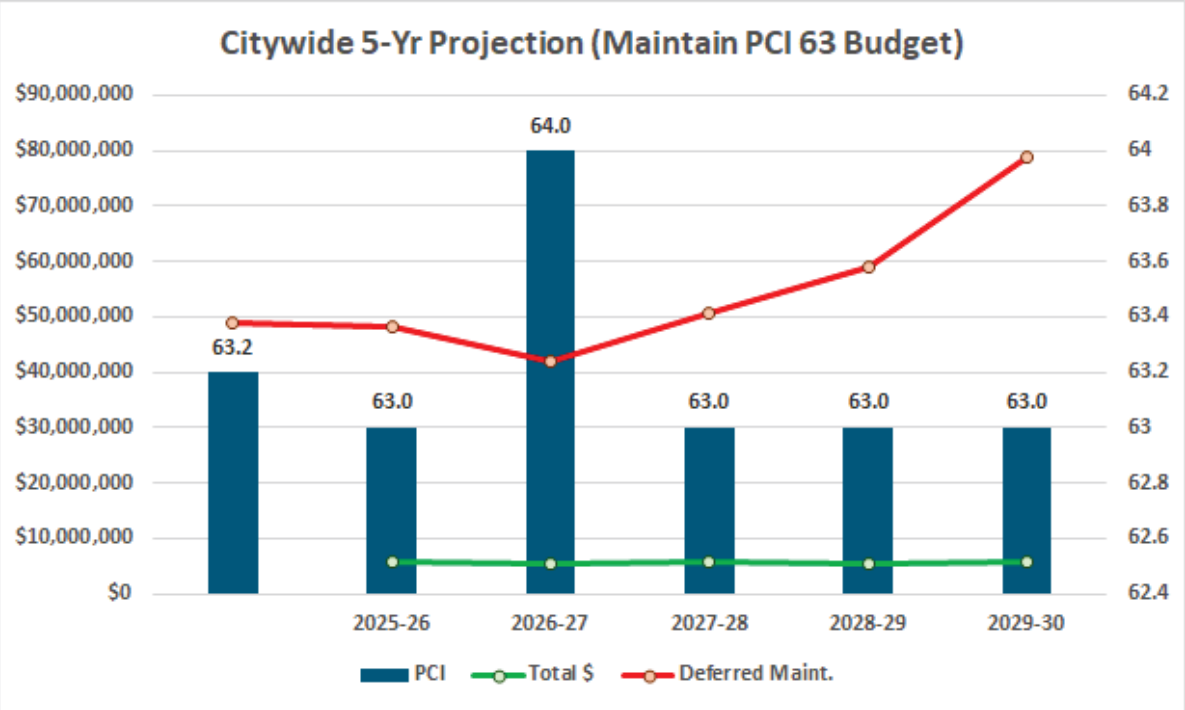

Figure 7 – Five Year Projection; Maintain PCI of 63 Budget

PAVEMENT MANAGEMENT PROGRAM REPORTS

In addition to the annual budget scenario, this report contains a comprehensive and complementary assemblage of pavement management reports ranging from summary reports to annual maintenance and rehabilitation schedules (Forecasted Maintenance Report, Section IV). Collectively, as well as individually, the reports represent reasonable projections of pavement maintenance needs and performance based on visual condition assessments, unit cost estimates, and pavement deterioration models. These recommendations are for planning purposes only; City staff make all final decisions are project locations.

It is important to note that pavement segment dimensions and surface area recorded during 1999-2020, and 2025 inspections, along with the action and repair costs, as presented within the reports are accurate within tolerable limits. This is noteworthy due to the "implied" accuracy of reporting length and width to the nearest foot, surface area to the nearest square foot, and action and repair unit costs and project estimates to the nearest penny and dollar, respectively.

NEXT STEPS

As with any infrastructure management software program, time investments need to be made by key Public Works staff to maintain the integrity of the data as well as the accuracy. Bucknam can perform training sessions in the use of the StreetSaver tools and demonstrate how to generate standard common-sense reports to assist City staff in developing yearly budgets, project level analysis, and CIP projections. This will be key to future management of the pavement program and reporting. City personnel need to maintain their commitment to the preventive maintenance system, while working toward reducing the City's present backlog of rehabilitation projects.

In order to ensure that report outputs are accurate and credible, it is essential that the integrity of all data files be maintained. This will require performing all necessary updates when changes are made to scheduling scenarios, unit cost information, historical data, etc. In addition, the entire pavement network will have to be re-inventoried at regular intervals. This typically includes surveying arterial and collectors every two years and locals every three. One recommendation the City may consider to keep the program “managed” is:

- Survey all arterials and collectors every three years; and
- Survey all locals every three years

This will not only allow work to be scheduled based on the most current condition data available, but will provide City personnel with a means to monitor actual rates of pavement deterioration so appropriate modifications can be made to the system curves. To be compliant with the METRO requirements, the City must generate a triennial Pavement Management report indicating condition ratings, inspection dates and forecasted maintenance/rehabilitation recommendations.

Bucknam will be supporting the City with staff level support to assist in the continuous updates with the StreetSaver system. This will include work history updates, generating reports from the system, unit cost updates, and future inspections.

D. CONDITION DISTRIBUTION REPORT

This report depicts the distribution of the pavement condition throughout the street network by area.

The condition scheme ranges from "Very Good" to "Very Poor"; with a "Very Good" condition corresponding to a pavement at the beginning of its life cycle, and a "Very Poor" condition representing a badly deteriorated pavement with virtually no remaining life.

The table below shows the general description for each pavement condition:

Condition Description – PCI Range - Description

Condition Description	PCI Range	Description
Very Good	86-100	Minor to low distress, no significant distress; Low severity distresses with expection of utility patches in good condition or slight hairline cracks; minor weathering found
Good	75-85	Slight to moderately weathered, low to moderate distress severities, utility patching commonly found; moderate distress extents
Fair	60-74	Severly weathered or moderate levels of distress, generally limited to utility patching and climate related distress
Poor	41-59	Moderate to high distresses including load related types such as alligator cracking, greater distress extents
Very Poor	0-40	Severly distresses, large quanities of distortion or alligator cracking; Failure of the pavement, distress has surpassed tolerable rehabilitation limits

2025 City of Glendora weighted average PCI is 63.2 (Fair).

E. CALCULATION OF PCI

In order to calculate a Pavement Condition Index (PCI) value within StreetSaver, specific street section data needs to be inputted into StreetSaver to define the survey limits, asphalt types, pavement age and metrics. Pavement "sections" are pavement segments within the defined branch that have consistent pavement street classifications, construction/maintenance histories and use. Representative inspection samples are then selected and visually surveyed to locate distress data. This data is used to calculate the pavement sections Pavement Condition Index (PCI) which includes distress type, extent of the distress and its severity.

The PCI is a condition rating that ranges from 100 (pavement section that is in perfect condition) to 0 for a section that has structurally failed and deteriorated dramatically. The PCI is calculated from three major data entries from our inspectors:

1. Distress Type (one of 20 AC or 19 PCC types); these include alligator cracking, bleeding, block cracking, corrugations, depressions, long/trans cracking, patch/utility cut, potholes, rutting, weathering, raveling, etc.
2. Distress Quantity (the square footage, length or count of a specific distress)
3. Distress Severity (the level of severity determined for each distress found; low, medium or high)

F. GLENDORA MYROADS® PMP WEB-PORTAL

Bucknam's MyRoads® is a great match for the Glendora's PMP today and the future. **MyRoads® brings your PMP data to life within a dynamic dashboard!** Bucknam now provides all our PMP clients with a unique and agency driven "MyRoads®" web-portal that provides instantaneous access to your pavement management database.

This "dashboard" allows users to toggle through individual sections via GIS mapping selections, zone queries, rank selection, PCI ranges, etc. to review all section metrics, latest/previous inspections, work histories generate filtered PCI reports and identify potential maintenance / rehabilitation costs based upon your unique needs.

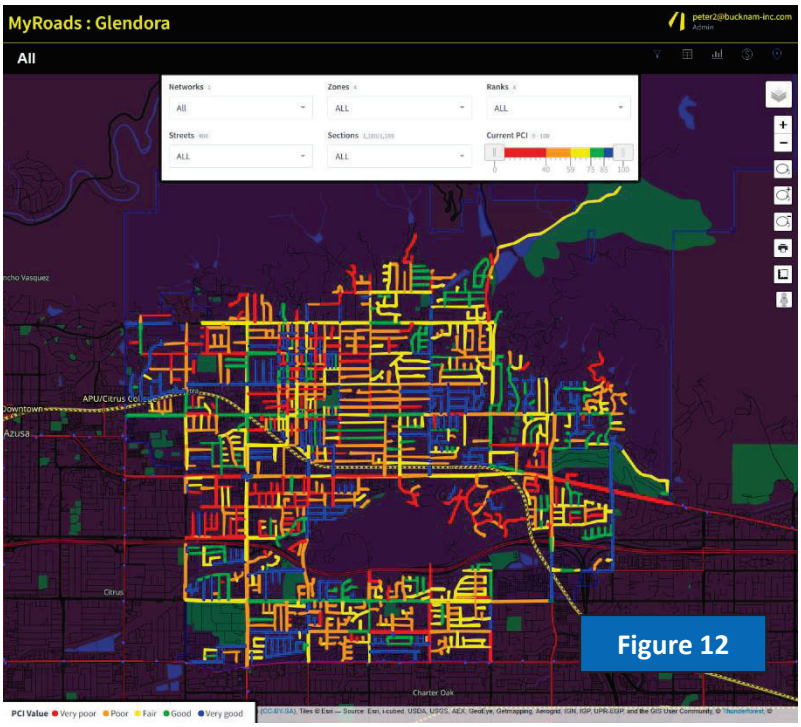

Figure 12

<u>Bucknam has shown above the current Glendora MyRoads® account actively working!</u> This tool will be accessed by City staff simply through a Username/Password methodology. As changes are made to the Glendora PMP database the MyRoads® dataset is changed to reflect work history edits, PCI inspections and section changes.

In summary, MyRoads® allows the user perform the following dynamic functions:

- Query specific pavement segment(s) to view current/historic PCI, work history inspection;
- Filter for pavement sections within a defined zone, PCI range and/or functional class;
- Select a pavement section or grouping of section through the on-board GIS tool;
- Enter slurry, overlay & reconstruction unit costs to determine preliminary cost of maintenance and resulting citywide PCI
    - Display critical street / sidewalk / ROW assets along pavement section(s) that are critical to Engineering Bid development and solicitation (ADA ramps, utilities, trees, etc.
- Displays all final GIS project maps (PCI, work history, 5-yr forecasted maintenance, etc.)

SECTION III

CITYWIDE
PAVEMENT CONDITION INDEX (PCI) REPORT

A. PCI Report – Data Definitions
B. 2025 Glendora PCI Map
C. Name Order (A-Z)
D. PCI Order (0-100)

PAVEMENT CONDITION INDEX REPORT – DATA DEFINITIONS

Listed alphabetically by street name or PCI, this report provides the City with a listing of pertinent inventory and pavement condition data for each inventory unit within the City's pavement network. The Pavement Condition Index (PCI) Report notes the names, limits, classification, dimension, surface type, and lane configuration of each inventory unit.

Detailed descriptions of the information appearing on this report are presented below:

BRANCH NAME - The name of each inventory unit appears in this column. Generally, the inventory unit name is taken directly from a street sign; however, where no street signs are posted, the name appearing on the network map is noted instead.

A sample set of street name suffix abbreviation definitions is presented below:

AVE -	Avenue	CT -	Court	CIR -	Circle
DR -	Drive	LN -	Lane	RD -	Road
ST -	Street	WY -	Way	EB -	East Bound
NB -	North Bound	SB -	South Bound	WB -	West Bound
TER -	Terrace	PL -	Place		

FROM - A description of the beginning limit of each inventory unit appears in this column. If the beginning limit exists between intersections, then the beginning limit description may be an address, post mile marker, or a distance from a known point of reference (e.g., "500' N/MAIN ST").

TO - A description of the ending limit of each inventory unit appears in this column. Like BEGIN limit, the END limit description may consist of a street name, an address, or a distance from a known point of reference. In the case of cul-de-sacs, or dead-ends, the END limit consists of and address, or a directional reference, such as "NORTH END," when no address is available.

STREET CLASSIFICATION - The codes for four street classifications are represented below. Basically, units are classified according the LA County MPAH and City classifications.

CODE	DESCRIPTION
A	Primary Arterial
C	Collector / Secondary
R	Local
O	Alley

SURFACE TYPE - A code was assigned to each inventory unit to describe surface type.

CODE	DESCRIPTION
AC	Asphalt Concrete
PCC	Concrete

LENGTH - The length of the section within each branch.

UNITS - The unit of measurement for the section length, typically linear feet (LF).

AREA - The area of each section within a branch.

UNITS - The unit of measurement for the section area, typically square feet (SF).

PCI - Pavement Condition Indices were calculated for inventory units based on severity and extent of distress manifestations observed within the inventory unit. Ranging between 0 and 100, a PCI of "100" corresponds to a pavement at the beginning of its life cycle, while a PCI of "0" corresponds to a badly deteriorated pavement which is at or near the end of its life cycle.

PCI CLIMATE, LOAD AND OTHER – reflects "Section Extrapolated Distress"; these values are shown within the Sample Distresses tab within the PCI window. Distresses are aggregated based on the type and severity level. For random samples, distress quantities are adjusted to reflect the extrapolated value based on the sections total area. Extrapolated distress deducts are classified as resulting from Climate, Load and Other distresses. The Distress Classification portion of the tab shows the "percent" of extrapolated distress deduct belonging to Climate, Load and Other (these %'s are shown within the PCI reports herein). These values are beneficial in that they support the decision whether recommend slurry seal, overlay or reconstruction project for street sections.

Asphalt Distresses	Cause Classification	PCC Distresses	Cause Classification
Alligator cracking	Load	Blow up	Climate
Bleeding	Other	Corner break	Load
Block cracking	Climate	Divided Slab	Load
Bumps/Sags	Other	Durability cracking	Climate
Corrugation	Other	Faulting	Other
Depression	Other	Joint Seal cracking	Climate
Edge cracking	Load	Lane Shoulder Drop-off	Climate
Joint Reflection cracking	Climate	Linear cracking	Load
Lane Shoulder Drop-off	Climate	Small Patching	Other
L&T cracking	Climate	Large Patching	Other
Patch/Utility cut	Other	Polished Agg	Load
Polished Agg	Other	Popouts	Other
Pothole	Climate	Pumping	Other
RR Crossing	Other	Punchout	Load
Rutting	Load	RR Crossing	Other
Shoving	Other	Scaling/crazing	Other
Slippage cracking	Other	Shrinkage cracking	Other
Swell	Other	Corner Spall	Other
Raveling	Other	Joint Spall	Other
Weathering	Climate		

INSPECTION DATE – Represents the most recent inspection date performed on a given sections. PCI shown is historical in value and may not indicate what "today's" PCI is due to variance in time. Pavement deterioration calculations can be performed on a section(s) to demonstrate a deteriorated PCI based upon a new current date.

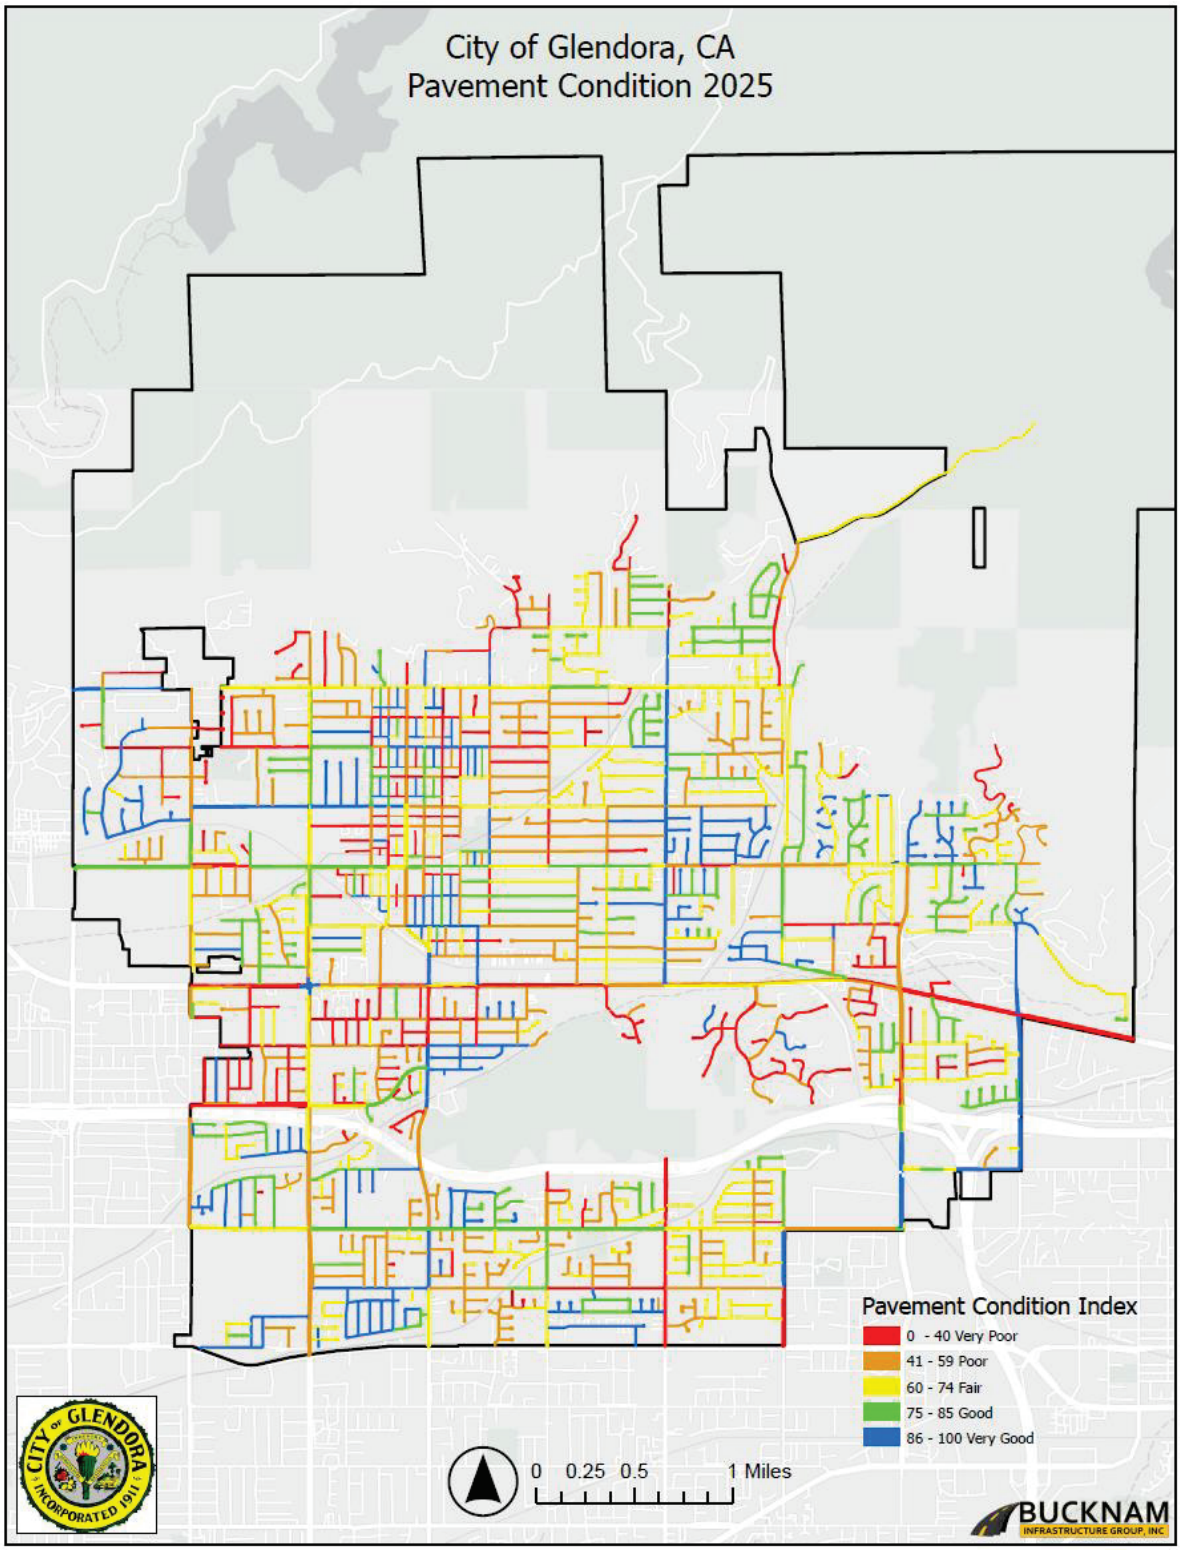

Figure 13 – Glendora Pavement Condition Index (PCI) 2025 Map

SECTION IV
FORECAST MAINTENANCE / REHABILITATION (FMR) REPORT

A. Reach PCI 67 Budget, Five Year Plan (FY 2025-2030)

FORECAST MAINTENANCE / REHABILITATION (FMR) REPORT

Section by section street listing sorted by rank classification, plan year, then alphabetically; this report presents the year and action corresponding to the next scheduled work activity for specific segments within the pavement network. Sections not shown are considered as deferred maintenance.

REACH PCI 67 BUDGET (5-YR) – The Reach PCI 67 budget was generated for the City to demonstrate what level of annual funding is required to achieve a PCI of 67 within three (3) years and to sustain it through five (5) years (FY 2025-2030).

The annual projected revenues shown below only account for the cost of pavement maintenance/rehabilitation activities. A 25% contingency was applied to the Arterial/Collector and Local pavement costs. Additional soft costs not included within the cost of pavement maintenance include:

- Right-of-way; and
- Utility improvements

In general sections are chosen first and foremost on available budget; secondly, the square footage of each section plays a large factor. The software initially chooses the draft sections that will increase PCI, sustain PCI or slow PCI deterioration within the budgeted timeframe. Additionally, the types of distress, extents of distress and severities of distress (high, medium, low) also determine how sections are/can be selected.

The City of Glendora makes all final decisions on what pavement sections are scheduled for improvement and within which fiscal year.

2025 UPDATED PAVEMENT MANAGEMENT PROGRAM (PMP)

PUBLIC WORKS
GLENDORA CITY COUNCIL
DECEMBER 9, 2025

VALERIE VELASQUEZ-SANTOYA, ASSISTANT PUBLIC WORKS DIRECTOR

PAVEMENT MANAGEMENT PLAN

City of Glendora 2025 – 2027 Goals and Action Plan

- Goal 4: Sustainable Infrastructure
  - Action 4.1 Complete Pavement Management Program (PMP)

2025 Community Survey

- How can the City make Glendora a better place?:
  - Improving Streets, roads and related infrastructure.

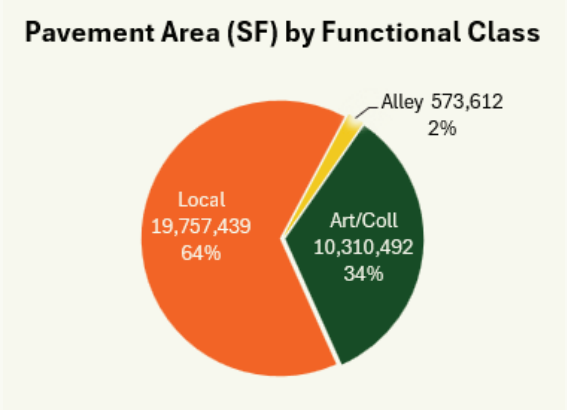
PMP Update

- PMP Reports completed in 2020 and 2015
- 2025 PMP Update included in the FY 2024/25 Adopted Budget

Agreement Awarded to Bucknam Infrastructure Group

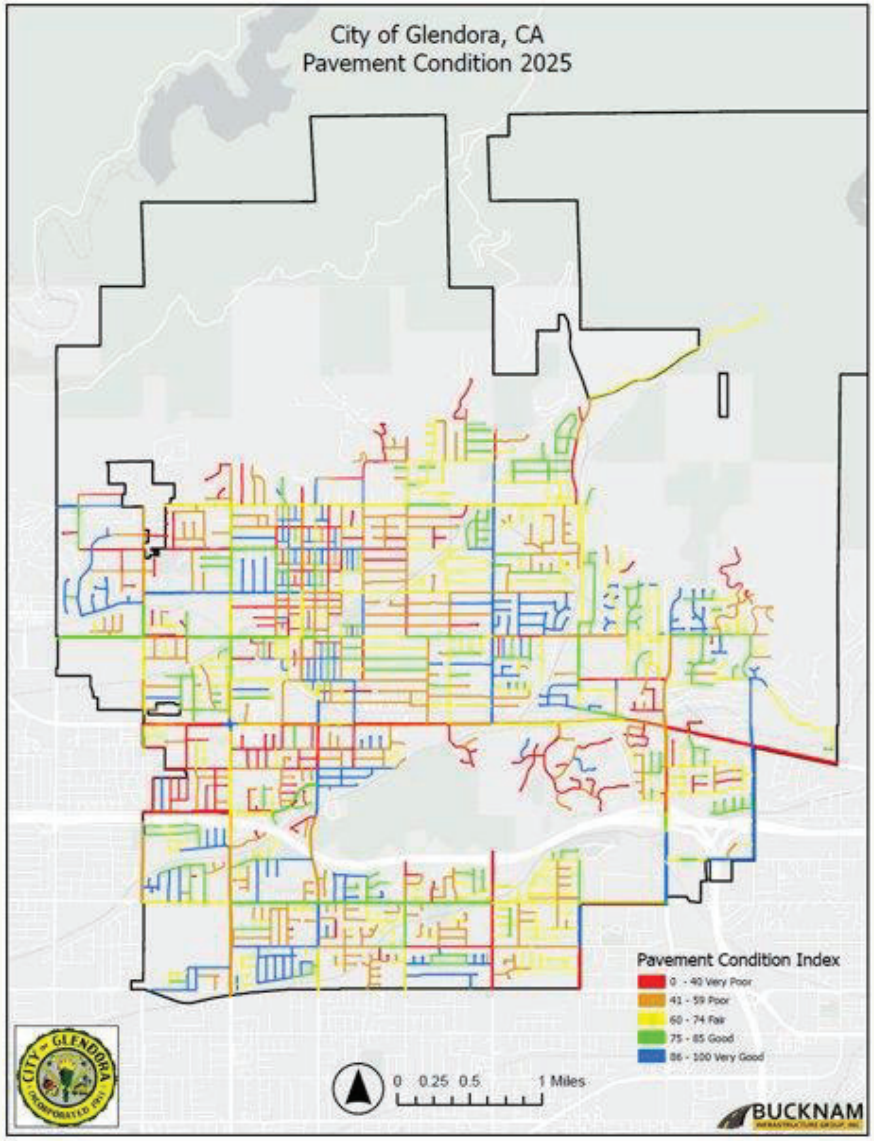
- Prepared the 2020 PMP.

Purpose



- Identify pavement conditions, maintenance needs & funding strategies
- Support strategic, data-based decision making for CIP selection.

OVERVIEW

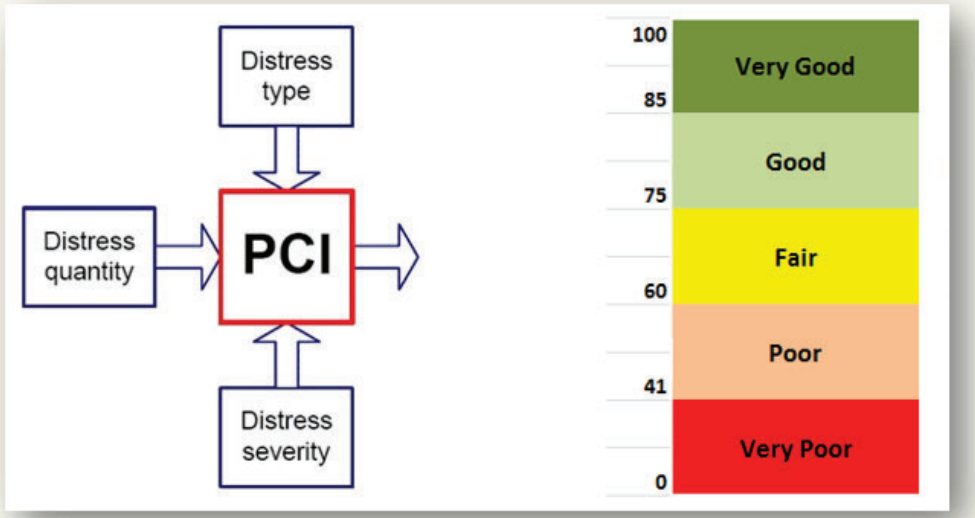


- **Glendora Street Network**
- **How the PMP is Updated**
- **Pavement Condition Survey Results**
- **Funding Scenario Assessments**
- **Findings & Recommendations**
- **Next Steps**

GLENDORA STREET NETWORK

Type	Miles		Square Feet	
Local / Residential	112.2	69%	19,757,439	64%
Arterial / Collector	45.0	28%	10,310,492	34%
Alleys	6.2	4%	573,612	2%
Totals	**163.4**		**30,641,543**	

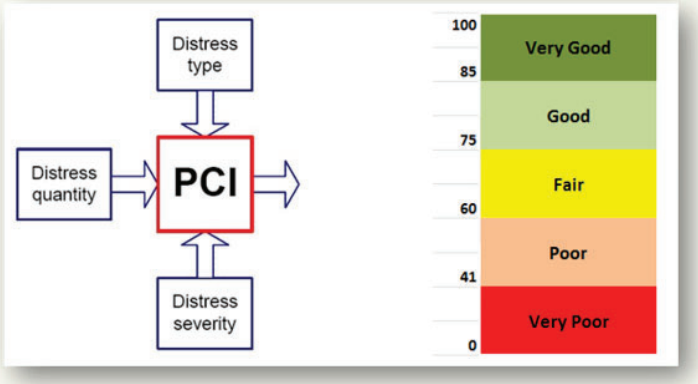
Asset Reconstruction Value = $439.1 Million



HOW THE PAVEMENT MANAGEMENT PROGRAM IS UPDATED

- **Assessment of Existing Pavement Network (segmentation review)**
- **Update of Work Histories**
- **Condition Survey (USACE walking field inspections)**
- **Develop Rehabilitation Strategies / Life-Cycle Analysis**
- **Forecast Future Pavement Preventive / Rehabilitation Costs**
- **Develop 5 & 7 –Year Plans based on Available Budget and Desired Goals**

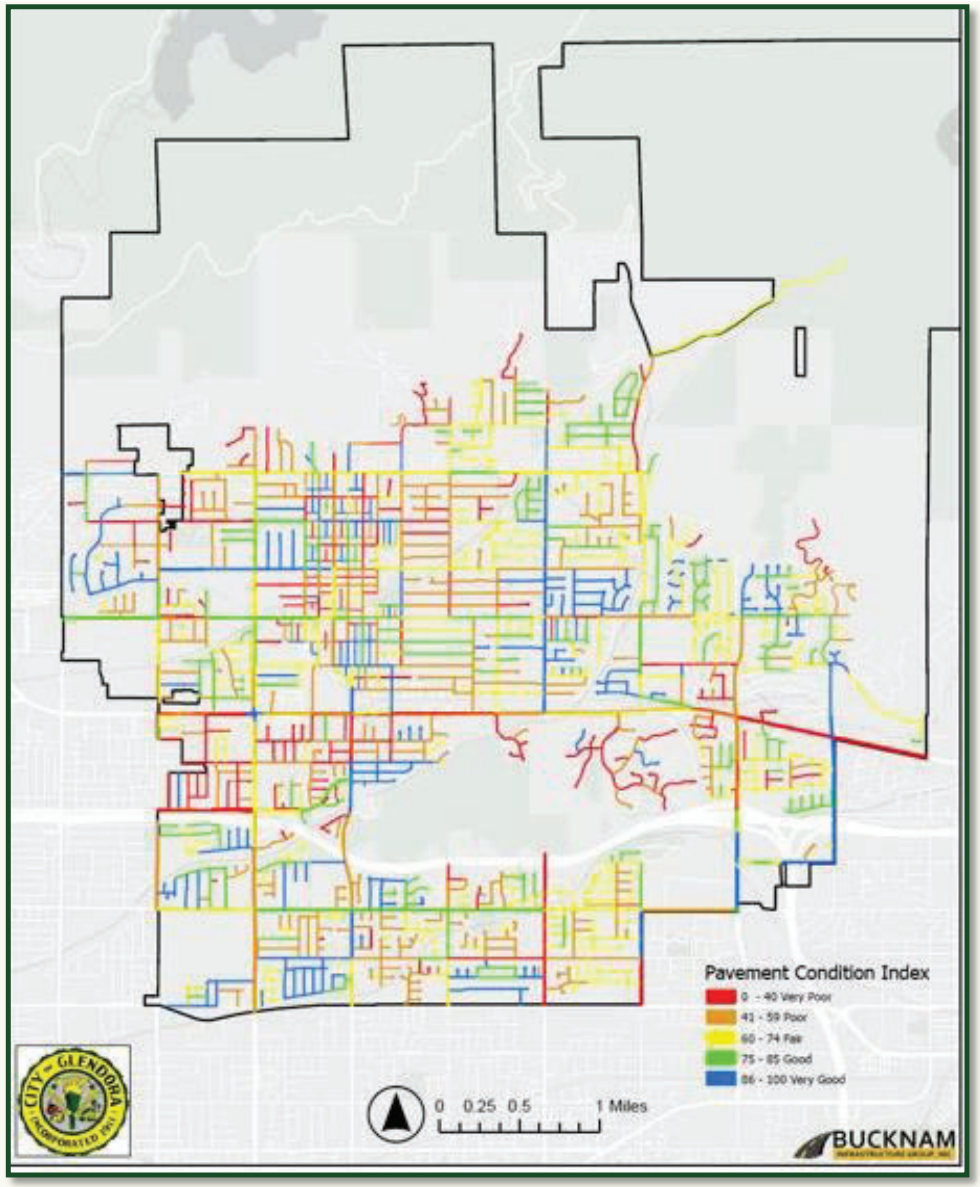
GENERATING PAVEMENT CONDITION INDEX (PCI)



- **Walking Condition Surveys completed June 2025**
- **True Area Calculations were performed to improve PCI accuracy and financial estimates**
- **Quality Control: Re-survey 10% of segments**
- **Results generated a PCI for each road segment**
- **PCI is a condition rating from 0 to 100**

PAVEMENT CONDITION INDEX (PCI) RESULTS

Glendora PCI



- **2025: 63.2**
- 2020: 65.4
- 2018: 59.0
- 2015: 62.5

Sustained PCI condition level of "Fair"

Condition Distribution by Section Mileage for all Streets.

Condition	PCI Range	Art / Coll	% of Art / Coll	Local	% of Locals	Alleys	% of Alleys	Total	% of Network
Very Good	86-100	6.7	15%	17.6	16%	2.3	37%	26.6	16%
Good	75-85	6.9	15%	18.4	16%	0.6	10%	25.9	16%
Fair	60-74	11.5	26%	24.7	22%	0.4	6%	36.6	22%

CITY OF GLENDORA
BUCKNAM

PCI COMPARISON

Glendora compared to other LA County cities:

Neighboring City PCI's (Citywide 2024 & 2025 PMP's)			
Alhambra	76.0	Duarte	77.3
South Gate	55.5	Monterey Park	65.7
Lynwood	71.6	Covina	73.4
South Pasadena	63.8	Commerce	65.5
El Segundo	80.3	Compton	58.0
Sierra Madre	76.5	Gardena	81.2

Weighted LA County PCI: 66
CA State-wide PCI: 65

2025 PCI of 63.2 places Glendora in the "Fair" range, Similar to Statewide and Countywide averages.

MAINTENANCE & REHABILITATION STRATEGIES

Global Maintenance	**PCI Range**
▪ General Repairs	
▪ Crack Sealing, Patching:	20 – 95
▪ Slurry Seals:	65 – 85
▪ Cape Seals:	40 – 65

Major Rehabilitation	**PCI Range**
▪ Overlays:	20 to 65
▪ AC Reconstruction:	0 to 20

Minimum Level of Service = 65

This value will trigger decisions between preventative maintenance vs. rehabilitation

FUNDING SCENARIOS EVALUATED

Forecasted Pavement Condition based on four (4) Funding Scenarios:

Program	PCI Target	# of Years	Average Annual Investment	Total Program Investment
Maintain 63 PCI	63	5	$5.58 M	$27,916,500
Reach PCI 65	65	5	$6.48 M	$32,406,800
Reach PCI 67	67	5	$8.38M	$41,902,200
Reach PCI 70	70	7	$8.42M	$58,946,700

Funding scenarios took into consideration the following:

- Long Term Goals
- Alternative Pavement Applications
- Maintaining “preventative maintenance” condition
- Deferred maintenance/backlog balance

FUNDING SCENARIO: REACH PCI 67

Plan Year	PCI	Slurry Seal	Overlay	Funds ($)	Deferred Maint.
2025 PMP	63.2				$46,785,500
2025 - 2026	65.0	$353,900	$8,077,900	$8,431,800	$45,981,800
2026 – 2027	66.0	$1,498,000	$6,712,800	$8,210,800	$37,202,800
2027 – 2028	67.0	$1,250,400	$7,123,400	$8,373,800	$41,467,500
2028 – 2029	67.0	$797,500	$7,602,800	$8,400,300	$51,084,600
2029 - 2030	67.0	$522,100	$7,963,400	$8,485,500	$71,951,900
		$4,421,900	$37,480,300	**$41,902,200**	

- Five Year (5) Program: FY 2026 – FY 2030
- $8.38 Million Annually
- $41.9 Million Five Year Total

FUNDING SCENARIO: REACH PCI 70

Plan Year	PCI	Slurry Seal	Overlay	Funds ($)	Deferred Maint.
2025 PMP	63.2				$46,785,500
2025 - 2026	65.0	$353,900	$8,077,900	$8,431,800	$45,981,800
2026 – 2027	66.0	$1,498,000	$6,712,800	$8,210,800	$37,202,800
2027 – 2028	67.0	$1,250,400	$7,123,400	$8,373,800	$41,467,500
2028 - 2029	68.0	$951,400	$7,981,800	$8,933,200	$47,761,500
2029 - 2030	70.0	$859,700	$8,451,100	$9,310,800	$56,642,600
2030 – 2031	70.0	$678,600	$7,134,500	$7,813,100	$61,353,900
2031 - 2032	70.0	$651,000	$7,222,200	$7,873,200	$62,987,600
		$6,243,000	$52,703,700	**$58,946,700**	

- Seven (7) Year Program: FY 2026 – FY 2032
- $8.42 Million Annually
- $58.9 Million Seven Year Total

FUNDING GAP

Funding Gap Summary "Reach 67"			
Fiscal Year	5 Year CIP & Staff Budgeted Amount*	Funds Needed to Reach PCI 67	Additional Amount Required to Reach PCI 67
FY 2026**	$9,446,814	$8,431,800	($1,015,014)
FY 2027	$5,554,872	$8,210,800	$2,655,928
FY 2028	$7,967,482	$8,373,800	($406,318)
FY 2029	$1,944,755	$8,400,300	$6,455,545

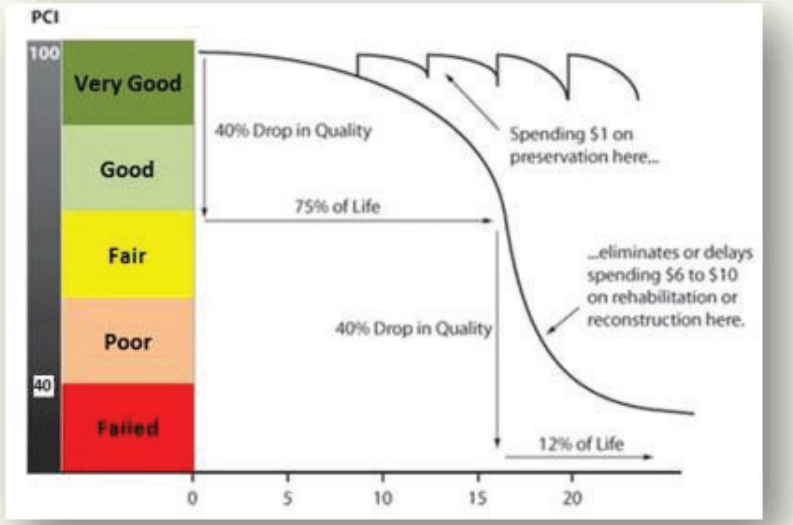
*** Estimated

Voter-approved Measures E(FY2019) and Z(FY2025) have strengthened overall City finances, contributing to essential City services, capital improvements, and staffing. Measures E & Z may be considered as potential supplemental sources for future street improvements.

Glendora



FUNDING GAP

- Maintaining an annual investment near $8.4M allows the City to improve PCI, slow deterioration, and reduce long-term costs.
- Current pavement funding averages $5.4M/year, creating an annual $3M shortfall compared to what is needed to reach PCI 67–70.
- Investing at the higher level now is fiscally prudent—early maintenance avoids the exponentially higher costs of deferred repairs.
- Planning for consistent $8.4M/year through FY 2031–32 positions the City to reach target PCI goals and preserve its $439M pavement network

WHY TIMELY MAINTENANCE MATTERS

- Pavement naturally deteriorates over time - maintenance timing is critical.
- Preventative treatments applied early dramatically extend pavement life.
- Streets in “good” condition are often treated first because they provide the best return on investment.
- Waiting until pavement becomes “poor” or “failed” requires expensive reconstruction.
- Every $1 Spent on early preservation avoids $6 - $10 in costly rehabilitation later.
- Strategic, timely maintenance helps preserve the overall condition of the City’s network.

"Good streets are cheapest to preserve and provide the highest ROI."

KEY FINDINGS

- **Current weighted PCI: 63.2, maintained an overall “Fair” network**
- **32% of streets are in “Good” to “Very Good” condition**
  - Long-term goal: increase "Good to Very Good" condition to 50% of the system
- **53% of the network (86.6 miles) now requires overlay or reconstruction**
- **Network stability is largely due to recent arterial investments**
- **Majority of local streets show increasing need for rehabilitation as they age**

RECOMMENDATIONS

- **Establish a Citywide Goal of Achieving PCI 67 within the next 5 years**
- **Recommend Average Annual PMP Funding of $8.4M**
- **Use Balanced Approach to Repairing Roads in the Lower / Mid PCI tiers**
- **Reassess PMP budget projections every two years**
- **Perform Citywide pavement inspections every three years**
- **Evaluate alternative pavement applications to extend pavement life and maximize dollars.**
- **Continue leveraging water and street project coordination to maximize dollars.**

SUMMARY

- **City's pavement network maintains a "Fair" PCI**
  - 2025 PCI of 63.2 a slight change from 65.4 in 2020
- **Long-term trend shows improvement:**
  - PCI was 62.5 (2015) and 59 (2018), before recent investments.
- **Earlier assessments (2015 & 2018) did not include alleys.**
  - Inclusion of alleys would have slightly lowered those PCI scores
- **Maintaining stability requires significant ongoing investment;**
  - Without recent work, PCI would have declined into "Poor" range
- **Upcoming Water and Street Improvement Projects (Colorado, Cypress, Glendora, Lone Hill) will address nearly 1,000,000 sq. ft. of pavement, Significantly Strengthening Future PCI.**

Glendora

NEXT STEPS

- **Continued investment at $8.4M annually is required to move from “Fair” to “Good”**
- **Updated PMP provides a data-driven framework for prioritizing maintenance and rehabilitation**
- **Next Steps:**
  - Align PMP recommendations with the Water Master Plan
  - Coordinate both plans with the City’s 5-Year CIP
  - Identify timing opportunities where water + street projects can be combined for greater efficiency
  - Return to Council with funding recommendations consistent with the target PCI goals

Glendora

RECOMMENDATION:

THAT THE CITY COUNCIL:

1. Receive and file the 2025 Pavement Management Program Update prepared by Bucknam Infrastructure Group, Inc.

STAFF REPORT

TO:	**Mayor and Council Members**	**DATE:**	**January 13, 2026**
FROM:	**City Manager**	**DISTRICT(S):**	**Citywide**
SUBJECT:	**City Council Update on Civic Center Revitalization and City Council Direction on Funding Methodology**		

RECOMMENDATION

That the City Council:

1. Receive a report on updated Civic Center renderings, cost estimates, and funding scenarios; and
2. Provide direction to staff in accordance with the 2025-2027 Strategic Plan New+Revitalized Facilities Goal relating to the Civic Center.

STRATEGIC FOCUS AREAS

Goal 3 - New + Revitalized Facilities

- Action 3.1 City Council Directs funding Methodology
- Action 3.3 Complete Space Planning Assessment
- Action 3.4 Determine if New or Remodel

EXECUTIVE SUMMARY

Over the past five years, Glendora has invested more than $60 million in parks, streets, and water infrastructure. Despite these efforts, many core facilities—including the Library, Police Station, Teen Center, Senior Center, City Hall, Transportation Center, and Public Works Yard—require modernization. Deferred maintenance is estimated at $50 million, with more than $250 million needed to create modern, accessible workspaces for staff and community spaces for the public in all City facilities.

In March 2025, the City Council directed staff to obtain cost estimates for a dedicated Civic Center project. The DLR Group has since provided renderings and rough order of magnitude (ROM) construction estimates of approximately $125 million. In September 2025, the City Council provided additional input and direction on the proposed Civic Center project.

Staff have worked with the DLR Group on revised renderings based on City Council feedback. Staff is seeking City Council approval of the Civic Center conceptual drawings and direction on funding scenarios. As stated in the City Council's September staff report, “This concept serves as a starting point for community conversation, giving residents and stakeholders a shared framework to react to, discuss, and shape.”

LEGISLATIVE HISTORY / PREVIOUS ACTIONS

Over the past three years, many public meetings and discussions have been held on various City facility needs by the City Council, Board of Library Trustees, Community Services Commission, and Planning Commission. The items noted in this section are highlights of the ongoing community dialogue on City facility needs.

On January 10, 2023, the City Council awarded a contract to Myers Houghton and Partners, Inc. (MHP) to perform in-depth structural analysis and evaluation of the Library's suitability for major renovations and initial visioning activities.

On September 12, 2023, the City Council received an update on the results of the comprehensive water system assessment, including information on future water rates. The water assessment identified more than $350 million in projects needed over the next 30 years, with $30 million being programmed for completion over the first five years.

On January 9, 2024, the City Council held a discussion on the MHP Library assessment/visioning analysis and discussed funding options. Following the discussion, the City Council directed staff to complete an overall condition analysis of major City facilities and undertake a community survey soliciting public input on a possible revenue measure.

On January 30, 2024, the City Council approved a Master Joint Use Agreement with the Glendora Unified School District (GUSD). While the agreement largely stipulates use of existing facilities and services provided by the City, the agreement does provide for better maintenance of GUSD Facilities and outlines a partnership methodology for joint capital upgrades (i.e., Glendora High School Aquatics Center).

On August 27, 2024, the City Council was provided the results of a community survey on a potential Citywide and/or Library specific revenue measure. The survey, completed by True North Research, documented initial support for a Citywide facility measure (53%) as opposed to Library specific bond measure (45%). Additionally, the survey highlighted the two highest quality of life improvements in the City as improving infrastructure/roads (17.8%) and addressing homelessness (17.2%).

On November 5, 2024, the Statewide ballot measure – ACA 5 – ballot failed (55% no). The State measure would have lowered the threshold for issuing facility bonds for cities and related local agencies, from 66.6% (2/3) to 55% (same as schools).

On November 12, 2024, the City Council approved an agreement with IDS Group, Inc. for Architectural, Engineering and Consultant Services for the City Corporate Yard Improvement Project in an amount not to exceed $725,581. The City will need to identify an estimated $13-15 million for the construction portion of the project, which will rehabilitate existing space and add a new building to increase the usable space by 10,000 square feet.

On February 25, 2025, the City Council received the FY 2024-25 Mid-Year Budget Update that documented approximately $50 million in current facility needs (e.g., new roofs, HVAC, etc.) that would largely keep City facilities as is. To significantly improve the City's facilities to a modern standard and better meet current and future operational needs, the estimated costs would total more than $250 million.

On March 11, 2025, the City Council was provided with a comprehensive report on City facility capital needs, deferred maintenance, cost increases in capital projects, and funding options. As part of the discussion, the City Council directed staff to return with more specific needs and cost estimates for the civic center, which includes, the Library, Police Department, City Hall, and parking.

On April 22, 2025, the City Council unanimously approved the 2025-2027 Strategic Plan. The plan included specific action items for the Civic Center under the New+Revitalized Facilities Goal, and specifically the following action items:

- Action 3.1: Direct the funding methodology for a new or revitalized Civic Center
- Action 3.3: Complete a space-planning assessment in coordination with a citywide facilities assessment; and
- Action 3.4: Determine whether the Civic Center should be remodeled or newly constructed.

On June 24, 2025, the City Council was provided with an update on the capital needs and deferred maintenance of City facilities. Further, the City Council was provided with information on revenue measures, historical land use decisions, and a detailed look at recent infrastructure investments in Glendora.

On September 9, 2025, the City Council reviewed Civic Center renderings and cost estimates. An amendment to the DLR Group Contract agreement to implement the direction form the City Council at that meeting was approved at the December 9, 2025 City Council meeting.

DISCUSSION

The City of Glendora remains committed to enhancing quality of life through strategic investment in core infrastructure. Recent strategic plans have consistently prioritized parks, trails, streets, sidewalks, water systems, and civic facilities. The City's community surveys continue to identify infrastructure and homelessness among the City's most pressing challenges. Over the past five years, the City has invested more than $60 million in capital improvements, including major park renovations, facility upgrades, and significant street and water system improvements.

Despite these investments, decades of under-investment have resulted in approximately $50 million in deferred maintenance and more than $250 million in modernization needs to bring all City facilities up to current accessibility, safety, and operational standards. Addressing these needs remains challenging, as State and Federal funding support has declined and local revenue capacity is constrained by Proposition 13 and related fiscal limitations.

Attached to this agenda item are three previous agenda items referenced in the Legislative History / Previous Actions Section of this staff report. Including these items as attachments will provide the reader with a detailed overview of previous discussions on:

1. City Facilities, Capital Needs and Funding Options (March 11, 2025) (Attachment A)
2. City Facilities Capital Needs Update, and Funding Options (June 24, 2025) (Attachment B)
3. Initial Civic Center Renderings and Rough Order of Magnitude Costs (September 9, 2025) (Attachment C)

Library Structural Assessment and Visioning

In January 2024, the Myers Houghton and Partners (MHP) Library Structural Assessment and Visioning Study provided the City Council and community with the first comprehensive, facility-specific evaluation of the Library in decades. The assessment identified significant structural and seismic deficiencies, aging mechanical, electrical, and plumbing systems, and building envelope limitations that materially affect the Library's long-term viability (Attachment A). While certain issues can be addressed through short-term maintenance or targeted repairs, the assessment concluded that many core deficiencies are systemic and cannot be fully resolved without substantial reinvestment. A copy of the Library Presentation is included in Attachment A.

In addition to physical deficiencies, the study documented functional constraints that limit the Library's ability to meet modern service expectations. These include inadequate space for youth and teen programming, limited areas for group study and community meetings, insufficient technology and digital learning spaces, and accessibility challenges for seniors and persons with disabilities. City Council and Library Board discussions emphasized that the Library is no longer simply a book repository, but a central community hub supporting education, workforce development, digital access, and civic engagement.

Importantly, the Library assessment served as a catalyst for broader conversations about City facilities. The City Council recognized that investing in one major facility in isolation would not address parallel challenges facing the City Hall, Police facilities, community centers, and public works yards, and could further complicate future funding strategies. The City Council discussed preliminary funding options and emphasized the importance of aligning any future investment with community priorities and fiscal capacity during its meeting held on January 9, 2024. At that meeting, the City Council directed staff to undertake a community survey soliciting public input on a possible revenue measure.

Facility Measure Community Survey

In August 2024, the City Council received results of a statistically valid community survey conducted by True North Research to assess resident priorities and potential support for facility funding options. The survey confirmed that residents place a high value on infrastructure investment and quality-of-life improvements. Initial results showed majority support for a citywide facilities measure (53%), though below the two-thirds threshold required for a City-sponsored bond, and comparatively lower support for a Library-only measure (45%). The survey results reinforced the need for continued public education, transparency, and careful consideration of funding approaches. A copy of the City Council presentation is included in Attachment A

Comprehensive Update on City Facilities, Capital Costs, and Funding Options

In March and June 2025, the City Council was provided with two comprehensive updates on the City's current facility needs, escalation of capital project costs, historical funding challenges and revenue measure options (Attachments A and B).

Both the 2023–2025 Strategic Plan and 2025–2027 Strategic Plan call for substantial allocation of City resources toward parks, trails, streets, sidewalks, water systems, and public facilities; community feedback consistently reinforces this focus.

California cities, including Glendora, are confronting a convergence of infrastructure challenges rooted in post–World War II suburban development, decades of deferred maintenance, and structural funding constraints. Large portions of Glendora's roads, water systems, and public facilities were constructed between the 1950s and 1970s and are now reaching the end of their useful lives simultaneously. These sprawling development patterns created high infrastructure costs per capita without sustainable revenue streams (e.g., development fees for roads/streets), leaving cities vulnerable as growth slowed and assets aged.

Glendora's largely suburban land-use pattern, with over 90% single-family residential and limited commercial acreage, compounds these challenges. While zoning reforms and state-mandated housing policies are pushing cities toward mixed-use and higher-density development, the City is balancing these changes with quality-of-life priorities through updated planning efforts, including the Housing Element and General Plan Update. At the same time, aging infrastructure remains a critical issue, with the City's water system alone requiring an estimated $350 million over the next 30 years, and City facilities facing roughly $50 million in deferred maintenance and more than $250 million in modernization needs.

Despite these pressures, Glendora has made significant recent investments. Voter approval of Measures E and Z, combined with aggressive pursuit of grant funding had strategic use of limited capital funds, has enabled over $60 million in capital improvements since 2020 and the programming of more than $108 million in future projects, subject to funding availability. However, construction and material costs have risen dramatically, often doubling since 2019. In short, even substantial and necessary investments now deliver less infrastructure value than in prior decades. These escalating costs continue to widen the gap between identified needs and available resources.

Revenue limitations under Proposition 13 remain a fundamental barrier to long-term infrastructure sustainability. Property tax constraints, supermajority voter requirements for city-initiated taxes and bonds, and the absence of robust local funding tools limit Glendora's ability to address infrastructure needs at scale. While citizen-initiated revenue measures offer a more achievable approval threshold, the overall fiscal environment remains challenging. Without new, sustainable funding strategies, infrastructure deterioration will continue to impact public safety, service delivery, and the community's long-term economic vitality.

In addition to requesting a financial analysis of bond/debt costs for facility improvements, the City Council directed staff to return with a potential scope, cost, and design considerations associated with a comprehensive Civic Center project.

Updated Civic Center Conceptual Renderings

Public Works Department staff engaged the DLR Group to prepare high-level conceptual renderings and corresponding rough order of magnitude (ROM) cost estimates addressing the Library, Police Department, City Hall, Council Chambers, and parking within the existing Civic Center campus pursuant to City Council direction.

Over several months, City staff worked closely with the DLR Group to evaluate existing conditions, previous facility studies, and explore conceptual approaches. More specifically, this work included review of as-built drawings, site visits, space needs assessments, incorporation of prior Library structural analysis and visioning work, and evaluation of site constraints, including grade changes across the campus. Broader urban design considerations were also discussed, such as how the Civic Center might better relate to Glendora Avenue, planned First/Last Mile improvements, and long-term connectivity between the Glendora Village and the Metro A Line station.

As part of its work, the DLR Group prepared a rough order of magnitude (ROM) cost estimate for the conceptual project (Attachment C). The estimate places total construction cost at approximately $125 million. This figure accounts for premiums related to phasing and occupancy, as well as escalation costs to the anticipated midpoint of construction in 2028. It is important to note that this is a preliminary ("high-level") estimate intended to provide a sense of scale for the project. Actual project costs will continue to be refined based on future community feedback received and market conditions.

Following review of the initial draft renderings in September 2025, the City Council provided direction emphasizing that the materials be understood as strictly conceptual and exploratory in nature, intended to frame discussion rather than represent a final design, scope, or commitment. City Council feedback focused on the need to more clearly communicate assumptions, acknowledge cost uncertainty at this early stage, and ensure that any future refinement prioritizes fiscal responsibility, phased implementation options, and alignment with community values.

The City Council also emphasized that the architectural inspiration drawn from the historic 1921 City Hall should be treated as a reference point rather than a prescribed design direction, and that flexibility, adaptability, and long-term functionality remain central goals. Similarly, while public space and place-making elements were recognized as important to the Civic Center's role in the community, the City Council underscored the importance of balancing those features with core service delivery, operational efficiency, and affordability.

The updated conceptual drawings (Attachment E) for City Council consideration include the following:

- Building color and materials were changed to better compliment (but not replicate) City Hall;
- Elements of the building's windows were changed (i.e., size, shape, and number) to better compliment City Hall;
- Renderings of the surrounding areas were updated to better illustrate the scale of the conceptual structure in relation to the existing physical built environment;
- New perspectives were included to show entrance to plaza and facilities from Glendora Avenue;

- “Block and Stack” diagrams were prepared to generally identify “what goes where” interior to the conceptual improvements (the illustrated program for the Library reflects the space needs identified in the visioning component of the MHP work); and
- Additional refinements intended to improve the design and functionality of the conceptual improvements.

This staff report provides an additional opportunity for the City Council to determine how best to proceed. The City Council will need to determine whether additional refinement of the conceptual approach is needed, if additional analysis of alternatives or phasing is needed, and the framework for expanded public outreach and feedback.

Potential Citizen Initiative

On December 11, 2025, the City received a Notice of Intent to Circulate a Petition for a parcel tax to fund the construction, repair, rehabilitation, and improvement of City facilities. The proponents have identified a targeted election date of November 2026 (Attachment E).

The draft initiative proposes to implement an ordinance that would authorize a special parcel tax applied to developed and vacant parcels within the City based on square footage, with variable rates based on property type. Revenues would be restricted to capital improvements for City-owned facilities, with accountability measures including independent audits, annual public reporting, and a citizen oversight committee. Staff estimates the measure could generate between $8 million and $9 million annually, depending on final levy rates and exemptions.

As required by State law, the City Attorney prepared and submitted a ballot title and summary on December 22, 2025. In order to qualify for the ballot, the authorized proponents have 180 days from the issuance of the ballot title and summary to gather the required number of signatures, which is estimated to be approximately 3,700 registered voters in Glendora.

As previously outlined to the City Council in guidance from the City Attorney, if the initiative qualifies for the ballot, the City Council may choose to adopt a formal position of support, opposition, or take no position at all.

City Council Direction

The 2025-2027 Strategic included specific action items for the Civic Center under the New+Revitalized Facilities Goal:

- Action 3.1: Direct the funding methodology for a new or revitalized Civic Center
- Action 3.3: Complete a space-planning assessment in coordination with a citywide facilities assessment; and
- Action 3.4: Determine whether the Civic Center should be remodeled or newly constructed.

City Council direction is needed on Actions 3.1 and 3.4; the City has already completed space-planning assessments and Citywide facilities assessments.

Preliminary debt service estimates for a $125 million project, is approximately $9-$10 million annually. For context, if the City were to issue debt without a revenue measure, the City Council would need to consider significant service level impacts. For reference, $9 million annually, is approximately 16% of the total expenditures for the General Fund and Measures E/Z. In terms of service levels, $9 million is approximately the total cost of operations for the Administrative Services (Finance/HR/Risk), City Manager, City Clerk, Library and Recreation/Human Services Departments. Alternatively, the Police, Public Works, and Community & Economic Development departments comprise approximately 70% of all General Fund and Measure E/Z expenditures.

The City Council has four options to consider for a funding methodology with respect to a new/revitalized Civic Center:

1. The City Council can direct staff to move forward with draft documents to place a city sponsored ballot measure on the June or November 2026 ballot.
2. The City Council can direct staff to bring back service level modifications to free up funding for a general fund revenue measure.
3. The City Council can adopt a wait and see approach as it relates to the possible citizen revenue measure and continue to encourage staff to seek other revenue opportunities (e.g. grants, earmarks, etc.).
4. Other direction or combination of options 1-3.

The City Council has already provided a level of direction on whether the Civic Center should be remodeled or be newly constructed, through the civic center conceptual rendering process. To date, the result is a hybrid approach, where certain buildings are remodeled (e.g., City Hall and Police Station), while other buildings are demolished and constructed due to current structural challenges (e.g., Council Chambers, Development Services, and the Library).

Staff requires direction based on the revised conceptual drawings. Options include:

1. Adopt the revised conceptual drawings as the baseline for future conversations with the community.
2. Provide staff with direction for additional refinements of the conceptual renderings.
3. Direct staff to take a new approach to the civic center project.
4. Other direction or a combination of options 1-3.

FISCAL IMPACT

After decades of under-investment, the City has made over $60 million in improvements in the past five years, including water projects, new streets and sidewalks, major park renovations, and facility upgrades. While these investments have greatly improved quality of life. Rising capital costs and the continued deterioration of aging facilities, such as the civic complex, public works yard, Library, City Hall, and Police Department, require the City to consider new funding strategies.

Since Proposition 13, the City has had limited financial flexibility to fund major facility projects. Over the past three years, staff have undertaken structural assessments, space planning, and community visioning to better understand facility needs. Moving forward, meaningful community engagement will be essential as leaders explore the possibility of a facility bond to replace and modernize critical infrastructure, much like City leaders did more than 50 years ago to support future generations.

While no funding source is identified at this time, the magnitude of these needs underscores the importance of identifying sustainable revenue solutions dedicated to the capital needs of the City. Any future funding strategy will require continued community engagement, careful evaluation of affordability, and alignment with the City's long-term fiscal health.

Similar to the decisions made by City leaders more than 50 years ago, current leaders may need to ask the community to fund improvements so future generations of Glendorans can experience the same quality of life enjoyed by the existing community and those that came before us.

There is no fiscal impact associated with the recommendations in this report. Based on City Council direction, staff with provide the fiscal impacts of future policy decisions.

ENVIRONMENTAL DETERMINATION

There are no CEQA impacts associated with the recommendations in this report.

STAFF REPORT

TO:	**Mayor and Council Members**	**DATE:**	**March 11, 2025**
FROM:	**City Manager**	**DISTRICT(S):**	**Citywide**

SUBJECT: City Facilities Capital Needs and Funding Options

RECOMMENDATION

That the City Council:

1. Receive a report on capital needs of City facilities and options to fund those needs; and
2. Provide direction to staff, as necessary.

STRATEGIC FOCUS AREAS

- Goal 2: Maintain Financial Stability and Sustainability (MFSS)
- Goal 5: Improve and Maintain the City's Infrastructure and Facilities (IMCIF)

EXECUTIVE SUMMARY

Over the past five years, the City has completed more than $50 million in capital projects. These projects have included significant investments in parks, streets, and water infrastructure. Despite these generational investments, significant needs exist to bring existing City facilities, including the Library, Police Station, Teen Center, Senior Center, City Hall, Transportation Center, and Public Works Maintenance Yard to modern standards.

Deferred maintenance on City facilities is currently estimated at approximately $50 million, with an investment of more than $250 million needed to bring facilities to levels that would provide for modern workspaces and greater accessibility to the public.

Past surveys on these issues signal general support for a comprehensive, citywide facility bond. The initial support level for a potential facility bond (53%) is lower than the two-thirds (66.6%) vote threshold required should the City wish to pursue this measure on its own. Should the measure be undertaken through a citizen-led effort, the vote threshold for the facility bond would be a simple majority (50%+1).

LEGISLATIVE HISTORY / PREVIOUS ACTIONS

Over the past three years, many public meetings and discussions have been held on facility needs by the City Council, Board of Library Trustees, Community Services Commission, and Planning Commission. The items noted in this section are highlights of the continued community dialogue on city facility needs.

On January 10, 2023, the City Council awarded a contract to Myers Houghton and Partners, Inc. (MHP) to perform in-depth structural analysis and evaluation of the Library's suitability for major renovations and initial visioning activities.

On September 12, 2023, the City Council received an update on the results of comprehensive water system assessment, including information on future water rates. The water assessment identified more than $350 million in projects needed over the next 30 years, with $30 million being programmed for completion over the first five years.

On January 9, 2024, the City Council held a discussion on a the MHP Library assessment/visioning analysis and discussed funding options. Following discussion, the City Council directed staff to complete an overall condition analysis of major City facilities and undertake a community survey soliciting public input on a possible revenue measure.

On January 30, 2024, the City Council approved a Master Joint Use Agreement with the Glendora Unified School District (GUSD). While the agreement largely stipulates use of existing facilities and services provided by the City, the agreement does provide for better maintenance of GUSD Facilities and outlines a partnership methodology for joint capital upgrades (e.g. GUSD High School Aquatics Center).

On August 27, 2024 (Attachment B), the City Council was provided the results of a community survey on a potential citywide and/or Library specific revenue measure. The survey, completed by True North Reasearch, documented initial support for a citywide facility measure (53%) as opposed to Library specific bond measure (45%). Additionally, the survey highlighted the two highest quality of life improvements in the City as improving infrastructure/roads (17.8%) and addressing homelessness (17.2%).

On November 5, 2024, the Statewide ballot measure – ACA 5 – ballot failed (55% no). The State measure would have lowered the threshold for issuing facility bonds for cities and related local agencies, from 66.6% (2/3) to 55% (same as schools).

On November 12, 2024 (Attachment C), the City Council approved an agreement with IDS Group, Inc. for Architectural, Engineering and Consultant Services for the City Corporate Yard Improvement Project in an amount not to exceed $725,581. The City will need to identify an estimated $13-15 million for the construction portion of the project, which will rehabilitate existing space and add a new building to increase the usable space by 10,000 square feet.

On February 25, 2025, the City Council received the FY 2024-25 Mid-Year Budget Update that documented approximately $50 million in current facility needs (e.g. new roofs, HVAC, etc.) that would largely keep City facilities as is. In order to significantly improve the City's facilities to modern standards and better meet current and future operational needs, the estimated costs would total more than $250 million.

DISCUSSION

The City is committed to finding ways to better the quality of life of its residents and business community. The 2023-2025 Strategic Plan, and the proposed 2025-2027 Strategic Plan, both require significant City resources to be allocated to improving the City's infrastructure, including parks, trails, streets, sidewalks, water, and facilities. These efforts are recognized by the public through the City's community survey process; the most recent of which has identified infrastructure and homelessness as the top two quality-of-life improvements needed.

Over the past five years, the City has completed more than $50 million in capital projects, including significant park transformations (e.g. Finkbiner and Louie Pompei), facility upgrades (e.g. Council Chambers), and miles of street and water infrastructure. Despite these generational investments, the City still faces impacts from decades of underinvestment. More specifically, many California cities are faced with diminishing State and Federal funding opportunities for critical infrastructure; the landscape of funding critical infrastructure and civic facilities has drastically changed over the past 50-years (e.g. Prop 13).

Over 50 years ago, Glendora was growing quickly – leadership was investing in infrastructure, building community spaces, and planning for a city that was anticipated to exceed 80,000 people, with over 20,000 school aged children, by the year 2000. While the City has experienced several larger developments over the past decade, the rapid growth experienced from the 1960's through the 1980's, has largely stopped. The City's population (approximately 50,000 people) has remained relatively flat for the last 20 years, with declines in three of the past five years.

As noted previously, the City has spent several years documenting and analyzing the facility and infrastructure needs of the community. Despite significant capital investment over the past five years, total deferred maintenance on City facilities is anticipated to cost approximately $50 million, with an investment of more than $250 million needed to bring facilities to levels that would provide for modern workspaces and greater accessibility to the public.

Outside of a revenue bond measure, the City does not have the financial resources to complete all of the needed facility upgrades. For example, the current state of the Library building, a critical and highly regarded location (and service provider), requires tens of millions in renovations to address significant structural challenges (Attachment A). The City has explored and applied for grant opportunities, worked with legislators for federal and state earmarks, and searched for other available funding sources. Recent changes at the federal level have created additional challenges and uncertainty with regard to funding, including earmark funding previously committed to the City (GPD police radio replacement project); new funding opportunities for discretionary facility and related infrastructure through the Federal government or as a passthrough from the State are highly unlikely.

Attachment D to this report provides a summary of property tax changes, dating from Proposition 13 in 1978 to the failure of ACA 5 in November 2024. In summary:

- Proposition 13 (1978) and Proposition 46 (1986) restrict cities' financial flexibility.
- Citizen-led initiatives are a viable mechanism to avoid the two-thirds voting threshold.
- The failure of ACA 5 to pass maintains the challenging environment for city-sponsored infrastructure funding, reinforcing the importance of citizen-led initiatives in municipal finance.

Measure Origin	Required Approval
City Council-Initiated GO Bonds	**Two-thirds (66.7%)** voter approval
Citizen-Initiated Bonds/Special Taxes	**Simple majority (50% + 1)** voter approval

The August 2024 community survey (Attachment B) on a possible citywide and/or Library specific revenue measure documented initial support for a citywide facility measure (53%) as opposed to Library specific bond measure (45%). It is unlikely that the City would be able to garner enough support for a City Council initiated facility bond measure; however, should the measure be undertaken through a citizen-led effort, there is an improved likelihood of its passage.

The process for a citizen initiative petition is outlined in the California Elections Code is outlined in Sections 9200-9226 and 9600-9610: http://leginfo.legislature.ca.gov/faces/home.xhtml

It is suggested that petitions be submitted a minimum of 134 days before the election to provide for the processing required by State law. All requisite processing of the initiative petitions must occur no later than the 88th day before the election to appear on the ballot. This includes verification of signatures, City Council action, and additional publication requirements, among other items.

To qualify for placement on the ballot, 10% of the registered voters of the city (according to the last report of registration by the county elections official) must be gathered. There are approximately 35,000 registered voters in the City of Glendora. A Frequently Asked Questions (FAQ) document about the citizen initiative process can be found as Attachment E.

FISCAL IMPACT

After decades of underinvestment in streets, roads, and City facilities, the City has invested more than $30 million in water projects, new streets/sidewalks, major park improvements, and facility upgrades over the last two years, and more than $50 million over the last five. While these generational improvements were necessary and critical to the quality of life in Glendora, the City faces difficult decisions moving forward. With rapid increases in capital costs since 2020, and the continued deterioration of key facilities (e.g. civic complex, public works yard, etc.), the City Council will need to consider a facility bond. The changing landscape of municipal finance post Proposition 13 does not allow the City to fund critical facilities, such as the ones in use today (e.g. Library, City Hall, Police Department, etc.). Over the past three years, the City has funded structural assessments, space planning, and community visioning of key City facilities. With the inability to fund facility needs from existing funding sources, the City will need to meaningfully engage its residents as we consider replacing aging City facilities. Similar to the decisions made by City leaders more than 50 years ago, current leaders will need to ask the community to fund improvements so future generations of Glendorans can experience the same quality of life enjoyed by the existing community and those that came before us.

There is no fiscal impact associated with the recommendations in this report. Based on City Council direction, staff with provide the fiscal impacts of future policy decisions.

1955 – LIBRARY BOND BALLOT MEASURE

RESOLUTION NO. 1182

RESOLUTION OF THE CITY COUNCIL OF THE CITY OF GLENDORA, CALIFORNIA, STATING THE RESULT OF THE CANVASS OF ELECTION RETURNS OF THE SPECIAL BOND ELECTION HELD NOVEMBER 29, 1955.

BOND PROPOSITION: Shall the City of Glendora incur a bonded indebtedness in the principal amount of $185,000 for the purpose of the acquisition and construction by said city of a certain municipal improvement, to wit: a public library building together with landscaping and off-street parking facilities therefor and including the acquisition of all furniture, furnishings, equipment and other property necessary therefor?

Consolidated Voting Precinct	Yes	No	Total

BACKGROUND

- 1967 and 1968
  - New library facility project gains momentum
  - Library expansion is a continual process
    - Reading Room
    - City Hall Space (1912)
    - City Hall Annex (1930)
    - City Hall Annex Expansion (1955)

BACKGROUND

- 1968 and 1969
  - Annexations, population growth, school impacts
  - Library space needs to be solved by a new building
  - City's new 1990 General Plan, anticipates:
    - Population growing from 30,000 to 80,000
    - Student enrollment growing from 9,175 to 25,350

1968 Letter From City to GUSD

A SUMMARY OF MAJOR BENEFITS PROJECTED TO BE AVAILABLE TO THE GLENDORA UNIFIED SCHOOL DISTRICT AS A RESULT OF ITS PARTICIPATION IN THE JOINT POWERS AGENCY WITH THE CITY OF GLENDORA FOR THE PURPOSES OF CONSTRUCTING A PUBLIC LIBRARY FACILITY

With the population increase, the information explosion and the dearth of funds available to schools at this time, an increasing number of school districts are being gradually forced to re-direct their students and teachers from their own school-operated, inadequately-equipped and stocked libraries to the cities' public library facilities for both basic and in-depth research materials. This development has been accepted as a permanent situation by many librarians and is considered a challenge that must be met and surmounted.

The aforementioned situation is especially valid in the Glendora Planning Area. 9,175 students presently attend the thirteen schools administered by the Glendora Unified School District. The Gruen Associates Glendora, California General Plan, 1990 projects a 1990 student population for the Planning Area of 25,350. A study made by the Glendora Planning Department indicates that 85% or 21,547 of these 25,350 students will be attending schools in the Glendora Unified School District.

BACKGROUND

- February 1969
  - City Council authorized City Manager to apply for library grant funds to build a new facility
  - City Council calls for a general obligation library bond measure should the funds be awarded ($785,000)

BACKGROUND

- September 1969
  - City Council updated on Library financing
  - City Council cancels election for library facility bonds, citing bond market uncertainty and uncertain tax law litigation (e.g. 2/3 vs 50 +1)
  - City Council hires a financial consultant and authorizes architect to continue work

BACKGROUND

- November/December 1969
  - State/Federal funding denied
  - City moves forward with “ultramodern” library design
    - 28,000 sqft, down from 33,000 sqft
    - Approximately $1.1 million including design, land acquisition, and furnishings
    - Anticipated to serve the City for 35 years

BACKGROUND

- Late 1969 through early 1970
  - Effort by a Mrs. Everett Cloutman, to require a vote to issue bonds to build a new library
    - Petition gathered 1,136 signatures, required 1,376 signature.
    - Supported by one Councilmember (Isensee)

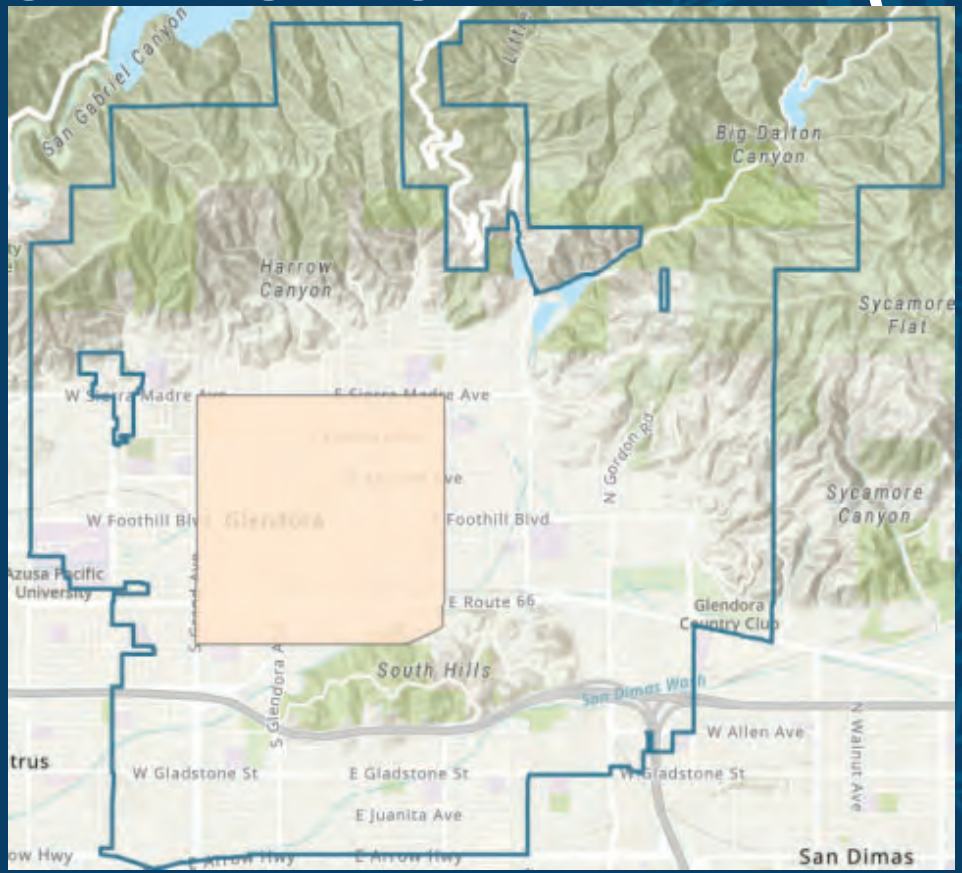
BACKGROUND

- July 1970
  - Creation of Glendora Library Authority
    - Joint Powers Authority between City and Glendora Unified School District
    - Ability to issue debt
    - Acknowledgement of growing school population

BACKGROUND

- October/November 1970
  - City Council approves “Glendora Library Ground Lease” and “Glendora Library Sublease”
    - Agreement with Glendora Library Authority
    - Term coincides with issuance of bonds
    - Payment is equivalent to debt service ($81,000/year)

BACKGROUND



- November 1970
  - Library Authority completes sale of $950,000 in Lease Revenue Bonds
    - Bank of America
    - Approximately 7% for 30 years
    - $81,000 annual debt service payment

BACKGROUND

- November 1970
  - Groundbreaking
- February 1972
  - Grand opening and dedication of Library

BUDGET AND CITY FINANCES

- February 1969 SGV Tribune article on library bond measure funding

Financed through a joint powers agreement between the city and school district, the library was a result of funds saved when the city's fire department merged with the county. The city's savings of $120,000 annually will go toward completing payments on the library.

  - "Yes" and "No" – Homeowners didn't see decreased costs

Subject: Recommended budget for the 1972-73 fiscal year

Cities all over the nation and especially in California are facing the greatest revenue-expenditure gap in history. All but about 10 million of America's 200 plus million people now live in urban areas and demand ever more costly urban services. Yet cities are expected and required to operate using antiquated and inadequate revenue producing sources. Nation wide, according to the National Leggue of Cities, city services cost about $12 billion more than they cost five years ago. Most of these increased costs are not controllable--like cost-of-living pay increases.

In Glendora, for example, police costs in 1967-68 were $424,736 excluding fringe benefits. The proposed budget recommends that $739,048 (based on 1971-72 salary rates) be spent for police services, an increase in five years of $314,312, or 74%. Yet property taxes to the City increased only $306,065, or 45% in the same period ($676,720 to an estimated $982,785).

What is needed, in my judgment, is a reordering of national and state priorities and a resturcturing of the revenue sources to provide adequate financial support for cities so that the 95 of every hundred Americans--city dwellers--can have the quality of life they want, deserve, and really are already paying for but in many cases not getting.

Fortunately the problem in Glendora, though critical, has not reached the conditions now existing in many cities. The quality of life in Glendora is high yet the level of City property taxes is low compared to our neighboring cities. Only Rosemead, Arcadia and El Monte of the 14 cities in our area have lower city tax rates than Glendora.

Comparison of 1971-72 Tax Rates -
Selected San Gabriel Valley Cities

Claremont	2.33	1.39
San Dimas	1.99	
Monrovia	1.92	
South Pasadena	1.86	
Monterey Park	1.73	
West Covina	1.72	
Alhambra	1.60	
Covina	1.49	
Azusa	1.45	
Glendora	1.38	
Duarte (est.)	1.38	
Arcadia	1.25	
Rosemead	1.14	
El Monte	1.10	

(Average: $1.56, or 13% higher than Glendora)

PROP 9 (1968) AND PROP 13 (1978)

California Proposition 9 was on the ballot as an initiated constitutional amendment in California on November 5, 1968. It was **defeated**.

A **"yes"** vote supported decreasing the ad valorem tax on property so that the sum of the tax and ad valorem special assessments on the property does not exceed 1% of the market value of the property.

A **"no"** vote opposed decreasing the ad valorem tax on property so that the sum of the tax and ad valorem special assessments on the property does not exceed 1% of the market value of the property.

RESOLUTION NO. 68-072

A RESOLUTION OF THE COUNCIL OF THE CITY OF GLENDORA OPPOSING THE CALIFORNIA INITIATIVE AMENDMENT ON PROPERTY TAX LIMITATION ("WATSON AMENDMENT")

Election results

California Proposition 9		
Result	Votes	Percentage
Yes	2,146,010	31.95%
✖ **No**	**4,570,097**	**68.05%**

WHEREAS, it is the opinion of the Glendora City Council that the proposed amendment is an irresponsible approach to the problem of tax reform because, in part, it misleads the public into believing there will be a tax decrease when, in fact, a massive tax shift requiring a significant State tax increase will result; the State income tax would have to be tripled and the State sales tax quadrupled to cover the revenue deficit created by this measure; the bonding capacity of the City of Glendora would be limited so that no further bonds can be issued to finance future city construction on a pay as you go basis; and

PROP 9 (1968) AND PROP 13 (1978)

California Proposition 13 was on the ballot as an initiated constitutional amendment in California on June 6, 1978. It was **approved**.

A **"yes"** vote supported this constitutional amendment to:

* require that properties be taxed at no more than 1 percent of their full cash value shown on the 1975-1976 assessment rolls and limit annual increases of assessed (taxable) value to the inflation rate or 2 percent, whichever was less.
* upon the transfer of properties, allow them to be reassessed at one percent of their sale price and reset the limit on annual increases of assessed value.
* prohibit the state legislature from enacting new taxes on the value or sale of properties.
* require a two-thirds vote of the state legislature to increase non-property taxes.
* require local governments to refer special taxes to the ballot and require a two-thirds vote of electors.
* make the state government responsible for distributing property tax revenue among local governments.

A **"no"** vote opposed this constitutional amendment to require that properties be taxed at no more than 1 percent of their full cash value shown on the 1975-1976 assessment rolls and limit annual increases of assessed (taxable) value to the inflation rate or 2 percent, whichever was less, and make other changes to tax-related provisions of the California Constitution.

Election results

California Proposition 13

Result	Votes	Percentage
✔ **Yes**	**4,280,689**	64.79%
No	2,326,167	35.21%

CURRENT LIBRARY BUILDING

Structural Analysis

- Ongoing building-related issues
  - Structural deficiencies & water intrusion

CURRENT LIBRARY BUILDING

- 2021: Preliminary structural assessment completed by JMDiaz, Inc.
  - Visible cracking in beam system noted
- 2023: Myers Houghton and Partners, Inc. (MHP) contracted to perform in-depth structural analysis
  - Initial visioning activities
  - Conceptual design for second story addition

CURRENT LIBRARY BUILDING

- MHP structural analysis – Findings
  - Other than wall anchorage upgrades, seismic strengthening not warranted
  - Minor-to-moderate cracking throughout the library's main roof structure
  - Plaza waterproofing membrane may be compromised
  - Live load and soil bearing pressure concerns with some girders and pad footings

CURRENT LIBRARY BUILDING

- MHP structural analysis – Recommendations
  - Significant retrofitting/repairs needed
  - Bidwell Plaza
    - passive use okay
    - currently not being used for public assembly events of over 500 people with equipment
  - Waterproofing consultant should be retained

NEXT 35 - 50 YEARS

Programmatic visioning

- Part of MHP's second phase:
  - evaluation of the feasibility of vertical expansion of the building
  - working with Library stakeholders to identify the intended use of the expanded space

NEXT 35 - 50 YEARS

Programmatic visioning

- architectural consultant
- seven workshops
- MHP, Library, Board of Library Trustees, GPL Friends Foundation, City Manager' s office, and Public Works Department

NEXT 35 - 50 YEARS

Programmatic visioning

- Initial inputs
  - Library's current strategic framework
  - Projected population and per-capita square footage allocation
    - Expected 45,000 to 52,500 gross square feet
    - Currently about 30,000 square feet
  - Environmental scan

NEXT 35 - 50 YEARS

Programmatic visioning

- GPL proposed Library building spaces of the future
  - Customer-Driven Workspaces
  - Public Assembly Spaces
  - Library-Mediated Public Workspace
  - Fulfillment Center Services
  - Small Private / Semi-Private Spaces
  - Physical Content Showroom

NEXT 35 - 50 YEARS

Programmatic visioning

- GPL proposed Library building spaces of the future, continued
  - Leisure Spaces – Relaxation
  - Library Services
  - Additional Library Services and Capacity Including: Preservation/Archival storage, Public Access Technologies, Food Service, Event Catering
  - Flexible Future Space: Uncharted Possibilities
  - Infrastructure

NEXT 35 - 50 YEARS

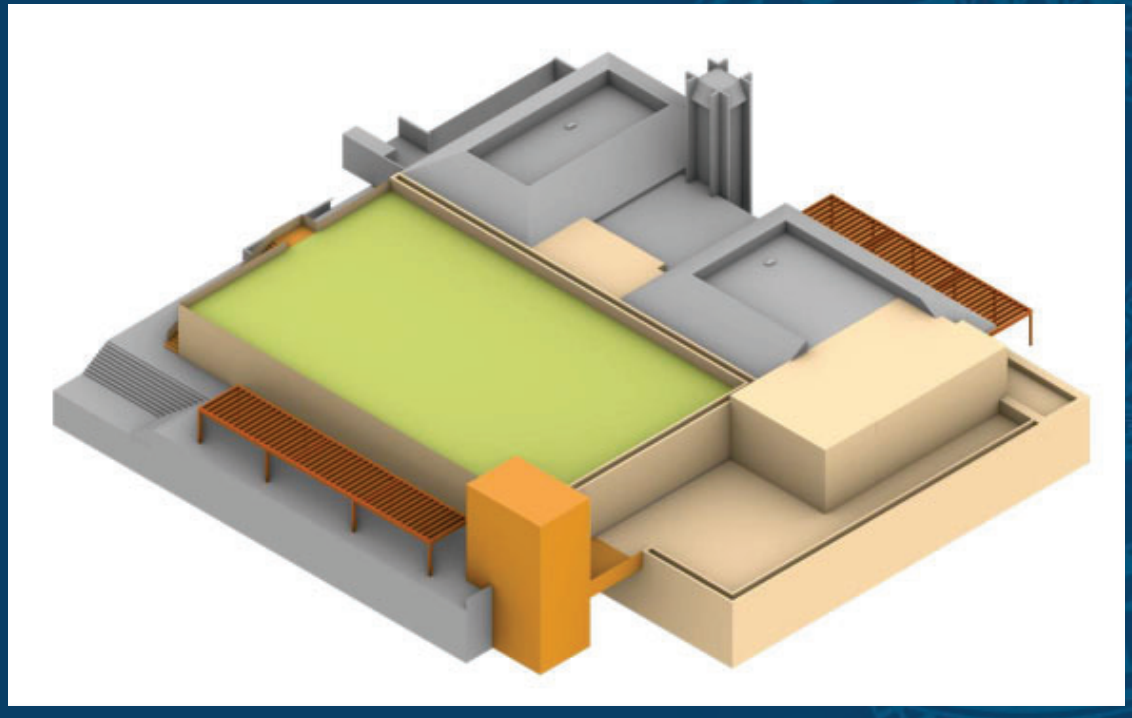
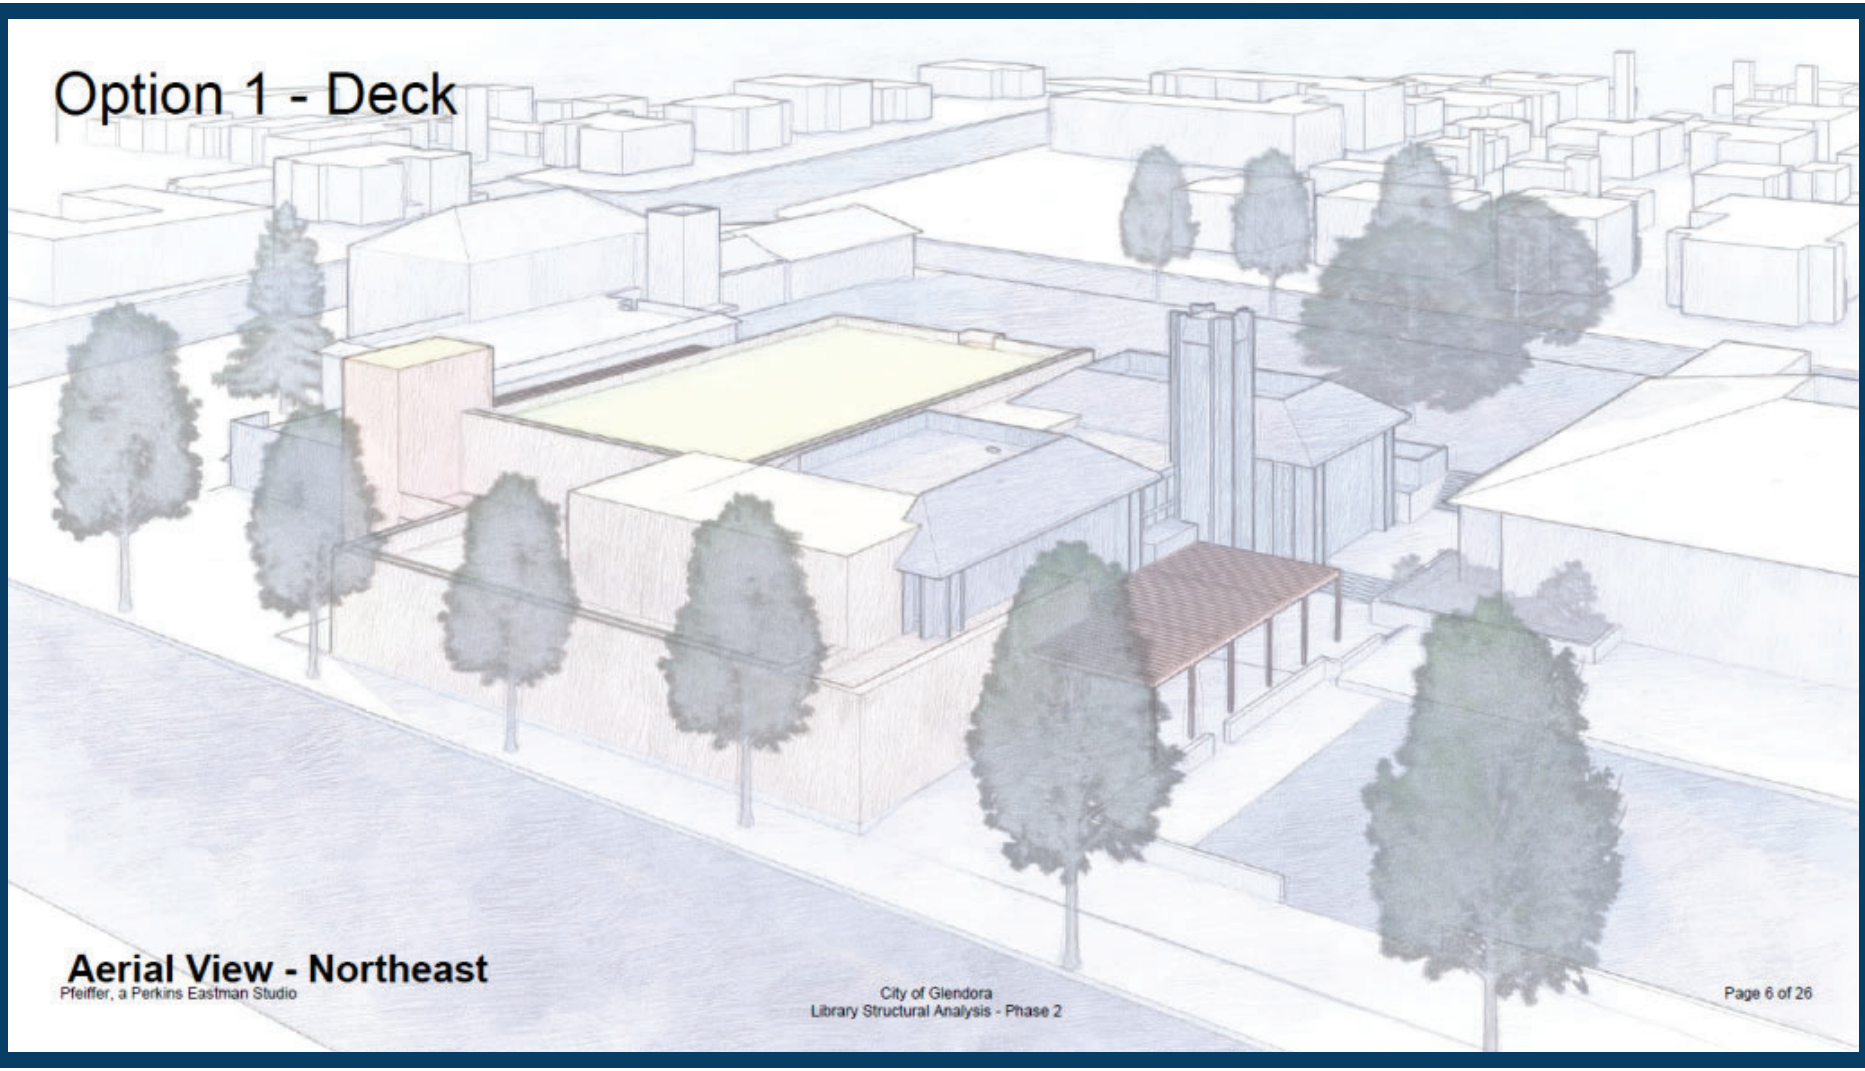
Programmatic visioning



- Roast of the current building
  - no visibility of the activities happening inside
  - entry process dark and non-intuitive
  - several areas where the existing environment fails to meet current codes
  - electrical connectivity in the building is inadequate
  - temperature control and ventilation pose challenges
  - water leaks have been a persistent issue since the library' s opening
  - lighting systems are outdated and require an upgrade
  - Library staff workplace is small, overcrowded, and lacks natural daylight
  - clear shortage of storage space

NEXT 35 - 50 YEARS



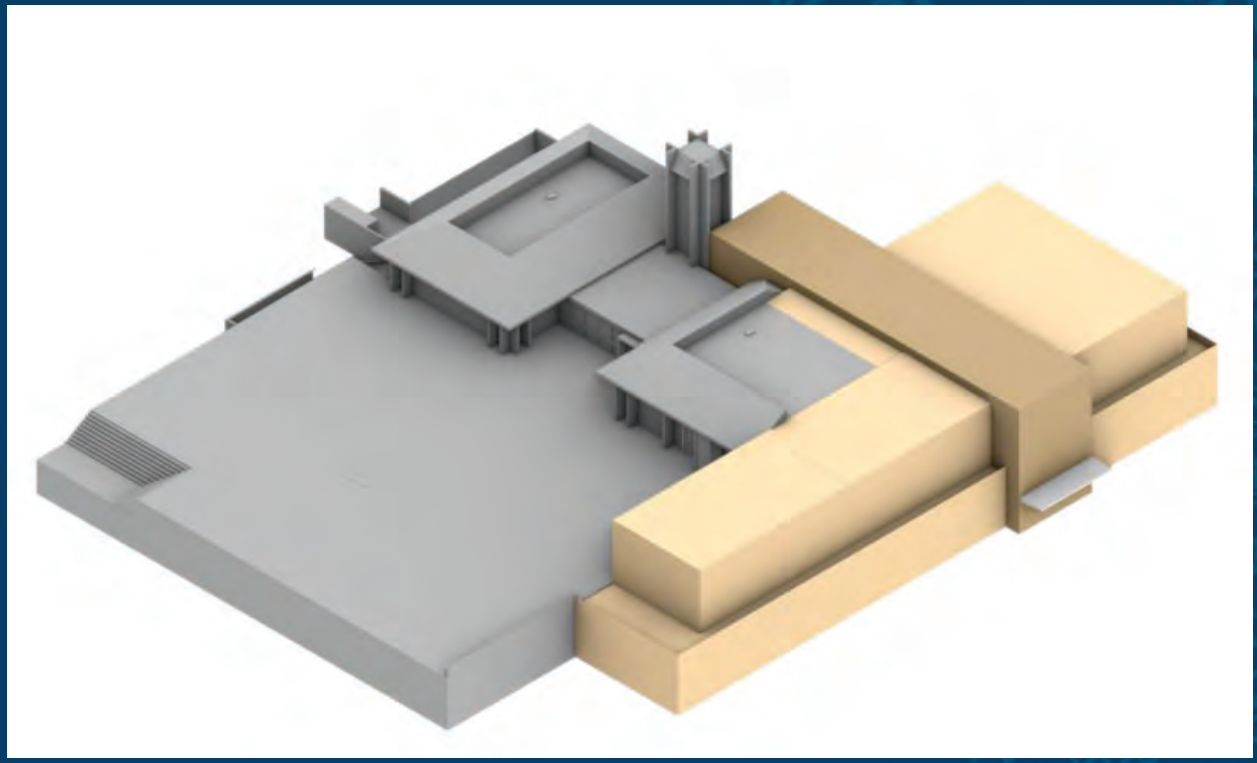
Programmatic visioning

- "The Deck" Concept
  - second story over the existing Plaza deck
  - 2-story addition on the Glendora Avenue side
  - $20.6M

NEXT 35 - 50 YEARS

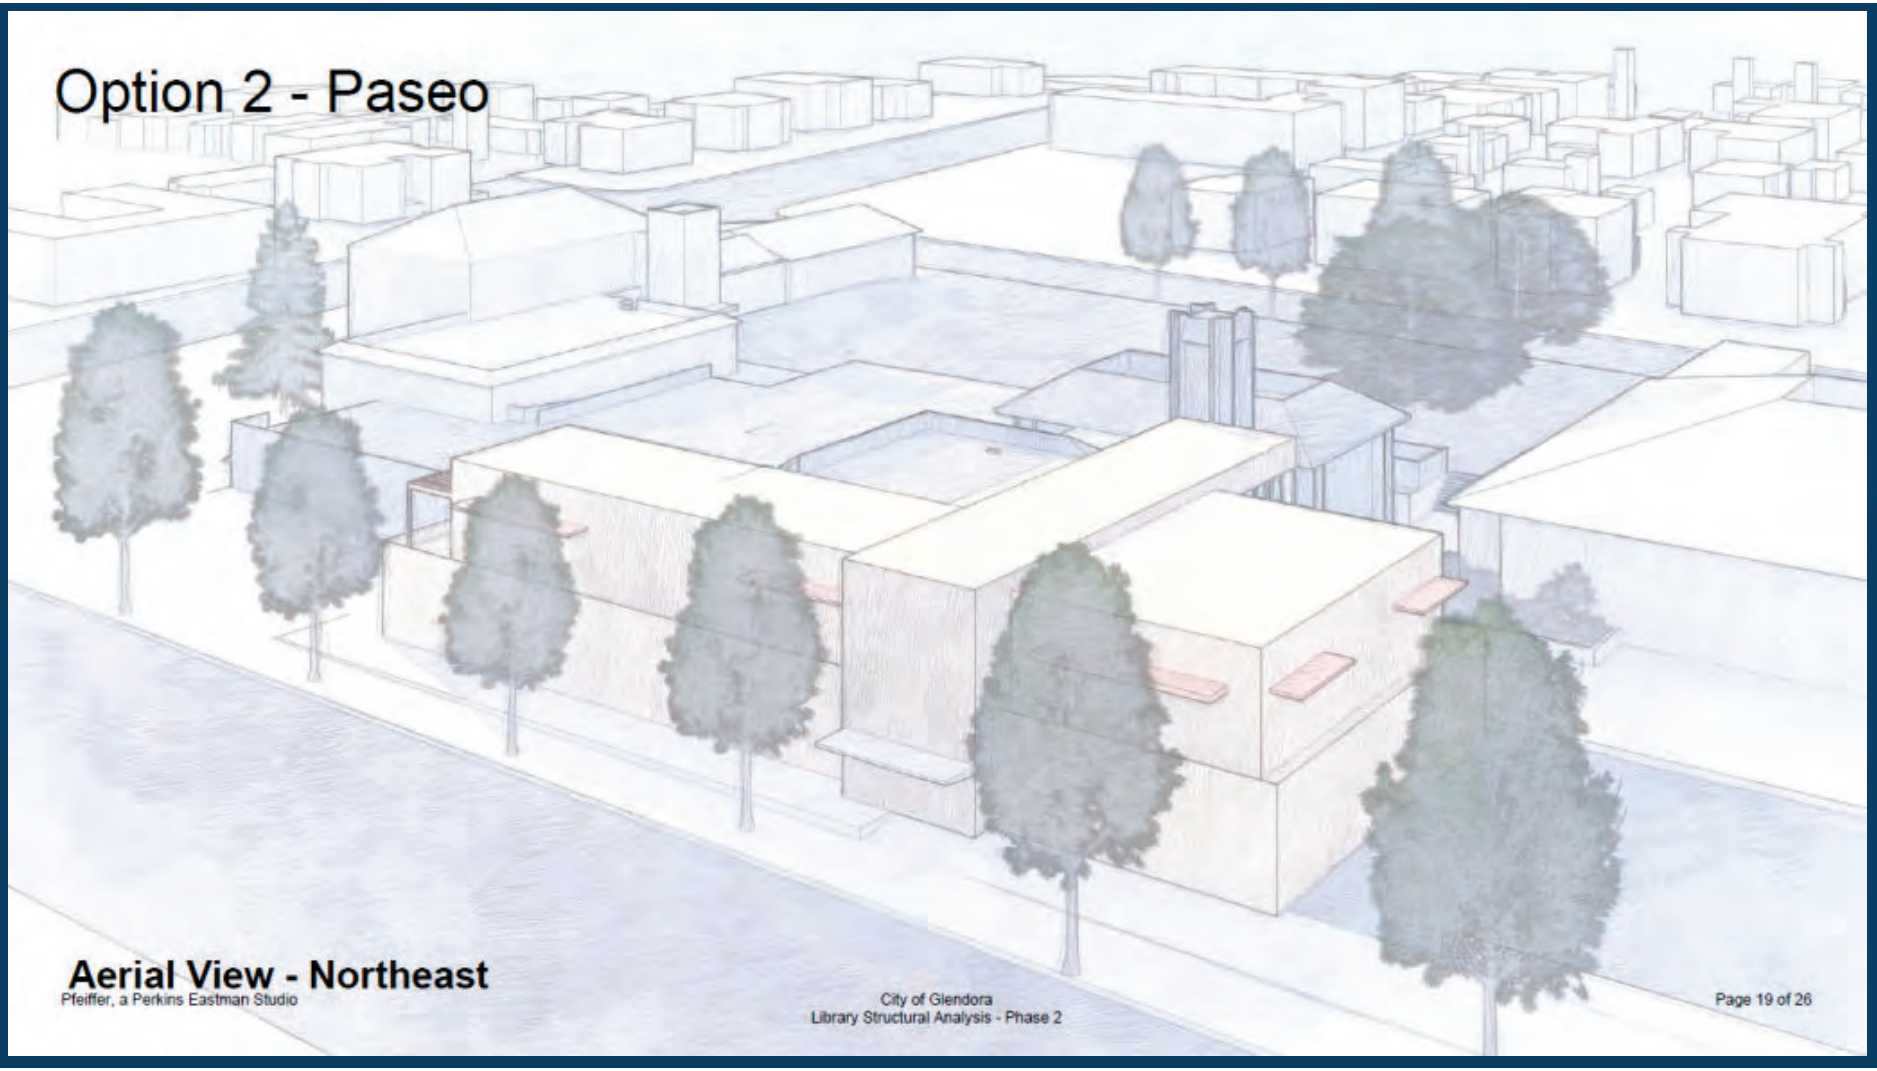
Option 1 - Deck

Aerial View - Northeast



Pfeiffer, a Perkins Eastman Studio

NEXT 35 - 50 YEARS



Programmatic visioning

- "The Paseo" Concept
  - Block A extends the library building towards Glendora Avenue
  - Block C is situated to the south and occupies a small portion of the existing library building and Police Station parking lot
  - The Paseo (Block B), is an architectural atrium-like space that captures abundant natural light during the day
  - $23.0M*

NEXT 35 - 50 YEARS

Option 2 - Paseo

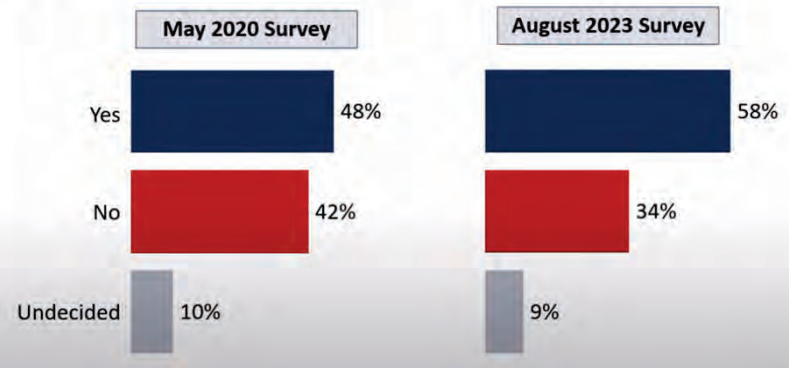
- Structural
- Infrastructure improvements
- Remodeling
- Modernization

NEXT 35 - 50 YEARS

Project Type	*Estimated Total Cost Range*
Current facility MEP renovation	$1.3M - $1.95M
Basic structural repairs of existing building (gravity load repairs to strength beams and repair cracks)	$2.9M - $4.35M
Weatherproofing Bidwell Plaza (topping slab & membrane replacement)	$900K - $1.35M
Combined basic critical maintenance repairs w/no other significant improvements	$5.1M – $7.65M
Known critical maintenance items & 2nd story expansion, but minimal other modernization or upgrades of existing facility.	$16.4M – $24.6M
Known critical maintenance items & comprehensive modernization and upgrades of existing facility, but no expansion.	$18.6M – $27.9M
Known critical maintenance items, comprehensive modernization and upgrades of existing facility, & expansion of 2nd story.	$29.9M – $44.9M
New Building or Replacement/Reconstruction	$35.8M - $71.6M+

POLITICAL & FISCAL ENVIRONMENT



Grant funding

- Building Forward Round Two
  - "not selected for funding at this time"
  - "wasn’t among the facilities with the highest poverty levels, as determined by the California Poverty Measure"

POLITICAL & FISCAL ENVIRONMENT

Glendora Unified School District – October 23, 2023

Nearly six-in-ten voters support a potential measure to provide funds for classroom repairs, upgrades and safety improvements for GUSD – up 10 points from May 2020.

FM3 Q. How would you vote on this measure: would you vote yes in favor of the measure or no to oppose it? **($140 million bond measure)**

Conclusions and Next Steps

- A $140 million bond measure for GUSD is worthy of future planning and consideration.
- Next steps include:
  - Now – June 2024: Develop and implement plan to communicate with voters to educate about the District's needs and goals
  - March – June 2024: Finalize project list, tax rate statement and resolution for balloting materials
  - May 2024: Follow-up survey to get up-to-date information on community attitudes before placement
  - June 2024: Board decision on bond measure placement (*Deadline is August 8, 2024*)
  - August 2024 – November 5, 2024: District provides information about the contents of the measure; outside campaign

FM3 RESEARCH

POLITICAL & FISCAL ENVIRONMENT

Funding options and watch-list items

- Citizen-initiated
- City-initiated
- Approval requirements
- Other considerations

POLITICAL & FISCAL ENVIRONMENT

- Citizen-initiated funding
  - legal precedent for this:
    - group of citizens proposing
    - special property tax
    - by initiative
  - majority vote
  - would take about a year (signature gathering period is six months)
  - Watch list: Taxpayer Protection and Government Accountability Act ("Taxpayer Act")

POLITICAL & FISCAL ENVIRONMENT

- City-initiated funding
  - could be at a special or general election
  - approval requirements follow
  - watch list: ACA 1 (Constitutional Amendment)

POLITICAL & FISCAL ENVIRONMENT

Local Level	Governing Body Approval	Voter Approval
City or county "general" taxes (revenues used for unrestricted purposes)	If consolidated with a regularly scheduled election of members of the legislative body: • 2/3 for transactions & use taxes • Other taxes: 2/3 for general law cities; majority for charter cities. If not consolidated, unanimous declaration of "emergency" required.	Majority

CaliforniaCityFinance.com Source: Adapted from CALFACTS, Legislative Analyst's Office

POLITICAL & FISCAL ENVIRONMENT

Local Level	Governing Body Approval	Voter Approval
City or county "special" taxes (revenues used for specific purposes)	Majority (2/3 for transactions & use taxes)	2/3
All school or special district taxes	Majority	2/3
General obligation bonds	Majority	2/3[b]
Other debt	Majority	None

CaliforniaCityFinance.com Source: Adapted from CALFACTS, Legislative Analyst's Office

POLITICAL & FISCAL ENVIRONMENT

Local Level	Governing Body Approval	Voter Approval
Property assessments	Majority	Majority of affected property owners. Votes weighted by assessment liability
Property—related fees	Majority	2/3 of voters or majority of affected property owners[c]
Fees—all other	Majority	None

CaliforniaCityFinance.com Source: Adapted from CALFACTS, Legislative Analyst's Office

POLITICAL & FISCAL ENVIRONMENT

- Other funding
  - Joint Powers Authority (JPA) (e.g., with a school district)
    - unlikely that a library would fit within the definition
  - Private/public partnership
    - Burbank exploring, to supplement State grant funds
  - Adding value
    - Smaller naming-rights sponsorships/donations for building features

POLITICAL & FISCAL ENVIRONMENT

Potential timelines

- Survey
  - ~50 days
- Citizen-proposed
  - Recommended if Nov. 2024 election: Notice of Intention by Dec. 22, 2023
- City-proposed
  - For Nov. 2024 election: Last day for City Council to call election and transmit resolution is Aug. 9, 2024

RECOMMENDATIONS

That the City Council:

1. Discuss and provide direction to staff as needed regarding:
    a. Scope of Council's recommended project(s) related to Library building;
    b. Scope of Council's recommended associated project(s) at other facilities specified by Council;
    c. Production of any related architectural concept drawings as desired;
    d. Position on funding options for recommended project(s);
    e. Public polling data as needed; AND,
2. In support of directed activities, specify any needed parameters authorizing:
    a. City Manager, or his designee, to execute Professional Services Agreements; and,
    b. Finance Director to appropriate necessary funds.

Bond Feasibility Survey

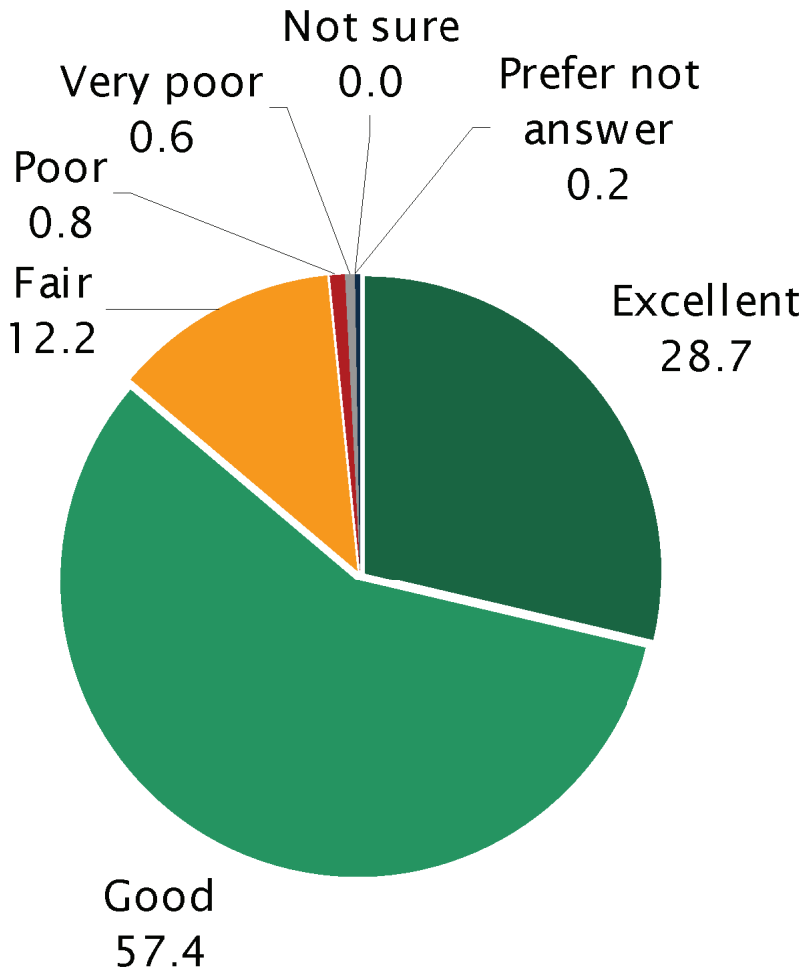
Conducted for the
City of Glendora

Presented By
Timothy McLarney Ph.D.

8/20/2024

TrueNorth Research

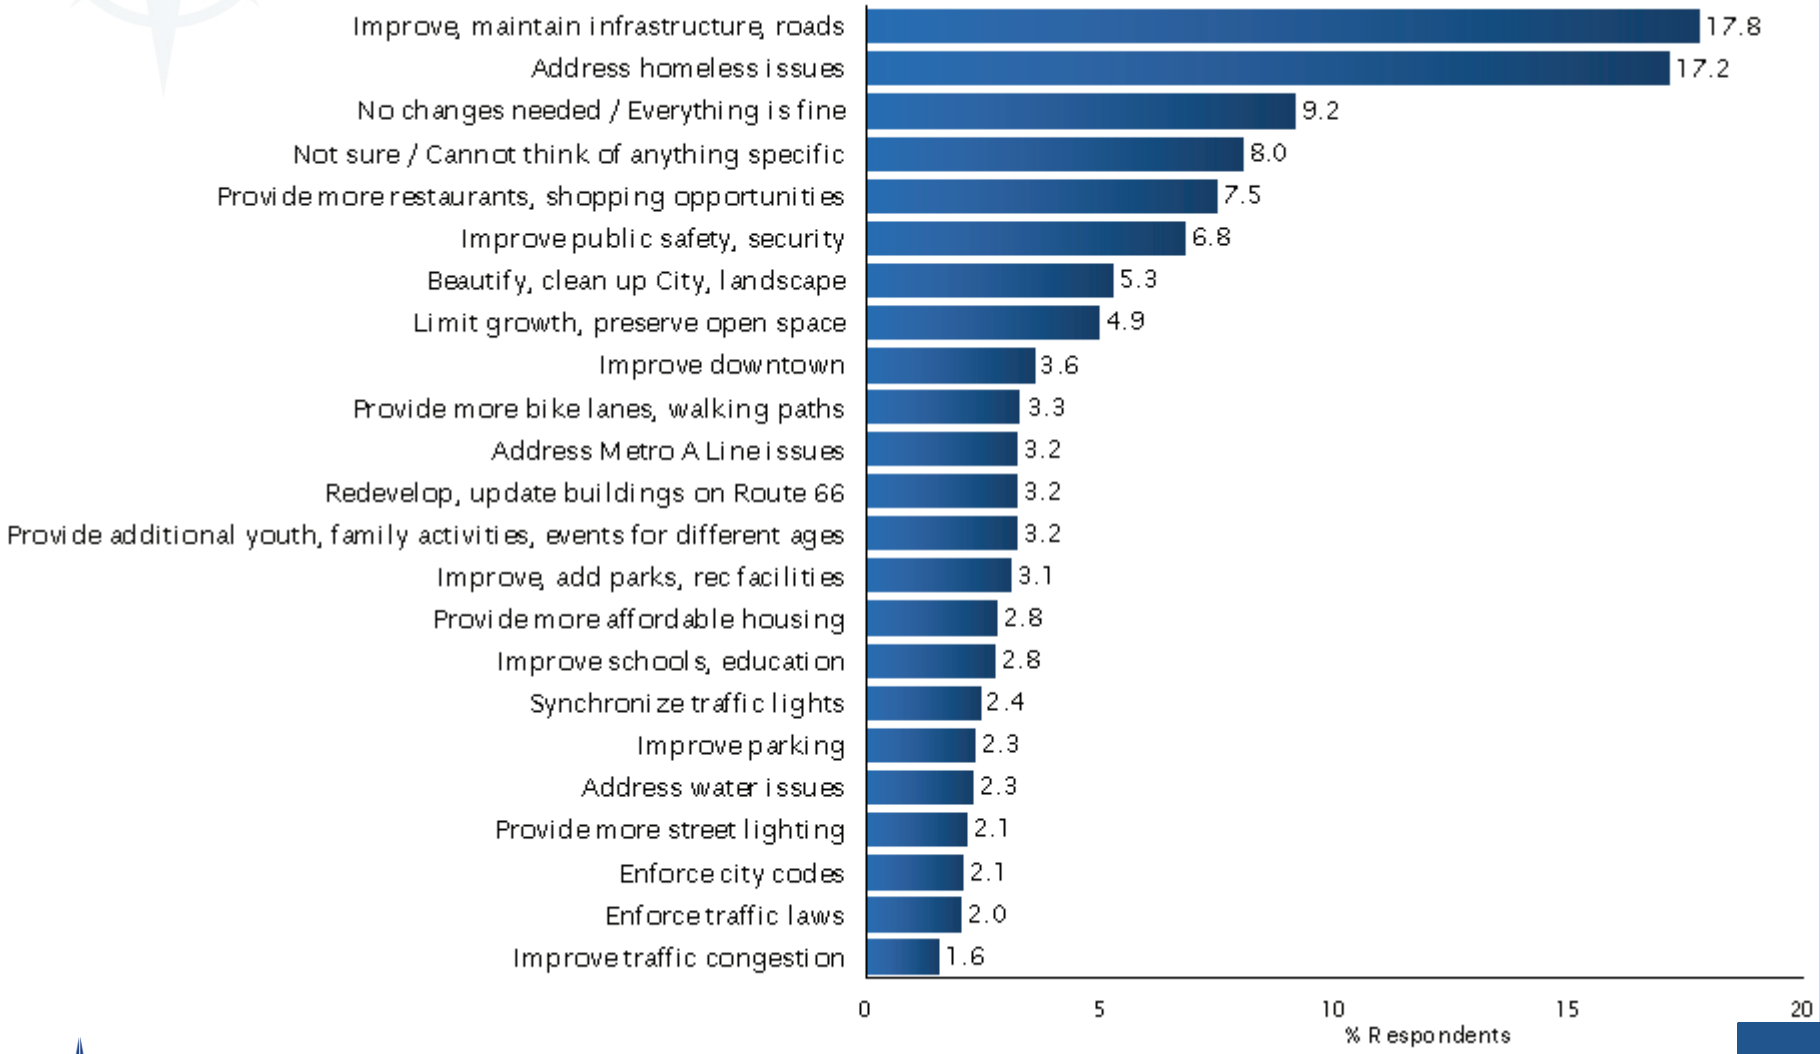
PURPOSE OF STUDY



- Determine if a bond measure is feasible
- Identify how to create a measure consistent with community priorities
- Gather information needed for communications & outreach

TRUENORTH RESEARCH

METHODOLOGY OF STUDY



- **How did we select voters to survey?**
  - Stratified & Clustered Random Sample of likely voters (2024) using age, gender, partisanship, household party type, and sub-geographies
  - Ensures balanced, representative sample of likely voters
- **How did we recruit participation?**
  - Personalized email, text, and telephone calls
  - PINs to restrict access and ensure one complete per respondent
- **How were voters able to share their opinions?**
  - Secure, PIN-protected website that scales to the device
  - Telephone (land line or mobile)
- **What was the sample size?**
  - 600 completed interviews – split sample
  - Overall margin of error of ± 4% @ 95% level of confidence

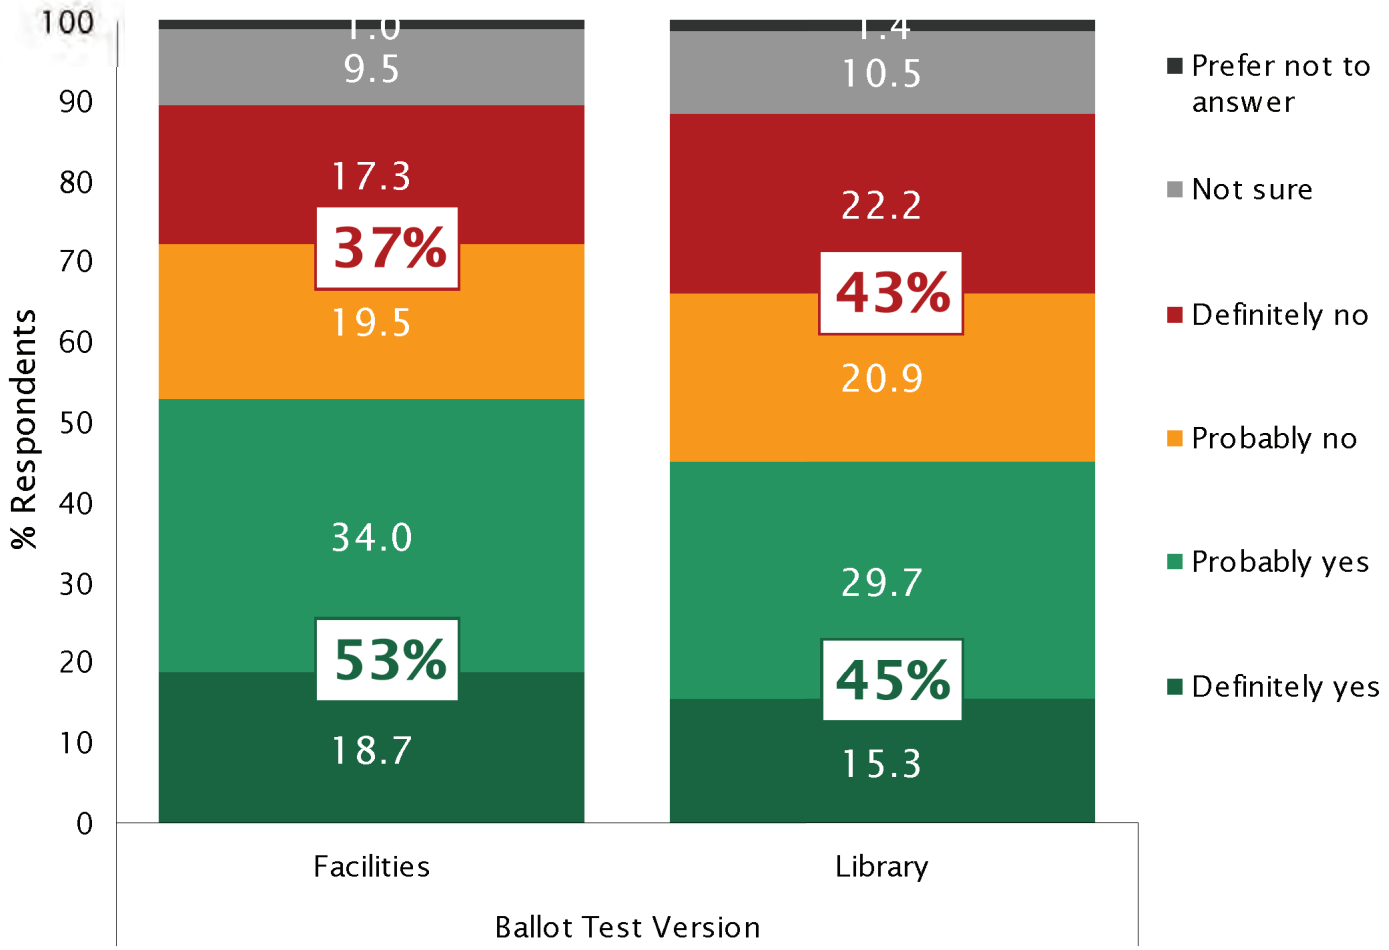
INITIAL BALLOT TEST: FACILITIES

In order to:

- Repair, expand, and upgrade aging community facilities including the Glendora Library, Senior Center, Teen Center, City Hall, and Recreation, Police and Public Works facilities
- Fix faulty roofs, plumbing, electrical, and ventilation
- And improve safety and access for seniors/disabled residents

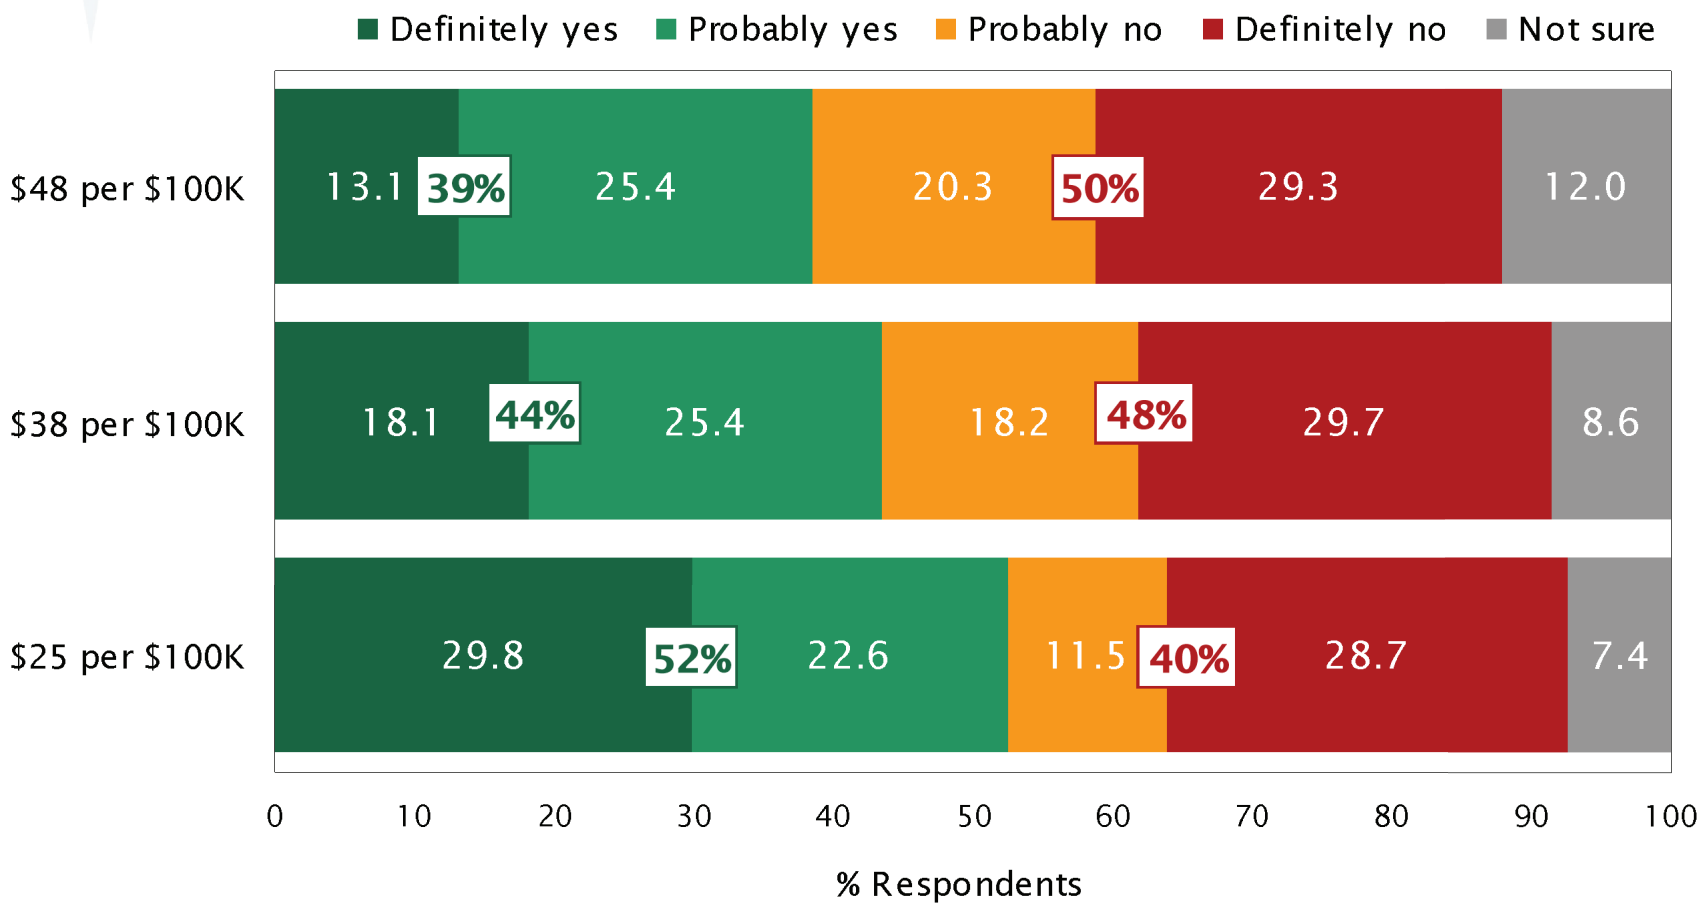
Shall the City of Glendora's measure authorizing $150 million in bonds at legal rates be adopted, levying 48 dollars per 100 thousand dollars assessed value (9 million dollars annually) while bonds are outstanding, with citizen oversight and all money locally controlled?

INITIAL BALLOT TEST: LIBRARY



In order to:

- Repair, modernize, and expand the Glendora Library with improved spaces for collaboration, community programs and events, computers/technology learning center, studying, training, and expanded book/resource collections to serve residents of all ages
- Fix faulty roofs, electrical, ventilation
- And improve access for seniors/disabled



Shall the City of Glendora's measure authorizing $70 million in bonds at legal rates be adopted, levying 25 dollars per 100 thousand dollars assessed value (4 million dollars annually) while bonds are outstanding, with citizen oversight and all money locally controlled?

TRUENORTH RESEARCH

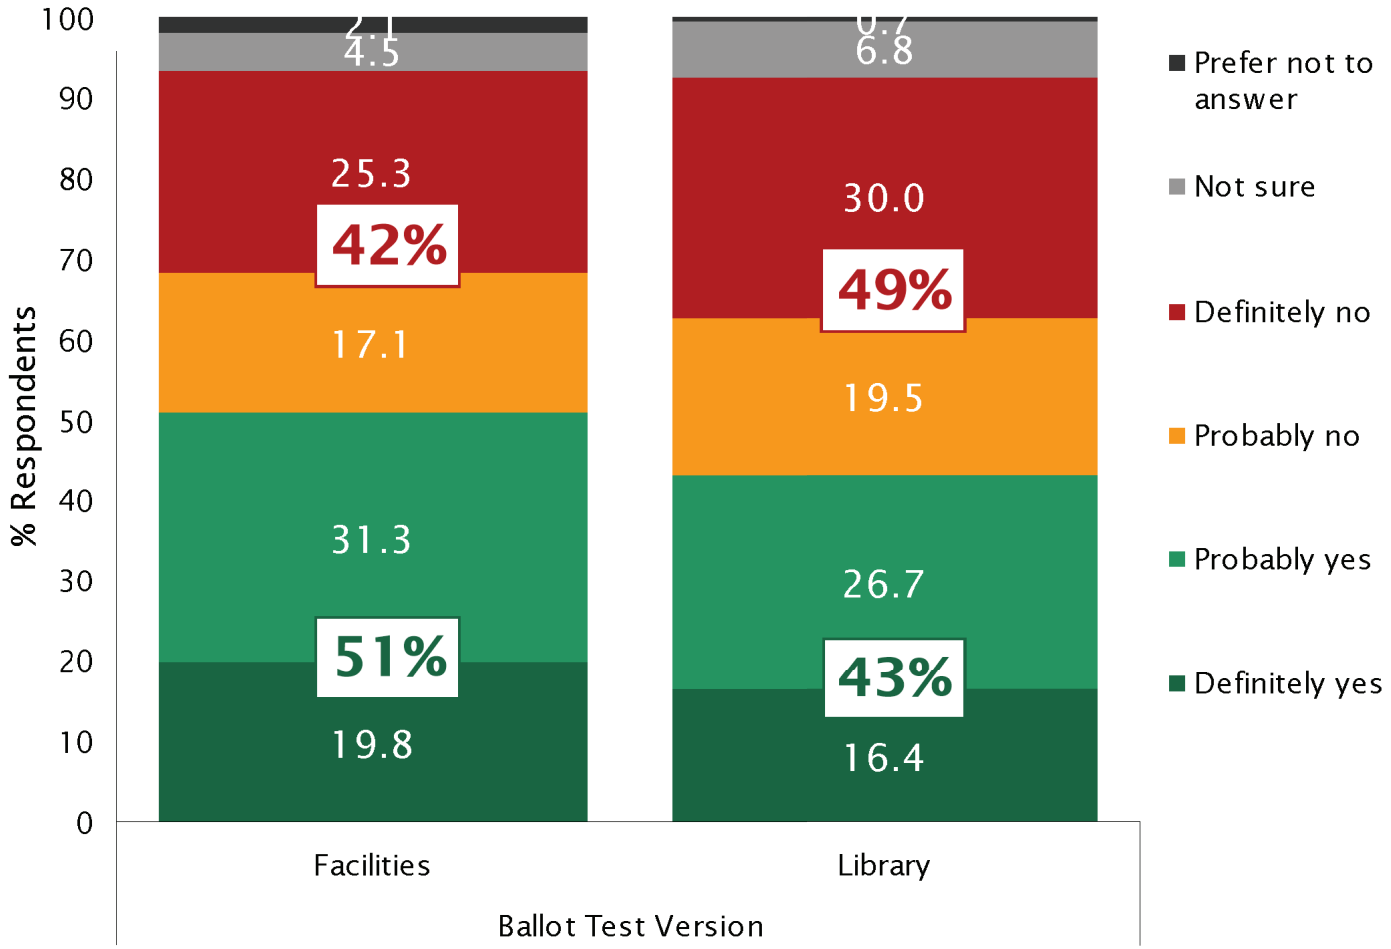
POSITIVE ARGUMENTS: FACILITIES

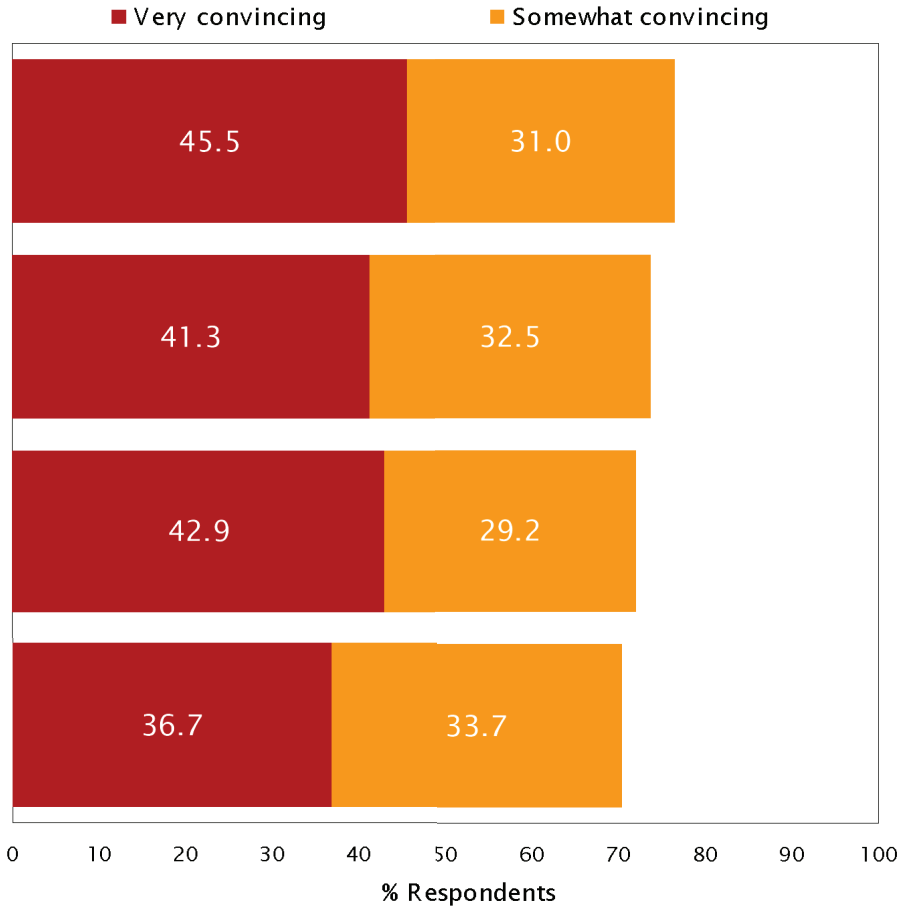


TRUENORTH RESEARCH

POSITIVE ARGUMENTS: LIBRARY

TRUENORTH RESEARCH

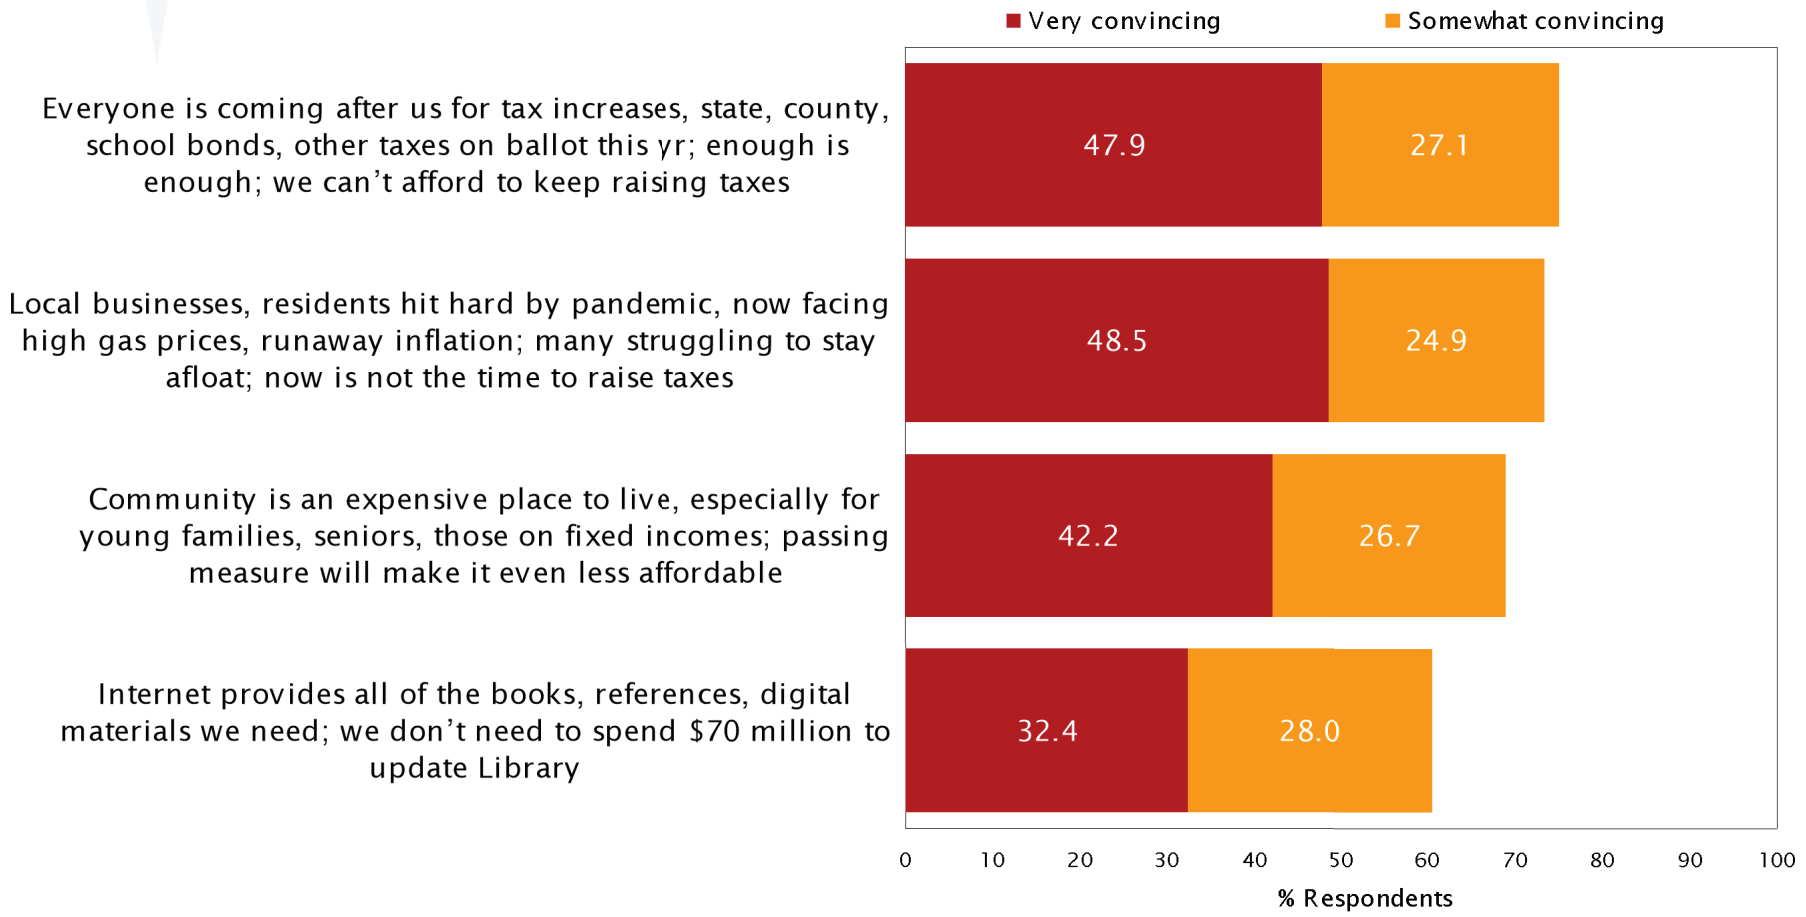
INTERIM BALLOT TEST



NEGATIVE ARGUMENTS: FACILITIES

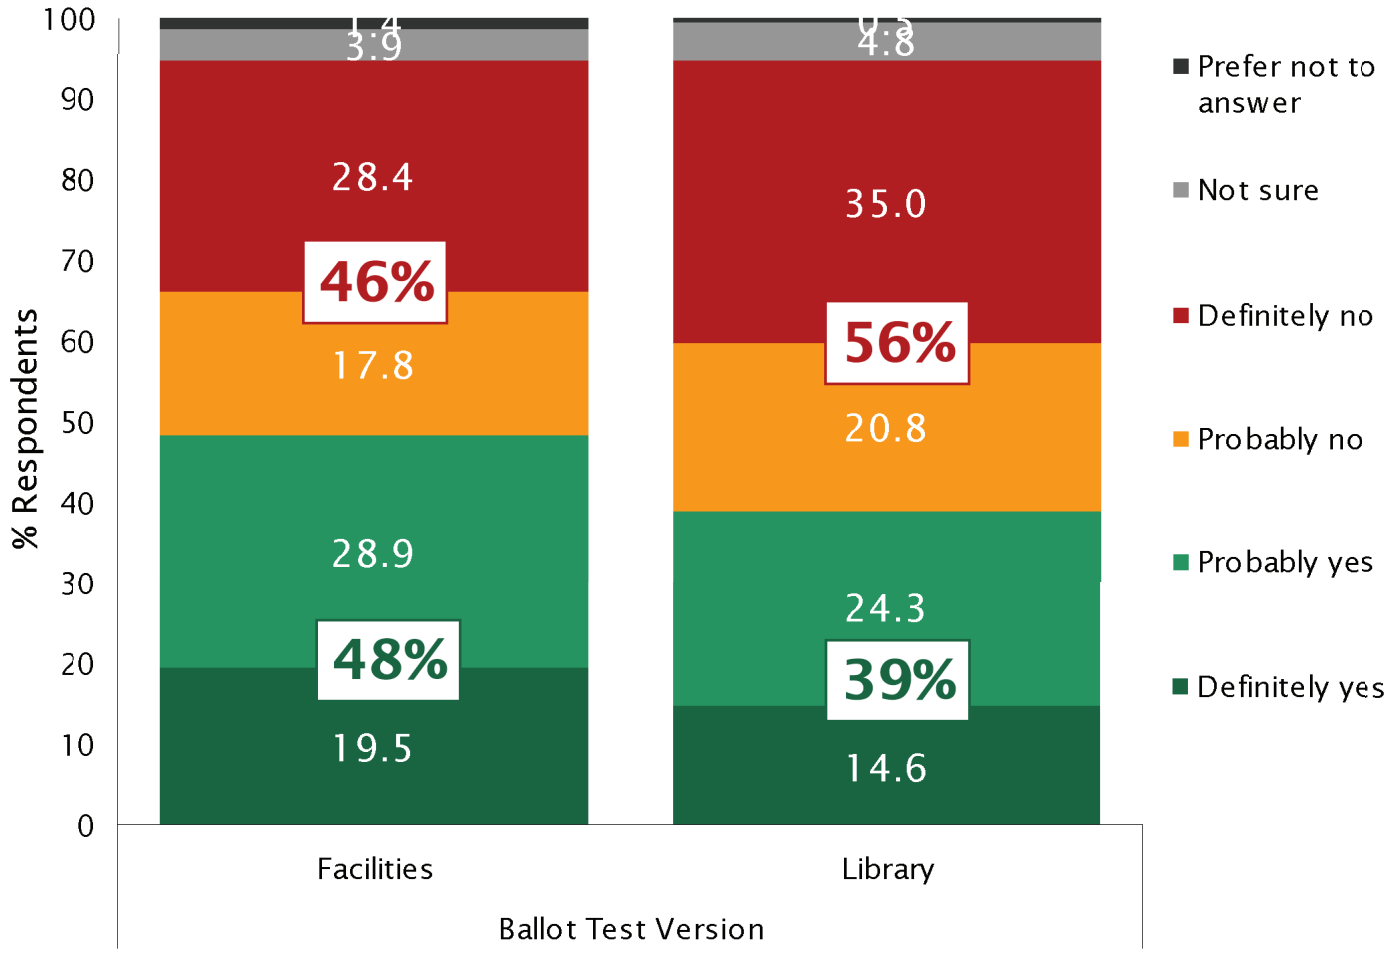
City raised local sales tax five years ago, generated over $20M in extra revenue; should use that money to fix community facilities rather than asking voters for another tax increase

Everyone is coming after us for tax increases, state, county taxes, school bonds, other taxes on ballot this year; enough is enough; we can't afford to keep raising taxes



Local businesses, residents hit hard by pandemic, now facing high gas prices, runaway inflation; many struggling to stay afloat; now is not time to raise taxes

Community is an expensive place to live, especially for young families, seniors, those on fixed incomes; passing measure will make it even less affordable



TRUENORTH RESEARCH

NEGATIVE ARGUMENTS: LIBRARY

TRUENORTH RESEARCH

FINAL BALLOT TEST

KEY CONCLUSIONS

Does a bond appear to be feasible under current CA law? *No, but if Proposition 5 passes it is a game changer.*

Positive Signs

- Voters understand the need to repair/maintain facilities and infrastructure
- Popular projects and improvements
- Solid positive arguments

Challenges

- Two-thirds threshold under current law
- Tax rate sensitivity
- Opposition arguments resonate (-4%)
- Electoral climate: Hyper-partisanship, statewide initiatives, & overlapping measures.
- Potential for AB1416 impacts

NEXT STEPS

- Refinement of the Schematic Design
- CEQA Analysis
- Preparation of Final Architectural, Engineering & Construction Documents
- Included in the City's 5 Year CIP Plan, $1,046,650 budgeted for FY2025
- IDS On Call Agreement - Staff requested a proposal:

Project Budget:	**$1,046,650**
Project Review and Schematic Design Refinement:	$71,836
Design Development:	$213,551
Construction Documents:	$325,168
Agency Review and Approvals:	$31,802
Construction Bid Assistance:	$11,752
Construction Administration:	$71,472
Total Contract Amount:	$725,581
Remaining Available Project Budget:	**$321,069**

RECOMMENDATION:

THAT THE CITY COUNCIL:

1. Award an Agreement for Contract Services to IDS Group, Inc., in the not to exceed amount of $725,581; and
2. Authorize the City Manager or his designee to execute the agreement, including any minimal and/or non-substantive changes.

Attachment D

Overview of California Municipal Finance: Property Taxes, Bonds, and Key Propositions

1. Municipal Finance and Property Taxes

Municipal finance in California primarily relies on property taxes, sales taxes, and fees for municipal services. Historically, property taxes have been a vital revenue source for cities, funding essential services including public safety, parks, libraries, and infrastructure.

2. Proposition 13 (1978)

Proposition 13 significantly limited California cities' revenue-raising ability by:

- Capping property taxes at 1% of assessed valuation.
- Limiting annual increases in assessed valuation to 2%, unless a property is sold or substantially improved.
- Requiring a two-thirds voter approval for new local taxes, including bond measures funded by property taxes.

This proposition dramatically constrained local government budgets, shifting reliance to alternative revenue sources.

3. Proposition 46 (1986)

Proposition 46 reaffirmed local governments' ability to issue General Obligation (GO) bonds funded by property tax increases for capital improvements such as parks, public buildings, infrastructure, and emergency services facilities. However, these GO bonds require two-thirds (66.7%) voter approval.

4. Voting Requirements for Facility Bond Measures

Under current law:

- City council-initiated General Obligation bond measures require a two-thirds (66.7%) voter approval.

5. Citizen Initiatives and the 50% Threshold

Recent court decisions, notably City of Upland v. California Cannabis Coalition (2017), clarified by subsequent litigation, established that citizen-sponsored initiatives placed on the ballot by voter petitions only require a simple majority (50% + 1) for approval. This significantly lowers the threshold and provides a strategic advantage for community groups or citizens seeking to fund municipal projects or impose special taxes without the higher barrier of two-thirds voter approval.

6. ACA 5 (2024) and its Failure to Pass

ACA 5, placed on the November 2024 ballot, proposed reducing the voter approval threshold for certain municipal infrastructure bond measures initiated by local governments from two-thirds to

Overview of California Municipal Finance: Property Taxes, Bonds, and Key Propositions

55%. The failure of ACA 5 maintained the existing high threshold of two-thirds voter approval, preserving the status quo. Consequently, the dynamic established by Proposition 13 and Proposition 46 remains unchanged, continuing the significant hurdle cities face when seeking voter approval for infrastructure funding.

Summary of Voting Thresholds Post-ACA 5 Failure

Measure Origin	Required Approval
City Council-Initiated GO Bonds	**Two-thirds (66.7%)** voter approval
Citizen-Initiated Bonds/Special Taxes	**Simple majority (50% + 1)** voter approval

Key Implications:

- Proposition 13 and Proposition 46 continue to restrict cities' financial flexibility.
- Citizen initiatives remain a powerful tool for circumventing the two-thirds requirement.
- The failure of ACA 4 to pass maintains the challenging environment for city-sponsored infrastructure funding, reinforcing the importance of citizen-led initiatives in municipal finance.

LOS ANGELES COUNTY
REGISTRAR-RECORDER/COUNTY CLERK

County Ballot Initiative Frequently Asked Questions

Initiating and Submitting an Initiative

How do I start an initiative in Los Angeles County?

Initiating an initiative in Los Angeles County involves drafting a proposed law or changes to law and creating a petition outlining the specifics. Initiative proponents can start the process by submitting to the Registrar-Recorder/County Clerk (RR/CC) the written text of the proposed law, a Notice of Intention (NOI) to circulate a petition in the County, along with a request for ballot title and summary (to be prepared by County Counsel). This would start the initiative process which involves preparation of the ballot title and summary, publication of the NOI and ballot title and summary, and filing of the Proof of Publication before the initiative petition can be circulated in the County for the gathering of signatures. Once the petition is ready for circulation and the circulation period commences, proponents have 180 days to secure a sufficient number of signatures on the petition and file the petition with the RR/CC to qualify the initiative measure for the ballot. The petition must meet the legal requirements set by the California Elections Code and California Code of Regulations.

What are the key elements needed in an initiative petition?

An initiative petition should have a clear, concise, and legally compliant statement of the proposed law. It requires the inclusion of a ballot title and a summary prepared by County Counsel and the precise text of the proposed initiative measure.

What are the steps to submitting an initiative petition?

The key steps to submitting an initiative petition include: (1) Proponents' filing of an NOI with the written text of the proposed law and request for ballot title and summary with the RR/CC; (2) The preparation of the ballot title and summary by County Counsel following RR/CC's review and acceptance for filing of the documents submitted by proponents; (3) Publication of NOI and ballot title and summary by proponents; (4) Filing of Proof of Publication by proponents; and (5) If requested by proponents, review and finalizing of the petition format between RR/CC and proponents. Once the petition is deemed ready for circulation and all the legal requirements are met, the proponents have 180 days to circulate the petition for signatures by the registered voters in the County and file the petition with the RR/CC.

If the number of signatures on the petition submitted to the RR/CCC equals or exceeds the minimum number of signatures required, RR/CC will examine and verify the signatures on the petition within 30 business days. The minimum number of signatures required to qualify a County initiative measure for the ballot is a number equal to not less than 10% of all votes cast in the County for all candidates for Governor at the last gubernatorial election preceding the publication of the NOI.

Circulation of Petitions

Who can circulate petitions for signatures?

Pursuant to the California Elections Code, the process of circulating petitions to gather signatures is open to persons who are 18 years of age or older. Typically, any registered voter can participate in the circulation of a petition.

What are the requirements for gathering signatures?

Every sheet of the petition requires a declaration by the circulator affirming that the signatures were collected while the circulator was present.

Is there a deadline for gathering signatures?

Yes, initiative petitions have a specific timeframe within which signatures must be gathered. Once the petition is deemed ready for circulation and all the legal requirements are met, the proponents have 180 days to circulate the petition for signatures by the registered voters in the County and file the petition with the RR/CC. It is essential to ensure that all signatures are collected and filed with the RR/CC at one time within the designated period.

Can someone sign the petition more than once?

No, each voter is allowed to sign the initiative petition only once.

Petition Signature Verification

How are petition signatures verified?

The RR/CC verifies each signature submitted on the petition against the voter's signature(s) and other information in the voter's registration records. This process involves checking the eligibility and registration status of each signer.

What factors might cause a signature to be invalid?

Signatures can be invalidated for various reasons, including, but not limited to, being ineligible, not registered to vote in the relevant district, the residence address on the petition differs from the voter's registration record, or the signature on the petition does not match the signature(s) on the voter's registration record.

What happens if the required number of signatures is not met?

An initiative petition must contain a certain number of valid signatures to qualify the initiative measure for the ballot. If the initiative petition falls short of the required number, it cannot qualify for the ballot.

What happens if a signature is found to be invalid during the verification process?

Any invalidated signatures during the verification process are not counted toward the required number of valid signatures. If too many signatures are invalidated, the initiative might fail to qualify.

Qualification

How many signatures are needed for an initiative to qualify?

The number of signatures required to qualify a County initiative measure for the ballot is the number not less than 10% of all votes cast in the County for all candidates for Governor at the last gubernatorial election preceding the publication of the NOI. Note that the minimum signature threshold varies depending on the type of initiative at issue (e.g., state initiative, district initiative), and different statutory requirements apply. Depending on the type of initiative, the number of required signatures can be based on the percentage of voters who voted in an election or the percentage of voters in the jurisdiction affected by the proposed initiative.

Can an initiative be withdrawn after submission?

Yes, an initiative proponent can withdraw an initiative at any time before the 88th day before the election.

What determines if an initiative qualifies?

An initiative qualifies for the ballot when the initiative petition successfully garners the required number of valid signatures within the statutorily prescribed period. Additionally, the proposed initiative must conform to all legal prerequisites and criteria to be eligible for the ballot.

CITY FACILITIES UPDATE

CITY COUNCIL
MARCH 11, 2025
ADAM RAYMOND, CITY MANAGER

BACKGROUND

- **Current Strategic Plan and Draft 2025-2027 Strategic Plan**
  - Requires significant resources to be directed to public infrastructure
  - $50 million in completed projects over the past 5-years
    - Miles of streets, sidewalks, and water infrastructure replaced
    - Upgrades to Parks (e.g. Louie Pompei, playgrounds) and facilities (e.g. Council chambers)

- **Documenting City Facility and Infrastructure Needs (Summary Listing)**
  - January 2023 - Contract to Myers Houghton and Partners, Inc. (MHP)
    - In-depth structural analysis/evaluation and initial visioning activities

  - September 2023 – Comprehensive water system evaluation
    - $350 million in projects needed over the next 30 years
    - $30 million programmed for completion in next five years

BACKGROUND

➢ Documenting City Facility and Infrastructure Needs (Con't)

- January 2024 - Discussion on the MHP Library assessment/visioning analysis and funding options
  - Staff directed to complete an overall condition analysis of major City facilities and survey the community for public input on a possible revenue measure

- January 2024 - the City Council approved a Joint Use Agreement MOU with Glendora Unified School District (GUSD)
  - Outlines a partnership methodology for joint capital upgrades (e.g. GUSD High School Aquatics Center)

- August 2024 - Results of a community survey on a possibility citywide and/or Library specific revenue measure
  - Initial support for a citywide facility measure (53%) as opposed to Library specific bond measure (45%)
  - Two highest quality of life improvements in the City are improving infrastructure/roads (17.8%) and addressing homelessness (17.2%)

BACKGROUND

➢ Documenting City Facility and Infrastructure Needs (Con't)

- November 2024 - ACA 5 ballot measure failed (55% no)
  - Would have lowered the threshold for issuing facility bonds for cities from 66.7% (2/3) to 55% (same as schools)

- November 2024 – Agreement with IDS Group, Inc. for Architectural, Engineering and Consultant Services for the City Corporate Yard Improvement Project
  - Increase the usable space by 10,000 sqft; project not funded

- February 2025 - FY 2024-25 Mid-Year Budget Update
  - $50 million in current facility needs (e.g. new roofs, bathrooms, HVAC, etc.)
  - $250+ million needed to significantly improve the City's facilities to modern standards and address current operational needs

FACILITY FUNDING

➢ Current Financial Overview

- Funding for needed investment in upgraded and new facilities does not exist.
  - Rapid growth planned 50 years ago slowed
  - Lack of development impact fees to replace existing facilities
  - Major changes to property tax based revenue measures begain with Prop 13 in 1978

- February 2025 - FY 2024-25 Mid-Year Budget Update
  - City's overall financial position remains stable thanks to Measure E/Z
  - Decreasing sales tax revenues ($1.35 million)
  - Increasing insurance costs ($1-1.5 million)
  - Unknown impacts of Federal spending reductions (e.g. police radios)

FACILITY FUNDING

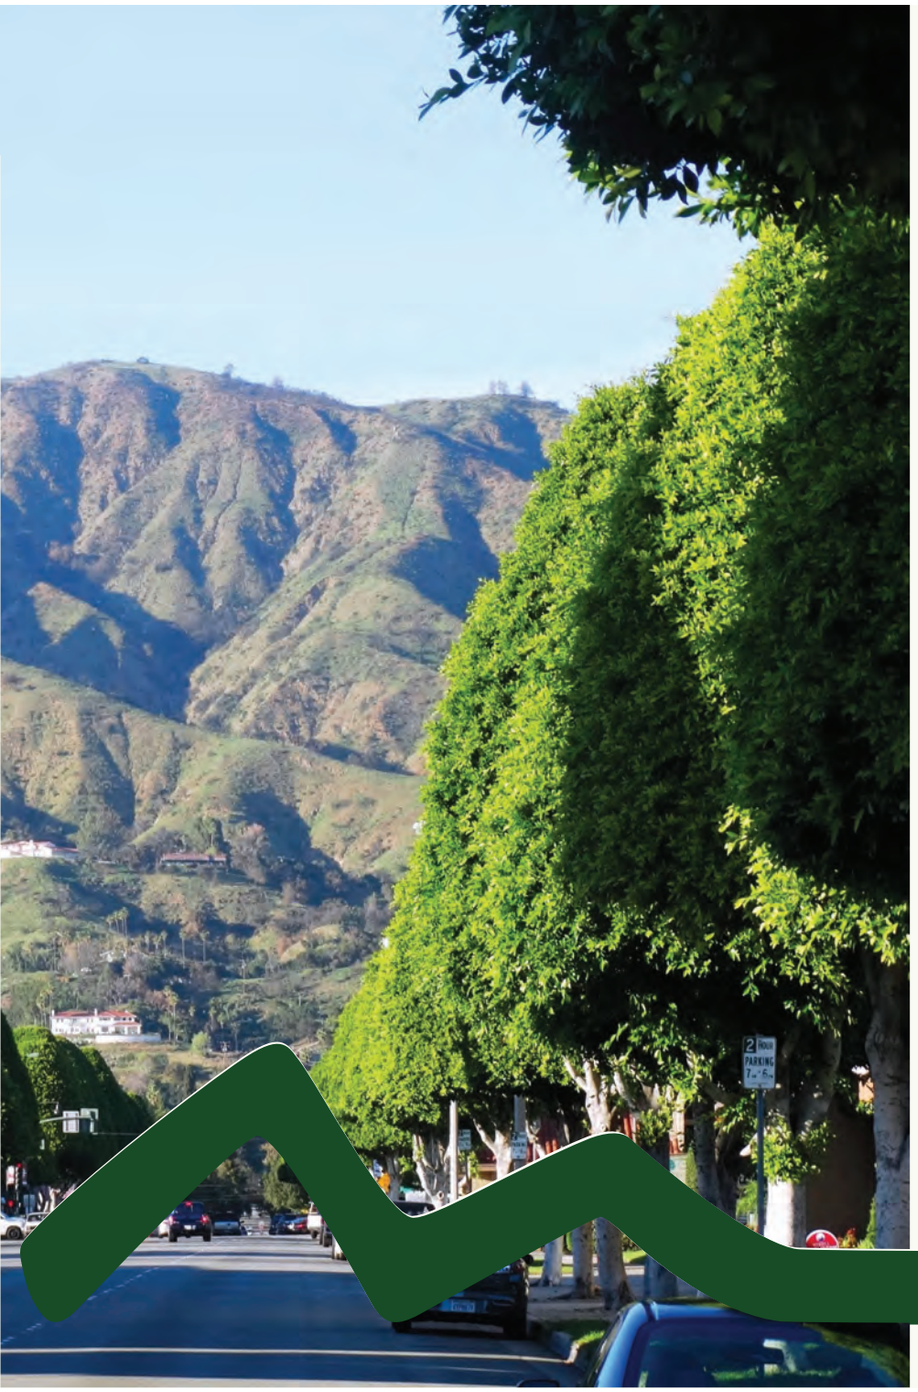
➢ Current Financial Overview

- Funding for needed investment in upgraded and new facilities does not exist.
  - Rapid growth planned 50 years ago slowed
  - Lack of development impact fees to replace existing facilities
  - Major changes to property tax based revenue measures begain with Prop 13 in 1978

- February 2025 - FY 2024-25 Mid-Year Budget Update
  - City's overall financial position remains stable thanks to Measure E/Z
  - Decreasing sales tax revenues ($1.35 million)
  - Increasing insurance costs ($1-1.5 million)
  - Unknown impacts of Federal spending reductions (e.g. police radios)
  - New administration is pushing to eliminate tax-exempt bonds, increasing costs of issuing debt and thereby limiting project scope

REVENUE MEASURE

➢ Revenue Measures



- Proposition 13 (1978) and Proposition 46 (1986) continue to restrict cities' financial flexibility
  - City Council initiated revenue measure for general obligation bonds (e.g. facility bond measure) requires two-thirds (66.7%) voter approval

- Citizen-led initiatives are a viable mechanism to avoid the two-thirds voting threshold
  - Community survey on citywide facility bonds shows an initial success at this required threshold (53%)

- The failure of ACA 5 to pass maintains the challenging environment for city-sponsored infrastructure funding
  - Would have allowed for a city-initiated revenue measure to require 55%, similar to school bond requirements

REVENUE MEASURE

- **Citizen Initiative Process**
  - Outlined in the California Elections Code in sections 9200-9226 and 9600-9610
  - Petitions must be submitted a minimum of 134 days before the election
    - Processing of the initiative petitions must occur no later than the 88th day before the election
  - To qualify for placement on the ballot, 10% of the registered voters in the City must be gathered
    - Approximately 35,000 registered voters in the City of Glendora

RECOMMENDATIONS

That the City Council:

1. Receive a report on capital needs of City facilities and options to fund those needs; and
2. Provide direction to staff, as necessary.

STAFF REPORT

TO:	**Mayor and Council Members**	**DATE:**	**June 24, 2025**
FROM:	**City Manager**	**DISTRICT(S):**	**Citywide**

SUBJECT: **City Facility Capital Needs Update, Funding Options, and Election Timelines**

RECOMMENDATION

That the City Council:

1. Receive a report on capital needs of City facilities, options to fund those needs, and election timelines; and
2. Provide direction to staff, as necessary.

STRATEGIC FOCUS AREAS

- New + Revitalized Facilities
  - Outcome 1: New or revitalized Civic Center
    - Action 3.1 Funding Methodology
    - Action 3.3 Space Planning
    - Action 3.4 New/Remodel

EXECUTIVE SUMMARY

Over the past five years, the City has completed more than $50 million in capital projects; over the next five year, the City is planning for even greater investment. These projects have included significant investments in parks, streets, and water infrastructure. Despite these generational investments, significant needs exist to bring existing City facilities, including the Library, Police Station, Teen Center, Senior Center, City Hall, Transportation Center, and Public Works Maintenance Yard to modern standards.

Deferred maintenance on City facilities is currently estimated at approximately $50 million, with an investment of more than $250 million needed to bring facilities to levels that would provide for modern workspaces and greater accessibility to the public.

Past surveys on these issues signal general support for a comprehensive, citywide facility bond. The initial support level for a potential facility bond (53%) is lower than the two-thirds (66.6%) vote threshold required should the City wish to pursue this measure on its own. Should the measure be undertaken through a citizen-led effort, the vote threshold for the facility bond would be a simple majority (50%+1).

In March 2025, the City Council received an update on the status of City facilities and funding options. To provide greater context for this important community conversation, the report includes an expanded look at the infrastructure of Glendora and cities in California from an historical perspective. The report also provides for greater insight into property tax measures, and the timeline for possible ballot measures.

LEGISLATIVE HISTORY / PREVIOUS ACTIONS

Over the past three years, many public meetings and discussions have been held on facility needs by the City Council, Board of Library Trustees, Community Services Commission, and Planning Commission. The items noted in this section are highlights of the continued community dialogue on city facility needs.

On January 10, 2023, the City Council awarded a contract to Myers Houghton and Partners, Inc. (MHP) to perform in-depth structural analysis and evaluation of the Library's suitability for major renovations and initial visioning activities.

On September 12, 2023, the City Council received an update on the results of comprehensive water system assessment, including information on future water rates. The water assessment identified more than $350 million in projects needed over the next 30 years, with $30 million being programmed for completion over the first five years.

On January 9, 2024, the City Council held a discussion on a the MHP Library assessment/visioning analysis and discussed funding options. Following discussion, the City Council directed staff to complete an overall condition analysis of major City facilities and undertake a community survey soliciting public input on a possible revenue measure.

On January 30, 2024, the City Council approved a Master Joint Use Agreement with the Glendora Unified School District (GUSD). While the agreement largely stipulates use of existing facilities and services provided by the City, the agreement does provide for better maintenance of GUSD Facilities and outlines a partnership methodology for joint capital upgrades (e.g. GUSD High School Aquatics Center).

On August 27, 2024 (Attachment B), the City Council was provided the results of a community survey on a potential citywide and/or Library specific revenue measure. The survey, completed by True North Research, documented initial support for a citywide facility measure (53%) as opposed to Library specific bond measure (45%). Additionally, the survey highlighted the two highest quality of life improvements in the City as improving infrastructure/roads (17.8%) and addressing homelessness (17.2%).

On November 5, 2024, the Statewide ballot measure – ACA 5 – ballot failed (55% no). The State measure would have lowered the threshold for issuing facility bonds for cities and related local agencies, from 66.6% (2/3) to 55% (same as schools).

On November 12, 2024 (Attachment C), the City Council approved an agreement with IDS Group, Inc. for Architectural, Engineering and Consultant Services for the City Corporate Yard Improvement Project in an amount not to exceed $725,581. The City will need to identify an estimated $13-15 million for the construction portion of the project, which will rehabilitate existing space and add a new building to increase the usable space by 10,000 square feet.

On February 25, 2025, the City Council received the FY 2024-25 Mid-Year Budget Update that documented approximately $50 million in current facility needs (e.g. new roofs, HVAC, etc.) that would largely keep City facilities as is. In order to significantly improve the City's facilities to modern standards and better meet current and future operational needs, the estimated costs would total more than $250 million.

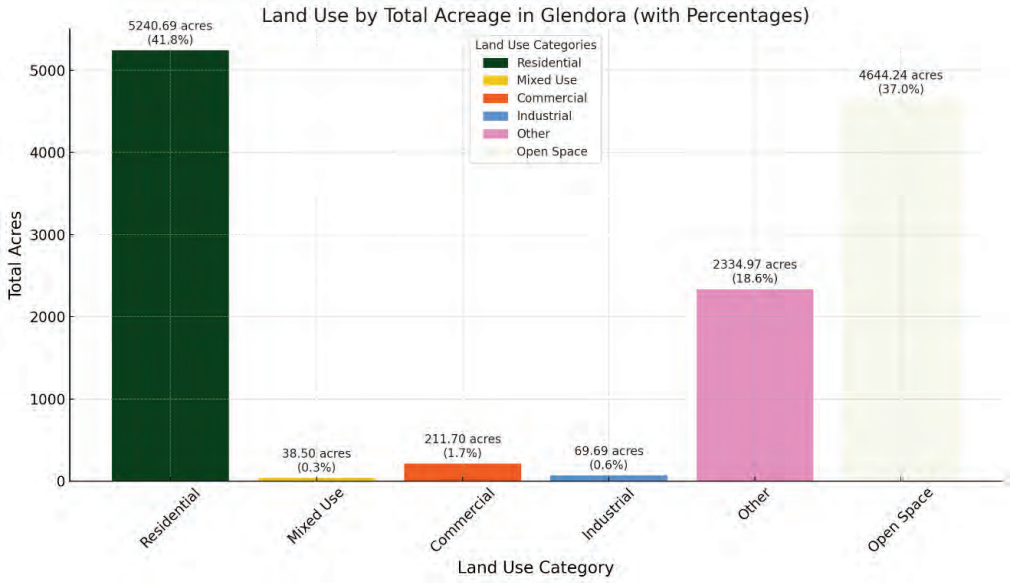
On March 11, 2025, the City Council received a report on the City's facility capital needs and funding options. After discussion, staff was directed to return to City Council with a more in-depth look at the City's historical infrastructure challenges and provide more information on revenue measures, including the timing and options.

DISCUSSION

INFRASTRUCTURE CHALLENGES IN CALIFORNIA CITIES

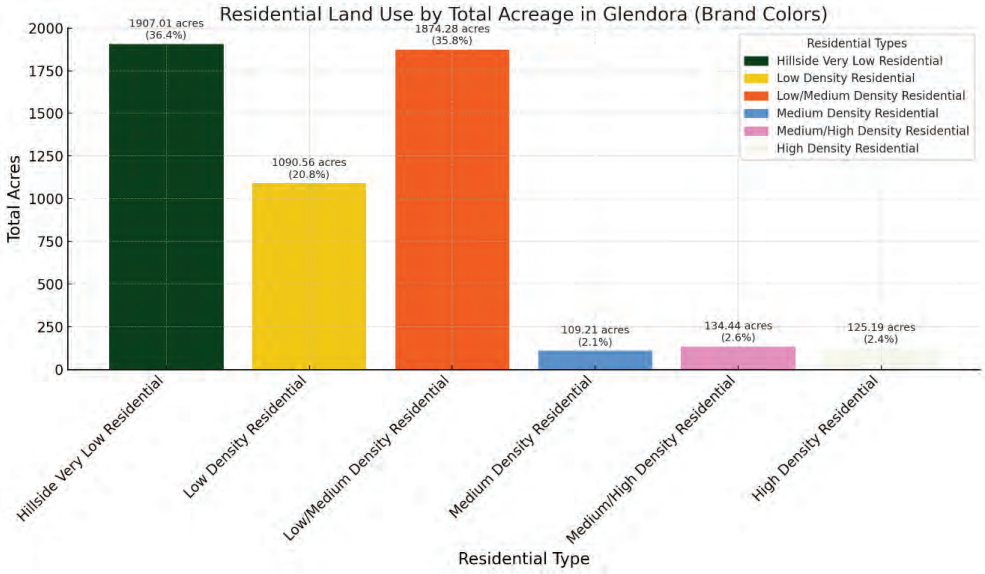
California's cities are grappling with aging infrastructure and funding shortfalls rooted in decades-old development patterns and fiscal policies; Glendora has not escaped these challenges. In July 2002, the City of Glendora was featured in an LA Times articled, with the heading, "Upscale Suburb Warned Its Beauty is Only Skin Deep" (Attachment A). The Article begins, "It's a fairly well-do-do suburb with multi-million-dollar mansions in the foothills and a bustling commercial center, but Glendora's infrastructure is crumbling, and the city cannot afford repairs." Below is an in-depth analysis of the key factors affecting Glendora, and other cities in California and throughout the nation:

Post-WWII Sprawl and the Infrastructure Legacy



After World War II, rapid suburbanization led to expansive urban sprawl across California. Cities and suburbs built vast networks of roads, highways, water lines, and sewer systems in the 1950s to 1970s, often with federal aid (e.g. the Interstate Highway Act of 1956). While this facilitated growth, it also sowed the seeds of future maintenance burdens. Many postwar suburbs pursued short-term gains while deferring long-term upkeep. The suburban growth patterns encouraged cities to chase growth and discount future liabilities, leading to deferred maintenance.

Sprawling development patterns resulted in more infrastructure per capita (e.g. roads, water lines, sidewalks, etc.) – which is costly to maintain – and many of those assets were built around the same time and are now aging out simultaneously. These assets, generally speaking, do not generate ongoing revenues to pay for their maintenance and upkeep in a sustainable manner.



City of Glendora – Zoning

The City of Glendora is largely a suburban community, and grew quickly from 1960 to 2000, more than doubling in population during that time.

Currently, the vast majority of Glendora is comprised of single-family neighborhoods, with a few commercial corridors. The following chart contains information from the City's 2006 General Plan. Overall, the totality of land use percentages are generally accurate. Major changes since 2006 include the Arrow Highway Specific Plan that added additional housing. The main items in the "Other" category includes the Route 66 Specific Plan (287 acres), Civic/Institutional (347 acres), Utility/Flood Control (267 acres), and Street/Freeways (1,382 acres). Even with the seemingly limited commercial space, the City has several shopping centers in need of significant improvements, including Foothill Blvd./Glendora Ave, Grand Ave/Baseline Ave, and Route 66/Elwood Ave.

Glendora's residential housing make-up is the definition of a suburban community; more than 90% of all housing is comprised of single-family residential.

Glendora, like many suburban communities is experiencing a shift in land zoning practices, driven by evolving consumer spending patterns and acute housing shortages. As traditional retail centers face declining foot traffic due to the rise of online shopping, zoning policies are increasingly adapting to permit mixed-use developments, with a goal of transforming underutilized commercial spaces into vibrant hubs combining residential units with retail, dining, and recreation. Simultaneously, municipalities, in accordance with State laws, are revisiting restrictive zoning codes to encourage densification of housing solutions, such as townhomes, apartments, and accessory dwelling units, thereby addressing affordability issues and meeting growing housing demands within existing suburban footprints.

The City of Glendora is tackling the zoning issue head on; recent projects include an approved Housing Element, which cut red tape for housing production and allowed for more flexible mixed-use projects. While significant work remains, the City is currently in the final stages of a Station Area Vision Plan, Objective Design Standards, and a comprehensive General Plan Update, which are included in the 2025-2027 Strategic Plan. The goals of these major land development issues can be summarized as preserving and enhancing our quality of life by encouraging key investment in specific areas through vetted development standards, that will give Glendorans more dining/shopping opportunities, preserve open space, and take advantage of the A-Line investment.

City of Glendora Population

- 1911 (700) – *City of Glendora is incorporated*
- 1950 (3,988)
- 1960 (20,752)
- 1970 (31,380) – *In the late 1960's the City publishes its General Plan for year 1990 and anticipates a population of 80,000 and student enrollment growing from approximately 9,000 students to 25,000 students*.
- 1980 (38,500)
- 2000 (49,502)
- Present (51,209) – *This is a reduction from a peak of 52,506 in 2020*.

Slowing Growth, Underinvestment, and Fiscalization of Land Use

California's explosive mid-20th-century growth has long since cooled. Many cities are no longer rapidly expanding, which paradoxically contributes to underinvestment. Large leaps of development were followed by periods of stasis, meaning infrastructure networks aged without incremental upgrades. With fewer new projects, political attention and funding often shifted away from infrastructure, leading to maintenance deferrals and a growing backlog.

Fiscalization of land use in California cities refers to the municipal tendency to prioritize revenue-generating land uses over residential housing. This prioritization largely stems from fiscal pressures created by Proposition 13, passed and implemented in 1978, which significantly reduced property tax revenues. As cities strive to balance budgets, they have increasingly favored commercial development that contributes substantial sales tax revenues. For an in-depth look at this topic and how it impacted Glendora, please see Attachment B.

Aging Mid-Century Infrastructure (Everything at Once)

Much of America's infrastructure was built in the mid-20th century and is now decades old. Roads, bridges, pipelines, and transit systems from the 1950s to1970s have reached or exceeded their design lifespans. Deferred maintenance means that roads have crumbled, bridges rusted, and water/sewer systems grown prone to failure. The need for repair is urgent and simultaneous across asset types.

The City's water system is a perfect example of aging infrastructure that suffers from deferred maintenance. As part of the recent rate study, it was determined that the City will need to invest $350 million dollars in capital improvements over the next thirty years to maintain the water infrastructure. The City has dedicated $30 million in capital improvements over the next five years to address urgent issues such as pipeline replacement, reservoir upgrades and replacements and pump and well maintenance. See Attachment C for the Month Year Water Infrastructure Presentation.

This type of deferred maintenance also exists at many of the City's facilities. As the facilities continue to age, the need for maintenance increases exponentially. This is especially true when discussing facility systems such as roofing, HVAC, plumbing, structural support, and electrical. Practical examples of this type of capital maintenance are represented with current projects, such as the need for a new roof at City Hall. Further, the La Fetra Senior Center has a set of stairs that have been condemned and are no longer usable due to structural failures. During a recent structural analysis of the library, it was determined that the main support beams, columns, and footing systems were either undersized or are failing. The original engineering of the support beams did not take into account the tortional load that the beams would need to carry. The torsional effects on the beams have started to produce visible cracking in some sections. For a more comprehensive overview of the Library Building, see Attachment D.

Managing these types of capital maintenance requires a detailed audit of the existing conditions and future planning for all city facilities. To accomplish this, the City engaged a consultant that specializes in providing building assessments and developing budgetary estimates for ongoing maintenance. Over the next 20 years the City will need to spend an estimated $48,871,500 in routine and capital maintenance just to keep the facilities in their current condition. For a more detailed analysis of the costs needed for routine capital maintenance, see Attachment E.

State and Federal Funding: Not Enough for Local Needs

Cities often look to state and federal sources for infrastructure funding, but these are insufficient and inconsistent. State and local governments typically spend 7–9 times more on infrastructure than the federal government. Federal contributions cover only a fraction of local needs. Even the 2021 federal infrastructure law, which provides $45.5 billion to California over five years, is a drop in the bucket compared to decades of deferred maintenance. Further, Federal infrastructure spending has declined in real terms for decades, falling from 1% of GDP in the 1980s to about 0.5% by recent years. Since the Federal contributions are not enough to cover the infrastructure maintenance, States and local jurisdictions have had to develop methods for funding infrastructure maintenance.

Traditionally, development impact fees were collected as new development was approved. The fees were used to build a reserve to assist with the future capital maintenance of infrastructure. Another method of funding on-going and capital maintenance would be to establish a community facilities district, which would impose a per property assessment collected through property taxes. Specifically related to water, are capacity charges for any new development. The capacity charge is based on the quantity of water a new development will consume. The purpose of the capacity charge is to build a reserve offset future capital improvements that will be required for the production and distribution of water. Unfortunately, in the case of Glendora, the development impact fees either do not exist or are too low to keep up with the required maintenance. Additionally, the City has never implemented CFD's or capacity charges. The lack of funding tools makes it virtually impossible, for the City to invest the necessary capital in long-term infrastructure maintenance and improvements. Even if the City were to significantly decrease services to the community (e.g. recreation, public safety, etc.), the needs would still exceed available resources by a wide margin.

Proposition 13 and Local Funding Constraints

A unique challenge in California is Proposition 13 (1978), a property tax limitation that dramatically constrained city revenues. It capped property tax rates at 1% and limited annual assessed value growth to 2%. This significantly reduced revenue growth and caused cities and counties to rely on development fees, special assessments, and sales tax – which are either insufficient or unreliable for long-term infrastructure investment.

Proposition 13 also imposed a two-thirds voter approval requirement for local taxes earmarked for specific purposes, making it difficult for cities to raise funds for infrastructure projects (e.g. school district bonds are 55%).

City of Glendora Examples

The vast majority of the City's facilities were built pre-Prop 13, including City Hall, Library, Police Station, and the majority of the recreation facilities.

The Police Station was built with the assistance of a "Public Safety Bond Proposition" approved by the voters on June 8, 1965 (86% yes / 14% No) – total of 2,872 votes. The measure authorized the City to issue $790,000 in bonds. Total project cost was approximately $1 million.

In 1955, a "Library Bond Proposition" in the amount of $185,000 failed (32% yes / 68% no) – total of 1,320 votes. In February 1969, the City Council called for a general obligation bond measure in the amount of $785,000 for a new Library. In September 1965, citing bond market uncertainty and possible tax law litigation (2/3rds vs 50+1), the City Council canceled the election. In late 1969, the City Council authorized a new library bond to be pursued in an effort to build a 28,000 sqft Library at a total cost of $1.1 million – previous designs were 33,000 sqft. A petition that attempted to mandate the City to call an election gathered 1,136 signatures, falling 240 short of the required amount. $950,000 in general obligation bonds were issued in November 1970, through a Joint Powers Authority created by the City and Glendora Unified School District. The City was able to use property tax revenues to pay back the debt after the County took over the fire department and increased property taxes in Glendora to pay for those services. The City's property tax rate did not reduce proportionally with transfer of the fire department to the County, which allowed the excess capacity to pay for the debt services on the new library.

Glendora's Recent Push for Generational Investment – Still Not Enough

Despite the challenge of funding capital improvements, the City has prioritized investments in critical areas and systems. In 2019, the residents of Glendora passed Measure E, a local sales tax. The funds have assisted the City in enhancing the completion of critical capital projects. The City has also been very aggressive in pursuing grant funds to help facilitate these projects. Through these efforts the city has been able to secure $62 million in grant funding for projects such as the Finkbiner Stormwater Capture project, the People Movement Project, significant traffic signal improvements and many others. These efforts have allowed the City to invest nearly $50 million in capital projects since 2020 (listed below). Over the next five years the city has programed seventy-six capital improvement projects, pending the ability to secure funding, representing an investment of over $108 million dollars.

- **2020**

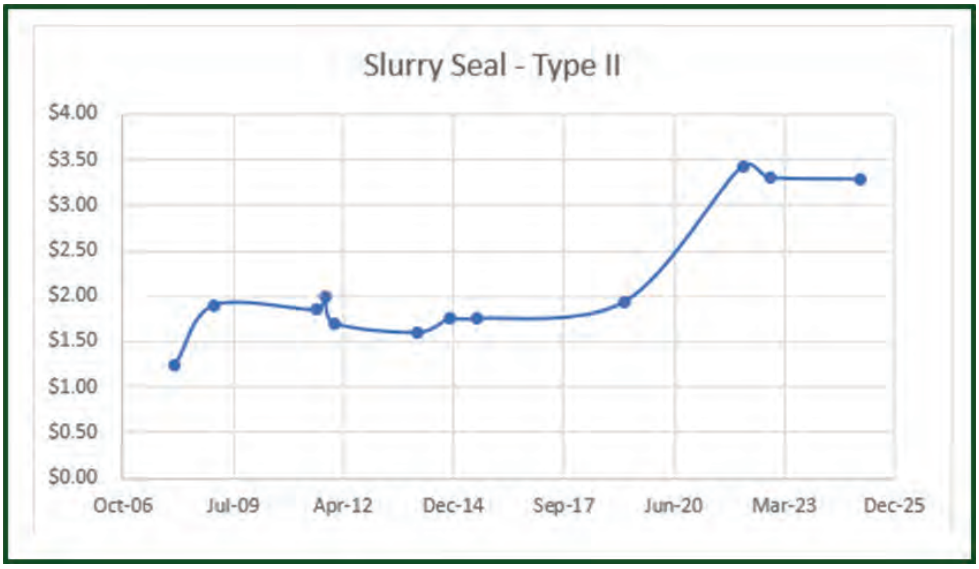
    - Zara and Sellers Watermain Replacement Project
    - CDBG Grind & Overlay
    - Dike St. Et. Al Water and Street Improvements
    - Chamber of Commerce Roof Replacement
    - Hook Canyon Booster Pump Station
- **2021**
    - Citywide Pavement Management Plan
    - Downtown Village Parking Lot Rehabilitation Project
    - Dawson Avenue Watermain Replacement
    - Donington Avenue Water and Street Replacement
    - CDBG Grind & Overlay
- **2022**
    - ADA Curb Ramps and Sidewalk Replacement
    - Cullen Avenue Water and Street Project
    - Citywide Slurry Seal
    - Storm Drain Inlet Insert
    - Antique Streetlight Improvement Project Phase One
- **2023**
    - Gladstone Reservoir Demolition and Parking Lot
    - St. Vladimir, Cossacks Water and Street Improvements
    - Police Department – Security Door Replacement
    - Citywide Slurry Seal
    - Bender-Carter Water and Street Improvements
    - Finkbiner Park Improvements – Phase 1
    - Library Boiler Replacement
    - Library Structural Analysis
    - Louie Pompei Park Turf Replacement
- **2024**
    - Facility Condition Assessment
    - Citywide Security Assessment
    - Finkbiner Park Improvements – Phase 2
    - Mauna Loa Water and Street Improvements
    - Bennett Water and Street Improvements
    - Amelia Street Improvements
    - County Club Water and Street Improvements
    - Cumberland- Palomar Water and Street Improvements
    - Finkbiner Park Stormwater Retention Project Design
    - North Glendora Reservoir Replacement Design
    - Street Yard Improvement Design
    - HSIP Traffic Signal Improvements
- **2025**
    - ADA Evaluation and Transition Plan
    - Pavement Management Plan Update
    - Police Department Lobby Improvements
    - Crowther Teen Center Roof Replacement
    - Legion Center Restroom Remodel
    - La Fetra Center Roof Repairs
    - Skate Park Resurface
    - Gladstone Shade Structure & Picnic Site Installation
    - Lone Hill Ave Street Rehabilitation
    - Glendora Ave Water and Street Improvement Design
    - Colorado Ave Water and Street Improvement Design
    - Cypress Water and Street Improvement Design
    - People Movement Project (PMP) / First Last Mile Design
- **2026**
    - La Fetra Reconstruction of Stairs
    - Scout Hut Improvements
    - Gladstone Pickleball Courts
    - South Hills Bike Park
    - San Dimas Wash Urban Trail
    - Finkbiner Park Stormwater Retention Project
    - Colorado Ave Water and Street Improvement Project
    - Cypress Water and Street Improvement Project
    - Verdugo Water and Street Improvement Project
    - North Glendora Reservoir Replacement

    - Sierra Madre and Goddard Reservoirs Improvements
    - Street Name, Gateway, and Wayfinding Program
    - CDBG Curb Improvement Project
    - Annual Slurry, Grind & Overlay Project
- **2027**
    - PMP / First Last Mile, Glendora Ave & Foothill Blvd Improvements
    - Antique Street Lights refurbished and installed on Glendora Ave
    - Fushia Water and Street Improvement Project
    - Upper Gordon Reservoir Improvements
    - Annual Slurry, Grind & Overlay Project
- **2028**
    - Youth Center ADA Bath Remodel
    - Glendora Ave. Water and Street Improvement Project
    - Foothill Blvd Water and Street Improvement Project
    - Milton Water and Street Improvement Project
    - Hidden Springs Reservoir Improvements
    - South Hills West Reservoir Improvements
    - Annual Slurry, Grind & Overlay Project
- **2029**
    - Live Oak Water and Street Improvement Project
    - Annual Slurry, Grind & Overlay Project

Construction Costs vs. General Inflation (1950–2025)

The cost of building and repairing infrastructure has risen faster than general inflation. Construction cost indices (such as ENR's) have increased about 22–25x since 1950, while general CPI has risen around 12x. This divergence means that a dollar goes much less far in construction today.

Modern projects also incur higher costs due to environmental and safety regulations, design standards, and rising material and labor expenses. Even maintaining existing assets is costly – repaving roads or replacing water mains now costs much more than in previous generations, with significant increases over the past five years.

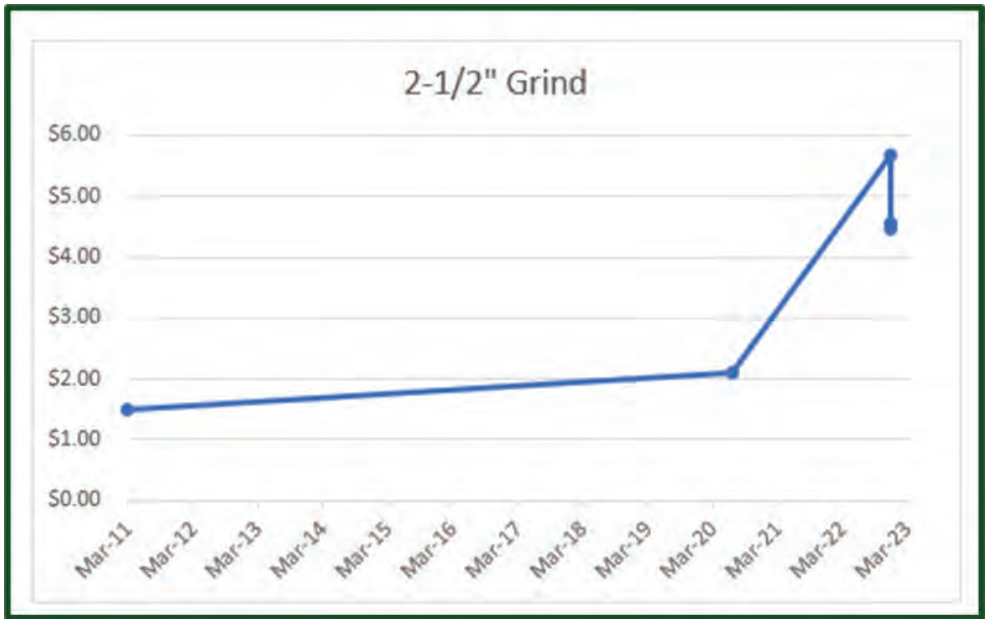


City of Glendora Project Cost Impacts

Staff reviewed completed City street and water infrastructure projects from the past decade and beyond to illustrate how significantly project costs have increased over time.

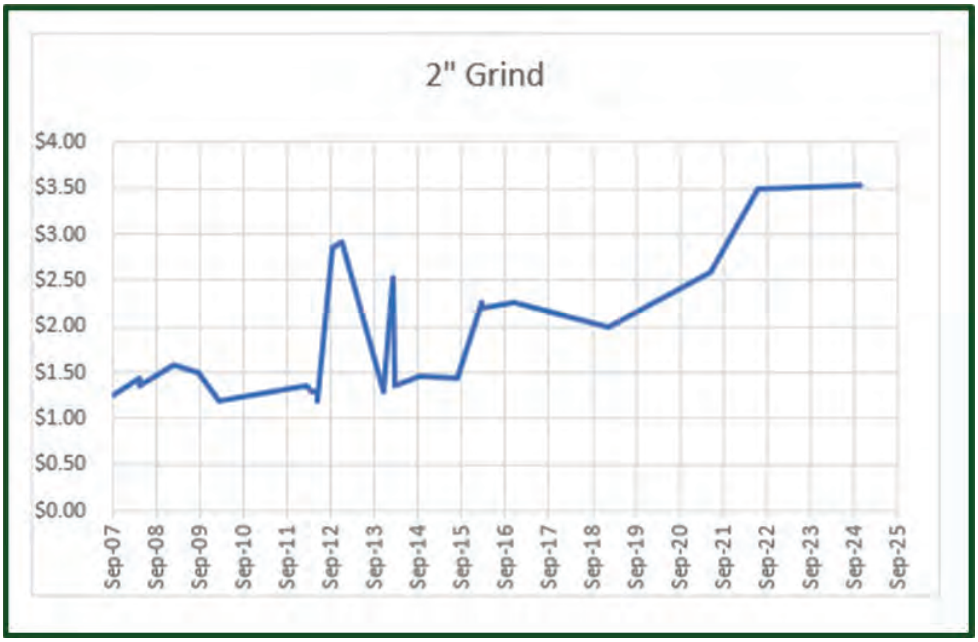
Slurry Seal Projects

Over the past three years, the cost of slurry seal projects has averaged approximately $3.30 per square yard. This pricing encompasses not only the slurry seal application but also includes additional services such as weed control, crack filling, and the restoration of pavement striping.



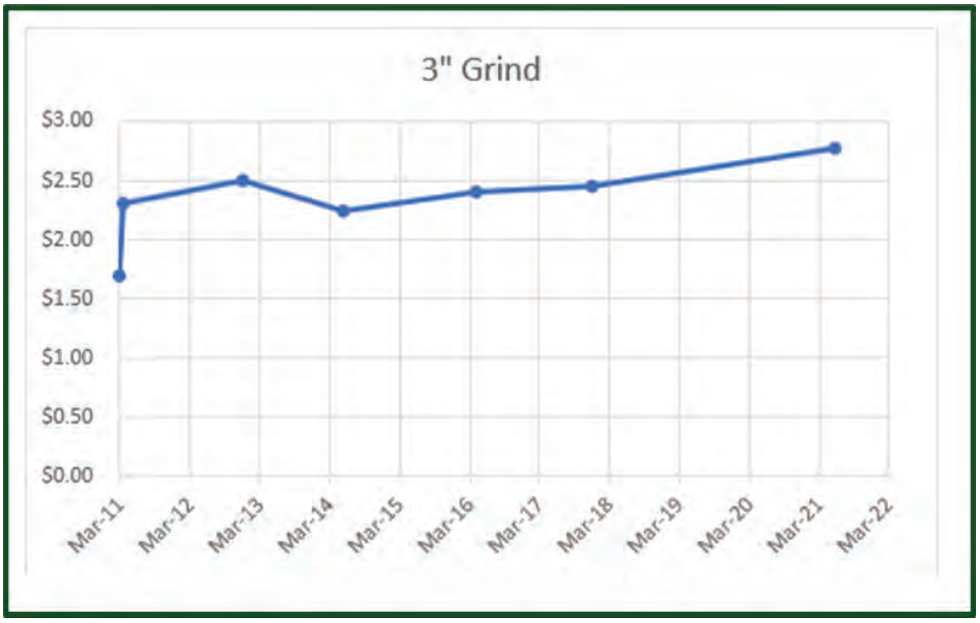
Twelve different slurry seal projects from January 2008 to February 2025 were analyzed to study the trend of the project costs. It is noteworthy that this cost represents a significant increase compared to historical rates. Before mid-2019, the cost of slurry seal projects consistently remained below $2.00 per square yard for over a decade. The rise in costs since mid-2019 reflects a broader trend of increasing construction and material expenses.

Grind and Overlay Projects



Cities typically conduct pavement rehabilitation projects using a 2-inch or 2-1/2-inch grind, along with localized dugouts. In the past three years, the City of Glendora has completed several major street projects using the 2-1/2-inch grind and overlay method. These projects involved extensive concrete improvements and water main replacement projects.

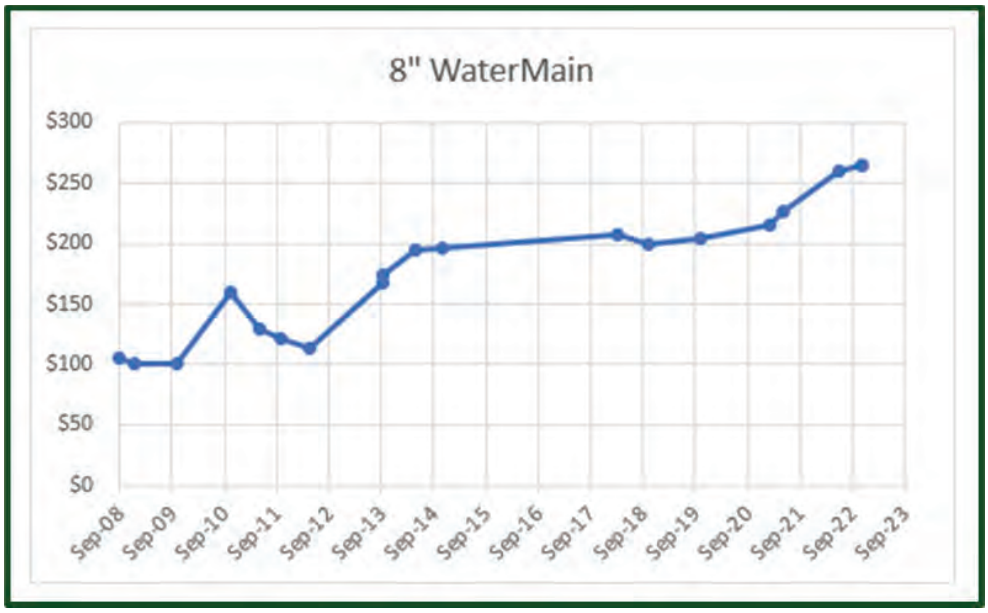
Over the past two years, the average cost for a 2-1/2-inch grind and overlay project has been approximately $5.00 per square foot. This cost includes not only pavement rehabilitation but also the removal and replacement of damaged sidewalks, curb ramps, and cross gutters, as well as the restoration of pavement striping. For comparison, a similar 2-1/2-inch pavement project completed in 2010 had a grinding cost of $2.10 per square foot. This represents a cost increase of over 100%.



A similar comparison was conducted for the recent 2-inch grind and overlay project against those completed in the past decade. From 2007 to 2016, the City had carried out either a 2-inch grind and overlay or street reconstruction projects. For this analysis, 25 projects from 2008 to 2025 are considered.

The findings reveal a 100% increase in project costs since 2019. The rise in costs since mid-2019 reflects a broader trend of increasing construction and material expenses, as observed before. The abrupt increase in project costs from 2011 to 2016 is due to the addition of deep (6-inch to 9-inch) pavement dugouts.

Data is available for 3-inch grind and overlay from 2011 to 2021 for this comparison. The project carried in June 2021 had a unit cost of $2.77 per square foot. Considering the trend of increasing costs for other grind and overlay projects, today's construction cost is estimated to be around $6.50 per square foot.



Watermain Replacement Projects

In the City's water distribution system, the water main size varies from 4-inch to 20-inch. For the new water main installation, a minimum size of 8-inch water main is considered. Water mains larger than 8-inch are either replaced with the same size or may be increased as recommended in the latest Water Master Plan.

For this comparison, 19 projects installing 8-inch water mains are considered from 2008 to 2022. It has been observed that the construction cost remained stable from 2014 to 2020. For the recent water main replacement projects, it was decided to package the water main replacement and street rehabilitation projects together to achieve better construction cost efficiency, cause less impacts to the community and increase the longevity of streets by not digging and patching a recently paved street for a water project.

Over the past three years, the cost of the watermain replacement project has averaged approximately $265 per linear foot for 8-inch water pipe. This pricing encompasses not only the water main but also includes installation of fire hydrants, tie-in connections, new service laterals, and the restoration of concrete and landscaping as needed. Street resurfacing projects were carried out after the completion of the water main replacement, resulting in cost savings for the water projects. While this price per linear foot marks a significant increase from 2013 to 2020, it is estimated that if these projects were awarded as water main replacement only, the cost per linear foot could be between $310 to $ 325.

As noted, the $265 per linear foot cost represents a significant increase compared to historical rates. Prior to 2020, when the unit cost of water main projects consistently remained around $200 per linear foot for over seven years. The recent rise in costs reflects a broader trend driven by decreased material availability and rising construction and labor expenses. The data clearly shows that capital maintenance project continue to increase in cost at an exponential rate forcing cities to make difficult decisions about how and where to apply the limited resources that are dedicated to infrastructure maintenance.

As noted previously, the City has spent several years documenting and analyzing the facility and infrastructure needs of the community. Despite significant capital investment over the past five years, total deferred maintenance on City facilities is anticipated to cost approximately $50 million, with an investment of more than $250 million needed to bring facilities to levels that would provide for modern workspaces and greater accessibility to the public. The City is currently working with the DLR Group to build upon the work previously conducted on various assessments of the city facilities, including the Library. The final product will an overview of the civic center changes needed, and how those improvements benefit the community through their access to the government and added amenities for their enjoyment. In addition to design renderings, the final product will include estimated costs for the work. Staff anticipates providing this information to the Library Board, Planning Commission, and City Council in early Fall 2025.

California's cities face a perfect storm of infrastructure challenges: aging systems, funding constraints, restrictive policies, and rising costs. Addressing these issues will require significant investment, policy reforms, and more sustainable growth strategies. Glendora, through the investment of the community via Measures E/Z, successful grant and federal funding campaigns, and strategic use of combined street and water projects, have been able to make generational investments in the community. Unfortunately, these efforts are not enough. Without action, infrastructure decay will continue to affect safety, equity, and economic vitality across the state. It should be noted, these issues are faced nationally, especially in those areas that saw significant growth post World War II.

REVENUES MEASURES TO PAY FOR INFRASTRUCTURE

Attachment F to this report provides a summary of property tax changes, dating from Proposition 13 in 1978 to the failure of ACA 5 in November 2024 and possible future changes under a proposal from the Howard Jarvis Taxpayers Association (HJTA). In summary:

- Proposition 13 (1978) and Proposition 46 (1986) restrict cities' financial flexibility.
- Citizen-led initiatives are a viable financing mechanism which require a lower voting threshold than city sponsored tax or bond measures.
- With the failure of ACA 5 to pass, the challenging environment for city-sponsored infrastructure funding will remain.
- The HTJA submitted two ballot measures to the California Attorney General's Office, which is the first step to prepare a petition to circulate for signatures, in order to place them on the ballot in 2026. Both measures are titled the Save Proposition 13 Act of 2026. Generally, both require 2/3rds vote on all special taxes and eliminate court decisions that have impacted Proposition 13. The only difference between the two measures, is that one provides for retroactivity of every tax measure that does not meet the new rule, the other tax measure does not have this provision.

Measure Origin	Required Approval
City Council-Initiated GO Bonds / Parcel Tax	**Two-thirds (66.7%)** voter approval
Citizen-Initiated Bonds/Special Taxes / Parcel Tax	**Simple majority (50% + 1)** voter approval

The August 2024 community survey (Attachment G) on a possible citywide and/or Library specific revenue measure documented initial support for a citywide facility measure (53%) as opposed to Library specific bond measure (45%). It is unlikely that the City would be able to garner enough support for a City Council initiated facility bond measure; however, should the measure be undertaken through a citizen-led effort, there is an improved likelihood of its passage.

As part of the discussion on March 11, 2025, the City Council asked staff to provide more information on GO Bond Measures and Parcel Tax measures. With the assistance of the City Attorney's Office, two sample ordinances, Attachments H (GO Bond) and I (Parcel Tax), are included. If the City Council chose to move forward with either option, these sample ordinances would be updated to include specifics on amounts charged, methodology for amounts charged, who is charged, allowable uses of funding, and creation of an oversight body.

Below is a summary of the typical differences between a General Obligation (GO) Bond and Parcel Tax ballot measure:

Feature	GO Bond Tax Measure	Parcel Tax Measure
Purpose / Use of Funds	Capital improvements only (e.g., buildings, roads, parks)	Capital projects (e.g. buildings, roads, parks) **and** operating expenses (e.g., maintenance)
Funding Mechanism	Bonds issued and repaid over time	Tax revenue collected directly from parcels
Tax Type	Ad valorem tax based on assessed property value, square footage, parcel type, etc.	Typically, a flat rate or tiered formula per parcel.
Who Pays	Property owners based on tax type	All parcel owners, regardless of value, Exceptions to the tax can include those that meet certain income requirements, etc.
Voter Approval Threshold	2/3 majority for cities (55% for school bonds under Prop 39). Possibility of (50%+1) on a citizen initiative.	2/3 majority under Prop 13 for City Council approved ballot measure 50%+1 for citizen initiative.
Flexibility of Use	Restricted to voter-approved infrastructure projects.	Flexible: Can fund capital projects, programs, maintenance, services, and debt.

Debt Involvement	Yes – city takes on debt and repays it over time.	Proceeds may be pledged to a lease financing or an installment sale financing, associated with a revenue bond or a certificate of participation.
Duration / Term	Typically, 15–40 years	Can be temporary (e.g., 10 to 40 years) or ongoing
Security / Backing	Backed by ad valorem tax levied every year; legally obligated to repay	Optional; funds collected annually

PROCESS TO ADD A PARCEL/GO BOND ON A BALLOT FOR CONSIDERATION OF THE VOTERS

The process for a citizen initiative petition is outlined in the California Elections Code is outlined in Sections 9200-9226 and 9600-9610: http://leginfo.legislature.ca.gov/faces/home.xhtml

It is suggested that petitions be submitted a minimum of 144 days before the election to provide for the processing required by State law, it is estimated that a voter initiated initiative process can take between 12 to 18 months. All requisite processing of the initiative petitions must occur no later than the 88th day before the election to appear on the ballot. This includes verification of signatures, City Council action, and additional publication requirements, among other items.

To qualify for placement on the ballot, 10% of the registered voters of the city (according to the last report of registration by the county elections official) must be gathered. As of the February 2025 Voter Registration Report, there are 35,909 registered voters in the City of Glendora (Attachment J). A Frequently Asked Questions (FAQ) document from Los Angeles County about the citizen initiative process can be found as Attachment K.

For an initiative to qualify for an election ballot, the following statutory requirements apply:

- *Submission Timeline:* Petitions should be submitted a minimum of 134 days prior to the election to allow for legally required processing.
- *Qualification Deadline*: All processing must be completed no later than the 88th day before the election in order for the measure to qualify for ballot placement. This includes signature verification, review by the City Clerk and County Elections Official, City Council action, and any necessary public notifications.
- *Signature Threshold:* Per the Elections Code, proponents must gather valid signatures equal to 10% of the City's registered voters based on the most recent county registration report. As of the February 2025 Voter Registration Report, the City of Glendora has approximately 36,000 registered voters, requiring approximately 3,600 valid signatures for qualification.

To assist residents in navigating the initiative process, the City Clerk's Office has developed a comprehensive, user-friendly guide specifically designed to outline the legal requirements, procedural steps, and best practices for placing a citizen-sponsored measure - on the ballot. The guide includes the following key components:

- *Introduction to the Initiative Process* - An overview of the citizen's right to propose legislation or bond measures and how this right is exercised through the initiative process.
- *Legal Framework and Definitions* - A summary of the applicable Elections Code sections, key definitions (e.g., "Notice of Intent," "circulator," "proponent"), and the legal structure governing initiatives.
- *Notice of Intent and Title Preparation* - Instructions for preparing and filing the Notice of Intent, which is the first official step in launching an initiative. This section also explains how the official ballot title and summary are prepared by the City Attorney.
- *Petition Format Requirements* - Detailed guidance on how the petition must be formatted, including font size, mandatory language, spacing, and signature block requirements to meet state law.
- *Circulation and Signature Gathering* - Practical tips and legal guidelines for circulating petitions and collecting valid signatures, including advice on interacting with voters, preventing disqualification of signatures, and maintaining proper records.
- *Petition Filing and Verification Process* - Step-by-step instructions for submitting the completed petition to the City Clerk, followed by a description of the verification process conducted by the County Elections Official.
- *City Council's Role and Options* - A description of the actions the City Council must take once a petition qualifies for the ballot, including the options to adopt the ordinance without alteration, order a report, or place it before the voters at an election.
- *Election Timeline and Publication Requirements* - A breakdown of statutory deadlines leading up to the election, including voter information pamphlet deadlines, public notices, and impartial analysis preparation.
- *FAQs* - A Frequently Asked Questions (FAQ)
- *Sample Forms and Templates* - Includes a sample Notice of Intent, petition cover pages, circulator declarations, and timelines for easy reference and compliance.
- *Notice of Intention (NOI) Example (Attachment M)*

This guide is intended to provide clarity and empower community members to fully understand the initiative process before committing time and resources to pursuing a ballot measure. It also helps ensure that all procedural steps are met in accordance with California Elections Code and City policies (Attachment L)

FISCAL IMPACT

After decades of underinvestment in streets, roads, and City facilities, the City has invested more than $30 million in water projects, new streets/sidewalks, major park improvements, and facility upgrades over the last two years, and more than $50 million over the last five years. While these generational improvements were necessary and critical to the quality of life in Glendora, the City faces difficult decisions moving forward. In many ways, this is the same conversation the City had in the late 1990's into the early 2000's.

With rapid increases in capital costs since 2020, and the continued deterioration of key facilities (e.g. civic complex, public works yard, etc.), the City Council will need to consider a revenue measure, which could be a facility bond or parcel tax specifically for capital items. The changing landscape of municipal finance post Proposition 13 does not allow the City to fund critical facilities as it previously did, such as the ones in use today (e.g. Library, City Hall, Police Department, etc.).

Over the past three years, the City has funded structural assessments, space planning, and community visioning of key City facilities. With the inability to fund facility needs from existing funding sources, the City will need to meaningfully engage its residents as we consider replacing aging City facilities. Similar to the decisions made by City leaders more than 50 years ago, current leaders may need to ask the community to fund improvements so future generations of Glendorans can experience the same quality of life enjoyed by the existing community and those that came before us.

There is no fiscal impact associated with the recommendations in this report. Based on City Council direction, staff with provide the fiscal impacts of future policy decisions.

Upscale Suburb Warned Its Beauty Is Only Skin Deep

By GARIOT LOUIMA

July 5, 2002 12 AM PT

Share

TIMES STAFF WRITER

It's a fairly well-to-do suburb with multimillion-dollar mansions in the foothills and a bustling commercial center, but Glendora's infrastructure is crumbling, and the city cannot afford repairs.

An independent auditor identified nearly $100 million in repairs needed to the city-owned water system and another $22 million for city streets.

The problem, said analysts with Citigate Associates, is that Glendora has only $15.6 million in reserve and $4 million in a water fund.

ADVERTISEMENT

The report, commissioned by the city, did not mention the sewer system, but city officials said they suspect those lines also need major repairs. But they said they have no idea what the work would cost, or where they would find the money.

Citigate's report was an eye-opener to the city of 49,415 in the foothills of the San Gabriel Mountains, 27 miles east of Los Angeles. Commercial and residential development haven't slowed during the economic slump, and the city--with a median household income in the $60,000s--has virtually escaped the increase in violent crime that has happened elsewhere.

But experts say Glendora's current financial difficulties are far from unique among the state's more than 500 cities. Public spending on infrastructure in California has declined more than 75% since the 1960s.

ADVERTISEMENT

And since 1978's Proposition 13, which capped property taxes, municipalities all over the state have had a tough time raising money for infrastructure maintenance, said Jeffrey Lambert, president of the California Chapter of the American Planning Assn.

For the most part, Lambert said, cities make piecemeal repairs. If a specific line is leaking, for example, they handle that leak.

"There are several reports out there that suggest the infrastructure needs--not just state roads and dams, but in local cities--there is an overwhelming need for major upgrades," said Steve Preston, chairman of the California Planners Roundtable.

Most cities rely on some state funding for maintenance of arterial roads, Preston said. Cities often allocate revenue from local taxes-- many times a gas tax--to pay for street repairs. Affluent cities such as Glendora sometimes have difficulty finding resources because they often don't qualify for the resources that are out there, Preston said.

When the report, which cost $104,000, was made public in April, many Glendorans scratched their heads in confusion. The report gives 100 areas that local officials should address in the coming years, including adoption of professional standards for several key city jobs.

"The sewer pipes are collapsing, the water pipes are collapsing, the business corridor is virtually a slum, and nothing's being done," said Richard Jacob, a past city councilman who was recalled in a recent special election, along with two others. In exasperation, he added, "This isn't Watts, this is Glendora."

Douglas Tessitor, who sits on the board of directors of the Glendora Republican Club, said most elected officials have long been aware of the infrastructure problems, especially those of the water system, but have been unwilling to act for political reasons.

“The stuff that is out of sight and out of mind that costs money to fix is very easy to defer when there are other, higher profile, sexier demands for money,” Tessitor said.

Idella Cloutman, an 84-year-old grandmother who moved to Glendora in 1933, said, “We’re in pretty bad shape. [The city government] didn’t do anything for 30 years.”

Some officials said they hadn’t been aware of Glendora’s precarious financial state.

“I was surprised that the financial health of the community is not what I expected,” said City Manager Eric Zeigler, who was appointed in May after serving nine months as interim manager.

“When you neglect the physical infrastructure, you, one day, reach a crisis point,” he added. “I don’t think we’ve reached a crisis, but I don’t think we’re at a very healthy place.”

In response to the report, the City Council last month voted 4-1 to impose a development moratorium along Route 66, the city’s main business corridor. Officials said they hope to lift the moratorium, once they have developed a downtown master plan.

The findings of the Citigate report didn’t come as a complete surprise to some officials. In 1995, a report by AKM Consulting Engineers outlined most of the problems with the city’s water system, estimating that improvements and repairs would cost $100 million.

Two years after publication of that report--which became the city’s Water Master Plan--AKM Consulting suggested a 10-year capital improvement program to address the most pressing problems, which included the replacement of key wells and several water mains, totaling $15 million.

Although the city has collected $1.3 million annually since 1999 into a capital improvement fund, less than 20% of those initial improvements have been completed.

Public works director Richard Cantwell said just one of six water mains has been replaced, at a cost of $1 million, and not a single city well has been replaced. “It will take over 70 years at this rate to complete the projects outlined in the Water Master Plan,” the report found.

Other areas of the city’s infrastructure, such as the sewers, still have not been studied.

Glendora owns the sewer lines, but day-to-day maintenance is handled by the Consolidated Sewer Maintenance District of Los Angeles County.

Glendora officials assumed for years that they weren’t responsible for major repairs to the system. That assumption ended in November when the showroom of Glendora Interiors was flooded with raw sewage.

The owner, Annette Nemeth, said the flood caused $86,000 in damages to her office and showroom. The county’s sewer maintenance district has agreed to pay for half of the damages, she said. City officials said they are not responsible. She is considering legal action.

Zeigler said the sewer backup was a wake-up call to him and other officials. Zeigler said he had started asking questions about sewer maintenance and learned “if there is a need for repairs to large portions of the system, the responsibility falls on the city.”

The only problem, he said, is that “there is no identified source of funds to make repairs to the system.”

Fiscalization of Land Use in California Cities: Proposition 13 and Housing Zoning Challenges

Executive Summary

This overview will provide an overview of the fiscalization of land use, driven by California's Proposition 13, and its implications on cities as they strive to meet the state's housing zoning requirements. Proposition 13 significantly curtailed property tax revenues, leading cities to prefer commercial and retail developments that generate higher sales tax revenue. However, recent state mandates requiring increased residential zoning have created a policy conflict, forcing cities to reconcile these competing fiscal and housing demands. Additionally, the rise of online sales and declining commercial centers has further complicated the fiscal landscape, with surviving brick-and-mortar businesses typically offering food, high-end goods, or experiential services.

Introduction

Fiscalization of land use in California cities refers to the municipal tendency to prioritize revenue-generating land uses over residential housing. This prioritization largely stems from fiscal pressures created by Proposition 13, passed and implemented in 1978, which significantly reduced property tax revenues. As cities strive to balance budgets, they have increasingly favored commercial development that contributes substantial sales tax revenues.

Understanding Proposition 13

Proposition 13, approved by California voters in 1978 and enacted immediately, drastically changed property taxation by limiting annual property tax increases to a maximum of 2%, except when properties are sold and reassessed at market value. Although it initially provided significant relief and predictability for property owners, this limitation severely reduced the financial capacity of local governments, historically reliant on property taxes as a stable source of revenue. Consequently, Proposition 13 reshaped the economic incentives underlying municipal land-use decisions.

Impacts on Land Use Decisions

Due to these financial constraints, California cities have increasingly preferred retail and commercial developments to generate necessary sales tax revenues, crucial for funding municipal services such as public safety, infrastructure maintenance, and local amenities. Residential projects have become less appealing because they typically generate lower direct revenue and higher service costs, particularly related to public education, emergency services, and infrastructure. In Glendora, the strain on resources resulted in the Marketplace/Diamond Ridge shopping center and expansion of the auto mall.

Impact of Online Sales and Decline of Commercial Centers

The rapid growth of online retail sales has significantly undermined traditional brick-and-mortar retail, resulting in a notable decline of commercial shopping centers. The reduced viability of traditional retail spaces has further strained municipal budgets already restricted by Proposition 13. Cities now face additional fiscal pressures as previously reliable sales tax revenues diminish. Surviving brick-and-mortar businesses generally fall into categories less affected by online competition, such as restaurants and food services, higher-end or specialty goods stores offering unique products less readily available online, and experiential retail—such as entertainment, leisure, fitness studios, and personal services—that require physical presence.

The City's Economic Development Action Plan highlights several commercial areas that staff is working with ownership to redevelopment: Route 66/Elwood, Grand/Baseline, Foothill/Glendora, and Arrow/Bonnie Cove.

Recent Zoning Mandates by California State and RHNA

In recent years, California has enacted several laws, including SB 375, SB 330, and regulations enforced by the Department of Housing and Community Development (HCD), aimed at addressing the state's housing shortage. These mandates require cities to significantly increase residential zoning and housing densities. Central to these mandates is the Housing Element process, which mandates that cities plan for future housing needs through the Regional Housing Needs Allocation (RHNA) cycle. Cities must identify sufficient land zoned to accommodate state-assigned housing goals across income levels.

The RHNA assigns a specific number of housing units to each jurisdiction, segmented by income levels: very low, low, moderate, and above moderate. These allocations are based on factors such as projected population growth, employment trends, and existing housing needs. HCD oversees this process, ensuring that local governments plan adequately for housing across all income levels.

It's crucial to understand that the RHNA number is not merely a target for housing production but a mandate for planning. Jurisdictions must demonstrate that they have sufficient land zoned appropriately to accommodate the assigned number of units. This involves identifying sites that are available, suitable, and likely to be developed within the planning period. If existing zoning does not allow for the necessary density or housing types, the jurisdiction must undertake rezoning to meet its RHNA obligations.

Noncompliance with these mandates grants the State significant enforcement powers, including monetary penalties, withholding of funding, and overriding local authority by taking control over permitting and development approval processes. Some cities, such as Huntington Beach, have challenged these state mandates, arguing against state overreach into local land use decision-making. However, these challenges have been unsuccessful in superior court and State and Federal appellate courts, reaffirming the State's robust enforcement capabilities.

Glendora received approval for its most recent Housing Element in 2023, which required zoning changes to ensure approximately 2,300 additional residential units could be built over existing housing stock. Since the early 2000's more than 1,000 of these additional units have been zoned in the area surround the future A-Line (Gold) station. The Metro funded Station Area Plan, to be discussed by the Planning Commission on July 1, 2025 and City Council on July 8, 2025, will provide scenarios on how housing units and commercial can be built to support plans the City has had for more than 20 years. As part of the City's Housing Element approval, the City Council and Planning Commission held joint meetings to discuss and approve more than 30 action items needed to meet the various State laws.

Community Input on Housing

The recent 2025 Glendora Community Opinion Survey highlights significant concerns among residents regarding housing affordability and availability. Specifically:

- Approximately 56% indicated a shortage of affordable housing for middle-income families.
- 43% cited insufficient affordable housing for lower-income families.
- Younger residents and renters showed heightened concern about housing affordability gaps.

These findings underscore the urgency for targeted zoning policies and housing initiatives to adequately meet the community's housing needs, aligning closely with the State's housing

objectives and mandates, while finding ways to ensure and improve quality of life for all Glendorans.

Current Challenges for Cities
Cities now find themselves at a critical juncture, needing to comply with state-imposed residential zoning targets, while still grappling with limited revenue opportunities due to Proposition 13 and the decline of traditional commercial retail. The pressure to accommodate more housing, coupled with reduced property tax and sales tax revenues, poses significant financial challenges. This conflict often leads to tension between local fiscal sustainability and state housing policy goals.

Development Trends to Meet Community Preferences
The 2025 community survey conducted by Glendora highlights clear community desires for increased fine dining options, improved shopping experiences, and enhanced road infrastructure. Approximately 60% of residents expressed a need for more fine dining restaurants, while 56% desired additional entertainment options such as movie theaters, arts venues and experiences. Additionally, significant support emerged for better road conditions and increased pedestrian and biking facilities.

Addressing these preferences can be strategically aligned with traditional mixed-use development initiatives or thoughtful linear mixed use (e.g. two blocks of housing with a block of commercial development in a manner that is easily accessible more multiple transit options), integrating residential units with restaurants, specialty retail, and community spaces.

Alignment with the 2025-2027 Strategic Plan
The City of Glendora's recent two-year strategic plan (2025-2027) outlines several goals that dovetail with addressing fiscal and housing challenges discussed herein. Specific strategic goals such as:

- Fostering "SubURBAN Living" through targeted housing density and revitalized commercial areas align closely with state housing mandates and community preferences.
- Strategic emphasis on "Sustainable Infrastructure," particularly improving streets and connectivity, matches community survey responses advocating for infrastructure improvements.
- Encouraging development and betterment of quality of life by showcasing "Glendora as a Destination" to attract visitors through strategic marketing, promotion of local businesses, and enhanced connectivity for a seamless destination experience.

Strategies and Policy Recommendations
Addressing thesel challenges requires innovative strategies. Generally, cities have considered:

- Diversifying municipal revenue streams, including exploring taxes and fees beyond traditional sales and property taxes. The Glendora community has responded with the passage of Measures E/Z. The City is also exploring options for city facility and infrastructure projects. Historically, the City has not supported the creation of development impact fees or community service districts.
- Advocating state-level legislative reforms or amendments to Proposition 13, allowing periodic reassessment of commercial properties, thus increasing municipal revenues without significantly impacting residential property owners. Glendora supports its business community and property owners. If legislation is proposed, Glendora would need to understand the impacts to the community before supporting similar legislation.
- Encouraging mixed-use developments that blend residential units with commercial space, thereby balancing revenue-generation with housing provision. With the adoption of the

recent Housing Element (2023), Arrow Highway Specific Plan (2019), and recent discussions around the future A-Line Station and Village, the City's planning efforts are already underway.

- Promoting regional cooperation among neighboring jurisdictions to pool resources, share revenues, and coordinate zoning and housing strategies to collectively address regional housing and fiscal issues. Glendora has taken a regional leadership role with the San Gabriel Valley Council of Governments – individuals have seats on the Executive Committee/Governing Board, Housing Trust, and Planning/City Manager/Homelessness/Transportation Technical Advisory Committees. The City is always looking for ways to partner with other agencies for the betterment of Glendora.
- Supporting retail and commercial sectors less vulnerable to online competition, focusing on experiential, specialty, and local niche businesses. With the adoption of the Economic Development Strategic plan in 2024, Glendora is working on tfools to support our business community for future growth and development.

Conclusion

The fiscalization of land use driven by Proposition 13 has profoundly influenced zoning decisions within Glendora and all California cities, particularly under new state mandates for increased housing production. Coupled with the rise of online sales and the decline of traditional retail centers, cities face intensified fiscal and developmental pressures. It has been almost 25 years since the adoption of the Route 66 Specific Plan, and eight years since the rollback of certain development incentives in the same area. Over the last five years, Glendora has taken a proactive approach to study current development trends, digest State mandates, and understand community concerns and wants. The City is prepared to make impactful development decisions to improve upon the high quality of life enjoyed by Glendorans.

Water Infrastructure Assessment and Rate Study

Public Works

City Council
September 12, 2023
Chisom Obegolu, Assistant Public Works Director
Marie Ricci, Administrative Services Director

CityOfGlendora.org

Discussion Agenda

- Existing System Assessment
- Proposed Water Rate Adjustments
- Customer Impact
- Next Steps

Rate Study Goals and Objectives

- Fair and equitable
- Fund CIP and O&M
- Defensible
- Revenue stability and predictability
- Affordability
- Promote Water Conservation

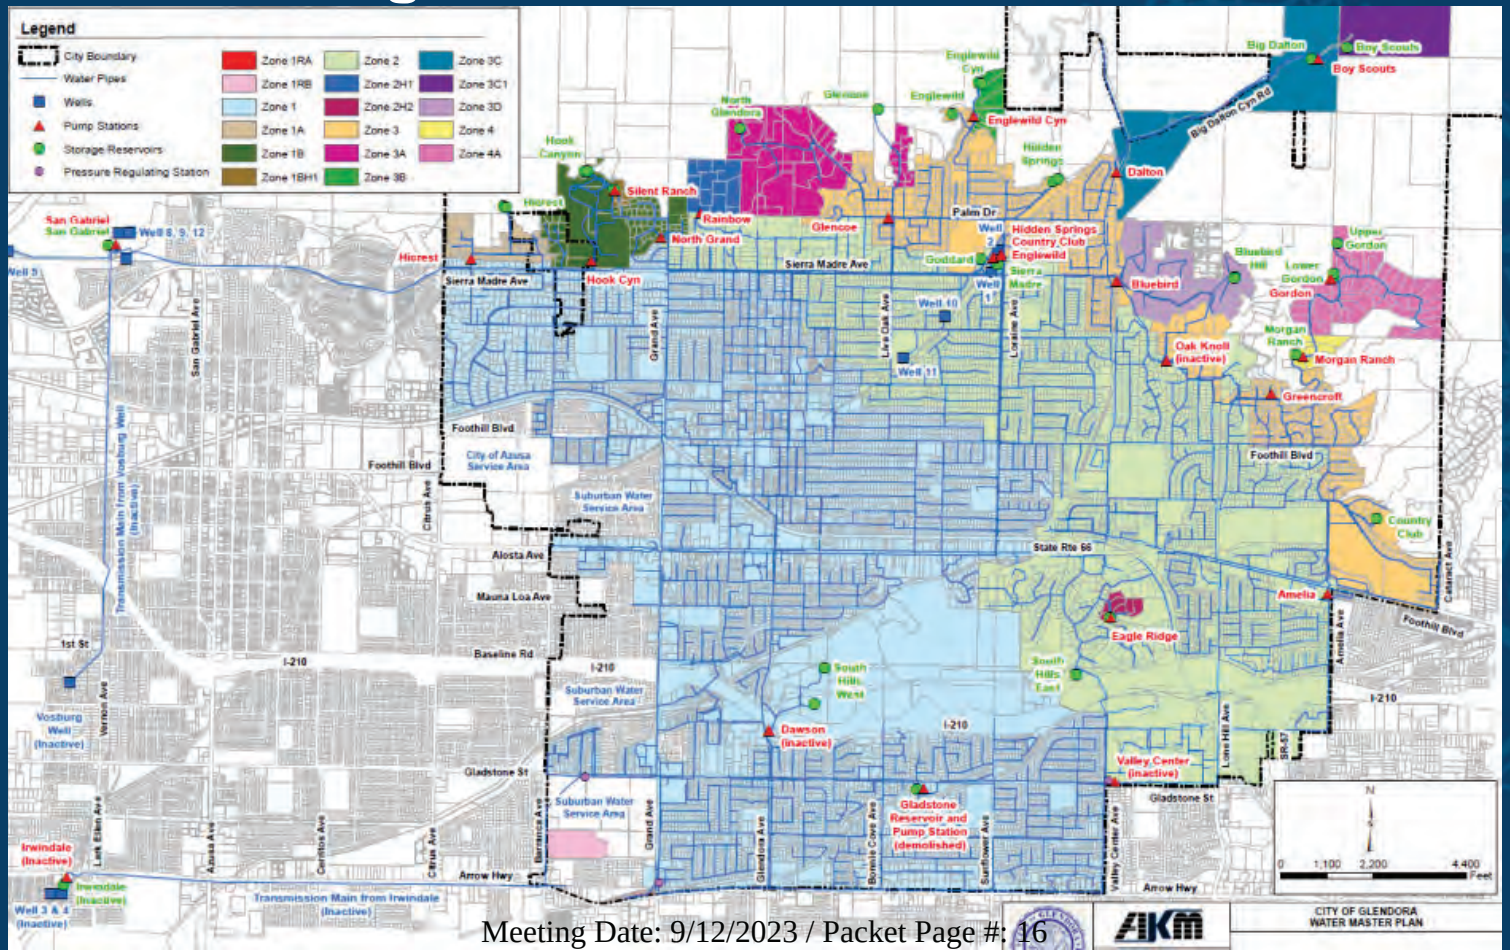
Legislative History and Previous Actions

- November 1996: State adoption of Prop 218
- July 2016: Last rate study and adoption by Glendora
- May 2018: State adoption of AB 1668 / SB 606 – Water Conservation
- January 2021: Last water rate adjustment
- April 2023: Completion of Water Infrastructure Assessment

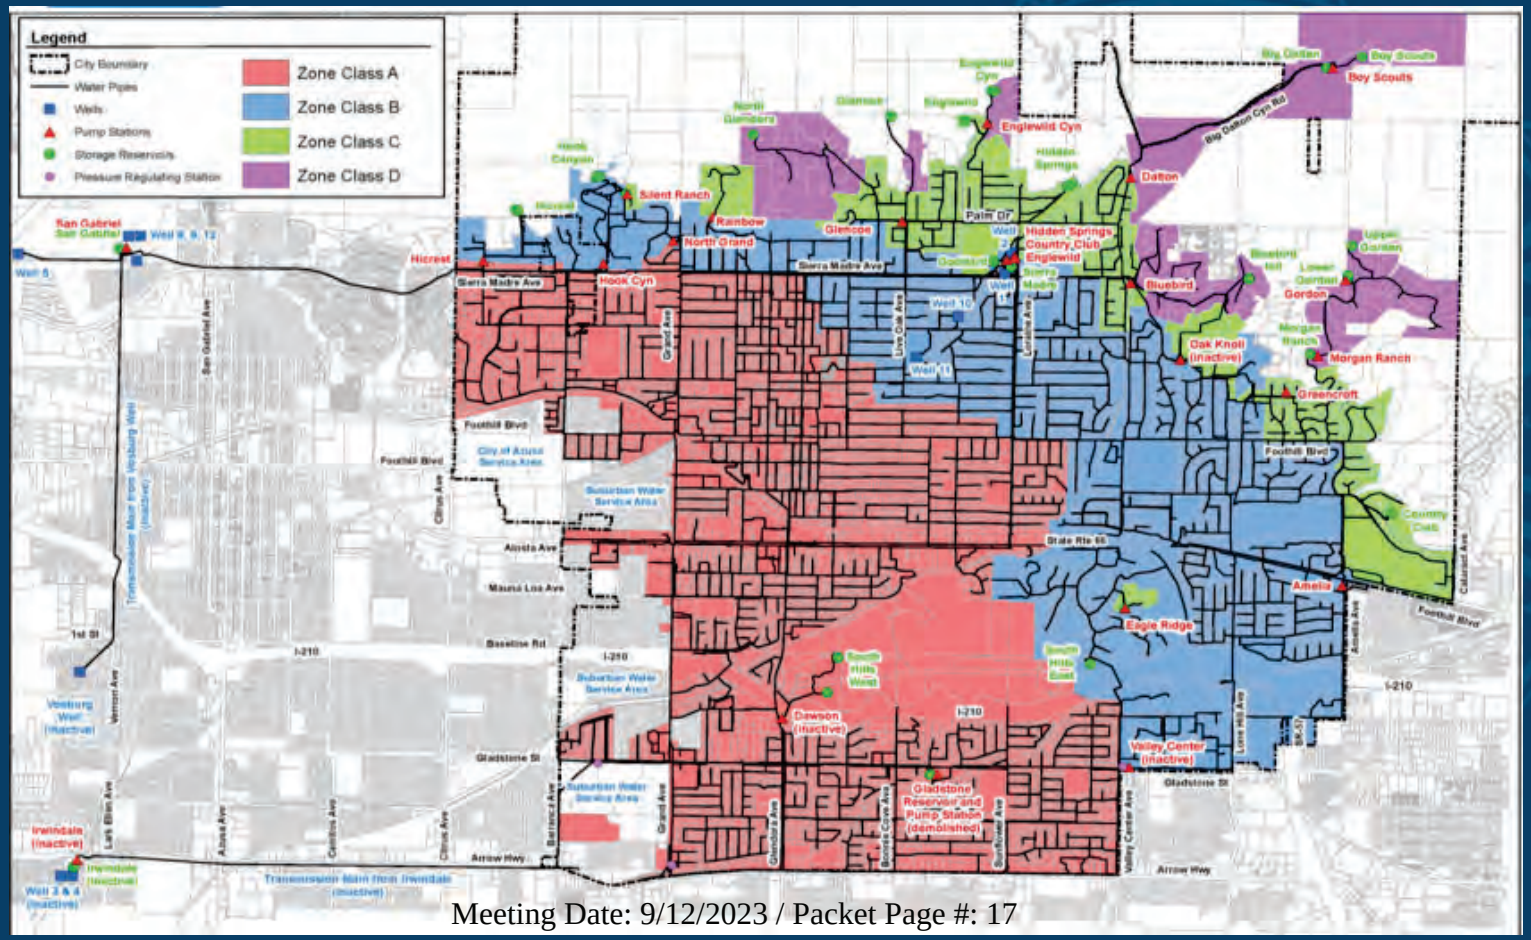
Glendora's Water System

- Service Area: 11 Sq. Miles
- Population of 45,551
- 13,500 Customer Meters

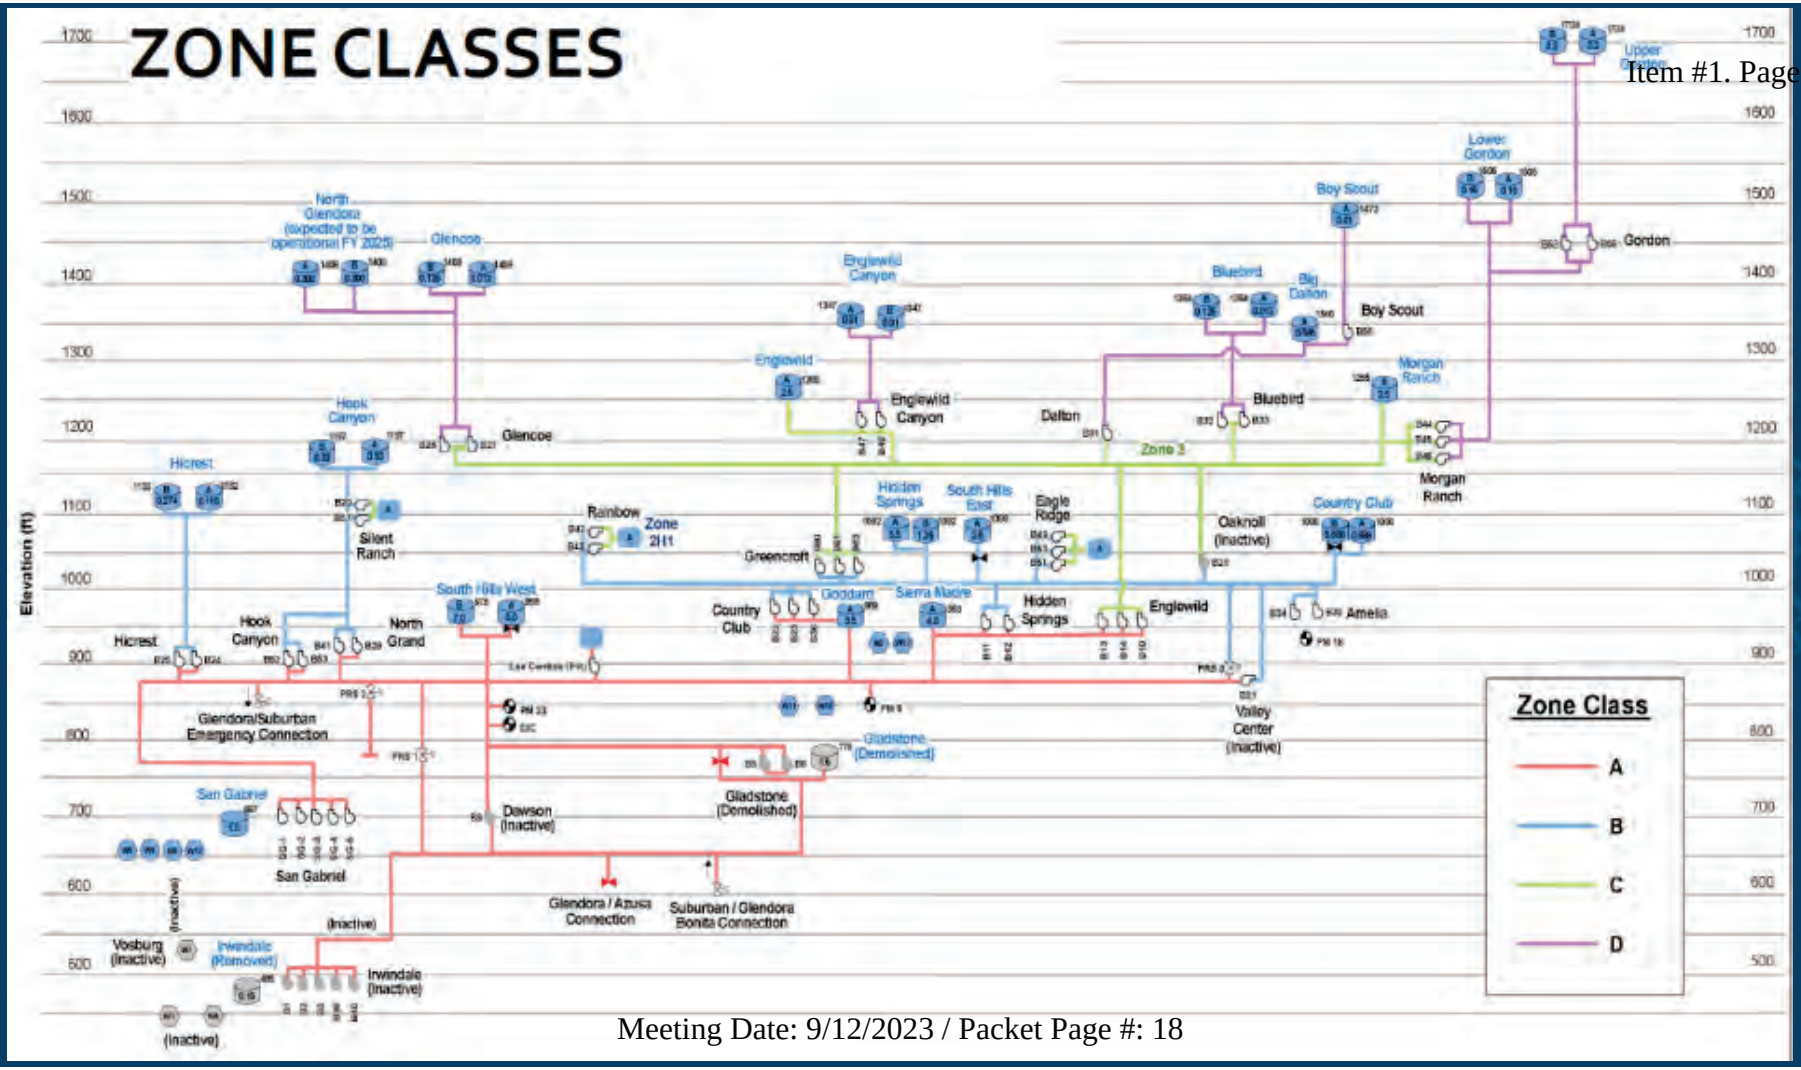
Water System



- 210 miles of water mains
- 8 Active wells
- 29 Reservoirs
- 20 Booster Stations
- 2 Disinfection Plants

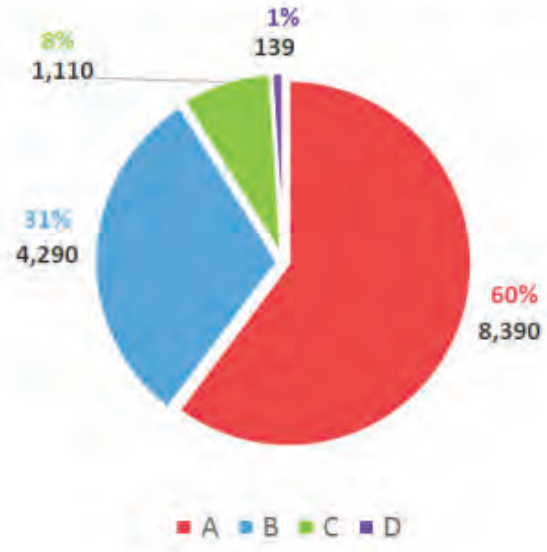


Glendora's Water Supply



- 90-95% local groundwater from the Main San Gabriel Basin
  - Pumping rights
  - Basin EI: 227.4 ft as of September 1, 2023
    - 43 ft increase from last year or 344,000 Acre-feet of water *(1 AF = 326,000 gals)*
- 5-10% imported from Metropolitan Water District ("MWD")
- Western states water supplies challenged by prolonged drought

Existing Pressure Zones – 17 Zone Classes



Proposed Pressure Zones – 4 Primary Zone Classes

BACKGROUND

- 1967 and 1968
  - New library facility project gains momentum
  - Library expansion is a continual process
    - Reading Room
    - City Hall Space (1912)
    - City Hall Annex (1930)
    - City Hall Annex Expansion (1955)

BACKGROUND

- 1968 and 1969
  - Annexations, population growth, school impacts
  - Library space needs to be solved by a new building
  - City's new 1990 General Plan, anticipates:
    - Population growing from 30,000 to 80,000
    - Student enrollment growing from 9,175 to 25,350

1968 Letter From City to GUSD

A SUMMARY OF MAJOR BENEFITS PROJECTED TO BE AVAILABLE TO THE GLENDORA UNIFIED SCHOOL DISTRICT AS A RESULT OF ITS PARTICIPATION IN THE JOINT POWERS AGENCY WITH THE CITY OF GLENDORA FOR THE PURPOSES OF CONSTRUCTING A PUBLIC LIBRARY FACILITY

With the population increase, the information explosion and the dearth of funds available to schools at this time, an increasing number of school districts are being gradually forced to re-direct their students and teachers from their own school-operated, inadequately-equipped and stocked libraries to the cities' public library facilities for both basic and in-depth research materials. This development has been accepted as a permanent situation by many librarians and is considered a challenge that must be met and surmounted.

The aforementioned situation is especially valid in the Glendora Planning Area. 9,175 students presently attend the thirteen schools administered by the Glendora Unified School District. The Gruen Associates Glendora, California General Plan, 1990 projects a 1990 student population for the Planning Area of 25,350. A study made by the Glendora Planning Department indicates that 85% or 21,547 of these 25,350 students will be attending schools in the Glendora Unified School District.

BACKGROUND

- February 1969
  - City Council authorized City Manager to apply for library grant funds to build a new facility
  - City Council calls for a general obligation library bond measure should the funds be awarded ($785,000)

BACKGROUND

- September 1969
  - City Council updated on Library financing
  - City Council cancels election for library facility bonds, citing bond market uncertainty and uncertain tax law litigation (e.g. 2/3 vs 50 +1)
  - City Council hires a financial consultant and authorizes architect to continue work

BACKGROUND

- November/December 1969
  - State/Federal funding denied
  - City moves forward with “ultramodern” library design
    - 28,000 sqft, down from 33,000 sqft
    - Approximately $1.1 million including design, land acquisition, and furnishings
    - Anticipated to serve the City for 35 years

BACKGROUND

- Late 1969 through early 1970
  - Effort by a Mrs. Everett Cloutman, to require a vote to issue bonds to build a new library
    - Petition gathered 1,136 signatures, required 1,376 signature.
    - Supported by one Councilmember (Isensee)

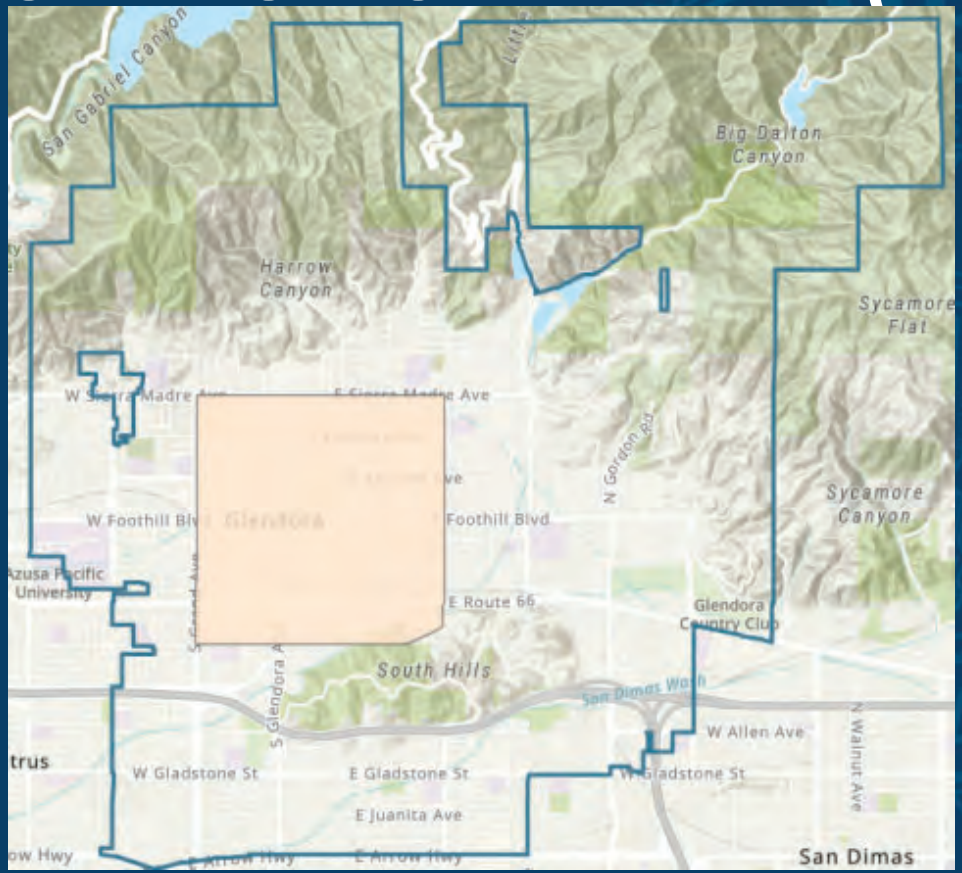
BACKGROUND

- July 1970
  - Creation of Glendora Library Authority
    - Joint Powers Authority between City and Glendora Unified School District
    - Ability to issue debt
    - Acknowledgement of growing school population

BACKGROUND

- October/November 1970
  - City Council approves “Glendora Library Ground Lease” and “Glendora Library Sublease”
    - Agreement with Glendora Library Authority
    - Term coincides with issuance of bonds
    - Payment is equivalent to debt service ($81,000/year)

BACKGROUND



- November 1970
  - Library Authority completes sale of $950,000 in Lease Revenue Bonds
    - Bank of America
    - Approximately 7% for 30 years
    - $81,000 annual debt service payment

BACKGROUND

- November 1970
  - Groundbreaking
- February 1972
  - Grand opening and dedication of Library

BUDGET AND CITY FINANCES

- February 1969 SGV Tribune article on library bond measure funding

Financed through a joint powers agreement between the city and school district, the library was a result of funds saved when the city's fire department merged with the county. The city's savings of $120,000 annually will go toward completing payments on the library.

  - "Yes" and "No" – Homeowners didn't see decreased costs

Subject: Recommended budget for the 1972-73 fiscal year

Cities all over the nation and especially in California are facing the greatest revenue-expenditure gap in history. All but about 10 million of America's 200 plus million people now live in urban areas and demand ever more costly urban services. Yet cities are expected and required to operate using antiquated and inadequate revenue producing sources. Nation wide, according to the National Leggue of Cities, city services cost about $12 billion more than they cost five years ago. Most of these increased costs are not controllable--like cost-of-living pay increases.

In Glendora, for example, police costs in 1967-68 were $424,736 excluding fringe benefits. The proposed budget recommends that $739,048 (based on 1971-72 salary rates) be spent for police services, an increase in five years of $314,312, or 74%. Yet property taxes to the City increased only $306,065, or 45% in the same period ($676,720 to an estimated $982,785).

What is needed, in my judgment, is a reordering of national and state priorities and a resturcturing of the revenue sources to provide adequate financial support for cities so that the 95 of every hundred Americans--city dwellers--can have the quality of life they want, deserve, and really are already paying for but in many cases not getting.

Fortunately the problem in Glendora, though critical, has not reached the conditions now existing in many cities. The quality of life in Glendora is high yet the level of City property taxes is low compared to our neighboring cities. Only Rosemead, Arcadia and El Monte of the 14 cities in our area have lower city tax rates than Glendora.

Comparison of 1971-72 Tax Rates -
Selected San Gabriel Valley Cities

Claremont	2.33	1.39
San Dimas	1.99	
Monrovia	1.92	
South Pasadena	1.86	
Monterey Park	1.73	
West Covina	1.72	
Alhambra	1.60	
Covina	1.49	
Azusa	1.45	
Glendora	1.38	
Duarte (est.)	1.38	
Arcadia	1.25	
Rosemead	1.14	
El Monte	1.10	

(Average: $1.56, or 13% higher than Glendora)

PROP 9 (1968) AND PROP 13 (1978)

California Proposition 9 was on the ballot as an initiated constitutional amendment in California on November 5, 1968. It was **defeated**.

A **"yes"** vote supported decreasing the ad valorem tax on property so that the sum of the tax and ad valorem special assessments on the property does not exceed 1% of the market value of the property.

A **"no"** vote opposed decreasing the ad valorem tax on property so that the sum of the tax and ad valorem special assessments on the property does not exceed 1% of the market value of the property.

RESOLUTION NO. 68-072

A RESOLUTION OF THE COUNCIL OF THE CITY OF GLENDORA OPPOSING THE CALIFORNIA INITIATIVE AMENDMENT ON PROPERTY TAX LIMITATION ("WATSON AMENDMENT")

Election results

California Proposition 9		
Result	Votes	Percentage
Yes	2,146,010	31.95%
✖ **No**	**4,570,097**	**68.05%**

WHEREAS, it is the opinion of the Glendora City Council that the proposed amendment is an irresponsible approach to the problem of tax reform because, in part, it misleads the public into believing there will be a tax decrease when, in fact, a massive tax shift requiring a significant State tax increase will result; the State income tax would have to be tripled and the State sales tax quadrupled to cover the revenue deficit created by this measure; the bonding capacity of the City of Glendora would be limited so that no further bonds can be issued to finance future city construction on a pay as you go basis; and

PROP 9 (1968) AND PROP 13 (1978)

California Proposition 13 was on the ballot as an initiated constitutional amendment in California on June 6, 1978. It was **approved**.

A **"yes"** vote supported this constitutional amendment to:

* require that properties be taxed at no more than 1 percent of their full cash value shown on the 1975-1976 assessment rolls and limit annual increases of assessed (taxable) value to the inflation rate or 2 percent, whichever was less.
* upon the transfer of properties, allow them to be reassessed at one percent of their sale price and reset the limit on annual increases of assessed value.
* prohibit the state legislature from enacting new taxes on the value or sale of properties.
* require a two-thirds vote of the state legislature to increase non-property taxes.
* require local governments to refer special taxes to the ballot and require a two-thirds vote of electors.
* make the state government responsible for distributing property tax revenue among local governments.

A **"no"** vote opposed this constitutional amendment to require that properties be taxed at no more than 1 percent of their full cash value shown on the 1975-1976 assessment rolls and limit annual increases of assessed (taxable) value to the inflation rate or 2 percent, whichever was less, and make other changes to tax-related provisions of the California Constitution.

Election results

California Proposition 13

Result	Votes	Percentage
✔ **Yes**	**4,280,689**	64.79%
No	2,326,167	35.21%

CURRENT LIBRARY BUILDING

Structural Analysis

- Ongoing building-related issues
  - Structural deficiencies & water intrusion

CURRENT LIBRARY BUILDING

- 2021: Preliminary structural assessment completed by JMDiaz, Inc.
  - Visible cracking in beam system noted
- 2023: Myers Houghton and Partners, Inc. (MHP) contracted to perform in-depth structural analysis
  - Initial visioning activities
  - Conceptual design for second story addition

CURRENT LIBRARY BUILDING

- MHP structural analysis – Findings
  - Other than wall anchorage upgrades, seismic strengthening not warranted
  - Minor-to-moderate cracking throughout the library's main roof structure
  - Plaza waterproofing membrane may be compromised
  - Live load and soil bearing pressure concerns with some girders and pad footings

CURRENT LIBRARY BUILDING

- MHP structural analysis – Recommendations
  - Significant retrofitting/repairs needed
  - Bidwell Plaza
    - passive use okay
    - currently not being used for public assembly events of over 500 people with equipment
  - Waterproofing consultant should be retained

NEXT 35 - 50 YEARS

Programmatic visioning

- Part of MHP's second phase:
  - evaluation of the feasibility of vertical expansion of the building
  - working with Library stakeholders to identify the intended use of the expanded space

NEXT 35 - 50 YEARS

Programmatic visioning

- architectural consultant
- seven workshops
- MHP, Library, Board of Library Trustees, GPL Friends Foundation, City Manager' s office, and Public Works Department

NEXT 35 - 50 YEARS

Programmatic visioning

- Initial inputs
  - Library's current strategic framework
  - Projected population and per-capita square footage allocation
    - Expected 45,000 to 52,500 gross square feet
    - Currently about 30,000 square feet
  - Environmental scan

NEXT 35 - 50 YEARS

Programmatic visioning

- GPL proposed Library building spaces of the future
  - Customer-Driven Workspaces
  - Public Assembly Spaces
  - Library-Mediated Public Workspace
  - Fulfillment Center Services
  - Small Private / Semi-Private Spaces
  - Physical Content Showroom

Programmatic visioning

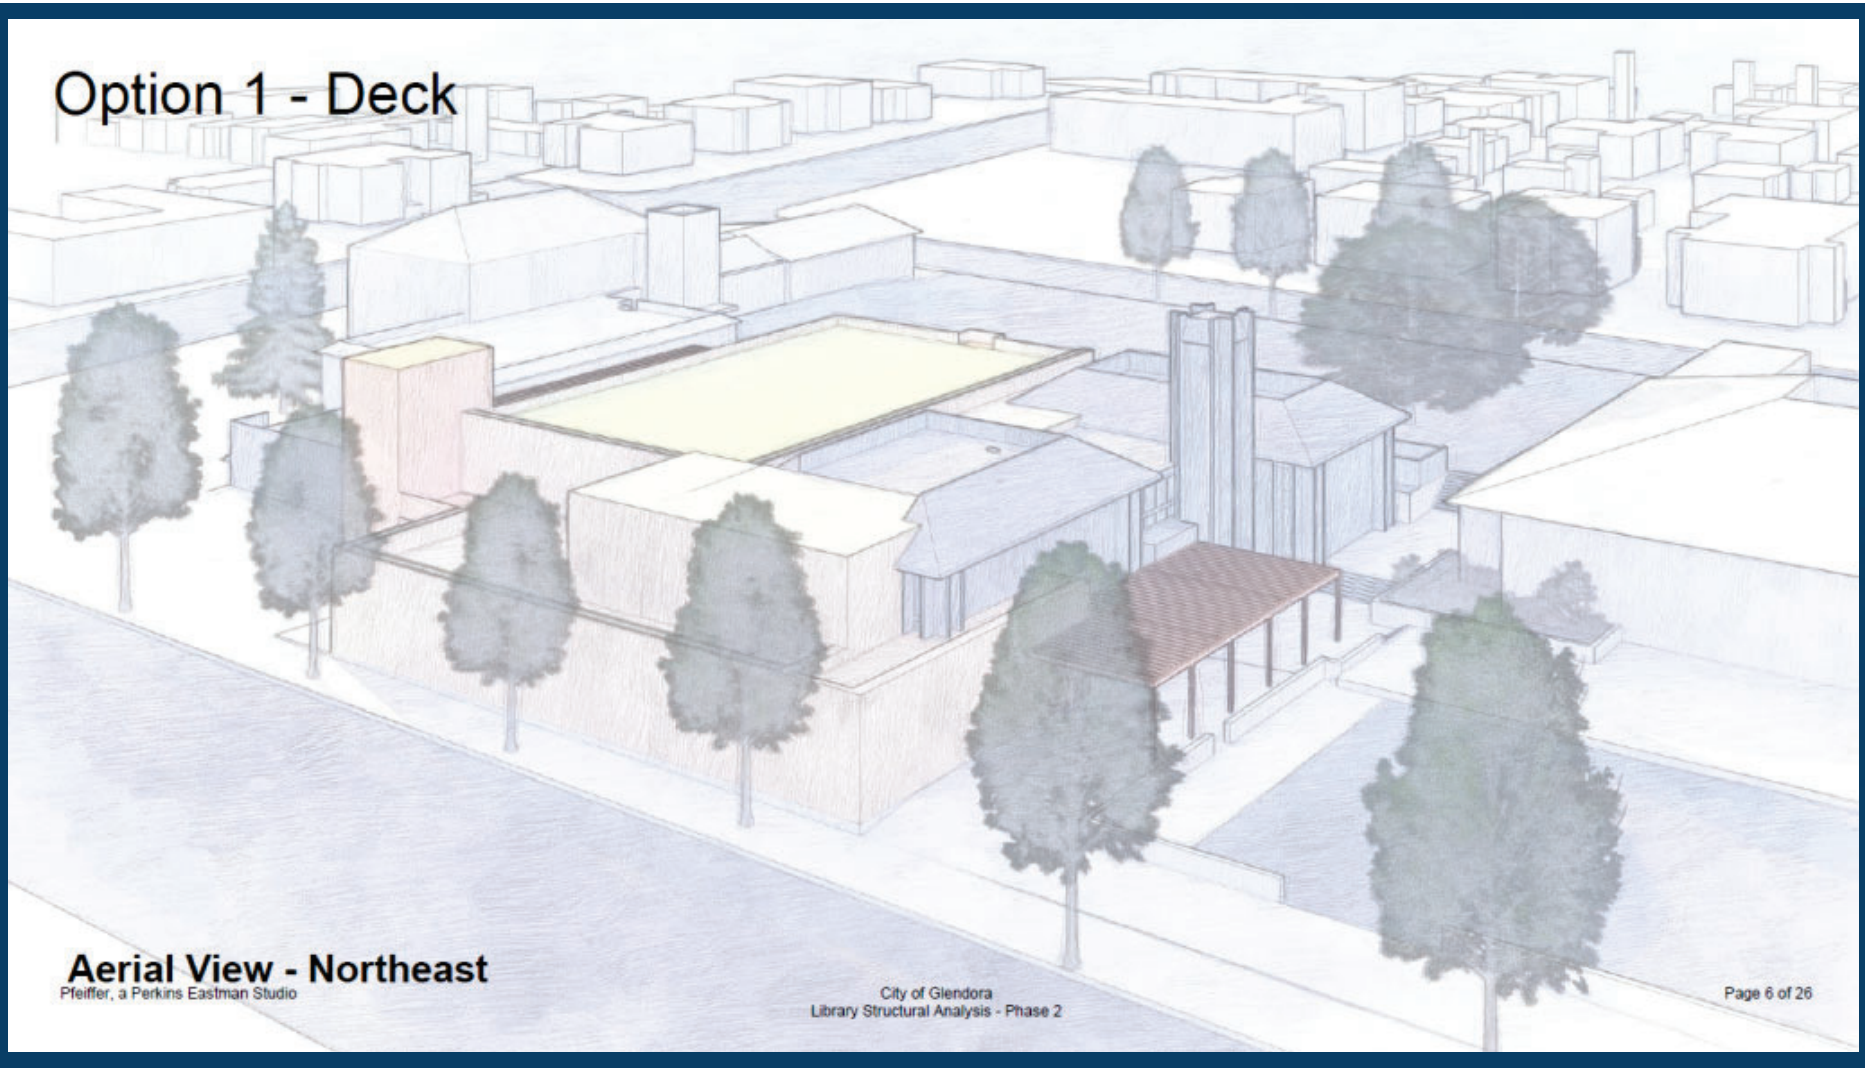
- Roast of the current building
  - no visibility of the activities happening inside
  - entry process dark and non-intuitive
  - several areas where the existing environment fails to meet current codes
  - electrical connectivity in the building is inadequate
  - temperature control and ventilation pose challenges
  - water leaks have been a persistent issue since the library' s opening
  - lighting systems are outdated and require an upgrade
  - Library staff workplace is small, overcrowded, and lacks natural daylight
  - clear shortage of storage space

NEXT 35 - 50 YEARS



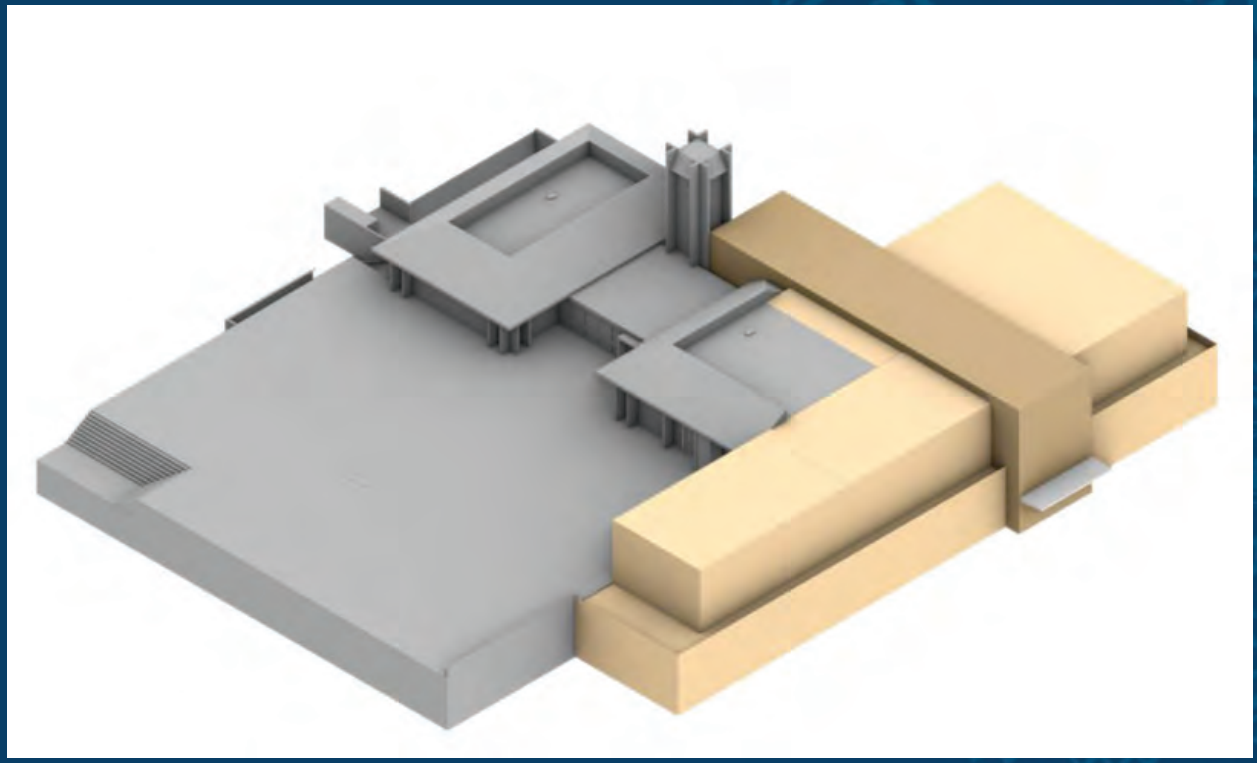
Programmatic visioning

- "The Deck" Concept
  - second story over the existing Plaza deck
  - 2-story addition on the Glendora Avenue side
  - $20.6M

NEXT 35 - 50 YEARS

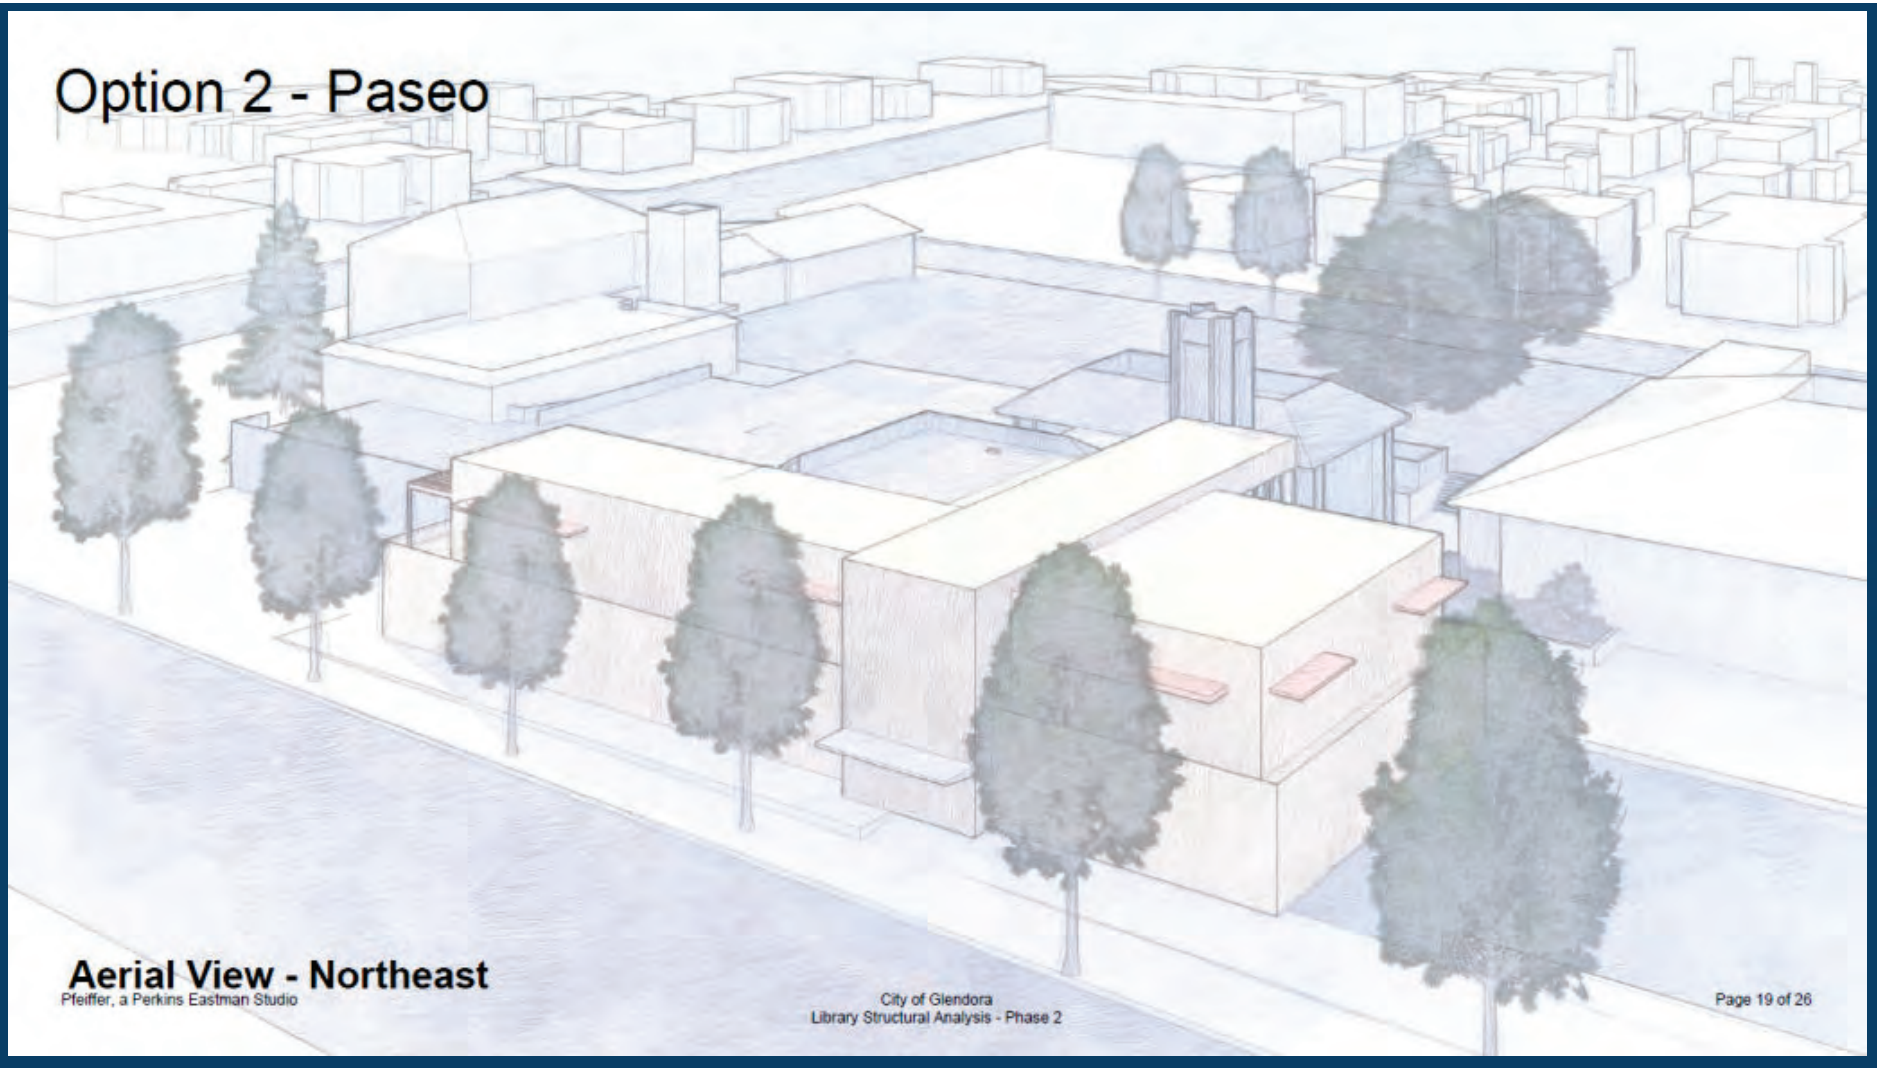
Option 1 - Deck

Aerial View - Northeast



Pfeiffer, a Perkins Eastman Studio

NEXT 35 - 50 YEARS



Programmatic visioning

- "The Paseo" Concept
  - Block A extends the library building towards Glendora Avenue
  - Block C is situated to the south and occupies a small portion of the existing library building and Police Station parking lot
  - The Paseo (Block B), is an architectural atrium-like space that captures abundant natural light during the day
  - $23.0M*

NEXT 35 - 50 YEARS

Option 2 - Paseo

Aerial View - Northeast

Pfeiffer, a Perkins Eastman Studio

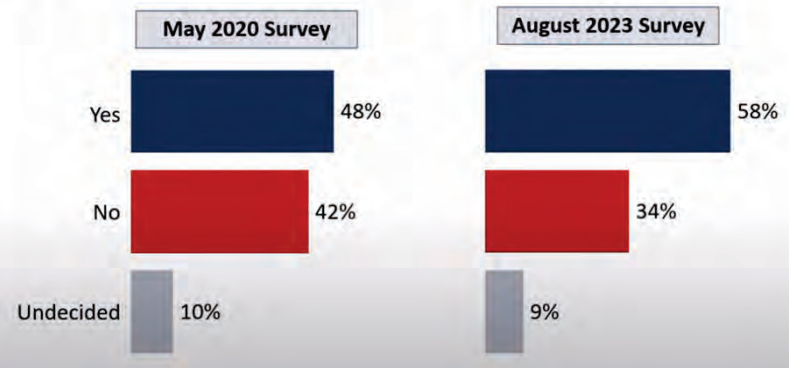
NEXT 35 - 50 YEARS

- Structural
- Infrastructure improvements
- Remodeling
- Modernization

NEXT 35 - 50 YEARS

Project Type	*Estimated Total Cost Range*
Current facility MEP renovation	$1.3M - $1.95M
Basic structural repairs of existing building (gravity load repairs to strength beams and repair cracks)	$2.9M - $4.35M
Weatherproofing Bidwell Plaza (topping slab & membrane replacement)	$900K - $1.35M
Combined basic critical maintenance repairs w/no other significant improvements	$5.1M – $7.65M
Known critical maintenance items & 2nd story expansion, but minimal other modernization or upgrades of existing facility.	$16.4M – $24.6M
Known critical maintenance items & comprehensive modernization and upgrades of existing facility, but no expansion.	$18.6M – $27.9M
Known critical maintenance items, comprehensive modernization and upgrades of existing facility, & expansion of 2nd story.	$29.9M – $44.9M
New Building or Replacement/Reconstruction	$35.8M - $71.6M+

POLITICAL & FISCAL ENVIRONMENT



Grant funding

- Building Forward Round Two
  - "not selected for funding at this time"
  - "wasn’t among the facilities with the highest poverty levels, as determined by the California Poverty Measure"

POLITICAL & FISCAL ENVIRONMENT

Glendora Unified School District – October 23, 2023

Nearly six-in-ten voters support a potential measure to provide funds for classroom repairs, upgrades and safety improvements for GUSD – up 10 points from May 2020.

FM3 Q. How would you vote on this measure: would you vote yes in favor of the measure or no to oppose it? **($140 million bond measure)**

Conclusions and Next Steps

- A $140 million bond measure for GUSD is worthy of future planning and consideration.
- Next steps include:
  - Now – June 2024: Develop and implement plan to communicate with voters to educate about the District's needs and goals
  - March – June 2024: Finalize project list, tax rate statement and resolution for balloting materials
  - May 2024: Follow-up survey to get up-to-date information on community attitudes before placement
  - June 2024: Board decision on bond measure placement (*Deadline is August 8, 2024*)
  - August 2024 – November 5, 2024: District provides information about the contents of the measure; outside campaign

FM3 RESEARCH

POLITICAL & FISCAL ENVIRONMENT

Funding options and watch-list items

- Citizen-initiated
- City-initiated
- Approval requirements
- Other considerations

POLITICAL & FISCAL ENVIRONMENT

- Citizen-initiated funding
  - legal precedent for this:
    - group of citizens proposing
    - special property tax
    - by initiative
  - majority vote
  - would take about a year (signature gathering period is six months)
  - Watch list: Taxpayer Protection and Government Accountability Act ("Taxpayer Act")

POLITICAL & FISCAL ENVIRONMENT

- City-initiated funding
  - could be at a special or general election
  - approval requirements follow
  - watch list: ACA 1 (Constitutional Amendment)

POLITICAL & FISCAL ENVIRONMENT

Local Level	Governing Body Approval	Voter Approval
City or county "general" taxes (revenues used for unrestricted purposes)	If consolidated with a regularly scheduled election of members of the legislative body: • 2/3 for transactions & use taxes • Other taxes: 2/3 for general law cities; majority for charter cities. If not consolidated, unanimous declaration of "emergency" required.	Majority

CaliforniaCityFinance.com Source: Adapted from CALFACTS, Legislative Analyst's Office

POLITICAL & FISCAL ENVIRONMENT

Local Level	Governing Body Approval	Voter Approval
City or county "special" taxes (revenues used for specific purposes)	Majority (2/3 for transactions & use taxes)	2/3
All school or special district taxes	Majority	2/3
General obligation bonds	Majority	2/3[b]
Other debt	Majority	None

CaliforniaCityFinance.com Source: Adapted from CALFACTS, Legislative Analyst's Office

POLITICAL & FISCAL ENVIRONMENT

Local Level	Governing Body Approval	Voter Approval
Property assessments	Majority	Majority of affected property owners. Votes weighted by assessment liability
Property—related fees	Majority	2/3 of voters or majority of affected property owners[c]
Fees—all other	Majority	None

CaliforniaCityFinance.com Source: Adapted from CALFACTS, Legislative Analyst's Office

POLITICAL & FISCAL ENVIRONMENT

- Other funding
  - Joint Powers Authority (JPA) (e.g., with a school district)
    - unlikely that a library would fit within the definition
  - Private/public partnership
    - Burbank exploring, to supplement State grant funds
  - Adding value
    - Smaller naming-rights sponsorships/donations for building features

POLITICAL & FISCAL ENVIRONMENT

Potential timelines

- Survey
  - ~50 days
- Citizen-proposed
  - Recommended if Nov. 2024 election: Notice of Intention by Dec. 22, 2023
- City-proposed
  - For Nov. 2024 election: Last day for City Council to call election and transmit resolution is Aug. 9, 2024

RECOMMENDATIONS

That the City Council:

1. Discuss and provide direction to staff as needed regarding:
    a. Scope of Council's recommended project(s) related to Library building;
    b. Scope of Council's recommended associated project(s) at other facilities specified by Council;
    c. Production of any related architectural concept drawings as desired;
    d. Position on funding options for recommended project(s);
    e. Public polling data as needed; AND,
2. In support of directed activities, specify any needed parameters authorizing:
    a. City Manager, or his designee, to execute Professional Services Agreements; and,
    b. Finance Director to appropriate necessary funds.

Campus Findings and Deficiencies

Historical Summary

The San Gabriel Water Yard/Plant property was originally constructed in 1920. The New Booster Building and New Warehouse were constructed in 2013. The original booster building is now used for storage, and the original warehouse is used as a well building.

Architectural

The roofs of the New Booster Building and New Warehouse are original to the 2013 construction date and appear to be in overall fair condition. The roofs of the Well Sheds also appear to be in adequate condition. The roofs of Well Building #12E and Storage Building reportedly have a history of on-going roof leaks. This has caused the wooden roof frame structure to rot in isolated locations. Repair/replacement of the roofs and wood frame are recommended in the near reserve term. Exterior walls are painted on a regular basis. CMU cracking was observed on the western exterior wall of Well Building #12E and is recommended for repair. Concrete cracking was also observed on the basement wall of the chlorine room in the New Booster Building. The basement wall was not sealed properly and has experienced leaks during rainstorms. A cost for repair has been included in the capital planning database.

The only area with interior finishes is the office/break room in the New Warehouse. These finishes are replaced on an as needed basis. Interior concrete floor cracking was observed in the Storage Building. Repair of these cracks is recommended during the reserve term.

Mechanical, Electrical, Plumbing and Fire (MEPF)

The office/break room of the New Warehouse is the only area that is conditioned by an HVAC system. It utilizes a ductless split system heat pump that was installed in 2022 and is in good condition. Most of the other buildings are ventilated by rooftop exhaust fans. The electrical system is controlled by switchboards and distribution panels in each of the buildings.

There is an emergency diesel generator next to the New Booster Building that was installed in 2017. According to the point of contact, it is undersized and only able to run half of the facility. A cost allowance to install an additional generator has been included in the capital planning database. There is also a cost to install additional security cameras for the facility due to recent break-ins.

Domestic hot water is supplied to the office/break room by an instant hot water heater. Typical plumbing fixtures are utilized in the restroom.

Fire suppression consists of individual fire extinguishers and nearby fire hydrants.

Site

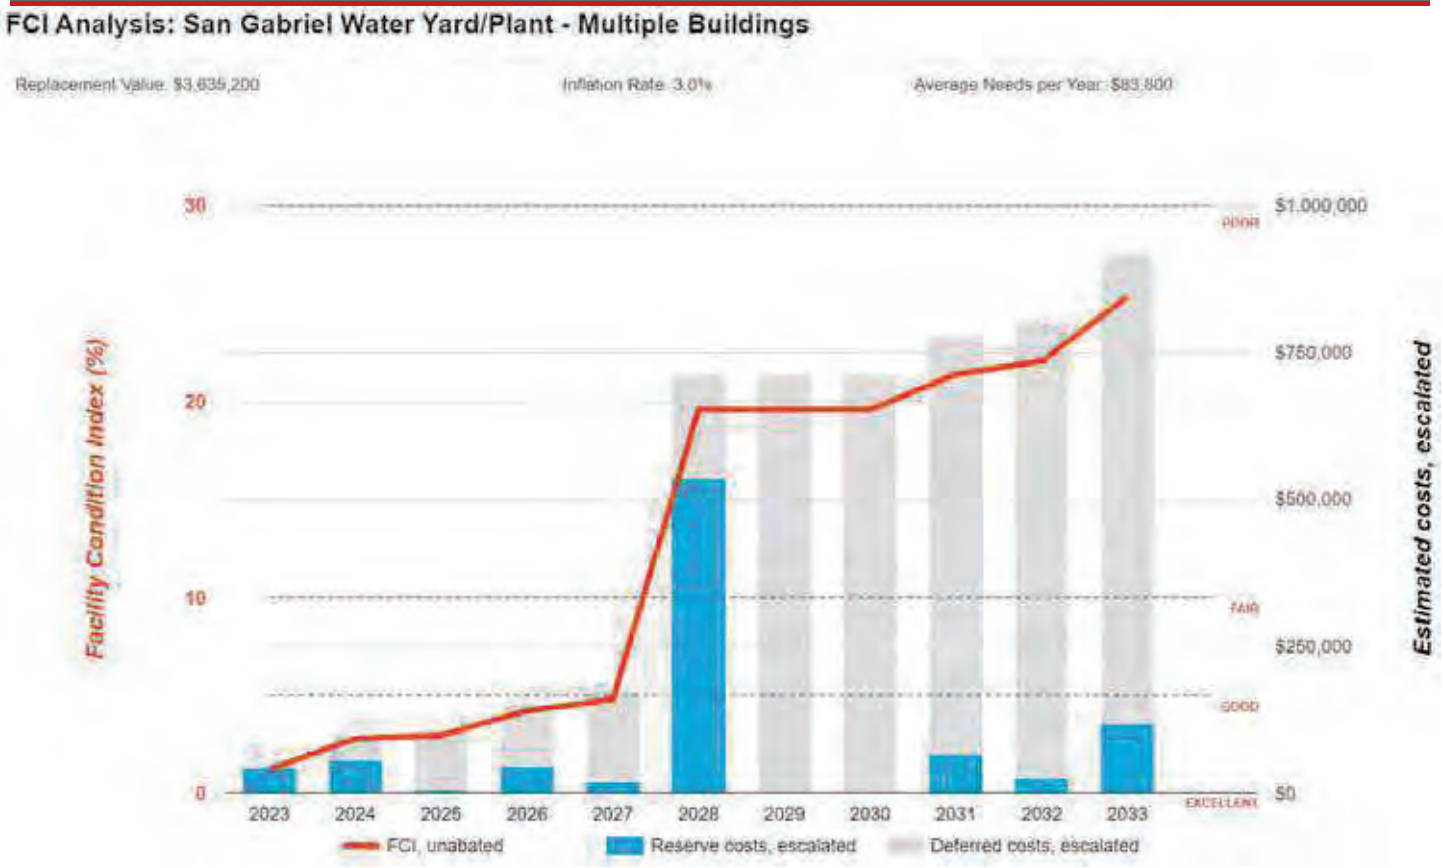
The asphalt paved lot appears to have been repaved in recent years and exhibits little to no cracking. The point of contact reported an issue with site lighting near the New Warehouse. The building mounted lights are recommended for repair or replacement during the reserve term. There is mature tree growth on the eastern side of the New Warehouse that is coming into contact with the roof. Trimming or tree removal is recommended.

Recommended Additional Studies

No additional studies recommended at this time.

Facility Condition Index (FCI)

One of the major goals of the FCA is to calculate each building's Facility Condition Index (FCI), which provides a theoretical objective indication of a building's overall condition. By definition, the FCI is defined as the ratio of the cost of current needs divided by current replacement value (CRV) of the facility. The chart below presents the industry standard ranges and cut-off points.



FCI Ranges and Description	
0 – 5%	In new or well-maintained condition, with little or no visual evidence of wear or deficiencies.
5 – 10%	Subjected to wear but is still in a serviceable and functioning condition.
10 – 30%	Subjected to hard or long-term wear. Nearing the end of its useful or serviceable life.
30% and above	Has reached the end of its useful or serviceable life. Renewal is now necessary.

The deficiencies and lifecycle needs identified in this assessment provide the basis for a portfolio-wide capital improvement funding strategy. In addition to the current FCI, extended FCI's have been developed to provide owners the intelligence needed to plan and budget for the "keep-up costs" for their facilities. As such the 3-year, 5-year, and 10-year FCI's are calculated by dividing the anticipated needs of those respective time periods by current replacement value. As a final point, the FCI's ultimately provide more value when used to relatively compare facilities across a portfolio instead of being over-analyzed and scrutinized as stand-alone values. The table below summarizes the individual findings for this FCA:

Facility (year built)	Cost/SF	Total SF	Replacement Value	Current	3-Year	5-Year	10-Year
San Gabriel Water Yard/Plant - Multiple Buildings / Plant - Well Building #12E	$300	850	$255,000	0.0%	9.0%	9.0%	23.0%
San Gabriel Water Yard/Plant - Multiple Buildings / Plant - Well Shed #8E	$300	70	$21,000	0.0%	0.0%	8.1%	9.5%
San Gabriel Water Yard/Plant - Multiple Buildings / Plant - Well Shed #9E	$300	70	$21,000	0.0%	0.0%	8.1%	32.4%
San Gabriel Water Yard/Plant - Multiple Buildings / Yard - New Booster Building and Boosters (2013)	$375	4,764	$1,786,500	0.9%	0.9%	29.2%	32.8%
San Gabriel Water Yard/Plant - Multiple Buildings / Yard - New Warehouse (2013)	$375	3,200	$1,200,000	0.0%	0.2%	2.5%	4.9%
San Gabriel Water Yard/Plant - Multiple Buildings / Yard - Storage Building	$300	1,200	$360,000	7.4%	17.7%	17.7%	20.7%

The vertical bars below represent the year-by-year needs identified for the site. The orange line in the graph below forecasts what would happen to the FCI (left Y axis) over time, assuming zero capital expenditures over the next ten years. The dollar amounts allocated for each year (blue bars) are associated with the values along the right Y axis.

Needs by Year with Unaddressed FCI Over Time

Immediate Needs

Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason or rationale for the recommended replacement, repair, or other corrective action. This is the "why" part of the equation. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the "best" fit, typically the one with the greatest significance.

Plan Type Descriptions		
Safety		An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk.
Performance/Integrity		Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.
Accessibility		Does not meet ADA, UFAS, and/or other handicap accessibility requirements.
Environmental		Improvements to air or water quality, including removal of hazardous materials from the building or site.
Retrofit/Adaptation		Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.
Lifecycle/Renewal		Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.

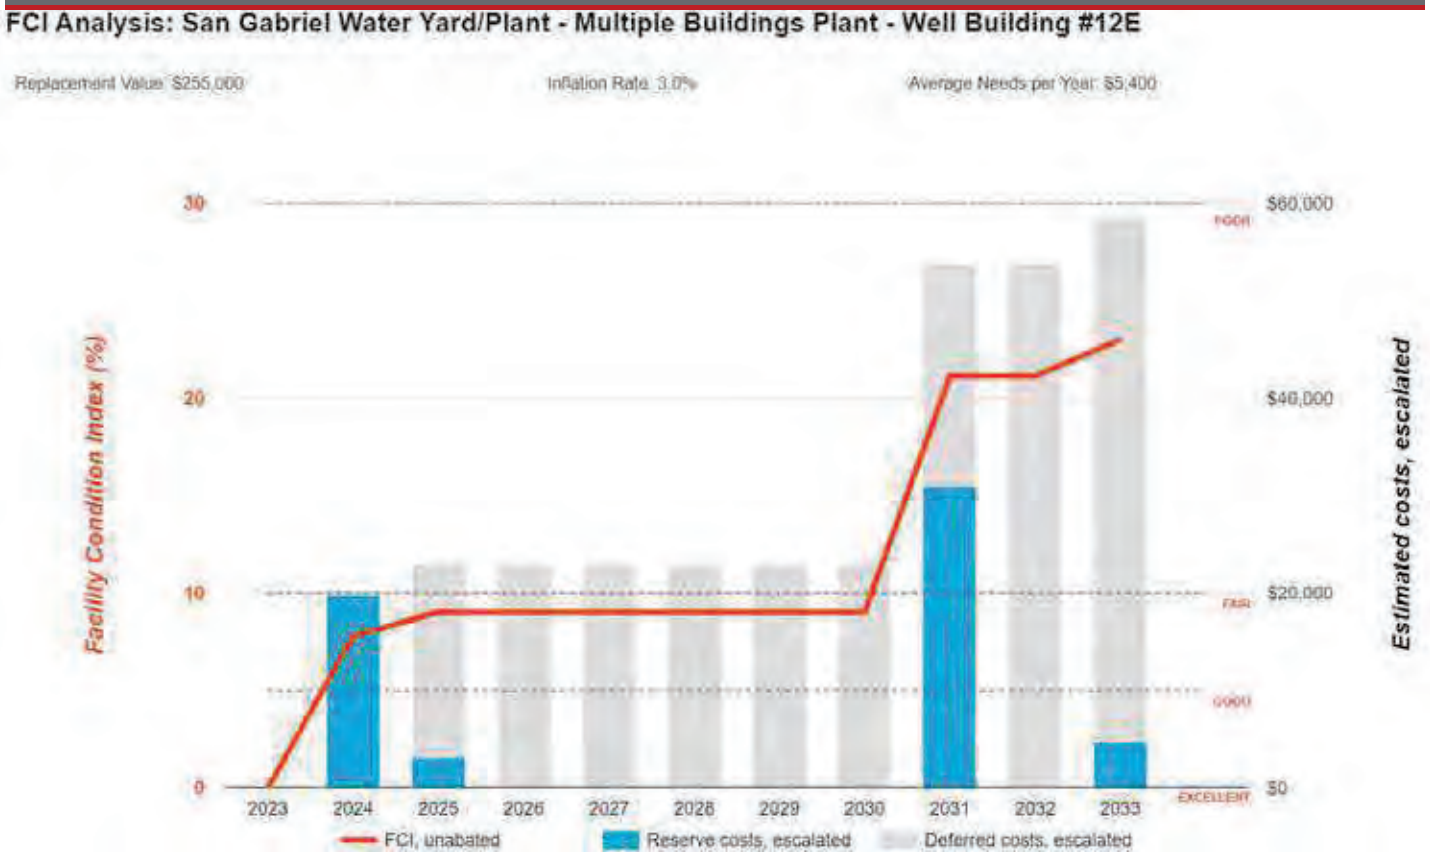
Plan Type Distribution (by Cost)

2. Plant – Well building NO.12E

Plant – Well Building #12E: Systems Summary		
Address	625 West Hidden Valley Drive; Glendora, California	
Constructed/Renovated	1920	
Building Size	850 SF	
Number of Stories	One	
System	*Description*	*Condition*
Structure	Masonry bearing walls and wood framed roof	Poor
Façade	Painted CMU and wood siding	Poor
Roof	Primary: Flat construction with single-ply EPDM membrane	Poor
Interiors	Walls: Unfinished Floors: Unfinished Ceilings: Unfinished	--
Elevators	None	--
Plumbing	None	--
HVAC	Roof mounted exhaust fans	Fair

Plant – Well Building #12E: Systems Summary

Fire Suppression	Fire extinguishers only	Fair
Electrical	Source & Distribution: Motor control center with copper wiring Interior Lighting: T-12 Emergency: none	Fair
Fire Alarm	None	--
Equipment/Special	None	--
Accessibility	Presently it does not appear an accessibility study is needed for this property.	
Key Issues and Findings	Roof leaks, roof frame wood rotting, exterior CMU cracking	



Plant – Well Building #12E: Systems Expenditure Forecast

System	Immediate	Short Term (1-2 yr)	Near Term (3-5 yr)	Med Term (6-10 yr)	Long Term (11-20 yr)	TOTAL
Structure	-	$5,500	-	-	-	$5,500

TOTALS (3% inflation)	**$2,200**	**-**	**$67,100**	**$65,400**	**$1,429,900**	**$1,564,600**

*Totals have been rounded to the nearest $100.

9. Property Space Use and Observed Areas

Areas Observed

The interior spaces were observed in order to gain a clear understanding of the property's overall condition. Other areas accessed included the site within the property boundaries and the exterior of the property.

Key Spaces Not Observed

All key areas of the property were accessible and observed.

10. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of "areas of public accommodations" and "public facilities" on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities.
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the checklists that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance
- Only a representative sample of areas was observed
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance
- Itemized costs for individual non-compliant items are not included in the dataset
- For any "none" boxes checked or reference to "no issues" identified, that alone does not guarantee full compliance

The facility was originally constructed in 1920. The facility was substantially renovated in 2013 but no widespread accessibility improvements appear to have been implemented at that time.

During the interview process with the client representatives, no complaints or pending litigation associated with potential accessibility issues was reported.

No costs or detailed follow-up study are currently recommended since this facility is not accessible to the general public, and all workers presently employed at the facility are required to possess a degree of physical ability that makes full compliance infeasible and currently unnecessary. Accessibility accommodation will reportedly be made when and if specific needs arise. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

11. Purpose and Scope

Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

Condition Ratings	
Excellent	New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Good	Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Fair	Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.
Poor	Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed, or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life.
Failed	Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.
Not Applicable	Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.

Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Review maintenance records and procedures with the in-place maintenance personnel.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

12. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means, CBRE Whitestone,* and *Marshall & Swift,* Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

Definitions

Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

13. Energy Audit

The purpose of this Energy Audit is to provide San Gabriel Water Yard/Plant with a baseline of energy usage, the relative energy efficiency of the facility, and specific recommendations for Energy Conservation Measures. Information obtained from these analyses may be used to support a future application to an Energy Conservation Program, Federal and Utility grants towards energy conservation, as well as support performance contracting, justify a municipal bond-funded improvement program, or as a basis for replacement of equipment or systems

The energy audit consisted of an onsite visual assessment to determine current conditions, itemize the energy consuming equipment (i.e. Boilers, Make-Up Air Units, DWH equipment); review lighting systems both exterior and interior; and review efficiency of all such equipment. The study also included interviews and consultation with operational and maintenance personnel. The following is a summary of the tasks and reporting that make up the Energy Audit portion of the report.

The following is a summary of the tasks and reporting that make up the Energy Audit portion of the report.

Energy and Water Using Equipment

- Bureau Veritas has surveyed the common areas, offices, maintenance facilities and mechanical rooms to document utility-related equipment, including heating systems, cooling systems, air handling systems and lighting systems.

Building Envelope

- Bureau Veritas has reviewed the characteristics and conditions of the building envelope, checking insulation values and conditions. This review also includes an inspection of the condition of walls, windows, doors, roof areas, insulation and special use areas. Where we anticipated significant losses, we utilized infrared thermographs to analyze heat loss across the envelope.

Recommendations for Energy Savings Opportunities

- Based on the information gathered during the on-site assessment, the utility rates, as well as recent consumption data and engineering analysis, Bureau Veritas has identified opportunities to save energy and provide probable construction costs, projected energy/utility savings and provide a simple payback analysis.

Analysis of Energy Consumption

- Based on the information gathered during the on-site assessment and a, Bureau Veritas has conducted an analysis of the energy usage of all equipment, and identified which equipment is using the most energy and what equipment upgrades may be necessary. As a result, equipment upgrades, or replacements are identified that may provide a reasonable return on the investment and improve maintenance reliability.

Energy Audit Process

- Interviewing staff and review plans and past upgrades
- Performing an energy audit for each use type
- Performing a preliminary evaluation of the utility system
- Analyzing findings, utilizing ECM cost-benefit worksheets
- Making preliminary recommendations for system energy improvements and measures
- Estimating initial cost and changes in operating and maintenance costs based on implementation of energy efficiency measures
- Ranking recommended cost measures, based on the criticality of the project and the largest payback

14. Historical Energy and Water Performance Metrics

Utility Data Tabulation Methodology

The baseline utility consumption data for the proper has been developed by aggregating the consumption from one electric meter and one water meter.

Data Limitation:
No assumptions were made in tabulation of the utility data for the purposes of the audit.

The cost associated with the utility consumption at the building was not made available to Bureau Veritas at the time of report compilation. As a result, Bureau Veritas has modeled the approximate rate based on the utility company published tariff for commercial institutions. Bureau Veritas will update the report on receipt of the actual data from the client.

Utilities Metering at Glance	
Number of electric meters observed	One
Number of domestic water meter observed	One

Average Utility Rates		
Electricity	Natural Gas	Water & Sewer
$0.30/kWh	$2.24/therm	$8.36/CCF

www.us.bureauveritas.com | p 800.733.0660

Electricity

Note: No utility data was received by Bureau Veritas from the housing authority at the time of report compilation. As a result, Bureau Veritas has used the electric rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data from the housing authority.

Water and Sewer

The City of Glendora satisfies the water and sewer requirements of the facility.

Note: No water and sewer utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used a rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data.

End Use Energy Distribution

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas will complete end use energy distribution on receipt of the actual data from the client.

Energy Star Portfolio Manager Facility Summary

Bureau Veritas uses the Portfolio Manager tool developed by the Federal Environmental Protection Agency to track relative energy uses of buildings by property type. This tool allows the input of a facility's historic utility data to be compared with normalized data of a large database of its peer facilities.

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas will complete energy benchmarking on receipt of the actual data from the client.

15. Energy Conservation Measures

Bureau Veritas has conducted an Energy Audit on San Gabriel Water Yard/Plant. The study included a review of the building's construction features, historical energy and water consumption and costs, review of the building envelope, HVAC equipment, heat distribution systems, lighting, and the building's operational and maintenance practices.

Bureau Veritas has evaluated one Energy Conservation Measures (ECMs) for this property. The savings for each measure are calculated using standard engineering methods followed in the industry, and detailed calculations for ECM are provided in Appendix H for reference. A 10% discount in energy savings was applied to account for the interactive effects amongst the ECMs. In addition to the consideration of the interactive effects, Bureau Veritas has applied a 15% contingency to the implementation costs to account for potential cost overruns during the implementation of the ECMs.

The following table summarizes the recommended ECMs in terms of description, investment cost, energy consumption reduction, and cost savings.

Recommended Non-Renewable Energy Conservation Measures: Financial Impact	
Total Projected Initial ECM Investment	$5,994 *(In Current Dollars)*
Estimated Annual Cost Savings Related to ECMs	$1,943 *(In Current Dollars)*
Net Effective ECM Payback	3.09 years

Key Metrics to Benchmark the Subject Property's Energy Usage Profile

- Building Site Energy Use Intensity - The sum of the total site energy use in thousands of Btu per unit of gross building area. Site energy accounts for all energy consumed at the building location only not the energy consumed during generation and transmission of the energy to the site.
- Building Source Energy Use Intensity – The sum of the total source energy use in thousands of Btu per unit of gross building area. Source energy is the energy consumed during generation and transmission in supplying the energy to your site.
- Building Cost Intensity - This metric is the sum of all energy use costs in dollars per unit of gross building area.
- Greenhouse Gas Emissions - Although there are numerous gases that are classified as contributors to the total for Greenhouse Emissions, the scope of this energy audit focuses on carbon dioxide (CO_2). Carbon dioxide enters the atmosphere through the burning of fossil fuels (oil, natural gas, and coal), solid waste, trees and wood products, and also as a result of other chemical reactions (e.g., manufacture of cement).

Energy Conservation Measures Screening:

Bureau Veritas screens ECMs using two financial methodologies. ECMs which are considered financially viable must meet both criteria.

1. Simple Payback Period –The number of years required for the cumulative value of energy or water cost savings less future non-fuel or non-water costs to equal the investment costs of the building energy or water system, without consideration of discount rates. ECMs with a payback period greater than the Expected Useful Life (EUL) of the project are not typically recommended, as the cost of the project will not be recovered during the lifespan of the equipment. These ECMs are recommended for implementation during future system replacement. At that time, replacement may be evaluated based on the premium cost of installing energy efficient equipment.

$$Simple\ Payback = \frac{Initial\ Cost}{Annual\ Savings}$$

2. Savings-to-Investment Ratio (SIR) – The savings-to-investment ratio is the ratio of the present value savings to the present value costs of an energy or water conservation measure. The numerator of the ratio is the present value over the estimated useful life (EUL) of net savings in energy or water and non-fuel or non-water operation and maintenance costs attributable to the proposed energy or water conservation measure. The denominator of the ratio is the present value of the net increase in investment and replacement costs less salvage value attributable to the proposed energy or water conservation measure. It is recommended that energy efficiency recommendations should be based on a calculated SIR, with larger SIRs receiving a higher priority. A project is typically only recommended if SIR is greater than or equal to 1.0, unless other factors outweigh the financial benefit.

$$SIR = \frac{Present\ Value\ (Annual\ Savings, i\%, EUL)}{Initial\ Cost}$$

Bureau Veritas has identified one Energy Conservation Measures (ECMs) for this property.

List of Recommended Energy Conservation Measures For SAN GABRIEL WATER YARD/PLANT

16. Operations & Maintenance Plan

The quality of the maintenance and the operation of the facility's energy systems have a direct effect on its overall energy efficiency. Energy-efficiency needs to be a consideration when implementing facility modifications, equipment replacements, and general corrective actions. The following is a list of activities that should be performed as part of the routine maintenance program for the property.

Building Envelope

- ✓ Ensure that the building envelope has proper caulking and weather stripping.
- ✓ Patch holes in the building envelope with foam insulation and fire rated caulk around combustion vents
- ✓ Inspect building vents semiannually for bird infestation
- ✓ Inspect windows monthly for damaged panes and failed thermal seals
- ✗ Repair and adjust automatic door closing mechanisms as needed.

Heating and Cooling

- ✗ Pilots lights on furnaces and boilers be turned off in summer
- ✗ All preventive maintenance should be performed on all furnaces and boilers, which would include cleaning of burners and heat exchanger tubes.
- ✗ Ensure that the combustion vents exhaust outside the conditioned space and the vent dampers are functional
- ✗ Ensure that the control valves are functioning properly before start of every season
- ✗ Ensure steam traps are functional before start of each heating season
- ✗ Ensure use of chemical treatment for boiler make up water
- ✗ Ensure boiler outside temperature re-set is set to 55F
- ✗ Ensure use of chemical treatment for Colling tower water to prevent corrosion
- ✗ Ensure the duct work in unconditioned space is un-compromised and well insulated
- ✗ Duct cleaning is recommended every 10 years. This should include sealing of ducts using products similar to 'aeroseal'
- ✗ Ensure use of economizer mode is functional and used
- ✗ Ensure that the outside air dampers actuators are operating correctly
- ✗ Ensure air coils in the AHU and FCA's are pressure washed annually
- ✗ Return vents should remain un-obstructed and be located centrally
- ✓ Temperature settings reduced in unoccupied areas and set points seasonally adjusted.
- ✓ Evaporator coils and condenser coils should be regularly cleaned to improve heat transfer
- ✓ Refrigerant pipes should be insulated with a minimum of ¾" thick Elastomeric Rubber Pipe Insulation
- ✓ Ensure refrigerant pressure is maintained in the condensers
- ✓ Change air filters on return vents seasonally. Use only filters with 'Minimum Efficiency Rating Value'(MERV) of 8

Central Domestic Hot Water Heater

- ✗ Never place gas fired water heaters adjacent to return vents so as to prevent flame roll outs
- ✓ Ensure the circulation system is on timer to reduce the losses through re-circulation
- ✓ Ensure all hot water pipes are insulated with fiberglass insulation at all times
- ✓ Replacement water heater should have Energy Factor (EF)>0.9
- ✗ Tank-type water heaters flushed annually

Lighting Improvements

- ✓ Utilize bi-level lighting controls in stairwells and hallways.
- ✓ Use LED replacement lamps
- ✓ Clean lighting fixture reflective surfaces and translucent covers.
- ✓ Ensure that timers and/or photocells are operating correctly on exterior lighting
- ✓ Use occupancy sensors for offices and other rooms with infrequent occupancy

Existing Equipment and Replacements

- ✓ Ensure that refrigerator and freezer doors close and seal correctly
- ✓ Ensure kitchen and bathroom exhaust outside the building and the internal damper operates properly
- ✓ Ensure that bathroom vents exhaust out
- ✓ Office/ computer equipment either in the “sleep” or “off” mode when not used

Key

✓	Maintenance Measure is Applicable For the Given Facility

17. Certification

The City of Glendora (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of San Gabriel Water Yard/Plant, 625 West Hidden Valley Drive, Glendora, California 91702, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

Appendix J:
Energy Audit Glossary of Terms

Glossary of Terms and Acronyms

ECM – Energy Conservation Measures are projects recommended to reduce energy consumption. These can be No/Low cost items implemented as part of routine maintenance or Capital Cost items to be implemented as a capital improvement project.

Initial Investment – The estimated cost of implementing an ECM project. Estimates typically are based on R.S. Means Construction cost data and Industry Standards.

Annual Energy Savings – The reduction in energy consumption attributable to the implementation of a particular ECM. These savings values do not include the interactive effects of other ECMs.

Cost Savings – The expected reduction in utility or energy costs achieved through the corresponding reduction in energy consumption by implementation of an ECM.

Simple Payback Period –The number of years required for the cumulative value of energy or water cost savings less future non-fuel or non-water costs to equal the investment costs of the building energy or water system, without consideration of discount rates.

EUL – Expected Useful Life is the estimated lifespan of a typical piece of equipment based on industry accepted standards.

RUL – Remaining Useful Life is the EUL minus the effective age of the equipment and reflects the estimated number of operating years remaining for the item.

SIR - The savings-to-investment ratio is the ratio of the present value savings to the present value costs of an energy or water conservation measure. The numerator of the ratio is the present value of net savings in energy or water and non-fuel or non-water operation and maintenance costs attributable to the proposed energy or water conservation measure. The denominator of the ratio is the present value of the net increase in investment and replacement costs less salvage value attributable to the proposed energy or water conservation measure. It is recommended that energy-efficiency recommendations be based on a calculated SIR, with larger SIRs receiving a higher priority. A project typically is recommended only if the SIR is greater than or equal to 1.0, unless other factors outweigh the financial benefit.

Life Cycle Cost - The sum of the present values of (a) **I**nvestment costs, less salvage values at the end of the study period; (b) Non-fuel operation and maintenance costs: (c) Replacement costs less salvage costs of replaced building systems; and (d) Energy and/or water costs.

Life Cycle Savings – The sum of the estimated annual cost savings over the EUL of the recommended ECM, expressed in present value dollars.

Building Site Energy Use Intensity - The sum of the total site energy use in thousands of Btu per unit of gross building area. Site energy accounts for all energy consumed at the building location only not the energy consumed during generation and transmission of the energy to the site.

Building Source Energy Use Intensity – The sum of the total source energy use in thousands of Btu per unit of gross building area. Source energy is the energy consumed during generation and transmission in supplying the energy to your site.

Building Cost Intensity - This metric is the sum of all energy use costs in dollars per unit of gross building area.

Greenhouse Gas Emissions - Although there are numerous gases that are classified as contributors to the total for Greenhouse Emissions, the scope of this energy audit focuses on carbon dioxide (CO_2). Carbon dioxide enters the atmosphere through the burning of fossil fuels (oil, natural gas, and coal), solid waste, trees and wood products, and also as a result of other chemical reactions (e.g., manufacture of cement).

A-2. Park Findings and Deficiencies

Amenities and General Site

Carlyle E. Linder Equestrian Park covers 5.7 acres and provides a location for walks and horse riding. The amenities encompass a picnic area, unpaved parking, and a building housing restroom and a snack bar.

Architectural

No notable issues were identified regarding the façade and structural components within the building. All architectural elements of restrooms were renovated in 2018. The overall condition of the interior finishes is considered fair to good, and the interior construction is evidently well-maintained. Recommendations are limited to routine lifecycle replacements, with no significant costs anticipated in the immediate future.

Mechanical, Electrical, Plumbing and Fire (MEPF)

Most of MEPF components were installed in 1980. There building has no heating or cooling. Hot water is supplied by an electric tankless water heater, and electricity is distributed through panels located in the snack bar or kitchen. Additionally, there is a lack of fire suppression systems.

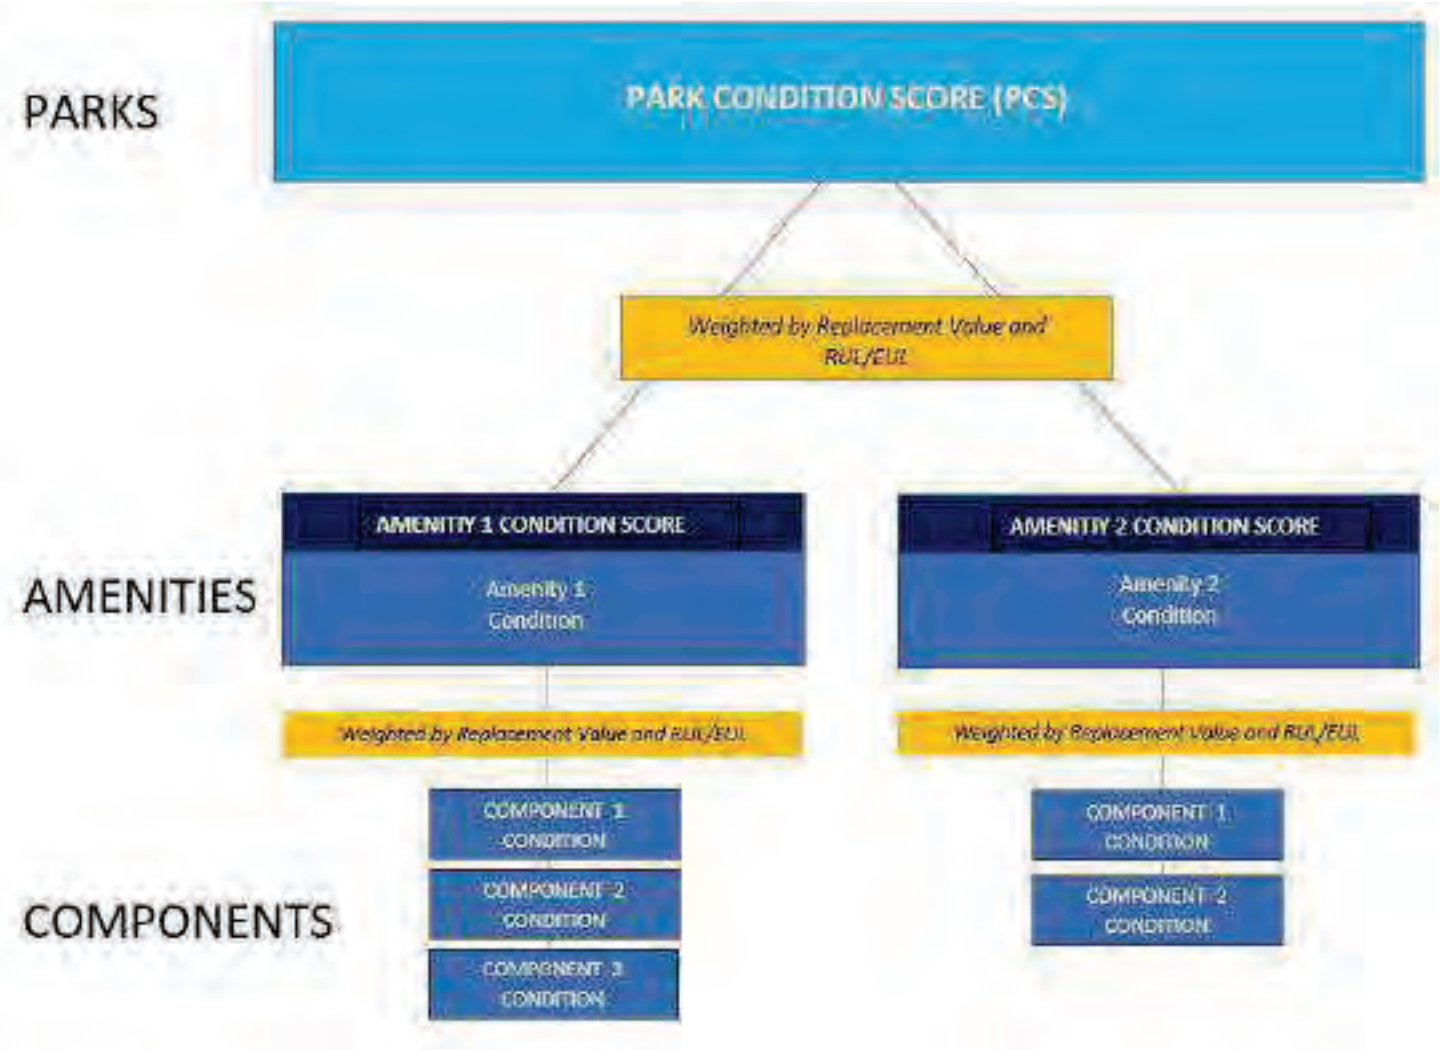
Site

The overall site maintenance is acceptable, with landscaping and site improvements generally in fair condition. However, the entry drive is surfaced with asphalt, which is deteriorated and shows transverse cracking, extensive raveling, and localized depressions. The drive aisle should be milled and overlaid with new asphalt in the short term. Additionally, the parking area is unpaved. Paving of the parking area should be considered.

Recommended Additional Studies

No additional studies are recommended.

B. Amenities and General Site



B-1. Prioritization Methodology

Park Condition Score (PCS) and Amenity Condition Score (ACS)

A major goal of the Facility Condition Assessment (FCA) is to benchmark individual parks with other parks within the portfolio, and amenities with other amenities either within the same park and across the portfolio. To achieve a rating for each park, the Park Condition Score (PCS) is developed; similarly, an Amenity Condition Score (ACS) is used to compare amenities.

To assist in the overall prioritization effort, the following terms are used at the Component and Amenity level:

- **Component:** individual elements of the amenity or park that are evaluated and assigned conditions and GPS coordinates. Examples of components include benches, trash receptacles, tennis nets, playground surfaces, or split-rail fencing.
- **Amenity:** defined as a group of components that constitute a major feature of the park, logically grouped together by purpose and/or proximity. Examples of an amenity include a basketball court, a softball field, a dog park, picnic area, or playground.
- **Current Renewal Value (CRV):** the cost in today's dollars of the major constituent parts that make up the whole:
  - for Parks: CRV = renewal cost of all **developed** amenities within it (land value is excluded)
  - for Amenities: CRV = renewal cost of all significant components within it

The Amenity Condition Score (ACS) is a score calculated from an algorithm comprising a weighted average of the conditions of all the components within it.

AMENITY CONDITION SCORE (ACS) FORMULA = SUM [Remaining Value / Renewal Value (RenV) of combined components]

Remaining value = RenV multiplied by RUL/EUL

The Park Condition Score (PCS) is the total score for a single park property calculated from the sum of the Amenity Condition Scores (ACSs) for each amenity within the park.

PARK CONDITION SCORE FORMULA = SUM [Remaining Value]/ SUM [Renewal Value]

B-2. Park Prioritization Metrics

Park Condition Score (PCS) and Amenity Condition Score (ACS)

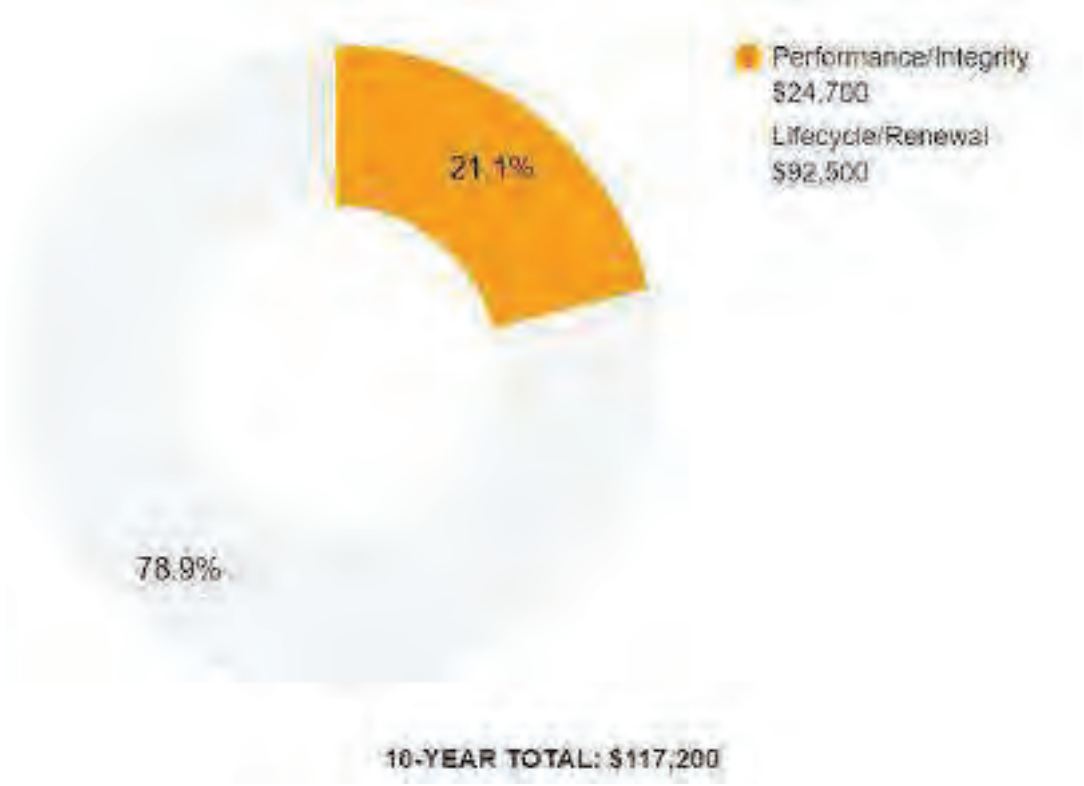
A major goal of the Facility Condition Assessment (FCA) is to benchmark individual parks with other parks within the portfolio, and amenities with other amenities either within the same park and across the portfolio. To achieve a rating for each park, the Park Condition Score (PCS) is developed; similarly, an Amenity Condition Score (ACS) is used to compare amenities.

The PCS and ACS metrics have been developed so that the higher the score, the less the park or amenity needs short term financial attention, due to its relative condition. The lower the score, the more attention is needed. An increasingly low score indicates an increased need to address deficiencies, provide replacements or make essential repairs. The lower the score, the more the amenity or park requires renewal or replacement. Both PCS and ACS scores range from 0 to 100.

The color coding reflects the score definition. Higher scores are assigned a sliding scale of green, with 100 assigned the deepest green. Yellow indicates a condition in the middle of the range, with yellow green in the high mid ranges, and yellow red in the low mid ranges. Scores in the low range are assigned a sliding scale of red, with 0 assigned the deepest red.

FAILED CONDITION - 0 _____ EXCELLENT CONDITION -100

The table on the following page shows the PCS condition score of this park, along with the ACS condition score of each amenity within the park:



Carlyle E. Linder Equestrian Park Restrooms/Concession	56
General Site	58
Equestrian	50

B-3. Plan Types (Amenities and General Site)

Each line item in the cost database is assigned a Plan Type, which is the primary reason for the recommended replacement, repair, or other corrective action. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the best fit, typically the one with the greatest significance. See the *Purpose* description in the *Purpose and Scope* section for an explanation of Component Type.

Plan Type Descriptions		
Safety		An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk.
Performance/Integrity		Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.
Accessibility		Does not meet ADA, UFAS, and/or other accessibility requirements.
Environmental		Improvements to air, water, or soil quality, including removal of hazardous materials from the site.
Retrofit/Adaptation		Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.
Lifecycle/Renewal		Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.

Plan Type Distribution (by Cost) – Timeframe 10 Years

B-4. Immediate Needs (Amenities and General Site)

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

BV did not identify any immediate needs associated with the amenities or general park areas at this site.

B-5. Key Findings (Amenities and General Site)

Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

The numerical scoring of condition as shown in the Key Findings is based on a 0-100 scale, as illustrated below:

- 0 - Replacement has none or very low impact on park operations
- 33 – Replacement has low impact on park operations
- 66 - Replacement has medium impact on park operation
- 100 - Failing, safety or code requirement component with high impact on park operations

Roadways in Poor condition.

Pavement, Asphalt
Carlyle E. Linder Equestrian Park Restrooms/Concession Park Entrance-Roadway

Uniformat Code: G2010
Recommendation: **Mill & Overlay in 2025**

Priority Score: **84.8**

Plan Type: Performance/Integrity

Cost Estimate: $18,200

**$$$**$

The asphalt pavement displays notable signs of deterioration, including alligator cracking, transverse cracking, extensive raveling, and localized depressions. Milling and overlay recommended. - AssetCALC ID: 7199031

Roadways in Poor condition.

Pavement, Asphalt
Carlyle E. Linder Equestrian Park Restrooms/Concession Park Entrance-Roadway

Uniformat Code: G2010
Recommendation: **Seal & Stripe in 2025**

Priority Score: **84.8**

Plan Type: Performance/Integrity

Cost Estimate: $2,300

No recent seal coat visible - AssetCALC ID: 7211344

B-6. Equestrian

Equestrian			
Asset Type	Riding Rinks		
Asset Location	Main site		
Overall Condition	Fair		
Parking Spaces	One		
Component	*Description*	*Quantity*	*Condition*
Pole Light Fixture w/ Lamps	Any type 30' High, w/ LED Replacement, Replace/Install	2 EA	Fair
Outdoor Spectator Seating	Bleachers, Aluminum Benches (per Seat), Replace	10 EA	Fair
Fences & Gates	Fence, Metal Tube 4', Replace	1100 LF	Fair
Accessibility	Potential accessibility issues were not observed at this asset.		
Key Issues and Findings	None		

B-7. General Site

General Site			
Asset Type	General site		
Asset Location	Throughout site		
Overall Condition	Fair		
Component	*Description*	*Quantity*	*Condition*
Campground Accessories	Grill, Pedestal-Style, Replace	2 EA	Fair
Bicycle repair station, tools, pump, stands	Exercise Station Parks/Trails, Standard, Replace	2 EA	Fair
Irrigation System	Control Panel, Replace	1 EA	Fair
Drinking Fountain	Wall-Mounted, Bi-Level, Replace	2 EA	Fair
Park Bench	Wood/Composite/Fiberglass, Replace	3 EA	Fair
Roadways	Pavement, Asphalt, Seal & Stripe	3500 SF	Poor
Roadways	Pavement, Asphalt, Mill & Overlay	3500 SF	Poor

General Site			
Bike Rack	Fixed 6-10 Bikes, Replace	1 EA	Fair
Sidewalk	Concrete, Large Areas, Replace	5000 SF	Good
Retaining Wall	Brick/Stone, Replace	300 SF	Fair
Signage	Property, Building or Pole-Mounted, Replace/Install	1 EA	Fair
Trash Receptacle	Portable/Light-Duty, Replace	1 EA	Fair
Irrigation System	Controllers & Valves, Repairs & Adjustments, Repair	45000 SF	Fair
Park Bench	Metal Powder-Coated, Replace	2 EA	Fair
Park Bench	Precast Concrete, Replace	3 EA	Fair
Trash Receptacle	Heavy-Duty Fixed Concrete, Replace	2 EA	Fair
Picnic Table	Precast Concrete, Replace	2 EA	Fair
Ancillary Building	Wood-Framed , Replace	60 SF	Fair
Picnic Table	Metal Powder-Coated, Replace	1 EA	Fair
Landscaping and Topography	Limited landscaping features; irrigation present Site is generally flat		
Storm Water Management	Surface drainage to developed and undeveloped surroundings		
Accessibility	Potential moderate issues have been identified at this asset. Refer to Appendix D and the previous study for more details.		
Key Issues and Findings	Drive aisle asphalt is deteriorated, no accessible route from public way		

C.Buildings

C-1. Facility Condition Index (FCI)

One of the major goals of the FCA is to calculate each building's Facility Condition Index (FCI), which provides a theoretical objective indication of a building's overall condition. By definition, the FCI is defined as the ratio of the cost of current needs divided by current replacement value (CRV) of the facility. The chart below presents the industry standard ranges and cut-off points.

FCI Ranges and Description	
0 – 5%	In new or well-maintained condition, with little or no visual evidence of wear or deficiencies.
5 – 10%	Subjected to wear but is still in a serviceable and functioning condition.
10 – 30%	Subjected to hard or long-term wear. Nearing the end of its useful or serviceable life.
30% and above	Has reached the end of its useful or serviceable life. Renewal is now necessary.

The deficiencies and lifecycle needs identified in this assessment provide the basis for a portfolio-wide capital improvement funding strategy. In addition to the current FCI, extended FCI's have been developed to provide owners the intelligence needed to plan and budget for the "keep-up costs" for their facilities. As such the 3-year, 5-year, and 10-year FCI's are calculated by dividing the anticipated needs of those respective time periods by current replacement value. As a final point, the FCI's ultimately provide more value when used to relatively compare facilities across a portfolio instead of being over-analyzed and scrutinized as stand-alone values. The table below summarizes the individual findings for this FCA:

FCI Analysis | Carlyle E. Linder Equestrian Park Restrooms/Concession / Building

Replacement Value	*Total SF*	*Cost/SF*
$ 199,500	*570*	*$ 350*

	Est Reserve Cost	FCI
Current	$ 0	**0.0 %**
3-Year	$ 0	0.0 %
5-Year	$ 13,900	7.0 %
10-Year	$ 33,900	17.0 %

The vertical bars below represent the year-by-year needs identified for the site. The orange line in the graph below forecasts what would happen to the FCI (left Y axis) over time, assuming zero capital expenditures over the next ten years. The dollar amounts allocated for each year (blue bars) are associated with the values along the right Y axis.

Needs by Year with Unaddressed FCI Over Time

Immediate Needs

No immediate needs were identified.

Key Findings

No key findings were identified.

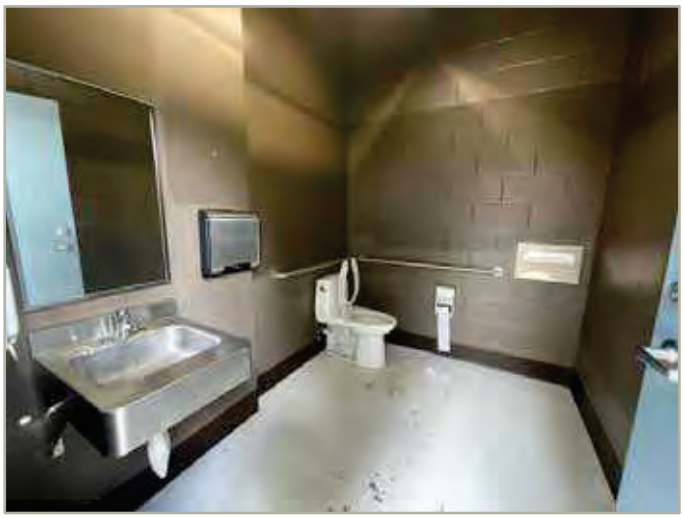
Areas Observed

All key areas of the site were accessible and observed

Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason or rationale for the recommended replacement, repair, or other corrective action. This is the "why" part of the equation. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the "best" fit, typically the one with the greatest significance.

Plan Type Descriptions



Safety	■	An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk.
Performance/Integrity	■	Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.
Accessibility	■	Does not meet ADA, UFAS, and/or other handicap accessibility requirements.
Environmental	■	Improvements to air or water quality, including removal of hazardous materials from the building or site.
Retrofit/Adaptation	■	Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.
Lifecycle/Renewal	■	Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.

Plan Type Distribution (by Cost)

C-2. Restroom/Concession Building

Building: Systems Summary		
Address	Restroom Building-1000 North Glendora Mountain Road, Glendora, California 91741	
Constructed	1980	
Building Size	570 SF	
Number of Stories	1	
System	*Description*	*Condition*
Structure	Masonry bearing walls with wood roof deck supported by wood joists and concrete slab foundation.	Fair
Façade	Wall Finish: CMU Windows: Wood	Good
Roof	Shed construction with asphalt shingles	Fair
Interiors	Walls: painted and unfinished Floors: VCT and unfinished concrete Ceilings: Painted and Unfinished/exposed	Fair
Elevators	None	--
Plumbing	Copper supply and cast-iron waste & venting Electric tankless water heaters Toilets and sinks in all restrooms	Fair
HVAC	None	--
Fire Suppression	None	Fair

Building: Systems Summary

Electrical	Source and Distribution: Panel with copper wiring Interior Lighting: LED	Fair
Fire Alarm	Alarms	Fair
Equipment/Special	None	--
Accessibility	Presently it does not appear an accessibility study is needed for this property.	
Key Issues and Findings	None	

D.Property Space Use and Observed Areas

Areas Observed

Most of the interior spaces were observed in order to gain a clear understanding of the property's overall condition. Other areas accessed included the site within the property boundaries, the exterior of the property, and the roofs.

Key Spaces Not Observed

All spaces were accessible and observed.

E. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of "areas of public accommodations" and "public facilities" on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily requires a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities.
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the checklists that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance.
- Only a representative sample of areas was observed.
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance.
- Itemized costs for individual non-compliant items are not included in the dataset.
- For any "none" boxes checked or reference to "no issues" identified, that alone does not guarantee full compliance.

The facility was originally constructed in 1980. The facility has not since been substantially renovated.

No costs or detailed follow-up study are currently recommended. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

F. Purpose and Scope

Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

Condition Ratings	
Excellent	New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Good	Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Fair	Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. The component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.
Poor	Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed, or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life.
Failed	Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.
Not Applicable	Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.

Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include a review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Review maintenance records and procedures with the in-place maintenance personnel.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

G. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means, CBRE Whitestone,* and *Marshall & Swift,* Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

Definitions

Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct, and manage the corrections.

H.Energy Audit

The purpose of this Energy Audit is to provide Carlyle E. Linder Equestrian Park Restrooms/Conces with a baseline of energy usage, the relative energy efficiency of the facility, and specific recommendations for Energy Conservation Measures. Information obtained from these analyses may be used to support a future application to an Energy Conservation Program, Federal and Utility grants towards energy conservation, as well as support performance contracting, justify a municipal bond-funded improvement program, or as a basis for replacement of equipment or systems.

The energy audit consisted of an onsite visual assessment to determine current conditions, itemize the energy consuming equipment (i.e. Boilers, Make-Up Air Units, DWH equipment); review lighting systems both exterior and interior; and review efficiency of all such equipment. The study also included interviews and consultation with operational and maintenance personnel. The following is a summary of the tasks and reporting that make up the Energy Audit portion of the report.

The following is a summary of the tasks and reporting that make up the Energy Audit portion of the report.

Energy and Water Using Equipment

- Bureau Veritas has surveyed the common areas, offices, maintenance facilities and mechanical rooms to document utility-related equipment, including heating systems, cooling systems, air handling systems and lighting systems.

Building Envelope

- Bureau Veritas has reviewed the characteristics and conditions of the building envelope, checking insulation values and conditions. This review also includes an inspection of the condition of walls, windows, doors, roof areas, insulation and special use areas.

Recommendations for Energy Savings Opportunities

- Based on the information gathered during the on-site assessment, the utility rates, as well as recent consumption data and engineering analysis, Bureau Veritas has identified opportunities to save energy and provide probable construction costs, projected energy/utility savings and provide a simple payback analysis.

Analysis of Energy Consumption

- Based on the information gathered during the on-site assessment and a, Bureau Veritas has conducted an analysis of the energy usage of all equipment, and identified which equipment is using the most energy and what equipment upgrades may be necessary. As a result, equipment upgrades, or replacements are identified that may provide a reasonable return on the investment and improve maintenance reliability.

Energy Audit Process

- Interviewing staff and review plans and past upgrades
- Performing an energy audit for each use type
- Performing a preliminary evaluation of the utility system
- Analyzing findings, utilizing ECM cost-benefit worksheets
- Making preliminary recommendations for system energy improvements and measures
- Estimating initial cost and changes in operating and maintenance costs based on implementation of energy efficiency measures.
- Ranking recommended cost measures, based on the criticality of the project and the largest payback.

I. Historical Energy and Water Performance Metrics

Utility Data Tabulation Methodology

Establishing the energy baseline begins with an analysis of the utility cost and consumption of the facility. Utilizing the historical energy data and local weather information, we evaluate the existing utility consumption and assign it to the various end-uses throughout the buildings. The Historical Data Analysis breaks down utilities by consumption, cost and annual profile.

This data is analyzed, using standard engineering assumptions and practices. The analysis serves the following functions:

- Allows our engineers to benchmark the energy and water consumption of the facilities against consumption of efficient buildings of similar construction, use and occupancy.
- Generates the historical and current unit costs for energy and water.
- Provides an indication of how well changes in energy consumption correlate to changes in weather.
- Reveals potential opportunities for energy consumption and/or cost reduction. For example, the analysis may indicate that there is excessive, simultaneous heating and cooling, which may mean that there is an opportunity to improve the control of the heating and cooling systems.

By performing this analysis and leveraging our experience, our engineers prioritize buildings and pinpoint systems for additional investigation during the site visit, thereby maximizing the benefit of their time spent on-site and minimizing time and effort by the customer's personnel.

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used the utility rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data from the client.

Utilities Metering at Glance	
Number of electric meters observed	1
Number of domestic water meter observed	1

Average Utility Rates		
Electricity	Natural Gas	Water & Sewer
$0.30 /kWh	N/A	$11.18 /kgal

Electricity

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used the electric rate from published tariffs. Bureau Veritas will update the report on receipt of the actual data from the client.

Water and Sewer

The City of Glendora satisfies the water and sewer requirements of the facility. The billing for the water and sewer is monthly.

Note: No water and sewer utility data were received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used a rate from published tariffs. Bureau Veritas will update the report on receipt of the actual data.

Energy Star Portfolio Manager Facility Summary

Bureau Veritas uses the Portfolio Manager tool developed by the Federal Environmental Protection Agency to track relative energy uses of buildings by property type. This tool allows the input of a facility's historic utility data to be compared with normalized data of a large database of its peer facilities.

Note: No water and sewer utility data were received by Bureau Veritas from the client at the time of report compilation. Hence energy benchmarking for the facility cannot be evaluated at this time. Bureau Veritas will update the report on receipt of the actual data.

J. Energy Conservation Measures

Bureau Veritas has conducted an Energy Audit on Carlyle E. Linder Equestrian Park. The study included a review of the building's construction features, historical energy and water consumption and costs, review of the building envelope, lighting, and the building's operational and maintenance practices.

Bureau Veritas has evaluated one Energy Conservation Measures (ECMs) for this property. The savings for each measure are calculated using standard engineering methods followed in the industry, and detailed calculations for ECM are provided in Appendix H for reference. A 10% discount in energy savings was applied to account for the interactive effects amongst the ECMs. In addition to the consideration of the interactive effects, Bureau Veritas has applied a 15% contingency to the implementation costs to account for potential cost overruns during the implementation of the ECMs.

The following table summarizes the recommended ECMs in terms of description, investment cost, energy consumption reduction, and cost savings.

Recommended Non-Renewable Energy Conservation Measures: Financial Impact	
Total Projected Initial ECM Investment	$36 *(In Current Dollars)*
Estimated Annual Cost Savings Related to ECMs	$6 *(In Current Dollars)*
Net Effective ECM Payback	6.2 years

Key Metrics to Benchmark the Subject Property's Energy Usage Profile

- Building Site Energy Use Intensity - The sum of the total site energy use in thousands of Btu per unit of gross building area. Site energy accounts for all energy consumed at the building location only not the energy consumed during generation and transmission of the energy to the site.
- Building Source Energy Use Intensity – The sum of the total source energy use in thousands of Btu per unit of gross building area. Source energy is the energy consumed during generation and transmission in supplying the energy to your site.
- Building Cost Intensity - This metric is the sum of all energy use costs in dollars per unit of gross building area.
- Greenhouse Gas Emissions - Although there are numerous gases that are classified as contributors to the total for Greenhouse Emissions, the scope of this energy audit focuses on carbon dioxide (CO_2). Carbon dioxide enters the atmosphere through the burning of fossil fuels (oil, natural gas, and coal), solid waste, trees and wood products, and also as a result of other chemical reactions (e.g., manufacture of cement).

Energy Conservation Measures Screening:

Bureau Veritas screens ECMs using two financial methodologies. ECMs which are considered financially viable must meet both criteria.

1. Simple Payback Period –The number of years required for the cumulative value of energy or water cost savings less future non-fuel or non-water costs to equal the investment costs of the building energy or water system, without consideration of discount rates. ECMs with a payback period greater than the Expected Useful Life (EUL) of the project are not typically recommended, as the cost of the project will not be recovered during the lifespan of the equipment. These ECMs are recommended for implementation during future system replacement. At that time, replacement may be evaluated based on the premium cost of installing energy efficient equipment.

$$Simple\ Payback = \frac{Initial\ Cost}{Annual\ Savings}$$

2. Savings-to-Investment Ratio (SIR) – The savings-to-investment ratio is the ratio of the present value savings to the present value costs of an energy or water conservation measure. The numerator of the ratio is the present value over the estimated useful life (EUL) of net savings in energy or water and non-fuel or non-water operation and maintenance costs attributable to the proposed energy or water conservation measure. The denominator of the ratio is the present value of the net increase in investment and replacement costs less salvage value attributable to the proposed energy or water conservation measure. It is recommended that energy efficiency recommendations should be based on a calculated SIR, with larger SIRs receiving a higher priority. A project is typically only recommended if SIR is greater than or equal to 1.0, unless other factors outweigh the financial benefit.

$$SIR = \frac{Present\ Value\ (Annual\ Savings, i\%, EUL)}{Initial\ Cost}$$

Bureau Veritas has identified one Energy Conservation Measure (ECM) for this property.

List of Recommended Energy Conservation Measures For Arezou Masoumi

		Description of ECM	Location	Projected Initial Investment	Estimated Annual Energy & Water Savings	Total Energy Savings	Estimated Utility Cost Savings	Estimated Annual O&M Savings	Total Estimated Annual Cost Savings	Simple Payback	Life Cycle Savings	Expected Useful Life (EUL)
				(a)	Water							
				($)	(kGal)	(Mmbtu)	($)	($)	($)	(Yrs.)	($)	(Yrs.)
1	Title:	Install Low Flow Faucet Aerators	Location:Carlyle E. Linder Equestrian Park - Restrooms	$32	0	0	$5	$0	$7	4.87	$24	10.00
	Attribute:	Replace 2x 1.5GPM rated bathroom aerators with 0.5GPM WaterSense certified aerators										
Totals for No/Low Cost Items				**$32**	**0**	**0**	**$5**	**$0**	**$7**	**4.87**		
Total For Capital Cost				**$0**	**0**	**0**	**$0**	**$0**	**$0**	**0.00**		
		Interactive Savings Discount @ 10%			0	0	$0	$0	-$1			
		Total Contingency Expenses @ 15%		$5								
Total for Improvements				**$37**	**0**	**0**	**$4**	**$0**	**$6**	**6.22**		

K. Operations & Maintenance Plan

The quality of the maintenance and the operation of the facility's energy systems have a direct effect on its overall energy efficiency. Energy-efficiency needs to be a consideration when implementing facility modifications, equipment replacements, and general corrective actions. The following is a list of activities that should be performed as part of the routine maintenance program for the property.

Central Domestic Hot Water Heater

- ✗ Never place gas fired water heaters adjacent to return vents so as to prevent flame roll outs
- ✗ Ensure the circulation system is on timer to reduce the losses through re-circulation
- ✓ Ensure all hot water pipes are insulated with fiberglass insulation at all times
- ✓ Replacement water heater should have Energy Factor (EF)>0.9
- ✗ Tank-type water heaters flushed monthly

Lighting Improvements

- ✓ Clean lighting fixture reflective surfaces and translucent covers.
- ✓ Ensure that timers and/or photocells are operating correctly on exterior lighting
- ✓ Use occupancy sensors for offices and other rooms with infrequent occupancy

Existing Equipment and Replacements

- ✓ Ensure that refrigerator and freezer doors close and seal correctly
- ✓ Ensure kitchen and bathroom exhaust outside the building and the internal damper operates properly
- ✓ Ensure that bathroom vents exhaust out

L. Certification

The City of Glendora (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Carlyle E. Linder Equestrian Park Restrooms/Conces, 1000 North Glendora Mountain Road, Glendora, California 91741, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

ECM EXPLANATION:

By reducing the flow of water coming from the restroom faucets, aerators can generate energy savings at low cost and with easy installation. The savings generated would be in the form of reduced water and sewer costs and at the same time aerators would save energy by reducing the demand for hot water. The average faucet has a flow rate of about 2 to 4 GPM. Adding a screw-in faucet aerator reduces the flow to 0.5 to 1.5 GPM in the bathroom and 2.2 GPM in the kitchen. In addition to saving energy and water, the "foamier" water that comes from faucet aerators wets objects better than water from a faucet with no aerator, which tends to bounce off the object rather than thoroughly wetting it.

BV recommends replacing the proposed faucet aerators with new low flow aerators as mentioned above. The proposed ECM shall also result in an annual energy saving in form of reduction in water heating bills.

Summary:

Initial Investment: $32 Estimated Annual Cost Savings: $7 Simple Payback Period (Yrs): 4.87

Appendix I:
Energy Audit Glossary of Terms

Glossary of Terms and Acronyms

ECM – Energy Conservation Measures are projects recommended to reduce energy consumption. These can be No/Low cost items implemented as part of routine maintenance or Capital Cost items to be implemented as a capital improvement project.

Initial Investment – The estimated cost of implementing an ECM project. Estimates typically are based on R.S. Means Construction cost data and Industry Standards.

Annual Energy Savings – The reduction in energy consumption attributable to the implementation of a particular ECM. These savings values do not include the interactive effects of other ECMs.

Cost Savings – The expected reduction in utility or energy costs achieved through the corresponding reduction in energy consumption by implementation of an ECM.

Simple Payback Period –The number of years required for the cumulative value of energy or water cost savings less future non-fuel or non-water costs to equal the investment costs of the building energy or water system, without consideration of discount rates.

EUL – Expected Useful Life is the estimated lifespan of a typical piece of equipment based on industry accepted standards.

RUL – Remaining Useful Life is the EUL minus the effective age of the equipment and reflects the estimated number of operating years remaining for the item.

SIR - The savings-to-investment ratio is the ratio of the present value savings to the present value costs of an energy or water conservation measure. The numerator of the ratio is the present value of net savings in energy or water and non-fuel or non-water operation and maintenance costs attributable to the proposed energy or water conservation measure. The denominator of the ratio is the present value of the net increase in investment and replacement costs less salvage value attributable to the proposed energy or water conservation measure. It is recommended that energy-efficiency recommendations be based on a calculated SIR, with larger SIRs receiving a higher priority. A project typically is recommended only if the SIR is greater than or equal to 1.0, unless other factors outweigh the financial benefit.

Life Cycle Cost - The sum of the present values of (a) Investment costs, less salvage values at the end of the study period; (b) Non-fuel operation and maintenance costs: (c) Replacement costs less salvage costs of replaced building systems; and (d) Energy and/or water costs.

Life Cycle Savings – The sum of the estimated annual cost savings over the EUL of the recommended ECM, expressed in present value dollars.

Building Site Energy Use Intensity - The sum of the total site energy use in thousands of Btu per unit of gross building area. Site energy accounts for all energy consumed at the building location only not the energy consumed during generation and transmission of the energy to the site.

Building Source Energy Use Intensity – The sum of the total source energy use in thousands of Btu per unit of gross building area. Source energy is the energy consumed during generation and transmission in supplying the energy to your site.

Building Cost Intensity - This metric is the sum of all energy use costs in dollars per unit of gross building area.

Greenhouse Gas Emissions - Although there are numerous gases that are classified as contributors to the total for Greenhouse Emissions, the scope of this energy audit focuses on carbon dioxide (CO_2). Carbon dioxide enters the atmosphere through the burning of fossil fuels (oil, natural gas, and coal), solid waste, trees and wood products, and also as a result of other chemical reactions (e.g., manufacture of cement).

A-2. Park Findings and Deficiencies

Historical Summary

Art Cook Demonstration Gardens Park is situated at the corner of Sierra Madre and Loraine. This small botanical garden encompasses an estimated land area of 0.4 acres.

Amenities and General Site

The community park showcases a variety of plantings, including trees, plants, and shrubs. The site area is furnished with precast concrete benches and a trash receptacle. Two sides of the park are surrounded by chain-link fencing, and a park monument sign is prominently displayed. Components are in good to fair condition, and maintenance appears to be good. Lifecycle replacements are recommended over the reserve term .

Architectural

There are no buildings on the site.

Mechanical, Electrical, Plumbing and Fire (MEPF)

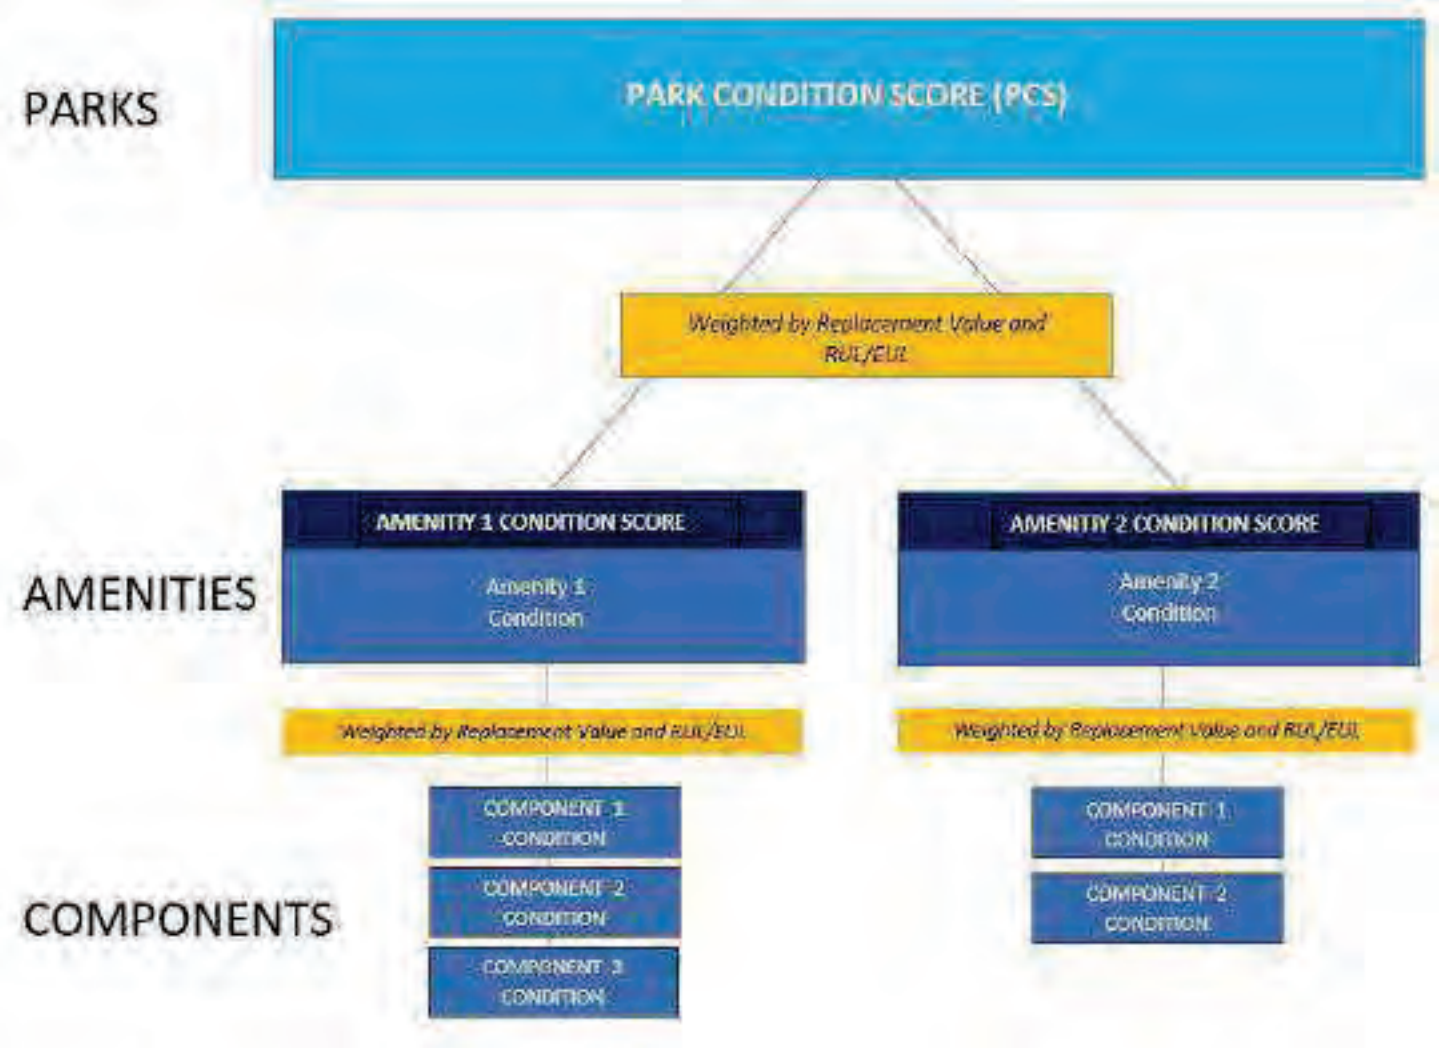
There are no MEPF assets identified on the site.

Recommended Additional Studies

No additional studies are recommended.

B. Amenities and General Site

B-1. Prioritization Methodology



Park Condition Score (PCS) and Amenity Condition Score (ACS)

A major goal of the Facility Condition Assessment (FCA) is to benchmark individual parks with other parks within the portfolio, and amenities with other amenities either within the same park and across the portfolio. To achieve a rating for each park, the Park Condition Score (PCS) is developed; similarly, an Amenity Condition Score (ACS) is used to compare amenities.

To assist in the overall prioritization effort, the following terms are used at the Component and Amenity level:

- **Component:** individual elements of the amenity or park that are evaluated and assigned conditions and GPS coordinates. Examples of components include benches, trash receptacles, tennis nets, playground surfaces, or split-rail fencing.
- **Amenity:** defined as a group of components that constitute a major feature of the park, logically grouped together by purpose and/or proximity. Examples of an amenity include a basketball court, a softball field, a dog park, picnic area, or playground.
- **Current Renewal Value (CRV):** the cost in today's dollars of the major constituent parts that make up the whole:
  - for Parks: CRV = renewal cost of all **developed** amenities within it (land value is excluded)
  - for Amenities: CRV = renewal cost of all significant components within it

www.us.bureauveritas.com | p 800.733.0660 BUREAU VERITAS

The Amenity Condition Score (ACS) is a score calculated from an algorithm comprising a weighted average of the conditions of all the components within it.

AMENITY CONDITION SCORE (ACS) FORMULA = SUM [Remaining Value / Renewal Value (RenV) of combined components]

Remaining value = RenV multiplied by RUL/EUL

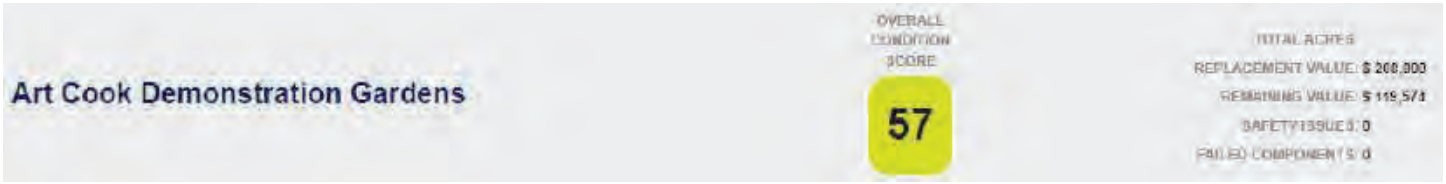
The Park Condition Score (PCS) is the total score for a single park property calculated from the sum of the Amenity Condition Scores (ACSs) for each amenity within the park.

PARK CONDITION SCORE FORMULA = SUM [Remaining Value]/ SUM [Renewal Value]

B-2. Park Prioritization Metrics

Park Condition Score (PCS) and Amenity Condition Score (ACS)

A major goal of the Facility Condition Assessment (FCA) is to benchmark individual parks with other parks within the portfolio, and amenities with other amenities either within the same park and across the portfolio. To achieve a rating for each park, the Park Condition Score (PCS) is developed; similarly, an Amenity Condition Score (ACS) is used to compare amenities.



The PCS and ACS metrics have been developed so that the higher the score, the less the park or amenity needs short term financial attention, due to its relative condition. The lower the score, the more attention is needed. An increasingly low score indicates an increased need to address deficiencies, provide replacements or make essential repairs. The lower the score, the more the amenity or park requires renewal or replacement. Both PCS and ACS scores range from 0 to 100.

The color coding reflects the score definition. Higher scores are assigned a sliding scale of green, with 100 assigned the deepest green. Yellow indicates a condition in the middle of the range, with yellow green in the high mid ranges, and yellow red in the low mid ranges. Scores in the low range are assigned a sliding scale of red, with 0 assigned the deepest red.

FAILED CONDITION - 0 _____ EXCELLENT CONDITION -100

The table on the following page shows the PCS condition score of this park, along with the ACS condition score of each amenity within the park:

B-3. Plan Types (Amenities and General Site)

Each line item in the cost database is assigned a Plan Type, which is the primary reason for the recommended replacement, repair, or other corrective action. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the best fit, typically the one with the greatest significance. See the *Purpose* description in the *Purpose and Scope* section for an explanation of Component Type.

Plan Type Descriptions		
Safety	■	An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk.
Performance/Integrity	■	Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.
Accessibility	■	Does not meet ADA, UFAS, and/or other accessibility requirements.
Environmental	■	Improvements to air, water, or soil quality, including removal of hazardous materials from the site.
Retrofit/Adaptation	■	Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.
Lifecycle/Renewal	■	Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.

Plan Type Distribution (by Cost) – Timeframe 10 Years

B-4. Immediate Needs (Amenities and General Site)

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

BV did not identify any immediate needs associated with the amenities or general park areas at this site.

B-5. Key Findings (Amenities and General Site)

Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

The numerical scoring of condition as shown in the Key Findings is based on a 0-100 scale, as illustrated below:

- 0 - Replacement has none or very low impact on park operations
- 33 – Replacement has low impact on park operations
- 66 - Replacement has medium impact on park operation
- 100 - Failing, safety or code requirement component with high impact on park operations

BV did not identify any key findings associated with the amenities or general park areas at this site.

B-6. General Site

General Site			
Amenity Type	General Site		
Amenity Location	Throughout park		
Overall Condition	Fair		
Component	*Description*	*Quantity*	*Condition*
Trash Receptacle	Heavy-Duty Fixed Concrete	1 EA	Good
Park Bench	Precast Concrete	2 EA	Fair/Good
Signage	Property, Building or Pole-Mounted	1 EA	Fair
Backflow Preventer	Domestic Water	1 EA	Fair
Irrigation System	Control Panel	1 EA	Fair
Fences & Gates	Fence, Chain Link 6'	300 LF	Fair
Sidewalk	Concrete, Large Areas	1000 SF	Fair
Irrigation System	Controllers & Valves, Repairs & Adjustments	10000 SF	Fair

General Site			
Landscaping	Planting Beds, Shrubs and Perennials, Basic	10000 SF	Fair
Landscaping and Topography	None		
Storm Water Management	Surface drainage to developed and undeveloped surroundings		
Key Issues and Findings	Lack of site lighting		

C. Property Space Use and Observed Areas

Areas Observed

All the site areas were observed in order to gain a clear understanding of the facility's overall condition.

Key Spaces Not Observed

All key areas of the property were accessible and observed.

D. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of "areas of public accommodations" and "public facilities" on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e. city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily requires a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities.
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the checklists that are included in the Accessibility appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance.
- Only a representative sample of areas was observed.
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance.
- Itemized costs for individual non-compliant items are not included in the dataset.
- For any "none" boxes checked or reference to "no issues" identified, that alone does not guarantee full compliance.

- The park was originally constructed in 2017. The park has not since been substantially renovated.
- The following table summarizes the accessibility conditions of the exterior amenities in the park:

Art Cook Demonstration Gardens: Accessibility Summary

Facility	*Year Built/ Renovated*	*Prior Study Provided?*	*Major/Moderate Issues Observed?*
General Site	2017	No	No

During the interview process with the client representatives, no complaints or pending litigation associated with potential accessibility issues within the park were reported.

No detailed follow-up accessibility studies are included as recommendations since no major or moderate issues were identified at any of the park amenities and facilities. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

E. Purpose and Scope

Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes construction systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of construction systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

Condition Ratings	
Excellent	New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Good	Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Fair	Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. Component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.
Poor	Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life.
Failed	Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.
Not Applicable	Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.

Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of existing systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey, but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Review maintenance records and procedures with the in-place maintenance personnel.
- Observe the exterior amenities of the property, including individual site elements.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key facts about the portfolio.

F. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means, CBRE Whitestone,* and *Marshall & Swift,* Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

G. Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

H. Definitions

Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Amenities and General Site and Facilities sections of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

I. Energy Audit

The purpose of this Energy Audit is to provide Art Cook Demonstration Gardens with a baseline of energy usage, the relative energy efficiency of the facility, and specific recommendations for Energy Conservation Measures. Information obtained from these analyses may be used to support a future application to an Energy Conservation Program, Federal and Utility grants towards energy conservation, as well as support performance contracting, justify a municipal bond-funded improvement program, or as a basis for replacement of equipment or systems.

The site contains no energy-consuming features, therefore no energy conservation analysis was able to be performed.

J. Certification

The City of Glendora (the Client) retained Bureau Veritas to perform this Facility Condition Assessment in connection with its continued operation of Art Cook Demonstration Gardens, 1021 East Sierra Madre Avenue, Glendora, California 91741, the "Property". It is our understanding that the primary interest of the Client is to locate and evaluate materials and building system defects that might significantly affect the value of the property and to determine if the present Property has conditions that will have a significant impact on its continued operations.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

The conclusions and recommendations presented in this report are based on the brief review of the plans and records made available to our Project Manager during the site visit, interviews of available property management personnel and maintenance contractors familiar with the Property, appropriate inquiry of municipal authorities, our Project Manager's walk-through observations during the site visit, and our experience with similar properties.

No testing, exploratory probing, dismantling or operating of equipment or in-depth studies were performed unless specifically required under the *Purpose and Scope* section of this report. This assessment did not include engineering calculations to determine the adequacy of the Property's original design or existing systems. Although walk-through observations were performed, not all areas may have been observed (see Section 1 for specific details). There may be defects in the Property, which were in areas not observed or readily accessible, may not have been visible, or were not disclosed by management personnel when questioned. The report describes property conditions at the time that the observations and research were conducted.

4	List other significant capital improvements (focus on recent years; provide approximate date).			
5	List any major capital expenditures planned/requested for the next few years. Have they been budgeted?			
6	Describe any on-going extremely problematic, historically chronic, or immediate facility needs.			

Mark the column corresponding to the appropriate response. Please provide additional details in the Comments column, or backup documentation for any ***Yes*** responses. (**NA** indicates "*Not Applicable*", **Unk** indicates "*Unknown*")

	Question	Response				Comments
		Yes	No	Unk	NA	
7	Are there any problems with foundations or structures, like excessive settlement?				X	
8	Are there any wall, window, basement or roof leaks?				X	
9	Has any part of the facility ever contained visible suspect mold growth, or have there been any indoor air quality complaints?				X	
10	Are your elevators unreliable, with frequent service calls?				X	
11	Are there any plumbing leaks, water pressure, or clogging/backup issues?			X		
12	Have there been any leaks or pressure problems with natural gas, HVAC piping, or steam service?				X	
13	Are any areas of the facility inadequately heated, cooled or ventilated? Poorly insulated areas?				X	
14	Is the electrical service outdated, undersized, or problematic?				X	
15	Are there any problems or inadequacies with exterior lighting?				X	
16	Is site/parking drainage inadequate, with excessive ponding or other problems?				X	
17	Are there any other unresolved construction defects or significant issues/hazards at the property that have not yet been identified above?			X		
18	ADA: Has an accessibility study been previously performed? If so, when?		X			
19	ADA: Have any ADA improvements been made to the property since original construction? Describe.		X			
20	ADA: Has building management reported any accessibility-based complaints or litigation?		X			
21	Are any areas of the property leased to outside occupants?		X

Campus Findings and Deficiencies

Historical Summary

The Sierra Madre Avenue Water Yard property was originally constructed in 1916. The Warehouse was one of the original buildings at the property. The Chemical Building was estimated to have been built in 2004, and the Water Department Office was built in 2009.

Architectural

The roofs on the Chemical Building and Water Department Office appear to be original. There is some minor roof edge deterioration on the Chemical Building that are recommended for repair. Some roof leaks have occurred in the Water Department Office causing a few ceiling leaks in the office area. The roof leaks are reportedly repaired as they occur. Roof leaks have been an on-going problem at the Warehouse causing wood ceiling damage in various location in the garage. Repair of the roof leaks and damaged wood ceiling is recommended. Isolated locations of exterior concrete wall cracking was observed on the Chemical Building and Warehouse. The exterior walls on the Water Department Office are in good condition with little to no areas of deterioration. According to the point of contact, there are no issues with building movement or settlement at the property. However, due to the age of the buildings, routine maintenance checks on the foundation are recommended.

The interior finishes are replaced on an as needed basis. Typical lifecycle based replacements for the interior and exterior finishes are budgeted and anticipated during the reserve term.

Mechanical, Electrical, Plumbing and Fire (MEPF)

HVAC components at the Warehouse involve a split system and suspended unit heater. The point of contact reported inadequate heating in the building. A cost allowance to upgrade the HVAC system at the Warehouse has been included in the online capital planning database. Heating and cooling at the Water Department Office are provided by rooftop mounted packaged units. The rooftop units are original and in adequate working condition. There is no HVAC system at the Chemical Building.

The electrical system at the Chemical Building and Water Department Offices are controlled by switchboards that are likely original. The electrical wiring at the Warehouse is reportedly outdated and recommended for replacement. LED lighting was installed at the Warehouse within the past year.

Domestic hot water is supplied by storage tank water heaters at the Warehouse and Water Department Office. Typical commercial plumbing fixtures are utilized in the restrooms. There is no plumbing system at the Chemical Building.

Fire suppression at the Water Department Office consists of a fire sprinkler system. Fire extinguishers are used at the other buildings.

Site

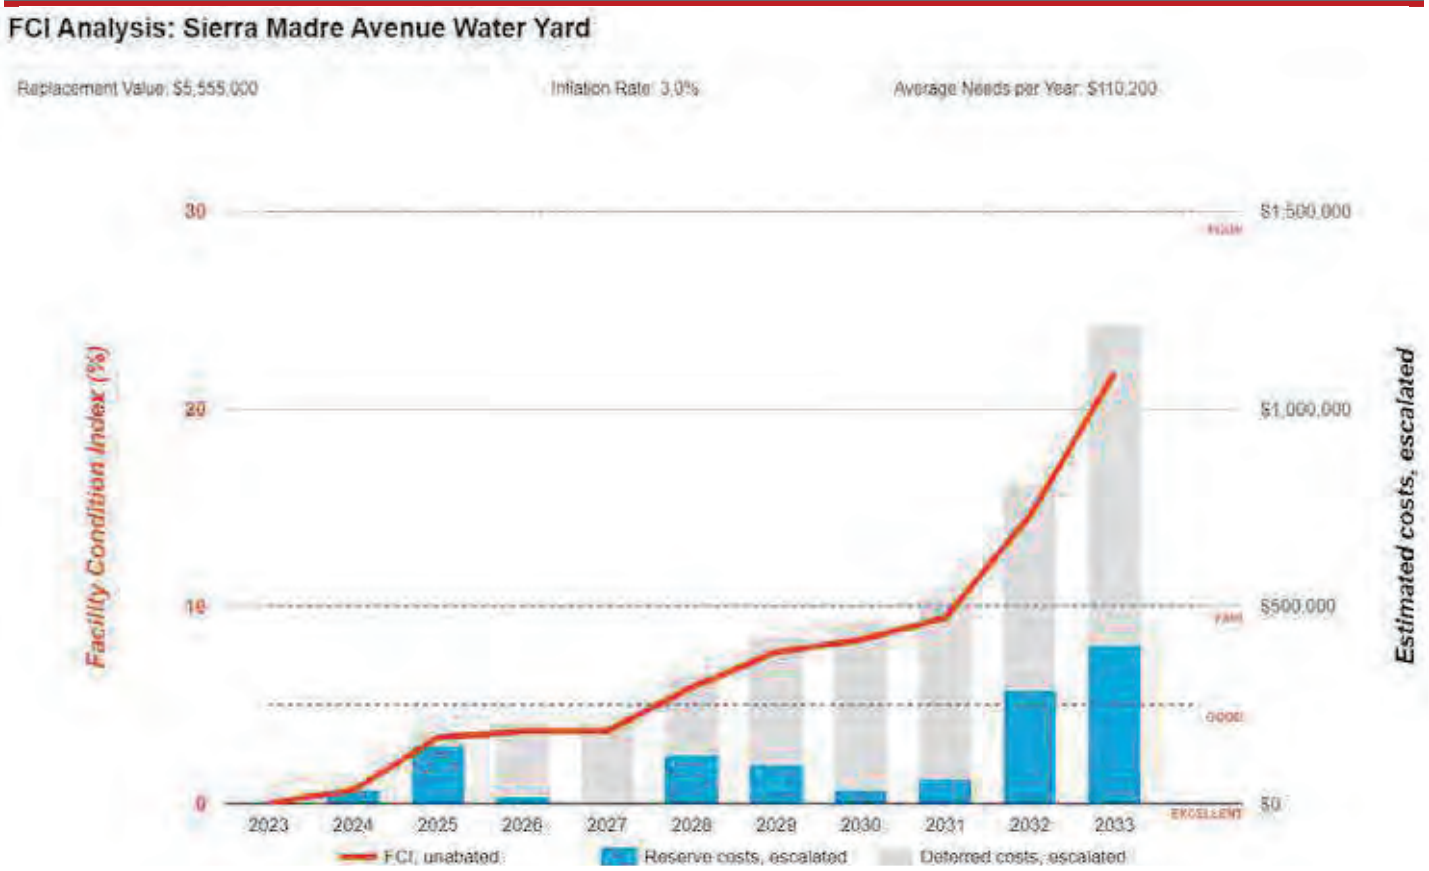
The site consists of the asphalt and concrete paved lots, the ancillary buildings that house the water facility’s booster pumps, and the reservoir structures. Asphalt and concrete pavement cracking was observed in the rear lot of the property. Crack sealing is recommended during the reserve term. Exterior building mounted lights were installed within the last year. Site lighting appears to be adequate for the facility’s needs.

Recommended Additional Studies

No additional studies recommended at this time.

Facility Condition Index (FCI)

One of the major goals of the FCA is to calculate each building's Facility Condition Index (FCI), which provides a theoretical objective indication of a building's overall condition. By definition, the FCI is defined as the ratio of the cost of current needs divided by current replacement value (CRV) of the facility. The chart below presents the industry standard ranges and cut-off points.



FCI Ranges and Description	
0 – 5%	In new or well-maintained condition, with little or no visual evidence of wear or deficiencies.
5 – 10%	Subjected to wear but is still in a serviceable and functioning condition.
10 – 30%	Subjected to hard or long-term wear. Nearing the end of its useful or serviceable life.
30% and above	Has reached the end of its useful or serviceable life. Renewal is now necessary.

The deficiencies and lifecycle needs identified in this assessment provide the basis for a portfolio-wide capital improvement funding strategy. In addition to the current FCI, extended FCI's have been developed to provide owners the intelligence needed to plan and budget for the "keep-up costs" for their facilities. As such the 3-year, 5-year, and 10-year FCI's are calculated by dividing the anticipated needs of those respective time periods by current replacement value. As a final point, the FCI's ultimately provide more value when used to relatively compare facilities across a portfolio instead of being over-analyzed and scrutinized as stand-alone values. The table below summarizes the individual findings for this FCA:

Facility (year built)	Cost/SF	Total SF	Replacement Value	Current	3-Year	5-Year	10-Year
Sierra Madre Avenue Water Yard / Chemical Building (2004)	$700	700	$490,000	0.3%	0.8%	1.8%	2.6%
Sierra Madre Avenue Water Yard / Warehouse (1916)	$375	2,400	$900,000	0.0%	14.4%	19.3%	23.9%
Sierra Madre Avenue Water Yard / Water Department Office (2009)	$700	5,950	$4,165,000	0.0%	0.2%	1.9%	7.5%

The vertical bars below represent the year-by-year needs identified for the site. The orange line in the graph below forecasts what would happen to the FCI (left Y axis) over time, assuming zero capital expenditures over the next ten years. The dollar amounts allocated for each year (blue bars) are associated with the values along the right Y axis.

Needs by Year with Unaddressed FCI Over Time

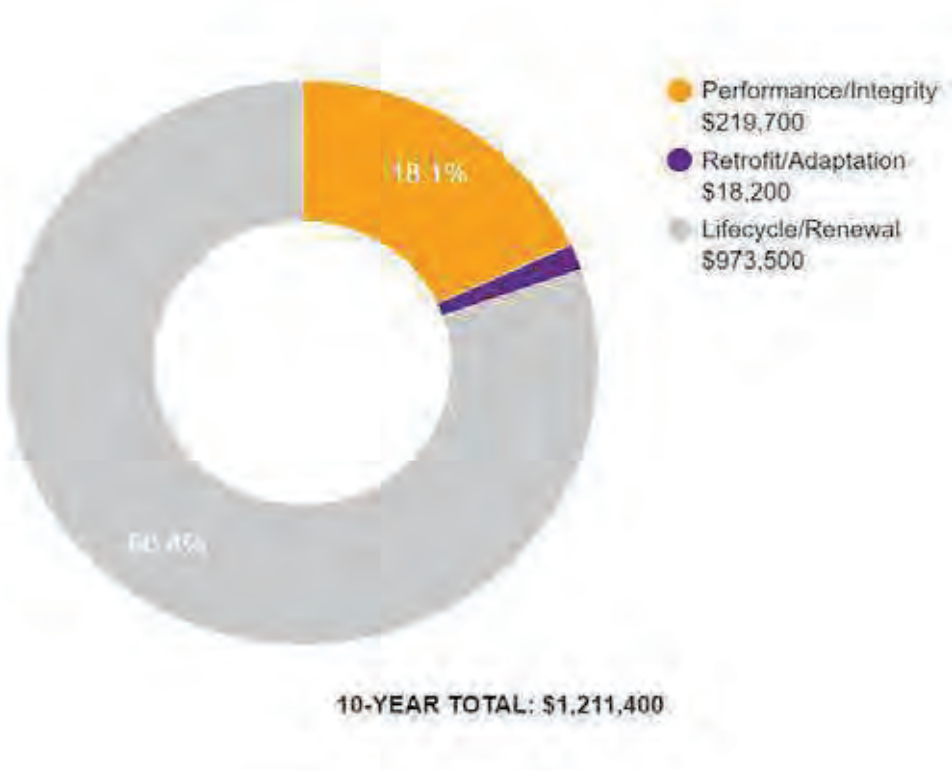
Recommendation: **Replace in 2028**

Priority Score: **54.5**

Plan Type: Retrofit/Adaptation

Cost Estimate: $15,600

**$$$**$



The POC reported that there is inadequate heating at the Warehouse. - AssetCALC ID: 7153264

Plan Types

Each line item in the cost database is assigned a Plan Type, which is the primary reason or rationale for the recommended replacement, repair, or other corrective action. This is the "why" part of the equation. A cost or line item may commonly have more than one applicable Plan Type; however, only one Plan Type will be assigned based on the "best" fit, typically the one with the greatest significance.

Plan Type Descriptions		
Safety	■	An observed or reported unsafe condition that if left unaddressed could result in injury; a system or component that presents potential liability risk.
Performance/Integrity	■	Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses risk to overall system stability.
Accessibility	■	Does not meet ADA, UFAS, and/or other handicap accessibility requirements.
Environmental	■	Improvements to air or water quality, including removal of hazardous materials from the building or site.
Retrofit/Adaptation	■	Components, systems, or spaces recommended for upgrades in in order to meet current standards, facility usage, or client/occupant needs.
Lifecycle/Renewal	■	Any component or system that is not currently deficient or problematic but for which future replacement or repair is anticipated and budgeted.

Plan Type Distribution (by Cost)

TOTALS (3% inflation)	**-**	**$124,300**	**$49,500**	**$41,800**	**$154,900**	**$370,500**

*Totals have been rounded to the nearest $100.

The orange line in the graph below forecasts what would happen to the FCI (left axis) over time, assuming zero capital expenditures. The capital expenditures for each year (blue bars) are associated with the dollar amounts along the right Y axis.

Needs by Year with Unaddressed FCI Over Time

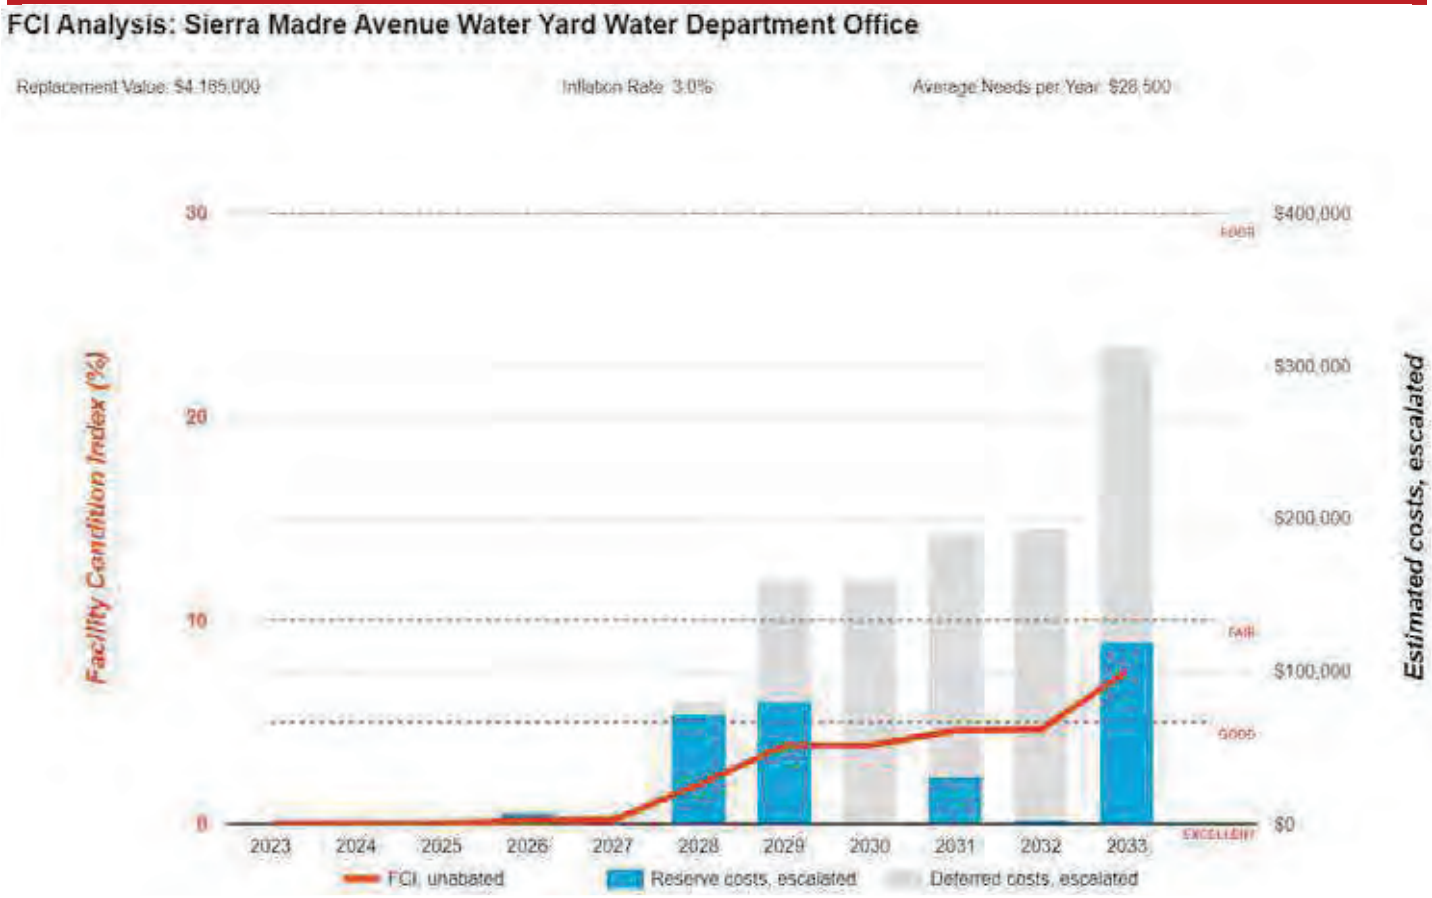
4. Water Department Office

Water Department Office: Systems Summary

Address	1051 East Sierra Madre Avenue; Glendora, California 91471	
Constructed/Renovated	2009	
Building Size	5,950 square feet	
Number of Stories	One	
System	*Description*	*Condition*
Structure	Concrete tilt-up bearing walls with wood roof deck supported by wood joists and concrete slab-on grade foundation	Good
Façade	Metal panels with vinyl windows	Good
Roof	Primary: Gable construction with metal finish Secondary: Gable construction with clay/concrete tiles	Good
Interiors	Walls: Painted drywall, ceramic tile Floors: Carpet, sealed concrete Ceilings: Painted drywall, suspended ACT	Fair
Elevators	None	--
Plumbing	Copper supply and cast iron waste and venting Gas water heater Toilets, urinals, and sinks in all restrooms	Fair
HVAC	Individual rooftop packaged units Supplementary components: ductless split system	Fair

Water Department Office: Systems Summary

Fire Suppression	Wet-pipe sprinkler system; hydrants, fire extinguishers	Fair
Electrical	Source and Distribution: Main switchboard with copper wiring Interior Lighting: T-8, CFL Emergency: none	Good
Fire Alarm	Alarm panel, smoke detectors, alarms, strobes, pull stations, back-up emergency lights, and exit signs	Fair
Equipment/Special	None	--
Accessibility	Presently it does not appear an accessibility study is needed for this property.	
Key Issues and Findings	No key issues observed	



Water Department Office: Systems Expenditure Forecast

System	Immediate	Short Term (1-2 yr)	Near Term (3-5 yr)	Med Term (6-10 yr)	Long Term (11-20 yr)	TOTAL
Facade	-	-	-	-	$54,200	$54,200
Roofing	-	-	-	-	-	-
Interiors	-	-	$69,600	$30,000	$125,600	$225,000
Plumbing	-	-	-	$4,800	$64,200	$69,000
HVAC	-	-	$7,800	$80,300	$69,000	$157,100
Fire Protection	-	-	-	-	$13,100	$13,100
Electrical	-	-	-	$53,500	$38,200	$91,700
Fire Alarm & Electronic Systems	-	-	-	$64,000	-	$64,000
Equipment & Furnishings	-	-	$2,600	-	$3,500	$6,100
Site Utilities	-	-	-	-	$18,800	$18,800
TOTALS (3% inflation)	-	-	**$79,900**	**$232,500**	**$386,400**	**$698,800**

*Totals have been rounded to the nearest $100.

The orange line in the graph below forecasts what would happen to the FCI (left axis) over time, assuming zero capital expenditures. The capital expenditures for each year (blue bars) are associated with the dollar amounts along the right Y axis.

Needs by Year with Unaddressed FCI Over Time

5. Site Summary

Site Information

Lot Size	4.40 acres (estimated)	
Parking Spaces	44 total spaces all in open lots; two of which are accessible	
System	*Description*	*Condition*
Pavement/Flatwork	Asphalt lots with areas of concrete and concrete sidewalks and curbs	Fair
Site Development	Building-mounted signage, CMU wall, chain link, and metal tube fencing Limited picnic tables	Fair
Landscaping and Topography	Limited landscaping features Irrigation present Low to moderate site slopes throughout	Fair
Utilities	Municipal water and sewer Local utility-provided electric and natural gas	Good
Site Lighting	Building-mounted: LED	Good
Ancillary Structures	Booster Pump Housing, Reservoir Pump Housing, Well #13E, Reservoir Structures	Fair
Accessibility	Presently it does not appear an accessibility study is needed for the exterior site areas. See Appendix C.	
Key Issues and Findings	Asphalt pavement cracking, concrete pavement cracking	

Site: Systems Expenditure Forecast

System	Immediate	Short Term (1-2 yr)	Near Term (3-5 yr)	Med Term (6-10 yr)	Long Term (11-20 yr)	TOTAL
Structure	-	-	-	-	-	-
Facade	-	$2,300	$1,300	-	$1,800	$5,400
Roofing	-	-	-	-	$25,500	$25,500
Electrical	-	-	-	$227,900	$346,000	$573,900
Fire Alarm & Electronic Systems	-	-	-	$17,000	-	$17,000
Special Construction & Demo	-	-	-	-	$324,500	$324,500
Site Development	-	-	-	$34,800	$11,800	$46,400

Site Pavement	-	$31,500	$5,900	$326,700	$170,400	$534,500
TOTALS (3% inflation)	-	**$33,800**	**$7,200**	**$606,200**	**$894,100**	**$1,541,300**

*Totals have been rounded to the nearest $100.

6. Property Space Use and Observed Areas

Areas Observed

The interior spaces were observed in order to gain a clear understanding of the property's overall condition. Other areas accessed included the site within the property boundaries and the exterior of the property.

Key Spaces Not Observed

All key areas of the property were accessible and observed.

7. ADA Accessibility

Generally, Title II of the Americans with Disabilities Act (ADA) prohibits discrimination by entities to access and use of “areas of public accommodations” and “public facilities” on the basis of disability. Regardless of their age, these areas and facilities must be maintained and operated to comply with the Americans with Disabilities Act Accessibility Guidelines (ADAAG).

A public entity (i.e., city governments) shall operate each service, program, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities.

However, this does not:

1. Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities.
2. Require a public entity to take any action that would threaten or destroy the historic significance of an historic property; or
3. Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with 35.150(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity.

Removal of barriers to accessibility should be addressed from a liability standpoint in order to comply with federal law, but the barriers may or may not be building code violations. The Americans with Disabilities Act Accessibility Guidelines are part of the ADA federal civil rights law pertaining to the disabled and are not a construction code. State and local jurisdictions have adopted the ADA Guidelines or have adopted other standards for accessibility as part of their construction codes.

During the FCA, Bureau Veritas performed a limited high-level accessibility review of the facility non-specific to any local regulations or codes. The scope of the visual observation was limited to the same areas observed while performing the FCA and the categories set forth in the checklists that are included in the appendix. It is understood by the Client that the limited observations described herein do not comprise a full ADA Compliance Survey, and that such a survey is beyond the scope of this particular assessment. A full measured ADA survey would be required to identify any and all specific potential accessibility issues. Additional clarifications of this limited survey:

- This survey was visual in nature and actual measurements were not taken to verify compliance
- Only a representative sample of areas was observed
- Two overview photos were taken for each subsection regardless of perceived compliance or non-compliance
- Itemized costs for individual non-compliant items are not included in the dataset
- For any “none” boxes checked or reference to “no issues” identified, that alone does not guarantee full compliance

The facility was originally constructed in 1916. The facility has not since been substantially renovated.

During the interview process with the client representatives, no complaints or pending litigation associated with potential accessibility issues was reported. The facility was substantially renovated in 2004 and 2009 and some accessibility improvements appear to have been implemented at that time.

No detailed follow-up accessibility study is currently recommended since no major or moderate issues were identified at the subject site. Reference the appendix for specific data, photos, and tables or checklists associated with this limited accessibility survey.

8. Purpose and Scope

Purpose

Bureau Veritas was retained by the client to render an opinion as to the Property's current general physical condition on the day of the site visit.

Based on the observations, interviews and document review outlined below, this report identifies significant deferred maintenance issues, existing deficiencies, and material code violations of record, which affect the Property's use. Opinions are rendered as to its structural integrity, building system condition and the Property's overall condition. The report also notes building systems or components that have realized or exceeded their typical expected useful lives.

The physical condition of building systems and related components are typically defined as being in one of five condition ratings. For the purposes of this report, the following definitions are used:

Condition Ratings	
Excellent	New or very close to new; component or system typically has been installed within the past year, sound and performing its function. Eventual repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Good	Satisfactory as-is. Component or system is sound and performing its function, typically within the first third of its lifecycle. However, it may show minor signs of normal wear and tear. Repair or replacement will be required when the component or system either reaches the end of its useful life or fails in service.
Fair	Showing signs of wear and use but still satisfactory as-is, typically near the median of its estimated useful life. The component or system is performing adequately at this time but may exhibit some signs of wear, deferred maintenance, or evidence of previous repairs. Repair or replacement will be required due to the component or system's condition and/or its estimated remaining useful life.
Poor	Component or system is significantly aged, flawed, functioning intermittently or unreliably; displays obvious signs of deferred maintenance; shows evidence of previous repair or workmanship not in compliance with commonly accepted standards; has become obsolete; or exhibits an inherent deficiency. The present condition could contribute to or cause the deterioration of contiguous elements or systems. Either full component replacement is needed, or repairs are required to restore to good condition, prevent premature failure, and/or prolong useful life.
Failed	Component or system has ceased functioning or performing as intended. Replacement, repair, or other significant corrective action is recommended or required.
Not Applicable	Assigning a condition does not apply or make logical sense, most commonly due to the item in question not being present.

Scope

The standard scope of the Facility Condition Assessment includes the following:

- Visit the Property to evaluate the general condition of the building and site improvements, review available construction documents in order to familiarize ourselves with, and be able to comment on, the in-place construction systems, life safety, mechanical, electrical, and plumbing systems, and the general built environment.
- Identify those components that are exhibiting deferred maintenance issues and provide cost estimates for Immediate Costs and Replacement Reserves based on observed conditions, maintenance history and industry standard useful life estimates. This will include the review of documented capital improvements completed within the last five-year period and work currently contracted for, if applicable.
- Provide a full description of the Property with descriptions of in-place systems and commentary on observed conditions.
- Provide a high-level categorical general statement regarding the subject Property's compliance to Title III of the Americans with Disabilities Act. This will not constitute a full ADA survey but will help identify exposure to issues and the need for further review.
- Obtain background and historical information about the facility from a building engineer, property manager, maintenance staff, or other knowledgeable source. The preferred methodology is to have the client representative or building occupant complete a Pre-Survey Questionnaire (PSQ) in advance of the site visit. Common alternatives include a verbal interview just prior to or during the walk-through portion of the assessment.
- Review maintenance records and procedures with the in-place maintenance personnel.
- Observe a representative sample of the interior spaces/units, including vacant spaces/units, to gain a clear understanding of the property's overall condition. Other areas to be observed include the exterior of the property, the roofs, interior common areas, and the significant mechanical, electrical and elevator equipment rooms.
- Provide recommendations for additional studies, if required, with related budgetary information.
- Provide an Executive Summary at the beginning of this report, which highlights key findings and includes a Facility Condition Index as a basis for comparing the relative conditions of the buildings within the portfolio.

9. Opinions of Probable Costs

Cost estimates are attached throughout this report, with the Replacement Reserves in the appendix.

These estimates are based on Invoice or Bid Document/s provided either by the Owner/facility and construction costs developed by construction resources such as *R.S. Means, CBRE Whitestone,* and *Marshall & Swift,* Bureau Veritas's experience with past costs for similar properties, city cost indexes, and assumptions regarding future economic conditions.

Opinions of probable costs should only be construed as preliminary, order of magnitude budgets. Actual costs most probably will vary from the consultant's opinions of probable costs depending on such matters as type and design of suggested remedy, quality of materials and installation, manufacturer and type of equipment or system selected, field conditions, whether a physical deficiency is repaired or replaced in whole, phasing or bundling of the work (if applicable), quality of contractor, quality of project management exercised, market conditions, use of subcontractors, and whether competitive pricing is solicited, etc. Certain opinions of probable costs cannot be developed within the scope of this guide without further study. Opinions of probable cost for further study should be included in the FCA.

Methodology

Based upon site observations, research, and judgment, along with referencing Expected Useful Life (EUL) tables from various industry sources, Bureau Veritas opines as to when a system or component will most probably necessitate replacement. Accurate historical replacement records, if provided, are typically the best source of information. Exposure to the elements, initial quality and installation, extent of use, the quality and amount of preventive maintenance exercised, etc., are all factors that impact the effective age of a system or component. As a result, a system or component may have an effective age that is greater or less than its actual chronological age. The Remaining Useful Life (RUL) of a component or system equals the EUL less its *effective age*, whether explicitly or implicitly stated. Projections of Remaining Useful Life (RUL) are based primarily on age and condition with the presumption of continued use and maintenance of the Property similar to the observed and reported past use and maintenance practices, in conjunction with the professional judgment of Bureau Veritas's assessors. Significant changes in occupants and/or usage may affect the service life of some systems or components.

Where quantities could not be or were not derived from an actual construction document take-off or facility walk-through, and/or where systemic costs are more applicable or provide more intrinsic value, budgetary square foot and gross square foot costs are used. Estimated costs are based on professional judgment and the probable or actual extent of the observed defect, inclusive of the cost to design, procure, construct and manage the corrections.

Definitions

Immediate Needs

Immediate Needs are line items that require immediate action as a result of: (1) material existing or potential unsafe conditions, (2) failed or imminent failure of mission critical building systems or components, or (3) conditions that, if not addressed, have the potential to result in, or contribute to, critical element or system failure within one year or will most probably result in a significant escalation of its remedial cost.

For database and reporting purposes the line items with RUL=0, and commonly associated with *Safety* or *Performance/Integrity* Plan Types, are considered Immediate Needs.

Replacement Reserves

Cost line items traditionally called Replacement Reserves (equivalently referred to as Lifecycle/Renewals) are for recurring probable renewals or expenditures, which are not classified as operation or maintenance expenses. The replacement reserves should be budgeted for in advance on an annual basis. Replacement Reserves are reasonably predictable both in terms of frequency and cost. However, Replacement Reserves may also include components or systems that have an indeterminable life but, nonetheless, have a potential for failure within an estimated time period.

Replacement Reserves generally exclude systems or components that are estimated to expire after the reserve term and are not considered material to the structural and mechanical integrity of the subject property. Furthermore, systems and components that are not deemed to have a material effect on the use of the Property are also excluded. Costs that are caused by acts of God, accidents, or other occurrences that are typically covered by insurance, rather than reserved for, are also excluded.

Replacement costs are solicited from ownership/property management, Bureau Veritas's discussions with service companies, manufacturers' representatives, and previous experience in preparing such schedules for other similar facilities. Costs for work performed by the ownership's or property management's maintenance staff are also considered.

Bureau Veritas's reserve methodology involves identification and quantification of those systems or components requiring capital reserve funds within the assessment period. The assessment period is defined as the effective age plus the reserve term. Additional information concerning the system's or component's respective replacement costs (in today's dollars), typical expected useful lives, and remaining useful lives were estimated so that a funding schedule could be prepared. The Replacement Reserves Schedule presupposes that all required remedial work has been performed or that monies for remediation have been budgeted for items defined as Immediate Needs.

For the purposes of 'bucketizing' the System Expenditure Forecasts in this report, the Replacement Reserves have been subdivided and grouped as follows: Short Term (years 1-3), Near Term (years 4-5), Medium Term (years 6-10), and Long Term (years 11-20).

Key Findings

In an effort to highlight the most significant cost items and not be overwhelmed by the Replacement Reserves report in its totality, a subsection of Key Findings is included within the Executive Summary section of this report. Key Findings typically include repairs or replacements of deficient items within the first five-year window, as well as the most significant high-dollar line items that fall anywhere within the ten-year term. Note that while there is some subjectivity associated with identifying the Key Findings, the Immediate Needs are always included as a subset.

Exceedingly Aged

A fairly common scenario encountered during the assessment process, and a frequent source of debate, occurs when classifying and describing "very old" systems or components that are still functioning adequately and do not appear nor were reported to be in any way deficient. To help provide some additional intelligence on these items, such components will be tagged in the database as Exceedingly Aged. This designation will be reserved for mechanical or electrical systems or components that have aged well beyond their industry standard lifecycles, typically at least 15 years beyond and/or twice their Estimated Useful Life (EUL). In tandem with this designation, these items will be assigned a Remaining Useful Life (RUL) not less than two years but not greater than 1/3 of their standard EUL. As such the recommended replacement time for these components will reside outside the typical Short Term window but will not be pushed 'irresponsibly' (too far) into the future.

10. Energy Audit

The purpose of this Energy Audit is to provide Sierra Madre Avenue Water Yard with a baseline of energy usage, the relative energy efficiency of the facility, and specific recommendations for Energy Conservation Measures. Information obtained from these analyses may be used to support a future application to an Energy Conservation Program, Federal and Utility grants towards energy conservation, as well as support performance contracting, justify a municipal bond-funded improvement program, or as a basis for replacement of equipment or systems

The energy audit consisted of an onsite visual assessment to determine current conditions, itemize the energy consuming equipment (i.e. Boilers, Make-Up Air Units, DWH equipment); review lighting systems both exterior and interior; and review efficiency of all such equipment. The study also included interviews and consultation with operational and maintenance personnel. The following is a summary of the tasks and reporting that make up the Energy Audit portion of the report.

The following is a summary of the tasks and reporting that make up the Energy Audit portion of the report.

Energy and Water Using Equipment

- Bureau Veritas has surveyed the common areas, offices, maintenance facilities and mechanical rooms to document utility-related equipment, including heating systems, cooling systems, air handling systems and lighting systems.

Building Envelope

- Bureau Veritas has reviewed the characteristics and conditions of the building envelope, checking insulation values and conditions. This review also includes an inspection of the condition of walls, windows, doors, roof areas, insulation and special use areas. Where we anticipated significant losses, we utilized infrared thermographs to analyze heat loss across the envelope.

Recommendations for Energy Savings Opportunities

- Based on the information gathered during the on-site assessment, the utility rates, as well as recent consumption data and engineering analysis, Bureau Veritas has identified opportunities to save energy and provide probable construction costs, projected energy/utility savings and provide a simple payback analysis.

Analysis of Energy Consumption

- Based on the information gathered during the on-site assessment and a, Bureau Veritas has conducted an analysis of the energy usage of all equipment, and identified which equipment is using the most energy and what equipment upgrades may be necessary. As a result, equipment upgrades, or replacements are identified that may provide a reasonable return on the investment and improve maintenance reliability.

Energy Audit Process

- Interviewing staff and review plans and past upgrades
- Performing an energy audit for each use type
- Performing a preliminary evaluation of the utility system
- Analyzing findings, utilizing ECM cost-benefit worksheets
- Making preliminary recommendations for system energy improvements and measures
- Estimating initial cost and changes in operating and maintenance costs based on implementation of energy efficiency measures
- Ranking recommended cost measures, based on the criticality of the project and the largest payback

11. Historical Energy and Water Performance Metrics

Utility Data Tabulation Methodology

The baseline utility consumption data for the proper has been developed by aggregating the consumption from one electric meter, one gas meter, and one water meter.

Data Limitation:

No assumptions were made in tabulation of the utility data for the purposes of the audit.

The cost associated with the utility consumption at the building was not made available to Bureau Veritas at the time of report compilation. As a result, Bureau Veritas has modeled the approximate rate based on the utility company published tariff for commercial institutions. Bureau Veritas will update the report on receipt of the actual data from the client.

Utilities Metering at Glance	
Number of electric meters observed	One
Number of gas meters observed	One
Number of domestic water meter observed	One

Average Utility Rates		
Electricity	Natural Gas	Water and Sewer
$0.30/kWh	$2.24/therm	$8.36/CCF

Electricity

Note: No utility data was received by Bureau Veritas from the housing authority at the time of report compilation. As a result, Bureau Veritas has used the electric rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data from the housing authority.

Natural Gas

Note: No utility data was received by Bureau Veritas from the housing authority at the time of report compilation. As a result, Bureau Veritas has used the natural gas rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data.

Water and Sewer

The City of Glendora satisfies the water and sewer requirements of the facility.

Note: No water and sewer utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas has used a rate from other properties within the same geographical region having similar construction layout and usage patterns. Bureau Veritas will update the report on receipt of the actual data.

End Use Energy Distribution

Note: No utility data was received by Bureau Veritas from the client at the time of report compilation. As a result, Bureau Veritas will complete end use energy distribution on receipt of the actual data from the client.

Energy Star Portfolio Manager Facility Summary

Bureau Veritas uses the Portfolio Manager tool developed by the Federal Environmental Protection Agency to track relative energy uses of buildings by property type. This tool allows the input of a facility's historic utility data to be compared with normalized data of a large database of its peer facilities.
