Construction-related activities would result in Project-generated DPM emissions from the exhaust of offroad, heavy-duty diesel equipment for site preparation (e.g., clearing, grading); paving; application of architectural coatings; and on-road truck travel. For construction activity, DPM is the primary toxic

air contaminant of concern. Exposure duration is based on continual heavy truck operation along nearby roadways.

Table 6 shows the health risk for Project construction for residential and school receptors. Based on OEHHA *Risk Assessment Guidelines*, the exposure duration for a resident is 18 months (the duration of construction activity). As shown in Table 6, the unmitigated construction risk at residential and school receptors would be 1.56 in one million and 0.21 in one million, respectively, which would not exceed the maximum individual cancer risk of 10 in one million. Therefore, Project impacts associated with carcinogenic risk would be less than significant.

Table 6: Unmitigated Carcinogenic Risk Assessment

Exposure Scenario (Construction)	Cancer Risk (Risk per Million)[1]	Significance Threshold (Risk per Million)	Exceeds Significance Threshold?
Residential	1.56	10	No
Student	0.21		No

1. The reported annual pollutant concentration is at the closest maximally exposed individual receptor (MEIR) for residential and schools to the Project site.
Source: Refer to Appendix A: Modeling Data in IS/MND Appendix B.

Appendix B goes on to discuss that the significance thresholds for TAC exposure also require an evaluation of non-cancer risk stated in terms of a hazard index. A chronic hazard index of 1.0 is considered individually significant. The chronic hazard was calculated based on the highest annual average concentration at the maximally exposed individual receptor. The highest maximum chronic hazard index associated with DPM emissions from Project construction would be 0.0014 at the residential receptors and 0.0002 at school receptors.

Therefore, as discussed above, the Proposed Project would not result in significant concentrations of pollutants at nearby sensitive receptors during construction and operational activities and would not exceed SCAQMD thresholds. Furthermore, the Proposed Project would not create a significant volume of traffic that would create a CO hot spot within the area. Impacts therefore would be less than significant. Project impacts associated with carcinogenic risk would be less than significant. In addition, non-carcinogenic hazards within acceptable limits and a less than significant impact would occur.

d) Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Less than Significant Impact.

Construction

Odors that could be generated by construction activities are required to follow SCAQMD Rule 402 to prevent odor nuisances on sensitive land uses. SCAQMD Rule 402, Nuisance, states:

A person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health, or safety of any such persons

or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.

Construction equipment emissions, such as diesel exhaust, and volatile organic compounds from architectural coatings and paving activities, may generate odors. However, these odors would be temporary, are not expected to affect a substantial number of people and would disperse rapidly. Therefore, Project construction activities would not result in objectionable odors that would adversely affect a substantial number of people, and impacts would be less than significant.

Operations

The SCAQMD CEQA Air Quality Handbook identifies certain land uses as sources of odors. These land uses include agriculture (farming and livestock), wastewater treatment plants, food processing plants, chemical plants, composting facilities, refineries, landfills, dairies, and fiberglass molding. The Project would not include any of the land uses that have been identified by the SCAQMD as odor sources. Therefore, Project operations would not result in odors that would adversely affect people. Impacts would be less than significant.

4.4 BIOLOGICAL RESOURCES

4.	BIOLOGICAL RESOURCES. Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☒	☐	☐
(b)	Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☒	☐	☐
(c)	Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☒	☐
(d)	Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☐	☒
(e)	Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☒	☐
(f)	Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☒	☐

4.4.1 Impact Analysis

Chambers Group conducted a reconnaissance-level survey and prepared a Biological Resources Letter Report for the Proposed Project dated January 2024. The Biological Resources Letter Report was prepared to summarize the existing vegetation communities, identify special status species that have potential to occur, and identifying potentially jurisdictional water features within the Proposed Project and Project site to determine the level of impact construction and operation of the project would have on biological resources. The complete report can be found in Appendix C.

a) *Would the project have a substantial adverse effect, either directly or through habitat modification, on any species identified as candidate, sensitive or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?*

Less than Significant Impact with Mitigation Incorporated.

Vegetation Communities and Other Areas
One vegetation community and one land cover type were found within the Project site during the biological reconnaissance survey: Ruderal and Developed.

Ruderal: Areas classified as Ruderal tend to be dominated by pioneering herbaceous species that readily colonize disturbed ground and that are typically found in temporary, often frequently disturbed habitats.

Developed: Developed areas are those that have been altered by humans and now display man-made structures such as houses, paved roads, sidewalks, buildings, parks, and other maintained areas.

The majority of the Project site is comprised of Ruderal vegetation with Developed areas bordering the eastern side.

General Plants
A total of 16 plant species were observed within the Project site during the biological reconnaissance survey. Plant species observed during the survey were representative of the existing Project site conditions. No special status plant species were observed during the survey.

General Wildlife
A total of eight wildlife species were observed within the Project site during the biological reconnaissance survey. Wildlife species observed or detected during the survey were characteristic of the existing Project site conditions. No special status wildlife species were observed or detected during the survey.

Special Status Plant Species
Database searches resulted in a list of 54 federal- and/or state-listed threatened, endangered, or otherwise special status plant species documented to historically occur within the vicinity of Project site. Of the 54 special status plant species identified in the literature review, all 54 of the plants are considered absent within the Project site. No special status plant species were found during the biological reconnaissance survey.

Special Status Wildlife Species

Database searches resulted in a list of 48 federal- and/or state-listed endangered or threatened, state SSC, or otherwise special status wildlife species documented to occur within the Project site. After a literature review and the assessment of the various habitat types within the Project site, it was determined that 47 special status wildlife species are considered absent; one has a low potential to occur within the Project site, the burrowing owl *(Athene cunicularia)* (BUOW). No special status wildlife species were found during the biological reconnaissance survey.

The BUOW is a California special species of concern (SSC). The BUOW breeds in open plains from western Canada and the western United States, Mexico through Central America, and into South America to Argentina. This species inhabits dry, open, native, or non-native grasslands, deserts, and other arid environments with low-growing and low-density vegetation. It may occupy golf courses, cemeteries, road rights-of way, airstrips, abandoned buildings, irrigation ditches, and vacant lots with holes or cracks suitable for use as burrows. BUOWs typically use burrows made by mammals such as California ground squirrels (*Otospermophilus beecheyi*), foxes (*Vulpes sp*.), or badgers (*Mustelidae sp*.). When burrows are scarce, the BUOW may use man-made structures such as openings beneath cement or asphalt pavement, pipes, culverts, and nest boxes. Ground squirrel burrows were observed on the Project site but due to recent tilling and mowing activities, most of these burrows were collapsed. If ground disturbance becomes infrequent and species are able to create burrows (and those burrows persist), it may create a habitat that could support BUOW. BUOW have also been recorded within 4.44 miles of the Project site. Although no BUOW or sign (burrows with whitewash, pellets, feathers etc.) were observed during the survey, the following measures are recommended in accordance with the California Department of Fish and Wildlife's (CDFW) Staff Report on Burrowing Owl Mitigation:

MM BIO-1 **Preconstruction Survey.** A preconstruction BUOW survey shall be conducted no less than 14 days prior to initiating ground disturbance (including clearing, grubbing, grading), and a final survey within 24 hours prior to ground disturbance, to determine whether BUOW or BUOW burrows are present within or adjacent to the Project site, and to avoid negative impacts and direct take of BUOW. If BUOW are confirmed on-site, avoidance measures will be developed and implemented in compliance with and in coordination with CDFW. The results of the survey shall be documented and filed with the City.

US Fish and Wildlife (USFWS) Critical Habitat

USFWS Critical Habitat is defined as areas of land, water, and air space containing the physical and biological features essential for the survival and recovery of endangered and threatened species. Designated Critical Habitat includes sites for breeding and rearing, movement or migration, feeding, roosting, cover, and shelter. Designated Critical Habitats require special management and protection of existing resources, including water quality and quantity, host animals and plants, food availability, pollinators, sunlight, and specific soil types. Designated Critical Habitat delineates all suitable habitat, occupied or not, that is essential to the survival and recovery of the species. According to the USFWS Critical Habitat WebGIS map, the Project site does not fall within Designated Critical Habitat. The closest USFWS Designated Critical Habitat is for San Bernardino kangaroo rat and occurs approximately 1.25 miles north of the Project site.

Special Status Habitats

Database searches resulted in a list of four special status habitats documented historically as occurring within the vicinity (approximately 5 miles) of the Project site, including: Riversidian Alluvial Fan Sage Scrub, Southern Mixed Riparian Forest, Southern Riparian Scrub, and Southern Sycamore Alder Riparian Woodland. After the literature review and the assessment of the habitat types within the Project site, it was determined that none of these communities were present within the Project site.

Nesting Birds

Most bird nests are protected under the Migratory Bird Treaty Act (MBTA). The MBTA states that it is unlawful to pursue, hunt, take, capture, kill, attempt to take, possess, sell, or export any migratory bird, nest, or egg. To avoid the destruction of active nests and to protect the reproductive success of birds protected under the MBTA, the Project will implement the following mitigation to address potential impacts to nesting birds.

MM BIO-2 **Nesting Bird Survey.** Construction activities shall take place outside nesting season (nesting typically February 1 to August 31) to the greatest extent practicable. If construction activities occur during nesting season, a preconstruction nesting bird survey shall be conducted within seven days prior to initiation of ground-disturbing activities (including any clearing, grubbing, or grading), or according to the to the survey timing in the Project permits. If an active nest is identified, a minimum avoidance buffer around the active nest should be determined and implemented by a qualified biologist to avoid impacts to the active nest. The buffer shall be established with flagging and stakes or construction fencing. A minimum 100-foot no-disturbance buffer shall be placed around passerine nests. For raptors, the no-disturbance buffer shall be expanded to 500 feet. The buffer should be maintained during physical ground-disturbing activities. Once the qualified biologist has determined that nesting has ceased, and the nestlings have fledged and are no longer using the nest, the buffer may be removed. Biological monitoring should be conducted as needed during the nesting season to monitor the status of any active nests, survey for any new nests, and to refresh nesting bird surveys after any periods of construction inactivity. The results of the survey shall be documented and filed with the City.

Based on the desktop research and survey of the Project site, the Proposed Project would not result in a substantial adverse effect on candidate, sensitive or special status species based on the condition of the Project site and implementation of the mitigation measures discussed above. Impacts therefore would be less than significant.

b) *Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?*

Less than Significant Impact. As reported in the Biological Resources Letter Report (Appendix C), the closest water features mapped by the National Wetlands Inventory (NWI) and National Hydrography Dataset (NHD), both riverine, are over a half mile from the Project site: the Santa Ana River to the north, and the Mission Flood Control Ditch to the south. Because both features are located well outside of the Project site boundary and no work would be conducted within or directly adjacent to either feature, no impacts to these features would occur as a result of this Project. Additionally, there are no riparian, wetland, or vernal pool habitats found within or adjacent to the Project site.

A potentially jurisdictional drainage identified on aerial imagery during the literature search is located west (outside) of the Project site and east of I-210. This feature is a channelized, concrete-lined drainage that is located approximately 15 feet from the northwestern corner of the Project site at its closest point. The drainage begins west of New York Street just north of I-10 and continues for approximately 2 miles, generally paralleling I-210, before connecting to the Santa Ana River. The channel appears to transition from a concrete-lined channel to an earthen channel (the last approximately 0.45 mile before joining the Santa Ana River) near Domestic Avenue and becomes more vegetated at this point. The field survey confirmed the presence of this drainage west of the Project site. As the Project site is fenced on the west side, the biologists were not able to inspect the drainage feature up close but noted that the feature was concrete lined and appeared to be dry. As mentioned, this drainage is outside of the Project site and would not be directly affected by the Project based on current Project design.

The Proposed Project would not result in significant impacts to riparian or other sensitive natural community due to its location. Therefore, the impacts would be less than significant.

c) *Would the project have a substantial adverse effect on state or federally protected wetlands (including but not limited to marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?*

Less than Significant Impact. As discussed in the previous section, and in the Biological Resources Letter Report, the Proposed project would not result in impacts to protected wetlands. There are no wetlands found within the Project site as it is located inland within the City, and the proposed construction and operational activities would not involve any removal or filling of any wetlands, marshal, vernal pool, or other coastal habitats. While there is a potential jurisdictional drainage found during the review of the aerial images, this is located outside of the Project boundary. Because of the lack of wetlands at and nearby the Project site, impacts would be less than significant.

d) *Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?*

No Impact. As summarized in the Biological Resources Letter Report (Appendix C), the Project site does not fall within the USFWS Designated Critical Habitat. The area does not contain any suitable habitat for migratory fish or wildlife. The Project site is a vacant and undeveloped parcel of land located within an urbanized area of the City. There are various commercial buildings and a freeway that border the Project site that is frequently disturbed. There are no water bodies or open space habitats. Therefore, the Proposed Project would not result in interfering the movement of migratory species. No impact would occur.

e) *Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?*

Less than Significant Impact. The City's General Plan outlines various preservation policies and ordinances to protect the City's resources. Preservation guidelines for the City's distinct elements include preservation of older neighborhoods, street trees and streetscapes, Citrus Groves, and managing activities within the Santa Ana River Wash and Upper Santa Ana River Land Management Habitat Conservation Plan. The Proposed Project would not conflict with any local policies or

ordinances because the Project will not affect or interfere with the preservation guidelines within the General Plan and the proposed work will not occur within these distinct areas. Additionally, the trees present on the perimeter of the Project site will be protected during construction and will not be removed as part of the Project. Therefore, the impacts would be less than significant.

f) Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Conservancy Conservation Plan, or other approved local, regional, or state habitat conservation plan?

Less than Significant Impact. The Proposed Project is not located within the Upper Santa Ana River Habitat Conservation Plan area or other opens spaces areas within the County. The Project site does not contain sensitive habitats or areas that are part of a conservation plan. Impacts therefore would be less than significant.

4.5 CULTURAL RESOURCES

5.	CULTURAL RESOURCES. Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	☐	☐	☒	☐
(b)	Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	☐	☒	☐	☐
(c)	Disturb any human remains, including those interred outside of formal cemeteries?	☐	☐	☒	☐

4.5.1 Impact Analysis

Chambers Group conducted a cultural resources survey and prepared a Cultural Resource Survey and Study Letter Report (Cultural Report) for the Proposed Project dated December 2023. The Cultural Report was prepared to gather and analyze information needed to assess the potential impacts to cultural resources within the Project site. The results of the Cultural Report indicate that there was no archival evidence found of cultural or paleontological resources within the Project site. However, during the survey, remnants of historic-age features were observed. While no evidence of paleontological resources was observed during the survey, background research and National History Museum of Los Angeles County (NHMLA) records indicate moderate sensitivity for fossil localities within the Project site and its study area. Although the Project site has evidence of past disturbance and while the potential for encountering intact resources within the upper sediments is low, the possibility of buried resources being identified below surface disturbances is not diminished. Research indicates geologic units known to be fossil-bearing underlay the Project site and could be encountered during Project-related ground-disturbing construction activities. Thus, there remains potential that buried cultural and paleontological resources could be encountered during the Project and would therefore require implementation of mitigation measures to result in less than significant impacts. The complete Cultural Report can be found in Appendix D.

a) Would the project cause a substantial adverse change in the significance of a historical resource?

Less than Significant Impact.

Regulatory Context

As the CEQA lead agency for the Project, the City must determine whether a project may have a significant effect on historical resources (Public Resources Code [PRC] Section 21084.1). In addition to State of California (State) and County regulations, projects in the City are also subject to several local regulations relating to cultural resources. Chapter 2 of the City of Redlands' General Plan pertains specifically to the identification and protection of cultural, historical, archaeological, and paleontological resources within the City. The regulatory framework as it pertains to cultural resources is detailed in Appendix D.

Under the provisions of CEQA, including the CEQA Statutes (PRC §§ 21083.2 and 21084.1), CEQA Guidelines (Title 14 California Code of Regulations [CCR] § 15064.5), and PRC § 5024.1 (Title 14 CCR § 4850 et seq.), properties expected to be directly or indirectly affected by a proposed project must be evaluated for eligibility for listing in the California Register of Historical Resources (CRHR).

California Register of Historical Resources

The purpose of the CRHR is to maintain listings of the State's historical resources and to indicate which properties are to be protected, to the extent prudent and feasible, from material impairment and substantial adverse change. The term "historical resources" includes a resource listed in or determined to be eligible for listing in the CRHR; a resource included in a local register of historical resources; and any object, building, structure, site, area, place, record, or manuscript that a lead agency determines to be historically significant (CCR § 15064.5[a]). The criteria for listing properties in the CRHR were expressly developed in accordance with previously established criteria developed for listing in the National Register of Historic Places (NRHP). The California Office of Historic Preservation (OHP 1995:2) regards "any physical evidence of human activities over 45 years old" as meriting recordation and evaluation.

A cultural resource is considered "historically significant" under CEQA if the resource meets one or more of the criteria for listing in the CRHR. A resource is considered significant if it:

1. is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
2. is associated with the lives of persons important in our past;
3. embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
4. has yielded, or may be likely to yield, information important in prehistory or history.
5. In addition to meeting one or more of the above criteria, historical resources eligible for listing in the CRHR must retain enough of their historic character or appearance to be able to convey the reasons for their significance. Such integrity is evaluated in regard to the retention of location, design, setting, materials, workmanship, feeling, and association.

Impacts that adversely alter the significance of a resource listed in or eligible for listing in the CRHR are considered a significant effect on the environment. Impacts to historical resources from a proposed project are thus considered significant if the project:

1. physically destroys or damages all or part of a resource;

2. changes the character of the use of the resource or physical feature within the setting of the resource, which contributes to its significance; or
3. introduces visual, atmospheric, or audible elements that diminish the integrity of significant features of the resource.

Study Methods

Chambers Group requested a records search from the California Historical Resources Information System (CHRIS) South-Central Coastal Information Center (SCCIC) at California State University, Fullerton, on October 9, 2023. A records search of the Project site and surrounding study area was requested to provide context and additional information regarding types and extent of resources recorded within the Study area.

Resources consulted during the records search conducted by the SCCIC included the NRHP, California Historical Landmarks (CHL), California Points of Historical Interest (CPHI), Caltrans Historic Highway Bridge Inventory, the California State Historic Resources Inventory, local registries of historic properties, and a review of available Sanborn Fire Insurance maps as well as historical photographs, maps, and aerial imagery. The task also included a search for potential prehistoric and/or historic burials (human remains) evident in previous site records and/or historical maps. In addition, Chambers Group submitted a request to the NAHC for a review of the Sacred Land Files (SLF) for the Project site and surrounding vicinity.

Results

Previous Cultural Resources Reports

Based on the records on-file with the SCCIC, seven cultural resource studies have previously been completed within the study area. Of these seven reports, one is within the Project site of a half-mile radius (SB-01783, Seven Oaks Dam Project; Water Systems).

Previously Recorded Cultural Resources

Based upon the records search conducted by the SCCIC, 17 previously recorded cultural resources are recorded within the study area. None are located within the Project site.

Additional Background Research Results

In addition to the records search review, Chambers Group archaeologists completed background research to determine if any additional historic properties, landmarks, bridges, or other potentially significant or listed properties are located within the Project site or within the study area. This background research included, but was not limited to, the NRHP, California State Historic Property Data Files, California State Historical Landmarks, CPHI, OHP Archaeological Determinations of Eligibility, historic aerial imagery accessed via NETR Online, Historic U.S. Geological Survey topographic maps, Built Environment Resource Directory (BERD), Caltrans, and State and local bridge surveys. Additionally, Chambers Group archaeologists reviewed the San Bernardino County Historical Landmarks inventory designated by the County of San Bernardino Cultural Heritage Board as well as the San Bernardino Historical Society and local historical newspaper clippings via Newspapers.com, ProQuest Historical Newspapers.com, and the California Digital Newspaper Collection. As a result of the records search review and archival research, no previously recorded resources or other listed or potentially significant properties are recorded within the Project site.

Field Survey Results
Chambers Group conducted a pedestrian survey of the Project site in December 2023. The Project site is an open field with evidence of recent discing and historic agricultural activity. Existing vegetation comprise low-growing grasses, and ground visibility varies between 30 and 80 percent across the parcels. Several collection piles of finished concrete debris, cobble rocks, and modern trash were observed scattered throughout the site.

A wastewater line, as delineated by a series of square concrete pads encasing steel covers marked with an "S," was observed traversing the Project site. There are no date stamps evident, however, their construction appears to be modern, and the alignment appears to conform with a similar series of "S"-marked covers located within the east/west trending W Brockton Avenue. Two on-ground and in-ground features were observed south of the wastewater alignment. These appear to be earlier constructed features that have been heavily impacted and subsequently demolished in part.

As a result of the systematic survey of the Project site, Chambers Group identified two historic-age features. These new resources are documented with the temporary identification 21450-CGI-001S and recorded on California Department of Parks and Recreation (DPR) 523 series forms which are confidential and will be submitted to the SCCIC as required.

When assessing 21450-CGI-001S for potential significance under CEQA, it does not appear to meet the criteria for inclusion in the CRHR. Based on the documented surface assemblage and additional background research, 21450-CGI-001S does not represent any association with events contributing to California's history and cultural heritage (Criterion 1); an association with the lives of persons important to our past (Criterion 2); embody the distinctive characteristics of a type, period, region, method of construction, or work of an important individual (Criterion 3); or has yielded, or may be likely to yield, information important in prehistory or history (Criterion 4). While additional construction and household refuse was observed near and around feature A, no temporally diagnostic material that can provide a rough manufacture date or date range was observed. In addition, there is no indication that the refuse material is in a primary context and could easily have been redeposited from another location. Further, the two features composing the site are ubiquitous to the area and within the context of the documented historic-period agricultural land use, and do not represent any unique features, qualities, or associations that would answer important scientific research questions of demonstratable public interest.

Based on the condition of the site, along with the results provided in the Cultural Report, the Proposed Project would not result in substantial adverse change in the significance of a historical resource because the historic-age features identified on-site do not meet the criterion pursuant to 15064.5. Impacts therefore would be less than significant.

b) *Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?*

Less than Significant Impact with Mitigation Incorporated.

Under CEQA, if an archeological site is not a historical resource but meets the definition of a "unique archeological resource" as defined in PRC § 21083.2, then it should be treated in accordance with the provisions of that section. A unique archaeological resource is defined as follows:

An archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

- Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information;
- Has a special and particular quality, such as being the oldest of its type or the best available example of its type; and
- Is directly associated with a scientifically recognized important prehistoric or historic event or person.

Resources that neither meet any of these criteria for listing in the CRHR nor qualify as a "unique archaeological resource" under CEQA PRC § 21083.2 are viewed as not significant. Under CEQA, "A non-unique archaeological resource need be given no further consideration, other than the simple recording of its existence by the lead agency if it so elects" (PRC § 21083.2[h]). Detailed archaeological history is provided in the Cultural Report in Appendix D.

Although the Project site has evidence of past disturbance and while the potential for encountering intact resources within the upper sediments is low, the possibility of buried resources being identified below surface disturbances is not diminished. Research indicates geologic units known to be fossil-bearing underlay the Project site and could be encountered during Project-related ground-disturbing construction activities. Therefore, the Proposed Project shall implement the following mitigation measures to ensure potential impacts to the discussed resources would be less than significant.

MM CUL-1 **Retain Cultural Resource Monitor.** The Applicant shall retain the services of a qualified cultural resources consultant and require that all initial ground disturbing work be monitored by a cultural resources monitor. This includes all initial construction activities that will potentially expose or encounter intact subsurface sediments underlying the Project site. The cultural resources consultant shall provide a Qualified Archaeologist, meeting the Secretary of the Interior Standards (U.S. Department of the Interior, 2008), and require that all initial ground-disturbing work be monitored by a cultural resources monitor (monitor) proficient in artifact and feature identification in monitoring contexts. The Consultant (Qualified Archaeologist and/or monitor) shall be present at the Project construction phase kickoff meeting.

MM CUL-2 **WEAP Training.** Prior to commencing construction activities and thus prior to any ground disturbance in the Proposed Project site, the Consultant shall conduct initial Worker Environmental Awareness Program (WEAP) training to all construction personnel, including supervisors, present at the outset of the Project construction work phase, for which the lead contractor and all subcontractors shall make their personnel available. This WEAP training will educate construction personnel on how to work with the monitor(s) to identify and minimize impacts to cultural resources and maintain environmental compliance and be performed periodically for new personnel coming on to the Project as needed.

MM CUL-3 **Monitor Schedule Notification.** The contractor shall provide the Consultant with a schedule of initial potential ground disturbing activities. A minimum of 48-hours' notice will be provided to the archaeological consultant of commencement of any initial ground disturbing activities that have potential to expose or encounter intact

subsurface sediments underlying the Project site. These activities may include grading, trenching, and mass excavation.

As detailed in the schedule provided, a monitor shall be present on-site at the commencement of ground-disturbing activities related to the Project. The Consultant shall observe initial ground disturbing activities and, as they proceed, adjust the monitoring approach as needed to provide adequate observation and oversight. All monitors will have stop-work authority to allow for the recordation and evaluation of finds during construction. The monitor will maintain a daily record of observations as an ongoing reference resource and to provide a resource for final reporting upon completion of the Project.

The Consultant, the lead contractor, and subcontractors shall maintain a line of communication regarding schedule and activity such that the Consultant is aware of all ground-disturbing activities in advance in order to provide appropriate oversight.

MM CUL-4 **Monitoring Report.** At the completion of all ground disturbing activities, the Consultant shall prepare a Cultural Resources Monitoring Report summarizing all monitoring efforts and observations, as performed, and any and all prehistoric or historic archaeological finds, as well as providing follow-up reports of any finds to the SCCIC, as required.

c) Would the project disturb any human remains, including those interred outside of formal cemeteries?

Less than Significant Impact. The Project site is vacant and undeveloped. While there was no evidence found of cemeteries located on the Project site, there are possibilities of buried remains to be discovered during ground disturbing activity.

In the event that human remains are discovered during ground-disturbing activities, then the proposed Project would be subject to California Health and Safety Code 7050.5, CEQA Section 15064.5, and California PRC Section 5097.98. If human remains are found during ground-disturbing activities, State of California Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to PRC Section 5097.98. In the event of an unanticipated discovery of human remains, the County Coroner shall be notified immediately. If the human remains are determined to be prehistoric, the County Coroner shall notify the NAHC, which shall notify a most likely descendant (MLD). The MLD shall complete the inspection of the site within 48 hours of notification and may recommend scientific removal and nondestructive analysis of human remains and items associated with Native American burials. Following the existing state regulations would result in less than significant impacts associated with disturbance of human remains during project construction.

4.6 ENERGY

6.	ENERGY Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☒	☐

6.	ENERGY Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(b)	Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☒	☐

4.6.1 Impact Analysis

a) Would the project result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Less Than Significant Impact. Energy source emissions would be generated due to electricity and natural gas usage associated with the Project. Primary uses of electricity and natural gas by the Project would be for space heating and cooling, water heating, ventilation, lighting, appliances, and electronics.

The Proposed Project would impact energy resources during construction and operation. Energy resources that would potentially be impacted include electricity and petroleum-based fuel supplies and distribution systems. A general definition of each of these energy resources is provided below.

Electricity is a man-made consumptive utility. The production of electricity requires the consumption or conversion of energy resources, including water, wind, oil, gas, coal, solar, geothermal, and nuclear resources, into energy. The delivery of electricity involves a number of system components, including substations and transformers that lower transmission line power to an appropriate level for on-site distribution and use. The electricity generated is distributed through a network of transmission and distribution lines commonly called a power grid. Conveyance of electricity through transmission lines is typically responsive to market demands.

Petroleum-based fuels currently account for a majority of California's transportation energy sources and primarily consist of diesel and gasoline types of fuels. However, the state has been working on developing strategies to reduce petroleum use. Over the last decade, California has implemented several policies, rules, and regulations to improve vehicle efficiency, increase the development and use of alternative fuels, reduce air pollutants and greenhouse gases (GHGs) from the transportation sector, and reduce VMT. Accordingly, petroleum-based fuel consumption in California has declined.

Construction

The Proposed Project would consume energy resources during construction in three general forms:

1. Petroleum-based fuels used to power off-road construction vehicles and equipment on the Project site, construction worker travel to and from the Project site, as well as delivery and haul truck trips (e.g., hauling demolition material to off-site reuse and disposal facilities).
2. Electricity associated with the conveyance of water that would be used during Proposed Project construction for dust control (supply and conveyance) and electricity to power any necessary lighting during construction, electronic equipment, or other construction activities necessitating electrical power.
3. Energy used in the production of construction materials, such as asphalt, steel, concrete, pipes, and manufactured or processed materials such as lumber and glass.

Project construction activities would require energy consumption that would not result in an adverse impact on available energy supplies and infrastructure. Energy consumed during construction would be obtained from the existing electrical and gas lines in the vicinity of the Project and would be temporary. Project construction would not result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, and impacts are less than significant.

Operations

The ongoing operation of the Proposed Project would require the use of energy resources. Long term operations would require use of energy resources for heating, ventilation, air conditioning (HVAC), lighting, use of appliances, electronics, office equipment, vehicle charging spaces, and use of the car wash and detailing services. Appendix A of the Air Quality Assessment provides the following electricity/energy uses during operations of the Proposed Project.

Table 7: Electricity (kWh/yr) and Natural Gas (kBTU/yr)

Land Use	Electricity (kWh/yr)	Natural Gas (kBTU/yr)
General Office Building	199,021	312,926
Other Asphalt Surfaces	0.00	0.00
Parking Lot	199,188	0.00
Automobile Care Center	406,402	1,827,377
Total	**804,611**	**2,140,303**
San Bernardino County annual consumption (non-residential)	10,327 GWh/year (millions of kWh per year)	2.94e10 kBTU

kWh = kilowatt hours
GWh = gigawatt hours
kBTU = kilo British thermal units

The total electricity consumption of Project operations is estimated to be 0.0078% of the total electricity, and 0.0072% of the total gas consumption for non-residential uses in San Bernardino County's as of 2022 (CEC 2024). The Proposed Project would comply with all federal, state, and county requirements related to the consumption of transportation energy, including California Code of Regulations Title 24, Part 11, the CALGreen Code. Additionally, the Proposed Project shall comply with the City's policies related to energy efficiency and conservation as outlined in their Sustainable Community Chapter of the General Plan with the following actions (City 2018).

8-A.7 Seek alternatives to reduce non-renewable energy consumption attributable to transportation within the Planning Area. Seek funding and other assistance from the South Coast Air Quality Management District (AQMD) for installation of electric vehicle charging stations at appropriate locations throughout the city.

8-A.8 Implement and enforce California Code of Regulations Title 24 building standards (parts 6 and 11) to improve energy efficiency in new or substantially remodeled construction. Consider implementing incentives for builders that exceed the standards included in Title 24 and recognize their achievements above the minimum standards.

8-A.9 Encourage the use of construction, roofing materials, and paving surfaces with solar reflectance and thermal emittance values per the California Green Building Code (Title 24, Part 11 of the California Code of Regulations) to minimize heat island effects.

8-A.10 Integrate trees and shade into the built environment to mitigate issues such as stormwater runoff and the urban heat island effect.

Therefore, construction and operational impacts regarding wasteful and inefficient consumption of energy, and conflicts with an applicable renewable energy or energy efficiency plan, would be less than significant.

b) Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Less than Significant Impact. As discussed in the Air Quality section, the Proposed Project will not conflict with implementation of applicable air quality plans. Additionally, the City adopted a Climate Action Plan (CAP) that provides a long-range plan to reduce local GHG emissions. This includes indirect emission associated with the consumption of energy such as electricity. As noted in the CAP, "The City will update the GHG inventory periodically. If an updated inventory reveals that Redlands is not making adequate progress toward meeting the GHG target, or that new technologies and programs emerge that warrant inclusion in the CAP, the City will adjust the CAP by modifying, adding, and/or replacing policies in the General Plan or elsewhere, or incorporating optional measure(s) to further reduce emissions outlined in Section 4 of this CAP." The CAP outlines several measures that include energy efficiency retrofits and efficient lighting standards. The Redlands Community Sustainability Plan (RCSP) was published in 2011. It is intended as a conceptual framework for sustainability policy. Actions related to water conservation, green buildings, waste reduction, climate friendly purchasing, renewable energy, carbon emissions, and land use are outlined in the RCSP (City 2018).

The Proposed Project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. In addition to implementing the CAP and RCSP, the Proposed Project would be consistent with the principle below from the City's Sustainable Community Plan:

> **8-P.1:** Promote energy efficiency and conservation technologies and practices that reduce the use and dependency of nonrenewable resources of energy by both City government and the community.

The Proposed Project would be consistent with all applicable energy-related policies from the General Plan. Therefore, the Proposed Project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. Impacts would be less than significant.

4.7 GEOLOGY AND SOILS

7.	GEOLOGY AND SOILS. Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
	i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☒	☐
	ii) Strong seismic ground shaking?	☐	☐	☒	☐
	iii) Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐
	iv) Landslides?	☐	☐	☒	☐
(b)	Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐

7.	GEOLOGY AND SOILS. Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(c)	Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☒	☐	☐
(d)	Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☐	☐	☒	☐
(e)	Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☐	☐	☐	☒
(f)	Directly or indirectly destroy a unique paleontological resource or site or unique geological feature?	☐	☒	☐	☐

4.7.1 Impact Analysis

The site is located on a broad terrace plain of the Santa Ana River in the San Bernardino Valley. The San Bernardino Valley in this area is bounded on the north by the San Bernardino Mountains, from which the Santa Ana River emanates.

In the Fall of 2022, 20 test borings ranging in depth from 6.5 to 51.5 feet below ground level were collected by Terracon; the full report is Appendix E. The ground cover is exposed soil and vegetation. Much of the site is relatively flat and has an approximate elevation ranging between 1297 feet and 1291 feet. To the west of the property is I-210 with a slope (ascending from outside the site boundary to the freeway) varying in height from 15 to 20 feet, and an inclination on the order of 2:1 (horizontal: vertical). A drainage channel is also present outside of the western property boundary, and adjacent/parallel to the I-210 toe of slope.

The site is mapped as younger alluvial valley deposits of Holocene age. The Holocene-age alluvium was encountered in the exploratory borings and consists of interbedded sands with silts, silty sand, and gravel lenses. The subsurface soil is loose to dense sand with varying amounts of silt and loose to dense gravel. (Appendix E).

a) i) *Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.*

Less than Significant Impact. The Project site is not located within a state-designated Alquist-Priolo Fault Zone. The site is located between two segments of the South Branch of the San Andreas fault each that are more than 4 miles from the site (DOC 2023). All construction activities for the Project would be conducted in accordance with the Uniform Building Code as well as City regulations and ordinances, pertaining to the mitigation of potential geologic and seismic impacts. Implementation of

the Project would have a less than significant impact associated with risk of loss, injury, or death involving a rupture of a known fault.

ii) Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving strong seismic ground shaking?

Less than Significant Impact. The most significant seismic hazard potentially affecting the Project site is ground shaking from a major earthquake. The Project site is not identified to be located within a State-designated Alquist-Priolo Fault Zone. The type and magnitude of seismic hazards affecting the site are dependent on the distance to fault zones, the intensity, and the magnitude of the seismic event. The site is located more than 4 miles from the nearest fault trace (DOC 2023). Further, all construction activities for the Project would be conducted in accordance with the Uniform Building Code as well as City regulations and ordinances, pertaining to the mitigation of potential geologic and seismic impacts. Implementation of the Project would result in a less than significant risk of loss, injury, or death involving a rupture of a known fault.

iii) Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving seismic-related ground failure, including liquefaction?

Less than Significant Impact. The Department of Conservation's EQZapp Program indicates the Project site has not been evaluated for liquefaction hazards (DOC 2023). However, the San Bernadino County Policy Map HZ-2 Liquefaction & Landslide Hazards does not show the project site in a liquefaction zone (County 2020). The Terracon 2022 Geotechnical Engineering Report describes the site as being subject to dry sand seismic settlement due to the potential for ground shaking. Based on the calculations, seismically induced settlement of dry sands is estimated to be less than 1.5 inches and differential seismic dry sand settlement is estimated to be less than one inch. Using the data from the geotechnical report, all Project activities would be conducted in accordance with the Uniform Building Code, as well as City regulations and ordinances, pertaining to the mitigation of potential geologic and seismic impacts. Therefore, implementation of the Project would result in a less than significant impact associated with seismic-induced ground failure, including liquefaction.

iv) Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving landslides?

Less than Significant Impact. The San Bernadino County Policy Map HZ-2 Liquefaction & Landslide Hazards does not show the project site in a landslide susceptibility zone (County 2020). The elevation profile on Google Earth indicates an average slope of 2%, or indicating the project site is relatively flat also supported by the Geotechnical Engineering Report in Appendix E. Development of the Project would require grading and finished pad construction in accordance with the California Building Code. Therefore, implementation of the Project would result in a less than significant impact associated with landslides.

b) *Would the project result in substantial soil erosion or the loss of topsoil?*
Less than Significant. Project construction would be subject to local and State codes and requirements for erosion control and grading. Because construction activities would disturb one or more acres, the Project must adhere to the provisions of the National Pollution Discharge Elimination System (NPDES) Construction General Permit. Construction activities subject to this permit include clearing, grading, and other soil disturbances such as stockpiling and excavating. The NPDES Construction General Permit requires implementation of a Storm Water Pollution Prevention Plan (SWPPP), which would

include temporary project construction features (i.e., best management practices [BMPs]) designed to prevent erosion and protect the quality of stormwater runoff. Sediment-control BMPs may include stabilized construction entrances, straw wattles on earthen embankments, sediment filters on existing inlets, or the equivalent.

In addition, grading activities would be required to conform to the most current version of the California Building Code and the approved Precise Grading Permit required by the City for grading of more than 50 cubic yards. The Project will require grading of approximately 33,800 cubic yards (excavation and fill). The Project must also comply with SCAQMD Rule 402 (Nuisance) and Rule 403 (Fugitive Dust), which would reduce construction erosion impacts. Rule 403 requires control measures to reduce fugitive dust from active operations, storage piles, or disturbed surfaces, with a goal to omit visibility beyond the property line or avoid exceedance of 20-percent opacity. Rule 402 requires dust suppression techniques be implemented to prevent dust and soil erosion from creating a nuisance off site. Compliance with these federal, regional, and local requirements would reduce the potential for both on-site and off-site erosion effects to accepted levels during Project construction. Upon completion of construction activities, ground surfaces would be stabilized by Project structures, paving, and landscaping. Therefore, impacts associated with soil erosion and topsoil loss would be less than significant.

c) *Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?*

Less than Significant with Mitigation. As noted in Impact 4.7 a) iii, the Proposed Project site is not located within a liquefaction zone, and the soil is not prone to liquefaction, is relatively flat, and is excessively drained Tujunga loamy sand (County 2020, USDA 2023). Construction activities would be conducted in accordance with the Uniform Building Code and the City's regulations and ordinances pertaining to the mitigation of potential geologic and seismic impacts. Therefore, implementation of the Proposed Project would result in less than significant impacts associated with off-site landslide, lateral spreading, liquefaction, or collapse. However, as noted in the Geotechnical Report, the near surface soils are loose and could be unstable under exterior slabs and pavements (Appendix E) possibly resulting in subsidence under buildings and pavement. Implementation of Mitigation Measure GEO-1 would reduce impacts associated with existing loose near surface soils leading to subsidence to less than significant levels.

MM GEO-1 **Excavate Loose Soils and Replace with Engineered Fill** The subsurface soils within the proposed building pads will be removed to a minimum depth of 4 feet below existing site grades, or 2 feet below bottom of proposed foundations, whichever is greater. Deeper removals may be required if loose soils are still encountered at a depth of 4 feet below ground surface. Grading for the proposed structures should incorporate the limits of the footings plus 3 feet beyond the outside edge of perimeter footings. The bottoms of excavations should be probed to determine if it is firm and unyielding. Localized deeper removals may be needed where soft soils are encountered at the excavation bottom. Compacted engineered fill should then be placed to design finish grade elevations.

Subgrade soils beneath exterior slabs and pavements should be removed to a depth of 1 foot below the proposed pavement section, including bottom of proposed aggregate base materials. Compacted engineered fill should then be placed to design elevations.

Exposed areas receiving fill, once properly cleared and benched where necessary, should be scarified to a minimum depth of 10 inches, moisture conditioned, and compacted per the compaction requirements of the Terracon 2022 Geotechnical Engineering Report in Appendix E.

d) Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Less than Significant. Expansive soils possess clay particles that react to moisture changes by shrinking when dry or swelling when wet. These types of soils have the potential to crack building foundations and, in some cases, structurally distress the buildings themselves. Minor to severe damage to overlying structures is possible. However, the Proposed Project is located on Tujunga loamy sand, which has low expansive properties because it is primarily sand without clay characteristics (USDA 2023). Therefore, impacts associated with expansive soils would be less than significant.

e) Would the project have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

No Impact. An existing sewer line is present on site. The Proposed Project site would rely on existing wastewater infrastructure to accommodate wastewater disposal requirements. Therefore, implementation of the Proposed Project would not result in an impact associated with soils incapable of supporting septic systems.

f) Would the project directly or indirectly destroy a unique paleontological resource or site or unique geological feature?

As discussed in Appendix D, on October 22, 2023, Chambers Group received the results of the paleontological records search from the NHMLA. The results show that no fossil localities lie directly within the Project site, however, there are fossil localities documented nearby from the same sedimentary deposit that underlays the Project site, either at the surface or at depth (Bell 2023). The records search covered only the records of the NHMLA. Based on the available information, the paleontological sensitivity could be considered low to moderate in the overall area considering the fossil localities recorded within the study area surrounding the Project site and the existence of similar fossil-bearing geologic units mapped underlying the Project site. These Pleistocene period deposits are composed of surficial alluvial sediments (Qa) that are unconsolidated, undissected, and indurated dissected alluvial fan deposits. Pleistocene alluvial units are considered sensitive for paleontological resources. However, during the survey of the site no evidence of paleontological resources was observed.

While there are no previously documented paleontological resources in the Project site, due to the mapped geologic formations underlying the Project site which are known to bear paleontological resources and the known fossil localities provided in the surrounding study area, there remains potential that new fossils could be exposed during the Project. Implementation of Mitigation Measures PAL-1 and PAL-2 would reduce impacts associated with unearthing unique paleontological resource during ground disturbance would be less than significant.

MM GEO-2. **Qualified Paleontologist**. Prior to issuance of a grading permit, the Applicant shall be required to obtain the services of a Qualified Project Paleontologist to remain on call for the duration of the proposed ground-disturbing construction activity. Upon approval or request by the City, a paleontological mitigation plan (PMP) outlining procedures for paleontological data recovery shall be prepared for the Project and submitted to the City for review and approval. The development and implementation of the PMP shall include consultations with the City's Engineering Geologist as well as a requirement that the curation of all specimens recovered under any scenario shall be through an appropriate repository agreed upon by the City. If the City accepts ownership, the curation location may be revised. The PMP shall include developing a multilevel ranking system, or Potential Fossil Yield Classification (PFYC), as a tool to demonstrate the potential yield of fossils within a given stratigraphic unit. The PMP shall outline the monitoring and salvage protocols to address paleontological resources encountered during Project-related ground-disturbing activities, as well as the appropriate recording, collection, and processing protocols to appropriately address any resources discovered.

MM-GEO-3 **Paleontological Report.** At the completion of all ground-disturbing activities, the Project Paleontologist shall prepare a final paleontological mitigation report summarizing all monitoring efforts and observations, as performed in line with the PMP, and all paleontological resources encountered, if any, as well as providing follow-up reports of any specific discovery, if necessary

4.8 GREENHOUSE GAS EMISSIONS

8.	GREENHOUSE GAS EMISSIONS. Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐
(b)	Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	☒	☐

4.8.1 Impact Analysis

Kimley-Horn prepared a GHG Emissions Assessment for the Proposed Project on May 2023. The GHG Emissions Assessment was prepared to evaluate the potential construction and operational emissions associated with the Proposed Project and determine the level of impact it would have on the environment. The results of GHG Emissions Assessment indicate that the Proposed Project would have a less than significant impact with regard to greenhouse gas emissions. The complete report can be found in Appendix F.

a) Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Less than Significant Impact.

Short-Term Construction GHG Emissions

Project construction activities would generate direct CO_2, N_2O, and CH_4 emissions from construction equipment, transport of materials, and construction workers commuting to and from the Project site. Total GHG emissions generated during all construction phases were combined and are presented in the table below.

Table 8: Construction-Related Greenhouse Gas Emissions

Category	**MTCO 2e**
2023 Construction	292
2024 Construction	179
Total Construction	471
30-Year Amortized Construction	15.70
Source: CalEEMod version 2022.1 Refer to Appendix A for model outputs.	

As indicated in Table 8, the Project would result in the generation of approximately 471 MTCO2e over the course of construction. Construction GHG emissions are typically summed and amortized over a 30-year period, then added to the operational emissions. The amortized Project construction emissions would be 15.70 MTCO2e per year. Once construction is complete, construction related GHG emissions would cease.

Long-Term Operational Greenhouse Gas Emissions

Operational or long-term emissions occur over the life of the Project. GHG emissions would result from direct emissions such as Project generated vehicular traffic, on-site combustion of natural gas, and operation of any landscaping equipment. Operational GHG emissions would also result from indirect sources, such as off-site generation of electrical power, the energy required to convey water to, and wastewater from the Project, the emissions associated with solid waste generated from the Project, and any fugitive refrigerants from air conditioning or refrigerators.

Total GHG emissions associated with the Project are summarized in Table 9. As shown in Table 9, the Project would generate approximately 2,823.70 MTCO2e annually from both construction and operations activities which is below the SCAQMD's 3,000 $MTCO_2$/year GHG threshold. Therefore, the proposed Project would not generate significant GHG emissions, and the impacts would be less than significant.

Table 9: Project Greenhouse Gas Emissions

Emissions Source	$MTCO_2e$ per Year
Construction Amortized Over 30 Years	15.70
Area Source	1
Energy	242
Mobile	1,010
Stationary Source – Generator[1]	20
Waste	54
Water and Wastewater	18
Refrigeration	1,463
Total	**2,823.70**
SCAQMD Threshold	*3,000*
Exceeds Threshold?	**No**

Notes:
1. One emergency backup generator has been assumed for the proposed Project.

Source: CalEEMod version 2022.1. Refer to Appendix A for model outputs.

b) *Would the project conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?*

Less than Significant Impact. On September 3, 2020, SCAG's Regional Council adopted Connect SoCal (2020 - 2045 Regional Transportation Plan/Sustainable Communities Strategy [2020 RTP/SCS]). The RTP/SCS is a long-range visioning plan that balances future mobility and housing needs with economic, environmental, and public health goals.

The 2022 Scoping Plan sets a path to achieve targets for carbon neutrality and reduce anthropogenic GHG emissions by 85 percent below 1990 levels by 2045 in accordance with AB 1279. The transportation, electricity, and industrial sectors are the largest GHG contributors in the State. The 2022 Scoping Plan plans to achieve the AB 1279 targets primarily through zero-emission transportation (e.g., electrifying cars, buses, trains, and trucks). Additional GHG reductions are achieved through decarbonizing the electricity and industrial sectors.

Several of the State's plans and policies would contribute to a reduction in mobile source emissions from the Project. These include the CARB's Advanced Clean Truck Regulation, Executive Order N-79-20, CARB's Mobile Source Strategy, CARB's Sustainable Freight Action Plan, and CARB's Emissions Reduction Plan for Ports and Goods Movement. The San Bernardino County Regional GHG Reduction Plan (County GHG Reduction Plan) presents greenhouse gas inventories, assesses the effectiveness of California initiatives to reduce GHG emissions, and identifies local GHG reduction strategies that were selected for 25 Partnership jurisdictions to reduce local GHG emissions. The County GHG Reduction Plan presents the collective results of all local efforts to reduce GHG emissions consistent with

statewide GHG targets expressed in Senate Bill (SB) 32, the "Global Warming Solutions Act of 2006," and SB 375. The County GHG Reduction Plan identifies state measures applicable to every Partnership jurisdiction, as well as local measures selected by each jurisdiction, that could reduce future GHG emissions within jurisdictional boundaries.

The City approved and adopted the City of Redlands CAP on December 5, 2017. The proposed Project would be consistent with the transportation and water utility goals of the CAP by providing EV charging stations for electric vehicles and complying with the City's Water Efficient Landscape requirements. The proposed Project would also be consistent with the CAP's energy efficiency goals by complying with the latest California Building Code (Title 24), including the latest CALGreen Code standards. Project construction would also comply with current local and State standards and CAP goals to increase diversion and reduction of waste by diverting construction waste from landfills to recycling. As such, the proposed project would be consistent with the applicable GHG reduction goals within the Redlands CAP.

As shown in Table 3, approximately 44 percent of the Project's GHG emissions are from energy and mobile sources, which would be further reduced by the 2022 Scoping Plan goals described above (including achieving 100 percent clean electricity by 2045 [SB 100], achieving 100 percent zero emission vehicle sales in 2035 [Advanced Clean Cars II], and implementing the Advanced Clean Fleets regulation [ZEV buses and trucks]). It should be noted that the City has no control over vehicle emissions. However, these emissions would decline in the future due to Statewide measures discussed above (including the reduction in fuels' carbon content, CARB's Advanced Clean Car Program, CARB's Mobile Source Strategy, fuel efficiency standards, etc.), as well as cleaner technology and fleet turnover. SCAG's 2020 RTP/SCS is also expected to help California reach its GHG reduction goals, with reductions in per capita transportation emissions of 19 percent by 2035. The Project would also comply with the goals of the Redlands CAP and would not inhibit its implementation or progress.

In conclusion, the Project does not conflict with the applicable plans that are discussed above and therefore, with respect to this particular threshold, the Project does not have a significant impact.

4.9 HAZARDS AND HAZARDOUS MATERIALS

9.	HAZARDS AND HAZARDOUS MATERIALS. Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
(b)	Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐
(c)	Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☒	☐

(d)	Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☒	☐	☐
(e)	For a project located within an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	☒
(f)	Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
(g)	Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?	☐	☐	☒	☐

4.9.1 Impact Analysis

a) Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Less Than Significant Impact. During construction of the Project, hazardous and potentially hazardous materials typically associated with construction activities would be routinely transported to/from and used on the Project site. These hazardous materials could include gasoline, diesel fuel, lubricants, and other products used to operate and maintain construction equipment. Construction materials including paints, adhesives, cleaning fluids, and solvents. Handling of these hazardous materials would be temporary in nature and limited to quantities and concentrations consistent with a commercial use of this size. BMPs such as proper labeling of chemicals, storage in approved containers, preparation of an accidental release plan, and compliance with hazardous materials handling protocols would be prepared and implemented to ensure safe storage, handling, transport, use and disposal of all hazardous materials during the construction phase of the Project, in compliance with all applicable laws, ordinances, rules, regulations, and orders. The Contractor would ensure hazardous waste generated is properly disposed. The transport, use, and handling of these materials would be a temporary activity coinciding with short-term Project construction activities.

Operation of the proposed Project would consist of a sales and administrative building, service building, private carwash, associated access drives, landscaped areas, presentation area, staging area, sales display area, and a customer and employee parking lot. Typical daily operations include deliveries of vehicles, parts and supplies to the site, vehicle sales and test drives, preparation of vehicles for sales, and vehicle service work which is to be performed inside fully conditioned buildings equipped with rollup doors. Only minor vehicle servicing will occur, including routine maintenance, oil changes, tire rotations diagnostic and mileage services. No major mechanical work, body work, or painting will occur within the service building.

The Project would include small quantities of hazardous substances as part of daily operations. The servicing operations would require the storage, transport, use and disposal of cleaning solvents, diesel, gasoline, oil, and other automotive fluids. Gasoline would be transported to the site by fuel trucks, which is a routine, permitted use. Given the quantities of potentially hazardous materials and

the characteristics of use (e.g., routine maintenance and cleaning), the Project would not be a potential risk to human health or the environment. Fuel transportation would be subject to federal shipment documentation and reporting requirements. The amount of hazardous materials stored and used would be limited and would be required to comply with applicable local, state, and federal regulations.

Operation of aboveground petroleum storage capacities of 1,320 gallons or more, which include aboveground storage containers or tanks with petroleum storage capacities of 55 gallons or greater, are subject to the Aboveground Petroleum Storage Act (APSA). APSA also regulates tank facilities with less than 1,320 gallons of petroleum if they have one or more stationary tanks in an underground area (TIUGA) with a shell capacity of 55 gallons or more of petroleum, and, in this case, only the TIUGAs are subject to APSA (CALFIRE 2023). The San Bernardino County Fire Protection District is the designated Certified Unified Program Agency (CUPA) responsible for the regulatory inspections of all tank facilities subject to the APSA in the County. In accordance with the APSA program, the Project would prepare and implement a Spill Prevention, Control, and Countermeasure (SPCC) Plan in order to prevent discharge of petroleum and to allow for the preparedness and proper response of petroleum discharges. The SPCC Plan is to be kept on-site for CUPA inspections. The Project would also be required to submit a Hazardous Material Business Plan (HMBP) to the CUPA that provides the on-site use and storage of fuels and hazardous materials in quantities equal or greater than:

- 55 gallons of a liquid,
- 500 pounds of a solid, or
- 200 cubic feet of compressed gas, or
- Extremely hazardous substances above the threshold planning quantity
- Facilities in County must also report any amount of hazardous waste via California Environmental Reporting System (CERS). (CUPA 2023)

The HMBP also provides emergency response personnel with adequate information to help prepare and respond to incidents at regulated facilities.

In summary, construction and operations of the proposed Project would comply with applicable federal, state, and local laws and regulation, and would require permits and the development of a SPCC Plan and a HMBP, resulting in a less than significant impact related to routine transport, use, or disposal of hazardous material.

b) *Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?*

Less Than Significant Impact. The Phase 1 Environmental Site Assessment (ESA) dated November 2022 for the Project site (Appendix G) did not identify any past or present Recognized Environmental Conditions (RECs) in connections with the site. As discussed in a) above, handling of hazardous materials during Project construction would be temporary and limited to quantities and concentrations consistent with construction of this size and type of commercial use facility. BMPs such as proper labeling of chemicals, storage in approved containers, preparation of an accidental release plan, and compliance with hazardous materials handling protocols would be implemented to minimize hazards to the public or the environment.

During Project operations, handling of small quantities of hazardous substances such as cleaning solvents, diesel, gasoline, oil, and other automotive fluids would occur as part of daily operations. Fuel transportation would be subject to federal shipment documentation and reporting requirements. The Project will comply with County CUPA enforced regulations and will obtain the required permits for operation of the aboveground fuel storage tank.

The Project would be required to submit a HMBP to the County CUPA that details the on-site use and storage of fuels and hazardous substances to prevent harm to public health, safety, and the environment involving the release of hazardous materials. Chemicals used in the carwash would be stored in closed containers and used in small amounts. Wastewater from the carwash would go into an oil water separator, the water would be reused in the carwash and the separated chemicals and oil would be taken off-site to be treated by a certified waste vendor. Compliance with applicable state, local, and federal laws and preparation of a HMBP would safeguard operations involving hazardous materials would not result in the release of such materials into the environment. The Project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment, and therefore, impacts are less than significant.

c) *Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?*

Less Than Significant Impact. There are no schools within a ¼ mile of the proposed Project. The nearest schools include the Redlands Adventist Academy located 0.9 miles to the South, and Orangewood High School and Redlands eAcademy (located on the Orangewood High School campus) approximately 0.4 mile to the Southeast. Both locations are on the other side of I-10 from the Project site. As discussed in Section 4.8.1a and 4.8.1b, compliance with applicable state, local, and federal laws and preparation of a HMBP would safeguard construction and operational activities involving hazardous materials from resulting in a significant hazard to the public or the environment. Therefore, impacts associated with emitting hazardous emissions or handling hazardous materials within a ¼ mile of a school would be less than significant.

d) *Would the project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?*

Less Than Significant Impact with Mitigation. The Phase 1 ESA dated November 2022 for the Project site (Appendix G) did not identify any past or present RECs in connections with the site. The Proposed Project site is not on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 (SWRCB 2023; Department of Toxic Substances Control [DTSC] 2023). However as identified in the ESA and the State Hazardous Waste databases, the previous Teledyne Battery Products facility at 840 Brockton was a LUST Cleanup Site but the case has been closed (DTSC 2023 and SWRB 2023). The site is approximately 602 feet to the northeast of the project area (SWRB 2023). According to the ESA (Appendix G), a 1994 ESA indicating an unauthorized release of heating oil impacting soil in 1987 was reported for the facility, and the responsible party installed borings and/or monitoring wells to further define the extent of contamination. It was concluded due to the distances from the Project site and impacts to soils only that Teledyne Battery is not a REC to the project site. However, in 1996 an additional ESA documented in Appendix G identified Teledyne, located approximately 740 feet east of the site and City of Redlands Well Field, in the regulatory database as

off-site issues. The City of Redlands Well Field was found to be associated with the plume that was identified on the Teledyne property. The 1996 ESA noted that the City of Redlands was utilizing a pump and treat method to clean up the groundwater. DTSC noted that the groundwater was not adequately characterized to determine if a release occurred at Teledyne. The 2022 ESA concluded due to the distance from the site and the depth to groundwater (230 feet), that the City of Redlands Well Field and the Teledyne site were not RECs to the Project site. However, there is a possibility during ground disturbance on the northeast portion of the site that unanticipated contamination could be exposed, which has the potential to impact the public or the environment. Therefore, impacts associated with hazardous materials site resulting in creation of a significant hazard to the public or the environment would be less than significant with implementation of MM HAZ-1 and HAZ-2.

MM HAZ-1 **Unanticipated Contamination Discovery Plan.** An Unanticipated Contamination Discovery Plan (UCDP) will be developed prior to ground disturbing activities on the project site. Contractors will be trained on the requirements of the UCDP during pre-construction environmental training. The UCDP is intended to provide guidance to ensure worker and public safety as well as prevent the spread of further contamination if contaminated soils are encountered during construction of the Project. The UCDP will provide contact information for laboratories that will analyze the samples and solid waste facilities that will accept the contaminated soils. It will identify the procedures for:

- Notification and documentation requirements;
- Identification of the characteristics of the contaminated soil (e.g., sample methods, vertical and horizontal extent of contamination and chemicals of concern);
- Determining baseline at which work can be reinitiated in the area;
- handling and/or disposal requirements for any contaminated media unearthed.
- The UCDP shall be effective during all ground disturbing activities of the Project.

MM HAZ-2 **Initial Response to Unanticipated Soil Contamination.** During excavation, indicators of possible contamination include, but are not limited to:

- Stained or discolored earth, as contrasted to adjoining soil;
- Fill material containing debris unearthed during trenching or grading;
- Household trash covered by earth or other material that appears to be interspersed with industrial debris;
- Gasoline smells or other hydrocarbon odors that emanate when the earth is disturbed; or
- Oily residue intermixed with earth.

Immediately following discovery of potentially hazardous waste or contaminants, the Contractor will:

- Cease work in the vicinity of suspected contamination;
- Cordon off or otherwise restrict access to the suspected area to protect workers and the public;
- Notify the City and Project authorities; and
- Implement the UCDP.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

Less Than Significant Impact. The Redlands Municipal Airport runway is approximately 2.8 miles to the Northeast of the project site (Google 2023). The Project area is not within the Redlands Airport Influence Area on the Redlands Municipal Airport Compatibility Map, with the western boundary of Orange Street just North of East Lugonia Avenue (City 2002). The western boundary is approximately 0.75 miles northeast of the project site. The San Bernardino International Airport runway is approximately 2.66 miles Northwest of the Project site on the other side of the I-210 (Google 2023). Figure 3.7-2 Airport Hazards in the Redlands General Plan 2035 EIR displays the Project area outside of the San Bernadino International Airport Influence Area Boundary (City 2018). Therefore, the project would not create a significant hazard or excessive noise for people working in the Project Area. The impact is less than significant.

f) Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Less Than Significant Impact. The Project area includes two driveways for access to the site from New York Street. The applicable emergency response or emergency evacuation plans for the Project area include the San Bernardino County Emergency Operations Plan (EOP) and the Redlands Local Hazard Mitigation Plan (LHMP). The EOP is administered and coordinated by the San Bernardino County Fire Department Office of Emergency Services. The concepts presented in EOP are comprised of mitigation programs to reduce the vulnerabilities to disasters and preparedness activities to ensure the capabilities and resources are available for an effective response. To assist communities in recovering from a disaster, the plan outlines programs that promote a return to regularity (County 2018). The purpose of the LHMP is to outline a mitigation strategy to help reduce and/or eliminate impacts from hazards within the City of Redlands (City 2021a). Compliance of all San Bernardino County Fire Protection District requirements, through the CUPA permitting process, would reduce the risk that the Project would impair an adopted emergency response plan or emergency evacuation plan, and impacts are less than significant.

g) Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

No Impact. The project site will be primarily covered with asphalt, cement, and buildings as 11.92 acres will be impervious areas and 5.4 acres would be landscaped/grassy areas. It would not exacerbate wildfire risk. The Project site is located outside of the State and locally classified very high fire hazard severity zone. Much of the area surrounding the proposed Project is built out and the undeveloped area has minimal vegetation. Therefore, the project would not exacerbate wildfire risks resulting in no impact.

4.10 HYDROLOGY AND WATER QUALITY

10.	HYDROLOGY AND WATER QUALITY. Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☒	☐
(b)	Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☒	☐
(c)	Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
	i) Result in substantial erosion or siltation on- or off-site;	☐	☐	☒	☐
	ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flood on- or off-site;	☐	☐	☒	☐
	iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☒	☐
	iv) Impede or redirect flood flows?	☐	☐	☒	☐
(d)	In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☐	☒
(e)	Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☒	☐

4.10.1 Impact Analysis

a) Would the project violate any water quality standards or waste discharge requirements, or otherwise substantially degrade surface or ground water quality?

Less than Significant Impact. Construction of the Project would be subject to City, County, and State requirements for erosion control and grading. Because construction activities would disturb one or more acres and more than 50 cubic yards of earth, the Applicant would be required to adhere to the provisions of the NPDES Construction General Permit and obtain a Grading Permit from the City. Construction activities subject to these permits include clearing, grading, and soil disturbance through stockpiling and grading. The NPDES Construction General Permit requires implementation of a SWPPP, which would include BMPs designed to prevent erosion and sedimentation in stormwater runoff. These construction BMPs would help retain stormwater and any constituents, pollutants, and sediment on the Project site, which would assist in the prevention of water quality impacts to downstream receiving waters during construction.

During operations, the Project's Water Quality Management Plan (WQMP) in Appendix G, describes the site drainage being intercepted by inlets with full trash capture filter inserts that will filter out trash and debris before runoff is routed to the detention basin system. The on-site catch basins shall be inspected monthly during the rainy season (October-May) and before and after each storm to preserve proper operation. The whole storm drain system will be inspected prior to the rainy season and after every rain event greater than 0.5 inches. Appendix H also identifies BMPs that protect downstream water quality including design of the trash enclosures to divert all storm flows around the enclosure and shall be checked on a weekly basis to ensure that no leaks are present, and that trash does not accumulate on the enclosure floor. All dumpsters will be inspected to ensure that they remain covered and leakproof. The Applicant shall ensure that the site is inspected daily for stray trash and that it is collected and disposed of correctly. No outdoor vehicle processing is proposed, and vehicle wash areas will be operated in compliance with the San Bernardino County Stormwater Program and California Stormwater Best Management Practice Handbook New Development and Redevelopment BMP SD-33 Vehicle Washing Areas. The vehicle wash is indoors, and wash water will be contained and recycled. Also, landscape areas used for water quality swales or infiltration areas shall have appropriate plants for saturated soils, drought tolerance and erosion control qualities. The parking lots will be swept weekly between October and May and quarterly outside of the rainy season.

As described in the WQMP, spill kits will be accessible at vehicle maintenance and fueling area. Employees will be trained in proper spill response. The project site will include Spill Contingency Plans and an Emergency Contingency Plan to provide spill procedures in the inadvertent spill or leak associated with used vehicle transport and reconditioning. Compliance with City, County, and State requirements and implementation of the project WQMP will prevent the project from violating water quality standards or waste discharge requirements or degradation of surface or groundwater quality, resulting in a less than significant impact.

b) *Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?*

Less than Significant Impact. The project would cover 11.92 acres of an 18.5 acre site with impervious pavement and buildings. However, the proposed project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge resulting in impeding groundwater management of the basin. There are no groundwater wells present on the site. According to the Geotechnical Engineering Report (Appendix F) dated September 2022, twenty borings were collected at depths ranging from 6.5 to 51.5 feet below ground surface (bgs) and ground water was not encountered. The Phase 1 Environmental Site Assessment (Appendix G), indicates based on wells in the area of the project site, within 740 and 330 feet respectively, groundwater was anticipated to be approximately 230 bgs in the project vicinity. Therefore, the site in its current condition is not significantly recharging the groundwater table. However, the site stormwater management will include an infiltration basin that will allow percolation of stormwater into the underlying groundwater basin.

The City of Redlands provides water to the City and its Sphere of Influence. The Redlands 2020 Urban Water Management Plan (UWMP) that is Part 2 Chapter 4 of the 2020 Upper Santa Ana River Watershed Integrated Regional UWMP, indicates Redlands obtain water from surface water from Mill Creek Watershed and Santa Ana River Watershed, groundwater from the Bunker Hill Subbasin and Yucaipa Subbasin, recycled water, and water imported from the State Water Project (SWP) as needed.

During wet years, the City contributes to regional efforts to recharge the Bunker Hill Basin so there is availability in dry years when other sources may be limited. (City 2021b)

It has been estimated, by the Applicant, that the project would use 33,630 gallons of freshwater per month, which is equivalent to 1.24 acre-feet per year. Based on the UWMP, the long-term analysis of the groundwater table during average years and multi-dry years indicates that the supply will still be capable of meeting the City's demand through 2045. The groundwater portion is projected to be 17,484 acre feet, Bunker Hill and Yucaipa combined (IRUWMP 2020). In addition, the project's primary use of water is for washing, so the water is not required to be 100 % potable; this allows flexibility to the City of the water sources that are provided to the project site. Therefore, the project would have a less than significant impact on groundwater supplies, recharge, and would not impede groundwater management of the basin.

c) *Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:*

i) result in substantial erosion or siltation on- or off-site;

Less Than Significant Impact. A Hydrology and Hydraulics Report (Drainage Report) was completed for the Project dated May 2023 and is included in Appendix I. The purpose of this report is to provide information about the design of the Storm Water Management System for the project and to determine the impact the proposed development has on the local existing drainage system and to mitigate post development peak flows beyond the pre-development peak flows.

There are no streams or rivers on the site, and the soil is sandy. The site is relatively flat, and the regional topography is sloped toward the northwest. The existing drainage of the site is from the southeast to the northwest, towards a Caltrans Channel to the west of the project boundary and ultimately discharging into the Santa Ana River Reach 5. Runoff from the existing site does not include off-site drainage. Once developed, the project site will have one main drainage area that will continue to contribute runoff to the western Caltrans Channel. However, the drainage will come from an infiltration basin that will infiltrate stormwater and only discharge additional runoff through an outlet pipe directly into the Caltrans Channel. The conclusions of the Drainage Report (Appendix I) specify that the development would discharge less stormwater than existing conditions due to the percolation through the drainage basin. Therefore, the project would have a less than significant impact on existing drainage patterns and would not result in substantial erosion or siltation on or off site.

ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;
iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources or polluted runoff; or

ii and iii) **Less Than Significant Impact.** As described in i) above, the drainage of the site would continue to use the existing drainage pattern of discharging storm runoff into the Caltrans Channel to the west of the site boundary. This channel eventually discharges into the Santa Ana River Reach 5. The Drainage Report (Appendix I) indicates that the infiltration basin has been designed to retain a 100-year storm up to a 24-hour event. The 100-year storm precipitation was used in the volume calculations for the storm water management system design. The infiltration/detention tank

provides 201,640 cubic feet per second (cfs) of storage. The peak flows discharge through an 18" orifice at a max flow of 9.36 cfs. The conclusions of the Drainage Report specify that the development would discharge less stormwater than existing conditions.

The Drainage Report also describes the Project Site as having a hydrologic soil group classification of A. Group A soils that typically has low runoff potential with high infiltration rates when thoroughly wetted and consist primarily of deep, well-drained sands or gravels. This is further supported by the soil type described in the Soil Survey (USDA 2023) that indicates the soil characteristics of Tujunga loamy sand is excessively drained and the underlying soil of the infiltration basin and the Caltrans Channel.

Throughout construction, the conditions of the NPDES Construction General Permit require implementation of a SWPPP, which would include BMPs designed to prevent erosion and sedimentation in stormwater runoff. The WQMP indicates that during operations, the proposed site drainage will be intercepted by proposed inlets with full trash capture filter inserts and will be routed to the detention basin system reducing debris in stormwater discharge. Multiple BMPs are identified in a) above that address the prevention of polluted runoff including diversion of stormwater flows from trash enclosure, weekly street sweeping during raining season, and contingency planning and employee training to prevent spills from getting into the stormwater drains. Therefore, the project construction and operations would have less than significant impact on the drainage pattern, creation of on or off-site flooding, or providing additional sources of polluted runoff.

iv) impede or redirect flood flows?

Less Than Significant Impact. Although the project development would increase the impervious surfaces on the site, a new on-site storm drain system, designed for the 100-year one-hour storm, will be installed to collect surface runoff at designated storm inlet locations across the site and convey flows downstream. Each inlet will be sized to limit ponding depths across the pavement to less than the 6-inch curb height. The drainage of the site would continue to use the existing drainage pattern of discharging storm runoff into the Caltrans Channel to the west of the site boundary. The Drainage Report (Appendix I) indicates that the infiltration basin has been designed to retain a 100-year storm up to a 24-hour event. The conclusions of the Drainage Report specify that the development would discharge less stormwater than existing conditions due to percolation into the project infiltration basin. Therefore, the impact to existing drainage patterns and impeding or directing flood flows would be less than significant.

d) Would the project in flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

No Impact. The site is over 55 miles east of the Pacific Ocean and there are no large bodies of water near the site. The Federal Emergency Management Agency (FEMA) Flood Hazard Firmette for the Project site included in the Drainage Report (Appendix I) indicates it is in Zone X Area of Minimal Flood Hazard. FEMA defines Zone X as being outside a Special Flood Hazard Area and higher elevation than a 0.2 percent annual chance flood (500-year flood) (FEMA 2020). As a result, there is no impact from the project having a high risk of inundation due to being in flood, tsunami, or seiche zones.

e) Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Less Than Significant Impact. The City of Redlands is part of the Santa Ana River RWQCB. The Santa Ana River Basin Water Quality Control Plan (Basin Plan) contains the RWQCB's policies for managing the region's water quality. The Basin Plan includes an implementation plan describing the actions by the RWQCB and others that are necessary to achieve and maintain the water quality standards. The City is responsible for monitoring TDS and nitrogen in groundwater every three years starting in 2005 (RWQCB 2020). The City, as part of the Basin Monitoring Program Task Force, must complete a Recomputation of Ambient Water Quality every three years and prepare a Water Quality Report for the Santa Ana River annually (RWQCB 2020). As a result, the City has an active role in collecting data for the management of water quality in the region.

The Project site is in the Upper Santa Ana Valley-San Bernardino Groundwater Basin. According to the Sustainable Groundwater Management Act 2019 (SGMA) Basin Prioritization Dashboard, the groundwater basin is a Very Low Priority (2019 DWR). Therefore, the California Department of Water Resources does not require the formation of a Groundwater Sustainability Agency (GSA) or a Groundwater Sustainability Plan for the Basin (2020 DWR), resulting in no conflict of a sustainable groundwater management plan by the project.

As discussed in a), the project would be required to comply with City, County, and State requirements regarding protection of water quality, and thus would not conflict with a water quality control plan. In addition, the project would not deplete groundwater supplies or interfere with groundwater recharge as discussed in b). Implementing the WQMP and the Drainage Plan (appendices H and I) during construction and operations will result in compliance with all applicable regulations, thus the proposed project would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan. Therefore, the impact is less than significant.

4.11 LAND USE AND PLANNING

11.	LAND USE/PLANNING Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Physically divide an established community?	☐	☐	☐	☒
(b)	Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☒	☐

4.11.1 Impact Analysis

a) Would the project physically divide an established community?

No Impact. The Project site is located on undeveloped land within the commercial district of the Specific Plan. Commercial properties are located to the north, east, and south along with the I-210 to the west. There are single-family residences located to the east of the Project site. Land use features that physically divide an established community involve construction of new roads and/or bridges. Division can also include new zoning and land use designations.

The Project site is zoned for commercial uses and does not contain any parcels designated for residential uses. There are no residential communities adjacent to the Project site. The Proposed Project would not physically divide an established community as there are no residential communities within or adjacent to the Project site. Additionally, the Project does not propose construction of new roadways or bridges that would divide existing communities in the area, therefore, no impact would occur.

b) *Would the project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?*

Less Than Significant Impact. The Project site is zoned as commercial. Land uses within the commercial district permit major departments stores and retail sales of automobiles, automobile rentals, and car washes. Repair and serving facilities are allowed within the commercial district of the Specific Plan. The existing language of the Specific Plan permits used automobile sales as an accessory to the sale of new automobiles. The Proposed Project proposes an amendment to the Specific Plan to permit the construction of a pre-owned automobile sales, refurbishing, and reconditioning facility with outdoor vehicle storage with a Conditional Use Permit.

The Proposed Project would not result in significant environmental impact due to a conflict with any land use plan, policy, or regulation. While the Proposed Project is amending the permitted use language of the Specific Plan, the change in language is not proposing incompatible uses. The Proposed Project would be consistent in operating a commercial facility. The Proposed Project would amend the Specific Plan to permit the sale of used vehicles as its primary operation and not as an accessory to the sales of new automobiles. Automobile sales is a consistent use of the parcel and other automobile related businesses are currently operating adjacent to the Project site. Therefore, impacts would be less than significant.

4.12 MINERAL RESOURCES

12.	MINERAL RESOURCES Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
(b)	Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒

4.12.1 Impact Analysis

a) *Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?*

No Impact. According to the California Division of Mines and Geology, no significant mineral deposits are known to exist in the City. In addition, Redlands is required by the Surface Mining and Reclamation Act of 1975 (SMARA) to adopt policies recognizing the importance of the identified mineral resources,

clarifying the intent that this information is to be used when making land use decisions in areas designated to be of statewide or regional significance, and emphasizing the conservation and development of identified mineral deposits.

The Proposed Project site is not identified as being within a significant mineral resource zone in the DOC's Mineral Land Classification Map; nor would the Proposed Project involve any mining activities (DOC 1986). In addition, the Proposed Project will not include any oil exploration or drilling. No impact would occur.

b) *Would the project result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?*

No Impact. The Project proposes to develop on land that has not been designated to contain a locally significant resource for minerals. As noted above, no significant mineral deposits are known to exist in the City (City 2018, DOC 1986). In addition, no mineral resource extraction would occur as part of the Proposed Project. No impact would occur.

4.13 NOISE

13.	NOISE Would the project result in:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☒	☐
(b)	Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☒	☐
(c)	For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☒	☐

4.13.1 Impact Analysis

Kimley-Horn prepared an Acoustical Assessment for the Proposed Project on May 2023. The Acoustical Assessment was prepared to evaluate the potential construction and operational noise and vibration levels associated with the Proposed Project and determine the level of impact it would have on the environment. The results of Acoustical Assessment indicate that the Proposed Project would have a less than significant impact with regard to noise. The complete report can be found in Appendix J.

a) *Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?*

Less than Significant Impact.

Construction

Construction noise typically occurs intermittently and varies depending on the nature or phase of construction (e.g., land clearing, grading, excavation, paving). Noise generated by construction equipment, including earth movers, material handlers, and portable generators, can reach high levels. During construction, exterior noise levels could affect the residential uses near the construction site. However, it is acknowledged that construction activities would occur throughout the project site and would not be concentrated at a single point near sensitive receptors.

Construction activities would include site preparation, grading, infrastructure improvements, building construction, paving, and architectural coating. Such activities could require dozers and tractors during site preparation; excavators, graders, dozers, tractors, and scrapers during grading; tractors, pavers, and rollers during infrastructure improvements; cranes, generators, tractors, and welders during building construction; pavers, rollers, and a pavement scarifier during paving; and air compressors during architectural coating. Typical operating cycles for these types of construction equipment may involve 1 or 2 minutes of full power operation, followed by 3 to 4 minutes at lower power settings. Other primary sources of acoustical disturbance would be random incidents, which would last less than one minute (such as dropping large pieces of equipment or the hydraulic movement of machinery lifts).

Sensitive uses in the Project site vicinity include existing residential uses to the east and northeast that could be exposed to elevated noise levels during Project construction. The noise levels calculated in Table 10 show the exterior construction noise at the nearest sensitive receptor and nearest non-sensitive commercial receptor conservatively, without accounting for attenuation from existing physical barriers and improvements in the technology of construction equipment, which today generate less noise. Construction equipment was assumed to operate simultaneously to represent a worst-case noise scenario, as construction activities would routinely be spread throughout the construction site and would operate at different intervals.

Table 10: Project Construction Noise Levels

Construction Phase	Receptor Location		Worst Case Modeled Exterior Noise Level (dBA L_{eq})	Noise Threshold (dBA L_{eq})[2]	Exceeded?
	Land Use	Distance (feet)[1]			
Site Preparation	Residential (East of the Project site)	1,100	60.8	80	No
Grading			61.4		No
Building Construction			62.5		No
Paving			59.7		No
Architectural Coating			46.9		No
Site Preparation	Commercial (North of the Project site)	400	69.6	85	No
Grading			70.2		No
Building Construction			71.3		No
Paving			68.5		No
Architectural Coating			55.7		No

Note:
1. Distance measured from the center of the Project site to the receptor's nearest property line.
2. Threshold from Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, Table 7-3, 2018.

Source: Federal Highway Administration, *Roadway Construction Noise Model*, 2006. Refer to Appendix A for noise modeling results.

As shown in Table 10, construction noise levels would not exceed the applicable Federal Transit Administration (FTA) construction thresholds. The highest exterior noise level at the nearest residential receptors would occur during the building construction stage, and would be 62.5 dBA, which is below the FTA's 80 dBA threshold for residential uses. At the adjacent commercial use (north of the Project site located approximately 400 feet from the center of the construction area), maximum construction noise levels of 71.3 dBA would not exceed the FTA's threshold of 85 dBA for commercial uses.

Construction activities may also cause increased noise along site access routes due to movement of equipment and workers. Compliance with the Redlands Municipal Code (RMC) would minimize impacts from construction noise, as construction would be limited to daytime hours on weekdays and Saturdays.

As discussed above, construction noise levels from the Project would not exceed the FTA's construction noise thresholds and would be required to comply with the RMC standards and allowable construction timeframe, and therefore would result in a less than significant noise impact.

Operation

Implementation of the proposed Project would create new sources of noise in the project vicinity. The major noise sources associated with the project including the followings:

- Mechanical equipment (i.e., trash compactors, air conditioners, etc.);
- Parking lot noise (i.e., car door slamming, car radios, engine start-up, and car pass-by); and
- Off-Site Traffic Noise.
- Truck Delivery Noise
- Car Wash Operations Noise

The results of the noise models show that the operations listed above would not exceed allowable noise levels reaching receptor from mechanical equipment, parking lot activities, and off-traffic noise. Operations from car wash operations, truck delivery noise, and back-up alarms shall comply with the City's noise standards. Impacts would be less than significant.

b) *Would the project result in generation of excessive groundborne vibration or groundborne noise levels?*

Less than Significant Impact. Increases in ground-borne vibration levels attributable to the proposed Project would be primarily associated with short-term construction-related activities. Construction on the Project site would have the potential to result in varying degrees of temporary ground-borne vibration, depending on the specific construction equipment used and the operations involved. The nearest structure to the Project site is the Home Depot building, located approximately 70 feet to the north of the Project boundary line. The nearest residential structure is located approximately 657 feet east of the Project boundary line. Ground-borne vibration generated by construction equipment spreads through the ground and diminishes in magnitude with increases in distance. Vibration velocities from typical heavy construction equipment operations that could be used during Project construction range from 0.0006 to 0.0190 in/sec PPV at 70 feet from the source of activity (the distance from active construction zone to the nearest structure to the north), which is below the FTA's 0.20 PPV threshold for structural damage and Caltrans 0.4 in/sec PPV threshold for annoyance. The closest residential uses are approximately 657 feet east of the Project site; at this distance, vibration velocities from typical heavy construction equipment would be far lower than those calculated from the FTA's Transit Noise and Vibration Impact Assessment Manual.

Once operational, the Project would not be a significant source of ground-borne vibration. It is also acknowledged that construction activities would occur throughout the project site and would not be concentrated at the point closest to the nearest structure. Therefore, vibration impacts associated with the Project construction would be less than significant.

c) *For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public us airport, would the project expose people residing or working in the project area to excessive noise levels?*

Less Than Significant Impact. The San Bernardino International Airport runway is approximately 2.66 miles Northwest of the Project site on the other side of I-210 (Google 2023). Figure 3.7-2 Airport Hazards in the Redlands General Plan 2035 EIR displays the Project area outside of the San Bernadino International Airport Influence Area Boundary (City 2018). The Redlands Municipal Airport runway is approximately 2.8 miles to the Northeast of the project site (Google 2023). The Project area is not

within the Redlands Airport Influence Area on the Redlands Municipal Airport Compatibility Map with the western boundary of Orange Street just North of East Lugonia Avenue (City 2002). The western boundary is approximately 0.75 miles northeast of the project site. The Project is not within 2.0 miles of a public airport, private airfield, or within an airport land use plan. Therefore, the Project would not expose people residing or working in the Project area to excessive airport- or airstrip-related noise levels and resulting in a less than significant impact.

4.14 POPULATION AND HOUSING

14.	POPULATION AND HOUSING. Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☒	☐
(b)	Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☒	☐

4.14.1 Impact Analysis

a) Would the project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Less than Significant Impact. The Proposed Project would construct a commercial facility consisting of a used automobile and conditioning facility on undeveloped land. The Project site is zoned for commercial uses and the surrounding uses consists of commercially operated businesses. The Proposed Project does not propose construction/extension of roads or other infrastructure that could create substantial unplanned growth. The Proposed Project does not include construction of new residential facilities that would increase population growth within the Specific Plan area.

The construction and operation of the Proposed Project would create temporary and permanent jobs within the City (up to 80 workers in the day shift and 120 workers in the evening). However, the Proposed Project is expected to hire from the local population and would therefore not create significant population growth. Impacts therefore would be less than significant.

b) Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

Less than Significant Impact. The Project site is undeveloped and zoned for commercial uses. The properties surrounding the Proposed Project have been designated for commercial purposes. There are no residential communities or housing on or adjacent to the Project site. Therefore, the Proposed Project would not displace people from existing housing and would not require construction of replacement housing. Impacts would be less than significant.

4.15 PUBLIC SERVICES

15.	PUBLIC SERVICES.	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
	i) Fire Protection?	☐	☐	☒	☐
	ii) Police Protection?	☐	☐	☒	☐
	iii) Schools?	☐	☐	☒	☐
	iv) Parks?	☐	☐	☒	☐
	v) Other public facilities?	☐	☐	☒	☐

4.15.1 Impact Analysis

a) i) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection?

ii) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for police protection?

Less than Significant Impact. The Proposed Project would not affect the service standards related to police protection and fire protection. The Proposed Project site is located approximately 1 mile southeast of the Redlands Police Station and Redlands Fire Station 264 (Google 2023).

The Proposed Project would not result in population growth requiring the expansion of existing services or the creation of new services. In addition, there would be no demand for increased police and fire protection throughout the area. The area is currently being serviced by the Redlands Police Station and Fire Station 264 and would continue to receive the same services as nearby land uses. While there may be temporary travel delays during construction with the presence of construction vehicles entering and exiting the Project area transporting heavy equipment, they would not create a long-term and significant delay for police protection in the area. Impacts would be less than significant.

iii) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for schools?

Less than Significant Impact. There are no schools within ¼ mile of the proposed Project. The nearest schools include the Redlands Adventist Academy located 0.9 miles to the South, and Orangewood High School and Redlands eAcademy (located on the Orangewood High School campus) approximately 0.5 mile to the Southeast. Both locations are on the other side of I-10 from the Project site.

Despite its proximity, the development of the Proposed Project would not induce population growth requiring the creation of new services. Additionally, The Proposed Project would not increase the demand for schools in the City. While there may be temporary travel delays during construction with the presence of construction vehicles and equipment traveling along the roadway, these would occur during construction and are not expected to create long term and significant delay to those accessing the school campus. Impacts would be less than significant.

iv) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for parks?

Less than Significant Impact. The Proposed Project would not induce population growth requiring the extension of existing or creation of new park services. The nearest parks to the Project site is the Community Park located at East San Bernardino Avenue and Church Street, approximately 1 mile to the northeast, and Terrace Park, approximately one mile east of the Project site. The construction and operation of the Proposed Project would not result in the deterioration or alteration of nearby parks. Impacts, therefore, would be less than significant because of the Project's distance from the parks.

v) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for other public facilities?

Less than Significant Impact. The Proposed Project would not induce growth requiring the extension of existing or creation of new services. Construction of the Proposed Project would not result in the demand for expansion or the addition of new service areas as the Project site, and surrounding areas are developed and are serviced by existing utilities and other service providers. Impacts would be less than significant.

4.16 RECREATION

16.	RECREATION. Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☐	☒
(b)	Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☐	☒

4.16.1 Impact Analysis

a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

No Impact. The increased use of existing parks and recreational facilities typically results from a substantial increase in population growth or a lack of recreational facilities in an area. The Proposed Project is the construction of an automobile facility within the commercial district area of the Specific Plan. The Proposed Project would not result in a substantial increase in population growth that would increase the use of existing recreational facilities as it does not propose new residential facilities, nor does it involve the construction or removal of recreational facilities.

The Proposed Project would create temporary and permanent employment with construction and operation of the Proposed Project. The anticipated number of temporary and permanent employees would not result in an increased use of existing neighborhood due to the temporary presence of the construction workers. Additionally, employees of the Proposed Project are expected to be filled by the local workforce. Therefore, the Proposed Project would not result in the substantial physical deterioration of recreational facilities. Therefore, no impacts would occur associated with parks or recreational facilities.

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

No Impact. The Proposed Project does not include construction or expansion of recreational facilities. The Project site is undeveloped and zoned for commercial uses. Properties surrounding the Project site consist of various commercial businesses, or lands designated for commercial use. Therefore, the Proposed Project would not create an adverse physical effect on the environment through construction or expansion of recreational facilities, resulting in no impact.

4.17 TRANSPORTATION

17.	TRANSPORTATION. Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadways, bicycle and pedestrian facilities?	☐	☐	☒	☐
(b)	Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	☒	☐
©(c)	Substantially increase hazards due to a geometric design feature (e. g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐
(d)	Result in inadequate emergency access?	☐	☐	☒	☐

4.17.1 Impact Analysis

Kimley-Horn prepared a Traffic Study for the Proposed Project dated April 2024. The Traffic Study (Appendix K) was prepared to evaluate and address the traffic-related effects from the Proposed Project.

As described in Appendix K, existing traffic volumes for the study intersections were collected in June 2023, while school was in session. Under Existing Conditions, all study intersections currently operate at an acceptable Level of Service during the morning and evening peak hours. The project is estimated to generate approximately 552 trips daily, with 15 trips in the morning peak hour and 27 trips in the evening peak hour.

a) *Would the project conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadways, bicycle, and pedestrian facilities?*

The Traffic Study in Appendix K was conducted in accordance with the City of Redlands traffic study requirements, including Measure "U", and in accordance with the San Bernardino Association of Governments (SANBAG) Congestion Management Program (CMP) requirements. Project-related traffic volumes were added to existing volumes to establish the conditions for the Existing Conditions Plus Project scenario. With the addition of project traffic to existing volumes, all study intersections would continue to operate at an acceptable Level of Service. The details of the analysis are included in Appendix K. Note that CEQA Guidelines section 15064.3(a) states, "a project's effect on automobile delay shall not constitute a significant environmental impact" for CEQA analysis purposes. Only VMT may be used to evaluate transportation impacts under CEQA (see part "b" below for further discussion).

The main access to the Project site will be through West Lugonia Avenue and New York Street. Vehicular access provisions for the Project site would be provided via one unsignalized full-movement driveway at the intersection of New York Street and Brockton Avenue. Based on the City of Redland's Measure "U" requirements, no improvements are required for the proposed project. Therefore, the Proposed Project would not conflict with any program or plan addressing the circulation system in the Project area, resulting in a less than significant impact.

b) Would the project Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

Less than Significant. Senate Bill 743 (SB 743) was approved by the California legislature in September 2013. SB 743 requires changes to CEQA, specifically directing the Governor's Office of Planning and Research (OPR) to develop alternative metrics to the use of vehicular "Level of Service" (LOS) for evaluating transportation projects. OPR has prepared a technical advisory ("OPR Technical Advisory") for evaluating transportation impacts in CEQA and has recommended that VMT replace LOS as the primary measure of transportation impacts. The Natural Resources Agency has adopted updates to CEQA Guidelines to incorporate SB 743 that requires VMT for the purposes of determining a significant transportation impact under CEQA.

The City of Redlands CEQA Assessment VMT Analysis Guidelines provide details on appropriate screening thresholds that can be used to identify when a proposed land use project is anticipated to result in a less-than-significant impact without conducting a more detailed level analysis. Screening thresholds include the following three categories:

1. Transit Priority Area (TPA) Screening
2. Low VMT Area Screening
3. Project Type Screening

Land development projects that meet one or more of the above screening thresholds may be presumed to create a less-than-significant impact on transportation and circulation. The screening thresholds were reviewed and evaluated for this project.

Projects located within a TPA may be presumed to have a less-than-significant impact. A TPA is defined as a half-mile area around an existing major transit stop along a high-quality transit corridor. 'Major transit stop' means a site containing an existing rail station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and evening peak commute periods. A 'high-quality transit corridor' means a corridor with a fixed route bus service with service intervals no longer than 15 minutes during the peak commute hours.

Based on the San Bernardino County Transportation Authority (SBCTA) VMT Screening Tool, the Project is located within a TPA. However as provided in Appendix K, based on discussion with City staff, because the Project has a floor area ratio (FAR) of less than 0.75 and includes more parking than required by the jurisdiction, the TPA screening would not apply. Therefore, TPA Screening criteria is not met by the Project.

Projects located within a low VMT generating area (VMT per worker, 15% below County baseline) may be presumed to have a less-than-significant impact. Based on the SBCTA VMT Screening Tool, the project is not located in a Low VMT Area. The results of the SBCTA VMT Screening Tool are provided in Appendix K.

The proposed Used Auto Sales and Service Facility project is intended to serve the local community. The nearest CarMax locations in the Redlands/Calimesa/Beaumont area (along the I-10) is approximately 20 to 30 miles away to the west in the City of Riverside (7980 Auto Drive) and even farther way to the east in the City of Palm Desert (73450 Dinah Shore Drive). With the proposed project location in the City of Redlands, residents and employees in the Redlands/Calimesa/Beaumont

area would not travel as far to work nor travel as far to receive the services that the Proposed Project can provide. As a result, the overall VMT in the noted area would be reduced by providing a retail project that is local serving in nature. As such, the proposed project meets the intent of SB 743 due to the reduction of VMT by providing a local-serving use.

Per the City of Redlands CEQA Assessment VMT Analysis Guidelines, based on the proposed use and estimated daily trips for the project, the Proposed Project would generate less than 3,000 MT CO_{2e} per year (2,823.70 MT CO_{2e} per year) as discussed in Section 4.9.1 Greenhouse Gases. As a result, the Proposed Project can be presumed to have a less-than-significant VMT impact and would meet the Project Type Screening criteria.

Based on review of the VMT screening criteria, the project meets the Project Type Screening threshold. Therefore, the project would result in a less-than-significant transportation impact, and no additional VMT analysis is required.

c) *Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g. farm equipment)?*

Less than Significant Impact. The Proposed Project would introduce new traffic flows along New York Street, including ingress and egress to the Project site. While this introduces new features to the site, the Project construction does not include sharp curves or dangerous intersections. Additionally, the Proposed Project is not an incompatible use to the area. Impacts therefore would be less than significant.

d) *Would the project result in inadequate emergency access?*

Less than Significant Impact. The Project site is accessible through Lugonia Avenue and Colton Avenue. Construction and operation of the Proposed Project would not interrupt emergency access to and from the Project site. As described in Section 1.3 Project Description, an additional driveway for emergency access with Knox Box access only will be at the north end of the sales/display lot. Additionally, the operation of the Proposed Project would not interfere with implementation the San Bernadino County Emergency Operations Plan or the City's Hazard Mitigation Plan. Impacts therefore would be less than significant.

4.18 TRIBAL CULTURAL RESOURCES

18.	**TRIBAL CULTURAL RESOURCES. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:**	**Potentially Significant Impact**	**Less than Significant With Mitigation Incorporated**	**Less Than Significant Impact**	**No Impact**
(a)	Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	☐	☐	☐	☒

18.	**TRIBAL CULTURAL RESOURCES. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:**	**Potentially Significant Impact**	**Less than Significant With Mitigation Incorporated**	**Less Than Significant Impact**	**No Impact**
(b)	A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☒	☐	☐

4.18.1 Impact Analysis

a) *Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?*

No Impact. As verified by the cultural resources survey for the Proposed Project conducted dated December 2023 (Appendix D), the Proposed Project site does not contain any structures listed or eligible for listing in the CRHR, or in a local register of historic resources as defined in PRC Section 5020.1(k). No impact would occur.

b) *Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?*

Less Than Significant Impact with Mitigation Incorporated. On October 9, 2023, the Chambers Group requested that the NAHC conduct a search of its SLF to determine if resources important to Native Americans have been recorded in the Project footprint and buffer area. On November 29, 2023, the NAHC responded stating that the search results were positive. Based on the results of the record search review and background research, there is potential to encounter buried archaeological and paleontological resources. Similarly, consultation with the Native American groups have indicated the possible presence of additional significant resources.

The City sent letters to all of the tribes recommended by the NAHC to conduct consultation. The City of Redlands received several initial responses from multiple Native American Tribes and opened

consultations accordingly in compliance with State law. No information or evidence has been presented to the City indicating that any tribal cultural resources are present or likely to be present on the project site or in the immediate vicinity of the project site. However, the City has agreed to implement certain mitigation measures to minimize any potentially significant impacts in the event of any inadvertent discoveries of tribal cultural resources. The City received suggested mitigation measures from the following tribes: Kizh Nation, the Morongo Band of Mission Indians, and the Yuhaaviatam of San Manuel Nation. As such, in addition to the mitigation measures noted in CUL-1 through CUL-6, TCR-1 through TCR-4 will be implemented to address and avoid any potential impacts to tribal cultural resources (TCR). Impacts associated with substantial adverse change in the significance of a tribal cultural resource are therefore less than significant with mitigation incorporated.

TCR-1 **Tribal Monitoring Services Agreement.** Prior to the issuance of the grading permits, the Applicant shall enter into a Tribal Monitoring Services Agreement with the Consulting Tribe(s). There shall be one monitor for the Gabrieleño Band of Mission Indians-Kizh Nation, and one monitor for the other Consulting Tribes (Morongo Band of Mission Indians, Yuhaaviatam of San Manuel Nation). The Tribal Monitors shall be on-site during all ground-disturbing activities (including, but not limited to, clearing, grubbing, tree and bush removal, grading, trenching, fence post placement and removal, construction excavation, excavation for all utility and irrigation lines, and landscaping phases of any kind). The Tribal Monitor shall have the authority to temporarily divert, redirect, or halt the ground-disturbing activities within 60 feet of the inadvertent discovery to allow identification, evaluation, and potential recovery of tribal cultural resources.

A copy of the executed monitoring agreement with each Consulting Tribe shall be submitted to the lead agency prior to the commencement of any ground-disturbing activity, or the issuance of any permit necessary to commence a ground-disturbing activity.

The monitor will complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground-disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs will identify and describe any discovered TCRs, including but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc., (collectively, tribal cultural resources, or "TCR"), as well as any discovered Native American (ancestral) human remains and burial goods. Copies of monitor logs will be provided to the project applicant/lead agency upon written request to the Tribe.

On-site tribal monitoring shall conclude upon the latter of the following: (1) written confirmation to the Consulting Tribe[s] from a designated point of contact for the project applicant/lead agency that all ground-disturbing activities and phases that may involve ground-disturbing activities on the project site or in connection with the project are complete; or

(2) a determination and written notification by the Consulting Tribe[s] to the project applicant/lead agency that no future, planned construction activity and/or development/construction phase at the project site possesses the potential to impact Consulting Tribe[s]TCRs.

TCR-2 **Native American Monitor.** Native American monitor(s) selected by the tribe should be present at the Project kickoff meeting, and shall be provided with a schedule of initial ground-disturbing activities, be on-site at the commencement of ground-disturbing activities related to the Project, and as the Project proceeds adjusting personnel and schedule as needed to provide sufficient oversight. The developer, lead contractor, and all subcontractors shall routinely update the Native American monitor(s) and their scheduling representative(s) regarding scheduling for ground-disturbing activities, and changes to said schedule, such that there is sufficient advance notice that a Native American monitor can be scheduled accordingly.

TCR-3 **Worker Environmental Awareness Program (WEAP)/Pre-Grade Meeting.** Prior to commencing construction activities and thus prior to any ground disturbance in the Proposed Project site, the Tribal Monitor(s)shall conduct initial WEAP training/pre-grade meeting for all construction personnel, including supervisors, present at the outset of the Project construction work phase, for which the lead contractor and all subcontractors shall make their personnel available. This WEAP training will educate construction personnel on how to work with the tribal monitor(s) to identify and minimize impacts to tribal cultural resources and maintain environmental compliance, and be performed periodically for new personnel coming on to the Project as needed. The retained Consulting Tribe(s) representative(s) shall attend the WEAP meeting with the grading contractors to explain and coordinate the requirements of the monitoring plan.

TCR-4 **Inadvertent Discovery of Human Remains.** The Consulting Tribes request the following specific conditions to be imposed in order to protect any inadvertent discovery of Native American human remains and/or cremations. No photographs are to be taken except by the County Coroner, with written approval by the Consulting Tribe(s) if applicable.

A. Should human remains and/or cremations be encountered on the surface or during any and all ground-disturbing activities (i.e., clearing, grubbing, tree and bush removal, grading, trenching, fence post placement and removal, construction excavation, excavation for all water supply, electrical, and irrigation lines, and landscaping phases of any kind), work in the immediate vicinity of the discovery shall immediately stop within a 100-foot perimeter of the discovery. The area shall be protected; project personnel/observers will be restricted. The County Coroner is to be contacted within 24 hours of discovery. The County Coroner has 48 hours to make his/her determination pursuant to State and Safety Code §7050.5. and PRC § 5097.98.

B. In the event that the human remains and/or cremations are identified as Native American, the Coroner shall notify the NAHC within 24 hours of determination pursuant to subdivision (c) of HSC §7050.5.

C. In the event that the human remains and/or cremations are identified as Native American, the Coroner shall notify the NAHC within 24 hours of determination pursuant to subdivision (c) of HSC §7050.5.

D. If any of the Consulting Tribes has been named the MLD, the Tribe may wish to rebury the human remains and/or cremation and sacred items in their place of discovery with no further disturbance where they will reside in perpetuity. The place(s) of reburial will not be disclosed by any party and is exempt from the California Public Records Act (California Government Code § 6254[r]). Reburial location of human remains and/or cremations will be determined by the Tribe's MLD, the landowner, and the City Planning Department.

TCR-5: **Pre-Grade Meeting.** A Native American monitor(s) selected by the tribe should be present at the Project kickoff meeting, be provided with a schedule of initial ground-disturbing activities and be on-site at the commencement of ground-disturbing activities related to the Project, and as the Project proceeds adjusting personnel and schedule as needed to provide sufficient oversight. The Consultant, lead contractor, and all subcontractors shall routinely update the Native American monitor and their scheduling representative(s) regarding scheduling for ground-disturbing activities, and changes to said schedule, such that there is sufficient advance notice that a Native American monitor can be scheduled accordingly.

TCR-6 **Inadvertent Discovery of Tribal Cultural Resources and Treatment.** In the event that previously unidentified tribal cultural resources are unearthed during construction, the Tribal Monitor(s) shall have the authority to temporarily divert and/or temporarily halt ground-disturbance operations in the area of discovery (within 60 feet) to allow for the evaluation of potentially significant tribal cultural resources. Tribal isolates and clearly non-significant tribal cultural deposits shall be minimally documented in the field and collected so the monitored grading can proceed.

If a potentially significant tribal cultural resource(s) is discovered, work shall stop within a 60-foot perimeter of the discovery and an Environmentally Sensitive Area (ESA) physical demarcation/barrier constructed. All work shall be diverted away from the vicinity of the find, so that the find can be evaluated by the Tribal Monitor(s). The Archaeologist and/or Tirbal Monitor(s) shall notify the Lead Agency and other Consulting Tribe(s) of said discovery. The Tribal Monitor(s), in consultation with the Lead Agency and the other Consulting Tribe(s), shall determine the significance of the discovered tribal cultural resource. A recommendation for the treatment and disposition of the Tribal Cultural Resource shall be made by the Tribal Monitor(s), in consultation with the Lead Agency and the other Consulting Tribe(s) and be submitted to the Lead Agency for review and approval. Below are the possible treatments and dispositions of significant cultural resources in order of CEQA preference:

A. Full avoidance
B. If avoidance is not feasible, Preservation in place.

C. If Preservation in place is not feasible, all items shall be reburied in an area away from any future impacts and reside in a permanent conservation easement or Deed Restriction.
D. If all other options are proven to be infeasible, data recovery through excavation and then curation in a Curation Facility that meets the Federal Curation Standards (CFR 79.1)

TCR-7 **Final Report.** The final report(s) created as a part of the project (AMTP, isolate records, site records, survey reports, testing reports, etc.) shall be submitted to the Lead Agency and Consulting Tribe(s) for review and comment, to the extent permitted by law. After approval of all parties, the final reports are to be submitted to the local repository (Eastern Information Center or SCCIC), as well as providing follow-up reports of any finds to the Eastern Information Center or SCCIC, as required, and the Consulting Tribe(s) if authorized by law.

4.19 UTILITIES AND SERVICE SYSTEMS

19.	UTILITIES/SERVICE SYSTEMS. Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☒	☐
(b)	Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	☐	☐	☒	☐

(d)	Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☒	☐
(e)	Comply with federal, state, and local management and reduction statutes and regulations related to solid wastes?	☐	☐	☒	☐

4.19.1 Impact Analysis

The City of Redlands operates its own water and wastewater utilities, cemetery, airport, landfill and solid waste services (City 2023).

a) *Would the project require or result in the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or expansion of which could cause significant environmental effects?*

Less than Significant Impact. The project site would be serviced by Southern California Gas Company for natural gas, Southern California Edison for electricity, Charter Communications for telecommunication services, and the City of Redlands for water and wastewater. There are existing connections in the vicinity of the project site for gas and electricity and Will Serve letters have been received from Southern California Gas Company and Charter Communications. No off-site expansions required.

Wastewater generation during operations would be minimal, as most of the water used in the carwash would be recycled and restroom facilities would serve customers and the approximately 200 workers. The City of Redlands 2021 Wastewater Master Plan capacity analysis indicated that the present treatment system is sufficient to meet projected demands in the near terms, long term, and ultimate buildout (City 2021b). As described in the Drainage Report (Appendix I) the analysis of the proposed storm water management system design would accommodate a 100-year storm up to a 24-hour event. It has been estimated, by the Applicant, that the project would use 33,630 gallons of freshwater per month, which is equivalent to 1.24 acre feet per year (AF/Y). The City of Redlands provides water to the City and its Sphere of Influence. The Redlands 2020 UWMP that is Part 2 Chapter 4 of the 2020 Upper Santa Ana River Watershed Integrated Regional UWMP indicates the 2025 water supply including recycled water is 31,039 AF. The projected water use in 2025 is 25,818 AF including 3,081 AF of Commercial/Institutional use (City 2021b). The projected use by the project is .004 percent of the projected Commercial/Institutional use in 2025. Therefore, there are less than significant impacts associated with relocated or new construction of utilities.

b) *Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal dry and multiple dry years?*

Less than Significant Impact. As described in Section 4.9 Hydrology and Water Quality, Redlands obtains water from surface water from Mill Creek Watershed and Santa Ana River Watershed, groundwater from the Bunker Hill Subbasin and Yucaipa Subbasin, recycled water and water imported from the SWP as needed. During wet years, the City contributes to regional efforts to recharge the Bunker Hill Basin so there is availability in dry years when other sources may be limited (City 2021b). The 2020 Upper Santa Ana River Watershed Integrated Regional UWMP includes an analysis of the water supply reliability assessment up to five consecutive dry water years. The assessment is based on a 10% increase throughout the five-year drought, to be conservative. The results of the analysis indicated that Redlands does not anticipate any water shortage due to consecutive dry years. Therefore, the proposed project included in the East Valley Corridor Specific Plan area projected to consume 1.24 AF/Y would have a less than significant impact on water supply in the foreseeable future during multiple dry years.

c) *Would the project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?*

Less than Significant Impact. The City of Redlands 2021 Wastewater Master Plan future flow projections included 1.1 million gallons per day (MGD) of wastewater flow for 55 developments

currently planned to be built between 2020 and 2030 in addition to the City-wide forecasted population growth. The development plans would include the proposed project because it is part of the East Valley Corridor Specific Plan area and would be constructed before 2030. Therefore, adequate capacity to serve the project is available and the associated impacts would be less than significant.

d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

e) Would the project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

d &e) **Less than Significant Impact.** The California Street Landfill is owned and operated by the City of Redlands and has a remaining capacity of 5,168,182 cubic yards and a permitted throughput of 829 tons per day per CalRecycle. As stated in the Redlands Strategic Plan, in 2017, the City Council adopted a new solid waste rate structure, which included funding designated for capital improvement projects and the purchase of more efficient landfill equipment. This has resulted in increased usable capacity of the landfill by 42 percent. SB 1383, effective January 1, 2022, brought regulations aimed to divert 50% of organic waste from landfills below 2014 levels by 2020 and 75% by 2025. The Strategic Plan also states the City has met and exceeded all required state mandates outlined in SB 1383.

The Project proposes to construct a pre-owned automobile sales, refurbishing, and reconditioning facility with outdoor vehicle storage on currently undeveloped land; therefore, no demolition is required. CalRecycle provides an estimate of 0.9 lb/100 sq ft/ day for auto dealer and service station. The proposed facility has 49,491 sq ft of building footprint. Using the CalRecycle estimate, the facility would generate 445 lbs per day (0.2225 tons per day) resulting in approximately 0.03 percent of the permitted throughput at the California Street Landfill (CalRecycle 2006, 2023).

4.20 WILDFIRE

20.	WILDFIRE. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
(b)	Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☐	☒
(c)	Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☒	☐
(d)	Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☐	☒

4.20.1 Impact Analysis

a) Would the project impair an adopted emergency response plan or emergency evacuation plan?

Less than Significant Impact. The Proposed Project site is not located within a very high fire hazard severity zone of state or local responsibility (CAL FIRE 2023). In addition, the Proposed Project would not interfere with an evacuation or emergency plan as discussed in Section 4.8.1 f) Hazards and Hazardous Materials. Impacts would be less than significant.

b) Would the project, due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

No Impact. As described in Section 4.8.1 g) Hazards and Hazardous Materials, the project site will be primarily covered with asphalt, cement, and buildings as 11.92 acres will be impervious areas and 5.4 acres would be landscaped/grassy areas. It would not exacerbate wildfire risk. The Project site is located outside of the State and locally classified as a very high fire hazard severity zone. Much of the area surrounding the proposed Project is built out and the undeveloped area has minimal vegetation. Therefore, the project would not exacerbate wildfire risks, resulting in no impact.

c) Would the project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Less than Significant. New infrastructure would be required for the proposed project operations. However much of the electrical distribution in the area is underground. Currently, it is not known if the proposed project would have all underground utility connections. However as stated in b), the Project site would not exacerbate wildfire risks, because it is an essentially built out area. New roads would not be constructed as part of the project. The project would have a less than significant impact associated with infrastructure that may exacerbate fire risk.

d) Would the project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability or drainage changes?

No Impact. As discussed in Section 4.6.1 iv) Geology and Soils, the Project area is not in a landslide susceptibility zone (County 2021). The project site is relatively flat which is supported by the Geotechnical Engineering Report in Appendix E. Most of the surrounding area is built out and the undeveloped area has minimal vegetation. Therefore, there would be no impact from the Project associated with downslope or downstream flooding or landslides.

4.21 MANDATORY FINDINGS OF SIGNIFICANCE

21.	MANDATORY FINDINGS OF SIGNIFICANCE.	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?	☐	☒	☐	☐
(b)	Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects?)	☐	☐	☒	☐
(c)	Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☒	☐	☐

4.21.1 Impact Analysis

a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?

Less than Significant Impact with Mitigation. A Biological Resources Letter Report and Cultural Resources Survey and Study Letter Report (Appendices C and D) were prepared to identify if the Proposed Project would have the potential to substantially degrade the quality of the biological resources and eliminate important examples of major periods of California history or prehistory.

The results of the Biological Resources Letter Report (Appendix C), as analyzed in Section 4.4, resulted in less than significant impacts to most of the resources identified, such as riparian habitats and natural communities, federally protected wetlands, migratory fish, or wildlife species, and for areas that have been identified to be in habitat conservation plans. Mitigation measures are required to ensure that special status species of concern (BUOW) and nesting birds would have a less than significant impact during construction (MM BIO-1 and MM BIO-2).

The results of the Cultural Report, as analyzed in Sections 4.5 Cultural Resources, 4.7 Geology and Soils, and 4.18 Tribal Resources, resulted in less than significant impacts to historical resources and less than significant impacts with mitigation related to archaeological and paleontological resources. As discussed in Appendix D (Cultural Report), fossil localities have been recorded within the area

surrounding the Project site and the existence of similar fossil-bearing geologic units are mapped underlying the Project site. There is a possibility of buried resources being identified below surface during grading and other ground disturbances. Implementation of mitigation measures CUL-1 through CUL-4, GEO-2 and GEO-3, and TRC 1 through 7 would result in less than significant impacts to the potential discovery of these resources.

b) *Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)*

Less Than Significant Impact. The Project does not have potential impacts that are individually limited, but cumulatively considerable. Based on the analysis contained in the above Sections, the proposed Project would not result in any significant and unmitigable impacts in any environmental categories. In all cases, effects associated with the Project would be limited to the existing Project Area/disturbance footprint and either result in no new impacts, less than significant impacts, or less than significant impacts with mitigation incorporated. As such, Project impacts are of such a negligible degree that they would not result in a significant contribution to any cumulative impacts.

According to the City's Planning Division Major Project List, updated in April 2024, the Tennessee Village Project is in progress. The Tennessee Village project is located east of Tennessee Street, approximately 500 feet north of East Lugonia Avenue, and approximately 950 feet north of the Project site. The Tennessee Village project proposes amending the zoning designation from EVCSP to C-3 for construction of a mixed-use project, including 460 apartments and 18,000 sq. ft. of commercial space (City 2024). Also, the Liberty Lane Apartments are about a quarter mile north on the opposite side of W Lugonia Avenue from the Project site. The Liberty Lane Apartments are comprised of 80 apartments for veterans and special needs households. This Project is currently under construction.

While these projects will occur nearby the Proposed Project, the impacts associated with the Proposed Project would not be significant when compared to applicable thresholds; therefore, none of the impacts associated with the Project would make cumulatively considerable, incremental contributions to significant cumulative impacts.

c) *Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?*

Less than Significant Impact with Mitigation. Substantial adverse effects on human beings directly or indirectly are primarily resulting from impacts to air quality, geology and soil, greenhouse gas emissions, hazardous materials, land use, noise, and wildfire. A Health Risk Assessment was prepared by Kimley-Horn dated January 2024 to evaluate potential health risks associated with TAC and DMP from the construction of the Project. The analysis resulted that impacts related to health risk from the Project would be less than significant and the Project's contribution would be less than cumulatively considerable (Appendix B).

As discussed in 4.7 Geology and Soils, unstable soils are present on the Project site that could create subsidence. Methods and specifications to replace the soil to eliminate the risks of soil instability were identified in Appendix E and incorporated into mitigation measure GEO-1 to reduce impacts associated with unstable soil to less than significant.

In Section 4.9 Hazards and Hazardous Materials, a hazardous waste site approximately 602 feet to the northeast of the project was identified and previously determined to have heating oil impacting soil. DTSC noted that the groundwater was not adequately characterized to determine if a release occurred at Teledyne. As the contaminated site is near the Project site, and the characterization of the impacts may not have been conclusive, mitigations measures HAZ-1 and HAZ-1 have been included as a precaution to avoid toxic exposure to workers and the public if unanticipated contaminated soil is encountered during construction. Therefore, implementation of the mitigations would result in a less than significant impact associated hazardous materials site resulting in creation of a significant hazard to the public or the environment would be less than significant.

As analyzed in this initial study and the technical reports attached in the appendices, impacts associated with air quality, greenhouse gas, land use, noise, and wildfire have been determined to be less than significant as the Proposed Project's construction and operations will comply with the City's General Plan policies and Municipal Code. Impacts therefore will be less than significant.

SECTION 5.0 – – MITIGATION, MONITORING AND REPORTING PLAN

Public Resources Code, Section 21081.6 (Assembly Bill 3180) requires that mitigation measures identified in environmental review documents prepared in accordance with California Environmental Quality Act (CEQA) are implemented after a project is approved. Therefore, this Mitigation Monitoring and Reporting Program (MMRP) has been prepared to ensure compliance with the adopted mitigation measures during the Pre-, During, and Post-construction phases of Used-Car Retail Development and Refurbishing Facility Project and Amendment No. 51 to the East Valley Corridor Specific Plan.

The City is the agency responsible for implementation of the mitigation measures identified in the MND. This MMRP provides the City with a convenient mechanism for quickly reviewing all the mitigation measures including the ability to focus on select information such as timing. The MMRP includes the following information for each mitigation measure:

- The phase of the project during which the required mitigation measure must be implemented, and
- The monitoring agency.

The MMRP includes a checklist to be used during the mitigation monitoring period. The checklist will verify the name of the monitor, the date of the monitoring activity, and any related remarks for each mitigation measure.

Mitigation Measure	Implementation Phase	Monitoring Agency	Level of Significance After Mitigation Less than Significant (LTS)	Verification of Compliance		
				Initial	Date	Remarks
BIOLOGICAL RESOURCES						
BIO-1: **Preconstruction Survey** A preconstruction burrowing owl (BUOW) survey shall be conducted no less than 14 days prior to initiating ground disturbance (including clearing, grubbing, grading), and a final survey within 24 hours prior to ground disturbance, to determine whether BUOW or BUOW burrows are present within or adjacent to the Project site, and to avoid negative impacts and direct take of BUOW. If BUOW are confirmed on-site, avoidance measures will be developed and implemented in compliance with and in coordination with CDFW. The results of the survey shall be documented and filed with the City.	Pre-Construction	Project Proponent, City of Redlands	LTS			
BIO-2: Nesting Bird Survey Construction activities shall take place outside nesting season (nesting typically February 1 to August 31) to the greatest extent practicable. If construction activities occur during nesting season, a preconstruction nesting bird survey shall be conducted within seven days prior to initiation of ground-disturbing activities (including any clearing, grubbing, or grading), or according to the to the survey timing in the Project permits. If an active nest is identified, a minimum avoidance buffer around the active nest should be determined and implemented by a qualified biologist to avoid impacts to the active nest. The buffer shall be established with flagging and stakes or construction fencing. A minimum 100-foot no-disturbance buffer shall be placed around passerine nests. For raptors, the no-disturbance buffer shall be expanded to 500 feet. The buffer should be maintained during physical ground-disturbing activities. Once the qualified biologist has determined that nesting has ceased, and the nestlings have fledged and are no longer using the nest, the buffer may be removed. Biological monitoring should be conducted as needed during the nesting season to monitor the status of any active nests, survey for any new nests, and to refresh nesting bird surveys after any periods of construction inactivity. The results of the survey shall be documented and filed with the City.	Pre-Construction/Construction	Project Proponent, City of Redlands	LTS			

Mitigation Measure	Implementation Phase	Monitoring Agency	Level of Significance After Mitigation Less than Significant (LTS)	Verification of Compliance		
				Initial	Date	Remarks
CULTURAL RESOURCES						
CUL-1 Retain Cultural Resource Consultant. The Developer shall retain the services of a qualified cultural resources consultant "Consultant" and require that all initial ground disturbing work be monitored by a cultural resources monitor. This includes all initial construction activities that will potentially expose or encounter intact subsurface sediments underlying the Project site. The cultural resources consultant shall provide a Qualified Archaeologist, meeting the Secretary of the Interior Standards (U.S. Department of the Interior, 2008), and require that all initial ground-disturbing work be monitored by a cultural resources monitor (monitor) proficient in artifact and feature identification in monitoring contexts. The Consultant (Qualified Archaeologist and/or monitor) shall be present at the Project construction phase kickoff meeting. The Archaeologist will conduct Cultural Resource Sensitivity Training. The training session will focus on the archaeological and cultural resources that may be encountered during ground-disturbing activities as well as the procedures to be followed in such an event. The Archaeologist shall be present during all ground-disturbing activities to identify any known or suspected archaeological and/or cultural resources.	Pre-Construction/Construction	Project Proponent, City of Redlands	LTS			
CUL-2 Prior to commencing construction activities and thus prior to any ground disturbance in the Proposed Project site, the Consultant shall conduct initial Worker Environmental Awareness Program (WEAP) training to all construction personnel, including supervisors, present at the outset of the Project construction work phase, for which the lead contractor and all subcontractors shall make their personnel available. This WEAP training will educate construction personnel on how to work with the archaeological/cultural Monitor(s) to identify and minimize impacts to archaeological and cultural resources and maintain environmental compliance and be performed periodically for new personnel coming on to the Project as needed.	Pre-Construction	Project Proponent, City of Redlands	LTS			

Mitigation Measure	Implementation Phase	Monitoring Agency	Level of Significance After Mitigation Less than Significant (LTS)	Verification of Compliance		
				Initial	Date	Remarks
CUL-3 The developer or contractor shall provide the Consultant and Monitor with a schedule of initial potential ground disturbing activities. A minimum of 48-hours' notice will be provided to the archaeological Consultant and/or Monitor of commencement of any initial ground disturbing activities that have potential to expose or encounter intact subsurface sediments underlying the Project site. These activities may include grading, trenching, and mass excavation. ▪ As detailed in the schedule provided, a monitor shall be present on-site at the commencement of ground-disturbing activities related to the Project. The Consultant shall observe initial ground disturbing activities and, as they proceed, adjust the monitoring approach as needed to provide adequate observation and oversight. All monitors will have stop-work authority to allow for the recordation and evaluation of finds during construction. The monitor will maintain a daily record of observations as an ongoing reference resource and to provide a resource for final reporting upon completion of the Project. ▪ The Consultant, the lead contractor, and subcontractors shall maintain a line of communication regarding schedule and activity such that the Consultant is aware of all ground-disturbing activities in advance in order to provide appropriate oversight.	Pre-Construction/Construction	Project Proponent, City of Redlands	LTS			
CUL-4 If archaeological or cultural resources are discovered, construction shall be halted within 50 feet of any archaeological or cultural artifacts or features and within 100 feet of any potential human remains at the discretion of the Archaeologist, and shall not resume until the Qualified Archaeologist, in consultation with consulting Tribe(s) and the City, can determine the significance of the find and/or the find has been fully investigated, appropriately documented, and cleared. (See also TCR -1 through TCR-7.)	Pre-Construction/Construction	Project Proponent, City of Redlands	LTS			
CUL-5 At the completion of all ground disturbing activities, the Consultant shall prepare a Cultural Resources Monitoring Report summarizing all monitoring efforts and observations, as performed, and any and all prehistoric or historic archaeological finds, as well as providing follow-up reports of any finds to the Eastern Information Center or SCCIC, as required.	Construction/Post-Construction	Project Proponent, City of Redlands	LTS			

Mitigation Measure	Implementation Phase	Monitoring Agency	Level of Significance After Mitigation Less than Significant (LTS)	Verification of Compliance		
				Initial	Date	Remarks
GEOLOGY and SOILS						
GEO-1: Excavate Loose Soil and Replace with Engineered Fill The subsurface soils within the proposed building pads will be removed to a minimum depth of 4 feet below existing site grades, or 2 feet below bottom of proposed foundations, whichever is greater. Deeper removals may be required if loose soils are still encountered at a depth of 4 feet below ground surface. Grading for the proposed structures should incorporate the limits of the footings plus 3 feet beyond the outside edge of perimeter footings. The bottoms of excavations should be probed to determine if it is firm and unyielding. Localized deeper removals may be needed where soft soils are encountered at the excavation bottom. Compacted engineered fill should then be placed to design finish grade elevations. Subgrade soils beneath exterior slabs and pavements should be removed to a depth of 1 foot below the proposed pavement section, including bottom of proposed aggregate base materials. Compacted engineered fill should then be placed to design elevations. Exposed areas receiving fill, once properly cleared and benched where necessary, should be scarified to a minimum depth of 10 inches, moisture conditioned, and compacted per the compaction requirements of the Terracon 2022 Geotechnical Engineering Report in Appendix E.	Construction	Project Proponent, City of Redlands	LTS			
GEO-2 Qualified Paleontologist. Prior to issuance of a grading permit, the Applicant shall be required to obtain the services of a Qualified Project Paleontologist to remain on call for the duration of the proposed ground-disturbing construction activity. Upon approval or request by the City, a paleontological mitigation plan (PMP) outlining procedures for paleontological data recovery shall be prepared for the Project and submitted to the City for review and approval. The development and implementation of the PMP shall include consultations with the City's Engineering Geologist as well as a requirement that the curation of all specimens recovered under any scenario shall be through an appropriate repository agreed upon by the City. If the City accepts ownership, the curation location may be revised. The PMP shall include developing a multilevel ranking system, or Potential Fossil Yield Classification (PFYC), as a tool to demonstrate the potential yield of fossils within a given stratigraphic unit. The PMP shall outline the monitoring and salvage protocols to address paleontological resources encountered during Project-related ground-disturbing activities, as well as the appropriate recording, collection, and processing protocols to appropriately address any resources discovered.	Pre-Construction/Construction	Project Proponent, City of Redlands	LTS			

Mitigation Measure	Implementation Phase	Monitoring Agency	Level of Significance After Mitigation Less than Significant (LTS)	Verification of Compliance		
				Initial	Date	Remarks
GEO-3 Paleontological Report. At the completion of all ground-disturbing activities, the Project Paleontologist shall prepare a final paleontological mitigation report summarizing all monitoring efforts and observations, as performed in line with the PMP, and all paleontological resources encountered, if any, as well as providing follow-up reports of any specific discovery, if necessary	Construction/Post-Construction	Project Proponent, City of Redlands	LTS			
HAZARDS AND HAZARDOUS MATERIALS						
HAZ-1 Unanticipated Contamination Discovery Plan. An Unanticipated Contamination Discovery Plan (UCDP) will be developed prior to ground disturbing activities on the project site. Contractors will be trained on the requirements of the UCDP during pre-construction environmental training. The UCDP is intended to provide guidance to ensure worker and public safety as well as prevent the spread of further contamination if contaminated soils are encountered during construction of the Project. The UCDP will provide contact information for laboratories that will analyze the samples and solid waste facilities that will accept the contaminated soils. It will identify the procedures for: ▪ Notification and documentation requirements; ▪ Identification of the characteristics of the contaminated soil (e.g., sample methods, vertical and horizontal extent of contamination and chemicals of concern); ▪ Determining baseline at which work can be reinitiated in the area; ▪ handling and/or disposal requirements for any contaminated media unearthed. The UCDP shall be effective during all ground disturbing activities of the Project.	Pre-Construction	Project Proponent, City of Redlands	LTS			

Mitigation Measure	Implementation Phase	Monitoring Agency	Level of Significance After Mitigation Less than Significant (LTS)	Verification of Compliance		
				Initial	Date	Remarks
HAZ-2 Initial Response to Unanticipated Soil Contamination. During excavation, indicators of possible contamination include, but are not limited to: ▪ Stained or discolored earth, as contrasted to adjoining soil; ▪ Fill material containing debris unearthed during trenching or grading; ▪ Household trash covered by earth or other material that appears to be interspersed with industrial debris; ▪ Gasoline smells or other hydrocarbon odors that emanate when the earth is disturbed; or ▪ Oily residue intermixed with earth. ▪ Immediately following discovery of potentially hazardous waste or contaminants, the Contractor will: ▪ Cease work in the vicinity of suspected contamination; ▪ Cordon off or otherwise restrict access to the suspected area to protect workers and the public; ▪ Notify the City and Project authorities; and ▪ Implement the UCDP.	Construction	Project Proponent, City of Redlands	LTS			

Mitigation Measure	Implementation Phase	Monitoring Agency	Level of Significance After Mitigation Less than Significant (LTS)	Verification of Compliance		
				Initial	Date	Remarks
TRIBAL CULTURAL RESOURCES						
TCR-1 Tribal Monitoring Services Agreement. Prior to the issuance of the grading permits, the Applicant shall enter into a Tribal Monitoring Services Agreement with the Consulting Tribe(s). There shall be one monitor for the Gabrieleño Band of Mission Indians-Kizh Nation, and one monitor for the other Consulting Tribes (Morongo Band of Mission Indians, Yuhaaviatam of San Manuel Nation). The Tribal Monitors shall be on-site during all ground-disturbing activities (including, but not limited to, clearing, grubbing, tree and bush removal, grading, trenching, fence post placement and removal, construction excavation, excavation for all utility and irrigation lines, and landscaping phases of any kind). The Tribal Monitor shall have the authority to temporarily divert, redirect, or halt the ground-disturbing activities within 60 feet of the inadvertent discovery to allow identification, evaluation, and potential recovery of tribal cultural resources. A copy of the executed monitoring agreement with each Consulting Tribe shall be submitted to the lead agency prior to the commencement of any ground-disturbing activity, or the issuance of any permit necessary to commence a ground-disturbing activity. The monitor will complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground-disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs will identify and describe any discovered TCRs, including but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc., (collectively, tribal cultural resources, or "TCR"), as well as any discovered Native American (ancestral) human remains and burial goods. Copies of monitor logs will be provided to the project applicant/lead agency upon written request to the Tribe. On-site tribal monitoring shall conclude upon the latter of the following: (1) written confirmation to the Consulting Tribe[s] from a designated point of contact for the project applicant/lead agency that all ground-disturbing activities and phases that may involve ground-disturbing activities on the project site or in connection with the project are complete; or (2) a determination and written notification by the Consulting Tribe[s] to the project applicant/lead agency that no future, planned construction activity and/or development/construction phase at the project site possesses the potential to impact Consulting Tribe[s]TCRs.	Pre-Construction/Construction	Project Proponent, City of Redlands	LTS			

Mitigation Measure	Implementation Phase	Monitoring Agency	Level of Significance After Mitigation **Less than Significant (LTS)**	**Verification of Compliance**		
				Initial	**Date**	**Remarks**
TCR-2 Native American Monitor. Native American monitor(s) selected by the tribe should be present at the Project kickoff meeting, and shall be provided with a schedule of initial ground-disturbing activities, be on-site at the commencement of ground-disturbing activities related to the Project, and as the Project proceeds adjusting personnel and schedule as needed to provide sufficient oversight. The developer, lead contractor, and all subcontractors shall routinely update the Native American monitor(s) and their scheduling representative(s) regarding scheduling for ground-disturbing activities, and changes to said schedule, such that there is sufficient advance notice that a Native American monitor can be scheduled accordingly.	Construction	City of Redlands	LTS			
TCR-3 Worker Environmental Awareness Program (WEAP)/Pre-Grade Meeting. Prior to commencing construction activities and thus prior to any ground disturbance in the Proposed Project site, the Tribal Monitor(s)shall conduct initial WEAP training/pre-grade meeting for all construction personnel, including supervisors, present at the outset of the Project construction work phase, for which the lead contractor and all subcontractors shall make their personnel available. This WEAP training will educate construction personnel on how to work with the tribal monitor(s) to identify and minimize impacts to tribal cultural resources and maintain environmental compliance and be performed periodically for new personnel coming on to the Project as needed. The retained Consulting Tribe(s) representative(s) shall attend the WEAP meeting with the grading contractors to explain and coordinate the requirements of the monitoring plan.	Pre-Construction	City of Redlands	LTS			

Mitigation Measure	Implementation Phase	Monitoring Agency	Level of Significance After Mitigation Less than Significant (LTS)	Verification of Compliance		
				Initial	Date	Remarks
TCR-4 Inadvertent Discovery of Human Remains. The Consulting Tribes request the following specific conditions to be imposed in order to protect any inadvertent discovery of Native American human remains and/or cremations. No photographs are to be taken except by the County Coroner, with written approval by the Consulting Tribe(s) if applicable. A. Should human remains and/or cremations be encountered on the surface or during any and all ground-disturbing activities (i.e., clearing, grubbing, tree and bush removal, grading, trenching, fence post placement and removal, construction excavation, excavation for all water supply, electrical, and irrigation lines, and landscaping phases of any kind), work in the immediate vicinity of the discovery shall immediately stop within a 100-foot perimeter of the discovery. The area shall be protected; project personnel/observers will be restricted. The County Coroner is to be contacted within 24 hours of discovery. The County Coroner has 48 hours to make his/her determination pursuant to State and Safety Code §7050.5. and PRC § 5097.98. B. In the event that the human remains and/or cremations are identified as Native American, the Coroner shall notify the NAHC within 24 hours of determination pursuant to subdivision (c) of HSC §7050.5. C. The NAHC shall immediately notify the person or persons it believes to be the MLD. The MLD has 48 hours, upon being granted access to the Project site, to inspect the site of discovery and make his/her recommendation for final treatment and disposition, with appropriate dignity, of the remains and all associated grave goods pursuant to PRC §5097.98. D. If any of the Consulting Tribes has been named the MLD, the Tribe may wish to rebury the human remains and/or cremation and sacred items in their place of discovery with no further disturbance where they will reside in perpetuity. The place(s) of reburial will not be disclosed by any party and is exempt from the California Public Records Act (California Government Code § 6254[r]). Reburial location of human remains and/or cremations will be determined by the Tribe's MLD, the landowner, and the City Planning Department.	Pre-Construction/Construction	City of Redlands	LTS			

Mitigation Measure	Implementation Phase	Monitoring Agency	Level of Significance After Mitigation **Less than Significant (LTS)**	Verification of Compliance		
				Initial	**Date**	**Remarks**
TCR-5 Pre-Grade Meeting. A Native American monitor(s) selected by the tribe should be present at the Project kickoff meeting, be provided with a schedule of initial ground-disturbing activities and be on-site at the commencement of ground-disturbing activities related to the Project, and as the Project proceeds adjusting personnel and schedule as needed to provide sufficient oversight. The Consultant, lead contractor, and all subcontractors shall routinely update the Native American monitor and their scheduling representative(s) regarding scheduling for ground-disturbing activities, and changes to said schedule, such that there is sufficient advance notice that a Native American monitor can be scheduled accordingly.	Pre-Construction	City of Redlands	LTS			
TCR-6 Inadvertent Discovery of Tribal Cultural Resources and Treatment. In the event that previously unidentified cultural resources are unearthed during construction, the Qualified Archaeologist and the Tribal Monitor shall have the authority to temporarily divert and/or temporarily halt ground-disturbance operations in the area of discovery to allow for the evaluation of potentially significant cultural resources. Isolates and clearly non-significant deposits shall be minimally documented in the field and collected so the monitored grading can proceed. If a potentially significant cultural resource(s) is discovered, work shall stop within a 60-foot perimeter of the discovery and an Environmentally Sensitive Area (ESA) physical demarcation/barrier constructed. All work shall be diverted away from the vicinity of the find, so that the find can be evaluated by the Qualified Archaeologist and Tribal Monitor[s]. The Archaeologist shall notify the Lead Agency and consulting Tribe[s] of said discovery. The Qualified Archaeologist, in consultation with the Lead Agency, the consulting Tribe[s], and the Tribal Monitor, shall determine the significance of the discovered resource. A recommendation for the treatment and disposition of the Tribal Cultural Resource shall be made by the Qualified Archaeologist in consultation with the Tribe[s] and the Tribal Monitor[s] and be submitted to the Lead Agency for review and approval. Below are the possible treatments and dispositions of significant cultural resources in order of CEQA preference: A. Full avoidance B. If avoidance is not feasible, Preservation in place. C. If Preservation in place is not feasible, all items shall be reburied in an area away from any future impacts and reside in a permanent conservation easement or Deed Restriction. D. If all other options are proven to be infeasible, data recovery through excavation and then curation in a Curation Facility that meets the Federal Curation Standards (CFR 79.1).	Pre-Construction	City of Redlands	LTS			

Mitigation Measure	Implementation Phase	Monitoring Agency	Level of Significance After Mitigation **Less than Significant (LTS)**	**Verification of Compliance**		
				Initial	**Date**	**Remarks**
TCR-7 Final Report. The final report(s) created as a part of the project (AMTP, isolate records, site records, survey reports, testing reports, etc.) shall be submitted to the Lead Agency and Consulting Tribe(s) for review and comment, to the extent permitted by law. After approval of all parties, the final reports are to be submitted to the local repository (Eastern Information Center or SCCIC), as well as providing follow-up reports of any finds to the Eastern Information Center or SCCIC, as required, and the Consulting Tribe(s) if authorized by law. SECTION 1.0 – INTRODUCTION 1
1.1 INITIAL STUDY / MITIGATED NEGATIVE DECLARATION 1
1.2 AVAILABILITY OF THE NOI AND IS/MND 1

SECTION 2.0 – RESPONSE TO COMMENTS 2

SECTION 3.0 – REVISIONS TO THE INITIAL STUDY/MITIGATED NEGATIVE DECLARATION 3

SECTION 1.0 – INTRODUCTION

1.1 INITIAL STUDY / MITIGATED NEGATIVE DECLARATION

On May 3, 2024, the City of Redlands distributed the Initial Study/Mitigated Negative Declaration (IS/MND) for the Used-Car Retail Development and Refurbishing Facility Project and Amendment No. 51 to the East Valley Corridor Specific Plan Project to public agencies and the general public. In accordance with the California Environmental Quality Act (CEQA) Section 21091 and State CEQA Guidelines Section 15073, a 30-day public review and comment period for the IS/MND was provided from May 3, 2024, to June 3, 2024. **The CITY COUNCIL will consider the Initial Study/Mitigated Negative Declaration for adoption at its regularly scheduled meeting on July 16, 2024, in the Council Chamber located at 35 Cajon Street, Redlands, CA 92373.**

1.2 AVAILABILITY OF THE NOI AND IS/MND

The NOI and the IS/MND were available for review at the following locations:

- OPR State Clearinghouse website 'https://www.opr.ca.gov/sch/'
- City of Redlands website 'https://www.cityofredlands.org/post/environmental-documents'
- **P**lanning Division public counter, 35 Cajon St., Suite 20, Redlands, CA 92373

SECTION 2.0 – RESPONSE TO COMMENTS

No public comments were submitted to the City or State Clearinghouse during the 30-day public review and comment period.

CEQA Guidelines Section 15204 (b) outlines parameters for submitting comments and reminds persons and public agencies that the focus of review and comment of negative declarations should be, "on the proposed finding that the project will not have a significant effect on the environment. If persons and public agencies believe that the project may have a significant effect, they should: (1) Identify the specific effect; (2) Explain why they believe the effect would occur, and; (3) Explain why they believe the effect would be significant."

CEQA Guidelines Section 15204 (c) further advises, "Reviewers should explain the basis for their, and should submit data or references offering facts, reasonable assumptions based on facts, or expert opinion supported by facts in support of the comments. Pursuant to Section 15064, an effect shall not be considered significant in the absence of substantial evidence." Section 15204 (d) also states, "Each responsible agency and trustee agency shall focus its comments on environmental information germane to that agency's statutory responsibility." Section 15204 (e) states, "This section shall not be used to restrict the ability of reviewers to comment on the general adequacy of a document or of the lead agency to reject comments not focused as recommended comments by this section."

In accordance with Public Resources Code 21092.5 (b) of the CEQA Guidelines, the lead agency shall notify any public agency which comments on a negative declaration of the public hearing or hearings, if any, on the project for which the negative declaration was prepared. If notice to the commenting public agency is provided pursuant to Section 21092, the notice shall satisfy the requirement of this subdivision. During the 30-day comment period, no comments were received from agencies or the public.

SECTION 3.0 – REVISIONS TO THE INITIAL STUDY/MITIGATED NEGATIVE DECLARATION

The following section includes revisions to the IS/MND previously circulated for public review and comment. Text revisions and corrections to the IS/MND are indicated by changes in font styling; deleted text is indicated by a strike-through (~~example~~), and added text is indicated by a bold underline (**example**). Minor editorial corrections (e.g., typographical, grammatical, etc.) have been made throughout the document and are not indicated by strikethrough or bold underlined text.

Revisions are as follows:

This addition is included at the end of b) in Section 4.18.1 Tribal Cultural Resources Impact Analysis

The City initiated consultation with the Gabrieleño Band of Mission Indians – Kizh Nation (Tribe) in December 2023, regarding the Proposed Project, leading to a series of communications and a meeting about the Project and its potential impact on tribal cultural resources. Initial emails from the Tribe indicated agreement with the Specific Plan Amendment and a desire for consultation on future projects. After clarifying Project details, the City and Tribe arranged a meeting in January 2024 to discuss any information the Tribe wished to provide, mitigation measures and that the language in the mitigation measure be allowed to reference "Consulting Tribes" considering multiple ongoing consultation efforts with Native American tribes. The Tribe stated their desire to keep their mitigation measures separate from other Tribes. No mitigation measures were provided during the meeting and the City followed up with the Tribe to request mitigation measures. In February 2022, the City received three mitigation measures from the Tribe.

In March of 2024, the City received an email from the Tribe that contained vague maps, nonspecific newspaper clippings, and other information provided via the body of the email that the Tribe noted as "substantial evidence" related to the Project site and the Tribe requested that the City respond and state to what extent the mitigation measures will be included so the consultation can be concluded. Although the Tribe did not provide any specific information or evidence regarding specific potentially significant impacts to known or likely tribal cultural resources on or near the Project site, the City agreed to implement TCR-1 and TCR-3 (the Tribe provided), and noted that TCR-2 conflicted with use of a Qualified Archaeologist retained by the developer as well as other Tribal Monitors from other Consulting Tribes. The Tribe had also requested that the City pre-declare (i.e., prior to any discovery or assessment) any inadvertent discoveries of tribal resources as belonging to the Gabrieleno – Kizh Nation Tribe to the exclusion of all other Consulting Tribes, which the City declined to implement. The City and the Tribe agreed to meet in early June 2024 to discuss ongoing concerns from the Tribe; the meeting was canceled the day before the scheduled meeting date by the Tribe stating their concern about the involvement of multiple other tribes within their ancestral territory.

The City responded in a letter dated June 25, 2024, that it has made a good faith effort at consultation, and agreed to most mitigation measures in concept (such as tribal monitoring on the project site, etc.) which are consistent with mitigation measures implemented for other projects in the recent past as well as consistent with measures that have been previously proposed by the Tribe. Therefore, given the lack of any information or evidence provided by the Tribe after multiple requests, the City concluded and closed the tribal consultation process pursuant to PRC Section 21080.3.2. The City stated that the mitigation measures they agreed to implement are more than adequate to ensure that any inadvertent discovery or potential impact to tribal cultural resources will remain less than significant.

RESOLUTION NO. 8615

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS ADOPTING A MITIGATED NEGATIVE DECLARATION AND MITIGATION MONITORING/REPORTING PROGRAM AND APPROVING THE SOCIO-ECONOMIC COST/BENEFIT STUDY FOR THE FOR A USED AUTOMOBILE SALES FACILITY AND RECONDITIONING/STORAGE FACILITY LOCATED ON THE WEST SIDE OF NEW YORK STREET AT WEST BROCKTON AVENUE.

WHEREAS, CarMax Auto Superstores, Inc. ("Applicant"), has submitted an application for Amendment No. 52 to the East Valley Corridor Specific Plan (Specific Plan No. 40) to allow for pre-owned automobile sales as a conditionally permitted land use without sales of new automobiles within the General Commercial (EV/CG) District of the East Valley Corridor Specific Plan (the "Project" or "Project Entitlements"); and

WHEREAS, this application was filed concurrently with Conditional Use Permit No. 1179 and Commission Review & Approval No. 962 to include used automobile retail sales and online sales, pre-owned automobile reconditioning and outdoor storage yard, and related ancillary activities such as vehicle washing and outdoor loading/unloading activities, submitted for the parcels located on the west side of New York Street at Brockton Avenue (APNs 0169-011-38-0000 and 0169-011-39-0000) (the "Project" or "Project Entitlements"); and

WHEREAS, on June 11, 2024, the Planning Commission held a public hearing and considered the staff report, oral report, the testimony, and the written evidence submitted by and on behalf of the applicant and by members of the public; and

WHEREAS, on June 11, 2024, the Planning Commission recommended to the City Council that the Mitigated Negative Declaration and Mitigation Monitoring/Reporting Program be adopted; and

WHEREAS, on June 11, 2024, the Planning Commission recommended that the City Council adopt the Socio-Economic Cost/Benefit Study prepared for the Project; and

WHEREAS, the Mitigated Negative Declaration and related materials for the Project that were reviewed by the Planning Commission in making its recommendation for approval have been forwarded to the City Council; and

WHEREAS, on or about July 3, 2024, notice of the City Council's public hearing for the Project, including the Mitigated Negative Declaration and Socio-Economic Cost/Benefit Study, was published in the Redlands Daily Facts by the City Clerk; and

WHEREAS, the City Council held a duly noticed public hearing on July 16, 2024, at which interested persons had the opportunity to provide verbal and written testimony on the Project, including the proposed Mitigated Negative Declaration and Socio-Economic Cost/Benefit Study.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF REDLANDS AS FOLLOWS:

Section 1. CEQA Compliance. As the decision-making body for the Project, the City Council has reviewed and considered the information contained in the Initial Study/Mitigated Negative Declaration ("MND"), related technical studies and analyses, public comments received, the Responses to Comments, and supporting documentation. The City Council determines that the MND and related documents contain a complete and accurate reporting of the environmental impacts and mitigation measures associated with the Project. The City Council finds that the MND was prepared in compliance with CEQA, and that the City complied with CEQA's procedural and substantive requirements.

Section 2. Independent Judgment of Lead Agency. The MND for the Project, prepared by the City's environmental consultant, reflects the City's independent judgment and analysis. The City has exercised independent judgment and analysis in accordance with Public Resources Code Section 21082.1(c)(3) in managing as appropriate the environmental consultant, and directing the consultant in the preparation of the MND. The City Council has independently reviewed and analyzed the MND and accompanying technical studies/reports, and finds that the MND reflects the independent judgment and analysis of the City.

Section 3. Adoption of Mitigated Negative Declaration. The City Council finds on the basis of the whole record that there is no substantial evidence that the Project will have a significant effect on the environment, including mitigation measures and any project design features, and hereby adopts the MND for the Project.

Section 4. Adoption of Mitigation Monitoring/Reporting Program. Pursuant to Public Resources Code section 21081.6, the City hereby adopts the Mitigation Monitoring/Reporting Program attached to the MND, and all mitigation measures are included as conditions of approval for the Project.

Section 5. Notice of Determination. The City Council adopt the MND for the Project and the accompanying Mitigation Monitoring and Reporting Program and direct staff to file and post a Notice of Determination in accordance with the State CEQA Guidelines.

Section 6. Custodian of Records. The custodian of documents and other material which constitute the record of proceedings upon which its decision is based is the Development Services Director or designee, and all records are located in the City's Development Services Department.

Section 7. Approval of Socio-Economic Cost/Benefit Study. The City Council of the City of Redlands hereby approves and adopts the Socio-Economic Cost/Benefit Study prepared for the Project based upon the following findings:

A. *The Project will not create unmitigated physical blight within the City or overburden public services including, without limitation, the sufficiency of Police and Fire Protection services.*

The Project will not create significant unmitigable physical blight in the City of Redlands ("City") or overburden public services, including without limitation police and fire protection services, because the mitigation measures for environmental impacts, described in the study, have been added to the project as Conditions of Approval. The Project developer will make improvements to facilitate implementation of the Project, including the construction of adjacent roadways and roadway improvements the project frontage. The Project would provide connections to existing City infrastructure. Utility lines less than 66kV in size or capacity will be placed underground. Storage and utility areas will be appropriately screened from public views. The Project developer is required to fund the project's fair share allocation of any necessary public infrastructure associated with development of the Project.

B. *The benefits to the City resulting from development of the Project outweigh any direct cost to the City that may result.*

The Socio-Economic Cost/Benefit Study demonstrates that the Project will generate "new net" annual revenues of approximately $57,743.50 and approximately $4,772.10 in costs, and therefore will result in a positive balance of $52,971.40 (or cost/benefit ratio of +12.10). For every dollar the City spends in providing services to the Project, the City will receive $12.10 in "new net" revenue. Revenue provided to the City through sales taxes, increased property tax assessment, and the payment of development impact fees, indirect funding will be provided for cultural enhancements, downtown district enhancements, public safety (Police and Fire) enhancements, and traffic safety enhancements.

Section 8. Effective Date. This Resolution shall take effect upon adoption.

ADOPTED, SIGNED AND APPROVED this 16th day of July, 2024.

RESOLUTION NO. 8616

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS APPROVING AMENDMENT NO. 52 TO THE EAST VALLEY CORRIDOR SPECIFIC PLAN (SPECIFIC PLAN NO. 40) TO ALLOW USED AUTOMOBILE SALES, WITHOUT THE SALES OF NEW AUTOMOBILES, AS A CONDITIONALLY PERMITTED USE IN THE EV/CG (GENERAL COMMERCIAL) DISTRICT.

WHEREAS, CarMax Auto Superstores, Inc. ("Applicant"), has filed an application for Amendment No. 52 to the East Valley Corridor Specific Plan (Specific Plan No. 40) to allow for pre-owned automobile sales as a conditionally permitted land use without sales of new automobiles within the General Commercial (EV/CG) District of the East Valley Corridor Specific Plan (the "Project" or "Project Entitlements"); and

WHEREAS, this application was filed concurrently with Conditional Use Permit No. 1179 and Commission Review & Approval No. 962 to include used automobile retail sales and online sales, pre-owned automobile reconditioning and outdoor storage yard, and related ancillary activities such as vehicle washing and outdoor loading/unloading activities, submitted for the parcels located on the west side of New York Street at Brockton Avenue (APNs 0169-011-38-0000 and 0169-011-39-0000) (the "Project" or "Project Entitlements"); and

WHEREAS on May 31, 2024, notice of the Planning Commission's public hearing for the Project and related Project Entitlements was published in the Redlands Daily Facts and notices were mailed to property owners within a 300-foot radius; and

WHEREAS, on June 11, 2024, the Planning Commission held a public hearing and considered the staff report, oral report, the testimony, and the written evidence submitted by and on behalf of the applicant and by members of the public; and

WHEREAS, at the public hearing on June 11, 2024, the Planning Commission determined that the Specific Plan Amendment would be in conformity with the 2035 General Plan, and adopted Resolution No. 1683 recommending approval for Amendment No. 52 to the East Valley Corridor Specific Plan (Specific Plan No. 40); and

WHEREAS, on or about July 3, 2024, notice of the City Council's public hearing for the Project, including Specific Plan Amendment No. 49 was published in the Redlands Daily Facts by the City Clerk; and

WHEREAS, on July 16, 2024, the City Council held a duly noticed public hearing and considered the staff written and oral reports, the recommendation of the Planning Commission, the testimony and written evidence submitted by and on behalf of the applicant, and testimony by members of the public.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF REDLANDS AS FOLLOWS:

Section 1. General Plan Conformity. The proposed Specific Plan Amendment to remove the Project site (the proposed Bergamot Specific Plan Amendment) from the boundaries of the East Valley Corridor Specific Plan will conform with the Redlands General Plan.

Section 2. Approval of Specific Plan Amendment No. 52 to the East Valley Corridor Specific Plan. Specific Plan Amendment No. 52 to the East Valley Corridor Specific Plan (Specific Plan No. 40) is hereby approved. Specific Plan Amendment No. 52 shall amend Chapter 7 of the East Valley Corridor Specific Plan to allow for pre-owned automobile sales as a conditionally permitted land use without sales of new automobiles within the General Commercial (EV/CG) District, as more particularly shown in "Exhibit "A" attached hereto.

Section 3. Effective Date. This Resolution shall take effect upon adoption.

ADOPTED, SIGNED AND APPROVED this 16th day of July, 2024.

CHAPTER 7. GENERAL COMMERCIAL

Section EV3.0701 Intent

The General Commercial District creates, preserves and enhances areas for businesses which provide a variety of goods and services serving a community or regional market. The District provides for the grouping of retail and service uses that are compatible in the type of commodity sold, the scope of services provided or the method of operation.

The District may contain major department stores, administrative/ professional headquarters and community or regional shopping centers. Smaller businesses which benefit from the customer drawing power of the larger stores and provide specialty goods and services may also be located here. The creation of a pleasant and efficient environment for shopping and business is the primary function of this District.

Section EV3.0705 Locational Standards

(a) The area is occupied or will be occupied by stores and businesses which provide retail sales and services for a wide range of consumer needs, characterized by relatively long-term utility.

(b) The District is located either at the intersection of major streets or along major streets and freeways.

(c) The area is free of environmental constraints and has physical conditions which can sustain commercial development, including all required parking, circulation, landscaping and yards.

(d) The location shall be consistent with the General Plan text and maps.

Section EV3.0710 Permitted Land Uses

The following uses are permitted within the General Commercial District. New construction shall require Commission Review and Approval as required by the Redlands Municipal Code. Determinations regarding similar uses not specifically listed shall be made pursuant to §EV3.0135(b).

(1) Agriculture as a continuation of the existing land use, including orchards, groves, nurseries, field crops, tree crops, berry crops, bush crops, truck gardening and commercial flower growing, and structures and appurtenances thereof.

(2) Uses permitted in the Neighborhood Commercial District and Administrative Professional District.

(3) Retail sale of goods generally characterized by relatively long-term utility or consumption, including but not limited to the following types of goods and/or stores:

- Antiques
- Appliances
- Art galleries, print and frame shops
- Auto and motorcycle parts and accessories (new)
- Automobiles, motorcycles and other motor vehicles (new)
- Bicycles and parts
- Boats
- Commercial nursery, retail
- Computers and accessories
- Department and general merchandise stores
- Draperies, curtains, upholstery
- Fur goods and apparel
- Furniture and home furnishings
- Home improvement centers
- Jewelry, precious metals, coin and stamp dealers
- Office supplies and equipment
- Photographic equipment and supplies
- Plumbing and heating equipment and supplies
- Radio, TV, stereo
- Secondhand merchandise and thrift shops
- Swimming pools and spas
- Vintage or collectible vehicles
- Wall and floor coverings

(4) Provision of services to individuals and business establishments, generally including but not limited to the following types of services:

- Automobile rental (limited to offices and storage of vehicles only; no on-site repair or maintenance of rental vehicles permitted)
- Car washes
- Eating establishments (including on-site sale of alcoholic beverages), with the exception of drive-through restaurants, which shall require a Conditional Use Permit
- Funeral parlors and mortuaries
- Furniture repair and re-upholstery
- Medical massage therapy; provided, that (a) a minimum of eighty percent (80%) of the establishment's clients are from referrals by state-licensed health care providers, and (b) the establishment's records are kept on the premises and made accessible to the City upon request for compliance
- Pet grooming
- Restaurants *See "Eating establishments"*

- Taxidermy
- Telephone exchanges
- Veterinarians and animal hospitals
- Vocational and trade schools

(5) Repair and servicing of any article which is permitted to be sold in this District.

Section EV3.0712 Accessory Land Uses

The following uses are permitted as an accessory use to a primary permitted or conditionally permitted use:

(1) Sale of used automobiles and other vehicles, if accessory to the sale of new vehicles.
(2) Nightclubs
(3) Recreation centers
(4) Skating rinks indoor)
(5) Hotels and Motels
(6) Conditionally permitted uses in the Administrative Professional District and Neighborhood Commercial District.

Section EV3.0713 Conditionally Permitted Uses

The following uses may be permitted subject to approval of a Conditional Use Permit by the Planning Commission. Determinations regarding similar uses not specifically listed shall be made pursuant to §EV3.0135(b):

(1) Auto service and repair centers

(2) Commercial repair garages for motor vehicles and equipment (including body and paint work)

(3) Cultural, Entertainment and Recreational Facilities, generally including but not limited to the following:

- Arcades, pool halls, discotheques
- Bars and cocktail lounges
- Bowling alley and miniature golf
- Drive-in theaters
- Gymnasiums, health and athletic clubs, figure salons
- Live theaters (except adult theaters as defined by the Redlands Municipal Code)
- Meeting halls (lodge and union)
- Motion picture theaters
- Nightclubs
- Recreation centers
- Skating rinks (indoor)

(4) Hotels and Motels

(5) Conditionally permitted uses in the Administrative Professional District and Neighborhood Commercial District.

(6) Retail sales of pre-owned or used automobiles (as primary use) not in conjunction with new auto sales.

Section EVJ.0715 Prohibited Uses

Any use not listed as permitted, conditionally permitted, or permitted as an accessory use is prohibited in the General Commercial District.

Section EVJ.0720 Development Standards

(a) All lots shall have adequate width, depth and area to accommodate all required parking, setbacks, landscaping, loading, trash enclosures, and access requirements.

(b) No maximum building height is established. Height limits shall be determined in accordance with Part 77 of the FAA regulations. Also refer to Floor Area Ratio-Section EV4.0240(a).

(c) Minimum building setbacks shall be as follows:

(1)

Front yard	25 feet
Street side yard	25 feet
Side and rear yards	None except where adjoining residential district

(2) Where district abuts a street designated as a Special Landscaped Street in Section EV4.0115 (a), see Section EV4.0155 for setback and landscaping requirements.

(3) Where district abuts a residential district or residential portion of a Planned Development, see Section EV4.0225 (d) for setback and landscape buffer requirements.

(4) See Section EV 3.0620 (i) for exceptions for front yard and street side yard setbacks for unenclosed, architectural type projections such as portico's, porte-cochere's, and pedestrian walkways for drive through restaurants and services.

(d) For requirements on landscaping, walls, access, parking, loading, trash enclosures, lighting and storage, the provisions of Division 4 shall apply.

(e) The provisions of Division 4 shall apply to signs. In addition, the maximum area of any sign facing a residential district shall be 75 feet.

(f) All access ways to a public street shall be located not less than seventy-five (75) feet from the intersection of any street lines, and shall be designed in a manner conducive to safe ingress and egress. Where practical, exits shall be located on a minor street. Frequency of access ways shall be at intervals of not less than one hundred (100) feet.

(g) Automobile Sales Development Standards

The purpose of these provisions are to establish standards for the development of new and pre-owned automobile sales facilities where sales are conducted outdoors.

The following property development standards shall apply when they are more restrictive than the development standards for the particular zone in which new automobile sales are proposed to be conducted:

(1) Site Area. Each site shall have a minimum area of 50,000 square feet.

(2) Site Dimensions. The minimum lot width and depth dimensions shall be 200 feet.

(3) Parking. Off-street parking shall be provided in accordance with the provisions of Chapter 18.164 of the Redlands Municipal Code.

(4) Landscaping. A minimum of ten percent of the site shall be landscaped. Landscaping shall be placed along the entire street frontage, except for driveway openings and walkways. Landscaping shall be oriented to enhance public views and accent on-site structures.

(5) Architectural Treatment. It is the policy of the City to require high quality architectural treatment. The design of the facilities shall be harmonious with the character and quality of the neighborhood and community.

(6) Service Areas and Facilities. Service areas and facilities, and outdoor motor vehicle holding areas for operational vehicles (not including display areas for auto sales), shall be completely screened from view from the public right of way. Screening shall be by use of walls, earth berms, landscaping or a combination thereof.

RESOLUTION NO. 8617

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS APPROVING CONDITIONAL USE PERMIT NO. 1179 AND COMMISSION REVIEW AND APPROVAL NO. 962 TO ALLOW THE CONSTRUCTION AND OPERATION A PRE-OWNED AUTOMOBILE SALES AND SERVICE/RECONDITIONING FACILITY INCLUDING OUTDOOR VEHICLE STORAGE LOT ON APPROXIMATELY 18.56 ACRES OF LAND LOCATED ON THE WEST SIDE OF NEW YORK STREET AT WEST BROCKTON AVENUE IN THE GENERAL COMMERCIAL (EV/CG) DISTRICT OF THE EAST VALLEY CORRIDOR SPECIFIC PLAN (APNS: 0169-011-38-0000 AND 0169-011-39-0000).

WHEREAS, CarMax Auto Superstores, Inc. ("Applicant"), has filed applications for Conditional Use Permit No. 1179 and Commission Review & Approval No. 962 to construct a pre-owned automobile sales and service/reconditioning facility consisting of: a 4,958 square-foot retail sales building, a 39,621 square-foot automobile service/repair facility and reconditioning building, a 2,772 square-foot quality control/auction building with 936 square foot non-public carwash, a private fuel tank/dispenser, an outdoor vehicle holding/storage lot, and various related on-site improvements including driveways, landscape, lighting, and walls/fences on an 18.56-acre project site located on the west side of New York Street at West Brockton Avenue, approximately 1000 feet north of West Colton Avenue in the General Commercial (EV/CG) District of the East Valley Corridor Specific Plan (APNs: 0169-011-38-0000 and 0169-011-39-0000) (the "Project" or "Project Entitlements"); and

WHEREAS, these applications were filed concurrently with Amendment No. 52 to Specific Plan No. 40 (the "Project" or "Project Entitlements"); and

WHEREAS, the Project is subject to the California Environmental Quality Act (CEQA), the City has prepared an Initial Study for the Project in accordance with the State CEQA Guidelines, and adopted a Mitigated Negative Declaration for the project in accordance with CEQA Guidelines Section 15074; and

WHEREAS, on June 11, 2024, the Planning Commission held a public hearing and considered the staff report, oral report, the testimony, and the written evidence submitted by and on behalf of the applicant and by members of the public; and

WHEREAS, on June 11, 2024, the Planning Commission recommended approval of the Project to the City Council; and

WHEREAS, on or about July 3, 2024, notice of the City Council's public hearing for the Project was published in the Redlands Daily Facts by the City Clerk; and

WHEREAS, on July 16, 2024, the City Council held a public hearing and considered the staff written and oral reports, the recommendation of the Planning Commission, the testimony and

written evidence submitted by and on behalf of the applicant, and testimony by members of the public; and

WHEREAS, following the public hearing on July 16, 2024, the City Council determined that approval of the proposal is in the best interests of the public health, safety, and general welfare.

NOW, THEREFORE, BE IT RESOLVED BY THE PLANNING COMMISSION OF THE CITY OF REDLANDS AS FOLLOWS:

SECTION 1. CALIFORNIA ENVIRONMENTAL QUALITY ACT. The proposed Project is subject to the California Environmental Quality Act (CEQA), and the City Council has adopted Resolution No. 8615 certifying and adopting the Mitigated Negative Declaration and related Mitigation Monitoring/Reporting Program for the project.

SECTION 2. FINDINGS FOR APPROVAL OF CONDITIONAL USE PERMIT NO. 1179. The City Council of the City of Redlands hereby approves Conditional Use Permit No. 1179 based upon the following findings, and subject to the Conditions of Approval attached hereto as Exhibit "A," and Exhibit "B,":

1. *That the proposed development will not adversely affect the applicable land use plans of the city.*

   The proposed development will not adversely affect the land use plans of the City, as the proposed development is consistent with the General Plan's land use designations as Commercial and Commercial Industrial, and the General Commercial (EV/CG) district of the East Valley Corridor Specific Plan (as amended), which allow for a variety of commercial and light industrial uses, including used automobile sales facilities. With the conditions of approval requiring retail operations and enhanced screening for vehicle storage areas, the proposed development meets all applicable development standards of the EV/CG district.

2. *That the proposed development will not be detrimental to the public health, safety and welfare.*

   The proposed project will not be detrimental to the public health, safety, and welfare. The proposed project will develop a used automobile sales facility with ancillary service, reconditioning and outdoor storage areas on an existing 18.56-acre lot that is consistent with existing commercial development in the surrounding area. An Initial Study/Mitigated Negative Declaration (IS/MND) was prepared to fully analyzed potential environmental impacts as a result of the proposed project, and all potential impacts are either considered less than significant or can be mitigated to a level that will be less than significant. The MND contains a total of twelve (12) mitigation measures that have been recommended to reduce potential impacts associated with Biological Resources, Cultural Resources, Tribal Cultural Resources, Geology and Soils, and Hazards and Hazardous Materials. With the

implementation of these mitigation measures, impacts are reduced to a level that is less than significant, and a Mitigated Negative Declaration is recommended.

The project will construct two driveway entrances which will serve the proposed project. New York Street and Lugonia Avenue are roadways that have capacity to provide adequate vehicular access to the development, and Lugonia Avenue is a dedicated truck route.

3. That the proposed development will comply to the maximum extent feasible with the regulations of the city's general plan, the applicable zoning district and the city's development standards.

With the recommended conditions of approval requiring enhanced screening, the proposed development complies, to the maximum extent feasible, with the City's General Plan and zoning regulations. In addition, the project will meet all applicable development standards in the General Commercial (EV/CG) District of the East Valley Corridor Specific Plan, and other applicable provisions of the Redlands Municipal Code.

4. That the proposed development is appropriate at the proposed location.

The proposed used automotive sales facility is appropriate at the proposed location because it is consistent with commercial uses within the vicinity, and has adequate site design and access to ensure maximum land use compatibility. The site is designated Commercial, and Commercial Industrial by the General Plan and located within the General Commercial (EV/CG) District of the East Valley Corridor Specific Plan. These designations at the project site date back to the early 2000s, therefore, the site has been envisioned to be developed with commercial development since at least that time. The project site is a 18.56-acre site located near several large scale commercial and industrial developments including a new automobile sales facility, commercial shopping centers, and an industrial building, and incorporates improvements that will be similar to the surrounding area and standard new developments. Enhanced screening, as required with the conditions of approval, will allow the project to be compatible with adjacent land uses. Utilities and services in the area are adequate to serve the proposed development, and adjacent roadways have capacity to provide adequate vehicular access to the development.

SECTION 3. FINDINGS FOR APPROVAL OF COMMISSION REVIEW & APPROVAL NO. 962. The City Council of the City of Redlands hereby approves Commission Review & Approval No. 962 based upon the following findings, and subject to the Conditions of Approval attached hereto as Exhibit "A" and Exhibit "B":

1. The site for the intended use is adequate in size and shape to accommodate the use, and all of the required yards, setbacks, walls or fences, landscaping and other features will adjust the use to those existing or permitted future uses of land in the

neighborhood.

The site is physically suitable for the type of development proposed. The site has a relatively flat grade, is currently vacant, with all necessary utilities available. The project will construct adequate access consisting of two driveways for the proposed used automobile use. The project consists of constructing a 4,958 square foot sales building, a 39,621 square foot service/reconditioning building, a 2,772 square foot quality control building with 936 square foot non-public carwash, a private fuel tank/dispenser, and an outdoor vehicle storage lot approximately six acres in size. The buildings will be set far back from the street and comply with their respective land use and zoning designations. The proposed use and site design complies with the General Commercial (EV/CG) district of the East Valley Corridor Specific Plan and the with the conditions of approval requiring enhanced screening, adjusts to existing permitted uses of land adjacent by protecting them from unsightly views onto the outdoor storage yard and will comply with all development standards in terms of setbacks, lot coverage, parking, landscaping and screening.

2. *The site for the proposed use relates to streets and highways which are properly designed and improved to carry the type and quantity of traffic generated or to be generated by the proposed use.*

The project site is located on the west side of New York Street which has been designed to carry the type and quantity of traffic generated or to be generated by the proposed use, and connects to Lugonia Avenue, a dedicated truck route. The traffic study prepared by the applicant demonstrates that traffic impacts during peak hours will be insignificant. The site will be developed with a used automotive retail and reconditioning facility and is in close proximity to collector streets, major arterials, and designated truck routes. Ingress and egress will be provided from a two driveways taking access from New York Street. With approval of the Specific Plan amendment and the conditions of approval, the proposed project is consistent with the General Plan and Zoning designations for the property.

3. *The conditions set forth in the approval and those shown on the approved site plan are deemed necessary to protect the public health, safety and general welfare.*

The conditions set forth are adequate to protect the public health, safety and general Welfare, including those that require additional landscaping and wall screening. These conditions ensure maximum land use computability by protecting neighboring commercial and residential properties from unsightly view onto the outdoor vehicle storage lot. In addition, conditions of approval requiring the operation of a retail sales facility during operation of the project site will ensure the project is compliant with the land use regulations established by the East Valley Corridor Specific Plan, which are an expression of the City's goals and policies protecting the public health, safety and general welfare. In addition, the project will also comply with design standards and the applicable provisions of the Redlands Municipal Code.

4. *The proposed development is in conformity with the provisions of Chapter 18.12, and approval of the plan is in the best interest of the public health, safety, and general welfare. It is intended that design submittals be compatible with the character of adjacent and surrounding developments, and that they be of comparable composition, materials, textures and colors. Conformance is evaluated based on consideration of the seven criteria contained in RMC Section 18.12.170(B).*

   The proposed height, form, and architectural treatment of the retail and service buildings will be consistent and compatible with surrounding nearby retail/commercial structures (including automobile retail sales, retail stores, and other commercial service buildings) on all sides that are one-story and two-story buildings. The proposed architectural materials, textures, finishes, and colors will be compatible with the predominantly retail character of adjacent and surrounding developments. The proposed landscape materials, palette, and screening are consistent with the character of adjacent and surrounding developments.

SECTION 4. EFFECTIVE DATE. This Resolution shall take effect upon adoption.

ADOPTED, SIGNED AND APPROVED this 16th day of July, 2024.

Jeanne Donaldson, City Clerk

EXHIBIT A
DEVELOPMENT SERVICES DEPARTMENT
CONDITIONS OF APPROVAL

1. This permit/approval authorizes Conditional Use Permit No. 1179 and Commission Review & Approval No. 962 to construct a pre-owned automobile sales and service/reconditioning facility consisting of: a 4,958 square-foot retail sales building; a 39,621 square-foot automobile service/repair facility and reconditioning building; a 3,708 square-foot quality control/auction building; a 936 square-foot non-public carwash (i.e., developer's use only) ; a private fuel tank/fuel dispenser; a display area/lot for retail sales vehicles actively available for sale; an outdoor vehicle holding/storage lot on approximately six acres of the subject property (for vehicles awaiting repair or reconditioning or public display); and related on-site improvements including driveways, landscape, lighting, walls/fences, security and access gates, frontage improvements, and other related improvements. The project site consists of 18.56 acres located on the west side of New York Street at West Brockton Avenue (APNs: 0169-011-38-0000 and 0169-011-39-0000).

2. This permit/approval shall require that a minimum of 4,958 square-feet of enclosed floor area for the Sales Building (i.e., at least half of the Sales Building floor area for conducting retail sales as shown on the project plans) shall be regularly operated and staffed for conducting onsite retail sales of automobiles on all days that the subject property is in operation. The other activities and uses on the subject property (including auto body or engine repair, other repairs, reconditioning, painting, outdoor storage lot) shall not be operated unless the retail sales component of the business is also being operated during daytime hours on the same day. The retail sales building shall be operated on every day that other non-retail uses/activities/operations are occurring.

3. The developer, property owner, and/or business operator shall not modify, alter, expand, or intensify the authorized land use (listed in Condition No. 1) or any approved buildings or approved site improvements (per the approved Project Plans) unless and until reviewed and approved by the Development Services Director or designee. Substantial modification, alteration, expansion, or intensification of the use may require a formal application for Revision at the discretion of the Development Services Director. Any application for a Revision to CUP No. 1179 and/or CRA No. 962 shall be reviewed and approved by the Planning Commission in accordance with the provisions of the Redlands Municipal Code.

4. This permit/approval shall expire two (2) years from the date of project approval (shall expire on June 11, 2026), unless construction has commenced pursuant to a building or engineering permit(s), or a time extension is granted in accordance with the Redlands Municipal Code pursuant to RMC Section 18.192.090 (Conditional Use Permits).

5. Any application(s) for an Extension of Time must be submitted to the Planning Division at least ninety (90) days prior to the expiration date.

6. Pursuant to Government Code Section 66020(d), certain fees, dedications, reservations or exactions imposed by the City as a condition of approval of this project are subject to a statutory ninety (90) day protest period. Please be advised that the ninety (90) day protest period for those fees, dedications, reservations and exactions which are subject to Government Code Section 66020(a) has commenced to run on the date this project was approved by the City.

7. The applicant for this permit, and its successors and assigns, shall defend, indemnify and hold harmless the City of Redlands, and its elected officials, officers, agents and employees, from and against any and all claims, actions, and proceedings to attack, set aside, void or annul the approval of this permit by the City, or brought against the City due to acts or omissions in any way connected to the applicant's project that is the subject of this permit. This indemnification shall include, but not be limited to, damages, fees, costs, liabilities, and expenses incurred in such actions or proceedings, including damages for the injury to property or persons, including death of a person, and any award of attorneys' fees. In the event any such action is commenced to attack, set aside, void or annul all, or any, provisions of this permit, or is commenced for any other reason against the City for acts or omissions relating to the applicant's project, within fourteen (14) City business days of the same, the applicant shall file with the City a performance bond or irrevocable letter of credit (together, the "Security") in a form satisfactory to the City and in the amount of Three Hundred Thousand Dollars ($300,000), to ensure applicant's performance of its defense and indemnity obligations under this condition. The failure of the applicant to provide the Security shall be deemed an express acknowledgement and agreement by the applicant that the City shall have the authority and right, without objection by the applicant, to revoke all entitlements granted for the project pursuant to this permit. The City shall have no liability to the applicant for the exercise of City's right to revoke this permit.

8. The issuance of any permits shall comply with all applicable provisions of the Redlands Municipal Code, California Building Code, and California Fire Code in effect at the time of permit issuance.

9. All plans submitted to the City shall reflect the Planning Commission or City Council approval and any other changes required by the Commission, Council, and/or staff. This condition applies to the site plan, landscape plans, building elevations and materials, and all other illustrations, text, or plans submitted to the City in connection with this project.

10. A copy of the approved Conditions of Approval shall be included on the cover page(s) of the construction plans submitted to the Building Division.

11. No final inspection or Certificate of Occupancy shall be granted until all applicable conditions of approval have been satisfied.

12. Prior to the issuance of a building permit, a Lot Merger shall be recorded.

13. Plans submitted by Developer with building permit applications shall show on the building elevation sheets all exterior building materials and colors, including product and finish manufacturer name, color name and number, and surface finish type (such as: stucco with sand finish, plaster with smooth finish) to be used in construction

14. All utilities shall be placed underground. Plans shall be submitted that detail the undergrounding of all off-site and on-site utilities, subject to review and approval by the Municipal Utilities and Engineer Director and the Development Services Director, prior to issuance of building permits.

15. Ground mounted equipment, shall be screened from public view on all sides subject to review and approval by the Development Services Director, prior to issuance of building permits.

16. Transformer cabinets and commercial gas meters shall not be located within required setbacks and shall be screened from public view either by architectural treatment or with landscaping. Multiple electrical meters and panels shall be fully enclosed and incorporated into the overall architectural design of the building(s). Backflow preventers, DCDAs, and similar utility appurtenances shall be enclosed with landscaping that will provide complete screening upon maturity. The location and method of enclosure or screening of this equipment shall be shown on the construction plans and landscape plans prior to building permit issuance. Location of said equipment shall be coordinated with appropriate utility company (e.g., Southern California Gas Company or Southern California Edison Company). The applicant shall submit plans showing details of screening subject to review and approval by the Development Services Director, prior to issuance of building permits.

17. Prior to the issuance of a building permit for any walls over three feet (3'0") in height or open fences over four feet (4'0") in height within the front yard setback(s), the developer shall obtain a Minor Exception Permit. Prior to the issuance of a building permit for any walls over six feet (6'0") in height, the developer shall obtain a Minor Exception Permit.

18. Guardrail fencing enclosing the vehicle display lot shall be placed behind landscape screening (e.g., shrubs, hedge type plants, trees, earthen berm, etc.). The Development Services Director may require and enforce additional screening improvements as site conditions change or warrant sufficient screening in accordance with the East Valley Corridor Specific Plan.

19. The outdoor vehicle storage/holding yard(s) shall be screened from public view from public rights-of-way through: placement behind buildings; and/or the construction or installation opaque walls minimum ~~eight~~ **six** feet tall, and landscape screening (e.g., hedge type plants, trees, earthen berm, etc.). The Development Services Director may require and enforce additional screening improvements as site conditions change or warrant sufficient screening in accordance with the East Valley Corridor Specific Plan. This requirement does not apply to the retail sales vehicle display area(s) at the front of the subject property. **(added by Planning Commission)**

20. In accordance with the approved traffic study, production employee shift scheduling shall occur across two primary shifts: 7:00PM to 3:00PM and 3:00PM to 11:00PM).

21. Roof and ground-mounted equipment shall be screened from public view on all sides subject to review and approval by the Development Services Director, prior to the issuance of building permits.

22. Prior to the issuance of building permits, the applicant shall submit plans detailing that roof screening is of adequate height to screen any roof-top equipment from public view on all sides, subject to review and approval by the Development Services Director. Screening of air conditioning units and other equipment on the buildings shall be incorporated into or compatible with the architectural design of the buildings. All equipment shall be screened from public view of adjacent roadways and freeways.

23. Prior to building permit issuance, the Developer shall provide a lighting plan that provides design details (light standards, bollards, wall mounted packs, etc.) and illumination site information within pathways, streetscapes, and open spaces proposed throughout the development. An electrical engineer shall prepare the site lighting and/or photometric plan demonstrating that adequate lighting ranges will be provided throughout the development without creating light spillover, light pollution, or conflicts with surrounding factors such as tree locations, off-site or adjacent lighting. The illumination within the parking lot shall be a minimum of 0.5-foot candle and illumination along all property lines of the project site shall not exceed 0.5-foot candle. Walkway lighting shall have a maximum height of 12 feet and all parking lot lighting shall have a maximum height of 30 feet.

24. All lighting shall be shielded, and no light or glare shall impact the surrounding properties.

25. Prior to issuance of building permits, Developer shall demonstrate that light standards will not conflict with tree locations. Developer shall submit a plan showing both the lighting and landscape on the same sheet.

26. All landscaped areas noted on the site plan shall be permanently maintained with healthy planting material, and whenever necessary shall be replanted with suitable vegetation.

27. Landscape and Irrigation Plans shall provide water use calculations on the submitted plans, and Developer shall demonstrate compliance with the Model Water Efficient Landscape Ordinance prior to permit issuance. The plans shall be prepared by a California-licensed landscape architect.

28. All landscaped areas noted on the site plan shall be permanently maintained with healthy planting material, and whenever necessary shall be replanted with suitable vegetation.

29. Landscape and Irrigation Plans shall provide water use calculations on the submitted plans, and Developer shall demonstrate compliance with the Model Water Efficient

Landscape Ordinance prior to permit issuance. The plans shall be prepared by a California-licensed landscape architect.

30. Trash enclosure design and finish shall be subject to review and approval by the Facilities and Community Services Department and Development Services Department during plan check, prior to the issuance of building permits. Trash storage and refuse areas shall match the project architecture, including solid covered roofs and metal gate(s).

31. Prior to issuance of a building permit, the applicant shall be required to obtain approval of a construction site safety plan by the Redlands Police Department providing adequate security measures such as lights, video cameras, vehicle transponders, locks, alarms, trained security personnel, fencing etc. The nature of the measures will depend on the specific requirements of the site and may vary with the different stages of construction. The applicant shall be responsible for the compliance of all sub-contractors working on the site.

32. The project site shall be kept in a weed and dust free condition throughout all periods of construction and development.

33. All construction activities shall comply with the City's Noise Ordinance (RMC Chapter 8.06). Operating or causing the operation of any tools or equipment used in construction, drilling, repair, alteration, or demolition work between weekday hours of 6:00 P.M. and 7:00 A.M., including Saturdays, or at any time on Sundays or holidays, such that the sound therefrom creates a noise disturbance across a residential or commercial real property line. All mobile or stationary internal combustion engine powered equipment or machinery shall be equipped with exhaust and air intake silencers in proper working order, or suitable to meet the standards set forth herein.

34. Employees associated with the business or tenant(s) shall only park their personal vehicles within the subject property, and shall not utilize public right-of-way.

35. All vehicle transport trucks or tractor-trailer delivery trucks shall not load or unload vehicles or other merchandise on New York Street or other public right-of-way. All vehicle loading/unloading activities shall occur on the project site only.

36. Anti-idling signs indicating a five (5) minute restriction on engine idling for diesel trucks shall be posted on the project site and within the truck parking areas and shall be strictly enforced by the facility operator.

37. Signs shall be installed at all truck exit driveways directing truck drivers to the permitted truck route(s) per the General Plan (Figure 5-7, Truck Routes) to be routed to the Interstate Freeway System.

38. There shall be no outdoor storage of any materials/products, shipping containers, temporary structures, temporary trailers functioning as office or service buildings, or heavy equipment located on the subject property.

39. Before placing or constructing any signs on the project property, Developer shall obtain a sign permit from the City. Sign locations and illumination are subject to review and approval by the Planning Division under separate permit.

40. Revocation procedures: The Planning Commission may, after notice and public hearing, revoke approval of this permit/approval (CUP No. 1192) for noncompliance with any of its conditions.

    A. Notice shall be mailed to the record owner or lessee of the subject property not less than twenty (20) days prior to giving a ten (ten) day public notice. The record owner or lessee notice shall set forth the noncompliance, and shall request appearance by the permittee at the time and place specified for the hearing, to allow them to show cause why this approval should not be revoked.

    B. Notice shall be given as provided in RMC Section 18.192.040.

    C. Within ten (10) days after the hearing, the Planning Commission may revoke or modify the conditions of approval or the entitlement. After revocation, or modification, the subject property shall conform to all regulations of the zone in which it is located.

    D. Following the revocation of this entitlement by the city, no application for a Conditional Use Permit for the same or substantially the same use on the same or substantially same site shall be filed within six (6) months of the date of the denial or the revocation of the Conditional Use Permit.

    CEQA Mitigation Measures:

41. BIO-1: Preconstruction Survey A preconstruction burrowing owl (BUOW) survey shall be conducted no less than 14 days prior to initiating ground disturbance (including clearing, grubbing, grading), and a final survey within 24 hours prior to ground disturbance, to determine whether BUOW or BUOW burrows are present within or adjacent to the Project site, and to avoid negative impacts and direct take of BUOW. If BUOW are confirmed on-site, avoidance measures will be developed and implemented in compliance with and in coordination with CDFW. The results of the survey shall be documented and filed with the City.

42. BIO-2: Nesting Bird Survey Construction activities shall take place outside nesting season (nesting typically February 1 to August 31) to the greatest extent practicable. If construction activities occur during nesting season, a preconstruction nesting bird survey shall be conducted within seven days prior to initiation of ground-disturbing activities (including any clearing, grubbing, or grading), or according to the to the survey timing in the Project permits. If an active nest is identified, a minimum avoidance buffer around the active nest should be determined and implemented by a qualified biologist to avoid impacts to the active nest. The buffer shall be established with flagging and stakes or construction fencing. A minimum 100-foot no-disturbance buffer shall be placed around passerine nests. For raptors, the no-disturbance buffer shall be expanded to 500 feet. The buffer should be maintained during physical ground-disturbing activities. Once the

qualified biologist has determined that nesting has ceased, and the nestlings have fledged and are no longer using the nest, the buffer may be removed. Biological monitoring should be conducted as needed during the nesting season to monitor the status of any active nests, survey for any new nests, and to refresh nesting bird surveys after any periods of construction inactivity. The results of the survey shall be documented and filed with the City.

43. CUL-1: Retain Cultural Resource Consultant. The Developer shall retain the services of a qualified cultural resources consultant "Consultant" and require that all initial ground disturbing work be monitored by a cultural resources monitor. This includes all initial construction activities that will potentially expose or encounter intact subsurface sediments underlying the Project site. The cultural resources consultant shall provide a Qualified Archaeologist, meeting the Secretary of the Interior Standards (U.S. Department of the Interior, 2008), and require that all initial ground-disturbing work be monitored by a cultural resources monitor (monitor) proficient in artifact and feature identification in monitoring contexts. The Consultant (Qualified Archaeologist and/or monitor) shall be present at the Project construction phase kickoff meeting. The Archaeologist will conduct Cultural Resource Sensitivity Training. The training session will focus on the archaeological and cultural resources that may be encountered during ground-disturbing activities as well as the procedures to be followed in such an event. The Archaeologist shall be present during all ground-disturbing activities to identify any known or suspected archaeological and/or cultural resources.

44. CUL-2: Prior to commencing construction activities and thus prior to any ground disturbance in the Proposed Project site, the Consultant shall conduct initial Worker Environmental Awareness Program (WEAP) training to all construction personnel, including supervisors, present at the outset of the Project construction work phase, for which the lead contractor and all subcontractors shall make their personnel available. This WEAP training will educate construction personnel on how to work with the archaeological/cultural Monitor(s) to identify and minimize impacts to archaeological and cultural resources and maintain environmental compliance and be performed periodically for new personnel coming on to the Project as needed.

45. CUL-3: The developer or contractor shall provide the Consultant and Monitor with a schedule of initial potential ground disturbing activities. A minimum of 48-hours' notice will be provided to the archaeological Consultant and/or Monitor of commencement of any initial ground disturbing activities that have potential to expose or encounter intact subsurface sediments underlying the Project site. These activities may include grading, trenching, and mass excavation.

    A. As detailed in the schedule provided, a monitor shall be present on-site at the commencement of ground-disturbing activities related to the Project. The Consultant shall observe initial ground disturbing activities and, as they proceed, adjust the monitoring approach as needed to provide adequate observation and oversight. All monitors will have stop-work authority to allow for the recordation and evaluation of finds during construction. The monitor will maintain a daily

record of observations as an ongoing reference resource and to provide a resource for final reporting upon completion of the Project.

B. The Consultant, the lead contractor, and subcontractors shall maintain a line of communication regarding schedule and activity such that the Consultant is aware of all ground-disturbing activities in advance in order to provide appropriate oversight.

46. CUL-4: If archaeological or cultural resources are discovered, construction shall be halted within 50 feet of any archaeological or cultural artifacts or features and within 100 feet of any potential human remains at the discretion of the Archaeologist, and shall not resume until the Qualified Archaeologist, in consultation with consulting Tribe(s) and the City, can determine the significance of the find and/or the find has been fully investigated, appropriately documented, and cleared. (See also TCR -1 through TCR-7.)

47. CUL-5: At the completion of all ground disturbing activities, the Consultant shall prepare a Cultural Resources Monitoring Report summarizing all monitoring efforts and observations, as performed, and any and all prehistoric or historic archaeological finds, as well as providing follow-up reports of any finds to the Eastern Information Center or SCCIC, as required.

48. GEO-1: Excavate Loose Soil and Replace with Engineered Fill The subsurface soils within the proposed building pads will be removed to a minimum depth of 4 feet below existing site grades, or 2 feet below bottom of proposed foundations, whichever is greater. Deeper removals may be required if loose soils are still encountered at a depth of 4 feet below ground surface. Grading for the proposed structures should incorporate the limits of the footings plus 3 feet beyond the outside edge of perimeter footings. The bottoms of excavations should be probed to determine if it is firm and unyielding. Localized deeper removals may be needed where soft soils are encountered at the excavation bottom. Compacted engineered fill should then be placed to design finish grade elevations.

    Subgrade soils beneath exterior slabs and pavements should be removed to a depth of 1 foot below the proposed pavement section, including bottom of proposed aggregate base materials. Compacted engineered fill should then be placed to design elevations.

    Exposed areas receiving fill, once properly cleared and benched where necessary, should be scarified to a minimum depth of 10 inches, moisture conditioned, and compacted per the compaction requirements of the Terracon 2022 Geotechnical Engineering Report in Appendix E.

49. GEO-2: Qualified Paleontologist. Prior to issuance of a grading permit, the Applicant shall be required to obtain the services of a Qualified Project Paleontologist to remain on call for the duration of the proposed ground-disturbing construction activity. Upon approval or request by the City, a paleontological mitigation plan (PMP) outlining procedures for paleontological data recovery shall be prepared for the Project and

submitted to the City for review and approval. The development and implementation of the PMP shall include consultations with the City's Engineering Geologist as well as a requirement that the curation of all specimens recovered under any scenario shall be through an appropriate repository agreed upon by the City. If the City accepts ownership, the curation location may be revised. The PMP shall include developing a multilevel ranking system, or Potential Fossil Yield Classification (PFYC), as a tool to demonstrate the potential yield of fossils within a given stratigraphic unit. The PMP shall outline the monitoring and salvage protocols to address paleontological resources encountered during Project-related ground-disturbing activities, as well as the appropriate recording, collection, and processing protocols to appropriately address any resources discovered.

50. GEO-3: Paleontological Report. At the completion of all ground-disturbing activities, the Project Paleontologist shall prepare a final paleontological mitigation report summarizing all monitoring efforts and observations, as performed in line with the PMP, and all paleontological resources encountered, if any, as well as providing follow-up reports of any specific discovery, if necessary.

51. HAZ-1: Unanticipated Contamination Discovery Plan. An Unanticipated Contamination Discovery Plan (UCDP) will be developed prior to ground disturbing activities on the project site. Contractors will be trained on the requirements of the UCDP during pre-construction environmental training. The UCDP is intended to provide guidance to ensure worker and public safety as well as prevent the spread of further contamination if contaminated soils are encountered during construction of the Project. The UCDP will provide contact information for laboratories that will analyze the samples and solid waste facilities that will accept the contaminated soils. It will identify the procedures for:

    A. Notification and documentation requirements;

    B. Identification of the characteristics of the contaminated soil (e.g., sample methods, vertical and horizontal extent of contamination and chemicals of concern);

    C. Determining baseline at which work can be reinitiated in the area; and

    D. Handling and/or disposal requirements for any contaminated media unearthed.

    The UCDP shall be effective during all ground disturbing activities of the Project.

52. HAZ-2: Initial Response to Unanticipated Soil Contamination. During excavation, indicators of possible contamination include, but are not limited to:

    A. Stained or discolored earth, as contrasted to adjoining soil;

    B. Fill material containing debris unearthed during trenching or grading;

    C. Household trash covered by earth or other material that appears to be interspersed

with industrial debris;

D. Gasoline smells or other hydrocarbon odors that emanate when the earth is disturbed; or

E. Oily residue intermixed with earth.

F. Immediately following discovery of potentially hazardous waste or contaminants, the Contractor will:

- Cease work in the vicinity of suspected contamination;
- Cordon off or otherwise restrict access to the suspected area to protect workers and the public;
- Notify the City and Project authorities; and
- Implement the UCDP.

53. TCR-1: Tribal Monitoring Services Agreement. Prior to the issuance of the grading permits, the Applicant shall enter into a Tribal Monitoring Services Agreement with the Consul□ng Tribe(s). There shall be one monitor for the Gabrieleño Band of Mission Indians-Kizh Na□on, and one monitor for the other Consul□ng Tribes (Morongo Band of Mission Indians, Yuhaaviatam of San Manuel Na□on). The Tribal Monitors shall be on-site during all ground-disturbing activities (including, but not limited to, clearing, grubbing, tree and bush removal, grading, trenching, fence post placement and removal, construction excavation, excavation for all utility and irrigation lines, and landscaping phases of any kind). The Tribal Monitor shall have the authority to temporarily divert, redirect, or halt the ground-disturbing activities within 60 feet of the inadvertent discovery to allow identification, evaluation, and potential recovery of tribal cultural resources.

A copy of the executed monitoring agreement with each Consulting Tribe shall be submitted to the lead agency prior to the commencement of any ground-disturbing activity, or the issuance of any permit necessary to commence a ground-disturbing activity.

The monitor will complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground-disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs will identify and describe any discovered TCRs, including but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc., (collectively, tribal cultural resources, or "TCR"), as well as any discovered Native American (ancestral) human remains and burial goods. Copies of monitor logs will be provided to the project applicant/lead agency upon written request to the Tribe.

On-site tribal monitoring shall conclude upon the latter of the following:

1. Written confirmation to the Consulting Tribe[s] from a designated point of contact for the project applicant/lead agency that all ground-disturbing activities and phases that may involve ground-disturbing activities on the project site or in connection with the project are complete; or

2. A determination and written notification by the Consulting Tribe[s] to the project applicant/lead agency that no future, planned construction activity and/or development/construction phase at the project site possesses the potential to impact Consulting Tribe[s]TCRs.

54. TCR-2: Native American Monitor. Native American monitor(s) selected by the tribe should be present at the Project kickoff meeting, and shall be provided with a schedule of initial ground-disturbing activities, be on-site at the commencement of ground-disturbing activities related to the Project, and as the Project proceeds adjusting personnel and schedule as needed to provide sufficient oversight. The developer, lead contractor, and all subcontractors shall routinely update the Native American monitor(s) and their scheduling representative(s) regarding scheduling for ground-disturbing activities, and changes to said schedule, such that there is sufficient advance notice that a Native American monitor can be scheduled accordingly.

55. TCR-3: Worker Environmental Awareness Program (WEAP)/Pre-Grade Meeting. Prior to commencing construction activities and thus prior to any ground disturbance in the Proposed Project site, the Tribal Monitor(s)shall conduct initial WEAP training/pre-grade meeting for all construction personnel, including supervisors, present at the outset of the Project construction work phase, for which the lead contractor and all subcontractors shall make their personnel available. This WEAP training will educate construction personnel on how to work with the tribal monitor(s) to identify and minimize impacts to tribal cultural resources and maintain environmental compliance and be performed periodically for new personnel coming on to the Project as needed. The retained Consulting Tribe(s) representative(s) shall attend the WEAP meeting with the grading contractors to explain and coordinate the requirements of the monitoring plan.

56. TCR-4: Inadvertent Discovery of Human Remains. The Consulting Tribes request the following specific conditions to be imposed in order to protect any inadvertent discovery of Native American human remains and/or cremations. No photographs are to be taken except by the County Coroner, with written approval by the Consulting Tribe(s) if applicable.

    A. Should human remains and/or cremations be encountered on the surface or during any and all ground-disturbing activities (i.e., clearing, grubbing, tree and bush removal, grading, trenching, fence post placement and removal, construction excavation, excavation for all water supply, electrical, and irrigation lines, and landscaping phases of any kind), work in the immediate vicinity of the discovery shall immediately stop within a 100-foot perimeter of the discovery. The area shall be protected; project personnel/observers will be restricted. The County Coroner is to be contacted within 24 hours of discovery. The County Coroner has

48 hours to make his/her determination pursuant to State and Safety Code §7050.5. and PRC § 5097.98.

B. In the event that the human remains and/or cremations are identified as Native American, the Coroner shall notify the NAHC within 24 hours of determination pursuant to subdivision (c) of HSC §7050.5.

C. The NAHC shall immediately notify the person or persons it believes to be the MLD. The MLD has 48 hours, upon being granted access to the Project site, to inspect the site of discovery and make his/her recommendation for final treatment and disposition, with appropriate dignity, of the remains and all associated grave goods pursuant to PRC §5097.98.

D. If any of the Consulting Tribes has been named the MLD, the Tribe may wish to rebury the human remains and/or cremation and sacred items in their place of discovery with no further disturbance where they will reside in perpetuity. The place(s) of reburial will not be disclosed by any party and is exempt from the California Public Records Act (California Government Code § 6254[r]). Reburial location of human remains and/or cremations will be determined by the Tribe's MLD, the landowner, and the City Planning Department.

57. TCR-5: Pre-Grade Meeting. A Native American monitor(s) selected by the tribe should be present at the Project kickoff meeting, be provided with a schedule of initial ground-disturbing activities and be on-site at the commencement of ground-disturbing activities related to the Project, and as the Project proceeds adjusting personnel and schedule as needed to provide sufficient oversight. The Consultant, lead contractor, and all subcontractors shall routinely update the Native American monitor and their scheduling representative(s) regarding scheduling for ground-disturbing activities, and changes to said schedule, such that there is sufficient advance notice that a Native American monitor can be scheduled accordingly.

58. TCR-6: Inadvertent Discovery of Tribal Cultural Resources and Treatment. In the event that previously unidentified cultural resources are unearthed during construction, the Qualified Archaeologist and the Tribal Monitor shall have the authority to temporarily divert and/or temporarily halt ground-disturbance operations in the area of discovery to allow for the evaluation of potentially significant cultural resources. Isolates and clearly non-significant deposits shall be minimally documented in the field and collected so the monitored grading can proceed.

    If a potentially significant cultural resource(s) is discovered, work shall stop within a 60-foot perimeter of the discovery and an Environmentally Sensitive Area (ESA) physical demarcation/barrier constructed. All work shall be diverted away from the vicinity of the find, so that the find can be evaluated by the Qualified Archaeologist and Tribal Monitor[s]. The Archaeologist shall notify the Lead Agency and consulting Tribe[s] of said discovery. The Qualified Archaeologist, in consultation with the Lead Agency, the consulting Tribe[s], and the Tribal Monitor, shall determine the significance of the

discovered resource. A recommendation for the treatment and disposition of the Tribal Cultural Resource shall be made by the Qualified Archaeologist in consultation with the Tribe[s] and the Tribal Monitor[s] and be submitted to the Lead Agency for review and approval. Below are the possible treatments and dispositions of significant cultural resources in order of CEQA preference:

A. Full avoidance.
B. If avoidance is not feasible, Preservation in place.
C. If Preservation in place is not feasible, all items shall be reburied in an area away from any future impacts and reside in a permanent conservation easement or Deed Restriction.
D. If all other options are proven to be infeasible, data recovery.

59. TCR-7: Final Report. The final report(s) created as a part of the project (AMTP, isolate records, site records, survey reports, testing reports, etc.) shall be submitted to the Lead Agency and Consulting Tribe(s) for review and comment, to the extent permitted by law. After approval of all parties, the final reports are to be submitted to the local repository (Eastern Information Center or SCCIC), as well as providing follow-up reports of any finds to the Eastern Information Center or SCCIC, as required, and the Consulting Tribe(s) if authorized by law.

Building & Safety Division

60. When the Entitlement Review is approved, submit complete construction drawings including structural calculations, soils report, and energy calculations to Building and Safety for plan review in accordance with the current edition of the California Building and Fire Codes including all local ordinances and standards which are effective at the time of Plan Check Submittal.

61. Disabled access for the site and buildings must be in accordance with the State of California and ADA regulations.

62. Accessible EVC parking spaces for future and required EVCS as per the California Green Code is required.

63. The Underground Storage Tank (UST) requires a City of Redlands building permit, fire operational permit, and permits through San Bernardino County (CUPA – Certified Unified Program Agency).

Fire Department

64. Fire Department Access & Water Supply (Fire Master Plan)

A. Fire Department Access & Water Supply plan is required to be formally submitted to Redlands Fire Department as a separate permit application prior grading & building permits.

Review Note: Preliminary Site Fire Master included in project packet accounts for major aspects of the Fire Department Access & Water Supply plan. Details and specifics to be reviewed in the separate permit identified above.

65. Two Points of Connection for On-Site Fire Protection Water Supply

    A. Acknowledging the inherent high fire fuel load associated with the proposed amount of vehicles present, this project is required to provide a looped design for the on-site fore protection water supply with two points of connection to the public water mains.

66. Fuels Management and Weed Abatement

    A. From the present time until project construction phase, property owner is responsible to maintain compliance with Redlands Municipal Code Chapter 8.40 regarding Weed Abatement and Fuels Management.

    B. Weeds and annual grasses shall be maintained at 4 inches of growth or less.

    C. Tumbleweeds and similar uncultivated vegetation shall be removed.

Other City Departments/Divisions:

67. Conditions of Approval from the following City Departments/Divisions are applicable to the project, and are hereby incorporated by reference:

    A. Land Use Engineering Division (Exhibit B)

Brian Desatnik
Development Services Director

EXHIBIT B
LAND USE ENGINEERING DIVISION
CONDITIONS OF APPROVAL

[Attached]

REDLANDS DEVELOPMENT SERVICES DEPARTMENT
LAND USE ENGINEERING
DEVELOPMENT REQUIREMENTS
CONDITIONAL USE PERMIT NO.1179 AND COMMISSION REVIEW AND APPROVAL NO. 962

Date of P.C. Meeting:	**June 11, 2024**
Applicant:	**CarMax Auto Superstores, Inc.**
Location:	**West Side of New York Street at West Brockton Avenue.**
Project Description:	**Construct a Pre-Owned Automobile Sales Facilities and Service/Reconditioning Facility on an Approximately 18.5 Acre Site**

The applicant shall comply with the following engineering requirements to allow for the orderly development of the surrounding area and for public health and safety.

All requirements for development shall be consistent with requirements set forth in the East Valley Corridor Specific Plan; applicable sections of Redlands Municipal Code; latest edition of "Redlands Standard Specifications and Detail Drawings for Design and Construction of Public Improvements"; latest edition of American Public Works Association "Standard Plans for Public Works" and "Standard Specifications for Public Works Construction – Greenbook"; latest edition of "Redlands Water Systems Standard Specifications"; latest edition of "Redlands Sanitary Sewer Systems Standard Specifications"; and current Redlands policies and guidelines relative to development projects.

A. The following items are required prior to issuance of the GRADING PERMIT.

1. Pay plan check fee as established per resolution. The amount will be determined at plan check submittal.

2. Plans required to be submitted include:
   a. Precise Grading Plan. Grading plans shall be coordinated with the existing and proposed off-site improvements. (RMC 15.04)
   b. SWPPP/Erosion Control Plan. Erosion/Sediment Control Plan shall be submitted for review and approval. A copy of the project's Storm Water Pollution Prevention Plan (SWPPP) shall be submitted for review. SWPPP Best Management Practices (BMPs) to prevent and control discharges to the municipal separate storm sewer (drain) system shall be in effect for the entire duration of project construction to its completion and acceptance by the City. (RMC 13.54)
   c. Water Quality Management Plan. Submit final Water Quality Management Plan (WQMP) for review and approval. WQMP shall consist of post construction Best Management Practices (BMPs) prepared in accordance with the requirements and guidelines of the San Bernardino County Stormwater Program. The requirements of the WQMP shall remain in effect throughout the life of the project. (California State Order No. R8-2010-0036)

All plans used as reference for design shall be listed on title sheet of all plans with reference numbers. All plans shall be submitted on 24" x 36" size sheets. Six (6) copies of each are required. After final review, grading and SWPPP plans shall be submitted on 24" x 36" size, min. 4 mil, mylar sheets for City's approval.

3. Submission of plan sets shall be complete and include all required engineering designs and drawings listed in No. 2 above. All plans submitted shall be substantially complete, and no plan check queue place-holder plans will be accepted. An incomplete plan submittal will not be accepted for plan check.

4. All support documentation shall be submitted with the plans to be checked. Submission shall include:
   a. Hydrology Report and Hydrologic Calculations; (RMC 18.192.050)
   b. Geotechnical Report; (RMC 15.04)
   c. Easement Documents. (RMC 18.192.050)

5. The post-construction stormwater discharge rate (Q) from a 100 year storm event shall not be greater than the pre-construction stormwater discharge rate (Q).

6. A final WQMP that is in substantial conformance with the preliminary WQMP and in full conformance with the WQMP Guidance Document shall be submitted and approved prior to the approval of precise grading plans.

7. Cash cleanup deposit shall be submitted ($1,000.00). Deposit will be reimbursed after the work is completed and accepted by the City upon written request. (RMC 12.16.290)

8. Truck route permit is required for all construction vehicles 5 tons and over gross vehicular weight (e.g. concrete trucks) using streets other than established truck routes. (RMC 10.54)

   NOTE: Cash cleanup deposit and truck route permit submitted during the grading process could be transferred to be used during building construction or off-site improvement construction if it is within the time limit specified in the truck route permit, otherwise a new truck route permit must be issued.

9. For all development requiring coverage under the state of California General Storm Water Permit, in effect at the time of permit issuance, and whom have filed with the State Board a Notice of Intent (NOI), a copy of the Waste Discharge Identification Number (WDID) and NOI shall be submitted for review and file. Call (866) 563-3107. (RMC 13.54)

10. The Final WQMP shall also include a site trash plan detailing the installation, operation, and maintenance of a Full Capture System (FCS) for loose trash. The intent of the FCS is to capture loose trash preventing the trash from entering the site storm drains and basins. BMPs or devices used as FCS devices shall require acceptance by the City Engineer. Full Capture Systems are defined as treatment

controls (either a single device or a series of devices) capable of trapping all particles 5 mm or greater. In addition, the FCS shall trap trash from the greater of:

a. A flow not less than the peak flow rate, Q, resulting from a one-year, one-hour, storm. Precipitation intensity shall be determined using the NOAA ATLAS 14 Point Precipitation Frequency Estimates web site; or
b. A flow rate equal to the on-site storm water conveyance system including pipes, channels, and swales.

B. The following items are required prior to RECORDATION OF TRACT/PARCEL MAP.

No map is required for this application.

C. The following items are required prior to issuance of the BUILDING PERMIT.

1. Pay plan check fee as established per resolution. The amount is to be determined at plan check submittal.

2. Plans required to be submitted shall include:
   a. Precise Grading

   All plans used as reference for design shall be listed on title sheet of all plans with reference numbers. All plans shall be submitted on 24" x 36" size sheets. Three (3) copies of each are required. After final review, plans shall be submitted on 24" x 36" size, min. 4 mil, mylar sheets for City's approval.

3. Submission of plan sets shall be complete and include all required engineering designs and drawings listed in No. 2 above. All plans submitted shall be substantially complete, and no plan check queue place-holder plans will be accepted. An incomplete plan submittal will not be accepted for plan check.

4. Finalize and obtain all necessary onsite and offsite permissions, permits, easements, right-of-way, and properties in order to satisfy the conditions of approval for this project. Such items shall include:
   a. Encroachment Permits from Caltrans.

5. All off-site improvements shall be designed by owner's Civil Engineer in accordance with City Standard Specifications and Detail Drawings and Standard Specifications for Public Works Construction (Green Book) latest revision thereof. All existing utilities shall be pot-holed to determine the actual depth if no signed plan is available. Field notes will be submitted at time of submitting the plan for review and plan checking.

6. The approximate locations of existing underground utilities shall be shown on the improvement/site/grading plans. The utilities shall be plotted from record and field

data. The City of Redlands and the Engineer assume no liability as to the exact location of said lines where locations are not shown.

7. Provide pad certification and compaction report to the Building and Safety Department.

8. Pay the required development impact fees per ordinance in effect at time of issuing the building permit. The exact amount will be determined based upon the review of the final building plan or project information. Development Impact Fees shall include:
   - Transportation Facilities; (RMC 3.54)
   - Fire Facilities; (RMC 3.60)
   - General Government Facilities; (RMC 3.60)
   - Police Facilities; (RMC 3.60)
   - Storm Drain Facilities; (RMC 3.56)
   - Water Capital Improvement Charge; (RMC 3.48)
   - Recycled Water Capital Improvement Charge; (RMC 3.53)
   - Water Source Acquisition Charge; (RMC 13.40)
   - Sewer Capital Improvement Charge; (RMC 3.44)
   - Solid Waste Capital Improvement Charge; (RMC 3.70) and
   - Water/Recycled Water/Sewer Frontage Charges. (RMC 13.44 and 13.12.)

9. Final City approved mylars for all public improvements shall be on file with the Municipal Utilities and Engineering Department.

10. Although this project will have an on-going inspection throughout construction, a final inspection for all off-site improvements must be scheduled by developer to certify that these improvements comply with City specifications. (RMC 12.16.090)

11. Requirements for New York Street (RMC 18.192.050):

    a. Dedicate to provide for a 32 foot half street right-of-way width;
    b. Repair/replace altered, broken or substandard existing off-site improvements to the project boundary. No altered, broken or substandard existing improvements observed at this time;
    c. Provide full depth construction/reconstruction consistent with the City standard or alternative method of street rehabilitation as accepted by the City Engineer between the curb and gutter to the street centerline verified through a geotechnical report;
    d. Construct underwalk drain, if necessary;
    e. Use traffic index of 8.0; and
    f. Install commercial fire hydrants as required by the Redlands Fire Department.

12. Provide for adequate drainage facilities. The applicant shall provide and submit all necessary hydrology/hydraulic studies and calculations in accordance with the San Bernardino County Hydrology Manual. (RMC 192.050)

13. Install reduced pressure principle backflow devices as required by City Engineer. (RMC 13.20)

14. Install onsite fire line with double detector check valve backflow devices at service connection satisfactory to the City Fire Department. (RMC 13.20)

15. Comply with the Solid Waste Recycling Access Act of 1991 (AB 1327) and install double solid waste bin enclosure(s). Submit a plan prepared by a licensed engineer showing bin enclosure(s) location on the site plan with solid waste truck turning and/or turnaround track template superimposed.

16. Submit recycling plans for site demolition/construction for review and approval in accordance with Chapter 13.66 of the Redlands Municipal Code.

17. Dedication documents shall be prepared by a licensed Land Surveyor or registered Civil Engineer (registered prior to January 1982) and must be submitted for review and approval before recordation. (California B&P Code 8761 and CCR 4411)

D. The following items are required prior to approval of APPLICATION FOR WATER SERVICE CONNECTION and prior to WATER METER INSTALLATION.

1. Pay the Water Capital Improvement Charge; (RMC 3.48.030)

2. Pay the Water Source Acquisition Charge; (RMC 13.40)

3. Submission of approved onsite potable and irrigations plans (pdf format) is required prior to connection to recycled water system. All onsite improvements shall be done in accordance with the Water Resources Control Board, Division of Drinking Water requirements for recycled water. City shall submit plans to Division of Drinking Water for approval prior to final approval and installation of irrigation meters.

4. Pay the Recycled Water Capital Improvement Charge; (RMC 3.53.050)

5. Pay the Water/Recycled Frontage Charges. (RMC 13.12.)

6. Pay the Water Meter Charge. (Redlands Ordinance No. 2830)

E. The following items are required prior to issuance of the ENCROACHMENT PERMIT.

1. Cash cleanup deposit shall be submitted ($1,000.00). Deposit will be reimbursed after the work is completed and accepted by the City upon written request. (Required unless previously submitted under Sections A, B or C.) (RMC 12.16.290)

2. Truck route permit is required for all construction vehicles 5 tons and over gross vehicular weight (e.g. concrete trucks) using streets other than established truck routes. (RMC 10.54)

3. Section 4216/4217 of the Government Code requires a Dig Alert Identification Number be issued before a "Permit to Excavate" will be valid. For your Dig Alert Identification Number, call Underground Service Alert toll free, 1-800-227-2600, two (2) working days prior to conducting any excavation. (RMC 12.20.120)

4. Encroachment Permit application and two (2) sets of City approved plans must be submitted for all off-site improvements. Encroachment Permit fees shall be paid prior to issuance of Encroachment Permit. (RMC 12.16.010)

5. A California OSHA Permit Number for all work that is 5 feet deep or deeper shall be provided. Call (909)383-4321. (RMC 12.16.040)

6. A copy of soils report is required with recommendation for the final pavement structural section to be submitted prior to placing of the street pavement. The report shall include test results and boring/sampling locations.

7. A traffic control plan shall be prepared in accordance with the latest revision of CA MUTCD or W.A.T.C.H. manual, submitted and accepted by the City Engineer prior to issuance of an encroachment permit. The plan shall show all required construction signage, warning devices, road closures, detours, delineation, phasing schedules and anticipated durations of closures and detours for any work within the public right-of-way. The plans shall provide names and 24-hour phone numbers of individuals who can be contacted regarding traffic control measures.

F. The following items are required prior to issuance of CERTIFICATE OF OCCUPANCY.

1. All requirements as described in Sections A, B, C, D and E of these conditions of approval shall be met.

2. All work shall be completed to the satisfaction of the City Engineer. All as-built plans shall be delivered to the Municipal Utilities and Engineering Department for review and approval.

3. The Engineer of Record shall file a Final Certification for all grading and improvements relating to the project development.

4. Owner's Licensed Land Surveyor shall reset survey points, monuments, record corners, and centerline ties that were destroyed during construction and shall file Corner Records for those points prior to completion of the project with San Bernardino County Surveyor. Copies of information shall be furnished to the

Municipal Utilities and Engineering Department. [California B&P Code 8762, 8767, 8768, 8771, and 8773(b)]

5. Streets may be required to have a seal coat applied at the option of the City Engineer. Type of seal coat is to be determined by the City Engineer.

6. Resurface existing roadway as directed by the City Engineer due to utility installations and construction damage.

7. Existing striping shall be removed and replaced as necessary. New striping and pavement markings shall be installed as required by the City Engineer.

8. Owner/Developer shall provide recycling receipts as required by the recycling plan.

G. The following items are required prior to release of SECURITIES/WARRANTIES/DEPOSITS.

1. Prior to the release of the securities for the project, all improvements shall be reviewed and accepted by the City Engineer.

2. Tie sheets shall be submitted for all monuments found and/or set in the public right-of-way.

3. The release of securities/warranties/deposits must be requested in writing to the City Engineer. Allow 30 days for processing.

Donald Young

DONALD YOUNG, P.E., P.M.P.
One Stop Permit Center Manager

FILE: CUP 1179 & CRA 968

City Council Meeting **J. 4.**

DATE: 07/16/2024

TO: Honorable Mayor and City Council Members

SUBJECT: Public hearing to consider Planned Development No. 7; Lot Merger No. 8
(Mayor to declare meeting as public hearing)

A. Construction of a 357,610 square-foot warehouse (including 6,000 square feet of office space) and related site improvements including parking lots, loading docks, landscaping, walls and fences, lighting, stormwater drainage facilities, and utility connections on approximately 16 net acres located at 1101 California Street on the west side of California Street between Lugonia Avenue and Interstate 10 (APNs: 0292-033-11-0000 and 0292-033-13-0000);

B. Mitigated Negative Declaration and corresponding Mitigation Monitoring and Reporting Program prepared for the project in accordance with Section 15074 of the CEQA Guidelines; and the Socio-Economic Cost/Benefit Study prepared for the project in accordance with Measure U (Development Services Director Desatnik)

PROCEDURE FOR PUBLIC HEARING:

1. Mayor declares the meeting open as a public hearing.
2. Mayor calls upon Department Director for report.
3. Mayor calls for questions/comments from members of the City Council.
4. Mayor calls upon applicant, or his/her representative, for comments and testimony.
5. Mayor calls for comments/questions/testimony from members of the public
(3 minutes per speaker).
6. Mayor calls upon City Clerk to note any written comments received.
7. Mayor calls upon the applicant, or representative, for rebuttal

comments (5 minutes).
8. Mayor closes the public hearing.
9. City Council considers the motion and votes.

MOTION(S):

If the City Council desires to deny the application, the following motion is provided:

> I move that the City Council adopts Resolution No. 8619 denying Planned Development No. 7 and Lot Merger No. 8.

Alternatively, if the City Council desires to approve the application, the following motion is provided:

> I move that the City Council adopts Resolution No. 8620 adopting a Mitigated Negative Declaration and Mitigation Monitoring & Reporting Program; adopt a Socio-Economic Cost/Benefit Study; and approve Planned Development No. 7 and Lot Merger No. 8.

RECOMMENDATION:

At its regular meeting on June 11, 2024, the Planning Commission considered the project applications and voted 7–0 recommending that the City Council deny the project.

Prior to the meeting, the City received a total of 72 written public comments (all opposed to the project). The primary concerns raised in the comments include the possible impacts on traffic congestion and air pollution resulting from the project, the proximity of the proposed warehouse to nearby receptors such as the Kaiser medical building to the north, as well as expressing opposition to the proliferation of warehousing in general.

During the public hearing on June 11, 2024, a total of 15 individuals addressed the Planning Commission (nine spoke in opposition to the project and four in support). The primary concerns raised during the hearing include project impacts on traffic, air pollution and public health, as well as general concerns about the suitability of the site for a warehouse based on its incompatibility with surrounding uses. Comments in support of the project largely focused on the economic benefits created by temporary jobs during construction.

During deliberation, the Commission expressed various concerns about the proposed development including its incompatibility with surrounding land uses and being out of character with the surrounding community, the cumulative impact of local and regional warehousing development, the proximity of sensitive

receptors including the adjacent Kaiser facility, and various inconsistencies with the General Plan (see "Findings" section of this report for further discussion of the Commission's deliberation). The Commission concluded that they could not make the required findings for approval of the Planned Development application and directed staff to prepare denial findings and forward their recommendation to the City Council for consideration. On June 25, 2024, the Planning Commission adopted a resolution containing denial findings and (Attachment E) recommending that the City Council deny the project.

STAFF RECOMMENDATION:

Based on the analysis and findings contained in the staff report to the Planning Commission (Attachment F), staff recommends approval of the project because the project:

1. Substantially conforms to the General Plan's "Commercial/Industrial" land use designation of the subject site and is consistent with a number of General Plan objectives and policies, particularly those concerning the East Valley Corridor; and

2. Complies with all applicable development standards of the East Valley Corridor Specific Plan and Municipal Code; and

3. Would not conflict with traffic Level of Service (LOS) standards nor cause adverse socio-economic or fiscal impacts under Measure U; and

4. Would not result in significant adverse environmental effects upon implementation of feasible mitigation measures.

BACKGROUND:

The subject property was formerly occupied by an amusement park ("Pharoah's Lost Kingdom" and "Splash Kingdom Waterpark") which was demolished in 2021. The site is now vacant except for the remnant improvements and footings from former park attractions and parking lots.

Surrounding land uses include: Kaiser medical office building (directly to the north across Lugonia Ave.) and large warehouses to the north; office buildings, retail, and San Bernardino County Museum to the east; large warehouse/distribution facilities and light industrial uses to the west; Interstate 10 abutting the project site on the south side, and retail uses further to the south (within the City of Redlands) and City of Loma Linda further to the south.

PROPOSAL:

The applicant proposes to merge two parcels totaling approximately 16.0 net acres and construct a 357,610 square-foot warehouse building and related site

improvements including parking lots, loading areas, landscaping, screen walls, lighting, stormwater drainage facilities, and utility connections. The project site is located at 1101 California Street, on the west side of California Street, between Lugonia Avenue and the westbound Interstate 10 on-ramp.

ANALYSIS:

A summary of staff's analysis is provided below. Please refer to the Planning Commission staff report (Attachment F) for the detailed analysis.

General Plan: The proposed development complies with all applicable zoning and development standards (under the East Valley Corridor Specific Plan and Municipal Code) and is consistent with the "Commercial/Industrial" General Plan land use designation of the subject site. Staff believes the project is consistent with the following General Plan goals and policies:

> Action: 3-A.4: Encourage and attract businesses that support industry clusters for demand occupations in technology, healthcare, business services, education, and logistics.
>
> Principle 4-P.7: Provide a diversity of compatible land uses throughout the city, providing opportunities for the development of a range of businesses, services, residential types, and public facilities to meet the needs of the community.
>
> Principle 4-P.10: Ensure that the scale and character of new development is appropriate for surrounding terrain and the character of existing development.
>
> Principle 4-P.13: Provide for the concentration of office, industrial, and commercial uses in appropriate locations near transportation corridors to encourage the development of employment centers and reduce the potential for land use conflicts with sensitive uses.
>
> Action 4-A.27: Provide space for expansion of existing industries and protect them from encroachment by inharmonious uses, but encourage most new industries to locate in the East Valley Corridor where impacts on residential areas will be minimized.
>
> Principle 5-P.29: Prioritize goods movement along specific routes in the city, consistent with the layered network, to foster efficient freight logistics.

East Valley Corridor Specific Plan: The project site is located in the Special Development (EV/SD) district of the East Valley Corridor Specific Plan (EVCSP) according to the zoning map (Attachment C). The purpose of the EV/SD district is to provide regulatory, land use, and design flexibility to attain economical and efficient use of land (EVCSP Section EV3.1101). The EV/SD district allows any

uses that are permitted in the following specific plan districts: Administrative/Professional (EV/AP), General Commercial (EV/CG), Commercial Industrial (EV/IC), and Public/Institutional (EV/IP). Warehousing is permitted in the EV/IC district and is, by extension, also permitted in the EV/SD district.

RMC Chapter 18.156 (Warehouse Regulations): The proposed facility also complies with the provisions of Ordinance No. 2955, now codified in RMC Chapter 18.156, Article XII.

Measure 'U' Traffic Standards and Socio-Economic Cost/Benefit Study: Measure 'U' is a growth management initiative approved by Redlands voters in 1997, and establishes several principles of managed development including a general requirement that a Level of Service (LOS) grade of "C" or better must be maintained at roadway intersections. Based on the traffic impact analysis prepared for the project in December 2023, intersections in the project study area presently operate at acceptable LOS. The study further concludes that the projected increase in traffic levels caused directly by the project is not expected to reduce the performance of study intersections below the Measure U threshold of LOS C. The proposed development is estimated to generate 1,132 passenger-car equivalent (PCE) daily trips, with 111 total trips modeled in the AM peak hour and 114 total trips modeled in the PM peak hour. Based on the forecasted "existing plus project" traffic conditions, nearby intersections are expected to continue functioning at acceptable performance levels under project operating conditions. Project traffic is not anticipated to adversely affect the performance of nearby intersections below LOS 'C' and, therefore, no mitigating roadway system improvements are identified as necessary.

The developer will dedicate a portion of the southeast corner of the project site (abutting the I-10 on-ramp) to Caltrans in order to accommodate one new additional free right-turn lane that will be constructed in the future. In addition, the project will also re-stripe the existing median on Lugonia Avenue to accommodate a new westbound left-turn lane for truck access into the proposed Driveway 1.

Measure 'U' requires a socio-economic cost/benefit study for projects involving new structures larger than 5,000 square feet. A Socio-Economic Cost/Benefit Study has been prepared for this project (see Attachment H). According to the Cost/Benefit Model used by the City, the project is projected to result in annual non-residential revenues of $197,250 to the City upon project implementation and annual ongoing costs of $17,672. The surplus is $179,578 and the cost/benefit ratio is +11.16.

FINDINGS:

Findings for Planned Development

In considering a Planned Development application, the City Council must make

the following two findings in order to grant approval. The Planning Commission was unable to make either of the two required findings. After each finding below there is a discussion as to why the Planning Commission was unable to make the finding as well as a discussion as to why staff believes that the findings can be made.

1. *The proposed Planned Development is in conformity with the General Plan of the City.*

   Planning Commission

   The Planning Commission determined this finding cannot be made for the following reasons. The proposed Planned Development does not conform to the General Plan of the City because it conflicts with several General Plan objectives and policies concerning the City's overall character and land use planning principles. Specifically, the Livability Element of the General Plan provides several policies intended to (1) maintain a land use pattern of various uses designed and arranged to protect and enhance Redlands' unique character; (2) provide for buffers and transitions between low- and high-intensity land uses; and (3) ensure that the scale and character of new development is appropriate for surrounding terrain and the character of existing development. The proposed development of a major warehouse on the subject site does not maintain a land use pattern that protects and enhances community character, which is characterized by a heterogeneous distribution of compatibly located land uses. The proposed development would expand industrial land uses eastward toward existing commercial development, thereby degrading community character as a result. Furthermore, the subject site is located between existing land use of different intensities (industrial to the west; commercial to the north and south), and the proposed development does not adequately provide for buffers or land use transitions that would contribute to harmonious and orderly development of the area.

   Staff

   The General Plan land use designation of the subject site is "Commercial/Industrial" which provides for certain types of commercial and light industrial uses, including flex commercial space as well as business parks, that may be compatibly located. As a warehousing facility, the proposed development is consistent with both the General Plan land use designation and applicable General Plan goals and policies, particularly those concerning the East Valley Corridor. Designated truck routes are abutting and available to the subject site, and the proposed development abuts the Interstate 10 freeway and California Street interchange. No abutting, adjacent or nearby sensitive receptors are located in proximity to the project site or the necessary truck routes that serve the proposed facility.

2. *The proposed Planned Development would not adversely affect the surrounding area or the Redlands community in general.*

   Planning Commission

   The Planning Commission determined this finding cannot be made for the following reasons. The proposed Planned Development would adversely affect the surrounding area because surrounding properties to the north and east are developed with commercial buildings that should be protected from the encroachment of incompatible and impactful uses including warehousing. The proposed development is incompatible with surrounding uses and is inconsistent with the existing pattern of development in the vicinity. The proposed development would adversely impact surrounding non-industrial uses, particularly the site of the existing medical office building to the north across Lugonia Avenue on which the development of a regional hospital complex is reasonably foreseeable based on recent filing of development applications. Furthermore, the subject site is in close proximity to planned future transit-oriented development (south of Interstate 10 on California St.) identified as the Transit Villages Concept within the 2035 General Plan. Development of the subject site with a warehouse would unduly increase the potential for future land use conflicts to occur in these sensitive areas.

   Staff

   The subject site is generally surrounded by existing industrial and commercial developments, and no existing or reasonably foreseeable land use conflicts or other detrimental effects are present in the vicinity. Vehicular access and freeway access (for large trucks and tractor-trailers) are adjacent to the subject site, and several ramps access Interstate 10 near the project site and elsewhere in the vicinity. The project will dedicate land to widen and improve the westbound California Street on-ramp to Interstate 10 abutting the project site. Truck traffic to and from the proposed warehouse facility will have minimal effect on the local street network. Furthermore, the proposed use will not be detrimental to the health, safety, or general welfare, and will not be injurious to property or improvements in the vicinity. The proposed development is compatible with the surrounding area and all improvements necessary to adequately serve the new development are existing or will be constructed as required by the conditions of approval.

Findings for Socio-Economic Cost/Benefit Study

The Socio-Economic Cost/Benefit Study prepared for the project concludes that the proposed development would result in a positive cost/benefit ratio exceeding 1.0, and the project will not create or result in any significant unmitigable

physical blight or overburden public services in the community. Thus, the following findings for adoption of the Socio-Economic Cost/Benefit Study can be made:

1. The project will not create unmitigated physical blight within the City or overburden public services including, without limitation, the sufficiency of police and fire protection services.

   The Project will neither create unmitigated physical blight within the City of Redlands nor overburden public services, including the sufficiency of police and fire protection services, because the proposed development: features attractive and well-designed architecture and perimeter landscaping and will serve as a positive addition to the East Valley Corridor; existing public service capacity is sufficient to serve the new development; and the expected increase in public revenue generated by the proposed development more than offsets the expected public cost of serving the proposed development. The Project will not create significant unmitigable physical blight in the City of Redlands or overburden public services, including without limitation police and fire protection services. The Project site is adjacent to or abuts primarily industrial, office, and commercial developments, and is located within an area designated in the General Plan for industrial development.

   The Project site is located in an area designated in the General Plan as Commercial/Industrial. The Project provides improvements to blend in with and enhance the surrounding community through use of architectural treatment and landscaped buffers along the public right-of-way, screen walls, and preservation of existing mature landscape trees as well as planting of new trees. Moreover, the Project will contribute or provide funding for a public art installation that is valued at a minimum of one (1) percent of the total Project value.

2. The benefits to the City resulting from the development of the project outweigh any direct cost to the City that may result.

   According to the Socio-Economic Cost/Benefit Study, the proposed development is projected to generate annual revenues of approximately $197,250.50 and have approximately $17,672.30 in costs. Therefore, the project will result in a positive balance of $10,373 (or a positive cost/benefit ratio of 11.16). For every one dollar the City will spend in providing services to the project, the City will receive $11.16 in revenue. The project would provide revenue to the City through increased property tax assessment, sales tax and the payment of development impact fees. These fees may provide for cultural enhancements, downtown district enhancements, park enhancements, public safety (Police and Fire) enhancements, and traffic enhancements. In addition, customers and guests will also contribute additional revenue to the City’s General Fund through local sales tax

generation, including the new 1.0% local sales tax (Measure T) approved by Redlands voters.

ENVIRONMENTAL REVIEW:

According to Section 15270 of the California Environmental Quality Act (CEQA) Guidelines, CEQA does not apply to projects which a public agency rejects or disapproves. Therefore, the City Council may deny the project entitlements and determine the adoption of the resolution is exempt from environmental review.

Alternatively, if the City Council wishes to approve the project, the Initial Study/Mitigated Negative Declaration that was prepared for the project must be adopted as required by the California Environmental Quality Act in accordance with Section 15074 of the CEQA Guidelines. The Planning Commission reviewed the Initial Study/Mitigated Negative Declaration on June 11, 2024, and did not express any concerns or opposition to the document itself.

Initial Study/Mitigated Negative Declaration: The Initial Study/Mitigated Negative Declaration (IS/MND) (see Attachment I-1) prepared for the project is based on the CEQA Guidelines and includes analysis of all standard environmental factors (i.e., those listed in CEQA Guidelines Appendix G). The document was prepared using the appropriate criteria and thresholds for an IS/MND in compliance with CEQA.

Public Review & Comment Period: The required minimum 30-day public review and comment period began on March 28, 2024, and ended on April 29, 2024. The Notice of Intent was published in a local newspaper as well as posted to OPR's State Clearinghouse website for CEQA documents (SCH No. 2024031107). The Initial Study and related documents are also posted on the City's website for environmental documents at'www.cityofredlands.org/post/environmental-documents'.

Mitigation Measures: The Mitigation Monitoring/Reporting Program (Attachment I-2) includes mitigation measures pertaining to Biological Resources, Cultural Resources, Geology & Soils, and Tribal Cultural Resources. After mitigation, no potentially significant impacts were identified as a result of the project, and the mitigation measures will be incorporated into the project as mandatory conditions of approval.

Public Comments: A total of eleven (11) public comments were received from interested parties and the South Coast Air Quality Management District (AQMD). South Coast AQMD requested clarification on technical documents and modeling information (air quality, health risks, and greenhouse gas analysis) and provided general information concerning regulatory compliance. There is no information or evidence identifying any potentially significant impacts as a result of the project, and the City's environmental consultant has provided a written response to the comments (see Attachment I-3). The proposed Mitigated Negative Declaration is the appropriate environmental determination for this

project.

ALTERNATIVES:

The City Council may continue the public hearing and direct staff to address any issues or bring back additional information.

3. CONCRETE WALKWAY. SEE CIVIL PLAN.
4. DRIVEWAY APRONS.
5. 5'-6"X5'-6"X4" MIN. THICK CONCRETE EXTERIOR LANDING PAD TYP. AT ALL EXTERIOR MAN DOORS TO LANDSCAPED AREAS. FINISH TO BE MEDIUM BROOM FINISH. SLOPE TO BE 1/4" - 12" MAX. PROVIDE WALK TO PUBLIC WAY OR DRIVE WAY W/ 1:20 MAX. AS REQ. BY CITY INSPECTOR.
6. 10'H CONCRETE SCREEN WALL.
7. MANUAL OPERATED GATES W/ KNOX. PAD LOCK PER FIRE DEPARTMENT STANDARDS PER DRIVEWAY.
8. EXTERIOR CONC. STAIR.
9. BIKE RACK TYPICAL
10. PRE-CAST CONC. WHEEL STOP.
11. CONC. FILLED GUARD POST "6 DIA. U.N.O. 42" H,
12. CONCRETE RAMP.
13. LANDSCAPE, LANDSCAPE AREAS INDICATED BY SHADED PATTERN.
14. ACCESSIBLE ENTRY SIGN.
15. ACCESSIBLE PARKING STALL SIGN.
16. DESIGNATED SMOKING AREA.
17. PATIO AREA
18. HOLLOW METAL DOOR MAN DOOR.
19. ELECTRONIC VEHICLE CHARGER SPACE WITH ELECTRIC VEHICLE SUPPLY EQUIPMENT (EVSE).
20. TRUNCATED DOME.
21. EV CAPABLE SPACE WITH CONDUIT ONLY.
22. TRASH ENCLOSURE.
23. 8'H CHAIN LINK FENCE.
24. APPROXIMATE LOCATION OF TRANSFORMER PAD.

SITE PLAN GENERAL NOTES

1. THE SOILS REPORT PREPARED BY NORCAL ENGINEERING DATED 05/02/2023 PROJECT NUMBER TBD SHOULD BE A PART OF THESE CONTRACT DOCUMENTS.
2. IF SOILS ARE EXPANSIVE IN NATURE, USE STEEL REINFORCING FOR ALL SITE CONCRETE.
3. ALL DIMENSIONS ARE TO THE FACE OF CONCRETE WALL, FACE OF CONCRETE CURB OR GRID LINE U.N.O.
4. SEE "C" PLANS FOR ALL CONCRETE CURBS, GUTTERS AND SWALES.
5. THE ENTIRE PROJECT SHALL BE PERMANENTLY MAINTAINED WITH AN AUTOMATIC IRRIGATION SYSTEM, PRIOR TO INSTALLATION & AT LEAST 60 DAYS BEFORE BLDG. COMPLETION.
6. SEE "C" DRAWINGS FOR POINT OF CONNECTIONS TO OFF-SITE UTILITIES. CONTRACTOR SHALL VERIFY ACTUAL UTILITY CONTRACTOR SHALL VERIFY ACTUAL UTILITY LOCATIONS.
7. PROVIDE POSITIVE DRAINAGE AWAY FROM BLDG. SEE "C" DRAWINGS.
8. CONTRACTOR TO REFER TO "C" DRAWINGS FOR ALL HORIZONTAL CONTROL DIMENSIONS. SITE PLANS ARE FOR GUIDANCE AND STARTING LAYOUT POINTS.
9. SEE "C" DRAWINGS FOR FINISH GRADE ELEVATIONS.
10. CONCRETE SIDEWALKS TO BE A MINIMUM OF 4" THICK W/ TOOLED JOINTS AT 6' O.C. EXPANSION/CONSTRUCTION JOINTS SHALL BE A MAXIMUM 12' EA. WAY W/ 1:20 MAX. SLOPE. EXPANSION JOINTS TO HAVE COMPRESSIVE EXPANSION FILLER MATERIAL OF 1/4". SEE "L" DRAWINGS FOR FINISH.
11. ALL PARKING AREA SHALL PROVIDE A LANDSCAPED PLANTER OF A MINIMUM WIDTH OF SEVEN FEET WIDE AT THE ENDS OF ALL PARKING AISLES. ALL PLANTING AREAS SHALL HAVE ROUND CORNERS INSTEAD OF 90 DEGREE CORNERS AND BE SHAPED TO PERMIT VEHICLE TURN MOVEMENTS. TWO FEET OF CURB IS REQUIRED. SEE DETAIL "D"
12. PAINT CURBS AND PROVIDE SIGNS TO INFORM OF FIRE LANES AS REQUIRED BY FIRE DEPARTMENT.
13. CONSTRUCTION DOCUMENTS PERTAINING TO THE LANDSCAPE AND IRRIGATION OF THE ENTIRE PROJECT SITE SHALL BE SUBMITTED TO THE BUILDING DEPARTMENT AND APPROVED BY PUBLIC FACILITIES DEVELOPMENT PRIOR TO ISSUANCE OF BUILDING PERMITS.
14. PRIOR TO FINAL CITY INSPECTION, THE LANDSCAPE ARCHITECT SHALL SUBMIT A CERTIFICATE OF COMPLETION TO PUBLIC FACILITIES DEVELOPMENT.
15. NOT USED
16. ALL LANDSCAPE AND IRRIGATION DESIGNS SHALL MEET CURRENT CITY STANDARDS AS LISTED IN GUIDELINES OR AS OBTAINED FROM PUBLIC FACILITIES DEVELOPMENT.
17. NOT USED.
18. LANDSCAPED AREAS SHALL BE DELINEATED WITH A MINIMUM SIX INCHES (6") HIGH CURB
19. APPROVED CONCEPTUAL LANDSCAPE PLAN PRIOR TO GRADING PERMIT

KETNOTES - FLOOR PLAN

1. CONCRETE TILT-UP PANEL.
2. STRUCTURAL STEEL COLUMN.
3. TYPICAL STOREFRONT SYSTEM WITH GLAZING. SEE OFFICE BLOW-UP AND ELEVATIONS FOR SIZE, COLOR AND LOCATIONS.
4. CONCRETE RAMP W/ 42"HIGH CONC TILT-UP GUARD WALL BLOW-UP AND WALL ON BOTH SIDE OF RAMP.
5. 9'-0" X 10' TRUCK DOOR, SECTIONAL O'H., STANDARD GRADE.
6. EXTERIOR CONCRETE STAIR
7. 5'-6"X5'-6"X4" THICK CONCRETE EXTERIOR LANDING PAD TYPICAL AT ALL EXTERIOR MAN DOORS TO LANDSCAPED AREA. FINISH TO BE MEDIUM BLOOM FINISH. SLOPE TO BE 1/4" : 12" MAX. PROVIDE WALK TO HARD SURFACE PER CITY REQUIREMENTS.
8. LOUVERED OPENING FOR VENTILATION.
9. DOCK DOOR BUMPER
10. 12' X 14' DRIVE THRU. SECTIONAL OH., STANDARD GRADE.
11. 3'X7' HOLLOW METAL EXTERIOR MAN DOOR.
12. SOFFIT LINE ABOVE
13. TRASH COMPACTOR.
14. CONC. FILLED GUARD POST. 6" DIA. U.N.O.. 42"H.
15. EXTERIOR DOWNSPOUT WITH OVERFLOW SCUPPER.
16. Z GUARD
17. INTERIOR BIKE RACK
18. ROOF ACCESS LADDER
19. KNOCK OUT PANEL. SEE ELEVATIONS.

GENERAL NOTES-FLOOR PLAN

A. THIS BUILDING IS DESIGNED FOR HIGH PILE STORAGE WITH FIRE ACCESS MAN DOORS AT 100' MAXIMUM O.C. A SEPARATE PERMIT WILL BE REQUIRED FOR ANY RACKING/CONVEYER SYSTEMS.

B. FIRE HOSE LOCATIONS SHALL BE APPROVED PER FIRE DEPARTMENT.

C. THE BUILDING FLOOR SLAB IS SLOPED, SEE "C" DRAWINGS FOR FINISH SURFACE ELEVATIONS.

D. NOT USED

E. WAREHOUSE INTERIOR CONCRETE WALLS ARE PAINTED WHITE. COLUMNS ARE TO RECEIVE PRIMER ONLY. ALL GYP. BD. WALLS IN WAREHOUSE TO RECEIVE1 COAT OF WHITE TO COVER.

F. SLOPE POUR STRIP 1/2" TO EXTERIOR AT ALL MANDOOR EXITS.

G. ALL DIMENSIONS ARE TO THE FACE OF CONCRETE PANEL WALL, GRIDLINE, OR FACE OF STUD U.N.O.

H. SEE CIVIL DRAWINGS FOR POINT OF CONNECTIONS TO OFF-SITE UTILITIES. CONTRACTOR TO VERIFY ACTUAL UTILITY LOCATIONS. PLUMBING/ELECTRICAL COORDINATION.

I. FOR DOOR TYPES AND SIZES, SEE DETAIL SHEET A0.4. NOTE: ALL DOORS PER DOOR SCHEDULE ARE FINISH OPENINGS.

J. CONTRACTOR TO PROTECT AND KEEP THE FLOOR SLAB CLEAN. ALL EQUIPMENT TO BE DIAPERED INCLUDING CARS AND TRUCKS.

K. ALL EXIT MAN DOORS IN WAREHOUSE TO HAVE ILLUMINATED EXIT SIGN. HARDWARE.

L. HIGHLY FLAMMABLE AND COMBUSTIBLE MATERIAL SHALL NOT BE USED OR STORED IN THIS BUILDING.

M. EACH EXTERIOR EXIT DOOR SHALL BE IDENTIFIED BY A TACTILE EXIT SIGN WITH THE WORDS "EXIT". THE MOUNTING HEIGHT FOR SUCH SIGNAGE SHALL BE 60" FROM FINISH FLOOR LEVEL TO THE CENTER OF THE SIGN.

N. NON-ACCESSIBLE DOOR. PROVIDE WARNING SIGN LOCATED IN THE INTERIOR SIDE PER CBC 1133B.1.1.1

O. ALL ROOF MOUNTED MATERIALS SHALL BE FULLY SCREENED FROM PUBLIC VIEW, SEE A/A4.1 OFFICE SECTION.

FLOOR SLAB AND POUR STRIPS REQ.

THESE NOTES ARE VERY MIN. REQUIREMENT.

1. FLOOR COMPACTION - 95%
2. TRENCH COMPACTION - 90%
3. BUILDING FLOOR SLAB:
4. CONTRACTOR TO BUILD FOR CLASS V FLOOR PER A.C.I. 302-1R-96
5. NOT USED
6. CONCRETE SLAB TO HAVE STEEL FLOAT HARD TROWEL BURNISHED FINISH.
7. FOR SLAB CURING, COORDINATE WITH THE OWNER.
8. ALL EQUIPMENT & MOVING VEHICLES SHALL BE DIAPERED.
9. NO CRANES, CONCRETE TRUCKS, OR ANYTHING HEAVIER WILL BE PLACED ON THE SLAB.
10. SLAB TO BE FF50 FL35 MEASURED WITHIN 24 HOURS.
11. NO FLY ASH IN THE CONCRETE
12. WHERE INDICATED, PROVIDE VAPOR BARRIER, CONCRETE SLAB OVER 2" SAND OVER 10MIL VISQUEEN, OVER 2" SAND, OVER COMPACT SOIL. ENGINEER OR MANUFACTURER'S RECOMMENDATION. CONCRETE SLAB IN FUTURE OFFICE AREAS, WHERE SAND OVER VISQUEEN ARE REQUIRED, SHALL BE NATURALLY HYDRATED WITHOUT USE OF BURLENE, CURING COMPOUND, OR RELEASE AGENTS. CONTROL/CONSTRUCTION JOINTS SHALL NOT BE FILLED WITH MM-80 JOINT FILLER IN FUTURE OFFICE AREAS.
13. SEAL CONCRETE SLAB W/ "LAPIDOLITH" SEALER

KEYNOTES - ELEVATIONS

1. CONCRETE TILT-UP PANEL(PAINTED). FINISH GRADE VARIES. SEE "C" DRAWINGS. WATERPROOF ALL WALLS WHERE GRADE IS HIGHER AND EXPOSED TO THE WEATHER ONE SIDE. WATERPROOFING TO BE PROTECTED WITH PROTECTION BOARD AND A MIN. OF 6" OF GRAVEL. PROVIDE TRENCH DRAIN AT BOTTOM AND DAYLIGHT TO CURB OR TAKE TO STORM DRAIN. NOT REQUIRED AT DOCK HIGH CONDITION OR AT RAMP WALLS.
2. PANEL JOINT.
3. PANEL REVEAL. ALL REVEALS TO HAVE A MAX. OF 3/8" CHAMFER. REVEAL COLOR TO MATCH ADJACENT BUILDING FIELD COLOR. U.N.O.
4. OVERHEAD DOOR @ DRIVE THRU. PROVIDE COMPLETE WEATHER-STRIPPING PROTECTION ALL AROUND. PAINT COLOR TO MATCH FIELD COLOR.
5. OVERHEAD DOOR @ DOCK HIGH. PROVIDE COMPLETE WEATHER-STRIPPING PROTECTION ALL AROUND. PAINT COLOR TO MATCH FIELD COLOR.
6. CONCRETE STAIR, LANDING AND GUARDRAIL W/ METAL PIPE HANDRAIL. PROVIDE NON SKID NOSING TO MEET ADA REQUIREMENTS. PROVIDE CONTRASTING COLORED 3" WIDE WARNING STRIPE INTEGRAL TO CONCRETE AT TOP LANDING AND BOTTOM TREAD PER ADA REQUIREMENTS.
7. METAL LOUVER. PAINT COLOR TO MATCH FIELD COLOR.
8. HOLLOW METAL DOORS. PROVIDE COMPLETE WEATHER STRIPING ALL AROUND DOOR. PROVIDE FOR RAIN DIVERTER ABOVE DOOR.
9. ROOF LINE BEYOND.
10. DOCK BUMPER
11. ALUMINUM STOREFRONT FRAMING WITH TEMPERED GLAZING AT ALL DOORS, SIDELITES ADJACENT TO DOORS AND GLAZING WITH BOTTOMS LESS THAN 18" ABOVE FINISH FLOOR ELEVATION.
12. BUILDING ADDRESS
13. EXTERIOR CANOPY
14. EXTERIOR DOWNSPOUT WITH OVERFLOW SCUPPER.
15. INTERIOR DRAIN WITH OVERFLOW SCUPPER.
16. WALL MOUNT LIGHTING FIXTURE, SEE G/DAB-4.1
17. 5'-6"X5'-6"X4" THICK CONCRETE EXTERIOR LANDING PAD TYPICAL AT ALL EXTERIOR MAN DOORS TO LANDSCAPED AREA. FINISH TO BE MEDIUM BROOM FINISH. SLOPE TO BE 1/4" : 12" MAX. PROVIDE WALK TO HARD SURFACE PER CITY REQUIREMENTS.
18. KNOCK OUT PANEL.

GENERAL NOTES - ELEVATIONS

A. ALL PAINT COLOR CHANGES TO OCCUR AT INSIDE CORNERS UNLESS NOTED OTHERWISE.
B. ALL PAINT FINISHES ARE TO BE FLAT UNLESS NOTED OTHERWISE.
C. T.O.P. EL.= TOP OF PARAPET ELEVATION.
D. F.F. = FINISH FLOOR ELEVATION.
E. STOREFRONT CONSTRUCTION: GLASS, METAL ATTACHMENTS AND LINTELS. CONTRACTOR SHALL SUBMIT SHOP DRAWINGS PRIOR TO INSTALLATION.
F. CONTRACTOR SHALL FULLY PAINT ONE CONCRETE PANEL W/ SELECTED COLORS. ARCHITECT AND OWNER SHALL APPROVE PRIOR TO PAINTING REMAINDER OF BUILDING.
G. BACK SIDE OF PARAPETS TO HAVE SMOOTH FINISH AND BE PAINTED WITH ELASTOMERIC PAINT.
H. FOR SPANDREL GLAZING, ALLOW SPACE BEHIND SPANDREL TO BREATH.
J. USE ADHESIVE BACK WOOD STRIPS FOR ALL REVEAL FORMS.
K. THE FIRST COAT OF PAINT TO BE ROLLED-ON AND THE SECOND COAT TO BE SPRAYED-ON

LANDSCAPE NOTES

- ALL LANDSCAPE AREAS TO BE IRRIGATED WITH AN AUTOMATIC IRRIGATION SYSTEM.
- LANDSCAPING IS TO CONFORM TO ALL APPLICABLE CODES & ORDINANCES.
- PROPERTY OWNER SHALL BE RESPONSIBLE FOR ALL ON-SITE LANDSCAPING AS SHOWN.
- ALL TREES WITHIN 10' OF HARDSCAPE TO HAVE A 12" DEEP LINEAR ROOT BARRIER.
- ALL PLANTER AREAS TO RECEIVE A 3" LAYER OF SHREDDED ORGANIC MULCH.
- SOIL COMPACTION TO BE NO GREATER THAN 85% ON LANDSCAPE AREAS.
- ALL FINISH GRADES TO BE 1-1/2" BELOW FINISH SURFACE PAVING.
- AGRONOMICAL SOIL TESTING REPORT TO BE PROVIDED BY CONTRACTOR.
- USE ONLY APPROVED PLANTING MEDIA AT DESIGNATED UNDERGROUND PLANTER LOCATIONS.

RESOLUTION NO. 1678

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF REDLANDS RECOMMENDING THAT THE CITY COUNCIL DENY THE DEVELOPMENT APPLICATIONS FOR PLANNED DEVELOPMENT NO. 7 AND LOT MERGER NO. 8, FOR A PROPOSED 357,610 SQUARE-FOOT WAREHOUSE AND LOGISTICS DISTRIBUTION FACILITY ON 16 ACRES, LOCATED AT 1101 CALIFORNIA STREET.

WHEREAS, CRP/NPP Redlands Industrial Owner, LLC ("Applicant"), has filed applications for Lot Merger No. 8 and Planned Development No. 7, in conjunction with a Socio-Economic Cost/Benefit Study, requesting approval to merge two parcels encompassing approximately 16.0 net acres and construct a 357,610 square-foot warehouse and related site improvements located at 1101 California Street (APNs: 0292-033-11-0000 and 0292-033-13-0000) (the "Project" or "Project Entitlements"); and,

WHEREAS, the Applicant submitted an application for a Socio-Economic Cost/Benefit Study as required by Measure "U" and the Redlands Municipal Code; and

WHEREAS, notice of the Planning Commission's public hearing for Planned Development No. 7 and related Socio-Economic Cost/Benefit Study was duly published in a newspaper of general circulation by the Secretary to the Planning Commission; and

WHEREAS, notice of the Planning Commission's public hearing was provided in accordance with the requirements of the Redlands Municipal Code and the East Valley Corridor Specific Plan; and

WHEREAS, on June 11, 2024, the Planning Commission held a public hearing and considered the staff report, oral report, the testimony and the written evidence submitted by and on behalf of the applicant and by members of the public; and

WHEREAS, an Initial Study and Mitigated Negative Declaration was prepared for the Project and was circulated for public review for a period beginning on March 28, 2024, and ending on April 29, 2024; and,

WHEREAS, the Project is subject to the California Environmental Quality Act (CEQA) and the City has prepared an Initial Study and exercised its own independent judgement and analysis, there is no substantial evidence that the Project may have a significant effect on the environment, and a Mitigated Negative Declaration has been prepared in accordance with the CEQA Guidelines; and,

WHEREAS, following the hearing for Planned Development No. 7 and Socio-Economic Cost/Benefit Study, the Planning Commission determined that approval of the requested entitlement is not in the best interests of the public health, safety, and general welfare; and,

WHEREAS, on June 11, 2024, the Planning Commission made findings for denial for the Project and requested staff to prepare an appropriate Resolution with written findings for denial.

NOW, THEREFORE, BE IT RESOLVED BY THE PLANNING COMMISSION OF THE CITY OF REDLANDS AS FOLLOWS:

SECTION 1. FINDINGS FOR DENIAL OF PLANNED DEVELOPMENT NO. 7. The Planning Commission hereby recommends that the City Council deny Planned Development No. 7, based upon the following findings.

1. *That the proposed Planned Development is in conformity with the General Plan of the City.*

   This finding cannot be made. The proposed Planned Development does not conform to the General Plan of the City because it conflicts with several General Plan objectives and policies concerning the City's overall character and land use planning principles. Specifically, the Livability Element of the General Plan provides several policies intended to (1) maintain a land use pattern of various uses designed and arranged to protect and enhance Redlands' unique character; (2) provide for buffers and transitions between low- and high-intensity land uses; and (3) ensure that the scale and character of new development is appropriate for surrounding terrain and the character of existing development. The proposed development of a major warehouse on the subject site does not maintain a land use pattern that protects and enhances its surroundings, which is characterized by a heterogeneous distribution of compatibly located land uses. The proposed development would expand industrial land uses eastward toward existing commercial development, thereby degrading community character as a result. Furthermore, the subject site is located between existing land uses of different intensities (industrial to the west; commercial to the north and south), and the proposed development does not adequately provide for buffers or land use transitions that would contribute to harmonious and orderly development of the area.

2. *That the proposed Planned Development would not adversely affect the surrounding area or the Redlands community in general.*

   This finding cannot be made. The proposed Planned Development would adversely affect the surrounding area because surrounding properties to the north and east are developed with commercial buildings that must be protected from incompatible and impactful uses including warehousing. The proposed development is incompatible with surrounding uses and is inconsistent with the existing pattern of development in the vicinity. The proposed development would adversely impact surrounding non-industrial uses, particularly the site of the existing medical office building to the north across Lugonia Avenue on which the development of a regional hospital complex is reasonably foreseeable based on recent filing of development applications. Furthermore, the subject site is in close proximity to planned future transit-oriented development (south of Interstate 10 on California St.) identified as the Transit Villages Concept within the 2035 General Plan. Development of the subject site with a warehouse would unduly increase the potential for future land use conflicts to occur in these sensitive areas.

SECTION 2. RECOMMENDATION OF DENIAL. The Planning Commission hereby recommends that the City Council deny the Project Entitlements based on the above findings.

SECTION 3. EFFECTIVE DATE. This Resolution shall take effect upon adoption.

ADOPTED, SIGNED AND APPROVED this 25th day of June, 2024.

Karah Shaw, Chair
Planning Commission

ATTEST:

Linda McCasland,
Planning Commission Secretary

I, Linda McCasland, Secretary to the Planning Commission, hereby certify that the foregoing resolution was duly adopted by the Planning Commission at a regular meeting thereof held on the 25th day of June, 2024.

City of Redlands
REQUEST FOR PLANNING COMMISSION ACTION

Planning Commission **5. D.**

Meeting Date: 06/11/2024

APPLICANT:
CRP/NPP REDLANDS INDUSTRIAL OWNER, LLC
(PROJECT PLANNER: KEVIN BEERY, SENIOR PLANNER)

A **PUBLIC HEARING** to consider the following matters concerning the proposed development of a warehouse on a site encompassing approximately 16.1 gross acres located at 1101 California Street (APNs: 0292-033-11-0000 and 0292-033-13-0000), on the west side of California Street between Lugonia Avenue and Interstate 10:

1. Consider and make a recommendation to the City Council on a proposed **Mitigated Negative Declaration** and corresponding Mitigation Monitoring and Reporting Program prepared for the project in accordance with Section 15074 of the California Environmental Quality Act (CEQA) Guidelines.

2. Consider and make a recommendation to the City Council on a **Socio-Economic Cost/Benefit Study** prepared for the project in accordance with Measure U.

3. Consider and make a recommendation to the City Council on **Planned Development No. 7** and **Lot Merger No. 8**, a request to merge two parcels and construct a 357,610 square-foot warehouse (including 6,000 square feet of office space) and related site improvements including parking lots, loading docks, landscaping, walls and fences, lighting, stormwater drainage facilities, and utility connections on approximately 16.0 net acres.

SYNOPSIS

1. General Plan Designation:	Commercial/Industrial (CI)
2. Existing Zoning:	Special Development District (East Valley Corridor Specific Plan)
3. Surrounding Zoning:	North: Medical Facilities District (Concept Plan No. 1) South: General Commercial (East Valley Corridor Specific Plan) East: Office/Commercial (Specific Plan No. 29); and Open Space District (East Valley Corridor Specific Plan) West: Planned Development No. 3 (East Valley Corridor Specific Plan)
4. Existing Land Use:	Vacant (Demolished Amusement Park)
5. Surrounding Land Use:	North (across Lugonia): Commercial (Medical Offices) South (across I-10): City Citrus Grove East (across California): Commercial (General Office); Vacant West: Industrial (Warehouse)
6. Area / Topography:	16.1 gross acres with flat topography

7. Environmental Determination:	An Initial Study was prepared and a Mitigated Negative Declaration with a Mitigation Monitoring/Reporting Program is proposed per CEQA Guidelines Section 15074.	
8. Socio-Economic/Cost Benefit Study:	A Socio-Economic Cost/Benefit Study was prepared pursuant to Measure U, and the project has a positive Cost/Benefit ratio of 11.16.	
9. Planning Commission Submittal Dates:	(A) Date Submitted: (B) Date Accepted As Complete: (C) Planning Commission Meeting:	August 2, 2023 November 20, 2023 June 11, 2024

PROPOSAL

The applicant proposes to merge two parcels totaling approximately 16.0 net acres and construct a 357,610 square-foot warehouse building and related site improvements including parking lots, loading areas, landscaping, screen walls, lighting, stormwater drainage facilities, and utility connections. The project site is located at 1101 California Street, on the west side of California Street between Lugonia Avenue and the westbound Interstate 10 on-ramp.

BACKGROUND

The subject site was formerly occupied by an amusement park ("Pharoah's Lost Kingdom" and "Splash Kingdom Waterpark") which was demolished in 2021. The site is now vacant except for the remains of former park attractions and parking lots.

ANALYSIS

A) General Plan

The 2035 General Plan land use designation of the subject site as "Commercial/Industrial", which provides for certain types of commercial and light industrial uses, including flex commercial space as well as business parks, that may be compatibly located (Attachment B). The proposed development is consistent with this designation, as well as the following General Plan goals and policies:

> Action: 3-A.4: Encourage and attract businesses that support industry clusters for demand occupations in technology, healthcare, business services, education, and logistics.
>
> Principle 4-P.7: Provide a diversity of compatible land uses throughout the city, providing opportunities for the development of a range of businesses, services, residential types, and public facilities to meet the needs of the community.
>
> Principle 4-P.10: Ensure that the scale and character of new development is appropriate for surrounding terrain and the character of existing development.
>
> Principle 4-P.13: Provide for the concentration of office, industrial, and commercial uses in appropriate locations near transportation corridors to encourage the development of employment centers and reduce the potential for land use conflicts with sensitive uses.
>
> Action 4-A.27: Provide space for expansion of existing industries and protect them from encroachment by inharmonious uses, but encourage most new industries to locate in the East

Valley Corridor where impacts on residential areas will be minimized.

Principle 5-P.29: Prioritize goods movement along specific routes in the city, consistent with the layered network, to foster efficient freight logistics.

B) East Valley Corridor Specific Plan

The subject site is located in the Special Development (EV/SD) district of the East Valley Corridor Specific Plan (EVCSP) (see Attachment C). The purpose of the EV/SD district is to provide regulatory, land use, and design flexibility to attain economical and efficient use of land (EVCSP Section EV3.1101). The EV/SD district allows any uses that are permitted in the following specific plan districts: Administrative/Professional (EV/AP), General Commercial (EV/CG), Commercial Industrial (EV/IC), and Public/Institutional (EV/IP). Warehousing is permitted in the EV/IC district and is, by extension, also permitted in the EV/SD district.

Although the EV/SD district does not establish district-specific development standards (e.g., building setbacks, height and size), new development in the district must conform to the general standards and guidelines under EVCSP Chapter 4. Table 1 summarizes the proposed development specifications and their conformance with applicable development standards. Attachment D includes the development plans.

Table 1. Development Standards Summary

Development Standard	***Requirement***	***Proposed***	***Complies***
Floor Area Ratio	0.80 max.	0.511	Yes
Building Setback (from California)	30'-0" min.	86'-1"	Yes
Parking Setback (from California)	30'-0" min.	30'-1"	Yes
Building Setback (from Lugonia)	30'-0" min.	71'-8"	Yes
Parking Setback (from Lugonia)	15'-0" min.	15'-8"	Yes
Interior Yard(s)	Per approved PD plan	124'-6"	Yes, if approved
Freeway Setback	50'-0" min.	80'-5"	Yes
Building Height	Per approved PD plan	50'-0"	Yes, if approved
Landscaping Coverage (Site)	15% min.	11.8%	No*
Landscaping Coverage (Parking Areas)	7% min.	10%	Yes

* Development will provide public art installation. According to EVCSP Section EV4.0260(e), the landscaped area requirement may be reduced by up to 5% where public art is to be displayed in a setting which enhances pedestrian spaces and building architecture.

Site Plan and Architecture: The proposed building is a rectangular concrete tilt-up building featuring a flat roof, and is 50 feet in height measured from adjacent finished grade to the top of the roofline (parapet). The site plan shows that the proposed building is centrally sited with parking spaces arranged in rows around the building. Landscaped areas are located along the site frontage, as well as between the parking areas and the building.

The architectural design of the proposed building conforms to the provisions under EVCSP Chapter 4 and is consistent with the City's Architectural Guidelines. The proposed building exterior consists of concrete panels painted in various shades of white and gray. The street-facing facade is modulated by pairs of concrete panel column projections (painted in indigo), as well as metal canopies. Windows are regularly spaced along the street- and freeway-facing facades and feature combinations of both vision and spandrel glazing. The two primary building entrances, which are located on opposite ends of the east side of the building,

consist of glass and aluminum framing articulated by steel canopies. Overall, the exterior architecture is designed in a manner compatible with surrounding development, and in a manner appropriate for the location of the project site next to the Interstate 10 and California Street interchange, a central gateway to the East Valley Corridor.

Parking and Loading: As shown in Table 2, based on gross floor area, the minimum off-street parking space count required for the proposed development is 396. The development plan provides a total of 396 parking spaces and meets the requirement. The plan also shows 47 loading bays in the screened yard on the west side of the building, which far exceeds the five spaces required for industrial buildings that exceed 160,000 square-feet.

Table 2. Parking and Loading Requirements Summary

Use	Parking Space Requirement	Spaces Required	Spaces Provided
Office	1 parking space per 250 square feet	24	–
Warehouse	1 parking space per 500 square feet up to 20k square feet; 1 space per 1,000 square feet over 20k square feet	372	–
Total		396	396

Landscaping: For industrial facilities located in the specific plan, a minimum of 15% of the development site must be landscaped, and the development plan indicates that 12% of the site would be landscaped. EVCSP Section EV4.0260(e) provides that the landscaped area requirement may be reduced by up to five (5) percent where public art is to be displayed in a setting which enhances pedestrian spaces and building architecture. Accordingly, in-lieu of meeting the minimum landscaping coverage standard, the applicant is opting either to contribute or fund a public art installation to be valued at a minimum of 1% of total project value. A condition of approval guaranteeing compliance with the public art requirement has been added.

A minimum of 7% of the parking lot areas must be landscaped, and 10% will be provided and will meet the code requirement.

The proposed plant palette consists of a combination of trees, shrubs, accent plants and ground cover to be installed throughout the site. Mature carrotwood, canary island pine, and mexican fan palm trees exist along the project frontages. In general, existing trees in these areas are proposed to remain in place and be protected during construction. As part of the project, the developer is also proposing new off-site landscaping abutting the I-10 westbound on-ramp (subject to approval by Caltrans). Final landscape plans demonstrating compliance with water efficiency requirements must be reviewed prior to issuance of a building permit.

Screening, Fences, and Walls: Rooftop equipment will be screened from public view by parapet walls extending roughly six feet in height above the roof field. Conditions of approval have been added requiring ground-mounted ancillary equipment, such as backflow preventors, irrigation valves and transformers, to be concealed from public view.

Screen walls 8'0" high, constructed from concrete tilt-up panels, will be located around the loading area on the west side (rear) of the proposed building. The walls will be painted to match the main building and will feature mid-section accent reveals. An existing 8'0" tall chain link fence on the west lot boundary will remain in place.

C) Planned Development No. 7

New development projects in the EV/SP district are subject to the "Planned Development" review and approval process. According to City Council Resolution No. 5116, which establishes Planned Development application procedures, approval of a Planned Development application is "quasi-legislative" in nature, and thus is subject to review and recommendation by the Planning Commission, with final review and approval by the City Council. A Planned Development, when submitted in a single stage as a comprehensive site plan serves as both an approved site plan and a development permit, upon which conditions of approval (including expiration dates) may be imposed.

D) Municipal Code Chapter 18.156

The proposed facility is subject to the provisions under Article XII of Chapter 18.156 of the Redlands Municipal Code (Warehouses and Logistics Distribution Centers), which apply to new large-scale warehousing facilities either having a gross floor area of 50,000 square feet or greater, or having six (6) or more truck docks or high docks loading doors. The provisions include standards on the location, screening and buffering, traffic patterns, energy usage and operations. The proposed facility complies with these requirements as described below.

Site Location Requirement: New warehouses must be located within one mile (5,280 feet) from a freeway entrance/exit ramp to the Interstate Freeway System (I-10 or I-210). The site of the proposed facility is adjacent to the westbound Interstate 10 on-ramp at California Street, and therefore, meets the location requirement.

Site Design: The development site plan shows sufficient on-site area (a minimum of 140 feet for two trucks) to accommodate queuing outside the loading dock to avoid vehicle spillover on the public right-of-way. Loading docks and truck entries are not oriented toward any sensitive receptors (of which there are none abutting the project site), and truck docks are placed at the rear of the building to be fully concealed from public view.

Landscape Shading: Trees will be installed in passenger vehicle parking areas to provide at least 35% shade coverage of the parking area within 15 years.

Truck Routing: As required by Measure U, a traffic study was prepared evaluating impacts of the proposed development on levels of service (LOS) at nearby intersections. There are no abutting or adjacent sensitive receptors (such as schools, hospitals, or residences) near the project site that might be detrimentally affected by truck trips, noise, vibration, or air quality impacts resulting from the proposed use. The site is adjacent to Interstate 10 and has immediate access to the interstate system via California Street.

Other Requirements: All other design and operational requirements have been included as mandatory conditions of approval (e.g., use of PV solar panels, cool roof treatment, sustainable energy requirements, engine idling signs, etc.).

E) Traffic and Measure 'U'

Measure 'U' is a growth management initiative approved by Redlands voters in 1997, and establishes several principles of managed development including a general requirement that a Level of Service (LOS) grade of "C" or better must be maintained at roadway intersections. Based on the traffic impact analysis prepared for the project in December 2023, intersections in the project study area presently operate at acceptable LOS. The study further concludes that the projected increase in traffic levels caused directly by the project is not expected to reduce the performance of study intersections below the Measure U threshold of LOS C. The proposed development is estimated to generate 1,132

passenger-car equivalent (PCE) daily trips, with 111 total trips modeled in the AM peak hour and 114 total trips modeled in the PM peak hour. Based on the forecasted "existing plus project" traffic conditions, nearby intersections are expected to continue functioning at acceptable performance levels under project operating conditions. Project traffic is not anticipated to adversely affect the performance of nearby intersections below LOS 'C' and, therefore, no mitigating roadway system improvements are identified as necessary.

The developer will dedicate a portion of the southeast corner of the project site (abutting the I-10 on-ramp) to Caltrans in order to accommodate one new additional free right-turn lane that will be constructed in the future. In addition, the project will also re-stripe the existing median on Lugonia Avenue to accommodate a new westbound left-turn lane for truck access into the proposed Driveway 1.

F) Socio-Economic Cost/Benefit Study

Measure 'U' requires a socio-economic cost/benefit study for projects involving new structures larger than 5,000 square feet. A Socio-Economic Cost/Benefit Study has been prepared for this project (see Attachment E). According to the Cost/Benefit Model used by the City, the project is projected to result in annual non-residential revenues of $197,250 to the City upon project implementation and annual ongoing costs of $17,672. The surplus is $179,578 and the cost/benefit ratio is +11.16. The complete Cost/Benefit Model results are attached to the report.

ENVIRONMENTAL REVIEW

Initial Study/Mitigated Negative Declaration: The Initial Study/Mitigated Negative Declaration (IS/MND) (see Attachment F-1) prepared for the project is based on the CEQA Guidelines and includes analysis of all standard environmental factors (i.e., those listed in CEQA Guidelines Appendix G). The document was prepared using the appropriate criteria and thresholds for an IS/MND in compliance with CEQA.

Public Review & Comment Period: The required minimum 30-day public review and comment period began on March 28, 2024, and ended on April 29, 2024. The Notice of Intent was published in a local newspaper as well as posted to OPR's State Clearinghouse website for CEQA documents (SCH No. 2024031107). The Initial Study and related documents are also posted on the City's web site for environmental documents at 'www.cityofredlands.org/post/environmental-documents'.

Mitigation Measures: The Mitigation Monitoring/Reporting Program (Attachment F-2) includes mitigation measures pertaining to Biological Resources, Cultural Resources, Geology & Soils, and Tribal Cultural Resources. After mitigation, no potentially significant impacts were identified as a result of the project, and the mitigation measures will be incorporated into the project as mandatory conditions of approval.

Public Comments: To date, a total of eleven (11) public comments have been received from interested parties and the South Coast Air Quality Management District (AQMD). South Coast AQMD requested clarification on technical documents and modeling information (air quality, health risks, and greenhouse gas analysis) and provided general information concerning regulatory compliance. There is no information or evidence identifying any potentially significant impacts as a result of the project, and the City's environmental consultant has provided a written response to the comments (see Attachment F-3). The proposed Mitigated Negative Declaration is the appropriate environmental determination for this project.

FINDINGS

In considering a Planned Development application, the Planning Commission must make the following findings before recommending its approval to the City Council. Each finding is followed by the recommended determination based on staff's analysis.

1) That the proposed Planned Development is in conformity with the General Plan of the City.

The General Plan land use designation of the subject site is "Commercial/Industrial" which provides for certain types of commercial and light industrial uses, including flex commercial space as well as business parks, that may be compatibly located. As a warehousing facility, the proposed development is consistent with both the General Plan land use designation and applicable General Plan goals and policies, particularly those concerning the East Valley Corridor. Designated truck routes are abutting and available to the subject site, and the proposed development abuts the Interstate 10 freeway and California Street interchange. No abutting, adjacent or nearby sensitive receptors are located in proximity to the project site or the necessary truck routes that serve the proposed facility.

2) That the proposed Planned Development would not adversely affect the surrounding area or the Redlands community in general.

The subject site is generally surrounded by existing industrial and commercial development, and no existing or reasonably foreseeable land use conflicts or other detrimental effects are present in the vicinity. Vehicular access and freeway access (for large trucks and tractor-trailers) are adjacent to the subject site, and several ramps accessing Interstate 10 abut the project site and elsewhere in the vicinity. The project will dedicate land to widen and improve the westbound California Street on-ramp to Interate 10 abutting the project site. Truck traffic to and from the proposed warehouse facility will minimally affect the Redlands community and loca street network. Furthermore, the proposed use will not be detrimental to the health, safety, or general welfare, and will not be injurious to property or improvements in the vicinity. The proposed development is compatible with the surrounding area and all improvements necessary to adequately serve the new development are existing or will be constructed as required by the conditions of approval.

RECOMMENDATIONS

Based on the above analysis and findings, staff recommends that the Planning Commission adopt Resolution No. 1678 and recommend that the City Council adopt the Mitigated Negative Declaration, adopt the Socio-Economic Cost/Benefit Study for the project, and approve Lot Merger No. 8 and Planned Development No. 7.

MOTIONS

If the Planning Commission concurs with staff's recommendation, the following motion is provided:

"I move that the Planning Commission adopt Resolution No. 1678 and recommend that the City Council:

- Adopt the Mitigated Negative Declaration and Mitigation Monitoring & Reporting Program

prepared for the project;
- Adopt the Socio-Economic Cost/Benefit Study prepared for the project;
- Approve Lot Merger No. 8; and
- Approve Planned Development No. 7."

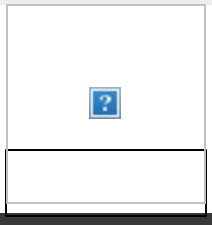
Comment for the Commission

Begin forwarded message:

> **From:** PAUL FOSTER
> **Date:** June 6, 2024 at 4:59:14 PM PDT
> **To:** Karah Shaw
> **Subject: Upcoming Planning Commission Item**
>
> Hi Karah!
>
> I hope this message finds you well.
>
> I'm writing to express my objections to the upcoming Planning Commission item proposition the construction of a warehouse facility on the site of Splash Kingdom across from the Kaiser Permanente Medical Office.
>
> The planning and opening of that medical office was one of my last major projects before retiring from KP. The site, as you may know was purchased with building a hospital on the site. As you may also be aware Kaiser is moving forward with planning the expansion on that site in the near future.
>
> The patients seen at the facility have and continue to complain about the truck traffic as they attempt to arrive and depart from their visits. This will only get much worse if such a facility is constructed.
>
> In addition, as the hospital is completed it will, of course include an Emergency Department. Emergency vehicles attempting to get critical patients to the ED will be faced with loosing vital minutes, even seconds as big rig trucks fill the California Street exit,even if enlarged. Asking these same emergency vehicles to find other routes in order to accommodate the trucks for the wearhouse is simply unacceptable!!! Taking care of the medical needs of Redlands residents must be in the forefront of the decision making on this project rather than the economic advantage to the developer.
> This site should have never been zoned as it is. While serving as Mayor I met with a prior owner at their request and made it clear that the site should be developed as mixed use or office

professional citing the reasons above as part of my reasoning.
I must add that former Mayor Harisson and myself worked hard to have the orange grove on the south side of the freeway at California Street replanted as a grove as that location make the gateway entrance to Redlands. It would be a shame to see nothing but wear housing on the opposite side.

My voice these days carries little weight in Redlands these days but I couldn't let this matter come to the Commission without raising my concerns.
I ask that you give them consideration in your deliberations.



Best wishes to you always!

Paul W. Foster
Mayor (retired)
City of Redlands
Assistant Medical Group Administrator(retired)
Southern California Permanente Medical Group

PLANNING COMMISSION COMMENTS

Planning Commission Date:
June 11, 2024

Agenda Item Number:
5D

Speaker Name:
Kathleen Wing

Address (Optional):
1316 E Brockton Avenue, Redlands, CA 92374

Subject on which the person wishes to speak:
Against

Briefly describe what you would like to say (Max 250 Words):
I don't know why they would build another warehouse when the vacancy rate is increasing for existing warehouses. Also, why would we want a development that will produce mostly low wage jobs when there

are few affordable places to live? Even if the ecomomics improve for warehouses the negative effects of that pollution and related traffic congestion will be bad for our quality of life in Redlands if this project is developed.

Briefly describe what you would like to say (Max 250 Words):
The intersection of the proposed warehouse is extremely busy. Two days ago I was under the overpass and 6 massive trucks turned left onto California during one light! I thought there was a moratorium on warehouse. Really, at some point this needs to stop. With Kaiser just

down the street, there is a lot of personal/family traffic that already has to share California with too many trucks.

5d

Speaker Name:
Ulysses Mora

Address (Optional):

Subject on which the person wishes to speak:
Against

Briefly describe what you would like to say (Max 250 Words):
Please do not support the approval of yet another warehouse in Redlands. They Inland Empire region is suffocating in pollution caused by the constant building of warehouses. We have a regional housing crisis, our development plans should all be prioritizing housing and

making the city more walkable. These warehouses do not bring good paying jobs and would only cause more harm than good to the community.

PLANNING COMMISSION COMMENTS

Planning Commission Date:
June 11, 2024

Agenda Item Number:
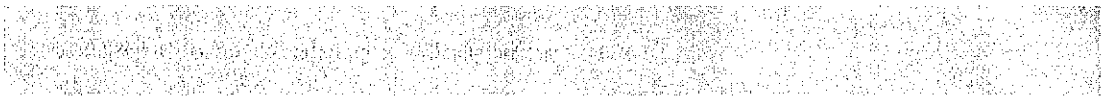
APNs: 0292-033-11-0000 and 0292-033-13-0000

Speaker Name:
Ken Hartling



Address (Optional):
Eureka St Redlands

Subject on which the person wishes to speak:
Against

Briefly describe what you would like to say (Max 250 Words):
This is the proposed giant warehouse on California St, where splash kingdom used to be.
Please, no more warehouses in Redlands! Quality of life has greatly diminished over the past 20yrs due to the additional high traffic (truck and air) and the ongoing air quality issues.
1. The logistics industry is now considered the worst environmental justice crisis in the history of the IE. We don't need more warehouses.
2. We can be more creative than this! It used to be a park, it could be a park again
3. Kaiser has a medical facility next door to this location, the last thing they need is more air pollution and traffic.
"In a study conducted by SmartSurvey that used 12 metrics to measure air quality, the Inland Empire topped the list as having the worst total air quality in the U.S." Redlands is our home and I personally want better for our families.

Subject: Possible Warehouse at Splash Kingdom

You don't often get email from morganbstoneking@gmail.com. Learn why this is important

[**NOTICE:** This message originated outside of City of Redlands -- **DO NOT CLICK** on **links** or open **attachments** unless you are sure the content is safe.]

To Whom It May Concern,

I am reaching out regarding the potential warehouse that is in talks of being built where the old Splash Kingdom used to be. There are several reasons why this would not be an ideal situation.

I work on California Street and Orange Tree Lane. Getting off of the 10 at California Street is already extremely difficult, but with the addition of as many stop lights as there are between there at San Bernardino Avenue makes for a very difficult commute.

This would be a horrible eyesore to the city. If we build ANOTHER warehouse in this place, it makes it look just like every other city in California these days. There are so many warehouses and distribution centers in Redlands already, we do not need another ugly, beige building to look at.

I hope you really take people's opinions into consideration. This is an awful idea for both commuting purposes and taking away from the city.

Thank you for your time.
-A PROUD Redlands Resident

PLANNING COMMISSION COMMENTS

Planning Commission Date:
June 11, 2024

Agenda Item Number:
5D

Speaker Name:
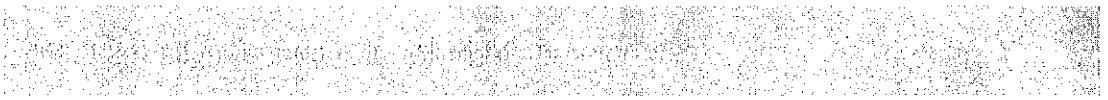
Greg Tieman



Address (Optional):

Subject on which the person wishes to speak:
Against

Briefly describe what you would like to say (Max 250 Words):
1. The logistics industry is now considered the worst environmental justice crisis in the history of the IE. We don't need more warehouses.
2. We can be more creative than this! It used to be a park, it could be a park again or something that benefits the residents and beautifies the area.
3. Kaiser has a medical facility next door to this location, they don't need more air pollution and traffic.
4. I have kids who are growing up here and they all developed asthma at an early age. Warehouse and truck traffic only exacerbate the ongoing local public health problem surrounding poor air quality and increased pollution from the Logistics industry. We need to be doing better for our residents, not worse.

PLANNING COMMISSION COMMENTS

Planning Commission Date:
June 11, 2024

Agenda Item Number:
5D

Speaker Name:
Julia Lenhardt

Address (Optional):

Subject on which the person wishes to speak:
Against

Briefly describe what you would like to say (Max 250 Words):
The increased number of warehouses in the Inland Empire is now the cause of a public health crisis. The area around the proposed project is already overburdened by warehouses and the pollution and traffic they generate. Acute or prolonged exposure to pollution from diesel trucks has been linked to asthma, pulmonary and cardiovascular diseases, and cancer. Our area does not need more warehouses. This site was a recreational site before. We can be strategic and creative in the use of this space. I urge you to vote no to this project.

PLANNING COMMISSION COMMENTS

Planning Commission Date:
June 11, 2024

Agenda Item Number:
5D

Speaker Name:
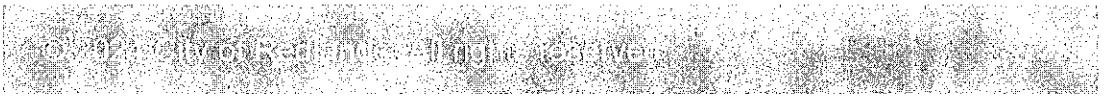
Margot Bordne



Address (Optional):

Subject on which the person wishes to speak:
Against

Briefly describe what you would like to say (Max 250 Words):
I am strongly opposed to this warehouse project in Redlands. I opposed the previous warehouse project and will continue to oppose these projects because the IE does not need more warehouses bringing more trucks and more pollution to where my kids breathe air all day. This location used to be a park and has the potential to be something that could improve our community and quality of life, rather than something that will make it dirtier and less livable. I strongly urge the council to consider a better option for this location instead if a warehouse that will continue to perpetuate the pollution and environmental justice crisis in the IE.

Subject: Planning Commission Comments - former site of Splash Kingdom Park

You don't often get email from garyspringfield.direct@gmail.com. Learn why this is important

[**NOTICE:** This message originated outside of City of Redlands -- **DO NOT CLICK** on **links** or open **attachments** unless you are sure the content is safe.]

Please don't turn this site into another warehouse. I work less than a mile from this location and through the years, the traffic has become a nightmare. What used to be a simple task of getting on and off the freeway has become a game of wait while all the traffic piles up and completely ignores anything resembling a traffic light.

I've worked in this area for many many years so I've been here when Splash Kingdom was in its heyday. Traffic was not bad. Then, through the years, dozens of warehouses were built a mile or so off that path. Unfortunately, nothing was ever done to improve traffic flow. What used to be the occasional truck on the road now has hundreds of trucks a day clogging all traffic. And now you want to build another warehouse? Seriously?

We've got to stop making our area warehouse central. We have so many of these warehouses without thought or planning of how it affects traffic. I've lived it. I've seen when traffic was light, now it's a nightmare. Don't believe your studies. If you put another ware house with 47 truck dock doors, do you really think that won't impact the area?

Feel free to build one of these warehouses next to your home and let me know if there's any affect on your quality of life.

Come up with a different plan. Stop the warehouse madness. If you do vote for this really bad idea, I hope when they build the warehouse, you take the California exit as your preferred route to get anywhere. Then you'll know how terrible the situation already is. You'd never vote for this if you had to do the commute all of us in this area have to take while working here.

Do the right thing.

Against

Briefly describe what you would like to say (Max 250 Words):
In a study conducted by SmartSurvey that used 12 metrics to measure air quality, the Inland Empire topped the list as having the worst total air quality in the U.S. Redlands is my home I want better for our families. This space can be repurposed for something better than a giant warehouse that will make our air quality even worse. I take my young children to their pediatrician at Kaiser directly next door.

Agenda Item Number:
5D

Speaker Name:
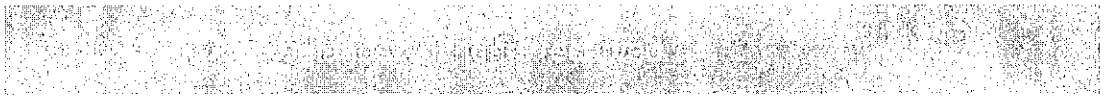
Ashley Killian



Address (Optional):

Subject on which the person wishes to speak:
Against

Briefly describe what you would like to say (Max 250 Words):
The recent warehouse boom is nothing more than just that, a boom that has already begun to fizzle out. More and more warehouses are sitting empty, and the building of them is just a cash grab. The Inland Empire was just recently ranked within the top 5 worst air quality sectors in the COUNTRY. The trucking industry is a big part of this. There are warehouses and big rigs everywhere now, and our infrastructure has not been maintained to keep up with this, or the housing boom. Adding yet another large warehouse in an already saturated area would only exacerbate these existing problems. Aside from all those reasons, they are an eyesore. I am adamantly against any new warehouse buildings in the area.

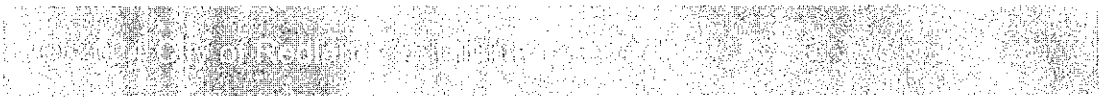
Planning Commission Date:
June 11, 2024

Agenda Item Number:
D

Speaker Name:
Shantanu Tavkar



Address (Optional):

Subject on which the person wishes to speak:
Against

Briefly describe what you would like to say (Max 250 Words):
I'd like to express my stance against another warehouse in Redlands. North Redlands has felt ignored with poorly maintained streets, bad walking/biking infrastructure, and a lack of shade and trees. Warehouses and the trucks they bring don't help with this. We don't need more warehouses bringing more traffic, pollution, and trucks to this city. I live close to the proposed site and it is already frustrating to navigate at peak times with how many trucks use that intersection, I can't imaging having to deal with a warehouse right on that intersection. This is not a good idea.
Build a new park, a train station, affordable housing, or anything that would benefit the residents of the city instead of corporations.

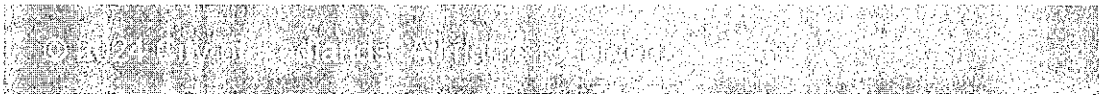
PLANNING COMMISSION COMMENTS

Planning Commission Date:
June 11, 2024

Agenda Item Number:
5D

Speaker Name:
Cassandra



Address (Optional):

Subject on which the person wishes to speak:
Against

Briefly describe what you would like to say (Max 250 Words):
I am speaking against this because of the inherent harm I think it will have on the community. As it stands this area has the worst air quality in the US a warehouse like this will only add to that problem and make it harder for those with health issues. This seems especially ill advised given the Kaiser medical facility near the proposed location. Logistically, driving around the area during peak commute times is already challenging, another warehouse will only compound the issue. And lastly, with 5 acres of land there are so many more ways it can be used to benefit the community from parks that would add cooling spaces during the summer, recreation for exercise, etc.

To: Planning Commission
Subject: Comment on new warehouse on Orange Tree Lane (old Splash Kingdom)

You don't often get email from rod@kcalfm.com. Learn why this is important

[**NOTICE:** This message originated outside of City of Redlands -- **DO NOT CLICK** on **links** or open **attachments** unless you are sure the content is safe.]

Good morning City Planners,
I work for a business on Orange Tree Lane. I'm an outside sales person, so I'm going thru the California/Orange Tree intersection 3-4 times per day...plus on and off the 10 freeway at the CA interchange multiple times per day. I thought I'd send a note about my concern about adding another warehouse at the old Splash Kingdom.

First of all, traffic will definitely be compromised at the intersection of Orange Tree Lane at California with North and Southbound trucks. Traffic will likely be backed up in all directions. But here's a few things that will directly affect us.

- California street is already pretty bad with lane narrowing on north and southbound. More specifically, northbound CA street at Lugonia will be a bigger mess unless the road is widened.
- We all know that large trucks increase pot hole damage to roads. Potholes not only cause a lot of vehicle damage, they also cause accidents. When a pothole is deep enough, the impact can be incredibly destructive. I'm not suggesting citizens suing the city for damage to their vehicle due to increase in potholes, but there must be some improvements funded by the builder of the new building.
- Narrowing of CA street is so poorly designed that drivers are currently delayed. Add big rigs to the mix and it's going to be an issue for people going to Kaiser. (especially senior citizens)
- An increase in large trucks will delay access on and off the freeway at the California off/on ramps. The Eastbound off ramp used to get backed up onto the 10 freeway before the off ramp was widened. But not sure it was widened to the extent that will be necessary moving forward. Furthermore, the Westbound onramp at California will definitely be back up into the intersection at Orange Tree Lane and CA street..

It's not my intent to stop progress as there is always a work around...but would hope our city leaders would ask the builder to make improvements to the California off ramp and California street to accommodate the increase of new trucks. Just sayin'. ;)

Have a great Tuesday!!

Briefly describe what you would like to say (Max 250 Words):
I'd like to express my strong opposition to the warehouse proposal at the former Splash Kingdom location. Our community is already inundated with warehouses and traffic and another warehouse would only further add to the negative impacts on the health of our community members (asthma rates, cardiovascular disease, and cancer due to emissions exposure). I am encouraged by the Strategic Plan (2022-2028) for the City of Redlands as it emphasizes Priority A: Quality of Life and Priority D: Sustainability. I know that in order to uphold these values that you have set forth for our community, the committee would need to vote against this project. Thank you.

Briefly describe what you would like to say (Max 250 Words):
Collectively warehouses in the Inland Empire cover more than a BILLION square feet. We do not need to add any more to this total. This property is too close to a health care facility, to offices, schools and housing. The last thing Redlands needs is more truck traffic and more concrete. This property has the potential to improve the lives of our residents (a park, a recreation center, more affordable housing etc). Another warehouse will not.

[NOTICE: This message originated outside of City of Redlands -- DO NOT CLICK on links or open attachments unless you are sure the content is safe.]

Hello, I'm a concerned Redlands resident. I've become aware of the latest efforts to put a warehouse where Splash Kingdom used to be.

As if a giant, concrete slab full of graffiti, trash, and weeds for years wasn't bad enough, a warehouse is the absolute last thing we need as a city. The location of the warehouse would make the already miserable California intersection and off-ramps even more difficult and time consuming to navigate. The sheer volume of 53 foot trailers coming in and out that close to train tracks, a freeway overpass with on and off-ramps, and a busy shopping center would congest the surrounding streets even further.

In a time of insane housing prices and an extremely high cost of living, Redlands should use this space as an opportunity to create housing. Young families like mine are forced out of the communities they grew up in simply because they can't afford the price. It's insulting to the residents of our city that perfectly good space is good enough for a company's profit, but not to help the people who live here.

Throughout the Inland Empire, communities have seen an unbelievable amount of warehouses being built. These warehouses often provide employment opportunities that equate to backbreaking work in uncomfortable conditions, a lack of a real living wage, and a career path that is often nothing more than a dead end job. A warehouse is just another building, that takes from the community more than in gives.

The city of Redlands has a duty and responsibility to use this as an opportunity to address the public's concerns, not private concerns.

Thank you, I hope you'll consider this in the decision making process. It would be a shame to realize only after the warehouse is constructed how big of a waste it actually is.

PLANNING COMMISSION COMMENTS

Planning Commission Date:
June 11, 2024

Agenda Item Number:
5D

Speaker Name:
Mike Miranda

Address (Optional):
Redlands, CA

Subject on which the person wishes to speak:
Against

Briefly describe what you would like to say (Max 250 Words):
I strongly oppose the development of the warehouse on California St.

In share many of other's concerns regarding pollution, traffic, and proximity to medical facilities and residents. Also as Redland's population grows, we have a need for amenities for residents. A warehouse will only benefit a few large corporations. This was once an entertainment district, I hope it could once again be used for similar purposes.

Outside of this specific project, I question the integrity of the cities review of projects. There has been a pattern across multiple projects of using categorization of warehousing or baseline numbers to lead to a conclusion of minimal impact. These baselines and categorizations do not reflect the reality of what is being proposed. It seems that the city has the interest of developers in mind over those of residents. It is

infuriating that our tax dollars are being used to pay for and promote blatantly misleading reports.

PLANNING COMMISSION COMMENTS

Planning Commission Date:
June 11, 2024

Agenda Item Number:
5D

Speaker Name:
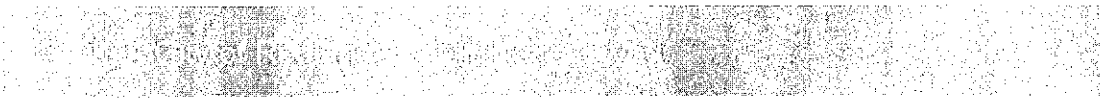
Ralf Gottschalk

Address (Optional):
522 Adams St.



Subject on which the person wishes to speak:
Against

Briefly describe what you would like to say (Max 250 Words):
I don't know why we need more warehouses in this town when we already have so many empty ones polluting our landscape. If we need something to do with the land, it feels like there are many other things that we can do that would be more forward thinking and sustainable so that we can create an environment that our children can thrive in and be proud of this community. I find it hard to believe that a 357,610 square foot distribution warehouse with 47 truck doors has "no significant impact" on the environment and traffic. Maybe this is true. Maybe each individual warehouse treated in isolation doesn't have a significant impact. However, none of this is in isolation. The analysis of one without considering the other existing functioning ones plus all the new ones popping all over the place and then the eventual filling of the empty ones... there is no way that it has no significant impact. The City of Redlands should require EIRs for all developments and require mitigations that would benefit it's citizens like adding parks, planting

trees, creating more green infrastructure to replenish our groundwater and protect us from extreme weather phenomena that we will see more of. Until we have these rules, the city does a real assessment of what all these warehouses will do to us 20 years from now, can we just stop with the warehouses please?

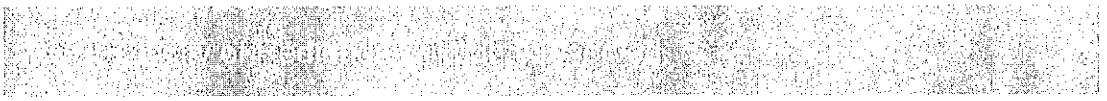
PLANNING COMMISSION COMMENTS

Planning Commission Date:
June 11, 2024

Agenda Item Number:
5D

Speaker Name:
Elizabeth Mcdonald



Address (Optional):

Subject on which the person wishes to speak:
Against

Briefly describe what you would like to say (Max 250 Words):
The increased number of warehouses in the Inland Empire is now the cause of a public health crisis. The area around the proposed project is already overburdened by warehouses and the pollution and traffic they generate. Acute or prolonged exposure to pollution from diesel trucks has been linked to asthma, pulmonary and cardiovascular diseases, and cancer. Our area does not need more warehouses. This site was a recreational site before. We can be strategic and creative in the use of this space. I urge you to vote no to this project.

PLANNING COMMISSION COMMENTS

Planning Commission Date:
June 11, 2024

Agenda Item Number:
5D

Speaker Name:
Doug Morgenthaler

Address (Optional):

Subject on which the person wishes to speak:
Against

Briefly describe what you would like to say (Max 250 Words):
The air quality in Redlands continues to degrade. Adding more congestion and industry will continue to negatively impact our quality of life. The additional traffic congestion in Redlands is already suffering tremendously near the main areas to access the 10 freeway. We need less traffic (especially truck traffic which results in increased repairs), not more.

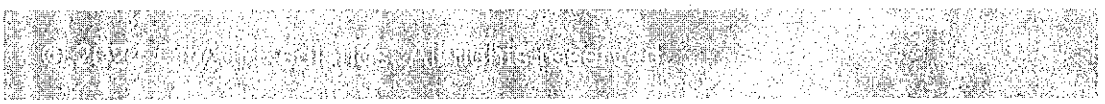
PLANNING COMMISSION COMMENTS

Planning Commission Date:
June 11, 2024

Agenda Item Number:
5D

Speaker Name:
Dawn Wright



Address (Optional):
30870 Palo Alto Drive, Redlands, CA 92373

Subject on which the person wishes to speak:
Against

Briefly describe what you would like to say (Max 250 Words):
Please, no more warehouses in Redlands!
Here are 3 critical realities that we residents are facing:
1. The logistics industry is now considered the worst environmental justice crisis in the history of the IE, and with the IE recently ranked in top 5 worst air quality in the nation.
2. In my opinion, after studies we have conducted at Esri, we don't need more warehouses. We can be more creative than this! It used to be a park, it could be a park again
3. Kaiser has a medical facility next door to this location. The last thing they need is more air pollution and traffic.
Thank you for your consideration

PLANNING COMMISSION COMMENTS

Planning Commission Date:
June 11, 2024

Agenda Item Number:
5D

Speaker Name:
Sara Schoonmaker

Address (Optional):
426 Alvarado St. Redlands 92373

Subject on which the person wishes to speak:
Against

Briefly describe what you would like to say (Max 250 Words):
This project goes against the General Plan for 2035 that seeks to make Redlands a distinctive city with a liveable, healthy, sustainable community and a vital environment.
Warehouses damage community health. They make Redlands less liveable, bringing traffic, congestion and air pollution. We already have some of the worst air quality in the country, with an F rating. There is no lower official rating, but air pollution will worsen. Conduct a full Environmental Impact Report {EIR}. An LA Times report showed that about 1/3 of warehouses do not comply with rules to reduce air pollution; about ¼ of warehouses opt to pay fines instead of complying with these rules. 1/3 of warehouse owners do not release the data about their operations to the public, so we cannot keep track of whether they comply with the law.
Warehouse developers say that they will bring jobs. That is unsustainable. Those jobs are poorly paid, have bad working

conditions, and will eventually be automated.
To be distinctive, Redlands should diversify its economy, not depend on warehouses. We need businesses that offer jobs with better pay and working conditions, and that will not automate. We need more green space for recreation and to mitigate effects of climate change. Warehouses do not fit with the City's climate action plan. We need creative thinking about diverse, sustainable businesses such as solar recycling, a solar farm, or construction of modular homes to provide more affordable housing. A community pool with restaurant would complement the County Museum.

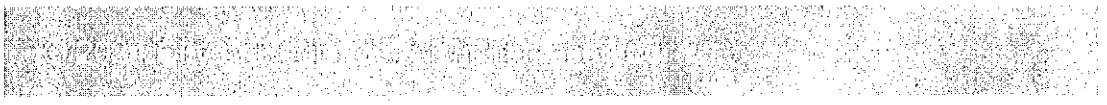
PLANNING COMMISSION COMMENTS

Planning Commission Date:
June 11, 2024

Agenda Item Number:
5D

Speaker Name:
Breck Polk



Address (Optional):

Subject on which the person wishes to speak:
Against

Briefly describe what you would like to say (Max 250 Words):
Redlands does not need anymore warehouses. There is already a housing supply shortage that has made cost of living nearly unmanageable. Introducing warehouses will only cause an increase in people looking for housing, which will only increase the cost of housing further. We need more housing units. Not more warehouses.

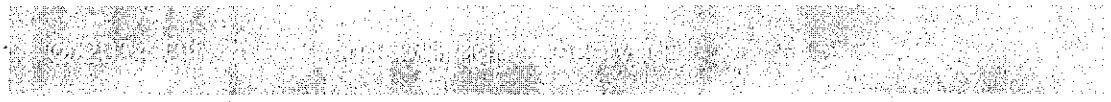
PLANNING COMMISSION COMMENTS

Planning Commission Date:
June 11, 2024

Agenda Item Number:
5D

Speaker Name:
Alvaro Lopez



Address (Optional):

Subject on which the person wishes to speak:
Against

Briefly describe what you would like to say (Max 250 Words):
In Wang X, Song G, Zhai Z, Wu Y, Yin H, Yu L. Effects of Vehicle Load on Emissions of Heavy-Duty Diesel Trucks: A Study Based on Real-World Data. Int J Environ Res Public Health. 2021 Apr 7;18(8):3877. doi: 10.3390/ijerph18083877. PMID: 33917119; PMCID: PMC8067817, a study of the emissions for semi-trucks is revised and data about low speed and load incidences is detailed.
In general, it is concerning that a single truck emits 1.5 to 2.5 kilograms of CO2 between 0-30 km/h. Then, distribution centers that manage easily more than 100 trucks/day may be a source of harming levels of pollutants, not only for sensitive groups.
We have to stop warehouse building in the area.

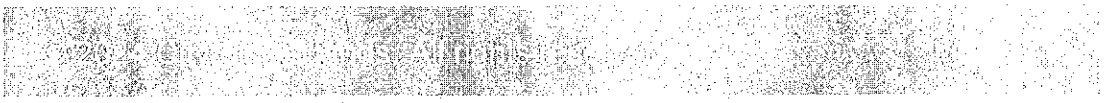
PLANNING COMMISSION COMMENTS

Planning Commission Date:
June 11, 2024

Agenda Item Number:
5d

Speaker Name:
Keith Osajima

Address (Optional):
426 Alvarado St



Subject on which the person wishes to speak:
Against

Briefly describe what you would like to say (Max 250 Words):
Thank you for this opportunity to comment on Agenda item 5d, the proposal to build a warehouse at the location of the former Splash Kingdom Water Park in Redlands. I attended the April meeting where you considered the Tennessee Street warehouse proposal and appreciated your careful and thoughtful consideration of the problems that facility presented.
Once again, I write to express my opposition to the warehouse approval. The increase of traffic in the area and the negative impact on air quality remain important concerns. But I recognize that the proposed location nearer the freeway and further from schools and homes, may make these impacts appear less severe, and thus make it more difficult to deny.
So let me offer another perspective. In this time, when the adverse impacts of rising temperatures threaten virtually every aspect of our lives, it is vital for cities, such as Redlands, with its rich history of being

a leader in the region, to take a strong moral stand against the expansion of warehouses. By denying the current proposal, the Commission can send a signal to the region that quality of life is more important than the distribution of goods. You would simultaneously create an opportunity to envision alternatives that are community-oriented, sustainable and empowering. Wouldn't that be a way to distinguish Redlands as a beacon of hope.

PLANNING COMMISSION COMMENTS

Planning Commission Date:
June 11, 2024

Agenda Item Number:
5D

Speaker Name:
Jessica Mayuga-Allen

Address (Optional):
1553 E. Brockton

Subject on which the person wishes to speak:
Against

Briefly describe what you would like to say (Max 250 Words):
I am writing to express my strong opposition to the proposed warehouse construction at 1101 California. Approving this project would be highly irresponsible and detrimental to the well-being of Redlands and its residents.

The environmental impact is a major concern. Increased traffic from large trucks will lead to higher emissions, contributing to air pollution and noise disturbances. Local business and area strongholds (such as the San Bernardino County Museum, Edwards Mansion, and Kaiser) would all be negatively affected. It would be hard to undo the damage a warehouse would cause.

Furthermore, warehouses typically offer low-wage, temporary jobs that do little to uplift our community or provide sustainable employment. This perpetuates economic instability and fails to foster long-term prosperity

for our residents. The strain on local infrastructure and services due to increased traffic and industrial activity will outweigh any short-term economic gains.

The influx of industrial activity will also reduce the overall quality of life. The Inland Empire was ranked in top 5 worst air quality in the nation. It is frankly embarrassing to live in a warehouse hub.

I urge decision-makers to prioritize the long-term well-being and identity of Redlands over short-term economic gains. This warehouse proposal poses significant risks to our environment, community character, and economic stability.

It is imperative that we explore alternative development options that align with our values and preserve the unique spirit of our city for future generations. Approving this warehouse would be a mistake, and I strongly urge you to vote against its approval.

Briefly describe what you would like to say (Max 250 Words):
The people of Redlands would be harmed by the construction of an additional warehouse. We already have too many as it is. These warehouses and the trucks that come with them destroy our roads and have contributed to this region's position as #1 worst air quality in the country. It would be better to leave the lot vacant. Best would be to build something that actually benefits the people who live here. There is hardly any green space in Northwest Redlands, wouldn't that be a better use of this lot?

Re: **Agenda Item No. 5.D. 1101 California Street Warehouse (Lot Merger No. 8; Planned Development No. 7) (SCH No. 2024031107)**

Dear Planning Commissioners, Mr. Beery, Mr. Desatnik:

On behalf of Californians Allied for a Responsible Economy ("CARE CA"), we submit these comments on the Staff Report[1] and Responses to Comments[2] (collectively "Staff Report" or "Responses") prepared by the City of Redlands ("City") for the June 11, 2024 Planning Commission hearing for the 1101 California Street Warehouse Project (SCH No. 2024031107) ("Project"), proposed by CRP/NPP Redlands Industrial Owner, LLC ("Applicant"). Staff recommends that the Planning Commission recommend approval to the City Council of the Initial Study / Mitigated Negative Declaration ("MND") prepared by the City pursuant to the

[1] City of Redlands, Planning Commission, Agenda Item No. 5.D. (June 11, 2024) (hereinafter "Staff Report").
[2] City of Redlands, Planning Commission, Agenda Item No. 5.D. Attachment F-3: MND Comments and Responses to Comments (hereinafter "Responses to Comments").

printed on recycled paper

California Environmental Quality Act ("CEQA") [3], the proposed Socio-Economic Cost/Benefit Study, and the proposed Planned Development No. 7 and Lot Merger No. 8.

The Project proposes the construction of a 357,610 square-foot ("SF") warehouse that will include 6,000 SF of Administration/Office Space.[4] The Project Site is proposed to be located at 1101 California St, Redlands, California 92374 on the southwest corner of Lugonia Avenue and California Street and includes two Assessor's Parcel Numbers: 0292-033-11 and 0292-033-13, in the County of San Bernardino.[5] The Project site is located in an area designated by the Redlands General Plan as Commercial/Industrial and within the Special Development district of the East Valley Corridor Specific Plan.[6] The Project site was previously developed with the Splash Kingdom recreational water park.[7]

CARE CA appreciates Staff's consideration of public comments. In response to CARE CA's comments on the MND, the Staff Report clarified that the City will add a permit condition prohibiting cold storage in accordance with RMC § 18.156.950.E.[8] But, the Staff Report and the Mitigation Monitoring and Reporting Program do not contain a condition to prohibit the use of cold storage onsite in accordance with RMC § 18.156.950.E. Further, the Staff Report fails to resolve all of the issues raised in CARE CA's comments, and the MND still does not comply with CEQA. The City must comply with CEQA and protect public health and safety in reviewing warehouse projects of this type.

The Planning Commission cannot make a recommendation to the City Council to adopt the MND and Mitigation Monitoring and Reporting Program ("MMRP") or issue the Project's other approvals at this time because the MND fails to comply with the requirements of CEQA. Instead, the Commission should direct Staff to prepare an Environmental Impact Report ("EIR") that discloses, analyzes and mitigates the Project's potentially significant impacts before the Project can be approved.

CARE CA reviewed the Staff Report and prepared these comments with the assistance of air quality and GHG expert James Clark, whose comments ("Clark Comments, June 11, 2024") are attached hereto as **Attachment A.** CARE CA's

[3] Pub. Res. Code §§ 21000 *et seq*.
[4] City of Redlands, Initial Study for 1101 California Street Warehouse (March 26, 2024), p. 1. (hereinafter "MND").
[5] MND, p. 1.
[6] City of Redlands, East Valley Corridor Specific Plan (September 5, 2017).
[7] MND, p. 2.
[8] Staff Report, p. 1.

printed on recycled paper

comments on noise and vibration were prepared with the assistance of acoustics, noise, and vibration expert Jack Meighan of Wilson Ihrig. Mr. Meighan's Comments ("Meighan Comments, June 11, 2024") are attached hereto as **Attachment B.**

The Staff Report fails to remedy the inadequacies of the MND. The MND still fails to accurately describe the Project, fails to accurately characterize the environmental setting, and fails to analyze all required air quality, health risk, GHG, land use, and noise issues. There is also substantial evidence supporting a fair argument that the Project may have significant environmental and public health impacts that the MND fails to adequately mitigate, incorrectly concluding that impacts will be mitigated to less than significant levels. The City may not approve the Project until it prepares an EIR that adequately analyzes the Project's potentially significant environmental and public health impacts and incorporates all feasible mitigation measures to avoid or lessen these impacts.

CARE CA provided the City with substantial evidence in our April 29, 2024 comments on the MND with the assistance of our expert consultants. CARE CA's air quality, public health, and GHG emissions expert James Clark, Ph.D. provided substantial evidence supporting a fair argument that the Project will result in potentially significant health risk impacts associated with diesel exhaust and toxic air contaminants. These impacts are not reduced to levels of insignificance with the mitigation proposed in the MND and MMRP.

CARE CA's noise and acoustical expert, Jack Meighan of Wilson Ihrig, provided substantial evidence supporting a fair argument that the Project's noise and vibration impacts are significant and unmitigated, and are more severe than analyzed in the MND. The MND relies on an inaccurate environmental setting with respect to noise. Further, Mr. Meighan calculated that the construction vibration impacts and operational noise impacts may result in a significant impact to nearby sensitive receptors.

The Project's proposed land use approvals are also incomplete.The Staff Report provides that "the City will adopt appropriate conditions of approval on the project post-entitlement as part of the detailed site plan review."[9] If the City intends to adopt additional mitigation measures to reduce significant impacts to nearby hospital users, these measures must be analyzed in an EIR which is

[9] Responses to Comments, p. 236 of 261.

printed on recycled paper

recirculated for public review and scrutiny before the Project is approved.[10] The Municipal Code grants the Planning Commission authority to "affix to a Development Plan such conditions as it deems necessary and reasonable to protect the best interests of the surrounding property and neighborhood, the East Valley Corridor Specific Plan, the General Plan and the intent thereof."[11] Such conditions of approval must be attached to the Development Plan at the time of the approval of the Development Plan to allow for sufficient public review. Since the revised Development Plan's conditions of approval have not yet been prepared, they have not been provided to the public or the Commission for consideration and should be circulated with an EIR. Without reviewing the Project's proposed conditions of approval, the Planning Commission is unable to exercise its independent judgment to consider the adequacy of the conditions, and lacks substantial evidence to support a recommendation to the City Council for their approval.

CARE CA urges the Commission to remand the Project to Staff to prepare a legally adequate EIR which adequately analyzes and mitigates Project impacts. The Planning Commission has a duty to consider the Project's CEQA document before recommending project approval,[12] and any approval recommendations must be supported by substantial evidence.[13] The record before the Commission lacks the requisite substantial evidence to support approval. The Project should not be rescheduled for a further public hearing until all of the issues raised in CARE CA's comments, and in the comments of other members of the public, have been fully addressed. We reserve the right to supplement these comments at a later date, and at any later proceedings related to this Project.[14]

I. STATEMENT OF INTEREST

CARE CA is an unincorporated association of individuals and labor organizations that may be adversely affected by the potential public and worker health and safety hazards, and the environmental impacts of the Project. The coalition includes Redlands residents Michael Lopez, Scott Ortiz, Kevin Miller, Kevin Salas, the District Council of Ironworkers, Southern California Pipe Trades

printed on recycled paper

DC 16, along with their members, their families, and other individuals who live and work in the City of Redlands and San Bernardino County.

CARE CA advocates for protecting the environment and the health of their communities' workforces. CARE CA seeks to ensure a sustainable construction industry over the long-term by supporting projects that offer genuine economic and employment benefits, and which minimize adverse environmental and other impacts on local communities. CARE CA members live, work, recreate, and raise their families in the City of Redlands and San Bernardino County and the surrounding communities. Accordingly, they would be directly affected by the Project's environmental and health and safety impacts. Individual members may also work on the Project itself. They will be first in line to be exposed to any health and safety hazards that exist onsite.

In addition, CARE CA has an interest in enforcing environmental laws that encourage sustainable development and ensure a safe working environment for its members. Environmentally detrimental projects can jeopardize future jobs by making it more difficult and more expensive for business and industry to expand in the region, and by making the area less desirable for new businesses and new residents. Indeed, continued environmental degradation can, and has, caused construction moratoriums and other restrictions on growth that, in turn, reduce future employment opportunities.

II. THE STAFF REPORT FAILS TO REMEDY THE MND'S INADEQUATE PROJECT DESCRIPTION

As detailed in CARE CA's prior comments[15], the MND fails to include an accurate and complete project description because it lacks any description of the emergency backup generator that will be required for the Project site. The April 17, 2024 comments of the South Coast Air Quality Management District ("SCAQMD") included in the Staff Report also explain that the Project's use of new stationary and portable sources, including but not limited to emergency generators and fire water pumps require consultation and air permits from SCAQMD.[16] SCAQMD also explained that the Project's CEQA document must include "calculations and analyses for construction and operation emissions for the new stationary and portable sources" as this information will also be relied upon as the basis for the

printed on recycled paper

permit conditions and emission limits for the Project's air permits.[17] The City failed to disclose this information in the MND, and the Staff Report does not resolve the omission.

As CARE CA's expert Dr. Clark documented in his comments on the MND, a backup generator would operate during unscheduled events like Public Safety Power Shutoff ("PSPS") events and extreme heat events ("EHEs"). Although such events are unscheduled, they occur frequently enough in California that they are reasonably foreseeable. For example, the total duration of PSPS events in California lasted between 141 hours to 154 hours in 2019. In 2021, two EHEs were declared which lasted 120 hours combined. These conditions are expected to increase in severity over time.[18] The widespread use of back-up generators to adapt to PSPS and EHE events suggests that back-up generators are a reasonably foreseeable consequence of the Project.

Generators can emit criteria air pollutants, greenhouse gases, and toxic air contaminants ("TACs"). Backup generators commonly rely on fuels such as natural gas or diesel,[19] and thus can significantly impact public health through DPM emissions.[20] Diesel back-up generators emit significant amounts of Nitrogen Oxides ("NOx"), sulfur dioxides ("SO2"), particulate matter ("PM10"), carbon dioxide ("CO2"), carbon monoxide ("CO"), and volatile organic compounds ("VOC").[21] Omission of a generator system results in an underestimation of the Project's air quality, greenhouse gas, and health risk impacts.

In sum, omission of the Project's generator results in an underestimation of the Project's reasonably foreseeable air quality, greenhouse gas, energy, and health risk impacts. The Staff Report disregards this analysis without providing any substantial evidence to the contrary. The MND must be withdrawn and an EIR prepared to resolve this project description inconsistency and correct the affected impacts analyses to accurately disclose the Project's potentially significant impacts.

III. THE STAFF REPORT FAILS TO REMEDY THE MND'S INADEQUATE AIR QUALITY ANALYSIS

The Responses to Comments in the Staff Report fails to rebut the substantial evidence presented in CARE CA's comments which support a fair argument that the Project may result in significant air quality impacts. Namely, the Staff Report fails to remedy the Project's significant impacts from building downwash effects on human health risk, fails to adequately address the significant diesel exhaust emissions from the Project's backup generators, and fails to adequately analyze the Project's cumulative impacts.

A. Building Downwash Impacts Are Significant and Must be Analyzed in an EIR

The Staff Report provides that the modeling of operational emissions, specifically idling trucks, was appropriately done with no building downwash analysis.[22] But, absent an adequate downwash analysis in calculating operational emissions, the Project's air quality and health risk impacts are significantly underestimated.

Dr. James Clark confirmed that, in order for the operational air quality and health risk analysis to be adequate, truck idling emissions would need to be estimated separately and included in the dispersion modeling analysis and HRA as point sources.[23] However, the operational HRA modeling file indicates those emissions as line volume source types.[24] Specifically, the Staff Report provides "idling emissions are effectively line volume sources and have been modeled as such consistent with applicable AERMOD protocols."[25] This is not consistent with SCAQMD Modeling Guidance for AERMOD which requires that "Building downwash effects must be included and should be modeled using BPIP-PRIME (BPIPPRM)."[26] The MND's failure to model the building downwash violates SCAQMD requirements to include building downwash in the AERMOD modeling.

When a standard, accepted methodology is available to assess a significant impact, an EIR must evaluate the impact unless a reasoned basis for not doing so is

provided.[27] In *Berkeley Keep Jets Over the Bay Comm. v. Board of Port Comm'rs*, a court reviewed a DEIR's failure to analyze health risk from TAC exposure. The DEIR claimed that no methodology or standards of significance existed for assessing the health risk from TAC exposure.[28] The court determined that the lead agency abused its discretion, reasoning that the lead agency failed to consider, in good faith, comments from the public showing that it was feasible to analyze health risk from TAC exposure:[29]

> The Port has not cited us to any reasonably conscientious effort it took either to collect additional data or to make further inquiries of environmental or regulatory agencies having expertise in the matter.…At the very least, the documents submitted by the public raised substantial questions about the project's effects on the environment and the unknown health risks to the area's residents...the Port has not offered any justification why more definitive information could not have been provided.

Here, the City failed to analyze a critical dispersion factor– building downwash – which exacerbates the rate and severity of exposure to TACs and would occur at the Project site, without any justification to support the omission. The Staff Report fails to explain why the City failed to include this analysis, and instead obfuscates by incorrectly saying "idling emissions are effectively line volume sources and have been modeled as such consistent with applicable AERMOD protocols…. [T]he building downwash algorithms do not apply to volume or area sources. The MND air quality experts have therefore concluded that truck idling emissions sources resulting from the Project would not be materially affected by downwash from the Project warehouse buildings."[30] This statement is not supported by substantial evidence. In fact, Dr. Clark's comments show that an AERMOD model can feasibly be run to account for building downwash for area sources.[31]

The City's failure to include downwash as an emission factor in its health risk analysis represents a failure to accurately to analyze and disclose the ground level concentration of DPM emissions generated by the Project. The MND must be withdrawn and EIR circulated to adequately analyze and mitigate Project health risk impacts.

B. Backup Generators May Result in Significant Impacts and Must be Analyzed in an EIR

The Staff Report provides that "in other than emergency conditions, emergency generators or emergency fire water pumps operate only for short-term periodic testing, and emissions from such short-term operations would not contribute substantively to air pollutant emissions."[32] This analysis does not meet CEQA's requirement that a lead agency must provide analysis that connects the air quality effects of the Project to human health consequences.[33] "CEQA requires that an EIR make a reasonable effort to discuss relevant specifics regarding the connection between two segments of information already contained in the EIR, the general health effects associated with a particular pollutant and the estimated amount of that pollutant the project will likely produce." [34] Further, "[t]his discussion will allow the public to make an informed decision, as CEQA requires."[35]

Dr. Clark's comments provide substantial evidence that absent analysis of the generators' emissions, the MND's air quality analysis is unsupported by substantial evidence.[36] Dr. Clark provides that, diesel exhaust, in particular diesel particulate matter ("DPM"), is classified by the State of California as a TAC.[37] TACs, including DPM, contribute to a host of respiratory impacts and may lead to the development of various cancers.[38] Failing to quantify the carcinogenic and other health risk impacts places the community at risk for unwanted adverse health impacts.[39] *Even brief exposures to the TACs could lead to the development of adverse health impacts over the life of an individual.*

Diesel exhaust has been linked to a range of serious health problems including an increase in respiratory disease, lung damage, cancer, and premature death.[40] Fine DPM is deposited deep in the lungs in the smallest airways and can result in increased respiratory symptoms and disease; decreased lung function, particularly in children and individuals with asthma; alterations in lung tissue and

printed on recycled paper

respiratory tract defense mechanisms; and premature death.[41] Exposure to DPM increases the risk of lung cancer. It also causes non-cancer effects including chronic bronchitis, inflammation of lung tissue, thickening of the alveolar walls, immunological allergic reactions, and airway constriction.[42]

Dr. Clark concludes that, due to the inherent toxicity of TACs, the City must first quantify the concentration released into the environment at each of the sensitive receptor locations through air dispersion modeling, calculate the dose of each TAC at that location, and quantify the cancer risk and hazard index for each of the chemicals of concern.[43] This analysis must be included in a legally adequate EIR to fully analyze the Project's air quality impacts before the Project can be approved.

IV. THE STAFF REPORT FAILS TO REMEDY THE MND'S INADEQUATE NOISE ANALYSIS

The Responses to Comments in the Staff Report fail to rebut the substantial evidence presented in CARE CA's comments which support a fair argument that the Project may result in significant vibration and noise impacts.

A. Vibration Impacts Are Significant and Unmitigated

Mr. Meighan's comments provide substantial evidence that vibration impacts from Project construction are significant, requiring preparation of an EIR.[44] But, the Staff Report's Responses to Comments provides that "In the first instance the threshold cited by the commenter is not applicable to construction activities. Per Municipal Code Section 8.06,120, G. 'Construction Activity: This chapter shall not apply to noise sources associated with new construction . . .'"[45] Redlands Municipal Code Section 8.06 provides that noise sources from new construction are exempt, but this does not apply to vibration.[46] The Municipal Code does not exempt vibration sources. The Staff Report's assertion that the City was only required to analyze excessive vibration is not supported. The Municipal Code defines Vibration as "Operating or permitting the operation of any device that creates a vibration which is above the vibration perception threshold of an individual at or beyond the

printed on recycled paper

property boundary of the source if on private property or at one hundred fifty feet (150') from the source if on a public space or public right of way."[47]

Mr. Meighan modeled construction vibration and found that 0.016 in/sec PPV will exceed the threshold of 0.01 in/sec limit.[48] Vibration impacts from construction of the Project are therefore significant due to its exceedance of the Vibration Perception Threshold as laid out in the Municipal Code.[49] Substantial evidence supports a fair argument that vibration impacts remain significant, therefore, the City must circulate a legally adequate EIR for Project approval.

B. Operational Noise Impacts Are Significant and Unmitigated

The Staff Report's Response to Comments provides that "Any noise generated by the Project would be imperceptible against the background freeway noise."[50] This statement is misleading and disregards the requirement of CEQA to fully analyze and mitigate Project's environmental impacts. The Staff Report and the MND fail to quantify the Project's potentially significant operational noise impacts. Without adequate modeling, the City cannot conclude that the noise generated by the Project would be imperceptible against the background freeway noise.[51]

The Staff Report and the MND fail to adequately quantify the Project's noise impacts, resulting in an unsupported analysis of noise impacts in the MND. Substantial evidence in CARE CA's Comments and expert consultant reports demonstrated potentially significant noise impacts requiring preparation of an EIR before the Project can be approved.

V. THE STAFF REPORT FAILS TO REMEDY THE MND'S INADEQUATE CUMULATIVE IMPACT ANALYSIS

The Responses to Comments in the Staff Report fails to rebut the substantial evidence presented in CARE CA's comments which support a fair argument that the Project may result in significant cumulative air quality and greenhouse gas emissions impacts. The Staff Report concludes, absent substantial evidence that

[50] Responses to Comments, p. 258 of 261.
[51] *Id.*

printed on recycled paper

"the Project would not result in cumulatively significant air quality, health risk, or greenhouse gas emissions impacts."[52] The Staff Report concludes that the Project will not lead to substantial cumulative impacts, but fails to perform any quantitative analysis of the current and future planned projects, as required by CEQA.[53]

As demonstrated in CARE CA's MND comments and in James Clark's expert consultant report, there are 81 existing warehouse projects with another 3 projects approved within 2 miles of the Project Sites.[54] The 81 existing projects represent 27,000,0000 square feet of floor space and account for 18,000 daily truck trips.[55] They release 24.9 pounds of diesel particulate matter[56] and 2,804 pounds of oxides of nitrogen (NOx – a precursor to smog formation) daily. The three additional projects will add another 600,000 square feet of warehouse space to the area. The proposed Project will contribute additional air pollutants during construction and operation.[57] The cumulative impact of the Project is therefore significant and requires analysis and mitigation in a legally adequate EIR before the Project can lawfully be approved.

VI. THE CITY LACKS SUBSTANTIAL EVIDENCE TO APPROVE THE PROJECT'S LAND USE PERMITS

The Staff Report disregards CARE CA's substantial evidence that the Project results in significant environmental impacts requiring preparation of an EIR, without providing substantial evidence to the contrary. As detailed in CARE CA's prior comments, the Project requires a number of discretionary entitlements and related approvals under local City plans and codes, including a Planned Development Permit and a Lot Line Adjustment.

Planned Development permit applications are processed in accordance with Chapter 4 of the East Valley Corridor Specific Plan.[58] An application for a Planned Development, when submitted in a single stage as a comprehensive, detailed site plan, shall be" quasi- legislative" in nature and subject to review and

[57] Clark Comments, June 11, 2024, p. 3.
[58] Resolution No. 5116 A Resolution of the City Council of the City of Redlands Establishing Regulations for the Processing of Planned Development Applications Pursuant to the City's East Valley Corridor Specific Plan.

printed on recycled paper

recommendation by the City' s Planning Commission with final review and approval by the City Council.[59] An application for a Planned Development shall be considered by the Planning Commission at a noticed, public hearing.[60] In considering a request for a Planned Development, the Planning Commission shall satisfy itself that the following conditions prevail before recommending to the City Council that the Planned Development application be approved:

A. That the proposed Planned Development is in conformity with General Plan of the City;
B. That the proposed Planned Development would not adversely affect the surrounding area or the Redlands community in general.[61]

As demonstrated in CARE CA's comments and expert consultant reports, the Project results in significant air quality, public health, greenhouse gas, and noise impacts which "would adversely affect the surrounding area [and] the Redlands community in general."[62]

Moreover, the Project fails to conform with the General Plan for the following reasons:

1. The Project's unmitigated significant air quality and health risk impacts violate the General Plan's Air Quality Principles and Actions 7-P.44: Protect air quality within the city and support efforts for enhanced regional air quality.
2. The Project would increase the community's GHG emissions in violation of Green Building and Landscape Principles and Actions 8-P.8: Promote sustainability by reducing the community's greenhouse gas (GHG) emissions and fostering green development patterns–including buildings, sites, and landscapes.
3. The Project fails to conform with Public Health Action 7-A.44: Support the use of clean fuel and "climate friendly" vehicles in order to reduce energy use, energy costs, and greenhouse gas emissions by residents, businesses, and City government activities.

Substantial evidence in CARE CA's comments presented a fair argument that the Project results in significant air quality, health risk, greenhouse gas, and noise impacts which would adversely affect the surrounding area [and] the

[59] Resolution No. 5116.
[60] *Id.*
[61] *Id.*
[62] *Id.*

printed on recycled paper

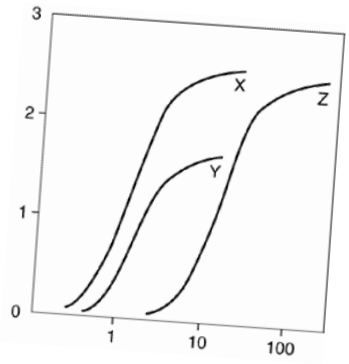
Redlands community in general and violate the General Plan. The Planning Commission therefore cannot make the necessary findings to support a recommendation to the City Council to approve the Project. The City must prepare an EIR to analyze the Project's inconsistencies with the General Plan and analyze and mitigate the Project's adverse environmental impacts before the Planning Commission can recommend approval by the City Council.

VII. CONCLUSION

The Planning Commission lacks substantial evidence to support a recommendation to the City Council to approve the Project because the City has not complied with CEQA and the Project has significant, unmitigated impacts which prevent the Commission from making the necessary findings to issue the proposed land use entitlements. As described in detail above, in CARE CA's prior comments and in expert consultant reports, substantial evidence supports of a fair argument that the Project poses a significant and unmitigated risk to the public due to unmitigated construction and operational air quality, health risk, greenhouse gas emissions, noise, land use and cumulative impacts such that an EIR must be prepared before the Project can be approved.

The Commission should withdraw the MND and direct staff to prepare an EIR before rescheduling the Project for a further hearing.

Sincerely,



Kelilah D. Federman

601 Gateway Boulevard, Suite 1000
South San Francisco, CA 94080

Attn: Ms. Kelilah D. Federman

Subject: Response To City Staff Report And Urban Crossroads Response To ABJ&C Comments Dated June 4, 2024, Lilburn Corporation Responses To Letters Received During Public Review Period For 1101 California Street Warehouse Dated June 4, 2024

Dear Ms. Federman:

At the request of Adams Broadwell Joseph & Cardozo (ABJC), Clark and Associates (Clark) has reviewed materials related to the above referenced project.

Clark's review of the materials in no way constitutes a validation of the conclusions or materials contained within the IS/MND. If we do not comment on a specific item, this does not constitute acceptance of the item.

Master Response:

The responses from the Proponent's experts seek to minimize the discussion of serious potential health impacts from the Project without a consideration of alternative points of view. Far from being a "difference of opinion" among experts regarding the how to undertake the analyses, the comments from and authoritative agency (the SCAQMD) and multiple experts identified significant issues in the completeness of the analysis of the Proposed Project's emissions and health outcomes. Without further analysis in the form of an Environmental Impact Report (EIR) for the Project it is evident that

impacts from the Project will extend well into the community, creating an additional health burden that is not mitigated. Since the Project does not explicitly prohibit the use of the facility for cold storage or the storage of hazardous materials, does not incorporate a full analysis of the stationary sources of emissions, and fails to completely evaluate the health risks from the exposure to toxic air contaminants released from the Project it is clear the IS/MND does not fully address all of the foreseeable areas of concern with the Project

Specific Comments:

1. Response To Comment 11-21 (Lilburn/Urban Crossroad) The Staff Report Incorrectly Concludes that the AERMOD Analysis Does Not Need To Include A Downwash Analysis Since The Idling Vehicles Were Modeled As A Line Of Volume Sources.

Lilburn and Crossroads claim that the modeling of operational emissions, specifically idling trucks, was appropriately done with no building downwash based on the type of source evaluated and that the modeling experts had determined that the emissions would not have been materially affected by downwash. This analysis is performed without any quantitative analysis and does not comport with requirements from the SCAQMD. In a recent review of Draft Environmental Impact Report (Draft EIR) for the Proposed West Campus Upper Plateau Project (Proposed Project) (SCH Number: 2021110304), SCAQMD[1] specifically calls out the need for inclusion of downwash analysis for this Project which included a business park, industrial, mixed-use, public facility, parks, recreation and open space, and infrastructure improvements, totaling 369.60 acres. Of the warehouse components, the Project included:

- 1,250,000 square feet of high-cube fulfillment center warehouse use in Building B
- 587,000 square feet of high-cube fulfillment center warehouse use in Building C
- 725,561 square feet of high-cube fulfillment center warehouse use in the Industrial Area; and
- 500,000 square feet of high-cube cold storage warehouse use in the Industrial Area

[1] SCAQMD. 2023. Draft Environmental Impact Report (Draft EIR) for the Proposed West Campus Upper Plateau Project (Proposed Project) (SCH Number: 2021110304) Dated March 9, 2023, p. 2.

SCAQMD staff reviewing the project outlined that building downwash should be considered for the Proposed Project operation in order to predict more accurate ground-level concentrations. In addition, the truck idling emissions would need to be estimated separately and included in the dispersion modeling analysis and HRA as point sources. However, the operational HRA modeling file indicates those emissions as line volume source types. It is evident from the analysis performed by SCAQMD in similar projects that the omission of the building downwash effect underestimates the exposure point concentrations for receptors near the building(s). This error should be addressed in an EIR for the Project.

2. Response To Comment 11-26: The Staff Report Incorrectly Concludes that the Project Will Not Lead To Substantial Cumulative Impacts.

The City concludes that the Project will not lead to substantial cumulative impacts without performing any quantitative analysis of the current and future planned projects. As was noted in my comment letter there are 81 existing warehouse projects with another 3 projects approved within 3 kilometers of the Project Sites. The 81 existing projects represent 27,000,0000 square feet of floor space and account for 18,000 daily truck trips. They release 24.9 pounds of diesel particulate matter[2] and 2,804 pounds of oxides of nitrogen (NOx – a precursor to smog formation) daily. The three additional projects will add another 600,000 square feet of warehouse space to the area. The proposed Project will contribute additional air pollutants during construction and operation.

[2] Warehouse Cumulative Impact Tool for Community (CITY). 2024. https://radicalresearch.shinyapps.io/WarehouseCITY/ accessed 4/25/2024.

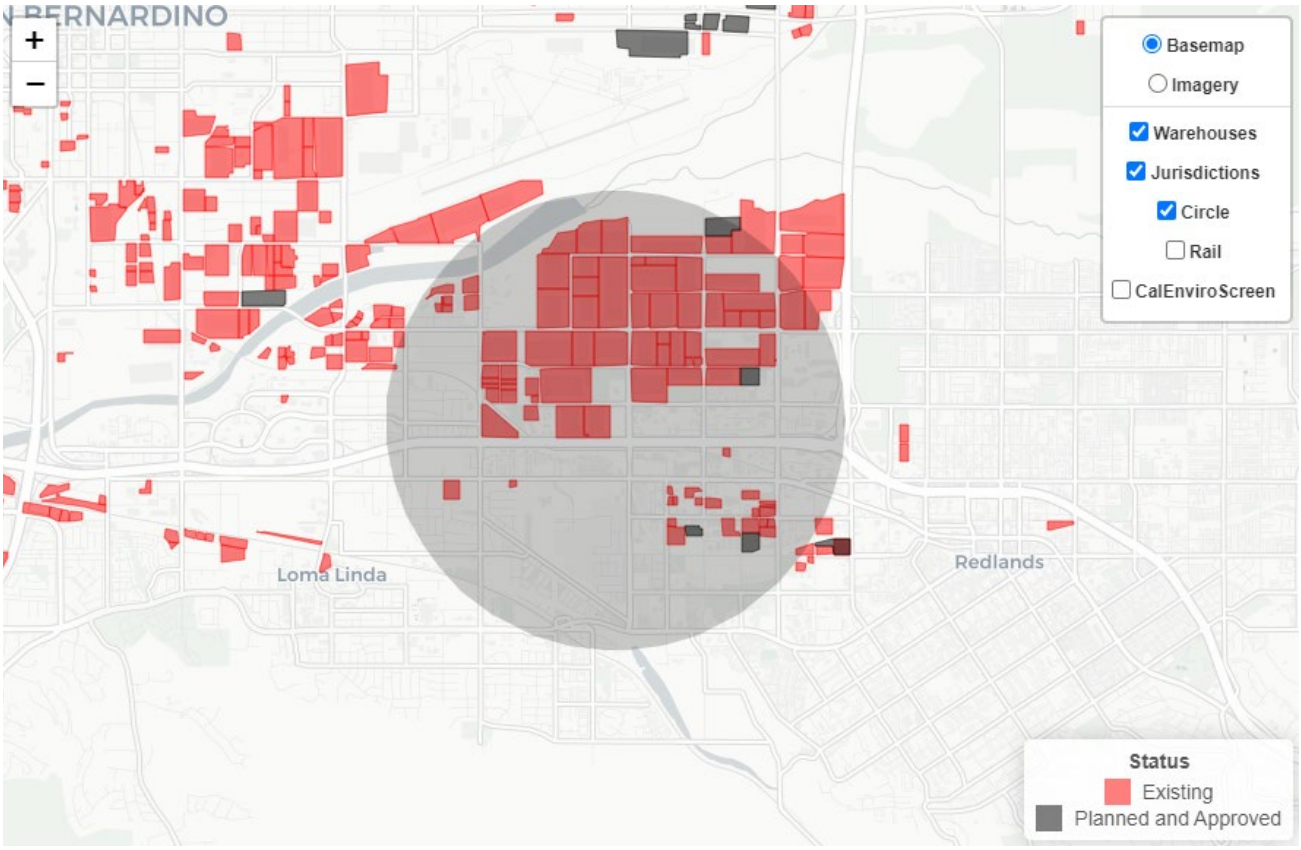

Figure 1: Existing And Planned Warehouse Projects Within 3 km Of Project Site

It is clear from the analysis above that the Project will add to the already heavily impacted regional problem of NOx and toxic air contaminants (TACs). The Project should be evaluated in an EIR to assure the public that the cumulative air quality and health impacts from the Project have been fully evaluated and mitigated.

3. Response To Comment 11-12: The Staff Report Incorrectly Concludes that the Backup Generators Will Not Emit Significant Concentrations Of DPM.

According to the analysis from Urban Crossroads for the City, "in other than emergency conditions, backup generators typically operate only for short-term periodic testing. Emissions from such short-term operations would not contribute substantively to air pollutant emissions." This approach is clearly qualitative and does not meet the requirements under CEQA to analysis the health risk from all foreseeable stationary sources. Diesel exhaust, in particular DPM, is classified by the

State of California as a TAC. TACs, including DPM[3], contribute to a host of respiratory impacts and may lead to the development of various cancers. Failing to quantify the carcinogenic and other health risk impacts places the community at risk for unwanted adverse health impacts. *Even brief exposures to the TACs could lead to the development of adverse health impacts over the life of an individual*.

Diesel exhaust has been linked to a range of serious health problems including an increase in respiratory disease, lung damage, cancer, and premature death.[4,5,6] Fine DPM is deposited deep in the lungs in the smallest airways and can result in increased respiratory symptoms and disease; decreased lung function, particularly in children and individuals with asthma; alterations in lung tissue and respiratory tract defense mechanisms; and premature death.[7] Exposure to DPM increases the risk of lung cancer. It also causes non-cancer effects including chronic bronchitis, inflammation of lung tissue, thickening of the alveolar walls, immunological allergic reactions, and airway constriction.[8] DPM is a TAC that is recognized by state and federal agencies as causing severe health risk because it contains toxic materials, unlike $PM_{2.5}$ and PM_{10}.[9]

The inherent toxicity of TACs requires the City to first quantify the concentration released into the environment at each of the sensitive receptor locations through air dispersion modeling, calculate the dose of each TAC at that location, and quantify the cancer risk and hazard index for each of the chemicals of concern. Following that analysis, then the City can make a determination of the relative

[3] Because DPM is a TAC, it is a different air pollutant than criteria particulate matter (PM) emissions such as PM10, PM2.5, and fugitive dust. DPM exposure causes acute health effects that are different from the effects of exposure to PM alone.

SUBJECT: 1101 California Project
Redlands, California
Response to Comments on Noise Analysis

Dear Ms. Federman,

Below you will find responses to comments on the 1101 California Project in Redlands, CA based on the document entitled "5294_MND_Response_to_Comments_1101_California.pdf" There are two pairs of responses, from both Urban Crossroads and Lilburn. Unless otherwise noted, these responses cover both sets of responses, since the content is nearly identical.

Response to Comment 11-24

The response states that "In the first instance the threshold cited by the commenter is not applicable to construction activities. Per Municipal Code Section 8.06,120, G. 'Construction Activity: This chapter shall not apply to **noise** sources associated with new construction . . .'" However, this states that Redlands Municipal Code Section 8.06 is exempt from **noise** sources. It says nothing regarding vibration. The authors of the city code clearly considered vibration sources, since Section 8.06.090(G) is entitled 'vibration'. There is no reason to believe that vibration impacts are exempted by 8.06.120(G). The modeled 0.016 in/sec PPV is greater than the 0.01 in/sec Vibration Perception Threshold set by Section 8.06.020. Thus, the Project construction will result in a significant vibration impact due to its exceedance of the vibration thresholds set by the City of Redlands Municipal Code.

Response to Comment 11-16 and 11-23

Several points are made, which are discussed in bullet points below

- Comment 11-16 states that, "Construction-source noise impacts are considered less-than-significant based on compliance with date/time constraints outlined in the City's Noise Control Ordinance" this does not address the issue, which is that no daytime construction noise thresholds were chosen to analyze the project. If the city and county do not have appliable codes, it is up to the CEQA document to choose thresholds based on other relevant documents and jurisdiction and apply these thresholds to the project. This was not done, as a result it is unknown if the project would create a substantial temporary or periodic increase

in ambient noise levels in the project vicinity above levels existing without the project. This should be studied in a situation where modeled levels are compared to applicable limits so the public can make an informed decision regarding the potential impacts and changes to the environment caused by this project. Comment 11-23 states that "Any noise generated by the Project would be imperceptible against the background freeway noise." But without adequate modeling, this statement is unsupported. The MND failed to adequately quantify the Project's construction noise impacts, therefore the MND's noise analysis is unsupported.

- Comment 11-16 also states that the "current noise environment at the Project site is dominated by vehicular-source noise emanating from the adjacent I-10 freeway" and that the project site "lies within the 70 CNEL noise contour." The response then provides a sample calculation before coming to the conclusion that "noise generated by the Project operations as received at any land use greater than 50 feet from the Project boundary would not exceed 66 dBA and would be imperceptible in the context of the 70 CNEL noise contour." The 70 CNEL noise contour is not uniform, changing in exact level due to variance such as shielding from buildings blocking traffic noise, the influence of local traffic, and airplane noise, among other factors. Shielding from traffic noise is particularly relevant to this site. The warehouse to the west of the project is 900 feet long, meaning that the eastern façade of the building would have almost no exposure to traffic on I-10 west of the project. Therefore, the noise level is almost certainly lower than the CNEL contour, since it has roughly half the traffic noise exposure. However, this level cannot be known without noise measurements to accurately describe the current environment. This is why baseline noise measurements are typically required for a proper noise analysis, as both the Federal Transit Administration's Noise and Vibration Impact Assessment Manual[1], and the Caltrans Traffic Noise Analysis Protocol[2] recommend noise measurements to accurately describe the current environment. In this case, if the shielding halved the noise exposure, the CNEL would be 67 dBA[3]. If noise was indeed 66 dBA from the project, the new noise level would indeed be heard on site at 69.5 dBA, a roughly 2 to 3 dB increase and thus a potential impact.

Very truly yours,
WILSON IHRIG

Re: Comments on Mitigated Negative Declaration for 1101 California Street Warehouse (Lot Merger No. 8; Planned Development No. 7) (SCH No. 2024031107)

Dear Mr. Beery, Mr. Desatnik:

On behalf of Californians Allied for a Responsible Economy ("CARE CA"), we submit these comments on the Initial Study / Mitigated Negative Declaration ("MND") prepared by the City of Redlands ("City") pursuant to the California Environmental Quality Act ("CEQA") [1], for the 1101 California Street Warehouse Project (SCH No. 2024031107) ("Project"), proposed by CRP/NPP Redlands Industrial Owner, LLC ("Applicant").

The Project proposes the construction of a 357,610 square-foot ("SF") warehouse that will include 6,000 SF of Administration/Office Space.[2] The Project Site is located at 1101 California St, Redlands, California 92374 on the southwest corner of Lugonia Avenue and California Street and includes two Assessor's Parcel Numbers: 0292-033-11 and 0292-033-13, in the County of San Bernardino.[3] The Project site is located in an area designated by the Redlands General Plan as Commercial/Industrial and within the Special Development ("EV/SD") district of the

[1] Pub. Res. Code §§ 21000 *et seq.*
[2] City of Redlands, Initial Study for 1101 California Street Warehouse (March 26, 2024), p. 1. [hereinafter "MND").
[3] MND, p. 1.

printed on recycled paper

East Valley Corridor Specific Plan.[4] The Project site was previously developed with the Splash Kingdom recreational water park.[5] The water park was vacated in 2018, and partially demolished in 2021, with various structures remaining onsite. The Air Quality Impact Analysis utilized the past emissions values as the existing condition baseline for the Proposed Project's new development emissions.[6] The property is located immediately adjacent to the 10-Freeway, and the property design contemplates dedicating a portion of the southeast corner of the property to improve the right turn access onto the westbound 10-Freeway onramp. The Project requires a Planned Development permit, a Lot Line Adjustment Merger, a Socio-Economic Cost/Benefit Study, a Construction General Permit Order 2009-2009-DWQ), and a Storm Water Pollution and Prevention Plan ("SWPPP").

CARE CA reviewed the MND, its technical appendices, and reference documents with the assistance of air quality and GHG expert James Clark, whose comments ("Clark Comments") and curriculum vitae ("CV") are attached hereto as **Exhibit A.** CARE CA's comments on noise and vibration were prepared with the assistance of acoustics, noise, and vibration expert Jack Meighan of Wilson Ihrig. Mr. Meighan's Comments ("Meighan Comments") and Mr. Meighan's CV are attached hereto as **Exhibit B.** Based on CARE CA's review of the MND and available documents in conjunction with its experts, there is substantial evidence supporting a fair argument that the Project may result in potentially significant and adverse impacts to air quality, public health, greenhouse gas emissions, land use, and cumulative impacts which are not fully disclosed or mitigated by the MND and require additional mitigation. To correct these deficiencies, the City must prepare an Environmental Impact Report ("EIR") that fully discloses, analyzes and mitigates the Project's potentially significant impacts and considers alternatives to the Project.

I. STATEMENT OF INTEREST

CARE CA is an unincorporated association of individuals and labor organizations that may be adversely affected by the potential public and worker health and safety hazards, and the environmental impacts of the Project. The coalition includes Redlands residents Michael Lopez, Scott Ortiz, Kevin Miller, Kevin Salas, the District Council of Ironworkers, Southern California Pipe Trades DC 16, along with their members, their families, and other individuals who live and work in the City of Redlands and San Bernardino County.

[5] MND, p. 2.
[6] MND Appendix A: Urban Crossroads, Air Quality Impact Analysis and Greenhouse Gas Analysis, (October 12, 2023).

printed on recycled paper

CARE CA advocates for protecting the environment and the health of their communities' workforces. CARE CA seeks to ensure a sustainable construction industry over the long-term by supporting projects that offer genuine economic and employment benefits, and which minimize adverse environmental and other impacts on local communities. CARE CA members live, work, recreate, and raise their families in the City of Redlands and San Bernardino County and the surrounding communities. Accordingly, they would be directly affected by the Project's environmental and health and safety impacts. Individual members may also work on the Project itself. They will be first in line to be exposed to any health and safety hazards that exist onsite.

In addition, CARE CA has an interest in enforcing environmental laws that encourage sustainable development and ensure a safe working environment for its members. Environmentally detrimental projects can jeopardize future jobs by making it more difficult and more expensive for business and industry to expand in the region, and by making the area less desirable for new businesses and new residents. Indeed, continued environmental degradation can, and has, caused construction moratoriums and other restrictions on growth that, in turn, reduce future employment opportunities.

II. LEGAL BACKGROUND

Except in limited circumstances, CEQA requires that lead agencies analyze any project with potentially significant environmental impacts in an EIR.[7] The purpose of an EIR "is to inform the public and its responsible officials of the environmental consequences of their decisions *before* they are made. Thus, the EIR protects not only the environment, but also informed self-government."[8] The EIR has been described as "an environmental 'alarm bell' whose purpose is to alert the public and its responsible official to environmental changes before they have reached ecological points of no return."[9]

A negative declaration may be prepared instead of an EIR when, after preparing an initial study, a lead agency determines that a project "would not have a significant effect on the environment."[10] Courts have held that if "no EIR has been prepared for a nonexempt project, but substantial evidence in the record

[7] Pub. Resources Code, § 21000; CEQA Guidelines, § 15002.

printed on recycled paper

supports a fair argument that the project may result in significant adverse impacts, the proper remedy is to order preparation of an EIR."[11]

The presumption in favor of preparing an EIR, rather than a negative declaration, is reflected in the "fair argument" standard. Under that standard, the lead agency "shall" prepare an EIR whenever substantial evidence in the whole record before the agency supports a fair argument that a project may have a significant effect on the environment.[12] The fair argument standard creates a "low threshold" of favoring environmental review through an EIR, rather than through a negative declaration.

"Substantial evidence" required to support a fair argument is defined as "enough relevant information and reasonable inferences from this information that a fair argument can be made to support a conclusion, even though other conclusions might also be reached."[13] "[I]n marginal cases where it is not clear whether there is substantial evidence that a project may have a significant effect on the environment, the lead agency shall be guided by the following principle: If there is disagreement among expert opinion supported by facts over the significance of an effect on the environment, the Lead Agency shall treat the effect as significant and shall prepare an EIR."[14]

With respect to this Project, the MND fails to satisfy the basic purposes of CEQA. The MND fails to adequately investigate, disclose, and analyze the Project's potentially significant impacts, and fails to provide substantial evidence to conclude that impacts will be mitigated to a less than significant level. Because the MND lacks basic information regarding the Project's potentially significant impacts, the MND's conclusion that the Project will have a less than significant impact on the environment is unsupported.[15] The City failed to gather the relevant data to support its finding of no significant impacts, and substantial evidence shows that the Project may result in potentially significant impacts. As detailed herein and in the attached expert comments substantial evidence supports a fair argument that the Project may result in significant and unmitigated impacts to air quality, public

printed on recycled paper

health, greenhouse gas emissions, noise and vibration, and cumulative impacts. The City must prepare an EIR that analyzes, discloses, and mitigates these impacts and which considers less environmentally damaging alternatives.

III. THE MND FAILS TO PROVIDE A COMPLETE PROJECT DESCRIPTION

CEQA requires that an Initial Study include a description of the project and an identification of the environmental setting.[16] "An accurate and complete project description is necessary for an intelligent evaluation of the potential environmental impacts of the agency's action."[17] Accordingly, a lead agency may not hide behind its failure to obtain a complete and accurate project description.[18] Without a complete project description, the environmental analysis under CEQA is impermissibly limited, thus minimizing the project's impacts and undermining meaningful public review.[19]

CEQA Guidelines section 15378 defines "project" to mean "the whole of an action, which has a potential for resulting in either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment."[20] "The term "project" refers to the activity which is being approved and which may be subject to several discretionary approvals by governmental agencies. The term project does not mean each separate governmental approval."[21] Courts have explained that a complete description of a project must "address not only the immediate environmental consequences of going forward with the project, but also all "*reasonably foreseeable* consequence[s] of the initial project."[22] Accordingly, a lead agency may not hide behind its failure to obtain a complete and accurate project description.[23]

printed on recycled paper

A. The MND Fails to Identify Reasonably Foreseeable Uses of the Project Site

CEQA is concerned with a project's environmental impacts, regardless of who ultimately uses or operates a project.[24] Courts have held that where the tenant or type of business is foreseeable and there is evidence that an impact unique to that tenant or type of business will result, the CEQA document must disclose that information.[25] An EIR must include an analysis of the environmental effects of a proposed future use or action at a project site if: (1) it is a reasonably foreseeable consequence of the initial project; and (2) the future expansion or action will be significant in that it will likely change the scope or nature of the initial project or its environmental effects.[26] A failure to describe anticipated project operations can result in a flawed impact analysis, in violation of CEQA.[27] An EIR is required to "adequately apprise all interested parties of the true scope of the project for intelligent weighing of the environmental consequences of the project," otherwise, informed decisionmaking is precluded and the EIR may be deemed inadequate as a matter of law.[28]

Here, the Project is being developed for unknown future tenants, but for reasonably foreseeable future uses. The Development Application submitted for the Project provides that the Project is proposed to be built on a speculative basis without an identified tenant/user and may be utilized for warehousing and distribution of finished goods or manufacturing.[29] The MND likewise does not identify a tenant or end user for the Project's warehouse development. However, based on the Project's location and proposed construction, it is reasonably foreseeable that the Project may involve high-intensity warehouse uses such as high cube warehousing and cold storage. Absent conditions of approval limiting Project operation to low-intensity warehouse uses, future tenants would be able to operate these higher intensity uses. The impacts of high-intensity warehouse uses must therefore be analyzed in the CEQA document.

printed on recycled paper

B. The MND Fails to Substantiate the Assumption that Project Operation Will Not Involve Cold Storage Uses

The MND analyses assume that the Project would not result in impacts associated with cold storage uses. This assumption lacks the support of substantial evidence, as the MND does not identify a tenant or end user for the warehouse. Further, this assumption is not reflected in any enforceable conditions related to Project use. In order for the City to correctly assume that the Project would not include cold storage, which is a common warehouse use,[30] the MND would need to include binding measures or conditions which limit warehouse use at the Project to prohibit cold storage. Absent such a restriction, it is reasonable to assume that future Project warehouse tenants may use the site for cold storage. The MND does not include a restriction on cold storage use, yet fails to analyze the elevated air quality, public health, and energy impacts of cold storage use at the Project site. As a result, the MND may substantially underestimate these impacts.

A cold storage warehouse generates greater environmental impacts than other types of warehouses. Cold storage generates more trips per square foot and has higher energy impacts due to the low temperatures required by the facility's transport refrigeration units ("TRUs") and on-site storage. TRUs are refrigeration systems powered by integral diesel engines.[31] The refrigeration systems are used to control the environment of temperature-sensitive products transported in insulated trucks, trailers, shipping containers, or railcars. The California Air Resources Board ("CARB") states that TRUs emit diesel particulate matter ("DPM"), fine particulate matter ("PM2.5"), oxides of nitrogen ("NOx"), and GHGs while in transit and during stationary operation at refrigerated warehouses or distribution centers, grocery stores, seaport facilities, intermodal railyards, and other locations of operation. CARB explains that communities near facilities where TRUs operate bear a disproportionate health burden:

> PM2.5 pollution contributes to more fatalities than other air pollutants and can lodge deep in the lungs or pass through the lungs to enter the blood stream and affect the heart, brain, and other organs. Adverse health effects

[30] See e.g. https://www.inboundlogistics.com/articles/cold-storage-warehouse/ (cold storage warehouses are "commonly used for storing fresh produce, dairy products, and other perishable items that require a cool but not frozen environment… The importance and popularity of cold storage warehouses have soared in recent years, driven by shifting consumer preferences, growing populations, and increased spending–especially when it comes to frozen food, probiotics, pharmaceuticals, or fresh produce.")

[31] California Air Resources Board, 2022 TRU Technology Assessment, pg. 1, https://ww2.arb.ca.gov/sites/default/files/2022-10/CARB%202022%20TRU%20Technology%20Assessment%2010-14-22.pdf.

printed on recycled paper

> from long-term exposure to PM2.5 pollution include increased risk of heart attacks and heart disease, impaired lung development in children, the development and exacerbation of asthma, and premature death. NOx is a precursor to ozone, which can cause irritation and damage lung tissue, worsen asthma and chronic illnesses including obstructive pulmonary disease and reduce lung function.[32]

CARB also explains that TRUs' emissions of GHGs contribute towards climate change,[33] and that TRUs generate noise impacts: "TRU operations produce noise that can be problematic when deliveries that often occur late evening or early morning are near residential neighborhoods, hotels, hospitals, and elder care facilities… One study conducted by LSA Associates found that a diesel-powered TRU operating at high idle produces an A-weighted decibel (dBA) noise rating of 104 dBA, while a diesel truck at idle produces a noise rating of 96 dBA."[34]

By assuming the Project will not include cold storage, the MND may drastically underestimate the Project's impacts in each of these areas. The MND does not provide supporting evidence demonstrating that cold storage uses would be absent from the Project site for the duration of the Project's life. Due to ever-increasing population and market demands in Southern California, it is reasonably foreseeable that the Project may attract end users, either now or in future years of the Project's life, which require cold storage. As a result, the MND's assumption is not supported by substantial evidence. Rather, it is reasonably foreseeable that some of the 357,610 SF Project site may support cold storage end uses in the future.

In the California Attorney General's ("AG") guidance for warehouse projects, the AG recommends that, unless a developer adopts mitigation measures limiting cold storage impacts, the developer should record a covenant on the title of the underlying property to ensuring that the property cannot be used to provide refrigerated warehouse space.[35] The City should include such a title restriction for the Project unless the MND is revised to analyze and mitigate impacts associated with a more conservative and fact-based cold-storage use percentage.

printed on recycled paper

C. The Project Description Fails to Include Reasonably Foreseeable Backup Generators

The MND fails to disclose potential backup/emergency stationary generators for the Project's operations. The MND's project description does not address whether backup generators are a reasonably foreseeable component of the Project, and the MND's technical analyses assume no backup generators will be installed for operations. The MND does not disclose any conditions or mitigation measures that limit or prevent use of backup generators. The MND must disclose and analyze the potential use of backup generators because (1) they are a reasonably foreseeable use and consequence of the Project, and (2) the use of backup generators will expand the Project's environmental effects.

In *East Oakland Stadium Alliance v. City of Oakland*,[36] the Court of Appeal upheld an EIR's analysis of emissions from backup generators. The EIR's analysis assumed that generators would operate for 50 hours of testing and maintenance annually, while allocating no time for actual emergency use. In discussing the lead agency's duty to analyze backup generator emissions, the Court stated that "if the annual need for emergency generator use is reasonably foreseeable, the EIR was not entitled to disregard such use merely because it would occur at unpredictable times."[37] The Court explained that use of a generator was reasonably foreseeable because, "[a]s noted in the EIR, some parts of the Bay Area are subject to predictable, sustained power outages undertaken to reduce the risk of fire."[38] Thus, "[t]he EIR was required to make neither a generally applicable nor a worst-case assumption; rather it was required to make a reasonable estimate of likely annual use of the generators at the project site."[39]

Here, as in *East Oakland Stadium Alliance*, back-up generators are a reasonably foreseeable consequence of the Project due to increasingly common Public Safety Power Shutoff ("PSPS") events and extreme heat events. Extreme heat events ("EHE") are defined as periods where in the temperatures throughout California exceed 100 degrees Fahrenheit.[40] From January 2019 through December 2019, Southern California Edison reported 158 of their circuits underwent a PSP event.[41] In Los Angeles County, two circuits had 4 PSPS events during that period,

printed on recycled paper

lasting an average of 35 to 38 hours. The total duration of the PSPS events lasted between 141 hours to 154 hours in 2019. According to the California Public Utilities Commission (CPUC) de-energization report[42] in October 2019, there were almost 806 PSPS events that impacted almost 973,000 customers (~7.5% of households in California) of which ~854,000 of them were residential customers. The California Air Resources Board estimates that with 973,000 customers impacted by PSPS events in October 2019, approximately 125,000 back-up generators were used by customers to provide electricity during power outage.[43] The widespread use of back-up generators to adapt to PSPS and EHE events suggests that back-up generators are a reasonably foreseeable consequence of the Project.

Further demonstrating that backup generators are reasonably foreseeable is the possibility that the Project may include cold storage. A cold storage warehouse has the ability to keep temperature sensitive items in a temperature-controlled environment, which requires a constant energy supply to power refrigeration. Cold storage warehouses thus commonly utilize backup generators.[44] Backup generators commonly rely on fuels such as natural gas or diesel,[45] and thus can significantly impact air quality, GHG emissions, and public health through toxic DPM emissions.[46] Since the Project may include cold storage, it is reasonably foreseeable that the Project would require on-site backup generators.

Diesel-fired engines also produce significantly greater amounts of fine particulates and toxics

printed on recycled paper

Omission of a generator system results in an underestimation of the Project's air quality, greenhouse gas, and health risk impacts.

In sum, omission of the Project's generator results in an underestimation of the Project's reasonably foreseeable air quality, greenhouse gas, energy, and health risk impacts. The MND must be withdrawn and an EIR prepared to resolve this project description inconsistency and correct the affected impacts analyses to accurately disclose the Project's potentially significant impacts.

D. The Project Description Fails to Include Reasonably Foreseeable Use and Transport of Hazardous Materials

The MND also contains conflicting descriptions of future uses, further demonstrating the inconsistencies in the City's impact assumptions. The MND initially states that "future items to be stored for distribution would include non-hazardous, non-flammable products on high-pile storage pallet racking and shelving."[50] However, the MND does not include mitigation measures or conditions prohibiting storage of hazardous items. The MND later states that the Project will include "[t]he storage of hazardous materials… kept in compliance with State and local regulations."[51] The transport and storage of hazardous materials may result in potentially significant impacts which are not discussed or analyzed in the MND due to its fluctuating description of Project operations.

Since the Project is being designed to be capable of supporting intensive warehouse distribution, and potentially cold storage and hazardous materials transport uses at the Project site, the City must prepare an EIR to include specific use information and to analyze the impacts of the most intensive reasonably foreseeable uses of the Project site. The EIR must also include all known information about the types of future users at the Project site. The MND must be withdrawn and an EIR circulated which adequately describes the Project's reasonably foreseeable future users before the Project can lawfully be approved.

IV. THE MND FAILS TO ADEQUATELY ANALYZE THE PROJECT'S ENVIRONMENTAL SETTING

CEQA requires that an Initial Study include a description of the project and

---

emissions compared to natural gas fired equipment."), available at http://www.aqmd.gov/home/permits/emergency-generators#Fact2.

[50] MND, p. 2.

[51] MND, p. 35.

printed on recycled paper

an identification of the environmental setting.[52] CEQA requires that a lead agency include a description of the physical environmental conditions in the vicinity of the Project as they exist at the time environmental review commences.[53] As numerous courts have held, the impacts of a project must be measured against the "real conditions on the ground."[54] The description of the environmental setting constitutes the baseline physical conditions by which a lead agency may assess the significance of a project's impacts.[55] Use of the proper baseline is critical to a meaningful assessment of a project's environmental impacts.[56] An agency's failure to adequately describe the existing setting contravenes the fundamental purpose of the environmental review process, which is to determine whether there is a potentially substantial, adverse change compared to the existing setting.

The CEQA Guidelines call for the environmental baseline to reflect conditions as they exist early in the CEQA process. The CEQA Guidelines specify that the physical environmental conditions at the time the notice of preparation is published or, if there is no notice of preparation, at the time environmental review begins "will normally constitute the baseline physical conditions by which a lead agency determines whether an impact is significant."[57] The CEQA Guidelines also provide that in assessing a project's impacts on the environment, the lead agency should "normally limit its examination to the existing physical conditions in the affected area" at the same stage of the CEQA process.[58]

Baseline information on which a lead agency relies must be supported by substantial evidence.[59] The CEQA Guidelines define "substantial evidence" as "enough relevant information and reasonable inferences from this information that a fair argument can be made to support a conclusion."[60] "Substantial evidence shall include facts, reasonable assumptions predicated upon facts, and expert opinion

supported by facts ... [U]nsubstantiated opinion or narrative [and] evidence which is clearly inaccurate or erroneous ... is not substantial evidence."[61]

A. The MND Relies on an Inadequate Baseline Against Which to Analyze Project's Air Quality and Greenhouse Gas Impacts

The California Supreme Court, in *Communities for a Better Environment v. South Coast Air Quality Management District* ("*CBE v. SCAQMD*"),[62] recognized that "the baseline 'normally' consists of 'the physical environmental conditions in the vicinity of the project, as they exist at the time ... environmental analysis is commenced....'"[63] This decision considered a long line of Court of Appeal decisions that hold, in similar terms, that the impacts of a proposed project are ordinarily to be compared to the actual environmental conditions existing at the time of CEQA analysis.[64] This line of authority includes cases where a plan or regulation allowed for greater development or more intense activity than had so far actually occurred, as well as cases where actual development or activity had, by the time CEQA analysis was begun, already exceeded that allowed under the existing regulations.[65]

In *CBE v. SCAQMD*, the Supreme Court identified circumstances under which a lead agency could deviate from the "normal" baseline of conditions existing at the date the Notice of Preparation is released. ConocoPhillips had applied to modify an operating petroleum refinery in a way that would increase operation of

[64] *Environmental Planning Information Council v. County of El Dorado* (1982) 131 Cal.App.3d 350, 354, 357-358 (effects of a proposed area plan for land development must be compared to the existing physical conditions in the area, rather than to development permitted under the county's general plan); *City of Carmel-by-the-Sea v. Board of Supervisors* (1986) 183 Cal.App.3d 229, 246-247 (effects of rezoning must be compared to the existing physical environment, rather than to development allowed under a prior land use plan); *County of Amador v. El Dorado County Water Agency* (1999) 76 Cal.App.4th 931, 955 (baseline for water diversion project was actually existing stream flows, not minimum stream flows set by federal license); *Save Our Peninsula Committee v. Monterey County Bd. of Supervisors* (2001) 87 Cal.App.4th 99, 121 (water use baseline for analysis of proposed land development was actual use without the project, not what the applicant was entitled to use for irrigation); *San Joaquin Raptor Rescue Center v. County of Merced* (2007) 149 Cal.App.4th 645, 658 (baseline for proposed expansion of a mining operation must be the "realized physical conditions on the ground, as opposed to merely hypothetical conditions allowable under existing plans"); *Woodward Park Homeowners Assn., Inc. v. City of Fresno* (2007) 150 Cal.App.4th 683, 693, 706-710 (effects of a large office and shopping center development must be compared to the current undeveloped condition of the property, rather than to an office park that could be developed under existing zoning).
[65] *CBE v. SCAQMD*, *supra,* 48 Ca.4th 310, 321.

printed on recycled paper

four boilers that produced steam for refinery operations.[66] The lead agency selected as the project's baseline for nitrogen oxide emissions the amount the boilers would emit if they operated at the maximum level allowed under ConocoPhillips's existing permits, even though ConocoPhillips had never operated them at that level.[67] Citing that refinery operations "vary greatly with the season, crude oil supplies, market conditions, and other factors,"[68] the court explained that agencies may exercise discretion to accommodate a "temporary lull or spike in operations that happens to occur at the time of environmental review."[69] The Court held that a lead agency enjoys the discretion to decide how the existing physical conditions can most realistically be measured, supported by substantial evidence.[70] The Court rejected the "maximum level permitted" baseline because it did not aim to reflect existing conditions.

Some subsequent cases,[71] as well as the CEQA Guidelines,[72] have allowed lead agencies to deviate from using the NOP date as the baseline when assessing existing facilities/operations in limited situations "where conditions change or fluctuate over time." However, in most cases, the facility/operation was still operating to some extent at the time of the NOP.[73]

County of Carlsbad* (2015) 241 Cal.App.4th 94, 105 (upholding use of recent historical traffic levels as a baseline for currently operating shopping mall with greater-than-usual vacancies, noting that "the nature of a shopping center is that tenants change and the amount of occupied space constantly fluctuates"); *San Francisco Baykeeper, Inc. v. State Lands Commission* (2015) 242 CA4th 202, 218 (upholding a baseline for a continuously operating sand mine that was derived from 5 years of historical mining operations, noting that the amount of sand mined fluctuates substantially from year to year due to a variety of factors); *Association of Irritated Residents v. Kern County Board of Supervisors* (2017) 17 CA5th 708, 709 (upholding baseline based on oil refinery's last year of full operations, noting that the facility was currently in operation at the time of the NOP and its permits remained in place); *Cherry Valley Pass Acres & Neighbors v. City of Beaumont* (2010) 190 CA4th 316 (upholding baseline closely approximating historic water use of egg farm in 2004, noting that egg farm only ceased operations after NOP date in 2005).
[72] CEQA Guidelines, Section 15125(a)(1) (providing, "[w]here existing conditions change or fluctuate over time, and where necessary to provide the most accurate picture practically possible of the project's impacts, a lead agency may define existing conditions by referencing historic conditions, or conditions expected when the project becomes operational, or both, that are supported with substantial evidence. In addition, a lead agency may also use baselines consisting of both existing conditions and projected future conditions that are supported by reliable projections based on substantial evidence in the record").
[73] *See* note 57.

printed on recycled paper

For example, in *Association of Irritated Residents v. Kern County Board of Supervisors*,[74] the court reviewed the baseline set for an oil refinery that temporarily suspended refining operations at the time of the NOP. The baseline was set at operating levels of the facility in 2007, when the refinery was operating at full capacity, whereas in 2013, the date of the NOP, no refining operations were occurring. The court articulated the baseline analysis as such:[75]

> Our analysis of County's treatment of the baseline question breaks the County's approach into two factual components. The first inquiry considers the basic question of whether County has a sufficient evidentiary basis for finding existing conditions included an *operating* refinery. If that finding is upheld, the second inquiry addresses whether substantial evidence supports County's choice of 2007 as a *realistic measure* of the baseline physical conditions created by the refinery's operations. [emphasis in original text]

To the first inquiry, the court "conclude[d] the EIR's choice of 2007 as the measure of an existing conditions baseline for an operating refinery (1) was supported by substantial evidence."[76] The court noted that suspension of operations was intended as temporary, and that the refinery had a "history of fluctuating operations"[77] – the refinery frequently started and stopped refining operations. The court noted as relevant that when the refinery suspended operations at the time of the NOP, the refinery "continued other operations and activities. Those continuing activities included managing inventory, blending and marketing fuels, and functioning as a terminal for crude oil and finished petroleum products."[78] To the second inquiry, substantial evidence supported that the 2007 figure was a reasonable representation of the operations actually performed at the refinery because there had been only a temporary suspension of activity at the refinery, not the permanent closure of an unrelated former use, as here.[79]

In *North County Advocates v. County of Carlsbad*,[80] the court upheld the use of recent historical traffic levels as a baseline for an operating shopping mall with that had greater-than-usual vacancies. Specifically, a large department store retail space in the mall was vacant at the time of the NOP. In determining the scope of baseline operations, the court analyzed the historical occupancy of the mall. The court noted that, although the retail space in question was vacant at the time

printed on recycled paper

CEQA review commenced, the mall remained operational. The court observed that the department store retail space within the mall frequently fluctuated in occupancy – for instance, "the Robinsons-May space was less occupied from 2007 through 2009 (two retail users occupied part of it from August 2006 through December 2007, and two others occupied part of it from August through November in 2008 and in 2009."[81] The court concluded, "[w]e view this fluctuating occupancy—which is 'the nature of a shopping center'—as akin to the varying oil refinery operations in *Communities for a Better Environment*."[82] Therefore, the court permitted the shopping center to use a baseline that assumed the department store retail space was occupied since it was a component of the mall, which remained operational.

Here, the City incorrectly claimed a baseline credit for a wholly shuttered former use that is unrelated to the proposed Project. The site was formerly developed as the Splash Kingdom amusement park, which closed in 2018, and was demolished in 2021, and currently features the remains of the former water park's abandoned attractions and structures.[83] Unlike the shopping mall in *North County Advocates*, which sought to fill a vacant space in an existing mall, or the refinery in *AIR v. Kern*, which had ongoing refining operations at the time of the NOP, the Project has no relationship to the former water park and is not an expansion or replacement of components of an existing facility. The facts of the Project do not allow the City to take any credit for baseline operations based on the shuttered waterpark that occupied the site before 2021.

The Notice of Intent to Adopt this MND was released on March 26, 2024. At that time, the Project site contained only the demolished Splash Kingdom's abandoned attractions and structures.[84] The MND provides that "because the site was previously developed with an amusement park, the Air Quality Impact Analysis utilized the past emissions values as the existing condition baseline for the Proposed Project's new development emissions."[85] This is incorrect. The City's choice to use fictitious emissions values as the existing baseline is misplaced. The "normal" baseline described in *CBE v. SCAQMD*, which should reflect the physical environmental conditions in the vicinity of the project, as they exist at the time environmental analysis is commenced, is of a vacant developed lot.[86] No sources of

printed on recycled paper

emissions are operational at the Project Site, or have been since the water park's closure in 2018 or demolition in 2021.[87]

The MND fails to provide substantial evidence to justify deviation from the "normal" baseline. The MND cannot provide this evidence because operations of the water park on the Project site had completely ceased, which makes this case plainly distinguishable from *Association of Irritated Residents v. Kern County Board of Supervisors*,[88] *CBE v. SCAQMD*,[89] *North County Advocates v. County of Carlsbad*,[90] and other leading cases[91] allowing use of recent historical conditions as a baseline. Those cases all involved operations active at the time of the NOP experiencing a temporary "lull" due to their "history of fluctuating conditions."[92] Here, the Project involves a completely vacated facility at the date of the Notice of Intent; Splash Kingdom did not merely halt operations for a period – it completely vacated the premises. There is no evidence that Splash Kingdom expects to reoccupy the Project site, or that water parks are businesses where operations are expected to vacate and reoccupy warehouse facilities due to regularly fluctuating conditions. Therefore, the MND lacks evidence for finding existing conditions included an *operating* amusement park.

The CEQA Guidelines state that existing conditions may be defined "by referencing historic conditions" that are supported by substantial evidence, "where necessary to provide the most accurate picture practically possible of the project's impacts."[93] A departure from the normal use of existing baseline conditions "can be justified by substantial evidence that an analysis based on existing conditions would tend to be misleading or without informational value"[94] Here, the record contains no substantial evidence that analysis based on existing conditions would be misleading or without informational value. If the Project were not to proceed, the site would remain an empty lot continuing to emit no greenhouse gas emissions, air quality impacts, health risk, or traffic impacts.

In fact, it is misleading to rely on a fictitious baseline. Dr. Clark determined that the reliance on an inaccurate baseline results in an underestimation of Project emissions.[95] Specifically, the reliance on fictitious emissions associated with a

printed on recycled paper

historical use of a water park to reduce Net GHG Emissions from the Project results in a gross miscalculation of the Project's potentially significant greenhouse gas emissions impacts.[96] The MND's analysis includes a calculation that Net Emissions is calculated by subtracting Existing Emissions from the Proposed Emissions from Total CO2 emissions.[97] See figure below. The MND's conclusions based on subtracting the fictitious 2,228.88 Existing Emissions from the Total Emissions of 3,534.58, are incorrect.[98] Total and Net Emissions remain 3,534.58. The reliance on fictitious "Existing Emissions" to reduce the Project's Net Emissions is inaccurate and results in inaccurate Greenhouse Gas Emissions impact assessment.[99] Dr. Clark concludes, therefore, that the City's analysis is incomplete and must be revised in an EIR circulated for public review.

Table 6
Project GHG Emissions

Emission Source	Emissions (MT/yr)				
	CO_2	CH_4	N_2O	Refrigerants	Total CO_2e
Annual construction-related emissions amortized over 30 years	27.47	0.0	0.0	0.02	28.10
Mobile Source	3,072.72	0.20	0.34	4.31	3,183.19
Area Source	7.25	0.00	0.00	0.00	7.28
Water Usage	116.44	2.70	0.06	0.00	203.26
Waste	31.91	3.19	0.00	0.00	111.64
Refrigerants	0.00	0.00	0.00	1.11	1.11
Total CO2e (All Sources)	**3,534.58**				
Existing Emissions	2,228.88				
Net Emissions (Proposed – Existing)	**1,305.70**				

The Air Quality Analysis in the MND relies on the same fictitious baseline to determine air quality and health risk impacts. All the Project's baseline conditions are those existing from 2018 onward, following the closure of the Splash Kingdom amusement park.

The City lacks substantial evidence to support its reliance on fully operational amusement park baselines to inform its analysis of the Project's impacts. The MND must be withdrawn and an EIR circulated to include baseline analyses which reflect the conditions existing at the Project site at the time of the Notice of Intent, and to revise any impact analyses that utilized these erroneous baselines.

printed on recycled paper

B. The MND Fails to Analyze the Site's Baseline Noise Environment Against Which to Analyze Project's Noise and Vibration Impacts

Mr. Meighan, CARE CA's expert noise consultant at Wilson Ihrig concludes that the MND fails to include an accurate ambient noise analysis. The MND fails to include any measurements of existing ambient noise conditions on the Project site against which to measure the Project's potentially significant noise and vibration impacts. The MND defines the ambient noise level, but does not calculate it. The MND provides that, "Ambient Noise Level [means]: The composite of noise from all sources, near and far. In this context, the ambient noise level constitutes the normal or existing level of environmental noise at a given location."[100] "Given the proximity to both local streets and Interstate 10 (I-10), along with noise from nearby residences and commercial parking lots, as well as shielding from the main noise source of I-10, noise levels should be physically measured to be accurately determined."[101]

The MND's failure to analyze the existing environmental setting with respect to noise results in an inadequate analysis of the Project's potential increase in noise above the ambient noise levels in the vicinity of the Project site. The MND's conclusion that "the Proposed Project would not generate substantial permanent increase in ambient noise levels in the vicinity of the Project" is therefore not supported by substantial evidence.[102] The MND must be withdrawn and an EIR circulated which accurately characterizes the environmental setting with respect to noise and adequately analyzes and mitigates potentially significant noise and vibration impacts before the Project can lawfully be approved.

V. THE CITY MUST PREPARE AN EIR BECAUSE THERE IS SUBSTANTIAL EVIDENCE SUPPORTING A FAIR ARGUMENT THAT THE PROJECT MAY RESULT IN SIGNIFICANT AIR QUALITY IMPACTS

An EIR must fully disclose all potentially significant impacts of a project, and implement all feasible mitigation to reduce those impacts to less than significant levels. The lead agency's significance determination with regard to each impact must be supported by accurate scientific and factual data.[103] An agency cannot

[100] MND, p. 44.
[101] Meighan Comments, p. 3.
[102] MND, p. 46.
[103] 14 CCR § 15064(b).

printed on recycled paper

conclude that an impact is less than significant unless it produces rigorous analysis and concrete substantial evidence justifying the finding.[104]

Moreover, the failure to provide information required by CEQA is a failure to proceed in the manner required by CEQA.[105] Challenges to an agency's failure to proceed in the manner required by CEQA, such as the failure to address a subject required to be covered in an EIR or to disclose information about a project's environmental effects or alternatives, are subject to a less deferential standard than challenges to an agency's factual conclusions.[106] In reviewing challenges to an agency's approval of an EIR based on a lack of substantial evidence, the court will "determine de novo whether the agency has employed the correct procedures, scrupulously enforcing all legislatively mandated CEQA requirements."[107] Even when the substantial evidence standard is applicable to agency decisions to certify an EIR and approve a project, reviewing courts will not 'uncritically rely on every study or analysis presented by a project proponent in support of its position. A clearly inadequate or unsupported study is entitled to no judicial deference.'"[108]

A. The MND Fails to Use Actual Truck Trip Lengths, Resulting in an Underestimation of Vehicle Emissions

The MND's conclusion that air quality impacts are less than significant is not supported by substantial evidence. To the contrary, emissions from diesel trucks will result in significant air quality impacts associated with the emissions of Toxic Air Contaminants ("TACs").[109] The City's own General Plan Update and Climate Action Plan EIR provide that "CARB has identified diesel engine exhaust particulate matter as the predominant TAC in California. Diesel particulate matter is emitted into the air by diesel-powered mobile vehicles, including heavy-duty diesel trucks, construction equipment, and passenger vehicles. Certain ROGs may also be designated as TACs."[110]

The MND includes an inaccurate calculation of the Project's air quality impacts by underestimating the vehicle miles traveled of the trucks ingressing and egressing the Project site. The MND provides:

> To determine emissions from trucks for the proposed industrial uses, the analysis incorporated the SCAQMD recommended truck trip length of 15.3 miles for 2-axle (LHDT1, LHDT2), 14.2 miles for 3-axle (MHDT) trucks, and 39.9 miles for 4+-axle (HHDT) trucks and weighting the average trip lengths using traffic trip percentages. The trip length function for the warehouse and the general light industrial uses has been conservatively calculated to 30.34 miles and 29.84 miles, respectively, with an assumption of 100% primary trips for the proposed industrial land uses.

According to the Air Quality Analysis[111] for the IS/MND, the SCAQMD recommended truck trip length of 40 (39.9) miles was incorporated in the CalEEMod analysis. Guidance from SCAQMD does not require a 40-mile truck trip, rather as stated in the SCAQMD's Final Environmental Assessment and Adoption of Proposed Rule 2305 – Warehouse Indirect Source Rule (WAIRE), the trip length for Class 8 trucks (heavy duty multi-axle trucks) are assumed to travel 39.9 miles per trip based on modeling conducted for the 2016 Regional Transportation Plan (RTP) from SCAG and the 2016 Air Quality Management Plan (AQMP).[112] SCAQMD has explained that this guidance is not intended to replace an analysis of actual truck trip distances to and from the ports.[113]

The MND's reliance on 39.9 miles per trip average is therefore misplaced. Contrary to the MND's assertion, the 40-mile trip length is not "required" by SCAQMD. It is a default average value recommended by SCAQMD for use in CalEEMod modeling in the absence of more specific data. CalEEMod explains that default values are only intended to be used "if site-specific information is not available."[114] And CEQA requires that significance determinations be "based to the extent possible on scientific and factual data."[115] The MND is inconsistent with this requirement because it lacks any evidence to support the assumption that truck trips to and from the Project site would be just 40 miles long. In particular, the MND does not identify any originating locations or destinations for the Project's

printed on recycled paper

warehouse products which are 40 miles (or less) from the Project site. The MND therefore lacks substantial evidence to support its reliance on 40-mile truck trips.

The actual conditions of the Project potentially result in a far higher average truck trip.[116] CARE CA's expert Dr. Clark provided substantial evidence demonstrating that the nearest ports, which are common originating and destination locations for warehouse supply shipments, are at least 80 miles from the Project site, supporting a more reasonable conclusion that average truck trips would be 80 or more miles. As Dr. Clark explains, trucks are likely to travel to the Port of Long Beach and the Port of Los Angeles, which would result in a true truck trip of approximately 80 miles.[117] This would result in a nearly 200% longer trip than estimated in the air quality assessment in the MND.[118] This error results in a gross miscalculation of the Project's greenhouse gas, air quality, diesel particulate matter, and toxic air contaminant emissions associated with operation of the Project. The Project's impacts with respect to greenhouse gas emissions and air pollutant emissions will be nearly doubled, utilizing the correct trip length.[119] The vehicle emissions and greenhouse gas impacts associated with Project operation must be recalculated based on the higher average truck trip lengths.

Moreover, depending on the type of warehouse operation, the actual trip generation rate could be magnitudes greater than those assumed by the MND depending on the eventual tenant. An increased intensity of use would further compound the Project's VMT, air quality, and GHG impacts. The City must correct the estimated distance traveled by trucks and analyze the Project's impacts based on actual distances in a revised and recirculated FSEIR.

B. The MND Fails to Accurately Analyze or Mitigate the Project's Potentially Significant Air Quality Impacts

As discussed above, the air quality impact conclusions of the MND are based on an erroneous baseline that does not reflect existing conditions. The MND's air quality impact assessment is therefore not supported by substantial evidence.

The MND includes no mitigation to reduce air quality impacts associated with construction and operation of the Project, even though the Project results in significant air quality and public health impacts. Dr. Clark concludes that the Project results in significant air quality impacts from criteria and TAC pollutants

[116] Clark Comments, p. 12.
[117] *Id.*
[118] *Id.*
[119] *Id.*

printed on recycled paper

associated with yard equipment used on the Project site.[120] The MND provides, that as required by City of Redlands Ordinance No. 2955, a minimum of ninety percent (90%) of the on-site cargo handling equipment shall be zero emissions for new warehouse development project.[121] But, Dr. Clark found that the MND fails to account for the nearly 10% of on-site cargo handling equipment that will not be zero emission.[122] The non-zero emission on-site cargo handling equipment may result in significant criteria and toxic air pollutants, which were not analyzed or mitigated in the MND.[123] The MND's conclusion that air quality impacts are less than significant is therefore not supported by substantial evidence. Substantial evidence in Dr. Clark's comments supports a fair argument that the Project may result in a significant air quality impact from emissions of criteria and toxic pollutants from on-site motorized operational equipment.

C. The MND Fails to Accurately Analyze or Mitigate the Project's Construction and Operational Health Risk

Furthermore, Dr. Clark found that the Project results in a health risk impact which was not adequately analyzed or mitigated in the MND. Dr. Clark concluded that the health risk assessment relied on inappropriate breathing rates to artificially reduce the Project's potentially significant health risk impacts.[124] Dr. Clark calculated that the health risk estimate for ages 2 to 30 years is off by a factor of 1.3.[125] Utilizing the correct breathing rate, the Project's health risk impacts are significant and require mitigation in an EIR before the Project can be approved.

Further, the MND fails to account for potentially significant health risk impacts associated with building downwash effect. In order to assess the impact of project related emissions, the MND included air quality modeling utilizing AERMOD, which is used to assess near-field pollutant dispersion.[126] However, Dr. James Clark explains that the air dispersion model used for the health risk analysis ("HRA") for the construction and operational phases of the Project has a structural flaw that results in inaccurate estimates of the Project emissions within the community.

[125] *Id.*
[126] *Id.*, Appendix A, p. 51.

printed on recycled paper

Dr. Clark reviewed the City's AERMOD modeling, and noted that the City's use of AERMOD does not account for the impact on emissions from building downwash, rendering the analysis inaccurate. Dr. Clark's comments explain that building downwash occurs as the wind flows over and around buildings and impacts the dispersion of pollution from nearby stacks.[127] A plume caught in the path of this flow is drawn into the wake, temporarily trapping it in a recirculating cavity. This downwash effect leads to higher ground-level concentration of chemicals. The downwash effect increases as the relative difference between the release height and top of the building increases. This effect is well-understood. For example, analysis and mitigation of downwash is discussed in Section 123 of the Clean Air Act.[128]

The MND completely fails to account for this impact in its AERMOD model, nor does it provide any justification why. Dr. Clark found that running the model without considering building downwash significantly underestimates the impacts of the project. [129]

When a standard, accepted methodology is available to assess a significant impact, an EIR must evaluate the impact unless a reasoned basis for not doing so is provided.[130] In *Berkeley Keep Jets Over the Bay Comm. v. Board of Port Comm'rs*, a court reviewed a DEIR's failure to analyze health risk from TAC exposure. The DEIR claimed that no methodology or standards of significance existed for assessing the health risk from TAC exposure.[131] The court determined that the lead agency abused its discretion, reasoning that the lead agency failed to consider, in good faith, comments from the public showing that it was feasible to analyze health risk from TAC exposure:[132]

> The Port has not cited us to any reasonably conscientious effort it took either to collect additional data or to make further inquiries of environmental or regulatory agencies having expertise in the matter.…At the very least, the documents submitted by the public raised substantial questions about the project's effects on the environment and the unknown health risks to the

printed on recycled paper

> area's residents...the Port has not offered any justification why more definitive information could not have been provided.

Here, the City failed to analyze a critical dispersion factor – building downwash – which affects the rate and severity of exposure to TACs, without explaining why. Dr. Clark's comments show that an AERMOD model can be run to account for building downwash. The City's failure to include this emission factor in its health risk analysis represents a failure to accurately to analyze and disclose the ground level concentration of DPM emissions generated by the Project. The MND must be withdrawn and EIR circulated to adequately analyze and mitigate Project health risk impacts.

The City must circulate an EIR which adequately analyzes all of the Project's potentially significant impacts, and require all feasible mitigation to reduce the Project's significant environmental and public health impacts to less than significant levels. Feasible mitigation includes, but is not limited to, the following:

1. Until construction of the Project is completed, Applicant shall require that all diesel off-road construction equipment must meet USEPA Tier 4 Final off-road emissions standards for equipment rated at 50 horsepower or greater wherever and whenever reasonably available. In the event that Tier 4 construction equipment is not available, the Applicant may utilize Tier 3 construction equipment outfitted with Best Available Control Technology ("BACT") devices, including but not limited to a CARB certified Level 3 Diesel Particulate Filters ("DPF").
2. All heavy-duty trucks entering the Project site shall be model year 2017 or later to the extent feasible, and in any event all heavy duty trucks entering the Project site shall be no earlier than model year 2014.
3. Provide EV capable infrastructure for a minimum of five medium-duty and/or heavy-duty trucks to accommodate future installation of medium-duty and/or heavy-duty EV charging stations.
4. Require that all outdoor cargo handling equipment (including yard trucks, yard goats, pallet jacks, and forklifts) shall be zero emission. The Project site shall include the necessary charging stations for electric cargo handling equipment.
5. Require 10-foot-high concrete screen wall encompassing the western parking lot and docking area.

These measures should be included a Mitigation Monitoring and Reporting Program in a legally adequate EIR circulated for public review and scrutiny before the Project can be approved.

printed on recycled paper

D. The MND Fails to Analyze Impacts Associated with the Kaiser Expansion

The MND makes no reference to impacts associated with the Project's proximity to the future expansion of the Kaiser Permanente Redlands Medical Offices. Kaiser Permanente Medical Offices is located approximately 358 feet north of the Project site.[133] Kaiser Permanente seeks to expand their Medical Offices facility at 1301 California Street into a full-service hospital through the Kaiser Permanente Medical Center Project ("Medical Center Project").[134] Phase I of the Medical Center Project will construct a 4-story 165,000 square foot Medical Office Building/Ambulatory Services Center and parking lots.[135] In Phase II, a 7-story 400,000 square foot hospital and a 2-story 35,000 square foot Central Utility Plant building would be constructed with accompanying parking structure and parking lots.[136]

City law requires that warehouse projects that abut neighborhoods, childcare centers, and hospitals require a ten-foot-high screen wall and extra landscaping.[137] Additionally, truck docks and entries must be oriented away from abutting sensitive receptor properties and parking lots must provide at least 35% shade cover.[138] Specifically, the Municipal Code provides that "Warehouse developments shall provide a solid decorative wall(s) of at least ten feet (10') in height when abutting any sensitive receptors. Sensitive receptors for purposes of this section shall be defined as any residence including private homes, condominiums, apartments, and living quarters, schools, preschools, daycare centers, in-home daycares, ***hospitals***, ***long-term care facilities***, retirement and nursing homes, community centers, places of worship, parks (excluding trails), and dormitories."[139]

The Project does not comply with these requirements. The Project requires an 8-foot-high concrete screen wall encompassing the western parking lot and docking area, 8-foot-high security and maintenance fencing along the western boundary.[140] This may not be sufficient to reduce Project impacts to sensitive receptors at Kaiser when it is fully constructed. The City should require the Project to include a 10-foot-high screen wall to protect sensitive receptors at the future

printed on recycled paper

Kaiser Permanente Medical Center from potentially significant noise and air pollution associated with operation of the trucks and equipment on the Project site.

VI. THE CITY MUST PREPARE AN EIR BECAUSE THERE IS SUBSTANTIAL EVIDENCE SUPPORTING A FAIR ARGUMENT THAT THE PROJECT MAY RESULT IN SIGNIFICANT NOISE IMPACTS

As detailed above, the MND fails to include an accurate baseline against which to analyze the Project's noise impacts. Noise and vibration impacts may therefore be underestimated. Further, substantial evidence supports a fair argument that noise and vibration impacts may be significant and require mitigation in an EIR circulated for public review before the Project can lawfully be approved.

A. The MND Fails to Adequately Analyze Operational Noise Impacts

Mr. Meighan determined that the MND fails to adequately analyze the Project's operational noise emissions. Mr. Meighan concludes that "Day-to-day operational noise levels are not discussed in the MND at all. Typical sources from a warehouse project can include loading dock noise, rooftop mechanical noise, and parking lot noise, among other sources. These can combine to increase ambient noise levels and can be more sensitive than construction noise due to the more permanent nature of the duration."[141]

Section 8.06.080 of the Redlands Municipal Code provides that no entity can "operate or cause to be operated any source of sound, or allow the creation of any noise, which causes the noise level when measured inside a neighboring receiving occupied building to exceed" the standard of 60 dBA for industrial buildings.[142] For example, rooftop commercial HVAC units may reach as high as 88 dBA at a 3 feet reference level, in which case three of these units could exceed the industrial interior noise limit of 60 dBA set in section 8.06.080 at 140 feet away (the distance between the project and the nearest façade to the west).[143] Operation of the Project's HVAC system may result in potentially significant noise impacts, and must be analyzed and mitigated in an EIR.

[141] Meighan Comments, p. 3.
[142] *Id.*
[143] *Id.*

printed on recycled paper

B. Project Construction May Result in Potentially Significant Vibration Impacts

Mr. Meighan calculates that the use of a vibratory roller, operated at the western property line, would create a vibration level of 0.016 in/sec.[144] This would result in an exceedance of Municipal Code thresholds.[145] Construction may therefore result in a significant vibration impact which must be analyzed and mitigated in an EIR circulated for public review and scrutiny before the Project can be approved.

VII. THE CITY MUST PREPARE AN EIR BECAUSE THERE IS SUBSTANTIAL EVIDENCE SUPPORTING A FAIR ARGUMENT THAT THE PROJECT MAY RESULT IN SIGNIFICANT CUMULATIVE IMPACTS

The MND's conclusion that the Project would have a less than significant impact related to cumulatively considerable impacts, is not supported by substantial evidence.[146] "Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects."[147] The MND asserts without substantial evidence that the Project would not result in a cumulatively considerable environmental impact.[148] But, the MND fails to analyze any "past projects…current projects, and the effects of probable future projects" in determining the cumulative significance of the Project.[149]

CEQA requires lead agencies to conduct an analysis of "past projects, the effects of other current projects, and the effects of probable future projects."[150] The MND fails to include any list of past, present, or future projects which may result in cumulatively considerable air quality, public health, and greenhouse gas emissions.

The Project site is surrounded by heavy industrial uses on all sides. Dr. Clark concludes that the MND fails to adequately analyze the cumulative impacts of the Project because the MND fails to identify all nearby projects, fails to compile

[144] Meighan Comments, pp. 3-4
[145] Redlands Municipal Code § 8.06.090(G).

[150] CEQA Guidelines Appendix G.

printed on recycled paper

cumulative emissions, and fails to estimate cumulative health impacts to on-site and off-site workers.[151]

Dr. Clark calculated that the Project Site is located in the vicinity (3 kilometers of the Project Site) of 81 existing warehouse projects with another 3 projects approved.[152] The 81 existing projects represent 27,000,0000 square feet of floor space and account for 18,000 daily truck trips.[153] Collectively, these projects release 24.9 pounds of diesel particulate matter and 2,804 pounds of oxides of nitrogen (NOx – a precursor to smog formation) daily.[154] The three additional projects will add another 600,000 square feet of warehouse space to the area.

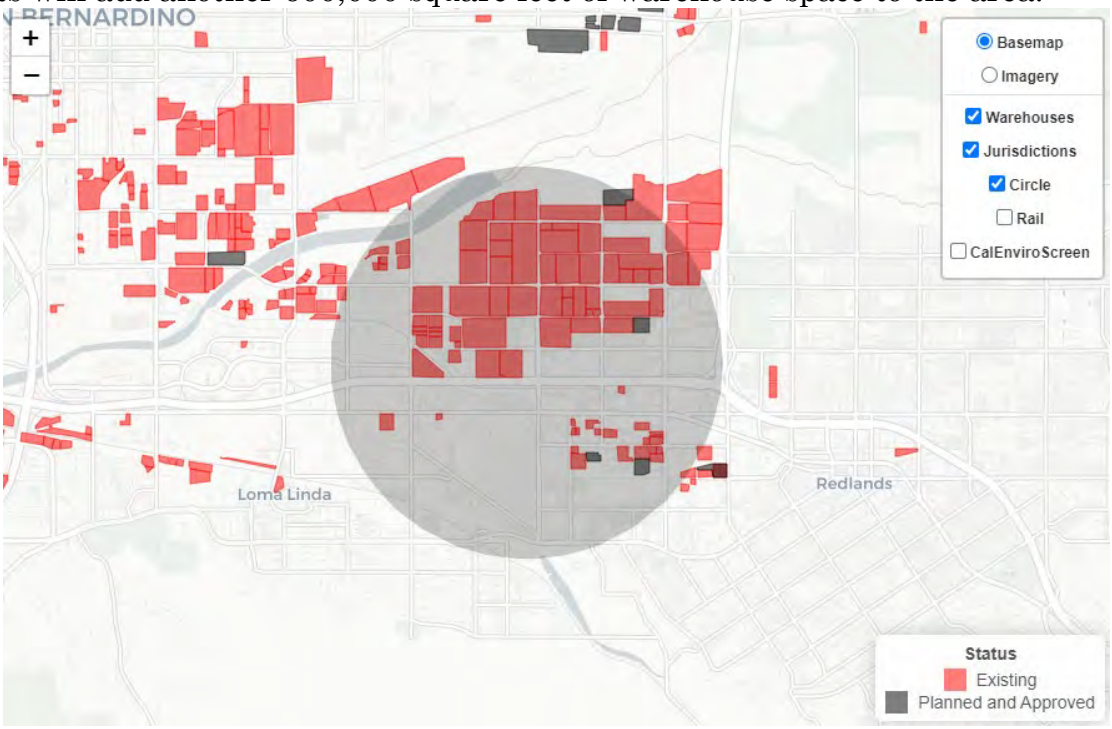

Figure 1: Existing And Planned Warehouse Projects Within 3 km Of Project Site

Dr. Clark cites to SCAQMD's MATES V study which found that the risk from air contaminants in the area surround the Project site is approximately 401 in 1,000,000 (well above the U.S. EPA's risk management range of 1 to 100 in 1,000,000).[155] The Project will contribute additional emissions, exacerbating this

[155] Clark Comments, p. 4.

7177-004acp

printed on recycled paper

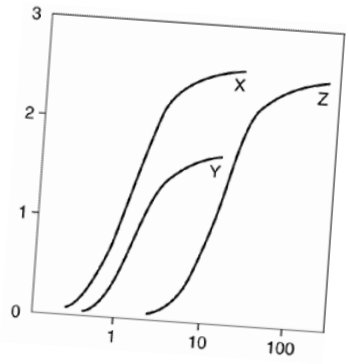
risk and resulting in a potentially significant cumulative air quality and public health impact that the MND fails to disclose.

Substantial evidence therefore supports a fair argument that the Project may result in potentially significant cumulative impacts. The City must prepare an EIR which adequately analyzes and mitigates the Project's potentially significant cumulative impacts before the Project can lawfully be approved.

VIII. CONCLUSION

The City should withdraw the MND and direct staff to prepare an EIR. As described in detail above and in attached expert reports, substantial evidence supports of a fair argument that the Project poses a significant and unmitigated risk to the public due to unmitigated construction and operational air quality, health risk, greenhouse gas emissions, noise, land use and cumulative impacts.

Sincerely,



Kelilah D. Federman

Adams Broadwell Joseph & Cardozo
601 Gateway Boulevard, Suite 1000
South San Francisco, CA 94080

Attn: Ms. Kelilah D. Federman

Subject: Comment Letter on Initial Study For 1101 California Street Warehouse, City of Redlands, California

Dear Ms. Federman:

At the request of Adams Broadwell Joseph & Cardozo (ABJC), Clark and Associates (Clark) has reviewed materials related to the above referenced project.

Clark's review of the materials in no way constitutes a validation of the conclusions or materials contained within the IS/MND. If we do not comment on a specific item, this does not constitute acceptance of the item.

Project Description:

The Proposed Project consists of a new 357,610 square-foot warehouse development located directly north of Interstate 10 (I-10) and the California Street westbound on-ramp. Access to the Project Site would be available via two proposed driveways to the north on Lugonia Avenue and two driveways to the east on California Street. The Proposed Project would include 47 dock doors, 396 parking spaces, driveway improvements, updated security fencing, and improved landscaped areas. Demolition activities would include removal of remaining concrete paving and k-rails, the remains of former

amusement park attractions, and landscaping left from prior development.

According to the IS/MND, the building would be a concrete tilt-up building, consisting of a concrete slab-on grade floor and a shallow foundation system. The maximum building height would be 49 feet from grade. The MND states that it is anticipated that future items to be stored for distribution would include non-hazardous, non-flammable products on high-pile storage pallet racking and shelving, but does not include binding conditions to this effect.

The Project Site includes two parcels, APNs 0292-033-11 and -13, encompassing approximately 16 acres. The site was formerly developed as the Splash Kingdom amusement park,

Figure 1: Proposed Site Location

which was demolished in 2021, and currently features the remains of the former water park's abandoned attractions and structures.

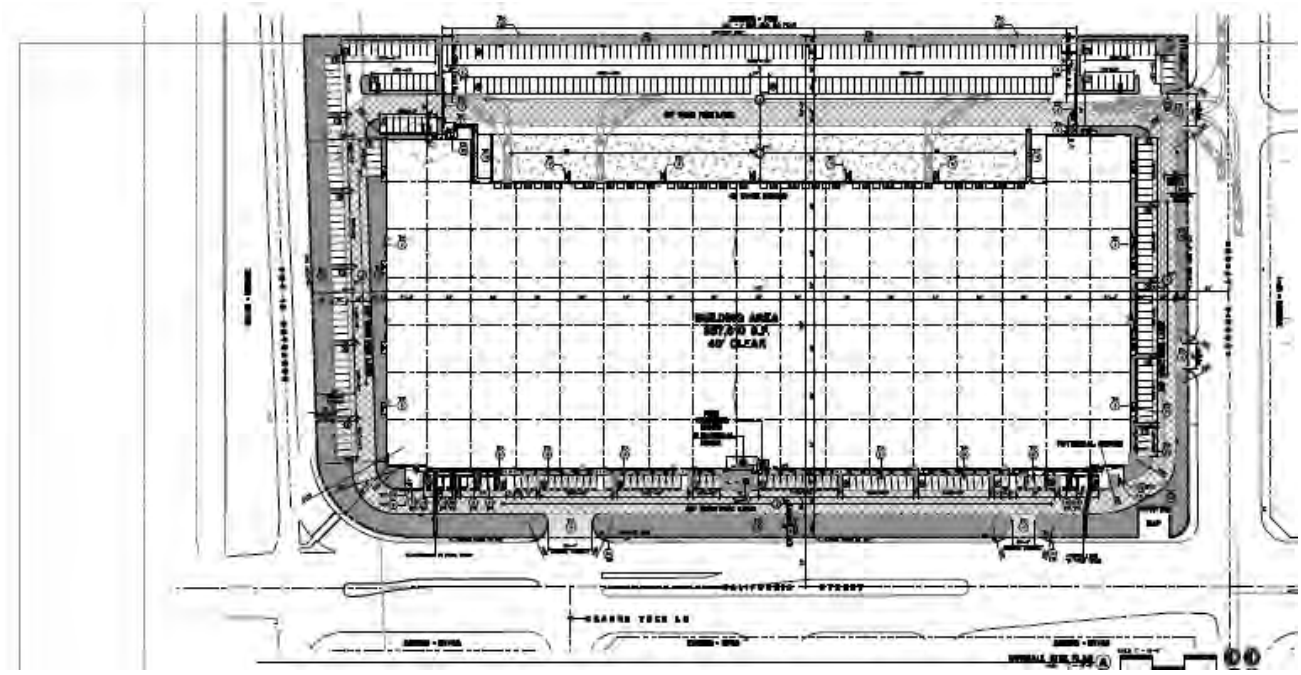

Figure 2: Project Site Plan

The IS/MND concludes that no mitigation is required to prevent impacts from the project on air quality in the area. This conclusion is in conflict with the facts provided within the IS/MND.

Specific Comments:

1. The Air Quality Study and the Greenhouse Gas Analysis Incorrectly Assume An Existing Source Of Emissions From The Project Site. The Amusement Park Onsite Was Abandoned In 2021.

Both the Air Quality and Greenhouse Gases Analyses of the Project assume that an existing source of emissions is currently onsite. According to the IS/MND, the site was formerly developed as the Splash Kingdom amusement park, which was closed in 2018, and partially demolished in 2021, and currently features the remains of the former water park's abandoned attractions and structures.

No sources of emissions are currently operational at the Project Site.

Figure 3: AQ Analysis Of Project Emissions

Table 6
Project GHG Emissions

Emission Source	Emissions (MT/yr)				
	CO_2	CH_4	N_2O	Refrigerants	Total CO_2e
Annual construction-related emissions amortized over 30 years	27.47	0.0	0.0	0.02	28.10
Mobile Source	3,072.72	0.20	0.34	4.31	3,183.19
Area Source	7.25	0.00	0.00	0.00	7.28
Water Usage	116.44	2.70	0.06	0.00	203.26
Waste	31.91	3.19	0.00	0.00	111.64
Refrigerants	0.00	0.00	0.00	1.11	1.11
Total CO2e (All Sources)	**3,534.58**				
Existing Emissions	2,228.88				
Net Emissions (Proposed – Existing)	**1,305.70**				

Figure 4: GHG Analysis of Project Emissions

The MND's omission of the "existing" emissions from the shuttered water park in the AQ and GHG analyses presents a skewed view of the Project emissions which underestimates actual emissions. The City's analysis is therefore incomplete, and the MND's conclusion that the Project's air quality impacts would be less than significant is unsupported. These errors must be corrected in an environmental impact report for the Project.

2. The Cumulative Analysis Presented In The IS/MND Fails To Account For A Large Number Of Existing Warehouses Within The Immediate Vicinity Of The Project And The Cumulative Degradation of Regional And Local Air Quality.

The Project Site is located in the vicinity (3 kilometers of the Project Site) of 81 existing warehouse projects with another 3 projects approved. The 81 existing projects represent 27,000,0000 square feet of floor space and account for 18,000 daily truck trips. They release 24.9 pounds of diesel particulate matter[1] and 2,804 pounds of oxides of nitrogen (NOx – a precursor to smog formation) daily. The three additional projects will add another 600,000 square feet of warehouse space to the area. The proposed Project will contribute additional air pollutants during construction and operation.

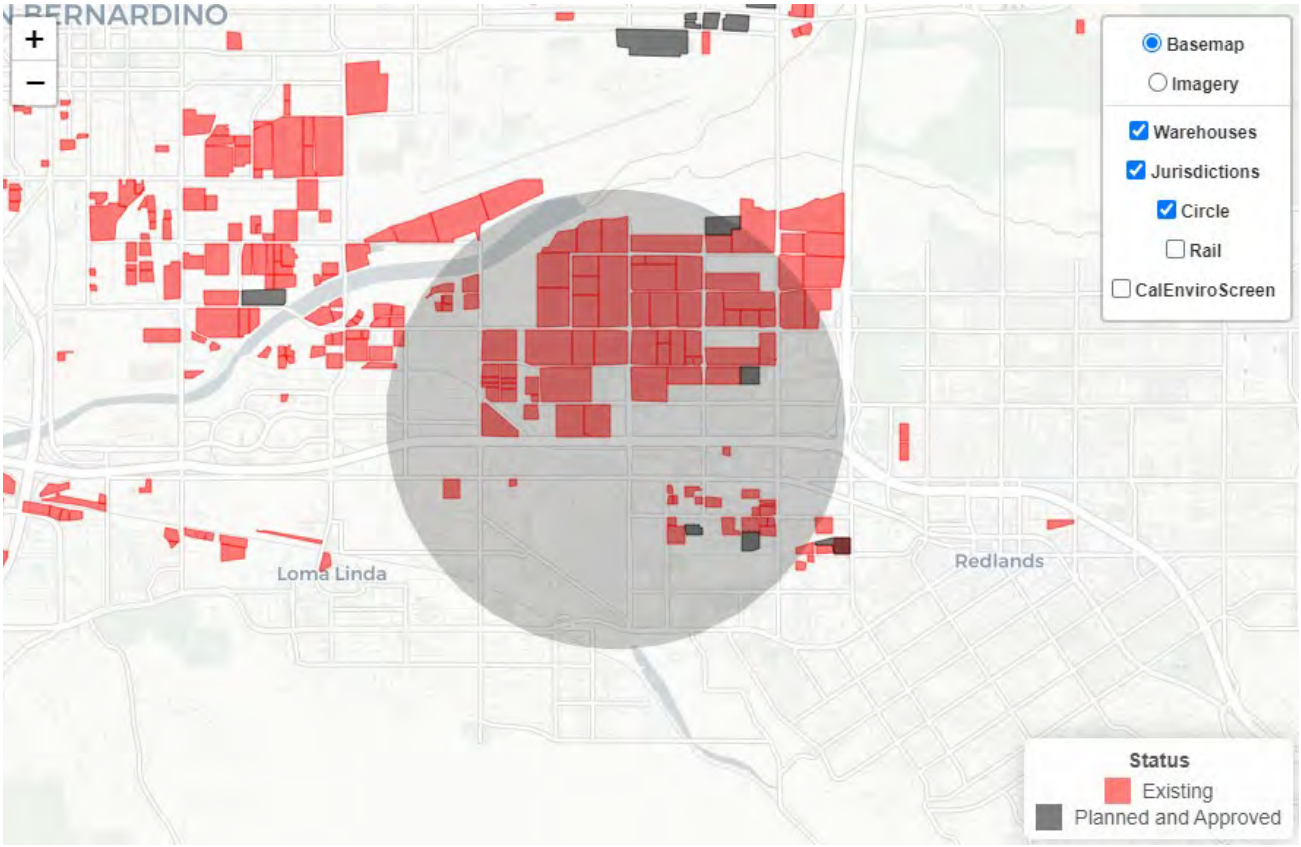

Figure 5: Existing And Planned Warehouse Projects Within 3 km Of Project Site

According the SCAQMD's MATES V study, the existing health risk from air contaminants in the area surrounding the Project site is approximately 401 in 1,000,000 (well above the U.S. EPA's risk management range of 1 to 100 in 1,000,000). The largest fraction of that risk is from exposure to diesel particulate matter (DPM). DPM emitted during Project construction and operation will exacerbate this risk.

[1] Warehouse Cumulative Impact Tool for Community (CITY). 2024. https://radicalresearch.shinyapps.io/WarehouseCITY/ accessed 4/25/2024.

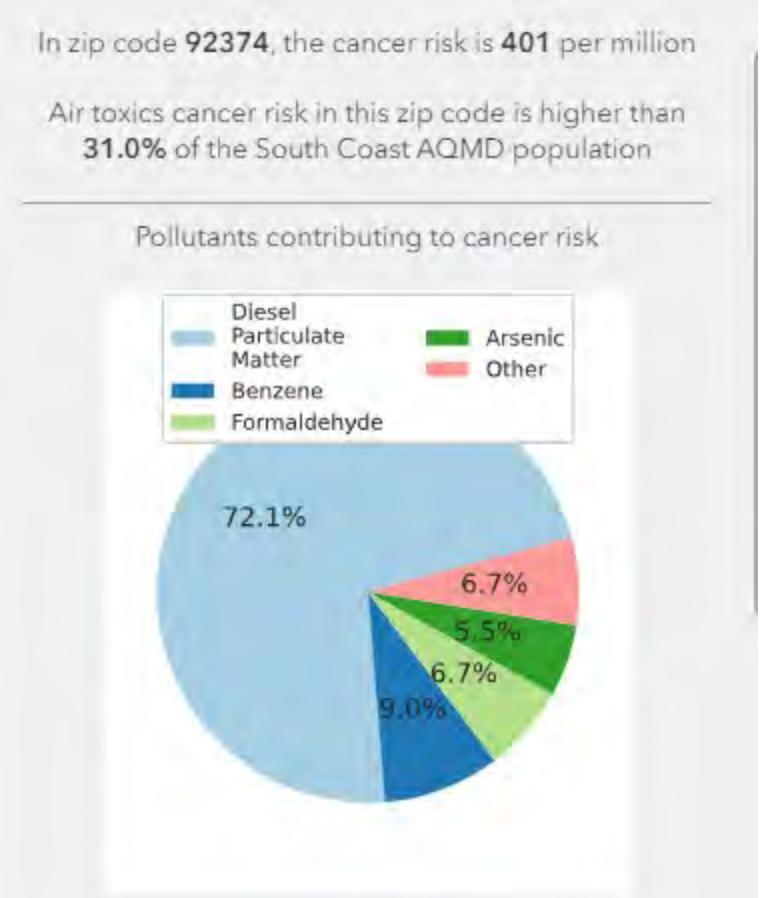

Figure 6: Risk From Air Toxins In Redlands (MATES V Study)

The Cumulative Analysis of GHG and AQ emissions for the Project states, without support, that the Proposed Project would not cause adverse impacts on humans, either directly or indirectly. It is clear from the analysis above that the Project will add to the already heavily impacted regional problem of NOx and toxic air contaminants (TACs). The Project should be evaluated in an EIR to assure the public that the cumulative air quality and health impacts from the Project have been fully evaluated and mitigated.

3. The Air Quality Analysis And Greenhouse Gas Analysis Of Operational Emissions Is Incomplete And Fails To Include Emissions From The Fire Pump System and Generators That Will Be Installed Onsite.

According to the Air Quality Analysis prepared for the Project, operational emissions were calculated using the CalEEMOD (Version 2022.1) software. Included in the analysis are area source

emissions and mobile source emissions. Not included in the analysis are emissions from the fire flow pump system or the back-up generator that will need to be installed. Under the City of Redlands Building and Construction Code (15.20.540) Section 914.12.5, distribution warehouses greater than 50,000 square feet, are required to have a standby power generator and fire pump system. In addition, a fuel supply sufficient for not less than two hours of operation shall be required on the premises. All electrically connected systems shall be transferred within 60 seconds after losing primary power. Both sources would add to the total amount of TACs, specifically DPM, that will be released from the site.

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

Equipment Type	Fuel Type	Number per Day	Hours per Day	Hours per Year	Horsepower	Load

5.16.2. Process Boilers

Equipment Type	Fuel Type	Number	Boiler Rating (MMBtu/hr)	Daily Heat Input (MMBtu/day)	Annual He

Figure 7: CalEEMod Assumptions

The analyses are therefore incomplete and must be corrected in an environmental impact (EIR) report for the Project.

4. The AQ Study States That The Project Will Operate 24 Hours Per Day, 7 Days A Week And That 90% Of The Cargo Handling Equipment Operating Onsite Will Be Zero Emission. No Analysis or Restrictive Conditions Are Included in the MND to Support this Assumption and There is No Analysis of Emissions from the 10% Of Cargo Handling Equipment That Are Assumed Not to Be Zero-Emission.

The Air Quality Study assumes the Project will be able to operate continuously and that the greatest percentage of cargo handling equipment (e.g., forklifts, pallet jacks, yard goats) will be zero emission.[2]

The CalEEMOD analysis supplied in the AQ Study portion of the IS/MND does not include emissions from the remaining non-zero emission yard equipment. The AQ study therefore assumes, without support, that the Project would utilize exclusively zero emission equipment and is missing a

[2] See Air Quality Study, Appendix A, p. 43.

potentially significant source of criteria and toxic pollutants. This oversite must be addressed in a revised air quality study in an EIR for the Project.

5. The Health Risk Analysis Incorporates Non-Standard Daily Breathing Rates For Sensitive Receptors Analyzed In The HRA.

According to the IS/MND, a health risk assessment was prepared in accordance with SCAQMD's guidance. For purposes of this Health Risk Assessment[3], receptors include both residential and non-residential (worker, school children) land uses in the vicinity of the Project. The methodology used in the HRA is inconsistent with regulatory agency guidance, including South Coast AQMD and the Office of Environmental Health Hazard Assessment recommended guidance,[4] and is not supported by any substantial evidence in the record.

While reviewing the input values utilized in the HRA, it is clear that the analysis utilized a variety of daily breathing rates that are favorable to reducing the potential health impacts. The HRA states that "Discrete variants for daily breathing rates, exposure frequency, and exposure duration were obtained from relevant distribution profiles presented in the 2015 OEHHA Guidelines."[5] The values listed in Table 2-7 include both the 95 percent upper confidence limit (95% UCL) values (for age in eutero exposure and age 0 to 2) and the 80th percentile values for the remaining age groups (age 2 to 16 and age 16 to 30). The risk estimate for ages 2 to 30 is off by a factor of 1.3. Utilizing the correct breathing rate, the health risk impacts are significant and require mitigation.

[4] Urban Crossroads. 2023. 1101 California Warehouse Mobile Source Health Risk Assessment, City of Redlands. Dated October 12, 2023. Pg 19

[5] Urban Crossroads. 2023. 1101 California Warehouse Mobile Source Health Risk Assessment, City of Redlands. Dated October 12, 2023. Pg 20

TABLE 2-7: EXPOSURE ASSUMPTIONS FOR INDIVIDUAL CANCER RISK (30 YEAR RESIDENTIAL)

Age	Daily Breathing Rate (L/kg-day)	Age Specific Factor	Exposure Duration (years)	Fraction of Time at Home	Exposure Frequency (days/year)	Exposure Time (hours/day)
-0.25 to 0	361	10	0.25	0.85	350	24
0 to 2	1,090	10	2	0.85	350	24
2 to 16	572	3	14	0.72	350	24
16 to 30	261	1	14	0.73	350	24

Figure 8: Daily Breathing Rates Utilized In HRA

The 2015 Air Toxic Hot Spots Program Guidance Manual [6], notes that residential estimates, use 95th percentile breathing rates in Table 5.6. Table 5.6 shows values of 745 L/kg BW-day for children age 2 to 16 and 335 L/kg BW-day for adults age 16 to 30.

Table 5.6 Point Estimates of Residential Daily Breathing Rates for 3rd trimester, 0<2, 2<9, 2<16, 16<30 and 16-70 years (L/kg BW-day)

	3rd Trimester[a]	0<2 years	2<9 years	2<16 years	16<30 years	16<70 years
	L/kg-day					
Mean	225	658	535	452	210	185
95th Percentile	361	1090	861	745	335	290

[a] 3rd trimester **breathing rates** based on breathing rates of pregnant women using the assumption that the dose to the fetus during the 3rd trimester is the same as that to the mother.

The City's analysis is therefore incomplete and must be corrected in an environmental impact report for the Project.

6. The Air Quality Analysis Did Not Incorporate Building Downwash In The AERMOD Analysis.

A review of the Mobile Source Health Risk Assessment show that building downwash was not incorporated into the AERMOD analysis of the Project. According to the Project description, the maximum building height would be 49 feet from grade. Building downwash occurs as the wind flows over and around buildings and impacts the dispersion of pollution from nearby stacks. A plume caught in the path of this flow is drawn into the wake, temporarily trapping it in a recirculating cavity. This

[6] Office of Environmental Health Hazard Assessment, Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments, February 2015, http://oehha.ca.gov/air/hot_spots/hotspots2015.html

downwash effect leads to higher ground-level concentration of chemicals emitted from sources. The downwash effect increases as the relative difference between the release height and top of the building increases.[7] Using a lower height for the building will underestimate the potential ground level concentrations of pollutants associated with the Project operation.

For the closest receptors to the site, this difference will create an additional air quality impact that is not accounted for in the HRA. In addition to incorporating the building downwash impacts of the Project buildings, the AERMOD model should also incorporate the building downwash for receptors near the Project site. Receptors farther away will still be subject to the downwash effect given the assumed emission height release incorporated into the model. Guidance from authoritative bodies in California regarding the preparation of health risk assessments of mobile sources of diesel emissions[8] requires the inclusion of building heights and dimensions for building downwash calculations. Omission of the building downwash effect underestimates the exposure point concentrations for receptors near the building(s). This error should be addressed in an EIR for the Project.

7. The IS/MND Underestimates Average Truck Trip Lengths; the 40 Miles Used In The Air Quality Analysis Does Not Match The Actual Length(s) To The Ports of Los Angeles and Long Beach.

According to the Air Quality Analysis[9] for the IS/MND, the SCAQMD recommended truck trip length of 40 (39.9) miles was incorporated in the CalEEMod analysis. Guidance from SCAQMD does not require a 40-mile truck trip, rather as stated in the SCAQMD's Final Environmental Assessment and Adoption of Proposed Rule 2305 – Warehouse Indirect Source Rule (WAIRE), the trip length for Class 8 trucks (heavy duty multi-axle trucks) are assumed to travel 39.9 miles per trip

[7] The so-called good engineering practice height (GEP) of the source. The GEP is defined in Section 123 of the Clean Air Act as "the height necessary to ensure that emissions from a stack do not result in excessive concentrations of any air pollutant in the immediate vicinity of the source as a result of atmospheric downwash, eddies or wakes which may be created by the source itself, nearby structures or nearby terrain obstacles."

[8] SCAQMD. 2003. Health Risk Assessment Guidance For Analyzing Cancer Risks From Mobile Source Diesel Emissions. August, 2003. Page 2.

[9] Urban Crossroads. 2023. 1101 California Warehouse Air Quality Impact Analysis, City of Redlands. Dated October 12, 2023. Pg. 42

based on modeling conducted for the 2016 Regional Transportation Plan (RTP) from SCAG and the 2016 Air Quality Management Plan (AQMP).[10] SCAQMD has explained that this guidance is not intended to replace an analysis of actual truck trip distances to and from the ports.[11] The Air Quality Analysis also states that the trip length function for the warehouse and the general light industrial uses has been conservatively calculated to 30.34 miles and 29.84 miles, respectively, with an assumption of 100% primary trips for the proposed industrial land uses. [12]

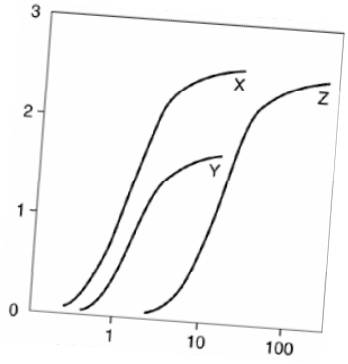
The IS/MND's misinterpretation of the averaged value from SCAG's model is another example of how the City's assumption are unsupported. The IS/MND's reliance on the 40-mile trip length does not comport with the reality of where warehoused materials will ship from in the region. The 40-mile distance is insufficient to allow vehicles to travel to the major ports in the Southern California region – Los Angeles and Long Beach. It is also inconsistent with average truck trip lengths assumed in other County CEQA documents for similar warehouse projects. A review of the path length from the Project Site to the Port of Long Beach (closest port to Project Site) shows that the true trip length is approximately 80 miles (approximately 200% longer than the assumed 40-mile trip length).

This error must be corrected in an EIR that accurately calculates emissions using fact-based, reasonably foreseeable truck trip lengths which include actual distances to and from the ports. As SCAQMD has explained, "Tailoring these parameters and assumptions to be based on project-specific data will ensure a more accurate assessment of emissions, accounting for the unique circumstances and logistical realities of the Proposed Project."[13]

Conclusion

[10] SCAQMD. 2021. BOARD MEETING DATE: MAY 7, 2021 AGENDA NO. 27 pg 815. http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2021/2021-May7-027.pdf

[11] See 11/22/2023 SCAQMD letter to City of Fontana re: Draft Subsequent Environmental Impact Report for the Hemlock Warehouse Development Project (Proposed Project) (SCH No.: 2009091089), Hemlock FSEIR pp. 2-6 to 2-10, available at https://www.fontanaca.gov/DocumentCenter/View/43908/Hemlock-Final-SEIR-Feb-2024.



[12] ibid

[13] *Id.*

The facts identified and referenced in this comment letter lead me to reasonably conclude that the Project could result in significant impacts if allowed to proceed. An EIR should be prepared to address these substantial concerns.

Sincerely,

Clark & Associates

James J. J. Clark, Ph.D.

Principal Toxicologist

Toxicology/Exposure Assessment Modeling

Risk Assessment/Analysis/Dispersion Modeling

Education:

Ph.D., Environmental Health Science, University of California, 1995

M.S., Environmental Health Science, University of California, 1993

B.S., Biophysical and Biochemical Sciences, University of Houston, 1987

Professional Experience:

Dr. Clark is a well recognized toxicologist, air modeler, and health scientist. He has 20 years of experience in researching the effects of environmental contaminants on human health including environmental fate and transport modeling (SCREEN3, AEROMOD, ISCST3, Johnson-Ettinger Vapor Intrusion Modeling); exposure assessment modeling (partitioning of contaminants in the environment as well as PBPK modeling); conducting and managing human health risk assessments for regulatory compliance and risk-based clean-up levels; and toxicological and medical literature research.

Significant projects performed by Dr. Clark include the following:

LITIGATION SUPPORT

Case: James Harold Caygle, et al, v. Drummond Company, Inc. Circuit Court for the Tenth Judicial Circuit, Jefferson County, Alabama. Civil Action. CV-2009

Client: Environmental Litgation Group, Birmingham, Alabama

Dr. Clark performed an air quality assessment of emissions from a coke factory located in Tarrant, Alabama. The assessment reviewed include a comprehensive review of air quality standards, measured concentrations of pollutants from factory, an inspection of the facility and detailed assessment of the impacts on the community. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Rose Roper V. Nissan North America, et al. Superior Court of the State Of California for the County Of Los Angeles – Central Civil West. Civil Action. NC041739

Client: Rose, Klein, Marias, LLP, Long Beach, California

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to multiple chemicals, including benzene, who later developed a respiratory distress. A review of the individual's medical and occupational history was performed to prepare an exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to respiratory irritants. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: O'Neil V. Sherwin Williams, et al. United States District Court Central District of California

Client: Rose, Klein, Marias, LLP, Long Beach, California

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to petroleum distillates who later developed a bladder cancer. A review of the individual's medical and occupational history was performed to prepare a quantitative exposure assessment. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Summary judgment for defendants.

Case: Moore V., Shell Oil Company, et al. Superior Court of the State Of California for the County Of Los Angeles

Client: Rose, Klein, Marias, LLP, Long Beach, California

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to chemicals while benzene who later developed a leukogenic disease. A review of the individual's medical and occupational history was performed to prepare a quantitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to refined petroleum hydrocarbons. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Raymond Saltonstall V. Fuller O'Brien, KILZ, and Zinsser, et al. United States District Court Central District of California

Client: Rose, Klein, Marias, LLP, Long Beach, California

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to benzene who later developed a leukogenic disease. A review of the individual's medical and occupational history was performed to prepare a quantitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to refined petroleum hydrocarbons. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Richard Boyer and Elizabeth Boyer, husband and wife, V. DESCO Corporation, et al. Circuit Court of Brooke County, West Virginia. Civil Action Number 04-C-7G.

Client: Frankovitch, Anetakis, Colantonio & Simon, Morgantown, West Virginia.

Dr. Clark performed a toxicological assessment of a family exposed to chlorinated solvents released from the defendant's facility into local drinking water supplies. A review of the individual's medical and occupational history was performed to prepare a qualitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to chlorinated solvents. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: JoAnne R. Cook, V. DESCO Corporation, et al. Circuit Court of Brooke County, West Virginia. Civil Action Number 04-C-9R

Client: Frankovitch, Anetakis, Colantonio & Simon, Morgantown, West Virginia.

Dr. Clark performed a toxicological assessment of an individual exposed to chlorinated solvents released from the defendant's facility into local drinking water supplies. A review of the individual's medical and occupational history was performed to prepare a qualitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to chlorinated solvents. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Patrick Allen And Susan Allen, husband and wife, and Andrew Allen, a minor, V. DESCO Corporation, et al. Circuit Court of Brooke County, West Virginia. Civil Action Number 04-C-W

Client: Frankovitch, Anetakis, Colantonio & Simon, Morgantown, West Virginia.

Dr. Clark performed a toxicological assessment of a family exposed to chlorinated solvents released from the defendant's facility into local drinking water supplies. A review of the individual's medical and occupational history was performed to prepare a qualitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to chlorinated solvents. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Michael Fahey, Susan Fahey V. Atlantic Richfield Company, et al. United States District Court Central District of California Civil Action Number CV-06 7109 JCL.

Client: Rose, Klein, Marias, LLP, Long Beach, California

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to refined petroleum hydrocarbons who later developed a leukogenic disease. A review of the individual's medical and occupational history was performed to prepare a qualitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to refined petroleum hydrocarbons. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Constance Acevedo, et al., V. California Spray-Chemical Company, et al., Superior Court of the State Of California, County Of Santa Cruz. Case No. CV 146344

Dr. Clark performed a comprehensive exposure assessment of community members exposed to toxic metals from a former lead arsenate manufacturing facility. The former manufacturing site had undergone a DTSC mandated removal action/remediation for the presence of the toxic metals at the site. Opinions were presented regarding the elevated levels of arsenic and lead (in attic dust and soils) found throughout the community and the potential for harm to the plaintiffs in question.

Case Result: Settlement in favor of defendant.

Case: Michael Nawrocki V. The Coastal Corporation, Kurk Fuel Company, Pautler Oil Service, State of New York Supreme Court, County of Erie, Index Number I2001-11247

Client: Richard G. Berger Attorney At Law, Buffalo, New York

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to refined petroleum hydrocarbons who later developed a leukogenic disease. A review of the individual's medical and occupational history was performed to prepare a qualitative exposure assessment. The exposure assessment was evaluated against the

known outcomes in published literature to exposure to refined petroleum hydrocarbons. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Judgement in favor of defendant.

SELECTED AIR MODELING RESEARCH/PROJECTS

Client – Confidential

Dr. Clark performed a comprehensive evaluation of criteria pollutants, air toxins, and particulate matter emissions from a carbon black production facility to determine the impacts on the surrounding communities. The results of the dispersion model will be used to estimate acute and chronic exposure concentrations to multiple contaminants and will be incorporated into a comprehensive risk evaluation.

Client – Confidential

Dr. Clark performed a comprehensive evaluation of air toxins and particulate matter emissions from a railroad tie manufacturing facility to determine the impacts on the surrounding communities. The results of the dispersion model have been used to estimate acute and chronic exposure concentrations to multiple contaminants and have been incorporated into a comprehensive risk evaluation.

Client – Los Angeles Alliance for a New Economy (LAANE), Los Angeles, California

Dr. Clark is advising the LAANE on air quality issues related to current flight operations at the Los Angeles International Airport (LAX) operated by the Los Angeles World Airport (LAWA) Authority. He is working with the LAANE and LAX staff to develop a comprehensive strategy for meeting local community concerns over emissions from flight operations and to engage federal agencies on the issue of local impacts of community airports.

Client – City of Santa Monica, Santa Monica, California

Dr. Clark is advising the City of Santa Monica on air quality issues related to current flight operations at the facility. He is working with the City staff to develop a comprehensive strategy for meeting local community concerns over emissions from flight operations and to engage federal agencies on the issue of local impacts of community airports.

Client: Omnitrans, San Bernardino, California

Dr. Clark managed a public health survey of three communities near transit fueling facilities in San Bernardino and Montclair California in compliance with California Senate Bill 1927. The survey included an epidemiological survey of the effected communities, emission surveys of local businesses, dispersion modeling to determine potential emission concentrations within the communities, and a comprehensive risk assessment of each community. The results of the study were presented to the Governor as mandated by Senate Bill 1927.

Client: Confidential, San Francisco, California

Summarized cancer types associated with exposure to metals and smoking. Researched the specific types of cancers associated with exposure to metals and smoking. Provided causation analysis of the association between cancer types and exposure for use by non-public health professionals.

Client: Confidential, Minneapolis, Minnesota

Prepared human health risk assessment of workers exposed to VOCs from neighboring petroleum storage/transport facility. Reviewed the systems in place for distribution of petroleum hydrocarbons to identify chemicals of concern (COCs), prepared comprehensive toxicological summaries of COCs, and quantified potential risks from carcinogens and non-carcinogens to receptors at or adjacent to site. This evaluation was used in the support of litigation.

Client – United Kingdom Environmental Agency

Dr. Clark is part of team that performed comprehensive evaluation of soil vapor intrusion of VOCs from former landfill adjacent residences for the United Kingdom's Environment

Agency. The evaluation included collection of liquid and soil vapor samples at site, modeling of vapor migration using the Johnson Ettinger Vapor Intrusion model, and calculation of site-specific health based vapor thresholds for chlorinated solvents, aromatic hydrocarbons, and semi-volatile organic compounds. The evaluation also included a detailed evaluation of the use, chemical characteristics, fate and transport, and toxicology of chemicals of concern (COC). The results of the evaluation have been used as a briefing tool for public health professionals.

EMERGING/PERSISTENT CONTAMINANT RESEARCH/PROJECTS

Client: Ameren Services, St. Louis, Missouri

Managed the preparation of a comprehensive human health risk assessment of workers and residents at or near an NPL site in Missouri. The former operations at the Property included the servicing and repair of electrical transformers, which resulted in soils and groundwater beneath the Property and adjacent land becoming impacted with PCB and chlorinated solvent compounds. The results were submitted to U.S. EPA for evaluation and will be used in the final ROD.

Client: City of Santa Clarita, Santa Clarita, California

Dr. Clark is managing the oversight of the characterization, remediation and development activities of a former 1,000 acre munitions manufacturing facility for the City of Santa Clarita. The site is impacted with a number of contaminants including perchlorate, unexploded ordinance, and volatile organic compounds (VOCs). The site is currently under a number of regulatory consent orders, including an Immanent and Substantial Endangerment Order. Dr. Clark is assisting the impacted municipality with the development of remediation strategies, interaction with the responsible parties and stakeholders, as well as interfacing with the regulatory agency responsible for oversight of the site cleanup.

Client: Confidential, Los Angeles, California

Prepared comprehensive evaluation of perchlorate in environment. Dr. Clark evaluated the production, use, chemical characteristics, fate and transport, toxicology, and remediation of perchlorate. Perchlorates form the basis of solid rocket fuels and have recently been detected in water supplies in the United States. The results of this research

were presented to the USEPA, National GroundWater, and ultimately published in a recent book entitled *Perchlorate in the Environment.*

Client – Confidential, Los Angeles, California

Dr. Clark is performing a comprehensive review of the potential for pharmaceuticals and their by-products to impact groundwater and surface water supplies. This evaluation will include a review if available data on the history of pharmaceutical production in the United States; the chemical characteristics of various pharmaceuticals; environmental fate and transport; uptake by xenobiotics; the potential effects of pharmaceuticals on water treatment systems; and the potential threat to public health. The results of the evaluation may be used as a briefing tool for non-public health professionals.

PUBLIC HEALTH/TOXICOLOGY

Client: Brayton Purcell, Novato, California

Dr. Clark performed a toxicological assessment of residents exposed to methyl-tertiary butyl ether (MTBE) from leaking underground storage tanks (LUSTs) adjacent to the subject property. The symptomology of residents and guests of the subject property were evaluated against the known outcomes in published literature to exposure to MTBE. The study found that residents had been exposed to MTBE in their drinking water; that concentrations of MTBE detected at the site were above regulatory guidelines; and, that the symptoms and outcomes expressed by residents and guests were consistent with symptoms and outcomes documented in published literature.

Client: Confidential, San Francisco, California

Identified and analyzed fifty years of epidemiological literature on workplace exposures to heavy metals. This research resulted in a summary of the types of cancer and non-cancer diseases associated with occupational exposure to chromium as well as the mortality and morbidity rates.

Client: Confidential, San Francisco, California

Summarized major public health research in United States. Identified major public health research efforts within United States over last twenty years. Results were used as a briefing tool for non-public health professionals.

Client: Confidential, San Francisco, California

Quantified the potential multi-pathway dose received by humans from a pesticide applied indoors. Part of team that developed exposure model and evaluated exposure concentrations in a comprehensive report on the plausible range of doses received by a specific person. This evaluation was used in the support of litigation.

Client: Covanta Energy, Westwood, California

Evaluated health risk from metals in biosolids applied as soil amendment on agricultural lands. The biosolids were created at a forest waste cogeneration facility using 96% whole tree wood chips and 4 percent green waste. Mass loading calculations were used to estimate Cr(VI) concentrations in agricultural soils based on a maximum loading rate of 40 tons of biomass per acre of agricultural soil. The results of the study were used by the Regulatory agency to determine that the application of biosolids did not constitute a health risk to workers applying the biosolids or to residences near the agricultural lands.

Client – United Kingdom Environmental Agency

Oversaw a comprehensive toxicological evaluation of methyl-*tertiary* butyl ether (M*t*BE) for the United Kingdom's Environment Agency. The evaluation included available data on the production, use, chemical characteristics, fate and transport, toxicology, and remediation of M*t*BE. The results of the evaluation have been used as a briefing tool for public health professionals.

Client – Confidential, Los Angeles, California

Prepared comprehensive evaluation of *tertiary* butyl alcohol (TBA) in municipal drinking water system. TBA is the primary breakdown product of M*t*BE, and is suspected to be the primary cause of M*t*BE toxicity. This evaluation will include available information on the production, use, chemical characteristics, fate and transport in the environment, absorption, distribution, routes of detoxification, metabolites, carcinogenic potential, and remediation of TBA. The results of the evaluation were used as a briefing tool for non-public health professionals.

Client – Confidential, Los Angeles, California

Prepared comprehensive evaluation of methyl *tertiary* butyl ether (MTBE) in municipal drinking water system. MTBE is a chemical added to gasoline to increase the octane

rating and to meet Federally mandated emission criteria. The evaluation included available data on the production, use, chemical characteristics, fate and transport, toxicology, and remediation of MTBE. The results of the evaluation have been were used as a briefing tool for non-public health professionals.

Client – Ministry of Environment, Lands & Parks, British Columbia

Dr. Clark assisted in the development of water quality guidelines for methyl tertiary-butyl ether (MTBE) to protect water uses in British Columbia (BC). The water uses to be considered includes freshwater and marine life, wildlife, industrial, and agricultural (e.g., irrigation and livestock watering) water uses. Guidelines from other jurisdictions for the protection of drinking water, recreation and aesthetics were to be identified.

Client: Confidential, Los Angeles, California

Prepared physiologically based pharmacokinetic (PBPK) assessment of lead risk of receptors at middle school built over former industrial facility. This evaluation is being used to determine cleanup goals and will be basis for regulatory closure of site.

Client: Kaiser Venture Incorporated, Fontana, California

Prepared PBPK assessment of lead risk of receptors at a 1,100-acre former steel mill. This evaluation was used as the basis for granting closure of the site by lead regulatory agency.

RISK ASSESSMENTS/REMEDIAL INVESTIGATIONS

Client: Confidential, Atlanta, Georgia

Researched potential exposure and health risks to community members potentially exposed to creosote, polycyclic aromatic hydrocarbons, pentachlorophenol, and dioxin compounds used at a former wood treatment facility. Prepared a comprehensive toxicological summary of the chemicals of concern, including the chemical characteristics, absorption, distribution, and carcinogenic potential. Prepared risk characterization of the carcinogenic and non-carcinogenic chemicals based on the exposure assessment to quantify the potential risk to members of the surrounding community. This evaluation was used to help settle class-action tort.

Client: Confidential, Escondido, California

Prepared comprehensive Preliminary Endangerment Assessment (PEA) of dense non-aqueous liquid phase hydrocarbon (chlorinated solvents) contamination at a former printed circuit board manufacturing facility. This evaluation was used for litigation support and may be used as the basis for reaching closure of the site with the lead regulatory agency.

Client: Confidential, San Francisco, California

Summarized epidemiological evidence for connective tissue and autoimmune diseases for product liability litigation. Identified epidemiological research efforts on the health effects of medical prostheses. This research was used in a meta-analysis of the health effects and as a briefing tool for non-public health professionals.

Client: Confidential, Bogotá, Columbia

Prepared comprehensive evaluation of the potential health risks associated with the redevelopment of a 13.7 hectares plastic manufacturing facility in Bogotá, Colombia The risk assessment was used as the basis for the remedial goals and closure of the site.

Client: Confidential, Los Angeles, California

Prepared comprehensive human health risk assessment of students, staff, and residents potentially exposed to heavy metals (principally cadmium) and VOCs from soil and soil vapor at 12-acre former crude oilfield and municipal landfill. The site is currently used as a middle school housing approximately 3,000 children. The evaluation determined that the site was safe for the current and future uses and was used as the basis for regulatory closure of site.

Client: Confidential, Los Angeles, California

Managed remedial investigation (RI) of heavy metals and volatile organic chemicals (VOCs) for a 15-acre former manufacturing facility. The RI investigation of the site included over 800 different sampling locations and the collection of soil, soil gas, and groundwater samples. The site is currently used as a year round school housing approximately 3,000 children. The Remedial Investigation was performed in a manner

that did not interrupt school activities and met the time restrictions placed on the project by the overseeing regulatory agency. The RI Report identified the off-site source of metals that impacted groundwater beneath the site and the sources of VOCs in soil gas and groundwater. The RI included a numerical model of vapor intrusion into the buildings at the site from the vadose zone to determine exposure concentrations and an air dispersion model of VOCs from the proposed soil vapor treatment system. The Feasibility Study for the Site is currently being drafted and may be used as the basis for granting closure of the site by DTSC.

Client: Confidential, Los Angeles, California

Prepared comprehensive human health risk assessment of students, staff, and residents potentially exposed to heavy metals (principally lead), VOCs, SVOCs, and PCBs from soil, soil vapor, and groundwater at 15-acre former manufacturing facility. The site is currently used as a year round school housing approximately 3,000 children. The evaluation determined that the site was safe for the current and future uses and will be basis for regulatory closure of site.

Client: Confidential, Los Angeles, California

Prepared comprehensive evaluation of VOC vapor intrusion into classrooms of middle school that was former 15-acre industrial facility. Using the Johnson-Ettinger Vapor Intrusion model, the evaluation determined acceptable soil gas concentrations at the site that did not pose health threat to students, staff, and residents. This evaluation is being used to determine cleanup goals and will be basis for regulatory closure of site.

Client –Dominguez Energy, Carson, California

Prepared comprehensive evaluation of the potential health risks associated with the redevelopment of 6-acre portion of a 500-acre oil and natural gas production facility in Carson, California. The risk assessment was used as the basis for closure of the site.

Kaiser Ventures Incorporated, Fontana, California

Prepared health risk assessment of semi-volatile organic chemicals and metals for a fifty-year old wastewater treatment facility used at a 1,100-acre former steel mill. This evaluation was used as the basis for granting closure of the site by lead regulatory agency.

ANR Freight - Los Angeles, California

Prepared a comprehensive Preliminary Endangerment Assessment (PEA) of petroleum hydrocarbon and metal contamination of a former freight depot. This evaluation was as the basis for reaching closure of the site with lead regulatory agency.

Kaiser Ventures Incorporated, Fontana, California

Prepared comprehensive health risk assessment of semi-volatile organic chemicals and metals for 23-acre parcel of a 1,100-acre former steel mill. The health risk assessment was used to determine clean up goals and as the basis for granting closure of the site by lead regulatory agency. Air dispersion modeling using ISCST3 was performed to determine downwind exposure point concentrations at sensitive receptors within a 1 kilometer radius of the site. The results of the health risk assessment were presented at a public meeting sponsored by the Department of Toxic Substances Control (DTSC) in the community potentially affected by the site.

Unocal Corporation - Los Angeles, California

Prepared comprehensive assessment of petroleum hydrocarbons and metals for a former petroleum service station located next to sensitive population center (elementary school). The assessment used a probabilistic approach to estimate risks to the community and was used as the basis for granting closure of the site by lead regulatory agency.

Client: Confidential, Los Angeles, California

Managed oversight of remedial investigation most contaminated heavy metal site in California. Lead concentrations in soil excess of 68,000,000 parts per billion (ppb) have been measured at the site. This State Superfund Site was a former hard chrome plating operation that operated for approximately 40-years.

Client: Confidential, San Francisco, California

Coordinator of regional monitoring program to determine background concentrations of metals in air. Acted as liaison with SCAQMD and CARB to perform co-location sampling and comparison of accepted regulatory method with ASTM methodology.

Client: Confidential, San Francisco, California

Analyzed historical air monitoring data for South Coast Air Basin in Southern California and potential health risks related to ambient concentrations of carcinogenic metals and volatile organic compounds. Identified and reviewed the available literature and calculated risks from toxins in South Coast Air Basin.

IT Corporation, North Carolina

Prepared comprehensive evaluation of potential exposure of workers to air-borne VOCs at hazardous waste storage facility under SUPERFUND cleanup decree. Assessment used in developing health based clean-up levels.

April 24th, 2024

Ms. Kelilah D. Federman
Adams Broadwell Joseph & Cardozo
601 Gateway Boulevard, Suite 1000
South San Francisco, California 94080

SUBJECT: California & Lugonia
Redlands, California
DRAFT- Comments on Noise Analysis

Dear Ms. Federman,

As requested, we have reviewed the information and noise impact analysis for the Mitigated Negative Declaration (MND) for the California & Lugonia Project in Redlands, CA. This letter contains our comments on the noise analysis in the subject documents. The approximately 30-acre project site is located at the southwest corner of California Street and Lugonia Avenue in the City of Redlands in San Bernardino County, California. The proposed project would construct a 357,610 square-foot warehouse. Currently, the project site is vacant. Existing land uses in the vicinity of the site include a warehouse directly to the west of the project, single family residences 800 feet to the south, and a medical building 400 feet to the north.

Wilson Ihrig is an acoustical consulting firm that has practiced exclusively in the field of acoustics since 1966. During our almost 58 years of operation, we have prepared hundreds of noise studies for Environmental Impact Reports and Statements. We have one of the largest technical laboratories in the acoustical consulting industry. We also utilize industry-standard acoustical programs such as Roadway Construction Noise Model (RCNM), SoundPLAN, and CadnaA. In short, we are well qualified to prepare environmental noise studies and review studies prepared by others.

Adverse Effects of Noise[1]

Although the health effects of noise are not taken as seriously in the United States as they are in other countries, they are real and, in many parts of the country, pervasive.

Noise-Induced Hearing Loss. If a person is repeatedly exposed to loud noises, he or she may experience noise-induced hearing impairment or loss. In the United States, both the Occupational Health and Safety Administration (OSHA) and the National Institute for Occupational Safety and Health (NIOSH) promote standards and regulations to protect the hearing of people exposed to high levels of industrial noise.

[1] More information on these and other adverse effects of noise may be found in *Guidelines for Community Noise*, eds B Berglund, T Lindvall, and D Schwela, World Health Organization, Geneva, Switzerland, 1999. (https://www.who.int/publications/i/item/a68672)

Speech Interference. Another common problem associated with noise is speech interference. In addition to the obvious issues that may arise from misunderstandings, speech interference also leads to problems with concentration fatigue, irritation, decreased working capacity, and automatic stress reactions. For complete speech intelligibility, the sound level of the speech should be 15 to 18 dBA higher than the background noise. Typical indoor speech levels are 45 to 50 dBA at 1 meter, so any noise above 30 dBA begins to interfere with speech intelligibility. The common reaction to higher background noise levels is to raise one's voice. If this is required persistently for long periods of time, stress reactions and irritation will likely result.

Sleep Disturbance. Noise can disturb sleep by making it more difficult to fall asleep, by waking someone after they are asleep, or by altering their sleep stage, e.g., reducing the amount of rapid eye movement (REM) sleep. Noise exposure for people who are sleeping has also been linked to increased blood pressure, increased heart rate, increase in body movements, and other physiological effects. Not surprisingly, people whose sleep is disturbed by noise often experience secondary effects such as increased fatigue, depressed mood, and decreased work performance.

Cardiovascular and Physiological Effects. Human's bodily reactions to noise are rooted in the "fight or flight" response that evolved when many noises signaled imminent danger. These include increased blood pressure, elevated heart rate, and vasoconstriction. Prolonged exposure to acute noises can result in permanent effects such as hypertension and heart disease.

Impaired Cognitive Performance. Studies have established that noise exposure impairs people's abilities to perform complex tasks (tasks that require attention to detail or analytical processes), and it makes reading, paying attention, solving problems, and memorizing more difficult. This is why there are standards for classroom background noise levels and why offices and libraries are designed to provide quiet work environments.

Document Fails to Analyze Potential Noise Impacts

Significance Criteria is Improperly Established for Daytime Construction

CEQA requires evaluation of whether a project would cause a "substantial temporary or permanent increase in ambient noise levels …" (MND p. 43). The DEIR establishes only the City's Municipal Code Section 8.06.120 (G)[2] as the threshold for significant noise exposure from the construction noise generated by the project, which exempts construction activities from noise codes on Monday through Saturday from 7 AM to 6 PM, excluding holidays. The MND states on page 44 that the project "would not result in a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance."

This document's interpretation of this statute implies that there are no thresholds of significance for daytime construction noise, and any increase in noise is insignificant as long as the construction activities are conducted only during daytime hours. Hypothetically, under the logic of this document, there is no noise level – no matter how extreme – where daytime construction noise would be considered an impact. CEQA requires the project applicants to assess if there will be a substantial increase in ambient levels.

[2] https://codelibrary.amlegal.com/codes/redlandsca/latest/redlands_ca/0-0-0-5339

Other applicable standards do exist for daytime construction noise impacts, such as in Section 7.1 of the Federal Transit Administration's (FTA) Transit Noise and Vibration Impact Assessment Manual[3]. This threshold, or a threshold from another applicable document, should be chosen to compare to modeled construction noise levels in an Environmental Impact Report (EIR) to ensure that substantial temporary increases in ambient noise levels are not caused by this project.

Baseline Noise Level Characterizations are Incomplete

CEQA requires evaluation of whether a project would cause a "substantial temporary or permanent increase in ambient noise levels." Without knowing how loud the environment is, it is impossible to determine if the new project will increase noise in the surrounding community. Baseline noise measurements are the preferred way to determine background noise sources. These measurements serve as a crucial reference point for evaluating the potential noise impacts of proposed projects or activities. Without establishing the baseline noise conditions before any new development occurs, decision-makers cannot effectively determine whether the project complies with noise regulations nor identify any potential adverse effects on the surrounding environment and communities. Given the proximity to both local streets and Interstate 10 (I-10), along with noise from nearby residences and commercial parking lots, as well as shielding from the main noise source of I-10, noise levels should be physically measured to be accurately determined. An EIR must be prepared with baseline noise measurements, to properly describe the noise environment.

Document Includes no Discussion of Operational Noise

Day-to-day operational noise levels are not discussed in the MND at all. Typical sources from a warehouse project can include loading dock noise, rooftop mechanical noise, and parking lot noise, among other sources. These can combine to increase ambient noise levels and can be more sensitive than construction noise due to the more permanent nature of the duration. Section 8.06.080 of the Redlands noise code states that no entity can "operate or cause to be operated any source of sound, or allow the creation of any noise, which causes the noise level when measured inside a neighboring receiving occupied building to exceed" the standard of 60 dBA for industrial buildings.

As an example, rooftop commercial HVAC units may reach as high as 88 dBA at a 3 feet reference level, in which case three of these units could exceed the industrial interior noise limit of 60 dBA set in section 8.06.080 at 140 feet away (the distance between the project and the nearest façade to the west). This assumes open windows in the neighboring facility, but does not include any noise due to exterior loading dock or parking lot operations. Either way, the potential for noise impacts exists, and as such should be studied more thoroughly in an EIR.

Construction Vibration Thresholds could be Exceeded

Section 8.06.020 of the Redlands City Code sets a vibration perception threshold stating that the "perception threshold shall be presumed to be a motion velocity of 0.01 inches per second over the range of one to one hundred (100) Hz." Section 8.06.090(G) prohibits "operating or permitting the operation of any device that creates a vibration which is above the vibration perception threshold of an individual at or beyond the property boundary of the source if on private property." Section

[3] https://www.transit.dot.gov/sites/fta.dot.gov/files/docs/research-innovation/118131/transit-noise-and-vibration-impact-assessment-manual-fta-report-no-0123_0.pdf

8.06.120 lists exemptions for construction activity stating the noise statute "shall not apply to noise sources associated with new construction, remodeling, rehabilitation or grading of any property."

This sets a vibration threshold in the City of a Peak Particle Velocity (PPV) of 0.01 in/sec, with exemptions for construction noise, not construction vibration. A vibratory roller, operated at the western property line would create a PPV level of 0.016 in/sec. This is using the formula for vibration attenuation from the FTA manual (Eq. 7-2) and the source level for a vibratory roller found in the same manual (Table 7-4). This would be an exceedance, and thus construction vibration should be studied in an EIR.

Conclusion

The MND has several errors and omissions. The noise analysis is lacking substance and includes no mention of ambient measurements, daytime construction thresholds, or discussion of mechanical noise. Additionally, there is a chance of a construction vibration impact. Please feel free to contact me with any questions on this information.

Very truly yours,
WILSON IHRIG

WILSON IHRIG
ACOUSTICS, NOISE & VIBRATION

JACK MEIGHAN

Associate

Jack joined Wilson Ihrig in 2021 and is an experienced acoustics engineer with expertise in projects involving rail transit systems, highways, CEQA analysis, environmental noise reduction, mechanical drawing reviews, and construction noise and vibration mitigation. He has hands-on experience with project management, including client coordination and presentations, as well as in designing, developing, and testing MATLAB code used in acoustics applications. Additionally, his expertise includes taking field measurements, developing test plans and specifying, purchasing, setting up and repairing acoustic measurement equipment. He has experience in using Traffic Noise Model (TNM), CadnaA, EASE, Visual Basic, LabView, and CAD software.

Education

- B.S. in Mechanical Engineering, University of Southern California, Los Angeles, CA

Project Experience

Metro Regional Connector, Los Angeles CA
Planned, took, and processed measurements as part of a team to determine the effectiveness of floating slab trackwork for a new subway in downtown Los Angeles that travels below the Walt Disney Concert Hall and the Colburn School of Music.

Rodeo Credit Enterprise CEQA Analysis for New Construction, Palmdale, CA
Wrote an accepted proposal and executed it for a noise study project to determine noise mitigation requirements on a new housing development. Led all aspects of the project and managed the budget during all phases of project completion. Completed 5 separate projects of this type for this developer.

Blackhall Studios, Santa Clarita, CA
Led the vibration measurement effort for a new soundstage directly adjacent to an existing freight and commuter rail line. Tested equipment, processed data, and analyzed results to determine the vibration propagation through the soil to the proposed soundstage locations, and was part of the team that developed mitigation techniques for the office spaces directly next to the rail line.

Octavia Residential Condos CEQA Study, San Francisco, CA
Calculated the STC ratings for the proposed windows to meet Title 24 requirements, modeled the acoustic performance of floor and ceiling structures, researched noise codes, helped with a mechanical design review, and wrote a report summarizing the results for a new Condominium project being developed in San Francisco.

San Diego International Airport Terminal I Replacement, CA
Conducted interior noise and vibration measurements, analyzed measurement data to help determine project criteria, modeled the existing and future terminals in CadnaA, and was part of a team that did a complete HVAC analysis of the entire terminal, as part of a CEQA analysis where a new terminal for the airport is being designed.

Five Points Apartments Noise Study, Whittier, CA
Took measurements, researched sound data and solutions, and recommended mitigation for a new apartment complex that was located next to an existing car wash, as part of a CEQA review.

USC Ellison Vibration Survey, Los Angeles, CA
Conducted vibration measurements as part of a survey to determine the effectiveness of vibration isolation platforms that are used to insulate cell growth in a cancer research facility. Determined the effectiveness and presented this information to the client. Researched and recommended a permanent monitoring system so the client could view data in real time.

TEN50 Condos 'Popping' Noise Investigation, Los Angeles, CA
Was part of a team that investigated the noise source of an unwanted popping noise in luxury condos in Downtown Los Angeles. Helped isolate the noise source location with accelerometers to determine where vibrations were occurring first and used an acoustic camera to determine where in the condo the noise was coming from.

2000 University Project, Berkely, CA
Wrote a construction noise monitoring plan based on environmental noise calculations, wrote a report summarizing the results, and attending a meeting with the client to discuss options.

Bay Area Rapid Transit (BART) On-Track, CA, San Francisco Bay Area, CA*
Day to day project manager, responsible for meetings, presentations, and coordination with the client for an ongoing noise study on the BART system. Developed MATLAB code to process measurements and determine areas where high corrugation was present, contributing to excessively high in-car noise levels. Performed noise measurements inside both the right of way and the vehicle cabin, in addition to rail corrugation measurements.

California I-605/SR-60 Interchange Improvement, Los Angeles, CA*
Developed a noise model of the area that predicted sound levels for abatement design, in addition to conducting noise measurements and analysis. Led the Team in use of the FHWA Traffic Noise Model Software for the project, involving three major highways and two busy interchanges extending over 17 miles in southern California.

Sound Transit On-Track, Seattle, WA*
Took measurements, fixed equipment, and developed software in MATLAB to process Corrugation Analysis Trolley measurements as part of an ongoing noise study on the Sound Transit Link system. Tested vibration data to determine the best measurement and processing techniques to store the data in an online database for in-car measurements.

LA Metro CRRC Railcar Testing, Los Angeles, CA*
Led the effort to plan the measurements, determine measurement locations and finalize the test plan. Formulated a method to capture speed data directly from legacy train vehicles. Executed noise and vibration specification measurements for new rail cars delivered by CRRC.

City of Los Angeles, Pershing Square Station Rehabilitation Noise Monitoring, CA*
Built noise models, wrote a construction noise plan, and assisted in on-site construction noise issues as they arose for a renovation of the Pershing Square metro station in downtown Los

** Work done prior to working for Wilson Ihrig*

Angeles. Trained construction personnel in techniques for noise reduction and how to conduct noise monitoring measurements to meet project specifications.

City of Orange Metrolink Parking Garage Construction Monitoring, CA*
Wrote an adaptive management vibration monitoring plan, set up equipment to monitor live vibration levels, and generated weekly reports as part of an effort to build a new parking garage. Designed, planned, and completed measurements to predict and mitigate pile driving construction impacts at three historic building locations adjacent to the construction site. Coordinated with the client whenever an on-site problem arose.

LA Metro Westside Subway Construction, Los Angeles, CA*
Planned, organized, and processed noise measurements for the Purple Line extension construction. Implemented both long term microphones to measure noise levels and accelerometers to measure vibration levels in existing subway tunnels. Oversaw noise monitoring at sensitive construction sites for the project and worked with the contractor to find ways to reduce construction noise levels by approximately 10dB.

Montreal Réseau Express Métropolitain, Canada*
Conducted vibration propagation measurements used to create models to predict operational vibration levels for an under-construction transit line. Managed equipment, solved problems in the field, and wrote parts of the report summarizing the findings of the acoustic study.

NHCRP Barrier*
Took on-highway measurements and wrote, designed, developed, and tested MATLAB code to identify specific spectrograms to use for analyses for a project evaluating barrier reflected highway traffic noise differences in the presence of a single absorptive or reflective noise barrier.

Siemens Railcar Testing for Sound Transit, Seattle, WA*
Measured in-car noise and vibration for new rail cars delivered by Siemens. Developed new internal techniques for measurements based on the written specifications. Contributed to the team that helped identify issues that new cars had in meeting the Sound Transit specifications for noise and vibration. Participated in developing the test plan and specified then acquired new equipment for the measurement.

Toronto/Ontario Eglinton Crosstown Light Rail, Final Design, Canada*
Assisted in vibration propagation measurements, analysis, and recommendations for mitigation for a 12-mile light-rail line both on and under Eglinton Avenue. Set up and ran equipment for at-grade measurements with an impact hammer for underground measurements with an impact load cell that was used during pre-construction borehole drilling.

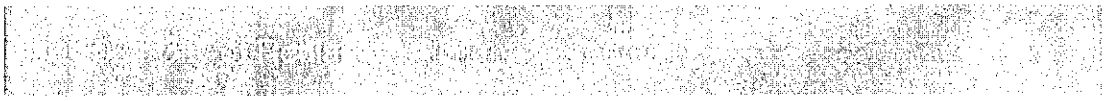
PLANNING COMMISSION COMMENTS

Planning Commission Date:
June 11, 2024

Agenda Item Number:
5D

Speaker Name:
Aleta Vienneau



Address (Optional):

Subject on which the person wishes to speak:
Against

Briefly describe what you would like to say (Max 250 Words):
Local air quality has been declining visibly and rapidly as the number of warehouses have increased. There will be consequences to all Redlands residents but especially for children, the elderly, and vulnerable people in our community. We don't need more asthma in our community. Please do not build more warehouses in our community!

SOCIO-ECONOMIC EVALUATION CHECKLIST FORM

BACKGROUND

1. Project Title: Planned Development No. 7 and Lot Merger No. 8

2. Lead Agency Name and Address:
City of Redlands
Development Services Department
35 Cajon Street, Suite 20
Redlands, CA 92373

Mailing Address:
City of Redlands
Development Services – Planning
P.O. Box 3005
Redlands, CA 92373

3. Contact Person & Telephone: Kevin Beery, Senior Planner (909) 798-7555 x2

4. Project Location: The project site is located on the west side of California Street between Lugonia Avenue and Interstate 10 (APNs: 0292-033-11-0000 and 0292-033-13-0000).

5. Project Sponsor's Name and Address: CRP/NPP Redlands Industrial Owner, LLC, 1330 Factory Place, Suite 105, Los Angeles, CA 90013

6. General Plan Designation: Commercial/Industrial

7. Zoning Designation: East Valley Corridor Specific Plan (EVCSP) Special Development (EV/SD) District

8. Description of Project: A development proposal to merge two parcels encompassing approximately 16.0 net acres and thereon construct a 357,610 square-foot warehouse building and related site improvements including parking lots, a loading area, landscaping, screen walls, lighting, onsite stormwater detention facilities and utility connections. The project site is located on the west side of California Street between Lugonia Avenue and the westbound on-ramp to Interstate 10. The project is not exempt from environmental review and a mitigated negative declaration is proposed in accordance with the guidelines of the California Environmental Quality Act (CEQA).

9. Existing On-site Land Use and Setting: Previously developed with an amusement park that was demolished in 2021. The site is now vacant except for the remains of former park attractions.

10. Surrounding Land Uses and Setting: Commercial and industrial development to the north and west. Offices, commercial, medical, and institutional uses to the east. Interstate 10 and Metrolink right-of-way to the south.

11. Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement): None.

COST BENEFIT FACTORS:

The cost benefit factors are evaluated independently using the cost benefit model. A positive or negative cost/benefit ratio will be derived by evaluating projects. A complete model used to evaluate the project is available in the Development Services Department. A summary of that analysis is provided here:

According to the Cost Benefit Model used by the City, the project is projected to result in annual non-residential revenues of $197,250.50 to the City upon project implementation, and annual ongoing costs of $17,672.30. The surplus revenue is $179,578.20. The cost benefit ratio has a factor of 11.16. The complete Cost/Benefit Model results are attached herein.

PUBLIC INFRASTRUCTURE AND EFFECT ON THE CITY OF REDLANDS:

Identify the public infrastructure required for development of this project and identify the source(s) of funding for these improvements. Identify the effects of such development upon the City of Redlands.

a. List of public infrastructure required for the project:

   The applicant will provide the infrastructure as required by the Municipal Utilities and Engineering Department. The developer will be installing all required off-site improvements. The proposed development will provide the following:

   1. Roads (Lane Miles): 0.0
   2. Storm Drain (Lineal Feet): 0.0
   3. Traffic Intersections Requires Signals: 0.0
   4. Aggregate Landscaping (Acres): 0.0
   5. Street Lights: 0.0
   6. Trails (Lineal Miles): 0.0

b. Sources of funding for these improvements to include developer installed payment of impact fees, assessment districts, etc.:

   The developer will be required to pay applicable development impact fees and permit fees as required by the Redlands Municipal Code.

c. The effect of the project upon the City of Redlands relative to public infrastructure is as follows:

   The project will require the use of public infrastructure such as sewer, water, public

safety and roads. To mitigate the impact of the development on public infrastructure, development impact fees will be assessed against the project and charged prior to issuance of a building permit. Accordingly, the proposed development would not adversely affect the existing public infrastructure systems below existing performance levels.

BENEFITS OF THE PROJECT TO THE CITY OF REDLANDS

The following is a list of benefits that can be attributed to the proposed project. The benefits may fall into the categories identified or a miscellaneous category. Each benefit identified will be described in detail with supporting reasons as to how the item benefits the community.

A. Citrus Enhancements or Preservation. Does the project preserve citrus? The following are accepted ways to enhance or preserve citrus which may be determined to be a benefit to the City of Redlands.

1. Provide conservation easement(s) on citrus groves the City hopes to preserve.
2. Acquire citrus grove(s) and donate all or a portion of the grove to the City.
3. Enhance viability and productivity of existing groves by enhancing irrigation or adding frost water.
4. Maintain a viable buffer of citrus around the project (at least 3 rows).
5. Other ways to preserve citrus.

If this project provides benefit(s) that apply to citrus enhancement or preservation, describe in detail the benefit(s) with supporting reasons as to how the item(s) benefits the community.

Proposed Project: The project does not involve existing citrus crops or land designated and/or reserved for agricultural purposes. The site was previously developed with an amusement park. Therefore, the proposed development would not impact the local citrus industry.

B. Cultural Enhancements or Preservation. Does the project enhance or preserve cultural aspects of the community? The following are accepted ways to enhance and/or preserve cultural aspects of the community which may be determined to be a benefit to the City of Redlands.

1. Contributes to “art in public places” concept to a minimum of 1% of total project value.
2. Contributes to the alleviation of problems at cultural sites.
3. Provides an electronic library available to the public.

4. Enhances or contributes to current services or cultural resources.
5. Contribute to performing arts venues.

If this project provides benefit(s) that apply to cultural enhancements or preservation, describe in detail the benefit(s) with supporting reasons as to how the item(s) benefits the community.

Proposed Project: In-lieu of meeting the standard for minimum sitewide landscaping coverage (15%) for industrial developments in the EVCSP, the project proposes to contribute an onsite art installation (in a location visible from the public realm) that will be valued at a minimum of 1% of total project value. Furthermore, the project will pay City-established development impact fees and provide additional revenue from increased property tax assessment, business license tax, and other revenue sources that will indirectly provide funding that will contribute to enhancing and/or maintaining some of the cultural facilities within the City.

C. Heritage Enhancements or Preservation. Does the project enhance or preserve heritage aspects of the community? The following are accepted ways to enhance and/or preserve heritage aspects of the community which may be determined to be a benefit to the City of Redlands.

1. Renovates existing historic homes.
2. The project has design features which include garage doors do not face street; 50% wrap around porch on 1-1/2 sides; broad overhangs on roof; driveway located on the side of house or a circular drive; decorative wood, masonry or wrought iron fence.
3. Adaptive reuse of historic structures in appropriate zones.
4. Forming a new or annexing to an existing historic district.
5. Designation of a structure as an individual historic resource.

If this project provides benefit(s) that apply to heritage enhancements or preservation, describe in detail the benefit(s) with supporting reasons as to how the item(s) benefits the community.

Proposed Project: The project site is currently vacant and is not located in a designated historic district. Accordingly, there are no impacts and no opportunity to enhance or preserve heritage aspects of the community because these types of resources are not present on-site.

D. Architectural Enhancements. Does the project enhance architectural aspects of the community? The following are accepted ways to enhance architectural aspects of the community which may be determined to be a benefit to the City of Redlands.

1. Provide architectural or decorative enhancements to the

project which exceed normal architectural standards.
2. Trees or other landscaping amenities that exceed minimum requirements.
3. Contribution of off-site enhancements in the public right-of-way, such as sidewalk installation and street tree replacement.
4. Assisting in undergrounding of utility lines.

If this project provides benefit(s) that apply to architectural enhancements, describe in detail the benefit(s) with supporting reasons as to how the item(s) benefits the community.

Proposed Project: The proposed development comprises a single warehouse building featuring a contemporary architectural design and style, as well as related improvements including parking, lighting and landscaping.

The development plan indicates a proposed on-site landscape area of 82,104 square feet. For industrial facilities in the EVCSP, a minimum of 15 percent of the development site must be landscaped, and a minimum of 7 percent of the parking area must be landscaped. A total of 12 percent of the site would be landscaped and roughly 10 percent of the parking area is landscaped. In-lieu of satisfying minimum sitewide landscaping coverage standard, the developer has opted to contribute an onsite art installation (in a location visible from the public realm) that will be valued at a minimum of 1% of total project value.

The landscaping plan shows tree species consisting of western redbud, camphor trees, carrotwoods, palms, Afghan pine and African sumac as well as various drought-resistant shrubs and groundcovers. Multiple mature trees located on-site would remain protected in place.

E. Historic Downtown Enhancements or Preservation. Does the project enhance or preserve the historic downtown of the community? The following are accepted ways to enhance and/or preserve the historic downtown of the community which may be determined to be a benefit to the City of Redlands.

1. Contributes financially to viability of core downtown within expanded downtown.
2. Renovate old buildings.
3. Within an expanded downtown extends DRBA streetscape enhancements.
4. Contributing to the restoration of original building facades of existing structures
5. Re-establishing historical “pedestrian oriented” street frontages where original buildings have been removed.
6. Provides unique adaptive use of historic building.
7. Contributes to alternative means of transportation.

If this project provides benefit(s) that apply to historic downtown enhancements or preservation, describe in detail the benefit(s) with supporting reasons as to how the item(s)

benefits the community.

Proposed Project: The project is not located within the historic downtown district. The project will pay City established development impact fees and provide additional revenue from increased property tax assessment, business license tax, and other revenue sources that will indirectly provide funding that could be utilized to enhance and/or maintain the downtown district.

F. Job Enhancements. Does the project enhance jobs for the community? The following are accepted ways to enhance jobs for the community which may be determined to be a benefit to the City of Redlands.

1. Provides jobs for the community.
2. Brings in revenue from outside the city.
3. Internship opportunities for students at universities, high school and colleges.

If this project provides benefit(s) that apply to job enhancements, describe in detail the benefit(s) with supporting reasons as to how the item(s) benefits the community.

Proposed Project: The proposed development consists of one 357,610 square-foot warehouse building on a site encompassing approximately 16 net acres. The proposed facility will provide a new source of employment for residents of the city and surrounding area and bring additional revenue to the city. The proposed facility is expected to employ 300 people. The proposed facility will provide a source of permanent employment in the future, and temporary jobs during construction.

G. Open Space Enhancements or Preservation. Does the project enhance or preserve open space aspects of the community? The following are accepted ways to enhance and/or preserve open space within the community which may be determined to be a benefit to the City of Redlands.

1. Hardscape feature that enhances wildlife-water/food/ shelter.
2. Enhanced landscape on commercial project which conceals infrastructure.
3. Waterscaping which increases illusion of open space.
4. Provides open space in addition to zoning requirement.
5. Provides a Planned Residential Development
6. Provides a usable conservation easement across open space in perpetuity.
7. Preserves access for wildlife migration corridor.
8. Provides undisturbed refuge area for wildlife.

If this project provides benefit(s) that apply to open space enhancements or preservation, describe in detail the benefit(s) with supporting reasons as to how the item(s) benefits the

community.

Proposed Project: No publicly accessible open space will be provided on the project site. Perimeter landscaping is being proposed throughout the project site; the landscape plan indicates that 82,104 square feet will consist of landscaping, which is approximately 12% of site landscaping. In-lieu of satisfying minimum landscaping coverage (15%) for industrial developments in the EVCSP, the developer has opted to contribute an onsite art installation (in a location visible from the public realm) that will be valued at a minimum of 1% of total project value The project site is located in an urbanized area and no wildlife corridors or refuge areas are located on or near the project site.

H. Park Enhancements or Preservation. Does the project enhance or preserve parks of the community? The following are accepted ways to enhance and/or preserve parks within the community which may be determined to be a benefit to the City of Redlands.

1. Adds improved parkland.
2. Adds parkland beyond requirements.
3. Provides pedestrian and/or bike trails to parks or provides extension of existing pedestrian and/or bike trails from the project site.
4. Adds meeting rooms accessible to local groups on a frequent basis.
5. Improves or adds to existing landscape and/or streetscape at or near the project site.

If this project provides benefit(s) that apply to park enhancements or preservation, describe in detail the benefit(s) with supporting reasons as to how the item(s) benefits the community.

Proposed Project: The proposed development does not directly involve public parks or recreational facilities. The project will pay City-established development impact fees and provide significant additional revenue from increased property tax assessment, business license tax, and other revenue sources that will directly or indirectly provide funding that may be used to benefit City parks.

I. Public Safety Enhancements. Does the project enhance public safety aspects of the community? The following are accepted ways to enhance public safety within the community which may be determined to be a benefit to the City of Redlands.

1. Security infrastructure is provided in an architecturally acceptable manner.
2. Exterior television monitoring on commercial project.
3. Provide a building site or fully equipped fire station or contributes to dedicated City account for future construction.
4. Provides significant additional fire equipment as determined by the Fire Department.
5. Provides for a police substation (subject to City approval).

6. Provides for a building site for a new facility.

If this project provides benefit(s) that apply to public safety enhancements, describe in detail the benefit(s) with supporting reasons as to how the item(s) benefits the community.

Proposed Project: The project will provide on-site security lighting (parking lot lighting, exterior building lighting) as well as a secured truck loading/storage yard on the west side of the building. The project will also pay City development impact fees to fund public services, including police and fire services. The project will also provide significant additional revenue from increased property tax assessment, business license tax, and other revenue sources that may assist in funding police and fire facilities and services.

J. School Enhancements. Does the project enhance schools or their operations within the community? The following are accepted ways to enhance schools within the community which may be determined to be a benefit to the City of Redlands.

1. Senior citizen development adds revenue but no impact.
2. Provides day care and after school program(s).
3. Project is close to schools serving the project.
4. Contributes equipment or other enhancements to existing day care and after school programs.
5. Assist schools with land or financing (such as Mello Roos).

If this project provides benefit(s) that apply to schools, describe in detail the benefit(s) with supporting reasons as to how the item(s) benefits the community.

Proposed Project: The project is not a residential development and is not considered growth-inducing in nature, either directly or indirectly. Prior to building permit issuance, the project will pay school facility fees set by the Redlands Unified School District.

K. Traffic. Does the project reduce traffic, enhance systems to improve traffic conditions or otherwise improve traffic within the community? The following are accepted ways to improve traffic within the community which may be determined to be a benefit to the City of Redlands.

1. Provide financial mitigation which helps alleviate parking problems in town i.e. by contributing to the parking district.
2. Incorporate “traffic calming” elements into the design of the circulation system.
3. Support for alternative forms of public transportation or public transportation facilities.
4. Add biking and pedestrian access to off campus intellectual or entertainment resources.
5. Have a unique method of product/inventory delivery.

If this project provides benefit(s) that apply to traffic, describe in detail the benefit(s) with supporting reasons as to how the item(s) benefits the community.

Proposed Project: In accordance with Measure U, a traffic impact analysis assessing the potential impacts on levels of service (LOS) caused by the proposed development was prepared. The analysis concludes that the proposed development would not substantially worsen existing roadway traffic in the vicinity below current LOS and, therefore, no mitigating improvements to the transportation system have been identified as necessary. In addition, the project must dedicate a portion of southeast portion of the site to accommodate an additional freeway on-ramp lane to be constructed at a future date. Payment of development impact fees would adequately mitigate any traffic impacts of the proposed development on the surrounding road network.

L. Wastewater System Enhancements. Does the project enhance the wastewater system within the community? The following are accepted ways to improve the wastewater system within the community which may be determined to be a benefit to the City of Redlands.

1. Provide a dual system to use potable and non-potable water.
2. Provide financial contributions to tertiary facilities at the Wastewater Treatment Plant.
3. Improve water quality.

If this project provides benefit(s) that apply to the wastewater system, describe in detail the benefit(s) with supporting reasons as to how the item(s) benefits the community.

Proposed Project: The proposed project would connect to the City of Redlands sanitary sewer system. The proposed project would generate wastewater that can be discharged to a municipal system with sufficient capacity. No systemwide improvements or expansions are necessary. The project will pay development impact fees to be used for system maintenance and upgrades.

M. Miscellaneous Preservation or Enhancements. Does the project enhance or preserve elements within the community?

If this project provides benefit(s) that apply to enhancement or preservation of elements that are important to the City, describe in detail the benefit(s) with supporting reasons as to how the item(s) benefits the community.

Proposed Project: The project does not provide any additional enhancements or preservation of elements within the community other than those previously identified.

SOCIAL FACTORS POTENTIALLY AFFECTED:

This project may create unmitigable physical blight or overburden public services for those social factors checked below within the "Potentially Significant," “Potentially Significant Unless Mitigation” or "Less Than Significant" as indicated by the checklist on the following pages.

__ Agricultural/Citrus Removal	__ Police Services	__ Recreational Programs
__ Wildlife/Habitat	__ Downtown Impacts	__ Land Use Compatibility
__ Traffic	__ Residential Design	__ Schools
__ Fire Services	__ Cultural Facilities	
__ Paramedic Services	__ Park Facilities	

DETERMINATION

On the basis of this initial evaluation:

X I find that the proposed project will not create unmitigable physical blight or overburden public services in the community, and no additional information or evaluation is needed.

___ I find that although the proposed project could create unmitigable physical blight or overburden public services in the community, there will not be a significant effect in this case because the mitigation measures described on an attached sheet have been added to the project by the applicant.

___ I find that the proposed project may create unmitigable physical blight or overburden public services in the community, and additional information or evaluation is needed in the following areas:

___ I find that the proposed project has already been evaluated for socio-economic impacts and the prior evaluation adequately evaluated this project.

Signed: *Kevin Beery*
Kevin Beery
Senior Planner
City of Redlands
May 1, 2024

EVALUATION OF SOCIAL FACTORS

Explanations of all "Potentially Significant," "Potentially Significant Unless Mitigation Incorporated," "Less Than Significant Impact," and "No Impact" answers are provided on the attached sheets.

Issues and Supporting Information Sources:	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
1. AGRICULTURAL/CITRUS REMOVAL. Would the proposal:				
a) Affect agricultural resources or operations (e.g. impacts to soils or farmlands, or impacts from incompatible land uses)?	____	____	____	✓
b) Remove active citrus groves from production?	____	____	____	✓

Agricultural/Citrus Removal

1.a,b) The project site is identified by the Farmland Mapping and Monitoring Program of the California Resource Agency as “urban and built-up” land. The project site is not identified as prime farmland, unique farmland, or farmland of statewide importance. The site was previously developed with an amusement park which was demolished in 2021. Therefore, no impacts to farmland or to agricultural resources are identified.

Issues and Supporting Information Sources:	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
2. WILDLIFE/HABITAT/OPEN SPACE PRESERVATION. Would the proposal:				
a) Eliminate or have negative impact upon wildlife corridors?	____	____	____	✓
b) Tend to urbanize open space impacting preservation and conservation of natural resources?	____	____	____	✓
c) Interfere with use of recognized trails used by joggers, hikers, equestrians or bicyclists?	____	____	____	✓

d)	Eliminate, reduce, or have any negative impact upon wildlife habitat areas to include the protection of fringe or buffer areas?	____	____	✓	____

Wildlife/Habitat/Open Space Preservation

2.a) The site currently contains remnants of a former amusement park's abandoned attractions and structures. The entire site has been disturbed and has no potential to serve as wildlife habitat. The project site is surrounded by urban development and is void of any wildlife corridors. No significant impacts are identified or anticipated, and no mitigation measures are required.

2. b) The project site is surrounded by commercial, industrial, and other nonresidential development. The project site has a General Plan designation of Commercial/Industrial. The project would not tend to urbanize open space that could impact preservation and conservation of natural resources.

2. c). There are no recognized trails on or near the project site.

2. d) The project will not eliminate, reduce, or have any negative impact upon wildlife habitat areas to include the protection of fringe or buffer areas. The project site has been previously developed with an amusement park and is surrounded by urban development. The site contains multiple mature landscaped trees remaining from the previous development. In order to avoid the potential impact of disturbing or destroying active bird nests, a preconstruction nesting survey will be required prior to commencement of project construction.

Issues and Supporting Information Sources:	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact

3. TRAFFIC IMPACTS. Would the proposal:

a)	Result in increased vehicle trips or congestion?	____	____	✓	____
b)	Create additional traffic so as to be in conflict with the policies of the General Plan?	____	____	✓	____

c)	Does traffic impact livability of a residential neighborhood on streets which, due to design or terrain features, street side development or other factors, have greater than usual sensitivity to increased traffic?	____	____	____	✓
d)	Create additional traffic so as to increase the level of service on roadways that are adjacent to or in the vicinity of the project?	____	____	✓	____

Traffic Impacts

3, a-d) The development plan indicates that that site access is to be provided by two proposed driveways on Lugonia Avenue and two existing driveways on California Street. The proposed development would not create a substantial generation of vehicle trips that would worsen traffic congestion (i.e., levels of service) on roadways in the vicinity of the project site. The proposed development is estimated to generate 1,132 passenger-car equivalent (PCE) daily trips with 111 total trips expected in the AM peak hour and 114 total trips expected in the PM peak hour. Based on forecasted existing plus project traffic conditions, nearby intersections are expected to continue functioning at existing performance levels under project operating conditions. Upon project implementation, intersections are not anticipated to operate at a deficient LOS and, accordingly, no roadway system improvements have been identified as necessary.

The project site is in an area designated for commercial and industrial uses and will have access from California Street and Lugonia Avenue, and is adjacent to Interstate 10. There are no residential uses in the immediate area of the project.

Issues and Supporting Information Sources:	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
4. FIRE AND PARAMEDIC SERVICES. Will the proposal result in:				
a) Requiring fire and paramedic services that are beyond the current capabilities of the Fire Department?			✓	
b) An increase in response time for essential fire or paramedic services to the remainder of the community?			✓	
c) The need for additional fire or paramedic facilities or equipment?			✓	

Fire and Paramedic Services

4.a) The City of Redlands Fire Department indicates that current capabilities are adequate to provide fire and paramedic service demands for this development. The project will incorporate fixed fire protection systems which will mitigate any impacts relative to this issue.

4.b) The City of Redlands Fire Department will provide fire and emergency medical services to the Project. The Fire Department consists of approximately fifty-five (55) total sworn personnel, including eighteen (18) firefighter/paramedics and thirty-seven (37) firefighter/EMTs and covers an area of thirty-seven (37) square miles. The development will not impact essential fire or paramedic services to the remainder of the community. The project would be served by Fire Station No. 264, located at 1270 W. Park Avenue, and is within a minimum response time of five minutes.

4.c) Present capabilities of the Fire Department will not be impacted with development of the project. The project will pay development impact fees which have been established by the City to fund public facilities, including fire stations. These additional revenues to the City, as well as the revenue from increased property tax assessment generated from the future subdivision, will assist in funding fire operations for the area.

Issues and Supporting Information Sources:	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
5. POLICE SERVICES. Would the proposal:				
a) Requiring police services that are beyond the current capabilities of the Police Department?			✓	
b) An increase in response time for essential police services to the remainder of the community?			✓	
c) The need for additional police facilities or equipment?			✓	
d) Increase in crime as a result of the type of business?			✓	

Police Services

5.a-d) Present capabilities of the Redlands Police Department would not be adversely impacted with project development, however, cumulatively the project will, along with future development, require increased police services. The project will pay development impact fees which have been established by the City to fund public facilities, including police. The project will also provide significant additional revenue from increased property tax assessment, business license tax, and other revenue sources that may assist in funding police services.

Issues and Supporting Information Sources:	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
6. DOWNTOWN IMPACTS. Would the proposal:				
a) A reduction of the number or types of businesses located in the downtown?				✓

b)	An unfair or unreasonable competitive disadvantage to existing businesses downtown?	____	____	____	✓
c)	Creation of vacant buildings and the potential for blight?	____	____	____	✓
d)	Cause an unreasonable increase in traffic downtown?	____	____	____	✓
e)	Economic and social effects of businesses competing with downtown businesses?	____	____	____	✓

Downtown Impacts

6.a-e) The proposed project is located approximately 4.5 miles northwest of the Downtown Business District, and therefore, does not have the potential to negatively impact the Downtown Business District. The project, which would result in the expansion of the logistics industry in northwest Redlands, would not adversely affect the economic base of Downtown.

Issues and Supporting Information Sources:	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
7. RESIDENTIAL DESIGN. Would the proposal:				
a) Conflict with existing codes and or standards?	____	____	____	✓
b) Meet minimum point standards of the Residential Development Allocation process?	____	____	____	✓

Residential Design

7.a-b) No impact. The proposed development does not involve residential use.

Issues and Supporting Information Sources:	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
8. CULTURAL FACILITIES. Would the proposal result in:				
a) A reduction of the number or types of businesses located in the downtown?				✓
b) An unfair or unreasonable competitive disadvantage to existing businesses downtown?				✓
c) Impacts to cultural facilities such as the Smiley Library, Redlands Bowl, Lincoln Shrine, Joslyn Center, Community Center, etc?				✓
d) Have the potential to cause a physical change which would affect unique ethnic cultural values?				✓
e) Potential to disturb existing religious facilities?				✓
f) Impact or restrict religious or sacred uses?				✓

Cultural Facilities

8.a-b) The site is currently vacant and does not contain historic structures. The site is not in a historic district.

8.c) The proposed development would not impact local cultural facilities, such as the Smiley Library, Redlands Bowl, Lincoln Shrine, Joslyn Senior Center and the Community Center. The project will pay development impact fees and provide an increase in revenue to the City from increased property tax assessment, business license tax, and other revenue sources that may assist in providing funding for existing cultural facilities. Thus, the project would not adversely affect cultural facilities.

8.d) No part of this project has the potential to affect unique ethnic cultural values.

8.e-f) The project site was previously developed but is now vacant. There are no

religious facilities located within or adjacent to the project site; therefore, no part of this project will result in impacts to existing religious facilities or restrict religious uses.

Issues and Supporting Information Sources:	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
9. PARK FACILITIES AND RECREATIONAL PROGRAMS. Will the proposal result in:				
a) Increases in use or demand for park facilities or programs to include manpower, facilities or equipment?	____	____	____	✓
b) A ratio of parkland to population which exceeds standards and or goals established by the General Plan?	____	____	____	✓

Park Facilities and Recreational Programs

9.a,b) The proposed development does not involve residential use. Therefore, the project will not adversely affect existing or planned park facilities or recreational programs within the City nor create a significant new demand for additional recreational facilities. The project will pay development impact fees and provide an increase in revenue to the City from increased property tax assessment, business license tax, and other revenue sources that may assist in providing funding that could be used to benefit park facilities and recreational programs.

Issues and Supporting Information Sources:	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
10. LAND USE COMPATIBILITY. Would the proposal result in:				
a) Land uses that are not compatible or consistent with the General Plan?	____	____	____	✓
b) Economic impacts on businesses and small property owners from a project?	____	____	____	✓
c) Physical separation or division of an existing community	____	____	____	✓
d) Loss of jobs for the community?	____	____	____	✓
e) Overcrowding of housing?	____	____	____	✓

Land Use Compatibility

10.a) The subject property has a General Plan Designation of Commercial/Industrial. The project is located in the Special Development district of the East Valley Corridor Specific Plan which allows uses permitted in the Commercial Industrial (EV/IC) specific plan district. The proposed warehouse use is permitted and is consistent with the General Plan designation of the site. Therefore, the project would not result in land uses that are incompatible or inconsistent with the General Plan or surrounding area.

10.b) The project does not pose an economic impact on businesses and small property owners. The proposed facility would adversely impact local businesses or property owners.

10.c) The proposed warehouse facility is to be located in an area designated for commercial and industrial uses. Adjacent development consists of warehouse facilities, commercial and other nonresidential uses. The project has been designed for compatibility with surrounding development and would not physically divide or separate an existing community.

10.d) No part of this project has the potential to create a loss in jobs available to the community.

10.e) The proposed development does not involve residential use.

Issues and Supporting Information Sources:	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
10. SCHOOLS. Would the proposal result in:				
a) Creating an overcapacity in schools?	____	____	____	✓
b) The need for additional school facilities or equipment?	____	____	____	✓
c) Land uses not consistent with or compatible with existing educational facilities in community?	____	____	____	✓
d) Social or academic impacts on students resulting from school closures.	____	____	____	✓

Schools

11.a-d) Public school services within the City of Redlands are provided by the Redlands Unified School District. The project is not residential and therefore would not increase demand for local school facilities. Any potential direct impacts attributable to the Redlands Unified School District resulting from this project will be offset through the payment of state established school fees assessed at the time of building permit issuance on the newly created lot. No further additional information or evaluation is needed.

TABLE 1

SHADED CELLS ARE VARIABLE ASSUMPTIONS OR INPUTS UNIQUE TO THE PROJECT.

NOTES:

1. Average number of residents per Dwelling Unit ("DU") provided by the California Department of Finance.
   Residents per DU = 2.801 OTHER

2. Assumes residential acreage per unit of the following:

Rural Living (less than 0.2 - 0.4 du/acre)	NA
Very-Low-Density Residential (0 - 2.7 du/acre)	NA
Low-Density Residential (0 - 6.0 du/acre)	NA
Low-Medium-Density Residential (0 - 8.0 du/acre)	NA
Medium-Density Residential (0 - 15.0 du/acre)	NA
High Density (0 - 27.0 du/acre)	NA

3. Assumes average non-residential site coverage of the following (based on the General Plan):

Retail	0.0%	
Industrial	45.0%	
Other Non-Residential	0.0%	Lot Coverage

4. Assumes non-residential equivalent dwelling units of the following:
   EDUs per acre = 9.0 OTHER

GENERAL PLAN BUILDOUT	PROJ. Sq. Ft.*	F.A.R.*	Projected Acreage	
RETAIL	8,646,200	0.30	661.63	
INDUSTRIAL	10,048,400	0.40	576.70	OTHER
OTHER NON-RESIDENTIAL	21,641,990	0.45	1,104.07	
	40,336,590		2,342.40	

*As disclosed in the General Plan

Typical Home Size: 2,835 OTHER
Estimated Equivalency: 6.07

TABLE 6
CITY OF REDLANDS : MODEL
POLICE DEPARTMENT, FIRE DEPARTMENT, PUBLIC WORKS & PER CAPITA COSTS
FISCAL IMPACT ANALYSIS

POLICE DEPARTMENT COSTS

RESIDENTIAL CALLS	16,562	CITY
COST PER DWELLING UNIT	$295	
NON-RESIDENTIAL RETAIL CALLS	8,987	
COST PER BUILDING SQUARE FOOT	$0.47	
NON-RESIDENTIAL INDUSTRIAL CALLS	344	
COST PER BUILDING SQUARE FOOT	$0.02	
OTHER NON-RESIDENTIAL CALLS	7,948	
COST PER BUILDING SQUARE FOOT	$0.42	
MISCELLANEOUS CALLS /2	17,628	
TOTAL CALLS	51,469	

1. Based on Net Cost and number of calls to residential or non-residential properties.
2. Based on conversations with the Police Chief, these incidences are not related to residences or businesses in the City.

EXISTING DWELLING UNITS	25,984	CITY
EXISTING NON-RESIDENTIAL SQUARE FOOTAGE	8,824,690	

RESIDENTIAL FIRE DEPARTMENT COSTS [1]

RESIDENTIAL CALLS	3,579	CITY
COST PER DWELLING UNIT	$168	
NON-RESIDENTIAL RETAIL CALLS	446	
COST PER BUILDING SQUARE FOOT	$0.06	
NON-RESIDENTIAL INDUSTRIAL CALLS	155	
COST PER BUILDING SQUARE FOOT	$0.02	
OTHER NON-RESIDENTIAL CALLS	1,459	
COST PER BUILDING SQUARE FOOT	$0.20	
MISCELLANEOUS CALLS /2	1,988	
TOTAL CALLS	7,627	

1. Based on Net Cost and number of calls to residential or non-residential properties.
2. Based on information from Fire Chief, these incidences are not related to residences or businesses in the City.

PUBLIC INFRASTRUCTURE REQUIREMENTS /1

ROADS (LANE MILES)	0.0	DEVELOPER
TRAFFIC INTERSECTIONS REQUIRING SIGNALS	0.0	
AGGREGATE LANDSCAPING (ACRES)	0.0	
PARK ACREAGE (GROSS)	0.0	
STREET LIGHTS	0.0	
OPEN SPACE (ACRES)	0.0	
TRAILS (LINEAL MILE)	0.0	
STORM DRAINS (MILES)	0.0	

1. Infrastructure should exclude privately maintained facilities.

PUBLIC WORKS MAINTENANCE COSTS

PAVEMENT MAINTENANCE PER LANE MILE /1	$5,000	CITY
STREET SWEEPING PER CURB MILE - ALL STREETS /1	$9	
TRAFFIC SIGNAL OPERATIONS & MAINTENANCE PER INTERSECTION /1	$5,560	
LANDSCAPE MAINTENANCE PER ACRE /1	$12,500	
PARK MAINTENANCE PER ACRE /1	$7,000	
STREET LIGHT MAINTENANCE COST PER LIGHT /1	$125	
OPEN SPACE MAINTENANCE PER ACRE /2	$125	
TRAIL MAINTENANCE PER LINEAL MILE /2	$500	
STORM DRAIN MAINTENANCE PER MILE /2	$750	

1. Based on consultations with the City of Redlands Public Works Department.
2. Based on consultant's experience.

CITY GENERAL GOVERNMENT COSTS*

CITY COUNCIL	$174,090
CITY CLERK	$285,939
CITY MANAGER	$314,819
FINANCE	$605,155
CITY TREASURER	$2,875,064
CITY ATTORNEY	$1,159,167
TOTAL, CITY GENERAL GOVERNMENT COSTS	$5,414,234

*Costs have been reduced to reflect department specific revenues.

CITY GENERAL GOVERNMENT COSTS CONTINUED

TOTAL CITY OPERATING BUDGET*	#########

*Excludes Debt Service, Utilities and Capital Improvements.

OVERHEAD AS A % OF OPERATING BUDGET	11.04%
OVERHEAD AS A % OF DIRECT COSTS	12.41%

1. **Project Title:** 1101 California Street Warehouse

2. **Lead Agency Name and Address:**
City of Redlands
Development Services Department
35 Cajon Street, Suite 20
Redlands, CA 92373

3. **Contact Person and Phone Number:**
Kevin Beery, Senior Planner
Email: kbeery@cityofredlands.org
Phone: (909) 798-7555 ext. 2

4. **Project Location:** The Project Site is located at the southwest corner of Lugonia Avenue and California Street and has an address of 1101 California Street, Redlands, CA (refer to Figure 1: Regional Location Map; and Figure 2: Vicinity Map). The Project Site includes two Assessor's Parcel Numbers (APN) 0292-033-11 and 0292-033-13.

5. **Project Sponsor's Name and Address:**
CRP/NPP Redlands Industrial Owner, LLC
1330 Factory Place, Suite 105
Los Angeles, CA 90013

Pete Williams
Email: pete.williams@northpalisade.com
Phone: (818) 468-0566

6. **General Plan Designation:** Commercial/Industrial

7. **Zoning:** East Valley Corridor Specific Plan – Special Development (EV/SD)

8. **Project Description:**

The Proposed Project consists of a new warehouse development located directly north of Interstate 10 (I-10) and the California Street westbound on-ramp.

Project improvements include the construction of a new 357,610 square-foot (SF) warehouse that includes 6,000 SF of Administration/Office Space (refer to Figure 3: Site Plan). Access to the Project Site would be available via two proposed driveways to the north on Lugonia Avenue and two driveways to the east on California Street. The proposed

driveways on Lugonia Avenue include a 40-foot driveway to the west and a 30-foot driveway to the east. California Street has two existing driveways including a 28' 2" driveway to the north and a 56' 4" driveway to the south. The Proposed Project would include 47 dock doors on the western side of the warehouse which would be 9 feet x 10 feet, with sectional overhead doors, and classified as standard grade. Demolition activities would include removal of remaining concrete paving and k-rails, the remains of former amusement park attractions, and landscaping left from prior development.

The building would be a concrete tilt-up building, consisting of a concrete slab-on grade floor and a shallow foundation system. The maximum building height would be 49 feet from grade. It is anticipated that future items to be stored for distribution would include non-hazardous, non-flammable products on high-pile storage pallet racking and shelving.

Additional site improvements would include a trash enclosure, updated driveway improvements on California Street and additional driveways on Lugonia Avenue, new site access gates with an eight (8) foot high concrete screen wall encompassing the western parking lot and docking area, eight (8) foot high security and maintenance fencing along the western boundary, and approximately 82,104 square feet of improved landscape areas. Paved areas would include employee parking, storage racks, bike racks, bike lockers, loading docks, and internal roadways, totaling approximately 623,779 square feet or 14.32 acres. The Proposed Project will also include minor utility connections necessary to serve the new development.

The Proposed Project would include a total of 396 parking spaces. Specifically, 308 would be standard parking spaces, 6 standard accessible, 2 van accessible, 40 Electric Vehicle (EV) Capable spaces, 33 Electric Vehicle Charging Stations (EVCS) provided with Electric Vehicle Supply Equipment (EVSE), 3 EVCS standard accessible with EVSE, 1 EVCS van accessible with EVSE, and 3 spaces would be EVCS ambulatory with EVSE.

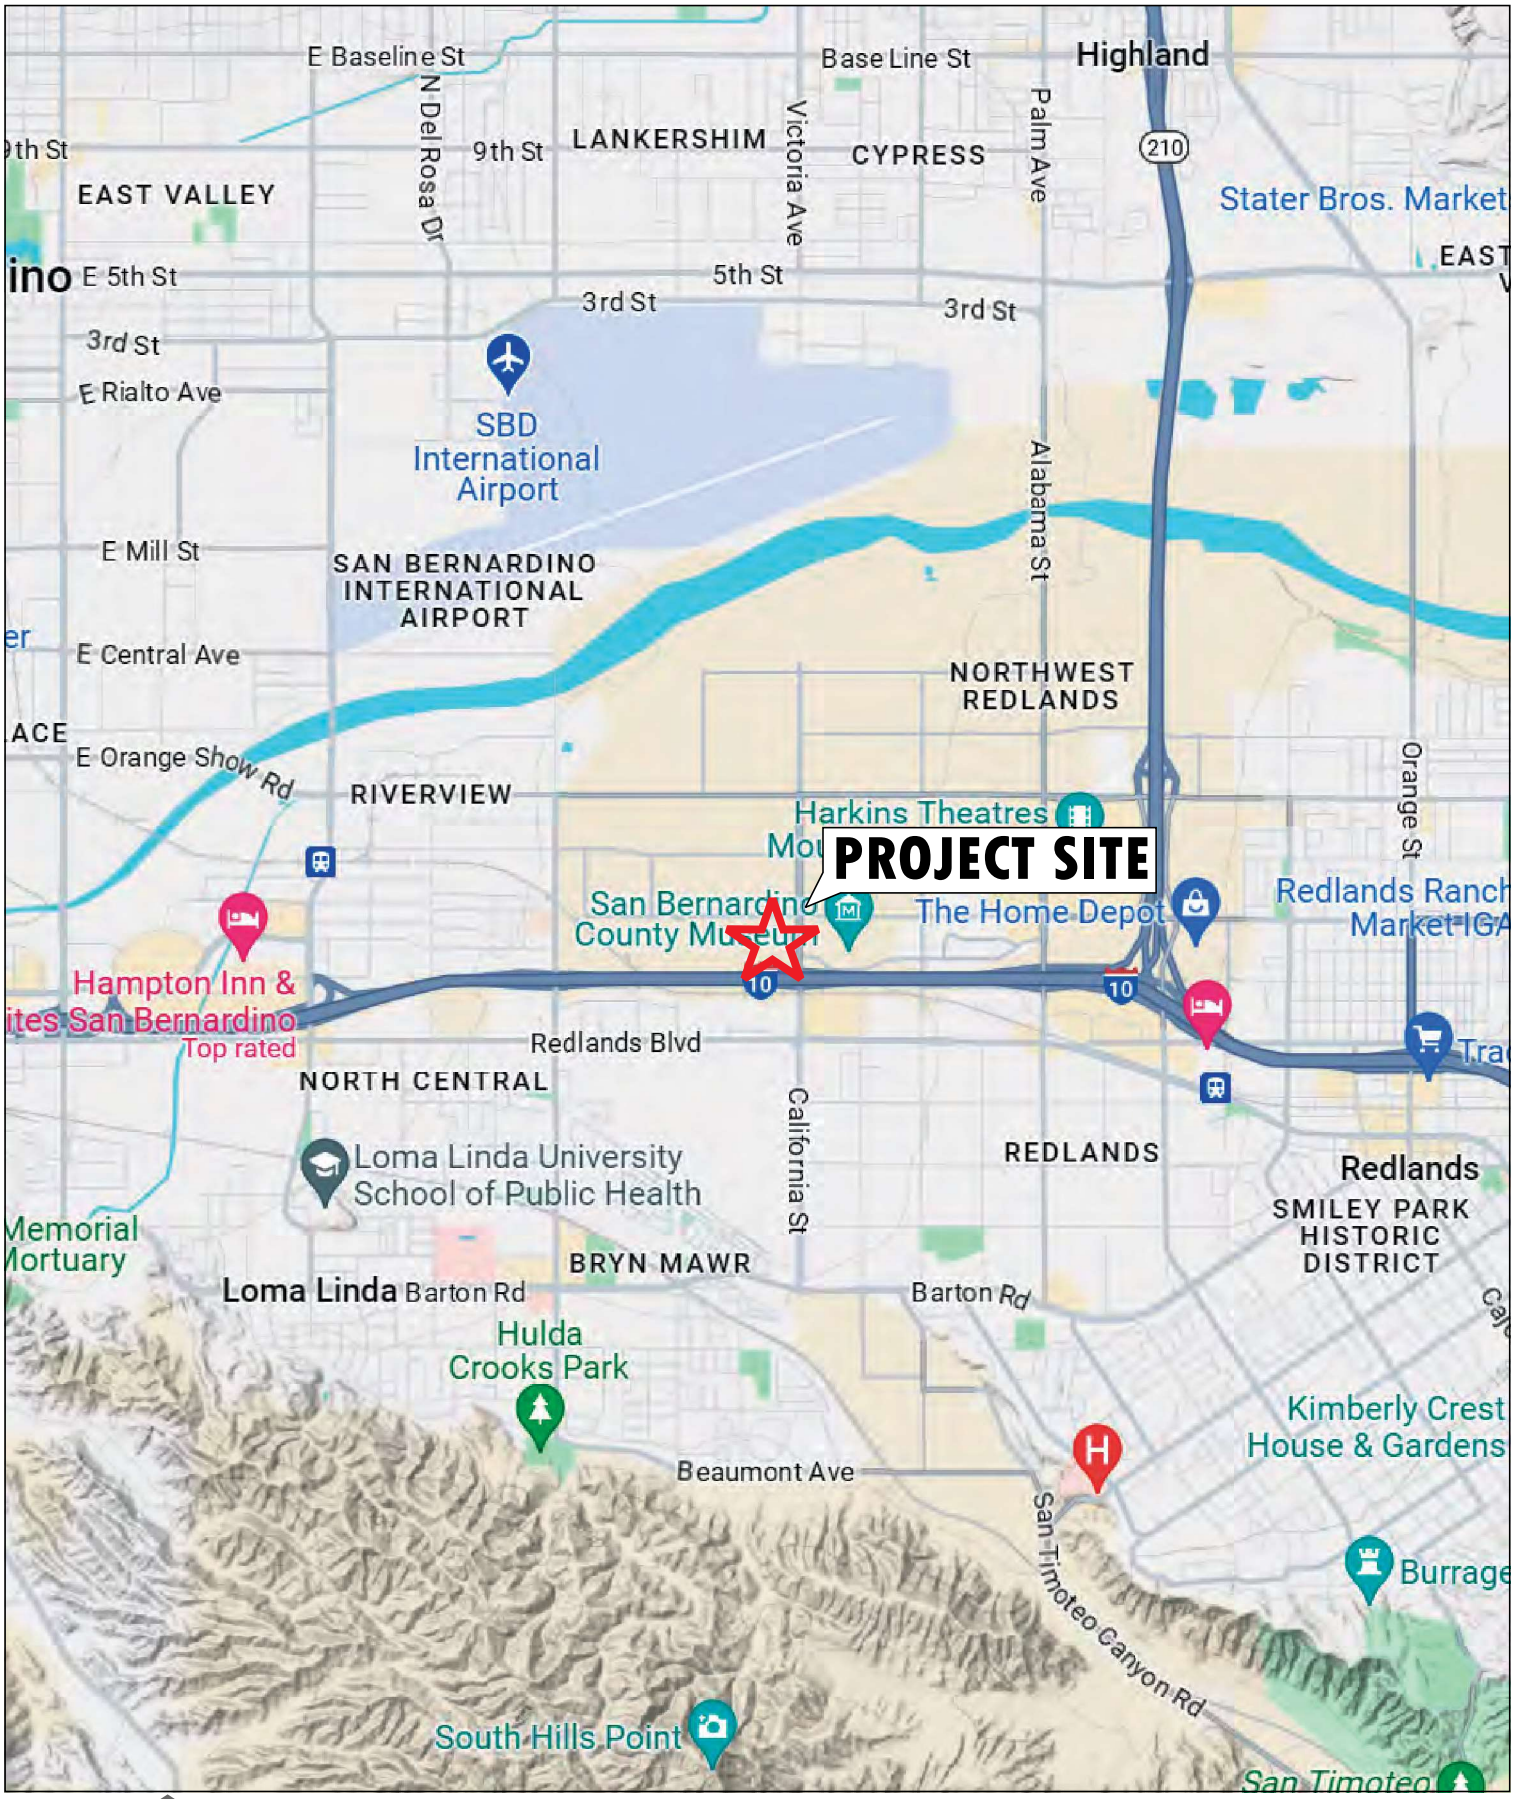
9. Surrounding Land Uses and Setting:

The Project Site includes two parcels, APNs 0292-033-11 and -13, encompassing approximately 16 acres. The site was formerly developed as the Splash Kingdom amusement park, which was demolished in 2021, and currently features the remains of the former water park's abandoned attractions and structures.

The Project Site is located in an area primarily associated with commercial, industrial, and agricultural uses. It is surrounded by commercial development and industrial distribution centers to the north and west. Offices, commercial, medical, and institutional uses are located to the east. The I-10 and Metrolink route is directly south of the Project Site, with an orange grove and gas station occurring beyond I-10.

The Project Site and surrounding parcels are located in the East Valley Corridor Specific Plan area. The Project Site has a land use designation of Commercial/Industrial and a specific plan designation of East Valley – Special Development (EV/SD) (refer to table below for additional information).

	Land Use	General Plan	Zoning
Project Site	**Vacated water park structures**	**Commercial/Industrial**	**Special Development (EV/SD)**
North	Commercial and Industrial	Commercial/Industrial	Concept Plan (CP-1)
South (across I-10)	Agriculture and Commercial	Agriculture	General Commercial (EV/CG)
East	Commercial and Vacant	Commercial and Agriculture	General Commercial (EV/CG); Specific Plan 29 (SP29); and Open Space (EV/OS)
West	Industrial	Commercial/Industrial	Planned Development (PD3)



Vegetation on-site consists mainly of non-native weedy species with ornamental landscaping (introduced trees, shrubs, etc.) remaining from the abandoned water park, along the property boundaries and scattered throughout the Project Site.

10. Other public agencies whose approval is required:
Regional Water Quality Control Board, Santa Ana Region

11. Required Permits and Approvals:

- Planned Development
- Lot Line Adjustment / Merger
- Socio-Economic Cost/Benefit Study

12. Related Technical Reports (incorporated by reference): The technical studies/reports referenced and summarized herein is also available for review on the City's website (https://www.cityofredlands.org/post/environmental-documents), and are listed in the References section at the end of this Initial Study.

25. APPROXIMATE LOCATION OF TRANSFORMER PAD.

SITE PLAN GENERAL NOTES

1. THE SOILS REPORT PREPARED BY NORCAL ENGINEERING DATED 05/02/2023 PROJECT NUMBER TBD SHOULD BE A PART OF THESE CONTRACT DOCUMENTS.
2. IF SOILS ARE EXPANSIVE IN NATURE, USE STEEL REINFORCING FOR ALL SITE CONCRETE.
3. ALL DIMENSIONS ARE TO THE FACE OF CONCRETE WALL, FACE OF CONCRETE CURB OR GRID LINE U.N.O.
4. SEE "C" PLANS FOR ALL CONCRETE CURBS, GUTTERS AND SWALES.
5. THE ENTIRE PROJECT SHALL BE PERMANENTLY MAINTAINED WITH AN AUTOMATIC IRRIGATION SYSTEM, PRIOR TO INSTALLATION & AT LEAST 60 DAYS BEFORE BLDG. COMPLETION.
6. SEE "C" DRAWINGS FOR POINT OF CONNECTIONS TO OFF-SITE UTILITIES. CONTRACTOR SHALL VERIFY ACTUAL UTILITY CONTRACTOR SHALL VERIFY ACTUAL UTILITY LOCATIONS.
7. PROVIDE POSITIVE DRAINAGE AWAY FROM BLDG. SEE "C" DRAWINGS.
8. CONTRACTOR TO REFER TO "C" DRAWINGS FOR ALL HORIZONTAL CONTROL DIMENSIONS. SITE PLANS ARE FOR GUIDANCE AND STARTING LAYOUT POINTS.
9. SEE "C"DRAWINGS FOR FINISH GRADE ELEVATIONS.
10. CONCRETE SIDEWALKS TO BE A MINIMUM OF 4" THICK W/ TOOLED JOINTS AT 6' O.C. EXPANSION/CONSTRUCTION JOINTS SHALL BE A MAXIMUM 12' EA. WAY W/ 1:20 MAX. SLOPE. EXPANSION JOINTS TO HAVE COMPRESSIVE EXPANSION FILLER MATERIAL OF 1/4". SEE "L" DRAWINGS FOR FINISH.
11. ALL PARKING AREA SHALL PROVIDE A LANDSCAPED PLANTER OF A MINIMUM WIDTH OF SEVEN FEET WIDE AT THE ENDS OF ALL PARKING AISLES. ALL PLANTING AREAS SHALL HAVE ROUND CORNERS INSTEAD OF 90 DEGREE CORNERS AND BE SHAPED TO PERMIT VEHICLE TURN MOVEMENTS. TWO FEET OF CURB IS REQUIRED. SEE DETAIL "D"
12. PAINT CURBS AND PROVIDE SIGNS TO INFORM OF FIRE LANES AS REQUIRED BY FIRE DEPARTMENT.
13. CONSTRUCTION DOCUMENTS PERTAINING TO THE LANDSCAPE AND IRRIGATION OF THE ENTIRE PROJECT SITE SHALL BE SUBMITTED TO THE BUILDING DEPARTMENT AND APPROVED BY PUBLIC FACILITIES DEVELOPMENT PRIOR TO ISSUANCE OF BUILDING PERMITS.
14. PRIOR TO FINAL CITY INSPECTION, THE LANDSCAPE ARCHITECT SHALL SUBMIT A CERTIFICATE OF COMPLETION TO PUBLIC FACILITIES DEVELOPMENT.
15. NOT USED
16. ALL LANDSCAPE AND IRRIGATION DESIGNS SHALL MEET CURRENT CITY STANDARDS AS LISTED IN GUIDELINES OR AS OBTAINED FROM PUBLIC FACILITIES DEVELOPMENT.
17. NOT USED.
18. LANDSCAPED AREAS SHALL BE DELINEATED WITH A MINIMUM SIX INCHES (6") HIGH CURB
19. APPROVED CONCEPTUAL LANDSCAPE PLAN PRIOR TO GRADING PERMIT

12. Evaluation Format:

This Initial Study is prepared in compliance with the California Environmental Quality Act (CEQA) Guidelines. This format of the study is presented as follows. The project is evaluated based upon its effect on eighteen (18) major categories of environmental factors. Each factor is reviewed by responding to a series of questions regarding the impact of the project on each element of the overall factor. The Initial Study Checklist provides a formatted analysis that provides a determination of the effect of the project on the factor and its elements. The effect of the project is categorized into one of the following four categories of possible determinations:

Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact

Substantiation is then provided to justify each determination. One of the four following conclusions is then provided as a summary of the analysis for each of the major environmental factors.

1. Therefore, no impacts are identified or anticipated, and no mitigation measures are required.
2. Therefore, no significant adverse impacts are identified or anticipated, and no mitigation measures are required.
3. Possible significant adverse impacts have been identified or anticipated and the following mitigation measures are required as a condition of project approval to reduce these impacts to a level below significant. The required mitigation measures are: (List mitigation measures).
4. Significant adverse impacts have been identified or anticipated. An Environmental Impact Report (EIR) is required to evaluate these impacts, which are: (List the impacts requiring analysis within the EIR).

At the end of the analysis the required mitigation measures are restated and categorized as being either self- monitoring or as requiring a Mitigation Monitoring and Reporting Program.

1.2 ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is "Potentially Significant Impact" as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Agriculture & Forestry Resources	☐ Air Quality
☒ Biological Resources	☒ Cultural Resources	☐ Energy
☒ Geology/Soils	☐ Greenhouse Gas Emissions	☐ Hazards & Hazardous Materials
☐ Hydrology/Water Quality	☐ Land Use / Planning	☐ Mineral Resources
☐ Noise	☐ Population / Housing	☐ Public Services
☐ Recreation	☐ Transportation	☒ Tribal Cultural Resources
☐ Utilities / Service Systems	☐ Wildfire	☐ Mandatory Findings of Significance

1.3 ENVIRONMENTAL DETERMINATION

On the basis of this Initial Study, the City of Redlands Environmental Review Committee finds:

☐ I find that the Proposed Project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☒ I find that although the Proposed Project would have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the Proposed Project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the Proposed Project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect: 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the Proposed Project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the Proposed Project, nothing further is required.

ENVIRONMENTAL CHECKLIST FORM

I. AESTHETICS – Would the project:

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☒	☐
b) Substantially damage scenic resources, including but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☐	☒
d) Create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area?	☐	☐	☒	☐

a) **Less Than Significant.** Scenic vistas in the General Plan Planning Area consist of the scenic corridors and views to and from the open spaces, canyonlands, hillsides, groves, and the San Bernardino Mountains.[1] The East Valley Corridor Specific Plan (EVCSP) concludes that the mountain background will be maintained and should be enhanced by landscaping and well-designed development. The Proposed Project would provide 82,104 SF of landscape. The Project Site was previously developed as a recreational water park until 2018; the tallest structures that existed on-site are estimated to have exceeded the maximum building height of the Proposed Project which would be 49 feet from grade. The Proposed Project would be redeveloped as a warehouse facility in compliance with development standards including building height restrictions, established in the General Plan and the EV/SD zoning district. Therefore, no significant adverse impacts are identified or anticipated, and no mitigation measures are required.

b) **No Impact**. As previously stated, the Project Site is currently an abandoned developed lot which was utilized as an amusement park until 2018. The nearest State Scenic highway is I-210,[2] located approximately 1.5 miles east of the Project Site. The land between the Project Site and I-210 is completely developed. No rock outcroppings or historic buildings are located within the Project Site; resources are limited to the remaining ornamental trees which are not being cared for. Therefore, implementation of the Proposed Project would

not substantially degrade scenic resources within a state scenic highway. No impacts are identified or anticipated, and no mitigation measures are required.

c) **No Impact.** The Proposed Project is redevelopment of the Project Site as a warehouse facility. The Proposed Project proposes 82,104 SF of landscaping. Therefore, the general aesthetics of the site would change from an abandoned and neglected prior use to a new industrial building with site landscaping. These changes would be considered beneficial. Moreover, the Project Site is located in a developed area that includes existing industrial and commercial uses. The Project Site is currently zoned EV/SD. The Proposed Project would be an allowable use within this zoning district. Therefore, no impacts are identified or anticipated, and no mitigation measures are required.

d) **Less than Significant**. The Proposed Project would not generate a significant amount of light and glare when compared to the surrounding area, which includes streetlights and security and other lighting associated with existing land uses. Currently, the Project Site consists of a developed lot which was utilized as a recreational water park until vacated in 2018. The Proposed Project would redevelop the Project Site as a warehouse facility. The design and placement of light fixtures within the future development would be reviewed for consistency with City standards and subject to City approval. City Standards require shielding, diffusing, or indirect lighting to avoid glare. Lighting would be selected and located to confine the area of illumination to be within the Project Site. Since lighting would be designed to prohibit spill-over onto adjacent residential development to the south, east and west, no significant impacts would result. Therefore, no significant adverse impacts are identified or anticipated, and no mitigation measures are required.

II. AGRICULTURE AND FORESTRY RESOURCES

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the	☐	☐	☒	☐

California Resources Agency, to non-agricultural use?				
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104 (g))?	☐	☐	☐	☒
d) Result in loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒

a) **Less than Significant**. The Project Site is identified as "Urban and Built-Up Land."[3] Urban and Built-up Land is used for residential, industrial, commercial, construction, institutional, public administration, railroad and other transportation yards, and other developed purposes.[4] As no Prime or Unique Farmlands or Farmland of Statewide Importance are located within or adjacent to the Project Site, no conversion of such farmlands will occur. Impacts related to this issue would be less than significant and no mitigation is required.

b) **No Impact.** Williamson Act contracts restrict land development of contract lands.[4] These contracts typically limit land use to agriculture, recreation, and open space, unless otherwise stated in the contract. The Project Site is currently zoned Special Development (EV/SD). It is not zoned for agricultural use is not enrolled in a Williamson Act contract.[5] Implementation of the Proposed Project would not interfere with such a contract. Therefore, no impacts are identified or anticipated, and no mitigation measures are required.

c) **No Impact.** The Project Site has a land use designation of Commercial/Industrial and is currently zoned Special Development (EV/SD). The Proposed Project would not Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources

[3] California Department of Conservation. California Important Farmland Finder. Accessed December 8, 2023.
[4] California Department of Conservation. Important Farmland Categories. Accessed December 8, 2023.
[5] Dyett and Bhatia. City of Redlands General Plan Update and Climate Action Plan EIR. July 21, 2017. Figure 3.2-1: Farmland Classifications.

Code section 12220(g), timberland. The Project Site does not contain forestland. Therefore, no impacts are identified or anticipated, and no mitigation measures are required.

d) **No impact.** The Project Site does not support, nor is it near any forest land. Therefore, implementation of the Proposed Project would not convert forest land to non-forest use. No impacts are identified or anticipated, and no mitigation measures are required.

e) **No Impact.** The Project Site does not support agricultural or forest land uses that would be lost as a result of the Proposed Project implementation. There are no such land uses in the vicinity. Therefore, no impacts are identified or anticipated, and no mitigation measures are required.

III. AIR QUALITY

Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:

	Potentially Significant Impact	Less than Significant with Mitigation.	Less than Significant	No Impact
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☒	☐
c) Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☒	☐
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☒	☐

a) **Less than Significant.** Urban Crossroads prepared an Air Quality Impact Analysis for the Proposed Project in October 2023 which is available for review on the City's website (https://www.cityofredlands.org/post/environmental-documents), and at the Development Services Department, 35 Cajon St Suite 20, Redlands, and is summarized herein (see Appendix A). The Project Site is located in the South Coast Air Basin (SCAB). The South Coast Air Quality Management District (SCAQMD) has jurisdiction over air quality issues and regulations within the SCAB. The Air Quality Management Plan (AQMP) for the SCAB establishes a program of rules and regulations administered by the SCAQMD to obtain attainment of the state and federal ambient air quality standards. The most recent

AQMP (AQMP 2016) was adopted by the SCAQMD on March 3, 2017.[6] The 2016 AQMP identifies strategies and control measures needed to achieve attainment of the 8-hour ozone standard and federal annual and 24-hour standard for PM2.5 in the SCAB. Consistency with the AQMP is determined through evaluation of whether a project would exceed the estimated emissions used as the basis of the AQMP, which are based, in part, on population projections developed by the Southern California Association of Governments (SCAG). The SCAG forecasts are based on local general plans and other related documents, such as housing elements, that are used to develop population projections and traffic projections. Consistency with the AQMP for general development projects is determined by demonstrating compliance with local land use plans and/or employment projections. A project is non-conforming if it conflicts with or delays implementation of any applicable attainment or maintenance plan. A project is conforming if it complies with all applicable SCAQMD rules and regulations, complies with all proposed control measures that are not yet adopted from the applicable plan(s), and is consistent with the growth forecasts in the applicable plan(s) (or is directly included in the applicable plan).

The Proposed Project does not involve amendments to land use or zoning designations and therefore is accounted for in the AQMP. Additionally, because the site was previously developed with an amusement park, the Air Quality Impact Analysis utilized the past emissions values as the existing condition baseline for the Proposed Project's new development emissions.[7]

Construction of the Proposed Project would involve the use of off-road equipment, haul trucks, and worker commute trips. Assumptions for off-road equipment emissions in air quality plans are developed based on hours of activity and equipment population reported to CARB for rule compliance. The use of construction equipment in the AQMP is estimated for the region on an annual basis, and construction-related emissions are estimated as an aggregate in the AQMP. Since construction is limited to short-term activities and construction activities would not involve unusual characteristics that would necessitate the use of extensive off-road equipment usage, the Proposed Project would not increase the assumptions for off-road equipment use in the AQMP. Construction activities would also comply with the applicable SCAQMD rules and regulations, including Rule 401 (Visible Emissions), Rule 402 (Nuisance), Rule 403 (Fugitive Dust), and Rule 1113 (Architectural Coating), which are developed to implement AQMP control measures. In addition, the Proposed Project would result in emissions that would be below the SCAQMD regional and localized thresholds during construction, as concluded in responses III) b and III) c below. The thresholds were developed to assist the region in attaining applicable state and federal ambient air quality standards; therefore, the Proposed Project would not result in an increase in the frequency or severity of existing air quality violations and would not have the potential to cause or affect a violation of the ambient air quality standards. Therefore, construction activities would not conflict with the applicable air quality plan.

[6] City of Redlands. General Plan Update and Climate Action Plan. *Environmental Impact Report*. July 21, 2017. Accessed December 18, 2023.
[7] Urban Crossroads. Air Quality Impact Analysis and Greenhouse Gas Analysis. October 12, 2023.

The Proposed Project would not involve any uses that would increase population beyond that considered in the General Plan. The Proposed Project is consistent with the General Plan land use designation of Commercial/Industrial. As such, the Proposed Project's operational activities would not involve any uses that would increase population or vehicle trips beyond that considered in the General Plan, which was used to develop the assumptions in the 2016 AQMP. Therefore, the Proposed Project's operational emissions have been accounted for in the AQMP and would not exceed the current assumptions used to develop the AQMP. As shown below, the Proposed Project would generate operational emissions below the SCAQMD regional and localized thresholds. Therefore, the Proposed Project's operational emissions would not result in an increase in the frequency or severity of existing air quality violations and would not have the potential to cause or affect a violation of the ambient air quality standards.

No significant impacts are identified or anticipated, and no mitigation measures are required.

b) **Less than Significant.** By its very nature, air pollution is largely a cumulative impact. The nonattainment status of regional pollutants is a result of past and present development within the SCAB, and this regional impact is cumulative rather than being attributable to any one source. A project's emissions may be individually limited, but cumulatively considerable when taken in combination with past, present, and future development projects. Projects that would not exceed the thresholds of significance would not contribute a cumulatively considerable amount of criteria air pollutant emissions to the region's emissions profile and would not impede attainment and maintenance of ambient air quality standards.

Construction

Emissions were estimated using the California Emissions Estimator Model (CalEEMod), version 2022. Construction emissions are considered short-term, temporary emissions but have the potential to result in a significant impact on air quality. Construction activities for the Proposed Project would generate temporary emissions of precursors to ozone (VOC and NOX), CO, SO_X, PM_{10}, and $PM_{2.5}$. Mobile equipment, such as off-road construction equipment and on-road motor vehicles, generate exhaust emissions of VOC and NOX, CO, SO_X, PM_{10}, and $PM_{2.5}$. Fugitive particulate matter dust emissions (PM_{10}, and $PM_{2.5}$) are also associated with site preparation/ grading activities as well as travel on unpaved and paved roads and vary as a function of parameters such as soil silt content, soil moisture, wind speed, acreage of disturbance area, and miles traveled by construction vehicles.

Construction is anticipated to occur between July 2024 through May 2025. The Air Quality Impact analysis also estimated the total number of construction-related vehicle trips to and from the Project Site (as described in Table 1). Using these assumptions, daily worker trips would range between 15 to 224 trips.

Table 1
Construction Trip Assumptions

Phase Name	Worker Trips Per Day	Vendor Trips Per Day	Total Hauling Trips
Demolition	15	5	35
Site Preparation	18	3	0
Grading	20	8	196
Building Construction	150	43	0
Paving	15	0	0
Architectural Coating	30	0	0

Source: Air Quality Impact Analysis

Additionally, as shown in Table 2, construction-related emissions would not exceed the SCAQMD maximum daily thresholds of significance for any criteria pollutants. Consistent with SCAQMD Rule 403, the analysis assumed the Proposed Project would implement typical best management practices (BMPs) during construction, such as appropriate dust-abatement measures (watering exposed areas at least twice per day and limiting vehicle speeds to 15 miles per hour on unpaved roads) to comply with SCAQMD Rule 401 (Visible Emissions), Rule 402 (Nuisance), and Rule 403 (Fugitive Dust).

Table 2
Construction-Related Maximum Daily Emissions

Year/Description	Emissions (lbs/day)					
	VOC	NO_x	CO	SO_x	PM_{10}[a]	$PM_{2.5}$[a]
Summer						
2024	3.92	51.63	41.50	0.15	8.37	4.22
2025	63.51	22.28	41.65	0.05	3.79	1.50
Winter						
2024	2.07	14.64	24.67	0.04	2.89	1.08
2025	63.45	22.43	37.91	0.05	3.79	1.50
Maximum Daily Emissions	**63.51**	**51.63**	**41.65**	**0.15**	**8.37**	**4.22**
SCAQMD Threshold (lbs/day)	75	100	550	150	150	55
Exceeds Threshold	**No**	**No**	**No**	**No**	**No**	**No**

Source CalEEMod 2022

Notes: [a]Emission estimates assume implementation of fugitive dust control requirements per SCAQMD Rule 403. VOC = volatile organic compounds; NO_x = nitrogen oxides; CO = carbon monoxide; SO_x = sulfur oxides; PM_{10} = suspended particulate matter less than 10 micrometers in diameter; $PM_{2.5}$ = fine particulate matter less than 2.5 micrometers in diameter; lbs/day = pounds per day.

As shown in Table 2, both summer and winter season construction emissions are below SCAQMD thresholds. The Proposed Project does not exceed applicable SCAQMD regional thresholds during construction activities. Therefore, no significant adverse impacts are identified or anticipated, and no mitigation measures are required.

Operation

Mobile source emissions would be associated with vehicle trips to and from the site by future employees and contractors. Trip generation for the Proposed Project was based on information provided in the Traffic Analysis, dated December 14, 2023, provided by Urban Crossroads which is available for review on the City's website (https://www.cityofredlands.org/post/environmental-documents), and at the Development Services Department, 35 Cajon St Suite 20, Redlands, and is summarized herein (see Appendix B). The Proposed Project would be anticipated to generate approximately 842 total daily trips, with 648 consisting of passenger vehicles and 194 of truck trips. Since mobile source emissions between passenger vehicles and trucks vary, and the trip distances between the two vehicle types will also differ, the Air Quality study analyzed these two sources of emissions to estimate the total impact of mobile source emissions. As shown in Table 3 and 4, project operational emissions would not exceed the SCAQMD regional thresholds of significance.

Table 3
Summer Operational Emissions Summary
(Pounds Max Per Day)

Source	VOC	NO_x	CO	SO_x	PM_{10}	$PM_{2.5}$
Mobile Source	3.05	19.40	43.55	0.22	12.33	3.39
Area Source	10.73	0.13	15.55	0.00	0.03	0.02
Total Maximum Daily Emissions	**13.78**	**19.54**	**59.10**	**0.22**	**12.36**	**3.41**
Existing Emissions	6.21	7.49	71.59	0.16	13.52	3.51
Net Emissions (Proposed – Existing)	**7.57**	**12.04**	**-12.48**	**0.06**	**-1.16**	**-0.10**

Exceed Threshold	**No**	**No**	**No**	**No**	**No**	**No**

Source: CalEEMod 2022

As shown in Table 3, the summer operational emissions are below SCAQMD thresholds. The Proposed Project would not exceed applicable SCAQMD regional thresholds during construction activities. The Proposed Project would not violate any air quality standard or contribute substantially to an existing or projected air quality violation. Therefore, no significant adverse impacts are identified or are anticipated, and no mitigation measures are required.

Table 4
Winter Operational Emissions Summary
(Pounds Max Per Day)

Source	VOC	NO_x	CO	SO_x	PM_{10}	$PM_{2.5}$
Mobile Source	2.51	15.79	32.57	0.17	10.06	2.75
Area Source	9.93	0.09	10.65	0.00	0.02	0.01

Source	VOC	NO_x	CO	SO_x	PM_{10}	$PM_{2.5}$
Total Maximum Daily Emissions	**12.43**	**15.88**	**43.23**	**0.17**	**10.08**	**2.77**
Existing Emissions	5.76	8.08	58.27	0.15	13.52	3.51
Net Emissions (Proposed – Existing)	**6.68**	**7.79**	**-15.04**	**0.02**	**-3.45**	**-0.75**

Exceed Threshold	**No**	**No**	**No**	**No**	**No**	**No**

Source: CalEEMod 2022

As shown in Table 4, the winter operational emissions are below SCAQMD thresholds. The Proposed Project would not exceed applicable SCAQMD regional thresholds during operational activities. The Proposed Project would not violate any air quality standard or contribute substantially to an existing or projected air quality violation. Therefore, no significant adverse impacts are identified or are anticipated, and no mitigation measures are required.

c) **Less than Significant.** Air pollution does not affect every individual in the population in the same way, and some groups are more sensitive to adverse health effects than others. Land uses such as residences, schools, day care centers, hospitals, and nursing and convalescent homes are considered to be the most sensitive to poor air quality because the population groups associated with these uses have increased susceptibility to respiratory distress or, as in the case of residential receptors, their exposure time is greater than that for other land uses. Therefore, these groups are referred to as sensitive receptors. SCAQMD defines sensitive receptors as children, adults, and seniors occupying or residing in residential dwellings, schools, day care centers, hospitals, and senior-care facilities. The Project Site is approximately 0.17 miles north of an existing residential development. Other sensitive receptors located near the Project Site would be Mission Elementary School approximately 0.3 miles south of the project.

Health Risk Assessment (HRA)

A Mobile Source Health Risk Assessment dated October 12, 2023, was prepared by Urban Crossroads for the Proposed Project which is available for review on the City's website (https://www.cityofredlands.org/post/environmental-documents), and at the Development Services Department, 35 Cajon St Suite 20, Redlands, and is summarized herein (see Appendix C). This report evaluates the potential health risk impacts associated with the development of the Project to sensitive receptors in the area, including residents and adjacent workers. Health risks are those that may occur as a result of exposure to Toxic Air Contaminants (TACs) including diesel particulate matter (DPM) from heavy-duty diesel trucks accessing the site.

Construction

The existing nearby land use with the greatest potential exposure to Project construction-source DPM emissions is an existing residential development which is located approximately 0.17 miles south of the Project Site. At the maximally exposed individual

receptor (MEIR), the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 0.30 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable threshold of 1.0. The Proposed Project would not cause a significant human health or cancer risk to adjacent land uses as a result of Project construction activity. All other receptors during construction activity would experience less risk than what is identified for this location.

Operations

Residential Exposure Scenario:

As Previously mentioned, the land use with the greatest potential exposure to Project construction-source DPM emissions is an existing residential development which is located approximately 0.17 miles south of the Project Site. At the maximum exposed individual resident (MEIR), the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 0.15 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0. The Proposed Project would not cause a significant human health or cancer risk to adjacent land uses as a result of Project operational activity.

Worker Exposure Scenario:

The worker receptor land use with the greatest potential exposure to Proposed Project operational source DPM emissions is an adjacent industrial development, located approximately 105 feet west of the Project Site. At the MEIW, the maximum incremental cancer risk impact is 0.12 in one million which is less than the SCAQMD's threshold of 10 in one million. Maximum non-cancer risks at this same location were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0. The adjacent industrial development is the worker receptor that would experience the highest concentrations of DPM during Proposed Project's operation due to meteorological conditions at the site. All other worker receptors in the vicinity of the project would be exposed to less emissions and therefore less risk than the MEIW identified herein. Therefore, the Project would not be anticipated to cause a significant human health or cancer risk to nearby workers.

School Child Exposure Scenario:

The nearest school is Mission Elementary School, located approximately 1,631 feet south of the Project Site. The maximally exposed individual school child (MEISC) is the school receptor that would experience the highest modeled concentrations of DPM, and thus the highest risk. At the MEISC, the maximum incremental cancer risk impact attributable to the Project is calculated to be 0.01 in one million, which is less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to the Project were calculated to be <0.01, which would not exceed the applicable significance threshold of 1.0. Because all other modeled school receptors would be exposed to lower concentrations of DPM, all other school receptors in the vicinity of the of the Project would be exposed to less emissions and therefore less risk than the MEISC identified herein.

Therefore, the Proposed Project would not be anticipated to cause a significant human health or cancer risk to nearby school children.

Operation of the Proposed Project would not exceed the thresholds of significance. Therefore, the Proposed Project would not expose sensitive receptors to substantial pollutant concentrations and this impact would be less than significant.

No significant impacts are identified or anticipated, and no mitigation measures are required.

d) **Less than Significant.** The occurrence and severity of other emissions, such as those leading to odor impacts, depend on numerous factors, including the nature, frequency, and intensity of the source; wind speed and direction; and the presence of sensitive receptors. While offensive odors rarely cause any physical harm, they still can be very unpleasant, leading to considerable distress and often generating citizen complaints to local governments and regulatory agencies. Typical facilities that generate odors include wastewater treatment facilities, sanitary landfills, composting facilities, petroleum refineries, chemical manufacturing plants, agriculture, and food processing facilities (SCAQMD 2005). Construction activities associated with the Proposed Project could result in short-term odor emissions from exhaust associated with construction equipment. The Proposed Project would utilize typical construction techniques, and the odors would be typical of most construction sites and temporary in nature. Project operations would not include any land uses identified by the SCAQMD as being associated with the generation of objectionable odors. The Project Site has been fully disturbed and developed, and has been vacant since 2018. The site is intended to be utilized as a warehouse, which is not a use that is prone to emit odors that would adversely affect a substantial number of people.

Therefore, no significant adverse impacts are identified or are anticipated, and no mitigation measures are required.

IV. BIOLOGICAL RESOURCES

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact
Would the project:				
a) Have substantial adverse effects, either directly or through habitat modifications, on any species identified as a candidate, sensitive or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☒	☐	☐
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and	☐	☐	☐	☒

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact
regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?				
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☒	☐
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☒	☐
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional or state habitat conservation plan?	☐	☐	☐	☒

a) **Less than Significant.** The Project Site has been subjected to a high level of disturbance as it is the former Splash Kingdom amusement park site (currently non-operational).

There are 19 species that are State or federally listed as rare, threatened, or endangered species that have been or were identified as potentially present within the General Plan Planning Area.[8] Only the following eight species are known to either be present or have a moderate to high probability of occurring: Nevin's barberry; Slender-horned spineflower; Santa Ana River woolly star; Southwestern willow flycatcher; California gnatcatcher; Least Bell's vireo; San Bernardino kangaroo rat; and Stephens' kangaroo rat.[9] These species are present or have a moderate to high probability of occurring within the General Plan Planning area due to the presence of suitable habitat, mainly along the Santa Ana River, Mill Creek, or San Timoteo Creek. The Project Site does not occur within or near these identified suitable habitats. The Project Site is not located in an area containing critical habitats for the Santa Ana Sucker, the Southern Willow Flycatcher, and the San Bernardino Kangaroo Rat.[10] The Arroyo toad may also be present in Redlands but has a low probability of occurring along San Timoteo Creek or other drainages in the area. The other 10 species that are listed as rare, threatened, or endangered, and that are reported from

[8] Dyett and Bhatia. City of Redlands General Plan Update and Climate Action Plan EIR. July 21, 2017
[9] Dyett and Bhatia. City of Redlands General Plan Update and Climate Action Plan EIR. July 21, 2017.
[10] Dyett and Bhatia. City of Redlands General Plan Update and Climate Action Plan EIR. July 21, 2017. Figure 3.4-2: Critical Habitat and Principal Waters.

the general vicinity of Redlands are not expected to occur within the Planning Area. According to the San Bernardino County Valley/Mountain Region Biotic Resources Overlay, the Project Site is within an area that can support suitable habitat for burrowing owl.[11]

The Project Site is surrounded by commercial development and industrial distribution centers to the north and west. Offices, commercial, medical, and institutional uses are located to the east. The I-10 and Metrolink route is directly south of the Project Site, with an agricultural orange grove and commercial gas station occurring beyond I-10. The site currently contains remnants of the former amusement park's abandoned attractions and structures.

Additionally, the ornamental vegetation that occurs on the Project Site and immediate surrounding area contains habitat suitable for nesting birds. As such, pre-construction surveys are warranted and recommended to reduce the potential impacts to nesting birds, should project construction occur during the bird nesting season. Therefore, possible significant adverse impacts have been identified or are anticipated and the following mitigation measure is required as a condition of project approval to reduce these impacts to a level below significant.

Mitigation Measure BIO-1:

Preconstruction Nesting Bird Survey **-** If construction or other Project activities are scheduled to occur during the nesting bird season (February 1 through August 31), a preconstruction nesting bird survey shall be conducted by a qualified avian biologist to ensure that active bird nests will not be disturbed or destroyed. The survey shall be completed no more than three days prior to initial ground disturbance. The nesting bird survey shall include the Project Site and adjacent areas where Project activities have the potential to affect active nests, either directly or indirectly, due to construction activity, noise, human activity, or ground disturbance. If an active nest is identified, a qualified avian biologist shall establish an appropriately sized non-disturbance buffer around the nest using flagging or staking. Construction activities shall not occur within any non-disturbance buffer zones until the nest is deemed inactive by the qualified avian biologist. If initial ground-disturbing activities are scheduled to occur during the nesting bird season, then a biological monitor shall be present during all vegetation removal activities to ensure no impacts to nesting birds occur.

The implementation of Mitigation Measure BIO-1 would ensure that potential impacts to candidate, sensitive or special status species are avoided by the project. Therefore, the Proposed Project would not involve habitat modifications or activities that would have adverse effects on biological resources.

b) **No Impact.** Riparian/Riverine areas are lands which contain habitat dominated by trees, shrubs, persistent emergent vegetation, or emergent mosses and lichens, which occur close

[11] http://www.sbcounty.gov/Uploads/lus/BioMaps/vly_mtn_all_biotic_resources_map_final.pdf

to or which depend upon soil moisture from nearby freshwater sources, or areas with freshwater flow during all or a portion of the year. Most riparian areas are designated Open Space under the General Plan, and would thus be protected from direct impacts from development.[12] The Project Site is currently designated Commercial/Industrial in the East Valley Corridor Specific Plan. As stated previously, the Project Site is highly disturbed. There is no riparian habitat or other sensitive natural community on-site. Therefore, no impacts are identified or anticipated, and no mitigation measures are required.

c) **No Impact.** The Project Site is completely disturbed from the prior use which was vacated in 2018 with various structures remaining. Additionally, the Project Site as well as the surrounding uses are within a Commercial/Industrial land use category, which would not include any wetland resources. Therefore, the Proposed Project would not have a substantial adverse effect on state or federally protected wetlands. No impacts are identified or anticipated, and no mitigation measures are required.

d) **Less than Significant.** Wildlife movement and the fragmentation of wildlife habitat are recognized as critical issues that must be considered in assessing impacts to wildlife. Habitat fragmentation is the division or breaking up of larger habitat areas into smaller areas that may or may not be capable of independently sustaining wildlife and plant populations. Habitat linkages provide connections between larger habitat areas that are separated by development. Wildlife corridors are similar to linkages but provide specific opportunities for animals to disperse or migrate between areas.

The San Bernardino County Land Use Plan Open Space Element depicts wildlife corridors within the Valley and Mountain Areas. According to the Land Use Plan, the Project Site has not been identified as occurring within a Wildlife Corridor.[13] The Project Site is located in a developed area mixed with industrial and commercial uses. It is surrounded by industrial and commercial uses to the north, east, and west, and the I-10 freeway, residential and commercial uses exist to the south of the Project Site. The Project Site and its immediate vicinity are not suitable for facilitating the movement of fish or wildlife. Therefore, no significant impacts are identified or anticipated, and no mitigation measures are required.

e) **Less than Significant.** The Project Site currently has remnant ornamental trees remaining from the prior water park. The Proposed Project has a landscape plan that would include approximately 82,104 sf of new irrigated landscaping along the northern, eastern, and southern property lines. Additionally, the Proposed Project would be required to abide by the City of Redlands Municipal Code Chapter 12.52, describing trees and tree protection along streets and in public places. Therefore, with the adherence to Municipal Code Chapter 12.52, no significant impacts would be identified or anticipated, and no mitigation measures are required.

f) **No Impact.** The City of Redlands General Plan and the California Department of Fish and Wildlife's California Natural Community Conservation Plans do not identify the Project

[12] Dyett and Bhatia. City of Redlands General Plan Update and Climate Action Plan EIR. July 21, 2017.
[13] San Bernardino County Land Use Plan. General Plan Open Space Element. Accessed December 20, 2023.

Site, nor the vicinity to be within a Habitat Conservation Plan.[14] Additionally, the Proposed Project would not conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state Habitat Conservation Plan because at present, there are no adopted regional HCPs or natural community conservation plans within Redlands.[15] Therefore, no impacts are identified or anticipated, and no mitigation measures are required.

V. CULTURAL RESOURCES

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact
Would the project				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	☐	☒	☐	☐
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	☐	☒	☐	☐
c) Disturb any human remains, including those interred outside of formal cemeteries?	☐	☒	☐	☐

a, b) **Less than Significant with Mitigation.** A Phase I Cultural Resources Survey and Paleontological Assessment dated October 18, 2023, was conducted by BFSA Environmental Services for the Proposed Project, and is available for review on the City's website (https://www.cityofredlands.org/post/environmental-documents), and at the Development Services Department, 35 Cajon St Suite 20, Redlands, and is summarized herein (see Appendix D) . The Project Site is situated within the broad, fault-bounded alluvial valley of the Santa Ana Wash between the San Bernardino Mountains to the north and the San Timoteo Badlands to the south. The project overlies middle Holocene young axial-valley deposits. These sedimentary deposits are characterized as fine – to coarse – grained sands and pebbly sands. An archaeological records search was conducted by BFSA at the SCCIC at CSU Fullerton.

The records search did not identify any recorded resources within the project. However, 62 resources (one prehistoric, one multicomponent, and 60 historic) were recorded within one mile of the project. The single prehistoric resource is an isolate, while the multicomponent resource is the Guachama Rancheria Site. The remaining 60 historic resources are primarily associated with the historic development of the region and are mostly comprised of built resources. The records search also indicated that a total of 43 cultural resources studies have been conducted within a one-mile radius of the project. However, none of the studies on file with the SCCIC were within the subject property.

[14] California Department of Fish and Wildlife. California Natural Community Conservation Plans. August 2023. Accessed December 20, 2023.
[15] Dyett and Bhatia. City of Redlands General Plan Update and Climate Action Plan EIR. July 21, 2017.

The Project Site currently consists of a developed lot, which has been vacated and cleared of buildings. The Proposed Project would result in redevelopment of the Project Site with a warehouse. Although the Project Site has previously been fully graded, the Proposed Project would involve new grading and other earthwork that could potentially unearth unknown historic and archeological resources. To ensure potential impacts to these resources are reduced to a less than significant level, the following mitigation measure shall be implemented:

Mitigation Measure CR-1:

In the event that cultural resources are discovered during project activities, all work in the immediate vicinity of the find (within a 60-foot buffer) shall cease and a qualified archaeologist meeting Secretary of Interior standards shall be hired to assess the find. Work on the other portions of the project outside of the buffered area may continue during this assessment period. If significant pre-contact and/or historic-era cultural resources, as defined by CEQA (as amended, 2015), are discovered and avoidance cannot be ensured, the archaeologist shall develop a Monitoring and Treatment Plan. The archaeologist shall monitor the remainder of the project and implement the Plan accordingly.

c) **Less than Significant with Mitigation.** Construction activities, particularly grading, soil excavation and compaction, could adversely affect unknown buried human remains. The discovery of human remains is always a possibility during ground-disturbing activities. Therefore, possible significant adverse impacts have been identified or anticipated and Mitigation Measure CR-2 is required to reduce these impacts to a less than significant level.

Mitigation Measure CR-2:

If human remains are discovered, work shall halt in that area until a determination can be made regarding the provenance of the human remains, and the following procedures as set forth in CEQA Section 15064.5(e), the California Public Resources Code (Sec. 5097.98), and the State Health and Safety Code (Sec. 7050.5) shall be undertaken. All work shall be directed away from the location of the discovery and any nearby area reasonably suspected of overlaying adjacent human remains until a determination can be made by the medical examiner. The medical examiner will determine if the remains are or are most likely to be of Native American origin. If human remains are determined to be Native American, the medical examiner will notify the NAHC within 24 hours. If human remains are not Native American, the medical examiner will determine the appropriate course of action with the city staff (Public Resources Code 5097.98).

Implementation of Mitigation Measures CR-1 and CR-2 would ensure that no significant impacts to historical and archaeological resources occur.

VI. ENERGY

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact
Would the project:				
a) Result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy, or wasteful use of energy resources, during project construction or operation?	☐	☐	☒	☐
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☒	☐

a) **Less than Significant.**

Electricity
Southern California Edison (SCE) provides electricity to the area of the Project Site. Under the prior use as a water park, the Project Site received service from SCE; although demand for energy during peak operations has not been determined. The analysis for the Proposed Project therefore utilized CalEEMod defaults which incorporates the application of the 2005, 2008, 2013, 2016, and 2019 Title 24 standards to the building's design. The Air Quality Study prepared by Urban Crossroads identified that the estimated electricity consumption would be approximately 2,707,264 kilowatt hours (kWh) per year for the Proposed Project. The industry sector of the Southern California Edison planning area consumed approximately 17,353 GWh of electricity in 2022.[16] The increase in electricity demand from the project would result in approximately 2.71 GWh per year, which would represent a 0.02 percent of the overall 2022 SCE industry consumption. Therefore, projected electrical demand would not significantly impact SCE's level of service.

Based on information provided by the Project applicant, the site is not expected to utilize natural gas for any energy consumption. It should be noted that the Project would include solar photovoltaic with the capability to off-set 100 percent of building electricity demand. Therefore, no significant adverse impacts are identified or anticipated, and no mitigation measures are required.

b) **Less than Significant.** The Proposed Project would be required to comply with the California Building Code (CBC) and California Green Building Standards Code (CALGreen Code) pertaining to energy and water conservation standards in effect at the time of construction. The Proposed Project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency and therefore no significant impacts are anticipated, and no mitigation measures are recommended Impacts would be less than significant and no mitigation is required.

[16]California Energy Commission. https://ecdms.energy.ca.gov/Default.aspx. Accessed December 21, 2023.

VII. GEOLOGY AND SOILS

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact
Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☒	☐
ii. Strong seismic ground shaking?	☐	☒	☐	☐
iii. Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐
iv. Landslides?	☐	☐	☒	☐
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☐	☒	☐
d) Be located on expansive soil, as defined in Table 181-B of the California Building Code (1994), creating substantial direct or indirect risks to life or property?	☐	☐	☐	☒
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☐	☒

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☒	☐	☐

a)

i. **Less Than Significant.** A Geotechnical Engineering Investigation, dated May 2, 2023, and reviewed February 1, 2024, was prepared for the Proposed Project by NorCal Engineering which is available for review on the City's website (https://www.cityofredlands.org/post/environmental-documents), and at the Development Services Department, 35 Cajon St Suite 20, Redlands, and is summarized herein (see Appendix E). As stated in the geotechnical report, the proposed development lies outside of any Alquist Priolo Special Studies Zones and the potential for damage due to direct fault rupture is considered unlikely. The nearest active fault would be the San Jacinto (San Bernardino Valley Segment) Fault zone is located approximately 3.7 miles west of the Project Site.

No evidence of surface faulting was observed on the property during site reconnaissance. Furthermore, there are no active fault traces in the immediate vicinity of the Project Site. Accordingly, the Project Site is not within an Earthquake Fault Zone (Special Studies Zone) and will not require a special site investigation by an Engineering Geologist. Therefore, no significant adverse impacts are identified or anticipated, and no mitigation measures are required.

ii. **Less Than Significant with Mitigation.** The site is located in a seismically active area of Southern California. As stated previously, the nearest active fault line is the San Jacinto fault zone located approximately 3.7 miles west of the Project Site. Ground shaking originating from earthquakes along other active faults in the region is expected to induce lower horizontal accelerations due to smaller anticipated earthquakes and/or greater distances to other faults. The Proposed Project would be required to adhere to existing building codes and state and local regulations to minimize any potential significant seismic impact to the Project Site. Additionally, the Proposed Project shall implement Mitigation Measure GEO-1 below to ensure that the hazards due to seismic ground shaking are addressed.

Mitigation Measures GEO-1:

The recommendations regarding site preparation and construction, as described in a Final Geotechnical Investigation as approved by the City Engineer, shall be incorporated into project design.

Therefore, with the implementation of GEO-1 the Proposed Project would be anticipated to pose a less than significant impact on future seismic related events.

iii. **Less Than Significant Impact.** Liquefaction is a phenomenon in which cohesion-less, saturated, fine-grained sand and silt soils lose shear strength and exhibit fluid-like flow behaviors due to seismic-related ground failure. The main factors contributing to liquefaction potential are:

1. Cohesionless, granular soils having relatively low density (usually of Holocene age);
2. Shallow groundwater (generally less than 50 feet); and
3. Moderate to high seismic activity

Based on the geotechnical analysis, the site is expected to experience ground shaking and seismic activity, which is a factor that contributes to the potential of liquefaction. However, since the depth to groundwater is estimated to be greater than 100 feet in the vicinity of the site, the risk of liquefaction (sudden loss of shear strength in a saturated cohesionless soil) is considered negligible. Based on review of the City of Redlands 2035 General Plan, the Project Site does not lie within an area designated as a high, medium, or low liquefaction susceptibility.[17] Additionally, the San Bernardino County Land Use Plan identifies that the Project Site is not within zones of "Suspected Liquefaction Susceptibility."[18]

Furthermore, the design of the proposed construction would be required to adhere to the latest Building Code provisions for earthquake design which would provide mitigation for ground shaking hazards that are typical to Southern California. Therefore, the Proposed Project would be anticipated to have a less than significant impact on geologic hazards related to ground failure.

iv. **Less Than Significant Impact.** The Project Site exists on primarily flat land due to the prior development of a waterpark. Currently, the Project Site contains the remains of pool establishments which range from 2 to 7 feet below the existing ground surface. However, the Proposed Project would include cut and fill procedures to achieve finished grade elevations. Additionally, based on the San Bernardino Countywide Plan, the Project Site does not exist within an area at risk of liquefaction or landslides.[19] Lastly, the geotechnical analysis recommends that site inspections be performed by a qualified geologist during all grading and construction of the development to verify the findings and recommendations within the geotechnical report. Therefore, a less than significant impact would be anticipated, and no mitigation measures are required.

b) **Less than Significant.** Erosion is a process that causes geologic surfaces to be worn away overtime due to chemical or physical abrasive factors such as rain or wind. During the development of the Project Site, which would include disturbance of approximately 14.1 acres (of the approximately 16-acre site), project-related dust may be generated due to the operation of construction equipment on-site or due to high winds. Additionally, erosion of soils could occur due to a storm event. Development of the Proposed Project would disturb more than one acre of soil; therefore, the Proposed Project is subject to the

[17] City of Redlands 2035 General Plan. Chapter 7. Healthy Community, Figure 7-28.
[18] County of San Bernardino Land Use Plan. General Plan. Geologic Hazard Overlays. (FH31 C).
[19] San Bernardino Countywide Plan. HZ-2 Liquefaction and Landslides. October 2020. Accessed January 9, 2024.

requirements of the State Water Resources Control Board General Permit for Discharges of Storm Water Associated with Construction Activity (Construction General Permit Order 2009-2009-DWQ). Construction activity subject to this permit includes clearing, grading, and disturbances to the ground such as stockpiling or excavation. The Construction General Permit requires the development and implementation of a Storm Water Pollution and Prevention Plan (SWPPP). The SWPPP must list Best Management Practices (BMPs) to avoid and minimize soil erosion. Adherence to BMPs is anticipated to ensure that the Proposed Project does not result in substantial soil erosion or the loss of topsoil. No significant adverse impacts are identified or are anticipated, and no mitigation measures are required.

c) **Less than Significant Impact.** As previously stated, the Project Site exists on primarily flat land due to the prior development and is surrounded by urbanized development. Based on the San Bernardino Countywide Plan, the Project Site does not exist within an area at risk of liquefaction or landslides.[20] Lateral Spreading is known as a pervasive type of seismic-induced ground failure that may occur on gentle slopes or near free-faces, such as river channels.[21] Because the Project Site is primarily flat, and is encompassed by urbanized uses, seismic induced lateral spreading is not likely to exist within the Project Site.

The geotechnical report identified that the soil shrinkage will be on the order of five to ten percent due to excavation and recompaction, based upon the assumption that the fill is compacted to 92 percent of the maximum dry density per ASTM standards. Subsidence within the Project Site is expected to be approximately 0.2 feet due to earthwork operations. Additionally, construction of all structures would be required to comply with the 2022 California Building Code. Therefore, no significant adverse impacts are identified or anticipated, and no mitigation measures are required.

d) **No Impact.** Expansive soils are fine grained clay soils generally found in historical floodplains and lakes. Expansive soils are subject to swelling and shrinkage in relation to the amount of moisture present in the soil. As concluded in the geotechnical report, the upper onsite soils are very low in expansion potential. Additionally, the onsite soils may be considered non-expansive for design purposes and may be used as a source of Engineered Fill with respect to constructing the planned improvements. Therefore, no impacts are identified or anticipated, and no mitigation measures are required.

e) **No Impact.** The Proposed Project would connect to the City's existing sewer collection system which includes a sewer main along California Street. No septic tanks or alternative wastewater disposal are proposed. No impacts are identified or are anticipated, and no mitigation measures are required.

f) **Less Than Significant with Mitigation.** Paleontological resources, including fossils, have been found in the Redlands area, and there is potential for paleontological finds to occur in

[20] San Bernardino Countywide Plan. HZ-2 Liquefaction and Landslides. October 2020. Accessed January 9, 2024.
[21] USGS. Assessing Lateral Spread Hazards in Areas Prone to Great and Long-Duration Earthquakes. 2015. Accessed January 9, 2024.

remaining, unexcavated open space areas within and adjacent to the City of Redlands.[22] These resources are found in geologic strata conducive to their preservation, typically sedimentary formations. Paleontological resources have been identified in San Timoteo Canyon area in the past.

The Project Site is located in a developed area mixed with industrial and commercial uses. It is surrounded by commercial development and industrial distribution centers to the north and west. Offices, commercial, medical, and institutional uses are located to the east. The I-10 and Metrolink route is directly south of the Project Site, with an orange grove and gas station occurring beyond I-10. The property has been previously developed, however, has been vacant since 2018. The Proposed Project would redevelop the Project Site as a warehouse facility.

Given the property's current condition and surrounding development, there is low potential for paleontological finds during project construction. However, in the event that paleontological resources are discovered, the following mitigation measure shall be implemented:

Mitigation Measure GEO-2:

Establish a procedure for the management of paleontological materials found on-site during project development, including the following provisions:

- If materials are found on-site during grading, it is required that work be halted until a qualified paleontologist evaluates the find to determine if it represents a significant paleontological resource.
- If the resource is determined to be significant, the paleontologist shall supervise removal of the material and determine the most appropriate archival storage of the material.
- Appropriate materials shall be prepared, catalogued, and archived at the applicant's expense and shall be retained within San Bernardino County if feasible.

Therefore, with the implementation of **Mitigation Measure GEO-2**, the Proposed Project would pose a less than significant impact on potentially significant geologic or paleontological resources.

VIII. GREENHOUSE GAS EMISSIONS

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact

Would the project:

[22] Dyett and Bhatia. City of Redlands General Plan Update and Climate Action Plan EIR. July 21, 2017.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment.	☐	☐	☒	☐
b) Conflict with an applicable plan, policy, or regulation adopted for the purposes of reducing the emissions of greenhouse gases.	☐	☐	☒	☐

a) **Less than Significant.** A Greenhouse Gas Analysis dated October 12, 2023, was prepared for the Proposed Project by Urban Crossroads which is available for review on the City's website (https://www.cityofredlands.org/post/environmental-documents), and at the Development Services Department, 35 Cajon St Suite 20, Redlands, and is summarized herein (see Appendix F). Gases that absorb and re-emit infrared radiation in the atmosphere are called greenhouse gases (GHGs). GHGs are present in the atmosphere naturally, are released by natural sources, or are formed from secondary reactions taking place in the atmosphere. The gases that are widely seen as the principal contributors to human-induced climate change include carbon dioxide (CO_2), methane (CH_4), nitrous oxides (N_2O), fluorinated gases such as hydrofluorocarbons (HFCs) and perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6). Water vapor is excluded from the list of GHGs because it is short lived in the atmosphere and its atmospheric concentrations are largely determined by natural processes, such as oceanic evaporation.

The City of Redlands has adopted a Climate Action Plan (CAP). The CAP serves as a qualified GHG Reduction Strategy, which enables streamlined environmental review of future development projects, in accordance with CEQA pursuant to CEQA Guidelines Section 15183.5. The CAP's GHG emission targets and goals are based on meeting the goals in Executive Order B-30 15 and Senate Bill 32 and following the CAP guidelines established in CARB's 2017 Scoping Plan. The CAP includes emissions targets of 6.0 MT CO2e per capita per year for 2030 and 5.0 MT CO2e per capita per year for 2035. Redlands' emissions targets are met in both years 2030 and 2035, with forecast emissions of 4.8 MT CO2e in 2030 and 4.5 MT CO2e in 2035. Therefore, implementation of the Redlands General Plan 2035 would enable Redlands to meet the standards outlined in the 2017 Scoping Plan, and implementation of projects consistent with the General Plan would be consistent with the Redlands CAP and therefore would not require additional GHG analysis in accordance with CEQA.

In addition, as described in the City of Redlands CEQA Assessment VMT Analysis Guidelines, the SCAQMD in its Interim CEQA GHG Significance Thresholds for Stationary Sources, Rules and Plans (SCAQMD 2008b) recommends a screening threshold of 3,000 MT CO2e per for residential and commercial projects, and 10,000 MT CO2e per year for industrial projects. The SCAQMD significance thresholds also recommend evaluating construction emissions by amortizing them over an expected project life of 30 years. These quantitative thresholds are also used by the City of Redlands to determine the significance of GHG emissions.

Heavy-duty off-road equipment, materials transport, and worker commutes during construction of the Project would result in exhaust related GHG emissions. As described previously, operation of the Project would also generate GHG emissions associated with site operations, including area, energy, mobile, stationary, water, waste, and fugitive (potential SF6 leakage) sources. Table 5 shows the Project's amortized annual construction GHG emissions.

Table 5
Amortized Annual Construction Emissions

Year	Emissions (MT/yr)				
	CO_2	CH_4	N_2O	Refrigerants	Total CO_2e[5]
2024	560.66	0.04	0.05	0.38	575.63
2025	263.30	0.01	0.01	0.21	267.45
Total GHG Emissions	823.96	0.05	0.06	0.59	843.08
Amortized Construction Emissions	**27.47**	**0.00**	**0.00**	**0.02**	**28.10**

Source: CalEEMod 2022

Based on Urban Crossroads CalEEMod (version 2022) results, construction activity for the project would generate an estimated 843.08 metric tons of CO_2e[5] per year. Therefore, the Proposed Project's construction emissions would not exceed the 10,000 MT CO2e annual screening threshold defined by SCAQMD.

The annual GHG emissions associated with the Project are summarized below in Table 6. It should be noted that the existing development emissions were subtracted from the Project operational emissions to determine the new emissions from the Proposed Project. As shown in Table 6, construction and operation of the Project would generate a net total of approximately 1,708 MTCO2e/yr.

Table 6
Project GHG Emissions

Emission Source	Emissions (MT/yr)				
	CO_2	CH_4	N_2O	Refrigerants	Total CO_2e
Annual construction-related emissions amortized over 30 years	27.47	0.0	0.0	0.02	28.10
Mobile Source	3,072.72	0.20	0.34	4.31	3,183.19
Area Source	7.25	0.00	0.00	0.00	7.28
Water Usage	116.44	2.70	0.06	0.00	203.26
Waste	31.91	3.19	0.00	0.00	111.64
Refrigerants	0.00	0.00	0.00	1.11	1.11
Total CO2e (All Sources)	**3,534.58**				
Existing Emissions	2,228.88				
Net Emissions (Proposed – Existing)	**1,305.70**				

As such, the Project would not exceed the SCAQMD's recommended numeric threshold of 10,000 MTCO2e/yr. Therefore, project related emissions would not have a potential significant direct or indirect impact on GHG and climate change.

b) **Less than Significant.** The State of California and SCAQMD have adopted plans or policies to reduce GHG emissions. In September 2006, California passed the California Global Warming Solutions Act of 2006 (Assembly Bill [AB] 32; California Health and Safety Code Division 25.5, Sections 38500, et seq.). AB 32 establishes regulatory, reporting, and market mechanisms to achieve quantifiable reductions in GHG emissions and establishes a cap on statewide GHG emissions. It required that statewide GHG emissions be reduced to 1990 levels by 2020, which it met in 2016. In 2016, the state legislature also passed SB 32, which established a 2030 GHG emissions reduction target of 40 percent below 1990 levels. In 2008 and 2014, CARB approved the Scoping Plan and the first update to the Scoping Plan, respectively. In response to SB 32 and the companion legislation of AB 197, CARB approved the Final Proposed 2017 Scoping Plan Update: The Strategy for Achieving California's 2030 GHG Target in November 2017.

While the Scoping Plan updates do include measures that would indirectly address GHG emissions associated with construction and operational activities, including the phasing in of cleaner technology for diesel engine fleets (including construction equipment) and Low Carbon Fuel Standard, successful implementation of these measures predominantly depends on the development of laws and policies at the state level. As such, none of these statewide plans or policies constitutes a regulation to adopt or implement a regional or local plan for reduction or mitigation of GHG emissions. Thus, it is assumed that any requirements or policies formulated under the mandate of AB 32 and SB 32 that would be applicable to the project, either directly or indirectly, would be implemented consistent with statewide policies and laws.

The California Green Building Standards Code (CALGreen) encourages sustainable construction practices and building design as an effort to meet the goals of AB 32 to reduce statewide GHG emissions. The Proposed Project would comply with the latest CALGreen requirements. The CALGreen requirements include mandatory measures for all new building construction, which would result in energy conservation and make a major contribution in meeting the state's goals established by AB 32 and SB 32 for reduction in GHG emissions.

As stated previously, the City of Redlands adopted the City's CAP in December 2017, concurrent with the updated Redlands General Plan. The General Plan includes strategies such as transit-oriented and mixed-use development, integrated transportation and land use planning, promotion of bicycle and pedestrian movements, and parking and transportation demand management. It also includes goals and policies to promote energy efficiency, waste reduction, and resource conservation and recycling. These strategies, goals, and policies would result in GHG reduction compared to baseline trends. Specifically, the Proposed Project parking facilities would include Level 2 EV chargers for fleet and employees and Level 3 50kW fast chargers to support SCE's electric fleet, which would be consistent with CAP Measure Option G, Promote an Increase in the Amount of Zero-Emissions Vehicle Travel. The Proposed Project's paved areas would also include a bike rack and bike lockers, which would be consistent with CAP measures for bikeway system improvements and increased connectivity. In addition, since the Proposed Project would

comply with the latest California Code of Regulations Title 24 building standards, which require that buildings are equipped with solar ready conduits for future photovoltaic panels as well as efficient building design, the Proposed Project would also be consistent with the following General Plan policies and actions:

- Policy 8-P.1: Promote energy efficiency and conservation technologies and practices that reduce the use and dependency of nonrenewable resources of energy;
- Action 8-A.9: Encourage the use of construction, roofing materials, and paving surfaces with solar reflectance and thermal emittance values per the California Green Building Code (Title 24, Part 11 of the California Code of Regulations) to minimize heat island effects;
- Action 8-A.25: Encourage water conservation through the following strategies:
  - Establish water and wastewater rates that encourage conservation and provide for system maintenance.
  - Update the landscape irrigation ordinance to continue reducing the use of potable water for landscape irrigation to CALGreen requirements. All aspects of landscaping from the selection of plants to soil preparation and the installation of irrigation systems should be designed to reduce water demand, retain runoff, decrease flooding, and recharge groundwater.
  - Establish incentives for use of water efficient fixtures and fittings.
- Action 8-A.39: Continue implementation and enforcement of the California Building and Energy codes to promote energy efficient building design and construction.

As stated in the City of Redlands CAP, the City's emissions targets are met in both years 2030 and 2035. Since the Proposed Project would be consistent with the General Plan land use designation and policies, and implementation of the General Plan would enable Redlands to meet the standards outlined in the 2017 Scoping Plan, the Proposed Project would neither conflict with the Scoping Plan, Scoping Plan updates, nor the City's CAP. Therefore, the Proposed Project would not conflict with plans, policies, or regulations for the purpose of reducing GHG emissions. No significant impacts are identified or anticipated, and no mitigation measures are required.

IX. HAZARDS AND HAZARDOUS MATERIALS

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact
Would the project:				
a) Create a significant hazard to the public or the Environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset	☐	☐	☒	☐

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact
and accident conditions involving the release of hazardous materials into the environment?				
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☐	☒
d) Be located on a site, which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☒	☐
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☒	☐
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
g) Expose people or structures, either directly or indirectly to a significant risk of loss, injury or death involving wildland fires?	☐	☐	☒	☐

a, b) **Less Than Significant.** The Applicant is proposing the development of a 357,610 SF warehouse facility. The storage of hazardous materials shall be kept in compliance with State and local regulations. Additionally, all materials required during construction would be kept in compliance with State and local regulations and would comply with Best Management Practices.

The California Health and Safety Code Chapter 6.95 includes provisions for Hazardous Materials Release Response Plans and Inventory. The intent of the code is to protect the public health and safety and the environment; it is necessary to establish business and area plans relating to the handling and release or threatened release of hazardous materials. In San Bernardino County, this program is referred to as the Hazardous Materials Release Response Plans and Inventory (Business Plan) program and is operated by the SBFD CUPA. The Business Plan program is intended to provide information regarding hazardous materials at facilities to emergency responders and the general public, along with coordinating the reporting of releases and spill response among businesses to local, State, and federal government authorities.

Facilities are required to disclose all hazardous materials and wastes above certain designated quantities which are used, stored, or handled at their facility, and to update their plans regularly. Facilities are also required to provide initial and annual training for employees to safely handle chemicals and to take appropriate emergency response actions. In San Bernardino County, the Business Emergency/Contingency Plan is also used to satisfy the contingency plan requirement for hazardous waste generators. Any business subject to any of the CUPA permits is required in San Bernardino County to file a Business Emergency/Contingency Plan using the California Environmental Reporting System (CERS). A new business going through the process of obtaining County or City planning or building approval is required to comply with the Business Emergency/Contingency Plan requirement prior to obtaining final certificate of occupancy and prior to bringing hazardous materials onto the property.

The warehouse facility would not create a significant hazard to the public or the environment due to the use of hazardous materials. The Project Site is currently zoned EV/SD. Uses allowed within this zone include manufacturing, research, warehousing/ distributing, assembly of non-hazardous products and materials, and retail related to manufacturing. Operational activities would also include standard maintenance (i.e., landscape upkeep, exterior painting and similar activities) involving the use of commercially available products (e.g., pesticides, herbicides, gas, oil, paint, etc.) the use of which would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accidental release of hazardous materials into the environment. The Proposed Project would require implementation of Best Management Practices (BMPs) and compliance with all applicable regulations. Therefore, no significant impacts are identified or anticipated, and no mitigation measures are required.

c) **No Impact.** The nearest school is to the Mission Elementary School, approximately 0.3-mile south of the Project Site. No schools exist within a quarter mile of the Project Site. Therefore, no impacts are identified or anticipated, and no mitigation measures are required.

d) **Less Than Significant.** The Project Site is not included on a list of hazardous material sites as compiled pursuant to Government Code Section 65962.5 and reported in the EnviroStor database.[23] Additionally, a Phase I ESA was completed May 9, 2023, and a Phase II ESA was completed for the Proposed Project on May 13, 2023, by Hazard Management Consulting, Inc. The Phase I ESA found that there was a potential for releases of chlorinated solvents and other VOC containing chemicals within the Project Site. Therefore, a Phase II ESA was conducted to analyze the sites soil and soil vapor composition to assess whether concentrations of chemicals of potential concern warrant further action. The study concluded that the soil investigation activities did not identify any residual sources of site-related chemical constituents. Therefore, no significant adverse impacts are identified or anticipated.

[23] California Department of Conservation. EnviroStor Map Database. 2023. Accessed December 11, 2023.

e) **Less Than Significant.** The nearest airport to the Project Site is the San Bernardino International Airport, which is located approximately 1.8 miles north of the Project Site. However, the Proposed Project would not change air traffic patterns or create a safety hazard to people or aircraft. Therefore, no significant impacts are identified or anticipated, and no mitigation measures are required.

f) **Less than Significant.** The Project Site does not contain any emergency facilities.[24] It is adjacent to Lugonia Avenue, California Street, and the I-10 Freeway, the latter of which is classified as an evacuation route.[25] Additionally, during construction, the contractor would be required to maintain adequate emergency access for emergency vehicles as required by the City. The Proposed Project would provide more parking spaces than required, thereby keeping project vehicles off the public right of way.

The California Emergency Services Act requires the City to manage and coordinate the overall emergency and recovery activities within its jurisdictional boundaries. The City's Emergency Operations Plan includes policies and procedures to be administered by the City in the event of a disaster. During disasters, the City of Redlands is required to coordinate emergency operations with the County of San Bernardino. Policies within the City's General Plan and updates to the City's Emergency Plan, as required by State law, would ensure the Proposed Project would not interfere with adopted policies and procedures. Therefore, no significant impacts have been identified or anticipated, and no mitigation measures are required.

g) **Less than Significant.** The Project Site is located in an area with moderate threat to fire hazards.[26] It is located in an urban area and surrounded primarily by developed land. The Project Site is not located adjacent to or near wildlands. Therefore, the Proposed Project would not expose people or structures to a significant risk of loss, injury or death involving wildland fires. Therefore, no significant impacts are identified or anticipated, and no mitigation measures are required.

X. HYDROLOGY AND WATER QUALITY

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact
Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☒	☐
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede substantial groundwater management of the basin?	☐	☐	☒	☐
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:	☐	☐	☒	☐
i) result in substantial erosion or siltation on- or off-site;				
ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;				
iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or				
iv) impede or redirect flood flows?				
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☒	☐
e) Conflict with or obstruct implementation of a water quality control plan or substantial groundwater management plan?	☐	☐	☒	☐

a) **Less than Significant Impact.** A Hydrology Study dated November 10, 2023, and a Preliminary Water Quality Management Plan dated July 20, 2023, and revised December 19, 2023, were prepared by Huitt-Zollars, Inc. Both reports are available for review on the City's website (https://www.cityofredlands.org/post/environmental-documents), and at the Development Services Department, 35 Cajon St Suite 20, Redlands, and is summarized herein (see Appendices G and H). The Proposed Project would develop approximately 14.32 acres with impervious surfaces and would therefore be subject to National Pollutant Discharge Elimination System (NPDES) requirements. The State of California is authorized to administer various aspects of the NPDES. Construction activities covered under the State's General Construction permit include the removal of

vegetation, grading, excavating, or any other activity that causes the disturbance of one acre or more.

The General Construction permit requires recipients to reduce or eliminate non-storm water discharges into stormwater systems, and to develop and implement a SWPPP. The SWPPP is based on the principles of Best Management Practices (BMPs) to control and abate pollutants. Examples of BMPs include sandbag barriers, geotextiles, storm drain inlet protection, sediment traps, rip rap soil stabilizers, sweep roadway from track out, and rumble strips. BMPs applicable to the Proposed Project will be subject to City approval and provided in contract bid documents. The SWPPP must include BMPs to prevent project-related pollutants from impacting surface waters. The purpose of a SWPPP is to: 1) identify pollutant sources that may affect the quality of discharges of storm water associated with construction activities; and 2) identify, construct and implement storm water pollution control measures to reduce pollutants in storm water discharges from the construction site during and after construction.

The NPDES also requires a Water Quality Management Plan (WQMP), which is subject to review and approval by the City. A preliminary WQMP was prepared for the Proposed Project. The includes mandatory compliance of BMPs as well as compliance with NPDES Permit requirements. Review and approval of the WQMP by the City would ensure that all potential pollutants of concern are minimized or otherwise appropriately treated prior to being discharged from the Project Site. No significant adverse impacts are identified or are anticipated, and no mitigation measures are required.

b) **Less Than Significant Impact.** The Project Site is located within the City of Redlands water service area. Redlands' water supply primarily comprises surface water from the Santa Ana River (SAR) and Mill Creek watershed and supplemented by groundwater extracted from the Bunker Hill Basin (part of the San Bernardino Basin) and Yucaipa Basin and a small amount of imported water when needed.[27] The Urban Water Management Plan (UWMP) for City of Redlands is based on projected growth included in General Plans for areas within their service area. The Proposed Project is consistent with the land use and population projections included in the General Plan. Therefore, the Proposed Project water demand is already anticipated from buildout of the General Plan Planning Area.

The new development is expected to have 14.32 acres of impervious land or approximately 89 percent of the total site acreage, and 1.72 acres of pervious land (approximately 11 percent). Implementation of the project Best Management Practices (BMPs) would ensure that stormwater discharge does not substantially alter the existing drainage pattern and water quality, thereby allowing runoff from the Project Site to be utilized as a resource that can eventually be used for groundwater recharge. Therefore, the Proposed Project is not anticipated to have a substantial impact on groundwater supplies or interfere substantially with groundwater recharge. No significant impacts are identified or anticipated, and no mitigation measures are required.

[27] Water Systems Consulting, Inc. and Woodard & Curran. 2020 Upper Santa Ana River Watershed Integrated Regional Urban Water Management Plan.

c)

i) **Less than Significant Impact.** Erosion is a phenomenon characterized by the wearing a way of a geologic surface as a result of forces such as wind or water. Siltation is another geologic term that describes how fine mineral particles such as silt or clay may be suspended in a body of water in various amounts depending on water velocity.

Soil erosion has the possibility to occur during a storm event. Construction activities covered under the State of California's General Construction permit include removal of vegetation, grading, excavating, or any other activities that causes the disturbance of one acre or more. The General Construction permit requires recipients to reduce or eliminate non-storm water discharges into stormwater systems, and to develop and implement a Storm Water Pollution Prevention Plan (SWPPP). The purpose of the SWPPP is to: 1) identify pollutant sources that may affect the quality of discharges of stormwater associated with construction activities; and 2) identify, construct, and implement stormwater pollution control measures to reduce pollutants in stormwater discharges from the construction site during and after construction. The SWPPP must list BMPs to avoid and minimize soil erosion. Adherence to BMPs would prevent substantial soil erosion or the loss of topsoil. Examples of BMPs include i.e., sandbag barriers, geotextiles, storm drain inlet protection, sediment traps, rip rap soil stabilizers, sweep roadway from track-out, and rumble strips. BMPs applicable to the Proposed Project will be subject to City approval and provided in contract bid documents. Therefore, less than significant impacts are identified or anticipated, and no mitigation measures are required.

ii, iii) **Less than Significant Impact.** As described in the Hydrology Report, the site is currently developed and generally slopes ±1.0 percent from the southeast corner to the northwest corner of the property. The maximum site elevation, located at the southeast property corner, is approximately 1163± feet mean sea level (msl). The minimum site elevation located at the southwest property corner is 1151± feet msl. There are existing low points throughout the site due to the previously operational pools, but this is being disregarded for general site drainage purposes. Runoff from the existing site discharges into an existing storm drain lateral located at the northwest corner to the 66-inch storm drain in Lugonia Avenue. The Proposed Projects area runoff would be directed to the on-site underground infiltration system located on the west side of the site. The proposed 60" underground infiltration system would have a volume of 57,367 cubic feet (cf). Any potential overflow from the underground infiltration system would be discharged through storm drain Line C to the existing storm drain in Lugonia Avenue.

Site runoff from the east half of the warehouse building roof, east drive aisle, and east parking lot will be collected by catch basins 1-3. The collected runoff will then be conveyed through the proposed on-site storm drain Line A located along the Proposed Project's eastern parking lot and discharged to the underground infiltration system on the west side of the Project Site.

Site runoff from the west half of the building roof, west landscaping area, south landscaping and parking area, and the west truck docks will be collected by catch basins 4-6. The collected runoff will then be conveyed through the proposed on-site storm drain Line B located along the Proposed Project's western parking lot and discharged to the underground infiltration system on the west side of the Project Site.

iv) **Less than Significant Impact.** As previously stated, the underground infiltration system provides 57,367 cf of storage for water quality purposes. The proposed 100-year flood analysis generated from the Project Site is estimated to be 48.68 cubic feet per second (cfs). All proposed on-site drainage and storm drain facilities will be sized adequately for the 100-year storm event. No significant adverse impacts are identified or are anticipated, and no mitigation measures are required.

d) **Less Than Significant Impact**. The National Flood Insurance Program (NFIP) identifies Special Flood Hazard Areas (SFHAs), or areas within the floodplain of a community subject to a 1-percent or greater chance of flooding in any given year, known as the 100-year flood. The Project Site is neither located within a 100-year floodplain nor a 500-year floodplain.[28] Due to the inland distance from the Pacific Ocean and any other significant body of water, tsunamis and seiches are not potential hazards at the site. Therefore, the risk of release of pollutants due to project inundation is low. Therefore, no significant impacts are identified or anticipated, and no mitigation measures are required.

e) **Less than Significant Impact.** Requirements of a NPDES permit to be issued for the Proposed Project would include development and implementation of a SWPPP and is subject to RWQCB review and approval. The Proposed Project would not otherwise substantially degrade water quality as appropriate measures relating to water quality protection would be implemented. Therefore, no significant impacts are identified or anticipated, and no mitigation measures are required.

XI. LAND USE AND PLANNING

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact
Would the project:				
a) Physically divide an established community?	☐	☐	☒	☐
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☒	☐

[28] San Bernardino Countywide Plan. HZ-4: Flood Hazards. October 2020. Accessed on January 10, 2024.

a) **Less Than Significant.** The physical division of an established community is typically associated with construction of a linear feature, such as a major highway or railroad tracks, or removal of a means of access, such as a local road or bridge, which would impair mobility in an existing community or between a community and an outlying area. The Proposed Project does not include the construction of a linear feature. Moreover, the Project Site currently consists of a previously developed and vacated lot. It is located in a Special Development zone (EV/SD) and is surrounded by commercial and industrial uses. Therefore, the Proposed Project would neither physically divide an established community nor cause a significant environmental impact due to conflict with any land use plans or policies. No impacts would occur, and no mitigation measures are required.

b) **Less Than Significant.** The Project Site is currently a developed lot and is located in the East Valley Corridor Specific Plan (EVCSP) – Special Development (EV/SD) District. The EV/SD District is intended to provide an alternative, more flexible site planning process of administrative professional, commercial, or industrial developments, or a mixture of such uses.[29] The Proposed Project would introduce a supply warehouse. The Project improvements would include a trash enclosure, updated driveway improvements on California Avenue and additional driveways on Lugonia Avenue, new site access gates with an eight (8) foot high concrete screen wall encompassing the western parking lot and docking area, eight (8) foot high security and maintenance fencing along the western boundary, approximately 82,104 SF of improved landscape areas. Paved areas would include employee parking, storage racks, bike racks, bike lockers, loading docks, and internal roadways, totaling approximately 280,174 SF. The Proposed Project would be an allowable use within the EV/SD zoning district. It would be subject to the development standards established by the EVCSP. Therefore, no significant impacts are identified or anticipated, and no mitigation measures are required.

XII. MINERAL RESOURCES

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact
Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒

[29] City of Redlands. Community Land Use: Chapter 11. Special Development District. Accessed December 11, 2023.

a, b) **No Impact.** The Project Site is not located within a Mineral Resource zone.[30] The previously developed Project Site is surrounded by industrial and commercial uses. The size of the Project Site and surrounding uses make the site unsuitable for mineral resources extraction. Therefore, no impacts are identified or anticipated, and no mitigation measures are required.

XIII. NOISE

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact
Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☒	☐
b) Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☒	☐
c) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☒	☐

a) **Less than Significant.**

The potential noise impacts of the Proposed Project were evaluated in light of applicable federal, state and local policies, including those of the City of Redlands.

The unit of measurement used to describe a noise level is the decibel (dB). The human ear is not equally sensitive to all frequencies within the sound spectrum. Therefore, the "A-weighted" noise scale, which weights the frequencies to which humans are sensitive, is used for measurements. Noise levels using A-weighted measurements are written dB(A) or dBA.

The noise descriptors utilized in the noise study for the Proposed Project include but are not limited to the following:

[30] Dyett and Bhatia. City of Redlands General Plan Update and Climate Action Plan EIR. July 21, 2017. Figure 3.11-1: Mineral Resources.

- Ambient Noise Level: The composite of noise from all sources, near and far. In this context, the ambient noise level constitutes the normal or existing level of environmental noise at a given location.

- Community Noise Equivalent Level (CNEL): The average equivalent A-weighted sound level during a 24- hour day, obtained after addition of five (5) decibels to sound levels in the evening from 7:00 to 10:00 PM and after addition of ten (10) decibels to sound levels in the night before 7:00 AM and after 10:00 PM.

- Community Noise Equivalent Level (CNEL): The average equivalent A-weighted sound level during a 24- hour day, obtained after addition of five (5) decibels to sound levels in the evening from 7:00 to 10:00 PM and after addition of ten (10) decibels to sound levels in the night before 7:00 AM and after 10:00 PM

According to the City of Redlands General Plan, noise levels of up to 60 dBA CNEL are considered "clearly compatible"; and noise levels between 60 and 75 dBA CNEL are considered "normally incompatible" for single-family, multi-family, and mobile home residential uses.

Construction

Construction activities will occur in phases including grading, building construction, paving, and architectural coating. Assumptions for the phasing, duration, and required equipment for the construction of the Proposed Project were obtained from the project applicant.

The City's Municipal Code Sections 8.06.120 (G) and 8.06.090 limit the hours of construction to between the hours of 7:00 AM and 6:00 PM, including Saturdays, with no activities taking place at any time on Sundays or federal holidays. According to the EIR prepared for the City of Redlands General Plan (2017), a temporary increase in ambient noise levels from construction noise would be considered less than significant if construction activities comply with the City's Noise Control Ordinance in the Municipal Code, Section 8.06.090. Project construction will not occur outside of the hours outlined as "exempt" in City's Municipal Code Sections 8.06.120 (G) and 8.06.090; and therefore, would not result in a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance.

In addition to adherence to the City of Redlands Municipal Code which limits the construction hours of operation, the following best management practices will be implemented to further reduce construction noise emanating from the Proposed Project:

Construction Noise - Best Management Practices

1. All construction equipment whether fixed or mobile, will be equipped with properly operating and maintained mufflers, consistent with manufacturer standards.

2. All stationary construction equipment will be placed so that emitted noise is directed away from the noise sensitive receptors nearest the project site.
3. As applicable, all equipment shall be shut off when not in use.
4. Equipment staging in areas shall be located to create the greatest distance between construction-related noise/vibration sources and existing sensitive receptors.
5. Jackhammers, pneumatic equipment, and all other portable stationary noise sources will be directed away and shielded from existing residences in the vicinity of the project site. Either one-inch plywood or sound blankets can be utilized for this purpose. They should reach up from the ground and block the line of sight between equipment and existing residences. The shielding should be without holes and cracks.
6. No amplified music and/or voice will be allowed on the project site.
7. Haul truck deliveries will not occur outside of the hours presented as exempt for construction per City's Municipal Code Sections 8.06.120 (G) and 8.06090.

Off-Site Construction Noise

In addition to on-site construction noise sources, delivery, concrete mixer, and haul trucks, as well as construction worker vehicles, would generate off-site noise. The primary noise sources associated with off-site construction traffic would be delivery trucks. Trucks traveling to and from the Project Site would be required to travel along a haul route approved by the City. There would be no noise-sensitive receptors along these routes. Therefore, off-site construction traffic generated by the Project along haul routes would not be considered significant. Further, any change in noise level would not be readily noticeable and would be less than significant. Therefore, no significant impacts are identified or anticipated, and no mitigation measures are required.

Operation

The Project Site is located on California Street adjacent to the I-10/California Street on-ramp. Local circulation would be provided by California Street to the east and Lugonia Avenue to the north. According to the General Plan EIR, California Street and Lugonia Avenue are classified as Major Arterial Roadways; these two roadways are currently used by 4-axle trucks with trailers accessing and leaving warehouses in the immediate vicinity of the Project Site. A Focused Traffic Study, dated December 14, 2023, was prepared for the Proposed Project by Urban Crossroads . As concluded in the study, all of the study area intersections are anticipated to operate at acceptable levels of service (per the City's thresholds) and, as such, there are no off-site improvements recommended because Project traffic is not anticipated to result in any deficiencies based on the City's thresholds and is therefore compliant with Measure U of the General Plan. As such, the Project applicant shall pay requisite fees towards future regional roadway improvements consistent with City requirements.

The Proposed Project design includes two 8-foot-tall concrete walls on either side of the western parking lot and loading dock area. The proposed walls would serve to mitigate any

potential significant project noise impacts during operations. Therefore, no significant impacts are anticipated during project operations.

The Proposed Project would not generate a substantial permanent increase in ambient noise levels in the vicinity of the Project Site.

b) **Less than Significant.** Construction activities can produce vibration that may be felt by adjacent uses. Although the primary sources of vibration during construction would be from bulldozers and vibratory rollers, other vibratory equipment could be used during installation of pavement. Construction of the Proposed Project would be temporary and would not present any long-term impacts. Construction activities would be short-term and would occur within the daytime hours permitted by the City per Sections 8.06.120 (G) and 8.06.090 of the Municipal Code.

Additionally, the City of Redlands has prohibited the operation of any device that creates a vibration, which is above the vibration perception threshold of an individual at or beyond the property boundary of the source if on private property; or at 150 feet from the source if on a public space or public right-of-way. The City of Redlands Municipal Code, Section 8.06.020, defines the vibration perception threshold as 0.01 inches per second over the range of one to one hundred (100) Hz.

The Project Site is adjacent to industrial and commercial uses to the north, east, and west, and the I-10 is directly south of the Project Site. Ground-borne vibration levels resulting from Proposed Project construction activities occurring at the Project Site would be temporary and construction activities, including grading, are anticipated to generate low levels of ground-borne vibration within the Project Site. Bulldozers, and other heavy-tracked construction equipment (expected to be used for this project) generate approximately 0.089 peak particle velocity (PPV) inches per second of ground-borne vibration when measured at 25 ft.

The closest existing off-site structure is an industrial warehouse development directly adjacent to the western property boundary of the Project Site. The nearest residential development is approximately 0.17 miles south of the Proposed Project, and beyond the I-10 freeway.

Construction equipment may result in temporary vibration levels that are noticeable if the equipment is within 100 feet of a receptor. However, since the nearest sensitive receptor is a residential development located approximately 800 feet south of the Project Site, no significant impacts are anticipated to occur. Therefore, no significant impacts are identified or anticipated, and no mitigation measures are required.

c) **Less Than Significant.** The Project Site is not within an airport safety review area or Airport Runaway Protection Zone. The Project Site is not located within the vicinity of a private or public airstrip. The Project Site is located approximately 1.8 miles south of the San Bernardino International Airport. Therefore, no significant impacts are identified or anticipated, and no mitigation measures are required.

XIV. POPULATION AND HOUSING

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact
Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☒	☐
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

a) **Less Than Significant.** Construction of the Proposed Project would not be expected to attract a substantial number of new employees to the area since there is an existing pool of construction labor in Redlands and surrounding cities. In 2023, San Bernardino County was estimated to have 126,200 construction laborers.[31] Construction activities would be temporary and would not attract new employees to the area.

The Proposed Project would require approximately 312 employees, based on 1 employee per 1,195 SF of warehouse area and 1 employee per 697 SF of office area.[32] Employment in the City is anticipated to increase by approximately 15,521 jobs between 2016 and 2035.[33] The Proposed Project's employee requirement would represent approximately 2% of the City's projected employment growth between 2016 and 2035. In addition, the Proposed Project would be an allowable use within the EV/SD zoning district. Therefore, it would not induce substantial unplanned population growth within the City. Therefore, this would be considered a less than significant impact and therefore, no mitigation measures are required.

b) **No Impact.** The Project Site is currently a vacated water park with no structures, and does not contain any residential housing. Implementation of the Proposed Project would not require displacement of any existing housing units or the construction of replacement housing elsewhere. Therefore, no impacts are identified or anticipated, and no mitigation measures are required.

[31] California Department of Conservation. State of California: Employment Development Department. San Bernardino County Profile. Accessed December 13, 2023.
[32] SCAG Employment Density Study https://www.mwcog.org/file.aspx? 1 A=QTTlTR24POOOUIw5mPNzK8F4d8djdJe4LF9Exj6lXOU%3D
[33] Dyett and Bhatia. City of Redlands General Plan Update and Climate Action Plan EIR. July 21, 2017.

XV. PUBLIC SERVICES

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact
a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
Fire Protection?	☐	☐	☒	☐
Police Protection?	☐	☐	☒	☐
Schools?	☐	☐	☒	☐
Parks?	☐	☐	☒	☐
Other Public Facilities?	☐	☐	☒	☐

a)

Fire Protection

Less than Significant. Fire protection at the Project Site would be provided by the City of Redlands Fire Department (emergency operations, fire prevention services, and emergency medical services). The City of Redlands is served by four Redlands Fire Stations and responds as an all-risk fire and EMS agency. The Redlands Fire Department responded to 11,386 calls for service in 2021 and experiences a 6.65 percent increase on average annually. The Redlands Fire Department is staffed with 52 sworn personnel, of which 41 personnel are Paramedics and 16 are Emergency Medical Technicians. The Redlands Fire Department strives to meet the National Fire Protection Association (NFPA) standards, which recommend that the first arriving unit arrive within four minutes 90 percent of the time. A more lenient goal of arriving eight minutes and 30 seconds 90 percent of the time, per the June 25, 2020, Fire Department Assessment and Deployment Study for the Redlands Fire Department, is a more realistic objective given the analysis within the study.

Redlands Fire Department responds to multiple calls at one time (2 or more) 13.83 percent of the time. This is a significant percentage of calls that continues to rise based on the current fire and EMS defense system in the City. Currently, only 34 percent of the city is within an Effective Response Force (ERF) during congested periods. The Fire Department will be able to improve service levels with the planned addition of two new fire stations

and the relocation of a third. This will increase the four-minute service response time by 60 percent, providing an improvement in the ability of first responders to reach areas within the community that are currently outside of a four-minute response time window. The closest station to the Project Site is Redlands Fire Station 264, located at 1270 Park Avenue, approximately 1.5 miles southeast of the Project Site. Average travel time between Station 264 and the Project Site is approximately six minutes.

The Proposed Project would be designed, constructed, and operated according to applicable fire prevention/protection standards established by the City of Redlands. The Redlands Fire Department provides fire protection and prevention services to the City of Redlands.[34] The Proposed Project is required to provide a minimum of fire safety and support fire suppression activities, fire sprinklers, and paved fire access. The Redlands Fire Department and the Building Division enforce fire safety standards during review of building plans and inspections. Development impact fees (DIF) are collected at the time of building permit issuance and would increase funding to assist in the provision of planned facilities, equipment, and staffing. Therefore, no significant adverse impacts are identified or anticipated, and no mitigation measures are required.

Police Protection

Less than Significant. The City of Redlands Police Department (RPD) provides police protection for the Project Site and vicinity. The service ratio for the City is 1.1 officers per 1,000 residents. Though the City does not have a service ratio standard, the City recognizes that its ratio falls below the national average of 2.1, and that hiring additional officers would be optimal.[35] In 2015, the Department had an average response time of 6.5 minutes for police services.[36] Although there are no industry standards for response time to emergency calls, according to the City of Redlands, a response time of 4.5 minutes is desirable in a city of Redlands' size. Development of the Proposed Project may incrementally increase the demand for police protection services due to the increased population on the site. In its review of new development plans, the RPD evaluates project plans on its ability to provide proper police protection to the development. Additionally, the proponent of the Proposed Project would be required to pay service fees and DIF to the RPD. The DIF would be used to fund capital costs associated with acquiring land for new police stations, constructing new police stations, purchasing crime-fighting equipment for new police stations, and providing for additional staff as needed and as identified by the City. Therefore, no significant adverse impacts are identified or anticipated, and no mitigation measures are required.

Schools

Less than Significant. The Redlands Unified School District (RUSD) provides public schools in the Planning Area, which includes the Project Site. Construction and operation

[34] Dyett and Bhatia. City of Redlands General Plan Update and Climate Action Plan EIR. July 21, 2017.
[35] Dyett and Bhatia. City of Redlands General Plan Update and Climate Action Plan EIR. July 21, 2017.
[36] Dyett and Bhatia. City of Redlands 2035 General Plan Update DEIR. Police Safety Services. Accessed December 13, 2023.

of new school facilities would be funded through school impact fees assessed on new developments that occur within the school district. The Proposed Project is not anticipated to substantially increase population growth within the area, as the future employees would likely come from the local area (see XIV a) above), and therefore would not generate new students. Therefore, no significant adverse impacts are identified or anticipated, and no mitigation measures are required.

Parks

Less than Significant. The Redlands Parks Division currently operates 18 parks.[37] In 2035, with the development of 140.9 acres of proposed parkland as designated in the General Plan, and the addition of 10,355 residents, the ratio will be 6.9 acres per 1,000 residents, which would exceed the City's park standard of 5 acres per 1,000 people.[38] The Redlands Municipal Code provides for open space and park fees (i.e. DIF) to be imposed as a condition of approval of new residential, commercial, and office and industrial development (Chapter 3.32). The DIF are intended to ensure that open space lands and active and passive parks are made available to the public concurrent with the need for such lands and parks caused by new development. They may be used to pay for costs incurred by the City for acquiring, developing, improving, and expanding open space areas, scenic drives, parks, playgrounds, and recreational facilities to meet the increased needs for those facilities resulting from the effects of new development. Collection of the DIF would ensure no significant impacts to parks would occur. Therefore, no significant adverse impacts are identified or anticipated, and no mitigation measures are required.

Other Public Facilities

Less than Significant. DIF are charged by local governments to defray all or a portion of the cost of public facilities related to development projects. The requirements for enactment of a development impact fee program are set forth in Government Code Sections 66000-66025 (the "Mitigation Fee Act"). In Redlands, development impact fees are collected at the time a building permit is issued for the purpose of mitigating the impacts caused by new development on the City's infrastructure. Fees are used to finance the acquisition, construction, and improvement of public facilities needed as a result of a new development. A separate funding structure has been established to account for the impact of new development on each of the following types of public facilities: Open Space, Parks, Public Facilities (including public safety, library and general government facilities), Transportation, Water, Solid Waste, and Sewer. Collection of developer impact fees would ensure no significant impacts to other public utilities would occur. Therefore, no significant adverse impacts are identified or anticipated, and no mitigation measures are required.

[37] City of Redlands. City-Owned and Operated Parks. https://www.cityofredlands.org/parks
[38] Dyett and Bhatia. City of Redlands General Plan Update and Climate Action Plan EIR. July 21, 2017.

XVI. RECREATION

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?	☐	☐	☐	☒

a) **Less than Significant.** The Redlands Parks Division currently operates 18 parks. Implementation of the Proposed Project would not induce residential development and would not significantly increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of any facilities would result. The Redlands Municipal Code provides for open space and park fees to be imposed as a condition of approval of new residential, commercial, and office and industrial development (Chapter 3.32). The fees are intended to ensure that open space lands and active and passive parks are made available to the public concurrent with the need for such lands and parks caused by new development. They may be used to pay for costs incurred by the City for acquiring, developing, improving, and expanding open space areas, scenic drives, parks, playgrounds, and recreational facilities to meet the increased needs for those facilities resulting from the effects of new development. Collection of fees would ensure no significant impacts to parks would occur. Therefore, no significant adverse impacts are identified or anticipated, and no mitigation measures are required.

b) **No impact.** The Proposed Project does not include recreational facilities or require the construction or expansion of recreational facilities. Therefore, no impacts are identified or anticipated, and no mitigation measures are required.

XVII. TRANSPORTATION

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact
Would the project:				
a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadways, bicycle lanes and pedestrian facilities?	☐	☐	☒	☐

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact
b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	☒	☐
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐
d) Result in inadequate emergency access?	☐	☐	☒	☐

a) **Less Than Significant.** A Traffic Analysis dated December 14, 2023, was prepared by Urban Crossroads for the Proposed Project (see Appendix B). Regional access to the Project Site is provided by the I-10 freeway at the California Street interchange which is adjacent to the project site. Local circulation would be provided by California Street to the east and Lugonia Avenue to the north. California Street and Lugonia Avenue are classified as Major Arterial Roadways.[39] Major arterial roadways typically provide four to six travel lanes and may also be used as truck routes. They usually provide service for the highest volumes and the longest trips and are reasonably higher-speed routes. They may provide service to abutting land, but access is secondary to through-travel needs. Minor arterial roadways enhance the major arterial network and are typically two to four travel lanes. They provide service to trips of moderate lengths.

Transit System:
The City is currently served by Omnitrans, a public transit agency serving the County of San Bernardino and the City of Redlands. However, there is currently no bus service along the Project Site roadways. The closest existing transit line is Route 8, which operates along Redlands Boulevard south of the I-10 Freeway and currently has stops near the corner of California Street and Redlands Boulevard. Transit service is reviewed and updated by Omnitrans periodically to address ridership, budget, and community demand needs. Changes in land use can affect these periodic adjustments which may lead to either enhanced or reduced service where appropriate.

Bicycle, Equestrian, and Pedestrian Facilities:
The Proposed Project will maintain the existing sidewalks along its frontage on both Lugonia Avenue and California Street. There are no existing bike routes along the study area roadways however, there are proposed bike routes along both Lugonia Avenue and California Street. The closest existing multi- use trail is located to the south of the I-10 Freeway, along Orange Blossom Trail.

The Connected City theme of the City General Plan promotes an efficient and integrated circulation system by enhancing the vehicular, biking, walking, and transit networks. The

[39] Dyett and Bhatia. City of Redlands General Plan 2035 EIR. Accessed December 22, 2023.

following analysis details project consistency with the applicable Connected City proposed actions:

5-A.14: Close the gaps in the sidewalk network where streets are built out but sidewalks are not complete.
Consistency: The Proposed Project would have continuous sidewalk pavement along the northern and eastern boundaries.

5-A.15: Maintain access for emergency vehicles and services by providing two means of ingress/egress into new communities, limitations on the length of cul-de-sacs, proper roadway widths and road grades, adequate turning radius, and other requirements per the California Fire Code.
Consistency: Access to the Project will be provided via two (2) existing driveways and two (2) new project driveways. The existing driveways along California Street on the eastern boundary of the site include one (1) 28' – 2" driveway to the north and one (1) 56" – 4" driveway to the south. The proposed driveways to the north of the Project along Lugonia Avenue would include one (1) 30' driveway to the east and one (1) 40' driveway to the west.

5-A.24: Use the City's Bicycle Master Plan as the primary resource for planning and implementing bikeway improvements.
5-A.26: Implement bicycle and trail improvements that provide strong north-south connections, especially with major east west trails, including routes on Mountain View Avenue, California Street, Nevada Street, Alabama Street, Texas Street, New York Street, Orange Street, Church Street, Dearborn Street, and Wabash Avenue.
Consistency: The portions of California Street and Lugonia Avenue adjacent to the Project Site are proposed future bike routes.[40] The Proposed Project would be required to provide right-of-way easements, which would allow for future bicycle and trail improvements along these streets.
5-A.28: Seek assistance from major employers in providing support facilities to encourage use of bikes for commuter purposes.
5-A.29: Incorporate end-of-trip facilities into Transportation Demand Management (TDM) plans at employment sites and public facilities, depending upon distance from bikeways. Provide well-located, secure bike storage facilities at employment sites, shopping and recreational areas, and schools in order to facilitate bike use. Encourage major employers to provide shower and changing facilities or assist in funding bicycle transit centers in nearby locations.
Consistency: The Proposed Project would provide 9 short-term bicycle racks and 9 long-term bicycle storage units.

5.A.47: Maximize the carrying capacity of arterials and boulevards by controlling the number of driveways and intersections, limiting residential access where applicable, and requiring sufficient on-site parking to meet the needs of proposed projects.

[40] Dyett and Bhatia. City of Redlands General Plan 2035. Adopted December 5, 2017. Figure 5-3: "Bicycle Facilities."

Consistent: Access to the Proposed Project would be provided by four gated driveways along California Street and Lugonia Avenue. California Street and Lugonia Avenue are major arterials. The City Code requires that the Proposed Project provide a total of 396 parking stalls, including 24 parking spaces for the office component of the Project and 372 parking spaces for the warehouse component of the Project. The Project Applicant would provide 396 stalls.

5-A.85: Discourage truck traffic from parking, idling, or traveling through local streets in residential neighborhoods.
Consistent: Project trucks would be utilizing a driveway along Lugonia Avenue. California Street and Lugonia Avenue are designated truck routes.[41] As shown in the City of Redlands General Plan Figure 5-7: Truck Routes, project trucks would not be traveling through residential neighborhoods and would use designated truck routes.

As summarized above, the Proposed Project would not conflict with the Connected City theme of the City General Plan. Therefore, no significant impacts are identified or anticipated, and no mitigation measures are required.

b) **Less than Significant**. Senate Bill (SB) 743 was adopted in 2013 requiring the Governor's Office of Planning and Research (OPR) to identify new metrics for identifying and mitigating transportation impacts within the California Environmental Quality Act (CEQA). For land use projects, OPR has identified VMT as the new metric for transportation analysis under CEQA. The regulatory changes to the CEQA guidelines that implement SB 743 were approved on December 28th, 2018, with an implementation date of July 1st, 2020, as the new metric. The City of Redlands City Counsel adopted their VMT Guidelines in July 21, 2020.

A Vehicle Miles Traveled (VMT) Screening Evaluation dated July 28, 2023, was conducted by Urban Crossroads for the Proposed Project (see Appendix I). Based on the VMT Analysis, the Project Site is not located within a half mile of an existing major transit stop or along a high-quality transit corridor. In addition, the Project does not meet the secondary criteria of having a floor area ratio (FAR) at or above 0.75.
City Guidelines identifies VMT per service population as the appropriate VMT metric for industrial projects and an impact threshold of "15 percent less than the baseline level for the County." The San Bernardino Transportation Analysis Model (SBTAM) has been utilized to determine the existing VMT per service population generated by the TAZ in which the Project is located (TAZ 53824601). TAZ 53824601 was found to generate 16.1 VMT per service population, as compared to 15 percent less than the baseline level for the County or 28.4. Therefore, the Project was identified to be located in a low VMT generating TAZ.

City Guidelines states projects that are consistent with the current Sustainable Communities Strategy (SCS) or general plan, and that generate less than 3,000 metric tons of CO2e per year can be presumed to have a less than significant impact on VMT. Based on substantial evidence provided in the City Guidelines, Warehousing of less than 463,000 square feet is presumed to have a less than significant impact on VMT. The

[41] Dyett and Bhatia. City of Redlands General Plan 2035. Adopted December 5, 2017. Figure 5-7: "Truck Routes."

proposed Project consists of a 357,610 square foot warehouse building and therefore is below the threshold identified in the City Guidelines. In addition, the Project is located in an area designated for Commercial/Industrial uses and thus is consistent with the City of Redlands General Plan underlying land use assumptions.

The Project was evaluated and is consistent with City Guidelines and was found to meet the Low VMT Area Screening and the Project Type Screening. Therefore, the Proposed Project would have a less than significant impact and no further VMT analysis is required.

c) **Less than Significant Impact.** Access to the Project Site will be provided via 4 new and existing project driveways:

- Lugonia Avenue & Project Driveway #1 – This driveway will be a new intersection along the south side of Lugonia Avenue approximately 620 feet west of California Street. The driveway would serve passenger cars and trucks and would accommodate full access (e.g., no turn restrictions).
- Lugonia Avenue & Project Driveway #2 – This driveway will be a new intersection along the south side of Lugonia Avenue approximately 270 feet west of California Street. The driveway would serve passenger cars only and would be restricted to right-in/right-out access only.
- California Street & Project Driveway #3 – This existing driveway is not anticipated to be modified from the current location on California Street and would serve passenger cars only. The driveway would be restricted to right-in/right-out access only.
- California Street & Project Driveway #4 – This existing driveway is not anticipated to be modified from the current location on California Street and would serve passenger cars only. The driveway aligns with the existing Orange Tree Lane on the east and would accommodate full access with the existing traffic signal.

The Proposed Project is the development of a warehouse building which would be consistent with surrounding land uses and also adhere to the City's guidelines and Development Code. Furthermore, the Proposed Project would not include geometric designs or incompatible uses that would substantially increase hazards to the surrounding area. Therefore, no significant impacts are identified or anticipated, and no mitigation measures are required.

d) **Less than Significant Impact.** The nearest evacuation route to the Project Site would be the I-10 Freeway located directly south of the project boundary. As previously stated, the Project Site would have a total of four driveways, two located on Lugonia Avenue and two along California Street. During construction, the contractor would be required to maintain adequate emergency access for emergency vehicles. Project operations would not interfere with an adopted emergency response or evacuation plan. Therefore, no impacts are identified or anticipated, and no mitigation measures are required.

XVIII. TRIBAL CULTURAL RESOURCES

		Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact
a)	Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is?				
	i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or?	☐	☒	☐	☐
	ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?	☐	☒	☐	☐

a)

i) **Less Than Significant with Mitigation.** A Phase I Cultural Resources Survey and Paleontological Assessment dated October 18, 2023, was conducted by BFSA Environmental Services for the Proposed Project. The records search did not identify any recorded resources within the project. However, 62 resources (one prehistoric, one multicomponent, and 60 historic) were recorded within one mile of the project. The records search also indicated that a total of 43 cultural resources studies have been conducted within a one-mile radius of the project. However, none of the studies on file with the SCCIC were within the subject property.

Although the Project Site has been fully graded, the Proposed Project would involve grading and other earthwork that could potentially unearth unknown historic and archeological resources. To ensure potential impacts to these resources is reduced to a less than significant level, the Mitigation Measures CR-1 and CR-2 shall be implemented.

Therefore, with the implementation of CR-1 and CR-2, the Proposed Project would not have a significant impact on potential historical resources.

ii) **Less Than Significant with Mitigation.** California Assembly Bill 52 (AB52) was approved by Governor Brown on September 25, 2014. AB52 specifies that CEQA projects

with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource may have a significant effect on the environment. As such, the bill requires lead agency consultation with California Native American tribes traditionally and culturally affiliated with the geographic area of a proposed project, if the tribe requested to the lead agency, in writing, to be informed of proposed projects in that geographic area. The legislation further requires that the tribe-requested consultation be completed prior to determining whether a negative declaration, mitigated negative declaration, or environmental impact report is required for a project. On December 13, 2023, the San Manuel Band of Mission Indians responded that due to the project being located on existing Serrano territory it is therefore of interest to the Tribe. Additionally, on December 26, 2023, the Morongo Band of Mission Indians responded and requested further tribal participation (a.k.a. Tribal Monitors) is requested by MBMI THPO during all ground disturbing activities and additional mitigation measures stated below (see Appendix I).

The Morongo Band of Mission Indians and the San Manuel Band of Mission Indians recommended the following Mitigation Measures which will be implemented for the Proposed Project to reduce any potentially significant impacts:

Mitigation Measure TR-1:

Tribal Monitoring Services Agreement Prior to the issuance of grading permits, the applicant shall enter into a Tribal Monitoring Services Agreement with the Morongo Band of Mission Indians (MBMI) for the Project. The Tribal Monitor shall be on-site during all ground-disturbing activities (including, but not limited to, clearing, grubbing, tree and bush removal, grading, trenching, fence post placement and removal, construction excavation, excavation for all utility and irrigation lines, and landscaping phases of any kind). The Tribal Monitor shall have the authority to temporarily divert, redirect, or halt the ground-disturbing activities to allow identification, evaluation, and potential recovery of cultural resources.

Mitigation Measure TR-2:

Retention of Archaeologist Prior to any ground-disturbing activities (including, but not limited to, clearing, grubbing, tree and bush removal, grading, trenching, fence post replacement and removal, construction excavation, excavation for all utility and irrigation lines, and landscaping phases of any kind), and prior to the issuance of grading permits, the Applicant shall retain a Qualified Archaeologist who meets the U.S. Secretary of the Interior Standards (SOI). The Archaeologist shall be present during all ground- disturbing activities to identify any known or suspected archaeological and/or cultural resources. The Archaeologist will conduct Cultural Resource Sensitivity Training, in conjunction with the Tribe[s] Tribal Historic Preservation Officer (THPO), and/or designated Tribal Representative. The training session will focus on the archaeological and tribal cultural resources that may be encountered during ground-disturbing activities as well as the procedures to be followed in such an event.

Mitigation Measure TR-3:

Cultural Resource Management Plan Prior to any ground-disturbing activities the project Archaeologist shall develop a Cultural Resource Management Plan (CRMP) and/or Archaeological Monitoring and Treatment Plan (AMTP) to address the details, timing, and responsibilities of all archaeological and cultural resource activities that occur on the project site. This Plan shall be written in consultation with the consulting Tribe[s] and shall include the following: approved Mitigation Measures (MM)/Conditions of Approval (COA), contact information for all pertinent parties, parties' responsibilities, procedures for each MM or COA, and an overview of the project schedule.

Mitigation Measure TR-4:

Pre-Grade Meeting The retained Qualified archeologist and Consulting Tribe[s] representative shall attend the pre-grade meeting with the grading contractors to explain and coordinate the requirements of the monitoring plan.

Mitigation Measure TR-5:

On-site Monitoring During all ground-disturbing activities the Qualified Archaeologist and the Tribal Monitor shall be on-site full-time. The frequency of inspections shall depend on the rate of excavation, the materials excavated, and any discoveries of Tribal Cultural Resources as defined in California Public Resources Code Section 21074. Archaeological and Tribal Monitoring will be discontinued when the depth of grading and the soil conditions no longer retain the potential to contain cultural deposits. The Qualified Archaeologist, in consultation with the Tribal Monitor, shall be responsible for determining the duration and frequency of monitoring.

Mitigation Measure TR-6:

Significant Resources The Yuhaaviatam of San Manuel Nation Cultural Resources Department (YSMN) shall be contacted of any pre-contact and/or historic-era cultural resources discovered during project implementation, and be provided information regarding the nature of the find, so as to provide Tribal input with regards to significance and treatment. Should the find be deemed significant, as defined by CEQA (as amended, 2015), a Cultural Resources Monitoring and Treatment Plan shall be created by the archaeologist, in coordination with YSMN, and all subsequent finds shall be subject to this Plan. This Plan shall allow for a monitor to be present that represents YSMN for the remainder of the project, should YSMN elect to place a monitor on-site.

Mitigation Measure TR-7:

Project Documents Any and all archaeological/cultural documents created as a part of the project (isolate records, site records, survey reports, testing reports, etc.) shall be supplied to the applicant and Lead Agency for dissemination to YSMN. The Lead

Agency and/or applicant shall, in good faith, consult with YSMN throughout the life of the project.

Mitigation Measure TR-8:

Final Report: The final report[s] created as a part of the project (AMTP, isolate records, site records, survey reports, testing reports, etc.) shall be submitted to the Lead Agency and Consulting Tribe[s] for review and comment. After approval of all parties, the final reports are to be submitted to the Eastern Information Center, and the Consulting Tribe[s].

In the event of an accidental discovery of cultural and/or historical resources at the site; implementation of mitigation measures CR-1 and CR-2, and TR-1 – TR-6 will ensure impacts would remain less than significant. Therefore, impacts to tribal cultural resources would be less than significant.

XIX. UTILITIES AND SERVICE SYSTEMS

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact
Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications, the construction or relocation of which could cause significant environmental effects?	☐	☐	☒	☐
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	☐	☐	☒	☐
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☒	☐
d) Generate solid waste in excess of State or local standards or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☒	☐

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☒	☐

a) **Less Than Significant.** The Project Site is located within the City of Redlands water service area. There are existing water lines with sufficient capacity to serve the Proposed Project's water demands along Califiornia Street and Lugonia Avenue that the Proposed Project would connect to.

The Project Site is located within the City of Redlands sewer collection and wastewater treatment service area. There are existing water lines with sufficient capacity to serve the Proposed Project's sewer demands along Califiornia Street and Lugonia Avenue that the Proposed Project would connect to.

The new development is expected to have 14.32 acres of impervious land (approximately 89 percent) and 1.72 acres of pervious land (approximately 11 percent), totaling to approximately 16 acres. Post-development surface runoff will be collected by catch basins and conveyed to the onsite underground infiltration system, which is sized to capture the WQMP's (designed capture volume) DCV, on the west side of the Project Site. Catch basin filters will be added to each of the site's storm drain catch basins as a pre-treatment unit in addition to the CDS unit (Continuous Deflective System) that is sized based on treatment flow from the site. Once the infiltration system reaches the WQMP's DCV capacity it will overflow and discharge into an existing lateral at the northwest property corner along Lugonia Avenue. Ultimately, runoff will be conveyed to the Mission Channel, Santa Ana River, and Prado Flood Control Basin.

SCE would provide electrical service for the Proposed Project. The Proposed Project would receive electrical power by connecting to SCE's existing service lines in California Street and Lugonia Avenue adjacent to the Project Site. SCE provided electrical service to the previous and currently vacated water park.

The Southern California Gas Company (SoCalGas) provides natural gas service to the area of the Project Site and previously provided service to the currently vacated water park. Therefore, the Proposed Project would receive natural gas from SoCalGas by connecting to the existing line located in California Street adjacent to the Project Site.

There is existing telephone service available to the Proposed Project as previously provided by the prior use.

The Proposed Project is not anticipated to require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electrical power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects. No significant adverse impacts are identified or are anticipated, and no mitigation measures are required.

b) **Less than Significant.** The Project Site is located within the City of Redlands water service area. Redlands' water supply primarily comprises surface water from the Santa Ana River (SAR) and Mill Creek and supplemented by groundwater extracted from the Bunker Hill Basin (part of the San Bernardino Basin) and Yucaipa Basin and a small amount of imported water when needed.[42] The Urban Water Management Plan (UWMP) for City of Redlands is based on projected growth included in General Plans for areas within their service area.

Per UWMP requirements, Redlands has evaluated reliability for an average year, single dry year, and a 5 consecutive dry year period. Redlands' demands in single dry years are assumed to increase by 10 percent above normal year demands. According to the UWMP, he local groundwater basins that Redlands produces water from have storage for use in dry years Redlands' supplies are 100 percent reliable during normal and single dry years.[43] Moreover, Redlands can produce the volume of water needed to meet 100 percent of demands in multiple dry years.[44]

The Proposed Project is consistent with the land use and population projections included in the General Plan. Therefore, the Proposed Project water demand is already anticipated from buildout of the General Plan Planning Area. Since the City has sufficient water supplies to meet current and future development consistent with its General Plan through the year 2035, additional water storage and treatment facilities are not anticipated to be required through build out of the General Plan in 2035.

No significant impacts are identified or anticipated, and no mitigation measures are required.

c) **Less Than Significant.** Sewer service in the General Plan Planning Area is provided by the City of Redlands. The Redlands Wastewater Treatment Plant (WWTP) has a secondary treatment capacity of 9.5 million gallons per day (mgd).[45] Approximately 6 million gallons of that capacity is in a membrane bioreactor system, the remaining 3.5 million gallons is in a conventional activated sludge process. The WWTP meets all current regional, State, and federal requirements for secondary treatment. The City regularly samples the WWTP's influent and effluent to ensure compliance with State regulations. Current regulations require compliance with water quality standards and these measures would preclude development lacking adequate utility capacity, including wastewater treatment capacity. The Proposed Project would be reviewed by the City and the applicable wastewater providers to determine that sufficient sewer capacity exists to serve the additional population that would be generated by project. The City would continue to coordinate with the wastewater service providers to ensure that new development would not exceed the capacity of wastewater conveyance and treatment facilities. The Proposed Project would

[42] Water Systems Consulting, Inc. and Woodard & Curran. 2020 Upper Santa Ana River Watershed Integrated Regional Urban Water Management Plan.
[43] Water Systems Consulting, Inc. and Woodard & Curran. 2020 Upper Santa Ana River Watershed Integrated Regional Urban Water Management Plan.
[44] Water Systems Consulting, Inc. and Woodard & Curran. 2020 Upper Santa Ana River Watershed Integrated Regional Urban Water Management Plan.
[45] Dyett and Bhatia. City of Redlands General Plan Update and Climate Action Plan EIR. July 21, 2017.

be required to pay development impact fees based on the volume of wastewater generated. Therefore, no significant adverse impacts are identified or anticipated, and no mitigation measures are required.

d) **Less than Significant.** Solid waste from Redlands is primarily disposed of at the California Street Landfill operated by the Quality of Life Department and the San Timoteo Sanitary Landfill operated by the County, both within the city limits. The California Street Landfill is located at 2151 Nevada Street and encompasses 115 acres. The landfill has a maximum permitted capacity of 11.4 million cubic yards. It has a maximum permitted throughput of 829 tons per day. As of July 25, 2018, it has a remaining capacity of 5,168,182 cubic yards.[46] The San Timoteo Sanitary Landfill is located on San Timoteo Canyon Road and is 366 acres in size. It has a maximum permitted capacity of 23,685,785 cubic yards and a maximum permitted daily throughput of 2,000 tons. As of April 30, 2019, the remaining capacity was 12,360,396 cubic yards.[47] The Proposed Project consists of a new warehouse supply facility and storage yard. According to CalRecycle's estimated solid waste generation rates for industrial uses, the Proposed Project would generate at most, approximately 2,786 pounds of solid waste per day or approximately 1.4 tons per day, based on 8.93 pounds per employee per day.[48] Therefore, the Proposed Project solid waste generation contribution to these landfills would be nominal and would not exceed the daily permitted capacities of these facilities. No significant adverse impacts are identified or are anticipated, and no mitigation measures are required.

e) **Less than Significant.** The Proposed Project would be required to comply with City of Redlands Municipal Chapter 13.66 (Recycling Requirements for Specified Developmental Activity). Chapter 13.66 establishes requirements for recycling by specified development activities to facilitate the City's compliance with state recycling mandates, remove architectural barriers to recycling and ensure the recycling of construction and demolition. The Project Applicant is required to coordinate with a waste hauler to collect solid waste on a common schedule as established in applicable local, regional, and State programs. The Proposed Project shall adhere the California Integrated Waste Management Act of 1989 (AB 939), AB 1327, Chapter 18 (California Solid Waste Reuse and Recycling Access Act of 1991), and any other applicable local, State, and federal solid waste management regulations. Therefore, no significant adverse impacts are identified or are anticipated, and no mitigation measures are required.

XX. WILDFIRE

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact
If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☒	☐
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary ongoing impacts to the environment?	☐	☐	☒	☐
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☒	☐

a) **Less than Significant.** As stated previously, the Proposed Project would provide more than the required number of parking spaces. Therefore, project vehicles are not anticipated to park off-site and interfere with external traffic. The Project Site does not contain any emergency facilities.[49] It is adjacent to Lugonia Avenue, California Street, and the I-10 of which the I-10 is classified as an evacuation route.[50] During construction, the contractor would be required to maintain adequate emergency access for emergency vehicles as required by the City. The Proposed Project would provide more parking spaces than required, thereby keeping project vehicles off the public right of way.

Additionally, the California Emergency Services Act requires the City to manage and coordinate the overall emergency and recovery activities within its jurisdictional boundaries. The City's Emergency Operations Plan includes policies and procedures to be administered by the City in the event of a disaster. During disasters, the City of Redlands is required to coordinate emergency operations with the County of San Bernardino. Policies within the City's General Plan and updates to the City's Emergency Plan, as required by

[49] San Bernardino County. Countywide Policy Plan web maps: PP-1 "Critical Facilities." Accessed December 14, 2023.
[50] San Bernardino County. Countywide Policy Plan web maps: PP-2 "Evacuation Routes." Accessed December 14, 2023.

State law, would ensure the Proposed Project would not interfere with adopted policies and procedures. Therefore, no significant impacts have been identified or are anticipated, and no mitigation measures are required.

b) **Less than Significant.** The Project Site is located in an area with moderate threat to fire hazards.[51] It is not located in a very high fire hazard zone.[52] The property is located in an urban area and surrounded primarily by developed land. The Project Site is not located adjacent to or near wildlands. Therefore, the Proposed Project would not expose people or structures to a significant risk of loss, injury or death involving wildland fires. No significant impacts are identified or anticipated, and no mitigation measures are required.

c) **Less than Significant.** The Proposed Project would not require the installation or maintenance of associated infrastructure; existing infrastructure is of sufficient capacity to serve the use, The Project Site is not located within a Very High Fire Hazard Severity Zone.[53] The proposed warehouse facility would replace the vacated developed lot with on site a warehouse building with fire safety and fire suppression design elements, and proper landscaping, thereby reducing the risk of wildfire. Therefore, no significant impacts are identified or anticipated, and no mitigation measures are required.

d) **Less than Significant.** Similar to adjacent properties, the Project Site is relatively flat. No hillside areas or natural areas prone to wildfire fire are located in the immediate vicinity. Therefore, the Proposed Project would not expose persons or structures to post-fire slope instability or post-fire drainage. No significant impacts are identified or are anticipated, and no mitigation measures are required.

XXI. MANDATORY FINDINGS OF SIGNIFICANCE:

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact
a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☒	☐	☐

[51] Dyett and Bhatia. City of Redlands General Plan Update and Climate Action Plan EIR. July 21, 2017. Figure 3.7-3: Fire Hazards and Fire Safety Services.
[52] San Bernardino Countywide Plan. HZ-5 Fire Hazard Severity Zones. Accessed on December 21, 2023.
[53] San Bernardino Countywide Policy Plan Draft EIR. Hazards and Hazardous Materials. Figure 5.8-6" Fire Severity and Growth Areas in the East Desert Regions."

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant	No Impact
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	☐	☐	☒	☐
c) Does the project have environmental effects, which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☒	☐	☐

a) **Less than Significant with Mitigation**. The Project Site is located in a developed area mixed with industrial and commercial uses. The property has been graded and paved from a previous amusement park in 2018 that has been vacated. The Proposed Project would redevelop the Project Site as a warehouse facility in compliance with development standards set for the City of Redlands EV/SD zoning district. Therefore, because the site has been previously developed, the Proposed Project would not involve habitat modifications or activities that would have adverse effects on biological resources. Although the Project Site has been fully graded, the Proposed Project would involve grading and other earthwork that could potentially unearth unknown historic and archeological resources. To ensure potential impacts to these resources is reduced to a less than significant level, Mitigation Measure CR-1, CR-2, and GEO-2 shall be implemented.

b) **Less than Significant.** Cumulative impacts are defined as two or more individual affects that, when considered together, are considerable or that compound or increase other environmental impacts. The cumulative impact from several projects is the change in the environment that results from the incremental impact of the development when added to the impacts of other closely related past, present, and reasonably foreseeable or probable future developments. Cumulative impacts can result from individually minor, but collectively significant, developments taking place over a period. The CEQA Guidelines, Section 15130 (a) and (b), states:

(a) Cumulative impacts shall be discussed when the project's incremental effect is cumulatively considerable.

(b) The discussion of cumulative impacts shall reflect the severity of the impacts and their likelihood of occurrence, but the discussion need not provide as great detail as is provided of the effects attributable to the project. The discussion should be guided by the standards of practicality and reasonableness.

Air Quality

By its very nature, air pollution is largely a cumulative impact. The nonattainment status of regional pollutants is a result of past and present development within the SCAB, and this regional impact is cumulative rather than being attributable to any one source. A

project's emissions may be individually limited, but cumulatively considerable when taken in combination with past, present, and future development projects. Projects that would not exceed the thresholds of significance would not contribute a cumulatively considerable amount of criteria air pollutant emissions to the region's emissions profile and would not impede attainment and maintenance of ambient air quality standards. As summarized previously, construction activities and project operations would not exceed the SCAQMD regional and localized thresholds of significance.

Greenhouse Gas

The quantity of GHGs that it takes to ultimately result in climate change is not precisely known; however, no single project alone is expected to measurably contribute to a noticeable incremental change in the global average temperature, or to a global, local, or micro-climate. Therefore, the geographic scope of consideration for GHG emissions is on a global scale and as such, emissions contribute, on a cumulative basis, to global climate change. The Project would generate approximately 1,708 MT CO2e per year and would not exceed the SCAQMD's adopted significance threshold of 10,000 MT CO2e per year. Furthermore, the Proposed Project would not conflict with plans, policies, or regulations for the purpose of reducing GHG emissions. As such, implementation of the Proposed Project and its incremental contribution to global climate change would not be considered significant.

c) **Less the Significant with Mitigation**. The development of the Proposed Project would not cause adverse impacts on humans, either directly or indirectly. The Proposed Project is not within a geologic fault zone, and therefore would not be subject to significant seismic hazards. As concluded in Section III. Air Quality, the Proposed Project non-cancer chronic hazard index is below the SCAQMD threshold of 1.0 for both residential and worker sensitive receptors. Therefore, with the implementation of Mitigation Measures CUL 1-2, GEO 1-2, and TR 1-8, the Proposed Project would not expose sensitive receptors to substantial pollutant concentrations.

MITIGATION MONITORING REPORTING PROGRAM

Project: 1101 California Street Warehouse (Lot Merger No. 8; Planned Development No.7 **Applicant:** CRP/NPP Redlands Industrial Owner, LLC

Lead Agency: City of Redlands **Date:** March 2024

Mitigation Measures No. / Implementing Action	Implementation Timing	Party Responsible for Implementation	Party Responsible for Monitoring	Date of Completion/Notes
Biological Resources				
BIO-1: Preconstruction Nesting Bird Survey: If construction or other Project activities are scheduled to occur during the nesting bird season (February 1 through August 31), a preconstruction nesting bird survey shall be conducted by a qualified avian biologist to ensure that active bird nests will not be disturbed or destroyed. The survey shall be completed no more than three days prior to initial ground disturbance. The nesting bird survey shall include the Project Site and adjacent areas where Project activities have the potential to affect active nests, either directly or indirectly, due to construction activity, noise, human activity, or ground disturbance. If an active nest is identified, a qualified avian biologist shall establish an appropriately sized non-disturbance buffer around the nest using flagging or staking. Construction activities shall not occur within any non-disturbance buffer zones until the nest is deemed inactive by the qualified avian biologist. If initial ground-disturbing activities are scheduled to occur during the nesting bird season, then a biological monitor shall be present during all vegetation removal activities to ensure no impacts to nesting birds occur.	Prior to any ground-disturbing activities	Qualified Avian Biologist	City of Redlands	
Cultural Resources				
CR-1: In the event that cultural resources are discovered during project activities, all work in the immediate vicinity of the find (within a 60-foot buffer) shall cease and a qualified archaeologist meeting Secretary of Interior standards shall be hired to assess the find. Work on the other portions of the project outside of the buffered area may continue during this assessment period. If significant pre-contact and/or historic-era cultural resources, as defined by CEQA (as amended, 2015), are discovered and avoidance cannot	Prior to any ground-disturbing activities	Project Proponent Archaeologist	City of Redlands	

Mitigation Measures No. / Implementing Action	Implementation Timing	Party Responsible for Implementation	Party Responsible for Monitoring	Date of Completion/Notes
be ensured, the archaeologist shall develop a Monitoring and Treatment Plan. The archaeologist shall monitor the remainder of the project and implement the Plan accordingly.				
CR-2: If human remains are discovered, work shall halt in that area until a determination can be made regarding the provenance of the human remains, and the following procedures as set forth in CEQA Section 15064.5(e), the California Public Resources Code (Sec. 5097.98), and the State Health and Safety Code (Sec. 7050.5) shall be undertaken. All work shall be directed away from the location of the discovery and any nearby area reasonably suspected of overlaying adjacent human remains until a determination can be made by the medical examiner. The medical examiner will determine if the remains are or are most likely to be of Native American origin. If human remains are determined to be Native American, the medical examiner will notify the NAHC within 24 hours. If human remains are not Native American, the medical examiner will determine the appropriate course of action with the city staff (Public Resources Code 5097.98).	During all earth moving activities	Project Proponent Archaeologist	Project Archaeologist City of Redlands	

Mitigation Measures No. / Implementing Action	Implementation Timing	Party Responsible for Implementation	Party Responsible for Monitoring	Date of Completion/Notes
Geology and Soils				
GEO-1: The recommendations regarding site preparation and construction, as described in a Final Geotechnical Investigation as approved by the City Engineer, shall be incorporated into project design.	Prior to issuance of grading permits	Project Proponent Paleontologist	Paleontologist City of Redlands	
GEO-2: Establish a procedure for the management of paleontological materials found on-site during project development, including the following provisions: If materials are found on-site during grading, it is required that work be halted until a qualified paleontologist evaluates the find to determine if it represents a significant paleontological resource. If the resource is determined to be significant, the paleontologist shall supervise removal of the material and determine the most appropriate archival storage of the material. Appropriate materials shall be prepared, catalogued, and archived at the applicant's expense and shall be retained within San Bernardino County if feasible.	Upon discovery of paleontological resources	Project Proponent Paleontological Monitor	City of Redlands	
Tribal Cultural Resources				
TCR-1: Tribal Monitoring Services Agreement: Prior to the issuance of grading permits, the applicant shall enter into a Tribal Monitoring Services Agreement with the Morongo Band of Mission Indians (MBMI) for the Project. The Tribal Monitor shall be on-site during all ground-disturbing activities (including, but not limited to, clearing, grubbing, tree and bush removal, grading, trenching, fence post placement and removal, construction excavation, excavation for all utility and irrigation lines, and landscaping phases of any kind). The Tribal Monitor shall have the authority to temporarily divert, redirect, or halt the ground-disturbing activities to allow identification, evaluation, and potential recovery of cultural resources.	Upon discovery of any pre-contact or historic-era resources	Qualified Archeologist	Morongo Band of Mission Indians Cultural Resources Department City of Redlands	

Mitigation Measures No. / Implementing Action	Implementation Timing	Party Responsible for Implementation	Party Responsible for Monitoring	Date of Completion/Notes
TCR-2: Retention of Archaeologist: Prior to any ground-disturbing activities (including, but not limited to, clearing, grubbing, tree and bush removal, grading, trenching, fence post replacement and removal, construction excavation, excavation for all utility and irrigation lines, and landscaping phases of any kind), and prior to the issuance of grading permits, the Applicant shall retain a Qualified Archaeologist who meets the U.S. Secretary of the Interior Standards (SOI). The Archaeologist shall be present during all ground- disturbing activities to identify any known or suspected archaeological and/or cultural resources. The Archaeologist will conduct Cultural Resource Sensitivity Training, in conjunction with the Tribe[s] Tribal Historic Preservation Officer (THPO), and/or designated Tribal Representative. The training session will focus on the archaeological and tribal cultural resources that may be encountered during ground-disturbing activities as well as the procedures to be followed in such an event.	Upon completion of project cultural reports	Qualified Archeologist	City of Redlands	
TCR-3: Cultural Resource Management Plan: Prior to any ground-disturbing activities the project Archaeologist shall develop a Cultural Resource Management Plan (CRMP) and/or Archaeological Monitoring and Treatment Plan (AMTP) to address the details, timing, and responsibilities of all archaeological and cultural resource activities that occur on the project site. This Plan shall be written in consultation with the consulting Tribe[s] and shall include the following: approved Mitigation Measures (MM)/Conditions of Approval (COA), contact information for all pertinent parties, parties' responsibilities, procedures for each MM or COA, and an overview of the project schedule.	Prior to any ground-disturbing activities	Qualified Archeologist	City of Redlands	
TCR-4: Pre-Grade Meeting: The retained Qualified archeologist and Consulting Tribe[s] representative shall attend the pre-grade meeting with the grading contractors to explain and coordinate the requirements of the monitoring plan.	Prior to any ground-disturbing activities	Qualified Archeologist and Consulting Tribe[s] representative[s]	City of Redlands Consulting Tribe[s]	
TCR-5: On-site Monitoring: During all ground-disturbing activities the Qualified Archaeologist and the Tribal Monitor shall be on-site full-time. The frequency of inspections shall depend on the rate of excavation, the	Upon discovery of any pre-contact or historic-era resources	Qualified Archeologist	City of Redlands Consulting Tribe[s]	

Mitigation Measures No. / Implementing Action	Implementation Timing	Party Responsible for Implementation	Party Responsible for Monitoring	Date of Completion/Notes
materials excavated, and any discoveries of Tribal Cultural Resources as defined in California Public Resources Code Section 21074. Archaeological and Tribal Monitoring will be discontinued when the depth of grading and the soil conditions no longer retain the potential to contain cultural deposits. The Qualified Archaeologist, in consultation with the Tribal Monitor, shall be responsible for determining the duration and frequency of monitoring.				
TCR-6: Significant Resources: The Yuhaaviatam of San Manuel Nation Cultural Resources Department (YSMN) shall be contacted of any pre-contact and/or historic-era cultural resources discovered during project implementation and be provided information regarding the nature of the find, so as to provide Tribal input with regards to significance and treatment. Should the find be deemed significant, as defined by CEQA (as amended, 2015), a Cultural Resources Monitoring and Treatment Plan shall be created by the archaeologist, in coordination with YSMN, and all subsequent finds shall be subject to this Plan. This Plan shall allow for a monitor to be present that represents YSMN for the remainder of the project, should YSMN elect to place a monitor on-site.	Upon discovery of any pre-contact or historic-era resources	Qualified Archeologist	Yuhaaviatam of San Manuel Nation Cultural Resources Department City of Redlands	
TCR-7: Project Documents: Any and all archaeological/cultural documents created as a part of the project (isolate records, site records, survey reports, testing reports, etc.) shall be supplied to the applicant and Lead Agency for dissemination to YSMN. The Lead Agency and/or applicant shall, in good faith, consult with YSMN throughout the life of the project.	Upon completion of project archeological/cultural reports	Qualified Archeologist	City of Redlands Consulting Tribe[s]	
TCR-8: Final Report: The final report[s] created as a part of the project (AMTP, isolate records, site records, survey reports, testing reports, etc.) shall be submitted to the Lead Agency and Consulting Tribe[s] for review and comment. After approval of all parties, the final reports are to be submitted to the Eastern Information Center, and the Consulting Tribe[s].	Upon completion of project archeological/cultural reports	Qualified Archeologist	City of Redlands Consulting Tribe[s]

We DON'T need anymore warehouses in Redlands! We need a big Community Pool and more activity centers for our youth, teens & adults!! Or how about an event venue for music and theater (like Yucaipa Performing Arts).

Seriously, almost anything that provides enrichment, cultural, or wellness benefits for our community instead of more warehouses.

Hi Kevin,

I would like to understand the impact of this on the overall air quality. As it is with the growing number of warehouses and trucks coming into the area it seems the air quality is deteriorating with every passing day.

The community does not have enough entertainment and amusement center.

This project is also close to residential which might start impacting peoples health adversely.

Thanks

As a homeowner in Redlands who chose Redlands as a city to reside in because of its walkability my concern is the focus on warehouse/logistics for the city.
Driving into Redlands from the East on 10 there has been a presence of smog for sometime. San Bernardino County gets an F for pollution. We are part of SB County. What is the city doing to control the growing logistics building that is happening in Redlands because of our proximity to 10, an artery for trucking in and out of California and the abundance of land still available for growth here?
Are there plans for "green spaces"?
I'm not anti growth, just concerned that there isn't thoughtful planning around it.

Dear Mr. Beery,
I just found out that today was the last day for public comments for the proposed 357,000 sq. ft. warehouse where Pharaoh's Last Kingdom was located.
Do we really need more warehouses?
I can't believe the City would even consider this proposal.

A few months ago the City Council requested that the residents respond to a survey to "rebrand" our City. Our current slogan is "A City that Works", what will the new slogan be? "A City that works for Developers", "A City that works for Warehouses"?
In previous conversations the City Council had always discussed our precious Redlands as a destination point.
Look at us now....Destination to what? Will we have walking tours to visit all the empty warehouses?

You already know all the arguments against ANOTHER warehouse.

- Increased Traffic due to all the big trucks
- Air Pollution caused by the additional CO2 in the atmosphere
- Not conducive to the neighborhood with schools, residents, medical facilities, churches and restaurants near by
- Increased road damage (10 times as much) when you compare trucks to cars
- Noise Pollution- the residents have no control as to who would lease this humongous warehouse

Where is the VISION for our future? Is every decision revenue based?
We have to think of the future and what we are leaving to the next generation. Will they thank us for all the hard work that was done preserving our history?
Or will they despise us for no vision and inviting all these out-of-town developers to come in and create another concrete jungle just like they did in Los Angeles?

Please consider the consequences of the decisions that are made for our Beloved Redlands.

Sincerely,
Robert and LuAnn Benton

[**NOTICE:** This message originated outside of City of Redlands -- **DO NOT CLICK** on **links** or open **attachments** unless you are sure the content is safe.]

To Kevin Beery:

Thank you for the opportunity to comment on the proposal to put a new warehouse in the former Splash Kingdom location. I would like to voice my strong **opposition** to this proposal. San Bernardino already ranks the worst in the nation for ozone pollution in large part because of the warehouses that have already taken over our region, combined with our geography that traps this pollution against the mountains. Due to our geography that already exacerbates the impacts of pollution, we should be doing everything we can to reduce and remove pollution, instead of approving new projects that will further worsen the health of our region. This pollution is known to cause diseases and health risks such as premature birth and asthma in children, and can worsen the effects of other diseases. See more information on the risks in this article https://www.communityforwardredlands.com/san-bernardino-county-ranks-worst-in-the-nation-for-ozone-pollution/

Our city council should be doing everything it can to improve the health and livability of our region, instead of approving projects that may create short term profit for a few at the expense of all of our long-term health and environment.

Thank you for taking this into consideration. I realize I am a couple of hours past the deadline but I hope you will still consider my feedback with the other opposition comments I am sure you have received. I am a busy full-time working mom who is also currently pregnant and am taking time out of my day to write you these comments because opposing this warehouse for the sake of my children is so important to me.

Thank you,
Margot

Subject:	Comments on environmental report for California St warehouse proposal
Date:	Monday, April 29, 2024 04:50:20

[**NOTICE:** This message originated outside of City of Redlands -- **DO NOT CLICK** on **links** or open **attachments** unless you are sure the content is safe.]

Hello Mr. Beery,

Thank you for the opportunity to comment on the proposed warehouse at 1101 California St. As a Redlands resident and climate scientist, my primary concern is with the air quality findings. I simply find it impossible to believe that yet another logistics warehouse will have no significant impact on air quality, unless it's because the air quality is so bad already that it's almost impossible to make it worse. This is highlighted in the CO hotspot analysis. According to the report, this warehouse would not generate a CO hotspot because CO is already concentrated in this region.

I think a full Environmental Impact Report should be required for all new warehouse projects; as was stated with the proposed Tennessee St project, a Mitigated Negative Declaration is not enough.

Thank you,
Julia

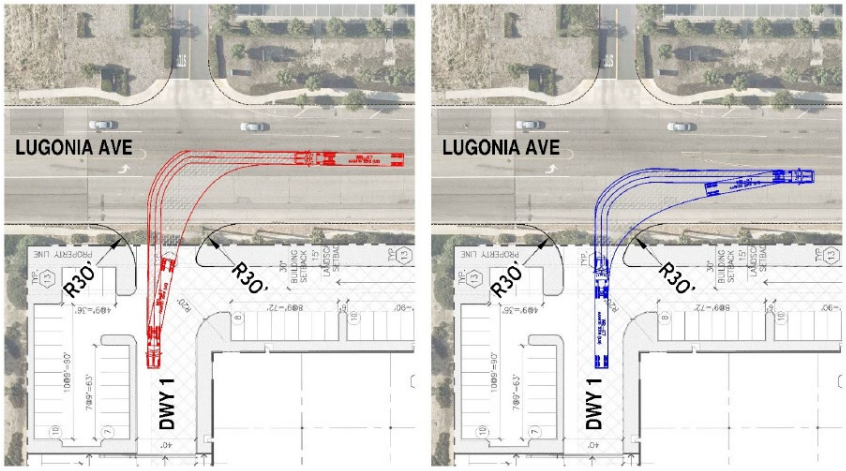
RE: Proposed Warehouse Project Located at 1101 California Street (Planned Development No. 7)- CEQA Comments

Mr. Beery:
Please accept this letter in response to the call for comments for 1101 California Street under the provisions of CEQA.



Driveway 1 and Project Recommended Stacking Lane: The proposed project includes one entrance for all trucks on Lugonia Avenue. As proposed, the new Driveway 1 does not align with our existing driveway on Lugonia. The Traffic Study recommended the following:

Recommendation 1 – Driveway 1 & Lugonia Avenue (#1) – The following improvements are necessary to accommodate site access:

- Accommodate a westbound left turn lane within the existing median with a minimum storage of 100-feet.

393 E. Walnut Street, 5th Floor
Pasadena, CA 91188

EXHIBIT 1-5: TRUCK ACCESS

Due to the offset in driveway alignment, the turn of the westbound truck will conflict with the existing eastbound left turn lane into our site. This will result in roadway hazards due to conflicts from competing turning demands and queuing in the median.

Existing Use Credits:

The project site has been vacant for 4+ years. The Traffic Study does not give credit for any existing uses however the GHG Report does for mobile emissions. Please explain why one technical study gives an existing use credit but the other does not.

4.1 PROJECT TRIP GENERATION

The Project is located on the former Splash Kingdom Waterpark site. The waterpark started operations in 2006 and the interior was later transformed into a trampoline park in 2012. There was a massive fire that caused property damage in May 2020 and the facilities license to operate was revoked in October 2020. By 2021 the remaining building structures on the site were demolished. Due to the time that has passed since the closure of the prior use and the site is not currently generating any traffic, a trip credit for the existing use has not been applied.

3.6.8 EMISSIONS SUMMARY

EXISTING GHG EMISSIONS

The site is currently occupied with existing uses. The estimated GHG emissions from the existing development are summarized on Table 3-6.

TABLE 3-6: EMISSIONS FROM EXISTING DEVELOPMENT

Emission Source	Emissions (MT/yr)				
	CO_2	CH_4	N_2O	Refrigerants	Total CO_2e
Mobile Source	2,122.74	0.10	0.10	4.16	2,159.84

Mitigated Negative Declaration (MND) for the Proposed 1101 California Street Warehouse Project (Proposed Project)

South Coast Air Quality Management District (South Coast AQMD) staff appreciate the opportunity to review the above-mentioned document. The City of Redlands is the California Environmental Quality Act (CEQA) Lead Agency for the Proposed Project. To provide context, South Coast AQMD staff has provided a brief summary of the project information and prepared the following comments, which are organized by topic of concern.

South Coast AQMD Staff's Summary of Project Information in the MND

Based on the information provided in the MND, the Proposed Project consists of demolishing the remaining structures and constructing a new 357,610 square feet (sq. ft) warehouse with 47 dock doors on the western side of the warehouse building.[1] The Proposed Project generates 194 daily truck trips associated with the operation activities.[2] The Proposed Project is located at 1101 California Street, Redlands.[3] Based on the aerial photographs, South Coast AQMD staff found that the nearest sensitive receptor (e.g., residential) is within 750 feet south of the Proposed Project site. The construction is anticipated to occur between July 2024 through May 2025.[4]

South Coast AQMD Staff's Comments on the MND

Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program

On May 7, 2021, South Coast AQMD's Governing Board adopted Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program, [5] and Rule 316 – Fees for Rule 2305.[6] Rules 2305 and 316 are new rules that will reduce regional and local emissions of nitrogen oxides (NOx) and particulate matter (PM), including diesel PM. These emission reductions will reduce public health impacts for communities located near warehouses

[1] MND. Page 1 and 2.
[2] *Ibid*. Page 16.
[3] *Ibid*. Page 1.
[4] *Ibid*. Page 14.
[5] South Coast AQMD Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program. Accessed at: http://www.aqmd.gov/docs/default-source/rule-book/reg-xxiii/r2305.pdf.
[6] South Coast AQMD Rule 316 – Fees for Rule 2305. Access at: http://www.aqmd.gov/docs/default-source/rule-book/reg-iii/r316.pdf.

from mobile sources that are associated with warehouse activities. Also, the emission reductions will help the region attain federal and state ambient air quality standards. Rule 2305 applies to owners and operators of warehouses greater than or equal to 100,000 square feet. Under Rule 2305, operators are subject to an annual WAIRE Points Compliance Obligation that is calculated based on the annual number of truck trips to the warehouse. WAIRE Points can be earned by implementing actions in a prescribed menu in Rule 2305, implementing a site-specific custom plan, or paying a mitigation fee. Warehouse owners are only required to submit limited information reports, but they can opt-in to earn Points on behalf of their tenants if they so choose because certain actions to reduce emissions may be better achieved at the warehouse development phase, for instance, the installation of solar and charging infrastructure. Rule 316 is a companion fee rule for Rule 2305 to allow South Coast AQMD to recover costs associated with Rule 2305 compliance activities. Since the Proposed Project consists of the development of a 357,610-square-foot warehouse, the Proposed Project's warehouse owners and operators will be required to comply with Rule 2305 once the warehouse is occupied. Therefore, South Coast AQMD staff recommends that the Lead Agency review South Coast AQMD Rule 2305 to determine the potential WAIRE Points Compliance Obligation for future operators and explore whether additional project requirements and CEQA mitigation measures can be identified and implemented at the Proposed Project that may help future warehouse operators meet their compliance obligation. South Coast AQMD staff is available to answer questions concerning Rule 2305 implementation and compliance by phone or email at (909) 396-3140 or waire-program@aqmd.gov. For implementation guidance documents and compliance and reporting tools, please visit South Coast AQMD's WAIRE Program webpage[7].

South Coast AQMD Rules, Permits, and Responsible Agency

If the implementation of the Proposed Project would require the use of new stationary and portable sources, including but not limited to emergency generators, fire water pumps, boilers, spray booths, etc., air permits from South Coast AQMD will be required, and the role of South Coast AQMD would change from a Commenting Agency to a Responsible Agency under CEQA. In addition, if South Coast AQMD is identified as a Responsible Agency, per CEQA Guidelines Sections15086, the Lead Agency is required to consult with South Coast AQMD. In addition, CEQA Guidelines Section 15096 sets forth specific procedures for a Responsible Agency, including making a decision on the adequacy of the CEQA document for use as part of evaluating the applications for air permits. For these reasons, the Final MND should include a discussion about any new stationary and portable equipment requiring South Coast AQMD air permits and identify South Coast AQMD as a Responsible Agency for the Proposed Project.

The Final MND should also include calculations and analyses for construction and operation emissions for the new stationary and portable sources, as this information will also be relied upon as the basis for the permit conditions and emission limits for the air permit(s). Please contact South Coast AQMD's Engineering and Permitting staff at (909) 396-3385 for questions regarding what types of equipment would require air permits. For more general information on permits, please visit South Coast AQMD's webpage at http://www.aqmd.gov/home/permits.

[7] South Coast AQMD WAIRE Program. Accessed at: http://www.aqmd.gov/waire.

Conclusion

The Lead Agency is recommended to revise the CEQA analysis to address the aforementioned comments and provide the necessary evidence to sufficiently support the conclusions reached. If the requested information and analysis are not included in the final CEQA document, either the Final MND or other type of CEQA document, the Lead Agency should provide reasons for not doing so. Pursuant to California Public Resources Code Section 21092.5(b) and CEQA Guidelines Section 15074, prior to approving the Proposed Project, the Lead Agency shall consider the MND for adoption together with any comments received during the public review process and notify each public agency when any public hearings are scheduled. Please provide South Coast AQMD with written responses to all comments contained herein prior to the adoption of the Final MND. When responding to issues raised in the comments, detailed reasons supported by substantial evidence in the record to explain why specific comments and suggestions are not accepted must be provided. In addition, if the Lead Agency decides to adopt the Final MND, please provide South Coast AQMD with a notice of any scheduled public hearing(s).

Thank you for the opportunity to provide comments. South Coast AQMD staff is available to work with the Lead Agency to address any air quality questions that may arise from this comment letter. Please contact Danica Nguyen, Air Quality Specialist, at dnguyen1@aqmd.gov should you have any questions.

Sincerely,

Sam Wang

SUBJECT: COMMENTS ON 1101 CALIFORNIA STREET WAREHOUSE MND (SCH NO. 2024031107)

Dear Mr. Beery,

Thank you for the opportunity to comment on the Mitigated Negative Declaration (MND) for the proposed 1101 California Street Warehouse Project. Please accept and consider these comments on behalf of Golden State Environmental Justice Alliance. Also, Golden State Environmental Justice Alliance formally requests to be added to the public interest list regarding any subsequent environmental documents, public notices, public hearings, and notices of determination for this project. Send all communications to Golden State Environmental Justice Alliance P.O. Box 79222 Corona, CA 92877.

1.0 Summary

The project proposes to construct and operate a 357,610 square-foot (sf) warehouse building consisting of 189,397 sf of warehousing space and 6,000 sf of office space on an approximately 16 acre site. The building proposes 47 truck/trailer loading dock doors, 396 passenger car parking spaces, and 0 truck/trailer parking spaces. The project is anticipated to operate 24-hours a day, 7 days per week.

2.0 Project Description

The MND does not include a floor plan, detailed site plan, building elevations, or a conceptual grading plan. The basic components of a Planning Application include a detailed site plan, floor plan, conceptual grading plan, written narrative, and detailed elevations. Additionally, the site plan provided in Figure 3 has been edited to remove pertinent information from public view. For example, it does not provide any detailed information such as parking requirements, floor area

ratio, earthwork quantity notes, or maximum building height. There are no building elevations or grading plan included in the MND. Providing the grading plan and earthwork quantity notes is vital as the MND does not provide any information regarding soil import/export that is necessary to construct the proposed project. The quantity of soil import/export directly informs the necessary truck hauling trips during the grading phase of construction. An EIR must be prepared to include wholly accurate and unedited detailed project site plan, floor plan, grading plan, elevations, and project narrative for public review.

Evaluation of Environmental Impacts
III. Air Quality, VI. Energy, and VIII. Greenhouse Gas Emissions

Please refer to attachments from SWAPE for a complete technical commentary and analysis.

The MND does not include for analysis relevant environmental justice issues in reviewing potential impacts, including cumulative impacts from the proposed project. This is especially significant as the surrounding community is highly burdened by pollution. According to CalEnviroScreen 4.0[1], CalEPA's screening tool that ranks each census tract in the state for pollution and socioeconomic vulnerability, the proposed project's census tract (6071007800) is ranked in the 94th percentile for overall pollution burden, meaning it is among the most polluted census tracks in the state. The surrounding community bears the impact of multiple sources of pollution and is more polluted than average on several pollution indicators measured by CalEnviroScreen. For example, the project census tract ranks in the 100th percentile for ozone burden, the 57th percentile for particulate matter (PM) 2.5 burden, and the 83rd percentile for diesel PM, and 81st percentile for traffic impacts. All of these environmental factors are attributed to heavy truck activity in the area. Ozone can cause lung irritation, inflammation, and worsening of existing chronic health conditions, even at low levels of exposure[2]. The very small particles of diesel PM can reach deep into the lung, where they can contribute to a range of health problems. These include irritation to the eyes, throat and nose, heart and lung disease, and lung cancer[3].

The census tract ranks in the 96th percentile for drinking water impacts, which indicates that it ranks with the worst quality drinking water in the state. Poor communities are exposed to contaminants in their drinking water more often than people in other parts of the state[4].

[1] CalEnviroScreen 4.0 https://oehha.ca.gov/calenviroscreen/report/calenviroscreen-40
[2] OEHHA Ozone Burden https://oehha.ca.gov/calenviroscreen/indicator/air-quality-ozone
[3] OEHHA Diesel Particulate Matter https://oehha.ca.gov/calenviroscreen/indicator/diesel-particulate-matter
[4] OEHHA Drinking Water https://oehha.ca.gov/calenviroscreen/drinking-water

The census tract also bears more impacts from cleanup sites than 82% of the state. Chemicals in the buildings, soil, or water at cleanup sites can move into nearby communities through the air or movement of water[5].

The census tract also ranks in the 97th percentile for hazardous waste facility impacts. Hazardous waste generators and facilities contribute to the contamination of air, water and soil near waste generators and facilities can harm the environment as well as people[6].

Further, the census tract is a diverse community including 25% Hispanic, 14% African-American, and 11% Asian-American residents, whom are especially vulnerable to the impacts of pollution. The community has a high rate of poverty, meaning 56% of the households in the census tract have a total income before taxes that is less than the poverty level. Income can affect health when people cannot afford healthy living and working conditions, nutritious food and necessary medical care[7]. Poor communities are often located in areas with high levels of pollution[8]. Poverty can cause stress that weakens the immune system and causes people to become ill from pollution[9]. Living in poverty is also an indication that residents may lack health insurance or access to medical care. Medical care is vital for this census tract as it ranks in the 45th percentile for incidence of cardiovascular disease.

Additionally, the census tract adjacent to the project site (6071007200 (west)) is identified as a SB 535 Disadvantaged Community[10], which is not discussed or presented for analysis in the MND. This indicates that cumulative negative impacts of development and environmental impacts in the area are disproportionately impacting these communities. The MND does not discuss that the surrounding area is a disadvantaged community and does not utilize this information in its analysis. The MND has not considered the environmental impacts in relation to the SB 535 status of the project census tract and surrounding area. The negative environmental, health, and quality of life impacts of the warehousing and logistics industry in the area have become distinctly inequitable. The severity of environmental impacts particularly on these Disadvantaged Communities must be included for analysis as part of an EIR.

The State of California lists three approved compliance modeling softwares[11] for non-residential buildings: CBECC-Com, EnergyPro, and IES VE. CalEEMod is not listed as an approved software. The CalEEMod modeling does not comply with the 2022 Building Energy Efficiency Standards and under-reports the project's significant Energy impacts and fuel consumption to the public and decision makers. Since the MND did not accurately or adequately model the energy impacts in compliance with Title 24, it cannot conclude the project will generate less than significant impacts and a finding of significance must be made. An EIR with modeling using one of the approved software types must be prepared and circulated for public review in order to adequately analyze the project's significant environmental impacts. This is vital as the MND utilizes CalEEMod as a source in its methodology and analysis, which is clearly not an approved software.

XI. Land Use and Planning

The MND does not discuss or analyze the project's compliance with the General Plan's Land Use Buildout Scenario. Table ES-1: Non-Residential Buildout (2035) within the General Plan EIR[12] projected new development of 1,246,376 s.f. of light industrial uses and 1,246 associated new jobs. The MND does not provide any information or analysis on the buildout conditions of the General Plan. The MND has not provided evidence that the growth generated by the proposed project was anticipated by the General Plan, RTP/SCS, or AQMP. An EIR must be prepared to include this analysis, and also provide a cumulative analysis discussion of projects approved since General Plan adoption and projects "in the pipeline" to determine if the project will exceed the General Plan buildout scenarios. For example, other recent industrial projects[13] such as 301 Tennessee Street Warehouse (197,397 s.f.; 166 employees), Nevada Street Warehouse (89,430 s.f.; 75 employees), Kansas St. & Park Ave. Warehouse (83,875 s.f.; 71 employees), 1980 Park Ave. Warehouse (48,079 s.f.; 41 employees), Mtn. View. & 10 Freeway Warehouse (420,937 s.f.; 353 employees), and New Jersey Street Warehouse (179,400 s.f.; 151 employees) combined with the proposed project will cumulatively generate 1,327 employees and 1,561,828 square feet of light industrial space. This exceeds the City's projected light industrial growth forecast through 2035 by 25% and exceeds the quantity jobs associated with projected light industrial development through 2035 by 6% and is accounted for by only eight recent industrial projects. These totals increase exponentially when other light industrial development approved, submitted, or "in the

[11] California Energy Commission 2022 Energy Code Compliance Software https://www.energy.ca.gov/programs-and-topics/programs/building-energy-efficiency-standards/2022-building-energy-efficiency-1
[12] Redlands General Plan EIR https://www.cityofredlands.org/sites/main/files/file-attachments/redlands_deir_compiled_lo_071917_0.pdf?1554321669
[13] City of Redlands Major Project List https://www.cityofredlands.org/sites/main/files/file-attachments/major_projects_list_2q_2023_-_5.22.2023.pdf

pipeline" since General Plan adoption are added to the total. An EIR must be prepared to include a cumulative analysis on this topic.

Additionally, the MND does not provide any consistency analysis with SCAG's 2020-2045 Connect SoCal RTP/SCS. Due to errors in modeling and modeling without supporting evidence, as noted throughout this comment letter and attachments, the proposed project has significant potential for inconsistency with Goal 5 to reduce greenhouse gas emissions and improve air quality, Goal 6 to support healthy and equitable communities, and Goal 7 to adapt to a changing climate. An EIR must be prepared to include revised, accurate modeling and a consistency analysis with all goals of the RTP/SCS.

XIV. Population and Housing

The MND utilizes uncertain language and does not provide any meaningful analysis or supporting evidence to substantiate the conclusion that there will be no significant impact to population and housing. The MND does not provide any geographic or demographic information regarding the available workforce, such as whether the unemployed workforce is interested in or qualified for work in the industrial sector. Relying upon the workforce of the greater Inland Empire region will serve to increase project generated service population VMT and increase VMT impacts.

The MND also relies upon the statement that the project "is an allowable use within the EV/SD zoning district," and therefore consistent with the General Plan to conclude that there will be less than significant impacts. However, as stated above, the MND has not provided any meaningful evidence to support this claim. The MND does not discuss or analyze the project's compliance with the General Plan's Land Use Buildout Scenario. Table ES-1: Non-Residential Buildout (2035) within the General Plan EIR[14] projected new development of 1,246,376 s.f. of light industrial uses and 1,246 associated new jobs. The MND does not provide any information or analysis on the buildout conditions of the General Plan. The MND has not provided evidence that the growth generated by the proposed project was anticipated by the General Plan, RTP/SCS, or AQMP. An EIR must be prepared to include this analysis, and also provide a cumulative analysis discussion of projects approved since General Plan adoption and projects "in the pipeline" to determine if the project will exceed the General Plan buildout scenarios and associated employment projections.

Additionally, the MND does not provide any meaningful information or discussion regarding the construction employees needed for the project. An EIR must be prepared to include a quantified

[14] Redlands General Plan EIR https://www.cityofredlands.org/sites/main/files/file-attachments/redlands_deir_compiled_lo_071917_0.pdf?1554321669

construction worker analysis including geographic locations of qualified available workers in order to provide an adequate and accurate environmental analysis.

SCAG's Connect SoCal Demographics and Growth Forecast[15] states that the City will add 13,700 jobs between 2016 - 2045. Utilizing the MND's calculation of 312 employees, the project represents 2.2% of the City's employment growth from 2016 - 2045. A single project accounting for this amount of growth over 29 years represents a significant amount of growth. An EIR must be prepared to include this analysis, and also provide a cumulative analysis discussion of projects approved since 2016 and projects "in the pipeline" to determine if the project will exceed SCAG's employment and/or population growth forecast and the General Plan's growth forecasts. For example, other recent industrial projects[16] such as Iowa Street Warehouse (185,100 s.f.; 158 employees), Nevada Street Warehouse (89,430 s.f.; 75 employees), Kansas St. & Park Ave. Warehouse (83,875 s.f.; 71 employees), 1980 Park Ave. Warehouse (48,079 s.f.; 41 employees), Mtn. View. & 10 Freeway Warehouse (420,937 s.f.; 353 employees), New Jersey Street Warehouse (179,400 s.f.; 151 employees), and 301 Tennessee Street Warehouse (197,397 s.f.; 166 employees) combined with the proposed project will cumulatively generate 1,327 employees, which is 9.6% of the City's SCAG employment growth forecast over 29 years accounted for by only eight recent industrial projects. This number increases exponentially when the City's commercial development activity is added to the calculation. An EIR must be prepared to include a cumulative analysis on this topic.

4.16 Transportation

The VMT analysis has exempted the project from performing a project-specific VMT analysis because the City's VMT Guidelines exempt warehousing projects that are 463,600 square feet or less in size because it is presumed that they generate less than 3,000 MTCO2e annually[17]. The MND is misleading to the public and decision makers in stating that the project qualifies for the exemption because it meets the size threshold requirement, but it does not meet the Guidelines presumption that it generates less than 3,000 MTCO2e annually. Table 6: Project GHG Emissions within the MND demonstrates that the project will generate 3,534.58 MTCO2e annually. Applying the exemption to the proposed project is not consistent with the City's VMT Guidelines and a project-specific quantified VMT analysis must be prepared as part of an EIR.

[15] SCAG Connect SoCal Demographics and Growth Forecast adopted September 3, 2020 https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocal_demographics-and-growth-forecast.pdf?1606001579
[16] City of Redlands Major Project List https://www.cityofredlands.org/sites/main/files/file-attachments/major_projects_list_1q_2023_-_2.15.2023.pdf
[17] City of Redlands. CEQA Assessment VMT Analysis Guidelines https://www.cityofredlands.org/sites/main/files/file-attachments/redlands_vmt_analysis_guidelines.pdf

Additionally, the MND's erroneous VMT exemption does not act in accordance with or further the goals of SB 743 and the State's GHG reduction goals. The actual VMT generated by project operations (service population and operational truck/trailer/delivery van activity) is not consistent with the significance threshold and legislative intent of SB 743 to reduce greenhouse gas emissions by reducing VMT. The operational nature of industrial/warehouse uses involves high rates of truck/trailer/delivery van VMT due to traveling from large import hubs to regional distribution centers to smaller industrial parks and then to their final delivery destinations. Once employees arrive at work at the proposed project, they will conduct their jobs by driving delivery vans across the region as part of the daily operations as a warehouse, which will drastically increase project-generated VMT. The project's truck/trailer and delivery van activity is unable to utilize public transit or active transportation and it is misleading to the public and decision makers to exclude this activity from VMT analysis. The project's actual VMT generated by project operations (service population and operational truck/trailer/delivery van activity) is not consistent with the significance threshold and legislative intent of SB 743 to reduce greenhouse gas emissions by reducing VMT. An EIR must be prepared to reflect a project-specific quantified VMT analysis that includes all truck/trailer and delivery van activity in order to provide an adequate and accurate environmental analysis.

The MND has not adequately analyzed the project's potential to substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses; or the project's potential to result in inadequate emergency access. Exhibit 1-5: Truck Access within Appendix B depicts the truck turning template at the intersection of the project driveway and Lugonia Avenue separately for each truck entering and exiting the site. This is because there is clearly not adequate maneuvering area within the proposed 40 foot driveway area. The truck turning template on Figure 3: Site Plan in the MND depicts trucks turning simultaneously here, and there are overlapping lines for the trucks entering the site from both east and westbound Lugonia. This demonstrates that a truck cannot be queued onsite while another attempts to enter or they will collide.

Further, the Site Plan depicts further conflicts between passenger cars and trucks. Passenger car parking spaces are adjacent to truck court. The modeling for trucks turning into the loading docks show overlap with the edge of the parking stalls, meaning that there is not adequate maneuvering space within the truck court. These parking stalls that may be in use at any time and further restrict truck/trailer movement. There are also no exhibits depicting emergency vehicle access. Deferring this environmental analysis required by CEQA to the construction permitting phase is improper mitigation and does not comply with CEQA's requirement for meaningful disclosure and adequate

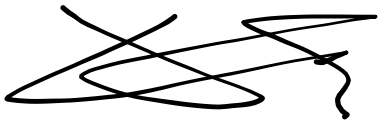
informational documents. An EIR must be prepared for the proposed project with this analysis in order to provide an adequate and accurate environmental analysis.

Additionally, the MND has not provided any analysis of the available horizontal and vertical sight distance at the intersection of the project driveways and adjacent streets. Sight distance is the continuous length of street ahead visible to the driver. At unsignalized intersections, corner sight distance must provide a substantially clear line of sight between the driver of the vehicle waiting on the minor road (driveway) and the driver of an approaching vehicle. An EIR must be prepared with this analysis based on the American Association of State Highway and Transportation Officials (AASHTO) Stopping Sight Distance requirements.

4.19 Mandatory Findings of Significance

An EIR must be prepared to include a cumulative analysis discussion here to demonstrate the impact of the proposed project in a cumulative setting. The MND does not discuss or analyze the project's compliance with the General Plan's Land Use Buildout Scenario. Table ES-1: Non-Residential Buildout (2035) within the General Plan EIR[18] projected new development of 1,246,376 s.f. of light industrial uses and 1,246 associated new jobs. The MND does not provide any information or analysis on the buildout conditions of the General Plan. The recent projects discussed above combined with the proposed project will cumulatively generate 1,327 employees and 1,561,828 square feet of light industrial space. This exceeds the City's projected light industrial growth forecast through 2035 by 25% and exceeds the quantity jobs associated with projected light industrial development through 2035 by 6% and is accounted for by only eight recent industrial projects. These totals increase exponentially when other light industrial development approved, submitted, or "in the pipeline" since General Plan adoption are added to the total. An EIR must be prepared to include a cumulative analysis on this topic.

SCAG's Connect SoCal Demographics and Growth Forecast states that the City will add 13,700 jobs between 2016 - 2045. Utilizing the MND's calculation of 312 employees, the project represents 2.2% of the City's employment growth from 2016 - 2045. A single project accounting for this amount of growth over 29 years represents a significant amount of growth. The MND has not provided evidence that the growth generated by the proposed project was anticipated by the General Plan, RTP/SCS, or AQMP.



[18] Redlands General Plan EIR https://www.cityofredlands.org/sites/main/files/file-attachments/redlands_deir_compiled_lo_071917_0.pdf?1554321669

An EIR must be prepared to include this analysis, and also provide a cumulative analysis discussion of projects approved since General Plan adoption and projects "in the pipeline" to determine if the project will exceed the General Plan buildout scenarios and/or SCAG growth forecasts. For example, other recent industrial projects[19] such as Iowa Street Warehouse (185,100 s.f.; 158 employees), Nevada Street Warehouse (89,430 s.f.; 75 employees), Kansas St. & Park Ave. Warehouse (83,875 s.f.; 71 employees), 1980 Park Ave. Warehouse (48,079 s.f.; 41 employees), Mtn. View. & 10 Freeway Warehouse (420,937 s.f.; 353 employees), New Jersey Street Warehouse (179,400 s.f.; 151 employees) and and 301 Tennessee Street Warehouse (197,397 s.f.; 166 employees) combined with the proposed project will cumulatively generate 1,327 employees, which is 9.6% of the City's SCAG employment growth forecast over 29 years accounted for by only eight recent industrial projects. This number increases exponentially when the City's commercial development activity is added to the calculation. An EIR must be prepared to include a cumulative analysis on this topic.

Conclusion

For the foregoing reasons, GSEJA believes the MND is flawed and an EIR must be prepared for the proposed project and circulated for public review. Golden State Environmental Justice Alliance requests to be added to the public interest list regarding any subsequent environmental documents, public notices, public hearings, and notices of determination for this project. Send all communications to Golden State Environmental Justice Alliance P.O. Box 79222 Corona, CA 92877.

Sincerely,

Gary Ho

Subject: Comments on the 1101 California Street Warehouse Project (SCH No. 2024031107)

Dear Mr. Ho,

We have reviewed the March 2024 Checklist for the 1101 California Street Warehouse ("Project") located in the City of Redlands ("City"). The Project proposes to construct 357,610-square-feet ("SF") of industrial space and 6,000-SF of office space, as well as 396 parking spaces on the 16-acre site.

Our review concludes that the Checklist fails to adequately evaluate the Project's air quality, health risk, and greenhouse gas impacts. As a result, emissions and health risk impacts associated with construction and operation of the proposed Project may be underestimated and inadequately addressed. A full CEQA analysis should be prepared to adequately assess and mitigate the potential air quality, health risk, and greenhouse gas impacts that the project may have on the environment.

Air Quality

Failure to Provide Complete CalEEMod Output Files

Land use development projects under the California Environmental Quality Act ("CEQA") typically evaluate air quality impacts and calculate potential criteria air pollutant emissions using the California Emissions Estimator Model ("CalEEMod"). [1] CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type. If more specific project information is known, the user can change the default values and input project-specific values, but CEQA requires that such changes be justified by substantial evidence. Once all of the values are inputted into the model, the Project's

[1] "CalEEMod User's Guide." California Air Pollution Control Officers Association (CAPCOA), May 2021, *available at:* https://www.aqmd.gov/caleemod/user's-guide.

construction and operational emissions are calculated, and "output files" are generated. These output files disclose to the reader what parameters are used in calculating the Project's air pollutant emissions and demonstrate which default values are changed. Justifications are provided for the selected values.

According to the Air Quality Impact Analysis ("AQIA"), included as Appendix A to the Checklist, CalEEMod Version 2022.1 is relied upon to estimate Project emissions (p. 14). However, this poses a problem, as the currently available version of CalEEMod 2022.1 is described as a "soft release" which fails to provide complete output files.[2] Specifically, the "User Changes to Default Data" table no longer provides the quantitative counterparts to the changes to the default values (see excerpt below) (Appendix A, pp. 153, 209, 245):

8. User Changes to Default Data

Screen	Justification
Construction: Construction Phases	Schedule taken from client data Building Construction, Paving, and Architectural Coating overlap to present a conservative analysis Construction schedule compressed to account for 2025 Opening Year
Construction: Off-Road Equipment	T/L/Bs replaced with Crawler Tractor to accurately calculate disturbance for Site Preparation and Grading phases Standard 8 hours work days
Construction: Trips and VMT	Vendor Trips adjusted based on CalEEMod defaults for Building Construction and number of days for Demolition, Site Preparation, Grading, and Building Construction
Construction: Architectural Coatings	SCAQMD Rule 1113

However, previous CalEEMod Versions, such as 2020.4.0, include the specific numeric changes to the model's default values (see example excerpt below):

Table Name	Column Name	Default Value	New Value
tblConstructionPhase	NumDays	230.00	167.00
tblConstructionPhase	PhaseEndDate	11/22/2023	8/25/2023
tblConstructionPhase	PhaseEndDate	9/27/2023	6/30/2023
tblConstructionPhase	PhaseEndDate	10/25/2023	7/28/2023
tblConstructionPhase	PhaseStartDate	10/26/2023	7/29/2023
tblConstructionPhase	PhaseStartDate	9/28/2023	7/1/2023
tblLandUse	LandUseSquareFeet	160,000.00	160,371.00
tblLandUse	LandUseSquareFeet	119,000.00	41,155.00
tblLandUse	LotAcreage	3.67	3.68
tblLandUse	LotAcreage	2.73	2.74

The output files associated with CalEEMod Version 2022.1 fail to present the exact parameters used to calculate Project emissions. To remedy this issue, the Checklist should have provided access to the model's ".JSON" output files, which allow third parties to review the model's revised input parameters.[3] Without access to the complete output files, including the specific numeric changes to the default values, we cannot verify that the Checklist's air modeling and subsequent analysis is an accurate reflection of the proposed Project. As a result, a full CEQA analysis should be prepared to include an

[2] "CalEEMod California Emissions Estimator Model Soft Release." California Air Pollution Control Officers Association (CAPCOA), 2022, *available at:* https://caleemod.com/.
[3] "Video Tutorials for CalEEMod Version 2022.1." California Air Pollution Control Officers Association (CAPCOA), May 2022, *available at:* https://www.caleemod.com/tutorials.

updated air quality analysis that correctly provides the complete output files for CalEEMod Version 2022.1, or includes an updated air model using an older release of CalEEMod.[4]

Unsubstantiated Input Parameters Used to Estimate Project Emissions

As previously discussed, the Checklist relies on CalEEMod Version 2022.1 to estimate the Project's air quality emissions and fails to provide the complete output files required to adequately evaluate model's analysis (p. 14). Regardless, when reviewing the Project's CalEEMod output files, provided in Appendix A and the Greenhouse Gas Analysis ("GHG Analysis"), included as Appendix F to the Checklist, we were able to identify several model inputs that are inconsistent with information disclosed in the Checklist. The Project's construction and operational emissions may consequently be underestimated. A full CEQA analysis should be prepared to include an updated air quality analysis that adequately evaluates the impacts that construction and operation of the Project will have on local and regional air quality.

Failure to Consider Potential Cold Storage Requirements

Review of the CalEEMod output files demonstrates that the "15517 - 1101 California (Construction)" and "15517 - 1101 California (Operations)" models include 286,088-SF of the "Unrefrigerated Warehouse-No Rail" land use (see excerpt below) (Appendix A, pp. 162, 217; Appendix F, pp. 7, 110, 165).

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)
Unrefrigerated Warehouse-No Rail	286	1000sqft	6.57	286,088	87,490
Industrial Park	71.5	1000sqft	1.64	71,522	0.00
Parking Lot	401	Space	3.61	0.00	0.00
Other Asphalt Surfaces	6.83	Acre	6.83	0.00	0.00
User Defined Industrial	358	User Defined Unit	0.00	0.00	0.00

As demonstrated above, the models do not include any refrigerated warehouse space whatsoever. This may be incorrect, as the Checklist does not mention potential tenants whatsoever.

As future site tenants are unknown, the proposed warehouse may require cold storage for operation. As discussed by the South Coast Air Quality Management District ("SCAQMD"), "CEQA requires the use of 'conservative analyses to afford 'fullest possible protection of the environment.'"[5] The Checklist must provide substantial evidence for not including any of the warehouse as cold storage space. Otherwise,

[4] "CalEEMod Version 2020.4.0." California Air Pollution Control Officers Association (CAPCOA), May 2021, *available at:* http://www.aqmd.gov/caleemod/download-model.

[5] "Warehouse Truck Trip Study Data Results and Usage" Presentation. SCAQMD Inland Empire Logistics Council, June 2014, *available at*: http://www.aqmd.gov/docs/default-source/ceqa/handbook/high-cube-warehouse-trip-rate-study-for-air-quality-analysis/final-ielc_6-19-2014.pdf?sfvrsn=2.

an updated model should be prepared to include the entire warehouse land use as refrigerated to account for the additional emissions that refrigeration requirements may generate.

This presents an issue, as refrigerated warehouses release more criteria air pollutant and greenhouse gas ("GHG") emissions when compared to unrefrigerated land uses for three reasons. First, warehouses equipped with cold storage, such as refrigerators and freezers, are known to consume more energy when compared to warehouses without cold storage.[6] Second, warehouses equipped with cold storage typically require refrigerated trucks, which are known to idle for much longer when compared to unrefrigerated hauling trucks.[7] Lastly, according to a July 2014 *Warehouse Truck Trip Study Data Results and Usage* presentation prepared by the SCAQMD hauling trucks that require refrigeration result in greater truck trip rates when compared to non-refrigerated hauling trucks.[8]

By failing to account for any potential cold storage requirements, the models may underestimate the Project's operational emissions and should not be relied upon to determine Project significance. A full CEQA analysis should be prepared to account for the possibility of additional refrigerated warehouse needs by the Project's future tenants.

Underestimated Saturday and Sunday Operational Vehicle Trip Rates

According to the Traffic Analysis, included as Appendix B to the Checklist, the proposed Project is expected to generate approximately 842 daily operational vehicle trips (see excerpt below) (Appendix B, p. 37):

TABLE 4-2: PROJECT TRIP GENERATION SUMMARY

Land Use	Quantity	Units[1]	AM Peak Hour In	AM Peak Hour Out	AM Peak Hour Total	PM Peak Hour In	PM Peak Hour Out	PM Peak Hour Total	Daily
Actual Vehicles:									
General Light Industrial (20%)	71.522	TSF							
Passenger Cars:			46	6	52	6	40	46	330
2-axle Trucks:			0	0	0	0	0	0	4
3-axle Trucks:			0	0	0	0	0	0	4
4+-axle Trucks:			0	0	0	0	0	0	12
Total Truck Trips (Actual Vehicles):			0	0	0	0	0	0	20
Total Trips (Actual Vehicles)[2]			46	6	52	6	40	46	350
Warehousing (80%)	286.088	TSF							
Passenger Cars:			34	9	43	10	33	43	318
2-axle Trucks:			1	0	1	1	1	2	30
3-axle Trucks:			1	1	2	1	1	2	36
4+-axle Trucks:			2	2	4	3	3	6	108
Total Truck Trips (Actual Vehicles):			4	3	7	5	5	10	174
Total Trips (Actual Vehicles)[2]			38	12	50	15	38	53	492
Passenger Cars			80	15	95	16	73	89	648
Trucks			4	3	7	5	5	10	194
Total Trips (Actual Vehicles)[2]			**84**	**18**	**102**	**21**	**78**	**99**	**842**
Passenger Car Equivalent (PCE):									
General Light Industrial (20%)	71.522	TSF							
Passenger Cars:			46	6	52	6	40	46	330
2-axle Trucks (PCE = 1.5):			0	0	0	0	0	0	4
3-axle Trucks (PCE = 2.0):			0	0	0	0	0	0	8
4+-axle Trucks (PCE = 3.0):			1	0	1	1	1	1	34
Total Truck Trips (PCE):			1	0	1	1	1	2	46
Total Trips (PCE)[2]			47	6	53	7	41	48	376
Warehousing (80%)	286.088	TSF							
Passenger Cars:			34	9	43	10	33	43	318
2-axle Trucks (PCE = 1.5):			1	1	2	1	1	2	44
3-axle Trucks (PCE = 2.0):			1	1	2	2	2	4	72
4+-axle Trucks (PCE = 3.0):			6	5	11	9	8	17	322
Total Truck Trips (PCE):			8	7	15	12	11	23	438
Total Trips (PCE)[2]			42	16	58	22	44	66	756
Passenger Cars			80	15	95	16	73	89	648
Trucks			9	7	16	13	12	25	484
Total Trips (PCE)[2]			**89**	**22**	**111**	**29**	**85**	**114**	**1,132**

[1] TSF = thousand square feet

[2] Total Trips = Passenger Cars + Truck Trips.

The Project's models should accurately reflect the above-mentioned operational daily vehicle trip rates. However, review of the CalEEMod output files demonstrates that the "15517 - 1101 California (Operations)" model only includes a total of approximately 427.4 Saturday[9] and 403.9 Sunday[10] vehicle trips (see excerpt below) (Appendix B, pp. 196, 197, 235; Appendix F, pp. 183, 145).

[9] Calculated: Total Saturday Warehouse Operations Vehicle Trips (15.2 Unrefrigerated Warehouse-No Rail trips + 16.2 Industrial Park trips + 396 User Defined Industrial trips) = 427.4 Total Saturday Vehicle Trips.

[10] Calculated: Total Sunday Warehouse Operations Vehicle Trips (6.01 Unrefrigerated Warehouse-No Rail trips + 15.9 Industrial Park trips + 382 User Defined Industrial trips) = 403.9 Total Sunday Vehicle Trips.

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Unrefrigerated Warehouse-No Rail	174	15.2	6.01	46,453	5,277	460	182	1,409,382
Industrial Park	20.0	16.2	15.9	6,896	598	482	476	205,764
Parking Lot	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00
Other Asphalt Surfaces	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00
User Defined Industrial	648	396	382	209,516	9,833	6,013	5,796	3,179,356

The Saturday and Sunday trips are underestimated by a total of approximately 414.6 trips[11] and 438.1 trips,[12] respectively. As such, the trip rates input into the model are underestimated and inconsistent with the information provided by the Checklist and associated documents.

These inconsistencies present an issue, as CalEEMod uses the operational vehicle trip rates to calculate the emissions associated with the operational on-road vehicles.[13] By including underestimated Saturday and Sunday operational vehicle trips, the model underestimates the Project's mobile-source operational emissions and should not be relied upon to determine Project significance.

Unsubstantiated Changes to Architectural Coating Emission Factors

Review of the CalEEMod output files demonstrates that the "15517 - 1101 California (Construction)" and "15517 - 1101 California (Operations)" models include changes to the default architectural coating emission factors (see excerpt below) (Appendix A, pp. 153, 209, 245; Appendix F, pp. 101, 157, 193):

8. User Changes to Default Data

Screen	Justification
Construction: Construction Phases	Schedule taken from client data Building Construction, Paving, and Architectural Coating overlap to present a conservative analysis Construction schedule compressed to account for 2025 Opening Year
Construction: Off-Road Equipment	T/L/Bs replaced with Crawler Tractor to accurately calculate disturbance for Site Preparation and Grading phases Standard 8 hours work days
Construction: Trips and VMT	Vendor Trips adjusted based on CalEEMod defaults for Building Construction and number of days for Demolition, Site Preparation, Grading, and Building Construction
Construction: Architectural Coatings	SCAQMD Rule 1113
Operations: Vehicle Data	Trip characteristics based on information provided in traffic analysis
Operations: Fleet Mix	Passenger Car Mix estimated based on CalEEMod default fleet mix and the ratio of the vehicle classes (LDA, LDT1, LDT2, MDV, MCY). Truck Fleet Mix based on 2, 3 and 4 axle trucks
Operations: Architectural Coatings	SCAQMD Rule 1113
Operations: Energy Use	Per client data, natural gas will not be utilized
Operations: Refrigerants	Beginning 1 January 2025, all new air conditioning equipment may not use refrigerants with a GWP of 750 or greater

As previously mentioned, the CalEEMod User's Guide requires any changes to model defaults be justified.[14] As demonstrated above in the "User Changes to Default Data" table, the justification provided for these changes is:

[11] Calculated: 842 proposed vehicle trips – 427.4 modeled vehicle trips = 414.6 vehicle trips underestimated.
[12] Calculated: 842 proposed vehicle trips – 403.9 modeled vehicle trips = 438.1 vehicle trips underestimated.
[13] "CalEEMod User's Guide." California Air Pollution Control Officers Association (CAPCOA), May 2021, *available at:* https://www.aqmd.gov/caleemod/user's-guide, p. 36.
[14] "CalEEMod User's Guide." California Air Pollution Control Officers Association (CAPCOA), May 2021, *available at:* https://www.aqmd.gov/caleemod/user's-guide, p. 1, 14.

"SCAQMD Rule 1113" (Appendix A, pp. 153, 209, 245; Appendix F, pp. pp. 101, 157, 193).

Furthermore, the Project relies on the Fontana General Plan Update ("Fontana GP"), which includes the SCAQMD Rule 1113 concerning architectural coating values as a formal mitigation measure:

> "MM-AQ-11 All paints and coatings shall meet or exceed performance standards noted in SCAQMD Rule 1113. Specifically, the following measures shall be implemented, as feasible: Use coatings and solvents with a VOC content lower than that required under AQMD Rule 1113" (Fontana GP, pp. 89)

However, the models' reductions to the architectural coating emission factors remain unsubstantiated for two reasons.

First, we cannot verify the accuracy of the revised architectural coating emission factors based on SCAQMD Rule 1113 alone. The SCAQMD Rule 1113 Table of Standards provides the required volatile organic compound ("VOC") limits (grams of VOC per liter of coating) for 57 different coating categories.[15] The VOC limits for each coating varies from a minimum value of 50 g/L to a maximum value of 730 g/L. As such, we cannot verify that SCAQMD Rule 1113 substantiates reductions to the default coating values without more information regarding what category of coating will be used. As the Checklist fails to explicitly require the use of a specific type of coating which would adhere to a specific VOC limit, we are unable to verify the models' revised coating emission factors.

Second, as previously discussed, the output files for CalEEMod 2022.1 do not present the numeric changes to any model defaults. Upon further review of the output files, Table 5.5 contains the only mention of architectural coatings (see excerpt below) (Appendix A, pp. 145; Appendix F, pp. 93):

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	0.00	0.00	536,415	178,805	27,273

However, as demonstrated above, Table 5.5 only provides the *square footage* of area to be coated. Since the output files fail to demonstrate the architectural coating *emission factors* that the model relies on, we cannot verify that the values included in the model are accurate. As previously stated, the Checklist should have provided access to the model's ".JSON" output files, which allow third parties to review the model's revised input parameters.[16]

These unsubstantiated reductions present an issue, as CalEEMod uses the architectural coating emission factors to calculate the Project's reactive VOC emissions.[17] By including unsubstantiated reductions to

[15] "SCAQMD Rule 1113 Advisory Notice." SCAQMD, February 2016, *available at:* http://www.aqmd.gov/docs/default-source/rule-book/reg-xi/r1113.pdf?sfvrsn=24, p. 1113-14, Table of Standards 1.

[16] "Video Tutorials for CalEEMod Version 2022.1." California Air Pollution Control Officers Association (CAPCOA), May 2022, *available at:* https://www.caleemod.com/tutorials.

[17] "CalEEMod User's Guide." California Air Pollution Control Officers Association (CAPCOA), May 2021, *available at:* https://www.aqmd.gov/caleemod/user's-guide, p. 35, 40.

the default architectural coating emission factors, the model may underestimate the Project's construction-related VOC emissions and should not be relied upon to determine Project significance.

Unsubstantiated Changes to Operational Fleet Mix Values

Review of the CalEEMod output files demonstrates that the "15517 - 1101 California (Operations)" model includes changes to the default operational vehicle fleet mix percentages (see excerpt below) (Appendix A, pp. 209, 245; Appendix F, pp. 157, 193).

8. User Changes to Default Data

Screen	Justification
Construction: Construction Phases	Schedule taken from client data Building Construction, Paving, and Architectural Coating overlap to present a conservative analysis Construction schedule compressed to account for 2025 Opening Year
Construction: Off-Road Equipment	T/L/Bs replaced with Crawler Tractor to accurately calculate disturbance for Site Preparation and Grading phases Standard 8 hours work days
Construction: Trips and VMT	Vendor Trips adjusted based on CalEEMod defaults for Building Construction and number of days for Demolition, Site Preparation, Grading, and Building Construction
Construction: Architectural Coatings	SCAQMD Rule 1113
Operations: Vehicle Data	Trip characteristics based on information provided in traffic analysis
Operations: Fleet Mix	Passenger Car Mix estimated based on CalEEMod default fleet mix and the ratio of the vehicle classes (LDA, LDT1, LDT2, MDV, MCY). Truck Fleet Mix based on 2, 3 and 4 axle trucks
Operations: Architectural Coatings	SCAQMD Rule 1113
Operations: Energy Use	Per client data, natural gas will not be utilized
Operations: Refrigerants	Beginning 1 January 2025, all new air conditioning equipment may not use refrigerants with a GWP of 750 or greater

As previously mentioned, the CalEEMod User's Guide requires any changes to model defaults be justified.[18] As demonstrated above in the "User Changes to Default Data" table, the justification provided for these changes is:

> "Passenger Car Mix estimated based on CalEEMod default fleet mix and the ratio of the vehicle classes (LDA, LDT1, LDT2, MDV, MCY). Truck Fleet Mix based on 2, 3 and 4 axle trucks" (Appendix A, pp. 209, 241; Appendix F, pp. 157, 193).

However, these changes remain unsubstantiated. As previously discussed, the output files for CalEEMod 2022.1 do not present the numeric changes to any model defaults. Upon further review of the output files, the model's fleet mix percentages are not provided whatsoever. Until the Checklist verifies that the model includes the correct breakdown of every vehicle type that will access the Project site during operations, we cannot verify that the values included in the model are accurate.[19]

These unsubstantiated changes present an issue, as CalEEMod uses operational vehicle fleet mix percentages to calculate the Project's operational emissions associated with on-road vehicles.[20] By including several unsubstantiated changes to the default operational vehicle fleet mix percentages, the

[18] "CalEEMod User's Guide." California Air Pollution Control Officers Association (CAPCOA), May 2021, *available at:* https://www.aqmd.gov/caleemod/user's-guide, p. 1, 14.
[19] "CalEEMod User's Guide." California Air Pollution Control Officers Association (CAPCOA), May 2021, *available at:* https://www.aqmd.gov/caleemod/user's-guide, p. 38.
[20] "CalEEMod User's Guide." California Air Pollution Control Officers Association (CAPCOA), May 2021, *available at:* https://www.aqmd.gov/caleemod/user's-guide, p. 36.

model may underestimate the Project's mobile-source operational emissions and should not be relied upon to determine Project significance.

SWAPE's Air Model Indicates a Potentially Significant Air Quality Impact

In an effort to quantitatively estimate the Project's construction-related and operational emissions, we used the CalEEModVersion 2020.4.0, as well as Project-specific information provided by the Checklist. CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type.

Our model included 286,088-SF of "Unrefrigerated Warehouse-No Rail" land use, 71,522-SF of "Industrial Park" land use, 401 spaces of "Parking lot" land use, and 6.83-acres of "Other Asphalt Surfaces". our updated model, we included the correct Saturday and Sunday operational vehicle trip rates; we also omitted the unsubstantiated changes to the architectural coating emission factors and operational fleet mix values. All other values are consistent with the Checklist's model.[21]

Our updated analysis estimates that the VOC emissions associated with Project construction exceed the applicable SCAQMD threshold of 75 pounds per day ("lbs/day"), as referenced by the Checklist (p. 15) (see table below).[22]

SWAPE Criteria Air Pollutant Emissions

Checklist	**Construction ROG** (lbs/day)
Checklist	63.51
SWAPE	114.6
% Increase	80.3%
SCAQMD Threshold	**75.0**
Exceeds?	***Yes***

As demonstrated above, construction-related VOC emissions, as estimated by SWAPE, increase by approximately 80.3% and exceed the applicable SCAQMD significance threshold. Our updated modeling demonstrates that the Project would result in a potentially significant air quality impact that was not previously identified or addressed by the Checklist. As a result, a full CEQA analysis should be prepared to adequately assess and mitigate the potential air quality impacts that the Project may have on the environment.

[21] See Attachment B for CalEEMod model.
[22] "South Coast AQMD Air Quality Significance Thresholds." SCAQMD, April 2019, *available at*: https://www.aqmd.gov/docs/default-source/ceqa/handbook/south-coast-aqmd-air-quality-significance-thresholds.pdf?sfvrsn=25.

Diesel Particulate Matter Emissions Inadequately Evaluated

The Checklist concludes that the proposed Project would result in a less-than-significant health risk impact based on a quantified construction and operational HRA, as detailed the Mobile Source Health Risk Assessment ("HRA Report"), provided as Appendix C to the Checklist. Specifically, the HRA Report estimates that the maximum cancer risk posed to nearby, existing residential sensitive receptors associated with construction and operation would be 0.02 in one million, which would not exceed the SCAQMD significance threshold of 10 in one million (p. 4, Table ES-3).

TABLE ES-3: SUMMARY OF CONSTRUCTION AND OPERATIONAL CANCER AND NON-CANCER RISKS

Time Period	Location	Maximum Lifetime Cancer Risk (Risk per Million)	Significance Threshold (Risk per Million)	Exceeds Significance Threshold
30 Year Exposure	Maximum Exposed Sensitive Receptor (Location R5)	0.02	10	NO
Time Period	**Location**	**Maximum Hazard Index**	**Significance Threshold**	**Exceeds Significance Threshold**
Annual Average	Maximum Exposed Sensitive Receptor (Location R5)	<0.01	1.0	NO

However, the Checklist's evaluation of the Project's potential health risk impacts, as well as the subsequent less-than-significant impact conclusion, is incorrect for two reasons.

First, the Checklist's HRAs are unreliable, as they rely upon emissions estimates from a flawed air model, as discussed above in the section titled "Unsubstantiated Input Parameters Used to Estimate Project Emissions." The HRAs are consequently based on potentially underestimated diesel particulate matter concentrations to calculate the health risk associated with Project construction. As a result, the Checklist's HRAs and resulting cancer risk should not be relied upon to determine Project significance.

Second, the Checklist's operational HRA underestimates the Fraction of Time At Home ("FAH") values for the third trimester, infant, and child receptors. Specifically, the HRA Report utilizes an FAH value of 0.85 for the third trimester (age -0.25 to 0) and infant (age 0 to 2) receptors, and an FAH value of 0.72 for the child receptors (age 2 to 16) (see excerpt below) (Appendix C, pp. 249).

Combined Construction and Operational Risk

Receptor No.	Age Bin	DPM Conc. (µg/m³)	Exposure Frequency (days)	Exposure Duration (years)	Inhalation Rate (L/kg-day)	Inhalation Absorption Factor	Averaging Time (years)	FAH	ASF	Cancer Risk			
										URF	CPF	Dose	Risk (per million)
1 (MEIW)	16 to 41	0.02057	250	0.83	230	1	70	1.00	1	3.0E-04	1.1E+00	3.2E-06	0.04

However, the FAH values used for the third trimester, infant, and childhood receptors are incorrect, as SCAQMD guidance clearly states:

> "For Tiers 1, 2, and 3 screening purposes, the FAH is assumed to be 1 for ages third trimester to 16. As a default, children are assumed to attend a daycare or school in close proximity to their home and no discount should be taken for time spent outside of the area affected by the facility's emissions. People older than age 16 are assumed to spend only 73 percent of their time at home."[23]

Per SCAQMD guidance, the HRA Report should have used an FAH of 1 for the third trimester, infant, and child receptors. By relying on incorrect FAH values, the Checklist underestimates the cancer risk posed to nearby, existing sensitive receptors as a result of the Project operation. An updated HRA should be prepared that accurately accounts for FAH values, and consequently assesses the health risk impacts the Project poses to nearby sensitive receptors.

Greenhouse Gas

Failure to Adequately Evaluate Greenhouse Gas Impacts

The Checklist estimates that the Project would generate net annual GHG emissions of 1,305.7 metric tons of carbon dioxide equivalents per year ("MT CO_2e/year") (see excerpt below) (p. 32, Table 6).

[23] "Risk Assessment Procedures." SCAQMD, August 2017, available at: http://www.aqmd.gov/docs/default-source/rule-book/Proposed-Rules/1401/riskassessmentprocedures_2017_080717.pdf, p. 7.

Table 6
Project GHG Emissions

Emission Source	Emissions (MT/yr)				
	CO_2	CH_4	N_2O	Refrigerants	Total CO_2e
Annual construction-related emissions amortized over 30 years	27.47	0.0	0.0	0.02	28.10
Mobile Source	3,072.72	0.20	0.34	4.31	3,183.19
Area Source	7.25	0.00	0.00	0.00	7.28
Water Usage	116.44	2.70	0.06	0.00	203.26
Waste	31.91	3.19	0.00	0.00	111.64
Refrigerants	0.00	0.00	0.00	1.11	1.11
Total CO2e (All Sources)	**3,534.58**				
Existing Emissions	2,228.88				
Net Emissions (Proposed – Existing)	**1,305.70**				

The Checklist concludes:

> "As such, the Project would not exceed the SCAQMD's recommended numeric threshold of 10,000 MTCO2e/yr. Therefore, project related emissions would not have a potential significant direct or indirect impact on GHG and climate change" (p. 32).

However, the Checklist's analysis, as well as the subsequent less-than-significant impact conclusion, is incorrect for three reasons:

(1) The Checklist's quantitative analysis relies upon a flawed air model;
(2) The Checklist's quantitative analysis relies upon an outdated threshold;
(3) The Checklist's unsubstantiated air model indicates a potentially significant impact;

1) Incorrect and Unsubstantiated Quantitative Analysis of Emissions

As previously stated, the Checklist estimates that the Project would generate net annual GHG emissions of 1,305.7 MT CO_2e/year (Appendix F, p. 32, Table 6). However, the Checklist's quantitative analysis is unsubstantiated. As previously discussed, when reviewing the Project's CalEEMod models, provided in the AQIA, we found that several of the values inputted into the models are not consistent with information disclosed in the Checklist. As a result, the models may underestimate the Project's emissions, and the Checklist's quantitative analysis should not be relied upon to determine Project significance. A full CEQA analysis should be prepared that adequately assesses the potential GHG impacts that construction and operation of the proposed Project may have on the environment.

2) Incorrect Reliance on an Outdated Quantitative GHG Threshold

As previously stated, the Checklist estimates that the Project would generate net annual GHG emissions of 1,305.7 MT CO_2e/year, which would not exceed the SCAQMD threshold of 10,000 MT CO_2e/year (Appendix F, p. 49). However, the guidance that provided the 10,000 MT CO_2e/year threshold, the SCAQMD's 2008 *Interim CEQA GHG Significance Threshold for Stationary Sources, Rules, and Plans* report, was developed when the Global Warming Solutions Act of 2006, commonly known as "AB 32",

was the governing statute for GHG reductions in California. AB 32 requires California to reduce GHG emissions to 1990 levels by 2020.[24] Furthermore, AEP guidance states:

> "[F]or evaluating projects with a post 2020 horizon, the threshold will need to be revised based on a new gap analysis that would examine 17 development and reduction potentials out to the next GHG reduction milestone."[25]

As it is currently March 2024, thresholds for 2020 are not applicable to the proposed Project and should be revised to reflect the current GHG reduction target. As such, the SCAQMD bright-line threshold of 10,000 MT CO_2e/year is outdated and inapplicable to the proposed Project, and the Checklist's less-than-significant GHG impact conclusion should not be relied upon. Instead, we recommend that the Project apply the SCAQMD 2035 service population efficiency target of 3.0 metric tons of carbon dioxide equivalents per service population per year ("MT CO_2e/SP/year"), which was calculated by applying a 40% reduction to the 2020 targets.[26]

3) *Failure to Identify a Potentially Significant GHG Impact*

In an effort to quantitatively evaluate the Project's GHG emissions, we compared the Project's GHG emissions, as estimated by the GHG Analysis, to the SCAQMD 2035 efficiency target of 3.0 MT CO_2e/SP/year. When applying this threshold, the Project's incorrect and unsubstantiated air model indicates a potentially significant GHG impact.

As previously stated, the Checklist estimates that the Project would generate net annual GHG emissions of 1,305.7MT CO_2e/year (p. 32, Table 6). According to CAPCOA's *CEQA & Climate Change* report, a service population ("SP") is defined as "the sum of the number of residents and the number of jobs supported by the project."[27] According to the Checklist, the project would support approximately 312 employees (p. 47). As the project is not expected to support any residential land uses, we estimate an SP of 312 people. When dividing the Project's net annual GHG emissions, as estimated by the Checklist, by an SP of 312 people, we find that the Project would emit approximately 4.18 MT CO_2e/SP/year (see table below).[28]

[24] "Health & Safety Code 38550." California State Legislature, January 2007, *available at:* https://leginfo.legislature.ca.gov/faces/codes_displaySection.xhtml?lawCode=HSC&sectionNum=38550.

[25] "Beyond Newhall and 2020: A Field Guide to New CEQA Greenhouse Gas Thresholds and Climate Action Plan Targets for California." Association of Environmental Professionals (AEP), October 2016, *available at:* https://califaep.org/docs/AEP-2016_Final_White_Paper.pdf, p. 39.

[26] "Minutes for the GHG CEQA Significance Threshold Stakeholder Working Group #15." SCAQMD, September 2010, *available at:* http://www.aqmd.gov/docs/default-source/ceqa/handbook/greenhouse-gases-(ghg)-ceqa-significance-thresholds/year-2008-2009/ghg-meeting-15/ghg-meeting-15-minutes.pdf, p. 2.

[27] "CEQA & Climate Change." California Air Pollution Control Officers Association (CAPCOA), January 2008, *available at:* https://www.airquality.org/LandUseTransportation/Documents/GHGThresholdsJustificationSept2014.pdf, p. 71-72.

[28] Calculated: (1,305.7 MT CO_2e/year) / (312 service population) = (4.18 MT CO_2e/SP/year).

Project Greenhouse Gas Emissions	
Annual Emissions (MT CO_2e/year)	1,305.7
Service Population	312
Service Population Efficiency (MT CO_2e/SP/year)	4.18
SCAQMD 2035 Target	**3.0**
Exceeds?	***Yes***

As demonstrated above, the Project's service population efficiency value exceeds the SCAQMD 2035 efficiency target of 3.0 MT CO_2e/SP/year, indicating a potentially significant impact not previously identified or addressed by the Checklist. As a result, the Checklist's less-than-significant GHG impact conclusion should not be relied upon. A full CEQA analysis should be prepared, including an updated GHG analysis and incorporating additional mitigation measures to reduce the Project's GHG emissions to less-than-significant levels.

Mitigation

Feasible Mitigation Measures Available to Reduce Emissions

Our analysis demonstrates that the Project would result in potentially significant air quality, health risk, and GHG impacts that should be mitigated further. In an effort to reduce emissions, the Project should consider the implementation of the following mitigation measures found in the California DOJ Warehouse Project Best Practices document.[29]

- Requiring off-road construction equipment to be hybrid electric-diesel or zero emission, where available, and all diesel-fueled off-road construction equipment to be equipped with CARB Tier IV-compliant engines or better, and including this requirement in applicable bid documents, purchase orders, and contracts, with successful contractors demonstrating the ability to supply the compliant construction equipment for use prior to any ground-disturbing and construction activities.
- Prohibiting off-road diesel-powered equipment from being in the "on" position for more than 10 hours per day.
- Using electric-powered hand tools, forklifts, and pressure washers, and providing electrical hook ups to the power grid rather than use of diesel-fueled generators to supply their power.
- Designating an area in the construction site where electric-powered construction vehicles and equipment can charge.
- Limiting the amount of daily grading disturbance area.
- Prohibiting grading on days with an Air Quality Index forecast of greater than 100 for particulates or ozone for the project area.

[29] "Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act." State of California Department of Justice, September 2022, *available at*: https://oag.ca.gov/system/files/media/warehouse-best-practices.pdf, p. 8 – 10.

- Forbidding idling of heavy equipment for more than three minutes.
- Keeping onsite and furnishing to the lead agency or other regulators upon request, all equipment maintenance records and data sheets, including design specifications and emission control tier classifications.
- Conducting an on-site inspection to verify compliance with construction mitigation and to identify other opportunities to further reduce construction impacts.
- Using paints, architectural coatings, and industrial maintenance coatings that have volatile organic compound levels of less than 10 g/L.
- Providing information on transit and ridesharing programs and services to construction employees.
- Providing meal options onsite or shuttles between the facility and nearby meal destinations for construction employees.
- Requiring all heavy-duty vehicles engaged in drayage to or from the project site to be zero-emission beginning in 2030.
- Requiring all on-site motorized operational equipment, such as forklifts and yard trucks, to be zero-emission with the necessary charging or fueling stations provided.
- Requiring tenants to use zero-emission light- and medium-duty vehicles as part of business operations.
- Forbidding trucks from idling for more than three minutes and requiring operators to turn off engines when not in use.
- Posting both interior- and exterior-facing signs, including signs directed at all dock and delivery areas, identifying idling restrictions and contact information to report violations to CARB, the local air district, and the building manager.
- Installing solar photovoltaic systems on the project site of a specified electrical generation capacity that is equal to or greater than the building's projected energy needs, including all electrical chargers.
- Designing all project building roofs to accommodate the maximum future coverage of solar panels and installing the maximum solar power generation capacity feasible.
- Constructing zero-emission truck charging/fueling stations proportional to the number of dock doors at the project.
- Running conduit to designated locations for future electric truck charging stations.
- Unless the owner of the facility records a covenant on the title of the underlying property ensuring that the property cannot be used to provide refrigerated warehouse space, constructing electric plugs for electric transport refrigeration units at every dock door and requiring truck operators with transport refrigeration units to use the electric plugs when at loading docks.
- Oversizing electrical rooms by 25 percent or providing a secondary electrical room to accommodate future expansion of electric vehicle charging capability.
- Constructing and maintaining electric light-duty vehicle charging stations proportional to the number of employee parking spaces (for example, requiring at least 10% of all employee parking

spaces to be equipped with electric vehicle charging stations of at least Level 2 charging performance)

- Running conduit to an additional proportion of employee parking spaces for a future increase in the number of electric light-duty charging stations.
- Installing and maintaining, at the manufacturer's recommended maintenance intervals, air filtration systems at sensitive receptors within a certain radius of facility for the life of the project.
- Installing and maintaining, at the manufacturer's recommended maintenance intervals, an air monitoring station proximate to sensitive receptors and the facility for the life of the project, and making the resulting data publicly available in real time. While air monitoring does not mitigate the air quality or greenhouse gas impacts of a facility, it nonetheless benefits the affected community by providing information that can be used to improve air quality or avoid exposure to unhealthy air.
- Requiring all stand-by emergency generators to be powered by a non-diesel fuel.
- Requiring facility operators to train managers and employees on efficient scheduling and load management to eliminate unnecessary queuing and idling of trucks.
- Requiring operators to establish and promote a rideshare program that discourages single-occupancy vehicle trips and provides financial incentives for alternate modes of transportation, including carpooling, public transit, and biking.
- Meeting CalGreen Tier 2 green building standards, including all provisions related to designated parking for clean air vehicles, electric vehicle charging, and bicycle parking.
- Designing to LEED green building certification standards.
- Providing meal options onsite or shuttles between the facility and nearby meal destinations.
- Posting signs at every truck exit driveway providing directional information to the truck route.
- Improving and maintaining vegetation and tree canopy for residents in and around the project area.
- Requiring that every tenant train its staff in charge of keeping vehicle records in diesel technologies and compliance with CARB regulations, by attending CARB-approved courses. Also require facility operators to maintain records on-site demonstrating compliance and make records available for inspection by the local jurisdiction, air district, and state upon request.
- Requiring tenants to enroll in the United States Environmental Protection Agency's SmartWay program, and requiring tenants who own, operate, or hire trucking carriers with more than 100 trucks to use carriers that are SmartWay carriers.
- Providing tenants with information on incentive programs, such as the Carl Moyer Program and Voucher Incentive Program, to upgrade their fleets.

These measures offer a cost-effective, feasible way to incorporate lower-emitting design features into the proposed Project, which subsequently, reduce emissions released during Project construction and operation.

A full CEQA analysis should be prepared to include all feasible mitigation measures, as well as include updated air quality, health risk, and GHG analyses to ensure that the necessary mitigation measures are

implemented to reduce emissions to the maximum extent feasible. The full CEQA analysis should also demonstrate a commitment to the implementation of these measures prior to Project approval, to ensure that the Project's potentially significant emissions are reduced to the maximum extent possible.

Disclaimer

SWAPE has received limited discovery regarding this project. Additional information may become available in the future; thus, we retain the right to revise or amend this report when additional information becomes available. Our professional services have been performed using that degree of care and skill ordinarily exercised, under similar circumstances, by reputable environmental consultants practicing in this or similar localities at the time of service. No other warranty, expressed or implied, is made as to the scope of work, work methodologies and protocols, site conditions, analytical testing results, and findings presented. This report reflects efforts which were limited to information that was reasonably accessible at the time of the work, and may contain informational gaps, inconsistencies, or otherwise be incomplete due to the unavailability or uncertainty of information obtained or provided by third parties.

Matt Hagemann, P.G, C.Hg.
(949) 887-9013
mhagemann@swape.com

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

Geologic and Hydrogeologic Characterization
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
Industrial Stormwater Compliance
CEQA Review

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.
B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist
California Certified Hydrogeologist
Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 30 years of experience in environmental policy, contaminant assessment and remediation, stormwater compliance, and CEQA review. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) and directed efforts to improve hydrogeologic characterization and water quality monitoring. For the past 15 years, as a founding partner with SWAPE, Matt has developed extensive client relationships and has managed complex projects that include consultation as an expert witness and a regulatory specialist, and a manager of projects ranging from industrial stormwater compliance to CEQA review of impacts from hazardous waste, air quality and greenhouse gas emissions.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2104, 2017;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt's responsibilities have included:

- Lead analyst and testifying expert in the review of over 300 environmental impact reports and negative declarations since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at more than 100 industrial facilities.
- Expert witness on numerous cases including, for example, perfluorooctanoic acid (PFOA) contamination of groundwater, MTBE litigation, air toxins at hazards at a school, CERCLA compliance in assessment and remediation, and industrial stormwater contamination.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.

With Komex H2O Science Inc., Matt's duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.
- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted

public hearings, and responded to public comments from residents who were very concerned about the impact of designation.
- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9.

Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, Oxygenates in Water: Critical Information and Research Needs.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific

principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt is currently a part time geology instructor at Golden West College in Huntington Beach, California where he taught from 2010 to 2014 and in 2017.

Invited Testimony, Reports, Papers and Presentations:

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S. EPA Region 9, San Francisco, California.

Hagemann, M.F., 2005. Use of Electronic Databases in Environmental Regulation, Policy Making and Public Participation. Brownfields 2005, Denver, Coloradao.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Nevada and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Las Vegas, NV (served on conference organizing committee).

Hagemann, M.F., 2004. Invited testimony to a California Senate committee hearing on air toxins at schools in Southern California, Los Angeles.

Brown, A., Farrow, J., Gray, A. and **Hagemann, M.**, 2004. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to the Ground Water and Environmental Law Conference, National Groundwater Association.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Arizona and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Phoenix, AZ (served on conference organizing committee).

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in the Southwestern U.S. Invited presentation to a special committee meeting of the National Academy of Sciences, Irvine, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a tribal EPA meeting, Pechanga, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a meeting of tribal repesentatives, Parker, AZ.

Hagemann, M.F., 2003. Impact of Perchlorate on the Colorado River and Associated Drinking Water Supplies. Invited presentation to the Inter-Tribal Meeting, Torres Martinez Tribe.

Hagemann, M.F., 2003. The Emergence of Perchlorate as a Widespread Drinking Water Contaminant. Invited presentation to the U.S. EPA Region 9.

Hagemann, M.F., 2003. A Deductive Approach to the Assessment of Perchlorate Contamination. Invited presentation to the California Assembly Natural Resources Committee.

Hagemann, M.F., 2003. Perchlorate: A Cold War Legacy in Drinking Water. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. From Tank to Tap: A Chronology of MTBE in Groundwater. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. A Chronology of MTBE in Groundwater and an Estimate of Costs to Address Impacts to Groundwater. Presentation to the annual meeting of the Society of Environmental Journalists.

Hagemann, M.F., 2002. An Estimate of the Cost to Address MTBE Contamination in Groundwater (and Who Will Pay). Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to a meeting of the U.S. EPA and State Underground Storage Tank Program managers.

Hagemann, M.F., 2001. From Tank to Tap: A Chronology of MTBE in Groundwater. Unpublished report.

Paul Rosenfeld, Ph.D.

Chemical Fate and Transport & Air Dispersion Modeling

Principal Environmental Chemist

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Focus on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years of experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, industrial, military and agricultural sources, unconventional oil drilling operations, and locomotive and construction engines. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities. Dr. Rosenfeld has also successfully modeled exposure to contaminants distributed by water systems and via vapor intrusion.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, creosote, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at sites and has testified as an expert witness on numerous cases involving exposure to soil, water and air contaminants from industrial, railroad, agricultural, and military sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H_2O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist
Big Creek Lumber, Davenport, California, 1995; Scientist
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

Presentations:

Rosenfeld, P.E., "The science for Perfluorinated Chemicals (PFAS): What makes remediation so hard?" Law Seminars International, (May 9-10, 2018) 800 Fifth Avenue, Suite 101 Seattle, WA.

Rosenfeld, P.E., Sutherland, A; Hesse, R.; Zapata, A. (October 3-6, 2013). Air dispersion modeling of volatile organic emissions from multiple natural gas wells in Decatur, TX. *44th Western Regional Meeting, American Chemical Society.* Lecture conducted from Santa Clara, CA.

Sok, H.L.; Waller, C.C.; Feng, L.; Gonzalez, J.; Sutherland, A.J.; Wisdom-Stack, T.; Sahai, R.K.; Hesse, R.C.; **Rosenfeld, P.E.** (June 20-23, 2010). Atrazine: A Persistent Pesticide in Urban Drinking Water. *Urban Environmental Pollution*. Lecture conducted from Boston, MA.

Feng, L.; Gonzalez, J.; Sok, H.L.; Sutherland, A.J.; Waller, C.C.; Wisdom-Stack, T.; Sahai, R.K.; La, M.; Hesse, R.C.; **Rosenfeld, P.E.** (June 20-23, 2010). Bringing Environmental Justice to East St. Louis, Illinois. *Urban Environmental Pollution.* Lecture conducted from Boston, MA.

Rosenfeld, P.E. (April 19-23, 2009). Perfluoroctanoic Acid (PFOA) and Perfluoroactane Sulfonate (PFOS) Contamination in Drinking Water From the Use of Aqueous Film Forming Foams (AFFF) at Airports in the United States. *2009 Ground Water Summit and 2009 Ground Water Protection Council Spring Meeting*, Lecture conducted from Tuscon, AZ.

Rosenfeld, P.E. (April 19-23, 2009). Cost to Filter Atrazine Contamination from Drinking Water in the United States" Contamination in Drinking Water From the Use of Aqueous Film Forming Foams (AFFF) at Airports in the United States. *2009 Ground Water Summit and 2009 Ground Water Protection Council Spring Meeting*. Lecture conducted from Tuscon, AZ.

Wu, C., Tam, L., Clark, J., **Rosenfeld, P**. (20-22 July, 2009). Dioxin and furan blood lipid concentrations in populations living near four wood treatment facilities in the United States. Brebbia, C.A. and Popov, V., eds., *Air Pollution XVII: Proceedings of the Seventeenth International Conference on Modeling, Monitoring and Management of Air Pollution*. Lecture conducted from Tallinn, Estonia.

Rosenfeld, P. E. (October 15-18, 2007). Moss Point Community Exposure To Contaminants From A Releasing Facility. *The 23rd Annual International Conferences on Soils Sediment and Water.* Platform lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld, P. E. (October 15-18, 2007). The Repeated Trespass of Tritium-Contaminated Water Into A Surrounding Community Form Repeated Waste Spills From A Nuclear Power Plant. *The 23rd Annual International Conferences on Soils Sediment and Water*. Platform lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld, P. E. (October 15-18, 2007). Somerville Community Exposure To Contaminants From Wood Treatment Facility Emissions. The *23rd Annual International Conferences on Soils Sediment and Water*. Lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld P. E. (March 2007). Production, Chemical Properties, Toxicology, & Treatment Case Studies of 1,2,3-Trichloropropane (TCP). *The Association for Environmental Health and Sciences (AEHS) Annual Meeting*. Lecture conducted from San Diego, CA.

Rosenfeld P. E. (March 2007). Blood and Attic Sampling for Dioxin/Furan, PAH, and Metal Exposure in Florala, Alabama. *The AEHS Annual Meeting.* Lecture conducted from San Diego, CA.

Hensley A.R., Scott, A., **Rosenfeld P.E.,** Clark, J.J.J. (August 21 – 25, 2006). Dioxin Containing Attic Dust And Human Blood Samples Collected Near A Former Wood Treatment Facility. *The 26th International Symposium on Halogenated Persistent Organic Pollutants – DIOXIN2006*. Lecture conducted from Radisson SAS Scandinavia Hotel in Oslo Norway.

Hensley A.R., Scott, A., **Rosenfeld P.E.,** Clark, J.J.J. (November 4-8, 2006). Dioxin Containing Attic Dust And Human Blood Samples Collected Near A Former Wood Treatment Facility. *APHA 134 Annual Meeting & Exposition.* Lecture conducted from Boston Massachusetts.

Paul Rosenfeld Ph.D. (October 24-25, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. Mealey's C8/PFOA. *Science, Risk & Litigation Conference.* Lecture conducted from The Rittenhouse Hotel, Philadelphia, PA.

Paul Rosenfeld Ph.D. (September 19, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, *Toxicology and Remediation PEMA Emerging Contaminant Conference*. Lecture conducted from Hilton Hotel, Irvine California.

Paul Rosenfeld Ph.D. (September 19, 2005). Fate, Transport, Toxicity, And Persistence of 1,2,3-TCP. *PEMA Emerging Contaminant Conference.* Lecture conducted from Hilton Hotel in Irvine, California.

Paul Rosenfeld Ph.D. (September 26-27, 2005). Fate, Transport and Persistence of PDBEs. *Mealey's Groundwater Conference.* Lecture conducted from Ritz Carlton Hotel, Marina Del Ray, California.

Paul Rosenfeld Ph.D. (June 7-8, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. *International Society of Environmental Forensics: Focus On Emerging Contaminants*. Lecture conducted from Sheraton Oceanfront Hotel, Virginia Beach, Virginia.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Fate Transport, Persistence and Toxicology of PFOA and Related Perfluorochemicals. *2005 National Groundwater Association Ground Water And Environmental Law Conference*. Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, Toxicology and Remediation. *2005 National Groundwater Association Ground Water and Environmental Law Conference.* Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. and Rob Hesse R.G. (May 5-6, 2004). Tert-butyl Alcohol Liability and Toxicology, A National Problem and Unquantified Liability. *National Groundwater Association. Environmental Law Conference*. Lecture conducted from Congress Plaza Hotel, Chicago Illinois.

Paul Rosenfeld, Ph.D. (March 2004). Perchlorate Toxicology. *Meeting of the American Groundwater Trust*. Lecture conducted from Phoenix Arizona.

Hagemann, M.F., **Paul Rosenfeld, Ph.D.** and Rob Hesse (2004). Perchlorate Contamination of the Colorado River. *Meeting of tribal representatives*. Lecture conducted from Parker, AZ.

Paul Rosenfeld, Ph.D. (April 7, 2004). A National Damage Assessment Model For PCE and Dry Cleaners. *Drycleaner Symposium. California Ground Water Association*. Lecture conducted from Radison Hotel, Sacramento, California.

Rosenfeld, P. E., Grey, M., (June 2003) Two stage biofilter for biosolids composting odor control. *Seventh International In Situ And On Site Bioremediation Symposium Battelle Conference* Orlando, FL.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. (February 20-21, 2003) Understanding Historical Use, Chemical Properties, Toxicity and Regulatory Guidance of 1,4 Dioxane. *National Groundwater Association. Southwest Focus Conference. Water Supply and Emerging Contaminants*.. Lecture conducted from Hyatt Regency Phoenix Arizona.

Paul Rosenfeld, Ph.D. (February 6-7, 2003). Underground Storage Tank Litigation and Remediation. *California CUPA Forum*. Lecture conducted from Marriott Hotel, Anaheim California.

Paul Rosenfeld, Ph.D. (October 23, 2002) Underground Storage Tank Litigation and Remediation. *EPA Underground Storage Tank Roundtable*. Lecture conducted from Sacramento California.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Understanding Odor from Compost, *Wastewater and Industrial Processes. Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Using High Carbon Wood Ash to Control Compost Odor. *Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Grey, M. A. (September 22-24, 2002). Biocycle Composting For Coastal Sage Restoration. *Northwest Biosolids Management Association*. Lecture conducted from Vancouver Washington..

Rosenfeld, P.E. and Grey, M. A. (November 11-14, 2002). Using High-Carbon Wood Ash to Control Odor at a Green Materials Composting Facility. *Soil Science Society Annual Conferenc*e. Lecture conducted from Indianapolis, Maryland.

Rosenfeld. P.E. (September 16, 2000). Two stage biofilter for biosolids composting odor control. *Water Environment Federation.* Lecture conducted from Anaheim California.

Rosenfeld. P.E. (October 16, 2000). Wood ash and biofilter control of compost odor. *Biofest.* Lecture conducted from Ocean Shores, California.

Rosenfeld, P.E. (2000). Bioremediation Using Organic Soil Amendments. *California Resource Recovery Association*. Lecture conducted from Sacramento California.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. *Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings*. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., and C.L. Henry. (1999). An evaluation of ash incorporation with biosolids for odor reduction. *Soil Science Society of America*. Lecture conducted from Salt Lake City Utah.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Comparison of Microbial Activity and Odor Emissions from Three Different Biosolids Applied to Forest Soil. *Brown and Caldwell.* Lecture conducted from Seattle Washington.

Rosenfeld, P.E., C.L. Henry. (1998). Characterization, Quantification, and Control of Odor Emissions from Biosolids Application To Forest Soil. *Biofest.* Lecture conducted from Lake Chelan, Washington.

Rosenfeld, P.E, C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions From Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. $41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: $10,000 grant awarded to San Diego State University.
Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. $100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. $20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: $10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: $15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. $500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

In the Superior Court of the State of California, County of San Bernardino
Billy Wildrick, Plaintiff vs. BNSF Railway Company
Case No. CIVDS1711810
Rosenfeld Deposition 10-17-2022

In the State Court of Bibb County, State of Georgia
Richard Hutcherson, Plaintiff vs Norfolk Southern Railway Company
Case No. 10-SCCV-092007
Rosenfeld Deposition 10-6-2022

In the Civil District Court of the Parish of Orleans, State of Louisiana
Millard Clark, Plaintiff vs. Dixie Carriers, Inc. et al.
Case No. 2020-03891
Rosenfeld Deposition 9-15-2022

Re: 1101 California Street Warehouse (SCH NO. 2024031107)

Dear Mr. Beery:

On behalf of the Golden State Environmental Justice Alliance ("GSEJA"), I am writing to you regarding the 1101 California Street Warehouse (SCH NO. 2024031107) ("Project").

GSEJA is withdrawing its comment letter and opposition to the Project. The Project's developer has addressed GSEJA's concerns about environmental mitigation.

Sincerely,

Joe Bourgeois
Executive Director

Subject:	Comments on Mitigated Negative Declaration for 1101 California Street Warehouse (Lot Merger No. 8; Planned Development No. 7) (SCH No. 2024031107)
Date:	Monday, April 29, 2024 17:20:52
Attachments:	7177-004acp - 1101 Cal. St. Warehouse MND Comments and Exhibits A-B.pdf

[**NOTICE:** This message originated outside of City of Redlands -- **DO NOT CLICK** on **links** or open **attachments** unless you are sure the content is safe.]

Good afternoon,

Please find attached **Comments on Mitigated Negative Declaration for 1101 California Street Warehouse (Lot Merger No. 8; Planned Development No. 7) (SCH No. 2024031107)** and **Exhibits A-B**.

We are also providing a Dropbox link containing supporting references:

A hard copy of our Comments and Exhibits A-B will be sent via overnight delivery.

If you have any questions, please contact Kelilah Federman.

Thank you.

Re: Comments on Mitigated Negative Declaration for 1101 California Street Warehouse (Lot Merger No. 8; Planned Development No. 7) (SCH No. 2024031107)

Dear Mr. Beery, Mr. Desatnik:

On behalf of Californians Allied for a Responsible Economy ("CARE CA"), we submit these comments on the Initial Study / Mitigated Negative Declaration ("MND") prepared by the City of Redlands ("City") pursuant to the California Environmental Quality Act ("CEQA") [1], for the 1101 California Street Warehouse Project (SCH No. 2024031107) ("Project"), proposed by CRP/NPP Redlands Industrial Owner, LLC ("Applicant"). 11-1

The Project proposes the construction of a 357,610 square-foot ("SF") warehouse that will include 6,000 SF of Administration/Office Space.[2] The Project Site is located at 1101 California St, Redlands, California 92374 on the southwest corner of Lugonia Avenue and California Street and includes two Assessor's Parcel Numbers: 0292-033-11 and 0292-033-13, in the County of San Bernardino.[3] The Project site is located in an area designated by the Redlands General Plan as Commercial/Industrial and within the Special Development ("EV/SD") district of the 11-2

[1] Pub. Res. Code §§ 21000 *et seq.*
[2] City of Redlands, Initial Study for 1101 California Street Warehouse (March 26, 2024), p. 1. [hereinafter "MND").

printed on recycled paper

East Valley Corridor Specific Plan.[4] The Project site was previously developed with the Splash Kingdom recreational water park.[5] The water park was vacated in 2018, and partially demolished in 2021, with various structures remaining onsite. The Air Quality Impact Analysis utilized the past emissions values as the existing condition baseline for the Proposed Project's new development emissions.[6] The property is located immediately adjacent to the 10-Freeway, and the property design contemplates dedicating a portion of the southeast corner of the property to improve the right turn access onto the westbound 10-Freeway onramp. The Project requires a Planned Development permit, a Lot Line Adjustment Merger, a Socio-Economic Cost/Benefit Study, a Construction General Permit Order 2009-2009-DWQ), and a Storm Water Pollution and Prevention Plan ("SWPPP"). 11-2 Cont.

CARE CA reviewed the MND, its technical appendices, and reference documents with the assistance of air quality and GHG expert James Clark, whose comments ("Clark Comments") and curriculum vitae ("CV") are attached hereto as **Exhibit A.** CARE CA's comments on noise and vibration were prepared with the assistance of acoustics, noise, and vibration expert Jack Meighan of Wilson Ihrig. Mr. Meighan's Comments ("Meighan Comments") and Mr. Meighan's CV are attached hereto as **Exhibit B.** Based on CARE CA's review of the MND and available documents in conjunction with its experts, there is substantial evidence supporting a fair argument that the Project may result in potentially significant and adverse impacts to air quality, public health, greenhouse gas emissions, land use, and cumulative impacts which are not fully disclosed or mitigated by the MND and require additional mitigation. To correct these deficiencies, the City must prepare an Environmental Impact Report ("EIR") that fully discloses, analyzes and mitigates the Project's potentially significant impacts and considers alternatives to the Project. 11-3

I. STATEMENT OF INTEREST

CARE CA is an unincorporated association of individuals and labor organizations that may be adversely affected by the potential public and worker health and safety hazards, and the environmental impacts of the Project. The coalition includes Redlands residents Michael Lopez, Scott Ortiz, Kevin Miller, Kevin Salas, the District Council of Ironworkers, Southern California Pipe Trades DC 16, along with their members, their families, and other individuals who live and work in the City of Redlands and San Bernardino County. 11-4

[5] MND, p. 2.
[6] MND Appendix A: Urban Crossroads, Air Quality Impact Analysis and Greenhouse Gas Analysis, (October 12, 2023).

printed on recycled paper

CARE CA advocates for protecting the environment and the health of their communities' workforces. CARE CA seeks to ensure a sustainable construction industry over the long-term by supporting projects that offer genuine economic and employment benefits, and which minimize adverse environmental and other impacts on local communities. CARE CA members live, work, recreate, and raise their families in the City of Redlands and San Bernardino County and the surrounding communities. Accordingly, they would be directly affected by the Project's environmental and health and safety impacts. Individual members may also work on the Project itself. They will be first in line to be exposed to any health and safety hazards that exist onsite. 11-4 Cont.

In addition, CARE CA has an interest in enforcing environmental laws that encourage sustainable development and ensure a safe working environment for its members. Environmentally detrimental projects can jeopardize future jobs by making it more difficult and more expensive for business and industry to expand in the region, and by making the area less desirable for new businesses and new residents. Indeed, continued environmental degradation can, and has, caused construction moratoriums and other restrictions on growth that, in turn, reduce future employment opportunities.

II. LEGAL BACKGROUND

Except in limited circumstances, CEQA requires that lead agencies analyze any project with potentially significant environmental impacts in an EIR.[7] The purpose of an EIR "is to inform the public and its responsible officials of the environmental consequences of their decisions *before* they are made. Thus, the EIR protects not only the environment, but also informed self-government."[8] The EIR has been described as "an environmental 'alarm bell' whose purpose is to alert the public and its responsible official to environmental changes before they have reached ecological points of no return."[9] 11-5

A negative declaration may be prepared instead of an EIR when, after preparing an initial study, a lead agency determines that a project "would not have a significant effect on the environment."[10] Courts have held that if "no EIR has been prepared for a nonexempt project, but substantial evidence in the record

[7] Pub. Resources Code, § 21000; CEQA Guidelines, § 15002.

printed on recycled paper

supports a fair argument that the project may result in significant adverse impacts, the proper remedy is to order preparation of an EIR."[11] 11-5 Cont.

The presumption in favor of preparing an EIR, rather than a negative declaration, is reflected in the "fair argument" standard. Under that standard, the lead agency "shall" prepare an EIR whenever substantial evidence in the whole record before the agency supports a fair argument that a project may have a significant effect on the environment.[12] The fair argument standard creates a "low threshold" of favoring environmental review through an EIR, rather than through a negative declaration.

"Substantial evidence" required to support a fair argument is defined as "enough relevant information and reasonable inferences from this information that a fair argument can be made to support a conclusion, even though other conclusions might also be reached."[13] "[I]n marginal cases where it is not clear whether there is substantial evidence that a project may have a significant effect on the environment, the lead agency shall be guided by the following principle: If there is disagreement among expert opinion supported by facts over the significance of an effect on the environment, the Lead Agency shall treat the effect as significant and shall prepare an EIR."[14]

With respect to this Project, the MND fails to satisfy the basic purposes of CEQA. The MND fails to adequately investigate, disclose, and analyze the Project's potentially significant impacts, and fails to provide substantial evidence to conclude that impacts will be mitigated to a less than significant level. Because the MND lacks basic information regarding the Project's potentially significant impacts, the MND's conclusion that the Project will have a less than significant impact on the environment is unsupported.[15] The City failed to gather the relevant data to support its finding of no significant impacts, and substantial evidence shows that the Project may result in potentially significant impacts. As detailed herein and in the attached expert comments substantial evidence supports a fair argument that the Project may result in significant and unmitigated impacts to air quality, public 11-6

health, greenhouse gas emissions, noise and vibration, and cumulative impacts. The City must prepare an EIR that analyzes, discloses, and mitigates these impacts and which considers less environmentally damaging alternatives. 11-6 Cont.

III. THE MND FAILS TO PROVIDE A COMPLETE PROJECT DESCRIPTION

CEQA requires that an Initial Study include a description of the project and an identification of the environmental setting.[16] "An accurate and complete project description is necessary for an intelligent evaluation of the potential environmental impacts of the agency's action."[17] Accordingly, a lead agency may not hide behind its failure to obtain a complete and accurate project description.[18] Without a complete project description, the environmental analysis under CEQA is impermissibly limited, thus minimizing the project's impacts and undermining meaningful public review.[19] 11-7

CEQA Guidelines section 15378 defines "project" to mean "the whole of an action, which has a potential for resulting in either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment."[20] "The term "project" refers to the activity which is being approved and which may be subject to several discretionary approvals by governmental agencies. The term project does not mean each separate governmental approval."[21] Courts have explained that a complete description of a project must "address not only the immediate environmental consequences of going forward with the project, but also all "*reasonably foreseeable* consequence[s] of the initial project."[22] Accordingly, a lead agency may not hide behind its failure to obtain a complete and accurate project description.[23]

A. The MND Fails to Identify Reasonably Foreseeable Uses of the Project Site

CEQA is concerned with a project's environmental impacts, regardless of who ultimately uses or operates a project.[24] Courts have held that where the tenant or type of business is foreseeable and there is evidence that an impact unique to that tenant or type of business will result, the CEQA document must disclose that information.[25] An EIR must include an analysis of the environmental effects of a proposed future use or action at a project site if: (1) it is a reasonably foreseeable consequence of the initial project; and (2) the future expansion or action will be significant in that it will likely change the scope or nature of the initial project or its environmental effects.[26] A failure to describe anticipated project operations can result in a flawed impact analysis, in violation of CEQA.[27] An EIR is required to "adequately apprise all interested parties of the true scope of the project for intelligent weighing of the environmental consequences of the project," otherwise, informed decisionmaking is precluded and the EIR may be deemed inadequate as a matter of law.[28] 11-8

Here, the Project is being developed for unknown future tenants, but for reasonably foreseeable future uses. The Development Application submitted for the Project provides that the Project is proposed to be built on a speculative basis without an identified tenant/user and may be utilized for warehousing and distribution of finished goods or manufacturing.[29] The MND likewise does not identify a tenant or end user for the Project's warehouse development. However, based on the Project's location and proposed construction, it is reasonably foreseeable that the Project may involve high-intensity warehouse uses such as high cube warehousing and cold storage. Absent conditions of approval limiting Project operation to low-intensity warehouse uses, future tenants would be able to operate these higher intensity uses. The impacts of high-intensity warehouse uses must therefore be analyzed in the CEQA document.

B. The MND Fails to Substantiate the Assumption that Project Operation Will Not Involve Cold Storage Uses

The MND analyses assume that the Project would not result in impacts associated with cold storage uses. This assumption lacks the support of substantial evidence, as the MND does not identify a tenant or end user for the warehouse. Further, this assumption is not reflected in any enforceable conditions related to Project use. In order for the City to correctly assume that the Project would not include cold storage, which is a common warehouse use,[30] the MND would need to include binding measures or conditions which limit warehouse use at the Project to prohibit cold storage. Absent such a restriction, it is reasonable to assume that future Project warehouse tenants may use the site for cold storage. The MND does not include a restriction on cold storage use, yet fails to analyze the elevated air quality, public health, and energy impacts of cold storage use at the Project site. As a result, the MND may substantially underestimate these impacts.

A cold storage warehouse generates greater environmental impacts than other types of warehouses. Cold storage generates more trips per square foot and has higher energy impacts due to the low temperatures required by the facility's transport refrigeration units ("TRUs") and on-site storage. TRUs are refrigeration systems powered by integral diesel engines.[31] The refrigeration systems are used to control the environment of temperature-sensitive products transported in insulated trucks, trailers, shipping containers, or railcars. The California Air Resources Board ("CARB") states that TRUs emit diesel particulate matter ("DPM"), fine particulate matter ("PM2.5"), oxides of nitrogen ("NOx"), and GHGs while in transit and during stationary operation at refrigerated warehouses or distribution centers, grocery stores, seaport facilities, intermodal railyards, and other locations of operation. CARB explains that communities near facilities where TRUs operate bear a disproportionate health burden:

11-9

> PM2.5 pollution contributes to more fatalities than other air pollutants and can lodge deep in the lungs or pass through the lungs to enter the blood stream and affect the heart, brain, and other organs. Adverse health effects

[30] See e.g. https://www.inboundlogistics.com/articles/cold-storage-warehouse/ (cold storage warehouses are "commonly used for storing fresh produce, dairy products, and other perishable items that require a cool but not frozen environment… The importance and popularity of cold storage warehouses have soared in recent years, driven by shifting consumer preferences, growing populations, and increased spending–especially when it comes to frozen food, probiotics, pharmaceuticals, or fresh produce.")

[31] California Air Resources Board, 2022 TRU Technology Assessment, pg. 1, https://ww2.arb.ca.gov/sites/default/files/2022-10/CARB%202022%20TRU%20Technology%20Assessment%2010-14-22.pdf.

printed on recycled paper

> from long-term exposure to PM2.5 pollution include increased risk of heart attacks and heart disease, impaired lung development in children, the development and exacerbation of asthma, and premature death. NOx is a precursor to ozone, which can cause irritation and damage lung tissue, worsen asthma and chronic illnesses including obstructive pulmonary disease and reduce lung function.[32]

11-9 Cont.

CARB also explains that TRUs' emissions of GHGs contribute towards climate change,[33] and that TRUs generate noise impacts: "TRU operations produce noise that can be problematic when deliveries that often occur late evening or early morning are near residential neighborhoods, hotels, hospitals, and elder care facilities… One study conducted by LSA Associates found that a diesel-powered TRU operating at high idle produces an A-weighted decibel (dBA) noise rating of 104 dBA, while a diesel truck at idle produces a noise rating of 96 dBA."[34]

By assuming the Project will not include cold storage, the MND may drastically underestimate the Project's impacts in each of these areas. The MND does not provide supporting evidence demonstrating that cold storage uses would be absent from the Project site for the duration of the Project's life. Due to ever-increasing population and market demands in Southern California, it is reasonably foreseeable that the Project may attract end users, either now or in future years of the Project's life, which require cold storage. As a result, the MND's assumption is not supported by substantial evidence. Rather, it is reasonably foreseeable that some of the 357,610 SF Project site may support cold storage end uses in the future.

In the California Attorney General's ("AG") guidance for warehouse projects, the AG recommends that, unless a developer adopts mitigation measures limiting cold storage impacts, the developer should record a covenant on the title of the underlying property to ensuring that the property cannot be used to provide refrigerated warehouse space.[35] The City should include such a title restriction for the Project unless the MND is revised to analyze and mitigate impacts associated with a more conservative and fact-based cold-storage use percentage.

printed on recycled paper

C. The Project Description Fails to Include Reasonably Foreseeable Backup Generators

The MND fails to disclose potential backup/emergency stationary generators for the Project's operations. The MND's project description does not address whether backup generators are a reasonably foreseeable component of the Project, and the MND's technical analyses assume no backup generators will be installed for operations. The MND does not disclose any conditions or mitigation measures that limit or prevent use of backup generators. The MND must disclose and analyze the potential use of backup generators because (1) they are a reasonably foreseeable use and consequence of the Project, and (2) the use of backup generators will expand the Project's environmental effects.

In *East Oakland Stadium Alliance v. City of Oakland*,[36] the Court of Appeal upheld an EIR's analysis of emissions from backup generators. The EIR's analysis assumed that generators would operate for 50 hours of testing and maintenance annually, while allocating no time for actual emergency use. In discussing the lead agency's duty to analyze backup generator emissions, the Court stated that "if the annual need for emergency generator use is reasonably foreseeable, the EIR was not entitled to disregard such use merely because it would occur at unpredictable times."[37] The Court explained that use of a generator was reasonably foreseeable because, "[a]s noted in the EIR, some parts of the Bay Area are subject to predictable, sustained power outages undertaken to reduce the risk of fire."[38] Thus, "[t]he EIR was required to make neither a generally applicable nor a worst-case assumption; rather it was required to make a reasonable estimate of likely annual use of the generators at the project site."[39] 11-10

Here, as in *East Oakland Stadium Alliance*, back-up generators are a reasonably foreseeable consequence of the Project due to increasingly common Public Safety Power Shutoff ("PSPS") events and extreme heat events. Extreme heat events ("EHE") are defined as periods where in the temperatures throughout California exceed 100 degrees Fahrenheit.[40] From January 2019 through December 2019, Southern California Edison reported 158 of their circuits underwent a PSP event.[41] In Los Angeles County, two circuits had 4 PSPS events during that period,

printed on recycled paper

lasting an average of 35 to 38 hours. The total duration of the PSPS events lasted between 141 hours to 154 hours in 2019. According to the California Public Utilities Commission (CPUC) de-energization report[42] in October 2019, there were almost 806 PSPS events that impacted almost 973,000 customers (~7.5% of households in California) of which ~854,000 of them were residential customers. The California Air Resources Board estimates that with 973,000 customers impacted by PSPS events in October 2019, approximately 125,000 back-up generators were used by customers to provide electricity during power outage.[43] The widespread use of back-up generators to adapt to PSPS and EHE events suggests that back-up generators are a reasonably foreseeable consequence of the Project.

11-10 Cont.

Further demonstrating that backup generators are reasonably foreseeable is the possibility that the Project may include cold storage. A cold storage warehouse has the ability to keep temperature sensitive items in a temperature-controlled environment, which requires a constant energy supply to power refrigeration. Cold storage warehouses thus commonly utilize backup generators.[44] Backup generators commonly rely on fuels such as natural gas or diesel,[45] and thus can significantly impact air quality, GHG emissions, and public health through toxic DPM emissions.[46] Since the Project may include cold storage, it is reasonably foreseeable that the Project would require on-site backup generators.

Diesel-fired engines also produce significantly greater amounts of fine particulates and toxics

printed on recycled paper

Omission of a generator system results in an underestimation of the Project's air quality, greenhouse gas, and health risk impacts. 11-10 Cont.

In sum, omission of the Project's generator results in an underestimation of the Project's reasonably foreseeable air quality, greenhouse gas, energy, and health risk impacts. The MND must be withdrawn and an EIR prepared to resolve this project description inconsistency and correct the affected impacts analyses to accurately disclose the Project's potentially significant impacts.

D. The Project Description Fails to Include Reasonably Foreseeable Use and Transport of Hazardous Materials

The MND also contains conflicting descriptions of future uses, further demonstrating the inconsistencies in the City's impact assumptions. The MND initially states that "future items to be stored for distribution would include non-hazardous, non-flammable products on high-pile storage pallet racking and shelving."[50] However, the MND does not include mitigation measures or conditions prohibiting storage of hazardous items. The MND later states that the Project will include "[t]he storage of hazardous materials… kept in compliance with State and local regulations."[51] The transport and storage of hazardous materials may result in potentially significant impacts which are not discussed or analyzed in the MND due to its fluctuating description of Project operations. 11-11

Since the Project is being designed to be capable of supporting intensive warehouse distribution, and potentially cold storage and hazardous materials transport uses at the Project site, the City must prepare an EIR to include specific use information and to analyze the impacts of the most intensive reasonably foreseeable uses of the Project site. The EIR must also include all known information about the types of future users at the Project site. The MND must be withdrawn and an EIR circulated which adequately describes the Project's reasonably foreseeable future users before the Project can lawfully be approved.

IV. THE MND FAILS TO ADEQUATELY ANALYZE THE PROJECT'S ENVIRONMENTAL SETTING 11-12

CEQA requires that an Initial Study include a description of the project and

emissions compared to natural gas fired equipment."), available at http://www.aqmd.gov/home/permits/emergency-generators#Fact2.

[50] MND, p. 2.

[51] MND, p. 35.

printed on recycled paper

an identification of the environmental setting.[52] CEQA requires that a lead agency include a description of the physical environmental conditions in the vicinity of the Project as they exist at the time environmental review commences.[53] As numerous courts have held, the impacts of a project must be measured against the "real conditions on the ground."[54] The description of the environmental setting constitutes the baseline physical conditions by which a lead agency may assess the significance of a project's impacts.[55] Use of the proper baseline is critical to a meaningful assessment of a project's environmental impacts.[56] An agency's failure to adequately describe the existing setting contravenes the fundamental purpose of the environmental review process, which is to determine whether there is a potentially substantial, adverse change compared to the existing setting.

11-12 Cont.

The CEQA Guidelines call for the environmental baseline to reflect conditions as they exist early in the CEQA process. The CEQA Guidelines specify that the physical environmental conditions at the time the notice of preparation is published or, if there is no notice of preparation, at the time environmental review begins "will normally constitute the baseline physical conditions by which a lead agency determines whether an impact is significant."[57] The CEQA Guidelines also provide that in assessing a project's impacts on the environment, the lead agency should "normally limit its examination to the existing physical conditions in the affected area" at the same stage of the CEQA process.[58]

Baseline information on which a lead agency relies must be supported by substantial evidence.[59] The CEQA Guidelines define "substantial evidence" as "enough relevant information and reasonable inferences from this information that a fair argument can be made to support a conclusion."[60] "Substantial evidence shall include facts, reasonable assumptions predicated upon facts, and expert opinion

11-12 Cont.

A. The MND Relies on an Inadequate Baseline Against Which to Analyze Project's Air Quality and Greenhouse Gas Impacts

The California Supreme Court, in *Communities for a Better Environment v. South Coast Air Quality Management District* ("*CBE v. SCAQMD*"),[62] recognized that "the baseline 'normally' consists of 'the physical environmental conditions in the vicinity of the project, as they exist at the time ... environmental analysis is commenced....'"[63] This decision considered a long line of Court of Appeal decisions that hold, in similar terms, that the impacts of a proposed project are ordinarily to be compared to the actual environmental conditions existing at the time of CEQA analysis.[64] This line of authority includes cases where a plan or regulation allowed for greater development or more intense activity than had so far actually occurred, as well as cases where actual development or activity had, by the time CEQA analysis was begun, already exceeded that allowed under the existing regulations.[65]

11-13

In *CBE v. SCAQMD*, the Supreme Court identified circumstances under which a lead agency could deviate from the "normal" baseline of conditions existing at the date the Notice of Preparation is released. ConocoPhillips had applied to modify an operating petroleum refinery in a way that would increase operation of

[64] *Environmental Planning Information Council v. County of El Dorado* (1982) 131 Cal.App.3d 350, 354, 357-358 (effects of a proposed area plan for land development must be compared to the existing physical conditions in the area, rather than to development permitted under the county's general plan); *City of Carmel-by-the-Sea v. Board of Supervisors* (1986) 183 Cal.App.3d 229, 246-247 (effects of rezoning must be compared to the existing physical environment, rather than to development allowed under a prior land use plan); *County of Amador v. El Dorado County Water Agency* (1999) 76 Cal.App.4th 931, 955 (baseline for water diversion project was actually existing stream flows, not minimum stream flows set by federal license); *Save Our Peninsula Committee v. Monterey County Bd. of Supervisors* (2001) 87 Cal.App.4th 99, 121 (water use baseline for analysis of proposed land development was actual use without the project, not what the applicant was entitled to use for irrigation); *San Joaquin Raptor Rescue Center v. County of Merced* (2007) 149 Cal.App.4th 645, 658 (baseline for proposed expansion of a mining operation must be the "realized physical conditions on the ground, as opposed to merely hypothetical conditions allowable under existing plans"); *Woodward Park Homeowners Assn., Inc. v. City of Fresno* (2007) 150 Cal.App.4th 683, 693, 706-710 (effects of a large office and shopping center development must be compared to the current undeveloped condition of the property, rather than to an office park that could be developed under existing zoning).
[65] *CBE v. SCAQMD*, *supra,* 48 Ca.4th 310, 321.

printed on recycled paper

four boilers that produced steam for refinery operations.[66] The lead agency selected as the project's baseline for nitrogen oxide emissions the amount the boilers would emit if they operated at the maximum level allowed under ConocoPhillips's existing permits, even though ConocoPhillips had never operated them at that level.[67] Citing that refinery operations "vary greatly with the season, crude oil supplies, market conditions, and other factors,"[68] the court explained that agencies may exercise discretion to accommodate a "temporary lull or spike in operations that happens to occur at the time of environmental review."[69] The Court held that a lead agency enjoys the discretion to decide how the existing physical conditions can most realistically be measured, supported by substantial evidence.[70] The Court rejected the "maximum level permitted" baseline because it did not aim to reflect existing conditions.

11-13 Cont.

Some subsequent cases,[71] as well as the CEQA Guidelines,[72] have allowed lead agencies to deviate from using the NOP date as the baseline when assessing existing facilities/operations in limited situations "where conditions change or fluctuate over time." However, in most cases, the facility/operation was still operating to some extent at the time of the NOP.[73]

County of Carlsbad* (2015) 241 Cal.App.4th 94, 105 (upholding use of recent historical traffic levels as a baseline for currently operating shopping mall with greater-than-usual vacancies, noting that "the nature of a shopping center is that tenants change and the amount of occupied space constantly fluctuates"); *San Francisco Baykeeper, Inc. v. State Lands Commission* (2015) 242 CA4th 202, 218 (upholding a baseline for a continuously operating sand mine that was derived from 5 years of historical mining operations, noting that the amount of sand mined fluctuates substantially from year to year due to a variety of factors); *Association of Irritated Residents v. Kern County Board of Supervisors* (2017) 17 CA5th 708, 709 (upholding baseline based on oil refinery's last year of full operations, noting that the facility was currently in operation at the time of the NOP and its permits remained in place); *Cherry Valley Pass Acres & Neighbors v. City of Beaumont* (2010) 190 CA4th 316 (upholding baseline closely approximating historic water use of egg farm in 2004, noting that egg farm only ceased operations after NOP date in 2005).
[72] CEQA Guidelines, Section 15125(a)(1) (providing, "[w]here existing conditions change or fluctuate over time, and where necessary to provide the most accurate picture practically possible of the project's impacts, a lead agency may define existing conditions by referencing historic conditions, or conditions expected when the project becomes operational, or both, that are supported with substantial evidence. In addition, a lead agency may also use baselines consisting of both existing conditions and projected future conditions that are supported by reliable projections based on substantial evidence in the record").
[73] *See* note 57.

printed on recycled paper

11-13 Cont.

For example, in *Association of Irritated Residents v. Kern County Board of Supervisors*,[74] the court reviewed the baseline set for an oil refinery that temporarily suspended refining operations at the time of the NOP. The baseline was set at operating levels of the facility in 2007, when the refinery was operating at full capacity, whereas in 2013, the date of the NOP, no refining operations were occurring. The court articulated the baseline analysis as such:[75]

> Our analysis of County's treatment of the baseline question breaks the County's approach into two factual components. The first inquiry considers the basic question of whether County has a sufficient evidentiary basis for finding existing conditions included an *operating* refinery. If that finding is upheld, the second inquiry addresses whether substantial evidence supports County's choice of 2007 as a *realistic measure* of the baseline physical conditions created by the refinery's operations. [emphasis in original text]

To the first inquiry, the court "conclude[d] the EIR's choice of 2007 as the measure of an existing conditions baseline for an operating refinery (1) was supported by substantial evidence."[76] The court noted that suspension of operations was intended as temporary, and that the refinery had a "history of fluctuating operations"[77] – the refinery frequently started and stopped refining operations. The court noted as relevant that when the refinery suspended operations at the time of the NOP, the refinery "continued other operations and activities. Those continuing activities included managing inventory, blending and marketing fuels, and functioning as a terminal for crude oil and finished petroleum products."[78] To the second inquiry, substantial evidence supported that the 2007 figure was a reasonable representation of the operations actually performed at the refinery because there had been only a temporary suspension of activity at the refinery, not the permanent closure of an unrelated former use, as here.[79]

In *North County Advocates v. County of Carlsbad*,[80] the court upheld the use of recent historical traffic levels as a baseline for an operating shopping mall with that had greater-than-usual vacancies. Specifically, a large department store retail space in the mall was vacant at the time of the NOP. In determining the scope of baseline operations, the court analyzed the historical occupancy of the mall. The court noted that, although the retail space in question was vacant at the time

printed on recycled paper

CEQA review commenced, the mall remained operational. The court observed that the department store retail space within the mall frequently fluctuated in occupancy – for instance, "the Robinsons-May space was less occupied from 2007 through 2009 (two retail users occupied part of it from August 2006 through December 2007, and two others occupied part of it from August through November in 2008 and in 2009."[81] The court concluded, "[w]e view this fluctuating occupancy—which is 'the nature of a shopping center'—as akin to the varying oil refinery operations in *Communities for a Better Environment*."[82] Therefore, the court permitted the shopping center to use a baseline that assumed the department store retail space was occupied since it was a component of the mall, which remained operational.

11-13 Cont.

Here, the City incorrectly claimed a baseline credit for a wholly shuttered former use that is unrelated to the proposed Project. The site was formerly developed as the Splash Kingdom amusement park, which closed in 2018, and was demolished in 2021, and currently features the remains of the former water park's abandoned attractions and structures.[83] Unlike the shopping mall in *North County Advocates*, which sought to fill a vacant space in an existing mall, or the refinery in *AIR v. Kern*, which had ongoing refining operations at the time of the NOP, the Project has no relationship to the former water park and is not an expansion or replacement of components of an existing facility. The facts of the Project do not allow the City to take any credit for baseline operations based on the shuttered waterpark that occupied the site before 2021.

11-14

The Notice of Intent to Adopt this MND was released on March 26, 2024. At that time, the Project site contained only the demolished Splash Kingdom's abandoned attractions and structures.[84] The MND provides that "because the site was previously developed with an amusement park, the Air Quality Impact Analysis utilized the past emissions values as the existing condition baseline for the Proposed Project's new development emissions."[85] This is incorrect. The City's choice to use fictitious emissions values as the existing baseline is misplaced. The "normal" baseline described in *CBE v. SCAQMD*, which should reflect the physical environmental conditions in the vicinity of the project, as they exist at the time environmental analysis is commenced, is of a vacant developed lot.[86] No sources of

printed on recycled paper

emissions are operational at the Project Site, or have been since the water park's closure in 2018 or demolition in 2021.[87] 11-14 Cont.

The MND fails to provide substantial evidence to justify deviation from the "normal" baseline. The MND cannot provide this evidence because operations of the water park on the Project site had completely ceased, which makes this case plainly distinguishable from *Association of Irritated Residents v. Kern County Board of Supervisors*,[88] *CBE v. SCAQMD*,[89] *North County Advocates v. County of Carlsbad*,[90] and other leading cases[91] allowing use of recent historical conditions as a baseline. Those cases all involved operations active at the time of the NOP experiencing a temporary "lull" due to their "history of fluctuating conditions."[92] Here, the Project involves a completely vacated facility at the date of the Notice of Intent; Splash Kingdom did not merely halt operations for a period – it completely vacated the premises. There is no evidence that Splash Kingdom expects to reoccupy the Project site, or that water parks are businesses where operations are expected to vacate and reoccupy warehouse facilities due to regularly fluctuating conditions. Therefore, the MND lacks evidence for finding existing conditions included an *operating* amusement park.

The CEQA Guidelines state that existing conditions may be defined "by referencing historic conditions" that are supported by substantial evidence, "where necessary to provide the most accurate picture practically possible of the project's impacts."[93] A departure from the normal use of existing baseline conditions "can be justified by substantial evidence that an analysis based on existing conditions would tend to be misleading or without informational value"[94] Here, the record contains no substantial evidence that analysis based on existing conditions would be misleading or without informational value. If the Project were not to proceed, the site would remain an empty lot continuing to emit no greenhouse gas emissions, air quality impacts, health risk, or traffic impacts.

In fact, it is misleading to rely on a fictitious baseline. Dr. Clark determined that the reliance on an inaccurate baseline results in an underestimation of Project emissions.[95] Specifically, the reliance on fictitious emissions associated with a 11-14

historical use of a water park to reduce Net GHG Emissions from the Project results in a gross miscalculation of the Project's potentially significant greenhouse gas emissions impacts.[96] The MND's analysis includes a calculation that Net Emissions is calculated by subtracting Existing Emissions from the Proposed Emissions from Total CO2 emissions.[97] See figure below. The MND's conclusions based on subtracting the fictitious 2,228.88 Existing Emissions from the Total Emissions of 3,534.58, are incorrect.[98] Total and Net Emissions remain 3,534.58. The reliance on fictitious "Existing Emissions" to reduce the Project's Net Emissions is inaccurate and results in inaccurate Greenhouse Gas Emissions impact assessment.[99] Dr. Clark concludes, therefore, that the City's analysis is incomplete and must be revised in an EIR circulated for public review.

11-15 Cont.

Table 6
Project GHG Emissions

Emission Source	Emissions (MT/yr)				
	CO_2	CH_4	N_2O	Refrigerants	Total CO_2e
Annual construction-related emissions amortized over 30 years	27.47	0.0	0.0	0.02	28.10
Mobile Source	3,072.72	0.20	0.34	4.31	3,183.19
Area Source	7.25	0.00	0.00	0.00	7.28
Water Usage	116.44	2.70	0.06	0.00	203.26
Waste	31.91	3.19	0.00	0.00	111.64
Refrigerants	0.00	0.00	0.00	1.11	1.11
Total CO2e (All Sources)	**3,534.58**				
Existing Emissions	2,228.88				
Net Emissions (Proposed – Existing)	**1,305.70**				

The Air Quality Analysis in the MND relies on the same fictitious baseline to determine air quality and health risk impacts. All the Project's baseline conditions are those existing from 2018 onward, following the closure of the Splash Kingdom amusement park.

The City lacks substantial evidence to support its reliance on fully operational amusement park baselines to inform its analysis of the Project's impacts. The MND must be withdrawn and an EIR circulated to include baseline analyses which reflect the conditions existing at the Project site at the time of the Notice of Intent, and to revise any impact analyses that utilized these erroneous baselines.

B. The MND Fails to Analyze the Site's Baseline Noise Environment Against Which to Analyze Project's Noise and Vibration Impacts

Mr. Meighan, CARE CA's expert noise consultant at Wilson Ihrig concludes that the MND fails to include an accurate ambient noise analysis. The MND fails to include any measurements of existing ambient noise conditions on the Project site against which to measure the Project's potentially significant noise and vibration impacts. The MND defines the ambient noise level, but does not calculate it. The MND provides that, "Ambient Noise Level [means]: The composite of noise from all sources, near and far. In this context, the ambient noise level constitutes the normal or existing level of environmental noise at a given location."[100] "Given the proximity to both local streets and Interstate 10 (I-10), along with noise from nearby residences and commercial parking lots, as well as shielding from the main noise source of I-10, noise levels should be physically measured to be accurately determined."[101] 11-16

The MND's failure to analyze the existing environmental setting with respect to noise results in an inadequate analysis of the Project's potential increase in noise above the ambient noise levels in the vicinity of the Project site. The MND's conclusion that "the Proposed Project would not generate substantial permanent increase in ambient noise levels in the vicinity of the Project" is therefore not supported by substantial evidence.[102] The MND must be withdrawn and an EIR circulated which accurately characterizes the environmental setting with respect to noise and adequately analyzes and mitigates potentially significant noise and vibration impacts before the Project can lawfully be approved.

V. THE CITY MUST PREPARE AN EIR BECAUSE THERE IS SUBSTANTIAL EVIDENCE SUPPORTING A FAIR ARGUMENT THAT THE PROJECT MAY RESULT IN SIGNIFICANT AIR QUALITY IMPACTS 11-17

An EIR must fully disclose all potentially significant impacts of a project, and implement all feasible mitigation to reduce those impacts to less than significant levels. The lead agency's significance determination with regard to each impact must be supported by accurate scientific and factual data.[103] An agency cannot

[100] MND, p. 44.

[103] 14 CCR § 15064(b).

printed on recycled paper

conclude that an impact is less than significant unless it produces rigorous analysis and concrete substantial evidence justifying the finding.[104] 11-17 Cont.

Moreover, the failure to provide information required by CEQA is a failure to proceed in the manner required by CEQA.[105] Challenges to an agency's failure to proceed in the manner required by CEQA, such as the failure to address a subject required to be covered in an EIR or to disclose information about a project's environmental effects or alternatives, are subject to a less deferential standard than challenges to an agency's factual conclusions.[106] In reviewing challenges to an agency's approval of an EIR based on a lack of substantial evidence, the court will "determine de novo whether the agency has employed the correct procedures, scrupulously enforcing all legislatively mandated CEQA requirements."[107] Even when the substantial evidence standard is applicable to agency decisions to certify an EIR and approve a project, reviewing courts will not 'uncritically rely on every study or analysis presented by a project proponent in support of its position. A clearly inadequate or unsupported study is entitled to no judicial deference.'"[108]

A. The MND Fails to Use Actual Truck Trip Lengths, Resulting in an Underestimation of Vehicle Emissions

The MND's conclusion that air quality impacts are less than significant is not supported by substantial evidence. To the contrary, emissions from diesel trucks will result in significant air quality impacts associated with the emissions of Toxic Air Contaminants ("TACs").[109] The City's own General Plan Update and Climate Action Plan EIR provide that "CARB has identified diesel engine exhaust particulate matter as the predominant TAC in California. Diesel particulate matter is emitted into the air by diesel-powered mobile vehicles, including heavy-duty diesel trucks, construction equipment, and passenger vehicles. Certain ROGs may also be designated as TACs."[110] 11-18

The MND includes an inaccurate calculation of the Project's air quality impacts by underestimating the vehicle miles traveled of the trucks ingressing and egressing the Project site. The MND provides:

printed on recycled paper

> To determine emissions from trucks for the proposed industrial uses, the analysis incorporated the SCAQMD recommended truck trip length of 15.3 miles for 2-axle (LHDT1, LHDT2), 14.2 miles for 3-axle (MHDT) trucks, and 39.9 miles for 4+-axle (HHDT) trucks and weighting the average trip lengths using traffic trip percentages. The trip length function for the warehouse and the general light industrial uses has been conservatively calculated to 30.34 miles and 29.84 miles, respectively, with an assumption of 100% primary trips for the proposed industrial land uses.

11-18 Cont.

According to the Air Quality Analysis[111] for the IS/MND, the SCAQMD recommended truck trip length of 40 (39.9) miles was incorporated in the CalEEMod analysis. Guidance from SCAQMD does not require a 40-mile truck trip, rather as stated in the SCAQMD's Final Environmental Assessment and Adoption of Proposed Rule 2305 – Warehouse Indirect Source Rule (WAIRE), the trip length for Class 8 trucks (heavy duty multi-axle trucks) are assumed to travel 39.9 miles per trip based on modeling conducted for the 2016 Regional Transportation Plan (RTP) from SCAG and the 2016 Air Quality Management Plan (AQMP).[112] SCAQMD has explained that this guidance is not intended to replace an analysis of actual truck trip distances to and from the ports.[113]

The MND's reliance on 39.9 miles per trip average is therefore misplaced. Contrary to the MND's assertion, the 40-mile trip length is not "required" by SCAQMD. It is a default average value recommended by SCAQMD for use in CalEEMod modeling in the absence of more specific data. CalEEMod explains that default values are only intended to be used "if site-specific information is not available."[114] And CEQA requires that significance determinations be "based to the extent possible on scientific and factual data."[115] The MND is inconsistent with this requirement because it lacks any evidence to support the assumption that truck trips to and from the Project site would be just 40 miles long. In particular, the MND does not identify any originating locations or destinations for the Project's

printed on recycled paper

warehouse products which are 40 miles (or less) from the Project site. The MND therefore lacks substantial evidence to support its reliance on 40-mile truck trips. 11-18 Cont.

The actual conditions of the Project potentially result in a far higher average truck trip.[116] CARE CA's expert Dr. Clark provided substantial evidence demonstrating that the nearest ports, which are common originating and destination locations for warehouse supply shipments, are at least 80 miles from the Project site, supporting a more reasonable conclusion that average truck trips would be 80 or more miles. As Dr. Clark explains, trucks are likely to travel to the Port of Long Beach and the Port of Los Angeles, which would result in a true truck trip of approximately 80 miles.[117] This would result in a nearly 200% longer trip than estimated in the air quality assessment in the MND.[118] This error results in a gross miscalculation of the Project's greenhouse gas, air quality, diesel particulate matter, and toxic air contaminant emissions associated with operation of the Project. The Project's impacts with respect to greenhouse gas emissions and air pollutant emissions will be nearly doubled, utilizing the correct trip length.[119] The vehicle emissions and greenhouse gas impacts associated with Project operation must be recalculated based on the higher average truck trip lengths.

Moreover, depending on the type of warehouse operation, the actual trip generation rate could be magnitudes greater than those assumed by the MND depending on the eventual tenant. An increased intensity of use would further compound the Project's VMT, air quality, and GHG impacts. The City must correct the estimated distance traveled by trucks and analyze the Project's impacts based on actual distances in a revised and recirculated FSEIR.

B. The MND Fails to Accurately Analyze or Mitigate the Project's Potentially Significant Air Quality Impacts

As discussed above, the air quality impact conclusions of the MND are based on an erroneous baseline that does not reflect existing conditions. The MND's air quality impact assessment is therefore not supported by substantial evidence. 11-19

The MND includes no mitigation to reduce air quality impacts associated with construction and operation of the Project, even though the Project results in significant air quality and public health impacts. Dr. Clark concludes that the Project results in significant air quality impacts from criteria and TAC pollutants

associated with yard equipment used on the Project site.[120] The MND provides, that as required by City of Redlands Ordinance No. 2955, a minimum of ninety percent (90%) of the on-site cargo handling equipment shall be zero emissions for new warehouse development project.[121] But, Dr. Clark found that the MND fails to account for the nearly 10% of on-site cargo handling equipment that will not be zero emission.[122] The non-zero emission on-site cargo handling equipment may result in significant criteria and toxic air pollutants, which were not analyzed or mitigated in the MND.[123] The MND's conclusion that air quality impacts are less than significant is therefore not supported by substantial evidence. Substantial evidence in Dr. Clark's comments supports a fair argument that the Project may result in a significant air quality impact from emissions of criteria and toxic pollutants from on-site motorized operational equipment. 11-19 Cont.

C. The MND Fails to Accurately Analyze or Mitigate the Project's Construction and Operational Health Risk

Furthermore, Dr. Clark found that the Project results in a health risk impact which was not adequately analyzed or mitigated in the MND. Dr. Clark concluded that the health risk assessment relied on inappropriate breathing rates to artificially reduce the Project's potentially significant health risk impacts.[124] Dr. Clark calculated that the health risk estimate for ages 2 to 30 years is off by a factor of 1.3.[125] Utilizing the correct breathing rate, the Project's health risk impacts are significant and require mitigation in an EIR before the Project can be approved. 11-20

Further, the MND fails to account for potentially significant health risk impacts associated with building downwash effect. In order to assess the impact of project related emissions, the MND included air quality modeling utilizing AERMOD, which is used to assess near-field pollutant dispersion.[126] However, Dr. James Clark explains that the air dispersion model used for the health risk analysis ("HRA") for the construction and operational phases of the Project has a structural flaw that results in inaccurate estimates of the Project emissions within the community. 11-21

[126] *Id.*, Appendix A, p. 51.

printed on recycled paper

Dr. Clark reviewed the City's AERMOD modeling, and noted that the City's use of AERMOD does not account for the impact on emissions from building downwash, rendering the analysis inaccurate. Dr. Clark's comments explain that building downwash occurs as the wind flows over and around buildings and impacts the dispersion of pollution from nearby stacks.[127] A plume caught in the path of this flow is drawn into the wake, temporarily trapping it in a recirculating cavity. This downwash effect leads to higher ground-level concentration of chemicals. The downwash effect increases as the relative difference between the release height and top of the building increases. This effect is well-understood. For example, analysis and mitigation of downwash is discussed in Section 123 of the Clean Air Act.[128]

11-21 Cont.

The MND completely fails to account for this impact in its AERMOD model, nor does it provide any justification why. Dr. Clark found that running the model without considering building downwash significantly underestimates the impacts of the project. [129]

When a standard, accepted methodology is available to assess a significant impact, an EIR must evaluate the impact unless a reasoned basis for not doing so is provided.[130] In *Berkeley Keep Jets Over the Bay Comm. v. Board of Port Comm'rs*, a court reviewed a DEIR's failure to analyze health risk from TAC exposure. The DEIR claimed that no methodology or standards of significance existed for assessing the health risk from TAC exposure.[131] The court determined that the lead agency abused its discretion, reasoning that the lead agency failed to consider, in good faith, comments from the public showing that it was feasible to analyze health risk from TAC exposure:[132]

> The Port has not cited us to any reasonably conscientious effort it took either to collect additional data or to make further inquiries of environmental or regulatory agencies having expertise in the matter.…At the very least, the documents submitted by the public raised substantial questions about the project's effects on the environment and the unknown health risks to the

printed on recycled paper

area's residents...the Port has not offered any justification why more definitive information could not have been provided.

11-21 Cont.

Here, the City failed to analyze a critical dispersion factor – building downwash – which affects the rate and severity of exposure to TACs, without explaining why. Dr. Clark's comments show that an AERMOD model can be run to account for building downwash. The City's failure to include this emission factor in its health risk analysis represents a failure to accurately to analyze and disclose the ground level concentration of DPM emissions generated by the Project. The MND must be withdrawn and EIR circulated to adequately analyze and mitigate Project health risk impacts.

The City must circulate an EIR which adequately analyzes all of the Project's potentially significant impacts, and require all feasible mitigation to reduce the Project's significant environmental and public health impacts to less than significant levels. Feasible mitigation includes, but is not limited to, the following:

1. Until construction of the Project is completed, Applicant shall require that all diesel off-road construction equipment must meet USEPA Tier 4 Final off-road emissions standards for equipment rated at 50 horsepower or greater wherever and whenever reasonably available. In the event that Tier 4 construction equipment is not available, the Applicant may utilize Tier 3 construction equipment outfitted with Best Available Control Technology ("BACT") devices, including but not limited to a CARB certified Level 3 Diesel Particulate Filters ("DPF").
2. All heavy-duty trucks entering the Project site shall be model year 2017 or later to the extent feasible, and in any event all heavy duty trucks entering the Project site shall be no earlier than model year 2014.
3. Provide EV capable infrastructure for a minimum of five medium-duty and/or heavy-duty trucks to accommodate future installation of medium-duty and/or heavy-duty EV charging stations.
4. Require that all outdoor cargo handling equipment (including yard trucks, yard goats, pallet jacks, and forklifts) shall be zero emission. The Project site shall include the necessary charging stations for electric cargo handling equipment.
5. Require 10-foot-high concrete screen wall encompassing the western parking lot and docking area.

These measures should be included a Mitigation Monitoring and Reporting Program in a legally adequate EIR circulated for public review and scrutiny before the Project can be approved.

printed on recycled paper

D. The MND Fails to Analyze Impacts Associated with the Kaiser Expansion

The MND makes no reference to impacts associated with the Project's proximity to the future expansion of the Kaiser Permanente Redlands Medical Offices. Kaiser Permanente Medical Offices is located approximately 358 feet north of the Project site.[133] Kaiser Permanente seeks to expand their Medical Offices facility at 1301 California Street into a full-service hospital through the Kaiser Permanente Medical Center Project ("Medical Center Project").[134] Phase I of the Medical Center Project will construct a 4-story 165,000 square foot Medical Office Building/Ambulatory Services Center and parking lots.[135] In Phase II, a 7-story 400,000 square foot hospital and a 2-story 35,000 square foot Central Utility Plant building would be constructed with accompanying parking structure and parking lots.[136]

11-22

City law requires that warehouse projects that abut neighborhoods, childcare centers, and hospitals require a ten-foot-high screen wall and extra landscaping.[137] Additionally, truck docks and entries must be oriented away from abutting sensitive receptor properties and parking lots must provide at least 35% shade cover.[138] Specifically, the Municipal Code provides that "Warehouse developments shall provide a solid decorative wall(s) of at least ten feet (10') in height when abutting any sensitive receptors. Sensitive receptors for purposes of this section shall be defined as any residence including private homes, condominiums, apartments, and living quarters, schools, preschools, daycare centers, in-home daycares, ***hospitals***, ***long-term care facilities***, retirement and nursing homes, community centers, places of worship, parks (excluding trails), and dormitories."[139]

The Project does not comply with these requirements. The Project requires an 8-foot-high concrete screen wall encompassing the western parking lot and docking area, 8-foot-high security and maintenance fencing along the western boundary.[140] This may not be sufficient to reduce Project impacts to sensitive receptors at Kaiser when it is fully constructed. The City should require the Project to include a 10-foot-high screen wall to protect sensitive receptors at the future

printed on recycled paper

Kaiser Permanente Medical Center from potentially significant noise and air pollution associated with operation of the trucks and equipment on the Project site. 11-22 Cont.

VI. THE CITY MUST PREPARE AN EIR BECAUSE THERE IS SUBSTANTIAL EVIDENCE SUPPORTING A FAIR ARGUMENT THAT THE PROJECT MAY RESULT IN SIGNIFICANT NOISE IMPACTS

As detailed above, the MND fails to include an accurate baseline against which to analyze the Project's noise impacts. Noise and vibration impacts may therefore be underestimated. Further, substantial evidence supports a fair argument that noise and vibration impacts may be significant and require mitigation in an EIR circulated for public review before the Project can lawfully be approved.

A. The MND Fails to Adequately Analyze Operational Noise Impacts

Mr. Meighan determined that the MND fails to adequately analyze the Project's operational noise emissions. Mr. Meighan concludes that "Day-to-day operational noise levels are not discussed in the MND at all. Typical sources from a warehouse project can include loading dock noise, rooftop mechanical noise, and parking lot noise, among other sources. These can combine to increase ambient noise levels and can be more sensitive than construction noise due to the more permanent nature of the duration."[141] 11-23

Section 8.06.080 of the Redlands Municipal Code provides that no entity can "operate or cause to be operated any source of sound, or allow the creation of any noise, which causes the noise level when measured inside a neighboring receiving occupied building to exceed" the standard of 60 dBA for industrial buildings.[142] For example, rooftop commercial HVAC units may reach as high as 88 dBA at a 3 feet reference level, in which case three of these units could exceed the industrial interior noise limit of 60 dBA set in section 8.06.080 at 140 feet away (the distance between the project and the nearest façade to the west).[143] Operation of the Project's HVAC system may result in potentially significant noise impacts, and must be analyzed and mitigated in an EIR.

[141] Meighan Comments, p. 3.
[142] *Id.*
[143] *Id.*

printed on recycled paper

B. Project Construction May Result in Potentially Significant Vibration Impacts

Mr. Meighan calculates that the use of a vibratory roller, operated at the western property line, would create a vibration level of 0.016 in/sec.[144] This would result in an exceedance of Municipal Code thresholds.[145] Construction may therefore result in a significant vibration impact which must be analyzed and mitigated in an EIR circulated for public review and scrutiny before the Project can be approved. 11-24

VII. THE CITY MUST PREPARE AN EIR BECAUSE THERE IS SUBSTANTIAL EVIDENCE SUPPORTING A FAIR ARGUMENT THAT THE PROJECT MAY RESULT IN SIGNIFICANT CUMULATIVE IMPACTS

The MND's conclusion that the Project would have a less than significant impact related to cumulatively considerable impacts, is not supported by substantial evidence.[146] "Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects."[147] The MND asserts without substantial evidence that the Project would not result in a cumulatively considerable environmental impact.[148] But, the MND fails to analyze any "past projects…current projects, and the effects of probable future projects" in determining the cumulative significance of the Project.[149] 11-25

CEQA requires lead agencies to conduct an analysis of "past projects, the effects of other current projects, and the effects of probable future projects."[150] The MND fails to include any list of past, present, or future projects which may result in cumulatively considerable air quality, public health, and greenhouse gas emissions.

The Project site is surrounded by heavy industrial uses on all sides. Dr. Clark concludes that the MND fails to adequately analyze the cumulative impacts of the Project because the MND fails to identify all nearby projects, fails to compile

printed on recycled paper

cumulative emissions, and fails to estimate cumulative health impacts to on-site and off-site workers.[151]

11-25 Cont.

Dr. Clark calculated that the Project Site is located in the vicinity (3 kilometers of the Project Site) of 81 existing warehouse projects with another 3 projects approved.[152] The 81 existing projects represent 27,000,0000 square feet of floor space and account for 18,000 daily truck trips.[153] Collectively, these projects release 24.9 pounds of diesel particulate matter and 2,804 pounds of oxides of nitrogen (NOx – a precursor to smog formation) daily.[154] The three additional projects will add another 600,000 square feet of warehouse space to the area.

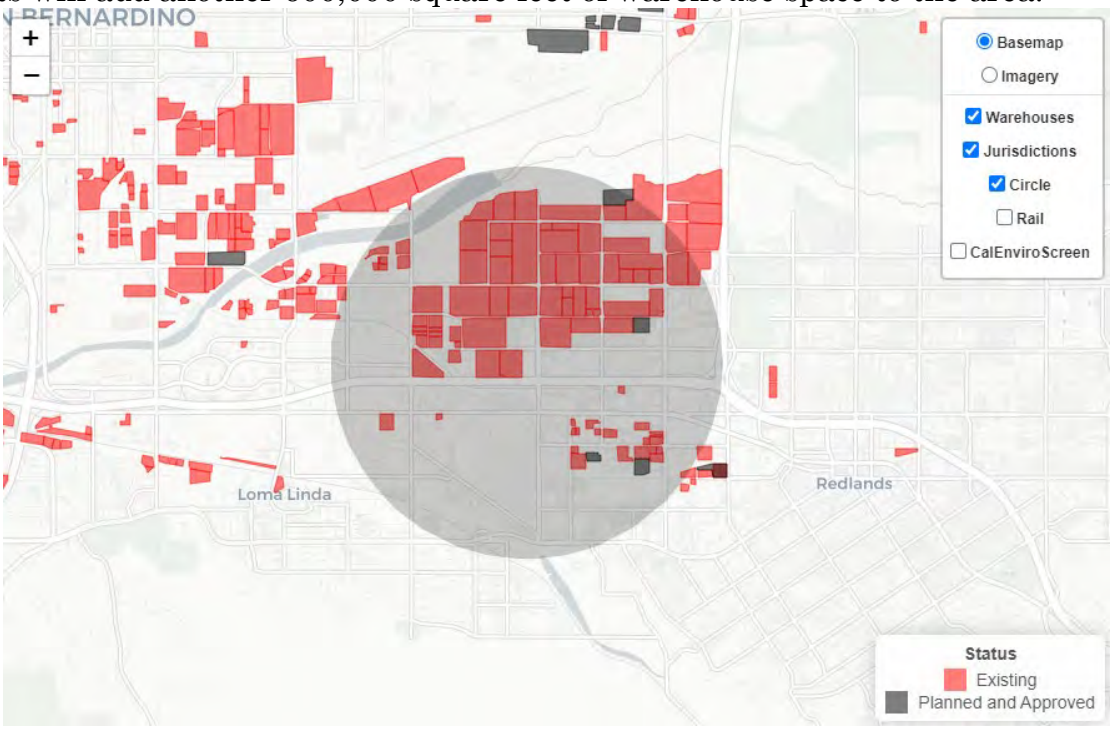

Figure 1: Existing And Planned Warehouse Projects Within 3 km Of Project Site

Dr. Clark cites to SCAQMD's MATES V study which found that the risk from air contaminants in the area surround the Project site is approximately 401 in 1,000,000 (well above the U.S. EPA's risk management range of 1 to 100 in 1,000,000).[155] The Project will contribute additional emissions, exacerbating this

printed on recycled paper

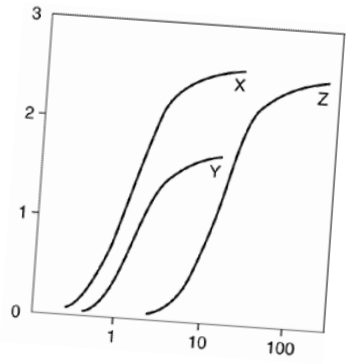
risk and resulting in a potentially significant cumulative air quality and public health impact that the MND fails to disclose. 11-25 Cont.

Substantial evidence therefore supports a fair argument that the Project may result in potentially significant cumulative impacts. The City must prepare an EIR which adequately analyzes and mitigates the Project's potentially significant cumulative impacts before the Project can lawfully be approved.

VIII. CONCLUSION

The City should withdraw the MND and direct staff to prepare an EIR. As described in detail above and in attached expert reports, substantial evidence supports of a fair argument that the Project poses a significant and unmitigated risk to the public due to unmitigated construction and operational air quality, health risk, greenhouse gas emissions, noise, land use and cumulative impacts. 11-26

Sincerely,



Kelilah D. Federman

Adams Broadwell Joseph & Cardozo
601 Gateway Boulevard, Suite 1000
South San Francisco, CA 94080

Attn: Ms. Kelilah D. Federman

Subject: Comment Letter on Initial Study For 1101 California Street Warehouse, City of Redlands, California

Dear Ms. Federman:

At the request of Adams Broadwell Joseph & Cardozo (ABJC), Clark and Associates (Clark) has reviewed materials related to the above referenced project.

Clark's review of the materials in no way constitutes a validation of the conclusions or materials contained within the IS/MND. If we do not comment on a specific item, this does not constitute acceptance of the item.

Project Description:

The Proposed Project consists of a new 357,610 square-foot warehouse development located directly north of Interstate 10 (I-10) and the California Street westbound on-ramp. Access to the Project Site would be available via two proposed driveways to the north on Lugonia Avenue and two driveways to the east on California Street. The Proposed Project would include 47 dock doors, 396 parking spaces, driveway improvements, updated security fencing, and improved landscaped areas. Demolition activities would include removal of remaining concrete paving and k-rails, the remains of former

amusement park attractions, and landscaping left from prior development.

According to the IS/MND, the building would be a concrete tilt-up building, consisting of a concrete slab-on grade floor and a shallow foundation system. The maximum building height would be 49 feet from grade. The MND states that it is anticipated that future items to be stored for distribution would include non-hazardous, non-flammable products on high-pile storage pallet racking and shelving, but does not include binding conditions to this effect.

The Project Site includes two parcels, APNs 0292-033-11 and -13, encompassing approximately 16 acres. The site was formerly developed as the Splash Kingdom amusement park,

Figure 1: Proposed Site Location

which was demolished in 2021, and currently features the remains of the former water park's abandoned attractions and structures.

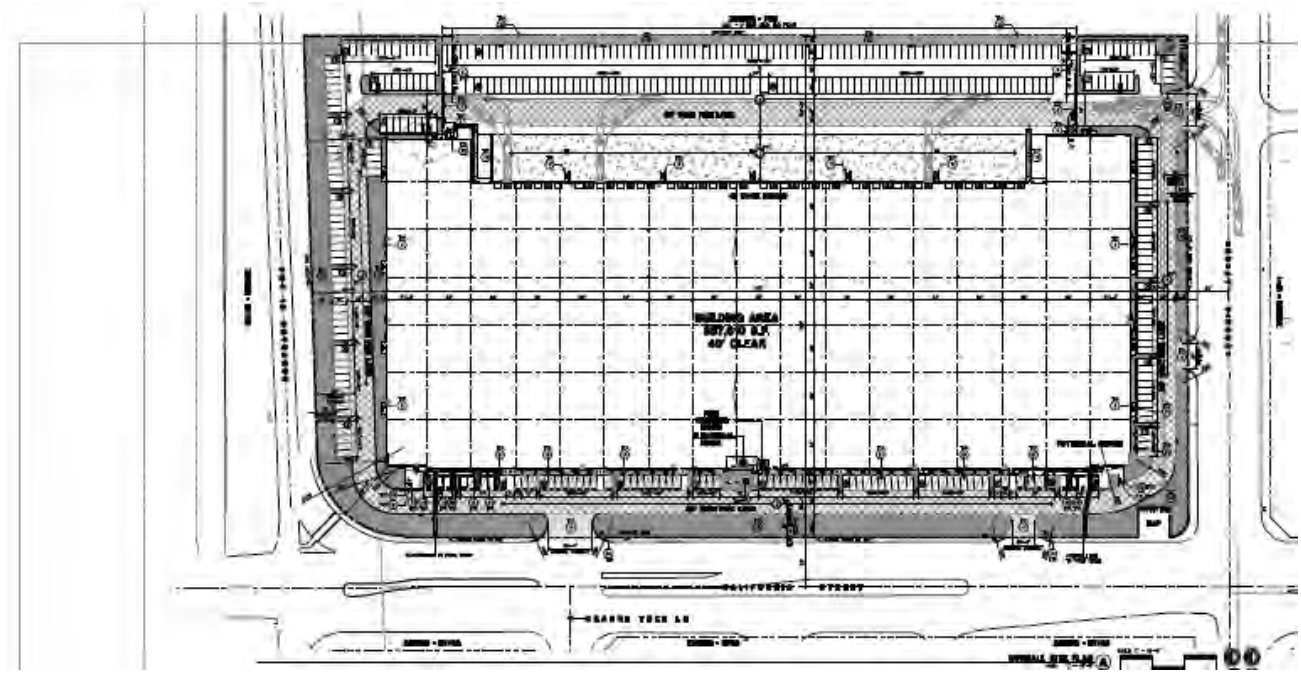

Figure 2: Project Site Plan

The IS/MND concludes that no mitigation is required to prevent impacts from the project on air quality in the area. This conclusion is in conflict with the facts provided within the IS/MND.

Specific Comments:

1. The Air Quality Study and the Greenhouse Gas Analysis Incorrectly Assume An Existing Source Of Emissions From The Project Site. The Amusement Park Onsite Was Abandoned In 2021.

Both the Air Quality and Greenhouse Gases Analyses of the Project assume that an existing source of emissions is currently onsite. According to the IS/MND, the site was formerly developed as the Splash Kingdom amusement park, which was closed in 2018, and partially demolished in 2021, and currently features the remains of the former water park's abandoned attractions and structures.

No sources of emissions are currently operational at the Project Site.

Table 3
Summer Operational Emissions Summary
(Pounds Max Per Day)

Source	VOC	NO_x	CO	SO_x	PM_{10}	$PM_{2.5}$

Figure 3: AQ Analysis Of Project Emissions

Table 6
Project GHG Emissions

Emission Source	Emissions (MT/yr)				
	CO_2	CH_4	N_2O	Refrigerants	Total CO_2e
Annual construction-related emissions amortized over 30 years	27.47	0.0	0.0	0.02	28.10
Mobile Source	3,072.72	0.20	0.34	4.31	3,183.19
Area Source	7.25	0.00	0.00	0.00	7.28
Water Usage	116.44	2.70	0.06	0.00	203.26
Waste	31.91	3.19	0.00	0.00	111.64
Refrigerants	0.00	0.00	0.00	1.11	1.11
Total CO2e (All Sources)	**3,534.58**				
Existing Emissions	2,228.88				
Net Emissions (Proposed – Existing)	**1,305.70**				

Figure 4: GHG Analysis of Project Emissions

The MND's omission of the "existing" emissions from the shuttered water park in the AQ and GHG analyses presents a skewed view of the Project emissions which underestimates actual emissions. The City's analysis is therefore incomplete, and the MND's conclusion that the Project's air quality impacts would be less than significant is unsupported. These errors must be corrected in an environmental impact report for the Project.

2. The Cumulative Analysis Presented In The IS/MND Fails To Account For A Large Number Of Existing Warehouses Within The Immediate Vicinity Of The Project And The Cumulative Degradation of Regional And Local Air Quality.

The Project Site is located in the vicinity (3 kilometers of the Project Site) of 81 existing warehouse projects with another 3 projects approved. The 81 existing projects represent 27,000,0000 square feet of floor space and account for 18,000 daily truck trips. They release 24.9 pounds of diesel particulate matter[1] and 2,804 pounds of oxides of nitrogen (NOx – a precursor to smog formation) daily. The three additional projects will add another 600,000 square feet of warehouse space to the area. The proposed Project will contribute additional air pollutants during construction and operation.

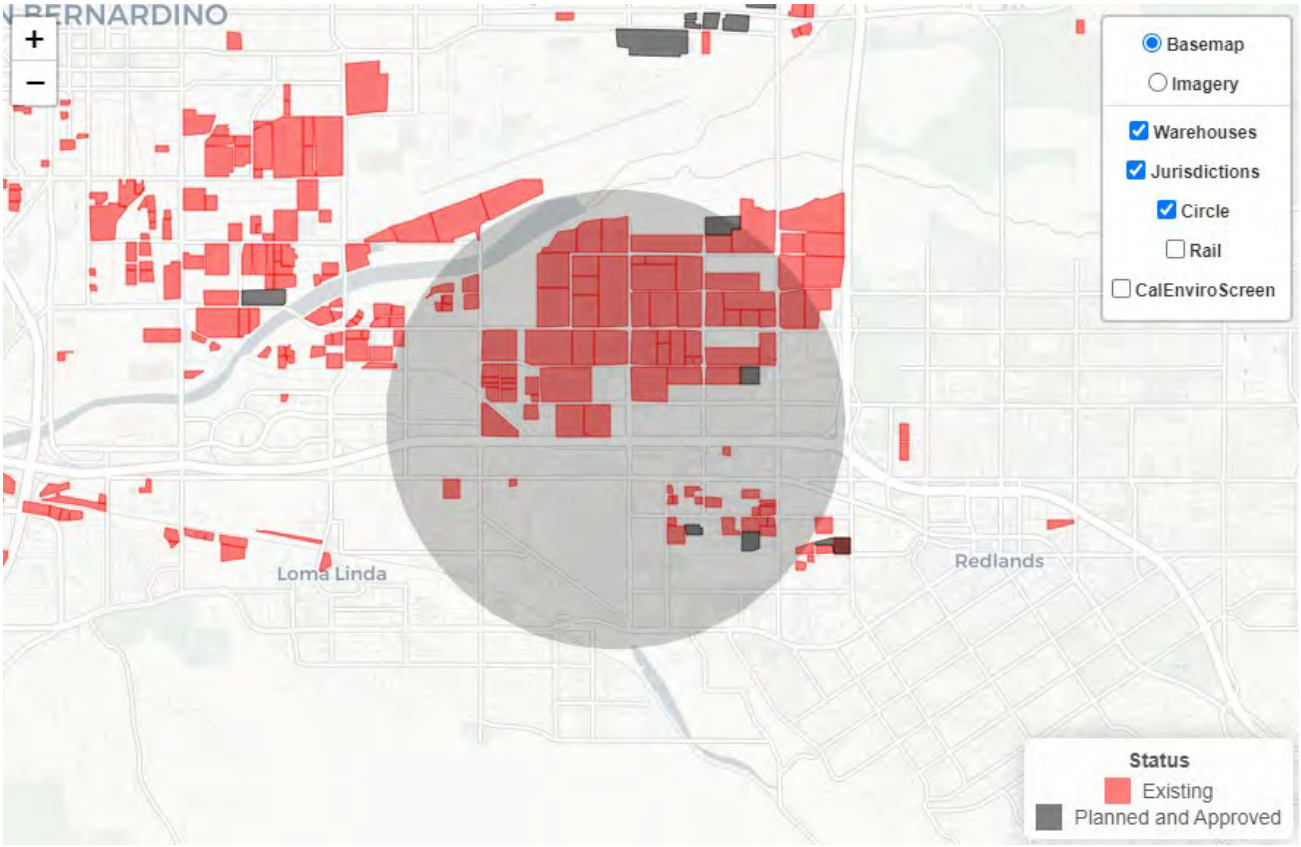

Figure 5: Existing And Planned Warehouse Projects Within 3 km Of Project Site

According the SCAQMD's MATES V study, the existing health risk from air contaminants in the area surrounding the Project site is approximately 401 in 1,000,000 (well above the U.S. EPA's risk management range of 1 to 100 in 1,000,000). The largest fraction of that risk is from exposure to diesel particulate matter (DPM). DPM emitted during Project construction and operation will exacerbate this risk.

[1] Warehouse Cumulative Impact Tool for Community (CITY). 2024. https://radicalresearch.shinyapps.io/WarehouseCITY/ accessed 4/25/2024.

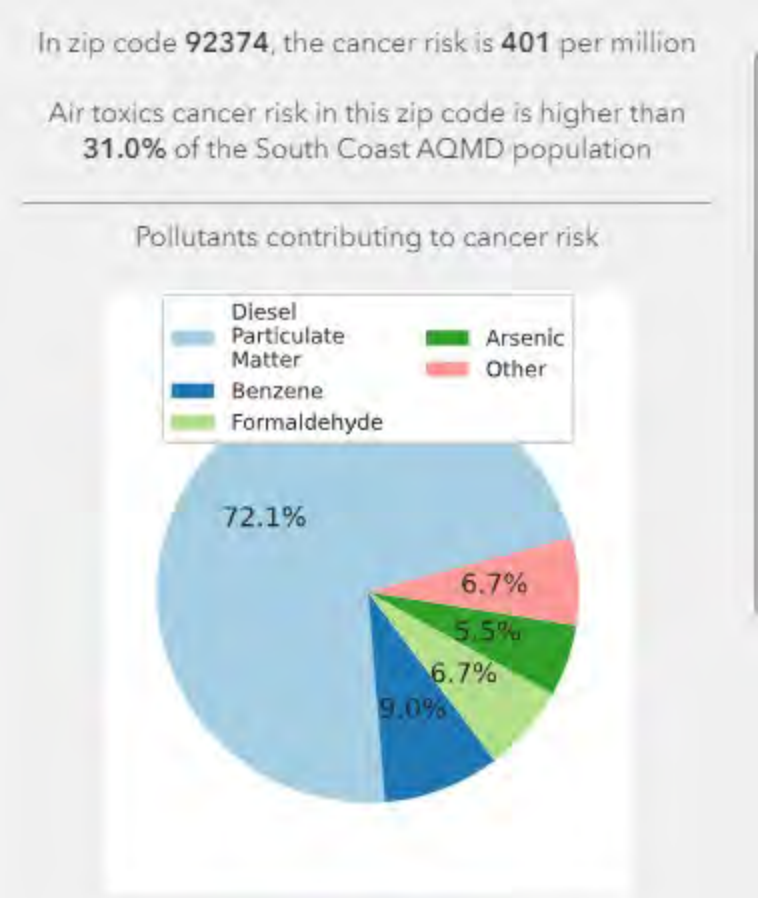

Figure 6: Risk From Air Toxins In Redlands (MATES V Study)

The Cumulative Analysis of GHG and AQ emissions for the Project states, without support, that the Proposed Project would not cause adverse impacts on humans, either directly or indirectly. It is clear from the analysis above that the Project will add to the already heavily impacted regional problem of NOx and toxic air contaminants (TACs). The Project should be evaluated in an EIR to assure the public that the cumulative air quality and health impacts from the Project have been fully evaluated and mitigated.

3. The Air Quality Analysis And Greenhouse Gas Analysis Of Operational Emissions Is Incomplete And Fails To Include Emissions From The Fire Pump System and Generators That Will Be Installed Onsite.

According to the Air Quality Analysis prepared for the Project, operational emissions were calculated using the CalEEMOD (Version 2022.1) software. Included in the analysis are area source

emissions and mobile source emissions. Not included in the analysis are emissions from the fire flow pump system or the back-up generator that will need to be installed. Under the City of Redlands Building and Construction Code (15.20.540) Section 914.12.5, distribution warehouses greater than 50,000 square feet, are required to have a standby power generator and fire pump system. In addition, a fuel supply sufficient for not less than two hours of operation shall be required on the premises. All electrically connected systems shall be transferred within 60 seconds after losing primary power. Both sources would add to the total amount of TACs, specifically DPM, that will be released from the site.

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

Equipment Type	Fuel Type	Number per Day	Hours per Day	Hours per Year	Horsepower	Load

5.16.2. Process Boilers

Equipment Type	Fuel Type	Number	Boiler Rating (MMBtu/hr)	Daily Heat Input (MMBtu/day)	Annual He

Figure 7: CalEEMod Assumptions

The analyses are therefore incomplete and must be corrected in an environmental impact (EIR) report for the Project.

4. The AQ Study States That The Project Will Operate 24 Hours Per Day, 7 Days A Week And That 90% Of The Cargo Handling Equipment Operating Onsite Will Be Zero Emission. No Analysis or Restrictive Conditions Are Included in the MND to Support this Assumption and There is No Analysis of Emissions from the 10% Of Cargo Handling Equipment That Are Assumed Not to Be Zero-Emission.

The Air Quality Study assumes the Project will be able to operate continuously and that the greatest percentage of cargo handling equipment (e.g., forklifts, pallet jacks, yard goats) will be zero emission.[2]

The CalEEMOD analysis supplied in the AQ Study portion of the IS/MND does not include emissions from the remaining non-zero emission yard equipment. The AQ study therefore assumes, without support, that the Project would utilize exclusively zero emission equipment and is missing a

[2] See Air Quality Study, Appendix A, p. 43.

potentially significant source of criteria and toxic pollutants. This oversite must be addressed in a revised air quality study in an EIR for the Project.

5. The Health Risk Analysis Incorporates Non-Standard Daily Breathing Rates For Sensitive Receptors Analyzed In The HRA.

According to the IS/MND, a health risk assessment was prepared in accordance with SCAQMD's guidance. For purposes of this Health Risk Assessment[3], receptors include both residential and non-residential (worker, school children) land uses in the vicinity of the Project. The methodology used in the HRA is inconsistent with regulatory agency guidance, including South Coast AQMD and the Office of Environmental Health Hazard Assessment recommended guidance,[4] and is not supported by any substantial evidence in the record.

While reviewing the input values utilized in the HRA, it is clear that the analysis utilized a variety of daily breathing rates that are favorable to reducing the potential health impacts. The HRA states that "Discrete variants for daily breathing rates, exposure frequency, and exposure duration were obtained from relevant distribution profiles presented in the 2015 OEHHA Guidelines."[5] The values listed in Table 2-7 include both the 95 percent upper confidence limit (95% UCL) values (for age in eutero exposure and age 0 to 2) and the 80th percentile values for the remaining age groups (age 2 to 16 and age 16 to 30). The risk estimate for ages 2 to 30 is off by a factor of 1.3. Utilizing the correct breathing rate, the health risk impacts are significant and require mitigation.

95th Percentile	361	1090	861	745	335	290

[a] 3rd trimester **breathing rates** based on breathing rates of pregnant women using the assumption that the dose to the fetus during the 3rd trimester is the same as that to the mother.

The City's analysis is therefore incomplete and must be corrected in an environmental impact report for the Project.

6. The Air Quality Analysis Did Not Incorporate Building Downwash In The AERMOD Analysis.

A review of the Mobile Source Health Risk Assessment show that building downwash was not incorporated into the AERMOD analysis of the Project. According to the Project description, the maximum building height would be 49 feet from grade. Building downwash occurs as the wind flows over and around buildings and impacts the dispersion of pollution from nearby stacks. A plume caught in the path of this flow is drawn into the wake, temporarily trapping it in a recirculating cavity. This

[6] Office of Environmental Health Hazard Assessment, Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments, February 2015, http://oehha.ca.gov/air/hot_spots/hotspots2015.html

downwash effect leads to higher ground-level concentration of chemicals emitted from sources. The downwash effect increases as the relative difference between the release height and top of the building increases.[7] Using a lower height for the building will underestimate the potential ground level concentrations of pollutants associated with the Project operation.

For the closest receptors to the site, this difference will create an additional air quality impact that is not accounted for in the HRA. In addition to incorporating the building downwash impacts of the Project buildings, the AERMOD model should also incorporate the building downwash for receptors near the Project site. Receptors farther away will still be subject to the downwash effect given the assumed emission height release incorporated into the model. Guidance from authoritative bodies in California regarding the preparation of health risk assessments of mobile sources of diesel emissions[8] requires the inclusion of building heights and dimensions for building downwash calculations. Omission of the building downwash effect underestimates the exposure point concentrations for receptors near the building(s). This error should be addressed in an EIR for the Project.

7. The IS/MND Underestimates Average Truck Trip Lengths; the 40 Miles Used In The Air Quality Analysis Does Not Match The Actual Length(s) To The Ports of Los Angeles and Long Beach.

According to the Air Quality Analysis[9] for the IS/MND, the SCAQMD recommended truck trip length of 40 (39.9) miles was incorporated in the CalEEMod analysis. Guidance from SCAQMD does not require a 40-mile truck trip, rather as stated in the SCAQMD's Final Environmental Assessment and Adoption of Proposed Rule 2305 – Warehouse Indirect Source Rule (WAIRE), the trip length for Class 8 trucks (heavy duty multi-axle trucks) are assumed to travel 39.9 miles per trip

[7] The so-called good engineering practice height (GEP) of the source. The GEP is defined in Section 123 of the Clean Air Act as "the height necessary to ensure that emissions from a stack do not result in excessive concentrations of any air pollutant in the immediate vicinity of the source as a result of atmospheric downwash, eddies or wakes which may be created by the source itself, nearby structures or nearby terrain obstacles."

[8] SCAQMD. 2003. Health Risk Assessment Guidance For Analyzing Cancer Risks From Mobile Source Diesel Emissions. August, 2003. Page 2.

[9] Urban Crossroads. 2023. 1101 California Warehouse Air Quality Impact Analysis, City of Redlands. Dated October 12, 2023. Pg. 42

based on modeling conducted for the 2016 Regional Transportation Plan (RTP) from SCAG and the 2016 Air Quality Management Plan (AQMP).[10] SCAQMD has explained that this guidance is not intended to replace an analysis of actual truck trip distances to and from the ports.[11] The Air Quality Analysis also states that the trip length function for the warehouse and the general light industrial uses has been conservatively calculated to 30.34 miles and 29.84 miles, respectively, with an assumption of 100% primary trips for the proposed industrial land uses. [12]

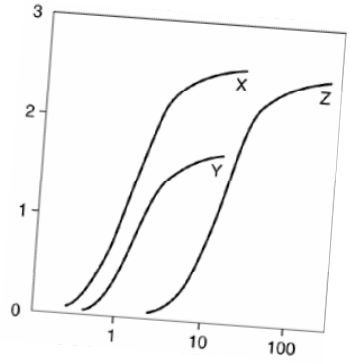
The IS/MND's misinterpretation of the averaged value from SCAG's model is another example of how the City's assumption are unsupported. The IS/MND's reliance on the 40-mile trip length does not comport with the reality of where warehoused materials will ship from in the region. The 40-mile distance is insufficient to allow vehicles to travel to the major ports in the Southern California region – Los Angeles and Long Beach. It is also inconsistent with average truck trip lengths assumed in other County CEQA documents for similar warehouse projects. A review of the path length from the Project Site to the Port of Long Beach (closest port to Project Site) shows that the true trip length is approximately 80 miles (approximately 200% longer than the assumed 40-mile trip length).

This error must be corrected in an EIR that accurately calculates emissions using fact-based, reasonably foreseeable truck trip lengths which include actual distances to and from the ports. As SCAQMD has explained, "Tailoring these parameters and assumptions to be based on project-specific data will ensure a more accurate assessment of emissions, accounting for the unique circumstances and logistical realities of the Proposed Project."[13]

Conclusion

[10] SCAQMD. 2021. BOARD MEETING DATE: MAY 7, 2021 AGENDA NO. 27 pg 815. http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2021/2021-May7-027.pdf

[11] See 11/22/2023 SCAQMD letter to City of Fontana re: Draft Subsequent Environmental Impact Report for the Hemlock Warehouse Development Project (Proposed Project) (SCH No.: 2009091089), Hemlock FSEIR pp. 2-6 to 2-10, available at https://www.fontanaca.gov/DocumentCenter/View/43908/Hemlock-Final-SEIR-Feb-2024.



[12] ibid

[13] *Id.*

The facts identified and referenced in this comment letter lead me to reasonably conclude that the Project could result in significant impacts if allowed to proceed. An EIR should be prepared to address these substantial concerns.

Sincerely,

Clark & Associates

James J. J. Clark, Ph.D.

Principal Toxicologist

Toxicology/Exposure Assessment Modeling

Risk Assessment/Analysis/Dispersion Modeling

Education:

Ph.D., Environmental Health Science, University of California, 1995

M.S., Environmental Health Science, University of California, 1993

B.S., Biophysical and Biochemical Sciences, University of Houston, 1987

Professional Experience:

Dr. Clark is a well recognized toxicologist, air modeler, and health scientist. He has 20 years of experience in researching the effects of environmental contaminants on human health including environmental fate and transport modeling (SCREEN3, AEROMOD, ISCST3, Johnson-Ettinger Vapor Intrusion Modeling); exposure assessment modeling (partitioning of contaminants in the environment as well as PBPK modeling); conducting and managing human health risk assessments for regulatory compliance and risk-based clean-up levels; and toxicological and medical literature research.

Significant projects performed by Dr. Clark include the following:

LITIGATION SUPPORT

Case: James Harold Caygle, et al, v. Drummond Company, Inc. Circuit Court for the Tenth Judicial Circuit, Jefferson County, Alabama. Civil Action. CV-2009

Client: Environmental Litgation Group, Birmingham, Alabama

Dr. Clark performed an air quality assessment of emissions from a coke factory located in Tarrant, Alabama. The assessment reviewed include a comprehensive review of air quality standards, measured concentrations of pollutants from factory, an inspection of the facility and detailed assessment of the impacts on the community. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Rose Roper V. Nissan North America, et al. Superior Court of the State Of California for the County Of Los Angeles – Central Civil West. Civil Action. NC041739

Client: Rose, Klein, Marias, LLP, Long Beach, California

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to multiple chemicals, including benzene, who later developed a respiratory distress. A review of the individual's medical and occupational history was performed to prepare an exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to respiratory irritants. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: O'Neil V. Sherwin Williams, et al. United States District Court Central District of California

Client: Rose, Klein, Marias, LLP, Long Beach, California

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to petroleum distillates who later developed a bladder cancer. A review of the individual's medical and occupational history was performed to prepare a quantitative exposure assessment. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Summary judgment for defendants.

Case: Moore V., Shell Oil Company, et al. Superior Court of the State Of California for the County Of Los Angeles

Client: Rose, Klein, Marias, LLP, Long Beach, California

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to chemicals while benzene who later developed a leukogenic disease. A review of the individual's medical and occupational history was performed to prepare a quantitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to refined petroleum hydrocarbons. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Raymond Saltonstall V. Fuller O'Brien, KILZ, and Zinsser, et al. United States District Court Central District of California

Client: Rose, Klein, Marias, LLP, Long Beach, California

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to benzene who later developed a leukogenic disease. A review of the individual's medical and occupational history was performed to prepare a quantitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to refined petroleum hydrocarbons. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Richard Boyer and Elizabeth Boyer, husband and wife, V. DESCO Corporation, et al. Circuit Court of Brooke County, West Virginia. Civil Action Number 04-C-7G.

Client: Frankovitch, Anetakis, Colantonio & Simon, Morgantown, West Virginia.

Dr. Clark performed a toxicological assessment of a family exposed to chlorinated solvents released from the defendant's facility into local drinking water supplies. A review of the individual's medical and occupational history was performed to prepare a qualitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to chlorinated solvents. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: JoAnne R. Cook, V. DESCO Corporation, et al. Circuit Court of Brooke County, West Virginia. Civil Action Number 04-C-9R

Client: Frankovitch, Anetakis, Colantonio & Simon, Morgantown, West Virginia.

Dr. Clark performed a toxicological assessment of an individual exposed to chlorinated solvents released from the defendant's facility into local drinking water supplies. A review of the individual's medical and occupational history was performed to prepare a qualitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to chlorinated solvents. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Patrick Allen And Susan Allen, husband and wife, and Andrew Allen, a minor, V. DESCO Corporation, et al. Circuit Court of Brooke County, West Virginia. Civil Action Number 04-C-W

Client: Frankovitch, Anetakis, Colantonio & Simon, Morgantown, West Virginia.

Dr. Clark performed a toxicological assessment of a family exposed to chlorinated solvents released from the defendant's facility into local drinking water supplies. A review of the individual's medical and occupational history was performed to prepare a qualitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to chlorinated solvents. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Michael Fahey, Susan Fahey V. Atlantic Richfield Company, et al. United States District Court Central District of California Civil Action Number CV-06 7109 JCL.

Client: Rose, Klein, Marias, LLP, Long Beach, California

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to refined petroleum hydrocarbons who later developed a leukogenic disease. A review of the individual's medical and occupational history was performed to prepare a qualitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to refined petroleum hydrocarbons. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Constance Acevedo, et al., V. California Spray-Chemical Company, et al., Superior Court of the State Of California, County Of Santa Cruz. Case No. CV 146344

Dr. Clark performed a comprehensive exposure assessment of community members exposed to toxic metals from a former lead arsenate manufacturing facility. The former manufacturing site had undergone a DTSC mandated removal action/remediation for the presence of the toxic metals at the site. Opinions were presented regarding the elevated levels of arsenic and lead (in attic dust and soils) found throughout the community and the potential for harm to the plaintiffs in question.

Case Result: Settlement in favor of defendant.

Case: Michael Nawrocki V. The Coastal Corporation, Kurk Fuel Company, Pautler Oil Service, State of New York Supreme Court, County of Erie, Index Number I2001-11247

Client: Richard G. Berger Attorney At Law, Buffalo, New York

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to refined petroleum hydrocarbons who later developed a leukogenic disease. A review of the individual's medical and occupational history was performed to prepare a qualitative exposure assessment. The exposure assessment was evaluated against the

known outcomes in published literature to exposure to refined petroleum hydrocarbons. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Judgement in favor of defendant.

SELECTED AIR MODELING RESEARCH/PROJECTS

Client – Confidential

Dr. Clark performed a comprehensive evaluation of criteria pollutants, air toxins, and particulate matter emissions from a carbon black production facility to determine the impacts on the surrounding communities. The results of the dispersion model will be used to estimate acute and chronic exposure concentrations to multiple contaminants and will be incorporated into a comprehensive risk evaluation.

Client – Confidential

Dr. Clark performed a comprehensive evaluation of air toxins and particulate matter emissions from a railroad tie manufacturing facility to determine the impacts on the surrounding communities. The results of the dispersion model have been used to estimate acute and chronic exposure concentrations to multiple contaminants and have been incorporated into a comprehensive risk evaluation.

Client – Los Angeles Alliance for a New Economy (LAANE), Los Angeles, California

Dr. Clark is advising the LAANE on air quality issues related to current flight operations at the Los Angeles International Airport (LAX) operated by the Los Angeles World Airport (LAWA) Authority. He is working with the LAANE and LAX staff to develop a comprehensive strategy for meeting local community concerns over emissions from flight operations and to engage federal agencies on the issue of local impacts of community airports.

Client – City of Santa Monica, Santa Monica, California

Dr. Clark is advising the City of Santa Monica on air quality issues related to current flight operations at the facility. He is working with the City staff to develop a comprehensive strategy for meeting local community concerns over emissions from flight operations and to engage federal agencies on the issue of local impacts of community airports.

Client: Omnitrans, San Bernardino, California

Dr. Clark managed a public health survey of three communities near transit fueling facilities in San Bernardino and Montclair California in compliance with California Senate Bill 1927. The survey included an epidemiological survey of the effected communities, emission surveys of local businesses, dispersion modeling to determine potential emission concentrations within the communities, and a comprehensive risk assessment of each community. The results of the study were presented to the Governor as mandated by Senate Bill 1927.

Client: Confidential, San Francisco, California

Summarized cancer types associated with exposure to metals and smoking. Researched the specific types of cancers associated with exposure to metals and smoking. Provided causation analysis of the association between cancer types and exposure for use by non-public health professionals.

Client: Confidential, Minneapolis, Minnesota

Prepared human health risk assessment of workers exposed to VOCs from neighboring petroleum storage/transport facility. Reviewed the systems in place for distribution of petroleum hydrocarbons to identify chemicals of concern (COCs), prepared comprehensive toxicological summaries of COCs, and quantified potential risks from carcinogens and non-carcinogens to receptors at or adjacent to site. This evaluation was used in the support of litigation.

Client – United Kingdom Environmental Agency

Dr. Clark is part of team that performed comprehensive evaluation of soil vapor intrusion of VOCs from former landfill adjacent residences for the United Kingdom's Environment

Agency. The evaluation included collection of liquid and soil vapor samples at site, modeling of vapor migration using the Johnson Ettinger Vapor Intrusion model, and calculation of site-specific health based vapor thresholds for chlorinated solvents, aromatic hydrocarbons, and semi-volatile organic compounds. The evaluation also included a detailed evaluation of the use, chemical characteristics, fate and transport, and toxicology of chemicals of concern (COC). The results of the evaluation have been used as a briefing tool for public health professionals.

EMERGING/PERSISTENT CONTAMINANT RESEARCH/PROJECTS

Client: Ameren Services, St. Louis, Missouri

Managed the preparation of a comprehensive human health risk assessment of workers and residents at or near an NPL site in Missouri. The former operations at the Property included the servicing and repair of electrical transformers, which resulted in soils and groundwater beneath the Property and adjacent land becoming impacted with PCB and chlorinated solvent compounds. The results were submitted to U.S. EPA for evaluation and will be used in the final ROD.

Client: City of Santa Clarita, Santa Clarita, California

Dr. Clark is managing the oversight of the characterization, remediation and development activities of a former 1,000 acre munitions manufacturing facility for the City of Santa Clarita. The site is impacted with a number of contaminants including perchlorate, unexploded ordinance, and volatile organic compounds (VOCs). The site is currently under a number of regulatory consent orders, including an Immanent and Substantial Endangerment Order. Dr. Clark is assisting the impacted municipality with the development of remediation strategies, interaction with the responsible parties and stakeholders, as well as interfacing with the regulatory agency responsible for oversight of the site cleanup.

Client: Confidential, Los Angeles, California

Prepared comprehensive evaluation of perchlorate in environment. Dr. Clark evaluated the production, use, chemical characteristics, fate and transport, toxicology, and remediation of perchlorate. Perchlorates form the basis of solid rocket fuels and have recently been detected in water supplies in the United States. The results of this research

were presented to the USEPA, National GroundWater, and ultimately published in a recent book entitled *Perchlorate in the Environment.*

Client – Confidential, Los Angeles, California

Dr. Clark is performing a comprehensive review of the potential for pharmaceuticals and their by-products to impact groundwater and surface water supplies. This evaluation will include a review if available data on the history of pharmaceutical production in the United States; the chemical characteristics of various pharmaceuticals; environmental fate and transport; uptake by xenobiotics; the potential effects of pharmaceuticals on water treatment systems; and the potential threat to public health. The results of the evaluation may be used as a briefing tool for non-public health professionals.

PUBLIC HEALTH/TOXICOLOGY

Client: Brayton Purcell, Novato, California

Dr. Clark performed a toxicological assessment of residents exposed to methyl-tertiary butyl ether (MTBE) from leaking underground storage tanks (LUSTs) adjacent to the subject property. The symptomology of residents and guests of the subject property were evaluated against the known outcomes in published literature to exposure to MTBE. The study found that residents had been exposed to MTBE in their drinking water; that concentrations of MTBE detected at the site were above regulatory guidelines; and, that the symptoms and outcomes expressed by residents and guests were consistent with symptoms and outcomes documented in published literature.

Client: Confidential, San Francisco, California

Identified and analyzed fifty years of epidemiological literature on workplace exposures to heavy metals. This research resulted in a summary of the types of cancer and non-cancer diseases associated with occupational exposure to chromium as well as the mortality and morbidity rates.

Client: Confidential, San Francisco, California

Summarized major public health research in United States. Identified major public health research efforts within United States over last twenty years. Results were used as a briefing tool for non-public health professionals.

Client: Confidential, San Francisco, California

Quantified the potential multi-pathway dose received by humans from a pesticide applied indoors. Part of team that developed exposure model and evaluated exposure concentrations in a comprehensive report on the plausible range of doses received by a specific person. This evaluation was used in the support of litigation.

Client: Covanta Energy, Westwood, California

Evaluated health risk from metals in biosolids applied as soil amendment on agricultural lands. The biosolids were created at a forest waste cogeneration facility using 96% whole tree wood chips and 4 percent green waste. Mass loading calculations were used to estimate Cr(VI) concentrations in agricultural soils based on a maximum loading rate of 40 tons of biomass per acre of agricultural soil. The results of the study were used by the Regulatory agency to determine that the application of biosolids did not constitute a health risk to workers applying the biosolids or to residences near the agricultural lands.

Client – United Kingdom Environmental Agency

Oversaw a comprehensive toxicological evaluation of methyl-*tertiary* butyl ether (M*t*BE) for the United Kingdom's Environment Agency. The evaluation included available data on the production, use, chemical characteristics, fate and transport, toxicology, and remediation of M*t*BE. The results of the evaluation have been used as a briefing tool for public health professionals.

Client – Confidential, Los Angeles, California

Prepared comprehensive evaluation of *tertiary* butyl alcohol (TBA) in municipal drinking water system. TBA is the primary breakdown product of M*t*BE, and is suspected to be the primary cause of M*t*BE toxicity. This evaluation will include available information on the production, use, chemical characteristics, fate and transport in the environment, absorption, distribution, routes of detoxification, metabolites, carcinogenic potential, and remediation of TBA. The results of the evaluation were used as a briefing tool for non-public health professionals.

Client – Confidential, Los Angeles, California

Prepared comprehensive evaluation of methyl *tertiary* butyl ether (MTBE) in municipal drinking water system. MTBE is a chemical added to gasoline to increase the octane

rating and to meet Federally mandated emission criteria. The evaluation included available data on the production, use, chemical characteristics, fate and transport, toxicology, and remediation of MTBE. The results of the evaluation have been were used as a briefing tool for non-public health professionals.

Client – Ministry of Environment, Lands & Parks, British Columbia

Dr. Clark assisted in the development of water quality guidelines for methyl tertiary-butyl ether (MTBE) to protect water uses in British Columbia (BC). The water uses to be considered includes freshwater and marine life, wildlife, industrial, and agricultural (e.g., irrigation and livestock watering) water uses. Guidelines from other jurisdictions for the protection of drinking water, recreation and aesthetics were to be identified.

Client: Confidential, Los Angeles, California

Prepared physiologically based pharmacokinetic (PBPK) assessment of lead risk of receptors at middle school built over former industrial facility. This evaluation is being used to determine cleanup goals and will be basis for regulatory closure of site.

Client: Kaiser Venture Incorporated, Fontana, California

Prepared PBPK assessment of lead risk of receptors at a 1,100-acre former steel mill. This evaluation was used as the basis for granting closure of the site by lead regulatory agency.

RISK ASSESSMENTS/REMEDIAL INVESTIGATIONS

Client: Confidential, Atlanta, Georgia

Researched potential exposure and health risks to community members potentially exposed to creosote, polycyclic aromatic hydrocarbons, pentachlorophenol, and dioxin compounds used at a former wood treatment facility. Prepared a comprehensive toxicological summary of the chemicals of concern, including the chemical characteristics, absorption, distribution, and carcinogenic potential. Prepared risk characterization of the carcinogenic and non-carcinogenic chemicals based on the exposure assessment to quantify the potential risk to members of the surrounding community. This evaluation was used to help settle class-action tort.

Client: Confidential, Escondido, California

Prepared comprehensive Preliminary Endangerment Assessment (PEA) of dense non-aqueous liquid phase hydrocarbon (chlorinated solvents) contamination at a former printed circuit board manufacturing facility. This evaluation was used for litigation support and may be used as the basis for reaching closure of the site with the lead regulatory agency.

Client: Confidential, San Francisco, California

Summarized epidemiological evidence for connective tissue and autoimmune diseases for product liability litigation. Identified epidemiological research efforts on the health effects of medical prostheses. This research was used in a meta-analysis of the health effects and as a briefing tool for non-public health professionals.

Client: Confidential, Bogotá, Columbia

Prepared comprehensive evaluation of the potential health risks associated with the redevelopment of a 13.7 hectares plastic manufacturing facility in Bogotá, Colombia The risk assessment was used as the basis for the remedial goals and closure of the site.

Client: Confidential, Los Angeles, California

Prepared comprehensive human health risk assessment of students, staff, and residents potentially exposed to heavy metals (principally cadmium) and VOCs from soil and soil vapor at 12-acre former crude oilfield and municipal landfill. The site is currently used as a middle school housing approximately 3,000 children. The evaluation determined that the site was safe for the current and future uses and was used as the basis for regulatory closure of site.

Client: Confidential, Los Angeles, California

Managed remedial investigation (RI) of heavy metals and volatile organic chemicals (VOCs) for a 15-acre former manufacturing facility. The RI investigation of the site included over 800 different sampling locations and the collection of soil, soil gas, and groundwater samples. The site is currently used as a year round school housing approximately 3,000 children. The Remedial Investigation was performed in a manner

that did not interrupt school activities and met the time restrictions placed on the project by the overseeing regulatory agency. The RI Report identified the off-site source of metals that impacted groundwater beneath the site and the sources of VOCs in soil gas and groundwater. The RI included a numerical model of vapor intrusion into the buildings at the site from the vadose zone to determine exposure concentrations and an air dispersion model of VOCs from the proposed soil vapor treatment system. The Feasibility Study for the Site is currently being drafted and may be used as the basis for granting closure of the site by DTSC.

Client: Confidential, Los Angeles, California

Prepared comprehensive human health risk assessment of students, staff, and residents potentially exposed to heavy metals (principally lead), VOCs, SVOCs, and PCBs from soil, soil vapor, and groundwater at 15-acre former manufacturing facility. The site is currently used as a year round school housing approximately 3,000 children. The evaluation determined that the site was safe for the current and future uses and will be basis for regulatory closure of site.

Client: Confidential, Los Angeles, California

Prepared comprehensive evaluation of VOC vapor intrusion into classrooms of middle school that was former 15-acre industrial facility. Using the Johnson-Ettinger Vapor Intrusion model, the evaluation determined acceptable soil gas concentrations at the site that did not pose health threat to students, staff, and residents. This evaluation is being used to determine cleanup goals and will be basis for regulatory closure of site.

Client –Dominguez Energy, Carson, California

Prepared comprehensive evaluation of the potential health risks associated with the redevelopment of 6-acre portion of a 500-acre oil and natural gas production facility in Carson, California. The risk assessment was used as the basis for closure of the site.

Kaiser Ventures Incorporated, Fontana, California

Prepared health risk assessment of semi-volatile organic chemicals and metals for a fifty-year old wastewater treatment facility used at a 1,100-acre former steel mill. This evaluation was used as the basis for granting closure of the site by lead regulatory agency.

ANR Freight - Los Angeles, California

Prepared a comprehensive Preliminary Endangerment Assessment (PEA) of petroleum hydrocarbon and metal contamination of a former freight depot. This evaluation was as the basis for reaching closure of the site with lead regulatory agency.

Kaiser Ventures Incorporated, Fontana, California

Prepared comprehensive health risk assessment of semi-volatile organic chemicals and metals for 23-acre parcel of a 1,100-acre former steel mill. The health risk assessment was used to determine clean up goals and as the basis for granting closure of the site by lead regulatory agency. Air dispersion modeling using ISCST3 was performed to determine downwind exposure point concentrations at sensitive receptors within a 1 kilometer radius of the site. The results of the health risk assessment were presented at a public meeting sponsored by the Department of Toxic Substances Control (DTSC) in the community potentially affected by the site.

Unocal Corporation - Los Angeles, California

Prepared comprehensive assessment of petroleum hydrocarbons and metals for a former petroleum service station located next to sensitive population center (elementary school). The assessment used a probabilistic approach to estimate risks to the community and was used as the basis for granting closure of the site by lead regulatory agency.

Client: Confidential, Los Angeles, California

Managed oversight of remedial investigation most contaminated heavy metal site in California. Lead concentrations in soil excess of 68,000,000 parts per billion (ppb) have been measured at the site. This State Superfund Site was a former hard chrome plating operation that operated for approximately 40-years.

Client: Confidential, San Francisco, California

Coordinator of regional monitoring program to determine background concentrations of metals in air. Acted as liaison with SCAQMD and CARB to perform co-location sampling and comparison of accepted regulatory method with ASTM methodology.

Client: Confidential, San Francisco, California

Analyzed historical air monitoring data for South Coast Air Basin in Southern California and potential health risks related to ambient concentrations of carcinogenic metals and volatile organic compounds. Identified and reviewed the available literature and calculated risks from toxins in South Coast Air Basin.

IT Corporation, North Carolina

Prepared comprehensive evaluation of potential exposure of workers to air-borne VOCs at hazardous waste storage facility under SUPERFUND cleanup decree. Assessment used in developing health based clean-up levels.

SUBJECT: California & Lugonia
Redlands, California
DRAFT- Comments on Noise Analysis

Dear Ms. Federman,

As requested, we have reviewed the information and noise impact analysis for the Mitigated Negative Declaration (MND) for the California & Lugonia Project in Redlands, CA. This letter contains our comments on the noise analysis in the subject documents. The approximately 30-acre project site is located at the southwest corner of California Street and Lugonia Avenue in the City of Redlands in San Bernardino County, California. The proposed project would construct a 357,610 square-foot warehouse. Currently, the project site is vacant. Existing land uses in the vicinity of the site include a warehouse directly to the west of the project, single family residences 800 feet to the south, and a medical building 400 feet to the north.

Wilson Ihrig is an acoustical consulting firm that has practiced exclusively in the field of acoustics since 1966. During our almost 58 years of operation, we have prepared hundreds of noise studies for Environmental Impact Reports and Statements. We have one of the largest technical laboratories in the acoustical consulting industry. We also utilize industry-standard acoustical programs such as Roadway Construction Noise Model (RCNM), SoundPLAN, and CadnaA. In short, we are well qualified to prepare environmental noise studies and review studies prepared by others.

Adverse Effects of Noise[1]

Although the health effects of noise are not taken as seriously in the United States as they are in other countries, they are real and, in many parts of the country, pervasive.

Noise-Induced Hearing Loss. If a person is repeatedly exposed to loud noises, he or she may experience noise-induced hearing impairment or loss. In the United States, both the Occupational Health and Safety Administration (OSHA) and the National Institute for Occupational Safety and Health (NIOSH) promote standards and regulations to protect the hearing of people exposed to high levels of industrial noise.

[1] More information on these and other adverse effects of noise may be found in *Guidelines for Community Noise*, eds B Berglund, T Lindvall, and D Schwela, World Health Organization, Geneva, Switzerland, 1999. (https://www.who.int/publications/i/item/a68672)

Speech Interference. Another common problem associated with noise is speech interference. In addition to the obvious issues that may arise from misunderstandings, speech interference also leads to problems with concentration fatigue, irritation, decreased working capacity, and automatic stress reactions. For complete speech intelligibility, the sound level of the speech should be 15 to 18 dBA higher than the background noise. Typical indoor speech levels are 45 to 50 dBA at 1 meter, so any noise above 30 dBA begins to interfere with speech intelligibility. The common reaction to higher background noise levels is to raise one's voice. If this is required persistently for long periods of time, stress reactions and irritation will likely result.

Sleep Disturbance. Noise can disturb sleep by making it more difficult to fall asleep, by waking someone after they are asleep, or by altering their sleep stage, e.g., reducing the amount of rapid eye movement (REM) sleep. Noise exposure for people who are sleeping has also been linked to increased blood pressure, increased heart rate, increase in body movements, and other physiological effects. Not surprisingly, people whose sleep is disturbed by noise often experience secondary effects such as increased fatigue, depressed mood, and decreased work performance.

Cardiovascular and Physiological Effects. Human's bodily reactions to noise are rooted in the "fight or flight" response that evolved when many noises signaled imminent danger. These include increased blood pressure, elevated heart rate, and vasoconstriction. Prolonged exposure to acute noises can result in permanent effects such as hypertension and heart disease.

Impaired Cognitive Performance. Studies have established that noise exposure impairs people's abilities to perform complex tasks (tasks that require attention to detail or analytical processes), and it makes reading, paying attention, solving problems, and memorizing more difficult. This is why there are standards for classroom background noise levels and why offices and libraries are designed to provide quiet work environments.

Document Fails to Analyze Potential Noise Impacts

Significance Criteria is Improperly Established for Daytime Construction

CEQA requires evaluation of whether a project would cause a "substantial temporary or permanent increase in ambient noise levels …" (MND p. 43). The DEIR establishes only the City's Municipal Code Section 8.06.120 (G)[2] as the threshold for significant noise exposure from the construction noise generated by the project, which exempts construction activities from noise codes on Monday through Saturday from 7 AM to 6 PM, excluding holidays. The MND states on page 44 that the project "would not result in a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance."

This document's interpretation of this statute implies that there are no thresholds of significance for daytime construction noise, and any increase in noise is insignificant as long as the construction activities are conducted only during daytime hours. Hypothetically, under the logic of this document, there is no noise level – no matter how extreme – where daytime construction noise would be considered an impact. CEQA requires the project applicants to assess if there will be a substantial increase in ambient levels.

[2] https://codelibrary.amlegal.com/codes/redlandsca/latest/redlands_ca/0-0-0-5339

Other applicable standards do exist for daytime construction noise impacts, such as in Section 7.1 of the Federal Transit Administration's (FTA) Transit Noise and Vibration Impact Assessment Manual[3]. This threshold, or a threshold from another applicable document, should be chosen to compare to modeled construction noise levels in an Environmental Impact Report (EIR) to ensure that substantial temporary increases in ambient noise levels are not caused by this project.

Baseline Noise Level Characterizations are Incomplete

CEQA requires evaluation of whether a project would cause a "substantial temporary or permanent increase in ambient noise levels." Without knowing how loud the environment is, it is impossible to determine if the new project will increase noise in the surrounding community. Baseline noise measurements are the preferred way to determine background noise sources. These measurements serve as a crucial reference point for evaluating the potential noise impacts of proposed projects or activities. Without establishing the baseline noise conditions before any new development occurs, decision-makers cannot effectively determine whether the project complies with noise regulations nor identify any potential adverse effects on the surrounding environment and communities. Given the proximity to both local streets and Interstate 10 (I-10), along with noise from nearby residences and commercial parking lots, as well as shielding from the main noise source of I-10, noise levels should be physically measured to be accurately determined. An EIR must be prepared with baseline noise measurements, to properly describe the noise environment.

Document Includes no Discussion of Operational Noise

Day-to-day operational noise levels are not discussed in the MND at all. Typical sources from a warehouse project can include loading dock noise, rooftop mechanical noise, and parking lot noise, among other sources. These can combine to increase ambient noise levels and can be more sensitive than construction noise due to the more permanent nature of the duration. Section 8.06.080 of the Redlands noise code states that no entity can "operate or cause to be operated any source of sound, or allow the creation of any noise, which causes the noise level when measured inside a neighboring receiving occupied building to exceed" the standard of 60 dBA for industrial buildings.

As an example, rooftop commercial HVAC units may reach as high as 88 dBA at a 3 feet reference level, in which case three of these units could exceed the industrial interior noise limit of 60 dBA set in section 8.06.080 at 140 feet away (the distance between the project and the nearest façade to the west). This assumes open windows in the neighboring facility, but does not include any noise due to exterior loading dock or parking lot operations. Either way, the potential for noise impacts exists, and as such should be studied more thoroughly in an EIR.

Construction Vibration Thresholds could be Exceeded

Section 8.06.020 of the Redlands City Code sets a vibration perception threshold stating that the "perception threshold shall be presumed to be a motion velocity of 0.01 inches per second over the range of one to one hundred (100) Hz." Section 8.06.090(G) prohibits "operating or permitting the operation of any device that creates a vibration which is above the vibration perception threshold of an individual at or beyond the property boundary of the source if on private property." Section

[3] https://www.transit.dot.gov/sites/fta.dot.gov/files/docs/research-innovation/118131/transit-noise-and-vibration-impact-assessment-manual-fta-report-no-0123_0.pdf

8.06.120 lists exemptions for construction activity stating the noise statute "shall not apply to noise sources associated with new construction, remodeling, rehabilitation or grading of any property."

This sets a vibration threshold in the City of a Peak Particle Velocity (PPV) of 0.01 in/sec, with exemptions for construction noise, not construction vibration. A vibratory roller, operated at the western property line would create a PPV level of 0.016 in/sec. This is using the formula for vibration attenuation from the FTA manual (Eq. 7-2) and the source level for a vibratory roller found in the same manual (Table 7-4). This would be an exceedance, and thus construction vibration should be studied in an EIR.

Conclusion

The MND has several errors and omissions. The noise analysis is lacking substance and includes no mention of ambient measurements, daytime construction thresholds, or discussion of mechanical noise. Additionally, there is a chance of a construction vibration impact. Please feel free to contact me with any questions on this information.

Very truly yours,
WILSON IHRIG

WILSON IHRIG
ACOUSTICS, NOISE & VIBRATION

JACK MEIGHAN

Associate

Jack joined Wilson Ihrig in 2021 and is an experienced acoustics engineer with expertise in projects involving rail transit systems, highways, CEQA analysis, environmental noise reduction, mechanical drawing reviews, and construction noise and vibration mitigation. He has hands-on experience with project management, including client coordination and presentations, as well as in designing, developing, and testing MATLAB code used in acoustics applications. Additionally, his expertise includes taking field measurements, developing test plans and specifying, purchasing, setting up and repairing acoustic measurement equipment. He has experience in using Traffic Noise Model (TNM), CadnaA, EASE, Visual Basic, LabView, and CAD software.

Education

- B.S. in Mechanical Engineering, University of Southern California, Los Angeles, CA

Project Experience

Metro Regional Connector, Los Angeles CA
Planned, took, and processed measurements as part of a team to determine the effectiveness of floating slab trackwork for a new subway in downtown Los Angeles that travels below the Walt Disney Concert Hall and the Colburn School of Music.

Rodeo Credit Enterprise CEQA Analysis for New Construction, Palmdale, CA
Wrote an accepted proposal and executed it for a noise study project to determine noise mitigation requirements on a new housing development. Led all aspects of the project and managed the budget during all phases of project completion. Completed 5 separate projects of this type for this developer.

Blackhall Studios, Santa Clarita, CA
Led the vibration measurement effort for a new soundstage directly adjacent to an existing freight and commuter rail line. Tested equipment, processed data, and analyzed results to determine the vibration propagation through the soil to the proposed soundstage locations, and was part of the team that developed mitigation techniques for the office spaces directly next to the rail line.

Octavia Residential Condos CEQA Study, San Francisco, CA
Calculated the STC ratings for the proposed windows to meet Title 24 requirements, modeled the acoustic performance of floor and ceiling structures, researched noise codes, helped with a mechanical design review, and wrote a report summarizing the results for a new Condominium project being developed in San Francisco.

San Diego International Airport Terminal I Replacement, CA
Conducted interior noise and vibration measurements, analyzed measurement data to help determine project criteria, modeled the existing and future terminals in CadnaA, and was part of a team that did a complete HVAC analysis of the entire terminal, as part of a CEQA analysis where a new terminal for the airport is being designed.

Five Points Apartments Noise Study, Whittier, CA
Took measurements, researched sound data and solutions, and recommended mitigation for a new apartment complex that was located next to an existing car wash, as part of a CEQA review.

USC Ellison Vibration Survey, Los Angeles, CA
Conducted vibration measurements as part of a survey to determine the effectiveness of vibration isolation platforms that are used to insulate cell growth in a cancer research facility. Determined the effectiveness and presented this information to the client. Researched and recommended a permanent monitoring system so the client could view data in real time.

TEN50 Condos 'Popping' Noise Investigation, Los Angeles, CA
Was part of a team that investigated the noise source of an unwanted popping noise in luxury condos in Downtown Los Angeles. Helped isolate the noise source location with accelerometers to determine where vibrations were occurring first and used an acoustic camera to determine where in the condo the noise was coming from.

2000 University Project, Berkely, CA
Wrote a construction noise monitoring plan based on environmental noise calculations, wrote a report summarizing the results, and attending a meeting with the client to discuss options.

Bay Area Rapid Transit (BART) On-Track, CA, San Francisco Bay Area, CA*
Day to day project manager, responsible for meetings, presentations, and coordination with the client for an ongoing noise study on the BART system. Developed MATLAB code to process measurements and determine areas where high corrugation was present, contributing to excessively high in-car noise levels. Performed noise measurements inside both the right of way and the vehicle cabin, in addition to rail corrugation measurements.

California I-605/SR-60 Interchange Improvement, Los Angeles, CA*
Developed a noise model of the area that predicted sound levels for abatement design, in addition to conducting noise measurements and analysis. Led the Team in use of the FHWA Traffic Noise Model Software for the project, involving three major highways and two busy interchanges extending over 17 miles in southern California.

Sound Transit On-Track, Seattle, WA*
Took measurements, fixed equipment, and developed software in MATLAB to process Corrugation Analysis Trolley measurements as part of an ongoing noise study on the Sound Transit Link system. Tested vibration data to determine the best measurement and processing techniques to store the data in an online database for in-car measurements.

LA Metro CRRC Railcar Testing, Los Angeles, CA*
Led the effort to plan the measurements, determine measurement locations and finalize the test plan. Formulated a method to capture speed data directly from legacy train vehicles. Executed noise and vibration specification measurements for new rail cars delivered by CRRC.

City of Los Angeles, Pershing Square Station Rehabilitation Noise Monitoring, CA*
Built noise models, wrote a construction noise plan, and assisted in on-site construction noise issues as they arose for a renovation of the Pershing Square metro station in downtown Los

** Work done prior to working for Wilson Ihrig*

Angeles. Trained construction personnel in techniques for noise reduction and how to conduct noise monitoring measurements to meet project specifications.

City of Orange Metrolink Parking Garage Construction Monitoring, CA*
Wrote an adaptive management vibration monitoring plan, set up equipment to monitor live vibration levels, and generated weekly reports as part of an effort to build a new parking garage. Designed, planned, and completed measurements to predict and mitigate pile driving construction impacts at three historic building locations adjacent to the construction site. Coordinated with the client whenever an on-site problem arose.

LA Metro Westside Subway Construction, Los Angeles, CA*
Planned, organized, and processed noise measurements for the Purple Line extension construction. Implemented both long term microphones to measure noise levels and accelerometers to measure vibration levels in existing subway tunnels. Oversaw noise monitoring at sensitive construction sites for the project and worked with the contractor to find ways to reduce construction noise levels by approximately 10dB.

Montreal Réseau Express Métropolitain, Canada*
Conducted vibration propagation measurements used to create models to predict operational vibration levels for an under-construction transit line. Managed equipment, solved problems in the field, and wrote parts of the report summarizing the findings of the acoustic study.

NHCRP Barrier*
Took on-highway measurements and wrote, designed, developed, and tested MATLAB code to identify specific spectrograms to use for analyses for a project evaluating barrier reflected highway traffic noise differences in the presence of a single absorptive or reflective noise barrier.

Siemens Railcar Testing for Sound Transit, Seattle, WA*
Measured in-car noise and vibration for new rail cars delivered by Siemens. Developed new internal techniques for measurements based on the written specifications. Contributed to the team that helped identify issues that new cars had in meeting the Sound Transit specifications for noise and vibration. Participated in developing the test plan and specified then acquired new equipment for the measurement.

Toronto/Ontario Eglinton Crosstown Light Rail, Final Design, Canada*
Assisted in vibration propagation measurements, analysis, and recommendations for mitigation for a 12-mile light-rail line both on and under Eglinton Avenue. Set up and ran equipment for at-grade measurements with an impact hammer for underground measurements with an impact load cell that was used during pre-construction borehole drilling.

June 4, 2024

Mr. Brian Foote
Mr. Kevin Beery
City of Redlands
Development Services Department
35 Cajon Street, Suite 20
Redlands, CA 92373

SUBJECT: Responses to Comment Letters Received During Public Review Period for 1101 California Street Warehouse

Dear Brian and Kevin:

This letter has been prepared per the City's request for Lilburn Corporation to provide responses to the comment letters from various individuals and organizations during the 30 day public review period for the subject project's Initial Study/MND ("Initial Study" or "MND"). The review period began March 28, 2024 and ended April 29, 2024. A total of eleven letters and emails were received and are included as Attachment 1 to this letter.

General responses provided herein are intended to provide the Planning Commission with information to proceed with adoption of a Mitigated Negative Declaration based on the Initial Study that was circulated for public review. More detailed responses to comments related to Air Quality, Greenhouse Gas Emissions, Traffic, and Noise were provided by the Applicant's consultant, Urban Crossroads and are included as Attachment 2 to this letter.

CEQA Guidelines state that an Initial Study may rely upon expert opinion supported by facts, technical studies, or other substantial evidence to document its findings. The Initial Study prepared for the subject project evaluated potentially significant effects to 20 general environmental resources areas. Six technical studies prepared specifically for the project were peer reviewed and then incorporated into the Initial Study.

Individuals Opposing the Project

A total of six commenters provided their opposition to the project, but did not comment on the CEQA Initial Study. These were:

1. Cindy and Robert Calderon, email dated April 27, 2024
2. Vivek Gupta, email dated April 29, 2024
3. Elizabeth Kim, email dated April 29, 2024
4. Robert and LuAnn Benton, email dated April 29, 2024
5. Beth and Jerry Sanders, email dated April 29, 2024
6. Margot Bordne, email dated April 29, 2024

Julia Lenhardt email dated April 29, 2024

Julia Lenhardt commented via an email dated April 29, 2024 on the finding of the Carbon Monoxide (CO) hotspot analysis stating that according to the report, the project would not generate a CO hotspot because CO is already concentrated in this region.
Response: *The CO hotspot analysis included in the Air Quality Impact Analysis prepared for the project by Urban Crossroads. The report states on page 52 that an adverse CO concentration, known as a "hot spot", would occur if an exceedance of the State one-hour standard of 20 parts per million (ppm) or the eight-hour standard of 9 ppm were to occur. Page 52 if the report states that the ambient one-hour and eight-hour CO concentrations within the Project study area are estimated to be 2.0 ppm and 1.6 ppm respectively (based on 2021 data). Therefore, the project area is well below what would be considered a CO hotspot. The report also concludes that the project would not be capable of resulting in a hotspot because of on-going improvements in ambient air quality and vehicular emissions controls, NOT because CO is already concentrated in this region.*

Kaiser Permanente Letter dated April 29, 2024

Kaiser Permanente provides comments on site design, trip generation calculations, and GHG emissions. They first commented that the project's entrance for all trucks is on Lugonia Avenue and that driveway does not align with Kaiser Permanente's driveway on Lugonia. The commenter recommends that a westbound turn lane be accommodated within the existing median with a minimum storage of 100 feet. It is stated that due to the offset in driveway alignment the turn of the westbound truck will conflict with existing eastbound left turn lane into Kaiser Permanente's site.
Response: *City staff has worked with the Applicant and has resolved the potential turn lane conflict. Urban Crossroad prepared an exhibit demonstrating that turning can be done without conflict. The project team stated they will implement a logistics plan to not allow trucks exiting the facility to make the right turn out until the inbound left turn lane is clear of vehicles.*

Kaiser Permanente second comment asks why the Traffic Study does not give credit for any existing uses whereas the GHG Report does. Quotations from the two referenced reports are provided.

Response: *The Urban Crossroads authors of the two reports indicate that it is correct that the site was not operational and there were no on-site structures and that no credit was taken for trips generated as that was the City's request for traffic. This provided for a conservative assessment for LOS Traffic (which is no longer a CEQA topic area). For GHG, pursuant to CEQA, no credit was taken for the historical baseline condition. Moreover, the Project total gross GHG emissions (3,534.58 MTCO2e/yr) does not approach much less exceed the applicable SCAQMD 10,000 MTCO2e/yr threshold. Even assuming the commenter's inaccurate baseline conditions, Project GHG emissions would not directly or indirectly have a significant impact on the environment, and impacts would be less-than-significant.*

South Coast Air Quality Management District Letter dated April 17, 2024
South Coast Air Quality Management District (SCAQMD) cites rules of the agencies' Governing Board that were adopted to reduce regional and local emissions, including diesel particulate matter, and the application of these rules to warehouse owners and operators.
Response: *Urban Crossroads, author of the Air Quality Impact Analysis used in the CEQA Initial Study, prepared a response letter (April 30, 2024) which is attached hereto.*

BLUM, COLLINS & HO Letter dated April 26, 2024
This commenting law firm submitted comments on behalf of Golden State Environmental Justice Alliance.
Response: *The Commenter subsequently withdrew the comment letter in correspondence dated May 17, 2024.*

Adams Broadwell Joseph & Cardozo Letter dated April 29, 2024 – Letter 11
This commenting law firm has submitted comments on behalf of Californians Allied for a Responsible Economy ("CARE CA") which is an incorporated association of individuals and labor organizations including the District Council of Ironworks and the Southern California Pipe Trades DC 16. Responses to the Blum Collins & Ho letter (referred to as "Letter 11") are provided below and an indexed copy of their letter follows. Responses to the SWAPE attachment were prepared by Urban Crossroads and their letter is also attached.

In general multiple comments provided by the commenter assert that the MND technical analyses improperly evaluate the Project's potential environmental impacts. City Planning disagrees with this assertion. The City considers the MND technical analyses in all respects to accurately represent the extent and magnitude of the Project impacts. Consistent with the City's CEQA environmental process, the Initial Study prepared for the Project evaluated potential impacts under 20 environmental resources areas. As part of the Initial Study analysis, supporting technical studies, each with applicable background information and modeling, were prepared specifically for this Project.

Analytic efforts provided by the commenter are acknowledged. Analysis and remarks provided by the commenter evidence a "difference of opinion" regarding how to undertake these analyses. In this regard, *CEQA Guidelines Section 15151. Standards for Adequacy of an EIR [MND]*, provides the following:

> "An EIR [MND] should be prepared with a sufficient degree of analysis to provide decision-makers with information which enables them to make a decision which intelligently takes account of environmental consequences. An evaluation of the environmental effects of a proposed project need not be exhaustive, but the sufficiency of an EIR is to be reviewed in the light of what is reasonably feasible. *Disagreement among experts does not make an EIR inadequate, but the EIR should summarize the main points of disagreement among the experts. The courts have*

> *looked not for perfection but for adequacy, completeness, and a good faith effort at full disclosure"* [emphasis added].

Despite disagreement expressed by the commenter, the MND prepared for the Project including supporting technical analyses are considered adequate, complete, and represent a good faith effort at full disclosure of the Project's potential environmental impacts. Findings and conclusions of the MND are not affected. No revisions to the MND are required or proposed. Preparation of an EIR is not required.

Letter 11 – Transmittal
This is a transmittal email indicating a comment document, with exhibits is attached and providing a Dropbox link to supporting references.

Response to Letter 11 Transmittal
The comment is noted for the record and no response is required.

Comment 11-1
This is an introductory comment stating the law firm is providing comments on behalf of Californians Allied for a Responsible Economy ("CARE CA"), and does not provide any CEQA-related comments.

Response to Comment 11-1
The comment is noted for the record and no response is required.

Comment 11-2
This comment summarizes the proposed project.

Response to Comment 11-2
This is a summary comment reiterating the Project Description and history of prior site use as provided in the Initial Study. It does not raise specific environmental topics requiring a response. The comment is noted for the record and no response is required.

Comment 11-3
Comment introduces the letters attached Exhibits A & B. and indicates that comments specific to air quality and GHG, and to noise and vitiation are provided therein by commenter's experts whose curriculum vitae are also included in the exhibits. Commenter believes sufficient evidence is provided therein to support a fair argument that Project may result in significant adverse impacts, and therefore the City must prepare an EIR.

Response to Comment 11-3
CEQA Guidelines state that an Initial Study may rely upon expert opinion supported by facts, technical studies, or other substantial evidence to document its findings. The Initial Study prepared for the subject project evaluated potentially significant effects to 20

general environmental resources areas. Six technical studies prepared specifically for the project were peer reviewed and then incorporated into the Initial Study. No significant impacts that could not be mitigated to levels of less than significant were identified; the City has made the determination that a Mitigated Negative Declaration is the appropriate CEQA document to use in approval of the project.

Comment 11-4
This comment introduces CARE CA as an association of individuals and labor organizations "that may be adversely affected by the potential public and worker health and safety hazards, and the environmental impacts of the Project". Commenter further states that CARE CA advocates for protecting the environment and communities' workforce health and they have interest in enforcing environmental laws for safe working environments. This comment does not relate directly to any specific project CEQA analysis deficiency or error.

Response to Comment 11-4
The comment is noted for the record and no response is required.

Comment 11-5
Comment presents CEQA definitions and guidelines related to preparation of EIRs and Negative Declarations, as well as what Courts have held relative to the two. This comment does not relate directly to any specific project CEQA analysis deficiency or error.

Response to Comment 11-5
The comment is noted for the record and no response is required.

Comment 11-6
Commenter further believes that the MND for the Project fails to adequately analyze potentially significant impacts and fails to present substantial evidence to conclude impacts mitigated to less than significant levels; this is introductory to subsequent more detailed comments and as presented in exhibits.

Response to Comment 11-6
Responses to detailed comments are provided below in Responses to Comments 11-8 through 11-26.

Comment 11-7
This comment provides CEQA guidelines and Court explanations regarding the need for a complete and accurate Project Description. Comment does not identify any specific project-related Initial Study/MND deficiencies or errors.

Response to Comment 11-7
The comment is noted for the record and no response is required.

Comment 11-8

This comment provides CEQA guidelines and Court explanations related to the requirements that an EIR include analysis of environmental effects related to potential future tenants, uses, or actions of a project. The subject Project Application presents that the warehouse would be developed on a speculative basis and there are unknown future tenants, but reasonably foreseeable uses. Commenter further states that absent conditions of approval limiting Project operations to low intensity warehouse uses, it is reasonably foreseeable that the Project may involve high-intensity warehouse uses (e.g. high cube warehousing and cold storage).

Response to Comment 11-8

High-intensity uses are not proposed as part of the Project Application and the City will add a permit condition prohibiting cold storage in accordance with RMC § 18.156.950.E. The MND evaluates a mix of 20% general light industrial and 80% warehousing. As such, the Project generates more trips than the High-Cube Transload, High-Cube Cold Storage, and High-Cube Fulfillment (Non-Sort) uses. Given the size and configuration of the warehouse, the prospect of a lessee opting to utilize the facility as either a high-cube fulfillment (sort) (ITE 155) or high-cube parcel hub purposes are highly improbable due to the specialized and demanding nature of these operations and the logistical challenges they entail.

Comment 11-9

The commenter states that the "MND fails to substantiate the assumption that project operation will not involve cold storage uses." The commenter then describes various issues and environmental concerns surrounding cold storage warehouse uses and references the Attorney General's guidance and recommendation for mitigation measures to be adopted limiting cold storage, or recording a covenant on the title.

Response to Comment 11-9

The Project does not propose or require cold storage warehouse uses and would be so conditioned. Findings and conclusions of the MND are not affected.

Comment 11-10

The commenter speculates that use of backup generators at the Project site could result in potentially significant impacts not addressed in the MND. The City disagrees. In other than emergency conditions, backup generators typically operate only for short-term periodic testing. Emissions from such short-term operations would not contribute substantively to air pollutant emissions.

Response to Comment 11-10

Even if operated for protracted periods as speculated by the commenter, use of backup generators at the Project site would not result in impacts not considered and addressed in the MND. As a means of comparison, maximum emissions resulting from Project construction equipment operations would not exceed any SCAQMD significance thresholds (Initial Study pp. 37 – 40, 44 – 51) and would not result in any significant impacts. Within the context of Project construction,

grading operations would involve the following heavy-duty equipment: 1 grader, 2 excavators, 2 crawler tractors, 2 scrapers, and 1 rubber-tired dozer - - all operating for 8 hours per day for an estimated 30 days. It is highly unlikely that temporary operations of backup generators at the Project site would result in air quality impacts greater than would result from the cited Project construction equipment operations. As with Project construction-source air quality impacts, any potential air quality impacts resulting from backup generator operations would be less-than-significant. The commenter restates speculative remarks regarding potential development of cold storage warehouse uses at the Project. The Project does not propose or require development of cold storage warehouse use (see Response to Comment 11-9).

Comment 11-11

Comment states MND contains conflicting descriptions of future uses of hazardous materials with no mitigation provided and that Project is designed to be capable of supporting intensive warehouse uses and transport of hazardous materials need to be analyzed in an EIR.

Response to Comment 11-11

The City confirms that the Project Description states that it is anticipated that future items to be stored for distribution would include non-hazardous, non-flammable products on high-pile storage pallet racking and shelving.

Page 35 of the Initial study/MND states that the storage of hazardous materials shall be kept in compliance with State and local regulations. Additionally, all materials required during construction would be kept in compliance with State and local regulations and would comply with Best Management Practices. Further, the California Health and Safety Code Chapter 6.95 includes provisions for Hazardous Materials Release Response Plans and Inventory. The intent of the code is to protect the public health and safety and the environment; it is necessary to establish business and area plans relating to the handling and release or threatened release of hazardous materials. In San Bernardino County, this program is referred to as the Hazardous Materials Release Response Plans and Inventory (Business Plan) program and is operated by the SBFD CUPA. The Business Plan program is intended to provide information regarding hazardous materials at facilities to emergency responders and the general public, along with coordinating the reporting of releases and spill response among businesses to local, State, and federal government authorities.

Page 36 states that the Project Site is currently zoned EV/SD. Uses allowed within this zone include manufacturing, research, warehousing/ distributing, assembly of non-hazardous products and materials, and retail related to manufacturing. Operational activities would also include standard maintenance (i.e., landscape upkeep, exterior painting and similar activities) involving the use of commercially available products (e.g., pesticides, herbicides, gas, oil, paint, etc.) the use of which would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accidental release of hazardous materials into the environment. The Proposed Project would require implementation of Best Management Practices (BMPs) and

compliance with all applicable regulations. Therefore, no significant impacts are identified or anticipated, and no mitigation measures are required.

The City disagrees with conflicting commenter's statements regarding hazardous materials transport, storage, and use. Further, compliance with local, State, and federal law provides that no significant impacts would occur and no mitigation measures are required. Compliance with existing and future laws related to hazardous materials are required for any business to remain viable and in operation. With less than significant impacts, and EIR is not required.

Comment 11-12
This comment provides CEQA guidelines regarding the establishment of a project's baseline upon which impacts are determined significant . Comment does not identify any specific project-related Initial Study/MND deficiencies or errors.

Response to Comment 11-12
The comment is noted for the record and no response is required.

Comment 11-13
The commenter states that the MND relies on an inadequate baseline against which to analyze Project's air quality and greenhouse gas impacts.

Response to Comment 11-13
The City disagrees. Legal citations provided by the commenter are noted. The project does not use a historical baseline, and even if it had, a historical GHG emissions baseline is an appropriate existing conditions setting for evaluation of the Project GHG emissions impacts. See North County Advocates v. City of Carlsbad (Plaza Camino Real, LP, et al., Real Parties in Interest) 241 Cal.App.4th 94 (holding historical level of use is proper CEQA baseline).

Comment 11-14
The commenter rephrases previous Comment 11-13 regarding GHG emissions baseline conditions.

Response to Comment 11-14
These comments are addressed at previous Response 13. As substantiated in the MND, all Project GHG emissions impacts would be less-than-significant.

Comment 11-15
The commenter rephrases previous Comments 13, 14 regarding GHG emissions baseline conditions. The commenter states that "the Air Quality Analysis in the MND relies on the same fictitious baseline to determine air quality and health risk impacts." Specifically, all the Project's baseline conditions are those existing from 2018 onward, following the closure of the Splash Kingdom amusement park. Commenter states that the City lacks substantial evidence to support

its reliance on fully operational amusement park baselines to inform its analysis of the Project's impacts.

Response to Comment 11-15

The MND analysis of criteria pollutant emissions impacts and health risk impacts does not rely "on a fictious baseline." All criteria pollutant emissions impacts and health risk impacts have been evaluated based on specific operational characteristics of this Project in the context of applicable SCAQMD thresholds.

All Project emissions modeling and related analyses conform with SCAQMD's Modeling protocols, and employ the latest version of CalEEMod (Version 2022.1.1.12). All modeling inputs are consistent with applicable SCAQMD guidance, and reflect extensive practical experience of the MND air quality expert. The MND appropriately concludes that the Project would not result in or contribute to any potentially significant air quality impacts. Please refer to MND Item III. Air Quality, and MND Appendix A, Air Quality Analysis.

All Project health risk impacts have been evaluated consistent with Health Risk Assessment Guidance for Analyzing Cancer Risk from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis. All modeling inputs are consistent with applicable SCAQMD guidance, and reflect extensive practical experience of the MND air quality expert. The MND appropriately concludes that the Project would not result in or contribute to any potentially significant health risk impacts. Please refer to MND Item III. Air Quality, and MND Appendix C, Health Risk Assessment.

The City does not concur with alternative analyses offered by the commenter. In summary, the City has conducted necessary and appropriate analyses addressing the Project's likely environmental impacts, including but not limited to potential air quality, GHG emissions, and health risk impacts. All analyses have been conducted consistent with accepted professional practices, and are considered to accurately and adequately disclose the Project's potential impacts. Via the MND, the City has made a good faith effort at full disclosure of the Project's potential environmental impacts, including but not limited to the Project's potential air quality, GHG emissions, and health risk impacts. On this basis, the City has concluded that the Project would not result in any significant air quality impacts, GHG emissions impacts, or health risk impacts. Findings and conclusions of the MND are not affected.

Comment 11-16

Commenter states that the MND fails to include any measurements of existing ambient noise conditions on the Project site against which to measure the Project's potentially significant noise and vibration impacts. The MND defines the ambient noise level, but does not calculate it. The MND's failure to analyze the existing environmental setting with respect to noise results in an inadequate analysis of the Project's potential increase in noise above the ambient noise levels in the vicinity of the Project site.

Response to Comment 11-16

The commenter asserts that the Project could result in significant noise impacts. As discussed in the MND, construction-source noise impacts are considered less-than-significant based on compliance with date/time constraints outlined in the City's Noise Control Ordinance. See MND at p. 44. Additionally, the Project would incorporate Construction Noise Best Management Practices acting to further control and reduce Project construction-source noise. See MND at pp. 44, 45. The MND properly concludes that Project construction-source noise impacts would be less-than-significant and would not contribute substantially to area noise conditions.

Additionally, the Project would not generate traffic that would substantially increase ambient noise levels along Study Area roadways. In this regard, assuming that the speed and vehicle mix do not change, a doubling of traffic volumes would be required to create a discernible (3 dBA) increase in vehicular-source noise levels. The Project would contribute less than 2 percent to average daily traffic volumes in the Study Area (MND Appendix B, Traffic Analysis pp. 40, 42). Project traffic would therefore not contribute substantially to area noise conditions.

With regard to Project operational/area-source noise impacts, the current noise environment at the Project site is dominated by vehicular-source noise emanating from the adjacent I-10 freeway. The City of Redlands General Plan (General Plan Figure 7-8 Existing Noise Contours, Figure 7-9 Future Noise Contours Projected to 2035) indicates the Project site lies within the 70 CNEL noise contour paralleling the freeway. Noise analyses conducted for developments similar to the Project, including industrial projects of greater size adjacent to the project site, indicate that at 50 feet, received noise levels from operational activities could not exceed 66 dBA. Noise levels received at greater distances would be further reduced due to source-receptor noise attenuation factors (typically 1.5 dBA attenuation for each doubling of distance). Any noise generated by the Project operations as received at any land use greater than 50 feet from the Project boundary would not exceed 66 dBA, and would be imperceptible in the context of the 70 CNEL noise contour encompassing the Project site and properties adjacent to the freeway.

Comment 11-17

The commenter cites various CEQA requirements addressing impact significance, environmental analytic protocols, etc.

Response to Comment 11-17

Commenter remarks are noted. The commenter raises no issues regarding the Project's MND. The City is aware of and has complied with all applicable CEQA requirements and protocols. No further response is required.

Comment 11-18

Commenter states that the MND includes an inaccurate calculation of the Project's air quality impacts by underestimating the vehicle miles traveled of the trucks ingressing and egressing the Project site.

Response to Comment 11-18
The Air Quality Impact Analysis (AQIA) modeling and the AQIA in total reflect the City's understanding of the range and types of vehicles and vehicle trips that would result from the specific Project described in the MND. Employing this information and reflecting the MND air quality experts' experience with similar developments in similar contexts, the AQIA appropriately estimates Project trip generation and trip lengths, and models the resulting air pollutant emissions accordingly. See Initial Study, pp. 12 – 19, pp. 30 – 34, pp. 51 – 55, MND Appendix A Air Quality Impact Analysis, Appendix B Traffic Impact Analysis, Appendix F, Greenhouse Gas Analysis, Appendix I VMT Screening Analysis.

Comment 11-19
Commenter again states that the air quality impact conclusions of the MND are based on an erroneous baseline that does not reflect existing conditions. The MND's air quality impact assessment is therefore not supported by substantial evidence, and further that the MND includes no mitigation to reduce air quality impacts associated with construction and operation of the Project, even though the Project results in significant air quality and public health impacts. Comments cites their expert's (Dr. Clark) conclusion that the Project results in significant air quality impacts.

Response to Comment 11-19
The City disagrees. In the first instance the MND substantiates in detail that the Project would not result in any potentially significant air quality impacts. See Initial Study, pp. 12 – 19, and MND Appendix A Air Quality Impact Analysis. CEQA does not require mitigation of impacts that are determined to be less-than significant. The City further does not concur with alternative analyses offered by the commenter.

Comment 11-20
Commenter states that the MND fails to accurately analyze or mitigate project's construction and operational health risk based on their expert Dr. Clark who found that the Project results in a health risk impact which was not adequately analyzed or mitigated in the MND. Dr. Clark concluded that the health risk assessment relied on inappropriate breathing rates to artificially reduce the Project's potentially significant health risk impacts.

Response to Comment 11-20
In the first instance the MND substantiates in detail that the Project would not result in any potentially significant health risk impacts. See Initial Study, pp. 17 – 19, 30 – 34, and MND Appendix C Health Risk Assessment. CEQA does not require mitigation of impacts that are determined to be less-than significant. The City disagrees with the alternative analyses offered by the commenter.

Comment 11-21
The commenter states that "the MND fails to account for potentially significant health risk impacts associated with building downwash effect."

Response to Comment 11-21

For this Project, idling emissions are effectively line volume sources and have been modeled as such consistent with applicable AERMOD protocols. Per User's Guide for the AMS/EPA Regulatory Model (AERMOD), Section 3.3.9, Specifying Building Downwash Information, the building downwash algorithms do not apply to volume or area sources. The MND air quality experts have therefore concluded that truck idling emissions sources resulting from the Project would not be materially affected by downwash from the Project warehouse buildings. The Lead Agency does not concur with alternative analyses offered by the commenter. The commenter lists various measures that generally act to control or reduce air pollutant emissions. As noted previously, the Project would not result in any potentially significant air quality impacts. CEQA does not require mitigation for impacts determined to be less-than-significant.

Comment 11-22

Commenter notes that the Initial Study/MND makes no reference to the Kaiser Permanente seeking to expand their Redlands Medical Offices (located north of the Warehouse Project Site across Lugonia Avenue) into a full-service hospital. The City Municipal Code requires that warehouse project that abut uses including hospitals include a ten-foot-high screen wall and extra landscaping.

Response to Comment 11-22

According to the March 5, 2024 Project Site Plans 12% (82,104 s.f.) of the site will be landscaped and an 8-foot high metal fence will be provided at the north property boundary. These design parameters meet current Specific Plan Development Code (not the Municipal Code) as no uses currently exist adjacent to the Project Site to require more than what is provided. A project is not required to provide protection from uses that do not exist. Further, the City will adopt appropriate conditions of approval on the project post-entitlement as part of the detailed site plan review.

Comment 11-23

The commenter asserts that the MND did not adequately analyze the Project's operational-source noise impacts.

Response to Comment 11-23

See Response to Comment 11-16. With specific regard to the Redlands Municipal Code noise standard cited by the commenter, in the first instance, the land use 140 feet west of the Project site already lies within the 70 CNEL contour of the I-10 freeway. Any noise generated by the Project would be imperceptible against the background freeway noise. Further, the potential maximum received 60 dBA noise level cited by the commenter would be the exterior noise level, not the interior noise level limit governed by Municipal Code Section 8.06.080 Conventional construction typically provides a minimum 20 dBA noise attenuation from exterior to interior noise environments. As such, the received interior noise level at a building 140 feet from the Project would be 40 dBA, not 60 dBA as stated by the commenter. The received 40 dBA noise level would not exceed the Redlands Municipal Code standards.

Comment 11-24

Commenter states that their expert, Mr. Meighan calculates that the use of a vibratory roller, operated at the western property line, would create a vibration level of 0.016 in/sec. This would result in an exceedance of Municipal Code thresholds. Construction may therefore result in a significant vibration impact

Response to Comment 11-24

In the first instance the threshold cited by the commenter is not applicable to construction activities. Per Municipal Code Section 8.06,120, G. "Construction Activity: This chapter shall not apply to noise sources associated with new construction . . ." Further, the relevant threshold consideration here is whether Project activities would result in excessive vibration impacts. In this context, excessive vibration impacts would comprise vibration that could result in damage at proximate sensitive land uses or structures. Caltrans has established a maximum continuous vibration threshold of 0.3 PPV (in/sec) when considering whether construction-source vibration activities could result in damage at proximate sensitive land uses or structures. The Lead agency considers this the appropriate threshold applicable to the Project construction activities. Even assuming the received 0.016 in/sec vibration level cited by the commenter is accurate, Project construction-source vibration would not exceed the applicable 0.3 PPV in/sec threshold.

Comment 11-25

The commenter asserts that the Project would result in cumulatively significant air quality, public health, and greenhouse gas emissions impacts.

Response to Comment 11-25

The MND substantiates in all circumstances that Project air quality, health risk, and greenhouse gas emissions impacts would be less-than-significant. SCAQMD is the regulatory agency governing air quality, health risk, and greenhouse gas emissions considerations relevant to the Project. Per SCAQMD guidance, less-than-significant impacts at the Project level are not cumulatively considerable or cumulatively significant.[1] *Further, the Lead agency does not concur with alternative analyses offered by the commenter*

Comment 11-26

This comment is a concluding remark that the City should withdraw the MND and direct staff to prepare an EIR because as detailed above and in attached expert reports, substantial evidence supports of a fair argument that the Project poses a significant and unmitigated risk to the public due to unmitigated construction and operational air quality, health risk, greenhouse gas emissions, noise, land use and cumulative impacts.

[1] As a Lead Agency, South Coast AQMD "uses the same significance thresholds for project specific and cumulative impacts […]" (Appendix D, 2003 White Paper). Meaning, projects that exceed the project-specific significance threshold are considered cumulatively considerable and vice-versa. As a CEQA Commenting Agency, South Coast AQMD "recommends that other public agencies perform cumulative impact analysis relative to air quality in the same manner as does AQMD" (Appendix D, 2003 White Paper).

Response to Comment 11-26

The City as noted in above responses, does not concur there are significant and unmitigated Impacts ("risks") to the public. The MND and MND technical analyses together with the Responses provided herein comprise substantial evidence supporting the MND findings and conclusions that the Project would not result in any significant environmental impacts. The City has made the determination that a Mitigated Negative Declaration is the appropriate CEQA document to use in approval of the project.

Staff Conclusion

The Planning Commission should note that an Initial Study may rely upon expert opinion supported by facts, technical studies, or other substantial evidence to document its findings. Courts have found that disagreement among experts does not make a CEQA document inadequate.

We conclude that: 1) no new significant impacts have been identified; 2) there is no need for additional mitigation measures other than those presented in the circulated Initial Study and Mitigation Monitoring and Reporting Program; and 3) there is no need to recirculate the IS/MND. The City does not have an obligation to provide formal responses to the commenters however, this letter should be included in the Administrative Record for the project.

If you should have any questions or require additional information, please do not hesitate to give us a call.

Sincerely,

Cheryl A. Tubbs
Vice President

MEMORANDUM

URBAN CROSSROADS

DATE: April 30, 2024
TO: Kevin Beery, City of Redlands
FROM: Urban Crossroads
JOB NO: 15517-04 RTC SCAQMD

1101 CALIFORNIA WAREHOUSE RESPONSE TO SCAQMD COMMENTS

This letter has been prepared per the City's request for Urban Crossroads, Inc. to provide response to the comment letter from the South Coast Air Quality Management District (SCAQMD) dated April 17, 2024 regarding the CEQA Initial Study prepared for the 1101 California Street Warehouse Project (Project). The response provided herein is intended to provide the Planning Commission with information to proceed with adoption of a Mitigated Negative Declaration (MND) based on the Initial Study. The Initial Study has been submitted to the State Clearinghouse. The State-assigned Clearinghouse reference number is SCH No. 2024031107 and dates of the public review period for the Initial Study is March 28 through April 29, 2024.

OVERVIEW

CEQA Guidelines state that an Initial Study may rely upon expert opinion supported by facts, technical studies, or other substantial evidence to document its findings. (*CEQA Guidelines* §15603 (a) (3)) Consistent with the City's CEQA environmental process, the Initial Study prepared for the Project evaluated potential impacts under 20 environmental resources areas. Among the evaluated Initial Study environmental resources topics is the issue of potential impacts to air quality. As part of the Initial Study analysis, air quality technical studies (Air Quality Impact Analysis [AQIA], Greenhouse Gas Analysis [GHGA], and Health Risk Assessment [HRA]) – each with applicable supporting background information and modeling, were prepared specifically for the Project.

With specific regard to air quality issues addressed in the Initial Study, the AQIA, GHGA, and HRA prepared by Urban Crossroads Inc. concluded that the Project would not result in or cause any potentially significant impacts related to criteria air pollutants, greenhouse gases, or health risks related to air pollutants (Initial Study, pp. 12 – 19, 30 – 34, Appendix A *Air Quality Impact Analysis*, Appendix C *Health Risk Assessment*, Appendix F *Green House Gas Analysis*.

SCAQMD COMMENTS AND RESPONSE TO COMMENTS

In their comments, SCAQMD cites requirements established under SCAQMD Rule 2305 *Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program*. As noted in the SCQAMD comments, the Project warehouse owners

will be required to comply with Rule 2305 once the warehouse is occupied. Consistent with SCAQMD requirements, the Project warehouse owner(s) will implement incumbent Rule 2305 provisions. Though not required, the City may want to notify the Applicant of Rule 2305 requirements via the Project Conditions of Approval. SCAQMD comments here do not raise any new environmental issues or concerns. Findings and conclusions of the Initial Study are not affected. No revision to the Initial Study is required.

SCAQMD comments further that SCAQMD permitting will be required for "the use of new stationary and portable sources, including but not limited to emergency generators, fire water pumps, boilers, spray booths, etc." With regard to the need for or use of the SCQAQMD-cited "stationary and portable sources," specific locations for, and types of, these potential sources are unknown at this preliminary stage of Project development. When these specific factors become available, SCAQMD will be contacted, and all SCAQMD permitting requirements will be complied with, thereby precluding potential impacts that may result from operations of any new stationary or potable uses that could generate air pollutant emissions. Again, though not required, the City may want to notify the Applicant of SCAQMD permitting requirements via the Project Conditions of Approval.

Further, that the Project does not propose or require boilers or spray booths that would comprise substantial emissions sources. Additionally, in other than emergency conditions, emergency generators or emergency fire water pumps operate only for short-term periodic testing, and emissions from such short-term operations would not contribute substantively to air pollutant emissions. In this latter regard, as a means of comparison, maximum emissions resulting from Project construction equipment operations would not exceed any SCAQMD significance thresholds (Initial Study pp. 37 – 40, 44 – 51). Within the context of Project construction, grading operations would involve the following heavy-duty equipment: 1 grader, 2 excavators, 2 crawler tractors, 2 scrapers, and 1 rubber-tired dozer - - all operating for 8 hours per day for an estimated 30 days. It is highly unlikely that temporary and intermittent operations of a few emergency generators at the Project site would result in air quality impacts greater than would result from the cited Project construction equipment operations. As with Project construction-source air quality impacts, any potential air quality impacts resulting from emergency generator operations would be less-than-significant. Findings and conclusions of the Initial Study are not affected. No revision to the Initial Study is required.

The Planning Commission should again note that an Initial Study may rely upon expert opinion supported by facts, technical studies, or other substantial evidence to document its findings. Courts have found that disagreement among experts does not make a CEQA document inadequate. (*CEQA Guidelines* § 15151) Despite comments provided by SCAQMD, the Initial Study prepared for the Project including, but not limited to, supporting AQIA, GHGA, and HRA are considered adequate, complete, and represent a good faith effort at full disclosure of the Project's potential air quality impacts.

SUMMARY AND CONCLUSIONS

Based on the preceding and substantial evidence presented in the Initial Study and supporting technical analyses we conclude that: 1) no new significant impacts have been identified by SCAQMD; 2) there is no need for mitigation other than is presented in the circulated Initial Study

and Mitigation Monitoring and Reporting Program; and 3) there is no need to recirculate the IS/MND.

The City is not required to provide a formal response to SCAQMD. (*CEQA Guidelines* § 15074(b)) However, this letter should be included in the Administrative Record for the Project. Additionally, the City is required to provide written notification to SCAQMD regarding any public hearing for the Project. (*CEQA Guidelines* § 15073(e))

MEMORANDUM

URBAN | CROSSROADS

DATE: June 4, 2024
TO: Kevin Beery, City of Redlands
FROM: Urban Crossroads
JOB NO: 15517-04 RTC ABJ&C

1101 CALIFORNIA WAREHOUSE RESPONSE TO ABJ&C COMMENTS

MASTER RESPONSE TO COMMENTS

Multiple comments provided by the commenter assert that the MND technical analyses improperly evaluate the Project's potential environmental impacts. The Lead Agency disagrees with this assertion. The Lead Agency considers the MND technical analyses in all respects to accurately represent the extent and magnitude of the Project impacts. Consistent with the City's CEQA environmental process, the Initial Study prepared for the Project evaluated potential impacts under 20 environmental resources areas. As part of the Initial Study analysis, supporting technical studies, each with applicable background information and modeling, were prepared specifically for this Project.

Analytic efforts provided by the commenter are acknowledged. Analysis and remarks provided by the commenter evidence a "difference of opinion" regarding how to undertake these analyses. In this regard, CEQA Guidelines Section 15151. Standards for Adequacy of an EIR [MND], provides the following:

> "An EIR [MND] should be prepared with a sufficient degree of analysis to provide decision-makers with information which enables them to make a decision which intelligently takes account of environmental consequences. An evaluation of the environmental effects of a proposed project need not be exhaustive, but the sufficiency of an EIR is to be reviewed in the light of what is reasonably feasible. *Disagreement among experts does not make an EIR inadequate, but the EIR should summarize the main points of disagreement among the experts. The courts have looked not for perfection but for adequacy, completeness, and a good faith effort at full disclosure*" [emphasis added].

Despite disagreement expressed by the commenter, the MND prepared for the Project including supporting technical analyses are considered adequate, complete, and represent a good faith effort at full disclosure of the Project's potential environmental impacts.

Findings and conclusions of the MND are not affected. No revisions to the MND are required or proposed. Preparation of an EIR is not required.

Comment 11-9

B. The MND Fails to Substantiate the Assumption that Project Operation Will Not Involve Cold Storage Uses

The MND analyses assume that the Project would not result in impacts associated with cold storage uses. This assumption lacks the support of substantial evidence, as the MND does not identify a tenant or end user for the warehouse. Further, this assumption is not reflected in any enforceable conditions related to Project use. In order for the City to correctly assume that the Project would not include cold storage, which is a common warehouse use,30 the MND would need to include binding measures or conditions which limit warehouse use at the Project to prohibit cold storage. Absent such a restriction, it is reasonable to assume that future Project warehouse tenants may use the site for cold storage. The MND does not include a restriction on cold storage use, yet fails to analyze the elevated air quality, public health, and energy impacts of cold storage use at the Project site. As a result, the MND may substantially underestimate these impacts.

A cold storage warehouse generates greater environmental impacts than other types of warehouses. Cold storage generates more trips per square foot and has higher energy impacts due to the low temperatures required by the facility's transport refrigeration units ("TRUs") and on-site storage. TRUs are refrigeration systems powered by integral diesel engines. The refrigeration systems are used to control the environment of temperature-sensitive products transported in insulated trucks, trailers, shipping containers, or railcars. The California Air Resources Board ("CARB") states that TRUs emit diesel particulate matter ("DPM"), fine particulate matter ("PM2.5"), oxides of nitrogen ("NOx"), and GHGs while in transit and during stationary operation at refrigerated warehouses or distribution centers, grocery stores, seaport facilities, intermodal railyards, and other locations of operation. CARB explains that communities near facilities where TRUs operate bear a disproportionate health burden:

PM2.5 pollution contributes to more fatalities than other air pollutants and can lodge deep in the lungs or pass through the lungs to enter the blood stream and affect the heart, brain, and other organs. Adverse health effects from long-term exposure to PM2.5 pollution include increased risk of heart attacks and heart disease, impaired lung development in children, the development and exacerbation of asthma, and premature death. NOx is a precursor to ozone, which can cause irritation and damage lung tissue, worsen asthma and chronic illnesses including obstructive pulmonary disease and reduce lung function.

CARB also explains that TRUs' emissions of GHGs contribute towards climate change, and that TRUs generate noise impacts: "TRU operations produce noise that can be problematic when deliveries that often occur late evening or early morning are near residential neighborhoods, hotels, hospitals, and elder care facilities… One study conducted by LSA Associates found that a diesel-powered TRU operating at high idle produces an A-weighted decibel (dBA) noise rating of 104 dBA, while a diesel truck at idle produces a noise rating of 96 dBA."

By assuming the Project will not include cold storage, the MND may drastically underestimate the Project's impacts in each of these areas. The MND does not provide supporting evidence demonstrating that cold storage uses would be absent from the Project site for the duration of the Project's life. Due to ever-increasing population and market demands in Southern California,

it is reasonably foreseeable that the Project may attract end users, either now or in future years of the Project's life, which require cold storage. As a result, the MND's assumption is not supported by substantial evidence. Rather, it is reasonably foreseeable that some of the 357,610 SF Project site may support cold storage end uses in the future.

In the California Attorney General's ("AG") guidance for warehouse projects, the AG recommends that, unless a developer adopts mitigation measures limiting cold storage impacts, the developer should record a covenant on the title of the underlying property to ensuring that the property cannot be used to provide refrigerated warehouse space. The City should include such a title restriction for the Project unless the MND is revised to analyze and mitigate impacts associated with a more conservative and fact-based cold-storage use percentage.

Response 11-9

The commenter states that the "MND fails to substantiate the assumption that project operation will not involve cold storage uses." The commenter then describes various issues and environmental concerns surrounding cold storage warehouse uses. These narratives are noted.

To be clear, the Project does not propose or require cold storage warehouse uses. There is no requirement that the MND evaluate actions or uses that are not proposed by the Project. Commenter assumption that the Project would involve or require cold storage warehouse uses is purely speculative. There is no need for the City to impose a "no refrigerated warehouse space" or similar title restriction for the Project. Findings and conclusions of the MND are not affected. No revision to the MND is required. Preparation of an EIR is not required.

Comment 11-10

C. The Project Description Fails to Include Reasonably Foreseeable Backup Generators

The MND fails to disclose potential backup/emergency stationary generators for the Project's operations. The MND's project description does not address whether backup generators are a reasonably foreseeable component of the Project, and the MND's technical analyses assume no backup generators will be installed for operations. The MND does not disclose any conditions or mitigation measures that limit or prevent use of backup generators. The MND must disclose and analyze the potential use of backup generators because (1) they are a reasonably foreseeable use and consequence of the Project, and (2) the use of backup generators will expand the Project's environmental effects.

In East Oakland Stadium Alliance v. City of Oakland, the Court of Appeal upheld an EIR's analysis of emissions from backup generators. The EIR's analysis assumed that generators would operate for 50 hours of testing and maintenance annually, while allocating no time for actual emergency use. In discussing the lead agency's duty to analyze backup generator emissions, the Court stated that "if the annual need for emergency generator use is reasonably foreseeable, the EIR was not entitled to disregard such use merely because it would occur at unpredictable times." The Court explained that use of a generator was reasonably foreseeable because, "[a]s noted in the EIR, some parts of the Bay Area are subject to predictable, sustained power outages undertaken to reduce the risk of fire." Thus, "[t]he EIR was required to make neither a generally applicable nor a worst-case assumption; rather it was required to make a reasonable estimate of likely annual use of the generators at the project site."

Here, as in East Oakland Stadium Alliance, back-up generators are a reasonably foreseeable consequence of the Project due to increasingly common Public Safety Power Shutoff ("PSPS") events and extreme heat events. Extreme heat events ("EHE") are defined as periods where in the temperatures throughout California exceed 100 degrees Fahrenheit.40 From January 2019 through December 2019, Southern California Edison reported 158 of their circuits underwent a PSP event.

In Los Angeles County, two circuits had 4 PSPS events during that period, lasting an average of 35 to 38 hours. The total duration of the PSPS events lasted between 141 hours to 154 hours in 2019. According to the California Public Utilities Commission (CPUC) de-energization report in October 2019, there were almost 806 PSPS events that impacted almost 973,000 customers (~7.5% of households in California) of which ~854,000 of them were residential customers. The California Air Resources Board estimates that with 973,000 customers impacted by PSPS events in October 2019, approximately 125,000 back-up generators were used by customers to provide electricity during power outage. The widespread use of backup generators to adapt to PSPS and EHE events suggests that back-up generators are a reasonably foreseeable consequence of the Project.

Further demonstrating that backup generators are reasonably foreseeable is the possibility that the Project may include cold storage. A cold storage warehouse has the ability to keep temperature sensitive items in a temperature-controlled environment, which requires a constant energy supply to power refrigeration. Cold storage warehouses thus commonly utilize backup generators. Backup generators commonly rely on fuels such as natural gas or diesel, and thus can significantly impact air quality, GHG emissions, and public health through toxic DPM emissions. Since the Project may include cold storage, it is reasonably foreseeable that the Project would require on-site backup generators.

Generators can emit criteria air pollutants, greenhouse gases, and toxic air contaminants ("TACs"). Backup generators commonly rely on fuels such as natural gas or diesel, and thus can significantly impact public health through DPM emissions. Diesel back-up generators emit significant amounts of Nitrogen Oxides ("NOx"), sulfur dioxides ("SO2"), particulate matter ("PM10"), carbon dioxide ("CO2"), carbon monoxide ("CO"), and volatile organic compounds ("VOC").

Omission of a generator system results in an underestimation of the Project's air quality, greenhouse gas, and health risk impacts. In sum, omission of the Project's generator results in an underestimation of the Project's reasonably foreseeable air quality, greenhouse gas, energy, and health risk impacts. The MND must be withdrawn and an EIR prepared to resolve this project description inconsistency and correct the affected impacts analyses to accurately disclose the Project's potentially significant impacts.

Response 11-10

The commenter speculates that use of backup generators at the Project site could result in potentially significant impacts not addressed in the MND. The Lead Agency disagrees. In other than emergency conditions, backup generators typically operate only for short-term periodic testing. Emissions from such short-term operations would not contribute substantively to air pollutant emissions.

Even if operated for protracted periods as speculated by the commenter, use of backup generators at the Project site would not result in impacts not considered and addressed in the

MND. As a means of comparison, maximum emissions resulting from Project construction equipment operations would not exceed any SCAQMD significance thresholds (Initial Study pp. 37 – 40, 44 – 51) and would not result in any significant impacts. Within the context of Project construction, grading operations would involve the following heavy-duty equipment: 1 grader, 2 excavators, 2 crawler tractors, 2 scrapers, and 1 rubber-tired dozer - - all operating for 8 hours per day for an estimated 30 days. It is highly unlikely that temporary operations of backup generators at the Project site would result in air quality impacts greater than would result from the cited Project construction equipment operations. As with Project construction-source air quality impacts, any potential air quality impacts resulting from backup generator operations would be less-than-significant. The commenter restates speculative remarks regarding potential development of cold storage warehouse uses at the Project. The Project does not propose or require development of cold storage warehouse uses. These comments are addressed at previous Response 12-9.

Findings and conclusions of the MND are not affected. No revision to the MND is required. Preparation of an EIR is not required.

Comment 11-13

A. The MND Relies on an Inadequate Baseline Against Which to Analyze Project's Air Quality and Greenhouse Gas Impacts

The California Supreme Court, in Communities for a Better Environment v. South Coast Air Quality Management District ("CBE v. SCAQMD"),62 recognized that "the baseline 'normally' consists of 'the physical environmental conditions in the vicinity of the project, as they exist at the time ... environmental analysis is commenced....'" This decision considered a long line of Court of Appeal decisions that hold, in similar terms, that the impacts of a proposed project are ordinarily to be compared to the actual environmental conditions existing at the time of CEQA analysis. This line of authority includes cases where a plan or regulation allowed for greater development or more intense activity than had so far actually occurred, as well as cases where actual development or activity had, by the time CEQA analysis was begun, already exceeded that allowed under the existing regulations.

In CBE v. SCAQMD, the Supreme Court identified circumstances under which a lead agency could deviate from the "normal" baseline of conditions existing at the date the Notice of Preparation is released. ConocoPhillips had applied to modify an operating petroleum refinery in a way that would increase operation of four boilers that produced steam for refinery operations. The lead agency selected as the project's baseline for nitrogen oxide emissions the amount the boilers would emit if they operated at the maximum level allowed under ConocoPhillips's existing permits, even though ConocoPhillips had never operated them at that level. Citing that refinery operations "vary greatly with the season, crude oil supplies, market conditions, and other factors,"68 the court explained that agencies may exercise discretion to accommodate a "temporary lull or spike in operations that happens to occur at the time of environmental review." The Court held that a lead agency enjoys the discretion to decide how the existing physical conditions can most realistically be measured, supported by substantial evidence. The Court rejected the "maximum level permitted" baseline because it did not aim to reflect existing conditions.

Some subsequent cases, as well as the CEQA Guidelines, have allowed lead agencies to deviate from using the NOP date as the baseline when assessing existing facilities/operations in limited situations "where conditions change or fluctuate over time." However, in most cases, the facility/operation was still operating to some extent at the time of the NOP.

For example, in Association of Irritated Residents v. Kern County Board of Supervisors, the court reviewed the baseline set for an oil refinery that temporarily suspended refining operations at the time of the NOP. The baseline was set at operating levels of the facility in 2007, when the refinery was operating at full capacity, whereas in 2013, the date of the NOP, no refining operations were occurring. The court articulated the baseline analysis as such:

Our analysis of County's treatment of the baseline question breaks the County's approach into two factual components. The first inquiry considers the basic question of whether County has a sufficient evidentiary basis for finding existing conditions included an operating refinery. If that finding is upheld, the second inquiry addresses whether substantial evidence supports County's choice of 2007 as a *realistic measure* of the baseline physical conditions created by the refinery's operations. [emphasis in original text]

To the first inquiry, the court "conclude[d] the EIR's choice of 2007 as the measure of an existing conditions baseline for an operating refinery (1) was supported by substantial evidence." The court noted that suspension of operations was intended as temporary, and that the refinery had a "history of fluctuating operations" – the refinery frequently started and stopped refining operations.

The court noted as relevant that when the refinery suspended operations at the time of the NOP, the refinery "continued other operations and activities. Those continuing activities included managing inventory, blending and marketing fuels, and functioning as a terminal for crude oil and finished petroleum products." To the second inquiry, substantial evidence supported that the 2007 figure was a reasonable representation of the operations actually performed at the refinery because there had been only a temporary suspension of activity at the refinery, not the permanent closure of an unrelated former use, as here.

In North County Advocates v. County of Carlsbad, the court upheld the use of recent historical traffic levels as a baseline for an operating shopping mall with that had greater-than-usual vacancies. Specifically, a large department store retail space in the mall was vacant at the time of the NOP. In determining the scope of baseline operations, the court analyzed the historical occupancy of the mall. The court noted that, although the retail space in question was vacant at the time CEQA review commenced, the mall remained operational. The court observed that the department store retail space within the mall frequently fluctuated in occupancy – for instance, "the Robinsons-May space was less occupied from 2007 through 2009 (two retail users occupied part of it from August 2006 through December 2007, and two others occupied part of it from August through November in 2008 and in 2009." The court concluded, "[w]e view this fluctuating occupancy—which is 'the nature of a shopping center'—as akin to the varying oil refinery operations in Communities for a Better Environment." Therefore, the court permitted the shopping center to use a baseline that assumed the department store retail space was occupied since it was a component of the mall, which remained operational.

Response 11-13

The commenter states that the MND relies on an inadequate baseline against which to analyze Project's air quality and greenhouse gas impacts. The Lead Agency disagrees. Legal citations provided by the commenter are noted. For the specific Project considered here, the Lead Agency has determined that the historical GHG emissions baseline is the applicable and appropriate existing conditions setting for evaluation of the Project GHG emissions impacts. See *North County Advocates v. City of Carlsbad (Plaza Camino Real, LP, et al., Real Parties in Interest)* 241 Cal.App.4th 94 (holding historical level of use is proper CEQA baseline).

Moreover, the Project total gross GHG emissions (3,534.58 MTCO2e/yr) does not approach much less exceed the applicable SCAQMD 10,000 MTCO2e/yr threshold. Even assuming the commenter's inaccurate baseline conditions, Project GHG emissions would not directly or indirectly have a significant impact on the environment, and impacts would be less-than-significant. Additionally, the MND at pp. 32, 33, and Appendix F, *Greenhouse Gas Emissions* substantiate that the Project would not conflict with any applicable plan, policy, or regulation adopted for the purposes of reducing GHG emissions. Impacts in these regards would be less-than-significant. Based on the preceding, the GHG emissions baseline employed in the MND GHG analysis is appropriate. As substantiated in the MND, all Project GHG emissions impacts would be less-than-significant.

With regard to evaluation of the Project's criteria pollutant emissions, the MND analyses conform with SCAQMD's Modeling protocols, and employ the latest version of CalEEMod (Version 2022.1.1.12). All modeling inputs are consistent with applicable SCAQMD guidance, and reflect extensive practical experience of the MND air quality expert. The MND appropriately concludes that the Project would not result in or contribute to any potentially significant criteria pollutant air quality impacts. Please refer to MND Item III. *Air Quality*, and MND Appendix A, *Air Quality Analysis*.

Findings and conclusions of the MND are not affected. No revision to the MND is required. Preparation of an EIR is not required.

Comment 11-14

Here, the City incorrectly claimed a baseline credit for a wholly shuttered former use that is unrelated to the proposed Project. The site was formerly developed as the Splash Kingdom amusement park, which closed in 2018, and was demolished in 2021, and currently features the remains of the former water park's abandoned attractions and structures. Unlike the shopping mall in North County Advocates, which sought to fill a vacant space in an existing mall, or the refinery in AIR v. Kern, which had ongoing refining operations at the time of the NOP, the Project has no relationship to the former water park and is not an expansion or replacement of components of an existing facility. The facts of the Project do not allow the City to take any credit for baseline operations based on the shuttered waterpark that occupied the site before 2021.

The Notice of Intent to Adopt this MND was released on March 26, 2024. At that time, the Project site contained only the demolished Splash Kingdom's abandoned attractions and structures. The MND provides that "because the site was previously developed with an amusement park, the Air Quality Impact Analysis utilized the past emissions values as the existing condition baseline for the Proposed Project's new development emissions." This is incorrect. The City's choice to use fictitious emissions values as the existing baseline is misplaced. The "normal" baseline described

in CBE v. SCAQMD, which should reflect the physical environmental conditions in the vicinity of the project, as they exist at the time environmental analysis is commenced, is of a vacant developed lot. No sources of emissions are operational at the Project Site, or have been since the water park's closure in 2018 or demolition in 2021.

The MND fails to provide substantial evidence to justify deviation from the "normal" baseline. The MND cannot provide this evidence because operations of the water park on the Project site had completely ceased, which makes this case plainly distinguishable from Association of Irritated Residents v. Kern County Board of Supervisors, CBE v. SCAQMD,89 North County Advocates v. County of Carlsbad, and other leading cases allowing use of recent historical conditions as a baseline.

Those cases all involved operations active at the time of the NOP experiencing a temporary "lull" due to their "history of fluctuating conditions." Here, the Project involves a completely vacated facility at the date of the Notice of Intent; Splash Kingdom did not merely halt operations for a period – it completely vacated the premises. There is no evidence that Splash Kingdom expects to reoccupy the Project site, or that water parks are businesses where operations are expected to vacate and reoccupy warehouse facilities due to regularly fluctuating conditions. Therefore, the MND lacks evidence for finding existing conditions included an operating amusement park.

The CEQA Guidelines state that existing conditions may be defined "by referencing historic conditions" that are supported by substantial evidence, "where necessary to provide the most accurate picture practically possible of the project's impacts." A departure from the normal use of existing baseline conditions "can be justified by substantial evidence that an analysis based on existing conditions would tend to be misleading or without informational value. Here, the record contains no substantial evidence that analysis based on existing conditions would be misleading or without informational value. If the Project were not to proceed, the site would remain an empty lot continuing to emit no greenhouse gas emissions, air quality impacts, health risk, or traffic impacts.

Response 11-14

The commenter rephrases previous Comment 13 regarding GHG emissions baseline conditions. These comments are addressed at previous Response 13. As substantiated in the MND, all Project GHG emissions impacts would be less-than-significant.

Findings and conclusions of the MND are not affected. No revision to the MND is required. Preparation of an EIR is not required.

Comment 11-15

In fact, it is misleading to rely on a fictitious baseline. Dr. Clark determined that the reliance on an inaccurate baseline results in an underestimation of Project emissions. Specifically, the reliance on fictitious emissions associated with a historical use of a water park to reduce Net GHG Emissions from the Project results in a gross miscalculation of the Project's potentially significant greenhouse gas emissions impacts. The MND's analysis includes a calculation that Net Emissions is calculated by subtracting Existing Emissions from the Proposed Emissions from Total CO2 emissions.

The MND's conclusions based on subtracting the fictitious 2,228.88 Existing Emissions from the Total Emissions of 3,534.58, are incorrect. Total and Net Emissions remain 3,534.58. The reliance on fictitious "Existing Emissions" to reduce the Project's Net Emissions is inaccurate and results in inaccurate Greenhouse Gas Emissions impact assessment. Dr. Clark concludes, therefore, that the City's analysis is incomplete and must be revised in an EIR circulated for public review.

The Air Quality Analysis in the MND relies on the same fictitious baseline to determine air quality and health risk impacts. All the Project's baseline conditions are those existing from 2018 onward, following the closure of the Splash Kingdom amusement park.

The City lacks substantial evidence to support its reliance on fully operational amusement park baselines to inform its analysis of the Project's impacts. The MND must be withdrawn and an EIR circulated to include baseline analyses which reflect the conditions existing at the Project site at the time of the Notice of Intent, and to revise any impact analyses that utilized these erroneous baselines.

Response 11-15

The commenter rephrases previous Comments 13, 14 regarding GHG emissions baseline conditions. These comments are addressed at previous Responses 13, 14. As substantiated in the MND, all Project GHG emissions impacts would be less-than-significant.

The commenter states that "the Air Quality Analysis in the MND relies on the same fictitious baseline to determine air quality and health risk impacts." This is incorrect. The MND analysis of criteria pollutant emissions impacts and health risk impacts does not rely "on a fictious baseline." All criteria pollutant emissions impacts and health risk impacts have been evaluated based on specific operational characteristics of this Project in the context of applicable SCAQMD thresholds.

All Project emissions modeling and related analyses conform with SCAQMD's Modeling protocols, and employ the latest version of CalEEMod (Version 2022.1.1.12). All modeling inputs are consistent with applicable SCAQMD guidance, and reflect extensive practical experience of the MND air quality expert. The MND appropriately concludes that the Project would not result in or contribute to any potentially significant air quality impacts. Please refer to MND Item III. *Air Quality*, and MND Appendix A, *Air Quality Analysis*.

All Project health risk impacts have been evaluated consistent with *Health Risk Assessment Guidance for Analyzing Cancer Risk from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis*. All modeling inputs are consistent with applicable SCAQMD guidance, and reflect extensive practical experience of the MND air quality expert. The MND appropriately concludes that the Project would not result in or contribute to any potentially significant health risk impacts. Please refer to MND Item III. *Air Quality*, and MND Appendix C, *Health Risk Assessment.*

The Lead Agency does not concur with alternative analyses offered by the commenter. Please refer to the introductory Master Response and Responses provided herein substantiating accuracy and adequacy of all MND technical analyses.

In summary, the Lead Agency has conducted necessary and appropriate analyses addressing the Project's likely environmental impacts, including but not limited to potential air quality, GHG emissions, and health risk impacts. All analyses have been conducted consistent with accepted professional practices, and are considered to accurately and adequately disclose the Project's

potential impacts. Via the MND, the Lead Agency has made a good faith effort at full disclosure of the Project's potential environmental impacts, including but not limited to the Project's potential air quality, GHG emissions, and health risk impacts. On this basis, the Lead agency has concluded that the Project would not result in any significant air quality impacts, GHG emissions impacts, or health risk impacts. Findings and conclusions of the MND are not affected. No revision to the MND is required. Preparation of an EIR is not required.

Comment 11-16

B. The MND Fails to Analyze the Site's Baseline Noise Environment Against Which to Analyze Project's Noise and Vibration Impacts

Mr. Meighan, CARE CA's expert noise consultant at Wilson Ihrig concludes that the MND fails to include an accurate ambient noise analysis. The MND fails to include any measurements of existing ambient noise conditions on the Project site against which to measure the Project's potentially significant noise and vibration impacts. The MND defines the ambient noise level, but does not calculate it. The MND provides that, "Ambient Noise Level [means]: The composite of noise from all sources, near and far. In this context, the ambient noise level constitutes the normal or existing level of environmental noise at a given location." "Given the proximity to both local streets and Interstate 10 (I-10), along with noise from nearby residences and commercial parking lots, as well as shielding from the main noise source of I-10, noise levels should be physically measured to be accurately determined."

The MND's failure to analyze the existing environmental setting with respect to noise results in an inadequate analysis of the Project's potential increase in noise above the ambient noise levels in the vicinity of the Project site. The MND's conclusion that "the Proposed Project would not generate substantial permanent increase in ambient noise levels in the vicinity of the Project" is therefore not supported by substantial evidence. The MND must be withdrawn and an EIR circulated which accurately characterizes the environmental setting with respect to noise and adequately analyzes and mitigates potentially significant noise and vibration impacts before the Project can lawfully be approved.

Response 11-16

The commenter asserts that the Project could result in significant noise impacts. The Lead Agency disagrees. As discussed in the MND, construction-source noise impacts are considered less-than-significant based on compliance with date/time constraints outlined in the City's Noise Control Ordinance. See MND at p. 44. Additionally, the Project would incorporate Construction Noise Best Management Practices acting to further control and reduce Project construction-source noise. See MND at pp. 44, 45. On-road construction equipment accessing the Project site would be required to travel along designated haul routes that avoid sensitive land uses, thereby minimizing potential noise impacts at sensitive land uses. On this basis, the MND properly concludes that Project construction-source noise impacts would be less-than-significant and would not contribute substantially to area noise conditions.

Additionally, the Project would not generate traffic that would substantially increase ambient noise levels along Study Area roadways. In this regard, assuming that the speed and vehicle mix do not change, a doubling of traffic volumes would be required to create a discernible (3 dBA) increase in vehicular-source noise levels. The Project would contribute less than 2 percent to

average daily traffic volumes in the Study Area (MND Appendix B, *Traffic Analysis* pp. 40, 42). Project traffic would therefore not contribute substantially to area noise conditions.

With regard to Project operational/area-source noise impacts, the current noise environment at the Project site is dominated by vehicular-source noise emanating from the adjacent I-10 freeway. The City of Redlands General Plan (General Plan Figure 7-8 *Existing Noise Contours*, Figure 7-9 Future Noise Contours Projected to 2035) indicates the Project site lies within the 70 CNEL noise contour paralleling the freeway. Noise analyses conducted for developments similar to the Project, including industrial projects of greater size adjacent to the project site, indicate that at 50 feet, received noise levels from operational activities could not exceed 66 dBA. Noise levels received at greater distances would be further reduced due to source-receptor noise attenuation factors (typically 1.5 dBA attenuation for each doubling of distance). Any noise generated by the Project operations as received at any land use greater that 50 feet from the Project boundary would not exceed 66 dBA, and would be imperceptible in the context of the 70 CNEL noise contour encompassing the Project site and properties adjacent to the freeway. Based on the preceding, the Project would not result in significant noise impacts, or contribute substantially to area noise conditions. Project impacts in these regards would be less-than-significant.

The Lead agency does not concur with alternative analyses offered by the commenter. Please refer to the introductory Master Response and Responses provided herein substantiating accuracy and adequacy of all MND technical analyses.

Findings and conclusions of the MND are not affected. No revision to the MND is required. Preparation of an EIR is not required.

Comment 11-17

V. THE CITY MUST PREPARE AN EIR BECAUSE THERE IS SUBSTANTIAL EVIDENCE SUPPORTING A FAIR ARGUMENT THAT THE PROJECT MAY RESULT IN SIGNIFICANT AIR QUALITY IMPACTS

An EIR must fully disclose all potentially significant impacts of a project, and implement all feasible mitigation to reduce those impacts to less than significant levels. The lead agency's significance determination with regard to each impact must be supported by accurate scientific and factual data. An agency cannot conclude that an impact is less than significant unless it produces rigorous analysis and concrete substantial evidence justifying the finding.

Moreover, the failure to provide information required by CEQA is a failure to proceed in the manner required by CEQA. Challenges to an agency's failure to proceed in the manner required by CEQA, such as the failure to address a subject required to be covered in an EIR or to disclose information about a project's environmental effects or alternatives, are subject to a less deferential standard than challenges to an agency's factual conclusions. In reviewing challenges to an agency's approval of an EIR based on a lack of substantial evidence, the court will "determine de novo whether the agency has employed the correct procedures, scrupulously enforcing all legislatively mandated CEQA requirements."

Even when the substantial evidence standard is applicable to agency decisions to certify an EIR and approve a project, reviewing courts will not 'uncritically rely on every study or analysis presented by a project proponent in support of its position. A clearly inadequate or unsupported study is entitled to no judicial deference.'"

Response 11-17

The commenter cites various CEQA requirements addressing impact significance, environmental analytic protocols, etc. Commenter remarks are noted. The commenter raises no issues regarding the MND. The Lead Agency is aware of and complies with all applicable CEQA requirements and protocols. No further response is required.

Findings and conclusions of the MND are not affected. No revision to the MND is required. Preparation of an EIR is not required.

Comment 11-18

A. The MND Fails to Use Actual Truck Trip Lengths, Resulting in an Underestimation of Vehicle Emissions

The MND's conclusion that air quality impacts are less than significant is not supported by substantial evidence. To the contrary, emissions from diesel trucks will result in significant air quality impacts associated with the emissions of Toxic Air Contaminants ("TACs"). The City's own General Plan Update and Climate Action Plan EIR provide that "CARB has identified diesel engine exhaust particulate matter as the predominant TAC in California. Diesel particulate matter is emitted into the air by diesel-powered mobile vehicles, including heavy-duty diesel trucks, construction equipment, and passenger vehicles. Certain ROGs may also be designated as TACs.

The MND includes an inaccurate calculation of the Project's air quality impacts by underestimating the vehicle miles traveled of the trucks ingressing and egressing the Project site. The MND provides:

To determine emissions from trucks for the proposed industrial uses, the analysis incorporated the SCAQMD recommended truck trip length of 15.3 miles for 2-axle (LHDT1, LHDT2), 14.2 miles for 3-axle (MHDT) trucks, and 39.9 miles for 4+-axle (HHDT) trucks and weighting the average trip lengths using traffic trip percentages. The trip length function for the warehouse and the general light industrial uses has been conservatively calculated to 30.34 miles and 29.84 miles, respectively, with an assumption of 100% primary trips for the proposed industrial land uses.

According to the Air Quality Analysis for the IS/MND, the SCAQMD recommended truck trip length of 40 (39.9) miles was incorporated in the CalEEMod analysis. Guidance from SCAQMD does not require a 40-mile truck trip, rather as stated in the SCAQMD's Final Environmental Assessment and Adoption of Proposed Rule 2305 – Warehouse Indirect Source Rule (WAIRE), the trip length for Class 8 trucks (heavy duty multi-axle trucks) are assumed to travel 39.9 miles per trip based on modeling conducted for the 2016 Regional Transportation Plan (RTP) from SCAG and the 2016 Air Quality Management Plan (AQMP). SCAQMD has explained that this guidance is not intended to replace an analysis of actual truck trip distances to and from the ports.

The MND's reliance on 39.9 miles per trip average is therefore misplaced. Contrary to the MND's assertion, the 40-mile trip length is not "required" by SCAQMD. It is a default average value recommended by SCAQMD for use in CalEEMod modeling in the absence of more specific data. CalEEMod explains that default values are only intended to be used "if site-specific information is not available." And CEQA requires that significance determinations be "based to the extent possible on scientific and factual data." The MND is inconsistent with this requirement because it lacks any evidence to support the assumption that truck trips to and from the Project site would be just 40 miles long. In particular, the MND does not identify any originating locations or

destinations for the Project's warehouse products which are 40 miles (or less) from the Project site. The MND therefore lacks substantial evidence to support its reliance on 40-mile truck trips.

The actual conditions of the Project potentially result in a far higher average truck trip. CARE CA's expert Dr. Clark provided substantial evidence demonstrating that the nearest ports, which are common originating and destination locations for warehouse supply shipments, are at least 80 miles from the Project site, supporting a more reasonable conclusion that average truck trips would be 80 or more miles. As Dr. Clark explains, trucks are likely to travel to the Port of Long Beach and the Port of Los Angeles, which would result in a true truck trip of approximately 80 miles. This would result in a nearly 200% longer trip than estimated in the air quality assessment in the MND. This error results in a gross miscalculation of the Project's greenhouse gas, air quality, diesel particulate matter, and toxic air contaminant emissions associated with operation of the Project. The Project's impacts with respect to greenhouse gas emissions and air pollutant emissions will be nearly doubled, utilizing the correct trip length. The vehicle emissions and greenhouse gas impacts associated with Project operation must be recalculated based on the higher average truck trip lengths.

Moreover, depending on the type of warehouse operation, the actual trip generation rate could be magnitudes greater than those assumed by the MND depending on the eventual tenant. An increased intensity of use would further compound the Project's VMT, air quality, and GHG impacts. The City must correct the estimated distance traveled by trucks and analyze the Project's impacts based on actual distances in a revised and recirculated FSEIR[sic].

Response 11-18

The commenter asserts "[t]he MND fails to use actual truck trip lengths, resulting in an underestimation of vehicle emissions." The Lead Agency disagrees. The AQIA modeling and the AQIA in total reflect the Lead Agency's understanding of the range and types of vehicles and vehicle trips that would result from the specific Project described in the MND. Employing this information and reflecting the MND air quality experts' experience with similar developments in similar contexts, the AQIA appropriately estimates Project trip generation and trip lengths, and models the resulting air pollutant emissions accordingly. The AQIA thus provides an analysis of likely vehicular-source air quality impacts based on the best available information and what is reasonably feasible in the context of this specific Project. The MND analysis substantiates that Project VMT impacts and vehicular-source emissions impacts would be less-than-significant. See Initial Study, pp. 12 – 19, pp. 30 – 34, pp. 51 – 55, MND Appendix A *Air Quality Impact Analysis*, Appendix B *Traffic Impact Analysis*, Appendix F, *Greenhouse Gas Analysis*, Appendix I *VMT Screening Analysis*.

The Lead agency does not concur with alternative analyses offered by the commenter. Please refer to the introductory Master Response and Responses provided herein substantiating accuracy and adequacy of all MND technical analyses.

Findings and conclusions of the MND are not affected. No revision to the MND is required. Preparation of an EIR is not required.

Comment 11-19

B. The MND Fails to Accurately Analyze or Mitigate the Project's Potentially Significant Air Quality Impacts

As discussed above, the air quality impact conclusions of the MND are based on an erroneous baseline that does not reflect existing conditions. The MND's air quality impact assessment is therefore not supported by substantial evidence. The MND includes no mitigation to reduce air quality impacts associated with construction and operation of the Project, even though the Project results in significant air quality and public health impacts. Dr. Clark concludes that the Project results in significant air quality impacts from criteria and TAC pollutants associated with yard equipment used on the Project site. The MND provides, that as required by City of Redlands Ordinance No. 2955, a minimum of ninety percent (90%) of the on-site cargo handling equipment shall be zero emissions for new warehouse development project. But, Dr. Clark found that the MND fails to account for the nearly 10% of on-site cargo handling equipment that will not be zero emission. The non-zero emission on-site cargo handling equipment may result in significant criteria and toxic air pollutants, which were not analyzed or mitigated in the MND. The MND's conclusion that air quality impacts are less than significant is therefore not supported by substantial evidence. Substantial evidence in Dr. Clark's comments supports a fair argument that the Project may result in a significant air quality impact from emissions of criteria and toxic pollutants from on-site motorized operational equipment.

Response 11-19

The commenter states that the MND "[f]ails to accurately analyze or mitigate the project's potentially significant air quality impacts." The Lead Agency disagrees. In the first instance the MND substantiates in detail that the Project would not result in any potentially significant air quality impacts. See Initial Study, pp. 12 – 19, and MND Appendix A *Air Quality Impact Analysis*. CEQA does not require mitigation of impacts that are determined to be less-than significant.

The Lead agency does not concur with alternative analyses offered by the commenter. Please refer to the introductory Master Response and Responses provided herein substantiating accuracy and adequacy of all MND technical analyses.

Findings and conclusions of the MND are not affected. No revision to the MND is required. Preparation of an EIR is not required.

Comment 11-20

C. The MND Fails to Accurately Analyze or Mitigate the Project's Construction and Operational Health Risk

Furthermore, Dr. Clark found that the Project results in a health risk impact which was not adequately analyzed or mitigated in the MND. Dr. Clark concluded that the health risk assessment relied on inappropriate breathing rates to artificially reduce the Project's potentially significant health risk impacts. Dr. Clark calculated that the health risk estimate for ages 2 to 30 years is off by a factor of 1.3. Utilizing the correct breathing rate, the Project's health risk impacts are significant and require mitigation in an EIR before the Project can be approved.

Response 11-20

The commenter states that the MND "fails to accurately analyze or mitigate the project's construction and operational health risk." The Lead Agency disagrees. In the first instance the MND substantiates in detail that the Project would not result in any potentially significant health risk impacts. See Initial Study, pp. 17 – 19, 30 – 34, and MND Appendix C *Health Risk Assessment*. CEQA does not require mitigation of impacts that are determined to be less-than significant.

The Lead agency does not concur with alternative analyses offered by the commenter. Please refer to the introductory Master Response and Responses provided herein substantiating accuracy and adequacy of all MND technical analyses.

Findings and conclusions of the MND are not affected. No revision to the MND is required. Preparation of an EIR is not required.

Comment 11-21

Further, the MND fails to account for potentially significant health risk impacts associated with building downwash effect. In order to assess the impact of project related emissions, the MND included air quality modeling utilizing AERMOD, which is used to assess near-field pollutant dispersion. However, Dr. James Clark explains that the air dispersion model used for the health risk analysis ("HRA") for the construction and operational phases of the Project has a structural flaw that results in inaccurate estimates of the Project emissions within the community.

Dr. Clark reviewed the City's AERMOD modeling, and noted that the City's use of AERMOD does not account for the impact on emissions from building downwash, rendering the analysis inaccurate. Dr. Clark's comments explain that building downwash occurs as the wind flows over and around buildings and impacts the dispersion of pollution from nearby stacks. A plume caught in the path of this flow is drawn into the wake, temporarily trapping it in a recirculating cavity.

This downwash effect leads to higher ground-level concentration of chemicals. The downwash effect increases as the relative difference between the release height and top of the building increases. This effect is well-understood. For example, analysis and mitigation of downwash is discussed in Section 123 of the Clean Air Act. The MND completely fails to account for this impact in its AERMOD model, nor does it provide any justification why. Dr. Clark found that running the model without considering building downwash significantly underestimates the impacts of the project.

When a standard, accepted methodology is available to assess a significant impact, an EIR must evaluate the impact unless a reasoned basis for not doing so is provided. In Berkeley Keep Jets Over the Bay Comm. v. Board of Port Comm'rs, a court reviewed a DEIR's failure to analyze health risk from TAC exposure. The DEIR claimed that no methodology or standards of significance existed for assessing the health risk from TAC exposure. The court determined that the lead agency abused its discretion, reasoning that the lead agency failed to consider, in good faith, comments from the public showing that it was feasible to analyze health risk from TAC exposure:

The Port has not cited us to any reasonably conscientious effort it took either to collect additional data or to make further inquiries of environmental or regulatory agencies having expertise in the matter….At the very least, the documents submitted by the public raised substantial questions about the project's effects on the environment and the unknown health risks to the area's residents…the Port has not offered any justification why more definitive information could not have been provided.

Here, the City failed to analyze a critical dispersion factor – building downwash – which affects the rate and severity of exposure to TACs, without explaining why. Dr. Clark's comments show that an AERMOD model can be run to account for building downwash. The City's failure to include this emission factor in its health risk analysis represents a failure to accurately to analyze and

disclose the ground level concentration of DPM emissions generated by the Project. The MND must be withdrawn and EIR circulated to adequately analyze and mitigate Project health risk impacts.

The City must circulate an EIR which adequately analyzes all of the Project's potentially significant impacts, and require all feasible mitigation to reduce the Project's significant environmental and public health impacts to less than significant levels. Feasible mitigation includes, but is not limited to, the following:

1. Until construction of the Project is completed, Applicant shall require that all diesel off-road construction equipment must meet USEPA Tier 4 Final off-road emissions standards for equipment rated at 50 horsepower or greater wherever and whenever reasonably available. In the event that Tier 4 construction equipment is not available, the Applicant may utilize Tier 3 construction equipment outfitted with Best Available Control Technology ("BACT") devices, including but not limited to a CARB certified Level 3 Diesel Particulate Filters ("DPF").

2. All heavy-duty trucks entering the Project site shall be model year 2017 or later to the extent feasible, and in any event all heavy-duty trucks entering the Project site shall be no earlier than model year 2014.

3. Provide EV capable infrastructure for a minimum of five medium-duty and/or heavy-duty trucks to accommodate future installation of medium-duty and/or heavy-duty EV charging stations.

4. Require that all outdoor cargo handling equipment (including yard trucks, yard goats, pallet jacks, and forklifts) shall be zero emission. The Project site shall include the necessary charging stations for electric cargo handling equipment.

5. Require 10-foot-high concrete screen wall encompassing the western parking lot and docking area.

These measures should be included a Mitigation Monitoring and Reporting Program in a legally adequate EIR circulated for public review and scrutiny before the Project can be approved.

Response 11-21

The commenter states that "the MND fails to account for potentially significant health risk impacts associated with building downwash effect." The Lead Agency disagrees. For this Project, idling emissions are effectively line volume sources and have been modeled as such consistent with applicable AERMOD protocols. Per User's Guide for the AMS/EPA Regulatory Model (AERMOD), Section 3.3.9, *Specifying Building Downwash Information*, the building downwash algorithms do not apply to volume or area sources. The MND air quality experts have therefore concluded that truck idling emissions sources resulting from the Project would not be materially affected by downwash from the Project warehouse buildings.

The Lead Agency does not concur with alternative analyses offered by the commenter. Please refer to the introductory Master Response and Responses provided herein substantiating accuracy and adequacy of all MND technical analyses.

The commenter lists various measures that generally act to control or reduce air pollutant emissions. As noted previously, the Project would not result in any potentially significant air quality impacts. CEQA does not require mitigation for impacts determined to be less-than-significant.

Findings and conclusions of the MND are not affected. No revision to the MND is required. Preparation of an EIR is not required.

Comment 11-23

VI. THE CITY MUST PREPARE AN EIR BECAUSE THERE IS SUBSTANTIAL EVIDENCE SUPPORTING A FAIR ARGUMENT THAT THE PROJECT MAY RESULT IN SIGNIFICANT NOISE IMPACTS

As detailed above, the MND fails to include an accurate baseline against which to analyze the Project's noise impacts. Noise and vibration impacts may therefore be underestimated. Further, substantial evidence supports a fair argument that noise and vibration impacts may be significant and require mitigation in an EIR circulated for public review before the Project can lawfully be

approved.

A. The MND Fails to Adequately Analyze Operational Noise Impacts

Mr. Meighan determined that the MND fails to adequately analyze the Project's operational noise emissions. Mr. Meighan concludes that "Day-to-day operational noise levels are not discussed in the MND at all. Typical sources from a warehouse project can include loading dock noise, rooftop mechanical noise, and parking lot noise, among other sources. These can combine to increase ambient noise levels and can be more sensitive than construction noise due to the more permanent nature of the duration."

Section 8.06.080 of the Redlands Municipal Code provides that no entity can "operate or cause to be operated any source of sound, or allow the creation of any noise, which causes the noise level when measured inside a neighboring receiving occupied building to exceed" the standard of 60 dBA for industrial buildings. For example, rooftop commercial HVAC units may reach as high as 88 dBA at a 3 feet reference level, in which case three of these units could exceed the industrial interior noise limit of 60 dBA set in section 8.06.080 at 140 feet away (the distance between the project and the nearest façade to the west). Operation of the Project's HVAC system may result in potentially significant noise impacts, and must be analyzed and mitigated in an EIR.

Response 11-23

The commenter asserts that the MND did not adequately analyze the Project's operational-source noise impacts. The Lead Agency disagrees. These comments are addressed at previous Response 12-16. With specific regard to the Redlands Municipal Code noise standard cited by the commenter, in the first instance, the land use 140 feet west of the Project site already lies within the 70 CNEL contour of the I-10 freeway. Any noise generated by the Project would be imperceptible against the background freeway noise. Further, the potential maximum received 60 dBA noise level cited by the commenter would be the *exterior* noise level, not the *interior* noise level limit governed by Municipal Code Section 8.06.080 Conventional construction typically provides a minimum 20 dBA noise attenuation from exterior to interior noise environments. As such, the received *interior* noise level at a building 140 feet from the Project would be 40 dBA, not

60 dBA as stated by the commenter. The received 40 dBA noise level would not exceed the Redlands Municipal Code standards, and impacts would therefore be less-than-significant.

Findings and conclusions of the MND are not affected. No revision to the MND is required. Preparation of an EIR is not required.

Comment 11-24

B. Project Construction May Result in Potentially Significant Vibration Impacts

Mr. Meighan calculates that the use of a vibratory roller, operated at the western property line, would create a vibration level of 0.016 in/sec. This would result in an exceedance of Municipal Code thresholds. Construction may therefore result in a significant vibration impact which must be analyzed and mitigated in an EIR circulated for public review and scrutiny before the Project can be approved.

Response 11-24

The commenter asserts that the Project could result in potentially significant vibration impacts. The Lead Agency disagrees. In the first instance the threshold cited by the commenter is not applicable to construction activities. Per Municipal Code Section 8.06,120, G. "*Construction Activity*: This chapter shall not apply to noise sources associated with new construction . . ." Further, the relevant threshold consideration here is whether Project activities would result in *excessive* vibration impacts. In this context, excessive vibration impacts would comprise vibration that could result in damage at proximate sensitive land uses or structures. Caltrans has established a maximum continuous vibration threshold of 0.3 PPV (in/sec) when considering whether construction-source vibration activities could result in damage at proximate sensitive land uses or structures. The Lead agency considers this the appropriate threshold applicable to the Project construction activities. Even assuming the received 0.016 in/sec vibration level cited by the commenter is accurate, Project construction-source vibration would not exceed the applicable 0.3 PPV in/sec threshold, and impacts would therefore be less-than-significant.

Findings and conclusions of the MND are not affected. No revision to the MND is required. Preparation of an EIR is not required.

Comment 11-25

VII. THE CITY MUST PREPARE AN EIR BECAUSE THERE IS SUBSTANTIAL EVIDENCE SUPPORTING A FAIR ARGUMENT THAT THE PROJECT MAY RESULT IN SIGNIFICANT CUMULATIVE IMPACTS

The MND's conclusion that the Project would have a less than significant impact related to cumulatively considerable impacts, is not supported by substantial evidence. "Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects." The MND asserts without substantial evidence that the Project would not result in a cumulatively considerable environmental impact. But, the MND fails to analyze any "past projects…current projects, and the effects of probable future projects" in determining the cumulative significance of the Project.

CEQA requires lead agencies to conduct an analysis of "past projects, the effects of other current projects, and the effects of probable future projects." The MND fails to include any list of past, present, or future projects which may result in cumulatively considerable air quality, public health, and greenhouse gas emissions. The Project site is surrounded by heavy industrial uses on all sides. Dr. Clark concludes that the MND fails to adequately analyze the cumulative impacts of the Project because the MND fails to identify all nearby projects, fails to compile cumulative emissions, and fails to estimate cumulative health impacts to on-site and off-site workers.

Dr. Clark calculated that the Project Site is located in the vicinity (3 kilometers of the Project Site) of 81 existing warehouse projects with another 3 projects approved. The 81 existing projects represent 27,000,0000 square feet of floor space and account for 18,000 daily truck trips.153 Collectively, these projects release 24.9 pounds of diesel particulate matter and 2,804 pounds of oxides of nitrogen (NOx – a precursor to smog formation) daily. The three additional projects will add another 600,000 square feet of warehouse space to the area.

Dr. Clark cites to SCAQMD's MATES V study which found that the risk from air contaminants in the area surround the Project site is approximately 401 in 1,000,000 (well above the U.S. EPA's risk management range of 1 to 100 in 1,000,000). The Project will contribute additional emissions, exacerbating this risk and resulting in a potentially significant cumulative air quality and public health impact that the MND fails to disclose.

Substantial evidence therefore supports a fair argument that the Project may result in potentially significant cumulative impacts. The City must prepare an EIR which adequately analyzes and mitigates the Project's potentially significant cumulative impacts before the Project can lawfully be approved.

Response 11-25

The commenter asserts that the Project would result in cumulatively significant air quality, public health, and greenhouse gas emissions impacts. The Lead Agency disagrees. The MND substantiates in all circumstances that Project air quality, health risk, and greenhouse gas emissions impacts would be less-than-significant.

SCAQMD is the regulatory agency governing air quality, health risk, and greenhouse gas emissions considerations relevant to the Project. Per SCAQMD guidance, less-than-significant impacts at the Project level are not cumulatively considerable or cumulatively significant.[1]

Further, the Lead agency does not concur with alternative analyses offered by the commenter. Please refer to the introductory Master Response and Responses provided herein substantiating accuracy and adequacy of all MND technical analyses.

[1] As a Lead Agency, South Coast AQMD "uses the same significance thresholds for project specific and cumulative impacts [...]" (Appendix D, 2003 White Paper). Meaning, projects that exceed the project-specific significance threshold are considered cumulatively considerable and vice-versa. As a CEQA Commenting Agency, South Coast AQMD "recommends that other public agencies perform cumulative impact analysis relative to air quality in the same manner as does AQMD" (Appendix D, 2003 White Paper).

Based on the preceding, the Project would not result in cumulatively significant air quality, health risk, or greenhouse gas emissions impacts.

Findings and conclusions of the MND are not affected. No revision to the MND is required. Preparation of an EIR is not required.

Comment 11-26

VIII. CONCLUSION

The City should withdraw the MND and direct staff to prepare an EIR. As described in detail above and in attached expert reports, substantial evidence supports of a fair argument that the Project poses a significant and unmitigated risk to the public due to unmitigated construction and operational air quality, health risk, greenhouse gas emissions, noise, land use and cumulative impacts.

Response 11-26

The Lead Agency disagrees with the commenter statements and analyses in total. The MND and MND technical analyses together with the Responses provided herein comprise substantial evidence supporting the MND findings and conclusions that the Project would not result in any significant environmental impacts. Further, the MND fully discloses the Project's potential environmental impacts, and provides the Lead Agency with the information necessary to evaluate the Project in the context of its potential environmental implications. Findings and conclusions of the MND are not affected. No revision to the MND is required. Preparation of an EIR is not required.

RESOLUTION NO. 8619

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS DENYING PLANNED DEVELOPMENT NO. 7, A PROPOSAL TO CONSTRUCT A 357,610 SQUARE-FOOT WAREHOUSE/LOGISTICS DISTRIBUTION CENTER AND RELATED SITE IMPROVEMENTS ON 16.0 NET ACRES AT 1101 CALIFORNIA STREET, LOCATED ON THE WEST SIDE OF CALIFORNIA STREET BETWEEN LUGONIA AVENUE AND INTERSTATE 10

WHEREAS, CRP/NPP Redlands Industrial Owner, LLC has filed applications for Lot Merger No. 8 and Planned Development No. 7, in conjunction with a Socio-Economic Cost/Benefit Study, requesting approval to merge two parcels encompassing approximately 16.0 net acres and thereon construct a 357,610 square-foot warehouse and related site improvements located on the west side of California Street between Lugonia Avenue and Interstate 10 (APNs: 0292-033-11-000; 0292-033-13-0000) (the "Project" or "Project Entitlements"); and,

WHEREAS, the subject site has a General Plan land use designation of "Commercial/Industrial", and is located in the Special Development District of the East Valley Corridor Specific Plan (Specific Plan),

WHEREAS, City Council Resolution No. 5116, which establishes Planned Development application procedures, allows a Planned Development application to be submitted as a single stage for the approval of a comprehensive and detailed site plan, and shall be "quasi-legislative" in nature subject to final review and approval by the City Council; and,

WHEREAS, an initial study and mitigative negative declaration (MND) were prepared for the Project and circulated for public review for a period beginning on March 28, 2024, and ending on April 29, 2024; and,

WHEREAS, on June 11, 2024, the Planning Commission held a duly noticed public hearing and considered the staff report, oral report, the testimony, and the written evidence submitted by and on behalf of the applicant, and by members of the public; and,

WHEREAS, on June 11, 2024, after closing the public hearing and deliberating on the proposed Project, the Planning Commission voted 7-0 to recommend that the City Council not approve Lot Merger No. 8 and Planned Development No. 7; and,

WHEREAS, on or about July 5, 2024, notice of the City Council's public hearing for the Project was published in a newspaper of general circulation by the City Clerk; and,

WHEREAS, on July 16, 2024, the City Council considered the staff report, oral report, the recommendation of the Planning Commission, the testimony and written evidence submitted by and on behalf of the applicant, and written comments and testimony by members of the public, for the Project.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF REDLANDS AS FOLLOWS:

Section 1. Findings for Denial of the Project. The City Council hereby denies Planned Development No. 7 based upon the inability to make the following findings:

1. *That the proposed Planned Development is in conformity with the General Plan of the City.*

   This finding cannot be made. The proposed Planned Development does not conform to the General Plan of the City because it conflicts with several General Plan objectives and policies concerning the City's overall character and land use planning principles. Specifically, the Livability Element of the General Plan provides several policies intended to (1) maintain a land use pattern of various uses designed and arranged to protect and enhance Redlands' unique character; (2) provide for buffers and transitions between low- and high-intensity land uses; and (3) ensure that the scale and character of new development is appropriate for surrounding terrain and the character of existing development. The proposed development of a major warehouse on the subject site does not maintain a land use pattern that protects and enhances its surroundings, which is characterized by a heterogeneous distribution of compatibly located land uses. The proposed development would expand industrial land uses eastward toward existing commercial development, thereby degrading community character as a result. Furthermore, the subject site is located between existing land uses of different intensities (industrial to the west; commercial to the north and south), and the proposed development does not adequately provide for buffers or land use transitions that would contribute to harmonious and orderly development of the area.

2. *That the proposed Planned Development would not adversely affect the surrounding area or the Redlands community in general.*

   This finding cannot be made. The proposed Planned Development would adversely affect the surrounding area because surrounding properties to the north and east are developed with commercial buildings that must be protected from incompatible and impactful uses including warehousing. The proposed development is incompatible with surrounding uses and is inconsistent with the existing pattern of development in the vicinity. The proposed development would adversely impact surrounding non-industrial uses, particularly the site of the existing medical office building to the north across Lugonia Avenue on which the development of a regional hospital complex is reasonably foreseeable based on recent filing of development applications. Furthermore, the subject site is in close proximity to planned future transit-oriented development (south of Interstate 10 on California St.) identified as the Transit Villages Concept within the 2035 General Plan. Development of the subject site with a warehouse would unduly increase the potential for future land use conflicts to occur in these sensitive areas.

Section 2. California Environmental Quality Act. According to Section 15270 of the California Environmental Quality Act (CEQA) Guidelines, CEQA does not apply to projects which a public agency rejects or disapproves. The City Council hereby determines that the action to disapprove the project is exempt from CEQA and authorizes staff to prepare and file a Notice of Exemption with the County Recorder and Office of Planning & Research State Clearinghouse.

Section 3. Effective Date. This Resolution shall take effect upon adoption.

ADOPTED, SIGNED AND APPROVED this 16th day of July, 2024.

RESOLUTION NO. 8620

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS ADOPTING A MITIGATED NEGATIVE DECLARATION, ADOPTING A SOCIO-ECONOMIC COST/BENEFIT STUDY, AND APPROVING LOT MERGER NO. 8 AND PLANNED DEVELOPMENT NO. 7 AUTHORIZING THE CONSTRUCTION OF A 357,610 SQUARE-FOOT WAREHOUSE/LOGISTICS DISTRIBUTION FACILITY AND RELATED SITE IMPROVEMENTS ON 16.0 NET ACRES LOCATED ON THE WEST SIDE OF CALIFORNIA STREET BETWEEN LUGONIA AVENUE AND INTERSTATE 10

WHEREAS, CRP/NPP Redlands Industrial Owner, LLC has filed applications for Lot Merger No. 8 and Planned Development No. 7, in conjunction with a Socio-Economic Cost/Benefit Study, requesting approval to merge two parcels encompassing approximately 16.0 net acres and thereon construct a 357,610 square-foot warehouse and related site improvements located on the west side of California Street between Lugonia Avenue and Interstate 10 (APNs: 0292-033-11-000; 0292-033-13-0000) (the "Project" or "Project Entitlements"); and,

WHEREAS, the East Valley Corridor Specific Plan (Specific Plan No. 40) requires an application for a Planned Development for new land uses and developments within the plan area, and the proposed type of land use is a permitted land use within the subject zoning district; and,

WHEREAS, City Council Resolution No. 5116 allows a Planned Development application to be submitted as a single stage for the approval of a comprehensive and detailed site plan, and shall be "quasi-legislative" in nature subject to final review and approval by the City Council; and,

WHEREAS, an Initial Study and Mitigated Negative Declaration was prepared for the Project and was circulated for public review for a period beginning on March 28, 2024, and ending on April 29, 2024; and,

WHEREAS, the Project is subject to the California Environmental Quality Act (CEQA) and the City has prepared an Initial Study and exercised its own independent judgement and analysis, there is no substantial evidence that the Project may have a significant effect on the environment, the custodian of records is the Planning Division of the Development Services Department, and a Mitigated Negative Declaration has been prepared in accordance with the CEQA Guidelines; and,

WHEREAS, on June 11, 2024, the Planning Commission held a duly noticed public hearing and considered the staff report, oral report, the testimony and the written evidence submitted by and on behalf of the applicant and by members of the public; and

WHEREAS, on June 11, 2024, after closing the public hearing and deliberating on the proposed Project, the Planning Commission voted 7-0 to recommend that the City Council not approve Lot Merger No. 8 and Planned Development No. 7; and,

WHEREAS, on or about July 5, 2024, notice of the City Council's public hearing for the Project was published in a newspaper of general circulation by the City Clerk; and,

WHEREAS, on July 16, 2024, the City Council considered the staff report, oral report, the recommendation of the Planning Commission, the testimony and written evidence submitted by and on behalf of the applicant, and written comments and testimony by members of the public, for the Project.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF REDLANDS AS FOLLOWS:

Section 1. CEQA Compliance and Environmental Determination. As the decision-making body for the Project, the City Council has reviewed and considered the information contained in the Initial Study and Mitigated Negative Declaration (MND), related technical studies and analyses, public comments received, the Responses to Comments, and supporting documentation. The City Council determines that the MND and related documents contain a complete and accurate reporting of the environmental impacts and mitigation measures associated with the Project. The City Council finds that the MND was prepared in compliance with CEQA, and that the City complied with CEQA's procedural and substantive requirements.

The MND for the Project, prepared by the City's environmental consultant, reflects the City's independent judgment and analysis. The City has exercised independent judgment and analysis in accordance with Public Resources Code Section 21082.1(c)(3) in managing as appropriate the environmental consultant, and directing the consultant in the preparation of the MND. The City Council has independently reviewed and analyzed the MND and accompanying technical studies/reports, and finds that the MND reflects the independent judgment and analysis of the City.

The City Council finds on the basis of the whole record that there is no substantial evidence that the Project will have a significant effect on the environment, including mitigation measures and any project design features, and hereby adopts the MND for the Project. Pursuant to Public Resources Code section 21081.6, the City hereby adopts the Mitigation Monitoring/Reporting Program attached to the MND and all mitigation measures are included as conditions of approval for the Project.

Section 2. Socio-Economic Cost/Benefit Study. The City Council hereby adopts the Socio-Economic Cost/Benefit Study prepared for the proposed project based on the below findings. The study concludes that the Project would result in a positive cost/benefit ratio exceeding 1.0, and the Project will not create or result in any significant unmitigable physical blight or overburden public services in the community.

A. The project will not create unmitigated physical blight within the City or overburden public services including, without limitation, the sufficiency of police and fire protection services.

The Project will neither create unmitigated physical blight within the City of Redlands nor overburden public services, including the sufficiency of police and fire protection services, because the proposed development: features attractive and well-designed architecture and

perimeter landscaping and will serve as a positive addition to the East Valley Corridor; existing public service capacity is sufficient to serve the new development; and the expected increase in public revenue generated by the proposed development more than offsets the expected public cost of serving the proposed development. The Project will not create significant unmitigable physical blight in the City of Redlands or overburden public services, including without limitation police and fire protection services. The Project site is adjacent to or abuts primarily industrial, office, and commercial developments, and is located within an area designated in the General Plan for industrial development.

The Project site is located in an area designated in the General Plan as Commercial/Industrial. The Project provides improvements to blend in with and enhance the surrounding community through use of architectural treatment and landscaped buffers along the public right-of-way, screen walls, and preservation of existing mature landscape trees as well as planting of new trees. Moreover, the Project will contribute or provide funding for a public art installation that is valued at a minimum of one (1) percent of the total Project value.

B. The benefits to the City resulting from development of the project outweigh any direct cost to the City that may result.

According to the Socio-Economic Cost/Benefit Study, the proposed development is projected to generate annual revenues of approximately $197,250.50 and have approximately $17,672.30 in costs. Therefore, the project will result a positive balance of $10,373 (or a positive cost/benefit ratio of 11.16). For every one dollar the City will spend in providing services to the project, the City will receive $11.16 in revenue. The project would provide revenue to the City through increased property tax assessment, sales tax and the payment of development impact fees. These fees may provide for cultural enhancements, downtown district enhancements, park enhancements, public safety (Police and Fire) enhancements, and traffic enhancements. In addition, customers and guests will also contribute additional revenue to the City's General Fund through local sales tax generation, including the new 1.0% local sales tax (Measure T) approved by Redlands voters.

Section 3. Findings for Approval of Planned Development No. 7. The City Council hereby approves Planned Development No. 7, based upon the following findings, and subject to the Conditions of Approval attached hereto as Exhibit "A" and Exhibit "B."

1. *That the proposed Planned Development is in conformity with the General Plan of the City.*

The General Plan land use designation of the subject site is "Commercial/Industrial" which provides for certain types of commercial and light industrial uses, including flex commercial space as well as business parks, that may be compatibly located. As a warehousing facility, the proposed development is consistent with both the General Plan land use designation and applicable General Plan goals and policies, particularly those concerning the East Valley Corridor. Designated truck routes in the City of Redlands are abutting and available to the project site, and the project site abuts the Interstate 10 freeway

with several freeway ramps immediately adjacent to the project site. No abutting, adjacent, or nearby sensitive receptors are located in proximity to the project site or the necessary truck routes that serve the proposed facility.

2. *That the proposed Planned Development would not adversely affect the surrounding area or the Redlands community in general.*

   The subject site is generally surrounded by existing industrial and commercial development, and no existing or reasonably foreseeable land use conflicts or other detrimental effects are present in the vicinity. Vehicular access and freeway access points (for large trucks and tractor-trailers) are adjacent to the subject site, and several ramps accessing Interstate 10 are located abutting the project site and elsewhere in the vicinity. The project will dedicate land to widen and improve the westbound California Street on-ramp to Interstate 10 abutting the project site. Truck traffic to and from the proposed warehouse facility will minimally affect the Redlands community and local street network. Furthermore, the proposed use will not be detrimental to the health, safety, or general welfare, and will not be injurious to property or improvements in the vicinity. The proposed development is compatible with the surrounding area and all improvements necessary to adequately serve the new development are existing or will be constructed as required by the conditions of approval.

Section 4. Approval of Lot Merger No. 8. The City Council hereby approves Lot Merger No. 8 for the proposed development project, subject to the Conditions of Approval attached hereto as Exhibit "A" and Exhibit "B."

Section 5. Effective Date. This Resolution shall take effect upon adoption.

ADOPTED, SIGNED AND APPROVED this 16th day of July, 2024.

EXHIBIT A
DEVELOPMENT SERVICES DEPARTMENT
CONDITIONS OF APPROVAL

1. This permit/approval is for Lot Merger No. 8 and Planned Development No. 7 authorizing the merger of two parcels encompassing approximately 16.0 net acres and the construction thereon of a 357,610 square-foot warehouse and related site improvements located on the west side of California Street between Lugonia Avenue and Interstate 10 (APNs: 0292-033-11-0000; 0292-033-13-0000).

2. The issuance of any permits shall comply with the provisions of the Redlands Municipal Code and the East Valley Corridor Specific Plan (EVCSP).

3. Unless construction has commenced pursuant to a building permit, or a time extension is granted in accordance with Code, this approval shall expire two (2) years from the date of City Council approval.

4. Pursuant to Government Code 66020(d), certain fees, dedications, reservations, or exactions imposed by the City as a condition of approval of this project are subject to a statutory ninety (90)-day protest period for those fees, dedications, reservations and exactions which are subject to Government Code 66020(a) has commenced to run on the date this project was approved by the City.

5. The applicant for this permit, and its successors and assigns, shall defend, indemnify and hold harmless the City of Redlands, and its elected officials, officers, agents and employees, from and against any and all claims, actions, and proceedings to attack, set aside, void or annul the approval of this permit by the City, or brought against the City due to acts or omissions in any way connected to the applicant's project that is the subject of this permit. This indemnification shall include, but not be limited to, damages, fees, costs, liabilities, and expenses incurred in such actions or proceedings, including damages for the injury to property or persons, including death of a person, and any award of attorneys' fees. In the event any such action is commenced to attack, set aside, void or annul all, or any, provisions of this permit, or is commenced for any other reason against the City for acts or omissions relating to the applicant's project, within fourteen (14) City business days of the same, the applicant shall file with the City a performance bond or irrevocable letter of credit (together, the "Security") in a form satisfactory to the City and in the amount of Three Hundred Thousand Dollars ($300,000), to ensure applicant's performance of its defense and indemnity obligations under this condition. The failure of the applicant to provide the Security shall be deemed an express acknowledgement and agreement by the applicant that the City shall have the authority and right, without objection by the applicant, to revoke all entitlements granted for the project pursuant to this permit. The City shall have no liability to the applicant for the exercise of City's right to revoke this permit.

6. All plans submitted to the City shall reflect the City Council approval and any other changes required by the Council and/or staff. This condition applies to the site plan, landscape plans, building elevations and materials, grading, and all other illustrations, text, or plans submitted to the City in connection with this project.

7. The applicant shall not make any modifications or changes during construction that are in conflict or contrary to the Project's approved site design, grading plan, landscaping plan, or building elevations without first consulting the Development Services Director or his designee. The Development Services Director is authorized to approve minor modifications to the approved project plans if such modifications shall achieve substantial compliance with said plans and conditions.

8. A copy of the approved Conditions of Approval shall be included on the cover page of the construction plans submitted to the Building Division.

9. No final inspection or certificate of occupancy shall be granted until all conditions of approval have been satisfied.

10. The project site shall be kept in a weed and dust free condition throughout all periods of development.

11. All existing and new utilities of 12 kV or less within the project and along adjacent major arterials shall be installed underground. Plans shall be submitted that detail the undergrounding of all on-site utilities, subject to review and approval by the Development Services Director, prior to issuance of building permits.

12. Roof and ground-mounted equipment shall be screened from public view on all sides subject to review and approval by the Development Services Director, prior to issuance of building permits. All required screening from public view, such as storage spaces, loading docks, and equipment, shall be architecturally integrated with the surrounding building design through the use of concrete, masonry, or other similar materials pursuant to Section EV4.0235(h) of the EVCSP. Solid walls within the buildable lot area shall not exceed a height of eight (8) feet from the highest finished grade. If the height of the wall is not sufficient, appropriate landscaping shall be required to screen the required areas from the freeway.

13. Transformer cabinets and commercial gas meters shall not be located within required setbacks and shall be screened from public view either by architectural; treatment or with landscaping. Multiple electrical meters and panels shall be fully enclosed and incorporated into the overall architectural design of the building(s). Backflow preventers shall be enclosed with landscaping that will provide complete screening upon maturity. The location and method of enclosure or screening of this equipment shall be shown on the construction plans and landscape plans prior to building permit issuance. Location fo said equipment shall be coordinated with the appropriate utility company (e.g., Southern California Gas Company or Southern California Edison). The applicant shall submit plans showing details of screening subject to review and approval by the Development Services Director, prior to issuance of building permits.

14. Facility operations shall adhere to the performance standards under Section EV4.0225 of the EVCSP. No truck queuing is permitted in the public right-of-way.

15. No outdoor storage of materials, containers, structures, heavy equipment, vehicles having a gross vehicle weight rating of more than 14,000 pounds, semi-trucks and/or trailers shall occur in parking lots and/or yards between the building and the public right-of-way.

16. To ensure compliance with the East Valley Corridor Specific Plan and adherence to the development plans, the following design features shall be incorporated into the development and represented on the drawings submitted as part of the applications for construction permits (i.e., grading, building, landscaping):

    a. Landscaped berms, or a combination of berms, landscaping and/or wall treatments of sufficient height to substantially screen parking areas shall be provided between parking areas and the public right-of-way along California Street and Lugonia Avenue. (Code: EVCSP § EV4.0255; § EV4.0115(e,g))

    b. Earth berms adjacent to the public right-of-way shall be constructed to a smooth, rounded, continuous natural contour, with slope not to exceed 3:1. Construction of berms shall not interfere with normal drainage of water anywhere on the site. (Code: EVCSP § EV4.0275(a))

    c. No cut or fill slopes shall be steeper than 3:1. Cut or fill slopes shall be graded with smooth vertical transitions. (Code: EVCSP § EV4.0275(c))

    d. In-lieu of providing minimum landscaping coverage, public art shall be displayed in a setting which enhances pedestrian spaces and building architecture. The minimum cost of public art shall be one (1%) percent of the overall cost of the project as stated on the building permit. The style, appearance, design and location of the public art shall be approved by the Development Services Director prior to installation. The public art shall be installed and inspected by the Planning Division prior to issuance of a certificate of occupancy.

    e. A tree protection plan shall be submitted as part of the landscape permit application. Tree protection measures shall also be identified on grading plans.

17. The trash area(s) shall be designed and constructed in accordance with Section EV4.0230 of the EVCSP.

18. Before placing or constructing any signs on the property, Developer shall obtain a sign permit from the City and comply with the applicable sign code criteria. Sign locations and illumination are subject to review and approval under separate permit(s).

19. During the plan check review process, the Developer shall provide a lighting plan that provides design details (light standards, bollards, wall mounted packs, etc.) and illumination information within pathways, streetscapes, and open spaces proposed throughout the development. An electrical engineer shall prepare the site lighting and/or photometric plan demonstrating that adequate lighting ranges will be provided throughout the development without creating spillover, light pollution, or conflicts with surrounding factors such as tree locations, off-site or adjacent lighting. The illumination within the parking lot shall be a minimum of 0.5-foot candle and illumination along all property lines of the project site shall not exceed 0.5-foot candle. To ensure adherence to the Community Design Standards under Division 4 of the EVCSP, the lighting plan shall demonstrate compliance with the following requirements:

    a. Walkway lighting shall have a maximum height of 12 feet, all parking lot lighting

shall have a maximum height of 30 feet, and such light fixtures shall include shielding permanently attached to fixtures to contain illumination and prevent glare overspill onto abutting or nearby residential properties.

b. Lighting shall be required at (i) pedestrian walkways and plazas, (ii) building entries, driveway entries and parking, and (iii) hazardous locations such as changes of grade and stairways which must be well-lit with lower-level supplemental lighting or additional overhead units.

c. All light fixtures are to be concealed source fixtures except for pedestrian-oriented accent lights.

d. Security lighting fixtures are not to project above the fences or roof line of the building and are to be shielded. The shields shall be painted to match the surface to which they are attached. Security lighting fixtures are not to be substituted for parking lot or walkway lighting fixtures and are restricted only to loading and storage locations or similar service areas.

e. Exterior wall-mounted floodlights are expressly prohibited except for security lighting approved by the Development Services Director.

f. All illuminated signs are to be internally illuminated.

g. The design of all lighting fixtures and their structural support shall be architecturally compatible with the surrounding buildings.

h. When walkway lighting is provided primarily by low fixtures, there shall be sufficient peripheral lighting to illuminate the immediate surroundings to ensure public safety. Shatter-proof coverings are recommended on low-level fixtures.

20. Plans submitted for plan check shall include an exterior lighting plan, including fixture and pole designs, for review and approval by the Development Services Director or his designee.

21. All lighting shall be shielded, and no light or glare shall impact the surrounding properties.

22. Prior to issuance of building permits, Developer shall demonstrate that light standards will not conflict with tree locations. Developer shall submit a plan showing both the lighting and landscape on the same sheet.

23. The Final Landscaping Plan shall incorporate the following:

a. The landscape plan shall comply with all requirements for landscaping in parking areas according to Section EV4.0255 of the EVCSP.

b. Final landscape plans, irrigation system plans, tree preservation techniques and preservation guarantees shall be reviewed and approved by the Development Services Director prior to issuance of a building permit.

c. Trees shall be installed in automobile (passenger vehicle) parking areas to provide at least thirty five percent (35%) shade cover of parking areas within fifteen years pursuant to Redlands Municipal Code Section 18.156.930.D. This requirement is in addition to the applicable standard design requirements for parking lot landscape and related improvements.

24. All landscaped areas noted on the site plan shall be permanently maintained with healthy planting material, and whenever necessary shall be replanted with suitable vegetation.

25. Landscape and Irrigation plans shall provide water use calculations on the submitted plans, and Developer shall demonstrate compliance with the Model Water Efficient Landscape Ordinance prior to permit issuance. The plans shall be prepared by a California-licensed landscape architect.

26. Unless a Minor Exception Permit is obtained, open and solid fencing within the required front yard area shall not exceed four feet and three feet, respectively, and fencing along side and rear property lines shall not exceed six feet in height. A Minor Exception Permit is not required for screening walls up to eight feet in height located within the buildable lot area in accordance with EVCSP § EV4.0235(h).

27. Pedestrian walkways shall be provided within parking areas to destination points.

28. All necessary equipment for use of non-potable water as a condition of occupancy of on-site structures in accordance with the City's master-planned non-potable water system shall be installed prior to issuance of a certificate of occupancy. Necessary equipment shall be as determined by the City of Redlands and may include pipes, pumps, storage and other facilities including "backbone" or "distribution" lines.

29. Prior to issuance of a building permit, the applicant shall be required to obtain approval of a construction site safety plan by the Redlands Police Department providing adequate security measures such as lights, video cameras, vehicle transponders, locks, alarms, trained security personnel, fencing, etc. The nature of the measures will depend on the specific requirements of the site and may vary with the different stages of construction. The applicant shall be responsible for the compliance of all subcontractors working on the site.

30. Prior to issuance of a building permit, the property owner shall record a covenant on the title of the subject property ensuring that the property cannot be used to provide chilled, cooled, or freezer warehouse space. Prior to recordation of the covenant, the form shall be reviewed and approved by the Planning Division and the City Attorney.

31. Entry gates into the loading dock/truck court area with more than twenty (20) loading docks shall be positioned after a minimum of one hundred forty (140) feet of total available stacking depth inside the property line (or alternatively, if one hundred forty (140) feet of depth is not feasible due to site constraints, then provide seventy (70) feet of available stacking depth for two trucks side-by-side as an alternative design). The stacking distance shall be increased by seventy (70) feet for every twenty (20) loading docks beyond 50 docks. Queuing, or circling of vehicles, on public streets immediately

pre- or post-entry to an industrial commerce facility is strictly prohibited unless queuing occurs in a deceleration lane or right turn lane exclusively serving the facility.

32. The following facility signage shall be installed prior to issuance of a certificate of occupancy:

    a. Anti-idling signs indicating a five (5) minute restriction on engine idling for diesel trucks shall be posted at warehouses and industrial commerce facilities along entrances to the site and within the dock areas and shall be strictly enforced by the facility operator.

    b. Signs shall be installed at all truck exit driveways directing truck drivers to the truck route as indicated in the Truck Routing Plan to be routed to the Interstate Freeway System.

    c. Signs and drive aisle pavement markings shall clearly identify the onsite circulation pattern to minimize unnecessary on-site vehicular travel.

    d. Facility operators shall post signs in prominent locations inside and outside of the building indicating that off-site parking for any Medium Heavy-Duty trucks, Heavy Heavy-Duty trucks, truck trailers or cabs, and other operations-related vehicles is strictly prohibited.

    e. All signs shall be legible, durable, and weather-proof.

33. The following sustainable energy measures shall be implemented and specified on the drawings submitted as part of a building permit application as applicable:

    a. A minimum of ninety percent (90%) of the on-site motorized operational equipment shall be zero emission (ZE).

    b. All warehouse building roofs shall install photovoltaic (PV) solar collector system or other form of on-site renewable energy, provided such renewable energy source is recognized by the State of California as a renewable resource under the Renewable Portfolio Standard Program. The renewable energy system shall be metered separately from the nonrenewable metered power usage of the building (if not in conflict with other applicable regulations). The renewable energy system shall be built to generate an amount of electricity sufficient to meet the following criteria:

        i. Annualized building demand based on the approved use or, if no use is proposed, then the demand for the most energy intensive use that could occupy the building; and

        ii. Annualized demand required to charge fully electric vehicles and trucks, assuming that all vehicles and trucks to the site are fully electric; and

        iii. A reasonable rate of efficiency loss over ten (10) years.

    Note: Electricity demand that exceeds the generation capacity of the on-site

renewable energy system may be obtained from off-site energy sources or suppliers.

c. The warehouse building's rooftop that is not covered with solar panels or other utilities shall be constructed with light colored roofing material with a solar reflective index (SRI) in accordance with current California Energy Code regulations. This material shall be the minimum solar reflective rating of the roof material for the life of the building.

d. The on-site passenger vehicle parking shall include electric vehicle (EV) ready parking spaces in accordance with current requirements of the California Building Code, and at least fifty percent (50%) of the required EV parking spaces shall be equipped with working Level 2 Quick Charge EV charging stations installed and operational, prior to building occupancy. Signage shall be installed indicating EV charging stations and specifying that spaces are reserved for clean air/EV vehicles. Unless superior technology is developed that would replace the EV charging units, facility operator and any successors in interest shall be responsible for maintaining the EV charging stations in working order for the life of the facility.

34. The developer and/or facility operator shall comply with the following operation and construction standards:

a. Cool surface treatments shall be added to all drive aisles and parking areas, or such areas shall be constructed with a solar-reflective cool pavement such as concrete. Solar collectors may be installed on support structures that provide shade over parking areas to achieve minimum requirements.

b. To ensure that warehouse electrical rooms are sufficiently sized to accommodate the potential need for additional electrical panels, either a secondary electrical room shall be provided in the building, or the primary electrical room shall be sized twenty-five percent (25%) larger than is required to satisfy the service requirements of the building or the electrical gear shall be installed with the initial construction with twenty-five percent (25%) excess demand capacity.

c. All exterior light fixtures (including but not limited to parking lot lighting, wall fixtures, roof fixtures, light poles, etc.) visible from public right-of-way or abutting properties shall have shielding affixed to contain illumination within the subject property and prevent light trespass and glare overspill.

d. The facility operator shall be required to perform regular maintenance of building structures, landscaping, and paved surfaces to ensure good physical condition and appearance.

e. Any outdoor storage of materials, high-pile storage, or any other manner of storage or staging shall not exceed the height of the enclosing screen walls.

Environmental Mitigation Measures

35. BIO-1: Preconstruction Nesting Bird Survey: If construction or other Project activities are scheduled to occur during the nesting bird season (February 1 through August 31), a preconstruction nesting bird survey shall be conducted by a qualified avian biologist to ensure that active bird nests will not be disturbed or destroyed. The survey shall be completed no more than three days prior to initial ground disturbance. The nesting bird survey shall include the Project Site and adjacent areas where Project activities have the potential to affect active nests, either directly or indirectly, due to construction activity, noise, human activity, or ground disturbance. If an active nest is identified, a qualified avian biologist shall establish an appropriately sized non-disturbance buffer around the nest using flagging or staking. Construction activities shall not occur within any non-disturbance buffer zones until the nest is deemed inactive by the qualified avian biologist. If initial ground-disturbing activities are scheduled to occur during the nesting bird season, then a biological monitor shall be present during all vegetation removal activities to ensure no impacts to nesting birds occur.

36. CR-1: In the event that cultural resources are discovered during project activities, all work in the immediate vicinity of the find (within a 60-foot buffer) shall cease and a qualified archaeologist meeting Secretary of Interior standards shall be hired to assess the find. Work on the other portions of the project outside of the buffered area may continue during this assessment period. If significant pre-contact and/or historic-era cultural resources, as defined by CEQA (as amended, 2015), are discovered and avoidance cannot be ensured, the archaeologist shall develop a Monitoring and Treatment Plan. The archaeologist shall monitor the remainder of the project and implement the Plan accordingly.

37. CR-2: If human remains are discovered, work shall halt in that area until a determination can be made regarding the provenance of the human remains, and the following procedures as set forth in CEQA Section 15064.5(e), the California Public Resources Code (Sec. 5097.98), and the State Health and Safety Code (Sec. 7050.5) shall be undertaken. All work shall be directed away from the location of the discovery and any nearby area reasonably suspected of overlaying adjacent human remains until a determination can be made by the medical examiner. The medical examiner will determine if the remains are or are most likely to be of Native American origin. If human remains are determined to be Native American, the medical examiner will notify the NAHC within 24 hours. If human remains are not Native American, the medical examiner will determine the appropriate course of action with the city staff (Public Resources Code 5097.98).

38. GEO-1: The recommendations regarding site preparation and construction, as described in a Final Geotechnical Investigation as approved by the City Engineer, shall be incorporated into project design.

39. GEO-2: Establish a procedure for the management of paleontological materials found on-site during project development, including the following provisions:

    If materials are found on-site during grading, it is required that work be halted

until a qualified paleontologist evaluates the find to determine if it represents a significant paleontological resource.

If the resource is determined to be significant, the paleontologist shall supervise removal of the material and determine the most appropriate archival storage of the material.

Appropriate materials shall be prepared, catalogued, and archived at the applicant's expense and shall be retained within San Bernardino County if feasible.

40. TCR-1: Tribal Monitoring Services Agreement: Prior to the issuance of grading permits, the applicant shall enter into a Tribal Monitoring Services Agreement with the Morongo Band of Mission Indians (MBMI) for the Project. The Tribal Monitor shall be on-site during all ground-disturbing activities (including, but not limited to, clearing, grubbing, tree and bush removal, grading, trenching, fence post placement and removal, construction excavation, excavation for all utility and irrigation lines, and landscaping phases of any kind). The Tribal Monitor shall have the authority to temporarily divert, redirect, or halt the ground-disturbing activities to allow identification, evaluation, and potential recovery of cultural resources.

41. TCR-2: Retention of Archaeologist: Prior to any ground-disturbing activities (including, but not limited to, clearing, grubbing, tree and bush removal, grading, trenching, fence post replacement and removal, construction excavation, excavation for all utility and irrigation lines, and landscaping phases of any kind),and prior to the issuance of grading permits, the Applicant shall retain a Qualified Archaeologist who meets the U.S. Secretary of the Interior Standards (SOI). The Archaeologist shall be present during all ground- disturbing activities to identify any known or suspected archaeological and/or cultural resources. The Archaeologist will conduct Cultural Resource Sensitivity Training, in conjunction with the Tribe[s] Tribal Historic Preservation Officer (THPO), and/or designated Tribal Representative. The training session will focus on the archaeological and tribal cultural resources that may be encountered during ground-disturbing activities as well as the procedures to be followed in such an event.

42. TCR-3: Cultural Resource Management Plan: Prior to any ground-disturbing activities the project Archaeologist shall develop a Cultural Resource Management Plan (CRMP) and/or Archaeological Monitoring and Treatment Plan (AMTP) to address the details, timing, and responsibilities of all archaeological and cultural resource activities that occur on the project site. This Plan shall be written in consultation with the consulting Tribe[s] and shall include the following: approved Mitigation Measures (MM)/Conditions of Approval (COA), contact information for all pertinent parties, parties' responsibilities, procedures for each MM or COA, and an overview of the project schedule.

43. TCR-4: Pre-Grade Meeting: The retained Qualified archeologist and Consulting Tribe[s] representative shall attend the pre-grade meeting with the grading contractors to explain and coordinate the requirements of the monitoring plan.

44. TCR-5: On-site Monitoring: During all ground-disturbing activities the Qualified

Archaeologist and the Tribal Monitor shall be on-site full-time. The frequency of inspections shall depend on the rate of excavation, the materials excavated, and any discoveries of Tribal Cultural Resources as defined in California Public Resources Code Section 21074. Archaeological and Tribal Monitoring will be discontinued when the depth of grading and the soil conditions no longer retain the potential to contain cultural deposits. The Qualified Archaeologist, in consultation with the Tribal Monitor, shall be responsible for determining the duration and frequency of monitoring.

45. TCR-6: Significant Resources: The Yuhaaviatam of San Manuel Nation Cultural Resources Department (YSMN) shall be contacted of any pre-contact and/or historic-era cultural resources discovered during project implementation, and be provided information regarding the nature of the find, so as to provide Tribal input with regards to significance and treatment. Should the find be deemed significant, as defined by CEQA (as amended, 2015), a Cultural Resources Monitoring and Treatment Plan shall be created by the archaeologist, in coordination with YSMN, and all subsequent finds shall be subject to this Plan. This Plan shall allow for a monitor to be present that represents YSMN for the remainder of the project, should YSMN elect to place a monitor on-site.

46. TCR-7: Project Documents: Any and all archaeological/cultural documents created as a part of the project (isolate records, site records, survey reports, testing reports, etc.) shall be supplied to the applicant and Lead Agency for dissemination to YSMN. The Lead Agency and/or applicant shall, in good faith, consult with YSMN throughout the life of the project.

47. TCR-8: Final Report: The final report[s] created as a part of the project (AMTP, isolate records, site records, survey reports, testing reports, etc.) shall be submitted to the Lead Agency and Consulting Tribe[s] for review and comment. After approval of all parties, the final reports are to be submitted to the Eastern Information Center, and the Consulting Tribe[s].

Building & Safety Division:

48. When the Entitlement Review is approved, submit complete construction drawings including structural calculations, energy calculations and a soils report to Building and Safety for plan review in accordance with the current edition of the California Building and Fire Codes including all local ordinances and standards which are effective at the time of Plan Check Submittal.

49. Disabled access for the site and building must be in accordance with the State of California and ADA regulations.

50. Accessible EVC parking spaces for future and required EVCS as per the California Green Code is required.

Other City Departments/Divisions:

51. Conditions of Approval from the following City Departments/Divisions are applicable to the project, and are hereby incorporated by reference:

    a. Land Use Engineering Division (Exhibit B)

LAND USE ENGINEERING DIVISION
CONDITIONS OF APPROVAL

[Attached]

REDLANDS DEVELOPMENT SERVICES DEPARTMENT
LAND USE ENGINEERING
DEVELOPMENT REQUIREMENTS
PLANNED DEVELOPMENT NO. 7

Date of P.C. Meeting:	**June 11, 2024**
Applicant:	**Pete Williams, CRP/NPP Redlands Industrial Owner, LLC**
Location:	**West Side of California Street Between West Lugonia Avenue and Interstate 10**
Project Description:	**Construct an Approximately 357,610 Square-Foot Warehouse**

The applicant shall comply with the following engineering requirements to allow for the orderly development of the surrounding area and for public health and safety.

All requirements for development shall be consistent with requirements set forth in the East Valley Corridor Specific Plan; applicable sections of Redlands Municipal Code; latest edition of "Redlands Standard Specifications and Detail Drawings for Design and Construction of Public Improvements"; latest edition of American Public Works Association "Standard Plans for Public Works" and "Standard Specifications for Public Works Construction – Greenbook"; latest edition of "Redlands Water Systems Standard Specifications"; latest edition of "Redlands Sanitary Sewer Systems Standard Specifications"; and current Redlands policies and guidelines relative to development projects.

A. The following items are required prior to issuance of the GRADING PERMIT.

1. Pay plan check fee as established per resolution. The amount will be determined at plan check submittal.

2. Plans required to be submitted include:
   a. Precise Grading Plan. Grading plans shall be coordinated with the existing and proposed off-site improvements. (RMC 15.04)
   b. SWPPP/Erosion Control Plan. Erosion/Sediment Control Plan shall be submitted for review and approval. A copy of the project's Storm Water Pollution Prevention Plan (SWPPP) shall be submitted for review. SWPPP Best Management Practices (BMPs) to prevent and control discharges to the municipal separate storm sewer (drain) system shall be in effect for the entire duration of project construction to its completion and acceptance by the City. (RMC 13.54)
   c. Water Quality Management Plan. Submit final Water Quality Management Plan (WQMP) for review and approval. WQMP shall consist of post construction Best Management Practices (BMPs) prepared in accordance with the requirements and guidelines of the San Bernardino County Stormwater Program. The requirements of the WQMP shall remain in effect throughout the life of the project. (California State Order No. R8-2010-0036)

   All plans used as reference for design shall be listed on title sheet of all plans with reference numbers. All plans shall be submitted on 24" x 36" size sheets. Six (6)

copies of each are required. After final review, grading and SWPPP plans shall be submitted on 24" x 36" size, min. 4 mil, mylar sheets for City's approval.

3. Submission of plan sets shall be complete and include all required engineering designs and drawings listed in No. 2 above. All plans submitted shall be substantially complete, and no plan check queue place-holder plans will be accepted. An incomplete plan submittal will not be accepted for plan check.

4. All support documentation shall be submitted with the plans to be checked. Submission shall include:
   a. Hydrology Report and Hydrologic Calculations; (RMC 15.04)
   b. Geotechnical Report; (RMC 15.04)
   c. Easement Documents. (RMC 12.22)

5. A final WQMP that is in substantial conformance with the preliminary WQMP and in full conformance with the WQMP Guidance Document shall be submitted and approved prior to the approval of precise grading plans.

6. Cash cleanup deposit shall be submitted ($1,000.00). Deposit will be reimbursed after the work is completed and accepted by the City upon written request. (RMC 12.16.290)

7. For all development requiring coverage under the state of California General Storm Water Permit, in effect at the time of permit issuance, and whom have filed with the State Board a Notice of Intent (NOI), a copy of the Waste Discharge Identification Number (WDID) and NOI shall be submitted for review and file. Call (866) 563-3107.(RMC 13.54)

8. The Final WQMP shall also include a site trash plan detailing the installation, operation, and maintenance of a Full Capture System (FCS) for loose trash. The intent of the FCS is to capture loose trash preventing the trash from entering the site storm drains and basins. BMPs or devices used as FCS devices shall require acceptance by the City Engineer. Full Capture Systems are defined as treatment controls (either a single device or a series of devices) capable of trapping all particles 5 mm or greater. In addition, the FCS shall trap trash from the greater of:

   a. A flow not less than the peak flow rate, Q, resulting from a one-year, one-hour, storm. Precipitation intensity shall be determined using the NOAA ATLAS 14 Point Precipitation Frequency Estimates web site; or
   b. A flow rate equal to the on-site storm water conveyance system including pipes, channels, and swales.

B. The following items are required prior to RECORDATION OF TRACT/PARCEL MAP.

No map is required for this application.

C. The following items are required prior to issuance of the BUILDING PERMIT

1. Pay plan check fee as established per resolution. The amount is to be determined at plan check submittal.

2. Plans required to be submitted shall include:
   a. Street Reconstruction/Rehabilitation Plans;
   b. Pavement Striping Plans (including reflectorized pavement markers);
   c. Offsite Water Improvement/Utility Plans: and
   c. Onsite Potable Water and Irrigation Plans.

   All plans used as reference for design shall be listed on title sheet of all plans with reference numbers. All plans shall be submitted on 24" x 36" size sheets. Three (3) copies of each are required. After final review, plans shall be submitted on 24" x 36" size, min. 4 mil, mylar sheets for City's approval.

3. Submission of plan sets shall be complete and include all required engineering designs and drawings listed in No. 2 above. All plans submitted shall be substantially complete, and no plan check queue place-holder plans will be accepted. An incomplete plan submittal will not be accepted for plan check.

5. Finalize and obtain all necessary onsite and offsite permissions, permits, easements, right-of-way, and properties in order to satisfy the conditions of approval for this project. Such items may include:
   a. Encroachment Permits from Caltrans.

6. All off-site improvements shall be designed by owner's Civil Engineer in accordance with City Standard Specifications and Detail Drawings and Standard Specifications for Public Works Construction (Green Book) latest revision thereof. All existing utilities shall be pot-holed to determine the actual depth if no signed plan is available. Field notes will be submitted at time of submitting the plan for review and plan checking.

7. The approximate locations of existing underground utilities shall be shown on the improvement/site/grading plans. The utilities shall be plotted from record and field data. The City of Redlands and the Engineer assume no liability as to the exact location of said lines where locations are not shown.

8. Submission of approved onsite potable water and irrigation plans (pdf format) is required prior to connection to recycled water system. All onsite improvements shall be done in accordance with the Water Resources Control Board, Division of Drinking Water requirements for recycled water. City shall submit plans to Division of Drinking Water for approval prior to final approval and installation of irrigation meters.

9. Provide pad certification and compaction report to the Building and Safety Department.

10. Pay the required development impact fees per ordinance in effect at time of issuing the building permit. The exact amount will be determined based upon the review of the final building plan or project information. Development Impact Fees shall include:
    - Transportation Facilities; (RMC 3.54)
    - Fire Facilities; (RMC 3.60)
    - General Government Facilities; (RMC 3.60)
    - Police Facilities; (RMC 3.60)
    - Storm Drain Facilities; (RMC 3.56)
    - Water Capital Improvement Charge; (RMC 3.48)
    - Recycled Water Capital Improvement Charge; (RMC 3.53)
    - Water Source Acquisition Charge; (RMC 13.40)
    - Sewer Capital Improvement Charge; (RMC 3.44)
    - Solid Waste Capital Improvement Charge; (RMC 3.70) and
    - Recycled Water Frontage Charges. (RMC 13.44)

11. Final City approved mylars for all public improvements shall be on file with the Municipal Utilities and Engineering Department.

12. Although this project will have an on-going inspection throughout construction, a final inspection for all off-site improvements must be scheduled by developer to certify that these improvements comply with City specifications. (RMC 12.16.090)

13. Requirements for California Street (RMC 12.22):

    a. Dedicate to provide for a free right turn lane from southbound California Street to the westbound Interstate 10 onramp as approved by the City Engineer;
    b. Dedicate sidewalk easement(s) as needed to provide for Public ADA compliant crossings at all driveways;
    c. Repair/replace altered, broken or substandard existing off-site improvements to the project boundary. No altered, broken or substandard observed at this time;
    d. Provide full depth construction/reconstruction consistent with the City standard or alternative method of street rehabilitation as accepted by the City Engineer between the new curb and gutter to the street centerline verified through a geotechnical report;
    e. Construct underwalk drain, if necessary;
    f. Use traffic index of 9.0; and
    g. Install commercial fire hydrants as required by the Redlands Fire Department.

14. Requirements for Lugonia Avenue (RMC 12.22):

    a. Dedicate sidewalk easement(s) as needed to provide for Public ADA compliant crossings at all driveways;
    b. Repair/replace altered, broken or substandard existing off-site improvements to the project boundary. This shall include but is not limited to the replacement of altered, broken or substandard sidewalk;
    c. Provide full depth construction/reconstruction consistent with the City standard or alternative method of street rehabilitation as accepted by the City Engineer between the new curb and gutter to the street centerline verified through a geotechnical report;
    d. Construct underwalk drain, if necessary;
    e. Use traffic index of 9.0; and
    f. Install commercial fire hydrants as required by the Redlands Fire Department.

15. Provide for adequate drainage facilities. The applicant shall provide and submit all necessary hydrology/hydraulic studies and calculations in accordance with the San Bernardino County Hydrology Manual. (RMC 18.12.080)

16. Install reduced pressure principle backflow devices as required by City Engineer. (RMC 13.20)

17. Install onsite fire line with double detector check valve backflow devices at service connection satisfactory to the City Fire Department. (RMC 13.20)

18. Comply with the Solid Waste Recycling Access Act of 1991 (AB 1327) and install double solid waste bin enclosure(s). Submit a plan prepared by a licensed engineer showing bin enclosure(s) location on the site plan with solid waste truck turning and/or turnaround track template superimposed.

19. Submit recycling plans for site demolition/construction for review and approval in accordance with Chapter 13.66 of the Redlands Municipal Code.

20. Dedication documents shall be prepared by a licensed Land Surveyor or registered Civil Engineer (registered prior to January 1982) and must be submitted for review and approval before recordation. (California B&P Code 8761 and CCR 4411)

21. Submit for review, approval, & recordation a Lot Line Adjustment/Lot Merger to remove property line between APN(s) 0292-033-11 and 0292-033-13.

22. Any on-site water wells shall be abandoned. (RMC 13.42.140);

23. Improvement bonds must be posted for the total estimated cost of off-site improvements as follows (RMC 12.22.060):

Performance	100% security (due prior to building permit issuance)
(Warranty)	10% security (due at acceptance of improvements)
Labor and Materials	50% security (due prior to building permit issuance)

Acceptable security forms: Surety Bond(s), Letter of Credit from a qualified bank or institution, Cash Deposits, or Set Aside Letter (savings account) in City's name subject to approval of the City Attorney and Finance Director.

24. The 10% warranty security will be retained for one year after acceptance of public improvements by the City for warranty of off-site work. (12.20.100)

25. Execute Public Improvement Agreement. (RMC 12.22.060)

D. The following items are required prior to approval of APPLICATION FOR WATER SERVICE CONNECTION and prior to WATER METER INSTALLATION.

1. Pay the Water Capital Improvement Charge; (RMC 3.48.030)

2. Pay the Water Source Acquisition Charge; (RMC 13.40)

3. Pay the Recycled Water Capital Improvement Charge; (RMC 3.53.050)

4. Pay the Recycled Water Frontage Charges. (RMC 13.44); and

5. Pay the Water Meter Charge. (Redlands Ordinance No. 2830)

E. The following items are required prior to issuance of the ENCROACHMENT PERMIT.

1. Cash cleanup deposit shall be submitted ($1,000.00). Deposit will be reimbursed after the work is completed and accepted by the City upon written request. (Required unless previously submitted under Sections A, B or C.) (RMC 12.16.290)

2. Section 4216/4217 of the Government Code requires a Dig Alert Identification Number be issued before a "Permit to Excavate" will be valid. For your Dig Alert Identification Number, call Underground Service Alert toll free, 1-800-227-2600, two (2) working days prior to conducting any excavation. (RMC 12.20.120)

3. Encroachment Permit application and two (2) sets of City approved plans must be submitted for all off-site improvements. Encroachment Permit fees shall be paid prior to issuance of Encroachment Permit. (RMC 12.16.010)

4. A California OSHA Permit Number for all work that is 5 feet deep or deeper shall be provided. Call (909)383-4321. (RMC 12.16.040)

5. A copy of soils report is required with recommendation for the final pavement structural section to be submitted prior to placing of the street pavement. The report shall include test results and boring/sampling locations.

6. A traffic control plan shall be prepared in accordance with the latest revision of CA MUTCD or W.A.T.C.H. manual, submitted and accepted by the City Engineer prior to issuance of an encroachment permit. The plan shall show all required construction signage, warning devices, road closures, detours, delineation, phasing schedules and anticipated durations of closures and detours for any work within the public right-of-way. The plans shall provide names and 24-hour phone numbers of individuals who can be contacted regarding traffic control measures.

7. Improvement bonds must be posted for the total estimated cost of off-site improvements as follows:

Performance	100% security (due prior to building permit issuance)
(Warranty)	10% security (due at acceptance of improvements)
Labor and Materials	50% security (due prior to building permit issuance)

Acceptable security forms: Surety Bond(s), Letter of Credit from a qualified bank or institution, Cash Deposits, or Set Aside Letter (savings account) in City's name subject to approval of the City Attorney and Finance Director.

8. Execute Public Improvement Agreement.

9. The 10% warranty security will be retained for one year after acceptance of public improvements by the City for warranty of off-site work.

F. The following items are required prior to issuance of CERTIFICATE OF OCCUPANCY.

1. All requirements as described in Sections A, B, C, D and E of these conditions of approval shall be met.

2. All work shall be completed to the satisfaction of the City Engineer. All as-built plans shall be delivered to the Municipal Utilities and Engineering Department for review and approval.

3. The Engineer of Record shall file a Final Certification for all grading and improvements relating to the project development.

4. Owner's Licensed Land Surveyor shall reset survey points, monuments, record corners, and centerline ties that were destroyed during construction and shall file Corner Records for those points prior to completion of the project with San Bernardino County Surveyor. Copies of information shall be furnished to the

Municipal Utilities and Engineering Department. [California B&P Code 8762, 8767, 8768, 8771, and 8773(b)]

5. A list of as-built infrastructure improvement quantities shall be provided in the Excel format provided by the City showing quantities for each street segment (i.e. pavement, curb and gutter, sidewalk, etc.)

6. Streets may be required to have a seal coat applied at the option of the City Engineer. Type of seal coat is to be determined by the City Engineer.

7. Resurface existing roadway as directed by the City Engineer due to utility installations and construction damage.

8. Existing striping shall be removed and replaced as necessary. New striping and pavement markings shall be installed as required by the City Engineer.

9. Owner/Developer shall provide recycling receipts as required by the recycling plan.

G. The following items are required prior to release of SECURITIES/WARRANTIES/DEPOSITS.

1. Prior to the release of the securities for the project, all improvements shall be reviewed and accepted by the City Engineer.

2. The release of securities/warranties/deposits must be requested in writing to the City Engineer. Allow 30 days for processing.

FILE: Planned Development No. 7

City Council Meeting **K. 1.**

DATE: 07/16/2024

TO: Honorable Mayor and City Council Members

SUBJECT: Consideration of a sole source purchase with Horizon Structures, LLC for a modular kennel building not to exceed the amount of $275,000, an additional appropriation of the same, and authorize the City Manager or his designee to execute all documents pertaining to the purchase (Facilities and Community Services Director Crocker)

MOTION(S):

If the City Council determines that staff's recommendations are appropriate, the following motion is provided:

1. I move to approve the sole source purchase of a modular dog kennel building from Horizon Structures, LLC for $275,000, an additional appropriation of the same, and authorize the City Manager or his designee to execute all documents pertaining to the purchase.

RECOMMENDATION:

Staff recommends that City Council approve a sole source purchase with Horizon Structures, LLC for a modular dog kennel building, an additional appropriation of the same, and authorize the City Manager or his designer to execute all documents pertaining to the purchase.

DISCUSSION:

The Animal Services Division of the Facilities and Community Services Department at the City of Redlands oversees the operation of the Redlands Animal Shelter, which provides essential care and shelter for lost and stray animals within the city limits. Constructed in 1985, the shelter originally accommodated 28 dog kennels. However, nearly four decades of operation, coupled with the city's population growth, have significantly increased the demand for animal services. Consequently, the shelter has consistently

operated at or above its capacity in recent years. To address this critical need, the staff has identified the expansion of kennel space as a priority. After a thorough evaluation, it was determined that a modular kennel building would be the most efficient and timely solution. Horizon Structures, LLC specializes in the manufacture and delivery of turnkey modular dog kennel buildings constructed to commercial standards. This solution offers a rapid deployment option that meets the immediate need for additional kennel space. The proposed acquisition for the Redlands Animal Shelter includes a 24'x60' modular kennel building, which will provide 24 kennels equipped with both indoor and outdoor running spaces. The interior spaces of these kennels will be climate-controlled to ensure the comfort and well-being of the animals. Horizon Structures, LLC has been selected as the sole source vendor for this project, as they are the exclusive provider of turnkey commercial dog kennel modular buildings. Their expertise and product offerings uniquely qualify them to meet the shelter's expansion requirements efficiently and effectively. This item includes the purchase of the pre-fabricated modular building. However, a future action will be brought before the City Council for contractual services to prepare the site and install the building. The total project cost is estimated not to exceed $500,000 and will be funded by the capital project reserve.

ALTERNATIVES:

The City Council may elect not to approve the purchase of a modular dog kennel building and provide alternative direction to staff.

Purchase Requisition # _____

Estimated Total Cost: $ 275,000

Proposed Vendor: Horizon Structures LLC

Request Term: One Time

This form must accompany the purchase document whenever an exception to the competitive process is requested. Requests for goods and/or services from a specific vendor or limited to a specific brand, where substitutes to the recommended vendor or brand are unacceptable, must be accompanied by a written justification explaining the circumstances that make alternatives unacceptable.

The City Manager will determine whether the justification is appropriate. Requests for exception must be supported by factual statements that will pass an audit.

INSTRUCTIONS

1. Please check all applicable categories (a. through i.) below and provide additional information where indicated.

☐ a. The requested product is an integral repair part or accessory compatible with existing equipment.

Existing Equipment: _____

Manufacturer/Model Number: _____

Age: _____

Current Estimated Value: _____

☒ b. The requested product has unique design/performance specifications or quality requirements that are not available in comparable products.

☐ c. I have standardized the requested product and the use of another brand/model would require considerable time and funding to evaluate.

☐ d. The requested product is one in which I (and/or my staff) have specialized training and/or extensive expertise. Retraining would incur substantial cost in time and/or funding.

☐ e. The requested product is used or demonstration equipment available at a lower-than-new cost.

☐ f. Repair/Maintenance service is available only from manufacturer or designated service representative.

☐ g. Upgrade to or enhancement of existing software is available only from manufacturer.

☐ h. Service proposed by vendor is unique; therefore, competitive bids are not available or applicable.

☐ i. Other factors (provide detailed explanation in #2 below).

2. Provide a detailed explanation and pertinent documentation *for each category* checked in item 1 above. Attach additional sheets if necessary:

Horizon Structures LLC is the only provider currently building and delivering commercial grade modular dog kennels for the animal shelter environment.

3. Was an evaluation of other equipment, products, or services performed?

☒ Yes ☐ No

***If yes, please explain the type of evaluation performed and provide all supporting documentation*:**

Staff conducted extensive research and were unable to find any other entities that provide a co

4. List below the name of each individual who was involved in the evaluation, if conducted, and in making the recommendation to procure this product or service. Attach additional information, if necessary.

5. Explain what action(s) the department would take if the sole/single source services were no longer available

Consideration of traditionally built structure at significant increase in time and cost.

6. I certify that the above information is accurate to the best of my knowledge, and a signed copy of this document will be kept on file and available for audit in my department

City Council Meeting **K. 2.**

DATE: 07/16/2024

TO: Honorable Mayor and City Council Members

SUBJECT: Consideration of a request to establish restricted parking zones on 3rd Street and Al Harris Lane, and determine this action is exempt from environmental review pursuant to Section 15061(b)(3) of the guidelines implementing the California Environmental Quality Act (Municipal Utilities and Engineering Director Harris)

MOTION(S):

If City Council determines the staff recommendation is appropriate, the following motions are provided:

1. I move that City Council determine that establishing restricted parking zones on 3rd Street and Al Harris Lane is exempt from environmental review pursuant to Section 15061(b)(3) of the State's guidelines implementing the California Environmental Quality Act; and

2. I move that City Council approve restricted parking zones on 3rd Street and Al Harris Lane as presented in the staff report and exhibit.

RECOMMENDATION:

In a 3:2 vote on May 23, 2024, with two (2) Commissioners absent, the Traffic and Parking Commission declined to make a City Council recommendation to establish restricted parking zones on 3rd Street and Al Harris Lane, citing their reluctance to allow the use of public rights-of-way by a private business.

Staff recommends that City Council determine that establishing restricted parking zones on 3rd Street and Al Harris Lane is exempt from environmental review pursuant to Section 15061(b)(3) of the State's guidelines implementing the California Environmental Quality Act.

Staff further recommends City Council approval to establish restricted parking zones on 3rd Street and Al Harris Lane.

DISCUSSION:

In 2012, California eliminated redevelopment agencies and the Redlands Redevelopment Agency was required to sell real property holdings. Only properties being held for public use could be transferred to municipalities. Subsequently, the Mutual Orange Distributors (MOD) Packing House property located at 330 N. 3rd Street was sold to Arteco Partners (Arteco) on December 6, 2016, although escrow did not close until May 5, 2019. On March 1, 2018, the Historic and Scenic Preservation Commission adopted Resolution No. 2018-02, recommending approval of historic resource designation No. 132 for the property. On May 1, 2018, the City Council adopted Resolution No. 7838 designating the 330 N. 3rd Street property as a historic property. On May 1, 2018, the City Council adopted Resolution No. 7839 and Resolution No. 7840 approving Conditional Use Permit (CUP) No. 1100 for an adaptive reuse project to convert the structure located on this property to provide space for several food and alcoholic beverage service establishments operating in accordance with specific conditions of approval.

The Arteco project is now known as the Redlands Public Market (RPM) and is currently being renovated to provide space for eighteen (18) micro-restaurants and businesses, primarily small food and beverage service establishments, within the historic 34,215 square-foot structure. Exterior site improvements are also being constructed to provide safe access for pedestrians and vehicles, outdoor patio/dining spaces, landscaping, lighting, and other attractive project elements. The site's historic designation exempts the project from off-street parking requirements, and the project relies on existing public street rights-of-way for customer parking. Arteco proposes to establish restricted parking zones on 3 rd Street and Al Harris Lane to reduce the potential for "long-term" parking within these public rights-of-way.

The Traffic and Parking Commission (TPC) first considered the Arteco request to recommend that the City Council establish time restricted parking zones on 3rd Street and Al Harris Lane on January 25, 2024. Several nearby businesses spoke in opposition to the proposed parking restrictions, noting that the plan would significantly impact the ability of customers to access their businesses. This discussion was continued to the next TPC meeting to allow the applicant, MUED staff, and these nearby businesses time to develop a parking solution that could be supported by all. On March 28, 2024, the TPC was presented with a revised restricted parking zone plan that was supported by the applicant, MUED staff, and nearby businesses. Nearby businesses attended this TPC meeting as well and spoke in favor of the revised restricted parking plan. However, the TPC continued this discussion to the next TPC meeting to allow MUED staff time to compile additional information. The TPC also encouraged the applicant to discuss opportunities for shared off-street parking with adjacent businesses. On May 23, 2024, the TPC was presented with the additional information requested.

Again, nearby businesses attended the TPC meeting and spoke in favor of the proposed restricted parking plan. However, the TPC voted 3:2 against recommending City Council approval of the proposed restricted parking zones, generally noting their concern with the use of public rights-of-way by a private business. Two (2) Commissioners did not attend this meeting. The TPC serves as an advisory commission to the City Council and neither directly approves nor denies requests. In this case, the majority of TPC members attending the May 23, 2024, TPC meeting voted to make no recommendation to the City Council. Soon after, Arteco requested that approval of the proposed restricted parking zone designation plan be considered by City Council.

MUED staff is concerned that most or all on-street parking within the 3rd Street and Al Harris Lane rights-of-way will be used daily for "long-term" parking, perhaps by RPM employees, businesses, and/or vendors, without thoughtful time-restricted parking zones. This will contribute to additional traffic congestion within these corridors, and may encourage RPM customers to park vehicles at adjacent business locations without permission. RPM requests to establish a 10-minute parking zone directly adjacent to RPM on the east side of 3rd Street (see Parking Designation Map blue/teal area) to allow for quick turnover of vehicles accessing RPM to pick up to-go food orders. Additionally, RPM requests to establish additional 90-Minute (see Parking Designation Map purple area) and No Parking (see Parking Designation Map red area) zones. MUED staff, RPM, and nearby businesses support this parking restriction proposal. If City Council approves these restricted parking zones, MUED staff and businesses along 3rd Street and Al Harris Lane will meet periodically to evaluate the need to revise the parking plan and/or install additional traffic control measures.

Approval of the proposed restricted parking zones on 3rd Street and Al Harris Lane is exempt from environmental review pursuant to Section 15061(b)(3) of the State's guidelines implementing the California Environmental Quality Act since it can be seen with reasonable certainty to have no possibility of causing a significant effect on the environment.

ALTERNATIVES:

City Council may deny the staff recommendation and provide alternate direction.

STRATEGIC PLAN:

Priority A, Strategic Objective 2. Economic Vitality - Increase accessibility to businesses and essential services through improvements to mobility and parking

SUBMITTED BY:
John R. Harris, Municipal Utilities and Engineering Director

   A. Minutes of the regular meeting of September 28, 2023

3. **Public Comment**

   The public is invited to speak on items not listed on this agenda, but within the jurisdiction of the Commission. However, no general discussion of such items, or action on such items, may be taken. Comments are limited to three minutes.

4. **New Business**

   A. Request to establish on-street parking restrictions on Al Harris Lane and 3rd Street between Redlands Boulevard and Orange Street

   B. Request to clarify and distinguish the scope of the Traffic and Parking Commission with regard to the responsibilities and duties of the Planning Commission

   C. Request to clarify the scope of the traffic and parking commission with regard to non-motorized traffic

   D. Request to update ordinances regarding bicycle licenses

5. **Communications**

   A. Annual report to City Council

   B. Status of Traffic and Parking Commission budget

   C. Status of work orders

In compliance with the Americans with Disabilities Act, if you need special assistance to participate in this meeting, please contact Goutam K. Dobey of Municipal Utilities/Engineering Department at (909) 798-7584 x2. Notification 48 hours prior to the meeting will enable the City to make reasonable arrangements to ensure accessibility to this meeting. NOTE: Any writings or documents distributed to a majority of the Traffic and Parking Commission regarding an open session agenda item less than 72 hours before this meeting are available at https://www.cityofredlands.org/traffic-and-parking-commission or the Municipal Utilities & Engineering Department at 35 Cajon Street, Suite 15A for public inspection or by calling 909-789-7584 x 7.
(28 CFR 35.102-35.104 ADA Title II)

D. Discussion about roundabouts

6. Old Business

A. Continued discussion of the duties and responsibilities under the TPC's purview

7. Adjournment

In compliance with the Americans with Disabilities Act, if you need special assistance to participate in this meeting, please contact Goutam K. Dobey of Municipal Utilities/Engineering Department at (909) 798-7584 x2. CITY OF REDLANDS
TRAFFIC AND PARKING COMMISSION
REGULAR MEETING
Thursday, September 28, 2023 at 6:00 P.M.

MINUTES

1. ATTENDANCE & CALL TO ORDER

The regular meeting of the Traffic and Parking Commission was called to order at 6:00 pm by Vice Chair Cassie MacDuff.

Roll Call:

Present

Commissioners:	Staff:
Cassie MacDuff	Martin Gonzalez, PD
Kevin Morningstar	John Harris, MUED
Carl Davis	Goutam Dobey, MUED
Bill Waddell	Johana Silva, MUED
Johnathan Ghazal	Brian Desatnik, DSD

Absent

Commissioners:
Eric Shamp (excused)
Andrew Hoder (excused)

2. APPROVAL OF MINUTES

Commissioner MacDuff and Chairperson Shamp made corrections to the minutes.

A motion was made by Commissioner Morningstar and seconded by Commissioner Ghazal to approve the minutes of the regular meeting held on July 27, 2023 with the inclusion of the letter from the Redlands Chamber of Commerce. By roll call vote of 5-0, the motion carried unanimously.

3. PUBLIC COMMENT

No non-agenda related public comments were made. Comments related to specific agenda items are incorporated into the item discussion.

4. OLD BUSINESS

4A. *Downtown Parking Study*

Director Desatnik presented staff's recommendations on the Downtown Parking Study. The recommendations encompass various immediate and medium-term strategies. Immediate actions include enhancing turnover in timed parking spaces

DRAFT

through increased parking enforcement, initiating a feasibility study for a parking structure to assess capacity and economic impacts, focusing on acquiring private lots with over twenty-five (25) spaces for public or employee parking, and starting safety enhancements in existing public lots. Street crosswalk improvements in identified priority areas are also prioritized immediately. Evaluating special event impacts on parking availability revealed minimal disruptions except for certain holidays and specific events. Moreover, a medium-term initiative, the paid parking pilot program, is proposed after evaluating the effectiveness of increased enforcement. The consideration of a Parking Benefits District (PBD) is not immediate and depends on the success of the pilot program.

Evan Sanford, the Executive Director of the Redlands Chamber of Commerce, raised various concerns about the Study's content and shared results to a survey conducted by the Chamber.

Noah Moeller, representative from the Redlands Chamber of Commerce, addressed concerns raised by business employees regarding safety while walking from parking areas to their workplace.

The commission discussed the feasibility of making Citrus Avenue a one-way street from Orange Street to Redlands Boulevard and adding angled parking, and courtesy warnings before enforcement measures are taken. The commission systematically reviewed each recommendation individually to ascertain their position on each one.

A motion was made by Commissioner Morningstar and seconded by Commissioner Davis to recommend the following to City Council:

Increased Parking Education and Phased Enforcement: Educate the public with signage, communication with the business community, and develop parking options for employees of downtown businesses. Phase-in parking enforcement, with a focus on issuing warnings for a period of time to be determined, followed by citations and fines.

Pursue Shared-Use Agreements with Private Parking Lot Owners: Pursue agreements with local churches and businesses on underutilized parking lots.

Encourage Use of Existing Parking Facilities through Safety Improvements: Target improvements in convenience, safety, and usability for existing parking facilities.

The Traffic and Parking Commission (TPC) did the support the following: a feasibility study of parking structure, paid parking pilot program, or the establishment of a PBD.

Request for Staff Report: Task staff to return to the Commission with a report on downtown and parking safety, including an assessment of the impact of homelessness.

Study on Citrus Ave Restriping: Explore the restriping of Citrus Ave for additional parking, one-way circulation alternating with State Street, and introducing greenery and shade improvements.

By roll call vote of 5-0, the motion carried unanimously.

5. COMMUNICATIONS

4A. *Citywide Left-Turn Pocket Study*

Ms. Silva provided an update on the Left-Turn Pocket Study, presenting tables that outline recommendations for signal timing adjustments and left-turn pocket striping configurations. These tables distinguished between actions that can be carried out in-house and those requiring additional evaluation.

4B. *Status of Traffic and Parking Commission budget*

Ms. Silva presented a slide with an overview of expenditures relating to the TPC budget.

4C. *Status of work orders*

Ms. Silva presented a slide and provided a brief overview of the status of work orders that were previously recommended by the Commission and approved by City Council, and the status of work orders which do not require Commission recommendation and have been approved and completed by city staff in accordance with the Redlands Municipal Code.

4D. *Discussion about roundabouts*

A motion was made by Commissioner Waddell and seconded by Commissioner Morningstar to continue this item to the next commission meeting.

6. ADJOURNMENT

The meeting was adjourned by Chairperson MacDuff at 7:49 pm.

DRAFT

AGENDA ITEM **4A**
COMMISSION MEETING OF **1/25/24**

REQUEST FOR COMMISSION ACTION

SUBJECT: REQUEST BY ARTECO PARTNERS TO ESTABLISH ON-STREET PARKING RESTRICTIONS ON AL HARRIS LANE AND 3RD STREET BETWEEN REDLANDS BOULEVARD AND ORANGE STREET

MOTION:

I move to recommend to City Council approval of the implementation of the proposed parking restrictions as depicted in “Exhibit 1”.

STAFF RECOMMENDATION:

Staff recommend that the commission deliberate on the proposed parking restrictions, as depicted in "Exhibit 1," and evaluate whether the restrictions are warranted.

DISCUSSION:

Arteco Partners is the owner and developer of the Redlands Public Market, a future development with a collection of approximately twenty (20) small restaurants located at 330 N 3rd Street, in an historically significant building that does not provide on-site parking. It will necessarily rely heavily on public parking options both on-street and off-street. The surrounding Santa Fe Historic District is undergoing new construction, including the restoration of the historic depot, which will primarily house restaurant businesses. Approximately seventy (70) percent of new commercial retail development results in food-related uses, with the recent opening of a restaurant and bar named Overland at the northwest corner of Al Harris Lane and Orange Street being the initial establishment.

Arteco Partners believes that a critical factor in the success of these restaurants, particularly in the post-pandemic environment marked by increased off-site dining and delivery sales, is the provision of short-term convenient customer parking. This need arises for quick visits to pick up take-out food, facilitate food delivery services, and cater to other brief visits.

The proposal seeks to discourage long-term parking from utilizing convenient on-street spaces that are ideally suited for short-term patrons. People intending to park for extended periods or planning prolonged visits to the food hall or other nearby restaurants would be encouraged to park in off-street parking lots and the Stuart Avenue parking garage.

The proposal is to transition all parking in the Santa Fe district on Al Harris Lane and 3rd Street, north of Redlands Avenue to thirty (30) minute parking zones. This proposed time limit extension would apply from 6:00 AM to 10:00 PM. The extension until 10:00 PM accommodates destination bars that attract late-night patrons, allowing for longer-term

customer parking while ensuring the safety and convenience of late-night visitors.

An exception to the proposal is the request to establish a zone for five (5) minute parking along the east curb of 3rd Street. directly in front of Redlands Public Market. This area is proposed to be used as a customer loading zone and a location for delivery drivers to pick up orders. The intent is to facilitate brief parking for individuals collecting pre-prepared orders, thereby supporting efficient order pickup processes for businesses and their customers.

Furthermore, due to insufficient width in certain zones, on-street parking cannot be accommodated on both sides of the street. To address this, it's recommended to establish a no-parking zone on the westbound side of Al Harris Lane. Additionally, staff recommends implementing a no-parking zone for the initial 125 feet of either the south or northbound lanes of 3rd Street, extending from Redlands Boulevard. This zone should also encompass the area adjacent to the proposed sidewalk extension at the corner of Al Harris Lane and 3rd Street.

Numerous prospective tenants visiting the site have expressed inquiries about parking, emphasizing the importance of short-term parking for pickups and deliveries. Accommodating these needs is crucial for the traffic flow of this area.

ALTERNATIVES:

The commission may do one of the following:

1. Recommend approval the proposed on-street parking restrictions with modifications; or
2. Recommend denial of the request.

FISCAL IMPACT:

There is no fiscal impact associated with this action related to the costs including equipment and materials. Work will be performed by City Staff as maintenance.

REQUEST FOR COMMISSION ACTION

SUBJECT: REQUEST TO CLARIFY AND DISTINGUISH THE SCOPE OF THE TRAFFIC AND PARKING COMMISSION WITH REGARD TO THE RESPONSIBILITIES AND DUTIES OF THE PLANNING COMMISSION

DISCUSSION:

In previous Commission meetings, the Commission has requested City staff to provide clarity in distinguishing those parking concerns that are within the scope of the Traffic and Parking Commission, and those that fall under the duties of the Planning Commission. The proposed action seeks to give clear directions to staff on this matter.

The Planning Commission is charged with reviewing new development projects for compliance with the Zoning Regulations as defined in Title 18 of the City ordinance, which includes off-street parking requirements.

The duties of the Traffic and Parking Commission are defined in Section 2.48.040. Among those duties is to advise the City Council on the development of adequate parking for commercial and retail uses, recommend policies to encourage, develop and support adequate parking within the City, recommend actions for the establishment of long-term parking plans for the City and in particular the downtown Redlands business area, and advise the City Council in the administration of resources for the development of parking. The commission may also assist other advisory groups such as the Planning Commission in matters relating to parking.

It is therefore within the scope of the Traffic and Parking Commission to provide supplemental review of any proposed project that comes before the Planning Commission which seeks reductions to parking requirements in the Zoning ordinance, as those reductions can impact “adequate parking”, both off-street and on-street, which is the charge of the Traffic and Parking Commission. It is also within the scope of the Traffic and Parking Commission to review all changes and updates to Zoning ordinances regarding off-street parking.

Additionally, the ordained duties of the Traffic and Parking Commission do not currently address the development of adequate parking for multi-family residential uses, only commercial and retail. However, inadequate parking at multi-family residential properties can have a profound effect on the availability of adjacent on street parking, which is clearly within the scope of the Commission.

The following proposed changes to the City ordinance seeks to clarify these discrepancies and omissions, ensuring that the combined oversights of the Traffic and Parking Commission and the Planning Commission fully address adequate parking within the City.

MOTION:

I move to recommend to City Council a request to modify City ordinances as follows:

> 2.48.040: DUTIES:
>
> It shall be the duty of the Traffic and Parking Commission to perform educational activities in traffic matters, to supervise the preparation and publication of traffic reports, to receive complaints relating to traffic matters and to recommend to the City Council

ways and means of improving traffic conditions and the administration and enforcement of traffic regulations.

The Traffic and Parking Commission shall also advise the City Council on the development of adequate parking for ~~commercial and retail uses~~ commercial, retail, and multi-family uses, recommend policies to encourage, develop and support adequate parking within the City, recommend actions for the establishment of long term parking plans for the City and in particular the downtown Redlands business area, and advise the City Council in the administration of resources for the development of parking. The commission may also assist other advisory groups such as the Planning Commission in matters relating to parking.

The commission shall keep records of all of its acts and proceedings, and shall submit all of its recommendations to the City Council and to the City Manager.

The commission shall assist other advisory groups such as the Planning Commission in requests for any variances to off-street parking that are required by Title 18 Zoning Regulations.

The Traffic and Parking Commission shall also advise the City Council on updates to parking requirements described in the Title 18 Zoning Regulations. (Ord. 2265 § 1, 1994)

PREPARED BY:

Eric Shamp, TPC Chairman

REQUEST FOR COMMISSION ACTION

SUBJECT: REQUEST TO CLARIFY THE SCOPE OF THE TRAFFIC AND PARKING COMMISSION WITH REGARD TO NON-MOTORIZED TRAFFIC

DISCUSSION:

Over the past decade, the City has developed significant infrastructure to support the use of non-motorized vehicles, including bike lanes (Class III bikeways) and bike paths (Class I bikeways). In addition, the recent proliferation of e-bikes and other forms of personal transportation devices has introduced non-motorized and non-automobile traffic to City streets not seen since early in the last century. The scope of the Traffic and Parking Commission is not well defined in our City ordinances with regards to non-motorized and non-automobile road users.

The duties of the Traffic and Parking Commission are defined in Section 2.48.040, using terms that are defined in various locations throughout the City ordinance. Some terms, such as “traffic” are undefined anywhere in the ordinances, leading to confusion over the Commission’s jurisdiction over non-motorized and non-automobile vehicles and non-motorized thoroughfares. This leaves a significant portion of road users without a Commission to educate, supervise, receive complaints, and make recommendations.

If the Commission wishes to clarify and define its scope to include non-motorized and non-automobile traffic and non-motorized thoroughfares, some changes to the City ordinance are in order. By making the following changes to definitions in Sections 10 and 12 of the ordinances, Section 2.48.040 can remain as written while effectively being expanded to include all road users, not just motorized automotive road users.

MOTION:

I move to recommend to City Council a request to modify City ordinances as follows:

10.04.130: MOTOR VEHICLES:

A "motor vehicle" is any vehicle which is self-propelled. Electric motorized vehicles that have a limiting device that restricts their speed to not more than 20 miles per hour are not considered motor vehicles. (Prior code § 68600.1)

10.04.300: TRAFFIC:

‘Traffic’ refers to the movement of vehicles on any street.

12.04.160: STREET:

"Street" means public street, lane, alley, court, easement, right of way, non-motorized thoroughfare, or other public place in the city, as they now exist or may hereafter be established, or any portion thereof, including all or part of any highway, right of way or easement, whether or not such entire area as used for highway purposes, excepting any easement or right of way vested in the city for a specified single utility purpose only. (Prior code § 74011)

12.04.210: VEHICLE:

"Vehicle" means a device in, upon, or by which any person or property is or may be propelled, moved or drawn on the highway or street ~~weighing in excess of one hundred (100) pounds~~. (Prior code § 74016)

12.04.230: NON-MOTORIZED THOROUGHFARE:

'Non-motorized thoroughfare' means a public easement set aside for the travel of pedestrians, non-motorized vehicles, and electric motorized vehicles that have a limiting device that restricts their speed to not more than 20 miles per hour. Non-motorized thoroughfares shall not include unpaved trails located in public parks, conservancies, or wilderness areas.

PREPARED BY:

Eric Shamp, TPC Chairperson

REQUEST FOR COMMISSION ACTION

SUBJECT: REQUEST TO UPDATE ORDINANCES REGARDING BICYCLE LICENSES

DISCUSSION:

As allowed under the 2022 California Vehicle Code Section 39000, the City of Redlands ordinances require a California Bicycle License to operate any bicycle on City roadways. Licenses are issued by the State and procured through the Redlands Police Department. The Police Department does not enforce the requirement for a license. However, the program remains in place, underutilized. A bicycle owner can still fill out a form provided by RPD, pay a nominal fee, and secure a California Bicycle License. While out of date, this program has the potential to help combat bicycle theft and aid in the recovery and return of stolen bicycles to their owners.

Bicycle theft is an unfortunately common occurrence in the City. With the recent proliferation of e-bikes and high-end bicycles, the cost to owners due to these thefts has increased. As one means of addressing this, the Bicycle License program should to be updated and made optional. In addition, the public and local bicycle retailers need to be made aware of this program.

The proposed changes to Chapter 10.56 BICYCLES will remove the license requirement and associated penalties, while providing clear direction to the public on how to participate in the program.

MOTION:

I move to recommend to City Council a request to modify City ordinances as follows:

Make the following changes to CHAPTER 10.56 BICYCLES:

~~10.56.010: LICENSE REQUIRED:~~

~~It is unlawful for any person to operate or use a bicycle, as defined in section 21200 of the Vehicle Code without having attached thereto a California bicycle license, upon any of the streets, alleys or public highways of this city. (Prior code § 63100)~~

10.56.020: LICENSE; ISSUANCE:

The police department of the city is authorized and directed to obtain original bicycle license ~~plates~~ decals and renewal license ~~plates~~ decals from the California department of motor vehicles and issue same at the police department. (Prior code § 63101)

10.56.030: LICENSE; CONDITION OF BICYCLE:

The bicycle shall be equipped and maintained as provided for in section 21201 of the Vehicle Code at all times when operated in the city, and before a license can be issued. (Prior code § 63102)

~~10.56.040: LICENSE; EFFECT:~~

~~Licenses, when issued, shall entitle the licensee to operate such bicycle, for which said license has been issued, upon all the streets, alleys and public highways, exclusive of the sidewalks thereof, in the city. (Prior code § 63103)~~

10.56.050: LICENSE PLATE AND REGISTRATION:

The city shall provide, for a fee, a California bicycle license and maintain registration records as provided in division 16.7 of the California Vehicle Code. (Prior code § 63104)

10.56.060: LICENSE; BICYCLE ATTACHMENT:

~~The plate shall be attached to the frame of the bicycle below the seat on the seat post portion of the frame.~~ The license decal shall be adhered to the frame of the bicycle below the seat on the front of the seat tube portion of the frame. If this placement is not possible, as would be the case with recumbent bicycles, the decal shall be adhered to the frame in a forward-facing position, so that the decal is legible without lifting the bicycle off the ground. (Prior code § 63105)

10.56.070: LICENSE ~~PLATE~~ DECAL REMOVAL:

~~The plate shall not be removed.~~ Removal of the license decal by the owner will void the license. (Prior code § 63106)

10.56.080: LICENSE; RECORDATION:

The police department shall maintain registration records. (Prior code § 63107)

10.56.090: LICENSE; NOTIFICATION OF BICYCLE DESTRUCTION:

It shall be the duty of every license holder to notify to police department within ten (10) days of the destruction of the bicycle. The registration card shall be returned to the police department at that time. (Prior code § 63108)

10.56.100: FEES; INITIAL PURCHASE AND RENEWAL:

The initial license fee and the renewal fee to be paid for each bicycle shall be ~~one dollar fifty cents ($1.50)~~ [revised fee to be determined]. ~~A bicycle purchased after license deadline may be licensed for fifty cents ($0.50) for each year remaining in the three (3) year period or portion of the remaining year, upon proof of sale.~~ (Prior code § 63200)

~~10.56.110: FEES; PENALTY FOR LATE RENEWAL:~~

~~A penalty of one dollar ($1.00) shall be added upon any application for annual renewal of registration made on or after February 1 of the registration renewal year, except as provided in section 10.56.100 of this chapter. (Prior code § 63201)~~

10.56.120: FEES; PAYMENT:

All licenses shall be payable in advance to the chief of police or his representative, who is designated as the license collector for all fees due under this chapter. (Prior code § 63202)

10.56.130: FEES; TRANSFER:

Pursuant to sections 10.56.160 and 10.56.170 of this chapter, a bicycle license may be transferred when the ownership of said bicycle is transferred and a fee of ~~fifty cents ($0.50)~~ [revised fee to be determined] shall be paid for the registration of such transfer. (Prior code § 63203)

10.56.140: DEALER; SECONDHAND DEALER PURCHASE REPORT:

~~All persons engaged in the business of buying secondhand bicycles are required to make a weekly report to the police department, giving the name and address of the person from whom each bicycle is purchased, the description of each bicycle purchased, the frame number thereof, and the number of any license found thereon, if any.~~ All persons engaged in the business of buying secondhand bicycles are required, upon purchasing a bicycle displaying a license decal, to report to the police department, giving the name and address of the person from whom each bicycle is purchased, the description of each bicycle purchased, the frame number thereof, and the number of the license found thereon. (Prior code § 63300)

10.56.150: DEALER; ~~REPORT OF~~ REGISTRATION UPON SALE:

~~All persons engaged in the business of selling new or secondhand bicycles are required to make a weekly report to the police department, giving a list of all sales made by such dealers, which list shall include the name and address of each person to whom sold, the kind of bicycle sold, together with a description and frame number thereof, and the number of the license attached thereto, if any.~~ All persons engaged in the business of selling new or secondhand bicycles are required to provide a Bicycle License Application Form to the buyer of any bicycle." (Prior code § 63301)

10.56.160: REGISTRATION TRANSFER; REPORT:

It is the duty of every person who sells or transfers ownership of any licensed bicycle, to report such sale or transfer by returning to the police department the registration card issued to such person as licensee thereof, together with the name and address of the person to whom said licensed bicycle was sold or transferred; and such report shall be made within ten (10) days of the date of said sale or transfer. (Prior code § 63400)

~~10.56.170: REGISTRATION TRANSFER; APPLICATION:~~

~~It shall be the duty of the purchaser or transferee of such bicycle to apply for a transfer of registration thereof within ten (10) days of the date of such transfer of registration. (Prior code § 63401)~~

~~10.56.180: IMPOUNDMENT:~~

~~In addition to the penalty hereinabove set forth, the police department, or any of the members thereof, may impound any bicycle operated in violation of any of the provisions of this chapter, and retain possession of same until the license provided for herein is obtained by the owner of such bicycle. (Prior code § 63500~~)

10.56.190: CITATION; ISSUANCE:

The police department may issue a traffic citation to any person who operates a bicycle in violation of any of the provisions of this chapter or the California Vehicle Code. (Prior code § 63501)

CITY OF REDLANDS
TRAFFIC AND PARKING COMMISSION
REGULAR MEETING AGENDA

ERIC SHAMP, CHAIR

CASSIE MACDUFF, VICE CHAIR — ANDREW HODER, COMMISSIONER
KEVIN MORNINGSTAR, COMMISSIONER — CARL DAVIS, COMMISSIONER
BILL WADDELL, COMMISSIONER — BENJAMIN DANIEL PEREZ, COMMMISSIONER

Thursday, March 28, 2024, at 6:00 P.M.
City Council Chamber, Civic Center
35 Cajon Street, Suite 2, Redlands, CA

This will be an open public meeting. The following information comprises the agenda for a meeting of the Traffic and Parking Commission of the City of Redlands.

1. **Attendance & Call to Order**

2. **Approval of Minutes**

   A. Minutes of the regular meeting of January 25, 2024

3. **Public Comment**

   The public is invited to speak on items not listed on this agenda, but within the jurisdiction of the Commission. However, no general discussion of such items, or action on such items, may be taken. Comments are limited to three minutes.

4. **Old Business**

   A. Request to establish on-street parking restrictions on Al Harris Lane and 3rd Street between Redlands Boulevard and Orange Street

   B. Request to clarify and distinguish the scope of the Traffic and Parking Commission with regard to the responsibilities and duties of the Planning Commission

   C. Request to clarify the scope of the Traffic and Parking Commission with regard to non-motorized traffic

   D. Request to update ordinances regarding bicycle licenses

5. **Communications**

   A. Safety report on downtown parking

   B. Status of Traffic and Parking Commission budget

   C. Status of work orders

In compliance with the Americans with Disabilities Act, if you need special assistance to participate in this meeting, please contact Goutam K. Dobey of Municipal Utilities/Engineering Department at (909) 798-7584 x2. Notification 48 hours prior to the meeting will enable the City to make reasonable arrangements to ensure accessibility to this meeting. NOTE: Any writings or documents distributed to a majority of the Traffic and Parking Commission regarding an open session agenda item less than 72 hours before this meeting are available at https://www.cityofredlands.org/traffic-and-parking-commission or the Municipal Utilities & Engineering Department at 35 Cajon Street, Suite 15A for public inspection or by calling 909-789-7584 x 7. (28 CFR 35.102-35.104 ADA Title II)

D. Roundabout presentation

6. Adjournment – Next Meeting is May 23, 2024 at 6:00 PM

In compliance with the Americans with Disabilities Act, if you need special assistance to participate in this meeting, please contact Goutam K. Dobey of Municipal Utilities/Engineering Department at (909) 798-7584 x2. CITY OF REDLANDS
TRAFFIC AND PARKING COMMISSION
REGULAR MEETING
Thursday, January 25, 2024 at 6:00 P.M.

MINUTES

1. ATTENDANCE & CALL TO ORDER

The regular meeting of the Traffic and Parking Commission was called to order at 6:00 pm by Chairperson Eric Shamp.

Roll Call:

Present

Commissioners:	Staff:
Eric Shamp	Ryan Steinhaus, PD
Kevin Morningstar	Martin Gonzalez, PD
Carl Davis	Brian Desatnik, DSD
Bill Waddell	John Harris, MUED
Andrew Hoder	Goutam Dobey, MUED
Benjamin Daniel Perez	Johana Silva, MUED

Absent

Commissioners:
Cassie MacDuff (excused)

2. APPROVAL OF MINUTES

Commissioner MacDuff and Chairperson Shamp made corrections to the minutes.

A motion was made by Commissioner Morningstar and seconded by Commissioner Waddell to approve the minutes of the regular meeting held on September 28, 2023. By roll call vote of 4-0, the motion carried with Commissioner Hoder and Shamp abstaining.

3. PUBLIC COMMENT

Commissioner Waddell requested contact details for previously approved commission items to receive project updates. Chairperson Shamp then presented a written request from Vice Chair MacDuff for a report on downtown parking and public safety and an update on the study for converting Citrus Avenue to one-way westbound. Mr. Harris sought clarification on the parking and public safety update request and informed the commission that the City Council has decided against making Citrus Avenue one-way westbound. Mr. Desatnik added that a prior study revealed this change would only yield approximately thirty (30) additional parking spaces.

DRAFT

4. NEW BUSINESS

4A. *Request to establish on-street parking restrictions on Al Harris Lane and 3rd Street between Redlands Boulevard and Orange Street*

Ms. Silva presented updated plans submitted by Arteco Partners for the Redlands Public Market, a development with around twenty small restaurants at 330 N 3rd Street. She provided an overview of Staff's suggested modifications, proposing additional no-parking zones because the road width is inadequate for parking on both sides. Mr. Desatnik outlined the development proposal for the Redlands Public Market lacking on-site parking.

Jerry Tessier, owner of the Redlands Public Market, emphasized the need for short-term customer parking, proposing 30-minute zones on Al Harris Lane and 3rd Street from 6:00 AM to 10:00 PM and a 5-minute zone in front of Redlands Public Market.

Tom Robinson of VantageOne Real Estate expressed concerns about potential parking issues, stating that it could become problematic. He suggested further discussions with the property owner, neighboring businesses, and staff to address these concerns. However, he clarified that he is supportive of the proposed 5-minute parking.

Glenn Fearon of Property One, LLC mentioned that parking restrictions should be applicable to all businesses and further discussions with neighboring businesses are needed.

Chair Shamp mentioned that Property One, LLC submitted a public comment for the record. He also addressed Vice Chair MacDuff's inquiry regarding the storage container shown on the exhibit. Mr. Tessier clarified that it was an error on the exhibit and confirmed that the storage container no longer exists.

Chairperson Shamp called for a five (5) minute recess at 6:52 PM.

Bryan Bruce, owner of the Overland and Aori Mak Mak, highlighted the existing limited parking in the area and expressed concern about the proposed parking restrictions, noting the challenges it poses for his businesses. He emphasized the perceived danger of crossing at the Orange Street and Al Harris Lane intersection.

The commission inquired about the businesses housed in the structure, sought clarification on the proposed parking plan within the development plan, and asked whether off-street parking was taken into account. Additionally, there were queries regarding employee parking arrangements and the leasing of parking spaces.

The commission decided to table the item for further discussion to the next meeting.

DRAFT

4B. ***Request to clarify and distinguish the scope of the Traffic and Parking Commission with regard to the responsibilities and duties of the Planning Commission***

Chairperson Shamp proposed changes to the City ordinance to clarify that the Traffic and Parking Commission has the authority to provide supplemental review for projects seeking parking requirement reductions in the Zoning ordinance. The changes also address the omission of multi-family residential parking concerns in the current duties, recognizing their impact on on-street parking availability. The overall goal is to ensure that both the Traffic and Parking Commission and the Planning Commission collectively address adequate parking within the City.

The Commission continued discussions on the distinction between parking concerns falling under the purview of the Traffic and Parking Commission and those falling within the responsibilities of the Planning Commission. The commission proposed actions aim to provide clear guidance to City staff on this matter.

Chairperson Shamp read Vice Chair MacDuff's comments into recorded stating that most of her concerns have been discussed. One concern was raised about the educational duties of TPC, seeking clarification on what they should consist of. Staff responded that the clarification should come from the TPC membership, and the level of educational involvement is at the discretion of the Commission.

This item was tabled for further discussion to the next meeting.

4C. ***Request to clarify the scope of the Traffic and Parking Commission with regard to non-motorized traffic***

Chairperson Shamp discussed the evolving landscape of non-motorized transportation in the City, emphasizing the significant infrastructure developed over the past decade to support non-motorized vehicles. Mr. Shamp stated that the Traffic and Parking Commission's duties, outlined in Section 2.48.040, lack clarity regarding non-motorized road users, leading to confusion and a gap in oversight. To address this, he proposed changes to City ordinances, particularly in Sections 10 and 12, were discussed. These changes aim to redefine the Commission's scope, ensuring it includes non-motorized and non-automobile traffic, as well as non-motorized thoroughfares. The goal is to educate, supervise, address complaints, and make recommendations for all road users, not solely motorized automotive road users.

This item was tabled for further discussion to the next meeting.

4D. ***Request to update ordinances regarding bicycle licenses***

Chairperson Shamp discussed the Bicycle License program. He proposed updating the Bicycle License program, making it optional, and increasing awareness among the public and local bicycle retailers. Proposed changes to Chapter 10.56 BICYCLES

aim to eliminate the license requirement and associated penalties, offering clearer instructions on program participation. The discussion emphasized the potential benefits of combatting bicycle theft and facilitating the recovery of stolen bicycles.

This item was tabled for further discussion to the next meeting.

5. COMMUNICATIONS

5A. *Annual report to City Council*

Mr. Harris clarified that City commissions and committees are required to provide annual updates to the City Council. The commission was assigned February 20th as the date to report to the Council. Any changes to the date would result in the commission submitting a staff report under consent instead of presenting it in person. In consensus, Chairperson Shamp was chosen to present to the City Council on behalf of the Commission.

5B. *Status of Traffic and Parking Commission budget*

Mr. Harris mentioned that an overview of the budget is available in the agenda packet. To save time, Staff will skip a presentation and invite the commission to ask any questions they may have.

5C. *Status of work orders*

Mr. Harris mentioned that an overview of the work orders' status is available in the agenda packet. To save time, Staff will skip a presentation and invite the commission to ask any questions they may have.

5D. *Discussion about roundabouts*

This item has been tabled for an upcoming commission meeting.

6. OLD BUSINESS

7A. *Continued discussion of the duties and responsibilities under the TPC's purview*

The item was removed from the agenda, as it pertained to a previously discussed topic and related agenda items. It will also be excluded from future agendas.

7. ADJOURNMENT

The meeting was adjourned by Chairperson Shamp at 8:19 pm.

DRAFT

AGENDA ITEM **4A**
COMMISSION MEETING OF **3/28/24**

REQUEST FOR COMMISSION ACTION

SUBJECT: REQUEST BY ARTECO PARTNERS TO ESTABLISH ON-STREET PARKING RESTRICTIONS ON AL HARRIS LANE AND 3RD STREET BETWEEN REDLANDS BOULEVARD AND ORANGE STREET

MOTION:

I move to recommend to City Council approval of the implementation of the proposed parking restrictions as depicted in “Exhibit 1”.

STAFF RECOMMENDATION:

Staff recommend that the commission deliberate on the proposed parking restrictions, as depicted in 'Exhibit 1,' and evaluate whether the restrictions are warranted.

DISCUSSION:

Arteco Partners is the owner and developer of the Redlands Public Market, a future development with a collection of approximately twenty (20) small restaurants located at 330 N 3rd Street, in a historically significant building that does not provide on-site parking. It will rely heavily on public parking options both on-street and off-street. The surrounding Santa Fe Historic District is undergoing new construction, including the restoration of the historic depot, which will primarily house restaurant businesses. Approximately seventy (70) percent of new commercial retail development results in food-related uses, with the recent opening of a restaurant and bar named Overland at the northwest corner of Al Harris Lane and Orange Street being the initial establishment.

Arteco Partners believes that a critical factor in the success of these restaurants, particularly in the post-pandemic environment marked by increased off-site dining and delivery sales, is the provision of short-term convenient customer parking. This need arises for quick visits to pick up take-out food, facilitate food delivery services, and cater to other brief visits.

The proposal seeks to discourage long-term parking from utilizing convenient on-street spaces that are ideally suited for short-term patrons. People intending to park for extended periods or planning prolonged visits to the food hall or other nearby restaurants would be encouraged to park in off-street parking lots and the Stuart Avenue parking garage.

The proposal was presented to the Traffic and Parking Commission on January 25, 2024. Following the meeting, the commission advised staff to initiate further discussions with local business owners, aiming to collaboratively formulate parking solutions tailored to the area's needs.

After these discussions, several adjustments were made to the proposed parking restrictions. The revised proposal suggests transitioning all parking in the Santa Fe district on Al Harris Lane and 3rd Street, north of Redlands Avenue, to ninety (90) minute parking zones. The proposed time limit extension would be in effect from 10:00 AM to 10:00 PM. This extension aims to accommodate bars attracting late-night patrons, providing for longer-term customer parking while prioritizing the safety and convenience of late-night visitors.

An exception to the proposal is the request to establish a zone for ten (10) minute parking along the east curb of 3rd Street directly in front of Redlands Public Market. This designated area is intended for use as a customer loading zone and a pickup location for delivery drivers. The intent is to facilitate brief parking for individuals collecting pre-ordered takeout, thereby supporting efficient order pickup processes for businesses and their customers.

Furthermore, due to insufficient width in certain zones, on-street parking cannot be accommodated on both sides of the street. To address this, a no-parking zone is proposed on the westbound side of Al Harris Lane. This zone should also encompass the area adjacent to the proposed sidewalk extension at the corner of Al Harris Lane and 3rd Street. Additionally, a no-parking zone will be implemented for the initial 100 feet of northbound lane of 3rd Street, extending from Redlands Boulevard.

ALTERNATIVES:

The commission may do one of the following:

1. Recommend approval the proposed on-street parking restrictions with modifications; or
2. Recommend denial of the request.

FISCAL IMPACT:

There is no fiscal impact associated with this action related to the costs including equipment and materials. Work will be performed by City Staff as maintenance.

REQUEST FOR COMMISSION ACTION

SUBJECT: REQUEST TO CLARIFY AND DISTINGUISH THE SCOPE OF THE TRAFFIC AND PARKING COMMISSION WITH REGARD TO THE RESPONSIBILITIES AND DUTIES OF THE PLANNING COMMISSION

DISCUSSION:

In previous Commission meetings, the Commission has requested City staff to provide clarity in distinguishing those parking concerns that are within the scope of the Traffic and Parking Commission, and those that fall under the duties of the Planning Commission. The proposed action seeks to give clear directions to staff on this matter.

The Planning Commission is charged with reviewing new development projects for compliance with the Zoning Regulations as defined in Title 18 of the City ordinance, which includes off-street parking requirements.

The duties of the Traffic and Parking Commission are defined in Section 2.48.040. Among those duties is to advise the City Council on the development of adequate parking for commercial and retail uses, recommend policies to encourage, develop and support adequate parking within the City, recommend actions for the establishment of long-term parking plans for the City and in particular the downtown Redlands business area, and advise the City Council in the administration of resources for the development of parking. The commission may also assist other advisory groups such as the Planning Commission in matters relating to parking.

It is therefore within the scope of the Traffic and Parking Commission to provide supplemental review of any proposed project that comes before the Planning Commission which seeks reductions to parking requirements in the Zoning ordinance, as those reductions can impact “adequate parking”, both off-street and on-street, which is the charge of the Traffic and Parking Commission. It is also within the scope of the Traffic and Parking Commission to review all changes and updates to Zoning ordinances regarding off-street parking.

Additionally, the ordained duties of the Traffic and Parking Commission do not currently address the development of adequate parking for multi-family residential uses, only commercial and retail. However, inadequate parking at multi-family residential properties can have a profound effect on the availability of adjacent on street parking, which is clearly within the scope of the Commission.

The following proposed changes to the City ordinance seeks to clarify these discrepancies and omissions, ensuring that the combined oversights of the Traffic and Parking Commission and the Planning Commission fully address adequate parking within the City.

MOTION:

I move to recommend to City Council a request to modify City ordinances as follows:

> 2.48.040: DUTIES:
>
> It shall be the duty of the Traffic and Parking Commission to perform educational activities in traffic matters, to supervise the preparation and publication of traffic reports, to receive complaints relating to traffic matters and to recommend to the City Council

ways and means of improving traffic conditions and the administration and enforcement of traffic regulations.

The Traffic and Parking Commission shall also advise the City Council on the development of adequate parking for ~~commercial and retail uses~~ commercial, retail, and multi-family uses, recommend policies to encourage, develop and support adequate parking within the City, recommend actions for the establishment of long term parking plans for the City and in particular the downtown Redlands business area, and advise the City Council in the administration of resources for the development of parking. The commission may also assist other advisory groups such as the Planning Commission in matters relating to parking.

The commission shall keep records of all of its acts and proceedings, and shall submit all of its recommendations to the City Council and to the City Manager.

The commission shall assist other advisory groups such as the Planning Commission in requests for any variances to off-street parking that are required by Title 18 Zoning Regulations.

The Traffic and Parking Commission shall also advise the City Council on updates to parking requirements described in the Title 18 Zoning Regulations. (Ord. 2265 § 1, 1994)

PREPARED BY:

Eric Shamp, TPC Chairman

REQUEST FOR COMMISSION ACTION

SUBJECT: REQUEST TO CLARIFY THE SCOPE OF THE TRAFFIC AND PARKING COMMISSION WITH REGARD TO NON-MOTORIZED TRAFFIC

DISCUSSION:

Over the past decade, the City has developed significant infrastructure to support the use of non-motorized vehicles, including bike lanes (Class III bikeways) and bike paths (Class I bikeways). In addition, the recent proliferation of e-bikes and other forms of personal transportation devices has introduced non-motorized and non-automobile traffic to City streets not seen since early in the last century. The scope of the Traffic and Parking Commission is not well defined in our City ordinances with regards to non-motorized and non-automobile road users.

The duties of the Traffic and Parking Commission are defined in Section 2.48.040, using terms that are defined in various locations throughout the City ordinance. Some terms, such as “traffic” are undefined anywhere in the ordinances, leading to confusion over the Commission’s jurisdiction over non-motorized and non-automobile vehicles and non-motorized thoroughfares. This leaves a significant portion of road users without a Commission to educate, supervise, receive complaints, and make recommendations.

If the Commission wishes to clarify and define its scope to include non-motorized and non-automobile traffic and non-motorized thoroughfares, some changes to the City ordinance are in order. By making the following changes to definitions in Sections 10 and 12 of the ordinances, Section 2.48.040 can remain as written while effectively being expanded to include all road users, not just motorized automotive road users.

MOTION:

I move to recommend to City Council a request to modify City ordinances as follows:

10.04.130: MOTOR VEHICLES:

A "motor vehicle" is any vehicle which is self-propelled. Electric motorized vehicles that have a limiting device that restricts their speed to not more than 20 miles per hour are not considered motor vehicles. (Prior code § 68600.1)

10.04.300: TRAFFIC:

‘Traffic’ refers to the movement of vehicles on any street.

12.04.160: STREET:

"Street" means public street, lane, alley, court, easement, right of way, non-motorized thoroughfare, or other public place in the city, as they now exist or may hereafter be established, or any portion thereof, including all or part of any highway, right of way or easement, whether or not such entire area as used for highway purposes, excepting any easement or right of way vested in the city for a specified single utility purpose only. (Prior code § 74011)

12.04.210: VEHICLE:

"Vehicle" means a device in, upon, or by which any person or property is or may be propelled, moved or drawn on the highway or street ~~weighing in excess of one hundred (100) pounds~~. (Prior code § 74016)

12.04.230: NON-MOTORIZED THOROUGHFARE:

'Non-motorized thoroughfare' means a public easement set aside for the travel of pedestrians, non-motorized vehicles, and electric motorized vehicles that have a limiting device that restricts their speed to not more than 20 miles per hour. Non-motorized thoroughfares shall not include unpaved trails located in public parks, conservancies, or wilderness areas.

PREPARED BY:

Eric Shamp, TPC Chairperson

REQUEST FOR COMMISSION ACTION

SUBJECT: REQUEST TO UPDATE ORDINANCES REGARDING BICYCLE LICENSES

DISCUSSION:

As allowed under the 2022 California Vehicle Code Section 39000, the City of Redlands ordinances require a California Bicycle License to operate any bicycle on City roadways. Licenses are issued by the State and procured through the Redlands Police Department. The Police Department does not enforce the requirement for a license. However, the program remains in place, underutilized. A bicycle owner can still fill out a form provided by RPD, pay a nominal fee, and secure a California Bicycle License. While out of date, this program has the potential to help combat bicycle theft and aid in the recovery and return of stolen bicycles to their owners.

Bicycle theft is an unfortunately common occurrence in the City. With the recent proliferation of e-bikes and high-end bicycles, the cost to owners due to these thefts has increased. As one means of addressing this, the Bicycle License program should to be updated and made optional. In addition, the public and local bicycle retailers need to be made aware of this program.

The proposed changes to Chapter 10.56 BICYCLES will remove the license requirement and associated penalties, while providing clear direction to the public on how to participate in the program.

MOTION:

I move to recommend to City Council a request to modify City ordinances as follows:

Make the following changes to CHAPTER 10.56 BICYCLES:

~~10.56.010: LICENSE REQUIRED:~~

~~It is unlawful for any person to operate or use a bicycle, as defined in section 21200 of the Vehicle Code without having attached thereto a California bicycle license, upon any of the streets, alleys or public highways of this city. (Prior code § 63100)~~

10.56.020: LICENSE; ISSUANCE:

The police department of the city is authorized and directed to obtain original bicycle license ~~plates~~ decals and renewal license ~~plates~~ decals from the California department of motor vehicles and issue same at the police department. (Prior code § 63101)

10.56.030: LICENSE; CONDITION OF BICYCLE:

The bicycle shall be equipped and maintained as provided for in section 21201 of the Vehicle Code at all times when operated in the city, and before a license can be issued. (Prior code § 63102)

~~10.56.040: LICENSE; EFFECT:~~

~~Licenses, when issued, shall entitle the licensee to operate such bicycle, for which said license has been issued, upon all the streets, alleys and public highways, exclusive of the sidewalks thereof, in the city. (Prior code § 63103)~~

10.56.050: LICENSE PLATE AND REGISTRATION:

The city shall provide, for a fee, a California bicycle license and maintain registration records as provided in division 16.7 of the California Vehicle Code. (Prior code § 63104)

10.56.060: LICENSE; BICYCLE ATTACHMENT:

~~The plate shall be attached to the frame of the bicycle below the seat on the seat post portion of the frame.~~ The license decal shall be adhered to the frame of the bicycle below the seat on the front of the seat tube portion of the frame. If this placement is not possible, as would be the case with recumbent bicycles, the decal shall be adhered to the frame in a forward-facing position, so that the decal is legible without lifting the bicycle off the ground. (Prior code § 63105)

10.56.070: LICENSE ~~PLATE~~ DECAL REMOVAL:

~~The plate shall not be removed.~~ Removal of the license decal by the owner will void the license. (Prior code § 63106)

10.56.080: LICENSE; RECORDATION:

The police department shall maintain registration records. (Prior code § 63107)

10.56.090: LICENSE; NOTIFICATION OF BICYCLE DESTRUCTION:

It shall be the duty of every license holder to notify to police department within ten (10) days of the destruction of the bicycle. The registration card shall be returned to the police department at that time. (Prior code § 63108)

10.56.100: FEES; INITIAL PURCHASE AND RENEWAL:

The initial license fee and the renewal fee to be paid for each bicycle shall be ~~one dollar fifty cents ($1.50)~~ [revised fee to be determined]. ~~A bicycle purchased after license deadline may be licensed for fifty cents ($0.50) for each year remaining in the three (3) year period or portion of the remaining year, upon proof of sale.~~ (Prior code § 63200)

~~10.56.110: FEES; PENALTY FOR LATE RENEWAL:~~

~~A penalty of one dollar ($1.00) shall be added upon any application for annual renewal of registration made on or after February 1 of the registration renewal year, except as provided in section 10.56.100 of this chapter. (Prior code § 63201)~~

10.56.120: FEES; PAYMENT:

All licenses shall be payable in advance to the chief of police or his representative, who is designated as the license collector for all fees due under this chapter. (Prior code § 63202)

10.56.130: FEES; TRANSFER:

Pursuant to sections 10.56.160 and 10.56.170 of this chapter, a bicycle license may be transferred when the ownership of said bicycle is transferred and a fee of ~~fifty cents ($0.50)~~ [revised fee to be determined] shall be paid for the registration of such transfer. (Prior code § 63203)

10.56.140: DEALER; SECONDHAND DEALER PURCHASE REPORT:

~~All persons engaged in the business of buying secondhand bicycles are required to make a weekly report to the police department, giving the name and address of the person from whom each bicycle is purchased, the description of each bicycle purchased, the frame number thereof, and the number of any license found thereon, if any.~~ All persons engaged in the business of buying secondhand bicycles are required, upon purchasing a bicycle displaying a license decal, to report to the police department, giving the name and address of the person from whom each bicycle is purchased, the description of each bicycle purchased, the frame number thereof, and the number of the license found thereon. (Prior code § 63300)

10.56.150: DEALER; ~~REPORT OF~~ REGISTRATION UPON SALE:

~~All persons engaged in the business of selling new or secondhand bicycles are required to make a weekly report to the police department, giving a list of all sales made by such dealers, which list shall include the name and address of each person to whom sold, the kind of bicycle sold, together with a description and frame number thereof, and the number of the license attached thereto, if any.~~ All persons engaged in the business of selling new or secondhand bicycles are required to provide a Bicycle License Application Form to the buyer of any bicycle." (Prior code § 63301)

10.56.160: REGISTRATION TRANSFER; REPORT:

It is the duty of every person who sells or transfers ownership of any licensed bicycle, to report such sale or transfer by returning to the police department the registration card issued to such person as licensee thereof, together with the name and address of the person to whom said licensed bicycle was sold or transferred; and such report shall be made within ten (10) days of the date of said sale or transfer. (Prior code § 63400)

~~10.56.170: REGISTRATION TRANSFER; APPLICATION:~~

~~It shall be the duty of the purchaser or transferee of such bicycle to apply for a transfer of registration thereof within ten (10) days of the date of such transfer of registration. (Prior code § 63401)~~

~~10.56.180: IMPOUNDMENT:~~

~~In addition to the penalty hereinabove set forth, the police department, or any of the members thereof, may impound any bicycle operated in violation of any of the provisions of this chapter, and retain possession of same until the license provided for herein is obtained by the owner of such bicycle. (Prior code § 63500~~)

10.56.190: CITATION; ISSUANCE:

The police department may issue a traffic citation to any person who operates a bicycle in violation of any of the provisions of this chapter or the California Vehicle Code. (Prior code § 63501)

CITY OF REDLANDS
TRAFFIC AND PARKING COMMISSION
REGULAR MEETING AGENDA

ERIC SHAMP, CHAIR

CASSIE MACDUFF, VICE CHAIR — ANDREW HODER, COMMISSIONER
KEVIN MORNINGSTAR, COMMISSIONER — CARL DAVIS, COMMISSIONER
BILL WADDELL, COMMISSIONER — BENJAMIN DANIEL PEREZ, COMMMISSIONER

Thursday, May 23, 2024, at 6:00 P.M.
City Council Chamber, Civic Center
35 Cajon Street, Suite 2, Redlands, CA

This will be an open public meeting. The following information comprises the agenda for a meeting of the Traffic and Parking Commission of the City of Redlands.

1. **ATTENDANCE & CALL TO ORDER**

2. **APPROVAL OF MINUTES**

   A. Minutes of the regular meeting of March 28, 2024

3. **PUBLIC COMMENT**

   The public is invited to speak on items not listed on this agenda, but within the jurisdiction of the Commission. However, no general discussion of such items, or action on such items, may be taken. Comments are limited to three minutes.

4. **OLD BUSINESS**

   A. Request to establish on-street parking restrictions on Al Harris Lane and 3rd Street between Redlands Boulevard and Orange Street

   B. Review and clarify Traffic and Parking Commission responsibilities and consider ordinance updates

5. **COMMUNICATIONS**

   A. Crosswalk/Intersection Improvement Requests

      a. Ford Street and Redlands Boulevard

      b. Cajon Street and Highland Avenue

      c. Citrus Avenue and 9th Street

   B. 2024 Speed Survey Request for Proposal (RFP)

In compliance with the Americans with Disabilities Act, if you need special assistance to participate in this meeting, please contact Goutam K. Dobey of Municipal Utilities/Engineering Department at (909) 798-7584 x2. Notification 48 hours prior to the meeting will enable the City to make reasonable arrangements to ensure accessibility to this meeting. NOTE: Any writings or documents distributed to a majority of the Traffic and Parking Commission regarding an open session agenda item less than 72 hours before this meeting are available at https://www.cityofredlands.org/traffic-and-parking-commission or the Municipal Utilities & Engineering Department at 35 Cajon Street, Suite 15A for public inspection or by calling 909-789-7584 x 7. (28 CFR 35.102-35.104 ADA Title II)

C. Safety report on intersection collisions

D. Pavement Management Program (PMP) update

E. Status of Traffic and Parking Commission budget

F. Status of work orders

6. COMMISSIONER ANNOUNCEMENTS, REPORTS ON ACTIVITIES, AND/OR REQUEST FOR FUTURE AGENDA ITEMS

7. ADJOURNMENT – Next Meeting is July 25, 2024 at 6:00 PM

In compliance with the Americans with Disabilities Act, if you need special assistance to participate in this meeting, please contact Goutam K. Dobey of Municipal Utilities/Engineering Department at (909) 798-7584 x2. Notification 48 hours prior to the meeting will enable the City to make reasonable arrangements to ensure accessibility to this meeting. NOTE: Any writings or documents distributed to a majority of the Traffic and Parking Commission regarding an open session agenda item less than 72 hours before this meeting are available at https://www.cityofredlands.org/traffic-and-parking-commission for public inspection or at the Municipal Utilities & Engineering Department, 35 Cajon Street, Suite 15A by calling 909-789-7584 x 7.

CITY OF REDLANDS
TRAFFIC AND PARKING COMMISSION
REGULAR MEETING
Thursday, March 28, 2024 at 6:00 P.M.

MINUTES

1. ATTENDANCE & CALL TO ORDER

The regular meeting of the Traffic and Parking Commission was called to order at 6:01 pm by Chairperson Eric Shamp.

Roll Call:

Present

Commissioners:	Staff:
Eric Shamp	Ryan Steinhaus, PD
Cassie MacDuff	Brian Desatnik, DSD
Kevin Morningstar	John Harris, MUED
Carl Davis	Goutam Dobey, MUED
Andrew Hoder	Charles Duggan, City Manager

Absent

Commissioners:
Bill Waddell (excused)
Benjamin D. Perez (excused)

2. APPROVAL OF MINUTES

A motion was made by Commissioner Hoder and seconded by Commissioner Morningstar to approve the minutes of the regular meeting held on January 25, 2024. By roll call vote of 5-0, the motion carried.

3. PUBLIC COMMENT

Mark Walker, resident, raised concerns about the intersection of Ford Street and Redlands Boulevard. He pointed out the absence of crosswalks, mentioned that the timing on eastbound Redlands Boulevard prioritizes the left-turning lane onto northbound Ford Street, causing issues, and noted minimal enforcement in the intersection. He suggested extending the phase for southbound Ford Street.

The commission requested a designated time on the agenda for making comments and proposing future agenda items.

4. OLD BUSINESS

4A. *Request to establish on-street parking restrictions on Al Harris Lane and 3rd Street between Redlands Boulevard and Orange Street*

DRAFT

Mr. Dobey stated that Arteco Partners, the owner of Redlands Public Market, seeks parking solutions for 330 N 3rd Street. The proposal, initially presented to the Traffic and Parking Commission on January 25, 2024, was revised after discussions with local businesses. Changes include converting parking in the Santa Fe district to 90-minute zones and establishing 10-minute parking in front of the market.

Glenn Fearon of Property One, LLC, was pleased to engage in discussions with the Redlands Public Market developer and the City regarding the parking restrictions. An additional comment suggested making Al Harris Lane one-way traffic.

Vice Chair MacDuff inquired about Property One's plans to prevent patrons of the Redlands Public Market from using their parking spaces. Mr. Fearon expressed concern about this issue and emphasized his dissatisfaction with the plan being accepted without a parking strategy.

The commission called upon Jerry Tessier, owner of the Redlands Public Market, to address their questions. Queries included whether the movie theater owners were contacted, how staff will indicate short-term parking, and why 90-minute parking was chosen over 2-hour parking. Mr. Tessier explained that efforts were made to contact the theater management but were unsuccessful. He clarified that the 90-minute parking zone was agreed upon by neighboring businesses. Mr. Harris clarified that the curb for short-term parking in front of the Public Market will be painted green, and signage can be added. Regarding public awareness of parking locations, Mr. Tessier mentioned the use of signage, QR codes, and social media. Questions were raised about the narrow curve transition between 3rd Street and Al Harris Lane and its suitability for fire vehicles, to which Mr. Tessier stated that the design engineer deemed it appropriate.

Business owner Bryan Bruce supported the suggestion of converting the area into a one-way street, citing safety concerns at the Orange Street and Al Harris Lane intersection.

Vice Chair MacDuff proposed adding more 90-minute parking by reducing 10-minute parking to two (2) or three (3) spaces and studying the possibility of making Al Harris Lane one-way westbound. Commissioner Morningstar expressed concern about imposing public parking restrictions for the benefit of one (1) business and recommended that the Public Market owner reach out to the theater owners to explore using their parking spaces. He also supported studying the one-way street proposal and suggested deferring the agenda item. Commissioner Hoder suggested installing a traffic signal on Al Harris Lane and Orange Street to facilitate left turns onto Orange Street and inquired about the potential traffic impact of future developments on the north side of Al Harris Lane and their parking needs. Chair Shamp noted that State Street has precedence for requesting parking restrictions, proposed studying the one-way street suggestion, asked staff to determine if State Street has a similar ratio of 10-minute parking zones per restaurant for comparison, and requested directional signage to the public parking lot.

The commission decided to table the item for further discussion to the next meeting.

4B. ***Request to clarify and distinguish the scope of the Traffic and Parking Commission with regard to the responsibilities and duties of the Planning Commission***

Chair Shamp proposed discussing agenda items 4B, 4C, and 4D together since they are related and suggested combining them into one (1) agenda item in the future. He briefly introduced the agenda items.

Mr. Harris explained that, after consulting with the City Attorney, some suggested items fall outside the purview of the Traffic and Parking Commission, such as addressing parking issues on private property, which falls under the Planning Commission's jurisdiction. However, the City Attorney had no issue with the commission being involved in multifamily projects that impact public right-of-way or non-vehicular traffic issues. Mr. Harris mentioned that altering the definition of certain terms related to vehicles or traffic is challenging due to the complexity of various codes and laws.

The commission requested staff to draft language to amend the municipal code and address non-motorized traffic and multifamily projects within their jurisdiction.

The commission also inquired about how they would be informed about issues within their purview presented to the Planning Commission. Mr. Harris stated he will provide some ideas at the next meeting. The commission sought clarification on the difference between a resolution and an ordinance. Mr. Duggan clarified that a resolution signifies a certain course of action, while an ordinance carries the weight of law. Commissioners do not have the authority to pass ordinances or resolutions. They can only make recommendations to the City Council.

Vice Chair MacDuff commended Chairperson Shamp for his editorials, viewing them as educational for the City. She asked about the process for commissioners to write editorials. Mr. Harris suggested presenting the idea to the commissioner first, and he could determine if it needs approval from the City Attorney. Chairperson Shamp suggested making it clear in the editorial that the comment represents the individual and not the commission or the City.

This item was tabled for further discussion to the next meeting.

4C. ***Request to clarify the scope of the Traffic and Parking Commission with regard to non-motorized traffic***

This item was tabled for further discussion at the next meeting.

4D. ***Request to update ordinances regarding bicycle licenses***

This item was tabled for further discussion to the next meeting.

5. COMMUNICATIONS

5A. ***Safety report on downtown parking***

Mr. Dobey indicated that the request originated from our Downtown Parking Study discussions, where the commission examined parking conditions and future possibilities for parking in Redlands. As part of the study, a survey was conducted, revealing safety concerns in certain parking areas. In response, the commission deemed it important to further investigate and obtain a safety report specifically for the studied area.

Sgt. Steinhaus presented the safety report, focusing on crimes against persons and other calls for service that may pose safety concerns within or near downtown Redlands parking locations. The analysis included police data from January 01, 2020, to February 29, 2024. Sgt. Steinhaus proceeded to provide an overview of the safety report.

Questions were raised regarding whether the report could detail what happens after an officer resolves a call for service, including the disposition of the call.

5B. ***Status of Traffic and Parking Commission budget***

Mr. Dobey provided an overview of TPC budget expenditures, noting that $82,000 remains unutilized. Mr. Harris clarified that unused TPC funds do not carry over to the next fiscal year.

The commission requested to include on a future agenda the installation of crosswalks on Highland Avenue and Cajon Street, as well as allowing sidewalks along Prospect Park.

Vice Chair MacDuff proposed potential uses for the unspent budget, such as directional signs for downtown parking and extending the left turn lane pocket on southbound California Street at Redlands Boulevard.

5C. ***Status of work orders***

Mr. Dobey presented a slide and provided a brief overview of the status of work orders that were previously recommended by the Commission and approved by City Council, and the status of work orders which do not require Commission recommendation and have been approved and completed by city staff in accordance with the Redlands Municipal Code.

5D. ***Roundabouts presentation***

Mr. Dobey gave a presentation on roundabouts beginning with an introduction to what roundabouts are and why they are effective traffic management tools. It covered various types of roundabouts and outlined their pros, such as safety benefits like reduced conflict points and crash reduction, as well as reduced delay for drivers.

The presentation then delved into specific examples of conceptual designs for roundabouts, including Ford St/5th Ave, Colton/Dearborn Ave, and a mini-roundabout at Highland/Cedar/Crown. Additionally, it highlighted roundabouts in neighboring cities, such as Yucaipa Blvd & 2nd St and Yucaipa Blvd & California St in the City of Yucaipa, and Flint Ave & 6th St in the City of Long Beach.

The discussion focused on traffic impacts during construction, roundabout costs, and truck maneuverability. Mr. Harris clarified that roundabouts can be constructed in phases to maintain traffic flow. He noted that while roundabout costs are higher than signals, their maintenance costs are lower. Additionally, roundabouts are designed with truck aprons to facilitate truck turns. Vice Chair MacDuff voiced support for roundabouts but cautioned about potential rush hour backups on high-volume roads. Chairperson Shamp echoed support for roundabouts as another viable solution worth exploring.

6. ADJOURNMENT – Next regular meeting will be held on May 23, 2024.

Before adjournment, Chairperson Shamp asked if there were any comments or requests for future agenda items by the commission.

Commissioner Davis expressed his discontent for the lack of traffic enforcement and requested that the police gather data on the effectiveness of controlled intersections. He asked for citations for all controlled intersections in the 2022 and 2023 calendar years.

Vice Chair MacDuff asked when City Council was presented with the idea of Citrus Avenue as a one-way street. Mr. Harris clarified that City Council was presented with the idea of a one-way street on Citrus Avenue as part of TPC's recommendations of the Downtown Parking Study.

Commissioner Morningstar stated that the commission should look at signal timing, inquired about the current pavement management plan, and commented on the low visibility of striping on some city streets.

The meeting was adjourned by Chairperson Shamp at 8:37 p.m.

DRAFT

City of
REDLANDS
Incorporated 1888
Municipal Utilities & Engineering Department

JOHN R. HARRIS
Director

MEMORANDUM

TO: Eric Shamp, Traffic and Parking Commission Chair

FROM: Johana Silva, Associate Engineer

DATE: May 15, 2024

SUBJECT: Parking Restrictions on Al Harris Lane and 3rd Street Staff Memo

---

Overview:

Arteco Partners owns the Redlands Public Market, a future development at 330 N 3rd Street with approximately twenty (20) small restaurants in a historic building lacking on-site parking. The market will rely on public parking options amid the Santa Fe Historic District. The proposal aims to discourage long-term parking in prime on-street spaces, encouraging extended stays to use off-street lots and the Stuart Avenue parking garage.

Proposal Details:

The proposal was presented to the Traffic and Parking Commission on January 25, 2024, leading to further discussions with local business owners. These discussions resulted in revised recommendations, now proposing:

- Ninety-Minute Parking Zones: Implementation of 90-minute parking zones on Al Harris Lane and 3rd Street, effective from 10:00 AM to 10:00 PM.

- Ten-Minute Parking Zone: Establishment of a 10-minute parking zone on 3rd Street in front of Redlands Public Market for quick takeout pickups and delivery driver use.

Further Research and Recommendations:

During the March 28th TPC meeting, the commission directed staff to investigate the following:

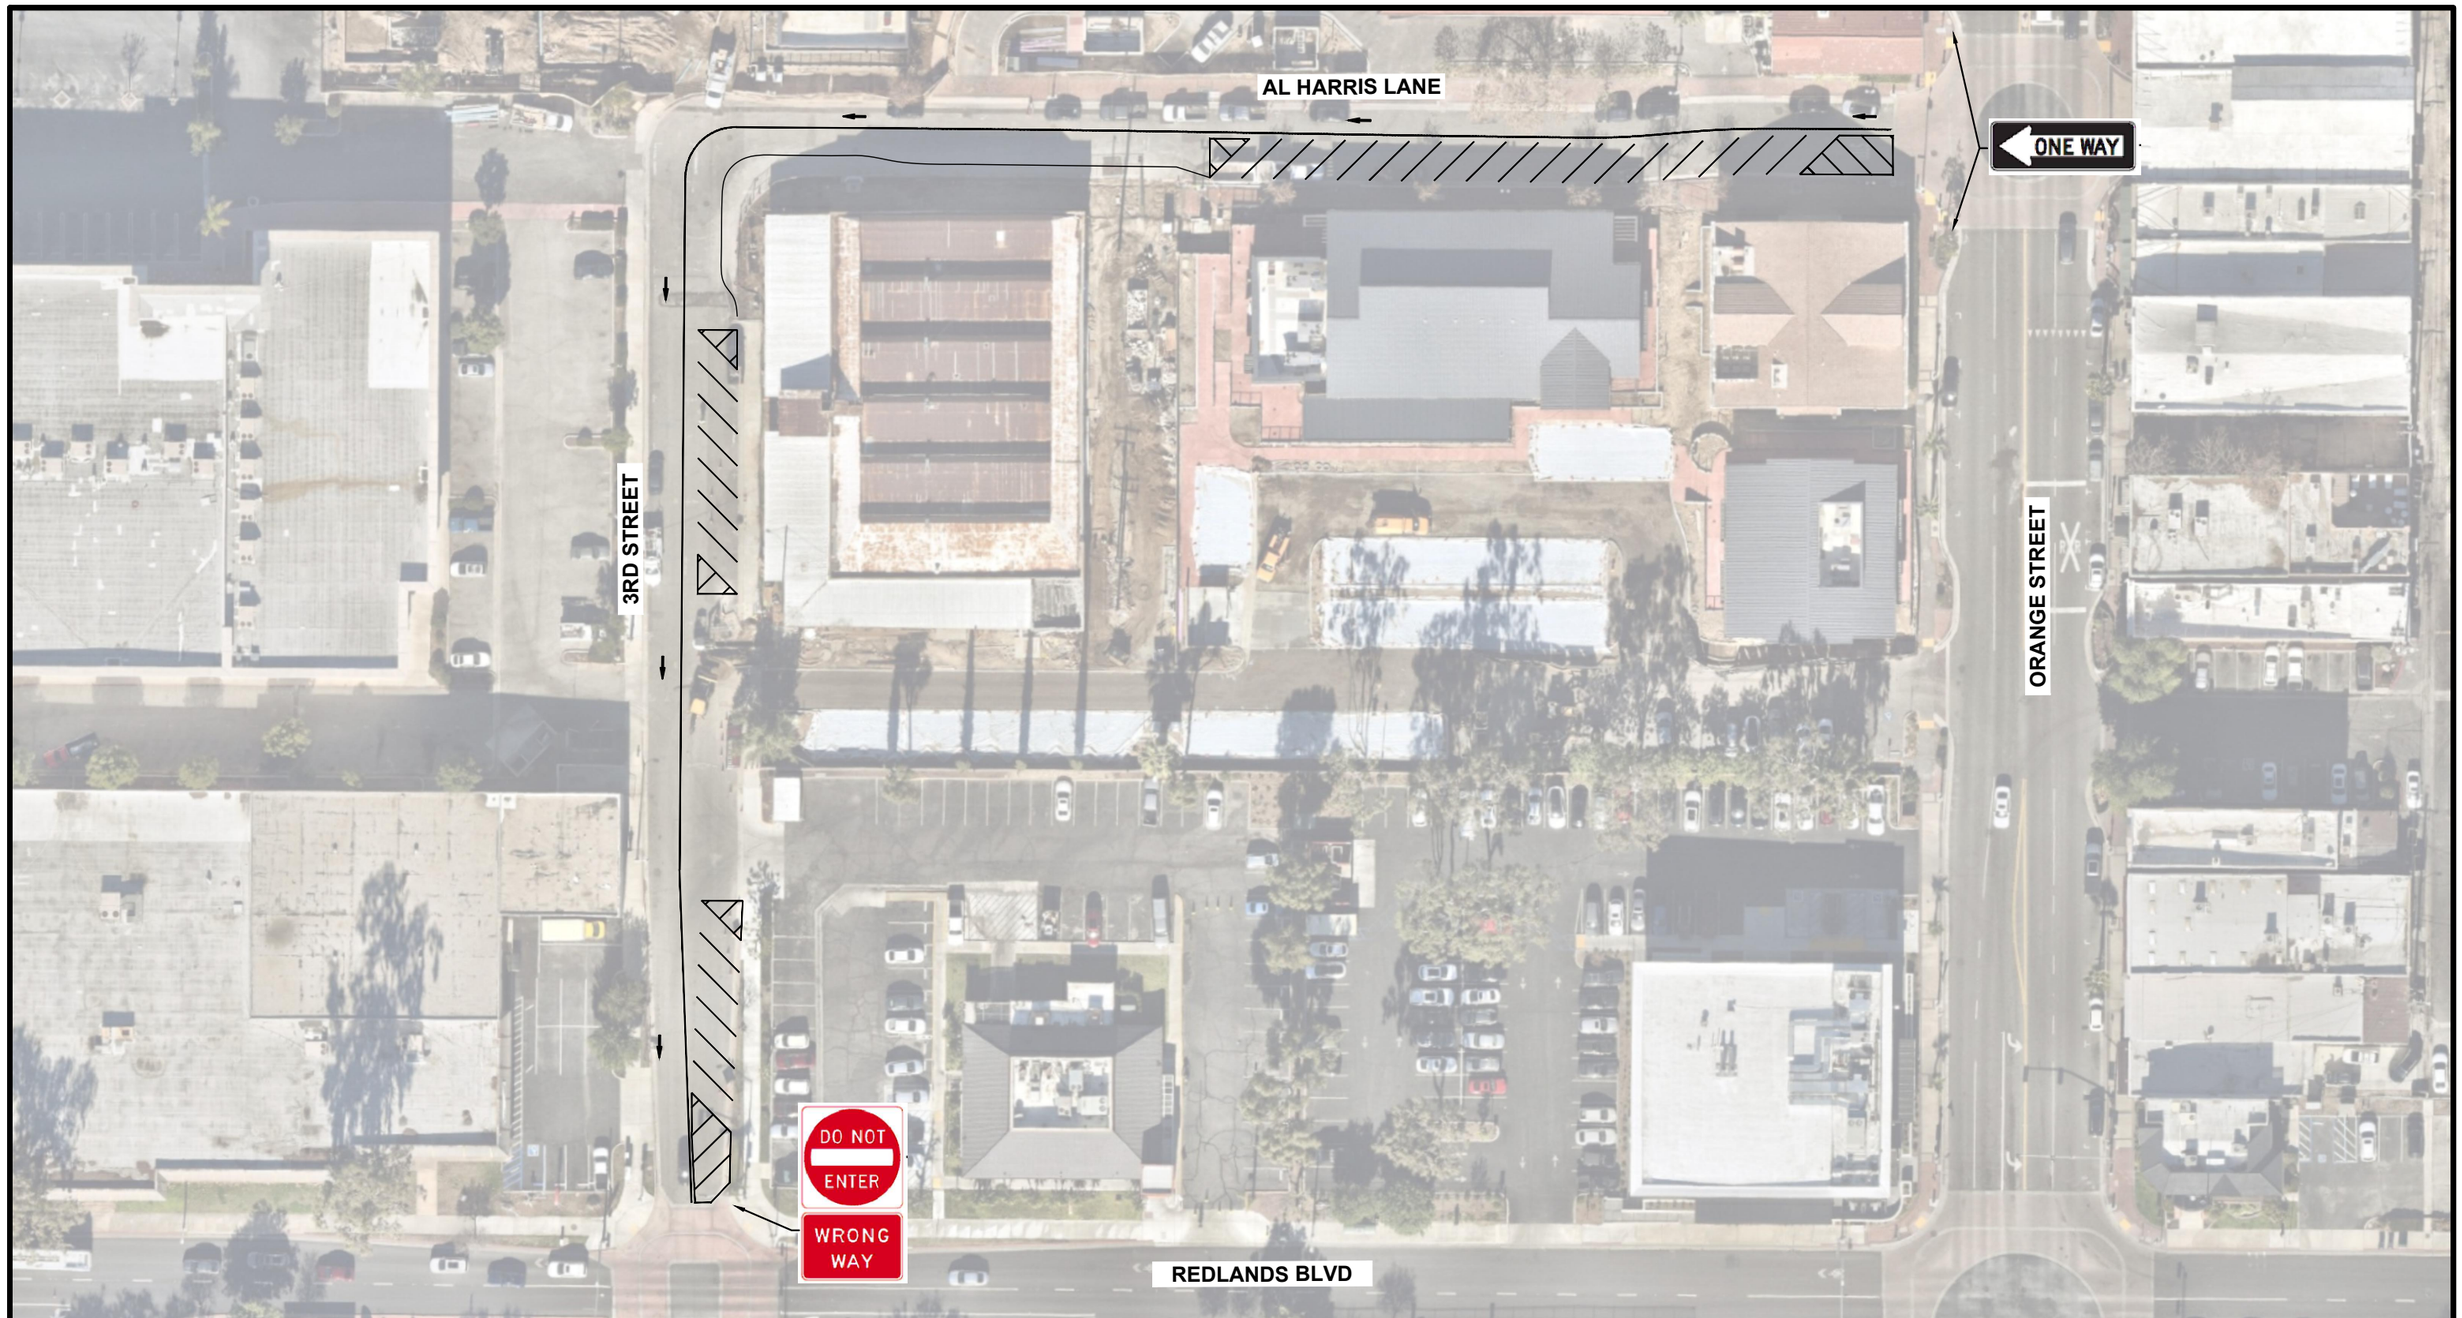
1. Conversion of Al Harris Lane to One-Way Westbound: To convert Al Harris Lane to one-way westbound, northbound traffic on 3rd Street will need to be redirected. This can be avoided by

converting both 3rd Street and Al Harris Lane to one-way streets. This configuration could add approximately thirty-one (31) angled parking spaces, similar to the amount initially proposed with parallel parking. However, the one-way configuration could lead to vehicle spillback onto Orange Street during peak times due to having only one entry point and lane, which would decrease the maximum traffic flow in the area.

2. State Street Parking Ratio: Attachment B depicts the parking stalls on State Street between Cajon Street and Redlands Boulevard, which include a combination of ADA stalls, 30-minute, and 2-hour parking zones. The diagram considers only the parking stalls and eateries fronting State Street. The ratio of eateries to 30-minute parking is 13:5, while the ratio of eateries to 2-hour parking is 13:140.

3. Parking Signs to Stuart Street Parking: Signs guiding motorists to the Stuart Street Parking Lot can be placed from the 3rd Street/Al Harris Lane exit points to the parking lot. It is recommended that these signs show a right turn arrow from exit points to reduce left turns and congestion in the area.

4. Traffic Signal at Orange Street and Al Harris Lane: Staff recommends against installing a traffic signal at the proposed traffic signal. It is located approximately 400 feet from two traffic signals and 100 feet from railroad tracks. The proximately to the railroad track presents safety concerns including potential signal confusion and queue spillback onto the tracks, increasing collision risks. Additionally, traffic flow could be disrupted, leading to congestion and delays, especially during peak hours or frequent train passages.



Please review these recommendations and provide further direction on how to proceed.

Thank you,

Johana Silva

RESOLUTION NO. 7840

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS APPROVING CONDITIONAL USE PERMIT NO. 1100, FOR TWO (2) TYPE 21 (OFF-SALE GENERAL) ALCOHOL LICENSES, AND UP TO SEVEN (7) TYPE 41 (ON-SALE BEER & WINE - EATING PLACE) OR TYPE 47 (ON-SALE GENERAL - EATING PLACE) ALCOHOL LICENSES, IN CONJUNCTION WITH OPERATION OF THE REDLANDS FOOD HALL. THE SUBJECT PROPERTY IS THE HISTORIC MUTUAL ORANGE COMPANY PACKING PLANT LOCATED AT 330 NORTH THIRD STREET.

WHEREAS, Redlands Food Hall, LLC, has submitted applications for Conditional Use Permit No. 1100, Commission Review and Approval No. 895, Historic Resource Designation No. 132, and Certificate of Appropriateness No. 559 (collectively referred to herein as "Project Entitlements") to rehabilitate and adaptively reuse the historic Mutual Orange Company Packing Plant located at 330 North Third Street (APNs: 0169-028-47-0000, 0169-028-48-0000, 0169-028-49-0000, 0169-028-50-0000); and

WHEREAS, on March 5, 2018, the Environmental Review Committee held a public hearing and recommended exemption from environmental review and approval of the Socio-Economic Cost/Benefit Study; and

WHEREAS, on April 10, 2018, the Planning Commission held a public hearing for Conditional Use Permit No. 1100 and considered the staff report, oral report, the testimony, and the written evidence submitted by and on behalf of the applicant, and by members of the public; and

WHEREAS, on April 10, 2018, the Planning Commission adopted a Resolution recommending approval of Conditional Use Permit No. 1100; and

WHEREAS on April 20, 2018, notice of this City Council's public hearing for Conditional Use Permit No. 1100 was published in the Redlands Daily Facts by the City Clerk; and

WHEREAS, on May 1, 2018, the City Council held a public hearing and considered the staff written and oral reports, the recommendation of the Planning Commission, the testimony and written evidence submitted by and on behalf of the applicant, and testimony by members of the public; and

WHEREAS, following the public hearing on the application for Conditional Use Permit No. 1100, at which this City Council provided opportunity for public testimony, the City Council determined that approval of the Conditional Use Permit is in the best interests of the public health, safety and general welfare; and

WHEREAS, the California Environmental Quality Act (Public Resources Code, §21000 et seq.) pursuant to State CEQA Guidelines (Title 15, Cal. Code Regs., §15000 et seq.) Section 15331 (Historic Resource Restoration/Rehabilitation) and Section 15332 (In-Fill Development Projects) exempts certain projects from environmental review, and the proposed project meets all criteria for these exemptions; and

WHEREAS, Business & Professions Code Sections 23958 and 23958.4 allow the local governing body to make a Determination of Public Convenience or Necessity if the general public would be served by the issuance of alcoholic beverage control licenses in an area of undue concentration;

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF REDLANDS AS FOLLOWS:

SECTION 1. CALIFORNIA ENVIRONMENTAL QUALITY ACT. The City Council hereby determines that approval of Conditional Use Permit No. 1100 and the related Project Entitlements is exempt from environmental review under the California Environmental Quality Act (Public Resources Code, §21000 et seq.) pursuant to State CEQA Guidelines (Title 15, Cal. Code Regs., §15000 et seq.) Section 15331 and Section 15332.

SECTION 2. SOCIO-ECONOMIC COST/BENEFIT STUDY. The City Council hereby adopts the Socio-Economic Cost/Benefit Study that has been prepared for the project.

SECTION 3. FINDINGS FOR APPROVAL OF CONDITIONAL USE PERMIT NO. 1100. Conditional Use Permit No. 1100 is hereby approved, subject to the Conditions of Approval included as Exhibit "A" to this Resolution, and based upon the following findings:

1. That the proposed development will not adversely affect the applicable land use plans of the city.

The proposed project will not adversely affect applicable land use plans. The project will implement several policies in the new 2035 General Plan, including: Action 4.A-121 ("Encourage a centrally-located mix of uses to promote activity and economic vitality"); Action 4.A-122 ("Maintain a distinctive character that builds on Downtown's many historic features and its citrus heritage"); and Action 4.A-123 ("Promote the reuse of citrus packing houses, historic warehouses, and other historic commercial buildings to create a destination for residents and tourists"). The operation of restaurants, food retail stores, alcoholic beverage outlets, and similar uses are permitted in the Town Center - Historic (TC-H) district of the Downtown Specific Plan as well as other commercial areas of the City. The project will comply with all applicable development standards of the Town Center - Historic (TC-H) district (e.g., height, Floor Area Ratio, setbacks, and landscape), to the extent practicable considering that the property was developed prior to the City adopting any zoning regulations.

2. That the proposed development will not be detrimental to the public health, safety and welfare.

The project has been conditioned to comply with the Downtown Specific Plan and the Redlands Municipal Code. The proposed Type 21 licenses, and Type 41 or 47 licenses, require the approval of a Conditional Use Permit which allows for appropriate conditions

of approval to be attached to these types of alcohol sales licenses. The activities associated with the proposed use will be conducted within the confines of the existing building, new exterior boardwalk, and outdoor patio. The conditions included in the Resolution are adequate to protect the public health, safety and general welfare. Furthermore, the applicant will be required to obtain a permit and comply with the requirements of the California Department of Alcoholic Beverage Control.

3. That the proposed development will comply to the maximum extent feasible with the regulations of the city's general plan, the applicable zoning district and the city's development standards.

The proposed operation of restaurants and food retail stores (permitted uses), and alcoholic beverage outlets (with CUP approval), are allowable in the Town Center - Historic (TC-H) district of the Downtown Specific Plan. The project will comply with all operating regulations applicable to alcoholic beverage sales establishments as contained on Redlands Municipal Code Chapter 18.190.

4. That the proposed development is appropriate at the proposed location.

The subject site is currently developed with the historic Mutual Orange Company packing house, and the new 2035 General Plan identifies the property as a candidate for adaptive reuse to ensure the longevity of the resource and to create a destination for residents and tourists. This particular property is also positioned at a key location in the heart of the downtown business district, between the Santa Fe Depot to the north (future Arrow light rail stop and future Metrolink platform nearby), movie theatre and Packing House District Shopping Center to the west, restaurants and shops along Orange Street to the east, and future mall redevelopment to the south. Rehabilitation and adaptive reuse of the subject property will stimulate the rejuvenation and redevelopment of a presently quiet block in the heart of the downtown.

SECTION 4. FINDINGS FOR ALCOHOLIC BEVERAGE SALES ESTABLISHMENTS. Conditional Use Permit No. 1100 for up to two (2) Type 21 licenses, and up to seven (7) Type 41 or Type 47 licenses, for a total of up to nine (9) ABC licenses of the types specified is hereby approved, subject to the Conditions of Approval included as Exhibit "A" to this Resolution, and based upon the following findings:

1. The establishment is located in a zoning district in which the establishment is a conditionally permitted use.

The operation of restaurants (with and without alcohol sales) and food retail stores (with and without alcohol sales) are permitted in the Town Center - Historic (TC-H) district of the Downtown Specific Plan. The proposed two Type 21 (Off-Sale General), and up to seven of Type 41 (On-Sale Beer & Wine – Eating Place) or Type 47 (On-Sale General – Eating Place) licenses require the approval of a Conditional Use Permit, which allows for appropriate conditions of approval to be attached to these types of licenses.

2. That the operations of the establishment do not cause or result in adverse effects to the health, welfare, peace or safety of persons visiting, residing, working, or conducting business in the surrounding area.

The operations of the establishment will not cause or result in adverse effects to the health, welfare, peace or safety of persons visiting, residing, working, or conducting business in the surrounding area. The project is required to comply with the Downtown Specific Plan and the Redlands Municipal Code. The activities associated with the proposed alcohol consumption will be conducted within the confines of the building, the exterior boardwalk (subject to the property owner's control), and the outdoor patio (subject to the property owner's control). The hours for alcoholic beverage service and on-site consumption will be from 8:00 AM to 2:00 AM daily. Conditions have been placed on the project to promote a secure environment, minimize the potential for alcohol-related disturbances in the vicinity, and limit the potential for excessive noise. With the implementation of operating standards contained on Redlands Municipal Code Chapter 18.190 and conditions of approval, the project will not have a detrimental effect on surrounding properties. Furthermore, the businesses selling alcohol will be required to comply with the requirements of the California Department of Alcoholic Beverage Control.

3. That the establishment does not jeopardize or endanger the public health or safety of persons visiting, residing, working or conducting business in the surrounding area.

The establishment will not jeopardize or endanger the public health or safety of persons visiting, residing, working or conducting business in the surrounding area. As previously noted the project has been conditioned to comply with the Downtown Specific Plan and the Redlands Municipal Code The activities associated with the proposed alcohol consumption will be conducted within the confines of the building, the exterior boardwalk (subject to the property owner's control), and the outdoor patio (subject to the property owner's control). The Redlands Police Department has also provided conditions of approval to better protect the health and safety of persons visiting, residing, working or conducting business in the surrounding area.

4. A finding of "public convenience and necessity" (Business and Professions Code Section 23958.4(b) (2)), if the activity will be located in an area that has been determined by the ABC to have an undue concentration of licenses as defined in Business and Professions Code Section 23958.4(a).

The subject property is located within Census Tract 81. According to the California Department of Alcoholic Beverage Control (ABC), two Off-Sale licenses and two On-Sale licenses are allowed in Censes Tract 81. Presently the numbers of existing licenses exceed both the guidelines of two On-Sale and two Off-Sale licenses, making this Census Tract an area of undue concentration. Sections 23958 and 23958.4 of the Business & Professions Code require ABC to deny applications for licenses in an area of undue concentration unless the local governing body determines that the "Public Convenience or Necessity" would be

served by the issuance of the requested license. ABC does not publish standards by which to make a finding of Public Convenience or Necessity, and the Business & Professions Code leaves that discretion to the local jurisdiction. In this case, the local governing body makes the determination for the Type 21 (Off-Sale General) licenses; ABC will make the determination for the Type 41 (On-Sale Beer & Wine – Eating Place) and Type 47 (On-Sale General – Eating Place) licenses. Redlands Municipal Code Section 18.190.080(D) grants the discretion to the Planning Commission (or City Council, in this case). For the proposed food hall and restaurant businesses, the finding of Public Convenience or Necessity can be made for the following reasons:

a) The sale of beer, wine, and spirits is ancillary to the primary uses with multiple restaurants and food retail stores within the existing building. The types of unique specialty restaurants and specialty food stores in this facility would be expected to offer beer, wine, and spirits along with the menu items. The 2035 General Plan envisions a lively downtown commercial district with restaurant and entertainment uses, including the adaptive reuse of former citrus packing plants as specified in Action 4.A-123 ("Promote the reuse of citrus packing houses, historic warehouses, and other historic commercial buildings to create a destination for residents and tourists").

b) The proposed sale of beer, wine, and spirits is an important component of an upscale specialty food hall proposed at this location, as well as a desirable and unique use in the downtown core commercial area.

c) The proposed sale of beer, wine, and spirits would be related to multiple restaurant uses within the proposed food hall, dining on the outdoor patio and boardwalk (areas under the control of the property owner and tenants), and the downtown area is designed to be walkable and pedestrian-friendly while being within moderate walking distance to existing neighborhoods as well as future higher-density residential uses. The sale of beer, wine, and spirits at this location will allow local residents the option of walking to local specialty restaurants as well as provide a convenience to local residents.

d) The Redlands Police Department has reviewed the proposed use, and has no objections to the proposal.

5. That the operations of the establishment will not aggravate existing problems in the neighborhood created by the sale of alcohol such as disturbance of the peace, illegal drug activity, public drunkenness, drinking in public, harassment of passersby, gambling, prostitution, sale of stolen goods, public urination, theft, assaults, batteries, acts of vandalism, littering, loitering, graffiti, illegal parking, excessive loud noises, especially in the late night or early morning hours, traffic violations, curfew violations, lewd conduct, or police detentions and arrests.

The subject property is located within the Town Center - Historic (TC-H) district of the Downtown Specific Plan. The primary activities will restaurants and related food retail stores, with ancillary alcohol sales and consumption (which will be conducted within the confines of the building, the exterior boardwalk, and the outdoor patio). The requested hours for alcoholic beverage service and on-site consumption are from 8:00 AM to 2:00 AM daily. Conditions have been placed on the project to minimize the likelihood of any

public safety problems. With the implementation of operating standards contained on Redlands Municipal Code Chapter 18.190 and conditions of approval, the project is not expected to aggravate existing problems in the neighborhood created by the sale of alcohol such as disturbance of the peace, illegal drug activity, public drunkenness, drinking in public, harassment of passersby, theft, assault/battery, vandalism, littering, loitering, graffiti, excessive loud noises, traffic violations, curfew violations, or police arrests.

6. The establishment will not detrimentally affect nearby neighborhoods considering the distance of the alcohol establishment to residential buildings, schools, parks, playgrounds or recreational areas, nonprofit youth facilities, places of worship, hospitals, alcohol or other drug abuse recovery or treatment facilities, social service offices, or other Alcohol Beverages Sales Activity Establishments.

The subject property is located within the Town Center - Historic (TC-H) district of the Downtown Specific Plan, and is not in close proximity to any residential neighborhoods or buildings, schools, parks, playgrounds, youth facilities, places of worship, hospitals, or social services or treatment facilities. There are numerous other Alcohol Beverages Sales Activity Establishments in the vicinity of the downtown (primarily restaurants, pubs, and cafés), which is to be expected in the downtown core commercial and entertainment area of the City.

7. The establishment will otherwise be compatible with existing and potential uses within the surrounding area.

The establishment will be compatible with existing and future uses within the surrounding downtown area. The proposed uses including restaurants, food retail, and similar uses are permitted in the Town Center - Historic (TC-H) district of the Downtown Specific Plan, and includes sales and serving of alcoholic beverages subject to a Conditional Use Permit. Other existing uses in the area include numerous restaurants, commercial retail, personal and professional services, and alcoholic beverage service. Future uses in the area will include many of the same uses, as well as transit-oriented development within one-half mile of the downtown train station including higher-density residential uses above commercial uses. With the proposed conditions of approval, the proposed establishment will continue to be compatible with the existing and future uses.

SECTION 5. EXPIRATION DATE. Conditional Use Permit No.1100 shall automatically expire two years from the date of City Council approval, and automatically become null and void, unless the applicant has diligently pursued the project as evidenced by issuance of one or more valid Type 21, Type 41, or Type 47 license(s) issued by the California Department of Alcoholic Beverage Control.

SECTION 6. EFFECTIVE DATE. This Resolution shall become effective upon adoption.

ADOPTED, SIGNED AND APPROVED this 1st day of May, 2018.

Paul W. Foster, Mayor

EXHIBIT A
CONDITIONS OF APPROVAL
Conditional Use Permit No. 1100

Development Services – Planning Division

1. This permit/approval is for up to two (2) Type 21 (Off-Sale General) licenses, and up to seven (7) Type 41 (On-Sale Beer & Wine – Eating Place) or Type 47 (On-Sale General – Eating Place) licenses, **for a total of up to nine (9) alcohol licenses of the types specified** as issued by the California Department of Alcoholic Beverage Control for the proposed food hall facility. The project site is located at 330 North Third Street.

2. This permit/approval shall expire two years from the date of City Council's approval (will expire on May 1, 2020) unless the applicant has diligently pursued the use as evidenced by issuance of the first Alcoholic Beverage Control license(s) necessary to operate the facility, or a time extension has been granted by the Planning Commission or City Council in accordance with the Redlands Municipal Code.

3. The property owner and applicant and their successors and assigns, shall defend, by paying for the defense costs of the City of Redlands (for counsel retained by the City), indemnify and hold harmless the City of Redlands, and its elected officials, officers, employees, and agents, from and against any and all claims, actions, and proceedings (collectively "Claims") to attack, set aside, void or annul the approval of this Conditional Use Permit by the City, or Claims brought against the City due to acts or omissions in any way connected to the applicant's project that is the subject of this permit. This indemnification shall include, but not be limited to, damages, fees, costs, liabilities, and expenses incurred in such actions or proceedings, including damages for the injury to property or persons, including death of a person, and any award of costs or attorneys' fees. In the event any such action is commenced to attack, set aside, void or annul all, or any, provisions of this permit, or is commenced for any other reason against the City for acts or omissions relating to the applicant's project, within fourteen (14) City business days following notice of such action from the City, the applicant shall file with the City a performance bond or irrevocable letter of credit, or other form of security satisfactory to the City (the "Security") in a form satisfactory to the City, and in the amount of $300,000, to ensure applicant's performance of its defense and indemnity obligations under this condition. The Security amount shall not limit the total indemnity obligation of the applicant pursuant to this condition. The failure of the applicant to provide the Security shall be deemed an express acknowledgement and agreement by the applicant that the City shall have the authority and right, without objection by the applicant, to revoke all entitlements granted for the project pursuant to this permit. The City shall have no liability to the applicant for the exercise of City's right to revoke this permit.

4. Pursuant to Government Code Section 66020(d), certain fees, dedications, reservations or exactions imposed by the City as a condition of approval of this project are subject to a statutory ninety (90) day protest period. Please be advised that the ninety (90) day protest period for those fees, dedications, reservations and exactions which are subject to

Government Code Section 66020(a) has commenced to run on the date this project was approved by the City.

5. By initiating or using this permit, the permittee acknowledges all of the conditions imposed and accepts this permit subject to those conditions and with full awareness of the provisions of Redlands Municipal Code Chapter 18.190 (including Sections 18.190.090 through 18.190.130 inclusive) and Sections 18.192.090 and 18.192.100. Failure of the permittee to sign these conditions does not affect their enforceability by the City or other responsible entity. These conditions are binding upon all future property owners and occupants of the subject property.

6. This permit/approval is granted for the plans dated April 3, 2018, ("the plans") on file with the Planning Division. Operations on the site shall remain in substantial conformance with the request and with the application materials submitted by the applicant, as approved by the Planning Commission and/or City Council, and placed on file in the office of the Planning Division, except as modified within these conditions.

7. Conditional Use Permit No. 1100 may be reviewed, modified, or revoked by the City in accordance with RMC Chapter 18.192 should it be determined that the proposed use does not comply with any of its operational standards, training requirements, or conditions; or if the use or conditions under which they were permitted are detrimental to the public health, welfare, or materially injurious to property or improvements in the vicinity; or if the use is maintained so as to constitute a public nuisance.

8. The applicant shall submit a copy of the Department of Alcoholic Beverage Control license(s) including any and all conditions imposed, to the City Planner within sixty (60) days of the issuance dates of the ABC licenses by the California Department of Alcoholic Beverage Control. The applicant shall maintain compliance with all applicable ABC regulations for the license types authorized by this permit/approval.

9. The operator(s) and all employees serving alcoholic beverages shall be required to participate in the State of California's free Licensee Education on Alcohol and Drugs (L.E.A.D.).

10. There shall be no over-serving of alcohol, and bartenders and servers shall be instructed to refuse alcohol service to visibly intoxicated persons.

11. To alleviate litter problems, no open cans or bottles intended for on-site consumption shall leave the premises.

12. The off-site consumption of alcoholic beverages sold or intended for on-site consumption is prohibited. The applicant shall post a sign at each entrance/exit of the exterior boardwalk and the outdoor patio advising patrons that "No Open Containers of Alcoholic Beverages May Leave the Premises" or "No Open Containers of Alcoholic Beverages Beyond This Point."

13. An employee/attendant shall actively monitor the outdoor patio area and boardwalk area(s) during all times that alcohol is served and consumed in those outdoor areas.

14. Property owner and tenants shall arrange for commercial loading and unloading activities to occur during off-peak business hours, to the extent practicable, to minimize traffic impacts and parking impacts to local streets.

Police Department Conditions

15. Establish a "complaint response community relations" program that includes the following:
    - Coordinating efforts with the police department to monitor community complaints about the establishment's activities.

16. Restrict the hours of alcohol sales to 8:00 a.m. to 2:00 a.m. unless limited further by the ABC.

17. Restrict the service of discounted alcoholic beverages to no later than 8:00 pm.
    - Post the following signs prominently posted in a readily visible manner in English and Spanish: "California State Law Prohibits the Sale of Alcoholic Beverages to Persons under 21 Years of Age".
    - "No Loitering or Public Drinking".
    - "It Is Illegal To Possess An Open Container Of Alcohol In The Vicinity Of This Establishment".

18. The establishment is required to operate in a manner appropriate with mitigating alcohol related problems that negatively impact those individuals living or working in the neighborhood including, but not limited to, sales to minors, surrogate sales, the congregation of individuals, violence on or near the premises, drunkenness, public urination, solicitation, drug dealing, drug use, loud noise and litter. The establishment may be required to retain a specified number of security guards based upon the impact of its activities on the surrounding neighborhood. All security guards shall have all required state and city permits and licenses.

19. The establishment's operators or employees are required to discourage loiterers who are not patronizing any of the businesses, and to ask persons loitering longer than fifteen (15) minutes to leave the area and contact local law enforcement officials for enforcement of applicable trespassing and loitering laws if persons requested to leave fail to do so.

20. The establishment is required to implement a video camera safety plan which includes:
    - Digital video camera system which records activity of patrons and employees at primary service counters, entrances and exits, and primary parking areas.
    - Video recordings must be stored and retrievable for a minimum period of seven (7) days from the time of recording.
    - Video clarity must be such that a person's facial features can be identified from the video.
    - The video system must be engaged and recording at all times, while the establishment is open to the public. The system must be maintained in working

establishment is open to the public. The system must be maintained in working order at all times.

- The video system must be approved by the Redlands Police Department before it is installed to ensure compliance with city requirements and approved again after the system is operational.

21. The establishment may be required to retain a specified number of security guards. The number of security guards shall vary based upon the specific facts and circumstances of each establishment site and operation. All security guards shall have all required state and city permits and licenses.

22. Alcoholic drinks shall not be included in the price of admission to any establishment.

23. There shall be no requirement for patrons to purchase a minimum number of alcoholic drinks.

24. All alcohol sold for on-site consumption shall remain on the establishment's premises, including within outdoor dining areas.

25. An employee of the establishment must be present at all times in areas within the establishment where alcohol is served.

26. All areas of the business that are accessible to patrons shall be illuminated to make easily discernible the appearance and conduct of all people in the business.

27. Games or contests requiring or involving consumption of alcoholic beverages shall be prohibited.

28. The establishment(s) shall follow all conditions of the alcohol license(s) issued by the California Department of Alcoholic Beverage Control, as well as all other relevant portions of the Redlands Municipal Code.

29. No new customers shall be permitted after 30 minutes before closing.

30. Last call for drinks shall be no later than 15 minutes before closing.

31. After midnight (12:00 a.m.), only single-sized drinks and no multiple drinks shall be served to one individual customer for personal consumption.

End of Conditions of Approval

Brian Desatnik
Development Services Director

RESOLUTION NO. 7839

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS APPROVING COMMISSION REVIEW AND APPROVAL NO. 895 TO REHABILITATE AND CONSTRUCT INTERIOR AND EXTERIOR MODIFICATIONS, IN ACCORDANCE WITH THE SECRETARY OF THE INTERIOR'S STANDARDS FOR HISTORICAL BUILDING REHABILITATION, TO THE MUTUAL ORANGE COMPANY PACKING PLANT BUILDING LOCATED AT 330 NORTH THIRD STREET, IN THE TOWN CENTER - HISTORIC (TC-H) DISTRICT OF THE DOWNTOWN SPECIFIC PLAN.

WHEREAS, Redlands Food Hall, LLC, has submitted applications for Commission Review and Approval No. 895, Historic Resource Designation No. 132, Conditional Use Permit No. 1100, and Certificate of Appropriateness No. 559 (collectively referred to herein as "Project Entitlements") to rehabilitate and adaptively reuse the historic Mutual Orange Company Packing Plant located at 330 North Third Street (APNs: 0169-028-47-0000, 0169-028-48-0000, 0169-028-49-0000, 0169-028-50-0000); and

WHEREAS, on March 1, 2018, the Historic and Scenic Preservation Commission adopted a Resolution recommending to City Council approval of Historic Resource Designation No. 132; and

WHEREAS, on March 5, 2018, the Environmental Review Committee held a public hearing and recommended exemption from environmental review and approval of the Socio-Economic Cost/Benefit Study prepared for the project; and

WHEREAS, on April 10, 2018, the Planning Commission held a public hearing and considered the staff report, oral report, the testimony, and the written evidence submitted by and on behalf of the applicant, and by members of the public; and

WHEREAS, on April 10, 2018, the Planning Commission adopted a Resolution recommending approval of Commission Review and Approval No. 895; and

WHEREAS on April 20, 2018, notice of this City Council's public hearing for Historic Resource Designation No. 132 and Conditional Use Permit No. 1100 was published in the Redlands Daily Facts by the City Clerk; and

WHEREAS, on May 1, 2018, the City Council held a public hearing and considered the staff written and oral reports, the recommendations of the Planning Commission and the Historic & Scenic Preservation Commission, the testimony and written evidence submitted by and on behalf of the applicant, and testimony by members of the public; and

WHEREAS, following the public hearing on the application for the Historic Resource Designation and Conditional Use Permit, at which this City Council provided opportunity for public testimony, the City Council determined that approval of the Project Entitlements is in the best interests of the public health, safety and general welfare; and

WHEREAS, the California Environmental Quality Act (Public Resources Code, §21000 et seq.) pursuant to State CEQA Guidelines (Title 15, Cal. Code Regs., §15000 et seq.) Section 15331 (Historic Resource Restoration/Rehabilitation) and Section 15332 (In-Fill Development Projects) exempts certain projects from environmental review, and the proposed project meets all criteria for these exemptions;

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF REDLANDS AS FOLLOWS:

SECTION 1. CALIFORNIA ENVIRONMENTAL QUALITY ACT. The City Council hereby determines that approval of Commission Review & Approval No. 895 and Project Entitlements is exempt from environmental review under the California Environmental Quality Act (Public Resources Code, §21000 et seq.) pursuant to State CEQA Guidelines (Title 15, Cal. Code Regs., §15000 et seq.) Sections 15331 and 15332.

SECTION 2. SOCIO-ECONOMIC COST/BENEFIT STUDY. The City Council hereby adopts the Socio-Economic Cost/Benefit Study that has been prepared for the project.

SECTION 3. FINDINGS FOR APPROVAL OF COMMISSION REVIEW & APPROVAL NO. 895. The City Council hereby approves Commission Review and Approval No. 895 based upon the following findings, and subject to the Conditions of Approval attached hereto as Exhibit "A" and Exhibit "B:"

1. The site for the intended use is adequate in size and shape to accommodate the use, and all of the required yards, setbacks, walls or fences, landscaping and other features will adjust the use to those existing or permitted future uses of land in the neighborhood.

The existing building and site is adequate in size and shape to accommodate the proposed use. The site includes a single building that occupies most the subject parcel, which is a typical configuration for historical buildings constructed on small commercial lots in the downtown core. The proposed uses including restaurants, food retail, and similar uses are permitted in the Town Center - Historic (TC-H) district of the Downtown Specific Plan. The project will comply with all applicable Town Center - Historic (TC-H) development standards, to the extent practicable considering that the property was developed prior to the City adopting any zoning regulations. The site contains an existing structure of an adequate size to easily accommodate the proposed restaurant uses, and the proposed new exterior boardwalk and patio will provide additional dining and seating areas.

2. The site for the proposed use relates to streets and highways which are properly designed and improved to carry the type and quantity of traffic generated or to be generated by the proposed use.

The existing site is adjacent to Third Street and Shoppers Lane, and relates to streets which are properly designed and improved to carry the type and quantity of traffic generated or to be generated by the proposed use. The site has street frontage along Third Street and

Shoppers Lane, which will be designed to include pedestrian improvements and crosswalks within the public right-of-way. The site was historically developed with the Mutual Orange Company packing house, provides no parking on-site (as none was required when the property was originally developed), and is located within the downtown parking district which exempts historical buildings from the contemporary parking requirements of the Municipal Code. The proposed restaurant and food retail uses are consistent with the General Plan and Downtown Specific Plan designations for the property which these streets were designed to accommodate.

3. The conditions set forth in the approval and those shown on the approved site plan are deemed necessary to protect the public health, safety and general welfare.

The conditions included in the Resolutions are adequate to protect the public health, safety and general welfare. The project will also comply with design standards and the applicable provisions of the Redlands Municipal Code.

ADOPTED, SIGNED AND APPROVED this 1st day of May, 2018.

Paul W. Foster, Mayor

ATTEST:

Jeanne Donaldson, City Clerk

I, Jeanne Donaldson, City Clerk of the City of Redlands, hereby certify that the foregoing resolution was duly adopted by the City Council at a regular meeting thereof held on the 1st day of May, 2018.

EXHIBIT A
CONDITIONS OF APPROVAL
Commission Review & Approval No. 895

1. This approval/permit shall expire two (2) years from the date of City Council's approval of the project (will expire on May 1, 2020), unless construction has commenced pursuant to a building permit, or a time extension is granted in accordance with Code.

2. This permit/approval is for the rehabilitation and adaptive reuse of the historic Mutual Orange Company Packing House, construction of façade rehabilitation and improvements, establishing a multi-tenant food hall (with food retail uses, farmer's market, restaurants, demonstration kitchen, and similar retail uses), and related site improvements including outdoor patio/dining area, walls, walkways, landscaping, lighting, and new refuse enclosure. The existing building is approximately 33,676 square feet in total area, with approximately 19,375 square-feet on the main (1st) floor and 14,301 square-feet in the basement. A new exterior boardwalk approximately 5,670 square-feet in area is approved for the west, north, and east sides of the existing building.

3. The property owner and applicant for this permit, and its successors and assigns, shall defend, indemnify and hold harmless the City of Redlands, and its elected officials, officers, agents and employees, from and against any and all claims, actions, and proceedings to attack, set aside, void or annul the approval of this permit by the City, or brought against the City due to acts or omissions in any way connected to the applicant's project that is the subject of this permit. This indemnification shall include, but not be limited to, damages, fees, costs, liabilities, and expenses incurred in such actions or proceedings, including damages for the injury to property or persons, including death of a person, and any award of attorneys' fees. In the event any such action is commenced to attack, set aside, void or annul all, or any, provisions of this permit, or is commenced for any other reason against the City for acts or omissions relating to the applicant's project, within fourteen (14) City business days of the same, the applicant shall file with the City a performance bond or irrevocable letter of credit (together, the "Security") in a form satisfactory to the City and in the amount of Three Hundred Thousand Dollars ($300,000), to ensure applicant's performance of its defense and indemnity obligations under this condition. The failure of the applicant to provide the Security shall be deemed an express acknowledgement and agreement by the applicant that the City shall have the authority and right, without objection by the applicant, to revoke all entitlements granted for the project pursuant to this permit. The City shall have no liability to the applicant for the exercise of City's right to revoke this permit.

4. Pursuant to Government Code Section 66020(d), certain fees, dedications, reservations or exactions imposed by the City as a condition of approval of this project are subject to a statutory ninety (90) day protest period. Please be advised that the ninety (90) day protest period for those fees, dedications, reservations and exactions which are subject to Government Code Section 66020(a) has commenced to run on the date this project was approved by the City.

5. This permit/approval is granted for the plans dated April 3, 2018, ("the plans") on file with the Planning Division. Construction of the building and site shall remain in substantial conformance with the request and with the application materials submitted by the applicant, as approved by the Planning Commission and/or City Council, and placed on file in the office of the Planning Division, except as modified within these conditions. If the plans are modified or amended in order to satisfy a requirement of the State Historic Preservation Office and/or National Park Service, the modified or amended plans may be presumed to be in substantial conformance with these conditions and need not be subject to supplemental review by the Historic & Scenic Preservation Commission, Planning Commission, or City Council. The applicant shall provide evidence in writing of such modifications to the Development Services Director or designee prior to building permit issuance, and shall revise construction plans being reviewed by the Building Division prior to permit issuance.

6. The issuance of any permits shall comply with all applicable provisions of the Redlands Municipal Code, and all applicable provisions of the California Building Code and/or California Historical Building Code.

7. No final inspection or Certificate of Occupancy shall be granted until all conditions of approval have been satisfied.

8. Plans submitted by Developer with building permit applications shall show on the building elevation sheets all exterior building materials and colors, including product and finish manufacturer name, color name and number, and surface finish type (such as: stucco with sand finish, plaster with smooth finish) to be used in construction.

9. Transformer cabinets and commercial gas meters shall not be located within required setbacks and shall be screened from public view either by architectural treatment or with landscaping. Multiple electrical meters and panels shall be fully enclosed and incorporated into the overall architectural design of the building(s). Backflow preventers shall be enclosed with landscaping that will provide complete screening upon maturity. The location and method of enclosure or screening of this equipment shall be shown on the construction plans and landscape plans prior to building permit issuance. Location of said equipment shall be coordinated with appropriate utility company (e.g., Southern California Gas Company or Southern California Edison Company). The applicant shall submit plans showing details of screening subject to review and approval by the Development Services Director, prior to issuance of building permits.

10. During the plan check review process, the Developer shall provide a lighting plan that provides design details (light standards, bollards, wall mounted packs, etc.) and illumination site information within pathways, streetscapes, and open spaces proposed throughout the development. An electrical engineer shall prepare the site lighting and/or photometric plan demonstrating that adequate lighting ranges will be provided throughout the development without creating light spillover, light pollution, or conflicts with surrounding factors such as tree locations, off-site or adjacent lighting.

11. Prior to issuance of building permits, Developer shall demonstrate that light standards will not conflict with tree locations. Developer shall submit a plan showing both the lighting and landscape on the same sheet.

12. All lighting shall be shielded and no light or glare shall impact the surrounding properties.

13. Developer shall recess and fully screen roof heating/cooling systems and other exterior mechanical equipment from adjoining property and public right-of-way, to the extent practicable, as required by this permit. Plumbing vents, ducts, and other appurtenances protruding from the roof of structures shall be placed and architecturally treated, to the extent practicable, so that view will be minimized from the front of the property or other major public vantage points. Roof vents shall be shown on construction drawings and painted to match roof material color.

14. For any exterior utility meter panels, Developer shall paint such panels to match the structure upon which it is located. Such panels shall be located to take advantage of screening (e.g. landscaping or other building elements) from public right-of-ways, to the maximum extent feasible.

15. All landscaped areas noted on the site plan shall be permanently maintained with healthy planting material, and whenever necessary shall be replanted with suitable vegetation.

16. Landscape and Irrigation Plans shall provide water use calculations on the submitted plans, and Developer shall demonstrate compliance with the Model Water Efficient Landscape Ordinance prior to permit issuance. The plans shall be prepared by a California-licensed landscape architect.

17. Trees shall be allowed to grow to the full genetic height and habit (trees shall not be topped or overly trimmed). Trees shall be maintained using standard arboriculture practices.

18. Property owner and tenants shall arrange for commercial loading and unloading activities to occur during off-peak business hours, to the extent practicable.

19. A copy of the approved Conditions of Approval shall be included on the cover page of the construction plans submitted to the Building Division.

20. Roof and ground-mounted equipment shall be screened from public view on all sides subject to review and approval by the Development Services Director, prior to the issuance of building permits.

21. The applicant shall work with the local utility companies to locate all new transformer cabinets outside of required setbacks. All new transformers shall be screened from public view either by architectural treatment or within landscaping. Multiple electric meters shall be fully enclosed and incorporated into the overall architecture design of the structure. Backflow preventers shall be enclosed with landscaping that will provide complete screening upon

maturity. The location and method of enclosure or screening of this equipment shall be shown on the final working drawings prior to building permit issuance. Location of said equipment shall be coordinated with the appropriate utility company.

22. Trash enclosure design and finish shall be subject to review and approval by the Quality of Life Department, Municipal Utilities & Engineering Department, and Development Services Department during plan check, prior to the issuance of building permits. Trash storage areas shall be constructed according to the approved plans, including metal gate(s), and shall be painted a subdued color to match or complement the building color. The trash enclosure roof (corrugated metal) may not be painted.

23. On-site parking is not required for the subject property. The parking requirements of RMC Section 18.164.240 are not applicable to designated, eligible, or contributing historical buildings over 50 years of age within the Town Center - Historic (TC-H) district pursuant to Chapter III, Section (C)(2)(2.2), of the Downtown Specific Plan.

24. Prior to issuance of a building permit, the applicant shall be required to obtain approval of a construction site safety plan by the Redlands Police Department providing adequate security measures such as lights, video cameras, vehicle transponders, locks, alarms, trained security personnel, fencing, etc. The nature of the measures will depend on the specific requirements of the site, and may vary with the different stages of construction. The applicant shall be responsible for the compliance of all sub-contractors working on the site.

25. If human remains are encountered during grading and other construction excavation, work in the immediate vicinity (50 feet radius) shall cease and the County Coroner shall be contacted pursuant to California Health & Safety Code Section 7050.5. California Health & Safety Code Sections 7050.5 through 7055: As required by state law, the requirements and procedures set forth in Public Resources Code Section 5097.98 would be implemented, including notification of the County Coroner, notification of the Redlands Police Department, notification of the Native American Heritage Commission and coordination with the individual identified by the Native American Heritage Commission to be the "most likely descendant."

26. In the event that Native American cultural resources are discovered during project development/construction, all work in the immediate vicinity (50 feet radius) of the find shall cease and a qualified archaeologist meeting Secretary of the Interior's Standards shall be hired to assess the find. Work on the overall project may continue during this assessment period.

a. If significant Native American cultural resources are discovered, for which a Treatment Plan must be prepared, the developer or his/her archaeologist shall contact the Morongo Band of Mission Indians.

b. If requested by the Morongo Band of Mission Indians or other Native American Tribe, the developer or the project archaeologist shall, in good faith, communicate and coordinate resolution efforts on the discovery and its disposition (e.g. avoidance, preservation, return of artifacts to tribe, etc.).

27. The attached conditions of approval from the following City of Redlands Departments/Divisions are incorporated herein by reference:

CONDITIONS OF APPROVAL

[Attached]

REDLANDS MUNICIPAL UTILITIES AND ENGINEERING DEPARTMENT
DEVELOPMENT REQUIREMENTS
CONDITIONAL USE PERMIT NO. 1100 AND
COMMISSION REVIEW AND APPROVEL NO. 895

Date of P.C. Meeting:	**April 10, 2018**
Applicant:	**Redlands Food Hall L.L.C.**
Location:	**330 Third Street**
Project Description:	**Establish a Multi-Tenant Food Hall within an Existing 21,000 Square Foot Building**

The applicant shall comply with the following engineering requirements to allow for the orderly development of the surrounding area and for public health and safety.

All requirements for development shall be consistent with requirements set forth in the Specific Plan No. 45; applicable sections of Redlands Municipal Code; latest edition of "Redlands Standard Specifications and Detail Drawings for Design and Construction of Public Improvements"; latest edition of American Public Works Association "Standard Plans for Public Works" and "Standard Specifications for Public Works Construction – Greenbook"; latest edition of "Redlands Water Systems Standard Specifications"; latest edition of "Redlands Sanitary Sewer Systems Standard Specifications"; and current Redlands policies and guidelines relative to development projects.

A. The following items are required prior to issuance of the GRADING PERMIT.

No grading permit is required.

B. The following items are required prior to RECORDATION OF TRACT/PARCEL MAP.

No map is required for this application.

C. The following items are required prior to issuance of the BUILDING PERMIT.

1. Pay plan check fee as established per resolution. The amount is to be determined at plan check submittal. (City Resolution No. 7671)

2. Water Quality Management Plan. Submit final Water Quality Management Plan (WQMP) for review and approval. WQMP shall consist of post construction Best Management Practices (BMPs) prepared in accordance with the requirements and guidelines of the San Bernardino County Stormwater Program. The requirements of the WQMP shall remain in effect throughout the life of the project. (California State Order No. R8-2010-0036)

3. The Final WQMP shall also include a site trash plan detailing the installation, operation, and maintenance of a Full Capture System (FCS) for loose trash. The intent of the FCS is to capture loose trash preventing the trash from entering the

site storm drains and basins. BMPs or devices used as FCS devices shall require acceptance by the City Engineer. Full Capture Systems are defined as treatment controls (either a single device or a series of devices) capable of trapping all particles 5 mm or greater. In addition, the FCS shall trap trash from the greater of:

a. A flow not less than the peak flow rate, Q, resulting from a one-year, one-hour, storm. Precipitation intensity shall be determined using the NOAA ATLAS 14 Point Precipitation Frequency Estimates web site; or
b. A flow rate equal to the on-site storm water conveyance system including pipes, channels, and swales.

4. The final WQMP must be in substantial conformance with the preliminary WQMP and in full conformance with the WQMP Guidance Document. The final WQMP shall be submitted and approved prior to the issuance of a building permit.

5. Plans required to be submitted shall include:
   a. Street Improvement;
   b. Pavement Striping and Signage Plans: (Including thermosplastic striping and pavement markings, identification of parking restriction areas, reflectorized pavement markers, and limits of slurry sealing necessary for the pavement markings);
   c. Street Light Installation – Provide a street lighting plan which show approved locations of service pedestal(s), conduits, street lights, appurtenances, and any necessary details by Southern California Edison Company;
   d. Potable water lateral installation, as needed; and
   e. CFD Landscape and Irrigation Plan.

6. All plans used as reference for design shall be listed on title sheet of all plans with reference numbers. All plans shall be submitted on 24" x 36" size sheets. Three (3) copies of each are required. After final review, plans shall be submitted on 24" x 36" size, min. 4 mil, mylar sheets for City's approval.

7. Submission of plan sets shall be complete and include all required engineering designs and drawings listed in No. 2 above. All plans submitted shall be substantially complete, and no plan check queue place-holder plans will be accepted. An incomplete plan submittal will not be accepted for plan check.

8. All off-site improvements shall be designed by owner's Civil Engineer in accordance with City Standard Specifications and Detail Drawings and Standard Specifications for Public Works Construction (Green Book) latest revision thereof. All existing utilities shall be pot-holed to determine the actual depth if no signed plan is available. Field notes will be submitted at time of submitting the plan for review and plan checking.

9. The approximate locations of existing underground utilities shall be shown on the improvement/site/grading plans. The utilities shall be plotted from record and

field data. The City of Redlands and the Engineer assume no liability as to the exact location of said lines where locations are not shown.

10. All National Pollutant Elimination System (NPDES) Best Management Practices (BMPs) to prevent and control discharges to the municipal separate storm sewer (drain) system shall be in place and shall be maintained throughout the course of the project. (RMC 13.54)

11. Pay the required development impact fees per ordinance in effect at time of issuing the building permit. The exact amount will be determined based upon the review of the final building plan or project information. Development Impact Fees shall include:
    - Transportation Facilities; (RMC 3.54)
    - Fire Facilities; (RMC 3.60)
    - General Government Facilities; (RMC 3.60)
    - Police Facilities; (RMC 3.60)
    - Storm Drain Facilities; (RMC 3.56)
    - Water Capital Improvement Charge; (RMC 3.48)
    - Water Source Acquisition Charge; (RMC 13.40)
    - Sewer Capital Improvement Charge; (RMC 3.44) and
    - Solid Waste Capital Improvement Charge. (RMC 3.70)

12. Cash cleanup deposit shall be submitted ($1,000.00). Deposit will be reimbursed after the work is completed and accepted by the City upon written request. (RMC 12.16.290)

13. Truck route permit is required for all construction vehicles 5 tons and over gross vehicular weight (e.g. concrete trucks) using streets other than established truck routes. (RMC 10.54)

14. Final City approved mylars for all public improvements shall be on file with the Municipal Utilities and Engineering Department.

15. Although this project will have an on-going inspection throughout construction, a final inspection for all off-site improvements must be scheduled by developer to certify that these improvements comply with City specifications. (RMC 12.16.090)

16. Requirements for Shoppers Lane (RMC 18.192.050 and 18.12.080):

    a. Repair/replace altered, broken or substandard existing off-site improvements to the project boundary. This shall include, but is not limited to, the removal of the existing curb cut and the construction of standard curb, gutter, and sidewalk;
    b. Construct ADA compliant ramps at all curb returns, and all pedestrian crossings as accepted by the City Engineer;

c. Install LED historic ornamental street light(s) with the equivalent illumination of a 100 watt sodium vapor street light. Prepare and submit a separate street lighting plan for City approval. Street light spacing shall be determined by the City design specifications. Location of the light(s) will be determined at time of plan preparation. Coordinate with City staff for guidance at that time. Prepare and submit a separate street lighting plan for City approval;
d. Provide street trees avoiding sewer and water laterals, and landscaping. Prepare and submit a separate CFD Landscape and Irrigation Plan for City approval;
e. Construct ADA compliant sidewalk crossings at all driveway entrances including any necessary dedication of easement for pedestrian access;
f. Construct storm drain inlets as necessary to convey street storm flow into the existing storm drain system in Shoppers Lane;
g. Construct underwalk drain, if necessary; and
h. Install commercial fire hydrants as required by the Redlands Fire Department.

17. Requirements for Third Street (RMC 18.192.050 and 18.12.080):

a. Repair/replace altered, broken or substandard existing off-site improvements to the project boundary. This shall include, but is not limited to the installation of ADA compliant sidewalk at the driveway for the trash enclosure area;
b. Construct ADA compliant ramps at all curb returns and all pedestrian crossings accepted by the City Engineer;
c. Install LED historic ornamental street light(s) with the equivalent illumination of a 100 watt sodium vapor street light. Prepare and submit a separate street lighting plan for City approval. Street light spacing shall be determined by the City design specifications. Location of the light(s) will be determined at time of plan preparation. Coordinate with City staff for guidance at that time;
d. Provide street trees avoiding sewer and water laterals, and landscaping. Prepare and submit a separate CFD Landscape and Irrigation Plan for City approval;
e. Construct ADA compliant sidewalk crossings at all driveway entrances including any necessary dedication of easement for pedestrian access;
f. Construct underwalk drain, if necessary; and
g. Install commercial fire hydrants as required by the Redlands Fire Department.

18. Provide advanced pedestrian warning facilities for the proposed pedestrian crossings on Shoppers Lane and Third Street. These may include solar powered pedestrian activated crosswalk beacon(s) and/or in-placement crosswalk lighting among other options as accepted by the City Engineer.

19. Provide for adequate drainage facilities. (RMC 18.192.050 and 18.12.080)

20. As a condition of and prior to the final approval, the applicant shall (1) petition the City for annexation of the property comprising CUP 1100 and CRA 895 to the City's Community Facilities District No. 2004-1, or a similar City community facilities district, as designed by the City; (2) take actions reasonable or necessary to annex such property to community facilities district; and (3) pay the reasonable and actual costs incurred by the City in annexing the property to the community facilities district; all for the purpose of maintenance of landscaping and public right-of-ways. (California Community Facilities Act)

21. Install reduced pressure principle backflow devices as required by City Engineer. (RMC 13.20)

22. Install onsite fire line with double detector check valve backflow devices at service connection satisfactory to the City Fire Department. (RMC 13.20)

23. Comply with City of Redlands Landscape Ordinance No. 2724 and submit a landscape/irrigation plan prepared by a licensed landscape architect for review and approval. The irrigation system shall be designed and constructed to make use of future recycled and/or recycled water system. (RMC 15.54)

24. Comply with the Solid Waste Recycling Access Act of 1991 (AB 1327) and install double solid waste bin enclosure(s). Submit a plan prepared by a licensed engineer showing bin enclosure(s) location on the site plan with solid waste truck turning and/or turnaround track template superimposed.

25. Dedication documents shall be prepared by a licensed Land Surveyor or registered Civil Engineer (registered prior to January 1982) and must be submitted for review and approval before recordation. (California B&P Code 8761 and CCR 4411)

26. Construct storm drain inlets as needed to convey storm flow within the street into the existing storm drain system in Shoppers Lane and Third Street.

26. FEMA Elevation Certificate (Pre-Construction). All new construction or substantial improvements within a Special Flood Hazard Area (designated floodplain) shown on the FEMA flood map (FIRM) shall comply with the City's floodplain management regulations (Chapter 15.32, Redlands Municipal Code). For proposed developments within a floodplain, the applicant must submit a FEMA Elevation Certificate (EC) for review and acceptance by the Municipal Utilities and Engineering Department prior to issuance of the building permit. This certification shall be made by a registered professional engineer or land surveyor in the State of California. The latest EC form and instructions can be downloaded from the FEMA website at www.fema.gov.

27. Improvement bonds must be posted for the total estimated cost of off-site improvements as follows (RMC 18.192.050B and 18.12.080):

Performance	100% security (due prior to building permit issuance)
(Performance/Warranty)	10% security (due at acceptance of improvements)
Labor and Materials	50% security (due prior to building permit issuance)

Acceptable security forms: Surety Bond(s), Letter of Credit from a qualified bank or institution, Cash Deposits, or Set Aside Letter (savings account) in City's name.

28. The 10% performance (warranty) security will be retained for one year after acceptance of public improvements by the City for warranty of off-site work. (RMC 18.192.050B, 18.12.080 and 12.20.100)

29. Execute Public Improvement Agreement. (RMC 12.22.060)

30. Execute a Memorandum of Understanding between the City and the applicant for use of the public right-of-way areas adjacent to the building as coordinated through the Development Services Department and approved by City Council.

D. The following items are required prior to approval of APPLICATION FOR WATER SERVICE CONNECTION and prior to WATER METER INSTALLATION.

1. Pay the Water Capital Improvement Charge; (RMC 3.48.030)

2. Pay the Water Source Acquisition Charge; (RMC 13.40) and

3. Pay the Water Meter Charge. (Redlands Ordinance No. 2830)

E. The following items are required prior to issuance of the ENCROACHMENT PERMIT.

1. Cash cleanup deposit shall be submitted ($1,000.00). Deposit will be reimbursed after the work is completed and accepted by the City upon written request. (Required unless previously submitted under Sections A, B or C.) (RMC 12.16.290)

2. Truck route permit is required for all construction vehicles 5 tons and over gross vehicular weight (e.g. concrete trucks) using streets other than established truck routes. (RMC 10.54)

3. Section 4216/4217 of the Government Code requires a Dig Alert Identification Number be issued before a "Permit to Excavate" will be valid. For your Dig Alert Identification Number, call Underground Service Alert toll free, 1-800-227-2600, two (2) working days prior to conducting any excavation. (RMC 12.20.120)

4. Encroachment Permit application and two (2) sets of City approved plans must be submitted for all off-site improvements. Encroachment Permit fees shall be paid prior to issuance of Encroachment Permit. (RMC 12.16.010)

5. A California OSHA Permit Number for all work that is 5 feet deep or deeper shall be provided. Call (909)383-4321. (RMC 12.16.040)

6. A traffic control plan shall be prepared in accordance with the latest revision of (CA) MUTCD or W.A.T.C.H. manual, submitted and accepted by the City Engineer prior to issuance of an encroachment permit. The plan shall show all required construction signage, warning devices, road closures, detours, delineation, phasing schedules and anticipated durations of closures and detours for any work within the public right-of-way. The plans shall provide names and 24-hour phone numbers of individuals who can be contacted regarding traffic control measures.

7. Improvement bonds must be posted for the total estimated cost of off-site improvements as follows:

Performance	100% security (due prior to building permit issuance)
(Performance/Warranty)	10% security (due at acceptance of improvements)
Labor and Materials	50% security (due prior to building permit issuance)

Acceptable security forms: Surety Bond(s), Letter of Credit from a qualified bank or institution, Cash Deposits, or Set Aside Letter (savings account) in City's name.

8. Execute Public Improvement Agreement.

9. Execute a Memorandum of Understanding between the City and the applicant for use of the public right-of-way areas adjacent to the building as coordinated through the Development Services Department and approved by City Council.

10. The 10% performance (warranty) security will be retained for one year after acceptance of public improvements by the City for warranty of off-site work.

F. The following items are required prior to issuance of CERTIFICATE OF OCCUPANCY.

1. All requirements as described in Sections A, B, C, D and E of these conditions of approval shall be met.

2. All improvements shall be reviewed and accepted by the City Engineer. The Engineer of Record shall file a Final Certification for all improvements relating to the project development.

3. Owner's Licensed Land Surveyor shall reset survey points, monuments, record corners, and centerline ties that were destroyed during construction and shall file Corner Records for those points prior to completion of the project with San Bernardino County Surveyor. Copies of information shall be furnished to the Municipal Utilities and Engineering Department. (California B&P Code 8762, 8767, 8768, 8771, and 8773(b)

4. FEMA Elevation Certificate (Finished Construction). A post-construction Elevation Certificate (EC) shall be submitted for all new construction or substantial improvements within a Special Flood Hazard Area (designated floodplain) shown on the FEMA flood map (FIRM). This certification shall provide as-built survey elevations to verify compliance with the City's floodplain management regulations (Chapter 15.32, Redlands Municipal Code). This certification shall be made by a registered professional engineer or land surveyor in the State of California and submitted to the Municipal Utilities and Engineering Department for review and acceptance prior to issuance of the Certificate of Occupancy. The latest EC form and instructions can be downloaded from the FEMA website at www.fema.gov.

5. All work shall be completed to the satisfaction of the City Engineer. All as-built plans shall be delivered to the Municipal Utilities and Engineering Department for review and approval.

6. A list of as-built infrastructure improvement quantities shall be provided in the Excel format provided by the City showing quantities for each street segment (i.e. pavement, curb and gutter, sidewalk, etc.)

7. Streets may be required to have a seal coat applied at the option of the City Engineer. Type of seal coat is to be determined by the City Engineer.

8. Resurface existing roadway as directed by the City Engineer due to utility installations and construction damage.

9. Existing striping shall be removed and replaced as necessary. New striping and pavement markings shall be installed as required by the City Engineer.

10. Owner/Developer shall provide recycling receipts as required by the recycling plan.

G. The following items are required prior to release of SECURITIES, WARRANTIES, and DEPOSITS.

1. Prior to the release of the securities for the project, all improvements shall be reviewed and accepted by the City Engineer.

2. Tie sheets shall be submitted for all monuments found and/or set in the public right-of-way.

3. The release of securities/warranties/deposits must be requested in writing to the City Engineer. Allow 30 days for processing.

FILE CUP 1100 & CRA 875

RESOLUTION NO. 7838

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS DESIGNATING 330 NORTH THIRD STREET AS A HISTORIC PROPERTY (HISTORIC RESOURCE DESIGNATION NO. 132)

WHEREAS, Chapter 2.62 of the Redlands Municipal Code establishes rules and regulations governing the designation, preservation and perpetuation of historic and scenic properties; and

WHEREAS, the property owner has applied for and requested designation of 330 North Third Street, an eligible and contributing structure located within the Santa Fe depot National Historic District, as an historic property; and

WHEREAS, the Historic and Scenic Preservation Commission held a duly noticed public hearing on March 1, 2018, to consider the nomination and designation of 330 North Third Street (APNs: 0169-028-47-0000, 0169-028-48-0000, 0169-028-49-0000, 0169-028-50-0000) as a historic property; and

WHEREAS, on March 1, 2018, the Historic and Scenic Preservation Commission nominated 330 North Third Street as a historic property in accordance with procedures established in Chapter 2.62 of the Redlands Municipal Code; and

WHEREAS, on April 20, 2018, the City Clerk caused a public notice to be published in a newspaper of general circulation in the City; and

WHEREAS, on May 1, 2018, the City Council of the City of Redlands held a duly noticed public hearing to consider the recommendation of the Historic & Scenic Preservation Commission.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF REDLANDS AS FOLLOWS:

Section 1. The subject property at 330 North Third Street (APNs: 0169-028-47-0000, 0169-028-48-0000, 0169-028-49-0000, 0169-028-50-0000) is hereby designated as a historic property, in accordance with the provisions and criteria contained in Section 2.62.170 of the Redlands Municipal Code. The subject property contains a single-story industrial building originally utilized as a citrus packing plant, with an original construction date of 1894, minor additions in 1900 and 1906, and remodel in 1930. The structure embodies elements of architectural design, detail, materials, or craftsmanship that represent a significant architectural structure and style, and contributes to the historical or scenic heritage and historical or scenic properties of the city.

Section 2. The former citrus packing plant at 330 North Third Street shall be officially known as the "Mutual Orange Company Packing House."

Section 3. Neither the structures on the property nor the property shall be altered on the exterior, moved, demolished, subdivided, or otherwise permanently changed, unless a Certificate of Appropriateness or Certificate of Hardship has been first obtained from the City of Redlands.

Section 4. The City Council hereby determines that the approval of this Historic Resource Designation and project is exempt from environmental review in accordance with the California Environmental Quality Act ("CEQA") pursuant to Section 15331 (Historical Resource Restoration/Rehabilitation) and Section 15332 (In-Fill Development Projects) of the State CEQA Guidelines.

Section 5. The City Clerk of the City of Redlands is hereby directed to cause a certified copy of this Resolution to be recorded upon the 330 North Third Street properties (APNs: 0169-028-47-0000, 0169-028-48-0000, 0169-028-49-0000, 0169-028-50-0000) with the County Recorder, County of San Bernardino.

ADOPTED, SIGNED AND APPROVED this 1st day of May, 2018.

Paul W. Foster, Mayor

ATTEST:

Jeanne Donaldson, City Clerk

I, Jeanne Donaldson, City Clerk of the City of Redlands, hereby certify that the foregoing resolution was duly adopted by the City Council at a regular meeting thereof held on the 1st day of May, 2018, by the following vote:

AYES:	Councilmembers Harrison, Tejeda, Momberger, Mayor Foster
NOES:	None
ABSENT:	Mayor Pro Tempore Barich
ABSTAIN:	None

Jeanne Donaldson, City Clerk

RESOLUTION NO. 2018-02

A RESOLUTION OF THE HISTORIC AND SCENIC PRESERVATION COMMISSION OF THE CITY OF REDLANDS RECOMMENDING APPROVAL OF HISTORIC RESOURCE DESIGNATION NO. 132 AND COMMISSION REVIEW & APPROVAL NO. 895, AND APPROVING MAJOR CERTIFICATE OF APPROPRIATENESS NO. 559 SUBJECT TO THE APPROVAL OF THE RELATED PROJECT ENTITLEMENTS, TO REHABILITATE AND ADAPTIVELY REUSE THE HISTORIC PACKING PLANT COMMONLY REFERRED TO AS THE MUTUAL ORANGE DISTRIBUTORS PACKING HOUSE LOCATED AT 330 NORTH THIRD STREET.

WHEREAS, Jerry Tessier on behalf of Redlands Food Hall, LLC, has submitted applications for Historic Resource Designation No. 132 and Major Certificate of Appropriateness No. 559 to rehabilitate and adaptively reuse a 34,215 square-foot industrial building known as the Mutual Orange Distributors (MOD) Packing House located at 330 North Third Street. Related applications include Commission Review & Approval No. 895 and Conditional Use Permit No. 1100 (hereinafter, collectively the "project entitlements").

WHEREAS, the subject property with the Mutual Orange Distributors (MOD) Packing House is located within the Santa Fe Depot Historic District added to the National Registry on October 29, 1991, and the Mutual Orange Distributors (MOD) Packing House is a contributing structure within the Santa Fe Depot Historic District.

WHEREAS, notice of this Historic & Scenic Preservation Commission public hearing for the Project was duly published in the Redlands Daily Facts by the Secretary to the Commission; and,

WHEREAS, on March 1, 2018, the Historic & Scenic Preservation Commission held a public hearing and considered the staff report, oral report, the testimony and the written evidence submitted by and on behalf of the applicant and by members of the public; and,

WHEREAS, Public Resources Code Section 15301 (Existing Facilities) and Section 15331 (Historic Resource Restoration/Rehabilitation) provides for exemption from environmental review in accordance with the California Environmental Quality Act, and the project qualifies for these exemptions; and,

WHEREAS, following the public hearing for the Historic Resource Designation and the Major Certificate of Appropriateness, the Historic & Scenic Preservation Commission determined that approval of the requested Historic Resource Designation and Certificate of Appropriateness would be in the best interests of the public health, safety, and general welfare.

NOW, THEREFORE, BE IT RESOLVED BY THE HISTORIC AND SCENIC PRESERVATION COMMISSION OF THE CITY OF REDLANDS AS FOLLOWS:

Section 1. The proposed project is exempt from environmental review in accordance with the California Environmental Quality Act per Section 15301 for existing facilities and Section 15331 for historic resource rehabilitation.

Section 2. The requested Historic Resource Designation No. 132 and Commission Review & Approval No. 895 are hereby recommended for approval to the Planning Commission and the City Council.

Section 3. The requested Certificate of Appropriateness is hereby approved based upon the following finding of fact, subject to the conditions of approval contained in Exhibit "A" attached to this Resolution, and subject to approval of related project entitlements (Commission Review & Approval and a Conditional Use Permit) and approval by the City Council of the historic designation.

1. *The project is consistent with the City's Historic Preservation Ordinance, contained in Chapter 2.62 of the Redlands Municipal Code and will not be detrimental to a historic resource.*

   The proposed development is appropriate and consistent with the City's Historic Preservation Ordinance and will not be detrimental to a historic resource. The project will be consistent with the applicable provisions of "The Secretary of Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring & Reconstructing Historic Buildings." The project will rehabilitate the historic Mutual Orange Distributors (MOD) Packing House, and facilitate the adaptive reuse and integrity of the resource. The project will also ensure the continued longevity and restore vibrancy to the Santa Fe Depot Historic District (National Register), which the MOD Packing House is a contributing resource within the Santa Fe Depot Historic District.

Section 4. This Resolution shall become effective upon adoption.

ADOPTED, SIGNED AND APPROVED this 1st day of March, 2018.

Kurt Heidelberg, Historic and Scenic Preservation Commission Chair

ATTEST:

Joni Mena

Joni Mena, Secretary to the Commission

I, Joni Mena, Historic and Scenic Preservation Commission Secretary of the City of Redlands, hereby certify that the foregoing resolution was duly adopted by the Historic and Scenic Preservation Commission at a regular meeting thereof held on the 1st day of March, 2018.

ABSTAINED:

Joni Mena

Joni Mena, Historic and Scenic Preservation Commission Secretary

EXHIBIT A
CONDITIONS OF APPROVAL

Certificate of Appropriateness No. 559
MOD Packing House Located at 330 North Third Street

1. This approval will not become effective unless and until the date that the final decision-making body approves the related project entitlements (Commission Review & Approval and a Conditional Use Permit) and/or approval by the City Council of the Historic Resource Designation.

2. This approval is for the rehabilitation and adaptive reuse of the historic Mutual Orange Distributors (MOD) Packing House, construction of façade rehabilitation and improvements, establishing a multi-tenant food hall (with food retail uses, farmer's market, restaurants, demonstration kitchen, and similar retail uses), and related site improvements including outdoor patio/dining area, walls, walkways, landscaping, lighting, and new refuse enclosure. The existing building is approximately 33,676 square feet in total area, with approximately 19,375 square-feet on the main (1st) floor and 14,301 square-feet in the basement. A new exterior boardwalk approximately 5,400 square-feet in area is approved for the west, north, and east sides of the existing building.

3. Unless construction has commenced pursuant to a building permit, or a time extension is granted in accordance with Code, this application shall expire eighteen (18) months from the date of the final approval (approval by City Council for the Historic Resource Designation).

4. The issuance of any permits shall comply with all applicable provisions of the Redlands Municipal Code.

5. Prior to commencing any construction activity, appropriate building permit(s) shall be obtained from the Development Services Department.

6. All plans submitted to the City for building permits shall reflect all applicable Conditions of Approval for Certificate of Appropriateness No. 559, and shall be in substantial conformance with the plans reviewed by the Historic & Scenic Preservation Commission and/or City Council. If the plans are modified or amended in order to satisfy the requirement of the State Historic Preservation Office and/or National Park Service, the modified or amended plans may be presumed to be in substantial conformance with these conditions and need not be subject to supplemental review by the Historic & Scenic Preservation Commission. The applicant shall provide evidence in writing of such modifications to the Development Services Director or designee prior to building permit issuance, and shall revise construction plans being reviewed by the Building Division prior to permit issuance.

7. The applicant for this permit, and its successors and assigns, shall defend, indemnify and hold harmless the City of Redlands, and its elected officials, officers, agents and employees, from and against any and all claims, actions, and proceedings to attack, set aside, void or annul the approval of this permit by the City, or brought against the City due to acts or omissions in any way connected to the applicant's project that is the subject of this permit. This indemnification shall include, but not be limited to, damages, fees, costs, liabilities, and expenses incurred in such actions or proceedings, including damages for the injury to property or persons, including death of a person, and any award of attorneys' fees. In the event any such action is commenced to attack, set aside, void or annul all, or any, provisions of this permit, or is commenced for any other reason against the City for acts or omissions relating to the applicant's project, within fourteen (14) City business days of the same, the applicant shall file with the City a performance bond or irrevocable letter of credit (together, the "Security") in a form and in an amount satisfactory to the City, to ensure applicant's performance of its defense and indemnity obligations under this condition. The failure of the applicant to provide the Security shall be deemed an express acknowledgement and agreement by the applicant that the City shall have the authority and right, without objection by the applicant, to revoke all entitlements granted for the project pursuant to this permit. The City shall have no liability to the applicant for the exercise of City's right to revoke this permit.

8. All work and construction related to the building shall be consistent with the applicable provisions of "The Secretary of Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring & Reconstructing Historic Buildings."

John R. Harris
Municipal Utilities & Engineering Director
P.O. Box 3005
35 Cajon Street, Suite 15A
Redlands, CA 92373
jharris@cityofredlands.org

Dear Mr. Harris:

I would like to formally request that the City Council agendize and consider our request for the addition of on-street parking restrictions in the Santa Fe Depot district on Al Harris Lane and 3rd Street. The Traffic and Transportation Commission failed to move on a recommendation after several public hearings. With the completion of Redlands Public Market and several new buildings by Property One, it is important to establish these restrictions before the end of Summer.

We have outreached with the affected property owners and held a working group meeting with City staff, and consensus was reached on what is believed to be the optimal on-street parking restrictions. These restrictions are important to incoming businesses that require some convenient, short-term customer parking. Unrestricted on-street parking will result in employee and other "long-term" parking that will take up valuable customer parking.

Redlands Public Market is a collection of 18 micro-restaurants and businesses at 330 3rd Street located in the historically designated MOD Packing House which is historically exempt from on-site parking and as such depends on public parking both on-street and off-street. When we acquired the building from the City Redevelopment Agency there was early discussion of enacting on-street parking restrictions when the project would come to fruition.

Currently there are no parking restrictions on either Street. It is a commonly-accepted principle that on-street parking should prioritize short-term customer visits where retail/commercial businesses are located. Without parking restrictions, "long-term" parking such as employees of local businesses will undoubtedly park as close as they can to their destination. This approach does not serve the public well. A short-term convenience customer will possibly be precluded from parking or not return again if it is too difficult to park, whereas an employee will certainly park a further distance away and walk to work despite the extra distance, or someone planning to patronize multiple businesses and spend a half day in downtown Redlands will certainly be more tolerant of parking a further distance.

Currently many areas of downtown benefit from 2-hour parking restrictions (and a small percentage of 30 minute parking spaces). The consensus of the property owners in the Santa Fe District is to enact 90-minute parking restrictions on both Al Harris and 3rd Street, with the exception of one area of shorter term parking in front of Redlands Public Market. There was also consensus on the hours of parking

restrictions from 10:00 AM to 10:00 PM in order to permit longer late night and overnight parking visits from future planned residential developments.

As you know well, it is imperative that restaurants have short term convenient customer parking to address quick trips for customers picking up take-out food, grabbing a quick coffee or juice on site, for food delivery services, and other short trips. This has become especially important post pandemic when the percentage of off-site dining, to-go, and delivery sales has skyrocketed. Most every prospective and future tenant of RPM has asked about short term parking on street and they find it critical for their business model to succeed.

After getting input and consensus from neighboring property owners, Arteco Partner's request is to designate the 3rd Street curb adjacent to RPM as 10-minute restricted parking, which would allow approximately five (5) such short-term spaces. This can be easily achieved with green curb paint and markings and a few select signs. We will actively monitor the usage of these stalls to see if parking restrictions should be proposed to be amended since it is in everyone's interest to maximize on-street parking usage. These spaces can likewise benefit businesses in the new construction across Al Harris street as these spaces will be their closest on-street parking.

Parking is of course not an exact science and there is consensus amongst the affected property owners that we need to analyze parking utilization once the District is fully open and operational and revisit as needed these parking restrictions.

Arteco Partners was privileged to be selected by the City to redevelop the MOD Packing House and we continue to appreciate the City Council's support in bringing a unique food hall experience to downtown Redlands. We would appreciate your deliberation and decision at the soonest possible date prior to RPM and other businesses opening in the District.

Attached for reference is the proposed on-street parking restriction map. I can be available for any questions.

Sincerely,

Jerry Tessier

PURCHASE AND SALE AGREEMENT
AND JOINT ESCROW INSTRUCTIONS

THIS PURCHASE AND SALE AGREEMENT AND JOINT ESCROW INSTRUCTIONS (this "**Agreement**") is made and entered into as of December 06, 2016 (the "**Agreement Date**"), by and between **CITY OF REDLANDS SUCCESSOR AGENCY, a political subdivision of the State of California** ("**Seller**"), and **REDLANDS FOOD HALL , LP, a California limited partnership** ("**Buyer**"), for the purpose of setting forth the agreement of the Parties and to provide instructions to Escrow Agent with respect to the transaction contemplated by this Agreement. Seller and Buyer shall also individually be referred to as a "**Party**" and collectively as the "**Parties**".

R E C I T A L S

A. Seller is the owner of that certain real property located at 330 N. Third Street in the City of Redlands ("**City**"), San Bernardino County (the "**County**"), State of California, known as APN Numbers 0169-281-47, 48, 49 and 50 as more particularly described on **Exhibit "A"** attached to and made a part of this Agreement (collectively, the "**Land**"). The Land, together with the Improvements, the balance of the Real Property, and the Intangible Property (each as defined in Section 5), are sometimes collectively referred to in this Agreement as the "**Property**".

B. Seller desires to sell the Property to Buyer, and Buyer desires to purchase the Property from Seller, upon and subject to the terms and conditions set forth in this Agreement.

A G R E E M E N T

In consideration of the mutual agreements contained in this Agreement and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, Buyer and Seller hereby agree, and instruct Escrow Agent, as follows:

1. PURCHASE AND SALE.

Seller agrees to sell, transfer, and convey to Buyer, and Buyer agrees to purchase and acquire from Seller, the Property on all of the terms and conditions of this Agreement.

2. PURCHASE PRICE.

The purchase price for the Property (the "**Purchase Price**") shall be THREE HUNDRED TWENTY THOUSAND DOLLARS ($320,000.00), in cash. The Purchase Price shall be payable as follows:

2.1 Deposit. By 5:00 p.m. on the third (3rd) day after the "Opening of Escrow" (as defined below), Buyer shall deposit into "Escrow" (as defined below) the sum of Ten Thousand Dollars ($10,000.00) (which amount, together with any and all interest earned thereon, shall be referred to in this Agreement as the "**Deposit**"). The Deposit shall be fully refundable through the Due Diligence Termination Date, as defined in Section 4.1.3. From and after the Due Diligence Termination Date, provided Buyer does not elect to terminate this Agreement as permitted pursuant to the terms of Section 4.1.3, the Deposit shall become non-refundable, except as

specifically provided otherwise in this Agreement, and shall be credited against the Purchase Price at Closing.

2.1.1 Refund of Deposit. If Buyer delivers its Due Diligence Approval Notice (as defined below), but subsequently elects to terminate this Agreement due to (a) a Seller Default, as defined in Section 12.1) hereunder, (b) a failure of a Buyer's Condition to Closing, or (c) the occurrence of any other event which by the terms of this Agreement gives rise to Buyer's right to terminate this Agreement and receive a refund of the Deposit, then, subject to the terms of Section 12.1, (i) the Deposit shall immediately be returned by Escrow Agent to Buyer, or to the extent previously released to Seller, refunded to Buyer by Seller, (ii) this Agreement and the Escrow shall terminate, and (iii) the Parties shall have no further obligation to one another with respect to this Agreement, except with respect to such provisions which by their terms survive the termination of this Agreement.

2.1.2 Interest. The Initial Deposit and any other cash held by Escrow Agent for the benefit of Buyer shall be held in a federally insured interest bearing account, and the interest shall accrue to Buyer's benefit.

2.1.3 Independent Consideration. Notwithstanding the terms of Section 2.1.1, a portion of the Deposit in the amount of One Hundred Dollars ($100.00) (the "**Independent Consideration**") shall be non-refundable to Buyer as independent consideration for the rights extended to Buyer under this Agreement, including the right to conduct the Due Diligence and terminate this Agreement as provided in this Agreement. If Buyer elects to terminate this Agreement for any reason other than Seller's Default (as defined in Section 4.1.3), Seller shall retain the Independent Consideration. The Independent Consideration shall be applicable towards the Purchase Price.

2.2 Deposit of Balance of Purchase Price. Buyer shall, at least one (1) business day prior to Closing (as defined in Section 7.1), deposit into Escrow in the form of wire transfer, cash or a certified or bank cashier's check for immediately available funds, the amount of the Purchase Price less the Deposit, plus Buyer's closing costs and Buyer's share of any proration's to be made in accordance with this Agreement.

3. ESCROW.

Opening of Escrow. Buyer and Seller shall cause an escrow ("**Escrow**") to be opened with Ticor Title Company of California located at 4120 Concours Ave., Ste. 400, Ontario, CA 91764, Attention: Loretta Hovey, ("**Escrow Agent**") by delivery to Escrow Agent of a fully executed copy of this Agreement. Escrow Agent shall promptly deliver to Buyer and Seller written confirmation of the date of the "Opening of Escrow." As used in this Agreement, the term "**Opening of Escrow**" means the day on which Escrow Agent receives a fully executed copy of this Agreement and has notified each Party in writing of such receipt.

3.1 Escrow Instructions. This Agreement shall constitute escrow instructions to Escrow Agent as well as the agreement of the Parties. If any other printed escrow instructions are requested of the Parties and the terms thereof conflict or are inconsistent with any provision of this Agreement or any deed, instrument, or document executed or delivered in connection with the transaction contemplated hereby, the provisions of this Agreement, or such deed, instrument, or

document shall control. Escrow Agent is hereby appointed and designated to act as Escrow Agent and instructed to deliver, pursuant to the terms of this Agreement, the documents and funds to be deposited into Escrow as provided this Agreement.

3.2 Termination/Cancellation. Upon any termination or cancellation (the terms being used interchangeably in this Agreement) by either of the Parties as expressly allowed under this Agreement (including, without limitation, any deemed termination or cancellation), (a) the Deposit shall be delivered to the Party that this Agreement specifies is entitled to the same; (b) all documents, instruments, and funds delivered into Escrow shall be returned to the Party that delivered the same into Escrow, and (c) the Parties shall thereafter be relieved from further liability under this Agreement, except with respect to any obligations under this Agreement that are expressly stated to survive any termination of this Agreement. A copy of any notice of termination allowed under this Agreement shall be sent to Escrow Agent by the Party electing to terminate. Upon a termination or cancellation by either of the Parties for any reason other than a default by Seller, Buyer shall deliver to Seller copies of all third-party reports, plans, studies, applications or any other matters obtained by or prepared for Buyer in connection with Buyer's review of the Property and which relate to the physical condition of the Property, including, without limitation, any physical inspection, engineering, and environmental reports completed and/or obtained by Buyer in connection with Buyer's review of the Property (collectively, "**Property Condition Documents**"), but excluding any documents that are subject to the attorney client privilege or that contain proprietary or confidential information. Seller understands and acknowledges that neither Buyer nor any of Buyer's representatives makes any representation or warranty to Seller as to the accuracy or completeness of the Property Condition Documents and that Buyer and Buyer's representatives have not made or will not make any attempt to verify the data contained in the Property Condition Reports. Seller agrees that Buyer and Buyer's representatives shall not have any liability to Seller as a result of Seller's use of the Property Condition Documents.

4. ACTIONS PENDING CLOSING.

4.1 Due Diligence.

4.1.1 Property Materials.

4.1.1.1 On or before 5:00 p.m. on the fifth (5th) day following the Opening of Escrow, Seller shall, at Seller's sole cost and expense, to the extent within the Seller's possession or control, provide to Buyer and Buyer's counsel true, correct, and complete copies of all of the following documents (collectively, the "**Property Materials**"):

(a) Any and all surveys for the Property;

(b) All existing, proposed or draft site plans, maps, plats, landscaping plans, construction plans and drawings, and development plans for the Property (including, without limitation, with respect to offsite development related to the Property);

(c) All existing environmental reports for the Property;

(d) All leases, occupancy agreements, operating agreements, and licenses that affect the Property;

(e) All zoning stipulations, agreements, and requirements that affect or that are proposed to affect the Property;

(f) All archaeological, biological, soil, geological, grading, drainage, and hydrology reports, surveys, or assessments and any other engineering reports for the Property;

(g) A Natural Hazards Disclosure Report in conformity with the California Natural Hazards Disclosure Act;

(h) All records to the extent within Seller's possession or control relating to the use, storage and disposal of all pesticides, fertilizers and other agricultural chemicals which have been used on the Property or that Seller anticipates Seller, or its agents or contractors, will use on the Property prior to the Close of Escrow.

(i) The contact information for all engineers, architects, draftspersons, and/or consultants known to Seller to have information concerning the Property and/or its development (each of whom Buyer shall be authorized to contact, discuss the Property and/or its development with, and, if desired by Buyer, retain at Buyer's expense);

(j) Articles of organization, bylaws, rules and regulations, budgets and resolutions of board of directors for any owners' associations affecting the Property;

(k) All contracts with all third Parties who have provided services or supplied materials to the Property (each of whom Buyer shall be authorized to contact, discuss the Property and/or its development with); and

(l) Any other third-Party reports, contracts, and agreements of any kind in Seller's possession or control pertaining to the Property.

4.1.1.2 Further, prior to the Due Diligence Termination Date (as defined in Section 4.1.3), upon not less than twenty-four (24) hours prior written notice by Buyer to Seller, Seller shall make available to Buyer at Seller's offices, and Buyer shall have the right to review, all other records in Seller's possession or control relating to the Property.

4.1.1.3 Seller shall promptly furnish to Buyer for its review (a) any of the items described in Section 4.1.1.1 that may come into Seller's possession or control from and after the date of this Agreement, and (b) any additional documents and information in the possession or control of Seller reasonably requested in writing by Buyer. Except as provided in Section 8.15, Buyer understands and acknowledges that neither Seller nor any of Seller's representatives makes any representation or warranty to Buyer as to the accuracy or completeness of the Property Materials and that Seller and Seller's representatives shall have not made or will not make any attempt to verify the data contained therein. Buyer agrees that Seller and Seller's representatives shall not have any liability to Buyer as a result of Buyer's use of the Property Materials.

4.1.2 Buyer's Diligence Tests.

4.1.2.1 At all reasonable times from the date of this Agreement to the Closing (or earlier termination of this Agreement), Buyer and its employees, agents, consultants, and contractors shall be entitled, at Buyer's sole cost and expense, to: (a) enter onto the Property to perform any inspections, investigations, studies, and tests of the Real Property (including, without limitation, physical, engineering, soils, geotechnical, and environmental tests) that Buyer deems reasonable; (b) review all Property Materials; and (c) investigate such other matters pertaining to the Property as Buyer may desire. Notwithstanding the foregoing, Buyer shall not conduct any invasive testing on the Real Property without the prior consent of Seller, which shall not be unreasonably withheld, delayed (specifically, Seller shall respond to Buyer's request to conduct such testing not more than twenty-four (24) hours after written notice by Buyer to Seller), or conditioned. Any entry by Buyer onto the Real Property shall be subject to, and conducted in accordance with, all applicable laws.

4.1.2.2 Buyer shall keep the Property free and clean of any mechanics' liens and indemnify, protect, defend, and hold Seller and Seller's partners, officers, directors, shareholders, managers, members, agents, employees, and representatives (each an "**Indemnified Party**" and collectively, the "**Indemnified Parties**") harmless from and against any and all claims (including, without limitation, claims for mechanic's liens or materialman's liens), causes of action, demands, obligations, losses, damages, liabilities, judgments, costs, and expenses (including, without limitation, reasonable attorneys' fees, charges, and disbursements) (collectively, "**Claims**") in connection with or arising out of any inspections of the Property carried on by or on behalf of Buyer pursuant to the terms of this Agreement, provided, however, that Buyer shall have no responsibility or liability for (a) the negligence or willful misconduct of any Indemnified Party; (b) any adverse condition or defect on or affecting the Property not caused by Buyer or its employees, agents, consultants, or contractors but discovered or impacted during their inspections including, without limitation, the pre-existing presence or discovery of any matter (such as, but not limited to, any Hazardous Substance (as defined in this Agreement defined)); and/or (c) the results or findings of any inspection.

4.1.2.3 Upon completion of Buyer's inspections, Buyer shall promptly repair any material damage to the Property caused by its entry and restore the Property to substantially the same conditions which existed prior to Buyer's entry under this Section 4.1.2, except that any partition walls removed by Buyer in accordance with Seller's approval need not be reconstructed or repaired.

4.1.2.4 The provisions of this Section 4.1.2 shall survive the Closing or the earlier termination of this Agreement.

4.1.3 Buyer's Termination Right. Buyer shall have the right at any time on or before 5:00 p.m. on the sixth (60th) day after the Opening of Escrow (the "**Due Diligence Termination Date**") to terminate this Agreement by delivering a written notice of such termination to Seller and Escrow Agent if Buyer determines, in its sole and absolute discretion, that the Property is not acceptable to Buyer for any reason. Buyer shall indicate its satisfaction and/or waiver of the Due Diligence condition described in this Section 4.1 by delivering written notice of such satisfaction and/or waiver ("**Due Diligence Approval Notice**") to Seller and Escrow Agent on or prior to the Due Diligence Termination Date. Buyer may extend the Due Diligence

Termination Date an additional thirty (30) days by providing written notice thereof, with or without cause. If Buyer fails to timely deliver a Due Diligence Approval Notice, then this Agreement and the Escrow shall be automatically deemed terminated. If this Agreement is terminated in accordance with this Section, then the Initial Deposit shall be immediately returned to Buyer and the Parties shall thereafter be relieved from further liability hereunder, except with respect to any obligations under this Agreement that are expressly stated to survive any termination of this Agreement.

4.2 Title.

4.2.1 Deliveries by Seller. On or before 5:00 p.m. on the third (3rd) Business Days after the Opening of Escrow, Seller shall cause Ticor Title Company of California ("**Title Insurer**"), to issue and deliver to Buyer, at Buyer's sole cost and expense, (a) a current commitment for an ALTA extended coverage Owner's Policy of Title Insurance for the Real Property (the "**Title Report**") and (b) legible copies of all documents referenced as exceptions in the Title Report (collectively with the Title Report, the "**Title Documents**").

4.2.2 Buyer's Review of Title. Buyer shall have until the Due Diligence Termination Date to notify Seller in writing of any objection that Buyer may have to any matters reported or shown in any survey or the Title Documents or any amendments or updates thereof (a "**Buyer's Title Objection Letter**") (provided, however, that if any such amendments or updates are received by Buyer after or within five (5) Business Days before the Due Diligence Termination Date, Buyer shall have five (5) Business Days following Buyer's receipt of such amendment or update and copies of all documents referenced in the Title Documents to notify Seller of objections to matters shown on any such amendment or update that were not disclosed on the previously delivered survey or Title Documents and the Closing Date shall automatically be extended as necessary to facilitate such notice period and any subsequent periods for Seller's response and Buyer's election as provided in subsections (i) and (ii), below). Matters shown as exceptions to coverage in the Title Report (or any amendments or updates thereof) that are not timely objected to by Buyer as provided above shall constitute "**Permitted Exceptions**". Seller shall cooperate, at no cost to Seller, with Buyer to eliminate matters objected to by Buyer, but, except as set forth in the last sentence of this Section 4.2.2, Seller shall have no obligation to cure or correct any matter objected to by Buyer. On or before the fifth (5^{th}) Business Day following Seller's receipt of Buyer's Title Objection Letter, Seller may elect, by delivering written notice of such election to Buyer and Escrow Agent ("**Seller's Response**"), to cause Title Insurer to remove or insure over any matters objected to in Buyer's Title Objection Letter. If Seller fails to deliver Seller's Response within the period set forth above, it shall be deemed an election by Seller not to cause Title Insurer to so remove or insure over such objections. If Seller elects or is deemed to have elected not to cause Title Insurer to so remove or insure, or if Buyer determines, in its sole discretion, that any proposed endorsement for or insurance over an objected matter is unsatisfactory, then Buyer must elect, by delivering written notice of such election to Seller and Escrow Agent on or before the earlier to occur of (a) the fifth (5^{th}) Business Day following Buyer's receipt of Seller's Response or (b) if no Seller's Response is received by Buyer, the fifth (5^{th}) Business Day following the date on which Seller shall have been deemed to have responded, as provided above, to: (i) terminate this Agreement, in which case the Initial Deposit, to the extent previously deposited in Escrow, shall be immediately returned to Buyer; or (ii) proceed with this transaction, in which event those objected to exceptions or matters that Seller has not elected to cause Title Insurer to so remove or insure shall be deemed to be Permitted Exceptions. If Buyer

fails to make such election on a timely basis, then Buyer shall be deemed to have elected to terminate this Agreement in accordance with the preceding clause (i). Notwithstanding anything else stated in this Agreement, in all events, regardless of whether Buyer has given notice of objection as stated above, Seller shall be obligated to satisfy and otherwise remove all monetary and financial liens and encumbrances in existence as of the Agreement Date or incurred by Seller on or before the Closing Date (other than current taxes not yet due) and any additional encumbrances incurred by Seller after the Agreement Date in violation of any provision of this Agreement, and, except as may be otherwise specifically set forth in this Agreement, terminate all leases, possessory agreements, licenses, and operating agreements that affect the Property and Buyer need not object to any such matters. Seller agrees not to cause or create any additional encumbrances or other matters affecting title to the Property to be incurred following the Agreement Date that are not satisfied or otherwise removed on or before the Closing Date as contemplated above.

4.2.3 Condition of Title at Closing. Upon the Closing, Seller shall sell, transfer, and convey to Buyer fee simple title to the Real Property by a duly executed and acknowledged grant deed in the form of **Exhibit "B"** attached hereto (the "**Grant Deed**"), subject only to the Permitted Exceptions and the reservations and other matters, if any, referenced or described in said Grant Deed.

4.3 Entitlements and Zoning. Buyer shall have the right, during the term of this Agreement, to pursue all property-specific entitlements in connection with Buyer's intended use of the Property. The cost or expense of preparing for or filing for any such applications by Buyer pursuant to this Section 4.3 shall be borne solely by Buyer.

5. DESCRIPTION OF PROPERTY.

5.1 The Real Property. As used in this Agreement, the term "**Real Property**" shall mean, collectively, all of Seller's right, title, and interest in and to: (a) the Land; (b) all buildings and related improvements on the Property (the "**Improvements**"); and (c) all of the rights, privileges, appurtenances, hereditaments, easements, reversions, and remainders pertaining to or used in connection with the Land and/or any of the Improvements, including, without limitation, all (i) development rights and credits, air rights, water, water rights, and water stock relating to the Land, (ii) strips and gores, streets, alleys, easements, rights-of-way, public ways, or other rights appurtenant, adjacent, or connected to the Land, and (iii) minerals, oil, gas, and other hydrocarbon substances in, under, or that may be produced from the Land.

5.2 The Intangible Property. As used in this Agreement, the term "**Intangible Property**" shall mean all of Seller's right, title, and interest in and to that certain intangible property owned by Seller or used by Seller in connection with all or any portion of the Real Property, including, without limitation, all of Seller's right, title, and interest, if any, in and to: (a) all plats, improvement plans, drawings and specifications (including, without limitation, CAD files), and development rights and credits relating to the Property, (b) all books, records, reports, test results, environmental assessments, if any, as-built plans, specifications, and other similar documents and materials relating to the use, operation, maintenance, repair, construction, or fabrication of all or any portion of the Real Property; (c) all transferable architectural, site, landscaping or other permits, applications, approvals, authorizations, and other entitlements affecting any portion of the Real Property; (d) all credits (including without limitation water meter

credits), reimbursements and refunds of any fees and/or deposits paid in connection with the Real Property; and (e) all transferable guarantees, warranties, and utility contracts relating to all or any portion of the Real Property.

6. CONDITIONS TO CLOSING.

6.1 Buyer's Closing Conditions. The obligation of Buyer to complete the transaction contemplated by this Agreement is subject to the following conditions precedent (and conditions concurrent, with respect to deliveries to be made by Seller at the Closing) (the "**Buyer's Closing Conditions**"), which conditions may be waived, or the time for satisfaction of such conditions extended, by Buyer only in a writing executed by Buyer:

6.1.1 Title. Title Insurer shall be irrevocably and unconditionally prepared and committed to issue to Buyer (with an effective date not earlier than the Closing Date), an ALTA extended coverage owner's policy of title insurance ("**ALTA Extended Policy**") in favor of Buyer for the Real Property (a) showing fee title to the Real Property vested in Buyer, (b) with liability coverage in an amount equal to the Purchase Price, (c) with those endorsements reasonably requested by Buyer including, without limitation, a Mechanic's Lien Endorsement, and (d) containing no exceptions other than the Permitted Exceptions and the reservations and other matters referenced or described in the Grant Deed (the "**Owner's Title Policy**"). Buyer shall pay any difference in the cost of the premium for a standard ALTA owner's policy of title insurance and the ALTA Extended Policy. If a new or updated survey is required to enable the Title Company to issue the ALTA Extended Policy, Buyer shall obtain the same, at its sole cost and expense, in a timely manner so as to facilitate the issuance of the ALTA Extended Policy upon the Close of Escrow.

6.1.2 Seller's Due Performance. All of the representations and warranties of Seller set forth in Section 8 shall be true, correct, and complete in all material respects as of the Closing Date, and Seller, on or prior to the Closing Date, shall have complied with and/or performed all of the obligations, covenants, and agreements required on the part of Seller to be complied with or performed pursuant to the terms of this Agreement on or prior to the Closing.

6.1.3 Physical Condition of Property. The physical condition of the Real Property shall be substantially the same on the Closing Date as on the Agreement Date, except for reasonable wear and tear and any damages due to any act of Buyer or Buyer's representatives.

6.1.4 No Moratorium. As of the Closing Date, there shall be no moratorium, injunction, restraining order, or other limitation imposed by any Applicable Authority, court, administrative body, or private entity that precludes or prevents the issuance of building permits or certificates of occupancy with respect to the Real Property and/or the construction of residences or other improvements on the Real Property.

6.1.5 Bankruptcy. No action or proceeding shall have been commenced by or against Seller under the federal bankruptcy code or any state law for the relief of debtors or for the enforcement of the rights of creditors, and no attachment, execution, lien, or levy shall have attached to or been issued with respect to Seller's interest in the Property or any portion thereof.

6.1.6 Possession/Removal of Personal Property. Upon the Close of Escrow, Seller shall deliver exclusive and vacant possession of the Property to Buyer. Prior to the Close of Escrow Seller shall have the right to remove any or all improvements and Seller's equipment, trade fixtures or other personal property. Any such salvage and removal shall be performed pursuant to all required permits, in accordance with all laws, rules and regulations, and in such manner that the Property is delivered upon the Close of Escrow without any safety issues on site, such as large holes, partially razed structures, or any other similarly unsafe conditions. Any improvements or personal property of Seller remaining on the Property after the Close of Escrow shall be conclusively deemed abandoned by Seller (the "**Abandoned Personal Property**"). Seller waives and relinquishes all rights, title, interest and claims in any such Abandoned Personal Property and effective upon abandonment transfers, conveys and assigns all of its right, title and interest in such Abandoned Personal Property to Buyer for disposition as determined by Buyer in Buyer's sole and absolute discretion.

6.2 Seller's Closing Conditions. All of the representations and warranties of Buyer set forth in Section 9 shall be true, correct, and complete in all material respects as of the Closing Date, and Buyer, on or prior to the Closing Date, shall have complied with and/or performed all of the obligations, covenants, and agreements required on the part of Buyer to be complied with or performed pursuant to the terms of this Agreement on or prior to the Closing.

7. CLOSING.

7.1 Closing Date. Subject to the provisions of this Agreement, the Closing shall take place on or before that date (the "**Closing Date**") which is the three hundred and sixty five (365) day after the Opening of Escrow. As used in this Agreement, the "**Closing**" shall mean the recordation of the Grant Deed in the Official Records.

7.1.1 Extension of Closing Date. Subject to the provisions of this Agreement, the Closing may be extended by an additional sixty (60) day period by Buyer's sole election, with Buyer providing advance written notice, and Buyer shall deposit as additional Deposit the sum of $10,000.00 (ten thousand dollars) and said additional deposit shall become immediately non-refundable pursuant to all of the conditions of the Deposit. Said additional Deposit shall be applied to the Purchase Price.

7.2 Deliveries by Seller. On or before the Closing Date, Seller, at its sole cost and expense, shall deliver or cause to be delivered into Escrow the following items, documents, and instruments, each dated as of the Closing Date, fully executed and, if appropriate acknowledged, and, if applicable, in proper form for recording:

7.2.1 Grant Deed. The Grant Deed conveying the Real Property to Buyer;

7.2.2 Non-Foreign Affidavit. A Non-Foreign Affidavit in the form attached hereto as **Exhibit "C"** (the "**Non-Foreign Affidavit**");

7.2.3 State Affidavit. A California Franchise Tax Board Form 593-C (the "**State Affidavit**");

7.2.4 General Assignment. A general assignment to Buyer of the Intangible Property in the form attached to this Agreement as **Exhibit "D"** (the "**General Assignment**");

7.2.5 Owner's Affidavit. An owner's affidavit or seller's certificate duly executed by Seller in the form customarily required by title insurance companies in the county in which the Property is located, in connection with the issuance of title insurance, to remove standard exceptions for mechanics liens, the gap period from the latest title update of Buyer's title insurance commitment and Parties in possession;

7.2.6 Proof of Authority. Such proof of Seller's authority and authorization to enter into this Agreement and the transaction contemplated hereby, and such proof of the power and authority of the individual(s) executing or delivering any instruments, documents, or certificates on behalf of Seller to act for and bind Seller as may be reasonably required by Title Insurer or Escrow Agent; and

7.2.7 The Seller's Review and Approval. The Seller's approval of the Basic Concept Drawings shall not relieve the Buyer of its obligation to submit drawings and plans to the City of Redlands in order to obtain the discretionary entitlements and ministerial permits including required for the construction of any project on the Property. Any and all changes or revisions required by the City and its inspectors which are required under the City's Municipal Code and all other applicable Uniform Codes (such as Building, Plumbing, Fire and Electrical), and under other applicable Governmental Requirements, shall be included by the Buyer in its Construction Drawings and completed during the construction of the project. The City shall be deemed to have approved any change or revision required by the City and its inspectors. The City shall also use its best, reasonable efforts to expeditiously process for consideration all associated permits and approvals necessary for construction of any project on the Property.

7.2.8 Such other items, documents, and instruments as may be reasonably required by Buyer, Title Insurer, Escrow Agent, or otherwise in order to effectuate the provisions of this Agreement and the Closing and/or otherwise to fulfill the covenants and obligations to be performed by Seller at the Closing pursuant to this Agreement.

7.3 Deliveries by Buyer. On or before the Closing Date, Buyer, at its sole cost and expense, shall deliver or cause to be delivered into Escrow the following funds and the following items, documents, and instruments, each dated as of the Closing Date, fully executed and, if appropriate acknowledged, and, if applicable, in proper form for recording:

7.3.1 Purchase Price. Cash or other immediately available funds in an amount equal to the unpaid sum of the Purchase Price (less the Deposit) and all of Buyer's share of the Closing Costs (as defined below) and otherwise sufficient to close the transaction contemplated in this Agreement;

7.3.2 Proof of Authority. Such proof of Buyer's authority and authorization to enter into this Agreement and the transaction contemplated hereby, and such proof of the power and authority of the individual(s) executing or delivering any instruments, documents, or certificates on behalf of Buyer to act for and bind Buyer as may be reasonably required by Title Insurer or Escrow Agent;

7.3.3 Entitlements. The Seller shall have obtained each of the discretionary entitlements and ministerial permits including, but not limited to, grading and building permits,

required by the City for the construction of the project; and the applicable limitations period for legal challenges to the project;

7.3.4 Financing. Buyer shall secure funding for the acquisition and development of the Property from a credible lending institution or private funding entity as approved by the Seller. Written documentation of funding shall be submitted to the reasonable satisfaction of the Seller; and

7.3.5 Other. Such other items, documents, and instruments as may be reasonably required by Seller, Title Insurer, Escrow Agent, or otherwise in order to effectuate the provisions of this Agreement and the Closing and/or otherwise to fulfill the covenants and obligations to be performed by Buyer at the Closing pursuant to this Agreement.

7.4 Actions by Escrow Agent. Provided that Escrow Agent shall not have received written notice from Buyer or Seller of the failure of any condition to the Closing or of the termination of the Escrow and this Agreement, when Buyer and Seller have deposited into Escrow the documents and funds required by this Agreement and Title Insurer is irrevocably and unconditionally prepared and committed to issue the Owner's Title Policy in accordance with the terms of this Agreement, Escrow Agent shall, in the order and manner indicated in this Agreement below, take the following actions:

7.4.1 Recording. Cause the Grant Deed and any other documents customarily recorded and/or that the Parties may mutually direct to be recorded in the Official Records and obtain conformed copies of such items for distribution to Buyer and Seller.

7.4.2 Funds. Disburse all funds as follows:

7.4.2.1 Pursuant to the Closing Statement (as defined below), retain for Escrow Agent's own account all escrow fees and costs, disburse to Title Insurer the fees and expenses incurred in connection with the issuance of the Owner's Title Policy, and disburse to any other persons or entities entitled to receive such fees and costs the amount of any other Closing Costs;

7.4.2.2 Disburse to Seller an amount equal to the Purchase Price, less or plus the net debit or credit to Seller by reason of the proration's and allocations of Closing Costs provided for in this Agreement; and

7.4.2.3 Disburse to the Party who deposited the same any remaining funds in the possession of Escrow Agent after the payments pursuant to Sections 7.4.2.1 and 7.4.2.2 above have been completed.

7.4.3 Delivery of Documents. Deliver: (a) to Seller (i) one original of all documents deposited into Escrow (other than the Grant Deed, the other documents recorded pursuant to the terms of this Agreement, the Non-Foreign Affidavit, the State Affidavit and the General Assignment), (ii) one copy of the Non-Foreign Affidavit, the State Affidavit and the General Assignment, and (iii) one conformed copy of each document recorded pursuant to the terms of this Agreement; and (b) to Buyer, (i) one original of all documents deposited into Escrow (other than the Grant Deed and the other documents recorded pursuant to the terms of this Agreement, but including, without limitation, the Non-Foreign Affidavit and the State Affidavit),

and (ii) the one conformed copy of each document recorded pursuant to the terms of this Agreement. Originals of any documents recorded at Closing shall be delivered after such recording as indicated thereon.

7.4.4 Owner's Title Policy. Cause Title Insurer to issue or be irrevocably and unconditionally prepared and committed to issue the Owner's Title Policy to Buyer.

7.5 Proration's/Apportionment.

7.5.1 Method of Proration. Taxes and assessments affecting the Real Property shall be prorated between Buyer and Seller as of the Closing Date based on a 360-day year. All non-delinquent real estate taxes and assessments on the Property shall be prorated based on the actual current tax bill, but if such tax bill has not yet been received by Seller by the Closing Date or if supplemental taxes are assessed after the Closing for the period prior to the Closing, the Parties shall make any necessary adjustment after the Closing by cash payment to the Party entitled to the same so that Seller shall have borne all real property taxes, including all supplemental taxes, allocable to the period prior to the Closing and Buyer shall bear all real property taxes, including all supplemental taxes, allocable to the period from and after the Closing. If any real property taxes or assessments or any expenses attributable to the Real Property and allocable to the period prior to the Closing are discovered or billed after the Closing, the Parties shall make any necessary adjustment after the Closing by cash payment to the Party entitled to the same within five (5) Business Days following the discovery thereof or the receipt by any Party of the bill therefor, as the case may be, so that Seller shall have borne all real property taxes, assessments and expenses allocable to the period prior to the Closing and Buyer shall bear all real property taxes, assessments and expenses allocable to the period from and after the Closing.

7.5.2 Survival. The obligations under this Section 7.5 shall survive the Closing and the delivery and recordation of the Grant Deed for the Property.

7.6 Closing Costs. Each Party shall pay its own costs and expenses arising in connection with the Closing (including, without limitation, its own attorneys' and advisors' fees, charges, and disbursements), except the following costs (the "**Closing Costs**"), which shall be allocated between the Parties as follows:

7.6.1 Escrow Agent's escrow fees and costs shall be shared equally by Buyer and Seller;

7.6.2 The cost of the Owner's Title Policy attributable to the standard coverage portion shall be paid by Seller;

7.6.3 The cost of the Owner's Title Policy attributable to the extended coverage portion shall be paid by Buyer;

7.6.4 The cost of any items required to be provided by Seller pursuant to Section 4.2.2, shall be paid by Seller, and the costs of any other endorsements to the Owner's Title Policy shall be paid by Buyer;

7.6.5 Seller shall pay the cost of any documentary transfer taxes in connection with the recording of the Grant Deed;

7.6.6 Seller shall pay all recording costs for recording the Grant Deed; and

7.6.7 All other closing fees and costs shall be charged to and paid by Buyer.

7.7 Closing Statement. Three (3) Business Days prior to the Closing Date, Escrow Agent shall deliver to each of the Parties for their review and approval a preliminary closing statement (the "**Preliminary Closing Statement**") setting forth: (a) the proration amounts allocable to each of the Parties pursuant to Section 7.5; and (b) the Closing Costs allocable to each of the Parties pursuant to Section 7.6. Based on each of the Party's comments, if any, regarding the Preliminary Closing Statement, Escrow Agent shall revise the Preliminary Closing Statement and deliver a final, signed version of a closing statement to each of the Parties at the Closing (the "**Closing Statement**").

7.8 Deliveries Outside of Escrow. Upon the Closing, Seller shall deliver vacant, sole, and exclusive possession of the Property to Buyer, subject only to the Permitted Exceptions. Further, Seller hereby covenants and agrees to deliver to Buyer, on or prior to the Closing, the Intangible Property, including, without limitation, the original Property Materials to the extent within Seller's possession or control. Effective immediately upon the Closing, any personal property remaining on the Land shall be deemed abandoned and may be removed and disposed of by Buyer at its sole cost and expense. This Section 7.8 shall survive the Closing.

8. SELLER'S COVENANTS, REPRESENTATIONS AND WARRANTIES.

Seller represents, and warrants to and agrees with Buyer, as of the Agreement Date and as of the Closing Date, as follows:

8.1 Due Organization. Seller is The City of Redlands Successor Agency, a political subdivision of the State of California

8.2 Seller's Authority; Validity of Agreements. Seller has full right, power, and authority to sell the Property to Buyer as provided in this Agreement and to carry out its obligations under this Agreement. The individual(s) executing this Agreement and the instruments referenced in this Agreement on behalf of Seller has/have the legal power, right, and actual authority to bind Seller to the terms hereof and thereof. This Agreement is, and all other instruments, documents and agreements to be executed, and delivered by Seller in connection with this Agreement shall be, duly authorized, executed, and delivered by Seller and the valid, binding, and enforceable obligations of Seller (except as enforcement may be limited by bankruptcy, insolvency, or similar laws) and do not, and as of the Closing Date will not result in any violation of, or conflict with, or constitute a default under, any provisions of any agreement of Seller or any mortgage, deed of trust, indenture, lease, security agreement, or other instrument, covenant, obligation, or agreement to which Seller or the Property is subject, or any judgment, law, statute, ordinance, writ, decree, order, injunction, rule, ordinance, or governmental regulation or requirement affecting Seller or the Property.

8.3 No Third-Party Rights. Except as disclosed in the Title Report, Seller is not aware of any leases or occupancy agreements that grant third-Parties any possessory or rights to use all or any part of the Property.

8.4 Litigation. Seller is not aware of (a) any actions, investigations, suits, or proceedings pending or threatened that affect the Property, the ownership or operation thereof, or the ability of Seller to perform its obligations under this Agreement, and (b) there are no judgments, orders, awards, or decrees currently in effect against Seller with respect to the ownership or operation of the Property that have not been fully discharged prior to the Agreement Date.

8.5 Zoning and Condemnation. Except as disclosed in the Property Materials, Seller is not aware of any planned or pending proceedings to alter or restrict the zoning or other use restrictions applicable to the Property, to condemn all or any portion of the Property by eminent domain proceedings or otherwise, or to institute a moratorium or similar restriction on building on or issuing certificates of occupancy for construction on the Property.

8.6 No Violations of Environmental Laws. To Seller's knowledge and except as disclosed in the Property Materials: (a) the Property is not in, nor has it been or is it currently under investigation for violation of any federal, state, or local law, ordinance, or regulation relating to industrial hygiene, worker health and safety, or to the environmental conditions in, at, on, under, or about the Property, including, but not limited to, soil and groundwater conditions ("**Environmental Laws**"); (b) the Property has not been subject to a deposit of any Hazardous Substance; (c) neither Seller nor any third Party has used, generated, manufactured, stored, or disposed in, at, on, or under the Property any Hazardous Substance; and (d) there is not now in, on, or under the Property any underground or above ground storage tanks or surface impoundments, any asbestos containing materials, or any polychlorinated biphenyls used in hydraulic oils, electrical transformers, or other equipment. Seller hereby assigns to Buyer as of the Closing all claims, counterclaims, defenses, and actions, whether at common law or pursuant to any other applicable federal, state or other laws that Seller may have against any third Party or Parties relating to the existence or presence of any Hazardous Substance in, at, on, under, or about the Property. For purpose of this Agreement, the term "**Hazardous Substance**" shall include any wastes, materials, substances, pollutants, and other matters regulated by Environmental Laws.

8.7 No Other Commitments. Except as may be disclosed in the Title Report, Seller has not made any commitment or representation to any governmental authority, or any adjoining or surrounding property owner, that would in any way be binding on Buyer or would interfere with Buyer's ability to develop and improve the Property for residential, commercial, or retail purposes, and Seller shall not make any such commitment or representation that would affect all or any portion of the Property without Buyer's written consent.

8.8 Wells. Except as disclosed in the Property Materials, Seller is not aware of wells, drilling holes or wellheads located on or under the Property.

8.9 Landfill/Waste Disposal Site. Seller has not used the Property and, except as disclosed in the Property Materials, Seller is not aware that the Property has ever been used as a landfill, waste disposal site, or burial site.

8.10 Property Materials. Seller is not aware of any material defects, deficiencies, or inaccuracies in any of the Property Materials.

8.11 Permits and Approvals. To Seller's knowledge, all work performed on the Property by or at the request of Seller including, without limitation, brush removal, has been performed in

material compliance with all applicable laws, rules and regulations and pursuant to all required permits and approvals.

8.12 Williamson Act. Seller represents that no land conservation contract pursuant to the Williamson Act, as defined in Chapter 7 of Division 1 of Title 5 (Sections 51200, et seq.) of the California Government Code, as amended, or any successor statute thereto ("**Williamson Act Contract**"), currently affects the Property. If a Williamson Act Contract is in effect with respect to the Property, Seller agrees that Seller shall be responsible, at its sole cost and expense, to cause the termination of the Williamson Act Contract on or before the Close of Escrow such that Buyer shall acquire title to the Property free and clear of the Williamson Act Contract.

8.13 Actual Knowledge. For purposes hereof, "**Seller is not aware**" or "**to Seller's knowledge**", or like terms shall mean the current actual knowledge of James Troyer, without implying any duty of investigation or inquiry. In furtherance thereof, Seller hereby warrants and represents that James Troyer is the Seller's representative most knowledgeable regarding the Property.

8.14 Survival. All of the representations, warranties, and agreements of Seller set forth in this Agreement shall be true upon the Agreement Date, shall be deemed to be repeated at and as of the Closing Date, and shall survive the delivery of the Grant Deed and the Closing for a period of one (1) year. Prior to a termination of this Agreement, Seller shall not take any action, fail to take any required action, or willfully allow or consent to any action that would cause any of Seller's representations or warranties to become untrue. If any representation or warranty of Seller was true as of the date of this Agreement, but is not true as of the Closing Date, then Seller shall disclose this changed fact to Buyer in writing. So long as Seller makes the foregoing disclosure and the change of circumstances regarding the representation or warranty did not arise due to the fault of Seller, then Seller shall not be in breach of this Agreement due to the fact that the representation or warranty has become untrue as of the Closing Date; provided, however, the fact that any representation or warranty under this Section 8 is untrue as of the Closing Date shall still be a failure of a condition pursuant to Section 6.1.2. Notwithstanding the foregoing, if Buyer has actual knowledge of the incorrectness of any representation or warranty set forth in this Section 8 as of the Close of Escrow and Buyer has not elected to terminate this Agreement as provided in this Agreement, then Buyer will be deemed to have waived any claim against Seller for the incorrectness of such representation or warranty.

9. BUYER'S REPRESENTATIONS AND WARRANTIES.

Buyer represents and warrants to Seller, as of the Agreement Date and as of the Closing Date, as follows:

9.1 Due Organization. Buyer is a limited liability company duly organized, validly existing, and in good standing under the laws of the State of California and is authorized to do business in the State of California.

9.2 Buyer's Authority; Validity of Agreements. Buyer has full right, power, and authority to purchase and acquire the Property from Seller as provided in this Agreement and to carry out its obligations hereunder. The individual(s) executing this Agreement and the instruments referenced in this Agreement on behalf of Buyer has/have the legal power, right, and

actual authority to bind Buyer to the terms of this Agreement and such instruments and documents. This Agreement is, and all other instruments, documents, and agreements to be executed and delivered by Buyer in connection with this Agreement shall be, duly authorized, executed, and delivered by Buyer and the valid, binding, and enforceable obligations of Buyer (except as enforcement may be limited by bankruptcy, insolvency, or similar laws) and do not, and as of the Closing Date will not, violate any provision of any law, statute, ordinance, rule, regulation, agreement or judicial order to which Buyer is a Party or to which Buyer is subject.

9.3 Survival. All of the representations, warranties, and agreements of Buyer set forth in this Agreement shall be true upon the Agreement Date, shall be deemed to be repeated at and as of the Closing Date and shall survive the delivery of the Grant Deed and the Closing for a period of one (1) year. Prior to a termination of this Agreement, Buyer shall not take any action, fail to take any required action, or willfully allow or consent to any action that would cause any of Buyer's representations or warranties to become untrue.

10. AS-IS.

THE PARTIES HEREBY ACKNOWLEDGE AND AGREE AS FOLLOWS: (A) BUYER IS A SOPHISTICATED BUYER WHO IS FAMILIAR WITH THIS TYPE OF PROPERTY; (B) EXCEPT AS MAY BE SPECIFICALLY SET FORTH IN THIS AGREEMENT, THE DEED, AND/OR ANY OTHER DOCUMENT OR INSTRUMENT DELIVERED BY SELLER AT CLOSING (THE "**EXPRESS REPRESENTATIONS**"), NEITHER SELLER NOR ANY OF ITS AGENTS, REPRESENTATIVES, BROKERS, OFFICERS, DIRECTORS, SHAREHOLDERS, MEMBERS, OR EMPLOYEES HAS MADE OR WILL MAKE ANY REPRESENTATIONS OR WARRANTIES OF ANY KIND WHATSOEVER, WHETHER ORAL OR WRITTEN, EXPRESS OR IMPLIED, WITH RESPECT TO THE PROPERTY; AND (C) EXCEPT AS MAY BE SPECIFICALLY SET FORTH IN THIS AGREEMENT (INCLUDING SECTION 8.6 AS IT RELATES TO THE LAND AND IMPROVEMENTS), THE PROPERTY IS BEING SOLD TO BUYER IN ITS PRESENT "AS IS" CONDITION SUBJECT TO THE EXPRESS REPRESENTATIONS. SUBJECT TO THE EXPRESS REPRESENTATIONS AND THE TERMS OF THIS AGREEMENT, BUYER WILL BE AFFORDED THE OPPORTUNITY TO MAKE ANY AND ALL INSPECTIONS OF THE PROPERTY AND SUCH RELATED MATTERS AS BUYER MAY REASONABLY DESIRE AND, ACCORDINGLY, SUBJECT TO THE EXPRESS REPRESENTATIONS, BUYER WILL RELY SOLELY ON ITS OWN DUE DILIGENCE AND INVESTIGATIONS IN PURCHASING THE PROPERTY. IN CONNECTION WITH THE FOREGOING (EXCEPT AS TO SECTION 8.6 WITH RESPECT TO THE LAND AND IMPROVEMENTS), BUYER EXPRESSLY AGREES TO WAIVE ANY AND ALL RIGHTS WHICH BUYER MAY HAVE UNDER SECTION 1542 OF THE CALIFORNIA CIVIL CODE, WHICH PROVIDES AS FOLLOWS:

> "A GENERAL RELEASE DOES NOT EXTEND TO CLAIMS WHICH THE CREDITOR DOES NOT KNOW OR SUSPECT TO EXIST IN HIS OR HER FAVOR AT THE TIME OF EXECUTING THE RELEASE, WHICH IF KNOWN BY HIM OR HER MUST HAVE MATERIALLY AFFECTED HIS OR HER SETTLEMENT WITH THE DEBTOR."

11. RISK OF LOSS.

11.1 Condemnation. If, prior to any Closing, all or any portion of the Property is taken by condemnation or eminent domain (or is the subject of a pending or contemplated taking which has not been consummated), Seller shall immediately notify Buyer in writing of such fact. In such event, Buyer shall have the option to terminate this Agreement upon written notice to Seller given within ten (10) Business Days after receipt of such notice from Seller, in which event the Deposit shall be returned to Buyer. Notwithstanding the foregoing, Buyer's failure to provide written notice of Buyer's election to terminate within such ten (10) Business Day period shall be deemed Buyer's election to terminate this Agreement. Prior to any termination or deemed termination of this Agreement, Buyer shall have the right to participate in any proceedings and negotiations with respect to the taking and any transfer in lieu of taking (and Seller shall not consummate any transfer in lieu of taking without Buyer's prior written consent, which consent shall not be unreasonably withheld, conditioned or delayed). If Buyer waives the right to terminate this Agreement and elects to proceed with the Closing, then (a) Seller, at, and as a condition precedent to Buyer's obligation to proceed with, the Closing, must: (i) pay to Buyer (or direct Escrow Agent to credit Buyer against the Purchase Price for) the amount of all awards for the taking (and any consideration for any transfer in lieu of taking) actually received by Seller; and (ii) assign to Buyer by written instrument reasonably satisfactory to Buyer all rights or claims to any future awards for the taking (and any consideration for any transfer in lieu of taking); and (b) the Parties shall proceed to the Closing pursuant to the terms hereof without further modification of the terms of this Agreement.

11.2 Casualty. Prior to the Closing and notwithstanding the pendency of this Agreement, the entire risk of loss or damage by earthquake, hurricane, tornado, flood, landslide, fire, sinkhole, contamination by hazardous materials or other casualty shall be borne and assumed by Seller. If, prior to the Closing, any portion of the Property is damaged as a result of any earthquake, hurricane, tornado, flood, sinkhole, landslide, fire, contamination by hazardous materials or other casualty, Seller shall immediately notify Buyer in writing of such fact. In such event, Buyer shall have the option to terminate this Agreement upon written notice to Seller given within ten (10) Business Days after receipt of any such notice from Seller, in which event the Deposit shall be returned to Buyer. Notwithstanding the foregoing, Buyer's failure to provide written notice of Buyer's election to terminate within such ten (10) Business Day period shall be deemed Buyer's election to terminate this Agreement. Prior to any termination or deemed termination of this Agreement, Buyer shall have the right to participate in any adjustment of the insurance claim. If Buyer waives the right to terminate this Agreement and elects to proceed with the Closing, then (a) Seller, at, and as a condition precedent to Buyer's obligation to proceed with, the Closing, must either: (i) pay to Buyer (or direct Escrow Agent to credit Buyer against the Purchase Price for) the amount of any insurance proceeds actually received by Seller plus the amount of any deductible under Seller's insurance; or (ii) if no insurance proceeds have been received by Seller, assign to Buyer by written instrument reasonably satisfactory to Buyer all rights or claims to the insurance proceeds and credit Buyer against the Purchase Price for any deductible payable under Seller's insurance policy; and (b) the Parties shall proceed to the Closing pursuant to the terms hereof without further modification of the terms of this Agreement.

12. REMEDIES.

12.1 Default by Seller. If Seller shall breach any of the terms or provisions of this Agreement or otherwise fail to perform any of Seller's obligations under this Agreement at or prior to Closing, and if such failure continues without cure by Seller for five (5) Business Days after Buyer provides Seller and Escrow Agent with written notice thereof (a "**Seller Default**"), and provided Buyer is not then in default, then Buyer may, as Buyer's sole remedies for such failure, but without limiting Buyer's right to recover attorneys' fees pursuant to Section 14.13 below: (a) waive the effect of such matter and proceed to consummate this transaction; (b) cancel this Agreement and receive a full refund of the Deposit and recover from Seller the reasonable out-of-pocket expenses incurred by Buyer related to the Property and this transaction, which amounts shall be payable by Seller to Buyer within five (5) Business Days following receipt by Seller of written request therefor from Buyer together with copies of invoices evidencing such expenses; or (c) proceed with any remedies available to Buyer at law or in equity, which may, without limitation, include the bringing of an action against Seller for specific performance and/or recovery of the Deposit and any other damages suffered or incurred by Buyer as a result of any breach or failure by Seller to perform any of Seller's obligations under this Agreement.

12.2 Default by Buyer. IF BUYER SHALL BREACH ANY OF THE TERMS OR PROVISIONS OF THIS AGREEMENT OR OTHERWISE FAIL TO PERFORM ANY OF BUYER'S OBLIGATIONS UNDER THIS AGREEMENT AND IF SUCH FAILURE CONTINUES WITHOUT CURE BY BUYER FOR FIVE (5) BUSINESS DAYS AFTER SELLER PROVIDES BUYER AND ESCROW AGENT WITH WRITTEN NOTICE THEREOF, AND PROVIDED SELLER IS NOT THEN IN DEFAULT, THEN SELLER MAY WAIVE SUCH BREACH AND PROCEED TO CONSUMMATE THIS TRANSACTION IN ACCORDANCE WITH THE TERMS HEREOF, OR SELLER MAY, AS ITS EXCLUSIVE REMEDY (BUT WITHOUT LIMITING SELLER'S RIGHT TO RECOVER ATTORNEYS' FEES PURSUANT TO SECTION 14.13 BELOW), CANCEL THIS AGREEMENT AND RETAIN THE DEPOSIT AS LIQUIDATED DAMAGES AND AS CONSIDERATION FOR THE ACCEPTANCE OF THIS AGREEMENT AND FOR TAKING THE PROPERTY OFF THE MARKET, AND NOT AS A PENALTY. BUYER AND SELLER HAVE DETERMINED AND HEREBY AGREE THAT IT WOULD BE IMPRACTICAL OR EXTREMELY DIFFICULT, IF NOT IMPOSSIBLE, TO ASCERTAIN WITH ANY DEGREE OF CERTAINTY THE AMOUNT OF DAMAGES THAT WOULD BE SUFFERED BY SELLER IF BUYER FAILS TO PERFORM ANY OF ITS OBLIGATIONS IN ACCORDANCE WITH THE PROVISIONS OF THIS AGREEMENT, AND THE PARTIES AGREE THAT A REASONABLE ESTIMATE OF SUCH DAMAGES UNDER THE CIRCUMSTANCES IS AN AMOUNT EQUAL TO THE DEPOSIT. ACCORDINGLY, BUYER AND SELLER AGREE THAT IF BUYER BREACHES ANY OF ITS OBLIGATIONS UNDER THIS AGREEMENT OR OTHERWISE DEFAULTS HEREUNDER, SELLER MAY RETAIN THE DEPOSIT AS LIQUIDATED DAMAGES. THE PAYMENT AND RETENTION OF THE DEPOSIT AS LIQUIDATED DAMAGES IS NOT INTENDED AS A FORFEITURE OR PENALTY WITHIN THE MEANING OF CALIFORNIA CIVIL CODE SECTIONS 3275 OR 3369, BUT IS INTENDED TO CONSTITUTE LIQUIDATED DAMAGES TO SELLER PURSUANT TO CALIFORNIA CIVIL CODE SECTIONS 1671, 1676 AND 1677.

Seller's Initials _____ Buyer's Initials GVT

13. BROKERS.

The Parties acknowledge that neither Party has been represented by a real estate broker, with respect to this transaction. Both Parties here agree that neither Party shall owe any real estate brokerage commissions or finder's fee to the other Party, provided that each Party shall indemnify the other for any and all claims for brokerage commissions or finder's fees from any third party that may arise or be alleged to arise out of the acts of that Party.

14. MISCELLANEOUS PROVISIONS.

14.1 Entire Agreement. This Agreement, including the exhibits attached hereto, constitutes the entire agreement between Buyer and Seller pertaining to the subject matter hereof and supersedes all prior agreements, understandings, letters of intent, term sheets, negotiations, and discussions, whether oral or written, of the Parties, and there are no warranties, representations, or other agreements, express or implied, made to either Party by the other Party in connection with the subject matter hereof except as specifically set forth in this Agreement or in the documents delivered pursuant hereto or in connection herewith.

14.2 Modification; Waiver. No supplement, modification, waiver, or termination of this Agreement shall be binding unless executed in writing by the Party to be bound thereby. No waiver of any provision of this Agreement shall be deemed or shall constitute a waiver of any other provision hereof (whether or not similar), nor shall such waiver constitute a continuing waiver unless otherwise expressly provided.

14.3 Notices. All notices, consents, requests, reports, demands or other communications hereunder (collectively, "**Notices**") shall be in writing and may be given personally, by registered or certified mail, by facsimile transmission, electronic mail, by courier, or by Federal Express (or other reputable overnight delivery service) for overnight delivery, as follows:

To Buyer:
REDLANDS FOOD HALL, LP
Attention: Arteco Management LLC, Gerald V Tessier
281 S Thomas St, Ste. 504
Pomona, CA 91766
Telephone: 909.629.5359
Email: jtessier@artecopartners.com

To Seller:
City of Redlands
P.O. Box 3005
Redlands, California 92373
Attention: City Clerk
Telephone: (909) 798-7531
Email: sirwin@cityofredlands.org

With A Copy To:	City Attorney City of Redlands Attention: Daniel J. McHugh Telephone: (909) 798-7595 Email: dmchugh@cityofredlands.org
To Escrow Agent:	Ticor Title Company of California 4120 Concours Ave., Ste. 400 Ontario, CA 91764 Attention: Loretta Hovey Telephone: 909.579.1515 Email: lhovey@ticortitle.com

or to such other address or such other person as the addressee Party shall have last designated by Notice to the other Party and Escrow Agent. All Notices shall be deemed to have been given three (3) days following deposit in the United States Postal Service (postage prepaid) or, upon receipt, if sent by overnight delivery service, courier, facsimile transmission (so long as confirmed by the appropriate automatic confirmation page), electronic mail (so long as receipt is acknowledged or otherwise confirmed), or personally delivered. Notice to a Party shall not be effective unless and until each required copy of such Notice is given. The inability to deliver a Notice because of a changed address of which no Notice was given or an inoperative facsimile number for which no Notice was given of a substitute number, or any rejection or other refusal to accept any Notice, shall be deemed to be the receipt of the Notice as of the date of such inability to deliver or rejection or refusal to accept. Any Notice to be given by any Party may be given by legal counsel for such Party. Telephone numbers are provided in this Agreement for convenience only and shall not alter the manner of giving Notice set forth in this Section 14.4.

14.4 Expenses. Subject to the provision for payment of the Closing Costs in accordance with the terms of Section 7.6 of this Agreement and of any other provision of this Agreement, whether or not the transaction contemplated by this Agreement shall be consummated, all fees and expenses incurred by any Party hereto in connection with this Agreement shall be borne by such Party.

14.5 Severability. Any provision or part of this Agreement that is invalid or unenforceable in any situation in any jurisdiction shall, as to such situation and such jurisdiction, be ineffective only to the extent of such invalidity and shall not affect the enforceability of the remaining provisions hereof or the validity or enforceability of any such provision in any other situation or in any other jurisdiction.

14.6 Successors and Assigns. Neither Seller nor Buyer shall assign its rights under this Agreement without the consent of the other Party, which consent shall not be unreasonably withheld or delayed. Notwithstanding the foregoing, either Party shall have the right, without the consent of the other, to assign its rights under this Agreement to an affiliate entity directly or indirectly controlling, controlled by or under common control with the assigning Party or an entity in which such assigning Party or such an affiliate directly or indirectly owns a financial and voting interest and directly or indirectly is responsible for day to day management of the entity provided such assignee assumes such Party's obligations hereunder pursuant to a written agreement, a copy of which shall be provided to the other Party by the assigning Party. Notwithstanding any such

assignment, no assignment shall relieve the assignor of any obligations or liability under this Agreement. Subject to the foregoing, all of the Parties' rights, duties, benefits, liabilities, and obligations under this Agreement shall inure to the benefit of, and be binding upon, their respective successors and assigns.

14.7 Counterparts. This Agreement may be executed in as many counterparts as may be deemed necessary and convenient, and by the different Parties hereto on separate counterparts, each of which, when so executed, including, without limitation, by .pdf scanned counterparts of any initialed or executed pages delivered via electronic mail, shall be deemed an original, but all such counterparts shall constitute one and the same instrument.

14.8 Governing Law; Jurisdiction; Waiver of Jury; Judicial Reference. This Agreement shall be governed by and construed under the laws of the State of California without regard to conflicts-of-laws principles that would require the application of any other law. Each Party hereby consents to the exclusive jurisdiction of any court of competent jurisdiction in San Bernardino County in any action related to or arising under this Agreement. **EACH PARTY TO THIS AGREEMENT EXPRESSLY WAIVES ANY RIGHT TO TRIAL BY JURY OF ANY CLAIM, DEMAND, ACTION OR CAUSE OF ACTION (1) ARISING UNDER THIS AGREEMENT OR ANY OTHER INSTRUMENT, DOCUMENTS OR AGREEMENT EXECUTED OR DELIVERED IN CONNECTION THEREWITH, OR (2) IN ANY WAY CONNECTED WITH OR RELATED OR INCIDENTAL TO THE DEALINGS OF THE PARTIES HERETO OR ANY OF THEM WITH RESPECT TO THIS AGREEMENT OR ANY OTHER INSTRUMENT, DOCUMENT OR AGREEMENT EXECUTED OR DELIVERED IN CONNECTION HEREWITH, OR THE TRANSACTIONS RELATED HERETO OR THERETO, IN EACH CASE WHETHER NOW EXISTING OR HEREAFTER ARISING, AND WHETHER SOUNDING IN CONTRACT OR TORT OR OTHERWISE; AND EACH PARTY HEREBY AGREES AND CONSENTS THAT ANY SUCH CLAIM, DEMAND, ACTION OR CAUSE OF ACTION SHALL BE DECIDED BY COURT TRIAL WITHOUT A JURY. NOTWITHSTANDING THE FOREGOING TO THE CONTRARY, IF THAT THE JURY TRIAL WAIVER CONTAINED IN THIS AGREEMENT SHALL BE HELD OR DEEMED TO BE UNENFORCEABLE, EACH PARTY HERETO HEREBY EXPRESSLY AGREES TO SUBMIT TO JUDICIAL REFERENCE PURSUANT TO CALIFORNIA CODE OF CIVIL PROCEDURE SECTIONS 638 THROUGH 645.1 ANY CLAIM, DEMAND, ACTION OR CAUSE OF ACTION ARISING HEREUNDER FOR WHICH A JURY TRIAL WOULD OTHERWISE BE APPLICABLE OR AVAILABLE. PURSUANT TO SUCH JUDICIAL REFERENCE, THE PARTIES AGREE TO THE APPOINTMENT OF A SINGLE REFEREE AND SHALL USE THEIR BEST EFFORTS TO AGREE ON THE SELECTION OF A REFEREE. IF THE PARTIES ARE UNABLE TO AGREE ON A SINGLE REFEREE, A REFEREE SHALL BE APPOINTED BY THE COURT UNDER CALIFORNIA CODE OF CIVIL PROCEDURE SECTIONS 638 AND 640 TO HEAR ANY DISPUTES HEREUNDER IN LIEU OF ANY SUCH JURY TRIAL. SELLER AND BUYER ACKNOWLEDGE AND AGREE THAT THE APPOINTED REFEREE SHALL HAVE THE POWER TO DECIDE ALL ISSUES IN THE APPLICABLE ACTION OR PROCEEDING, WHETHER OF FACT OR LAW, AND SHALL REPORT A STATEMENT OF DECISION THEREON; PROVIDED, HOWEVER, THAT ANY MATTERS WHICH WOULD NOT OTHERWISE BE THE SUBJECT OF A JURY TRIAL WILL BE UNAFFECTED BY THIS WAIVER AND THE AGREEMENTS CONTAINED**

IN THIS AGREEMENT. THE PARTIES HERETO HEREBY AGREE THAT THE PROVISIONS CONTAINED IN THIS AGREEMENT HAVE BEEN FAIRLY NEGOTIATED ON AN ARMS-LENGTH BASIS, WITH BOTH SIDES AGREEING TO THE SAME KNOWINGLY AND BEING AFFORDED THE OPPORTUNITY TO HAVE THEIR RESPECTIVE LEGAL COUNSEL CONSENT TO THE MATTERS CONTAINED IN THIS AGREEMENT. ANY PARTY TO THIS AGREEMENT MAY FILE AN ORIGINAL COUNTERPART OR A COPY OF THIS SECTION WITH ANY COURT AS WRITTEN EVIDENCE OF THE CONSENT OF THE PARTIES HERETO TO THE WAIVER OF THEIR RIGHT TO TRIAL BY JURY AND THE AGREEMENTS CONTAINED IN THIS AGREEMENT REGARDING THE APPLICATION OF JUDICIAL REFERENCE IF OF THE INVALIDITY OF SUCH JURY TRIAL WAIVER.

14.9 Headings. The Section headings of this Agreement are for convenience of reference only and shall not be deemed to modify, explain, restrict, alter, or affect the meaning or interpretation of any provision hereof.

14.10 Time of Essence. Time shall be of the essence with respect to all matters contemplated by this Agreement.

14.11 Further Assurances. In addition to the actions recited in this Agreement and contemplated to be performed, executed, and/or delivered by Seller and Buyer, during the term of this Agreement and after the Closing, Seller and Buyer agree to perform, execute, and/or deliver or cause to be performed, executed, and/or delivered any and all such further acts, instruments, deeds, and assurances as may be reasonably required to consummate the transaction contemplated hereby. In furtherance of the foregoing, so long as Buyer is not in default under the terms of this Agreement, Seller will cooperate, as reasonably needed, and at no cost to Seller, in Buyer's due diligence review process, which shall include but not be limited to Seller's consent to Buyer's unrestricted access to agencies, representatives, tenants, consultants and other parties familiar with the Property and the execution and delivery of such applications or other documents as reasonably requested by Buyer.

14.12 Construction. As used in this Agreement, the masculine, feminine, and neuter gender and the singular or plural shall each be construed to include the other whenever the context so requires. This Agreement shall be construed as a whole and in accordance with its fair meaning, without regard to any presumption or rule of construction causing this Agreement or any part of it to be construed against the Party causing the Agreement to be written. The Parties acknowledge that each has had a full and fair opportunity to review the Agreement and to have it reviewed by counsel. If any words or phrases in this Agreement have been stricken, whether or not replaced by other words or phrases, this Agreement shall be construed (if otherwise clear and unambiguous) as if the stricken matter never appeared and no inference shall be drawn from the former presence of the stricken matters in this Agreement or from the fact that such matters were stricken.

14.13 Attorneys' Fees. If either Party brings an action or proceeding against the other Party to enforce or interpret any of the covenants, conditions, agreements, or provisions of this Agreement, the prevailing Party in such action or proceeding shall be awarded all costs and expenses of such action or proceeding, including, without limitation, attorneys' fees (including fees for a Party's use of in-house counsel), charges, disbursements, and the fees and costs of expert witnesses. If any Party secures a judgment in any such action or proceeding, then any costs and

expenses (including, but not limited to, attorneys' fees and costs) incurred by the prevailing Party in enforcing such judgment, or any costs and expenses (including, but not limited to, attorneys' fees and costs) incurred by the prevailing Party in any appeal from such judgment in connection with such appeal shall be recoverable separately from and in addition to any other amount included in such judgment. The preceding sentence is intended to be severable from the other provisions of this Agreement, and shall survive and not be merged into any such judgment. This Section shall survive Closing and any earlier termination of this Agreement.

14.14 Business Days. As used in this Agreement, the term "**Business Day**" shall mean a day that is not a Saturday, Sunday, or legal holiday. If that the date for the performance of any covenant or obligation under this Agreement shall fall on a Saturday, Sunday, or legal holiday, the date for performance thereof shall be extended to the next Business Day. Similarly, if that the day for the performance of any covenant or obligation under this Agreement involving Escrow Agent shall fall on a Business Day on which Escrow Agent is closed for business to the public, the date for performance thereof shall be extended to the next Business Day on which Escrow Agent is open for business to the public.

The Parties have executed this Agreement as of the day and year first written above.

NON-FOREIGN AFFIDAVIT

STATE OF CALIFORNIA

County of San Bernardino

The undersigned, as authorized agent of THE CITY OF REDLANDS SUCCESSOR AGENCY, a political subdivision of the State of California ("**Transferor**"), after being duly sworn upon his oath deposes and says that:

Section 1445 of the Internal Revenue Code provides that a transferee of a U.S. real property interest must withhold tax if the transferor is a foreign person. To inform **REDLANDS FOOD HALL, LP**, a California limited partnership ("**Transferee**"), that withholding of tax is not required upon the disposition of Transferor's interest in a U.S. real property interest, the undersigned hereby certifies the following:

1. Transferor is not a non-resident alien, foreign corporation, foreign partnership, foreign trust, foreign estate, or other foreign person within the meaning of § 1445 and § 7701 of the Internal Revenue Code and the treasury regulations promulgated thereunder;

2. Transferor is not a disregarded entity as defined in Treas. Reg. § 1.1445-2(b)(2)(iii);

3. Transferor's U.S. taxpayer identification number is: 95-6000766;

4. Transferor's business address is: P.O. Box 3005, Cajon Street, Redlands, CA 92373.

Transferor understands that this certification may be disclosed to the Internal Revenue Service by Transferee and that any false statement contained in this Agreement could be punished by fine, imprisonment, or both.

Under penalties of perjury Transferor declares that it has examined this certification and to the best of its knowledge and belief this certification is true, correct, and complete. The undersigned agent declares that he has the authority to sign this document on behalf of Transferor.

EXHIBIT "D"

GENERAL ASSIGNMENT

THIS GENERAL ASSIGNMENT (this "**Assignment**") is executed as of the 6th day of December, 2016, by THE CITY OF REDLANDS SUCCESSOR AGENCY, a political subdivision of the State of California ("**Assignor**"), to and for the benefit of, **REDLANDS FOOD HALL, LP**, a California limited partnership ("**Assignee**").

Contemporaneously with this Assignment, Assignee is acquiring from Assignor certain real property described in **Exhibit "A"** attached to this Assignment (the "**Land**"), together with all of Assignor's right, title, and interest in and to: (a) all improvements on the Land (the "**Improvements**"); and (c) all of the rights, privileges, appurtenances, hereditaments, easements, reversions, and remainders pertaining to or used in connection with the Land and/or any of the Improvements, including, without limitation, all (i) development rights and credits, air rights, water, water rights, and water stock relating to the Land, (ii) strips and gores, streets, alleys, easements, rights-of-way, public ways, or other rights appurtenant, adjacent, or connected to the Land, and (iii) minerals, oil, gas, and other hydrocarbon substances in, under, or that may be produced from the Land (collectively, the "**Real Property**");

In connection with the foregoing acquisition, Assignor desires to transfer and assign to Assignee all of Assignor's right, title, and interest in and to certain items and rights applicable or relating thereto, all as provided in this Assignment.

Therefore, for good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, Assignor hereby grants, sells, transfers, and assigns unto Assignee all of Assignor's right, title, and interest in and to that certain intangible property owned by Assignor or used by Assignor in connection with all or any portion of the Real Property, including, without limitation, all of Assignor's right, title, and interest, if any, in and to: (a) all plats, improvement plans, drawings and specifications (including, without limitation, CAD files), and development rights and credits relating to the Real Property, (b) all books, records, reports, test results, environmental assessments, if any, as-built plans, specifications, and other similar documents and materials relating to the use, operation, maintenance, repair, construction, or fabrication of all or any portion of the Real Property, excluding therefrom any books, records, documents and other instruments relating solely to the ordinary course of the agricultural and family use of the Real Property; (c) all transferable architectural, site, landscaping or other permits, applications, approvals, authorizations, and other entitlements affecting any portion of the Real Property; (d) all credits (including, without limitation, water meter fee credits), reimbursements and refunds of any fees and/or deposits paid in connection with the Real Property; and (e) all transferable guarantees, warranties, claims and causes of action relating to all or any portion of the Real Property, and Assignor agrees not to release, waive, or alter the liability of any persons providing such guarantees, warranties, claims or causes of action from and after the date of this Assignment.

This Assignment is binding upon the successors and assigns of Assignor and will inure to the benefit of the successors and assigns of Assignee.

Assignor hereby covenants that it will, at any time and from time to time upon written request therefor, execute and deliver to Assignee, and its successors and assigns, any new or confirmatory instruments and take such further acts as Assignee may reasonably request to evidence the assignment contained in this Agreement.

This Assignment shall be governed by and interpreted under the laws of the State of California, without regards to its principles of conflict of laws.

City Council Meeting **K. 3.**

DATE: 07/16/2024

TO: Honorable Mayor and City Council Members

SUBJECT: Consideration of Resolution No. 8610 to adopt a Mitigated Negative Declaration and Mitigation Monitoring/Reporting Program prepared for the proposed Sunset Reservoir Replacement Project in accordance with Section 15074 of the California Environmental Quality Act Guidelines (Municipal Utilities and Engineering Director Harris)

MOTION(S):

If City Council determines the staff recommendation is appropriate, the following motion is provided:

I move to approve Resolution No. 8610.

RECOMMENDATION:

Staff recommends that the City Council approve Resolution No. 8610 to adopt a Mitigated Negative Declaration and Mitigation Monitoring/Reporting Program for the proposed Sunset Reservoir Replacement Project in accordance with Section 15074 of the California Environmental Quality Act Guidelines.

DISCUSSION:

Project Location:

The proposed Sunset Reservoir Replacement Project (Project) site is located in the City of Redlands (City) in San Bernardino County, California. The Project is situated south of Helen Drive in the City. The existing City reservoir is located west of Helen Court. The proposed reservoirs will be located east of the existing reservoir on an approximately twenty-two (22) acre site. Both the existing reservoir and Project site are on City property. The City owns and manages the following parcels:

- APN 0300-451-13: 3.20 Acres
- APN 0300-451-14: 2.50 Acres
- APN 0300-451-24: 8.57 Acres
- APN 0300-451-25: 7.78 Acres

The Project site is accessible from Helen Court along Helen Drive. Helen Drive is located south of Sunset Drive South. Sunset Drive South becomes Alta Vista Drive to the east. Helen Court is a publicly accessed road. Interstate 10 (I-10) is located approximately one (1) mile to the north-east.

Project Description:

The City of Redlands Municipal Utilities and Engineering Department proposes the construction of two (2) new partially buried potable water reservoirs with approximately fourteen (14) million gallons (MG) of total storage capacity on City property, adjacent to the existing three (3) MG reservoir. The Project is proposed to be constructed on parcels 0300-451-25 and 0300-451-14, which will cover approximately forty-six percent (46%) of the four (4) City-owned parcels at this location. The Project site will be accessed by an asphalt and gravel driveway from Helen Court and two (2) parking spaces will be installed for maintenance access. The site will remain unmanned. Maintenance will occur on a monthly and as-needed basis by City employees. Landscaping will be maintained by the City. The existing water reservoir will continue to function during construction of the new reservoir(s). Once operational, the existing reservoir will be removed.

Project construction will require multiple workers using equipment such as loaders, pick-up trucks, backhoes, water trucks for dust suppression, cranes, asphalt paving equipment, and excavators. Project materials will be staged within the existing vacant parcels currently managed by the City. Construction of the Proposed Project includes, but is not limited to, excavation and grading to construct water reservoir pads and internal driveways, construction of the two (2) new partially buried potable water reservoirs and ancillary facilities such as a pump station and valve vaults. A retaining wall and security fence will be installed to secure the Project site. Architectural coatings will be added to the reservoirs to blend with the existing environment.

Summary of Cultural Resources Investigations:

To identify cultural resources that could be affected by the Project, various environmental investigations were conducted by the City's environmental Consultant, the Chambers Group (Chambers). Chambers requested and reviewed records from the California Historical Resources Information System (CHRIS) South-Central Coastal Information Center (SCCIC) at California State University, Fullerton. The SCCIC provided the requested records on April 11, 2023, which included information about documented cultural resources and previous archaeological investigations within the study area. Resources

consulted during the records search conducted by the SCCIC included the NRHP, California Historical Landmarks (CHL), California Points of Historical Interest (CPHI), California Department of Transportation (Caltrans) Historic Highway Bridge Inventory, the California State Historic Resources Inventory, local registries of historic properties, and a review of available Sanborn Fire Insurance maps as well as historical photographs, maps, and aerial imagery. The task also included a search for potential prehistoric and/or historic burials (human remains) evident in previous site records and/or historical maps. Additionally, the Chambers Group submitted a request to the Native American Heritage Commission (NAHC) for a review of the Sacred Land Files (SLF) for the Project site and surrounding vicinity. Based on the records on-file with the SCCIC, nine (9) cultural resource studies have previously been completed within the study area. Of these nine (9) reports, two (2) bisect the Project site. Additionally, two (2) previously recorded cultural resources are recorded within the study area. None are located within the Project site.

An intensive field inventory and survey of the Project area was completed on July 31, 2023. The survey consisted of a systematic surface inspection of the Project site areas that were safely accessible and visible. The Project site was transected at ten (10) meter intervals to ensure that any evidence of surface-exposed cultural materials and/or evidence of paleontological resources could be identified. No prehistoric resources were identified during the field survey.

Environmental Review:

The Chambers Group prepared an Initial Study and Mitigated Negative Declaration (IS/MND) in accordance with the California Environmental Quality Act (CEQA). The IS/MND was made available for public review and comment for thirty (30) days as required (State Clearinghouse No. 2024040090) between April 2, 2024, to May 2, 2024. The Notice of Intent was published in the Sun Newspaper at the beginning of the public review period. The environmental documents were also made available for public review on the City's website at 'https://www.cityofredlands.org/environmental-documents'.

Mitigation Measures: The Initial Study recommends a Mitigated Negative Declaration with fifteen (15) mitigation measures which pertain to Biological Resources, Cultural Resources, Paleontological Resources, and Tribal Cultural Resources. Most mitigation measures pertain to the construction phase of the project (e.g., construction activities, site improvements, or construction materials) and there are no aspects of the Project after construction that will require ongoing future monitoring for CEQA purposes. The mitigation measures will ensure that the effects of the Project will remain less than significant and are summarized in the Mitigation Monitoring and Reporting Program within the IS/MND.

After mitigation, no significant effects are anticipated, and the recommended

mitigation measures will be incorporated into the Project construction phase. There is no substantial evidence of any potentially significant environmental effects as a result of the Project, and a Mitigated Negative Declaration is the appropriate environmental determination.

Public Comments: In accordance with the California Environmental Quality Act (CEQA) Guidelines, the draft IS/MND was posted for public review and comment from April 2, 2024, to May 2, 2024. During the thirty (30) day comment period, no comments were received.

ALTERNATIVES:

City Council may deny the staff recommendation. However, this will prevent the City from acquiring the Division of Drinking Water Domestic Water Supply Permit necessary to engineer and construct the project.

STRATEGIC PLAN:

Priority D, Strategic Objective 3 - Infrastructure. Develop and implement Water and Wastewater Utility Master Plans to ensure facilities are improved and maintained to meet the needs of our expanding community

RESOLUTION NO. 8610

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS ADOPTING A MITIGATED NEGATIVE DECLARATION AND MITIGATION MONITORING/REPORTING PROGRAM FOR THE PROPOSED SUNSET RESERVOIR REPLACEMENT PROJECT LOCATED ON APN: 0300-451-13; 0300-451-14; 0300-451-24; 0300-451-25.

WHEREAS, an Initial Study and Mitigated Negative Declaration ("MND") for the proposed Sunset Reservoir Replacement Project ("Project") was prepared for the City of Redlands which was circulated for public review for a period of thirty days beginning on April 2, 2024, and ending on May 2, 2024;

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Redlands as follows:

Section 1. CEQA Compliance. The City Council has reviewed and considered the information contained in the Initial Study and MND, related technical studies and analyses, acknowledgement that no public comments received, and determines that the MND and related documents contain a complete and accurate reporting of the environmental impacts and mitigation measures associated with the Project.

Section 2. Independent Judgment of Lead Agency. The City Council has exercised independent judgment and analysis in accordance with Public Resources Code Section 21082.1(c)(3) in that the City Council analyzed the MND and accompanying technical studies/reports and finds that the MND reflects the independent judgment and analysis of the City.

Section 3. Adoption of Mitigated Negative Declaration. The City Council finds on the basis of the whole record that there is no substantial evidence that the Project will have a significant effect on the environment, including mitigation measures and any Project design features, and hereby adopts the MND for the Project.

Section 4. Adoption of Mitigation Monitoring/Reporting Program. Pursuant to Public Resources Code section 21081.6, the City hereby adopts the Mitigation Monitoring/Reporting Program attached to the MND, and all mitigation measures are included as conditions of approval for the Project.

Section 5. Notice of Determination. The City Council hereby adopts the MND for the Project and the accompanying Mitigation Monitoring and Reporting Program and direct staff to file and post a Notice of Determination in accordance with the State CEQA Guidelines.

Section 6. Effective Date. This Resolution shall take effect upon adoption.

ADOPTED, SIGNED AND APPROVED this 16th day of July, 2024.

SECTION 1.0 – INTRODUCTION

1.1 DRAFT INITIAL STUDY / MITIGATED NEGATIVE DECLARATION

On April 2, 2024, the City of Redlands (City) distributed the Draft Initial Study/Mitigated Negative Declaration (IS/MND) for the Sunset Reservoir Project to public agencies and the general public. In accordance with the California Environmental Quality Act (CEQA) Section 21091 and State CEQA Guidelines Section 15073, a 30-day public review period for the Draft IS/MND was provided from April 2, 2024 to May 1, 2024. **The City Council will review the IS/MND for adoption on July 16, 2024, at its regularly scheduled meeting located at City's office located at 35 Cajon Street, Suite 15A, Redlands, California.**

1.2 AVAILABILITY OF THE NOI AND IS/MND

The NOI and the IS/MND were available for review at the following locations:

- City's office located at 35 Cajon Street, Suite 15A, Redlands, CA 92373
- https://www.cityofredlands.org/post/environmental-documents

SECTION 2.0 – PROJECT DESCRIPTION AND ENVIRONMENTAL SETTING

2.1 PROJECT PURPOSE AND BACKGROUND

The City of Redlands (City) is proposing to construct two new reservoir tanks (Proposed Project) to be located on Helen Court, near East Sunset Drive in the City (Project site). The Proposed Project will safeguard public health by expanding the capacities of the reservoirs to meet public drinking water demands, which is critical as the City continues to be impacted by multi-decade drought. The Proposed Project will allow the City to treat and store more water during wet periods for distribution during dry periods.

A Condition, Seismic, and Structural Assessment (Assessment) was completed for water facilities located throughout the City. The results of the Assessment included recommendations for rehabilitating and/or replacing facilities and adding facilities within the City to improve drought resiliency by increasing storage capacity. Based on the water needs of the City, the Project proposes to install two new above ground factory-coated bolt carbon steel tank with an approximately 14 million gallon (MG) total capacity. To construct the tanks, the City requires a permit from the California State Water Resources Control Board (SWRCB) Division of Drinking Water (DDW) which requires California Environmental Quality Act (CEQA) documents to be submitted.

2.2 PROJECT LOCATION AND SITE CHARACTERISTICS

2.2.1 Project Site Location

The Project site is located south of Helen Drive in the City. The existing City reservoir is located west of Helen Court. The proposed tanks will be located east of the existing reservoir. Both the existing reservoir and Project site are within City property. The City owns and manages the following parcels:

- APN 0300-451-13: 3.20 Acres
- APN 0300-451-14: 2.50 Acres
- APN 0300-451-24: 8.57 Acres
- APN 0300-451-25: 7.78 Acres

The reservoir tanks will be located at parcel 0300-451-25 and 0300-451-14.

2.2.2 Project Site Access and Circulation

Project site access would be via Helen Court along Helen Drive. Helen Drive is located south of East Sunset Drive. East Sunset Drive becomes Alta Vista Drive to the east. Helen Court is a publicly accessed road. Interstate 10 (I-10) is located approximately 1 mile to the north.

2.2.3 General Plan/Zoning

The Project site is within the Highland-Canyons subarea within the City's sphere of influence. The site is zoned as Specific Plan 59 (SP 59) / Flood Plain (FP-1 - Flood Plain District) according to the City's Zoning Map and with a General Plan land use designation of Resource Preservation. SP 59, also known as the Sector 8 Specific Plan, is located within the central portion of the southeast General Plan Amendment. Land uses within SP 59 were noted as single family residential and open space.

The land use designation of Resource Preservation limits the use in areas that possess a unique character and fragile ecology that have prime resources for water conservation, wildlife preservation, open space recreation, and agriculture. Limited permitted uses include public utilities.

Land area to the immediate north, east, and south are zoned as SP 59. To the immediate west, the parcels are zoned as Single-Family Residential, Rural Residential District (R-R). General plan land uses to the west, south, and east are designated as Resource Preservation, and to the north as Very Low Density Residential.

2.3 PROJECT DESCRIPTION

The City of Redlands Municipal Utilites and Engineering Department proposes the construction of two new above ground factory-coated bolt carbon steel tank with an approximately 14 MG total capacity on City property, adjacent to the existing reservoir. The Proposed Project will develop on parcels 0300-451-25 and 0300-451-14, which will cover approximately 46% of the total City-owned parcels.

2.3.1 Parking and Hardscape

One driveway will connect the existing water tank and Helen Court. The driveway will be constructed utilizing asphalt/gravel. Two parking spaces will be installed for maintenance purposes. The site will remain unmanned.

2.3.2 Operations and Ongoing Maintenance

Maintenance will occur on a monthly and as-needed basis by City employees. Landscaping will be maintained by the City. The existing water tank will continue to function while the new reservoir tanks are constructed; once operational the existing water tank would cease operations.

2.3.3 Construction

Construction of the Proposed Project will require multiple workers using equipment such as loaders, pick-up trucks, backhoe, water truck for dust suppression, crane, asphalt paver, and excavators. Project materials will be staged within the existing vacant parcels currently managed by the City. Construction of the Proposed Project include, but are not limited to, excavation and grading to construct water tank pads and internal driveways, construction of two new above ground factory-coated bolt carbon steel tank with an approximately 14 MG total capacity and ancillary facilities such as a pump station, and valve vaults. A retaining wall with chain link fence will be installed to surround the reservoir. Architectural coatings will be added for the tanks to blend with the existing environment.

Construction Schedule

The Project is expected to break ground in 2024 and be completed by 2025. Construction activities will take place from 7:00 a.m. to 6:00 p.m. Monday through Saturday. No construction work will occur on Sundays or holidays per the City's Community Noise Control section Chapter 8.06 of the Municipal Code.

2.4 REQUIRED PERMITS AND APPROVALS

Reviewing Agencies include those agencies that do not have discretionary authority but may review the Initial Study, Environmental Impact Report (EIR), and/or Negative Declaration for adequacy and accuracy. Responsible Agencies have discretionary approval authority for a project. Potential Reviewing Agencies

and Responsible Agencies include the following:

Responsible Agencies

- California State Water Resources Control Board (SWRCB) Division of Drinking Water (DDW)

Reviewing Agencies

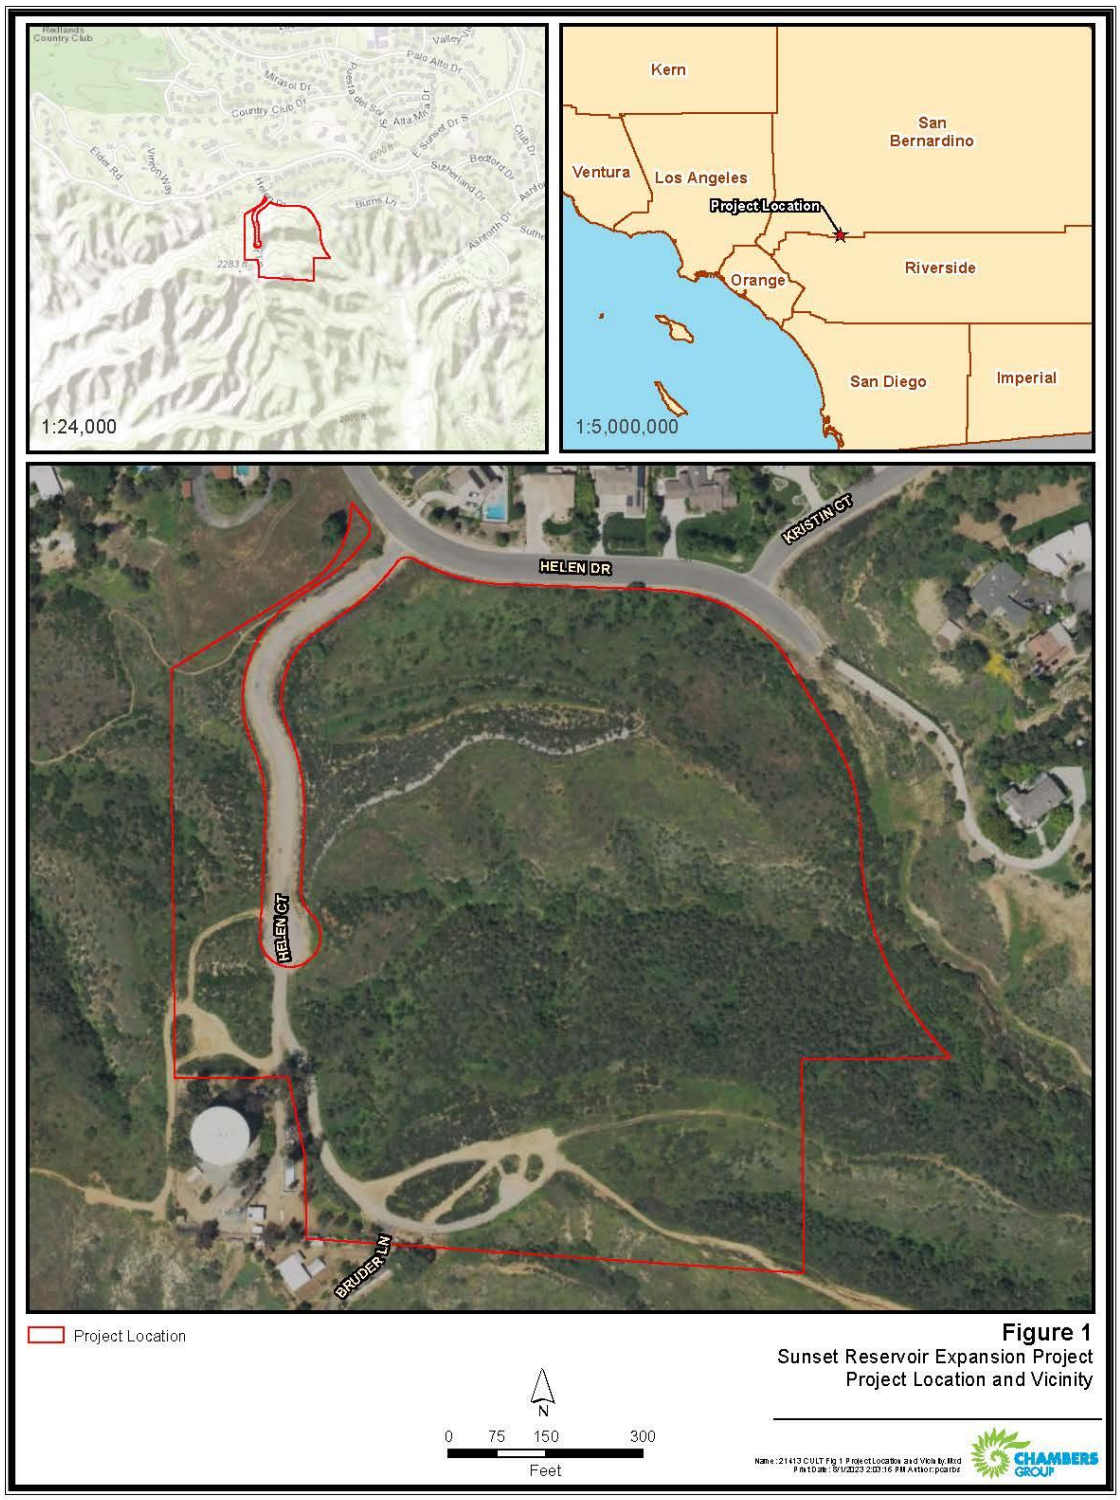
- South Coast Air Quality Management District (SCAQMD)
- Native American Heritage Commission (NAHC), and tribes requesting consultation

2.4.1 Permits and Approvals

The following permits and approvals may be required prior to construction of the Project:

- Site Plan review
- Grading Permit
- Building Permit
- Compliance with National Pollutant Discharge Elimination System (NPDES) Construction General Permit by the Regional Water Quality Control Board (RWQCB)

Figure 1 - Project Vicinity Map



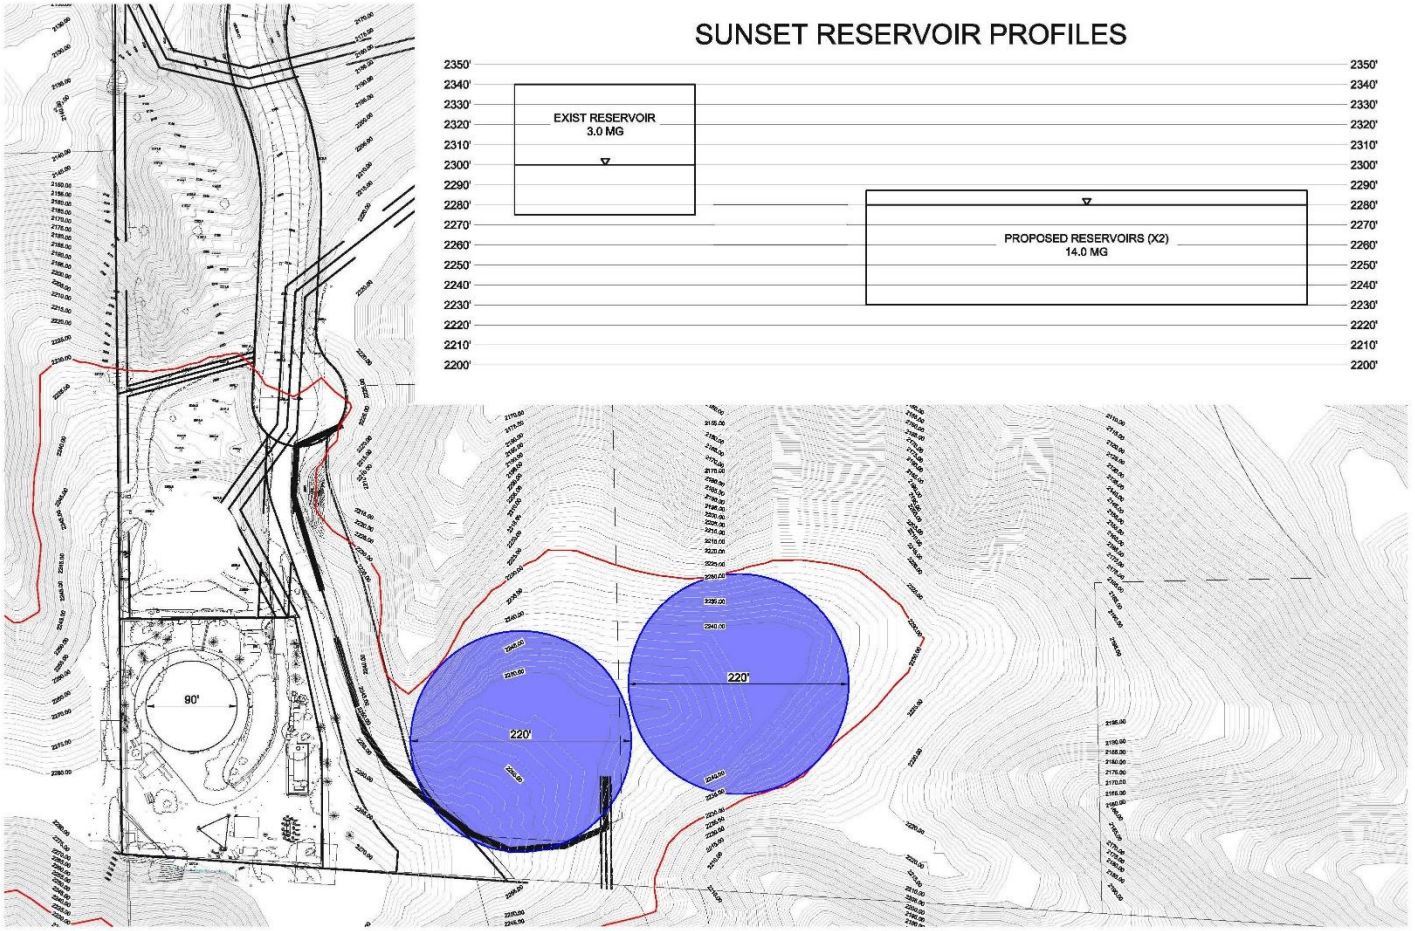


Figure 2 – Preliminary Concept

NOT TO SCALE

Figure 2
Sunset Reservoir Expansion Project
Preliminary Concept

SECTION 3.0 – FINDINGS

An Initial Study has been prepared to assess the Proposed Project's potential impacts on the environment and the significance of those impacts and was incorporated in the Draft MND. Based on this Initial Study, it has been determined that the Proposed Project would not have any significant impacts on the environment once all proposed mitigation measures have been implemented. This conclusion is supported by the following findings:

- No potential was found for adverse impacts on Mineral Resources, Population and Housing, and Recreation, associated with the Proposed Project.

- Potential adverse impacts resulting from the Proposed Project were found to be less than significant in the following areas: Aesthetics, Agriculture and Forestry Resources, Air Quality, Energy, Geology and Soils (excluding paleontological resources), Greenhouse Gas Emissions, Hazards and Hazardous Materials, Hydrology and Water Quality, Land Use and Planning, Noise, Public Services, Transportation, Utilities and Service Systems and Wildfire.

- Full implementation of the proposed mitigation measures included in this MND would reduce potential project-related adverse impact on Biological Resources, Cultural Resources, Geology and Soils (paleontological resources), and Tribal Cultural Resources to a less than significant level.

SECTION 4.0 – MITIGATION MEASURES

The following mitigation measures have been incorporated into the scope of work for the Proposed Project and will be fully implemented by the City to avoid or minimize adverse environmental impacts identified in this MND. These mitigation measures will be included in the Mitigation Monitoring and Reporting Program (MMRP) prepared for this Project.

BIO-1: The Project site has low to moderate potential to have the following special status plant species to be present on-site: slender-horned spineflower (*Dodecahema leptoceras*), chaparral sand-verbena (*Abronia villosa* var. *aurita*), Jaeger's milk-vetch (*Astragalus pachypus* var. *jaegeri*), mesa horkelia (*Horkelia cuneata* var. *puberula*), Hall's monardella (*Monardella macrantha* subsp. *hallii*), Brand's star phacelia (*Phacelia stellaris*), chaparral ragwort (*Senecio aphanactis*), Parry's spineflower (*Chorizanthe parryi* var. *parryi*), and Santa Ana River woollystar (*Eriastrum densifolium* subsp. *sanctorum*).

Therefore, a qualified botanist must be retained by the Project applicant to conduct a protocol level focused plant survey prior to construction at the location of the water tanks to identify if any special status plant species are present on site. The focused plant survey shall be conducted during the appropriate blooming period or when each species is conspicuous and readily identifiable by a qualified botanist. If any special status plant species are observed, they will be mapped, counted, and recorded.

When feasible, construction activities will avoid impacts to the areas with special status plant species if found. The special status plants identified shall be protected by a buffer zone established by a qualified botanist prior to construction. If the qualified botanist determines that the special status plants cannot be avoided and a buffer zone cannot be established, then further mitigation for the impacted species will be required. This may include payment of an in-lieu fee, preservation of suitable habitat elsewhere off the Project site, collection of seeds, transplanting, or another form of mitigation as approved by the resource agencies.

BIO-2: To minimize potential impacts to nesting birds protected under the Migratory Bird Treaty Act (MBTA) within the Project, construction activities shall take place outside nesting season (February 1 to August 31) to the greatest extent practicable.

If construction activities must occur during nesting season, a preconstruction nesting bird survey shall be conducted prior to initiation of ground-disturbing activities. The survey shall be completed within 14 days prior to ground disturbing activities which consists of but are not limited to tree removal, trenching, and grading. The survey shall be scheduled with and conducted by a qualified biologist in coordination with the City and onsite construction manager.

During the survey, should nesting birds or their nests be encountered a minimum buffer zone around occupied nests should be determined by a qualified biologist to avoid impacts to the active nest. The buffer shall range at a minimum of 100 to 300 feet. The buffer should be maintained during physical ground-disturbing activities. Avoidance

measures shall be implemented if the biologist finds that they are required to not impact the nests including but not limited to noise, activity, and design modifications, worker education, signage, buffers and/or temporary fencing. Once the biologist has determined that the nesting has ceased and the nestlings have fledged, the buffer may be removed.

CUL-1: The City shall retain the services of a Qualified Archaeologist, meeting the Secretary of the Interior Standards, or County requirements, whichever is the greater. The Qualified Archaeologist shall remain on-call throughout the Project. Upon approval or request by the City, a cultural resources mitigation plan (CRMP) outlining procedures for cultural resources monitoring, mitigation, treatment, and data recovery of any unanticipated discovery shall be prepared for the Project and submitted to the City for review and approval. The development and implementation of the CRMP shall include consultations with the City as well as a requirement that the curation of any significant cultural resources recovered under any scenario shall be through an appropriate repository agreed upon by the City. If the City accepts ownership, the curation location may be revised.

CUL-2: In the event of the discovery of previously unidentified and/or potential cultural resources, the City, and/or its Contractor, shall immediately cease all work activities within an area of not less than 50 feet of the discovery. The City or its Contractor shall immediately contact the City and the City-retained on-call Qualified Archaeologist. Except in the case of cultural items that fall within the scope of the California Health and Safety Code 7050.5, CEQA Section 15064.5, or California PRC Section 5097.98, the discovery of any cultural resource within the Project site shall not be grounds for a project-wide "stop work" notice or otherwise interfere with the Project's continuation except as set forth in this mitigation measure. Additionally, any consulting Native American Tribal groups that requested notification of any unanticipated discovery of cultural resources on the Project shall be notified and included in subsequent consultation appropriately. In the event of an unanticipated discovery of cultural resources during construction, the City-retained Qualified Archaeologist shall evaluate the significance of the materials prior to resuming any construction-related activities in the vicinity of the find. If a CRMP is prepared for the Project, the protocols for mitigation or treatment of cultural resources will be implemented. If the Qualified Archaeologist determines that the discovery constitutes a significant resource under CEQA and it cannot be avoided, the City shall implement an archaeological data recovery program.

CUL-3: If cultural resources are encountered during the Project, the Qualified Archaeologist shall prepare a report summarizing any and all prehistoric or historic archaeological finds as well as providing follow-up reports of any finds to the South Central Coastal Information Center (SCCIC), as required.

PAL-1: Prior to issuance of a grading permit, the City shall be required to obtain the services of a Qualified Project Paleontologist to remain on call for the duration of the proposed ground disturbing construction activity. The paleontologist selected must be approved by the City. Upon approval or request by the City, a paleontological mitigation plan (PMP) outlining procedures for paleontological data recovery shall be prepared for the Project

and submitted to the City for review and approval. The development and implementation of the PMP shall include consultations with the District's Engineering Geologist as well as a requirement that the curation of all specimens recovered under any scenario shall be through an appropriate repository agreed upon by the City. If the District accepts ownership, the curation location may be revised. The PMP shall include developing a multilevel ranking system, or Potential Fossil Yield Classification (PFYC), as a tool to demonstrate the potential yield of fossils within a given stratigraphic unit. The PMP shall outline the monitoring and salvage protocols to address paleontological resources encountered during Project-related ground-disturbing activities, as well as the appropriate recording, collection, and processing protocols to appropriately address any resources discovered.

PAL-2: At the completion of all ground-disturbing activities, the Project Paleontologist shall prepare a final paleontological mitigation report summarizing all monitoring efforts and observations, as performed in line with the PMP, and all paleontological resources encountered, if any, as well as providing follow-up reports of any specific discovery, if necessary.

TCR-1: Prior to the issuance of grading permits, the applicant shall enter into a Tribal Monitoring Services Agreement with the Morongo Band of Mission Indians (MBMI) for the Project. The Tribal Monitor shall be on-site during all ground-disturbing activities (including, but not limited to, clearing, grubbing, tree and bush removal, grading, trenching, fence post placement and removal, construction excavation, excavation for all utility and irrigation lines, and landscaping phases of any kind). The Tribal Monitor shall have the authority to temporarily divert, redirect, or halt the ground-disturbing activities to allow identification, evaluation, and potential recovery of cultural resources.

TCR-2: Prior to any ground-disturbing activities (including, but not limited to, clearing, grubbing, tree and bush removal, grading, trenching, fence post replacement and removal, construction excavation, excavation for all utility and irrigation lines, and landscaping phases of any kind), and prior to the issuance of grading permits, the Applicant shall retain a Qualified Archaeologist who meets the U.S. Secretary of the Interior Standards (SOI). The Archaeologist shall be present during all ground disturbing activities to identify any known or suspected archaeological and/or cultural resources. The Archaeologist will conduct a Cultural Resource Sensitivity Training, in conjunction with the Tribe[s] Tribal Historic Preservation Officer (THPO), and/or designated Tribal Representative. The training session will focus on the archaeological and tribal cultural resources that may be encountered during ground-disturbing activities as well as the procedures to be followed in such an event.

TCR-3: Prior to any ground-disturbing activities the project Archaeologist shall develop a Cultural Resource Management Plan (CRMP) and/or Archaeological Monitoring and Treatment Plan (AMTP) to address the details, timing, and responsibilities of all archaeological and cultural resource activities that occur on the project site. This Plan shall be written in consultation with the consulting Tribe[s] and shall include the following: approved Mitigation Measures (MM)/Conditions of Approval (COA), contact information for all

pertinent parties, parties' responsibilities, procedures for each MM or COA, and an overview of the project schedule.

TCR-4: The retained Qualified archeologist and Consulting Tribe[s] representative shall attend the pre-grade meeting with the grading contractors to explain and coordinate the requirements of the monitoring plan.

TCR-5: During all ground-disturbing activities the Qualified Archaeologist and the Tribal Monitor shall be onsite full-time. The frequency of inspections shall depend on the rate of excavation, the materials excavated, and any discoveries of Tribal Cultural Resources as defined in California Public Resources Code Section 21074. Archaeological and Tribal Monitoring will be discontinued when the depth of grading and the soil conditions no longer retain the potential to contain cultural deposits. The Qualified Archaeologist, in consultation with the Tribal Monitor, shall be responsible for determining the duration and frequency of monitoring.

TCR-6: In the event that previously unidentified cultural resources are unearthed during construction, the Qualified Archaeologist and the Tribal Monitor shall have the authority to temporarily divert and/or temporarily halt ground-disturbance operations in the area of discovery to allow for the evaluation of potentially significant cultural resources. Isolates and clearly non-significant deposits shall be minimally documented in the field and collected so the monitored grading can proceed.

If a potentially significant cultural resource(s) is discovered, work shall stop within a 60-foot perimeter of the discovery and an Environmentally Sensitive Area (ESA) physical demarcation/barrier constructed. All work shall be diverted away from the vicinity of the find, so that the find can be evaluated by the Qualified Archaeologist and Tribal Monitor[s]. The Archaeologist shall notify the City and consulting Tribe[s] of said discovery. The Qualified Archaeologist, in consultation with the Lead Agency, the consulting Tribe[s], and the Tribal Monitor, shall determine the significance of the discovered resource. A recommendation for the treatment and disposition of the Tribal Cultural Resource shall be made by the Qualified Archaeologist in consultation with the Tribe[s] and the Tribal Monitor[s] and be submitted to the Lead Agency for review and approval. Below are the possible treatments and dispositions of significant cultural resources in order of CEQA preference:

A. Full avoidance.
B. If avoidance is not feasible, Preservation in place.
C. If Preservation in place is not feasible, all items shall be reburied in an area away from any future impacts and reside in a permanent conservation easement or Deed Restriction.
D. If all other options are proven to be infeasible, data recovery through excavation and then curation in a Curation Facility that meets the Federal Curation Standards (CFR 79.1)

TCR-7: The Morongo Band of Mission Indians requests the following specific conditions to be imposed in order to protect Native American human remains and/or cremations. No photographs are to be taken except by the coroner, with written approval by the consulting Tribe[s].

A. Should human remains and/or cremations be encountered on the surface or during any and all ground-disturbing activities (i.e., clearing, grubbing, tree and bush removal, grading, trenching, fence post placement and removal, construction excavation, excavation for all water supply, electrical, and irrigation lines, and landscaping phases of any kind), work in the immediate vicinity of the discovery shall immediately stop within a 100-foot perimeter of the discovery. The area shall be protected; project personnel/observers will be restricted. The County Coroner is to be contacted within 24 hours of discovery. The County Coroner has 48 hours to make his/her determination pursuant to State and Safety Code §7050.5. and Public Resources Code (PRC) § 5097.98.

B. In the event that the human remains and/or cremations are identified as Native American, the Coroner shall notify the Native American Heritage Commission within 24 hours of determination pursuant to subdivision (c) of HSC §7050.5.

C. The Native American Heritage Commission shall immediately notify the person or persons it believes to be the Most Likely Descendant (MLD). The MLD has 48 hours, upon being granted access to the Project site, to inspect the site of discovery and make his/her recommendation for final treatment and disposition, with appropriate dignity, of the remains and all associated grave goods pursuant to PRC §5097.98

D. If the Morongo Band of Mission Indians has been named the MLD, the Tribe may wish to rebury the human remains and/or cremation and sacred items in their place of discovery with no further disturbance where they will reside in perpetuity. The place(s) of reburial will not be disclosed by any party and is exempt from the California Public Records Act (California Government Code § 6254[r]). Reburial location of human remains and/or cremations will be determined by the Tribe's MLD, the landowner, and the City Planning Department.

TCR-8: The final report[s] created as a part of the project (AMTP, isolate records, site records, survey reports, testing reports, etc.) shall be submitted to the Lead Agency and Consulting Tribe[s] for review and comment. After approval of all parties, the final reports are to be submitted to the Eastern Information Center, and the Consulting Tribe[s].

SECTION 5.0 – CIRCULATION

On April 2, 2024, the City of Redlands circulated a Notice of Intent to Adopt a Mitigated Negative Declaration and Initial Study to responsible agencies, trustee agencies, interest groups, and the general public. In accordance with the California Environmental Quality Act (CEQA) Section 21091 and State CEQA Guidelines Section 15073, a 30-day public review period for the IS/MND was provided from April 2, 2024 to May 1, 2024. The NOI was published in *The Sun* newspaper at the beginning of the public review period. Copies of the Initial Study, Mitigated Negative Declaration and supporting materials were made available for review at the City's office located at 35 Cajon Street, Suite 15A, Redlands, CA 92373 or on line on the City's website at: https://www.cityofredlands.org/post/environmental-documents.

During the 30-day comment period, no comments were received.

SECTION 6.0 – RESPONSE TO COMMENTS

CEQA Guidelines Section 15204 (b) outlines parameters for submitting comments and reminds persons and public agencies that the focus of review and comment of negative declarations should be, "on the proposed finding that the project will not have a significant effect on the environment. If persons and public agencies believe that the project may have a significant effect, they should: (1) Identify the specific effect; (2) Explain why they believe the effect would occur, and; (3) Explain why they believe the effect would be significant."

CEQA Guidelines Section 15204 (c) further advises, "Reviewers should explain the basis for their comments, and should submit data or references offering facts, reasonable assumptions based on facts, or expert opinion supported by facts in support of the comments. Pursuant to Section 15064, an effect shall not be considered significant in the absence of substantial evidence." Section 15204 (d) also states, "Each responsible agency and trustee agency shall focus its comments on environmental information germane to that agency's statutory responsibility." Section 15204 (e) states, "This section shall not be used to restrict the ability of reviewers to comment on the general adequacy of a document or of the lead agency to reject comments not focused as recommended by this section."

In accordance with Public Resources Code 21092.5 (b) of the CEQA Guidelines, the lead agency shall notify any public agency which comments on a negative declaration of the public hearing or hearings, if any, on the project for which the negative declaration was prepared. If notice to the commenting public agency is provided pursuant to Section 21092, the notice shall satisfy the requirement of this subdivision.

SECTION 7.0 – MITIGATED NEGATIVE DECLARATION

This document, along with the Draft Initial Study/Mitigated Negative Declaration; Mitigation Monitoring and Reporting Program; and the Notice of Determination, constitute the Final Mitigated Negative Declaration for the Sunset Reservoir Project in the City of Redlands.

Pursuant to Section 21082.1 of the California Environmental Quality Act, the City of Redlands has independently reviewed and analyzed the Initial Study and Mitigated Negative Declaration for the Proposed Project and finds that these documents reflect the independent judgment of the City of Redlands. The City, as lead agency, also confirms that the project mitigation measures detailed in these documents are feasible and will be implemented as stated in the MND and MMRP.

1.0 INTRODUCTION

1.1 Purpose of Analysis and Study Objectives

This Air Quality and Greenhouse Gas (GHG) Emissions Impact Analysis has been completed to determine the air quality and GHG emissions impacts associated with the proposed Sunset Reservoirs project (proposed project). The following is provided in this report:

- A description of the proposed project;
- A description of the atmospheric setting;
- A description of the criteria pollutants and GHGs;
- A description of the air quality regulatory framework;
- A description of the GHG emissions regulatory framework;
- A description of the air quality and GHG emissions thresholds including the California Environmental Quality Act (CEQA) significance thresholds;
- An analysis of the conformity of the proposed project with the South Coast Air Quality Management District (SCAQMD) Air Quality Management Plan (AQMP);
- An analysis of the short-term construction related and long-term operational air quality and GHG emissions impacts; and
- An analysis of the conformity of the proposed project with all applicable GHG emissions reduction plans and policies.

1.2 Site Location and Study Area

The project site is located south of Helen Drive in the City of Redlands (City). There is an existing City reservoir tank located on the west side of Helen Court and the proposed reservoir tanks would be located on the east side of Helen Court on parcels APN 0300-451-25 (7.78 acres) and APN 0300-451-14 (2.50 acres) that total 10.28 acres and are currently vacant. The project site is bounded by vacant land and Helen Drive to the north, vacant land to the east, a single-family home to the south, and Helen Court and the existing reservoir tank to the west. The project local study area is shown in Figure 1.

Sensitive Receptors in Project Vicinity

The nearest sensitive receptor to the project site is a single-family home that is located as near as 280 feet south of the area that would be disturbed as part of the proposed project. There are also single-family homes as near as 730 feet northeast and 780 feet north of the area that would be disturbed as part of the proposed project.

1.3 Proposed Project Description

The City of Redlands Municipal Utilities and Engineering Department proposes the construction of two new above ground 220 foot diameter factory-coated bolt carbon steel tanks that with an approximately 14 million gallon (MG) total capacity from both tanks. To provide uninterrupted water service to its users during the demolition, the City will keep its existing 3 MG reservoir active. It is anticipated that

approximately 6.2 acres of the two parcels that total 10.28 acres will be disturbed as part of the proposed project. The proposed site plan is shown in Figure 2.

One driveway will connect the existing water tank and Helen Court. The driveway will be constructed utilizing asphalt/gravel. Two parking spaces will be installed for maintenance purposes. The site will remain unmanned. The existing water tank will continue to function while the new reservoir tanks will be constructed. Maintenance will occur on a monthly and as-needed basis by City employees. Landscaping will be maintained by the City.

The Project is expected to break ground in 2024 and be completed by 2025. Construction activities will take place between 7:00 a.m. to 6:00 p.m. Monday through Saturday. No construction work will occur on Sundays or holidays per the City's Community Noise Control Section Chapter 8.06 of the Municipal Code.

1.4 Executive Summary

Standard Air Quality and GHG Regulatory Conditions

The proposed project will be required to comply with the following regulatory conditions from the SCAQMD and State of California (State).

South Coast Air Quality Management District Rules

The following lists the SCAQMD rules that are applicable, but not limited to the proposed project.

- Rule 402 Nuisance – Controls the emissions of odors and other air contaminants;
- Rule 403 Fugitive Dust – Controls the emissions of fugitive dust;
- Rules 1108 and 1108.1 Cutback and Emulsified Asphalt – Controls the VOC content in asphalt; and
- Rule 1113 Architectural Coatings – Controls the VOC content in paints and solvents.

State of California Rules

The following lists the State of California Code of Regulations (CCR) air quality emission rules that are applicable, but not limited to the proposed project.

- CCR Title 13, Article 4.8, Chapter 9, Section 2449 – In use Off-Road Diesel Vehicles;
- CCR Title 13, Section 2025 – On-Road Diesel Truck Fleets;
- CCR Title 24 Part 6 – California Building Energy Standards; and
- CCR Title 24 Part 11 – California Green Building Standards.

Summary of Analysis Results

The following is a summary of the proposed project's impacts with regard to the State CEQA Guidelines air quality and GHG emissions checklist questions.

Conflict with or obstruct implementation of the applicable air quality plan?

Less than significant impact.

Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable Federal or State ambient air quality standard?

Less than significant impact.

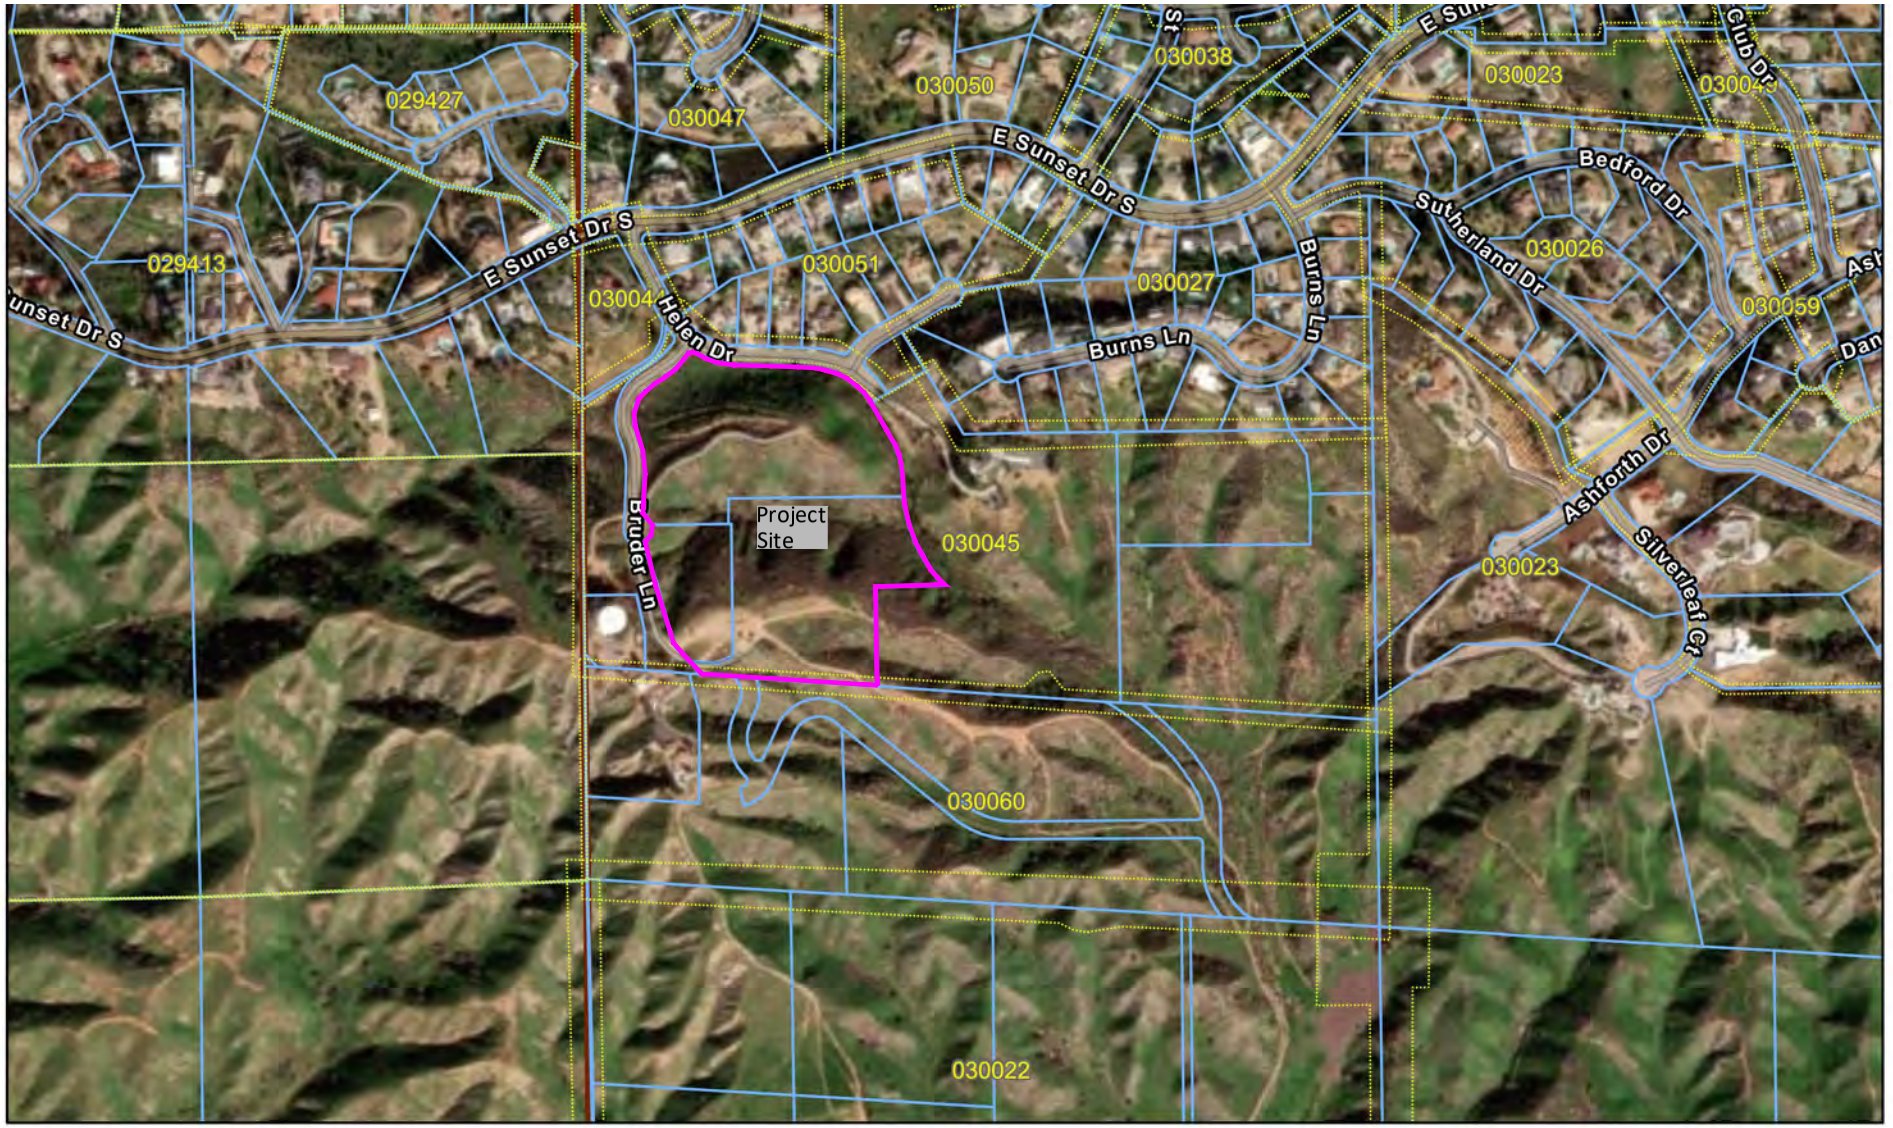
Expose sensitive receptors to substantial pollutant concentrations?

Less than significant impact.

Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Less than significant impact.

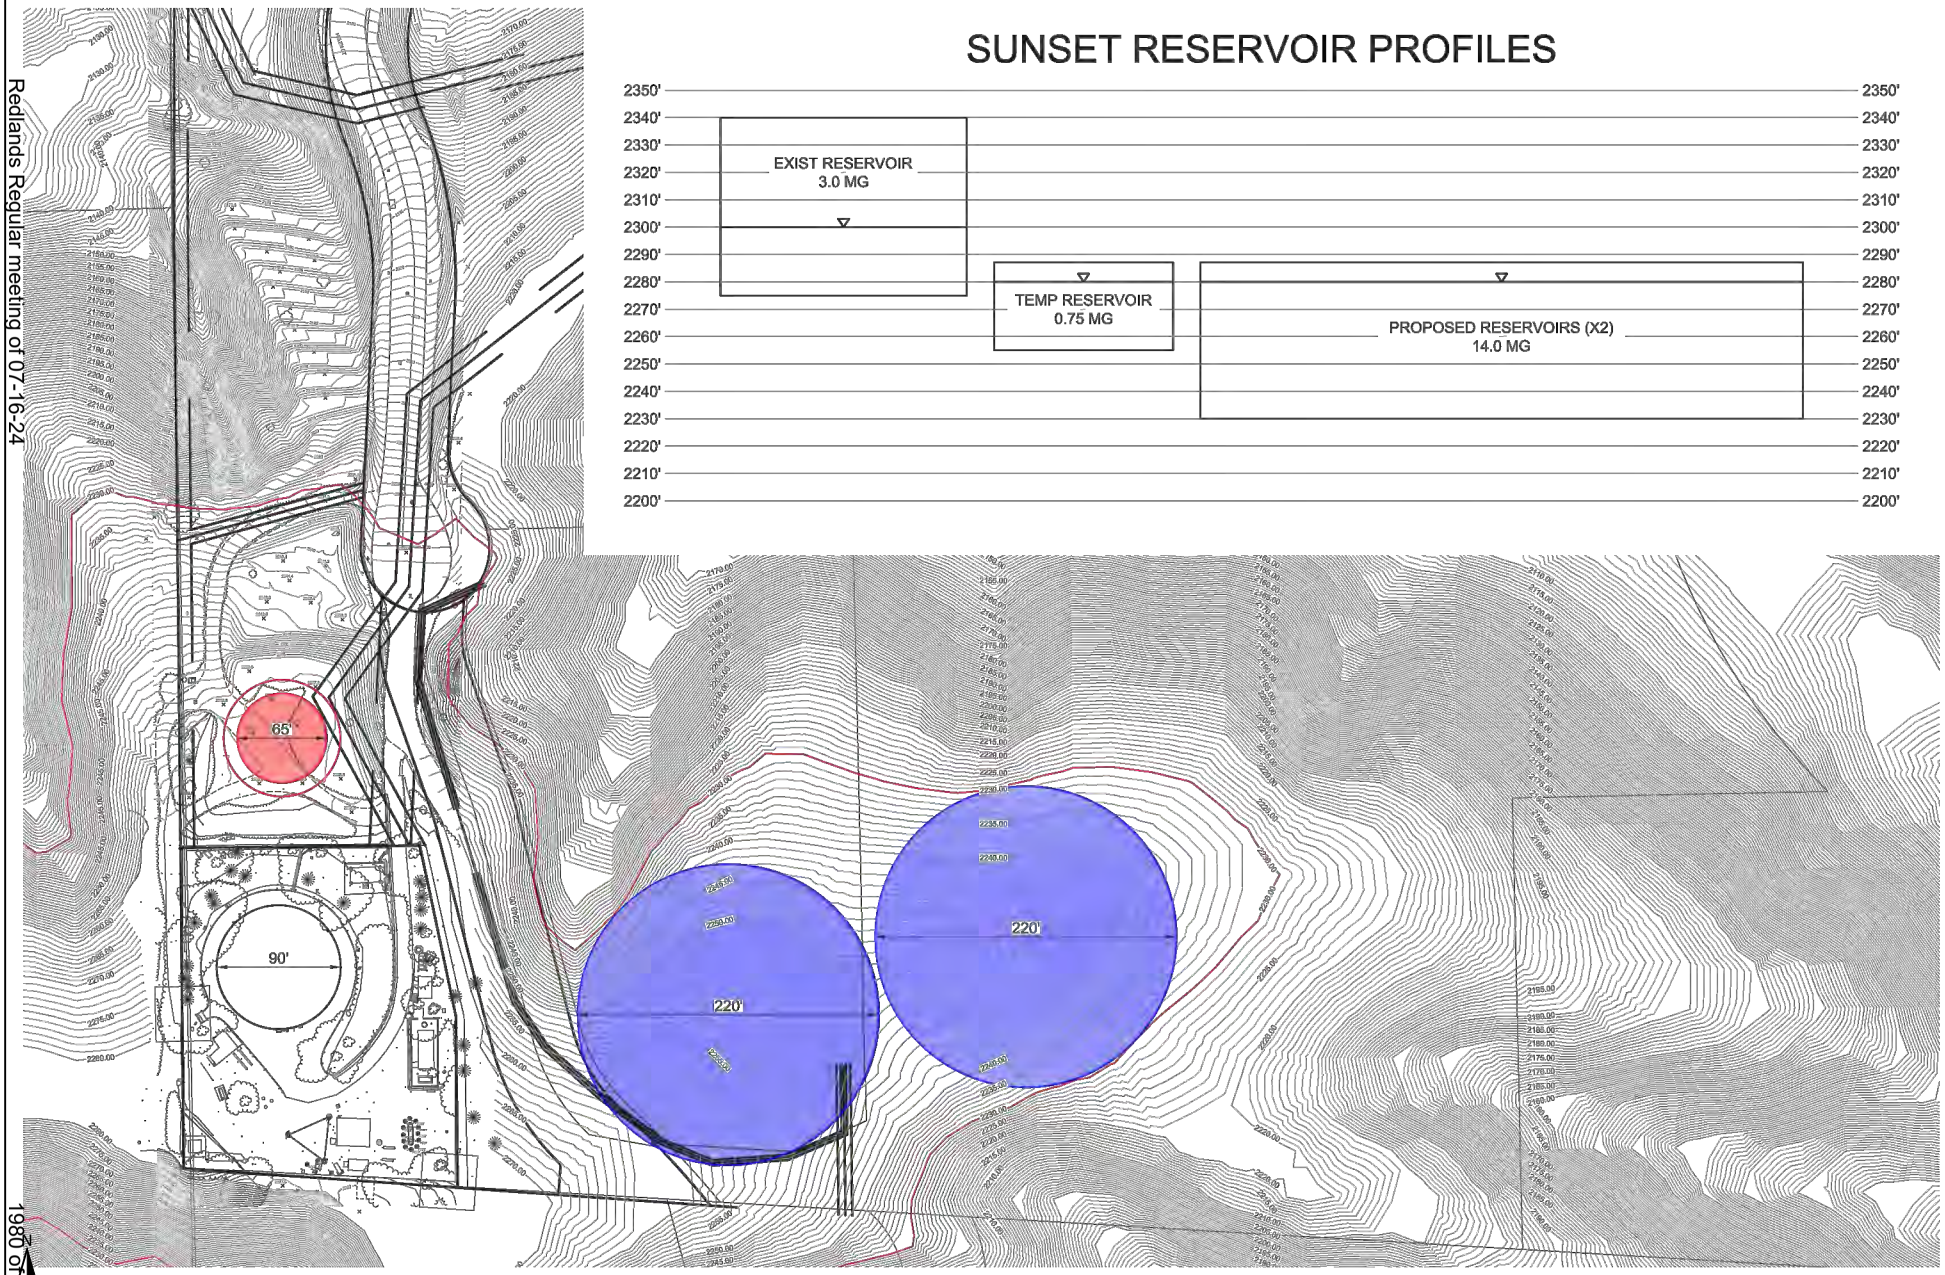
Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment?



Less than significant impact.

Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs?

Less than significant impact.



1.5 Mitigation Measures for the Proposed Project

This analysis found that implementation of the State and SCAQMD air quality and GHG emissions reductions regulations detailed in Section 1.4 above would limit criteria pollutants, toxic air contaminants, odors, and GHG emissions from the proposed project to less than significant levels. No mitigation measures are required for the proposed project with respect to air quality and GHG emissions.

Figure 2
Site Plan

2.0 AIR POLLUTANTS

Air pollutants are generally classified as either criteria pollutants or non-criteria pollutants. Federal ambient air quality standards have been established for criteria pollutants, whereas no ambient standards have been established for non-criteria pollutants. For some criteria pollutants, separate standards have been set for different periods. Most standards have been set to protect public health. For some pollutants, standards have been based on other values (such as protection of crops, protection of materials, or avoidance of nuisance conditions). A summary of federal and state ambient air quality standards is provided in the Regulatory Framework section.

2.1 Criteria Pollutants and Ozone Precursors

The criteria pollutants consist of: ozone, nitrogen oxides (NOx), CO, sulfur oxides (SOx), lead, and particulate matter (PM). The ozone precursors consist of NOx and VOC. These pollutants can harm your health and the environment, and cause property damage. The Environmental Protection Agency (EPA) calls these pollutants "criteria" air pollutants because it regulates them by developing human health-based and/or environmentally-based criteria for setting permissible levels. The following provides descriptions of each of the criteria pollutants and ozone precursors.

Nitrogen Oxides

NOx is the generic term for a group of highly reactive gases which contain nitrogen and oxygen. While most NOx are colorless and odorless, concentrations of nitrogen dioxide (NO_2) can often be seen as a reddish-brown layer over many urban areas. NOx form when fuel is burned at high temperatures, as in a combustion process. The primary manmade sources of NO_x are motor vehicles, electric utilities, and other industrial, commercial, and residential sources that burn fuel. NOx reacts with other pollutants to form, ground-level ozone, nitrate particles, acid aerosols, as well as NO_2, which cause respiratory problems. NO_x and the pollutants formed from NO_x can be transported over long distances, following the patterns of prevailing winds. Therefore, controlling NOx is often most effective if done from a regional perspective, rather than focusing on the nearest sources.

Ozone

Ozone is not usually emitted directly into the air, instead it is created by a chemical reaction between NOx and VOC in the presence of sunlight. Motor vehicle exhaust, industrial emissions, gasoline vapors, chemical solvents as well as natural sources emit NOx and VOC that help form ozone. Ground-level ozone is the primary constituent of smog. Sunlight and hot weather cause ground-level ozone to form with the greatest concentrations usually occurring downwind from urban areas. Ozone is subsequently considered a regional pollutant. Ground-level ozone is a respiratory irritant and an oxidant that increases susceptibility to respiratory infections and can cause substantial damage to vegetation and other materials. Because NOx and VOC are ozone precursors, the health effects associated with ozone are also indirect health effects associated with significant levels of NOx and VOC emissions.

Carbon Monoxide

Carbon monoxide (CO) is a colorless, odorless gas that is formed when carbon in fuel is not burned completely. It is a component of motor vehicle exhaust, which contributes approximately 56 percent of all CO emissions nationwide. In cities, 85 to 95 percent of all CO emissions may come from motor vehicle exhaust. Other sources of CO emissions include industrial processes (such as metals processing and chemical manufacturing), residential wood burning, and natural sources such as forest fires. Woodstoves,

gas stoves, cigarette smoke, and unvented gas and kerosene space heaters are indoor sources of CO. The highest levels of CO in the outside air typically occur during the colder months of the year when inversion conditions are more frequent. The air pollution becomes trapped near the ground beneath a layer of warm air. CO is described as having only a local influence because it dissipates quickly. Since CO concentrations are strongly associated with motor vehicle emissions, high CO concentrations generally occur in the immediate vicinity of roadways with high traffic volumes and traffic congestion, active parking lots, and in automobile tunnels. Areas adjacent to heavily traveled and congested intersections are particularly susceptible to high CO concentrations.

CO is a public health concern because it combines readily with hemoglobin and thus reduces the amount of oxygen transported in the bloodstream. The health threat from lower levels of CO is most serious for those who suffer from heart disease such as angina, clogged arteries, or congestive heart failure. For a person with heart disease, a single exposure to CO at low levels may cause chest pain and reduce that person's ability to exercise; repeated exposures may contribute to other cardiovascular effects. High levels of CO can affect even healthy people. People who breathe high levels of CO can develop vision problems, reduced ability to work or learn, reduced manual dexterity, and difficulty performing complex tasks. At extremely high levels, CO is poisonous and can cause death.

Sulfur Oxides

SOx gases are formed when fuel containing sulfur, such as coal and oil is burned, as well as from the refining of gasoline. SOx dissolves easily in water vapor to form acid and interacts with other gases and particles in the air to form sulfates and other products that can be harmful to people and the environment.

Lead

Lead is a metal found naturally in the environment as well as manufactured products. The major sources of lead emissions have historically been motor vehicles and industrial sources. Due to the phase out of leaded gasoline, metal processing is now the primary source of lead emissions to the air. High levels of lead in the air are typically only found near lead smelters, waste incinerators, utilities, and lead-acid battery manufacturers. Exposure of fetuses, infants and children to low levels of lead can adversely affect the development and function of the central nervous system, leading to learning disorders, distractibility, inability to follow simple commands, and lower intelligence quotient. In adults, increased lead levels are associated with increased blood pressure.

Particulate Matter

PM is the term for a mixture of solid particles and liquid droplets found in the air. PM is made up of a number of components including acids (such as nitrates and sulfates), organic chemicals, metals, and soil or dust particles. The size of particles is directly linked to their potential for causing health problems. Particles that are less than 10 micrometers in diameter (PM10) that are also known as *Respirable Particulate Matter* are the particles that generally pass through the throat and nose and enter the lungs. Once inhaled, these particles can affect the heart and lungs and cause serious health effects. Particles that are less than 2.5 micrometers in diameter (PM2.5) that are also known as *Fine Particulate Matter* have been designated as a subset of PM10 due to their increased negative health impacts and its ability to remain suspended in the air longer and travel further.

Volatile Organic Compounds

Hydrocarbons are organic gases that are formed from hydrogen and carbon and sometimes other elements. Hydrocarbons that contribute to formation of ozone are referred to and regulated as VOCs (also

referred to as reactive organic gases). Combustion engine exhaust, oil refineries, and fossil-fueled power plants are the sources of hydrocarbons. Other sources of hydrocarbons include evaporation from petroleum fuels, solvents, dry cleaning solutions, and paint.

VOC is not classified as a criteria pollutant, since VOCs by themselves are not a known source of adverse health effects. The primary health effects of VOCs result from the formation of ozone and its related health effects. High levels of VOCs in the atmosphere can interfere with oxygen intake by reducing the amount of available oxygen through displacement. Carcinogenic forms of hydrocarbons, such as benzene, are considered TACs. There are no separate health standards for VOCs as a group.

2.2 Other Pollutants of Concern

Toxic Air Contaminants

In addition to the above-listed criteria pollutants, TACs are another group of pollutants of concern. TACs is a term that is defined under the California Clean Air Act and consists of the same substances that are defined as Hazardous Air Pollutants (HAPs) in the Federal Clean Air Act. There are over 700 hundred different types of TACs with varying degrees of toxicity. Sources of TACs include industrial processes such as petroleum refining and chrome plating operations, commercial operations such as gasoline stations and dry cleaners, and motor vehicle exhaust. Cars and trucks release at least 40 different toxic air contaminants. The most important of these TACs, in terms of health risk, are diesel particulates, benzene, formaldehyde, 1,3-butadiene, and acetaldehyde. Public exposure to TACs can result from emissions from normal operations as well as from accidental releases. Health effects of TACs include cancer, birth defects, neurological damage, and death.

TACs are less pervasive in the urban atmosphere than criteria air pollutants, however they are linked to short-term (acute) or long-term (chronic or carcinogenic) adverse human health effects. There are hundreds of different types of TACs with varying degrees of toxicity. Sources of TACs include industrial processes, commercial operations (e.g., gasoline stations and dry cleaners), and motor vehicle exhaust.

According to *The California Almanac of Emissions and Air Quality 2013 Edition*, the majority of the estimated health risk from TACs can be attributed to relatively few compounds, the most important of which is DPM. DPM is a subset of PM2.5 because the size of diesel particles are typically 2.5 microns and smaller. The identification of DPM as a TAC in 1998 led the California Air Resources Board (CARB) to adopt the Risk Reduction Plan to Reduce Particulate Matter Emissions from Diesel-fueled Engines and Vehicles in September 2000. The plan's goals are a 75-percent reduction in DPM by 2010 and an 85-percent reduction by 2020 from the 2000 baseline. Diesel engines emit a complex mixture of air pollutants, composed of gaseous and solid material. The visible emissions in diesel exhaust are known as particulate matter or PM, which includes carbon particles or "soot." Diesel exhaust also contains a variety of harmful gases and over 40 other cancer-causing substances. California's identification of DPM as a toxic air contaminant was based on its potential to cause cancer, premature deaths, and other health problems. Exposure to DPM is a health hazard, particularly to children whose lungs are still developing and the elderly who may have other serious health problems. Overall, diesel engine emissions are responsible for the majority of California's potential airborne cancer risk from combustion sources.

Asbestos

Asbestos is listed as a TAC by CARB and as a HAP by the EPA. Asbestos occurs naturally in mineral formations and crushing or breaking these rocks, through construction or other means, can release

asbestiform fibers into the air. Asbestos emissions can result from the sale or use of asbestos-containing materials, road surfacing with such materials, grading activities, and surface mining. The risk of disease is dependent upon the intensity and duration of exposure. When inhaled, asbestos fibers may remain in the lungs and with time may be linked to such diseases as asbestosis, lung cancer, and mesothelioma. The nearest likely locations of naturally occurring asbestos, as identified in the *General Location Guide for Ultramafic Rocks in California*, prepared by the California Division of Mines and Geology, is located in Santa Barbara County. The nearest historic asbestos mine to the project site, as identified in the *Reported Historic Asbestos Mines, Historic Asbestos Prospects, and Other Natural Occurrences of Asbestos in California,* prepared by U.S. Geological Survey, is located at Asbestos Mountain, which is approximately 45 miles southeast of the project site in the San Jacinto Mountains. Due to the distance to the nearest natural occurrences of asbestos, the project site is not likely to contain asbestos.

3.0 GREENHOUSE GASES

3.1 Greenhouse Gases

Constituent gases of the Earth's atmosphere, called atmospheric GHGs, play a critical role in the Earth's radiation amount by trapping infrared radiation from the Earth's surface, which otherwise would have escaped to space. Prominent greenhouse gases contributing to this process include carbon dioxide (CO_2), methane (CH_4), ozone, water vapor, nitrous oxide (N_2O), and chlorofluorocarbons (CFCs). This phenomenon, known as the Greenhouse Effect, is responsible for maintaining a habitable climate. Anthropogenic (caused or produced by humans) emissions of these greenhouse gases in excess of natural ambient concentrations are responsible for the enhancement of the Greenhouse Effect and have led to a trend of unnatural warming of the Earth's natural climate, known as global warming or climate change. Emissions of gases that induce global warming are attributable to human activities associated with industrial/manufacturing, agriculture, utilities, transportation, and residential land uses. Emissions of CO_2 and N_2O are byproducts of fossil fuel combustion. Methane, a potent greenhouse gas, results from off-gassing associated with agricultural practices and landfills. Sinks of CO_2, where CO_2 is stored outside of the atmosphere, include uptake by vegetation and dissolution into the ocean. The following provides a description of each of the greenhouse gases and their global warming potential.

Water Vapor

Water vapor is the most abundant, important, and variable GHG in the atmosphere. Water vapor is not considered a pollutant; in the atmosphere it maintains a climate necessary for life. Changes in its concentration are primarily considered a result of climate feedbacks related to the warming of the atmosphere rather than a direct result of industrialization. The feedback loop in which water is involved is critically important to projecting future climate change. As the temperature of the atmosphere rises, more water is evaporated from ground storage (rivers, oceans, reservoirs, soil). Because the air is warmer, the relative humidity can be higher (in essence, the air is able to "hold" more water when it is warmer), leading to more water vapor in the atmosphere. As a GHG, the higher concentration of water vapor is then able to absorb more thermal indirect energy radiated from the Earth, thus further warming the atmosphere. The warmer atmosphere can then hold more water vapor and so on and so on. This is referred to as a "positive feedback loop." The extent to which this positive feedback loop will continue is unknown as there is also dynamics that put the positive feedback loop in check. As an example, when water vapor increases in the atmosphere, more of it will eventually also condense into clouds, which are more able to reflect incoming solar radiation (thus allowing less energy to reach the Earth's surface and heat it up).

Carbon Dioxide

The natural production and absorption of CO_2 is achieved through the terrestrial biosphere and the ocean. However, humankind has altered the natural carbon cycle by burning coal, oil, natural gas, and wood. Since the industrial revolution began in the mid-1700s, each of these activities has increased in scale and distribution. CO_2 was the first GHG demonstrated to be increasing in atmospheric concentration with the first conclusive measurements being made in the last half of the 20th century. Prior to the industrial revolution, concentrations were fairly stable at 280 parts per million (ppm). The International Panel on Climate Change (IPCC) indicates that concentrations were 379 ppm in 2005, an increase of more than 30 percent. Left unchecked, the IPCC projects that concentration of carbon dioxide in the atmosphere is projected to increase to a minimum of 540 ppm by 2100 as a direct result of anthropogenic sources. This

could result in an average global temperature rise of at least two degrees Celsius or 3.6 degrees Fahrenheit.

Methane

CH_4 is an extremely effective absorber of radiation, although its atmospheric concentration is less than that of CO_2. Its lifetime in the atmosphere is brief (10 to 12 years), compared to some other GHGs (such as CO_2, N_2O, and CFCs). CH_4 has both natural and anthropogenic sources. It is released as part of the biological processes in low oxygen environments, such as in swamplands or in rice production (at the roots of the plants). Over the last 50 years, human activities such as growing rice, raising cattle, using natural gas, and mining coal have added to the atmospheric concentration of methane. Other anthropocentric sources include fossil-fuel combustion and biomass burning.

Nitrous Oxide

Concentrations of N_2O also began to rise at the beginning of the industrial revolution. In 1998, the global concentration of this GHG was documented at 314 parts per billion (ppb). N_2O is produced by microbial processes in soil and water, including those reactions which occur in fertilizer containing nitrogen. In addition to agricultural sources, some industrial processes (fossil fuel-fired power plants, nylon production, nitric acid production, and vehicle emissions) also contribute to its atmospheric load. N_2O is also commonly used as an aerosol spray propellant (i.e., in whipped cream bottles, in potato chip bags to keep chips fresh, and in rocket engines and race cars).

Chlorofluorocarbons

CFCs are gases formed synthetically by replacing all hydrogen atoms in methane or ethane with chlorine and/or fluorine atoms. CFCs are nontoxic, nonflammable, insoluble, and chemically unreactive in the troposphere (the level of air at the Earth's surface). CFCs have no natural source, but were first synthesized in 1928. They were used for refrigerants, aerosol propellants, and cleaning solvents. Due to the discovery that they are able to destroy stratospheric ozone, a global effort to halt their production was undertaken and in 1989 the European Community agreed to ban CFCs by 2000 and subsequent treaties banned CFCs worldwide by 2010. This effort was extremely successful, and the levels of the major CFCs are now remaining level or declining. However, their long atmospheric lifetimes mean that some of the CFCs will remain in the atmosphere for over 100 years.

Hydrofluorocarbons

Hydrofluorocarbons (HFCs) are synthetic man-made chemicals that are used as a substitute for CFCs. Out of all the GHGs, they are one of three groups with the highest global warming potential. The HFCs with the largest measured atmospheric abundances are (in order), HFC-23 (CHF_3), HFC-134a (CF_3CH_2F), and HFC-152a (CH_3CHF_2). Prior to 1990, the only significant emissions were HFC-23. HFC-134a use is increasing due to its use as a refrigerant. Concentrations of HFC-23 and HFC-134a in the atmosphere are now about 10 parts per trillion (ppt) each. Concentrations of HFC-152a are about 1 ppt. HFCs are manmade for applications such as automobile air conditioners and refrigerants.

Perfluorocarbons

Perfluorocarbons (PFCs) have stable molecular structures and do not break down through the chemical processes in the lower atmosphere. High-energy ultraviolet rays about 60 kilometers above Earth's surface are able to destroy the compounds. Because of this, PFCs have very long lifetimes, between 10,000 and 50,000 years. Two common PFCs are tetrafluoromethane (CF_4) and hexafluoroethane (C_2F_6).

Concentrations of CF_4 in the atmosphere are over 70 ppt. The two main sources of PFCs are primary aluminum production and semiconductor manufacturing.

Sulfur Hexafluoride

Sulfur Hexafluoride (SF_6) is an inorganic, odorless, colorless, nontoxic, nonflammable gas. SF_6 has the highest global warming potential of any gas evaluated; 23,900 times that of CO_2. Concentrations in the 1990s were about 4 ppt. Sulfur hexafluoride is used for insulation in electric power transmission and distribution equipment, in the magnesium industry, in semiconductor manufacturing, and as a tracer gas for leak detection.

Aerosols

Aerosols are particles emitted into the air through burning biomass (plant material) and fossil fuels. Aerosols can warm the atmosphere by absorbing and emitting heat and can cool the atmosphere by reflecting light. Cloud formation can also be affected by aerosols. Sulfate aerosols are emitted when fuel containing sulfur is burned. Black carbon (or soot) is emitted during biomass burning due to the incomplete combustion of fossil fuels. Particulate matter regulation has been lowering aerosol concentrations in the United States; however, global concentrations are likely increasing.

3.2 Global Warming Potential

GHGs have varying global warming potential (GWP). The GWP is the potential of a gas or aerosol to trap heat in the atmosphere; it is the cumulative radiative forcing effects of a gas over a specified time horizon resulting from the emission of a unit mass of gas relative to the reference gas, CO_2. The GHGs listed by the IPCC and the CEQA Guidelines are discussed in this section in order of abundance in the atmosphere. Water vapor, the most abundant GHG, is not included in this list because its natural concentrations and fluctuations far outweigh its anthropogenic (human-made) sources. To simplify reporting and analysis, GHGs are commonly defined in terms of their GWP. The IPCC defines the GWP of various GHG emissions on a normalized scale that recasts all GHG emissions in terms of CO_2 equivalent (CO_2e). As such, the GWP of CO_2 is equal to 1. The GWP values used in this analysis are based on the 2007 IPCC Fourth Assessment Report, which are used in CARB's 2014 Scoping Plan Update and the CalEEMod Model Version 2022.1 and are detailed in Table A. The IPCC has updated the Global Warming Potentials of some gases in their Fifth Assessment Report, however the new values have not yet been incorporated into the CalEEMod model that has been utilized in this analysis.

Table A – Global Warming Potentials, Atmospheric Lifetimes and Abundances of GHGs

Gas	Atmospheric Lifetime (years)[1]	Global Warming Potential (100 Year Horizon)[2]	Atmospheric Abundance
Carbon Dioxide (CO_2)	50-200	1	379 ppm
Methane (CH_4)	9-15	25	1,774 ppb
Nitrous Oxide (N_2O)	114	298	319 ppb
HFC-23	270	14,800	18 ppt
HFC-134a	14	1,430	35 ppt
HFC-152a	1.4	124	3.9 ppt
PFC: Tetrafluoromethane (CF_4)	50,000	7,390	74 ppt
PFC: Hexafluoroethane (C_2F_6)	10,000	12,200	2.9 ppt
Sulfur Hexafluoride (SF_6)	3,200	22,800	5.6 ppt

Notes:

[1] Defined as the half-life of the gas.
[2] Compared to the same quantity of CO_2 emissions and is based on the Intergovernmental Panel On Climate Change (IPCC) 2007 standard, which is utilized in CalEEMod (Version 2022.1),that is used in this report (CalEEMod User Guide, May 2021).
Definitions: ppm = parts per million; ppb = parts per billion; ppt = parts per trillion
Source: IPCC 2007, EPA 2015

3.3 Greenhouse Gas Emissions Inventory

According to the Carbon Dioxide Information Analysis Center[1], 9,855 million metric tons (MMT) of CO_2e emissions were created globally in the year 2014. According to the Environmental Protection Agency (EPA), the breakdown of global GHG emissions by sector consists of: 25 percent from electricity and heat production; 21 percent from industry; 24 percent from agriculture, forestry and other land use activities; 14 percent from transportation; 6 percent from building energy use; and 10 percent from all other sources of energy use[2].

According to *Inventory of U.S. Greenhouse Gas Emissions and Sinks 1990-2020,* prepared by EPA, in 2020 total U.S. GHG emissions were 5,981.4 million metric tons (MMT) of CO_2e emissions. Total U.S. emissions have decreased by 7.3 percent between 1990 and 2020, which is down from a high of 15.7 percent above 1990 levels in 2007. Emissions decreased from 2019 to 2020 by 9.0 percent. The sharp decline in emissions from 2019 to 2020 is largely due to the impacts of the coronavirus pandemic on travel and economic activity.

According to *California Greenhouse Gas Emissions for 2000 to 2020 Trends of Emissions and Other Indicators*, prepared by the CARB, October 26, 2022, the State of California created 369.2 million metric tons of carbon dioxide equivalent ($MMTCO_2e$) in 2020. The 2020 emissions were 35.3 $MMTCO_2e$ lower than 2019 levels and almost 61.8 $MMTCO_2e$ below the State adopted year 2020 GHG limit of 431 $MMTCO_2e$. The 2019 to 2020 decrease in emissions is likely an anomaly as it was due in large part to the impacts of the COVID-19 pandemic. The transportation sector showed the largest decline in emissions of 27 $MMTCO_2e$ (16 percent) compared to 2019. Between 2019 and 2020, California's Gross Domestic Product (GDP) contracted 2.8 percent, while GHG intensity of California's economy decreased 6.2 percent.

4.0 AIR QUALITY MANAGEMENT

The air quality at the project site is addressed through the efforts of various federal, state, regional, and local government agencies. These agencies work jointly, as well as individually, to improve air quality through legislation, regulations, planning, policy-making, education, and a variety of programs. The agencies responsible for improving the air quality are discussed below.

4.1 Federal – United States Environmental Protection Agency

The Clean Air Act, first passed in 1963 with major amendments in 1970, 1977 and 1990, is the overarching legislation covering regulation of air pollution in the United States. The Clean Air Act has established the mandate for requiring regulation of both mobile and stationary sources of air pollution at the state and federal level. The EPA was created in 1970 in order to consolidate research, monitoring, standard-setting and enforcement authority into a single agency.

The EPA is responsible for setting and enforcing the National Ambient Air Quality Standards (NAAQS) for atmospheric pollutants. It regulates emission sources that are under the exclusive authority of the federal government, such as aircraft, ships, and certain locomotives. NAAQS pollutants were identified using medical evidence and are shown below in Table B.

Table B – State and Federal Criteria Pollutant Standards

Air Pollutant	Concentration / Averaging Time		Most Relevant Effects
	California Standards	Federal Primary Standards	
Ozone (O_3)	0.09 ppm / 1-hour 0.07 ppm / 8-hour	0.070 ppm, / 8-hour	a) Pulmonary function decrements and localized lung injury in humans and animals; (b) asthma exacerbation; (c) chronic obstructive pulmonary disease (COPD) exacerbation; (d) respiratory infection; (e) increased school absences, and hospital admissions and emergency department (ED) visits for combined respiratory diseases; (e) increased mortality; (f) possible metabolic effects. Vegetation damage; property damage
Carbon Monoxide (CO)	20.0 ppm / 1-hour 9.0 ppm / 8-hour	35.0 ppm / 1-hour 9.0 ppm / 8-hour	Visibility reduction (a) Aggravation of angina pectoris and other aspects of coronary heart disease; (b) decreased exercise tolerance in persons with peripheral vascular disease and lung disease; (c) possible impairment of central nervous system functions; (d) possible increased risk to fetuses; (f) possible increased risk of pulmonary disease; (g) possible emergency department visits for respiratory diseases overall and visits for asthma.
Nitrogen Dioxide (NO_2)	0.18 ppm / 1-hour 0.030 ppm / annual	100 ppb / 1-hour 0.053 ppm / annual	Short-term (a) asthma exacerbations (“asthma attacks”) Long-term (a) asthma development; (b) higher risk of all-cause, cardiovascular, and respiratory mortality. Both short and long term NO2 exposure is also associated with chronic obstructive pulmonary disease (COPD) risk. Potential impacts on cardiovascular health, mortality and cancer, aggravate chronic respiratory disease. Contribution to atmospheric discoloration

Air Pollutant	Concentration / Averaging Time		Most Relevant Effects
	California Standards	Federal Primary Standards	
Sulfur Dioxide (SO_2)	0.25 ppm / 1-hour 0.04 ppm / 24-hour	75 ppb / 1-hour	Respiratory symptoms (bronchoconstriction, possible wheezing or shortness of breath) during exercise or physical activity in persons with asthma. Possible allergic sensitization, airway inflammation, asthma development.
Respirable Particulate Matter (PM10)	50 µg/m^3 / 24-hour 20 µg/m^3 / annual	150 µg/m^3 / 24-hour	Short -term (a) increase in mortality rates; (b) increase in respiratory infections; (c) increase in number and severity of asthma attacks; (d) COPD exacerbation; (e) increase in combined respiratory-diseases and number of hospital admissions; (f) increased mortality due to cardiovascular or respiratory diseases; (g) increase in hospital admissions for acute respiratory conditions; (h) increase in school absences; (i) increase in lost work days; (j) decrease in respiratory function in children; (k) increase medication use in children and adults with asthma. Long-term (a) reduced lung function growth in children; (b) changes in lung development; (c) development of asthma in children; (d) increased risk of cardiovascular diseases; (e) increased total mortality from lung cancer; (f) increased risk of premature death. Possible link to metabolic, nervous system, and reproductive and developmental effects for short-term and long-term exposure to PM2.5.
Suspended Particulate Matter (PM2.5)	12 µg/m^3 / annual	35 µg/m^3 / 24-hour 12 µg/m^3 / annual	
Sulfates	25 µg/m^3 / 24-hour	No Federal Standards	(a) Decrease in lung function; (b) aggravation of asthmatic symptoms; (c) vegetation damage; (d) Degradation of visibility; (e) property damage
Lead	1.5 µg/m^3 / 30-day	0.15 µg/m^3 /3-month rolling	(a) Learning disabilities; (b) impairment of blood formation and nerve function; (c) cardiovascular effects, including coronary heart disease and hypertension Possible male reproductive system effects
Hydrogen Sulfide	0.03 ppm / 1-hour	No Federal Standards	Exposure to lower ambient concentrations above the standard may result in objectionable odor and may be accompanied by symptoms such as headaches, nausea, dizziness, nasal irritation, cough, and shortness of breath

Source: 2022 AQMP, SCAQMD, 2022.

As part of its enforcement responsibilities, the EPA requires each state with federal nonattainment areas to prepare and submit a State Implementation Plan (SIP) that demonstrates the means to attain the national standards. The SIP must integrate federal, state, and local components and regulations to identify specific measures to reduce pollution, using a combination of performance standards and market-based programs within the timeframe identified in the SIP. The CARB defines attainment as the category given to an area with no violations in the past three years. As indicated below in Table C, the Air Basin has been designated by EPA for the national standards as a non-attainment area for ozone and PM2.5 and partial non-attainment for lead. Currently, the Air Basin is in attainment with the national ambient air quality standards for CO, PM10, SO_2, and NO_2.

Table C – National Air Quality Standards Attainment Status – South Coast Air Basin

Criteria Pollutant	Averaging Time	Designation[a]	Attainment Date[b]
Ozone	1979 1-Hour (0.12 ppm)	Nonattainment (Extreme)	2/6/2023 (revised deadline)
	2015 8-Hour (0.07 ppm)[d]	Nonattainment (Extreme)	8/3/2038
	2008 8-Hour (0.075 ppm)[d]	Nonattainment (Extreme)	7/20/2032
	1997 8-Hour (0.08 ppm)[d]	Nonattainment (Extreme)	6/15/2024
PM2.5[e]	2006 24-Hour (35 µg/m^3)	Nonattainment (Serious)	12/31/2019
	2012 Annual (12 µg/m^3)	Nonattainment (Serious)	12/31/2021
	1997 Annual (15 µg/m^3)	Attainment (final determination pending)	4/5/2015 (attained 2013)
PM10[f]	1987 24-Hour (150 µg/m^3)	Attainment (Maintenance)	7/26/2013 (attained)
Lead[g]	2008 3-Months Rolling (0.15 µg/m^3)	Nonattainment (Partial) (Attainment determination requested)	12/31/2015
CO	1971 1-Hour (35 ppm)	Attainment (Maintenance)	6/11/2007
	1971 8-Hour (9 ppm)	Attainment (Maintenance)	6/11/2007
NO_2[h]	2010 1-Hour (100 ppb)	Unclassifiable/Attainment	N/A (attained)
	1971 Annual (0.053 ppm)	Attainment (Maintenance)	9/22/1998 (attained)
SO_2[i]	2010 1-Hour (75 ppb)	Unclassifiable/Attainment	1/9/2018
	1971 24-Hour (0.14 ppm)	Unclassifiable/Attainment	3/19/1979

Source: SCAQMD, 2022

Notes:

a) U.S. EPA often only declares Nonattainment areas; everywhere else is listed as Unclassifiable/Attainment or Unclassifiable.

b) A design value below the NAAQS for data through the full year or smog season prior to the attainment date is typically required for attainment demonstration.

c) The 1979 1-hour ozone NAAQS (0.12 ppm) was revoked, effective June 15, 2005; however, the Basin has not attained this standard and therefore has some continuing obligations with respect to the revoked standard; original attainment date was 11/15/2010; the revised attainment date is 2/6/2023.

d) The 2008 8-hour ozone NAAQS (0.075 ppm) was revised to 0.070 ppm, effective 12/28/20115 with classifications and implementation goals to be finalized by 10/1/2017; the 1997 8-hour ozone NAAQS (0.08 ppm) was revoked in the 2008 ozone implementation rule, effective 4/6/2015; there are continuing obligations under the revoked 1997 and revised 2008 ozone NAAQS until they are attained.

e) The attainment deadline for the 2006 24-Hour PM2.5 NAAQS was 12/31/15 for the former "moderate" classification; the EPA approved reclassification to "serious", effective 2/12/16 with an attainment deadline of 12/31/2019; the 2012 (proposal year) annual PM2.5 NAAQS was revised on 1/15/2013, effective 3/18/2013, from 15 to 12 µg/m^3; new annual designations were final 1/15/2015, effective 4/15/2015; on 7/25/2016 the EPA finalized a determination that the Basin attained the 1997 annual (15.0 µg/m^3) and 24-hour PM2.5 (65 µg/m^3) NAAQS, effective 8/24/2016.

f) The annual PM10 standard was revoked, effective 12/18/2006; the 24-hour PM10 NAAQS deadline was 12/31/2006; the Basin's Attainment Re-designation Request and PM10 Maintenance Plan was approved by the EPA on 6/26/2103, effective 7/26/2013.

g) Partial Nonattainment designation – Los Angeles County portion of the Basin only for near-source monitors; expect to remain in attainment based on current monitoring data; attainment re-designation request pending.

h) New 1-hour NO_2 NAAQS became effective 8/2/2010, with attainment designations 1/20/2012; annual NO_2 NAAQS retained.

i) The 1971 annual and 24-hour SO_2 NAAQS were revoked, effective 8/23/2010.

Despite substantial improvements in air quality over the past few decades, some air monitoring stations in the Air Basin still exceed the NAAQS and frequently record the highest ozone levels in the United States. In 2020, monitoring stations in the Air Basin exceeded the most current federal standards on a total of 181 days (49 percent of the year), including: 8-hour ozone (157 days over the 2015 ozone NAAQS), 24-hour PM2.5 (39 days), PM10 (3 days), and NO_2 (1 day). Nine of the top 10 stations in the nation most frequently exceeding the 2015 8-hour ozone NAAQS in 2020 were located within the Air Basin, including stations in San Bernardino, Riverside, and Los Angeles Counties (SCAQMD, 2022).

PM2.5 levels in the Air Basin have improved significantly in recent years. Since 2015, none of the monitoring stations in the Air Basin have recorded violations of the former 1997 annual PM2.5 NAAQS (15.0 µg/m^3). On July 25, 2016 the U.S. EPA finalized a determination that the Air Basin attained the 1997 annual (15.0 µg/m^3) and 24-hour PM2.5 (65 µg/m^3) NAAQS, effective August 24, 2016. However, the Air Basin does not meet the 2012 annual PM2.5 NAAQS (12.0 µg/m^3), with six monitoring stations having design values above the standard for the 2018-2020 period (SCAQMD, 2022)

4.2 State – California Air Resources Board

The CARB, which is a part of the California Environmental Protection Agency, is responsible for the coordination and administration of both federal and state air pollution control programs within California. In this capacity, the CARB conducts research, sets the California Ambient Air Quality Standards (CAAQS), compiles emission inventories, develops suggested control measures, provides oversight of local programs, and prepares the SIP. The CAAQS for criteria pollutants in the Air Basin are shown in Table D. In addition, the CARB establishes emission standards for motor vehicles sold in California, consumer products (e.g. hairspray, aerosol paints, and barbeque lighter fluid), and various types of commercial equipment. It also sets fuel specifications to further reduce vehicular emissions.

Table D – California Ambient Air Quality Standards Attainment Status – South Coast Air Basin

Criteria Pollutant	Averaging Time	Level[a]	Designation[b]
Ozone	1-Hour	0.09 ppm	Nonattainment
	8-Hour	0.070 ppm	Nonattainment
PM2.5	Annual	12 µg/m^3	Nonattainment
PM10	24-Hour	50 µg/m^3	Nonattainment
	Annual	20 µg/m^3	Nonattainment
Lead	30-Day Average	1.5 µg/m^3	Attainment
CO	1-Hour	20 ppm	Attainment
	8-Hour	9.0 ppm	Attainment
NO_2	1-Hour	0.18 ppm	Attainment
	Annual	0.030	Attainment[c]
SO_2	1-Hour	0.25 ppm	Attainment
	24-Hour	0.04 ppm	Attainment
Sulfates	24-Hour	25 µg/m^3	Attainment
Hydrogen Sulfide	1-Hour	0.03 ppm	Unclassified

Source: SCAQMD, 2022

Notes:

a) CA State standards, or CAAQS, for ozone, SO_2, NO_2, PM10 and PM2.5 are values not to be exceeded; lead, sulfates and H_2S standards are values not to be equaled or exceeded; CAAQS are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.

b) CA State designations shown were updated by CARB in 2019, based on the 2016-2018 3-year period; stated designations are based on a 3-year data period after consideration of outliers and exceptional events.

c) The CA-60 near road portion of San Bernardino, Riverside and Los Angeles Counties has recently been redesignated as an attainment area based on data collected between 2018 and 2020

As shown in Table D, the Air Basin has been designated by the CARB as a non-attainment area for ozone, PM10 and PM2.5 and partial nonattainment for NO_2. Currently, the Air Basin is in attainment with the ambient air quality standards for lead, CO, SO_2 and sulfates, and is unclassified for Hydrogen Sulfide.

The following lists the State of California Code of Regulations (CCR) air quality emission rules that are applicable, but not limited to all residential projects in the State.

Assembly Bill 2588

The Air Toxics "Hot Spots" Information and Assessment Act (Assembly Bill [AB] 2588, 1987, Connelly) was enacted in 1987 as a means to establish a formal air toxics emission inventory risk quantification program. AB 2588, as amended, establishes a process that requires stationary sources to report the type and quantities of certain substances their facilities routinely release in California. The data is ranked by high, intermediate, and low categories, which are determined by: the potency, toxicity, quantity, volume, and proximity of the facility to nearby receptors.

CARB Regulation for In-Use Off-Road Diesel Vehicles

On July 26, 2007, the CARB adopted California Code of Regulations Title 13, Article 4.8, Chapter 9, Section 2449 to reduce DPM and NOx emissions from in-use off-road heavy-duty diesel vehicles in California. Such vehicles are used in construction, mining, and industrial operations. The regulation limits idling to no more than five consecutive minutes, requires reporting and labeling, and requires disclosure of the regulation upon vehicle sale. Performance requirements of the rule are based on a fleet's average NOx emissions, which can be met by replacing older vehicles with newer, cleaner vehicles or by applying exhaust retrofits. The regulation was amended in 2010 to delay the original timeline of the performance requirement making the first compliance deadline January 1, 2014 for large fleets (over 5,000 horsepower), 2017 for medium fleets (2,501-5,000 horsepower), and 2019 for small fleets (2,500 horsepower or less). Currently, no commercial operation in California may add any equipment to their fleet that has a Tier 0, Tier 1, or Tier 2 engine. It should be noted that commercial fleets may continue to use their existing Tier 0, 1 and 2 equipment, if they can demonstrate that the average emissions from their entire fleet emissions meet the NOx emissions targets.

CARB Resolution 08-43 for On-Road Diesel Truck Fleets

On December 12, 2008 the CARB adopted Resolution 08-43, which limits NOx, PM10 and PM2.5 emissions from on-road diesel truck fleets that operate in California. On October 12, 2009 Executive Order R-09-010 was adopted that codified Resolution 08-43 into Section 2025, title 13 of the California Code of Regulations. This regulation requires that by the year 2023 all commercial diesel trucks that operate in California shall meet model year 2010 (Tier 4 Final) or latter emission standards. This regulation also provides a few exemptions including a onetime per year 3-day pass for trucks registered outside of California. All on-road diesel trucks utilized during construction of the proposed project will be required to comply with Resolution 08-43.

4.3 Regional – Southern California

The SCAQMD is the agency principally responsible for comprehensive air pollution control in the South Coast Air Basin. To that end, as a regional agency, the SCAQMD works directly with the Southern California Association of Governments (SCAG), county transportation commissions, and local governments and cooperates actively with all federal and state agencies.

South Coast Air Quality Management District

SCAQMD develops rules and regulations, establishes permitting requirements for stationary sources, inspects emission sources, and enforces such measures through educational programs or fines, when necessary. SCAQMD is directly responsible for reducing emissions from stationary, mobile, and indirect sources. It has responded to this requirement by preparing a sequence of AQMPs. The *Final 2022 Air Quality Management Plan* (2022 AQMP) was adopted by ARB on January 26, 2023 and has been submitted to the U.S. EPA for final approval, which is anticipated to occur sometime this year. After the 2022 AQMP

has been adopted by the U.S. EPA, the 2022 AQMP will be incorporated into the State Implementation Plan (SIP). The 2022 AQMP establishes actions and strategies to reduce ozone levels to the U.S. EPA 2015 ozone standard of 70 ppb by 2037. The 2022 AQMP promotes extensive use of zero-emission technologies across all stationary and mobile sources coupled with rules and regulations, investment strategies, and incentives.

Although SCAQMD is responsible for regional air quality planning efforts, it does not have the authority to directly regulate air quality issues associated with plans and new development projects throughout the Air Basin. Instead, this is controlled through local jurisdictions in accordance to the California Environmental Quality Act (CEQA). In order to assist local jurisdictions with air quality compliance issues the *CEQA Air Quality Handbook* (SCAQMD CEQA Handbook), prepared by SCAQMD, 1993, with the most current updates found at http://www.aqmd.gov/ceqa/hdbk.html, was developed in accordance with the projections and programs detailed in the AQMPs. The purpose of the SCAQMD CEQA Handbook is to assist Lead Agencies, as well as consultants, project proponents, and other interested parties in evaluating a proposed project's potential air quality impacts. Specifically, the SCAQMD CEQA Handbook explains the procedures that SCAQMD recommends be followed for the environmental review process required by CEQA. The SCAQMD CEQA Handbook provides direction on how to evaluate potential air quality impacts, how to determine whether these impacts are significant, and how to mitigate these impacts. The SCAQMD intends that by providing this guidance, the air quality impacts of plans and development proposals will be analyzed accurately and consistently throughout the Air Basin, and adverse impacts will be minimized.

The following lists the SCAQMD rules that are applicable but not limited to public works projects in the Air Basin.

Rule 402 - Nuisance

Rule 402 prohibits a person from discharging from any source whatsoever such quantities of air contaminants or other material which causes injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property. Compliance with Rule 402 will reduce local air quality and odor impacts to nearby sensitive receptors.

Rule 403- Fugitive Dust

Rule 403 governs emissions of fugitive dust during construction activities and requires that no person shall cause or allow the emissions of fugitive dust such that dust remains visible in the atmosphere beyond the property line or the dust emission exceeds 20 percent opacity, if the dust is from the operation of a motorized vehicle. Compliance with this rule is achieved through application of standard Best Available Control Measures, which include but are not limited to the measures below. Compliance with these rules would reduce local air quality impacts to nearby sensitive receptors.

- Utilize either a pad of washed gravel 50 feet long, 100 feet of paved surface, a wheel shaker, or a wheel washing device to remove material from vehicle tires and undercarriages before leaving project site.
- Do not allow any track out of material to extend more than 25 feet onto a public roadway and remove all track out at the end of each workday.

- Water all exposed areas on active sites at least three times per day and pre-water all areas prior to clearing and soil moving activities.
- Apply nontoxic chemical stabilizers according to manufacturer specifications to all construction areas that will remain inactive for 10 days or longer.
- Pre-water all material to be exported prior to loading, and either cover all loads or maintain at least 2 feet of freeboard in accordance with the requirements of California Vehicle Code Section 23114.
- Replant all disturbed area as soon as practical.
- Suspend all grading activities when wind speeds (including wind gusts) exceed 25 miles per hour.
- Restrict traffic speeds on all unpaved roads to 15 miles per hour or less.

Rules 1108 and 1108.1 – Cutback and Emulsified Asphalt

Rules 1108 and 1108.1 govern the sale, use, and manufacturing of asphalt and limits the VOC content in asphalt. This rule regulates the VOC contents of asphalt used during construction as well as any on-going maintenance during operations. Therefore, all asphalt used during construction and operation of the proposed project must comply with SCAQMD Rules 1108 and 1108.1.

Rule 1113 – Architectural Coatings

Rule 1113 governs the sale, use, and manufacturing of architectural coatings and limits the VOC content in sealers, coatings, paints and solvents. This rule regulates the VOC contents of paints available during construction. Therefore, all paints and solvents used during construction and operation of the proposed project must comply with SCAQMD Rule 1113.

Southern California Association of Governments

The SCAG is the regional planning agency for Los Angeles, Orange, Ventura, Riverside, San Bernardino, and Imperial Counties and addresses regional issues relating to transportation, the economy, community development and the environment. SCAG is the federally designated Metropolitan Planning Organization (MPO) for the majority of the southern California region and is the largest MPO in the nation. With respect to air quality planning, SCAG has prepared the *2020-2045 Regional Transportation Plan/Sustainable Communities Strategy* (Connect SoCal), adopted September 3, 2020and the *2019 Federal Transportation Improvement* Program (2019 FTIP), adopted September 2018, which addresses regional development and growth forecasts. Although the Connect SoCal and 2019 FTIP are primarily planning documents for future transportation projects a key component of these plans are to integrate land use planning with transportation planning that promotes higher density infill development in close proximity to existing transit service. These plans form the basis for the land use and transportation components of the AQMP, which are utilized in the preparation of air quality forecasts and in the consistency analysis included in the AQMP. The Connect SoCal, 2019 FTIP, and AQMP are based on projections originating within the City and County General Plans.

4.4 Local – City of Redlands

Local jurisdictions, such as the City of Redlands, have the authority and responsibility to reduce air pollution through its police power and decision-making authority. Specifically, the City is responsible for the assessment and mitigation of air emissions resulting from its land use decisions. The City is also

responsible for the implementation of transportation control measures as outlined in the AQMPs. Examples of such measures include bus turnouts, energy-efficient streetlights, and synchronized traffic signals. In accordance with CEQA requirements and the CEQA review process, the County assesses the air quality impacts of new development projects, requires mitigation of potentially significant air quality impacts by conditioning discretionary permits, and monitors and enforces implementation of such mitigation.

In accordance with the CEQA requirements, the City does not, however, have the expertise to develop plans, programs, procedures, and methodologies to ensure that air quality within the City and region will meet federal and state standards. Instead, the City relies on the expertise of the SCAQMD and utilizes the SCAQMD CEQA Handbook as the guidance document for the environmental review of plans and development proposals within its jurisdiction.

5.0 GLOBAL CLIMATE CHANGE MANAGEMENT

The regulatory setting related to global climate change is addressed through the efforts of various international, federal, state, regional, and local government agencies. These agencies work jointly, as well as individually, to reduce GHG emissions through legislation, regulations, planning, policy-making, education, and a variety of programs. The agencies responsible for global climate change regulations are discussed below.

5.1 International

In 1988, the United Nations established the IPCC to evaluate the impacts of global climate change and to develop strategies that nations could implement to curtail global climate change. In 1992, the United States joined other countries around the world in signing the United Nations' Framework Convention on Climate Change (UNFCCC) agreement with the goal of controlling GHG emissions. The parties of the UNFCCC adopted the Kyoto Protocol, which set binding GHG reduction targets for 37 industrialized countries, the objective of reducing their collective GHG emissions by five percent below 1990 levels by 2012. The Kyoto Protocol has been ratified by 182 countries, but has not been ratified by the United States. It should be noted that Japan and Canada opted out of the Kyoto Protocol and the remaining developed countries that ratified the Kyoto Protocol have not met their Kyoto targets. The Kyoto Protocol expired in 2012 and the amendment for the second commitment period from 2013 to 2020 has not yet entered into legal force. The Parties to the Kyoto Protocol negotiated the Paris Agreement in December 2015, agreeing to set a goal of limiting global warming to less than 2 degrees Celsius compared with pre-industrial levels. The Paris Agreement has been adopted by 195 nations with 147 ratifying it, including the United States by President Obama, who ratified it by Executive Order on September 3, 2016. On June 1, 2017, President Trump announced that the United States is withdrawing from the Paris Agreement and on January 21, 2021 President Biden signed an executive order rejoining the Paris Agreement.

Additionally, the Montreal Protocol was originally signed in 1987 and substantially amended in 1990 and 1992. The Montreal Protocol stipulates that the production and consumption of compounds that deplete ozone in the stratosphere—CFCs, halons, carbon tetrachloride, and methyl chloroform—were to be phased out, with the first three by the year 2000 and methyl chloroform by 2005.

5.2 Federal – United States Environmental Protection Agency

The United States Environmental Protection Agency (EPA) is responsible for implementing federal policy to address global climate change. The Federal government administers a wide array of public-private partnerships to reduce U.S. GHG intensity. These programs focus on energy efficiency, renewable energy, methane, and other non-CO_2 gases, agricultural practices and implementation of technologies to achieve GHG reductions. EPA implements several voluntary programs that substantially contribute to the reduction of GHG emissions.

In Massachusetts v. Environmental Protection Agency (Docket No. 05–1120), argued November 29, 2006 and decided April 2, 2007, the U.S. Supreme Court held that not only did the EPA have authority to regulate greenhouse gases, but the EPA's reasons for not regulating this area did not fit the statutory requirements. As such, the U.S. Supreme Court ruled that the EPA should be required to regulate CO2 and other greenhouse gases as pollutants under the federal Clean Air Act (CAA).

In response to the FY2008 Consolidations Appropriations Act (H.R. 2764; Public Law 110-161), EPA proposed a rule on March 10, 2009 that requires mandatory reporting of GHG emissions from large sources in the United States. On September 22, 2009, the Final Mandatory Reporting of GHG Rule was signed and published in the Federal Register on October 30, 2009. The rule became effective on December 29, 2009. This rule requires suppliers of fossil fuels or industrial GHGs, manufacturers of vehicles and engines, and facilities that emit 25,000 metric tons or more per year of GHG emissions to submit annual reports to EPA.

On December 7, 2009, the EPA Administrator signed two distinct findings under section 202(a) of the Clean Air Act. One is an endangerment finding that finds concentrations of the six GHGs in the atmosphere threaten the public health and welfare of current and future generations. The other is a cause or contribute finding, that finds emissions from new motor vehicles and new motor vehicle engines contribute to the GHG pollution which threatens public health and welfare. These actions did not impose any requirements on industry or other entities, however, since 2009 the EPA has been providing GHG emission standards for vehicles and other stationary sources of GHG emissions that are regulated by the EPA. On September 13, 2013 the EPA Administrator signed 40 CFR Part 60, that limits emissions from new sources to 1,100 pounds of CO_2 per mega-watt hour (MWh) for fossil fuel-fired utility boilers and 1,000 pounds of CO_2 per MWh for large natural gas-fired combustion units.

On August 3, 2015, the EPA announced the Clean Power Plan, emissions guidelines for U.S. states to follow in developing plans to reduce GHG emissions from existing fossil fuel-fired power plants (Federal Register Vol. 80, No. 205, October 23 2015). On October 11, 2017, the EPA issued a formal proposal to repeal the Clean Power Plan and on June 19, 2019 the EPA replaced the Clean Power Plan with the Affordable Clean Energy rule that is anticipated to lower power sector GHG emissions by 11 million tons by the year 2030.

On April 30, 2020, the EPA and the National Highway Safety Administration published the Final Rule for the *Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule for Model Years 2021-2026 Passenger Cars and Light Trucks* (SAFE Vehicles Rule). Part One of the Rule revokes California's authority to set its own GHG emissions standards and zero-emission vehicle mandates in California, which results in one emission standard to be used nationally for all passenger cars and light trucks that is set by the EPA.

5.3 State

The CARB has the primary responsible for implementing state policy to address global climate change, however there are State regulations related to global climate change that affect a variety of State agencies. CARB, which is a part of the California Environmental Protection Agency, is responsible for the coordination and administration of both the federal and state air pollution control programs within California. In this capacity, the CARB conducts research, sets California Ambient Air Quality Standards (CAAQS), compiles emission inventories, develops suggested control measures, provides oversight of local programs, and prepares the SIP. In addition, the CARB establishes emission standards for motor vehicles sold in California, consumer products (e.g. hairspray, aerosol paints, and barbeque lighter fluid), and various types of commercial equipment. It also sets fuel specifications to further reduce vehicular emissions.

In 2008, CARB approved a Climate Change Scoping Plan that proposes a "comprehensive set of actions designed to reduce overall carbon GHG emissions in California, improve our environment, reduce our dependence on oil, diversify our energy sources, save energy, create new jobs, and enhance public health" (CARB 2008). The Climate Change Scoping Plan has a range of GHG reduction actions which include direct

regulations; alternative compliance mechanisms; monetary and non-monetary incentives; voluntary actions; market-based mechanisms such as a cap-and-trade system. In 2014, CARB approved the First Update to the Climate Change Scoping Plan (CARB, 2014) that identifies additional strategies moving beyond the 2020 targets to the year 2050. On December 14, 2017 CARB adopted the California's 2017 Climate Change Scoping Plan, November 2017 (CARB, 2017) that provides specific statewide policies and measures to achieve the 2030 GHG reduction target of 40 percent below 1990 levels by 2030 and the aspirational 2050 GHG reduction target of 80 percent below 1990 levels by 2050. In addition, the State has passed the following laws directing CARB to develop actions to reduce GHG emissions, which are listed below in chronological order, with the most current first.

Executive Order B-55-18 and Assembly Bill 1279

The California Governor issued Executive Order B-55-18 in September 2018 that establishes a new statewide goal to achieve carbon neutrality as soon as possible, but no later than 2045. This executive order directs CARB to work with relevant State agencies to develop a framework for implementation and accounting that tracks progress toward this goal as well as ensuring future scoping plans identify and recommend measures to achieve this carbon neutrality goal. Assembly Bill 1279 was passed by the legislature in September 2022 that codifies the carbon neutrality targets provided in Executive Order B-55-18. The *2022 Scoping Plan for Achieving Carbon Neutrality,* prepared by CARB, November 16, 2022 that will be considered for adoption at CARB's December Board meeting, was prepared in order to meet the carbon neutrality goal targets developed in Executive Order B-55-18 and codified in Assembly Bill 1279.

Executive Order N-79-20

The California Governor issued Executive Order N-79-20 on September 23, 2020 that requires all new passenger cars and trucks and commercial drayage trucks sold in California to be zero-emissions by the year 2035 and all medium- heavy-duty vehicles (commercial trucks) sold in the state to be zero-emission by 2045 for all operations where feasible. Executive Order N-79-20 also requires all off-road vehicles and equipment to transition to 100 percent zero-emission equipment, where feasible by 2035.

California Code of Regulations (CCR) Title 24, Part 6

The CEC is also responsible for implementing the CCR Title 24, Part 6: *California's Energy Efficiency Standards for Residential and Nonresidential Buildings* (Title 24 Part 6) that were first established in 1978 in response to a legislative mandate to reduce California's energy consumption. In 2008 the State set an energy-use reduction goal of zero-net-energy use of all new homes by 2020 and the CEC was mandated to meet this goal through revisions to the Title 24, Part 6 regulations.

The Title 24 standards are updated on a three-year schedule and since 2008 the standards have been incrementally moving to the 2020 goal of the zero-net-energy use. The 2022 Title 24 standards are the current standards that went into effect on January 1, 2023.

According to the Title 24 Part 6 Fact Sheet, the CEC estimates that over 30 years the 2022 Title 24 standards will reduce 10 $MMTCO_2e$ of GHG emissions, which is equivalent to taking nearly 2.2 million cars off the road for a year. For single-family homes, the CEC estimates that the 2022 Title 24 changes from using natural gas furnaces to electric heat pumps to heat new homes and would reduce net CO_2 emissions by 16,230 $MTCO_2e$ per year, when compared to the 2019 Title 24 standards, which is equivalent of taking 3,641 gas cars off the road each year. The 2022 Title 24 standards will: (1) Increase onsite renewable energy generation; (2) Increases electric load flexibility to support grid reliability; (3) Reduces emissions

from newly constructed buildings; (4) Reduces air pollution for improved public health; and (5) Encourages adoption of environmentally beneficial efficient electric technologies.

California Code of Regulations (CCR) Title 24, Part 11

CCR Title 24, Part 11: *California Green Building Standards* (CalGreen Code) was developed in response to continued efforts to reduce GHG emissions associated with energy consumption. The CalGreen Code is also updated every three years and the current version is the 2022 CalGreen Code.

The CalGreen Code contains requirements for construction site selection; storm water control during construction; construction waste reduction; indoor water use reduction; material selection; natural resource conservation; site irrigation conservation; and more. The code provides for design options allowing the designer to determine how best to achieve compliance for a given site or building condition. The code also requires building commissioning, which is a process for verifying that all building systems (e.g., heating and cooling equipment and lighting systems) are functioning at their maximum efficiency.

The CalGreen Code provides standards for bicycle parking, carpool/vanpool/electric vehicle spaces, light and glare reduction, grading and paving, energy efficient appliances, renewable energy, graywater systems, water efficient plumbing fixtures, recycling and recycled materials, pollutant controls (including moisture control and indoor air quality), acoustical controls, storm water management, building design, insulation, flooring, and framing, among others. Implementation of the CalGreen Code measures reduces energy consumption and vehicle trips and encourages the use of alternative-fuel vehicles, which reduces pollutant emissions.

Some of the notable changes in the 2022 CalGreen Code over the prior 2019 CalGreen Code for nonresidential development mandatory requirements include repeal of the designated parking spaces for clean air vehicles, an increase in the number of electric vehicle (EV) ready parking spaces and a new requirement for installed Level 2 or DCFC EV charging stations for autos and added EV charging readiness requirements to loading docks, enhanced thermal insulation requirements, and acoustical ceilings are now required.

Senate Bill 100 and Executive Order B-55-18

Senate Bill 100 (SB 100) was adopted September 2018 and the California Governor issued Executive Order B-55-18 in September 2018, shortly before SB 100 was adopted. SB 100 and Executive Order B-55-18 requires that by December 1, 2045 that 100 percent of retail sales of electricity to be generated from renewable or zero-carbon emission sources of electricity. SB 100 supersedes the renewable energy requirements set by SB 350, SB 1078, SB 107, and SB X1-2. However, the interim renewable energy thresholds from the prior Bills of 44 percent by December 31, 2024, 52 percent by December 31, 2027, and 60 percent by December 31, 2030, will remain in effect.

Executive Order B-48-18 and Assembly Bill 2127

The California Governor issued Executive Order B-48-18 on January 26, 2018 that orders all state entities to work with the private sector to put at least five million zero-emission vehicles on California roads by 2030 and to install 200 hydrogen fueling stations and 250,000 electric vehicle chargers by 2025. Currently there are approximately 350,000 electric vehicles operating in California, which represents approximately 1.5 percent of the 24 million vehicles total currently operating in California. Implementation of Executive Order B-48-18 would result in approximately 20 percent of all vehicles in California to be zero emission electric vehicles. Assembly Bill 2127 (AB 2127) was codified into statute on September 13, 2018 and

requires that the CEC working with CARB prepare biannual assessments of the statewide electric vehicle charging infrastructure needed to support the levels of zero emission vehicle adoption required for the State to meet its goals of putting at least 5 million zero-emission vehicles on California roads by 2030.

Executive Order B-30-15, Senate Bill 32 and Assembly Bill 197

The California Governor issued Executive Order B-30-15 on April 29, 2015 that aims to reduce California's GHG emissions 40 percent below 1990 levels by 2030. This executive order aligns California's GHG reduction targets with those of other international governments, such as the European Union that set the same target for 2030 in October, 2014. This target will make it possible to reach the ultimate goal of reducing GHG emissions 80 percent under 1990 levels by 2050 that is based on scientifically established levels needed in the U.S.A to limit global warming below 2 degrees Celsius – the warming threshold at which scientists say there will likely be major climate disruptions such as super droughts and rising sea levels. Assembly Bill 197 (AB 197) (September 8, 2016) and Senate Bill 32 (SB 32) (September 8, 2016) codified into statute the GHG emissions reduction targets of at least 40 percent below 1990 levels by 2030 as detailed in Executive Order B-30-15. AB 197 also requires additional GHG emissions reporting that is broken down to sub-county levels and requires CARB to consider the social costs of emissions impacting disadvantaged communities.

Executive Order B-29-15

The California Governor issued Executive Order B-29-15 on April 1, 2015 and directed the State Water Resources Control Board to impose restrictions to achieve a statewide 25% reduction in urban water usage and directed the Department of Water Resources to replace 50 million square feet of lawn with drought tolerant landscaping through an update to the State's Model Water Efficient Landscape Ordinance. The Ordinance also requires installation of more efficient irrigation systems, promotion of greywater usage and onsite stormwater capture, and limits the turf planted in new residential landscapes to 25 percent of the total area and restricts turf from being planted in median strips or in parkways unless the parkway is next to a parking strip and a flat surface is required to enter and exit vehicles. Executive Order B-29-15 would reduce GHG emissions associated with the energy used to transport and filter water.

Assembly Bill 341 and Senate Bills 939 and 1374

Senate Bill 939 (SB 939) requires that each jurisdiction in California to divert at least 50 percent of its waste away from landfills, whether through waste reduction, recycling or other means. Senate Bill 1374 (SB 1374) requires the California Integrated Waste Management Board to adopt a model ordinance by March 1, 2004 suitable for adoption by any local agency to require 50 to 75 percent diversion of construction and demolition of waste materials from landfills. Assembly Bill 341 (AB 341) was adopted in 2011 and builds upon the waste reduction measures of SB 939 and 1374, and set a new target of a 75 percent reduction in solid waste generated by the year 2020.

Senate Bill 375

Senate Bill 375 (SB 375) was adopted September 2008 in order to support the State's climate action goals to reduce GHG emissions through coordinated regional transportation planning efforts, regional GHG emission reduction targets, and land use and housing allocation. SB 375 requires CARB to set regional targets for GHG emissions reductions from passenger vehicle use. In 2010, CARB established targets for 2020 and 2035 for each Metropolitan Planning Organizations (MPO) within the State. It was up to each MPO to adopt a sustainable communities strategy (SCS) that will prescribe land use allocation in that MPOs Regional Transportation Plan (RTP) to meet CARB's 2020 and 2035 GHG emission reduction targets. These reduction targets are required to be updated every eight years and the most current targets are

detailed at: https://ww2.arb.ca.gov/our-work/programs/sustainable-communities-program/regional-plan-targets, which provides GHG emissions reduction targets for SCAG of 8 percent by 2020 and 19 percent by 2035.

The *2020-2045 Regional Transportation Plan/Sustainable Communities Strategy* (Connect SoCal), adopted September 3, 2020 provides a 2035 GHG emission reduction target of 19 percent reduction over the 2005 per capita emissions levels. The Connect SoCal include new initiatives of land use, transportation and technology to meet the 2035 new 19 percent GHG emission reduction target for 2035. CARB is also charged with reviewing SCAG's RTP/SCS for consistency with its assigned targets.

City and County land use policies, including General Plans, are not required to be consistent with the RTP and associated SCS. However, new provisions of CEQA incentivize, through streamlining and other provisions, qualified projects that are consistent with an approved SCS and categorized as "transit priority projects."

Assembly Bill 32

In 2006, the California State Legislature adopted AB 32, the California Global Warming Solutions Act of 2006. AB 32 requires CARB, to adopt rules and regulations that would achieve GHG emissions equivalent to statewide levels in 1990 by 2020 through an enforceable statewide emission cap which will be phased in starting in 2012. Emission reductions shall include carbon sequestration projects that would remove carbon from the atmosphere and utilize best management practices that are technologically feasible and cost effective.

In 2007 CARB released the calculated Year 1990 GHG emissions of 431 $MMTCO_2e$. The 2020 target of 431 $MMTCO_2e$ requires the reduction of 78 $MMTCO_2e$, or approximately 16 percent from the State's projected 2020 business as usual emissions of 509 $MMTCO_2e$ (CARB, 2014). Under AB 32, CARB was required to adopt regulations by January 1, 2011 to achieve reductions in GHGs to meet the 1990 cap by 2020. Early measures CARB took to lower GHG emissions included requiring operators of the largest industrial facilities that emit 25,000 metric tons of CO_2 in a calendar year to submit verification of GHG emissions by December 1, 2010. The CARB Board also approved nine discrete early action measures that include regulations affecting landfills, motor vehicle fuels, refrigerants in cars, port operations and other sources, all of which became enforceable on or before January 1, 2010.

CARB's Scoping Plan that was adopted in 2009, proposes a variety of measures including: strengthening energy efficiency and building standards; targeted fees on water and energy use; a market-based cap-and-trade system; achieving a 33 percent renewable energy mix; and a fee regulation to fund the program. The 2014 update to the Scoping Plan identifies strategies moving beyond the 2020 targets to the year 2050.

The Cap-and-Trade Program established under the Scoping Plan sets a statewide limit on sources responsible for 85 percent of California's GHG emissions, and has established a market for long-term investment in energy efficiency and cleaner fuels since 2012.

Assembly Bill 1493

California Assembly Bill 1493 (also known as the Pavley Bill, in reference to its author Fran Pavley) was enacted on July 22, 2002 and required CARB to develop and adopt regulations that reduce GHGs emitted by passenger vehicles and light duty trucks. In 2004, CARB approved the "Pavley I" regulations limiting

the amount of GHGs that may be released from new passenger automobiles that are being phased in between model years 2009 through 2016. These regulations will reduce GHG emissions by 30 percent from 2002 levels by 2016. In June 2009, the EPA granted California the authority to implement GHG emission reduction standards for light duty vehicles, in September 2009, amendments to the Pavley I regulations were adopted by CARB and implementation of the "Pavley I" regulations started in 2009.

The second set of regulations "Pavley II" was developed in 2010, and is being phased in between model years 2017 through 2025 with the goal of reducing GHG emissions by 45 percent by the year 2020 as compared to the 2002 fleet. The Pavley II standards were developed by linking the GHG emissions and formerly separate toxic tailpipe emissions standards previously known as the "LEV III" (third stage of the Low Emission Vehicle standards) into a single regulatory framework. The new rules reduce emissions from gasoline-powered cars as well as promote zero-emissions auto technologies such as electricity and hydrogen, and through increasing the infrastructure for fueling hydrogen vehicles. In 2009, the U.S. EPA granted California the authority to implement the GHG standards for passenger cars, pickup trucks and sport utility vehicles and these GHG emissions standards are currently being implemented nationwide.

The EPA has performed a midterm evaluation of the longer-term standards for model years 2022-2025, and based on the findings of this midterm evaluation, the EPA proposed The Safer Affordable Fuel Efficient (SAFE) Vehicles Proposed Rule for Model Years 2021-2026 that amends the corporate average fuel economy (CAFE) and GHG emissions standards for light vehicles for model years 2021 through 2026. The SAFE Vehicles Rule was published on April 30, 2020 and made effective on June 29, 2020.

5.4 Regional – Southern California

The SCAQMD is the agency principally responsible for comprehensive air pollution control in the Air Basin. To that end, as a regional agency, the SCAQMD works directly with SCAG, county transportation commissions, and local governments and cooperates actively with all federal and state agencies.

South Coast Air Quality Management District

SCAQMD develops rules and regulations, establishes permitting requirements for stationary sources, inspects emission sources, and enforces such measures through educational programs or fines, when necessary. SCAQMD is directly responsible for reducing emissions from stationary, mobile, and indirect sources. The SCAQMD is also responsible for GHG emissions for projects where it is the lead agency. However, for other projects in the Air Basin where it is not the lead agency, it is limited to providing resources to other lead agencies in order to assist them in determining GHG emission thresholds and GHG reduction measures. In order to assist local agencies with direction on GHG emissions, the SCAQMD organized a Working Group, which is described below.

SCAQMD Working Group

Since neither CARB nor the OPR has developed GHG emissions threshold, the SCAQMD formed a Working Group to develop significance thresholds related to GHG emissions. At the September 28, 2010 Working Group meeting, the SCAQMD released its most current version of the draft GHG emissions thresholds, which recommends a tiered approach that either provides a quantitative annual thresholds of 3,500 $MTCO_2e$ for residential uses, 1,400 $MTCO_2e$ for commercial uses, 3,000 $MTCO_2e$ for mixed uses, and 10,000 $MTCO_2e$ for industrial uses.

Southern California Association of Governments

The SCAG is the regional planning agency for Los Angeles, Orange, Ventura, Riverside, San Bernardino, and Imperial Counties and addresses regional issues relating to transportation, the economy, community development and the environment. SCAG is the federally designated Metropolitan Planning Organization (MPO) for the majority of the southern California region and is the largest MPO in the nation. With respect to air quality planning, SCAG has prepared the Connect SoCal and 2019 FTIP addresses regional development and growth forecasts. Although the Connect SoCal and 2019 FTIP are primarily planning documents for future transportation projects a key component of these plans are to integrate land use planning with transportation planning that promotes higher density infill development in close proximity to existing transit service. These plans form the basis for the land use and transportation components of the AQMP, which are utilized in the preparation of air quality forecasts and in the consistency analysis included in the AQMP. The Connect SoCal, 2019 FTIP, and AQMP are based on projections originating within the City and County General Plans.

5.5 Local – City of Redlands

Local jurisdictions, such as the City of Redlands, have the authority and responsibility to reduce GHG emissions through their police power and decision-making authority. Specifically, the City is responsible for the assessment and mitigation of GHG emissions resulting from its land use decisions. In accordance with CEQA requirements and the CEQA review process, the City assesses the global climate change potential of new development projects, requires mitigation of potentially significant global climate change impacts by conditioning discretionary permits, and monitors and enforces implementation of such mitigation. In order to address the State's GHG emissions reduction standards within the City, the *City of Redlands Climate Action Plan* (Redlands CAP), was adopted on December 5, 2017. The Redlands CAP incorporates the guidelines established in *California's 2017 Climate Change Scoping Plan* (2017 Scoping Plan), prepared by CARB, November 2017. The 2017 Scoping Plan was prepared to meet the most current GHG emissions reduction targets set in Executive Order S-3-15 and SB 32 that recommends local governments to develop plans to reduce GHG emissions to 6 $MTCO_2e$ per capita per year by the year 2030 and 2 $MTCO_2e$ per capita per year by the year 2050. Since the Redlands CAP was prepared in coordination with the General Plan that has a horizon year of 2035, the Redlands CAP provides a year 2035 target of 5 $MTCO_2e$ per capita per year, which was determined through interpolation of the 2030 and 2035 GHG emissions targets.

6.0 ATMOSPHERIC SETTING

6.1 South Coast Air Basin

The project site is located within City of Redlands within the County of San Bernardino, which is part of the South Coast Air Basin (Air Basin) that includes the non-desert portions of Riverside, San Bernardino, and Los Angeles Counties and all of Orange County. The Air Basin is located on a coastal plain with connecting broad valleys and low hills to the east. Regionally, the Air Basin is bounded by the Pacific Ocean to the southwest and high mountains to the east forming the inland perimeter.

6.2 Local Climate

The climate of western San Bernardino County, technically called an interior valley subclimate of the Southern California's Mediterranean-type climate, is characterized by hot dry summers, mild moist winters with infrequent rainfall, moderate afternoon breezes, and generally fair weather. Occasional periods of strong Santa Ana winds and winter storms interrupt the otherwise mild weather pattern. The clouds and fog that form along the area's coastline rarely extend as far inland as western San Bernardino County. When morning clouds and fog form, they typically burn off quickly after sunrise. The most important weather pattern from an air quality perspective is associated with the warm season airflow across the densely populated areas located west of the project site. This airflow brings polluted air into western San Bernardino County late in the afternoon. This transport pattern creates unhealthful air quality that may extend to the project site particularly during the summer months.

Winds are an important parameter in characterizing the air quality environment of a project site because they both determine the regional pattern of air pollution transport and control the rate of dispersion near a source. Daytime winds in western San Bernardino County are usually light breezes from off the coast as air moves regionally onshore from the cool Pacific Ocean to the warm Mojave Desert interior of Southern California. These winds allow for good local mixing, but as discussed above, these coastal winds carry significant amounts of industrial and automobile air pollutants from the densely urbanized western portion of the Air Basin into the interior valleys which become trapped by the mountains that border the eastern and northern edges of the Air Basin.

In the summer, strong temperature inversions may occur that limit the vertical depth through which air pollution can be dispersed. Air pollutants concentrate because they cannot rise through the inversion layer and disperse. These inversions are more common and persistent during the summer months. Over time, sunlight produces photochemical reactions within this inversion layer that creates ozone, a particularly harmful air pollutant. Occasionally, strong thermal convections occur which allows the air pollutants to rise high enough to pass over the mountains and ultimately dilute the smog cloud.

In the winter, light nocturnal winds result mainly from the drainage of cool air off of the mountains toward the valley floor while the air aloft over the valley remains warm. This forms a type of inversion known as a radiation inversion. Such winds are characterized by stagnation and poor local mixing and trap pollutants such as automobile exhaust near their source. Despite light wind conditions, especially at night and in the early morning, winter is generally a period of good air quality in the project vicinity.

The temperature and precipitation levels for the Redlands Monitoring station, which is the nearest weather station to the project site with historical data are shown below in Table E. Table E shows that August is typically the warmest month and December is typically the coolest month. Rainfall in the project

area varies considerably in both time and space. Almost all the annual rainfall comes from the fringes of mid-latitude storms from late November to early April, with summers being almost completely dry.

Table E – Monthly Climate Data

Month	Average Maximum Temperature (°F)	Average Minimum Temperature (°F)	Average Total Precipitation (inches)
January	64.8	39.4	2.68
February	66.1	41.3	2.64
March	69.1	43.6	2.28
April	73.8	46.8	1.17
May	78.6	51.2	0.47
June	86.8	55.2	0.10
July	94.5	60.3	0.07
August	94.3	60.7	0.15
September	90.2	57.6	0.28
October	81.0	54.3	0.69
November	72.6	44.0	1.13
December	65.8	39.6	1.89
Annual	**78.1**	**49.2**	**13.56**

6.3 Monitored Local Air Quality

The air quality at any site is dependent on the regional air quality and local pollutant sources. Regional air quality is determined by the release of pollutants throughout the Air Basin. Improvements in cleaner technology and strict regulations have reduced ozone levels since its peak in the mid-twentieth century. However, ozone levels have remained unacceptably high over the past decade despite significant reductions. This trend is due to the changes in climate and other weather conditions such as the increase in hot, stagnant days that can lead to the formation of ozone that we have experienced in recent years. (SCAQMD, 2022).

SCAQMD has divided the Air Basin into 38 air-monitoring areas with a designated ambient air monitoring station representative of each area. The project site is located in Air Monitoring Area 34, Central San Bernardino Valley, which covers the area from Fontana to the base of the San Bernardino Mountains. Since not all air monitoring stations measure all of the tracked pollutants, the data from the following two monitoring stations, listed in the order of proximity to the project site have been used: Redlands-Dearborn Monitoring Station (Redlands Station) and San Bernardino-4th Street Monitoring Station (San Bernardino Station).

The Redlands Station is located approximately 3.2 miles north of the project site at 500 North Dearborn Street, Redlands and the San Bernardino Station is located approximately 10 miles northwest of the project site at 24302 4th Street, San Bernardino. Table F presents the monitored pollutant levels from these Monitoring Stations. Ozone and PM10 were measured at the Redlands Station and NO_2 and PM2.5 were measured at the San Bernardino Station. CO measurements have not been provided, since CO is currently in attainment in the Air Basin and monitoring of CO within the Air Basin ended on March 31, 2013. It should also be noted that due to the air monitoring stations distances from the project site,

recorded air pollution levels at the air monitoring stations reflect with varying degrees of accuracy, local air quality conditions at the project site.

Table F – Local Area Air Quality Monitoring Summary

Pollutant (Standard)	Year 2020	2021	2022
Ozone: [1]			
Maximum 1-Hour Concentration (ppm)	0.173	0.145	0.135
Days > CAAQS (0.09 ppm)	**104**	**74**	**63**
Maximum 8-Hour Concentration (National Measurement) (ppm)	0.136	0.119	0.109
Days > NAAQS (0.070 ppm)	**141**	**114**	**104**
Days > CAAQs (0.070 ppm)	**145**	**118**	**106**
Nitrogen Dioxide: [2]			
Maximum 1-Hour Concentration (ppb)	54.0	56.3	52.6
Days > NAAQS (100 ppb)	0	0	0
Days > CAAQS (180 ppb)	0	0	0
Inhalable Particulates (PM10) : [1]			
Maximum 24-Hour National Measurement (ug/m^3)	87.7	44.2	50.5
Days > NAAQS (150 ug/m^3)	0	0	0
Days > CAAQS (50 ug/m^3)	**2**	0	0
Annual Arithmetic Mean (AAM) (ug/m^3)	24.7	23.7	22.4
Annual > NAAQS (50 ug/m^3)	No	No	No
Annual > CAAQS (20 ug/m^3)	**Yes**	**Yes**	**Yes**
Ultra-Fine Particulates (PM2.5): [2]			
Maximum 24-Hour National Measurement (ug/m^3)	56.6	57.9	40.1
Days > NAAQS (35 ug/m^3)	**2**	**1**	**2**
Annual Arithmetic Mean (AAM) (ug/m^3)	ND	11.9	11.3
Annual > NAAQS and CAAQS (12 ug/m^3)	No	No	No

Notes: Exceedances are listed in **bold.** CAAQS = California Ambient Air Quality Standard; NAAQS = National Ambient Air Quality Standard; ppm = parts per million; ppb = parts per billion; ND = no data available.

Ozone

During the last three years, the State 1-hour concentration standard for ozone has been exceeded between 63 and 104 days each year at the Redlands Station. The State 8-hour ozone standard has been exceeded between 106 and 145 days each year over the last three years at the Redlands Station. The Federal 8-hour ozone standard has been exceeded between 104 and 141 days each year over the last three years at the Redlands Station. Ozone is a secondary pollutant as it is not directly emitted. Ozone is the result of chemical reactions between other pollutants, most importantly hydrocarbons and NO_2, which

occur only in the presence of bright sunlight. Pollutants emitted from upwind cities react during transport downwind to produce the oxidant concentrations experienced in the area. Many areas of Southern California contribute to the ozone levels experienced at this monitoring station, with the more significant areas being those directly upwind.

Nitrogen Dioxide

The San Bernardino Station did not record an exceedance of either the Federal or State 1-hour NO_2 standards for the last three years.

Particulate Matter

The State 24-hour concentration standard for PM10 has been exceeded for only two days in the year 2020 over the past three years at the Redlands Station. Over the past three years the Federal 24-hour standard for PM10 has not been exceeded at the Redlands Station. The annual PM10 concentration at the San Bernardino Station has exceeded the State standard for the past three years and has not exceeded the Federal standard for the past three years.

Over the past three years the federal 24-hour concentration standard for PM2.5 has been exceeded between one and two days each year over the past three years at the San Bernardino Station. The annual PM2.5 concentrations at the San Bernardino Station has been within both the State and Federal standards for the past three years. There does not appear to be a noticeable trend for PM10 or PM2.5 in either maximum particulate concentrations or days of exceedances in the area. Particulate levels in the area are due to natural sources, grading operations, and motor vehicles.

According to the EPA, some people are much more sensitive than others to breathing fine particles (PM10 and PM2.5). People with influenza, chronic respiratory and cardiovascular diseases, and the elderly may suffer worsening illness and premature death due to breathing these fine particles. People with bronchitis can expect aggravated symptoms from breathing in fine particles. Children may experience decline in lung function due to breathing in PM10 and PM2.5. Other groups considered sensitive are smokers and people who cannot breathe well through their noses. Exercising athletes are also considered sensitive, because many breathe through their mouths during exercise.

6.4 Toxic Air Contaminant Levels in the Air Basin

In order to determine the Air Basin-wide risks associated with major airborne carcinogens, the SCAQMD conducted the Multiple Air Toxics Exposure Study (MATES) studies. According to the MATES V study (SCAQMD, 2021), the project site has an estimated cancer risk of 341 per million persons chance of cancer. In comparison, the average cancer risk for the Air Basin is 455 per million persons. The MATES V study monitored air toxins between May 1, 2018 to April 30, 2019, found that cancer risk from air toxics has declined significantly in the Air Basin with a 40 percent decrease in cancer risk since the monitoring for the MATES IV study that occurred between July 1, 2012 and June 30, 2013 and an 84 percent decrease in cancer risk since the monitoring for the MATES II study that occurred between April 1, 1998 and March 31, 1999.

The MATES V study also analyzed impacts specific to the communities experiencing environmental injustices (EJ communities) that were evaluated using the Senate Bill 535 definition of disadvantaged communities, which found that between MATES IV and MATES V, the cancer risk from air toxics decreased by 57 percent in EJ communities overall, compared to a 53 percent reduction in non-EJ communities.

In order to provide a perspective of risk, it is often estimated that the incidence in cancer over a lifetime for the U.S. population ranges between 1 in 3 to 4 and 1 in 3, or a risk of about 300,000 per million persons. The MATES-III study referenced a Harvard Report on Cancer Prevention, which estimated that of cancers associated with known risk factors, about 30 percent were related to tobacco, about 30 percent were related to diet and obesity, and about 2 percent were associated with environmental pollution related exposures that includes hazardous air pollutants.

7.0 MODELING PARAMETERS AND ASSUMPTIONS

7.1 CalEEMod Model Input Parameters

The criteria air pollution and GHG emissions impacts created by the proposed project have been analyzed through use of the California Emissions Estimator Model (CalEEMod) Version 2022.1.1.19. CalEEMod is a computer model published by the California Air Pollution Control Officers Association (CAPCOA) for estimating air pollutant and GHG emissions. The CalEEMod program uses the EMFAC2021 computer program to calculate the emission rates specific for the South Coast Air Basin portion of San Bernardino County for employee, vendor and haul truck vehicle trips and the OFFROAD2007 and OFFROAD2011 computer programs to calculate emission rates for heavy equipment operations. EMFAC2021, OFFROAD2007 and OFFROAD2011 are computer programs generated by CARB that calculates composite emission rates for vehicles. Emission rates are reported by the program in grams per trip and grams per mile or grams per running hour.

The project characteristics in the CalEEMod model were set to a project location of the South Coast Air Basin portion of San Bernardino County, utility companies of Southern California Edison and Southern California Gas and a project opening year of 2025.

Land Use Parameters

The proposed project consists of construction of two new above ground 220 foot diameter factory-coated bolt carbon steel tanks. It is anticipated that approximately 6.2 acres will be disturbed as part of the proposed project. A driveway will be constructed utilizing asphalt/gravel that connects the water tanks to Helen Court. Two parking spaces will also be installed for maintenance purposes. Since the final plans are not yet available, this analysis is based on the paved area covering up to 0.7 acres. The proposed project is expected to break ground in 2024 and be completed by 2025.

The proposed project's land use parameters that were entered into the CalEEMod model are shown in Table G.

Table G – CalEEMod Land Use Parameters

Proposed Land Use	Land Use Subtype in CalEEMod	Land Use Size[1]	Lot Acreage[2]	Building[3] (square feet)	Landscaped Area[4] (sq ft)
Proposed Reservoirs	User Defined Industrial	6 AC	5.50	76,027	23,951
Paved Areas	Other Asphalt Surfaces	1 AC	0.70	--	3,049

Notes:
[1] TSF = Thousand Square Feet; AC = Acres
[2] Lot acreage calculated based on the total disturbed area of 6.2-acres.
[3] Building square feet represents area where architectural coatings will be applied.
[4] Landscaped area based on 10 percent of the area disturbed, spread proportionally between land uses.

Construction Parameters

Construction of the proposed project is anticipated to start around May 2024 and was modeled based on the CalEEMod default timing that would have construction completed by July 2025. The construction-related GHG emissions were based on a 30-year amortization rate as recommended in the SCAQMD GHG Working Group meeting on November 19, 2009. The phases of construction activities that have been

analyzed are detailed below and include: 1) Site Preparation; 2) Grading, 3) Building construction, 4) Paving; and) Application of architectural coatings.

The CalEEMod model provides the selection of "mitigation" to account for project conditions that would result in less emissions than a project without these conditions, however it should be noted that this "mitigation" may represent regulatory requirements. This includes the required to adherence to SCAQMD Rule 403, which requires that the Best Available Control Measures be utilized to reduce fugitive dust emissions and was modeled in CalEEMod by selection of mitigation of water all exposed areas three times per day.

Site Preparation

The site preparation phase would consist of removing any vegetation, tree stumps, and stones onsite prior to grading. The site preparation phase was modeled as starting in May 2024 and was modeled as occurring over two weeks, which is based on the CalEEMod default timing. The site preparation activities would generate an average of 17.5 worker trips per day. In order to account for water truck emissions, three onsite truck trips per day with a 0.25-mile length was added to the site preparation phase. The onsite equipment would consist of three rubber-tired dozers, and four of either tractors, loaders, or backhoes, which is based on the CalEEMod default equipment mix.

Grading

The grading phase would occur after completion of the site preparation phase and was modeled as occurring over four weeks, which is based on the CalEEMod default timing. The grading would likely be balanced, which would result in no dirt being imported or exported from the project site. The grading activities would generate 15 worker trips per day. In order to account for water truck emissions, three onsite truck trips per day with a 0.25-mile length was added to the grading phase. The onsite equipment would consist of one excavator, one grader, one rubber-tired dozer, and three of either tractors, loaders, or backhoes, which is based on the CalEEMod default equipment mix.

Building Construction

The building construction would occur after the completion of the grading phase and was modeled as occurring over 11 months, which is based on the CalEEMod default timing. The building construction phase would generate an average of 31.9 worker trips and 12.5 vendor trips per day. The onsite equipment would consist of the simultaneous operation of one crane, three forklifts, one generator, one welder, and three of either tractors, loaders, or backhoes, which is based on the CalEEMod default equipment mix.

Paving

The paving phase would consist of paving the onsite driveway and parking. The paving phase would occur after the completion of the building construction phase and was modeled as occurring over four weeks, which is based on the CalEEMod default timing. The paving phase would generate an average of 15 worker trips per day. The onsite equipment would consist of the simultaneous operation of two pavers, two paving equipment, and two rollers, which is based on the CalEEMod default equipment mix.

Architectural Coating

The application of architectural coatings would occur after completion of the paving phase and was modeled as occurring over four weeks, which is based on the CalEEMod default timing. The architectural

coating phase would generate an average of 6.4 worker trips per day. The onsite equipment would consist of one air compressor, which is based on the CalEEMod default equipment mix.

Operational Emissions Modeling

In general, operation of the new reservoir tanks will be passive as there will be no equipment installed on the reservoir tanks that creates air emissions. The existing water tank will continue to function while the new reservoir tanks are constructed. Currently, maintenance on the existing water tank occurs on a monthly and as-needed basis by City employees, that includes landscaping. No change would occur between the maintenance activities for the existing water tank and proposed reservoir tanks. As such, operation of the proposed project would not create any additional air emissions, over which is currently being created, and no operational air emission modeling was performed.

8.0 THRESHOLDS OF SIGNIFICANCE

8.1 Regional Air Quality

Many air quality impacts that derive from dispersed mobile sources, which are the dominate pollution generators in the Air Basin, often occurs hours later and miles away after photochemical processes have converted primary exhaust pollutants into secondary contaminants such as ozone. The incremental regional air quality impact of an individual project is generally very small and difficult to measure. Therefore, SCAQMD has developed significance thresholds based on the volume of pollution emitted rather than on actual ambient air quality because the direct air quality impact of a project is not quantifiable on a regional scale. The SCAQMD CEQA Handbook states that any project in the Air Basin with daily emissions that exceed any of the identified significance thresholds should be considered as having an individually and cumulatively significant air quality impact. For the purposes to this air quality impact analysis, a regional air quality impact would be considered significant if emissions exceed the SCAQMD significance thresholds identified in Table H.

Table H – SCAQMD Regional Criteria Pollutant Emission Thresholds of Significance

	Pollutant Emissions (pounds/day)						
	VOC	**NOx**	**CO**	**SOx**	**PM10**	**PM2.5**	**Lead**
Construction	75	100	550	150	150	55	3
Operation	55	55	550	150	150	55	3

Source: http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf?sfvrsn=2

8.2 Local Air Quality

Project-related construction air emissions may have the potential to exceed the State and Federal air quality standards in the project vicinity, even though these pollutant emissions may not be significant enough to create a regional impact to the Air Basin. In order to assess local air quality impacts the SCAQMD has developed Localized Significant Thresholds (LSTs) to assess the project-related air emissions in the project vicinity. SCAQMD has also provided *Final Localized Significance Threshold Methodology* (LST Methodology), July 2008, which details the methodology to analyze local air emission impacts. The LST Methodology found that the primary emissions of concern are NO_2, CO, PM10, and PM2.5.

The LST Methodology provides Look-Up Tables with different thresholds based on the location and size of the project site and distance to the nearest sensitive receptors. As detailed above in Section 6.3, the project site is located in Air Monitoring Area 34, Central San Bernardino Valley. The Look-Up Tables provided in the LST Methodology include project site acreage sizes of 1-acre, 2-acres and 5-acres. Since the proposed project would disturb up to 6.2 acres, the 5-acre thresholds were utilized, since it is the closest acreage size available. It should also be noted that no more than 5-acres would be disturbed in any workday as part of the proposed project.

The nearest sensitive receptor to the project site is a single-family home that is located as near as 280 feet (85 meters) south of the area that would be disturbed as part of the proposed project. As such, the 50 meter and 100 meter thresholds were interpolated to find the 85 meter thresholds. Table I below shows the LSTs for NO_2, PM10 and PM2.5 for both construction and operational activities.

Table I – SCAQMD Local Air Quality Thresholds of Significance

Activity	Allowable Emissions (pounds/day)[1]			
	NOx	CO	PM10	PM2.5
Construction	356	3,630	59	15
Operation	356	3,630	15	4

Notes:
[1] The nearest offsite sensitive receptor is a single-family home located as near as 280 feet (85 meters) south of the area that would be disturbed. As such, the 50 meter and 100 meter thresholds were interpolated to find the 85 meter thresholds.
Source: Calculated from SCAQMD's Mass Rate Look-up Tables for five acres in Air Monitoring Area 34, San Bernardino Valley.

8.3 Toxic Air Contaminants

According to the SCAQMD CEQA Handbook, any project that has the potential to expose the public to toxic air contaminants in excess of the following thresholds would be considered to have a significant air quality impact:

- If the Maximum Incremental Cancer Risk is 10 in one million or greater; or
- Toxic air contaminants from the proposed project would result in a Hazard Index increase of 1 or greater.

In order to determine if the proposed project may have a significant impact related to toxic air contaminants (TACs), the *Health Risk Assessment Guidance for analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis*, (Diesel Analysis) prepared by SCAQMD, August 2003, recommends that if the proposed project is anticipated to create TACs through stationary sources or regular operations of diesel trucks on the project site, then the proximity of the nearest receptors to the source of the TAC and the toxicity of the HAP should be analyzed through a comprehensive facility-wide health risk assessment (HRA).

8.4 Odor Impacts

The SCAQMD CEQA Handbook states that an odor impact would occur if the proposed project creates an odor nuisance pursuant to SCAQMD Rule 402, which states:

> "A person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.
>
> The provisions of this rule shall not apply to odors emanating from agricultural operations necessary for the growing of crops or the raising of fowl or animals."

If the proposed project results in a violation of Rule 402 with regards to odor impacts, then the proposed project would create a significant odor impact.

8.5 Greenhouse Gas Emissions

The *City of Redlands Climate Action Plan* (Redlands CAP), was adopted on December 5, 2017. The Redlands CAP was prepared pursuant to Section 15183.5(b) of the CEQA Guidelines to be utilized as a tiering document for the General Plan as well as future projects within the City that are consistent with

the General Plan. The Redlands CAP incorporates the guidelines established in CARB's 2017 Scoping Plan. The 2017 Scoping Plan was prepared to meet the most current GHG emissions reduction targets set in Executive Order S-3-15 and SB 32 that recommends local governments to develop plans to reduce GHG emissions to 6 $MTCO_2e$ per capita per year by the year 2030 and 2 $MTCO_2e$ per capita per year by the year 2050. Since the Redlands CAP was prepared in coordination with the General Plan that has a horizon year of 2035, the Redlands CAP provides a year 2035 target of 5 $MTCO_2e$ per capita per year, which was determined through interpolation of the 2030 and 2035 GHG emissions targets. Since a per capita threshold does not apply to the proposed, the SCAQMD thresholds has been utilized, instead.

In order to identify significance criteria under CEQA for development projects, SCAQMD initiated a Working Group, which provided detailed methodology for evaluating significance under CEQA. At the September 28, 2010 Working Group meeting, the SCAQMD released its most current version of the draft GHG emissions thresholds, which recommends a tiered approach that provides a quantitative annual threshold of 3,000 $MTCO_2e$ for all land use projects.

The GHG emissions analysis for both construction and operation of the proposed project can be found below in Sections 9.6 and 9.7.

9.0 IMPACT ANALYSIS

9.1 CEQA Thresholds of Significance

Consistent with CEQA and the State CEQA Guidelines, a significant impact related to air quality and GHG emissions would occur if the proposed project is determined to:

- Conflict with or obstruct implementation of the applicable air quality plan;
- Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard;
- Expose sensitive receptors to substantial pollutant concentrations;
- Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people;
- Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment; or
- Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs.

9.2 Air Quality Compliance

The proposed project would not conflict with or obstruct implementation of the SCAQMD Air Quality Management Plan (AQMP). The following section discusses the proposed project's consistency with the SCAQMD AQMP.

SCAQMD Air Quality Management Plan

The California Environmental Quality Act (CEQA) requires a discussion of any inconsistencies between a proposed project and applicable General Plans and regional plans (CEQA Guidelines Section 15125). The regional plan that applies to the proposed project includes the SCAQMD AQMP. Therefore, this section discusses any potential inconsistencies of the proposed project with the AQMP.

The purpose of this discussion is to set forth the issues regarding consistency with the assumptions and objectives of the AQMP and discuss whether the proposed project would interfere with the region's ability to comply with Federal and State air quality standards. If the decision-makers determine that the proposed project is inconsistent, the lead agency may consider project modifications or inclusion of mitigation to eliminate the inconsistency.

The SCAQMD CEQA Handbook states that "New or amended GP Elements (including land use zoning and density amendments), Specific Plans, and significant projects must be analyzed for consistency with the AQMP." Strict consistency with all aspects of the plan is usually not required. A proposed project should be considered to be consistent with the AQMP if it furthers one or more policies and does not obstruct other policies. The SCAQMD CEQA Handbook identifies two key indicators of consistency:

(1) Whether the project will result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, or delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP.

(2) Whether the project will exceed the assumptions in the AQMP or increments based on the year of project buildout and phase.

Both of these criteria are evaluated in the following sections.

Criterion 1 - Increase in the Frequency or Severity of Violations?

Based on the air quality modeling analysis contained in this report, short-term regional construction air emissions would not result in significant impacts based on SCAQMD regional thresholds of significance discussed above in Section 8.1 or local thresholds of significance discussed above in Section 8.2. The ongoing operation of the proposed project would generate air pollutant emissions that are inconsequential on a regional basis and would not result in significant impacts based on SCAQMD thresholds of significance discussed above in Section 8.1. The analysis for long-term local air quality impacts showed that local pollutant concentrations would not exceed the air quality standards. Therefore, a less than significant long-term impact would occur and no mitigation would be required.

Therefore, based on the information provided above, the proposed project would be consistent with the first criterion.

Criterion 2 - Exceed Assumptions in the AQMP?

Consistency with the AQMP assumptions is determined by performing an analysis of the proposed project with the assumptions in the AQMP. The emphasis of this criterion is to ensure that the analyses conducted for the proposed project are based on the same forecasts as the AQMP. The AQMP is developed through use of the planning forecasts provided in the Connect SoCal and 2019 FTIP. The Connect SoCal is a major planning document for the regional transportation and land use network within Southern California. The Connect SoCal is a long-range plan that is required by federal and state requirements placed on SCAG and is updated every four years. The 2019 FTIP provides long-range planning for future transportation improvement projects that are constructed with state and/or federal funds within Southern California. Local governments are required to use these plans as the basis of their plans for the purpose of consistency with applicable regional plans under CEQA. For this project, the City of Redlands General Plan's Land Use Plan defines the assumptions that are represented in AQMP.

The project site is currently designated as Resource Preservation in the General Plan. The proposed reservoirs are an allowed use within this land use designation and would not require a General Plan Amendment. As such, the proposed project is not anticipated to exceed the AQMP assumptions for the project site and is found to be consistent with the AQMP for the second criterion.

Based on the above, the proposed project will not result in an inconsistency with the SCAQMD AQMP. Therefore, a less than significant impact will occur in relation to implementation of the AQMP.

Level of Significance

Less than significant impact.

9.3 Cumulative Net Increase in Non-Attainment Pollution

The proposed project would not result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable Federal or State ambient air quality standard.

The SCAQMD has published a report on how to address cumulative impacts from air pollution: White Paper on Potential Control Strategies to Address Cumulative Impacts from Air Pollution (http://www.aqmd.gov/docs/default-source/Agendas/Environmental-Justice/cumulative-impacts-working-group/cumulative-impacts-white-paper.pdf). In this report the AQMD clearly states (Page D-3):

> *"…the AQMD uses the same significance thresholds for project specific and cumulative impacts for all environmental topics analyzed in an Environmental Assessment or Environmental Impact Report (EIR). The only case where the significance thresholds for project specific and cumulative impacts differ is the Hazard Index (HI) significance threshold for TAC emissions. The project specific (project increment) significance threshold is HI > 1.0 while the cumulative (facility- wide) is HI > 3.0. It should be noted that the HI is only one of three TAC emission significance thresholds considered (when applicable) in a CEQA analysis. The other two are the maximum individual cancer risk (MICR) and the cancer burden, both of which use the same significance thresholds (MICR of 10 in 1 million and cancer burden of 0.5) for project specific and cumulative impacts. Projects that exceed the project-specific significance thresholds are considered by the SCAQMD to be cumulatively considerable. This is the reason project-specific and cumulative significance thresholds are the same. Conversely, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant."*

Therefore, this analysis assumes that individual projects that do not generate operational or construction emissions that exceed the SCAQMD's recommended daily thresholds for project- specific impacts would also not cause a cumulatively considerable increase in emissions for those pollutants for which the Basin is in nonattainment, and, therefore, would not be considered to have a significant, adverse air quality impact. Alternatively, individual project-related construction and operational emissions that exceed SCAQMD thresholds for project-specific impacts would be considered cumulatively considerable. The following section calculates the potential air emissions associated with the construction and operations of the proposed project and compares the emissions to the SCAQMD standards.

Construction Emissions

The construction activities for the proposed project are anticipated to include site preparation and grading of approximately 6.2 acres, building construction of the proposed reservoirs, paving of an onsite driveway and parking spaces, and application of architectural coatings. The CalEEMod model has been utilized to calculate the construction-related emissions from the proposed project and the input parameters utilized in this analysis have been detailed in Section 7.1. The maximum daily construction-related criteria pollutant emissions from the proposed project are shown below in Table J.

Table J – Construction-Related Criteria Pollutant Emissions

	Maximum Daily Pollutant Emissions (pounds/day)					
Season and Year of Construction	**VOC**	**NOx**	**CO**	**SO_2**	**PM10**	**PM2.5**
Summer 2024	3.74	36.1	34.4	0.05	8.04	4.26
Winter 2024	1.37	11.9	15.4	0.03	1.03	0.59
Summer 2025	35.8	11.0	15.8	0.03	0.96	0.53
Winter 2025	1.27	11.0	15.1	0.03	0.96	0.53
Maximum Daily Construction Emissions	**35.8**	**36.1**	**34.4**	**0.05**	**8.04**	**4.26**
SCQAMD Regional Thresholds	**75**	**100**	**550**	**150**	**150**	**55**
SCAQMD Local Thresholds[1]	**--**	**356**	**3,630**	**--**	**59**	**15**
Exceeds Thresholds?	No	No	No	No	No	No

Notes:
[1] The nearest sensitive receptor is a single-family home located as near as 280 feet (85 meters) south of the area that would be disturbed. As such, the 50 meter and 100 meter thresholds were interpolated to find the 85 meter thresholds. Calculated from SCAQMD's Mass Rate Look-up Tables for five acres in Air Monitoring Area 34, San Bernardino Valley.
Source: CalEEMod Version 2022.1.

Table J shows that none of the analyzed criteria pollutants would exceed either the regional or local emissions thresholds during construction of the proposed project. Therefore, a less than significant regional or local air quality impact would occur from construction of the proposed project.

Operational Emissions

In general, operation of the new reservoir tanks will be passive as there will be no equipment installed on the reservoir tanks that creates air emissions. The existing water tank will continue to function while the new reservoir tanks are constructed. Currently, maintenance on the existing water tank occurs on a monthly and as-needed basis by City employees, that includes landscaping. No change would occur between the maintenance activities for the existing water tank and proposed reservoir tanks. As such, operation of the proposed project would not create any additional air emissions, over which is currently being created, and no operational air emission modeling was performed. As such, less than significant air quality impacts would occur from operation of the proposed project.

Therefore, the proposed project would not result in a cumulatively considerable net increase of any criteria pollutant.

Level of Significance

Less than significant impact.

9.4 Sensitive Receptors

The proposed project would not expose sensitive receptors to substantial pollutant concentrations. The local concentrations of criteria pollutant emissions produced in the nearby vicinity of the proposed project, which may expose sensitive receptors to substantial concentrations have been calculated above in Section 9.3 for both construction and operations, which are discussed separately below. The discussion below also includes an analysis of the potential impacts from local criteria pollutant and toxic air contaminant emissions.

Construction-Related Sensitive Receptor Impacts

Construction activities may expose sensitive receptors to substantial pollutant concentrations of localized criteria pollutant concentrations and from toxic air contaminant emissions created from onsite construction equipment, which are described below.

Local Criteria Pollutant Impacts from Construction

The local air quality impacts from construction of the proposed project have been analyzed above in Section 9.3 and found that the construction of the proposed project would not exceed the local NOx, CO, PM10 and PM2.5 thresholds of significance discussed above in Section 8.2. Therefore, construction of the proposed project would create a less than significant construction-related impact to local air quality and no mitigation would be required.

Toxic Air Contaminants Impacts from Construction

The greatest potential for toxic air contaminant emissions would be related to DPM emissions associated with heavy equipment operations during construction of the proposed project. According to SCAQMD methodology, health effects from carcinogenic air toxics are usually described in terms of "individual cancer risk". "Individual Cancer Risk" is the likelihood that a person exposed to concentrations of toxic air contaminants over a 70-year lifetime will contract cancer, based on the use of standard risk-assessment methodology. It should be noted that the most current cancer risk assessment methodology recommends analyzing a 30-year exposure period for the nearby sensitive receptors (OEHHA, 2015).

Given the relatively limited number of heavy-duty construction equipment, the varying distances that construction equipment would operate to the nearby sensitive receptors, and the short-term construction schedule, the proposed project would not result in a long-term (i.e., 30 or 70 years) substantial source of toxic air contaminant emissions and corresponding individual cancer risk. In addition, California Code of Regulations Title 13, Article 4.8, Chapter 9, Section 2449 regulates emissions from off-road diesel equipment in California. This regulation limits idling of equipment to no more than five minutes, requires equipment operators to label each piece of equipment and provide annual reports to CARB of their fleet's usage and emissions. This regulation also requires systematic upgrading of the emission Tier level of each fleet, and currently no commercial operator is allowed to purchase Tier 0, Tier 1 or Tier 2 equipment. In addition to the purchase restrictions, equipment operators need to meet fleet average emissions targets that become more stringent each year between years 2014 and 2023. Therefore, due to the limitations in off-road construction equipment DPM emissions from implementation of Section 2448, a less than significant short-term TAC impacts would occur during construction of the proposed project from DPM emissions.

As such, construction of the proposed project would result in a less than significant exposure of sensitive receptors to substantial pollutant concentrations.

Operations-Related Sensitive Receptor Impacts

In general, operation of the new reservoir tanks will be passive as there will be no equipment installed on the reservoir tanks that creates air emissions. The existing water tank will continue to function while the new reservoir tanks are constructed. Currently, maintenance on the existing water tank occurs on a monthly and as-needed basis by City employees, that includes landscaping. No change would occur between the maintenance activities for the existing water tank and proposed reservoir tanks. As such, operation of the proposed project would not create any additional air emissions, over which is currently being created, and no operational air emission modeling was performed. Therefore, operation of the proposed project would result in a less than significant exposure of sensitive receptors to substantial pollutant concentrations.

Level of Significance

Less than significant impact.

9.5 Odor Emissions

The proposed project would not create objectionable odors affecting a substantial number of people. Individual responses to odors are highly variable and can result in a variety of effects. Generally, the impact of an odor results from a variety of factors such as frequency, duration, offensiveness, location, and sensory perception. The frequency is a measure of how often an individual is exposed to an odor in

the ambient environment. The intensity refers to an individual's or group's perception of the odor strength or concentration. The duration of an odor refers to the elapsed time over which an odor is experienced. The offensiveness of the odor is the subjective rating of the pleasantness or unpleasantness of an odor. The location accounts for the type of area in which a potentially affected person lives, works, or visits; the type of activity in which he or she is engaged; and the sensitivity of the impacted receptor.

Sensory perception has four major components: detectability, intensity, character, and hedonic tone. The detection (or threshold) of an odor is based on a panel of responses to the odor. There are two types of thresholds: the odor detection threshold and the recognition threshold. The detection threshold is the lowest concentration of an odor that will elicit a response in a percentage of the people that live and work in the immediate vicinity of the project site and is typically presented as the mean (or 50 percent of the population). The recognition threshold is the minimum concentration that is recognized as having a characteristic odor quality, this is typically represented by recognition by 50 percent of the population. The intensity refers to the perceived strength of the odor. The odor character is what the substance smells like. The hedonic tone is a judgment of the pleasantness or unpleasantness of the odor. The hedonic tone varies in subjective experience, frequency, odor character, odor intensity, and duration. Potential odor impacts have been analyzed separately for construction and operations below.

Construction-Related Odor Impacts

Potential sources that may emit odors during construction activities include the application of coatings such as asphalt pavement, paints and solvents and from emissions from diesel equipment. Standard construction requirements that limit the time of day when construction may occur as well as SCAQMD Rule 1108 that limits VOC content in asphalt and Rule 1113 that limits the VOC content in paints and solvents would minimize odor impacts from construction. As such, the objectionable odors that may be produced during the construction process would be temporary and would not likely be noticeable for extended periods of time beyond the project site's boundaries. Through compliance with the applicable regulations that reduce odors and due to the transitory nature of construction odors, a less than significant odor impact would occur and no mitigation would be required.

Operations-Related Odor Impacts

The proposed project would consist of the development of two enclosed water reservoirs. Enclosed water reservoirs are not a known source of odors. Therefore, a less than significant odor impact would occur from operation of the proposed project.

Level of Significance

Less than significant impact

9.6 Generation of Greenhouse Gas Emissions

The proposed project would not generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment. The proposed project would consist of the development of two water reservoirs. The proposed project is anticipated to generate GHG emissions from construction activities.

In general, operation of the new reservoir tanks will be passive as there will be no equipment installed on the reservoir tanks that creates GHG emissions. The existing water tank will continue to function while the new reservoir tanks are constructed. Currently, maintenance on the existing water tank occurs on a

monthly and as-needed basis by City employees, that includes landscaping. No change would occur between the maintenance activities for the existing water tank and proposed reservoir tanks. As such, operation of the proposed project would not create any additional GHG emissions, over which is currently being created, as such no operation-related GHG emissions would be created from the proposed project.

The project's GHG emissions have been calculated with the CalEEMod model based on the construction and operational parameters detailed in Section 7.1 above. A summary of the results is shown below in Table K and the CalEEMod model run annual printouts are provided in Appendix B.

Table K – Project Related Greenhouse Gas Annual Emissions

	Greenhouse Gas Emissions (Metric Tons per Year)			
Year of Construction	**CO_2**	**CH_4**	**N_2O**	**CO_2e**
2024	233	0.01	0.01	235
2025	174	0.01	<0.01	176
Total Construction Emissions	407	0.02	0.01	**411**
Amortized Construction Emissions[1] (30 years)				**13.7**
SCAQMD Draft Threshold				**3,000**
Exceed Threshold?				No

Notes:
[7] Construction emissions amortized over 30 years as recommended in the SCAQMD GHG Working Group on November 19, 2009.
Source: CalEEMod Version 2022.1.

The data provided in Table K**Error! Reference source not found.** above shows that the proposed project's construction activities would generate a total of 411 $MTCO_2e$. According to the SCAQMD recommended GHG emissions analysis methodology, construction-related GHG emissions should be amortized over 30 years, which results in the proposed project creating 13.7 $MTCO_2e$ per year. According to the SCAQMD draft threshold of significance detailed above in Section 8.5, a cumulative global climate change impact would occur if the GHG emissions created from the on-going operations would exceed 3,000 $MTCO_2e$ per year. Therefore, a less than significant generation of greenhouse gas emissions would occur from development of the proposed project. Impacts would be less than significant.

Level of Significance

Less than significant impact.

9.7 Greenhouse Gas Plan Consistency

The proposed project would not conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing GHG emissions. The applicable plan for the proposed project is the Redlands CAP that was prepared pursuant to Section 15183.5(b) of the CEQA Guidelines to be utilized as a tiering document for the General Plan as well as future projects within the City that are consistent with the General Plan. Since the proposed project is consistent with the General Plan, the proposed project meets the criteria allowed for use of the Redlands CAP for analysis of the proposed project.

In addition, as detailed above in Section 9.6, the proposed project is anticipated to create 13.7 $MTCO_2e$ per year, which is well below the SCAQMD threshold of significance of 3,000 $MTCO_2e$ per year. The SCAQMD developed this threshold in order to meet the State GHG emissions reduction regulations that was based on substantial evidence supporting the use of the recommended thresholds. Therefore, the

proposed project would not conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases.

Level of Significance

Less than significant impact.

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	25.9	annual days of extreme heat
Extreme Precipitation	3.25	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	8.54	annual hectares burned

2548 of 2822

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Regular Meeting of 07-16-24

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	3	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Packet Pg. 2236

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	3	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A

Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract

APPENDIX B – BIOLOGICAL RECONNAISSANCE ASSESSMENT

Biological Reconnaissance Assessment the Sunset Reservoir Water Storage Tank Project

City of Redlands

September 21, 2023
3151 Airway Ave., Suite F-208
Costa Mesa, CA 92626

City of Redlands
Municipal Utilities and Engineering Department

Subject: Biological Reconnaissance Assessment for Report regarding the Sunset Reservoir Water Storage Tank Project, Redlands, California

Chambers Group, Inc. (Chambers Group) was retained by the City of Redlands Municipal Utilities and Engineering Department to conduct a literature review and biological reconnaissance-level survey for the Sunset Reservoir Project (Project). The purpose of this survey was to document existing vegetation communities, identify special status species with a potential for occurrence, map habitats that could support special status wildlife species, and evaluate potential impacts of the Project to these resources.

Project Site Location and Description

The City of Redlands Municipal Utilities and Engineering Department proposes the construction of two new reservoir tanks to improve drought resiliency by increasing storage capacity. Based on the water needs of the City, the Project proposes to install two new above ground factory-coated bolt carbon steel tank with an approximately 14 million gallon (MG) total capacity

The 21.91-acre Project site is located south of Helen Drive, in Redlands, San Bernardino County, California within Assessor's Parcel Numbers (APN) 0300-451-13, 14, 24, and 25. The existing reservoir is located west of Helen Court. The site is located within the United States Geological Survey (USGS) *Redlands,* California 7.5-minute topographic quadrangle. The proposed temporary reservoir will be located east of the existing reservoir. Both the existing reservoir and the proposed Project site are within City property. The reservoirs will be located within APN 0300-451-25 and 0300-451-14, consisting of approximately 10.28 acres. The elevational range of the Project site is between 2,100 to 2,300 feet above mean sea level (amsl). A map of the Project location and Project vicinity is provided in Attachment 1: Figure 1.

Literature Review

Prior to performing the biological reconnaissance survey, a literature review was conducted for soils, jurisdictional water features that contribute to hydrology, and special status species known to occur within the Project's vicinity (approximately 5 miles).

Soils

Prior to performing the biological reconnaissance survey, soil maps for the Project site were referenced in accordance with categories set forth by the U.S. Department of Agriculture (USDA) Soil Conservation Service and the USDA Natural Resources Conservation Service (NRCS 2023) Web Soil Survey (USDA 2023).

Hydrology

Prior to performing the field survey, a database review of the U.S. Fish and Wildlife Service's (USFWS 2023) National Wetlands Inventory (NWI) and National Hydrography Database (NHD) blueline drainages was referenced (NHD 2023). A general assessment of waters potentially regulated by the U.S. Army Corps of Engineers (USACE), California Regional Water Quality Control Board (RWQCB), and California Department of Fish and Wildlife (CDFW) was conducted for the Project siteProject site. Pursuant to Section 404 of the Clean Water Act, USACE regulates the discharge of dredged and/or fill material into waters of the United States. The State of California (State) regulates discharge of material into waters of the State pursuant to Section 401 of the Clean Water Act and the California Porter-Cologne Water Quality

Control Act (California Water Code, Division 7, §13000 et seq.). Pursuant to Division 2, Chapter 6, Sections 1600-1602 of the California Fish and Game Code, CDFW regulates all diversions, obstructions, or changes to the natural flow or bed, channel, or bank of any river, stream, or lake which supports fish or wildlife. A desktop assessment was conducted of available data prior to the biological reconnaissance survey in the field.

Special Status Habitats and Species

The most recent records of the California Natural Diversity Database (CNDDB) managed by CDFW (2023) and the California Native Plant Society's Electronic Inventory (CNPSEI) of Rare and Endangered Vascular Plants of California (CNPS 2023) were reviewed for the following USGS 7.5-minute quadrangles containing and surrounding the Project: *Yucaipa, San Bernardino South, Redlands, Harrison Mtn., San Bernardino North, Keller Peak, Sunnymead, El Casco,* and *Riverside East*. These databases contain records of reported occurrences of federally or State-listed endangered or threatened species, California Species of Special Concern (SSC), or otherwise special status species or habitats that may occur within or in the immediate vicinity of the Project site (Attachment 1: Figure 2 – CNDDB Occurrences Map).

Biological Reconnaissance Survey

The biological reconnaissance survey was conducted on foot within the Project site. During the survey, the biologists identified and mapped all vegetation communities found within the site onto aerial photographs (Attachment 1: Figure 3 – Vegetation Communities Map). Plant communities were determined in accordance with the *Manual of California Vegetation, Second Edition* (Sawyer et al. 2009). Plant nomenclature follows that of *The Jepson Manual, Vascular Plants of California, Second Edition* (Baldwin et al. 2012). Plant and wildlife species observed or detected within the Project site were recorded (Attachments 2 and 3). Site photographs were taken depicting current site conditions (Attachment 4).

Results

Chambers Group biologists Heather Franklin and Jessica Calvillo conducted the biological reconnaissance survey within the Project site to identify vegetation communities, the potential for occurrence of special status species, and/or habitats that could support special status wildlife species. The survey was conducted on foot between 0830 and 1530 hours on July 31, 2023. Weather conditions during the survey included temperatures ranging from 80 to 92 degrees Fahrenheit, wind speeds between 1 and 3 miles per hour, with 60 percent cloud cover and 0 percent precipitation.

Biological Site Conditions

Soils

According to the results from the USDA NRCS Web Soil Survey (USDA 2023), the Project site is in the San Bernardino County Southwestern Part CA677 of the soil map. Two soil types are known to occur within and/or adjacent to the site. The soil types are described below (Attachment 1: Figure 4 – Soils Map).

Ramona sandy loam, 15 to 30 percent slopes, eroded occurs within a small northern section of the Project site. The parent material is alluvium derived from granite. The soil profile is sandy loam at the H1 layer (0 to 23 inches), loam at the H2 layer (23 to 32 inches), clay loam at the H3 layer (32 to 54 inches), and sandy loam at the H4 layer (54 to 60 inches). The available water storage is classified as moderate (approximately 7.9 inches) with a depth to the water table of more than 80 inches (USDA 2023).

Saugus sandy loam, 30 to 50 percent slopes occurs within the majority of the Project site. The parent material is Residuum weathered from sedimentary rock. The soil profile is sandy loam at the H1 layer (0 to 8 inches), loam at the H2 layer (8 to 40 inches), and weathered bedrock at the H3 layer (40 to 44 inches). The available water storage is classified as moderate (approximately 6.0 inches) with a depth to the water table of more than 80 inches (USDA 2023).

Hydrology

The Project is located within the Upper Santa Ana River Watershed (Hydrologic Unit Code [HUC 10] 1807020304) (USDA 2023) in San Bernardino County, California. The Upper Santa Ana River Watershed is bound to the north and east by mountains and southwest by the Pacific Ocean. The Santa Ana River is the major water source for the Upper Santa Ana River Watershed. The headwaters of the Santa Ana River are located in the San Bernardino Mountains. These waters ultimately end in the Pacific Ocean, a Traditional Navigable Water. Mill Creek, City Creek, San Timoteo Creek are all tributaries to the Santa Ana River Watershed. Lytle Creek is the largest tributary that feeds in from the San Gabriel Mountains to the north down through Riverside County.

No jurisdictional features such as drainages or swales were observed within the Project site (Attachment 1: Figure 5 – Jurisdictional Waters Map) during the survey. Three large NWI blue-line features and several additional NHD tributaries are shown to occur directly east, south, and west of the site outside of the Project boundary. These features are historically mapped by the NWI/NHD as riverine systems flowing away from the Project site. One NHD ephemeral feature is shown to flow west to east through the Project site and appears to connect to the mapped NWI blue-line feature just east of the Project boundary. However, during the survey, no defined channelization or bank to bank was observed in the area of the NHD feature. No bed and bank features were identified within the Project site. Work is anticipated to occur on the top of the slope near the existing water tank and no impacts are anticipated to occur outside of the Project boundary or to the NWI drainage features; therefore, with the implementation of Best Management Practices (BMPs) such as installation of silt fencing and/or weed free straw waddles to prevent sediment from traveling downhill, no impacts to waters of the United States or waters of the State are anticipated to occur as a result of this Project.

Vegetation Communities and Other Areas

Four native vegetation communities, California Buckwheat Scrub, Disturbed California Buckwheat Scrub, Hoary Leaf Ceanothus Chaparral, and Disturbed Hoary Leaf Ceanothus Chaparral, and three other areas, Bare Ground, Developed, and Ruderal were found within the Project site during the biological reconnaissance survey. The majority of the Project site is comprised of Disturbed Hoary Leaf Ceanothus Chaparral. The communities are described in the following subsections.

California Buckwheat Scrub

California Buckwheat Scrub is found in upland slopes, intermittently flooded arroyos, channels and washes, and rarely flooded low-gradient deposits. Soils are coarse, well drained, and moderately acidic to slightly saline (Sawyer et al. 2009). Stands do well on rocky sites and in shallow soils, and they establish after disturbance by fire or flood or after heavy grazing. In southern coastal California, this alliance is usually one of the first of the coastal scrubs to establish in mechanically disturbed areas such as road cuts or slope failures, and it persists in areas with light to moderate grazing (Sawyer et al. 2009). In this vegetation community, California buckwheat (*Eriogonum fasciculatum*) or yucca (*Hesperoyucca whipplei*) is dominant or co-dominant in the shrub canopy in cismontane stands with California sagebrush (*Artemisia californica*), coyote brush (*Baccharis pilularis*), sticky monkeyflower (*Diplacus aurantiacus*), brittlebush sunflower (*Encelia californica*), brittlebush (*Encelia farinosa*), coast goldenbush (*Isocoma menziesii*), deerweed (*Acmispon glaber*), white sage (*Salvia apiana*), or black sage (*Salvia mellifera*). The herbaceous layer is variable and may be grassy (Sawyer et al. 2009).

Areas with California Buckwheat Scrub vegetation are present within 0.61 acre of the Project site within several small pockets on site. Native plant species found on the Project site typical of this vegetation community included: California buckwheat, California sagebrush, deerweed, black sage, twiggy wreathplant (*Stephanomeria virgata*), sand-aster (*Corethrogyne filaginifolia*), and slender sunflower (*Helianthus gracilentus*) with occasional scattered chamise (*Adenostoma fasciculatum*) and hoary leaf ceanothus (*Ceanothus crassifolius*) also present. Non-native species

included: shortpod mustard (*Hirschfeldia incana*), tocalote (*Centaurea melitensis*), wild oat (*Avena fatua*), foxtail chess (*Bromus madritensis* subsp. *madritensis*), and Russian thistle (*Salsola tragus*).

Disturbed California Buckwheat Scrub

A disturbed form of California Buckwheat Scrub is present within 1.04 acres of the Project site within several small pockets adjacent to undisturbed California Buckwheat Scrub. Disturbed areas have a high percentage of non-native weedy species (i.e., greater than 25 percent of the species cover). Native plant species found on the Project site typical of this vegetation community included: California buckwheat, California sagebrush, deerweed, black sage, twiggy wreathplant, sand-aster, and slender sunflower with a 25 percent cover of non-native species including shortpod mustard, tocalote, wild oat, foxtail chess, and Russian thistle.

Hoary Leaf Ceanothus Chaparral

Hoary Leaf Ceanothus Chaparral can be found on slopes, often south-facing with soils that are typically shallow and rocky (Sawyer et al. 2009). Hoary leaf ceanothus is dominant or co-dominant in the shrub canopy with chamise, big berry manzanita (*Arctostaphylos glauca*), chaparral whitethorn (*Ceanothus leucodermis*), mountain mahogany (*Cercocarpus betuloides*), sticky monkeyflower, California buckwheat, chaparral yucca, toyon (*Heteromeles arbutifolia*), chaparral beard tongue (*Keckiella antirrhinoides*), laurel sumac (*Malosma laurina*), scrub oak (*Quercus berberidifolia*), sugarbush (*Rhus ovata*) and black sage. Membership rules state that both hoary leaf ceanothus and chamise have a 30 to 60 percent relative cover in the shrub canopy (Sawyer et al. 2009). Emergent trees may be present at low cover, including coast live oak (*Quercus agrifolia*). The shrub canopy is typically less than 11 feet and is intermittent to continuous with an herbaceous layer that is open (Sawyer et al. 2009).

Areas with Hoary Leaf Ceanothus Chaparral vegetation are present within 3.79 acres of the Project site along the slopes. Native plant species found on the Project site typical of this vegetation community included: hoary leaf ceanothus, chaparral whitethorn, chamise, California buckwheat, black sage, scrub oak, skunk bush (*Rhus aromatica*), sacapellote (*Acourtia microcephala*), southern honeysuckle (*Lonicera subspicata*), and spiny redberry (*Rhamnus crocea*). Non-native species included: shortpod mustard, tocalote, wild oat, foxtail chess, and Russian thistle.

Disturbed Hoary Leaf Ceanothus Chaparral

A disturbed form of Hoary Leaf Ceanothus Chaparral is present within 7.94 acres of sloping areas of the Project site. Disturbed areas are those areas that have a high percentage of non-native weedy species (i.e., greater than 25 percent of the species cover). Native plant species found on the Project site typical of this vegetation community included: hoary leaf ceanothus, chaparral whitethorn, chamise, California buckwheat, black sage, scrub oak, skunk bush, sacapellote, southern honeysuckle, and spiny redberry with approximately 25 percent cover of non-native species including shortpod mustard, tocalote, wild oat, foxtail chess, and Russian thistle.

Other Areas

Developed

Developed areas are areas that have been altered by humans and now display man-made structures such as houses, paved roads, buildings, parks, and other maintained areas.

Developed areas are present within the Project site along an eroding asphalt path that cuts through the center of the Project site. There are 0.23 acre of Developed areas on the Project Site. These areas were devoid of vegetation.

Bare Ground

Bare Ground areas are generally devoid of vegetation, but do not contain any form of pavement or other developed structures. Bare Ground has higher water permeability. Areas with Bare Ground are found within 1.46 acres of the Project site bordering the southern portions of the site and adjacent to the existing water tower outside of the Project Site.

Ruderal

Areas classified as Ruderal tend to be dominated by pioneering herbaceous species that readily colonize disturbed ground and that are typically found in temporary, often frequently disturbed habitats (Barbour et al. 1999). The soils in ruderal areas are typically characterized as heavily-compacted or frequently-disturbed. The vegetation in these areas is adapted to living in compact soils where water does not readily penetrate the soil. Often, Ruderal areas are dominated by species of the *Centaurea, Brassica, Malva, Salsola, Eremocarpus, Amaranthus*, and *Atriplex* genera.

Areas with Ruderal vegetation were present within the Project site along the slopes and bordering Bare Ground areas. Ruderal plant species found on the Project site included: shortpod mustard, tocalote, wild oat, foxtail chess, and Russian thistle. Scattered native species present in low abundance included twiggy wreathplant, sand-aster, and slender sunflower. There are 6.84 acres of Ruderal vegetation on the Project site.

General Plants

A total of 23 plant species were observed within the Project site during the biological reconnaissance survey (Attachment 2: Plant Species Observed). Plant species observed during the survey were representative of the existing Project site conditions. No special status plant species were observed during the survey.

General Wildlife

A total of 16 wildlife species were observed within the Project site during the biological reconnaissance survey. Wildlife species observed or detected during the survey were characteristic of the existing Project site conditions. A complete list of wildlife species observed or detected is provided in Attachment 3 – Wildlife Species Observed/Detected List.

Special Status Species

The following information is a list of abbreviations used to help determine special status biological resources potentially occurring in the Project site.

CNPS California Rare Plant Rank (CRPR)

1A	=	Plants presumed extinct in California.
1B	=	Plants rare and endangered in California and throughout their range.
2	=	Plants rare, threatened or endangered in California but more common elsewhere in their range.
3	=	Plants about which we need more information, a review list.
4	=	Plants of limited distribution; a watch list.

CRPR Extensions

0.1	=	Seriously endangered in California (greater than 80 percent of occurrences threatened/high degree and immediacy of threat).
0.2	=	Fairly endangered in California (20 to 80 percent occurrences threatened).
0.3	=	Not very endangered in California (less than 20 percent of occurrences threatened).

Federal

FE	=	Federally listed; Endangered
FT	=	Federally listed; Threatened

State

ST	=	State listed; Threatened
SE	=	State listed; Endangered

RARE	=	State listed; Rare (Listed "Rare" animals have been re-designated as Threatened, but Rare plants have retained the Rare designation.)
SSC	=	State Species of Special Concern
WL	=	CDFW Watch List
FP	=	CDFW Fully Protected

The following information was used to determine biological resources potentially occurring within the Project site. The criteria used to evaluate the potential for special status species to occur within the Project site are outlined in Table 1.

Table 1: Criteria for Evaluating Special Status Species Potential for Occurrence (PFO)

PFO*	CRITERIA
Absent:	Species is restricted to habitats or environmental conditions that do not occur within the proposed Project site.
Low:	Either historical records for this species do not exist within the vicinity (approximately 5 miles) of the proposed Project site, and/or habitats or environmental conditions needed to support the species are of poor quality, or historical records for this species do exist within the vicinity (approximately 5 miles) of the proposed Project site, and habitats or environmental conditions needed to support the species are of poor quality.
Moderate:	Either a historical record exists of the species within the vicinity of the proposed Project site (approximately 5 miles) and habitat exists on the proposed Project site, or the habitat requirements or environmental conditions associated with the species occur within the proposed Project site, but no historical records exist within 5 miles of the proposed Project site.
High:	Both a historical record exists of the species within the proposed Project site or its immediate vicinity (approximately 1 mile), and the habitat requirements and environmental conditions associated with the species occur within the proposed Project site.
Present:	Species was detected within the proposed Project site at the time of the survey.

*PFO: Potential for Occurrence

Special Status Plant Species

Database searches (CDFW 2023; CNPS 2023) resulted in a list of 52 federally and/or State-listed threatened, endangered, or otherwise special status plant species documented to historically occur within the vicinity of Project site. Of the 52 plant species, it was determined that 43 plant species are considered **Absent**, one considered to have **Low** potential to occur, and 8 are considered to have a **Moderate** potential to occur within the Project site. No special status plant species were found during the biological reconnaissance survey.

The following 4 plant species are considered **Absent** from the Project site because the species are presumed extinct (CRPR 1A) in California, have not been observed within 5 miles of the Project site, and all records of historical occurrence are over 43 years old:

- Los Angeles sunflower (*Helianthus nuttallii* subsp. *parishii*) – CRPR 1A
- Parish's bush-mallow (*Malacothamnus parishii*) – CRPR 1A
- Pringle's monardella (*Monardella pringlei*) – CRPR 1A
- Parish's gooseberry (*Ribes divaricatum* var. *parishii*) – CRPR 1A

The following 37 plant species are considered **Absent** from the Project site due to lack of suitable habitat:

- Mt. Pinos onion (*Allium howellii* var. *clokeyi*) – CRPR 1B.3
- Yucaipa onion (*Allium marvinii*) – CRPR 1B.2
- marsh sandwort (*Arenaria paludicola*) – **FE, SE**, CRPR 1B.1
- Horn's milk-vetch (*Astragalus hornii* var. *hornii*) – CRPR 1B.1
- San Jacinto Valley crownscale (*Atriplex coronata* var. *notatior*) – **FE**, CRPR 1B.1
- Davidson's saltscale (*Atriplex serenana* var. *davidsonii*) – CRPR 1B.2
- thread-leaved brodiaea (*Brodiaea filifolia*) – **FT, SE**, CRPR 1B.1
- Palmer's mariposa-lily (*Calochortus palmeri* var. *palmeri*) – CRPR 1B.2
- bristly sedge (*Carex comosa*) – CRPR 2B.1
- ash-gray paintbrush (*Castilleja cinerea*) – **FT**, CRPR 1B.2
- San Bernardino Mountains owl's-clover (*Castilleja lasiorhyncha*) – CRPR 1B.2
- smooth tarplant (*Centromadia pungens* subsp. *laevis*) – CRPR 1B.1
- salt marsh bird's-beak (*Chloropyron maritimum* subsp. *maritimum*) - **FE, SE**, CRPR 1B.2
- white-bracted spineflower (*Chorizanthe xanti* var. *leucotheca*) – CRPR 1B.2
- Peruvian dodder (*Cuscuta obtusiflora* var. *glandulosa*) – CRPR 2B.2
- San Bernardino Mountains monkeyflower (*Erythranthe exigua*) – CRPR 1B.2
- hot springs fimbristylis (*Fimbristylis thermalis*) – CRPR 2B.2
- Alvin Meadow bedstraw (*Galium californicum* subsp. *primum*) – CRPR 1B.2
- Parish's alumroot (*Heuchera parishii*) – CRPR 1B.3
- California satintail (*Imperata brevifolia*) – CRPR 2B.1
- silver-haired ivesia (*Ivesia argyrocoma* var. *argyrocoma*) – CRPR 1B.2
- Coulter's goldfields (*Lasthenia glabrata* subsp. *coulteri*) – CRPR 1B.1
- lemon lily (*Lilium parryi*) – CRPR 1B.2
- mud nama (*Nama stenocarpa*) – CRPR 2B.2
- Gambel's water cress (*Nasturtium gambelii*) – **FE, ST**, CRPR 1B.1
- San Bernardino ragwort (*Packera bernardina*) – CRPR 1B.2
- Sonoran maiden fern (*Pelazoneuron puberulum* var. *sonorense*) – CRPR 2B.2
- Parish's yampah (*Perideridia parishii* subsp. *parishii*) – CRPR 2B.2
- black bog-rush (*Schoenus nigricans*) – CRPR 2B.2
- Parish's checkerbloom (*Sidalcea hickmanii* subsp. *parishii*) – CR, CRPR 1B.2
- Bear Valley checkerbloom (*Sidalcea malviflora* subsp. *dolosa*) – CRPR 1B.2
- salt spring checkerbloom (*Sidalcea neomexicana*) – CRPR 2B.2
- bird-foot checkerbloom (*Sidalcea pedata*) – **FE, SE**, CRPR 1B.1
- prairie wedge grass (*Sphenopholis obtusata*) – CRPR 2B.2
- southern jewelflower (*Streptanthus campestris*) – CRPR 1B.3
- San Bernardino aster (*Symphyotrichum defoliatum*) – CRPR 1B.2
- Wright's trichocoronis (*Trichocoronis wrightii* var. *wrightii*) – CRPR 2B.1

The following two plant species are considered **Absent** because their size and stature would have made them conspicuous during the reconnaissance-level survey and they were not observed within the Project site.

- Parish's desert-thorn (*Lycium parishii*) – CRPR 2B.3

- Nevin's barberry (*Berberis nevinii*) – **FE, SE**, CRPR 1B.1

The following plant species is considered to have a **Low** potential for occurrence within the Project site as historical records of this species known to occur within the vicinity of the proposed Project site (approximately 5 miles) are more than 20 years old, but habitats or environmental conditions needed to support the species are present.

- slender-horned spineflower (*Dodecahema leptoceras*) – **FE, SE**, CRPR 1B.1

The following 6 plant species are considered to have a **Moderate** potential for occurrence within the proposed Project site because the habitat requirements or environmental conditions associated with the species occur within the Project site, but no historical records exist within 5 miles of the Project site.

chaparral sand-verbena (*Abronia villosa* var. *aurita*) – CRPR 1B.1

Chaparral sand-verbena is a CRPR 1B.1 species. This perennial herb is in the Nyctaginaceae family and blooms from March to September and sometimes blooms as early as January. It is typically found in sandy soils within chaparral, coastal scrub, and desert dune habitats at elevations between 245 and 5,250 feet amsl. The known range includes Imperial, Orange, Riverside, San Bernardino, and San Diego counties. Chaparral sand-verbena is potentially threatened by non-native plants, alteration of fire regimes, road maintenance, flood control activities, vehicles, and development. The survey was conducted within the flowering period of this species when it would have been identifiable; however, due to the species' small stature and the Project's size and topography it was not observed within the scope of the reconnaissance-level survey. No historical records of this species have been found within 5 miles of this site, but appropriate chaparral and coastal scrub habitat with sandy soil is present on the Project site. Therefore, there is a **Moderate** potential for this species to occur within the Project site.

Jaeger's milk-vetch (*Astragalus pachypus* var. *jaegeri*) – CRPR 1B.1

Jaeger's milk-vetch is a CRPR 1B.1 species. This perennial shrub is in the Fabaceae family and blooms from December to June. It is typically found in soils that are sometimes rocky or sandy within chaparral, cismontane woodland, coastal scrub, and valley and foothill grassland habitats at elevations between 1,200 and 3,200 feet amsl. The known range includes Riverside and San Diego counties. Jaeger's milk-vetch is potentially threatened by urbanization, vehicles, road maintenance, and agriculture. The survey was conducted outside the flowering period of this species. No historical records of this species have been found within 5 miles of this site but appropriate chaparral and coastal scrub habitat with sandy soil is present on the Project site. Therefore, there is a **Moderate** potential for this species to occur within the Project site.

mesa horkelia (*Horkelia cuneata* var. *puberula*) – CRPR 1B.1

Mesa horkelia is a CRPR 1B.2 species. This perennial herb is in the Rosaceae family and blooms from February to September. It is typically found in sandy or gravelly soils, within maritime chaparral, cismontane woodland, and coastal scrub habitats at elevations between 230 and 2,657 feet amsl. The known range includes Los Angeles, Orange, Riverside, Santa Barbara, San Bernardino, San Diego, San Luis Obispo, and Ventura counties. Further study is required to confirm status of occurrences and for true species representation. Mesa horkelia is potentially threatened by habitat conversion. The survey was conducted within the flowering period of this species when it would have been identifiable; however, due to the species' small stature and the Project's size and topography it was not observed within the scope of the reconnaissance-level survey. No historical records of this species have been found within 5 miles of this site but appropriate chaparral and coastal scrub habitat with sandy soil is present on the Project site. Therefore, there is a **Moderate** potential for this species to occur within the Project site.

Hall's monardella (*Monardella macrantha* subsp. *hallii*) – CRPR 1B.3

Hall's monardella is a CRPR 1B.3 species. This perennial rhizomatous herb is in the Lamiaceae family and blooms from June to October. It is typically found in broadleafed upland forest, chaparral, cismontane woodland, lower montane coniferous forest, and valley and foothill grassland habitats at elevations between 2,395 and 7,200 feet amsl. The known range includes Los Angeles, Orange, Riverside, San Bernardino, and San Diego counties. Hall's monardella is threatened by road maintenance and recreational activities. The survey was conducted within the flowering period of this species when it would have been identifiable; however, due to the species' small stature and the Project's size and topography it was not observed within the scope of the reconnaissance-level survey. No historical records of this species have been found within 5 miles of this site, but appropriate chaparral habitat is present on the Project site. Therefore, there is a **Moderate** potential for this species to occur within the Project site.

Brand's star phacelia (*Phacelia stellaris*) – CRPR 1B.1

Brand's star phacelia is a CRPR 1B.1 species. This annual herb is in the Hydrophyllaceae family and blooms from March and June. It is typically found on coastal dunes and coastal scrub habitat at elevations between 5 and 1,310 feet amsl. The known range includes Los Angeles, Orange, Riverside, San Bernardino, and San Diego counties. Brand's star phacelia is potentially threatened by development, foot traffic/trampling, and non-native plant impacts (CNPS 2023). The survey was conducted outside the flowering period of this species. No historical records of this species have been found within 5 miles of this site, but appropriate coastal scrub habitat is present on the Project site. Therefore, there is a **Moderate** potential for this species to occur within the Project site.

chaparral ragwort (*Senecio aphanactis*) – CRPR 2B.2

Chaparral ragwort is a CRPR 2.2 species. It is an annual herb in the Asteraceae family that blooms between January and April. This species occurs in chaparral, cismontane woodland, and coastal scrub in soils that are sometimes alkaline at elevations between 50 and 2,600 feet amsl. The known range of this species exists in Alameda, Contra Costa, Fresno, Los Angeles, Merced, Monterey, Orange, Riverside, Santa Barbara, Santa Clara, San Diego, San Luis Obispo, Solano, and Ventura counties; and on Santa Catalina Island; Santa Cruz Island; Santa Rosa Island; and Baja California. The survey was conducted outside the flowering period of this species. No historical records of this species have been found within 5 miles of this site, but appropriate chaparral and coastal scrub habitat is present on the Project site. Therefore, there is a **Moderate** potential for this species to occur within the Project site.

The following 2 plant species are considered to have a **Moderate** potential for occurrence within the Project site because historical records (within the past 20 years) exist for the species within the vicinity (approximately 5 miles) of the proposed Project site and habitat exists on the Project site.

Parry's spineflower (*Chorizanthe parryi* var. *parryi*) – CRPR 1B.1

Parry's spineflower is a CRPR 1B.1 species. This annual herb is in the Polygonaceae family and blooms from April to June in sandy to gravelly open areas of chaparral and coastal scrub at elevations between 130 to 6,000 feet amsl. Known ranges include Los Angeles, Riverside, and San Bernardino counties. Habitat for Parry's spineflower is rapidly declining due to urbanization and may already be extirpated in Los Angeles County. This species has been previously confused with prostrate spineflower (*Chorizanthe procumbens*) and is often misidentified as this plant. The survey was conducted outside the flowering period of this species. Most recent historical records indicate an extant population has been observed 5 years ago within 4.78 miles of the Project site "approximately 0.75 air mile [northeast] of the junction of Opal Ave with San

Bernardino Ave., Redlands" (CDFW 2023). Therefore, there is a **Moderate** potential for this species to occur within the Project site.

Santa Ana River woollystar (*Eriastrum densifolium* subsp. *sanctorum*) – FE, SE, CRPR 1B.1
Santa Ana River woollystar is a CRPR 1B.1 species. This annual herb is in the Polemoniaceae family and blooms from April to September in sometimes sandy to sometimes gravelly chaparral and alluvial fans within coastal scrub at elevations between 300 to 2,000 feet amsl. Known ranges include Orange, Riverside, and San Bernardino counties. This species is threatened by development, vehicles, foot traffic, sand and gravel mining, hydrological alterations, illegal dumping, road construction, flood control projects, and non-native plants. The survey was conducted within the flowering period of this species when it would have been identifiable; however due to the species' small stature and the Project's size and topography it was not observed within the scope of the reconnaissance-level survey. However, appropriate sandy chaparral habitat occurs within the Project site. Most recent historical records indicate an extant population has been observed 9 years ago within 4.75 miles of the Project site and that "2 plants [were] observed in 2014; 1 flowering and one dormant/dead" (CDFW 2023). Therefore, there is a **Moderate** potential for this species to occur within the Project site.

Special Status Wildlife Species

Database searches (CDFW 2023; USFWS 2023) resulted in a list of 47 federally and/or State listed endangered or threatened, State SSC, or otherwise special status wildlife species documented to occur within the Project site. After a literature review and the assessment of the various habitat types within the Project site, it was determined that **43** special status wildlife species are considered absent and four species have a low potential to occur within the site.

The following 43 wildlife species are considered **Absent** from the Project site due to lack of suitable habitat present within the site, lack of riparian habitat within the vicinity of the site, or no known occurrences within the last 25 years:

- American badger (*Taxidea taxus*) – SSC
- arroyo chub (*Gila orcuttii*) – SSC
- bald eagle (*Haliaeetus leucocephalus*)—**SE**
- burrowing owl (*Athene cunicularia*) – SSC
- California black rail (*Laterallus jamaicensis coturniculus*)—**ST**
- California red-legged frog (*Rana draytonii*) – **FT**, SSC
- coast horned lizard (*Phrynosoma blainvillii*) – SSC
- coastal California gnatcatcher (*Polioptila californica californica*)—**FT**, SSC
- Delhi sands flower-loving fly (*Rhaphiomidas terminates abdominalis*)—**FE**
- least Bell's vireo (*Vireo bellii pusillus*) – **FE, SE**
- lesser long-nosed bat (*Leptonycteris yerbabuenae*) – SSC
- Los Angeles pocket mouse (*Perognathus longimembris brevinasus*) – SSC
- loggerhead shrike (*Lanius ludovicianus*) – SSC
- northwestern San Diego pocket mouse (*Chaetodipus fallax fallax*) – SSC
- pallid bat (*Antrozous pallidus*) – SSC
- pocketed free-tailed bat (*Nyctinomops femorosaccus*) – SSC
- quino checkerspot butterfly (*Euphydryas Editha quino*)—**FE**
- red diamond rattlesnake (*Crotalus ruber*) – SSC
- Riverside fairy shrimp (*Streptocephalus woottoni*) – **FE**
- San Bernardino flying squirrel (*Glaucomys oregonensis californicus*) – SSC

- San Bernardino kangaroo rat (*Dipodomys merriami parvus*)—**FE,** SSC
- Santa Ana speckled dace *(Rhinichthys osculus* ssp. 8) – SSC
- Santa Ana sucker (*Catostomus santaanae*)—**FT**
- San Diego banded gecko (*Coleonyx variegatus abbotti*) – SSC
- San Diego desert woodrat (*Neotoma lepida intermedia*) – SSC
- California glossy snake (*Arizona elegans occidentalis*) – SSC
- southern grasshopper mouse (*Onychomys torridus ramona*) – SSC
- southern mountain yellow-legged frog (*Rana muscosa*) – **FE, SE**
- southern rubber boa (*Charina umbratica*) – ST
- southwestern willow flycatcher (*Empidonax traillii extimus*) – **FE, SE**
- steelhead-Southern California DPS (*Oncorhynchus mykiss irideus* pop.10)—**FE**
- Stephens' kangaroo rat (*Dipodomys stephensi*)—**FT, ST**
- Swainson's hawk (*Buteo swainsoni*)—**ST**
- tricolored blackbird (*Agelaius tricolor*)—**ST**
- two-striped garter snake (*Thamnophis hammondii*) – SSC
- western mastiff bat (*Eumops perotis californicus*) – SSC
- western pond turtle (*Emys marmorata*) – SSC
- western spadefoot (*Spea hammondii*) – SSC
- western yellow bat (*Lasiurus xanthinus*) – SSC
- western yellow-billed cuckoo (*Coccyzus americanus occidentails*)**—FT, SE**
- white-eared pocket mouse (*Perognathus alticola alticola*) – SSC
- yellow-breasted chat (*Icteria virens*) – SSC
- yellow warbler (*Setophaga petechia*) – SSC

The analysis of the CNDDB search and field survey resulted in four species with a **low** potential to occur directly adjacent to the Project site.

- coast patch-nosed snake (*Salvadora hexalepis virgultea*) – SSC
- coastal whiptail (*Aspidoscelis tigris stejnegeri*) – SSC orange-throated whiptail (*Aspidoscelis hyperythra*) SSC
- southern California legless lizard (*Anniella stebbinsi*) – SSC

United States Fish Wildlife Service Critical Habitat

Critical Habitat is defined as areas of land, water, and air space containing the physical and biological features essential for the survival and recovery of endangered and threatened species. Designated Critical Habitat includes sites for breeding and rearing, movement or migration, feeding, roosting, cover, and shelter. Designated Critical Habitats require special management and protection of existing resources, including water quality and quantity, host animals and plants, food availability, pollinators, sunlight, and specific soil types. Designated Critical Habitat delineates all suitable habitat, occupied or not, that is essential to the survival and recovery of the species. According to the USFWS Critical Habitat WebGIS map, the Project site does not fall within Designated Critical Habitat (USFWS 2023). Critical habitat for southwestern willow flycatcher occurs approximately 1.85 miles west of the Project site; however, the Project site lacks any riparian habitat or water sources required by this species and therefore, this species is not anticipated to occur with the site.

Special Status Communities

Five special status communities, Riversidian Alluvial Fan Sage Scrub, Southern Coast Live Oak Riparian Forest, Southern Riparian Forest, Southern Sycamore Alder Riparian Woodland, and Southern Willow Scrub were found within 5 miles of the proposed Project site but were not present on or adjacent the proposed Project site.

Conclusions and Recommendations

Hydrology

No USFWS NWI features are present within the Project site. One NHD ephemeral feature is shown to historically flow through the Project site; however, based on the results of the field survey, no defined channelization or bank to bank was observed in the area of the NHD feature and it appears this area just facilitates nuisance flow during rain events and becomes sheet flow at the bottom of the hill and does not appear to connect to any other features downstream. In addition, Project impacts are proposed to occur on the top of the hill near the existing water tower and no work is anticipated to occur along the hillsides. Therefore, no impacts to jurisdictional waters are anticipated to occur as a result of Project activities. In order to minimize temporary impacts along the surrounding hillsides, BMP's including silt fencing and straw waddle are recommended throughout construction activities.

Special Status Plant Species

Following the literature review and after the reconnaissance level field assessment of the various habitat types in the Project site, it was determined that of the 52 special status plant species that have been observed within one of the surrounding quadrangles of the site, 43 are considered **Absent**, one is considered to have a **Low** potential for occurrence, and eight are considered to have a **Moderate** potential to occur within the Project site. No special status plant species were found during the biological reconnaissance survey. Focused protocol-level plant surveys are recommended in order to determine if the one **Low** or eight **Moderate** species with a potential to occur are present on the Project site. Surveys should be conducted during June in order to ensure all species are surveyed during the blooming period.

Special Status Communities

Five special status communities, Riversidian Alluvial Fan Sage Scrub, Southern Coast Live Oak Riparian Forest, Southern Riparian Forest, Southern Sycamore Alder Riparian Woodland, and Southern Willow Scrub were found within 5 miles of the proposed Project site but were not present on the proposed Project site.

Special Status Wildlife Species

Following the literature review and the assessment of the various habitat types within the Project site, it was determined that 43 of 47 special status wildlife species known to occur within the Project site are considered absent due to a lack of suitable habitat for these species. Four species, coastal patch-nosed snake, coastal whiptail, orange-throated whiptail, and southern California legless lizard have been observed within two miles of the site; however, the Project site lacks contains only marginal quality habitat and is not adjacent to any riparian areas, which is often associated with these species. Therefore, these species have a low potential to occur within the Project site and no impacts are anticipated to occur to these species as a result of Project activities. Coastal California gnatcatcher and yellow-billed cuckoo have been recorded within two miles of the site; however, the Project site is composed of low to moderate quality habitat for California gnatcatcher and lacks any riparian habitat required by yellow-billed cuckoo. Therefore, these species are not anticipated to occur within the site. No sensitive wildlife species were observed during the field survey.

To minimize potential impacts to nesting birds protected under the Migratory Bird Treaty Act (MBTA), construction activities should take place outside nesting season (February 1 to August 31) to the greatest extent practicable.

If construction activities occur during nesting season, a preconstruction nesting bird survey should be conducted prior to initiation of ground-disturbing activities. To the maximum extent practicable, a minimum buffer zone around occupied nests should be determined by a qualified biologist to avoid impacts to the active nest. The buffer should be maintained during physical ground-disturbing activities. Once nesting has ceased and the nestlings has fledged, the buffer may be removed.

Please contact me at (949) 261-5414 or hfranklin@chambersgroupinc.com if you have any questions or concerns regarding this report.

Sincerely,

CHAMBERS GROUP, INC.

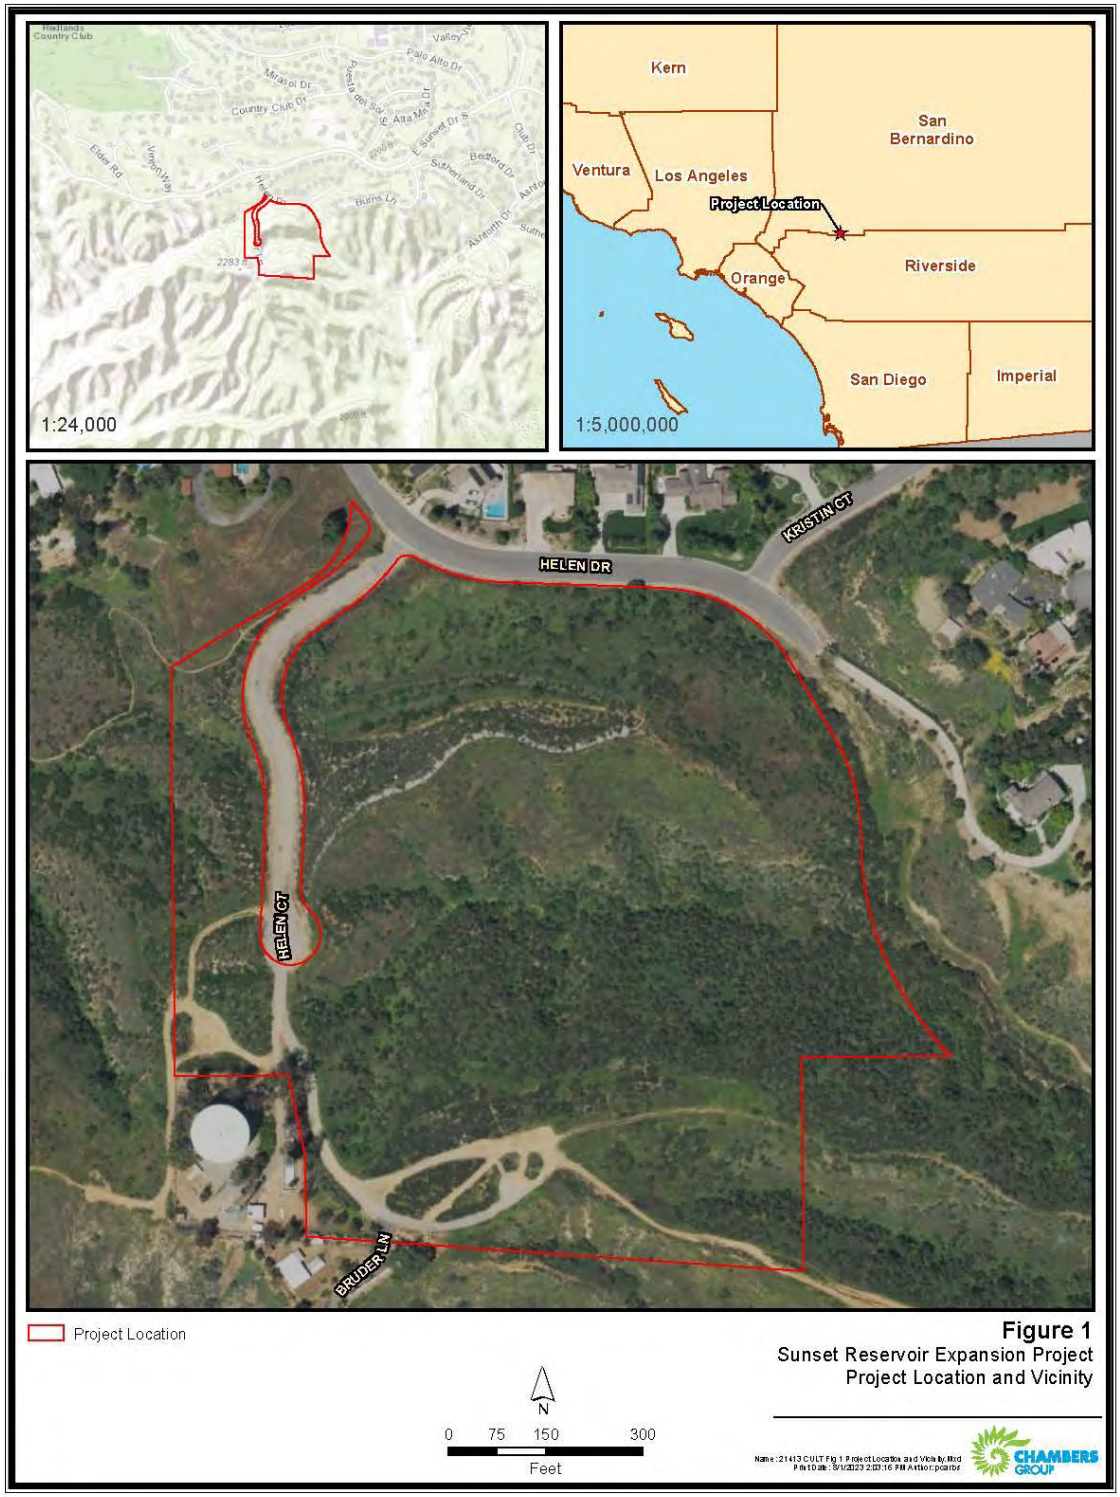
Redlands, CA 92373

Subject: Cultural Resources Survey and Study Letter Report for the Sunset Reservoir Expansion Project, San Bernardino County, California.

Dear Ms. Medina,



Chambers Group provides this Cultural Resources Letter Report to the City of Redlands (City) in support of the proposed Sunset Reservoir Expansion Project (Project) in San Bernardino County, California. This assessment includes the results of a cultural resources survey of the Project site, and a cultural resources records search and literature review of a surrounding half-mile radius (study area) (Figure 1). The purpose of the study is to gather and analyze information needed to assess the potential for impacts to cultural resources within the Project site.

Project Description and Location

The City, acting as Lead Agency, is proposing to construct two new reservoir tanks adjacent to the existing reservoir tank located on Helen Court, near East Sunset Drive in the City of Redlands. The existing reservoir is located west of Helen Court, to the southwest of the Project site. The proposed two new reservoir tanks will be located to the east of the existing reservoir on parcel 0300-451-25 and 0300-451-14. Further Project description details are available within the associated Environmental Document prepared for the Project.

The Project site is located within City property south of Helen Drive, Redlands, San Bernardino County, California 92373, and consists of an approximately 22-acre tract of generally vacant and undeveloped, densely vegetated land. The Project is located in a residential neighborhood within assessor parcel numbers (APNs): 0300-451-13, 0300-451-14, 0300-451-24, and 0300-451-25. The Project is depicted on the United States Geological Survey (USGS) 7.5-minute *Redlands*, California Quadrangle, Township 2 South, Range 2 West, Section 7 (Figure 1). Parcels to the north and northeast of the Project site are developed as residential; land to the south, east, and west are undeveloped aside from the reservoir tank directly to the southwest of the Project site and minimally maintained various access roads.

Figure 1: Project Location

Regulatory Context

As the California Environmental Quality Act (CEQA) lead agency for the Project, the City must determine whether a project may have a significant effect on historical resources (Public Resources Code [PRC] Section 21084.1). In addition to State of California (State) and county regulations, projects in the City are also subject to several local regulations relating to cultural resources. Chapter 2 of the City of Redlands' General Plan pertains specifically to the identification and protection of cultural, historical, archaeological, and paleontological resources within the City. The regulatory framework as it pertains to cultural resources under CEQA is detailed below.

Under the provisions of CEQA, including the CEQA Statutes (PRC §§ 21083.2 and 21084.1), CEQA Guidelines (Title 14 California Code of Regulations [CCR] § 15064.5), and PRC § 5024.1 (Title 14 CCR § 4850 et seq.), properties expected to be directly or indirectly affected by a proposed project must be evaluated for eligibility for listing in the California Register of Historical Resources (CRHR).

California Register of Historical Resources

The purpose of the CRHR is to maintain listings of the State's historical resources and to indicate which properties are to be protected, to the extent prudent and feasible, from material impairment and substantial adverse change. The term *historical resources* include a resource listed in or determined to be eligible for listing in the CRHR; a resource included in a local register of historical resources; and any object, building, structure, site, area, place, record, or manuscript that a lead agency determines to be historically significant (CCR § 15064.5[a]). The criteria for listing properties in the CRHR were expressly developed in accordance with previously established criteria developed for listing in the National Register of Historic Places (NRHP). The California Office of Historic Preservation (OHP 1995:2) regards "any physical evidence of human activities over 45 years old" as meriting recordation and evaluation.

A cultural resource is considered "historically significant" under CEQA if the resource meets one or more of the criteria for listing in the CRHR. The CRHR was designed to be used by State and local agencies, private groups, and citizens to identify existing cultural resources within the State and to indicate which of those resources should be protected, to the extent prudent and feasible, from substantial adverse change. The following criteria have been established for the CRHR. A resource is considered significant if it:

1. is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
2. is associated with the lives of persons important in our past;
3. embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
4. has yielded, or may be likely to yield, information important in prehistory or history.

In addition to meeting one or more of the above criteria, historical resources eligible for listing in the CRHR must retain enough of their historic character or appearance to be able to convey the reasons for their significance. Such integrity is evaluated in regard to the retention of location, design, setting, materials, workmanship, feeling, and association.

Under CEQA, if an archeological site is not a historical resource but meets the definition of a "unique archeological resource" as defined in PRC § 21083.2, then it should be treated in accordance with the provisions of that section. A *unique archaeological resource* is defined as follows:

> An archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

- Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information;
- Has a special and particular quality, such as being the oldest of its type or the best available example of its type; and
- Is directly associated with a scientifically recognized important prehistoric or historic event or person.

Resources that neither meet any of these criteria for listing in the CRHR nor qualify as a "unique archaeological resource" under CEQA PRC § 21083.2 are viewed as not significant. Under CEQA, "A non-unique archaeological resource need be given no further consideration, other than the simple recording of its existence by the lead agency if it so elects" (PRC § 21083.2[h]).

Impacts that adversely alter the significance of a resource listed in or eligible for listing in the CRHR are considered a significant effect on the environment. Impacts to historical resources from a proposed project are thus considered significant if the project:

1. physically destroys or damages all or part of a resource;
2. changes the character of the use of the resource or physical feature within the setting of the resource, which contributes to its significance; or
3. introduces visual, atmospheric, or audible elements that diminish the integrity of significant features of the resource.

Assembly Bill 52

Assembly Bill (AB) 52 was enacted in 2015 and expands CEQA by defining a new resource category: tribal cultural resources (TCR). AB 52 establishes that "a project with an effect that may cause a substantial adverse change in the significance of a TCR is a project that may have a significant effect on the environment" (PRC Section 21084.2). AB 52 also establishes a formal consultation process for California tribes regarding those resources. The consultation process must be completed before a CEQA document can be certified. AB 52 requires that lead agencies "begin consultation with a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project." Native American tribes to be included in the process are those that have requested notice of projects proposed in the jurisdiction of the lead agency. It further states that the lead agency shall establish measures to avoid impacts that would alter the significant characteristics of a TCR, when feasible (PRC Section 21084.3). PRC Section 21074 (a)(1)(A) and (B) define TCRs as "sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe" which meet either of the following criteria:

- Listed or eligible for listing in the CRHR, or in a local register of historical resources as defined in PRC Section 5020.1(k)
- A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of PRC Section 5024.1 (in applying the criteria set forth in subdivision (c) of PRC Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe)

Local

City of Redlands

In addition to State and County regulations, projects built in the City are also subject to several local regulations relating to cultural and paleontological resources. Chapter 2, *Distinctive City*, of the City of Redlands 2035 General Plan outlines principles and actions to protect and preserve Redlands' cultural, historical, archaeological, and paleontological resources within the City (City of Redlands, 2017). Per Chapter 2, Section 2.2, Cultural Resources, of the City of Redlands General Plan, the following sections outline its principles and actions as follows:

Cultural Resources

Principle 2-P.8 Identify, maintain, protect, and enhance Redlands' cultural, historic, social, economic, architectural, agricultural, archaeological, and scenic heritage. In so doing, Redlands will preserve its unique character and beauty, foster community pride, conserve the character and architecture of its neighborhoods and commercial and rural areas, enable citizens and visitors to enjoy and learn about local history, and provide a framework for making appropriate physical changes.

Principle 2-P.9 Provide incentives to protect, preserve, and maintain the city's heritage.

Principle 2-P.10 Foster an understanding and appreciation of history and architecture.

Principle 2-P.11 Encourage retention of the character of existing historic structures and urban design elements that define the built environment of the city's older neighborhoods.

Principle 2-P.12 Encourage retention of historic structures in their original use or reconversion to their original use where feasible. Encourage sensitive, adaptive reuse where the original use is no longer feasible.

Principle 2-P.13 Encourage preservation of and public access to defined and established significant scenic vistas, viewpoints, and view corridors.

Principle 2-P.14 Coordinate preservation of historic resources with policies designed to preserve neighborhoods and support the affordability of housing in historical structures.

Principle 2-P.15 Balance the preservation of historic resources with the desire of property owners of historic structures to adopt energy efficient strategies.

Principle 2-P.17 Protect archaeological and paleontological resources for their aesthetic, scientific, educational, and cultural values.

Action 2-A.71 Using an annually updated Archaeological Resource Sensitivity Map, review proposed development projects to determine whether a site contains known prehistoric or historic cultural resources and/or to determine the potential for discovery of additional cultural resources.

Action 2-A.72 Require that applicants for projects identified by the South Coastal Information Center as potentially affecting sensitive resource sites hire a consulting archaeologist to develop an archaeological resource mitigation plan and to monitor the project to ensure that mitigation measures are implemented.

Action 2-A.73 Require that areas found during construction to contain significant historic or prehistoric archaeological artifacts be examined by a qualified consulting archaeologist (RPA certified) or historian for appropriate protection and preservation.

Action 2-A.74 Proactively coordinate with the area's native tribes in the review and protection of any tribal cultural resources discovered at development sites.

Paleontological Resources

Principle 2-P.16 Work with local paleontologists to identify significant non-renewable paleontological resources.

Principle 2-P.17 Protect archaeological and paleontological resources for their aesthetic, scientific, educational, and cultural values.

Action 2-A.75 Require, as a standard condition of approval, that project applicants provide an assessment as to whether grading for the Proposed Project would impact underlying soil units or geologic formations that have a moderate to high potential to yield fossiliferous materials, prior to issuance of a grading permit. If the potential for fossil discovery is moderate to high, require applicants to provide a paleontological monitor during rough grading of the project.

Action 2-A.76 Establish a procedure for the management of paleontological materials found onsite during a development, including the following provisions:

- If materials are found on-site during grading, require that work be halted until a qualified professional evaluates the find to determine if it represents a significant paleontological resource.
- If the resource is determined to be significant, the paleontologist shall supervise removal of the material and determine the most appropriate archival storage of the material.
- Appropriate materials shall be prepared, catalogued, and archived at the applicant's expense and shall be retained within San Bernardino County if feasible.

Environmental Setting

The City of Redlands is situated at the base of the San Bernardino Mountains, located in southwest San Bernardino County in Southern California. The city is situated between the northern margin of the Peninsular Range Geomorphic Province and the Transverse Ranges Geomorphic Province and lies within the broad alluvial flood plain derived from Santa Ana River deposits and eroding mountain hillsides (Morton and Miller 2006). The topography of the Project site is characterized as predominately hilly, with slopes up to 42 degrees, and has an elevation averaging approximately 2,200 feet above mean sea level (AMSL).

The Project site is underlain by older surficial sediments (Qoa) that are weakly indurated alluvial fan deposits derived from local terrains of plutonic rocks. These alluvial fan deposits consist of sand and minor gravel of the Pleistocene age (Dibblee and Minch 2003). The Davis SoilWeb database (2023) describes the soil classification as the San Bernardino County Southwestern Part (CA677) and as Saugus sandy loam (ShF) with 30 to 50 percent slopes.

The Project site is currently vacant, undeveloped land, and is densely vegetated by plant species from the chaparral community. Common native plants typically include oak and scrub oak, sycamore, chamise, cacti, agave, yucca, species of sage, chía, and various grasses (Munz and Keck 1968). The nearest water source is Yucaipa Creek, in Live Oak Canyon, approximately 0.75 miles south of the Project site.

Cultural Setting

Prehistoric Overview

During the twentieth century, many archaeologists developed chronological sequences to explain prehistoric cultural changes within all or portions of Southern California (Moratto 1984; Jones and Klar 2007). A prehistoric chronology was devised for the Southern California coastal region based on early studies and focused on data synthesis that included four horizons: Early Man, Milling Stone, Intermediate, and Late Prehistoric (Wallace 1955, 1978). Although initially lacking the chronological precision of absolute dates (Moratto 1984:159), Wallace's 1955 synthesis has been modified and improved using thousands of radiocarbon dates obtained by Southern California researchers over recent decades (Byrd and Raab 2007:217; Koerper and Drover 1983; Koerper et al. 2002). The prehistoric chronological sequence for Southern California presented below is a composite based on Wallace (1955) and Warren (1968) as well as later studies, including Koerper and Drover (1983).

It is generally believed that human occupation of Southern California began at least 10,000 years before present (BP). The archaeological record indicates that between approximately 10,000- and 6,000-years BP, a predominantly hunting and gathering economy existed, characterized by archaeological sites containing numerous projectile points and butchered large animal bones. The most heavily exploited species were likely those species still alive today. Bones of extinct species have been found but cannot definitively be associated with human artifacts in California, unlike other regions of the continent. Although small animal bones and plant grinding tools are rarely found within archaeological sites of this period, small game and vegetal foods were likely exploited. A lack of deep cultural deposits from this period has been interpreted by some researchers as indicative that the region was occupied by small groups that practiced high residential mobility during this period (Wallace 1978).

The three major periods of prehistory for the greater Los Angeles Basin region have been refined by recent research using radiocarbon dates from archaeological sites in coastal Southern California (Koerper and Drover 1983; Mason and Peterson 1994):

- Millingstone Period (6,000 –1,000 BP, or about 8,000–3,000 years ago)
- Intermediate Period (1,000 BC – AD 650, or 3,000–1,350 years ago)
- Late Prehistoric Period (AD 650 – about AD 1800, or 1,350–200 years ago)

Around 6,000 years BP, a shift in focus from hunting toward a greater reliance on vegetal resources occurred. Archaeological evidence of this trend consists of a much greater number of milling tools (e.g., metates and manos) for processing seeds and other vegetable matter (Wallace 1978). This period, termed by archaeologists as the Millingstone

Period, was a long cultural phase characterized by small, mobile groups that likely relied on a seasonal round of settlements that included both inland and coastal residential bases. Seeds from sage and grasses, rather than acorns, provided calories and carbohydrates. Faunal remains from sites dating to this period indicate that similar animals to those in the prior period were hunted. Inland Millingstone sites are characterized by numerous manos, metates, and hammerstones. Shell middens are common at coastal Millingstone sites. Coarse-grained lithic materials, such as quartzite and rhyolite, are more common than fine-grained materials in flaked stone tools from this time. Projectile points are found in archaeological sites from this period, but they are far fewer in number than from sites dating to before 6,000 years BP. An increase in the size of groups and the stability of settlements is indicated by deep, extensive middens at some sites from this period (Wallace 1978).

In sites post-dating roughly 3,000 years BP, archaeological evidence indicates the reliance on both plant gathering and hunting continued but was more specialized and locally adapted to particular environments. Mortars and pestles were added to metates and manos for grinding seeds and other vegetable material. Chipped-stone tools became more refined and specialized, and bone tools appear to be more common. During this period, peoples from the Great Basin began entering Southern California. These immigrants, who spoke a language of the Uto-Aztecan linguistic stock, seem to have displaced or absorbed the earlier population of Hokan-speaking peoples. The exact time of their entry into the region is not known; however, they were present in Southern California during the final phase of prehistory. During this period, population densities were higher than before; and settlement became concentrated in villages and communities along the coast and interior valleys (Erlandson 1994; McCawley 1996). During the Intermediate Period, mortars and pestles appeared, indicating the beginning of acorn exploitation. Use of the acorn – a high-calorie, storable food source – probably facilitated greater sedentism and increased social organization. Large projectile points from archaeological sites of this period indicate that the bow and arrow, a hallmark of the Late Prehistoric Period, had not yet been introduced, and hunting was likely accomplished using the atlatl (spear thrower) instead. Settlement patterns during this time are not well understood. The semi-sedentary settlement pattern characteristic of the Late Prehistoric Period may have begun during the Intermediate Period, although territoriality may not yet have developed because of lower population densities. Regional subcultures also started to develop, each with its own geographical territory and language or dialect (Kroeber 1925; McCawley 1996; Moratto 1984). These were most likely the basis for the groups encountered by the first Europeans during the eighteenth century (Wallace 1978). Despite the regional differences, many material culture traits were shared among groups, indicating a great deal of interaction (Erlandson 1994). The Late Prehistoric Period is better understood than earlier periods largely through ethnographic analogy made possible by ethnographic and anthropological research of the descendants of these groups in the late nineteenth and early twentieth centuries.

Ethnographic Overview

The Project site lies within an area known to be transitionally occupied by the Gabrielino, whose villages stretched from the Pacific coast to the San Bernardino Mountains to the east. The Cahuilla's traditional use area ranged over the entire San Bernardino basin, the San Jacinto Mountains, the Coachella Valley, and portions of the southern Mojave. The Serrano territory included the entire San Bernardino range of mountains, west into the San Gabriel Mountains, south across the San Bernardino Valley, and eastward to near Twentynine Palms.

Historic Overview

Post-European contact history for the state of California is generally divided into three periods: the Spanish Period (1769–1822), the Mexican Period (1822–1848), and the American Period (1848 – present). Briefly, and in very general terms, the Spanish Period encompassed the earliest historic-period explorations of the West, colonization, missionization and proselytization across the western frontier, the establishment of major centers such as Los Angeles and Monterey and a line of missions and presidios with attendant satellite communities, minor prospecting, and a foundational economic structure based on the rancho system. The Mexican Period initiated with a continuation of the same structures; however, commensurate with the political changes that led to the establishment of the Mexican state, the missions and presidios were secularized, the lands parceled, and Indian laborers released. Increased global trade introduced both foreign and American actors into the Mexican economic and political sphere, both coincidentally, and purposefully, smoothing the transition to the American Period. The American Period was ushered in with a momentous influx of people seeking fortune in the Sierra foothills where gold was "discovered" in 1848. By the early 1850s people

from all over the globe had made their way to California. Expansive industries were required to supply the early mining operations, such as forestry products and food networks. Grains, poultry, cattle, and water systems, which were initiated in the early Mexican Period, were intensified into a broad system of ranches and supply networks. Additionally, this period witnessed the development and expansion of port cities to supply hard goods and clothes, animals, and people transported along improved trail and road networks throughout the interior regions of the state. California cycled through boom and bust for several decades until World War I, when the Department of the Navy began porting war ships along the west coast. Subsequently, California has grown and contracted, predominantly around military policy along the west coast and the Pacific Ocean. Following the industrial expansion related to World War II and the Cold War, technology and systems associated have come to fore as economic drivers.

City of Redlands

The City of Redlands, also known in 1900 as "The City of Millionaires" and later as "The City of Beautiful Homes," was founded in 1881 and became incorporated in 1888. Redlands is characterized as the quintessential "big town" with a "small town" feel. For much of its history Redlands was the "Washington Navel Orange Growing Capital of the World" with the citrus industry as the main focus of its economy. Some of the City's most renowned buildings and landmarks are the A.K. Smiley Public Library, a Moorish-style library built in 1898, the University of Redlands, founded in 1907, and the Redlands Bowl, built in 1930 and home of the oldest continuously free outdoor concert series in California (City of Redlands 2023). The City of Redlands boasts a rich historical background and is the home of a variety of historic resources valued by the community. Redlands' early period of growth remains strongly visible in the community today, in the form of mature street trees, citrus groves, and exquisitely detailed historic buildings (City of Redlands 2017).

Study Methods

Chambers Group requested a records search from the California Historical Resources Information System (CHRIS) South-Central Coastal Information Center (SCCIC) at California State University, Fullerton, on March 3, 2023. A records search of the Project site and surrounding study area was requested to provide context and additional information regarding types and extent of resources recorded within the Study area. These data provide the greater basis for this review. The SCCIC returned the records search results on April 11, 2023, providing information on all documented cultural resources and previous archaeological investigations within the study area. Resources consulted during the records search conducted by the SCCIC included the NRHP, California Historical Landmarks (CHL), California Points of Historical Interest (CPHI), California Department of Transportation (Caltrans) Historic Highway Bridge Inventory, the California State Historic Resources Inventory, local registries of historic properties, and a review of available Sanborn Fire Insurance maps as well as historical photographs, maps, and aerial imagery. The task also included a search for potential prehistoric and/or historic burials (human remains) evident in previous site records and/or historical maps. In addition, Chambers Group submitted a request to the Native American Heritage Commission (NAHC) for a review of the Sacred Land Files (SLF) for the Project site and surrounding vicinity. Results of the NACH SLF records search and additional outreach are detailed below and included in Attachment A. The results of the SCCIC records search are also detailed below and included in confidential Attachment B.

Chambers Group also requested a paleontological records search from the Western Science Center (WCS) on April 27, 2023. This information was requested with the intent to provide further context related to the paleontological sensitivity of the area based on known fossil locations identified within the Project site and study area. The paleontological records provide insight into what associated geological formations are most likely to contain fossils as well as the associated depths and placement of the known fossil locals relative to the geological formations in the area. On May 3, 2023, Chambers Group received the results of the paleontological records search. These results are detailed below.

Additionally, a survey of the Project site was conducted on July 31, 2023. The pedestrian survey consisted of a systematic surface inspection of the areas of the Project site that were safely accessible and visible. The Project site was transected at 10-meter intervals to ensure that any evidence of surface-exposed cultural materials and/or evidence of paleontological resources could be identified.

Chambers Group Cultural Resources Department Lead Lucas Tutschulte managed the Project tasks related to cultural resources. Chambers Group cultural resources specialist Eduvijes Davis-Mullens completed the pedestrian survey. Cultural resources specialist Kellie Kandybowicz conducted background research and authored the report. Richard Shultz, MA, RPA, served as Principal Investigator for cultural resources and performed quality control for the report.

Results

Previous Cultural Resources Reports

Based on the records on-file with the SCCIC, nine cultural resource studies have previously been completed within the study area. Table 1 provides further details of these nine studies. Of these nine reports, two bisect the Project site. These projects are bolded in the Table. A map (Figure 2) of the record search results is included in confidential Attachment B.

Table 1: Previous Cultural Resources Studies within a Half-Mile Radius of the Project SIte

Previously Recorded Cultural Resources

Based upon the records search conducted by the SCCIC, two previously recorded cultural resources are recorded within the study area (Table 2). None are located within the Project site. A map (Figure 2) displaying the record search results is included in confidential Attachment B.

Table 2: Previously Recorded Cultural Resources within a Half-Mile Radius of the Project Site

Primary No.	Trinomial	Resource Name	Site Description	Within Project Site?
P-36-007835	CA-SBR-007835H	Alphonso Edwards Redland Hermit	AH02. Foundation/structure pad; AH03. Landscaping/orchard; AH04. Privy/dump/trash scatter; AH05. Well/cistern; AH16. Other	No
P-36-022622		Redlands Country Club Golf Course; 1749 Garden St, Redlands	HP39. Country Club and Golf Course	No

Additional Background Research Results

In addition to the records search review, Chambers Group archaeologists completed background research to determine if any additional historic properties, landmarks, bridges, or other potentially significant or listed properties are located within the Project site or within the study area. This background research included, but was not limited to, the NRHP, California State Historic Property Data Files, California State Historical Landmarks, California Points of Historical Interest, Office of Historic Preservation Archaeological Determinations of Eligibility, historic aerial imagery accessed via NETR Online, Historic U.S. Geological Survey topographic maps, Built Environment Resource Directory (BERD), and Caltrans, and State and local bridge surveys. Additionally, Chambers Group archaeologists reviewed the San Bernardino County Historical Landmarks inventory designated by the County of San Bernardino Cultural Heritage Board as well as the San Bernardino Historical Society and local historical newspaper clippings via Newspapers.com, ProQuest Historical Newspapers.com, and the California Digital Newspaper Collection.

As a result of the records search review and archival research, no previously recorded resources or other listed or potentially significant properties are recorded within the Project site. Based on the review of available historic maps and imagery, the Project site was bisected by a dirt road by at least 1901, as illustrated on the 1901 *Redlands* USGS topographic map. By the mid-1930s, an access route to a water tank to the southwest of the Project site had already been established, as shown in the 1938 aerial photograph and housing development and construction began in the immediate vicinity during the 1960s (NETROnline 2023). The Project site was also partially cleared by 1980 for use during the development of the surrounding housing tracts to the north (NETROnline 2023).

NAHC SLF Search Results

Chambers Group submitted a request for a search of the Sacred Lands Files housed at the California NAHC on March 10, 2023. The results of the search were returned on March 29, 2023, and were negative, stating that the absence of specific site information in the SLF does not indicate the absence of cultural resources in the Project site that still may be impacted by Project development.

Additional consultation with the tribes, as indicated in the NAHC SLF letter (Attachment A), would be required to determine the nature of any existing resources located during ground-disturbing activities. PRC Section 21074 defines a resource as a TCR if it meets either of the following criteria:

1. Listed or eligible for listing in the CRHR, or in a local register of historical resources as defined in PRC Section 5020.1(k)
2. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of PRC Section 5024.1 (in applying the criteria set forth in subdivision (c) of PRC Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe)

The NAHC response provided contact information for 25 Native American tribal contacts that may have information on cultural resources on the Project site (Attachment A). The associated Native American contact list provided contacts from the Agua Caliente Band of Cahuilla Indians, Augustine Band of Cahuilla Mission Indians, Cabazon Band of Mission Indians, Cahuilla Band of Indians, Gabrieleno Band of Mission Indians – Kizh Nation, Los Coyotes Band of Cahuilla and Cupeño Indians, Morongo Band of Mission Indians, Pala Band of Mission Indians, Pechanga Band of Luiseño Indians, Quechan Tribe of the Fort Yuma Reservation, Ramona Band of Cahuilla, Rincon Band of Luiseño Indians, Santa Rosa Band of Cahuilla Indians, Serrano Nation of Mission Indians, Soboba Band of Luiseno Indians, Torres–Martinez Desert Cahuilla Indians, and Yuhaaviatam of San Manuel Nation (formerly the San Manuel Band of Mission Indians).

AB 52 Notification and Tribal Consultation

At this time, Chambers Group assumes the City, as Lead Agency, is conducting AB 52 tribal consultation as necessary for the Project. As such, no details of consultation are included in this document.

Paleontological Resources

On May 3, 2023, Chambers Group received the results of the paleontological records search from the WSC. The results show that no fossil localities are documented directly within the Project site, but there are recorded fossil localities from the same sedimentary deposit that underlays the Project site.

Potential fossil-bearing units are present within the Project site, as stated in the WSC record search results. Based on the records search results, which covered only the records of the WSC, the paleontological sensitivity of the Project site could be considered moderate due to the previously recorded and known fossil localities in the same sedimentary deposits as mapped in the Project site and within the study area (Stoneburg 2023).

The geologic mapping of the region by Dibblee and Minch (2003) indicates the entire Project site is underlain by quaternary alluvial fan deposits of sand and gravel from the Pleistocene epoch. These Pleistocene period deposits are composed of older surficial sediments (Qoa) that are weakly indurated dissected alluvial fan deposits derived from local terrains of plutonic rocks. Pleistocene alluvial units are considered highly sensitive for paleontological resources. The Davis SoilWeb database (2023) describes soils associated with the Project site as Saugus sandy loam (ShF) with 30 to 50 percent slopes, which are part of the San Bernardino County Southwestern Part (CA677) classification. Based on the records search results and review of publicly available geologic mapping, the Project site's underlying sedimentary deposits have potential to yield previously undocumented fossil localities during construction.

Field Survey Results

Chambers Group cultural resources specialist Eduvijes Davis-Mullens conducted the pedestrian survey on July 31, 2023. All areas within the Project site that were safely accessible were surveyed, including proposed construction equipment access and staging areas for the proposed locations for the two new tanks. The western and mid-section areas of the Project site show evidence of disturbance related to previous construction for the existing water tank reservoir access roads, dating to as early as 1938. Additionally, surrounding housing development activity began in the 1960s adding to disturbances along East Sunset Drive South (NETROnline 2023).

The Project site terrain is composed primarily of undeveloped land, with steep slopes averaging a 40-degree angle with dense vegetation. Thus, much of the site was not surveyed intensively due to the safety concerns and the understanding

that there is less potential to encounter intact cultural resources on the surface of steep slopes. The dense vegetation observed on site is mainly composed of chaparral vegetation community species and tall grasses, and further limited access and ground surface visibility. Due to the dense vegetation, much of the Project site was observed with an average of 5 to 10 percent ground surface visibility (Photographs 1, 4, 5). Due to these safety and visibility constraints, approximately 8 acres (roughly 36 percent) of the approximately 22-acre Project site was surveyed intensively with 10-meter transects. Additionally, the maintained access roads and cleared areas within the Project site were observed with 97 to 100 percent visibility (Photographs 2 & 3). These access roads and cleared areas were subject to intensive survey for possible associated historic age items and features as they largely match previous historic age road alignments, leading to the extant reservoir tank adjacent to the southwest corner of the Project site, which can be observed as early as 1938 in historic aerial imagery (NETROnline 2023). Only a sparse collection of modern trash and furniture was observed at the south end of the Project site near Bruner Lane (Photograph 6).

No evidence of cultural or paleontological resources was observed during the field survey.

Photograph 1: Overview of current conditions at Sunset Reservoir Expansion Proposed Project location showing dense vegetation and steep slopes. View to the northeast.

Photograph 2: Access Road leading to reservoir tank to the southwest of the Project site. View to the southwest.

Photograph 3: Overview of current conditions at Sunset Reservoir Expansion Proposed Project location showing vegetation overgrowth on road. View to the east.

Photograph 5: Overview of current conditions at Sunset Reservoir Expansion Proposed Project location showing dense vegetation and steep slopes. View to the southwest.

Photograph 6: Overview of current conditions at Sunset Reservoir Expansion Proposed Project location showing modern debris and disturbance. View to the east.

Discussion

As detailed above, Chambers Group conducted a Project site-specific study that included cultural resources records searches, literature review, and a pedestrian survey for the proposed Project in accordance CEQA, as well as the City's goals and policies regarding the protection of archaeological, tribal, historical, and paleontological resources (City of Redlands 2017). City of Redlands' Chapter 2, Section 2.2 - Cultural Resources policies and actions, which protect the archaeological, paleontological, and historical resources within the City, will be applicable if resources are encountered during the Project.

An archival records search through the CHRIS database at the SCCIC, background research of the Project site, and a field survey were conducted as part of this study. A paleontological records search was also conducted by the WSC. In addition, Chambers Group requested a SLF search from the NAHC to determine the presence or absence of data regarding any known tribal cultural resources reported within the Project site or its study area.

The SCCIC records search identified two previous cultural resources studies that included the Project site; no cultural resources have been recorded within the Project site. The paleontological record search resulted in no documented fossil localities within the Project site. However, the results also indicated fossils localities have been recorded within the study area in the same sedimentary deposits as those mapped underlying the Project site. The NAHC SLF search was negative for documented resources important to the local Tribal groups in the Project site and/or surrounding area.

Additionally, based on the review of available historic maps and imagery, Chambers Group archaeologists observed that the Project site was bisected by a dirt road by the early 1900s, as shown in the 1901 *Redlands* topographic map, and by 1938, as shown in the aerial imagery, slightly rerouted westward for access to a water tank reservoir southwest of the current Proposed Project site. The Project site was also partially cleared by 1980 for use during the development of the surrounding housing tracts to the north (NETROnline 2023).

During the field survey, no evidence of cultural or paleontological resources was observed. While there are no previously recorded cultural or paleontological resources in the Project site, there remains potential to uncover archaeological deposits during construction due to the nature of soil deposition and dense vegetation overgrowth

within areas of the Project site which appear to be previously undisturbed. Due to the mapped geologic formations underlying the Project site known to bear paleontological resources and the known fossil localities provided in the surrounding study area, there remains potential that new fossils could be exposed during the Project.

In summary, Chambers Group found no physical or archival evidence of cultural or paleontological resources within the Project site. While no surficial evidence of prehistoric or historic archaeological resources was observed, the ground surface visibility was limited due to dense vegetation and steep slopes in much of the Project site. While no evidence of paleontological resources was observed during the survey, background research and WSC records indicate moderate sensitivity for fossil localities within the Project site and its study area. Additionally, WSC noted the existence of similar fossil-bearing geologic units mapped underlying the Project site. Finally, although the Project site has evidence of past disturbance and while the potential for encountering intact resources within the upper sediments is low, the possibility of buried resources being identified below surface disturbances is not diminished. Research indicates geologic units known to be fossil-bearing underlay the Project site and could be encountered during Project-related ground-disturbing construction activities. Additionally, due to the surface nature of the previous disturbance and limited surface visibility during survey, there is potential that intact native soil formations, which have been known to bear cultural resources, underly the Project site. Thus, there remains potential that buried cultural and paleontological resources could be encountered during the Project.

Recommendations

Per CEQA Guidelines, the Project should be designed to avoid impacts to cultural resources within the Project site whenever feasible. While Chambers Group did not identify any cultural resources through background research or though survey of the Project site, Chambers Group recommends the following mitigation measures be implemented as part of Project approval to ensure that potential impacts to cultural and paleontological resources are less than significant.

MM CUL-1 The City shall retain the services of a Qualified Archaeologist, meeting the Secretary of the Interior Standards, or County requirements, whichever is the greater. The Qualified Archaeologist shall remain on-call throughout the Project. Upon approval or request by the City, a cultural resources mitigation plan (CRMP) outlining procedures for cultural resources monitoring, mitigation, treatment, and data recovery of any unanticipated discovery shall be prepared for the Project and submitted to the City for review and approval. The development and implementation of the CRMP shall include consultations with the City as well as a requirement that the curation of any significant cultural resources recovered under any scenario shall be through an appropriate repository agreed upon by the City. If the City accepts ownership, the curation location may be revised.

MM CUL-2 In the event of the discovery of previously unidentified and/or potential cultural resources, the City, and/or its Contractor, shall immediately cease all work activities within an area of not less than 50 feet of the discovery. The City or its Contractor shall immediately contact the City and the City-retained on-call Qualified Archaeologist. Except in the case of cultural items that fall within the scope of the California Health and Safety Code 7050.5, CEQA Section 15064.5, or California PRC Section 5097.98, the discovery of any cultural resource within the Project site shall not be grounds for a project-wide "stop work" notice or otherwise interfere with the Project's continuation except as set forth in this mitigation measure. Additionally, any consulting Native American Tribal groups that requested notification of any unanticipated discovery of cultural resources on the Project shall be notified and included in subsequent consultation appropriately. In the event of an unanticipated discovery of cultural resources during construction, the City-retained Qualified Archaeologist shall be contacted to evaluate the significance of the materials prior to resuming any construction-related activities in the vicinity of the find. If a CRMP is prepared for the Project, the protocols for mitigation or treatment of cultural resources will be implemented. If the Qualified Archaeologist determines that the discovery constitutes a significant resource under CEQA and it cannot be avoided, the City shall implement an archaeological data recovery program.

MM-CUL-3 If cultural resources are encountered during the Project, the Qualified Archaeologist shall prepare a report summarizing any and all prehistoric or historic archaeological finds as well as providing follow-up reports of any finds to the SCCIC, as required.

MM PAL-1 Prior to issuance of a grading permit, the City shall be required to obtain the services of a Qualified Project Paleontologist to remain on call for the duration of the proposed ground-disturbing construction activity. The paleontologist selected must be approved by the City. Upon approval or request by the City, a paleontological mitigation plan (PMP) outlining procedures for paleontological data recovery shall be prepared for the Project and submitted to the City for review and approval. The development and implementation of the PMP shall include consultations with the District's Engineering Geologist as well as a requirement that the curation of all specimens recovered under any scenario shall be through an appropriate repository agreed upon by the City. If the District accepts ownership, the curation location may be revised. The PMP shall include developing a multilevel ranking system, or Potential Fossil Yield Classification (PFYC), as a tool to demonstrate the potential yield of fossils within a given stratigraphic unit. The PMP shall outline the monitoring and salvage protocols to address paleontological resources encountered during Project-related ground-disturbing activities, as well as the appropriate recording, collection, and processing protocols to appropriately address any resources discovered.

MM-PAL-2 At the completion of all ground-disturbing activities, the Project Paleontologist shall prepare a final paleontological mitigation report summarizing all monitoring efforts and observations, as performed in line with the PMP, and all paleontological resources encountered, if any, as well as providing follow-up reports of any specific discovery, if necessary.

HUMAN REMAINS – LEGAL REQUIREMENTS In the event that human remains are discovered during ground-disturbing activities, then the proposed Project would be subject to California Health and Safety Code 7050.5, CEQA Section 15064.5, and California PRC Section 5097.98. If human remains are found during ground-disturbing activities, State of California Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to PRC Section 5097.98. In the event of an unanticipated discovery of human remains, the County Coroner shall be notified immediately. If the human remains are determined to be prehistoric, the County Coroner shall notify the NAHC, which shall notify a most likely descendant (MLD). The MLD shall complete the inspection of the site within 48 hours of notification and may recommend scientific removal and nondestructive analysis of human remains and items associated with Native American burials (National Park Service 1983).

Chambers Group is available to assist with any further support or document preparation related to Cultural Resources, including tribal consultation. Please contact the cultural resources staff at the contact information below if you have any questions or comments regarding this report.

NATIVE AMERICAN HERITAGE COMMISSION

March 29, 2023

Kellie Kandybowicz
The Chambers Group, Inc.

Via Email to: kkandybowicz@chambersgroupinc.com

Re: Redlands Sunset Reservoir Project (21413) Project, San Bernardino County

Dear Ms. Kandybowicz:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Cameron.vela@nahc.ca.gov.

Sincerely,

Cameron Vela

Terracon Project No. CB227029

Dear Ms. Medina:

Terracon Consultants, Inc. (Terracon) is pleased to submit the enclosed Phase I Environmental Site Assessment (ESA) report for the above-referenced site. This assessment was performed in accordance with Terracon Proposal No. PCB227029, dated February 7, 2022, and Purchase Order, dated February 14, 2022.

We appreciate the opportunity to be of service to you on this project. In addition to Phase I services, our professionals provide geotechnical, environmental, construction materials, and facilities services on a wide variety of projects locally, regionally and nationally. For more detailed information on all of Terracon's services please visit our website at www.terracon.com. If there are any questions regarding this report or if we may be of further assistance, please do not hesitate to contact us.

Sincerely,
Terracon Consultants, Inc.

EXECUTIVE SUMMARY

This Phase I Environmental Site Assessment (ESA) was performed in accordance with Terracon Proposal No. PCB227029, dated February 7, 2022, and Purchase Order, dated February 14, 2022, and was conducted consistent with the procedures included in ASTM E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* and Client Scope of Work. The ESA was conducted under the supervision or responsible charge of Carl A. Parten, Environmental Professional. Laura S. Hedman performed the site reconnaissance on March 2, 2022.

Findings and Opinions

A summary of findings is provided below. It should be recognized that details were not included or fully developed in this section, and the report must be read in its entirety for a comprehensive understanding of the items contained herein.

Site Description and Use

The site is located at south of Helen Drive, Redlands, San Bernardino County, California 92373, and consists of an approximately 22-acre tract of generally vacant and undeveloped, densely vegetated land (chaparral), located in a residential neighborhood south of Helen Drive. The site is further identified by San Bernardino County Assessor parcel numbers (APNs): 0300-451-13, 0300-451-14, 0300-451-24, and 0300-451-25. At the time of the visual reconnaissance, the site was owned by the Macknet family members.

Historical Information

Based on review of the historical information, the site consisted of undeveloped vacant land from as early as 1899 and has remained relatively unchanged through the present.

The surrounding properties consisted of undeveloped vacant land from as early as 1899. By 1938, the existing water tower was depicted southwest of the site. By 1949, a road (Bruder Lane) appears developed abutting the southern portion of the site. By 1959, existing residential neighborhood developed abuts northwest (130413-130515 East Sunset Drive) and a road depicted east of the site (Kristen Court). The adjoining property to the northeast appeared developed with existing residential homes (13151 Helen Drive) by 1967. By 1975, a residential home developed adjoining south (13202 Bruder Lane). By 1985, road appears developed (Helen Drive), and an existing residential neighborhood developed abuts north and northeast (13039-13087 Helen Drive). The adjoining property to the east was developed with a driveway (Helen Court) and an existing residential home (31280 Helen Court) by 1995. Vacant undeveloped land abuts west, followed by a water tank.

Records Review

Selected federal and state environmental regulatory databases as well as responses from state and local regulatory agencies were reviewed. The site was not identified in the current regulatory

databases. The facilities listed in the databases do not appear to represent RECs to the site at this time, based upon regulatory status, apparent topographic gradient, and/or distance from the site.

Site Reconnaissance

During the site reconnaissance, a concrete storm water discharge pipe and miscellaneous household trash were identified. Based on visual observations, RECs were not identified in connection with the site.

Adjoining Properties

Helen Drive and Sunset Drive abuts the site to the north, followed by residential neighborhood (13039-13087 Helen Drive) and another residential neighborhood (30413-30515 East Sunset Drive). Kristen Court and Helen Court abuts the site to the east, followed by residential neighborhood (13151 Helen Drive and 31280 Helen Court). Bruder Lane abuts the site to the south, followed by a residential home (13202 Bruder Lane).

Significant Data Gaps

No significant data gaps were identified.

Conclusions

We have performed a Phase I ESA consistent with the procedures included in ASTM Practice E 1527-13 of the Macknet Property, located south of Helen Drive, Redlands, San Bernardino County, California 92373, the site, Assessor Parcel Number (APN): 0300-451-13, 0300-451-14, 0300-451-24, and 0300-451-25. RECs or Controlled RECs (CREC) were not identified in connection with the site.

Recommendations

Based on the scope of services, limitations, and conclusions of this assessment, Terracon did not identify RECs or CRECs. As such, no additional investigation is warranted at this time.

1.0 INTRODUCTION

1.1 Site Description

Site Name	Macknet Property
Site Location/Address	South of Helen Drive, Redlands, San Bernardino, California 92373
Land Area	The site is an approximately 22-acres tract of land, identified by APNs: 0300-451-13, 0300-451-14, 0300-451-24, and 0300-451-25.
Site Improvements	The site is generally undeveloped.
Anticipated Future Site Use	Development of a new water tower.
Purpose of the ESA	Acquiring the site.

The location of the site is depicted on Exhibit 1 of Appendix A, which was reproduced from a portion of the Redlands, Yucaipa, El Casco, and Sunnymead, California USGS 7.5-minute series topographic map (2018). The site and adjoining properties are depicted on the Site Diagram, which is included as Exhibit 2 of Appendix A. Acronyms and terms used in this report are described in Appendix F.

1.2 Scope of Services

This Phase I ESA was performed in accordance with Terracon Proposal No. PCB227029, dated February 7, 2022, and Purchase Order, dated February 14, 2022, and was conducted consistent with the procedures included in ASTM E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* and Client Scope of Work. The purpose of this ESA was to assist the client in developing information to identify RECs in connection with the site as reflected by the scope of this report. This purpose was undertaken through user-provided information, a regulatory database review, historical and physical records review, interviews, including local government inquiries, as applicable, and a visual noninvasive reconnaissance of the site and adjoining properties. Limitations, ASTM deviations, and significant data gaps (if identified) are noted in the applicable sections of the report.

ASTM E1527-13 contains a new definition of "migrate/migration," which refers to “the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.” By including this explicit reference to migration in ASTM E1527-13, the Standard clarifies that the potential for vapor migration should be addressed as part of a Phase I ESA. This Phase I ESA has considered vapor migration in evaluation of RECs associated with the site.

1.3 Standard of Care

This ESA was performed in accordance with generally accepted practices of this profession, undertaken in similar studies at the same time and in the same geographical area. We have endeavored to meet this standard of care, but may be limited by conditions encountered during performance, a client-driven scope of work, or inability to review information not received by the report date. Where appropriate, these limitations are discussed in the text of the report, and an evaluation of their significance with respect to our findings has been conducted.

Phase I ESAs, such as the one performed at this site, are of limited scope, are noninvasive, and cannot eliminate the potential that hazardous, toxic, or petroleum substances are present or have been released at the site beyond what is identified by the limited scope of this ESA. In conducting the limited scope of services described herein, certain sources of information and public records were not reviewed. It should be recognized that environmental concerns may be documented in public records that were not reviewed. No ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs. No warranties, express or implied, are intended or made. The limitations herein must be considered when the user of this report formulates opinions as to risks associated with the site or otherwise uses the report for any other purpose. These risks may be further evaluated – but not eliminated – through additional research or assessment. We will, upon request, advise you of additional research or assessment options that may be available and associated costs.

1.4 Additional Scope Limitations, ASTM Deviations and Data Gaps

Based upon the agreed-on scope of services, this ESA did not include subsurface or other invasive assessments, vapor intrusion assessments or indoor air quality assessments (i.e. evaluation of the presence of vapors within a building structure), business environmental risk evaluations, or other services not particularly identified and discussed herein. Credentials of the company (Statement of Qualifications) have not been included in this report but are available upon request. Pertinent documents are referred to in the text of this report, and a separate reference section has not been included. Reasonable attempts were made to obtain information within the scope and time constraints set forth by the client; however, in some instances, information requested is not, or was not, received by the issuance date of the report. Information obtained for this ESA was received from several sources that we believe to be reliable; nonetheless, the authenticity or reliability of these sources cannot and is not warranted hereunder. This ESA was further limited by the following:

- Reasonable attempts were made to contact the local and state regulatory agencies; however, at the issuance of this report, a response from the San Bernardino County Environmental Health/Department of Public Health (EHS/DPH) and the City of Redlands remains pending. Based on a review of historical information and the regulatory databases, the absence of this response does not represent a significant data gap.

An evaluation of the significance of limitations and missing information with respect to our findings has been conducted, and where appropriate, significant data gaps are identified and discussed in the text of the report. However, it should be recognized that an evaluation of significant data gaps is based on the information available at the time of report issuance, and an evaluation of information received after the report issuance date may result in an alteration of our conclusions, recommendations, or opinions. We have no obligation to provide information obtained or discovered by us after the issuance date of the report, or to perform any additional services, regardless of whether the information would affect any conclusions, recommendations, or opinions in the report. This disclaimer specifically applies to any information that has not been provided by the client.

This report represents our service to you as of the report date and constitutes our final document; its text may not be altered after final issuance. Findings in this report are based upon the site's current utilization, information derived from the most recent reconnaissance and from other activities described herein; such information is subject to change. Certain indicators of the presence of hazardous substances or petroleum products may have been latent, inaccessible, unobservable, or not present during the most recent reconnaissance and may subsequently become observable (such as after site renovation or development). Further, these services are not to be construed as legal interpretation or advice.

1.5 Reliance

This ESA report is prepared for the exclusive use and reliance of, City of Redlands. Use or reliance by any other party is prohibited without the written authorization of City of Redlands and Terracon Consultants, Inc. (Terracon).

Reliance on the ESA by the client and all authorized parties will be subject to the terms, conditions and limitations stated in the proposal, ESA report, and Terracon's Agreement For Services. The limitation of liability defined in Terracon's Agreement For Services is the aggregate limit of Terracon's liability to the client and all relying parties.

Continued viability of this report is subject to ASTM E1527-13 Sections 4.6 and 4.8. If the ESA will be used by a different user (third party) than the user for whom the ESA was originally prepared, the third party must also satisfy the user's responsibilities in Section 6 of ASTM E1527-13.

1.6 Client Provided Information

Prior to the site visit, Ms. Veronica Medina, client's representative, was asked to provide the following user questionnaire information as described in ASTM E1527-13 Section 6.

Client Questionnaire Responses

Client Questionnaire Item	Client Did Not Respond	Client's Response	
		Yes	No
Specialized Knowledge or Experience that is material to a REC in connection with the site.			X
Actual Knowledge of Environmental Liens or Activity Use Limitations (AULs) that may encumber the site.			X
Actual Knowledge of a Lower Purchase Price because contamination is known or believed to be present at the site.			X
Commonly Known or Reasonably Ascertainable Information that is material to a REC in connection with the site.			X
Obvious Indicators of Contamination at the site.			X

Terracon's consideration of the client provided information did not identify RECs. A copy of the questionnaire is included in Appendix C.

2.0 PHYSICAL SETTING

Physical Setting Information		Source
Topography		
Site Elevation	Approximately 2,100 to 2,220 feet above the National Geodetic Vertical Datum (NGVD).	See Exhibit 1 in Appendix A – Redlands, Yucaipa, El Casco, and Sunnymead, California (2018) USGS Topographic Map Google Map Data (2022), www.google.com/maps
Topographic Gradient	Multi-directional; however, steeply sloping generally toward the west.	
Closest Surface Water	Earthen pond located approximately 3,500 feet northwest of the site (Redlands Country Club).	
Soil Characteristics		
Soil Type	Saugus sandy loam (ShF)	Soil Survey of San Bernardino County Southwestern Part, California (CA677); United States Department of Agriculture (USDA) Natural Resource Conservation Service (NRCS); issued 2021. https://websoilsurvey.sc.egov.usda.gov
Description	ShF: Moderate infiltration rates, Deep and moderately deep, moderately well and well drained soils with moderately coarse textures; 30 to 50 percent slopes.	
Geology/Hydrogeology		
Formation	Older Surficial Sediments (Qoa)	

Physical Setting Information		Source
Description	Weakly indurated alluvial fan deposits derived from local terrains of plutonic rocks; alluvial fan deposits of sand, minor gravel, top surface slope more than 40 ft per 0.7 mile from the source terrains and dissected by stream channel from the source terrains (Pleistocene).	Geologic map of the Sunnymead/south ½ of Redlands quadrangles California (Dibblee, T.W. and Minch, J.A.; Dibblee Geological Foundation) Dated 2003 https://ngmdb.usgs.gov/mapview
Estimated Depth to First Occurrence of Groundwater	Site: Unknown, no data readily available. Vicinity: Measured at approximately 176 feet below ground surface (bgs) in a irrigation well located approximately 1.4 miles northwest (last measured in December 6, 2021).	California Department of Water Resources Water Data Library State Well No. 02S03W01D001S Local Well Name: Redlands Hghtshttps://wdl.water.ca.gov
*Hydrogeologic Gradient	Site: Unknown, no data readily available. Vicinity/Regional: May be inferred to be parallel to topographic gradient (primarily to the west).	

* The groundwater flow direction and the depth to shallow, unconfined groundwater, if present, would likely vary depending upon seasonal variations in rainfall and other hydrogeological features. Without the benefit of on-site groundwater monitoring wells surveyed to a datum, groundwater depth and flow direction beneath the site cannot be directly ascertained.

3.0 HISTORICAL USE INFORMATION

Terracon reviewed the following historical sources to develop a history of the previous uses of the site and surrounding area, in order to help identify RECs associated with past uses. Copies of selected historical documents are included in Appendix C.

3.1 Historical Topographic Maps, Aerial Photographs, Sanborn Maps

Readily available historical USGS topographic maps, selected historical aerial photographs (at approximately 10- to 15-year intervals) and historical fire insurance maps produced by the Sanborn Map Company were reviewed to evaluate land development and obtain information concerning the history of development on and near the site. Reviewed historical topographic maps and aerial photographs maps are summarized below.

Historical fire insurance maps produced by the Sanborn Map Company were requested from Environmental Data Resources, Inc. (EDR) to evaluate past uses and relevant characteristics of the site and surrounding properties. Based upon inquiries to the above-listed Sanborn provider, Sanborn maps were not available for the site.

East	Undeveloped vacant land (1899-1949); land abuts northeast appears graded (1949-1953); a road depicted as Kristen Court (1959); northeastern adjoining property developed with residential homes (1967-2018); a driveway (Helen Court) and a residential home developed abutting east to the site (1995-2018).
South	Undeveloped vacant land (1899-1938); a road appears developed as Bruder Lane (1949-2018); residential home depicted (1975-2018).
West	Undeveloped vacant land (1899-1901) water tower depicted southwest of the site (1938-2018).

3.2 Historical City Directories

The EDR Digital Archive, Haines Criss-Cross Directory, and Luskey Brothers & Co. Publishers city directories used in this study were made available through EDR (selected years reviewed: 1992 through 2017) and were reviewed at approximate five-year intervals, if readily available. East State Street listings were not available prior to 1992. The current street address for the site was identified as South of Helen Drive.

Historical City Directories

Direction	Description
Site	No addresses reported
North	***13075 Helen Drive***: Salvesen, John A (1992-1995); Farris, Terry A (2005-2014) ***13087 Helen Drive***: Richey, Mark A (1992-2017); Silvergleid, Arthur J (2000); Lindemer, Curtis A (2005) ***13039 Helen Drive***: Slayyeh, Yaser A (2005-2017) ***13051 Helen Drive***: Fairchild, James L (2005); Brickley, Tom M (2010-2014) ***30413-30515 East Sunset Drive***: no listings
South	***13202 Bruder Lane***: no listings
East	***13151 Helen Drive***: Jutzy, Kenneth R (2005-2017) ***31280 Helen Court***: City of Redlands
West	No addresses reported

3.3 Site Ownership

Based on a review of information obtained from the San Bernardino County Assessor's Office online database at www.sbcounty.gov/ARC/Main/Assor/PropertyInformation, the site, located at South of Helen Drive, Redlands, San Bernardino, California, 92373, consists of an approximately 22-acre parcel identified by San Bernardino County Assessor parcel numbers (APNs): 0300-451-13, 0300-451-14, 0300-451-24, and 0300-451-25, currently owned by Macknet family members.

3.4 Title Search

At the direction of the client, a title search was not included as part of the scope of services. Unless notified otherwise, we assume that the client is evaluating this information outside the scope of this report.

3.5 Environmental Liens and Activity and Use Limitations

The EDR regulatory database report included a review of both Federal and State Engineering Control (EC) and Institutional Control (IC) databases. Based on a review of the database report, the site was not listed on the EC or IC databases. Please note that in addition to these federal and state listings, AULs can be recorded at the county and municipal level that may not be listed in the regulatory database report. Environmental lien and activity and use limitation records recorded against the site were not provided by the client. At the direction of the client, performance of a review of these records was not included as part of the scope of services and unless notified otherwise, we assume that the client is evaluating this information outside the scope of this report.

3.6 Interviews Regarding Current and Historical Site Uses

The following individuals were interviewed regarding the current and historical use of the site.

Interviews

Interviewer	Name / Phone #	Title	Date/Time
Ms. Laura S. Hedman	Mr. Mark Macknet / (909) 363-6238	Site land owner	March 2, 2022 / During the site visit

Terracon interviewed Mr. Mark Macknet, site land owner, during the site reconnaissance. Mr. Macknet indicated that he and his family have owned the site since the 1980's, and during that time, there have not been concerns with the site or the adjoining properties. Mr. Macknet stated that the site was partially graded at one point, but that their had not been any structures developed on-site. Mr. Macknet further stated he was not aware of any septic tanks, water wells, AST's or UST's associated with the site. Mr. Macknet indicated he was not aware of pending, past, and/or threatened environmental litigation and notices of possible violations of environmental law, liability and/or potential environmental concerns associated with site.

3.7 Prior Report Review

Terracon requested the client provide any previous environmental reports, permits, registrations, and geotechnical reports they are aware of for the site. Previous reports were not provided by the client to Terracon for review.

4.0 RECORDS REVIEW

Regulatory database information was provided by EDR, a contract information services company. The purpose of the records review was to identify RECs in connection with the site. Information in this section is subject to the accuracy of the data provided by the information services company and the date at which the information is updated. The scope herein did not include confirmation of facilities listed as "unmappable" by regulatory databases.

In some of the following subsections, the words up-gradient, cross-gradient and down-gradient refer to the topographic gradient in relation to the site. As stated previously, the groundwater flow direction and the depth to shallow groundwater, if present, would likely vary depending upon seasonal variations in rainfall and the depth to the soil/bedrock interface. Without the benefit of on-site groundwater monitoring wells surveyed to a datum, groundwater depth and flow direction beneath the site cannot be directly ascertained.

4.1 Federal and State/Tribal Databases

Listed below are the facility listings identified on federal and state/tribal databases within the ASTM-required search distances from the approximate site boundaries. Database definition, descriptions, and the database search report are included in Appendix D.

Federal Databases

Database	Description	Distance (miles)	Listings
CERCLIS	Comprehensive Environmental Response, Compensation, & Liability Information System	0.5	0
CERCLIS / NFRAP	Comprehensive Environmental Response, Compensation, & Liability Information System/No Further Remedial Action Planned	0.5	0
ERNS	Emergency Response Notification System	Site	0
FUDS	Formerly Used Defense Sites	1.0	0
IC / EC	Institutional Control/Engineering Control	Site	0
NPL	National Priorities List	1.0	0
NPL (Delisted)	National Priorities Delisted List	0.5	0
RCRA CORRACTS/ TSD	RCRA Corrective Action Activity	1.0	0
RCRA Generators	Resource Conservation and Recovery Act	Site and adjoining properties	0
RCRA NonGen / NLR	RCRA – Non-Generators / No Longer Regulated	0.25	0

Database	Description	Distance (miles)	Listings
RCRA Non-CORRACTS/ TSD	RCRA Non-Corrective Action Activity	0.5	0
UXO	Unexploded Ordnance Site	1.0	0

State/Tribal Databases

Database	Description	Distance (miles)	Listings
CALSITES	CalSites Database	1.0	0
CALSITES (AWP)	Active Annual Workplan Sites	1.0	0
CA FID UST	Facility Inventory Database	0.25	0
CERS	CalEPA Regulated Site Portal Data	Site	0
CERS TANKS	California Environmental Reporting System (CERS) Tanks	0.25	
CERS HAZ WASTE	CERS HAZ Waste	0.25	0

LUST	Leaking Underground Storage Tanks	0.5	0
San Ber. Co. Permit	San Bernardino County Permitted Facility	0.25	1
SWEEPS UST	Statewide Environmental Evaluation and Planning System UST Listing	0.25	0
SWF/LF	Solid Waste Facilities/Landfills	0.5	0
WIP	Well Investigation Program Case List	0.25	0

Database	Description	Distance (miles)	Listings
AST / UST	Aboveground Storage Tank / Underground Storage Tank Facilities	Site and adjoining properties	0
VCP	Voluntary Cleanup Program	0.5	0

In addition to the above ASTM-required listings, Terracon reviewed other federal, state, local, and proprietary databases provided by the database firm. A list of the additional reviewed databases is included in the regulatory database report included in Appendix D.

The site was not listed in the regulatory database report.

The following table summarizes the site-specific information provided by the database and/or gathered by this office for identified facilities. Facilities within 500 feet of the site are listed in order of proximity to the site. Additional discussion for selected facilities follows the summary table.

Listed Facilities

Facility Name and Location	Estimated Distance / Direction/Gradient	Database Listings	Is a REC, CREC, or HREC to the Site
AT & T Mobility-ES0022-02 (CM365) Redlands Water Tank 31280 B Helen Court	Adjacent / West-southwest / Down-gradient	HWTS, San Bern. Co. Permit	No, based on file review, status, and topographic gradient,

The remaining facilities listed in the database report do not appear to represent RECs to the site at this time based upon regulatory status, apparent topographic gradient, and/or distance from the site.

Unmapped facilities are those that do not contain sufficient address or location information to evaluate the facility listing locations relative to the site. The report listed twenty-four facilities in the unmapped section. Determining the location of unmapped facilities is beyond the scope of this assessment; however, none of these facilities were identified as the site or adjacent properties. These facilities are listed in the database report in Appendix D.

4.2 Local Agency Inquiries

Agency Contacted/ Contact Method	Response
San Bernardino County Department of Public Health (DPH) / Environmental Health Services (EHS) Fax: (909) 387-4323	At the issuance of this report, a response has not been obtained from the DPH/EHS.

Agency Contacted/ Contact Method	Response
South Coast Air Quality Management District (SCAQMD) / online portal: http://www.aqmd.gov/nav/online-services/public-records	According to the SCAQMD, no records were found for the site, because they are unable to provide site information based on APN's or similar geographic site data.
Santa Ana Regional Water Quality Control Board / Email: filereview8@waterboards.ca.gov	According to RWQCB File Review Desk, no records were found for the site, because they are unable to provide site information based on APN's or similar geographic site data.
Department of Toxic Substances Control (DTSC) / Email: pubreqact@dtsc.ca.gov DTSC online EnviroStor Database, www.environstor.dtsc.ca.gov	According to the DTSC, no records were found associated with the site. Based on a review of the DTSC online EnviroStor Database no records were found associated with the site.
Redland's City Clerk Office online portal: https://www.cityofredlands.org	At the issuance of this report, a response has not been obtained from the City of Redlands.
San Bernardino County Fire Department / Email: mmolina@sbcfire.org	The San Bernardino County Fire Department informed Terracon that search fees apply to each parcel and/or address, which is beyond the scope of the ESA and a search request was not submitted. Based on a review of historical information and the regulatory database, the absence of this regulatory information does not represent a significant data gap.

4.3 Local Area Knowledge

Based on a review of the California Geologic Energy management Division (CalGEM), https://www.conservation.ca.gov/calgem (formerly the California Department of Conservation Division of Oil, Gas, and Geothermal Resource Well Finder (DOGGR), there are no active or plugged oil production wells located at the site or adjoining properties.

5.0 SITE RECONNAISSANCE

5.1 General Site Information

Information contained in this section is based on a visual reconnaissance conducted while walking through the site and the accessible interior areas of structures, if any, located on the site. The site and adjoining properties are depicted on the Site Diagram, which is included in Exhibit 2 of Appendix A. Photo documentation of the site at the time of the visual reconnaissance is provided in Appendix B. Credentials of the individuals planning and conducting the site visit are included in Appendix E.

General Site Information

Site Reconnaissance	
Field Personnel	Laura S. Hedman
Reconnaissance Date	March 2, 2022
Weather Conditions	Mostly sunny / 77° F
Site Contact/Title	Mr. Mark Macknet / Site land owner
Site Utilities	
Drinking Water	City of Redlands
Wastewater	City of Redlands
Electric	Southern California Edison
Natural Gas	None

5.2 Overview of Current Site Occupants and Operations

The site is located at South of Helen Drive, Redlands, San Bernardino County, California 92373, and consists of an approximately 22-acres tract of generally vacant and undeveloped, densely vegetated land (chaparral), located in a residential neighborhood south of Helen Drive. The site is further identified by San Bernardino County Assessor parcel numbers (APNs): 0300-451-13, 0300-451-14, 0300-451-24, and 0300-451-25. At the time of the visual reconnaissance, the site was owned by the Macknet family members.

5.3 Site Observations

The following table summarizes site observations and interviews. Affirmative responses (designated by an "X") are discussed in more detail following the table.

Site Characteristics

Category	Item or Feature	Observed or Identified
Site Operations, Processes, and Equipment	Emergency generators	
	Elevators	
	Air compressors	
	Hydraulic lifts	
	Dry cleaning	
	Photo processing	
	Ventilation hoods and/or incinerators	
	Waste treatment systems and/or water treatment systems	
	Heating and/or cooling systems	

Category	Item or Feature	Observed or Identified
	Paint booths	
	Sub-grade mechanic pits	
	Wash-down areas or carwashes	
	Pesticide/herbicide production or storage	
	Printing operations	
	Metal finishing (e.g., electroplating, chrome plating, galvanizing, etc.)	
	Salvage operations	
	Oil, gas or mineral production	
	Other processes or equipment	
Aboveground Chemical or Waste Storage	Aboveground storage tanks	
	Drums, barrels and/or containers ≥ 5 gallons	
	MSDS or SDS	
Underground Chemical or Waste Storage, Drainage or Collection Systems	Underground storage tanks or ancillary UST equipment	
	Sumps, cisterns, French drains, catch basins and/or dry wells	
	Grease traps	
	Septic tanks and/or leach fields	
	Oil/water separators, clarifiers, sand traps, triple traps, interceptors	
	Pipeline markers	
	Interior floor drains	
Electrical Transformers/ PCBs	Transformers and/or capacitors	
	Other equipment	
Releases or Potential Releases	Stressed vegetation	
	Stained soil	
	Stained pavement or similar surface	
	Leachate and/or waste seeps	
	Trash, debris and/or other waste materials	X
	Dumping or disposal areas	
	Construction/demolition debris and/or dumped fill dirt	
	Surface water discoloration, odor, sheen, and/or free floating product	
	Strong, pungent or noxious odors	
	Exterior pipe discharges and/or other effluent discharges	X
	Surface water bodies	

Category	Item or Feature	Observed or Identified
Other Notable Site Features	Quarries or pits	
	Wastewater lagoons	
	Wells	

Releases or Potential Releases

Trash, debris and/or other waste materials

At the time of the visual reconnaissance, Terracon observed miscellaneous household trash (clothing items, paper, plastics bags, paper cups), located on the southern portion of the site. Noxious odors or hazardous waste disposal was not observed in the vicinity of the miscellaneous household trash. Based on site observations, the miscellaneous household trash does not constitute a REC in connection with the site.

Exterior pipe discharges and/or other effluent discharges

At the time of the visual reconnaissance, Terracon observed a storm water discharge pipe (concrete), located on the central portion of the site. Noxious odors or hazardous waste disposal was not observed in the vicinity of the discharge pipe. Based on site observations, the discharge pipe does not constitute a REC in connection with the site.

6.0 ADJOINING PROPERTY RECONNAISSANCE

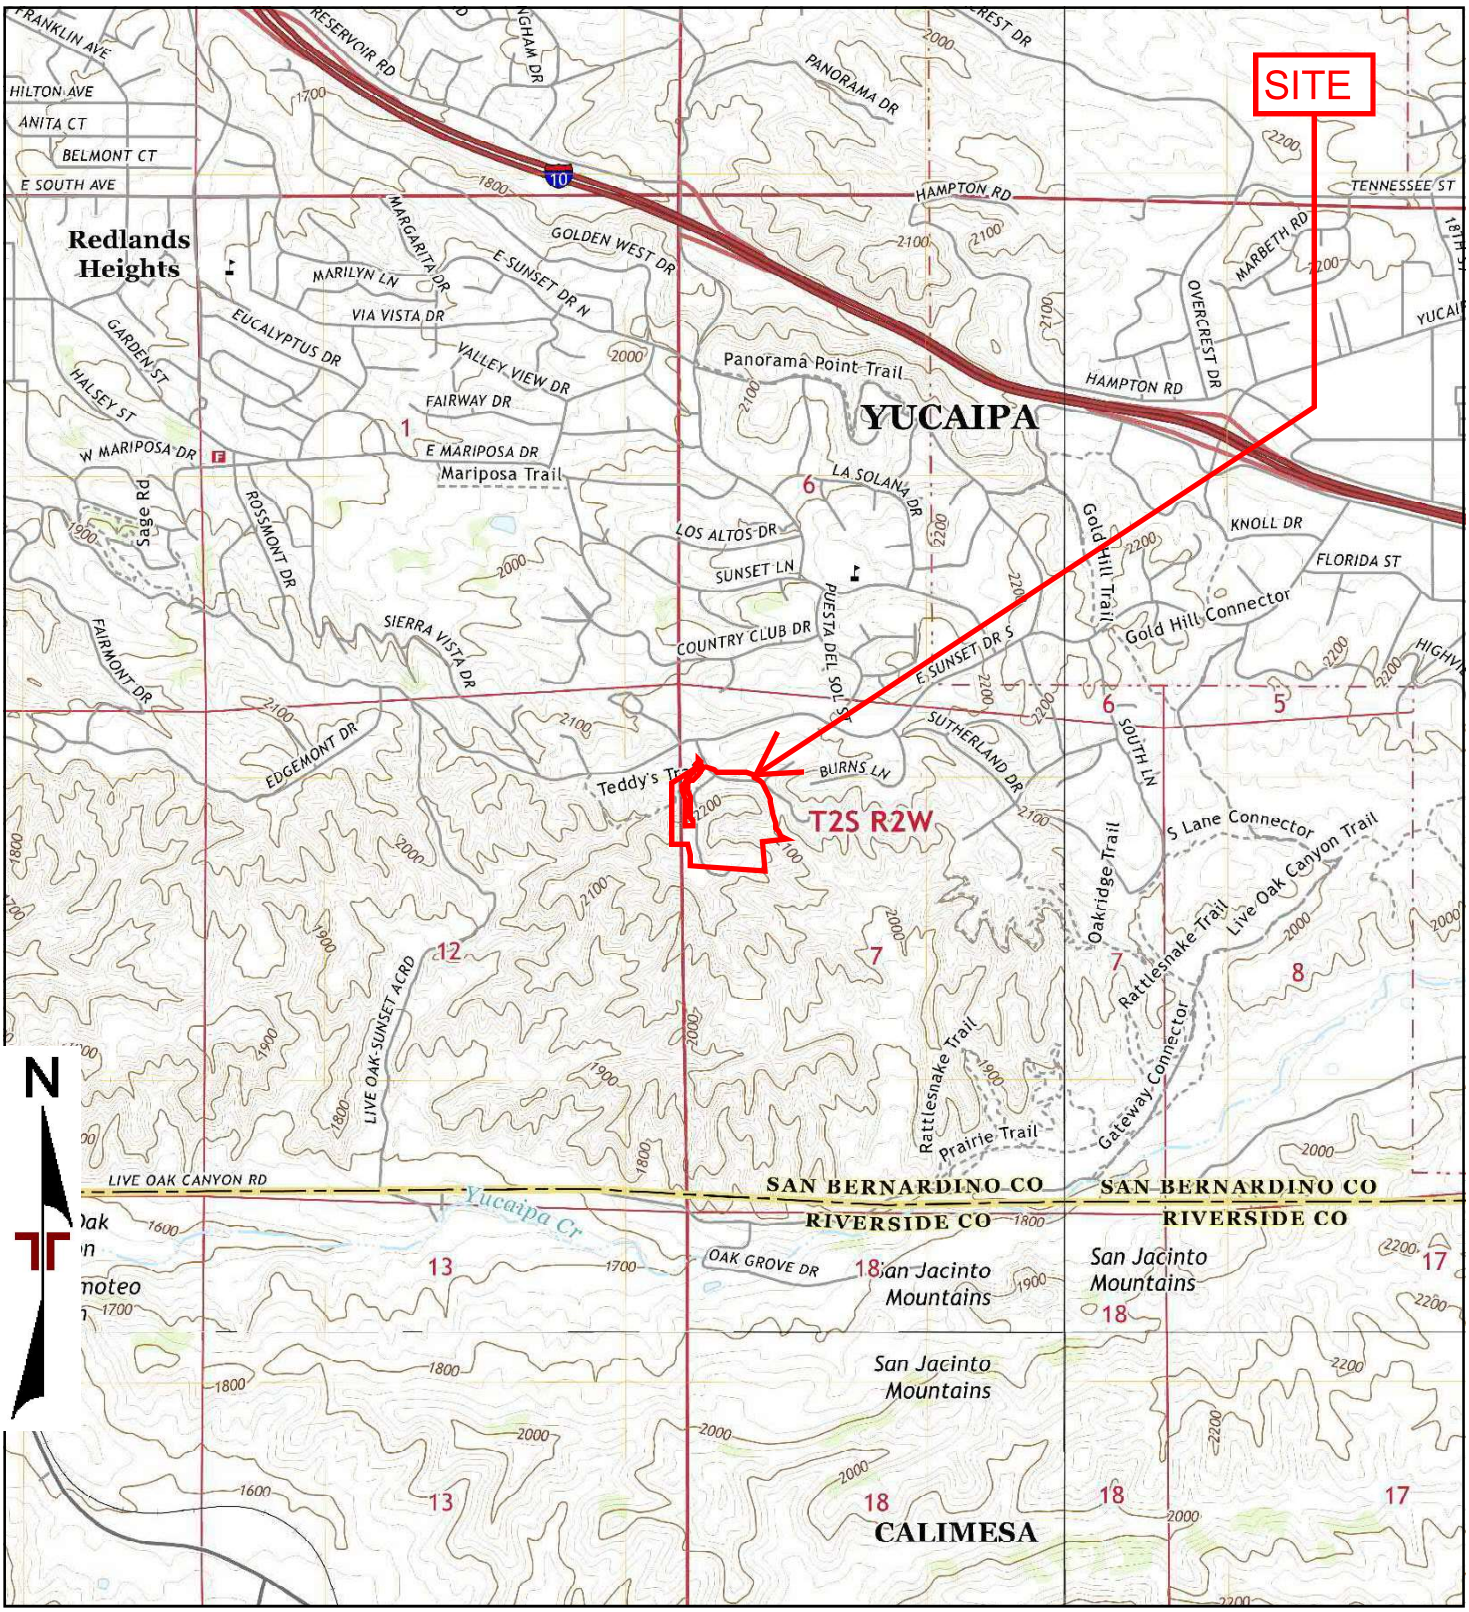
Visual observations of adjoining properties (from site boundaries) are summarized below.

Adjoining Properties

Direction	Description
North	Helen Drive followed by residential neighborhood (13039-13087 Helen Drive). Sunset Drive, further north, followed by a residential neighborhood (30413-30515 East Sunset Drive).
East	Kristen Court and Helen Court followed by residential neighborhood (13151 Helen Drive and 31280 Helen Court).
South	Bruder Lane followed by a residential home (13202 Bruder Lane), and undeveloped densely vegetated land (chaparral).
West	Vacant undeveloped densely vegetated land (chaparral) followed by a water tank.

RECs were not observed with the adjoining properties.

7.0 ADDITIONAL SERVICES



Per the agreed scope of services specified in the proposal, additional services (e.g. asbestos sampling, lead-based paint sampling, wetlands evaluation, lead in drinking water testing, radon testing, vapor encroachment screening, etc.) were not conducted.

8.0 DECLARATION

I, Carl A. Parten, declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312; and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the site. I have developed and performed the All Appropriate Inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Carl A. Parten
Senior Principal / Office Manager III

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Terracon were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Colton, CA 92324
Contact: Laura Hedman

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Client/User Required Questionnaire

Person Completing Questionnaire	Name: Veronica Medina Company: City of Redlands Phone: (909) 798-7584 x 6 Email: vmedina@cityofredlands.org
Site Name	Macknet Property
Site Address	South of Helen Drive, Redlands, California
Point of Contact for Access	Name: Mark Macknet Company: Phone: (909) 363-6238 Email: mmacknet@mac.com
Access Restrictions or Special Site Requirements?	_X_No ___Yes (If yes, please explain)
Confidentiality Requirements?	_X_No ___Yes (If yes, please explain)
Current Site Owner	Name: Mark Macknet, Dale Macknet, Cathy Macknet Company: Phone: (909) 363-6238 (Mark)/ (909) 214-7771 (Cathy) Email: mmacknet@mac.com / dmacknet@gmail.com / cmacknet@hotmail.com
Current Site Operator	Name: See "Current Site Owner" Company: Phone: Email:
Reasons for ESA (e.g., financing, acquisition, lease, etc.)	The City is looking into purchasing the site with the purpose of removing and replacing the existing water reservoir (white circle near the corner of property. The new reservoir will be placed within the subject property.
Anticipated Future Site Use	Reservoir location
Relevant Documents?	Please provide Terracon copies of prior Phase I or II ESAs, Asbestos Surveys, Environmental Permits or Audit documents, Underground Storage Tank documents, Geotechnical Investigations, Site Surveys, Diagrams or Maps, or other relevant reports or documents.

ASTM User Questionnaire

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the user must respond to the following questions. Failure to provide this information to the environmental professional may result in significant data gaps, which may limit our ability to identify recognized environmental conditions resulting in a determination that "all appropriate inquiry" is not complete. This form represents a type of interview and as such, the user has an obligation to answer all questions in good faith, to the extent of their actual knowledge.

1) Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the property under federal, tribal, state, or local law (40 CFR 312.25)?
_X_No ___Yes (If yes, explain below and send Terracon a copy of the title records or judicial records reviewed.)

2) Did a search of recorded land title records (or judicial records where appropriate) identify any activity and use limitations (AULs), such as engineering controls, land use restrictions, or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state, or local law (40 CFR 312.26)?
_X_No ___Yes (If yes, explain below and send Terracon a copy of the title records or judicial records reviewed.)

3) Do you have any specialized knowledge or experience related to the site or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the site or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business (40 CFR 312-28)?
_X_No ___Yes (If yes, explain below)

4) Do you have actual knowledge of a lower purchase price because contamination is known or believed to be present at the site (40 CFR 312.29)?
_X_No ___Yes ___Not applicable (If yes or Not applicable, explain below)

5) Are you aware of commonly known or reasonably ascertainable information about the site that would help the environmental professional to identify conditions indicative of releases or threatened releases (40 CFR 312.30)?
_X_No ___Yes (If yes, explain below)

6) Based on your knowledge and experience related to the site, are there any obvious indicators that point to the presence or likely presence of contamination at the site (40 CFR 312.31)?
_X_No ___Yes (If yes, explain below)

Supplemental Investigation, and the preparation and the implementation of a Removal Action Workplan for the site

Completed Area Name: PROJECT WIDE
Completed Document Type: Standard Voluntary Agreement
Completed Date: 08/20/1993

Completed Area Name: PROJECT WIDE
Completed Document Type: Remedial Investigation / Feasibility Study
Completed Date: 05/10/1999
Comments: The Remedial Investigation/Feasibility Study (RI/FS) consists of soil investigation and groundwater monitoring. The major chemicals of potential concern are carcinogenic polycyclic aromatic hydrocarbons (C-PAHs) in the soil. The objective of this project is to remediate the site by removing contaminated soils.

Completed Area Name: PROJECT WIDE
Completed Document Type: Removal Action Completion Report
Completed Date: 06/30/2002
Comments: The removal of contaminated soil has been completed and a removal action report has been submitted.

Completed Area Name: PROJECT WIDE
Completed Document Type: Removal Action Workplan
Completed Date: 06/28/1999
Comments: The objective of this project is to remediate the site by removing contaminated soils. The selected remedial action consists of removing contaminated soil to a depth of 12 feet bgs. Excavated areas will be backfilled with clean imported soil.

Completed Area Name: PROJECT WIDE
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 08/31/1994

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

MACKNET PROPERTY
SOUTH OF HELEN DRIVE
REDLANDS, CA 92373

TARGET PROPERTY COORDINATES

Latitude (North):	34.0157 - 34ˆ 0’ 56.52’’
Longitude (West):	117.136868 - 117ˆ 8’ 12.72’’
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	487362.6
UTM Y (Meters):	3763710.8
Elevation:	2221 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	12014994 REDLANDS, CA
Version Date:	2018
Northeast Map:	12015002 YUCAIPA, CA
Version Date:	2018
Southeast Map:	12014838 EL CASCO, CA
Version Date:	2018
Southwest Map:	12015927 SUNNYMEAD, CA
Version Date:	2018

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

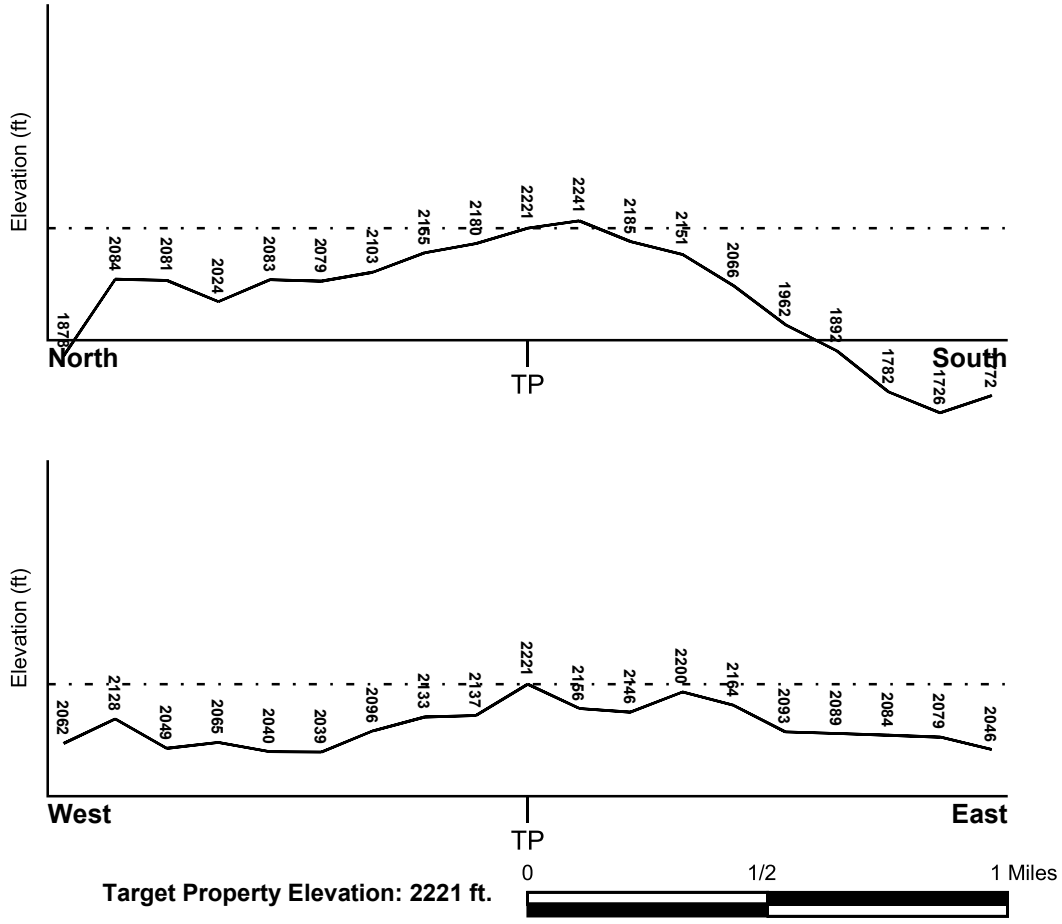
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06071C8719H	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06071C8740H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
NOT AVAILABLE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Saugus

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	Not reported	Max: 4 Min: 1.4	Max: Min:
2	7 inches	40 inches	loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	Not reported	Max: 4 Min: 1.4	Max: Min:
3	40 inches	44 inches	weathered bedrock	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	Not reported	Max: 4 Min: 1.4	Max: Min:

Soil Map ID: 2

Soil Component Name: RAMONA

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	22 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 6.6
2	22 inches	31 inches	loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 6.6
3	31 inches	53 inches	sandy clay loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 6.6
4	53 inches	59 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 6.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 3

Soil Component Name: RAMONA

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Resume

Laura Hedman

Staff Geologist

PROFESSIONAL EXPERIENCE

Ms. Hedman is a staff geologist in Terracon's Colton, CA office, Environmental Department. Ms. Hedman's professional experience includes Environmental Services, Phase I Environmental Site Assessments (ESAs), Limited Site Investigations (LSIs), soil and groundwater sampling, and groundwater monitoring projects. She has conducted site assessments on office facilities, warehouses, manufacturing facilities, automotive dealerships, restaurants, medical offices, telecommunication towers, vacant, and agricultural land. She prepares environmental site assessment reports; researches city directories and regulatory agency files; and reviews aerial photographs and topographic maps. In addition, she assists the Senior Project Manager in Phase I Environmental Site Assessments.

PROJECT EXPERIENCE

Office Buildings/Medical Office Building – California

Project Manager and Environmental Site Assessments on office properties, which includes multi-story financial, educational, medical office buildings, and a 95,000-square-foot community hospital.

Warehouse Buildings/Logistical Centers – California

Project Manager and Environmental Site Assessment on warehouses and logistical centers, which includes commercial facilities with 1.2 million-square-foot warehousing space.

Restaurants/Retail Buildings – California

Project Manager and Environmental Site Assessment on family-style restaurants, and retail lease spaces.

Auto Dealership/Automotive Service– California

Project Manager and Environmental Site Assessment on automotive dealerships, automotive maintenance facilities, and automotive collision repair centers.

Undeveloped/Vacant/Agricultural – California

Project Manager and Environmental Site Assessments on undeveloped, vacant, and agricultural land; from less than one-acre- to over 200-acre parcel of land.

EDUCATION

Bachelor of Science, Geology/Earth Science, University of California, Riverside, 2016

Mount San Jacinto College
Associate of Science, Geographic Information Systems (GIS), May 2014

CERTIFICATIONS

Geologist in Training (Fundamental of Geology), June 2017

PROFESSIONAL TRAINING

40-Hour OHSA HAZWOPER

24-Hour AHERA Asbestos Abatement Building Inspector

40-Hour AHERA Asbestos Supervisor Training

WORK HISTORY

Terracon, Colton, California
Staff Geologist
January 2018 to Present

United States Army, Master Sergeant, Retired;
Recruiting Battalion Operations Senior NonCommissioned Officer/ Senior Career Counselor
August 1988 to February 2011

Carl A. Parten

Office Manager, Senior Principal

PROFESSIONAL EXPERIENCE

Mr. Parten has 32 years of experience in environmental consulting in multiple regional regulatory districts throughout the United States. His professional experience includes comprehensive site investigations and remediation studies for Industrial and Hazardous Waste sites, municipal solid waste landfill sites and underground storage tank (UST) facilities.

He has successfully managed and obtained regulatory closure of over 30 Voluntary Cleanup Program (VCP) sites and leaking underground storage tank (LUST) facilities, and coordinated UST removal and closure for numerous facilities in multiple states throughout the United States. Mr. Parten continues to serve as a technical lead with Terracon and he possesses extensive experience in the installation of monitor wells, aquifer characterization, sensitive receptor surveys, risk-based assessments, vapor intrusion (VI) evaluations, and soil-gas assessments. Additionally, he has extensive experience in comprehensive soil and groundwater investigations on industrial facilities and municipal solid waste (MSW) landfill facilities, including evaluation of landfill gas/methane impacts. He has prepared and implemented corrective action work plans for remediation of chlorinated hydrocarbons at dry cleaner facilities and petroleum hydrocarbons at LUST facilities, MSW landfill facilities, and managed and implemented groundwater pump and treat, non-aqueous phase liquid (NAPL) recovery, and duel-phase vapor extraction systems for the recovery of petroleum hydrocarbons. Additionally, Mr. Parten developed work plans and implemented the remediation of heavy metals and poly-nuclear aromatic hydrocarbons (PAHs).

PROJECT EXPERIENCE

Kaiser Permanente, AV Behavioral Health, Lancaster, California
Provided QA/QC for the Phase I ESA for the potential Kaiser Permanente AV Behavioral Health Building that consisted of a 29,245-square-foot (SF) single-story building with a mezzanine, in a multi-tenant commercial/retail shopping center on an approximately 6.12-acre parent tract. Our scope of services included the site

EDUCATION

Bachelor of Science, Geology, Sul Ross State University, Alpine, Texas, 1994

Additional Courses:
University of Houston TCEQ Texas Risk Reduction Program: Mod. I, II, and III
Roadmap to Remediation
CAPM Refresher Course, Texas A&M University
TNRCC Hazardous Waste Seminar
TNRCC PST Risk Assessments Seminar
TNRCC Pollution Prevention Workshop
API Risk/Exposure Assessment
Contaminant Fate and Transport Modeling in Risk Assessment
Environmental Hydrology / Soil Science

REGISTRATIONS

Licensed Professional Geoscientist (P.G.), I.D. # 221, Texas Board of Professional Geoscientists 2003 (current)

Registered Professional Geologist (P.G.), I.D. # 004037; State of Tennessee, May 1996 (current)

TCEQ Corrective Action Project Manager, CAPM #01091 (current)

Geological Society of America

reconnaissance and soil and soil vapor sampling. Provided QA/QC review of the report before we sent it to the client.

Kaiser Permanente, Primary Care Medical Office Building, Wildomar, California
Project Manager for the Phase I ESA for the potential Kaiser Permanente Primary Care Medical Office Building consisted of an approximately 36-acre tract of generally vacant land. Provided QA/QC review of the report before we sent it to the client.

Industrial Warehouse Facility – La Palma, California
Phase I ESA, comprehensive subsurface investigation and delineation of volatile organic compounds (VOCs), petroleum hydrocarbons TPH) in soil, groundwater and vapor to characterize environmental site conditions and development of response actions. Soil remediation, soil vapor extraction of VOCs, and waste characterization/disposal of impacted environmental media at a large warehouse facility. Active monitoring and additional response actions are on-going. Consulting services included preparation of investigation reports, response action work plans, client interaction and litigation support.

Industrial Warehouse Facility / Demolition / Soil Management – Los Angeles / Union Crossing - California
Phase I ESA, Limited Site Investigation, soil management plan / remediation of impacted soils, underground storage tank / structures management and support services, investigation and delineation of volatile organic compounds (VOCs), petroleum hydrocarbons TPH) in soil, and waste characterization and disposal of impacted environmental media. Consulting services included preparation of investigation reports, response action work plans, client interaction and construction management support.

Industrial Facility – Union City, California
Subsurface investigation and delineation of heavy metals and polynuclear aromatic hydrocarbons (PAHs) in soil to facilitate the development of response actions and waste characterization/disposal of impacted environmental media at a large industrial facility with over sixty years of operations. Consulting services included preparation of investigation reports, response action work plans, and client/regulatory interaction.

Industrial Facility – Land-use Change/Private School, Los Angeles, CA
Environmental consulting services including Phase I Environmental Site Assessments (ESA) due diligence support, subsurface investigation activities to evaluate environmental media including soil, groundwater, soil gas and indoor / outdoor air. Services included a land-use change from an industrial facility to a private school. Prepared environmental investigation reports, regulatory interaction, corrective action design and work plan for management of environmental media.

USARC Facility – Mare Island, California
Environmental team leader for evaluation of an existing 32-acre military facility, Mare Island in California. The teaming effort included the preparation of a Technical Assessment report on the facility to provide

USAR a decision making and programming tool to establish future restoration and replacement upgrades to the facility. The report included an evaluation of existing conditions of the site and facilities with respect to current mission and identified construction costs required to comply with USAR facility standards, Anti-Terrorism/Force Protection requirements, handicapped accessibility regulations, and current building codes. Conceptual costs for related improvements and environmental mitigation were presented.

Major Department Store Commercial Retail Portfolio
Environmental team lead for evaluating environmental site conditions and due diligence review, including overseeing Phase I Environmental Site Assessments and Phase II Environmental Site Investigations for over fifty retail facilities with automotive maintenance across California. Findings from subsurface investigations were used to support regulatory closure of select facilities to facilitate a real estate transaction across the United States.

Automated Fuel Dispensing Facilities – Camp Pendleton, California
Project scope included environmental and geotechnical investigations at six fueling existing/proposed facilities within Camp Pendleton, California. The project consisted of construction of new buildings, canopies, pavements, retaining walls, slopes, and installation of underground storage tanks (USTs), and other site facilities. Served as the primary client point of contact and environmental technical leader.

Mixed-Use High-rise Building, West Hollywood, California
Conducted comprehensive investigation and assisted the client through enrolling and interacting with the DTSC / VCP regarding chlorinated solvent and heavy metal-impacted soil and groundwater. Provided construction management oversight to manage impacted soils and assisted the client in waste disposition, permitting and regulatory compliance interaction. A total of 52,000 cubic yards of soil was removed from the site and disposed at an off-site facility, prior to the construction of a $170M high-rise multi-use complex. Terracon's support services allowed for significant savings in construction, on an expedited timeline in concert with the construction schedule.

Underground Storage Tank and Soil Remediation – Regional Water Board, Squaw Valley, CA
Terracon assisted a private developer with the regulatory closure of an underground storage tank (UST) site located in Squaw Valley, California. The abandoned 10,000-gallon UST was responsible for a release of heavy waste oils to the ground surface and banks of a creek. Following disposal of the UST, approximately 70 cubic yards of petroleum-impacted soils were excavated and properly disposed. Interaction with the Regional Water Board and Public Notification resulted in the issuance of case closure.

Retail Shopping Center – Former Dry Cleaners Facility – DTSC, Fremont, CA
Conducted extensive site investigation activities to evaluate the magnitude and extent of chlorinated solvents identified in the vicinity of a former dry cleaners' facility, including an evaluation of groundwater, soil, soil-gas and indoor vapors as a result of a chlorinated solvent plume. Mr. Parten provided direct support and interaction with client, client legal team and DTSC representatives to manage the closure

process, including the preparation of work plans and environmental investigation reports, risk-based human health evaluation, and response actions.

Soil Remediation – Riverside County Regulatory Oversight, Telecommunications Site, Perris, CA
Terracon assessed the magnitude and extent of a surficial release of petroleum hydrocarbons, developed a work plan, approved by overseeing agency, and conducted remediation, removal and legal disposal of 80 cubic yards of non-hazardous soil.

Municipal Landfill – VCP Site
Successfully oversaw and managed the engineering design and construction quality assurance for the closure and restoration of a high-profile MSW landfill in accordance with regulatory standards, subsequent to significant investigation activities. The remedy consisted of removal and consolidation of wastes and construction of LFG recovery trenches to prevent migration of landfill gas. The remedy utilized engineering controls and removal of impacted media. Project management responsibilities included coordination with Local, State and Federal officials, public/neighborhood communications, and interaction with attorneys, and management of project budgets that exceeded $4.5 million over seven years. Terracon continues to provide post closure care monitoring and O&M for the site.

Department of Transportation Contract - TX
Successfully managed a two-year environmental services contract with the Texas Department of Transportation (TxDOT) and coordinated multiple Terracon offices to provide geographic coverage of environmental consulting service throughout Texas. Mr. Parten was the liaison to TxDOT for the performance of environmental consulting services, and provided senior technical review of environmental investigations, Phase I ESAs, removal of underground storage tanks, remediation of affected media and waste management, asbestos and lead-based paint investigations, and management of financial metrics and budgets in strict conformance with negotiated fees and procedures under a $2,000,000 contract.

City-Operated LUST Facilities
Provided senior project management of 14 City operated LUST facilities through coordination of investigation, regulatory reporting and response actions in the pursuit of closure. Mr. Parten was responsible for managing all site activities, evaluation of data, reporting, communicating with local and state officials, and management of budget and schedule requirements.

Municipal Property
Provided senior project management and technical review of several properties, including the remediation of metals and PAH-impacted soils, using a combination of excavation and removal and in-place stabilization. Work was performed under the EPA Brownfields Program and the Voluntary Cleanup Program. The $1.2 million-dollar remediation project was part of a high-profile downtown parks and recreation redevelopment project that successfully established LEED Certified public parks in areas once occupied by commercial and industrial property. Mr. Parten was responsible for managing all site

activities, evaluation of data, reporting, communicating with local and state officials, and management of budget and schedule requirements.

Retail Shopping Center – VCP Site

Conducted extensive site investigation activities to evaluate the magnitude and extent of chlorinated solvents identified in the vicinity of a former dry cleaners' facility. The chlorinated solvent plume was defined to drinking water standards and was delineated to a creek channel nearly 1,200 feet from the source property. Based on site investigation results, assisted the property owner in entering the site into the VCP, and managed and implemented response actions and treatment of affected media utilizing a combination of source-removal/excavation (750 cubic yards) within the building interiors, hydrogen-releasing compound (HRC®) treatment of backfill, and HRC injection into the underlying soil and groundwater across the site. Treatment technology effectively remediated affected soils and significantly reduced contaminant levels within the on-site source areas. Additional response actions were conducted to reduce on-site groundwater contamination levels through HRC injection at over 250 locations. Monitored natural attenuation and groundwater monitoring was performed for a period of approximately four years. Mr. Parten assisted the client in the establishment of a deed restriction (Municipal Setting Designation) that restricted the use of groundwater on the site. Mr. Parten interacted with City and State officials and prepared and submitted multiple reports documenting site activities and managed a project budget totaling $1,200,000.

Additional Project Experience

Under the direction and senior technical review by Mr. Parten, final site closure has been obtained for over thirty VCP, Innocent Owner/Operator Program, LUST, and Industrial and Hazardous Waste facilities in multiple states across the United States. Additionally, Mr. Parten has coordinated and managed the removal of dozens of underground storage tank (UST) systems and remediation of contaminated soil and groundwater. Mr. Parten has provided expert testimony on multiple projects and is a primary point of contact interacting with environmental attorneys and regulatory agencies.

Todd G. McFarland, PG, CHG

DEPARTMENT MANAGER

PROFESSIONAL EXPERIENCE

Mr. McFarland has over 21 years of experience as a professional geologist and hydrogeologist, in over 200 site characterization and remediation projects throughout California. He is an environmental Department Manager for Terracon's Colton office. Mr. McFarland has been involved with environmental investigations, well design and construction, aquifer testing, Phase I and II ESAs, including agricultural, petroleum, and industrial properties; and remediation design and mitigation for commercial, industrial and LUST/LUFT projects.

Mr. McFarland's expertise includes hydrogeology, Phase I & II Environmental Assessments, Hazardous Waste Site Investigations, LUST/LUFT Site Investigation and Remediation (soil, vapor, and groundwater) Hydrogeology, Contaminant Fate & Transport, Well Design and Construction, Remedial Strategy and Design, California UST Cleanup Fund, Triad Approach Investigation Methods, and high resolution site characterization (HRSC).

PROJECT EXPERIENCE

Charis Corporation/US Army, Aquifer and Well Evaluation, Fort Irwin, California
Project Geologist for the identification, assessment and testing of domestic and agricultural wells associated with the expansion of Ft. Irwin military base. Responsible for field mapping, staff and logistics coordination, subcontractor management, well pumping, mine shaft mapping and collection of samples for heavy metal analytical testing.

Bechtel, Mountain View Power Plant Expansion Project, Loma Linda, California
Project Geologist support for pump test and analytical testing of new production well within the Bunker Hill Basin. Sampling and testing of water for Title 22, perchlorate and TCE to determine well viability, and ability to discharge surplus water to Santa Ana River.

Herzog, Rail Line Rehabilitation Project, San Bernardino, California
Project Geologist for compliance monitoring, soil sampling and remediation management of soils during rail line rehabilitation. Project work conducted for BNSF under their oversight and safety management guidelines. Managed daily soil screening, mobile laboratory analysis oversight and directed soil excavation and segregation for offsite disposal of hydrocarbon and solvent impacted soils.

Amtrak, 8th Street Amtrak Yard ROW Investigation, Los Angeles, California
Project Geologist for Phase I & II assessments along ROWs within the active rail yard for proposed ROW exchange. Project work included drilling and soil sampling adjacent to active rail lines associated with train maintenance and wash rack. Reporting and recommendations for soil remediation options.

EDUCATION

Bachelor of Science, Hydrogeology, Northern Arizona University, 1998

AA, Art/Architecture, Pasadena City College, 1992

REGISTRATIONS

WORK HISTORY

Terracon Consultants, Inc., Department Manager, 2018-Present

AECOM, Sr. Project Manager/Sr. Hydrogeologist, 2013-2018

HFA, Sr. Geologist/Sr. Project Manager, 2009-2013, Assoc. Geologist/Sr. Geologist/Project Manager/Office Manager, 2004-2009

Geo-Cal, Inc., Project Geologist, 2003 – 2004

CHJ, Inc., Staff Geologist, 1998-2003

Chevron and ExxonMobil, Service Station and Terminal Facility Management, Southern and Northern California
Project/Senior Geologist and Project Manager for portfolio of underground storage tank facilities. Managed schedule, costs and project work for numerous retail service station and bulk tank facilities. Scoped and executed assessment and remedial efforts targeted to model and remove contaminants. Geological logging and drilling oversight for the installation of numerous shallow and deep monitoring wells within unconsolidated and over-consolidated soils. Develop and execute aquifer, soil vapor extraction, and air sparge testing to determine feasibility of remedial options. Prepare conceptual site models to evaluate project data and develop remedial action plans and human health risk assessments. Collaborate with engineers to design, build and execute remedial systems for treatment of petroleum impacted soil and groundwater. Responsible for direct interaction with client and regulators to develop and execute strategies.

Chevron EMC, MTBE Groundwater Plume Investigation and Remediation, San Juan Capistrano California
Senior Geologist and Project Manager for two underground storage tank facilities that allegedly affected the City's water production supply. Scoped and executed assessment and remedial efforts targeted to model and remove benzene and MTBE. Installed and operated in-situ soil and groundwater remedial systems. Geological logging and drilling oversight for the installation of numerous shallow and deep monitoring and remediation wells. Testing and evaluation of City's production wells. Attend and participate in public hearings, plan and participate in planning and design review meetings. Conduct client meetings and provide project details to client's legal team.

Confidential Client, Crafton-Redlands Perchlorate Plume Investigation, Mentone, California
Project Geologist for underground storage tank facility. Geological logging and drilling oversight for the installation of deep monitoring wells within the Crafton-Redlands Plume using rotary casing hammer and sonic drilling rigs. Collection of soil and groundwater samples to evaluation aquifer for petroleum hydrocarbons, including MTBE and perchlorate. Conduct soil vapor extraction pilot testing for in-situ soil remediation of hydrocarbon impacts.

City of Rialto, Landfill Investigation and Post-Closure Monitoring, Rialto, California. Project Geologist for landfill closure and post-closure investigations and monitoring. On going monitoring of water quality beneath and surrounding the boundary limits of landfill. Statistical analysis and reporting of water quality data to determine trends and stability post-closure.

City of Los Angeles, Community Park Development, Lead Removal, California
Project Geologist for development of a community park. Planned, coordinated, and conducted assessment and remediation of aerial deposited lead within a residential community. Conducted lead dust monitoring, excavation activities and verification sampling and reporting.

City of Blythe, Citywide Commingled Plume Investigation, Blythe, California
Project Manager for city wide commingled plume assessment and remedial cleanup of 7 commingled plumes (over 30 individual sites) related to petroleum releases to groundwater. Conducted large-scale site assessment, well installation and remedial actions including soil vapor extraction, dual-phase extraction, free-product extraction and soil excavation. Managed complex financial contract and UST Cleanup Fund reimbursement. Responsible for direct interaction with client (City), UST Cleanup Fund and California's Water Board to develop and execute strategies.

AFCEC, Industrial Waste Line Removal and Vapor Intrusion Risk Assessment, Former Norton Air Force Base, San Bernardino, California
Senior hydrogeologist for evaluation of soil and soil vapor sampling. Conducted closure report review, human health risk assessment modeling and evaluation, and closure recommendations. Evaluation and reporting resulted in obtaining closure from DTSC.

APPENDIX F
DESCRIPTION OF TERMS AND ACRONYMS

Description of Selected General Terms and Acronyms

Term/Acronym	Description
ACM	Asbestos Containing Material. Asbestos is a naturally occurring mineral, three varieties of which (chrysotile, amosite, crocidolite) have been commonly used as fireproofing or binding agents in construction materials. Exposure to asbestos, as well as ACM, has been documented to cause lung diseases including asbestosis (scarring of the lung), lung cancer and mesothelioma (a cancer of the lung lining). Regulatory agencies have generally defined ACM as a material containing greater that one (1) percent asbestos, however some states (e.g. California) define ACM as materials having 0.1% asbestos. In order to define a homogenous material as non-ACM, a minimum number of samples must be collected from the material dependent upon its type and quantity. Homogenous materials defined as non-ACM must either have 1) no asbestos identified in all of its samples or 2) an identified asbestos concentration below the appropriate regulatory threshold. Asbestos concentrations are generally determined using polarized light microscopy or transmission electron microscopy. Point counting is an analytical method to statistically quantify the percentage of asbestos in a sample. The asbestos component of ACM may either be friable or non-friable. Friable materials, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure and have a higher potential for a fiber release than non-friable ACM. Non-friable ACM are materials that are firmly bound in a matrix by plastic, cement, etc. and, if handled carefully, will not become friable. Federal and state regulations require that either all suspect building materials be presumed ACM or that an asbestos survey be performed prior to renovation, dismantling, demolition, or other activities that may disturb potential ACM. Notifications are required prior to demolition and/or renovation activities that may impact the condition of ACM in a building. ACM removal may be required if the ACM is likely to be disturbed or damaged during the demolition or renovation. Abatement of friable or potentially friable ACM must be performed by a licensed abatement contractor in accordance with state rules and NESHAP. Additionally, OSHA regulations for work classification, worker training and worker protection will apply.
AHERA	Asbestos Hazard Emergency Response Act
AST	Aboveground Storage Tanks. ASTs are generally described as storage tanks less than 10% of which are below ground (i.e., buried). Tanks located in a basement, but not buried, are also considered ASTs. Whether, and the extent to which, an AST is regulated, is determined on a case-by-case basis and depends upon tank size, its contents and the jurisdiction of its location.
BGS	Below Ground Surface
Brownfields	State and/or tribal listing of Brownfield properties addressed by Cooperative Agreement Recipients or Targeted Brownfields Assessments.
BTEX	Benzene, Toluene, Ethylbenzene, and Xylenes. BTEX are VOC components found in gasoline and commonly used as analytical indicators of a petroleum hydrocarbon release.
CERCLA	Comprehensive Environmental Response, Compensation and Liability Act (a.k.a. Superfund). CERCLA is the federal act that regulates abandoned or uncontrolled hazardous waste sites. Under this Act, joint and several liability may be imposed on potentially responsible parties for cleanup-related costs.
CERCLIS	Comprehensive Environmental Response, Compensation and Liability Information System. An EPA compilation of sites having suspected or actual releases of hazardous substances to the environment. CERCLIS also contains information on site inspections, preliminary assessments and remediation of hazardous waste sites. These sites are typically reported to EPA by states and municipalities or by third parties pursuant to CERCLA Section 103.
CESQG	Conditionally Exempt Small Quantity Generators
CFR	Code of Federal Regulations

Description of Selected General Terms and Acronyms

Term/Acronym	Description
CREC	Controlled Recognized Environmental Condition is defined in ASTM E1527-13 as "a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority) , with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). A condition considered by the environmental professional to be a controlled recognized environmental condition shall be listed in the findings section of the Phase I Environmental Site Assessment report, and as a recognized environmental condition in the conclusions section of the Phase I Environmental Site Assessment report."
DOT	U.S. Department of Transportation
EPA	U.S. Environmental Protection Agency
ERNS	Emergency Response Notification System. An EPA-maintained federal database which stores information on notifications of oil discharges and hazardous substance releases in quantities greater than the applicable reportable quantity under CERCLA. ERNS is a cooperative data-sharing effort between EPA, DOT, and the National Response Center.
ESA	Environmental Site Assessment
FRP	Fiberglass Reinforced Plastic
Hazardous Substance	As defined under CERCLA, this is (A) any substance designated pursuant to section 1321(b)(2)(A) of Title 33, (B) any element, compound, mixture, solution, or substance designated pursuant to section 9602 of this title; (C) any hazardous waste having characteristics identified under or listed pursuant to section 3001 of the Solid Waste Disposal Act (with some exclusions); (D) any toxic pollutant listed under section 1317(a) of Title 33; (E) any hazardous air pollutant listed under section 112 of the Clean Air Act; and (F) any imminently hazardous chemical substance or mixture with respect to which the EPA Administrator has taken action under section 2606 of Title 15. This term does not include petroleum, including crude oil or any fraction thereof which is not otherwise listed as a hazardous substance under subparagraphs (A) through (F) above, and the term include natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas).
Hazardous Waste	This is defined as having characteristics identified or listed under section 3001 of the Solid Waste Disposal Act (with some exceptions). RCRA, as amended by the Solid Waste Disposal Act of 1980, defines this term as a "solid waste, or combination of solid wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics may (A) cause, or significantly contribute to an increase in mortality or an increase in serious irreversible, or incapacitating reversible illness; or (B) pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, or disposed of, or otherwise managed."
HREC	Historical Recognized Environmental Condition is defined in ASTM E1527-13 as "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time of the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition."

Description of Selected General Terms and Acronyms

Term/Acronym	Description
IC/EC	A listing of sites with institutional and/or engineering controls in place. IC include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. EC include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.
ILP	Innocent Landowner/Operator Program
LQG	Large Quantity Generators
LUST	Leaking Underground Storage Tank. This is a federal term set forth under RCRA for leaking USTs. Some states also utilize this term.
MCL	Maximum Contaminant Level. This Safe Drinking Water concept (and also used by many states as a ground water cleanup criteria) refers to the limit on drinking water contamination that determines whether a supplier can deliver water from a specific source without treatment.
MSDS	Material Safety Data Sheets. Written/printed forms prepared by chemical manufacturers, importers and employers which identify the physical and chemical traits of hazardous chemicals under OSHA's Hazard Communication Standard.
NESHAP	National Emissions Standard for Hazardous Air Pollutants (Federal Clean Air Act). This part of the Clean Air Act regulates emissions of hazardous air pollutants.
NFRAP	Facilities where there is "No Further Remedial Action Planned," as more particularly described under the Records Review section of this report.
NOV	Notice of Violation. A notice of violation or similar citation issued to an entity, company or individual by a state or federal regulatory body indicating a violation of applicable rule or regulations has been identified.
NPDES	National Pollutant Discharge Elimination System (Clean Water Act). The federal permit system for discharges of polluted water.
NPL	The NPL is the EPA's database of uncontrolled or abandoned hazardous waste facilities that have been listed for priority remedial actions under the Superfund Program.
OSHA	Occupational Safety and Health Administration or Occupational Safety and Health Act
PACM	Presumed Asbestos-Containing Material. A material that is suspected of containing or presumed to contain asbestos but which has not been analyzed to confirm the presence or absence of asbestos.
PCB	Polychlorinated Biphenyl. A halogenated organic compound commonly in the form of a viscous liquid or resin, a flowing yellow oil, or a waxy solid. This compound was historically used as dielectric fluid in electrical equipment (such as electrical transformers and capacitors, electrical ballasts, hydraulic and heat transfer fluids), and for numerous heat and fire sensitive applications. PCB was preferred due to its durability, stability (even at high temperatures), good chemical resistance, low volatility, flammability, and conductivity. PCBs, however, do not break down in the environment and are classified by the EPA as a suspected carcinogen. 1978 regulations, under the Toxic Substances Control Act, prohibit manufacturing of PCB-containing equipment; however, some of this equipment may still be in use today.
pCi/L	picoCuries per Liter of Air. Unit of measurement for Radon and similar radioactive materials.
PLM	Polarized Light Microscopy (see ACM section of the report, if included in the scope of services)
PST	Petroleum Storage Tank. An AST or UST that contains a petroleum product.

Description of Selected General Terms and Acronyms

Term/Acronym	Description
Radon	A radioactive gas resulting from radioactive decay of naturally-occurring radioactive materials in rocks and soils containing uranium, granite, shale, phosphate, and pitchblende. Radon concentrations are measured in picoCuries per Liter of Air. Exposure to elevated levels of radon creates a risk of lung cancer; this risk generally increases as the level of radon and the duration of exposure increases. Outdoors, radon is diluted to such low concentrations that it usually does not present a health concern. However, radon can accumulate in building basements or similar enclosed spaces to levels that can pose a risk to human health. Indoor radon concentrations depend primarily upon the building's construction, design and the concentration of radon in the underlying soil and ground water. The EPA recommended annual average indoor "action level" concentration for residential structures is 4.0 pCi/l.
RCRA	Resource Conservation and Recovery Act. Federal act regulating solid and hazardous wastes from point of generation to time of disposal ('cradle to grave"). 42 U.S.C. 6901 et seq.
RCRA Generators	The RCRA Generators database, maintained by the EPA, lists facilities that generate hazardous waste as part of their normal business practices. Generators are listed as either large (LQG), small (SQG), or conditionally exempt (CESQG). LQG produce at least 1000 kg/month of non-acutely hazardous waste or 1 kg/month of acutely hazardous waste. SQG produce 100-1000 kg/month of non-acutely hazardous waste. CESQG are those that generate less than 100 kg/month of non-acutely hazardous waste.
RCRA CORRACTS/TSDs	The USEPA maintains a database of RCRA facilities associated with treatment, storage, and disposal (TSD) of hazardous materials which are undergoing "corrective action". A "corrective action" order is issued when there is a release of hazardous waste or constituents into the environment from a RCRA facility.
RCRA Non-CORRACTS/TSDs	The RCRA Non-CORRACTS/TSD Database is a compilation by the USEPA of facilities which report storage, transportation, treatment, or disposal of hazardous waste. Unlike the RCRA CORRACTS/TSD database, the RCRA Non-CORRACTS/TSD database does not include RCRA facilities where corrective action is required.
RCRA Violators List	RAATS. RCRA Administrative Actions Taken. RAATS information is now contained in the RCRIS database and includes records of administrative enforcement actions against facilities for noncompliance.
RCRIS	Resource Conservation and Recovery Information System, as defined in the Records Review section of this report.
REC	Recognized Environmental Conditions are defined by ASTM E1527-13 as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to any release to the environment; 2) under conditions indicative of a release to the environment. De minimis conditions are not recognized environmental conditions."
SCL	State "CERCLIS" List (see SPL /State Priority List, below).
SPCC	Spill Prevention, Control and Countermeasures. SPCC plans are required under federal law (Clean Water Act and Oil Pollution Act) for any facility storing petroleum in tanks and/or containers of 55-gallons or more that when taken in aggregate exceed 1,320 gallons. SPCC plans are also required for facilities with underground petroleum storage tanks with capacities of over 42,000 gallons. Many states have similar spill prevention programs, which may have additional requirements.
SPL	State Priority List. State list of confirmed sites having contamination in which the state is actively involved in clean up activities or is actively pursuing potentially responsible parties for clean up. Sometimes referred to as a State "CERCLIS" List.
SQG	Small Quantity Generator
SWF/LF	State and/or Tribal database of Solid Waste/Landfill facilities. The database information may include the facility name, class, operation type, area, estimated operational life, and owner.
TPH	Total Petroleum Hydrocarbons
TRI	Toxic Release Inventory. Routine EPA report on releases of toxic chemicals to the environment based upon information submitted by entities subject to reporting under the Emergency Planning and Community Right to Know Act.

Redlands Regular meeting of 07-16-24
2268 of 2362

Description of Selected General Terms and Acronyms

Term/Acronym	Description
TSCA	Toxic Substances Control Act. A federal law regulating manufacture, import, processing and distribution of chemical substances not specifically regulated by other federal laws (such as asbestos, PCBs, lead-based paint and radon). 15 U.S.C 2601 et seq.
USACE	United States Army Corps of Engineers
USC	United States Code
USGS	United States Geological Survey
USNRCS	United States Department of Agriculture-Natural Resource Conservation Service
UST	Underground Storage Tank. Most federal and state regulations, as well as ASTM E1527-13, define this as any tank, incl., underground piping connected to the tank, that is or has been used to contain hazardous substances or petroleum products and the volume of which is 10% or more beneath the surface of the ground (i.e., buried).
VCP	State and/or Tribal facilities included as Voluntary Cleanup Program sites.
VOC	Volatile Organic Compound
Wetlands	Areas that are typically saturated with surface or ground water that creates an environment supportive of wetland vegetation (i.e., swamps, marshes, bogs). The Corps of Engineers Wetlands Delineation Manual (Technical Report Y-87-1) defines wetlands as areas inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. For an area to be considered a jurisdictional wetland, it must meet the following criteria: more than 50 percent of the dominant plant species must be categorized as Obligate, Facultative Wetland, or Facultative on lists of plant species that occur in wetlands; the soil must be hydric; and, wetland hydrology must be present. The federal Clean Water Act which regulates “waters of the US,” also regulates wetlands, a program jointly administered by the USACE and the EPA. Waters of the U.S. are defined as: (1) waters used in interstate or foreign commerce, including all waters subject to the ebb and flow of tides; (2) all interstate waters including interstate wetlands; (3) all other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds, etc., which the use, degradation, or destruction could affect interstate/ foreign commerce; (4) all impoundments of waters otherwise defined as waters of the U. S., (5) tributaries of waters identified in 1 through 4 above; (6) the territorial seas; and (7) wetlands adjacent to waters identified in 1 through 6 above. Only the USACE has the authority to make a final wetlands jurisdictional determination.

1.0 INTRODUCTION

1.1 Purpose of Analysis and Study Objectives

This Noise Impact Analysis has been prepared to determine the noise impacts associated with the proposed Sunset Reservoirs project (proposed project). The following is provided in this report:

- A description of the study area and the proposed project;
- Information regarding the fundamentals of noise;
- Information regarding the fundamentals of vibration;
- A description of the local noise guidelines and standards;
- An evaluation of the current noise environment;
- An analysis of the potential short-term construction-related noise impacts from the proposed project; and,
- An analysis of long-term operations-related noise impacts from the proposed project.

1.2 Site Location and Study Area

The project site is located south of Helen Drive in the City of Redlands (City). There is an existing City reservoir tank located on the west side of Helen Court and the proposed reservoir tanks would be located on the east side of Helen Court on parcels APN 0300-451-25 (7.78 acres) and APN 0300-451-14 (2.50 acres) that total 10.28 acres and are currently vacant. The project site is bounded by vacant land and Helen Drive to the north, vacant land to the east, a single-family home to the south, and Helen Court and the existing reservoir tank to the west. The project study area is shown in Figure 1.

Sensitive Receptors in Project Vicinity

The nearest sensitive receptor to the project site is a single-family home that is located as near as 280 feet south of the area that would be disturbed as part of the proposed project. There are also single-family homes as near as 730 feet northeast and 780 feet north of the area that would be disturbed as part of the proposed project.

1.3 Proposed Project Description

The City of Redlands Municipal Utilities and Engineering Department proposes the construction of two new above ground 220 foot diameter factory-coated bolt carbon steel tanks that with an approximately 14 million gallon (MG) total capacity from both tanks. To provide uninterrupted water service to its users during the demolition, the City will keep its existing 3 MG reservoir active. It is anticipated that approximately 6.2 acres of the two parcels that total 10.28 acres will be disturbed as part of the proposed project. The proposed site plan is shown in Figure 2.

One driveway will connect the existing water tank and Helen Court. The driveway will be constructed utilizing asphalt/gravel. Two parking spaces will be installed for maintenance purposes. The site will remain unmanned. The existing water tank will continue to function while the new reservoir tanks will be constructed. Maintenance will occur on a monthly and as-needed basis by City employees. Landscaping will be maintained by the City.

The Project is expected to break ground in 2024 and be completed by 2025. Construction activities will take place between 7:00 a.m. to 6:00 p.m. Monday through Saturday. No construction work will occur on Sundays or holidays per the City's Community Noise Control Section Chapter 8.06 of the Municipal Code.

1.4 Standard Noise Regulatory Conditions

The proposed project will be required to comply with the following regulatory conditions from the City of Redlands and State of California.

City of Redlands Municipal Code

The following lists the City of Redlands Municipal Code regulations that are applicable to the proposed project.

Section 8.06.120(G) – Construction Activity

Section 8.06.120(G) of the City's Municipal Code exempts noise sources associated with new construction, remodeling, rehabilitation or grading of any property from the City's noise standards provided construction activities that occur do not take place between the hours of 6:00 p.m. and 7:00 a.m. on weekdays and Saturdays, with no activities occurring at any time on Sundays or federal holidays. Additionally, all construction equipment must be equipped with functioning mufflers.

Section 8.06.070(A) – Exterior Noise Limits

Section 8.06.070(A) of the City's Municipal Code limits noise to single-family residential uses to 50 dBA between 10:00 p.m. and 7:00 a.m. and to 60 dBA between 7:00 a.m. and 10:00 p.m..

Section 8.06.080(A) –Interior Noise Limits

Section 8.06.080(A) of the City's Municipal Code limits interior noise levels of single-family residential uses to 45 dBA at all times.

State of California Rules

The following lists the State of California rules that are applicable to the proposed project.

California Vehicle Code Section 27200-27207 – On-Road Vehicle Noise

California Vehicle Code Section 27200-27207 provides noise limits for vehicles operated in California. For vehicles over 10,000 pounds noise is limited to 88 dB for vehicles manufactured before 1973, 86 dB for vehicles manufactured before 1975, 83 dB for vehicles manufactured before 1988, and 80 dB for vehicles manufactured after 1987. All measurements are based at 50 feet from the vehicle.

California Vehicle Section 38365-38380 – Off-Road Vehicle Noise

California Vehicle Code Section 38365-38380 provides noise limits for off-highway motor vehicles operated in California. 92 dBA for vehicles manufactured before 1973, 88 dBA for vehicles manufactured before 1975, 86 dBA for vehicles manufactured before 1986, and 82 dBA for vehicles manufactured after December 31, 1985. All measurements are based at 50 feet from the vehicle.

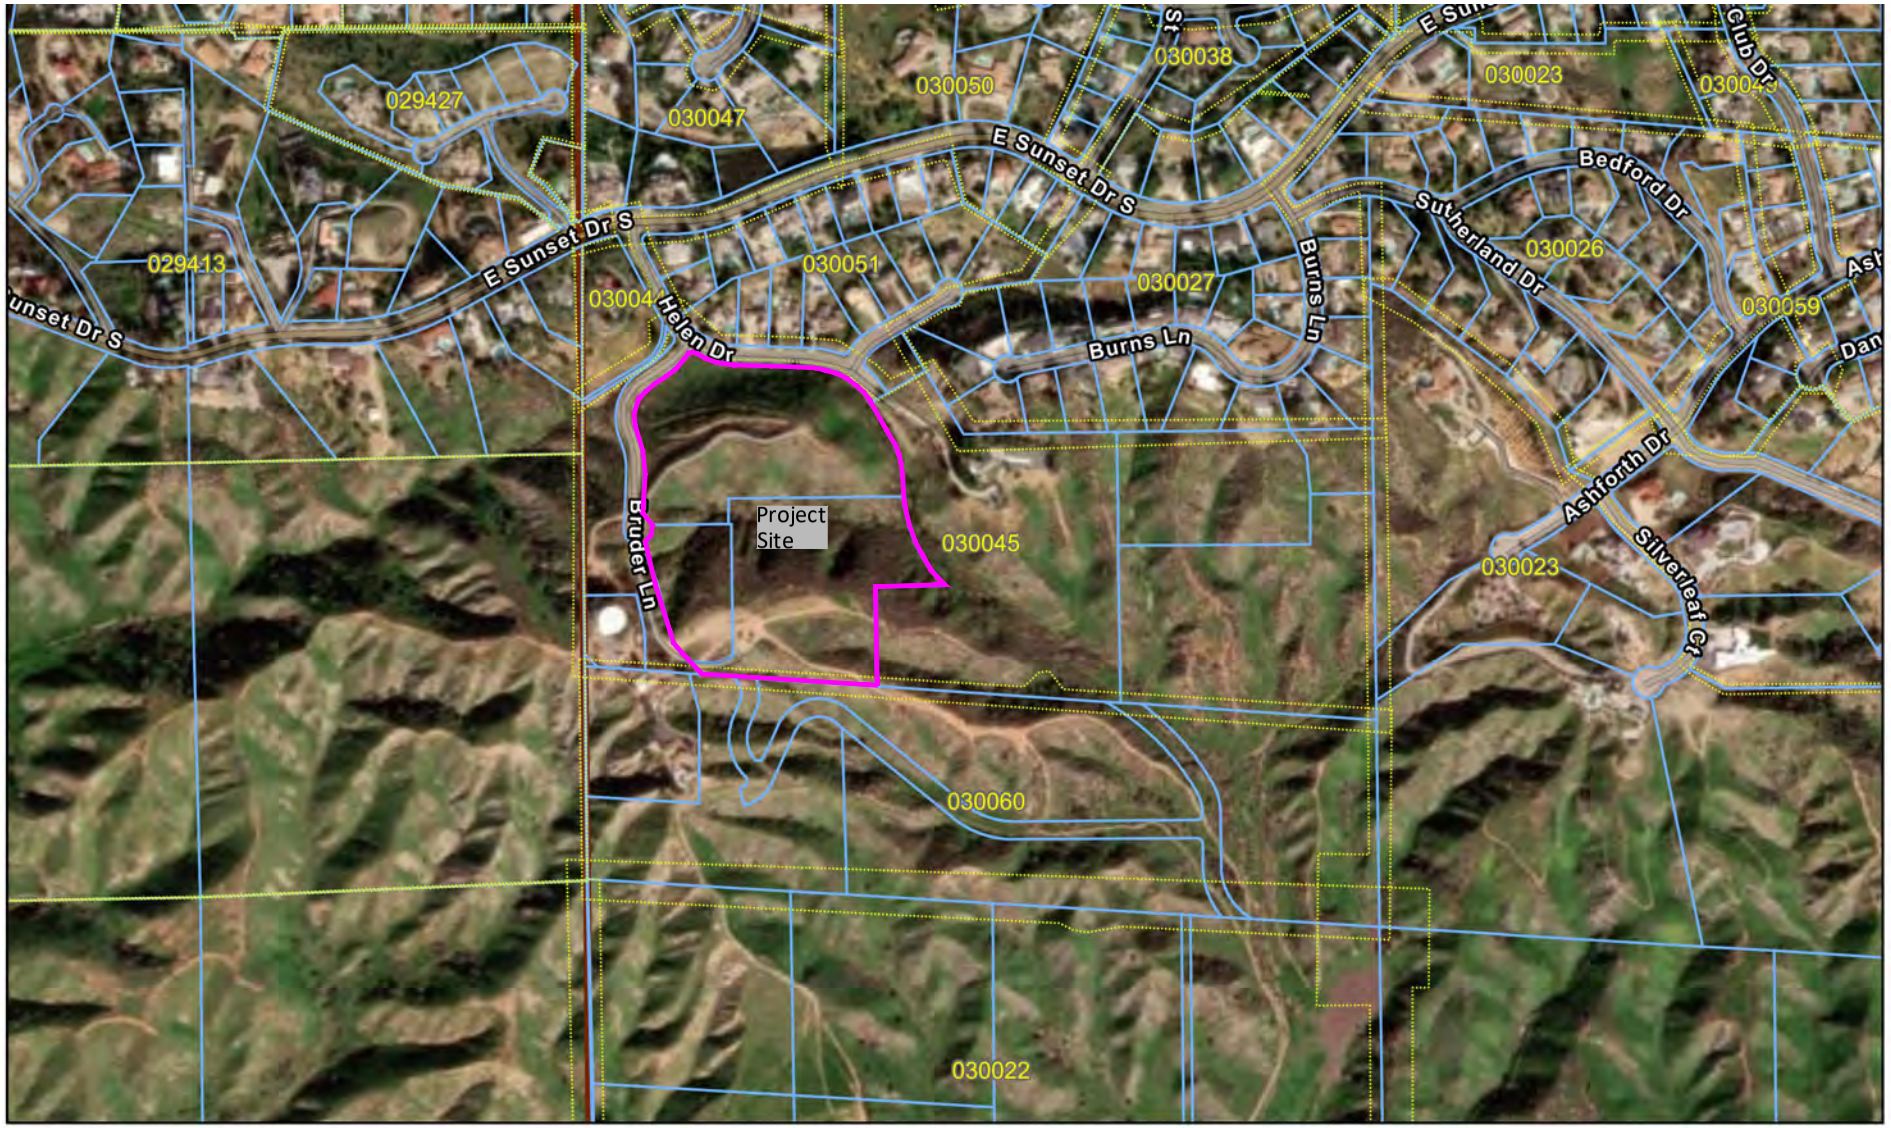
1.5 Summary of Analysis Results

The following is a summary of the proposed project's impacts with regard to the State CEQA Guidelines noise checklist questions.

Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Less than significant impact.

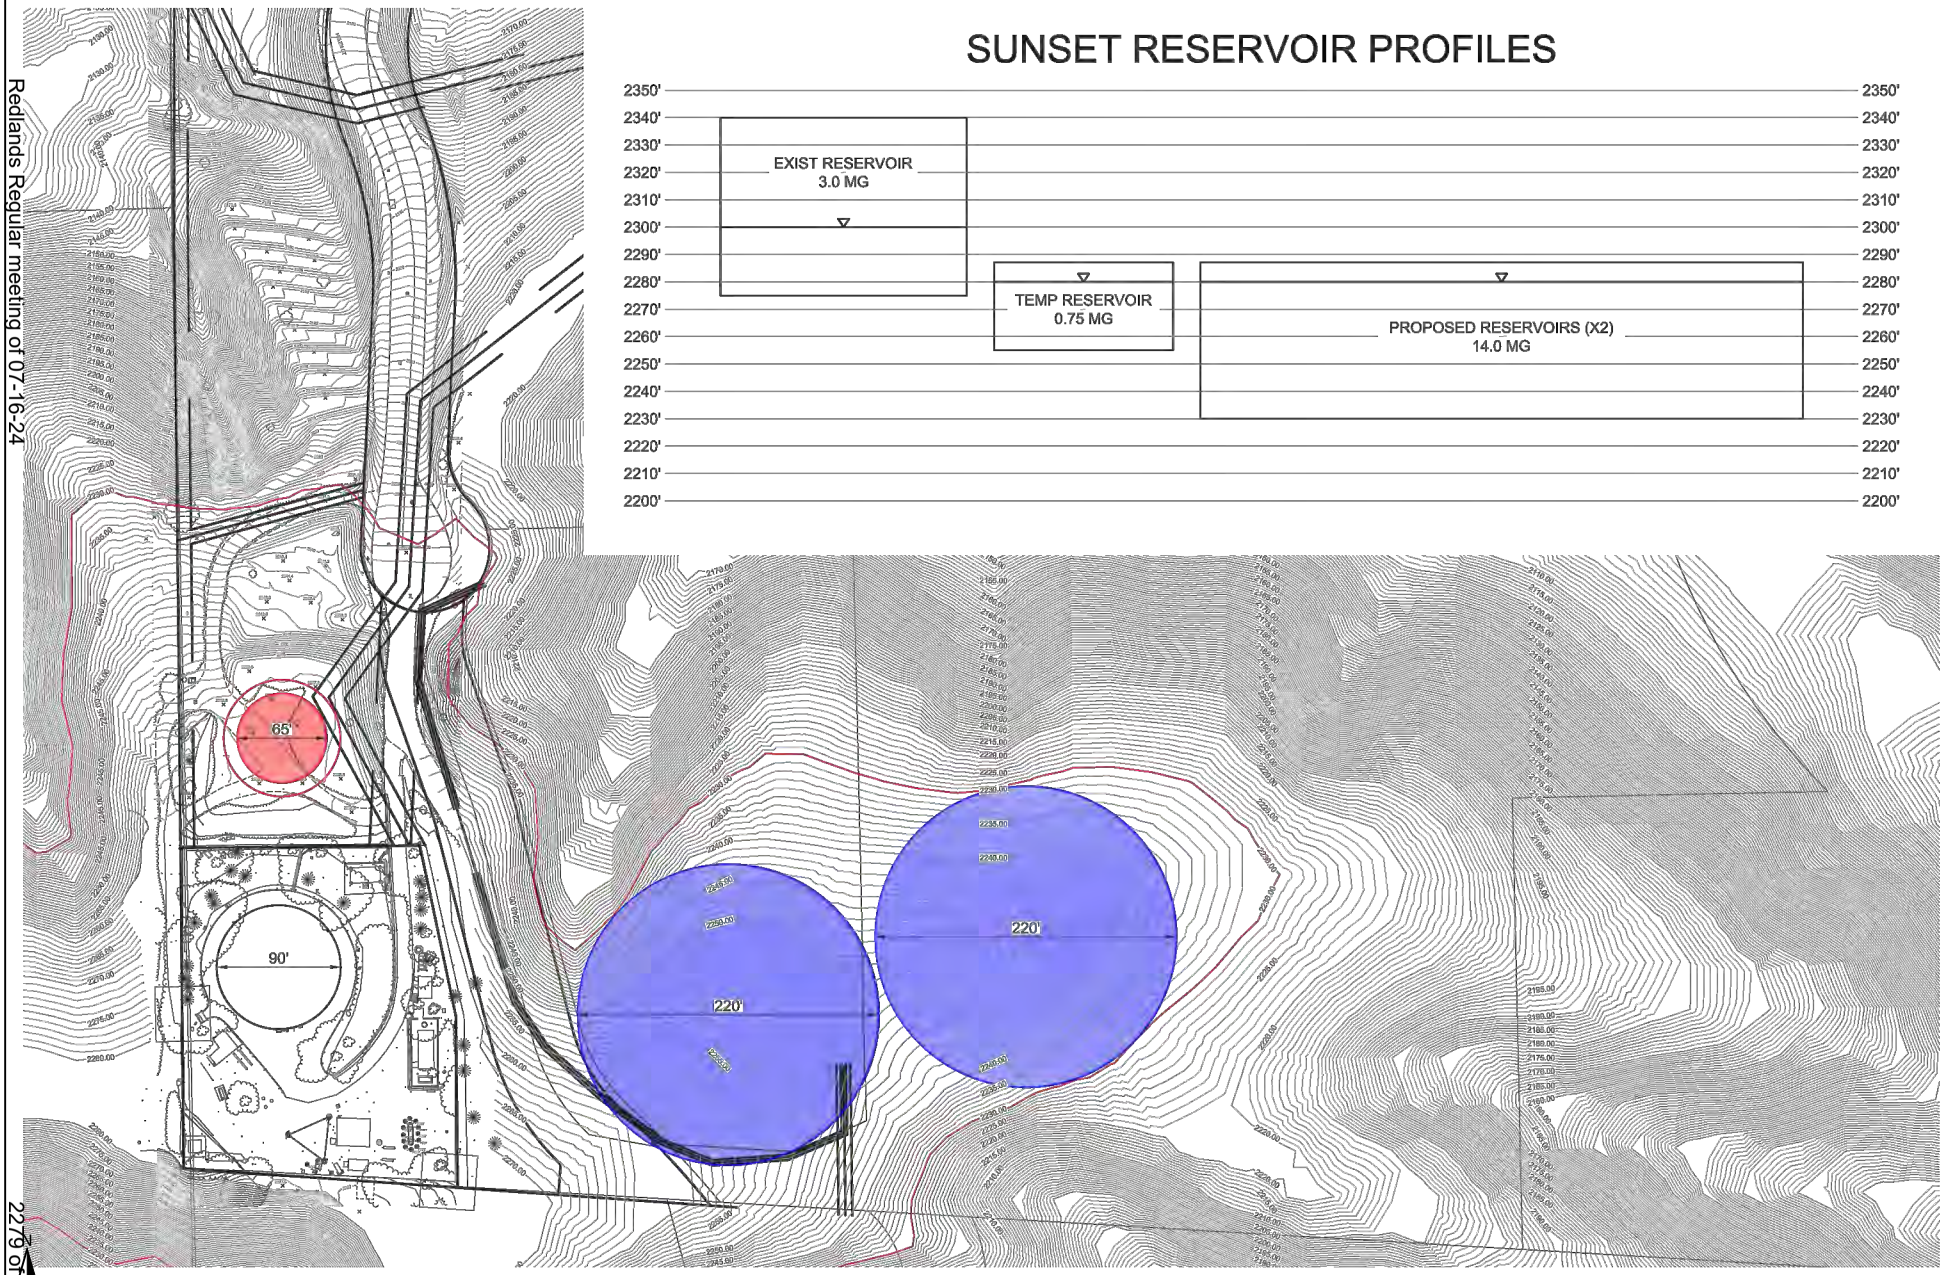
Generation of excessive groundborne vibration or groundborne noise levels?



Less than significant impact.

For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

No impact.



1.6 Mitigation Measures for the Proposed Project

This analysis found that through adherence to the noise and vibration regulations detailed in Section 1.4 above, all noise and vibration impacts would be reduced to less than significant levels and no mitigation is required.

Site Plan

2.0 NOISE FUNDAMENTALS

The following discussion on noise fundamentals has been obtained from *Technical Noise Supplement to the Traffic Noise Analysis Protocol* (TeNS), prepared by Caltrans, September 2013. Noise is defined as unwanted sound. Sound becomes unwanted when it interferes with normal activities, when it causes actual physical harm or when it has adverse effects on health. Sound is produced by the vibration of sound pressure waves in the air. Sound pressure levels are used to measure the intensity of sound and are described in terms of decibels. The decibel (dB) is a logarithmic unit which expresses the ratio of the sound pressure level being measured to a standard reference level. A-weighted decibels (dBA) approximate the subjective response of the human ear to a broad frequency noise source by discriminating against very low and very high frequencies of the audible spectrum. They are adjusted to reflect only those frequencies which are audible to the human ear.

2.1 Noise Descriptors

Noise Equivalent sound levels are not measured directly, but are calculated from sound pressure levels typically measured in A-weighted decibels (dBA). The equivalent sound level (Leq) represents a steady state sound level containing the same total energy as a time varying signal over a given sample period. The peak traffic hour Leq is the noise metric used by California Department of Transportation (Caltrans) for all traffic noise impact analyses.

The Day-Night Average Level (Ldn) is the weighted average of the intensity of a sound, with corrections for time of day, and averaged over 24 hours. The time of day corrections require the addition of ten decibels to sound levels at night between 10 p.m. and 7 a.m. While the Community Noise Equivalent Level (CNEL) is similar to the Ldn, except that it has another addition of 4.77 decibels to sound levels during the evening hours between 7 p.m. and 10 p.m. These additions are made to the sound levels at these time periods because during the evening and nighttime hours, when compared to daytime hours, there is a decrease in the ambient noise levels, which creates an increased sensitivity to sounds. For this reason the sound appears louder in the evening and nighttime hours and is weighted accordingly. The City of Redlands relies on the CNEL noise standard to assess transportation-related impacts on noise sensitive land uses.

2.2 Tone Noise

A pure tone noise is a noise produced at a single frequency and laboratory tests have shown that humans are more perceptible to changes in noise levels of a pure tone. For a noise source to contain a "pure tone," there must be a significantly higher A-weighted sound energy in a given frequency band than in the neighboring bands, thereby causing the noise source to "stand out" against other noise sources. A pure tone occurs if the sound pressure level in the one-third octave band with the tone exceeds the average of the sound pressure levels of the two contiguous one-third octave bands by:

- 5 dB for center frequencies of 500 hertz (Hz) and above
- 8 dB for center frequencies between 160 and 400 Hz
- 15 dB for center frequencies of 125 Hz or less

2.3 Noise Propagation

From the noise source to the receiver, noise changes both in level and frequency spectrum. The most obvious is the decrease in noise as the distance from the source increases. The manner in which noise

reduces with distance depends on whether the source is a point or line source as well as ground absorption, atmospheric effects and refraction, and shielding by natural and manmade features. Sound from point sources, such as air conditioning condensers, radiate uniformly outward as it travels away from the source in a spherical pattern. The noise drop-off rate associated with this geometric spreading is 6 dBA per each doubling of the distance (dBA/DD). Transportation noise sources such as roadways are typically analyzed as line sources, since at any given moment the receiver may be impacted by noise from multiple vehicles at various locations along the roadway. Because of the geometry of a line source, the noise drop-off rate associated with the geometric spreading of a line source is 3 dBA/DD.

2.4 Ground Absorption

The sound drop-off rate is highly dependent on the conditions of the land between the noise source and receiver. To account for this ground-effect attenuation (absorption), two types of site conditions are commonly used in traffic noise models, soft-site and hard-site conditions. Soft-site conditions account for the sound propagation loss over natural surfaces such as normal earth and ground vegetation. For point sources, a drop-off rate of 7.5 dBA/DD is typically observed over soft ground with landscaping, as compared with a 6.0 dBA/DD drop-off rate over hard ground such as asphalt, concrete, stone and very hard packed earth. For line sources a 4.5 dBA/DD is typically observed for soft-site conditions compared to the 3.0 dBA/DD drop-off rate for hard-site conditions. Caltrans research has shown that the use of soft-site conditions is more appropriate for the application of the Federal Highway Administration (FHWA) traffic noise prediction model used in this analysis.

3.0 GROUND-BORNE VIBRATION FUNDAMENTALS

Ground-borne vibrations consist of rapidly fluctuating motions within the ground that have an average motion of zero. The effects of ground-borne vibrations typically only cause a nuisance to people, but at extreme vibration levels damage to buildings may occur. Although ground-borne vibration can be felt outdoors, it is typically only an annoyance to people indoors where the associated effects of the shaking of a building can be notable. Ground-borne noise is an effect of ground-borne vibration and only exists indoors, since it is produced from noise radiated from the motion of the walls and floors of a room and may also consist of the rattling of windows or dishes on shelves.

3.1 Vibration Descriptors

There are several different methods that are used to quantify vibration amplitude such as the maximum instantaneous peak in the vibrations velocity, which is known as the peak particle velocity (PPV) or the root mean square (rms) amplitude of the vibration velocity. Due to the typically small amplitudes of vibrations, vibration velocity is often expressed in decibels and is denoted as (L_v) and is based on the rms velocity amplitude. A commonly used abbreviation is "VdB", which in this text, is when L_v is based on the reference quantity of 1 micro inch per second.

3.2 Vibration Perception

Typically, developed areas are continuously affected by vibration velocities of 50 VdB or lower. These continuous vibrations are not noticeable to humans whose threshold of perception is around 65 VdB. Off-site sources that may produce perceptible vibrations are usually caused by construction equipment, steel-wheeled trains, and traffic on rough roads, while smooth roads rarely produce perceptible ground-borne noise or vibration.

3.3 Vibration Propagation

The propagation of ground-borne vibration is not as simple to model as airborne noise. This is due to the fact that noise in the air travels through a relatively uniform median, while ground-borne vibrations travel through the earth which may contain significant geological differences. There are three main types of vibration propagation; surface, compression, and shear waves. Surface waves, or Rayleigh waves, travel along the ground's surface. These waves carry most of their energy along an expanding circular wave front, similar to ripples produced by throwing a rock into a pool of water. P-waves, or compression waves, are body waves that carry their energy along an expanding spherical wave front. The particle motion in these waves is longitudinal (i.e., in a "push-pull" fashion). P-waves are analogous to airborne sound waves. S-waves, or shear waves, are also body waves that carry energy along an expanding spherical wave front. However, unlike P-waves, the particle motion is transverse or "side-to-side and perpendicular to the direction of propagation."

As vibration waves propagate from a source, the vibration energy decreases in a logarithmic nature and the vibration levels typically decrease by 6 VdB per doubling of the distance from the vibration source. As stated above, this drop-off rate can vary greatly depending on the soil but has been shown to be effective enough for screening purposes, in order to identify potential vibration impacts that may need to be studied through actual field tests.

4.0 REGULATORY SETTING

The project site is located in the City of Redlands. Noise regulations are addressed through the efforts of various federal, state, and local government agencies. The agencies responsible for regulating noise are discussed below.

4.1 Federal Regulations

The adverse impact of noise was officially recognized by the federal government in the Noise Control Act of 1972, which serves three purposes:

- Promulgating noise emission standards for interstate commerce
- Assisting state and local abatement efforts
- Promoting noise education and research

The Federal Office of Noise Abatement and Control (ONAC) was initially tasked with implementing the Noise Control Act. However, the ONAC has since been eliminated, leaving the development of federal noise policies and programs to other federal agencies and interagency committees. For example, the Occupational Safety and Health Administration (OSHA) agency prohibits exposure of workers to excessive sound levels. The Department of Transportation (DOT) assumed a significant role in noise control through its various operating agencies. The Federal Aviation Administration (FAA) regulates noise of aircraft and airports. Surface transportation system noise is regulated by a host of agencies, including the Federal Transit Administration (FTA). Transit noise is regulated by the FTA, while freeways that are part of the interstate highway system are regulated by the Federal Highway Administration (FHWA). Finally, the federal government actively advocates that local jurisdictions use their land use regulatory authority to arrange new development in such a way that "noise sensitive" uses are either prohibited from being sited adjacent to a highway or, alternately that the developments are planned and constructed in such a manner that potential noise impacts are minimized.

Although the proposed project is not under the jurisdiction of the FTA, the *Transit Noise and Vibration Impact Assessment Manual* (FTA Manual), prepared by the FTA, September 2018, is a guidance document from a government agency that has defined what constitutes a significant noise impact from implementing a project. The FTA standards are based on extensive studies by the FTA and other governmental agencies on the human effects and reaction to noise and a summary of the FTA findings for a detailed construction noise assessment are provided below in Table A.

Table A – FTA Construction Noise Criteria

Land Use	Day (dBA $Leq_{(8\text{-hour})}$)	Night (dBA $Leq_{(8\text{-hour})}$)	30-day Average (dBA Ldn)
Residential	80	70	75
Commercial	85	85	80[(1)]
Industrial	90	90	85[(1)]

Notes:
[(1)] Use a 24-hour $Leq_{(24\ hour)}$ instead of $Ldn_{(30\ day)}$.
Source: Federal Transit Administration, 2018.

Since the federal government has preempted the setting of standards for noise levels that can be emitted by transportation sources, the City is restricted to regulating noise generated by the transportation system through nuisance abatement ordinances and land use planning.

4.2 State Regulations

Noise Standards

California Department of Health Services Office of Noise Control

Established in 1973, the California Department of Health Services Office of Noise Control (ONC) was instrumental in developing regularity tools to control and abate noise for use by local agencies. One significant model is the "Land Use Compatibility for Community Noise Environments Matrix," which allows the local jurisdiction to clearly delineate compatibility of sensitive uses with various incremental levels of noise.

California Noise Insulation Standards

Title 24, Chapter 1, Article 4 of the California Administrative Code (California Noise Insulation Standards) requires noise insulation in new hotels, motels, apartment houses, and dwellings (other than single-family detached housing) that provides an annual average noise level of no more than 45 dBA CNEL. When such structures are located within a 60-dBA CNEL (or greater) noise contour, an acoustical analysis is required to ensure that interior levels do not exceed the 45-dBA CNEL annual threshold. In addition, Title 21, Chapter 6, Article 1 of the California Administrative Code requires that all habitable rooms, hospitals, convalescent homes, and places of worship shall have an interior CNEL of 45 dB or less due to aircraft noise.

Government Code Section 65302

Government Code Section 65302 mandates that the legislative body of each county and city in California adopt a noise element as part of its comprehensive general plan. The local noise element must recognize the land use compatibility guidelines published by the State Department of Health Services. The guidelines rank noise land use compatibility in terms of normally acceptable, conditionally acceptable, normally unacceptable, and clearly unacceptable.

Vibration Standards

Title 14 of the California Administrative Code Section 15000 requires that all state and local agencies implement the California Environmental Quality Act (CEQA) Guidelines, which requires the analysis of exposure of persons to excessive groundborne vibration. However, no statute has been adopted by the state that quantifies the level at which excessive groundborne vibration occurs.

Caltrans issued the *Transportation and Construction Vibration Guidance Manual* in April 2020. The manual provides practical guidance to Caltrans engineers, planners, and consultants who must address vibration issues associated with the construction, operation, and maintenance of Caltrans projects. However, this manual is also used as a reference point by many lead agencies and CEQA practitioners throughout California, as it provides numeric thresholds for vibration impacts. Thresholds are provided for both transient (i.e., mobile equipment) and continuous (i.e., pile driving) sources of vibration. The Guidance Manual provides thresholds for both building damage, where transient vibration sources may start to create damage to buildings at 0.5 inch per second PPV and from human response, where transient vibration sources become distinctly perceptible at 0.24 inch per second PPV.

4.3 Local Regulations

The City of Redlands General Plan and Municipal Code establishes the following applicable policies related to noise and vibration.

City of Redlands General Plan Implementing Policies

9.0e Use the criteria specified in GP Table 9.1 (see Table B) to assess the compatibility of proposed land uses with the projected noise environment, and apply the noise standards in GP Table 9.2 (see Table C), which prescribe interior and exterior noise standards in relation to specific land uses. Do not approve projects that would not comply with the standards in GP Table 9.2.

Table B – City of Redlands Noise and Land Use Compatibility Matrix

Land Use Categories	Uses	Community Noise Equivalent Level (CNEL)						
		<60	65	70	75	80	>85	
Residential	Single-Family, Duplex, Multiple-Family	A	C	C	C	D	D	D
	Mobile Homes	A	C	C	C	D	D	D
Commercial Regional, District	Hotel, Motel, Transient Lodging	A	A	B	B	C	C	D
Commercial Regional, Village, District, Special	Commercial, Retail, Bank, Restaurant, Movie Theatre	A	A	A	A	B	B	C
Commercial Industrial, Institutional	Office Building, Research and Development, Professional Offices, City Office Building	A	A	A	B	B	C	D
Commercial Recreation Institutional Civic Center	Amphitheatre, Concert Hall, Auditorium, Meeting Hall	B	B	C	C	D	D	D
Commercial Recreation	Children's Amusement Park, Miniature Golf Course, Go-cart Track, Equestrian Center, Sports Club	A	A	A	A	B	B	B
Commercial General, Special Industrial, Institutional	Automobile Service Station, Auto Dealership, Manufacturing, Warehousing, Wholesale, Utilities	A	A	A	A	B	B	B
Institutional General	Hospital, Church, Library, Schools, Classroom	A	B	C	C	D	D	
Open Space	Parks	A	A	A	B	C	D	D
	Golf Course, Cemeteries, Nature Centers, Wildlife Reserves, Wildlife Habitat	A	A	A	A	B	C	C
Agriculture	Agriculture	A	A	A	A	A	A	A

Interpretation:
Zone A: Clearly Compatible. Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction without any special noise insulation requirements.

Zone B: Normally Compatible. New construction or development should be undertaken only after detailed analysis of the noise reduction requirements are made and needed noise insulation features in the design are determined. Conventional construction, with closed windows and fresh air supply systems or air conditioning, will normally suffice.
Zone C: Normally Incompatible. New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of noise reduction requirements must be made and needed noise insulation features included in the design.
Zone D: Clearly Incompatible. New construction or development should generally not be undertaken.
Source: Table 7-10 from City of Redlands General Plan, 2017.

Table C – City of Redlands Interior and Exterior Noise Standards

Land Use Categories	Uses	Community Noise Equivalent (CNEL)	
		Interior[(1)]	Exterior[(2)]
Residential	Single-Family, Duplex, Multiple-Family	45[(3,5)]	60
	Mobile Homes	--	60[(4)]
Commercial, Institutional, Open Space	Hotel, Motel, Transient Lodging	45	65[(5)]
	Commercial Retail, Bank, Restaurant	55	--
	Office Building, Research & Development, Professional Offices, City Office Building	50	--
	Amphitheater, Concert Hall, Auditorium, Meeting Hall	45	--
	Gymnasium (Multipurpose)	50	--
	Sports Club	55	--
	Manufacturing, Warehousing, Wholesale, Utilities	60	--
	Movie Theatres	45	--
	Hospital, School's Classroom	45	--
	Parks	--	60

Interpretation:
[1] Indoor environment excluding: bathrooms, toilets, closets, corridors.
[2] Outdoor environment limited to: private yard of single-family as measured at the property line; multi-family private patio or balcony which is served by a means of exit from inside; mobile home park, hospital patio; park picnic area; school playground; hotel and recreational area..
[3] Noise level requirement with closed windows, if they are used to meet natural ventilation requirement.
[4] Exterior noise level should be such that interior noise level will not exceed 45 CNEL.
[5] Except those areas affected by aircraft noise.
See also Policy 9.0s.
Source: Table 9.2 from City of Redlands General Plan, 2017.

9.0f Require a noise impact evaluation based on noise measurements at the site for all projects in Noise Referral Zones (B, C, or D) as shown on GP Table 9.1 (see Table B) and on GP Figure 9.1 or as determined from tables in the Appendix, as part of the project review process. Should measurements indicate that unacceptable noise levels will be created or experienced, require mitigation measures based on a detailed technical study prepared by a qualified acoustical engineer (i.e., a Registered Professional Engineer in the State of California with a minimum of three years experience in acoustics).

9.0i Require construction of barriers to mitigate sound emissions where necessary or where feasible, and encourage use of walls and berms to protect residential or other noise sensitive land uses that are adjacent to major roads, commercial, or industrial areas.

9.0s Require mitigation to ensure that indoor noise levels for residential living spaces not exceed 45 dB LDN/CNEL due to the combined effect for all exterior noise sources.

The Uniform Building Code (specifically, the California Administrative Code, Title 24, Part 6, Division T25, Chapter 1, Subchapter 1, Article 4, Sections T25-28) requires that "Interior community noise levels (CNEL/LDN) with windows closed, attributable to exterior sources shall not exceed an annual CNEL or LDN of a 45 dB in any habitable room." The code requires that this standard be applied to all new hotels, motels, apartment houses and dwellings other than detached single-family dwellings.

Policy 9-s sets the maximum acceptable interior noise level at 45 CNEL. The Noise Referral Zones (65 CNEL) delineate areas within which tests to ensure compliance are to be required for new structures

9.0u Require all new residential projects or replacement dwellings to be constructed near existing sources of non transportation noise (including but not limited to commercial facilities or public parks with sports activities) to demonstrate via an acoustical study conducted by a Registered Engineer that the indoor noise levels will be consistent with the limits contained in the Community Noise Ordinance (see Table C).

9.0v Consider the following impacts as possibly "significant":

- An increase in exposure of four or more dB if the resulting noise level would exceed that described as clearly compatible for the affected land use, established in GP Table 9.1 [Table 7-10] and GP Table 9.2 [Table 7-11];
- Any increase of six dB or more, due to the potential for adverse community response.

City of Redlands Municipal Code

The City of Redlands Municipal Code establishes the following applicable standards related to noise.

Section 8.06.030 – General Noise Regulations

It shall be unlawful for any person to willfully or negligently make, or cause to be made, any loud, unnecessary or unusual noise which disturbs the peace and quiet of any neighborhood or which causes discomfort or annoyance to a reasonable person of normal sensitivity in the area. The factors that may be considered in determining whether a violation of this chapter exists include, but are not limited to, the following:

A. The sound level of the objectionable noise;

B. The sound level of the ambient noise;

C. The proximity of the noise to residential living or sleeping facilities;

D. The nature and zoning of the area within which the noise emanates;

E. The number of persons affected by the noise;

F. The time of day or night the noise occurs;

G. The duration of the noise;

H. The tonal, informative or musical content of the noise;

I. Whether the noise is continuous, recurrent, or intermittent;

J. Whether the noise is produced by a commercial or noncommercial activity;

K. Whether the nature of the noise is usual or unusual;

L. Whether the origin of the noise is natural or unnatural; and

M. Whether the noise occurs on a weekday, weekend or a holiday.

Section 8.06.070 – Exterior Noise Limits

A. The noise standards for the categories of land uses identified in Table 1 (see Table D) of this section shall, unless otherwise specifically indicated, apply to all such property within a designated zone.

B. No person shall operate, or cause to be operated, any source of sound at any location within the city or allow the creation of any noise on property owned, leased, occupied or otherwise controlled by such person which causes the noise level when measured on any other property to exceed:

1. The noise standard for that land use specified in Table 1 of this section for a cumulative period of more than thirty (30) minutes in any hour; or
2. The noise standard specified in Table 1 of this section plus five (5) dB for a cumulative period of more than fifteen (15) minutes in any hour; or
3. The noise standard specified in Table 1 of this section plus ten (10) dB for a cumulative period of more than five (5) minutes in any hour; or
4. The noise standard specified in Table 1 of this section plus fifteen (15) dB for a cumulative period of more than one minute in any hour; or
5. The noise standard specified in Table 1 of this section plus twenty (20) dB or the maximum measured ambient level, for any period of time.

C. If the measured ambient level exceeds the allowable noise exposure standard within any of the first four (4) noise limit categories below, the allowable noise exposure standard shall be adjusted in five (5) dB increments in each category as appropriate to encompass or reflect said ambient noise level. In the event the ambient noise level exceeds the fifth noise limit category, the maximum allowable noise level under this category shall be increased to reflect the maximum ambient noise level.

D. The ambient noise shall be measured at the same location along the property line utilized in subsection 8.06.06B of this chapter, with the alleged offending noise source inoperative. If the alleged offending noise source cannot be shut down, the ambient noise shall be estimated by performing a measurement in the same general area of the source but at sufficient distance that the noise from the source is at least ten (10) dB below the ambient in order that only the ambient level be measured. If the difference between the ambient and noise source is five (5) to ten (10) dB, then the level of the ambient itself can be reasonably determined by subtracting a one decibel correction to account for the contribution of the source.

E. In the event the alleged offensive noise contains a steady, audible tone such as a whine, screech, hum, or is a repetitive noise such as a hammering or riveting, or contains music or speech conveying informational content, the standard limits set forth in Table 1 of this section shall be reduced by five (5) dB.

Table D – City of Redlands Maximum Permissible Sound Levels By Receiving Land Use

Receiving Land Use Category	Time Period	Noise Level (dBA)
Single-Family Residential Districts	10:00 p.m. – 7:00 a.m.	50
	7:00 a.m. – 10:00 p.m.	60
Multi-Family Residential Districts, Public Space, Institutional	10:00 p.m. – 7:00 a.m.	50
	7:00 a.m. – 10:00 p.m.	60
Commercial	10:00 p.m. – 7:00 a.m.	60
	7:00 a.m. – 10:00 p.m.	65
Industrial	Any time	75

Source: City of Redlands Municipal Code Section 8.06.070.

Section 8.06.080 – Interior Noise Standards

A. No person shall operate or cause to be operated any source of sound, or allow the creation of any noise, which causes the noise level when measured inside a neighboring receiving occupied building to exceed the following standards.

1. The noise standard for that land use specified in Table 2 (see Table E) of this section for a cumulative period of more than five (5) minutes in any hour.
2. The noise standard for that land use specified in Table 2 of this section plus five (5) dB for a cumulative period of more than one minute in any hour.
3. The noise standard for that land use specified in Table 2 of this section plus ten (10) dB for the maximum measured ambient noise level for any period of time.

Table E – City of Redlands Maximum Permissible Interior Sound Levels By Receiving Land Use

Receiving Land Use Category	Time Period	Noise Level (dBA)
Single-Family Residential Districts	Any time	45

B. If the measured ambient level exceeds the allowable exterior noise exposure standard in Table 1 (see Table D) of this chapter, the allowable interior noise exposure level shall be adjusted in five (5) dB increments as appropriate too reflect the ambient noise level.

Section 8.06.090 – Noise Disturbances Prohibited

The following acts, and the causing or permitting thereof, are declared to be in violation of this chapter:

F. Construction And/Or Demolition: Operating or causing the operation of any tools or equipment used in construction, drilling, repair, alteration or demolition work between weekday hours of six o'clock (6:00) P.M. and seven o'clock (7:00) A.M., including Saturdays, or at any time on Sundays or holidays, such that the sound therefrom creates a noise disturbance across a residential or commercial real property line, except for emergency work by public service utilities, the city or another government entity. All mobile

or stationary internal combustion engine powered equipment or machinery shall be equipped with exhaust and air intake silencers in proper working order, or suitable to meet the standards set forth herein.

G. Vibration: Operating or permitting the operation of any device that creates a vibration which is above the vibration perception threshold of an individual at or beyond the property boundary of the source if on private property or at one hundred fifty feet (150') from the source if on a public space or public right of way.

Section 8.06.120 – Exemptions

A. Emergency Exemption: This chapter shall not apply to:

1. The emission of sound for the purpose of alerting persons to the existence of an emergency such as, but not limited to, loudspeakers, horns, sirens, whistles or other similar devices which emit sound, only for the time required to make notification of the emergency condition; or
2. The emission of sound in the performance of emergency work or the temporary provision of essential services such as, but not limited to, utility system repairs or upgrades, infrastructure repairs, structural repairs and other unscheduled, infrequent and nonrecurring activities, required to protect persons and property from physical harm or loss of essential services.

B. Warning Devices: This chapter shall not apply to warning devices necessary for the protection of public safety. Police, fire and ambulance sirens and train horns are exempt from this chapter.

C. Outdoor Activities: This chapter shall not apply to occasional outdoor public gatherings, public dances, shows, and sporting and entertainment events conducted within city parks and city owned facilities, including events conducted at the Redlands Bowl, provided such events are conducted pursuant to a permit or license issued by the city.

D. School Activities: This chapter shall not apply to activities and operations conducted on the grounds of any public or private elementary, intermediate or secondary school or colleges and universities.

E. Hospital: This chapter shall not apply to activities and operations conducted within the grounds of the Redlands Community Hospital provided that said activities and operations are in compliance with the acoustical provisions of the hospital's conditional use permit.

F. Minor Maintenance Of Residential Property: This chapter shall not apply to noise sources associated with the minor maintenance of residential property, provided such activities take place between the hours of seven o'clock (7:00) A.M. to eight o'clock (8:00) P.M. on weekdays, and seven o'clock (7:00) A.M. to eight o'clock (8:00) P.M. on weekends and legal holidays, and provided that such activities generate no more than ninety (90) dBA at or within the real property line of the residential property. Activities covered under this provision include, but are not limited to, maintenance of landscaping and minor repair of residential dwellings or ancillary structures.

G. Construction Activities: This chapter shall not apply to noise sources associated with new construction, remodeling, rehabilitation or grading of any property provided such activities take place between the hours of seven o'clock (7:00) and six o'clock (6:00) P.M. on weekdays, including Saturdays, with no activities taking place at any time on Sundays or federal holidays. All motorized equipment used in such activity shall be equipped with functioning mufflers.

H. Agricultural Operations: This chapter shall not apply to mobile noise sources associated with agricultural operations for use in maintenance, cultivation, planting and harvesting of agricultural areas provided said activities take place between the hours of seven o'clock (7:00) A.M. to eight o'clock (8:00)

P.M. on weekdays including Saturdays, with no activities taking place at any time on Sundays or federal holidays. All motorized equipment used in such activity shall be equipped with functioning mufflers.

I. Chapter Application: This chapter shall not apply to any activity in which state or federal law has preempted the regulation of such activity.

5.0 EXISTING NOISE CONDITIONS

To determine the existing noise levels, noise measurements have been taken in the vicinity of the project site. The field survey noted that noise within the proposed project area is generally relatively low compared to the rest of the City. The primary noise sources in the project vicinity consist of vehicles operating on Helen Court and Helen Drive and from mechanical equipment associated with the telecommunications towers next to the existing water tank. The following describes the measurement procedures, measurement locations, noise measurement results, and the modeling of the existing noise environment.

5.1 Noise Measurement Equipment

The noise measurements were taken using a Larson-Davis Model 831 Type 1 precision sound level meter programmed in "slow" mode to record noise levels in "A" weighted form as well as the frequency spectrum of the noise broken down into 1/3 octaves. The sound level meter and microphone were mounted on a tripod five feet above the ground and were equipped with a windscreen during all measurements. The sound level meter was calibrated before and after the monitoring using a Larson-Davis calibrator, Model CAL 200. The accuracy of the calibrator is maintained through a program established through the manufacturer and is traceable to the National Bureau of Standards. The noise level measurement equipment meets American National Standards Institute (ANSI) specifications for sound level meters (ANSI S1.4-2014 standard).

Noise Measurement Locations

The noise monitoring locations were selected in order to obtain noise levels in the vicinity of the project site. Descriptions of the noise monitoring sites are provided below in Table F and are shown in Figure 3. Appendix A includes a photo index of the study area and noise level measurement locations.

Noise Measurement Timing and Climate

The noise measurements were recorded between 3:25 p.m. and 4:04 p.m. on Monday, August 28, 2023. During the noise measurements, the sky was clear (no clouds), the temperature was 103 degrees Fahrenheit, the humidity was 23 percent, barometric pressure was 27.68 inches of mercury, and the wind was blowing at an average rate of five miles per hour.

5.2 Noise Measurement Results

The results of the noise level measurements are presented in Table F and the noise monitoring data printouts are included in Appendix B.

Table F – Existing (Ambient) Noise Measurement Results

Site No.	Description	Primary Noise Source	Start Time of Measurement	Measured Noise Level	
				dBA Leq	dBA Lmax
1	Located southwest of proposed reservoirs, approximately 40 feet southwest of Helen Court centerline and 20 feet north of fence for home at 13202 Bruder Lane	Vehicles on Helen Court and mechanical equipment	3:25 p.m.	46.8	58.8
2	Located north of proposed reservoirs at Teddy's Trailhead, approximately 15 feet north of Helen Court centerline.	Vehicles on Helen Court and Helen Lane	3:49 p.m.	51.3	73.2

Notes: Noise measurements taken with a Larson-Davis Model 831 Type 1 precision sound level meter on Monday, August 28, 2023.

Field Noise Monitoring Locations

6.0 MODELING PARAMETERS AND ASSUMPTIONS

6.1 Construction Noise

The noise impacts from construction of the proposed project have been analyzed through use of the FHWA's Roadway Construction Noise Model (RCNM). The FHWA compiled noise measurement data regarding the noise generating characteristics of several different types of construction equipment used during the Central Artery/Tunnel project in Boston. Table G below provides a list of the construction equipment anticipated to be used for each phase of construction, which was obtained from the *Air Quality and Greenhouse Gas Emissions Impact Analysis Sunset Reservoirs Project* (Air Quality Analysis), prepared by Vista Environmental, October 2, 2023.

Table G – Construction Equipment Noise Emissions and Usage Factors

Equipment Description	Number of Equipment	Acoustical Use Factor[1] (percent)	Spec 721.560 Lmax at 50 feet[2] (dBA, slow[3])	Actual Measured Lmax at 50 feet[4] (dBA, slow[3])
Site Preparation				
Rubber Tired Dozer	3	40	85	83
Tractor, Loader, or Backhoe	4	40	84	N/A
Grading				
Excavators	1	40	85	81
Grader	1	40	85	83
Rubber Tired Dozer	1	40	85	82

Paver	2	50	85	77
Paving Equipment	2	50	85	77
Rollers	2	20	85	80
Architectural Coating				
Air Compressor	1	40	80	78

Notes:
[1] Acoustical use factor is the percentage of time each piece of equipment is operational during a typical workday.
[2] Spec 721.560 is the equipment noise level utilized by the RCNM program.
[3] The "slow" response averages sound levels over 1-second increments. A "fast" response averages sound levels over 0.125-second increments.
[4] Actual Measured is the average noise level measured of each piece of equipment during the Central Artery/Tunnel project in Boston, Massachusetts primarily during the 1990s.
Source: Federal Highway Administration, 2006 and CalEEMod default equipment mix.

Table G also shows the associated measured noise emissions for each piece of equipment from the RCNM model and measured percentage of typical equipment use per day. Construction noise impacts to the nearby sensitive receptors have been calculated according to the equipment noise levels and usage factors listed in Table G and through use of the RCNM. For each phase of construction, all construction

equipment was analyzed based on being placed in the middle of the project site, per the FTA Manual for a General Assessment, and is based on the rational that mobile equipment would likely move around the entire project site in a typical workday. As such, the middle of project site would provide the acoustical average noise level created over a typical workday. However, in order to provide a conservative analysis, all equipment was analyzed, instead of just the two nosiest pieces of equipment as detailed in the FTA Manual. The RCNM model printouts are provided in Appendix C.

6.2 Vibration

Construction activity can result in varying degrees of ground vibration, depending on the equipment used on the site. Operation of construction equipment causes ground vibrations that spread through the ground and diminish in strength with distance. Buildings in the vicinity of the construction site respond to these vibrations with varying results ranging from no perceptible effects at the low levels to slight damage at the highest levels. Table H gives approximate vibration levels for particular construction activities. The data in Table H provides a reasonable estimate for a wide range of soil conditions.

Table H – Vibration Source Levels for Construction Equipment

Equipment		Peak Particle Velocity (inches/second)	Approximate Vibration Level (L_v)at 25 feet
Pile driver (impact)	Upper range	1.518	112
	typical	0.644	104
Pile driver (sonic)	Upper range	0.734	105
	typical	0.170	93
Clam shovel drop (slurry wall)		0.202	94
Vibratory Roller		0.210	94
Hoe Ram		0.089	87
Large bulldozer		0.089	87
Caisson drill		0.089	87
Loaded trucks		0.076	86
Jackhammer		0.035	79
Small bulldozer		0.003	58

Source: Federal Transit Administration, September, 2020.

The construction-related vibration impacts have been calculated through the vibration levels shown above in Table H and through typical vibration propagation rates. The equipment assumptions were based on the equipment lists provided above in Table G.

7.0 IMPACT ANALYSIS

7.1 CEQA Thresholds of Significance

Consistent with the California Environmental Quality Act (CEQA) and the State CEQA Guidelines, a significant impact related to noise would occur if a proposed project is determined to result in:

- Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;
- Generation of excessive groundborne vibration or groundborne noise levels; or
- For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels.

7.2 Generation of Noise Levels in Excess of Standards

The proposed project would not generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies. The following section calculates the potential noise emissions associated with the temporary construction activities and long-term operations of the proposed project and compares the noise levels to the City standards.

Construction-Related Noise

The construction activities for the proposed project are anticipated to include site preparation and grading of approximately 6.2 acres, building construction of the proposed reservoirs, paving of an onsite driveway and parking spaces, and application of architectural coatings. Noise impacts from construction activities associated with the proposed project would be a function of the noise generated by construction equipment, equipment location, sensitivity of nearby land uses, and the timing and duration of the construction activities. The nearest sensitive receptor to the project site is a single-family home that is located as near as 280 feet south of the area that would be disturbed as part of the proposed project. There are also single-family homes as near as 730 feet northeast and 780 feet north of the area that would be disturbed as part of the proposed project.

Section 8.06.120(G) of the City's Municipal Code exempts noise sources associated with new construction, remodeling, rehabilitation or grading of any property from the City's noise standards provided construction activities that occur do not take place between the hours of 6:00 p.m. and 7:00 a.m. on weekdays and Saturdays, with no activities occurring at any time on Sundays or federal holidays. However, the City construction noise standards do not provide any limits to the noise levels that may be created from construction activities and even with adherence to the City standards, the resultant construction noise levels may result in a significant substantial temporary noise increase to the nearby residents.

In order to determine if the proposed construction activities would create a significant substantial temporary noise increase, the FTA construction noise criteria thresholds detailed above in Section 4.1 have been utilized, which shows that a significant construction noise impact would occur if construction noise exceeds 80 dBA during the daytime at any of the nearby homes or school classrooms.

Construction noise impacts to the nearby sensitive receptors have been calculated through use of the RCNM and the parameters and assumptions detailed in Section 6.1 of this report including Table G – Construction Equipment Noise Emissions and Usage Factors. The results are shown below in Table I and the RCNM printouts are provided in Appendix C.

Table I – Construction Noise Levels at the Nearby Sensitive Receptors

Construction Phase	Construction Noise Level (dBA Leq) at:		
	Home to South[1]	Home to Northeast[2]	Home to North[3]
Site Preparation	66	62	62
Grading	65	61	61
Building Construction	66	61	62
Paving	61	57	57
Painting	53	49	49
FTA Construction Noise Threshold	**80**	**80**	**80**
Exceed Thresholds?	No	No	No

Notes:
[1] The home to south is located as near as 530 feet from the center of the area disturbed.
[2] The home to northeast is located as near as 870 feet from the center of the area disturbed.
[3] The home to north is located as near as 840 feet from the center of the area disturbed.
Source: RCNM, Federal Highway Administration, 2006 (see Section 6.1 above for detailed description of modeling assumptions)

Table I shows that greatest construction noise impacts would occur during the site preparation, with noise levels as high as 66 dBA Leq at the nearest home to the south and 62 dBA at the homes to the northeast and north. All calculated construction noise levels shown in Table I are within the FTA daytime construction noise standard of 80 dBA averaged over eight hours. Therefore, through adherence to the limitation of allowable construction times provided in Section 8.06.120(G) of the City's Municipal Code, construction-related noise levels would not exceed any standards established in the General Plan or Noise Ordinance nor would construction activities create a substantial temporary increase in ambient noise levels from construction of the proposed project. Impacts would be less than significant.

Operational-Related Noise

In general, operation of the new reservoir tanks will be passive as there will be no equipment installed on the reservoir tanks that creates noise. The existing water tank will continue to function while the new reservoir tanks are constructed. Currently, maintenance on the existing water tank occurs on a monthly and as-needed basis by City employees, that includes landscaping. No change would occur between the maintenance activities for the existing water tank and proposed reservoir tanks. As such, operation of the proposed project would not create any additional sources of noise, over which is currently being created, and no operational noise modeling was performed. As such, less than significant noise impacts would occur from operation of the proposed project.

Level of Significance

Less than significant impact.

7.3 Generation of Excessive Groundborne Vibration

The proposed project would not expose persons to or generation of excessive groundborne vibration or groundborne noise levels. The following section analyzes the potential vibration impacts associated with the construction and operations of the proposed project.

Construction-Related Vibration Impacts

The construction activities for the proposed project are anticipated to include site preparation and grading of approximately 6.2 acres, building construction of the proposed reservoirs, paving of an onsite driveway and parking spaces, and application of architectural coatings. Vibration impacts from construction activities associated with the proposed project would typically be created from the operation of heavy off-road equipment. The nearest sensitive receptor to the project site is a single-family home that is located as near as 280 feet south of the area that would be disturbed as part of the proposed project

Section 9.06.090(G) limits vibration activities to vibration levels that are not discernible at or beyond the boundary line of private property or at 150 feet from the vibration source if on a public space or public right of way. Based on these standards, there is potential that groundborne vibration may expose persons to excessive vibration levels. Since the City does not provide any quantitative vibration thresholds for what is considered discernible, the Caltrans vibration thresholds have been utilized in this analysis, which defines the threshold for building damage to structures at 0.5 inch per second PPV and the threshold for distinctly perceptible human annoyance of 0.24 inch per second PPV from transient sources.

The primary source of vibration during construction would be from the operation of a bulldozer. From Table H above a bulldozer would create a vibration level of 0.089 inch per second PPV at 25 feet. Based on typical propagation rates, the vibration level at the nearest sensitive receptors (280 feet to the south) would be 0.006 inch per second PPV, which would be below both Caltrans exceed both the 0.5 inch per second PPV threshold for damage to structures and the human annoyance threshold of 0.24 inch per second PPV. Impacts would be less than significant.

Operations-Related Vibration Impacts

The proposed project would consist of the development of two new reservoir tanks. The on-going operation of the proposed project would not include the operation of any equipment that creates vibration and would not include any other known vibration sources. Therefore, a less than significant vibration impact is anticipated from operation of the proposed project.

Level of Significance

Less than significant impact.

7.4 Aircraft Noise

The proposed project would not expose people residing or working in the project area to excessive noise levels from aircraft. The nearest airport is Redlands Municipal Airport that is located approximately 4.8 miles north of the project site. The project site is located outside of the 60 dBA CNEL noise contours of Redlands Municipal Airport. No impacts would occur from aircraft noise.

Level of Significance

No impact.

May 2024

MITIGATION MONITORING AND REPORTING PROGRAM

Public Resources Code, Section 21081.6 (Assembly Bill 3180) requires that mitigation measures identified in environmental review documents prepared in accordance with California Environmental Quality Act (CEQA) are implemented after a project is approved. Therefore, this Mitigation Monitoring and Reporting Program (MMRP) has been prepared to ensure compliance with the adopted mitigation measures during the demolition and construction phases of Sunset Reservoir Project.

The City of Redlands is the agency responsible for implementation of the mitigation measures identified in the MND. This MMRP provides the City of Redlands with a convenient mechanism for quickly reviewing all the mitigation measures including the ability to focus on select information such as timing. The MMRP includes the following information for each mitigation measure:

- The phase of the project during which the required mitigation measure must be implemented;
- The phase of the project during which the required mitigation measure must be monitored; and
- The enforcement agency.

The MMRP includes a checklist to be used during the mitigation monitoring period. The checklist will verify the name of the monitor, the date of the monitoring activity, and any related remarks for each mitigation measure.

					Initial	Date	Remarks
Biological Resources							
BIO-1: The Project site has low to moderate potential to have the following special status plant species to be present on-site: slender-horned spineflower (Dodecahema leptoceras), chaparral sand-verbena (*Abronia villosa* var. *aurita*), Jaeger's milk-vetch (*Astragalus pachypus* var. *jaegeri*), mesa horkelia (*Horkelia cuneata* var. *puberula*), Hall's monardella (*Monardella macrantha* subsp. *hallii*), Brand's star phacelia (*Phacelia stellaris*), chaparral ragwort (*Senecio aphanactis*), Parry's spineflower (*Chorizanthe parryi* var. *parryi*), and Santa Ana River woollystar (*Eriastrum densifolium* subsp. *sanctorum*). Therefore, a qualified botanist must be retained by the Project applicant to conduct a protocol level focused plant survey prior to construction at the location of the water tanks to identify if any special status plant species are present on site. The focused plant survey shall be conducted during the appropriate blooming period or when each species is conspicuous and readily identifiable by a qualified botanist. If any special status plant species are observed, they will be mapped, counted, and recorded. When feasible, construction activities will avoid impacts to the areas with special status plant species if found. The special status plants identified shall be protected by a buffer zone established by a qualified botanist prior to construction. If the qualified botanist determines that the special status plants cannot be avoided and a buffer zone cannot be established, then further mitigation for the impacted species will be required. This may include payment of an in-lieu fee, preservation of suitable habitat elsewhere off the Project site, collection of seeds, transplanting, or another form of mitigation as approved by the resource agencies.	Pre-Construction	Construction	City of Redlands	LTS			

MITIGATION MONITORING AND REPORTING PROGRAM Sunset Reservoir Project							
Mitigation Measure	**Implementation Phase**	**Monitoring Phase**	**Enforcement Agency**	**Level of Significance After Mitigation** Less than Significant (LTS)	**Verification of Compliance**		
					Initial	**Date**	**Remarks**
BIO-2: To minimize potential impacts to nesting birds protected under the Migratory Bird Treaty Act (MBTA) within the Project, construction activities shall take place outside nesting season (February 1 to August 31) to the greatest extent practicable. If construction activities must occur during nesting season, a preconstruction nesting bird survey shall be conducted prior to initiation of ground-disturbing activities. The survey shall be completed within 14 days prior to ground disturbing activities which consists of but are not limited to tree removal, trenching, and grading. The survey shall be scheduled with and conducted by a qualified biologist in coordination with the City and onsite construction manager. During the survey, should nesting birds or their nests be encountered a minimum buffer zone around occupied nests should be determined by a qualified biologist to avoid impacts to the active nest. The buffer shall range at a minimum of 100 to 300 feet. The buffer should be maintained during physical ground-disturbing activities. Avoidance measures shall be implemented if the biologist finds that they are required to not impact the nests including but not limited to noise, activity, and design modifications, worker education, signage, buffers and/or temporary fencing. Once the biologist has determined that the nesting has ceased and the nestlings have fledged, the buffer may be removed.	Pre-Construction	Construction	City of Redlands	LTS			
Cultural Resources							
CUL-1: The City shall retain the services of a Qualified Archaeologist, meeting the Secretary of the Interior Standards, or County requirements, whichever is the greater. The Qualified Archaeologist shall remain on-call throughout the Project. Upon approval or request by the City, a cultural resources mitigation plan (CRMP) outlining procedures for cultural resources monitoring, mitigation, treatment, and data recovery of any unanticipated discovery shall be prepared for the Project and submitted to the City for review and approval. The development and implementation of the CRMP shall include consultations with the City as well as a requirement that the curation of any significant cultural resources recovered under any scenario shall be through an appropriate repository agreed upon by the City. If the City accepts ownership, the curation location may be revised.	Pre-Construction	Construction	City of Redlands	LTS			

MITIGATION MONITORING AND REPORTING PROGRAM Sunset Reservoir Project							
Mitigation Measure	**Implementation Phase**	**Monitoring Phase**	**Enforcement Agency**	**Level of Significance After Mitigation** Less than Significant (LTS)	**Verification of Compliance**		
					Initial	**Date**	**Remarks**
CUL-2: In the event of the discovery of previously unidentified and/or potential cultural resources, the City, and/or its Contractor, shall immediately cease all work activities within an area of not less than 50 feet of the discovery. The City or its Contractor shall immediately contact the City and the City-retained on-call Qualified Archaeologist. Except in the case of cultural items that fall within the scope of the California Health and Safety Code 7050.5, CEQA Section 15064.5, or California PRC Section 5097.98, the discovery of any cultural resource within the Project site shall not be grounds for a project-wide "stop work" notice or otherwise interfere with the Project's continuation except as set forth in this mitigation measure. Additionally, any consulting Native American Tribal groups that requested notification of any unanticipated discovery of cultural resources on the Project shall be notified and included in subsequent consultation appropriately. In the event of an unanticipated discovery of cultural resources during construction, the City-retained Qualified Archaeologist shall evaluate the significance of the materials prior to resuming any construction-related activities in the vicinity of the find. If a CRMP is prepared for the Project, the protocols for mitigation or treatment of cultural resources will be implemented. If the Qualified Archaeologist determines that the discovery constitutes a significant resource under CEQA and it cannot be avoided, the City shall implement an archaeological data recovery program.	Construction	Construction	City of Redlands	LTS			
CUL-3: If cultural resources are encountered during the Project, the Qualified Archaeologist shall prepare a report summarizing any and all prehistoric or historic archaeological finds as well as providing follow-up reports of any finds to the South Central Coastal Information Center (SCCIC), as required.	Post-Construction	Construction	City of Redlands	LTS			

Mitigation Measure	Implementation Phase	Monitoring Phase	Enforcement Agency	Level of Significance After Mitigation	Verification of Compliance		
					Initial	Date	Remarks
Geology and Soils							
PAL-1: Prior to issuance of a grading permit, the City shall be required to obtain the services of a Qualified Project Paleontologist to remain on call for the duration of the proposed ground disturbing construction activity. The paleontologist selected must be approved by the City. Upon approval or request by the City, a paleontological mitigation plan (PMP) outlining procedures for paleontological data recovery shall be prepared for the Project and submitted to the City for review and approval. The development and implementation of the PMP shall include consultations with the District's Engineering Geologist as well as a requirement that the curation of all specimens recovered under any scenario shall be through an appropriate repository agreed upon by the City. If the District accepts ownership, the curation location may be revised. The PMP shall include developing a multilevel ranking system, or Potential Fossil Yield Classification (PFYC), as a tool to demonstrate the potential yield of fossils within a given stratigraphic unit. The PMP shall outline the monitoring and salvage protocols to address paleontological resources encountered during Project-related ground-disturbing activities, as well as the appropriate recording, collection, and processing protocols to appropriately address any resources discovered.	Pre-Construction/Construction	Construction	City of Redlands	LTS			
PAL-2: At the completion of all ground-disturbing activities, the Project Paleontologist shall prepare a final paleontological mitigation report summarizing all monitoring efforts and observations, as performed in line with the PMP, and all paleontological resources encountered, if any, as well as providing follow-up reports of any specific discovery, if necessary.	Post-Construction	Construction	City of Redlands	LTS			
Tribal Cultural Resources							
TCR-1: Prior to the issuance of grading permits, the applicant shall enter into a Tribal Monitoring Services Agreement with the Morongo Band of Mission Indians (MBMI) for the Project. The Tribal Monitor shall be on-site during all ground-disturbing activities (including, but not limited to, clearing, grubbing, tree and bush removal, grading, trenching, fence post placement and removal, construction excavation, excavation for all utility and irrigation lines, and landscaping phases of any kind). The Tribal Monitor shall have the authority to temporarily divert, redirect, or halt the ground-disturbing activities to allow identification, evaluation, and potential recovery of cultural resources.	Pre-Construction/Construction	Construction	City of Redlands	LTS			

Mitigation Measure	Implementation Phase	Monitoring Phase	Enforcement Agency	Level of Significance After Mitigation Less than Significant (LTS)	Verification of Compliance		
					Initial	Date	Remarks
TCR-2: Prior to any ground-disturbing activities (including, but not limited to, clearing, grubbing, tree and bush removal, grading, trenching, fence post replacement and removal, construction excavation, excavation for all utility and irrigation lines, and landscaping phases of any kind), and prior to the issuance of grading permits, the Applicant shall retain a Qualified Archaeologist who meets the U.S. Secretary of the Interior Standards (SOI). The Archaeologist shall be present during all ground disturbing activities to identify any known or suspected archaeological and/or cultural resources. The Archaeologist will conduct a Cultural Resource Sensitivity Training, in conjunction with the Tribe[s] Tribal Historic Preservation Officer (THPO), and/or designated Tribal Representative. The training session will focus on the archaeological and tribal cultural resources that may be encountered during ground-disturbing activities as well as the procedures to be followed in such an event.	Pre-Construction/Construction	Construction	City of Redlands	LTS			
TCR-3: Prior to any ground-disturbing activities the project Archaeologist shall develop a Cultural Resource Management Plan (CRMP) and/or Archaeological Monitoring and Treatment Plan (AMTP) to address the details, timing, and responsibilities of all archaeological and cultural resource activities that occur on the project site. This Plan shall be written in consultation with the consulting Tribe[s] and shall include the following: approved Mitigation Measures (MM)/Conditions of Approval (COA), contact information for all pertinent parties, parties' responsibilities, procedures for each MM or COA, and an overview of the project schedule.	Pre-Construction	Construction	City of Redlands	LTS			
TCR-4: The retained Qualified archeologist and Consulting Tribe[s] representative shall attend the pre-grade meeting with the grading contractors to explain and coordinate the requirements of the monitoring plan.	Pre-Construction	Pre-Construction	City of Redlands	LTS			
TCR-5: During all ground-disturbing activities the Qualified Archaeologist and the Tribal Monitor shall be onsite full-time. The frequency of inspections shall depend on the rate of excavation, the materials excavated, and any discoveries of Tribal Cultural Resources as defined in California Public Resources Code Section 21074. Archaeological and Tribal Monitoring will be discontinued when the depth of grading and the soil conditions no longer retain the potential to contain cultural deposits. The Qualified Archaeologist, in consultation with the Tribal Monitor, shall be responsible for determining the duration and frequency of monitoring.	Construction	Construction	City of Redlands	LTS			

Mitigation Measure	Implementation Phase	Monitoring Phase	Enforcement Agency	Level of Significance After Mitigation Less than Significant (LTS)	Verification of Compliance		
					Initial	Date	Remarks
TCR-6: In the event that previously unidentified cultural resources are unearthed during construction, the Qualified Archaeologist and the Tribal Monitor shall have the authority to temporarily divert and/or temporarily halt ground-disturbance operations in the area of discovery to allow for the evaluation of potentially significant cultural resources. Isolates and clearly non-significant deposits shall be minimally documented in the field and collected so the monitored grading can proceed. If a potentially significant cultural resource(s) is discovered, work shall stop within a 60-foot perimeter of the discovery and an Environmentally Sensitive Area (ESA) physical demarcation/barrier constructed. All work shall be diverted away from the vicinity of the find, so that the find can be evaluated by the Qualified Archaeologist and Tribal Monitor[s]. The Archaeologist shall notify the City and consulting Tribe[s] of said discovery. The Qualified Archaeologist, in consultation with the Lead Agency, the consulting Tribe[s], and the Tribal Monitor, shall determine the significance of the discovered resource. A recommendation for the treatment and disposition of the Tribal Cultural Resource shall be made by the Qualified Archaeologist in consultation with the Tribe[s] and the Tribal Monitor[s] and be submitted to the Lead Agency for review and approval. Below are the possible treatments and dispositions of significant cultural resources in order of CEQA preference: A. Full avoidance. B. If avoidance is not feasible, Preservation in place. C. If Preservation in place is not feasible, all items shall be reburied in an area away from any future impacts and reside in a permanent conservation easement or Deed Restriction. D. If all other options are proven to be infeasible, data recovery through excavation and then curation in a Curation Facility that meets the Federal Curation Standards (CFR 79.1)	Construction	Construction	City of Redlands	LTS			

Mitigation Measure	Implementation Phase	Monitoring Phase	Enforcement Agency	Level of Significance After Mitigation Less than Significant (LTS)	Verification of Compliance		
					Initial	Date	Remarks
TCR-7: The Morongo Band of Mission Indians requests the following specific conditions to be imposed in order to protect Native American human remains and/or cremations. No photographs are to be taken except by the coroner, with written approval by the consulting Tribe[s]. A. Should human remains and/or cremations be encountered on the surface or during any and all ground-disturbing activities (i.e., clearing, grubbing, tree and bush removal, grading, trenching, fence post placement and removal, construction excavation, excavation for all water supply, electrical, and irrigation lines, and landscaping phases of any kind), work in the immediate vicinity of the discovery shall immediately stop within a 100-foot perimeter of the discovery. The area shall be protected; project personnel/observers will be restricted. The County Coroner is to be contacted within 24 hours of discovery. The County Coroner has 48 hours to make his/her determination pursuant to State and Safety Code §7050.5. and Public Resources Code (PRC) § 5097.98. B. In the event that the human remains and/or cremations are identified as Native American, the Coroner shall notify the Native American Heritage Commission within 24 hours of determination pursuant to subdivision (c) of HSC §7050.5. C. The Native American Heritage Commission shall immediately notify the person or persons it believes to be the Most Likely Descendant (MLD). The MLD has 48 hours, upon being granted access to the Project site, to inspect the site of discovery and make his/her recommendation for final treatment and disposition, with appropriate dignity, of the remains and all associated grave goods pursuant to PRC §5097.98 D. If the Morongo Band of Mission Indians has been named the MLD, the Tribe may wish to rebury the human remains and/or cremation and sacred items in their place of discovery with no further disturbance where they will reside in perpetuity. The place(s) of reburial will not be disclosed by any party and is exempt from the California Public Records Act (California Government Code § 6254[r]). Reburial location of human remains and/or cremations will be determined by the Tribe's MLD, the landowner, and the City Planning Department.	Construction	Construction	City of Redlands	LTS			
TCR-8: The final report[s] created as a part of the project (AMTP, isolate records, site records, survey reports, testing reports, etc.) shall be submitted to the Lead Agency and Consulting Tribe[s] for review and comment. After approval of all parties, the final reports are to be submitted to the Eastern Information Center, and the Consulting Tribe[s].	Post-Construction	Construction	City of Redlands	LTS			

City Council Meeting **K. 4.**

DATE: 07/16/2024

TO: Honorable Mayor and City Council Members

SUBJECT: Consideration of a Master Service and Purchasing Agreement with Axon Enterprise, Inc. to purchase 105 Taser 10 conductive electrical weapons and required accessories for a total amount not to exceed of $549,724.94, and authorize the Police Chief to sign the agreement (Police Chief Tolber)

MOTION(S):

If the City Council determines that staff's recommendation is appropriate, the following motion is provided:

I move to approve the Master Service and Purchasing Agreement with Axon Enterprise, Inc. and to authorize the Police Chief to sign the agreement.

RECOMMENDATION:

Staff recommends that Council approve the Master Service and Purchasing Agreement with Axon Enterprise, Inc. to purchase 105 Axon's Taser 10 conductive electrical weapons and required accessories in the amount not to exceed $109,944.98 for FY 2024-25, $109,944.98 for FY 2025-26, $109,944.98 for FY 2026-27, $109,944.98 for FY 2027-28 and $109,944.98 for FY 2028-29.

DISCUSSION:

The Redlands Police Department (RPD) has been using Conducted Electronic Weapons (CEW) for the past 23 years with great success. There are many instances where the use of a CEW has prevented a suspect or an officer from being injured. There have been cases where the use of the CEW saved a suspect from serious bodily injury or death. In those cases, the only other alternative would have been lethal force.

Our current CEW, the X26P has been in use by RPD department for the last 10 years and are outdated. When the department initially bought the X26P, only enough equipment was purchased for the officers at that time. Over time, as tasers were issued to new officers and civilian employees of the department additional tasers were bought on an as-needed basis. The X26P has a warranty that is good for five years and as RPD has purchased these tasers on an as-needed basis, there has been no consistency in the warranties, and have found the need to replace them regularly. Furthermore, RPD has noticed several malfunctions which could potentially create officer safety issues in the field.

Purchasing the Axon's Taser 10 (Taser 10) will provide the Redlands Police Department with the most up-to-date CEW device, providing almost double the range of current tasers, with a maximum distance to reach a subject of 45 feet, providing more time and space to de-escalate and reducing risk for everyone involved. In addition, the device has new de-escalation features, including a 1,000-lumen pulsing light, loud audible alerts and laser painting to warn a subject to comply before having to deploy probes. The Taser 10 provides more opportunities than other less-lethal options to immediately stop a threat without needing to reload. The Taser 10 has the ability to deploy up to 10 probes compared with two probes previously, which only provided one or two opportunities to be effective.

RPD has negotiated the cost and recommends City Council approve the sole source agreement with Axon Enterprise for an amount not-to-exceed $549,724.94. The 60-month agreement will provide RPD with 5 installment payments of $109,944.98 for each fiscal year from fiscal year 2024/25 to 2028/29. Funds for this program are included in the Department's FY 2024-2026 biennial budget proposal and will be requested for subsequent fiscal years in the Police Department's budget requests.

ALTERNATIVES:

Do not approve the purchase of the Axon's Taser 10. However, this will leave the department with a series of unreliable/out of warranty tasers. Officers in the field will no longer have that force option available to them. This in turn could jeopardize officer safety and the safety of the community.

STRATEGIC PLAN:

Not applicable.

SUBMITTED BY:
Stephen Crane, Deputy Police Chief

RECOMMENDED BY:
Charles M. Duggan Jr., City Manager

REVIEWED BY:
Yvette M. Abich Garcia, City Attorney
Danielle Garcia, Management Services/Finance Director
Dana Abramovitz-Daniel, Procurement Manager

PREPARED BY:
Jimmy Nguyen, Management Analyst

Fiscal Impact

Fiscal Year:	2024-25
Revenue Generating:	N
Appropriation Required Y/N:	N
Amount:	$109,944.98
Budgeted Y/N:	Y
Account No.:	101202-7102

Discussion:

This agreement provides for the following terms: An installment annual payment amount of $109,944.98 for FY 2024-25, $109,944.98 for FY 2025-26, $109,944.98 for FY 2026-27, $109,944.98 for FY 2027-28 and $109,944.98 for FY 2028-29. Funding for subsequent fiscal years will be included in the Police Department's budget requests.

Axon Enterprise Sole Source

Master Services and Purchasing Agreement for Customer

This Master Services and Purchasing Agreement ("**Agreement**") is between Axon Enterprise, Inc. ("**Axon**"), and the customer listed below or, if no customer is listed below, the customer on the Quote attached hereto ("**Customer**"). This Agreement is effective as of the later of the (a) last signature date on this Agreement or (b) date of acceptance of the Quote ("**Effective Date**"). Axon and Customer are each a "**Party**" and collectively "**Parties**". This Agreement governs Customer's purchase and use of the Axon Devices and Services detailed in the Quote Appendix ("**Quote**"). It is the intent of the Parties that this Agreement will govern all subsequent purchases by Customer for the same Axon Devices and Services in the Quote, and all such subsequent quotes accepted by Customer shall be also incorporated into this Agreement by reference as a Quote. The Parties agree as follows:

1. **Definitions**.

   1.1. "**Axon Cloud Services"** means Axon's web services, including but not limited to, Axon Evidence, Axon Records, Axon Dispatch, FUSUS services and interactions between Axon Evidence and Axon Devices or Axon client software. Axon Cloud Service excludes third-party applications, hardware warranties, and my.evidence.com.

   1.2. "**Axon Device**" means all hardware provided by Axon under this Agreement. Axon-manufactured Devices are a subset of Axon Devices.

   1.3. "**Quote**" means an offer to sell and is only valid for devices and services on the offer at the specified prices. Any inconsistent or supplemental terms within Customer's purchase order in response to a Quote will be void. Orders are subject to prior credit approval. Changes in the deployment estimated ship date may change charges in the Quote. Shipping dates are estimates only. Axon is not responsible for typographical errors in any Quote by Axon, and Axon reserves the right to cancel any orders resulting from such errors.

   1.4. "**Services**" means all services provided by Axon under this Agreement, including software, Axon Cloud Services, and professional services.

2. **Term**. This Agreement begins on the Effective Date and continues until all subscriptions hereunder have expired or have been terminated ("**Term**").

   2.1. All subscriptions including Axon Evidence, Axon Fleet, Officer Safety Plans, Technology Assurance Plans, and TASER 7 or TASER 10 plans begin on the date stated in the Quote. Each subscription term ends upon completion of the subscription stated in the Quote ("**Subscription Term**").

   2.2. Upon completion of the Subscription Term, the Subscription Term will automatically renew for an additional 5 years ("**Renewal Term**"). For purchase of TASER 7 or TASER 10 as a standalone, Axon may increase pricing to its then-current list pricing for any Renewal Term. For all other purchases, Axon may increase pricing on all line items in the Quote by up to 3% at the beginning of each year of the Renewal Term. New devices and services may require additional terms. Axon will not authorize services until Axon receives a signed Quote or accepts a purchase order, whichever is first.

3. **Payment**. Axon invoices for Axon Devices upon shipment, or on the date specified within the invoicing plan in the Quote. Payment is due net 30 days from the invoice date. Axon invoices for Axon Cloud Services on an upfront yearly basis prior to the beginning of the Subscription Term and upon the anniversary of the Subscription Term. Payment obligations are non-cancelable. Unless otherwise prohibited by law, Customer will pay interest on all past-due sums at the lower of one-and-a-half percent (1.5%) per month or the highest rate allowed by law. Customer will pay invoices without setoff, deduction, or withholding. If Axon sends a past due account to collections, Customer is responsible for collection and attorneys' fees.

4. **Taxes**. Customer is responsible for sales and other taxes associated with the order unless Customer provides Axon a valid tax exemption certificate.

5. **Shipping**. Axon may make partial shipments and ship Axon Devices from multiple locations. All shipments are EXW (Incoterms 2020) via common carrier. Title and risk of loss pass to Customer upon Axon's delivery to the common carrier. Customer is responsible for any shipping charges in the Quote.

6. **Returns**. All sales are final. Axon does not allow refunds or exchanges, except warranty returns or as provided by state or federal law.

7. **Warranty**.

   7.1. **Limited Warranty**. Axon warrants that Axon-manufactured Devices are free from defects in workmanship and materials for one (1) year from the date of Customer's receipt, except Signal Sidearm and Axon-manufactured accessories, which Axon warrants for thirty (30) months and ninety (90) days, respectively, from the date of Customer's receipt. Used conducted energy weapon ("**CEW**") cartridges are deemed to have operated properly. Extended warranties run from the expiration of the one (1) year hardware warranty through the extended warranty term purchased.

7.2. Disclaimer. All software and Axon Cloud Services are provided "AS IS," without any warranty of any kind, either express or implied, including without limitation the implied warranties of merchantability, fitness for a particular purpose and non-infringement. Axon Devices and Services that are not manufactured, published or performed by Axon ("Third-Party Products") are not covered by Axon's warranty and are only subject to the warranties of the third-party provider or manufacturer.

7.3. **Claims**. If Axon receives a valid warranty claim for an Axon-manufactured Device during the warranty term, Axon's sole responsibility is to repair or replace the Axon-manufactured Device with the same or like Axon-manufactured Device, at Axon's option. A replacement Axon-manufactured Device will be new or like new. Axon will warrant the replacement Axon-manufactured Device for the longer of (a) the remaining warranty of the original Axon-manufactured Device or (b) ninety (90) days from the date of repair or replacement.

7.3.1. If Customer exchanges an Axon Device or part, the replacement item becomes Customer's property, and the replaced item becomes Axon's property. Before delivering an Axon-manufactured Device for service, Customer must upload Axon-manufactured Device data to Axon Evidence or download it and retain a copy. Axon is not responsible for any loss of software, data, or other information contained in storage media or any part of the Axon-manufactured Device sent to Axon for service.

7.4. **Spare Axon Devices**. At Axon's reasonable discretion, Axon may provide Customer a predetermined number of spare Axon Devices as detailed in the Quote ("**Spare Axon Devices**"). Spare Axon Devices are intended to replace broken or non-functioning units while Customer submits the broken or non-functioning units, through Axon's warranty return process. Axon will repair or replace the unit with a replacement Axon Device. Title and risk of loss for all Spare Axon Devices shall pass to Customer in accordance with shipping terms under Section 5. Axon assumes no liability or obligation in the event Customer does not utilize Spare Axon Devices for the intended purpose.

7.5. **Limitations**. Axon's warranty excludes damage related to: (a) failure to follow Axon Device use instructions; (b) Axon Devices used with equipment not manufactured or recommended by Axon; (c) abuse, misuse, or intentional damage to Axon Device; (d) force majeure; (e) Axon Devices repaired or modified by persons other than Axon without Axon's written permission; or (f) Axon Devices with a defaced or removed serial number. Axon's warranty will be void if Customer resells Axon Devices.

7.5.1. To the extent permitted by law, the above warranties and remedies are exclusive. Axon disclaims all other warranties, remedies, and conditions, whether oral, written, statutory, or implied. If statutory or implied warranties cannot be lawfully disclaimed, then such warranties are limited to the duration of the warranty described above and by the provisions in this Agreement. Customer confirms and agrees that, in deciding whether to sign this Agreement, it has not relied on any statement or representation by Axon or anyone acting on behalf of Axon related to the subject matter of this Agreement that is not in this Agreement.

7.5.2. Axon's cumulative liability to any party for any loss or damage resulting from any claim, demand, or action arising out of or relating to this Agreement will not exceed the purchase price paid to Axon for the Axon Device, or if for Services, the amount paid for such Services over the twelve (12) months preceding the claim. Neither Party will be liable for special, indirect, incidental, punitive or consequential damages, however caused, whether for breach of warranty or contract, negligence, strict liability, tort or any other legal theory.

7.6. **Online Support Platforms**. Use of Axon's online support platforms (e.g., Axon Academy and MyAxon) is governed by the Axon Online Support Platforms Terms of Use Appendix available at www.axon.com/sales-terms-and-conditions.

7.7. **Third-Party Software and Services**. Use of software or services other than those provided by Axon is governed by the terms, if any, entered into between Customer and the respective third-party provider, including, without limitation, the terms applicable to such software or services located at www.axon.com/sales-terms-and-conditions, if any.

7.8. **Axon Aid**. Upon mutual agreement between Axon and Customer, Axon may provide certain products and services to Customer, as a charitable donation under the Axon Aid program. In such event, Customer expressly waives and releases any and all claims, now known or hereafter known, against Axon and its officers, directors, employees, agents, contractors, affiliates, successors, and assigns (collectively, "**Releasees**"), including but not limited to, on account of injury, death, property damage, or loss of data, arising out of or attributable to the Axon Aid program whether arising out of the negligence of any Releasees or otherwise. Customer agrees not to make or bring any such claim against any Releasee, and forever release and discharge all Releasees from liability under such claims. Customer expressly allows Axon to publicly announce its participation in Axon Aid and use its name in marketing materials. Axon may terminate the Axon Aid program without cause immediately

upon notice to the Customer.

8. **Statement of Work**. Certain Axon Devices and Services, including Axon Interview Room, Axon Channel Services, and Axon Fleet, may require a Statement of Work that details Axon's Service deliverables ("**SOW**"). In the event Axon provides an SOW to Customer, Axon is only responsible for the performance of Services described in the SOW. Additional services are out of scope. The Parties must document scope changes in a written and signed change order. Changes may require an equitable adjustment in fees or schedule. The SOW is incorporated into this Agreement by reference.

9. **Axon Device Warnings**. See www.axon.com/legal for the most current Axon Device warnings.

10. **Design Changes**. Axon may make design changes to any Axon Device or Service without notifying Customer or making the same change to Axon Devices and Services previously purchased by Customer.

11. **Bundled Offerings**. Some offerings in bundled offerings may not be generally available at the time of Customer's purchase. Axon will not provide a refund, credit, or additional discount beyond what is in the Quote due to a delay of availability or Customer's election not to utilize any portion of an Axon bundle.

12. **Insurance**. Axon will maintain General Liability, Workers' Compensation, and Automobile Liability insurance. Upon request, Axon will supply certificates of insurance.

13. **IP Rights**. Axon owns and reserves all right, title, and interest in Axon-manufactured Devices and Services and suggestions to Axon, including all related intellectual property rights. Customer will not cause any Axon proprietary rights to be violated.

14. **IP Indemnification**. Axon will indemnify Customer against all claims, losses, and reasonable expenses from any third-party claim alleging that the use of Axon-manufactured Devices or Services infringes or misappropriates the third-party's intellectual property rights. Customer must promptly provide Axon with written notice of such claim, tender to Axon the defense or settlement of such claim at Axon's expense and cooperate fully with Axon in the defense or settlement of such claim. Axon's IP indemnification obligations do not apply to claims based on (a) modification of Axon-manufactured Devices or Services by Customer or a third-party not approved by Axon; (b) use of Axon-manufactured Devices and Services in combination with hardware or services not approved by Axon; (c) use of Axon Devices and Services other than as permitted in this Agreement; or (d) use of Axon software that is not the most current release provided by Axon.

15. **Customer Responsibilities**. Customer is responsible for (a) Customer's use of Axon Devices; (b) breach of this Agreement or violation of applicable law by Customer or an Customer end user; (c) disputes between Customer and a third-party over Customer's use of Axon Devices; (d) ensuring Axon Devices are destroyed and disposed of securely and sustainably at Customer's cost; and (e) any regulatory violations or fines, as a result of improper destruction or disposal of Axon Devices.

16. **Termination**.

    16.1. **For Breach**. A Party may terminate this Agreement for cause if it provides thirty (30) days written notice of the breach to the other Party, and the breach remains uncured at the end of thirty (30) days. If Customer terminates this Agreement due to Axon's uncured breach, Axon will refund prepaid amounts on a prorated basis based on the effective date of termination.

    16.2. **By Customer**. If sufficient funds are not appropriated or otherwise legally available to pay the fees, Customer may terminate this Agreement. Customer will deliver notice of termination under this section as soon as reasonably practicable.

    16.3. **Effect of Termination**. Upon termination of this Agreement, Customer rights immediately terminate. Customer remains responsible for all fees incurred before the effective date of termination. If Customer purchases Axon Devices for less than the manufacturer's suggested retail price ("**MSRP**") and this Agreement terminates before the end of the Term, Axon will invoice Customer the difference between the MSRP for Axon Devices received, including any Spare Axon Devices, and amounts paid towards those Axon Devices. Only if terminating for non-appropriation, Customer may return Axon Devices to Axon within thirty (30) days of termination. MSRP is the standalone price of the individual Axon Device at the time of sale. For bundled Axon Devices, MSRP is the standalone price of all individual components.

17. **Confidentiality**. "**Confidential Information**" means nonpublic information designated or expressly marked as confidential. Each Party will take reasonable measures to avoid disclosure, dissemination, or unauthorized use of the other Party's Confidential Information. Unless required by law, court order or subpoena, neither Party will disclose the other Party's Confidential Information during the Term thereafter. If Customer receives a public records request to disclose Axon

Confidential Information, to the extent allowed by law, Customer will provide notice to Axon before disclosure. Axon may publicly announce information related to this Agreement.

18. **General**.

18.1. **Force Majeure**. Neither Party will be liable for any delay or failure to perform due to a cause beyond a Party's reasonable control.

18.2. **Independent Contractors**. The Parties are independent contractors. Neither Party has the authority to bind the other. This Agreement does not create a partnership, franchise, joint venture, Customer, fiduciary, or employment relationship between the Parties.

18.3. **Third-Party Beneficiaries**. There are no third-party beneficiaries under this Agreement.

18.4. **Non-Discrimination**. Neither Party nor its employees will discriminate against any person based on race; religion; creed; color; sex; gender identity and expression; pregnancy; childbirth; breastfeeding; medical conditions related to pregnancy, childbirth, or breastfeeding; sexual orientation; marital status; age; national origin; ancestry; genetic information; disability; veteran status; or any class protected by local, state, or federal law.

18.5. **Export Compliance**. Each Party will comply with all import and export control laws and regulations.

18.6. **Assignment**. Neither Party may assign this Agreement without the other Party's prior written consent. Axon may assign this Agreement, its rights, or obligations without consent: (a) to an affiliate or subsidiary; or (b) for purposes of financing, merger, acquisition, corporate reorganization, or sale of all or substantially all its assets. This Agreement is binding upon the Parties respective successors and assigns.

18.7. **Waiver**. No waiver or delay by either Party in exercising any right under this Agreement constitutes a waiver of that right.

18.8. **Severability**. If a court of competent jurisdiction holds any portion of this Agreement invalid or unenforceable, the remaining portions of this Agreement will remain in effect.

18.9. **Survival**. The following sections will survive termination: Payment, Warranty, Axon Device Warnings, Indemnification, IP Rights, Customer Responsibilities and any other Sections detailed in the survival sections of the Appendices.

18.10. **Governing Law**. The laws of the country, state, province, or municipality where Customer is physically located, without reference to conflict of law rules, govern this Agreement and any dispute arising from it. The United Nations Convention for the International Sale of Goods does not apply to this Agreement.

18.11. **Notices**. All notices must be in English. Notices posted on Customer's Axon Evidence site are effective upon posting. Notices by email are effective on the sent date of the email. Notices by personal delivery are effective immediately. Notices to Customer shall be provided to the address on file with Axon. Notices to Axon shall be provided to Axon Enterprise, Inc., Attn: Legal, 17800 North 85th Street, Scottsdale, Arizona 85255 with a copy to legal@axon.com.

18.12 **Entire Agreement**. This Agreement, the Appendices, including any applicable Appendices not attached herein for the products and services purchased, which are incorporated by reference and located in the Master Purchasing and Services Agreement located at https://www.axon.com/sales-terms-and-conditions, Quote and any SOW(s), represents the entire agreement between the Parties. This Agreement supersedes all prior agreements or understandings, whether written or verbal, regarding the subject matter of this Agreement. This Agreement may only be modified or amended in a writing signed by the Parties.

Each Party, by and through its respective representative authorized to execute this Agreement, has duly executed and delivered this Agreement as of the date of signature.

Axon Cloud Services Terms of Use Appendix

1. **Definitions**.

    a. **"Customer Content"** is data uploaded into, ingested by, or created in Axon Cloud Services within Customer's tenant, including media or multimedia uploaded into Axon Cloud Services by Customer. Customer Content includes Evidence but excludes Non-Content Data.

    b. "**Evidence**" is media or multimedia uploaded into Axon Evidence as 'evidence' by an Customer. Evidence is a subset of Customer Content.

    c. "**Non-Content Data**" is data, configuration, and usage information about Customer's Axon Cloud Services tenant, Axon Devices and client software, and users that is transmitted or generated when using Axon Devices. Non-Content Data includes data about users captured during account management and customer support activities. Non-Content Data does not include Customer Content.

    d. "**Personal Data**" means any information relating to an identified or identifiable natural person. An identifiable natural person is one who can be identified, directly or indirectly, in particular by reference to an identifier such as a name, an identification number, location data, an online identifier or to one or more factors specific to the physical, physiological, genetic, mental, economic, cultural or social identity of that natural person.

    e. "**Provided Data**" means de-identified, de-personalized, data derived from Customer's TASER energy weapon deployment reports, related TASER energy weapon logs, body-worn camera footage, and incident reports.

    f. "**Transformed Data**" means the Provided Data used for the purpose of quantitative evaluation of the performance and effectiveness of TASER energy weapons in the field across a variety of circumstances.

2. **Access**. Upon Axon granting Customer a subscription to Axon Cloud Services, Customer may access and use Axon Cloud Services to store and manage Customer Content. Customer may not exceed more end users than the Quote specifies. Axon Air requires an Axon Evidence subscription for each drone operator. For Axon Evidence Lite, Customer may access and use Axon Evidence only to store and manage TASER CEW and TASER CAM data ("**TASER Data**"). Customer may not upload non-TASER Data to Axon Evidence Lite.

3. **Customer Owns Customer Content**. Customer controls and owns all right, title, and interest in Customer Content. Except as outlined herein, Axon obtains no interest in Customer Content, and Customer Content is not Axon's business records. Customer is solely responsible for uploading, sharing, managing, and deleting Customer Content. Axon will only have access to Customer Content for the limited purposes set forth herein. Customer agrees to allow Axon access to Customer Content to (a) perform troubleshooting, maintenance, or diagnostic screenings; and (b) enforce this Agreement or policies governing use of the Axon products.

4. **Security**. Axon will implement commercially reasonable and appropriate measures to secure Customer Content against accidental or unlawful loss, access or disclosure. Axon will maintain a comprehensive information security program to protect Axon Cloud Services and Customer Content including logical, physical access, vulnerability, risk, and configuration management; incident monitoring and response; encryption of uploaded digital evidence; security education; and data protection. Axon agrees to the Federal Bureau of Investigation Criminal Justice Information Services Security Addendum for its digital evidence management systems or records.

5. **Customer Responsibilities**. Customer is responsible for (a) ensuring Customer owns Customer Content; (b) ensuring no Customer Content or Customer end user's use of Customer Content or Axon Cloud Services violates this Agreement or applicable laws; and (c) maintaining necessary computer equipment and Internet connections for use of Axon Cloud Services. If Customer becomes aware of any violation of this Agreement by an end user, Customer will immediately terminate that end user's access to Axon Cloud Services.

    a. Customer will also maintain the security of end usernames and passwords and security and access by end users to Customer Content. Customer is responsible for ensuring the configuration and utilization of Axon Cloud Services meet applicable Customer regulation and standards. Customer may not sell, transfer, or sublicense access to any other entity or person. Customer shall contact Axon immediately if an unauthorized party may be using Customer's account or Customer Content, or if account information is lost or stolen.

6. **Privacy**. Customer's use of Axon Cloud Services is subject to the Axon Cloud Services Privacy Policy, a current version of which is available at https://www.axon.com/legal/cloud-services-privacy-policy. Customer agrees to allow Axon access to Non-Content Data from Customer to (a) perform troubleshooting, maintenance, or diagnostic screenings; (b) provide, develop, improve, and support current and future Axon products and related services; and (c) enforce this Agreement or policies governing the use of Axon products.

7. **Axon Body Wi-Fi Positioning**. Axon Body cameras may offer a feature to enhance location services where GPS/GNSS signals may not be available, for instance, within buildings or underground. Customer administrators can manage their choice to use this service within the administrative features of Axon Cloud Services. If Customer chooses to use this service, Axon must also enable the usage of the feature for Customer's Axon Cloud Services tenant. Customer will not see this option with Axon Cloud Services unless Axon has enabled Wi-Fi Positioning for Customer's Axon Cloud Services tenant. When Wi-Fi Positioning is enabled by both Axon and Customer, Non-Content and Personal Data will be sent to Skyhook Holdings, Inc. ("**Skyhook**") to facilitate the Wi-Fi Positioning functionality. Data controlled by Skyhook is outside the scope of the Axon Cloud Services Privacy Policy and is subject to the Skyhook Services Privacy Policy.

8. **Storage**. For Axon Unlimited Device Storage subscriptions, Customer may store unlimited data in Customer's Axon Evidence account only if data originates from Axon Capture or the applicable Axon Device. Axon may charge Customer additional fees for exceeding purchased storage amounts. Axon may place Customer Content that Customer has not viewed or accessed for six (6) months into archival storage. Customer Content in archival storage will not have immediate availability and may take up to twenty-four (24) hours to access.

   For Third-Party Unlimited Storage the following restrictions apply: (i) it may only be used in conjunction with a valid Axon's Evidence.com user license; (ii) is limited to data of the law enforcement Customer that purchased the Third-Party Unlimited Storage and the Axon's Evidence.com end user or Customer is prohibited from storing data for other law enforcement agencies; and (iii) Customer may only upload and store data that is directly related to: (1) the investigation of, or the prosecution of a crime; (2) common law enforcement activities; or (3) any Customer Content created by Axon Devices or Evidence.com.

9. **Location of Storage**. Axon may transfer Customer Content to third-party subcontractors for storage. Axon will determine the locations of data centers for storage of Customer Content. For United States agencies, Axon will ensure all Agency Content stored in Axon Cloud Services remains within the United States. Ownership of Customer Content remains with Customer.

10. **Suspension**. Axon may temporarily suspend Customer's or any end user's right to access or use any portion or all of Axon Cloud Services immediately upon notice, if Customer or end user's use of or registration for Axon Cloud Services may (a) pose a security risk to Axon Cloud Services or any third-party; (b) adversely impact Axon Cloud Services, the systems, or content of any other customer; (c) subject Axon, Axon's affiliates, or any third-party to liability; or (d) be fraudulent. Customer remains responsible for all fees incurred through suspension. Axon will not delete Customer Content because of suspension, except as specified in this Agreement.

11. **Axon Cloud Services Warranty**. Axon disclaims any warranties or responsibility for data corruption or errors before Customer uploads data to Axon Cloud Services.

12. **TASER Data Science Program.** Axon will provide a quantitative evaluation on the performance and effectiveness of TASER energy weapons in the field across a variety of circumstances.

    If Customer purchases the TASER Data Science Program, Customer grants Axon, its affiliates, and assignees an irrevocable, perpetual, fully paid, royalty-free, and worldwide right and license to use Provided Data solely for the purposes of this Agreement and to create Transformed Data. Customer shall own all rights and title to Provided Data. Axon shall own all rights and title to Transformed Data and any derivatives of Transformed Data.

    Axon grants to Customer an irrevocable, perpetual, fully paid, royalty-free, license to use to TASER Data Science report provided to Customer for its own internal purposes. **The Data Science report is provided "as is" and without any warranty of any kind.**

    In the event Customer seeks Axon's deletion of Provided Data, it may submit a request to privacy@axon.com. Where reasonably capable of doing so, Axon will implement the request but at a minimum will not continue to collect Provided Data from Customer.

13. **Axon Records**. Axon Records is the software-as-a-service product that is generally available at the time Customer purchases an OSP 7 or OSP 10 bundle. During Customer's Axon Records Subscription Term, if any, Customer will be entitled to receive Axon's Update and Upgrade releases on an if-and-when available basis.

a. The Axon Records Subscription Term will end upon the completion of the Axon Records Subscription as documented in the Quote, or if purchased as part of an OSP 7 or OSP 10 bundle, upon completion of the OSP 7 or OSP 10 Term ("**Axon Records Subscription**")

b. An "**Update**" is a generally available release of Axon Records that Axon makes available from time to time. An "**Upgrade**" includes (i) new versions of Axon Records that enhance features and functionality, as solely determined by Axon; and/or (ii) new versions of Axon Records that provide additional features or perform additional functions. Upgrades exclude new products that Axon introduces and markets as distinct products or applications.

c. New or additional Axon products and applications, as well as any Axon professional services needed to configure Axon Records, are not included. If Customer purchases Axon Records as part of a bundled offering, the Axon Record subscription begins on the later of the (1) start date of that bundled offering, or (2) date Axon provisions Axon Records to Customer.

d. Users of Axon Records at the Customer may upload files to entities (incidents, reports, cases, etc) in Axon Records with no limit to the number of files and amount of storage. Notwithstanding the foregoing, Axon may limit usage should the Customer exceed an average rate of one-hundred (100) GB per user per year of uploaded files. Axon will not bill for overages.

14. **Axon Cloud Services Restrictions**. Customer and Customer end users (including employees, contractors, agents, officers, volunteers, and directors), may not, or may not attempt to:

    a. reverse engineer, disassemble, or decompile Axon Cloud Services or apply any process to derive any source code included in Axon Cloud Services, or allow others to do the same;

    b. copy, modify, tamper with, repair, or create derivative works of any part of Axon Cloud Services;

    c. access or use Axon Cloud Services with the intent to gain unauthorized access, avoid incurring fees or exceeding usage limits or quotas;

    d. use Axon Cloud Serves as a service bureau, or as part of an Customer infrastructure as a service;

    e. use trade secret information contained in Axon Cloud Services, except as expressly permitted in this Agreement;

    f. access Axon Cloud Services to build a competitive device or service or copy any features, functions, or graphics of Axon Cloud Services;

    g. remove, alter, or obscure any confidentiality or proprietary rights notices (including copyright and trademark notices) of Axon's or Axon's licensors on or within Axon Cloud Services; or

    h. use Axon Cloud Services to store or transmit infringing, libelous, or other unlawful or tortious material; material in violation of third-party privacy rights; or malicious code.

15. **Axon Narrative.** AI-Assisted Report Writing feature. Axon may impose usage restrictions if a single user generates more than one hundred (100) reports per month for two or more consecutive months.

16. **After Termination**. Axon will not delete Customer Content for ninety (90) days following termination. There will be no functionality of Axon Cloud Services during these ninety (90) days other than the ability to retrieve Customer Content. Customer will not incur additional fees if Customer downloads Customer Content from Axon Cloud Services during this time. Axon has no obligation to maintain or provide Customer Content after these ninety (90) days and will thereafter, unless legally prohibited, delete all Customer Content. Upon request, Axon will provide written proof that Axon successfully deleted and fully removed all Customer Content from Axon Cloud Services.

17. **Post-Termination Assistance**. Axon will provide Customer with the same post-termination data retrieval assistance that Axon generally makes available to all customers. Requests for Axon to provide additional assistance in downloading or transferring Customer Content, including requests for Axon's data egress service, will result in additional fees and Axon will not warrant or guarantee data integrity or readability in the external system.

18. **U.S. Government Rights**. If Customer is a U.S. Federal department or using Axon Cloud Services on behalf of a U.S. Federal department, Axon Cloud Services is provided as a "commercial item," "commercial computer software," "commercial computer software documentation," and "technical data", as defined in the Federal Acquisition Regulation and Defense Federal Acquisition Regulation Supplement. If Customer is using Axon Cloud

Services on behalf of the U.S. Government and these terms fail to meet the U.S. Government's needs or are inconsistent in any respect with federal law, Customer will immediately discontinue use of Axon Cloud Services.

19. **Survival**. Upon any termination of this Agreement, the following sections in this Appendix will survive: Customer Owns Customer Content, Privacy, Storage, Axon Cloud Services Warranty, Customer Responsibilities and Axon Cloud Services Restrictions.

Axon Customer Experience Improvement Program Appendix

1. **Axon Customer Experience Improvement Program (ACEIP)**. The ACEIP is designed to accelerate Axon's development of technology, such as building and supporting automated features, to ultimately increase safety within communities and drive efficiency in public safety. To this end, subject to the limitations on Axon as described below, Axon, where allowed by law, may make limited use of Customer Content from all of its customers to provide, develop, improve, and support current and future Axon products (collectively, "ACEIP Purposes"). However, at all times, Axon will comply with its obligations pursuant to the Axon Cloud Services Terms of Use Appendix to maintain a comprehensive data security program (including compliance with the CJIS Security Policy for Criminal Justice Information), privacy program, and data governance policy, including high industry standards of de-identifying Personal Data, to enforce its security and privacy obligations for the ACEIP. ACEIP has 2 tiers of participation, Tier 1 and Tier 2. By default, Customer will be a participant in ACEIP Tier 1. If Customer does not want to participate in ACEIP Tier 1, Customer can revoke its consent at any time. If Customer wants to participate in Tier 2, as detailed below, Customer can check the ACEIP Tier 2 box below. If Customer does not want to participate in ACEIP Tier 2, Customer should leave box unchecked. At any time, Customer may revoke its consent to ACEIP Tier 1, Tier 2, or both Tiers.

2. **ACEIP Tier 1.**

   2.1. When Axon uses Customer Content for the ACEIP Purposes, Axon will extract from Customer Content and may store separately copies of certain segments or elements of the Customer Content (collectively, "**ACEIP Content**"). When extracting ACEIP Content, Axon will use commercially reasonable efforts to aggregate, transform or de-identify Customer Content so that the extracted ACEIP Content is no longer reasonably capable of being associated with, or could reasonably be linked directly or indirectly to a particular individual ("**Privacy Preserving Technique(s)**"). For illustrative purposes, some examples are described in footnote 1[1]. For clarity, ACEIP Content will still be linked indirectly, with an attribution, to the Customer from which it was extracted. This attribution will be stored separately from the data itself, but is necessary for and will be solely used to enable Axon to identify and delete all ACEIP Content upon Customer request. Once de-identified, ACEIP Content may then be further modified, analyzed, and used to create derivative works. At any time, Customer may revoke the consent granted herein to Axon to access and use Customer Content for ACEIP Purposes. Within 30 days of receiving the Customer's request, Axon will no longer access or use Customer Content for ACEIP Purposes and will delete any and all ACEIP Content. Axon will also delete any derivative works which may reasonably be capable of being associated with, or could reasonably be linked directly or indirectly to Customer. In addition, if Axon uses Customer Content for the ACEIP Purposes, upon request, Axon will make available to Customer a list of the specific type of Customer Content being used to generate ACEIP Content, the purpose of such use, and the retention, privacy preserving extraction technique, and relevant data protection practices applicable to the Customer Content or ACEIP Content ("**Use Case**"). From time to time, Axon may develop and deploy new Use Cases. At least 30 days prior to authorizing the deployment of any new Use Case, Axon will provide Customer notice (by updating the list of Use Case at https://www.axon.com/aceip and providing Customer with a mechanism to obtain notice of that update or another commercially reasonable method to Customer designated contact) ("**New Use Case**").

   2.2. **Expiration of ACEIP Tier 1**. Customer consent granted herein will expire upon termination of the Agreement. In accordance with section 1.1.1, within 30 days of receiving the Customer's request, Axon will no longer access or use Customer Content for ACEIP Purposes and will delete ACEIP Content. Axon will also delete any derivative works which may reasonably be capable of being associated with, or could reasonably be linked directly or indirectly to, Customer.

3. **ACEIP Tier 2**. In addition to ACEIP Tier 1, if Customer wants to help further improve Axon's services, Customer may choose to participate in Tier 2 of the ACEIP. ACEIP Tier 2 grants Axon certain additional rights to use Customer

[1] For example; (a) when extracting specific text to improve automated transcription capabilities, text that could be used to directly identify a particular individual would not be extracted, and extracted text would be disassociated from identifying metadata of any speakers, and the extracted text would be split into individual words and aggregated with other data sources (including publicly available data) to remove any reasonable ability to link any specific text directly or indirectly back to a particular individual; (b) when extracting license plate data to improve Automated License Plate Recognition (ALPR) capabilities, individual license plate characters would be extracted and disassociated from each other so a complete plate could not be reconstituted, and all association to other elements of the source video, such as the vehicle, location, time, and the surrounding environment would also be removed; (c) when extracting audio of potential acoustic events (such as glass breaking or gun shots), very short segments (<1 second) of audio that only contains the likely acoustic events would be extracted and all human utterances would be removed.

Content, in addition to those set forth in Tier 1 above, without the guaranteed deployment of a Privacy Preserving Technique to enable product development, improvement, and support that cannot be accomplished with aggregated, transformed, or de-identified data.

☐ Check this box if Customer wants to help further improve Axon's services by participating in ACEIP Tier 2 in addition to Tier 1. Axon will not enroll Customer into ACEIP Tier 2 until Axon and Customer agree to terms in writing providing for such participation in ACEIP Tier 2.

Professional Services Appendix

If any of the Professional Services specified below are included on the Quote, this Appendix applies.

1. **Utilization of Services**. Customer must use professional services as outlined in the Quote and this Appendix within six (6) months of the Effective Date.

2. **Axon Full Service (Axon Full Service)**. Axon Full Service includes advance remote project planning and configuration support and up to four (4) consecutive days of on-site service and a professional services manager to work with Customer to assess Customer's deployment and determine which on-site services are appropriate. If Customer requires more than four (4) consecutive on-site days, Customer must purchase additional days. Axon Full Service options include:

System set up and configuration • Instructor-led setup of Axon View on smartphones (if applicable) • Configure categories and custom roles based on Customer need • Register cameras to Customer domain • Troubleshoot IT issues with Axon Evidence and Axon Dock ("**Dock**") access • One on-site session included
Dock configuration • Work with Customer to decide the ideal location of Docks and set configurations on Dock • Authenticate Dock with Axon Evidence using admin credentials from Customer • On-site assistance, not to include physical mounting of docks
Best practice implementation planning session • Provide considerations for the establishment of video policy and system operations best practices based on Axon's observations with other agencies • Discuss the importance of entering metadata in the field for organization purposes and other best practices for digital data management • Provide referrals of other agencies using the Axon camera devices and Axon Evidence • Recommend rollout plan based on review of shift schedules
System Admin and troubleshooting training sessions Step-by-step explanation and assistance for Customer's configuration of security, roles & permissions, categories & retention, and other specific settings for Axon Evidence
Axon instructor training (Train the Trainer) Training for Customer's in-house instructors who can support Customer's Axon camera and Axon Evidence training needs after Axon has fulfilled its contractual on-site obligations
Evidence sharing training Tailored workflow instruction for Investigative Units on sharing Cases and Evidence with local prosecuting agencies
End user go-live training and support sessions • Assistance with device set up and configuration • Training on device use, Axon Evidence, and Evidence Sync
Implementation document packet Axon Evidence administrator guides, camera implementation guides, network setup guide, sample policies, and categories & roles guide
Post go-live review

3. **Body-Worn Camera Starter Service (Axon Starter)**. Axon Starter includes advance remote project planning and configuration support and one (1) day of on-site Services and a professional services manager to work closely with Customer to assess Customer's deployment and determine which Services are appropriate. If Customer requires more than one (1) day of on-site Services, Customer must purchase additional on-site Services. The Axon Starter options include:

System set up and configuration (Remote Support)

• Instructor-led setup of Axon View on smartphones (if applicable) • Configure categories & custom roles based on Customer need • Troubleshoot IT issues with Axon Evidence and Dock access
Dock configuration • Work with Customer to decide the ideal location of Dock setup and set configurations on Dock • Authenticate Dock with Axon Evidence using "Administrator" credentials from Customer • Does not include physical mounting of docks
Axon instructor training (Train the Trainer) Training for Customer's in-house instructors who can support Customer's Axon camera and Axon Evidence training needs after Axon's has fulfilled its contracted on-site obligations
End user go-live training and support sessions • Assistance with device set up and configuration • Training on device use, Axon Evidence, and Evidence Sync
Implementation document packet Axon Evidence administrator guides, camera implementation guides, network setup guide, sample policies, and categories & roles guide

4. **Body-Worn Camera Virtual 1-Day Service (Axon Virtual)**. Axon Virtual includes all items in the BWC Starter Service Package, except one (1) day of on-site services.

5. **CEW Services Packages**. CEW Services Packages are detailed below:

System set up and configuration • Configure Axon Evidence categories & custom roles based on Customer need. • Troubleshoot IT issues with Axon Evidence. • Register users and assign roles in Axon Evidence. • **For the CEW Full Service Package**: On-site assistance included • **For the CEW Starter Package**: Virtual assistance included
Dedicated Project Manager Assignment of specific Axon representative for all aspects of planning the rollout (Project Manager). Ideally, Project Manager will be assigned to Customer 4–6 weeks before rollout
Best practice implementation planning session to include: • Provide considerations for the establishment of CEW policy and system operations best practices based on Axon's observations with other agencies • Discuss the importance of entering metadata and best practices for digital data management • Provide referrals to other agencies using TASER CEWs and Axon Evidence • **For the CEW Full Service Package:** On-site assistance included • **For the CEW Starter Package:** Virtual assistance included
System Admin and troubleshooting training sessions On-site sessions providing a step-by-step explanation and assistance for Customer's configuration of security, roles & permissions, categories & retention, and other specific settings for Axon Evidence
Axon Evidence Instructor training • Provide training on the Axon Evidence to educate instructors who can support Customer's subsequent Axon Evidence training needs. • **For the CEW Full Service Package:** Training for up to 3 individuals at Customer • **For the CEW Starter Package:** Training for up to 1 individual at Customer
TASER CEW inspection and device assignment Axon's on-site professional services team will perform functions check on all new TASER CEW Smart weapons and assign them to a user on Axon Evidence.
Post go-live review **For the CEW Full Service Package**: On-site assistance included. **For the CEW Starter Package**: Virtual assistance included.

6. **Smart Weapon Transition Service**. The Smart Weapon Transition Service includes:

Archival of CEW Firing Logs Axon's on-site professional services team will upload CEW firing logs to Axon Evidence from all TASER CEW

Smart Weapons that Customer is replacing with newer Smart Weapon models.
Return of Old Weapons Axon's on-site professional service team will ship all old weapons back to Axon's headquarters. Axon will provide Customer with a Certificate of Destruction

*Note: CEW Full Service packages for TASER 7 or TASER 10 include Smart Weapon Transition Service instead of 1-Day Device Specific Instructor Course.

7. **VR Services Package.** VR Service includes advance remote project planning and configuration support and one (1) day of on-site service and a professional services manager to work with Customer to assess Customer's deployment and determine which Services are appropriate. The VR Service training options include:

System set up and configuration (Remote Support) • Instructor-led setup of Axon VR headset content • Configure Customer settings based on Customer need • Troubleshoot IT issues with Axon VR headset
Axon instructor training (Train the Trainer) Training for up to five (5) Customer's in-house instructors who can support Customer's Axon VR CET and SIM training needs after Axon's has fulfilled its contracted on-site obligations
Classroom and practical training sessions Step-by-step explanation and assistance for Customer's configuration of Axon VR CET and SIM functionality, basic operation, and best practices

8. **Axon Air, On-Site Training.** Axon Air, On-Site training includes advance remote project planning and configuration support and one (1) day of on-site Services and a professional services manager to work closely with Customer to assess Customer's deployment and determine which Services are appropriate. If Customer's requires more than one (1) day of on-site Services, Customer must purchase additional on-site Services. The Axon Air, On-Site training options include:

System set up and configuration (Remote Support) • Instructor-led setup of Axon Air App (ASDS) • Configure Customer settings based on Customer need • Configure drone controller • Troubleshoot IT issues with Axon Evidence
Axon instructor training (Train the Trainer) Training for Customer's in-house instructors who can support Customer's Axon Air and Axon Evidence training needs after Axon's has fulfilled its contracted on-site obligations
Classroom and practical training sessions Step-by-step explanation and assistance for Customer's configuration of Axon Respond+ livestreaming functionality, basic operation, and best practices

9. **Axon Air, Virtual Training.** Axon Air, Virtual training includes all items in the Axon Air, On-Site Training Package, except the practical training session, with the Axon Instructor training for up to four hours virtually.

10. **Signal Sidearm Installation Service**.

    a. **Purchases of 50 SSA units or more**: Axon will provide one (1) day of on-site service and one professional services manager and will provide train the trainer instruction, with direct assistance on the first of each unique holster/mounting type. Customer is responsible for providing a suitable work/training area.

    b. **Purchases of less than 50 SSA units:** Axon will provide a 1-hour virtual instruction session on the basics of installation and device calibration**.**

11. **Out of Scope Services**. Axon is only responsible to perform the professional services described in the Quote and this Appendix. Any additional professional services are out of scope. The Parties must document scope changes in a written and signed change order. Changes may require an equitable adjustment in the charges or schedule.

12. **Delivery of Services**. Axon personnel will work Monday through Friday, 8:30 a.m. to 5:30 p.m., except holidays. Axon will perform all on-site tasks over a consecutive timeframe. Axon will not charge Customer travel time by Axon

personnel to Customer premises as work hours.

13. **Access Computer Systems to Perform Services**. Customer authorizes Axon to access relevant Customer computers and networks, solely for performing the Services. Axon will work to identify as soon as reasonably practicable resources and information Axon expects to use and will provide an initial itemized list to Customer. Customer is responsible for and assumes the risk of any problems, delays, losses, claims, or expenses resulting from the content, accuracy, completeness, and consistency of all data, materials, and information supplied by Customer.

14. **Site Preparation**. Axon will provide a hardcopy or digital copy of current user documentation for the Axon Devices ("**User Documentation**"). User Documentation will include all required environmental specifications for the professional services and Axon Devices to operate per the Axon Device User Documentation. Before installation of Axon Devices (whether performed by Customer or Axon), Customer must prepare the location(s) where Axon Devices are to be installed ("**Installation Site**") per the environmental specifications in the Axon Device User Documentation. Following installation, Customer must maintain the Installation Site per the environmental specifications. If Axon modifies Axon Device User Documentation for any Axon Devices under this Agreement, Axon will provide the update to Customer when Axon generally releases it

15. **Acceptance**. When Axon completes professional services, Axon will present an acceptance form ("**Acceptance Form**") to Customer. Customer will sign the Acceptance Form acknowledging completion. If Customer reasonably believes Axon did not complete the professional services in substantial conformance with this Agreement, Customer must notify Axon in writing of the specific reasons for rejection within seven (7) calendar days from delivery of the Acceptance Form. Axon will address the issues and re-present the Acceptance Form for signature. If Axon does not receive the signed Acceptance Form or written notification of reasons for rejection within seven (7) calendar days of delivery of the Acceptance Form, Axon will deem Customer to have accepted the professional services.

16. **Customer Network**. For work performed by Axon transiting or making use of Customer's network, Customer is solely responsible for maintenance and functionality of the network. In no event will Axon be liable for loss, damage, or corruption of Customer's network from any cause.

Technology Assurance Plan Appendix

If Technology Assurance Plan ("**TAP**") or a bundle including TAP is on the Quote, this appendix applies.

1. **TAP Warranty**. The TAP warranty is an extended warranty that starts at the end of the one- (1-) year hardware limited warranty.
2. **Officer Safety Plan**. If Customer purchases an Officer Safety Plan ("**OSP**"), Customer will receive the deliverables detailed in the Quote. Customer must accept delivery of the TASER CEW and accessories as soon as available from Axon.
3. **OSP 7 or OSP 10 Term**. OSP 7 or OSP 10 begins on the date specified in the Quote ("**OSP Term**").
4. **TAP BWC Upgrade**. If Customer has no outstanding payment obligations and purchased TAP, Axon will provide Customer a new Axon body-worn camera ("**BWC Upgrade**") as scheduled in the Quote. If Customer purchased TAP, Axon will provide a BWC Upgrade that is the same or like Axon Device, at Axon's option. Axon makes no guarantee the BWC Upgrade will utilize the same accessories or Axon dock.
5. **TAP Dock Upgrade**. If Customer has no outstanding payment obligations and purchased TAP, Axon will provide Customer a new Axon Dock as scheduled in the Quote ("**Dock Upgrade**"). Accessories associated with any Dock Upgrades are subject to change at Axon discretion. Dock Upgrades will only include a new Axon dock bay configuration unless a new Axon dock core is required for BWC compatibility. If Customer originally purchased a single-bay Axon dock, the Dock Upgrade will be a single-bay Axon dock model that is the same or like Axon Device, at Axon's option. If Customer originally purchased a multi-bay Axon dock, the Dock Upgrade will be a multi-bay Axon dock that is the same or like Axon Device, at Axon's option.
6. **Upgrade Delay**. Axon may ship the BWC and Dock Upgrades as scheduled in the Quote without prior confirmation from Customer unless the Parties agree in writing otherwise at least ninety (90) days in advance. Axon may ship the final BWC and Dock Upgrade as scheduled in the Quote sixty (60) days before the end of the Subscription Term without prior confirmation from Customer.
7. **Upgrade Change**. If Customer wants to upgrade Axon Device models from the current Axon Device to an upgraded Axon Device, Customer must pay the price difference between the MSRP for the current Axon Device and the MSRP for the upgraded Axon Device. If the model Customer desires has an MSRP less than the MSRP of the offered BWC Upgrade or Dock Upgrade, Axon will not provide a refund. The MSRP is the MSRP in effect at the time of the upgrade.
8. **Return of Original Axon Device**. Within thirty (30) days of receiving a BWC or Dock Upgrade, Customer must return the original Axon Devices to Axon or destroy the Axon Devices and provide a certificate of destruction to Axon including serial numbers for the destroyed Axon Devices. If Customer does not return or destroy the Axon Devices, Axon will deactivate the serial numbers for the Axon Devices received by Customer.
9. **Termination**. If Customer's payment for TAP, OSP, or Axon Evidence is more than thirty (30) days past due, Axon may terminate TAP or OSP. Once TAP or OSP terminates for any reason:
   - 9.1. TAP and OSP coverage terminate as of the date of termination and no refunds will be given.
   - 9.2. Axon will not and has no obligation to provide the Upgrade Models.
   - 9.3. Customer must make any missed payments due to the termination before Customer may purchase any future TAP or OSP.

TASER Device Appendix

This TASER Device Appendix applies to Customer's TASER 7/10, OSP 7/10, OSP Plus, or OSP 7/10 Plus Premium purchase from Axon, if applicable.

1. **Duty Cartridge Replenishment Plan**. If the Quote includes "**Duty Cartridge Replenishment Plan**", Customer must purchase the plan for each CEW user. A CEW user includes officers that use a CEW in the line of duty and those that only use a CEW for training. Customer may not resell cartridges received. Axon will only replace cartridges used in the line of duty.

2. **Training**. If the Quote includes a TASER On Demand Certification subscription, Customer will have on-demand access to TASER Instructor and TASER Master Instructor courses only for the duration of the TASER Subscription Term. Axon will issue a maximum of ten (10) TASER Instructor vouchers and ten (10) TASER Master Instructor vouchers for every thousand TASER Subscriptions purchased. Customer shall utilize vouchers to register for TASER courses at their discretion however Customer may incur a fee for cancellations less than 10 business days prior to a course date or failure to appear to a registered course. The voucher has no cash value. Customer cannot exchange voucher for any other device or service. Any unused vouchers at the end of the Term will be forfeited. A voucher does not include any travel or other expenses that might be incurred related to attending a course.

3. **Extended Warranty**. If the Quote includes an extended warranty, the extended warranty coverage period warranty will be for a five- (5-) year term, which includes the hardware manufacturer's warranty plus the four- (4-) year extended term.

4. **Trade-in**. If the Quote contains a discount on CEW-related line items and that discount is contingent upon the trade-in of hardware, Customer must return used hardware and accessories associated with the discount ("**Trade-In Units**") to Axon within the below prescribed timeline. Customer must ship batteries via ground shipping. Axon will pay shipping costs of the return. If Axon does not receive Trade-In Units within the timeframe below, Axon will invoice Customer the value of the trade-in credit. Customer may not destroy Trade-In Units and receive a trade-in credit.

Customer Size	Days to Return from Start Date of TASER 10 Subscription
Less than 100 officers	60 days
100 to 499 officers	90 days
500+ officers	180 days

5. **TASER Device Subscription Term**. The TASER Device Subscription Term for a standalone TASER Device purchase begins on shipment of the TASER Device. The TASER Device Subscription Term for OSP 7/10 begins on the OSP 7/10 start date.

6. **Access Rights**. Upon Axon granting Customer a TASER Device Axon Evidence subscription, Customer may access and use Axon Evidence for the storage and management of data from TASER Devices devices during the TASER Device Subscription Term. Customer may not exceed the number of end users the Quote specifies.

7. **Customer Warranty.** If Customer is located in the US, Customer warrants and acknowledges that TASER 10 is classified as a firearm and is being acquired for official Customer use pursuant to a law enforcement Customer transfer under the Gun Control Act of 1968.

8. **Purchase Order.** To comply with applicable laws and regulations, Customer must provide a purchase order to Axon prior to shipment of TASER 10.

9. **Apollo Grant (US only).** If Customer has received an Apollo Grant from Axon, Customer must pay all fees in the Quote prior to upgrading to any new TASER Device offered by Axon.

10. **Termination**. If payment for TASER Device is more than thirty (30) days past due, Axon may terminate Customer's TASER Device plan by notifying Customer. Upon termination for any reason, then as of the date of termination:

    10.1. TASER Device extended warranties and access to Training Content will terminate. No refunds will be given.

    10.2. Axon will invoice Customer the remaining MSRP for TASER Devices received before termination. If terminating for non-appropriations, Axon will not invoice Customer if Customer returns the TASER Device, rechargeable battery, holster, dock, core, training suits, and unused cartridges to Axon within thirty (30) days of the date of

termination.

10.3. Customer will be responsible for payment of any missed payments due to the termination before being allowed to purchase any future TASER Device plan.

Standard Terms and Conditions

Axon Enterprise Inc. Sales Terms and Conditions

Axon Master Services and Purchasing Agreement:

This Quote is limited to and conditional upon your acceptance of the provisions set forth herein and Axon's Master Services and Purchasing Agreement (posted at https://www.axon.com/sales-terms-and-conditions), as well as the attached Statement of Work (SOW) for Axon Fleet and/or Axon Interview Room purchase, if applicable. In the event you and Axon have entered into a prior agreement to govern all future purchases, that agreement shall govern to the extent it includes the products and services being purchased and does not conflict with the Axon Customer Experience Improvement Program Appendix as described below.

ACEIP:

The Axon Customer Experience Improvement Program Appendix, which includes the sharing of de-identified segments of Agency Content with Axon to develop new products and improve your product experience (posted at www.axon.com/legal/sales-terms-and-conditions), is incorporated herein by reference. By signing below, you agree to the terms of the Axon Customer Experience Improvement Program.

Acceptance of Terms:

Any purchase order issued in response to this Quote is subject solely to the above referenced terms and conditions. By signing below, you represent that you are lawfully able to enter into contracts. If you are signing on behalf of an entity (including but not limited to the company, municipality, or government agency for whom you work), you represent to Axon that you have legal authority to bind that entity. If you do not have this authority, please do not sign this Quote.

6/5/2024

Sole Source/ Single Source/ Standardization Form

For procurement of supplies, equipment and services valued at $5,000 and over

NOTE: Every question must be answered with appropriate documentation attached; incomplete forms will be immediately rejected by Purchasing.

Date: 6/26/24

TO: Purchasing Division

FROM: Stephen Crane, Police Department

Purchase Requisition # MUNIS to generate

Estimated Total Cost: $ 549,724.94

Proposed Vendor: Axon Enterprise

Request Term: 5-years

This form must accompany the purchase document whenever an exception to the competitive process is requested. Requests for goods and/or services from a specific vendor or limited to a specific brand, where substitutes to the recommended vendor or brand are unacceptable, must be accompanied by a written justification explaining the circumstances that make alternatives unacceptable.

The City Manager will determine whether the justification is appropriate. Requests for exception must be supported by factual statements that will pass an audit.

INSTRUCTIONS

1. Please check all applicable categories (a. through i.) below and provide additional information where indicated.

☐ a. The requested product is an integral repair part or accessory compatible with existing equipment.

Existing Equipment: _____

Manufacturer/Model Number: _____

Age: _____

Current Estimated Value: _____

☒ b. The requested product has unique design/performance specifications or quality requirements that are not available in comparable products.

☐ c. I have standardized the requested product and the use of another brand/model would require considerable time and funding to evaluate.

☒ d. The requested product is one in which I (and/or my staff) have specialized training and/or extensive expertise. Retraining would incur substantial cost in time and/or funding.

☐ e. The requested product is used or demonstration equipment available at a lower-than-new cost.

☒ f. Repair/Maintenance service is available only from manufacturer or designated service representative.

☐ g. Upgrade to or enhancement of existing software is available only from manufacturer.

☒ h. Service proposed by vendor is unique; therefore, competitive bids are not available or applicable.

☒ i. Other factors (provide detailed explanation in #2 below).

2. Provide a detailed explanation and pertinent documentation *for each category* checked in item 1 above. Attach additional sheets if necessary:

Axon Enterprise manufactures the Taser 10, and they are the only company that manufactures this item. Taser 10 cannot be purchased by any other manufacturer. Members of our department have specialized training in the item, and it would cost a significant amount of time and money to purchase and train on a similar item. Repair and maintenance is only available through Axon Enterprise.

3. Was an evaluation of other equipment, products, or services performed?

☐ Yes ■ No

***If yes, please explain the type of evaluation performed and provide all supporting documentation*:**

4. List below the name of each individual who was involved in the evaluation, if conducted, and in making the recommendation to procure this product or service. Attach additional information, if necessary.

Kyle Alexander Jonathan James Darren Beck

5. Explain what action(s) the department would take if the sole/single source services were no longer available

RPD will have end of life (expired) tasers and the current taser will be no longer available with Axon.

6. I certify that the above information is accurate to the best of my knowledge, and a signed copy of this document will be kept on file and available for audit in my department
