PUBLIC NOTICES

Agenda Materials: Any staff reports for agenda items considered in open session, as well as agenda materials for open session items provided to a majority of the legislative body(ies) following distribution of the agenda, are available for inspection in the City Clerk's Office at Rancho Mirage City Hall, located at 69-825 Highway 111, Rancho Mirage, CA 92270, during normal business hours.

Americans with Disabilities Act (ADA): If you are an individual with a disability and need a reasonable modification or accommodation pursuant to the ADA, please contact the City Clerk's Office at (760) 324-4511 Ext. 488, or via e-mail to CityClerk@RanchoMirageCA.gov, prior to the meeting. Providing notice at least 48 hours in advance of the meeting is suggested, so a determination may be made as to whether the request is feasible.

Livestream: This meeting may be viewed via Livestream on the City's website at www.RanchoMirageCA.gov.

Public Comments: Written public comments may be submitted to the City Clerk via email to CityClerk@RanchoMirageCA.gov or mail/delivery to ATTN: City Clerk, City of Rancho Mirage, 69-825 Highway 111, Rancho Mirage, CA 92270. Please submit written public comments at least three (3) hours in advance of the meeting to ensure they may be fully considered. Written public comments received during the meeting will be distributed to the legislative body(ies) and made available to the public following the meeting.

Oral public comments/testimony may be provided in person at the meeting during the non-agenda public comment period and during the public comment/testimony period for each agenda item. Public comments are limited to three (3) minutes per speaker. Please fill out a Request to Speak slip prior to the start of the meeting and submit it to the City Clerk. You will be called upon to speak at the appropriate time. Please submit a separate slip for each item on which you wish to speak.

Declaration of Posting: *I, Kristie Ramos, City Clerk of the City of Rancho Mirage, do hereby declare that the foregoing meeting agenda was posted on the City of Rancho Mirage website at www.RanchoMirageCA.gov, on the Rancho Mirage City Hall bulletin board at 69-825 Highway 111, Rancho Mirage, CA 92270, and at the Rancho Mirage Library & Observatory at 71-100 Highway 111, Rancho Mirage, CA 92270, at least 72 hours in advance of the meeting.*

Attachment 1 - Draft Ordinance No. 1233

ORDINANCE NO. 1233

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF RANCHO MIRAGE, CALIFORNIA, APPROVING THE TENTH AMENDMENT TO STATUTORY DEVELOPMENT AGREEMENT BY AND BETWEEN THE CITY OF RANCHO MIRAGE AND NEWAGE RANCHO MIRAGE, LLC

WHEREAS, City of Rancho Mirage (the "City") is a charter city and a municipal corporation of the State of California, and recognized as a political subdivision of the State for certain purposes; and

WHEREAS, on or about August 5, 1983, the City and Federated Development Company ("Federated") entered into a Development Agreement ("Original Development Agreement") under the provisions of the Development Agreement Statute pertaining to the property described therein and which was recorded on November 29, 1983, as Instrument No. 247445, with the Riverside County Recorder's Office and which is hereby incorporated herein by this reference as though set forth at length; and

WHEREAS, the Original Development Agreement has been amended 9 times, with the Original Agreement and all subsequent amendments incorporated herein by this reference, prior to the proposed 10th Amendment, as detailed in the Recitals of the 10th Amendment, attached hereto and incorporated herein by this reference as Exhibit "A" (the "10th Amendment"). As detailed in the Recitals to the 10th Amendment, the original counterparty to the Development has been updated numerous times, with the current owner of the subject property and project applicant being Newage Rancho Mirage, LLC; and

WHEREAS, Newage has proposed this 10th Amendment to the Original Development Agreement which includes the following: 1) Environmental Assessment Case Number EA21-0002 for the environmental review of the "Project", which currently includes a proposed Mitigated Negative Declaration that includes Mitigation Measures for Biological Resources, Cultural Resources, Noise, Transportation, and Tribal Cultural Resources; 2) General Plan Zoning Map Amendment Case No. GPZMA21-0001 for a zone change from Mountain Reserve (MR) to Resort Hotel (Rs-H) for the Sky Mesa portion of the Project Site; 3) Development Agreement Case No. DA21-0002 for a 10th Amendment to the Original Development Agreement; 4) Tentative Parcel Map Case No. TPM23-0002 ("TPM38768") which is a parcel map for condominium purposes which establishes three parcels for the Hotel Site (excluding the Sky Mesa area) which include Parcel 1 (2.699 acres) for the existing Spa Suites Site, Parcel 2 (15.995 acres) for the Hotel Site, and Parcel 3 (11.873 acres) for an event space, parking structure, and 106 residential condominium units; and 5) Major Modification Case No. MOD21-0004 for the project entitlements which consist of 106 residential units that include 1 to 3 bedrooms, 23,843 square feet of event space, 6,273 square feet of restaurant, 5,513 square feet for amenities, a 381-space subterranean parking structure, and other recreational amenities; and

WHEREAS, to strengthen the public planning process, encourage private participation in comprehensive planning and reduce the economic risk of development, the Legislature of the State of California adopted Sections 65864 et seq. of the California Government Code, "Development Agreement Statute" which authorizes cities to enter into property development agreements with any person(s) or entity(ies) having a legal or equitable interest in real property for the development of such real property in order to establish certain development rights in the real property; and

WHEREAS, pursuant to Chapter 17.56, “Development Agreements” of the Rancho Mirage Municipal Code, a development agreement is intended to provide assurances to Developer that an approved project may proceed subject to the policies, rules, regulations, and conditions of approval applicable to the project at the time of approval, regardless of any changes to City policies, rules, and regulations after project approval, and provide assurances that City cannot otherwise unilaterally impose conditions of approval of the project outside the context of a negotiated development agreement; and

WHEREAS, this Amendment will eliminate uncertainty in planning for and secure orderly development of the Subject Property, assure progressive installation of necessary improvements, and ensure attainment of the maximum effective utilization of resources within City at the least economic cost to its citizens; and

WHEREAS, the Development Agreement Statute, in relevant part, provides that (1) a development agreement may be amended by mutual consent of the parties to the agreement, and (2) notice of intention to amend shall be given in the same manner as a development agreement as set forth in Government Code Section 65867; (3) amendments are subject to Government Code Section 65867.5, which provides that a development agreement is a legislative act that shall be approved by an ordinance, and that the agreement shall not be approved unless the legislative body finds that the provisions of the agreement are consistent with the general plan and any appliable specific plan, and that the requirements apply to charter cities; and

WHEREAS, the parties to the Development Agreement desire to amend the agreement, and notice was provided as required in the Development Agreement Statute; and

WHEREAS, on January 9, 2025, the Rancho Mirage Planning Commission adopted Resolution No. 2025-PC-02, incorporated herein by this reference, recommending, in part, the City Council introduce and adopt this Ordinance, approving and adopting the proposed 10th Amendment; and

WHEREAS, on December 18, 2025, at a duly noticed meeting of the City Council, the City Council approved Resolution No. 2025-[TO BE INSERTED] adopting the Mitigation Monitoring and Reporting Program and approving the Mitigated Negative Declaration; and

WHEREAS, based on the foregoing recitals, City has determined that this Amendment is appropriate under the Development Agreement Statute and Chapter 17.56 of the Rancho Mirage Municipal Code; and

WHEREAS, the Amendment is voluntarily entered into in consideration of the benefits to and the rights created in favor of each of the parties hereto and in reliance upon the various representations and warranties contained herein.

NOW THEREFORE, THE CITY COUNCIL OF THE CITY OF RANCHO MIRAGE DOES ORDAIN AS FOLLOWS:

SECTION 1. RECITALS

That the above Recitals are true and correct and are incorporated as though fully set forth herein.

SECTION 2. APPROVAL OF 10th AMENDMENT TO DEVELOPMENT AGREEMENT

That the City Council hereby approves the attached 10th Amendment to Development Agreement by and between City of Rancho Mirage, a municipal corporation located in the County of Riverside, State of California ("City"), and Newage Rancho Mirage, LLC, a California limited liability company (“Developer”), pursuant to the authority of Sections 65864 et seq. of the California Government Code and Chapter 17.56 (Development Agreements) of the Rancho Mirage Municipal Code.

SECTION 3. CITY ATTORNEY REVIEW

That the City Attorney prepared and framed this Ordinance pursuant to Section 1.04.010 of the Municipal Code and finds that the City Council has the authority to adopt this Ordinance, that the Ordinance is constitutionally valid and that the Ordinance is consistent with the general power and purposes of the City as set forth in Section 1.04.031 of the Municipal Code.

SECTION 4. CEQA COMPLIANCE

That the City Council acting on behalf of the “Lead Agency,” under the California Environmental Quality Act (“CEQA”) and the CEQA Guidelines, on December 18, 2025 approved Resolution No. 2025-[NEXT IN ORDER], approving and adopting a mitigated negative declaration (the “MND”) and a mitigation monitoring and reporting program (“MMRP”) for the Project (Environmental Assessment Case No. EA21-0002), based upon its determination that mitigation measures imposed on the Project will avoid or mitigate impacts to a point where clearly no significant impacts on the environment would occur.

Section 5. **GOVERNMENT CODE SECTION 65867.5(b)**

That the City Council finds that the provisions of the Amendment are consistent with the City's General Plan.

Section 6. **SEVERABILITY**

That the City Council declares that, should any provision, section, paragraph, sentence or word of this Ordinance be rendered or declared invalid by any final court action in a court of competent jurisdiction or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences or words of this Ordinance as hereby adopted shall remain in full force and effect.

SECTION 7. **GOVERNMENT CODE 66020 NOTICE**

That pursuant to Government Code section 66020(d)(1), notice is hereby given that the Proposed Project is subject to certain fees, dedications, reservations and other exactions as provided herein, in the staff report and conditions of approval (collectively, "Conditions"); and these Conditions constitute written notice of a statement of the amount of such fees, and a description of the dedications, reservations, and other exactions, and that the applicant is hereby notified that the ninety-day approval period in which the applicant may protest these fees, dedications, reservations, and other exactions, pursuant to Government Code Section 66020(a), has commenced upon the date of adoption of this Ordinance.

SECTION 8. **EFFECTIVE DATE OF ORDINANCE**

That this Ordinance shall take effect thirty (30) days after its second reading by the City Council.

SECTION 9. **EXECUTION AND EFFECTIVE DATE OF AMENDMENT**

That in accordance with Section 17.56.050 of the City's Municipal Code, the 10th Amendment shall not be executed by the City until on or after the effective date of the Ordinance.

SECTION 10. **REPEAL OF CONFLICTING PROVISIONS**

That all the provisions of the Rancho Mirage Municipal Code as heretofore adopted by the City of Rancho Mirage that are in conflict with the provisions of this ordinance are hereby repealed.

SECTION 11. **RECORDATION OF AMENDMENT**

That in accordance with Section 17.56.050 of the City's Municipal Code, the City Clerk is hereby directed to record the fully executed Amendment with the Riverside County Recorder no later than ten (10) days after its execution.

SECTION 12. **CERTIFICATION**

That the City Clerk shall certify to the passage of this Ordinance and shall cause the same to be published according to law.

10TH AMENDMENT TO DEVELOPMENT AGREEMENT BY AND BETWEEN THE CITY OF RANCHO MIRAGE AND NEWAGE RANCHO MIRAGE, LLC

This 10th Amendment to the Development Agreement ("10th Amendment") is entered into this _____ day of _____, 2025, by and between the CITY OF RANCHO MIRAGE, a municipal corporation ("City"), and NEWAGE RANCHO MIRAGE, LLC, a California limited liability company ("Newage"), pursuant to the authority of Sections 65864 et seq. of the California Government Code and Chapter 17.56 of the Rancho Mirage Municipal Code.

R E C I T A L S:

WHEREAS, the City of Rancho Mirage ("City") is recognized as a charter city and a political subdivision of the State of California for certain purposes; and

WHEREAS, to strengthen the public planning process, encourage private participation in comprehensive planning and reduce the economic risk of development, the Legislature of the State of California adopted Section 65864 et seq. of the California Government Code (the "Development Agreement Statute"); and

WHEREAS, the Development Agreement Statute and the Rancho Mirage Municipal Code authorizes the City to enter into a property development agreement with any person or entity having a legal or equitable interest in real property for the development of such real property in order to establish certain development rights in the real property; and

WHEREAS, on or about August 5, 1983, the City and Federated Development Company ("Federated") entered into a Development Agreement ("Original Development Agreement") under the provisions of the Development Agreement Statute pertaining to the property described therein and which was recorded on November 29, 1983, as Instrument No. 247445, with the Riverside County Recorder's Office and which is hereby incorporated herein by this reference as though set forth at length; and

WHEREAS, in connection with the Original Development Agreement, Federated applied for and received approvals from the City for General Plan Amendment No. 83-84, Zone Change No. 83-82, Tentative Tract Map ("TTM") No. 19397, and "Conceptual Land Use Approval" in Land Use Case No. 83-P-145; and

WHEREAS, on or about August 22, 1985, the City and Federated amended the Original Development Agreement ("1st Amendment") pursuant to the Development Agreement Statute, to revise TTM No. 19397 and make associated changes to the "Conceptual Land Use Approval" in Land Use Case No. 83-P-145, which was recorded on February 10, 1986, as Instrument No. 31768 with the Riverside County Recorder's Office and which is hereby incorporated herein by this reference as though set forth at length; and

WHEREAS, on or about November 22, 1989, the City and Federated entered into a 2nd Amendment to the Original Development Agreement ("2nd Amendment") pursuant to the Development Agreement Statute, which was recorded on December 27, 1989, as Instrument No. 453119 with the Riverside County Recorder's Office and which is hereby incorporated herein by this reference as though set forth at length; and

WHEREAS, consistent with the 2nd Amendment, the City adopted a Specific Plan Overlay and amended the General Plan to permit property designated for general commercial use to be developed for "community centers, including specialty retail stores, offices and small high end department stores"; and

WHEREAS, portions of the Subject Property were acquired by MCO, with Federated retaining title to Lots 11, 12, 14, 48 and 50 of Tract Map No. 19397, and on or about June 6, 1991, the City consented to that certain Assignment and Assumption Agreement between Federated and MCO concerning certain rights and duties under the Original Development Agreement, the 1st Amendment and the 2nd Amendment and which is incorporated herein by this reference as though set forth at length; and

.

WHEREAS, on or about September 19, 1991, MCO, Federated and the City entered into a 3rd Amendment to the Original Development Agreement ("3rd Amendment") to substitute newly revised exhibits to the 2nd Amendment which was recorded on November 25, 1991, as Instrument No. 409130, with the Riverside County Recorder's Office and which is incorporated herein by this reference as though set forth at length; and

WHEREAS, on or about November 19, 1992, MCO, Federated and the City entered into a 4th Amendment to the Original Development Agreement ("4th Amendment") which was recorded on January 8, 1993, as Instrument No. 7776 with the Riverside County Recorder's Office and which is hereby incorporated herein by this reference as though set forth at length; and

WHEREAS, consistent with the 4th Amendment, MCO agreed to develop a certain portion of the Subject Property known as the "Villa Site" that would be operated under a condominium-hotel concept, whereby the units would be partially available for hotel rental, and the hotel facilities would be accessible to the condominium owners or users, in accordance with the zoning and development standards in effect City wide at the time of the issuance of the building permits for the Villa Site; and

WHEREAS, on or about November 30, 1995, certain property owned by MCO was transferred to FDC Real Estate ("FDC") pursuant to an Assignment of Rights under Development Agreement by Federated to FDC, with the City consenting to such assignment on December 7 1995, by approving a Consent to Assignment; and

WHEREAS, on or about June 19, 1997, MCO, FDC and the City entered into a 5th Amendment to Original Development Agreement ("5th Amendment"), which extended the Term of the Original Development Agreement to December 10, 2011, which was recorded on July 25, 1997, as Instrument No. 262788 with the Riverside County Recorder's Office and which is incorporated herein by this reference as though set forth at length; and

WHEREAS, or about November 2, 2000, MCO and the City entered into a 6th Amendment to Original Development Agreement ("6th Amendment") which added Tentative Tract Map No. 28741, a revision of Tentative Tract Map No. 24857. which was recorded on April 24, 2001, as Instrument No. 2001-173795, with the Riverside County Recorder's Office and which is incorporated herein by this reference as though set forth at length; and

WHEREAS, on or about December 2, 2000, MCO and FDC (which soon thereafter divested itself of all rights title and interest in the Project Site) and the City entered into a 7th Amendment to the Original Development Agreement ("7th Amendment") whereby MCO was permitted to elect in its sole discretion to proceed with development of certain portions of the Amended Tentative Tract Map No. 29389 which was recorded on April 24, 2001, as Instrument No. 2001-173794 with the Riverside County Recorder's Office and which is incorporated herein by this reference as though set forth at length; and

WHEREAS, on or about March 19, 2005, MCO and the City entered into an 8th Amendment to the Original Development Agreement ("Eight Amendment") whereby

MCO was provided with the opportunity to construct 138 two-story hotel villa units on the Villa Site which MCO could either retain or sell, in whole or subdivided, subject to certain restrictions on use and occupancy set forth in the 8th Amendment which was recorded on January 25, 2006, as Instrument No. 2006-0058746 with the Riverside County Recorder's Office and which is incorporated herein by this reference as though set forth at length; and

WHEREAS, on or about July 28, 2005, GENLB-Rancho ("GENLB") acquired a portion of the Subject Property from VA Rancho Mirage, L.P. ("Vail") which included the current site of the Hotel ("Hotel Site") formerly known as the "Lodge at Rancho Mirage" site, along with a portion of the Subject Property commonly referred to as the "Tennis Site"; and

WHEREAS, on or about July 28, 2005, the City consented to that certain Assignment and Assumption Agreement between Vail and GENLB with respect to the Hotel Site and the Tennis Site and concerning certain rights and duties under the Original Development Agreement as amended to date and which is hereby incorporated herein by this reference as though set forth at length; and

WHEREAS, on or about December 16, 2005, GENLB acquired the Villa Site from MCO; and

WHEREAS, on or about December 15, 2005, the City consented to that certain Assignment and Assumption Agreement between MCO and GENLB with respect to the Villa Site and concerning certain rights and duties under the Original Development Agreement as amended to date and which is hereby incorporated herein by this reference as though set forth at length; and

WHEREAS, on or about September 30, 2006, GENLB and the City entered into a 9th Amendment to the Original Development Agreement ("9th Amendment") which was recorded on October 27, 2006, as Instrument No. 2006- 0790342 with the Riverside County Recorder's Office and which is incorporated herein by this reference as though set forth at length; and

WHEREAS, Judi Bikulege, Vice President of GenLB, in a letter dated December 29, 2010, notified the City of GenLB's assignment of rights and obligations under the 9th Amendment to Rancho California Investments, LLC ("RCI"), an entity in which GenLB's principal shareholders retain a majority interest, and RCI's expressed assumption of the obligations of GenLB under the Ninth Amendment; and

WHEREAS, Sebastian Casano, Vice President of RCI, in a letter dated October 30, 2012, requested that the City consent to the assignment of the 9th Amendment to "Kam Sang Company Inc. or any of its affiliates, including Newage Rancho Mirage LLC

("Newage") conditioned upon the acquisition of the Project by Newage and the assumption by Newage of the obligations of RCI under the [Ninth Amendment]"; and

WHEREAS, pursuant to an Assignment and Assumption of Agreement GenLB had expressly assigned it rights and obligations under the Ninth Amendment to RCI and RCI has expressly assumed such rights and obligations; and

WHEREAS, on or around November 1, 2012, the City consented to that certain Consent to Assignment of 9th Amendment to Development Agreement, between RCI and Newage, concerning certain rights and duties under the Original Development Agreement, as amended to date, and which is hereby incorporated herein by this reference as though set forth at length; and

WHEREAS, Newage has proposed this 10th Amendment to the Original Development Agreement which includes the following: 1) Environmental Assessment Case Number EA21-0002 for the environmental review of the Project, which currently includes a proposed Mitigated Negative Declaration that includes Mitigation Measures for Biological Resources, Cultural Resources, Noise, Transportation, and Tribal Cultural Resources; 2) General Plan Zoning Map Amendment Case No. GPZMA21-0001 for a zone change from Mountain Reserve (MR) to Resort Hotel (Rs-H) for the Sky Mesa portion of the Project Site; 3) Development Agreement Case No. DA21-0002 for a 10th Amendment to the Original Development Agreement; 4) Tentative Parcel Map Case No. TPM23-0002 ("TPM38768") which is a parcel map for condominium purposes which establishes three parcels for the Hotel Site (excluding the Sky Mesa area) which include Parcel 1 (2.699 acres) for the existing Spa Suites Site, Parcel 2 (15.995 acres) for the Hotel Site, and Parcel 3 (11.873 acres) for an event space, parking structure, and 106 residential condominium units; and 5) Major Modification Case No. MOD21-0004 for the project entitlements which consist of 106 residential units that include 1 to 3 bedrooms, 23,843 square feet of event space, 6,273 square feet of restaurant, 5,513 square feet for amenities, a 381-space subterranean parking structure, and other recreational amenities; and

WHEREAS, based on the foregoing Recitals, the City has determined that this 10th Amendment is appropriate under the Development Agreement Statute and Chapter 17.56 of the Rancho Mirage Municipal Code; and

WHEREAS, this 10th Amendment is voluntarily entered into in consideration of the benefits to and the rights created in favor of each of the parties hereto and in reliance upon the various representations and warranties contained herein; and

WHEREAS, the application for this 10th Amendment was considered by the Planning Commission and the City Council at duly noticed public hearings in accordance with the Development Agreement Statute and Chapter 17.56 of the Rancho Mirage Municipal Code; and

WHEREAS, this 10th Amendment will eliminate uncertainty in planning for and securing orderly development of the Project and Project Site (as specifically described in this 10th Amendment below), assure progressive installation of necessary improvements, ensure attainment of the maximum effective utilization of resources within the City at the least economic cost to its citizens, and otherwise achieve the goals and purposes for which the Development Agreement Statute was enacted; and

WHEREAS, the City Council believes that such orderly development of the Project and Project Site will provide many public benefits to the City through the imposition of development standards and requirements under the provisions and conditions of this 10th Amendment, including, without limitation, the creation of job opportunities and additional tax revenue for the City's general fund; and

WHEREAS, it is the intent of the parties that all acts referred to in this 10th Amendment shall be accomplished in such a way as to fully comply with the California Environmental Quality Act (California Public Resources Code §21000 *et seq*.) ("CEQA") and the State CEQA Guidelines (California Code of Regulations, title 14, §15000 *et seq*.), as each is amended from time to time; and

WHEREAS, this 10th Amendment is made and entered into in consideration of the mutual covenants and in reliance upon the various representations and warranties contained herein.

NOW, THEREFORE, in consideration of the mutual covenants and promises of the parties contained herein, the parties agree as follows:

A G R E E M E N T:

Section 1. Incorporation of Recitals. The foregoing recitals are incorporated into this 10th Amendment by this reference as though fully set forth herein.

Section 2. Effective Date. This 10th Amendment shall be effective upon the effective date ("Effective Date") of the ordinance enacting this 10th Amendment ("Enacting Ordinance").

Section 3. Project Site. The "Project Site" consists of the Subject Property as more particularly described in the Legal Description attached hereto as Exhibit A for the Hotel Site which includes the existing Spa Suites, Exhibit B for the Villas Site which includes the T-Wing and Hotel Villas, Exhibit C for the Tennis Site, and Exhibit D for the Sky Mesa Site.

Section 4. Project. The "Project" includes the following:

a) Development Agreement (Case No. DA21-0002) – For a 10th Amendment to the Original Development Agreement;

b) General Plan Zoning Map Amendment (Case No. GPZMA21-0001) – For a zone change from Mountain Reserve (MR) to Resort Hotel (Rs-H) for the Sky Mesa Site;

c) Tentative Parcel Map (TPM 38768) (Case No. TPM23-0002) – For a parcel map for condominium purposes to establish three separate parcels for the Project Site (excluding the Sky Mesa area) that includes Parcel 1 (2.699 acres) for the Spa Suites Site which is not subject to future development and remains subject to the terms and conditions of the 9th Amendment, unless modified under this 10th Amendment, Parcel 2 (15.995 acres) for the Hotel Site which is not subject to any further development and remains subject to the terms and conditions of the 9th Amendment, unless modified under this 10th Amendment, and Parcel 3 (11.873 acres) for the Villas Site (that includes the T-Wing and Hotel Villas) for the development of an 106 residential condominium units, an events space, a restaurant, a subterranean parking structure, and various amenities including recreational amenities, which shall be subject to the conditions of approval and all rights and privileges afforded to NEWAGE as successor in interest under Tract Map No. 34640, unless otherwise provided by this Tentative Parcel Map; and

d) Major Modification (MOD21-0004) for the requisite entitlements to permit Parcel 3 (Villas Site) to be developed with 106 residential units ranging in size from 1 to 3 bedrooms, 23,843 square feet of event space, a 6,273 square foot restaurant, 5,513 square feet of amenities, a 381-space subterranean parking structure, and various recreational amenities.

e) The Parties hereto understand and agree that notwithstanding anything to the contrary herein or in the Original Development Agreement, as previously amended, the Project, as defined herein, and associated entitlements and City approvals, shall supersede Tentative Tract Map 34640, Preliminary Development Plan Case No. PDP06001, and all related prior City approvals, as approved by City on or around, or prior to, August 3, 2006, with the exception of the Tennis Villa Units.

Section 5. Existing Hotel Units. This Section 5 (Existing Hotel Units) shall apply to the Existing Hotel, which contains 244 traditional hotel rooms/suites, as depicted in the Site Plan, attached hereto as Exhibit F.

(1) Upgrades and Renovations. NEWAGE shall have the right to upgrade and renovate the Hotel's existing rooms/suites, which may include combining individual rooms/suites into larger rooms/suites in order to assure increased room rates and long-term viability.

(2) Lock-Off Configurations. The Existing Hotel Units which have legally approved separate entrance/exit doors may be constructed in a “lock off” configuration to permit the unit to be rented as two separate units.

(3) Condo-Hotel Units, Fractionals and Timeshares Prohibited. None of the 244 Existing Hotel Units shall be marketed, used or sold as condo-hotel units, fractionals or timeshares.

Section 6. Condo-Hotel Units. In consideration for the approval of this 10th Amendment, NEWAGE agrees that the Project and Project Site shall be subject to and comply with the City’s condo-hotel regulations as set forth in Ordinance No. 932, attached hereto as Exhibit E, unless specifically provided otherwise in this 10th Amendment. Should there be any inconsistency or conflict between the development standards and limitations and restrictions set forth in Section 17.30.095 of the Municipal Code with respect to development, ownership and operation of condo-hotel units and the provisions specifically set forth in this 10th Amendment, the provisions set forth in this 10th Amendment shall prevail and be applied to the Project and Project Site.

For purposes of this section, “owner occupation” shall include the person or entity listed as the record owner of the condo-hotel unit and the owner’s spouse, by marriage or otherwise, domestic partner, child or stepchild, by natural birth or adoption, parent, brother, sister, half-brother, half-sister, parent-in-law, brother-in-law, sister-in-law, nephew, niece, aunt, uncle, first cousin, or any person denoted by the prefix "grand" or "great," or the spouse of any of these persons.

a) T-Wing Units. This Section shall apply to the 48 T-Wing Units currently depicted in the attached Site Plan, attached hereto as Exhibit F, as the Building A-1 Units.

(1) Condo-Hotel Units. The 48 T-Wing Units may, at NEWAGE’s option, be developed as condo-hotel units.

(2) Fractionals and Timeshares Prohibited. None of the T-Wing Units shall be marketed, used or sold as fractionals or timeshares.

(3) Lock-Off Configurations. The T-Wing Units which have two legally approved separate entrance/exit doors may be constructed in a “lock-off” configuration to permit the unit to be rented as two separate units.

(4) Owner’s Allowable Occupancy Period. The period of time an owner of a condo-hotel unit amongst the T-Wing Units (“T-Wing Allowable Occupancy Period”) may occupy his or her unit shall not exceed six (6) months, whether consecutive or non-consecutive periods of occupancy, per calendar year. This provision

shall replace and supersede any other restrictions or limitations on the maximum time of owner occupancy by an owner of a condo-hotel unit, including without limitation Section 1 (e) of the 8th Amendment.

(5) Additional Owner Occupancy Beyond Owner's Allowable Occupancy Period. Any condo-hotel owner shall have a right to rent its unit for additional personal occupancy beyond the Allowable Occupancy Period as set forth herein, provided that the owner pays transient occupancy taxes for each day the owner occupies its condo-hotel unit beyond the Allowable Occupancy Period, even if the period of owner occupation beyond the owner's allowable occupancy period exceeds 27 consecutive days, regardless of any restrictions that may be set forth in the City's transient occupancy tax regulations as codified from time to time in the Rancho Mirage Municipal Code. This provision shall also replace and supersede any other restrictions or limitations on the maximum time of owner occupancy by an owner of a condo-hotel unit, including without limitation Section 1 (e) of the 8th Amendment.

(6) Rental Availability. When a condo-hotel unit amongst the T-Wing Units is not occupied by the owner, unless it is unoccupied for maintenance or repair purposes, the condo-hotel unit shall be made available for transient rentals to the general public pursuant to the City's condo-hotel regulations as set forth in Ordinance No. 932, attached hereto as Exhibit E, unless otherwise provided in this 10th Amendment.

(7) Transient Occupancy Tax. When a condo-hotel unit amongst the T-Wing Units is used as a transient rental, it shall be subject to the payment of transient occupancy taxes in accordance with the City's transient occupancy tax regulations in effect at the time the transient occupancy tax is due and payable, with the caveat that transient occupancy taxes shall also apply to condo-hotel unit rentals for more than 27 consecutive days, regardless of any restrictions that may be set forth in the City's transient occupancy tax regulations as codified from time to time in the Rancho Mirage Municipal Code. However, whenever any condo-hotel unit is occupied by a non-owner during the owner's occupancy period via a condominium, condo-hotel or any other share, trading or exchange system or program, whether formally established or operated as a "Club" or by any other method or means, the City shall be entitled to receive 100 percent of the applicable transient occupancy tax for each day of occupancy by the non-owner based on the fair market value of the room rate that would otherwise be charged for the subject unit.

b) Hotel Villa Units. This Section shall apply to the 58 Hotel Villa Units currently depicted in the Site Plan, attached hereto as Exhibit F, as the Building B1 through B15 Units.

(1) Condo-Hotel Units. The Hotel Villa Units may, at NEWAGE's option, convert the existing hotel rooms/suites into condo-hotel units.

(2) Fractionals and Timeshares Prohibited. None of the Hotel Villa Units shall be marketed, used or sold as fractionals or timeshares.

(3) Owner's Allowable Occupancy Period. The period of time an owner of a condo-hotel unit amongst the Hotel Villa Units ("Hotel Villa Allowable Occupancy Period") may occupy his or her unit shall not exceed six (6) months, whether consecutive or non-consecutive periods of occupancy, per calendar year. This provision shall replace and supersede any other restrictions or limitations on the maximum time of owner occupancy by an owner of a condo-hotel unit, including without limitation Section 1 (e) of the 8th Amendment.

(4) Additional Owner Occupancy Beyond Owner's Allowable Occupancy Period. Any condo-hotel owner shall have a right to rent its unit for additional personal occupancy beyond the Allowable Occupancy Period as set forth herein, provided that the owner pays transient occupancy taxes to the City for each day the owner occupies its condo-hotel unit beyond the Allowable Occupancy Period, even if the period of owner occupation beyond the owner's allowable occupancy period exceeds 27 consecutive days, regardless of any restrictions that may be set forth in the City's transient occupancy tax regulations as codified from time to time in the Rancho Mirage Municipal Code. This provision shall replace and supersede any other restrictions or limitations on the maximum time of owner occupancy by an owner of a condo-hotel unit, including without limitation Section 1 (e) of the 8th Amendment.

(5) Rental Availability. When a condo-hotel unit amongst the Hotel Villa Units is not occupied by the owner, unless it is unoccupied for maintenance or repair purposes, the condo-hotel unit shall be made available for transient rentals to the general public pursuant to the City's condo-hotel regulations as set forth in Ordinance No. 932, attached hereto as Exhibit E, unless otherwise provided in this 10th Amendment.

(6) Transient Occupancy Tax. When a condo-hotel unit amongst the Hotel Villa Units is used as a transient rental, it shall be subject to the payment of transient occupancy taxes in accordance with the City's transient occupancy tax regulations in effect at the time the transient occupancy tax is due and payable, with the caveat that transient occupancy taxes shall also apply to condo-hotel unit rentals for more than 27 consecutive days, regardless of any restrictions that may be set forth in the City's transient occupancy tax regulations as codified from time to time in the Rancho Mirage Municipal Code. However, whenever any condo-hotel unit is occupied by a non-owner during the owner's occupancy period via a condominium, condo-hotel or any other share, trading or exchange system or program, whether formally established or operated as a "Club" or by any other method or means, the City shall be entitled to receive 100 percent of the applicable transient occupancy tax for each day of

occupancy by the non-owner based on the fair market value of the room rate that would otherwise be charged for the subject unit.

c) Tennis Villa Units. This Section shall apply to the 25 Tennis Villa Units currently depicted in the Site Plan, attached hereto as Exhibit F.

(1) Condo-Hotel Units. The 25 Tennis Villa Units may, at NEWAGE's option, be developed as condo-hotel units.

(2) Lock-Off Configurations. The Tennis Villa Units which have two legally approved separate entrance/exit doors may be constructed in a "lock off" configuration to permit the unit to be rented as two separate units.

(3) Fractionals and Timeshares Prohibited. None of the 25 Tennis Villa Units shall be marketed, used or sold as fractionals or timeshares.

(4) Owner's Allowable Occupancy Period. The period of time an owner of a condo-hotel unit amongst the Tennis Villa Units ("Tennis Villa Allowable Occupancy Period") may occupy his or her unit shall be six (6) months, whether consecutive or non-consecutive periods of occupancy, per calendar year. This provision shall replace and supersede any other restrictions or limitations on the maximum time of owner occupancy by an owner of a condo-hotel unit, including without limitation Section 1 (e) of the 8th Amendment.

(5) Additional Owner Occupancy Beyond Owner's Allowable Occupancy Period. Any condo-hotel owner shall have a right to rent its unit for additional personal occupancy beyond the Allowable Occupancy Period as set forth herein, provided that the owner pays transient occupancy taxes to the City for each day the owner occupies its condo-hotel unit beyond the Allowable Occupancy Period, even if the period of owner occupation beyond the owner's allowable occupancy period exceeds 27 consecutive days, regardless of any restrictions that may be set forth in the City's transient occupancy tax regulations as codified from time to time in the Rancho Mirage Municipal Code. This provision shall replace and supersede any other restrictions or limitations on the maximum time of owner occupancy by an owner of a condo-hotel unit, including without limitation Section 1 (e) of the 8th Amendment.

(6) Rental Availability. When a condo-hotel unit amongst the Tennis Villa Units is not occupied by the owner, unless it is unoccupied for maintenance or repair purposes, the condo-hotel unit shall be made available for transient rentals to the general public pursuant to the City's condo-hotel regulations as set forth in Ordinance No. 932, attached hereto as Exhibit E, unless otherwise provided in this 10th Amendment.

(7) Transient Occupancy Taxes. When a condo-hotel unit amongst the Tennis Villa Units is used as a transient rental, it shall be subject to the payment of transient occupancy taxes in accordance with the City's transient occupancy tax regulations in effect at the time the transient occupancy tax is due and payable, with the caveat that transient occupancy taxes shall also apply to condo-hotel unit rentals for more than 27 consecutive days, regardless of any restrictions that may be set forth in the City's transient occupancy tax regulations as codified from time to time in the Rancho Mirage Municipal Code. However, whenever any condo-hotel unit is occupied by a non-owner during the owner's occupancy period via a condominium, condo-hotel or any other share, trading or exchange system or program, whether formally established or operated as a "Club" or by any other method or means, the City shall be entitled to receive 100 percent of the applicable transient occupancy tax for each day of occupancy by the non-owner based on the fair market value of the room rate that would otherwise be charged for the subject unit.

d) Spa Suite Units. This section shall apply to the existing 16 Spa Suite Units which were constructed 2015, as depicted in the Site Plan, attached hereto as Exhibit F, as the Spa Building.

(1) Condo-Hotel Units. The Spa Suite Units may, at NEWAGE's option, be converted into condo-hotel units.

(2) Lock-Off Configurations. The Spa Suite Units which have two legally approved separate entrance/exit doors may be constructed in a "lock off" configuration to permit the unit to be rented as two separate units.

(3) Fractionals and Timeshares Prohibited. None of the Spa Suite Units shall be marketed, used or sold as fractionals or timeshares.

(4) Owner's Allowable Occupancy Period. The period of time an owner, other than the Existing Hotel's professional management entity/company, of a condo-hotel unit amongst the Spa Suite Units ("Spa Suite Allowable Occupancy Period") may occupy his or her unit shall be six months, whether consecutive or non-consecutive periods of occupancy, per calendar year, as permitted under the December 31, 2015, Addendum to the 9th Amendment. This provision shall replace and supersede any other restrictions or limitations on the maximum time of owner occupancy by an owner of a condo-hotel unit, including without limitation Section 1 (e) of the 8th Amendment.

(5) Additional Owner Occupancy Beyond Owner's Allowable Occupancy Period. Any condo-hotel owner, other than the Existing Hotel's professional management entity/company, shall have a right to rent its unit for additional personal occupancy beyond the Allowable Occupancy Period as set forth herein, provided that the owner pays transient occupancy taxes to the City for each day the owner occupies

its condo-hotel unit beyond the Allowable Occupancy Period, even if the period of owner occupation beyond the owner's allowable occupancy period exceeds 27 consecutive days, regardless of any restrictions that may be set forth in the City's transient occupancy tax regulations as codified from time to time in the Rancho Mirage Municipal Code. This provision shall replace and supersede any other restrictions or limitations on the maximum time of owner occupancy by an owner of a condo-hotel unit, including without limitation Section 1 (e) of the 8th Amendment.

(6) Rental Availability. When a condo-hotel unit amongst the Spa Suite Units is not occupied by the owner, unless it is unoccupied for maintenance or repair purposes, the condo-hotel unit shall be made available for transient rentals to the general public pursuant to the City's condo-hotel regulations as set forth in Ordinance No. 932, attached hereto as Exhibit E, unless otherwise provided in this 10th Amendment. Any condo-hotel units owned, in whole or in part by the Existing Hotel's professional management entity/company shall be made available for rent for transient occupancy for no more than twenty-seven consecutive days by any given transient, at all times regardless of whether the Existing Hotel or management entity/company would otherwise have occupancy rights as an owner under this section.

(7) Transient Occupancy Tax. When a condo-hotel unit amongst the Spa Suite Units is used as a transient rental, it shall be subject to the payment of transient occupancy taxes in accordance with the City's transient occupancy tax regulations in effect at the time the transient occupancy tax is due and payable, unless otherwise provided below, and with the caveat that transient occupancy taxes shall also apply to rentals for more than 27 consecutive days, regardless of any restrictions that may be set forth in the City's transient occupancy tax regulations as codified from time to time in the Rancho Mirage Municipal Code. However, whenever any condo-hotel unit is occupied by a non-owner during the owner's occupancy period via a condominium, condo-hotel or any other share, trading or exchange system or program, whether formally established or operated as a "Club" or by any other method or means, the City shall be entitled to receive 100 percent of the applicable transient occupancy tax for each day of occupancy by the non-owner based on the fair market value of the room rate that would otherwise be charged for the subject unit.

Section 7. Rental of Condo-Hotel Units. The rental of any condo-hotel units pursuant to the terms and provisions of this 10th Amendment shall not be considered as "short-term rentals" which are prohibited in the City per Section 17.30.270 Short-Term Rentals of the Rancho Mirage Municipal Code since the rental of units located within City-approved hotels shall not be considered short-term rentals.

Considering the foregoing, as a condition to renting out a condo-hotel unit, the owner of the condo-hotel unit shall enter into an agreement with the Existing Hotel's management entity/company which, at a minimum, shall provide that the management

entity/company will collect all transient occupancy taxes required on rentals of that owner's condo-hotel unit and manage all permissible rental operations. The Existing Hotel's management entity/company shall then be responsible for forwarding transient occupancy taxes to the City in accordance with the City's transient occupancy tax regulations as set forth in the Rancho Mirage Municipal Code and any related procedures and regulations in effect at the time the transient occupancy taxes are due and payable to the City, unless otherwise provide in this 10th Amendment. In addition, under no circumstances shall any owner of a condo-hotel unit or any other unit described in this 10th Amendment advertise or cause to be advertised the availability of any such units for transient purposes for any period of time. All advertisements shall be handled, managed and facilitated solely by the Existing Hotel's management entity/company and any such advertisements shall not refer to the any condo-units or any other units covered by this 10th Amendment as "short-term rentals." NEWAGE shall submit documents for recordation which clearly demonstrate the forgoing advertisement restrictions and obligations, subject to the reasonable satisfaction of City Attorney and City Engineer.

Section 8. Extension of Tentative Map. In accordance with Government Code Section 66452(a)(1), TPM38768 shall be extended for the greater period of (a) the term of this Agreement or (b) such maximum total time as is permitted in accordance with the State Subdivision Map Act (Government Code Sections 66410 *et seq*.) or Applicable Law.

Section 9. Operator. NEWAGE agrees that the Project shall be operated during the life of the Project as an establishment that: (a) reflects the characteristics of the ultimate in luxury and sophistication with first class accommodations, and (b) maintains physical attributes that are extraordinary in every manner, and (c) provides a level of service that is meticulous and exceeds all guests' expectations while maintaining an impeccable standard of excellence.

Section 10. Previous Amendments. Except as herein modified and amended, provisions of the Original Development Agreement, the 1st Amendment, the 2nd Amendment, the 3rd Amendment, the 4th Amendment, the 5th Amendment, the 6th Amendment, the 7th Amendment, the 8th Amendment and 9th Amendment, and any addenda thereto, are ratified, confirmed and remain in full force and effect as if set forth and reiterated herein verbatim.

Section 11. Term. The parties agree that the Term of this 10th Amendment shall be ten (10) years commencing on the Effective Date subject to the extension and early termination provisions described in this 10th Amendment and this Term shall only apply to the Project Site. Upon termination of this 10th Amendment, this 10th Amendment shall be deemed terminated and of no further force and effect without the need of further documentation from the parties hereto, provided, however, that this termination shall not affect any right or duty arising from the entitlements or approvals

for the Project Site or the financial obligations of NEWAGE or its assignees and successors in interest agreed to by the parties or approved concurrently with, or subsequent to, the Effective Date or as otherwise provided in this 10th Amendment.

Section 12. Cooperation by NEWAGE. NEWAGE will, in a timely manner, provide the City with all documents, applications, plans and other information necessary for the City to carry out its obligations hereunder, and cause NEWAGE's planners, engineers, and all other consultants to submit in a timely manner all required materials and documents, therefore. NEWAGE also shall apply in a timely manner for such other permits and approvals from other governmental or quasi-governmental agencies having jurisdiction over the Project Site as may be required for the development of, or provision of services to, the Project Site.

Section 13. Applicable Rules, Regulations and Policies. Except as otherwise provided in this 10th Amendment, the rules, regulations, and policies governing the use, density, intensity, design, improvement, construction, building and occupancy standards and specifications of the Project and Project Site shall be those rules, regulations, and policies in place at the time of the Effective Date. The City, however, shall be permitted to apply certain rules, regulations and policies enacted after the Effective Date to discretionary actions which are not part of the Project.

Section 14. Funding for Processing 10th Amendment and Entitlements Described Therein. The actual costs for all services provided by the City and its consultants for processing of this 10th Amendment and the entitlements described herein shall be paid by NEWAGE. All such processing costs shall not be the obligations of the City or any of its departments and divisions, and the City shall not be liable for any such costs form its general fund or any other fund. In addition, to the extent that City, on behalf of NEWAGE, attempts to enter into binding agreements with other entities in order to assure the availability of certain permits and approvals or services necessary for development of the Project Site as described in this 10th Amendment, NEWAGE shall reimburse City for all costs and expenses incurred in connection with seeking and entering into any such agreements. Any fees, assessments, or other amounts payable by City pursuant to any such agreements described herein shall be borne by NEWAGE except where NEWAGE has notified City in writing, prior to City entering into any such agreement, that it does not desire for City to execute said agreement.

Section 15. Processing Fees. NEWAGE shall pay all land use approvals, building permits or other similar permits, licenses or entitlements which are in force and effect on a City-wide basis at the time application is made for such permits, licenses, or entitlements at the time such fees are due and payable during the development process.

Section 16. Development Impact Fees. NEWAGE shall pay all development

impact fees that are designed to pay for new or expanded public facilities needed to serve, or to mitigate the adverse effects of, a given development project (including any species protection or habitat preservation or conservation mitigation fees) that are in effect at the time such fees are due and payable during the development process.

Section 17. Exactions. NEWAGE shall pay or provide, as the case may be, all exactions, in-lieu fees or payments, dedication or reservation requirements, obligations for on-site or off-site improvements, construction requirements for public improvements, facilities, or services required of the Project or Project Site, whether such requirements constitute subdivision improvements, mitigation measures in connection with environmental review, or impositions made under any applicable ordinance or other applicable regulation.

Section 18. Community Facilities District No. 1. NEWAGE acknowledges the existence of "Community Facilities District No. 1" which was created pursuant to the Mello-Roos Community Facilities Act, as set forth in Government Code section 53311 et seq. for the purpose of funding certain public safety services. If the Project and Project Site are currently subject to the assessments of Community Services District No. 1, NEWAGE voluntarily consents that it will not vote or otherwise support the dissolution of said District. In the event said District formally dissolves, NEWAGE shall consent to paying an in-lieu assessment in a manner and form, deemed acceptable by the City, as though the District had never dissolved. If, however, the Project or Project Site, or any portions thereof, are not currently subject to the assessments of Community Facilities District No. 1, NEWAGE voluntarily consents to take whatever affirmative action it needs to take on its part to ensure that the Project and Project Site, and all portions thereof, are subject to the assessments of the Community Facilities District No. 1, which includes without limitation, voting to annex to said District.

Section 19. Covenants Running With the Land and Constructive Notice. All of the terms, provisions, and obligations contained in this 10th Amendment shall be binding upon NEWAGE and its heirs, successors, and assigns, and all other persons or entities acquiring all or any portion of the Project Site or Project, or any interest therein, whether by operation of law or in any manner whatsoever, and the rights thereof shall inure to the benefit of the City and its successors and assigns. As such, all of the provisions of this 10th Amendment shall be enforceable as equitable servitudes and constitute covenants running with the land pursuant to applicable law, including but not limited to, Section 1468 of the Civil Code of the State of California. Notwithstanding the above, every person who now or hereafter owns or acquires any right, title or interest in or to any portion of the Project Site or Project shall be deemed to have consented and agreed to every provision contained in this 10th Amendment, whether or not any reference to this 10th Amendment is contained in the instrument by which such person acquired an interest in the Project Site.

Section 20. City's Obligations. The City shall approve the permits, licenses and other entitlements as describe in this 10th Amendment pursuant to the provisions contained herein.

Section 21. Periodic Review. The City shall conduct a review of this 10th Amendment as set forth as follows:

a) Annual Review. The City will review the extent of good faith compliance by NEWAGE with the terms of this 10th Amendment annually commencing on the first anniversary of the Effective Date of this 10th Amendment.

b) Notice. The City shall notify NEWAGE in writing of the date of review at least thirty (30) days prior thereto.

c) Good-faith Compliance. During each annual review, NEWAGE is required to demonstrate good faith compliance with the terms of this 10th Amendment.

d) Production of Documents and Other Evidence. NEWAGE agrees to furnish such reasonable evidence and adequate documentation of good faith compliance as the City, in the exercise of its reasonable discretion, may require.

e) Cost of Annual Review. The costs incurred by City in connection with the annual review shall be borne by NEWAGE.

Section 22. Relationship of Parties. It is specifically understood and agreed by and between the parties hereto that the development of the Project Site is a private development and that neither party is acting as the agent of the other in any respect hereunder. The City and NEWAGE also hereby renounce the existence of any form of joint venture or partnership between them, and agree that nothing contained herein or in any document executed in connection herewith shall be construed as making the City and NEWAGE joint venturers or partners.

Section 23. No Third Party Beneficiaries. The only parties to this 10th Amendment are NEWAGE and the City. There are no third party beneficiaries and this 10th Amendment is not intended, and shall not be construed, to benefit, or be enforceable by any other person whatsoever.

Section 24. Assignment. NEWAGE shall have the right to assign its rights and obligations under this 10th Amendment, by giving prior written notice to the City, to any entity in which the NEWAGE, or its principal shareholders, retain a majority ownership interest so long as such assignee expressly assumes the obligations of NEWAGE hereunder. Otherwise, NEWAGE may not assign all or any portion of its rights hereunder nor delegate all or any portion of its duties and obligations hereunder without the prior written consent of the City, which consent shall not be unreasonably withheld.

Section 25. Estoppel Certificate. For and in consideration of entering into this 10th Amendment, the parties hereto acknowledge the receipt of good and valuable consideration. This paragraph shall constitute an Estoppel Certificate and shall be an independent agreement among the parties which is intended to and shall survive any subsequent determination that this 10th Amendment is invalid for any reason, by a final court decision, having jurisdiction thereof. NEWAGE represents to the City that it has no actual knowledge of any Claims, as herein below defined, against City specifically pertaining to the matters set forth in the Original Development Agreement, the 1st Amendment, the 2nd Amendment, the 3rd Amendment, the 4th Amendment, the 5th Amendment, the 6th Amendment, the 7th Amendment, the 8th Amendment and this 10th Amendment. For purposes of this Section, "claims" are defined as all known claims, fees, demands, costs, damages, obligations, expenditures, remedies, liens, rights or arbitration, rights of action and/or causes of action, whether compensatory or punitive, legal or equitable. This estoppel certificate legally bars NEWAGE from filing claims of which it had actual knowledge at the time of the approval by the City of this 10th Amendment.

Section 26. Hold Harmless. NEWAGE hereby agrees to, and shall defend, save and hold City and its elected and appointed boards, commissions, officers, agents, and employees harmless from, any and all claims, costs and liability for any damages, personal injury or death, which may arise, directly or indirectly, from NEWAGE's or NEWAGE's contractors', subcontractors', agents or employees' operations under this 10th Amendment, whether such negligent operations be by NEWAGE or by any of NEWAGE's contractors, subcontractors, agents or employees.

Section 27. Indemnification. NEWAGE shall defend, indemnify and hold harmless City and its agents, officers and employees against and from any and all liabilities, demands, claims, actions or proceedings and costs and expenses incidental thereto (including costs of defense, settlement and reasonable attorneys' fees), which any or all of them may suffer, incur, be responsible for or pay out as a result of or in connection with any challenge to the legality, validity or adequacy of any of the following: (i) any prior agreements by and between City and NEWAGE and/or its predecessor(s) in interest; (ii) this 10th Amendment and the concurrent and subsequent permits, licenses and entitlements approved for the Project or Project Site; (iii) the environmental impact report prepared in connection with the development of any environmental determinations made by the City in connection with this agreement, the Project and/or Project Site; and (iii) the proceedings undertaken in connection with the adoption or approval of any of the above. In the event of any legal or equitable action or other proceeding instituted by any third party (including a governmental entity or official) challenging the validity of any provision of this 10th Amendment or any portion thereof as set forth herein, the parties shall mutually cooperate with each other in defense of said action or proceeding. Notwithstanding the above, the City, at is sole option, may tender the complete defense of any third party challenge as described herein. In the

event, the City elects to contract with special counsel to provide for such a defense, the City shall meet and confer with NEWAGE regarding the selection of counsel, and NEWAGE shall pay all costs related to retention of such counsel.

Section 28. Severability. If any term, provision, covenant or condition of this 10th Amendment is repealed by referendum or is held by a court of competent jurisdiction to be invalid, void or unenforceable, the remaining provisions, if any, of this 10th Amendment shall continue in full force and effect, unless enforcement of this 10th Amendment as so invalidated would be unreasonable or grossly inequitable under all the circumstances or would frustrate the purposes of this 10th Amendment.

Section 29. Singular and Plural; Gender; and Person. Except where the context requires otherwise, the singular of any word shall include the plural and vice versa, and pronouns inferring the masculine gender shall include the feminine gender and neuter, and vice versa, and a reference to "person" shall include, in addition to a natural person, any governmental entity and any partnership, corporation, joint venture or any other form of business entity.

Section 30. Time Is of the Essence. Time is of the essence of this 10th Amendment and of each and every term and condition hereof.

Section 31. Delays in Performance. In addition to any other provisions of this 10th Amendment with respect to delay, NEWAGE and City shall be excused for performance of their obligations hereunder during any period of delay caused by acts of God or civil commotion, major acts of terrorism occurring in the United States of America, riots, strikes, picketing, or other labor disputes, shortage of materials or supplies, or damage to or prevention of work in process by reason of fire, floods, earthquake, or other casualties, litigation, acts or neglect of the other party, or restrictions imposed or mandated by governmental or quasi-governmental entities, enactment of conflicting provisions of the Constitution or laws of the United States of America or the State of California or any codes, statutes, regulations or executive mandates promulgated thereunder. If written notice of such delay is given to either party within (30) days of the commencement of such delay, an extension of time for such cause shall be granted in writing for the period of the delay, or longer as may be mutually agreed upon.

Section 32. Events of Default. Subject to any extensions of time by mutual consent in writing, and subject to the provisions of Section 31 "Delays in Performance", the failure or unreasonable delay by either party to perform any material term or provision of this 10th Amendment for a period of thirty (30) days after the dispatch of a written notice of default from the other party shall constitute a default under this 10th Amendment. If the nature of the alleged default is such that it cannot reasonably be cured within such 30-day period, the commencement of the cure within such time period and the diligent prosecution to completion of the cure shall be deemed a cure within

such period. Any Notice of Default give hereunder shall specify in detail the nature of the alleged Event of Default and the manner in which such Event of Default may be satisfactorily cured in accordance with the terms and conditions of this 10th Amendment. During the time periods herein specified for cure of an Event of Default, the party charged therewith shall not be considered to be in default for purposes of termination of this 10th Amendment, institution of legal proceedings with respect thereto, or whether any further building permits shall be issued with respect to the Project Site.

Section 33. General Default Remedies. After notice and expiration of the 30-day period without cure, the non-defaulting party shall have such rights and remedies against the defaulting party as it may have at law or in equity, including, but not limited to, the right to terminate this 10th Amendment pursuant to Government Code Section 65868 or seek mandamus, specific performance, injunctive or declaratory relief. Any rights or remedies available to non-defaulting party under this 10th Amendment and any other rights or remedies that such party may have at law or in equity upon a default by the other party under this 10th Amendment shall be distinct and separate, providing the non-defaulting party with cumulative rights and remedies. None of such rights or remedies, whether or not exercised by the non-defaulting party, shall be deemed to exclude any other rights or remedies available to the non-defaulting party. The non-defaulting party may, in its discretion, exercise any and all of its rights and remedies, at once or in succession, at such time or times as the non-defaulting party considers appropriate.

Section 34. Legal Action; Attorneys' Fees. Either party may, in addition to any other rights or remedies, institute legal action to cure, correct or remedy a default, enforce any covenant or agreement herein, enjoin any threatened or attempted violation hereof, or enforce by specific performance the obligations and rights of the parties hereto. The prevailing party in any such action shall be entitled to its reasonable attorneys' fees and costs to be paid by the losing party.

Section 35. NEWAGE Default. No building permit shall be issued or building permit application accepted for any structure on the Project Site after NEWAGE is determined by City to be in default of the terms and conditions of this 10th Amendment until such default thereafter is cured by the NEWAGE or is waived by the City. If the City terminates this 10th Amendment because of NEWAGE's default, then the City shall retain any and all benefits, including money or land received by the City hereunder.

Section 36. Waiver. All waivers must be in writing to be effective or binding upon the waiving party, and no waiver shall be implied from any omission by a party to take any action with respect to an Event of Default. Failure by a party to insist upon the strict performance of any of the provisions of this 10th Amendment by the other party shall not constitute waiver of such party's right to demand strict compliance by the other party in the future. In addition, no express written waiver of any Event of Default shall

affect any other Event of Default, or cover any other period of time specified in such express waiver.

Section 37. Amendments. This 10th Amendment may be amended from time to time by mutual consent of the original parties or their successors in interest, with the City's costs payable by amendment applicants, in accordance with the provisions of Government Code Section 65867 and 65868 and the City's adopted procedures and requirements for the consideration of development agreements.

Section 38. Ambiguities or Uncertainties. The parties hereto have mutually negotiated the terms and conditions of this Development Agreement and each party received independent legal advice from its attorneys with respect to the advisability of executing this 10th Amendment and the meaning of the provisions contained herein. As such, this 10th Amendment is a product of the joint drafting efforts of both parties and neither party shall be deemed to have solely or independently prepared or framed this 10th Amendment. Therefore, any ambiguities or uncertainties are not to be construed against or in favor of either party.

Section 39. Applicable Law. This 10th Amendment shall be construed and enforced in accordance with the laws of the State of California.

Section 40. Nexus/Reasonable Relationship Challenges. NEWAGE consents to, and waives any rights it may have now or in the future to challenge the legal validity of, the conditions, requirements, policies or programs set forth in this 10th Amendment including, without limitation, any claim that they constitute an abuse of the police power, violate substantive due process, deny equal protection of the laws, effect a taking of property without payment of just compensation, or impose an unlawful tax.

Section 41. Civil Code Section 1542 Waiver. NEWAGE hereby waives any and all rights they or their successors and assigns may have under Article XIIIC or Article XIIID of the California Constitution and any and all rights they or their successors and assigns may have under any other applicable law to contest the fees, exactions and assessments and/or their amounts payable to the City under this 10th Amendment as follows:

> **In furtherance of the intentions of the parties to this 10th Amendment, NEWAGE with and under advice of counsel, hereby expressly waives any and all right and benefit conferred upon said parties by the provisions of Civil Code Section 1542, which provides as follows:**
>
> > **"A general release does not extend to claims which a creditor or releasing party does not know or suspect to**

exist in his or her favor at the time of executing the release and that, if known by him or her, would have materially affected his or her settlement with the debtor or released party."

NEWAGE further expressly waives any and all rights and benefits conferred upon NEWAGE by any provision of any other state, federal or local statute, code, ordinance or law similar to section 1542 of the Civil Code. NEWAGE expressly consents that the waiver of rights contained in the first paragraph shall be given full force and effect, according to the express terms and provisions of the instant waiver, to unknown and unsuspected claims, demands and causes of action, if any, arising out of or relating to the waiver of rights contained in this 10th Amendment.

Initials:
NEWAGE ____

Section 42. Venue. In the event that suit is brought by either party to this 10th Amendment, the parties agree that venue shall be exclusively vested in the State courts of the County of Riverside, California or where appropriate, in the United States District Court, Southern District of California, Riverside, California.

Section 43. No Damages Relief Against City. The parties acknowledge that the City would not have entered into this 10th Amendment had it been exposed to damage claims from NEWAGE for any breach thereof. As such, the parties agree that in no event shall NEWAGE be entitled to recover damages against City for breach of this 10th Amendment.

Section 44. Notices. Any notice or communication required hereunder between City or NEWAGE shall be in writing, and may be given either personally or by registered mail, return-receipt requested. Notice, whether given by registered mail or personal delivery, shall be deemed to have been given and received on the actual receipt by any of the addresses designated below as the party to whom notices are to be sent. Any party hereto may at any time, upon written notice to the other party hereto, designate any other address in substitution of the address to which such notice or communication shall be given. Such notices or communications shall be given to the parties at their addresses set forth below:

To City:

City of Rancho Mirage
69-825 Highway 111
Rancho Mirage, CA 92270
Attention: City Manager

To NEWAGE:

Newage Rancho Mirage LLC
c/o Kam Sang Co., Inc.
411 E Huntington Drive, Ste 305
Arcadia, CA 91006
Attention: Ronnie Lam

Section 45. Entire Agreement. The Original Development Agreement, the 1st Amendment, the 2nd Amendment, the 3rd Amendment, the 4th Amendment, the 5th Amendment, the 6th Amendment, the 7th Amendment, the 8th Amendment, the 9th Amendment and this 10th Amendment and the Exhibits attached thereto contain all the representations and the entire agreement between the parties with respect to the subject matter hereof. Except as otherwise specified in this 10th Amendment and the Exhibits attached hereto, any prior correspondence, memoranda, agreements (other than the Original Development Agreement and all subsequent amendments), warranties or representations are superseded in total by this 10th Amendment and Exhibits hereto.

Section 46. Recordation. In order to comply with Section 65868.5 of the Development Agreement Statute, the parties do hereby direct the City Clerk to cause a copy of this 10th Amendment to be recorded with the Riverside County Recorder's Office within ten (10) days after the Enacting Ordinance takes effect.

Section 47. Counterparts. This 10th Amendment may be executed in duplicate counterpart originals, each of which is deemed to be an original, and all of which when taken together shall constitute one and the same instrument.

[THIS PORTION LEFT BLANK INTENTIONALLY]

CONDO-HOTEL
ORDINANCE NO. 932

(SEE ATTACHED)

DRAFT

ORDINANCE NO. 932

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF RANCHO MIRAGE AMENDING RANCHO MIRAGE MUNICIPAL CODE TO INCLUDE DEVELOPMENT AND USE REGULATIONS REGARDING CONDO-HOTEL PROJECTS

WHEREAS, there has been a recent increase in the popularity of the development of and/or use of condo-hotel projects among individual and business investors, national and international hotel corporations, business travelers, members of the vacationing public and developers; and

WHEREAS, this increase in popularity has created a need for specific regulations to govern the development and operation of condo-hotel projects to ensure that such projects are developed and operated in a manner that not only effectively mitigate the impacts such projects will have on surrounding land uses and traffic circulation, but also enhances the City's ability to adequately provide for the public service needs of the owners and guests of condo-hotel units and the general public; and

WHEREAS, the potential conversion of existing revenue-producing lodging establishments in the City to condo-hotel projects may result in diminished revenue to the City's general fund that is used to pay for many general municipal services demanded of the City's residents, businesses, and transient guests of the City's many lodging establishments unless the City adopts development and operational standards regulating condo-hotel projects that are necessary for ensuring that such projects enhance rather than diminish the City's ability to continue providing optimal municipal services; and

WHEREAS, the City desires to enhance rather than diminish the provision of general municipal services to its residents, businesses and transient guests of the City's many lodging establishments now and in the future while promoting development that will result in attracting and encouraging the development of additional revenue-producing business activities to the City; and

WHEREAS, the changing hotel market throughout the country has created a demand for condo-hotel projects; and

WHEREAS, the City desires to enhance its opportunities in attracting new resort hotel development to meet the demands of the changing tourist trade while at the same time increasing revenue for general municipal services.

NOW THEREFORE, THE CITY COUNCIL OF THE CITY OF RANCHO MIRAGE DOES ORDAIN AS FOLLOWS:

Section 1. TITLE

This ordinance shall be known as the "Condo-Hotel Ordinance."

Section 2. PURPOSE AND INTENT

The purpose and intent of this Ordinance is to ensure that the development of condo-hotel projects in the City does not detrimentally impact surrounding uses and that such development provides opportunities for the City to enhance its abilities to provide optimal municipal services not only to the prospective owners and users of condo-hotel units, but also to the general public.

Section 3. AMENDMENT TO SECTION 17.90.020" DEFINITIONS OF SPECIALIZED TERMS AND PHRASES"

Section 17.90.020 of Chapter 17.90 "Definitions" of Title 17 "Zoning" is hereby amended as follows:

"Condo-hotel project" shall mean a project which is operated to meet the definition of a hotel, containing condominiums, ownership of which may be structured as whole ownership condominiums, fractional ownership with no more than 12 fractional shares per unit, or other ownership/financing arrangement deemed by the City Council to be similar in function and/or operation, but shall not include timeshares.

Section 4. AMENDMENT TO SECTION 17.10.010 "PURPOSE"

Paragraph B "Individual Zoning Districts" of Section 17.10.010 of Chapter 17.10 "Commercial and Industrial Districts" of Title 17 "Zoning" is hereby amended as follows:

6. Rs-H (Resort Hotel) Zone. The Rs-H zoning district is applied to areas appropriate for hotels and destination resorts, ***including condo-hotel projects,*** with limited ancillary commercial uses, including restaurants and health spas that directly support the primary use. The Rs-H zoning district is consistent with the resort hotel land use designation of the general plan; and

Section 5. **AMENDMENT TO SECTION 17.10.012 "ALLOWABLE COMMERCIAL AND INDUSTRIAL ZONE USES, PERMIT REQUIREMENTS AND PROJECT REVIEW AUTHORITY"**

Table 2-4 "Allowable Uses and Permit Requirements for Commercial and Industrial Zoning Districts" of Section 17.10.012 of Chapter 17.10 "Commercial and Industrial Districts" shall be amended to reflect that condo-hotel projects shall only be permitted in the Resort Hotel "Rs-H" District by a Development Permit Plan and a Development Agreement, when one is required, which shall all be subject to the final review authority of the City Council.

Section 6. **AMENDMENT TO SECTION 16.06.010 "DEFINITIONS"**

Section 16.06.010 of Chapter 16.06 "Definitions" of Title 16 "Subdivisions" shall be amended as follows:

9. "Condominium" means an estate in real property consisting of an undivided interest in common in a portion of a parcel together with a separate interest in space in a residential or commercial building on the real property, such as an apartment, residence, office, ***condo-hotel unit*** or store. Furthermore, a condominium may include a separate interest in other portions of the real property.

Section 7. **AMENDMENT TO CHAPTER 17.30 "STANDARDS FOR SPECIFIC LAND USES"**

Chapter 17.30 "Standard for Specific Land Uses" shall be amended as follows:

17.30.095 Condo-Hotel projects.

A. Development Standards. The development standards applicable to Resort Hotels shall apply to all condo-hotel projects, unless otherwise provided

in this chapter or pursuant to a development agreement.

B. *Conversions. No existing hotel room or existing hotel facility or structure shall be converted to condo-hotel status unless otherwise permitted pursuant to a development agreement.*

C. *Owner and Occupancy Restrictions. The following occupancy restrictions shall apply to all condo-hotel projects:*

1. *The number of units of a condo-hotel project that may be condo-hotel units shall be limited to no more than ten (10)percent of the project's total sum of condo-hotel units and hotel rooms combined unless otherwise permitted pursuant to a development agreement.*

2. *Each owner of a condo-hotel unit and each individual fractional owner of a condo-hotel unit shall be limited to using or occupying any given unit owned by said owner for no more than twenty-seven (27) days per calendar year unless otherwise permitted pursuant to a development agreement. Owners may assign their use and occupancy rights to a third party subject to the City's transient occupancy tax regulations unless otherwise provided pursuant to a development agreement.*

3. *Outside the owner occupancy periods, a condo-hotel unit shall be made available for transient occupancy purposes for no more than 27 consecutive days by any given transient.*

D. *Collection of Transient Occupancy Taxes. The following provisions shall apply to all condo-hotel projects:*

1. *Each owner of a condo-hotel unit shall enter into an agreement with a professional hotel management entity/company which, at a minimum, provides that the management*

entity/company will collect all transient occupancy taxes required on rentals of that owner's unit, outside the owner occupancy periods, whether or not such rentals are handled by said management entity/company. The management entity/company shall then be responsible for forwarding transient occupancy taxes to the City in accordance with the City's transient occupancy tax regulations.

(a) Any condo-hotel units owned, in whole or in part by the parent hotel or professional management entity/company shall be made available for rent for transient occupancy for no more than 27 consecutive days by any given transient, at all times regardless of whether the hotel or management entity/company would otherwise have occupancy rights as an owner under this section.

2. The professional management entity/company designated to collect transient occupancy taxes pursuant to this section must have at least five (5) consecutive years of experience, meeting the First Class Hotel Standards and have no fewer than ten (10) other properties (each in separate cities, or distinct and separate projects in any given city, nationally or internationally) under current management unless otherwise provided pursuant to a development agreement.

Section 8. EFFECTIVE DATE

This ordinance shall take effect thirty (30) days after its second reading.

Section 9. CERTIFICATION

The City Clerk shall certify to the passage of this ordinance and shall cause the same to be published according to law.

PASSED AND ADOPTED THIS 20TH day of July, 2006.

69-825 Highway 111, Rancho Mirage, CA 92270

Thursday, December 18, 2025, 1:00 PM

DRAFT MINUTES

1. GENERAL

1.A. Call to Order

Mayor Mallotto called the meeting to order at 1:01 P.M.

1.B. Flag Salute

Mayor Pro Tem O'Keefe led the flag salute.

1.C. Roll Call: Downs, Fromberg Edelstein, Weill, O'Keefe, Mallotto

All City Council Members were present.

2. PRESENTATIONS

2.A. Rancho Mirage Chamber of Commerce Business Update

Rancho Mirage Chamber of Commerce Board Members Nicole Kent and David Kowalczyk provided an update on the Chamber. Mr. Kowalczyk also provided an update on Eisenhower Health.

3. COUNCIL MEMBER COMMENTS/REPORTS

Council Member Fromberg Edelstein spoke regarding recent local menorah lightings and the importance of peaceful celebrations.

Council Member Weill expressed appreciation to The Ritz-Carlton Rancho Mirage, The River at Rancho Mirage shopping center, and the Rancho Mirage Chamber of Commerce for their exceptional contributions by way of civic and holiday events.

Council Member Downs spoke of the importance of the City celebrating Pride month. He also commented on

recent holiday events he attended and presented related photos.

Mayor Pro Tem O'Keefe announced that the Coachella Valley Animal Shelter was holding a free adoption event. He reminded everyone that Rancho Mirage was welcoming to all, where people should feel safe and accepted. He spoke of the ways the City recognized and supported the LGBTQ+ community. He also noted the importance of friendship, community, family, empathy, generosity, understanding, personal growth, music, art, and nature.

Mayor Mallotto spoke of the various ways the City supported its residents' quality of life. She also commented on the importance of supporting one another.

4. CITY MANAGER COMMENTS/REPORTS

Isaiah Hagerman, City Manager, thanked City staff for their efforts over the past year. He also expressed gratitude for the City's public safety personnel.

5. CONSENT CALENDAR (A-G)

Isaiah Hagerman presented the Consent Calendar items.

MOVED/SECONDED BY DOWNS/WEILL TO APPROVE THE CONSENT CALENDAR AS PRESENTED. MOTION CARRIED 5/0.

5.A. Waive Full Reading of Any Ordinance Introduced or Adopted Pursuant to this Agenda

5.B. December 4, 2025, Regular City Council Meeting Minutes

— RECOMMENDED ACTION: Approve the December 4, 2025, Regular City Council Meeting Minutes as presented.

5.C. 2025 Building Code Adoption

— RECOMMENDED ACTION: 1) Adopt Ordinance No. 1227, 2nd Reading, Amending Chapter 15.02 “Adopted California and Uniform Codes” of Title 15 “Buildings and Construction” of the Rancho Mirage Municipal Code to Adopt the 2025 California Energy Code, 2025 California Historical Building Code, 2025 California Existing Building Code, and 2025 California Green Building Standards Code; 2) Adopt Ordinance No. 1228, 2nd Reading, Amending Chapter 15.04 “California Building Code, 2022 Edition” of Title 15 “Buildings and Construction” of the Rancho Mirage Municipal Code to Adopt the 2025 California Building Code; 3) Adopt Ordinance No. 1229, 2nd Reading, Amending Chapter 15.08 “California Mechanical Code, 2022 Edition and California Plumbing Code, 2022 Edition” and adding Chapter 15.06 “California Plumbing Code, 2025 Edition” to Title 15 “Buildings and Construction” of the Rancho Mirage Municipal Code to Adopt the 2025 California Mechanical Code and 2025 California Plumbing Code; 4) Adopt Ordinance No. 1230, 2nd Reading, Amending Chapter 15.10 “California Electrical Code, 2022 Edition” of Title 15 “Buildings and Construction” of the Rancho Mirage Municipal Code to Adopt the 2025 California Electrical Code; 5) Adopt Ordinance No. 1231, 2nd Reading, Amending Chapter 15.14 “California Residential Code, 2022 Edition” to Title 15 “Buildings and Construction” of the Rancho Mirage Municipal Code to Adopt the 2025 California Residential Code; and, 6) Adopt Ordinance No. 1232, 2nd Reading, Repealing and Replacing Chapter 15.12 “2022 California Fire Code” and adding Chapter 15.13 “California Wildland-Urban Interface Code ,2025 Edition to Title 15 “Buildings and Construction” of the Rancho Mirage Municipal Code to Adopt the 2025 California Fire Code.

5.D. Final Parcel Map No. 38844 (Skilled Nursing Facility). Location: Bob Hope Drive, Between Gerald Ford Drive and Via Marta

— RECOMMENDED ACTION: Approve Final Parcel Map No. 38844, subject to final review and approval by the City Manager, in consultation with the City Attorney.

5.E. Extension of Completion Date for Parcel Map No. 38315 (Palomino Four). Location: Northwest Corner of Palomino Lane and Cypress Lane

— RECOMMENDED ACTION: Authorize an Amendment to the Subdivision Improvement Agreement, which provides for the extension of the completion date for Parcel Map No. 38315 until December 7, 2026.

5.F. Contracts

— RECOMMENDED ACTION: Approve the terms of the contracts as presented and authorize the City Manager to execute the subject contracts.

5.G. Demands

— RECOMMENDED ACTION: Approve the demands as presented.

6. PUBLIC HEARINGS

6.A. Environmental Assessment Case No. EA21-0002, General Plan Zoning Map Amendment Case No. GPZMA21-0001, Development Agreement Amendment Case No. DA21-0002, Major Modification Case No. MOD21-0004, & Tentative Parcel Map Case Number TPM23-0002 (TPM38768) - Ritz Carlton Rancho Mirage. Applicant: Kam Sang Company on Behalf of Newage Rancho Mirage LLC/ Ritz Carlton. Consideration to Construct the Ritz Carlton Residences which is a Modification to Previously Approved Entitlements Consisting of 106 Condo Units; Event Space and Room for Amenities; Subterranean Parking Structure; and Additional Residential Parking Spaces. Additionally, a Newly Proposed Sky Mesa Recreational Area will Include a Restaurant, Additional Lawn Event Space and Pool Area. The 35.07 Acre Project Site (Excluding Previously Approved Tennis Villas Site (7.96 Acres on APN: 689-330-011)) Occurs Along Frank Sinatra Drive (68900 Frank Sinatra Drive) Approximately 0.85 Miles Southwest of the Intersection with Highway 111 Within the City of Rancho Mirage (APNs: 689-330-026, -028, -031, -032, -034; 689-020-012, -014; & 689-331-001, -018)

— RECOMMENDED ACTION: 1) Adopt Resolution No. 2025-(Next-in-Order), Approving the Mitigation Monitoring and Reporting Program and Mitigated Negative Declaration (SCH# 2024030267) for the Proposed Project Based on Environmental Assessment Case No. EA21-0002; 2) Adopt Resolution No. 2025-(Next-in-Order), Approving General Plan Zoning Map Amendment (GPZMA21-0001), Tentative Parcel Map Case No. TPM23-0002, & Major Modification Case No. MOD21-0004; and 3) Introduce Ordinance No. (Next-in-Order), 1st Reading, Approving Development Agreement Amendment (DA21-0002).

Ben Torres, Planning Manager, presented the staff report.

Isaiah Hagerman, City Manager, addressed concerns raised by neighboring property owners; specifically, construction hours, use of the emergency access road for construction traffic, pedestrians walking on the roadway, the possible addition of a bicycle lane on Frank Sinatra Drive, and impact to existing views.

The following individuals provided public testimony: Bruce Bauer, Halil Nalci, Nicole Kent, Sal Amezquita, Richard Zacky, Andy Gladstein, and Michael Harrington.

Ronnie Lam, Applicant, highlighted the history and current status of the project.

The following individuals provided public testimony: Tom Richards and Claudia Padilla.

John Hicks, Project Manager, provided an overview of the project.

The following individual provided public testimony: Omar Cobian (Western States Regional Council of Carpenters).

A discussion ensued.

MOVED/SECONDED BY WEILL/DOWNS TO:

1. **ADOPT RESOLUTION NO. 2025-47, APPROVING THE MITIGATION MONITORING AND REPORTING PROGRAM AND MITIGATED NEGATIVE DECLARATION (SCH# 2024030267) FOR THE PROPOSED PROJECT BASED ON ENVIRONMENTAL ASSESSMENT CASE NO. EA21-0002;**
2. **ADOPT RESOLUTION NO. 2025-48, APPROVING GENERAL PLAN ZONING MAP AMENDMENT (GPZMA21-0001), TENTATIVE PARCEL MAP CASE NO. TPM23-0002, & MAJOR MODIFICATION CASE NO. MOD21-0004;**
3. **INTRODUCE ORDINANCE NO. 1233, 1ST READING, APPROVING DEVELOPMENT AGREEMENT AMENDMENT (DA21-0002); AND**

7. ACTION CALENDAR

7.A. Intention to Annex Territory Comprising 5.04 Acres to Community Facilities District No. 1 in Connection with Tentative Tract Map No. TTM 38447. Location: Southwest Corner of Via Florencia and Via Josefina

— RECOMMENDED ACTION: Adopt Resolution No. 2025-(Next-in-Order), Declaring the City's Intention to Annex Territory to Community Facilities District No. 1 and to Levy a Special Tax therein for Additional Police and Fire Services, Preliminarily Approve a Map of the Area Proposed to be Annexed, and Schedule a Public Hearing to Consider the Annexation and the Levy of the Special Tax for Annexation No. 203.

Jacob De La Cruz, Financial Analyst, presented the staff report.

MOVED/SECONDED BY FROMBERG EDLELSTEIN/O'KEEFE TO ADOPT RESOLUTION NO. 2025-49, DECLARING THE CITY'S INTENTION TO ANNEX TERRITORY TO COMMUNITY FACILITIES DISTRICT NO. 1 AND TO LEVY A SPECIAL TAX THEREIN FOR ADDITIONAL POLICE AND FIRE SERVICES, PRELIMINARILY APPROVE A MAP OF THE AREA PROPOSED TO BE ANNEXED, AND SCHEDULE A PUBLIC HEARING TO CONSIDER THE ANNEXATION AND THE LEVY OF THE SPECIAL TAX FOR ANNEXATION NO. 203. MOTION CARRIED 5/0.

8. NON-AGENDA PUBLIC COMMENTS

The following individuals provided non-agenda public comments: Wally Melendez and Susan Ragsdale.

9. CLOSED SESSION

9.A. Closed Session Agenda

— 1. CONFERENCE WITH LEGAL COUNSEL - EXISTING LITIGATION Pursuant to Government Code Section 54956.9(d)(1). Case name unspecified since disclosure may jeopardize existing settlement negotiations.

Colin Kirkpatrick, City Attorney, announced that the City Council would recess to Closed Session to confer with legal counsel regarding one existing litigation item, pursuant to Government Code Section 54956.9(d)(1), with the case name being unspecified since disclosure may jeopardize existing settlement negotiations.

9.B. Recess to Closed Session

Mayor Mallotto recessed the meeting to Closed Session at 2:55 P.M.

9.C. Reconvene Open Session

Mayor Mallotto reconvened the meeting at 3:24 P.M., with Council Member Downs, Council Member Weill, Mayor Pro Tem O'Keefe, and Mayor Mallotto in attendance.

9.D. Closed Session Announcements

Colin Kirkpatrick, City Attorney, announced that no reportable action was taken during Closed Session.

10. ADJOURNMENT

Mayor Mallotto adjourned the meeting at 3:25 P.M.

Date Approved by City Council:

City Council Staff Report

Calendar Year 2026 Salary Schedule

DATE	ITEM #
January 15, 2026	CONSENT CALENDAR - 5D.
Presented To	**Presented By**
Mayor and City Council	Joseph Carpenter, Assistant Director of Administrative Services

RECOMMENDED ACTION

Adopt Resolution No. 2026-(Next-in-Order), Approving the Updated Calendar Year 2026 Salary Schedule to Comply with California Public Employee's Retirement System (CalPERS) Statutory and Regulatory Requirements for Compensation Earnable and Publicly Available Pay Schedules.

DISCUSSION

On January 8, 2020, CalPERS issued Circular Letter 200-003-20, clarifying that salary schedules must comply with Government Code Section 20636 and CCR Section 570.5. The City must comply with the compensation earnable provisions and corresponding regulations of the Public Employee's Retirement Law. Where employers fail to comply, CalPERS will be unable to use such pay amounts when calculating members' retirement benefits.

To comply with said codes, salary schedules need to meet the following requirements:

1. Have been duly approved and adopted by the employer's governing body in accordance with requirements of applicable public meetings laws;
2. Identifies the position title for every employee position;
3. Shows the payrate for each identified position, which may be stated as a single amount or as multiple amounts within a range;
4. Indicates the time base, including, but not limited to, whether the time base is hourly, daily, bi-weekly, monthly, bi-monthly, or annually;
5. Is posted at the office of the employer or immediately accessible and available for public review from the employer during normal business hours or posted on the employer's internet website;
6. Indicates an effective date and date of any revisions;
7. Is retained by the employer and available for public inspection for not less than five years; and
8. Does not reference another document in lieu of disclosing the payrate.

All eight (8) requirements must be met for CalPERS to approve the pay amount as payrate and reportable compensation earnable.

The salary schedule included as Exhibit A to the Resolution incorporates a cost-of-living adjustment effective January 1, 2026. The salary schedule shall remain in effect unless and until amended by the City Council.

RESOLUTION NO. 2026-_____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF RANCHO MIRAGE APPROVING THE UPDATED CALENDAR YEAR 2026 SALARY SCHEDULE TO COMPLY WITH CALIFORNIA PUBLIC EMPLOYEE'S RETIREMENT SYSTEM (CALPERS) STATUTORY AND REGULATORY REQUIREMENTS FOR COMPENSATION EARNABLE AND PUBLICLY AVAILABLE PAY SCHEDULES

WHEREAS, the City of Rancho Mirage ("City") is a charter city and recognized as a political subdivision of the State of California for certain purposes; and

WHEREAS, the City must comply with the compensation earnable and publicly available pay schedules provisions contained within California Government Code (CGC) section 20636(d) and California Code of Regulations (CCR) 570.5 otherwise CalPERS is unable to use any such amounts when calculating members' retirement benefits; and

WHEREAS, the Finance Division of the Department of Administrative Services who manages the salary schedules requests that the City Council approve certain additions, deletions, and modifications to the salary schedule; and

WHEREAS, attached to this resolution and incorporated by reference is the City's updated comprehensive salary schedule which will be made publicly available on the City's external website and provided upon request; and

WHEREAS, in light of the foregoing, the City Council desires to adopt the Calendar Year 2026 salary schedule, subject to any modifications made by the City Council.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF RANCHO MIRAGE DOES HEREBY RESOLVE, DECLARE, DETERMINE, AND ORDER AS FOLLOWS:

Section 1. Recitals.

That the Recitals set forth above are true and correct.

Section 2. Approval and Adoption of the City's Calendar Year 2026 Salary Schedule.

That the City Council hereby approves and confirms the salary schedule to comply with California Public Employees' Retirement System (CalPERS) statuary and regulatory requirements for compensation earnable and publicly available pay schedules.

Section 3. Severability.

That the City Council declares that, should any provision, section, paragraph, sentence or word of this Resolution be rendered or declared invalid by any final court action in a court of competent jurisdiction or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences or words of this Resolution as hereby adopted shall remain in full force and effect.

Section 4. Repeal of Conflicting Provisions.

That all the provisions heretofore adopted by the City or the City Council that are in conflict with the provisions of this Resolution are hereby repealed.

Section 5. Effective Date.

That this Resolution shall take effect upon its adoption.

Section 6. Certification.

That the City Clerk shall certify to the passage of this Resolution and enter it into the book of original resolutions.

[THE REMAINDER OF THIS PAGE INTENTIONALLY LEFT BLANK]

PASSED, APPROVED, and ADOPTED on this 15th day of January, 2026.

CONTRACT SUMMARY

FROM: Ryan Stendell, Assistant City Manager

DATE: January 15, 2026

SUBJECT: Award of Contract for CP 25-402 Citywide Concrete Repair Project.

Background

This project consists of the repair and replacement of damaged concrete at 16 unique locations throughout the city to improve safety and accessibility. The scope of work includes removal and replacement of sidewalks, curb ramps, curb and gutter, median curbs, spandrels, and related concrete improvements in accordance with the city standards and specifications.

On December 10, 2025, the City received five sealed bids in response to the Notice Inviting Bids that was issued on November 6, 2025, for the subject project. The following are the results of the bidding:

Contractor	***Total Bid***
Gentry General Engineering, Inc.	**$358,460.00**
LC Paving & Sealing, Inc.	$402,575.00
Tri-Star Contracting II, Inc.	$499,768.50
Granite Construction	$515,000.00
Hardy & Harper, Inc.	$600,000.00

The bid submitted by Gentry General Engineering, Inc. was analyzed and found to be responsive. The contractor's license status and references were evaluated and are in order.

FISCAL IMPACT

Sufficient funds have been budgeted for the project from Measure A Local Funds and department level repair and maintenance accounts. No budget adjustments are necessary. If the contract is awarded, work on this project will begin in early March and take approximately 60 days to complete.

City Council Staff Report

Historic Resources Survey Update

DATE	ITEM #
January 15, 2026	PUBLIC HEARINGS - 6A.
Presented To	**Presented By**
Mayor and City Council	Ben Torres, Planning Manager

RECOMMENDED ACTION

Adopt Resolution No. 2026-(Next-in-Order), Approving the Historic Resources Survey Update.

DISCUSSION

Background

In 2003 the City of Rancho Mirage completed its first intensive level survey of historic resources to serve as the backbone of the newly established historic preservation program. The survey identified 105 properties including two historic districts (Tamarisk Ranchos I and Tamarisk Fairways). The 2003 Historic Resources Survey primarily consisted of single-family homes with a few commercial properties identified ranging in year built from 1934 to 1978. Currently, there are 77 designated properties and two historic districts within the City. Most of the currently designated properties were part of the original 2003 Historic Resources Survey (46 properties from the survey are designated and both historic districts).

The City issued a Request for Proposals (RFP) on May 14, 2024 given that the survey was over 20 years old and five proposals for the Historic Resources Survey Update were received. On July 18, 2024 the City Council awarded a professional services agreement with Urbana Preservation & Planning LLC to complete the Historic Resources Survey Update.

Historic Resources Survey Update (Survey Update)

The Historic Resources Survey Update is organized to include the following sections: Introduction, Regulatory Framework, Historic Resource Survey Results, Recommendations for Future Action, and Historic Context Statement. Each property listed on the survey update has a California Department of Parks and Recreation (DPR) 523 Series form located within the appendix section.

The Survey Update has identified and evaluated 50 new historic-era properties within the city boundaries, updated 58 records for existing historic-era properties that have not been designated from the 2003 Historic Resources Survey, identified 5 new potential historic districts, and created 12 new survey forms for designated properties missing adequate documentation.

Properties listed on the Survey Update range in year built from 1934 to 1986 and are primarily residential. As part of the update, additional commercial properties were also included like the VCA Rancho Mirage Animal Hospital, Provident Bank, and Lord Fletchers.

Historic Preservation Commission (HPC)

On November 19, 2025, the Historic Preservation Commission was presented with the draft Historic Resources Survey Update. Various public comments were made and provided at the meeting. The HPC made a motion to table the item to a future meeting to allow for additional review time.

On December 17, 2025, the HPC continued reviewing the subject request, and additional public comments were made and provided at the meeting. After further discussing the Survey Update, the Historic Preservation Commission made the following motion:

> MOVED/SECONDED BY LEIBOWITZ/LOPEZ TO AUTHORIZE STAFF TO MAKE MINOR REVISIONS TO THE HISTORIC RESOURCES SURVEY UPDATE BASED ON COMMENTS RECEIVED AND RECOMMEND TO THE CITY COUNCIL APPROVAL OF THE HISTORIC RESOURCES SURVEY UPDATE. MOTION CARRIED 5/0.

After the meeting staff and the project consultant revised the Survey Update based on comments from the HPC and public comments provided.

Public Noticing

Municipal Code Section 17.74.020(C), *Hearing and notice,* allows for alternative notice (subject to Government Code Section 65091(A)(3)) with a minimum 1/8th page newspaper notice if the number of property owners to whom notice would be mailed is more than 1,000. The subject notice was published (1/8th page size) in *The Desert Sun* on January 4, 2026. The notice was also posted at City Hall, The Rancho Mirage Library & Observatory, and on the City's website on December 30, 2025.

Public Hearing Notices were also mailed out on December 30, 2025 to all properties listed on the Historic Resources Survey Update and to their mailing address listed on County Records. Attachment 6 contains new public comments that were received and past public comments that were presented to the HPC.

California Environmental Quality Act (CEQA)

This Historic Resources Survey Update is exempt from the California Environmental Quality Act (CEQA) pursuant to Section 15061(b)(3) because it can be seen with certainty that there is no possibility that the Historic Resources Survey Update will have a significant effect on the environment.

Program Status

As of this date, the City Council has designated 77 structures as Historic Resources. In addition, there are two designated Historic Districts in the City – Tamarisk Ranchos I and Cody Court (Tamarisk Fairways).

JUSTIFICATION OR INFORMATION CONTINUED:

HISTORIC RESOURCES SURVEY UPDATE

The Historic Resources Survey Update report is organized to include the following sections: Introduction, Regulatory Framework, Historic Resource Survey Results, Recommendations for Future Action, and Historic Context Statement. Each property listed on the survey update has a California Department of Parks and Recreation (DPR) 523 Series form located within the appendix section.

The Draft Historic Resources Survey Update has identified and evaluated 50 new historic-era properties within the city boundaries, updated 58 records for existing historic-era properties that have not been designated from the 2003 survey, identified 5 new potential historic districts, and created 12 new survey forms for designated properties missing adequate documentation.

Properties listed on the Historic Resources Survey Update range in year built from 1934 to 1986 and are primarily residential. As part of the update, additional commercial properties were also included like the VCA Rancho Mirage Animal Hospital, Provident Bank, a few Eisenhower Health buildings, and Lord Fletchers. The following is a summary of the survey results:

- 125 Total Evaluated Properties
  - 104 Properties are Significant and Eligible for Designation
  - 21 Properties are Not Ineligible for Designation
- 58 were Previously Recorded Properties
  - 12 Properties were found to be Significant but Ineligible for Designation (due to a lack of historic integrity)
    - 3 of those Properties are No Longer Extant (Demolished)
  - 46 Properties are Significant and Eligible For Designation
- 50 were Newly Recorded Properties
  - 9 Properties are Significant but Ineligible for Designation (due to a lack of historic integrity)
  - 41 Properties are Significant and Eligible For Designation
- 12 were Locally Designated Properties (lacking DPR 523 documentation)
  - 11 Properties are Eligible for the NRHP, CRHR, and Local Register
  - 1 Property is Eligible for the CRHR and the Local Register (Not 50 years old - Not eligible for the National Register of Historic Places)
- 5 Proposed Potential Historic Districts
  - Chalet Palms
  - Tamarisk West I
  - Tamarisk West II
  - Tamarisk Ranchos II
  - Tamarisk Gardens

The historic context statement was also updated from the 2003 Historic Resources Survey, with the following eight themes:

- Theme 1: The Coachella Valley in the Spanish and Mexican Eras, 1774 – 1847
- Theme 2: Development of the Coachella Valley, 1848 – 1923

JUSTIFICATION OR INFORMATION CONTINUED:

- Theme 3: Early Agricultural and Residential Period, 1924 – 1950
- Theme 4: Country Club Era, 1951 – 1973
- Theme 5: Residential Subdivisions and Cooperatives, 1951 – 1973
- Theme 6: Commercial Development, 1934 – 1973
- Theme 7: Cityhood, 1973 - Present
- Theme 8: Rancho Mirage Architectural Styles, 1934 – 1980s

The Historic Resources Survey Update comprehensively evaluated potential historic resources within the City as detailed in Attachment 4.

HISTORIC PRESERVATION COMMISSION

On November 19, 2025, the Historic Preservation Commission held a public meeting to consider the Historic Resources Survey Update. City staff and the project consultant (Urbana Preservation and Planning) presented the highlights of the survey update, and various public comments were received during the public meeting. As summarized in the draft meeting minutes attached to this report, the Commissioners asked questions which the staff addressed. After due consideration of the staff report and public testimony, the Historic Preservation Commission made a motion to table the item to a future meeting.

COURTESY NOTICE

On Wednesday, December 3, 2025 Courtesy Notices (Attachment 1) were mailed out to all properties listed on the Historic Resources Survey Update and to their mailing address listed on County Records. The Courtesy Notice informed property owners of the upcoming Historic Preservation Commission meeting and the purpose of the Historic Resources Survey Update. Public comment received are included as Attachment 5.

PUBLIC HEARING NOTICE

CITY COUNCIL MEETING
Thursday, January 15, 2026 – 1:00 p.m.

Historic Resources Survey Update

Applicant: City of Rancho Mirage

Request: Consideration of a Historic Resources Survey Update which has identified and evaluated 50 new historic-era properties within the City, updated 58 records for properties that have not been designated from the 2003 survey, identified 5 new potential historic districts, and created 12 new survey forms for designated properties. The survey update identifies properties that have the potential to become Historic Resources or Historic Districts, with property owner consent. The Historic Preservation Commission recommended approval on December 17, 2025.

Location: City-wide

NOTICE IS HEREBY GIVEN that a Public Hearing will be held before the City of Rancho Mirage City Council regarding consideration of the above referenced application, pursuant to Rancho Mirage Municipal Code Title 15, Chapter 15.27 *"Historic Preservation Program"* under the *"Buildings and Construction"* Section. This project is exempt from the California Environmental Quality Act (CEQA) pursuant to Section 15061(b)(3).

The Public Hearing will be held on Thursday, January 15, 2026, at 1:00 p.m., in the Council Chamber, 69-825 Highway 111, Rancho Mirage, California, at which time and place pertinent testimony will be heard. The file, including all environmental information, is available for public inspection at City Hall, Monday through Friday, between 8 a.m. and 5:00 p.m., and will be posted on the City's website with the publication of the City Council Agenda, to be posted at least 72 hours prior to the meeting.

Written testimony may be submitted to the City Clerk via email to CityClerk@RanchoMirageCA.gov, or mailed to City of Rancho Mirage, ATTN: City Clerk, 69-825 Highway 111, Rancho Mirage, CA 92270. Written testimony must be received no later than 10:00 a.m. on the day of the meeting to be considered by the City Council.

GOVERNMENT CODE § 65009 NOTICE: If you challenge this proposed activity in court, you may be limited to raising only those issues you or someone else raised at the Public Hearing described in this notice, or in written correspondence delivered to the City Council sufficiently prior to the Public Hearing to enable its consideration by them.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF RANCHO MIRAGE APPROVING THE HISTORIC RESOURCES SURVEY UPDATE

WHEREAS, the first Historic Resources Survey ("2003 Survey") for the City of Rancho Mirage was completed on February 3, 2003; and

WHEREAS, pursuant to Rancho Mirage Municipal Code ("RMMC") Section 15.27.040 "Survey/inventory – Historic structures and sites," the Rancho Mirage Historic Preservation Commission ("Commission"), after an open public meeting, caused the issuance of a written recommendation in support of the attached Historic Resources Survey Update ("Survey Update"), which evaluated 125 properties within the City; and

WHEREAS, the Survey Update identified and evaluated 50 new historic-era properties within the City boundaries, updated 58 records for existing historic-era properties that had not been designated from the 2003 Survey, identified 5 new potential historic districts, and created 12 new survey forms for designated properties missing adequate documentation; and

WHEREAS, pursuant to RMMC Section 15.27.040(D) "Survey/inventory – Historic structures and sites," the Rancho Mirage City Council considered the Commission's recommendation at a duly noticed public hearing, and designated the Survey Update as the official survey for the City of Rancho Mirage, as set forth in more detail herein.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF RANCHO MIRAGE, CALIFORNIA DOES HEREBY RESOLVE AS FOLLOWS:

SECTION 1. RECITALS AND EXHIBITS.

That the foregoing Recitals and attached Exhibits are true and correct and are incorporated by this reference.

SECTION 2. HISTORIC RESOURCES SURVEY UPDATE.

That the Survey Update (attached hereto and incorporated herein by this reference as Exhibit A) is hereby designated as the official survey for the City of Rancho Mirage, subject to all of the applicable provisions set forth in RMMC Chapter 15.27 "Historic Preservation Program," incorporated herein by this reference as such provisions may be subsequently amended from time to time, and that the 2003 Survey is hereby repealed and superseded in its entirety.

SECTION 3. SEVERABILITY.

That the City Council declares that, should any provision, section, paragraph, sentence or word of this Resolution or Survey Update be rendered or declared invalid by any final court action in a court of competent jurisdiction or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences or words of this Resolution or Survey Update as hereby adopted shall remain in full force and effect.

SECTION 4. REPEAL OF CONFLICTING PROVISIONS.

That all the provisions heretofore adopted by the City or the City Council that are in conflict with the provisions of this Resolution are hereby repealed.

SECTION 5. EFFECTIVE DATE.

That this Resolution shall take effect upon its adoption.

SECTION 6. CERTIFICATION.

That the City Clerk shall certify as to the adoption of this Resolution and shall cause the same to be processed in the manner required by law.

[THE REMAINDER OF THIS PAGE LEFT INTENTIONALLY BLANK]

PASSED, APPROVED AND ADOPTED this 15th day of January 2026.

I. Introduction

In 2025 Urbana Preservation and Planning, LLC (Urbana) was commissioned by the City of Rancho Mirage to prepare a historic resource survey and historic context statement package to aid in the identification and evaluation of potential historic resources throughout the City. Preparation of the updated survey and context implements the City's goal to protect and preserve valuable and irreplaceable historic resources. See **Figure 1** for the survey area boundaries, **Figure 2** for a map of all historic-era (pre-1980) and contemporary-era neighborhoods, and **Figure 3** for a detailed map with the names of all historic-era neighborhoods.

The purpose of this historic resource survey and context statement is to evaluate the significance and integrity of historic-era properties in the City of Rancho Mirage under the criteria of the National Register of Historic Places (NRHP), the California Register of Historical Resources (CRHR), and the Rancho Mirage Register of Historic Resources (Local Register), and to establish parameters via the historic context statement for future identification and evaluation of potential historic resources not yet surveyed.

In 2002, the city commissioned preparation of an intensive-level citywide survey of buildings and structures over 45 years of age (historic-era). Leslie Heumann and Associates conducted this survey between 2002-2003 which resulted in significance evaluation of 105 properties, including two potential historic districts and preparation of an initial historic context statement.

In 2024, Urbana was commissioned by the City to update and expand the 2003 historic context statement and the citywide historic resources survey. Urbana's methods and findings are presented in this report. The current citywide survey identified and evaluated 50 new historic-era properties within the city boundaries, updated 58 records for existing historic-era properties that have not been designated, identified 5 new potential historic districts, and created 12 new survey forms for designated properties missing adequate documentation. Urbana staff documented and evaluated all properties and districts at an intensive level on Department of Parks and Recreation (DPR) 523 series forms. Of the 125 evaluated properties and districts, 104 are found significant and eligible for designation and listing on the Local Register, CRHR, or NRHP, either individually or as contributors to a potential local historic

district. 21 documented and evaluated properties were identified as ineligible for listing on the Local Register, CRHR, or NRHP. See **Figure 4** for the locations of all survey properties.

Methodological Approach and Report Organization

This report is organized to include the following sections: Introduction, Regulatory Framework, Historic Resource Survey Results, Recommendations for Future Action, and Historic Context Statement. City of Rancho Mirage Planning Division provided initial direction for Urbana's survey effort and research by providing a list of 58 properties that required updated documentation through survey and a list of 12 designated properties currently lacking sufficient documentation. Using the data from the City of Rancho Mirage and input from a local preservation advocacy organization, Preservation Mirage, Urbana generated created a list of 50 new properties for evaluation to fulfil the scope of work outlined by the City of Rancho Mirage.

The results of property evaluations on California Department of Recreation (DPR) 523 series forms for all individually surveyed properties are organized by their status as either updates, new sites, or previously designated sites and the forms are located in Appendix A-C. Information regarding newly proposed historic districts within Rancho Mirage and their associated contributing properties is collected in Appendix D. Lastly, the qualifications for all Urbana staff, with resumes attached, are included in Appendix E.

The methodological approach involved four main tasks: desk and field survey, research, context preparation, documentation and reporting, and stakeholder involvement.

The Planning Division for the City of Rancho Mirage has made it a goal to update the historic resource survey to account for new properties that meet the age threshold for evaluation. This goal is part of the larger community vision for Rancho Mirage outlined in the 2017 General Plan. While the 2003 historic resources survey is a valuable resource that serves as a guiding document for this update, the passage of time necessitated improvement to the over 20-year-old report. The 2003 historic context statement did not include a concrete analytical framework to identify and evaluate historic resources for future survey efforts. The context statement provides significant themes for the broad history of Rancho Mirage, but that information is not applied to property types through the lens of significance thresholds, integrity considerations, and character defining features for specific architectural styles. The current historic resource survey and context statement provided an opportunity to update the 2003 historic context statement and historic resources survey. This report was prepared in accordance with accepted preservation practice as outlined in the steps below.

Desk and Field Survey

Urbana utilized historic aerial imagery and Assessor year-built data to research the previously identified 125 historic-era properties within the city boundaries assigned for survey by the City of Rancho Mirage. Of these 125 properties, 58 of these properties were previously surveyed and 12 were previously designated. Urbana updated the previous findings for these properties and documented and evaluated 50 additional properties and 5 newly proposed historic districts on DPR 523 series forms, the standard technical documentation for properties in California.

Field survey occurred over several days in November 2024. Several house types, architectural styles and stylistic variations, and community facilities within Rancho Mirage were photographed over the course of this fieldwork. All fieldwork was conducted from the public right-of-way and from cart paths on golf courses where properties were located within the boundaries of country clubs. Only primary buildings on a parcel were surveyed. Any properties that could not be observed from the public right-of-way or private streets were not surveyed. In particular, the survey focused on properties constructed between the 1930s and 1980s and those identified by members of the community as having historical importance.

Contextual and Property-Specific Research

Contextual and property-specific research informed survey activities, context development, and significance evaluations for individual properties. Research tasks involved in-person and remote/digital research of resources on file at the City of Rancho Mirage, Rancho Mirage Library & Observatory, Palm Springs Art Museum Archives, Preservation Mirage Archive, the Riverside Assessor-County Clerk-Recorder, UC Riverside, the Los Angeles Public Library, and Calisphere.

Local and regional newspapers were researched via the California Digital Newspaper Collection at UC Riverside, Genealogy Bank, and Newspapers.com. Newspaper accounts detailed the area's history including references to the development of larger residential tracts, and buildings and structures on individual parcels, as well as accounts of individuals associated with the city at different points in time.

Building permit records on file at the City were reviewed and tabulated for use in property documentation. Each survey property was researched for previous permits issued. The permit

data was integrated into the construction history portions of the property documentation. The permits also provided past owner names and any attributed architects, designers, and builders which offered additional research leads.

Digital data from the City of Rancho Mirage provided local history which was used with early *Palm Springs Telephone Directories,* historic maps, historic photographs, newspapers and other ephemera provided by Preservation Mirage staff to inform information on specific properties in the City. Owners and occupant's names and biographical information were researched using collected Preservation Mirage data and additional genealogical research conducted online via Ancestry.

Aerial imagery was researched at multiple locales including National Environmental Title Research (NETR) Historic Aerials, UC Santa Barbara Frame Finder, and the U.S. Interior Department's Earth Explorer collection.

Subdivision tract maps, downloaded from the Riverside County Land Records Research Tool, set against the City's Residential Directory Map (showing current neighborhood names and locations) helped to verify boundaries, arrangement, and size of lots, and offered insight on the pace of growth for the city via survey and recordation dates.

Context Preparation

Utilizing contextual and property-specific research, Urbana developed an updated and expanded historic context statement. This context statement analyzes the historical development of the city and contains information about historical trends and properties, organized by important themes with corresponding timeframes.

The context development effort utilized the 2003 historic context statement prepared by Leslie Heumann and Associates. This report was prepared by Leslie Heumann, Teresa Grimes, and Peter Moruzzi. The current context statement utilizes some of the themes first identified in 2003 and introduces new themes, property type descriptions, significance thresholds, and integrity considerations to provide parameters for the identification of significant properties in the City. Eight themes were prepared as part of the updated context effort.

- Theme 1: The Coachella Valley in the Spanish and Mexican Eras, 1774 – 1847
- Theme 2: Development of the Coachella Valley, 1848 – 1923
- Theme 3: Early Agricultural and Residential Period, 1924 – 1950
- Theme 4: Country Club Era, 1951 – 1973

- Theme 5: Residential Subdivisions and Cooperatives, 1951 – 1973
- Theme 6: Commercial Development, 1934 – 1973
- Theme 7: Cityhood, 1973 - Present
- Theme 8: Rancho Mirage Architectural Styles, 1934 – 1980s

Documentation and Reporting

Upon completion of fieldwork and contextual and property-specific research, Urbana documented and evaluated all surveyed properties and prepared this survey report package. All property documentation conformed to the California SHPO *Instructions for Recording Historical Resources* (1996 as amended).

The fieldwork data was used to update findings for previously recorded properties through the preparation of DPR 523 L (Continuation Sheet) forms for each previously recorded resource with updated photographs, descriptions of integrity, and eligibility conclusions. In addition to updating existing records, Urbana documented and evaluated 50 newly identified properties and 5 new historic districts using DPR 523 Series Forms, including 523A Primary Records; 523B Building, Structure, Object Records; 523D District Records (where appropriate), and 523J Location Records. Urbana assessed each property to determine the level of alteration and integrity status and focused the intensive documentation and evaluation on properties that initially appeared to qualify as historical resources more readily under CEQA.

City of Rancho Mirage Planning Division

The primary partner for the historic resource survey was the City of Rancho Mirage Planning Division and the Historic Preservation Commission. The Planning Division produces general plans for the City, manages the development of Rancho Mirage through zoning, produces applicable reports related to future development projects, and manages the Historic Preservation Program. The Director of Development Services, Majna Dukic and Planning Manager Ben Torres were directly consulted throughout the historic resource survey and context statement development process to provide input, feedback, and support throughout the research, fieldwork, and analysis stages of the project.

In November 2024, Urbana presented an overview of the survey effort and project goals to the City of Rancho Mirage Historic Preservation Commission. This presentation introduced the forthcoming historical resource survey effort and outlined the process for the coming months in terms of research, writing, and submission.

Other Partnerships

Members of the local preservation advocacy organization, Preservation Mirage, and individual property owners also assisted with survey and research efforts by providing access to properties, photographs, and other historical data to inform the survey process. The primary goals of Preservation Mirage are to advocate for the protection of significant architectural resources, assist with local designations, and raise awareness of the City's historic architecture by offering educational opportunities. Throughout the development of the historic resource survey and context statement, members of Preservation Mirage assisted Urbana staff by conducting local research, providing applicable historic documents and photos; and administering access to their archives.

Personnel

Urbana employed a team approach to the project with several staff members contributing to the project including

- John Hyche, MA, Associate Historian,
- Alexandrea Baker, MCP, Preservation Planner,
- Douglas E. Kupel, Ph.D., RPA, Senior Historian, and
- Wendy L. Tinsley Becker RPH, AICP, Principal.

All Urbana personnel meet the Secretary of the Interior's Professional Qualifications Standards in the disciplines of History, Architectural History, and Archaeology. Resumes are included in Appendix E. Additionally, Urbana retained Rancho Mirage history expert and author of *Mod Mirage: The Midcentury Architecture of Rancho Mirage*, Melissa Riche, as a Senior Research consultant. Ms. Riche shared data and files from her personal archive, provided insight on properties selected for documentation, and facilitated introductions and access to survey properties where access was otherwise not granted.

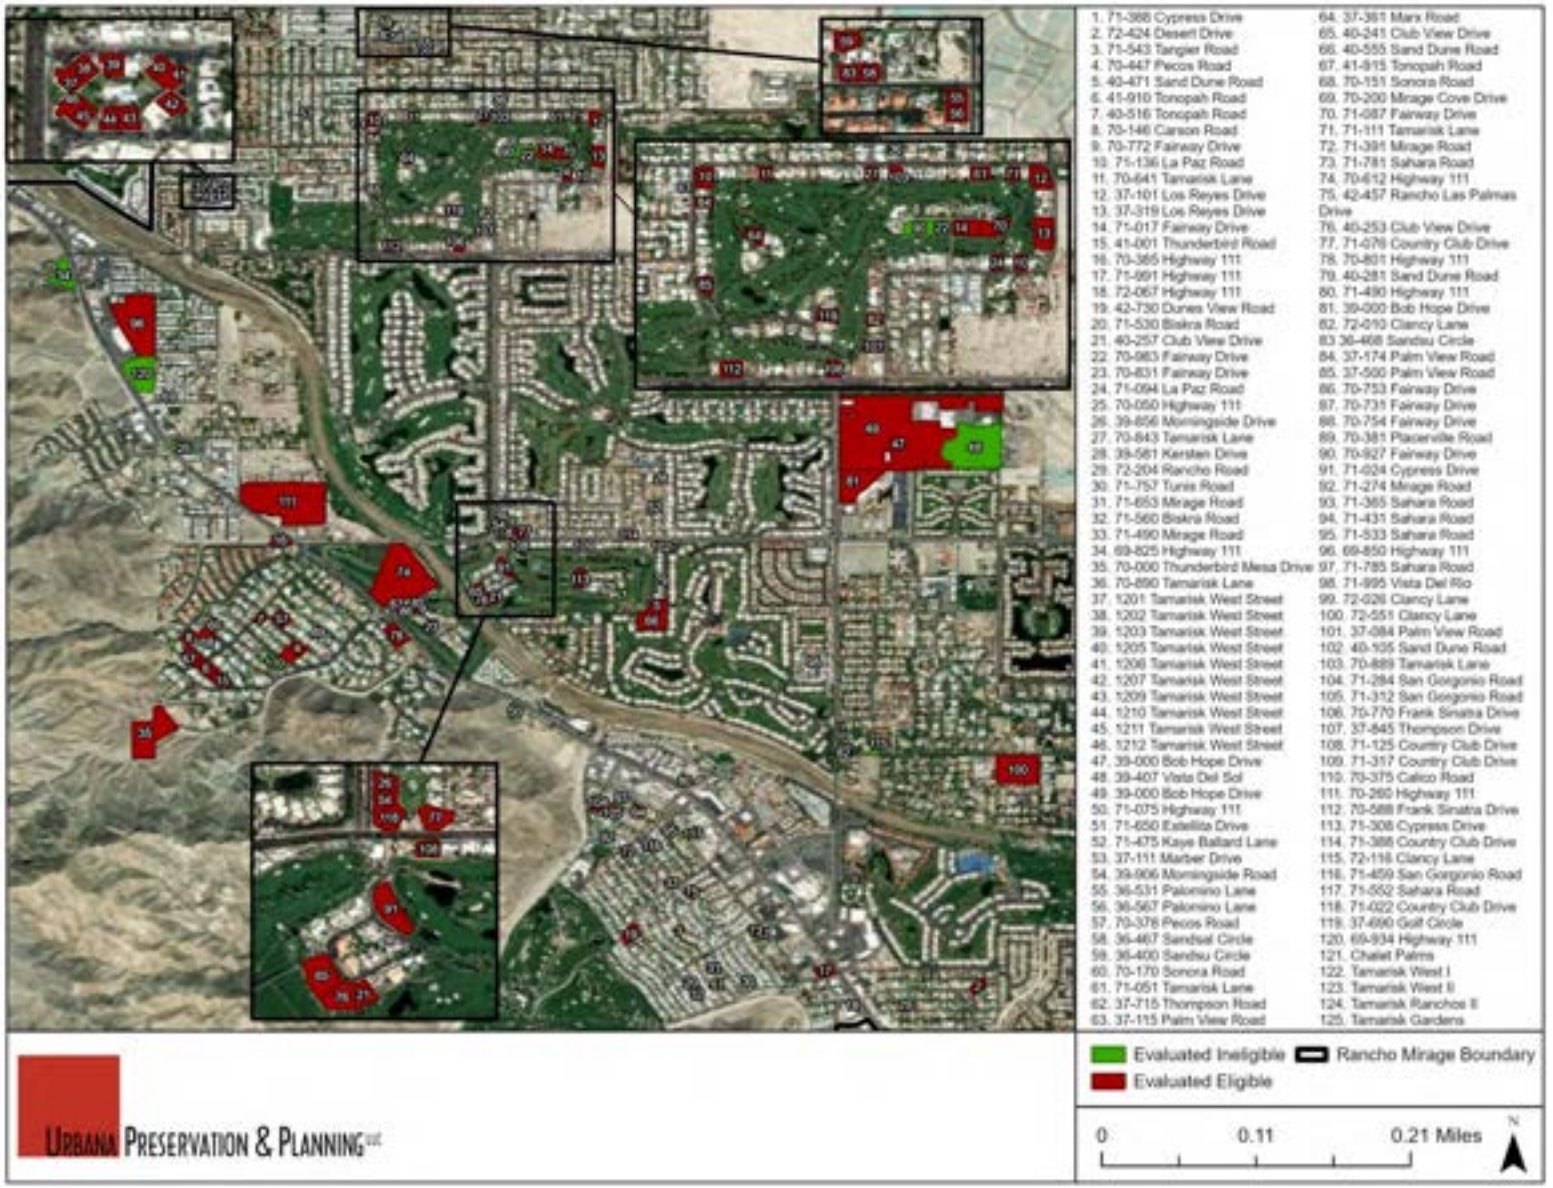

Figure 4. Location Map of All Surveyed Properties.

II. Regulatory Framework

This historic resource survey documented and evaluated 125 properties for eligibility under the criteria of the National Register of Historic Places (NRHP), the California Register for Historical Resources (CRHR), and the Rancho Mirage Register of Historic Resources (Local Register). Properties listed on or eligible for listing on the NRHP, CRHR, and Local Register generally qualify as historic properties and historic resources under Federal, State and local regulatory frameworks. Following is an overview of the historic preservation regulatory framework for properties and projects in Rancho Mirage.

National Historic Preservation Act (NHPA) & Historic Properties

The NHPA requires federal agencies to consider the effects of proposed undertakings on historic properties. A historic property is defined as any building, site, district, structure or object that is listed in or eligible for listing in the NRHP. For a property to qualify for the NRHP, it must meet one of four criteria for evaluation and retain sufficient integrity to convey its significance. Pursuant to *National Register Bulletin 15* (36 CFR § 60.4), the quality of significance in American history, architecture, archaeology, engineering, and culture is present in districts, sites, buildings, structures, and objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association, and one or more of the criteria listed below.

Criterion A. That are associated with events that have made a significant contribution to the broad patterns of our history.

Criterion B. That are associated with the lives of persons significant in our past.

Criterion C. That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represents a significant and distinguishable entity whose components lack individual distinction.

Criterion D. That have yielded, or may be likely to yield, information important in prehistory or history.

NRHP Criteria Considerations

According to the criteria considerations provided by the National Park Service in 36 CFR § 60.4, districts, sites, buildings, structures, and objects such as cemeteries, birthplaces or graves of historical figures, properties owned by religious institutions or used for religious purposes, structures that have been moved from their original locations, reconstructed historic buildings, properties primarily commemorative in nature, and properties that have achieved significance within the past 50 years that meet one or more of the NRHP criteria are not considered eligible for listing in the NRHP. However, such properties would qualify in Rancho Mirage if they were found to be integral parts of districts that do meet the criteria or if they fall within the following categories listed below.

- **A.** A religious property deriving primary significance from architectural or artistic distinction or historical importance.
- **B.** A building or structure removed from its original location but which is primarily significant for architectural value, or which is the surviving structure most importantly associated with a historic person or event.
- **C.** A birthplace or grave of a historical figure of outstanding importance if there is no appropriate site or building associated with his or her productive life.
- **D.** A cemetery that derives its primary importance from graves of persons of transcendent importance, from age, from distinctive design features, or from association with historic events.
- **E.** A reconstructed building when accurately executed in a suitable environment and presented in a dignified manner as part of a restoration master plan, and when no other building or structure with the same association has survived.
- **F.** A property primarily commemorative in intent if design, age, tradition, or symbolic value has invested it with its own exceptional significance.
- **G.** A property achieving significance within the past 50 years if it is of exceptional importance.

Integrity and the NRHP

In addition to meeting at least one of the designation criteria, a property must retain sufficient integrity to convey its significance for listing in the NRHP. Integrity is the ability of a property to convey its significance using physical characteristics related to a proposed historic period of significance. The National Park Service has defined the following seven aspects of integrity in *National Register Bulletin 15* listed below.

- **Location** - the place where the historic property was constructed or the place where the historic event occurred.
- **Design** - the combination of elements that create the form, plan, space, structure, and style of a property.
- **Setting** - the physical environment of a historic property.
- **Materials** - the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property.
- **Workmanship** - the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory.
- **Feeling** - a property's expression of the aesthetic or historic sense of a particular period of time.
- **Association** - the direct link between an important historic event or person and a historic property.

California Environmental Quality Act (CEQA) & Historical Resources

Historical resources are defined as "a resource listed or eligible for listing on the California Register of Historical Resources" (CRHR) in the Public Resources Code, Section 5024.1; 14 CCR 15064.5. Under CEQA Guidelines Section 15064.5(a), the term "historical resources" includes the following:

1. A resource listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the CRHR (Public Resources Code, Section 5024.1).
2. A resource included in a local register of historical resources, as defined in Section 5020.1(k) of the Public Resources Code or identified as significant in a historical resource survey meeting the requirements of Section 5024.1(g) of the Public Resources Code, will be presumed to be historically or culturally significant. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant.
3. Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be a historical resource, provided the lead agency's determination is supported by substantial evidence in light of the whole record. Generally, a resource shall be considered by the lead

agency to be "historically significant" if the resource meets one or more of the criteria for listing on the CRHR (Public Resources Code Section 5024.1).

Criterion 1. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;

Criterion 2. Is associated with the lives of persons important in California's past;

Criterion 3. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or

Criterion 4. Has yielded, or may be likely to yield, information important in prehistory or history.

4. The fact that a resource is not listed in, or determined to be eligible for listing in the CRHR, not included in a local register of historical resources (pursuant to Section 5020.1(k) of the Public Resources Code), or identified in a historical resources survey (meeting the criteria in Section 5024.1(g) of the Public Resources Code) does not preclude a lead agency from determining that the resource may be an historical resource as defined in Public Resources Code Sections 5020.1(j) or 5024.1

Pursuant to the California Office of Historic Preservation the California Register includes resources listed in or formally determined eligible for listing in the National Register of Historic Places, as well as some California State Landmarks and Points of Historical Interest. Properties of local significance that have been designated under a local preservation ordinance (local landmarks or landmark districts) or that have been identified in a local historical resources inventory may be eligible for listing in the California Register and are presumed to be significant resources for purposes of CEQA unless a preponderance of evidence indicates otherwise (PRC Section 5024.1, 14 CCR § 4850).

The California Register statute (PRC Section 5024.1) and regulations (14 CCR Section 4850 et seq.) require that at the time a local jurisdiction nominates an historic resources survey for listing in the California Register, the survey must be updated if it is more than five years old. This is to ensure that a nominated survey is as accurate as possible at the time it is listed in the California Register. However, this does not mean that resources identified in a survey that is more than five years old need not be considered "historical resources" for purposes of CEQA. Unless a resource listed in a survey has been demolished, lost substantial integrity, or there is a preponderance of evidence indicating that it is otherwise not eligible for listing, a lead agency should consider the resource to be potentially eligible for the California Register.[1]

Integrity and the California Register of Historic Resources (CRHR)

Integrity is the authenticity of a historical resource's physical identity evidenced by the survival of characteristics that existed during the resource's period of significance. Historical resources eligible for listing in the California Register must meet one of the criteria of significance described above and retain enough of their historic character or appearance to be recognizable as historical resources and to convey the reasons for their significance.

Historical resources that have been rehabilitated or restored may be evaluated for listing. Integrity is evaluated with regard to the retention of location, design, setting, materials, workmanship, feeling, and association. It must also be judged with reference to the particular criteria under which a resource is proposed for eligibility. Alterations over time to a resource or historic changes in its use may themselves have historical, cultural, or architectural significance.

It is possible that historical resources may not retain sufficient integrity to meet the criteria for listing in the National Register, but they may still be eligible for listing in the California Register. A resource that has lost its historic character or appearance may still have sufficient integrity for the California Register if it maintains the potential to yield significant scientific or historical information or specific data.

CRHR Special Considerations

Certain properties may be listed in the CRHR under specific special circumstances. These special considerations are listed below.

- Moved buildings, structures, or objects. The Commission encourages the retention of historical resources on site and discourages the non-historic grouping of historic buildings into parks or districts. However, it is recognized that moving an historic building, structure, or object is sometimes necessary to prevent its destruction. Therefore, a moved building, structure, or object that is otherwise eligible may be listed in the CRHR if it was moved to prevent its demolition at its former location and if the new location is compatible with the original character and use of the historical resource. An historical resource should retain its historic features and compatibility in orientation, setting, and general environment.
- Historical resources achieving significance within the past fifty (50) years. In order to understand the historic importance of a resource, sufficient time must have passed to obtain a scholarly perspective on the events or individuals associated with the resource. A resource less than fifty (50) years old may be considered for listing in the

CRHR if it can be demonstrated that sufficient time has passed to understand its historical importance.

- Reconstructed buildings. Reconstructed buildings are those buildings not listed in the CRHR under the criteria in 14 CCR § 4852(b)(1), (2), or (3). A reconstructed building less than fifty (50) years old may be eligible if it embodies traditional building methods and techniques that play an important role in a community's historically rooted beliefs, customs, and practices; e.g., a Native American roundhouse.

City of Rancho Mirage Historic Preservation Program

Contained within Chapter 15.27 of the City of Rancho Mirage Code of Ordinances, the City's historic preservation program provides a mechanism for identifying certain structures, sites and districts which represent eras, events, or persons important in the city's cultural, archaeological, social, economic, architectural, and political history for the purpose of encouraging the preservation, improvement, and promotion of such structures and sites without forcing private property owners to sell their properties through the use of the City's power of eminent domain. §15.27.040 specifies that the City maintain a survey and inventory program on a 10-year cycle unless otherwise determined to identify those structures and sites within the city that represent an era, event, or person important in the city's cultural, archaeological, social, economic, architectural, and/or political history; and to identify structures and sites that potentially qualify to be placed or have been placed on the NRHP. Survey / inventory findings shall be presented to the Historic Preservation Commission for review and recommendation to the City Council. Pursuant to §15.27.040 (D), the City Council shall conduct a duly noticed public hearing to determine which structures and sites should be added to or removed from the survey or inventory. Only the structures and sites contained within the inventory shall be deemed historic resources for purposes of this Chapter 15.27.

Pursuant to §15.27.070 (A), the City relies on the NRHP criteria to determine whether a particular structure or site qualifies for the NRHP, and also maintains a separate set of criteria, under §15.27.070 (B), to formally designate and add properties to the Rancho Mirage Register of Historic Resources (Local Register) and for the purposes of regulating historic resources pursuant to Chapter 15.27. Pursuant to §15.27.070 (B), the City may find a particular structure or site to be a historic resource upon finding that one or more of the following criteria are met.

Criterion 1. The subject structure or site is representative of a particular architectural style or reflects special elements of a historical period, type, style or way of life important to the city;

Criterion 2. The subject structure or site is associated with a business or use which was once common but is now rare or non-existent within the city;

Criterion 3. The subject structure or site is representative of the evolution or development or associated with the cultural, religious, educational, political, social or economic growth of the city, county, state or nation;

Criterion 4. The subject structure or site represents the work of a master builder, engineer, designer, artist or architect whose individual genius influenced an era;

Criterion 5. The subject structure or site signifies an historic event or is associated with persons or events that have made a meaningful contribution to the city, state or nation;

Criterion 6. The subject structure or site has a high potential for yielding information or archaeological interest;

Criterion 7. The subject structure or site embodies elements of outstanding or innovative attention to architectural or engineering design, detail, craftsmanship or use of materials; or

Criterion 8. The subject site contains an unusual natural feature.

Pursuant to §15.27.070 (C), in the absence of a showing that a famous or well-known individual has made significant contributions to the city, state or nation, a former residence of such famous or well-known individual should not qualify as a historic resource, unless the structure itself qualifies under the criteria set forth in this section.

Pursuant to §15.27.070 (D), a structure or site may qualify as a historic resource upon a finding that facts and circumstances exist that meet the criteria for placing the structure or site on the NRHP and/or the CRHR.

Pursuant to §15.27.110 (A), the City Council on its own or at the recommendation of the Historic Preservation Commission may without the owner's consent designate any defined geographic area within the city a historic district provided that the City Council determines that the structures or sites within the proposed historic district share a similar history, related significance and common architectural identity with one another. Absent the owners' consent, the City shall not impose any special standards upon the maintenance, preservation or rehabilitation of any of the structures or sites situated within such a designated district.

Pursuant to §15.27.110 (B), if a majority of the total number of structures within a defined geographic area have been deemed to be historic resources pursuant to Chapter 15.27,

and a majority of the property owners within the defined geographic area provide their written consent, then that area may be designated a historic district at the request of the subject property owners or their bona fide representative(s), provided that the City Council determines that the structures within the proposed historic district share a similar history, related significance and common architectural identity with one another and a majority of the subject property owners agree to adopt special standards via recordable conditions, covenants, restrictions or any other similar recordable instruments relating to the preservation and/or rehabilitation of the common areas that have been identified by the City to contribute to the overall integrity or character of the proposed historic district. Any request submitted for historic district designation by the owners or on behalf of the owners shall be presented to the City Manager or designee for the Historic Preservation Commission's review and recommendation to the City Council.

III. Historic Resource Survey Results

The survey scope of work included preparation of new and updated DPR 523 series forms for 58 previously recorded properties, 50 newly recorded properties, 12 locally designated properties in need of documentation, and five (5) proposed historic districts. To develop the final survey list, the Urbana team utilized the 2003 survey report, and a list of properties recommended for documentation by local members of Preservation Mirage. City Staff reviewed the proposed survey property list and provided approval along with building permit data for each property and other pertinent information to inform the documentation and evaluation effort. Preservation Mirage and its individual members shared research files, and in some instances, facilitated access to survey properties.

The individual properties and the five (5) proposed historic districts were evaluated for significance and eligibility under the criteria of the NRHP, CRHR, and Local Register. CRHR status codes were assigned to each property to provide reviewers a quick indication of the property status. CRHR status codes, as developed by the California Office of Historic Preservation, applied in the survey findings are defined below.

- 3B – Appears eligible for NRHP both individually and as a contributor to a NRHP eligible multi-component resource like a district through survey evaluation.
- 3D – Appears eligible for NRHP as a contributor to a NRHP eligible multi-component resource through survey evaluation.
- 3S – Appears eligible for NRHP individually through survey evaluation.
- 3CB – Appears eligible for CRHP both individually and as a contributor to a CRHR eligible multi-component resource through survey evaluation.
- 3CD – Appears eligible for CRHR as a contributor to a CRHR eligible multi-component resource through survey evaluation.
- 3CS – Appears eligible for CRHR individually through survey evaluation.
- 5B – Locally significant both individually (listed, eligible, or appears eligible) and as contributor to a multi-component resource like a district that is locally listed, designated, determined eligible, or appears eligible through survey evaluation.
- 5D3 – Appears to be a contributor to a multi-component resource that appears eligible for local listing or designation.
- 5S1 – Individually listed or designated locally.
- 5S2 – Individually eligible for local listing or designation.

- 5S3 – Appears to be individually eligible for local listing or designation through survey evaluation.
- 6Z – Found ineligible for NRHP, CRHR or local designation through survey evaluation.

Survey conclusions are detailed in the following pages.

Updates to Previously Recorded Properties

Of the 58 previously recorded properties three (3) are demolished, with documentation updated to reflect that change in status; 12 were evaluated as significant but ineligible under the NRHP, CRHR, and Local Register due to a lack of integrity; and 46 were evaluated as significant and eligible under the NRHP, CRHR, and Local Register. The 46 surveyed eligible properties meet the definition of an historic property and historical resource under the federal, state, and local regulatory framework. The 12 surveyed ineligible properties do not meet the definition of an historic property nor that of an historic resource under any regulatory framework. **Table 1** below details the updated findings for the 58 previously recorded properties. See **Figure 7** for a map of all the previously recorded eligible properties that are not locally designated.

120	69-934 Highway 111	Chart Residence (Demolished)	6Z

Some notable resources within this group of previously recorded properties are the Jorgensen/Mavis Residence at 40-253 Club View Drive and the Elman Residence at 70-770 Frank Sinatra Drive. Designed in 1955 by Master Architect William Cody on the ninth fairway of the Thunderbird Country Club golf course, the Jorgensen/Mavis Residence is an excellent example of Cody's Desert Modernist style and appears to retain most, if not all, of its original design features. The Elman Residence at 70-770 Frank Sinatra Drive is another exceptionally intact Modernist home from 1955 built in the Contemporary style that still retains exceptional historic integrity. Both properties are potentially eligible for listing in the national, state, or local registers.

Figure 5. The Jorgensen/Mavis Residence at 40-253 Club View Drive.

Figure 6. Elman Residence at 70-770 Frank Sinatra Drive.

Figure 7. Location Map of Updates to Previously Recorded Eligible Properties.

Newly Recorded Properties

Of the 50 newly recorded properties, nine (9) were evaluated as significant but ineligible under the NRHP, CRHR, and Local Register due to a lack of integrity; and 41 were evaluated as significant and eligible under the NRHP, CRHR, or Local Register. The 41 surveyed eligible properties meet the definition of an historic property and historical resource under the federal, state, and local regulatory framework. The nine (9) surveyed ineligible properties do not meet the definition of an historic property nor that of an historic resource under any regulatory framework. Pending rehabilitation, these nine properties may be suitable for reevaluation and a change in status. **Table 2** below details the updated findings for the 50 previously unrecorded / newly identified properties. See **Figure 10** for a map of all the newly recorded eligible properties.

Figure 8. Jeff Chandler Residence at 71-543 Tangier Road.

Some notable resources within this group of newly recorded properties are the Jeff Chandler Residence at 71-543 Tangier Road and the Gerald Ford Estate at 40-471 Sand Dune Road. The Jeff Chandler Residence, built in 1957, is a rare intact example of an early property constructed by the Rancho Mirage Realty Company in Magnesia Falls Cove and former home of the actor Jeff Chandler, famous for his role as Cochise. The Gerald Ford Estate at Thunderbird Country Club was the retirement home for President Gerald Ford and First Lady Betty Ford in the Coachella Valley after it was completed in 1978. This property, which has been restored and maintained by subsequent owners, was the location where Gerald and Betty Ford continued much of their work post-presidency and where Betty Ford oversaw the creation of the Betty Ford Center at Eisenhower Medical Center. It is an important local landmark eligible for listing in the national, state, and local registers for its architectural significance, constructed by Welton Becket & Associates, and associated with the Fords.

Figure 9. The Gerald Ford Estate at 40-471 Sand Dune Road.

Figure 10. Location Map of all Newly Recorded Eligible Properties.

Locally Designated Properties in Need of Documentation

Of the 12 locally designated properties in need of documentation, 11 maintain eligibility under the NRHP, CRHR, and Local Register. One (1) property has been identified as ineligible for the NRHP due to not meeting the 50-year age eligibility requirement. However, this property remains CRHR eligible and maintains its Local Register listing. See **Figure 11** for a map of all currently designated properties in Rancho Mirage. See **Figure 14** for a map of the 12 sites without documentation.

Table 3. Locally Designated Properties in Need of Documentation

12 Designated Properties			
Urbana Survey No.	**Address**	**Resource Name**	**CRHR Status Code**
51	71-650 Estellita Drive	Fincher Residence	3S/3CS/5S1
52	71-475 Kaye Ballard Lane	Kay Ballard Residence	3S/3CS/5S1
53	37-111 Marber Drive	N/A	3S/3CS/5S1
54	39-906 Morningside Road	N/A	3S/3CS/5S1

59	36-400 Sandsu Circle	N/A	3S/3CS/5S1
60	70-170 Sonora Road	Kassinger Residence	3CS/5S1
61	71-051 Tamarisk Lane	Rubinstein Residence	3S/3CS/5S1
62	37-715 Thompson Road	Red Skelton Residence	3S/3CS/5S1

Some notable resources within this group of 12 listed properties include the Fincher Residence at 71-650 Estellita Drive and the Davis Residence, sometimes referred to as 'White Shadows", at 70-378 Pecos Road. Both homes are excellent example of Modern designs with different regional influences. The Fincher Residence is a Desert Modernist home, with natural stone siding and a low-profile flat roof design that blends with the surrounding desert locale. It is a significant local example of the style built in 1962 during the height of the Modernism movement. The Davis Residence is also a unique Modernist style building, but it has distinct Moorish Revival elements from the designs of Henry Eggers and Walter Wilkman (Eggers & Wilkman), who built the home in 1957. The Davis Residence is a unique local landmark and a nationally significant example of an Eggers & Wilkman design.

Figure 14. Location Map of 12 Designated Properties Without Documentation.

Proposed Historic Districts

Five preliminary historic districts were documented to offer a framework for future district designation under Chapter 15.27.110 (A) or (B). Each preliminary historic district is opined eligible for the NRHP, CRHR, and Local Register and summarized in **Table 4**. Preliminary historic district descriptions are included below. See **Figure 20** for a map of all 5 proposed historic districts.

Chalet Palms

The Chalet Palms community is a Post and Beam style Modernist group of condominiums that were constructed in 1964 by the Garfield-Collier Company and designed by Master Architect Barry Berkus. In 1963, developer Basil Collier decided to take advantage of

Figure 15. Chalet Palms - Tract No. 2926.

California's recently passed Condominium Act and build a new housing community in Rancho Mirage. To that end, he hired architect Barry Berkus to imagine a resort community on one of the last large undeveloped parcels in the Magnesia Falls Cove neighborhood. Situated near Thunderbird and Tamarisk Country Clubs, the location was ideal for Collier wanting to market the property as a vacation getaway destination. Construction was completed in 1964, and the first units were sold in January 1965. Berkus' layout for the terraced property was meant to create privacy and encourage community. Each unit was designed with floor-to-ceiling glass windows/doors for courtyard and side yard use. Every

room was designed with at least two entry/exit points to create an open feel to the spaces. This space-saving layout had the effect of making the units feel much larger than their 915-square-foot design would imply. The most distinctive features of the property are the A-framed "chalet" roofs covering each unit's courtyard and the diamond-patterned shadow block walls surrounding the exteriors.

Tamarisk West I

The Tamarisk West I community is a Desert Modernist style group of duplex condominiums that were constructed in 1964-1965 by Trenton J. Dunphy following designs developed by S.

Figure 16. Tamarisk West I - Tract No. 3096.

Charles Lee. The Tamarisk West I condominiums were completed as the first phase of the Tamarisk West community. *This group of duplex homes* was the first step in establishing the development project which took place over the course of the coming decade. Lee-Keiter Enterprises experimented with their concepts when they completed these first 22 units*, which* officially opened in 1965. Master Architect S. Charles Lee designed Post and Beam style homes with rock wall and stucco facades and decorative breeze block walls in muted desert shades light-pink and brown, exemplifying the Desert Modern subtype of the International architectural style. The rear elevations featured floor-to-ceiling windows with patios shaded by an extended eave that overlooked a common-area pool with mountain views. *Following their opening,* some of the original homeowners later contracted Lee-Keiter Enterprises to make changes to interior courtyards and atrium spaces through the mid-to-late 1970s. These owners largely wanted to convert their courtyards and atriums into fully indoor spaces with additional windows or more substantial roof coverings.

Tamarisk West II

The Tamarisk West II community is a Desert Modernist style group of duplex condominiums that were constructed in 1969 by Trenton J. Dunphy following designs developed by S. Charles Lee and Michael Allan Black. Lee-Keiter Enterprises commissioned architect Michael

Figure 17. Tamarisk West II - Tract No. 3795.

Allan Black to prepare designs for the second group of homes. For Tamarisk West II, Michael Allan Black mirrored many elements from Tamarisk West I with some important differences. The detached carports at Tamarisk West I were replaced with attached garages at Tamarisk West II and the perpendicular dividing walls between units were changed from stucco clad features to walls clad in uncoursed natural stone. By 1969, Tamarisk West II development was completed, though some of the original homeowners later contracted Lee-Keiter Enterprises to make changes to interior courtyards and atrium spaces through the mid-to-late 1970s, following the example set by several Tamarisk West I owners. These new occupants also wanted to convert their courtyards and atriums into fully indoor spaces with additional windows or more substantial roof coverings.

Tamarisk Ranchos II

The Tamarisk Ranchos II community is a Contemporary style group of single-family residences that were constructed in 1961 by the High Dale Company following designs developed by William Krisel and the Devon Construction Company. Lou Halper, an initial founder of Tamarisk Country Club, originally planned to build a 40-lot subdivision with two groupings of communally designed homes in the late 1950s. In 1956, Halper hired Master Architect William

Figure 18. Tamarisk Ranchos I & II Tract Map.

Krisel, whom he had worked with previously in Los Angeles, to design the first phase, composed of 16 Contemporary style homes around a communal pool and gardens that retained and integrated existing date palm trees on the site. The initial group of homes, Tamarisk Rancho I, was built in 1958 by the Devon Construction Company. In 1958, Halper sold the property to the High Dale Company. Under High Dale's ownership, the second group of 16 homes, Tamarisk Ranchos II, was constructed in 1961 immediately north and adjacent to the first phase. The High Dale Company generally followed the plans produced by Krisel and the Devon Construction Company but changed the inward orientation of the buildings and made all roofing forms low-pitched hipped roofs. The Tamarisk Ranchos II single-family residences were completed three years after the first Tamarisk Ranchos community was constructed to the south, but it was part of the original cohesive vision for the planned community envisioned by Lou Halper.

Tamarisk Gardens

The Tamarisk Gardens community is a Desert Modernist style group of condominiums that were constructed in 1965 by Richard McCarthy Jr. following designs developed by Don Hartfelder. Tamarisk Gardens feature a central pool, interior courtyards, planned gardens,

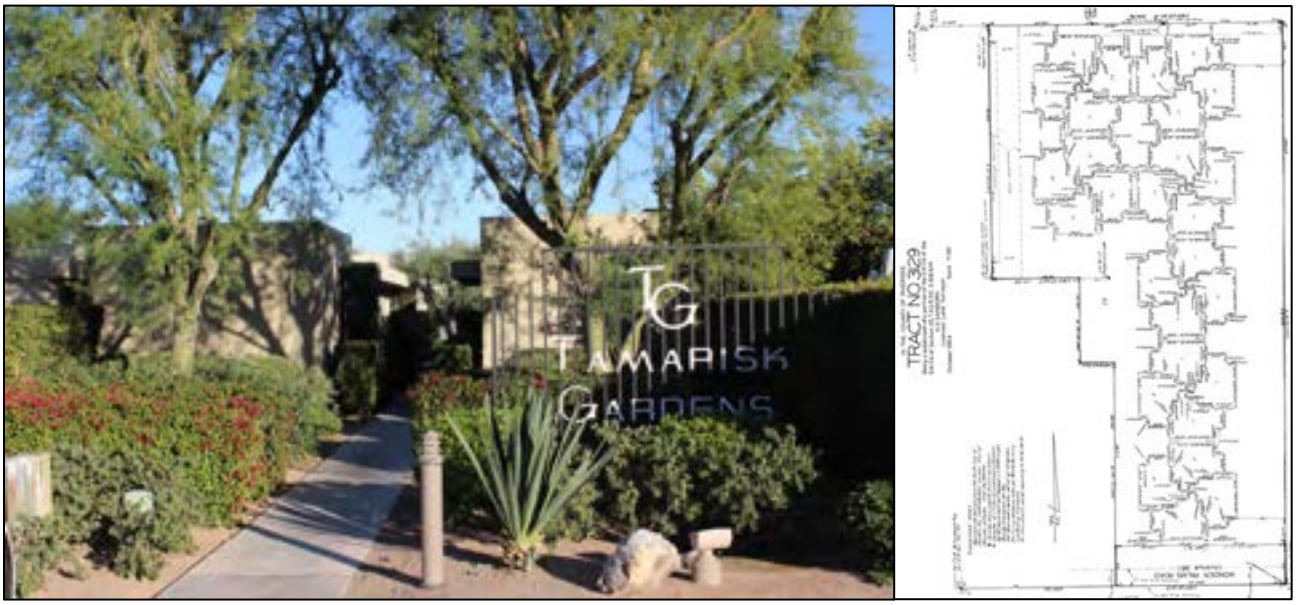

Figure 19. Tamarisk Gardens - Tract No. 3129.

and an entertainment porch. The condos were built as two-bedroom, two bath, 1,800 square-foot units with marble fireplaces and open-plan living rooms. At the exterior, the condos feature flat roofs, floor-to-ceiling windows, low elevations, and simple lines, with stucco-clad walls. The Tamarisk Gardens condominiums were completed in 1965 and were designed to cater to residents wanting both hotel resort perks and country club assess. With turn-down services offered by the Wonder Palms Hotel and Guest Ranch staff and easy access to the Tamarisk Country Club next door, Tamarisk Gardens was a unique attempt to capitalize on the growing recreation industry in Rancho Mirage.

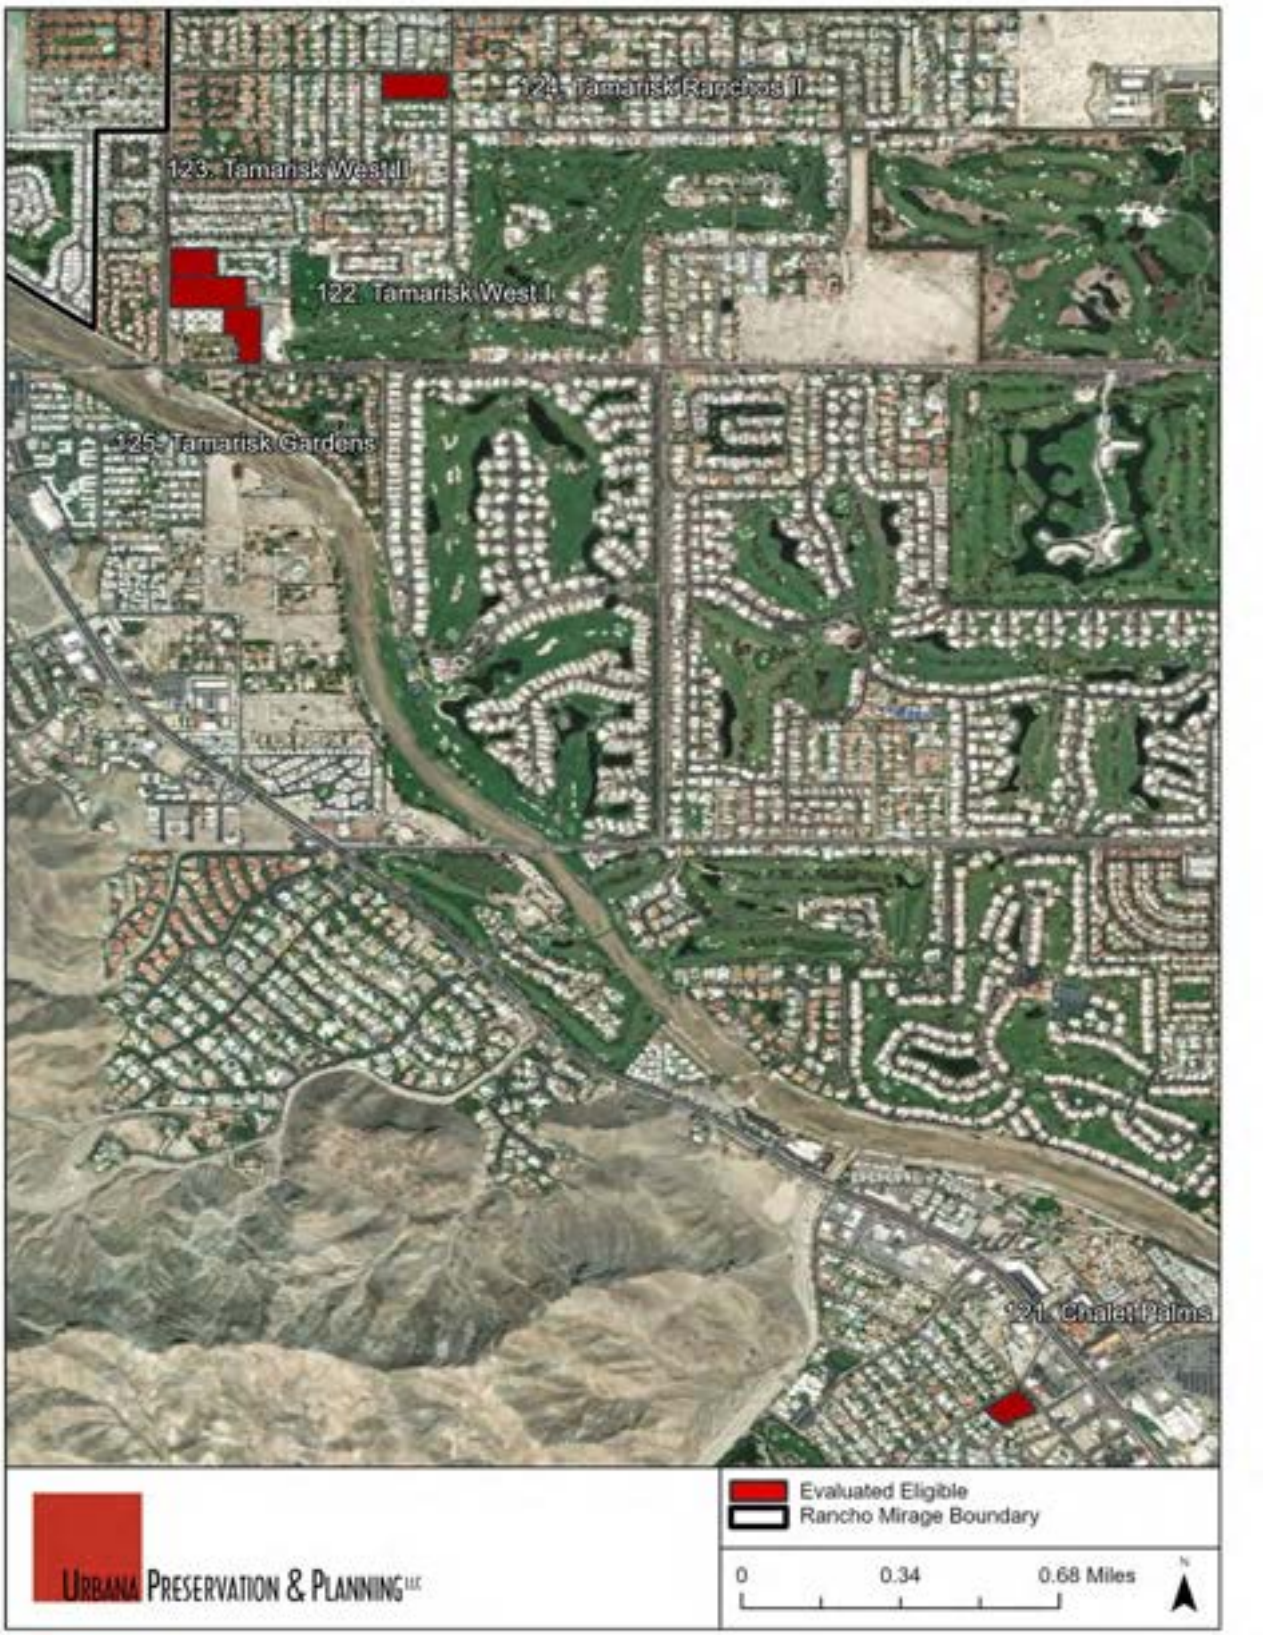

Figure 20. Location Map of 5 Proposed Historic Districts

IV. Recommendations for Future Action

Urbana recommends the following actions to ensure the future preservation and protection of historic resources within Rancho Mirage municipal boundaries.

- Complete an Examination of Remaining Unevaluated Properties: Rancho Mirage Municipal Code Chapter 15.27 mandates completion of a historic resource survey every decade unless determined otherwise by City Staff. By 2035, the date of the next potential survey effort, more contemporary period properties will have achieved age eligibility status under the NRHP including several identified by Urbana in this survey effort. It is recommended that the City maintain the citywide survey program to ensure identification, registration, and appropriate treatment of historic resources throughout the City.

- Historic District Designation: The current survey effort identified 5 proposed historic districts. Of those 5 districts, the Tamarisk Ranchos II community appears to be ready for designation. Of the 16 total homes in the Tamarisk Ranchos II community, there are 7 individually locally designated properties. The current survey efforts identified at least 4 additional properties that are considered individually eligible for local designation and potential future district contributors. If the majority of the total number of buildings within the proposed district are deemed to be historic resources and a majority of the property owners within the bounds of the proposed district provide their written consent, the Tamarisk Ranchos II historic district can be locally designated, as outlined in Chapter 15.27.110 of the Rancho Mirage Municipal Code. Designation of the 4 newly surveyed properties and the overall proposed district by the City will provide official recognition of the area's significance to the City's history and will add a measure of protection for the area as a larger historic resource.

- Future District Consideration: Besides Tamarisk Ranchos II, the current survey identified 4 other proposed historic districts that may be considered historic resources given that the majority of the housing units within the preliminary district boundaries can be deemed individually eligible properties or potential district contributors and the majority of the property owners within the bounds of the proposed district provide their written consent. These other proposed districts, Chalet Palms, Tamarisk West I,

Tamarisk West II, and Tamarisk Gardens, all have properties eligible for both individual designation and contributory status. For the future designation of these districts, City staff may work with property owners to encourage restorative changes to exterior materials, and work towards the maintenance of current historic-era features. The City of Rancho Mirage Planning Division may also encourage property owners to consider future district designation for the purposes of promoting California Mills Act program agreements and incentives.

- Reevaluation of properties identified as lacking integrity: Several documented properties have been identified as lacking integrity to convey significance. It is recommended that owners consider conformance with the *Secretary of the Interior's Standards for the Treatment of Historic Properties: Standards for Rehabilitation* when planning future proposed projects at these properties with the goal of restoring the properties to a higher degree of integrity.

- Civic Property Designation: The current survey effort reevaluated City of Rancho Mirage Fire Station #1 (Riverside Country Fire Station 50) at 70-801 Highway 111 which was previously surveyed in 2002 and recommends that the City of Rancho Mirage designate the property as a locally significant historic resource. The Brutalist style fire station was constructed in 1975 by W.E. Colglazier and was designed by city architect Robert H. Ricciardi. Urbana found the property to be significantly associated with the theme of Cityhood (1973-Present) as the oldest, minimally altered civic building in Rancho Mirage and significant as a building that embodies the distinctive characteristics of a Brutalist style civic property.

- Future National, State, and Local Designations: In addition to civic properties that are recommended for local designation, other properties significant at the state or local level should be listed on the Local Register. Properties such as the Jorgensen/Mavis Residence, Jeff Chandler Residence, and Desert Braemar are significant properties eligible at the state and local level that are important and noteworthy candidates. Likewise, properties in Rancho Mirage that are either eligible for the NRHP, currently listed, or determined eligible for listing in the Local Register, should be moved forward to nomination and listing. Some of these properties include Sunnylands (The Annenberg Estate), which is already designated at the local level; the Cook Residence (Ichpa Mayapan); and the Gerald Ford Estate. It is recommended that the City work with interested property owners to nominate these eligible and locally listed properties and others to the NRHP. This will further a sense of pride in the history of the area and provide a basis for future heritage tourism programs.

- Context Representatives: Beyond the more noteworthy and significant eligible properties that should be moved forward for designation, it is recommended that the City establish a goal to identify and designate representative examples of the historic context themes. This will result in a good balance of the several historic themes that are important to the City. For example, the Clancy Residence is a good example of the Early Agricultural and Residential Period theme. Commercial buildings such as the Noel F. Birns Building, Lord Fletcher's Restaurant, and Provident Bank are strongly related to the Commercial Development and Cityhood themes. Properties significant as important examples of architectural styles are also worthy of designation. Urbana recommends that the City work with property owners to gain official designations for properties that are representative of the important historical themes in the City.

V. Historic Context Statement

Rancho Mirage's early history is tied to the development of ranches and farms along the Bradshaw Trail, which evolved over time into the Bradshaw Highway (Highway 111). The original Bradshaw Trail was a route intended to provide safe and efficient passage between present-day Palm Springs and present-day La Paz, Arizona where a gold strike occurred in 1862. In 1868, the Bradshaw route was officially authorized by Congress as a U.S. Mail stagecoach route to carry mail from Los Angeles through San Bernardino, La Paz and Prescott, Arizona, and on to Santa Fe, New Mexico. The Bradshaw Stage Line passed through the southern section of modern-day Rancho Mirage until it was replaced by a graded gravel road in 1915. This early stagecoach route, however, was not the primary transportation corridor in the Coachella Valley. In 1876, the Southern Pacific Railroad extended service from Los Angeles to Indio to transport people and produce grown in the region. The Coachella Valley was home to numerous farming establishments, particularly Indio, which featured reliable water sources. Rancho Mirage's climate fostered growth of exotic dates, citrus trees, and grapes, becoming one of several agricultural communities in the Coachella Valley.

This Southern Pacific connection opened the Coachella Valley for more than homesteading, ranching, and agricultural uses. In the first few decades of the 20th century, tourism, including therapeutic and recreational resorts, were developed throughout the valley. The Desert Health School for Children opened in the 1930s, which was originally the Eleven Mile Ranch established in 1925 by William E. Everett. Nine years later, development began on what is now the Magnesia Falls Cove residential subdivision, which was platted in 1929 as an Egyptian themed resort community. However, development did not begin until 1934 when Louis Blankenhorn purchased the subdivision and hired Van Pelt & Lind to design homes. Only a few residences were built before A. Ronald Button bought the Rancho Mirage development in 1944 and partnered with Dave Culver and Art Linkletter to build even more homes. Still, settlement was slow, and Rancho Mirage consisted mainly of agricultural ranches. After 1951, the fabric of the community began a rapid transformation with the construction of the Thunderbird and Tamarisk Country Clubs.

In 1950, after Johnny Dawson and his group of notable investors bought the Thunderbird Ranch from Frank Bogert, they quickly began development on the first eighteen-hole golf course in the Palm Springs area. Only a year after Thunderbird Country Club opened, San

Francisco real estate developer and theater owner Joseph Blumenfeld bought the Harry Taylor ranch property with plans to create the Tamarisk Country Club. With the success of both country clubs and others that soon followed, Rancho Mirage quickly became the leader in the development of the Coachella Valley as a new "golf capital of the world." The development of country clubs also coincided with the construction of custom residential and commercial properties within their boundaries. Booming post-war development within these country clubs helped shape what is now commonly referred to as 'Desert Modernism.'

Although country clubs were the dominant property type developed in Rancho Mirage in the post-WWII period, smaller communities apart from the clubs also sprang up. They distinguished themselves by advertising exclusive-use community resources such as shared pools, gardens, and regular maintenance. These communities, while distinctive in their identity, were tied to the success of the clubs and used their proximity as a common selling point. Additionally, commercial properties to support new residents within and outside the country clubs were quickly built along the Highway 111 corridor including hotels, shops, stores, and offices. Eventually, civic and public-serving institutions were established to support Rancho Mirage's growing population. These early improvements included schools and the Eisenhower Medical Center.

Rancho Mirage experienced a building boom in the mid-1970s after its incorporation in 1973. By 1974, 5,000 new dwellings were under construction. The City approved several early municipal improvements, including the construction of Fire Station #1 (Riverside Country Fire Station 50) on Highway 111 in 1976 and Rancho Mirage City Hall in 1979. Country club development continued at a steady pace and commercial growth accelerated along the Highway 111 corridor. During the 1980s, the City of Rancho Mirage continued to invest in infrastructure and capital improvements including construction of the Whitewater Park in 1981 (now Rancho Mirage Community Park) and creation of the Bighorn Sheep Preserve in the Santa Rosa Mountains in 1987. Today, Rancho Mirage remains a destination for golfers and a hub for medical services in the Coachella Valley, with numerous golf courses and a growing Eisenhower Health campus which has become the largest employer in the City. Rancho Mirage continues to embrace its heritage while facilitating new development strategies.

This historic context includes a historical narrative, organized by chronological periods of development. For each narrative theme, the relevant property types are identified with designation requirements. Eight themes are included in the following pages.

Theme 1: The Coachella Valley in the Spanish and Mexican Eras, 1774 – 1847

Juan Bautista de Anza, a Spanish explorer in search of a land route between Mexico and California, passed through the Coachella Valley in 1774.[2] For the Desert Cahuilla people who lived in the region, this was their first contact with Europeans. Linguistically part of the Shoshonean family, the Desert Cahuilla in the region, who later became known as the Agua Caliente band of Cahuilla Indians, had developed camps and villages in several canyons, exploiting ample water supplies, natural palm groves, and the hot springs that provided the group with its name.[3]

Unlike other tribes' experiences with Europeans, the first encounter between the Cahuilla and the Europeans initially had limited impact on their established way of life. The Spanish expedition continued to Mission San Gabriel Arcángel. Other visitors in the valley were rare, as Spanish settlement became concentrated on the coastal areas of California Alta. The Cahuilla continued their traditions of hunting, gathering, and cultivating melons, squash, beans, and corn for their subsistence.[4] After 1800, Spanish travel and trade expanded across the desert and the Coachella Valley became a more important location on the well-established trails. Some of the Cahuilla people also traveled outside of the valley on these trails and settled on distant missions established by the Franciscans. As early as 1809, Cahuilla people were being baptized at distant missions, and by 1819, Cahuilla villages were regularly trading with Spanish travelers. They began obtaining goods such as horses, cattle, glass beads, cloth, and metal tools.[5] Eventually, contact with Europeans had a devastating impact on the Cahuilla people, first through outbreaks of diseases such as syphilis, cholera, measles, smallpox, malaria, tuberculosis, and typhoid fever, to which they had no natural defenses, and ultimately, the disruption of their traditional culture and practices, the introduction of unhealthy changes in diet, and the stress of coerced labor on ranches.[6] The population of many Cahuilla communities declined rapidly.

A small local rebellion in Mexico in 1810 quickly grew into a war for independence from Spain, and after a long struggle to be free from Spanish colonial rule, Mexico gained its independence in 1821. Alta California, which had few settlers, became a territory of the new Republic of Mexico rather than a state. Important changes in the laws and administration of California included secularization of the missions and the awarding of large land grants to Mexican citizens in the southern California area. Again, this had limited impact on the Coachella Valley as few settlers were interested in establishing a ranch in the arid desert, but Cahuilla men were often sought as wage laborers to work on ranches outside the Coachella Valley.

The United States declared war on Mexico in 1846, and after the war, with the Treaty of Guadalupe-Hidalgo, Mexico ceded control of California and the greater Southwest to the United States. The discovery of gold at Sutter's Mill in 1848 led to the California Gold Rush of 1849, and about 300,000 immigrants traveled to the area from around the world. Thousands of these gold-seekers traveled west along the branches of the southern route, some of which passed through the Coachella Valley. This new wave of settlers and travelers began to impact Cahuilla communities in more direct ways than the previous 50 to 75 years of contact.

Associated Property Types

There are no known extant structures related to the Spanish and Mexican Era within the boundaries Rancho Mirage municipal boundaries. Therefore, existing, and future property types dating to the Spanish and Mexican eras do not fall into categories of residential, commercial, recreational, or civic/institutional buildings or structures. Instead, any undiscovered cultural resources related to the period that may be designated will either be archaeological sites, objects, and natural areas and features. These site types may be related to Native American life in the Coachella Valley and may or may not be related to living communities, such as the Agua Caliente Band of Cahuilla Indians, the Torres-Martinez Desert Cahuilla Indians, and the Cabazon Band of Mission Indians. As such, these sites may differ in terms of material culture, use, or cultural significance from sites related to the prehistoric period.

The archaeological sites, objects, or natural areas and features may also be related to early European expansion into the Coachella Valley via new trails and trade routes. Below are the definitions, character defining features, and significance thresholds for these types of sites.

Archaeological Sites

Archaeological sites related to the Spanish and Mexican Eras theme may date from approximately 1774 to 1847, when initial trade routes, trails, and relationships were beginning to form between Cahuilla tribes and Spanish/Mexican colonists, before sustained Western settler migration brought permanent development in the Coachella Valley. These sites may include villages, campsites, caves, rock shelters, middens, quarries, cemeteries, cremation sites, and other evidence of Native American occupation, like those found during the Prehistoric period but with clear changes in material culture that signify trade within European communities. Items such as European faunal remains, glass beads, European

ceramics, and metal tools may be some indicators of Cahuilla sites from the post-contact period. Archaeological sites may also be directly related to European settlement and travel through the region. Campsites, forts, dwelling remains, trash middens, western style burials, and other types of historic archaeological sites may be dated to this period based on accumulated physical and historical evidence.

Character-defining features strictly apply to architectural character, and they are elements that define the visual and physical appearance of buildings and structures. Archaeological sites are more widely varied than historic structures and buildings. The visual and physical appearance of an archeological site is often impossible to accurately evaluate prior to excavation. However, significant prehistoric and historic archaeological sites do often share common elements. Significant archaeological sites often exhibit some or all the following characteristics.

- Related to a particular time or cultural group
- Exhibit minimal disturbance and intact features
- Contain artifact assemblages in good condition
- Display definable geographic boundaries

Objects

Significant objects from the Spanish or Mexican eras may include petroglyphs and pictographs like those that existed during the prehistoric period, but they must be dated or otherwise differentiated from objects dating to the pre-contact timeframe. Significant objects might also be trail markers or historic art created by Spanish or Mexican explorers and travelers, or other distinct artistic work dated between 1774 and 1847. No significant objects have been recorded within the boundaries of Rancho Mirage, though future sites may be discovered through future survey work.

As with archaeological sites, objects do not have character defining features in the same sense as buildings and structures. However, significant proto-historic objects may share similar elements in location and design. Significant objects may share some, or all, of the following features.

- Created through a carving, scratching, drilling, sculpting, dyeing, painting, polishing, etching, and/or movement/rearrangement
- Located on vertical or horizontal rock walls in the open air, protected rock shelter walls, under rock overhangs, or cave walls
- Formed with man-made manufactured material, such as metal, adobe, and brick for markers and/or artistic compositions

Natural Areas and Features

Significant natural areas and features may be regions with no evidence of human activity or intervention, or areas modified by a traditional community. Such areas may be culturally significant to a community because this area serves to reinforce its beliefs or because the area is one from which that community derives natural resources important to the community. Therefore, the identification of such types of cultural properties relies on sustained and meaningful consultation with established local tribes such as the Torres-Martinez Desert Cahuilla Indians, the Agua Caliente Band of Cahuilla Indians, and the Cabazon Band of Mission Indians. Natural areas and features that were identified and/or in-use between 1774 and 1847 may be deemed as significant historic resources. Future research projects may identify potential areas and features to be designated.

Natural areas and features significant to a linked ethnic or social group may include some or all the following characteristics.

- Mountaintops
- Caves
- Trails
- Collection areas
- Animal habitats
- Springs or other sources of water
- Places referenced in songs and other literature
- Other places important to religious, social, or economic lifestyles

Significance Thresholds

To be eligible for listing in the NRHP, CRHR, or Local Register, archaeological sites, objects, or natural areas and features dating to the Spanish and Mexican eras must be significant under at least one of the following criteria listed below.

NRHP Criterion A/CRHR Criterion 1

A site dating between 1774 and 1847, may be significant under Criterion A/1 for its association with events that have made a significant contribution to the broad pattern of history after the date of initial contact during the Spanish or Mexican eras of Californian history. Sites from this period must be conclusively dated to Spanish or Mexican spans of occupation in the region through elements of material culture or scientific dating methods

utilizing organic material. Significant natural areas and features under Criterion A/1 must have a significant and ongoing participation or linkage of an ethnic or social group with an area's history. A property must be important to a community today and be utilized in the same function as it was historically. In Rancho Mirage, places linked to specific practices or beliefs by local Desert Cahuilla Tribes must retain the same role as they did for Cahuilla people of the past.

NRHP Criterion B/CRHR Criterion 2

A site from the Spanish or Mexican eras that is identified with specific persons significant to national, state, or local history, such as important Native American leaders, European explorers, colonial settlers, early ranchers, and noteworthy traders may be eligible under Criterion B/2. While Juan Bautista de Anza is one of the only currently known significant individuals to have interacted with Desert Cahuilla tribes during this period, additional significant individuals may be uncovered through future research projects. Oral traditions and symbols may also link specific individuals or spiritual figures to individual sites or objects. In these instances, the term "person" may be used in less Eurocentric terms to convey how a place can be tied to traditions of the past and present.

NRHP Criterion C/CRHR Criterion 3

A site from the Spanish or Mexican eras may be significant under Criterion C/3 as the remains of a building or structure that embodies the distinctive characteristics of a style, type, period, method of construction, use of indigenous materials, or craftsmanship of the Desert Cahuilla people after initial contact with Europeans. Intact organic materials related to Cahuilla structures or other evidence of no longer extant structures may provide valuable insight into the distinctive methods of construction utilized by tribes in the valley during the Spanish and Mexican eras. Objects can be important examples of craftsmanship and/or artistic composition during these formative eras. Western building remains may also be significant under Criterion C/3 for embodying the distinctive characteristics of a style, type, period, method of construction, use of materials, or craftsmanship of early settlers. Though there is no evidence of colonist and settler buildings or structures in Rancho Mirage, future research projects and survey work may yield new information. Modified natural areas and features may be significant under Criterion C/3 if they can be shown to be associated with a well-known crafter that is respected and valued by a living traditional community or if they display artistic values reflecting an ethnic group's distinctive mode of expression.

NRHP Criterion D/CRHR Criterion 4

A site from the Spanish or Mexican eras may be significant under Criterion D/4 as a resource which has the potential of yielding information important in prehistory or history. Most existing significant archaeological sites and objects that retain integrity and future sites will be labeled significant using this criterion. Examples of intact natural areas and features that could yield information of scientific value may include collection sites for studies of subsistence patterns or religious and ceremonial sites for ethnographic data.

Local Register Criteria

A site or object, dating between 1774 and 1847, may be significant under Local Register Criterion 1 if it is representative of a particular architectural style or reflects special elements of a historical period, type, style or way of life important to the City; under Local Register Criterion 2 if it is associated with a business or use which was once common but is now rare or non-existent within the City, such as trading, milling, or other forms of early food production; under Local Register Criterion 3 if it is representative of the evolution or development or associated with the cultural, religious, educational, political, social or economic growth of the City, county, state or nation, like a site pertaining to the development of an early Coachella Valley settlement; under Local Register Criterion 5 for an association with a historic event person(s) that have made a meaningful contribution to the City, state or nation, like an early trading post or trail; under Local Register Criterion 6 if it has a high potential for yielding information of archaeological interest; or under Local Register Criterion 8 if it contains an unusual natural feature.

Because no extant buildings or structures dating from 1774 – 1847 exist within Rancho Mirage, Local Register Criteria 4 and 7 are not applicable to this theme.

Integrity Considerations

To be eligible for listing in the NRHR, CRHR, or Local Register, a site from the Spanish or Mexican eras must retain sufficient integrity to convey its significance. The integrity of a site describes the level of preservation or quality of information contained within a district, site, object, or other assemblage. Sites with high integrity are relatively intact and complete. The archeological record at a site with high integrity has not been severely impacted by contemporary un-related cultural activities or natural processes. Sites lacking integrity may contain elements that are inconsistent with a particular time or culture.

To be eligible for listing in the NRHR, CRHR, or Local Register, natural areas and features

related to practices from the Spanish or Mexican eras life must retain sufficient integrity of condition and relationship to convey their significance. The integrity of condition regarding a natural area or feature describes the level of preservation or quality of information contained within a definable area. Natural areas and features with high integrity of condition have not been severely altered by later, unaffiliated cultural activities or natural processes. Areas lacking integrity of condition may contain elements that are inconsistent with a particular time or culture. Areas with high relational integrity are integral to the retention or transmittal of a belief or to the performance of a practice. Conversely, beliefs and practices may also be integral to the maintenance of a natural area or feature. However, areas and features used in traditional beliefs and/or practices that are not specifically essential to the practice of such beliefs and/or practices do not have a strong relationship and therefore possess a lower, or secondary, degree of relational integrity.

The importance of each aspect of integrity depends upon the nature of the site and the criterion or criteria under which it is being nominated. Sites from the Spanish or Mexican eras nominated under NRHP Criteria A/CRHR Criteria 1 should retain integrity of location, setting, feeling, and association. Sites nominated under NRHP Criterion B/CRHR Criterion 2 should retain integrity of location, design, feeling, and association, as the physical condition of a site is directly related to connection between a property and a significant individual. Sites nominated under NRHP Criterion C/CRHR Criterion 3 should retain integrity of design, materials, workmanship, and feeling, as these are critical for a property to embody distinctive characteristics of a style. Sites nominated under NRHP Criterion D/CRHR Criterion 4 should retain integrity of location, materials, and association.

For sites potentially eligible for listing in the Local Register, a site nominated under Criteria 1, 4, or 7 should retain integrity of design, materials, workmanship, and feeling. A site nominated under Criteria 2, 3, or 5 should retain integrity of location, setting, feeling, and association. A site nominated under Criteria 6 or 8 should retain integrity location, materials, and association.

Theme 2: Development of the Coachella Valley, 1848 – 1923

Shortly after the beginning of the American period, settlers became invested in ways to utilize the Coachella Valley and the San Gorgonio Pass to their benefit. Specific technological improvements and advantageous land laws made settlement possible and initial establishments were slow to gain a footing. The advent of sustained contact between Americans and the Desert Cahuilla people also introduced friction between the groups and the eventual establishment of Native American reservations in the Coachella Valley.

The 1848 Treaty of Guadalupe Hidalgo that ended the war with Mexico allowed the United States to begin surveys for railroads. Between 1853 and 1857, the United States sent out several teams to survey the southwest for possible transcontinental railroad routes. Notable explorers searched for a practical route west in the interest of linking California to the rest of the nation. One of the earliest railroad surveys was led by Lieutenant Robert S. Williamson, a graduate of the United States Military Academy, who led a US Army Corps of Topographical Engineers survey in 1853. Williamson's party left Benicia, California, and travelled south, exploring passes through the Sierra Nevada.[7] The most southerly branch, from Texas to San Diego, was surveyed by Lieutenant John C. Parke and geologist William Blake. This route was later used by the "Jackass Mail" from Texas to San Diego in 1857, and then by the Butterfield Overland Mail stagecoach trail that went through Yuma and on to Los Angeles and San Francisco. The company departed with a large contingent of workers and supplies and surveyed the Coachella Valley in 1853, identifying the San Gorgonio Pass as the best low-level mountain pass on the Pacific slope suitable for a potential railway line. To provide an incentive for the construction of a railroad, the federal government deeded every other odd-numbered section to the Southern Pacific Railroad while retaining the even-numbered ones, resulting in a grid of one-mile square sections.[8]

In 1861, four Sacramento businesspeople incorporated the Central Pacific Railroad (CPRR). These investors, known as "The Big Four," included Leland Stanford, Mark Hopkins, Charles Crocker, and Collis P. Huntington, were known for building the western section of the first transcontinental railroad across Sierra Nevada. They also bought the Southern Pacific Railroad (SPRR), which ran from San Francisco to San Diego via the San Joaquin Valley, to expand it into a southern transcontinental route.[9] In 1871, Congress authorized the SPRR to be the only railroad to "construct a line of railroad from a point at or near Tehachapi Pass, by way of Los Angeles, to the Texas Pacific Railroad at or near the Colorado River." This action essentially blocked the Texas Pacific in California.[10] The SPRR began construction through the Coachella Valley in 1864. The grade through San Gorgonia Pass was one of the most difficult to build, requiring wagons to haul water, food, supplies, and materials to the

site. As the railway line was completed, a railroad depot was constructed in present-day Indio, as a mid-way point between Yuma and Los Angeles. In 1876, the railroad through the pass was completed between Los Angeles and Indio. The next year, 1877, the SPRR reached the Arizona border and controlled approximately 85% of California's railroad mileage. Congress granted the SPRR right of way through the military reservation at Fort Yuma, which enabled the railroad company to complete the transcontinental route along the 32nd parallel as originally envisioned in ratification of the Gadsden Purchase treaty in 1854. By 1883, the line extended east to New Orleans by connecting to railroads that were constructed to the West.

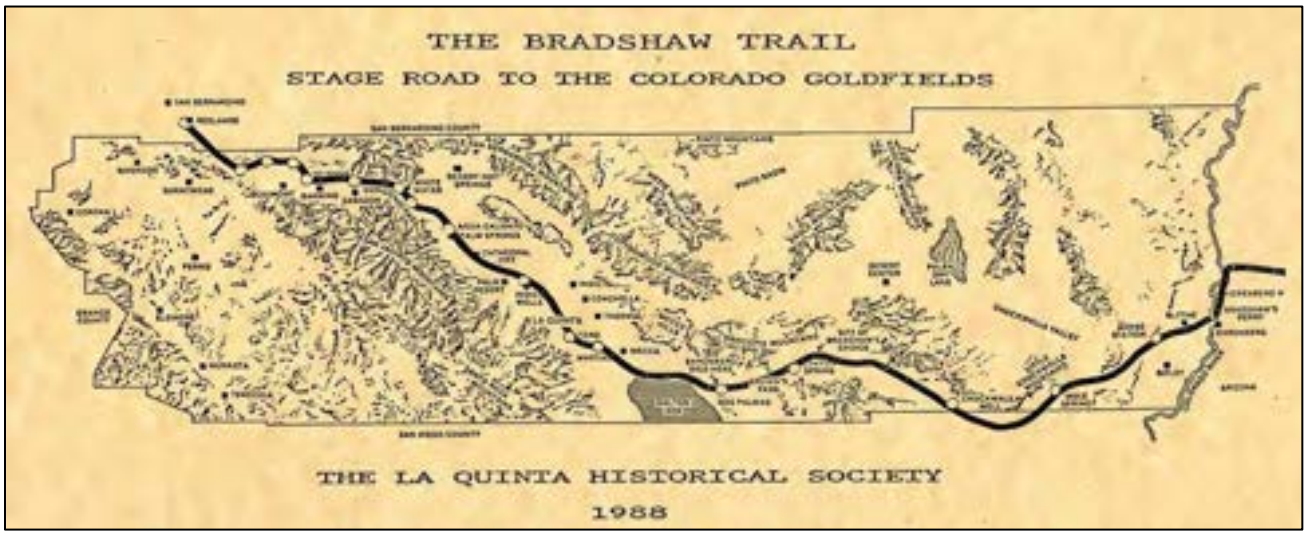

Figure 21. The Bradshaw Trail.
(Source: Betty O'Reilly & Virginia L. Bailey, Ph.D. *The Bradshaw Trail: Stage Road to the Colorado Goldfields*, Published by the La Quinta Historical Society, 1988)

In 1862, gold was discovered near La Paz, Arizona, attracting potential miners from Los Angeles to travel eastward across the Mojave and Colorado Deserts utilizing the San Gorgonio Pass to the Coachella Valley. Henry De Groot, an assistant geologist for the California State Mining Bureau, teamed with newspaper writer J. H. Riley to investigate the La Paz gold rush and travel along the routes miners were taking to get from California to Arizona. De Groot and Riley left from San Bernardino, California, aiming to take a newly opened trail discovered by William Bradshaw which went through the San Gorgonio Pass, cutting 200 miles from the journey. Along the way De Groot described geography, distances traveled, water hole locations, and available food for livestock. Riley kept notes in his diary and recorded stories and narratives from their journey.

The Bradshaw Trail ran from the Agua Caliente Village (Palm Springs), through what is now Rancho Mirage, Indian Wells, La Quinta, the Rancheria de los Toro's, the Martinez Village, Lone Palm Springs, and Dos Palmas (near the modern-day edges of the Salton Sea where

potable water was available). After passing down the Coachella Valley, the Bradshaw Trail passed Tabaseca and Chuckawalla, eventually arriving at the Pima Villages near La Paz.[11] By 1915, the trail was characterized by a graded road that became the Bradshaw Highway and later Highway 111. The route hugged the base of the Santa Rosa Mountains and roughly paralleled the Whitewater Riverbed. It became the spine of "cove communities," throughout the valley, including Rancho Mirage.[12]

Native American Reservations and Early Homesteads

Throughout the first decades of the American period, the Cahuilla people were often subject to continued labor exploitation for ranching, agriculture, and railroad construction throughout Southern California and the Coachella Valley. An 1860 system of apprenticeship was instituted in California which essentially legalized indentured servitude for Native workers. However, following the Great Drought between 1862 and 1864, cattle raising activity in California sharply declined and large tracts of agricultural lands were divided into smaller parcels. Therefore, the need for Native labor decreased and the need for workers became increasingly filled by Chinese immigrant laborers over the last quarter of the 19th century.[13] As labor conditions in Southern California evolved, Native American groups advocated for property rights and fought against their continual mistreatment.

In 1870, the Indian Rights Association was created to stop the theft of Indian land and water across the country. Several religious organizations also joined the effort in support of Native Americans, and in response, President Ulysses S. Grant implemented a procedure for establishing land grants for specific tribes. This became known as the Grant Peace Policy. President Grant established the first reservations for the Cahuilla, Torres-Martinez, Cabazon, and Morongo peoples in the San Gorgonio Pass and Coachella Valley in 1875.

The boundaries of the first reservations in the Coachella Valley were not clearly defined, resulting in lawsuits by settlers who challenged the reservation grants. In 1852, the Desert Cahuilla people in the Coachella Valley were to be given a strip of land that was 30 miles wide and 40 miles long. However, Congress failed to ratify the treaty and the proposed reservation boundaries were not formally recognized.[14] In 1887, Congress passed the Dawes Act, which allowed the division of reservation land into separate tracts allotted to individual Native Americans. Conflicts over land ownership and allotments continued. To resolve these disputes the Act for the Relief of Mission Indians was enacted in 1891, which established reservations in Southern California according to the recommendations of the Smiley Commission. This act clearly defined the boundaries of each reservation. However, due to lawsuits, the designated reservation lands were reduced by one-third of what was originally

designated. The lands of the Agua Caliente Band of Cahuilla Indians, Torres-Martinez Desert Cahuilla Indians, and the Cabazon Band of Mission Indians are products of the reservation system that continued to evolve after 1875.

In 1952, members of Agua Caliente Band of Cahuilla Indians, including Dora Joyce Weimas, whose family still holds several Mission Hills Country Club land allotments, traveled to Washington D.C. to lobby for the Equalization Bill and the 99-year Land Lease Act. In 1959, Congress passed the Equalization Bill, which equalized property values for the Agua Caliente Band of Cahuilla Indians, set aside tribal reserves, and allowed for 99-year leases.[15] Today, the Agua Caliente Indian Reservation totals 34,032 acres (53 square miles), primarily consisting of one square-mile sections obtained from the federal government after the SPRR was completed.[16]

The creation of the tribal reservation system coincided with the inception of other federal policies designed to encourage Americans to move west and develop the vast interior of the continent. The suite of laws that made formal settlement in the western United States possible began with the Homestead Act of 1862. Homesteading was integral to the settlement of the American West. The 1862 Act and subsequent related laws allowed settlers to gain ownership of federally owned lands previously considered part of the public domain. Although homesteading had its roots in the mid-19th century, easing requirements and extending the act allowed homesteading to continue in the early 20th century. The homestead laws were changed and modified many times and reinterpreted by rules and court decisions. These changes allowed people to homestead larger tracts of land. Also, the laws evolved so that residency requirements were reduced. The Homestead Act and its amendments had such an impact on the settlement of the western United States that by 1958 some 38,784,000 acres of federal land had been transferred from the public domain to homesteaders in California alone.[17]

Under the Homestead Act of 1862, an applicant could declare his or her intent to homestead. The homesteader was then required to make certain improvements, including building a residence, cultivating the land, and residing on the claim for five years, and then would receive a patent for a 160-acre parcel. A homestead claim could be made by almost anyone who was the head of a household or at least 21 years of age. U.S. citizens, freed slaves, new immigrants, single women, and people of all races were eligible. Though the requirement for "proving up" homestead claims changed over time, applicants were required to live on the land for a set amount of time and make improvements, which required a significant amount of work and investment. to successfully receive their land patent, many homesteaders took loans to fund required improvements and lived frugally to

ensure they could successfully meet the five-year residency requirement.[18]

Though initially focused on agriculture, homesteading shifted to include ranching. Out of necessity, many homesteads were characterized by multiple economic endeavors. In regions with marginal soils or sparse water, homesteads relied on subsistence agriculture, which included raising livestock, row crops, and orchards. These early homesteaders had to diversify to subsist in hopes of turning a small profit. This changed with the advent of agricultural irrigation in the desert regions of the Coachella Valley where homesteaders could rely on irrigation companies to supply water from surface ditches or groundwater wells. Subsequent homesteading laws and amendments to the Homestead Act of 1862 changed the requirements to accommodate the realities of life in the arid West by allowing larger plots for farming and stock-only patents, as well as more flexibility in residency requirements which homesteaders to spend periods of time away from the homestead to pursue a second livelihood.[19]

In 1862, federal land grants were issued to railroad companies to encourage further expansion of the national railroad system. Five alternate odd numbered sections along 10-mile spans were reserved for the railroads on each side of the line. In 1864, railroad grants were increased to 20 alternate sections for each mile of track, thus reaching far from the rail line. In 1871, Congress ceased issuing railroad grants. Three years after the railroad was completed, unused lands could be sold at $1.25 per acre for settlement and preemption. Preemption was the right of settling on and improving unappropriated public lands and, later, of buying them at the minimum price without competition.[20]

The Desert Land Act of 1877 eliminated the requirement for homesteaders to live on the land and increased the acreage that settlers could acquire up to 640 acres. Significantly, the impetus for the Desert Land Act came from California representative John K. Luttrel who sought to speed up privatization of land east of the Sierra Nevada Mountains. Luttrel was instrumental in obtaining Congressional approval of the Lassen County Land Act of 1875 which expanded acreage for homesteads in Lassen County, California. This was a precursor to the Desert Land Act of 1877 which extended the provisions to other areas in California and other western states.[21]

Early types of land grants in the Coachella Valley consisted of Desert Land Entries, Homestead Entries, Railroad Grants, Cash Entries, Reclamation Homestead Entries, State Grants, and properties acquired through the Indemnity List. In what is now Rancho Mirage, the first application for a land grant was made just after the turn of the century. In 1912, Everett Knox Da Vall purchased a half-section of land from Southern Pacific Railroad and

planted 250 date palms, establishing Wonder Palms Ranch, the first residential property within what is now the City boundaries.[22]

Interest in homesteading and settlement in Rancho Mirage and the Coachella Valley region area slowed by during and after World War I. Also contributing to the decline was the lack of good lands since many of the prime locations had already been homesteaded. Drought and the post-World War I economic collapse of agricultural and livestock prices further contributed to the decline of homesteading. To combat the decline, Congress adopted several measures in the 1920s to encourage homesteading and to reward veterans for their wartime service.[23]

Only a fraction of those who attempted to homestead were successful in obtaining a patent on their claims. To obtain a patent on a homestead, a home was required to be built and lived in for a period of five years while a minimum of one-eighth of the land was farmed and improved. The houses constructed under these requirements were often small, single wall construction with wood siding.

Architectural designs for early ranches in the Coachella Valley were built in a variety of forms. Most were vernacular residences reflecting Spanish Colonial Revival, Minimal Traditional, or early Ranch styles. Remaining photographs of early properties generally support this notion. All early ranches in Rancho Mirage are no longer extant. Therefore, most information regarding their principal forms and materials of these ranch homes is based on limited photographs and anecdotal evidence.

William Blake's 1853 geological report acclaimed the Coachella Valley's high quality desert soil and attributed the condition to ta rich underground aquifer and the warm climate. Desert farmers saw a new market for their produce and recognized that the region was particularly suited to the cultivation of dates. With federal government assistance in the form of free date seeds to promote this specific crop cultivation, new date tree groves gradually began to dot the landscape.

Everett Da Vall Ranch

The first ranch in present-day Rancho Mirage was built in 1912 by Everett Da Vall, a native of Pennsylvania that migrated to Southern California sometime around the turn of the century. Da Vall purchased a half section from the railroad at $7.50 an acre.[24] He planted 250 free seeds and eventually developed several of his own varieties, including the popular "honey date" that remains a specialty of the Da Vall family growers outside Rancho Mirage in the Coachella Valley.[25] Da Vall's ranch property remained under his ownership until circa 1947 when it was acquired by Joseph Blumenfeld who redeveloped the property as the Wonder Palms Hotel and Guest Ranch, changing the rustic ranch into a resort destination amidst the remaining date palms.[26]

Figure 22. Wonder Palms Hotel and Guest Ranch Advertisement. (*Rancho Mirage at Fifty* Book, Source: City of Rancho in partnership with Desert Publications, Inc.)

When Blumenfeld began development on the Tamarisk Country Club in the late 1940s, until it opened in 1952, it was partially built on acreage formerly owned by the Da Vall family. After the Tamarisk Country Club opened, the Wonder Palms Hotel and Guest Ranch only occupied the northeast corner of what is now Da Vall Drive and what was then Avenue 38, renamed to Wonder Palms Road in 1956, and to Frank Sinatra Drive in 1971.[27] By 1979, the last remaining components of the Da Vall Ranch and the Wonder Palms Hotel and Guest Ranch were demolished and replaced with the Tamarisk Villas condominium complex, which occupies the parcels today.

Associated Property Types

Advantageous laws and newly enacted policies, coupled with the construction of the

railroad through the Coachella Valley and technological advancements to aid irrigation, spurred the initial wave of American settlement in the Rancho Mirage area during the late 19th and early 20th century. While Western settlers attempted to carve out properties in the Coachella Valley during that time, local Native American tribes fought to preserve sections of their ancestral territory utilizing the reservation system. While all early homestead buildings from this period have been demolished or replaced within Rancho Mirage, some associated structures and/or outbuildings, may remain undocumented. Any possible extant property types from this context theme will all reflect the first wave of homesteads within the boundaries of Rancho Mirage. Homesteaders often constructed dwellings and outbuildings such as barns, latrines, sheds, stables, cellars, and other structures to support ranching or farming activities, but the associated structures all existed to serve the occupants of the primary residence. Therefore, any remaining extant dwellings and/or outbuildings will be residential in nature.

Significance Thresholds

To be eligible for listing in the NRHP, CRHR, or Local Register, an extant original homestead building or structure dating to Rancho Mirage's era of early railroad and homestead development must be significant under at least one of the following criteria.

NRHP Criterion A/CRHR Criterion 1

A homestead/ranch site or structure dating to the period between 1848 and 1920 may be significant under Criterion A/1 for an individual significant association or representation of the development of Rancho Mirage during the first period of American settlement in the region following the Spanish and Mexican eras.

NRHP Criterion B/CRHR Criterion 2

A homestead/ranch site or structure in Rancho Mirage that can be documented as the home of an important person in local history such as a prominent leader, pioneer, settler, journalist, trader, homesteader, rancher, or would be significant under Criterion B/2. While some prominent individuals are known, including Everett Da Vall, additional significant individuals may be discovered through further research.

NRHP Criterion C/CRHR Criterion 3

A site from the Spanish or Mexican eras may be significant under Criterion C/3 as the A homestead/ranch site or structure retaining high levels of integrity of design, materials,

workmanship would convey significance under Criterion C/3 for displaying distinctive characteristics of a late 19th and early 20th century architectural style. Homesteads were most prevalent in the Coachella Valley from the 1880s to the 1910s; therefore, many individually eligible properties would likely be either Adobe or Homestead Vernacular in style. A notable work of a master builder, architect, or designer would also be significant under Criterion C/3 if the residential property was designed or constructed during the early settlement of Rancho Mirage.

NRHP Criterion D/CRHR Criterion 4

A homestead property dating to the period between 1848 and 1923 may be significant under Criterion D/4 for its potential to yield important information of scientific value. Any unevaluated and undocumented ruins of homestead sites or structures may be found to be significant using this criterion.

Local Register Criteria

A site or structure, dating between 1848 and 1923, may be significant under Local Register Criterion 1 if it is representative of a late 19th or early 20th century architectural style or reflects special elements of early development period, type, style or way of life important to the City; under Local Register Criterion 2 if it is associated with a business or use which was once common but is now rare or non-existent within the City, such as trading or ranching; under Local Register Criterion 3 if it is representative of the evolution or development or associated with the cultural, religious, educational, political, social or economic growth of the City, county, state or nation, like a site or structure pertaining to the development of an early Coachella Valley homestead or ranch; under Local Register Criterion 4 if it represents the work of a master builder, engineer, designer, artist or architect whose individual genius influenced the *Development of the Coachella Valley* era; under Local Register Criterion 5 for an association with a historic event person(s) that have made a meaningful contribution to the City, state or nation, like an early trading post; under Local Register Criterion 6 if it has a high potential for yielding information of archaeological interest; under Local Register Criterion 7 if it embodies elements of outstanding or innovative attention to architectural or engineering design, detail, craftsmanship or use of materials; or under Local Register Criterion 8 if it contains an unusual natural feature.

Integrity Considerations

To be eligible for listing in the NRHP, CRHR, or Local Register, a residential property from the initial settlement period must retain sufficient integrity to convey its significance. A residential

homestead site that has sufficient integrity will retain most of the character-defining features. A property nominated under NRHP Criteria A/CRHR Criteria 1 should retain integrity of location, setting, feeling, and association. A property nominated under NRHP Criterion B/CRHR Criterion 2 should retain integrity of location, design, feeling, and association, as the physical condition of a site is directly related to connection between a property and a significant individual. A property nominated under NRHP Criterion C/CRHR Criterion 3 should retain integrity of design, materials, workmanship, and feeling, as these are critical for a property to embody distinctive characteristics of a style. Some alterations may be acceptable if the property retains its essential features and overall original form. A property nominated under NRHP Criterion D/CRHR Criterion 4 should retain integrity of location, materials, and association.

Regarding integrity considerations for sites potentially eligible for listing in the Local Register, a property nominated under Criteria 1, 4, or 7 should retain integrity of design, materials, workmanship, and feeling. A property nominated under Criteria 2, 3, or 5 should retain integrity of location, setting, feeling, and association. A property nominated under Criteria 6 or 8 should retain integrity location, materials, and association.

In evaluating the integrity of properties that date to Rancho Mirage's early development, general importance is placed on design, materials, and workmanship through retention of character defining features of architectural styles. However, given the rarity of resources in the Coachella Valley that date to the late 19th and early 20th centuries, other aspects of integrity could elevate a resource to a significant level even if design, materials, and workmanship are diminished. In these cases, integrity of feeling, association, location, and setting may be of greater importance than design, materials, and workmanship. This is applicable to properties associated with people important in the history of Rancho Mirage or an event that is significant in Rancho Mirage's early development history. Properties that retain materials and workmanship in addition to design should be considered individually significant resources.

Theme 3: Early Agricultural and Residential Period, 1924 – 1950

California has a deserved reputation as a prime location for ranching and agriculture activities. This reputation dates to the earliest era of Spanish and Mexican land grants when Hispanic vaqueros brought ranching culture to Alta California. Americans first traveled west to California to pursue gold and agriculture. Many miners soon realized that even greater fortunes could be made by providing ranching and agricultural products to sustain the mining industry. By the end of the 19th century, California saw increasing specialization of agricultural products and an expansion of agricultural output due to improved technology during the early 20th century. Today, California is a world leader in agricultural production, and the Coachella Valley is one of the state's premier agricultural areas.

With the arrival of the ranchers and developers in the American period, came the beginning of agriculture as an industry in the Rancho Mirage area. One of the requirements of homesteading was that the land must be under cultivation for a period of five years prior to the patenting of the applicant's claim. The biggest challenge was not being able to obtain a permanent source of water, such as a well, on the land and then being able to farm it for five years. Despite the lack of water, the Rancho Mirage climate was ideal for growing dates, and seedless grapes. The high temperatures resulted in rapid growth of crops. With the Southern Pacific Railroad depot located in nearby Indio, farmers had easy access for shipping their crops to the Los Angeles and San Francisco markets. Over time. dates proved to be best suited to the climate and soil conditions of the Rancho Mirage area.[28]

Dates were first introduced in the United States in 1888 by the U.S. Department of Agriculture (USDA) although they had been first introduced to the Western Hemisphere by Spanish missionaries. In 1904, the USDA established an experimental agricultural station in the Coachella Valley to promote date production. Production rose from 100,000 pounds in 1919 to 1 million pounds in 1926. Three varieties of commercial dates were commonly grown: Deglet Noor (date of light), Saidy, and Thoory. Dates yielded a better return per acre than any other branch of agriculture or horticulture.[29]

Dates can be grown from seed, but the most dependable commercial fruit is produced from proven offshoots or suckers of known varieties. A young palm will produce dates at six years old and be full bearing at ten years. Date palms are not self-pollinating. Pollination must be done by hand, or the fruit will not develop and mature. This created a need for farm laborers in the Coachella Valley.[30]

After World War II, the date industry collapsed. Date palms were taken out and replaced

with citrus trees on many ranches. During the late 1940s and early 1950s there was a boom in citrus growing, especially grapefruit and tangerines. Besides dates and citrus, grapes were grown in the Rancho Mirage area. Truck crops were limited to the flat areas. In many places, there was too much clay in the soil to grow many crop varieties. The lack of water coupled with undesirable soil conditions forced some farmers to abandon their holdings.

Early Agricultural Ranches in Rancho Mirage

The public land laws in the United States provided a mechanism to transfer land from the public domain – lands owned and controlled by the federal government – to private individuals. These early ranches left a mark on the land and are a key part of the City's history.[31] Many early ranches were focused on agriculture and pasturelands, and later evolved into recreation and leisure properties, such as dude ranches and resorts. These dude ranches offered urbanites opportunities to participate in general outdoor and equestrian activities, such as riding and roping within a controlled environment. During the 1920s, 1930s, and 1940s, guests at dude ranches often stayed in rustic cabins, ate meals in community lodges, swam in on-site pools, and rode along in chuck wagon expeditions. Below are the histories of some of the early ranches in Rancho Mirage, some of which were converted into dude ranches as owners changed over time.

Eleven Mile Ranch

In 1925, William E. Everett established the second ranch in Rancho Mirage, calling it Eleven Mile Ranch because of its location, 11-miles from both Palm Springs and Indio in either direction. The Eleven Mile Ranch was located at the northeast end of Magnesia Falls Drive.[32] Under Everett's ownership the ranch produced citrus fruit, grapes, and dates.[33] In 1929, the Eleven Mile Ranch was sold to the Southland Land & Realty Company, who planned to develop it into an Egyptian-styled subdivision. This speculative vision was stymied by the Great Depression.[34] Between 1932 and 1934, the Eleven

Figure 23. White Sun Guest Ranch Entrance. (*Rancho Mirage at Fifty* Book, Source: City of Rancho in partnership with Desert Publications, Inc.)

Mile Ranch was operated as the Desert Health School for Children, a center for children with respiratory illnesses.[35] The school was spearheaded by entertainer Will Rogers and Dr. Earl Tarr, a Los Angeles-based pediatrician.[36] The conversion of the ranch to a health center was reflective of the larger movement in the Coachella Valley to promote the benefits of the warm and dry climate.

By 1946, ownership of the former Eleven Mile Ranch passed to Jack and Helen Dengler, who turned the property into the White Sun Guest Ranch. They operated the property as a guest ranch until 1980, when they sold the property to Holiday Haven Promotions, who operated the property for one year under the name of the Lost World Resort.[37] In 1981, Dennis Schroeder purchased the property and renamed it as The New Lost World Country Club & Resort, a popular resort that remained open into the late 1980s. By 1990, the resort property had been condemned, and the property was destroyed in a fire in 1999.[38] Soon thereafter, the White Sun Estates residential community was constructed on the former Eleven Mile Ranch property.

Rancho Del Sol

In 1924, Los Angeles developers R. P. "Bert" Davie of Santa Monica and E. E. McIntyre purchased several hundred acres of land in the Magnesia Falls area from the railroad with the intention of subdividing it into 10-acre farms geared towards "gentlemen farmers." They sold many of these parcels to friends and business peers in Santa Monica. To make the area accessible, Davie laid out a road connecting Magnesia Falls with the Eleven Mile Ranch and the Bradshaw Highway, lined it with palm trees, and named it the "Rio del Sol", now Bob Hope Drive. Many of Davie's Santa Monica friends became the first residents of the "Rancho del Sol Estates," now known as the Clancy Lane neighborhood.[39] L. M. and Helen Clancy of Los Angeles built the first Rancho del Sol property in 1932. In the tradition of the earliest settlers in the Palm Springs area, the Clancy's built an adobe home on their property and planted grapefruit, dates, and grapes.[40] The home is no longer extant, but another adobe home built in 1938 at 72-010 Clancy Lane associated with the Clancy family and it is still extant at the northeast corner of Bob Hope Drive and Clancy Lane. This home is associated with Frank B. Clancy, a real estate developer, and his son, Robert Leslie Clancy, who both lived at the home.

Nittinger House

Water was supplied to the Rancho del Sol Estates by wells and delivered via pipes provided by Santa Monica plumbing shop proprietor, Earl P. Nittinger, who also purchased property in the Rancho del Sol Estates. He built a Vernacular Ranch style home at 72-116 Clancy Lane

in 1934. Tike the rest of the neighborhood, the property also included date palms.[41] In 1950, Earl Nittinger married Verna N. Smith, who continued to live at 72-116 Clancy Lane after Earl died in 1956.[42] The home was eventually demolished and replaced in 2004.

Rancho Chiquito

North of Clancy Lane, also within the Rancho Del Sol Estates, the Follansbee family built three houses in the 1930s, each built with river rock exterior walls and Mediterranean Revival elements. The 10-acre Follansbee date farm was located at 72-116 Follansbee Road. In 2003, the main house and many of the date palms were still extant, but the house was threatened by development. In 2004, the City of Rancho Mirage facilitated relocation of the Follansbee House to the Rancho Mirage Community Park, where it is located today in special recognition as the oldest existing home in Rancho Mirage.[43]

Red Roof Ranch

In 1937, John Warburton, an English film star, with his wife Ruth, purchased the Red Roof Ranch from Philip Boyd, Palm Springs' first mayor. The Warburton's cultivated grapes, dates, and onions while they lived there and when the couple divorced, Ruth retained ownership. In 1950, she sold the property to Thunderbird Country Club, to provide additional land for the golf course under construction on 663 acres of Thunderbird Ranch.[44]

Thunderbird Ranch

On December 15, 1946, Frank Bogert, with several corporate magnates as backers, opened the Thunderbird Ranch on 663 acres of land in Section 11, north of Magnesia Falls Cove, that he had purchased for $34,000 earlier that year. Thunderbird featured twenty-two ranch style cabins, forty horse stalls, and a western style clubhouse designed by Pasadena architect Gordon Kaufmann, which was arranged around a large pool.[45] It catered to Hollywood residents wanting to experience a western-style vacation with horseback riding, shooting, and chuck wagon meals. The film, *Two Guys From Texas*, was filmed at Thunderbird Ranch in 1947.[46] The ranch operated until 1950, when amateur golfer Johnny Dawson, with a group of investors that included Texas oilman D. B. McDaniels, Colorado governor Dan Thornton, tire company founder Leonard Firestone, and Hollywood celebrities, such as Bob Hope, Bing Crosby, Randolph Scott, Phil Harris, Alice Faye, Lucille Ball, Desi Arnaz, and Ralph Kiner, bought Thunderbird Ranch from Bogert with the intention of building the first 18-hole golf course in Palm Springs. The Thunderbird Country Club was opened in 1951. The property does not retain any elements of the original ranch.[47]

Early Residential Subdivisions

Residential development in Rancho Mirage began slowly due to the lingering effects of the Great Depression and the general lack of construction materials caused by WWII. Local real estate developers made extensive plans for subdivisions as early as 1925, but their visions were not fully realized until after the war ended. A limited number of early homes were built within subdivisions during the 1930s and 1940s, the first boom in development came after the first country clubs in Rancho Mirage finally opened in the early 1950s, using the recreation and leisure industry to drive real estate investment.

Rancho Mirage Tract at Magnesia Falls Cove

In 1934, Louis Blankenhorn, a Pasadena native and the owner of the Smoke Tree Ranch in Palm Springs, purchased the defunct Southland Land & Realty Company subdivision and several hundred more acres to the west in the Magnesia Falls Cove area. He began selling lots to prospective buyers that same year.[48]

Figure 24. The original 1934 Rancho Mirage subdivision map.

Blankenhorn enlisted sales director Laurence Macomber to develop and market "modern attractive small homes" designed by Pasadena architects Van Pelt & Lind, a firm that employed the desert-based designers John Porter Clark and Albert Frey, both recognized as Master Architects today. The Van Pelt & Lind homes were four to six rooms on 100 by 100-

foot lots. Described as "Early American" style in the February 27, 1937 edition of *Pasadena Star-News,* the original homes that remain appear to incorporate elements of the Minimal Traditional and Spanish Colonial Revival aesthetic. While John Porter Clark and Albert Frey were the credited designers, Frey was mostly in New York at the time, suggesting that Clark took a larger part in developing the house designs.[49]

To market the homes, Blankenhorn, Macomber, and local realtor Don Cameron, settled on calling the new subdivision "Rancho Mirage", after a suggestion from Blankenhorn's wife Ruth.[50] Early advertisements, including the aforementioned February 1937 *Pasadena Star-News* article, advertised Rancho Mirage as just "15 minutes from Palm Springs", with "one hour more sunshine" than Palm Springs, and "the finest water system in the valley." By February 1937, six homes had been built in Rancho Mirage with several more lots purchased in anticipation of development. One of the earliest homes was that of Frank Morgan, the actor who portrayed the wizard in *The Wizard of Oz*.[51] Morgan built his house in 1939 at 71-845 Sahara Road.

In 1944, a Hollywood attorney named A. Ronald Button bought the Rancho Mirage subdivision and expanded its holdings further into the cove where the original subdivision was platted. Button was a graduate of Stanford University and Harvard Law School. After law school he became a corporate and business lawyer who represented many prominent film stars in divorce cases. Button also became known for his impressive political connections. During a trip out to Palm Springs with his daughter Barbara, Button drove by the budding subdivision and saw development potential. Following his trip, he began buying acreage throughout the Magnesia Falls Cove and started developing speculative homes, selling lots to individuals, and selling lots to developers to build tract style houses. Early investors included celebrities such as Hedy Lamarr, who built her home at 72-424 Desert Drive in 1946.[52]

Button partnered with actor Dave Culver in 1945 to develop additional subdivisions and construct new apartment complexes, with land purchases amounting to almost 2,000 acres total. Button, who was selling homes throughout the late-1940s and early-1950s, established the Rancho Mirage Realty Company in 1954. His plan was to build a new city, which required more investors. To that end, he partnered briefly with his brother-in-law, the radio and TV personality Art Linkletter from 1956 to 1958, to develop more modern Contemporary style homes. During this time, Button built a house for himself at 42-730 Dunes View Road, which was completed in 1957. Between 1956 and 1959, Button served as the California State Treasurer, during which time he left the management of his Rancho Mirage developments to Mel Anderson. After his term ended, Button resumed his role in developing the community and headed the Rancho Mirage Community Association until 1965. Ronald Button sold most

of his holdings to Desser & Garfield, a pair of Beverly Hills based developers who continued to build houses in the area throughout the 1960s.[53]

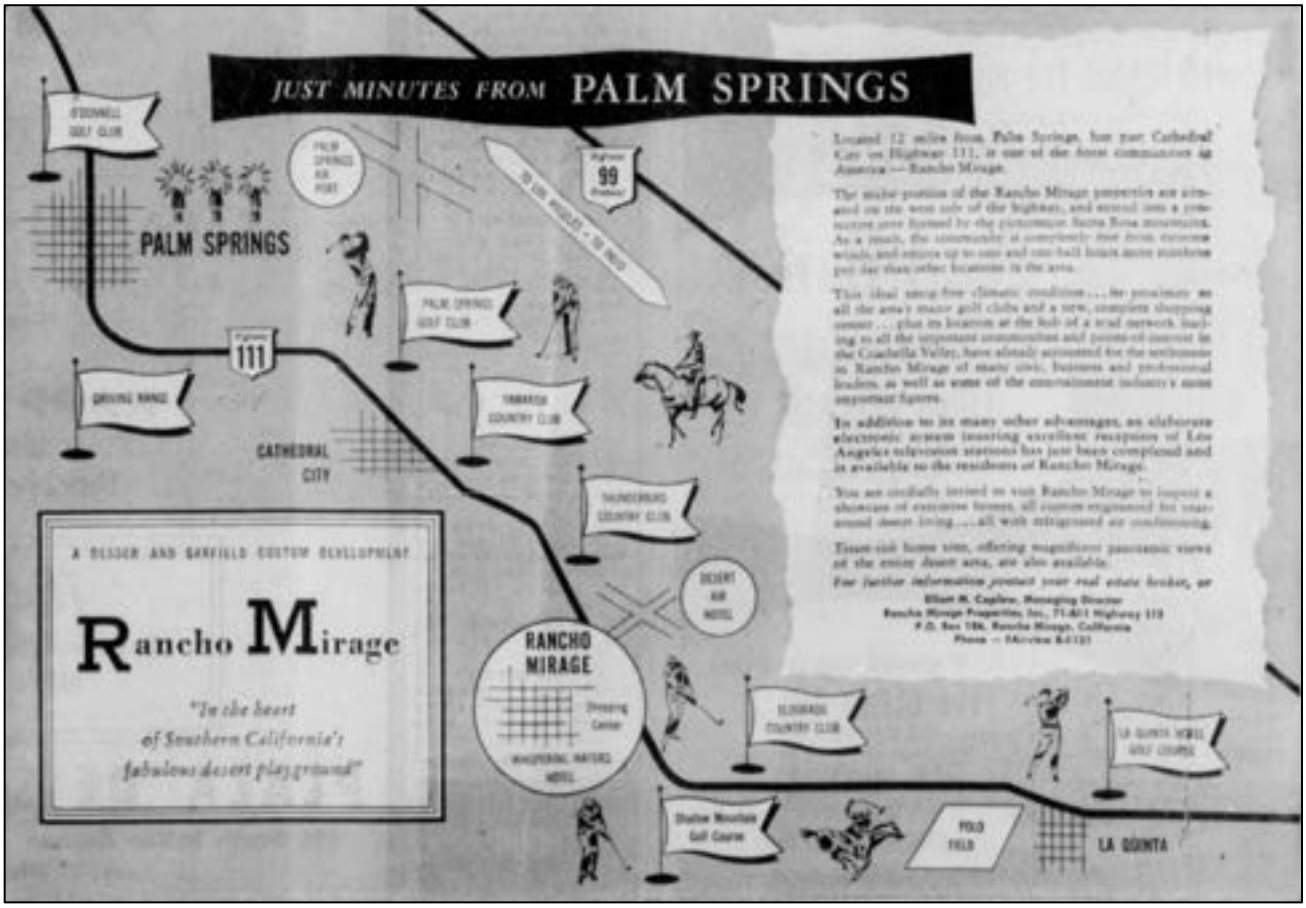

Figure 25. Desser & Garfield Rancho Mirage advertisement, ca. 1959.

Associated Property Types

The Early Agricultural and Residential Period theme spans the time from the first subdivision in Rancho Mirage until the establishment of country clubs in the mid-20th century.

Residential Farm and Ranch Buildings

Because agricultural and ranching houses are much like all other houses in California built from the 1920s to the 1950s, they share similar character-defining features. Their shape, form, massing, orientation, and decoration are like most farmhouses built during the 20th century. Rural dwellings are like their urban counterparts in virtually all aspects. In general, agricultural and ranching residences are normally unhindered by land restrictions and are usually oriented with their broad elevations facing the road. Wings often extend to the rear as well, usually reflecting the growing farm family over several generations and the increasing need

for more room.

Agricultural and ranching residences must possess most of the following character defining features listed below.

- Continued residential use; the house must still function as a residence and maintain a residential use (single/multi-family or housing of some kind).
- Original rural residential setting: the house must predominantly retain its historic rural residential setting. If a house began as an isolated rural farmhouse on 300 acres of open land, it must retain some feeling and association with the rural setting even if the parcel is now reduced in size.
- All key features must also survive essentially intact: doors, windows, roofs, trim. Acceptable losses include a single window or door replacement, replacement of roof materials, and minor alterations to the rear or secondary elevations such as some covering of materials for purposes of an addition or porch.
- Residential-related interior space relationships and major features such as parlors, staircases, and sleeping rooms must survive essentially intact.

Agricultural and Ranch Outbuildings

As rural agricultural outbuildings and support structures were designed with a singular use and function, the original use of these structures is clearly reflected in their exterior appearance. Rural agricultural buildings and structures are also defined by their original function. They are buildings, including barns, silos and granaries, packing sheds, and equipment sheds, built to fulfill a specific and, typically, singular purpose. While the purposes of agricultural and ranching outbuildings and structures may seem minor in some ways, they were critical to the smooth function of the farm or ranch property. As such, the rural farm/ranch setting is an essential character-defining feature.

Agricultural and ranching outbuildings must possess most of the following character defining features listed below.

- Continued original use; the property must still function in its original use. However, because the original use may no longer be necessary in the same fashion on a modern farm or ranch, this attribute is less important than for properties whose original function continues in modern practice.
- Original rural setting: for individually nominated properties or properties within districts, the property must exist in its historic rural setting. If the agricultural/ranch outbuilding or structure was constructed in a rural area as part of a farm complex, it cannot now have lost that farm setting. Even if the original farm/ranch parcel has been reduced

in size, it must retain some feeling and association with the rural setting.
- All key features must also survive essentially intact: doors, windows, roofs, trim. However, some minor loss of integrity including alterations to window and door materials, new roof materials, compatible additions, minimal additional wall openings, and compatible mortar repair is acceptable.
- The agricultural/ranch outbuilding or structure must still be in a good and usable condition.

Single-Family Residences

Residential development attached to ranches, resorts, and subdivisions from 1924 through the 1950 chiefly consisted of single-family homes developed with Spanish, Minimal Traditional, Ranch, and Contemporary styles.

Early single-family residences across Rancho Mirage were constructed on either undeveloped lots or previous faming/ranching acreage. Some of the earliest homes in the community were built within the new Rio Del Sol subdivision, the "Rancho Mirage" (Magnesia Falls Cove) subdivision, or on what was previously Eleven Mile Ranch. Early residential properties were built with largely Spanish Styled Ranch, Tract Ranch, Custom Ranch, and Contemporary styles.

Single-family residences constructed during the early development of the community, between the establishment of Rio Del Sol and the development of Thunderbird Country Club in 1950, generally exhibit the following character defining features listed below.

- One or two stories
- Early and mid-century architectural styles – Spanish Colonial Revival, Minimal Traditional, Tract Ranch, Contemporary, Custom Ranch, Post and Beam, and International
- Private driveways
- Attached or detached garages or carports
- Gable, hipped, or flat roofing forms
- Large windows

Significance Thresholds

To be eligible for listing in the NRHP, CRHR, or Local Register, a property dating to Rancho Mirage's Early Agricultural and Residential Period must be significant under at least one of the following criteria.

NRHP Criterion A/CRHR Criterion 1

Agriculture or ranching properties dating to the period between 1900 and the 1970s may be significant under Criterion A/1 for an individual significant association or representation of agriculture/ranching and/or residential development in Rancho Mirage. Prominent or large properties with notable historic associations to the broad patterns of agricultural or residential settlement are considered eligible.

NRHP Criterion B/CRHR Criterion 2

Agricultural and/or residential properties in Rancho Mirage that can be documented as associated with an important person in local history such as a prominent leader, pioneer, settler, developer, homesteader, rancher or would be significant under Criterion B/2. While some prominent individuals are known including William E. Everett, L. M. Clancy, Helen Clancy, Frank B. Clancy, Louis Blankenhorn, Laurence Macomber, Don Cameron, A. Ronald Button, Art Linkletter, Dave Culver, R. P. "Bert" Davie, John Warburton, Frank Bogert, Dr. Earl Tarr, Jack Dengler, Helen Dengler, Dennis Schroeder, E. E. McIntyre, Earl P. Nittinger, Frank Morgan, or Hedy Lamarr, additional significant individuals may be discovered through further research.

NRHP Criterion C/CRHR Criterion 3

Agricultural and/or residential properties retaining high levels of integrity of design, materials, workmanship would convey significance under Criterion C/3 for displaying distinctive characteristics of early to mid-20th century architectural styles. Ranches and single-family residences were most prevalent in the Coachella Valley during the 1920s to the 1950s; therefore, many individually eligible properties would likely either be Spanish Colonial Revival, Minimal Traditional, Tract Ranch, Contemporary, Custom Ranch, Post and Beam, or International styles. Ranching properties would also be significant under Criterion C/3 if they represented key aspects of ranching or agricultural design and construction. Early homes built in subdivisions would be considered significant under Criterion C/3 if they retain sufficient integrity to convey their character defining features.

NRHP Criterion D/CRHR Criterion 4

Archaeological resources related to agriculture or ranching dating to the period between 1924 and 1950 may be significant under Criterion D/4 for their potential to yield important information of scientific value. Any unevaluated and undocumented ruins of agricultural or

ranching properties may be found to be significant using this criterion.

Local Register Criteria

A building, structure, object, or site, dating between 1924 and 1950, may be significant under Local Register Criterion 1 if it is representative of an early 20th or mid-20th century architectural style or reflects special elements of early residential period, type, style or way of life important to the City; under Local Register Criterion 2 if it is associated with a business or use which was once common but is now rare or non-existent within the City, such as ranching; under Local Register Criterion 3 if it is representative of the evolution or development or associated with the cultural, religious, educational, political, social or economic growth of the City, county, state or nation, like a property pertaining to the development of early Coachella Valley ranching or subdivision development; under Local Register Criterion 4 if it represents the work of a master builder, engineer, designer, artist or architect whose individual genius influenced the *Early Agricultural and Residential Period*; under Local Register Criterion 5 for an association with a historic event person(s) that have made a meaningful contribution to the City, state or nation, like an early ranching property or early subdivision property; under Local Register Criterion 6 if it has a high potential for yielding information of archaeological interest; under Local Register Criterion 7 if it embodies elements of outstanding or innovative attention to architectural or engineering design, detail, craftsmanship or use of materials; or under Local Register Criterion 8 if it contains an unusual natural feature.

Integrity Considerations

To be eligible for listing in the NRHP, CRHR, or Local Register, an agricultural/ranching property or a residential property from the 1924 to 1950 period must retain sufficient integrity to convey its significance. An agriculture or ranching property that has sufficient integrity will retain most of the character-defining features and will:

- Present appearance resembles the original appearance and retains sufficient historic integrity to convey its historical association with a significant event or individual.
- Retains a significant number of character-defining features, such that the visual, spatial, and contextual relationships of the property may be understood.
- Enough original materials should be intact such that the historic fabric, character, and overall visual effect have been preserved.
- Alterations may be acceptable if minimal.
- Some individual design features may have been modified, altered, or replaced.

To be eligible for listing in the NRHP, CRHR, or Local Register, an agricultural/ranching or residential property from the 1924 to 1950 period must retain sufficient integrity to convey its significance. A property nominated under NRHP Criteria A/CRHR Criteria 1 should retain integrity of location, setting, feeling, and association. A property nominated under NRHP Criterion B/CRHR Criterion 2 should retain integrity of location, design, feeling, and association, as the physical condition of a site is directly related to connection between a property and a significant individual. A property nominated under NRHP Criterion C/CRHR Criterion 3 should retain integrity of design, materials, workmanship, and feeling, as these are critical for a property to embody distinctive characteristics of a style. Some alterations may be acceptable if the property retains its essential features and overall original form. A property nominated under NRHP Criterion D/CRHR Criterion 4 should retain integrity of location, materials, and association.

A property nominated under Local Register Criteria 1, 4, or 7 should retain integrity of design, materials, workmanship, and feeling. A property nominated under Criteria 2, 3, or 5 should retain integrity of location, setting, feeling, and association. A property nominated under Criteria 6 or 8 should retain integrity location, materials, and association.

Theme 4: Country Club Era, 1951 – 1973

In the late 19th century, many settlers and homesteaders in the Coachella Valley were initially attracted to the desert for the health benefits associated with arid climates to alleviate respiratory and arthritic ailments. Others sought settlement in the Coachella Valley for quiet refuge and relaxation in relative solitude compared to nearby cities and towns. Over the course of the 20th century, the hospitality industry capitalized on the allure of desert solitude and built hotels and resorts throughout the Coachella Valley for the wealthy elite. As a result, establishments in the Coachella Valley, specifically in the Rancho Mirage area, regularly hosted tourists, celebrities, and other wealthy individuals drawn to the advertised charm and beauty of the desert. Over time, the high-profile clientele attracted a more middle-class demographic that became drawn to Rancho Mirage for the same reasons: its relative isolation, burgeoning country club communities, and growing recreational opportunities.

With the success of the early country clubs, the Rancho Mirage quickly became the new "golf capital of the world" attracting attention through high-profile memberships from the corporate and entertainment spheres. and hosting prominent new tournaments. High profile visitors, such as President Dwight D. Eisenhower, brought additional publicity and new inventions like the golf cart added to the growing reputations of the Rancho Mirage clubs as cutting-edge golfing establishments.[54]

The development of country clubs coincided with the construction of custom residential and commercial properties within their boundaries. Booming post-WWII development within these country clubs helped shape what is now commonly referred to as 'Desert Modernism', a distinct sub-type of the International style of architecture that incorporated modern materials, techniques, and floor plans with the unique requirements of building within a desert environment. The typical characteristics of Desert Modernism included large expanses of floor-to-ceiling glass walls sheltered by deep overhangs extending from flat roofs and flowing interior floor plans that merged gracefully with the outdoors. Often oriented to the rear, where most decorative flourishes could be visible from the adjacent fairways, Desert Modernist houses in Rancho Mirage often featured unassuming front elevations designed with privacy in mind, with only clerestories and obscured glass panels adjacent to the entries providing light. These houses were often light, with roofs floating above glass walls and clerestories, and ceilings supported by thin steel or wood posts. In addition to glass, exterior materials included stucco, wood, slump stone, and natural rock that often mirrored the desert environment.[55] Swimming pools with expansive golf course views were typical at the rear elevation.

The Desert Air Hotel

Figure 26. Desert Air Hotel Restaurant, ca. 1951.
(*Rancho Mirage at Fifty* Book, Source: City of Rancho in partnership with Desert Publications, Inc.)

In 1936, Los Angeles architect Henry "Hank" Gogerty purchased 10-acres near the end of the Rio del Sol road (now Bob Hope Drive) south of the Rio del Sol farms on the opposite side of the Whitewater River. Gogerty began building a house, which he finished in 1939. After the completion of his home, he began buying adjoining acreage, eventually amassing approximately 600 acres. Gogerty was a licensed pilot that often flew his own planes between Los Angeles and the Coachella Valley, prompting his interest to build a runway and airpark. By 1946, he had purchased an additional 320 acres for the airstrip. Gogerty moved Army surplus barracks onto the property from a military installation in nearby Beaumont, CA. This would later become the Desert Air Hotel.[56]

Opened in 1951, the Desert Air Hotel featured rental cottages, a restaurant, a swimming pool, and a polo field that also served as a second runway. The hotel quickly became popular with aviation-minded celebrities such as Bing Crosby, Gene Autry, James Stewart, and Edgar Bergen, who all used the airstrip. Other celebrity visitors included Sophia Loren and Marilyn Monroe, along with political figures like Dwight D. Eisenhower and Richard Nixon. In the 1950s, the resort was used for filming the *Bob Cummings Show*.[57]

Gogerty sold the Desert Air Hotel in 1968 to a group of Chicago based investors who removed the airstrip and installed a new 18-hole golf course, which opened in 1969 with the updated name of the Desert Air Hotel and Golf Club.[58] Between 1969 and 1975, the new ownership installed eight new condominium buildings along Rio del Sol, built around a central pool and attached to the golf course. In 1976, the golf course was replaced with the Rancho Las Palmas Country Club.[59] The following year as part of a separate joint project between Marriott and the Sunrise Corporation, the original buildings associated with Desert Air Hotel and restaurant, in the northwest corner of the property along Rio del Sol Road and

the Whitewater River, were demolished and replaced with a Marriott hotel called the Rancho Las Palmas Resort, now the Omni Rancho Las Palmas Resort & Spa.[60] In 1980-1981, the Rancho Las Palmas Shopping Center was built immediately south of the old Desert Air Hotel developments along the Rio del Sol. The Rancho Las Palmas Country Club annexed the eight Desert Air Hotel and Golf Club condominiums and swimming pool from the early 1970s into its gated community, and they are still extant off Desert Air Drive.

Thunderbird Country Club

Built on the former Thunderbird Ranch property, the Thunderbird Country Club is the site of the first 18-hole golf course in the Coachella Valley. Designed by golf course architect Lawrence Hughes, the club officially opened on January 9, 1951, when owner Johnny Dawson and Lawrence Hughes were the first to tee off using ceremonial golf balls.[61] Early investors and the first club members were offered lots along the fairways to construct their own custom houses. Phil Harris, Bob Hope, Bing Crosby, songwriter Hoagy Carmichael, and Leonard Firestone were some of the first buyers.[62] Notable local architect William F. Cody, today recognized as a Master, was hired to remodel the guest ranch buildings and construct 14 cottages for member use. Professional golfer Jimmy Hines became an early member of the golf club, which helped further boost the course's notoriety.[63]

Figure 27. Thunderbird Country Club Entrance Sign.
(Rancho Mirage at Fifty Book, Source: City of Rancho in partnership with Desert Publications, Inc.)

In 1951, Thunderbird Country Club developed the first motorized golf cart. Created by Eddie Susalla, an Associate Golf Professional at Thunderbird, the cart was a re-tooled motorized cart he acquired in Long Beach to carry golf equipment. These early golf carts were three-wheeled with two seats and a small truck to hold clubs. In 1953, Susalla developed a four-wheeled version, which quickly replaced the early models throughout the club. In 1954, club member Ernest Breech, Chairman of the Ford Motor Company, was looking for a name for a new car model and settled on 'Thunderbird' after the country club. With the club's permission, Ford was permitted to use the name and the first Ford Thunderbird produced was presented to the club in 1955. That same year, the Thunderbird Country Club gained additional publicity when it hosted the Ryder Cup.[64] Also in 1955, William Cody was commissioned again for work in the country club, this time for Lou Manseau, founder of Thunderbird Realty, to design four homes and a community pool at the north of the club off the 10th fairway along Country Club Drive.[65]

Over time, Thunderbird Country Club has maintained an association with prominent public figures. Notable politicians such as Dwight D. Eisenhower and Gerald Ford became members, and many other presidents have visited since the 1950s.[66] Today, the Thunderbird Country Club retains most of its original buildings and structures. Many of the original custom homes for members constructed in the 1950s, 1960s, and early 1970s are extant. 12 of the original 14 cottages designed by William Cody are also intact. The country club grounds have not been expanded or extensively remodeled, apart from the clubhouse which has been regularly remodeled and expanded, first in 1960, then in 1982, and most recently in 2004.[67]

Tamarisk Country Club

In 1952, one year after the Thunderbird Country Club opened, San Francisco real estate developer and theater owner Joseph Blumenfeld bought the property with plans to create the Tamarisk Country Club.[68] Blumenfeld was already the owner of the adjacent Wonder Palms Hotel and Guest Ranch and sought to create a high-end golf club.[69] Blumenfeld organized a group of 65 investors, including high profile members like Jack Benny, George Burns, Danny Kaye, Sol Lessor, and the Marx Brothers. Blumenfeld hired golf course architect William Bell to design the course and successfully attracted many of the first members from the Hillcrest Country Club in Los Angeles. Ben Hogan was hired as the premier golf professional for the course. The course opened in February 1952. William Cody designed the original clubhouse at the Tamarisk Golf Club, but the building was demolished and replaced in 1983.[70]

In 1954, President Eisenhower visited the Tamarisk Country Club and the Thunderbird Country Club, lending prominence to Rancho Mirage as a premiere golfing destination that would later be known as the "Playground of the Presidents".[71] That same year, Frank Sinatra bought five lots along Tamarisk's 17th fairway where he commissioned William Cody to construct a walled compound for Sinatra and his friends. Completed in 1957, additions and improvements to the compound were completed through 1998.[72] In 1960, Tamarisk Country Club, along with Thunderbird Country Club, Bermuda Dunes Country Club, and Indian Wells Country Club, became the founding four courses of the Palm Springs Golf Classic, later renamed to the Bob Hope Desert Classic. Today, the Tamarisk Country Club has more than 110 historic-era homes surrounding the fairway grounds.[73] Despite the changes to the original clubhouse, the course retains its original configuration from 1952.

Other Private Clubs and Estates

From 1951 to the incorporation of the City of Rancho Mirage in 1973, other private country clubs opened within the city limits. While important to solidifying the Coachella Valley as a premier golfing location, these later country clubs did not achieve the same cultural impact as Thunderbird Country Club and Tamarisk Country Club.

Sunnylands, The Annenberg Estate

Like the other private country clubs developed during this period, the development of the Annenberg Estate had a lasting effect on establishing Rancho Mirage as a unique desert community. Although it was built as a single-family compound, the massive estate and the family that founded it shaped the development of Rancho Mirage and fostered its association with powerful political figures. Though not a country club, the Annenberg Estate functioned like a private club for guests of the Annenberg family for much of its history until it opened to the public in 2012.

Figure 28. Sunnylands, The Annenberg Estate, designed by A. Quincy Jones.
(*Rancho Mirage at Fifty* Book, Source: City of Rancho in partnership with Desert Publications, Inc.)

While living in Philadelphia, Walter and Leonore Annenberg visited their friends Harriet and Armand Deutsch in La Quinta and other acquaintances at the Tamarisk Country Club. Annenberg was the publisher of the *Philadelphia Inquirer* and president of Triangle Publications, who produced the *TV Guide*, *Daily Racing Form*, and *Seventeen Magazine*. While golfing at the Tamarisk Country Club, Walter and Leonore noted that a plot of undeveloped land east of the club might also make an ideal location for another golf course. To achieve this end, the Annenbergs decided to build their own private residence amongst the fairways. They purchased 200 acres from the First American Title Insurance & Trust Company in 1963 who, under Trust No. P-76, had owned the property since 1942, when they acquired it from Louis E. Golan.[74]

Located at 71-800 Wonder Palms Road, at the northwest corner of Wonder Palms Road and Rio del Sol (present-day Frank Sinatra Drive and Bob Hope Drive), the Annenberg Estate, named Sunnylands, was designed by Master Architects A. Quincy Jones and Frederick Emmons. In 1964, the *Desert Sun* announced that the vast home, which cost $540,875, was completed. Sunnylands included the 32,000 square feet main house, a guest quarters, 12 manmade lakes, and a nine-green, 18-tee golf course. The home was built to reflect Japanese and Mayan influences with the principal building covered by a large monitor roof. Within the home, the interior design was headed by notable designers Billy Haines and Ted Graber.[75] Designed by Dick Wilson, the Sunnylands golf course opened in 1965.[76]

An avid art collector, philanthropist, and important Republican supporter, Walter Annenberg was appointed Ambassador to the United Kingdom by President Nixon. Leonore Annenberg served President Reagan and the First Lady as White House Chief of Protocol. While maintaining their primary residence in Philadelphia, at Sunnylands, the Annenbergs hosted prominent public figures, statesmen, and executives, including multiple United States presidents and British royalty.[77] The Annenberg's also opened their home to benefit the local community, hosting major contributors to the Palm Springs Desert Museum in 1974, where Leonore became president of the board of trustees. In 1985, Sunnylands hosted a fundraiser for the Eisenhower Medical Center, resulting in a $30 million capital-improvement campaign. Walter and Leonore Annenberg gave hundreds of millions of dollars to various causes within the Coachella Valley. In Rancho Mirage they donated approximately $125 million for the creation and operation of Eisenhower Medical Center, donated 6.25 acres and money to Children's Discovery Museum of the Desert, and contributed $2 million for building the Rancho Mirage Public Library on Highway 111. They also served on boards and committees of public-serving organizations. Walter Annenberg died in 2002, and Leonore died in 2009. In 2012, their Rancho Mirage home opened to the public as Sunnylands Center & Gardens, offering tours of the estate, exhibitions of their enormous art collections, and

various regular programming events. The golf course, which has evolved since the 1980s, remains private, but is still frequented by U.S. Presidents and other dignitaries on a regular basis.[78]

Desert Island Country Club

First established in 1971, the Desert Island Country Club was initially named the Desert National Country Club and was built as a private member-only course by the Winmar Company, Inc, a subsidiary of the Safeco Corporation from Seattle. Walter Sibbert served as the president of the club and was also vice president of the Winmar Company. The Desert Island Country Club was built on 160 acres at the southwest corner of the intersection of Bob Hope Drive and Frank Sinatra Drive, south of Sunnylands.

The property was constructed with an island of 350 condominium units in the center of the golf course surrounded by a 25-acre lake with a 20,000 square foot central clubhouse. The clubhouse was completed in 1971 and the original condominium units, built across two building complexes, were completed in 1972 and 1975. Opened in 1972, the course was designed by renowned golf course architect Desmond Muirhead. William Martin served as first golf professional for the Desert Island Country Club.[79] In 1980, a third condominium building, housing 99 units, was constructed on the island north of the first two buildings. Today, the original clubhouse appears to retain much of its original design elements and configuration. The Desert Island Country Club remained private and closed to the public until 2022, when the course and clubhouse was opened to the public.

Mission Hills Country Club

In 1965, Max Genet Jr., a U.S. Marine pilot turned developer, approached the Agua Caliente Band of Cahuilla Indians to establish lease agreements for a 640-acre plot of land to build what would become the Mission Hills Country Club. In 1968, golf course architect Desmon Muirhead began designing and overseeing construction of the first course at the Mission Hills Country Club. In 1969, Heathman Construction of Palm Springs began building the first 50 homes and the original clubhouse. In 1971, the Mission Hills Country Club officially opened.[80]

The same year, David Foster, president and CEO of the Colgate-Palmolive Company, announced that a new Ladies Professional Golf Association (LPGA) tournament would be hosted by popular singer and actress Dinah Shore at the Mission Hills Country Club. Ms. Shore hosted Dina's Place, a popular daytime talk show that was sponsored by Colgate-Palmolive. In 1972, Jane Blalock won the first Colgate-Dinah Shore Circle tournament, now known at the Chevron Championship. Following the success of the golf tournament, the Colgate-

Palmolive Company acquired the Mission Hills Country Club in 1974. During the 1970s and 1980s additional homes were built within club boundaries. In 1978, professional golfer Arnold Palmer designed a course at the Mission Hills Country Club west of the original course. This was the first of many courses designed by Mr. Palmer in the Coachella Valley. At the Mission Hills Country Club, the Arnold Palmer Signature Course opened in 1979. In 1981, Landmark purchased the club and set about updating the property including demolition of the original clubhouse in 1985 and replacing it with a much larger facility that opened the next year. Today, the Mission Hills Country Club remains a private club, hosting prominent golf tournaments regularly.[81]

Associated Property Types

In the 1950s, the resort industry in Rancho Mirage began the process of replacing undeveloped land and agricultural properties with lavish country clubs catered to wealthy patrons, snowbird residents, and retirees who all sought quiet seclusion within residential developments attached to the golf courses. The golfing industry created some of the early commercial properties in Rancho Mirage, after the prevalence of dude ranches declined, and it spurred the construction of single-family residences and condominiums. The growth of the golfing industry was rapid following the completion of the Thunderbird Country Club in 1951 through incorporation of the City of Rancho Mirage in 1973. The Desert Hotel, Thunderbird Country Club, Tamarisk Country Club, Desert Island Country Club, and Mission Hills Country Club were the major clubs built between 1951 and 1973 in Rancho Mirage. These communities rapidly transformed the fabric of the community from a rural town to a premier golfing destination. Rancho Mirage experienced more resort development during the following decades as developers continued to build on the model first introduced by Thunderbird Country Club. Properties related to the development of country clubs in Rancho Mirage are both residential and commercial in nature.

Single-Family Residences

Residential properties attached to country clubs and resorts from 1951 through 1973 consisted of single-family homes and condos developed with Tract Ranch, Custom Ranch, Contemporary, Post and Beam, International, and Desert Modern styles.

Single-family residences within Thunderbird Country Club were constructed on property that was formerly a part of the Thunderbird Ranch and similar homes were constructed within Tamarisk Golf Club on land that was previously a part of the Da Vall Ranch and the Wonder Palms Hotel and Guest Ranch. Homes built within both country clubs were exclusively custom

designs featuring Contemporary, Post and Beam, International, or desert Modern styles. Following the success of both clubs, developers built more single-family homes and condominiums within the Desert Island Country Club and the Mission Hills Country Club in the 1970s largely utilizing Spanish Styled Ranch, Tract Ranch, and International styles.

Single-family residences constructed in the early country clubs, between the initial construction of the Thunderbird Country Club in 1951 through the 1973, exhibit the following character defining features listed below.

- One or two stories
- Mid-century architectural styles – Tract Ranch, Custom Ranch, Contemporary, Post and Beam, International, or Desert Modern styles
- Private driveways
- Attached or detached garages/carports
- Gable, hipped, or flat roofing forms
- Large metal floor-to-ceiling windows
- Prominent course-facing façades
- Large shaded rear porches

Condominiums

Condominiums within the Desert Air Hotel, Desert Island Country Club, and the Mission Hills Country Club were constructed on undeveloped lots that was previously agricultural or ranching land. The developers built condos with Spanish Styled Ranch, Tract Ranch, or International styles.

Condominiums within country clubs from 1951 through the 1973 exhibit the following character defining features listed below.

- One or two stories
- Paired and mirrored homes sharing a wall or multi-unit buildings
- Mid-century architectural styles – Spanish Styled Ranch, Tract Ranch, Contemporary, Post and Beam, International, or Desert Modernist styles
- Shared or individual driveways
- Gable, hipped, or flat roofing forms
- Large metal floor-to-ceiling windows
- Shared amenities (pools, tennis courts, gyms, etc.)

Commercial Buildings

Construction of the commercial buildings at the Desert Air Hotel, Thunderbird Country Club,

Tamarisk Country Club, Desert Island Country Club, and Mission Hills Country Club properties occurred on previously undeveloped land or former agricultural/ranching property. The commercial resort buildings at these properties all originally consisted of golf clubhouses and club facilities for additional amenities. The commercial buildings and structures constructed during this period largely reflected the mid-20th century modernistic style variations. The Desert Air Hotel restaurant had a unique Streamline Moderne style circular floorplan. The original clubhouses at Thunderbird and Tamarisk, both designed by William Cody, exhibited early Desert Modernist style elements before the clubs instituted significant additions and alterations. The 1971 Desert Island clubhouse still exhibits International style elements, but the Mission Hills clubhouse was demolished and replaced in 1985. Its original style remains unclear.

Commercial properties constructed in Rancho Mirage during the early development of the golfing industry, between the initial construction of the Thunderbird Country Club in 1951 through 1973, exhibit the following character defining features listed below.

- One or more stories (usually one to two) in height
- Mid-century architectural styles – Contemporary, Post and Beam, International, or Desert Modern styles
- Automobile oriented
- Low-pitched or flat roof
- Smooth stucco exterior walls
- Metal framed floor-to-ceiling windows

Significance Thresholds

To be eligible for listing in the NRHP, CRHR, or Local Register, a property dating to Rancho Mirage's era of early resort development must be significant under at least one of the following criteria.

NRHP Criterion A/CRHR Criterion 1

Country club properties may be eligible under Criterion A/1 if they can be shown to have made a significant individual contribution to the board patterns of national, state, or local history, particularly relating to the evolution of the golfing industry in Rancho Mirage.

NRHP Criterion B/CRHR Criterion 2

Country club properties may be significant under Criterion B/2 for an association with the life of a person important in the development of the Rancho Mirage golfing industry. Country

club properties that can be documented as being associated with an important person in local history may qualify for designation. In addition, the individual must have been associated with the property during the period that the person's significant achievements and contributions occurred. Prominent figures related to the development of the country club industry may include Henry "Hank" Gogerty, Johnny Dawson, Jimmy Hines, Frank Bogert, Eddie Susalla, William Cody, Joseph Blumenfeld, Harry Taylor, Walter Annenberg, Leonore Annenberg, Walter Sibbert and Max Genet Jr. Additional significant individuals may be discovered through future research.

NRHP Criterion C/CRHR Criterion 3

Country club properties in Rancho Mirage may be eligible under Criterion C/3 for embodying distinctive characteristics of a style, type, period, or method of construction. A notable work of a master builder, architect, or designer would also be significant under Criterion C/3 if the property was designed or constructed as part of the country club development in Rancho Mirage. For example, multiple country club developments by William Cody may be found eligible under C/3 if the subject properties retain sufficient integrity to convey their significance.

NRHP Criterion D/CRHR Criterion 4

A property related to the development of the golfing industry in Rancho Mirage may be significant under Criterion D/4 if it has the potential to yield important information of scientific value. Unevaluated and undocumented elements of country club properties may be found to be significant using this criterion.

Local Register Criteria

A country club property dating between 1951 and 1973, may be significant under Local Register Criterion 1 if it is representative of a mid-20th century architectural style or reflects special elements of early residential period, type, style or way of life important to the City; under Local Register Criterion 2 if it is associated with a business or use which was once common but is now rare or non-existent within the City; under Local Register Criterion 3 if it is representative of the evolution or development or associated with the cultural, religious, educational, political, social or economic growth of the City, county, state or nation, like an early country club; under Local Register Criterion 4 if it represents the work of a master builder, engineer, designer, artist or architect whose individual genius influenced the *Country Club Era*; under Local Register Criterion 5 for an association with a historic event person(s) that have made a meaningful contribution to the City, state or nation; under Local Register

Criterion 6 if it has a high potential for yielding information of archaeological interest; under Local Register Criterion 7 if it embodies elements of outstanding or innovative attention to architectural or engineering design, detail, craftsmanship or use of materials; or under Local Register Criterion 8 if it contains an unusual natural feature.

Integrity Considerations

To be eligible for listing in the NRHP, CRHR, or Local Register, a country club property, residential or commercial, built between 1951 and 1973, must retain sufficient integrity to convey its significance. A property nominated under NRHP Criteria A/CRHR Criteria 1 should retain integrity of location, setting, feeling, and association. A property nominated under NRHP Criterion B/CRHR Criterion 2 should retain integrity of location, design, feeling, and association, as the physical condition of a site is directly related to connection between a property and a significant individual. A property nominated under NRHP Criterion C/CRHR Criterion 3 should retain integrity of design, materials, workmanship, and feeling, as these are critical for a property to embody distinctive characteristics of a style. Some alterations may be acceptable if the property retains its essential features and overall original form. A property nominated under NRHP Criterion D/CRHR Criterion 4 should retain integrity of location, materials, and association.

Regarding integrity considerations for sites potentially eligible for listing in the Local Register, a property nominated under Criteria 1, 4, or 7 should retain integrity of design, materials, workmanship, and feeling. A property nominated under Criteria 2, 3, or 5 should retain integrity of location, setting, feeling, and association. A property nominated under Criteria 6 or 8 should retain integrity location, materials, and association.

Theme 5: Residential and Cooperative Communities, 1951 – 1973

The development of country clubs in Rancho Mirage set the stage for the transition of the area from a desert retreat, catering to leisure activities for high profile seasonal elite, to an established Coachella Valley community filled with tight-knit residential communities. Subdivision development in the post-WWII era began with projects that were often immediately adjacent to, or bounded by, established country clubs, advertising the ease of access to these clubs and the option to buy memberships. At the same time, smaller cooperative communities were also built within Rancho Mirage, each distinguished by exclusive-use community amenities like shared pools, gardens, and regular maintenance. These new co-op apartment communities appealed to middle class buyers who could own their own apartments, later reclassified as condominiums, at a fraction of the cost of a custom-built detached home, while still enjoying exclusive community-wide facilities, like clubhouses and pools.

The trend in cooperative housing communities was partially as result of the Federal government taking steps to foster ownership of cooperative forms of housing during World War II. In 1942, the Federal government extended the deductibility of mortgage interest and real estate taxes to cooperative homeownership. As during World War I, this was a war effort to combat material shortages that resulted in a reduced supply of single-family housing. Encouragement of multifamily housing had the needed result, and for the first time had an impact in the Southwestern United States where war industry expanded.

In the post war era, several post war cooperative developments were already pioneered before California adopted its condominium laws in 1963 and early efforts by developers had individual owners granted their own deed to their apartment. The use of the phrase "own your own" in these communities appealed to older, wealthier buyers who wanted control over their real estate investment without the responsibility of individual upkeep and maintenance activities. As such, this concept was both an appeal to the benefits of cooperative apartments of the past that were common in the east and looked forward to as condominium ownership became available in California after the adoption of a statutory framework. These changes after World War II created a niche for developers to exploit.

The passage on June 10, 1961, of Section 234 of the National Housing Act, or Horizontal Property Act (HPA), laid the groundwork for the development of joint home ownership and gave rise to the advent of condominiums in the United States.[82] Between 1955 and 1961, multifamily housing increased from 8.4% to 26.3% of all housing in the United States. At the

same time single-family housing during this period fell by 37 percent. The passage of the 1961 Act, however, resulted in a surge of condominium development, which was a new housing concept compared to its predecessors (apartments, cooperatives, and townhouses).[83]

Cooperative housing communities in Rancho Mirage typically sold modest sized single-family residences or apartments, usually all constructed by the same cooperation and/or architect, with some aspect of shared community fees and ownership. This usually came in the form of shared facilities. Single-family residences or condominiums with added amenities were designed to be individually owned with some shared upkeep expenses for communal facilities. Communities with apartments, like Desert Braemar allowed residents to sign protracted leasing agreements.

More traditional single-family residence subdivisions constructed during the country club era outside of the early clubs in Rancho Mirage varied in size and scope. Some were solely residential tracts, designed to attract wealthier clientele inclined to design their own custom homes within private gated neighborhoods. These communities often did not come with shared facilities and were largely or completely inhabited by members of nearby country clubs. Some early residential subdivision communities established in Rancho Mirage were also constructed under unique circumstances or were never fully realized, with only a handful of model homes completed.

Thunderbird Heights

Developed as a continuation of the Thunderbird Country Club in the early 1950s, the Thunderbird Heights gated community was originally named Thunderbird Ranch and Country Club Estates.[84] It was originally marketed as a continuation of the Thunderbird Country Club with a gated entrance at the base of Bradley Canyon. One of the earliest homes built within Thunderbird Heights was Bing Crosby's residence at 70-375 Calico Road, which was completed in 1952. Like Crosby, subsequent owners built their own custom homes on large parcels across the gated neighborhood in the 1950s through 1970s, designing houses that optimized views overlooking the Coachella Valley and Thunderbird Country Club below. Many of the elaborate homes in this community were designed by notable architects of the time and many display hallmark features of Desert Modernism.

Valley of the Sun

Located north of Cypress Lane around two cul-de-sacs called Sandsu Circle and Sandsal Circle, the Valley of the Sun tract was built in 1957-1958 and was the first residential subdivision built in the vicinity of the Tamarisk Country Club. Valley of the Sun includes 15 homes

designed by Master Architects Dan Palmer and William Krisel, who formed a partnership in 1949 and finished their Smoke Tree Valley project (now Twin Palms Estates) in Palm Springs prior to initiating work on Valley of the Sun.[85] Builder George M. Holstein & Sons began construction in the summer of 1957, including 12 homes along the cul-de-sacs and three on Palomino Lane. The Palmer & Krisel designs were all post-and-beam construction with varying rooflines, glass walls, exterior rock facades, and exposed beam ceilings.[86] The designs mirrored those found in Twin Palms Estates, offering different variations of similar plans. By March 1959, all 15 homes were sold, and most remain extant in good condition today.

Tamarisk 10th Fairway Ranch/Peacock Circle

After the initial success of both the Thunderbird Country Club and the Tamarisk Country Club, developers and investors quickly began formulating plans for residential communities surrounding both clubs. In 1955, Fred Mottle, a Palm Springs resident and co-owner of the Chi Chi Club, and Charles E. Jones, a Los Angeles-based factory owner, purchased the former Cobb Ranch, a 29-acre holding that bordered the 10th fairway at Tamarisk Country Club. Mottle and Jones commissioned Master Architect William Cody to prepare a master plans for the subdivision, which included construction of homes around a new circular drive, called Peacock Circle, sited south off Chappel Road. The concept plans called for leasable apartments with swimming pools, and approximately 50 bungalow-style homes for rent. However, by 1957, Cody and the developers had reworked the plan significantly, planning to build single-family residences and a hotel. In 1957, 10 homes were in various stages of completion, including residences for Mottle and Jones. The interior floorplans were designed by C.W. Doty, who later worked with Mottle on larger-scale projects in Palm Springs. In 1958, the 10 homes designed by William Cody were completed, but the hotel was never constructed.[87] It took decades for buyers to infill the rest of the lots around Peacock Circle.

Sunny Lane Palm Estates

While cooperative housing development projects and high-end gated subdivisions continued to be developed during the 1950s and 1960s, tract style development was also occurring in Rancho Mirage, most notably in what is now the Tamarisk Heights neighborhood. Along Ferber Drive, Marber Drive, and Palmdale Road between Sunny Lane and Cobb Road, west of the Tamarisk Ranchos, developers began building single-family residences featuring Roman tubs, Palos Verdes stone fireplaces, and entryways clad in slate and terrazzo. The first group of approximately 50 residences was completed between 1961 and 1962. Another group of homes was completed in 1973.[88] The first 50 homes, built between 1961 and 1962, were designed as Contemporary style homes, and later homes built in the 1970s were built as Tract Ranch style residences. All houses featured attached garages with

front-gabled and cross-gabled forms. Within Sunny Lane Palm Estates, some properties retain their historic integrity, but many homes have been substantially remodeled or replaced over time.

Sun Valley Estates

The Tamarisk Heights neighborhood was significantly built-out along the western ends of Cobb Road, Sun Valley Drive, and Chappel Road where they intersect with Da Vall Drive when a former U.S. Army Air Force pilot named Charles Cash developed Sun Valley Estates from 1963 through 1968. Over the course of six years, Cash funded the construction of 90 Tract Ranch style single-family residences in the neighborhood.[89] Over time, the decorative motifs of the Tract Ranch houses evolved from minimalist and modernistic designs to a neo-Spanish Revival aesthetic that included terracotta tile roofing and stucco arches.

Blue Skies Village

Following the opening of Thunderbird Country Club and the construction of his own home in 1952, Bing Crosby was one of the early visionaries who recognized the potential for both high-end and middle-class community building in Rancho Mirage. In 1953, Crosby purchased 22-acres of land adjoining Highway 111 north of the burgeoning Thunderbird Country Club and Thunderbird Heights community to build a modest trailer park community. Crosby knew that trailer parks were popular in post-WWII Palm Springs and surmised that the popularity would inevitably spread southward to Rancho Mirage. He created the Blue Skies Trailer Village cooperation, made himself president, and gathered a group of 48 investors, mostly friends from the entertainment industry, naming many of the planned streets after them. Crosby employed his assistant, Pete Pettito to oversee the development and later hired builder Rex Thompson as the project contractor. In 1954, the plan for Blue Skies Village was approved, with 307 lots for trailers. Crosby hired William Cody to create a master plan, design the trailer spaces, create a plan for the clubhouse/pool, and assist with landscape design. The Blue Skies Trailer Village was constructed between 1954 and 1956.[90] Today, the village retains many of the original Cody elements, including the clubhouse, pool, trailer park types, and landscape layout.

Tierra Del Sol

Robert McCulloch, founder of McCullough Engineering, identified a gap in the housing market in Rancho Mirage wherein prospective buyers needed a third housing option as an alternative to the country clubs and Blue Skies Trailer Village. McCulloch planned a modest community east of Thunderbird Country Club off Bob Hope Drive along the circular Vista Del Rio road. The plan called for 39 homes, a shared pool, and a community center west. McCulloch hired Richard R. Leitch, a young Los Angeles based architect and recent USC School of Architecture graduate to design the homes. The Desert Sun Development Corporation broke ground in August 1956 and had completed four model homes by November of that year. The models employed a Contemporary style with state-of-the-art appliances and modern features, including accordion-type hardwood partition walls and sliding screens.[91] While some of the original homes retain their original character, many have been modernized significantly, changing the look and feel of the original community. The shared pool and community center are no longer extant, and the cooperative nature of the community is no longer intact.

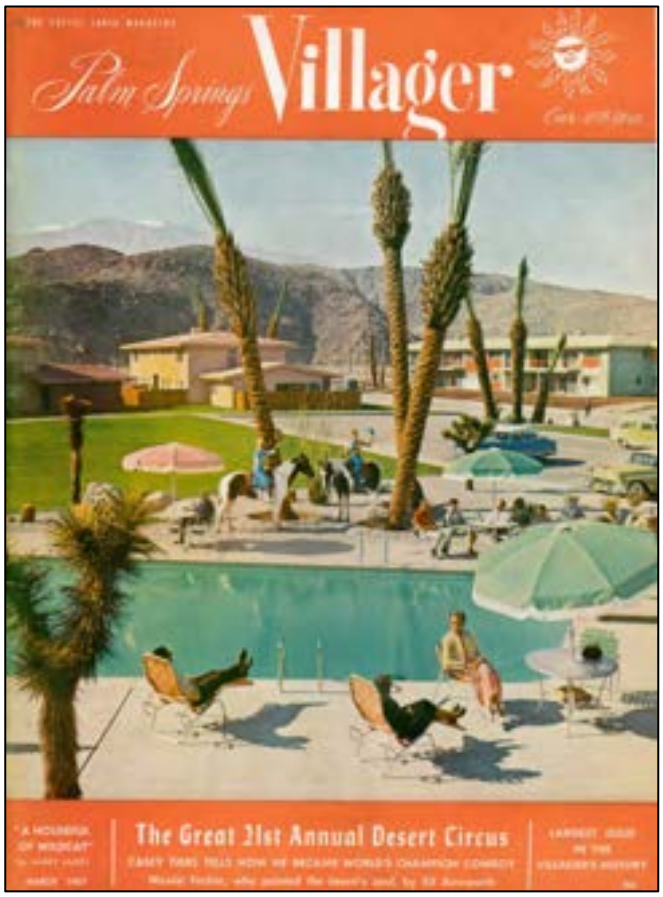

Figure 29. Desert Braemar community illustration, ca. 1957. (Source: Palm Springs Villager, March 1957)

Desert Braemar

In 1955, the Braemar Construction Corporation took note of the success of the Thunderbird and Tamarisk Country Clubs, as well as the popularity of the Blue Skies Trailer Village, and planned a cooperative housing development between the two clubs along Highway 111. The cooperative resort was built to appeal to people seeking enjoyment in a maintenance-free community with ample amenities. The Braemar Construction Corporation commissioned Master Architect John C. Lindsay to design the community, which was to include 100 apartments and townhouses on a 12-acre site with a shared pool, gardens, putting green, and clubhouse. Lindsay, a previous partner with the firm, Palmer, Krisel & Lindsay, was experienced in the design of commercial office blocks and housing projects prior to his work on Desert Braemar. He

continued to work on residential tracts after the Desert Braemar project, which was constructed between 1956 and 1957.

When finished, the $3 million Desert Braemar development included one and two-story buildings with open-tread stairs, open stairwells, decorative metal railings, and low roof lines. The townhomes featured floor-to-ceiling windows, open-plan living spaces, and exposed beam ceilings. Overall, the property blended tropical motifs, using pink-tiled Bermuda roofs, with Desert Modernist design elements to create a unique look and feel to the entire property. Master Interior Designer Arthur Elrod added more modernist elements to the apartments and townhomes complementing Lindsay's vision.[92]

After the last apartments were completed in 1957, the Braemar Construction Corporation planned to construct another 90 units on an adjacent property, but the company soon fell into legal trouble, and the units were not built. By 1960, the existing owners of the apartments and townhomes had locked in 99-year leases, and the co-op structure remains in place today.[93]

4th Fairway Cottages/Thunderbird Palms West

At the southern end of the Thunderbird Country Club off Highway 111 and Paxton Drive, local builder and entrepreneur George Holstein commissioned Master Architect William Cody to design 19 cottages around a central pool along Thunderbird's fourth fairway. Constructed in 1957, these 1,300 square foot homes were envisioned as weekend homes, initially named as the 4th Fairway Cottages. In 1964-1965, additional homes were built east of the original 19 cottages.[94] Today, the community of 38 homes is known as Thunderbird Palms, a stock cooperative community. The original 19 homes are referred to as Thunderbird Palms West and the latter grouping is known as Thunderbird Palms East.

Tamarisk Ranchos I and II

After the opening of the Tamarisk Country Club, one of its initial founders, financier and Southern California developer Lou Halper, originated an idea for a nearby mini-resort exclusively for Tamarisk members who were looking for a more private and manageable alternative to a home on the country club's fairway. Halper originally planned for a 40-lot subdivision with two groupings of communally designed homes. In 1956, Halper hired Master Architect William Krisel, whom he had worked with previously in Los Angeles, to design the first phase, composed of 16 Contemporary style homes around a communal pool and gardens that retained and integrated existing date palm trees on the site. The initial group of homes, Tamarisk Rancho I, was built in 1958 by the Devon Construction Company, owned

by Lou Halper. Bound by Pinto Palms Way, Los Pueblos Way, Palm View Road, and Tamarisk Lane. Each home was designed by Krisel to include a spacious floorplan, approximately 2,000 square feet, with post-and-beam construction, large rear terraces, floor-to-ceiling glass windows, post-and-beam construction, open ceilings, and open-plan living areas.[95]

Apart from Halper, the initial owner-residents included City National Bank founder Al Hart, scriptwriter Harry Tugend, actor Groucho Marx, radio and television producer John Guedel, film producer Lawrence Weingarten, Elizabeth Taylor's agent Jules Goldstone, Abbott & Costello producer Alex Gottlieb, and Los Angeles radio station owner Harry Maizlish.[96]

In 1958, Halper sold the property to the High Dale Company. Under High Dale's ownership, the second group of 16 homes, Tamarisk Ranchos II, was constructed in 1961 immediately north and adjacent to the first phase. The High Dale Company generally followed the plans produced by Krisel and the Devon Construction Company but changed the inward orientation of the buildings and made all roofing forms low-pitched hipped roofs.[97]

Da Vaal Estates

In 1960, developer Robert Marx partnered with architect Val Powelson to create an apartment cooperative north of and adjacent to the Wonder Palms Hotel and Guest Ranch on the former Everett Da Vall Ranch.[98] They designed the property to consist of five cross-shaped, single-story buildings each consisting of four 1,400 square-foot apartments with two bedrooms and two bathrooms. Because of Powelson's dislike of rectangular shaped structures, the units played with structure and geometry to utilize triangular shapes wherever possible. Powelson designed the apartments with the roofs of all apartments featuring sharply angled triangular gable forms, large overhangs, floor to ceiling windows, open floor-plans, and complementing geometric landscaping between the units which did not share any adjoining walls. These Contemporary style apartments were completely unique when they were finished in 1960 due to their striking design and bold layout. Some of the date palms and grapefruit trees from the Da Vall ranch were retained during construction to add to the character of the cooperative development and tie the new residences at the Da Vaal Estates to the history of the area.[99] The Da Vaal Estates remain relatively intact today, with few exterior changes over time.

Tamarisk West I, II, & III

In the 1950s and 1960s, Master Architect S. Charles Lee partnered with his son-in-law, George Keiter, to develop Federal Housing Administration (FHA)-funded residential communities across the country.[100] By the early 1960s, Lee's daughter and Keiter's wife, Connie, was an

award-winning golfer. This motivated Keiter and Lee to develop Tamarisk West in 1964, immediately adjacent to the western end of Tamarisk Country Club off Da Vall Drive under their firm Lee-Keiter Enterprises.

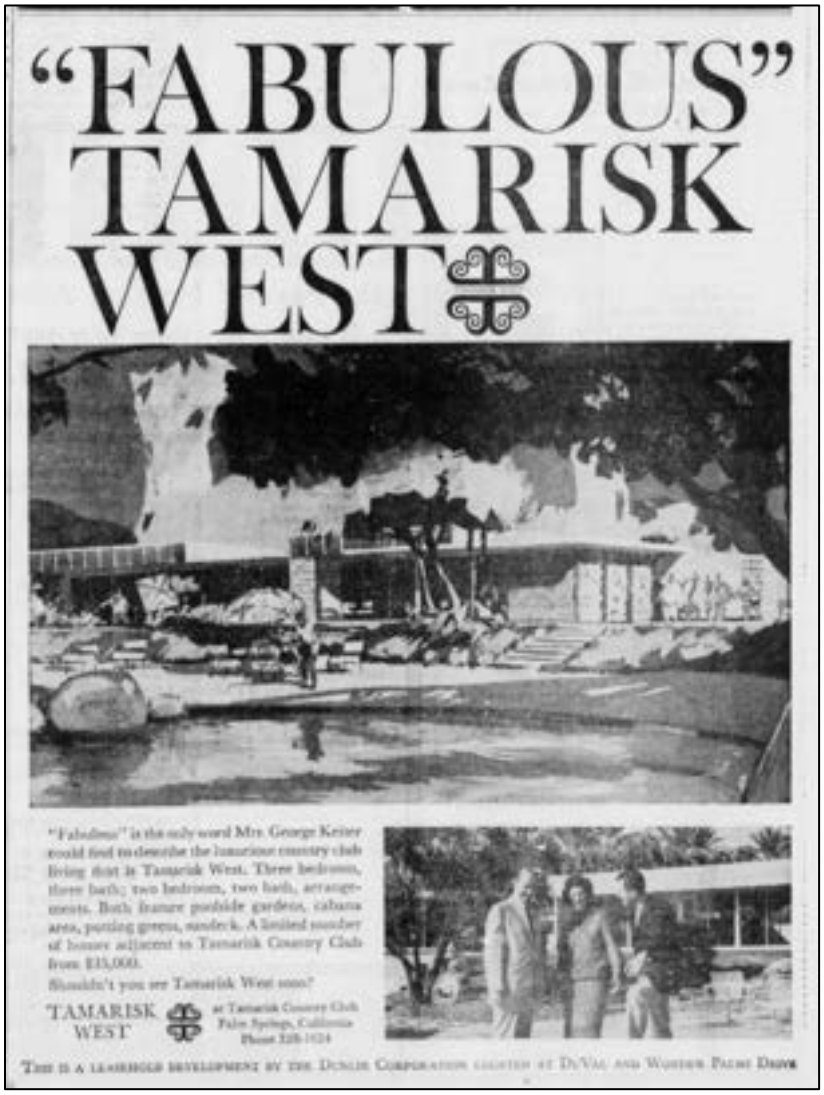

Figure 30. Tamarisk West community advertisement, ca. 1965. (Source: *Desert Sun*, January 22, 1965)

Keiter-Lee hired Trenton J. Dunphy as the general contractor for the Tamarisk West project. Dunphy was the contractor for the Sandpiper condominiums in Palm Desert, designed by Master Architect William Krisel. Like Krisel's designs for the Sandpiper project, at Tamarisk West Lee designed Post and Beam style homes with rock wall and stucco facades and decorative breezeblock walls in muted desert shades light-pink and brown, exemplifying the Desert Modern subtype of the International architectural style. The rear elevations featured floor-to-ceiling windows with patios shaded by an extended eave that overlooked a common-area pool with mountain views. The first group of homes at Tamarisk West, Tamarisk West I, were built at the southern end of the development in 1964 and officially opened in 1965.

Lee-Keiter Enterprises commissioned architect Michael Allan Black to prepare designs for the second group of homes, Tamarisk West II. A 1961 graduate of the USC School of Architecture, Mr. Black established his architectural practice in 1968 after working for Master Architect E. Stewart Williams, whose portfolio included the Santa Fe Savings Bank and the Upper Mountain Station of the Palm Springs Aerial Tramway, as well as the Frank Sinatra House. For Tamarisk West II, Michael Allan Black mirrored elements from Tamarisk West I. By

1969, Tamarisk West II was constructed. The third and final phase of the project, Tamarisk West III, was completed in 1972.[101]

Tamarisk Gardens

Richard McCarthy Jr., primarily known as a developer of luxury homes in Pasadena, commissioned Huntington Beach-based architect J. Donald "Don" Hartfelder in 1964 to construct a compact resort-style community of 28 duplex condominiums sited between the Wonder Palms Hotel and the Tamarisk Country Club on the north side of what was then Wonder Palms Road. A graduate of the USC School of Architecture, Hartfelder primarily practiced in Los Angeles and Orange Counties and, although he specialized in medical buildings, his time at USC and works throughout Southern California informed his modernist aesthetic, including his design of the Tamarisk Gardens.[102]

Completed in 1965, Tamarisk Gardens featured a central pool, interior courtyards, planned gardens, and an entertainment porch. The condos were built as two-bedroom, two bath, 1,800 square-foot units with marble fireplaces and open-plan living rooms. At the exterior, the condos featured flat roofs, floor-to-ceiling windows, low elevations, and simple lines, with stucco-clad walls. As such, the homes blend with the surrounding landscaping, using muted colors on the exterior, apart from colorful recessed front doors, illustrating elements of Desert Modernism. Like the cooperative living complex to the north, Dal Vaal estates, residents at the Tamarisk Gardens were offered hotel and maid services from the Wonder Palms Hotel and Guest Ranch.[103]

Thunderbird Villas

In 1965, north of the already platted Thunderbird Heights subdivision, developer and Thunderbird Country Club member George M. Holstein planned another gated community with several shared community pools. Holstein hired USC School of Architecture graduate Richard Robert Leitch, AIA, architect of the nearby Tierra Del Sol community, to design the Thunderbird Villas condominiums. Leitch's design incorporated a mix of Contemporary and neo-Spanish Revival style elements, with rounded terracotta tiles for the roofing, but also open interior floor-plans with exposed beams, and full-height windows. Brick fireplaces with rounded arches also demonstrated Spanish Revival inspiration, but the interior recessed entries with courtyards were a Contemporary style touch. The first group of approximately 50 homes opened to residents in 1966. Subsequent Thunderbird Villas condominium units were built in the 1970s.[104]

Cody Court 10th Fairway Condominiums

The last small-scale resort community constructed adjacent to the Tamarisk Country Club was Cody Court, a group of eight condominium units with a shared pool built along the 10th fairway of the Tamarisk golf course east of the Peacock Circle subdivision. The property was originally within Fred Mottle and Charles E. Jones' 1956 Peacock Circle development designed by Master Architect William Cody, but the property was not developed, leaving a large open parcel north of the 10th hole green. To in-fill this land, the vice president of the Tamarisk Country Club at the time, Will Rosenfeld, turned to William Cody who, again, was tasked with creating a suitable design for this community in 1969. By this time, Cody had evolved his designs from earlier more typical International and Contemporary styles, into a distinct Desert Modernist style, taking inspiration from the environment while utilizing familiar techniques. The buildings were designed to feature wide expanses of uninterrupted brick walls painted with light desert colors that were broken up by floor-to-ceiling windows, wide overhanging flat roofs, and recessed patios/entrances. Desert flora was incorporated into the landscape along with interspersed palm trees. The Cody Court project was completed in 1970 and remains largely unaltered. They have become a unique part of the Tamarisk Country Club landscape and are immediately recognizable for their distinct design elements and configuration.[105]

Thunderbird North

In 1953, a Dallas developer named A. Pollard Simons bought the 40-acre Loupe Ranch north of Thunderbird Country Club on the northeast corner of Country Club Drive and Morningside Drive. Loupe Ranch included two homes, with citrus trees, date trees, and a vineyard. By 1955, Simons commissioned Master Architect William Cody to design a seven-acre portion of the property as a small private resort community for Simons and his friends who were all members of Thunderbird Country Club and included Texas oilman Monty Moncrief and Thunderbird's all pro golfer Jimmy Hines. Simons and his friends gradually built 10 homes around a central pool with an 8,000-square foot private putting green. Each home was custom built, with three designed by William Cody and another three designed by Wexler & Harrison, a partnership of Master Architect Donald Wexler and Master Architect Richard Harrison . Several other homes were designed in a compatible aesthetic although the architect for these properties has not been confirmed. The first two homes in Simons' Thunderbird North project were completed in 1956 and the last was completed in 1978.[106]

Green Acres

In 1962, developers Rubin, Leeb, and Horwich hired architect Robert Marx to design a small 30-unitsubdivision at the southwest corner of Palm View Road and Tamarisk Lane. A USC graduate, and son of Gummo Marx, Robert Marx designed three spec homes, between 1,800 and 2,500 square feet for use as models for the Green Acres project. The models were assigned breezy names, indicative of resort themes: 'Pacific', 'Caribbean', and 'Mediterranean' although all were designed in a Desert Modernist style. At least 10 homes in the Green Acres project were built utilizing Marx's designs. The remaining lots were in-filled in 1999-2000, during that time one of the original Marx-designed homes was demolished and replaced. Another home designed by Robert Marx, within the Carolyn Court cul-de-sac, was demolished and replaced in 2016.[107]

Tamarisk Village

Sited within the Tamarisk Heights neighborhood, Tamarisk Village was conceived as a $2.5 million residential community composed of 40 detached single-family homes ranging in cost between $50,000 and $60,000. The project was initially planned by developer Don Baker through his company, Far West Development, who purchased the land in 1960. Baker hired Master Architect Hugh Kaptur to design four models, but the development quickly fell through due to economic constraints leaving only a small number of homes designed by Kaptur within the project boundaries. The Kaptur homes are sited on Mottle Circle and were built in ca1962-1963. Kaptur additionally designed Don Baker's residence in the project boundary. Completed in 1963 in the Desert Modernist style, the Baker residence features a recessed front entry, a prominent rock wall, a flat roof with a wide overhang, floor-to-ceiling glass windows, and subtle Spanish motifs.[108]

Sky Mountain

In 1963, Southern California builder and developer Merton H. Baker bought 640 acres of land west of Highway 111 between Tamarisk Country Club and Thunderbird Country Club to build a large resort community over a ten-year development period. The community, called Sky Mountain, was going to be designed with commercial properties, residences, a hotel, an eighteen-hole golf course, a clubhouse, and other recreational facilities. William Cody was initially tasked with designing oversight of residential construction within this new subdivision. However, by 1971, one apartment building and a few home sites had been improved. Sky Mountain was declared bankrupt and the remaining 605 acres were sold on the market. Today, the Sky Mountain Condominiums from 1964 remain one of the only markers of the original community, which sprawled up a canyon along Stellar Drive and Mirage Cove Drive.

Over time, single-family residences gradually filled the streets of Sky Mountain, which was only fully in-filled by the early 2000s.[109]

Associated Property Types

The first boom of residential development in Rancho Mirage was tied directly to the popularity of the country club industry in the post-war era. While planned residential development began with the with the Rio Del Sol and Magnesia Falls Cove communities, post-war development was primarily driven by country club investment. Early residential subdivisions and cooperatives throughout Rancho Mirage were largely composed of single-family residences. Most condos and apartments within residential communities were not developed in large quantities until the late 1970s and 1980s. While new residential subdivisions and cooperatives focused construction around new country clubs, commercial development stayed localized around Highway 111 throughout this period.

Single-Family Residences

Residential properties in subdivisions and cooperatives from 1951 to 1973 largely consisted of Tract Ranch, Custom Ranch, Contemporary, Post and Beam, International, and Desert Modernist homes. These were built in the Thunderbird Heights, Valley of the Sun, Peacock Circle, Sunny Lane Palm Estates, and Sun Valley Estates subdivisions. The same styles were used in the Blue Skies Village, Tierra Del Sol, Desert Braemar, 4th Fairway Cottages, Tamarisk Ranchos, Da Vaal Estates, Tamarisk West, Tamarisk Gardens, Thunderbird Villas, 10th Fairway Condominiums, Thunderbird North, Green Acres, Tamarisk Village, and Sky Mountain Condominiums, which all had varying degrees of shared community resources.

Single-family residences within Rancho Mirage subdivisions and cooperative communities were largely constructed on either undeveloped land or former agricultural property. Single-family homes were constructed with Tract Ranch, Custom Ranch, Contemporary, Post and Beam, International, and Desert Modernist styles.

Single-family residences constructed in independent residential subdivisions from 1951 through 1973, exhibit the following character defining features listed below.

- One or two stories
- Mid-century architectural styles – Tract Ranch, Custom Ranch, Contemporary, Post and Beam, International, or Desert Modernist
- Private driveways
- Attached or detached garages/carports

- Gable, hipped, or flat roofing forms
- Low-pitched roofs
- Large overhangs
- Metal windows
- Large patios

Condominiums and Cooperative Apartments

The condominiums and/or apartments within Desert Braemar, Thunderbird Palms West, Da Vaal Estates, Tamarisk Gardens, Thunderbird Villas, and the Sky Mountain Condominiums were constructed on undeveloped lots that was previously agricultural or ranching land. Developers built condos using Spanish Styled Ranch, Tract Ranch, Contemporary, Post and Beam, International, or Desert Modernist styles.

Condominiums and apartments outside country clubs from 1951 through the 1973 exhibit the following character defining features listed below.

- One or two stories
- Paired and mirrored homes sharing a wall or multi-unit buildings
- Mid-century architectural styles – Spanish Styled Ranch, Tract Ranch, Contemporary, Post and Beam, International, or Desert Modernist styles
- Shared or individual driveways
- Gable, hipped, or flat roofing forms
- Large metal floor-to-ceiling windows
- Shared amenities (pools, tennis courts, gyms, etc.…)

Significance Thresholds

To be eligible for listing in the NRHP, CRHR, or Local Register, a property dating to Rancho Mirage's *Residential Subdivisions and Cooperatives* period must be significant under at least one of the following criteria.

NRHP Criterion A/CRHR Criterion 1

Residential properties throughout Rancho Mirage if they can be shown to have made a significant individual contribution to the board patterns of national, state, or local history, particularly relating to the evolution of the residential development in Rancho Mirage after the institution of the Thunderbird Country Club and prior to incorporation in of the City of Rancho Mirage.

NRHP Criterion B/CRHR Criterion 2

Residential properties may be significant under Criterion B/2 for their association with the life of a person important in the development of Rancho Mirage residential subdivisions and cooperatives. A residential property that can be documented as associated with an important person in national, state, or local history may qualify for designation. In addition, the individual must have been associated with the resource during the period that the person's significant achievements and contributions occurred. Prominent figures related to the residential development of Rancho Mirage may include Dan Palmer, George M. Holstein, Fred Mottle, Charles E. Jones, Charles Cash, Bing Crosby, Pete Pettito, Robert McCulloch, John C. Lindsay, Lou Halper, Robert Marx, George Keiter, Richard McCarthy Jr., A. Pollard Simons "Rube" Rubin, William Leeb, Filmore Horwich, Don Baker, or Merton H. Baker. Additional significant individuals may be discovered through future research.

NRHP Criterion C/CRHR Criterion 3

A residential property in Rancho Mirage may be eligible under Criterion C/3 for embodying distinctive characteristics of a style, type, period, or method of construction. A notable work of a master builder, architect, or designer would also be significant under Local Register Criterion C if the residential property was designed or constructed as part of the residential development of Rancho Mirage from 1951 through 1973.

NRHP Criterion D/CRHR Criterion 4

A residential property related to the overall residential development of Rancho Mirage may be significant under Criterion D/4 if it has the potential to yield important information of scientific value. Unevaluated and undocumented elements of residential properties may be found to be significant using this criterion.

Local Register Criteria

A residential property dating between 1951 and 1973, may be significant under Local Register Criterion 1 if it is representative of a mid-20th century architectural style or reflects special elements of early residential period, type, style or way of life important to the City; under Local Register Criterion 2 if it is associated with a business or use which was once common but is now rare or non-existent within the City; under Local Register Criterion 3 if it is representative of the evolution or development or associated with the cultural, religious, educational, political, social or economic growth of the City, county, state or nation, like a subdivision or residential cooperative community; under Local Register Criterion 4 if it represents the work of a master builder, engineer, designer, artist or architect whose

individual genius influenced the *Residential Subdivisions and Cooperatives* period; under Local Register Criterion 5 for an association with a historic event person(s) that have made a meaningful contribution to the City, state or nation; under Local Register Criterion 6 if it has a high potential for yielding information of archaeological interest; under Local Register Criterion 7 if it embodies elements of outstanding or innovative attention to architectural or engineering design, detail, craftsmanship or use of materials; or under Local Register Criterion 8 if it contains an unusual natural feature.

Integrity Considerations

To be eligible for listing in the NRHP, CRHR, or Local Register, a residential property, built between 1951 and 1973, must retain sufficient integrity to convey its significance. A property nominated under NRHP Criteria A/CRHR Criteria 1 should retain integrity of location, setting, feeling, and association. A property nominated under NRHP Criterion B/CRHR Criterion 2 should retain integrity of location, design, feeling, and association, as the physical condition of a site is directly related to connection between a property and a significant individual. A property nominated under NRHP Criterion C/CRHR Criterion 3 should retain integrity of design, materials, workmanship, and feeling, as these are critical for a property to embody distinctive characteristics of a style. Some alterations may be acceptable if the property retains its essential features and overall original form. A property nominated under NRHP Criterion D/CRHR Criterion 4 should retain integrity of location, materials, and association.

A property nominated under Local Register Criteria 1, 4, or 7 should retain integrity of design, materials, workmanship, and feeling. A property nominated under Local Register Criteria 2, 3, or 5 should retain integrity of location, setting, feeling, and association. A property nominated under Criteria 6 or 8 should retain integrity location, materials, and association.

Theme 6: Commercial Development, 1934 – 1973

In Rancho Mirage, commercial and civic development was spurred by residential interests. As residential tracts began to develop in the post-WWII era, Highway 111 anchored the construction of new commercial properties. The earliest commercial projects were in the vicinity of Magnesia Falls Cove, before extending north and south along the Highway 111 corridor. These early commercial, hotel, civic and institutional-use properties provided the backbone for living that fostered community development in Rancho Mirage and solidified the City's arrangement of uses between country clubs, golf courses, and residential communities that have come to characterize the City's history.

Table 5. Notable Early Commercial Buildings in Rancho Mirage

Identifier	Year Built	Address	Extant
Louis Krupp Studio	1948	71-555 Highway 111	Yes
Veldt Street Commercial Buildings	1950	Rancho Mirage Lane East Veldt Street	Yes
Original Rancho Mirage United States Post Office	1951	Highway 111 (Unknown)	No
Casbah Apartment Hotel	1957	42-457 Rancho Las Palmas Drive	Yes
Dancing Waters/Whispering Waters	1958	42-536 Rancho Mirage Lane	Yes
Safeway Grocery Store	1958	71-550 Highway 111	Yes
Erik's Furniture Store	1960	71-285 Highway 111	Yes
Christian School of the Desert	1963	72-850 Clancy Lane	No
Elmer's Market	1964	42427 Rancho Mirage Lane	Yes
Lord Fletcher's Restaurant	1966	70-385 Highway 111	Yes
Rancho Mirage Elementary School	1967	42-985 Indian Trail	Yes
Rancho Super Car Wash (Building)	1967	71-490 Highway 111	Yes

Eisenhower Medical Center	1971	39-000 Bob Hope Drive	Yes
Las Casuelas Nuevas	1973	70-050 Highway 111	Yes

Figure 31. Rancho Mirage Chamber of Commerce members, 1964.
(Source: Palm Desert Post, Volume 2, Number 27, 2 July 1964)

One of the earliest extant commercial properties built in Rancho Mirage is located at 71-555 Highway 111, between Indian Trail and Dunes View Road. Constructed in 1948, the property was originally the home and studio of German artist Louis Krupp, who moved to the Coachella Valley in 1946 at the age of 58 years old.[110] The Spanish Colonial Revival style office building has housed a mix of uses over time after Krupp including the Purvis Gallery of Design, another art studio, and Rose Mortuaries, the current occupant.

By 1950, additional commercial buildings were constructed in the center of Magnesia Falls

Cove along present-day Highway 111 and Rancho Mirage Lane, originally called 'The Veldt' or 'Veldt Street' until 1988.[111] Referring to the area's naturally barren landscape, Veldt is a Dutch and Afrikaans term describing treeless open grasslands in Southern Africa. The Veldt Street commercial cluster included Elmer's Minute Market addressed as 42-427 The Veldt and Rancho Mirage Paint and Hardware under the proprietorship of father and son L.E. and David Moore at 42-462, Gallery del Sol, also addressed as 42-462 The Veldt. A community swimming pool was installed at the end of The Veldt. Operated as the Rancho Mirage Swim Club, individual and family memberships provided access to the pool, recreation area, and picnic and barbecue facilities.[112]

Three extant Veldt Street properties that date to the pre-incorporation period are identified as 42-414 Rancho Mirage Lane and 42-487 East Veldt, both constructed in 1950 with a mix of Spanish Colonial Revival and Ranch style features; and 42-427 Rancho Mirage Lane, Elmer's Minute Market, which opened in 1964.[113] This International style building is now occupied by property management firm, Desert Management. Most of the other original commercial buildings at The Veldt, on present-day Rancho Mirage Lane and East Veldt Street, have been either removed or replaced over time.

Figure 32. The first Rancho Mirage mailboxes, ca. 1930s.
(Source: *Desert Sun,* May 5, 2022)

Before Rancho Mirage had a post office, mail was routed through Indio and distributed to Rancho Mirage via Rural Free Delivery. In 1936, 14 residents that were living in Rancho Mirage, including those with homes in the Magnesia Falls Cove and nearby ranches, independently set up a row of mailboxes along the Veldt for easy delivery. However, by the 1940s, residents wanted a local office for their own convenience. Estella Ewart, the tract manager in Rancho Mirage, was instrumental in organizing the effort to establish the post office. She organized neighbors to sign petitions demanding that the office be built. In response, the Federal government finally approved the request and the first post office in Rancho Mirage began construction in 1950.[114] The California Building and Supply Company built the post office as a new separate wing within the Rancho Mirage Tract Office at 71-841 Highway 111, owned

by the developers of the Magnesia Falls Cove subdivision, A. Ronald Button and Dave F. Culver. The post office officially opened its doors on February 1, 1951, when Sidney F. Greenleaf was sworn in as the first postmaster.[115] He served until 1967.[116] The office moved in 1954 and again in 1962, both times in the vicinity of the current Rancho Mirage post office building, which was built in the early 1990s.[117] The other historic-era post office buildings are no longer extant.

One of the first hotels in Rancho Mirage was conceived in 1956, when Dr. Harry Johnson, decided to buy some land in the Magnesia Falls Cove neighborhood, which was then simply referred to as Rancho Mirage. Johnson wanted to fulfill his dream of building and owning his own hotel. He enjoyed bringing his family out to the desert for weekends and vacations and wanted to create a permanent establishment in the Coachella Valley to anchor him to this locale. To realize his vision, Johnson hired Long Beach architects Powers, Daly, and DeRosa, who had previously designed his family home in Lakewood. They developed a site plan and design for a group of buildings gathered around a pool and central loggia. In October 1956, Johnson received planning permission and construction began in the spring of 1957. Initially called "Dancing Waters", the name eventually became "Whispering Waters" when construction finished, and the establishment opened by January 1958.[118]

Overwhelmed with the difficulties of managing the commercial establishment, the Johnson family sold the property in October 1958 to an ownership group of television stars such as Lloyd Bridges, Dennis Weaver, Carolyn Jones, Hugh O'Brian, and Pat Conway. The celebrity group sold the establishment again in 1960, and the Whispering Waters hotel remained a popular destination until the 1990s, when the City of Rancho Mirage acquired the property and converted it into a senior housing complex.[119]

Another small hotel from the same period was the Casbah Apartment Hotel. In 1957, developer Bill Boland opened the establishment. Designed by McCallum & Pitchford, the hotel was designed for short- and long-term guests visiting Rancho Mirage looking to golf for the weekend or stay for the season. Today, the Desert Modern style buildings at 42-457 Rancho Las Palmas Drive are all long-term apartments.[120]

From the 1950s through the late 1960s, developers constructed several notable commercial properties along Highway 111 in Rancho Mirage. Many of these early shops and stores remain extant, though some have been substantially altered through renovations. In 1958, Novikoff Engineers constructed one of the earlier grocery stores in Rancho Mirage at 71-550 Highway 111.[121] Now a consignment store, the building still clearly displays elements of the Desert Modernist style, with large windows and rock wall facades. At the northern end of

Magnesia Falls Cove, Ross "Erik" Erickson and his wife Marge constructed Erik's Furniture Store in 1960 at 71-285 Highway 111. The building, which was extensively modified in 1973, continues to operate as a family-owned store in the same location.[122] Two years later in 1966, the Howard Lapham designed Lord Fletcher's Restaurant at 70-385 Highway 111 opened its doors at its location between Thunderbird Heights and Thunderbird Country Club. With its English countryside inn-inspired decorative elements, the restaurant became one of the early high-profile restaurants for notable local residents to gather along what would become known as "Restaurant Row."[123] While the restaurant has closed, the building remains extant in 2025. Back south closer to the Magnesia Falls Cove neighborhood, Harold Bissner and Robert Pitchford completed the Rancho Super Car Wash at 71-490 Highway 111 by 1967.[124] The car wash remains in operation today and the pink elephant neon sign has become a local landmark.

Figure 33. Las Casuelas Nuevas Restaurant concept drawing, ca. 1972. (Source: *Desert Sun*, September 16, 1972)

One of the more prominent pre-incorporation restaurants to open on what would become Restaurant Row was Las Casuelas Nuevas, which had its roots dating back to 1958, when Florencio "Del" Delgado and his wife Mary opened their first Mexican restaurant in the Coachella Valley, Las Casuelas Original, in Palm Springs at 368 North Palm Canyon Drive.[125] They utilized family recipes to serve local residents until 1972, when they decided to expand their operation. They retained control of the original location but endeavored to build a larger Spanish Colonial Revival style restaurant in Rancho Mirage. To realize their vision, they hired Arthur Valdes, who went on to design the clubhouse at the Rancho Las Palmas Country Club, to develop a design for their new location.[126] In April 1973, Las Casuelas Nuevas officially opened at 70-050 Highway 111.[127] Since its opening, the Delgado family has expanded and modernized the restaurant, but original components are still readily identifiable.

In 1971, the first Eisenhower Medical Center, now Eisenhower Health, building was completed, providing much needed local medical services to the community. Following the completion of the hospital, possible annexation and incorporation interests began to quickly evolve as new residential, commercial, and municipal properties developed in Rancho Mirage. The Cities of Cathedral City and Palm Desert demonstrated interest in annexation to encompass the new hospital. In response, the residents of Rancho Mirage swiftly jumpstarted a movement to incorporate. Residents voted 85% in favor of incorporation, which was officially completed on August 3, 1973, when Rancho Mirage became the 16th City in Riverside County.[128]

The first school in Rancho Mirage was the Christian School of the Desert, part of a network of private Hawthorne Christian Schools, which opened in the fall of 1963.[129] This small private school at 72-850 Clancy Lane taught kindergarten through eighth grade until Marywood Country Day School acquired the campus in 1986. In 2005, Marywood Country Day School agreed to merge with the Palm Valley Private School (ca. 1992) at 35-525 Da Vall Drive and the Clancy Lane campus officially closed in 2007.[130] By 2014, the old Marywood facilities and any original Christian School elements were demolished and replaced with a new housing development.

In 1965, the Palm Springs Unified School District purchased a 9.3-acre parcel off Indian Trail at the top of the Magnesia Falls Cove from Rancho Mirage Properties, Inc, for $60,000.[131] Construction finished in 1967, and the Rancho Mirage Elementary School opened in the fall of 1967, becoming the first public school in the community. The Chamber of Commerce officially dedicated the establishment in May 1968.[132] Over time the school continuously expanded to serve the needs of the growing Rancho Mirage community. In 2013, the City of Rancho Mirage used grant funds to construct a sidewalk along Mirage Road so students from the school could safely walk to the Rancho Mirage Library and Observatory of Highway 111.[133]

Figure 34. The Eisenhower Medical Center, now Eisenhower Health, ca. 1971.
(*Rancho Mirage at Fifty* Book, Source: City of Rancho in partnership with Desert Publications, Inc.)

Prior to Rancho Mirage's incorporation as a city in 1973, comedian Bob Hope and his wife, Dolores, purchased the 300-acres of undeveloped land from Hank Gogerty, the owner of the Desert Air Hotel, in 1961. Five years later in 1966, Hope donated 80 acres of that land for the construction of a hospital and volunteered to serve on the board. The board then asked Eisenhower in 1966, who at that time was a resident at the Eldorado Country Club in Indian Wells, to lend his name to the new establishment.[134] Eisenhower agreed and the project broke ground on November 26, 1969. The board commissioned Edward Durrell Stone, who had previously planned the Museum of Modern Art in New York City and the Kennedy Center in Washington D.C., to design the hospital.[135]

Before and while construction was beginning, Bob and Dolores Hope continued to fundraise for the hospital. Dolores helped establish the Eisenhower Auxiliary towards this end and donations from the Bob Hope Desert Classic contributed to funding operating costs during construction. Two years later, the 138-bed Eisenhower Medical Center was dedicated on November 27, 1971. Richard Nixon presided over the event, and the facility was opened to patients a month later in December 1971. Funded through continuous donations, the

hospital grew rapidly during the 1970s. In 1972, the Probst Professional Building opened, which was made possible through donations by Mr. and Mrs. Walter F. Probst. Three years later in 1975, the Eisenhower Medical Center completed the Kiewit Professional Building, which was donated by Mr. and Mrs. Peter Kiewit. During the same period, Thunderbird, Eldorado, Tamarisk, and Desert Island country clubs actively fundraised as well, contributing $7.2 million to further construction. By 1976, the hospital's admission rate topped 5,000.[136]

In 1978, the hospital added the 47-bed Mamie Eisenhower East Wing, and in 1979, the Wright Professional Building funded by Mrs. Harold (Hazel) Wright opened. Film producer Hal. B. Wallis also donated $1.2 million to support a new building bearing his name the same year and Walter and Leonore Annenberg donated $4 million to build the Annenberg Center for Health Sciences, which was completed in 1980.[137]

In the 1980s, the Eisenhower Medical Center continued to expand. An addiction treatment center attached to the Eisenhower Medical Center named the Betty Ford Center opened in 1982. Three years later, in 1985, the hospital opened the 100-bed Autry Tower. Other improvements during the '80s included additional buildings like the Eisenhower Imaging Center, the Dolores Hope Building, and the Barbara Sinatra Children's Center. In 2008, the hospital transitioned from a community hospital to a teaching hospital, and it is now the largest employer in Rancho Mirage. The Eisenhower Medical Center, now Eisenhower Health, continues to be improved with new facilities as it has become the premier hospital in the Coachella Valley.[138]

Associated Property Types

The properties related to commercial development in Rancho Mirage from 1934 through 1973 are largely confined to the Highway 111 corridor. Most of the first commercial construction in Rancho Mirage began in the vicinity of Magnesia Falls Cove, before spreading north and south along the road. A few early buildings constructed close to the highway were originally single-family residences that were later converted to fully commercial spaces. Due to the scattered nature of commercial development in Rancho Mirage, many of the first commercial buildings have been demolished and replaced over time.

Commercial Buildings

Commercial properties in Rancho Mirage built from 1934 to 1973 were almost exclusively developed on previously undeveloped lots. Near Magnesia Falls Cove, few of the earliest

commercial properties remain. Most have been demolished and replaced. While commercial development was steady through the middle of the 20th century and after the establishment of the first country clubs, it was not until the late 1970s and 1980s that commercial construction boomed with the implementation of strip mall, restaurant, and convenience store projects. Commercial buildings developed in the center of Rancho Mirage through the 1970s largely began as Spanish Colonial Revival style buildings, and slowly transitioned to mid-century styles like Contemporary, International, Post and Beam, and Desert Modernist styles. Some early Ranch single-family residences were converted into commercial buildings. Commercial properties during this period were largely limited to small one-story shops, restaurants, and convenience stores.

Commercial properties constructed in Rancho Mirage residential subdivisions from 1934 to 1973 exhibit the following character defining features listed below.

- One or two stories (usually one) in height
- Period Revival, Ranch, or Modernistic styles – Spanish Colonial Revival, Tract Ranch, Custom Ranch, Spanish Styled Ranch, Contemporary, Post and Beam, International, or Desert Modernist styles
- Automobile oriented with readily available parking
- Low-pitched or flat roof
- Metal framed windows

Significance Thresholds

To be eligible for listing in the NRHP, CRHR, or Local Register, a property dating to Rancho Mirage's *Commercial Development* period must be significant under at least one of the following criteria.

NRHP Criterion A/CRHR Criterion 1

Commercial properties throughout Rancho Mirage if they can be shown to have made a significant individual contribution to the board patterns of national, state, or local history, particularly relating to the evolution of the commercial development in Rancho Mirage after the beginning of construction within the Magnesia Falls Cove and prior to incorporation in of the City of Rancho Mirage.

NRHP Criterion B/CRHR Criterion 2

Commercial properties may be significant under Criterion B/2 for their association with the life of a person important in the development of Rancho Mirage commercial properties. A

commercial property that can be documented as associated with an important person in national, state, or local history may qualify for designation. In addition, the individual must have been associated with the resource during the period that the person's significant achievements and contributions occurred. Prominent figures related to the commercial development of Rancho Mirage may include Dr. Harry Johnson, Lloyd Bridges, Dennis Weaver, Carolyn Jones, Hugh O'Brian, Pat Conway, Bill Boland, Ross "Erik" Erickson, Howard Lapham, Estella Ewart, A. Ronald Button, Dave F. Culver, Sidney F. Greenleaf, Hank Gogerty, Walter Annenberg, Leonore Annenberg, and Betty Ford. Additional significant individuals may be discovered through future research.

NRHP Criterion C/CRHR Criterion 3

A commercial property in Rancho Mirage may be eligible under Criterion C/3 for embodying distinctive characteristics of a style, type, period, or method of construction. A notable work of a master builder, architect, or designer would also be significant under Local Register Criterion C if the commercial property was designed or constructed in Rancho Mirage from 1951 through 1973.

NRHP Criterion D/CRHR Criterion 4

A commercial property related to the overall residential development of Rancho Mirage may be significant under Criterion D/4 if it has the potential to yield important information of scientific value. Unevaluated and undocumented elements of commercial properties may be found to be significant using this criterion.

Local Register Criteria

A commercial property dating between 1951 and 1973, may be significant under Local Register Criterion 1 if it is representative of a mid-20th century architectural style or reflects special elements of commercial type, style or way of life important to the City; under Local Register Criterion 2 if it is associated with a business or use which was once common but is now rare or non-existent within the City; under Local Register Criterion 3 if it is representative of the evolution or development or associated with the cultural, religious, educational, political, social or economic growth of the City, county, state or nation, like a significant restaurant or noteworthy corporate office; under Local Register Criterion 4 if it represents the work of a master builder, engineer, designer, artist or architect whose individual genius influenced the *Commercial Development* theme; under Local Register Criterion 5 for an association with a historic event person(s) that have made a meaningful contribution to the city, state or nation; under Local Register Criterion 6 if it has a high potential for yielding

information of archaeological interest; under Local Register Criterion 7 if it embodies elements of outstanding or innovative attention to architectural or engineering design, detail, craftsmanship or use of materials; or under Local Register Criterion 8 if it contains an unusual natural feature.

Integrity Considerations

To be eligible for listing in the NRHP, CRHR, or Local Register, a commercial property, built between 1951 and 1973, must retain sufficient integrity to convey its significance. A property nominated under NRHP Criteria A/CRHR Criteria 1 should retain integrity of location, setting, feeling, and association. A property nominated under NRHP Criterion B/CRHR Criterion 2 should retain integrity of location, design, feeling, and association, as the physical condition of a site is directly related to connection between a property and a significant individual. A property nominated under NRHP Criterion C/CRHR Criterion 3 should retain integrity of design, materials, workmanship, and feeling, as these are critical for a property to embody distinctive characteristics of a style. Some alterations may be acceptable if the property retains its essential features and overall original form. A property nominated under NRHP Criterion D/CRHR Criterion 4 should retain integrity of location, materials, and association.

A property nominated under Local Register Criteria 1, 4, or 7 should retain integrity of design, materials, workmanship, and feeling. A property nominated under Local Register Criteria 2, 3, or 5 should retain integrity of location, setting, feeling, and association. A property nominated under Criteria 6 or 8 should retain integrity location, materials, and association.

Theme 7: Cityhood, 1973 – Present

By the late 1960s, Rancho Mirage had a year-round population of approximately 500 people and a seasonal residency of approximately 1,500.[139] The community was still small, though it had experienced two decades of steady growth following the construction of the Thunderbird and Tamarisk Country Clubs. Single-family residences, commercial improvements along Highway 111, two new elementary schools, the post office, and the new hospital were signs that the area was rapidly developing. So, when the neighboring communities of Cathedral City and Palm Desert began to show interest in expanding their spheres of influence to assume control of the new Eisenhower Medical Center, Rancho Mirage residents were ready to start a political movement to avoid this infringement on their self-sovereignty. Local citizens held an election in 1973 and 85% of voters chose to recognize Ranch Mirage as the sixteenth city in Riverside County. As a result, the City of Rancho Mirage was formally incorporated on August 3, 1973.[140]

Following incorporation, Rancho Mirage experienced a building boom in the mid-1970s, with 5,000 new dwellings reported to be in progress in 1974.[141] The newly formed city approved several early municipal improvements, including the construction of Fire Station #1 (Riverside Country Fire Station 50) on Highway 111 in 1976 and the Rancho Mirage City Hall in 1979. The country club development continued at a steady pace with the creation of the Springs, Sunrise, and Rancho Las Palmas Country Clubs. Commercial growth accelerated along the Highway 111 corridor, with the construction of mini-malls and the distinctive Organic Modern style Chart House, designed by Kendrick Kellogg in 1978. By 1979, the population of Rancho Mirage had reached 7,379.[142]

During the 1980s, the City of Rancho Mirage completed construction of the Whitewater Park in 1981 (now Rancho Mirage Community Park) and facilitated the creation of the Bighorn Sheep Preserve in the Santa Rosa Mountains in 1987.[143] In 1983, the Jack Nicklaus designed Club at Morningside course opened and the developer, Ed Johnsen, constructed condominiums around the course from 1983 to 1990. In 1984, the Harold Heers and Robert Muir Graves designed Rancho Mirage Country Club course opened to the public. The condos around the course at the country club were gradually built between 1985 and 1999.

Property types associated with the *Cityhood* period of Rancho Mirage include private residential, commercial, and municipal improvements. Because most resources constructed during this period are less than forty-five years old, many properties during this period have not been evaluated for the purposes of historic designation.

Country Clubs

Country clubs constructed within the *Cityhood* era include the Springs Country Club, Sunrise Country Club, Rancho Las Palmas Country Club, Rancho Mirage Country Club, and the Club at Morningside which were built during the 1970s and 1980s. In 2004, the Porcupine Creek private estate was completed, which reopened to the public in 2022 as the Sensei Porcupine Creek, a public resort and wellness retreat, owned by Oracle founder Larry Ellison.

The Springs Country Club

In the early 1970s, Edwin "Ed" C. Johnsen, president of the California land development company Trojan Properties, Inc., was looking for the opportunity to develop another successful country club, following the success of Thunderbird and Tamarisk. After some time searching, he finally made concrete plans to develop a new residential community and golf club in 1973 through a joint venture agreement with the Equitable Life Assurance Company. Together, they planned a $75 million dollar project to develop a country club between Thunderbird and Tamarisk Country Clubs and around the new Desert Island Country Club. The plan called for the development of seven hundred and sixty-two total condominium units (one hundred of those units on fairways), an eighteen-hole golf course, six tennis courts, and forty-six swimming pools across what would be known as the Springs Country Club.[144]

Construction began on the first homes in 1974 along Stanford Drive, which featured single-story, two-unit, condo buildings situated along cul-de-sacs with shared pools between the buildings. Desmond Muirhead designed the course following his successful work at the nearby Mission Hills Country Club and the Desert Island Country Club in Rancho Mirage. In May 1975, Johnsen and Equitable Life Assurance broke ground on their now 35,000 square foot clubhouse designed by William L. Rudolph, a Los Angeles based architect. The clubhouse was constructed by Torre Construction Company from Newport Beach, California. At the time of its construction, the building was the largest in Rancho Mirage.[145] Today, the clubhouse remains extant, and the club is still private. Notable celebrities who lived at the Springs Country Club include Willy Mays and Mary Martin.[146]

Sunrise Country Club

In 1971, developer Bill Bone purchased a 135-acre date ranch adjacent and east of the Thunderbird Country Club. Bone commissioned James C. Barg to design the clubhouse and Ted Robinson as the golf course architect for the new 18-hole course. After plans were approved, construction began in 1974. A total of 746 condominiums were built around the course, which included four small lakes, twenty-two swimming pools, eleven tennis courts,

eight pickleball courts, and the new clubhouse. Construction on the condos was completed in 1975 and by the end of the 1970s, most of the units were sold. Throughout this period, Bill Bone retained ownership of the clubhouse, golf course, and other common facilities. His success at Sunrise Country Club led to his development of additional country clubs in the valley including Rancho Las Palmas, Monterey Country Club, Palm Valley, and The Lakes.[147]

In 1981, Bone announced that he planned to sell the country club to the California Golf and Tennis Company, which owned and managed numerous other country clubs and golf courses. They agreed to buy the club for $1,492,000 but the deal was never finalized because Bone gave the homeowners the opportunity to buy the club. Soon after, a committee of homeowners formed a corporation and immediately forged a plan to retain communal ownership. After a quickly organized funding campaign, the collection of owners was able to secure funding for club purchase in November 1981.[148] Today, the country club remains a private member-owned private establishment. The condos remain relatively unaltered, and the 1974 clubhouse remains extant.

Rancho Las Palmas

Construction on the Rancho Las Palmas Country Club started in August 1976, when developer Bill Bone broke ground with the mayors of Rancho Mirage and Palm Desert. Bone put Jack Conlon, president of the Sunrise Corporation, in charge of the project. Under Conlon's direction, the Sunrise Corporation hired golf course architect Ted Robinson to design a 27-hole golf course; architects Arthur Valdes & Co. Ltd. and Stoffregen, DeCoster, & Associates to design the new clubhouse; and Susan Schreiber to design the model homes. Construction of the course was finished in 1977, and all condo units were completed by 1978.[149]

The Club at Morningside

The Club at Morningside was established in 1982 by Ed Johnsen following his success at the Springs Golf Club. Johnsen had famous golf professional Jack Nicklaus design the eighteen-hole course and Claude Harmon agreed to be the first teaching professional at the club. After construction was complete, the privately owned club passed bylaws to restrict membership and prohibit non-member events. Construction on all condos within the country club was completed by 1990. The club remains a privately owned establishment today.[150]

Rancho Mirage Country Club

The Rancho Mirage Country Club was established by Hal Heers Sr., director of Woodhaven

Developers Inc. The project began construction in January 1984 with a groundbreaking ceremony and was completed in 1999 when the last condo was finished. Woodhaven hired Christopher Mills as the architect for the central clubhouse and Paulden Evans as the lead interior designer, the course opened in 1984.[151]

Residential Developments

Like country club and commercial developments, residential construction accelerated following the incorporation of Rancho Mirage during the *Cityhood* period. Many notable residential properties were developed in the 1970s and 1980s that may meet the criteria for historic designation at either the national, state, or local levels of significance, despite their age just above or below the 45-year threshold. These properties most notably include Ichpa Mayapan designed by Howard Lapham in 1973 within Thunderbird Heights and the Gerald Ford Estate designed by Welton Becket in 1977 within Thunderbird Country Club. Other residential communities and single-family residences in Rancho Mirage built during the 1980s also showcase later examples of Desert Modernism and other examples of late-modern architectural styles.

Commercial Properties

Commercial properties built in the 1970s and 1980s were generally concentrated along the Highway 111 corridor and included mini-malls, convenience stores, restaurants, shops, and offices that may be found individually significant as excellent examples of architectural styles, notable works of masters, or unique properties associated with the development of the community during the Cityhood era.

Restaurant Row

The 1979 City of Rancho Mirage General Plan urged for "the creation of 'Restaurant Row,' which should be recognized as an asset to the City."[152] This statement was in part a recognition of the restaurants that were already built along the Highway 111 corridor, like Lord Fletcher's, Las Casuelas Nuevas, the Chart House, Kobe Japanese Steak House, and Wally's Desert Turtle, that were well known landmark establishments within the City. These establishments, and others built before and after incorporation, helped establish Rancho Mirage as a community known for its unique dining experiences.

Built on 5.48 acres of land and constructed at the foot of a small hill along Highway 111 in 1978, the Chart House restaurant was built to follow the natural curvature of the site as a

unique Organic Modern commercial property designed by architect Kendrick Bangs Kellogg. It featured a gently sloping roof with recycled roof boards that were supported by laminated curved beams. The building had fixed windows with black anodized aluminum mullions and a center skylight made of three layers of translucent plastic running the full length of the structure. The skylight culminated in a raised, ribbed dome from which a round natural rock chimney emerged. The rock in the subterranean walls and the chimney was quarried on site, further incorporating elements of the surrounding natural environment. The double doors of the recessed entrance to the restaurant were made of laminated beveled glass in curved wood frames. The entrance also featured a low-profile waterfall that ran in and out of the restaurant through the glass on the east side of the entrance. Low concrete walls formed planters, and a curved concrete walkway led to the parking lot. Over time, the interior was extensively remodeled, most notably when the restaurant changed owners and became GG's Island restaurant, but the exterior remained in its original condition.[153]

The Chart House was found to be architecturally significant as a unique and outstanding example of Organic Modern design by the City of Rancho Mirage in 2005. It appeared on the cover of Restaurant Design magazine in 1981, and it received the Vintage Pinot Noir Award sponsored by AIA, APA, ASLA, AEP, CSPE, IEDI of the Inland Empire of California, due largely to its energy efficiency, in 1994. The Chart House was Kellogg's only known commission in the Coachella Valley, and it brilliantly demonstrated Kellogg's unique design philosophy.[154] Sadly however, the Chart burned down in January 2012, and the remains were demolished in March 2013.[155]

Figure 35. Wally's Desert Turtle Restaurant.
(*Rancho Mirage at Fifty* Book, Source: City of Rancho in partnership with Desert Publications, Inc.)

The same year the Chart House opened, Wally Botello opened the Desert Turtle (now Wally's Desert Turtle), with interiors developed by the famed interior designer Steve Chase, who shaped the California style throughout the Coachella Valley.[156] With an understated Desert Modernist exterior and opulent interior decorations, Wally's remains a fixture in the Coachella Valley with a prominent reputation for its quality food.

Also opening in 1978, the Kobe Japanese Steak House, a teppan restaurant, was designed and inspired by a 17th-century Japanese inn. At the establishment, owners Hy Aisenstat and Rod Gardiner wanted to create an environment with charming pagodas and a tranquil koi pond to greet diners, who are then seated among imported Japanese antiques. While the restaurant subsequently changed ownership over the years, it continues to maintain its original exterior design elements and serve its unique Japanese cuisine.[157]

Eisenhower Medical Center Auxiliary - Collectors' Corner

In 1970, the Eisenhower Medical Center Auxiliary held their first "Collectors' Corner" event at locations across the desert.[158] The event, which involved purchasing a ticket to exchange thrifted goods, was hosted to raise funds for the Eisenhower Medical Center, which was still under construction. After several successful consecutive annual Collector's Corner events, the Auxiliary needed a permanent home to sell thrifted goods. While they waited for their permanent building to be constructed, the Auxiliary found temporary housing at 68-573 Broadway in Cathedral City, the former home of the Desert Auction Gallery.[159] Finally, in November 1973, the new Collector's Corner store officially opened for business at its current 71-280 Highway 111 location. The Auxiliary was integral in raising funds and creating community support for the Eisenhower Medical Center. In the first four years of operation, the Auxiliary fulfilled a $100,000 pledge and numbered approximately 1,625 members.[160] Today, the Auxiliary continues to operate the property with the same purpose. The International style Collectors' Corner building has since been updated and expanded since its date of initial construction, though elements of the original design are still identifiable.

Figure 36. Noel F. Birns Building, ca. 1974. (Source: *Desert Sun*, February 5, 1974)

Noel F. Birns Building

At the southern end of Magnesia Falls Cove, Ross Patten designed a new office building for the Noel F. Birns interior design company shortly before they merged with Steven De Christopher at 72-067 Highway 111.[161] The unique round Post and Beam style building was completed in 1974 and now houses the offices of David E. Scott Design Builders. Since its construction, the building

remains relatively intact, still clearly displaying the original design elements that make it a unique landmark within the City.

Provident Bank

In 1981, Provident Bank, at the time Provident Federal Savings, began construction on a new branch location in Rancho Mirage. At that time, Provident had a chain of branches located across Riverside Country, Los Angeles, San Bernardino, and Orange Counties. When Provident began construction on their Rancho Mirage branch, the founder and president of the bank, Gordon A. Blunden wanted a building with material and design that would "harmonize with and complement its desert surroundings." To this end, Provident hired Gin Wong Associates, a Los Angeles based Chinese-American architect who led the design team at the Los Angeles International Airport and planned many other iconic Los Angeles landmarks. For the Rancho Mirage Provident Bank, Wong designed a one-story building over 7,100 square feet with curved walls clad in black lava rock broken by floor-to-ceiling windows and heavy wooden roofing beams to create trellises and large overhangs over building entrances. Wong also designed the building to have large copper metal facia, which was chosen to weather over time and develop a "desert patina" to blend with the surrounding environment.[162] The building was fully completed in 1982. Since its construction, the Desert Modernist building has remained a Provident Bank branch and a fixture in the Rancho Mirage community.

Municipal and Institutional Facilities

Civic and institutional facilities such as parks, fire stations, and schools represent the governmental and architectural history of communities. Rancho Mirage's unique origins as an unincorporated ranching and agricultural community that evolved into a resort destination for golfers meant that typical civic and institutional facilities were not constructed until the number of permanent residents increased with substantial residential investment. The community relied on County services from existing locales. Municipal incorporation in 1973 marked the need for city-owned civic and institutional facilities officially. However, important civic improvements in Rancho Mirage really began as early as 1950, when the first post office was established, and in the early 1960s when designs for the Eisenhower Medical Center began to take shape and the Palm Springs Unified School District began to recognize the need for a school within the Rancho Mirage community.

Fire Station #1 (Riverside Country Fire Station 50)

Soon after incorporation, the City of Rancho Mirage invested time and resources to

determine where a new fire station should be located within city limits. After negotiations between city staff and several different landowners, the Thunderbird Country Club donated land on the south side of Highway 111 in-front of the Thunderbird Heights community to the City for development. In January 1976, the City of Rancho Mirage finished the construction of Fire Station #1 and dedicated the building on February 28th. The station, constructed in a Desert Modernist style, was originally operated by the Riverside County Fire Department and manned by local volunteers.[163] Today, fire services for the City of Rancho Mirage are provided through a cooperative agreement with the State of California (Cal-Fire) and the County of Riverside. The station at 70-801 Highway 111 is also commonly referred to as Riverside County Fire Station 50.[164]

Rancho Mirage City Hall

Following incorporation, city council member Edna Warner secured a lease for office space in an octagonal building with a center spire at the intersection of Frank Sinatra Drive and Highway 111 that was constructed sometime in the mid-1960s. In 1976, the City of Rancho Mirage acquired title to the property in a grant deed from Federated Development Co.[165] In 1978, work began on an addition and remodeling of the city hall building, headed by city architect Robert Ricciardi with Peter Kiewit Sons' Company as the general contractor.[166] When completed in December 1979, the new city hall was composed of two "teepee" like structures totaling approximately 18,000-square-feet.[167]

Figure 37. Rancho Mirage City Hall Building, ca. 1966.
(*Rancho Mirage at Fifty* Book, Source: City of Rancho in partnership with Desert Publications, Inc.)

In 1996, the city completed a remodeling/expansion campaign to modernize the City Hall, removing the teepee roofs and adding 12,350 square feet to the existing 17,600 square foot

building.[168] This construction project was also designed by Robert Ricciardi and completed by general contractor Great West Contractors, Inc. Shortly following the 1996 remodel in 2002, the City hired Stanford Leonhard Architects and Lion Heat Construction, Inc., to construct a new city council chamber within the footprint of the original 1976 building, removing all traces visible components of the original structure. Six years later in 2008, city officials endeavored to redesign the landscaping around the City hall with a focus on sustainability, which became a Sustainable Sites Initiative case study as "an example of high-quality, sustainable site development."[169] Today, the Rancho Mirage City Hall chiefly reflects the designs of city architect Richard Ricciardi who shaped the development of the property from 1979 to 1996.

Whitewater Park (Rancho Mirage Community Park)

In May 1981, the City of Rancho Mirage completed construction on the first city park, Whitewater Park, at 71-560 San Jacinto Drive. A.J. Construction completed the work, which involved the construction of tennis courts, handball courts, a softball field, a children's recreation area, and bicycle paths.[170] In 1983, the Rancho Mirage Woman's Club donated $9,500 for additional playground equipment at the park.[171] In 2004, the City moved *Rancho Chiquito*, the oldest residence in Rancho Mirage, to Whitewater Park (Rancho Mirage Community Park). There, the home is recognized as the oldest existing home in Rancho Mirage. The park, and its improvements, is considered as a significant municipal milestone in the story of early City development.

Palm Valley School and Rancho Mirage High School

In 1992, the Palm Valley School completed its first wave construction. In 1997, the school added a preschool program and a new gym and stage complex in 2001. They now teach grades Pre-K to the twelfth grade. Following their merger with the Marywood School in 2005, the campus has significantly expanded. It is now a 34-acre property with state-of-the-art facilities.[172] In 2005, the Palm Springs Unified School District (PSUSD) worked with Sun Cal Development to acquire 80 acres of land for a new high school site. PSUSD completed the design of the Rancho Mirage High School in 2007. Construction began in May 2010 and was completed in August 2013.[173]

Rancho Mirage Library

The City's first library opened in 1996 in the renovated former Bank of America building in the Rancho Las Palmas shopping center at the intersection of Bob Hope Drive and Highway 111. In 2000, the Annenbergs donated $2 million to build a new library on Highway 111. The facility

opened on January 8, 2006, one day after the city library's 10th anniversary. In 2018, the City of Rancho Mirage further improved on the library by adding a separate observatory building for educational purposes.[174]

Associated Property Types

Properties constructed during the *Cityhood* era are related to residential communities (including country clubs), commercial properties, municipal buildings, and institutions. Country clubs post-1973 have largely been constructed near earlier clubs, on ground previously developed by older clubs, or close to Highway 111. Residential properties constructed during the *Cityhood* period have also been built close to country clubs, on previous agricultural/ranching land, or undeveloped lots. Commercial properties during the *Cityhood* era have been built on previously disturbed land where older commercial properties have been demolished, or on the remaining undeveloped lots along Highway 111. Municipal buildings and institutional facilities have been built on similar parcels as commercial properties.

Single Family Residences

Residential properties post-1973 have mostly consisted of Tract Ranch, Custom Ranch, Spanish Styled Ranch, Post and Beam, and Desert Modernist homes. These continue to be built across Rancho Mirage in new and established subdivisions and country clubs. In many ways, construction of single-family residences, condominiums, and apartments follows the same patterns established pre-incorporation.

Single-family residences within Rancho Mirage subdivisions and country club communities post-1973 have been built on either undeveloped land or parcels previously occupied by historic-era residences. Single-family homes have been constructed with Tract Ranch, Custom Ranch, Spanish Styled Ranch, Post and Beam, and Desert Modernist styles.

Single-family residences constructed within residential subdivisions and country clubs post-1973 exhibit the following character defining features listed below.

- One or two stories
- Mid-to-late 20th architectural styles – Tract Ranch, Custom Ranch, Spanish Styled Ranch, Post and Beam, or Desert Modernist
- Private driveways
- Attached or detached garages/carports
- Gable, hipped, or flat roofing forms

- Low-pitched roofs
- Large overhangs
- Metal windows
- Large patios

Condominiums and Cooperative Apartments

The condominiums and/or apartments within subdivisions and country clubs have been built on undeveloped lots or land where previous housing has been demolished. Developers built condos and apartments using Tract Ranch, Spanish Styled Ranch, Post and Beam, or Desert Modernist styles.

Condominiums and apartments post-1973 generally exhibit the following character defining features listed below.

- One or two stories
- Paired and mirrored homes sharing a wall or multi-unit buildings
- Mid-to-late 20th century architectural styles –, Tract Ranch, Spanish Styled Ranch, Post and Beam, or Desert Modernist styles
- Shared or individual driveways
- Gable, hipped, or flat roofing forms
- Large metal floor-to-ceiling windows
- Shared amenities (pools, tennis courts, gyms, etc.)

Commercial Buildings

Commercial properties in Rancho Mirage built post-1973 have been built on previously disturbed land where older commercial properties have been demolished or on the remaining undeveloped lots along Highway 111. Near Magnesia Falls Cove, most of the earliest commercial properties have been removed. In the late 1970s and 1980s, commercial developers installed strip malls, additional restaurants, and convenience stores along Highway 111 and other principal community roads. Commercial buildings developed in the center of Rancho Mirage post-1973 have largely been Spanish Colonial Revival, Post and Beam, International, or Desert Modernist style buildings.

Commercial properties constructed in Rancho Mirage post-1973 may exhibit the following character defining features listed below.

- One or two stories (usually one) in height
- Period Revival or Modernistic styles – Spanish Colonial Revival, Post and Beam, International, or Desert Modernist styles

- Automobile oriented with readily available parking
- Low-pitched or flat roof
- Metal framed windows

Municipal and Institutional Buildings

Municipal and institutional properties in Rancho Mirage built post-1973 have been built on previously disturbed land or on the remaining undeveloped lots along Highway 111. Due to the lack of an established city center, municipal buildings in Rancho Mirage are scattered along Highway 111. Likewise, Institutional buildings have been constructed along the Highway 111 corridor, apart from the Eisenhower Medical Center (Eisenhower Health) campus which has expanded its campus along Bob Hope Drive over time. Municipal and institutional buildings developed in Rancho Mirage post-1973 have largely been Spanish Colonial Revival, Post and Beam, International, or Desert Modernist style buildings.

Municipal and institutional properties constructed in Rancho Mirage post-1973 may exhibit the following character defining features listed below.

- One or two stories (usually one) in height
- Period Revival or Modernistic styles – Spanish Colonial Revival, Post and Beam, International, or Desert Modernist styles
- Automobile oriented with readily available parking
- Low-pitched or flat roof
- Metal framed windows

Significance Thresholds

To be eligible for listing in the NRHP, CRHR, or Local Register, a property dating to Rancho Mirage's *Cityhood* period must be significant under at least one of the following criteria.

NRHP Criterion A/CRHR Criterion 1

Cityhood era properties throughout Rancho Mirage if they can be shown to have made a significant individual contribution to the board patterns of national, state, or local history, particularly relating to the evolution of the City of Rancho Mirage post-incorporation.

NRHP Criterion B/CRHR Criterion 2

Cityhood era properties may be significant under Criterion B/2 for their association with the life of a person important in the development of the City of Rancho Mirage. A post-1973

property that can be documented as associated with an important person in national, state, or local history may qualify for designation. In addition, the individual must have been associated with the resource during the period that the person's significant achievements and contributions occurred. Prominent figures related to the development of the City of Rancho Mirage may include Ed C. Johnsen, Desmond Muirhead, William L. Rudolph, Bill Bone, James C. Barg, Jack Conlon, Arthur Valdes, Hal Heers Sr. Christopher Mills Florencio "Del" Delgado, Mary Delgado, Kendrick Bangs Kellogg, Wally Botello, Steve Chase, Hy Aisenstat, Rod Gardiner Ross Patten, Gordon A. Blunden, Gin Wong, Edna Warner, or Robert Ricciardi. Additional significant individuals may be discovered through future research.

NRHP Criterion C/CRHR Criterion 3

A *Cityhood* era property in Rancho Mirage may be eligible under Criterion C/3 for embodying distinctive characteristics of a style, type, period, or method of construction. A notable work of a master builder, architect, or designer would also be significant under Local Register Criterion C if the property was designed or constructed in Rancho Mirage post-1973 but at least 45 years of age.

NRHP Criterion D/CRHR Criterion 4

A *Cityhood* era property related to the overall development of the City of Rancho Mirage may be significant under Criterion D/4 if it has the potential to yield important information of scientific value. Unevaluated and undocumented elements of any post-1973 properties may be found to be significant using this criterion.

Local Register Criteria

A *Cityhood* era property built post-1973 may be significant under Local Register Criterion 1 if it is representative of a mid-to-late 20th century architectural style or reflects special elements of a type, style or way of life important to the City; under Local Register Criterion 2 if it is associated with a business or use which was once common but is now rare or non-existent within the City; under Local Register Criterion 3 if it is representative of the evolution or development or associated with the cultural, religious, educational, political, social or economic growth of the city, county, state or nation, such as a significant restaurant or landmark corporate office or noteworthy institution; under Local Register Criterion 4 if it represents the work of a master builder, engineer, designer, artist or architect whose individual genius influenced the *Cityhood* theme; under Local Register Criterion 5 for an association with a historic event person(s) that have made a meaningful contribution to the city, state or nation; under Local Register Criterion 6 if it has a high potential for yielding

information of archaeological interest; under Local Register Criterion 7 if it embodies elements of outstanding or innovative attention to architectural or engineering design, detail, craftsmanship or use of materials; or under Local Register Criterion 8 if it contains an unusual natural feature.

Integrity Considerations

To be eligible for listing in the NRHP, CRHR, or Local Register, a *Cityhood* era property, built post-1973, must retain sufficient integrity to convey its significance. A property nominated under NRHP Criteria A/CRHR Criteria 1 should retain integrity of location, setting, feeling, and association. A property nominated under NRHP Criterion B/CRHR Criterion 2 should retain integrity of location, design, feeling, and association, as the physical condition of a site is directly related to connection between a property and a significant individual. A property nominated under NRHP Criterion C/CRHR Criterion 3 should retain integrity of design, materials, workmanship, and feeling, as these are critical for a property to embody distinctive characteristics of a style. Some alterations may be acceptable if the property retains its essential features and overall original form. A property nominated under NRHP Criterion D/CRHR Criterion 4 should retain integrity of location, materials, and association.

A property nominated under Local Register Criteria 1, 4, or 7 should retain integrity of design, materials, workmanship, and feeling. A property nominated under Criteria 2, 3, or 5 should retain integrity of location, setting, feeling, and association. A property nominated under Criteria 6 or 8 should retain integrity location, materials, and association.

Theme 8: Rancho Mirage Architectural Styles, 1934 -1980s

The architectural history of Rancho Mirage may be organized in three general styles and timeframes: period revival/eclectic, early modern, and post-WWII/late modern styles.

- Period Revival refers to an historicist period in design encompassing the first half of the 20th century wherein older architectural styles were 'revived' and revisited with modern adaptations. Architects working in the Period Revival were inspired by all historic periods and geographic locales including ancient Egyptian architecture (Egyptian Revival), classical Greco-Roman architecture (Classical Revival and Neoclassical), Italian Villas (Mediterranean/Renaissance Revival), Spanish churches (Spanish Colonial Revival/Spanish Eclectic), Spanish Colonial Missions (Mission), English cottages and country estates (Tudor Revival), and Colonial-era buildings in what would become the United States (Colonial Revival and Dutch Colonial).

- Early Modern architectural styles generally refer to building types developed in the first decades of the 20th century prior to the start of World War II that either initially evolved out of the Art Nouveau style and developed over time into International and Contemporary designs or styles came into popularity out of the need for simple affordable housing during the Great Depression. This section of architectural styles summarizes the types of buildings found in Rancho Mirage more generally after the end of World War II but may also include some buildings that were built before the war.

- Postwar period architectural styles generally refer to building types constructed in the first decades following the end of World War II in Rancho Mirage. Some early modern styles, such as International and Minimal Traditional styles, established and maintained popularity before and after the war. Some of the post-war styles below gained popularity in the post-war period but began in the 1930s and early '40s. This section on architectural styles summarizes the types of buildings found in Rancho Mirage more generally after the conclusion of World War II through the 1970s.

Within these generalized periods, this theme defines which architectural styles are represented in Rancho Mirage's history and identifies specific property types associated with those styles as well as known projects attributed to architects and builders working in the region. This theme is intended to serve as a guide for the identification of architecturally significant properties in Rancho Mirage.

Desert Vernacular (1912-1940s)

Desert Vernacular style homes in Rancho Mirage were early custom-built residences defined by their simple, utilitarian designs with limited distinguishing stylistic features. These buildings are chiefly characterized by their simplicity and blending of characteristics from other more recognizable styles. In Rancho Mirage, remaining examples were constructed with readily-available local materials with walls constructed from concrete masonry or slump stone block; wooden framed buildings with board-and-batten siding, and roofs clad in terracotta tile or rolled asphalt. Most of the early ranching buildings in Rancho Mirage built by the first farmers fall into this designation. Surviving examples are rare and have likely been modified. The basic stylistic features of the Desert Vernacular style are listed below.

- Simple square or rectangular form
- Gabled or hipped roof with boxed or open eaves
- Concrete masonry block or wood exterior cladding
- Simple window and door surrounds

Property Types

In Rancho Mirage, Desert Vernacular style buildings were constructed in the area around Magnesia Falls Cove and the southern half of the current boundaries of the City. Buildings designed in the style are all associated with single-family residences.

Figure 38. The Clancy Residence at 71-010 Clancy Lane.
It is an example of a local Desert Vernacular style home in the Clancy Lane neighborhood.

Spanish Colonial Revival / Neo-Spanish Colonial Revival (1915-1970s)

As the popularity of the Mission Revival style waned by the 1910s, Bertram Grosvenor Goodhue, pioneered a fresh style when he was selected as the chief designer for the Panama-California Exposition held in San Diego's Balboa Park in 1915. This style blended aesthetic precedents from the Iberian Peninsula (Mediterranean, Italian, Spanish and Moorish traditions) with the architecture of early settlement patterns in California and other southwestern states as well as Florida; all regions where Spanish Colonial buildings occurred. Popularized in Southern California, the Spanish Colonial Revival (or Spanish Eclectic) style suited the state's warm climate and became the favored building form in the 1920s and 1930s. Innumerable houses were built in the Spanish Colonial Revival style in California and became a distinctly American blend of architectural traditions.

There are five principal subtypes for Spanish Colonial Revival style buildings which include structures with side-gabled, hipped, cross-gabled, combined hipped-and-gabled, and flat roofs. The basic stylistic features of the Spanish Colonial Revival / Spanish Eclectic style are listed below.

- Low pitched roof covered in terracotta (Spanish/Mexican/Mission) tile
- Boxed eaves or limited eave overhang
- Smooth stucco siding (usually painted white)
- Arched windows and doors, particularly at principal openings
- Asymmetrical facade composition and floor plan
- use of outdoor balconies and patios
- arched openings
- thick wall dimensions
- colorful tile work
- ornamental vents and grille work at windows and doors
- ornamental elaborations at windows and doors in the form of relief surrounds

From the 1950s through the 1970s in Rancho Mirage, developers continued to utilize simplified and modernized versions of Spanish Colonial Revival designs for large scale residential tracts, multi-family family residences, and commercial properties, known as the Neo-Spanish Colonial Revival style.

Property Types

In Rancho Mirage, Spanish Colonial Revival style buildings dominated areas associated with the early residential subdivision development and early commercial properties. In Rancho Mirage, commercial buildings in the Spanish Colonial Revival style do not significantly differ in size, massing, or configuration from residential buildings and do not have many other

distinct character defining features.

Figure 40. Las Casuelas Nuevas Restaurant at 70-050 Highway 111.
It is an example of a local Neo-Spanish Colonial Revival style property.

Tudor Revival (1890-1940)

The Tudor style is an eclectic mixture of early and Medieval English building traditions to create a picturesque, traditional appearance. The term Tudor is somewhat of a misnomer, since the style does not closely follow the building patterns of the English Tudor era of the early 16th century. Instead, it is an amalgam of late medieval English inspired building elements. While early examples were often ornate structures in the late 19th century, building designs gradually became less complicated into the 20th century. In the 1920s and 1930s, the Tudor style was second in popularity only to the Colonial Revival style in residential properties. The basic stylistic features of the Tudor Revival style are listed below.

- steeply pitched roofs, often with a front facing gables or multiple gables
- half-timbered wall surfaces
- overhanging gables or second stories
- decorative front or side chimney
- diamond shaped casement windows
- board-and-batten front entry doors
- stucco, masonry or masonry-veneered construction, often with ornamental stonework or brickwork

Property Types

In Rancho Mirage there is only one example of a Tudor Revival style building, Lord Fletcher's Restaurant at 70-385 Highway 111. There are no recorded residential examples of the property type within City limits, but future survey efforts may identify other homes associated with this style.

Figure 41. The Lord Fletcher's Restaurant at 70-385 Highway 111. It is an example of a local Tudor Revival style building.

International (1925-1960s)

The International style originated in Europe when architects such as Walter Gropius and Le Corbusier sought a style that was not based on cultural traditions or historic precedent and could be used by any architect in any country. International style was based on the volume, form, and three-dimensional composition of a building rather than the ornamentation applied to the building. The International style was brought to the United States by European architects immigrating to the country after World War I or fleeing Hitler before World War II. The style was disseminated throughout the country by these architects who were also leading the architectural education at prominent universities such as Walter Gropius, who worked at Harvard and Mies Van der Rohe, who taught at the Illinois Institute of Technology. Instead of solid masonry wall structures, International style buildings were supported by lightweight structural skeletons allowing for walls to be freed to simply enclose volumes. Fenestration placement could then be more flexible.

The International style is defined by square and rectangular building footprints with strong right angles with symmetrical and asymmetrical variants. The basic stylistic features of the International style are listed below.

- Flat roofs
- large expanses of windowless surfaces
- Lack of applied ornament
- Horizontal bands of windows
- Common exterior materials include concrete, brick, stucco and glass
- Flush steel sash or casement windows
- Corner windows

Property Types

There are few International style buildings currently recorded in Rancho Mirage, and they appear to be limited to residential properties. Future survey efforts may locate more International style residential or commercial buildings within the boundaries of Rancho Mirage based on their presence in other nearby Coachella Valley communities. Commercial buildings in the International style would display other character defining features, which are listed below.

- Two or more stories in height
- Full length windows
- Single-story flat roof porches
- Ample automobile parking areas

It is an example of a local International style property in Rancho Mirage.

New Formalism (1950s-1970s)

Sometimes called "Neo Palladianism", New Formalism emerged in the mid 1950s as a rejection to the rigid form of Modernism. The style represents 20th century effort to combine the building forms of the past with new forms enabled by advances in building technology. New Formalist buildings embraced many Classical precedents such as building proportion and scale, classical columns, highly stylized entablatures, and colonnades. However, they also used the unique qualities of concrete to create new forms such as umbrella shells, waffle slabs and folded plates. Champions of the style include architects such as Edward Durell Stone, Philip Johnson, Eero Saarinen, and Minoru Yamasaki. The basic stylistic features of New Formalism are listed below.

- Symmetrical facades with columnar arched supports
- Flat slabbed roofing forms
- Concrete, stone, brick, or marble wall surfaces that are smooth and unadorned
- Slender attenuated columns

Property Types

In Rancho Mirage, the most noteworthy example of the New Formalism style is the original Eisenhower Medical Center building and the subsequent office buildings designed by Edward Durell Stone and completed during the early 1970s at 39-000 Bob Hope Drive. No other civic, commercial, or residential properties have been identified with this style, but more examples may be recorded in future survey work.

Figure 44. The Eisenhower Medical Center at 39-000 Bob Hope Drive. It is an example of a local New Formalist style property in Rancho Mirage.

Ranch Styles (1934-Present)

Few houses were built during the 1930s due to the financial uncertainty created by the lingering Great Depression, and with the United States' entry into World War II, all building materials were needed for the national defense effort. Very few houses were also built during the war. As a result, at the end of the war the country faced a serious housing shortage. Four million returning veterans could not find housing, and many people lived in overcrowded houses. In 1946, President Truman appointed Wilson W. Wyatt as national Housing Expediter, who recommended programs and legislation with the goal of building more than one million houses a year. To accomplish this, the Veterans' Emergency Housing Act was passed, providing $600 million in subsidies to builders who could quickly build small homes with a maximum of 1,100 square feet. The Federal Housing Administration (FHA) also enforced this policy: by the late 1940s all builders started adhering to the FHA's design standards because it was a key selling point if all homes in a subdivision were pre-approved for low-cost mortgages.

The need for inexpensive, efficiently produced housing coincided with the emergence of the Ranch style of architecture. The Ranch house was simple to build: a one-story rectangular or L-shaped house with a low-pitched roof on a concrete slab foundation. Standardized designs made it possible to build dozens or even hundreds of houses at the same time, which allowed more efficient site engineering and greater specialization of labor. Steel casement window units were easy to install. Ornamental features were sparse.

Ranch style architecture was deeply rooted in the American West. The Ranch style drew its inspiration from the 19th century adobe ranch houses of California, as well as the Craftsman style and early Frank Lloyd Wright Prairie houses. The simple and sparsely adorned houses reflected the romantic imagery of the past and the new social trends of informality and casual home life in postwar suburbia. Ranch houses were one story with a long rectangular or L-shaped plan and a low-pitched roof with deep eaves and a few traditional elements such as clapboards and false shutters. Ranch homes usually had no true porch, but rather, a simple extended eave over the entry. Ranches also reflected the growing importance of the automobile, which brought sprawling subdivisions with larger lots, allowing the broadest side of the house to be the primary façade. The low horizontal profile of the home facing the street with its many visible planes and angles was modern, streamlined, simple, and showed no trace of the elaborate European elements that embellished the earlier period revival styles. California architects Richard Neutra and Gregory Ain introduced the Ranch style in the 1930s, but in the late 1940s it became the predominant style for residential architecture.

For the most part, the Ranch style became tantamount to mass-produced standardized houses of nearly identical design. This is due largely to new emerging approaches to residential construction. In the early part of the 20th century, one would buy a lot and hire a contractor to build a house. After World War II, the need for fast and efficient construction of homes favored partnerships with investors, real estate specialists, architects, and large construction firms. Land was purchased, a subdivision plat laid out the arrangement of blocks, lots, and streets, and a single contractor oversaw construction of all houses in a tract. There were often three or more different models that offered some variety in styling, but the design differences between houses in a neighborhood tended to be in the arrangement of minor decorative elements and the placement of windows and doors. Ranch style houses built by a single contractor are often referred to as Tract Ranch houses. However, there were also custom-built Ranch houses, each with their own unique design by an architect for the site. The Custom Ranch houses tended to be larger, with more elaborate decorative elements. By 1960, Styled Ranch styles became common, with subtle thematic design elements that created subtypes such as Spanish, French Provincial, Storybook, American Colonial, and Swiss Chalet Styled Ranches.

Property Types

In Rancho Mirage, Ranch style buildings are present in most areas associated with early residential subdivisions and country club neighborhoods. The style is entirely reflected in single-family residences. There do not appear to be any Ranch style commercial buildings in Rancho Mirage. Any unrecorded businesses in Ranch buildings are likely be converted residences which would not display other commercial character defining features.

Tract Ranch

In Rancho Mirage, Tract Ranch homes were constructed in the first residential subdivisions from 1944 into the 1980s. These Tract Ranch houses were built by different homebuilders, starting with A. Ronald Button in the Magnesia Falls Cove during the 1940s. Button utilized several different architects with a wide variety of models and design options. Later, following the success of the first country clubs, subsequent developers also built Tract Ranch communities in the vicinity of the new golf courses.

Early Ranch style houses were largely uniform in appearance with one story with an elongated rectangular or L-shaped plan, with the broad side facing the street. The character defining features of early Tract Ranch Style homes are listed below.

- Asymmetrical façades
- Brick, concrete block, or wood frame construction materials
- Multiple roof types including gable, hip, intersecting gables, or multiple hips that are low-pitched to very low-pitched with broad overhanging eaves
- Roofs covered with asphalt shingles
- Steel casement windows with no trim
- Minimal porch, usually in the form of an extended eave, with or without posts
- Few decorative elements, usually limited to faux wood shutters and exposed rafters, occasionally brick wainscoting
- Attached carport on the side of the house

By 1960, changes in the design and construction of the Ranch style added other character defining features which are listed below.

- Fixed and sliding aluminum frame windows
- Attached garages replaced carports
- Larger floorplans
- A greater range of decorative elements, including brick or stone wainscoting, board-and-batten siding, wrought iron porch posts, weeping mortar, and scroll-cut decorative fascia
- Roofs covered with clay tiles or wood shakes
- Hip roofs with gablets and eyebrow dormers

Figure 46. 71-431 Sahara Road.
It is an example of a local Tract Ranch style building in Magnesia Falls Cove.

Custom Ranch

Custom Ranch homes were constructed throughout the early Rancho Mirage residential subdivisions including the Magnesia Falls Cove, Thunderbird Heights, and Tamarisk Heights tracts. Custom Ranch homes were also built throughout neighborhoods in private country clubs, like the Tamarisk and Thunderbird Country Clubs.

Custom Ranch homes were usually one story with elongated rectangular, L-shaped, U-shaped, or irregular-shaped plans, with the broad side facing the street and with wings occasionally extending to the rear. These homes were often much larger than Tract Ranch Houses with a much broader facade. The character defining features of the Custom Ranch Style are listed below.

- Asymmetrical facades
- Brick, concrete block, or wood frame construction materials, with exterior walls often clad in more than one material
- Strong horizontal emphasis/massing; occasionally bands of brick, wood, metal, glass, stone, or pierced block
- Many different roof types including gable, hip, intersecting gables, or multiple hips that were low pitched to very low pitched with broad overhanging eaves
- Variety of roofing materials, including asphalt shingles, clay tiles, wood shakes, or metal
- Steel casement windows or aluminum framed windows
- Minimal extended eave porch, recessed entry, or a more prominent porch with a gabled or hipped extension
- Attached or detached carport or garage
- Diversity in plan, roof type, building materials, and ornamentation
- High quality of artisanship in construction

It is an example of a local Custom Ranch style building in Magnesia Falls Cove.

Figure 48. The D.B. McDaniels Residence at 70-772 Fairway Drive.
It is an example of a local Custom Ranch style home in Thunderbird Country Club.

Styled Ranch

Styled Ranch homes were constructed in the early Rancho Mirage residential neighborhoods including Magnesia Falls Cove, Green Acres, Thunderbird Villas, and Tamarisk Heights areas. Styled Ranch homes were also built throughout private country clubs, like the Tamarisk Country Club and Thunderbird Country Club. Most Styled Ranches in Rancho Mirage were constructed in a Spanish style.

Due to the nature of Styled Ranch homes, the character defining features vary based on the selected style. However, Styled Ranch homes generally followed the same form and massing of other Ranch style homes. The different character defining features of Styled Ranch homes based on their theme are included below.

- Spanish Ranch
    - Clay tile roofs
    - Brick or stucco clad walls
    - Rounded or parabolic arched openings at porches, windows, or courtyards
    - Exposed rafters and beams
    - Metal window grilles
    - Inward-slanting chimneys or wing walls
- French Provincial Ranch
    - Features include L-shaped or irregular plan
    - Multiple hipped roofs with molded eaves
    - Pairs of tall casement windows and corner casement windows
    - Segmental arches
    - Paneled front doors
- Storybook Ranch
    - Scalloped vergeboards on the front façade
    - Window boxes with diamond-shaped windowpanes
    - Decorative stone or brick chimneys
    - Horizontal board siding
- American Colonial Ranch
    - Side-gabled or hipped roofs
    - Wood or brick siding
    - Federal or Greek Revival door surrounds
    - Classical moldings
    - Louvered shutters
- Neoclassical Ranch
    - Symmetrical form

  - Clad in brick or wood frame
  - Multi-pane windows
  - Roof dormers
  - Porch supported by Classical columns
- Swiss Chalet Ranch
  - Gabled roofs
  - Chaletesque dormers
  - Scrolled fascia board
  - Wood and stucco siding

Contemporary (1955-1965)

Contemporary style buildings are like the Ranch style homes in construction methods and materials but reflected in quite different forms. These styles included the front-gabled Contemporary style and a simple post-war version of the International style. Like the Ranch style, both had a strong horizontal emphasis, but Contemporary styles had a more massed plan.

Contemporary style homes featured a variety of subtypes with various roofing forms which included front-gabled, side-gabled, varied gable, flat, shed, and butterfly and slant roofing forms with broad overhanging eaves. The basic character defining features of the Contemporary Style are listed below.

- Symmetrical and asymmetrical plans
- Central entryways with no porch, but with an entry courtyard or recessed corner entry
- Wing walls, short courtyard, or landscape, walls
- Heavy piers supporting the gable
- Exposed roof beams
- Broad expanses of uninterrupted wall surfaces
- Horizontal bands or tall vertical bands of windows, often present in gable ends
- Carport or garage incorporated under the main roof

Property Types

In Rancho Mirage, Contemporary style single-family residences were constructed in Magnesia Falls Cove first and later spread to other neighborhoods closer to country clubs during the 1950s and 1960s. Larger Contemporary style homes were also constructed private neighborhoods like the Tamarisk and Thunderbird Country Clubs. There do not appear to be any multi-family residences constructed in the Contemporary style in Rancho Mirage. The current Consign Design shop at 71-550 Highway 111 was built as a Contemporary style grocery store completed in 1960. The store is the only known Contemporary style commercial building in the City.

It is an example of a local Contemporary style building in Magnesia Falls Cove.

Desert Modernism (1950-1980s)

Desert Modernism is a distinct subtype of International style of architecture that incorporated modern materials, techniques, and floor plans with the unique requirements of building within a desert environment. The typical characteristics of Desert Modernism included large expanses of floor-to-ceiling glass walls sheltered by deep overhangs extending from flat roofs and flowing interior floor plans that merged gracefully with the outdoors. Often oriented to the rear, where most decorative flourishes could be visible from the fairways of the country clubs, Desert Modernist houses were often built with a rear swimming pool, expansive views, and multiple points of outdoor access to a backyard. The front elevations were often constructed to be unassuming and often shielded for privacy, with only clerestories and obscured glass panels adjacent to the entries providing light. Most designs emphasized a strong interaction between the indoor and outdoor spaces and incorporated desert landscaping to further blend the design with the surrounding environment. Some Desert Modernist homes also incorporated Adobe, Pueblo, or Spanish styled elements to root the home with a sense of desert historicity and exploit the warm tones of these other styles.

The basic character defining features of Desert Modernism are listed below.

- Direct expression of the structural system, usually wood or steel posts and beams
- Horizontal massing
- Flat or shallow pitch roofs, often with deep overhangs
- Floor-to-ceiling glass
- Minimal use or solid load bearing walls
- Strong interior/exterior connection
- Open interior floor plan
- Painted with natural tones
- Flat roofs floating above glass walls and clerestories
- Exteriors clad in stucco, wood, slump stone, and coursed or uncoursed natural rock

Property Types

Desert Modernist houses were generally constructed on large lots of land found within private country clubs, like the Thunderbird and Tamarisk Country Clubs. Buildings with Desert Modernist designs are almost exclusively regulated to single-family residences in Rancho Mirage. Some multi-family residences, commercial properties, and civic buildings like Tamarisk West, Provident Bank, and the Rancho Mirage City Hall are examples of the limited number of other types of properties also associated with the style.

It is an example of a local Desert Modernist style residence in Tamarisk Country Club.

Figure 53. 7 Cody Court.
It is a significant example of a local Desert Modernist style residence in Tamarisk Country Club.

Post and Beam (1950-1980s)

Post and Beam architecture was a method of construction in which structural framing consisted of load bearing steel or wood beams supported by steel or wood columns rather than solid load bearing walls. The use of structural framing allowed for more flexibility in wall and window design including more expansive use of glass, a character defining feature of the style. Post and Beam style houses were defined by the large sections of floor-to-ceiling glass windows and doors and clerestory windows. The predominant roof style for Post and Beam houses utilized flat roofs or low-pitched gable rooflines. Some examples exhibited simplified aspects of Japanese and Ranch design. The open, rectilinear floor plans of Post and Beam houses were created by the structural framing and lack of dividing load bearing walls. The houses tended to be laid out in a grid with standardized beam length.

The basic character defining features of the Post and Beam style are listed below.

- Direct expression of the structural system, usually wood or steel frames
- Horizontal massing
- Flat or shallow pitch roofs, often with deep overhangs
- Floor-to-ceiling glass
- Repetitive façade geometry
- Minimal use or solid load bearing walls
- Absence of applied decoration
- Strong interior/exterior connection
- Open interior floor plan
- Exterior finish materials usually wood, steel, and glass

Property Types

Post and Beam houses were generally constructed on large lots of land found within private country clubs, like the Thunderbird and Tamarisk Country Clubs. Post and Beam style buildings are almost exclusively regulated to single-family residences in Rancho Mirage. The circular Noel F. Birns building is one of the only unique examples of a Post and Beam style commercial property.

Figure 54. 71-136 La Paz Road.
It is an example of a local Post and Beam style building in Tamarisk Country Club.

Figure 55. The Noel F. Birns Building at 72-067 Highway 111.
It is an example of a local Post and Beam style commercial property.

Shed (1965-1985)

The Shed style came into popularity following the publicity of the Sea Ranch development project in San Francisco. The overall effect of the Shed style emphasized bold diagonals, counterpointed shapes, and multiple massing. The form of the house imparts its overall style, not the smaller elements. The shed roof is often multi-directional and used in ways that give the effect of colliding geometric shapes. The front door and entry area may be obscured. There is little added exterior detail, and elaborations are primary simple window variations. There are few window openings on wall that face public areas and those that occur are generally quite varied and asymmetrically placed. As in the Contemporary style, large, fixed panes of plate glass are typically used on the private, or rear, facades. Ribbons of clerestory windows are found high on facades or above lower roof forms. The basic character defining features of the Shed style are listed below.

- Shed roof forms, generally multi-directional
- Smooth roof-wall junction, commonly with little or no overhang
- Wood wall cladding (vertical, diagonal, horizontal boards, or shingles)

Property Types

Shed style properties are almost exclusively residential and are represented in Rancho Mirage as both single-family and multi-family properties. A notable representation of the Shed style in Rancho Mirage with Desert Modern elements is the Riback Residence, designed by Patrick Sheehy and William Cody. There are no known commercial or civic properties constructed in the Shed style within the City limits.

Figure 56. The Riback Residence at 70-843 Tamarisk Lane. It is an example of a local Shed style residential property.

Organic Geometric (1955-1970s)

Organic Geometric architecture was a philosophy of design which promoted a harmonious relationship between buildings and nature. The father of Organic Geometric architecture in the United States was Frank Lloyd Wright, who in 1939, coined the phrase "Organic Architecture" in his speech, An Organic Architecture. Designers of this modern sub-style employed natural building materials, such as wood and stone, and designed buildings that were respectful to the site. Glass was also used to minimize the separation between interior and exterior encouraging the indoor/outdoor living concept. Buildings were thoughtfully sited to take advantage of views, often built on steep slopes with large balconies. Form was based on rectilinear geometry, designs are characterized by asymmetrical façades, unusual rooflines, and angular shapes.

The basic character defining features of the Organic Geometric Style are listed below.

- Exposed structure and materials
- Square, diamond, and polygon design motifs
- Natural materials (wood, stone, glass)
- Sharp angular massing
- Asymmetrical facades
- Complex roof forms
- Site specific design

Property Types

Two known examples of Organic Geometric style buildings have been documented in Rancho Mirage, the now demolished Chart House at 69-934 Highway 111 designed by Kendrick Bangs Kellogg in 1978, and the Annenberg Health Sciences Building in the Eisenhower Medical Center. The Chart House was a significant example of the style in a prominent location on 'Restaurant Row' of the City. In 2013, the restaurant was damaged by a fire and subsequently demolished. The Annenberg Health Sciences Building is a round structure housing an auditorium. The building utilizes distinct geometric motifs throughout the exterior and interior to complement its curved open circular floor plan.

Figure 57. The Chart House at 69-934 Highway 111.
It is a significant local example of an Organic Geometric building.
(Photograph Courtesy of Leslie Heumann and Associates, ca. 2002)

Figure 58. The Annenberg Health Sciences Building.
It is an example of a local Organic Geometric building.

Brutalism (1950-1980s)

The name "Brutalism" originated from the French béton brut which means "raw concrete." The style was largely inspired by Swiss architect Le Corbusier. Brutalist buildings were generally strikingly blockish, geometric, and composed of repetitive shapes. The predominant building material was concrete, frequently revealing the intentional textures of the wood formwork. The concrete was intended to be fully expressed as both the primary structural material and finish. Critics of the style argued that it disregarded the social environment, making such structures inhuman, stark, and out of place. Character defining features of the Brutalist Style are listed below.

- Exposed and expressive structural system
- Monumental massing
- Angular and rectilinear forms
- Exposed concrete as building finish
- Repetitive patterns
- Intentional avoidance of traditional elements or ornament

Property Types

Only one known example of Brutalist style building has been recorded in Rancho Mirage, Fire Station #1 (Riverside Country Fire Station 50) designed by Robert H. Ricciardi and built in 1975. Other Brutalist buildings have been evaluated within other nearby Coachella Valley communities and future evaluations within Rancho Mirage may locate further instances of this architectural style.

Figure 59. Fire Station #1 at 70-801 Highway 111.
It is an example of a local Brutalist building in Rancho Mirage.

Postmodern (1960s-Present)

Postmodern buildings appropriate and imitate elements of more traditional styles, while incorporating them with new forms and materials. It is common for Postmodern properties to reference several different styles within one design, creating a blend of period and regional elements. Advocates of the style believed it was important to absorb and reformulate traditional components that to continue designing glass boxes void of heritage or character. While paying homage to the past, many Postmodern buildings feature playful designs and ironic combinations. Elements of buildings can be exaggerated, manipulated, and distorted, often to subvert expectations. The character defining features of the Postmodern style are listed below.

- An eclectic mix of other architectural styles and periods, blending historical and contemporary elements
- Playful, whimsical, or ironic details
- An emphasis on ornamentation, often utilizing classical motifs or vibrant colors
- Asymmetrical facades
- Variety of materials and shapes
- Classical references

Property Types

Postmodern style properties in Rancho Mirage are exclusively residential. While there are likely more examples, the only recorded occurrence of the Postmodern style is the Klein Residence in the Tamarisk Country Club.

**Figure 60. The Klein Residence at 37-101 Los Reyes Drive.
It is an example of a local Postmodern style house.**

Known Architects and Builders in Rancho Mirage

Below are short summaries of the known architects and builders who worked in Rancho Mirage during the historic-era and who may be associated with properties evaluated as part of the current survey effort. This list is not intended to be fully comprehensive and chiefly represents architects and builders associated with newly identified properties or previously evaluated properties that have not been designated at this time.

William F. Cody, Architect

William Francis Cody (1916-1978) was born in Dayton, Ohio, in 1916, Cody's family relocated to California in 1930. While attending Beverly Hills High School, Cody designed and built stages for school plays prior to his graduation in 1932. Following high school, he graduated from Santa Monica Junior College in 1939 and enrolled in the College of Architecture and Fine Arts at the University of Southern California. He graduated from USC in 1942. During his time at Santa Monica Junior College and USC, Cody worked for architects, Heath Wharton and Asa Hudson. Following his graduation, Cody worked for several engineering and architecture firms in California, including Cliff May whom he worked for in 1944. In 1945, Cody's firm was hired to alter the Desert Inn in Palm Springs. Following the Desert Inn project, Cody began working independently in California and Arizona by 1946.

In 1946, William F. Cody moved to Palm Springs permanently and received his first independent commission to design the Del Marcos Hotel, which earned him an award in 1949 from the California chapter of the American Institute of Architects. In 1947, he was hired to convert the Thunderbird Dude Ranch, originally constructed in 1936, to the Thunderbird Country Club in Rancho Mirage. His work at Thunderbird led to future commissions at other clubhouses, recreational facilities, and residential developments, at locations throughout Rancho Mirage and the wider Coachella Valley, such as the Eldorado Country Club, Tamarisk Country Club, the Racquet Club, the Tennis Club, and the Seven Lakes Clubhouse. In Palm Springs, Cody was one of the architects, with Wexler & Harrison and Philip Koenig, to design the Spa Bathhouse and Spa Hotel. In 1952, Cody designed the Horizon Hotel.

In the Coachella Valley, he was responsible for several notable Modernist style residential designs including the Perlberg, Shamel, and Abernathy residences in Palm Springs and the Cody Court homes in Rancho Mirage. Throughout his career, he designed commercial and residential properties throughout California, Arizona, Texas, Cub, and Mexico. He was inducted into the College of Fellows of the AIA in 1965. Some of his final projects included St. Theresa's Catholic Church in 1968 and the Palm Springs Library Center in 1972. In 1973, he suffered a severe stroke which caused him to end his architectural career. He died in 1978

and today is considered one of the most important architects in the Desert Modernism movement.[175]

S. Charles Lee, Architect

S. Charles Lee (1899 – 1990) was the architect of the Desert Club clubhouse in La Quinta which began construction in 1937 and was open by 1940. Born Simeon Charles Levi in Chicago in 1899, Lee attended Chicago Technical College and graduated with honors in 1918. He was influenced by the early (and nearby) Modernism of pioneers Louis Sullivan and Frank Lloyd Wright. After serving in the Navy during World War I, Lee earned an architecture degree from Armor Institute of Technology in 1921. He moved to Los Angeles in 1922 and received his first theatre design commission within a few years.

Completed in 1927, Following the construction of the Tower Theatre on Broadway in downtown Los Angeles in 1927, Lee's career expanded and commissions for further theaters followed. His theaters blended all types of architectural styles and decorative motifs and were designed as striking advertisements, to both garner attention from passing automobile traffic and draw in pedestrians by using the sidewalk itself. By 1950, Lee had designed around 400 theatres—250 in the L.A. area alone. After World War II, Lee recognized the emerging requirement for more practical, modular structures. In addition to theatres, Lee also built dozens of small factories throughout post-war Los Angeles. In Rancho Mirage, S. Charles Lee was the primary architect behind the development of the Tamarisk West community.

Lee received numerous awards throughout his lifetime, including the Society of Registered Architects' Synergy Award in 1975. In 1986, the UCLA School of Architecture and Urban Planning established a chair in his honor. The Conservancy was honored to have Lee attend the first season of our Last Remaining Seats series of classic films in historic theatres in 1987.[176]

Walter S. White, Architect

Walter S. White (1917-2002) designed residences in the Coachella Valley during the post-war period, including a few buildings in Rancho Mirage. In 1953, he designed the Desert View Animal Hospital which served as a residence and business for Dr. James R. Ketchersid. White was born in San Bernardino, California and attended San Bernardino High School from 1933 to 1936. Growing up, White learned construction from his father who was a builder in the San Bernardino area. After one semester at San Bernardino Valley Junior College in 1936, White spent the next decade working for various architects, builders, and engineers in the Los Angeles area. During that time, he worked for Harwell Hamilton Harris, Rudolf Schindler, and Allen Ruoff. During WWII, he worked for Douglas Aircraft as a machine tool designer.

After the war in 1947, White returned to architecture and worked for over a year for the Palm Spring architects, John Porter Clark and Albert Frey. In 1948, White moved to La Quinta and designed his first office building on Highway 111 to work as a self-employed designer. In the Coachella Valley, White focused on designing affordable homes that mitigated the summer heat and provided ample mountain views for residents. Throughout the course of his career, White designed at least 48 homes in the Palm Desert area.

During the 1960s, after he obtained his Colorado architecture license, White developed modestly sized and standardized mountain cabins in Colorado Springs with limited building materials. In 1967, he returned to California where he focused his work during the 1970s and 1980s. In Southern California, White designed various sized residential buildings (from single-family homes to multi-unit dwellings), recreational complexes, commercial buildings, churches, and clubhouses. He died in 2002 at the age of 85 and Walter S. White is widely remembered as a notable modernist architect who focused on industrial and energy efficient designs throughout Southern California.

Donald A. Wexler, Architect

Born in Sioux Falls SD but raised in Minneapolis MN, Donald Allen Wexler served in the Navy during WWII and graduated from the University of Minnesota in 1950. He moved to Los Angeles to work for Richard Neutra then moved to Palm Springs in 1952 to work for William Cody. Later that year in 1952, Wexler, along with Richard Harrison from Cody's firm, set up Wexler & Harrison. In 1960, the George Alexander Construction Company hired them to design a neighborhood of prefab all-steel homes in Palm Springs. Due to high steel costs, the project was halted after just seven homes were built, but those that were completed became widely acclaimed. Wexler & Harrison dissolved in 1961, and Donald Wexler began to work independently. At the same time, he owned Wexler and Perrin-Boggio Architects and Engineers. From 1969 to 2000 he worked again as an independent architect. WWCOT (Widom, Wein, Cohen, O'Leary, and Terasawa) which became DLR acquired Wexler's firm in 2000. Wexler practiced in Palm Springs for almost six decades designing houses, schools, hotels, banks and among many other projects, including the 1966 main terminal building for the Palm Springs International Airport. In Rancho Mirage, Wexler & Harrison or Donald Wexler designed several homes including those at 71-049 Early Times Road, 71-048 Country Club Drive, and 70-170 Sonora Road. He died in 2015.[177]

Hugh Kaptur, Architect

Hugh Kaptur was born in Detroit Michigan where his father was a designer in the Packard and General Motors studios. He studied architecture at the Lawrence Institute of Technology. He joined the Marines and while stationed at Camp Pendleton, he met his first wife and designed a real estate office for her family in San Clemente, his first built project. In 1954, Kaptur returned to Detroit where he worked with his Dad in GM's styling division. He moved to Palm Springs in 1956 and apprenticed with Donald Wexler and Richard Harrison. After being let go during a recession, Kaptur went to work independently making renderings for other architects and was hired by contractors to draw building plans. In 1962 he formed a partnership with licensed architect Robert Ricciardi to get the commission for Palm Springs Fire Station #3 and the Palm Springs Golf Course Clubhouse. After that partnership ended, he formed a new firm with Larry Lapham, Kaptur & Lapham, who was the son of the noted architect Howard Lapham. That partnership lasted ten years during which they designed homes in the Thunderbird and Eldorado Country Clubs in Rancho Mirage, including the Cramer Residence at 41-910 Tonopah Road. After another partnership with James Cioffi, he semi-retired in 1992.[178]

William Krisel, Architect

William Krisel was born in 1924 in Shanghai with his American parents working overseas for the U.S. State Department. Krisel lived in China until age 13, when his family returned to the US, where he attended Beverly Hills High. During WWII, Krisel was assigned to General Joe Stilwell as a Chinese interpreter. Following the war, he attended the USC School of Architecture and graduated in 1949. He also earned a license as a landscape architect in 1954. Designing more than 30,000 living units throughout Southern California, Krisel's career spanned over 51 years. A close personal friend of developer Bob Alexander and his family, Krisel came to the Coachella Valley at his request to design a tract of modernist houses dubbed Smoke Tree Valley. Other Palmer & Krisel projects included the Ocotillo Lodge, Las Palmas Estates (Vista Las Palmas), Kings Point and Canyon View Estates, Racquet Club Estates, the "Valley of the Sun" homes in Rancho Mirage and the Sandpiper condo complex in Palm Desert (which garnered an AIA merit award for Landscape Architecture). The "House of Tomorrow," conceived as an experiment in modern living, so impressed Alexander's wife Helene that they made it their personal residence. The house later gained fame as the honeymoon home of Elvis and Priscilla Presley. Krisel is one of the few mid-century modern architects who lived to participate in the resurgence of modernism. In his final years, he contributed to the restoration of many of his original designs. Beginning in 2008, Krisel collaborated with Maxx Livingstone on exact replicas of his mid-century designs, constructed with all new materials and aimed towards LEED certification. He died in June 2017.[179]

William Pereira, Architect

William Pereira was born in Chicago, Illinois in 1909. He is known for his corporate, industrial, and institutional architecture, such as the Los Angeles County Museum of Art, the Master Plan of the University of California at Irvine, and the Transamerica Pyramid office building in San Francisco. Pereira designed the impressive Firestone offices in Los Angeles in the same year, 1958, as Firestone's Thunderbird Country Club house, both in the International Style. Pereira was in partnership with Charles Luckman, former president of the Lever Brothers Company, New York, from 1950 - 1958. Their work was frequently published in professional journals, especially Arts and Architecture by John Entenza. Until 1959, Pereira held a teaching position at the University of Southern California School of Architecture, Los Angeles. In 1958, Charles Luckman left the practice, leaving Pereira as the sole principal of the firm. Pereira died in 1985.[180]

Edward Durell Stone, Architect

Edward Durell Stone was born in 1902 in Fayetteville, Arkansas. He attended the University of Arkansas before moving to Boston in 1922. Though he did not earn a degree, Stone attended courses at the Boston Architectural Club (now Boston Architectural College), Harvard University's School of Architecture, and MIT. He moved to New York in 1929 and joined the firm of Schultze & Weaver. While there, he designed the main lobby, grand ballroom, and private dining rooms of the Waldorf-Astoria. Stone became an early adopter of the New Formalist style, drawing inspiration from his visits to Europe. Stone achieved success nationally and internationally. He lived in New York for the rest of his life but designed many important buildings throughout the country. Notable works by Stone include the Radio City Music Hall, the US Pavilion at the Brussels World's Fair, the Kennedy Center in DC, the Mandel House in Bedford Hills, NY, and the original Eisenhower Medical Center building in Rancho Mirage. Stone retired in 1974 and passed away in 1978.[181]

Paul Williams, Architect

Paul Williams was a noted architect based in Los Angeles. He began designing homes and commercial buildings in the early 1920s. Williams was considered a trailblazer in the architecture field as the first black architect to become a member of the American Institute of Architects in 1923, and the AIA's first black fellow in 1957. He was born in Los Angeles in 1894 and studied architecture at the University of Southern California. He went on to design approximately 2,500 buildings throughout Southern California, and around the world. Williams designed homes for many celebrity clients including Frank Sinatra and Cary Grant.[182]

In Rancho Mirage, Williams designed the Thunderbird Country Club home for Lucille Ball and Desi Arnaz. The buildings designed by Williams varied greatly in style and type. His most notable works include the Tudor style Leistikow House in Los Angeles (1923), William's International style home in Los Angeles (early 1950s), the Spanish Colonial Revival style 28th Street YMCA (1926), and the Late Moderne style Golden State Mutual Life Insurance Building in Los Angeles (1949). Trained in the Beaux-Arts architecture, Williams excelled at interpreting period styles. He was noted for his attention to detail and personalized elements. Williams passed away in 1980.[183]

Charles Du Bois, Architect

Charles Du Bois was born in Rochester, New York. He was raised, with his sister, by his uncle in Glendale, California. He attended UCLA for a year and then transferred to MIT, where he attended school intermittently from 1922 to 1930. During this time, he was also working as a draftsman for several prominent architecture firms, including Walker & Eisen (1923-1931), Gogerty & Weyl (1926-1929), and Horatio W. Bishop (1929). Du Bois was exposed to many Spanish Baroque, Spanish Colonial, and Mediterranean Revival styles in these early years. In 1938, he opened his office in Hollywood. When housing construction slowed during WWII, he worked as a Senior Set Designer for MGM. After the war, he lived in Encino and returned to designing and working with developers across southern California. Some of his works include the Hollywood Riviera Estates, Palos Verdes Riviera Beach Estates, Fairwood Estates in Granada Hills, Santa Anita Estates in Pasadena, and Woodland West in Woodland Hills. In particular, Woodland West offers a glimpse of several Du Bois design hallmarks, namely Palos Verdes stone cladding, double entry doors, and "casket-pull" door handles. His Palm Springs homes possess many classic mid-century modern traits, such as post-and-beam construction, vaulted ceilings, walls of glass, and an emphasis on blending indoor and outdoor living. Du Bois is well known for the Swiss Miss Houses in Palm Springs, featuring dramatic A-frame entries as well as the Las Palmas Summit and Canyon Estates developments. In Rancho Mirage, Du Bois designed the Armstrong Residence at 40-516 Tonopah Road. Du Bois died in 1996.[184]

E. Stewart Williams, Architect

Emerson Stewart Williams studied architecture at Cornell and the University of Pennsylvania, taught for a few years at Columbia University, and then worked for designer Raymond Loewy. He came to Palm Springs in 1946 to work with his father Harry and brother Roger in their architectural office. Stewart Williams was greatly influenced by the Scandinavian Modernists Alvar Aalto and E.G. Asplund, particularly their use of wood and other natural materials in the creation of a 'warmer' Modernism. Williams' first Palm Springs commission

was for the 1947 Frank Sinatra residence, a modern building of glass, natural stone, redwood siding, and an upswept roof that, according to author and critic Alan Hess, "set a tone for postwar glamour as Hollywood stars continued to move to Palm Springs – to large homes, often on country clubs, favoring a sleek but warm Modernism rather than cool minimalism." Stewart Williams' own home in Palm Springs was built in 1956. His career was long and varied including custom homes, offices, banks, civic buildings, Palm Springs' upper tramway station, and many schools throughout the Coachella Valley and high desert. One of his later works, the Desert Museum, a concrete building lifted above the street, surrounded by a sunken sculpture garden, and sheathed in volcanic cinder was completed in 1970. In Rancho Mirage, Williams designed four houses in the Thunderbird Country Club: the Kiner Residence (1951), Bligh Residence (1952), Christie Residence (1955), and Scott Residence (1957). The Roderick W. Kenaston Residence just outside of Thunderbird was built in 1956.[185]

Patrick E. Sheehy, Architect

Patrick Evan Sheehy was born in Los Angeles in 1940. Sheehy was a graduate of Cal Poly San Luis Obispo with a degree in Architectural Engineering. According to AIA historical records, Sheehy joined William Cody's practice in 1967. By 1969, Cody had made both Patrick Evan Sheehy and Laszlo Sandor associates and renamed his practice: William F. Cody & Associates, Inc. Cody's brother Jay was also made an associate in 1970. Cody retained the controlling interest in the partnership. The practice later became known as Cody/Sheehy Architects. Sheehy worked closely with William Cody on several major projects from the early 1970s including the Tennis Club hotel in downtown Palm Springs, completed in 1973. Sheehy and Cody also worked together on the new Palm Springs Library, designed in a Brutalist style. Following Cody's stroke in 1973, projects already on the boards in the office were seen through to completion, including the Riback Residence.

The firm was dissolved in 1976, when Jay Cody and Patrick Sheehy went their separate ways. William F. Cody later died in 1978. Following Cody's death, Ted Riback was still interested in following Cody's earlier designs and Sheehy's input, so he commissioned Sheehy in 1977 to finish the home. During his years of individual practice, Sheehy specialized in designing custom residences and designs for tract home developments across the Coachella Valley. He won several AIA awards in 1981 for the Inland California Chapter of the AIA: a citation for the Initial Cafeteria at Cal State Bakersfield in 1981 – which shared the same Brutalist style as the Palm Springs Library. He was also awarded for a 137-condominium project in Indian Wells for Vintage Properties and received an interiors award for the Robert McCulloch residence at Lake Havasu, Arizona. In Rancho Mirage, Sheehy finished the design of the Riback Residence in 1978, based on William F. Cody's designs from 1973. Sheehy moved from the

desert to Laguna Beach in or around 1990, having remarried. He died in 1996, at the age of 55.[186]

Wallace Neff, Architect

Edwin Wallace Neff was born in 1895 to Edwin Neff and Nannie McNally, daughter of printing mogul Andrew McNally of Rand-McNally Corp. When he was nine years old, the family moved to Europe, but later returned following the outbreak of World War I. Once back in the United States, Neff grew up on "Millionaire's Row" in Altadena, California, where he earned an appreciation for intricate custom architectural designs. He first began to hone his architectural drafting skills while working under Ralph Adams Cram in Massachusetts. He later returned to live in Altadena and work as a shipyard draftsman in Wilmington. One of his first projects was designing the St. Elizabeth of Hungary Roman Catholic Church in Altadena. Neff designed the building as a gift to the community and the church was officially dedicated in 1926. In most of his designs over the course of his career, Neff combined Spanish, Tuscan, Mediterranean, Islamic, and other design elements to form what he called the "California Style." His influential clientele included Judy Garland, Cary Grant, Charlie Chaplin, Mary Pickford, and Douglas Fairbanks. In Rancho Mirage, Wallace Neff designed the Red Skelton Residence at 37-715 Thompson Road in 1955. Today, Wallace Neff homes often continue to be desired by the Southern California elite.

William Beckett, Architect

William Sutherland Beckett was born June 14, 1921 in Kansas City, Missouri. He attended Yale University and graduated in 1943. Beckett moved to California after graduating and worked for Douglas Aircraft for a short time during World War II. He later went to work for the firm Spaulding and Rex from 1944 to 1949, eventually achieving the title Chief Designer. Beckett married fellow Kansas Citian and socialite, Julianne Kemper in 1948. She was the daughter of James Madison Kemper, Sr. and part of a prominent banking family and patrons of the arts in Kansas City. In late 1949, Beckett went out on his own, and by 1950, he had completed his own offices, located at 9026 Melrose Avenue. The building garnered him an AIA National Honor First Award in 1952, one of only three given nationwide that year. This prestigious award set his reputation as an architect for stars like Charlton Heston, setting him off on a career designing many celebrity homes and businesses in Beverly Hills and throughout LA. In Rancho Mirage, Beckett designed the Schwartz Residence in 1969 within the Tamarisk Country Club. William Beckett died at the early age of 56 in 1977 due to issues resulting from chronic alcoholism.[187]

Howard Lapham, Architect

Howard Lapham was born in 1914 in Stamford, Connecticut. In 1954 at age 40, he arrived in the Coachella Valley. Although he was a registered designer, Lapham intended on becoming a builder in his new desert home. Within a year, however, he was designing residences for wealthy and influential members of the Thunderbird Country Club along the Club's fairways and up the slopes of what became known as Thunderbird Heights. Several of Lapham's buildings appeared in "Architectural Digest", including the Hyatt von Dehn Residence (1960, Thunderbird Heights), the Kiewit Residence (1960, Thunderbird Country Club), the Clarke Swanson Residence (1961, Thunderbird Country Club), the Morrow Residence (1961, Silver Spur Ranch, Palm Desert), and the 1961 remodel of the Thunderbird Country Club clubhouse. He remodeled the famous Chi Chi nightclub in 1959, giving it an ultra-modern new façade. Lapham also designed Lord Fletcher's English Pub in 1966 on what became known as 'restaurant row' on Highway 111 in Rancho Mirage. One of Lapham's largest residential projects was the Mayan-themed Cook House, known as Ichpa Mayapan, built atop Thunderbird Heights in 1970. Lapham also drew the initial plans for the Eisenhower Medical Center, although Edward D. Stone obtained the commission. Lapham officially retired in the 1980s although he maintained an office in Palm Springs for many years. He died in 2008.[188]

Lawrence Lapham, Architect

Lawrence "Larry" Lapham, born in 1935, was an Oklahoma native. He spent two years at Oklahoma City University before he was drafted in 1954 to serve in the Korean War. In 1956, he returned to the United States and moved to Palm Springs in 1959 to work with his father, Howard Lapham as an architect and developer of both homes and commercial properties. In the early 1970s, Lapham partnered with Bill Bachwick to develop Desert Dorado, a 500-unit housing development. He is known for both Modernist and Mediterranean Revival style properties. Lapham is particularly known for the Alan Ladd building on Palm Springs Canyon Drive and many other notable properties across the Coachella Valley. He partnered with Hugh Kaptur to design the Cramer Residence in Thunderbird Heights, which was completed in 1971. In later years, he became a member of the Palm Spring Planning Commission and a part of the Tribal Planning Commission. He died in 2004 at the age of 68 from cancer at the Desert Regional Medical Center.[189]

James H. McNaughton, Architect

James H. McNaughton was born in 1912 in Pittsburgh, Pennsylvania. He graduated from Carnegie Tech (Carnegie Mellon University) in 1935 with a degree in architecture. During the

late 1930s, he was briefly employed as a designer for Steuben Glass Works, fashioning very detailed pieces, some of which are displayed at the Smithsonian. After graduation he left for New York City, where he hoped to design sets for Broadway productions. Instead, he found himself in the television business. Due to his innovative use of perspective, designing static one-dimensional backgrounds with the illusion of height and distance, McNaughton quickly gained acclaim as TV's first official art director. During the peak of his career in the 1950s, McNaughton earned many honors and awards. By the end of the decade, he felt that he'd accomplished all he wanted to in the field and made a clean break, leaving television and moving to the west coast.

McNaughton came to Palm Springs in 1959, when he was 47 years old with the ambition to design homes. In 1961, he received his first commission when Harry R. & Willa Morrill employed him to design a new mansion for themselves on Panorama Road in Little Tuscany, Palm Springs. Upon its completion, the Morrill House became an instant sensation, garnering praise and coverage *in Palm Springs Life*, The *Desert Sun*, and later The *Architectural Digest*. In 1963, he completed the Allan & Middy Kramer Residence in the Caballeros Estates, which also earned him more acclaim. He designed a second house for them in Tamarisk Country Club, which they moved into in 1974. Other project attributed to McNaughton include the George Arnold Residence in Palm Springs, the 1973 Petunia House in Phoenix, and a group of spec homes in Andreas and Murray Canyons.

He had many other talents which he practiced throughout his life. He was an accomplished painter, muralist, and pianist. He played the pipe organ and designed prestigious concert venues, including the Pittsburgh Organ Academy, Boston Philharmonic, and the Los Angeles Music Center. He died in 1979, only creating plans for about two dozen projects that were actually completed. However, the quality of these few designs makes McNaughton a noteworthy architect, particularly in the Coachella Valley.[190]

Gin Wong, Architect

Gin Wong was born in Guangzhou, China in 1922 and immigrated to Los Angeles as a young child. After serving as a radar bombardier for the U.S. Army in World War II, he attended USC's School of Architecture, graduating in 1950. After graduation, he worked for Pereira and Luckman, eventually becoming vice president of design. When William Pereira and Charles Luckman established their own firms, Wong helped found William L. Pereira & Associates in 1958, where he ultimately became a partner and the firm's president. Wong was instrumental in creating some of Los Angeles' greatest Modern structures. He served as design director for Los Angeles International Airport (LAX). Other projects included CBS

Television City and downtown's Union Oil Center (now Los Angeles Center Studios). Wong also designed what many consider the most iconic gas station in the world—the Union 76 station (1965) in Beverly Hills, originally designed as part of the LAX master plan. It was under Wong's leadership that Pereira & Associates was commissioned to design the landmark Transamerica Pyramid in San Francisco.[191] In Rancho Mirage, Gin Wong Associates designed the Provident Bank building, which was completed in 1982.

Welton Becket Associates, Architect

Born in Seattle in 1902, Welton Becket studied architecture at the University of Washington. He moved with his schoolmate Walter Wurdeman to Los Angeles in 1933. Together with Charles Plummer, they formed Plummer, Wurdeman and Becket, a firm that largely designed restaurants and shops. In 1935 they designed the Pan Pacific Auditorium in Los Angeles in a striking Streamline Moderne design. After Plummer's death in 1939, the duo continued as Wurdeman and Becket. They worked largely on defense and housing projects until the end of World War II. When large-scale projects were green-lit across the country, Becket and Plummer were well positioned to receive a sizable share of the new commissions. Their first major post war building was the 1947 Bullock's Pasadena, one of the first department stores to open after the war. The same year, their General Petroleum building became the first major post war office building to rise in downtown Los Angeles. After Wurdeman died unexpectedly in 1949, Becket renamed the firm Welton Becket and Associates. He continued to design several iconic buildings including Capitol Records (Hollywood, 1956), Parker Center (Civic Center, 1955), Los Angeles International Airport (with William Pereira, Charles Luckman, and Paul R. Williams; Inglewood, 1959), and The Music Center (Civic Center, 1964-67). Becket's firm also completed master plans for Panorama City (1947) and Century City (1960), UCLA Medical Center (Westwood, 1948-70), and the civic cores of Pomona (1962-69) and the City of Orange (1963). In 1955, Welton Becket designed the McCulloch Residence within Thunderbird Country Club. Welton "Welt" Becket oversaw the construction of more than a hundred projects before his passing in 1969.[192]

MacDonald Becket, Architect

MacDonald Becket graduated from the USC School of Architecture in 1952. Like his uncle, MacDonald was a driving force in the development of architecture in Los Angeles. Two of his major roles in California were coordinating architect for the master planning and architectural implementations of the 260-acre Century City project and in the successful renovation of the state capitol building in Sacramento. Becket became president of Welton Becket and Associates in 1969, after Welton's death, and under his leadership, the firm became significant for its corporate and institutional architecture with multiple offices in the

United States and around the world. He was instrumental in the design of projects such as the Washington, D.C. Convention Center, Terminal One at the Los Angeles International Airport, Barclays Bank International in New York City, the Federal Courts Building in downtown Los Angeles, the redevelopment of the Boston Commons, Xerox Square in Rochester, New York, the Reunion Hyatt Regency in Dallas, and the Valley National Bank (now Chase Bank) in downtown Phoenix, which is still the tallest building in Arizona.

MacDonald Becket also expanded the firm's development, investment, and international roles. In China, His firm designed the Great Wall Hotel in Beijing, and the firm later developed the World Trade Center in Moscow, Russia. He was the first American architect to do a major building in China. Five large projects for the Samsung Corporation in Seoul, South Korea, were also accomplished under his direction. The firm merged in 1987 with Ellerbe Inc. to form Ellerbe Becket, once the largest architectural firm in the United States. In 2009, AECOM Technology purchased Ellerbe Becket. Prior to the merger, Becket oversaw a staff of 300 architects, planners, engineers, interior designers, space planners and programmers, and allied specialists offering comprehensive total design services on a worldwide basis. In addition, Becket designed and completed personal homes for former United States presidents Dwight Eisenhower and Gerald Ford, as well as for J.C. Hall, owner and president of Hallmark Cards. He died in 2017 at the age of 89 years old in Phoenix, Arizona.[193]

John Randal McDonald, Architect

John Randal McDonald was an American architect, born in 1922, who worked in the 1950s and 1960s. McDonald was born in Milwaukee in 1922 and served in World War II as an officer in the U.S. Navy before pursuing a degree in architecture. After a brief stint in the fine arts program at the State Teacher's College, McDonald decided to pursue his interest in architecture at Yale University. His work has often been compared to Frank Lloyd Wright's because nature was a continuous theme in his design, emphasizing the importance of a natural setting and the use of natural materials. McDonald also encouraged homeowners to be aware of the elegance of the natural environment, thereby making them more sensitive to nature. McDonald designed unique homes that appealed to the public and were often affordable. Initially, McDonald's designs were predominantly for private residences; however, as years passed and his success and reputation increased, he was commissioned to design monasteries, hotels, factories, dormitories, schools, and churches across the country and abroad. McDonald constructed his first house, located at 801 Lathrop Avenue, Racine, Wisconsin in 1949. With his continued success, McDonald expanded his business and moved to Florida in the late 1950s. McDonald was successful throughout his life as he designed hotels, banks, churches, and marinas throughout the

world, as well as homes for various celebrities, such as Björn Borg, Mickey Mantle, Perry Como, Jimmy Connors, James Garner and Maureen O'Hara. He designed the Penrith-Taubman House in Thunderbird Heights, which was completed in 1965. He died in 2003.[194]

Buff & Hensman & Associates, Architect

One of the more prolific developers of Contemporary style homes and custom Modernistic style residences in Southern California during the postwar era, Buff, Straub & Hensman was a Pasadena based firm born out of the USC School of Architecture. Between 1958 and 1963, the partners, Conrad Buff, Donald Hensman, and Calvin Straub, became award winning designers, creating Modern style dwellings, including the Poppy Peak Historic District in Pasadena. In 1963, Straub relocated to Arizona and the firm changed names to Buff & Hensman & Associates (1964-1988). During this time, they designed the Meade Residence in 1972, within Tamarisk Country Club, and the governor's mansion for Ronald Reagan the following year in 1973.[195]

Barry Berkus, Architect

Barry Berkus was an American modernist architect known for his contributions to mid-century modern architecture, particularly in Southern California. He was born in 1935 in Santa Barbara, California, and graduated from the University of Southern California with a degree in architecture. He began his career as an intern with William Cody in Palm Springs and later founded his firm, B3 Architects. Throughout his career, Berkus designed numerous residential and commercial buildings. He designed more than 600,000 houses and helped write building codes and develop new towns in Japan. He designed the Chalet Palms community within Magnesia Falls Cove in 1964. He died in 2012 at the age of 77.[196]

Henry Eggers, Architect

Henry Eggers was born in Denver, Colorado on May 12, 1911. Earning his bachelor's degree in architecture from Cornell in 1933 and the Sands Medal that same year, Henry Eggers lived much of his life in the Los Angeles area where he died at the age of 75. Eggers joined the Southern California Chapter of the AIA in 1943 and served as the Chapter Secretary between 1947-48. During the years 1946-48 he was a partner in the firm Kaufmann, Lippincott & Eggers. Partnering with Walter W. Wilkman in the firm Eggers and Wilkman, Architects (1956-66) he ran the business from his home office in Pasadena.[197] Together they designed the Davis Residence "White Shadows" in Thunderbird Heights, which was completed in 1957.

Michael Allan Black, Architect

A 1961 graduate of the USC School of Architecture, Michael Allan Black established his architectural practice in 1968 after working for Master Architect E. Stewart Williams, whose portfolio included the Santa Fe Savings Bank and the Upper Mountain Station of the Palm Springs Aerial Tramway, as well as the Frank Sinatra House. In 1969, Michael Allan Black prepared designs for the second group of homes within the Tamarisk West community, Tamarisk West II.

Walter W. Wilkman, Architect

Walter W. Wilkman was born in Wilmington, Delaware in 1917. He attended Wentworth Institute from 1935 to 1937. Afterwards, he became a draftsman at Perry, Shaw, and Hepburn, Architects, Boston, Massachusetts from 1937 to 1938. He took classes at the Boston Architectural Center from 1937 to 1940, and additional coursework at the Massachusetts Institute of Technology from 1940 to 1941. He became a designer at the Stone and Webster Engineering Corporation from 1941 to 1942. After WWII, he became a designer for Kauffmann, Lippincott, and Eggers, Architects from 1946 to 1948. In 1952 he partnered with Henry Eggers to form Eggers and Wilkman, Architects in Los Angeles. He stayed with Eggers until 1966. Together, Eggers and Wilkman designed the Davis Residence "White Shadows" in Thunderbird Heights. He died in 1992 in Ventura Country, California.[198]

Harold Warren Levitt, Architect

Harold "Hal" Warren Levitt was born on July 26, 1921, in San Francisco, California. He received a Bachelor of Arts in Graphic Arts from Stanford University and an architecture degree from USC. After his graduation, he worked for Roland Coate and Burton Schutt before he founded his own architectural company, Levitt, LeDuc & Farwell, in the 1950s. The company was headquartered in Beverly Hills. He designed homes for Walter Mirisch, Steven Spielberg, Lew Wasserman, Olivia Newton-John, Ross Hunter, Quincy Jones, Burt Lancaster, Dean Martin, Debbie Reynolds, Lionel Richie, Kenny Rogers and Hal Wallis. He also designed the Riviera Hotel on the Las Vegas Strip and the headquarters of the Academy of Motion Picture Arts and Sciences in Beverly Hills. His designs reflected modernist philosophies of mid-century Los Angeles which emphasized intermixing and re-interpreting indoor and outdoor spaces with large glass surfaces, interior courtyards, and surprising entry sequences. Many Levitt homes featured large-scale doors that instead of leading indoors, opened into interior protected courtyards. He designed the Morton Residence within Tamarisk Country Club in 1986. He retired to Reno, Nevada, in 2001 and died at his holiday home in Las Vegas at the age of 79 in 2003.[199]

Crombie Taylor, Architect

Crombie Taylor was an architect, professor, and preservationist. He was born in Pennsylvania and earned architectural degrees at Penn State and Princeton University. He began teaching at Georgia Tech. In 1944, he began teaching at the Institute of Design in Chicago, with a focus on expanding the European Bauhaus school of modern architecture and design. He was the acting director of the program from 1951 to 1954. In 1954, Taylor left the school to practice architecture. Most of his design work was in Chicago, the most notable being the Hull House Uptown Center. His designs were known for being simple and elegant. In the 1950s, Taylor rediscovered and reproduced stencil designs by 19th century designer Louis H. Sullivan. Taylor was a champion of Sullivan's work, working throughout his career to restore several Sullivan designed buildings, and to recover and exhibit Sullivan's trademark stencil designs. Taylor began teaching at the University of Southern California in 1962, working there until his retirement in 1985. While he taught, Taylor designed the Rosenbaum Residence at 37-084 Palm View Road. He passed away in 1999.[200]

Ted Grenzbach, Architect

Ted Grenzbach was born in New York City but grew up in 1930s Hollywood. After serving in the Navy during World War II, Grenzbach earned a degree in architecture from U.C. Berkeley. Following graduation, he built homes in Modernist styles for stars such as Frank Sinatra, Dinah Shore, Cher, Gene Kelly, Herb Alpert, Rock Hudson, Rod Stewart, Barbra Streisand and Johnny Carson.[201] In 1983, Grenzbach designed the Postmodern style Klien Residence in the Tamarisk Country Club.

Richard Arnett Harrison, Architect

Richard Arnett Harrison was born in Los Angeles on June 5, 1924. Richard "Rick" attended University High School in Los Angeles. He went on to graduate from University of Southern California in 1951 with a degree in Architecture. After travel to Mexico and Canada, Harrison began work at William F. Cody's firm in Palm Springs from July 1951 to February 1953, where he worked side by side with his soon to be partner Donald Wexler (who previously began his career in the office of Richard Neutra). Harrison went on to design homes throughout Southern California including Seven Lakes, and enclaves of homes in Nevada.[202] Wexler & Harrison designed several notable homes in Rancho Mirage including the Skutt Residence and the Charney Residence.

Stan Alan Sackley, Architect/Builder

Stan Alan Sackley was a prolific Modernist architect in the Coachella Valley. He was born in Los Angeles County and graduated from the University of Southern California with a degree in architecture in 1961. In the early 1960s, prior to forming his own firm, Sackley partnered with Herman Charles Light. Sackley was never licensed as an architect but maintained a successful design firm in Palm Springs. He received national fame when his house for James Hollowell was featured in Playboy in April 1966. Sackley is best known for mid-century Modern homes along Caliente Drive. He designed the Spare Residence at Tamarisk Country Club in 1974. By 1986, Sackley had retired. He died in 2001.[203]

Albert Belden Crist, Builder

Albert Belden Crist was born in Hollywood in 1923, but he grew up and resided for much of his life in Palm Springs. His father was a builder but at age 19 in 1942, Crist was working at a Safeway in Arizona. After the war, from 1947 to 1951, Crist was listed as a carpenter in the Palm Springs Directory. Like his father, he continued to work as a builder for the rest of his career, which lasted through the 1970s. He constructed the Ben Gale Residence in 1961 within the Thunderbird Country Club. He died in 1986.[204]

Rancho Mirage Realty Company, Builder

A. Ronald Button created the Rancho Mirage Realty Company in 1954. While he sold property in Rancho Mirage throughout the late-1940s and early-1950s, homes Button's homes built by the Rancho Mirage Realty Company were unique in their design and marketing. From the 1940s, Button's plan was to build a new city, and he required investors. To that end, he partnered briefly with his brother-in-law, the radio and TV personality Art Linkletter, from 1956 to 1958, to develop modern Contemporary style homes within the Magnesia Falls Cove area. During this timeframe, the Rancho Mirage Realty Company developed several Contemporary style tract houses using similar plans and marketed them as 'Linkletter Homes', to capitalize on name recognition and put the community on the map. Most 'Linkletter Homes' had stucco-clad exterior walls, semi-detached garages connected by patio roofs, floor-to-ceiling windows on the front and rear elevations, front-facing gables with large overhangs, and exposed roofing components.

Marval Construction Company, Builder

Robert "Bob" Marx was the son of Gummo Marx (of the Marx Brothers), born in 1930. He was a building contractor in the Coachella Valley. He partnered with architect designer Val Powelson under the firm Marval Construction Company which operated from 1957 to 1964.

"Marval" is a combination of the Marx and Val names. Marx built many custom homes in the Rancho Mirage Tamarisk area, best known being the Gullwing House/Leo Maranz residence, the Sputnik House/Gummo Marx residence, and the Da Vall Estates ("Robert 'Bob' Marx Collection," Palm Springs Art Museum, Online Archive of California). The many residences constructed by the Marval Construction firm and designed by Powelson under the Marval firm are noted for their eye-catching Modern designs. This included dramatic winged roofs, sharply pointed exposed beams, unique shapes and angles, prominent center beams, and dramatic architectural features.

Other Architects and Builders

Other builders that appeared in building records or permits during the current survey effort are listed below. Limited information was available regarding these companies and individuals associated with historic-era properties in Rancho Mirage. Further research in the future may result in additional information regarding the location, operation, and activity of these architects and builders in the region.

- Jack McCallum & Robert "Bob" Pitchford
- Robert H. Ricciardi
- Ross Patten and Albert Wild
- Trenton Dunphy & John Fincher
- Jack McCallum and Robert “Bob” Pitchford
- Bill Foster
- Ernst Off
- Cobble & Wessman Construction Company
- Arthur Valdes
- K. Sande Senness
- Peter Kiewit Sons' Company
- Great West Contractors, Inc.
- George M. Holstein & Sons
- David Freedman
- Millard Archuleta

Associated Property Types

Property types associated with different local and regional architectural styles are included in the Historic Context Statement, with character defining features detailed for each style. The architectural styles encompass residential, commercial, civic, and institutional property types. Below are the significance thresholds and integrity considerations for a property in

Rancho Mirage to be listed on the NRHP, CRHR, or Local Register for representation of a specific architectural style, type, period, or method of construction.

Significance Thresholds

To be eligible for listing in the NRHP, CRHR, or Local Register, a property in Rancho Mirage that displays the character defining features of one or more of the listed architectural styles and exhibits sufficient levels of integrity must be significant under at least one of the following criteria.

NRHP Criterion A/CRHR Criterion 1

An architecturally significant property in Rancho Mirage may be eligible under Criterion A/1 for its association with one or more of the other identified themes in the Historic Context Statement related to the board patterns of national, state, or local history. A historic property may also be significant under A/1 as a representation of one or more of the themes identified in the Historic Context Statement.

NRHP Criterion B/CRHR Criterion 2

An architecturally significant property in Rancho Mirage may be significant under Criterion B/2 for its association with life and/or work of a person, or persons, important to national, state, or local Rancho Mirage history. Prominent individuals may include the persons discussed in one or more of the themes outlined throughout the Historic Context Statement. Additional significant individuals may be discovered through future research.

NRHP Criterion C/CRHR Criterion 3

A historic era building in Rancho Mirage displaying Period Revival, Early Modern, or Late Modern architectural styles may be eligible under Criterion C/3 for embodying distinctive characteristics of a style, type, period, or method of construction. A notable work of a master builder, architect, or designer in Rancho Mirage would also be significant under Criterion C/3.

NRHP Criterion D/CRHR Criterion 4

A building related to a specific architectural style in Rancho Mirage may be significant under Criterion D/4 if the building has the potential to yield important information of scientific value.

Local Register Criteria

An architecturally significant property built post-1973 may be significant under Local Register Criterion 1 if it is representative of a mid-to-late 20th century architectural style or reflects special elements of a type, style or way of life important to the City; under Local Register Criterion 2 if it is associated with a business or use which was once common but is now rare or non-existent within the City; under Local Register Criterion 3 if it is representative of the evolution or development or associated with the cultural, religious, educational, political, social or economic growth of the city, county, state or nation; under Local Register Criterion 4 if it represents the work of a master builder, engineer, designer, artist or architect whose individual genius influenced any of the themes outlined in the Historic Context Statement; under Local Register Criterion 5 for an association with a historic event person(s) that have made a meaningful contribution to the city, state or nation; under Local Register Criterion 6 if it has a high potential for yielding information of archaeological interest; under Local Register Criterion 7 if it embodies elements of outstanding or innovative attention to architectural or engineering design, detail, craftsmanship or use of materials; or under Local Register Criterion 8 if it contains an unusual natural feature.

Integrity Considerations

To be eligible for listing in the NRHP, CRHR, or Local Register, an architecturally significant property must retain sufficient integrity to convey its significance. A property nominated under NRHP Criteria A/CRHR Criteria 1 should retain integrity of location, setting, feeling, and association. A property nominated under NRHP Criterion B/CRHR Criterion 2 should retain integrity of location, design, feeling, and association, as the physical condition of a site is directly related to connection between a property and a significant individual. A property nominated under NRHP Criterion C/CRHR Criterion 3 should retain integrity of design, materials, workmanship, and feeling, as these are critical for a property to embody distinctive characteristics of a style. Some alterations may be acceptable if the property retains its essential features and overall original form. A property nominated under NRHP Criterion D/CRHR Criterion 4 should retain integrity of location, materials, and association.

Regarding integrity considerations for sites potentially eligible for listing in the Local Register, a property nominated under Criteria 1, 4, or 7 should retain integrity of design, materials, workmanship, and feeling. A property nominated under Criteria 2, 3, or 5 should retain integrity of location, setting, feeling, and association. A property nominated under Criteria 6 or 8 should retain integrity location, materials, and association.

Appendix A. Updated DPR Forms for Previously Recorded Properties

Table 1. Updates to Previously Recorded Properties

Previously Recorded Properties			
Urbana Survey No.	**Address**	**Resource Name**	**CRHR Status Code**
63	37-115 Palm View Road	DeLue Residence	3S/3CS/5S2
64	37-361 Marx Road	Borwick-Emrich Residence	3S/3CS/5S2
65	40-241 Club View Drive	Ball-Arnaz Residence	3S/3CS/5S2
66	40-555 Sand Dune Road	Firestone Residence	3S/3CS/5S2
67	41-915 Tonopah Road	Dennis Residence II	3S/3CS/5S2
68	70-151 Sonora Road	Simon Residence	3S/3CS/5S2
69	70-200 Mirage Cove Drive	Mirage Cove Drive Apartments	3S/3CS/5S2
70	71-087 Fairway Drive	Hanson Residence	3S/3CS/5S2
71	71-111 Tamarisk Lane	Stein Residence	3S/3CS/5S2
72	71-391 Mirage Road	Organ Residence	3S/3CS/5S3
73	71-781 Sahara Road	71-781 Sahara Road	3S/3CS/5S2
74	70-612 Highway 111	Thunderbird Country Club Cottages	3S/3CS/5S2
75	42-457 Rancho Las Palmas Drive	Casbah Apartment Hotel	3S/3CS/5S2
76	40-253 Club View Drive	Jorgensen/Mavis Residence	3S/3CS/5S2
77	71-076 Country Club Drive	Pollard Simons Residence	3S/3CS/5S2
78	70-801 Highway 111	Fire Station #1/Riverside County Fire Station 50	3S/3CS/5S2
79	40-281 Sand Dune Road	Johnson Residence	3S/3CS/5S2
80	71-490 Highway 111	Rancho Super Car Wash (Building)	3S/3CS/5S2
81	39-000 Bob Hope Drive	Eisenhower Medical Center Original Building	3S/3CS/5S2
82	72-010 Clancy Lane	Clancy Residence	3S/3CS/5S2
83	36-468 Sandsu Circle	Nestor Residence	3S/3CS/5S2
84	37-174 Palm View Road	McMillan Residence	3S/3CS/5S3
85	37-500 Palm View Road	37-500 Palm View Road	3S/3CS/5S2
86	70-753 Fairway Drive	Hilliard Residence	3S/3CS/5S2
87	70-731 Fairway Drive	Feicht Residence	3S/3CS/5S2
88	70-754 Fairway Drive	Singer Residence	6Z
89	70-381 Placerville Road	Dennis Residence I	6Z
90	70-927 Fairway Drive	Hayden Residence	6Z
91	71-024 Cypress Drive	Miller Residence	3S/3CS/5S2
92	71-274 Mirage Road	Knox Residence	6Z

93	71-365 Sahara Road	Garvey Residence	6Z
94	71-431 Sahara Road	Van Pelt and Lind Spec House	3S/3CS/5S2
95	71-533 Sahara Road	Goode Residence	6Z
96	69-850 Highway 111	Desert Braemar Apartments	3S/3CS/5S2
97	71-785 Sahara Road	71-785 Sahara Road	6Z
98	71-995 Vista Del Rio	Boscacci Residence	3S/3CS/5S2
99	72-026 Clancy Lane	Tower Residence	3S/3CS/5S2
100	72-551 Clancy Lane	Rancho Manana Stables	3S/3CS/5S2
101	37-084 Palm View Road	Rosenbaum Residence	3S/3CS/5S2
102	40-105 Sand Dune Road	Dyer Residence	3S/3CS/5S2
103	70-889 Tamarisk Lane	Goldstein Residence	3S/3CS/5S2
104	71-284 San Gorgonio Road	Grafton Residence	3S/3CS/5S2
105	71-312 San Gorgonio Road	Whittle Residence	3S/3CS/5S2

USGS 7.5' Quad: Cathedral City Date: 2021 Map Scale: 1;24000
Address: 37-115 Palm View Road City: Rancho Mirage Zip: 92270
UTM Zone: 11S 552552.56 m E 3737789.32 m N
APN: 674193017

Date Constructed: 1961
Ownership and Address: Zimmerman Family Trust, Mary A Zimmerman; 37115 Palm View Road, Rancho Mirage, CA 92270

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 37-115 Palm View Road property, known as the DeLue Residence, was constructed in 1961 in the Green Acres neighborhood. The prior survey described the property as a Modern one-story rectangular house with a medium-pitched front-gabled roof in 2002. The residence most closely falls under the Contemporary architecture style. The single-family residence has an asymmetrical facade, clad in concrete block and medium-smooth stucco siding. The front elevation features an offset front entrance with an opaque glass sidelight, with clerestory windows above that extend to the southeast corner. The residence has a low pitch, front gable roof with an attached covered carport. There does not appear to have been any significant alterations to the residence since the previous survey effort.

Permits provided by the City include:
- Mechanical/HVAC work in 2010 (Permit No. B1000282)
- Mechanical/HVAC work in 2023 (Permit No. B2300731)

See Continuation Sheet for Additional Information.

Updated Primary Record Information Continued:

View southeast of the front elevation. (37-115 Palm View Road_1)

View northeast of the front elevation. (37-115 Palm View Road_2)

Updated Building, Structure, Object Information Continued:

The 2002 survey evaluated the property as status code 5S3 - appears to be individually eligible for local listing or designation through survey evaluation. This prior survey evaluation found the property was noteworthy as a representative example of the Modern Ranch architecture style within the Country Club Era (1951-1973) theme. The current 2024 survey found that the dwelling is more specifically associated with the new theme of Residential Subdivisions and Cooperatives (1951-1973), but it does not possess individual documented significance in relation to this theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

The dwelling was previously identified as part of the Tamarisk Country Club neighborhood. Further research indicates that the home is in the Green Acres subdivision, located adjacent to the country club (The Desert Sun, April 13, 1963, Page 2). Green Acres had opened model homes by 1962 and advertised as a planned community adjacent to the Tamarisk Country Club (The Desert Sun, March 03, 1962, Page 14). It appears that the DeLue Residence was one of the model homes, constructed by local contractor Robert "Bob" Marx.

Marx was the son of Gummo Marx (of the Marx Brothers), born in 1930. He was a building contractor in the Coachella Valley. He partnered with architect designer Val Powelson under the firm Marval Construction Company which operated from 1957 to 1964. "Marval" is a combination of the Marx and Val names. Marx built many custom homes in the Rancho Mirage Tamarisk area, best known being the Gullwing House/Leo Maranz residence, the Sputnik House/Gummo Marx residence, and the Da Vaal Estates ("Robert 'Bob' Marx Collection," Palm Springs Art Museum, Online Archive of California). The many residences constructed by the Marval Construction firm and designed by Powelson under the Marval firm are noted for their eye-catching Modern designs. This included dramatic winged roofs, sharply pointed exposed beams, unique shapes and angles, prominent center beams, and dramatic architectural features. The DeLue Residence has been identified as being constructed by Marx, however, the architect was not identified. Based on other residences attributed to Marx, the DeLue Residence is a modest example of his work. The residence features Modern details that are typical of Marx's work, including the dramatic roofline, which extends across a wide carport, fixed windows that extend to the roofline within the roof gable, and geometric, square blocks along the front elevation.

The dwelling has not been found individually eligible under NRHP/CRHR Criterion A/1, as it has not been associated with significant events or patterns of events in local, regional, state, or national history; not individually eligible under NRHP/CRHR Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state or national history. The residence is not considered eligible under Local Criteria 2-6 and 8.

The single-family residence is considered eligible under NRHP/CRHR Criterion C/3 as property individually embodies the distinctive characteristics of a Contemporary style home constructed within Rancho Mirage in the 1960s. The property is also eligible under Local Register Criteria 1 and 7 as it is representative of a Contemporary style home that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

Erected in 1961, this Modern one-story rectangular house is capped with a medium-pitched front-gabled roof. Exposed beam-ends are visible beneath the deep roof overhangs of the east-facing residence. The house, located in the Tamarisk Country Club area, is 1,815 square feet with four bedrooms and two bathrooms, and is set on .24 acres. Square concrete block and medium-smooth stucco clad the exteriors. Windows are a combination of fixed, jalousie, sliding, and clerestory. The offset front entrance, with its opaque glass sidelight, is topped with clerestory windows that extend to the southeast corner. An adjacent sconce is probably not original. To the north and south of the front gable peak, fixed bedroom windows are paired with narrow jalousies and topped with broad clerestories. The rear (west) elevation is mostly glass, and opens onto a patio and swimming pool. A double carport is attached to the north side of the house. Low shrubs and a front lawn border a circular concrete driveway. Mature palms, pine and other trees provide shade. The building appears original and in excellent condition.

The Leonard and Nina DeLue Residence is architecturally noteworthy as a representative example of tract style Modern home. It was constructed by Robert "Bob" Marx, a local general contractor and son of entertainer Gummo Marx (who lived on the east side of Palm View Road). It is not known whether an architect was used in the design. The property typifies the simple, unadorned Modern house that grew out of the Palmer and Krisel-designed Alexander tract developments in Palm Springs. These modest, Modern houses made seasonal desert resort living possible for the upper middle class. The DeLue Residence was a 'spec' house in the same tradition as the Alexander homes, but located in the more prestigious Tamarisk Country Club area. Although the resource does not appear eligible for listing in the National Register of Historic Places or for designation under an existing or proposed local ordinance, it is of local interest (a "5S3" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City Date: 2021 Map Scale: 1;24000
Address: 37-361 Marx Road City: Rancho Mirage Zip: 92270
UTM Zone: 11S 552767.99 m E 3737611.39 m N
APN: 674292006

Date Constructed: 1962
Ownership and Address: Robert M Larinto, Tracy L Larinto; 3170 Mesalona Lane, Pasadena, CA 91107

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 37-361 Marx Road residence, designed by Robert Marx, was constructed in 1962. The home is located within the Tamarisk Country Club neighborhood, with the rear elevation opening onto the 7th fairway of the golf course. In 2002, Leslie Heumann and Associates described the residence as a Modern style, symmetrical home with a flat roof, with the exterior clad in medium-smooth stucco with beige-colored brick accents. The architecture style most closely resembles a Desert Modernist style. The residence features non-original smoked sliding glass and fixed windows with black anodized aluminum mullions. The rear (north) elevation features wings at either side of the center section. Previous reporting based on plans and building permits, indicate that the center section was originally an open patio that was enclosed circa 1984. There does not appear to have been any significant alterations to the property since the 2002 survey.

Permits provided by the City include:
- Mechanical/HVAC work in 2018 (Permit No. B1800087)
- Construction of a block wall in 2023 (Permit No. B2301349)

See Continuation Sheet for Additional Information.

Updated Building, Structure, Object Information Continued:

The 2002 survey evaluated the property as status code 5S3 - appears to be individually eligible for local listing or designation through survey evaluation. This prior evaluation found the property is a noteworthy example of a modern style home. The current survey found that the dwelling is associated with the theme of the Country Club Era (1951-1973), but it does not possess individual documented significance in relation to this theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community. The home's architecture style, previously identified as "Modern," most closely resembles the Desert Modernist style. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

The home is a good example of a Desert Modernist style home. The residence maintains character defining features of the style including a flat roof, broad expanses of uninterrupted wall surfaces, attached garage, a recessed corner entry with no porch, and an asymmetrical plan.

The residence was constructed in 1962 for Charles and Maureen Borwich-Emrich. The architect was identified as Robert Marx, with his company, Marval Construction Company, as the builder. While the Marval Construction Company often worked with architect Val Powelson, Marx was credited with the design of the subject building.

Marx was the son of Gummo Marx (of the Marx Brothers), born in 1930. He was a building contractor in the Coachella Valley. He partnered with architect designer Val Powelson under the firm Marval Construction Company which operated from 1957 to 1964. "Marval" is a combination of the Marx and Val names. Marx built many custom homes in the Rancho Mirage Tamarisk area, best known being the Gullwing House/Leo Maranz residence, the Sputnik House/Gummo Marx residence, and the Da Vaal Estates - these three are identified as being designed by Powelson ("Robert 'Bob' Marx Collection," Palm Springs Art Museum, Online Archive of California).

The dwelling has not been found individually eligible under NRHP/CRHR Criterion A/1, as it has not been associated with significant events or patterns of events inn local, regional, or national history; not individually eligible under Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state, or national history. The residence is not considered eligible under Local Criterion 2-6 and 8.

The single-family residence is considered eligible under NRHP/CRHR Criterion C/3 as property individually embodies the distinctive characteristics of a Desert Modernist style home constructed within Rancho Mirage in the 1960s. The property is also eligible under Local Register Criteria 1 and 7 as it is representative of a Desert Modernist style home that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Designed and built by Robert Marx in 1962, this Modern residence has a flat roof covering 5,694 square feet and contains five bedrooms and four bathrooms. Set on .53 acres, the symmetrical building faces south. The primary (rear) elevation opens onto the 7th fairway of the Tamarisk Country Club golf course. Exteriors are primarily sheathed in medium-smooth stucco, with some elevations featuring a veneer of flattened beige-colored brick. Smoked sliding glass and fixed windows with black anodized aluminum mullions are not original. Mature fan palms grow through square openings formed from the intersection of extended roof beams. The rear (north) elevation features wings on either side of a center section that projects towards the fairway. Original plans and building permits indicate that the center section was once an open patio; it was enclosed in the 1980s. An abstract metal sculpture is set in a reflecting pond with low concrete and mosaic tile walls. The grounds are lushly landscaped with a variety of palms, shrubs, boulders, and manicured lawns. It appears that, in addition to the non-original windows, the stucco finish has been updated. The building is in excellent condition.

This house is architecturally noteworthy for its use of modern design and association with architect Robert Marx and his Marval Construction Company. Constructed in 1962, the house was built for Charles and Maureen Borwick-Emrich and was featured in the Fall 1962 issue of Architectural Digest. The Marval Construction Company was a partnership between contractor Robert Marx and architect Val Powelson. For this residence, Robert Marx claims design as well as building credit. The Marval Company designed and built a number of residences in the Tamarisk, Thunderbird Country Club, and Thunderbird Heights areas of Rancho Mirage. The residence is a good example of modern design and technique with its flat roof and walls of floor to ceiling glass. Although the house has been altered, it continues to convey its original style. While it does not appear eligible for listing in the National Register of Historic Places or designation under an existing or proposed local ordinance, it is of local interest (a "5S3" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City, Rancho Mirage Date: 2021 Map Scale: 1;24000
Address: 40-241 Club View Drive City: Rancho Mirage Zip: 92270
UTM Zone: 11S 553119.65 m E 3735167.42 m N
APN: 684034005

Date Constructed: 1954
Ownership and Address: Susie Morton McAllister; 40241 Clubview Drive, Rancho Mirage, CA 92270

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 40-241 Club View Drive residence, designed by architect Paul Williams, was constructed in 1954. The home is located within the Thunderbird Country Club neighborhood. In 2002, Leslie Heumann and Associates described the residence as a one-story Ranch Modern house with a medium-pitched hipped roof. The current survey classifies the home as a Custom Ranch style residence. The home has a symmetrical, U-shaped form. The residence is clad in the original board and batten sheathing, with stucco covering at the two-car garage addition. At the front facade, the front entry door is centered with large sidelight windows at either side and surrounded with natural stone wall cladding. The 2002 survey documented several alterations to the original residence including: alterations to the board and batten siding, the two-car garage replacing the double carport at the west end of the house, the removal of a concrete block wall, removal of several wood grid sunscreens, roof replacement, removal of the interior natural rock chimney, and window replacement. Permits provided by the City (see below) and aerial images, show that there have been significant alterations to the rear elevation including several large additions. However, a majority of these alterations appear to be constrained to the rear elevation.

Permits provided by the City include:
- Construction of an addition or remodel in 2000 (Permit No. B0001358)
- Construction of an addition or remodel in 2000 (Permit No. B0001567)
- Construction of a pool & spa in 2000 (Permit No. B0001641)
- Construction of a block wall in 2001 (Permit No. B0100644)
- Construction of a patio in 2001 (Permit No. B0100272)
- Construction of a pool & spa in 2004 (Permit No. B0401849)
- Construction of an addition or remodel in 2004 (Permit No. B0401597)
- Construction of a block wall in 2004 (Permit No. B0401983)
- Construction of a block wall in 2005 (Permit No. B0501326)
- Construction of a patio in 2005 (Permit No. B0501638)

Updated Building, Structure, Object Information Continued:

The 2002 survey evaluated the property as status code 5S3 - appears to be individually eligible for local listing or designation through survey evaluation. The prior survey found this home eligible under NRHP/CRHR Criterion B for its association with original owners, Lucille Ball and Desi Arnaz. The home was the Ball and Arnaz family's second home in the Palm Springs area. It was built for them in 1954, and they owned the home until their divorce in 1960 (Eric G Meeks, Lucille Ball Desi Arnaz Palm Springs Home in Rancho Mirage, CA, Flickr). The current survey found that the dwelling is associated with the theme of the Country Club Era (1951-1973), but it does not possess individual documented significance in relation to this theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and but it is not considered a significant representative example of a known architectural style in the community. The current survey finds the residence most closely resembles the Custom Ranch architectural style. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

☒ Update ☒ Continuation Sheet

Updated Building, Structure, Object Information Continued:

The home was designed by architect Paul Williams, and constructed in 1954. Paul Williams was a noted architect based in Los Angeles. He began designing homes and commercial buildings in the early 1920s. Williams was considered a trailblazer in the architecture field as the first black architect to become a member of the American Institute of Architects in 1923, and the AIA's first black fellow in 1957. He was born in Los Angeles in 1894, and studied architecture at the University of Southern California. He went on to design approximately 2,500 buildings throughout Southern California, and around the world. Williams designed homes for many celebrity clients including Frank Sinatra, Lucille Ball and Desi Arnaz, and Cary Grant (Karen Grigsby Bates, A Trailblazing Black Architect Who Helped Shape L.A., NPR). The buildings designed Williams varied greatly in style and type. His most notable works include the Tudor style Leistikow House in Los Angeles (1923), William's International style home in Los Angeles (early 1950s), the Spanish Colonial Revival style 28th Street YMCA (1926), and the Late Moderne style Golden State Mutual Life Insurance Building in Los Angeles (1949). Trained in the Beaux-Arts architecture, Williams excelled at interpreting period styles. He was noted for his attention to detail and personalized elements. Williams passed away in 1980 (Lydia Lee, Nine Places that Illustrate the Life of Trailblazing Black Architect Paul R. Williams, Preservation Magazine, National Trust for Historic Preservation).

The home is associated with Lucille Ball and Desi Arnaz. The couple, best know for the television show, I Love Lucy, were the original owners of the residence. It was their second home in the Palm Springs area, and was not their primary residence. They owned the residence until their divorce in 1960.

The dwelling has not been found individually eligible under NRHP/CRHR Criterion A/1, as it has not been associated with significant events or patterns of events inn local, regional, or national history; and not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state, or national history. The residence is not considered eligible under Local Criterion 2, 3, 6, or 8.

The property individually embodies the characteristics of a Custom Ranch style home constructed in Rancho Mirage in the 1960s. The home maintains several character defining features of the style, including broad horizontal massing, wood siding with stone accents, and a recessed entry. However, many of the original features of the home have been removed during subsequent redevelopment efforts. The home was designed by notable architect Paul Williams, however, it no longer reflects his original design. The residence does not appear to retain sufficient integrity to convey its significance under NRHP/CRHR Criterion C/3. Due to alterations, it is not eligible under Local Criterion 1, 4, or 7, as it no longer reflects the original architectural design.

The residence is considered eligible under NRHP/CRHR Criterion B/2 and Local Criterion 5 for its association with original owners, Lucille Ball and Desi Arnaz. Ball and Arnaz were nationally, and internationally, well known at the time of their residence at the subject property. During the period of ownership, I Love Lucy, was one of the most popular television shows in the country. Home ownership in Rancho Mirage by well known celebrities, such as Ball and Arnaz, helped to elevate the city's status. The dwelling has been altered over the years, but maintains adequate integrity from the historic period to convey its significance as the Ball/Arnaz residence.

Architect Paul Williams designed the 5,824 square foot Lucille Ball/Desi Arnaz Residence in 1954 on .80 acres within the gates of the Thunderbird Country Club. The north-facing, one-story Ranch Modern house has three bedrooms and 3.5 bathrooms and is capped with a medium-pitched hipped roof. Although the basic floor plan appears intact, the house has been substantially altered. Some of the original board and batten sheathing remains, but stucco covers the new double-car garage that replaced the double carport located on the west end of the house. A concrete block supporting wall with offset, projecting squares was removed for the expansion. Several wood grid sunscreens are gone, one located in a cutout over the entrance, and the other a vertical screen west of the entrance. The rock roof was replaced by thick roof shingles. Also not original are new aluminum slider windows and wood shutters. The interior natural rock chimney that once projected from the ridgeline has also been removed. Landscaping consists of lawns, trimmed hedges and varieties of palms. The house appears to be well maintained.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

Due to substantial alterations of the character defining features of the house, designed by renowned architect Paul Williams and constructed in 1954, the significance of this property is derived primarily from the property's identity as the original residence built for Lucille Ball and Desi Arnaz in Rancho Mirage in 1954. Architecturally, the house is a Modern Ranch style building with a one-story, horizontal profile, open floor plan, and extensive indoor-outdoor access along the rear elevations.

***B10. Significance (continued):**

Lucille Ball and Desi Arnaz were America's most popular television stars in the early 1950s. After spending several seasons in Palm Springs, the famous couple began a highly public association with Rancho Mirage that greatly increased the popular awareness of the area and significantly boosted its image during the early postwar years. They were also among the first members of the Thunderbird Country Club. After her 1960 divorce from Desi Arnaz and subsequent marriage to Gary Morton, Lucille Ball maintained ownership of and residence in the house until her death in 1989. The property is still associated with the Morton family.

Paul Williams FAIA was one of the most prolific architects designing custom residences for many Hollywood celebrities, particularly in the Los Angeles area, from the late 1920s through the 1950s. He worked in a variety of genres, but was primarily associated with the Hollywood Regency style, a combination of French Eclectic, Colonial Revival, and Neoclassical design elements blended with Modern materials and floor plans. The Ball-Arnaz house, however, was primarily Ranch Modern in its design, befitting its desert location and the informality inherent in second-home living. Williams went with an open floor plan and limited decoration. A massive, curving natural rock wall in the living room was the most notable interior feature. The Ball-Arnaz residence was one of a small number of Williams' commissions in the Palm Springs area. He collaborated with architect A. Quincy Jones in the enlargement and remodeling of both the Tennis Club and the Town and Country Restaurant and provided the interior design of the Milton J. Kreiss drug store on Palm Canyon Drive. The Ball-Arnaz Residence is the only known house Williams designed in the Coachella Valley.

The Ball-Arnaz Residence is significant for its association with the lives of Lucille Ball and Desi Arnaz and their considerable contributions to publicizing the Rancho Mirage area. Although it does not appear eligible for designation under a local ordinance or for listing in the National Register of Historic Places, the house is of local interest (a "5S3" National Register Status Code).

APN: 684050008

Date Constructed: 1957
Ownership and Address: PJ Boschetto 3 LLC; 655 Mariners Island Blvd # 304, San Mateo, CA 94404

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 40-555 Sand Dune Road residence, designed by architect William Pereira, was constructed in 1958. The home is located in the Thunderbird Country Club neighborhood. In 2002, Leslie Heumann and Associates described the property as a one-story, flat roofed residence constructed in the International Style. In 2002, the residence was described as having a steel and glass design with flat room planes, bands of windows, and rectilinear form. The exterior was mostly glass with stucco, concrete, and slumpstone sheathing. During the 2024 survey effort, the residence was under construction. At the time of the survey, most of the exterior walls and roof cladding were removed. Portions of concrete block and concrete walls were visible, however, much of the exterior material was in the process of being replaced. In its current state, the home no longer resembles the original form.

Permits provided by the City include:
- Encroachment Construction in 2004 (Permit No. E0400212)
- Plumbing work in 2006 (Permit No. B0600233)
- Construction of an addition or remodel in 2013 (Permit No. B1301114)
- Sewer work in 2013 (Permit No. B1300413)
- Construction at the pool/spa in 2014 (Permit No. B1400123)
- Grading work in 2023 (Permit No. E2200306)
- Construction of an addition or remodel in 2023 (Permit No. B220731)
- Construction of an addition or remodel in 2024 (Permit No. B2400096)
- Construction at the pool/spa in 2024 (Permit No. B2400007)
- Construction of an ADU in 2024 (Permit No. B2401171)

View of north (front) elevation. (40-555 Sand Dune Road_1)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the property as status code 3S. The prior survey asserted that the home was eligible under NRHP Criterion B and C for its association with prominent citizen Leonard K. Firestone, and as a significant example of an International style home. Since the 2002 survey, the home has been significantly altered with extensive renovation efforts. The current survey found that the dwelling is associated with the theme of the Country Club Era (1951-1973), but it does not possess individual documented significance in relation to this theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community. During the 2024 survey, most of the exterior facades had been removed, as well as the interior walls, roof facia, and exterior landscaping.

Updated Building, Structure, Object Information Continued:

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is potentially individually eligible under NRHP/CRHR Criterion B/2, as the property is significantly associated with the life of Leonard Firestone, a significant local figure in the history of Rancho Mirage. The property is potentially eligible under NRHP/CRHR Criterion C/3 as a representative example of an International style residence by master architect William Pereira. Current remodeling work appears to be replacing many of the original design elements and materials. The extensive changes may alter existing character-defining features of the property. As such, it is unclear if the Firestone Residence still individually embodies the distinctive characteristics of a mid-century International style home constructed in Rancho Mirage during the 1950s. However, limited information from the current owner suggests that they are utilizing the original plans from master architect William Pereira as a guide for construction efforts, which suggests that the historic look and feel of the exterior will be restored. If the current remodeling campaign replaces exterior design elements with in-kind or with materials that match the original design, color, and texture, then the property will retain adequate historic integrity to convey its significance under this criterion. It is not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-3 and 6-8. At the time of this survey, the Firestone Residence appears to still be considered eligible under Local Register Criterion 1 as the residence is representative of a mid-20th century International style home in Rancho Mirage. Once the current renovation efforts are finished, it should also still be eligible under Local Register Criterion 4, if it can be determined that the property still represents the work of master architect William Pereira in terms of design and material integrity. The property also appears to still be considered eligible under Local Register Criterion 5 for its association with Leonard Firestone. As of this survey, the dwelling has not been substantially altered and it maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation. If the results of current remodeling campaign are not restorative and not faithful to the original designs from William Pereira, by adding extensive additions and inappropriate replacement materials, the property may be reevaluated and assigned a different status code.

Architect William Pereira designed this one-story, flat-roofed residence in 1958. Located along the greens of the Thunderbird Country Club golf course, the "U"-shaped house is 5,961 square feet and sits on 2.97 acres. The steel and glass design is International Style Modern with the flat roof planes, bands of windows, and overall rectilinearity associated with the style. Exteriors are mostly glass with additional sheathing of stucco, concrete, and slumpstone. Most windows are steel-framed ceiling-to-floor glass with narrow mullions. Large sliding glass doors open to patios on the north, south, and east elevations. Exceptionally deep overhangs, some cantilevered and others supported by square or rectangular steel posts, create large exterior rooms. Flagstone paves patios, the pool deck, and walkways. Interior floors are primarily terrazzo. The central living room roof plane overlaps the bedroom and guest wings. Low concrete walls adjacent to the bedroom wings serve as planters for tightly trimmed hedges. The swimming pool is surrounded on three sides by the house. The dining room consists of glass walls on two sides facing the swimming pool. Located on the east elevation, the main entrance consists of a long walkway leading to a double door. Extensive landscaping of lawns, citrus and olive trees, palms, clipped shrubs and hedges enhance the property, which also contains a tennis court and parking area. The vast north lawn merges unimpeded with the golf course greens. The house is original and in excellent condition.

This impressive home is architecturally significant for its elegant International Style design and historically significant for its association with a prominent citizen. William Pereira and Associates designed the house for Leonard K. Firestone in 1958 within the gates of the prestigious Thunderbird Country Club. Leonard K. Firestone (1907 – 1996) was the last surviving son of Harvey S. Firestone, founder of Firestone Tire and Rubber Company. Leonard Firestone became President of the company, was involved in Republican politics, and was Ambassador to Belgium from 1974-1977. In the Coachella Valley, Leonard Firestone was active in civic and philanthropic organizations and was influential in the establishment of Palm Desert after World War II.

Sketch Map

***B10. Significance (continued):**

William Pereira was born in Chicago, Illinois in 1909. He is known for his corporate, industrial, and institutional architecture, such as the Los Angeles County Museum of Art, the Master Plan of the University of California at Irvine, and the Transamerica Pyramid office building in San Francisco. Pereira designed the impressive Firestone offices in Los Angeles in the same year, 1958, as Firestone's Thunderbird house, both in the International Style. Pereira was in partnership with Charles Luckman, former president of the Lever Brothers Company, New York, from 1950 - 1958. Their work was frequently published in the professional journals, especially Arts and Architecture by John Entenza. Until 1959, Pereira held a teaching position at the University of Southern California School of Architecture, Los Angeles. In 1958, Charles Luckman left the practice, leaving Pereira as the sole principal of the firm. Pereira died in 1985.

The Firestone residence is International Style in its rectilinearity, flat roof, steel construction, glass curtain walls, and unadorned surfaces. The exceptionally deep overhangs are Pereira's response to the extremes of the desert sun. Situated on an enormous lot surrounded by lawns, the house makes a monumental statement. The exteriors are essentially original and the house has been meticulously maintained. Many of the custom houses commissioned in the country club areas were designed by local architects in the Desert Modern style using a broader assortment of surface materials. By hiring Los Angeles architect William Pereira, not known as a residential architect, to design his Thunderbird home, Firestone was indicating a desire for something akin to the offices Pereira was concurrently building for him in Los Angeles. Firestone wanted a rational building with clean lines and glass walls, which is exactly what Pereira produced.

Pure International Style residences are rare in Rancho Mirage. In fact, the house designed by Crombie Taylor circa 1970 located at 37-084 Palm View Drive along the Tamarisk Country Club golf course is the only other pure, unmodified International Style house in the city. Pereira and Luckman's only other major Coachella Valley commission was the 1958 Robinson's Department Store in Palm Springs.

The Firestone Residence appears eligible for separate listing in the National Register of Historic Places for its exceptional architectural significance (a "3S" National Register Status Code). In addition, the property would be eligible for designation under an existing or proposed local ordinance.

Ownership and Address: Michael K Boone Living Trust, Michael K Boone; 167 Cypress Drive, Laguna Beach, CA 92651

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 41-915 Tonopah Road residence was constructed in 1970. The home is in the Thunderbird Heights neighborhood. In 2002, Leslie Heumann and Associates described the residence as a flat-roofed Modern residence that is entirely round with floor-to-ceiling glass. The home was described as having a flat raised center roof section with clerestory windows for interior light. The house is sited on a raised concrete slab with medium-smooth stucco and quartz rock wall exteriors. The residence has sturdy posts widely spaced around the perimeter. The residence was re-roofed in 1983. During the 2024 survey, the residence was under construction. Based on survey images, it appears that the floor-to-ceiling glass windows that surround the residence have been replaced. Portions of the exterior walls have been removed during the construction process. The roof is under construction.

Permits provided by the City include:
- Construction of an addition or remodel in 2000 (Permit No. B0001287)
- Pool & spa work in 2000 (Permit No. B0001555)
- Miscellaneous work in 2000 (Permit No. B0001730)
- Pool & spa work in 2001 (Permit No. B0100417)
- Reroof of the dwelling in 2019 (Permit No. B1901747)
- Electrical work in 2020 (Permit No. B202012)
- Construction of a block wall in 2021 (Permit No. B2101431)
- Construction of a block wall in 2021 (Permit No. B2101749)
- Grading work in 2021 (Permit No. E2000200)
- Construction of an addition and remodel in 2021 (Permit No. B2020570)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the property as status code 5S1: Individual property that is listed or designated locally. The correct status code that should have been assigned in 2002 is 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The prior survey identified the residence as architecturally significant for its Modern design. The home most closely resembles a Post and Beam style home, though it is unique for its circular form. The current survey found that the dwelling is associated with the theme of Rancho Mirage Architectural Styles (1934-1980s) and Residential Subdivisions and Cooperatives (1951-1973). At the time of the current survey, the residence was undergoing significant renovations. The roof was in the process of being replaced, the walls had been removed during the process of the renovations, and some of the floor to ceiling windows had been replaced.

Updated Building, Structure, Object Information Continued:

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the property is not significantly associated with the lives of persons significant to national, state, or local history. The property is potentially eligible under NRHP/CRHR Criterion C/3 as a representative example of a Post and Beam style residence. Current remodeling work appears to be replacing many of the original design elements and materials. The extensive changes may alter existing character-defining features of the property. As such, it is unclear if the Dennis Residence II still individually embodies the distinctive characteristics of a mid-century Post and Beam style home constructed in Rancho Mirage. However, limited visual information suggests that the owner is maintaining the general massing of the original residence, which suggests that the historic look and feel of the exterior will be restored. If the current remodeling campaign replaces exterior design elements with in-kind or with materials that match the original design, color, and texture, then the property will retain adequate historic integrity to convey its significance under this criterion. Therefore, at the time of this survey, the home still retains integrity of design, materials, or feeling. It is not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-8. At the time of this survey, the Dennis Residence II appears to still be considered eligible under Local Register Criterion 1 as the residence is representative of a mid-20th century Post and Beam style home in Rancho Mirage. Once the current renovation efforts are finished, it should still be eligible under this criterion, if it can be determined that the property has restored its exterior design and material integrity. As of this survey, the dwelling maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation. If the results of current remodeling campaign are not restorative and not faithful to the original designs from William Pereira, by adding extensive additions and inappropriate replacement materials, the property may be reevaluated and assigned a different status code.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Constructed in 1970, the most character-defining feature of this flat-roofed Modern residence is that it is entirely round with floor-to-ceiling glass providing 270-degree views of the desert valley floor. A flat raised center roof section has clerestory windows providing interior light. Located in the Thunderbird Heights area, the house sits on a raised concrete slab and is 6,431 square feet, with three bedrooms and 4.25 bathrooms, and is set on 1.17 acres. Medium-smooth stucco and quartz rock walls clad the exteriors. Sturdy posts widely spaced around the perimeter support projecting roof beams and deep, cantilevered overhangs. A curving concrete driveway leads to the full-height double entrance doors that open to a vast living room. Away from the street along the west side of the property, a shallow pond borders the covered patio and surrounds an "island" pavilion that is reached via a terrazzo walkway. The pavilion (another dining room or perhaps a card room) is circular, flat-roofed, with glass walls. A swimming pool is nearby. A low quartz rock wall forms a planter containing a clipped hedge north of the entrance. Given the large size of the property, the grounds are lushly landscaped with lawns, gravel, boulders, mature citrus and palm trees, bougainvillea, trimmed hedges, and other vegetation. The house appears original and in excellent condition.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

This property is architecturally significant for its innovative Modern design. Joseph Knowlton Dennis, an insurance executive, commissioned the residence, having previously occupied a nearby house located at 70-381 Placerville Road which, like this house, has a round living room with spectacular views. Dennis Residence II, built in 1970 by an unknown architect, is a dynamic, circular Modern house with a flat roof, glass walls, concrete posts, and sits above ground level in the manner of a classical temple. The unique design is perfectly suited to its Thunderbird Heights location where dramatic views encircle the house. The smaller pavilion, a miniature version of the main house, is surrounded by water for an exotic, 'desert island' feel. The green lawns fronting the street-facing elevation reinforce the powerful symbolism of an isolated temple in the desert. The residence appears to be the only entirely round house constructed in Rancho Mirage and is in excellent, original condition. The property appears eligible for designation under an existing or proposed local ordinance, but does not appear eligible for listing in the National Register of Historic Places (a "5S1" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City, Rancho Mirage Date: 2021 Map Scale: 1;24000
Address: 70-151 Sonora Road City: Rancho Mirage Zip: 92270
UTM Zone: 11S 551835.41 m E 3734896.31 m N
APN: 690091010

Date Constructed: 1971
Ownership and Address: Susan Hofheinz, Nicholson Hofheinz, Susan Rev Inter Vivos Trust; 70151 Sonora Road, Rancho Mirage, CA 92270

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 70-151 Sonora Road property was constructed in 1971. The home is located in the Thunderbird Heights neighborhood. In 2002, Leslie Heumann and Associates described the property as a one-story, irregularly shaped, Modern residence with a flat and front-gabled roof. The home most specifically resembles a Desert Modernist style residence. The exterior is clad in light-colored natural rock and medium-smooth stucco. The residence features large, floor-to-ceiling windows with anodized aluminum frames. The entrance door has an opaque sidelight. The residence as a large exterior, smooth stone chimney. The 2002 survey indicated that the residence had been re-roofed twice (in 1981 and 1994), in addition to a remodeling campaign in 1974 and a change to the skylight in 1981. There does not appear to have been any significant alterations to the residence since the 2002 survey.

Permits provided by the City include:
- Construction of addition or remodel in 2016 (Permit No. B1601393)
- Mechanical/HVAC work in 2017 (Permit No. B1700837)
- Mechanical/HVAC work in 2017 (Permit No. B1701196)
- Mechanical/HVAC work in 2019 (Permit No. B1900900)
- Mechanical/HVAC work in 2022 (Permit No. B2200427)

View of south elevation. (70-151 Sonora Road_3)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey assigned the subject property a status code 5S3. The prior survey indicated that the home was a noteworthy example of a Modern design located within the Thunderbird Heights neighborhood. The architect or builder of the home could not be identified. The current survey finds the residence most closely resembles a Desert Modernist style home, and is associated with the theme of Residential Subdivisions and Cooperatives (1951-1973), though it is not considered eligible under this theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

The dwelling has not been found individually eligible under NRHP/CRHR Criterion A/1, as it has not been associated with significant events or patterns of events in local, regional, state, or national history; not individually eligible under NRHP/CRHR Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state or national history. The residence is not considered eligible under Local Criteria 2-6 and 8.

The single-family residence is considered eligible under NRHP/CRHR Criterion C/3 as property individually embodies the distinctive characteristics of a Desert Modernist style home constructed within Rancho Mirage in the 1970s. The home features several character defining features of the style including a rectilinear form, a flat and gable roof, deep, square overhangs above the entrances, a mix of stucco and natural rock walls, and large fixed windows. The property is also eligible under Local Register Criteria 1 and 7 as it is representative of a Desert Modernist style home that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Constructed in 1971, this one-story, irregularly shaped, Modern residence has both a flat and front-gabled roof. Elevated substantially above grade in Thunderbird Heights, the 9,808 square foot house has eight bedrooms and 7.5 bathrooms and sits on .87 acres. Light-colored natural rock and medium-smooth stucco sheathe the exteriors. Windows are mostly floor-to-ceiling with anodized aluminum frames. The terrazzo entry path on the southeast side of the house is flanked on the north by a reflecting pond and fountain. The entrance door has an opaque sidelight. A square volume with plate glass windows is cantilevered over a pond, with its flat overhang supported by square posts. Low concrete walls create planters filled with sculpted hedges and palms around southeast and northeast elevations. A battered, rock clad exterior chimney rises to the front gable peak along the projecting northeast wing. An enclosed three-car garage is south of the entrance. The swimming pool is located on the northwest side of the property. The residence appears original and in excellent condition.

This house is architecturally noteworthy as an intact and representative example of Modern design in the Thunderbird Heights area. Constructed in 1971 by an unknown architect and/or builder, the house was apparently built for M. J. Simon. The residence is characterized by mostly rectilinear surfaces, floor-to-ceiling glass, deep overhangs, square posts, terrazzo, natural rock walls, and water features. These are all Desert Modern design elements utilized by renowned local architect William Cody, particularly in the late 1960s and early 1970s, although there is no evidence that Cody had any involvement with this house. Although the property does not appear eligible for listing in the National Register of Historic Places or for designation under an existing or proposed local ordinance, it is of local interest (a "5S3" National Register Status Code).

USGS 7.5' Quad: Cathedral City, Rancho Mirage Date: 2021 Map Scale: 1;24000
Address: 70-200 Mirage Cove Drive City: Rancho Mirage Zip: 92270
UTM Zone: 11S 551657.40 m E 3736255.05 m N
APN: 689140006

Date Constructed: 1964
Ownership and Address: Grant Bayme; 70200 Mirage Cove Drive, Rancho Mirage, CA 92270

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The Mirage Cove Drive Apartments, addressed as 70-200 Mirage Cove Drive, designed by architect William Cody, was constructed in 1963. In 2002, Leslie Heumann and Associates described the property as a Modern style four-unit, two-story apartment building with a flat roof. The building is rectangular and symmetrical, constructed of concrete block and vertical boards. The residence has aluminum-framed fixed and sliding windows. The building has five decorative right-angled wooden spider leg posts that project away from the north elevation roofline. Since the 2002 survey, it appears there have been some alterations to the building including: the installation of large vinyl sun shades, exterior paint, large air units installed on the roof, and new cement block wall surrounding the property.

Permits provided by the City include:
- Construction of a block wall in 2003 (Permit No. B0302502)
- Construction of an addition or remodel in 2003 (Permit No. B0302545)
- Construction of an addition or remodel in 2005 (Permit No. B0501186)
- Construction of a block wall in 2007 (Permit No. B0700399)
- Construction of a block wall in 2008 (Permit No. B0800243)

- Mechanical/HVAC work in 2011 (Permit No. B1100765)
- Miscellaneous work (fire inspection) in 2023 (Permit No. F2300150)

See Continuation Sheet for Additional Information.

Updated Primary Record Information Continued:

View of north elevation. (70-200 Mirage Cove Drive_1)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey assigned the subject property a status code 5S3. The prior survey indicated that the subject property was notable as the only known apartment building designed by architect William Cody in the City of Rancho Mirage. The current survey finds the building most closely resembles an International style apartment building, and is associated with the theme of Residential Subdivisions and Cooperatives (1951-1973), but it does not possess individual documented significance in relation to this theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

Updated Building, Structure, Object Information Continued:

William Francis Cody (1916-1978) is designed the subject property in 1963. Born in Dayton, Ohio, in 1916, Cody's family relocated to California in 1930. While attending Beverly Hills High School, Cody designed and built stages for school plays prior to his graduation in 1932. Following high school, he graduated from Santa Monica Junior College in 1939 and enrolled in the College of Architecture and Fine Arts at the University of Southern California. He graduated from USC in 1942. During his time at Santa Monica Junior College and USC, Cody worked for architects, Heath Wharton and Asa Hudson. Following his graduation, Cody worked for several engineering and architecture firms in California, including Cliff May whom he worked for in 1944. In 1945, Cody's firm was hired to alter the Desert Inn in Palm Springs. Following the Desert Inn project, Cody began working independently in California and Arizona by 1946.

In 1946, William F. Cody moved to Palm Springs permanently and received his first independent commission to design the Del Marcos Hotel, which earned him an award in 1949 from the California chapter of the American Institute of Architects. In 1947, he was hired to convert the Thunderbird Dude Ranch, originally constructed in 1936, to the Thunderbird Country Club. His work at Thunderbird led to future commissions at other clubhouses, recreational facilities, and residential developments, at locations throughout Palm Desert, such as the Eldorado Country Club, Tamarisk Country Club, the Racquet Club, the Tennis Club, and the Seven Lakes Clubhouse. In Palm Springs, Cody was one of the architects, with Wexler & Harrison and Philip Koenig, to design the Spa Bathhouse and Spa Hotel. In 1952, Cody designed the Horizon Hotel.

In the Coachella Valley, he was responsible for several notable Modernist style residential designs including the Perlberg, Shamel, and Abernathy residences in Palm Springs. Throughout his career, he designed commercial and residential properties throughout California, Arizona, Texas, Cub, and Mexico. He was inducted into the College of Fellows of the AIA in 1965. Some of his final projects included St. Theresa's Catholic Church in 1968 and the Palm Springs Library Center in 1972. In 1973, he suffered a severe stroke which caused him to end his architectural career. He died in 1978 and today is considered one of the most important architects in the Desert Modernism movement.

The building has not been found individually eligible under NRHP/CRHR Criterion A/1, as it has not been associated with significant events or patterns of events in local, regional, or national history; not individually eligible under Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the building would not appear to yield information which could be considered important in local, regional, state, or national history. The building is not considered eligible under Local Criterion 1-3, 5-8.

The building is notable for its association with the architect William Cody. The subject property is the only known apartment building designed by Cody within Rancho Mirage. Cody had a notable impact within Rancho Mirage, having worked on the design, or redesign, of the Thunderbird, Tamarisk, and Eldorado Country Clubs, in addition to numerous residences within the country club areas. Cody is considered one of the most important architects in the Desert Modernism movement. The building is relatively simple in design, with the most notable architectural feature being the large wooden spider leg posts that extend from the building. The single-family residence is considered eligible under NRHP/CRHR Criterion C/3, and Local Criterion 4 for being the work of a noted architect whose work influenced the era; the building is a rare example of a multi-family residence constructed by Cody. As the dwelling has not been substantially altered, this dwelling maintains integrity from the historic period.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Architect William Cody designed this four-unit, two-story apartment building circa 1963. A flat roof without overhangs caps the south-facing apartments. Rectangular and symmetrical, the building is constructed of concrete block and vertical boards (T-111 plywood). Windows are aluminum-framed fixed and sliding. South-facing windows are tall and narrow, separated by large expanses of solid wall, while windows on the west and east elevations are wider. Conversely, a continuous window band of fixed and aluminum sliders characterizes the second floor north elevation. The most distinctive design element of the complex is the row of five right-angled wood spider legs that project away from the north elevation roofline, intersecting with the one-story carport wall on the north side of the property. The spider legs surmount small, rear exterior patios between each unit and the carports. Behind a concrete block perimeter wall, concrete decking surrounds the front swimming pool and apartment entrances. Unadorned wood entrance doors are adjacent to the narrow windows of the façade. Landscaping of lawns, shrubs, mature palms, and other trees surrounds the building. The apartment building appears mostly original and in fair condition.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

This property is architecturally significant as the only known apartment building architect William Cody designed in the City of Rancho Mirage. It is a highly unusual design for Cody, because the building does not employ the deep overhangs that are a Cody trademark. The building clearly exhibits the rationality and minimalism of his better designs, including the requisite flat roof and north-facing expanse of windows. Cody's most expressive design element is surely the five Neutra-like spider legs that extend far beyond any obvious utilitarian requirement.

***B10. Significance (continued):**

William F. Cody FAIA (1916-1978) was born in Dayton, Ohio and raised in Los Angeles. While attending architecture school at the University of Southern California in the late 1930s and early 1940s, Cody was also working for architect Cliff May, gaining experience in the adaptation of ranch and hacienda style houses to modern floor plans and construction techniques. Suffering from asthma, and believing that the Palm Springs area offered opportunity and prominent clients, Cody moved to Palm Springs in 1944-45 and set up practice. One of his first projects, the Del Marcos Hotel of 1946, won an AIA "creditable mention" award as an example of new resort hotel architecture for its "ingenious plan, which appears complicated but is actually orderly and thoughtful." Author and critic Alan Hess writes, "Greater thinness and more striking elegance became the single-minded focus of his ongoing design." Despite a reputation for carousing, Cody was exceptionally focused on the details of his designs and pushing the boundaries of his materials. His well-known and innovative early buildings, along with friendships with influential members of the Thunderbird, Tamarisk, and Eldorado Country Clubs, resulted in commissions to design (or in the case of Thunderbird, remodel) the clubhouses of all three locations. In addition, Cody designed a large number of residences in the country club areas, many along the fairways of the new resort concept of golf course living, a concept that Cody himself helped devise.

Author Adele Cygelman writes, "Joints and door frames seemingly disappeared into walls. He merged living rooms into terraces and gardens. Roofs jutted out twelve feet to shield the walls of glass. Pattern and texture came from tile floors, carved wood panels, and concrete-block screens with geometric motifs, all of which were meticulously designed by Cody to match each other precisely at the seams and angles where the planes met." Like other Coachella Valley architects, Cody designed churches, gas stations, motels, restaurants, offices, a mobile home park, shopping centers, even a carwash. "Yet a distinct character can be seen in all of them," says Hess. "It is a restless energy that brings a liveliness to his plans, elevations and details. The radical thinness of Cody roofs or the daring reach of a cantilever are clearly the result of a wrestling match between the architect and the materials and the laws of physics; that energy and striving remains in the building." Hess concludes, "The fact that Cody could take an established vocabulary and style and reinterpret it so vividly ranks him among the best of mid-century California designers."

This property appears eligible for designation under an existing or proposed local ordinance, but does not appear eligible for listing in the National Register of Historic Places (a "5S1" National Register Status Code). The building is one of William Cody's most unusual Modern buildings and, as a two-story apartment building, one of his most rare.

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City Date: 2021 Map Scale: 1;24000
Address: 71-087 Fairway Drive City: Rancho Mirage Zip: 92270
UTM Zone: 11S 553532.76 m E 3737646.64 m N
APN: 674300013

Date Constructed: 1967
Ownership and Address: Lewis S Baskerville; 708 N 1ST Street # 632, Minneapolis, MN 55401

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 71-087 Fairway Drive residence, designed by architect William Cody, was constructed in 1967. The residence is located within the Tamarisk Country Club. In 2002, Leslie Heumann and Associates described the residence as a Ranch Modern, one-story, post and beam house with an intersecting front and side-gabled roof. The home most closely resembles the Custom Ranch style. The exterior is clad in medium-rough stucco, plywood, and brick. The projecting cornice ends are notched, which is a signature element of Cody's work, with rafters visible beneath deep eaves. The residence has floor-to-ceiling steel-framed fixed and sliding windows. The primary elevation of the home faces the 14th and 15th fairways of the Tamarisk Country Club golf course. There is a large attached carport extending from the residence across the rounded driveway. The 2002 survey indicated that there was an addition in 1977, however, the property largely appeared to be in original condition. There does not appear to have been any significant alterations since the 2002 survey.

Permits provided by the City include:
- Construction of a block wall in 2007 (Permit No. B0700526)
- Construction of a block wall in 2007 (Permit No. B0701413)
- Construction of an addition or remodel in 2010 (Permit No. B1000224)
- Reroof of dwelling in 2010 (Permit No. B1000809)
- Construction of a block wall in 2023 (Permit No. B2300453)
- Construction of an addition or remodel in 2021 (Permit No. 2000419)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey assigned the subject property a status code 5S1: Individual property that is listed or designated locally. The correct status code that should have been assigned in 2002 is 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The current survey found that the dwelling is associated with the theme of the Country Club Era (1951-1973), but it does not possess individual documented significance in relation to this theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community. The prior survey found the residence eligible under NRHP Criteria C as an excellent example of the work of architect William Cody. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

Updated Building, Structure, Object Information Continued:

William Francis Cody (1916-1978) is designed the subject property in 1967. Born in Dayton, Ohio, in 1916, Cody's family relocated to California in 1930. While attending Beverly Hills High School, Cody designed and built stages for school plays prior to his graduation in 1932. Following high school, he graduated from Santa Monica Junior College in 1939 and enrolled in the College of Architecture and Fine Arts at the University of Southern California. He graduated from USC in 1942. During his time at Santa Monica Junior College and USC, Cody worked for architects, Heath Wharton and Asa Hudson. Following his graduation, Cody worked for several engineering and architecture firms in California, including Cliff May whom he worked for in 1944. In 1945, Cody's firm was hired to alter the Desert Inn in Palm Springs. Following the Desert Inn project, Cody began working independently in California and Arizona by 1946.

In 1946, William F. Cody moved to Palm Springs permanently and received his first independent commission to design the Del Marcos Hotel, which earned him an award in 1949 from the California chapter of the American Institute of Architects. In 1947, he was hired to convert the Thunderbird Dude Ranch, originally constructed in 1936, to the Thunderbird Country Club. His work at Thunderbird led to future commissions at other clubhouses, recreational facilities, and residential developments, at locations throughout Palm Desert, such as the Eldorado Country Club, Tamarisk Country Club, the Racquet Club, the Tennis Club, and the Seven Lakes Clubhouse. In Palm Springs, Cody was one of the architects, with Wexler & Harrison and Philip Koenig, to design the Spa Bathhouse and Spa Hotel. In 1952, Cody designed the Horizon Hotel.

In the Coachella Valley, he was responsible for several notable Modernist style residential designs including the Perlberg, Shamel, and Abernathy residences in Palm Springs. Throughout his career, he designed commercial and residential properties throughout California, Arizona, Texas, Cub, and Mexico. He was inducted into the College of Fellows of the AIA in 1965. Some of his final projects included St. Theresa's Catholic Church in 1968 and the Palm Springs Library Center in 1972. In 1973, he suffered a severe stroke which caused him to end his architectural career. He died in 1978 and today is considered one of the most important architects in the Desert Modernism movement.

The subject property is a notable example of the Custom Ranch architecture style. It features several architectural features that are typical of Cody's work including deep overhangs with projecting beam ends, notched rafters, and expansive glass walls. The home additionally features character defining features of a Custom Ranch home including:
- an asymmetrical facade, exterior walls clad in more than one material, including brick, stucco, and vertical board siding;
- strong horizontal massing with sections of floor-to-ceiling glass windows;
- multiple, intersecting roof types, including gable and flat;
- deep roof overhangs;
- a recessed entry with a prominent gabled porch roof;
- an attached carport;
- and high quality of artisanship as seen in the projecting beam ends, notched rafters, and variety of building materials and forms utilized.

The building has not been found individually eligible under NRHP/CRHR Criterion A/1, as it has not been associated with significant events or patterns of events in local, regional, or national history; not individually eligible under Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the building would not appear to yield information which could be considered important in local, regional, state, or national history. The building is not considered eligible under Local Criterion 2,3, 5, 6 and 8.

The subject property is found eligible under NRHP/CRHR Criterion C/3 for embodying the distinctive characteristics of a type, period, or method of construction. Relately the subject property is eligible under Local Criterion 4 as representative of a particular architectural style and as representative of the work of William Cody, and Local Criterion 1 and 7 as it is representative of a Custom Ranch style home that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

Updated Primary Record Information (DPR 523A):

USGS 7.5′ Quad: Cathedral City Date: 2021 Map Scale: 1;24000
Address: 71-111 Tamarisk Lane City: Rancho Mirage Zip: 92270
UTM Zone: 11S 553556.56 m E 3737846.69 m N
APN: 674281025

Date Constructed: 1970
Ownership and Address: Don Marital Maltzman Non-Exempt Trust, Dean Stuart Maltzman, Joan Maltzman; 9320 Wilshire Blvd, Ste 208, Beverly Hills, CA 90212

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 71-111 Tamarisk Lane residence, designed by architect William Cody, was constructed in 1970. The property is located in the Tamarisk Country Club. In 2002, Leslie Heumann and Associates described the residence as a one-story, flat-roofed, Desert Modernist style home. Urbana concurs with this finding. The primary (rear) elevation faces south towards the 13th fairway of the Tamarisk Country Club golf course. The exterior of the residence is clad in artificial stone block, board-and-batten, and medium-smooth stucco. There are five right-angled projecting wood posts and beams, a signature of Cody's work, that support the deep patio roof of the east wing. The 2002 survey detailed ten permitted alterations to the residence including: a 50 sq ft addition to the dwelling (1977), remodel of the residence (1978), the addition of a tennis court (1978), the addition of a gazebo (1979), a 865 sq ft addition to the residence and 236 sq ft addition to the porch (1981), demolition of walls in the dwelling (1984), addition and remodel of dwelling (1984), addition and remodel of the dwelling (1984), a 1214 sq ft addition (1997), the demolition of a bedroom and bathroom (1997), and the addition of a 133 sq ft kitchen and 48 sqft exercise room (2000). There does not appear to have been any significant alterations to the residence since the 2002 survey.

Permits provided by the City include:
- Construction of an addition or remodel in 2000 (Permit No. B0001027)
- Encroachment Construction in 2000 (Permit No. E0000549)
- block wall construction in 2000 (Permit No. B0001422)
- Installation of solar in 2019 (Permit No. B1901274)
- Electrical work in 2023 (Permit No. B2302018)

The prior 2002 survey assigned the subject property a status code 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The prior survey found the residence eligible under NRHP Criteria C as a noteworthy example of the work of architect William Cody. The home is associated with the theme of the Country Club Era (1951-1973), but it does not possess individual documented significance in relation to this theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

Updated Building, Structure, Object Information Continued:

William Francis Cody (1916-1978) designed the subject property in 1970. Born in Dayton, Ohio, in 1916, Cody's family relocated to California in 1930. While attending Beverly Hills High School, Cody designed and built stages for school plays prior to his graduation in 1932. Following high school, he graduated from Santa Monica Junior College in 1939 and enrolled in the College of Architecture and Fine Arts at the University of Southern California. He graduated from USC in 1942. During his time at Santa Monica Junior College and USC, Cody worked for architects, Heath Wharton and Asa Hudson. Following his graduation, Cody worked for several engineering and architecture firms in California, including Cliff May whom he worked for in 1944. In 1945, Cody's firm was hired to alter the Desert Inn in Palm Springs. Following the Desert Inn project, Cody began working independently in California and Arizona by 1946.

In 1946, William F. Cody moved to Palm Springs permanently and received his first independent commission to design the Del Marcos Hotel, which earned him an award in 1949 from the California chapter of the American Institute of Architects. In 1947, he was hired to convert the Thunderbird Dude Ranch, originally constructed in 1936, to the Thunderbird Country Club. His work at Thunderbird led to future commissions at other clubhouses, recreational facilities, and residential developments, at locations throughout Palm Desert, such as the Eldorado Country Club, Tamarisk Country Club, the Racquet Club, the Tennis Club, and the Seven Lakes Clubhouse. In Palm Springs, Cody was one of the architects, with Wexler & Harrison and Philip Koenig, to design the Spa Bathhouse and Spa Hotel. In 1952, Cody designed the Horizon Hotel.

In the Coachella Valley, he was responsible for several notable Modernist style residential designs including the Perlberg, Shamel, and Abernathy residences in Palm Springs. Throughout his career, he designed commercial and residential properties throughout California, Arizona, Texas, Cub, and Mexico. He was inducted into the College of Fellows of the AIA in 1965. Some of his final projects included St. Theresa's Catholic Church in 1968 and the Palm Springs Library Center in 1972. In 1973, he suffered a severe stroke which caused him to end his architectural career. He died in 1978 and today is considered one of the most important architects in the Desert Modernism movement.

The subject property is an example of a Desert Modernist style building designed by Cody. The home features several of Cody's trademark features, as well as character defining features of the Desert Modernist style. The flat roof, floor-to-ceiling glass walls, deep overhangs, and prominent support posts are all typical of Cody's work. The home features character defining features of the Desert Modernist style including: horizontal massing, a flat roof with deep overhangs, floor-to-ceiling glass walls, and prominent wood support beams. The home maintains many original features.

The dwelling has not been found individually eligible under NRHP/CRHR Criterion A/1, as it has not been associated with significant events or patterns of events in local, regional, state, or national history; not individually eligible under NRHP/CRHR Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state or national history. The residence is not considered eligible under Local Criteria 2-6 and 8.

The single-family residence is considered eligible under NRHP/CRHR Criterion C/3 as the property individually embodies the distinctive characteristics of a Desert Modernist style residence and as an example of the work of architect William Cody. The property is also eligible under Local Register Criteria 1 and 7 as it is representative of a Post and Beam home that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials. The home is also eligible under Local Criterion 4 as it represents the work of architect William Cody. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

Architect William Cody designed the Stein Residence in 1970. The Desert Modern, one-story, flat-roofed house is set on .40 acres. Currently containing 7,893 square feet, with five bedrooms and 4.25 bathrooms, the house originally was 4,450 square feet. The primary (rear) elevation looks south toward the 13th fairway of the Tamarisk Country Club golf course. Exteriors are sheathed in artificial stone block, board-and-batten, and medium-smooth stucco. The flat roof of the irregularly-shaped house is raised in some sections. Projecting glued and laminated (glue-lam) beams that support the roof along most elevations are notable. The north driveway leads to a covered entrance walkway of square posts and a grid of glue-lam beams. A perforated metal gate obscures the entrance porch and front door. The south driveway leads to several enclosed garages and the service entrance. There are primarily clerestory windows along the façade. Ceiling-to-floor glazing, both

This property is architecturally noteworthy for its evocation of William Cody's Desert Modernism. The essence of the Stein Residence is of a Desert Modern house with the qualities and characteristics associated with the original architect William Cody. The flat roof, floor to ceiling glass walls, deep overhangs, and support posts are all architectural design elements associated with Cody's style. Despite all of the many additions and remodels, Cody's vision is still evident.

***P3a. Description (continued):**

fixed and sliding, predominates along the rear elevations. Five right-angled projecting wood posts and beams support the deep patio roof of the east wing. Here, non-original square slate cladding covers some surfaces. Exterior walkway and patio ceilings are of varnished natural wood strips. The concrete work surrounding the swimming pool is of intersecting horizontal planes of various thicknesses and heights, creating a pleasing rectilinear pattern consistent with the house form. A freestanding pavilion located on the southwest corner of the property consists of four square wood posts topped by two projecting glue-lam beams supporting a flat square roof slab. The pavilion's poetic simplicity is emblematic of the overall design of the main residence. Landscaping is dense and layered with gently undulating lawns and an amazing variety of flora including cacti (such as mature saguaro), yucca (Joshua tree), palms, olive trees, citrus, and many others. The house has been remodeled with substantial additions, yet continues to retain its integrity of Cody's vision.

***B10. Significance (continued):**

William F. Cody FAIA (1916-1978) was born in Dayton, Ohio and raised in Los Angeles. While attending architecture school at the University of Southern California in the late 1930s and early 1940s, Cody was also working for architect Cliff May, gaining experience in the adaptation of ranch and hacienda style houses to modern floor plans and construction techniques. Suffering from asthma, and believing that the Palm Springs area offered opportunity and prominent clients, Cody moved to Palm Springs in 1944-45 and set up practice. One of his first projects, the Del Marcos Hotel of 1946, won an AIA "creditable mention" award as an example of new resort hotel architecture for its "ingenious plan, which appears complicated but is actually orderly and thoughtful." Author and critic Alan Hess writes, "Greater thinness and more striking elegance became the single-minded focus of his ongoing design." Despite a reputation for carousing, Cody was exceptionally focused on the details of his designs and pushing the boundaries of his materials. His well-known and innovative early buildings, along with friendships with influential members of the Thunderbird, Tamarisk, and Eldorado Country Clubs, resulted in commissions to design (or in the case of Thunderbird, remodel) the clubhouses of all three locations. In addition, Cody designed a large number of residences in the country club areas, many along the fairways of the new resort concept of golf course living, a concept that Cody himself helped devise.

Author Adele Cygelman writes, "Joints and door frames seemingly disappeared into walls. He merged living rooms into terraces and gardens. Roofs jutted out twelve feet to shield the walls of glass. Pattern and texture came from tile floors, carved wood panels, and concrete-block screens with geometric motifs, all of which were meticulously designed by Cody to match each other precisely at the seams and angles where the planes met." Like other Coachella Valley architects, Cody designed churches, gas stations, motels, restaurants, offices, a mobile home park, shopping centers, even a carwash. "Yet a distinct character can be seen in all of them," says Hess. "It is a restless energy that brings a liveliness to his plans, elevations and details. The radical thinness of Cody roofs or the daring reach of a cantilever are clearly the result of a wrestling match between the architect and the materials and the laws of physics; that energy and striving remains in the building." Hess concludes, "The fact that Cody could take an established vocabulary and style and reinterpret it so vividly ranks him among the best of mid-century California designers."

Although the resource does not appear eligible for listing in the National Register of Historic Places or for designation under an existing or proposed local ordinance, it is of local interest (a "5S3" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City, Rancho Mirage Date: 2021 Map Scale: 1;24000
Address: 71-391 Mirage Road City: Rancho Mirage Zip: 92270
UTM Zone: 11S 553832.48 m E 3733689.36 m N
APN: 684291001

Date Constructed: 1952
Ownership and Address: Younhee Choi; 74710 Highway 111, Suite 102, Palm Desert, CA 92260

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 71-391 Mirage Road property was constructed in 1952. The residence is located in the Magnesia Falls Cove neighborhood. In 2002, Leslie Heumann and Associates described the residence as an "L"-shaped Vernacular Modern house was a medium-pitched, hipped roof with deep eaves. The home most closely resembles a rustic Tract Ranch style home. The residence was described in the 2002 survey as concrete block construction with a combination of steel-framed fixed and multi-pane casement windows. In 2002, the property was described as being in original and excellent condition. Since the 2002 survey, a large privacy fence and hedge was installed around the perimeter of the property. Aerial images do not indicate that there have been significant alterations to the residence, however, much of the residence was not visible during 2024 survey effort due to the fencing.

Permits for the subject property were not available.

See Continuation Sheet for Additional Information.

View of east (front) elevation. (71-391 Mirage Road_1)

Updated Primary Record Information Continued:

View of east (front) elevation. (71-391 Mirage Road_3)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey assigned the subject property a status code 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The prior survey found the residence eligible under NRHP Criteria C as a noteworthy example of a Vernacular Modern home located in the Magnesia Falls neighborhood. The home was constructed in 1952, and based on the prior survey, is one of the most architecturally refined homes in the neighborhood constructed during that period. The current survey found the residence is associated with the themes of Residential Subdivisions and Cooperatives (1951-1973) and Rancho Mirage Architectural Styles (1934-1980s). The 2024 evaluation found that the property should be assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

The home has not been found individually eligible under NRHP/CRHR A/1, as it has not been associated with significant events or patterns of events in regional, state, or national history; not individually eligible under Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state, or national history.

The single-family residence is considered eligible under NRHP/CRHR Criterion C/3 as the property individually represents and embodies the distinctive characteristics of a unique Tract Ranch style from the early history of Magnesia Falls Cove. The property is also eligible under Local Register Criteria 1 and 7 as it is representative of a Tract Ranch style home that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials. Based on aerial images, there does not appear to have been any alterations to the residence since the prior survey. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

This "L"-shaped Vernacular Modern house was built in 1952. A medium-pitched, rock-covered, hipped roof with deep eaves crowns the north-facing residence. Constructed of concrete block, the house is 2,515 square feet with three bedrooms and 1.75 bathrooms. Windows are a combination of steel-framed fixed and multi-pane casement. A pair of adjacent window bands is located on the projecting northwest elevation. Three square, stair-stepped glass blocks are located west of the recessed entrance; a plate glass picture window flanked by casements lies to the east. The front entrance door is solid wood. A concrete block chimney is attached to the east elevation. Low concrete block walls form planters bordering the façade and also surround the .37-acre property. Landscaping consists mostly of gravel punctuated by a few trees, ocotillo, and bushes. A row of oleanders is on either side of an entry path made of wood railroad ties. The house appears original and in excellent condition.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

This house was constructed in 1952, perhaps for Glenn E. and Mary F. Organ who were listed at this address in the 1954 Palm Springs Directory. The property is noteworthy as a representative example of the type of substantial desert house being constructed in the Magnesia Falls area, one of the early subdivisions of Rancho Mirage, in the early years of the Country Club Era. Unlike the more modest concrete block houses built nearby in the 1930s and 1940s, the Organ Residence has a commanding street presence and is more architecturally refined than most houses constructed in the neighborhood up to that time. The house retains its original appearance and character and does not appear to have been altered. Although the property does not appear eligible for listing in the National Register of Historic Places or for designation under an existing or proposed local ordinance, it is of local interest (a "5S3" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City, Rancho Mirage Date: 2021 Map Scale: 1;24000
Address: 71-781 Sahara Road City: Rancho Mirage Zip: 92270
UTM Zone: 11S 554443.19 m E 3733253.48 m N
APN: 684353001

Date Constructed: 1938
Ownership and Address: Kutay Egilmez; 71781 Sahara Road, Rancho Mirage, CA 92270

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 71-781 Sahara Road property was constructed in 1938. The residence is located in the Magnesia Falls Cove neighborhood. In 2002, Leslie Heumann and Associates described the residence as a rustic one-story house with a low-pitched hipped roof clad with red tiles with exposed rafters and deep eaves. The home most closely resemble the Spanish Styled Ranch architecture style. The exterior is clad in board and batten siding. The windows at the residence appear to be sash, vinyl windows, arranged alone or in pairs. There is a small front stoop at the entrance to the home. Since the 2002 survey, the windows have been replaced. Based on aerial images, it appears the roof was replaced circa 2018. There does not appear to have been any other significant alterations to the residence.

Permits provided by the City include:
- Sewer work in 2003 (Permit No. B0300545)
- Reroof of the dwelling in 2018 (Permit No. B1800727)

See Continuation Sheet for Additional Information.

View of east (front) elevation. (71-781 Sahara Road) (Source: Google Earth)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the subject property as status code 5S1: individual property that is listed or designated locally. The correct status code that should have been assigned in 2002 is 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The prior survey found the home eligible under NRHP criterion A and C as historically significant as one of the few remnants of one of the earliest periods of Rancho Mirage, and architecturally noteworthy for its Spanish Rustic design. The home most closely resembles the Spanish Styled Ranch style home. The current survey found the residence is associated with the Early Agricultural and Residential Period (1924-1951). It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

The home was constructed in 1938 in the Magnesia Falls Cove neighborhood, and was one of the earliest homes in Rancho Mirage, constructed pre-World War II. The Magnesia Falls Cove neighborhood was the first small tract development in Rancho Mirage. In 1934, the land that would become Magnesia Falls Cove was purchased by a Louis MacLaughlin "Mac" Blankenhorn, a Pasadena businessman, realtor, and land developer. He began selling lots and "modern attractive small homes," in the area, with the earliest streets being Sahara, Mirage, Veldt, and Tunis. This early development was known as Rancho Mirage. By 1937, six homes had been constructed, with two in progress, and telephone lines had been laid. The stock market crash and depression of the 1930s led to slow development of the area, however, by April of 1937, there were enough residents to charter the Rancho Mirage Community Association and for Magnesia Falls Cove to become a postal stop. These early homes were smaller than the more modern residences that would be constructed in later periods. Advertisements from 1937 described the style as "Early American;" they were typically adobe or had Spanish Colonial Revival elements. Development largely stalled until after World War II.

Post World War II, development rapidly increased. In 1944, Hollywood lawyer, A. Ronald Button, purchased approximately 1,900 acres in the Magnesia Falls Cove area. By the late 40s, over 100 homes were under construction. In 1956, Button's brother-in-law, TV media star and developer Art Linkletter, began developing 137 more homes. The homes built in this era were marketed as luxury homes, and were largely "modern ranch homes and long gabled cottages." Into the late 1950s, development continued, with many more residences, two hotels, and a community pool being built. In 1957, Button-Linkletter, sold the remaining land to developers Harold Garfield and Arthur Desser. They would go on to develop the remaining lots and the commercial center across from Magnesia Falls Cove. There are currently around 550 homes in Magnesia Falls Cove and White Sun neighborhoods ("Magnesia Falls Cove Was Known as 'Rancho Mirage,' Magnesia Falls Cove Community Association; Tracy Conrad, "History: Intrepid Mac and Ruth Blankenhorn invented Rancho Mirage," Desert Sun, April 24, 2022).

The subject property is an example of an early Spanish Styled Ranch style home built in Rancho Mirage. It was one of the few homes built in the area before development stalled due to the Great Depression and World War II. The home features character defining features such as a low pitched roof clad in tile, a limited eave overhang, an asymmetrical facade, and exposed rafters.

The building has not been found individually eligible under Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the building would not appear to yield information which could be considered important in local, regional, state, or national history. The building is not considered eligible under Local Criterion 2-8.

The residence has been found individually eligible under NRHP/CRHR Criterion A/1 for association with significant events or patterns of events in local, regional, or national history. The home is one of the earliest homes constructed in Rancho Mirage and the Magnesia Falls Cove neighborhood. The number of homes built prior to World War II is limited, and the subject property is one of the few. The single-family residence is considered eligible under NRHP/CRHR Criterion C/3 as the property individually embodies the distinctive characteristics of a Spanish Styled Ranch home. The earliest homes built in the Magnesia Falls Cove neighborhood were constructed with Spanish Revival elements, including the subject property. The home is considered eligible under Local Criterion 1 as an example of the Spanish Styled Ranch style constructed in the early years of Rancho Mirage. As the dwelling has not been substantially altered, it maintains integrity from the historic period. While the integrity of the home has been negatively impacted since 2002 with the addition of new vinyl windows, these elements are potentially reversible replacements and do not significantly reduce the ability of the property to convey its significance under the above criteria.

This rustic one-story house built in 1938 is crowned with a low-pitched hipped roof and red tiles. Exposed rafters are visible beneath deep eaves. The northwest-facing residence is 1,619 square feet with two bedrooms and 1.75 bathrooms. Board and batten and some horizontal board sheathing covers wood frame construction. Windows are four-over-four, wood-framed, double-hung sash, arranged singly or in pairs. Concrete steps lead to a center entrance door of five horizontal panes framed in wood. Two small wrought iron sconces flank the front door and a trio of small square windows is directly east of the entrance. The roofline is slightly elevated west of the entrance and features a sturdy, concrete block exterior chimney on the west elevation. The single-car attached garage is located on the east side of the house. A low perimeter wall of river rocks borders the curved concrete driveway and tall hedges. Lush landscaping consists of lawns, sculpted bushes, and many varieties of mature trees. The building appears original and in excellent condition.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

This property is historically significant as one of the few remnants of one of the earliest periods of Rancho Mirage and architecturally noteworthy for its Spanish Rustic design. This address first appears in the Palm Springs Directory in 1957. The owner at that time was F. G. Wheeler. Of the essentially three styles of houses built in the Magnesia Falls area prior to World War II, the Spanish Rustic style was less common than Ranch or Vernacular Modern. The Magnesia Falls area was developed after Clancy Lane and its associated ranches and farms were established. While this property appears to be a custom house, Magnesia Falls was the location of the first small tract development in Rancho Mirage with a number of Van Pelt and Lind designs for developer Louis Blankenhorn spread along Sahara Road. Constructed in 1938, this house is an excellent, well preserved, and intact example of Spanish Rustic, featuring the combination of a low-pitched red tile roof and board and batten sheathing. The low river rock planter walls and four-over-four double-hung sash windows complete the theme. This house is also significant because it represents and documents a broad pattern of development that was important in the early residential history of Rancho Mirage. The property appears eligible for designation under an existing or proposed local ordinance, but does not appear eligible for listing in the National Register of Historic Places (a "5S1" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City, Rancho Mirage Date: 2021 Map Scale: 1;24000
Address: 70-612 Highway 111 City: Rancho Mirage Zip: 92270
UTM Zone: 11S 552705.39 m E 3735162.92 m N
APN: 690120003

Date Constructed: 1952
Ownership and Address: Thunderbird Country Club; 70737 Country Club Drive, Rancho Mirage, CA 92270

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The Thunderbird Country Club Cottages, addressed as 70-612 Highway 111, designed by architect William Cody, were constructed in 1952. The Cottages are located within the Thunderbird Country Club, adjacent to the Thunderbird clubhouse. There are twelve, one-story duplex and triplex buildings with low-pitched front-gabled roofs. In 2002, Leslie Heumann and Associates described property as having exposed beams and notched beam-ends which are typical of William Cody's work. The exterior of the buildings are clad in board-and-batten and medium-smooth stucco. The windows are a mix of fixed and sliding. Each unit has a sliding glass door that opens to an exterior patio. There are narrow stucco walls separating the units. The buildings all face a different direction with narrow sidewalks and landscaping between them. Two of the cottages were demolished between 2002 and 2004.

Relevant permits provided by the City include:
- block wall construction in 2000 (Permit No. B0000970)
- Pool & spa work in 2001 (Permit No. B0100951)
- Demolition work in 2002 (Permit No. B0200938)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the subject property as status code 5S1: individual property that is listed or designated locally. The correct status code that should have been assigned in 2002 is 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The prior survey found the residence that property was architecturally significant as an early example of the Modern style located within the Thunderbird Country Club. The Cottages most specifically resemble the Contemporary style. The current survey found the property is associated with the themes of the Country Club Era (1951-1973) and Rancho Mirage Architectural Styles (1934-1980s). The property is significant in relation to the development of the Thunderbird Country Club and as an example of the work of architect William Cody. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

In 1950, Johnny Dawson purchased the Thunderbird Ranch, and began development of the first eighteen-hole golf course in the Palm Springs area. The Thunderbird Country Club opened in 1951. Parcels along the fairways were offered for home construction to early investors. William Cody was hired to remodel the guest ranch buildings and to construct the fourteen Country Club Cottages, which were available to members. The country club gained publicity as the first golf club to develop the motorized golf cart and as the host of the Ryder Cup. The Country Club has been associated with prominent public figures including Dwight D. Eisenhower and Gerald Ford, who were members.

William Francis Cody (1916-1978) designed the subject property in 1952. Born in Dayton, Ohio, in 1916, Cody's family relocated to California in 1930. While attending Beverly Hills High School, Cody designed and built stages for school plays prior to his graduation in 1932. Following high school, he graduated from Santa Monica Junior College in 1939 and enrolled in the College of Architecture and Fine Arts at the University of Southern California. He graduated from USC in 1942. During his time at Santa Monica Junior College and USC, Cody worked for architects, Heath Wharton and Asa Hudson. Following his graduation, Cody worked for several engineering and architecture firms in California, including Cliff May whom he worked for in 1944. In 1945, Cody's firm was hired to alter the Desert Inn in Palm Springs. Following the Desert Inn project, Cody began working independently in California and Arizona by 1946.

In 1946, William F. Cody moved to Palm Springs permanently and received his first independent commission to design the Del Marcos Hotel, which earned him an award in 1949 from the California chapter of the American Institute of Architects. In 1947, he was hired to convert the Thunderbird Dude Ranch, originally constructed in 1936, to the Thunderbird Country Club. His work at Thunderbird led to future commissions at other clubhouses, recreational facilities, and residential developments, at locations throughout Palm Desert, such as the Eldorado Country Club, Tamarisk Country Club, the Racquet Club, the Tennis Club, and the Seven Lakes Clubhouse. In Palm Springs, Cody was one of the architects, with Wexler & Harrison and Philip Koenig, to design the Spa Bathhouse and Spa Hotel. In 1952, Cody designed the Horizon Hotel.

In the Coachella Valley, he was responsible for several notable Modernist style residential designs including the Perlberg, Shamel, and Abernathy residences in Palm Springs. Throughout his career, he designed commercial and residential properties throughout California, Arizona, Texas, Cub, and Mexico. He was inducted into the College of Fellows of the AIA in 1965. Some of his final projects included St. Theresa's Catholic Church in 1968 and the Palm Springs Library Center in 1972. In 1973, he suffered a severe stroke which caused him to end his architectural career. He died in 1978 and today is considered one of the most important architects in the Desert Modernism movement.

The Country Club Cottages were originally constructed as temporary accommodations within the gates of the country club. The cottages were sold and rented exclusively to club members and their guests. The Cottages are one-story duplex and triplex buildings. They feature character defining features of Cody's style, including low-pitched roofs, deep overhangs, board and batten siding, notched beam ends, sliding glass doors and clerestories, and slumpstone chimneys. The cottages are notable as a multi-family example of Cody's work.

Updated Building, Structure, Object Information Continued:

The property has not been found individually eligible under Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the building would not appear to yield information which could be considered important in local, regional, state, or national history. The building is not considered eligible under Local Criterion 2, 3, 5, 6.

The property is found individually eligible under NRHP/CRHR Criterion A/1, as it has been associated with significant events or patterns of events in local, regional, or national history. The cottages are part of the original Thunderbird Country Club. The residences were located close to the golf course clubhouse, and is representative of the early country club days in Rancho Mirage as the area became a leisure destination, influenced by the golf course country clubs. The subject property is found eligible under NRHP/CRHR Criterion C/3 for embodying the distinctive characteristics of a type, period, or method of construction. The residences are a multi-family example of the work of notable architect William Cody. The homes feature characteristics of the Contemporary style and of Cody's work, but in a rarer multi-family form. Relately the subject property is eligible under Local Criterion 1, 4, and 7 as representative of a particular architectural style and as representative of the work of William Cody. While two of the cottages have been demolished, a majority remain intact and unaltered. The property maintains integrity to the historic era.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Architect William Cody designed the Thunderbird Country Club cottages adjacent to the Thunderbird clubhouse in 1952. The one-story, rectangular duplexes have low-pitched front-gabled roofs with rafters visible beneath deep eaves. Exposed beams and notched beam-ends, a typical Cody detail, are supported by square wood posts. Exteriors are sheathed in board-and-batten and medium-smooth stucco. Windows are a mixture of fixed and sliding, with sliding glass doors opening to exterior patios. The scattered cottages face different directions to take advantage of various mountain and fairway views. Concrete block walls surround the patios for privacy. Interior slumpstone chimneys emerge near the ridgeline of each building. Concrete paths bordered by lawns and shrubs lead to cottage entrances. One of the cottages was demolished in 2002. The remaining cottages appear mostly original and in good condition.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

The Thunderbird Cottages are significant architecturally as early improvements at the new country club that helped usher in the Modern architectural style with which Thunderbird became associated. Fourteen Thunderbird Country Club cottages were built in1952 as temporary accommodations within the private gates of the country club property and adjacent to the clubhouse. Although technically classified as a hotel/motel, the cottages were available for sale or rent exclusively to club members and their guests. Built at a cost of $18,500 each, the individual units contained living rooms with fireplaces, two bedrooms, and a kitchen. The first cottage was sold to Barney Gengenbach of Chicago. Architect William Cody, who was responsible for remodeling and expanding the original Thunderbird Ranch clubhouse, designed the adjacent cottages around the same time. The modest duplexes exhibit Cody's fondness for certain architectural details and materials including low-pitched roofs, deep overhangs, board and batten sheathing, notched beam ends, sliding glass doors and clerestories, and slumpstone chimneys.

***Date of Evaluation:** *September 23, 2002*

***B10. Significance (continued):**

William F. Cody FAIA (1916-1978) was born in Dayton, Ohio and raised in Los Angeles. While attending architecture school at the University of Southern California in the late 1930s and early 1940s, Cody was also working for architect Cliff May, gaining experience in the adaptation of ranch and hacienda style houses to modern floor plans and construction techniques. Suffering from asthma, and believing that the Palm Springs area offered opportunity and prominent clients, Cody moved to Palm Springs in 1944-45 and set up practice. One of his first projects, the Del Marcos Hotel of 1946, won an AIA "creditable mention" award as an example of new resort hotel architecture for its "ingenious plan, which appears complicated but is actually orderly and thoughtful." Author and critic Alan Hess writes, "Greater thinness and more striking elegance became the single-minded focus of his ongoing design." Despite a reputation for carousing, Cody was exceptionally focused on the details of his designs and pushing the boundaries of his materials. His well-known and innovative early buildings, along with friendships with influential members of the Thunderbird, Tamarisk, and Eldorado Country Clubs, resulted in commissions to design (or in the case of Thunderbird, remodel) the clubhouses of all three locations. In addition, Cody designed a large number of residences in the country club areas, many along the fairways of the new resort concept of golf course living, a concept that Cody himself helped devise.

Author Adele Cygelman writes, "Joints and door frames seemingly disappeared into walls. He merged living rooms into terraces and gardens. Roofs jutted out twelve feet to shield the walls of glass. Pattern and texture came from tile floors, carved wood panels, and concrete-block screens with geometric motifs, all of which were meticulously designed by Cody to match each other precisely at the seams and angles where the planes met." Like other Coachella Valley architects, Cody designed churches, gas stations, motels, restaurants, offices, a mobile home park, shopping centers, even a carwash. "Yet a distinct character can be seen in all of them," says Hess. "It is a restless energy that brings a liveliness to his plans, elevations and details. The radical thinness of Cody roofs or the daring reach of a cantilever are clearly the result of a wrestling match between the architect and the materials and the laws of physics; that energy and striving remains in the building." Hess concludes, "The fact that Cody could take an established vocabulary and style and reinterpret it so vividly ranks him among the best of mid-century California designers."

The Thunderbird Cottages are characteristic, mostly original examples of Cody's Modernist architectural style adapted to modest duplexes in a country club setting. The property appears eligible for designation under an existing or proposed local ordinance, but does not appear eligible for listing in the National Register of Historic Places (a "5S1" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City, Rancho Mirage Date: 2021 Map Scale: 1;24000
Address: 42-457 Rancho Las Palmas Drive City: Rancho Mirage Zip: 92270
UTM Zone: 11S 554144.38 m E 3733483.63 m N
APN: 684342007

Date Constructed: 1957
Ownership and Address: Penny L Merrill; 44489 Town Center Way, Palm Desert, CA 92260

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The Casbah Apartment Hotel, addressed as 42-457 Rancho Las Palmas Drive, was constructed in 1957. In 2002, Leslie Heumann and Associates described the property as a "U"-shaped, nine-unit studio apartment complex split between two parallel buildings with a rectangular office building between them. The buildings are constructed in the Desert Modernist style. The buildings are constructed of stack bond concrete block and smooth stucco with shed roofs. The residential buildings have an irregular shape, with each unit turned at a 45-degree angle toward the pool at the center of the property. Each unit has an extended concrete block wall between the exterior patios. At the rear of the units are parking spaces. During the 2024 survey, portions of the property were inaccessible due to fencing, however, there does not appear to have been any significant alterations to the property since the 2002 survey.

Permits provided by the City include:
- Encroachment Construction in 2000 (Permit No. E0000532)
- block wall construction in 2005 (Permit No. B0501248)
- Reroof of building in 2005 (Permit No. B0501592)
- Electrical work in 2005 (Permit No. B0500942)
- Electrical work in 2007 (Permit No. B0700814)
- Electrical work in 2007 (Permit No. B0700815)
- Pool & spa work in 2008 (Permit No. B0801088)
- Mechanical/HVAC work in 2012 (Permit No. B1200492)
- block wall construction in 2015 (Permit No. B1500479)
- Encroachment Construction in 2019 (Permit No. E1900142)
- Sewer work in 2019 ((Permit No. B1900754)

See Continuation Sheet for Additional Information.

View of the southeast elevation. (42-457 Rancho Las Palmas Drive_1)

Updated Primary Record Information Continued:

View of the southeast elevation. (42-457 Rancho Las Palmas Drive_5)

Updated Building, Structure, Object Information Continued:

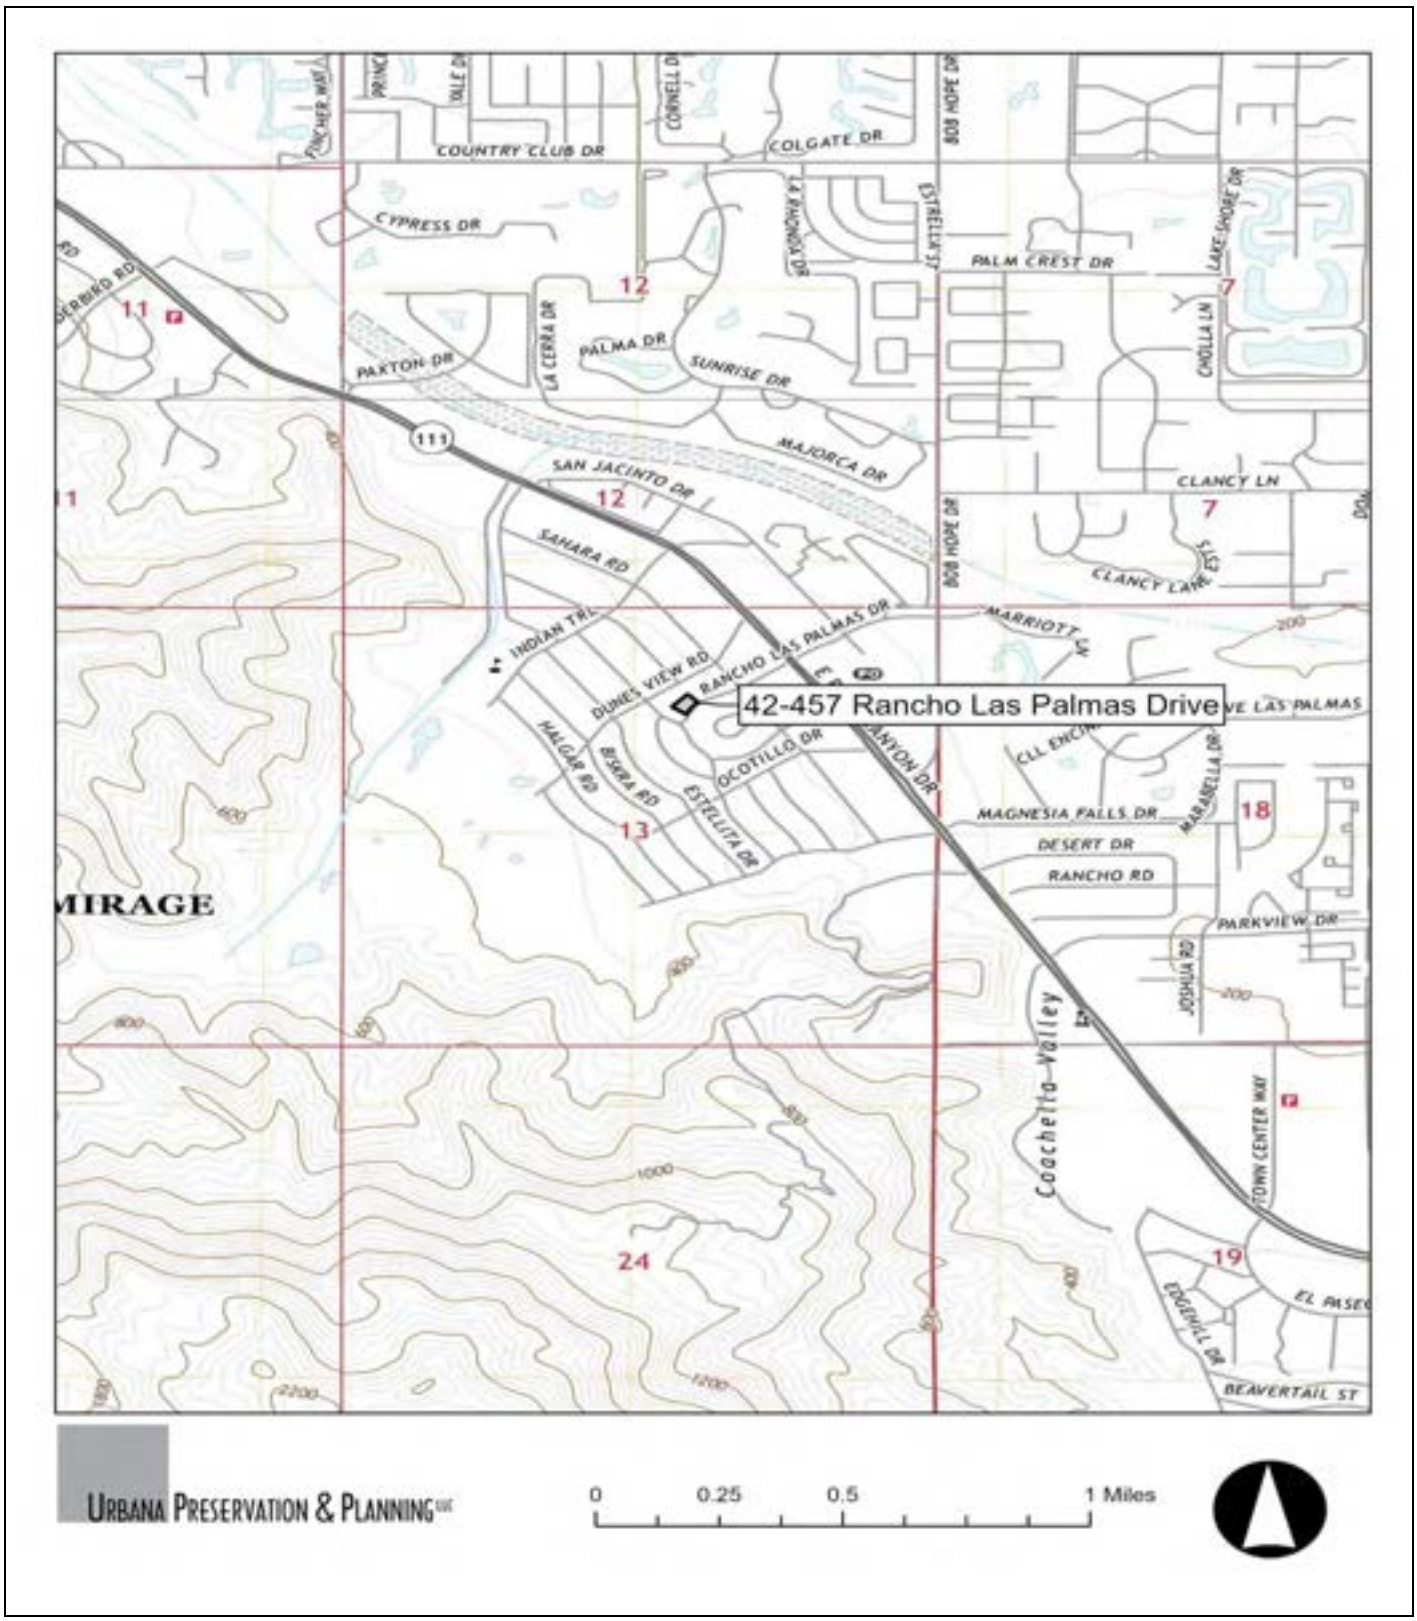
The prior 2002 survey evaluated the property as status code 5S1: Individual property that is listed or designated locally. The correct status code that should have been assigned in 2002 is 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The prior survey found the property was architecturally significant as an example of a small, Desert Modern multi-family property. This property type, from this era, is relatively rare. The current survey found the subject property associated with the themes of Residential Subdivisions and Cooperatives (1951-1973) and Rancho Mirage Architectural Styles (1934-1980s). The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

In 1957, developer Bill Boland opened the Casbah Apartment Hotel. Designed by Jack McCallum & Robert "Bob" Pitchford, the hotel was designed for short and long term guests visiting Rancho Mirage looking to golf for the weekend or stay for the season. Today, the Desert Modern style buildings at 42-457 Rancho Las Palmas Drive are all long-term apartments.

Updated Building, Structure, Object Information Continued:

The property is constructed in the Desert Modernist style. The development of country clubs coincided with the construction of custom residential and commercial properties within their boundaries. Booming post-war development within these country clubs helped shape what is now commonly referred to as 'Desert Modernism', a distinct subtype of the International style of architecture that incorporated modern materials, techniques, and floor plans with the unique requirements of building within a desert environment. The typical characteristics of Desert Modernism included large expanses of floor-to-ceiling glass walls sheltered by deep overhangs extending from flat roofs and flowing interior floor plans that merged gracefully with the outdoors. Often oriented to the rear, where most decorative flourishes could be visible from the fairways of the country clubs, Desert Modernist houses in Rancho Mirage often had a rear swimming pool and expansive golf course views and multiple points of outdoor access while front elevations were often constructed to be unassuming and often shielded for privacy, with only clerestories and obscured glass panels adjacent to the entries providing light. These houses were often light, with roofs floating above glass walls and clerestories, and ceilings supported by thin steel or wood posts. In addition to glass, exterior materials included stucco, wood, slumpstone, and natural rock that often mirrored the desert environment. The subject property includes character defining features of the style, including large sliding glass doors at each unit beneath overhangs, low pitched shed roofs, and a strong interaction between the indoor and outdoor spaces. The buildings are clad in smooth stucco with narrow brick walls for privacy between the units. The property has an open space and swimming pool between the units, with the units opening towards them, which emphasises the focus on outdoor living.

The property has not been found individually eligible under NRHP/CRHR Criterion A/1, as it has not been associated with significant events or patterns of events in local, regional, or national history. The property has not been found individually eligible under Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the building would not appear to yield information which could be considered important in local, regional, state, or national history. The property is not considered eligible under Local Criterion 2-6, 8.



The subject property is found eligible under NRHP/CRHR Criterion C/3 for embodying the distinctive characteristics of a type, period, or method of construction. The property is a rare example of a Desert Modernist multi-family residence. The property is one of the few small, multi-family residences dating to the 1950s, located in Rancho Mirage. Relately the subject property is eligible under Local Criterion 1 and 7 as representative of a Desert Modern style multi-family residence that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials. As the property has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

The Casbah Apartment Hotel was built in 1957 on what was then called West Veldt (now Rancho Las Palmas Drive). The "U"-shaped, nine-unit studio apartment complex consists of two parallel buildings with the perpendicular office at the base of the "U". All units face the central swimming pool. The buildings are constructed of stack bond concrete block with medium-smooth stucco finishing remaining exteriors. Shed roofs with extended overhangs cap each unit. Erected on a slight downward slope, each unit is turned at a 45-degree angle towards the pool for views and maximum privacy. The extended concrete block walls ensure that patios are shielded from neighbors on either side. Planters adjacent to patio walls provide welcome greenery while wide sliding glass patio doors complete the indoor-outdoor arrangement. A broad lawn, mature palms, olive trees, and other vegetation surround the pool area. Desert landscaping of gravel, rocks, and cacti fronts the property between the office building and the street. The buildings appear original and in good condition.

The Casbah Apartment Hotel is architecturally significant as an original, highly representative example of the type of small, Modern, single-story, family operated accommodations often seen in Palm Springs but rarely in Rancho Mirage. Although other small motels existed in the 1950s and 1960s in the area, virtually none remain that are so well preserved. The Casbah features shed roof units with glass walls turned at 45 degree angles for privacy, light, and views. Noteworthy architectural details include the flat, stack bond concrete block, overlapping roof sections, and built-in planters. Constructed in 1957 by an unknown architect and/or contractor, the owner of the property was W. B. Boland, per the 1957 Palm Springs Directory. The original addresses of the units were 71-457 to 71-473 West Veldt. The property appears eligible for designation under an existing or proposed local ordinance, but does not appear eligible for listing in the National Register of Historic Places (a "5S1" National Register Status Code).

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 40-253 Club View Drive residence, designed by architect William Cody, was constructed in 1955. It is located within the Thunderbird Country Club. In 2002, Leslie Heumann and Associates described the residence as an "L"-shaped Desert Modern home with a flat roof and deep eaves, with a pecky cypress fascia. The clad is in stucco with flagstone accents; at the rear of the residence, the exterior is comprised of floor-to-ceiling glass windows and sliding glass doors. The front elevations of the residence face Club View Drive and features a large double door with a large, opaque sidelight and large attached carport. The rear of the residence has deep eaves supported by square wood beams, and opens to the ninth fairway of the Thunderbird Country Club golf course. There does not appear to have been any significant alterations to the residence since the 2002 survey.

The property was re-roofed in 2008 (Permit No. B0800473). No other permits were not available for this property.

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the subject property as status code 3S: Appears eligible for NR as an individual property through survey evaluation. The prior survey indicates that the Jorgensen House is architecturally significant as an outstanding example of the Desert Modern style, and for its association with architect William Cody. The current survey also finds the home is a Desert Modernist style residence and finds it is associated with the theme of the Country Club Era (1951-1973). It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

Updated Building, Structure, Object Information Continued:

William Francis Cody (1916-1978) is designed the subject property in 1955. Born in Dayton, Ohio, in 1916, Cody's family relocated to California in 1930. While attending Beverly Hills High School, Cody designed and built stages for school plays prior to his graduation in 1932. Following high school, he graduated from Santa Monica Junior College in 1939 and enrolled in the College of Architecture and Fine Arts at the University of Southern California. He graduated from USC in 1942. During his time at Santa Monica Junior College and USC, Cody worked for architects, Heath Wharton and Asa Hudson. Following his graduation, Cody worked for several engineering and architecture firms in California, including Cliff May whom he worked for in 1944. In 1945, Cody's firm was hired to alter the Desert Inn in Palm Springs. Following the Desert Inn project, Cody began working independently in California and Arizona by 1946.

In 1946, William F. Cody moved to Palm Springs permanently and received his first independent commission to design the Del Marcos Hotel, which earned him an award in 1949 from the California chapter of the American Institute of Architects. In 1947, he was hired to convert the Thunderbird Dude Ranch, originally constructed in 1936, to the Thunderbird Country Club. His work at Thunderbird led to future commissions at other clubhouses, recreational facilities, and residential developments, at locations throughout Palm Desert, such as the Eldorado Country Club, Tamarisk Country Club, the Racquet Club, the Tennis Club, and the Seven Lakes Clubhouse. In Palm Springs, Cody was one of the architects, with Wexler & Harrison and Philip Koenig, to design the Spa Bathhouse and Spa Hotel. In 1952, Cody designed the Horizon Hotel.

In the Coachella Valley, he was responsible for several notable Modernist style residential designs including the Perlberg, Shamel, and Abernathy residences in Palm Springs. Throughout his career, he designed commercial and residential properties throughout California, Arizona, Texas, Cub, and Mexico. He was inducted into the College of Fellows of the AIA in 1965. Some of his final projects included St. Theresa's Catholic Church in 1968 and the Palm Springs Library Center in 1972. In 1973, he suffered a severe stroke which caused him to end his architectural career. He died in 1978 and today is considered one of the most important architects in the Desert Modernism movement.

The subject property is a notable example of the Desert Modernist style. It features several architectural features that are typical of Cody's work including large expanses of floor-to-ceiling glass, with deep overhangs extending from a flat roof, a mix of materials, and a design meant to take advantage of the desert views.The home additionally features character defining features of a Desert Modernist style home including:

- an asymmetrical plan and a strong horizontal emphasis;
- a corner front entry;
- wing walls;
- broad expanses of uninterrupted wall surfaces and large expanses of glass walls;
- an attached carport incorporated under the main roof;
- a flat roof.

The building has not been found individually eligible under NRHP/CRHR Criterion A/1, as it has not been associated with significant events or patterns of events in local, regional, or national history; not individually eligible under Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the building would not appear to yield information which could be considered important in local, regional, state, or national history. The building is not considered eligible under Local Criterion 1-3, 5, 6.

The subject property is found eligible under NRHP/CRHR Criterion C/3 for embodying the distinctive characteristics of a type, period, or method of construction. Relately the subject property is eligible under Local Criterion 1 and 7 as representative of the Desert Modernist architectural style and under Local Criterion 4 as representative of the work of William Cody. As the dwelling has not been substantially altered, this dwelling maintains integrity from the historic period.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

The Jorgensen Residence was designed in 1955 by architect William Cody on the ninth fairway of the Thunderbird Country Club golf course. The 3,300 square foot, four bedroom Desert Modern house is located on .65 acres. A flat roof with deep eaves and a pecky cypress fascia caps the "L"-shaped residence. A concrete driveway leads to a west-facing double carport supported by square wood posts and a flagstone wall that projects past the carport roof towards the street. The north-facing entrance features double doors with an opaque, corrugated glass sidelight to the east and an adjacent flagstone wall to the west. A large flagstone interior chimney emerges from the flat roof. The rear elevation has floor to ceiling glass walls and steel-framed sliding glass doors leading to the covered patio and pool area. Here, exceptionally deep eaves covering the patio are supported by the same square wood beams used in the carport. Shallow steps surround the rectangular pool on the north and west sides. A rectangular lawn between the house and pool mirrors the pool in size and form. The straight lines of the concrete deck surrounding the rear elevations continue the rectilinear theme. Landscaping consists of boulders, gravel, agaves, clipped hedges, lawns, and mature trees. According to Adele Cygelman in her 2000 book Palm Springs Modern, the Jorgensen House, owned by the Mavis family since the late 1950s, is virtually unchanged since construction, including all of the original furnishings. The house still appears original and is in excellent condition.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

The Jorgensen House is architecturally significant as an outstanding example of the Desert Modern, a style to which architect William F. Cody made significant contributions. Cody designed the house for steel magnate Earl M. Jorgensen and his wife Marion in 1955. According to Adele Cygelman in the book Palm Springs Modern, "Cody designed a horizontal house with an opposition roof that exuded a powerful individuality through its simple but meticulous detailing." She continues, "The huge overhang projection outside the living room, supported by four solid posts, dropped all pretense of being a mere extension of the interior. The outdoor terrace graduated and became a room in its own right." In the country club areas of Rancho Mirage, the houses are oriented towards the rear for spectacular golf course views; the Jorgensen Residence is a prime example of this orientation. Owned by the Mavis family for several decades, the house has been maintained in virtually original condition, both interior and exterior, since it was purchased from the Jorgensens.

(See Continuation Sheet 3 of 3.)

***B10. Significance (continued):**

This is one of William Cody's most important residential buildings in Rancho Mirage. The Jorgensen Residence exemplifies the Desert Modern style that Cody helped develop and with which he, along with E. Stewart Williams, became most closely associated. The Desert Modern architectural style incorporates large expanses of floor to ceiling glass sheltered by deep overhangs extending from flat roofs in creating a powerful interaction between the indoors and outdoors. Desert Modern buildings appear light, often supported by thin steel or wood posts, with open interiors flowing from room to room. In addition to glass, exterior materials include stucco, wood, slumpstone, and natural rock. Street elevations are often shielded for privacy, with only clerestories providing light. Rear elevations embrace desert views and outdoor access. The Desert Modern style grew out of local architects' desire to adapt Modern materials, techniques, and floor plans to the unique requirements of desert living.

William F. Cody FAIA (1916-1978) was born in Dayton, Ohio and raised in Los Angeles. While attending architecture school at the University of Southern California in the late 1930s and early 1940s, Cody was also working for architect Cliff May, gaining experience in the adaptation of ranch and hacienda style houses to modern floor plans and construction techniques. Suffering from asthma, and believing that the Palm Springs area offered opportunity and prominent clients, Cody moved to Palm Springs in 1944-45 and set up practice. One of his first projects, the Del Marcos Hotel of 1946, won an AIA "creditable mention" award as an example of new resort hotel architecture for its "ingenious plan, which appears complicated but is actually orderly and thoughtful." Author and critic Alan Hess writes, "Greater thinness and more striking elegance became the single-minded focus of his ongoing design." Despite a reputation for carousing, Cody was exceptionally focused on the details of his designs and pushing the boundaries of his materials. His well-known and innovative early buildings, along with friendships with influential members of the Thunderbird, Tamarisk, and Eldorado Country Clubs, resulted in commissions to design (or in the case of Thunderbird, remodel) the clubhouses of all three locations. In addition, Cody designed a large number of residences in the country club areas, many along the fairways of the new resort concept of golf course living, a concept that Cody himself helped devise.

Author Adele Cygelman writes: "Joints and door frames seemingly disappeared into walls. He merged living rooms into terraces and gardens. Roofs jutted out twelve feet to shield the walls of glass. Pattern and texture came from tile floors, carved wood panels, and concrete-block screens with geometric motifs, all of which were meticulously designed by Cody to match each other precisely at the seams and angles where the planes met." Like other Coachella Valley architects, Cody designed churches, gas stations, motels, restaurants, offices, a mobile home park, shopping centers, even a carwash. "Yet a distinct character can be seen in all of them," says Hess. "It is a restless energy that brings a liveliness to his plans, elevations and details. The radical thinness of Cody roofs or the daring reach of a cantilever are clearly the result of a wrestling match between the architect and the materials and the laws of physics; that energy and striving remains in the building." Hess concludes, "The fact that Cody could take an established vocabulary and style and reinterpret it so vividly ranks him among the best of mid-century California designers."

The property appears eligible for separate listing in the National Register of Historic Places (a "3S" National Register Status Code) under Criterion C, for exceptional significance in the embodiment of the distinctive characteristics of a type, the Desert Modern residence, and association with a master architect, William Cody. In addition, the property would be eligible for separate listing or designation under an existing or proposed local ordinance. Completely intact and original, the Jorgensen Residence, along with the Gillin Residence, are the two best and most well-preserved examples of Cody's work within the Thunderbird Country Club. Of the approximately 21 single family Cody-designed residences identified as architecturally noteworthy in Rancho Mirage, it is one of only six that appear eligible for listing in the National Register.

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 71-076 Country Club Drive property was constructed in 1958 in the Thunderbird North neighborhood. Leslie Heumann and Associates described the residence as a one-story Modern residence with a medium-pitched side-gabled roof with deep eaves in 2002. The residence features a flat-roofed porte cochere entrance. The porte cochere is supported by round metal posts and a pair of rock walls. The The home is positioned on a diagonal, facing the intersection of Country Club Drive and Morningsprings Road. The exterior is clad in board and batten or vertically scored stucco. The residence features natural rock at the perimeter walls, planters, porte cochere, and the interior chimney. There does not appear to have been any significant alterations to the residence, other than exterior paint and landscape changes.

Permits provided by the City include:
- Reroof dwelling in 2005 (Permit No. B0500390)
- Mechanical work in 2010 (Permit No. B1000753)
- Sewer work in 2013 (Permit No. B1300937)
- Pool & spa work in 2013 (Permit No. B1301161)
- Plumbing work in 2015 (Permit No. B1500058)
- Solar installation in 2022 (Permit No. B2201979)
- Electrical work in 2022 (Permit No. B220518)

Updated Primary Record Information Continued:

View of southeast (front) elevation. (71-076 Country Club Drive_3)

View of southeast (front) elevation. (71-076 Country Club Drive_1)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the subject property as status code 5S1: Individual property that is listed or designated locally. The correct status code that should have been assigned in 2002 is 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The prior survey indicated that it was significant as one of a cluster of ten homes developed around a communal swimming pool within a park-like setting, and as a Desert Modernist style home designed by architect William Cody. The current survey finds the residence is associated with the theme of Residential Subdivisions and Cooperatives (1951-1973). It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

William Francis Cody (1916-1978) is designed the subject property in 1958. Born in Dayton, Ohio, in 1916, Cody's family relocated to California in 1930. While attending Beverly Hills High School, Cody designed and built stages for school plays prior to his graduation in 1932. Following high school, he graduated from Santa Monica Junior College in 1939 and enrolled in the College of Architecture and Fine Arts at the University of Southern California. He graduated from USC in 1942. During his time at Santa Monica Junior College and USC, Cody worked for architects, Heath Wharton and Asa Hudson. Following his graduation, Cody worked for several engineering and architecture firms in California, including Cliff May whom he worked for in 1944. In 1945, Cody's firm was hired to alter the Desert Inn in Palm Springs. Following the Desert Inn project, Cody began working independently in California and Arizona by 1946.

In 1946, William F. Cody moved to Palm Springs permanently and received his first independent commission to design the Del Marcos Hotel, which earned him an award in 1949 from the California chapter of the American Institute of Architects. In 1947, he was hired to convert the Thunderbird Dude Ranch, originally constructed in 1936, to the Thunderbird Country Club. His work at Thunderbird led to future commissions at other clubhouses, recreational facilities, and residential developments, at locations throughout Palm Desert, such as the Eldorado Country Club, Tamarisk Country Club, the Racquet Club, the Tennis Club, and the Seven Lakes Clubhouse. In Palm Springs, Cody was one of the architects, with Wexler & Harrison and Philip Koenig, to design the Spa Bathhouse and Spa Hotel. In 1952, Cody designed the Horizon Hotel.

In the Coachella Valley, he was responsible for several notable Modernist style residential designs including the Perlberg, Shamel, and Abernathy residences in Palm Springs. Throughout his career, he designed commercial and residential properties throughout California, Arizona, Texas, Cub, and Mexico. He was inducted into the College of Fellows of the AIA in 1965. Some of his final projects included St. Theresa's Catholic Church in 1968 and the Palm Springs Library Center in 1972. In 1973, he suffered a severe stroke which caused him to end his architectural career. He died in 1978 and today is considered one of the most important architects in the Desert Modernism movement.

The development of country clubs coincided with the construction of custom residential and commercial properties within their boundaries. Booming post-war development within these country clubs helped shape what is now commonly referred to as 'Desert Modernism', a distinct subtype of the International style of architecture that incorporated modern materials, techniques, and floor plans with the unique requirements of building within a desert environment. The typical characteristics of Desert Modernism included large expanses of floor-to-ceiling glass walls sheltered by deep overhangs extending from flat roofs and flowing interior floor plans that merged gracefully with the outdoors. Often oriented to the rear, where most decorative flourishes could be visible from the fairways of the country clubs, Desert Modernist houses in Rancho Mirage often had a rear swimming pool and expansive golf course views and multiple points of outdoor access while front elevations were often constructed to be unassuming and often shielded for privacy, with only clerestories and obscured glass panels adjacent to the entries providing light. These houses were often light, with roofs floating above glass walls and clerestories, and ceilings supported by thin steel or wood posts. In addition to glass, exterior materials included stucco, wood, slumpstone, and natural rock that often mirrored the desert environment.

Updated Building, Structure, Object Information Continued:

The subject property features character defining features of the Desert Modernist style, including floor-to-ceiling glass walls, deep overhangs, a flat roof, ceilings supported by narrow posts, and natural stone features. These elements are also typical of Cody's work.

The home has not been found individually eligible under NRHP/CRHR A/1, as it has not been associated with significant events or patterns of events in local, regional, state, or national history; not individually eligible under Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4/D, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state, or national history. The residence is not found eligible under Local Criterion 2, 3, 5, 6, or 8.

The single-family residence is considered eligible under NRHP/CRHR Criterion C/3 as the property individually embodies the distinctive characteristics of a Desert Modernist style home and the work of William Cody. The property is also eligible under Local Register Criteria 1 and 7 as it is representative of a Desert Modernist style home that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials. The home is also eligible under Local Criterion 4 as an example of the work of Cody. While much of the residence is obscured by privacy walls, based on aerial images, there does not appear to have been significant alterations to the residence. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

Designed by architect William Cody in 1958, this rectangular one-story Modern residence has a medium-pitched side-gabled roof with deep eaves and a flat-roofed porte cochere entrance. Some of eaves are perforated in a square grid pattern. The 3,288 square foot house has five bedrooms and 3.5 bathrooms and is on a .55 acre parcel. Located on the northwest corner of Country Club Drive and Morningsprings Road, the house is positioned diagonally, facing southeast, with asphalt driveway entrances on both streets. Exteriors are clad in board and batten or vertically scored stucco. Windows are wood-framed with horizontal mullions. Natural rock is used for perimeter walls, planters, porte cochere, and the interior chimney that emerges at the ridgeline. The visually striking porte cochere features imbedded round metal posts that emerge from the top of a pair of rock walls to support the flat roof. Additional metal posts resting on a concrete floor divide the double-car space. The roof, with its exposed beams, has a single open section near the main entrance. Landscaping consists of lawns, citrus trees, clusters of mature fan palms, bougainvillea, and clipped bushes and hedges. The house appears original and in good condition.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

Constructed in 1958, this property is significant as one of a cluster of ten homes developed around a communal swimming pool within a park-like setting (the "cluster between Early Times Road and Country Club Drive") and for its Desert Modern design by architect William Cody. The architectural firms of Wexler & Harrison and William Cody designed many of the houses in this small community, erected in the late 1950s and early 1960s. The houses, ranging in size from 2,300 to 3,300 square feet, were built on half-acre lots without individual swimming pools. Instead, rear yards open to the manicured lawns, trees, and shared rectangular swimming pool of the one acre central court. Since construction, several of the houses have added private swimming pools. This is a property type apparently unique to Rancho Mirage in the Coachella Valley area. Privately owned single-family residences sharing grounds and a swimming pool is an unusual permutation of a multi-family residential complex. Additional examples include Tamarisk Fairway on 10th (1969-1970) and Tamarisk Ranchos I and II (1958 and 1961) near the Tamarisk Country Club, and, near the Thunderbird Country Club, the Vista Del Rio tract (1958) and Thunderbird Palms (circa 1961).

***B10. Significance (continued):**

William F. Cody FAIA (1916-1978) was born in Dayton, Ohio and raised in Los Angeles. While attending architecture school at the University of Southern California in the late 1930s and early 1940s, Cody was also working for architect Cliff May, gaining experience in the adaptation of ranch and hacienda style houses to modern floor plans and construction techniques. Suffering from asthma, and believing that the Palm Springs area offered opportunity and prominent clients, Cody moved to Palm Springs in 1944-45 and set up practice. One of his first projects, the Del Marcos Hotel of 1946, won an AIA "creditable mention" award as an example of new resort hotel architecture for its "ingenious plan, which appears complicated but is actually orderly and thoughtful." Author and critic Alan Hess writes, "Greater thinness and more striking elegance became the single-minded focus of his ongoing design." Despite a reputation for carousing, Cody was exceptionally focused on the details of his designs and pushing the boundaries of his materials. His well-known and innovative early buildings, along with friendships with influential members of the Thunderbird, Tamarisk, and Eldorado Country Clubs, resulted in commissions to design (or in the case of Thunderbird, remodel) the clubhouses of all three locations. In addition, Cody designed a large number of residences in the country club areas, many along the fairways of the new resort concept of golf course living, a concept that Cody himself helped devise.

Author Adele Cygelman writes, "Joints and door frames seemingly disappeared into walls. He merged living rooms into terraces and gardens. Roofs jutted out twelve feet to shield the walls of glass. Pattern and texture came from tile floors, carved wood panels, and concrete-block screens with geometric motifs, all of which were meticulously designed by Cody to match each other precisely at the seams and angles where the planes met." Like other Coachella Valley architects, Cody designed churches, gas stations, motels, restaurants, offices, a mobile home park, shopping centers, even a carwash. "Yet a distinct character can be seen in all of them," says Hess. "It is a restless energy that brings a liveliness to his plans, elevations and details. The radical thinness of Cody roofs or the daring reach of a cantilever are clearly the result of a wrestling match between the architect and the materials and the laws of physics; that energy and striving remains in the building." Hess concludes, "The fact that Cody could take an established vocabulary and style and reinterpret it so vividly ranks him among the best of mid-century California designers."

This building is a good example of Cody's residential design and reflects his approach to Desert Modernism. William Cody, along with E. Stewart Williams, become most closely associated the Desert Modern style as it evolved in the 1950s and 1960s. The Desert Modern architectural style incorporates large expanses of ceiling to floor glass sheltered by deep overhangs extending from flat roofs in creating a powerful interaction between the indoors and outdoors. Desert Modern buildings appear light, often supported by thin steel or wood posts, with open interiors flowing from room to room. In addition to glass, exterior materials include stucco, wood, slumpstone, and natural rock. Street elevations are often shielded for privacy with only clerestories providing light. Rear elevations embrace desert views and outdoor access. The Desert Modern style grew out of local architects' desire to adapt Modern materials, techniques, and floor plans to the unique requirements of desert living.

Of the ten properties in this cluster, this house was one of only four that have retained sufficient architectural integrity to be noteworthy. The property appears eligible for listing under an existing or proposed local ordinance, but does not appear eligible for listing in the National Register of Historic Places (a "5S1" National Register Status Code).

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 70-801 Highway 111 property, also known as City of Rancho Mirage Fire Station #1 (Riverside Country Fire Station 50) was constructed in 1975. The property was described as a one- and one-half-story, northeast facing building capped with a flat roof with exposed beams beneath deep overhangs by Leslie Heumann and Associates in 2002. The building features terraced walls clad with ribbed, texture concrete blocks with rough stucco accent walls. There are three large bays at the southeast elevation and two at the northwest elevation for fire truck access. In 2022, the building underwent a seismic retrofitting and interior remodel that maintained the character defining features on the exterior.

Permits provided by the City include:
- Tenant improvements in 2004 (Permit No. B0400118)
- Grading work in 2004 (Permit No. E0400192)
- Patio construction in 2013 (Permit No. B1301259)
- Encroachment Construction in 2015 (Permit No. E1500091)
- Electrical work in 2016 (Permit No. B1600722)
- Encroachment Construction in 2017 (Permit No. E1700126)
- Mechanical/HVAC work in 2017 (Permit No. B1701017)
- Mechanical/HVAC work in 2018 (Permit No. B1800788)
- Electrical work in 2018 (Permit No. B1800705)
- Plumbing work in 2019 (Permit No. B1901688)

Updated Primary Record Information Continued:

View of south elevation. (Fire Station_2)

View of south elevation. (Fire Station_1)

Updated Primary Record Information Continued:

View of south elevation. (Fire Station_3)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the subject property with a status code 5S1: Individual property that is listed or designated locally. The correct status code that should have been assigned in 2002 is 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The prior survey indicated that the property was historically significant as the oldest civic building in its original condition in Rancho Mirage. The subject property was constructed in 1975. It was designed by architect Robert H. Ricciardi, and built by contractor W.E. Colglazier. The fire station was designed in a Brutalist architecture style. The current survey finds the property is associated with the theme of Cityhood (1973-Present). It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community. As the oldest, unaltered civic building in Rancho Mirage, dating to two years after incorporation, the building represents that historic period within the City. The current survey found that the dwelling retains a sufficient level of integrity for individual eligibility at the national, state, and local level. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

The property has not been found individually eligible under NRHP/CRHR Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4/D, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state, or national history. The property is not considered eligible under Local Criterion 2, 4, 5, 6, 8

The building is eligible under NRHP/CRHR Criterion A/1 and Local Criterion 3. The fire station dates to the early years of cityhood within the City of Rancho Mirage. The building is the oldest unaltered civic building within the city, and represents this era in the City's development. As such the building is eligible for association with the growth of the city.

The building is considered eligible under NRHP/CRHR Criterion C/3 as the property individually embodies the distinctive characteristics of a civic building designed in the Brutalist style. The building exhibits several of the character defining features of the style including: a blockish form, monumental massing, textured concrete as the building finish, exposed structural system by way of the massive wood beams, and a lack of traditional ornamentation. The property is also eligible under Local Register Criteria 1 and 7 as it is representative of a Brutalist style building that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

Architect Robert Ricciardi designed Fire Station Number One for the City of Rancho Mirage in 1975. The one- and one-half-story, northeast-facing building is capped with a flat roof with exposed beams beneath deep overhangs. Overall, the building contains 7,594 square feet. A series of terraced walls and projecting vertical surfaces constructed of ribbed, textured concrete block defines the mostly rectangular building. Several secondary walls are finished in rough stucco. Windows are fixed with black anodized aluminum mullions and smoked glass. Three large bays accommodate fire trucks on the southeast elevation, while two bays open on the northwest side. A projecting flat porch roof shelters the glass doors of the main entrance. Landscaping consists of lawns, shade trees, and shrubs. The building appears original and in excellent condition.

Fire Station Number One is historically significant as the oldest civic building in its original condition in Rancho Mirage. It was built in 1975, one of the earliest community improvement projects of the young city which had incorporated in August 1973. Constructed on land once owned by the Thunderbird Country Club, Fire Station Number One is an excellent, and well-designed, example of civic architecture. Designer Robert Ricciardi was a Coachella Valley architect who did work throughout the desert, most notably the Gas Company building in Palm Springs on Sunrise Way. The terraced walls and projecting vertical surfaces of ribbed, textured concrete block combined with a flat roof and exposed wood beams creates a harmonious yet dynamic composition, rather unexpected for what is often a bland, utilitarian building. The property appears eligible for designation under an existing or proposed local ordinance, but does not appear eligible for listing in the National Register of Historic Places (a "5S1" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City, Rancho Mirage Date: 2021 Map Scale: 1;24000
Address: 40-281 Sand Dune Road City: Rancho Mirage Zip: 92270
UTM Zone: 11S 553976.77 m E 3735238.75 m N
APN: 684020037

Date Constructed: 1963
Ownership and Address: Damaschke/Mcilwee Trust, John Mcilwee, William J Damaschke; 9255 Sunset Blvd, Suite 805, West Hollywood, CA 90069

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 40-281 Sand Dune Road property was constructed in 1963. The residence is located in the Thunderbird Country Club. In 2002, Leslie Heumann and Associates described the residence as a one-story, flat-roofed home clad with slumpstone and reverse board-and-batten siding. The home has a rectangular form with the primary elevation oriented toward the swimming pool and the Thunderbird Country Club golf course. During the 2024 survey the residence was under construction. Much of the residence was not visible due to construction fencing, however, it appears that there have been significant alterations to the front and rear exterior walls and windows as well alterations to the roof.

Permits provided by the City include:
- Plumbing work in 2007 (Permit No. B0700173)
- Addition/Remodel in 2010 (Permit No. B1000283)
- Mechanical/HVAC work in 2011 (Permit No. B1100634)
- Addition/Remodel in 2022 (Permit No. B2201821)
- Pool work in 2023 (Permit No. B2302148)
- Roof mounted solar in 2024 (Permit No. B2400532)

See Continuation Sheet for Additional Information.

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the subject property with a status code 5S1: individual property that is listed or designated locally. The correct status code that should have been assigned in 2002 is 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The prior survey indicated that the property was significant as an intact example of a Desert Modern style home. The residence was constructed in 1963 and exhibited character defining features of a Desert Modernist home, including a flat roof, board and batten siding, slumpstone siding, clerestory windows, and deep overhangs. The current survey found the residence is associated with the theme of the Country Club Era (1951-1973), however, the residence does not possess individual documented significance in relation to this theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community. Since the prior 2002 survey, the residence has undergone significant alterations to both the front and rear elevations. Street view images from 2023 and survey photographs from 2024, show that a majority of the exterior walls at the front and rear of the building have been removed and the windows have been replaced.

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the home is not significantly associated with the lives of persons significant in our past. The property is eligible under NRHP/CRHR Criterion C/3 as a representative example of a Desert Modernist style residence constructed in Rancho Mirage during the 1960s. Current remodeling work appears to be replacing many of the original design elements and materials. The extensive changes may alter existing character-defining features of the property. As such, it is unclear if the Johnson Residence still individually embodies the distinctive characteristics of a mid-century Desert Modernist style home constructed in Rancho Mirage. However, there do not appear to be any significant exterior additions as part of the current work, which suggests that the historic look and feel of the exterior will be restored. If the current remodeling campaign replaces exterior design elements with in-kind or with materials that match the original design, color, and texture, then the property will retain adequate historic integrity to convey its significance under this criterion. Therefore, at the time of this survey, the home still retains integrity of design, materials, or feeling. It is not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-8. At the time of this survey, the Johnson Residence appears to still be considered eligible under Local Register Criterion 1 as the residence is representative of a mid-20th century Desert Modernist style home in Rancho Mirage. Once the current renovation efforts are finished, it should still be eligible under this criterion, if it can be determined that the property has restored its exterior design and material integrity. As of this survey, the dwelling maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation. If the results of current remodeling campaign are not restorative and not faithful to the original designs, by adding extensive additions and inappropriate replacement materials, the property may be reevaluated and assigned a different status code.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Constructed in 1963, this one-story, flat-roofed residence is 2,552 square feet in size and contains two bedrooms and 1.75 bathrooms. Located on .29 acres, the primary, rear, west-facing elevation is oriented toward the swimming pool and the Thunderbird Country Club golf course. Slumpstone and reverse board-and-batten sheath the rectangular house. Clerestory windows are visible from the street beneath deep eaves north of the center entrance. Here, a battered slumpstone wall supports projecting roof beam-ends. Another battered slumpstone wall supports the flat roof of the attached double carport that is perpendicular to the house. Non-original metal security doors front the double entrance doors. Formal landscaping of lawns, shaped olive trees, bushes, and shrubs borders the broad, diagonal driveway. Three-tiered topiary flank the entrance. The house appears original and in excellent condition.

This house is architecturally significant as a representative and intact example of Desert Modern design. Marsh and Dorothy Johnson were the owners of the residence, which was constructed in 1963, according to the 1965 Palm Springs Directory. Although not verified as a William Cody design, the house exhibits many qualities associated with Cody's Modern work from the early 1960s: flat roof, board and batten sheathing, slumpstone, street-facing clerestories, and deep overhangs. The house appears original and in excellent condition and is characteristic of the style and type of Modern residence constructed along the Thunderbird Country Club in that period. It is also one of a dwindling number of such houses that has not been demolished or altered beyond significance in the area. The property appears eligible for designation under an existing or proposed local ordinance, but does not appear eligible for listing in the National Register of Historic Places (a "5S1" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City, Rancho Mirage Date: 2021 Map Scale: 1;24000
Address: 71-490 Highway 111 City: Rancho Mirage Zip: 92270
UTM Zone: 11S 554088.31 m E 3734083.67 m N
APN: 684181011

Date Constructed: 1960
Ownership and Address: Richard Fromme, Eldon H Anderson; 2223 Madrona Way, Coupeville, WA 98239

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 71-490 Highway 111 property, also known as the Rancho Super Car Wash, was constructed circa 1960. In 2002, Leslie Heumann and Associates described the building as a one-story, flat-roofed car wash with three shed pavilions, including an enclosed center office building. The shed pavilions are used in the car washing operations; they are supported by steel posts and are open at all sides with flat steel roofs. The central building features fixed aluminum windows and aluminum glass doors. There is a small patio waiting area at the west elevation of the central building. There is a large, double sided neon sign at the southern corner of the property. The sign features a pink elephant with the business name. The sign was locally designated in 2023. There does not appear to have been any significant alterations to the building other than exterior paint.

Permits provided by the City include:
- Sewer work in 2003 (Permit No. B0300944)
- Encroachment Construction in 2016 (Permit No. E1600177)
- Encroachment Construction in 2016 (Permit No. E1600099)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the subject property as a status code 5S3: Appears to be individually eligible for local listing or designation through survey evaluation. The prior survey found the Rancho Super Car Wash is architecturally noteworthy as an example of Modern design applied to a prosaic building type. The building was identified as a well-designed example of an early 1960s car wash, which was designed with an open plan - differing from modern car washes. The property also features a large, double-sided neon sign. The sign, constructed in 1966, was formally designated by the City of Rancho Mirage in 2023. The current survey finds the building associated with the theme of Commercial Development (1934-Present). The building is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and but is not considered a significant representative example of a known architectural style in the community. The 2024 evaluation found that the building should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

The building has not been found individually eligible under under NRHP/CRHR Criterion B/2, as it has not been identified as having an association with an important person; not eligible under NRHP/CRHR Criterion C/3, as it has does not embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; and not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state or national history. The residence is not considered eligible under 1, 2, 4-8.

The building is located on Highway 111 in Rancho Mirage, a major thoroughfare in Rancho Mirage in through the Coachella Valley. The building represents the commercial development in the area as the region grew and expanded in the post-war 1960s. The car wash represents the city's economic growth, and as such is considered eligible under NRHP/CRHR A/1 as it is associated with significant events or patterns of events in local, regional, state, or national history, and under Local Criterion 3 for representative the evolution and economic growth of the city. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

Located slightly above grade on the north side of Highway 111, this one-story, flat-roofed carwash was built circa 1960. The property consists of three shed pavilions including an enclosed center office building. Materials used are steel, slumpstone, and concrete block. Fixed windows and glass doors are aluminum-framed. Steel I-beam posts and beams support the flat steel roofs of the carwash structures, which are open on all sides. Of particular note, a large double-sided neon sign is positioned atop two round steel posts on the south corner of the property along the highway (surveyed separately as an historic object). The property is paved with asphalt and concrete. The buildings appear mostly original and in good condition.

The Rancho Super Car Wash is architecturally noteworthy as an example of Modern design applied to a prosaic building type. Although car washes are common in the Coachella Valley, and certainly not unique to Rancho Mirage, the Rancho Super Car Wash is a particularly well-designed and original example from the early 1960s. While the architect is unknown, the steel posts, beams and flat steel roof are indicative of William Cody's designs in the desert. Cody's building list shows that he designed the Desert Car Wash whose location is unknown. The Rancho Super Car Wash is one of the last early 1960s buildings of its type to be still extant along Highway 111 in mostly original condition. Unlike contemporary car washes which are typically closed structures with little style, Rancho Super Car Wash is light, open, and consistent with the Desert Modern designs of local mid-century architects. It differs considerably from the enclosed buildings utilized at Elephant Car Washes elsewhere in the country. The property does not appear eligible for listing in the National Register of Historic Places or for designation under an existing or proposed local ordinance, but is of local interest (a "5S3" National Register Status Code).

Historic roadside signs have become increasingly rare in many cities due to changing property uses and ownership, new sign ordinances, cost of maintenance, and neglect. In recent years an appreciation for the mid-century neon road sign has emerged amongst historians and commercial archaeologists. Neon road signs such as Rancho Super Car Wash are evocative of an era of the individual, "mom and pop," commercial buildings that were common along America's highways, including Highway 111, from the 1940s through the 1970s. Designed by skilled craftsman and typically custom-made for each location, the monumental roadside neon signs of the mid-century were a site-specific art form virtually lost to the twenty-first century. The Elephant Car Wash sign appears to have been an icon modified for various locations; two have been immortalized in the Seattle area, where several dating back to the mid 1950s still exist, in a painting by local artist Sally Banfill (www.banfill.com/Roadside.htm).

***Date of Evaluation:** *September 23, 2002*

***B10. Significance (continued):**

In the City of Rancho Mirage there are no other original roadside neon signs of the mid-century still extant. The Rancho Super Car Wash sign is a particularly compelling specimen for its size, whimsy, use of color, neon animation (water spray), condition, and prominent location.

The property appears eligible for listing under an existing or proposed local ordinance, but does not appear eligible for listing in the National Register of Historic Places (a "5S1" National Register Status Code).

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 39-000 Bob Hope Drive property, also known as the Eisenhower Medical Center Original Building, was constructed in 1971. In 2002, Leslie Heumann and Associates described the building as a rectangular, symmetrical, three-story, flat-roofed building with a broad cornice and parapet decorated with an incised stylized fountain motif. The exterior is clad in smooth stucco. The building is constructed in the New Formalism style with a large vertical panels at the second and third stories, intersected with narrow fixed windows. In 2008, the Annenberg Pavilion building to the north was completed, which was connected to the original building.

Relevant permits provided by the City include:
- Mechanical/HVAC work in 2011 (Permit No. B1100545)
- Patio construction in 2011 (Permit No. B1100644)
- Patio construction in 2012 (Permit No. B1200630)
- Roof replacement in 2013 (Permit No. B1300605)
- Encroachment construction in 2014 (Permit No. E1400090)
- Electrical work in 2015 (Permit No. B1500143)
- Encroachment construction in 2017 (Permit No. E1700279)
- Encroachment construction in 2017 (Permit No. E1700278)
- block wall construction in 2019 (Permit No. B1801720)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the subject property with a status code 4S1: may become eligible for NR as separate when it becomes old enough (this status code no longer exists and is the equivalent of 7N1: Needs to be reevaluated – may become eligible for NR w/restoration or when meets other specific conditions). The prior survey found the building eligible as historically significant for its role in the development of Rancho Mirage and architecturally significant for its association with master architect Edward Durell Stone. The current survey finds the property is associated with the theme of Commercial Development (1934-1973). It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

Updated Building, Structure, Object Information Continued:

In 1966, entertainer Bob Hope donated 80 acres of land for the development of a medical center. Construction began in 1969, and the proposed medical center was named after former President Dwight D. Eisenhower. The center opened in 1971, with President Richard Nixon, Vice President Spiro Agnew, Mamie Eisenhower, and California Governor Ronald Reagan officiating. The medical center was opened two years prior to the City of Rancho Mirage's incorporation. The medical center has expanded several times over the years. It is considered the premier medical institution in the Coachella Valley. It remains an important element of Rancho Mirage and its history. The property is considered eligible under NRHP/CRHR A/1 and Local Criteria 3, as it is associated with significant patterns of events in local and regional history.

The medical center was designed by master architect Edward Durell Stone and built by construction company Forsberg and Gregory. The building is an example of the New Formalism style. Stone was born in 1902 in Fayetteville, Arkansas. He attended the University of Arkansas before moving to Boston in 1922. Though he did not earn a degree, Stone attended courses at the Boston Architectural Club (now Boston Architectural College), Harvard University's School of Architecture, and MIT. He moved to New York in 1929 and joined the firm of Schultze & Weaver. While there, he designed the main lobby, grand ballroom, and private dining rooms of the Waldorf-Astoria.

Stone became an early adopter of the New Formalist style, drawing inspiration from his visits to Europe. Stone achieved success nationally and internationally. He lived in New York for the rest of his life, but designed many important buildings throughout the country. Notable works by Stone include the Radio City Music Hall, the US Pavilion at the Brussels World's Fair, the Kennedy Center in DC, the Mandel House in Bedford Hills, NY, Stone retired in 1974 and passed away in 1978. (Edward Durell Stone, Los Angeles Conservancy).

The subject property is an example of the New Formalism style. New Formalism emerged in the United States during the mid-1950s and flowered in the 1960s. The style was a response to the more rigid International style. New Formalism blended elements and design concepts of classicism with the new materials and technologies being used in the International style. Buildings designed in the style exhibited many Classical elements including strict symmetrical elevations, building proportion and scale, Classical columns, highly stylized entablatures and colonnades. Architects Edward Durell Stone, Philip Johnson, and Minoru Yamasaki are considered the foremost architects of the style; they had gained recognition for their work within the International style but were interested in the use of new styles and materials. Stone's New Delhi American Embassy (1954), which blended the architecture of the east with modern western concepts, is regarded as the symbolic start of New Formalism architecture.

The style was used primarily for high-profile cultural, institutional and civic buildings. Within Southern California, the style was primarily used for museums, auditoriums, and college campuses. Examples of the style include the Los Angeles Music Center, the Century Plaza Hotel in Los Angeles, the Ambassador Auditorium in Pasadena, the Ahmanson Center in Los Angeles, and buildings at the University of Southern California, the California Institute of Technology, and Harvey Mudd College in Claremont. While other Modern styles were built to be integrated with nature, New Formalism creates a separation from nature. Properties in this style are typically set on a podium or base, or in a cohesive grouping surrounded by formal landscaped and hardscaped features, drawing a clear distinction between the architecture and the surrounding.

The subject property includes character defining features of the New Formalism style including: a light color with dark accents as seen in the dark tinted windows and signage, the embrace of classical elements as seen in the windows that mimic columns and classical designs at the roofline, and a formal fountain at the front elevation. The building is eligible under NRHP/CRHP Criterion 3/C, and Local Criterion 1 and 7, as it is representative of a New Formalist style building that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials. While additions have been added to the parts of the northern, eastern, and southern elevations, the essential form of the original building remains discernible. The important distinctive design elements remain in-place and as a whole, the building maintains adequate integrity from the historic period to convey its significance.

The first phase of the Eisenhower Medical Center was completed in 1971 on 80 acres of previously undeveloped desert land in the northeast corner of Rancho Mirage. Designed by architect Edward Durrell Stone, the original building faces west and is rectangular, symmetrical, three-stories, and flat-roofed. A broad cornice and parapet decorated with an incised stylized fountain motif distinguishes the roofline. Exteriors are sheathed in smooth stucco. In keeping with the "New Formalism" style of architecture, the building has a temple-like appearance with a series of equally spaced two-story vertical panels suggesting classical columns on second and third floor elevations. Narrow fixed windows of black anodized aluminum are recessed between the panels. A second floor balcony with closed railing mirrors the cornice/parapet in design and decoration. The first floor façade features a more compact series of vertical panels and narrow fixed windows on either side of the center entrance. On axis with the entry, a circular concrete fountain forms the centerpiece of the entrance courtyard, and is flanked

The Eisenhower Medical Center is historically significant for the role it has played in the development of Rancho Mirage and architecturally significant for its association with renowned American architect Edward Durrell Stone. In 1966, entertainer Bob Hope donated 80 acres of his land on Rio Del Sol (now Bob Hope Drive) for a proposed five million dollar medical center, beginning an association with the Hope family that has continued through the present day with Dolores Hope's service on the Board of Directors. Former President Dwight D. Eisenhower agreed to have the new facility named after him. Groundbreaking occurred in 1969, with Bob Hope as Master of Ceremonies. In 1971, the 138-bed Eisenhower Medical Center opened with President Richard Nixon, Vice President Spiro Agnew, Mamie Eisenhower, and California Governor Ronald Reagan officiating. Two years later, the City of Rancho Mirage incorporated, partially in response to local wishes to keep the facility within its borders. The Medical Center is now recognized as the premier medical institution in the Coachella Valley. It

***P3a. Description (continued):**

by classically formal landscaping of clipped hedges, trees, and lawns. Originally, four small ponds were positioned around the secondary elevations. Today, only two unequally sized ponds exist due to facility expansion. A vast asphalt parking lot fronts the property on the west side. Complementing, the formality and classicism of the exterior in its design, the interior lobby opens to a three-story atrium with a flat honeycomb ceiling surrounded by small square clerestory windows. The closed railings of the second and third story balconies are scored and perforated to match the honeycomb and clerestory designs. A pair of enormous starburst chandeliers is suspended from the ceiling. The exterior and specified lobby elements appear original and in excellent condition. Newer wings and separate buildings have been constructed to the rear and south of the original hospital building.

***B10. Significance (continued):**

has expanded several times over the last quarter century, with many of its specialty facilities endowed and supported by Rancho Mirage country clubs and residents, including the Betty Ford Center for Chemical Abuse (groundbreaking in 1981), the Barbara Sinatra Center for Abused Children (1986), the Dolores Hope Outpatient Care Center (1986), and the Annenberg Center for Health Sciences (1980).

Edward Durrell Stone was born in Fayetteville, Arkansas in 1902. Stone became primarily associated with an architectural style known as New Formalism, which evolved from the International Style of Modern architecture to incorporate sumptuous materials and decorative details. New Formalism had its roots in classicism where monumental buildings in isolation were highly admired. Stone's formalism developed during his Beaux-Arts education at the Massachusetts Institute of Technology and his apprenticeship in the New York office of Schultze and Weaver. Stone arranged his buildings as large multi-functional central spaces ringed by smaller enclosed rooms of more specific purpose. The Eisenhower Medical Center exemplifies this in the design of the central lobby, which is a large rectangular atrium space rising three stories to the flat clerestoried ceiling. Rooms and corridors radiate from the center space.

The original building of the Eisenhower Medical Center appears eligible for designation as a local landmark under an existing or proposed local ordinance. In addition, the resource may become eligible for separate listing in the National Register of Historic Places when the property becomes old enough to meet the Register's 50-year requirement (a "4S1" National Register Status Code). The Eisenhower Medical Center may become eligible for listing under National Register Criterion A, for significant contributions made to the broad patterns of Rancho Mirage's history, specifically, the property's role in the maturation of Rancho Mirage, and for the service it has performed for residents of the entire Coachella Valley since 1971. The resource may also be eligible for listing under Criterion C, because the original building represents the work of Edward Durrell Stone, a master architect, and is highly representative of his New Formalist design philosophy. It is also Stone's only known Coachella Valley commission and one of a handful of Stone's buildings in California.

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City, Rancho Mirage Date: 2021 Map Scale: 1;24000

UTM Zone: 11S 554840.92 m E 3734276.62 m N
APN: 682110009

Date Constructed: 1938
Ownership and Address: Paula Paulson Ebert; PO Box 798, Rancho Mirage, CA 92270

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 72-010 Clancy Lane property was constructed in 1938. In 2002, Leslie Heumann and Associates described the property as a one-story, rectangular, symmetrical residence with a vernacular appearance that illustrates the transition from ranch style to modern design. The residence has a medium-pitched, side-gabled roof with exposed rafters with eaves caps. The home is constructed of concrete blocks with extended wood lintels around the windows and doors. There is an interior chimney at the ridgeline. It appears that since the 2002 survey, the fixed and multi-pane casement steel windows were replaced with vinyl sliding windows, the non-original glazed door was replaced with a wooden front door, and the roofing material has been replaced. Other changes since 2002 include exterior paint to the chimney bricks and roofline, and the open eave ends have been covered with eave caps.In 2003, a permit was issued to construct a 40-foot length, six-foot high garden block wall (Permit No. B0302446). In 2004, a permit was issued to install a spa with waterfall, a BBQ, and a fire pit at the property (Permit No. B0400375). In 2005, a permit was issued to construct a 30-foot length garden wall (Permit No. B0500589). **See Continuation Sheet for Additional Information.**

View of south (front) elevation. (72-010 Clancy Lane_2)

Updated Primary Record Information Continued:

View of south (front) elevation. (72-010 Clancy Lane_1)

View of south (front) elevation. (72-010 Clancy Lane_3)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the residence as a status code 5S1: Individual property that is listed or designated locally. The correct status code that should have been assigned in 2002 is 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The prior survey evaluated the subject property as historically significant for its association with the Clancy family and architecturally significant for its representation of an early Desert Vernacular style building in Rancho Mirage. The current survey finds the subject property is associated with the theme of the Early Agricultural and Residential Period (1924-1951). It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and but it is not considered a significant representative example of a known architectural style in the community. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

The subject property was constructed in 1938. The earliest known owners were Frank B. and R.L. Clancy. Clancy Lane, the location of the subject property, is named after the Clancy family. Frank Clancy was the son of Merrill C. Clancy, well known real estate developer and builder (The Arizona Republic, Mar 30, 1949, Page 17). Clancy was born in Evanston, IL. Frank Clancy first came to Rancho Mirage in the 1930s, though the family's main residences were in Santa Monica, CA and Kalamazoo, MI. He passed away while living at the subject property in 1975. Clancy and his wife Helen had one son, Robert Clancy (The Desert Sun, March 06, 1975, Page 2; Deseret News, Apr 25, 1942 ·Page 22). The Clancy family was identified as living at the subject property in 1954. While Frank Clancy was identified as living in Rancho Mirage by 1942, there is no indication that they were the original owners of the property (Palm Springs Limelight-News, November 06, 1942, Page 15).

The subject property is a Desert Vernacular style home built in a simplistic design. The home is one of the earliest in Rancho Mirage, dating to prior to World War II. While Rancho Mirage had begun to develop residential neighborhoods in the 1930s, development stalled during the Great Depression and World War II. Much of the area's development occured after the war. As one of the few homes constructed in the pre-war era, the home is representative of Rancho Mirage's early development. As such, the property is eligible under NRHP/CRHP A/1 and Local Criterion 3 for being representative of the development of the city. The property is associated with the Clancy family who were early settlers in Rancho Mirage. While the Clancy family does not rise to the necessary level of state or national historical significance, they are considered locally significant and are eligible under Local Criterion 5. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Built in 1938, this is a one-story, rectangular, symmetrical residence whose vernacular appearance illustrates the transition from ranch style to modern design. A medium-pitched, side-gabled roof with exposed rafters beneath deep eaves caps the south-facing house. The 1,539 square foot, two bedroom, one bathroom residence is of concrete block construction. Windows are fixed and multi-pane steel casement with extended wood lintels. The front entrance is wood-framed with a non-original glazed door and, like the windows, is surmounted by an extended wood lintel. An interior chimney is centered along the ridgeline. The property, located on the busy corner of Bob Hope Drive and Clancy Line, is surrounded by a non-original concrete block wall, and contains a detached, single-car garage east of the house. A mature tree in the front yard partially shades the residence. According to building records, a portion of the house was demolished and reconstructed for the widening of Bob Hope Drive, although this may refer to the small structure on the northwest corner of the property. The house is in good condition.

The Clancy Residence is historically significant for its association with a pioneer Rancho Mirage family and architecturally notable for its representation of an early Rancho Mirage building type. According to city records, the house was constructed in 1938. The 1954 Palm Springs directory lists the owners as F. B. and R. L. Clancy (prior to 1954, there were no address listings for the Rancho Mirage area in the directories). F. B. Clancy was involved in real estate. Clancy Lane was named after the Clancy family, although it is not clear if this house was one of the early Clancy family properties or a later investment. The Clancy family constructed the first home in the "Rancho del Sol Estates" in 1932.

(This space reserved for official comments.)

Sketch Map

***Date of Evaluation:** *September 23, 2002*

***B10. Significance (continued):**

This is a good and intact example of typical 1930s and 1940s residential building type that appears in the early Rancho Mirage neighborhoods of Clancy Lane, Magnesia Falls, and San Jacinto Drive. Characteristic elements include concrete block construction, a low-pitched roof, and virtually no applied ornamentation. A distinguishing feature of the design is the use of extended wood lintels above the windows and the main entrance. While the thick concrete block walls, lintels, and exposed rafters suggest adobe influenced ranch style design, the steel casement windows and lack of decoration look forward to the Modern aesthetic.

The property appears eligible for listing under an existing or proposed local ordinance for its representation of the early years in the community of Rancho Mirage, but does not appear eligible for listing in the National Register of Historic Places (a "5S1" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City Date: 2021 Map Scale: 1;24000
Address: 36-468 Sandsu Circle City: Rancho Mirage Zip: 92270
UTM Zone: 11S 552680.53 m E 3738303.46 m N
APN: 674110010

Date Constructed: 1958
Ownership and Address: Dennis M Sullivan, Torrewanda M Sullivan; 20227 Princeton Ave, Riverside, CA 92507

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 36-468 Sandsu Circle property, designed by architects Daniel Palmer and William Krisel, was constructed in 1958. In 2002, Leslie Heumann and Associates described the residence as a Modern one-story home with a butterfly roof and eaves that fold over to become sunshades on the north and south elevations. The exterior is clad in medium-smooth stucco, vertical boards, and rock veneer. The residence features fixed, clerestory, and steel-fixed casement windows, and sliding glass doors that lead to the rear patio and swimming pool. There does not appear to have been any significant alterations to the residence since the 2002 survey.

In 2013, a permit was issued to replace the electrical service panel (Permit No. B1301256). In 2021, a permit was issued for a sewer hook up (Permit No. B2101685). **See Continuation Sheet for Additional Information.**

Updated Primary Record Information Continued:

View of west (front) elevation. (36-468 Sandsu Circle_2)

View of west (front) elevation. (36-468 Sandsu Circle_6)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the residence as status code 4S1: may become eligible for NR as separate when it becomes old enough (this status code no longer exists and is the equivalent of 7N1: Needs to be reevaluated – may become eligible for NR with restoration or when meets other specific conditions). The prior survey identified the residence as architecturally significant as an example of a Palmer and Krisel designed desert tract home. The home is more specifically identified as a Contemporary style tract home. The prior survey indicated that the home is historically significant under Criteria A as it represents a specific period of development in which moderately priced residential properties were first developed and sold in the area. The current survey finds the residence is associated with the theme of Residential Subdivisions and Cooperatives (1951-1973). It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and but it is not considered a significant representative example of a known architectural style in the community. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

The home was designed by the architecture firm Palmer and Krisel, and was part of a housing tract built by the Maus and Holstein developers. The homes in this tract were slightly enlarged versions of Palmer and Krisel designed homes, originally built in Palm Springs. The tract was part of the trend started in the late 1950s that introduced more mid-priced Modern tract homes to the Coachella Valley. The homes, which featured air conditioning and attractive modern designs, helped usher in an era of year round desert living. The home was previously identified as one of sixteen homes built in the tract, and as one of the only unaltered homes in the tract. As such the home is considered eligible under NRHP/CRHR Criteria A/1 and Local Criteria 3; the home represents the a particular era of development in Rancho Mirage, in which the city began to shift from a weekend retreat destination to a year round residential community. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

Designed in 1958 by architects Daniel Palmer and William Krisel, this Modern one-story residence is capped with a butterfly roof with eaves that fold over to become sunshades on north and south elevations. The west-facing residence is 1,748 square feet, with three bedrooms and 1.75 bathrooms set on .23 acres. Medium-smooth stucco, vertical boards, and rock veneer sheathe the exteriors. Windows are fixed, clerestory, and steel-framed casement. Sliding glass doors open onto the rear patio and swimming pool. A perpendicular rough-hewn rock wall extends past the roofline towards the street north of the entrance. A similar wall is located on the northwest corner parallel to the house. Deep eaves shade large expanses of west-facing glass. A square wood post supports the projecting beam at the center of the butterfly roof directly south of the recessed entrance porch. A narrow sidelight is north of the wood front door. An exterior square concrete block chimney is on the south elevation. The projecting double carport features a flat roof with wood post and beam supports and corrugated plywood panels. The rear elevation boasts extensive ceiling-to-floor glazing. The original plans included an interior garden atrium open to the sky. Desert landscaping of gravel, rocks, cacti, and drought resistant shrubs surround the house, which appears original and in excellent condition.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

This house is architecturally significant as an example of a Palmer and Krisel designed desert tract home. The twelve houses located on adjacent Sandsal and Sandsu Circles were based on the virtually identical designs and floor plans originally drawn by Palmer and Krisel for the Alexander Company's Palm Springs tract developments. In Rancho Mirage, the firm of Maus and Holstein were the developers of these residences. Constructed in 1958, this home was owned by Jim and Bobbylee Nestor.

In the late 1950s, Robert Alexander believed that there was an unmet demand for moderately priced second homes in the desert. He was convinced that well-designed Modern tract houses with amenities such as built in appliances, swimming pools, and landscaping would sell. In fact, the homes sold immediately and were a huge success. Palmer and Krisel went on to plan and design many tract developments built by the Alexander Company in the Coachella Valley, with an output totaling several thousand units.

***B10. Significance (continued):**

Partners Dan Palmer and William Krisel were graduates of the University of Southern California School of Architecture. Beginning in 1956, Palmer and Krisel were associated with developers George and Robert Alexander. Their first tract of 39 homes was built in the Twin Palms section of Palm Springs, south of Highway 111. Says author and critic Alan Hess, "Krisel used post-and-beam construction methods as he oversaw the Palm Springs projects. Butterfly roofs, natural stone walls, patterned concrete block, clerestory windows, carports – these designs showed that Modern could be a successful commodity in the housing market." Because of air-conditioning, a standard feature of each tract, "Alexander homes helped to usher in the era of year-round desert living," says Hess. Although the floor plans were essentially identical, the 1,600 square foot houses were available in a range of rooflines and facades, which gave each neighborhood a varied street appearance. Other desert projects included the residential subdivisions of Vista Las Palmas, Racquet Club Estates, Kings Point at Canyon Country Club, and Sandpiper in Palm Desert. In Rancho Mirage, for developers Maus and Holstein, Palmer and Krisel used their Twin Palms floor plan, slightly enlarged, and three roof configurations in the construction of sixteen houses on adjacent cul-de-sacs. Hess concludes, the Palmer and Krisel tracts "display the hopefulness and easy lifestyle of Modernism in the 1950s as it spread to a general audience." According to William Krisel, he and Palmer maintained ownership of the house plans and designs, which is why the Rancho Mirage tract of houses built by Maus and Holstein are so similar in form to the Alexander tract homes.

The property is an exceptionally fine and well-preserved example of Palmer and Krisel's work in Rancho Mirage. It is representative of a trend that was highly influential in the development of Rancho Mirage in the late 1950s and early 1960s as a viable community of second homes for middle-income buyers. This grouping of 16 tract houses was an excellent example of that trend, and this property is one of the few houses in the tract that has retained its original appearance. Additionally, the Palmer and Krisel designs are architecturally noteworthy for their clean lines, excellent floor plans, indoor/outdoor orientation, and attention to detail. As the best remaining example of the houses in the tract, the Nestor Residence may qualify for separate listing in the National Register of Historic Places. Additionally, the property would qualify for designation under an existing or proposed local ordinance (a "4S1" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City Date: 2021 Map Scale: 1;24000
Address: 37-174 Palm View Road City: Rancho Mirage Zip: 92270
UTM Zone: 11S 552608.35 m E 3737737.51 m N
APN: 674260013

Date Constructed: 1962
Ownership and Address: Thomas C Lupacchini, Dorothy N Lupacchini; 10660 Senda Acurio, San Diego, CA 92130

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 37-174 Palm View Road property was constructed in 1961. The residence is located within the Tamarisk Country Club. In 2002, Leslie Heumann and Associates described the residence as a one-story, flat-roofed Modern style home. The home more specifically resembles a Desert Modernist style residence. The exterior of the residence is clad in medium-smooth stucco and white wash brick, with an interior chimney that intersects the flat roof. At the front elevation there are large metallic, double doors at the entrance. A high privacy fence connects to the residence. The sunshades that were seen at the rear elevation during the 2002 survey have since been removed. The colorful sculpture mentioned in the 2002 survey documentation appears to have since been removed. A different sculpture has been installed alongside the pool. There does not appear to have been any significant alterations to the residence since the 2002 survey.

Permits provided by the City include:
- Electrical work in 2004 (Permit No. B0402512)
- Reroof of dwelling in 2005 (Permit No. B05000600)
- Addition/Remodel in 2006 (Permit No. B0600246)
- Electrical work in 2006 (Permit No. B0600575)

View of east (rear) elevation. (37-174 Palm View Road_8)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the subject property as status code 5S3: Appears to be individually eligible for local listing or designation through survey evaluation. The current survey found the dwelling is associated with the theme of the Country Club Era (1951-1973). It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community. The 2024 evaluation found that the property should be assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

The home has undergone several alterations as indicated in the prior survey, however, it maintains association with the theme of Country Club development in Rancho Mirage. The home was constructed in the Tamarisk Country Club and maintains several original features of a Desert Modernist style home constructed in this era. The home exhibits character defining features of the home including an asymmetrical plan, central entryway with no porch, high privacy walls surrounding the home, a flat roof, broad expanses of uninterrupted wall surfaces, and an attached garage under main roof.

The single-family residence is considered eligible under NRHP/CRHR Criterion C/3 as the property individually embodies the distinctive characteristics of a Desert Modernist style home constructed within Rancho Mirage in the 1960s. The property is also eligible under Local Register Criteria 1 and 7 as it is representative of a Contemporary style home that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials. The dwelling has been altered, but maintains adequate integrity from the historic period to convey its significance.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Constructed in 1961, this one-story, flat-roofed rectangular house faces west. The residence is 4,711 square feet, with three bedrooms and 3.75 bathrooms on .44 acres. The primary (rear) elevation opens onto the 3rd fairway of the Tamarisk Country Club golf course. Medium-smooth stucco sheathes the exteriors. White reflective window shades obscure the rear windows and doors opening to the concrete patio and rectangular swimming pool. An interior chimney appears towards the middle of the flat roof. A colorful metal sculpture is located on the lawn south of the swimming pool near the property line. Landscaping consists of lawns, bushes, cacti, and mature trees. Building permits indicate that the house has experienced a number of alterations and additions, yet the house still appears to retain its original Modern design. It is in good condition.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

This property is architecturally noteworthy as a representative example of a flat-roofed Modern residence built with its primary orientation towards rear golf course views. Despite alterations, the house continues to retain its integrity of exhibiting the clean lines and flat roof characteristic of the Modern style. It was constructed in 1961 by an unknown architect and/or contractor; the owner in 1965, according the Palm Springs Directory, was John S. McMillan. Although the resource does not appear eligible for listing in the National Register of Historic Places or for designation under an existing or proposed local ordinance, it is of local interest (a "5S3" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City Date: 2021 Map Scale: 1;24000
Address: 37-500 Palm View Road City: Rancho Mirage Zip: 92270
UTM Zone: 11S 552614.29 m E 3737426.51 m N
APN: 674291006

Date Constructed: 1977
Ownership and Address: Joseph R Mantello; 200 Park Avenue S, FL 8, New York, NY 10003

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 37-500 Palm View Road property, designed by architect William Cody, was constructed in 1977. The residence is located within the Tamarisk Country Club. In 2002, Leslie Heumann and Associates described the residence as a one-story, flat-roofed home with an "L"-shaped form, sheathed in slumpstone and medium-smooth stucco. A high privacy wall and planter surrounds the front elevation. There is a large entrance gate consisting of double doors and sidelights of opaque glass. Since the 2002 survey, it appears there have been alterations to the privacy wall adjacent to the front entryway. The slumpstone wall has been built up adjacent to the entry door and extending over the entry. It is difficult to determine alterations to the front elevation due to the high privacy walls, however, it does not appear that there have been other alterations to the front elevation except the wall adjacent to the entry and exterior paint.

Permits provided by the City include:
- Addition/Remodel in 2003 (Permit No. B0300296)
- Addition/Remodel in 2008 (Permit No. B0800240)
- Reroof dwelling in 2010 (Permit No. B1000886)
- Encroachment construction in 2011 (Permit No. E1100214)
- Solar installation in 2015 (Permit No. B1500207)
- Solar installation in 2021 (Permit No. B2101748)
- Addition/Remodel in 2021 (Permit No. B2100650)
- Pool & spa work in 2022 (Permit No. B2202218)
- block wall construction in 2022 (Permit No. B2202520)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the property as status code 5S1: Individual property that is listed or designated locally. The correct status code that should have been assigned in 2002 is 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The prior survey identified the residence as an example of the mature style of architect WIlliam Cody. The residence was constructed in 1973, at the later end of Cody's career. The home is identified as an example of Cody's Desert Modernism style. The current survey associates the residence with the theme of the Country Club Era (1951-1973). It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

William Francis Cody (1916-1978) is designed the subject property in 1977. Born in Dayton, Ohio, in 1916, Cody's family relocated to California in 1930. While attending Beverly Hills High School, Cody designed and built stages for school plays prior to his graduation in 1932. Following high school, he graduated from Santa Monica Junior College in 1939 and enrolled in the College of Architecture and Fine Arts at the University of Southern California. He graduated from USC in 1942. During his time at Santa Monica Junior College and USC, Cody worked for architects, Heath Wharton and Asa Hudson. Following his graduation, Cody worked for several engineering and architecture firms in California, including Cliff May whom he worked for in 1944. In 1945, Cody's firm was hired to alter the Desert Inn in Palm Springs. Following the Desert Inn project, Cody began working independently in California and Arizona by 1946.

In 1946, William F. Cody moved to Palm Springs permanently and received his first independent commission to design the Del Marcos Hotel, which earned him an award in 1949 from the California chapter of the American Institute of Architects. In 1947, he was hired to convert the Thunderbird Dude Ranch, originally constructed in 1936, to the Thunderbird Country Club. His work at Thunderbird led to future commissions at other clubhouses, recreational facilities, and residential developments, at locations throughout Palm Desert, such as the Eldorado Country Club, Tamarisk Country Club, the Racquet Club, the Tennis Club, and the Seven Lakes Clubhouse. In Palm Springs, Cody was one of the architects, with Wexler & Harrison and Philip Koenig, to design the Spa Bathhouse and Spa Hotel. In 1952, Cody designed the Horizon Hotel.

In the Coachella Valley, he was responsible for several notable Modernist style residential designs including the Perlberg, Shamel, and Abernathy residences in Palm Springs. Throughout his career, he designed commercial and residential properties throughout California, Arizona, Texas, Cub, and Mexico. He was inducted into the College of Fellows of the AIA in 1965. Some of his final projects included St. Theresa's Catholic Church in 1968 and the Palm Springs Library Center in 1972. In 1973, he suffered a severe stroke which caused him to end his architectural career. He died in 1978 and today is considered one of the most important architects in the Desert Modernism movement.

The development of country clubs coincided with the construction of custom residential and commercial properties within their boundaries. Booming post-war development within these country clubs helped shape what is now commonly referred to as 'Desert Modernism', a distinct subtype of the International style of architecture that incorporated modern materials, techniques, and floor plans with the unique requirements of building within a desert environment. The typical characteristics of Desert Modernism included large expanses of floor-to-ceiling glass walls sheltered by deep overhangs extending from flat roofs and flowing interior floor plans that merged gracefully with the outdoors. Often oriented to the rear, where most decorative flourishes could be visible from the fairways of the country clubs, Desert Modernist houses in Rancho Mirage often had a rear swimming pool and expansive golf course views and multiple points of outdoor access while front elevations were often constructed to be unassuming and often shielded for privacy, with only clerestories and obscured glass panels adjacent to the entries providing light. These houses were often light, with roofs floating above glass walls and clerestories, and ceilings supported by thin steel or wood posts. In addition to glass, exterior materials included stucco, wood, slumpstone, and natural rock that often mirrored the desert environment. The subject property features character defining features of the Desert Modern style, including a flat roof, interaction with the outdoor space, and the use of glass, stucco, and slumpstone.

Updated Building, Structure, Object Information Continued:

The dwelling has not been found individually eligible under NRHP/CRHR Criterion A/1, as it has not been associated with significant events or patterns of events in local, regional, state, or national history; not individually eligible under NRHP/CRHR Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state or national history. The residence is not considered eligible under Local Criteria 2, 5, 6 and 8.

The single-family residence is considered eligible under NRHP/CRHR Criterion C/3 as the property individually embodies the distinctive characteristics of a Desert Modernist style home constructed by William Cody within Rancho Mirage in the 1970s. The property is also eligible under Local Register Criteria 1 and 7 as it is representative of a Desert Modernist style home that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials. Further, the home is eligible under Local Criterion 4 as an example of the work of Cody. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Built circa 1973, this one-story, flat-roofed residence was one of the last residences designed by architect William Cody. The "L"-shaped house is sheathed in slumpstone and medium-smooth stucco. Set on .57 acres, the house is oriented with the primary (rear) elevation facing east to the third tee of the Tamarisk Country Club golf course. The 7,000 square foot house is fronted on the street side by a slumpstone wall and low slumpstone planter behind which the swimming pool is located. The entrance gate consists of double doors and sidelights of opaque glass; behind it, a post and beam entrance walkway roof is visible. Deep overhangs provide shade on west and east elevations. No windows can be seen from the street. Round sculpted hedges, a lawn, and palm trees of various sizes border a concrete circular driveway. The property appears to be in excellent condition.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

This property is architecturally significant as an example of the mature style of architect William Cody. Cody suffered a stroke in the early 1970s, yet was able to design this Desert Modern residence while confined to a wheelchair. The plan is similar to the Dr. Jaffe house of 1963 (37-200 Palm View Dr.) on the same street, which also has a rear elevation facing the Tamarisk Country Club golf course. Like the Jaffe residence, this house is "L"-shaped with the pool located within the "L" for privacy and is protected from the street by a slumpstone wall.

William Cody and fellow architect E. Stewart Williams became closely associated with Desert Modernism, an architectural style incorporating large expanses of floor to ceiling glass sheltered by deep overhangs extending from flat roofs in creating a powerful interaction between the indoors and outdoors. Desert Modern buildings appear light, often supported by thin steel

(See Continuation Sheet 3 of 3.)

or wood posts, with open interiors flowing from room to room. In addition to glass, exterior materials include stucco, wood, slumpstone, and natural rock. Street elevations are often shielded for privacy with only clerestories providing light. Rear elevations embrace desert views and outdoor access. The Desert Modern style grew out of local architects' desire to adapt Modern materials, techniques, and floor plans to the unique requirements of desert living. The house is a good, well-preserved example of Cody's Desert Modernism with its flat roof, floor to ceiling glass walls, deep overhangs and covered walkway supported by thin posts.

William F. Cody FAIA (1916-1978) was born in Dayton, Ohio and raised in Los Angeles. While attending architecture school at the University of Southern California in the late 1930s and early 1940s, Cody was also working for architect Cliff May, gaining experience in the adaptation of ranch and hacienda style houses to modern floor plans and construction techniques. Suffering from asthma, and believing that the Palm Springs area offered opportunity and prominent clients, Cody moved to Palm Springs in 1944-45 and set up practice. One of his first projects, the Del Marcos Hotel of 1946, won an AIA "creditable mention" award as an example of new resort hotel architecture for its "ingenious plan, which appears complicated but is actually orderly and thoughtful." Author and critic Alan Hess writes, "Greater thinness and more striking elegance became the single-minded focus of his ongoing design." Despite a reputation for carousing, Cody was exceptionally focused on the details of his designs and pushing the boundaries of his materials. His well-known and innovative early buildings, along with friendships with influential members of the Thunderbird, Tamarisk, and Eldorado Country Clubs, resulted in commissions to design (or in the case of Thunderbird, remodel) the clubhouses of all three locations. In addition, Cody designed a large number of residences in the country club areas, many along the fairways of the new resort concept of golf course living, a concept that Cody himself helped devise.

Author Adele Cygelman writes, "Joints and door frames seemingly disappeared into walls. He merged living rooms into terraces and gardens. Roofs jutted out twelve feet to shield the walls of glass. Pattern and texture came from tile floors, carved wood panels, and concrete-block screens with geometric motifs, all of which were meticulously designed by Cody to match each other precisely at the seams and angles where the planes met." Like other Coachella Valley architects, Cody designed churches, gas stations, motels, restaurants, offices, a mobile home park, shopping centers, even a carwash. "Yet a distinct character can be seen in all of them," says Hess. "It is a restless energy that brings a liveliness to his plans, elevations and details. The radical thinness of Cody roofs or the daring reach of a cantilever are clearly the result of a wrestling match between the architect and the materials and the laws of physics; that energy and striving remains in the building." Hess concludes, "The fact that Cody could take an established vocabulary and style and reinterpret it so vividly ranks him among the best of mid-century California designers."

This property appears eligible for designation under an existing or proposed local ordinance, but does not appear eligible for listing in the National Register of Historic Places (a "5S1" National Register Status Code).

Date Constructed: 1955
Ownership and Address: Ann Simmons Alspaugh Power of Appointment Trust, Paula A Cox; PO Box 18212, Oklahoma City, OK 73154

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 70-753 Fairway Drive property was constructed in 1955. The residence is located within the Thunderbird Country Club. In 2002, Leslie Heumann and Associates described the residence as a one-story, flat-roofed, mostly rectangular Modern house. The residence is clad in medium-rough stucco with brick supporting walls. A projecting porte cochere extends over the front entrance and curved driveway. The brick support wall includes decorative breeze blocks at the center. The front elevation has a recessed front porch with double entrance doors flanked with sidelights. The residence features aluminum-framed, ceiling-to-floor glass windows. There does not appear to have been any significant alterations to the residence since the 2002 survey.

Permits provided by the City include:
- Reroof of dwelling in 2001 (Permit No. B0101705)
- Electrical work in 2008 (Permit No. B0800401)
- Reroof of dwelling in 2018 (Permit No. B1800228)
- Solar installation in 2023 (Permit No. B2301140)
- Roof mounted solar installation in 2024 (Permit No. B2400064)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the status code as status code 5S3: Appears to be individually eligible for local listing or designation through survey evaluation. The current survey found that the dwelling is associated with the theme of the Country Club Era (1951-1973), but does not possess individual documented significance in relation to this theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

The dwelling has not been found individually eligible under NRHP/CRHR Criterion A/1, as it has not been associated with significant events or patterns of events in local, regional, state, or national history; not individually eligible under NRHP/CRHR Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state or national history. The residence is not considered eligible under Local Criteria 2-6 and 8.

The single-family residence is considered eligible under NRHP/CRHR Criterion C/3 as the property individually embodies the distinctive characteristics of a Desert Modernist style home constructed in the Thunderbird Country Club. The property is also eligible under Local Register Criteria 1 and 7 as it is representative of a Desert Modernist style home that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

This one-story, flat-roofed, mostly rectangular Modern house was constructed circa 1955. Medium-rough stucco, probably not original, finishes most exterior surfaces. Thin, stack bond brick forms the supporting wall of the projecting porte cochere and the curved façade walls on the east and west ends of the house. Windows are aluminum-framed, ceiling-to-floor glass with sliding glass doors at the rear, south-facing elevation. The recessed front porch features double entrance doors flanked by sidelights. Beneath the porte cochere roof paralleling the house, an open grid of wood beams admits light for a narrow planter of rocks, boulders and ficus trees. The textured concrete circular driveway passes beneath the porte cochere, creating a landscape island along the street. Here, lawn, gravel, boulders, trimmed shrubs and hedges, and mature trees create a lush setting for the house. Thick vegetation obscures much of the building along most elevations. There is a swimming pool at the rear of the property adjacent to the golf course. Although the house was extensively remodeled in 1982, the exterior appears to be relatively intact and in good condition.

This house is architecturally noteworthy as a mostly original and representative example of the type of Modern seasonal residences that were constructed within the Thunderbird Country Club in the first decade of the country club era. The flat roof, curving walls of thin stack bond brick, floor-to-ceiling rear glass walls, and open floor plan are indicative of Modern design of the period. The house was built circa 1955 by an unknown architect and/or builder. The first owners listed in the city directories were Eddie and Audrey Hillard, who appeared in 1961. Although the property does not appear eligible for listing in the National Register of Historic Places or designation under an existing or proposed local ordinance, it is of local interest (a "5S3" National Register Status Code).

Ownership and Address: Omar Noles, Suzanne Noles; 9646 NW Skyline Heights Drive, Portland, OR 97229

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 70-731 Fairway Drive property was constructed in 1960. The residence is located within the Thunderbird Country Club. In 2002, Leslie Heumann and Associates described the residence as a one-story, rectangular, flat-roofed, Vernacular Modern home with cantilevered eaves. The home most closely resembles a Desert Modernist style residence. The exterior is clad in medium-smooth stucco with narrow brick accents. The residence features fixed, clerestory, and ceiling-to-floor windows. The front elevation features a natural stone front entry steps leading to a recessed front porch with a large centered front door with large sidelights. The residence has an attached garage at the west elevation. Based on aerial images, the residence was altered circa 2002; it appears that the front elevation originally featured an open front courtyard, which was enclosed with a roof above the door. Circa 2004, a new roof was added which enclosed the rest of the entry courtyard.

In 2006, a permit was issued for construction work at the pool and spa (Permit No. B0600765). In 2011, a permit was issued for HVAC work (Permit No. B1100577). Also in 2011, a permit was issued for a foam re-roof (Permit No. B1100779). **See Continuation Sheet for Additional Information.**

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City, Rancho Mirage Date: 2021 Map Scale: 1;24000
Address: 70-754 Fairway Drive City: Rancho Mirage Zip: 92270
UTM Zone: 11S 552815.47 m E 3735085.87 m N
APN: 690140002

Date Constructed: 1952
Ownership and Address: Harper Trust, Jeffrey Alan Harper, Katherine Michelle Harper; 8455 El Paseo Drive, La Jolla, CA 92037

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 70-754 Fairway Drive property was constructed in 1952 within the Thunderbird Country Club. In 2002, Leslie Heumann and Associates described the property as a one-story, "L"-shaped Vernacular Modern house. The residence features a two-car attached garage. The "L" of the residence surrounds a pool. Surrounding pool, the residence features several sliding glass doors and floor-to-ceiling windows. The rear elevation faces the Thunderbird Country Club golf course and features several glass doors, fixed and horizontal sliding windows. There is a large exterior chimney, clad in rough stone, at the exterior elevation. Much of the front elevation is surrounded by a high stucco wall. At the rear elevation, there is a large concrete patio. Since the 2002 survey, there have been alterations to the building, most significantly the addition of rockwork to the exterior facades. The exterior wall cladding has been altered and consists of narrow brown rock and smooth stucco; this exterior cladding has been added to the front and rear elevations. Additional alterations include window replacements at the south elevation; it appears that all of the windows facing the pool have been replaced with sliding glass doors. The residence no longer retains integrity as it no longer resembles the original design intent.

Permits provided by the City include:
- block wall construction in 2005 (Permit No. B0501128)
- Addition/Remodel work in 2005 (Permit No. B0500949)
- Pool construction in 2005 (Permit No. B0501434)
- Electrical work in 2013 (Permit No. B1302304)
- Mechanical/HVAC work in 2014 (Permit No. B1401090)
- Solar installation in 2018 (Permit No. B1800621)

Updated Building, Structure, Object Information Continued:

The prior survey evaluated the property as status code 5S3: Appears to be individually eligible for local listing or designation through survey evaluation. The prior survey identified the residence as a good, mostly original example of a Vernacular Modern home constructed in the early years of the Thunderbird Country Club. The current survey found the dwelling is associated with the theme of the Country Club Era (1951-1973), but does not possess individual documented significance in relation to this theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and but it is not considered a significant representative example of a known architectural style in the community. The residence has been significantly altered with a stone cladding which has been added to the exterior since the 2002 survey. Additionally, many of the building's windows have been replaced since the prior survey. The current evaluation found that the property should be assigned a 6Z status code: Found ineligible for NR, CR or Local designation through survey evaluation. The home no longer maintains integrity to the historic era.

This one-story, "L"-shaped Vernacular Modern house was constructed in 1952 along the greens of the Thunderbird Country Club golf course. Located on a .32 acre parcel, the building is 2,992 square feet with two bedrooms and 3.5 bathrooms. The roof of the south-facing residence is flat except for a recessed, raised shed section running the length of the house from east to west. Rafters are visible beneath deep eaves. Board-and-batten, brick, and stucco sheathe the exteriors. Windows are fixed and sliding in type, with ceiling-to-floor glazing and sliding glass doors opening to covered patios on north and south elevations. Within the south-facing "L" in the front yard, a concrete deck surrounds a rectangular swimming pool. An enclosed double-car garage is located on the east end of the building. A fence borders the property along the street and driveway. The house appears original but neglected.

This house is architecturally noteworthy as a good, mostly original, example of the type of Vernacular Modern seasonal residence that was constructed within the Thunderbird Country Club in the first few years of the country club era. The roof configuration, floor to ceiling glass walls, and open floor plan are indicative of Vernacular Modern design of the period. It was built in 1952 by an unknown architect and/or builder. As of 1962, the owners were Ralph and Joyce Singer. While the resource does not appear eligible for listing in the National Register of Historic Places or for designation under an existing or proposed local ordinance, it is of local interest (a "5S3" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City, Rancho Mirage Date: 2021 Map Scale: 1;24000
Address: 70-381 Placerville Road City: Rancho Mirage Zip: 92270
UTM Zone: 11S 552358.94 m E 3734921.78 m N
APN: 690161003

Date Constructed: 1958
Ownership and Address: Stephen John Lodge, Sophie Helliwell; 70381 Placerville Road, Rancho Mirage, CA 92270

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 70-381 Placerville Road property was constructed in 1958 and is located in the Thunderbird Heights neighborhood. In 2002, Leslie Heumann and Associates described the residence as a one-story Modern home set on a platform elevated a few steps above grade. The home more specifically resembles a Post and Beam style home. The residence features a dramatically curved front wind with glass walls projecting towards the front driveway. The home has a mix clerestory and floor-to-ceiling windows. The residence has a flat roof. The front entrance is set within a recessed entrance porch. The home is clad in smooth stucco. It has an attached garage and is surrounded by a high stucco privacy wall. While most of the residence is obscured by the privacy wall, there appears to have been several alterations to the building since the 2002 survey. There appears to have been significant additions/alterations to the floor plan of the building, the roof profile appears to have been raised since the 2002 survey effort, and that a large interior chimney has been added within a new front addition. It appears that the exterior walls surrounding the front entry and the garage have been widened. A decorative gate has been added at the recessed front entry. As part of a remodel in 2019, the roofing area of the building was expanded at the rear of the home at the south wing and the original pool was significantly altered. In 2021/2022, a large front garage addition with an interior chimney was added to the residence, altering the public-facing north elevation of the home.

Permits provided by the City include:

- Plumbing work in 2000 (Permit No. B001707)
- Pool and spa work in 2002 (Permit No. B0201862)
- block wall construction in 2005 (Permit No. B0501669)
- block wall construction in 2005 (Permit No. B05001227)
- Spa work in 2005 (Permit No. B0500750)
- Addition/Remodel in 2005 (Permit No. B0302284)
- Addition/Remodel in 2019 (Permit No. B1900148)
- Solar installation in 2019 (Permit No. B1901463)
- Pool work in 2019 (Permit No. B1900601)
- Addition/Remodel in 2021 (Permit No. B2101060)
- Spa construction in 2021 (Permit No. B2102214)
- block wall construction in 2021 (Permit No. B2102027)

Updated Primary Record Information Continued:

View of northeast (front) elevation. (70-381 Placerville Road_4)

Updated Building, Structure, Object Information Continued:
The prior 2002 survey evaluated the property as status code 5S3: Appears to be individually eligible for local listing or designation through survey evaluation. The prior survey identified the residence as an architecturally notable as a Modern style, relatively understated home constructed in the Thunderbird Heights neighborhood. The current survey found the residence is associated with the themes of the Country Club Era (1951-1973) and Rancho Mirage Architectural Styles (1934-1980s), but does not maintain eligibility in relation to these themes. Due to significant alterations, including a large front addition with a new garage entrance, the residence does not maintain integrity to the historic era and is not considered eligible at the national, state, or local level. The residence no longer resembles the design as originally constructed. The 2024 evaluation found that the property should be assigned the 6Z status code - Found ineligible for NR, CR or Local designation through survey evaluation.

The home has not been found individually eligible under NRHP/CRHR A/1, as it has not been associated with significant events or patterns of events in local, regional, state, or national history; not individually eligible under Criterion B/2, as it has not been identified as having an association with an important person. The property is potentially individually eligible under Criterion C/3, as historic-era Post and Beam residence, but recent alterations and additions to the original design and materials have significantly negatively impacted the overall historic integrity of the property. Therefore, the property is not considered eligible under Criterion C/3. The property is not individually eligible under Criterion D/4/D, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state, or national history. The home is not found eligible under Local Criterion 1-8. The home does not maintain historic integrity.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Sitting on a platform elevated a few steps above grade, this one-story Modern residence was constructed in 1958 and faces northeast in the Thunderbird Heights area. Topped by a tiered, flat roof, the house is 4,023 square feet with four bedrooms and 3.25 bathrooms on .46 acres. Board and batten and vertically scored stucco sheathe the building. Windows are a combination of clerestory and floor-to-ceiling glass with wood mullions. Aluminum-framed sliding glass doors open to front and rear patios. A dramatically curved living room wing with glass walls projects towards the front driveway to take advantage of desert valley views. Concrete steps lead to the recessed entrance porch west of the living room where a non-original glass block sidelight is adjacent to the wood front door. Non-original glass block is also located near the northwest corner. A low, stucco-clad wall borders the asphalt driveway and the front of the house. Landscaping consists of lawns, citrus and palm trees, and shrubs. Despite the alterations, the house appears to be substantially intact and in good condition.

This Modern, flat-roofed building is architecturally notable as a representative example of the earlier, relatively understated houses constructed in Thunderbird Heights in the 1950s. Joseph and Wiki Dennis of Chicago were the original owners of the house and members of the Thunderbird Country Club. Mr. Dennis was an insurance executive. The Dennis' apparently owned this residence prior to the construction of the large circular house built in 1970 for the family nearby at 41-915 Tonopah Road. The Dennis' clearly were attracted to circular rooms with glass walls and stunning views as this is the most significant feature of Dennis Residence I. Although the resource does not appear eligible for listing in the National Register of Historic Places or for designation under an existing or proposed local ordinance, it is of local interest (a "5S3" National Register Status Code).

APN: 674300017

Date Constructed: 1968
Ownership and Address: Bruce H Konheim, Susan Konheim; 10580 Wilshire Blvd, No 1, Los Angeles, CA 90024

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 70-927 Fairway Drive property, designed by architects Buff and Hensman, was built in 1968. It is located in the Tamarisk Country Club. In 2002, Leslie Heumann and Associates described the residence as a large, one-story "U"-shaped house constructed in a Modern style. The residence has a symmetrical form, clad in smooth stucco. The residence features a flat roof with exposed beams and posts. Several elevations feature floor-to-ceiling glass. Previous documentation indicates that the residence had been been substantially remodeled prior to the 2002 survey. The residence has also been significantly altered since the prior 2002 survey. Most significantly is alterations to the roof. The residence previously featured a thin, flat roof, with a wide overhang and narrow profile. The roof maintains a flat form, but has been elevated, with the underside having a rounded edge. The roof is box-ier and thicker than seen originally.

Permits provided by the City include:
- Addition/Remodel in 2002 (Permit No. B0200971)
- Demolition permit in 2003 (Permit No. B0302130)
- Addition/Remodel in 2003 (Permit No. B0300588)
- Addition/Remodel in 2003 (Permit No. B0302219)

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

The Hayden Residence, designed in 1968 by architects Buff and Hensman, is a large, one-story, "U"-shaped house set on 1.24 acres within the Tamarisk Country Club grounds. The symmetrical building is 6,229 square feet with three bedrooms and 4.75 bathrooms. Medium-smooth stucco finishes the exteriors. Apparently extensively remodeled, the house still retains substantial character defining features such as massing, roof structure, exposed beams, sturdy posts, clerestories, and floor-to-ceiling glass along the rear, south elevation. The "U"-shaped concrete driveway passes beneath the broad porte cochere that shelters double wood entrance doors flanked by fixed sidelights. Square glass block replaces the pierced adobe block walls located east and west of the entrance. A pair of enclosed double-car garages face each other across the driveway. The primary, rear elevation features east and west wings flanking a south-projecting center living room section notable for its deep overhangs and walls of glass. The exposed beams seen along the façade are carried through the building to the rear, dividing the south elevations into numerous squared bays topped with clerestories. A monumental abstract metal sculpture enlivens the manicured grounds near the living room wing. A swimming pool located on the southwest corner of the property is surrounded by lush landscaping and the concrete patio that extends from beneath the deep overhangs. The interior entrance court contains a pair of reflecting pools on either side of sliding glass entrance doors. A "moat" of indoor pools surrounds the glass-enclosed central dining room on three sides. Interior furnishings were custom-designed under the supervision of decorator Arthur Elrod and Associates. Despite modifications, the house continues to retain its integrity of location, setting, feeling, association, materials, and workmanship, and is in excellent condition.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

The Hayden Residence is architecturally significant as a fine example of a Modern design by Pasadena architects Buff and Hensman. It was built in 1968 and published in the November/December 1970 issue of Architectural Digest, which reported: "the structure, in its entirety, was planned for maximum enjoyment of its raison d'etre *– the majesty of the desert." It continues, "glass walls of the house provide each room with breathtaking views" with "the house oriented on the property to take full advantage of views over the lush green fairways."*

Conrad Buff III was a native Californian and graduate of the University of Southern California's School of Architecture. There he met Donald C. Hensman, originally from Omaha, Nebraska, who taught design studios at USC before devoting himself entirely to architecture in 1962. Together with partner Calvin Straub, the firm of Buff, Straub, and Hensman "catered to a

wealthy clientele drawn from the world of film and entertainment," according to author Pierluigi Serraino in his 2000 book Modernism Rediscovered. The firm won 30 American Institute of Design awards and dozens of other prizes, particularly for their residential work. Straub left the firm in 1961.

The 1968 Hayden Residence, within the grounds of the Tamarisk Country Club, is one of three known residences designed by Buff and Hensman in Rancho Mirage, and their only house not remodeled beyond significance. The house is a fine example of Buff and Hensman's adaptation of their design tenets to the desert, particularly the flat roof with its post and beam structure allowing the use of massive walls of glass. The property appears eligible for designation under an existing or proposed local ordinance, but does not appear eligible for listing in the National Register of Historic Places (a "5S1" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City, Rancho Mirage Date: 2021 Map Scale: 1;24000
Address: 71-024 Cypress Drive City: Rancho Mirage Zip: 92270

Date Constructed: 1958
Ownership and Address: Lemon Tree Holdings; P O Box 69979, Los Angeles, CA 90069

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 71-024 Cypress Drive residence, designed by architect Howard Lapham, was built in 1958. The home is located in the Thunderbird Country Club. In 2002, Leslie Heumann and Associates described the residence as a one-story, "S"-shaped Modern home. The residence has a flat roof with deep overhangs. In 2002, the residence was described as having a pecky cypress fascia and pecky cypress exterior walls, both stained a non-original blue. Since the 2002 survey, these pecky cypress elements have been removed; the exterior walls are clad in smooth stucco with the original Palos Verde rock accent walls. There does not appear to be any other significant alterations to the residence since the 2002 survey.

Permits provided by the City include:
- Addition/Remodel in 2005 (Permit No. B0500379)
- Plumbing work in 2011 (Permit No. B1100076)
- Reroof of dwelling in 2023 (Permit No. B2301189)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the property as status code 5S1: Individual property that is listed or designated locally. The correct status code that should have been assigned in 2002 is 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The prior survey identified the residence as a good and highly intact example of the work of architect Howard Lapham, built in a Modern style. The current survey found that the dwelling is associated with the theme of the Country Club Era (1951-1973), but it does not possess individual documented significance in relation to this theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

The home is an example of a Desert Modernist style home constructed by architect Howard Lapham in 1958. Lapham was born in Oklahoma City in 1914. He moved to Palm Springs in 1954. Lapham had experience as a carpenter, draftsman, contractor, land planner, and architect. He worked on many notable buildings throughout the Coachella Valley, and maintained an office in Palm Springs until his death in 2008. While one of the lesser known architects in the area, Lapham was a fairly prolific architect in Palm Springs and the surrounding area. His designs appear to most closely resemble Desert Modern and Contemporary styles. In Rancho Mirage, Lapham constructed several homes in the Thunderbird Heights neighborhood and the Thunderbirds Country Club, as well as Lord Fletcher's English Pub, the Cook House (Ichpa Mayapan), and the remodel of the Thunderbird Country Club clubhouse. Lapham retired in 1980. The subject property is a good example of Lapham's work. It features several characteristics that were typical of his work including, the flat roof, natural rock walls, and incorporation of outdoor space. The unique "S" shape makes the home a unique example of his work and of the Desert Modernist style. While there have been some alterations to the residence, the character defining features of the home, including the rock elements, the flat roof, location on the Thunderbird Country Club golf course, and "S" shape remain intact.

The residence has not been found individually eligible under NRHP/CRHR Criterion A/1, as it has not been associated with significant events or patterns of events in local, regional, state or national history; not individually eligible under Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state, or national history. Additionally, the property is not found eligible under Local Criteria 2-6, and 8.

The single-family residence is considered eligible under NRHP/CRHR Criterion C/3 as the property individually embodies the distinctive characteristics of a Desert Modernist style home constructed within Rancho Mirage in the 1960s. The property is also eligible under Local Register Criteria 1 and 7 as it is representative of a Custom Ranch style home that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

Architect Howard Lapham designed the one-story, "S"-shaped Miller Residence in 1958. The 8,500 square foot Modern house has four bedrooms and 4.5 bathrooms and is located on .91 acres along the greens of the Thunderbird Country Club golf course. The flat-roofed residence has deep overhangs with a pecky cypress fascia. Exterior walls are also pecky cypress, with both the fascia and walls stained a non-original grayish blue. Windows are aluminum-framed, both fixed and sliding, with sliding glass doors located on the south and north elevations. Palos Verde rock walls project outward at right angles near the southwest corner of the house. A diamond-patterned mesh screen fills the space of a square cutout in one of the rock walls. The interior chimney is also of Palos Verdes rock. The main entrance lies east of the enclosed double-car garage. At the rear, facing the golf course, a kidney-shaped pool is surrounded by a concrete deck and formal landscaping. The house is perched atop a gently sloping lawn bordered by a low rock retaining wall. Mature palms, clipped hedges, rose bushes, and other vegetation covers the generous grounds. Other than the blue-stained pecky cypress, the house appears original and in good condition.

The Miller House is architecturally significant as a good and highly intact example of the work of architect Howard Lapham in the Modern style. According to the architect, the house was commissioned by Mr. Ted Miller in 1958. Howard Lapham had left Stamford, Connecticut, arriving in the Coachella Valley in 1954 at age 40. Although he was a registered designer, Lapham intended to become a builder in his new desert home. Within a year, however, he was designing residences for wealthy and influential members of the Thunderbird Country Club along the Club's fairways and up the slopes of what became known as Thunderbird Heights. A number of Lapham's buildings were published in Architectural Digest, including the Hyatt von Dehn

***B14. Evaluator:** *Peter Moruzzi, Teresa Grimes, Leslie Heumann*

***Date of Evaluation:** *September 23, 2002*

***B10. Significance (continued):**

Residence (1960, Thunderbird Heights), the Kiewit Residence (1960, Thunderbird Country Club), the Clarke Swanson Residence (1961, Thunderbird Country Club), the Morrow Residence (1961, Silver Spur Ranch, Palm Desert), and the 1961 remodel of the Thunderbird Country Club clubhouse. He remodeled the famous Chi Chi nightclub in 1959, giving it an ultra-modern new façade. Lapham also designed Lord Fletcher's English Pub in 1966 on what became known as 'restaurant row' on Highway 111 in Rancho Mirage. One of Lapham's largest residential projects was the Mayan-themed Cook House, known as Ichpa Mayapan, built atop Thunderbird Heights in 1970. Lapham also drew the initial plans for the Eisenhower Medical Center, although Edward D. Stone obtained the commission. Lapham officially retired in the 1980s, although he continues to maintain an office in Palm Springs.

This unusual "S"-shaped house is representative of Lapham's Modern design work, with its flat roof, natural rock walls, and indoor-outdoor access. Other than the blue stain applied to the pecky cypress sheathing and fascia, the building's exterior is virtually original and unchanged, clearly reflecting the time and place of its construction on the greens of the Thunderbird Country Club golf course. The property appears eligible for designation under an existing or proposed local ordinance, but does not appear eligible for listing in the National Register of Historic Places (a "5S1" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City, Rancho Mirage Date: 2021 Map Scale: 1;24000
Address: 71-274 Mirage Road City: Rancho Mirage Zip: 92270
UTM Zone: 11S 553735.87 m E 3733780.29 m N
APN: 684220010

Date Constructed: 1940
Ownership and Address: Ross Mathews Living Trust, Ross Mathews; 11812 San Vicente Blvd, FL 4th, Los Angeles, CA 90049

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 71-274 Mirage Road property was constructed circa 1940. In 2002, Leslie Heumann and Associates described the property as a Vernacular Modern style residence with corners rounded in the Streamline Moderne manner. Today, the home more closely resembles a Contemporary style residence. The residence has a rectangular, asymmetrical form and a flat roof with a moderate overhang. There have been significant alterations since the 2002 survey. In the prior survey, the exterior walls were described as concrete block; the exterior has since been clad in smooth stucco. The rounded corners described in the prior survey were not visible during the 2024 survey. Aerial images show that there was a large addition to the rear of the residence in 2019; this construction included alterations to the roof with a change in roof height near the rear of the roof. Other alterations include window replacements; the steel-framed fixed and multi-pane casement windows have been replaced with vinyl horizontal sliding windows.

Permits provided by the City include:
- Electrical work in 2007 (Permit No. B0700628)
- Electrical work in 2017 (Permit No. B1700081)
- Sewer work in 2018 (Permit No. B1801673)
- Pool & spa construction in 2019 (Permit No. B1900398)
- Addition/Remodel in 2019 (Permit No. B1900417)
- Roof mounted solar installation in 2023 (Permit No. B2302028)

See Continuation Sheet for Additional Information.

Updated Primary Record Information Continued:

View of southwest (front) elevation. (71-274 Mirage Road_2)

View of southwest (front) elevation. (71-274 Mirage Road_1)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the property as status code 5S1: Individual property that is listed or designated locally. The correct status code that should have been assigned in 2002 is 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The prior survey identified the residence as architecturally significant as an example of the type of homes constructed immediately before and after World War II. The home was constructed in 1940, prior to the rapid growth in development that was seen in the decades after World War II. The current survey found that the dwelling is associated with the theme of the Early Agricultural and Residential Period (1924-1951), but it does not possess individual documented significance in relation to this theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community. The 2024 evaluation found that the property should be assigned the 6Z status code - Found ineligible for NR, CR or Local designation through survey evaluation.

The home has not been found individually eligible under NRHP/CRHR A/1, as it has not been associated with significant events or patterns of events in local, regional, state, or national history; not individually eligible under Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4/D, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state, or national history.

The single-family residence is not considered eligible under NRHP/CRHR Criterion C/3 as the property no longer embodies the distinctive characteristics of a Desert Vernacular style home constructed within Rancho Mirage prior to the post-WWII development boom. There have been significant additions and material changes to the property over time. The property is also not eligible under Local Register Criteria 1 and 7 as it is no longer representative of a Desert Vernacular style home that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials. As the dwelling has been substantially altered, no longer maintains adequate integrity from the historic period to convey its significance.

The Knox Residence is significant as one of the oldest houses in Rancho Mirage, representative of a particular design and type particularly associated with the Rancho Mirage area in the years immediately before and after World War II. Constructed circa 1940, the house was not listed in the Palm Springs directories until1954, when the owner was Mrs. Frances Knox, a saleswoman. This is a good example of a type of 1930s and 1940s residence that appears in the early Rancho Mirage neighborhoods of Clancy Lane, Magnesia Falls, and San Jacinto Drive. It is a basic Vernacular Modern building constructed of concrete block with a flat roof and virtually no applied ornamentation. Somewhat unusual are the rounded corners of the concrete block that suggest the Streamline Moderne style of the 1930s. The residence appears original and in good condition. Because of its association with the earliest period in Rancho Mirage's history as a community, the property appears eligible for designation under an existing or proposed local ordinance, but does not appear eligible for listing in the National Register of Historic Places (a "5S1" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City, Rancho Mirage Date: 2021 Map Scale: 1;24000
Address: 71-365 Sahara Road City: Rancho Mirage Zip: 92270
UTM Zone: 11S 553794.74 m E 3733984.38 m N
APN: 684210005

Date Constructed: 1949
Ownership and Address: Gregg H & Teresa H Thompson Revocable Trust, Gregg H Thompson, Teresa H Thompson; 71365 Sahara Road, Rancho Mirage, CA 92270

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 71-365 Sahara Road property was constructed in 1949. In 2002, Leslie Heumann and Associates described the property as a one-story Vernacular Modern house with a medium-pitched, hipped roof. The residence has a rectangular plan with an attached garage. The front door has a wide wood surround with large picture windows at either side. The windows are largely not visible due to vegetation, however, since the prior survey, decorative fixed shutters have been added to the windows at the front elevation. The roof cladding has been replaced since the 2002 survey.

Permits provided by the City include:
- Plumbing work in 2002 (Permit No. B0201033)
- Electrical work in 2007 (Permit No. B0700647)
- Solar installation in 2023 (Permit No. B2300781)

See Continuation Sheet for Additional Information.

View of northeast (front) elevation. (71-365 Sahara Road_2)

Updated Primary Record Information Continued:

View of northeast (front) elevation. (71-365 Sahara Road_1)

View of northeast (front) elevation. (71-365 Sahara Road_3)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the residence as status code 5S3: Appears to be individually eligible for local listing or designation through survey evaluation. The prior survey found the home was historically significant as representative of the early residential development of Rancho Mirage. The current survey finds the residence is associated with the theme of the Early Agricultural and Residential Period (1924-1951), but does not possess individual documented significance in relation to the theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and but it is not considered a significant representative example of a known architectural style in the community. The current survey found that the dwelling does not retain a sufficient level of integrity for individual eligibility at the national or state level. There have been additional alterations to the residence since the prior survey, in addition to the previously documented alterations; the home no longer maintains integrity for significance at the local level. Alterations include, several additions, the change from a flat to pitched roof, and decorative, fixed shutters. The home no longer resembles its original form, and as such, no longer maintains significance as an example of an early Rancho Mirage home. As such, the current survey evaluates the residence as status code 6Z.

The home has not been found individually eligible under NRHP/CRHR A/1, as it has not been associated with significant events or patterns of events in local, regional, state, or national history; not individually eligible under Criterion B/2, as it has not been identified as having an association with an important person; not individually eligible under Criterion C/3, as it does not embody the distinctive characteristics of a type, period, or method of construction; and not individually eligible under Criterion D/4/D, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state, or national history. The home is associated with the early residential history of Rancho Mirage, but no longer maintains integrity to convey this association. The residence is not considered eligible under Local Criterion 1-8. The home does not maintain integrity to the historic period.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Erected in 1949, this northwest-facing, rectangular, one-story Vernacular Modern house is crowned with a medium-pitched, hipped roof. Exposed rafters are visible beneath deep eaves. The 1,545 square foot, two bedroom, two bathroom residence is constructed of flattened concrete blocks. Windows are mostly steel-framed fixed and casement, although non-original aluminum-framed windows are located near the west corner of the façade. An enclosed two car garage is at the east end of the house. The front entrance is flanked on either side by horizontal window bands. The non-original front door is paneled with a single rectangular light. An interior concrete block chimney emerges along the ridgeline. A curved concrete driveway occupies much of the area between the house and street. Landscaping consists of rocks, desert plants, and mature trees. In 1976, a workshop and storage room were added, and in 1987, the roof was altered from flat to pitched. The house appears to be in good condition.

Constructed in 1949, the Garvey Residence is important in documenting the early residential development of Rancho Mirage even with the considerable alterations to the building. Mr. L. C. and Mary Garvey were listed as owners in 1953, the first year that Rancho Mirage listings appeared in the Palm Springs Directory. Mr. Garvey was a dentist. This house is noteworthy in that it represents a broad pattern of development that was important in the history of Rancho Mirage. The house is located in the Magnesia Falls area, one of the earliest neighborhoods in Rancho Mirage. Although the resource does not appear eligible for listing in the National Register of Historic Places or for designation under an existing or proposed local ordinance, it is local interest (a "5S3" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City, Rancho Mirage Date: 2021 Map Scale: 1;24000
Address: 71-431 Sahara Road City: Rancho Mirage Zip: 92270
UTM Zone: 11S 553886.54 m E 3733922.47 m N
APN: 684210008

Date Constructed: 1937
Ownership and Address: Nidia S Miller; 71431 Sahara Road, Rancho Mirage, CA 92270

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 71-431 Sahara Road was constructed circa 1937. In 2002, Leslie Heumann and Associates described the residence as a one-story rectangular home with a cross-gabled roof. The projecting shed roof, centered between the two front gables, covers the original front porch which is now enclosed by stucco walls and horizontal picture windows. The course is constructed with concrete blocks with a squared bay at the west end of the front elevation. The home features steel-framed, multi-pane, fixed and casement windows. The residence has an attached garage. There is a flat-roofed addition east of the garage. Sun shades have been added across the central windows at the front elevation. There is a low rock wall planter surrounding the front elevation. There does not appear to have been any alterations to the residence since the 2002 survey.

Permits provided by the City include:
- Electrical work in 2007 (Permit No. B0700648)
- Mechanical/HVAC work in 2017 (Permit No. B1700690)
- Reroof dwelling in 2019 (Permit No. B1900309)

Updated Primary Record Information Continued:

View of northeast (front) elevation. (71-431 Sahara Road_3)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the property as status code 5S1: Individual property that is listed or designated locally. The correct status code that should have been assigned in 2002 is 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The prior survey found the residence was historically significant was one of the early model homes offered by developer-builder Louis Blankenhorn and company managing director, Laurence Macomber, in the Magnesia Falls neighborhood. The current survey finds the residence is associated with the theme of the Early Agricultural and Residential Period (1924-1951), but it does not possess individual documented significance in relation to this theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

The home has not been found individually eligible under NRHP/CRHR A/1, as it has not been associated with significant events or patterns of events in local, regional, state, or national history; not individually eligible under Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4/D, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state, or national history. The residence is not considered eligible under Local Criterion 2, 4-6, and 8.

The home is one of few homes dating to before World War II. Post-WWII, Rancho Mirage experienced a development boom; homes from before this era are rarer. The single-family residence is considered eligible under NRHP/CRHR Criterion C/3 as the property individually embodies the distinctive characteristics of a Tract Ranch style home constructed within Rancho Mirage in the 1930s. The property is also eligible under Local Register Criteria 1 and 7 as it is representative of a tract ranch style home that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials. Further, it is considered eligible under Local Criterion 3, for representing the growth of the city, as early model homes in the Magnesia Falls neighborhood. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Designed by architects Van Pelt and Lind circa 1937, this rectangular one-story residence is covered with a cross-gabled roof. Centered between the two front gables, a projecting shed roof covers an original front porch that is now enclosed by stucco walls and horizontal picture windows. The northeast-facing house is primarily constructed of concrete block. The squared bay on the west end of the façade, featuring a hipped metal roof and steel-framed, multi-pane, fixed and casement windows, is balanced by an attached, enclosed, single-car garage on the opposite end. East of the garage, a flat-roofed addition is faced with vertical boards. An interior chimney emerges from the rear, south slope of the side-gabled roof. A low rock wall borders the dirt driveway and the house. Desert landscaping, including various sized rocks and palms, enhances the setting. The metal garage door, main entrance door, and exterior lampposts are not original. The house appears to be in good condition.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

This property is historically significant as one of the early model homes offered by developer-builder Louis Blankenhorn and company managing director, Laurence Macomber, in the newly subdivided Magnesia Falls area. Constructed circa 1937, the house resembles the one pictured in an advertisement in the Pasadena Star-News on February 27th of that year. Boasting that the area offered "one hour more sunshine" than Palm Springs, the house was one of three built in what an accompanying article described as "Early American" in style. The article credited architects Van Pelt and Lind as the designers. Between 1935 and 1937, the Palm Springs office of the Pasadena-based architectural firm Van Pelt and Lind was staffed by local designers John Porter Clark and Albert Frey. Given that Frey returned to New York for almost two years starting in 1937, the Rancho Mirage residences can be most likely attributed to Clark.

(See Continuation Sheet 3 of 3.)

***Date of Evaluation:** *September 23, 2002*

Sketch Map

***B10. Significance (continued):**

Other models in the Magnesia Falls tract were prominently featured in advertisements to entice people to consider Rancho Mirage as a second home community in the desert. The houses ranged from four to six rooms and the minimum lot size was one-half acre. Magnesia Falls can be considered to be the earliest tract development in Rancho Mirage as these properties by developer-builder Louis Blankenhorn were built on speculation and not as custom homes. The 1953 Palm Springs directory lists the owners of this house as N. C. and Hazel K. Beckley. This was the first year that Rancho Mirage was listed in the directory.

Garrett Van Pelt, Jr. FAIA and George Lind were partners in their Pasadena-based architectural firm from 1928 until 1941, following Van Pelt's highly successful earlier association with Pasadena architects Sylvanus Marston and Edgar Maybury. During this period they designed numerous buildings in Los Angeles County, but also had a satellite office in Palm Springs managed by John Porter Clark. Clark had worked in Van Pelt and Lind's Pasadena office prior to settling in Palm Springs. Swiss architect and Le Corbusier disciple Albert Frey had met Clark while completing his first building in Palm Springs in 1934 and joined him in the Van Pelt and Lind office. According to author Joseph Rosa, "All the work that Clark and Frey did together, from 1935 to 1937, was under the firm name of Van Pelt and Lind Architects, since neither Clark nor Frey was licensed at the time."

Although windows have been replaced and the front porch enclosed, the house appears to be otherwise intact and in good condition. As one of the original houses in the Blankenhorn tract in Magnesia Falls and characteristic of the type of ranch house purchased as a second home in Rancho Mirage prior to World War II, the property reflects a significant period of development in the history of Rancho Mirage. The property appears eligible for designation under an existing or proposed local ordinance, but does not appear eligible for listing in the National Register of Historic Places (a "5S1" National Register Status Code).

APN: 684234003

Date Constructed: 1950
Ownership and Address: Jason R Swearengin; 71533 Sahara Road, Rancho Mirage, CA 92270

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 71-533 Sahara Road property was originally constructed in 1950 as a one-story, symmetrical, Vernacular Modern house. In 2002, Leslie Heumann and Associates described the residence as a rectangular building constructed of concrete blocks with steel-framed fixed and casement windows. Since the 2002 survey, the residence was completely remodeled in circa 2005. The residence, constructed in a contemporary Pueblo Revival style, features a flat roof and is clad in smooth stucco. The two-story residence has a terraced front facade with large wooden accents. At the front elevation there are two large picture windows with a central double door. The building has an attached two car garage. Due to the alterations, the residence no longer maintains integrity.

Relevant permits provided by the City include:
- Sewer work in 2003 (Permit No. B0302347)
- Addition/Remodel in 2004 (Permit No. B0400509)
- block wall construction in 2005 (Permit No. B0500945)
- Electrical work in 2007 (Permit No. B0700653)
- block wall construction in 2019 (Permit No. B1900664)

See Continuation Sheet for Additional Information.

Updated Primary Record Information Continued:

View of east (front) elevation. (71-533 Sahara Road_2)

Updated Building, Structure, Object Information Continued:

A prior survey evaluated the property as 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The prior survey described the residence as architecturally noteworthy as a representative example of a basic Vernacular Modern home, as seen in early Rancho Mirage neighborhoods. The current survey finds the residence is associated with the theme of the Early Agricultural and Residential Period (1924-1951), but it does not possess individual documented significance in relation to this theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme but is not considered a significant representative example of a known architectural style in the community. Since the 2002 survey, the residence has been substantially remodelled or demolished. Circa 2005, the home was replaced with a contemporary Pueblo Revival style single-family home, and no longer resembles the original home. As such, the current survey evaluated the property as a 6Z status code: Found ineligible for NR, CR or Local designation through survey evaluation. The home does not maintain integrity to the historic era.

This one-story, symmetrical, Vernacular Modern house was built in 1950. The rectangular northeast-facing residence is capped with a low-pitched, almost flat, side-gabled roof and covered in red tiles (which may not be original). Exposed rafters are visible beneath deep eaves. Constructed of concrete block, the 1,460 square foot residence has two bedrooms and 1.5 bathrooms. Windows are steel-framed fixed and casement, most with transoms. A metal security door fronts the non-original paneled wood front entrance door. Visible air handling equipment on the roof, a wrought iron entrance sconce, and a wood fence west of the building are also not original. There is an exterior concrete block chimney located on the east elevation. A circular concrete driveway surrounds basic landscaping, including mature Washingtonia filifera palms and a pine tree. Other than the noted alterations, the house appears original and in good condition.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

This property is architecturally noteworthy as a representative example of a type of residence that appears in the early Rancho Mirage neighborhoods of Clancy Lane, Magnesia Falls, and San Jacinto Drive. It is a basic Vernacular Modern building constructed of concrete block with a nearly flat roof, steel casement windows, and no applied ornamentation. Built by an unknown architect and/or builder in 1950, the house is typical of this type that was apparently unique to the Rancho Mirage area in the years immediately before and after World War II. The 1954 owners are listed as Cephas W. and Ola B. Goode. Mr. Goode was a rancher. There was no listing for this address in the Palm Springs directory prior to 1954. Although the resource does not appear eligible for listing in the National Register of Historic Places or for designation under an existing or proposed local ordinance, it is of local interest (a "5S3" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City Date: 2021 Map Scale: 1;24000
Address: 69-850 Highway 111 City: Rancho Mirage Zip: 92270
UTM Zone: 11S 551511.13 m E 3736632.15 m N APN: 689040017
Date Constructed: 1957
Ownership and Address: Desert Braemar Inc; 69850 Highway 111, Rancho Mirage, CA 92270
Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The Desert Braemar Apartments, addressed as 69-850 Highway 111, were built by Paul Broman and Richard Hanousek in 1957. The property consists of 18 detached buildings, and approximately 100 units. In 2002, Leslie Heumann and Associates described the property as a Vernacular Modern multi-family property. The property features one and two story units, each with an exterior patio. The buildings feature low-pitched hipped and gable roofs with open rafters and deep overhangs. Each building features a mix of window types, including aluminum frame fixed and tripartite horizontal sliding sash. The buildings are clad in stucco, with accent materials such as vertical wood board siding, and slumpstone walls and exterior chimneys. The two story units feature a centralized exterior, metal frame staircase. A minimalist metal railing surrounds the second floor units. Low slumpstone planter box walls provide privacy at the first floor unit patios. The buildings are connected via sidewalks, with the private road, Breamar Drive, going through the property. A private pool is at the center of the property.

Relevant permits provided by the City include:
- 147 sq.ft. addition to the living room at Unit #9 in 2000 (Permit No. B0000302)
- Garage No. 1 reroofed in 2000 (Permit No. B0000521)
- 147 sq.ft. addition to the living room at Unit #1 in 2000 (Permit No. B0000573)
- 80 sq.ft. laundry room addition at Unit #40 in 2000 (Permit No. B0000991)
- Installation of 200-sq.ft. patio enclosure at Space #58 in 2001 (Permit No. B0100239)

Updated Primary Record Information Continued:

March 1957 Cover of Palm Springs Villager (Desert Braemar Villager March 1957)

1957 Desert Braemar Advertisement (Desert Braemar full page ad)

Updated Building, Structure, Object Information Continued:

A prior survey evaluated the subject property as status code 5S1 - Individual property that is listed or designated locally. The correct status code that should have been assigned in 2002 is 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The current survey found the subject property is associated with the theme of Residential Subdivisions and Cooperatives (1951-1973). It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

The Desert Braemar Apartments are not individually eligible under NRHP/CRHR Criterion B/2, as the property has not been identified as having an association with an important person; and is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The Desert Braemar Apartments, built in 1957, were the largest multi-family one- and two-story apartment complex in Rancho Mirage at the time of construction. The concept of cooperative apartment ownership, now classified as condominiums, were new in the Coachella Valley at the time of their construction. The property is considered eligible under NRHP/CRHR Criterion A/1, as it is associated with a unique era of development in Rancho Mirage. Cooperative housing communities were new and rare property types at the time of construction, both in Rancho Mirage and the surrounding area. They represent a special timeframe of development in Rancho Mirage and the Coachella Valley during the post war era. The property is eligible under Local Criterion 3, as it is representative of the evolution and development of the city. The Apartments are also eligible under NRHP/CRHR C/3 as a rare example of a Desert Modernist multi-family condominium complex. Furthermore, the property is eligible under Local Criterion 1. There have been small additions to several of the units throughout the complex, in addition to several window replacements at various units. These alterations are notable, but do not appear to have significantly altered the overall design and form of the property. All units retain the ability to convey their significance as potential district contributors. As the property has not been substantially altered as a whole, it maintains adequate integrity from the historic period to convey its significance.

The Desert Braemar Cooperative Apartment complex was constructed in 1957 and consists of approximately 100 units in one- and two-story buildings spread across a multi-acre property adjacent to Highway 111. Individual units include one, two, or three bedrooms. Each building is capped with a low-pitched hipped roof with rafters visible beneath deep overhangs. Medium-smooth stucco and vertical boards sheathe the exteriors. Windows are aluminum-framed fixed, sliding, jalousie, or casement, with sliding glass doors opening to patios or balconies. Ribbon and corner windows predominate in the one-story buildings. Continuous second floor wrought iron balustrades angle inward with a horizontal grid pattern. Slumpstone is used for low walls enclosing patio spaces and for recessed entry porch walls and first floor stairwells. Floating staircases have wrought iron handrails and concrete aggregate steps. Some of the buildings are one-story with ten-foot ceilings and picture

The Desert Braemar Apartments are architecturally significant as an early and well executed example of an important building type in Rancho Mirage, the cooperative apartment complex. Built by Paul Broman and Richard Hanousek in 1957, the complex was the focus of much local interest. The March, 1957 issue of The Palm Springs Villager was mostly devoted to the new Desert Braemar, describing it as "a showplace of the finest modern architectural design and construction, with 100 deluxe apartments in rambling, colorful buildings." This was one of several " Braemar Plan" developments in the southwest that offered cooperative apartment ownership "without worrying about maintenance problems and upkeep chores." Known today as condominiums, the concept was novel in 1957 for the Coachella Valley. This was the largest multi-family one- and two-story apartment complex constructed in Rancho Mirage and perhaps in the Coachella Valley up to that time. Remarkably, the generous grounds and plan remain intact with no new infill. Buildings and grounds are meticulously maintained, appearing quite similar to historic photos of the property from 1957. The property appears eligible for designation under an existing or proposed local ordinance, but does not appear eligible for listing in the National Register of Historic Places (a "5S1" National Register Status Code).

***P3a. Description (continued):**

window grids of square glazing with aluminum mullions. Here, shed porch roofs shade main entrances flanked by narrow sidelights, although many of the original wood doors have been replaced. Other one-story buildings have standard-height ceilings and ribbon windows. The spacious grounds offer several swimming pools, lawn bowling, and shuffleboard, and are lushly landscaped with enormous lawns, shaped hedges, flowering bushes, and trees of citrus, olive, date palm, Washingtonia filifera, and fan palm. Soon after completion of the first phase, an additional 90 units were built around quads of similar plan and layout. The buildings and grounds appear original and in excellent condition.

APN: 684353002

Date Constructed: 1937
Ownership and Address: Matthew G & Madeleine A Tarnay 2000 Trust, Madeleine A Tarnay, Lan Anh T Do, Christopher Tarnay; 2529 Nearcliff Street, Torrance, CA 90505

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 71-785 Sahara Road residence, designed by architects Van Pelt and Lind, was constructed in 1937 as a one-story Ranch Modern home. In 2002, Leslie Heumann and Associates described the residence as a a rectangular building with a central side gable flanked with perpendicular shed roofs. In 2002, the residence was described as original and in excellent condition, and was identified as the best remaining example of the Blankenhorn tract in Magnesia Falls. Based on aerial images, the residence underwent significant alterations in 2017. Changes include the removal of the front porch, the addition of a large front gable above a recessed front entrance, the addition of an attached garage at the front elevation, and window replacements at the front elevation. The roof was replaced during the 2017 renovation. The residence no longer resembles the residence as it appeared during the 2002 survey or originally. The residence is clad in smooth white stucco. There appears to be six sash windows and four fixed windows at the front elevation. The attached garage is at the southeast corner of the home.

Relevant permits provided by the City include:
- Plumbing work in 2007 (Permit No. B0700953)
- Electrical work in 2007 (Permit No. B0700832)
- Sewer work in 2016 (Permit No. B1600883)
- Addition/Remodel in 2017 (Permit No. B1700120)
- Addition/Remodel in 2019 (Permit No. B1900403)
- Addition/Remodel in 2020 (Permit No. B2000362)
- Spa construction in 2020 (Permit No. B2020531)
- Solar installation in 2023 (Permit No. B2300057)

See Continuation Sheet for Additional Information.

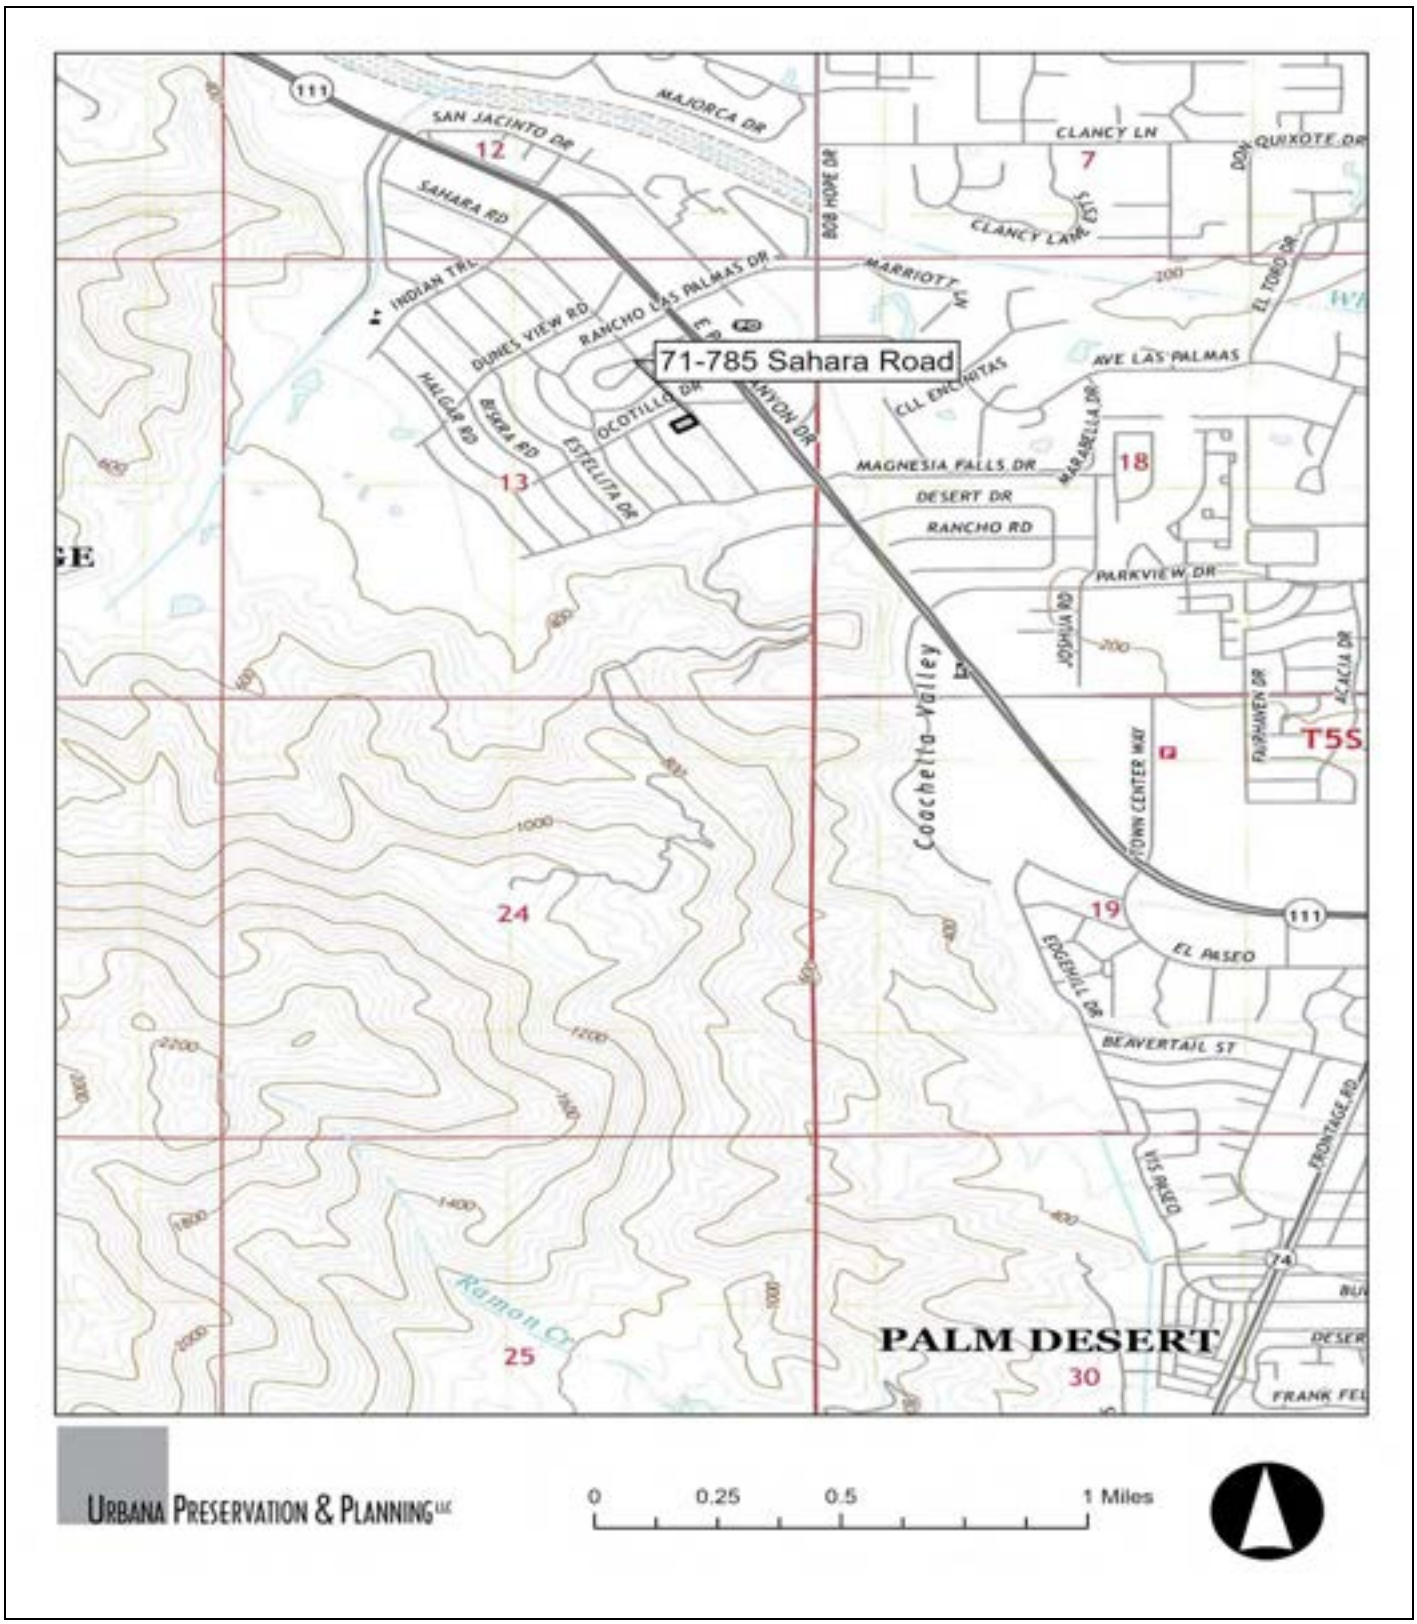
Updated Primary Record Information Continued:

View of northeast (front) elevation. (71-785 Sahara Road)

Updated Building, Structure, Object Information Continued:

A prior survey evaluated the property as 3S: appears eligible for NR as an individual property through survey evaluation. The prior survey found the property historically significant as one of the early model homes offered by developer-builder Louis Blankenhorn and company managing director, Laurence Macomber, in the newly subdivided Magnesia Falls area. The home was constructed in 1937, and was prominently featured in advertisements for the area.

On May 11, 2004, the home was designated at the local level by the City of Rancho Mirage. However, in 2011, the City removed this designation. This removal was not made official until October 21, 2019, when the Rancho Mirage City Council formally removed the historic designation for this home due to extensive alterations.



The current survey finds the residence is associated with the theme of the Early Agricultural and Residential Period (1924-1951), but it does not possess individual documented significance in relation to this theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme but it is not considered a significant representative example of a known architectural style in the community. Since the 2002 survey, the residence has been substantially remodeled. Circa 2017, the home underwent a substantial renovation, and no longer resembles the original design. As such, the current survey evaluated the property as a 6Z status code: found ineligible for NR, CR or Local designation through survey evaluation. The home does not maintain integrity to the historic era.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Attributed to Van Pelt and Lind, architects, this rectangular, one-story Ranch Modern house was built in 1937. The north-facing, 1,986 square foot residence has three bedrooms and 1.75 bathrooms and sits on .55 acres. The unusual roof configuration consists of a central side gable flanked perpendicular shed roofs. The house is of concrete block construction with board-and-batten and stucco sheathing. Windows are steel-framed, multi-pane fixed and casement with some non-original sliders. Square wood posts support the projecting roof that shelters a wide front porch and the main entrance. The front door is paneled wood. A squared bay with hipped metal hood is east of the center porch. A thick, tapered exterior chimney clad in stucco is located on the east elevation. The concrete driveway is bordered by long hedge. Lush vegetation of oleander, olive trees, mature palms, and a broad center lawn dominates the expansive front yard, obscuring the house from the street. With the exception of several window replacements and thicker roof shingles than in the historic photographs, the house appears original and in excellent condition.

This property is historically significant as one of the early model homes offered by developer-builder Louis Blankenhorn and company managing director, Laurence Macomber, in the newly subdivided Magnesia Falls area. Constructed in 1937, the house was prominently featured in an advertisement in the Pasadena Star-News on February 27th of that year. Boasting that the area offered "one hour more sunshine" than Palm Springs, the house was one of three built in what an accompanying article described as "Early American" in style. The article credited architects Van Pelt and Lind as the designers. Between 1935 and 1937, the Palm Springs office of the Pasadena-based architectural firm Van Pelt and Lind was staffed by local designers John Porter Clark and Albert Frey. Given that Frey returned to New York for almost two years starting in 1937, the Rancho Mirage residences can be most likely attributed to Clark.

(This space reserved for official comments.)

Sketch Map

***Date of Evaluation:** *September 23, 2002*

***B10. Significance (continued):**

The Pasadena Star-News noted that this model was being offered "tastefully furnished." Hoping to entice people to consider Rancho Mirage as a second home community in the desert, the advertisements proclaimed that the development possessed the "finest water system in the valley". The houses ranged from four to six rooms and the minimum lot size was one-half acre. Magnesia Falls can be considered to be the earliest tract development in Rancho Mirage as these properties by developer-builder Louis Blankenhorn were built on speculation and not as custom homes. The Palm Springs Directory first lists this address in 1957, when F. H. and Diana Armstrong were the owners.

Garrett Van Pelt, Jr. FAIA and George Lind were partners in their Pasadena-based architectural firm from 1928 until 1941. During this period they designed numerous buildings in Los Angeles County, but also had a satellite office in Palm Springs managed by John Porter Clark. Clark had worked in Van Pelt and Lind's Pasadena office prior to settling in Palm Springs. Swiss architect and Le Corbusier disciple Albert Frey had met Clark while completing his first building in Palm Springs in 1934 and joined him in the Van Pelt and Lind office. According to author Joseph Rosa, "All the work that Clark and Frey did together, from 1935 to 1937, was under the firm name of Van Pelt and Lind Architects, since neither Clark nor Frey was licensed at the time."

The 71-785 Sahara Road house is mostly original and in good condition. It is the best remaining example of the Blankenhorn tract in Magnesia Falls and highly reflective of the type of ranch house purchased as a second home in Rancho Mirage prior to World War II. The property appears eligible for separate listing in the National Register of Historic Places (a "3S" National Register Status Code). In addition, the property would be eligible for separate listing or designation under an existing or proposed local ordinance.

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City, Rancho Mirage Date: 2021 Map Scale: 1;24000
Address: 71-995 Vista Del Rio City: Rancho Mirage Zip: 92270
UTM Zone: 11S 554704.88 m E 3734773.83 m N
APN: 684112002

Date Constructed: 1958
Ownership and Address: Timothy D Esser; PO Box 1636, Cathedral City, CA 92235

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 71-995 Vista Del Rio residence, designed by architect Richard R. Leitch, was constructed in 1958. The home is one of 39 residences built in the Tierra Del Sol tract in the Thunderbird Country Club. In 2002, Leslie Heumann and Associates described the residence as a Modern style, one-story residence with a low-pitched, front-gabled roof. The home more specifically resembles a Contemporary style tract home. The roof has visible rafters with a deep overhang. The exterior is clad in vertical board siding and stucco. The residence has a post-and-beam, attached carport at the front elevation. There does not appear to have been any visible alterations to the residence since the 2002 survey, except exterior paint.

Permits provided by the City include:
- Reroof of dwelling in 2006 (Permit No. B0600021)
- Electrical work in 2009 (Permit No. B0900114)
- block wall construction in 2010 (Permit No. B1000875)

See Continuation Sheet for Additional Information.

Updated Primary Record Information Continued:

View of east (front) elevation. (71-995 Vista Del Rio_1)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the property as status code 5S1: Individual property that is listed or designated locally. The correct status code that should have been assigned in 2002 is 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The prior survey found the residence was historically significant as one of the best preserved of the Modern style homes in the Tierra Del Sol residential development. The current survey found that the dwelling is associated with the theme of Residential Subdivisions and Cooperatives (1951-1973), but it does not possess individual documented significance in relation to this theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

The home has not been found individually eligible under NRHP/CRHR A/1, as it has not been associated with significant events or patterns of events in regional, state, or national history; not individually eligible under Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state, or national history. The residence is not considered eligible under Local Criteria 2-6 and 8.

The home is considered as one of the 39 homes built in the Tierra Del Sol tract. The home is one of the only remaining unaltered homes in the tract. The Tierra Del Sol tract represents the development of middle-income Contemporary style tract homes. This home represents this era of residential development in Rancho Mirage. The single-family residence is considered eligible under NRHP/CRHR Criterion C/3 as the property individually embodies the distinctive characteristics of a Contemporary style home constructed within Rancho Mirage in the 1950s. The property is also eligible under Local Register Criteria 1 and 7 as it is representative of a Contemporary style home that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

Architect Richard R. Leitch designed this one-story residence in 1958 as one of 39 residences built in the Tierra Del Sol tract in the Thunderbird Country Club area. The east-facing house, covered by a low-pitched, front-gabled roof, was constructed on a .17 acre lot. The house features visible rafters beneath deep overhangs and exteriors sheathed in vertical boards and medium-smooth stucco. Windows are a combination of steel-framed fixed, casement, and clerestories. Ceiling-to-floor sliding glass doors are at the rear of the house. A post-and-beam double carport projects towards the street; the north half has been enclosed. A concrete path leads to the non-original glass door entrance located towards the south end of the façade. South of the concrete driveway, a gently sloping mound is landscaped with gravel, low shrubs, and mature trees. There is no swimming pool because pool and recreation facilities are communally shared and owned. Except for the noted changes, the house appears original and in excellent condition.

This property is architecturally significant for its Modern design by Richard Leitch and as an example of a property type particularly associated with Rancho Mirage. Arnold and Rita Boscacci were the original owners of the house, which was constructed in 1958. Architect Richard R. Leitch A.I.A. of Pasadena received a special award from the American Institute of Architects in 1958 for the architectural design and residential planning of the Tierra Del Sol cooperative development of 39 homes. The project was located on ten acres of land east of the Thunderbird Country Club. An advertisement in Palm Springs Villager described the residences as "Twenty-first Century 'Solar Contemporary' designed homes." There were various customizable plans of one, two, and three bedrooms and lanais "PLUS Roman Sunken Tubs adjoining private Sun Bathing Patios." House prices began at $18,500 and the option of "exciting interpretations of modern furnishings and décor by the internationally known decorator, C. Tony Pereira" was offered. Inspired by "desert living", interior colors were mostly

monochromatic with color accents. All houses came fenced and landscaped. Some exteriors had redwood siding and mosaic tile. The Tierra Del Sol tract provided a cooperatively-owned recreational area including swimming pool, dressing rooms, and volleyball court all enclosed by masonry walls and glass screens.

According to Leitch, industrialist Robert McCulloch and a partner financed the Tierra Del Sol development. McCulloch was a resident and member of the adjacent Thunderbird Country Club who met Leitch through their respective golfer wives. Leitch said McCulloch was interested in "getting his feet wet" in residential tract development prior to embarking on his ambitious Lake Havasu project in Arizona. McCulloch, other investors, and Leitch each took one of the Tierra Del Sol houses upon completion. Leitch's house was at 71-990 and McCulloch's at 71-962 Vista Del Rio. "It was a playhouse for McCulloch," Leitch said. The communal recreation area, "new at the time," was the first of a large number of Planned Unit Developments (PUDs) that Leitch became associated with. The PUD was the forerunner of condominiums.

This is a property type apparently unique to Rancho Mirage in the Coachella Valley area. Privately owned single-family residences sharing grounds and a swimming pool is an unusual permutation of a multi-family residential complex. Additional examples include Tamarisk Fairway on 10th (1969-1970) and Tamarisk Ranchos I and II (1958 and 1961) near the Tamarisk Country Club, and, near the Thunderbird Country Club, the cluster between Early Times Road and Country Club Drive (1957), and Thunderbird Palms (circa 1961).

Due to alterations of the 39 houses constructed in the tract, the Tierra Del Sol development does not possess the integrity to be considered a historic district. However, the Boscacci Residence is the most original and best preserved of the homes and is an excellent example of this type of middle-income Modern tract house built in what became the City of Rancho Mirage. The house is representative of the development of Rancho Mirage in the late 1950s and early 1960s as a viable community of second homes for middle-income buyers. The property appears eligible for designation under an existing or proposed local ordinance, but does not appear eligible for listing in the National Register of Historic Places (a "5S1" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City, Rancho Mirage Date: 2021 Map Scale: 1;24000
Address: 72-026 Clancy Lane City: Rancho Mirage Zip: 92270
UTM Zone: 11S 554863.71 m E 3734277.16 m N
APN: 682110004

Date Constructed: 1951
Ownership and Address: Lennon Tommi Lynne Living Trust; 25 Camisa Lane, Palm Desert CA, 92260

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 72-026 Clancy Lane residence was constructed in 1951. In 2002, Leslie Heumann and Associates described the residence as a Vernacular Modern home with a rectangular plan and wood frame construction. The residence has a flat roof with deep overhangs, with a recessed front porch The roof overhang is supported by square wood posts. The residence is clad in vertical board siding with a low brick accent along the foundation. The residence has an attached carport. The non-original air conditioner at the roof has been replaced since the 2002 survey. There does not appear to have been any other significant alterations to the residence since the 2002 survey, except exterior paint.

Permits were not available for the subject property.

See Continuation Sheet for Additional Information.

View of south (front) elevation. (72-026 Clancy Lane_2)

Updated Primary Record Information Continued:

View of south (front) elevation. (72-026 Clancy Lane_1)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the property as status code 5S3: Appears to be individually eligible for local listing or designation through survey evaluation. The prior survey found the subject property was historically significant as an example of a housing type dating from the early years of Rancho Mirage's development. The home was constructed in 1951, at the end of the first era of residential development in Rancho Mirage, immediately prior to the Post-World War II development boom that characterized the second phase of development. The current survey found that the dwelling is associated with the theme of the Early Agricultural and Residential Period (1924-1951), but does not possess individual documented significance in relation to this theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

Updated Building, Structure, Object Information Continued:

The home has not been found individually eligible under NRHP/CRHR A/1, as it has not been associated with significant events or patterns of events in regional, state, or national history; not individually eligible under Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state, or national history.

The home is representative of the transition period between the first and second residential periods in Rancho Mirage. The first residential period spanned from approximately 1924 to 1951. The homes built during this era were more modest in size and style compared to the homes constructed in later years. Beginning around 1951, the second era of residential development began in Rancho Mirage. Around this time the city experienced a development increase with both country club communities and residential subdivisions and tracts being constructed. The homes constructed in this period were typically larger, and incorporated Modern design details, compared to homes seen in earlier years. The subject property features a modest, rectangular form, with few architectural details, typical of the early residential period in Rancho Mirage. However, the home features details that are typical of the Modern homes constructed in the later residential period, including a flat and low-pitched shed roof, large exterior chimney, and attached carport. The home is an example of a Custom Ranch style home, taking on Modern elements.

The single-family residence is considered eligible under NRHP/CRHR Criterion C/3 as the property individually embodies the distinctive characteristics of a Custom Ranch style home with Modern elements, constructed within Rancho Mirage in the 1950s, representing the transition between styles. The property is also eligible under Local Register Criteria 1 and 7 as it is representative of a Custom Ranch home with Modern elements that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials, and that represents the transition between styles. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

Erected in 1951, this south-facing Vernacular Modern house is one-story with a flat roof along the front and a shed roof towards the rear. The 1,024 square foot rectangular house has two bedrooms and 1.75 bathrooms and is of wood frame construction. Narrow vertical boards sheathe the south-facing residence, which features a low textured brick wall along the foundation and horizontal boards on either side of the entrance. Windows are steel-framed casement with plain sills. The primary roof has deep eaves shading the recessed front entrance porch, whose flat roof overhang is supported by a pair of square wood posts. The wood-framed and glazed front door has opaque glass sidelights. An attached single carport is located on the west side of the house. The property is landscaped with a broad front lawn and several mature trees. A large non-original air conditioner sits atop the flat roof. The house appears original and in good condition.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

The Tower Residence is of architectural note as an example of a housing type dating from the early years of Rancho Mirage's development. According to city records, the house was added to the property tax books in 1951, just at the end of the first phase of the community's history and the beginning of the country club era. As of 1957, when the address first appeared in Palm Springs directories, Stanley Tower was the owner of the property. The building is a relatively original and intact example of early 1950s residences that were built in the original subdivisions in the Clancy Lane and Magnesia Falls areas of Rancho Mirage. It is a basic Vernacular Modern building with a flat roof, steel casement windows, and minimal applied ornamentation. While the house does not appear eligible for designation under a local ordinance or for listing in the National Register of Historic Places, it is of some local interest (a "5S3" National Register Status Code).

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The Rancho Manana Stables are located west of the main residence at 72-551 Clancy Lane property. While the main residence on the property was constructed in 1987, the stable building dates to pre-1939. The stables were constructed in a Colonial Revival style. The building is clad in board and batten with Z-patterned shutters. The building was evaluated by Leslie Heumann and Associates in 2002. At the time, the construction year was thought to be circa 1950, based on the Colonial Revival architectural details. Aerial images show that the structure was constructed pre-1939. It appears that the structure underwent construction to the roof, and likely to other parts of the structure, between 1953 and 1959. The structure is set back far on the property, and a portion is not visible due to mature trees. However, it does not appear that there has been any significant alterations to the structure since the 2002 survey. Permit records did not indicate any work completed at the stables.

See Continuation Sheet for Additional Information.

Updated Primary Record Information Continued:

View of north elevation. (72-551 Clancy Lane_1)

Updated Building, Structure, Object Information Continued:

The 2002 survey identified a construction year of circa 1950. However, a review of aerial images shows the structure dates to pre-1939, with alterations in the 1950s. The prior survey evaluated the property as status code 5S1: Individual property that is listed or designated locally. The correct status code that should have been assigned in 2002 is 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The current survey finds the stables are associated with the theme of the Early Agricultural and Residential Period (1924-1951). It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme but is not considered a significant representative example of a known architectural style in the community. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

Updated Building, Structure, Object Information Continued:

The property, originally known as Rancho Manana, appears to have been originally owned by John Warburton and Lucille Morrison, who moved onto the property in 1937. The Warburtons grew dates and grapefruits on the property, which was located across the highway from the newly established Rancho Mirage development (later known as Magnesia Falls Cove) (Palm Springs Limelight-News, November 13, 1937, Page 13). John Warburton was identified as an actor (The Desert Sun, May 26, 1939, Page 1). Warburton and Morrison had divorced by 1948, with the later retaining ownership of Rancho Manana. In 1948, she married New York banker, Howard Burdick (The Desert Sun, Jan 16, 1948, Page 7). The original home at the Rancho Manana was an adobe home and was seen as one of the standout homes in the area; it was the second home of the family, who primarily resided in Bel Air (Palm Springs News and Palm Springs Limelight News, May 15, 1951, Page 10). The property was sold in 1959. At the time the property was listed as a 30 acre ranch with a large adobe home, caretaker's cottage, box stalls and corrals, 10 acres of irrigated pasture, and 15 acres of dates (The Desert Sun, Mar 05, 1959, Page 14). The property was purchased by Bill and Jan Doty. Bill Doty was a designer (The Desert Sun, Oct 02, 1959, Page 7). By 1971, the property was owned by William Currin. In 1971, the property sustained significant fire damage (The Desert Sun, May 04, 1971,Page 2). In 1972, Currin subdivided the property and obtained permits for the construction of 20 homes on the property (Palm Desert Post, Jun 29, 1972, Page 1). The main residence was removed and reconstructed circa 1987.

The stables date to the first period of development in Rancho Mirage. They were constructed while the property was owned by John Warburton and Lucille Morrison, who were identified as the original owners of the property. At the time of construction, the property totaled 30 acres and was a producing ranch. The stables date to the agricultural era of Rancho Mirage's history. The main residence of the property dates to the contemporary era, and the larger, historic-era property has since been subdivided; the stables are the only element dating to this early agricultural period. The stables were renovated in the 1950s, but maintain integrity of location, feeling, and association. The stables are considered eligible under Local Criterion 1 as it reflects a special element of a historical period - the early agricultural era of Rancho Mirage. The stables maintain minor integrity to the historic era.

The property has not been found individually eligible under Criterion B/2, as it has not been identified as having an association with an important person; not individually eligible under Criterion C/3, as it does not embody the distinctive characteristics of a type, period, or method of construction; and not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state, or national history. The property is not considered eligible under Local Criteria 3-8.

The property is found eligible under NRHP/CRHR Criterion A/1 as a rare example of Rancho Mirage's early agricultural history. Much of the agricultural lands that were originally present in the city have been subdivided and developed. The stables, set on a large, minimally developed lot, represent the early era of Rancho Mirage's history when much of the city was divided into large ranch properties. Many of these properties, including the subject property, maintained stables and equestrian facilities. The subject property is also eligible under Local Criterion 1 and 2 as it reflects a special element of a way of life important to the city and as a use which was once common and is now rare. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

Rancho Manana Stables is the structure located west of the main residence and consists of a long, rectangular, one-story building with a combination medium-pitched, side-gabled and flat roof. Although the main house was constructed in 1987, the existing stables appear to pre-date the residence by several decades. Cladding is board and batten. Fenestration consists of rectangular openings with "Z"-patterned flanking wood shutters. A pair of square cupolas with horizontal vents and pyramidal metal caps sits at opposite ends of the ridgeline. Enclosed by wood rail fence, the deep setback on the north side of the property contains a large expanse of clipped grass with several mature trees. Although possibly altered in subsequent years, the structure retains its integrity of location, setting, feeling, association, materials and workmanship.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

*Dated to circa 1950 on the basis of its traditional Colonial Revival styling, the Rancho Manana stables are historically noteworthy as physical evidence of the character of Rancho Mirage during its first decades as a community. Beginning in 1924-1925, property in the region was purchased, subdivided, and homesteaded primarily with the intention of pursing agriculture or establishing one of the then-popular "dude ranches" for vacationing city dwellers. In this pre-golf era, the dominant outdoor sport of the Palm Springs area was horseback riding. The Thunderbird Ranch (predecessor the Thunderbird Country Club) and the polo field at the Desert Air Hotel (both no longer extant) were other manifestations of this enthusiasm. The Rancho Manana Stables recalls this earlier equestrian identity of Rancho Mirage and appear eligible for listing under an existing or proposed local ordinance, although not for listing in the National Register of Historic Places (a "5S1" National Register Status Code).**

** No documentary resources regarding the stables were located. Further research may substantiate or disprove these conclusions.*

Date Constructed: 1971
Ownership and Address: Christopher Fellows, Craig Bassam; 881 Ponus RDG, New Canaan, CT 06840

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 37-084 Palm View Road residence, designed by architect Crombie Taylor, was constructed in 1970. In 2002, Leslie Heumann and Associates described the residence as an International style home with a "U"-shaped form. The home has a flat roof with stucco exterior. The building has a recessed front entrance and attached garage. The building features large vertical panels with large fixed windows. It appears that since the 2002 survey, the tinted fixed windows immediately adjacent to the front entryway at the front elevation, have been removed. The exterior has also been painted since the prior survey effort.

Permits provided by the City include:
- Reroof the dwelling in 2007 (Permit No. B0700215)
- Electrical work in 2007 (Permit No. B0701304)
- Addition/Remodel in 2007 (Permit No. B0701043)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the property as status code 5S1: Individual property that is listed or designated locally. The correct status code that should have been assigned in 2002 is 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The prior survey found the residence was architecturally significant as an International style, and as an example of the work or architect Crombie Taylor. The current survey more specifically asserts that the home embodies the distinctive characteristics of a Post and Beam style residence. The current survey also found the residence is associated with the theme of the Country Club Era (1951-1973), but does not retain integrity relating to this theme, and the theme of Rancho Mirage Architectural Styles (1934-1980s). The current survey found that the dwelling retains a sufficient level of integrity for individual eligibility at the national, state, and local level. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

The residence was designed by Crombie Taylor in 1970. Taylor was an architect, professor, and preservationist. He was born in Pennsylvania and earned architectural degrees at Penn State and Princeton University. He began teaching at Georgia Tech. In 1944, he began teaching at the Institute of Design in Chicago, with a focus on expanding the European Bauhaus school of modern architecture and design. He was the acting director of the program from 1951 to 1954. In 1954, Taylor left the school to practice architecture. Most of his design work was located in Chicago, the most notable being the Hull House Uptown Center. His designs were known for being simple and elegant. In the 1950s, Taylor rediscovered and reproduced stencil designs by 19th century designer Louis H. Sullivan. Taylor was a champion of Sullivan's work, working throughout his career to restore several Sullivan designed buildings, and to recover and exhibit Sullivan's trademark stencil designs. Taylor began teaching at the University of Southern California in 1962, working there until his retirement in 1985. He passed away in 1999 (Myrna Oliver, "Crombie Taylor; Preservationist, USC Design Educator," Los Angeles Times, June 1, 1999).

The subject property appears to be a modest example of an Post and Beam style residence, which has had some alterations. The International style has a period of significance from 1925 to 1955, having originated in Europe. The style is defined by square and rectangular building footprints with strong right angles. The subject property is a late example of the style, having been constructed in 1970. The home is a modest example of the style. The home features character defining features of the style including a flat roof, large expanses of windowless surfaces, lack of applied ornament, large bands of windows, and a stucco and glass exterior.

The home has not been found individually eligible under NRHP/CRHR A/1, as it has not been associated with significant events or patterns of events in regional, state, or national history; not individually eligible under Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state, or national history. The residence is not considered eligible under Local Criteria 2-6 and 8.

The residence is considered eligible as an example of the work of Crombie Taylor, and as a late example of the Post and Beam style. The single-family residence is considered eligible under NRHP/CRHR Criterion C/3 as the property individually embodies the distinctive characteristics of an International style home constructed within Rancho Mirage in the 1970s. The property is also eligible under Local Register Criteria 1 and 7 as it is representative of an Post and Beam style home that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials. The home is also eligible under Local Criterion 4 as an example of the work of Crombie Taylor. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

USC Architectural Professor Crombie Taylor designed this International Style Modern residence circa 1970. The "U"-shaped, flat-roofed house faces south and occupies a .88 acre parcel located on the northwest corner of Palm View Drive and Tamarisk Lane. The primary, east-facing elevation opens onto the 3rd fairway of the Tamarisk Country Club golf course. Medium-smooth stucco finishes the exteriors. Windows are aluminum-framed fixed and sliding, with numerous sliding glass doors. From the street, horizontal and vertical rectangular panels, projecting flat overhangs, clerestory windows, and the recessed entrance emphasize the rectilinear theme. The concrete driveway bordered by green lawns is also sharply angled. Travertine veneer edges the raised stoop and much of the raised concrete foundation. The east elevation is composed entirely of floor-to-ceiling glass. The west elevation, partially visible behind a low concrete block wall, features narrow windows between stuccoed panels. Aerial photography indicates that a rectangular pool is located between the projecting wings of the "U". Mature olive trees surround much of the property. The building appears original and in excellent condition.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

This house is architecturally significant for its International Style design by Crombie Taylor. Constructed circa 1970, the residence may have been commissioned by a Mr. and Mrs. Rosenbaum of Chicago, although this has not been verified. Crombie Taylor was a renowned professor of architecture at USC who was known primarily for his efforts at promoting and preserving the work of famous Chicago-based architect Louis Sullivan. This is the only identified building that Taylor designed in the Coachella Valley. The residence is clearly an International Style design in its rectilinearity, flat roof, window bands, and unadorned surfaces. Unlike architect William Cody's Desert Modern designs, this house has shallow overhangs without post supports, no covered walkways, and an exclusively stucco finish (Cody often used slumpstone, board and batten, and natural rock sheathing, as well as stucco). The house harkens back to architect Albert Frey's early International Style buildings in Palm Springs from the 1930s such as the Kocher-Samson building and Villa Hermosa hotel. In Rancho Mirage, the 1958 Firestone Residence by William Pereira in the Thunderbird Country Club is the only other pure, unmodified International Style house in the city. The property appears eligible for designation under an existing or proposed local ordinance, but does not appear eligible for listing in the National Register of Historic Places (a "5S1" National Register Status Code).

Address: 40-105 Sand Dune Road City: Rancho Mirage Zip: 92270
UTM Zone: 11S 553973.42 m E 3735425.01 m N
APN: 684020032

Date Constructed: 1953
Ownership and Address: Beverly J Smith Family Trust, Stephen Amos Smith; 36 S Portola Road, Laguna Beach, CA 92651

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 40-105 Sand Dune Road, designed by architect William Cody, was constructed in 1953. The residence is located on the fairway of the Thunderbird Country Club golf course. In 2002, Leslie Heumann and Associates described the residence as a one-story, "L"-shaped Desert Modernist style home. The exterior of the house is clad in slumpstone and vertical board siding. The home has a recessed front porch and a large interior chimney that intersects the roofline. The home has an attached garage. The rear elevation appears to have a wide roof overhang which creates a covered patio space along the rear elevations. One original casement window is visible. Much of the residence is not visible due to vegetation, however, there does not appear to have been any significant alterations to the residence since the 2002 survey.

Permits provided by the City include:
- Mechanical/HVAC work in 2010 (Permit No. B1000386)
- Addition/Remodel in 2013 (Permit No. B1300383)

See Continuation Sheet for Additional Information.

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the property as status code 5S1: Individual property that is listed or designated locally. The correct status code that should have been assigned in 2002 is 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The prior survey found the residence was architecturally significant as an early example of architect William Cody's Desert Modern style. The current survey found that the dwelling is associated with the theme of the Country Club Era (1951-1973). It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community. The current survey found that the dwelling retains a sufficient level of integrity for individual eligibility at the national, state, and local level. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

Updated Building, Structure, Object Information Continued:

The home was constructed in 1953 by William Cody. William Francis Cody (1916-1978) was born in Dayton, Ohio, in 1916. Cody's family relocated to California in 1930. While attending Beverly Hills High School, Cody designed and built stages for school plays prior to his graduation in 1932. Following high school, he graduated from Santa Monica Junior College in 1939 and enrolled in the College of Architecture and Fine Arts at the University of Southern California. He graduated from USC in 1942. During his time at Santa Monica Junior College and USC, Cody worked for architects, Heath Wharton and Asa Hudson. Following his graduation, Cody worked for several engineering and architecture firms in California, including Cliff May whom he worked for in 1944. In 1945, Cody's firm was hired to alter the Desert Inn in Palm Springs. Following the Desert Inn project, Cody began working independently in California and Arizona by 1946.

In 1946, William F. Cody moved to Palm Springs permanently and received his first independent commission to design the Del Marcos Hotel, which earned him an award in 1949 from the California chapter of the American Institute of Architects. In 1947, he was hired to convert the Thunderbird Dude Ranch, originally constructed in 1936, to the Thunderbird Country Club. His work at Thunderbird led to future commissions at other clubhouses, recreational facilities, and residential developments, at locations throughout Palm Desert, such as the Eldorado Country Club, Tamarisk Country Club, the Racquet Club, the Tennis Club, and the Seven Lakes Clubhouse. In Palm Springs, Cody was one of the architects, with Wexler & Harrison and Philip Koenig, to design the Spa Bathhouse and Spa Hotel. In 1952, Cody designed the Horizon Hotel.

In the Coachella Valley, he was responsible for several notable Modern style residential designs including the Perlberg, Shamel, and Abernathy residences in Palm Springs. Throughout his career, he designed commercial and residential properties throughout California, Arizona, Texas, Cub, and Mexico. He was inducted into the College of Fellows of the AIA in 1965. Some of his final projects included St. Theresa's Catholic Church in 1968 and the Palm Springs Library Center in 1972. In 1973, he suffered a severe stroke which caused him to end his architectural career. He died in 1978 and today is considered one of the most important architects in the Desert Modernism movement. The subject property is considered an early example of his work. It features character defining elements of Cody's Desert Modern style, including the use of slumpstone, the low-pitched roof, deep overhangs, and a shielded front elevation.

The dwelling has not been found individually eligible under NRHP/CRHR Criterion A/1, as it has not been associated with significant events or patterns of events in local, regional, state, or national history; not individually eligible under NRHP/CRHR Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state or national history. The residence is not considered eligible under Local Criteria 2-6 and 8.

The single-family residence is considered eligible under NRHP/CRHR Criterion C/3 as the property individually embodies the distinctive characteristics of a Desert Modernist style home constructed by William Cody within Rancho Mirage in the 1950s. The property is also eligible under Local Register Criteria 1 and 7 as it is representative of a Desert Modernist style home that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials. The home is also eligible under Local Criterion 4 as an example of the work of Cody. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

The Dyer Residence was designed in 1953 by architect William Cody with its west-facing elevation oriented towards the fairways of the Thunderbird Country Club golf course. In the country club areas of Rancho Mirage the houses are oriented towards the rear for spectacular golf course views. The one-story, "L"-shaped house is crowned with a medium-pitched hipped roof with deep eaves. Set on .53 acres at the southwest corner of Country Club Drive and Sand Dune Road, the house is 3,051 square feet, with four bedrooms and 3.25 bathrooms. Exteriors are clad in slumpstone and vertical boards. Windows are steel-framed fixed and casement with sliding glass doors opening to the rear swimming pool. The roof is cantilevered over the entrance porch located at the northeast corner of the house. The porch is notched at a 45-degree angle and shades a low slumpstone planter in which sits not only a ficus tree but also the exterior slumpstone chimney that rises to penetrate the roof. Extensive, lush landscaping surrounds the property and consists of lawns, hedges, citrus and olive trees, and mature Washingtonia filifera and fan palms. The house appears original and in excellent condition.

This property is architecturally significant as a William Cody-designed house that illustrates an early phase in the evolution of the Desert Modern style for which he, and E. Stewart Williams, became known. Built in 1953 for Joseph Dyer, the residence incorporates a number of features commonly associated with Cody, including the use of slumpstone, a low-pitched (almost flat) roof, deep overhangs, and shielded street presence with only clerestories providing light. The notched entrance porch is a clever means of providing access from north and east sides, given the corner location.

William F. Cody FAIA (1916-1978) was born in Dayton, Ohio and raised in Los Angeles. While attending architecture school at the University of Southern California in the late 1930s and early 1940s, Cody was also working for architect Cliff May,

***B10. Significance (continued):**

gaining experience in the adaptation of ranch and hacienda style houses to modern floor plans and construction techniques. Suffering from asthma, and believing that the Palm Springs area offered opportunity and prominent clients, Cody moved to Palm Springs in 1944-45 and set up practice. One of his first projects, the Del Marcos Hotel of 1946, won an AIA "creditable mention" award as an example of new resort hotel architecture for its "ingenious plan, which appears complicated but is actually orderly and thoughtful." Author and critic Alan Hess writes, "Greater thinness and more striking elegance became the single-minded focus of his ongoing design." Despite a reputation for carousing, Cody was exceptionally focused on the details of his designs and pushing the boundaries of his materials. His well-known and innovative early buildings, along with friendships with influential members of the Thunderbird, Tamarisk, and Eldorado Country Clubs, resulted in commissions to design (or in the case of Thunderbird, remodel) the clubhouses of all three locations. In addition, Cody designed a large number of residences in the country club areas, many along the fairways of the new resort concept of golf course living, a concept that Cody himself helped devise.

Author Adele Cygelman writes, "Joints and door frames seemingly disappeared into walls. He merged living rooms into terraces and gardens. Roofs jutted out twelve feet to shield the walls of glass. Pattern and texture came from tile floors, carved wood panels, and concrete-block screens with geometric motifs, all of which were meticulously designed by Cody to match each other precisely at the seams and angles where the planes met." Like other Coachella Valley architects, Cody designed churches, gas stations, motels, restaurants, offices, a mobile home park, shopping centers, even a carwash. "Yet a distinct character can be seen in all of them," says Hess. "It is a restless energy that brings a liveliness to his plans, elevations and details. The radical thinness of Cody roofs or the daring reach of a cantilever are clearly the result of a wrestling match between the architect and the materials and the laws of physics; that energy and striving remains in the building." Hess concludes, "The fact that Cody could take an established vocabulary and style and reinterpret it so vividly ranks him among the best of mid-century California designers."

This property appears eligible for designation under an existing or proposed local ordinance, but does not appear eligible for listing in the National Register of Historic Places (a "5S1" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City Date: 2021 Map Scale: 1;24000
Address: 70-889 Tamarisk Lane City: Rancho Mirage Zip: 92270

Date Constructed: 1960
Ownership and Address: Tamarisk PSD; 545 5th Avenue, Suite 1103, New York, NY 10017

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 70-889 Tamarisk Lane residence was constructed circa 1970 in the Tamarisk Country Club golf course. In 2002, Leslie Heumann and Associates described the residence as a one-story, Desert Modern home with a flat roof and L-shaped plan. The roof has a deep overhang with varying roof heights. The exterior is clad in stucco with many floor-to-ceiling fixed windows. The front elevation in slightly recessed, with the northeast wing extended forward to create a sheltered entrance. The front entrance features a large double door with large fixed windows above and adjacent. Since the 2002 survey, the residence has been reroofed with a thick, rectangular roofline with boxed eaves. The screened sunroom at the rear elevation appears to have been removed circa 2021.

Permits provided by the City include:
- Plumbing work in 2003 (Permit No. B0301262)
- Electrical work in 2006 (Permit No. B0601240)
- Encroachment construction in 2011 (Permit No. E1100216)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the property as status code 5S3: Appears to be individually eligible for local listing or designation through survey evaluation. The prior survey found the subject property was architecturally significant as an example of the Desert Modern style. The current survey found that the dwelling is associated with the theme of the Country Club Era (1951-1973) and the theme of Rancho Mirage Architectural Styles (1934-1980s). The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

The residence is significant as an example of the Desert Modernist style. The development of country clubs coincided with the construction of custom residential and commercial properties within their boundaries. Booming post-war development within these country clubs helped shape what is now commonly referred to as 'Desert Modernism', a distinct subtype of the International style of architecture that incorporated modern materials, techniques, and floor plans with the unique requirements of building within a desert environment. The typical characteristics of Desert Modernism included large expanses of floor-to-ceiling glass walls sheltered by deep overhangs extending from flat roofs and flowing interior floor plans that merged gracefully with the outdoors. Often oriented to the rear, where most decorative flourishes could be visible from the fairways of the country clubs, Desert Modernist houses in Rancho Mirage often had a rear swimming pool and expansive golf course views and multiple points of outdoor access while front elevations were often constructed to be unassuming and often shielded for privacy, with only clerestories and obscured glass panels adjacent to the entries providing light. These houses were often light, with roofs floating above glass walls and clerestories, and ceilings supported by thin steel or wood posts. In addition to glass, exterior materials included stucco, wood, slumpstone, and natural rock that often mirrored the desert environment. The subject property features character defining features of the style including: a flat roof, floor-to-ceiling glass walls, deep overhangs, and the interaction of the indoor/outdoor spaces.

The home has not been found individually eligible under NRHP/CRHR A/1, as it has not been associated with significant events or patterns of events in regional, state, or national history; not individually eligible under Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state, or national history. The residence is not considered eligible under Local Criteria 2-6 and 8.

The single-family residence is considered eligible under NRHP/CRHR Criterion C/3 as the property individually embodies the distinctive characteristics of a Desert Modernist style home constructed within Rancho Mirage in the 1960s. The property is also eligible under Local Register Criteria 1 and 7 as it is representative of a Desert Modernist style home that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials. The dwelling has had some alterations, but it maintains adequate integrity from the historic period to convey its significance.

This circa 1970, one-story, Desert Modern residence faces north, with its primary (rear) elevation overlooking the fairways of the Tamarisk Country Club golf course. The flat-roofed building is generally "L"-shaped in plan. Deep overhangs shade medium-smooth stucco sheathing of the exterior walls. Windows are fixed, sliding, and clerestory in type. A circular driveway leads to a recessed front entrance porch. The roof of the center section of the house is raised a few feet above the primary roof, with clerestories facing the street and a screened ceiling and walls at the rear. A pair of screen doors opens to concrete steps leading down to the swimming pool. Desert landscaping appears in both front and rear, with gravel, large boulders, and many varieties of cacti, palms, and other vegetation. The house is in excellent condition.

Period of Significance: *1951-1973* **Property Type:** *Single-family Residence* **Applicable Criteria:** *C*
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

This property is architecturally noteworthy as an example of the Desert Modern style in its flat roof, floor-to-ceiling glass walls, deep overhangs, and indoor/outdoor access. It is also one of a dwindling number of residences along the Tamarisk Country Club golf course to retain a fairly characteristic Modern appearance. Apparently a house had been erected at this address by at least 1961, when the Palm Springs directory listed George J. Goldstein as the owner. However, the appearance of the house in 2002 suggests that that home was either substantially remodeled or replaced in the early 1970s. No building permits were located to confirm this supposition. Nonetheless, the property is evocative of the design principles of mid-century modern design. Although the resource does not appear eligible for listing in the National Register of Historic Places or for designation under an existing or proposed local ordinance, it is of local interest (a "5S3" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City, Rancho Mirage Date: 2021 Map Scale: 1;24000
Address: 71-284 San Gorgonio Road City: Rancho Mirage Zip: 92270
UTM Zone: 11S 553694.54 m E 3733958.11 m N
APN: 684210016

Date Constructed: 1948
Ownership and Address: Linda Joy Ward; PO Box 2314, Mill Valley, CA 94942

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 71-284 San Gorgonio Road was constructed in 1948 in the Magnesia Falls Cove neighborhood. The residence has a rectangular, one-story form, constructed in the Spanish Modern style. The building is constructed on concrete blocks with at least a portion of the exterior clad in board and batten siding. The home has a low-pitched side gable roof clad with red tiles. The residence has an attached garage at the west side of the building. In 2002, Leslie Heumann and Associates described the residence as having multi-pane steel casement windows, and a full-width front porch supported by square wood posts, and visible rafters at the roof. During the 2024 survey, heavy vegetation obscured much of the residence. Based on aerial images, it appears that there has not been significant alterations to the residence since the 2002 survey.

Permits provided by the City include:
- Electrical work in 2007 (Permit No. B0700657)
- Mechanical/HVAC work in 2013 (Permit No. B1300050)
- Sewer work in 2020 (Permit No. B2020411)

See Continuation Sheet for Additional Information.

Updated Primary Record Information Continued:

View of southwest (front) elevation. (71-284 San Gorgonio Road_2)

View of southwest (front) elevation. (71-284 San Gorgonio Road_1)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the property as status code 5S1: Individual property that is listed or designated locally. The correct status code that should have been assigned in 2002 is 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The prior survey found the residence was historically and architecturally significant as an example of the early development of Rancho Mirage and as a rare example of an early Spanish Colonial Revival style home. The current survey found that the dwelling is associated with the theme of the the Early Agricultural and Residential Period (1924-1951) and Rancho Mirage Architectural Styles (1934-1980s). The current survey found that the dwelling retains a sufficient level of integrity for individual eligibility at the national, state, and local level. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

The residence was constructed 1948 in the Magnesia Falls Cove neighborhood. The home was constructed in the early period of residential development in Rancho Mirage. The Magnesia Falls Cove neighborhood was the first small tract development in Rancho Mirage. In 1934, the land that would become Magnesia Falls Cove was purchased by a Louis MacLaughlin "Mac" Blankenhorn, a Pasadena businessman, realtor, and land developer. He began selling lots and "modern attractive small homes," in the area, with the earliest streets being Sahara, Mirage, Veldt, and Tunis. This early development was known as Rancho Mirage. By 1937, six homes had been constructed, with two in progress, and telephone lines had been laid. The stock market crash and depression of the 1930s led to slow development of the area, however, by April of 1937, there were enough residents to charter the Rancho Mirage Community Association and for Magnesia Falls Cove to become a postal stop. These early homes were smaller than the more modern residences that would be constructed in later periods. Advertisements from 1937 described the style as "Early American;" they were typically adobe or had Spanish Colonial Revival elements. Development largely stalled until after World War II.

Post World War II, development rapidly increased. In 1944, Hollywood lawyer, A. Ronald Button, purchased approximately 1,900 acres in the Magnesia Falls Cove area. By the late 40s, over 100 homes were under construction. In 1956, Button's brother-in-law, TV media star and developer Art Linkletter, began developing 137 more homes. The homes built in this era were marketed as luxury homes, and were largely "modern ranch homes and long gabled cottages." Into the late 1950s, development continued, with many more residences, two hotels, and a community pool being built. In 1957, Button-Linkletter, sold the remaining land to developers Harold Garfield and Arthur Desser. They would go on to develop the remaining lots and the commercial center across from Magnesia Falls Cove. There are currently around 550 homes in Magnesia Falls Cove and White Sun neighborhoods ("Magnesia Falls Cove Was Known as 'Rancho Mirage,' Magnesia Falls Cove Community Association; Tracy Conrad, "History: Intrepid Mac and Ruth Blankenhorn invented Rancho Mirage," Desert Sun, April 24, 2022).

The subject property is an example of a Spanish Colonial Revival style home built in Rancho Mirage. The style was popularized in Southern California, and was most prevalent from 1915 to 1940. It was one of the most popular building styles in Southern California in the 1920s and 1930s. The subject property features several character defining features of the style, including a low pitched roof covered in rounded tiles, a narrow front porch beneath the roof overhang, and narrow wood posts supporting the porch.

The home has not been found individually eligible under NRHP/CRHR A/1, as it has not been associated with significant events or patterns of events in local, regional, state, or national history; not individually eligible under Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state, or national history. The residence is not considered eligible under Local Criteria 2-8.

The home is one of few homes dating to the early development of Rancho Mirage. After the introduction of country club communities to the area, development significantly increased; homes from before this era are rarer. The home maintains significance as a rare example of a Spanish Colonial Revival style home. The single-family residence is considered eligible under NRHP/CRHR Criterion C/3 as the property individually embodies the distinctive characteristics of a Spanish Colonial Revival style home constructed within Rancho Mirage in the 1960s. The property is also eligible under Local Register Criteria 1 as it is representative of a Spanish Colonial Revival style home that reflects a specific historical period in the city. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

This rectangular, one-story Spanish Modern residence was built circa 1948 of concrete block construction. Red tiles cover the low-pitched side-gabled roof, which has rafters visible beneath deep overhangs along the southwest-facing facade. Windows are multi-pane steel casement. Square wood posts support the porch roof, which shades the full-width of the façade including the entrance. An attached double car garage is located on the west end of the building. Gravel borders the circular concrete driveway. Landscaping is a mix of oleander, citrus, olive trees, bougainvillea, Washingtonia filifera, fan and date palms, and many varieties of cactus. The house appears original and in excellent condition.

This house is historically and architecturally significant as a document of an early phase in the development of Rancho Mirage and as one of the few examples of Spanish-influenced housing from that period. Constructed circa 1948, the house was owned by Mr. H. W. Grafton in 1953, the first year that Rancho Mirage addresses were listed in the Palm Springs directory. Of the essentially three styles of houses built in the Magnesia Falls area before and immediately after World War II (the other two being Vernacular Modern and Ranch), the Spanish-influenced style was the least common. The Magnesia Falls area was developed after Clancy Lane and its associated ranches and farms were established in the late 1920s and the 1930s. While this property appears to be a custom house, Magnesia Falls was also the location of the first small tract development in Rancho Mirage, improved with Van Pelt and Lind designs for developer Louis Blankenhorn. Combining a low-pitched, side-gabled, red tile roof derived from the Spanish style with concrete block construction and steel casement windows, the house typifies the hybrid design characteristic of the period. The property appears eligible for designation under an existing or proposed local ordinance, but does not appear eligible for listing in the National Register of Historic Places (a "5S1" National Register Status Code).

APN: 684210014

Date Constructed: 1949
Ownership and Address: Whittle Investors Palm Springs; 260 S Los Robles Ave, Ste 303, Pasadena, CA 91101

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 71-312 San Gorgonio Road residence was constructed in 1949. The home has a U-shaped form with two freestanding sections connected by a double carport/breezeway. The home has an in-ground pool at the front of the property. The home is constructed of concrete blocks. It has a flat roof with a wide overhang. The residence features a large, non-original aluminum sliding door at the front elevation. At the front elevation, there is a large multi-pane casement window, and one large tri-part window. There is one entrance door at the front elevation. In 2002, Leslie Heumann and Associates described the residence as a Vernacular Modern home. Since the 2002 survey, the tripartite window was installed, replacing a multi-pane casement window. There does not appear to have been any other alterations since the 2002 survey.

Permits provided by the City include:
- Electrical work in 2007 (Permit No. B0700659)
- Sewer work in 2013 (Permit No. B1300006)
- Electrical work in 2018 (Permit No. B1800720)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the property as status code 5S3: Appears to be individually eligible for local listing or designation through survey evaluation. The prior survey found the residence was architecturally significant as an example of an early residence constructed in the Magnesia Falls Cove neighborhood. The home was previously described as a Vernacular Modern residence; it most closely resembles the Tract Ranch style. The current survey found the residence is associated with the Early Agricultural and Residential Period (1924-1951) and Rancho Mirage Architectural Styles (1934-1980s). The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

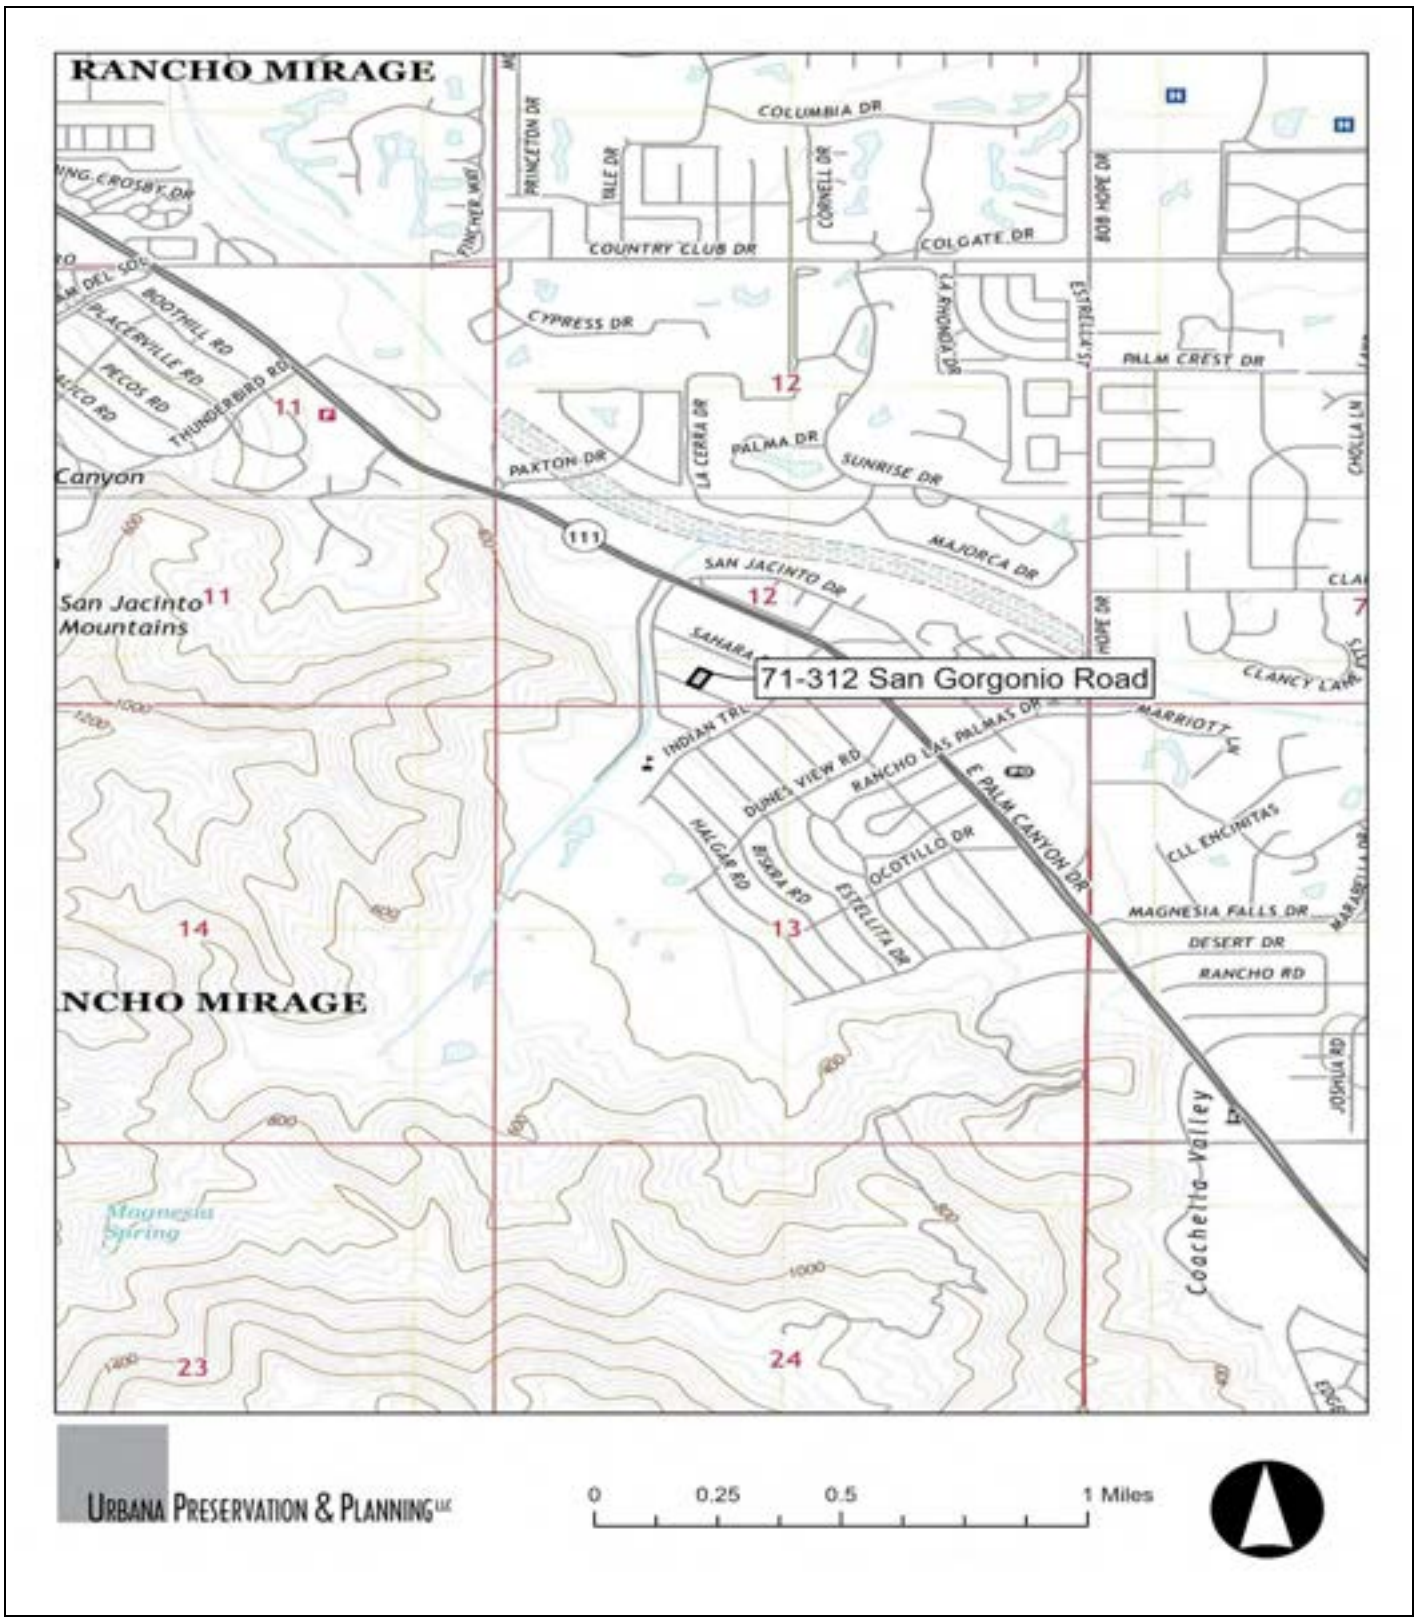
Updated Building, Structure, Object Information Continued:

The residence was constructed 1949 in the Magnesia Falls Cove neighborhood. The home was constructed in the early period of residential development in Rancho Mirage. The Magnesia Falls Cove neighborhood was the first small tract development in Rancho Mirage. In 1934, the land that would become Magnesia Falls Cove was purchased by a Louis MacLaughlin "Mac" Blankenhorn, a Pasadena businessman, realtor, and land developer. He began selling lots and "modern attractive small homes," in the area, with the earliest streets being Sahara, Mirage, Veldt, and Tunis. This early development was known as Rancho Mirage. By 1937, six homes had been constructed, with two in progress, and telephone lines had been laid. The stock market crash and depression of the 1930s led to slow development of the area, however, by April of 1937, there were enough residents to charter the Rancho Mirage Community Association and for Magnesia Falls Cove to become a postal stop. These early homes were smaller than the more modern residences that would be constructed in later periods. Advertisements from 1937 described the style as "Early American;" they were typically adobe or had Spanish Colonial Revival elements. Development largely stalled until after World War II.

Post World War II, development rapidly increased. In 1944, Hollywood lawyer, A. Ronald Button, purchased approximately 1,900 acres in the Magnesia Falls Cove area. By the late 40s, over 100 homes were under construction. In 1956, Button's brother-in-law, TV media star and developer Art Linkletter, began developing 137 more homes. The homes built in this era were marketed as luxury homes, and were largely "modern ranch homes and long gabled cottages." Into the late 1950s, development continued, with many more residences, two hotels, and a community pool being built. In 1957, Button-Linkletter, sold the remaining land to developers Harold Garfield and Arthur Desser. They would go on to develop the remaining lots and the commercial center across from Magnesia Falls Cove. There are currently around 550 homes in Magnesia Falls Cove and White Sun neighborhoods ("Magnesia Falls Cove Was Known as 'Rancho Mirage,' Magnesia Falls Cove Community Association; Tracy Conrad, "History: Intrepid Mac and Ruth Blankenhorn invented Rancho Mirage," Desert Sun, April 24, 2022).

The residence is an example of a Tract Ranch style home. The residence features several character defining features of the style including an asymmetrical facade, a low pitched gable roof, casement windows, windows with no trim, and an attached carport. The home is a simplistic example of a tract home, but features more unique details than a standard tract ranch. The home features a U-shaped plan, a carport set between the two wings of the home, and an emphasis on the interaction between the indoor and outdoor space.

The home has not been found individually eligible under NRHP/CRHR A/1, as it has not been associated with significant events or patterns of events in local, regional, state, or national history; not individually eligible under Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state, or national history. The residence is not considered eligible under Local Criteria 2-8.



The home maintains local significance. The home is one of few homes dating to the early development of Rancho Mirage. After the introduction of country club communities to the area, development significantly increased; homes from before this era are rarer. The single-family residence is considered eligible under NRHP/CRHR Criterion C/3 as the property individually embodies the distinctive characteristics of a modest Tract Ranch style home constructed within Rancho Mirage in the 1940s. The property is also eligible under Local Register Criteria 1 as it is representative of a Tract Ranch style home that represents the homes being developed prior to the post-WWII housing boom. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

Erected in 1949, this southwest-facing, flat-roofed house is of concrete block construction. The residence is 1,548 square feet, contains two bedrooms and 1.75 bathrooms, and is set on .55 acres. Windows are multi-pane steel casement. Spanned by a continuous roof, the "L"-shaped building is segmented into two freestanding sections connected by a double carport/breezeway. The roof and interior chimney have been covered with insulating foam. A non-original aluminum-framed sliding glass door and a single, screened door in the west wing of the house open to a concrete patio and rectangular swimming pool. The entrance to the east wing is within the carport. Slender steel posts support the carport roof. South of the concrete driveway, desert sand is dotted with smoke trees, oleander, and cacti, while the north side is landscaped with lawns and hedges. The house is mostly original and in excellent condition.

The property is architecturally noteworthy as a relatively intact and characteristic example of a type of residence that was constructed during the early phase of development of one Rancho Mirage's oldest neighborhoods, Magnesia Falls. It is a basic Vernacular Modern building constructed of concrete block with a flat roof and no applied ornamentation. It was constructed in 1949 by an unknown architect and/or builder. The first year that this property appears in local directories is 1961, when the owners were listed as Harold F. and Ruth Whittle. Although the resource does not appear eligible for listing in the National Register of Historic Places or for designation under an existing or proposed local ordinance, it is of local interest (a "5S3" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City Date: 2021 Map Scale: 1;24000
Address: 70-770 Frank Sinatra Drive City: Rancho Mirage Zip: 92270
UTM Zone: 11S 553015.97 m E 3737102.48 m N
APN: 674340011

Date Constructed: 1960
Ownership and Address: Matt C Bailey, Alicia A Bailey; 70770 Frank Sinatra Drive, Rancho Mirage, CA 92270

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 70-770 Frank Sinatra Drive residence was constructed in 1961 by Robert Marx with the MarVal Construction Company for the original owner, Ben Smith, in Tamarisk Country Club. The residence has an L-shaped plan, located facing the 17th tee of the golf course. In 2002, Leslie Heumann and Associates described the residence as a Vernacular Modern home. The home most closely resembles a Contemporary style home. The exterior is clad in stucco with square, concrete block accent walls throughout. The residence has a butterfly shed roof with open eaves. At the front elevation there is a recessed front porch. There is a wide, stucco clad exterior chimney at the front elevation. There is an attached carport at the front elevation. There does not appear to have been significant alterations to the residence since the 2002 survey.

Permits provided by the City include:

- Reroof of dwelling in 2000 (Permit No. B0001423)
- Sewer work in 2012 (Permit No. B1200876)
- block wall construction in 2013 (Permit No. B1301079)
- Reroof of dwelling in 2019 (Permit No. B1900255)
- Solar installation in 2019 (Permit No. B1801938)

See Continuation Sheet for Additional Information.

Updated Primary Record Information Continued:

View of the south (front) elevation. (70-770 Frank Sinatra Drive_1)

View of the south (front) elevation. (70-770 Frank Sinatra Drive_2)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the property as status code 5S3: Appears to be individually eligible for local listing or designation through survey evaluation. The prior survey found the residence was architecturally significant as a notable example of a Vernacular Modern residence within the Tamarisk Country Club. The home mostly closely resembles a Contemporary style home. The current survey found that the residence is associated with the theme of the Country Club Era (1951-1973) and the theme of Rancho Mirage Architectural Styles (1934-1980s). The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

The residence features several character defining features of the Contemporary style, including a butterfly roof form, large windows, stucco siding and glass walls, and exposed roof beams. The home is set within the Tamarisk Country Club, located at the 17th tee, constructed in 1960. The Tamarisk Country Club was constructed in 1952.

The home has not been found individually eligible under NRHP/CRHR A/1, as it has not been associated with significant events or patterns of events in local, regional, state, or national history; not individually eligible under Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state, or national history. The residence is not considered eligible under Local Criteria 2-6 and 8.

The single-family residence is considered eligible under NRHP/CRHR Criterion C/3 as the property individually embodies the distinctive characteristics of a Contemporary style home constructed within Rancho Mirage in the 1960s. The property is also eligible under Local Register Criteria 1 and 7 as it is representative of a Contemporary style home that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Capped with a medium-pitched shed roof, this Modern, one-story, south-facing residence was constructed circa 1961 on .59 acres. The primary (rear) elevation of the "L"-shaped house faces the 17th tee of the Tamarisk Country Club golf course. Exteriors are sheathed in medium-smooth stucco with exposed rafters visible beneath deep overhangs. Windows are a combination of fixed, clerestory, sliding, and ceiling-to-floor glass. The facade of the house is not visible from busy Frank Sinatra Drive. At the rear, low concrete steps lead from the patio to the rectangular swimming pool. A non-original wooden sunshade is located on the pool's east side. Toward the west end of the building, the downward sloping shed roof turns upward, creating a bow-tie roofline. A low wall of square concrete blocks forms a planter holding a cluster of mature fan palms near the pool. Lawns and extensive landscaping surround the property, including a small grove of citrus trees located between the swimming pool area and the golf course for privacy. The house appears original and in good condition.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

This property is architecturally noteworthy as a good, mostly original, example of the type of Vernacular Modern seasonal residences that were constructed along the Tamarisk Country Club golf course in the first decade of the country club era. The shed roof with upturned end, clerestories, and extensive use of glass are indicative of Vernacular Modern design of the period. According to the history, Tamarisk Country Club, The First 50 Years 1952 – 2002, Dan Elman was the owner of this residence, which was one of the first three houses built at Tamarisk. His widow, Jacqueline Garcia, is still the owner. Although the resource does not appear eligible for listing in the National Register of Historic Places or for designation under an existing or proposed local ordinance, it is of local interest for its architectural type and Tamarisk-related origins (a "5S3" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City Date: 2021 Map Scale: 1;24000
Address: 37-845 Thompson Drive City: Rancho Mirage Zip: 92270
UTM Zone: 11S 553141.09 m E 3737197.24 m N
APN: 674351005

Date Constructed: 1979
Ownership and Address: Stephen Eliot Sessa, Sara Lynn Sessa; 2682 Woodstock Road, Los Angeles, CA 90046

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 37-845 Thompson Drive residence, designed by architect William Cody, was constructed in 1956 in the Tamarisk Country Club. The residence was originally constructed in 1956, and it was partially demolished and rebuilt in 1979. In 2002, Leslie Heumann and Associates described the residence as a one-story Desert Modern home with a flat roof. The residence has flat-roofed walkways supported by slender square steel posts leading to a recessed front entry porch. The home has a projecting double carport. The exterior is clad in narrow vertical boards and medium-smooth stucco. The 2002 survey indicates that the residence was modified in 1979 and rebuilt with the original William Cody Desert Modernist features. Aerial images show that the residence was expanded at the front (east) elevation with new trellises.

Permits provided by the City include:
- Pool and spa construction in 2002 (Permit No. B0201784)
- block wall construction in 2002 (Permit No. B0200295)
- Electrical work in 2004 (Permit No. B0402594)
- Plumbing work in 2008 (Permit No. B0800489)
- Addition/Remodel in 2020 (Permit No. B2000798)
- Reroof of dwelling in 2021 (Permit No. B2100002)
- Addition/Remodel in 2021 (Permit No. B2100895)
- Pool and spa construction in 2022 (Permit No. B2200072)
- block wall construction in 2022 (Permit No. B2200485)
- Mechanical/HVAC work in 2022 (Permit No. B2200899)

View of east (front) elevation. (37-845 Thompson Drive_2)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the residence as status code 5S3: Appears to be individually eligible for local listing or designation through survey evaluation. The current survey found that the dwelling is associated with the theme of the Country Club Era (1951-1973), but it does not possess individual documented significance in relation to this theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community. The prior survey found the residence was architecturally significant as an example of the work of architect William Cody. The prior survey and historic aerial images show that the residence was altered circa 1979. The alterations appear to have reconstructed residence incorporated elements of the original Cody design elements, adding reversible trellises. Therefore, the residence still maintains integrity to the historic era.

William Francis Cody (1916-1978) was born in Dayton, Ohio, in 1916, and Cody's family relocated to California in 1930. While attending Beverly Hills High School, Cody designed and built stages for school plays prior to his graduation in 1932. Following high school, he graduated from Santa Monica Junior College in 1939 and enrolled in the College of Architecture and Fine Arts at the University of Southern California. He graduated from USC in 1942. During his time at Santa Monica Junior College and USC, Cody worked for architects, Heath Wharton and Asa Hudson. Following his graduation, Cody worked for several engineering and architecture firms in California, including Cliff May whom he worked for in 1944. In 1945, Cody's firm was hired to alter the Desert Inn in Palm Springs. Following the Desert Inn project, Cody began working independently in California and Arizona by 1946.

In 1946, William F. Cody moved to Palm Springs permanently and received his first independent commission to design the Del Marcos Hotel, which earned him an award in 1949 from the California chapter of the American Institute of Architects. In 1947, he was hired to convert the Thunderbird Dude Ranch, originally constructed in 1936, to the Thunderbird Country Club. His work at Thunderbird led to future commissions at other clubhouses, recreational facilities, and residential developments, at locations throughout Palm Desert, such as the Eldorado Country Club, Tamarisk Country Club, the Racquet Club, the Tennis Club, and the Seven Lakes Clubhouse. In Palm Springs, Cody was one of the architects, with Wexler & Harrison and Philip Koenig, to design the Spa Bathhouse and Spa Hotel. In 1952, Cody designed the Horizon Hotel.

In the Coachella Valley, he was responsible for several notable Modern style residential designs including the Perlberg, Shamel, and Abernathy residences in Palm Springs. Throughout his career, he designed commercial and residential properties throughout California, Arizona, Texas, Cub, and Mexico. He was inducted into the College of Fellows of the AIA in 1965. Some of his final projects included St. Theresa's Catholic Church in 1968 and the Palm Springs Library Center in 1972. In 1973, he suffered a severe stroke which caused him to end his architectural career. He died in 1978 and today is considered one of the most important architects in the Desert Modernism movement. The subject property is considered an early example of his work. It features character defining elements of Cody's Desert Modern style, including a flat roof, deep overhangs, covered walkways supported by thin posts, floor to ceiling glass, and a natural rock chimney.

The original owners of the residence were David C. and Loretta Holub. Holub was chairman of the board of Holub Iron Steel Co., a firm founded by his father in Akron, Ohio. Holub was one of the original members of the Tamarisk Country Club. He was president of the Tamarisk Country Club from 1961-1962, and was the first vice president of the Palm Springs Desert Golf Classic (now known as the Bob Hope Desert Classic). Holub passed away in 1973 (The Desert Sun, March 07, 1973, Page 2).

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the home is not significantly associated with the lives of persons significant in our past. While the house was owned by David C. and Loretta Holub, notable public figures, their accomplishments do not rise to the level of significance necessary for designation under this criterion. The property is eligible under NRHP/CRHR Criterion C/3 as it embodies the distinctive characteristics of the Desert Modernist style home constructed in Rancho Mirage during the 1950s and is representative of the work of the master architect William Cody. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

Updated Building, Structure, Object Information Continued:

The single-family residence is not considered eligible under Local Criteria 2-3, 5-6, and 8. The Holub Residence is considered eligible under Local Register Criterion 1 as the residence is representative of a mid-20th century Desert Modernist style home in Rancho Mirage. It is also considered eligible under Local Register Criterion 4, as it represents the work of the master architect William Cody. The property is eligible under Local Register Criterion 7 as it embodies elements of outstanding attention to architectural design, detail, craftsmanship and materials. Overall, the property appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. The dwelling maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

This mostly rectangular Desert Modern residence (which was substantially modified in 1979) was originally designed by architect William Cody in 1957 with its rear elevation towards the fairways of the Tamarisk Country Club golf course. The east-facing, one-story, flat-roofed house is 2,519 square feet, with three bedrooms and 2.25 bathrooms, and is set on .46 acres. Exteriors are sheathed in narrow vertical boards and medium-smooth stucco. Windows are primarily large panes of fixed or sliding glass. From the street, the most striking features are the flat-roofed walkways supported by slender square steel posts that front the residence and lead to the recessed entry porch. The projecting double carport shares the same flat roof and post configuration. A natural rock chimney emerges towards the middle of the house. Along the full width of the rear elevation, deep overhangs again feature flat roofs supported by square posts. Smooth concrete decking bordered by lawns and hedges surrounds the rectangular swimming pool. Wood screens on the roof disguise air handling equipment. An expansive pebble aggregate driveway occupies much of the area fronting the residence. Clipped hedges, mature fan palms, citrus, olive trees, and other vegetation edge the property on all sides. Although much of the residence was demolished and rebuilt in 1979, the house retains substantial integrity.

This property is architecturally noteworthy for its evocation of architect William Cody's Desert Modernism. The David C. and Loretta Holub residence, designed originally by William Cody, was published in the May 1957 issue of Palm Springs Villager. Even after the substantial 1979 alterations, the residence exhibits Cody's Desert Modern characteristics, including a flat roof, deep overhangs, covered walkways supported by thin posts, floor to ceiling glass, and a natural rock chimney.

***B10. Significance (continued):**

William F. Cody FAIA (1916-1978) was born in Dayton, Ohio and raised in Los Angeles. While attending architecture school at the University of Southern California in the late 1930s and early 1940s, Cody was also working for architect Cliff May, gaining experience in the adaptation of ranch and hacienda style houses to modern floor plans and construction techniques. Suffering from asthma, and believing that the Palm Springs area offered opportunity and prominent clients, Cody moved to Palm Springs in 1944-45 and set up practice. One of his first projects, the Del Marcos Hotel of 1946, won an AIA "creditable mention" award as an example of new resort hotel architecture for its "ingenious plan, which appears complicated but is actually orderly and thoughtful." Author and critic Alan Hess writes, "Greater thinness and more striking elegance became the single-minded focus of his ongoing design." Despite a reputation for carousing, Cody was exceptionally focused on the details of his designs and pushing the boundaries of his materials. His well-known and innovative early buildings, along with friendships with influential members of the Thunderbird, Tamarisk, and Eldorado Country Clubs, resulted in commissions to design (or in the case of Thunderbird, remodel)the clubhouses of all three locations. In addition, Cody designed a large number of residences in the country club areas, many along the fairways of the new resort concept of golf course living, a concept that Cody himself helped devise.

Author Adele Cygelman writes, "Joints and door frames seemingly disappeared into walls. He merged living rooms into terraces and gardens. Roofs jutted out twelve feet to shield the walls of glass. Pattern and texture came from tile floors, carved wood panels, and concrete-block screens with geometric motifs, all of which were meticulously designed by Cody to match each other precisely at the seams and angles where the planes met." Like other Coachella Valley architects, Cody designed churches, gas stations, motels, restaurants, offices, a mobile home park, shopping centers, even a carwash. "Yet a distinct character can be seen in all of them," says Hess. "It is a restless energy that brings a liveliness to his plans, elevations and details. The radical thinness of Cody roofs or the daring reach of a cantilever are clearly the result of a wrestling match between the architect and the materials and the laws of physics; that energy and striving remains in the building." Hess concludes, "The fact that Cody could take an established vocabulary and style and reinterpret it so vividly ranks him among the best of mid-century California designers."

Although the resource does not appear eligible for listing in the National Register of Historic Places or for designation under an existing or proposed local ordinance, it is of local interest (a "5S3" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City, Rancho Mirage Date: 2021 Map Scale: 1;24000
Address: 71-125 Country Club Drive City: Rancho Mirage Zip: 92270

Date Constructed: 1952
Ownership and Address: St Martin-Lowry Trust, Gloria Ann St Martin-Lowry, Patrick Stanley Lowry; 71125 Country Club Drive, Rancho Mirage, CA 92270

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 71-125 Country Club Drive residence was constructed in 1952 in the Thunderbird Country Club. In 2002, Leslie Heumann and Associates described the residence as a Modern style home with a low-pitch hipped and flat roof. The residence has a one-story form with an attached garage. The exterior of the residence is clad in a rock veneer and stucco. The front entrance is recessed with solid wood beams connecting the east and west sections of the house above the entry path. At the rear of the residence, visible from the Thunderbird Country Club golf course, there is an exterior bar seating area. One large, two-part fixed window is visible at the rear of the residence. The other windows are not visible due to high privacy fencing and sun shades. Much of the residence is not visible due to fencing, however, it does not appear that there have been significant alterations to the residence since the 2002 survey.

Permits provided by the City include:
- Solar installation in 2016 (Permit No. B1600912)
- Addition/Remodel in 2021 (Permit No. B2101945)

See Continuation Sheet for Additional Information.

View of north (front) elevation. (71-125 Country Club Drive_1)

Updated Primary Record Information Continued:

View of south (rear) elevation. (71-125 Country Club Drive_4)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the residence as status code 5S1: Individual property that is listed or designated locally. The correct status code that should have been assigned in 2002 is 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The prior survey found the residence was architecturally significant as a Modern design constructed along the Thunderbird Country Club golf course. The home more specifically displays the characteristics of a Desert Modernist style residence. The current survey found the residence is associated with the themes of the Country Club Era (1951-1973) and Rancho Mirage Architectural Styles (1934-1980s). The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

The home has not been found individually eligible under NRHP/CRHR A/1, as it has not been associated with significant events or patterns of events in local, regional, state, or national history; not individually eligible under Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state, or national history. The residence is not considered eligible under Local Criteria 2-6 and 8.

The single-family residence is considered eligible under NRHP/CRHR Criterion C/3 as the property individually embodies the distinctive characteristics of a Desert Modernist style home constructed within Rancho Mirage in the 1950s. The property is also eligible under Local Register Criteria 1 and 7 as it is representative of a Desert Modernist style home that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

The Cruttenden Residence is Modern in style, one-story in height, and topped by a combination low-pitched hipped and flat roof. Constructed in 1952, the north-facing house sits on .29 acres and is 2,993 square feet with three bedrooms and 2.5 bathrooms. The fairways of Thunderbird Country Club lie to the rear of the property. Visible windows are stretch from ceiling to floor beneath deep eaves on the east section of the house, and slant forward adjacent to the front entrance. Exteriors are clad in rock veneer and medium-smooth stucco. Wood beams connect the east and west sections of the house, covering the entry path. A low rock wall forms a planter bordering the driveway and entry path. A solid wall sheathed in stucco and topped with a wood rail surrounds an enclosed patio that projects towards the street. An interior rock-clad chimney emerges from behind the rectangular entrance wall. Not original are the garage door, driveway paving, and metal security gate. Given the noted alterations, the house appears mostly original and in excellent condition.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

The Cruttenden Residence is a architecturally significant as a good example of an early house of Modern design constructed along the Thunderbird Country Club golf course. Although altered, it retains key elements of the style including the flat and low-pitched roof, natural rock walls, and extensive use of glass on the rear elevation. The house was constructed in 1952, a year after the Thunderbird Country Club opened and began offering lots for sale along the fairways to its members. According to the Palm Springs Personages 1962 directory, the owners at that time were Mr. Walter and Mrs. Fay Cruttenden of Highland Park, Illinois. Mr. Cruttenden was an investment banker. The property appears eligible for listing under an existing or proposed local ordinance, but does not appear eligible for listing in the National Register of Historic Places (a "5S1" National Register Status Code).

APN: 684020047

Date Constructed: 1961
Ownership and Address: James W Scheuer, Ellen M Scheuer; PO Box 5005, Rancho Mirage, CA 92270

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 71-317 Country Club Drive residence was constructed in 1961 in the Thunderbird Country Club. In 2002, Leslie Heumann and Associates described the residence as a Modern, one-story home. The home more specifically displays the characteristics of a Desert Modernist style residence. The residence has a flat roof with an attached garage, clad in stucco. The front entrance is located behind a front gate and wall, creating a private front entry courtyard. The front elevation has a "zigzag" irregular front facade. The home has a broad rear facade that opens to the golf course. The rear elevation features several sliding glass doors that open to the rear patio and pool. There are several floor to ceiling fixed windows at the rear elevation. At the rear elevation the roof extends to create a covered patio, supported by narrow brick piers. In the 1980s, the residence was altered with several additions, a remodel, and the addition of a two-car garage. Since the 2002 survey, the stucco wall and wood gate at the front elevation has been replaced with a narrow brick wall. There does not appear to have been any other significant alterations to the residence since the 2002 survey.

No permits for the subject property were available.

See Continuation Sheet for Additional Information.

View of south (rear) elevation. (71-317 Country Club Drive_7)

Updated Primary Record Information Continued:

View of north (front) elevation. (71-317 Country Club Drive_3)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the subject property as status code 5S1: Individual property that is listed or designated locally. The correct status code that should have been assigned in 2002 is 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The prior survey evaluated the residence as architecturally significant as an example of a Modern house built in the Thunderbird Country Club. The home more specifically displays the characteristics of a Desert Modernist style residence. The current survey found the residence is associated with the themes of the Country Club Era (1951-1973) and Rancho Mirage Architectural Styles (1934-1980s). The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

The home has not been found individually eligible under NRHP/CRHR A/1, as it has not been associated with significant events or patterns of events in local, regional, state, or national history; not individually eligible under Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state, or national history.The residence is not considered eligible under Local Criteria 2-6 and 8.

The single-family residence is considered eligible under NRHP/CRHR Criterion C/3 as the property individually embodies the distinctive characteristics of a Desert Modernist style home constructed within Rancho Mirage in the 1960s. The property is also eligible under Local Register Criteria 1 and 7 as it is representative of a Desert Modernist style home that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Constructed in 1961, this Modern, one-story, mostly rectangular house faces north with its rear elevation oriented towards the fairways of the Thunderbird Country Club golf course. The residence is 4,721 square feet with five bedrooms and 4.5 bathrooms on .41 acres. A flat roof with a raised center living room section covers the building. Exteriors are finished in medium-smooth stucco. A domed skylight is located west of the entrance, which is hidden behind a wooden gate and stuccoed wall. Visible windows are fixed clerestory along the front and ceiling-to-floor glass at the rear. A notable feature is the zigzag treatment of the facade east of the entrance. Here, frameless mitered clerestory glazing tops each angled wall. The enclosed double-car garage is located in the perpendicular wing west of the entrance. The garage's north elevation is decorated with a series of four equally-spaced projecting rectangular elements that rise above the roofline. A concrete and brick driveway fronts the property, with sculpted hedges along the periphery. The house was remodeled and enlarged in the early 1980s, and the clerestory glazing and skylight do not appear to be original. The enclosed garage might originally have been a carport. The building is in good condition.

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City, Rancho Mirage Date: 2021 Map Scale: 1;24000
Address: 70-375 Calico Road City: Rancho Mirage Zip: 92270
UTM Zone: 11S 552142.85 m E 3734764.35 m N
APN: 690171015

Date Constructed: 1952
Ownership and Address: GWG Wyoming Trust, Joseph Winfield Tucker, Jackson Hole Trust Co; PO Box 1150, Jackson, WY 83001

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 70-375 Calico Road was constructed in 1952. In 2002, Leslie Heumann and Associates described the residence as a Modern Ranch home. The home more closely displays elements of a custom Post and Beam style residence. The residence is set high on a hill, with a large slope and vegetation shielding much of the residence from the public right of way. The 2002 survey indicated that the home featured non-original stucco siding, non-original extended cornice with non-original Tuscan columns, and non-original windows. According to aerial photographs, the home was significantly expanded between 1959 and 1972, likely after Crosby sold the property by 1960. The residence was altered with an addition and remodel in the 1980s. The property has new vinyl windows and sliding glass doors that appear to have been installed during the 2005 remodel.

Permits provided by the City include:
- Addition/Remodel in 2005 (Permit No. B0500892)
- Reroof of dwelling in 2016 (Permit No. B1601465)

See Continuation Sheet for Additional Information.

Updated Primary Record Information Continued:

View of northeast (front) elevation. (70-375 Calico Road_1)

View of northeast (front) elevation. (70-375 Calico Road_2)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the subject property as status code 5S1: individual property that is listed or designated locally. The correct status code that should have been assigned in 2002 is 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The prior survey evaluated the residence as historically significant as the residence of entertainer, Bing Crosby. The current survey found the residence is associated with the theme of Residential Subdivisions and Cooperatives (1951-1973), being an early residence within the newly created community. However, the design of the Bing Crosby Residence did not significantly impact the design or development of other early homes in Thunderbird Heights because the homes that followed were almost entirely custom built. Therefore, the property is not individually significantly associated with the theme of Residential Subdivisions and Cooperatives (1951-1973). It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme but is not considered a significant representative example of a known architectural style in the community.

The home was constructed for well known entertainer Bing Crosby. Crosby was one of the most popular stars of the middle decades of the 1900s. His career spanned from the 1920s to the 1970s. He had a wide ranging career, including music, radio, film, and television. Throughout his career he made over 70 films and recorded more than 1,600 songs. Crosby was born in 1903 in Washington. He passed away in 1977 (Bing Crosby, Wikipedia).

The subject property was constructed for Crosby in 1952. He owned the residence until 1957 but had sold it by 1960. Crosby's association with Rancho Mirage helped increase the public's awareness of the area, contributing to the increased development seen in the post-war era. Crosby was one of the first members of the Thunderbird Country Club, and one of the earliest to build a custom homes in the Thunderbird Heights community. Crosby was also a developer and investor of the Blue Skies Trailer Village in Rancho Mirage.

The home has not been found individually eligible under NRHP/CRHR A/1, as it has not been associated with significant events or patterns of events in local, regional, state, or national history. It is not individually eligible under Criterion C/3, as it no longer embodies the distinctive characteristics of a mid-20th century Post and Beam style dwelling. A significant addition between 1959 and 1972, further changes in the 1980s, and the latest remodeling in the 2000s have significantly impacted the material and design integrity of the property, hampering its ability to convey its potential significance under this criterion. It not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state, or national history. The residence is not considered eligible under Local Criteria 1-4, 6-8.

The residence is potentially considered eligible under NRHP/CRHR Criterion B/2 as the property is associated with entertainer Bing Crosby. He had a notable impact on the increased notability of the City, was one of the first members of the Thunderbird Country Club, and one of the first to build a custom home in the Thunderbird Heights community. The home is also potentially eligible under Local Criterion 5 for its association with Crosby. However, the home no longer possesses the necessary levels of historic integrity to convey its significance under these criteria. Overall, the home only maintains its integrity of location, setting, and association. As such, the property is assigned a 6Z status code: Found ineligible for NRHP, CRHR, or Local Register through survey evaluation.

This large one-story, 6244 square foot, six bedroom, four bathroom house located in Thunderbird Heights was originally built in 1952 for Bing Crosby. The residence has been extensively altered and enlarged since the Crosby's sold the house in 1957. Set on a double lot of 1.36 total acres, the house is perched atop a slope overlooking the Coachella Valley. Board and batten originally sheathed the house, which is now covered in thick stucco. An extended cornice supported by Tuscan columns is new. Original windows visible from the street have been replaced. Landscaping consists of desert flora, gravel, rocks, and mature palms. The house appears to be well maintained.

The Bing Crosby Residence is historically significant for its association with Bing Crosby, one of America's most popular entertainers in the middle decades of the twentieth century. Crosby's highly public connection to Rancho Mirage greatly increased the public's awareness of the area and significantly boosted the community's image during the early postwar years. Crosby also contributed to Rancho Mirage as a property owner and developer. He was one of the first members of the Thunderbird Country Club and one of the earliest to build a custom home in what became known as Thunderbird Heights. In 1953, Crosby enlisted many of his entertainer friends as investors in the Blue Skies Trailer Village he developed adjacent to Highway 111 not far from Thunderbird. Blue Skies Trailer Village was one of the first carefully planned trailer parks in America organized as a miniature town with a central park, pitch and putt golf course, swimming pool, recreation center, and a meeting hall.

(This space reserved for official comments.)

***B14. Evaluator:** *Peter Moruzzi, Teresa Grimes, Leslie Heumann*

***Date of Evaluation:** *September 23, 2002*

***B10. Significance (continued):**

Due to substantial alterations of the character defining features of the house, significance is derived from the property's status as the original custom-built residence of Bing Crosby when he lived in Rancho Mirage from 1952 until 1957. In 1957, Crosby moved to the Silver Spur Ranch in adjacent Palm Desert. The Bing Crosby Residence is significant for its historic association as the Rancho Mirage home of an important celebrity who made major contributions to the development and publicizing of Rancho Mirage. The property appears eligible for listing under an existing or proposed local ordinance depending upon the ordinance's integrity requirements. The resource does not appear eligible for listing in the National Register of Historic Places (a "5S1" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City, Rancho Mirage Date: 2021 Map Scale: 1;24000
Address: 70-260 Highway 111 City: Rancho Mirage Zip: 92270
UTM Zone: 11S 552354.16 m E 3735555.38 m N
APN: 689212052

Date Constructed: 1953
Ownership and Address: Elvia Goldberg; 70260 Highway 111, Unit 146, Rancho Mirage, CA 92270

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 70-260 Highway 111 property, known as the Blue Skies Village, was constructed in 1953 and was designed by architect William Cody. In 2002, Leslie Heuman & Associates described the property as a Modern style multi-family property. The property features approximately 164 manufactured home spaces. Some of the original trailer homes have been replaced with more modern manufactured homes. The manufactured homes are designed in a variety of styles, including more stylistic examples such as Asian, Egyptian, and Western styles, as well as many more traditional manufactured home styles.The overall community plan, street configurations and names, golf course with pond, recreation room, office, and meeting hall (Tanner Hall) are maintained. The meeting hall, attributed to Cody, and features a flat roof, wide overhang with decorative beams at the roof, and large walls of glass. The buildings designed by Cody have a strong intersection between the indoor and outdoor space, and are have Desert Modern influences. While there have been changes to the individual units, there does not appear to have been significant alterations to the permanent buildings, golf course, or overall plan of the property.

Permits provided by the City include:
- block wall construction in 2021 (Permit No. B2100447)
- Reroof in 2022 (Permit No. B2201466)
- Patio construction in 2024 (Permit No. B2400242)
- Mechanical/HVAC work in 2024 (Permit No. B2401420)

Updated Building, Structure, Object Information Continued:

The prior survey evaluated the property as status code 3S - Appears eligible for NR as an individual property through survey evaluation. The prior survey found the property was architecturally significant for its association with architect William Cody, and historically significant for its association with entertainer Bing Crosby. The current 2024 survey found that the dwelling is more specifically associated with the theme of Residential Subdivisions and Cooperatives (1951-1973). It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

The property not individually eligible under NRHP/CRHR Criterion B/2, as it has not been identified as having an association with an important person. While the property was developed by Bing Crosby, he did not live in the Blue Skies Village. The property is also not individually eligible under Criterion D/4, as further study of the residences would not appear to yield information which could be considered important in local, regional, state or national history. The property is not considered eligible under Local Criteria 2-6 and 8.

The property is individually eligible under NRHP/CRHR Criterion A/1, as the Blue Skies Village is significantly associated with the early pattern of residential development within Rancho Mirage post-1951. It is considered eligible under NRHP/CRHR Criterion C/3 as the property represents a rare example of a Desert Modernist style multi-family property. Further, the property type, a permanent mobile home park, was unique for the time and place. While trailer parks were not uncommon at the time, the Blue Skies Village was unique as it was designed as a more permanent community. Additionally, the property is architecturally notable as an example of community buildings designed by notable architect William Cody. The permanent buildings, including the meeting hall, recreation building, and office, designed by Cody, incorporate trademarks of his Desert Modern style, including wide roof overhangs, flat roofs, decorative beams, walls of glass, and interactions between the indoor and outdoor space. The property is eligible under Local Criterion 1, as an example of a specific property type, and Local Criterion 4, as an example of Cody's work. As the property has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance. The individual manufactured homes are not considered contributing elements to the property.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Blue Skies Village was designed in 1953 by architect William Cody for entertainer Bing Crosby. Located on land Crosby owned on the north side of Highway 111, Blue Skies Village consists of 164 spaces arranged along streets named for Crosby's friends and investors Burns and Allen, Jack Benny, Barbara Stanwyck, Claudette Colbert, Greer Garson, Danny Kaye, and Bing Crosby himself. The property was originally landscaped with 140 palm trees, and contains a swimming pool, recreation center, meeting hall, and office building. There is a circular central park with a nine-hole pitch-and-putt golf course, turquoise ponds, a concrete bridge, and a fountain. The original trailers, which were small and towed by automobiles, have all been replaced by manufactured homes that are, for all intents and purposes, permanent. A wide range of decorative styles have been applied to many of the houses, some rather surprisingly exotic. There are several Asian Modern facades consisting of lacquered torii gates, upswept roof corners, decorative concrete block, and Asian landscaping. Others tend towards the traditional with facades evoking the Colonial Revival and the Neoclassical styles. The old west/ranch look of shake roofs, board and batten cladding, and wood shutters is also popular as are also Modern interpretations with slanted shed roofs and wide expanses of glass. Cody's meeting/dance hall is a rectangular, one-story, flat-roofed building with hexagonal trusses beneath deep eaves. The south- and north-facing walls have enormous fixed windows and sliding glass doors all topped by clerestories. The layout, landscaping, and communal buildings appear original and in excellent condition.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

Blue Skies Village is architecturally significant as an innovative development of a building type and for its association with architect William F. Cody, and is historically significant for its association with entertainer Bing Crosby. In his book Palm Springs Weekend, architectural historian, author and critic Alan Hess writes "Trailer parks for vacationers in scenic sites, a branch of the motel and campground phenomena, were evolving into permanent communities of manufactured homes. As the comforts and size of trailers grew, the idea of turning them into part-time homes was a natural step. Blue Skies Village began as a spin-off of the movie industry in Palm Springs; trailers used as temporary housing for actors and technicians working on movies shooting in the area were parked on Crosby's property off Highway 111." Although several trailer parks for transient tourists already existed in the Palm Springs area, "Blue Skies was an evolutionary step beyond those. It was an established neighborhood using the traditional means of planning, architectural controls, landscaping and community

***B10. Significance (continued):**

services." In the early 1950s, there was no negative social connotation yet associated with metal prefabricated houses, so it was not unimaginable that a star such as Bing Crosby might wish to be associated with a trailer park. "The fact that Blue Skies was built [not far from] the 1946 Desert Air Hotel - a fly-in hotel for vacationing aviators – built by Henry ["Hank"] Gogerty on the old Rancho Las Palmas only added to Palm Springs' luster as a city at the forefront of the times." Crosby invited architect William Cody to design the masterplan of the community including the meeting hall and recreation building. Named after one of Crosby's hits, Blue Skies had strict guidelines on the size and landscaping required for each home. "Jack Benny, Phil Harris and Alice Faye, and Bing himself would attend breakfasts and the round of social functions at Blue Skies just as they would at Thunderbird Country Club."

William F. Cody FAIA (1916-1978) was born in Dayton, Ohio and raised in Los Angeles. While attending architecture school at the University of Southern California in the late 1930s and early 1940s, Cody was also working for architect Cliff May, gaining experience in the adaptation of ranch and hacienda style houses to modern floor plans and construction techniques. Suffering from asthma, and believing that the Palm Springs area offered opportunity and prominent clients, Cody moved to Palm Springs in 1944-45 and set up practice. One of his first projects, the Del Marcos Hotel of 1946, won an AIA "creditable mention" award as an example of new resort hotel architecture for its "ingenious plan, which appears complicated but is actually orderly and thoughtful." Author and critic Alan Hess writes, "Greater thinness and more striking elegance became the single-minded focus of his ongoing design." Despite a reputation for carousing, Cody was exceptionally focused on the details of his designs and pushing the boundaries of his materials. His well-known and innovative early buildings, along with friendships with influential members of the Thunderbird, Tamarisk, and Eldorado Country Clubs, resulted in commissions to design (or in the case of Thunderbird, remodel) the clubhouses of all three locations. In addition, Cody designed a large number of residences in the country club areas, many along the fairways of the new resort concept of golf course living, a concept that Cody himself helped devise.

Author Adele Cygelman writes, "Joints and door frames seemingly disappeared into walls. He merged living rooms into terraces and gardens. Roofs jutted out twelve feet to shield the walls of glass. Pattern and texture came from tile floors, carved wood panels, and concrete-block screens with geometric motifs, all of which were meticulously designed by Cody to match each other precisely at the seams and angles where the planes met." Like other Coachella Valley architects, Cody designed churches, gas stations, motels, restaurants, offices, a mobile home park, shopping centers, even a carwash. "Yet a distinct character can be seen in all of them," says Hess. "It is a restless energy that brings a liveliness to his plans, elevations and details. The radical thinness of Cody roofs or the daring reach of a cantilever are clearly the result of a wrestling match between the architect and the materials and the laws of physics; that energy and striving remains in the building." Hess concludes, "The fact that Cody could take an established vocabulary and style and reinterpret it so vividly ranks him among the best of mid-century California designers."

The Cody-designed meeting/dance hall, now called Tanner Hall, is the most architecturally significant building on the property. The deep eaves and sliding glass doors are hallmarks of Cody's Desert Modernism. The Desert Modern architectural style incorporates large expanses of floor to ceiling glass sheltered by deep overhangs extending from flat roofs in creating a powerful interaction between the indoors and outdoors. Desert Modern buildings appear light, often supported by thin steel or wood posts, with open interiors flowing from room to room. Rear elevations embrace desert views and outdoor access. The Desert Modern style grew out of local architects' desire to adapt Modern materials, techniques, and floor plans to the unique requirements of desert living.

Blue Skies Village, specifically, the plan, layout, shared communal features, and Tanner Hall (and specifically excluding the individual homes) appears eligible for separate listing in the National Register of Historic Places (a "3S" National Register Status Code). In addition, the property would be eligible for designation under an existing or proposed local ordinance. Under National Register Criterion C, Blue Skies Village significantly contributed to the development of the mobile home community property type as perhaps the first of, and a prototype for, planned trailer communities with significant amenities, building covenants, and substantial infrastructure and services. Mobile home communities such as Blue Skies subsequently appeared throughout the United States. It is also significant as a virtually original and intact example of William Cody's Desert Modern design from 1953 and for the preservation of its overall masterplan with all of its requisite parts: communal areas, central park, traffic flow, and landscaping. Hess concludes, "Blue Skies, well maintained and largely unchanged since the 1950s, is a premier example of planned trailer parks in the country."

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City Date: 2021 Map Scale: 1;24000
Address: 70-588 Frank Sinatra Drive City: Rancho Mirage Zip: 92270
UTM Zone: 11S 552702.61 m E 3737104.75 m N
APN: 674340002

Date Constructed: 1957-1998
Ownership and Address: Jim Pattison Inc; 333 N Sunrise #1506, Palm Springs, CA 92262

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 70-588 Frank Sinatra Drive property, known as the Frank Sinatra Compound, was constructed in 1957 within the Tamarisk Country Club. The property features a main house, five self-contained guest houses, a theater, maids' quarters, model train building, tennis court, and several outbuildings. In 2002, Leslie Heumann and Associates described the main residence as having a Vernacular style, however during the 2002 survey, the residence was surrounded by high privacy walls and hedges, and a detailed description was not possible. During the 2024 survey, the property continued to be surrounded by high privacy hedges. Based on aerial images, the main residence has a wide "U"-shaped form with a symmetrical design. The residence has a gable roof with a centered front entrance. The home has a large at the center rear that leads to a kidney bean shaped pool. There appears to be eight other buildings on the property, interconnected with pedestrian paths. There is a second swimming pool and tennis court on the property. Two of the large ancillary buildings feature flat roofs. One of the ancillary buildings (the building located north of the main entrance gate) features wood siding, a gable roof and a large multi-pane window. The large, rectangular building located at the far east of the property appears to be a garage; at least three garage door openings are visible at the west side elevation. Since construction Frank and Barbara Sinatra added continuously to their property to fit their needs. Today, the property is surrounded by large privacy hedges and rock walls. Based on aerial images, and what can be seen from the public right of way, there does not appear to have been significant alterations to the property since the 2002 survey.

Relevant permits provided by the City include:
- Reroof of dwelling in 2005 (Permit No. B0501402)
- Reroof of dwelling in 2007 (Permit No. B0700423)
- Solar installation in 2023 (Permit No. B2301064)

See Continuation Sheet for Additional Information.

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the subject property as status code 5S1: Individual property that is listed or designated locally. The correct status code that should have been assigned in 2002 is 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The prior survey found the property was historically significant for its association with celebrity, Frank Sinatra. The current survey found the residence is associated with the theme of Residential Subdivisions and Cooperatives (1951-1973). It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme but is not considered a significant representative example of a known architectural style in the community. The current survey maintains the 5S1 status code. The property was first developed in 1957, and was added to several times by Sinatra, until he sold the property in 1995. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

Frank Sinatra was one of the world's best-selling music artists, and one of the most popular entertainers of the twentieth century. He was born in New Jersey in 1915. He began singing professionally in 1939, becoming a solo artist in 1943. Sinatra sold an estimated 150 million records globally. He also had a successful film career. He was honored at the Kennedy Center Honors, was awarded the Presidential Medal of Freedom, the Congressional Gold Medal, and eleven Grammy Awards, including the Grammy Legend Award. Sinatra owned the subject property for many years; the street, Wonder Palms Road, was changed to Frank Sinatra Drive in 1971. Sinatra and his wife Barbara, frequently gave to Rancho Mirage charitable organizations throughout their time in the city.

The property has not been found individually eligible under NRHP/CRHR A/1, as it has not been associated with significant events or patterns of events in local, regional, state, or national history. It not individually eligible under Criterion C/3, as it does not embody the distinctive characteristics of a type, period, or method of construction. Continuous expansions during Frank Sinatra's life and after his death have modified the buildings and altered much of the original design intent. The compound is not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state, or national history. The residence is not considered eligible under Local Criteria 1, 2, 4-6.

It is individually eligible under Criterion B/2, as the property is significantly associated with the life of Frank and Barbara Sinatra. Sinatra owned the property from 1957 to 1995. During the time of ownership, he was one of the best known entertainers in the world. The property is also eligible under Local Criterion 5 for its association with persons that have made a meaningful contribution to the city, state, and nation. The property has been altered from construction into the early 2000s. However, the significant additions were directed by the Sinatra family. Therefore, the period of significance for this property is from 1957 to the late 1990s. All changes during this period do not negatively impact the overall historic integrity of the property because they are directly connected to the lives of the significant individuals who resided at the compound. Therefore, the property maintains adequate integrity to convey its significance.

Construction of the Frank Sinatra compound began in 1957. The property faces south on what was then Wonder Palms Road (now Frank Sinatra Drive) with the primary rear elevations opening towards the 17th fairway of the Tamarisk Country Club golf course. Located on .94 acres, the property consists of the main house, five self-contained guest houses, a theater, maids' quarters, model train building, tennis court, and assorted outbuildings of no particular architectural style. Completely walled on all sides, the compound is not visible from any vantage point. Due to the lack of accessibility, the current description and integrity of the property are unknown.

The historical significance of this property is derived from the property's status as the residential compound built for Frank Sinatra (1915-1998) in Rancho Mirage over a forty year period. Frank Sinatra, an international celebrity who is regarded by many as the most important pop singer of the twentieth century, relocated to the Tamarisk Country Club area of what would become the City of Rancho Mirage around 1953 after moving from his 1947 Stewart Williams-designed Palm Springs house. Sinatra first lived at 70-200 Wonder Palms Road in the 1953 H. Austin Peterson House designed by William Cody. In 1957, Sinatra moved up the street to 70-588 Wonder Palms Road to the large property he had acquired on the south side of the

***B10. Significance (continued):**

Tamarisk Country Club golf course. He spent much of the year at the compound, moving his mother into a five bedroom house on the premises and entertaining friends and dignitaries. One of the most well-known incidents involving the property occurred when President John F. Kennedy was planning on spending his holiday in the desert. Sinatra had new guest quarters and a helipad built specifically for the president's visit. "Sinatra destroyed the helipad when it was determined that JFK would bunk instead with the more politically benign Bing Crosby" in nearby Palm Desert, according to the history, Tamarisk Country Club, The First 50 Years 1952 – 2002. Sinatra sold the Rancho Mirage estate to Canadian businessman Jim Pattison in 1995.

Wonder Palms Road was changed to Frank Sinatra Drive in 1971. Frank and Barbara Sinatra, who married in 1976 at the "Sunnylands" estate in Rancho Mirage, gave generously to Rancho Mirage charitable organizations such as the Eisenhower Medical Center. In 1986, the Barbara Sinatra Children's Center at Eisenhower Medical Center opened with Mrs. Sinatra as Chairman. Frank Sinatra was an exceptionally significant figure in the history of Rancho Mirage and his residential compound has come to symbolize his many years of loyalty to the city.

For its historic associations as the Rancho Mirage home of an important celebrity who made major contributions to the development and publicizing of Rancho Mirage, the Frank Sinatra compound appears eligible for designation under an existing or proposed local ordinance depending upon the ordinance's integrity requirements. The resource does not appear eligible for listing in the National Register of Historic Places (a "5S1" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City, Rancho Mirage Date: 2021 Map Scale: 1;24000
Address: 71-308 Cypress Drive City: Rancho Mirage Zip: 92270
UTM Zone: 11S 553596.22 m E 3735228.68 m N

Date Constructed: 1955
Ownership and Address: Daniel B Jessup, Ashleigh M Jessup; 71308 Cypress Drive, Rancho Mirage, CA 92270

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 71-308 Cypress Drive residence, designed by architect Welton Becket, was constructed in 1955 in the Thunderbird Country Club. The residence features a modified "T" shape with a low pitched gable roof. In 2002, Leslie Heumann and Associates described the residence as a good example of the Desert Modern architecture style. The exterior of the residence is clad in smooth stucco. The rear elevation features a wide roof overhang supported by narrow square posts, creating a covered patio. At the rear elevation, which opens to the golf course, features several double doors and fixed windows. The property features a detached, three-car garage, in-ground pool, and tennis court. It appears that since the 2002 survey, the residence has been re-roofed and the exterior was re-clad in smooth stucco.

Permits provided by the City include:
- Pool and spa construction in 2003 (Permit No. B0301463)
- Demolition in 2003 (Permit No. B0300852)
- New construction in 2003 (Permit No. B0300508)
- block wall construction in 2004 (Permit No. B0401955)
- Plumbing work in 2004 (Permit No. B0400702)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the subject property as status code 3S: Appears eligible for NR as an individual property through survey evaluation. The prior survey found the residence was architecturally significant as an example of the Desert Modern style and as an example of the work of architect Welton Becket. The current survey found the residence was associated with the themes of the Country Club Era (1951-1973) and Rancho Mirage Architectural Styles (1934-1980s). The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

☒ Update ☒ Continuation Sheet

Updated Building, Structure, Object Information Continued:

The residence was constructed by architect Welton Becket in 1955. Becket was one of the most influential mid-century architects in Los Angeles. He was born in Seattle in 1902, and received a degree in architecture from the University of Washington in 1927. In 1930, Becket partnered with former classmate, Walter Wurdeman. The partners began working in and around Seattle; their work utilized a variety of styles including Art Deco, Cape Cod, and Tudor Revival. Beckett and Wurdeman moved to Los Angeles in 1933 and partnered with established Los Angeles architect, Charles Plummer. They gained local recognition for the award winning design of the Pan Pacific Auditorium in 1935.

In 1949, after Plummer's death, the firm was incorporated as Wurdeman & Becket. During World War II, the firm prospered, working on public housing and defense projects. They also completed several large scale projects, including the Bullock's Department Store, buildings for General Petroleum, and Prudential Insurance.

Wurdeman passed away in 1949, and the firm was renamed to Welton Becket & Associates. It grew to be one of the largest architectural firms in the United States. Their headquarters were in Los Angeles, with offices in San Francisco, New York, Houston, and CHicago. Becket, with Wurdeman, had developed the concept of "total design," in which the firm would handle master planning, engineering, interiors, furniture, fixtures, landscaping, and signage. Becket passed away in 1969 (Michael Houser, "Welton D. Becket," DAHP, 2012).

The subject property is constructed in the Desert Modernist style. The development of country clubs coincided with the construction of custom residential and commercial properties within their boundaries. Booming post-war development within these country clubs helped shape what is now commonly referred to as 'Desert Modernism', a distinct subtype of the International style of architecture that incorporated modern materials, techniques, and floor plans with the unique requirements of building within a desert environment. The typical characteristics of Desert Modernism included large expanses of floor-to-ceiling glass walls sheltered by deep overhangs extending from flat roofs and flowing interior floor plans that merged gracefully with the outdoors. Often oriented to the rear, where most decorative flourishes could be visible from the fairways of the country clubs, Desert Modernist houses in Rancho Mirage often had a rear swimming pool and expansive golf course views and multiple points of outdoor access while front elevations were often constructed to be unassuming and often shielded for privacy, with only clerestories and obscured glass panels adjacent to the entries providing light. These houses were often light, with roofs floating above glass walls and clerestories, and ceilings supported by thin steel or wood posts. In addition to glass, exterior materials included stucco, wood, slumpstone, and natural rock that often mirrored the desert environment.The subject residence originally featured many character defining features of the style, including a low pitched roof, deep overhangs, open floor plans, exposed beams, and the integration of indoor and outdoor space. While the home still retains most of these characteristics, the recladding of the home in smooth stucco was a significant alteration. The natural rock and vertical wood elements were character defining features of the original Desert Modernist style. It also appears that some of the original, prominent exposed beams were removed.

The dwelling has not been found individually eligible under NRHP/CRHR Criterion A/1, as it has not been associated with significant events or patterns of events in local, regional, state, or national history; not individually eligible under NRHP/CRHR Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state or national history. The residence is not considered eligible under Local Criteria 2-6 and 8.

The single-family residence is considered eligible under NRHP/CRHR Criterion C/3 as the property individually embodies the distinctive characteristics of a Desert Modernist style home constructed within Rancho Mirage in the 1950s. The property is also eligible under Local Register Criteria 1 and 7 as it is representative of a Desert Modernist style home that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials. As the dwelling has been altered, but it maintains adequate integrity from the historic period to convey its significance.

P3a. Description (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting)

Located on three quarters of an acre along the sixteenth fairway of the Thunderbird Country Club, the McCulloch Residence property consists of two primary buildings, the house and guest wing, in addition to a carport, a sunken tennis court, and a large swimming pool area. Epitomizing the "Desert Modern" style, the house and guest quarters create a "T" footprint. The main house, sited in the center of the lot, is "L"-shaped in plan with the living room, dining area, kitchen, interior bar, pool bar, and maid's quarters in the long wing of the "L." Perpendicular to and leading off of the living room, the bedroom wing originally consisted of the master bedroom with dressing rooms, bathrooms, gym, and a steam room. On the opposite side of the living room, a detached rectangular guest building contains three bedrooms and bathrooms. Together, both buildings total 5,500 square feet and are one-story in height, with nearly flat shed roofs and deep eaves. The broad metal fascia is crimped near the roofline then angles outward. Exteriors are sheathed in vertical boards and stone. The guest building features evenly spaced projecting faux rafters that provide both shade and a striking design element to the pool area.

As is characteristic of the architectural style and the country club location, the house is oriented to the golf course and presents a closed façade to the driveway. The main entrance is subdued with clerestory windows and an asymmetrically placed front door,

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also Address integrity).

The McCulloch Residence, designed by architect Welton Becket and completed in 1955, is an architecturally distinguished and highly individualistic example of the Desert Modern style . Widely publicized as an aesthetic and technological wonder, the house was dubbed "McCulloch's Push-Button Paradise" by Life Magazine in 1956 for its futuristic incorporation of remote controlled motorized devices throughout the house. House Beautiful of April 1963 titled their story "The Mechanical Marvels of a Motor Manufacturer." The theme of a futuristic, labor-saving house was quite popular in the 1950s and early 1960s.

Robert McCulloch, the 44-year-old president of McCulloch Motors, a manufacturer of chain saws, power mowers, outboard motors, and other devices, was intimately involved in the design of the many experimental mechanical devices incorporated into the house. In 1954 he commissioned prominent Los Angeles architect Welton Becket (1902 – 1969) to design a winter home on property he owned at the fashionable Thunderbird Country Club. Becket was a nationally known Southern California

P3a. Description (continued):

which dovetails into an adjacent panel, forming almost the only breaks in the siding. Hidden behind perimeter walls and vegetation, the primary elevations face the enormous, irregularly shaped swimming pool and pool deck and the golf course. The driveway is paved with a composite of pebble, stone, and concrete. Similarly, the paving of the main entry path and pool deck is of one-foot square sections of a much denser pebble composite. Ceilings of pecky cypress extend through clerestory and ceiling-to-floor windows of both buildings into the deep soffits of the overhangs. The glass fits flush to walls and ceilings, removing the distinction between indoor and outdoor space. From the pool area, the views through the clerestories are uninterrupted.

Artwork has been integrated into the fabric of the house. Centered between sliding glass walls and a pivoting glass door, an exterior floor-to-ceiling mural depicting geological strata faces the pool area. Executed by Emile Norman in 1955, the media are rock, stone, fossils, shells, and concrete. Other site-specific art includes a large mosaic mural forming the back wall of the indoor bar that depicts a sun legend of local Indian tribes rendered in glass, ceramic, turquoise, and gold tiles. The wall that divides the dining area from the entrance is translucent clear acrylic with inserts of color suggesting a three-dimensional mosaic.

The house was originally fully mechanized with over 200 motors installed to operate drapes, raise beds for changing, operate doors, control lighting, regulate air temperature, control the sound system, and accomplish many other tasks. Large red buttons, many with the Thunderbird symbol and surrounded by chrome faceplates, offer remote control of these functions. A chrome toggle switch operates the mechanical sliding ceiling-to-floor sliding glass door between the living room and pool area. Both stainless steel bar counters have four holes bored thirty feet into the ground, each holding a full case of liquor bottles. A motor pushes the bottles upward as they are needed. The mostly terrazzo master bath features a marble pylon holding gold-plated controls and indicators that allow the bath to be automatically filled with water at a pre-set temperature. Next to the pool is the motorized "human Lazy Susan," a fourteen-foot diameter disk with seven chaise lounges that slowly revolves under the sun.

The property retains a high degree of design integrity. McCulloch removed the fireplace that originally separated the living and the dining area and the original rock-covered west wall of the living room and extended the space to create a billiard room. Other alterations include a partial kitchen remodel, renovation of two of the three guest bathrooms, removal of some of the mechanized devices including the motorized guest beds, and the elimination of reflecting pools near the front entrance. Much of the landscaping, however, is original. The tennis court, placed opposite the master wing below grade eight feet to conform to fence height limits, and an adjacent eight-vehicle carport are also original.

B10. Significance (continued):

Architect known primarily for a body of commercial work in partnership with Walter Wurdeman that eventually included the Pan Pacific Auditorium, the Prudential Building, Bullock's Pasadena, Bullock's Palm Springs, the Capitol Records building and, later, the Los Angeles' Music Center and the Theme Building at LAX (in association with William Pereira, Charles Luckman, and Paul R. Williams). Earlier in Becket's career, however, he was recognized as a residential architect who designed large homes for wealthy clients. After World War II, Becket designed two other desert homes, one for his mother in Palm Springs, and one for President Eisenhower at the Eldorado Country Club in Indian Wells.

The McCulloch Residence is an excellent and original example of the Desert Modern style that evolved following World War II in the Coachella Valley. Led by visiting architects such as Richard Neutra and a group of talented local architects including Albert Frey, William Cody, John Porter Clark, Stewart Williams, Donald Wexler, and others, the style was characterized by low-pitched or flat roofs, deep overhangs, extensive use of glass, open floor plans, exposed beams, terrazzo, reinforced concrete, swimming pools, and an integration of landscaping with interiors in creating an indoor/outdoor living environment. The McCulloch Residence incorporates many of these characteristic features with the addition of site-specific artwork and a host of mechanically operated devices. Research indicates that the McCulloch Residence is unique in the Coachella Valley for this blending of Desert Modern design, custom art, and push button convenience. The house is remarkably intact, despite the billiard room addition and kitchen remodeling, and still exhibits the same level of style and sophistication for which it

(See Continuation Sheet 4 of 5.)

B10. Significance (continued):

became famous. Character defining features of the McCulloch Residence include low-pitched almost flat roof, deep overhangs, crimped metal fascia, pecky cypress ceilings and soffits, clerestory windows, ceiling to floor sliding glass living room door and frameless glass pool door, composite pebble driveway pavement, pebble entry path and pool deck paving squares, guest building faux rafter sun screen, vertical board sheathing and rock siding, original interior finishes such as terrazzo and original casework, and mechanized features such as the "human Lazy Susan." Also character defining are the site-specific art pieces including the exterior mural of geological strata, the sun legend mosaic mural behind the main bar, and the translucent acrylic interior wall panels near the front entrance. Although not quite 50 years old, the McCulloch Residence demonstrates exceptional significance as a significant work of a master architect and for the building's unique architectural quality in design, materials, and features. Additionally, the house represents a highly unusual example of the American postwar obsession with a push-button, labor-saving future. This blend of desert modern architecture, push-button futurism, and site-specific artwork satisfies Criterion C for listing in the National Register of Historic Places and Criterion 3 for listing in the California Register of Historical Resources. The property would also be eligible for designation under an existing or proposed local ordinance.

APN: 688252014

Date Constructed: 1958
Ownership and Address: Joseph D Funkey, Susan L Funkey; 71388 Country Club Dr, Rancho Mirage, CA 92270

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 71-388 Country Club Drive residence was constructed in 1958. In 2002, Leslie Heumann and Associates described the residence as a one-story Modern home with a primarily flat roof with a metal fascia. The home features a mix of rock, board and batten, and stucco facades. The home features a recessed front entrance. A rock wall extends across part of the front elevation and towards the edge of the property. The front elevation features one large horizontal sliding window. The home has an attached two-car garage. At the southwest corner of the residence, the roor raises at a dramatic agnel with an angular clerestory window below. The sun awning seen in the 2002 survey has been removed. There does not appear to have been significant alterations to the residence since the 2002 survey.

Permits provided by the City include:
- Reroof of dwelling in 2005 (Permit No. B0500154)
- Addition/Remodel in 2015 (Permit No. B1500927)
- Solar installation in 2018 (Permit No. B1800220)

See Continuation Sheet for Additional Information.

Updated Primary Record Information Continued:

View of east (rear) elevation. (71-388 Country Club Drive_3)

View of west (front) elevation. (71-388 Country Club Drive_4)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the residence as status code 5S1: Individual property that is listed or designated locally. The correct status code that should have been assigned in 2002 is 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The prior survey found the residence was architecturally significant as an example of a Modern style residence. The home most closely resembles a Desert Modernist style dwelling. The current survey found the residence is associated with the themes of Residential Subdivisions and Cooperatives (1951-1973) and Rancho Mirage Architectural Styles (1934-1980s). The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

The home has not been found individually eligible under NRHP/CRHR A/1, as it has not been associated with significant events or patterns of events in local, regional, state, or national history; not individually eligible under Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state, or national history. The residence is not considered eligible under Local Criteria 2-6 and 8.

The single-family residence is considered eligible under NRHP/CRHR Criterion C/3 as the property individually embodies the distinctive characteristics of a Desert Modernist style home constructed within Rancho Mirage in the 1950s. The property is also eligible under Local Register Criteria 1 and 7 as it is representative of a Desert Modernist style home that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

This one-story Modern house was constructed in 1958 on the northeast corner of Keenan and Country Club Drives. Although the roof is primarily flat with a metal fascia, it rises dramatically skyward on the southwest corner above an angular clerestory window and rock façade. Here, the rock wall continues beyond the home's perimeter at a downward slope. Other exterior surfaces are board and batten and medium-smooth stucco. The mostly rectangular, west-facing house pivots southward at a 45 degree angle at the north where the roof rises. The residence is 1,902 square feet with three bedrooms and 2.5 bathrooms on .32 acres. In addition to fixed windows, there are aluminum-framed sliders. A low concrete block wall flanks a concrete entry path. A rock-clad post supports the recessed entrance porch roof with additional shading provided by a retractable canvas awning. The entrance door is solid wood. An interior concrete block chimney emerges from the flat roof. On the south end of the building, an enclosed double-car garage was originally a carport and has been enclosed. A curved concrete driveway provides access from both streets. Landscaping consists of cacti, gravel, rocks, and palms. Other than the non-original metal driveway security gates, garage enclosure and doors, and canvas awning, the house appears original and in excellent condition.

Constructed in 1958, this house is architecturally significant as a good example of a Modern design residence. Although the architect is unknown, the house incorporates several arresting and unusual features, including the roofline that rises skyward on the southwest corner above an angular clerestory window and downward sloping rock wall. In addition, the mostly rectangular west-facing house pivots southward at a 45 degree angle at the north where the roof rises. Given these remarkable characteristics, and the original and excellent condition of the house, the property appears eligible for listing under an existing or proposed local ordinance, but does not appear eligible for listing in the National Register of Historic Places (a "5S1" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City, Rancho Mirage Date: 2021 Map Scale: 1;24000
Address: 72-116 Clancy Lane City: Rancho Mirage Zip: 92270
UTM Zone: 11S 555002.46 m E 3734284.43 m N
APN: 682110006

Date Constructed: 1934
Ownership and Address: Robert Stanley White Living Trust, Robert Stanley White; 5025 Estates Way, El Cajon, CA 92020

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 72-116 Clancy Lane residence was constructed in 1934. In 2002, Leslie Heumann and Associates described the residence as a Vernacular ranch style home with a medium pitched side-gable roof. The residence was demolished circa 2004 and a new home built in its place.

Updated BSO Information (DPR 523B):

A prior survey evaluated the property as status code 5S1 - individual property that is listed or designated locally. The correct status code that should have been assigned in 2002 is 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The dwelling on the property was initially recorded in 2002 by Leslie Heumann and Associates. It was fully demolished in ca. 2004 and subsequently replaced the same year. The historic resource is no longer extant. As such, the property is not eligible for inclusion in the NRHP, CRHR, or Local Register. The current survey evaluated the residence as status code 6Z - Found ineligible for NR, CR or Local designation through survey evaluation.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Built in 1934, this is a one-story residence exhibiting vernacular ranch styling. A medium pitched side-gabled roof with deep eaves caps the rectangular, south-facing building. Comprising 1,611 square feet and containing two bedrooms and 1.75 bathrooms, the residence features a combination of board and batten and natural rock cladding over wood frame construction. Original windows have been replaced with aluminum sliders. A slatted wood awning supported by square wood posts extends along the façade over a low brick planter and a concrete walkway and parallels the front lawn. Attached to the west elevation, a tapered, river rock chimney rises through the ridgeline. On the west side of the property, an asphalt driveway leads to a detached garage/shed. Towering date palms located in the rear of the property are visible from the street. Although the windows have been replaced, rock cladding added below the façade windows, and a non-original metal security door obscures the front entry, the house appears to be otherwise intact and in fair condition. The house continues to retain its integrity of location, setting, feeling, association, materials, and workmanship. A guest house constructed in the rear of the property appears to post-date the house and is of no historic interest.

The Nittinger House is of historic significance to the City of Rancho Mirage, for its age, location, and historic associations. It was constructed in 1934 on Clancy Lane, making it one of the two or three oldest buildings in the City. Clancy Lane began to be developed when R. P. "Bert" Davie, a developer from Santa Monica, created a road connecting the Magnesia Falls Cove area, itself a Davie and E. E. McIntyre subdivision, with the Bradshaw Highway (now Highway 111) and the "Eleven Mile Ranch." Known initially as the Rancho del Sol Estates, the Clancy Lane area was first improved in 1932, when L. M. and Helen Clancy of Los Angeles built a ranch on a ten-acre parcel and began raising grapefruit, dates, and grapes. Davie and other Santa Monicans also built homes, dug wells, and installed irrigation pipes donated by E. P. Nittinger, the proprietor of a Santa Monica plumbing store. According to the 1957 Palm Springs Directory, the owner-resident of this house was Mrs. Verna Nittinger, the widow of E. P. Nittinger. Prior to 1957, the address did not appear in Palm Springs directories, probably

***B10. Significance (continued):**

because many of the early residents eschewed such modern conveniences as electricity, air conditioning, and telephones (A Look Back In Time, page 5). The Nittingers became one of the pioneer residents of the Rancho Mirage community; in a famous photo from 1937 illustrating the Rancho Mirage postal stop, E. P. Nittinger is the fourth name on the list of residents.

In keeping with the simple life style adopted by the community, the Nittinger House is straightforward in design, utilizing board and batten and natural river rock as its primary materials. The ranch style, with a hacienda-like front porch or walkway, is evocative of the agricultural pursuits of the early residents. The house today appears to be largely unchanged, retaining much of the appearance it would have had when first built.

The Nittinger House appears eligible for designation under an existing or potential local ordinance (a "5S1" National Register status code). It represents a pattern of development that was significant in the history of Rancho Mirage, as one of the oldest buildings in the City, as one of the first homes built on Clancy Lane, one of the oldest neighborhoods in the City, and as the home of one of the earliest families to settle in the community.

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City, Rancho Mirage Date: 2021 Map Scale: 1;24000
Address: 71-459 San Gorgonio Road City: Rancho Mirage Zip: 92270
UTM Zone: 11S 553944.30 m E 3733732.58 m N
APN: 684302008

Date Constructed: 1940
Ownership and Address: Ronald P Saldamando, Mary Louise Christy; 16518 Wilton Place, Torrance, CA 90504

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 71-459 San Gorgonio Road residence was constructed circa 1940. In 2002, Leslie Heumann and Associates described the residence as a Vernacular Modern home featuring a concrete block construction, fixed and multi-pane steel casement windows, and wood lintels above the front door and windows. The residence was substantially altered circa 2017 with a large addition at the front of the property and an addition at the rear of the property The home is connected to the additions at the southeast and southwest corners of the home. The addition at the front elevation features a two car garage door, flat roof, and is clad in stucco. There is a open walkway between the front addition and the original wing of the home, that leads to the rear of the property.

Permits provided by the City include:
- Electrical work in 2007 (Permit No. B0700666)
- Sewer work in 2007 (Permit No. B0700238)
- Spa construction in 2012 (Permit No. B1200072)
- block wall construction in 2013 (Permit No. B1300683)
- Plumbing work in 2014 (Permit No. B1401161)
- Addition/Remodel in 2016 (Permit No. B1600721)
- Addition/Remodel in 2017 (Permit No. B1700751)
- Plumbing work in 2018 (Permit No. B1800941)
- Mechanical/HVAC work in 2023 (Permit No. B2300485)

View of east (front) elevation. (71-459 San Gorgonio Road_2)

View of east (front) elevation. (71-459 San Gorgonio Road_1)

Updated Building, Structure, Object Information Continued:

The prior 2002 survey evaluated the subject property as status code 5S1: Individual property that is listed or designated locally. The correct status code that should have been assigned in 2002 is 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The prior survey found the residence was architecturally significant as an example of an early residential home in Rancho Mirage. The current survey found the residence is associated with the themes of Early Agricultural and Residential Period (1924-1951) and Rancho Mirage Architectural Styles (1934-1980s). The residence has been substantially altered with two large additions at the front and rear of the home. It no longer maintains integrity to the historic era. As such, the current survey evaluated the property as status code 6Z - Found ineligible for NR, CR or Local designation through survey evaluation.

The home has not been found individually eligible under NRHP/CRHR A/1, as it has not been associated with significant events or patterns of events in local, regional, state, or national history; not individually eligible under Criterion B/2, as it has not been identified as having an association with an important person; not individually eligible under Criterion C/3, as it does not embody the distinctive characteristics of a type, period, or method of construction; and not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state, or national history. Due to significant alterations to the residence, the home is not considered eligible under Local Criteria 1-8. The home does not maintain integrity to the historic era.

This one-story, flat-roofed, rectangular house was built circa 1940 of concrete block construction. Unpainted, exposed rafters are visible beneath the eaves of this northeast-facing, Vernacular Modern residence. Windows are fixed and multi-pane steel casements of various sizes with extended wood lintels. The front entrance is wood-framed, with an original paneled wood door, and, like the windows, is surmounted by an extended wood lintel. A detached single-car garage is located east of the house, which is above grade and surrounded by desert sand and desert landscaping. Various boulders and mature trees enhance the setting. The house is original and in excellent condition.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

This property is architecturally significant as a good example of the type of homes that were constructed in the early Rancho Mirage neighborhoods of Clancy Lane, Magnesia Falls, and San Jacinto Drive in the 1930s and 1940s. It is a basic Vernacular Modern building constructed of concrete block with a flat roof, multi-pane casement windows, and virtually no applied ornamentation. A distinguishing characteristic of this house, the extended wood lintels above the windows and the main entrance, links the design to the adobe buildings which were constructed previously in the Coachella Valley. This house was built circa 1940 by an unknown architect and/or builder. As of 1953, the property owner was Joseph Hughes. Prior to 1953, Rancho Mirage addresses were not listed in the Palm Springs directory. For its representation of a era and building type closely associated with the Rancho Mirage area in the years immediately before and after World War II, this property appears eligible for designation under an existing or proposed local ordinance, but does not appear eligible for listing in the National Register of Historic Places (a "5S1" National Register Status Code).

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City, Rancho Mirage Date: 2021 Map Scale: 1;24000
Address: 71-552 Sahara Road City: Rancho Mirage Zip: 92270
UTM Zone: 11S 554118.94 m E 3733798.49 m N
APN: 684232029

Date Constructed: 1940
Ownership and Address: Michael J Cosgrove, Michele Ann Cosgrove; 41610 Indian Trail, Ste 2, Rancho Mirage, CA 92270

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 71-552 Sahara Road property was constructed circa 1940 in the Magnesia Falls neighborhood. In 2002, Leslie Heumann and Associates described the residence as a Vernacular Modern home constructed of concrete block with slightly curved edges. The windows were steel-framed casement with an attached garage. The residence was demolished circa 2004. As of 2024, nothing has been built in its place.

Updated BSO Information (DPR 523B):

A prior survey evaluated the property as status code 5S1 - individual property that is listed or designated locally. The correct status code that should have been assigned in 2002 is 5S3: appears to be individually eligible for local listing or designation through survey evaluation. The prior survey found the home was architecturally significant as a good example of an early residential home in Rancho Mirage. The residence was fully demolished in ca. 2004. As of 2024, it has not been replaced. The historic resource is no longer extant. As such, the property is not eligible for inclusion in the NRHP, CRHR, or Local Register. The property is evaluated as status code 6Z - Found ineligible for NR, CR or Local designation through survey evaluation.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

A flat roof with deep eaves covers this one-story, rectangular, Vernacular Modern residence built circa 1940. Constructed of flattened concrete block, the edges of the house are slightly curved. Windows are steel-framed casement of various sizes. A concrete path paralleling the house leads to a recessed entry porch. The solid wood door is original. An enclosed single-car garage on the east end of the building is probably an enclosed carport. A low concrete block wall with weeping mortar forms a planter east of the entrance. On the west elevation, three square wood posts support the wide overhang. A non-original evaporative cooling system sits on the roof. The driveway is unpaved and the front yard is desert sand. Landscaping consists of shrubs and mature trees including Washingtonia filifera palms. The house appears original and in fair condition.

Sketch Map

Updated Primary Record Information (DPR 523A):

USGS 7.5' Quad: Cathedral City, Rancho Mirage Date: 2021 Map Scale: 1;24000
Address: 71-022 Country Club Drive City: Rancho Mirage Zip: 92270
UTM Zone: 11S 553230.80 m E 3735488.76 m N
APN: 688230001

Date Constructed: 1957
Ownership and Address: Charles Y Liu, Aeran Kim; 71022 Country Club Drive, Rancho Mirage, CA 92270

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 71-022 Country Club Drive residence was constructed in 1955, located at a corner lot in the Thunderbird North neighborhood. The one-story, single family residence is clad in smooth stucco with a flat roof. The home features a large, interior chimney clad in stone. There are two small, fixed windows visible from the public right of way. The residence most closely resembles a Desert Modern style home, and features prominent interaction between the indoor and outdoor space. The front elevation is recessed behind a privacy wall, and is more modest architecturally compared to the rear elevation. The rear elevation faces the interior community space. At the front elevation, there is a prominent double entry door with no front stoop or porch. At the front elevation, there is an attached carport supported with thick, square posts. There are natural stone accent walls at the carport. The rear elevation has an L shaped form, around an inground pool. At the rear elevation, there is a wide roof overhang, creating a covered outdoor living space. At the roof, there are prominent exposed beams, with boxed eaves. The walls at the rear elevation are largely glass, creating an intersection between the indoor and outdoor spaces.

Permits provided by the City of Rancho Mirage include:
- Sewer work in 2004 (Permit No. B0301490)
- Reroof of the dwelling in 2007 (Permit No. B0701420)
- Miscellaneous work in 2008 (Permit No. B0800089)
- Remodel work in 2014 (Permit No. B1400925)

Updated Primary Record Information Continued:

View east of residence. (71-022 Country Club Drive_2)

View east of residence. (71-022 Country Club Drive_7)

Updated Building, Structure, Object Information Continued:

The current 2024 survey found that the dwelling is more specifically associated with the new themes of Residential Subdivisions and Cooperatives (1951-1973) and Rancho Mirage Architectural Styles (1934 – 1980s), but it does not possess individual documented significance in relation to this theme. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

A permit for the construction of the subject property, in the Thunderbird North neighborhood, was issued in 1955. The Thunderbird North neighborhood was developed by Dallas developer A. Pollard Simons. In 1953, Simons bought the 40-acre Loupe Ranch north of Thunderbird Country Club on the northeast corner of Country Club Drive and Morningside Drive. Loupe Ranch included two homes, with citrus trees, date trees, and a vineyard. By 1955, Simons commissioned Master Architect William Cody to design a seven-acre portion of the property as a small private resort community for Simons and his friends who were all members of Thunderbird Country Club and included Texas oilman Monty Moncrief and Thunderbird's all pro golfer Jimmy Hines. Simons and his friends gradually built 10 homes around a central pool with an 8000-square foot private putting green. Each home was custom built, with three designed by William Cody and another three designed by Wexler & Harrison, a partnership of Master Architect Donald Wexler and Master Architect Richard Harrison. Several other homes were designed in a compatible aesthetic although the architect for these properties has not been confirmed. The first two homes in Simons' Thunderbird North project were completed in 1956 and the last was completed in 1978.

The property was originally owned by William A. "Monty" Moncrief and his wife. Moncrief, originally from Texas, gained his fortune in the oil industry. The couple split their time between Texas and the Coachella Valley. The Moncrief's were popular in the Palm Springs and Rancho Mirage communities, being friends with Bing Crosby and often hosting gatherings at their home. The couple was one of the ten original owners in the Thunderbird North community, comprised of a group of friends. (Monty Desert Sentinel, Feb 16, 1950, Page 6; The Desert Sun, Nov 20, 1956, Page 4).

The home is a Desert Modernist style home. In the post-World War II era, country clubs began to be developed in the Coachella Valley. The development of country clubs coincided with the construction of custom residential and commercial properties within their boundaries. Booming post-war development within these country clubs helped shape what is now commonly referred to as 'Desert Modernism', a distinct subtype of the International style of architecture that incorporated modern materials, techniques, and floor plans with the unique requirements of building within a desert environment. The typical characteristics of Desert Modernism included large expanses of floor-to-ceiling glass walls sheltered by deep overhangs extending from flat roofs and flowing interior floor plans that merged gracefully with the outdoors. Often oriented to the rear, where most decorative flourishes could be visible from the fairways of the country clubs, Desert Modernist houses in Rancho Mirage often had a rear swimming pool and expansive golf course views and multiple points of outdoor access while front elevations were often constructed to be unassuming and often shielded for privacy, with only clerestories and obscured glass panels adjacent to the entries providing light. These houses were often light, with roofs floating above glass walls and clerestories, and ceilings supported by thin steel or wood posts. In addition to glass, exterior materials included stucco, wood, slumpstone, and natural rock that often mirrored the desert environment. The subject property features many character defining features of the style including a rear swimming pool, a strong intersection between the indoor/outdoor space, multiple points of outdoor access, an unassuming, shielded front elevation, clerestory windows, glass walls, prominent wood beams at the roof, and stucco and natural stone exterior cladding.

The dwelling has not been found individually eligible under NRHP/CRHR Criterion A/1, as it has not been associated with significant events or patterns of events in local, regional, state, or national history; not individually eligible under NRHP/CRHR Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state or national history. The residence is not considered eligible under Local Criteria 2-6 and 8.

The single-family residence is considered eligible under NRHP/CRHR Criterion C/3 as the property individually embodies the distinctive characteristics of a Desert Modernist style home constructed within Rancho Mirage in the 1950s. The property is also eligible under Local Register Criteria 1 and 7 as it is representative of a Desert Modernist style home that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

Ownership and Address: Papa Bear Residence; 199 E Lake Shore Drive, # 6W, Chicago, IL 60611

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 37-690 Golf Circle residence was constructed in 1959. The one-story residence features a "T"-shaped form with a flat roof. The residence most closely resembles a Desert Modernist style home with Mayan features. Throughout the building, there are several character defining trapezoidal walls which convey the Mayan influence. At the southwest elevation, there is a trapezoidal wall constructed of slumpstone. This trapezoidal wall is repeated at the northwest and eastern elevations. The exterior is clad in stucco with narrow brick accents. The front elevation features a trapezoidal buttress beams that runs over the front walkway. At the front elevation, there is one large, aluminum frame window with aluminum frame casement windows at either side. There is sidelite adjacent to the front door. There is one floor-to-ceiling, fixed window at the front elevation. The residence features an attached two car garage. At the rear elevation, there is a deep roof overhang supported by angled support beams. There are several large sliding glass doors at the rear elevation, opening to the rear in-ground pool. the residence does not appear to have had any alterations, excepting exterior paint.

View east of residence. (37-690 Golf Circle_4)

Updated Primary Record Information Continued:

View of rear elevation of residence. (37-690 Golf Circle_1)

Updated Building, Structure, Object Information Continued:

The subject property was previously found significant under Local Criteria 1, 5, as and 7. The current survey found the subject property is associated with the theme of the Country Club Era (1951 – 1973) and Rancho Mirage Architectural Styles (1934 – 1980s), but does not possess individual documented significance in relation to this theme. The 2024 evaluation found that the property should be assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

The subject property was built in 1959 by the MarVal Construction Company. The company was founded by contractor Robert Marx and architect Val Powelson. Marx was the son of Gummo Marx (of the Marx Brothers), born in 1930. He was a building contractor in the Coachella Valley. He partnered with architect designer Val Powelson under the firm Marval Construction Company which operated from 1957 to 1964. "Marval" is a combination of the Marx and Val names. Marx built many custom homes in the Rancho Mirage Tamarisk area, best known being the Gullwing House/Leo Maranz residence, the Sputnik House/Gummo Marx residence, and the Da Vaal Estates ("Robert 'Bob' Marx Collection," Palm Springs Art Museum, Online Archive of California). The many residences constructed by the Marval Construction firm and designed by Powelson under the Marval firm are noted for their eye-catching Modern designs. This included dramatic winged roofs, sharply pointed exposed beams, unique shapes and angles, prominent center beams, and dramatic architectural features. The Fallick Residence has been identified as being constructed by Marx, however, the architect was not identified, though it was likely designed by Powelson. The Fallick Residence features Modern details that are typical of Marx's work, including the prominent beams, unique shapes and angles, such as the trapezoidal elements, and the dramatic roof overhang.

The Fallick Residence most closely resembles a Desert Modernist style home, though it is unique for its Mayan influences. The Desert Modern style developed in the post World-War II era, specifically influenced by the construction of residential country clubs. Booming post-war development within these country clubs helped shape what is now commonly referred to as 'Desert Modernism', a distinct subtype of the International style of architecture that incorporated modern materials, techniques, and floor plans with the unique requirements of building within a desert environment. The typical characteristics of Desert Modernism included large expanses of floor-to-ceiling glass walls sheltered by deep overhangs extending from flat roofs and flowing interior floor plans that merged gracefully with the outdoors. Often oriented to the rear, where most decorative flourishes could be visible from the fairways of the country clubs, Desert Modernist houses in Rancho Mirage often had a rear swimming pool and expansive golf course views and multiple points of outdoor access while front elevations were often constructed to be unassuming and often shielded for privacy, with only clerestories and obscured glass panels adjacent to the entries providing light. These houses were often light, with roofs floating above glass walls and clerestories, and ceilings supported by thin steel or wood posts. In addition to glass, exterior materials included stucco, wood, slumpstone, and natural rock that often mirrored the desert environment. The Fallick Residence incorporates many characteristics of this style including an unassuming front elevation with a broad rear elevation facing the golf course, a deep roof overhang that creates an outdoor living space, a flat, unassuming roof, prominent exterior beams/buttresses, and the use of stucco and slumpstone materials.

The original owner of the property was Samuel J. Fallick, a Chicago attorney. The subject property was purchased in 1953, a year after the Tamarisk Country Club opened. However, the residence was not built until 1959. The Fallick's owned the property until 1961 when it was sold to Dr. and Ms. Sam Hart. Hart was on the board of the Desert Medical Center, later known as the Eisenhower Medical Center.

The dwelling has not been found individually eligible under NRHP/CRHR Criterion A/1, as it has not been associated with significant events or patterns of events in local, regional, state, or national history; not individually eligible under NRHP/CRHR Criterion B/2, as it has not been identified as having an association with an important person; and not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state or national history. The residence is not considered eligible under Local Criteria 2, 3, 5, 6 and 8.

Updated Building, Structure, Object Information Continued:

The single-family residence is considered eligible under NRHP/CRHR Criterion C/3 as the property individually embodies the distinctive characteristics of a Desert Modernist style home constructed within Rancho Mirage in the 1950s. The property is also eligible under Local Register Criteria 1 and 7 as it is representative of a Desert Modernist style home that embodies an outstanding attention to architectural design, detail, craftsmanship, and use of materials. The home is also eligible under Local Criterion 4 as a notable example of the MarVal Construction Company. As the dwelling has not been substantially altered, it maintains adequate integrity from the historic period to convey its significance.

Ownership and Address: Dev Grit; 201 N Palm Canyon Drive, Ste 200, Palm Springs, CA 92262

Report Citation: "Urbana Preservation & Planning, LLC, City of Rancho Mirage Historic Resource Survey and Context Statement, 2025."

Description:

The 69-934 Highway 111 property was a one-story commercial building constructed in 1978. In 2002, Leslie Heumann and Associates described the property as an Organic Modern style building designed by Ken Kellogg. The building was notable for its unique form which followed the natural curvature of the topography. The building was demolished circa 2013. As of 2024, nothing has been built in its place.

Updated BSO Information (DPR 523B):

A prior survey evaluated the property as status code 3S - appears eligible for NR as an individual property through survey evaluation. The prior survey found the building was architecturally significant as a good example of an Organic Modern building in Rancho Mirage. The building was fully demolished in ca. 2013. As of 2024, it has not been replaced. The historic resource is no longer extant. As such, the property is not eligible for inclusion in the NRHP, CRHR, or Local Register. The property is evaluated as status code 6Z - Found ineligible for NR, CR or Local designation through survey evaluation.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Situated at the foot of a small hill along Highway 111, the arrestingly designed Chart House restaurant follows the natural curvature of the site. The hill appears to slope down through the one-story, southwest-facing, Organic Modern building designed by architect Ken Kellogg in 1978. There is 9,296 square feet covered by the roof. Gently sloping roof, with four inches of urethane foam, the roof undulates around the perimeter of the hill, resting on recycled roof boards that are supported by laminated curved beams. Fixed windows are mostly clerestory and opaque with black anodized aluminum mullions. The center skylight is made of three layers of translucent plastic running the full length of the restaurant. The skylight culminates in a raised, ribbed dome from which a round natural rock chimney emerges. The rock in the subterranean walls and the chimney was quarried on site. The double doors of the recessed entrance are made of laminated beveled glass in curved wood frames for keeping out the summer heat. A low-profile waterfall of about 20 feet runs in and out through the glass on the east side of the entrance. Low concrete walls form planters on either side. A curved concrete walkway leads from the parking lot which, together with the restaurant, is on 5.48 acres of land. Landscaping consists of a front lawn, gravel, cacti, shrubs, and queen palms. Although the interior has been extensively remodeled, the exterior is original and in excellent condition.

Period of Significance: *1973 - Present* **Property Type:** *Single-family Residence* **Applicable Criteria:** *C*
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

The Chart House is architecturally significant as a unique and outstanding example of "Organic Modern" design, sensitively integrated into its site and responsive to the desert climate. Designed by architect Kendrick Bangs Kellogg, it was built in 1978 and appeared on the cover of Restaurant Design magazine in 1981. In 1994, it received the Vintage Pinot Noir Award sponsored by AIA, APA, ASLA, AEP, CSPE, IEDI of the Inland Empire of California, in large part due to its energy efficiency.

Kellogg attended university at San Diego State, University of Colorado, University of Southern California, and the University of California at Berkeley. He received an architect's license in California in 1964 and a building contractor's license in 1966, a national license in 1979, and a global (international) license in 1998. Kellogg's motto is: "the more unusual the site, the better the Architecture."

***Date of Evaluation:** *September 23, 2002*

***B10. Significance (continued):**

Kellogg's diversified experience emphasizes composing a totally unified concept. He has a rather unorthodox philosophy regarding architecture and the profession. "Although the 'architectural school' taught basic engineering, it also inadvertently taught me what not to do. Architecture cannot be taught. Beauty comes from within. I learned early that license does not make Architecture. Competitions are, for the most part, political. The technology of any time is only a tool. The AIA is composed of those, with and without license, who primarily are in the business of promoting themselves rather than Architecture. And a committee will never be composed of anything more than another level of mediocrity." Kellogg believes "Organic Architecture is the Mother of the Arts. Beauty is the sustainable essence of life. Nature is not sentimental. Both beauty and nature are the practical aspects of our compassion for survival."

The Chart House, Kellogg's only known Coachella Valley commission, brilliantly demonstrates Kellogg's design philosophy. Here he created a building that is an integral and 'organic' part of the environment as it grows out of the hill. Hugging the land, the partially subterranean building folds, curves, and undulates with the topography. It is clearly one-of-a-kind. The property appears eligible for separate listing in the National Register of Historic Places under Criterion C for exceptional merit as an example of Organic Modern design (a "3S" National Register Status Code). In addition, the property would be eligible for designation under an existing or proposed local ordinance.

***P3a. Description:**

The 71-388 Cypress Drive property, known as the Phil Harris & Alice Faye Residence, was constructed in 1952 in Thunderbird Country Club and it sits on a 0.60 acre parcel. The property is a one-story Post and Beam style single-family residence with an irregular floor plan and a low-pitched cross-gabled roof clad in composition sheets and tiles. The single-family residence has asymmetrical facades clad in brick and stucco siding. The front elevation features an offset and recessed front entrance and the rear elevation features floor-to-ceiling windows looking out over the golf course beneath a wide flat porch roof overhang. The property also has a detached non-historic (ca. 2019) guest house to the north. In 2019, the owner made significant alterations to the original dwelling, modernizing both the exterior and interior of the home, removing many of the original mid-century design elements and materials.

B9a. Architect: Hiram Hudson Benedict **b.** Builder: Unknown
***B10. Significance: Theme:** Country Club Era, 1951 – 1973 **Area:** City of Rancho Mirage
Period of Significance: 1951-1998 **Property Type:** Single-Family Residential
Applicable Criteria: NRHP/CRHR/Local ineligible

The first owners and occupants of 71-388 Cypress Drive were husband and wife, Phil Harris and Alice Faye, both well known entertainers of their age. The house was designed for the couple by Hiram Hudson Benedict. They occupied their home in Rancho Mirage until the 1990s, when Phil passed away in 1995 and Alice died in 1998. One of the earliest houses built within Thunderbird Country Club, Phil Harris and Alice Faye commissioned the home shorty after they helped establish the club as early investors. However, while the dwelling is associated with the establishment of the Country Club Era (1951-1973), it does not possess individual documented significance in relation to this theme. The construction of the home did not significantly impact the design and direction of future residents within the club boundaries. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme but it is not considered a significant representative example of a known architectural style in the community.

See Continuation Sheet for significance and integrity analysis.

Primary Record Information Continued:

71-388 Cypress Drive_5: View facing east of the northwest (front) elevation

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:
The home was built originally designed as a Custom Ranch house, but a remodeling campaign in 2019, removed many of the original mid-century design elements, and materials. The original wood shake roof was removed and replaced, the original configuration of windows and doors has been substantially modified, and most of the original brick walls have been removed. Today, the home more closely resembles a Post and Beam modernist style residence.

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is potentially individually eligible under NRHP/CRHR Criterion B/2, as the home is significantly associated with the lives of Phil Harris and Alice Faye while they were still working together in the entertainment industry. However, the property no longer retains adequate historic integrity to convey its significance under this criterion. Due to 2019 alterations, the home no longer retains integrity of design, materials, or feeling. The property is not considered eligible under NRHP/CRHR Criterion C/3 as it no longer individually embodies the distinctive characteristics of a mid-century Custom Ranch style home constructed in Rancho Mirage during the 1950s. It is not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 1-4 and 6-8. The home is potentially eligible under Local Register Criterion 5, as it is associated with persons or events that have made a meaningful contribution to the city, state or nation, Phil Harris and Alice Faye. However, the property no longer retains integrity of design, materials, or feeling. The dwelling has been substantially altered and it does not maintain adequate integrity from the historic period to convey its significance in relation to its past occupants. As such, the property is assigned a 6Z status code: Found ineligible for NRHP, CRHR, or Local Register through survey evaluation.

***B10. Significance: Theme:** Early Agricultural and Residential Period, 1924 – 1950 **Area:** City of Rancho Mirage
Period of Significance: 1946 **Property Type:** Single-Family Residential
Applicable Criteria: NRHP/CRHR Criteria B/2 and C/3; Local Criteria 1 and 5

72-424 Desert Drive is a Custom Ranch style single-family residence within Rancho Mirage Annex No. 2. The subject property was constructed in 1946 and was designed by Jack Carter (Pearson and Carter) for Hedy Lamarr, a nationally famous actress of her age. Carlos de La Leon was the interior designer. Due to a lack of telephone directory records and permit records, it is unclear how long she owned the property after it was constructed. It is rumoured that she also owned the house next door at 72-408 Desert Drive, which she utilized as a guest house.

One of the older remaining houses built within the Rancho Mirage Annex, the Hedy Lamarr House is associated with the Early Agricultural and Residential Period (1924-1950) of Rancho Mirage. A. Ronald Button, one of the principal figures in the development of Rancho Mirage, was Hedy Lamarr's lawyer for a time and likely influenced her decision to build a home in the community. However, the property was not one of the earliest homes built in the neighborhood and is not directly associated with A. Ronald Button. Therefore, it does not possess individual documented significance in relation to the Early Agricultural and Residential Period (1924-1950) theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

See Continuation Sheet for significance and integrity analysis.

B10. Statement of Significance Continued From Page 2:
The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is potentially individually eligible under NRHP/CRHR Criterion B/2, as the home is significantly associated with the life of Hedy Lamarr while she was working as an actress. The property is potentially eligible under NRHP/CRHR Criterion C/3 as it still embodies the distinctive characteristics of a Custom Ranch style home constructed in Rancho Mirage during the 1940s. It is not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-4 and 6-8. The Hedy Lamarr House is considered eligible under Local Register Criterion 1 as the residence is representative of a mid-20th century Custom Ranch home in Rancho Mirage. It is also considered eligible under Local Register Criterion 5, as it is associated with persons (Hedy Lamarr) or events which have made a meaningful contribution to the city, state or nation. The property appears to retain sufficient integrity of location, design, setting, materials, feeling, and association. The dwelling has not been substantially altered and it maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

***P3a. Description:**

The 71-543 Tangier Road property, known as the Jeff Chandler Residence, was constructed in 1957 in the Rancho Mirage Unit 6 subdivision and it sits on a 0.30 acre parcel. The property is a one-story Contemporary style single-family residence with an U-shaped floor plan and a low-pitched front-gabled roof. The residence has asymmetrical facades clad in stucco. The front elevation features a recessed off-centered front entrance with a paneled wooden door beneath the wide open eave overhang supported by a decorative metal post. Between the residence and the garage, there is a covered front patio beneath a flat roof and a wooden trellis which is located behind a decorative metal fence. The dwelling is connected to the garage at the northern end via the front patio roof and the garage is covered by its own separate front-gabled roof. The front elevation has floor-to-ceiling windows within the primary gable end that features exposed purlins and an exposed ridge beam. The roof is clad in rolled composition sheets. There appear to have been no significant additions to the property over time.

B1. Historic Name: Jeff Chandler Residence
B2. Common Name: 71-543 Tangier Road
B3. Original Use: Residential **B4. Present Use:** Residential
***B5. Architectural Style:** Contemporary

***B6. Construction History:** The single-family residence was constructed in 1957. Limited building permits exist prior to incorporation of the City of Rancho Mirage in 1973. During construction in 1956 A. Ronald Button was issued permits to wire the property with electric lines, install a sewage system, and build the rear pool (No. 10959, SF03661, and 10996).

Permit records post-1973 indicate that ownership installed a new sewer hookup in 2001. In 2007, the owner removed overhead electrical service conductors and replaced them with underground service. In 2020, they re-roofed the home and replaced the five ton heat pump and air handler. The next year in 2021, they replaced the two ton mini split and air handler. In 2022 they replaced the five ton heat pump and air handler again. In 2023, the ownership installed solar panels on the roof. Other non-permitted undated alterations include garage door and front door replacements.

Applicable Criteria: NRHP/CRHR Criteria B/2 and C/3; Local Criteria 1 and 5

71-543 Tangier Road is a Contemporary style single-family residence within Rancho Mirage Unit 6 subdivision. The subject property was constructed in 1957 by the Rancho Mirage Realty Company, which was owned by A. Ronald Button, Dave Culver, and Art Linkletter. The first owner and occupant was Jeff Chandler, a well known actor of his age famous for his portrayal of Cochise in the 1950 film Broken Arrow. Chandler owned and occupied this house seasonally until his tragic death in 1961.

A. Ronald Button created the Rancho Mirage Realty Company in 1954. While he sold property in Rancho Mirage throughout the late-1940s and early-1950s, homes Button's homes built by the Rancho Mirage Realty Company were unique in their design and marketing. From the 1940s, Button's plan was to build a new city and he required investors. To that end, he partnered briefly with his brother-in-law, the radio and TV personality Art Linkletter, from 1956 to 1958, to develop modern Contemporary style homes within the Magnesia Falls Cove area. During this timeframe, the Rancho Mirage Realty Company developed a number of Contemporary style tract houses using similar plans and marketed them as 'Linkletter Homes', to capitalize on name recognition and put the community on the map. Most 'Linkletter Homes' had stucco-clad exterior walls, semi-detached garages connected by patio roofs, floor-to-ceiling windows on the front and rear elevations, front-facing gables with large overhangs, and exposed roofing components.

B10. Statement of Significance Continued From Page 2:
One of the earlier houses built within the Magnesia Falls Cove neighborhood, the Jeff Chandler Residence is associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage. However, the dwelling was constructed more than a decade after A. Ronald Button began overseeing development in Magnesia Falls and it was built during the time that Button was serving as California State Treasurer (1956-1959) and left Mel Anderson in-charge to oversee his subdivision development. Therefore, it does not possess individual documented significance in relation to the Residential Subdivisions and Cooperatives (1951-1973) theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is potentially individually eligible under NRHP/CRHR Criterion B/2, as the home is significantly associated with the life of Jeff Chandler while he was working as an actor in Hollywood. The property is potentially eligible under NRHP/CRHR Criterion C/3 as it still embodies the distinctive characteristics of a Contemporary style home constructed in Rancho Mirage during the 1950s. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-4 and 6-8. The Jeff Chandler Residence is considered eligible under Local Register Criterion 1 as the residence is representative of a mid-20th century Contemporary style home in Rancho Mirage. It is also considered eligible under Local Register Criterion 5, as it is associated with persons (Jeff Chandler) or events which have made a meaningful contribution to the city, state or nation. The property appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. The dwelling has not been substantially altered and it maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

70-447 Pecos Road is a Desert Modernist style single-family residence within Thunderbird Heights. The subject property was designed by John Randal McDonald and constructed in 1965 by Albert Wild and Ross Patten. The first owners and occupants were Jack M. and Geraldine I. Penrith. Jack Penrith was vice president of United Insurance of America and president of the United Insurance Company in Chicago. Geraldine Penrith was an avid golfer and they both became members of the Thunderbird Country Club in 1961. Geraldine Penrith was the daughter of O.T. Hogan who was the founder and chairman of United Insurance. According to Hogan's obituary, the company was located in the 41-story United of America Building at State and Wacker, known as "the world's tallest marble skyscraper" in the mid 1960s. Mr. Hogan retired as board chairman in 1969, but continued as honorary chairman. Jack Penrith had joined the company as a young man, working as an elevator operator, and continued to work with the company until his death in 1964 when he was murdered in Chicago.

B10. Statement of Significance Continued From Page 2: The current owners are the Taubman family who updated the interior of the home over recent years. Julia Reyes Taubman, co-founder of the Museum of Contemporary Art Detroit, oversaw many of these updates with her interior designer, Brad Dunning, until her death in 2018. Julia was also a well known photographer who published her book, Detroit: 138 Square Miles, to showcase her work. Her family owned one of the nation's largest privately held companies, the Chicago-based food and beverage distribution company, Reyes Holdings LLC. She married Robert Taubman, the current chairman, president and CEO of Taubman Centers Inc., in 1999.

John Randal McDonald (1922-2003) was an American architect who worked in the 1950s and 1960s. McDonald was born in Milwaukee in 1922 and served in World War II as an officer in the U.S. Navy before pursuing a degree in architecture. After a brief stint in the fine arts program at the State Teacher's College, McDonald decided to pursue his interest in architecture at Yale University. His work has often been compared to Frank Lloyd Wright's because nature was a continuous theme in his design, emphasizing the importance of a natural setting and the use of natural materials. McDonald also encouraged homeowners to be aware of the elegance of the natural environment, thereby making them more sensitive to nature. McDonald designed unique homes that appealed to the public and were often were affordable. Initially, McDonald's designs were predominantly for private residences; however, as years passed and his success and reputation increased, he was commissioned to design monasteries, hotels, factories, dormitories, schools, and churches across the country and abroad. McDonald constructed his first house, located at 801 Lathrop Avenue, Racine, Wisconsin in 1949. With his continued success, McDonald expanded his business and moved to Florida in the late 1950s. McDonald was successful throughout his life as he designed hotels, banks, churches, and marinas throughout the world, as well as homes for various celebrities, such as Björn Borg, Mickey Mantle, Perry Como, Jimmy Connors, James Garner and Maureen O'Hara. He died in 2003.

One of the earlier houses built within the Thunderbird Heights, the Penrith-Taubman House is associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage. However, the dwelling is not individually significantly associated with development within the community. It did not influence the design or direction of other Desert Modernist houses built in the neighborhood during the 1960s and 1970s. Therefore, it does not possess individual documented significance in relation to the Residential Subdivisions and Cooperatives (1951-1973) theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

Building, Structure, Object Information Continued:

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the home is not significantly associated with the lives of persons significant in our past. The property is potentially eligible under NRHP/CRHR Criterion C/3 as it still embodies the distinctive characteristics of a Desert Modernist style home constructed in Rancho Mirage during the 1960s and is representative of the work of recognized the master architect John Randall McDonald and master builders Albert Wild and Ross Patten. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-3, 5-6, and 8. The Penrith-Taubman House is considered eligible under Local Register Criterion 1 as the residence is representative of a mid-20th century Desert Modernist style home in Rancho Mirage. It is also considered eligible under Local Register Criterion 4, as it represents the work of a master architect John Randall McDonald and master builders Albert Wild and Ross Patten. Furthermore, the property is eligible under Local Register Criterion 7 as it embodies elements of outstanding attention to architectural design, detail, craftsmanship and materials. The property appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. The dwelling has not been substantially altered and it maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

***B10. Significance: Theme:** Cityhood, 1973 - Present **Area:** City of Rancho Mirage
Period of Significance: 1978-2011 **Property Type:** Single-Family Residential
Applicable Criteria: NRHP/CRHR Criteria B/2 and C/3; Local Criteria 1, 4, and 5

40-471 Sand Dune Road is a Desert Modernist style single-family residence within Thunderbird Country Club. The subject property was designed by MacDonald Becket of Welton Becket & Associates and constructed in 1978 by Bill Foster, a former mayor of Palm Springs who was also second-generation builder. The home was built for former President Gerald Ford and former First Lady Betty Ford. The Ford Family built their house on property adjacent to their friend Leonard Firestone, who finished construction on his estate in 1957.

Born in Seattle in 1902, Welton Becket studied architecture at the University of Washington. He moved with his schoolmate Walter Wurdeman to Los Angeles in 1933. Together with Charles Plummer, they formed Plummer, Wurdeman and Becket, a firm that largely designed restaurants and shops. In 1935 they designed the Pan Pacific Auditorium in Los Angeles in a striking Streamline Moderne design. After Plummer's death in 1939, the duo continued as Wurdeman and Becket. They worked largely on defense and housing projects until the end of World War II. When large-scale projects were green-lit across the country, Becket and Plummer were well positioned to receive a sizable share of the new commissions. Their first major post war building was the 1947 Bullock's Pasadena, one of the first department stores to open after the war. The same year, their General Petroleum building became the first major post war office building to rise in downtown Los Angeles. After Wurdeman died unexpectedly in 1949, Becket renamed the firm Welton Becket and Associates. He continued to design several iconic buildings including: Capitol Records (Hollywood, 1956), Parker Center (Civic Center, 1955), Los Angeles International Airport (with William Pereira, Charles Luckman, and Paul R. Williams; Inglewood, 1959), and The Music Center (Civic Center, 1964-67). Becket's firm also completed master plans for Panorama City (1947) and Century City (1960), UCLA Medical Center (Westwood, 1948-70), and the civic cores of Pomona (1962-69) and the City of Orange (1963). Welton "Welt" Becket oversaw the construction of more than a hundred projects before his passing in 1969.

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:

MacDonald Becket graduated from the USC School of Architecture in 1952. Like his uncle, MacDonald was a driving force in the development of architecture in Los Angeles. Two of his major roles in California were coordinating architect for the master planning and architectural implementations of the 260-acre Century City project and in the successful renovation of the state capitol building in Sacramento. Becket became president of Welton Becket and Associates in 1969, after Welton's death, and under his leadership, the firm became significant for its corporate and institutional architecture with multiple offices in the United States and around the world. He was instrumental in the design of projects such as the Washington, D.C. Convention Center, Terminal One at the Los Angeles International Airport, Barclays Bank International in New York City, the Federal Courts Building in downtown Los Angeles, the redevelopment of the Boston Commons, Xerox Square in Rochester, New York, the Reunion Hyatt Regency in Dallas, and the Valley National Bank (now Chase Bank) in downtown Phoenix, which is still the tallest building in Arizona.

MacDonald Becket also expanded the firm's development, investment, and international roles. In China, His firm designed the Great Wall Hotel in Beijing and the firm later developed the World Trade Center in Moscow, Russia. He was the first American architect to do a major building in China. Five large projects for the Samsung Corporation in Seoul, South Korea, were also accomplished under his direction. The firm merged in 1987 with Ellerbe Inc. to forllerbe Becket, once the largest architectural firm in the United States. In 2009, AECOM Technology purchased Ellerbe Becket. Prior to the merger, Becket oversaw a staff of 300 architects, planners, engineers, interior designers, space planners and programmers, and allied specialists offering comprehensive total design services on a worldwide basis. In addition, Becket designed and completed personal homes for former United States presidents Dwight Eisenhower and Gerald Ford, as well as for J.C. Hall, owner and president of Hallmark Cards. He died in 2017 at the age of 89 years old in Phoenix, Arizona.

The Gerald Ford Estate was built decades after the initial formation of Thunderbird Country Club. Due to the year that the Fords finished their home, the property is associated with the Cityhood (1973 - Present) theme in Rancho Mirage. However, the house is not individually significantly associated with the development of Rancho Mirage as a community because it was already associated with celebrities and former U.S. presidents. Therefore, it does not possess individual documented significance in relation to the Cityhood (1973 - Present) theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

Building, Structure, Object Information Continued:

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is individually eligible under NRHP/CRHR Criterion B/2, as the home is significantly associated with the lives of both Gerald Ford and Betty Ford. This was the retirement home for Gerald Ford, but Betty Ford conducted significant work with the Betty Ford Center at the Eisenhower Medical Center to establish treatment options for individuals battling addiction and substance abuse while she lived at the house. The property is potentially eligible under NRHP/CRHR Criterion C/3 as it embodies the distinctive characteristics of a Desert Modernist style home constructed in Rancho Mirage during the 1970s and it represents the work of the master architects of Welton Becket & Associates, when the company was led by the nephew of Welton Becket, MacDonald Becket. While the property does not meet the 50-year threshold for listing in the NRHP at the time of this survey, there is precedent for exceptions, especially regarding properties associated with the lives of U.S. Presidents. Therefore, the property is eligible for listing in the CRHR and the NRHP under Criterion C/3. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-3 and 6-8. The Gerald Ford Estate is considered eligible under Local Register Criterion 1 as the residence is representative of a mid-20th century Desert Modernist style home in Rancho Mirage. It is also considered eligible under Local Register Criterion 4, as it represents the work of a master architect, Welton Becket & Associates, headed by MacDonald Becket. It is also considered eligible under Local Register Criterion 5, as it is associated with both Gerald Ford and Betty Ford, who both accomplished much while living on the property. The home appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. While the interior was renovated in 2013, the exterior has not been substantially altered and it maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

41-910 Tonopah Road is a Desert Modernist style single-family residence within Thunderbird Heights. The subject property was constructed in 1971 and designed by Hugh Kaptur and Larry Lapham for Glenn A. Cramer and his wife. The interior design was completed by Stephen Chase of Arthur Elrod Associates. Glen Cramer was the director of the Transamerica Corporation from 1968 to 1994, chairman of the executive committee of Transamerica Airlines from 1983 to 1994, and president of Trans International Airlines from 1962 to 1983.

41-910 Tonopah Road_6: View east of the northwest (front) elevation.

Cramer Residence rendering by Kaptur - PS Life: Hugh Kaptur Rendering of the Cramer Residence.

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:
Hugh Kaptur was born in Detroit Michigan where his father was a designer in the Packard and General Motors studios. He studied architecture at the Lawrence Institute of Technology. He joined the Marines and while stationed at Camp Pendleton, he met his first wife and designed a real estate office for her family in San Clemente, his first built project. In 1954, Kaptur returned to Detroit where he worked with his Dad in GM's styling division. He moved to Palm Springs in 1956 and apprenticed with Donald Wexler and Richard Harrison. After being let go during a recession, Kaptur went to work independently making renderings for other architects and was hired by contractors to draw building plans. In 1962 he formed a partnership with licensed architect Robert Ricciardi to get the commission for Palm Springs Fire Station #3 and the Palm Springs Golf Course Clubhouse. After that partnership ended, he formed a new firm with Larry Lapham, Kaptur & Lapham, who was the son of the noted architect Howard Lapham. That partnership lasted ten years during which they designed homes in the Thunderbird and Eldorado Country Clubs. After another partnership with James Cioffi, he semi-retired in 1992.

Lawrence "Larry" Lapham, born in 1935, was an Oklahoma native. He spent two years at Oklahoma City University before he was drafted in 1954 to serve in the Korean War. In 1956, he returned to the United States and moved to Palm Springs in 1959 to work with his father, Howard Lapham as an architect and developer of both homes and commercial properties. In the early 1970s, Lapham partnered with Bill Bachwick to develop Desert Dorado, a 500-unit housing development. He is known for both Modernist and Mediterranean Revival style properties. Lapham is particularlu known for the Alan Laddbuilding on Palm Springs Canyon Drive and many other notable properties across the Coachella Valley. In later years, he became a member of the Palm Spring Planning Commission and a part of the Tribal Council Planning Commission. He dies in 2004 at the age of 68 from cancer at the Desert Regional Medical Center.

One of the earlier houses built within the Thunderbird Heights, the Cramer Residence is associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage. However, the dwelling is not individually significantly associated with development within the community. It did not influence the design or direction of other Desert Modernist houses built in the neighborhood during the early 1970s. Therefore, it does not possess individual documented significance in relation to the Residential Subdivisions and Cooperatives (1951-1973) theme.

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the home is not significantly associated with the lives of persons significant in our past. The property is potentially eligible under NRHP/CRHR Criterion C/3 as it still embodies the distinctive characteristics of a Desert Modernist style home constructed in Rancho Mirage during the 1970s and is representative of the work of the master architects Hugh Kaptur and Larry Lapham. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-3, 5-6, and 8. The Cramer Residence is considered eligible under Local Register Criterion 1 as the residence is representative of a mid-20th century Desert Modernist style home in Rancho Mirage. It is also considered eligible under Local Register Criterion 4, as it represents the work of a master architects Hugh Kaptur and Larry Lapham. Furthermore, the property is eligible under Local Register Criterion 7 as it embodies elements of outstanding attention to architectural design, detail, craftsmanship and materials. The property appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. The dwelling has not been substantially altered and it maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S2 status code - individual property that is eligible for local listing or designation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

Applicable Criteria: NRHP/CRHR Criterion C/3; Local Criteria 1, 4, and 7

40-516 Tonopah Road is a Desert Modernist style single-family residence within Thunderbird Heights. The subject property was constructed in 1969 for Burt Armstrong and Catherine Armstrong, who was a member of the Palm Springs Branch of the American Association of University Women (AAUW) and interior decorator who designed the interior of the home. Burt and Catherine were both Los Angeles based interior designers who designed model apartments in major Los Angeles projects like the Century Towers and the Comstock Towers on Wilshire Boulevard. The Armstrong family sold the home the following year in 1970.

Charles Du Bois was born in Rochester, New York. He was raised, with his sister, by his uncle in Glendale, California. He attended UCLA for a year and then transferred to MIT, where he attended school intermittently from 1922 to 1930. During this time, he was also working as a draftsman for several prominent architecture firms, including Walker & Eisen (1923-1931), Gogerty & Weyl (1926-1929), and Horatio W. Bishop (1929). Du Bois was exposed to many Spanish Baroque, Spanish Colonial, and Mediterranean Revival styles in these early years. In 1938, he opened his office in Hollywood. When housing construction slowed during WWII, he worked as a Senior Set Designer for MGM. After the war, he lived in Encino and returned to designing and working with developers across southern California. Some of his works include the Hollywood Riviera Estates, Palos Verdes Riviera Beach Estates, Fairwood Estates in Granada Hills, Santa Anita Estates in Pasadena, and Woodland West in Woodland Hills. In particular, Woodland West offers a glimpse of several Du Bois design hallmarks, namely Palos Verdes stone cladding, double entry doors, and "casket-pull" door handles. His Palm Springs homes possess many classic mid-century modern traits, such as post-and-beam construction, vaulted ceilings, walls of glass, and an emphasis on blending indoor and outdoor living. Du Bois is well known for the Swiss Miss Houses in Palm Springs, featuring dramatic A-frame entries as well as the Las Palmas Summit and Canyon Estates developments. Du Bois died in 1996.

***P3a. Description:**
70-146 Carson Road, known as the Stoneman Residence, was constructed in 1964 in Thunderbird Heights and it sits on a 0.86 acre parcel. The property is a single-story Desert Modernist style single-family residence with an L-shaped floor plan and a flat roof. The single-family residence has asymmetrical facades that are clad in stucco. The front elevation features a front gate with dual metal doors that leads to an inner courtyard with a pool and fountain where the dual wood paneled front doors are centrally located under a large flat porch roof supported walls and decorative metal posts. The exterior walls are painted stucco interrupted by fiberglass sliding glass doors and fixed floor-to-ceiling metal framed windows. Outdoor walkways are clad in stone with brick framing and the flat roof extends out from most exterior walls to create continuous patio space around the inner courtyard which is supported by simple square metal columns. The flat roof is clad in rolled composition sheets. There appear to have been no significant additions to the property over time.

70-146 Carson Road is a Desert Modernist style single-family residence within Thunderbird Heights. The subject property was constructed in 1964 for Alan C. Stoneman and his wife Lois. Stoneman was president of the Purex Industries Inc. and the Orange County chairman during Ronald Reagan's 1966 gubernatorial campaign. Lois Lynn Rodgers (Stoneman) was an accomplished concert pianist and an active member of the Palm Springs Branch of the American Association of University Women (AAUW). The AAUW opened the house for tours shortly after its construction to help fundraise for a local scholarship fund.

Howard Lapham was born in 1914 in Stamford, Connecticut. In 1954 at age 40, he arrived in the Coachella Valley. Although he was a registered designer, Lapham intended on becoming a builder in his new desert home. Within a year, however, he was designing residences for wealthy and influential members of the Thunderbird Country Club along the Club's fairways and up the slopes of what became known as Thunderbird Heights. A number of Lapham's buildings appeared in "Architectural Digest", including the Hyatt von Dehn Residence (1960, Thunderbird Heights), the Kiewit Residence (1960, Thunderbird Country Club), the Clarke Swanson Residence (1961, Thunderbird Country Club), the Morrow Residence (1961, Silver Spur Ranch, Palm Desert), and the 1961 remodel of the Thunderbird Country Club clubhouse. He remodeled the famous Chi Chi nightclub in 1959, giving it an ultra-modern new façade. Lapham also designed Lord Fletcher's English Pub in 1966 on what became known as 'restaurant row' on Highway 111 in Rancho Mirage. One of Lapham's largest residential projects was the Mayan-themed Cook House, known as Ichpa Mayapan, built atop Thunderbird Heights in 1970. Lapham also drew the initial plans for the Eisenhower Medical Center, although Edward D. Stone obtained the commission. Lapham officially retired in the 1980s although he maintained an office in Palm Springs for many years. He died in 2008.

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:

One of the earlier houses built within the Thunderbird Heights, the Stoneman Residence is associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage. However, the dwelling is not individually significantly associated with development within the community. It did not influence the design or direction of other Desert Modernist designs built in the neighborhood during the 1960s. Therefore, it does not possess individual documented significance in relation to the Residential Subdivisions and Cooperatives (1951-1973) theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the home is not significantly associated with the lives of persons significant in our past. While Alan Stoneman was a notable executive, he does not appear to have spent significant time at the property until after his retirement from Purex in 1966. The property is potentially eligible under NRHP/CRHR Criterion C/3 as it embodies the distinctive characteristics of the Desert Modernist style home constructed in Rancho Mirage during the 1960s and is representative of the work of the master architect Howard Lapham. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-3, 5-6, and 8. The Stoneman Residence is considered eligible under Local Register Criterion 1 as the residence is representative of a mid-20th century Desert Modernist style home in Rancho Mirage. It is also considered eligible under Local Register Criterion 4, as it represents the work of master architect Howard Lapham. Furthermore, the property is eligible under Local Register Criterion 7 as it embodies elements of outstanding attention to architectural design, detail, craftsmanship and materials. The property appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. The dwelling has not been substantially altered on the exterior and it maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

70-772 Fairway Drive is a Custom Ranch style single-family residence within Thunderbird Country Club. The subject property was constructed in 1952 for D.B. McDaniels and his wife Grace. McDaniels (often listed as McDaniel) was a Texas oilman and Cadillac dealership owner from Houston, Texas. McDaniels was instrumental in the creation of Thunderbird Country Club, donating $100,000 to Johnny Dawson in order to construct the country club.

William Francis Cody (1916-1978) was born in Dayton, Ohio, in 1916, Cody's family relocated to California in 1930. While attending Beverly Hills High School, Cody designed and built stages for school plays prior to his graduation in 1932. Following high school, he graduated from Santa Monica Junior College in 1939 and enrolled in the College of Architecture and Fine Arts at the University of Southern California. He graduated from USC in 1942. During his time at Santa Monica Junior College and USC, Cody worked for architects, Heath Wharton and Asa Hudson. Following his graduation, Cody worked for several engineering and architecture firms in California, including Cliff May whom he worked for in 1944. In 1945, Cody's firm was hired to alter the Desert Inn in Palm Springs. Following the Desert Inn project, Cody began working independently in California and Arizona by 1946.

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:
In 1946, William F. Cody moved to Palm Springs permanently and received his first independent commission to design the Del Marcos Hotel, which earned him an award in 1949 from the California chapter of the American Institute of Architects. In 1947, he was hired to convert the Thunderbird Dude Ranch, originally constructed in 1936, to the Thunderbird Country Club. His work at Thunderbird led to future commissions at other clubhouses, recreational facilities, and residential developments, at locations throughout Palm Desert, such as the Eldorado Country Club, Tamarisk Country Club, the Racquet Club, the Tennis Club, and the Seven Lakes Clubhouse. In Palm Springs, Cody was one of the architects, with Wexler & Harrison and Philip Koenig, to design the Spa Bathhouse and Spa Hotel. In 1952, Cody designed the Horizon Hotel.

In the Coachella Valley, he was responsible for several notable Contemporary style residential designs including the Perlberg, Shamel, and Abernathy residences in Palm Springs. Throughout his career, he designed commercial and residential properties throughout California, Arizona, Texas, Cub, and Mexico. He was inducted into the College of Fellows of the AIA in 1965. Some of his final projects included St. Theresa's Catholic Church in 1968 and the Palm Springs Library Center in 1972. In 1973, he suffered a severe stroke which caused him to end his architectural career. He died in 1978 and today is considered one of the most important architects in the Desert Modernism movement.

The home, designed by famed master architect William F. Cody, was one of the first built within the club, adjacent to the clubhouse. While the residence was one of the first constructed in Thunderbird Country Club, it was one of many that were being constructed by the original group of investors around the course at the same time, many of which are still extant. Therefore, while the D.B. McDaniels Residence is associated with the Country Club Era (1951 – 1973) theme, it does not possess individual documented significance related to that theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

Building, Structure, Object Information Continued:

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is individually eligible under NRHP/CRHR Criterion B/2, as the home is significantly associated with the life of D.B. McDaniels, a significant figure in local history due to his connection with the creation of the Thunderbird Country Club and one of the earliest users of the mechanized golf cart before his death in 1955. The property is eligible under NRHP/CRHR Criterion C/3 as it embodies the distinctive characteristics of a Custom Ranch style home constructed in Rancho Mirage during the 1950s and it represents the work of the master architect William F. Cody. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-3 and 6-8. The D.B. McDaniels Residence is considered eligible under Local Register Criterion 1 as the residence is representative of a mid-20th century Custom Ranch style home in Rancho Mirage. It is also considered eligible under Local Register Criterion 4, as it represents the work of a master architect, William F. Cody. It is also considered eligible under Local Register Criterion 5, as it is associated with D.B. McDaniels, who was significant in the establishment of the Thunderbird Country Club while he lived at the property. The home appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. While a subsequent owner added an additional patio roof to the home in 2001, the original layout of the home remains intact and most of the original materials remain. Overall, the exterior has not been substantially altered and it maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

71-136 La Paz Road is a Post and Beam style single-family residence within Tamarisk Country Club. The subject property was constructed in 1972 for James Meade, the principal manager of the Merkeri Foundation, by Buff & Hensman & Associates. One of the later houses built within Tamarisk Country Club, the Meade Residence is associated with the Country Club Era (1951-1973) theme in Rancho Mirage. However, the dwelling is not individually significantly associated with the development of country clubs, as it was built at the tail end of this era, after many country clubs had been established throughout the Coachella Valley. The residence did not influence the design or direction of other Desert Modern designs built in the neighborhood during the 1970s. Therefore, it does not possess individual documented significance in relation to the Country Club Era (1951-1973) theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

B10. Statement of Significance Continued From Page 2:
One of the more prolific developers of Contemporary style homes and custom Modernistic style residences in Southern California during the postwar era, Buff, Straub & Hensman was a Pasadena based firm born out of the USC School of Architecture. Between 1958 and 1963, the partners, Conrad Buff, Donald Hensman, and Calvin Straub, became award winning designers, creating Modern style dwellings, including the Poppy Peak Historic District in Pasadena. In 1963, Straub relocated to Arizona and the firm changed names to Buff & Hensman & Associates (1964-1988). During this time they designed the Meade Residence in 1972 and the governor's mansion for Ronald Reagan the following year in 1973.

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the home is not significantly associated with the lives of persons significant in our past. The property is potentially eligible under NRHP/CRHR Criterion C/3 as it embodies the distinctive characteristics of the Post and Beam style home constructed in Rancho Mirage during the 1970s and is representative of the work of the master architects Buff & Hensman & Associates. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-3, 5-6, and 8. The Meade Residence is considered eligible under Local Register Criterion 1 as the residence is representative of a mid-20th century Post and Beam style home in Rancho Mirage. It is also considered eligible under Local Register Criterion 4, as it represents the work of master architects Buff & Hensman & Associates. Furthermore, the property is eligible under Local Register Criterion 7 as it embodies elements of outstanding attention to architectural design, detail, craftsmanship and materials. The property appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. The dwelling has not been substantially altered on the exterior and it maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

***P3a. Description:**

70-641 Tamarisk Lane, known as the Spare Residence, was constructed in 1974 in Tamarisk Country Club and it sits on a 0.44 acre parcel. The property is a single-story Desert Modernist style single-family residence with an irregular-shaped floor plan and a flat roof. The single-family residence has asymmetrical facades that are clad in stucco, painted brick, uncoursed stone, and glass windows. The front elevation features a recessed central entryway concealed behind a glass wall with metal framed glass doors and an attached garage on the eastern end of the building. The rear elevation mainly consists of floor-to-ceiling metal framed glass windows broken up with sections of stucco walls and square painted brick columns. The roof has wide overhanging eaves which are supported by the brick columns and stucco walls. The eaves extend out over the rear patio space, which has a concrete floor. The gabled roof is clad in rolled composition sheets. There appear to have been no significant additions to the property over time.

70-641 Tamarisk Lane is a Desert Modernist style single-family residence within Tamarisk Country Club. The subject property was constructed in 1974 by Stan Alan Sackley for Alexander T. Spare, a notable Chicago attorney. Spare was also the 'registered agent' for numerous Chicago companies. These businesses varied widely and included the Johnson Kiddie Rides and the Lake Tower Motel Corporation, coffee companies; the Long Realty Co.; Mark Realty & Investment Co.; Midland Building Corp.; National Design Center; Quality House Inc.; a company in his wife's name: R. H. S. Corp.; and Spare Realty Inc. He and his wife Rita started coming to the the Coachella Valley in the early 1960s. In 1961 they owned a house at 70-906 La Paz Road, in Tamarisk Country Club. Spare died in December 1973 at the age of 69 after a short battle with an unknown illness shortly before the completion of his home in August 1974.

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:
Stan Alan Sackley was a prolific Modernist architect in the Coachella Valley. He was born in Los Angeles County and graduated from the University of Southern California with a degree in architecture in 1961. In the early 1960s, prior to forming his own firm, Sackley partnered with Herman Charles Light. Sackley was never licensed as an architect but maintained a successful design firm in Palm Springs. He received national fame when his house for James Hollowell was featured in Playboy in April 1966. Sackley is best known for mid-century Modern homes along Caliente Drive. By 1986, Sackley had retired. He died in 2001.

One of the later houses built within Tamarisk Country Club, the Spare Residence is associated with the Cityhood (1973-Present) theme in Rancho Mirage. However, the dwelling is not individually significantly associated with the development of City of Rancho Mirage, as the construction was simply a continuation of earlier building across the club grounds. The residence did not influence the design or direction of other Desert Modern designs built in the neighborhood during the 1970s. Therefore, it does not possess individual documented significance in relation to the Cityhood (1973-Present) theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the home is not significantly associated with the lives of persons significant in our past. The property is potentially eligible under NRHP/CRHR Criterion C/3 as it embodies the distinctive characteristics of the Desert Modernist style home constructed in Rancho Mirage during the 1970s and is representative of the work of the master architect Stan Alan Sackley. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

Building, Structure, Object Information Continued:

The single-family residence is not considered eligible under Local Criteria 2-3, 5-6, and 8. The Spare Residence is considered eligible under Local Register Criterion 1 as the residence is representative of a mid-20th century Desert Modernist style home in Rancho Mirage. It is also considered eligible under Local Register Criterion 4, as it represents the work of the master architect Stan Alan Sackley. Furthermore, the property is eligible under Local Register Criterion 7 as it embodies elements of outstanding attention to architectural design, detail, craftsmanship and materials. The property appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. The dwelling has not been substantially altered on the exterior and it maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation

37-101 Los Reyes Drive is a Postmodern style single-family residence within Tamarisk Country Club. The subject property was constructed in 1983 by Ted Grenzbach, a notable post-war Modernist architect in Southern California, for Eugene "Gene" Klein, a New York businessman and owner of the San Diego Chargers. One of the later houses built within Tamarisk Country Club, the Klein Residence is associated with the Cityhood (1973-Present) theme in Rancho Mirage. However, the dwelling is not individually significantly associated with the development of City of Rancho Mirage, as the construction was simply a continuation of earlier building across the club grounds. The residence did not influence the design or direction of other designs built in the neighborhood during the early 1980s. Therefore, it does not possess individual documented significance in relation to the Cityhood (1973-Present) theme. Primary Record Information Continued:

37-101 Los Reyes Drive_2: View of the east (front) elevation)

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:
The architect and owner of the home were both notable figures. Ted Grenzbach was born in New York City but grew up in 1930s Hollywood. After serving in the Navy during World War II, Grenzbach earned a degree in architecture from U.C. Berkeley. Following graduation, he built homes in Modernist styles for stars such as Frank Sinatra, Dinah Shore, Cher, Gene Kelly, Herb Alpert, Rock Hudson, Rod Stewart, Barbra Streisand and Johnny Carson. Gene Klein, born in the Bronx, made his money and reputation in California as the owner of a used-car dealership. He later became and investor and later president of National General Corporation, which later became American Financial Group. In 1966, Klein with San Schulman and a group of minority investors bought the San Diego Chargers. In 1984, Klein sold his share in the team to Alex Spanos as he entered retirement.

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the home is not significantly associated with the lives of persons significant in our past. While it was commissioned by Gene Klein, a notable businessman and public figure, he only lived part-time at the residence after retirement and he died in 1990. The property is potentially eligible under NRHP/CRHR Criterion C/3 as it embodies the distinctive characteristics of the Postmodern style home constructed in Rancho Mirage during the 1980s and is representative of the work of the master architect Ted Grenzbach. However, the building was completed in 1982, and does not meet the 50-year age requirement for listing in the NRHP. As a result, the property is only eligible under CRHR Criterion 3. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

Building, Structure, Object Information Continued:

The single-family residence is not considered eligible under Local Criteria 2-3, 5-6, and 8. The Klein Residence is considered eligible under Local Register Criterion 1 as the residence is representative of a mid-20th century Postmodern style home in Rancho Mirage. It is also considered eligible under Local Register Criterion 4, as it represents the work of the master architect Ted Grenzbach. Furthermore, the property is eligible under Local Register Criterion 7 as it embodies elements of outstanding attention to architectural design, detail, craftsmanship and materials. The property has been meticulously restored by a subsequent owner and many of the original features have been restored to both the interior and exterior of the building. The property appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. The dwelling has not been substantially altered on the exterior and it maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

37-319 Los Reyes Drive is a Desert Modernist style single-family residence within Tamarisk Country Club. The subject property was constructed in 1969 by William Sutherland Beckett, a notable post-war Modernist architect in Southern California, for Daniel "Danny" and Natalie Schwartz. Val Arnold was the interior designer. Daniel Schwartz was a Bay area developer and World War II veteran. His wife, Natalie, owned a beauty shop in Palm Springs. When they lived in Rancho Mirage, they were donors and members of the development committee for the Barbara Sinatra Children's Center, as they were good friends with both Frank and Barbara Sinatra. They owned the home until 1998 when they moved to Las Vegas and sold it to Samuel Belzberg, a well known Canadian businessman and philanthropist, who lived part-time on the property until his death in 2018.

B10. Statement of Significance Continued From Page 2:
William Sutherland Beckett was born June 14, 1921 in Kansas City, Missouri. He attended Yale University and graduated in 1943. Beckett moved to California after graduating and worked for Douglas Aircraft for a short time during World War II. He later went to work for the firm Spaulding and Rex from 1944 to 1949, eventually achieving the title Chief Designer. Beckett married fellow Kansas Citian and socialite, Julianne Kemper in 1948. She was the daughter of James Madison Kemper, Sr. and part of a prominent banking family and patrons of the arts in Kansas City. In late 1949, Beckett went out on his own, and by 1950, he had completed his own offices, located at 9026 Melrose Avenue. The building garnered him an AIA National Honor First Award in 1952, one of only three given nationwide that year. This prestigious award set his reputation as an architect for stars like Charlton Heston, setting him off on a career designing many celebrity homes and businesses in Beverly Hills and throughout LA. William Beckett died at the early age of 56 in 1977 due to issues resulting from chronic alcoholism.

Built well after the establishment of the Tamarisk Country Club, the Schwartz Residence is associated with the Country Club Era (1951-1973) theme in Rancho Mirage. However, the dwelling is not individually significantly associated with the development of country clubs, as other clubs were already in development across Rancho Mirage at the time of construction. The property did not influence the design or direction of other houses built in the neighborhood during the late 1960s or early 1970s. Therefore, it does not possess individual documented significance in relation to the Country Club Era (1951-1973) theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

Building, Structure, Object Information Continued:

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the home is not significantly associated with the lives of persons significant in our past. While the house was commissioned by Daniel Schwartz, a notable public figure, he only lived in there retirement. While Samuel Belzberg is also a significant figure, he appears to have only lived part-time in Rancho Mirage. The property is potentially eligible under NRHP/CRHR Criterion C/3 as it embodies the distinctive characteristics of the Desert Modernist style home constructed in Rancho Mirage during the 1960s and is representative of the work of the master architect William Sutherland Beckett. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-3 and 5-8. The Schwartz Residence is considered eligible under Local Register Criterion 1 as the residence is representative of a mid-20th century Desert Modernist style home in Rancho Mirage. It is also considered eligible under Local Register Criterion 4, as it represents the work of the master architect William Sutherland Beckett. The property is not eligible under Local Register Criterion 7 as it no longer embodies elements of outstanding attention to architectural design, detail, craftsmanship and materials because the interior has been remodeled since its initial construction. Overall however, the property appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. The dwelling has not been substantially altered on the exterior and it maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

***P3a. Description:**
71-017 Fairway Drive, known as the Albert Marx Residence, was constructed in 1964 in Tamarisk Country Club and it sits on three parcels totaling 1.64 acres. The property is a single-story International style single-family residence with an irregular-shaped floor plan and a flat roof. The single-family residence has an asymmetrical facades that are clad with stucco, glass window walls, and painted concrete masonry unit blocks. The front elevation features a prominent three-car garage on the eastern end and a front entrance covered by an extended flat porch roof supported by circular columns. The front doors are glass with metal frames with dual side-lites. The rear elevation features a back patio flat roof supported by circular columns that wraps around the south, west and east, elevations. The rear features a pool located southwest of the residence. The roof is clad in rolled composition sheets. There appear to have been no significant additions to the property over time.

71-017 Fairway Drive is an International style single-family residence within Tamarisk Country Club. The subject property was constructed in 1964 by Richard A. Harrison, a notable post-war Modernist architect in Southern California, for Albert and Harriet Marx. Albert Marx was an well known record producer who gained notoriety in 1938 when he recorded Benny Goodman's famous Carnegie Hall concert via telephone wire. After working as a publisher for Musicraft, he founded Discovery Records in 1948. He first married to singer Helen Ward in the 1930s, but they divorced some time during the 1950s. Marx remained active in the music industry in the 1980s. His second wife, Harriet, was a model and a dancer on Broadway. She was also a lead singer with Sonny Dunham and the Charlie Barnet Orchestra. Harriet and Albert sponsored a scholarship fund at the College of the Desert's Music Department in honor of their son, Peter Marx, who died in a car accident in 1972. He was also preparing to study music in college. Albert and Harriet Marx owned the home at 71-017 Fairway Drive until at least 1977.

71-017 Fairway Drive_4: View north of the south (rear) elevation.

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:
Richard Arnett Harrison was born in Los Angeles on June 5, 1924. Richard "Rick" attended University High School in Los Angeles. He went on to graduate from University of Southern California in 1951 with a degree in Architecture. After travel to Mexico and Canada, Harrison began work at William F. Cody's firm in Palm Springs from July 1951 to February 1953, where he worked side by side with his soon to be partner Donald Wexler (who previously began his career in the office of Richard Neutra). Harrison went on to design homes throughout Southern California including Seven Lakes, and enclaves of homes in Nevada.

Built after the establishment of the Tamarisk Country Club, the Albert Marx Residence is associated with the Country Club Era (1951-1973) theme in Rancho Mirage. However, the dwelling is not individually significantly associated with the development of country clubs, as other clubs were already in development across Rancho Mirage at the time of construction. The property did not influence the design or direction of other houses built in the neighborhood during the 1960s or early 1970s. Therefore, it does not possess individual documented significance in relation to the Country Club Era (1951-1973) theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

Building, Structure, Object Information Continued:
The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is individually eligible under NRHP/CRHR Criterion B/2, as the home is significantly associated with the lives of Albert Marx, a notable figure in the music industry and the Rancho Mirage community. Albert continued to work in the music industry while living on the property, and Harriet managed the scholarship while they owned the home. The property is potentially eligible under NRHP/CRHR Criterion C/3 as it embodies the distinctive characteristics of an International style home constructed in Rancho Mirage during the 1960s and is representative of the work of the master architect Richard A. Harrison. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-3 and 6-8. The Albert Marx Residence is considered eligible under Local Register Criterion 1 as the residence is representative of a mid-20th century International style home in Rancho Mirage. It is considered eligible under Local Register Criterion 4, as it represents the work of a master architect, Richard A. Harrison. It is also considered eligible under Local Register Criterion 5, as it is associated with Albert Marx, who worked as a significant music producer while he lived at the property. The home appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. Overall, the exterior has not been substantially altered and it maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

***P3a. Description:**
41-001 Thunderbird Road, known as the Fred Wilson Residence, was constructed in 1969 in the Thunderbird Heights 2 subdivision and it sits on a 1.23 acre parcel. The property is a single-story Desert Modernist style single-family residence with an irregular-shaped floor plan and flat roofs forms at varying heights. The single-family residence has asymmetrical facades that are clad in stucco, uncoursed stone, concrete masonry block, and glass window walls. The front elevation features a painted concrete masonry wall with metal gates and a central stone archway leading to a walkway that are both covered with flat roofs. The front walls are either clad in stucco or unpainted and uncoursed rock. The east elevation (rear) features metal framed glass window walls that open out to the back patio covered with a flat roof with a wide overhang. The roof of the house is clad in rolled composition sheets and covered with pebble ballast. An interior remodeling campaign in 2001 also added a 214 square foot addition to the home.

41-001 Thunderbird Road is a Desert Modernist style single-family residence within Thunderbird Heights. The subject property was constructed in 1969 for Fred C. and Vondell "Vonnie" Wilson after Fred bought ten different lots within the community two years earlier. Fred Wilson was a WWII and Korean War Navy veteran who afterwards became founder of the Trans World Insurance Company. As he grew his business, he became friends with many well-known entertainers and politicians, most notably, Gerald Ford. During a visit to Rancho Mirage to see Wilson, Gerald and Betty Ford decided to move there and build their own house for retirement. While their home was under construction at the Thunderbird Country Club, they rented out the Wilson's home. After the Fords completed their home in 1978, Fred and Vonnie lived at the property until at least 1998. Fred died in 2006 and Vonnie died in 2012.

41-001 Thunderbird Road_3: Detail view of the front entrance.

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:
Built well after the establishment of the Thunderbird Heights community, the Fred Wilson Residence is associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage. However, the dwelling is not individually significantly associated with the development of community, as many other homes were already built within the neighborhood. The property did not influence the design or direction of other houses built in the surrounding area. Therefore, it does not possess individual documented significance in relation to the Residential Subdivisions and Cooperatives (1951-1973) theme. It is also associated with the new Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the home is not significantly associated with the lives of persons significant in our past. While the house was short occupied by Gerald and Betty Ford, it was not their permanent residence. The property is potentially eligible under NRHP/CRHR Criterion C/3 as it embodies the distinctive characteristics of the Desert Modernist style home constructed in Rancho Mirage during the 1960s. The low-profile modernistic elements of the post-and-beam construction help the building blend seamlessly with the surrounding desert environment. Furthermore, the stone ballast on the roofing, overall tan/brown color scheme, desert climate landscaping, and use of uncoursed stone making it a unique property that is an excellent example of what makes Desert Modernism unique from other International style variations. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-6 and 8. The Fred Wilson Residence is considered eligible under Local Register Criterion 1 as the residence is representative of a mid-20th century Desert Modernist style home in Rancho Mirage. The property is also eligible under Local Register Criterion 7 as it embodies elements of outstanding attention to architectural design, detail, craftsmanship and materials. While the interior has likely been widely remodeled, the exterior appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. An exterior addition was added in 2001, though it does not appear to be public-facing and does not significantly detract from the overall historic character of the building. The dwelling maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

B9a. Architect: Howard Lapham **b.** Builder: Cobble & Wessman Construction Company
***B10. Significance: Theme:** Commercial Development, 1934 – 1973 **Area:** City of Rancho Mirage
Period of Significance: 1966 **Property Type:** Commercial
Applicable Criteria: NRHP/CRHR Criterion A/1; Local Criterion 3

70-385 Highway 111 is a Tudor Revival style commercial building along the Highway 111 corridor. The subject property was designed by Howard Lapham and built by the Cobble & Wessman Construction Company in 1966 for Ron Fletcher, a restaurateur and previous manager of the Thunderbird Country Club restaurant. Fletcher, born in England, partnered with Robert O. Naegle, president of Naegle Advertising, Minneapolis, in May 1966 to fund the construction of the English style pub restaurant along Highway 111. To decorate the establishment, Fletcher visited England and bought items from his mother's antique shop, bringing them back overseas to create his own unique pub atmosphere. The most notable item included an authentic portrait of Winston Churchill painted by Alfred Edgerton Cooper. Opening on Thursday December 10th, 1966, "Lord Fletcher's Inn" quickly became a popular establishment. Over time, the restaurant hosted notable celebrities and local influential figures such as Lucille Ball, Walter Annenberg, Kirk Douglas, Gerald Ford, and Frank Sinatra. It is considered the first significant restaurant established on what would become Restaurant Row. The building was managed by the Fletcher family until 2020, when it closed and Michael Fletcher, the son of Ron, sold the property. In early 2025, Mike French acquired the defunct building and made plans to revitalize the local landmark using the same name and spirit.

B10. Statement of Significance Continued From Page 2:

Howard Lapham was born in 1914 in Stamford, Connecticut. In 1954 at age 40, he arrived in the Coachella Valley. Although he was a registered designer, Lapham intended on becoming a builder in his new desert home. Within a year, however, he was designing residences for wealthy and influential members of the Thunderbird Country Club along the Club's fairways and up the slopes of what became known as Thunderbird Heights. A number of Lapham's buildings appeared in "Architectural Digest", including the Hyatt von Dehn Residence (1960, Thunderbird Heights), the Kiewit Residence (1960, Thunderbird Country Club), the Clarke Swanson Residence (1961, Thunderbird Country Club), the Morrow Residence (1961, Silver Spur Ranch, Palm Desert), and the 1961 remodel of the Thunderbird Country Club clubhouse. He remodeled the famous Chi Chi nightclub in 1959, giving it an ultra-modern new façade. Lapham also designed Lord Fletcher's English Pub in 1966 on what became known as 'restaurant row' on Highway 111 in Rancho Mirage. One of Lapham's largest residential projects was the Mayan-themed Cook House, known as Ichpa Mayapan, built atop Thunderbird Heights in 1970. Lapham also drew the initial plans for the Eisenhower Medical Center, although Edward D. Stone obtained the commission. Lapham officially retired in the 1980s although he maintained an office in Palm Springs for many years. He died in 2008.

Built as the first significant restaurant on Restaurant Row, Lord Fletcher's Restaurant is individually significant within the theme of Commercial Development (1934 – 1973) in Rancho Mirage because it significantly impacted the development of Restaurant Row and helped establish the center for commercial dining within the community. The success of the restaurant paved the way for the later construction of Las Casuelas Nuevas, the Chart House, Wally's Desert Turtle, Kobe Japanese Steak House, and others. The property also influenced the design or direction of other restaurants built in the surrounding area, of which many also utilized strong cultural motifs to differentiate themselves from one another. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme but it is not considered a significant representative example of a known architectural style in the community.

Building, Structure, Object Information Continued:

The commercial building is individually eligible under NRHP/CRHR Criterion A/1, as it is directly associated with a significant pattern of events in local Rancho Mirage history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the building is not significantly associated with the lives of persons significant in our past. While Ron Fletcher and his son Michael are important local figures, their accomplishments are chiefly tied to the ownership and operation of the restaurant. The property is not potentially eligible under NRHP/CRHR Criterion C/3 as it does not embody the distinctive characteristics of a Tudor Revival style commercial restaurant. While the building has not been substantially altered over time, it is a minimal example of the Tudor Revival style and lacks many of the distinct character defining features typical of other buildings constructed in the same manner. The interior of the building contained many of the property's primary decorative features, which are no longer extant or are in poor condition. While the property was designed by master architect Howard Lapham, it is not representative of his work, which mainly consisted of Modernist style designs. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The commercial building is not considered eligible under Local Criteria 1-2 and 4-8. Lord Fletcher's Restaurant is considered eligible under Local Register Criterion 3 as the property is representative of the development of the economic growth of the City of Rancho Mirage. While the interior is likely in poor condition and only partially intact, the exterior appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. The building maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

***P3a. Description:**

71-991 Highway 111, known as Provident Bank, was constructed in 1982 along Highway 111 and it sits on a 1.06 acre parcel. The property is a single-story Desert Modernist style commercial building with a rectangular-shaped floor plan and a flat roof with a wide overhang and enclosed eaves that is clad in a copper fascia. Wood trellises project out of the south and east elevations. The commercial building has asymmetrical facades that are clad in uncoursed black lava rock and glass window walls. The front (east) elevation features a curved wooden trellis over two curved rock walls broken by a central walkway and set of stairs. The doorway is located beneath the trellis and it consists of metal framed glass doors. The parking area is also covered in a flat roof clad with copper metal fascia. The roof of the building is clad in rolled composition sheets. There appear to have been no significant additions to the property over time.

Period of Significance: 1982 **Property Type:** Commercial
Applicable Criteria: NRHP ineligible; CRHR Criterion 3; Local Criteria 1 and 4

71-991 Highway 111 is a Desert Modernist style commercial building along the Highway 111 corridor. The subject property was designed by Gin Wong in 1981 for Gordon A. Blunden, the founder and president of of Provident Bank. In 1981, Provident Bank, at the time Provident Federal Savings, began construction on a new branch location in Rancho Mirage. At that time, Provident had a chain of branches located across Riverside Country, Los Angeles, San Bernardino, and Orange Counties. When Provident began construction on their Rancho Mirage branch, Gordon Blunden wanted a building with material and design that would "harmonize with and complement its desert surroundings." To this end, Provident hired Gin Wong Associates, a Los Angeles based Chinese-American architect who led the design team at the Los Angeles International Airport and planned many other iconic Los Angeles landmarks. For the Rancho Mirage Provident Bank, Wong designed a one-story building over 7,100 square feet with curved walls clad in black lava rock broken by floor-to-ceiling windows and heavy wooden roofing beams to create trellises and large overhangs over building entrances. Wong also designed the building to have large copper metal fascia, which was chosen to weather over time and develop a "desert patina" to blend with the surrounding environment. The building was fully completed in 1982. Since its construction, the Desert Modernist building has remained a Provident Bank branch.

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:
Gin Wong was born in Guangzhou, China in 1922 and immigrated to Los Angeles as a young child. After serving as a radar bombardier for the U.S. Army in World War II, he attended USC's School of Architecture, graduating in 1950. After graduation, he worked for Pereira and Luckman, eventually becoming vice president of design. When William Pereira and Charles Luckman established their own firms, Wong helped found William L. Pereira & Associates in 1958, where he ultimately became a partner and the firm's president. Wong was instrumental in creating some of Los Angeles' greatest Modern structures. He served as design director for Los Angeles International Airport (LAX). Other projects included CBS Television City and downtown's Union Oil Center (now Los Angeles Center Studios). Wong also designed what many consider the most iconic gas station in the world—the Union 76 station (1965) in Beverly Hills, originally designed as part of the LAX master plan. It was under Wong's leadership that Pereira & Associates was commissioned to design the landmark Transamerica Pyramid in San Francisco.

He founded Gin Wong Associates (GWA) in 1974. The internationally recognized firm specializes in the design and planning of corporate headquarters, commercial and retail spaces, hotels, educational facilities, and university campuses. GWA designed the Arco Tower (now 1055 West Seventh), one of the most prominent Modern skyscrapers in downtown Los Angeles. Wong, was one of a unique group of Chinese-American architects who helped define the postwar architecture of Los Angeles, all while fighting discrimination through racial covenants in mid-century Los Angeles. Wong died on September 1, 2017 at the age of 94.

Building, Structure, Object Information Continued:

Built along the Highway 111 corridor, the Rancho Mirage Provident Bank was not the first bank built in the City of Rancho Mirage and did not significantly impact commercial development along Highway 111 during the Cityhood (1973-Present) era, as other buildings offering similar services were already common in the area. While it is a prominent Desert Modernist style commercial building, located on the corner of Highway 111 and Magnesia Falls Drive, there is no evidence to suggest that property influenced the design or direction of other commercial establishments built in the surrounding area. Therefore, it does not possess individual documented significance in relation to the Cityhood (1973-Present) theme. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

The commercial building is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the property is not significantly associated with the lives of persons significant in our past. While Gordon A. Blunden commissioned the building of the ranch, it was not one of the first Provident Bank locations and Blunden did not work at the office. The property is potentially eligible under NRHP/CRHR Criterion C/3 as it embodies the distinctive characteristics of a Desert Modernist style commercial property. However, the building was completed in 1982, and does not meet the 50-year age requirement for listing in the NRHP. As a result, the property is only eligible under CRHR Criterion 3. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The commercial building is not considered eligible under Local Criteria 2-3 and 5-8. Rancho Mirage Provident Bank is considered eligible under Local Register Criterion 1 as the property is representative of a mid-20th century Desert Modernist style commercial building in Rancho Mirage. It is considered eligible under Local Register Criterion 4, as it represents the work of a master architect, Gin Wong. The property appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. The building maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation; and the 3CS status code - appears eligible for CR individually through survey evaluation.

Applicable Criteria: NRHP/CRHR Criterion C/3; Local Criteria 1 and 7

72-067 Highway 111 is a Post and Beam style commercial building along the Highway 111 corridor. The subject property was designed by Ross Patten in 1974 for Noel F. Birns' interior design company. Noel F. Birns was an interior designer who worked on several large projects throughout the 1950s and '60s, designing model homes for Sunrise Estates and Araby Estates for the Alexander Construction Company, El Dorado Highlands, and a Canyon View Estates model for Fey Construction Company. He also worked on home interiors for actors and celebrities like David Janssen at Canyon Club Villas; the Movie Colony residence of James Logan Abernathy; interior work for Frank Sinatra, William Bendix, Debbie Reynolds, and Jackie Cooper; and That John's restaurant, owned by Ethel and John Harutun. In the 1970s, he collaborated with country clubs to work with buyers on customizing interiors during construction at the Sunrise Country Club, Rancho Las Palmas Country Club, and Monterey Country Club. In 1974, his company moved into the new 72-067 Highway 111 office by Ross Patten. Birn's firm merged with the fellow designer Steven DeChristopher the next year, who also moved into the building. In 1978, DeChristopher became the firm's president and COO while Birms shifted focus to other businesses.

Ap 1973 Ross Patten design Noel Birns interiors copy: 1973 Associated Press View of the east (front) elevation under construction.

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:
Built along the Highway 111 corridor, the Noel F. Birns Building was constructed well after many of the early office buildings constructed along Highway 111, which had been built in the area since the 1940s. As a later commercial office building, it did not significantly impact commercial development along Highway 111 during the Cityhood (1973-Present) era, as other buildings offering similar services were already common. While it is a unique and prominent Post and Beam style commercial building, there is no evidence to suggest that property influenced the design or direction of other office spaces built in the surrounding region. Therefore, it does not possess individual documented significance in relation to the Cityhood (1973-Present) theme. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

The commercial building is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the property is not significantly associated with the lives of persons significant in our past. The property is eligible under NRHP/CRHR Criterion C/3 as it embodies the distinctive characteristics of a Post and Beam style commercial property. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The commercial building is not considered eligible under Local Criteria 2-6, and 8. Rancho Mirage Provident Bank is considered eligible under Local Register Criterion 1 as the property is representative of a mid-20th century Post and Beam style commercial building in Rancho Mirage. The property is also eligible under Local Register Criterion 7 as it embodies elements of outstanding attention to architectural design, detail, craftsmanship and materials. While the interior appears to have been slightly remodeled, the exterior retains sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. The building maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

***P3a. Description:**
42-730 Dunes View Road, known as the A. Ronald Button Residence, was constructed in 1957 in the Rancho Mirage Unit No. 7 subdivision in Magnesia Falls Cove and it sits on a 1.31 acre parcel. The property is a single-story Contemporary style single-family residence with a U-shaped floor plan and two front-gabled roofs forms over the residence and semi-detached garage. The single-family residence has asymmetrical facades that are clad in stucco and glass window walls. The front elevation of the home has floor-to-ceiling windows within the primary gable end that features exposed purlins and and exposed ridge beam. Between the residence and the garage, there is a front patio beneath a flat roof connecting roof which leads to the garage. The garage is covered by its own separate front-gabled roof. Between the dwelling and the garage, a metal sheet wall divides the driveway and the front yard, which features a swimming pool. The roof is clad in rolled composition sheets. In the early 1970s, a previous owner added an approximately 214 square foot rear addition to the home. A renovation campaign in 2020 removed the original concrete block front wall, removed the original front patio/pool decking, and remodeled the interior of the home.

42-730 Dunes View Road is a Contemporary style single-family residence within Magnesia Falls Cove. The subject property was constructed in 1957 for A. Ronald Button by the Rancho Mirage Realty Company, which he owned.

In 1944, Button a Hollywood attorney, bought the original Rancho Mirage subdivision and expanded its holdings further into the Magnesia Falls Cove over time. He was a graduate of Stanford University and Harvard Law School. After law school he became a corporate and business lawyer who represented many prominent film stars in divorce cases. Button also became known for his impressive political connections. During a trip out to Palm Springs with his daughter Barbara, Button drove by the budding subdivision and saw development potential. Following his trip, he began buying acreage throughout the Magnesia Falls Cove and started developing speculative homes, selling lots to individuals, and selling lots to developers to build tract style houses. In 1945, he partnered with actor Dave Culver to develop additional subdivision expansions and construct new apartment complexes, with land purchases amounting to almost 2,000 acres total.

B10. Statement of Significance Continued From Page 2:
Button, who was selling property in Rancho Mirage throughout the late-1940s and early-1950s, officially created the Rancho Mirage Realty Company in 1954. His plan was to build a new city, which required more investors. To that end, he partnered briefly with his brother-in-law, the radio and TV personality Art Linkletter, from 1956 to 1958, to develop more modern Contemporary style homes. During this time, Button this house for himself and his wife, Gladys, at 42-730 Dunes View Road and hired Vee Nisley to do the interior decorating for him. Between 1956 and 1959, Button served as the California State Treasurer, during which time he left the management of his Rancho Mirage developments to Mel Anderson. After his ternded, he resumed his role in developing the community and headed the Rancho Mirage Community Association until 1965. While he lived, he sold most of his land to Desser & Garfield, a pair of Beverly Hills based developers who continued to build houses in the area throughout the 1960s. Button split his time between Rancho Mirage and Los Angeles and owned a house in Thunderbird Heights on Thunderbird Road in 1980. He died in 1987.

One of the earlier houses built within the Magnesia Falls Cove neighborhood, the A. Ronald Button Residence is associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage. However, the dwelling was constructed more than a decade after Button began overseeing development in the Magnesia Falls Cove. While the A. Ronald Button Residence, like the Jeff Chandler Residence, appears to have been built following a Contemporary style template used by the Rancho Mirage Realty Company, the design and overall style did not significantly impact the design and development of other nearby homes. Therefore, the property does not possess individual documented significance in relation to the Residential Subdivisions and Cooperatives (1951-1973) theme. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

Building, Structure, Object Information Continued:

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is individually eligible under NRHP/CRHR Criterion B/2, as the home is significantly associated with the life of A. Ronald Button, a developer whose work was critical to the development of Rancho Mirage. The property is eligible under NRHP/CRHR Criterion C/3 as the property embodies the distinctive characteristics of a Contemporary style home constructed in Rancho Mirage during the 1950s. The rear addition was added in the early 1970s and the 2020 remodeling campaign removed or replaced some of the original interior and exterior materials, but the home still overall retains most of its original character-defining features. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-4 and 6-8. The A. Ronald Button Residence is considered eligible under Local Register Criterion 1 as the residence is representative of a mid-20th century Contemporary style home in Rancho Mirage. It is also considered eligible under Local Register Criterion 5, as it is associated with A. Ronald Button, who made a meaningful contribution to the development of the City of Rancho Mirage. The property appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. The dwelling appears to have not been substantially altered and appears to maintain adequate integrity from the historic period to convey its significance. However, visibility during field survey activities was low due to a front wall and extensive vegetation. Therefore, the further intensive survey is needed to determine potential eligibility. As such, the property is assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation.; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

***P3a. Description:**
71-530 Biskra Road, known as the James Roosevelt Residence, was constructed in 1958 in the Rancho Mirage Unit No. 7 subdivision in Magnesia Falls Cove and it sits on a 0.27 acre parcel. The property is a single-story Custom Ranch style single-family residence with a rectangular-shaped floor plan and a side-gabled roof over the residence and attached garage. The single-family residence has asymmetrical facades that are clad in board-and-batten siding and uncoursed stone. The front elevation of the home has a large central front porch beneath the wide open eave overhang that is supported by wooden posts. The front door is located off-center at the northern end of the porch and features a wood framed French door. The center of the home has an open floor plan with large wood framed windows and exposed roofing. The rear of the home has more wood framed French doors and a wooden trellis that extend out over the back patio. The backyard has a rectangular pool. The roof is clad in composition shingles. In the early 1970s, a previous owner added an approximately 214 square foot rear addition to the home. A renovation campaign in 2020 removed the original concrete block front wall, removed the original front patio/pool decking, and remodeled the interior of the home.

B1. Historic Name: James Roosevelt Residence **B2. Common Name:** 71-530 Biskra Road
B3. Original Use: Residential. **B4. Present Use:** Residential ***B5. Architectural Style:** Custom Ranch

***B6. Construction History:** The residence was constructed in 1958. No building permits exist prior to incorporation of the City of Rancho Mirage in 1973. According to newspaper records, James Roosevelt added a bedroom and bathroom to the building in 1965. This addition is located at the rear of the home at the southern end of the building. According to historic photographs, the home appears to have been originally clad in stucco, but by 1969 the home was described as a "Swiss villa" indicating that James Roosevelt had likely added the board and batten siding. Permit records post-1973 indicate that ownership installed a sewer hookup in 2004, closed in the carport/garage and added a new garage door in 2006, replaced electrical equipment in 2007, and reroofed the home in 2022. In 1987, a house fire damaged the home and caused $20,000 in damage. Recent real estate listings in 2021-2022 show that interior renovations have been extensive. Recent work also likely also included the removal and replacement of the original aluminum sliding glass doors and sliding sash windows with wood window units. Apart from the 1965 addition, there have been no additions subsequent changes to the original footprint of the building and the pool remains in its original configuration.

71-530 Biskra Road is a Custom Ranch style single-family residence within Magnesia Falls Cove. The subject property was constructed in 1958 and bought by James and Gladys "Irene" Roosevelt that same year. James Roosevelt (James Roosevelt II) was the oldest son of Franklin D. and Eleanor Roosevelt. He was an American businessman, U.S. Marine Corps. officer, activist, and Democratic Party politician. He served as his father's secretary and was later elected to the House of Representatives for California's 26th District. While in office, James and his third wife, Irene, bought the 71-530 Biskra Road house in May 1958 and moved into the home the next year in September 1959 with their infant son Hall Delano Roosevelt. James Roosevelt continued to serve as a member of Congress until 1965. In 1969, Irene and James divorced but she continued to live at the subject property until her death in 1987. James Roosevelt died in 1991.

One of the earlier houses built within the Magnesia Falls Cove neighborhood, the James Roosevelt Residence is associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage. However, the dwelling was constructed well after construction began in the area. There is no evidence to support that the design and overall style significantly impacted the development of other nearby homes. Therefore, the property does not possess individual documented significance in relation to the Residential Subdivisions and Cooperatives (1951-1973) theme. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

***P3a. Description:**
40-257 Club View Drive, known as the Bligh Residence, was constructed in 1952 in the Thunderbird Country Club Estates Unit 2 subdivision of Thunderbird Country Club and it sits on a 0.40 acre parcel. The property is a single-story Contemporary style single-family residence with an L-shaped floor plan and a cross-gabled roof. The roof is extremely low-pitched with enclosed eaves and exposed purlin ends. The long rectangular interior chimney flue is clad in uncoursed stone. The single-family residence has asymmetrical facades that are clad in stucco and glass window walls. The front elevation on Club View Drive has a central doorway facing north where the cross-gabled roof turns. It is located beneath a wooden trellis which extends from the roof and is supported on the east side by a concrete masonry unit wall and enclosed by an iron bar gate. The attached garage on the eastern end of the 'L' shape has a door that faces north. The rear (west) elevation has floor-to-ceiling windows and metal framed sliding glass doors within the primary gable end. It also has a long rectangular pool that is perpendicular to the home and extends into the center of the building at the highest point of the gable. The side elevation has more metal framed sliding glass doors facing south. The roof is clad in rolled composition sheets.

40-257 Club View Drive is a Post and Beam style single-family residence within Thunderbird Country Club. The subject property was constructed in 1952 for Harrison J. "Jack" and Buddy Bligh by E. Stewart Williams. Jack and Buddy Bligh were from Chicago, Illinois, and were some of the earliest members of the Thunderbird Country Club. They held multiple art exhibitions and wedding anniversary parties at their home, which they used on a seasonal basis. An elderly couple when they completed their property, Buddy Bligh died in 1963. The property has been owned since at least 1982 by Loretta R. Nicastro, who owned the Village Patio Restaurant in Palm Springs.

B10. Statement of Significance Continued From Page 2:
Emerson Stewart Williams studied architecture at Cornell and the University of Pennsylvania, taught for a few years at Columbia University, and then worked for designer Raymond Loewy. He came to Palm Springs in 1946 to work with his father Harry and brother Roger in their architectural office. Stewart Williams was greatly influenced by the Scandinavian Modernists Alvar Aalto and E.G. Asplund, particularly their use of wood and other natural materials in the creation of a 'warmer' Modernism. Williams' first Palm Springs commission was for the 1947 Frank Sinatra residence, a modern building of glass, natural stone, redwood siding, and an upswept roof that, according to author and critic Alan Hess, "set a tone for postwar glamour as Hollywood stars continued to move to Palm Springs – to large homes, often on country clubs, favoring a sleek but warm Modernism rather than cool minimalism." Stewart Williams' own home in Palm Springs was built in 1956. His career was long and varied including custom homes, offices, banks, civic buildings, Palm Springs' upper tramway station, and many schools throughout the Coachella Valley and high desert. One of his later works, the Desert Museum, a concrete building lifted above the street, surrounded by a sunken sculpture garden, and sheathed in volcanic cinder was completed in 1970. In Rancho Mirage, Williams designed four houses in the Thunderbird Country Club: the Kiner Residence (1951), Bligh Residence (1952), Christie Residence (1955), and Scott Residence (1957). The Roderick W. Kenaston Residence just outside of Thunderbird was built in 1956.

One of the earliest houses built within Thunderbird Country Club, the Bligh Residence is associated with the Country Club Era (1951-1973) theme in Rancho Mirage. While the residence was one of the first constructed in the club, it was one of several that were being constructed by the original group of investors around the course at the same time, many of which are still extant. There is no evidence to support that the design of the Bligh Residence significantly impacted the development of other nearby homes. Therefore, while the Bligh Residence is associated with the Country Club Era (1951 – 1973) theme, it does not possess individual documented significance related to that theme. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the property is not significantly associated with the lives of persons significant in our past. While the Bligh family were well known in their country club community, hosting many social events at their unique residence, they did not significantly shape the development of the club, neighborhood, or wider community of Rancho Mirage. The property is eligible under NRHP/CRHR Criterion C/3 as it embodies the distinctive characteristics of a Post and Beam style residential property and is representative of the work of the master architect E. Stewart Williams. While the exterior pool trellis is no longer extant, the missing feature does not significantly detract from the overall historic integrity of the property because the structure can be potentially restored following guidance from historic photographs. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-3, 5-6, and 8. The Bligh Residence is considered eligible under Local Register Criterion 1 as the residence is representative of a mid-20th century Post and Beam style home in Rancho Mirage. It is also considered eligible under Local Register Criterion 4, as it represents the work of the master architect E. Stewart Williams. Furthermore, the property is eligible under Local Register Criterion 7 as it embodies elements of outstanding attention to architectural design, detail, craftsmanship and materials. The property appears to be relatively unaltered on the exterior with most of its original features. The property appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. The dwelling has not been substantially altered on the exterior and it maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

***P3a. Description:**
70-983 Fairway Drive, known as the Kramer Residence, was constructed in 1971 in the Wonder Estates subdivision of Tamarisk Country Club and it sits on a 0.60 acre parcel. The property is a single-story Neo-Spanish Colonial Revival style single-family residence with an irregular floor plan and flat-roof forms at varying heights and a central octagonal gazebo style roof clad with rounded terracotta tiles. The flat roof is clad in rolled composition sheets. The flat roofs have short parapets on all sides. The single-family residence has asymmetrical facades that are clad in stucco. The front elevation has a central doorway facing a U-shaped driveway with outer doors decorated in wrought iron designs that are filled with glass panels in-front of two wooden paneled front doors. The attached garage is located west of the front elevation and faces north. The rear elevation has a large wooden trellis over the back patio that is supported by stucco columns. It opens out to the back pool.

70-983 Fairway Drive is a Neo-Spanish Colonial Revival style single-family residence within Tamarisk Country Club. The subject property was constructed in 1971 as a speculative home designed by master architect James McNaughton. The earliest occupants were the Allan and Mildred Kramer, who moved into the house by 1974. The home was built originally designed as a Modernist style house, but a remodeling campaign in 2003 removed many of the original mid-century design elements and materials. An addition and replacement materials, such as the terracotta tile roof and additional column molding, have changed the style of the house to more closely resemble a Neo-Spanish Colonial Revival style residence.

B10. Statement of Significance Continued From Page 2:
James H. McNaughton was born in 1912 in Pittsburgh, Pennsylvania. He graduated from Carnegie Tech (Carnegie Mellon University) in 1935 with a degree in architecture. During the late 1930s, he was briefly employed as a designer for Steuben Glass Works, fashioning very detailed pieces, some of which are displayed at the Smithsonian. After graduation he left to New York City, where he hoped to design sets for Broadway productions. Instead, he found himself in the television business. Due to his innovative use of perspective, designing static one-dimensional backgrounds with the illusion of height and distance, McNaughton quickly gained acclaim as TV's first official art director. During the peak of his career in the 1950s, McNaughton earned many honors and awards. By the end of the decade, he felt that he'd accomplished all he wanted to in the field and made a clean break, leaving television and moving to the west coast.

McNaughton came to Palm Springs in 1959, when he was 47 years old with the ambition to design homes. In 1961, he received his first commission when Harry R. & Willa Morrill employed him to design a new mansion for themselves on Panorama Road in Little Tuscany, Palm Springs. Upon its completion, the Morrill House became an instant sensation, garnering praise and coverage in Palm Springs Life, The Desert Sun, and later The Architectural Digest. In 1963, he completed the Allan & Middy Kramer Residence in the Caballeros Estates, which also earned him more acclaim. Other project attributed to McNaughton include the George Arnold Residence in Palm Springs, the 1973 Petunia House in Phoenix, and a group of spec homes in Andreas and Murray Canyons.

Building, Structure, Object Information Continued:
He had many other talents which he practiced throughout his life. He was an accomplished painter, muralist, and pianist. He played the pipe organ and designed prestigious concert venues, including the Pittsburgh Organ Academy, Boston Philharmonic, and the Los Angeles Music Center. He died in 1979, only creating plans for about two dozen projects that were actually completed. However, the quality of these few designs makes McNaughton a noteworthy architect, particularly in the Coachella Valley.

Built after the establishment of the Tamarisk Country Club, the Kramer Residence is associated with the Country Club Era (1951-1973) theme in Rancho Mirage. However, the dwelling is not individually significantly associated with the development of country clubs, as other clubs were already in development across Rancho Mirage at the time of construction. The property did not influence the design or direction of other houses built in the neighborhood during the early 1970s. Therefore, it does not possess individual documented significance in relation to the Country Club Era (1951-1973) theme. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme but it is not considered a significant representative example of a known architectural style in the community.

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the property is not significantly associated with the lives of persons significant in our past. The property is not considered eligible under NRHP/CRHR Criterion C/3 as it no longer individually embodies the distinctive characteristics of a mid-century Modernist style home constructed in Rancho Mirage during the 1970s. The property no longer retains adequate historic integrity to convey its significance under this criterion. Due to 2003 alterations, the home no longer retains integrity of design, materials, or feeling. It is not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-3 and 5-8. The Kramer Residence is not considered eligible under Local Register Criterion 1 as the residence is no longer representative of a mid-20th century Modernist style home in Rancho Mirage. It is also not considered eligible under Local Register Criterion 4, as it no longer represents the work of master architect James McNaughton. The dwelling has been substantially altered and it does not maintain adequate integrity from the historic period to convey its significance in relation to its past occupants. As such, the property is assigned a 6Z status code: Found ineligible for NRHP, CRHR, or Local Register through survey evaluation.

Applicable Criteria: NRHP/CRHR Criteria B/2 and C/3; Local Criteria 1 and 5

70-831 Fairway Drive is a Desert Modernist style single-family residence within Thunderbird Country Club. The subject property was constructed in 1961 for Ben T. and Emma Gale by Albert Belden Crist. Ben and Emma Gale were winter residents of Thunderbird Country Club. Ben died in 1965 and Emma remarried Alden Bartlett the next year. Emma C. Gale Bartlett worked in the merchandising business and was an active member of the Thunderbird Country Club community from its early years. She lived with her husband, Ben, as early as 1954 within the country club, where they threw parties and entertained guests. In late 1961, the builder and designer Albert Belden Crist completed their new house. While she was a resident and member, Emma was heavily involved with the Women Golfers of Thunderbird Country Club organization, where she sponsored the Emma Gale invitational in 1962. She was also an original charter member of the Ladies Auxiliary of the Eisenhower Medical Center. She lived until 2000, when she died in Corpus Christi.

70-831 Fairway Drive_1: View of northeast (front) elevation.

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:
Albert Belden Crist was born in Hollywood in 1923, but he grew up and resided for much of his life in Palm Springs. His father was a builder but at age 19 in 1942, Crist was working at a Safeway in Arizona. After the war, from 1947 to 1951, Crist was listed as a carpenter in the Palm Springs Directory. Like his father, he continued to work as a builder for the rest of his career, which lasted through the 1970s. He died in 1986.

One of the earlier houses built within Thunderbird Country Club, the Gale Residence is associated with the Country Club Era (1951-1973) theme in Rancho Mirage. While the residence was one of the early homes constructed in the club, it was one of several that were being constructed at the time following the first homes built nearly ten years earlier. There is no evidence to support that the design of the Gale Residence significantly impacted the development of other nearby homes. Therefore, while the Gale Residence is associated with the Country Club Era (1951 – 1973) theme, it does not possess individual documented significance related to that theme. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

Building, Structure, Object Information Continued:

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is individually eligible under NRHP/CRHR Criterion B/2, as the property is significantly associated with Emma Gale, an important woman in the early Country Club era of Rancho Mirage. The property is eligible under NRHP/CRHR Criterion C/3 as it embodies the distinctive characteristics of a Desert Modernist style residential property. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-3 and 6-8. The Gale Residence is considered eligible under Local Register Criterion 1 as the residence is representative of a mid-20th century Desert Modernist stye home in Rancho Mirage. It is also considered eligible under Local Register Criterion 5, as it is associated with Emma C. Gale Bartlett, a significant local figure. The property appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. The dwelling appears to have not been substantially altered and appears to maintain adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

***P3a. Description:**

71-094 La Paz Road, known as Morton Residence, was constructed in 1986 in the Wonder Estates subdivision of Tamarisk Country Club and it sits on a 0.45 acre parcel. The property is a single-story Post and Beam style residential building with an irregular-shaped floor plan. The residence is covered by flat roof forms at varying heights with enclosed eaves and wide overhangs. The roof is clad in composition sheets. The residential building has asymmetrical facades that are clad in stucco and glass window walls. The front elevation features a U-shaped driveway, a metal front door beneath a flat porch roof, and an attached garage. The rear elevation features full height glass window walls and a roof supported by large square concrete columns. The roof extends out of the rear patio. There was an approximately 2,000 square feet addition to the front of the home along La Paz Road in 2007 but the color of the addition differentiates it from original massing.

B9a. Architect: Hal Levitt **b.** Builder: Unknown
***B10. Significance: Theme:** Cityhood, 1973 - Present **Area:** City of Rancho Mirage
Period of Significance: 1986 **Property Type:** Single-Family Residential
Applicable Criteria: NRHP ineligible; CRHR Criterion 3; Local Criteria 1 and 4

71-094 La Paz Road is a Post and Beam style commercial building within Tamarisk Country Club. The subject property was designed by Hal Levitt in 1986 with interiors by Steve Chase for Steve Morton, an amateur golfer and long-time chairman of the Bob Hope Classic tournament.

Harold "Hal" Warren Levitt was born on July 26, 1921, in San Francisco, California. He received a Bachelor of Arts in Graphic Arts from Stanford University and an architecture degree from USC. After his graduation, he worked for Roland Coate and Burton Schutt before he founded his own architectural company, Levitt, LeDuc & Farwell, in the 1950s. The company was headquartered in Beverly Hills. He designed homes for Walter Mirisch, Steven Spielberg, Lew Wasserman, Olivia Newton-John, Ross Hunter, Quincy Jones, Burt Lancaster, Dean Martin, Debbie Reynolds, Lionel Richie, Kenny Rogers and Hal Wallis. He also designed the Riviera Hotel on the Las Vegas Strip and the headquarters of the Academy of Motion Picture Arts and Sciences in Beverly Hills. His designs reflected modernist philosophies of mid-century Los Angeles which emphasized intermixing and re-interpreting indoor and outdoor spaces with large glass surfaces, interior courtyards, and surprising entry sequences. Many Levitt homes featured large-scale doors that instead of leading indoors, opened into an interior protected courtyards. He retired to Reno, Nevada, in 2001 and died at his holiday home in Las Vegas at the age of 79 in 2003.

71-094 La Paz Road_7: View of north (rear) elevation.

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:
One of the later houses built within Tamarisk Country Club, the Morton Residence is associated with the Cityhood (1973-Present) theme in Rancho Mirage. However, the dwelling is not individually significantly associated with the development of later country clubs, as it was built in a country club established decades earlier. The residence did not influence the design or direction of other homes built in the neighborhood during the 1980s. Therefore, it does not possess individual documented significance in relation to the Cityhood (1973-Present) theme. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

The residential building is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the property is not significantly associated with the lives of persons significant in our past. The property is potentially eligible under NRHP/CRHR Criterion C/3 as it embodies the distinctive characteristics of a Post and Beam style residential property. However, the building was completed in 1986, and does not meet the 50-year age requirement for listing in the NRHP. As a result, the property is only eligible under CRHR Criterion 3. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The residential building is not considered eligible under Local Criteria 2-3 and 5-8. Morton Residence is considered eligible under Local Register Criterion 1 as the property is representative of a late-20th century Post and Beam style residential building in Rancho Mirage. It is considered eligible under Local Register Criterion 4, as it represents the work of a master architect, Hal Levitt. Despite the 2007 garage addition, the property appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. The addition is in keeping with the style of the building and also adequately differentiated from the original construction with a different color scheme and unique decorative elements, such as a more prominent roof parapet wall. The building maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation; and the 3CS status code - appears eligible for CR individually through survey evaluation.

***P3a. Description:**
70-050 Highway 111, known as Las Casuelas Nuevas Restaurant, was constructed in 1966 along Highway 111 and it sits on a 1.12 acre parcel. The property is a single-story Neo-Spanish Colonial Revival style commercial building with an irregular-shaped floor plan covered by side-gabled and hipped roofing forms all clad in Spanish style terracotta tiles. The commercial building has asymmetrical facades that are clad in stucco. The front elevation facing Highway 111 features an outer concrete masonry unit wall clad in stucco, wood trellises over an interior patio, open eaves with exposed rafters along the roof lines, and a turret and the entrance to the parking lot covered with an octagonal gazebo roof. The Delgado family, the owners and founders of the restaurant, constructed a large addition and remodeled the existing restaurant in 1983 which added a new front entrance, back patio, and parking. The addition added the turret, visible from Highway 111, and increased the restaurant by roughly one-third of its initial size, adding 125 seats to the existing 300-seat building.

70-050 Highway 111 is a Neo-Spanish Colonial Revival style commercial building along the Highway 111 corridor. The subject property was designed by Arthur Valdes for Florencio "Del" and Mary Delgado, restaurant owners from Palm Springs. In 1958, the Delgados founded the Las Casuelas Original in Palm Springs at 368 North Palm Canyon Drive. They focused on using family recipes and their restaurant gained popularity throughout the 1960s. In 1972, they decided to expand and began the process of building Las Casuelas Nuevas in Rancho Mirage on Restaurant Row. In 1983, Joaquin and Sharon Delgado oversaw the construction of a new addition to the restaurant and thr property continues to be owned and managed by the Delgado family today.

B10. Statement of Significance Continued From Page 2:
Built as one of the first restaurants on Restaurant Row following Lord Fletcher's Restaurant, Las Casuelas Nuevas is individually significant within the theme of Commercial Development (1934 – 1973) in Rancho Mirage because it significantly impacted the development of Restaurant Row and further helped establish the center for commercial dining within the community. The success of the restaurant paved the way for the later construction of the the Chart House, Wally's Desert Turtle, Kobe Japanese Steak House, and others. The property also influenced the design or direction of other restaurants built in the surrounding area, of which many also utilized strong cultural motifs to differentiate themselves from one another. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme but is not considered a significant representative example of a known architectural style in the community.

The commercial building is potentially individually eligible under NRHP/CRHR Criterion A/1, as it is directly associated with a significant pattern of events in local Rancho Mirage history. However, significant additions to the property over time have negatively impacted the building's integrity to the historic period. Its original design and materials are no longer intact. Therefore, the building does not retain sufficient historic integrity to convey its significance under this criterion. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the building is not significantly associated with the lives of persons significant in our past. While the Delgado family are prominent members of the Rancho Mirage community, their accomplishments are chiefly tied to the ownership and operation of the restaurant. The property is potentially eligible under NRHP/CRHR Criterion C/3 as it still embodies the distinctive characteristics of a Neo-Spanish Colonial Revival style commercial restaurant. However, additions have altered the original design and impacted the material integrity of the property. Therefore, the building does not retain sufficient historic integrity to convey its significance under this criterion. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

Building, Structure, Object Information Continued:

The commercial building is not considered eligible under Local Criteria 2 and 4-8. Las Casuelas Nuevas is potentially eligible under Local Register Criterion 1 as it is representative of the Neo-Spanish Colonial Revival style. However, it no longer retains sufficient historic integrity to convey its significance under this criterion. Las Casuelas Nuevas is potentially considered eligible under Local Register Criterion 3 as the property is representative of the development of the economic growth of the City of Rancho Mirage. However, additions have altered the original design and impacted the material integrity of the property. Due to additions and changes to the property over time, the property only retains integrity of location, setting, workmanship, feeling, and association. The building does not maintain adequate integrity from the historic period to convey its significance. As such, the property is assigned a 6Z status code: Found ineligible for NRHP, CRHR, or Local Register through survey evaluation.

***P3a. Description:**
39-856 Morningside Drive, known as the Eddie Lowery Residence, was constructed in 1956 in the Thunderbird North subdivision and it sits on a 0.35 acre parcel. The property is a single-story Desert Modernist style single-family residence with an X-shaped floor plan and a flat roof clad in composition sheets. The single-family residence has asymmetrical facades that are clad in stucco and wooden board and batten siding. The front of the home faces Morningside Drive behind a painted concrete masonry unit wall and metal gate. The front elevation of the building features board and batten siding, two garage doors, and vinyl framed windows. The entryway is recessed beneath a flat porch roof. The home has an open ceiling with exposed rafters and windows that fill the spaces between the beams at the top of the roof. Most windows are either vinyl sliding sash/casement replacements of original fixed units. The doors are vinyl framed sliding glass doors. The home has been remodeled in the interior but retains most of its exterior design and materials. There appear to have been no significant additions to the property over time.

39-856 Morningside Drive is a Desert Modernist style single-family residence within the Thunderbird North community. The subject property was constructed in 1956 for Eddie Lowery, an amateur golfing champion and famous caddy. When Eddie Lowery was 10 years old, he caddied for Francis Ouimet in the 1913 U.S. Open where Ouimet won a playoff between Ted Ray and Harry Vardon in what is known as "The Greatest Game Ever Played." As an adult, he became a multi-millionaire as an auto dealer in San Francisco, but continued to foster golf at an amateur level. He became a Massachusetts State amateur champion and teamed up with Byron Nelson in 1955 to win the Bing Crosby Pro-Am Invitational at Pebble Beach. Through golf, he maintained a friendship with Bob Hope and became a member of the Thunderbird Country Club. In 1962, Eddie married his secretary, Margaret, and they adopted two infant children together, John and Cynthia. He became a president of the U.S. National Senior Open Golf Association and, in 1980, Lowery became president of the International Seniors Amateur Golf Society. Eddie Lowery died in 1984 and Margaret continued to live in Rancho Mirage until her death in 2000, where she owned an antique shop, Rancho Antiques. In 1998, Margaret established the Eddie Lowery Award as part of the Francis Ouimet Scholarship Fund for the best caddies in golf clubs.

URBANA PRESERVATION & PLANNING LLC

Primary Record Information Continued:

39-856 Morningside Road_1: View of west (front) elevation.

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:

One of the first houses built within the Thunderbird North neighborhood, the Eddie Lowery Residence is associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage. However, there is no evidence to support that the design and configuration of the home significantly impacted the development of other nearby homes in Thunderbird North or other nearby subdivisions. William Cody and Wexler & Harrison were building homes in Thunderbird North at the same time under independent contracts. The last three homes in Thunderbird North were completed in 1960, 1977, and 1978. The designs of the last three homes only share limited similarities with the Eddie Lowery Residence. Therefore, the property does not possess individual documented significance in relation to the Residential Subdivisions and Cooperatives (1951-1973) theme. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the home is not significantly associated with the lives of persons significant in our past. While the house is associated with Eddie Lowery, it was his home in retirement and he appears to have only lived at the property seasonally. The property is eligible under NRHP/CRHR Criterion C/3 as it embodies the distinctive characteristics of the Desert Modernist style home constructed in Rancho Mirage during the 1950s. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

Building, Structure, Object Information Continued:

The single-family residence is not considered eligible under Local Criteria 2-3 and 4-8. The Eddie Lowery Residence is considered eligible under Local Register Criterion 1 as the residence is representative of a mid-20th century Desert Modernist style home in Rancho Mirage. The property is not eligible under Local Register Criterion 7 as it no longer embodies elements of outstanding attention to architectural design, detail, craftsmanship and materials because the interior has been significantly remodeled since its initial construction, changing the initial window materials. Overall however, the property appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. The dwelling has not been substantially altered on the exterior and it maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

***P3a. Description:**
70-843 Tamarisk Lane, known as the Riback Residence, was constructed in 1978 in the Wonder Palms subdivision of Tamarisk Country Club and it sits on a 0.44 acre parcel. The property is a single-story Shed style single-family residence with Desert Modernist elements. It has an irregular-shaped floor plan and skillion roofing forms with limited clerestory lites. The roof is clad in flat terracotta tiles and bordered with a bronze cornice bank. The single-family residence has asymmetrical facades that are clad in stucco or floor-to-ceiling glass windows. The front elevation of the building features stucco walls, a garage door clad in slanted wood board siding, and a centered metal gate which leads down an outdoor walkway to the front entrance, which consists of glass doors under a flat porch roof. The home has an open ceiling with exposed rafters. The rear elevation is largely composed of glass window walls. It has a back patio covered by a flat roof supported by circular columns which are clad in bronze sheathing. The home is currently being extensively remodeled on the interior and exterior. Many of the original design elements have been removed and are in the process of being replaced, but there appear to be no significant additions to the property.

Period of Significance: 1978 **Property Type:** Single-Family Residential
Applicable Criteria: NRHP ineligible; CRHR Criterion C/3; Local Criteria 1 and 4

70-843 Tamarisk Lane is a Shed style style single-family residence with Desert Modernist elements built within Tamarisk Country Club. It exhibits a Shed style recessed entryway and skillion roofing forms with limited clerestory lites, while also adding Desert Modernist elements, such as stucco siding, roofing tile, and bronze cornice banding. The subject property was constructed in 1978 and was designed by Patrick Evan Sheehy based on William F. Cody's plans from 1973. The property was built for Ted and Betty Riback. Ted and Betty Riback were members of the Tamarisk Country Club and Ted was the leader of Riback Investment Corporation, Inc.

Patrick Evan Sheehy was born in Los Angeles in 1940. Sheehy was a graduate of Cal Poly San Luis Obispo with a degree in Architectural Engineering. According to AIA historical records, Sheehy joined William Cody's practice in 1967. By 1969, Cody had made both Patrick Evan Sheehy and Laszlo Sandor associates and renamed his practice: William F. Cody & Associates, Inc. Cody's brother Jay was also made an associate in 1970. Cody retained the controlling interest in the partnership. The practice later became known as Cody/Sheehy Architects. Sheehy worked closely with William Cody on a number of major projects from the early 1970s including the Tennis Club hotel in downtown Palm Springs, completed in 1973. Sheehy and Cody also worked together on the new Palm Springs Library, designed in a Brutalist style. Following Cody's stroke in 1973, projects already on the boards in the office were seen through to completion, including the Riback Residence.

B10. Statement of Significance Continued From Page 2:
The firm was dissolved in 1976, when Jay Cody and Patrick Sheehy went their separate ways. William F. Cody later died in 1978. Following Cody's death, Ted Riback was still interested in following Cody's earlier designs and Sheehy's input, so he commissioned Sheehy in 1977 to finish the home. During his years of individual practice, Sheehy specialized in designing custom residences and designs for tract home developments across the Coachella Valley. He won several AIA awards in 1981 for the Inland California Chapter of the AIA: a citation for the Initial Cafeteria at Cal State Bakersfield in 1981 – which shared the same Brutalist style as the Palm Springs Library. He was also awarded for a 137-condominium project in Indian Wells for Vintage Properties and received an interiors award for the Robert McCulloch residence at Lake Havasu, Arizona. Sheehy moved from the desert to Laguna Beach in or around 1990, having remarried. He died in 1996, at the age of 55.

Built after the establishment of the Tamarisk Country Club, the Riback Residence is associated with the Country Club Era (1951-1973) theme in Rancho Mirage. However, the dwelling is not individually significantly associated with the development of country clubs, as other clubs were already being built across Rancho Mirage at the time of construction. The property did not influence the design or direction of other houses built in the neighborhood during the early 1970s. Therefore, it does not possess individual documented significance in relation to the Country Club Era (1951-1973) theme. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community. One May 12, 2021, the property owner received comments from City Staff regarding alterations necessary to consider the property for local designation. At the time of this survey, efforts to address those changes and make other alterations to the building were underway, impacting the ability of Urbana to make concrete determinations over the course of survey work.

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the property is not significantly associated with the lives of persons significant in our past. The property is potentially eligible under NRHP/CRHR Criterion C/3 as a representative example of a Shed style residence with Desert Modernist elements designed by master architect William Cody. However, the building was completed in 1978, and does not meet the 50-year age requirement for listing in the NRHP. As a result, the property is only eligible under CRHR Criterion 3. Current remodeling work appears to be replacing many of the original design elements and materials. The extensive changes may alter existing character-defining features of the property. As such, it is unclear if the Riback Residence still individually embodies the distinctive characteristics of a mid-century Shed style home constructed in Rancho Mirage during the 1970s. However, there do not appear to be any significant exterior additions as part of the current work and limited visual information suggests that the historic look and feel of the exterior will be maintained. If the current remodeling campaign replaces exterior design elements with in-kind or with materials that match the original design, color, and texture, then the property will retain adequate historic integrity to convey its significance under this criterion. Therefore, at the time of this survey, the home still retains integrity of design, materials, or feeling. It is not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-3 and 5-8. At the time of this survey, the Riback Residence appears to still be considered eligible under Local Register Criterion 1 as the residence is representative of a mid-20th century Shed style home in Rancho Mirage with Desert Modern elements. Once the current renovation efforts are finished, it should also still be eligible under Local Register Criterion 4, if it can be determined that the property still represents the work of master architect William Cody in terms of design and material integrity. As of this survey, the dwelling has not been substantially altered and it maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation. If the results of current remodeling campaign are not restorative and not faithful to the original designs from Patrick Sheehy and William F. Cody, by adding extensive additions and inappropriate replacement materials, the property may be reevaluated and assigned a different status code.

***P3a. Description:**
39-581 Kersten Drive, known as the Kersten Ranch, was constructed in 1958 in the Desert Sun Ranch Estates Unit No. 1 subdivision of the Desert Ranch Estates neighborhood and it sits on a 0.28 acre parcel. The property is a single-story Custom Ranch style single-family residence with an L-shaped floor plan and a cross-gabled roof clad in rolled composition sheets. The roof had a moderate overhang with open eaves. The single-family residence has asymmetrical facades that are clad in stucco. The front elevation of the building features stucco walls, vinyl framed awning windows, metal framed fixed windows, and a fiberglass framed glass front door. At the northeast corner of the L-shaped building, a long rectangular exterior chimney clad in coursed stone protrudes from the front facade and pierces the interior gable. The home was extensively remodeled in 2017 on the interior and exterior, but no no additions were added. Many of the original design elements have been removed and replaced.

***B5. Architectural Style:** Custom Ranch

***B6. Construction History:** The single-family residence was constructed in 1958. No building permits exist prior to incorporation of the City of Rancho Mirage in 1973. In 2002, plumbing work was completed at the residence (Permit No. 0201067). In 2011, plumbing work was completed in 2011 (Permit No. B1100213). In 2012, plumbing work was completed at the residence (Permit No. B1200961). No significant exterior additions have been made since construction. In 2017, the owners underwent an extensive remodel which replaced many materials on the interior and exterior.

Applicable Criteria: NRHP/CRHR/Local ineligible

39-581 Kersten Drive is a Custom Ranch style single-family residence within Desert Ranch Estates. The subject property was constructed in 1958 but the architect is unknown. It appears to have been constructed as a home for staff on the Kersten Ranch, where Paul Kersten Sr., and later Paul Kersten Jr., grew dates, tangerines, grapefruit, and grapes. Founded in 1937 by Paul Kersten Sr., the Kersten Ranch encompassed approximately 175 acres and included a packing shed, at least three different homes for staff, utility buildings, and water system facilities. In 1961, both Paul Kersten Jr. and Sr. sold the ranch to Mark S. Schulman and Irvin S. Schulman, the owners and operators of the Palm Springs Riviera Hotel. They subidvided the property to build homes soon after their purchase.

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:
Built during the wave of residential development that followed the establishment of the Tamarisk and Thunderbird Country Clubs, the property is associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage. However, the dwelling was built before the area was subdivided into the Desert Sun Ranch Estates. It is not individually significantly associated with the development of subdivisions in Rancho Mirage. The property did not influence the design or direction of other houses built in the neighborhood during the late 1950s or early 1960s. Therefore, it does not possess individual documented significance in relation to the Residential Subdivisions and Cooperatives (1951-1973) theme. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme but it is not considered a significant representative example of a known architectural style in the community.

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the property is not significantly associated with the lives of persons significant in our past. The property is potentially eligible under NRHP/CRHR Criterion C/3 as a representative example of a Custom Ranch style residence. However, the 2017 remodeling work removed many of the original design elements and materials. The extensive changes have significantly altered the existing character-defining features of the property. As such, the property no longer individually embodies the distinctive characteristics of a mid-century Custom Ranch style home constructed in Rancho Mirage during the 1950s. The property no longer retains adequate historic integrity to convey its significance under this criterion. Due to current alterations, the home no longer retains integrity of design, materials, or feeling. It is not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state or national history.

Building, Structure, Object Information Continued:

The single-family residence is not considered eligible under Local Criteria 2-6 and 8. Kersten Ranch is not considered eligible under Local Register Criterion 1 as the residence is no longer representative of a mid-20th century Custom Ranch style home in Rancho Mirage. The property is not eligible under Local Register Criterion 7 as it no longer embodies elements of outstanding attention to architectural design, detail, craftsmanship and materials. The dwelling has been substantially altered and it does not maintain adequate integrity from the historic period to convey its significance. As such, the property is assigned a 6Z status code: Found ineligible for NRHP, CRHR, or Local Register through survey evaluation.

***P3a. Description:**
72-204 Rancho Road, known as the Hughey Residence, was constructed in 1946 in the Rancho Mirage Annex No. 2 subdivision and it sits on a 0.42 acre parcel. The property is a one-story Spanish Styled Ranch style single-family residence with an irregular-shaped floor plan. It is covered by low-pitched shed roof forms on the east and west ends and a low-pitched front-gabled roof the center. The single-family residence has asymmetrical facades clad in stucco. The front elevation features an enclosed front patio surrounded by a low stucco wall and a gateway filled with wooden doors. Within the patio, the front entrance is covered by a separate low-pitched shed roof clad in corrugated metal sheets and supported by wooden posts. The front doors and windows are wood framed glass doors with single lites. To the west of the front patio and front entrance, there is a two-car carport covered by a shed roof clad in corrugated metal sheets. The windows and doors are all wooden framed and most are paired French doors with single lites. According to available aerial photography, there appear to have been significant historic-era additions to the property over time on both the east and west ends of the building.

Period of Significance: 1946 **Property Type:** Single-Family Residential
Applicable Criteria: NRHP/CRHR/Local ineligible

72-204 Rancho Road is a Spanish Styled Ranch single-family residence within Rancho Mirage Annex No. 2. The subject property was constructed in 1946 for Jimmy and Rosa Hughey, who moved into the home with their son Tim. Jimmy Hughey was a local businessman who owned and operated the Orchard Trailer Park at 1862 South Palm Canyon Drive in Palm Springs while he lived in Rancho Mirage during the early 1940s. In 1946, he sold his first house and built another in the Rancho Mirage Annex. As he was moving, he also constructed a grocery store at the corner of Rancho Drive and Highway 111 in 1947. Soon after constructing their new home, the Hughey family sold the property in 1949 to Anthony Parcello in order to move east.

One of the older remaining houses built within the Rancho Mirage Annex, the Hughey Residence is associated with the Early Agricultural and Residential Period (1924-1950) of Rancho Mirage. However, the dwelling is not individually significantly associated with the development of the community and was not a part of a larger vision for the entire subdivision. There is no evidence to suggest that the property influenced the design or direction of other houses built in the neighborhood during the late 1940s. Therefore, it does not possess individual documented significance in relation to the Early Agricultural and Residential Period (1924-1950) theme. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme but it is not considered a significant representative example of a known architectural style in the community.

***P3a. Description:**
71-757 Tunis Road, known as the Carle Residence, was constructed in 1956 in the Rancho Mirage Unit No. 5 subdivision of Magnesia Falls Cove and it sits on a 0.22 acre parcel. The property is a single-story Contemporary style single-family residence with a L-shaped floor plan and a cross-gabled roof. The roof is clad in rolled composition sheets. The single-family residence has asymmetrical facades that are clad in stucco and glass window walls. The front elevation of the home has stucco walls, floor-to-ceiling windows, and smaller windows screened with vertical wooden bars. Decorative breeze block walls screen aluminum sliding glass doors at the south end of the elevation. A front patio between the front doorway and the attached garage is covered by exposed false rafters and screened with a wooden bar fence. The rear elevation features more windows screened with vertical wooden bars, sliding glass doors, and a sun ray shaped pergola at the inner corner of the home. There are triangular windows within the gable ends on the north and south ends of the home. In 1968, Curtis Towle added a rear addition to the home and connected the garage to the primary dwelling space. This added approximately 900 square feet to the original floor plan. The backyard pool was also likely added during this time period.

Applicable Criteria: NRHP/CRHR Criterion C/3; Local Criteria 1 and 7

71-757 Tunis Road is a Contemporary style single-family residence within Magnesia Falls Cove. The subject property was constructed in 1956 by K. Sande Senness as one of the 'Homes of Tomorrow' tract houses in Rancho Mirage. Cecil 'Teet' and Vesta Carle were the first owners and occupants. Teet Carle was a famous entertainment publicist, starting his career with USC before switching to the film business in the 1930s. He was director of Publicity for Paramount Studios when he purchased this house, founder of the Screen Publicists Guild and on the Board of the Academy (AMPAS). The 'Homes of Tomorrow' were built as Contemporary style ranch homes with post-and-beam construction. They were designed as 1300 sq ft, 3 bed, 2 bath houses with detached garages. The main identifying feature of the Homes of Tomorrow are triangular windows beneath eaves at the gable ends, which were present in most tract style variations.

URBANA PRESERVATION & PLANNING LLC

Primary Record Information Continued:

71-757 Tunis Road_1: View of east (front) elevation.

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:
One of the earlier houses built within the Magnesia Falls Cove neighborhood, the Carle Residence is associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage. However, the dwelling was constructed more than a decade after A. Ronald Button began overseeing development in the Magnesia Falls Cove and more than two decades after development began within the subdivision. The Carle Residence appears to have been originally built using a Contemporary style tract template. Curtis Towle's 1968 addition added elements to the existing home but overall maintained the original Contemporary style, adding similar design elements where the home and garage were connected. The design and overall style of the home, before and after the 1968 addition, did not significantly impact the design and development of other nearby tract homes built by other builders in later years. Therefore, the property does not possess individual documented significance in relation to the Residential Subdivisions and Cooperatives (1951-1973) theme. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the property is not significantly associated with the lives of persons significant in our past. The property is eligible under NRHP/CRHR Criterion C/3 as the property embodies the distinctive characteristics of a Contemporary style home constructed in Rancho Mirage during the 1950s. The rear addition was added in the late 1960s but it maintained the overall Contemporary style of the home. Subsequent remodeling campaigns have maintained the overall mid-20th century design intent. The home still overall retains most of its original character-defining features. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

Building, Structure, Object Information Continued:

The single-family residence is not considered eligible under Local Criteria 2-6 and 8. The Carle Residence is considered eligible under Local Register Criterion 1 as the residence is representative of a mid-20th century Contemporary style home in Rancho Mirage. It is also eligible under Local Register Criterion 7 as the property embodies elements of outstanding attention to architectural design, detail, craftsmanship and materials. The property appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. While the dwelling has been altered, it appears to maintain adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

e. Other Locational Data: APN: 684392003

***P3a. Description:**

71-653 Mirage Road, known as the Specht Residence, was constructed in 1957 in the Rancho Mirage Unit No. 6 subdivision of Magnesia Falls Cove and it sits on a 0.29 acre parcel. The property is a single-story Contemporary style single-family residence with an irregular-shaped floor plan and a front-gabled roof, which is clad in rolled composition sheets. The dwelling has a semi-detached garage to the north which connected via a flat roof, which also covered the garage structure. The single-family residence has asymmetrical facades that are clad in stucco and glass window walls. The front elevation of the home has floor-to-ceiling windows within the gable end that fill the wall space up to the full height of the gable beneath the eaves. Sections of the wall that are not filled with fixed glass windows are clad in stucco. The windows across the front elevation are divided into square sections. The front entrance is located north of the primary gable-end of the residence and features a multi-lite wood framed door. A pair of wood paneled doors to the north of the front entrance open to a covered exterior pathway that connects the house and the garage. The current owners added two small additions to the property in 2012 and 2013, the first being to the rear of the house and the second being to the north elevation of the garage. These additions added approximately 180 square feet and 30 square feet respectively. The owner built another addition to the north elevation of the garage in 2020, which added another approximately 100 square feet.

***B10. Significance: Theme:** Residential Subdivisions and Cooperatives, 1951 – 1973 **Area:** City of Rancho Mirage
Period of Significance: 1957 **Property Type:** Single-Family Residential
Applicable Criteria: NRHP/CRHR Criterion C/3; Local Criteria 1 and 7

71-653 Mirage Road is a Contemporary style single-family residence within Magnesia Falls Cove. The subject property was constructed in 1957 by Rancho Mirage Realty Company as one of the 'Linkletter Home' tract houses in Rancho Mirage. The original owners were Jack and Jane Specht, who owned the Specht Lamp Company in Los Angeles, a home accessories store.

A. Ronald Button created the Rancho Mirage Realty Company in 1954. While he sold property in Rancho Mirage throughout the late-1940s and early-1950s, homes Button's homes built by the Rancho Mirage Realty Company were unique in their design and marketing. From the 1940s, Button's plan was to build a new city and he required investors. To that end, he partnered briefly with his brother-in-law, the radio and TV personality Art Linkletter, from 1956 to 1958, to develop modern Contemporary style homes within the Magnesia Falls Cove area. During this timeframe, the Rancho Mirage Realty Company developed a number of Contemporary style tract houses using similar plans and marketed them as 'Linkletter Homes', to capitalize on name recognition and put the community on the map. Most 'Linkletter Homes' had stucco-clad exterior walls, semi-detached garages connected by patio roofs, floor-to-ceiling windows on the front and rear elevations, front-facing gables with large overhangs, and exposed roofing components.

Primary Record Information Continued:

71-653 Mirage Road_4 View of northeast (front) elevation.

Building, Structure, Object Information Continued:

B6. Construction History Continued From Page 2:
Based on aerial images, this permit is associated with construction of an addition at the southwest (rear) elevation. In 2013, a permit was issued for an addition/remodel (Permit No. B1301096). Based on aerial images, this permit appears to be associated with a small addition at the north elevation; this is a small addition at the north elevation of the garage. In 2017, a permit was issued for an addition/remodel (Permit No. B1601585). In 2019, a block wall was constructed (Permit No. B1900842). In 2019, a permit was issued for an addition/remodel (Permit No. B1900756). Based on aerial images, this permit appears to be associated with a small addition at the northeast corner of the property; this construction is a small addition to the garage. In 2020, a permit was issued for an addition/remodel (Permit No. B2020927), which added additional square footage to the north elevation of the garage.

B10. Statement of Significance Continued From Page 2:
One of the earlier houses built within the Magnesia Falls Cove neighborhood, the Specht Residence is associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage. However, the dwelling was constructed more than a decade after A. Ronald Button began overseeing development in the Magnesia Falls Cove and more than two decades after development began within the subdivision. The Specht Residence was originally built using a Contemporary style tract template. Subsequent additions in 2012, 2013, and 2020 added new square footage to the existing home but overall maintained the original Contemporary style, adding similar design elements or replicating historic designs. The overall style of the home, before and after the additions, did not significantly impact the development of other nearby tract homes built by other builders in later years. Therefore, the property does not possess individual documented significance in relation to the Residential Subdivisions and Cooperatives (1951-1973) theme. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the property is not significantly associated with the lives of persons significant in our past. The property is eligible under NRHP/CRHR Criterion C/3 as the property embodies the distinctive characteristics of a Contemporary style home constructed in Rancho Mirage during the 1950s. Additions added in recent years have altered the original floor plan but it maintained the overall Contemporary style of the home. Subsequent remodeling campaigns have maintained the overall mid-20th century design intent. The home still retains most of its original character-defining features. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-6 and 8. The Carle Residence is considered eligible under Local Register Criterion 1 as the residence is representative of a mid-20th century Contemporary style home in Rancho Mirage. It is also eligible under Local Register Criterion 7 as the property embodies elements of outstanding attention to architectural design, detail, craftsmanship and materials. The property appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. While the dwelling has been altered, it appears to maintain adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

***P3a. Description:**
71-560 Biskra Road, known as the Veiling Residence, was constructed in 1962 in the Rancho Mirage Unit No. 7 subdivision of Magnesia Falls Cove and it sits on a 0.28 acre parcel. The property is a single-story Desert Modernist style single-family residence with an L-shaped floor plan and a flat roof, which is clad in rolled composition sheets. The flat roof has no overhang along the front elevation, but moderate enclosed eaves at the sides and rear. The single-family residence has asymmetrical facades that are clad in uncoursed stone and stucco. The dwelling has a two-car attached garage at the northern end of the 'L' shape which faces south. The front elevation of the home has two large sections of wall clad in uncoursed stone. Between the two stone facades, two garage doors and a vinyl sliding sash bedroom window face south onto the curved front driveway. The front entrance faces west and is concealed by a curving decorative breeze block wall that acts as an enclosed front porch. The front doors are recessed within the breeze block wall and they consist of two single-lite wood framed French doors. The other elevations are clad in stucco and have either vinyl sliding sash windows, metal sliding glass doors, or wooden framed doors with single lites. There appear to have been no significant additions to the property over time since construction.

Period of Significance: 1962 **Property Type:** Single-Family Residential
Applicable Criteria: NRHP/CRHR Criterion C/3; Local Criteria 1 and 7

71-560 Biskra Road is a Desert Modernist style single-family residence within Magnesia Falls Cove. The subject property was constructed in 1962 by Trenton Dunphy & John Fincher, local builders and designers of custom homes, for Lawrence and Marjorie Veling. Marjorie Veling was an active socialite in the Rancho Mirage community as a prominent member of the Rancho Mirage Women's Club.

One of the earlier houses built within the Magnesia Falls Cove neighborhood, the Veiling Residence is associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage. However, the dwelling was constructed more than almost two decades after A. Ronald Button began overseeing development in the Magnesia Falls Cove and more than three decades after development began within the subdivision. The Veiling Residence was originally built as a custom Desert Modernist style house, like many other homes built in the Magnesia Falls Cove during this time period. There is no evidence to show that the design of the home significantly impacted the development of other nearby custom homes designed by other builders and architects in later years. Therefore, the property does not possess individual documented significance in relation to the Residential Subdivisions and Cooperatives (1951-1973) theme. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

***P3a. Description:**
71-490 Mirage Road, known as the Brush Residence, was constructed in 1951 in the Rancho Mirage Villa subdivision of Magnesia Falls Cove and it sits on a 0.36 acre parcel at the corner of Mirage Road and Dunes View Road. The property is a single-story Tract Ranch style single-family residence with an irregular-shaped floor plan and a flat roof, which is clad in rolled composition sheets and covered with stone ballast. The flat roof has a short overhang and enclosed eaves. The single-family residence has asymmetrical facades that are clad in painted concrete masonry blocks. The dwelling has a two-car attached carport facing east out onto Dunes View Road. The back carport wall is filled with glass blocks. Attached to the carport, there is an enclosed front patio that is screened with wooden latticework. The front elevation of the home on Mirage Road features wooden framed fixed windows and the front door is located beneath the principal eave of the house. There appear to have been no significant additions to the property over time since construction.

Period of Significance: 1951 **Property Type:** Single-Family Residential
Applicable Criteria: NRHP/CRHR ineligible; Local Criterion 1

71-490 Mirage Road is a Tract Ranch style single-family residence within Magnesia Falls Cove. The subject property was constructed in 1951 for John and Neome Brush. However, by 1962, Patricia McCallum was living at the property.

One of the earlier houses built within the Magnesia Falls Cove neighborhood, the Brush Residence is associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage. The dwelling is a Tract Ranch property, likely associated with one of the development project commissioned by A. Ronald Button throughout the Magnesia Falls Cove during this period as there are other homes with concrete masonry block walls with similar floor plans built across the neighborhood. However, the builder of this tract home could not be identified. There is no evidence to show that the design of this home significantly impacted the development of other nearby separate tracts designed by other builders and architects in later years. Therefore, the property does not possess individual documented significance in relation to the Residential Subdivisions and Cooperatives (1951-1973) theme. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

See Continuation Sheet for significance and integrity analysis.

Primary Record Information Continued:

71-490 Mirage Road_5: View of southeast (front) elevation.

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:
The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the property is not significantly associated with the lives of persons significant in our past. The property is not eligible under NRHP/CRHR Criterion C/3. While the property has the distinctive characteristics of an early Tract Ranch style home constructed in Rancho Mirage during the 1950s, the property does not rise to the level of significance necessary for listing the CRHR or NRHP. However, the property has remained well intact since construction and it maintains excellent historic integrity. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

Building, Structure, Object Information Continued:

The single-family residence is not considered eligible under Local Criteria 2-6 and 8. The Brush Residence is considered eligible under Local Register Criterion 1 as the residence is representative of a mid-20th century Tract Ranch style home in Rancho Mirage. It is not eligible under Local Register Criterion 7 as the property does not embody elements of outstanding attention to architectural design, detail, craftsmanship and materials. The property is a rustic style tract home that blends modern features with rustic materials, like concrete masonry wall construction and wood framed windows. The property appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. It appears to maintain adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation. It is ineligible for the NRHP and the CRHR.

e. Other Locational Data: APN: 689030001

***P3a. Description:** 69-825 Highway 111, the Rancho Mirage City Hall, was originally designed in 1978 by city architect Robert Ricciardi. Peter Kiewit Sons' Company completed the building in 1979 at the southwest corner of the intersection of Highway 111 and Frank Sinatra Drive. The current building is now sited on a 2.61 acre parcel. The property is a two-story Desert Modernist style government building with an irregular-shaped floor plan. It is covered by flat roof forms with short parapet walls, gable roofed components, and a hexagonal gazebo style roof. The flat roofing components are clad in rolled composition sheets and the sloped sections of the building are covered with metal sheets. The building has asymmetrical facades clad in stucco or coursed stone. The windows are largely metal framed fixed units with single-lites, apart from the northern front entrance, which features a window wall divided into several rectangular lites. The front entrance is also partially covered by a curved sweeping metal trellis supported by two round metal columns. A decorative tower with a stained glass panel running down the middle is located at the center of the building. A circular auditorium addition is sited at the eastern end of the building closest to Highway 111. The parking area is covered in two flat roof carport structures and a gabled carport structure to the north. Construction of the Rancho Mirage City Hall in 1978-1979 involved extensive remodeling and an addition to an existing office building which occupied the parcel from at least 1972. In 1996, the City of Rancho Mirage completed another remodeling/addition campaign which added 12,350 square feet to the west of the existing building. In 2002, the city added a new city council chamber. In 2008, the city redesigned the landscaping around the building.

Period of Significance: 1979 - 1996 **Property Type:** Government / Civic
Applicable Criteria: NRHP/CRHR/Local ineligible

69-825 Highway 111 is a Desert Modernist style government building on Highway 111. The subject property was designed by Richard Ricciardi in 1978 and completed by Peter Kiewit Sons' Company in 1979. Following incorporation of the City of Rancho Mirage, city council member Edna Warner secured a lease for office space in an octagonal building with a center spire at the intersection of Frank Sinatra Drive and Highway 111. In 1976, the City of Rancho Mirage acquired title to the property in a grant deed from Federated Development Co. In 1978, work began on an addition and remodeling of the city hall building, headed by city architect Robert Ricciardi with Peter Kiewit Sons' Company as the general contractor. When completed in December 1979, the new city hall was composed of two "teepee" like structures totalling approximately 18,000-square-feet. In 1996, the city completed a remodeling/expansion campaign to modernize the City Hall, removing the teepee roofs and adding 12,350 square feet to the existing 17,600 square foot building. This construction project was also designed by Robert Ricciardi and completed by general contractor Great West Contractors, Inc. Shortly following the 1996 remodel in 2002, the city hired Stanford Leonhard Architects and Lion Heat Construction, Inc. to construct a new city council chamber within the footprint of the original 1976 building, removing all traces visible components of the original structure. Six years later in 2008, city officials redesigned the landscaping around the city hall with a focus on sustainability.

Building, Structure, Object Information Continued:

B6. Construction History Continued From Page 2:
In 2007, a permit for a patio was issued (Permit No.B0700339). In 2007, electrical work was completed at the property (Permit No. B0700342). In 2008, a block wall was constructed (Permit No. B0800892). In 2008, a permit for encroachment construction was issued (Permit No. E0800330). In 2009, a permit was issued for a sign (Permit No.B0900493). In 2012, permit for encroachment construction was issued (Permit No.E1200302). In 2014, grading was completed at the property (Permit No. E1400083). In 2014, solar was installed (Permit No. B1301218). In 2014, electrical work was completed at the property (Permit No. B1401067). In 2015, plumbing work was completed at the property (Permit No.B1500845). In 2016, electrical work was completed at the property (Permit No. B1601102). In 2018, a permit for encroachment construction was issued (Permit No. E1800140). In 2019, plumbing work was completed at the property (Permit No. B190126). In 2020, electrical work was completed at the property (Permit No. B2020989). In 2024, mechanical/HVAC work was completed at the property (Permit No. B2401511). In 2024, electrical work was completed at the property (Permit No. B2401548). Based on aerial images and available permit records, there have been several large construction and remodelling campaigns, notably between 1996 and 2002 when the prominent, round wing of the building was constructed.

B10. Statement of Significance Continued:
Built along the Highway 111 corridor, the Rancho Mirage City Hall is the first city hall for the community of Rancho Mirage. It is significantly associated with the municipal development of the City of Rancho Mirage post-incorporation during the Cityhood (1973-Present) era. It is a prominent Desert Modernist style government building, located on the corner of Highway 111 and Frank Sinatra Drive. It does possess individual documented significance in relation to the Cityhood (1973-Present) theme. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme but it is not considered a significant representative example of the Desert Modernist architectural style.

Building, Structure, Object Information Continued:
The government building is potentially individually eligible under NRHP/CRHR Criterion A/1, as it is directly associated with the development of the local government of Rancho Mirage. However, the property has been severely modified over time with additions in 1979, 1996, and 2002, along with smaller changes outlined in the Construction History. While the major additions in 1979 and 1996 were both designed by Richard Ricciardi, the building no longer maintains its integrity of materials or feeling. Therefore, the property no longer retains sufficient integrity to convey its significance under this criterion. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the property is not significantly associated with the lives of persons significant in our past. The property is potentially eligible under NRHP/CRHR Criterion C/3 as it embodies the characteristics of a Desert Modernist style government property. However, the building has been substantially altered and no longer retains sufficient integrity to convey its significance under this criterion. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The government building is not considered eligible under Local Criteria 2-6 and 8. The Rancho Mirage City Hall is not considered eligible under Local Register Criterion 1 as the property is no longer representative of a mid-to-late 20th century Desert Modernist style government building in Rancho Mirage. It is also not eligible under Local Register Criterion 7 as the property does not embody elements of outstanding attention to architectural design, detail, craftsmanship and materials. Most of the original materials have been replaced and the overall design has changed and evolved drastically over time. The property only appears to retain sufficient integrity of location, setting, workmanship, and association. The building has been substantially altered and it does not maintain adequate integrity from the historic period to convey its significance. As such, the property is assigned a 6Z status code: Found ineligible for NRHP, CRHR, or Local Register through survey evaluation.

***P3a. Description:** 70-000 Thunderbird Mesa Drive, known as the Cook Residence or Ichpa Mayapan, was completed in 1973 in the Thunderbird Heights community and it sits on a 8.25 acre parcel. The 11,000 square foot property is a large single-story Mayan Revival and Modernist style single-family residence with an irregular-shaped floor plan and a flat roof, which is clad in rolled composition sheets. The flat roof has an enclosed eave that varies in the length of overhang across the different elevations. Most exterior patios and walkways around the home are covered with extensions of the flat roof and are supported by square or rectangular columns carved with Mayan motifs. The single-family residence has asymmetrical facades that are clad in stucco or filled with glass window walls. The dwelling has a four-car detached garage on the southern side compound, which also has a tennis court in the southwest corner of the property and a separate fitness center building north of the court. The front entrance of the home is recessed and attached to a square entrance court surrounded by a covered pathway wrapped around a garden with a central fountain. The northern courtyard wall features a hand-carved Mayan calendar.The rear of the home faces northeast out over the rest of the Thunderbird Heights community below. It has an arrow shaped pool with a Mayan statue at the tip of the point. The rear elevation of the house itself is covered by a flat patio roof supported by more rectangular columns with Mayan decorative motifs. The walls at the rear feature floor-to-ceiling metal framed single lite windows and sliding glass doors between sections of plain stucco wall. There appear to have been no significant additions to the property over time since construction.

70-000 Thunderbird Mesa Drive is a Mayan Revival and Modernist style single-family residence within Thunderbird Heights. The subject property was designed in 1972 by Howard Lapham for Maxine Cook, an avid golfer and local socialite. The home finished construction in 1973 and Ed Blood was hired as the interior designer. Maxine Cook was often noted as one of the best female golfers in the Coachella Valley, regularly competing in tournaments at local country clubs. She was also known to be a fashionable woman who owned her own gift shop called The Pepper Tree at 256 South Palm Canyon in Palm Springs, where she sold various gifts, including paintings and crystal figurines. In 2011, interior designer Michael S. Smith and his partner, former U.S. Ambassador to Spain and Andorra, James Costos, bought the property with the intent of revitalizing the home, which had begun to decay in the decades following initial construction. In 2015, they realized their vision and completed their two-year long rehabilitation process. They continue to own the home today and regularly host former U.S. President, Barack Obama.

B10. Statement of Significance Continued From Page 2:
Howard Lapham was born in Oklahoma City in 1914 and moved to Palm Springs in 1954. He was a carpenter, draftsman, contractor, land planner, and architect. His offices were at 577 East Sunny Dunes Road. His son, Lawrence, who later also became a local architect, moved to Palm Springs in 1959. He is best known for the architectural development of the Alan Ladd building. Throughout his career, Lapham's commissions were recognized both locally and nationally. Despite stiff competition for contracts with architects like William F. Cody, E. Stewart Williams, and Donald Wexler, architectural designers like Lapham frequently secured commissions, usually by virtue of their own creative designs. His early works included many custom homes in Palm Spring's Deepwell Estates. Other notable designs include Kelly's Home Furnishings, Tranquilla Villa, the Store Building, the Palm Springs Greyhound Bus Depot, the Rackstrom-Reid Building, Palm Springs National Bank, Smoke Tree Village, and the Chi Chi Club remodel in 1959. Lapham officially retired in the 1980s, although he continued to maintain an office in Palm Springs until his death in 2008 at the age of 92.

Built well after the establishment of the Thunderbird Heights community, the Cook Residence is associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage. It was completed just before the incorporation of the city in August 1973. The dwelling is not individually significantly associated with the development of the community, as many other homes were already built within the neighborhood. The property, a blend of a unique period revival style with modernistic elements, did not influence the design or direction of other houses built in the surrounding area. Therefore, it does not possess individual documented significance in relation to the Residential Subdivisions and Cooperatives (1951-1973) theme. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the home is not significantly associated with the lives of persons significant in our past. While the house has hosted prominent political figures, such as Barack Obama, they have not owned the property. The current owners, Michael S. Smith and James Costos may be considered significant individuals, though they only occupy the home on a part time basis. The property is eligible under NRHP/CRHR Criterion C/3 as it embodies the distinctive characteristics of a Mayan Revival and Modernist style home constructed in Rancho Mirage during the 1970s. The home maintains most of its original exterior features and still reflects the designs of master architect Howard Lapham. The property is a unique blend or architectural styles and illustrates Lapham's original vision clearly. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-3, 5-6, and 8. The Cook Residence is considered eligible under Local Register Criterion 1 as the residence is representative of a mid-20th century Mayan Revival and Modernist style home in Rancho Mirage. It is also considered eligible under Local Register Criterion 4, as it represents the work of the master architect Howard Lapham. Furthermore, the property is eligible under Local Register Criterion 7 as it embodies elements of outstanding attention to architectural design, detail, craftsmanship and materials. The original character-defining features, including many of the Mayan decorations, are intact and in good condition. The property appears to be relatively unaltered on the exterior with most of its original features. It appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. The dwelling has not been substantially altered on the exterior and it maintains adequate integrity from the historic period to convey its significance. However, visibility during field survey activities was low due to limit access past the front gate beneath the house. Therefore, the further intensive survey is needed to confirm its potential eligibility. As such, the property is assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation.; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

***P3a. Description:** 70-890 Tamarisk Lane, known as the Maxene Andrews Residence, was constructed in 1963 within the Flying "H" Ranch subdivision of Rancho Mirage and it sits on a 0.38 acre parcel. The property was originally designed as a single-story Modernist style single-family residence with Mediterranean Revival elements, including French doors, Spanish tiles, and a coffered ceiling. Today, the building exhibits a Desert Modernist style with a U-shaped floor plan and a flat roof, which is clad in rolled composition sheets. The flat roof has a wide overhang with enclosed eaves. The single-family residence has asymmetrical facades that are clad in stucco. The dwelling has a two-car attached garage at the southern end of the 'U' shape which opens out onto Andrews Circle. The front elevation of the home has has a stucco clad wall with a gate that leads to the central courtyard of the home. The courtyard has an arrow shaped pool that extends into the house at the western end. The doors and windows across the building are vinyl sliding sash units and vinyl sliding glass doors. There is a segmented and retractable window above the point where the pool extends into the footprint of the house, which consists of several aluminum framed rectangular lites. At the northern end of the U-shape, there is a 2021 addition with three long rectangular fixed windows. Apart from the 2021 addition, there are no other visible exterior additions, apart from the pool, which was also expanded in 2021.

B1. Historic Name: Maxene Andrews Residence
B2. Common Name: 70-890 Tamarisk Lane
B3. Original Use: Residential **B4. Present Use:** Residential
***B5. Architectural Style:** Desert Modernist

***B6. Construction History:** The single-family residence was constructed in 1963. No building permits exist prior to incorporation of the City of Rancho Mirage in 1973. In 2012, the residence was reroofed (Permit No. B1200988). In 2021, electrical work was completed at the property (Permit No. B2100027). In 2021, spa construction was completed at the property (Permit No. B2100526). In 2021, construction of an addition and remodel was completed at the property (Permit No. B2021039). Aerial images show that this construction consisted of an approximately 480 square foot addition at the front elevation. This addition was added to the north wing of the residence, extending towards the east side of the property. It has a flat roof to match the rest of the residence, with three narrow windows at the front elevation. In 2021, a block wall was constructed (Permit No. B2100987). In 2021, the residence was reroofed (Permit No. B2102463). In 2021, electrical work was completed at the property (Permit No. B2100660). In 2021, a permit for solar installation was issued (Permit No. B2100026). The 2021-era addition is the most significant alteration to the residence; no other significant alterations were identified.

70-890 Tamarisk Lane is a Desert Modernist style single-family residence in the Flying "H" Ranch subdivision of Rancho Mirage. The subject property was constructed in 1963 and owned by Maxene Andrews, one of the Andrews Sisters. The Andrews Sisters were a famous American singing group of the swing and boogie-woogie eras. They consisted of LaVerne Andrews, Maxene Andres, and Patricia "Patty" Andrews. They were considered the most popular female vocal group of the first half of the 20th century. Raised in Minneapolis, the group was formed when they were young girls. The youngest, Patty was seven years old when they won a talent contest at their local Orpheum Theatre. During WWII, the group reached its peak in popularity with hits including "Boogie Woogie Bugle Boy", "Three Little Sisters", "Don't Sit Under the Apple Tree (with Anyone Else but Me)", "A Hot Time In the Town of Berlin" and "Rum and Coca-Cola". During the 1950s and 1960s, the group periodically split, with Patty creating a solo act while Maxene and LaVerne continuing to act as a duo. LaVerne died in 1967. The duo of Patty and Maxene experienced a revival during the 1970s, but they eventually became estranged during the 1980s and 1990s. In 1995, Maxene died of a heart attack and Patty died in 2013.

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:
Maxene Andrews married Lou Levy in 1941 and adopted Aleda Ann and Peter with him. They separated in 1949, and Maxene soon afterward entered into a thirteen-year long relationship with her manager, Lynda Wells. During this time Maxene owned the subject property. It remains unclear how long Maxene owned the home, but it was advertised as in 1990 and 1991 as a 'Former Andrews Sisters Hideaway', four years before she died. Until the early 1990s, the home appears to have more closely resembled a Mediterranean Revival style residence with some Modernist style elements and a mid-century floor plan. Period revival features at the property included French doors, Spanish tiles, and a coffered ceiling. Several renovations have changed the character of the building to more closely resemble a Desert Modernist home, with modern landscaping/hardscaping, and a mid-century style addition, and sliding glass windows/doors.

One of the earlier houses built within the Flying "H" Ranch subdivision, the Maxene Andrews Residence is associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage. However, the property was not associated with a neighborhood development plan and there is no evidence to show that the design of the home significantly impacted the development of other nearby custom homes designed by other builders and architects in later years. Therefore, the property does not possess individual documented significance in relation to the Residential Subdivisions and Cooperatives (1951-1973) theme. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme but it is not considered a significant representative example of a known architectural style in the community.

Building, Structure, Object Information Continued:
The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is potentially individually eligible under NRHP/CRHR Criterion B/2, as the property is significantly associated with the lives of Maxene Andrews and the Andrews Sisters, a significant musicians who were writing and performing during the time when Maxene owned the property. However, the property no longer retains adequate historic integrity to convey its significance under this criterion. Due to 2021 alterations and previous renovation campaigns from at least the 1990s, the home no longer retains its integrity of design, materials, feeling, and association. The property is not considered eligible under NRHP/CRHR Criterion C/3 as it no longer individually embodies the distinctive characteristics of a mid-century Mediterranean Revival style home with Modernist elements constructed in Rancho Mirage during the 1960s. A significant addition was added to the front elevation in 2021, the pool/central courtyard has been extensively modified, and all of the openings have been altered with modern replacement materials. The recent renovation has attempted to create a mid-century aesthetic with new design elements that contribute to a false sense of historicity, blending historic features with modern replacements in a manner that is not easily discernible. It is not individually eligible under Criterion D/4, as further study of the dwelling would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-4, 6, and 8. The Maxene Andrews Residence is not considered eligible under Local Register Criterion 1 as the residence is no longer representative of a mid-20th century Mediterranean Revival style home with Modernist elements in Rancho Mirage. The home is potentially eligible under Local Register Criterion 5, as it is associated with Maxene Andrews and the Andrews Sisters. However, the property no longer retains integrity of design, materials, feeling, and association. The property is not eligible under Local Register Criterion 7 as it no longer embodies elements of outstanding attention to architectural design, detail, craftsmanship and materials. The dwelling has been substantially altered and it does not maintain adequate integrity from the historic period to convey its significance. As such, the property is assigned a 6Z status code: Found ineligible for NRHP, CRHR, or Local Register through survey evaluation.

***P3a. Description:** 1201 Tamarisk West Street, a condominium within the Tamarisk West II community, was constructed in 1969 and it sits on a 0.10 acre parcel. The unit is attached along the eastern wall to 1202 Tamarisk West Street. The property is a single-story Desert Modernist style single-family residence with an irregular-shaped floor plan and a flat roof, which is clad in rolled composition sheets. The flat roof has an overhang that varies from short to wide with enclosed eaves and a thick cornice line on the front and side elevations facing out towards Da Vall Drive and Tamarisk West Street. The single-family residence has asymmetrical facades with walls that have sections either entirely clad in uncoursed stone or stucco. The dwelling has an attached garage on the north elevation which has a modern metal-paneled sectional car door. Adjacent to the garage door, there is a concrete block wall and a doorway. Above both the doorway and the concrete block wall, there appear to be two locations where past ownership infilled windows with stucco clad walls. The front entrance of the home is covered by a wide flat porch roof over the front door, which is clad in added mirrored panels, and a three-lite sliding-fixed-sliding sash aluminum framed window. The home has an interior open atrium with three openings divided by two stucco clad rafters. The rear elevation is covered by a flat patio roof with a wide stucco-clad fascia board that is supported by square posts. The rear elevation wall chiefly consists of aluminum framed sliding glass doors and stucco dividing walls situated below long rectangular fixed transom lites that mirror the width of the door openings. The rear patio is divided from 1202 Tamarisk West Street patio by a wall clad in uncoursed stone. The floor of the rear patio is clad in rectangular tiles. There appear to have been no significant additions to the property over time since construction.

Period of Significance: 1969 **Property Type:** Single-Family Residential
Applicable Criteria: NRHP/CRHR Criterion C/3; Local Criteria 1 and 4

1201 Tamarisk West Street is a Desert Modernist style single-family residence within the Tamarisk West II community. The subject property was constructed in 1969 by Trenton J. Dunphy following designs developed by S. Charles Lee and Michael Allan Black. In 1948, well renowned architect S. Charles Lee partnered with Chicago businessman Samuel Hayden to form the Hayden Lee Development Company. Together they built large tracts for residential and commercial properties in southwestern Los Angeles, including the Los Angeles International Airport district. While the Hayden Lee Company was in operation, an executive and salesman within the company, George Keiter, married Lee's only daughter, Connie, in 1949. During the mid-1950s and early 1960s, Keiter was still a business partner and son-in-law to S. Charles Lee. Keiter and Lee had developed their own partnership and had completed several contracts with the Federal Housing Administration (FHA) for residential communities across the country.

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:
By the early 1960s, Lee's daughter and Keiter's wife, Connie, was an award-winning golfer. This motivated Keiter and Lee to partner in developing the Tamarisk West community in 1964, immediately adjacent to the western end of Tamarisk Country Club off Da Vall Drive. Together they formed Lee-Keiter Enterprises, a development firm. To complete the construction, which was built in three phases over time, Keiter and Lee hired Trenton J. Dunphy, a contractor who had recently built the William Krisel designed Sandpiper condominiums in Palm Desert in 1958. Like Sandpiper, Lee planned to design homes with floor-to-ceiling windows at the rear of the homes which would lead out to patios that overlooked a pool. The flat patio roof overhangs were to extend out over the patio spaces to shield residents from the sun and the pools were to be built beneath grade to maintain mountain views. The post-and-beam buildings had rock wall and stucco facades, decorative breeze block walls, and desert colors like light-pink and brown, exemplifying the Desert Modern subtype of the International architectural style. The first homes at the southern end of the development surrounding two pools (Tamarisk West I) were built in 1964 and officially opened in 1965.

To complete the work on the second phase, Lee-Keiter Enterprises hired Michael Allan Black, a 1961 graduate of the USC School of Architecture who had just begun his own practice in 1968 after working for many years with E. Stewart Williams. He designed Tamarisk West II, with oversight and input from Lee, mirroring elements from Tamarisk West I, while also incorporating its own unique design traits. By 1969, they completed the second phase (Tamarisk West II). The third phase (Tamarisk West III) of the subdivision was finally completed in 1972.

This condominium was constructed five years after the first Tamarisk West community (Tamarisk West I) was completed to the south. It was also was part of the second phase of a planned community with different floor plans but a similar communal configuration to the first Tamarisk West development. This condo, and the others in the Tamarisk West II community, are associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage. However, this dwelling was constructed in the second of three planned phases. There is no evidence to show that the design of this condominium unit individually significantly impacted the development of other nearby condos designed by other builders and architects in later years. Therefore, the property does not possess individual documented significance in relation to the Residential Subdivisions and Cooperatives (1951-1973) theme. As a whole, the Tamarisk West II development is significantly associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage because the cooperative living community is representative of the evolution of the City. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the property is not significantly associated with the lives of persons significant in our past. The property is eligible under NRHP/CRHR Criterion C/3 as the home embodies the distinctive characteristics of a Desert Modernist style condominium constructed in Rancho Mirage during the 1960s and is representative of the work of master architect S. Charles Lee and Michael Allan Black. In 1969, Lee and Black designed the property with stucco and rock wall facades, floor-to-ceiling glass windows/doorways, desert colors, and an expansive rear patio, which are all attributes clearly related to the Desert Modernist subtype of the International style. While the survey efforts showed that the front door, garage door, and atriuntryway have been modified with additional materials, the home has not been significantly altered on the exterior apart from these minor changes. The observed changes are potentially reversible and do not significantly impact the overall integrity of the property, which has had no significant additions. Overall, the exterior remains intact and the original mid-20th century integrity of design, materials, workmanship, feeling and association are still clearly discernible. The home is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

Building, Structure, Object Information Continued:

The single-family residence is not considered eligible under Local Criteria 2-3 and 5-8. The condominium is considered eligible under Local Register Criterion 1 as the property is representative of a mid-20th century Desert Modernist style residential building in Rancho Mirage. It is considered eligible under Local Register Criterion 4, as it represents the work of a master architect, S. Charles Lee and Michael Allan Black. Despite the garage door and front door modifications, and window infill, the property appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. The modifications, if removed in the future, can be replaced with period-appropriate materials without altering the essential form and integrity of the historic property. Overall, the building maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5B status code - locally significant both individually (listed, eligible, or appears eligible) and as contributor to a multi-component resource like a district that is locally listed, designated, determined eligible, or appears eligible through survey evaluation; the 3CB status code - appears eligible for CR both individually and as a contributor to a CR eligible multi-component resource through survey evaluation; and the 3B status code - appears eligible for NR both individually and as a contributor to a NR eligible multi-component resource like a district through survey evaluation.

B10. Statement of Significance Continued From Page 2:

By the early 1960s, Lee's daughter and Keiter's wife, Connie, was an award-winning golfer. This motivated Keiter and Lee to partner in developing the Tamarisk West community in 1964, immediately adjacent to the western end of Tamarisk Country Club off Da Vall Drive. Together they formed Lee-Keiter Enterprises, a development firm. To complete the construction, which was built in three phases over time, Keiter and Lee hired Trenton J. Dunphy, a contractor who had recently built the William Krisel designed Sandpiper condominiums in Palm Desert in 1958. Like Sandpiper, Lee planned to design homes with floor-to-ceiling windows at the rear of the homes which would lead out to patios that overlooked a pool. The flat patio roof overhangs were to extend out over the patio spaces to shield residents from the sun and the pools were to be built beneath grade to maintain mountain views. The post-and-beam buildings had rock wall and stucco facades, decorative breeze block walls, and desert colors like light-pink and brown, exemplifying the Desert Modern subtype of the International architectural style. The first homes at the southern end of the development surrounding two pools (Tamarisk West I) were built in 1964 and officially opened in 1965.

Building, Structure, Object Information Continued:

To complete the work on the second phase, Lee-Keiter Enterprises hired Michael Allan Black, a 1961 graduate of the USC School of Architecture who had just begun his own practice in 1968 after working for many years with E. Stewart Williams. He designed Tamarisk West II, with oversight and input from Lee, mirroring elements from Tamarisk West I, while also incorporating its own unique design traits. By 1969, they completed the second phase (Tamarisk West II). The third phase (Tamarisk West III) of the subdivision was finally completed in 1972.

This condominium was constructed five years after the first Tamarisk West community (Tamarisk West I) was completed to the south. It was also was part of the second phase of a planned community with different floor plans but a similar communal configuration to the first Tamarisk West development. This condo, and the others in the Tamarisk West II community, are associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage. However, this dwelling was constructed in the second of three planned phases. There is no evidence to show that the design of this condominium unit individually significantly impacted the development of other nearby condos designed by other builders and architects in later years. Therefore, the property does not possess individual documented significance in relation to the Residential Subdivisions and Cooperatives (1951-1973) theme. As a whole, the Tamarisk West II development is significantly associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage because the cooperative living community is representative of the evolution of the City. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the property is not significantly associated with the lives of persons significant in our past. The property is potentially eligible under NRHP/CRHR Criterion C/3 as an embodiment of the distinctive characteristics of a Desert Modernist style condominium constructed in Rancho Mirage during the 1960s and as representative of the work of master architect S. Charles Lee and Michael Allan Black. In 1969, Lee and Black designed the property with stucco and rock wall facades, floor-to-ceiling glass windows/doorways, desert colors, and an expansive rear patio, which are all attributes clearly related to the Desert Modernist subtype of the International style. However, current survey efforts showed that the atrium roof was replaced in 2016; the front entrance has been altered with a breezeblock addition; and the garage door was modified with contemporary materials. While the observed alterations are potentially reversible, overall they significantly impact the overall integrity of the property. Therefore, the exterior does not currently retain its material integrity. Due to these changes, the home is not individually eligible under this criterion. However, the property does retain adequate integrity to qualify as a contributor to a potential Tamarisk West II historic district. The home is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-3 and 5-8. The condominium is potentially considered eligible under Local Register Criterion 1 as the property is representative of a mid-20th century Desert Modernist style residential building in Rancho Mirage. However, the loss of material integrity from additions to the front entrance and atrium means that the home no longer maintains sufficient integrity to convey its significance under this criterion as an individual resource. It is also potentially considered eligible under Local Register Criterion 4, as a representative work of a master architect, S. Charles Lee and Michael Allan Black. However, modifications have hampered its material integrity. The additions and alterations, if removed in the future, can be replaced with period-appropriate materials without altering the essential form and integrity of the historic property and improve the condition of the property. Based on the condition of the property at the time of this survey, the home is assigned a 5D3 status code: appears to be a contributor to a multi-component resource that appears eligible for local listing or designation; a 3CD status code - appears eligible for CR as a contributor to a CR eligible multi-component resource through survey evaluation; and a 3D status code - appears eligible for NR as a contributor to a NR eligible multi-component resource through survey evaluation.

***P3a. Description:**

1203 Tamarisk West Street, a condominium within the Tamarisk West II community, was constructed in 1969 and it sits on a 0.11 acre parcel. The unit is attached along the eastern wall to 1204 Tamarisk West Street. The property is a single-story Desert Modernist style single-family residence with an irregular-shaped floor plan and a flat roof, which is clad in rolled composition sheets. The flat roof has an overhang that varies from short to wide with enclosed eaves and a thick cornice line on the front and side elevations facing out towards Tamarisk West Street. The single-family residence has asymmetrical facades with walls that have sections either entirely clad in uncoursed rock or stucco. The dwelling has an attached garage on the north elevation which has a modern metal-paneled sectional car door. The front entrance of the home is covered by a wide flat porch roof over the front door, which consists of two wooden doors adjacent to a three-lite sliding-fixed-sliding sash aluminum framed window. The home has an interior open patio behind an outer breeze block wall on the front elevation along Tamarisk West Street. The rear elevation is covered by a flat patio roof with a wide stucco-clad fascia board that is supported by square posts. The rear elevation wall chiefly consists of aluminum framed sliding glass doors and stucco dividing walls situated below long rectangular fixed transom lites that mirror the width of the door openings. The rear patio is divided from 1204 Tamarisk West Street patio by a wall clad in uncoursed rock. The floor of the rear patio is poured concrete. An original exterior chimney clad in rock is located within the center of the rear patio space. There appear to have been no significant additions to the property over time since construction.

***B10. Significance: Theme:** Residential Subdivisions and Cooperatives, 1951 – 1973 **Area:** City of Rancho Mirage; Tamarisk West II
Period of Significance: 1969 **Property Type:** Single-Family Residential
Applicable Criteria: NRHP/CRHR Criterion C/3; Local Criteria 1 and 4

1203 Tamarisk West Street is a Desert Modernist style single-family residence within the Tamarisk West II community. The subject property was constructed in 1969 by Trenton J. Dunphy following designs developed by S. Charles Lee and Michael Allan Black. The original owner of this unit was Mrs. Kaplan according to the remaining interior design plans.

In 1948, well renowned architect S. Charles Lee partnered with Chicago businessman Samuel Hayden to form the Hayden Lee Development Company. Together they built large tracts for residential and commercial properties in southwestern Los Angeles, including the Los Angeles International Airport district. While the Hayden Lee Company was in operation, an executive and salesman within the company, George Keiter, married Lee's only daughter, Connie, in 1949. During the mid-1950s and early 1960s, Keiter was still a business partner and son-in-law to S. Charles Lee. Keiter and Lee had developed their own partnership and had completed several contracts with the Federal Housing Administration (FHA) for residential communities across the country.

Primary Record Information Continued:

1203 Tamarisk West Street_3: View of front elevation.

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:
By the early 1960s, Lee's daughter and Keiter's wife, Connie, was an award-winning golfer. This motivated Keiter and Lee to partner in developing the Tamarisk West community in 1964, immediately adjacent to the western end of Tamarisk Country Club off Da Vall Drive. Together they formed Lee-Keiter Enterprises, a development firm. To complete the construction, which was built in three phases over time, Keiter and Lee hired Trenton J. Dunphy, a contractor who had recently built the William Krisel designed Sandpiper condominiums in Palm Desert in 1958. Like Sandpiper, Lee planned to design homes with floor-to-ceiling windows at the rear of the homes which would lead out to patios that overlooked a pool. The flat patio roof overhangs were to extend out over the patio spaces to shield residents from the sun and the pools were to be built beneath grade to maintain mountain views. The post-and-beam buildings had rock wall and stucco facades, decorative breeze block walls, and desert colors like light-pink and brown, exemplifying the Desert Modern subtype of the International architectural style. The first homes at the southern end of the development surrounding two pools (Tamarisk West I) were built in 1964 and officially opened in 1965.

Building, Structure, Object Information Continued:

To complete the work on the second phase, Lee-Keiter Enterprises hired Michael Allan Black, a 1961 graduate of the USC School of Architecture who had just begun his own practice in 1968 after working for many years with E. Stewart Williams. He designed Tamarisk West II, with oversight and input from Lee, mirroring elements from Tamarisk West I, while also incorporating its own unique design traits. By 1969, they completed the second phase (Tamarisk West II). The third phase (Tamarisk West III) of the subdivision was finally completed in 1972.

This condominium was constructed five years after the first Tamarisk West community (Tamarisk West I) was completed to the south. It was also was part of the second phase of a planned community with different floor plans but a similar communal configuration to the first Tamarisk West development. This condo, and the others in the Tamarisk West II community, are associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage. However, this dwelling was constructed in the second of three planned phases. There is no evidence to show that the design of this condominium unit individually significantly impacted the development of other nearby condos designed by other builders and architects in later years. Therefore, the property does not possess individual documented significance in relation to the Residential Subdivisions and Cooperatives (1951-1973) theme. As a whole, the Tamarisk West II development is significantly associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage because the cooperative living community is representative of the evolution of the City. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the property is not significantly associated with the lives of persons significant in our past. The property is eligible under NRHP/CRHR Criterion C/3 as the home embodies the distinctive characteristics of a Desert Modernist style condominium constructed in Rancho Mirage during the 1960s and is representative of the work of master architect S. Charles Lee and Michael Allan Black. In 1969, Lee and Black designed the property with stucco and rock wall facades, floor-to-ceiling glass windows/doorways at the rear, desert colors, and an expansive rear patio, which are all attributes clearly related to the Desert Modernist subtype of the International style. Current survey efforts showed that the garage door has been modified with replacement materials, but the home has not been significantly altered on the exterior apart from this minor change. The observed changes are potentially reversible and do not significantly impact the overall integrity of the property, which has had no significant additions. Overall, the exterior remains intact and the original mid-20th century integrity of design, materials, workmanship, feeling and association are still clearly discernible. The home is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-3 and 5-8. The condominium is considered eligible under Local Register Criterion 1 as the property is representative of a mid-20th century Desert Modernist style residential building in Rancho Mirage. It is considered eligible under Local Register Criterion 4, as it represents the work of a master architect, S. Charles Lee and Michael Allan Black. Despite the garage door replacement, the property appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. This modification, if removed in the future, can be replaced with period-appropriate materials without altering the essential form and integrity of the historic property. Overall, the building maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5B status code - locally significant both individually (listed, eligible, or appears eligible) and as contributor to a multi-component resource like a district that is locally listed, designated, determined eligible, or appears eligible through survey evaluation; the 3CB status code - appears eligible for CR both individually and as a contributor to a CR eligible multi-component resource through survey evaluation; and the 3B status code - appears eligible for NR both individually and as a contributor to a NR eligible multi-component resource like a district through survey evaluation.

***P3a. Description:**

1205 Tamarisk West Street, a condominium within the Tamarisk West II community, was constructed in 1969 and it sits on a 0.08 acre parcel. The unit is attached along the eastern wall to 1206 Tamarisk West Street. The property is a single-story Desert Modernist style single-family residence with an irregular-shaped floor plan and a flat roof, which is clad in rolled composition sheets. The flat roof has an overhang that varies from short to wide with enclosed eaves and a thick cornice line on the front and side elevations facing out towards Tamarisk West Street. The single-family residence has asymmetrical facades with walls that have sections either entirely clad in uncoursed rock or stucco. The dwelling has an attached garage on the north elevation which has a modern metal-paneled sectional car door. The front entrance of the home is covered by a wide flat porch roof over the front door, which consists of two wooden doors adjacent to a three-lite sliding-fixed-sliding sash aluminum framed window. The home has an interior open patio behind an outer breeze block wall on the front elevation along Tamarisk West Street. The rear elevation is covered by a flat patio roof with a wide stucco-clad fascia board that is supported by square posts. The rear elevation wall chiefly consists of in-kind replacement aluminum framed sliding glass doors and stucco dividing walls situated below long rectangular fixed transom lites that mirror the width of the door openings. The rear patio is divided from 1206 Tamarisk West Street patio by a wall clad in uncoursed rock. The floor of the rear patio is poured concrete. There appear to have been no significant additions to the property over time since construction.

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:

By the early 1960s, Lee's daughter and Keiter's wife, Connie, was an award-winning golfer. This motivated Keiter and Lee to partner in developing the Tamarisk West community in 1964, immediately adjacent to the western end of Tamarisk Country Club off Da Vall Drive. Together they formed Lee-Keiter Enterprises, a development firm. To complete the construction, which was built in three phases over time, Keiter and Lee hired Trenton J. Dunphy, a contractor who had recently built the William Krisel designed Sandpiper condominiums in Palm Desert in 1958. Like Sandpiper, Lee planned to design homes with floor-to-ceiling windows at the rear of the homes which would lead out to patios that overlooked a pool. The flat patio roof overhangs were to extend out over the patio spaces to shield residents from the sun and the pools were to be built beneath grade to maintain mountain views. The post-and-beam buildings had rock wall and stucco facades, decorative breeze block walls, and desert colors like light-pink and brown, exemplifying the Desert Modern subtype of the International architectural style. The first homes at the southern end of the development surrounding two pools (Tamarisk West I) were built in 1964 and officially opened in 1965.

Building, Structure, Object Information Continued:

To complete the work on the second phase, Lee-Keiter Enterprises hired Michael Allan Black, a 1961 graduate of the USC School of Architecture who had just begun his own practice in 1968 after working for many years with E. Stewart Williams. He designed Tamarisk West II, with oversight and input from Lee, mirroring elements from Tamarisk West I, while also incorporating its own unique design traits. By 1969, they completed the second phase (Tamarisk West II). The third phase (Tamarisk West III) of the subdivision was finally completed in 1972.

This condominium was constructed five years after the first Tamarisk West community (Tamarisk West I) was completed to the south. It was also was part of the second phase of a planned community with different floor plans but a similar communal configuration to the first Tamarisk West development. This condo, and the others in the Tamarisk West II community, are associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage. However, this dwelling was constructed in the second of three planned phases. There is no evidence to show that the design of this condominium unit individually significantly impacted the development of other nearby condos designed by other builders and architects in later years. Therefore, the property does not possess individual documented significance in relation to the Residential Subdivisions and Cooperatives (1951-1973) theme. As a whole, the Tamarisk West II development is significantly associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage because the cooperative living community is representative of the evolution of the City. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the property is not significantly associated with the lives of persons significant in our past. The property is eligible under NRHP/CRHR Criterion C/3 as the home embodies the distinctive characteristics of a Desert Modernist style condominium constructed in Rancho Mirage during the 1960s and is representative of the work of master architect S. Charles Lee and Michael Allan Black. In 1969, Lee and Black designed the property with stucco and rock wall facades, floor-to-ceiling glass windows/doorways at the rear elevation, desert colors, and an expansive rear patio, which are all attributes clearly related to the Desert Modernist subtype of the International style. Current survey efforts showed that the garage door has been modified with replacement materials, the aluminum sliding glass doors/windows had been replaced in-kind, and new front doors had been installed, but the home has not been significantly altered on the exterior apart from these minor changes. The observed non-original materials are potentially reversible and do not significantly impact the overall integrity of the property, which has had no significant additions. Overall, the exterior remains intact and the original mid-20th century integrity of design, materials, workmanship, feeling and association are still clearly discernible. The home is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-3 and 5-8. The condominium is considered eligible under Local Register Criterion 1 as the property is representative of a mid-20th century Desert Modernist style residential building in Rancho Mirage. It is considered eligible under Local Register Criterion 4, as it represents the work of a master architect, S. Charles Lee and Michael Allan Black. Despite the garage door replacement, in-kind door/window replacements, and the replacement of the original solid wood front doors, the property appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. These modifications, if removed in the future, can be replaced with period-appropriate materials without altering the essential form and integrity of the historic property. Overall, the building maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5B status code - locally significant both individually (listed, eligible, or appears eligible) and as contributor to a multi-component resource like a district that is locally listed, designated, determined eligible, or appears eligible through survey evaluation; the 3CB status code - appears eligible for CR both individually and as a contributor to a CR eligible multi-component resource through survey evaluation; and the 3B status code - appears eligible for NR both individually and as a contributor to a NR eligible multi-component resource like a district through survey evaluation.

The post-and-beam buildings had rock wall and stucco facades, decorative breeze block walls, and desert colors like light-pink and brown, exemplifying the Desert Modern subtype of the International architectural style. The first homes at the southern end of the development surrounding two pools (Tamarisk West I) were built in 1964 and officially opened in 1965.

To complete the work on the second phase, Lee-Keiter Enterprises hired Michael Allan Black, a 1961 graduate of the USC School of Architecture who had just begun his own practice in 1968 after working for many years with E. Stewart Williams. He designed Tamarisk West II, with oversight and input from Lee, mirroring elements from Tamarisk West I, while also incorporating its own unique design traits. By 1969, they completed the second phase (Tamarisk West II). The third phase (Tamarisk West III) of the subdivision was finally completed in 1972.

This condominium was constructed five years after the first Tamarisk West community (Tamarisk West I) was completed to the south. It was also was part of the second phase of a planned community with different floor plans but a similar communal configuration to the first Tamarisk West development. This condo, and the others in the Tamarisk West II community, are associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage. However, this dwelling was constructed in the second of three planned phases. There is no evidence to show that the design of this condominium unit individually significantly impacted the development of other nearby condos designed by other builders and architects in later years. Therefore, the property does not possess individual documented significance in relation to the Residential Subdivisions and Cooperatives (1951-1973) theme. As a whole, the Tamarisk West II development is significantly associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage because the cooperative living community is representative of the evolution of the City. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the property is not significantly associated with the lives of persons significant in our past.

The property is eligible under NRHP/CRHR Criterion C/3 as the home embodies the distinctive characteristics of a Desert Modernist style condominium constructed in Rancho Mirage during the 1960s and is representative of the work of master architect S. Charles Lee and Michael Allan Black. In 1969, Lee and Black designed the property with stucco and rock wall facades, floor-to-ceiling glass windows/doorways at the rear elevation, desert colors, and an expansive rear patio, which are all attributes clearly related to the Desert Modernist subtype of the International style. Current survey efforts showed that the garage door has been modified with replacement materials, the atrium was converted to an indoor space following construction, the front doors had been replaced, and the concrete block wall was removed after construction. However, the current owner has restored the two-door front door design and installed wooden doors that are similar, but differentiated from the original design, with long rectangular interior lites. Similarly, they removed the gabled skylight to more closely resemble the historic flat roof over the atrium. These treatments are consistent with the Secretary of the Interior's Standards for Rehabilitation as the replacement materials are compatible with the historic designs as they match historic features in size, scale, proportion, and massing to the design of the property. While the concrete block wall is still missing from the exterior, the design of the wall could potentially be restored based on existing examples of intact concrete block walls at other condos in the community.

Building, Structure, Object Information Continued:

The noted alterations are also all potentially reversible and do not significantly impact the overall integrity of the property, which has had no significant additions apart from roofing improvements. Overall, the exterior remains intact and the original mid-20th century integrity of design, materials, workmanship, feeling and association are still clearly discernible. The home is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-3 and 5-8. The condominium is considered eligible under Local Register Criterion 1 as the property is representative of a mid-20th century Desert Modernist style residential building in Rancho Mirage. It is considered eligible under Local Register Criterion 4, as it represents the work of a master architect, S. Charles Lee and Michael Allan Black. Despite the noted alterations and replacement materials, the property appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. Noted modifications, if removed and/or replaced in the future, can utilize period-appropriate materials without altering the essential form and integrity of the historic property. Overall, the building maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5B status code - locally significant both individually (listed, eligible, or appears eligible) and as contributor to a multi-component resource like a district that is locally listed, designated, determined eligible, or appears eligible through survey evaluation; the 3CB status code - appears eligible for CR both individually and as a contributor to a CR eligible multi-component resource through survey evaluation; and the 3B status code - appears eligible for NR both individually and as a contributor to a NR eligible multi-component resource like a district through survey evaluation.

***P3a. Description:**
1207 Tamarisk West Street, a condominium within the Tamarisk West II community, was constructed in 1969 and it sits on a 0.10 acre parcel. The unit is attached along the western wall to 1208 Tamarisk West Street. The property is a single-story Desert Modernist style single-family residence with an irregular-shaped floor plan and a flat roof, which is clad in rolled composition sheets. The flat roof has an overhang that varies from short to wide with enclosed eaves and a thick cornice line on the front and side elevations facing out towards Tamarisk West Street. The single-family residence has asymmetrical facades with walls that have sections either entirely clad in uncoursed rock or stucco. The dwelling has an attached garage on the south elevation which has a replacement metal-paneled sectional car door. The front entrance of the home is covered by a wide flat porch roof over the front doors, which consists of two original wooden doors. Adjacent to the front doors to the north there is a three-lite sliding-fixed-sliding sash aluminum framed window. **See Continuation Sheet for additional description.**

Period of Significance: 1969-1977 **Property Type:** Single-Family Residential
Applicable Criteria: NRHP/CRHR Criterion C/3; Local Criteria 1 and 4

1207 Tamarisk West Street is a Desert Modernist style single-family residence within the Tamarisk West II community. The subject property was constructed in 1969 by Trenton J. Dunphy following designs developed by S. Charles Lee and Michael Allan Black. The first owner was Shirley Cole, the original radio voice of "Little Orphan Annie".

In 1948, well renowned architect S. Charles Lee partnered with Chicago businessman Samuel Hayden to form the Hayden Lee Development Company. Together they built large tracts for residential and commercial properties in southwestern Los Angeles, including the Los Angeles International Airport district. While the Hayden Lee Company was in operation, an executive and salesman within the company, George Keiter, married Lee's only daughter, Connie, in 1949. During the mid-1950s and early 1960s, Keiter was still a business partner and son-in-law to S. Charles Lee. Keiter and Lee had developed their own partnership and had completed several contracts with the Federal Housing Administration (FHA) for residential communities across the country.

Primary Record Information Continued:

P3. Description Continued From Page 1:
The home has an interior closed atrium that has been converted into an indoor space. The atrium is topped with six domed skylights. The rear elevation is covered by a flat patio roof with a wide stucco-clad fascia board that is supported by square posts. The rear elevation wall chiefly consists of aluminum framed sliding glass doors and stucco dividing walls situated below long rectangular fixed transom lites that mirror the width of the door openings. The rear patio is divided from 1208 Tamarisk West Street patio by a wall clad in uncoursed rock. The floor of the rear patio is poured concrete. Shortly after construction of this unit, the Second Tamarisk West Owners Association asserted that the first owner of the condo, Shirley Cole, commissioned the original developer, Lee-Keiter Enterprises, to build the domed skylights and enclose the atrium. According to aerial photographs, this work appears to have been completed sometime between 1975 and 1977. During this time, the original owner also likely removed the concrete block wall adjacent to the garage door on the south elevation. In 2024, the wood rear entrance door adjacent to the garage was removed and replaced with a fiberglass framed door.

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:
By the early 1960s, Lee's daughter and Keiter's wife, Connie, was an award-winning golfer. This motivated Keiter and Lee to partner in developing the Tamarisk West community in 1964, immediately adjacent to the western end of Tamarisk Country Club off Da Vall Drive. Together they formed Lee-Keiter Enterprises, a development firm. To complete the construction, which was built in three phases over time, Keiter and Lee hired Trenton J. Dunphy, a contractor who had recently built the William Krisel designed Sandpiper condominiums in Palm Desert in 1958. Like Sandpiper, Lee planned to design homes with floor-to-ceiling windows at the rear of the homes which would lead out to patios that overlooked a pool. The flat patio roof overhangs were to extend out over the patio spaces to shield residents from the sun and the pools were to be built beneath grade to maintain mountain views. The post-and-beam buildings had rock wall and stucco facades, decorative breeze block walls, and desert colors like light-pink and brown, exemplifying the Desert Modern subtype of the International architectural style. The first homes at the southern end of the development surrounding two pools (Tamarisk West I) were built in 1964 and officially opened in 1965.

To complete the work on the second phase, Lee-Keiter Enterprises hired Michael Allan Black, a 1961 graduate of the USC School of Architecture who had just begun his own practice in 1968 after working for many years with E. Stewart Williams. He designed Tamarisk West II, with oversight and input from Lee, mirroring elements from Tamarisk West I, while also incorporating its own unique design traits. By 1969, they completed the second phase (Tamarisk West II). The third phase (Tamarisk West III) of the subdivision was finally completed in 1972.

This condominium was constructed five years after the first Tamarisk West community (Tamarisk West I) was completed to the south. It was also was part of the second phase of a planned community with different floor plans but a similar communal configuration to the first Tamarisk West development. This condo, and the others in the Tamarisk West II community, are associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage. However, this dwelling was constructed in the second of three planned phases. There is no evidence to show that the design of this condominium unit individually significantly impacted the development of other nearby condos designed by other builders and architects in later years. Therefore, the property does not possess individual documented significance in relation to the Residential Subdivisions and Cooperatives (1951-1973) theme. As a whole, the Tamarisk West II development is significantly associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage because the cooperative living community is representative of the evolution of the City. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the property is not significantly associated with the lives of persons significant in our past.

The property is eligible under NRHP/CRHR Criterion C/3 as the home embodies the distinctive characteristics of a Desert Modernist style condominium constructed in Rancho Mirage during the 1960s and is representative of the work of master architect S. Charles Lee and Michael Allan Black. In 1969, Lee and Black designed the property with stucco and rock wall facades, floor-to-ceiling glass windows/doorways at the rear elevation, desert colors, and an expansive rear patio, which are all attributes clearly related to the Desert Modernist subtype of the International style. Current survey efforts showed that the garage door was modified with replacement materials, the atrium was converted to an indoor space following construction, and the outer concrete block wall was removed after construction. However, according to local sources and aerial photographs, Shirley Cole appears to have commissioned Lee-Keiter Enterprises between 1975 and 1977 to enclose the atrium with skylights and remove the concrete block wall. Therefore, Urbana staff assert that the Lee-Keiter Enterprises modifications are an extension of the original plan implemented by the developer and thus do not detract from the overall historic integrity of the property. The other modification, the garage door replacement is a minor alteration that is potentially reversible and does not significantly impact the overall integrity of the property. Overall, the exterior remains intact and the original mid-20th century integrity of design, materials, workmanship, feeling and association are still clearly discernible. The home is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

Building, Structure, Object Information Continued:

The single-family residence is not considered eligible under Local Criteria 2-3 and 5-8. The condominium is considered eligible under Local Register Criterion 1 as the property is representative of a mid-20th century Desert Modernist style residential building in Rancho Mirage. It is considered eligible under Local Register Criterion 4, as it represents the work of a master architect, S. Charles Lee and Michael Allan Black. Despite the noted alterations and replacement materials, the property appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. Overall, the building maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5B status code - locally significant both individually (listed, eligible, or appears eligible) and as contributor to a multi-component resource like a district that is locally listed, designated, determined eligible, or appears eligible through survey evaluation; the 3CB status code - appears eligible for CR both individually and as a contributor to a CR eligible multi-component resource through survey evaluation; and the 3B status code - appears eligible for NR both individually and as a contributor to a NR eligible multi-component resource like a district through survey evaluation.

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:

By the early 1960s, Lee's daughter and Keiter's wife, Connie, was an award-winning golfer. This motivated Keiter and Lee to partner in developing the Tamarisk West community in 1964, immediately adjacent to the western end of Tamarisk Country Club off Da Vall Drive. Together they formed Lee-Keiter Enterprises, a development firm. To complete the construction, which was built in three phases over time, Keiter and Lee hired Trenton J. Dunphy, a contractor who had recently built the William Krisel designed Sandpiper condominiums in Palm Desert in 1958. Like Sandpiper, Lee planned to design homes with floor-to-ceiling windows at the rear of the homes which would lead out to patios that overlooked a pool. The flat patio roof overhangs were to extend out over the patio spaces to shield residents from the sun and the pools were to be built beneath grade to maintain mountain views. The post-and-beam buildings had rock wall and stucco facades, decorative breeze block walls, and desert colors like light-pink and brown, exemplifying the Desert Modern subtype of the International architectural style. The first homes at the southern end of the development surrounding two pools (Tamarisk West I) were built in 1964 and officially opened in 1965.

Building, Structure, Object Information Continued:

To complete the work on the second phase, Lee-Keiter Enterprises hired Michael Allan Black, a 1961 graduate of the USC School of Architecture who had just begun his own practice in 1968 after working for many years with E. Stewart Williams. He designed Tamarisk West II, with oversight and input from Lee, mirroring elements from Tamarisk West I, while also incorporating its own unique design traits. By 1969, they completed the second phase (Tamarisk West II). The third phase (Tamarisk West III) of the subdivision was finally completed in 1972.

This condominium was constructed five years after the first Tamarisk West community (Tamarisk West I) was completed to the south. It was also was part of the second phase of a planned community with different floor plans but a similar communal configuration to the first Tamarisk West development. This condo, and the others in the Tamarisk West II community, are associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage. However, this dwelling was constructed in the second of three planned phases. There is no evidence to show that the design of this condominium unit individually significantly impacted the development of other nearby condos designed by other builders and architects in later years. Therefore, the property does not possess individual documented significance in relation to the Residential Subdivisions and Cooperatives (1951-1973) theme. As a whole, the Tamarisk West II development is significantly associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage because the cooperative living community is representative of the evolution of the City. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the property is not significantly associated with the lives of persons significant in our past. The property is potentially eligible under NRHP/CRHR Criterion C/3 as the home embodies the distinctive characteristics of a Desert Modernist style condominium constructed in Rancho Mirage during the 1960s and is representative of the work of master architect S. Charles Lee and Michael Allan Black. In 1969, Lee and Black designed the property with stucco and rock wall facades, floor-to-ceiling glass windows/doorways at the rear elevation, desert colors, and an expansive rear patio, which are all attributes clearly related to the Desert Modernist subtype of the International style. However, current survey efforts showed that the garage door was replaced with a modern sectional door, the aluminum sliding glass doors/windows were replaced with vinyl units of a similar design, new front doors were installed, and an outdoor grilling station was added to the rear patio. As most of the fenestration on the home has been altered over time, the material integrity of the home has been significantly negatively impacted. While the observed non-original materials are potentially reversible, in their current state, they reduce the overall integrity of the property to the point where the home can no longer convey its potential individual significance under this criterion. Due to these changes, the home is not individually eligible under this criterion. However, the property does retain adequate integrity to qualify as a contributor to a potential Tamarisk West II historic district. The home is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-3 and 5-8. The condominium is potentially eligible under Local Register Criterion 1 as the property is representative of a mid-20th century Desert Modernist style residential building in Rancho Mirage. It is also potentially eligible under Local Register Criterion 4, as it represents the work of a master architect S. Charles Lee and Michael Allan Black. However, the lack of material integrity, due to window and door alterations, means that the dwelling can no longer convey any potential individual significance under both Local Register Criteria. In its current state, the property appears to retain only its integrity of location, design, setting, feeling, and association. These modifications, if removed in the future, can be replaced with period-appropriate materials that would improve the overall exterior integrity of the property to the point where it could convey its potential individual significance. Based on the condition of the property at the time of this survey, the home is assigned a 5D3 status code: appears to be a contributor to a multi-component resource that appears eligible for local listing or designation; a 3CD status code - appears eligible for CR as a contributor to a CR eligible multi-component resource through survey evaluation; and a 3D status code - appears eligible for NR as a contributor to a NR eligible multi-component resource through survey evaluation.

***P3a. Description:** 1210 Tamarisk West Street, a condominium within the Tamarisk West II community, was constructed in 1969 and it sits on a 0.08 acre parcel. The unit is attached along the eastern wall to 1209 Tamarisk West Street. The property is a single-story Desert Modernist style single-family residence with an irregular-shaped floor plan and a flat roof, which is clad in rolled composition sheets. The flat roof has an overhang that varies from short to wide with enclosed eaves and a thick cornice line on the front and side elevations facing out towards Tamarisk West Street. The single-family residence has asymmetrical facades with walls that have sections either entirely clad in uncoursed rock or stucco. The dwelling has an attached garage on the south elevation which has a replacement metal-paneled sectional car door. The front entrance of the home is covered by a wide flat porch roof over the front doors, which consists of two replacement doors. Adjacent to the front doors to the north there is a three-lite sliding-fixed-sliding sash vinyl framed window. The home has an interior open patio with a concrete breeze block wall. The rear elevation is covered by a flat patio roof with a wide stucco-clad fascia board that is supported by square posts. The rear elevation wall chiefly consists of vinyl framed sliding glass doors and stucco dividing walls situated below long rectangular fixed transom lites that mirror the width of the door openings. The rear patio is divided from 1209 Tamarisk West Street patio by a wall clad in uncoursed rock. The floor of the rear patio is poured concrete. There appear to have been no significant additions to the property over time since construction.

1210 Tamarisk West Street is a Desert Modernist style single-family residence within the Tamarisk West II community. The subject property was constructed in 1969 by Trenton J. Dunphy following designs developed by S. Charles Lee and Michael Allan Black. In 1948, well renowned architect S. Charles Lee partnered with Chicago businessman Samuel Hayden to form the Hayden Lee Development Company. Together they built large tracts for residential and commercial properties in southwestern Los Angeles, including the Los Angeles International Airport district. While the Hayden Lee Company was in operation, an executive and salesman within the company, George Keiter, married Lee's only daughter, Connie, in 1949. During the mid-1950s and early 1960s, Keiter was still a business partner and son-in-law to S. Charles Lee. Keiter and Lee had developed their own partnership and had completed several contracts with the Federal Housing Administration (FHA) for residential communities across the country.

B10. Statement of Significance Continued From Page 2:
By the early 1960s, Lee's daughter and Keiter's wife, Connie, was an award-winning golfer. This motivated Keiter and Lee to partner in developing the Tamarisk West community in 1964, immediately adjacent to the western end of Tamarisk Country Club off Da Vall Drive. Together they formed Lee-Keiter Enterprises, a development firm. To complete the construction, which was built in three phases over time, Keiter and Lee hired Trenton J. Dunphy, a contractor who had recently built the William Krisel designed Sandpiper condominiums in Palm Desert in 1958. Like Sandpiper, Lee planned to design homes with floor-to-ceiling windows at the rear of the homes which would lead out to patios that overlooked a pool. The flat patio roof overhangs were to extend out over the patio spaces to shield residents from the sun and the pools were to be built beneath grade to maintain mountain views. The post-and-beam buildings had rock wall and stucco facades, decorative breeze block walls, and desert colors like light-pink and brown, exemplifying the Desert Modern subtype of the International architectural style. The first homes at the southern end of the development surrounding two pools (Tamarisk West I) were built in 1964 and officially opened in 1965.

To complete the work on the second phase, Lee-Keiter Enterprises hired Michael Allan Black, a 1961 graduate of the USC School of Architecture who had just begun his own practice in 1968 after working for many years with E. Stewart Williams. He designed Tamarisk West II, with oversight and input from Lee, mirroring elements from Tamarisk West I, while also incorporating its own unique design traits. By 1969, they completed the second phase (Tamarisk West II). The third phase (Tamarisk West III) of the subdivision was finally completed in 1972.

This condominium was constructed five years after the first Tamarisk West community (Tamarisk West I) was completed to the south. It was also was part of the second phase of a planned community with different floor plans but a similar communal configuration to the first Tamarisk West development. This condo, and the others in the Tamarisk West II community, are associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage. However, this dwelling was constructed in the second of three planned phases. There is no evidence to show that the design of this condominium unit individually significantly impacted the development of other nearby condos designed by other builders and architects in later years. Therefore, the property does not possess individual documented significance in relation to the Residential Subdivisions and Cooperatives (1951-1973) theme. As a whole, the Tamarisk West II development is significantly associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage because the cooperative living community is representative of the evolution of the City. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the property is not significantly associated with the lives of persons significant in our past. The property is eligible under NRHP/CRHR Criterion C/3 as the home embodies the distinctive characteristics of a Desert Modernist style condominium constructed in Rancho Mirage during the 1960s and is representative of the work of master architect S. Charles Lee and Michael Allan Black. In 1969, Lee and Black designed the property with stucco and rock wall facades, floor-to-ceiling glass windows/doorways at the rear elevation, desert colors, and an expansive rear patio, which are all attributes clearly related to the Desert Modernist subtype of the International style. Current survey efforts showed that the garage door was replaced with a modern sectional door, the aluminum sliding glass doors/windows were replaced with vinyl units of a similar design, and new front doors were installed. As most of the fenestration on the home has been altered over time, the material integrity of the home has been significantly negatively impacted. While the observed non-original materials are potentially reversible, in their current state, they reduce the overall integrity of the property to the point where the home can no longer convey its potential individual significance under this criterion. Due to these changes, the home is not individually eligible under this criterion. However, the property does retain adequate integrity to qualify as a contributor to a potential Tamarisk West II historic district. The home is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

Building, Structure, Object Information Continued:

The single-family residence is not considered eligible under Local Criteria 2-3 and 5-8. The condominium is potentially eligible under Local Register Criterion 1 as the property is representative of a mid-20th century Desert Modernist style residential building in Rancho Mirage. It is also potentially eligible under Local Register Criterion 4, as it represents the work of a master architect S. Charles Lee and Michael Allan Black. However, the lack of material integrity, due to window and door alterations, means that the dwelling can no longer convey any potential individual significance under both Local Register Criteria. In its current state, the property appears to retain only its integrity of location, design, setting, feeling, and association. These modifications, if removed in the future, can be replaced with period-appropriate materials that would improve the overall exterior integrity of the property to the point where it could convey its potential individual significance. Based on the condition of the property at the time of this survey, the home is assigned a 5D3 status code: appears to be a contributor to a multi-component resource that appears eligible for local listing or designation; a 3CD status code - appears eligible for CR as a contributor to a CR eligible multi-component resource through survey evaluation; and a 3D status code - appears eligible for NR as a contributor to a NR eligible multi-component resource through survey evaluation.

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:
By the early 1960s, Lee's daughter and Keiter's wife, Connie, was an award-winning golfer. This motivated Keiter and Lee to partner in developing the Tamarisk West community in 1964, immediately adjacent to the western end of Tamarisk Country Club off Da Vall Drive. Together they formed Lee-Keiter Enterprises, a development firm. To complete the construction, which was built in three phases over time, Keiter and Lee hired Trenton J. Dunphy, a contractor who had recently built the William Krisel designed Sandpiper condominiums in Palm Desert in 1958. Like Sandpiper, Lee planned to design homes with floor-to-ceiling windows at the rear of the homes which would lead out to patios that overlooked a pool. The flat patio roof overhangs were to extend out over the patio spaces to shield residents from the sun and the pools were to be built beneath grade to maintain mountain views. The post-and-beam buildings had rock wall and stucco facades, decorative breeze block walls, and desert colors like light-pink and brown, exemplifying the Desert Modern subtype of the International architectural style. The first homes at the southern end of the development surrounding two pools (Tamarisk West I) were built in 1964 and officially opened in 1965.

Building, Structure, Object Information Continued:

To complete the work on the second phase, Lee-Keiter Enterprises hired Michael Allan Black, a 1961 graduate of the USC School of Architecture who had just begun his own practice in 1968 after working for many years with E. Stewart Williams. He designed Tamarisk West II, with oversight and input from Lee, mirroring elements from Tamarisk West I, while also incorporating its own unique design traits. By 1969, they completed the second phase (Tamarisk West II). The third phase (Tamarisk West III) of the subdivision was finally completed in 1972.

This condominium was constructed five years after the first Tamarisk West community (Tamarisk West I) was completed to the south. It was also was part of the second phase of a planned community with different floor plans but a similar communal configuration to the first Tamarisk West development. This condo, and the others in the Tamarisk West II community, are associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage. However, this dwelling was constructed in the second of three planned phases. There is no evidence to show that the design of this condominium unit individually significantly impacted the development of other nearby condos designed by other builders and architects in later years. Therefore, the property does not possess individual documented significance in relation to the Residential Subdivisions and Cooperatives (1951-1973) theme. As a whole, the Tamarisk West II development is significantly associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage because the cooperative living community is representative of the evolution of the City. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the property is not significantly associated with the lives of persons significant in our past. The property is eligible under NRHP/CRHR Criterion C/3 as the home embodies the distinctive characteristics of a Desert Modernist style condominium constructed in Rancho Mirage during the 1960s and is representative of the work of master architect S. Charles Lee and Michael Allan Black. In 1969, Lee and Black designed the property with stucco and rock wall facades, floor-to-ceiling glass windows/doorways at the rear elevation, desert colors, and an expansive rear patio, which are all attributes clearly related to the Desert Modernist subtype of the International style. Current survey efforts showed that the garage door has been modified with replacement materials, the aluminum sliding glass doors/windows had been replaced in-kind, and new front doors had been installed, but the home has not been significantly altered on the exterior apart from these minor changes. The observed non-original materials are potentially reversible and do not significantly impact the overall integrity of the property, which has had no significant additions. Overall, the exterior remains intact and the original mid-20th century integrity of design, materials, workmanship, feeling and association are still clearly discernible. The home is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The single-family residence is not considered eligible under Local Criteria 2-3 and 5-8. The condominium is considered eligible under Local Register Criterion 1 as the property is representative of a mid-20th century Desert Modernist style residential building in Rancho Mirage. It is considered eligible under Local Register Criterion 4, as it represents the work of a master architect, S. Charles Lee and Michael Allan Black. Despite the garage door replacement, in-kind door/window replacements, and the replacement of the original solid wood front doors, the property appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. These modifications, if removed in the future, can be replaced with period-appropriate materials without altering the essential form and integrity of the historic property. Overall, the building maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5B status code - locally significant both individually (listed, eligible, or appears eligible) and as contributor to a multi-component resource like a district that is locally listed, designated, determined eligible, or appears eligible through survey evaluation; the 3CB status code - appears eligible for CR both individually and as a contributor to a CR eligible multi-component resource through survey evaluation; and the 3B status code - appears eligible for NR both individually and as a contributor to a NR eligible multi-component resource like a district through survey evaluation.

***B6. Construction History:** The single-family residence was constructed in 1969. No building permits exist prior to incorporation of the City of Rancho Mirage in 1973. In 2004, construction of an addition or a remodel was completed at the property (Permit No. B0400084). In 2013, solar was installed at the property (Permit No. B1300364). In 2022, the residence was reroofed (Permit No. B2200313). In 2023, plumbing work was completed at the property (Permit No. B2302382). There appear to have been no significant additions to the property over time since construction.

B9a. Architect: S. Charles Lee / Michael Allan Black **b.** Builder: Trenton J. Dunphy
***B10. Significance: Theme:** Residential Subdivisions and Cooperatives, 1951 – 1973 **Area:** City of Rancho Mirage; Tamarisk West II
Period of Significance: 1969 **Property Type:** Single-Family Residential
Applicable Criteria: NRHP/CRHR Criterion C/3; Local Criteria 1 and 4

1212 Tamarisk West Street is a Desert Modernist style single-family residence within the Tamarisk West II community. The subject property was constructed in 1969 by Trenton J. Dunphy following designs developed by S. Charles Lee and Michael Allan Black. In 1948, well renowned architect S. Charles Lee partnered with Chicago businessman Samuel Hayden to form the Hayden Lee Development Company. Together they built large tracts for residential and commercial properties in southwestern Los Angeles, including the Los Angeles International Airport district. While the Hayden Lee Company was in operation, an executive and salesman within the company, George Keiter, married Lee's only daughter, Connie, in 1949. During the mid-1950s and early 1960s, Keiter was still a business partner and son-in-law to S. Charles Lee. Keiter and Lee had developed their own partnership and had completed several contracts with the Federal Housing Administration (FHA) for residential communities across the country.

URBANA PRESERVATION & PLANNING LLC

Primary Record Information Continued:

P3. Description Continued From Page 1:
Adjacent to the front doors to the north there is a three-lite sliding-fixed-sliding sash aluminum framed window and another smaller rectangular aluminum sliding sash window with two lites. The home has an interior closed atrium which appears to be unmodified with aluminum framed skylights and long rectangular clerestory windows. The rear elevation is covered by a flat patio roof with a wide stucco-clad fascia board that is supported by square posts. The rear elevation wall chiefly consists of aluminum framed sliding glass doors and stucco dividing walls situated below long rectangular fixed transom lites that mirror the width of the door openings. The rear patio is divided from 1211 Tamarisk West Street patio by a wall clad in uncoursed rock. The floor of the rear patio is poured concrete. There appear to have been no significant additions to the property over time since construction.

1212 Tamarisk West Street_1: View of front elevation.

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:
By the early 1960s, Lee's daughter and Keiter's wife, Connie, was an award-winning golfer. This motivated Keiter and Lee to partner in developing the Tamarisk West community in 1964, immediately adjacent to the western end of Tamarisk Country Club off Da Vall Drive. Together they formed Lee-Keiter Enterprises, a development firm. To complete the construction, which was built in three phases over time, Keiter and Lee hired Trenton J. Dunphy, a contractor who had recently built the William Krisel designed Sandpiper condominiums in Palm Desert in 1958. Like Sandpiper, Lee planned to design homes with floor-to-ceiling windows at the rear of the homes which would lead out to patios that overlooked a pool. The flat patio roof overhangs were to extend out over the patio spaces to shield residents from the sun and the pools were to be built beneath grade to maintain mountain views. The post-and-beam buildings had rock wall and stucco facades, decorative breeze block walls, and desert colors like light-pink and brown, exemplifying the Desert Modern subtype of the International architectural style. The first homes at the southern end of the development surrounding two pools (Tamarisk West I) were built in 1964 and officially opened in 1965.

To complete the work on the second phase, Lee-Keiter Enterprises hired Michael Allan Black, a 1961 graduate of the USC School of Architecture who had just begun his own practice in 1968 after working for many years with E. Stewart Williams. He designed Tamarisk West II, with oversight and input from Lee, mirroring elements from Tamarisk West I, while also incorporating its own unique design traits. By 1969, they completed the second phase (Tamarisk West II). The third phase (Tamarisk West III) of the subdivision was finally completed in 1972.

This condominium was constructed five years after the first Tamarisk West community (Tamarisk West I) was completed to the south. It was also was part of the second phase of a planned community with different floor plans but a similar communal configuration to the first Tamarisk West development. This condo, and the others in the Tamarisk West II community, are associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage. However, this dwelling was constructed in the second of three planned phases. There is no evidence to show that the design of this condominium unit individually significantly impacted the development of other nearby condos designed by other builders and architects in later years. Therefore, the property does not possess individual documented significance in relation to the Residential Subdivisions and Cooperatives (1951-1973) theme. As a whole, the Tamarisk West II development is significantly associated with the Residential Subdivisions and Cooperatives (1951-1973) theme in Rancho Mirage because the cooperative living community is representative of the evolution of the City. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

The dwelling is not individually eligible under NRHP/CRHR Criterion A/1, as it is not directly associated with significant events or patterns of events in local, regional, state, or national history. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the property is not significantly associated with the lives of persons significant in our past. The property is eligible under NRHP/CRHR Criterion C/3 as the home embodies the distinctive characteristics of a Desert Modernist style condominium constructed in Rancho Mirage during the 1960s and is representative of the work of master architect S. Charles Lee and Michael Allan Black. In 1969, Lee and Black designed the property with stucco and rock wall facades, floor-to-ceiling glass windows/doorways at the rear elevation, desert colors, and an expansive rear patio, which are all attributes clearly related to the Desert Modernist subtype of the International style. Current survey efforts showed that the garage door was modified with replacement materials, the aluminum sliding glass doors/windows were replaced in-kind, and two new window openings were added, but the home has not been significantly altered on the exterior apart from these minor changes. The new windows are in-keeping with the design of the original units, utilizing the same aluminum sliding sash design. The observed alterations, including the new window openings, are potentially reversible and do not significantly impact the overall integrity of the property, which has had no significant additions. Overall, the exterior remains intact and the original mid-20th century integrity of design, materials, workmanship, feeling and association are still clearly discernible. The home is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

Building, Structure, Object Information Continued:

The single-family residence is not considered eligible under Local Criteria 2-3 and 5-8. The condominium is considered eligible under Local Register Criterion 1 as the property is representative of a mid-20th century Desert Modernist style residential building in Rancho Mirage. It is considered eligible under Local Register Criterion 4, as it represents the work of a master architect, S. Charles Lee and Michael Allan Black. Despite the garage door replacement, in-kind door/window replacements, and the addition of two new windows, the property appears to retain sufficient integrity of location, design, setting, materials, workmanship, feeling, and association. These modifications, if removed in the future, can be replaced with period-appropriate materials without altering the essential form and integrity of the historic property. Overall, the building maintains adequate integrity from the historic period to convey its significance. As such, the property is assigned the 5B status code - locally significant both individually (listed, eligible, or appears eligible) and as contributor to a multi-component resource like a district that is locally listed, designated, determined eligible, or appears eligible through survey evaluation; the 3CB status code - appears eligible for CR both individually and as a contributor to a CR eligible multi-component resource through survey evaluation; and the 3B status code - appears eligible for NR both individually and as a contributor to a NR eligible multi-component resource like a district through survey evaluation.

***P3a. Description:**

The Annenberg Center for Health Sciences in the Eisenhower Medical Center (Eisenhower Health) campus at 39000 Bob Hope Drive was constructed in 1980 southeast of the original building and it sits on a 1.12 acre parcel. The property is an approximately three-story tall Organic Geometric style building with a circular-shaped floor plan covered by flat roof bordered with a short parapet wall. The walls on all sides are are decorated with small concrete pentagons arranged in a geometric pattern. The front (south) elevation of the building has a large deeply recessed center window that is fixed, metal framed, and divided into twelve rectangular lites. The front entrance, which consists of metal framed glass doors, is also recessed and covered by a long semi-circular flat patio roof which is supported by round concrete columns. There appear to have been no significant additions to the property over time since construction.

The Annenberg Center for Health Sciences is an Organic Geometric style medical building within the Eisenhower Health campus at 39-000 Bob Hope Drive. The subject property was designed by Williams, Clark, and Williams and completed in 1981 for use as a medical education center as the direct result of a $5 million gift to the Eisenhower Medical Center by Walter and Leonore Annenberg. In the late 1970s, Dolores Hope and Eisenhower Medical Center President John Sinn approached the Annenbergs about developing a medical education center. Annenberg agreed to a $5 million gift and later donated another $5 million for educational programs. The building, which began construction in 1980, opened in November 1981. The facility was built to accommodate a 485-seat amphitheater-style auditorium, and several private classrooms. Quickly after opening, the center became a popular venue for conferences and symposia. From the beginning of 1983 through July 1985, the Annenberg Center held 48 international conferences/symposia with a total of 5,447 participants. In 1986, the center hosted the World Medical Assembly, attracting about 500 participants from 50 countries. In 1996, the Annenberg Center held a three-day conference on preventing medical mistakes, which helped found the National Patient Safety Foundation.

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:
Built as an early and significant addition to the Eisenhower Medical Center campus, the Annenberg Center for Health Sciences is individually significant within the theme of Cityhood (1973 – Present) in Rancho Mirage because the building significantly increased the range of services provided within the hospital campus and helped establish the Eisenhower Medical Center as a premier location for the advancement of medical sciences in the Coachella Valley and nationwide. Since its establishment, the building has become a hub for continuing education meetings, community health/wellness meetings, and a popular location for both national and international meetings with leading experts in specific areas of medicine and health care policy. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

The medical building is potentially individually eligible under NRHP/CRHR Criterion A/1, as it is directly associated with a significant pattern of events in local Rancho Mirage history. However, the building was completed in 1981, and does not meet the 50-year age requirement for listing in the NRHP. As a result, the property is only eligible under CRHR Criterion 1. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the building is not significantly associated with the lives of persons significant in our past. The property is potentially eligible under NRHP/CRHR Criterion C/3 as it embodies the distinctive characteristics of an Organic Geometric style hospital building. The property has remained relatively intact since construction and it maintains its historic integrity of location, design, setting, materials, workmanship, feeling, and association. However, the building was completed in 1981, and does not meet the 50-year age requirement for listing in the NRHP. As a result, the property is only eligible under CRHR Criterion 3. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The hospital building is not considered eligible under Local Criteria 2 and 4-8. The Annenberg Center for Health Sciences is eligible under Local Register Criterion 1 as it is representative of the Organic Geometric style. The Annenberg Center for Health Sciences is considered eligible under Local Register Criterion 3 as the property is representative of the development of the infrastructure growth in the City of Rancho Mirage. The property retains sufficient historic integrity to convey its significance under both of these criteria. As such, the property is assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation; and the 3CS status code - appears eligible for CR individually through survey evaluation.

***P3a. Description:** The Betty Ford Center at 39-407 Vista Del Sol was constructed in 1982 east of the original 1971 Eisenhower building and it sits on a 14.28 acre parcel. The property consists of eight single-story buildings which have asymmetrical facades clad in coarse patterned stucco with large metal framed fixed windows. The roofs of all the buildings are flat with short parapet walls, moderate to wide overhangs, thick stucco-clad fascia, and enclosed eaves. The entrances to all buildings consist of metal framed glass doors in recessed entryways. Some buildings have front porch roofs supported by rectangular columns that are clad in either stucco or wood panels. In 1982, the property consisted of four buildings. The main building was 14,313 square feet and the other three buildings were 9,000 square feet. Following construction, the facility added four additional buildings over subsequent years. The first, Fisher Hall, was completed in 1986 and was designed by Milton Chambers and built by Trojan Properties, Rancho Mirage. The 13,000 square foot building was built to add twenty beds to the capacity of the Betty Ford Center. In March 1993, the Betty Ford Center added the James W. West Training Building, a 121-seat auditorium building with two classrooms. In 2002, the complex added its two most recent buildings, the Daniels Children's Training Pavilion for young children with dependency issues and Ottenstein Hall, for specialized treatment and assessment services. In 2009, the Betty Ford Center added a new patient entrance structure connecting Ottenstein Hall to the Firestone Hall to improve the patient intake process.

The Betty Ford Center is an International style medical complex at 39-407 Vista Del Sol. The subject property was completed in 1982 for use as a substance abuse treatment center as the direct result of the efforts of former First Lady Betty Ford. In 1982 Betty Ford co-founded the facility with Leonard Firestone and Dr. James West. Her decision to open the center was a result of her own battle with alcoholism and addiction. Before and after its opening, Mrs. Ford worked to raise funds and to help research and design treatments to assist men, women, and families in recovery from alcoholism and other drug dependency. Today, the Betty Ford Center is regarded as one of the nation's foremost substance abuse treatment facilities in the world. When it opened, Mrs. Ford patterned the drug and alcohol rehabilitation approach after the Hazelden Foundation's Minnesota Model of Care. In 2014, the Betty Ford Clinic and Hazelden merged, forming the nation's largest nonprofit addiction treatment center, the Hazelden Betty Ford Foundation.

Betty Ford Center_2: View of admissions entrance.

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:
Built as an early and significant addition to the Eisenhower Medical Center campus, the Betty Ford Center is individually significant within the theme of Cityhood (1973 – Present) in Rancho Mirage because the center significantly increased the range of services provided within the hospital campus and helped establish the Eisenhower Medical Center as a premier location for substance abuse rehab in the Coachella Valley and nationwide. Since its establishment, the center has become a hub for professionals in the field, a noteworthy location for celebrity clientele, and a leader in research. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme but it is not considered a significant representative example of a known architectural style in the community.

Building, Structure, Object Information Continued:
The Betty Ford Center is potentially individually eligible under NRHP/CRHR Criterion A/1, as it is directly associated with a significant pattern of events in local Rancho Mirage history. However, the center was completed in 1982, and does not meet the 50-year age requirement for listing in the NRHP. As a result, the property is only potentially eligible under CRHR Criterion 1. While the four original buildings from 1982 remain, the complex as a whole has been substantially altered since its construction, doubling in size by adding four additional buildings and altering original Firestone Hall with a 2009 entryway/connector to Ottenstein Hall, which removed the entire original eastern elevation of the building. Due to the alterations, the property is not eligible under Criterion 1. The property is potentially individually eligible under NRHP/CRHR Criterion B/2, as the building is significantly associated with the life of Betty Ford, who spent much of her later life guiding the development of the center while living nearby. However, the property as a whole no longer retains sufficient integrity to convey its significance under this criterion as the original design and materials are no longer intact. Therefore, the property is not eligible under Criterion 2. The property is potentially eligible under NRHP/CRHR Criterion C/3 as it embodies the distinctive characteristics of an International style medical center. However, the building was completed in 1982, and does not meet the 50-year age requirement for listing in the NRHP. As a result, the property is only potentially eligible under CRHR Criterion 3. However, the property has not remained intact, and it only maintains its historic integrity of location, setting, workmanship, feeling, and association. Therefore, the property is not eligible under Criterion 3. The complex is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The medical center is not considered eligible under Local Criteria 2, 4, and 6-8. The Betty Ford Center is potentially eligible under Local Register Criterion 1 as being representative of the International style. The Betty Ford Center is also considered potentially eligible under Local Register Criterion 3 as the property is representative of the development of the medical care in the City of Rancho Mirage. Lastly, the Betty Ford Center is potentially eligible under Local Register Criterion 5 as it is associated with the life and work of Betty Ford. However, the property as a whole no longer retains sufficient integrity to convey its significance under all of these criteria as the original design and materials are no longer intact. Due to additions and changes to the property over time, the Betty Ford Center only retains integrity of location, setting, workmanship, feeling, and association. The complex does not maintain adequate integrity from the historic period to convey its significance. As such, the property is assigned a 6Z status code: Found ineligible for NRHP, CRHR, or Local Register through survey evaluation.

e. Other Locational Data: APN: 685270020

***P3a. Description:**

The Probst Professional Building in the Eisenhower Medical Center (Eisenhower Health) campus at 39000 Bob Hope Drive was constructed in 1972 southwest of the original building and it sits on a 48.33 acre parcel. The property is a Formalism style building that faces south and is rectangular, symmetrical, three-stories tall, and flat-roofed. A broad cornice and parapet decorated with an incised geometric 'fountain' motif distinguishes the roofline. Exteriors are sheathed in smooth stucco. The building has a temple-like appearance with a series of equally spaced vertical panels suggesting classical columns from the ground floor to the third floor elevations. Narrow fixed windows of black anodized aluminum are recessed between the panels. There appear to have been no significant additions to the property over time since construction.

The Probst Professional Building is a New Formalism style medical building within the Eisenhower Health campus at 39-000 Bob Hope Drive. The subject property was the result of a $1 million donation from the treasurer and trustee of the Eisenhower Medical Center, Walter F. Probst, and his wife Eleanor Probst. Edward Durell Stone, who had designed the original Eisenhower Memorial Hospital Building, was also commissioned for this building, which was completed in 1972 for use as an office building on the campus. A native of Michigan, Walter F. Probst was chairman of the board and chief executive officer of Essex International Inc., a technological development company headquartered in Detroit. He was a highly successful businessman who became a philanthropist later in life, donating much of his time and energy in the 1970s to the development of the Eisenhower Medical Center.

Building, Structure, Object Information Continued:

B10. Statement of Significance Continued From Page 2:
Edward Durell Stone was born in 1902 in Fayetteville, Arkansas. He attended the University of Arkansas before moving to Boston in 1922. Though he did not earn a degree, Stone attended courses at the Boston Architectural Club (now Boston Architectural College), Harvard University's School of Architecture, and MIT. He moved to New York in 1929 and joined the firm of Schultze & Weaver. While there, he designed the main lobby, grand ballroom, and private dining rooms of the Waldorf-Astoria. Stone became an early adopter of the New Formalist style, drawing inspiration from his visits to Europe. Stone achieved success nationally and internationally. He lived in New York for the rest of his life, but designed many important buildings throughout the country. Notable works by Stone include the Radio City Music Hall, the US Pavilion at the Brussels World's Fair, the Kennedy Center in DC, the Mandel House in Bedford Hills, NY, Stone retired in 1974 and died in 1978.

Building, Structure, Object Information Continued:

Built as an early and significant addition to the Eisenhower Medical Center campus, the Probst Professional Building is individually significant within the theme of Commercial Development (1934 – 1973) in Rancho Mirage because the building significantly increased the capacity for medical providers to hold offices on the Eisenhower Medical Center campus, helped establish the Eisenhower Medical Center as a premier location for the advancement of medical sciences in the Coachella Valley and nationwide. Since its establishment, the building has become an important component of the facility, and essential for the staff that works on the property. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme and is considered a significant representative example of a known architectural style in the community.

The medical building is individually eligible under NRHP/CRHR Criterion A/1, as it is directly associated with a significant pattern of events in local Rancho Mirage history. The building is an important component of the history of the Eisenhower Medical Center, and by extension, the history of Rancho Mirage. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the building is not significantly associated with the lives of persons significant in our past. While Walter Probst was a significant philanthropist, he did not design the building and did not occupy and office in the building. The property is potentially eligible under NRHP/CRHR Criterion C/3 as it embodies the distinctive characteristics of a New Formalism style hospital building and it is representative of the work of master architect Edward Durell Stone. The property is relatively intact since construction and it maintains its historic integrity of location, design, setting, materials, workmanship, feeling, and association. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The hospital building is not considered eligible under Local Criteria 2 and 5-8. The Probst Professional Building is eligible under Local Register Criterion 1 as it is representative of the New Formalism style. The Probst Professional Building is considered eligible under Local Register Criterion 3 as the property is representative of the development of the infrastructure growth in the City of Rancho Mirage. It is also considered eligible under Local Register Criterion 4, as the Probst Professional Building represents the work of a master architect Edward Durell Stone, a pioneer of the New Formalism movement. The property retains sufficient historic integrity to convey its significance under all of these criteria. As such, the property is assigned the 5S3 status code - appears to be individually eligible for local listing or designation through survey evaluation; the 3CS status code - appears eligible for CR individually through survey evaluation; and the 3S status code - appears eligible for NR individually through survey evaluation.

B1. Historic Name: Desert View Animal Clinic
B2. Common Name: 71-075 Highway 111
B3. Original Use: Commercial **B4. Present Use:** Commercial
***B5. Architectural Style:** Neo-Spanish Colonial Revival

***B6. Construction History:** The commercial property was constructed in 1953 and was designed by Walter S. White. No building permits exist prior to incorporation of the City of Rancho Mirage in 1973. The property was originally occupied by the Desert View Animal Clinic, which was later acquired by the VCA in 2005 (The Desert Sun, Nov 19, 1953, Page 6; The Desert Sun, December 7, 2005, Page 16). The Desert View Animal Clinic added an addition to the southern (side) elevation of the building some time during the 1960s. In 1990, the hospital expanded the complex further by adding an ancillary building to the property, located south of the original structure for their 'Pet Resort', a facility for overnight animal boarding. Based on the condition of exterior materials at both buildings, the original structure was likely remodeled during the same time. **See Continuation Sheet for further construction history.**

***B7. Moved? ☒ No ☐ Yes ☐ Unknown Date:** N/A **Original Location:** N/A

B9a. Architect: Walter S. White **b. Builder:** Unknown
***B10. Significance: Theme:** Commercial Development, 1934 – 1973 **Area:** City of Rancho Mirage
Period of Significance: 1953 **Property Type:** Commercial
Applicable Criteria: NRHP/CRHR/Local ineligible

71-074 Highway 111 is a Neo-Spanish Colonial Revival style commercial building on the Highway 111 corridor. The subject property was built in 1953 as the Desert View Animal Clinic operated by Dr. James R. Ketchersid for use as his home and office. The original property was designed by notable Modernist architect, Walter S. White. In 1990 the animal clinic expanded and re-branded as the Desert View Animal Hospital & Pet Resort, with a separate building at 71-075 Highway 111. In 2005, VCA acquired the business and integrated the veterinary office into their nationwide network.

Walter S. White was born in San Bernardino, California and attended San Bernardino High School from 1933 to 1936. Growing up, White learned construction from his father who was a builder in the San Bernardino area. After one semester at San Bernardino Valley Junior College in 1936, White spent the next decade working for various architects, builders, and engineers in the Los Angeles area. During that time, he worked for Harwell Hamilton Harris, Rudolf Schindler, and Allen Ruoff. During WWII, he worked for Douglas Aircraft as a machine tool designer.

See Continuation Sheet for significance and integrity analysis.

Rancho Mirage Animal Hospital_3: View of front elevation.

Building, Structure, Object Information Continued:

B6. Construction History Continued From Page 2:

In 2000, the owners received a permit to install two new interior walls and new x-ray machines (Permit No. B0001398). In 2006, the hospital received a permit for tenant improvements and a permit for two new signs (Permit No. B0600012 & B0600951). In 2009, the owner received an electrical permit to imporve existing systems (Permit No. B0900123). The animal hospital received a permit in 2015 for a new monument and wall sign (Permit No. B1500310). In 2018, the animal hospital was re-roofed (Permit No. B1801786) and the store front was repaired the following year in 2019 (Permit No. B1701541**).**

B10. Statement of Significance Continued From Page 2:

After the war in 1947, White returned to architecture and worked for over a year for the Palm Spring architects, John Porter Clark and Albert Frey. In 1948, White moved to La Quinta and designed his first office building on Highway 111 to work as a self-employed designer. In the Coachella Valley, White focused on designing affordable homes that mitigated the summer heat and provided ample mountain views for residents. Throughout the course of his career, White designed at least 48 homes in the Palm Desert area.

During the 1960s, after he obtained his Colorado architecture license, White developed modestly sized and standardized mountain cabins in Colorado Springs with limited building materials. In 1967, he returned to California where he focused his work during the 1970s and 1980s. In Southern California, White designed various sized residential buildings (from single-family homes to multi-unit dwellings), recreational complexes, commercial buildings, churches, and clubhouses. He died in 2002 at the age of 85 and Walter S. White is widely remembered as a notable modernist architect who focused on industrial and energy efficient designs throughout Southern California.

Built as the first veterinary clinic in Rancho Mirage, the Desert View Animal Clinic is individually significant within the theme of Commercial Development (1934 – 1973) in Rancho Mirage because it significantly impacted the commercial landscape of the Highway 111 corridor early in the history of the City of Rancho Mirage, providing services that are essential for an independent established community. It is also associated with the Rancho Mirage Architectural Styles (1934-1980s) theme but it is not considered a significant representative example of a known architectural style in the community.

Building, Structure, Object Information Continued:

The commercial building is potentially individually eligible under NRHP/CRHR Criterion A/1, as it is directly associated with a significant pattern of events in local Rancho Mirage history. However, significant additions to the property over time have negatively impacted the building's integrity to the historic period. An early 1960s addition altered the original floor plan of the 1953 building and the 1990 addition/remodel impacted the historic design, materials, and setting of the property. Therefore, the building does not retain sufficient historic integrity to convey its significance under this criterion. The property is not individually eligible under NRHP/CRHR Criterion B/2, as the building is not significantly associated with the lives of persons significant in our past. The property is potentially eligible under NRHP/CRHR Criterion C/3 as it embodies the distinctive characteristics of a Neo-Spanish Colonial Revival style commercial building and was originally designed by Walter S. White. However, additions and renovations have altered the original design, materials, and setting. Therefore, the building does not retain sufficient historic integrity to convey its significance under this criterion. It is not individually eligible under Criterion D/4, as further study of the property would not appear to yield information which could be considered important in local, regional, state or national history.

The commercial building is not considered eligible under Local Criteria 2 and 5-8. The Desert View Animal Clinic is potentially eligible under Local Register Criterion 1 as it is representative of the Neo-Spanish Colonial Revival style. However, it no longer retains sufficient historic integrity to convey its significance under this criterion. Desert View Animal Clinic is potentially considered eligible under Local Register Criterion 3 as the property is representative of the development of the economic growth of the City of Rancho Mirage. It is also potentially considered eligible under Criterion 4 as the property was initially designed by notable Master Architect, Walter S. White in 1953. However, additions have altered the original design, materials, and setting, impacting the overall integrity of the property. Due to additions and changes to the property over time, the property only retains integrity of location, workmanship, feeling, and association. The building does not maintain adequate integrity from the historic period to convey its significance. As such, the property is assigned a 6Z status code: Found ineligible for NRHP, CRHR, or Local Register through survey evaluation.

***P3a. Description:**
The 71-650 Estellita Drive is located on the east side of Estellita Drive in the Magnesia Falls Cove neighborhood. The residence, constructed in 1967, sits on an approximately 0.27 acre parcel. The one story, single family residence is constructed in a Desert Modernist style. The residence has a T-shaped form, with a broad horizontal facade facing the street. An attached two-car garage is set at the front wing of the building. The residence is clad with a rough stone exterior facade. The home has a centered main entrance, sheltered behind an angled privacy wall that extends from the main facade, creating a small, sheltered front entryway. The double front doors each have a single glass lite. The residence has a flat roof with a broad overhang and boxed eaves. A curved driveway extends from the street to the garage. A low, concrete block wall extends around the front of the property.

Period of Significance: 1962 **Property Type:** Single-Family Residential
Applicable Criteria: NRHP/CRHR Criterion C/3; Local Criteria 1 and 7

The original owners were Luella and John Fincher (The Desert Sun, Oct 29, 1962, pg 7). It was locally designated February 16, 2012. The family lived at the residence from 1962 to at least 1973 (The Desert Sun, Apr 13, 1973, pg 13). The couple was married in 1948, and had three children, Pam, Michael and Kim (The Desert Sun, Aug 14, 2007, pg 12; The Desert Sun, Jan 28, 1960, pg 16). Fincher was a general contractor (The Desert Sun, Mar 04, 1960, pg 9). He began working as a contractor circa 1950, first in Palos Verdes before coming to the Coachella Valley circa 1957. He was the founder of the construction company, John E. Fincher & Sons (Palm Desert Post, May 15, 1980 ·Page 14). In addition to helping her husband with running the business, Luella Fincher was a charter member of the Rancho Mirage Woman's Club and the Rancho Mirage/Cathedral City Soroptimist Club. She was an ambassador for th Rancho Mirage Chamber of Commerce and was awarded Woman of the Year, Athena Award in 1998 (The Desert Sun, Aug 14, 2007, pg 12).
