City Council Chambers
Civic Center, 35 Cajon Street, Redlands, California

A G E N D A

The following information comprises the agenda for the regular meeting of the City Council of the City of Redlands at the times noted below in the City Council Chambers, Civic Center, 35 Cajon Street, Redlands, California, on:

Tuesday, June 2, 2026

To join via Zoom on a computer, laptop, or smart device
Please visit www.zoom.us, click on Join a Meeting
Enter the **Meeting ID 896 2789 8341,** then run the Zoom launcher
To join via Zoom with audio only (cell phone or landline)
Dial **1-877-853-5247**
Enter the **Meeting ID 896 2789 8341**

Should the City lose connectivity on Zoom, we will halt the meeting until it can be restored. To check on the status of remote connectivity in the event of an outage, go to the City's website at www.cityofredlands.org or to the City's Facebook page at @CityofRedlands or the Instagram page at @CityofRedlands_CityHall.

In the event the City cannot reestablish Zoom connectivity in a reasonable amount of time, the Mayor will adjourn the meeting to a future date.

PLEASE NOTE: Anyone desiring to speak on an agendized item at this meeting may do so during the consideration of that time. Due to time constraints and the number of persons who may wish to give oral testimony, public comments will be limited to three (3) minutes.

- **To provide comment while participating from Council Chambers:**
  - Although it is not required, speakers are encouraged to submit a "Speaker Sign Up Sheet" before the meeting is convened. Forms are available in the Office of the City Clerk or in Council Chambers.
  - After the meeting has convened, you may place the speaker form in the basket at the table along the north wall of the Chambers. Please do not disturb the City Clerk while the meeting is in progress.
- **To provide comment through Zoom (on a computer, laptop, or smart device)**
  - Click the "Raise Hand" button and the moderator will unmute you when it is your turn to speak
- **To provide comment via audio only (cell phone or landline)**
  - Dial *9 to "Raise Hand". The moderator will identify you by your area code and last 3 numbers of your telephone number when it is your turn to speak.

PLEASE SILENCE CELL PHONES, PAGERS AND OTHER ELECTRONIC COMMUNICATION DEVICES UPON ENTERING THE CHAMBERS

5:00 PM

A. Call City Council Meeting to Order

B. Public Comment

(Any person wishing to provide public comment on a closed session matter may do so at this time.)

C. Recess City Council Meeting to a Closed Session

1. Conference with legal counsel: Existing Litigation - Government Code §54956.9(d)(1)
   (City Attorney Abich Garcia)
   One Case:

   a. Holzer v. City of Redlands, et al., San Bernardino Superior Court, Case No. CIVSB2322787

2. Conference with labor negotiator - Government Code §54957.6
   (Assistant City Manager McConnell)

   Agency Negotiators:
   John Bakhit, Jay Trinnaman, Janice McConnell, Jorge Castillo

Approve a Public Works Construction Contract to David Ollis Landscape Development, Inc., in an amount not to exceed $128,601.30 to complete the Gateway Refresh Project FCS01132026KG; and determination that approval of the contract is exempt from the California Environmental Quality Act pursuant to Section 15303 of the CEQA Guidelines
(Facilities and Community Services Director Crocker)

J. Communications

1. Discussion and possible action relating to the cancellation of the August 4 and August 18, 2026 regular meetings of the City Council
(Mayor Saucedo)

2. Conference Report - 2026 City County Conference of the San Bernardino County Transit Authority (SBCTA)
(Mayor Saucedo)

3. Conference Report - 2026 Regional Conference of the Southern California Association of Governments (SCAG) and General Assembly
(Council Member Davis)

K. Public Hearings

1. Public Hearing regarding Assembly Bill 2561 Vacancy and Recruitment Report
(Mayor to declare meeting open as a public hearing)
(Assistant City Manager McConnell)

2. Public Hearing to consider Resolution No. 8786 adopting the Water Shortage Contingency Plan
(Mayor to declare meeting open as a public hearing)
(Municipal Utilities and Engineering Director Heredia)

3. Public Hearing to consider Resolution No. 8785 adopting Part 1, Part 2- Chapter 4, Part 3 and Part 4- Appendix D of the 2025 Regional Urban Water Management Plan
(Mayor to declare meeting open as a public hearing)
(Municipal Utilities and Engineering Director Heredia)

L. New Business

1. Consideration of two Resolutions related to compliance with Senate Bill 707 (SB 707): Resolution No. 8788 amending and restating Protocols for Resolving Disturbances at Public Meetings and Resolution 8787 No. establishing a Policy for Addressing Connection Disruptions During Hybrid Public Meetings
(Assistant City Manager McConnell)

2. Consideration of Resolution No. 8789 approving Agreement 3CA07718 with the Department of Forestry and Fire Protection (Cal Fire) for wildland protection during fiscal year 2026-2027 for an amount not to exceed $319,021.75
(Fire Chief Sessler)

3. Consideration of a Second Amendment to the Agreement with CelPlan Technologies, Inc. for the provision of a video management system replacement to increase the total agreement by an amount of $501,970.00
(Interim Assistant City Manager Garcia)

4. Consideration of a new Enterprise License Agreement with Esri and related subscription services for a three-year term, in an amount not to exceed $271,185.15
(Interim Assistant City Manager Garcia)

5. Consideration of the procurement of three Solid Waste collection vehicles from Rush Truck Centers, in the amount of $1,443,559.68
(Facilities and Community Services Director Crocker)

6. Consideration of a cooperative purchase of a 623 Scraper from Caterpillar Inc., in the amount of $1,346,837.80
(Facilities and Community Services Director Crocker)

7. Consideration of the City Manager's Proposed Two-Year Budget for Fiscal Years 2027 and 2028 and of Resolution No. 8794
(Interim Assistant City Manager Garcia)

M. Individual Council Member Announcements and/or Reports on Activities

(No collective discussion or action.)

1. Individual Council Member Report on Activities for May 2026 from Mayor Pro Tem Shaw
(City Clerk Donaldson)

N. Adjournment

The next regular meeting of the City Council will be held on June 16, 2026.

If you challenge any proposed development entitlement listed on this agenda in court, you may be limited to raising only those issues you or someone else raised at the public hearing described in this notice, or in written correspondence delivered to the City Council at or prior to this public meeting.

In compliance with the Americans with Disabilities Act, if you need special assistance to participate in this meeting, please contact Goutam Dobey, of the Municipal Utilities and Engineering Department at (909) 798-7584 ext 2. Notification 48 hours prior to the meeting will enable the City to make reasonable arrangements to ensure accessibility to this meeting.

(28 CFR 35.102-35.104 ADA Title II)

Any writings or documents distributed to a majority of the City Council Regarding an open session agenda item less than 72 hours before this meeting are available for public inspection at the City Clerk's Office or at the dais of the City Clerk once the open session begins.

Staff reports or other written documentation relating to items referred to on the agenda are available at the A. K. Smiley Public Library, 125 West Vine Street, Redlands, California, and on the City's Website referenced below.

Regular meetings are televised live on Redlands TV Channel 3 (Spectrum) and Channel 35 (Frontier) and re-broadcast at 7:00 P.M. The following Wednesday, Friday and Sunday; and at 9:00 A.M. Thursday, Saturday, and Monday. Meetings are also streamed live and archived for later viewing on demand on the City's website at www.cityofredlands.org. Agendas, staff reports and minutes of the City Council of the City of Redlands are available online at: www.cityofredlands.org

City Council **AGENDA ITEM NO. I1.**

DATE: June 2, 2026

TO: Honorable Mayor and City Council Members

SUBJECT: Approval of minutes of the special meeting of May 18, 2026 (City Clerk Donaldson)

MOTION:

I move to approve the special meeting minutes of May 18, 2026.

Attachments

City-Council-05-18-2026-minutesdraft

MINUTES

Special meeting of the City Council of the City of Redlands held in the Council Chambers, Civic Center, 35 Cajon Street, on Monday, May 18, 2026 at 5:00 P.M.

Present:	Mario Saucedo, Mayor Marc Shaw, Mayor Pro Tempore Paul Barich, Council Member Eddie Tejeda, Council Member Denise Davis, Council Member
Staff:	Charles M. Duggan, Jr., City Manager; Yvette M. Abich Garcia, City Attorney; Jeanne Donaldson, City Clerk; Phillip Doolittle, City Treasurer; Danielle Garcia, Interim Assistant City Manager; James Garland, Interim Management Services/Finance Director; Rich Sessler, Fire Chief; Rachel Tolber, Police Chief; Tabitha Crocker, Facilities and Community Services Director; Don McCue, Library Director; Monica Heredia, Municipal Utilities and Engineering Director; Brian Foote, City Planner/Planning Manager; Jenna Yorck, Human Resources Manager

A. Call City Council Meeting to Order

Mayor Saucedo called the special meeting to order and offered the public an opportunity to address them on any matter scheduled on this agenda or any matter within the jurisdiction of the City Council which is not already scheduled on the agenda. Public comments were presented either in-person via Zoom, via cell phone or landline.

B. Public Comment

Budget Musings - Dennis Bell was displeased that the public had only a limited amount of time to review such a complex document as the Budget Book, leaving very little opportunity to examine it thoroughly. He raised several questions including, how was the city planning to budget for the Redlands Historical Museum, how were vehicle leases, fee waivers, and CalPers budgeted, and were higher water rates intended to cover the debt service.

C. Fiscal Years 2026-2028 Budget Workshop

1. Proposed Budget Overview

    Mayor Saucedo made a brief statement to open the meeting. He urged the Council to work collaboratively to manage expenditures, ensuring the City can sustain the standard of services residents rely on.

    City Manager Duggan and Interim Assistant City Manager Garcia provided an overview of the Proposed Fiscal Year 2027-28 Budgets. The City Manager's budget message explained that this proposal continues the City's strategic investment in core services and its commitment to responsible financial stewardship. The budget advances key initiatives in public safety, infrastructure replacement and improvement, and technology modernization. Driven by ongoing national and global policy changes, this budget was developed during a period of financial caution. Accordingly, the City’s financial strategy will increasingly emphasize maintaining structural balance by aligning ongoing expenditures with sustainable revenue levels, prioritizing core services, and carefully evaluating new or expanded commitments within the context of long-term fiscal capacity. It was pointed out the workshop is an initial presentation of the budget and the Council will have more time to review the book, which is scheduled for discussion on June 2, 2026.

Due to technical disruptions with Zoom, the Mayor recessed the meeting at 5:17 P.M. with the meeting resuming at 5:19 P.M.

FISCAL YEAR 2026 SUMMARY

In FY 2026, the City advanced major projects in civic facilities, public safety, parks and cultural amenities, homelessness services, climate action, fire station improvements, and public safety technology aimed at enhancing the community's quality of life. Revenue forecasts improved slightly, but reserve-funded capital spending increased due to the timing of approved projects, especially State Street City Hall and Safety Hall.

FISCAL YEAR 2027 & 2028 OVERVIEW

For FY 2027–2028, the budget focuses on balancing slower revenue growth with rising costs while investing in emergency response, public safety, parks, libraries, historic preservation, and long-term infrastructure. Key planned projects include replacing a paramedic squad, upgrading emergency medical equipment, providing ballistic protection for fire personnel, enhancing police support operations, revitalizing Texonia Park, improving Sylvan Park and Joslyn Senior Center, preserving A.K. Smiley Public Library, continuing Safety Hall and Fire Station 264 projects, and pursuing Good Nite Inn transitional housing acquisition. Some requested projects remain unfunded due to limited resources.

The proposed biennial budget uses Measure T revenues to support key community priorities such as public safety, infrastructure maintenance, capital reinvestment, homelessness response, and quality-of-life programs. The budget reflects a balanced approach to maintaining essential services while investing in long-term sustainability, despite slower revenue growth, rising operating and personnel costs, and increasing infrastructure obligations. Departments have re-prioritized spending, deferred lower-priority items, and made operational reductions to preserve core services and fund critical investments.

Major planned investments include Safety Hall, relocation of Fire Station No. 264, public safety technology upgrades, homelessness response efforts, and HVAC replacement at the A.K. Smiley Public Library. The budget also acknowledges inflation, aging facilities, labor market pressures, and the need to recruit and retain qualified staff, while anticipating the strategic use of reserves for major capital projects. Overall, the City emphasizes continued prioritization and careful long-term planning to balance service levels, infrastructure needs, employee investment, and fiscal stewardship.

A brief recess was taken at 6:34 P.M. with the meeting resuming at 6:48 P.M.

A six-year long-term financial forecast was presented, offering insight into projections through the year 2032. It was noted that to appropriately and responsibly add staffing and continuing expenses to the budget, a Six-Year Financial Model was used. Expenses were projected out with an inflation factor of 2.5%. Revenues were modeled under a “Steady” economic scenario and the annual running total for unassigned fund balance helped frame the decisions made concerning budget choices.

City Manager Duggan added that as the next Biennium budget begins, he and staff intend to undertake the following: 1) A deep review of Departments/Service levels; 2) A complete Strategic Plan for FYs 2029 through 2032; 3) Preparation to decrease General Fund spending by $4.5M in Biennium FY29-30.

Questions raised by Council Members centered on a number of topics including, vehicle leases, deficit spending, unfunded projects, tree trimming budget, utility assistance program, mitigation measures to assist homeowners with insurance companies, and subsidizing the citrus grove fund. The grove fund needs to be thoroughly reviewed and reevaluated, and Director Crocker pointed out that the City won't begin to receive revenue from the newly replanted groves for five years, as the trees will not start producing fruit until then.

Following the overview, department heads discussed their FY 2027-2028 budgeted revenues and expenditures requests and responded to questions from the Council. Each Council Member expressed their appreciation for City Manager Duggan, Interim Assistant City Manager Garcia and the entire staff for their outstanding work in development of this proposed budget. Special thanks were given to Interim Management Services/Finance Director

James Garland, Finance Manager Marie Datuin and Budget Analyst Miriam Valtierra. The Proposed Budget discussion will continue at the regular meeting of June 2, 2026.

D. Adjournment

There being no further action required the special meeting adjourned at 7:36 P.M.

City Council **AGENDA ITEM NO. I2.**

DATE: June 2, 2026

TO: Honorable Mayor and City Council Members

SUBJECT: Approval of minutes of the regular meeting of May 19, 2026 (City Clerk Donaldson)

MOTION:

I move to approve the regular meeting minutes of May 19, 2026.

Attachments

City Council-05-19-2026-minutesDraft.pdf

MINUTES

Regular meeting of the City Council of the City of Redlands held in the Council Chambers, Civic Center, 35 Cajon Street, on Tuesday, May 19, 2026 at 5:00 P.M.

Present:	Mario Saucedo, Mayor Marc Shaw, Mayor Pro Tempore Paul Barich, Council Member Eddie Tejeda, Council Member Denise Davis, Council Member
Staff:	Charles M. Duggan, Jr., City Manager; Yvette M. Abich Garcia, City Attorney; Jeanne Donaldson, City Clerk; Phillip Doolittle, City Treasurer; Danielle Garcia, Interim Assistant City Manager; James Garland, Interim Management Services/Finance Director; Rich Sessler, Fire Chief; Rachel Tolber, Police Chief; Tabitha Crocker, Facilities and Community Services Director; Monica Heredia, Municipal Utilities and Engineering Director; Brian Foote, City Planner/Planning Manager

A. Call City Council Meeting to Order

Mayor Saucedo called the meeting to order and explained that comments could be presented in-person, via Zoom, via cell phone or landline. He offered the public an opportunity to provide comment on any item on the agenda for the closed session.

B. Public Comment

Teamster Negotiations - Teamster's Business Agent Andrew Coleman voiced his disappointment with the counter offer from the City's labor negotiator, saying the focus was placed solely on wages while offering nothing toward health care benefits. He emphasized that prioritizing both wages and health care was essential, and he urged the City to use the Class and Comp study as a guide to better support and retain employees.

C. Recess City Council Meeting to a Closed Session

1. Conference with legal counsel: Existing Litigation - Government Code §54956.9(d)(1) (City Attorney Garcia)

Two Cases:

1. Maldonado v. City of Redlands, et al, U.S. District Court, Central District, Case No. 5:25-cv-02169-SSS (MAAx)
2. Maldonado v. Redlands Police Department, et al., San Bernardino Superior Court, Case No. CIVSB2403830

2. Conference with labor negotiator - Government Code §54957.6

Agency Negotiators:
John Bakhit, Jay Trinnaman, Jorge Castillo

Employee Organizations:
Redlands Association of Department Directors
Redlands Association of Management Employees
Redlands Association of Mid-Management Employees
Redlands Association of Safety Management Employees
Redlands Association of Fire Management Employees

Redlands Police Officers Association
Redlands Professional Firefighters Association
Redlands Civilian Safety Employees
Teamsters Local 1932 Redlands Chapter

D. Reconvene City Council Meeting at 6:00 p.m.

Mayor Saucedo reconvened the meeting at 6:14 P.M.

E. Invocation by Mayor Pro Tem Shaw- Pledge of Allegiance by Smiley Elementary

F. Closed Session Report

City Attorney Garcia announced that no reportable action was taken during the closed session.

G. Presentations

1. Presentation of the Redlands Bike Classic Sponsorship gift to the City of Redlands by Scott Welsh, Eric Reiser, Brian Zander, and Sean Wilson

    Representing Redlands Bicycle Classic, Scott Welsh, Eric Reiser, Brian Zander, Sean Wilson, and Dan Rendler presented the Bike Classic Sponsorship gift to Mayor Saucedo and the Council Members.

H. Public Comment - City Council

Boys and Girls Club & Clay Street - Robin Lehfeldt complained that the Boys and Girls Club is continuing to disrupt the Clay Street neighborhood with excessive noise and bright lights. She pleaded with Council to take action against the club, which she claims is misusing the property.

Teamster Negotiations - Teamster's Business Agent Andrew Coleman, alongside thirteen Teamster employees passionately argued that during collective bargaining, workers deserve respect, fair wages and affordable healthcare. They urged the Council to invest in their employees, as they have invested in the City's infrastructure. Speakers included, James Estrada, Eli Salazar, Ricky Gonzales, Josie Lopez, Jocelynn Butters, Erick Brazile, Jason Lienen, Michael Gonzalez, Clemente Lozano, Aurelio Munoz, Ed Sherman, Jordan Juranko, and David Giannini. Each one shared their story, which was met with enthusiastic applause from an audience of about one-hundred Teamsters.

Coyote Aviation - Bruce Laycook insisted the City drop their pursuit of Coyote Aviation. He stated the cause was unjustified and a burden on City resources.

Open Government - Stephen Rogers was concerned with political attacks made against the San Bernardino County's Auditor-Controller and Treasurer-Tax Collector. He feared there is corruption within the County bureaucracy.

I. Consent Calendar

1. Approval of minutes of the regular meeting of May 5, 2026

    On motion of Council Member Eddie Tejeda, seconded by Council Member Denise Davis, the City Council approved, by roll call vote, the minutes of the regular meeting of May 5, 2026.

    Vote: 5 - 0 Passed

2. Adopt Resolution No. 8781 Annexation No. 32 declaring intent to annex territory into Community Facilities District 2004-1 and determine that the proposed project is exempt from environmental review pursuant to Section 15061(b)(3) of the State's guidelines implementing the California Environmental Quality Act

On motion of Council Member Eddie Tejeda, seconded by Council Member Denise Davis, the City Council determined, by roll call vote, that the proposed project is exempt from environmental review pursuant to Section 15061(b)(3) of the State's guidelines implementing the California Environmental Quality Act; and adopted Resolution No. 8781, Annexation No. 32, declaring its intent to annex territory into Community Facilities District No. 2004-1 and setting the public hearing for the City Council meeting on July 7, 2026.

Vote: 5 - 0 Passed

3. Adopt Resolution No. 8782 establishing the rate for the voter-approved special tax for emergency paramedic services for Fiscal Year 2026-2027

On motion of Council Member Eddie Tejeda, seconded by Council Member Denise Davis, the City Council adopted, by roll call vote, Resolution No. 8782, establishing the rate for the voter-approved special tax for emergency paramedic services for Fiscal Year 2026-2027.

Vote: 5 - 0 Passed

4. Approve a Sole Source purchase with Azteca Systems for Cityworks License Renewal for a period of three years at a total cost of $171,500.52

On motion of Council Member Eddie Tejeda, seconded by Council Member Denise Davis, the City Council approved, by roll call vote, the software license purchase from Azteca Systems, LLC, for a period of three years at a cost not-to-exceed $171,500.52.

Vote: 5 - 0 Passed

5. Adopt Resolution No. 8783 to implement STOP control at Ford Street and Garden Hill Drive intersection and determine that approval of the resolution is exempt from environmental review pursuant to Section 15301(c) of the State's guidelines implementing the California Environmental Quality Act

On motion of Council Member Eddie Tejeda, seconded by Council Member Denise Davis, the City Council determined, by roll call vote, that approval of the resolution is exempt from environmental review pursuant to Section 15301(c) of the State's guidelines implementing the California Environmental Quality Act; and adopted Resolution No. 8783 to implement a STOP control at the intersection of Ford Street and Garden Hill Drive.

Vote: 5 - 0 Passed

6. Receive and file the 2025 Annual Report of the Municipal Utilities and Public Works Commission

On motion of Council Member Eddie Tejeda, seconded by Council Member Denise Davis, the City Council agreed, by roll call vote, to receive and file the 2025 Annual Report of the Municipal Utilities and Public Works Commission.

Vote: 5 - 0 Passed

7. Approve an Event Services Agreement with the University of Redlands to conduct the Redlands Emergency Services Academy at the University's facility, and determine that approval of the agreement is exempt from environmental review pursuant to Section 15061(b)(3) of the State's guidelines implementing the California Environmental Quality Act

On motion of Council Member Eddie Tejeda, seconded by Council Member Denise Davis, the City Council determined, by roll call vote, that approval of the agreement is exempt from environmental review pursuant to Section 15061(b)(3) of the State's guidelines implementing the California Environmental Quality Act; and approved the Event Services Agreement with the University of Redlands for services relating to the Redlands Emergency Services Academy to be held from July 8, 2026 to July 15, 2026.

Vote: 5 - 0 Passed

8. Approve the Second Amendment to the agreement with the Counseling Team International and a purchase order modification in the amount of $20,000 for Redlands Police Department

Police Chief Tolber reviewed the Second Amendment and authorize staff to execute the modification of an existing purchase order in the amount of $20,000 with The Counseling Team International to its agreement with The Counseling Team International (TCTI) to include additional services for the Redlands Police Department (“RPD”) related to mental health wellness checks. RPD utilized an existing contract through the Human Resources Department (HR) with TCTI to implement these services. RPD is now requesting an increase of $20,000 to the current purchase order bringing the total to $53,400 to continue providing services for its police officers and professional staff during the third year of the contract. The additional cost will be funded through the RPD's current budget. As public comment, Stephen Rogers voiced concerns regarding TCTI, noting the owner's political connections and financial contributions to a specific candidate running in a County race creates a perceived conflict of interest.

On motion of Mayor Pro Tem Marc Shaw, seconded by Council Member Paul Barich, the City Council approved, by roll call vote, the Second Amendment to the agreement and a purchase order modification in the amount of $20,000 with The Counseling Team International.

Vote: 5 - 0 Passed

J. New Business

1. Discussion and possible action relating to the Redlands Downtown Morning Market hours of operation and future location options

Mayor Pro Tem Shaw opened the discussion to consider the Downtown Morning Market hours of operation, potential relocation options, and possible coordination with the existing Farmers Market at Grove School. The Downtown Morning Market has served as a long-standing community program supporting local agriculture, small businesses, and downtown activity. The market currently operates on Saturdays from 9:00 am to 1:00 pm in the municipal parking lot near Ed Hales Park and continues to attract vendors and visitors to the downtown area.

Mayor Pro Tem Shaw asked whether the market hours should be adjusted to begin and end earlier in the day in an effort to reduce the impact on downtown parking availability and peak business activity. Potential changes to market hours should also consider vendor participation, customer attendance, operational needs and expenses, and overall market success. Council Members considered future location options, such as relocating the market to another downtown-adjacent area like the parking lot behind Hatfield Buick or evaluating possible coordination or consolidation with the existing Farmers Market at Grove School. Council Member Tejeda suggested another option worth considering would be relocating the market to Industrial Park Avenue. Mayor Saucedo and Council Member Davis preferred the market to remain close to the downtown area.

As public comment, Redlands Chamber of Commerce President Patrick Roskam proposed the Chambers was very interested in administrating the weekly farmers market. He highlighted a few Chamber events, the Dog Jog and the NYE Orange Drop, as evidence they have a proven track record of organizing events to a consistently high standard.

It was noted that several parties have shown an interest in managing the market and Council Members agreed that soliciting proposals would be the fairest approach. City Manager Duggan added that the easiest method would be to solicit proposals using the same parking lot, at hours the Council would approve. However, staff can look at alternative sites and seek proposals for each specific location and determine which one might be the best solution for everyone involved.

On motion of Mayor Pro Tem Marc Shaw, seconded by Council Member Paul Barich, the City Council directed staff, by roll call vote, to adjust the current downtown morning market hours of operation to begin at 7:00 am and end by 11 am, with the corresponding parking lot closure to extend no more than one hour before or one hour after event

hours; and directed staff to explore alternative sites near downtown and solicit proposals for a third party administration of a weekly farmer's market near downtown to begin in the fall of 2026.

Vote: 5 - 0 Passed

2. Approve a new Enterprise License Agreement with Esri for a three-year term, not to exceed $271,185.15

Staff requested this item be pulled from tonight's agenda. The matter will be presented to the Council on June 2, 2026.

3. Consideration of approval of a Cooperative Agreement with San Bernardino County Transportation Authority (SBCTA) for management and delivery of the construction phase of the Highland/Redlands Regional Gap Connector Project (Project) in the amount not to exceed $440,396; approval of a Cooperative Agreement with City of Highland for sharing final design cost of the Project in the amount not to exceed $57,850; and determination that these actions are exempt from environmental review pursuant to Section 15061(b)(3) of the State's guidelines implementing the California Environmental Quality Act

Municipal Utilities and Engineering Director Heredia reviewed a Cooperative Agreement with SBCTA for the management and delivery of the construction phase of the Highland/Redlands Regional Gap Connector Project in the amount not to exceed $440,396, and presented a Cooperative Agreement with the City of Highland for sharing the final design cost of the Project in the amount not to exceed $57,850.

The Highland/Redlands Regional Gap Connector Project constitutes a regionally significant active transportation capital improvement initiative proposing the design and construction of Class I and Class IV bicycle and pedestrian facilities within the municipal jurisdictions of the City of Redlands and City of Highland, generally running from Citrus Valley High School in Redlands to Arroyo Verde Elementary School in Highland. Upon completion, the Project will establish a continuous, dedicated right-of-way for bicycle and pedestrian travel between the two jurisdictions and will further provide an interconnection with the planned Santa Ana River Trail, a regional trail system extending to the Pacific Ocean.

As public comment, Stephen Rogers pointed out that because this project was granted federal funding, it is subject to a more comprehensive environmental review process, which requires full compliance with both NEPA and CEQA. In response to safety concerns raised by Bruce Laycook, Director Heredia clarified that the plans include a protected bike and pedestrian path, ensuring a safe route along Boulder Avenue.

On motion of Council Member Paul Barich, seconded by Council Member Eddie Tejeda, the City Council approved, by roll call vote, a Cooperative Agreement with SBCTA for the management and delivery of the construction phase of the Highland/Redlands Regional Gap Connector Project in the amount not to exceed $440,396; approved a Cooperative Agreement with the City of Highland for sharing the final design cost of the Project in the amount not to exceed $57,850; and determined that the proposed project is exempt from environmental review pursuant to Section 15061(b)(3) of the State's guidelines implementing the California Environmental Quality Act.

Vote: 5 - 0 Passed

4. Consideration for approval of an Agreement with Pro-Craft Construction, Inc. for citywide plumbing and repair services for a one-year term with two (2) optional one-year extensions, in an amount not to exceed $300,000.00

Facilities and Community Services Department Director Crocker explained the need for an agreement with Pro-Craft Construction, Inc. for citywide on-call plumbing and repair services for a one-year term and two optional one-year extensions, in an amount not to exceed $300,000.

On motion of Council Member Eddie Tejeda, seconded by Council Member Denise Davis, the City Council approved, by roll call vote, approved an agreement with Pro-Craft Construction, Inc. for citywide on-call plumbing and repair services for a one-year term and two (2) optional one-year extensions, in an amount not to exceed $300,000.

Vote: 5 - 0 Passed

5. Consideration of a First Amendment to the Agreement with Quinmar Janitorial Inc. to increase the total compensation from $1,612,706.58 to $1,957,668.82 and extend the services for eight calendar months

Facilities and Community Services Director Crocker reported on a Request for Proposals (RFP) for citywide janitorial services conducted in April 2023, with a contract term expiring in April 2026. The RFP included services for 16 locations, each with multiple buildings, at a monthly cost of $43,120.28 for the final year 3 of the Agreement. Rather than issuing a new RFP for a full three-year term, staff recommended extending the existing agreement with Quinmar Janitorial Inc. for eight months (May 19, 2026, through December 31, 2026). This short-term extension will maintain continuity of service, allow time for facility transitions to the new City Hall and allow for operational stabilization as well as avoid issuing an RFP based on incomplete or shifting facility needs. Services will continue at the current monthly rate of $43,120.28 during the extended period.

On motion of Council Member Paul Barich, seconded by Council Member Denise Davis, the City Council approved, by roll call vote, the First Amendment to the Agreement with Quinmar Janitorial, Inc., increasing the total agreement compensation by $344,962.44 from $1,612,706.58 to $1,957,668.82 with an extension of 8 months.

Vote: 5 - 0 Passed

K. Individual Council Member Announcements and/or Reports on Activities

Mayor Saucedo attended the Mayor's Prayer Breakfast, participated alongside Mayor Pro Tem Shaw and City Manager Duggan, in the City/County Conference, enjoyed an Eagle Scout achievement recognition ceremony, and attended an essay contest for elementary schools, hosted by Tim Rochford at the Burrage Mansion. The theme was "What America Means To Me".

Council Member Barich attended the Library Board meeting and complimented Library staff for hosting many diverse events they organize throughout the year.

Council Member Davis participated in the SCAG Conference held in Palm Desert on May 7-8, spoke at a Science for Policy Conference at UC Riverside, was a panelist offering feedback to high school students at the Inland Civil Rights Institute as part of their civics lab, and she was honored to serve in the inaugural meeting of the San Bernardino Regional Housing Trust.

L. Adjournment

There being no further action required the meeting adjourned at 7:41 P.M. The next regular meeting of the City of Redlands City Council will be held on June 2, 2026.

City Council **AGENDA ITEM NO. I3.**

DATE: June 2, 2026

TO: Honorable Mayor and City Council Members

SUBJECT: Authorize issuance of proclamation declaring June 19, 2026, as Juneteenth (Mayor Saucedo)

MOTION:

If the City Council determines that staff's recommendation is appropriate, the following motion is provided:

I move to authorize issuance of a proclamation declaring June 19, 2026, as Juneteenth.

Attachments

Juneteenth Proclamation 2026.pdf

PROCLAMATION

Juneteenth

WHEREAS, the City of Redlands recognizes JUNETEENTH as a citywide celebration on Thursday, June 19, 2026, in recognition of the day news reached the Black community in Texas of their emancipation from slavery on June 19, 1865, also known as Juneteenth Independence Day or Emancipation Day; and

WHEREAS, at 2 p.m. on New Year's Day, January 1, 1863, using his war powers as President, Abraham Lincoln signed the Emancipation Proclamation, providing that all persons held as enslaved within any State in rebellion against the United States "*shall be then, thenceforward, and forever free*;" and

WHEREAS, the Emancipation Proclamation made the permanent abolition of slavery a Union war aim and provided the legal framework for the emancipation of nearly all four million enslaved people, ultimately serving as the catalyst for the announcement of General Order No. 3 by United States Army general Gordon Granger, proclaiming freedom from slavery in Texas; and

WHEREAS, Congress ultimately passed the Thirteenth Amendment to the United States Constitution, which abolished slavery throughout the United States and its territories; and

WHEREAS, the City Council and the Human Relations Commission gratefully acknowledge the contributions made by Black community members to the enrichment of the City of Redlands;

NOW, THEREFORE, BE IT PROCLAIMED, that the City Council of the City of Redlands does hereby recognize June 19, 2026, as Juneteenth and the many contributions made by valuable residents and community leaders past and present who are committed to preserving African-American history in the City of Redlands.

IN WITNESS WHEREOF, we hereunto affix our signatures and Official Seal of the City of Redlands on this 2nd day of June, 2026

Proclamation - Pride Month 2026.pdf

PROCLAMATION

LGBTQ+ Pride Month

WHEREAS, the City of Redlands has a diverse community, including its LGBTQ+ residents, and welcomes people of many backgrounds in the belief that a diverse population leads to a more vibrant community through inclusion, justice, and love; and

WHEREAS, many of the residents, students, city employees, and business owners within the City of Redlands who are a part of the LGBTQ+ community contribute to the vitality and enrichment of the City; and

WHEREAS, the Stonewall Uprising was one of the most prominent gatherings for persons of diverse backgrounds and interests to come together in a unified voice to call for change and progress in LGBTQ+ civil rights; and

WHEREAS, the Stonewall Uprising is considered by many to be the catalyst that launched the modern LGBTQ+ civil rights movement and since the Stonewall Uprising, LGBTQ+ citizens have made significant progress towards equality throughout the nation; and

WHEREAS, despite being marginalized, LGBTQ+ people continue to celebrate authenticity, acceptance, and love as it is imperative that all people in our community, regardless of sexual orientation, gender identity, and expression, feel valued, safe, empowered and supported by their peers and community leaders; and

WHEREAS, the City's first crosswalk mural on Vine Street which has an LGBTQ+ theme won the 2022 American Planning Association Inland Empire Chapter Grassroots Initiative Excellence Award; and

WHEREAS, the City of Redlands denounces prejudice and unfair discrimination based on age, gender identity, gender expression, race, color, religion, marital status, national origin, sexual orientation, or physical attributes as an affront to its fundamental principles;

NOW, THEREFORE, BE IT RESOLVED that the City Council of the City of Redlands does hereby proclaim the month of June 2026 as Pride Month in recognition of the Anniversary of the Stonewall Uprising and the contributions made by members of the LGBTQ+ community to actively promote the principles of equality and liberty.

IN WITNESS WHEREOF, we hereunto affix our signatures and Official Seal of the City of Redlands on this 2nd day of June 2026.

City Council **AGENDA ITEM NO. I5.**

DATE: June 2, 2026

TO: Honorable Mayor and City Council Members

SUBJECT: Adopt Resolution No. 8761 calling and giving notice of the holding of a General Municipal Election and requesting the Board of Supervisors of the County of San Bernardino to consolidate said election with the election to be held on Tuesday, November 3, 2026 (City Clerk Donaldson)

MOTION:

If the City Council determines that staff's recommendation is appropriate, the following motion is provided:

I move to adopt Resolution No. 8761.

RECOMMENDATION:

It is recommended that Council approve Resolution No. 8761, a resolution of the City Council of the City of Redlands, California, calling and giving notice of the holding of a General Municipal Election and requesting the Board of Supervisors of the County of San Bernardino to consolidate said election with the election to be held on Tuesday, November 3, 2026.

DISCUSSION:

This Resolution calls and gives notice of the holding of a General Municipal Election and requesting the Board of Supervisors of the County of San Bernardino to consolidate said election with the election to be held on Tuesday, November 3, 2026, for election of one Council Member, District 1; one Council Member, District 3; and one Council Member, District 5, each for a term of four (4) years. If the City Council desires to place a measure on the ballot, this resolution can be amended. The deadline for filing a request with the County of San Bernardino to add a ballot measure for consolidation is August 7, 2026.

ALTERNATIVES:

The Council may continue this matter to June 16, 2026.

RESOLUTION NO. 8761

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS, CALIFORNIA, CALLING AND GIVING NOTICE OF THE HOLDING OF A GENERAL MUNICIPAL ELECTION TO BE HELD ON TUESDAY, NOVEMBER 3, 2026, FOR THE ELECTION OF CERTAIN OFFICERS AS REQUIRED BY THE PROVISION OF THE LAWS OF THE STATE OF CALIFORNIA RELATING TO GENERAL LAW CITIES

WHEREAS, under the provisions of the laws relating to General Law cities in the State of California, a General Municipal Election may be held on Tuesday, November 3, 2026, for the election of Municipal Officers;

NOW, THEREFORE, the City Council of the City of Redlands, California, does hereby resolve, declare, determine and order as follows:

Section 1. That pursuant to the requirements of the laws of the State of California relating to General Law cities within said State there is called and ordered to be held in the City of Redlands, California, on Tuesday, November 3, 2026, a General Municipal Election for the purpose of electing one Member of the City Council by-district for District 1, one Member of the City Council by-district, for District 3, and one Member of the City Council by-district for District 5, each for the full term of four years.

Section 2. That the ballots to be used at the election shall be in form and content as required by law.

Section 3. That the City Clerk of the City of Redlands is hereby authorized, instructed, and directed to procure and furnish any and all official ballots, notices, printed matter and all supplies, equipment and paraphernalia that may be necessary in order to properly and lawfully conduct said election.

Section 4. That the polls for said election shall be open at 7:00 A.M. of the day of said election and shall remain open continuously from said time until 8:00 P.M. of the same day when said polls shall be closed, except as provided in Section 14401 of the California Elections Code.

Section 5. That in all particulars not recited in this resolution, the election shall be held and conducted as provided by law for holding municipal elections.

Section 6. That notice of the time and place of holding of the election is given and the City Clerk is hereby authorized, instructed, and directed to give further or additional notice of the election, in time, form and manner as required by law.

Section 7. That the Board of Supervisors of said County is hereby requested to issue instructions to the Registrar of Voters of said County to take any and all steps necessary for the consolidation of the General Municipal Election with said County election.

Section 8. That the Registrar of Voters of said County is authorized to canvass the returns of the General Municipal Election and provide necessary services pertaining to the election to be held on Tuesday, November 3, 2026.

Section 9. That the City Council of the City of Redlands recognizes that additional costs will be incurred by the County by reason of this consolidation and agrees to reimburse the County for any such costs.

Section 10. That the City Clerk of the City of Redlands is hereby directed to file a certified copy of this resolution with the Board of Supervisors and the Registrar of Voters of the County of San Bernardino.

ADOPTED, SIGNED AND APPROVED this 2nd day of June, 2026.

City Council **AGENDA ITEM NO. I6.**

DATE: June 2, 2026

TO: Honorable Mayor and City Council Members

SUBJECT: Adopt Resolution No. 8762 approving regulations pertaining to candidate statements for the General Municipal Election to be held November 3, 2026 (City Clerk Donaldson)

MOTION:

If the City Council determines that staff's recommendation is appropriate, the following motion is provided:

I move to adopt Resolution No. 8762.

RECOMMENDATION:

It is recommended that Council approve Resolution No. 8762, a resolution of the City Council of the City of Redlands, California, adopting regulations for candidates for elective office pertaining to candidate statements submitted to the voters at an election to be held on November 3, 2026.

DISCUSSION:

Section 13307 of the California Election Code provides that the governing body of any local agency adopt regulations pertaining to a candidate for a municipal election, including costs thereof. This resolution provides a written statement of those regulations and defines responsibilities for the administration of candidate statements.

ALTERNATIVES:

The Council may continue this matter to June 16, 2026.

Resolution_No_8762_Candidate_Statements.pdf

RESOLUTION NO. 8762

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS ADOPTING REGULATIONS FOR CANDIDATES FOR ELECTIVE OFFICE PERTAINING TO CANDIDATES' STATEMENTS SUBMITTED TO THE VOTERS AT AN ELECTION

WHEREAS, Section 13307 of the Elections Code of the State of California provides that, before the nominating period opens, the local agency for that election shall determine whether a charge shall be levied for the candidate's statement sent to each voter. A written statement of the regulations with respect to charges for handling, packaging, and mailing shall be provided to each candidate or their representative at the time they pick up the nomination papers;

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF REDLANDS AS FOLLOWS:

Section 1. General Provisions. Pursuant to Section 13307 of the Elections Code of the State of California each candidate for elective office to be voted for at the general municipal election to be held in the City of Redlands may prepare a candidate statement on an appropriate form provided by the City Clerk. The statement may include the name, age, and occupation of the candidate and a brief description of no more than 200 words of the candidate's education and qualifications expressed by the candidate. The statement shall not include party affiliation of the candidate, nor membership or activity in partisan political organizations. The statement shall be filed in the Office of the City Clerk at the time the candidate's nomination papers are filed. Except as provided in Section 13309 of the California Elections Code, the statement may be withdrawn, but not changed, during the period for filing nomination papers and until 5:00 P.M. of the next working day after the close of the nomination period.

Section 2. Foreign Language Policy.

A. Pursuant to the Voting Rights Act, the City is required to translate candidates' statements into the following language: Spanish.

B. Pursuant to State law, the candidate's statement must be translated and printed in any language at the candidate's request.

C. The City Clerk shall have all candidate statements translated into the language specified in paragraph (a) above and print any translations for candidates who so request printing in the voters' pamphlet.

Section 3. Payment. The candidate shall be required to pay for the cost of printing the candidate statement in English in the voters' pamphlet and shall also be required to pay for the cost of translating and printing the statement into any required foreign language as specified in (a) and (b) above pursuant to State and/or Federal law. The City Clerk shall estimate the total cost of printing, handling, translating, and mailing the candidate statements filed pursuant to this section, including costs incurred as a result of complying with the Voting Rights Act of 1965, as amended,

and require each candidate filing a statement to pay in advance to the City their estimated pro rata share as a condition of having their statement included in the voter's pamphlet. In the event the estimated payment is required, the estimate is just an approximation of the actual cost that varies from one election to another election and may be significantly more or less than the estimate, depending on the actual number of candidates filing statements. Accordingly, the City Clerk is not bound by the estimate and may, on a pro rata basis, bill the candidate for additional actual expense or refund any excess paid depending on the final actual cost. In the event of underpayment, the City Clerk may require the candidate to pay the balance of the cost incurred. In the event of overpayment, the City Clerk shall prorate the excess amount among the candidates and refund the excess amount paid within 30 days of the election.

Section 4. Additional Materials. No candidate will be permitted to include additional materials in the sample ballot package.

Section 5. The City Clerk shall provide each candidate or the candidate's representative a copy of this resolution at the time nominating petitions are issued.

Section 6. All previous resolutions establishing City Council policy on payment for candidate statements are repealed.

Section 7. This resolution shall apply at the next ensuing municipal election and at each municipal election after that time.

Section 8. The City Clerk shall certify to the passage and adoption of this resolution.

ADOPTED, SIGNED AND APPROVED this 2nd day of June, 2026.

City Council **AGENDA ITEM NO. I7.**

DATE: June 2, 2026

TO: Honorable Mayor and City Council Members

SUBJECT: Adopt Salary Resolution No. 8792 establishing a Salary Schedule and Compensation Plan for City Employees and rescinding Resolution No. 8749 (Assistant City Manager McConnell)

MOTION:

If the City Council determines that staff's recommendation is appropriate, the following motion is provided:

RECOMMENDATION:

Staff recommends that City Council approve Salary Resolution No. 8792 establishing a Salary Schedule and Compensation Plan for City Employees and rescind Resolution No. 8749.

DISCUSSION:

Resolution No. 8792 incorporates an additional four (4) full-time Equipment Mechanic positions in the Fleet Division of Facilities and Community Services Department. California Assembly Bill 339 requires public agencies to engage with labor organizations when renewing an existing contract for services that falls within the scope of work represented by the bargaining unit. The Human Resources Department engaged in multiple meet and confer discussions with Teamsters Local 1932 about the proposed extension of the fleet maintenance contract that resulted in this action. The City plans to replace contract mechanics with four (4) Teamsters represented Equipment Mechanic positions. The attached salary resolution reflects these proposed additions.

Section 4. Resolution No.8749 of the City of Redlands is hereby rescinded effective June 2, 2026.

Adopted, approved and signed this 2nd day of June, 2026.

Mario Saucedo, Mayor, City of Redlands

Attest:

Jeanne Donaldson, City Clerk

I, Jeanne Donaldson, City Clerk of the City of Redlands, hereby certify that the foregoing resolution was duly adopted by the City Council at a regular meeting thereof held on the XXX day of April, 2026, by the following vote:

AYES:
NOES:
ABSENT:
ABSTAIN:

Jeanne Donaldson, City Clerk

City Council **AGENDA ITEM NO. I8.**

DATE: June 2, 2026

TO: Honorable Mayor and City Council Members

SUBJECT: Adopt Resolution No. 8791, Annexation No. 31 declaring intent to annex territory into Community Facilities District 2004-1 and determine that the proposed project is exempt from environmental review pursuant to Section 15061(b)(3) of the State's guidelines implementing the California Environmental Quality Act (Development Services Director Reilly)

MOTION:

If the City Council determines that staff's recommendation is appropriate, the following motions are provided:

1. I move that the City Council determine that the proposed project is exempt from environmental review pursuant to Section 15061(b)(3) of the State's guidelines implementing the California Environmental Quality Act; and

2. I move to adopt Resolution No. 8791.

RECOMMENDATION:

Staff recommends City Council adopt Resolution No. 8791 declaring intent to annex territory into Community Facilities District No. 2004-1 and determine that the proposed project is exempt from environmental review pursuant to Section 15061(b)(3) of the State's guidelines implementing the California Environmental Quality Act.

DISCUSSION:

The City Council established Community Facilities District No. 2004-1 (CFD) for the purpose of providing certain services which are necessary to meet demands placed upon the City by development. The City Council is being asked to consider Resolution No. 8791, a Resolution of Intention to annex territory into the CFD.

City staff received petition from Tri Pointe Homes IE-SD, Inc. requesting annexation of its properties into the CFD for the maintenance of street trees within the street right-of-way adjacent to Tract Map No. 20520, currently identified as Assessor's Parcel Numbers 0167-422-49 through 55 and 0167-492-01 through 35 and as shown on Attachment C. This annexation is for the properties located on the east side of Texas Street at Pomelo Avenue. Tract Map No. 20520 was approved by the City Council July 15, 2025. The San Bernardino County Assessor has not yet assigned Assessor's Parcel Numbers to the newly created lots. The lot is still under the ownership of the project development team. If Resolution No. 8791 is adopted, a public hearing will be scheduled for the City Council meeting on July 7, 2026.

ALTERNATIVES:

City Council may choose not to adopt Resolution No. 8791 and provide staff alternative direction.

STRATEGIC PLAN:

N/A

SUBMITTED BY:
Sean Reilly, Development Services Director

RECOMMENDED BY:
Charles M. Duggan Jr., City Manager

REVIEWED BY:
Yvette M. Abich Garcia, City Attorney
Janice McConnell, Assistant City Manager
James Garland, Interim Management Services/Finance Director

PREPARED BY:
Alan Collett, Sr. Civil Engineer

FISCAL IMPACT

Fiscal Year:

Revenue Generating: Yes

Amount: $

Budgeted Y/N:

Account No.:

Additional Appropriation Required: No

Discussion:

Annexation of the property into CFD 2004-1 will ultimately generate revenue that can be used for tree trimming/maintenance in the project area.

RESOLUTION NO. 8791

RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS DECLARING INTENTION TO ANNEX TERRITORY TO COMMUNITY FACILITIES DISTRICT NO. 2004-1 OF THE CITY OF REDLANDS AND ADOPTING A MAP OF THE AREA PROPOSED TO BE ANNEXED THERETO (ANNEXATION NO. 31)

WHEREAS, the City Council (the "City Council") of the City of Redlands (the "City") has established Community Facilities District No. 2004-1 of the City of Redlands, County of San Bernardino, State of California (the "Community Facilities District") for the purpose of levying special taxes on parcels of taxable property therein for the purpose of providing certain services which are necessary to meet increased demands placed upon the City as a result of the development of said real property; and

WHEREAS, it is necessary that certain parcels of property be annexed to the Community Facilities District in order that they may be developed and receive the benefit of services which will be financed by the annual levy of special taxes on said property sufficient to pay the costs of such services and costs incidental thereto; and

WHEREAS, the current Rate and Method of Apportionment of Special Tax (the "Rate and Method") set forth in Exhibit "B" hereto, requires that Special Tax for all parcels increase annually in accordance with the Los Angeles-Riverside-Orange County Consumer Price Index (the "LRO Index"); and

WHEREAS, the LRO Index no longer exists and has been replaced by the Riverside-San Bernardino-Ontario, CA Consumer Price Index (the "RSO Index"); and

WHEREAS, it is necessary for the Rate and Method to be modified to reference the RSO Index, as the LRO Index no longer exists; and

WHEREAS, the City Council is authorized by Article 3.5 (commencing with Section 53339) of Chapter 2.5 of Part 1 of Division 2 of Title 5 of the California Government Code, commonly known as the "Mello-Roos Community Facilities Act of 1982," to annex territory to the Community Facilities District by complying with the procedures set forth in said Article 3.5;

NOW, THEREFORE, BE IT RESOLVED, DETERMINED AND ORDERED BY THE CITY COUNCIL OF THE CITY OF REDLANDS AS FOLLOWS:

Section 1. **Recitals**. The above recitals are true and correct and are hereby incorporated into this resolution.

Section 2. **Name of District**. The name of the existing Community Facilities District is "Community Facilities District No. 2004-1 of the City of Redlands, County of San Bernardino, State of California."

Section 3. **Amendment of Rate and Method.** The reference to the "Los Angeles-Riverside-Orange County" Consumer Price Index in Section C of the Rate and Method is hereby replaced with the "Riverside-San Bernardino-Ontario, CA Consumer Price Index." No other portion of the Rate and Method shall be amended.

Section 4. **Intention**. The City Council declares its intention to conduct proceedings pursuant to said Article 3.5 for the annexation to the Community Facilities District of the territory described in Exhibit "A" attached hereto. The City Council determines that the public convenience and necessity require that such territory be annexed to the Community Facilities District.

Section 5. **Description of Territory Proposed To Be Annexed; Annexation Map**. The territory which is included in the existing Community Facilities District is described on the map of the Community Facilities District recorded on May 18, 2004 in Book 76 of Maps of Assessment and Community Facilities Districts, page 94, and as Instrument No 2004-0347327 in the official records of the County of San Bernardino. The territory proposed to be annexed to the Community Facilities District is described in Exhibit "A" attached hereto and by this reference made a part hereof. Such territory is also shown and described on the map thereof entitled "Annexation Map No. 31 Community Facilities District No. 2004-1 of the City of Redlands, County of San Bernardino, State of California," which is on file with the City Clerk (the "Annexation Map") and is incorporated herein by this reference.

Section 6. **Types of Services; Incidental Expenses; Plan for Providing Services**. The services to be provided and financed by the existing Community Facilities District include the maintenance of landscaping within the Community Facilities District, including but not limited to, parkways, open space areas, firebreaks, medians and street trees and the associated maintenance of bushes, shrubs and ground cover. Annexation No. 31 is proposed to provide maintenance of including but not limited to, landscaping and street trees, and street right-of-way adjacent to Tract Map No. 20520, and any other public services authorized by the Mello-Roos Community Facilities Act of 1982, in the area of the Annexation No. 31 property and the Community Facilities District. The Community Facilities District shall also finance costs associated with the determination of the amount of and the levy and collection of special taxes which are levied to provide such services and costs otherwise incurred in order to carry out its authorized purposes. The services described above shall be provided, as needed, throughout the Community Facilities District and the territory proposed to be annexed thereto for the benefit of all owners of property and residents of the Community Facilities District and the territory proposed to be annexed thereto. All owners of taxable parcels of property within the Community Facilities District and the territory proposed to be annexed thereto shall pay special taxes at the same rate to finance the annual cost of providing such services. The services to be provided and financed by the Community Facilities District, as previously described, are necessary to meet increased demands placed upon the City as a result of development occurring within the Community Facilities District and the territory proposed to be annexed thereto.

Section 7. **Special Taxes**. Except where funds are otherwise available, special taxes sufficient to pay the costs of the services described in Section 6 above and the annual administrative expenses of the City and the Community Facilities District in determining, apportioning, levying and collecting such special taxes, shall be annually levied within the territory

proposed to be annexed to the Community Facilities District. Pursuant to Section 53340 of the California Government Code, the special taxes shall be collected in the same manner as ordinary ad valorem property taxes are collected and shall be subject to the same penalties and the same procedure, sale, and lien priority in case of delinquency as is provided for ad valorem taxes. The rates and method of apportionment of said special taxes shall be as set forth in Exhibit "B" attached hereto and by this reference made a part hereof. The property within the territory proposed to be annexed shall be assigned at the rate set forth for Special Tax Rate Category A as set forth in Exhibit "B" attached hereto and for Fiscal Year 2026-27, and each Fiscal Year thereafter, assessed at the rate set forth in Table 2 in Exhibit "B" attached hereto, subject to annual increases beginning in Fiscal Year 2027-28 by the greater of 2% or the percentage increase in the Consumer Price Index as determined pursuant to the method of apportioning such special taxes set forth in said Exhibit "B". No alteration of the special tax rates to be levied in the existing Community Facilities District, and established annexations, will result from the proposed annexation. The maximum special tax rate in the existing community facilities district, and established annexations, may not be increased as a result of this proceeding to annex property to the Community Facilities District.

Section 8. **Adoption of Annexation Map**. Pursuant to Section 3110.5 of the Streets and Highways Code, the City Council adopts the Annexation Map as the map of the area proposed to be annexed to the Community Facilities District. Pursuant to Section 3111 of said Code, the City Clerk shall file the original of the Annexation Map in her office and shall file a copy of the Annexation Map with the County Recorder of the County of San Bernardino no later than 15 days prior to the date of the hearing specified in Section 9 hereof.

Section 9. **Hearing**. A public hearing on the proposed annexation of said territory to the Community Facilities District shall be held at 6:00 p.m., or as soon thereafter as the matter may be heard, on July 7, 2026 in the Council Chambers at the City of Redlands Civic Center, 35 Cajon Street, Redlands, California, 92373.

Section 10. **Notice**. The City Clerk shall publish a notice of the time and place of said hearing as required by Section 53322 of the California Government Code, and shall also give notice of the hearing by first class mail to each registered voter and landowner within the territory proposed to be annexed to the Community Facilities District as prescribed by Section 53339.4 of said Code. Said notice shall be published at least seven (7) days and mailed at least fifteen (15) days before the date of the hearing and shall contain the information required by said Section 53339.4.

Section 11. **Description of Voting Procedures**. The voting procedures to be followed in conducting the election on the proposition with respect to the levy of special taxes within the territory proposed to be annexed to the Community Facilities District to shall be as follows:

(a) If, for each of the 90 days preceding the close of the public or protest hearing (hereinafter referred to as the "protest hearing") at least 12 persons are registered to vote within the territory proposed to be annexed to the Community Facilities District, the election shall be conducted by the City Clerk, and shall be held on a date selected by the City Council in conformance with the provisions of Section 53326 of the California Government Code ("Section 53326") and pursuant to the applicable provisions of law

regulating elections of the City, insofar as they may be applicable, and pursuant to Section 53326 the ballots for the election shall be distributed to the qualified electors of the territory proposed to be annexed to the Community Facilities District by mail with return postage prepaid and the election shall be conducted as a mail ballot election.

(b) If at the time of the close of the protest hearing, and for at least the preceding 90 days, less than 12 persons have been registered to vote within the territory proposed to be annexed to the Community Facilities District, and pursuant to Section 53326, the vote is therefore to be by the landowners of that territory, with each landowner of record at the close of the protest hearing having one vote for each acre or portion of an acre of land that he or she owns, the election shall be conducted by the City Clerk as follows:

(1) The election shall be held on the earliest date following the conclusion of the protest hearing upon which it can be held pursuant to Section 53326 which may be selected by the City Council, or such earlier date as the owners of land within the territory proposed to be annexed to the Community Facilities District and the City Clerk agree and concur is acceptable.

(2) Pursuant to Section 53326, the election may be held earlier than 90 days following the close of the protest hearing if the qualified electors of the territory proposed to be annexed to the Community Facilities District waive the time limits for conducting the election set forth in Section 53326 by unanimous written consent and the City Clerk concurs in such earlier election date as shall be consented to by the qualified electors.

(3) Pursuant to Section 53326, ballots for the election shall be distributed to the qualified electors by the City Clerk by mail with return postage prepaid or by personal service.

(4) Pursuant to applicable provisions of law regulating elections of the City which govern the conduct of mail ballot elections, and Division 4 (commencing with Section 4000) of the California Elections Code with respect to elections conducted by mail, the City Clerk shall mail or deliver to each qualified elector an official ballot in a form specified by the City Council in the resolution calling the election, and shall also mail or deliver to all such qualified electors a ballot pamphlet and instructions to voter, including a sample ballot identical in form to the official ballot but identified as a sample ballot, a statement pursuant to Section 9401 of the said Code, an impartial analysis by the City Attorney pursuant to Section 9280 of the said Code with respect to the ballot proposition contained in the official ballot, ballot arguments and rebuttals, if any, pursuant to Sections 9281 to 9287, inclusive, of said Code, a return identification envelope with prepaid postage thereon addressed to the City Clerk for the return of voted official ballots, and a copy of this resolution; provided, however, that such statement, analysis and arguments may be waived with the unanimous consent of all the landowners of the territory proposed to be annexed to the Community Facilities District and shall be so stated in the resolution adopted by the City Council calling the election.

(5) The official ballot to be mailed or delivered by the City Clerk to each landowner-voter shall have printed or typed thereon the name of the landowner-voter and the number of votes to be voted by the landowner-voter, and shall have appended to it a certification to be signed by the person voting the official ballot which shall certify that the person signing the certification is the person who voted the official ballot, and if the landowner-voter is other than a natural person, that he or she is an officer of or other person affiliated with the landowner-voter entitled to vote such official ballot, that he or she has been authorized to vote such official ballot on behalf of the landowner-voter, that in voting such official ballot it was his or her intent, as well as the intent of the landowner-voter, to vote all votes to which the landowner-voter is entitled based on its land ownership on the proposition set forth in the official ballot as marked thereon in the voting square opposite such proposition, and further certifying as to the acreage of the landowner-voter's land ownership within the territory proposed to be annexed to the Community Facilities District.

(6) The return identification envelope delivered by the City Clerk to each landowner-voter shall have printed or typed thereon the following: (i) the name of the landowner, (ii) the address of the landowner, (iii) a declaration under penalty of perjury stating that the voter is the landowner or the authorized representative of the landowner entitled to vote the enclosed ballot and is the person whose name appears on the identification envelope, (iv) the printed name and signature of the voter, (v) the address of the voter, (vi) the date of signing and place of execution of said declaration, and (vii) a notice that the envelope contains an official ballot and is to be opened only by the City Clerk.

(7) The information-to-voter form to be mailed or delivered by the City Clerk to the landowner-voters shall inform them that the official ballots shall be returned to the City Clerk properly voted as provided thereon and with the certification appended thereto properly completed and signed in the sealed return identification envelope with the certification thereon completed and signed and all other information to be inserted thereon properly inserted by 5:00 o'clock p.m. on the date of the election.

(8) Upon receipt of the return identification envelopes which are returned prior to the voting deadline on the date of the election, the City Clerk shall canvass the votes cast in the election, and shall file a statement with the City Council at its next regular meeting regarding the results of such canvass and the election.

The procedures set forth in this section for conducting the election may be modified as the City Council may determine to be necessary or desirable by a resolution subsequently adopted by the City Council.

ADOPTED this 2nd day of June, 2026.

Mario Saucedo, Mayor

ATTEST:

Jeanne Donaldson, City Clerk

CERTIFICATE

I, Jeanne Donaldson, City Clerk of the City of Redlands, do hereby certify that the foregoing resolution was regularly adopted by the City Council of said City at a regular meeting of said City Council duly held on the 2nd of June, 2026 by the following vote:

AYES:
NOES:
ABSENT:
ABSTAINED:

IN WITNESS WHEREOF, I have hereunto set my hand and affixed the official seal of the City of Redlands this 2nd day of June 2026.

_____
Jeanne Donaldson, City Clerk

EXHIBIT "A"

LEGAL DESCRIPTION
FOR
ANNEXATION NO. 31 TO
COMMUNITY FACILITIES DISTRICT NO. 2004-1
CITY OF REDLANDS, COUNTY OF SAN BERNARDINO
STATE OF CALIFORNIA

The property located in the City of Redlands, County of San Bernardino, State of California identified by San Bernardino County Assessor's Parcel No.: 0167-041-01-0000.

.

EXHIBIT "B"

RATE AND METHOD OF APPORTIONMENT OF SPECIAL TAX
COMMUNITY FACILITIES DISTRICT NO. 2004-1
OF THE CITY OF REDLANDS

A Special Tax (the "Special Tax") shall be levied on and collected from each Parcel of Taxable Property (defined below) in Community Facilities District No. 2004-1 (the "District"), in each Fiscal Year, (defined below), commencing in the Fiscal Year beginning July 1, 2004, in an amount determined by the City Council of the City of Redlands, acting in its capacity, as the legislative body of the District (hereinafter as the "Council"), by applying the rate and method of apportionment set forth below. All of the real property in the District, unless exempted by law or by the provisions herein, shall be taxed for the purposes, to the extent, and in the manner provided herein.

A. DEFINITIONS

"Additional Maintenance" means the maintenance of landscaping for Parcels assigned to a Special Tax Rate Category in addition to the Basic Maintenance, including, but not limited to, the maintenance of significant open space, citrus groves, and firebreaks and extensive medians and parkways.

"Additional Maintenance Rate Per Benefit Unit" means the Special Tax Rate per Benefit Unit that will be levied in any Fiscal Year on Parcels of Taxable Property assigned to a Special Tax Rate Category to pay the cost of Additional Maintenance, if any, for such Parcels, including, but not limited to, the City's administrative costs in levying and collecting the Special Tax and managing and administering the Additional Maintenance in such Fiscal Year.

"Basic Maintenance" means the normal maintenance of basic landscaping within the District, including, but not limited to, parkways, open space areas, medians and street trees and the associated maintenance of bushes, shrubs and ground cover.

"Base Rate Per Benefit Unit" means the Special Tax Rate per Benefit Unit that will be levied in any Fiscal Year on all Parcels of Taxable Property in the District to pay the estimated cost of the Basic Maintenance, including, but not limited to, the City's administrative costs in levying and collecting the Special Tax and managing and administering the Basic Maintenance in such Fiscal Year.

"Benefit Unit" means a Single-family residential lot or dwelling unit or the equivalent. Commercial property is assigned Benefit Units based on acreage with the basis being four (4) Benefit Units per acre, consistent with the average residential density in the City. Industrial Property is assigned Benefit Units based on acreage with the basis being two (2) Benefit Units per acre. Multi-family property is assigned 60 percent of one Benefit Unit per dwelling unit and Religious Property is assigned two (2) Benefit Units per acre.

"City" means the City of Redlands.

"Council" has the meaning set forth in the preamble.

"Commercial Property" means any Parcel that is used for the purpose of selling, distributing or furnishing a product or service.

"Development" means any approved development and/or improvement of property resulting in the recordation of a final map or the issuance of a building permit.

"District" has the meaning set forth in the preamble.

"Exempt Property" means property that is exempt from the levy of the Special Tax, including all publicly owned or dedicated property, sliver parcels, common lots, open space and any other property that cannot be developed.

"Fiscal Year" means the period from and including July 1st of any year to and including the following June 30th.

"Industrial Property" means any Parcel that is used for the purpose of manufacturing a product.

"Land Use Category" means any of the categories contained in Table 1 to which Parcels of Taxable Property are assigned consistent with the land use approvals that have been received or proposed for the Parcel as of March 1 preceding the beginning of a Fiscal Year.

"Maximum Special Tax Rate(s)" means the Maximum Special Tax Rate(s) per Benefit Unit for Parcels in all Special Tax Rate Categories that can be levied by the Council in any Fiscal Year as determined pursuant to Section C. The Maximum Special Tax Rates per Benefit Unit for Parcels in all Special Tax Rate Categories, including the Base Rate Per Benefit Unit and the Additional Maintenance Rate Per Benefit Unit, as set forth in Table 2, shall be increased by the percentage increase in the Consumer Price Index (All Items) for Los Angeles – Riverside – Orange County (1982-84 = 100) since the beginning of the preceding Fiscal Year, or by two percent (2%), whichever is greater, on July 1, 2005 for Fiscal Year 2005-06 and on each subsequent July 1 for the Fiscal Year then commencing.

"Multi-family Residential Property" means any Parcel of residential property that consists of a building or buildings comprised of attached residential units available for rental, but not purchase, by the general public and under common ownership and/or management.

"Parcel" means a lot or Parcel of land that is identified by an Assessor's Parcel Number in the Tax Assessment Roll of the County Assessor of the County of San Bernardino.

"Religious Property" means any Parcel used as a place of worship or for other religious activities.

"Single-family Residential Property" means any Parcel of residential property that is or will be improved with a building comprised of attached or detached residential units available for purchase or rent by the general public.

"Special Tax(es)" means the Special Tax to be levied in each Fiscal Year on each Parcel of Taxable Property.

"Special Tax Rate Category" means any of the categories identified in Table 2 to which Parcels of Taxable Property in a Development are assigned based on the cost of the Basic Maintenance and the cost of the Additional Maintenance, if any, which will be provided to such Parcels.

"Taxable Property" means Parcels that are not Exempt Property.

B. ASSIGNMENT TO LAND USE CATEGORY

Parcels of Taxable Property in a Development shall be assigned to the appropriate Land Use Category contained in Table 1. Such Parcels shall also be assigned to the appropriate Special Tax Rate Category contained in Table 2, based on the estimated cost for providing the Additional Maintenance, if any, to the Development. The Special Tax shall be levied upon and collected from each such Parcel for each Fiscal Year based on the Benefit Units which are assigned to the Parcel as a result of its assignment to the appropriate Land Use Category and Special Tax Rate Category, as provided in Sections C and D.

TABLE 1
Land Use Category

Land Use Category	Description	Benefit Unit(s)
1	Single-family Residential	One (1) / Residence
2	Commercial	Five (5) / Acre
3	Industrial	Two (2) / Acre
4	Multi-family Residential	Six tenths (0.6) / Residential Unit
5	Religious Property	Two (2) / Acre

C. MAXIMUM SPECIAL TAX RATES

The Maximum Special Tax Rate per Benefit Unit for each Parcel for each Fiscal Year shall be the total of the Base Rate Per Benefit Unit plus the Additional Maintenance Rate Per Benefit Unit for the Special Tax Rate Category to which the Parcel is assigned. For Fiscal Year 2004-05 the Base Rate Per Benefit Unit and the Additional Maintenance Rate Per Benefit Unit for each Special Tax Category shall be the amounts set forth in Table 2 for such Special Tax Rate Category. The Base Rates Per Benefit Unit and the Additional Maintenance Rates Per Benefit Unit for all Parcels in all Special Tax Rate Categories shall be increased by the percentage increase in the Consumer Price Index (All Items) for Los Angeles – Riverside – Orange County (1982-84 = 100) since the beginning of the preceding Fiscal Year, or by two percent (2%), whichever is greater, on July 1, 2005 for Fiscal Year 2005-06 and on each subsequent July 1 for the Fiscal Year then commencing.

TABLE 2
Maximum Special Tax Rates

Special Tax Rate Category	Maximum Rates Per Benefit Unit	
	Base Rate	Additional Maintenance Rate
A	$250	$0
B	$250	$100
C	$250	$200
D	$250	$300
E	$250	$400
F	$250	$500
G	$250	$600
H	$250	$700
I	$250	$800
J	$250	$900
K	$250	$1,000
L	$250	$1,100
M	$250	$1,200
N	$250	$1,300
O	$250	$1,400
P	$250	$1,500
Q	$250	$1,600
R	$250	$1,700
S	$250	$1,800
T	$250	$1,900
U	$250	$2,000
V	$250	$2,100
W	$250	$2,200
X	$250	$2,300
Y	$250	$2,400
Z	$250	$2,500

The Parcels which are to be included in the District at the time of its formation and which are identified in Table 3 shall be assigned to the Land Use Category and the Special Tax Rate Category specified in Table 3.

TABLE 3
Assignment to Land Use Category
and Special Tax Rate Category

Tract No.	Land Use Category	Special Tax Rate Category
16408	One (1)	K

D. METHOD OF APPORTIONMENT AND LEVY OF ANNUAL SPECIAL TAX

For each Fiscal Year, commencing with Fiscal Year 2004-05, the Council shall (a) determine the cost of providing the Basic Maintenance in the District and the amount of the Base Rate Per Benefit Unit to be levied on Parcels of Taxable Property in the District to pay the cost of the Basic Maintenance; (b) determine the cost of providing the Additional Maintenance, if any, for each Special Tax Rate Category, as then applicable, and the amount of the Additional Maintenance Rate Per Benefit Unit, if any, to be levied on Parcels of Taxable Property in each Special Tax Rate Category to pay the cost the Additional Maintenance therefor; and (c) levy the Special Tax on all Parcels of Taxable Property in each Special Tax Rate Category, as then applicable. The amount of the Special Tax to be levied on any Parcel of Taxable Property in any Fiscal Year shall be determined by multiplying the Benefit Units for the Parcel, depending on the Land Use Category to which it is assigned, by the Base Rate Per Benefit Unit and the Additional Maintenance Rate Per Benefit Unit, if any, determined pursuant to clauses (a) and (b) above, for the Special Tax Rate Category to which the Parcel is assigned.

No Special Tax shall be levied on property which, at the time of adoption of the Resolution of Formation for the District, is Exempt Property.

E. FUTURE ANNEXATIONS

It is anticipated that additional properties will be annexed to the District from time to time. As each annexation is proposed, an analysis will be prepared to determine the types and area of landscaping to be maintained, *i.e.,* Basic Maintenance and/or Additional Maintenance, if any, and the estimated annual cost of providing the Additional Maintenance, if any, to the property. Based on this analysis, the property to be annexed will be assigned to the appropriate Special Tax Rate Category contained in Table 2.

PETITION TO THE CITY COUNCIL OF THE CITY OF REDLANDS REQUESTING INITIATION OF PROCEEDINGS FOR THE ANNEXATION OF TERRITORY TO COMMUNITY FACILITIES DISTRICT NO. 2004-1 OF THE CITY OF REDLANDS, AND CONSENTING TO THE LEVY OF SPECIAL TAXES TO PAY THE ANNUAL COSTS OF CERTAIN SERVICES (ANNEXATION NO. 31)

1. Tri Pointe Homes IE-SD, Inc., a California corporation (the "Owner"), requests that the City Council (the "City Council") of the City of Redlands (the "City") initiate proceedings pursuant to Article 3.5 (commencing with Section 53339) of Chapter 2.5 of Part 1 of Division 2 of Title 5 of the California Government Code, commonly known as the "Mello-Roos Community Facilities Act of 1982," (the "Act") for the annexation of the property described in Exhibit "A" attached hereto (the "Property") to "Community Facilities District No. 2004-1 of the City of Redlands, County of San Bernardino, State of California" (the "CFD") for the purpose of providing for the funding, through the levy of special taxes, of the annual costs of services, including but not limited to, the maintenance of street trees and landscaping within the street right-of-way adjacent to Tract Map No. 0167-04, and any other public services authorized by the Act, in the area of the Property and the CFD.

2. Owners represent to the City Council that they are the owner of all of the Property.

(For Reference)

City Council **AGENDA ITEM NO. I9.**

DATE: June 2, 2026

TO: Honorable Mayor and City Council Members

SUBJECT: Approve the Professional Services Agreement with Cumming Management Group, Inc., for a Solar Feasibility Study, in an amount not to exceed $95,840; and determination that approval of the agreement is exempt from the California Environmental Quality Act pursuant to Section 15061(b)(3) of the CEQA Guidelines (Development Services Director Reilly)

MOTION:

If the City Council determines that staff's recommendation is appropriate, the following motions are provided:

1. I move that the City Council find that approval of a Professional Services Agreement with Cumming Management Group, Inc., for a Solar Feasibility Study is exempt from the California Environmental Quality Act pursuant to Section 15061(b)(3) of the CEQA Guidelines; and

2. I move that the City Council approve the Professional Services Agreement with Cumming Management Group, Inc., for a Solar Feasibility Study, in an amount not to exceed $95,840.

RECOMMENDATION:

Staff recommends that the City Council determine that approval of the Professional Services Agreement with Cumming Management Group, Inc., for a Solar Feasibility Study is exempt from the California Environmental Quality Act pursuant to Section 15061(b)(3) of the CEQA Guidelines; and approve the Professional Services Agreement with Cumming Management Group, Inc., for a Solar Feasibility Study, in an amount not to exceed $95,840.

DISCUSSION:

Renewable energy and energy storage, such as solar panel systems and battery energy storage, are one of the most effective ways to reduce greenhouse gas emissions and reduce demand and reliance on non-renewable energy sources. Solar energy is abundant, and when captured, is a clean and economical substitute to carbon-based energy generation.

Solar technology has improved significantly since the initial introduction to the market. Advances in battery storage allow for energy to be stored and used when solar panels cannot produce energy (e.g., at night or during severe weather events). Increased efficiency also strengthens the economic value of solar power.

The City of Redlands has undertaken aggressive climate action goals. The City's General Plan and Climate Action Plan both address the need to implement solar energy systems at City facilities.

- City of Redlands General Plan 2035:

    - Policy 8-A.4: Continue pursuit of sustainable energy sources - such as hydroelectricity, geothermal, solar, wind power, and biomethane - to meet the community's needs.
- City of Redlands Climate Action Plan 2050:
    - Measure BE-3a: Develop and implement a City "lead by example" plan to increase energy efficiency in City buildings, facilities, and operations. Measure BE-3e also encourages the City to consider installing solar photovoltaic (PV) systems and battery storage at City facilities.

In order to implement effective and economical renewable energy generation systems at City facilities and reach related sustainability goals, a study is recommended to review current energy use and the feasibility of renewable energy systems. This solar feasibility study would provide a comprehensive report, which would include but not be limited to, an analysis of energy costs and usage, City sites that are determined to be feasible for renewable energy systems, recommended system configurations, and system procurement pathways.

Staff followed the City's procurement protocol by preparing a Request for Proposal (RFP) to provide the Solar Feasibility Study. Nine proposals were received on February 26, 2026.

	Vendor	**Location**
1	Project Development Solutions, Inc.	Bakersfield, CA
2	Enerlogics West LLC	Youngstown, OH
3	Arc Alternatives	Moraga, CA
4	P2S LP	Long Beach, CA
5	NV5 Consultants, Inc.	San Rafael, CA
6	NewEnergiesGroup LLC	Melbourne, FL
7	Bureau Veritas Technical Assessments LLC	Ellicott City, MD
8	Forefront Licensing LLC	San Francisco, CA
9	Cumming Management Group, Inc.	Los Angeles, CA

In accordance with Chapter 2.16.180 of the City's Municipal Code (RMC), an evaluation committee interviewed and rated the proposals based on each firm's demonstrated competence and professional qualifications in accordance with specific evaluation criteria identified in the RFP. Cumming Management Group, Inc., were identified as the consultants most qualified to perform the tasks listed in the RFP. Staff is recommending that the City Council approve the agreement with Cumming Management Group, Inc., in an amount not to exceed $95,840.

Approval of this agreement is exempt from environmental review pursuant to Section 15061(b)(3) of the State's guidelines implementing the California Environmental Quality Act.

ALTERNATIVES:

City Council may elect not to approve the agreement and provide staff alternate direction.

STRATEGIC PLAN:

Supports Priority D (Sustainability).

SUBMITTED BY:
Sean Reilly, Development Services Director

RECOMMENDED BY:
Charles M. Duggan Jr., City Manager

REVIEWED BY:
Yvette M. Abich Garcia, City Attorney
Janice McConnell, Assistant City Manager
James Garland, Interim Management Services/Finance Director
Dana Abramovitz-Daniel, Procurement Manager

PREPARED BY:
Kaitlyn Haberlin, Sustainability Coordinator

FISCAL IMPACT

Fiscal Year: FY 2025-26

Revenue Generating: No

Amount: $95,840

Budgeted Y/N: Y

Account No.: 101164-6106

Additional Appropriation Required: No

Discussion:

Sufficient funding is available in the Development Services Planning Division FY 2025-26 Budget (101164-6106).

AGREEMENT TO PERFORM PROFESSIONAL SERVICES

This agreement for the provision of a Solar Feasibility Study ("Agreement") is made and entered in this 2nd day of June, 2026 ("Effective Date"), by and between the City of Redlands, a municipal corporation ("City") and Cumming Management Group, Inc., a California corporation ("Consultant"). City and Consultant are sometimes individually referred to herein as a "Party" and, together, as the "Parties." In consideration of the mutual promises contained herein, City and Consultant agree as follows:

ARTICLE 1 – ENGAGEMENT OF CONSULTANT

1.1. City hereby engages Consultant to provide a Solar Feasibility Study at city-owned facilities services for City (the "Services").

1.2. The Services shall be performed by Consultant in a professional manner, and Consultant represents that it has the skill and the professional expertise necessary to provide the Services to City at a level of competency presently maintained by other practicing professional consultants in the industry providing like and similar types of Services.

ARTICLE 2 – SERVICES OF CONSULTANT

2.1. The Services that Consultant shall perform are more particularly described in Exhibit "A," titled "Scope of Services," which is attached hereto and incorporated herein by this reference.

2.2. Consultant shall comply with applicable federal, state and local laws and regulations in the performance of this Agreement including, but not limited to, any applicable State prevailing wage laws.

ARTICLE 3 – RESPONSIBILITIES OF CITY

3.1. City designates Sean Reilly, Development Services Director, as City's representative with respect to performance of the Services, and such person shall have the authority to transmit instructions, receive information, interpret and define City's policies and decisions with respect to performance of the Services.

ARTICLE 4 – PERFORMANCE OF SERVICES

4.1. The term of this Agreement shall be for a period of twelve (12) months from the Effective Date of this Agreement.

4.2. If Consultant's Services include deliverable electronic visual presentation materials, such materials shall be delivered in a form, and made available to City, consistent with City Council-adopted policy for the same. It shall be the obligation of Consultant to obtain a copy of such policy from City staff.

ARTICLE 5 – PAYMENTS TO CONSULTANT

5.1. Total compensation for Consultant's performance of the Services shall not exceed the amount of Ninety-Five Thousand Eight Hundred and Forty dollars ($95,840). City shall pay Consultant on a time and materials basis up to the not to exceed amount in accordance with Exhibit "B," titled ("Fee Schedule") which is attached hereto and incorporated herein by reference.

5.2. Consultant shall submit monthly invoices to City describing the Services performed during the preceding month. Consultant's invoices shall include a brief description of the Services performed, the dates the Services were performed, the number of hours spent and by whom, and a description of reimbursable expenses related to the Services. City shall pay Consultant no later than thirty (30) days after receipt and approval by City of Consultant's invoice.

5.3. Any notice or other communication required, or which may be given, pursuant to this Agreement, shall be in writing. Any such notice shall be deemed delivered (i) on the date of delivery in person; (ii) five (5) days after deposit in first class registered mail, with return receipt requested; (iii) on the actual delivery date if deposited with an overnight courier; or (iv) on the date sent by facsimile or electronic mail transmission (including PDF), if confirmed with a copy sent contemporaneously by first class, certified, registered or express mail; in each case properly posted and fully prepaid to the appropriate address set forth below, or such other address as a Party may provide notice in accordance with this section:

ARTICLE 6 – INSURANCE AND INDEMNIFICATION

6.1. The following insurance coverage required by this Agreement shall be maintained by Consultant for the duration of its performance of the Services. Consultant shall not perform any Services unless and until the required insurance listed below is obtained by Consultant. Consultant shall provide City with certificates of insurance and endorsements evidencing such insurance prior to commencement of the Services. Insurance policies shall include a provision prohibiting cancellation or modification of the policy except upon thirty (30) days prior written notice to City.

A. Workers' Compensation and Employer's Liability insurance in the amount that meets statutory requirements with an insurance carrier acceptable to City, or certification to

City that Consultant is self-insured or exempt from the workers' compensation laws of the State of California.

B. Comprehensive General Liability insurance with carriers acceptable to City in the minimum amount of One Million Dollars ($1,000,000) per occurrence and Two Million Dollars ($2,000,000) aggregate, for public liability, property damage and personal injury is required. City shall be named as an additional insured and such insurance shall be primary and non-contributing to any insurance or self-insurance maintained by City.

C. Consultant shall secure and maintain professional liability insurance throughout the term of this Agreement in the amount of One Million Dollars ($1,000,000) per claim made.

D. Business Auto Liability coverage, with minimum limits of One Million Dollars ($1,000,000) per occurrence, combined single limit bodily injury liability and property damage liability. This coverage shall include all Consultant owned vehicles used in connection with Consultant's provision of the Services, hired and non-owned vehicles, and employee non-ownership vehicles. City shall be named as an additional insured and such insurance shall be primary and non-contributing to any insurance or self-insurance maintained by City.

E. Consultant is expressly prohibited from assigning or subcontracting any of the Services without the prior written consent of City. In the event of mutual agreement by the Parties to assign or subcontract a portion of the Services, Consultant shall add such assignee or subcontractor as an additional insured to the insurance policies required hereby and provide City with the insurance endorsements prior to any Services being performed by the assignee or subcontractor.

6.2. Consultant shall defend, indemnify and hold harmless City and its elected and appointed officials, employees and agents from and against any and all claims, losses or liability, including attorneys' fees, arising from injury or death to persons or damage to property occasioned by any negligent act or omission by, or the willful misconduct of, Consultant, or its officers, employees and agents in performing the Services.

ARTICLE 7 – CONFLICTS OF INTEREST

7.1. Consultant covenants and represents that it does not have any investment or interest in any real property that may be the subject of this Agreement or any other source of income, interest in real property or investment that would be affected in any manner or degree by the performance of Consultant's Services. Consultant further covenants and represents that in the performance of its duties hereunder, no person having any such interest shall perform any Services under this Agreement.

7.2. Consultant agrees it is not a designated employee within the meaning of the Political Reform Act because Consultant:

A. Does not make a governmental decision whether to:

(i) approve a rate, rule or regulation, or adopt or enforce a City law;
(ii) issue, deny, suspend or revoke any City permit, license, application, certification, approval, order or similar authorization or entitlement;
(iii) authorize City to enter into, modify or renew a contract;
(iv) grant City approval to a contract that requires City approval and to which City is a party, or to the specifications for such a contract;
(v) grant City approval to a plan, design, report, study or similar item;
(vi) adopt, or grant City approval of, policies, standards or guidelines for City or for any subdivision thereof.

B. Does not serve in a staff capacity with City and in that capacity, participate in making a governmental decision or otherwise perform the same or substantially the same duties for City that would otherwise be performed by an individual holding a position specified in City's Conflict of Interest Code under Government Code section 87302.

7.3. In the event City determines that Consultant must disclose its financial interests, Consultant shall complete and file a Fair Political Practices Commission Form 700, Statement of Economic Interests, with the City Clerk's office pursuant to the written instructions provided by the City Clerk.

ARTICLE 8 – GENERAL CONSIDERATIONS

8.1. In the event any action is commenced to enforce or interpret any of the terms or conditions of this Agreement the prevailing Party shall, in addition to any costs and other relief, be entitled to the recovery of its reasonable attorneys' fees, including fees for the use of in-house counsel by a Party.

8.2. Consultant shall not assign any of the Services, except with the prior written approval of City and in strict compliance with the terms and conditions of this Agreement. Any assignment or attempted assignment without such prior written consent may, in the sole discretion of City, result in City's immediate termination of this Agreement.

8.3. Consultant is for all purposes under this Agreement an independent contractor and shall perform the Services as an independent contractor. Neither City nor any its agents shall have control over the conduct of Consultant or Consultant's employees, except as herein set forth. Consultant shall supply all necessary tools and instrumentalities required to perform the Services. Assigned personnel employed by Consultant are for its account only, and in no event shall Consultant or personnel retained by it be deemed to have been employed by City or engaged by City for the account of, or on behalf of City. Consultant shall have no authority, express or implied, to act on behalf of City in any capacity whatsoever as an agent, nor shall Consultant have any authority, express or implied, to bind City to any obligation.

8.4. This Agreement may be terminated by City, in its sole discretion, by providing not less than five (5) days prior written notice to Consultant of City's intent to terminate. If this Agreement is terminated by City, an adjustment to Consultant's compensation shall be made, but (1) no amount shall be allowed for anticipated profit or unperformed Services, and (2) any payment due Consultant at the time of termination may be adjusted to the extent of any additional costs to City occasioned by any default by Consultant. Upon receipt of a termination notice, Consultant shall immediately discontinue its provision of the Services and, within five (5) days of the date of the termination notice, deliver or otherwise make available to City, copies (in both hard copy and electronic form, where applicable) of project related data, design calculations, drawings, specifications, reports, estimates, summaries and such other information and materials as may have been accumulated by Consultant in performing the Services. Consultant shall be compensated on a pro-rata basis for Services completed up to the date of termination.

8.5. Consultant shall maintain books, ledgers, invoices, accounts and other records and documents evidencing costs and expenses related to the Services for a period of three (3) years, or for any longer period required by law, from the date of final payment to Consultant pursuant to this Agreement. Such books shall be available at reasonable times for examination by City at the office of Consultant.

8.6. This Agreement, including the Exhibits incorporated herein by reference, represents the entire agreement and understanding between the Parties as to the matters contained herein, and any prior negotiations, written proposals or verbal agreements relating to such matters are superseded by this Agreement. Except as otherwise provided for herein, any amendment to this Agreement shall be in writing, approved by City and signed by City and Consultant.

8.7. This Agreement shall be governed by and construed in accordance with the laws of the State of California, without regard to its conflicts of laws provisions. The Parties agree that all actions or proceedings arising in connection with this Agreement shall be tried and litigated only in the state courts located in San Bernardino County, California, and the federal courts located in Riverside County, California.

8.8. If one or more of the sentences, clauses, paragraphs or sections contained in this Agreement is declared invalid, void or unenforceable by a court of competent jurisdiction, the same shall be deemed severable from the remainder of this Agreement and shall not affect, impair or invalidate the remaining sentences, clauses, paragraphs or sections contained herein, unless to do so would deprive a Party of a material benefit of its bargain under this Agreement.

IN WITNESS WHEREOF, duly authorized representatives of City and Consultant have signed in confirmation of this Agreement.

EXHIBIT "A"

SCOPE OF SERVICES

Project Understanding

Consultant understands that the City seeks to assess the feasibility of implementing renewable energy and battery storage systems across 24 city-owned facilities. The scope of this initiative includes identifying optimal system locations to maximize energy production and enhance return on investment through a balance of project costs and utility savings.

Under the current NEM 3.0 framework, energy storage plays a critical role in effective self-generation. Accordingly, our analysis will rigorously evaluate storage solutions in conjunction with solar generation capacity to enable peak load shifting and minimize overall utility expenditures.

Leveraging decades of experience in delivering independent solar feasibility assessments, Consultant's Energy Team will execute the tasks outlined herein to provide the City with the most advantageous and cost-effective options.

Project Management and Day-to-Day Oversight

Consultant will provide comprehensive day-to-day management of the project in strict accordance with the approved scope, schedule, and budget agreed upon with the city. All project activities will be managed to reflect the operational standards and service quality expected.

Our project management approach emphasizes proactive coordination, accountability, and transparency. The Project Manager will oversee all staff and resources, ensuring that deliverables remain aligned with the approved budget and scope. At project initiation, we will facilitate a formal project kickoff meeting to establish strategic alignment ensuring full agreement among all key stakeholders regarding project objectives. Ongoing project controls will include weekly progress meetings to keep city staff updated on progress and address any specific questions regarding the project.

Specific technical project tasks and deliverables are described below.

Task 1. Assessment of Past, Current, and Projected Energy Usage

Consultant will conduct a detailed energy usage and cost assessment for each pre-identified City facility. This includes:

- Review of 24–36 months of historical utility bills and interval data
- Analysis of current energy consumption patterns and demand charges
- Forecasting of future energy usage and utility costs with and without on-site renewable energy generation
- Development of baseline load profiles for use in system sizing and financial modeling

Task 1 Deliverables
Comprehensive, site-specific energy baseline for all evaluated facilities

Task 2. Site-Specific Evaluation of City Facilities

24 sites will be assessed for renewable energy and storage potential. Our preliminary assessment of these sites is shown in Table 1 below. For each of these sites, Consultant will complete a thorough analysis that evaluates:

- Structural suitability of rooftops for solar PV systems
- Feasibility of ground-mount or carport solar configurations
- Battery storage siting constraints and electrical room capacity
- Shading analysis, available area, and interconnection pathways
- Approximate system sizing and layout concepts
- Estimated annual and lifetime renewable energy generation
- Compatibility of system operation with ongoing site functions

Task 2 Deliverables
Facility feasibility matrix summarizing opportunities, constraints, and projected system performance

Task 3. Financial Feasibility and Cost-Benefit Analysis

Consultant will conduct a full financial assessment to determine the lifecycle costs, benefits, and economic value of solar and storage deployment across evaluated City facilities.

- **Market-Based Cost Estimate.** Prepare an analysis of the expected project costs based on optimized design scenario including O&M costs, and long-term equipment replacement expenses.

- **Financial Modeling and Proforma Development.** Consultant will develop detailed cost/benefit analyses for each viable system, including:
    - Capital cost estimates and lifecycle cost modeling
    - Cash flow analysis for ownership and financing structures
    - Scenario modeling for solar-only and solar-plus-storage
    - Energy cost savings projections under current SCE rate schedules
    - Sensitivity analysis for changes in utility escalation, system output, or incentives
- **Energy Cost Savings Projections.** Financial modeling will include:
    - Baseline utility cost forecast
    - Post-solar/battery savings scenarios
    - Demand reduction modeling (if applicable)
    - Analysis of bill impacts under SCE's evolving rate environment
- **Incentives, Credits, and Funding Opportunities.** Consultant will evaluate the following federal, state, and local incentive opportunities and integrate into financial models:
    - Federal Investment Tax Credit (ITC) and municipal direct-pay provisions
    - Federal and state grant programs
    - California energy storage and resiliency incentives
    - Expected future programs or market developments

Task Deliverables

- Recommended configurations for maximizing City savings
- Site-specific cost/benefit analyses ranked according to financial performance

Task 4. Regulatory, Policy, and Market Trend Review

Consultant will evaluate applicable regulatory requirements and industry trends that may impact the City's renewable energy program.

Review of Current & Anticipated Laws and Regulations

Analysis will include:

- Current and proposed SCE tariffs, NEM 3.0, and DER policies
- CPUC regulatory proceedings and General Rate Case implications
- Federal and state renewable energy mandates and legislative updates
- Local permitting and fire code requirements impacting system design

Technology and Market Trend Assessment

Consultant will review:

- Solar and battery storage cost trends and efficiency improvements
- EV charging integration approaches
- Long-duration storage, microgrid preparedness, and resiliency strategies
- Anticipated market developments that may benefit future City projects

Utility Rate Escalation Analysis

Using data from FEMP, EIA, CPUC, and SCE filings, Consultant will:

- Validate reasonable escalation assumptions
- Identify inflated vendor escalation assumptions that may create misleading ROI projections
- Provide data-supported escalation ranges for long-term modeling

Task Deliverables
- Overview of potential regulatory, legal and technical impacts that could impact project feasibility.

Task 5. Procurement & Implementation Pathway Analysis

Consultant will evaluate procurement and implementation strategies best suited to the City's needs. This includes:

- Traditional design–bid–build
- EPC procurement
- Lease and Power Purchase Agreement (PPA) options
- Hybrid financing or ownership models
- Phased or multi-stage implementation approaches
- Risk, schedule, and financial implications of each pathway

Task Deliverables
- A recommended procurement strategy based on City priorities

Task 6. Comprehensive Solar Feasibility Report

Consultant will prepare a final report summarizing all findings from Tasks 1 through 5, including:

- Detailed site-specific analyses
- System sizing and production estimates
- Financial modeling results
- Regulatory and technology assessments
- Incentive summaries and procurement recommendations

Draft reports will be submitted to the City for review and comment, and final reports will be issued following incorporation of feedback. All reports will undergo Consultant's formal QA/QC review process prior to submission, ensuring data accuracy, internal consistency and defensible assumptions. The QA/QC process includes independent senior-level technical review, cross-site consistency checks to ensure comparable systems are evaluated using standardized assumptions, and editorial review to confirm that narrative is clear, concise, and suitable for both internal and external audiences.

Task Deliverables
- Draft Feasibility Report
- Final Feasibility Report

Project Closeout & Acceptance

Upon delivery of the final report, Consultant will conduct a final project review with City leadership to:

- Present findings and recommended next steps
- Confirm all objectives have been met
- Document lessons learned and future planning considerations

EXHIBIT "B"

FEE SCHEDULE

Consultant proposes the project cost presented in the table below, not to exceed $95,840.00. Team member costs as presented are fully burdened rates, inclusive of material, travel, and overheads. Consultant recommends a fixed-fee progress-payment cost structure.

Team Member	Role	Rate ($/Hour)
Christine Marez	Sr. Vice President (Account Manager)	$300
Paul Kyllo	Energy Project Director	$250
Brian Mauleon	Senior Energy Engineer	$225
Kristal Estrella	Energy Analyst	$160
John Ballistreri	Sr. Cost Manager	$185

PROPOSED FEE				
Task No.	Task Name	Hours	Total Fee	Weight
1	Assessment of Past, Current, Projected Usage	68	$13,420	14%
2	Site Specific Evaluation of City Facilities	32	$6,360	7%
3	Financial Feasibility and Cost-Benefit Analysis	224	$42,700	45%
4	Regulatory, Policy and Market Trend Review	24	$5,700	6%
5	Procurement & Implementation Pathway Analysis	56	$10,720	11%
6	Comprehensive Solar Feasibility Report	84	$16,940	18%
	Total Fee	488	$95,840	100%

Re: Solar Feasibility Study **RFP No. 20260209TLM**

Dear Ms. Munoz,

Cumming Management Group, Inc. ("Cumming Group") is pleased to submit a proposal to the City of Redlands to conduct a solar feasibility study to determine the sites most feasible for renewable energy systems, recommend system configurations, and outline system procurement pathways.

Why the CUMMING GROUP Team?

- Highly credentialed in-house team of energy and sustainability professionals with energy efficiency, renewable energy, climate, green building, sustainability planning, and commissioning expertise.
- Conducted over 260MW+ Solar PV and battery storage feasibility studies and developed renewable energy projects achieving ultra-low-energy and carbon reduction results.
- Specialists in 3rd Party independent energy efficiency and renewable energy contract and financial risk assessments for Cities and Counties within California.
- Portfolio of energy and solar services includes over 100+ public and private clients, including the City of Hanford, City of Calabasas, Judicial Council of CA, Los Angeles County Metropolitan Transportation Authority, the Los Angeles Unified School District and over 70+ School Districts and Charter schools.

After reviewing our enclosed proposal and qualifications, if you have any questions, please do not hesitate to contact me. I will be the designated **Account Manager** for this engagement

Sincerely,

Christine Marez, CIG, LEED AP, ENV SP *(Account Manager)*
Senior Vice President, Sustainability & ESG

Executive Summary

Executive Summary

Cumming Management Group Inc. ("Cumming Group") is a privately held California corporation that was founded in 1996. Now in our 29th year, Cumming Group has more than 3,000 employees in 70+ offices worldwide. We offer clients the local knowledge and responsiveness of a small organization, backed by the depth of resources that only a national firm can offer.

Cumming Group has become a recognized leader in energy efficiency, renewable energy, sustainability planning, and climate mitigation services, having developed and implemented strategic sustainability and climate action plans for numerous cities, multi-billion-dollar public agencies, and companies across California and the U.S. Cumming Group is recognized by Engineering News-Record Magazine as one of the Top 4 firms in the United States that **exclusively serve as Owner's Representatives**. We provide independent owner advisory consulting services—never acting as designers or builders—and remain fully agnostic to products and equipment. Our sole focus is delivering exceptional service and successful outcomes that maximize cost savings and align with each project's goals.

RANKING ON ENR'S TOP 100 PM/CM LIST

Core Services

Cumming Group's sustainability team leaders strive to continually demonstrate our commitment to sustainability by delivering innovative solutions to our clients that directly improve their built environment and ongoing operations. Our team has been at the forefront of the changing attitudes, awareness, and legislative and regulatory initiatives regarding sustainability and energy in the design and construction industry

ENERGY + RENEWABLE ENERGY MANAGEMENT

- Energy Benchmarking
- Energy Auditing and Modeling
- Energy Efficiency Project Development
- Net Zero Energy Planning
- Renewable Energy Feasibility Studies (Solar PV/Battery)
- Commissioning and Retro-Commissioning
- Microgrid Feasibility Studies
- Energy Commodities (LCFS) Planning

CLIMATE PLANNING + DECARBONIZATION

- Greenhouse Gas Emissions Measurement and Reporting
- Climate Action Plans (CAP)
- Adaptation and Resiliency Planning
- Embodied and Whole-Life Carbon Assessments
- Decarbonization Planning and Strategy Development
- Decarbonization cost and life cycle financial analysis
- Zero Emissions Vehicle and Transportation Planning

Highly Qualified Team

Cumming Group has assembled a highly qualified team of energy and cost management professionals with extensive experience delivering similar services for cities and public agencies across California and the U.S. Our team understands the full scope of work and is prepared to provide comprehensive planning, technical energy assessments, cost and financial analyses, and project management coordination. We approach each engagement with a commitment to strategic execution, consistent delivery, and strong collaboration with City staff to ensure all project objectives are met efficiently and effectively.

Christine Marez, LEED AP, ENV SP, CIG, Account Manager Christine is an electrical engineer and LEED AP with over 30 years of experience in city, county and public agency projects, delivering energy, sustainability and climate technical solutions, triple bottom line cost analysis, and end-to-end project implementation. She is an expert in renewable energy feasibility studies and financing models. Christine will provide overall leadership to the team and is accountable for the performance of services, technical oversight of deliverables, supervisory and administrative oversight of the Team, contract administration, and performance through strong team trust and relationship development

Project Experience

Cumming Group has conducted independent solar and storage analyses and feasibility studies for dozens of public and private sector clients over the past several years.

- Coco Palms Resort, Kauai
- Fairmont Orchid, Hawaii
- Hawaii Convention Center, Oahu
- Westin Maui Resort, Maui
- Metropolitan Airport Commission, Minnesota
- New York Climate Exchange Governor's Island, New York
- Ross Stores Central Valley Distribution Center
- Unibail Rodamco Westfield, Nationwide

Section 2

Approach and Methodology

Approach and Methodology

Project Understanding

Cumming Group understands that the City of Redlands seeks to assess the feasibility of implementing renewable energy and battery storage systems across 24 city-owned facilities. The scope of this initiative includes identifying optimal system locations to maximize energy production and enhance return on investment through a balance of project costs and utility savings.

Under the current NEM 3.0 framework, energy storage plays a critical role in effective self-generation. Accordingly, our analysis will rigorously evaluate storage solutions in conjunction with solar generation capacity to enable peak load shifting and minimize overall utility expenditures.

Leveraging decades of experience in delivering independent solar feasibility assessments, Cumming Group's Energy Team will execute the tasks outlined herein to provide the City with the most advantageous and cost-effective options.

Project Management and Day-to-Day Oversight

Cumming Group will provide comprehensive day-to-day management of the project in strict accordance with the approved scope, schedule, and budget agreed upon with the city. All project activities will be managed to reflect the operational standards and service quality expected.

Our project management approach emphasizes proactive coordination, accountability, and transparency. The Project Manager will oversee all staff and resources, ensuring that deliverables remain aligned with the approved budget and scope. At project initiation, we will facilitate a formal project kickoff meeting to establish strategic alignment ensuring full agreement among all key stakeholders regarding project objectives. Ongoing project controls will include weekly progress meetings to keep city staff updated on progress and address any specific questions regarding the project.

Specific technical project tasks and deliverables are described below.

Task 1. Assessment of Past, Current, and Projected Energy Usage

Cumming Group will conduct a detailed energy usage and cost assessment for each pre-identified City facility. This includes:

- Review of 24–36 months of historical utility bills and interval data
- Analysis of current energy consumption patterns and demand charges
- Forecasting of future energy usage and utility costs with and without on-site renewable energy generation
- Development of baseline load profiles for use in system sizing and financial modeling

Task 1 Deliverables
Comprehensive, site-specific energy baseline for all evaluated facilities

Exhibit 1: Example of Helioscope

Task 2. Site-Specific Evaluation of City Facilities

Each of the 24 sites provided in Attachment A will be assessed for renewable energy and storage potential. Our preliminary

assessment of these sites is shown in Table 1. For each of these sites, Cumming Group will complete a thorough analysis that evaluates:

- Structural suitability of rooftops for solar PV systems
- Feasibility of ground-mount or carport solar configurations
- Battery storage siting constraints and electrical room capacity
- Shading analysis, available area, and interconnection pathways
- Approximate system sizing and layout concepts
- Estimated annual and lifetime renewable energy generation
- Compatibility of system operation with ongoing site functions

Task 2 Deliverables
Facility feasibility matrix summarizing opportunities, constraints, and projected system performance

Table 1: Initial Solar Potential Assessment

Initial Potential Assessment						
Location	Category	Potential Limitations	Energy/Demand Potential	Parking Canopy Potential	Rooftop	Initial Priority Assessment
Animal Shelter	Community Bldg	N/A	Limited	Limited	Limited	Low
Brookside Park	Park	N/A	Limited	Moderate	N/A	Low

Joslyn Senior Center	Community Bldg	Congested Parcel	Moderate	Moderate	Moderate	Moderate

Initial Potential Assessment						
Location	Category	Potential Limitations	Energy/Demand Potential	Parking Canopy Potential	Rooftop	Initial Priority Assessment
Martinez Park	Park	N/A	Limited	High	None	Moderate
Museum of Redlands	Community Bldg	N/A	High	Moderate	Moderate	High
Polic Department Admin Building	Police	Security Access for Maint	High	High	High	High
Police Station	Police	Same Address as M&O	N/A	N/A	N/A	N/A
Redlands Municipal Airport	Airport	Solar Module Glare	Limited	None	None	Low
Sports Park	Park	Adjacent to Airport / Glare	Limited	High	None	High
City of Redlands Landfill	Industrial	Damage/Dust	High	Limited	Moderate	Moderate
City of Redlands WWTP	Industrial	Same Address as Landfill	N/A	N/A	N/A	N/A

Task 3. Financial Feasibility and Cost-Benefit Analysis

Cumming Group will conduct a full financial assessment to determine the lifecycle costs, benefits, and economic value of solar and storage deployment across evaluated City facilities.

- **Market-Based Cost Estimate.** Prepare an analysis of the expected project costs based on optimized design scenario including O&M costs, and long-term equipment replacement expenses.
- **Financial Modeling and Proforma Development.** Cumming Group will develop detailed cost/benefit analyses for each viable system, including:
  - Capital cost estimates and lifecycle cost modeling
  - Cash flow analysis for ownership and financing structures
  - Scenario modeling for solar-only and solar-plus-storage
  - Energy cost savings projections under current SCE rate schedules
  - Sensitivity analysis for changes in utility escalation, system output, or incentives
- **Energy Cost Savings Projections.** Financial modeling will include:
  - Baseline utility cost forecast
  - Post-solar/battery savings scenarios
  - Demand reduction modeling (if applicable)
  - Analysis of bill impacts under SCE's evolving rate environment
- **Incentives, Credits, and Funding Opportunities.** Cumming Group will evaluate the following federal, state, and local incentive opportunities and integrate into financial models:
  - Federal Investment Tax Credit (ITC) and municipal direct-pay provisions
  - Federal and state grant programs
  - California energy storage and resiliency incentives

- Expected future programs or market developments

Task Deliverables

- Recommended configurations for maximizing City savings
- Site-specific cost/benefit analyses ranked according to financial performance

Task 4. Regulatory, Policy, and Market Trend Review

Cumming Group will evaluate applicable regulatory requirements and industry trends that may impact the City's renewable energy program.

Review of Current & Anticipated Laws and Regulations

Analysis will include:

- Current and proposed SCE tariffs, NEM 3.0, and DER policies
- CPUC regulatory proceedings and General Rate Case implications
- Federal and state renewable energy mandates and legislative updates
- Local permitting and fire code requirements impacting system design

Technology and Market Trend Assessment

Cumming Group will review:

- Solar and battery storage cost trends and efficiency improvements
- EV charging integration approaches
- Long-duration storage, microgrid preparedness, and resiliency strategies
- Anticipated market developments that may benefit future City projects

Utility Rate Escalation Analysis

Using data from FEMP, EIA, CPUC, and SCE filings, Cumming Group will:

- Validate reasonable escalation assumptions
- Identify inflated vendor escalation assumptions that may create misleading ROI projections
- Provide data-supported escalation ranges for long-term modeling

Task Deliverables

- Overview of potential regulatory, legal and technical impacts that could impact project feasibility.

Task 5. Procurement & Implementation Pathway Analysis

Cumming Group will evaluate procurement and implementation strategies best suited to the City's needs. This includes:

- Traditional design–bid–build
- EPC procurement
- Lease and Power Purchase Agreement (PPA) options

- Hybrid financing or ownership models
- Phased or multi-stage implementation approaches
- Risk, schedule, and financial implications of each pathway

Task Deliverables
- A recommended procurement strategy based on City priorities

Task 6. Comprehensive Solar Feasibility Report

Cumming Group will prepare a final report summarizing all findings from Tasks 1 through 5, including:

- Detailed site-specific analyses
- System sizing and production estimates
- Financial modeling results
- Regulatory and technology assessments
- Incentive summaries and procurement recommendations

Draft reports will be submitted to the City for review and comment, and final reports will be issued following incorporation of feedback. All reports will undergo Cumming Group's formal QA/QC review process prior to submission, ensuring data accuracy, internal consistency and defensible assumptions. The QA/QC process includes independent senior-level technical review, cross-site consistency checks to ensure comparable systems are evaluated using standardized assumptions, and editorial review to confirm that narrative is clear, concise, and suitable for both internal and external audiences.

Task Deliverables
- Draft Feasibility Report
- Final Feasibility Report

Project Closeout & Acceptance

Upon delivery of the final report, Cumming Group will conduct a final project review with City leadership to:

- Present findings and recommended next steps
- Confirm all objectives have been met
- Document lessons learned and future planning considerations

Section 3

Organization & Staffing

Team Qualifications

Cumming Group's team comprises energy project managers, licensed engineers, sustainability professionals, climate scientists, certified energy managers, cost estimators, and commissioning experts. We bring a deep bench of highly qualified and credentialed team members on whom we can draw and utilize as needed. Our current team has the following qualifications and certifications:

- Certified Energy Managers (CEM)
- Professional Engineer (PE)
- Certified Energy Auditor (CEA)
- Licensed Architect (AIA)
- Existing Building Commissioning Professional EBCP®
- Certified Building Commissioning Professional CBCP®
- SASB Fundamentals of Sustainability Accounting
- CARB Greenhouse Gas Lead Verifier
- GRI Certified Sustainability Professional
- WELL / Fitwel Accredited Professional
- LEED Accredited Professional (LEED AP, O+M, BD+C)
- Envision Sustainability Professional
- TRUE Zero Waste Advisor
- ISO 14001 and ISO 9001 Certified Auditor
- G-PRO Construction Management

Key Personnel

Cumming Group has assembled a highly qualified team of energy and cost management professionals with extensive experience delivering similar services for cities and public agencies across California and the U.S. Our team understands the full scope of work and is prepared to provide comprehensive planning, technical energy assessments, cost and financial analyses, and project management coordination. We approach each engagement with a commitment to strategic execution, consistent delivery, and strong collaboration with City staff to ensure all project objectives are met efficiently and effectively. Cumming Group identifies the following List of Principals who will provide overall leadership and responsibility for the delivery of services. Full Resumes are included following the Project Experience section.

- **Christine Marez, LEED AP, ENV SP, CIG, Account Manager**
  Christine is an electrical engineer and LEED AP with over 30 years of experience in city, county and public agency projects, delivering energy, sustainability and climate technical solutions, triple bottom line cost analysis, and end-to-end project implementation. She is an expert in renewable energy financing models. Christine will provide overall leadership to the team and is accountable for the performance of services, technical oversight of deliverables, supervisory and administrative oversight of the Team, contract administration, and performance through strong team trust and relationship development.

- **Paul Kyllo, CEM, Energy Project Director**
  Paul Kyllo is a senior energy and sustainability professional with more than 20 years of experience delivering technically complex energy efficiency, renewable energy, and carbon reduction projects for public and private sector clients. He has extensive experience in performing energy audits and data analysis, feasibility studies, technology evaluation, and renewable generation financing solutions. Paul will be the Day-to-Day contact and lead the technical team in the energy efficiency and financial assessment of the projects.

- **Brian Mauleon, P.E., Senior Energy Engineer**
  Brian is the Senior Engineer and Program Manager of Energy Resiliency at Cumming Group, responsible for delivering industry-leading expertise for private clients as well as public and educational agencies. Brian brings a unique combination of deep engineering knowledge and financial insight to develop comprehensive energy strategies. He will lead the technical analysis, supported by our team energy analysts, cost managers, and renewable energy finance experts to complete the assessment and produce the technical report and recommendations.

Project Experience

Cumming Group presents the following representative projects in which we performed comprehensive solar PV and battery storage studies, and financial assessments of energy efficiency and renewable energy systems. These projects demonstrate our proven capability to deliver independent, data-driven assessments that support sound decision-making for public agencies and private clients. Collectively, this portfolio reflects Cumming Group's depth of experience and our ability to successfully manage complex energy initiatives requiring multidisciplinary expertise, rigorous analysis, and a high degree of technical precision.

City of Grants Pass | Grants Pass, OR

Energy and Solar Feasibility Study | March 2024 – August 2024

Cumming Group conducted a feasibility study of the economic performance, environmental resiliency, sustainability, and social benefits of potential solar installations of large solar fields at three city-owned properties. Cumming Group solar experts are providing the city with an analysis of the different possibilities of ownership such as city-owned, community solar, power purchase agreements, and other options for each of the proposed solar arrays. Cumming modeled approximately 16 MW of total solar potential at all three sites and identified mounting configurations specific to each site location based on actual conditions.

San Diego County Planning and Development | San Diego, CA

Battery Energy Storage Systems Technical Report

Cumming Group prepared a Technical Report summarizing the current state of Battery Energy Storage Systems (BESS) for usage as a grid resource. Cumming researched federal, state and local regulations, policies and planning efforts for BESS. Cumming summarized typical use cases for BESS and the co-benefits including electricity reliability, environmental responsibility and economics. In addition, we researched best practices related to the safe installation of BESS by reviewing federal, state and local guidelines including recent actions of municipalities that have been dealing with BESS within their jurisdictions. The effort was used to help inform future planning and siting policies being developed by the Planning Department.

City of Calabasas | Calabasas, CA

Energy Efficiency & Renewable Energy Project Assessment | June 2024 – Present

Cumming Group energy professionals provided an independent assessment of a comprehensive $5M energy efficiency and renewable energy project. The project scope included lighting and HVAC retrofits and installation of solar PV and battery energy storage at four city-owned buildings. Cumming Group reviewed the energy savings calculations and energy models, modeled solar and battery storage capacity and reviewed the financial proformas and summarized findings and recommendations in a report delivered to city leaders. Our effort identified additional energy savings potential and solar capacity than what was originally presented by a large ESCO. As a result, we helped prepare and manage a competitive solicitation and evaluated several ESCO proposals that provided the best opportunity for the city. Cumming Group is currently working as an owner's representative overseeing the project implementation phase scheduled through 2027.

Judicial Council of California| Statewide California

Solar Feasibility and Battery Storage Resiliency Feasibility Services | April 2017 - Present

Solar production, financial feasibility analysis, and battery resiliency study at 25 civil and criminal courthouses owned and operated by the State of California. Feasibility included site visits, utility interval data collection, production sizing analysis, financial feasibility, and validation. Battery resiliency was separate study, analyzing full battery back support for 6 hours at each facility. Study analyzed current load, anticipated Solar PV integration, and emergency backup requirements.

Individual Measures Identified: Solar PV arrays at 25-sites, System size 9.9 MW, Battery Resiliency size 7,250 kWh

Measure Savings, Cost, Simple Payback: $10,200,000 NPV (2020 dollars).

City of Salem | Salem, Oregon

Energy Audits + Municipal Energy Master Plan

The City of Salem, Oregon selected Cumming Group to lead the development of its Municipal Energy Master Plan. The project began with a comprehensive analysis of 12 months of utility consumption and billing data for more than 100 City-owned facilities. This effort included mapping utility meters to individual buildings and use types, such as administrative offices, police and fire stations, the airport, museums, libraries, public works facilities, and IT/communications buildings. Findings from the data analysis were used to identify representative buildings within each category for targeted energy audits, based on factors including building vintage, construction type, and mechanical systems serving space conditioning and water heating. These targeted audits captured detailed building and equipment information and identified energy efficiency opportunities across lighting, HVAC, water heating, and building automation systems.

Energy savings, greenhouse gas reductions, and implementation costs were quantified and prioritized to support achievement of defined energy reduction targets aligned with the City's broader sustainability objectives. Results were synthesized into the Municipal Energy Master Plan, which also included supplemental analyses addressing energy resiliency, renewable energy opportunities, and potential project funding strategies. A subsequent phase of work will expand the analysis to municipal operations, including water distribution and wastewater treatment systems.

Wasco Unified School District | Wasco, Ca

Solar PV and Battery Storage Study + Contract Negotiation Services | August 2022 – August 2023

Cumming Group served as lead solar advisor for the assessment of the school District's solar contract and lease agreement. This included complete review of contract documents, rate structures, project financials, and solar modelling to validate system engineering. Cumming Group participated in contract negotiations alongside the district and negotiated a modified project with an estimated additional $2 Million in savings over the original, as well as an addition $20,000 discount applied to the project overall.

City of Hanford | Hanford, CA

Energy Contract Financial Assessment + Contract Negotiation Services | June 2025 – October 2025

The City of Hanford contracted with Cumming Group to evaluate the proposed solar and wastewater treatment plant upgrade projects and perform an independent assessment of its proposed ESCO contract assessment to validate energy efficiency savings, projected financial savings, and identify contract risks. The project included energy upgrades to the existing wastewater treatment plant and 842 kW of proposed solar PV across the project. Cumming Group found the ESCO Contract projected solar production was less than available per site conditions. Additionally, there was inconsistent information provided in the ESCO proposal, as well as numerous contractual and financial risks. Cumming Group helped the city with contract negotiations that resulted in a more financially attractive project with key risk areas addressed in the final contract.

Fullerton Union High School District | Fullerton, CA

Solar PV and Battery Storage Study and Procurement Support Services | February 2020- 2024

Solar production & financial feasibility analysis at 7 high schools and other district owned properties. Provided RFP preparation, bid analysis and validation of contractor's submissions. Managed contracting process and supported project team prior to board approval.

Individual Measures Identified: Solar PV arrays at 7-sites, System size 4.95 MW, PPA Contract Structure
Measure Savings, Cost, Simple Payback: $3,915,000 NPV (2019 dollars)

ABC Unified School District| Artesia, CA

Solar PV Feasibility Study and Procurement Support Services | April 2022 – 2025

Solar production & financial feasibility analysis at 33 sites including elementary, middle, high school, and administrative buildings. Provided RFP preparation, bid analysis and validation of contractor's submissions. Managed contracting process and supported project team prior to board approval.

Individual Measures Identified: Solar PV arrays at 33-sites, System size 7.5MW, PPA Contract Structure
Measure Savings, Cost, Simple Payback: $4,840,000 NPV (2020 dollars)

CUMMING GROUP

Christine E. Marez, LEED AP, ENV SP, CIG, EIT

Principal in Charge

Christine is a Senior Vice President and head of Sustainability and ESG for Cumming's global portfolio supporting our clients to achieve carbon reduction and project and program sustainability goals. She is a LEED AP and ENV SP with extensive experience developing and managing projects in the public and private sectors overseeing decarbonization, sustainability and climate solutions, renewable energy, and battery storage strategies. Christine has over 30 years of experience managing large capital construction programs, and 11 years of experience in electric utility design and construction

EDUCATION

- Bachelor of Science, Electrical Engineering, California State University, Los Angeles

CERTIFICATIONS

- Leadership in Energy and Environmental Design (LEED) Accredited Professional
- Certified Inspector General (CIG)
- Envision Sustainability Professional (ENV SP)
- ISO 20121 Implementation Lead
- GBAC™ Star Accreditation Certified (Global Biorisk Advisory Council)

AFFILIATIONS

- USGBC California, Chair Board of Directors
- Society of Hispanic Professional Engineers (SHPE)
- Construction Management Association of America (CMAA)
- Airports Council International, North America (ACI-NA)

PUBLICATIONS / PRESENTATIONS

- University of Southern California (USC), Guest Lecturer, ESG, 2024
- Yale University Sustainability: Mechanical Systems Usage & Economics, Yale University Sustainability: Mechanical Systems Usage & Economics

REPRESENTATIVE EXPERIENCE

City of Calabasas, Renewable and Energy Efficiency Project Assessment
Christine oversees our work providing an independent assessment of a comprehensive energy efficiency and renewable energy project for the City of Calabasas. The project scope included lighting and HVAC retrofits and installation of solar PV and battery energy storage at four city-owned buildings. Cumming Group reviewed the energy savings calculations and energy models, modeled solar and battery storage capacity and reviewed the financial proformas and summarized findings and recommendations in a report delivered to city leaders. Our effort identified additional energy savings potential and solar capacity than what was originally presented by a large ESCO. Other services included administration of a competitive solicitation and evaluated several ESCO proposals that provided the best opportunity for the city and now focusing on implementation of the selected energy installation firm.

Grants Pass (OR), Solar PV Project Services
Cumming Group is providing the City of Grants Pass Solar Feasibility Studies at three sites, Foothill and Merlin Landfills and the Redwood pump station totaling 15.97. Services include a Feasibility Study of the Economic performance, Environmental Resiliency, Sustainability and Social Benefits of potential solar installations of large solar fields at all locations. Cumming group solar experts are providing the City an analysis on the different possibilities of ownership such as city owned, community solar, power purchase agreements, and other options for each of the proposed solar arrays.

Honolulu International Airport. Solar Generation and Battery Storage Analysis
Cumming energy professionals supported the development the ConRAC solar bus depot procurement for the state of Hawaii. The project is a state effort to deploy an electric bus depot for ConRAC powered by solar photovoltaics (PV) and a battery energy storage system. Cumming services included a review the site's design documents, review and recommend utility rate options, evaluate financial benefit models and recommend financing opportunities. Cumming supported the delivery of a comprehensive RFP text for use within a competitive design-build RFP.

Unibail Rodamco Westfield (URW), Net Zero Carbon Strategy Development, Los Angeles, CA
Christine oversees Cumming Group's team delivering Cumming energy services for 13 flagship client properties across the U.S. He oversees Cumming's energy team of professional engineers, auditors and analysts performing ASHRAE Level II energy audits, data analysis, technical report development, Net Zero measure development, cost

assessments, and Owner project presentations. Cumming has identified and developed measures supporting URW's energy efficiency goal of an overall 20% reduction in energy usage for 2023; and the development of a long-term Net Zero Roadmap for facility operations. She also supports URW with sustainability reporting of all resources and recently developed a dynamic PowerBI dashboard tool to URW executives that achieved a vastly more comprehensive and calculated mode of tracking utility usages and cost analysis in real time house resources data, utility bills, energy usage, demand spikes, and costs. Cumming oversees Client's greater North American Energy and Sustainability portfolio, implementing widespread corporate changes towards carbon reduction during the pivotal period

Solar Project Development, 20+MW Anaheim Union High School District, Fullerton Joint Union School District, Val Verde Unified School District, CA
Development of solar projects for and feasibility studies at multiple school and administrative sites. Solar PV energy services include conceptual design, energy cost savings, risk analysis for each power purchase agreement/lease options, Solar PV project financial pro formas. Management of procurement and project implementation, best value analysis, and construction management.

Judicial Council of California, Solar PV Feasibility Studies
Scope of Services: Cumming also prepared a solar feasibility study to prove viability of alternative energy options. Utility rate analyses were completed for each site and with data based on utility bills from prior 12 months. Results were used in the basis for Project financial proformas that projected utility cost savings expectations based on actual utility tariffs of SCE, LADWP, and SCE sites.

Wasco Unified School District, Solar Contract Evaluation
Cumming supported the Wasco School District's solar contract and lease agreement independent review. This included complete review of contract documents, rate structures, project financials, and solar modelling to validate system engineering. Cumming participated in contract negotiations alongside the district, and negotiated a modified project with an estimated additional $2 Million in savings than the original, as well as an addition $20,000 discount applied to the project overall

Woodlake Unified School District, Solar Contract Evaluation
Woodlake Unified School District, Solar Contract Evaluation
Cumming supported Woodlake USD performing an independent review of a Solar PV contract submitted by a major solar provider vender. Cumming performed a risk assessments and financial analysis of the project and developed a detailed Technical Analysis and Risk Report that included multiple findings and recommendations to reduce investment costs, contract terms, production guarantee; Cumming provided backup cost estimates for all equipment installation including electrical equipment and transformer upgrades.

Clean Jobs Act, Energy Efficiency and Renewable Generation Services, Multiple (60+) K-12 School Districts, CA
Managed and administered tasks associated with CA Energy Commission Prop 39 Guidelines for the development and submittal of CEC energy expenditure plans and requests for over $325 Million of project funds for LED lighting retrofits and HVAC upgrades. Work includes ASHRAE energy auditing, sustainability studies, benchmarking, MEP cost estimating, and Solar PV project development. Over 60+ School District Clients.

CUMMING GROUP

Paul Kyllo, CEM

Energy Project Director

Paul Kyllo is a senior energy and sustainability professional with more than 20 years of experience delivering technically complex energy efficiency, renewable energy, and carbon reduction projects for public- and private-sector clients. As Director of Energy Services at Cumming Management Group, he leads multidisciplinary engineering and project management teams responsible for end-to-end delivery of energy programs, including energy audits and data analysis, feasibility studies, technology evaluation, project design oversight, and implementation of energy efficiency, renewable generation, microgrids, storage, and building electrification solutions. Paul has overseen the technical and economic evaluation of over 500 GW of renewable energy projects, integrated on-site generation and storage with efficiency measures to improve resiliency and reduce operating costs, and supported negotiation and execution of power purchase agreements.

EDUCATION

- Master of Business Administration, Loyola Marymount University, Los Angeles, CA
- Bachelor of Science, Mechanical Engineering, California State Polytechnic University, Pomona

CERTIFICATIONS

- Certified Energy Manager (CEM), Association of Energy Engineers, 2013

TRAINING

- OSHA 30-Hour Construction Safety Training Certificate, 2024

CORE CAPABILITIES

- Energy Analysis
- Contract Negotiations
- Financial Management
- Program Operations
- Strategic Planning
- Technical Writing
- Building Commissioning

AFFILIATIONS

- Western HVAC Performance Alliance, Co-Founder

AWARDS / HONORS

- Technology Transfer Award, Efforts to Commercialize Variable Refrigerant Flow HVAC Equipment in California, Electric Power Research Institute

REPRESENTATIVE EXPERIENCE

City of Grants Pass, Solar Feasibility Study
Paul managed the Cumming Group team conducting a study on the feasibility of reusing existing brownfield locations in Grants Pass, OR for development of utility-scale solar projects. Three sites were evaluated and two recommended for further analysis including assessment of total viable capacity, evaluation of ownership structure, review of local regulatory and legislative requirements for community-based solar, identification of available grant funding opportunities and assessment of financial benefits to the community.

Anaheim Elementary School District, Solar Project Development
Paul managed the team responsible for delivering a solar feasibility study for more than 20 site locations for Anaheim Elementary School District. The project included assessing each site for optimal energy generation, utility energy savings, battery storage feasibility, integration of electric vehicle charging infrastructure, financial investment costs and construction scheduling. Project also involved RFP support, contractor bid review and contract negotiations. Total system size evaluated was 6.2 MW with a construction budget of more than $25M over three years.

City of Calabasas, Renewable & Energy Efficiency Project Assessment
Paul leads the technical team in providing an independent assessment of a comprehensive energy efficiency and renewable energy project for the City of Calabasas. Services include an assessment of the proposed energy and renewable energy project proposed by a large ESCO for lighting, HVAC retrofits and installation of solar PV and battery energy storage at four city-owned buildings. Cumming Group reviewed the energy savings calculations and energy models, modeled solar and battery storage capacity and reviewed the financial proformas and summarized findings and recommendations in a report delivered to city leaders that identified additional energy savings potential and solar capacity than what was originally presented by the ESCO Firm.

San Diego County, Battery Energy Storage Systems
Conducted a comprehensive research study on the deployment of Battery Energy Storage Systems (BESS) in the San Diego region. Study included an overview of storage technologies, use cases for BESS, overview of regulatory and legislative policies

governing use of BESS and best practices in siting, permitting and operations of BESS. The study is part of an ongoing effort by local government officials to ensure proper policies and procedures regarding BESS are in place to mitigate safety concerns within the community in preparation for massive expansion of BESS in support of California greenhouse gas emission reduction goals.

Long Beach Unified School District, Electrification Transition Planning
Paul prepared two separate planning documents to assist Long Beach Unified School District (LBUSD) with the transition of its commercial kitchen equipment from natural gas to electric and its light and medium duty commercial vehicle fleet from combustion engine to electric vehicles. Both plans involved developing a detailed inventory of existing vehicles and equipment, identifying equivalent electric replacements, estimating the transition costs and forecasting the energy and emissions benefits from the transition. The plans also included a transition timeline that considered existing equipment depreciation and/or end-of-life replacement and statewide legislative mandates for electrification.

Unibail Rodamco Westfield (URW), Decarbonization Roadmap
Paul is the Energy Director overseeing the development of a decarbonization roadmap for URW to achieve a 90% reduction in GHG emissions by 2030. Paul managed Cumming's team of professional engineers, auditors and analysts who performed ASHRAE Level II energy audits and renewable generation analyses to identify and prioritize location-specific strategies. Cumming used this information to develop URW's overall roadmap and identified gaps to achieving their goal. Additional opportunities were recommended to close the gaps including replacement of existing R-22 and R-410a refrigerants with lower ODP options.

City of Salem, Municipal Energy Master Plan
Cumming Group is developing a Municipal Energy Master Plan for the City of Salem to align with several strategies contained in their 2022 Climate Action Plan. The first phase of this project is to focus on energy used in municipal buildings and park facilities. Cumming's work involves: Conducting a comprehensive inventory of energy usage of more than 200 facilities; Identifying energy efficiency opportunities related to HVAC, lighting and other electrical equipment; Recommending capital projects to improve building efficiency; Identifying opportunities to increase energy resiliency for critical infrastructure; and cataloging available funding mechanisms to help implement recommended actions

Orange County Transportation Authority HVAC Electrification Study
Paul led the preparation of a comprehensive study to assess the technical requirements and project costs for transition of all existing HVAC systems from natural gas heating to equivalent air-source heat pumps for all OCTA facilities. The project evaluated more than 60 units in use at 5 separate buildings and ranging in size from 1 ton to 40 tons. The analysis identified specific replacement options for each unit and considered the impact to existing electrical infrastructure. A detailed cost analysis was completed to estimate the total replacement cost with electrical upgrades and also estimated the impact to utility and maintenance costs. Different replacement scenarios were proposed that considered the age and condition of existing equipment and aligned with OCTA's energy and sustainability goals.

YEARS OF EXPERIENCE

- 13 Years

Brian Mauleon, PE

Senior Energy Engineer

Brian is the Senior Engineer and Program Manager of Energy Resiliency at Cumming Group, responsible for delivering industry-leading expertise for private clients as well as public and educational agencies. He brings a unique combination of deep engineering knowledge and financial insight to develop comprehensive energy strategies. Brian has established energy resiliency and decarbonization projects utilizing his extensive experience in energy efficiency, distributed energy resources, electrification strategies, utility optimization, and long-term capital planning. His approach focuses on strategically aligning technical solutions with clients' financial objectives and sustainability goals. Brian has over 15 years of experience managing complex energy programs, including significant expertise in life cycle cost analysis, demand side management, and integrated energy planning that bridges engineering design with executive decision-making.

REPRESENTATIVE EXPERIENCE

City of Calabasas, Renewable & Energy Efficiency Project Assessment
Brian performed energy and financial analysis to support the independent assessment of a comprehensive energy efficiency and renewable energy project for the City of Calabasas. The project data submitted sole source by a Large ESCO was analyzed using eQuest and Helioscope modeling software in order to provide a recommendation to the City Council on the contract moving forward. The analysis summarized findings and recommendations in a report delivered to city leaders that identified additional energy savings potential and solar capacity than what was originally presented by the ESCO Firm and lower costs by bidding out the work via competitive procurement. As a result, we helped prepare and manage a competitive solicitation and evaluated several ESCO proposals that provided the best opportunity for the city. Cumming Group is currently working as an owner's representative overseeing the project implementation phase scheduled through 2027.

Ross Stores, Renewable Energy Project Assessment
Brian oversees the energy and financial assessment of the 5 solar projects presented to Ross Stores for the Shafter Distribution Center to compare each opportunity and identify the best options available for the facility. This included evaluating energy production, financial investment costs, energy utility savings, and contract terms through the use of Helioscope to model solar and battery production and Energy Toolbase to perform a comprehensive financial model. He oversees the technical team developing a comprehensive financial analysis of the proposed systems comparing project costs and financial proformas and evaluate each opportunity to identify and rank each proposal based on their financial performance.

Judicial Council of California, Solar Feasibility Study
Brian was the lead engineer overseeing preparation of a solar feasibility study to prove viability of alternative energy options. Utility rate analyses were completed for each site and data based on utility bills from the prior 12 months. Results were used as the basis for project financial proformas that projected utility cost savings expectations based on actual utility tariffs of SCE, LADWP, and SCE sites.

Brian also was responsible for planning, scheduling, mobilization, onsite coordination, communication, project payment review, quality assurance, and oversight of crews on two (2) shifts overseeing the replacement and upgrade to LED lighting systems at 22 courthouse buildings.

CA Clean Jobs Act, Energy Efficiency and Energy Generation Services, Multiple (60+) K-12 School Districts, CA

Managed and administered tasks associated with CA Energy Commission Prop 39 Guidelines for the development and submittal of CEC energy expenditure plans and requests for over $225 Million of project funds for LED lighting retrofits and HVAC upgrades. Work includes ASHRAE energy auditing, sustainability studies, benchmarking, MEP cost estimating, and Solar PV project development. Over 60+ School District Clients received the above listed services including Santa Ana USD, Beverly Hills USD, San Francisco USD, Glendale USD, Pasadena USD, La Canada USD, Tustin USD, Alhambra USD, Vacaville USD, San Bernardino USD, West Contra Costa USD, Lake Elsinore USD and Val Verde USD.

Unibail-Rodamco-Westfield, Decarbonization Roadmap

Brian led Cumming Group's field audit team to assess the energy efficiency and renewable energy potential at 11 facilities. Brian then was responsible for analyzing the technical and financial feasibility for proposed measures to achieve URW's decarbonization goals.

Kamehameha Schools, Campus Energy Audits

Brian leads the energy engineering team performing comprehensive ASHRAE Level 2 energy audits for two K-12 campuses with total conditioned building space of nearly 1 million square feet. The team reviewed mechanical, lighting and control systems to identify energy savings opportunities that support Kamehameha School's long-term commitment to sustainability.

Southern California Edison, Senior Manager, Operational Planning

Brian led a team of 16 professionals responsible for developing and prioritizing SCE's annual Transmission & Distribution (T&D) capital and expense budget totaling $3.0B from 2026-35. He set strategic direction for the team to effectively execute on corporate objectives while balancing operational needs and long-term system reliability goals. Brian coordinated with compliance and legal teams to evaluate risk exposure and spend priorities across the T&D portfolio and ensure alignment with General Rate Case filings and regulatory strategy.

As part of this role, Brian led budget optimization through SCE's Integrated Grid Planning & Execution Initiative. Through this effort, he identified $80M in cost saving opportunities through deferred maintenance and operational efficiency improvements that enabled strategic reallocation of funds while continuing to focus on reliable and affordable service to ratepayers.

CUMMING GROUP

Kristal Estrella, CEM

Energy Analyst

Kristal serves as an Energy Analyst and project manager at Cumming Group specializing in energy management and sustainability initiatives. Her role involves overseeing the implementation of energy-saving measures, conducting detailed data analysis on energy usage, and developing strategies to improve operational efficiency for clients across various sectors. Kristal leverages her in-depth understanding of energy markets, regulatory compliance, and energy optimization to deliver impactful, data-driven solutions.

Throughout her career, Kristal has developed expertise in energy analysis, sustainability programs, data management, and stakeholder engagement. She is a Certified Energy Manager (CEM) with the Association of Energy Engineers (AEE) and is fluent in both English and Spanish. Kristal is also proficient in Microsoft Office Suite and other energy management tools.

REPRESENTATIVE EXPERIENCE

Ross Stores, Renewable Energy Project Assessment
Kristal is the energy analyst supporting our review of 5 solar projects presented to Ross Stores for the Shafter Distribution Center to compare each opportunity and identify the best options available for the facility. This included evaluating energy production, financial investment costs, energy utility savings, and contract terms using Helioscope to model solar and battery production and Energy Toolbase to perform a comprehensive financial model. Kristal also supported the comprehensive financial analysis of the proposed systems comparing project costs and financial pro formas.

LA Metro, Sustainability Reporting, and Data Management Protocol, Los Angeles, CA
Supported the annual development and publication of Los Angeles Metro's annual Sustainability Report and GHG emissions inventory (Scopes 1, 2 and select 3), including all aspects of data collection, trend analysis, report writing, graphics, and report production. Metro reports annually on two sets of sustainability metrics - custom metrics from the agency's 10-year sustainability strategic plan, Moving Beyond Sustainability, as well as the industry standard metrics defined by the APTA Sustainability Reporting guidelines. As such, their report includes 30 different sustainability performance metrics ranging from emissions and natural resource use to workforce development and sustainable procurement. The report conforms with The GHG Protocol, the APTA Sustainability Commitment, and ISO 14064.

Unibail Rodamco Westfield (URW), Los Angeles, CA
Kristal is part of Cumming Group's energy team of professional engineers, auditors and analysts performing ASHRAE Level II energy audits, data analysis, technical report development, Net Zero measure development, cost assessments, and Owner project presentations. Cumming Group has identified and developed measures supporting URW's energy efficiency goal of an overall 20% reduction in energy usage for 2023; and the development of a long-term Net Zero Roadmap for facility operations.

Kamehameha Schools, Campus Energy Audits
Kristal was the primary technical resource performing ASHRAE Level 2 energy audits for the KS Maui and KS Hawaii campuses. Kristal used the site audit findings to analyze

energy savings available from the proposed efficiency measures including mechanical, lighting and control systems. Kristal coordinated closely with the local utility to ensure proposed measures met the technical requirements of available rebate programs.

CalSHAPE, California Energy Commission, California
Kristal supports the energy team and coordinates the implementation of energy projects through the California Energy Commission CalSHAPE program for 70+ K-12 clients, managing the program's requirements for participation including (i) submittal of program funding applications and management of funding awards and distribution, (ii) development of site-specific estimates for the number and type of all HVAC systems at the site. (iii) performance of the HVAC system and delivery of the HVAC Assessment Report inclusive of results and findings. Cumming Group's in-house cost estimators develop line-item costs for materials, labor, and other costs per the CEC allowable labor rates and include brief narratives explaining the use of funds for any other costs.

Crothall Healthcare, Mount Sinai Health System, New York, NY
Previously, Kristal worked at Crothall Healthcare for the Mount Sinai Health System in New York, where she started as an Energy Analyst and advanced to Assistant Director. In this capacity, she analyzed energy consumption data across a network of hospitals, identified opportunities for energy savings, and managed Real-Time Energy Management (RTEM) platforms. Her efforts contributed significantly to a reduction in energy consumption and the optimization of energy management practices.

Reference No. 2

Client Name: City of Grants Pass, Solar Feasibility Study
Start and End Dates: March 2024 – October 2024
Project Description: Prepared a comprehensive feasibility study evaluating the solar potential at three city-owned sites for use in a community solar application. Conducted site visits at two landfills and one wastewater pumping station to assess the suitability for ground mounted solar arrays. Modeled over 8 MW of solar production at the three sites and prepared financial cash flow analyses for multiple ownership options including self-ownership and public/private partnerships. Identified available federal, state and utility incentives, tax credits and grant opportunities for developing brownfield sites for use in solar power generation. Evaluated potential legal and regulatory constraints impacting project implementation.

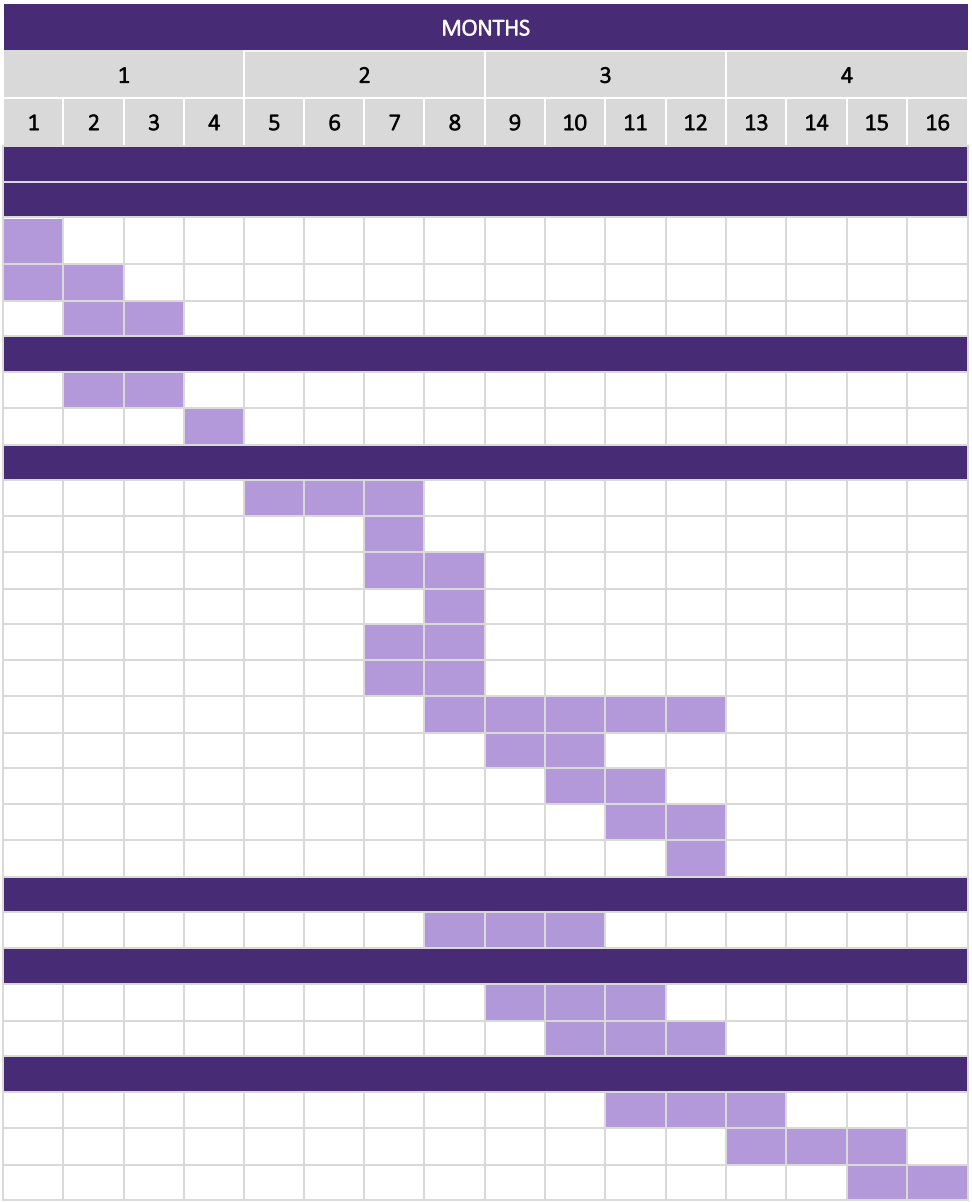
Proposed Schedule



Project Schedule

The expected timeline to complete project tasks is four months from Project Kickoff to Final Recommendation Report review with City. This timeline assumes availability of information to promptly initiate energy baselining and feasibility analysis. The schedule below outlines critical activities and milestones to complete the scope of work.

City of Redlands - Solar Feasibility Study

Project Schedule

Task #	Task Description
1	**Assessment of Past, Current, Projected Usage**
1.01	Kickoff and Alignment Meeting
1.02	Request for Utility Data and Site Drawings
1.03	Baseline site electric energy and demand using utility billing data
2	**Site Specific Evaluation of City Facilities**
2.01	Identify key sites for utility risk exposure and potential benefits
2.02	Deliver Refined Recommendation for Focus Site Analysis
3	**Financial Feasibility and Cost-Benefit Analysis**
3.01	Generate solar/energy storage models for recommended focus sites
3.02	Review initial models proposals
3.03	Update renewable and storage models based on City feedback
3.04	Deliver completed model analysis files
3.05	Import solar/energy storage models for financial modeling
3.06	Conduct utility rate and savings analysis optimizing for NEM 3.0
3.07	Develop cost models and financial alternatives (cash purchase, finance, PPA)
3.08	Evaluate federal, state, and incentive rebates for model forecast
3.09	Prioritize and recommend opportunities with maximum economic value
3.10	Update recommendations based on City Feedback
3.11	Executive Summary of financial review findings with City
4	**Regulatory, Policy and Market Trend Review**
4.01	Assess laws and regulations that may impact generation and storage projects
5	**Procurement & Implementation Pathway Analysis**
5.01	Develop prioritization roadmap for portfolio planning
5.02	Develop recommended procurement strategies and timelines
6	**Comprehensive Solar Feasibility Report**
6.01	DRAFT Recommendations Report
6.02	FINAL Recommendation Report
6.03	Project Closeout and Acceptance

Submittals Due	Thursday, February 26, 2026 by 4:00 p.m.
Evaluation Committee Meeting	TBD March 2026
Vendor Presentations	N/A
City Council Approval	April/May 2026

1. BACKGROUND

A) The City of Redlands

The City was incorporated in 1888 and originally founded upon the agricultural (citrus) industry. In the early 20th Century, the successful growth of citrus trees in the local climate led to Redlands becoming one of the largest producers of navel oranges in the world. The financial success of Redlands' founders and farmers resulted in the construction of several new civic buildings and opulent homes, several of which remain in use today, including the A.K. Smiley Public Library, Burrage Mansion, and Kimberly Crest House & Gardens (among many other notable private residences and non-residential buildings). Three U.S. Presidents visited the City in the early 1900s. Additional background information about the historical setting may be found in Chapter 2 "Distinctive City," Section 2.2, of the 2035 General Plan (pg. 2-4).

Redlands is a general law city and has a Council-Manager form of government with five residents elected to the City Council. The City Council Members are elected by district to serve four-year terms. Full-service functions of the City government are carried out by approximately 500 full time and part-time staff members. The City's departments consist of: Police, Fire, Municipal Utilities & Engineering, Management Services/ Finance, Human Resources, Facilities & Community Services, Development Services, A.K. Smiley Public Library, and City Manager's Office. The City covers 36 square miles and has a population of approximately 73,000 residents. The City's biennial adopted General Fund budget for FY 2025 is $127.5 million and for FY 2026 will be $133.2 million.

B) Development Services Department

Development Services includes the following divisions: Building & Safety; Land Use Engineering; Planning; Economic Development; and Administration. The department provides staffing for the Planning Commission and the Historic & Scenic Preservation Commission. Both Commissions consist of seven residents appointed to four-year terms by the City Council. The Director assigns one Planning staff member to perform the functions of the City's historic preservation officer.

2. SCOPE OF SERVICES

The City is seeking a qualified consulting firm to conduct a solar feasibility study. After selection, the consultant will work with the Development Services Department staff to confirm the scope of the study, given the desired budget for the project.

The anticipated scope of work would likely include the following:

Solar Feasibility Study

The City of Redlands is interested in determining the feasibility of renewable energy generation systems and storage across city-owned properties. The final solar feasibility study would be provided to the city as a comprehensive report that includes but is not limited to; an analysis of energy costs and usage, sites that are determined to be feasible for renewable energy systems, recommended system configurations, and system procurement pathways.

All recommended components, systems and equipment shall comply with all applicable state, federal and local laws and the requirements of all permitting and regulatory agencies.

The final study shall include but is not limited to the following:

- Assessment of the City's past, current and projected future energy usage and costs, with and without the generation of on-site renewable energy, on a comprehensive and site-specific basis;

- Site-specific evaluation of pre-identified City facilities (listed in Attachment A[as to the potential and suitability of each site for renewable energy production and storage, including suitability of the site and structures thereon, approximate system sizing and locating, estimated capability of renewable energy generation, and compatibility of the use(s) of the site with the operation of various systems;
- Analysis of the likely costs and benefits of renewable energy systems and storage that will reduce costs and maximize the net economic benefit to City, including maintenance and life-cycle costs, and likely energy cost savings projections for City;
- Review of current and projected operative laws and regulations that could impact City renewable energy generation and storage projects;
- Review of predicted technological advances and market trends that could improve or impact City renewable energy generation and storage projects;
- Review and analysis of state and federal energy credits, rebates, and/or other state or federal benefits or programs from which the City may obtain funding or revenue which are currently available or which are likely to become available in the future; and
- Analysis of possible procurement and implementation pathways for renewable energy systems.

3. SUBMITTAL FORMAT GUIDELINES

Interested firms should provide the City with the following information:

A. Cover Page.

This is to be used as the first page of the submission. Include the RFP number 20260209TLM. This form must be fully completed and signed by an authorized officer of the firm.

B. Executive Summary.

This part of the response to the RFP should be limited to a brief narrative highlighting the proposer's qualifications and experience. Typically, this section should **not exceed two (2)** pages.

C. Approach and Methodology.

Provide a straightforward and concise presentation. The submittal should include a description of your understanding of the City, emphasize a clear understanding of the scope of services required, and demonstrate the necessary resources and personnel to perform the intended services.

D. Firm Information/Organization.

The Proposer must identify the Account Manager who will be working directly with the City and engaged in managing the work. Resumes must be included which reference the individual's qualifications and experience in managing similar projects. List relevant education or other background, relevant certifications, relevant projects worked on, dates showing length of time spent on each project, and the specific duties/responsibilities for each project.

Identify the responsibilities of the key individuals, other than the Account Manager, who will be assigned to the proposed contract, and who will have major responsibilities for performance of the services required. Include resumes that list relevant education or other background, relevant certifications, relevant projects worked on, dates showing length of time spent on each project, and the specific duties/responsibilities for each project.

The City reserves the right to approve or disapprove any change to the successful Proposer's Account Manager. Personnel changes that impact the contract may result in the cancellation of the contract.

E. Staffing.

Provide a list of principals, including sub-contractors, with their qualifications. Upon award of contract, principals may not be changed without approval of the City. Describe firm's support organization, accessibility, and quality assurance methods for optimizing staff utilization.

F. References.

The information requested in this section should include references for the same or similar projects prepared within the past **ten (10) years** that are similar in size and scope to demonstrate competence to perform these services. Information shall include:

i. Names of key staff that participated on named projects and their specific responsibilities.

ii. A summary of your firm's demonstrated capability, including length of time that you have provided the services being requested in this Request for Proposals.

iii. Provide at least **three (3)** references that received similar services from your firm. The City may contact the organizations and individuals. Information provided shall include:
    a. Client name;
    b. Project description;
    c. Project start and end dates; and,
    d. Client project manager name, telephone, and electronic mail address.

G. Fee/Cost Proposal.

A fee proposal should be submitted and include material, supplies, and any associated travel expense rates, if not already included in the personnel rate. This proposal should be in a **separate sealed envelope marked "Fee Proposal"** and your firm's name. Failure to do so may result in your firm's disqualification.

a. Cost Proposal. The Cost Proposal must provide a detailed fee schedule itemizing the services including (but should not be limited to) the following:
b. Hourly rates for regular business hours (state regular business hours).
c. Any addition.
d. Travel or trip charges, if any.
e. Include any minimums that apply
f. Include any alternate pricing structures (such as block of hours).
g. Cost proposal must refer/reference specific Scope of Work items (tasks and sub-tasks).
h. If a specific requested service, function, or option is not offered/ available please indicate.

i. Provide a total cost for this assignment.
j. Include any general comments on pricing, or different levels of service.
k. Pricing should include all fees associated with this task(s).
l. It is expected that all proposers responding to this RFP will offer government or comparable most favorable rates. Any and all discounts offers must be clearly delineated.
m. In addition, all prices must be firm and fixed for this assignment following the notice of award

4. EVALUATION CRITERIA

The following is an outline of the procedures the City will use in the selection process:

1) City organizes the Screening and Selection Committee (Committee).

2) The Committee reviews the RFP submittals from by the prospective vendors.

3) The Committee selects submittals which qualify based on the qualifications and previous experience performing similar work.

4) The Committee will determine and identify the vendors that are qualified to perform the services and will rank the vendors based on their demonstrated competence and professional qualifications deemed necessary for the satisfactory performance of the services required. Vendors with top ranking proposals may be selected for an interview.

5) The Committee will make selection based on qualifications. Negotiations will be undertaken with the firm ranked most qualified with the City's goal being to secure the services at a cost equivalent to the lowest cost offered to the City by an approved and qualified vendor and provides to the City the best long range economic value by the qualified vendors.

6) If a contract cannot be successfully negotiated with the top-rated vendor/firm, the negotiations with the designated vendor/firm may be terminated in writing and negotiations may be started with the next highest rated proposal. This process will continue until the negotiations are successfully concluded with a vendor/firm.

5. PROCESS FOR SUBMITTING PROPOSALS

A. Content of Submittal.

The submittal must use the format as indicated in the format guidelines.

B. Number of Submittals.

Submit **three (3) copies** of your proposal to allow for thorough evaluation and comparative analysis. Proposal should be 8½ x 11 inches, printed two-sided on recycled/recyclable paper, with removable bindings. Exhibits such as time schedules, charts, and fee proposal charts may be printed on larger paper (e.g., 11 x 17 inches). An **electronic copy** of your Proposal (e.g., PDF file) must also be submitted via the PlanetBids website prior to the deadline.

C. Submission of Proposals.

The Proposal shall be signed by an authorized individual of the professional firm. Complete written proposals must be submitted in *sealed* envelopes (and Fee Proposal in a separate *sealed* envelope) and must be received in the Planning Division and on PlanetBids **no later than**

4:00 p.m. Pacific Time on Thursday, February 26, 2026.

The Cover Page of the submittal package shall be prominently marked with the following identification: **"RFP #** 20260209TLM**"** together with the name and address of the submitter.

Proposals can be mailed, hand-delivered, or sent by courier to the following address.

Hand-delivery or courier:
City of Redlands
Development Services Department
Attn: Trish Munoz, Management Analyst Analyst
35 Cajon St., Suite 20
Redlands, CA 92373

U.S. Mail:
City of Redlands
Development Services Department
Attn: Trish Munoz, Management

P.O. Box 3005
Redlands, CA 92373

The City's regular office hours are 8:00 a.m. to 4:30 p.m., Monday through Thursday, and on alternating Fridays (City offices are closed on alternating Fridays and holidays). A 2025 City Calendar is available at: www.cityofredlands.org/pod/questions-contact-us.

D. Conditions for Proposal Acceptance.

This RFP does not commit the City to award a contract or to pay any costs incurred for any services. The City, at its sole discretion, reserves the right to accept or reject any or all proposals received as a result of this RFP, to negotiate with any qualified source, or to cancel this RFP in part or its entirety, and to waive minor irregularities in any submittal.

6. STANDARD TERMS AND CONDITIONS

Cost for Preparing Submittal.
The cost for developing your submittal is the sole responsibility of the proposer. All submittals become the property of the City of Redlands. Submittals are subject to the California Public Records Act.

Firm's Current Workload and Schedule. Provide information supporting firm's ability to perform in a timely fashion. Present workload of key personnel assigned to this project. Indicate that the personnel listed in the submittal shall be available for and assigned to the City based on illustrated workload. Indicate firm's ability to meet budget and schedule. It will be important to limit response to similar projects based on current and near future workload.

Sub-consultants/Subcontractors. Contractor shall submit a list of sub-consultants and subcontractors (if any). No substitutions shall be made without prior written approval by the

City.

Intangibles. Describe any significant or unique accomplishments or awards for work performed for similar agencies. Provide any additional information which may be relevant to the evaluation of your submission relative to the City's project.

Litigation. Please list any past and/or pending litigation or disputes relating to the work described herein, that the firm has been involved in within the last five (5) years. List shall include project name, nature of litigation, and outcome of litigation (if resolved).

Licenses. *If Applicable:* Firm shall submit proof of licensing as may be required by local, state, or federal agencies to perform the required work.

Proposal Forms:

- Submittal cover page
- Exceptions or Deviations Form.
- Proposer Certification / Addenda Acknowledgement form or No-Proposal Response.
- IRS W-9 Form.

7. **INSURANCE REQUIREMENTS**

A Certificate of Insurance will be furnished by the successful Contractor upon Notice of Award. The certificate(s) shall be completed by the Contractor's authorized agent and submitted to the City's Risk Management Department. The successful Contractor shall not commence any work in connection with the Agreement until it has obtained all of the following types of insurance and shall maintain such insurance for the duration of the Agreement. The Contractor shall secure the minimum insurance coverage described below, and such insurance shall be primary with respect to any insurance or self-insurance programs maintained by the City.

- **Comprehensive Commercial General Liability**. Contractor shall obtain, and maintain throughout the life of the Agreement, Comprehensive Commercial General Liability Insurance in an amount of $1,000,000 per occurrence and $2,000,000 aggregate with an insurance carrier acceptable to the City and name the City as additional insured.

- **Commercial Automobile Liability Insurance.** Contractor shall obtain, and maintain throughout the life of the Agreement, Comprehensive Automobile Liability Insurance with minimum limits of $1,000,000, combined single limit for bodily injury liability and property damage liability and name the City as additional insured. This coverage shall include all owned vehicles, hired and non-owned vehicles, and employee non-ownership vehicles.

- **Workers' Compensation and Employer's Liability Insurance**. If applicable, the Contractor shall obtain, and maintain throughout the life of the Agreement, Workers' Compensation and Employer's Liability Insurance in the amount that meets the statutory requirement and shall be in force with an insurance carrier acceptable to the City. Contractor and any sub-consultants or subcontractors shall comply fully with the California Workers' Compensation Law.

- **Professional Liability Insurance**. If applicable, the Vendor shall obtain and maintain throughout the life of the Agreement Professional Liability Insurance in an amount of $1,000,000 per claims made and $2,000,000 aggregate with an insurance carrier accepted to the City.

- **The Contractor shall instruct their insurance broker to furnish properly executed certificates of insurance to the City.**

    - The name of the insured Contractor, the specified job by name and/or RFP number, the name of the insurer, the number of the policy, its effective date and its termination date.

- Certificates of insurance shall clearly evidence coverage required above.
- Certificates of insurance shall be submitted by the broker directly either via email (insurance@cityofredlands.org) or US Mail to: City of Redlands, Risk Management Division, P.O. Box 3005, Redlands, CA 92373. The insurer will notify the City at least thirty (30) days prior to any material changes in provisions or cancellation of the policy.

The city reserves the right to modify the insurance requirements set forth at any time during the process of solicitation or subsequent thereto.

8. **EXAMINATION OF PROPOSAL DOCUMENTS**

Each vendor shall carefully examine the Specifications and other applicable documents, and inform himself/herself thoroughly regarding any and all conditions and requirements that may in any manner affect cost, progress or performance of the work to be performed under the Contract. Ignorance on the part of the Contractor will in no way relieve him/her of the obligations and responsibilities assumed under the Contract.

Should a vendor find discrepancies or ambiguities in, or omissions from the Specifications, or should he/she be in doubt as to their meaning, he/she shall at once notify the City, in writing or by email to Tricia Munoz at **tmunoz@cityofredlands.org.**

9. **INTERPRETATIONS, CLARIFICATIONS AND ADDENDA**

No oral interpretations will be made to any vendor as to the meaning of the Proposal Documents. Any inquiry or request for interpretation received by the **City before the indicated due date will be given consideration. Post all questions** online at eProcurement system at www.cityofredlands.org/RFP. Answers will be provided posted at the city website, eProcurement system: www.cityofredlands.org/rfp

The City reserves the right to amend this RFQ prior to the proposal due date.
Addenda or addendum will be sent published on the City's website, eProcurement system at *www.cityofredlands.org/rfp*. In case any Proposer fails to acknowledge receipt of such addenda or addendum, his/her proposal will nevertheless be construed as though it had been received and acknowledged and the submission of his/her Proposal will constitute acknowledgment of the receipt of same. All addenda are a part of the Proposal Documents and each Proposer will be bound by such addenda, whether or not received by him/her. It is the responsibility of each Proposer to verify that he/she has received all addenda issued before Proposals are opened.

In the case of unit price items, the quantities of work to be done and materials to be furnished under this Proposal/Contract are to be considered as approximate only and are to be used solely for the comparison of Proposals received. The City and its Vendors do not expressly or by implication represent that the actual quantities involved will correspond exactly therewith; nor shall the Proposer plead misunderstanding or deception because of such estimate or quantities of work performed or material furnished in accordance with the Specifications and other proposal documents, and it is understood that the quantities may be increased or diminished as provided herein without in any way invalidating any of the unit or lump sum prices proposal.

10. **CHANGES / MODIFICATIONS**

The City reserves the right to order changes in the scope of work and resulting contract. The successful Proposer has the right to request an equitable price adjustment in cases where modifications to the contract under the authority of this clause result in increased costs to the contractor. Price adjustments will be based on the unit prices proposed by the Contractor in response to this solicitation. Any contract resulting from this solicitation may be modified upon written and mutual consent of both parties.

11. **GOVERNING LAWS AND REGULATIONS**

The Proposer is required to be familiar with and shall be responsible for complying with the City's Purchasing Policies and Procedures, City resolutions, City rules, all federal, state and local laws, ordinances, rules and professional standards or regulations that in any manner affect this

solicitation, the selection process, protests, award of contract, contract management or any other activity associated with this solicitation and the subsequent work required of the successful Proposer.

PREVAILING WAGES

When applicable, the City is subject to the State of California prevailing wage laws as set forth in California Labor Code Section 1770 et seq. The contractor is responsible for determining the appropriate Department of Industrial Relations (DIR) classification for the various employees and subcontractors used for a particular project or service. The rates for each classification are posted on the DIR website at http://www.dir.ca.gov/DIRdatabases.html. All contractors performing work for the City are responsible for abiding by all applicable prevailing wage laws, and must furnish the City with Certified Payroll Records upon request.

DIR REGISTRATION AND CONTRACTOR LICENSE REQUIREMENT:

The vendor is responsible for determining whether registration with the California Department of Industrial Relations (DIR) and a valid California contractor license are required for the work to be performed. If applicable, the vendor must be fully compliant with DIR public works requirements and hold the appropriate, active contractor license(s) issued by the California Contractors State License Board (CSLB). The vendor shall provide the City with valid proof of DIR registration and contractor license documentation prior to the commencement of any work.

12. **BLACK OUT PERIOD**

The black out period is defined as between the time the submittals for an Invitation to Bid, Request for Proposals, Request for Proposals or the Invitation to Negotiate, as applicable, are issued by the City's Purchasing Division and the time the City Council awards the contract. During this black out period, any attempt to influence the thinking of City staff or officials for or against a specific cause related to a solicitation for goods or services, in person, by mail, by facsimile, by telephone, by electronic mail, or by any other means of communication, may result in disqualification of their award and/or contract. This does not apply to pre-solicitation conferences, oral presentations before the selection committee, contract negotiations, or communications with staff not concerning this solicitation.

13. **CONTRACT NEGOTIATION**

Upon receipt of the submittals, the Selection Committee shall first determine and identify those persons or organizations that are qualified to perform the services and shall rank such persons and organizations based on their demonstrated competence and professional qualifications deemed necessary for the satisfactory performance of the services required.

Second, negotiations shall be undertaken with the person or organization ranked most qualified in an attempt to secure the services at an acceptable cost, in the sole discretion of the City. If the person or organization ranked is unwilling to provide the services at a cost equivalent to such lowest cost: 1) such person or organization may nevertheless be awarded a contract, provided the purchasing agent, city manager or city council, as appropriate, determines the initiating city department director has substantiated that the cost for the services is reasonable and appropriate; or 2) negotiations with the most qualified person or organization may be terminated and the initiating city department may undertake similar negotiations with the other qualified person and organizations in order of rank.

The proposal signed by the successful Proposer along with documentation included in their submittal as required by this solicitation and other additional materials submitted by the Proposer and accepted by the City shall be the basis for negotiation of a contract addressing the requirements of the solicitation. The resulting contract will be approved in accordance with the City's Purchasing Ordinance.

13. **FISCAL YEAR FUNDING APPROPRIATION**

Unless otherwise provided by law, a contract for supplies or services may be entered into for any period of time deemed to be in the best interests of the City, provided the term of the contract and conditions of renewal or extension, if any, are included in the solicitation and funds are available for the fiscal period at the time of the contract. Payment and performance obligations for

succeeding fiscal periods shall be subject to appropriation by the City of funds thereafter. When funds are not appropriated or otherwise made available to support continuation of performance in a subsequent fiscal period, the contract shall be cancelled and the contractor shall be entitled to reimbursement for the reasonable value of any nonrecurring cost incurred but not advertised in the price of the supplied or services delivered under the contract or otherwise recoverable.

14. **PAYMENTS**

Payments shall be made 30 days from the receipt of invoice, and follow all City policies promulgated thereby.

15. **BUSINESS LICENSES**

The successful proposer will be required to obtain a City of Redlands business license prior to commencement of work.

16. **INDEMNIFICATION**

The successful Proposer must fully indemnify the City. Such indemnification will be documented in the contract documents.

17. **RIGHT OF REJECTION**

The City of Redlands reserves the right to reject any and/or all submittals/proposals, reserve the right to waive any informalities or irregularities in the proposal or examination process, reserve the right to select low proposal per item, and reserve the right to award contracts in the best interest of the City.

18. **REFERENCE TERMS**

Any headings in this document are for the purposes of reference only and shall not limit or otherwise affect the meaning thereof. Any reference to gender shall be construed to include all genders, firms, partnerships and corporations. References in the singular shall be construed to include the plural and references in the plural shall be construed to include the singular. Any reference to the “City” or the “City of Redlands” shall be construed to refer to the City for which the solicitation was issued and the City shall be the legislative authority for all matters concerning this solicitation or the resulting contract(s).

19. **RIGHT TO AUDIT RECORDS**

The City shall be entitled to audit the books and records of the Contractor or any sub-contractor to the extent that such books and records relate to the performance of the Agreement or any sub-contract to the Agreement. Such books and records shall be maintained by the Contractor for a period of ten (10) years from the date of final payment under the Agreement and by the sub-contractor for a period of ten (10) years from the date of final payment under the sub-contract unless a shorter period is otherwise authorized in writing.

20. **ADDITIONAL TERMS AND CONDITIONS**

No additional terms and conditions included with the proposal response shall be evaluated or considered and any and all such additional terms and conditions shall have no force and effect and are inapplicable to this proposal. If submitted either purposefully through intent or design or inadvertently appearing separately in transmitting letters, specifications, literature, price lists or warranties, it is understood and agreed the general and special conditions in this solicitation are the only conditions applicable to this proposal and the Proposer’s authorized signature affixed to the proposal attests to this.

21. **PROPRIETARY INFORMATION**

Responses to this Request for Proposals, upon receipt by the City, become public records. If any submitter believes that any portion of all of the response is confidential and proprietary, submitter shall clearly assert such exception and the specific legal authority of the asserted exemption. Such designation of an item as a trade secret may be challenged in court by any person. By the proposer’s designation of material submitted to the City as a “trade secret”, the submitter agrees to hold harmless the City for any award to a plaintiff for damages, costs or attorney’s fees and for costs and attorney’s fees incurred by the City by reason of any legal action

challenging the proposer's "trade secret" claim.

22. **ADDITIONAL SERVICES/PURCHASES BY OTHER PUBLIC AGENCIES**

The Proposer by submitting a proposal acknowledges that other public agencies may seek to "Piggy-Back" under the same terms and conditions during the effective period of any resulting contract services and/or purchases being offered in this proposal/bid for the same prices and/or terms being proposed. The successful Proposer has the option to agree or disagree to allow contract Piggy-Backs on a case-by-case basis. Before a public agency is allowed to Piggy-Back any contract, the agency must first obtain the Proposer's approval. Without the Proposer's approval, the seeking agency cannot Piggy-Back.

23. **MINIMUM CRITERIA**

The information requested in this RFP should describe your qualifications and projects within the past **ten (10) years** that are similar in size and scope to demonstrate competence to perform these services.

24. **AGREEMENT TERM: Service Period**

To be determined based on the scope of work and negotiated terms.

City Council **AGENDA ITEM NO. I10.**

DATE: June 2, 2026

TO: Honorable Mayor and City Council Members

SUBJECT: Adopt Resolution No. 8790 establishing the special tax levy within the City of Redlands Community Facilities District No. 2003-1 (Redlands Business Center) (Interim Assistant City Manager Garcia)

MOTION:

If the City Council determines that staff's recommendation is appropriate, the following motion is provided:

I move to adopt Resolution No. 8790

RECOMMENDATION:

Staff recommends that City Council adopt Resolution No. 8790.

DISCUSSION:

In March 2004, the City issued $9,545,000 of Community Facilities District (CFD) Bonds for improvements within the District that is bounded by Mountain View Avenue on the west, San Bernardino Avenue on the north, California Street on the east and Lugonia Avenue on the south (CFD 2003-1). The bonds will be repaid by special taxes levied upon the benefiting property owners and are set to mature in September 2033.

Resolution No. 8790 set the 2026-2027 maximum tax rates and authorized the City Clerk to file all necessary information with the San Bernardino County Auditor/Controller no later than the levy deadline of August 10, 2026 (Preliminary Notice of Special Assessments will be provided to the County by DTA Public Finance, Inc. by July 1, 2026, as required).

Exhibit A of Resolution No. 8790 shows the calculation of the Fiscal Year 2026-2027 Special Tax Levy as prepared by DTA Public Finance, Inc., for CFD 2003-1.

It is noted that there is no levy for CFD 2001-1 For FY 2026-2027. CFD 2001-1 was established in August 2001, when the City issued $9,255,000 of Community Facility District (CFD) Bonds for improvements in and around the San Bernardino Avenue/California Street area (CFD 2001-1). The bonds are set to mature in September 2026 and no additional special taxes need to be levied as the CFD has sufficient funds to pay the remaining debt service to close out the CFD.

Detailed reports prepared by DTA Public Finance Inc., showing updates of the development status, the financial obligations and the special tax requirements for Fiscal Year 2026-2027 for each CFD, are on file in the City Clerk's office.

ALTERNATIVES:

The Council may choose to reject, modify or table this item. Note that failure to file the required information with the San Bernardino County Auditor/Controller before the August 10, 2026 deadline will result in the inability to collect this levy and may impact the debt repayment schedule.

STRATEGIC PLAN:

Not Applicable.

FISCAL IMPACT

Fiscal Year: 2026-2027

Revenue Generating: Yes

Amount: Various

Budgeted Y/N: Yes

Account No.: Fund 810

Additional Appropriation Required: No

Discussion:

There is no impact to the General Fund. These assessments are pass-through tax levies, wherein the City collects and remits funds on behalf of the Community Facilities Districts. Its indebtedness is not City debt in any way.

RESOLUTION NO. 8790

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS LEVYING SPECIAL TAXES WITHIN CITY OF REDLANDS COMMUNITY FACILITIES DISTRICT NO. 2003-1 (REDLANDS BUSINESS CENTER)

WHEREAS, the City Council (the "City Council") of the City of Redlands (the "City") has formed City of Redlands Community Facilities District No. 2003-1 (Redlands Business Center) (the "Community Facilities District"), under and pursuant to the Mello-Roos Community Facilities Act of 1982 (the "Act"); and

WHEREAS, the City Council, as the legislative body of the Community Facilities District, is authorized under the Act to levy special taxes (the "Special Taxes") to pay for the costs of certain facilities and to authorize the issuance of bonds secured by the Special Taxes under the Act; and

WHEREAS, the City Council, pursuant to Ordinance No. 2569, adopted by the City Council of the City on January 20, 2004, authorized and levied the Special Taxes within the Community Facilities District; and

WHEREAS, Section 53340 of the Act provides that the legislative body of a community facilities district may provide, by resolution, for the levy of the special tax in the current year or future tax years at the same rate or at a lower rate than the rate provided by ordinance, if the resolution is adopted and a certified list of all parcels subject to the special tax levy including the amount of the tax to be levied on each parcel for the applicable tax year, is filed by the clerk or other official designated by the legislative body with the county auditor on or before the 10th day of August of that tax year; and

WHEREAS, on February 3, 2004, the City Council adopted a resolution entitled "A Resolution of the City Council of the City of Redlands Authorizing the Issuance of not to exceed $9,600,000 Aggregate Principal Amount of City of Redlands Community Facilities District No. 2003-1 (Redlands Business Center) Special Tax Bonds, Series 2004, Approving the Execution and Delivery of an Indenture, a Bond Purchase Contract and a Continuing Disclosure Certificate and the Preparation of an Official Statement and Other Matters Related Thereto" authorizing the issuance of City of Redlands Community Facilities District No. 2003-1 (Redlands Business Center) Special Tax Bonds, Series 2004 (the "Bonds"), in an aggregate principal amount of not to exceed $9,600,000;

WHEREAS, the City Council desires to levy the Special Taxes within the Community Facilities District for Fiscal Year 2026-2027;

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF REDLANDS AS FOLLOWS:

Section 1. All of the above recitals are true and correct.

Section 2. The City Council hereby levies the Special Taxes for the Fiscal Year 2026-2027 at the maximum rates and with respect to the parcels as set forth in Exhibit A hereto; provided, however, that the City Manager of the Finance Director of the City is hereby authorized, prior to the

I:\cmo\Resolutions\Resolution No. 8790.CFD 2003-1.bm.05.18.2026.docx

submission to the San Bernardino County Auditor/Controller and upon consultation with the City 's special tax consultant, DTA Public Finance, Inc. (a) to make any necessary modifications to such Special Taxes to correct any errors, omissions or inconsistencies in the listing or categorization of parcels to be taxed (provided that any such modifications shall not result in an increase in the Special Tax applicable to any category of parcels), or (b) to lower such Special Tax rates to the extent such officer deems necessary upon receipt of the final pricing information, and debt service requirements with respect to, the Bonds. The City Clerk of the City is hereby authorized and directed to file with the San Bernardino County Auditor/Controller no later than August 10th, 2026, a certified list of all parcels subject to the Special Tax levy including the amount of the Special Tax to be levied on each parcel for Fiscal Year 2026-2027.

Section 3. The officers and agents of the City are, and each of them hereby is, authorized and directed to execute and deliver any and all documents and instruments and to do and cause to be done any and all acts and things necessary or proper for carrying out the levy of the Special Taxes for Fiscal Year 2026-27 as provided in this resolution.

Section 4. All actions heretofore taken by the officers and agents of the City with respect to the levy of the Special Taxes for Fiscal Year 2026-2027 are hereby approved, confirmed and ratified.

Section 5. This Resolution shall take effect immediately upon its adoption

APPROVED, AND ADOPTED by the City Council of the City of Redlands on this 2nd day of June, 2026.

City Council **AGENDA ITEM NO. I11.**

DATE: June 2, 2026

TO: Honorable Mayor and City Council Members

SUBJECT: Approve quitclaim deed to release an easement on Assessor's Parcel No. 0176-211-11-0000 (Municipal Utilities and Engineering Director Heredia)

MOTION:

If the City Council determines that staff recommendation is appropriate, I move to approve a quitclaim deed to release an easement on Assessor's Parcel No. 0176-211-11 (1780 Country Club Drive, Redlands).

RECOMMENDATION:

Staff recommends that the City Council approve the quitclaim deed to release the easement on Assessor's Parcel No. 0176-211-11 (1780 Country Club Drive, Redlands).

DISCUSSION:

City staff received a request from Florin Rominu, owner of the real property identified as Assessor's Parcel Number 0176-211-11, commonly known as 1780 Country Club Drive, Redlands, concerning the potential abandonment and release of a municipal easement encumbering the southern boundary of the subject parcel. The existing ten-foot-wide easement was originally granted for the installation, operation, and maintenance of a City waterline. However, said waterline has been formally abandoned in accordance with prior City authorization, and no active public utility facilities currently exist within the easement area. The property owner intends to develop the parcel with a single-family residence, and the subject easement constitutes a title encumbrance affecting such development. Accordingly, the owner's title company has required the City to formally vacate and release the easement as a condition precedent to proceeding with the proposed improvements.

Staff has evaluated the request to vacate the subject easement and determined that the easement is not presently required and is not reasonably anticipated to be necessary in the future for the installation, operation, or maintenance of public infrastructure, including water, wastewater, or storm drainage facilities. Accordingly, staff concludes that the easement is surplus to municipal needs and may be relinquished. Therefore, subject to the City Council's discretion and approval, the City may proceed with the formal release of the easement.

ALTERNATIVES:

The City Council may choose to not release the easement and provide alternate direction.

To whom it may concern,

Re: 1780 Country Club Dr 10” main water line easement

Dear Mr Goutam,

I am writing regarding the easement that exist on my property ant 1780 Country Club Dr. Redlands, Ca 92373, which is on the south side of the property. This easement was for 10” main water line. Per engineering department as you know approved a connection of two pipes on Mariposa and Country Club intersection in order to abandon the water line altogether from Palo Alto Dr., County Club Dr. intersection and Country Club Reservoir lake. This work was effectuated on Dec 2025. With this being said, there is no longer an active water line on my property. Thats why I request to vacate the easement on my property.

Attached is a copy of assessor’s map showing the property. The easement area is colored in green.

Feel free to contact me with any questions you may have?

Thank you

Florin Rominu

City Council **AGENDA ITEM NO. I12.**

DATE: June 2, 2026

TO: Honorable Mayor and City Council Members

SUBJECT: Adopt Resolution No. 8784 relating to Senate Bill No. 1 Road Repair and Accountability Act (SB1) Project List and determine that this action is exempt from environmental review pursuant to Section 15061(b)(3) of the State's guidelines implementing the California Environmental Quality Act (Municipal Utilities and Engineering Director Heredia)

MOTION:

If the City Council determines that staff recommendation is appropriate, the following motion is provided:

I move to adopt Resolution No. 8784.

RECOMMENDATION:

Staff recommends that the City Council adopt Resolution No. 8784 and determine that adoption of Resolution No. 8784 is exempt from environmental review pursuant to Section 15061(b)(3) of the State's guidelines implementing the California Environmental Quality Act and adopt Resolution No. 8784.

DISCUSSION:

In April 2017, the California Legislature passed Senate Bill No. 1, the Road Repair and Accountability Act (SB1). In order to address basic road maintenance, rehabilitation, and critical safety needs on both the California state highway system and local street and road systems, SB1 dedicated approximately $1.5 billion each year statewide through the following:

- Increased per-gallon fuel taxes;
- Increased per-gallon diesel fuel excise taxes;
- Increased vehicle registration fees; and
- Provided for inflationary adjustments to tax rates in future years.

To be eligible for SB1 funding, cities must submit a proposed project list adopted by resolution to the California Transportation Commission (CTC) each year. Once reviewed and adopted by the CTC, the list of cities eligible for funding is sent to the State Controller to begin the apportionment process. The proposed project list may be adjusted as funding is received, and constructed projects must have a minimum of twenty (20) years of estimated service life. For Fiscal Year 2026/27, staff proposes to adopt the attached project list and to utilize the estimated $2,061,965 SB1 funding allocation to supplement the Pavement Management Program (PMP) 2026 Street Resurfacing Project.

Adoption of Resolution No. 8784 is exempt from environmental review pursuant to Section 15061(b)(3) of the State's guidelines implementing the California Environmental Quality Act since this action will not significantly impact the environment.

ALTERNATIVES:

The City Council may deny the staff recommendation and provide alternative direction, although this will delay reimbursement of SB1 program funding to the City.

STRATEGIC PLAN:

Priority D - Strategic Objective 3. Infrastructure: Engineer and construct transportation facilities to accommodate all potential users – motorists, cyclists and pedestrians.

RESOLUTION NO. 8784

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS ADOPTING A ROAD REPAIR AND ACCOUNTABILITY ACT PROJECT LIST FOR FISCAL YEAR 2026/27

WHEREAS, Senate Bill 1 (SB1), the Road Repair and Accountability Act of 2017 (Chapter 5, Statutes of 2017), was passed by the Legislature and signed into law by the Governor in April 2017 to address the significant multi-modal transportation funding shortfalls statewide; and

WHEREAS, SB 1 includes accountability and transparency provisions that will ensure the residents of City of Redlands (City) are aware of the projects proposed for funding in our community, including which projects have been completed each fiscal year; and

WHEREAS, the City must include a list of all projects proposed to receive funding from the Road Maintenance and Rehabilitation Account (RMRA), created by SB 1, by resolution, which must include a description and the location of each proposed project, a proposed schedule for the project's completion, and the estimated useful life of the improvement; and

WHEREAS, the City, will receive an estimated $2,061,965 in RMRA funding in Fiscal Year 2026/27 from SB 1; and

WHEREAS, this is the tenth year in which the City is receiving SB 1 funding and will enable the City to continue essential road maintenance and rehabilitation projects, safety improvements, repairing and replacing aging bridges, and increasing access and mobility options for travelers that would not have otherwise been possible without SB 1; and

WHEREAS, the City used the Pavement Management Program (PMP) to determine the SB 1 project list and ensure revenues are being used on the most high-priority and cost-effective projects that also meet the community's priorities for transportation investment; and

WHEREAS, the funding from SB 1 will supplement other funding to rehabilitate approximately twenty-nine (29) lane miles throughout the City in the PMP 2026 Street Resurfacing Project; and

WHEREAS, the SB 1 project list and overall investment in local streets and roads infrastructure will help the City continue funding its Pavement Management Program by focusing on basic maintenance, safety, complete streets infrastructure, and the use of innovative technology, materials, and practices;

NOW, THEREFORE, be it resolved by the City Council of the City of Redlands, as follows:

Section 1. The foregoing recitals are true and correct.

Section 2. The following proposed project list is attached hereto as Exhibit "A" and

may utilize fiscal year 2026/27 Road Maintenance and Rehabilitation Account revenues in their delivery. With the listing of these projects in the adopted fiscal year resolution, the City is affirming to the public and the State its intent to fund these projects with Road Maintenance and Rehabilitation Account Revenues:

> PMP 2026 Street Resurfacing Project will maintain and rehabilitate approximately twenty-nine (29) lane miles of various streets in the City of Redlands. The maintenance efforts include slurry sealing, crack filling, crack sealing, and asphalt grind & overlay. The rehabilitation efforts include removing and replacing existing asphalt, grinding and overlay with hot mix asphalt, and full-depth reclamation. It also includes restriping, replacing traffic loops, manhole rim adjustment, etc. The project is anticipated to begin construction in fall 2026, with an estimated construction timeline of six (6) months and an estimated project life of at least 20 years where reconstruction methods are implemented.

Section 3. Adoption of this Resolution has no environmental impact and therefore such action is exempt from review under the California Environmental Quality Act ("CEQA") in accordance with State CEQA guidelines section 15061 (b)(3).

City of Redlands

PMP 2026 Street Resurfacing Project

Proposed Locations

City Council **AGENDA ITEM NO. I13.**

DATE: June 2, 2026

TO: Honorable Mayor and City Council Members

SUBJECT: Adopt Resolution No. 8770 - Annual Engineer's Reports Preliminary Approval; and Adopt Resolution No. 8771 - Declaration of Intention to Levy Fiscal Year 2026-27 Street Lighting District No. 1 and Landscape Maintenance District No. 1 Assessments (Facilities and Community Services Department Director Crocker)

MOTION:

If the City Council determines that staff's recommendation is appropriate, the following motions are provided:

1. I move to adopt Resolution No. 8770; and

2. I move to adopt Resolution No. 8771.

RECOMMENDATION:

Staff recommends City Council adopt Resolution No. 8770 preliminary approving the annual Engineer's Reports for Landscape Maintenance District No. 1 and Street Lighting District No. 1, and Resolution No. 8771 declaring the City Council's intention to levy and collect assessments for fiscal year 26/27 and scheduling a June 16, 2026, Public Hearing to receive comments related to levying assessments within these districts.

DISCUSSION:

On July 7, 1987, City Council ordered the formation of Landscape Maintenance District No. 1 (LM District), which was established to ensure satisfactory levels of maintenance are provided. LM District assessments provide funding for labor, materials, and equipment associated with landscape services provided by the City within the LM District. These services include turf and ground cover maintenance, irrigation, tree and vegetation maintenance, and LM District management.

On September 19, 1989, City Council ordered the formation of Street Lighting District No. 1 (SL District), which was established to generate funding for electricity to power streetlights, labor, material, and equipment costs to replace burned-out or damaged streetlight bulbs, damaged streetlight poles, and provide SL District management. On May 5, 2026, City Council approved Donald Young, One-Stop Permit Center Manager, as the Assessment Engineer for both districts. In the role of Assessment Engineer, Mr. Young is responsible for the preparation of the Engineer's Reports required to levy the annual assessments in accordance with the California Streets and Highways Code.

Staff has prepared the comprehensive Engineer's Reports to establish fiscal year 26/27 LM District and SL District assessments that will recover costs for City services within both districts. Appendix "D" of the Engineer's Reports details the assessments and provides a description of specific areas to be assessed. The Assessment District diagrams are also included in each of the Engineer's Reports as Appendix "B." No new areas are proposed for annexation into the districts. A public hearing is required to levy these assessments. The date of the Public Hearing will be set by adoption of Resolution No. 8771. At the Public Hearing, the Council will consider Resolution Nos. 8772 and 8773 to approve the Engineer's Reports for Landscape Maintenance District No. 1 and Street Lighting District No. 1 and implement the assessments for Fiscal Year 2026-2027. A copy of the Notice of Public Hearing is included with this staff report.

ALTERNATIVES:

The City Council may deny the staff recommendation which will result in no imposition of assessments by the San Bernardino County Assessor on property tax bills without adoption of the annual Engineer's Reports.

STRATEGIC PLAN:

N/A

SUBMITTED BY:
Tabitha Crocker, Facilities & Community Services Director

RECOMMENDED BY:
Charles M. Duggan Jr., City Manager

REVIEWED BY:
Yvette M. Abich Garcia, City Attorney
Janice McConnell, Assistant City Manager
James Garland, Interim Management Services/Finance Director

PREPARED BY:
Don Young, One Stop Permit Center Manager

FISCAL IMPACT

Fiscal Year: 26/27

Revenue Generating: Yes

Amount: $54,237.01

Budgeted Y/N:

Account No.:

Additional Appropriation Required: No

Discussion:

The proposed FY 26/27 the Street Lighting District No. 1 and Landscape Maintenance District No. 1 assessments will generate revenues to supplement necessary General Fund costs within the Facilities and Community Services Department budget to provide services within the districts.

RESOLUTION NO. 8770

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS GIVING PRELIMINARY APPROVAL OF THE ENGINEER'S REPORTS FOR FISCAL YEAR 2026-2027 FOR STREET LIGHTING DISTRICT NO. 1 AND LANDSCAPE MAINTENANCE DISTRICT NO. 1

WHEREAS, the City Council of the City of Redlands (the "City Council") has heretofore determined that the public interest, convenience and necessity require the maintenance and operation of street lighting and appurtenant facilities, as set forth in Section 22525 of the Streets and Highways Code, within the incorporated boundaries of the City of Redlands; and

WHEREAS, the City Council has heretofore determined that the public interest, convenience and necessity require the maintenance of landscape and irrigation facilities set forth in Section 22525 of the Streets and Highways Code, State of California, within the incorporated boundaries of the City of Redlands; and

WHEREAS, Donald Young, One Stop Permit Center Manager, located at 35 Cajon Street, Suite 15A, Redlands, California, has been appointed "Assessment Engineer" with all provisions of Part 2 of Division 15 of the Streets and Highways Code applicable to the Engineer being applied to the "Assessment Engineer;" and

WHEREAS, Sections 22622 and 22623 of the Streets and Highways Code require that an Engineer's Report be prepared and filed annually, specifying the assessments to be levied against the benefitting properties within the City's Street Lighting District No. 1 and Landscape Maintenance District No. 1; and

WHEREAS, the Assessment Engineer has prepared and filed with the City Clerk reports in writing as required by the Landscaping and Lighting Act of 1972 and in compliance with Article XIIID of the California Constitution; and

WHEREAS, the City Council has duly considered said reports and each and every part thereof; and finds that each and every part of said reports is sufficient, and that no part of said reports requires modification in any respect;

NOW, THEREFORE, be it resolved by the City Council of the City of Redlands as follows:

Section 1. That the Engineer's estimate of the itemized costs and expenses of said work and of the incidental expenses in connection therewith, contained in said reports be, and each of them are hereby, preliminarily approved and confirmed.

Section 2. That the diagrams showing the Street Lighting District No. 1 and Landscape Maintenance District No. 1, referred to and described in said reports, and the boundaries of the lots and parcels of land within such assessment district as the same existed at the time of passage of this resolution, are hereby preliminarily approved and confirmed.

Section 3. That the proposed assessment upon the properties in Street Lighting District No. 1 and Landscape Maintenance District No. 1, in proportion to the estimated benefit to be received by such properties, respectively, from said work and of the incidental expenses thereof, as contained in said report is hereby preliminarily approved and confirmed.

Section 4. That said reports shall stand as the Engineer's Report for the purposes of all subsequent proceedings for Street Lighting District No. 1 and Landscape Maintenance District No. 1.

APPROVED AND ADOPTED this 2nd day of June, 2026.

RESOLUTION NO. 8771

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS DECLARING ITS INTENTION TO LEVY AND COLLECT ASSESSMENTS WITHIN REDLANDS' STREET LIGHTING ASSESSMENT DISTRICT NO. 1 AND LANDSCAPE ASSESSMENT DISTRICT NO. 1 FOR FISCAL YEAR 2025-2026 PURSUANT TO THE LANDSCAPING AND LIGHTING ACT OF 1972, AND ESTABLISHING A TIME AND PLACE FOR PUBLIC HEARINGS FOR THE TWO DISTRICTS TO CONSIDER PROTESTS

BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF REDLANDS AS FOLLOWS:

Section 1. The City Council of the City of Redlands hereby (1) finds that the public interest and convenience requires, and (2) declares its intention to levy and collect, assessments against the lots and parcels of property within an existing assessment districts designated "Redlands' Street Lighting Assessment District No. 1 and Landscape Assessment District No. 1" (the "Districts") pursuant to the provisions of the Landscaping and Lighting Act of 1972, Part 2 of Division 15 of the Streets and Highways Code (commencing with Section 22500) (the "Act") for fiscal year 2026-2027, commencing July 1, 2026, and ending June 30, 2027, to pay for the costs and expenses of the improvements described in Section 3 hereof.

Section 2. Reference is hereby made to a map on file in the office of the City Clerk and open for public inspection for a description of the exterior boundaries of the Districts.

Section 3. The proposed improvements are briefly described as follows: The operation, maintenance and servicing of public within the District, including the operation, maintenance and servicing of public lighting facilities and landscaping, including safety lighting, traffic signals, trees, shrubs, grass and other ornamental vegetation, and appurtenant facilities, located along public roadways, streets and rights-of-way within the boundaries of the Districts. "Maintenance" means the furnishing of services and materials for the ordinary and usual maintenance, operation and servicing of the public lighting and landscaping facilities, and appurtenant facilities, including repair, removal or replacement of all or part of any of the public lighting and landscaping facilities, or appurtenant facilities. "Servicing" means the maintenance of any of the public lighting and landscaping facilities or appurtenant facilities, including the furnishing of electric current, energy or gas for the operation of any of the lighting facilities and the furnishing of water for the irrigation of any of the landscaping facilities.

Section 4. The assessments to be levied and collected against the assessable lots and parcels of property within the Districts for fiscal year 2026-2027 are not proposed to increase from the assessments levied and collected for fiscal year 1997-1998.

Section 5. Public property owned by any public agency and in use in the performance of a public function which is included within the boundaries of the Districts shall not be subject to assessment to be made under these proceedings to cover any of the costs and expenses of the improvements.

Section 6. All railroad, gas, water and electric utility rights-of-way are included within the Districts and shall be assessed in accordance with the benefits received from the improvements.

Section 7. Reference is hereby made to the Reports of the Engineer entitled "City of Redlands Street Lighting District No. 1 Engineer's Report for Fiscal Year 2026-2027" and "City of Redlands Landscape Maintenance District No. 1 Engineer's Report for Fiscal Year 2026-2027" on file in the office of the City Clerk for a full and detailed description of the improvements, the boundaries of the District and any zones therein and the proposed assessments upon assessable lots and parcels of land within the District.

Section 8. NOTICE IS HEREBY GIVEN THAT THE CITY COUNCIL APPOINTS TUESDAY, THE 16TH DAY OF JUNE, 2026, AT THE HOUR OF 6:00 P.M., OR AS SOON THEREAFTER AS THE MATTER MAY BE HEARD, IN THE COUNCIL CHAMBERS AT CITY HALL, CITY OF REDLANDS, 35 CAJON STREET, SUITE 2, REDLANDS, CALIFORNIA 92373, AS THE TIME AND PLACE FOR TWO PUBLIC HEARINGS TO CONSIDER PROTESTS OR OBJECTIONS TO THE LEVY OF THE PROPOSED ASSESSMENTS IN CONNECTION WITH THE DISTRICTS. All interested persons shall be afforded the opportunity to hear and be heard. Any interested person may file a written protest with the City Clerk prior to the conclusion of the hearing. A written protest shall state all grounds of objection. A protest by a property owner shall contain a description sufficient to identify the property owned by the signer thereof. The City Council shall consider all oral statements and all written protests made or filed by any interested person.

Section 9. The City Clerk is hereby authorized and directed to give notice of such hearing in accordance with law.

Section 10. The City Council hereby determines and declares that the proposed assessments constitute a continuation of assessments existing on the effective date of Article XIIID, that the assessments are imposed exclusively to finance the maintenance and operation expenses for streets and that the assessments are exempt from the requirements of Article XIIID, Section 4 of the California Constitution.

Section 11. The City Council hereby designates Donald Young, One Stop Permit Center Manager, telephone number (909) 307-1626, to answer inquiries regarding the hearing, protest proceedings and procedural or technical matters.

ADOPTED, SIGNED AND APPROVED this 2nd day of June, 2026.

CITY OF REDLANDS
CITY COUNCIL
NOTICE OF PUBLIC HEARING

NOTICE is hereby given that the City Council of the City of Redlands, County of San Bernardino, State of California, will hold a public hearing to consider the following:

1. **PUBLIC HEARING** to consider Ordinance No 2976 and Ordinance No. 2977 to approve the Engineer's Report for Landscape Maintenance District No. 1 and Street Lighting District No. 1 and implement the assessments for Fiscal Year 2025-2026

   City of Redlands, Applicant

In accordance with the Landscaping and Lighting Act of 1972 and in compliance with Article XIIID of the California Constitution a report has been prepared and filed with the City Clerk.

The full text of the proposed Resolutions, and all materials relevant to this hearing, are available for public inspection in the Development Services Department, located at 35 Cajon Street, Ste. 15A, Redlands, California. Phone number is (909) 307-1626. Website: www.cityofredlands.org

The public hearing will be held in the Council Chambers, Civic Center, 35 Cajon Street, Ste. 2, Redlands, California, at 6:00 P.M., or as soon thereafter as may be heard, on Tuesday, June 17, 2024.

Due to time constraints and the number of persons wishing to give oral testimony, time restrictions may be placed on oral testimony at the hearing regarding this project. You may wish to make your comments in writing to the following address to assure that you are able to express yourself adequately: City Council, P.O. Box 3005, Redlands, California 92373 or by e-mail to jdonaldson@cityofredlands.org.

If you challenge the Ordinances described in this notice in court, you may be limited to raising only those issues you or someone else raised at the public hearing described in this notice, or in written correspondence delivered to the City Council prior to the public hearing.

AUTHORITY FOR REPORT

This report is prepared by order of the City Council of the City of Redlands, California (City). This report is in compliance with the requirements of Chapter 1, Article 4, and Chapter 3 of Division 15 of the Streets and Highway Code of the State of California (Landscape and Lighting Act of 1972) and Article XIIID of the California Constitution.

I. GENERAL DESCRIPTION

The City Council of the City of Redlands, California has heretofore elected to form Street Lighting District No. 1 (District) and annexed territories to said District. The boundaries of said District and annexations thereto are entitled "Assessment Diagram of Street Lighting District No. 1," and are on file in the office of the City Clerk of the City of Redlands.

II. PLANS AND SPECIFICATIONS

All street lights are or will be owned by the City and are provided electrical services by Southern California Edison Company (SCE).

Reference is hereby made to the subject tract or parcel maps and assessment diagrams for the exact location of the parcels covered by the District. The plans and specifications by reference are hereby made a part of this report to the same extent as if said plans and specifications were attached hereto.

III. IMPROVEMENTS

The Landscaping and Lighting Act of 1972 allows the confirmation of benefit assessments for the construction of improvements in addition to maintenance and operation of existing facilities. Assessments will not be levied under the District to fund the installation of street lights during FY 2026-2027. Therefore, this report does not include any proposed benefit assessments for the installation of improvements for FY 2026-2027.

IV. ASSESSMENT DIAGRAM

The assessment District locations for the Original District and subsequent Annexations shown as Appendix B. The assessment diagrams by reference are hereby made a part of this report. The original diagram document used in prior Engineer's Reports was updated in 2021 for purposes of clarity.

Since there were numerous locations as part of Annexation Nos. 1, 2, 3, 4, 5, etc. they were identified on the diagram as S1-A, S1-B, S1-C or S2-A, S2-B, S2-C, etc. Prefix S is added to the identification on the later Annexations to identify that they are within the District. The same Annexation description will be used for identification with Sections IX and X of this report

V. ESTIMATED COSTS AND MAINTENANCE

Since the City owns the street lighting system, all maintenance efforts by the City should be allocated to the District as a direct cost. The Municipal Utilities and Engineering Department has taken the information used in the previous annual report and updated the values based upon the formulas for Unit of Benefit. Southern California Edison (SCE) monthly rates were calculated based upon LS-2 schedule of rates for 100W and 150W high pressure sodium vapor street lights. Because the District costs have historically exceeded the revenue generated by District assessment, it is anticipated that minimal administration and no maintenance will be provided during the 2026-2027 year. As such, the labor amount has been significantly reduced to an estimated value of $6,855 to be spread equally over the number of street lights.

Given these parameters the following is the estimated monthly costs per lamp:

POLES	SCE CHARGE	DEPARTMENT ADMINISTRATION	MONTHLY LAMP COST
419	$ 2.82	$ 1.36	$ 1,751

The following information is from the City's FY2017-2018 Budget:

Power Expenses	
City Street Lighting	S 15,000
Subtotal	**S 15,000**
Administration	
Salaries and Benefits	$ 10,893
Maintenance	$ 1,101
Subtotal	**S 11,994**
Incidental	
Other Professional Services	$ 0
Subtotal	**$ 0**
Total Costs	S 26,994
2017-2018 Levy	$ 25,465
Deficit	**$ 1,529**
Total Parcels Levied	990

The District and Annexations, which are maintained by the City, have been in existence for a number of years. Over the years, the existing assessments have not kept pace with the true annual cost of maintenance and administration.

No new areas are being proposed to be annexed to the District for FY 2026-2027.

VI. ASSESSMENT ROLL

Following the public hearing for FY 2026-2027 assessments and the City Council's approval of the assessments, an assessment roll will be prepared. The assessment roll will include the assessment parcel number, the San Bernardino County Assessor's parcel number and the confirmed assessment for each parcel. The assessment roll will be filed with the City Clerk and will subsequently be transmitted to the San Bernardino County Auditor/Tax Collector.

VII. PROPOSED BASIS FOR ASSESSMENTS

The City Council has heretofore determined that it will be necessary to utilize the provisions of the Landscaping and Lighting Act of 1972, a benefit assessment act, for the Original District and the subsequent Annexations to the District and to assess benefitting properties in proportion to the benefits that the various properties will receive.

The benefits the properties will receive will be assessed as increments of units of benefit (UOB). The District and the subsequent Annexations consist of various types of development having varying parcel sizes. Since the street lights either have been or will be installed in accordance with customary spacing established by the City, there will be four Assessment Zones based upon a street's curb-to-curb width.

Assessments proposed for individual parcels within the District and Annexations will be for the benefit received and will be determined based upon the four following Assessment Zones.

Zone 1: This will include all parcels having frontage on streets with curb separation of less than 40' or greater with 100watt HPSVL at 250' spacing.

Zone 2: This will include all parcels having frontage on streets with curb separations of less than 40' with 100 watt HPSVL at 600' spacing.

Zone 3: This will include all parcels having frontage on streets with curb separations of 40' or greater and less than 64' with 150 watt HPSVL at 250' spacing.

Zone 4: This will include all parcels having frontage on streets with curb separations of 64' or more with 150 watt HPSVL at 230' spacing.

Each of these four Assessment Zones will have assessments levied in UOB which is defined as increments of 100' frontage on public streets, right-of-way or easements. The frontage length and the corresponding UOB are as follows:

FRONTAGE LENGTH	UOB
Less than 199'	1
200' – 299'	2
300' – 399'	3
And so forth	

The UOB assessments for the four Zones are calculated as follows:

Zone 1: Includes 100 watt high pressure, sodium vapor luminaries with a monthly billing rate from SCE, a minimal amount of labor (excluding City General Government Overhead and Facilities and Community Services Department maintenance) for a lamp cost of $8.49. Since the spacing will be 240' ± 15', a spacing of 250' will be used in the calculation.

$$\frac{\$8.49 \times 12}{500} \times \frac{100'}{\text{UOB}} = \$20.38 \text{ per UOB}$$

Zone 2: Includes 100 watt high pressure, sodium vapor luminaries with a monthly billing rate from SCE, a minimal amount of labor (excluding City General Government Overhead and Facilities and Community Services Department maintenance) for a lamp cost of $8.49. Since the spacing will be 600', a spacing of 600' will be used in the calculation.

$$\frac{\$8.49 \times 12}{1200} \times \frac{100'}{\text{UOB}} = \$8.49 \text{ per UOB}$$

Zone 3: Includes 150 watt high pressure, sodium vapor luminaries with a monthly billing rate from SCE, a minimal amount of labor (excluding City General Government Overhead and Facilities and Community Services Department maintenance) for a lamp cost of $11.51. Since the spacing will be 265' ± 15', a spacing of 250' will be used in the calculation.

$$\frac{\$11.51 \times 12}{500} \times \frac{100'}{\text{UOB}} = \$27.63 \text{ per UOB}$$

Zone 4: Includes 150 watt high pressure, sodium vapor luminaries with a monthly billing rate from SCE, a minimal amount of labor (excluding City General Government Overhead and Facilities and Community Services Department maintenance) for a lamp cost of $11.51. Since the spacing will be 215' ± 15', a spacing of 230' will be used in the calculation.

$$\frac{\$11.51 \times 12}{460} \times \frac{100'}{\text{UOB}} = \$30.03 \text{ per UOB}$$

The incidental expenses are most equitably spread on a UOB basis, which is the same method for spreading the benefit from the direct lighting costs.

VIII. CALCULATION OF UOB AND INCIDENTAL COSTS FOR FY 2026-2027

For a breakdown of the UOB Incidental Costs see Appendix A – Calculation of UOB and Incidental Cost Table

IX. ESTIMATED ASSESSMENTS FOR FY 2026-2027

The following calculations presume the on-site development has been completed and include the estimated energy, administration and engineering costs:

Original District (Zone 3) – Parcel Map 11917 APN 0292-032-39, 40, 41, 42

The four parcels will receive one UOB per 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment per UOB
C = Cost of operation and maintenance to be assessed
N = Number of UOB in Parcel Map 11917

NA = C
A = $621.55/31
A = $20.05 per UOB

Assessment for each parcel:

Parcel 2	-	10 UOB	=	$200.50
Parcel 3	-	2 UOB	=	$40.10
Parcel 4	-	3 UOB	=	$60.15
Parcel 5	-	16 UOB	=	$320.80

Annexation S1-A – Parcel Map 12450, APN 0167-201-62 thru -65

These parcels are not assessed.

Annexation S1-B (Zone 4) – Parcel Map 11755 APN 0293-172-16, 17, 18

The seven parcels in Annexation S1-B having street frontage will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment per UOB
C = Cost of SCE UOB and Incidental Expenses
N = Number of UOB in Annexation S1-B with street frontage

NA = C
A = $273.39/13
A = $21.03 per UOB

Assessment for each parcel:

Parcel 1	-	1 UOB	=	$21.03
Parcel 3	-	1 UOB	=	$21.03
Parcel 5	-	1 UOB	=	$21.03
Parcel 6	-	2 UOB	=	$42.06
Parcel 7	-	2 UOB	=	$42.06
Parcel 8	-	4 UOB	=	$84.12
Parcel 9	-	2 UOB	=	$42.06

The original parcels have been reconfigured into three Assessor's Parcels.

Annexation S1-C (Zone 4) – CUP 617 APN 0292-033-11

The one parcel in Annexation S1-C will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment per UOB
C = Cost of SCE UOB and Incidental Expenses
N = Number of UOB in Annexation S1-C

NA = C
A = $231.33/1
A = $231.33 per Parcel

Annexation S1-D (Zone 3) – MS 184, Parcel Map 12300, APN 0167-231-19, 20, 21

The three parcels in Annexation S1-D will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of UOB in Annexation S1-D

NA = C
A = $60.15/3
A = $20.05 per Parcel

Annexation S1-E (Zone 3) – CUP 382 APN 0171-383-19, 20

The two parcels in Annexation S1-E will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of parcels in Annexation S1-E

NA = C
A = $40.10/2
A = $20.05 per Parcel

Annexation S1-F (Zone 1) – CRA 606 APN 0169-131-33

The one parcel in Annexation S1-F will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of parcels in Annexation S1-F

NA = C
A = $19.45/1
A = $19.45 per Parcel

Annexation S1-G (Zone 4) – CRA 486 APN 0292-321-10

The one parcel in Annexation S1-G will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of parcels in Annexation S1-G

NA = C
A = $105.15/1
A = $105.15 per Parcel

This parcel is exempt from assessment and has been removed from the assessment roll.

Annexation S1-H (Zone 4) – CUP 253 APN 0169-411-07

The one parcel in Annexation S1-H will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of parcels in Annexation S1-H

NA = C
A = $105.15/1
A = $105.15 per Parcel

Annexation S1-I (Zone 3) – CRA 608 APN 0169-142-11

The one parcel in Annexation S1-I will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of parcels in Annexation S1-I

NA = C
A = $20.05/1
A = $20.05 per Parcel

Annexation S1-J (Zone 3) – CUP 519 APN 0171-331-04

The one parcel in Annexation S1-J will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of parcels in Annexation S1-J

NA = C
A = $20.05/1
A = $20.05 per Parcel

Annexation S1-K (Zone 4) – CUP 516 APN 0292-166-11

The one parcel in Annexation S1-K will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of parcels in Annexation S1-K

NA = C
A = $273.39/1
A = $273.39 per Parcel

Annexation S1-L (Zone 3) – CUP 518 APN 0169-053-12

The one parcel in Annexation S1-L will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of parcels in Annexation S1-L

NA = C
A = $20.05/1
A = $20.05 per Parcel

Annexation S1-M (Zone 3) – CUP 522 APN 0172-031-49

The one parcel in Annexation S1-M will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of parcels in Annexation S1-M

NA = C
A = $20.05/1
A = $20.05 per Parcel

Annexation S1-N (Zone 1) – Tract 13947 APN 0174-621-01 thru -35

The thirty-five parcels in Annexation S1-N will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of parcels in Annexation S1-N

NA = C
A = $680.75/35
A = $19.45 per Parcel

Annexation S1-O (Zone 3) – CUP 521 APN 0292-034-16

The one parcel in Annexation S1-O will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of parcels in Annexation S1-L

NA = C
A = $20.05/1
A = $20.05 per Parcel

Annexation S1-P (Zone 1) – CUP 605 APN 0169-182-02, 03, 04

The three parcels in Annexation S1-P will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of parcels in Annexation S1-L

NA = C
A = $38.90/3
A = $12.97 per Parcel

Annexation S1-Q – City Hall, APN 0171-301-03

The one parcel in Annexation S1-Q is not assessed.

Annexation S1-R – Parcel Map 11904, APN 0176-044-14, 15

The two parcels in Annexation S1-R are not assessed.

Annexation S1-S (Zone 3) – CUP 278 APN 0171-171-18, 22, 23

The three parcels in Annexation S1-S will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of parcels in Annexation S1-L

NA = C
A = $80.20/3
A = $26.73 per Parcel

Annexation S7-A was originally APN 0171-161-13 and was then changed to APN 0171-161-14 and -15. Annexation S1-S was originally APN 0171-171-18, -22, and -23. Assessments for Annexation S7-A and S1-S were combined and then adjusted proportionately. New APNs for both annexations are 0171-161-17 and 0171-171-34. Assessment spread proportionately.

Annexation S1-T (Zone 3) – CUP 405 APN 0169-343-07

The one parcel in Annexation S1-T will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of parcels in Annexation S1-T

NA = C
A = $20.05/1
A = $20.05 per Parcel

Annexation S1-U (Zone 4) – CRA 354, Parcel Map 3131 APN 0292-182-30, 31

The two parcels in Annexation S1-U will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of parcels in Annexation S1-L

NA = C
A = $42.06/2
A = $21.03 per Parcel

Annexation S1-V (Zone 1) – CRA 346 APN 0292-061-25

The one parcel in Annexation S1-V will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of parcels in Annexation S1-V

NA = C
A = $19.45/1
A = $19.45 per Parcel

This property is owned by the County of San Bernardino and is not assessed.

Annexation S1-W (Zone 3) – CRA 607 APN 0292-156-21

The one parcel in Annexation S1-L will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of parcels in Annexation S1-W

NA = C
A = $120.30/1
A = $120.30 per Parcel

Annexation S1-X (Zone 1) – Tract 12461 APN 1212-191-60 thru -79

The twenty parcels in Annexation S1-X will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of parcels in Annexation S1-X

NA = C
A = $389.00/20
A = $19.45 per Parcel

Annexation S1-Y (Zone 3) – Parcel Map 12022 APN 0169-212-17 thru -27

The eleven parcels in Annexation S1-Y having street frontage will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment per UOB
C = Cost of SCE UOB and Incidental Expenses
N = Number of UOB in Annexation S1-Y

NA = C
A = $380.95/19
A = $20.05 per UOB

Assessment for each parcel:

Parcel 1	-	3 UOB	=	$60.15
Parcel 2	-	1 UOB	=	$20.05
Parcel 3	-	1 UOB	=	$20.05
Parcel 4	-	2 UOB	=	$40.10
Parcel 5	-	4 UOB	=	$80.20
Parcel 6	-	3 UOB	=	$60.15
Parcel 7	-	1 UOB	=	$20.05
Parcel 8	-	1 UOB	=	$20.05
Parcel 9	-	1 UOB	=	$20.05
Parcel 10	-	1 UOB	=	$20.05
Parcel 11	-	1 UOB	=	$20.05

Annexation S2-A (Zone 3) – Parcel Map 12330 APN 0292-153-24, 25, 26, 27

The four parcels in Annexation S2-A will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment per UOB
C = Cost of SCE UOB and Incidental Expenses
N = Number of UOB in Annexation S2-A

NA = C
A = $240.60/12
A = $20.05 per UOB

Assessment for each parcel:

Parcel 1	-	4 UOB	=	$80.20
Parcel 3	-	4 UOB	=	$80.20
Parcel 5	-	2 UOB	=	$40.10
Parcel 4	-	2 UOB	=	$40.10

Annexation S2-B (Zone 3) – Parcel Map 12940 APN 0292-441-11 thru 15

The five parcels in Annexation S2-B will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment per UOB
C = Cost of SCE UOB and Incidental Expenses
N = Number of UOB in Annexation S2-B

NA = C
A = $60.15/5
A = $12.03 per Parcel

Annexation S2-C (Zone 3) – MS 184, Parcel Map 12300, APN 0167-231-19, 20, 21

This annexation is a duplication of Annexation S1-D and has been removed.

Annexation S2-D (Zone 1) – Tract 14556 APN 0176-441-18 thru 27

The ten parcels in Annexation S2-D will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment per UOB
C = Cost of SCE UOB and Incidental Expenses
N = Number of UOB in Annexation S2-D

NA = C
A = $330.65/10
A = $33.07 per Parcel

Annexation S2-E – CRA 611 APN 0174-241-31

This annexation is not assessed.

Annexation S2-F (Zone 3) – MS 196 APN 0292-331-15, 16

The two parcels in Annexation S2-F will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment per UOB
C = Cost of SCE UOB and Incidental Expenses
N = Number of UOB in Annexation S2-F

NA = C
A = $160.40/2
A = $80.20 per Parcel

Annexation S2-G Parcel Map 11189 APN 0294-091-48, 48

The two parcels in Annexation S2-G are not assessed.

Annexation S2-H (Zone 4) – CRA 615 APN 0292-157-31

The one parcel in Annexation S2-H will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment per UOB
C = Cost of SCE UOB and Incidental Expenses
N = Number of UOB in Annexation S2-H

NA = C
A = $21.03/1
A = $21.03 per Parcel

Annexation S3-A (Zone 3) – CRA 517 APN 0169-321-01, 02

The two parcels in Annexation S3-A will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment per UOB
C = Cost of SCE UOB and Incidental Expenses
N = Number of UOB in Annexation S3-A

NA = C
A = $80.20/2
A = $40.10 per Parcel

Annexation S3-B (Zone 1) – CRA 628 APN 0292-310-07

The one parcel in Annexation S3-B will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment per UOB
C = Cost of SCE UOB and Incidental Expenses
N = Number of UOB in Annexation S3-B

NA = C
A = $19.45/1
A = $19.45 per Parcel

Annexation S3-C (Zone 3) – CRA 624 APN 0169-281-39

The one parcel in Annexation S3-C will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment per UOB
C = Cost of SCE UOB and Incidental Expenses
N = Number of UOB in Annexation S3-C

NA = C
A = $20.05/1
A = $20.05 per Parcel

Annexation S3-D (Zone 3) – CRA 305 APN 0167-271-61

The one parcels in Annexation S3-D will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment per UOB
C = Cost of SCE UOB and Incidental Expenses
N = Number of UOB in Annexation S3-D

NA = C
A = $100.25/1
A = $100.25 per Parcel

Annexation S3-E (Zone 1) – Tract 13575 APN 1212-201-01 thru -27

The twenty-seven parcels in Annexation S3-E will receive an equal benefit assessment:

A = Assessment per UOB
C = Cost of SCE UOB and Incidental Expenses
N = Number of UOB in Annexation S3-E

NA = C
A = $700.20/27
A = $25.93 per Parcel

Annexation S3-F (Zone 3 & 4) – CUP 550 APN 0292-165-15

The one parcel in Annexation S3-F will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment per UOB
C = Cost of SCE UOB and Incidental Expenses
N = Number of UOB in Annexation S3-F

NA = C
A = $222.51/1
A = $222.51 per Parcel

Annexation S3-G (Zone 1) – CRA 623 APN 0292-381-08

The one parcel in Annexation S3-G will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment per UOB
C = Cost of SCE UOB and Incidental Expenses
N = Number of UOB in Annexation S3-G

NA = C
A = $19.45/1
A = $19.45 per UOB

Annexation S3-H (Zone 4) – CUP 542 APN 0292-064-13, 17, 21 thru 27

The nine parcels in Annexation S3-H will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment per UOB
C = Cost of SCE UOB and Incidental Expenses
N = Number of UOB in Annexation S3-A

NA = C
A = $567.81/27
A = $21.03 per UOB

Assessment for each parcel:

Parcel 1	-	4 UOB	=	$84.12
Parcel 2	-	2 UOB	=	$42.06
Parcel 3	-	2 UOB	=	$42.06
Parcel 4	-	7 UOB	=	$147.21
Parcel 5	-	4 UOB	=	$84.12
Parcel 6	-	2 UOB	=	$42.06
Parcel 7	-	1 UOB	=	$21.03
Parcel 8	-	1 UOB	=	$21.03
Parcel 9	-	4 UOB	=	$84.12

Annexation S3-I – there is no Annexation S3-I

Annexation S3-J (Zone 3) – MS 201 APN 0171-341-33

The one parcel in Annexation S3-J will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment per UOB
C = Cost of SCE UOB and Incidental Expenses
N = Number of UOB in Annexation S3-J

NA = C
A = $80.20/1
A = $80.20 per Parcel

Annexation S4-A (Zone 4) – MS 213, Parcel Map 13978 APN 0172-301-14, 15, 16, 17

The four parcels in Annexation S4-A will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment per UOB
C = Cost of SCE UOB and Incidental Expenses
N = Number of UOB in Annexation S4-A

NA = C
A = $63.09/3
A = $21.03 per UOB

Assessment for each parcel:

Parcel 1	-	2 UOB	=	$25.24
Parcel 2	-	1 UOB	=	$12.62
Parcel 3	-	1 UOB	=	$12.62
Parcel 4	-	1 UOB	=	$12.62

Annexation S4-B (Zone 3) – MS 211 APN 0292-201-36, 39

The two parcels in Annexation S4-B will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment per UOB
C = Cost of SCE UOB and Incidental Expenses
N = Number of UOB in Annexation S4-B

NA = C
A = $100.25/5
A = $20.05 per UOB

Assessment for each parcel:

Parcel 1	-	2 UOB	=	$40.10
Parcel 2	-	3 UOB	=	$60.15

Parcel 2 lot line was adjusted with the property to the north. The assessment was spread proportionately - $47.57 to APN 0292-201-39 and $12.58 to APN 0292-201-40.

Annexation S4-C (Zone 4) – CUP 559 APN 0171-202-30

The one parcel in Annexation S4-C will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment per UOB
C = Cost of SCE UOB and Incidental Expenses
N = Number of UOB in Annexation S4-C

NA = C
A = $40.10/1
A = $40.10 per Parcel

Annexation S4-D (Zone 1) – CRA 636 APN 0169-043-14

The one parcel in Annexation S4-D will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment per UOB
C = Cost of SCE UOB and Incidental Expenses
N = Number of UOB in Annexation S4-D

NA = C
A = $58.35/1
A = $58.35 per Parcel

Annexation S4-E (Zone 4) – CUP 546 APN 0292-192-11

The one parcel in Annexation S4-E will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment per UOB
C = Cost of SCE UOB and Incidental Expenses
N = Number of UOB in Annexation S4-E

NA = C
A = $231.33
A = $231.33 per UOB

Annexation S4-F (Zone 1) – CUP 641 APN 0292-310-36

The two parcels in Annexation S4-F will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment per UOB
C = Cost of SCE UOB and Incidental Expenses
N = Number of UOB in Annexation S4-G

NA = C
A = $38.90/2
A = $19.45 per UOB

The two parcels were subsequently combined into a single parcel and the full assessment is on the one parcel.

Annexation S4-G (Zone 4) – CRA 640 APN 0169-301-08, 10, 11

The three parcels in Annexation S4-G will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessment are as follows:

A = Assessment per UOB
C = Cost of SCE UOB and Incidental Expenses
N = Number of UOB in Annexation S4-C

NA = C
A = $21.03/3
A = $7.01 per Parcel

Annexation S4-H (Zone 4) - CUP 562 APN 0292-064-17

The one parcel in Annexation S4-H will receive four UOB assessments for 100 feet of parcel frontage in accordance with this report. The calculations for the assessments are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S4-H

NA = C
A = $84.12/1
A = $84.12 per Parcel

Note that Annexation S4-H is already assessed in Annexation S3-H. Therefore, the assessment in Annexation S4-H is $0

Annexation S4-I (Zone 1) - CUP 548 APN 0169-313-16

The one parcel in Annexation S4-I will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessments are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S4-1

NA = C
A = $77.80 /1
A = $77.80 per Parcel

Annexation S5-A – CRA 637 APN 0169-281-23

This property became a City owned parcel and was removed from the assessment roll.

Annexation S5-B (Zone 1) - Tract 10179 APN 0167-851-39 thru 56, 0167-861-37 thru 54

The thirty-six parcels in Annexation S5-B will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessments are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S5-B

NA = C
A = $505.70/36
A = $14.05 per Parcel

Annexation S5-C (Zone 1) - CUP 574 APN 0171-202-33

The one parcel in Annexation S5-C will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessments are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S5-C

NA = C
A = $19.45/1
A = $19.45 per Parcel

Annexation S5-D (Zone 3) - CRA 642 APN 0292-154-12

The one parcel in Annexation S5-D will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessments are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation 85·0

NA = C
A = $100.25/1
A = $100.25 per Parcel

Annexation S5-E (Zone 1) - MS 216-B Parcel Map 14090 APN 0174-021-41, 42

The two parcels in Annexation S5-E will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessments are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S5-E

NA = C
A = $38.90/2
A = $19.45 per Parcel

Annexation S6-A (Zone 4) - CRA 648 APN 0292-157-16

The one parcel in Annexation S6-A will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessments are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S6-A

NA = C
A = $189.27/1
A = $189.27 per Parcel

This parcel has been purchased by the City of Redlands and will therefore no longer be assessed.

Annexation S6-B (Zone 1) - CUP 581 APN 0171-203-13

The one parcel in Annexation S6-B will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessments are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S6-B

NA = C
A = $38.90/1
A = $38.90 per Parcel

Annexation S7-A (Zone 3): MS 228 APN 0171-161-17

The two parcels in Annexation S7-A will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessments are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S7-A

NA = C
A = $200.50/2
A = $100.25 per Parcel

Annexation S7-A was originally APN 0171-161-13 and was then changed to APN 0171-161-14 and -15. Annexation S1-S was originally APN 0171-171-18, -22, and -23. Assessments for Annexation S7-A and S1-S were combined and then adjusted proportionately. New APNs for both annexations are 0171-161-17 and 0171-171-34. Assessment spread proportionately.

Annexation S7-B (Zone 3): CRA 639 APN 0292-152-39

The one parcel in Annexation S7-B will receive the entire benefit assessment. The calculations for the assessments are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S7-B

NA = C
A = $100.25/1
A = $100.25 per Parcel

Annexation S7-C (Zone 4) - CUP 602 APN 0292-063-48

The one parcel in Annexation S7-C will receive the entire benefit assessment. The calculations for the assessments are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S7-C

NA = C
A = $42.06/1
A = $42.06 per Parcel

Annexation S7-D (Zone 1) - CUP 590 APN 0171-332-30

The one parcel in Annexation S7-D will receive the entire benefit assessment. The calculations for the assessments are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S7-D

NA = C
A = $38.90/1
A = $38.90 per Parcel

Annexation S7-E (Zones 1 & 3) - CUP 607 APN 0167-101-13

The one parcel in Annexation S7-E will receive the entire benefit assessment. The calculations for the assessments are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S7-E

NA = C
A = $198.10/1
A = $198.10 per Parcel

Annexation S7-F (Zone 1) - CUP 577 APN 1212-041-01

The one parcel in Annexation S7-F will receive the entire benefit assessment. The calculations for the assessments are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S7-F

NA = C
A = $77.80/1
A = $77.80 per Parcel

Annexation S7-G (Zone 1) - CUP 541 APN 0174-261-15

The one parcel in Annexation S7-G will receive the entire benefit assessment. The calculations for the assessments are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S7-G

NA = C
A = $155.60/1
A = $155.60 per Parcel

Annexation S7-H (Zone 2) - Tract 14790-1 APN 0176-521-01 thru -13, -18 thru -23, -27 thru -32, APN 0176-531-01, 02, 03, 07, 08, 09, 12, 13, 18, 20, 21, 22, 24, 25, 26

The forty parcels in Annexation S7-H will receive an equal benefit assessment.

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S7-H

NA = C
A = $1,660.00/40
A = $41.50 per Parcel

Annexation S8-A (Zone 3) - CUP 584 APN 0172-121-03

The one parcel in Annexation S8-A will receive the entire benefit assessment. The calculations for the assessment are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S8-A

NA = C
A = $20.05/1
A = $20.05 per Parcel

Annexation S8-B (Zone 3) - CRA 666 APN 0292-158-17

The one parcel in Annexation S8-B will receive the entire benefit assessment. The calculations for the assessments are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S8-B

NA = C
A = $40.10/1
A = $40.10 per Parcel

Annexation S8-C (Zone 3) - CRA 616

The portion of this property that was Annexation S8-C is no longer assessed.

Annexation S9-A (Zones 1 & 4) - Tract 15589 APN 0293-421-01 thru -45

The forty-five parcels in Annexation S9-A will receive an equal benefit assessment.

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S9-A

NA = C
A = $202.40/45
A = $4.50 per Parcel

Annexation S9-B (Zone 1) - MS 221, Parcel Map 14285 APN 0174-281-33, 34, 35, 37

The four parcels in Annexation S9-B will receive an equal benefit assessment. The calculation for the assessment follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S9-B

NA = C
A = $58.35/4
A = $14.59 per Parcel

Annexation S9-C – there is no Annexation S9-C

Annexation S9-D (Zone 3) - CUP 617 APN 0292-033-13

The one parcel in Annexation S9-D will receive the entire benefit assessment. The calculation for the assessment follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S9-D

NA= C
A = $80.20/1
A = $80.20 per Parcel

Annexation S9-E (Zone 1) - CRA 670 APN 0292-157-20

The one parcel in Annexation S9-E will receive the entire benefit assessment. The calculations for the assessments are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S9-E

NA = C
A= $19.45/1
A = $19.45 per Parcel

Annexation S9-F (Zone 3) - CUP 629

The one parcel in Annexation S9-F will receive the entire benefit assessment. The calculations for the assessments are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S9-F

NA = C
A = $100.25/1
A = $100.25 per Parcel

Annexation S10-A (Zones 1 & 3) - Tract 15040 APN 0174-631-01 thru -09, -11 thru -35, -37 thru -58, -63, -64

The fifty-eight parcels in Annexation S10-A will each receive an equal benefit assessment. The calculations for the assessments are as follows:

A = Assessment per Parcel
C = Cost of SCE UOB and Incidental Expenses
N =Number of Parcels in Annexation S10-A

NA = C
A = $1,461.15/58
A = $25.19 per Parcel

Annexation S10-B (Zones 1 & 4) - Tract 15832 APN 0172-301-18 thru 22, 26

The six parcels in Annexation S10-B will each receive an equal benefit assessment. The calculations for the assessments are as follows:

A = Assessment per Parcel
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S10-B

NA = C
A = $140.89/6
A = $23.48 per Parcel

Annexation S10-C (Zones 1, 3 & 4) - TR 15937 APN 0168-731-01 thru -25, APN 0168-741-01 thru -78, APN 0168-751-01 thru -56

The one hundred fifty-nine parcels in Annexation S10-C will each receive an equal benefit assessment. The calculations for the assessments are as follows:

A = Assessment per Parcel
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S10-C

NA = C
A = $2,722.64 /159
A = $17.12 per Parcel

Annexation S10-D (Zone 1) - Tract 16015 APN 1212-021-01 thru -62
The sixty-two parcels in Annexation S10-D will each receive an equal benefit assessment. The calculations for the assessments are as follows:

A = Assessment per Parcel
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S10-D

NA = C
A = $1,050.30/62
A = $16.94 per Parcel

Annexation S10-E (Zones 1 & 3) - Tract 16029 APN 0167-081-13 thru -45

The thirty-three parcels in Annexation S10-E will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessments are as follows:

A = Assessment per Parcel
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels

NA = C
A = $453.95/33
A = $13.76 per Parcel

Annexation S10-F (Zones 1 & 4) - Tract 16032 APN 0170-481-20 thru -34

The fifteen parcels in Annexation S10-F will each receive an equal benefit assessment. The calculations for the assessments are as follows:

A = Assessment per Parcel
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S10-F

NA = C
A = $259.17 /15
A = $17.28 per Parcel

Annexation S10-G (Zone 1) - Tract 16082 APN 0172-091-24 thru 36

The thirteen parcels in Annexation S1O-G will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessments are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S10-G

NA = C
A= $350.10/13
A = $26.93 per Parcel

Annexation S10-H (Zones 1 & 4) - Tract 16101 APN 0168-771-01 thru -50, APN 0168-781-01 thru -34, APN 0168-791-01 thru -28, APN 0168-801-01 thru -38

The one hundred fifty parcels in Annexation S10-H will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessments are as follows:

A = Assessment per Parcel
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S10-H

NA = C
A = $2,289.87/150
A = $15.27 per Parcel

Annexation S10-I (Zones 1 & 4) - MS 253 (PM 15530) and MS 255 (PM 15617)
APN 0292-153-28, -30 thru -43

The fifteen parcels in Annexation S10-I will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessments are as follows:

A = Assessment/Parcel
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S10-I

NA=C
A = $435.80/22
A = $19.81 per UOB

Assessment for each Parcel in PM 15530 (except Parcel 2):
APN 0292-153-28, 30 thru 41

Parcel 1	-	3 UOB	=	$59.43
Parcel 3	-	1 UOB	=	$19.81
Parcel 4	-	3 UOB	=	$59.43
Parcel 5	-	1 UOB	=	$19.81
Parcel 6	-	1 UOB	=	$19.81
Parcel 7	-	1 UOB	=	$19.81
Parcel 8	-	1 UOB	=	$19.81
Parcel 9	-	1 UOB	=	$19.81
Parcel 10	-	1 UOB	=	$19.81
Parcel 11	-	1 UOB	=	$19.81
Parcel 12	-	4 UOB	=	$79.24
Parcel 13	-	1 UOB	=	$19.81
Parcel 14	-	1 UOB	=	$19.81

Assessment for each Parcel in PM 15530:
APN 0292-153-42, 43

Parcel 1	-	1 UOB	=	$19.81
Parcel 3	-	1 UOB	=	$19.81

Annexation S10-J (Zone 4) - MS 252 (PM 15492) APN 0169-011-32 thru -35, -38, -39

The original five parcels in Annexation S10-J will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessments are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels in Annexation S10-J

NA = C
A = $147.21/5
A = $29.44 per Parcel for APN -32 thru -35

APN 0169-011-36 was split into APN 0169-011-38 and -39.
Therefore, A = $14.72 per Parcel for APN -38 and -39

Annexation S10-K (Zones 1 & 4) - CRA 720, PM 17658, APN 0292-154-22 thru -25

The four parcels in Annexation S7-K will receive one UOB assessment for 100 feet of parcel frontage in accordance with this report. The calculations for the assessments are as follows:

A = Assessment
C = Cost of SCE UOB and Incidental Expenses
N = Number of UOB

NA = C
A = $139.31/7
A = $19.45 per UOB (Zone 1)
A = $21.03 per UOB (Zone 4)

Assessment for each parcel:

Parcel 1	-	Zone 1 - 2 UOB / Zone 4 - 2 UOB	= $80.96
Parcel 2	-	Zone 1 - 1 UOB	= $19.45
Parcel 3	-	Zone 1 - 1 UOB	= $19.45
Parcel 4	-	Zone 1 - 1 UOB	= $19.45

Annexation S10-L – there is no Annexation S10-L

Annexation S10-M (Zone 1) - CRA 679 - APN 0292-310-42

The one parcel will receive entire benefit assessment. The calculations for the assessments are as follows:

A = Assessment per Parcel
C = Cost of SCE UOB and incidental Expenses
N = Number of Parcels

NA = C
A = $19.45/1
A = $19.45 per Parcel

Annexation S10-N (Zone 3) - CUP 35R2 - APN 0173-251-21

The one parcel will receive entire benefit assessment. The calculations for the assessments are as follows:

A =Assessment per Parcel
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels

NA = C
A = $60.15/1
A = $60.15 per Parcel

Annexation S10-O (Zone 3) - CUP 355 Rev. 8 - APN 0172-121-10, 11, 14

The three parcels will receive an equal benefit assessment. The calculations for the assessments are as follows:

A = Assessment per Parcel
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels

NA = C
A = $80.20/3
A = $26.73 per Parcel

Annexation S10-P (Zone 3) - CUP 543 - APN 0171-431-05

The one parcel will receive entire benefit assessment. The calculations for the assessments are as follows:

A = Assessment per Parcel
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels

NA = C
A = $120.30/1
A = $120.30 per Parcel

Annexation S10-Q (Zones 1 & 2) - MS 234 (PM 14891) - APN 0169·272-29, APN 0169-281-45, 46

The three parcels will receive one UOB per 100 feet of parcel frontage in accordance with this report. The calculations for the assessments are as follows:

A = Assessment per UOB
C = Cost of operation and maintenance to be assessed
N = Number of UOB

NA = C
A = $196.38/12
A = $16.37 per UOB

Assessment for Each Parcel

Parcel 29	-	4 UOB	=	$65.48
Parcel 45	-	6 UOB	=	$98.22
Parcel 46	-	2 UOB	=	$32.74

Annexation S10-R (Zone 3) - MS 251 (PM 15414) APN 0176-014-16, 17

The two parcels will receive an equal benefit assessment. The calculations for the assessments are as follows:

A = Assessment per Parcel
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels

NA = C
A = $60.15/2
A = $30.08 per Parcel

Annexation S10-S (Zones 1 & 3) - Tract 14790-2 APN 0294-181-02 thru -15, APN 0294-191-01 thru -04, -06 thru -12, -16 thru -20, APN 0294-201-09, -11, -13, -15, -19, -21, -27, -28, APN 0294-211-02 thru -04, -06 thru -10, -12, -13

The forty-eight parcels in Annexation S10-S will each receive an equal benefit assessment. The calculations for the assessments are as follows:

A = Assessment per Parcel
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels

NA = C
A = $2,378.05/48
A = $49.54 per Parcel

Annexation S10-T (Zones 1 & 3) - Tract 14790-3 APN 0294-222-01 thru -12, APN 0294-232-01 thru -07, APN 0294-242-01 thru -06, APN 0294-252-01 thru -13, APN 0294-262-01 thru -13

The fifty-one parcels in Annexation S10-T will each receive an equal benefit assessment. The calculations for the assessments are as follows:

A = Assessment per Parcel
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels

NA = C
A = $1,842.70/51
A = $36.13 per Parcel

Annexation S10-U (Zones 1, 3 & 4) - Tract 15532 APN 0168-271-13 thru -48

The thirty-six parcels in Annexation S10-U will each receive an equal benefit assessment. The calculations for the assessments are as follows:

A = Assessment per Parcel
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels

NA = C
A = $515.40/36
A = $14.32 per Parcel

Annexation S10-V (Zone 1) - CUP 652 - APN 0171-011-67

The one parcel will receive entire benefit assessment. The calculations for the assessments are as follows:

A = Assessment per Parcel
C = Cost of SCE UOB and Incidental Expenses
N = Number of Parcels

NA = C
A = $19.45/1
A = $19.45 per Parcel

APN 0171-011-54 was the original Annexation 10-V. That parcel was merged with the parcel immediately to the east (APN 0171-011-45). The new parcel was assigned APN 0171-011-67.

Annexation S10-W (Zone 1) - MS 240 (PM 14912) - APN 0292-201-22

The one parcel will receive the entire benefit assessment. The calculations for the assessments are as follows:

A = Assessment per Parcel
C = Cost of Incidental Expenses
N = Number of Parcels

NA = C
A = $19.45/1
A = $19.45 per Parcel

This parcel has been subdivided and is not assessed.

* * * * * * * * * * * *

The City Council will hold a public meeting on June 16, 2026 to determine the assessments based upon the costs for FY 2026-2027 which are anticipated to be incurred by the City and which are to be recovered through assessments as required by the Landscaping and Lighting District Act of 1972.

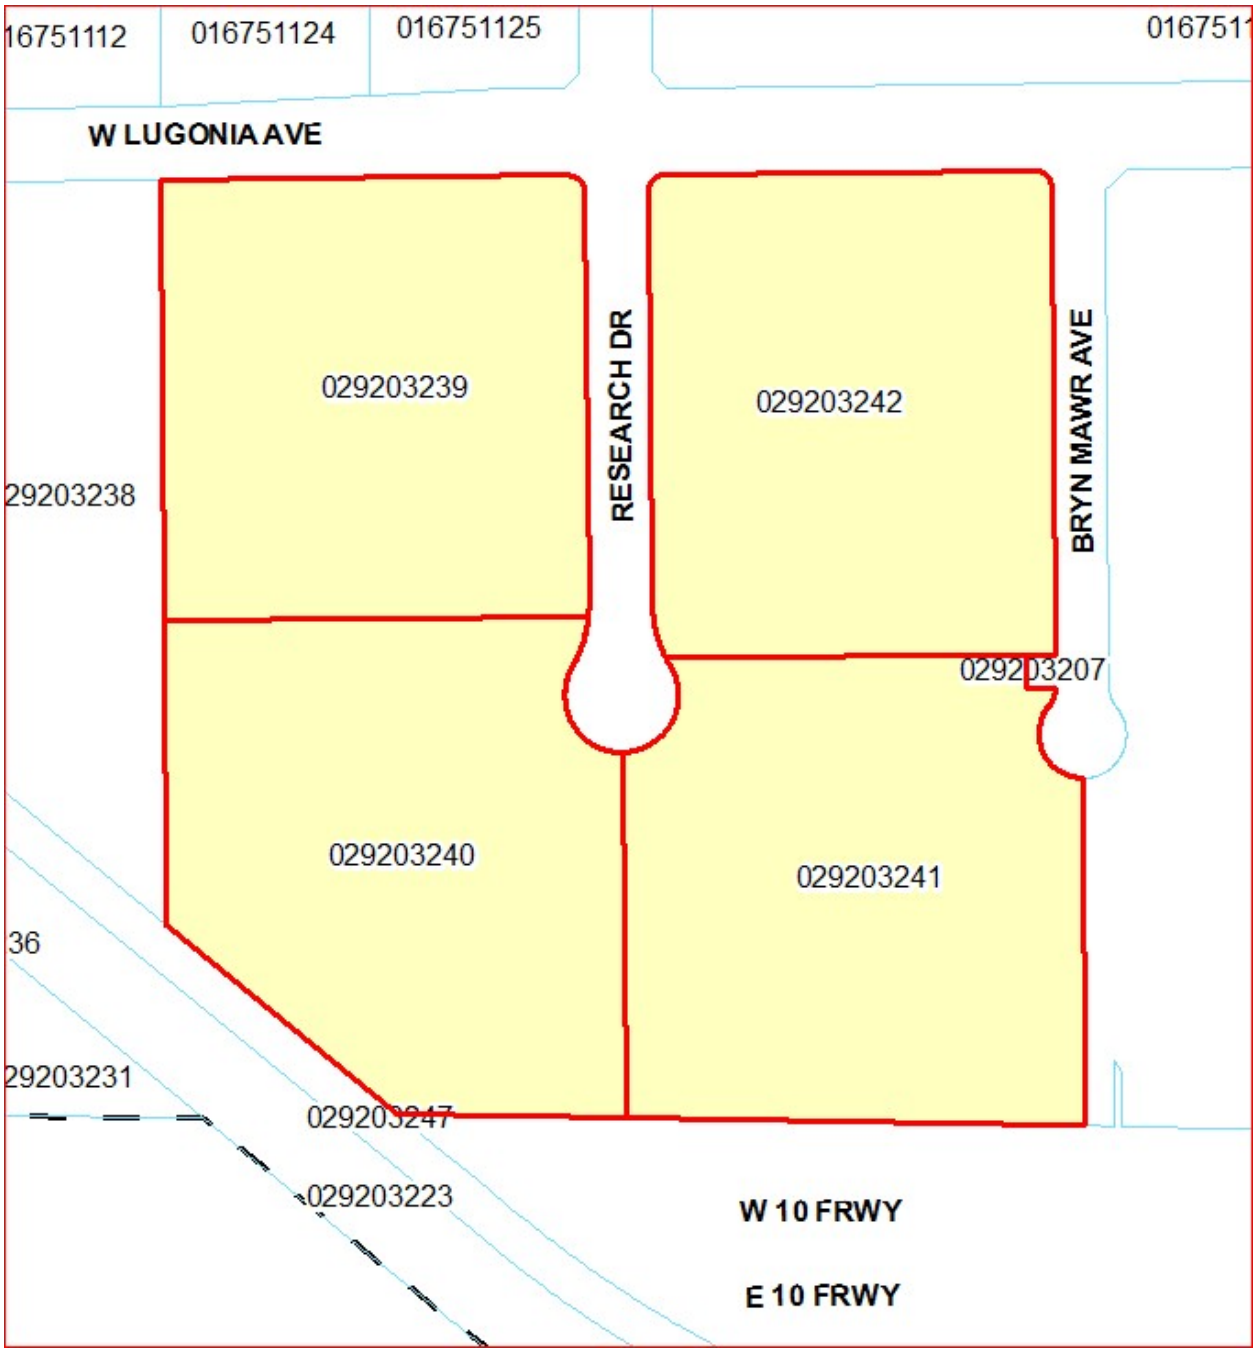
General comments

Each annexation has its own diagram.

North is up unless notated otherwise.

The assessor's parcel numbers are shown as a 9 digit number.



A dark red line delineates the boundary of each annexation.

A shaded background is typically used to indicate parcels within the Street Lighting District.

RESOLUTIONS

Resolution No. 8769 – Institute proceedings and appointment of engineer

Resolution No. 8770 – Preliminary approval of engineer's report

Resolution No. 8771 – Declaring intention to levy assessments

Resolution No. 8772 – Confirming assessments

This page intentionally left blank

RESOLUTION NO. 8434

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS INSTITUTING PROCEEDINGS FOR THE CONTINUED LEVY OF ASSESSMENTS, APPOINTING AN ASSESSMENT ENGINEER, AND ORDERING THE PREPARATION OF AN ENGINEER'S REPORT IN THE MATTER OF STREET LIGHTING DISTRICT NO. 1 AND LANDSCAPE MAINTENANCE DISTRICT NO. 1

WHEREAS, the City Council of the City of Redlands (this "City Council") has determined that the public interest, convenience and necessity requires the installation, operation and maintenance of a street lighting system and other facilities as set forth in Section 22525 of the California Streets and Highways Code; and

WHEREAS, it has been determined by the City Council of the City of Redlands (this "City Council"), that the public interest, convenience and necessity requires the maintenance of landscaping as set forth in Section 22525 of the California Streets and Highways Code; and

WHEREAS, this City Council has formed Redlands' Street Lighting District No. 1 to pay the costs associated with the installation, operation and maintenance of such street lighting system and other facilities; and

WHEREAS, this City Council has formed Redlands' Landscape Maintenance District No. 1 to pay the costs for the maintenance such landscaping; and

WHEREAS, it is the desire of this City Council to initiate proceedings and order the preparation of an engineer's report to levy assessments for fiscal year 2023-2024 upon properties located within Street Lighting District No. 1 and Landscape Maintenance District No. 1; and

WHEREAS, this City Council further desires to appoint Redlands' City Engineer, Goutam Dobey, RCE No. 75646, as the "Assessment Engineer" for Street Lighting District No. 1 and Landscape Maintenance District No. 1;

NOW, THEREFORE, the City Council of the City of Redlands does hereby find, determine and resolve as follows:

Section 1. That the public interest, convenience and necessity requires the continued levy of assessments within Street Lighting District No. 1 for the purpose of installing, operating and maintaining street lights and associated facilities as authorized by Section 22620 of the California Streets and Highways Code and in compliance with Article XIIID, and Section 19 of Article XVI, of the California Constitution.

Section 2. That the public interest, convenience and necessity requires the continued levy of assessments within Landscape Maintenance District No. 1 for the purpose of maintaining landscaping and improvements as authorized by Section 22620 of the California Streets and

Highways Code and in compliance with the requirements of Article XIIID and Section 19 of Article XVI of the California Constitution.

Section 3. That the properties to be assessed for the installation, operation and maintenance of the street lighting facilities shall be those properties located within the boundaries of Street Lighting District No. 1.

Section 4. That the properties to be assessed for the maintenance and operation of the landscaping and improvements shall be those properties located within the boundaries of Landscape Maintenance District No. 1.

Section 5. That the proceedings for the continued levy of assessments within Street Lighting District No. 1 and Landscape Maintenance District No. 1 shall be conducted in accordance the with provisions of Division 15 of the California Streets and Highways Code (the Landscaping and Lighting Act of 1972) and in compliance with the requirements of Article XIIID, and Section 19 of Article XVI, of the California Constitution.

Section 6. That Redlands' City Engineer, Goutam Dobey, RCE No. 75646, having an office located at 35 Cajon Street, Suite 15A, Redlands, California, is hereby appointed "Assessment Engineer" and shall have the authority conferred upon the Assessment Engineer by the Landscaping and Lighting Act of 1972.

Section 7. That the Assessment Engineer is hereby ordered to prepare a report in accordance with the Landscaping and Lighting Act of 1972.

ADOPTED, SIGNED AND APPROVED this 2nd day of May, 2023.

RESOLUTION NO. 8435

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS GIVING PRELIMINARY APPROVAL OF THE ENGINEER'S REPORTS FOR FISCAL YEAR 2023-2024 FOR STREET LIGHTING DISTRICT NO. 1 AND LANDSCAPE MAINTENANCE DISTRICT NO. 1

WHEREAS, the City Council of the City of Redlands (the "City Council") has heretofore determined that the public interest, convenience and necessity require the maintenance and operation of street lighting and appurtenant facilities, as set forth in Section 22525 of the Streets and Highways Code, within the incorporated boundaries of the City of Redlands; and

WHEREAS, the City Council has heretofore determined that the public interest, convenience and necessity require the maintenance of landscape and irrigation facilities set forth in Section 22525 of the Streets and Highways Code, State of California, within the incorporated boundaries of the City of Redlands; and

WHEREAS, Goutam Dobey, City of Redlands' City Engineer, 35 Cajon Street, Suite 15A, Redlands, California, has been appointed "Assessment Engineer" with all provisions of Part 2 of Division 15 of the Streets and Highways Code applicable to the Engineer being applied to the "Assessment Engineer;" and

WHEREAS, Sections 22622 and 22623 of the Streets and Highways Code require that an Engineer's Report be prepared and filed annually, specifying the assessments to be levied against the benefitting properties within the City's Street Lighting District No. 1 and Landscape Maintenance District No. 1; and

WHEREAS, the City of Redlands City Engineer, as the Assessment Engineer, has prepared and filed with the City Clerk reports in writing as required by the Landscaping and Lighting Act of 1972 and in compliance with Article XIIID of the California Constitution; and

WHEREAS, the City Council has duly considered said reports and each and every part thereof; and finds that each and every part of said reports is sufficient, and that no part of said reports requires modification in any respect;

NOW, THEREFORE, be it resolved by the City Council of the City of Redlands as follows:

Section 1. That the Engineer's estimate of the itemized costs and expenses of said work and of the incidental expenses in connection therewith, contained in said reports be, and each of them are hereby, preliminarily approved and confirmed.

Section 2. That the diagram showing the Street Lighting District No. 1 and Landscape Maintenance District No. 1 referred to and described in said reports, and the boundaries of the lots and parcels of land within such assessment district as the same existed at the time of passage of this resolution, are hereby preliminarily approved and confirmed.

Section 3. That the proposed assessment upon the properties in Street Lighting District No. 1 and Landscape Maintenance District No. 1, in proportion to the estimated benefit to be received by such properties, respectively, from said work and of the incidental expenses thereof, as contained in said report is hereby preliminarily approved and confirmed.

Section 4. That said reports shall stand as the Engineer's Report for the purposes of all subsequent proceedings for Street Lighting District No. 1 and Landscape Maintenance District No. 1.

APPROVED AND ADOPTED this 6th day of June, 2023.

RESOLUTION NO. 8436

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS DECLARING ITS INTENTION TO LEVY AND COLLECT ASSESSMENTS WITHIN REDLANDS' STREET LIGHTING ASSESSMENT DISTRICT NO. 1 AND LANDSCAPE ASSESSMENT DISTRICT NO. 1 FOR FISCAL YEAR 2023-2024 PURSUANT TO THE LANDSCAPING AND LIGHTING ACT OF 1972, AND ESTABLISHING A TIME AND PLACE FOR PUBLIC HEARINGS FOR THE TWO DISTRICTS TO CONSIDER PROTESTS

BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF REDLANDS AS FOLLOWS:

Section 1. The City Council of the City of Redlands hereby (1) finds that the public interest and convenience requires, and (2) declares its intention to levy and collect, assessments against the lots and parcels of property within an existing assessment districts designated "Redlands' Street Lighting Assessment District No. 1 and Landscape Assessment District No. 1" (the "Districts") pursuant to the provisions of the Landscaping and Lighting Act of 1972, Part 2 of Division 15 of the Streets and Highways Code (commencing with Section 22500) (the "Act") for fiscal year 2023-2024, commencing July 1, 2023, and ending June 30, 2024, to pay for the costs and expenses of the improvements described in Section 3 hereof.

Section 2. Reference is hereby made to a map on file in the office of the City Clerk and open for public inspection for a description of the exterior boundaries of the Districts.

Section 3. The proposed improvements are briefly described as follows: The operation, maintenance and servicing of public within the District, including the operation, maintenance and servicing of public lighting facilities and landscaping, including safety lighting, traffic signals, trees, shrubs, grass and other ornamental vegetation, and appurtenant facilities, located along public roadways, streets and rights-of-way within the boundaries of the Districts. "Maintenance" means the furnishing of services and materials for the ordinary and usual maintenance, operation and servicing of the public lighting and landscaping facilities, and appurtenant facilities, including repair, removal or replacement of all or part of any of the public lighting and landscaping facilities, or appurtenant facilities. "Servicing" means the maintenance of any of the public lighting and landscaping facilities or appurtenant facilities, including the furnishing of electric current, energy or gas for the operation of any of the lighting facilities and the furnishing of water for the irrigation of any of the landscaping facilities.

Section 4. The assessments to be levied and collected against the assessable lots and parcels of property within the Districts for fiscal year 2023-2024 are not proposed to increase from the assessments levied and collected for fiscal year 1997-1998.

Section 5. Public property owned by any public agency and in use in the performance of a public function which is included within the boundaries of the Districts shall not be subject to assessment to be made under these proceedings to cover any of the costs and expenses of the improvements.

Section 6. All railroad, gas, water and electric utility rights-of-way are included within the Districts and shall be assessed in accordance with the benefits received from the improvements.

Section 7. Reference is hereby made to the Reports of the Engineer entitled "City of Redlands Street Lighting District No. 1 Engineer's Report for Fiscal Year 2023-2024" and "City of Redlands Landscape Maintenance District No. 1 Engineer's Report for Fiscal Year 2023-2024" on file in the office of the City Clerk for a full and detailed description of the improvements, the boundaries of the District and any zones therein and the proposed assessments upon assessable lots and parcels of land within the District.

Section 8. NOTICE IS HEREBY GIVEN THAT THE CITY COUNCIL APPOINTS TUESDAY, THE 20TH DAY OF JUNE, 2023, AT THE HOUR OF 6:00 P.M., OR AS SOON THEREAFTER AS THE MATTER MAY BE HEARD, IN THE COUNCIL CHAMBERS AT CITY HALL, CITY OF REDLANDS, 35 CAJON STREET, SUITE 2, REDLANDS, CALIFORNIA 92373, AS THE TIME AND PLACE FOR TWO PUBLIC HEARINGS TO CONSIDER PROTESTS OR OBJECTIONS TO THE LEVY OF THE PROPOSED ASSESSMENTS IN CONNECTION WITH THE DISTRICTS. All interested persons shall be afforded the opportunity to hear and be heard. Any interested person may file a written protest with the City Clerk prior to the conclusion of the hearing. A written protest shall state all grounds of objection. A protest by a property owner shall contain a description sufficient to identify the property owned by the signer thereof. The City Council shall consider all oral statements and all written protests made or filed by any interested person.

Section 9. The City Clerk is hereby authorized and directed to give notice of such hearing in accordance with law.

Section 10. The City Council hereby determines and declares that the proposed assessments constitute a continuation of assessments existing on the effective date of Article XIIID, that the assessments are imposed exclusively to finance the maintenance and operation expenses for streets and that the assessments are exempt from the requirements of Article XIIID, Section 4 of the California Constitution.

Section 11. The City Council hereby designates Goutam Dobey, City Engineer, telephone number (909) 798-7584 x2, to answer inquiries regarding the hearing, protest proceedings and procedural or technical matters.

RESOLUTION NO. 8437

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS CONFIRMING A DIAGRAM AND ASSESSMENT FOR THE 2023-2024 FISCAL YEAR IN CONNECTION WITH LANDSCAPE MAINTENANCE DISTRICT NO. 1 PURSUANT TO THE LANDSCAPING AND LIGHTING ACT OF 1972, PART 2 OF DIVISION 15 OF THE CALIFORNIA STREETS AND HIGHWAYS CODE

BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF REDLANDS AS FOLLOWS:

Section 1. Pursuant to its adoption of a prior resolution, the City Council of the City of Redlands initiated proceedings and declared its intention to levy an assessment against the assessable lots and parcels of property within an existing assessment district designated "Landscape Maintenance District No 1" (the District) pursuant to the provisions of the Landscaping and Lighting Act of 1972, Part 2 of Division 15 of the California Streets and Highways Code (commencing with Section 22500) (the "Act") for the fiscal year commencing July 1, 2023, and ending June 30, 2024, and ordered the City Engineer, Goutam Dobey, to prepare and file a written report in accordance with Article 4 of Chapter 1 of the Act. The City Council, by prior resolution, approved such Engineer's Report.

Section 2. Following notice duly given in accordance with law, this City Council has held a full and fair public hearing regarding the Engineer's Report and the levy and collection of the proposed assessment within the District for fiscal year 2023-2024 to pay for the costs and expenses of the improvements described in the Engineer's Report pursuant to the terms and provisions of the Act. All interested persons were afforded the opportunity to hear, and be heard regarding, protests and objections to the levy and collection of the proposed assessment against lots or parcels of property within the District. The City Council considered all oral and written statements, protests and communications made or filed by interested persons.

Section 3. Based upon its review of the Engineer's Report and other reports and information, this City Council hereby finds and determines that (i) the land within the District will be benefited by the improvements described in the Engineer's Report (ii) the District includes all of the lands so benefited, and (iii) the net amount to be assessed upon the lands with the District for the 2023-2024 fiscal year in accordance with the Engineer's Report is apportioned by a formula and method which fairly distributes the net amount among all assessable lots or parcels in proportion to the estimated benefits to be received by each such lot or parcel from the improvements. Any and all oral and written protests and objections are hereby overruled by the City Council.

Section 4. The City Council declares that the diagram and assessment in the Engineer's Report are hereby confirmed as filed.

Section 5. The City Council hereby orders the improvements described in the Engineer's Report to be made.

Section 6. The assessment is in compliance with the provisions of the Act and the City Council has complied with all law pertaining to the levy of an annual assessment pursuant to the Act.

Section 7. The assessments to be levied and collected against the assessable lots and parcels of property within the District for fiscal year 2023-2024 are not proposed to increase from the assessment levied and collected for fiscal year 1997-1998.

Section 8. The assessment is levied without regard to property valuation.

Section 9. Public property owned by any public agency and in use in the performance of a public function which is included within the boundaries of the District shall not be subject to assessment to be made under these proceedings to pay for any of the costs and expenses of the improvements.

Section 10. The assessment is levied for the purpose of paying the costs and expenses of the improvements described in the Engineer's Report for fiscal year 2023-2024.

Section 11. The improvements described in the Engineer's Report shall be performed pursuant to law.

Section 12. The County Auditor of San Bernardino County shall enter on the County Assessment Roll opposite each lot or parcel of land the amount of the assessment and such assessments shall then be collected at the same time and in the same manner as the County taxes collected. After collection by the County, the net amount of the assessments shall be paid to the City Treasurer.

Section 13. The City Treasurer shall deposit all moneys representing assessments collected by the County to the credit of a special fund for Landscape Maintenance District No. 1.

Section 14. The adoption of this Resolution constitutes the levy of an assessment against the lots and parcels of land in the District for the fiscal year commencing July 1, 2023, and ending June 30, 2024.

Section 15. The City Clerk is hereby authorized and directed to file the diagram and assessment, or a certified copy of the diagram and assessment, with the County Auditor, together with a certified copy of this Resolution upon its adoption.

Section 16. A certified copy of the assessment and diagram shall be filed in the City's Municipal Utilities and Engineering Department, with a duplicate copy on file in the office of the City Clerk and open for public inspection.

ADOPTED, SIGNED AND APPROVED this 20th day of June, 2023.

RESOLUTION NO. 8769

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS INSTITUTING PROCEEDINGS FOR THE CONTINUED LEVY OF ASSESSMENTS, APPOINTING AN ASSESSMENT ENGINEER, AND ORDERING THE PREPARATION OF AN ENGINEER'S REPORT IN THE MATTER OF STREET LIGHTING DISTRICT NO. 1 AND LANDSCAPE MAINTENANCE DISTRICT NO. 1

WHEREAS, the City Council of the City of Redlands (this "City Council") has determined that the public interest, convenience and necessity requires the installation, operation and maintenance of a street lighting system and other facilities as set forth in Section 22525 of the California Streets and Highways Code; and

WHEREAS, it has been determined by the City Council of the City of Redlands (this "City Council"), that the public interest, convenience and necessity requires the maintenance of landscaping as set forth in Section 22525 of the California Streets and Highways Code; and

WHEREAS, this City Council has formed Redlands' Street Lighting District No. 1 to pay the costs associated with the installation, operation and maintenance of such street lighting system and other facilities; and

WHEREAS, this City Council has formed Redlands' Landscape Maintenance District No. 1 to pay the costs for the maintenance such landscaping; and

WHEREAS, it is the desire of this City Council to initiate proceedings and order the preparation of an engineer's report to levy assessments for fiscal year 2026-2027 upon properties located within Street Lighting District No. 1 and Landscape Maintenance District No. 1; and

WHEREAS, this City Council further desires to appoint Donald Young, RCE No. 49918, One Stop Permit Center Manager, as the "Assessment Engineer" for Street Lighting District No. 1 and Landscape Maintenance District No. 1;

NOW, THEREFORE, the City Council of the City of Redlands does hereby find, determine and resolve as follows:

Section 1. That the public interest, convenience and necessity requires the continued levy of assessments within Street Lighting District No. 1 for the purpose of installing, operating and maintaining street lights and associated facilities as authorized by Section 22620 of the California Streets and Highways Code and in compliance with Article XIIID, and Section 19 of Article XVI, of the California Constitution.

Section 2. That the public interest, convenience and necessity requires the continued levy of assessments within Landscape Maintenance District No. 1 for the purpose of maintaining landscaping and improvements as authorized by Section 22620 of the California Streets and

Highways Code and in compliance with the requirements of Article XIIID and Section 19 of Article XVI of the California Constitution.

Section 3. That the properties to be assessed for the installation, operation and maintenance of the street lighting facilities shall be those properties located within the boundaries of Street Lighting District No. 1.

Section 4. That the properties to be assessed for the maintenance and operation of the landscaping and improvements shall be those properties located within the boundaries of Landscape Maintenance District No. 1.

Section 5. That the proceedings for the continued levy of assessments within Street Lighting District No. 1 and Landscape Maintenance District No. 1 shall be conducted in accordance the with provisions of Division 15 of the California Streets and Highways Code (the Landscaping and Lighting Act of 1972) and in compliance with the requirements of Article XIIID, and Section 19 of Article XVI, of the California Constitution.

Section 6. That Donald Young, RCE No. 49918, One Stop Permit Center Manager, having an office located at 35 Cajon Street, Suite 15A, Redlands, California, is hereby appointed "Assessment Engineer" and shall have the authority conferred upon the Assessment Engineer by the Landscaping and Lighting Act of 1972.

Section 7. That the Assessment Engineer is hereby ordered to prepare a report in accordance with the Landscaping and Lighting Act of 1972.

ADOPTED, SIGNED AND APPROVED this 5th day of May, 2026.

RESOLUTION NO. 8770

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS GIVING PRELIMINARY APPROVAL OF THE ENGINEER'S REPORTS FOR FISCAL YEAR 2026-2027 FOR STREET LIGHTING DISTRICT NO. 1 AND LANDSCAPE MAINTENANCE DISTRICT NO. 1

WHEREAS, the City Council of the City of Redlands (the "City Council") has heretofore determined that the public interest, convenience and necessity require the maintenance and operation of street lighting and appurtenant facilities, as set forth in Section 22525 of the Streets and Highways Code, within the incorporated boundaries of the City of Redlands; and

WHEREAS, the City Council has heretofore determined that the public interest, convenience and necessity require the maintenance of landscape and irrigation facilities set forth in Section 22525 of the Streets and Highways Code, State of California, within the incorporated boundaries of the City of Redlands; and

WHEREAS, Donald Young, One Stop Permit Center Manager, 35 Cajon Street, Suite 15A, Redlands, California, has been appointed "Assessment Engineer" with all provisions of Part 2 of Division 15 of the Streets and Highways Code applicable to the Engineer being applied to the "Assessment Engineer;" and

WHEREAS, Sections 22622 and 22623 of the Streets and Highways Code require that an Engineer's Report be prepared and filed annually, specifying the assessments to be levied against the benefitting properties within the City's Street Lighting District No. 1 and Landscape Maintenance District No. 1; and

WHEREAS, the Assessment Engineer has prepared and filed with the City Clerk reports in writing as required by the Landscaping and Lighting Act of 1972 and in compliance with Article XIIID of the California Constitution; and

WHEREAS, the City Council has duly considered said reports and each and every part thereof; and finds that each and every part of said reports is sufficient, and that no part of said reports requires modification in any respect;

NOW, THEREFORE, be it resolved by the City Council of the City of Redlands as follows:

Section 1. That the Engineer's estimate of the itemized costs and expenses of said work and of the incidental expenses in connection therewith, contained in said reports be, and each of them are hereby, preliminarily approved and confirmed.

Section 2. That the diagrams showing the Street Lighting District No. 1 and Landscape Maintenance District No. 1, referred to and described in said reports, and the boundaries of the lots and parcels of land within such assessment district as the same existed at the time of passage of this resolution, are hereby preliminarily approved and confirmed.

Section 3. That the proposed assessment upon the properties in Street Lighting District No. 1 and Landscape Maintenance District No. 1, in proportion to the estimated benefit to be received by such properties, respectively, from said work and of the incidental expenses thereof, as contained in said report is hereby preliminarily approved and confirmed.

Section 4. That said reports shall stand as the Engineer's Report for the purposes of all subsequent proceedings for Street Lighting District No. 1 and Landscape Maintenance District No. 1.

APPROVED AND ADOPTED this 2nd day of June, 2026.

RESOLUTION NO. 8771

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS DECLARING ITS INTENTION TO LEVY AND COLLECT ASSESSMENTS WITHIN REDLANDS' STREET LIGHTING ASSESSMENT DISTRICT NO. 1 AND LANDSCAPE ASSESSMENT DISTRICT NO. 1 FOR FISCAL YEAR 2025-2026 PURSUANT TO THE LANDSCAPING AND LIGHTING ACT OF 1972, AND ESTABLISHING A TIME AND PLACE FOR PUBLIC HEARINGS FOR THE TWO DISTRICTS TO CONSIDER PROTESTS

BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF REDLANDS AS FOLLOWS:

Section 1. The City Council of the City of Redlands hereby (1) finds that the public interest and convenience requires, and (2) declares its intention to levy and collect, assessments against the lots and parcels of property within an existing assessment districts designated "Redlands' Street Lighting Assessment District No. 1 and Landscape Assessment District No. 1" (the "Districts") pursuant to the provisions of the Landscaping and Lighting Act of 1972, Part 2 of Division 15 of the Streets and Highways Code (commencing with Section 22500) (the "Act") for fiscal year 2026-2027, commencing July 1, 2026, and ending June 30, 2027, to pay for the costs and expenses of the improvements described in Section 3 hereof.

Section 2. Reference is hereby made to a map on file in the office of the City Clerk and open for public inspection for a description of the exterior boundaries of the Districts.

Section 3. The proposed improvements are briefly described as follows: The operation, maintenance and servicing of public within the District, including the operation, maintenance and servicing of public lighting facilities and landscaping, including safety lighting, traffic signals, trees, shrubs, grass and other ornamental vegetation, and appurtenant facilities, located along public roadways, streets and rights-of-way within the boundaries of the Districts. "Maintenance" means the furnishing of services and materials for the ordinary and usual maintenance, operation and servicing of the public lighting and landscaping facilities, and appurtenant facilities, including repair, removal or replacement of all or part of any of the public lighting and landscaping facilities, or appurtenant facilities. "Servicing" means the maintenance of any of the public lighting and landscaping facilities or appurtenant facilities, including the furnishing of electric current, energy or gas for the operation of any of the lighting facilities and the furnishing of water for the irrigation of any of the landscaping facilities.

Section 4. The assessments to be levied and collected against the assessable lots and parcels of property within the Districts for fiscal year 2026-2027 are not proposed to increase from the assessments levied and collected for fiscal year 1997-1998.

Section 5. Public property owned by any public agency and in use in the performance of a public function which is included within the boundaries of the Districts shall not be subject to assessment to be made under these proceedings to cover any of the costs and expenses of the improvements.

Section 6. All railroad, gas, water and electric utility rights-of-way are included within the Districts and shall be assessed in accordance with the benefits received from the improvements.

Section 7. Reference is hereby made to the Reports of the Engineer entitled "City of Redlands Street Lighting District No. 1 Engineer's Report for Fiscal Year 2026-2027" and "City of Redlands Landscape Maintenance District No. 1 Engineer's Report for Fiscal Year 2026-2027" on file in the office of the City Clerk for a full and detailed description of the improvements, the boundaries of the District and any zones therein and the proposed assessments upon assessable lots and parcels of land within the District.

Section 8. NOTICE IS HEREBY GIVEN THAT THE CITY COUNCIL APPOINTS TUESDAY, THE 16TH DAY OF JUNE, 2026, AT THE HOUR OF 6:00 P.M., OR AS SOON THEREAFTER AS THE MATTER MAY BE HEARD, IN THE COUNCIL CHAMBERS AT CITY HALL, CITY OF REDLANDS, 35 CAJON STREET, SUITE 2, REDLANDS, CALIFORNIA 92373, AS THE TIME AND PLACE FOR TWO PUBLIC HEARINGS TO CONSIDER PROTESTS OR OBJECTIONS TO THE LEVY OF THE PROPOSED ASSESSMENTS IN CONNECTION WITH THE DISTRICTS. All interested persons shall be afforded the opportunity to hear and be heard. Any interested person may file a written protest with the City Clerk prior to the conclusion of the hearing. A written protest shall state all grounds of objection. A protest by a property owner shall contain a description sufficient to identify the property owned by the signer thereof. The City Council shall consider all oral statements and all written protests made or filed by any interested person.

Section 9. The City Clerk is hereby authorized and directed to give notice of such hearing in accordance with law.

Section 10. The City Council hereby determines and declares that the proposed assessments constitute a continuation of assessments existing on the effective date of Article XIIID, that the assessments are imposed exclusively to finance the maintenance and operation expenses for streets and that the assessments are exempt from the requirements of Article XIIID, Section 4 of the California Constitution.

Section 11. The City Council hereby designates Donald Young, One Stop Permit Center Manager, telephone number (909) 798-7585 x6, to answer inquiries regarding the hearing, protest proceedings and procedural or technical matters.

RESOLUTION NO. 8772

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS CONFIRMING A DIAGRAM AND ASSESSMENT FOR THE 2026-2027 FISCAL YEAR IN CONNECTION WITH STREET LIGHTING MAINTENANCE DISTRCT NO. 1 PURSUANT TO THE LANDSCAPING AND LIGHTING ACT OF 1972, PART 2 OF DIVISION 15 OF THE CALIFORNIA STREETS AND HIGHWAYS CODE

BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF REDLANDS AS FOLLOWS:

Section 1. Pursuant to its adoption of a prior resolution, the City Council of the City of Redlands initiated proceedings and declared its intention to levy an assessment against the assessable lots and parcels of property within an existing assessment district designated "Street Lighting Maintenance District No. 1" (the "District") pursuant to the provisions of the Landscaping and Lighting Act of 1972, Part 2 of Division 15 of the California Streets and Highways Code (commencing with Section 22500) (the "Act") for the fiscal year commencing July 1, 2026, and ending June 30, 2027, and ordered Donald Young, One Stop Permit Center Manager, to prepare and file a written report in accordance with Article 4 of Chapter 1 of the Act. This City Council, also by adoption of a prior resolution, approved such Engineer's Report.

Section 2. Following notice duly given in accordance with law, the City Council has held a full and fair public hearing regarding the Engineer's Report and the levy and collection of the proposed assessment within the District for fiscal year 2026-2027 to pay for the costs and expenses of the improvements described in the Engineer's Report pursuant to the terms and provisions of the Act. All interested persons were afforded the opportunity to hear, and be heard regarding, protests and objections to the levy and collection of the proposed assessment against lots or parcels of property within the District. The City Council considered all oral and written statements, protests and communications made or filed by interested persons.

Section 3. Based upon its review of the Engineer's Report and other reports and information, this City Council hereby finds and determines that (i) land within the District will be benefited by the improvements described in the Engineers Report (ii) the District includes all of the lands so benefited, and (iii) the net amount to be assessed upon the lands within the District for the 2023-2024 fiscal year in accordance with the Engineer's Report is apportioned by a formula and method which fairly distributes the net amount among all assessable lots or parcels in proportion to the estimated benefits to be received by each such lot or parcel from the improvements. Any and all oral and written protests and objections are hereby overruled by the City Council.

Section 4. The City Council declares that the diagram and assessment in the Engineer's Report are hereby confirmed as filed.

Section 5. The City Council hereby orders the improvements described in the Engineer's Report to be made.

Section 6. The assessment is in compliance with the provisions of the Act and the City Council has complied with all law pertaining to the levy of an annual assessment pursuant to the Act.

Section 7. The assessments to be levied and collected against the assessable lots and parcels of property within the District for fiscal year 2026-2027 are not proposed to increase from the assessment levied and collected for fiscal year 1997-1998.

Section 8. The assessment is levied without regard to property valuation.

Section 9. Public property owned by any public agency and in use in the performance of a public function which is included within the boundaries of the District shall not be subject to assessment to be made under these proceedings to pay for any of the costs and expenses of the improvements.

Section 10. The assessment is levied for the purpose of paying the costs and expenses of the improvements described in the Engineer's Report for fiscal year 2026-2027.

Section 11. The improvements described in the Engineer's Report shall be performed pursuant to law.

Section 12. The County Auditor of San Bernardino County shall enter on the County Assessment Roll opposite each lot or parcel of land the amount of the assessment and such assessments shall then be collected at the same time and in the same manner as the County taxes are collected. After collection by the County, the net amount of the assessments shall be paid to the City Treasurer.

Section 13. The City Treasurer shall deposit all monies representing assessments collected by the County to the credit of a special fund for Street Lighting Maintenance District No. 1.

Section 14. The adoption of this Resolution constitutes the levy of an assessment against the lots and parcels of land in the District for the fiscal year commencing July 1, 2026, and ending June 30, 2027.

Section 15. The City Clerk is hereby authorized and directed to file the diagram and assessment, or a certified copy of the diagram and assessment, with the County Auditor, together with a certified copy of this Resolution upon its adoption.

Section 16. A certified copy of the assessment and diagram shall be filed in the City's Facilities and Community Services Department, with a duplicate copy on file in the office of the City Clerk and open for public inspection.

ENGINEER'S REPORT AFFIDAVIT

Landscape Maintenance District No. 1

City of Redlands
San Bernardino County, State of California

This Report describes the Landscape Maintenance District No. 1 ("District") and services therein including the improvements, budgets, parcels and assessments to be levied for Fiscal Year 2026-2027 as they existed at the time of the passage of the Resolution of Intention. Reference is hereby made to the San Bernardino County Assessor's maps for a detailed description of the lines and dimensions of parcels within the District. The undersigned respectfully submits the enclosed Report as directed by the City Council.

Dated this 2nd day of June, 2026

I. AUTHORITY FOR REPORT

This report is prepared by order of the City Council of the City of Redlands, California (City). This report is in compliance with the requirements of Chapter 1, Article 4, and Chapter 3 of Division 15 of the Streets and Highway Code of the State of California (Landscape and Lighting Act of 1972) and Article XIIID of the California Constitution.

II. GENERAL DESCRIPTION

The City Council of the City of Redlands, California has heretofore elected to form Landscape Maintenance District No. 1 (District) and annexed territories to said District. The boundaries of said District and annexations thereto are entitled "Assessment Diagram of Landscape Maintenance District No. 1," and are on file in the office of the City Clerk of the City of Redlands.

III. PLANS AND SPECIFICATIONS

The plans and specifications for the landscaping either have been or are being prepared by the developers. The plans and specifications for the landscaping will be in conformance with the requirements of the City's Development Services Department, Planning Division and Land Use Engineering Division (DSD) and the Facilities and Community Services Department (FCS).

Reference is hereby made to the subject tract or parcel maps and assessment diagrams for the exact location of the landscaped areas. The plans and specifications by reference are hereby made a part of this report to the same extent as if said plans and specifications were attached hereto.

IV. IMPROVEMENTS

All areas within the Landscape Maintenance District No. 1, identified in this report as the Original District and Annexation No. L1 through L12, are to be maintained by the District. For FY 2025/26 the Original District (A, B and C), and Annexations L1-A, L1-B, L2-A, L4-C, L4-W, L5-C and L6-E are the only Annexations currently maintained. The remaining Annexations are either not yet developed or the landscaping has not been accepted for maintenance by the Facilities and Community Services Department.

The City, through the Facilities and Community Services Department, has developed procedures for inspections, acceptance and maintenance of the landscaping improvements. It is anticipated that the Facilities and Community Services Department will be assigned the overall maintenance responsibilities once landscape improvements for individual Annexations have been accepted for maintenance.

V. ASSESSMENT DIAGRAM

The assessment District locations for the Original District and subsequent Annexations are shown in Appendix B. The assessment diagrams by reference are hereby made a part of this report. The original diagram document used in prior Engineer's Reports was updated in 2021 for purposes of clarity.

VI. ESTIMATED COSTS AND MAINTENANCE

It is anticipated that the City, through its Facilities and Community Services Department, will provide maintenance services for the District. The City's record keeping will be required to be sufficiently accurate to detail the expenses so that actual cost of maintaining the District and Annexations are documented.

The District and Annexations which are maintained and those Annexations which are not maintained at this time, have been in existence for a number of years. Over the years the existing assessments have not kept pace with the true annual cost of maintenance and administration. As a result, the surplus balances established at the formation of the District and Annexations have depleted to cover expenses.

Approximately fifty-one (51) percent of the general administration and engineering costs are charged to the District and Annexations having landscaping maintained by the City. Forty-nine (49) percent is spread to properties on an equal assessment per lot with on-site development, but with either no landscaping installed or landscaping which is not yet accepted for maintenance by the City. The latter assessment has not changed as compared to the last fiscal year and remains at $6.00 per lot.

The assessment per lot for general administration and engineering areas with landscaping maintained by the City is approximately $4.39 per lot for the Original District B and C, and Annexations L1-A, L1-B, L2-A, L4-W and L6-E. For Original District A, this amount is $36.16 per lot and for Annexation L5C it is $8.50 per lot. Annexation L4-C is maintained by the District but the assessment remains at $6.00 per lot.

Since there were numerous locations as part of Annexation Nos. 1, 2, 3, 4, etc. they were identified on the diagram as Original A, 1-1A, 1-1B, etc. Prefix L is added to the identification on the later annexations to identify that it is within the District. The description of the annexations will be within Sections IX and X of this report.

VII. ASSESSMENT ROLL

Following the public hearing for FY 2026-2027 (FY 26/27) assessments and the City Council's approval of the assessments, an assessment roll will be prepared. The assessment roll will include the assessment parcel number, the San Bernardino County Assessor's parcel number and the confirmed assessment for each parcel. The assessment roll will be

filed with the City Clerk and will subsequently be transmitted to the San Bernardino County Auditor/Tax Collector.

VIII. PROPOSED BASIS FOR ASSESSMENTS

The City Council has heretofore determined that it will be necessary to utilize the provisions of the Landscaping and Lighting Act of 1972, a benefit assessment act, for the Original District and the subsequent Annexations to the District and to assess benefitting properties in proportion to the benefits that the various properties will receive.

IX. CALCULATION OF MAINTENANCE AND INCIDENTAL COST

For a breakdown of the Maintenance and Incidental Costs see Appendix A – Calculation of Maintenance and Incidental Cost Table

X. ESTIMATED ASSESSMENTS FOR FY 2026-2027

The City Council, in forming the District and in annexing territories to the District, has maintained the philosophy that the subdivider or developer is responsible for the plantings, irrigation system and the maintenance of the improvements until they become well established. The assessments for maintenance thus only include anticipated costs incurred subsequent to the acceptance of the established improvements by FCS.

The maintenance of the landscaping is vital for the protection of both economic and humanistic values of the development. The City Council has heretofore determined that for the preservation of values incorporated within developments adjacent to landscaped areas, the parcels within the developments should be included in a maintenance district to ensure satisfactory levels of maintenance. The establishment of the assessment for each development must be on a unit-by-unit basis, which will preserve the integrity of each project.

The determination of benefit for the lots within the District and Annexations takes into consideration the following facts for the Original Districts and Annexations thereto:

Original District - Tracts 13282, 13434 and 13496

1. The purpose of landscaping is to provide an aesthetic impression on the area.

2. The maintained landscaping benefits all properties in the development.

3. The benefits to the lots that are not adjacent to the landscaped areas benefit by the uniform maintenance and appearance. All lots that are not abutting the landscaped areas benefit equally.

4. The landscaping on the Wabash Avenue and San Bernardino Avenue, boundaries of Tracts 13282 and 13434 respectively, is oriented away from the units adjacent to the landscaped areas; however, these properties were given a 10 percent surcharge to recognize proximity and support benefit.

5. The landscaping in the common area along the Alessandro Road frontage of Tract 13496 is oriented towards all units. Two of the lots abut the landscaped areas and were given a 20 percent surcharge to recognize proximity and support benefit.

6. The lots to receive a surcharge shall be considered to be within Assessment Zone "A".

Formula for Assessment

A = Assessment per interior lot

L = Number of lots that are not adjacent to landscaping areas on the Wabash Avenue frontage of Tract 13282, the San Bernardino Avenue frontage of 13434 and the Alessandro Road frontage of Tract 13496

P = Number of lots with a 10 percent or 20 percent surcharge

LA + P [(1.10) or (1.20)] A = Amount to be assessed

The FY 25/26 assessment will be spread based upon the preceding formula.

Original 1-A
Tract 13282

The total lot count in Tract 13282 is 38 lots, with 8 of those lots being adjacent to Wabash Avenue.

FY 25/26 Assessment

(20A) + 8 (1.10A) = $2,409
A = $62.09

APN 0168-681-01 thru 16, 25 thru 38

The amount of assessment for lots that are not adjacent to the landscaping areas on Wabash Avenue = $62.09

APN 0168-681-17 thru 24

The amount of assessment for lots adjacent to Wabash Avenue with a 10 percent surcharge = $68.30

Original 1-B
Tract 13434

The total lot count in Tract 13434 is 78 lots, with 4 of these lots being adjacent to San Bernardino Avenue.

FY 25/26 Assessment

(74A) + 4 (1.10A) = $2,826
A = $36.05

APN 0167-802-2 thru 7
APN 0167-803-2 thru 8
APN 0167-804-1 thru 19
APN 0167-823-1 thru 10
APN 0167-284-1 thru 32

The amount of assessment for lots that are not adjacent to the landscaping areas on San Bernardino Avenue = $36.05

APN 0167-802-01, 08
APN 0167-803-01, 09

The amount of assessments for lots adjacent to San Bernardino Avenue with a 10 percent surcharge = $39.65

Original 1-C
Tract 13496

The total lot count in Tract 13496 is 9 lots, with 2 of these lots being adjacent to Alessandro Road.

FY 2025/26Assessment

(7A) + 2 (1.2A) = $12,320
A = $1,310.64

APN 0175-491-02 thru 08

The amount of assessment for lots that are not adjacent to the landscaping areas on Alessandro Road = $1,310.64

APN 0175-491-01, 09

The amount of assessment for lots adjacent to Alessandro Road with a 20 percent surcharge = $1,572.77

Annexation No. L1-A – Tract 13745

1. The purpose of landscaping is to provide an aesthetic impression on the area.

2. The maintained landscaping benefits all properties in the development.

3. The benefit to the lots that are not adjacent to the landscaped areas benefit by the uniform maintenance and appearance. All lots that are not abutting the landscaped areas benefit equally.

4. The landscaping on San Bernardino Avenue is oriented away from the lots adjacent to the landscaped areas; however, these properties were given a 10 percent surcharge to recognize proximity and support benefit. These lots within Assessment Zone "A" are shown on the Assessment Diagram.

Formula for Assessment

A = Assessment per interior lot

L = Number of lots that are not adjacent to landscaping areas on San Bernardino Avenue

P = Number of lots with a 10 percent within Assessment Zone "A"

LA + P (1.10) A = Amount to be assessed

The FY 25/26 Assessment will be spread based upon the preceding formula. The total lot count in the tract is 38 lots, with 9 of these lots being adjacent to San Bernardino Avenue.

FY 25/26 Assessment

(29A) + 9 (1.10A) = $3,601
A = $92.57

APN 1212-141-01 thru 15, 25 thru 38

The amount of assessment for lots that are not adjacent to the landscaping areas on San Bernardino Avenue = $92.57

APN 1212-141-16 thru 24

The amount of assessments for lots within Assessment Zone "A" adjacent to the San Bernardino Avenue landscaping areas with a 10 percent surcharge = $101.83

Annexation No. L1-B – Tract 13765

1. The purpose of landscaping is to provide an aesthetic impression on the area.

2. The maintained landscaping benefits all properties in the development.

3. The benefit to the lots that are not adjacent to the landscaped areas benefit by the uniform maintenance and appearance. All lots that are not abutting the landscaped areas benefit equally.

4. The landscaping on San Bernardino Avenue is oriented away from the lots adjacent to the landscaped areas; however, these properties were given a 10 percent surcharge to recognize proximity and support benefit. These lots within Assessment Zone "A" as shown on the Assessment Diagram.

Formula for Assessment

A = Assessment per interior lot

L = Number of lots that are not adjacent to landscaping areas on San Bernardino Avenue

P = Number of lots with a 10 percent within Assessment Zone "A"

LA + P (1.10) A = Amount to be assessed

The FY 25/26 Assessment will be spread based upon the preceding formula. The total lot count in the tract is 25 lots, with 2 of these lots being adjacent to San Bernardino Avenue.

FY 25/26 Assessment

(23A) + 2 (1.10A) = $2,554
A = $101.35

APN 1212-081-54 thru -62

The amount of assessment for lots that are not adjacent to the landscaping areas on San Bernardino Avenue = $101.35

APN 1212-141-39 and -54

The amount of assessments for lots within Assessment Zone "A" adjacent to the San Bernardino Avenue landscaping areas with a 10 percent surcharge = $111.48

Annexation No. L2-A – Tract 13947

1. The purpose of landscaping is to provide an aesthetic impression on the area.

2. The maintained landscaping benefits all properties in the development.

3. The benefit to the lots that are not adjacent to the landscaped areas benefit by the uniform maintenance and appearance. All lots that are not abutting the landscaped areas benefit equally.

4. The landscaping on Reservoir Road is oriented away from the lots adjacent to the landscaped areas; however, these properties were given a 20 percent surcharge to recognize proximity and support benefit. These lots are within Assessment Zone "A" as shown on the Assessment Diagram

Formula for Assessment

A = Assessment per interior lot

L = Number of lots that are not adjacent to landscaping areas on Reservoir Road

P = Number of lots with a 20 percent within Assessment Zone "A"

LA + P (1.20) A = Amount to be assessed

FY 25/26 Assessment will be spread based upon the preceding formula. The total lot count in the tract is 35 lots, with 4 of these lots being adjacent to Reservoir Road.

FY 25/26 Assessment

(31A) + 4 (1.20A) = $1,595
A = $44.55

APN 0174-621-1 thru 7, 9 thru 25, 28 thru 34

The amount of assessment for lots that are not adjacent to the landscaping areas on Reservoir Road = $44.55

APN 0174-621-08, 26, 27, 35

The amount of assessments for lots within Assessment Zone "A" adjacent to the Reservoir Road landscaping areas with a 20 percent surcharge = $53.46.

Annexation No. L3-A – Parcel Map 11917

Formula for Assessment

T = Total length of perimeter landscaping = 3,099 feet

L = Individual lot length of perimeter landscaping

A = Amount to be assessed = $600

The FY 25/26 Assessment will be spread based upon the preceding formula. The total lot count in the tract is 4 lots.

FY 25/26 Assessment

Assessment per lot:

APN 0292-032-39	= 1010 ft/3099 ft	x $600 =	$195.55
APN 0292-032-40	= 206 ft/3099 ft	x $600 =	$39.88
APN 0292-032-41	= 324 ft/3099 ft	x $600 =	$62.73
APN 0292-032-42	= 1559 ft/3099 ft	x $600 =	$301.84

Annexation No. L5-C – Tract 14556

1. The purpose of landscaping is to provide an aesthetic impression on the area.

2. The maintained landscaping benefits all properties in the development.

3. The benefit to the lots that are not adjacent to the landscaped areas benefit by the uniform maintenance and appearance. All lots that are not abutting the landscaped areas benefit equally.

4. The landscaping on the median at the intersection of Franklin Avenue and Garden Street is oriented away from lots adjacent to the landscaped areas; however, these properties were given a 10 percent surcharge to recognize proximity and support benefit. These lots within Assessment Zone "A" as shown on the Assessment Diagram.

Formula for Assessment

A = Assessment per interior lot

L = Number of lots that are not adjacent to landscaping areas on Franklin Avenue and Garden Street

P = Number of lots with a 10 percent within Assessment Zone "A"

LA + P (1.10) A = Amount to be assessed

The FY 25/26 Assessment will be spread based upon the preceding formula. The total lot count in the tract is 10 lots, with 4 of these lots being in close proximity to the landscaped median at the intersection of Franklin Avenue and Garden Street.

FY 25/26 Assessment

(6A) + 4 (1.10A) = $815
A = $78.37

APN 0176-441-18, 23 thru 27

The amount of assessment for lots that are not adjacent to the landscaping areas = $78.37

APN 0174-441-19 thru 22

The amount of assessments for lots within Assessment Zone "A" adjacent to the landscaping areas with a 10 percent surcharge = $86.20

Annexation No. L4, L5 (except L5-C), L6, L7, L8, L9, L10, L11 and L12

No assessments are proposed to be levied on the parcels in these annexations in association with the landscape maintenance costs. However, these parcels will receive special benefit and be assessed for the per lot general City overhead charges and the prorated share of the Annual Engineer's Report to ensure that the required landscaping be maintained to the standards established by the City and anticipated when the improvements were initially required. The assessment will be $6.00 per lot in each of these annexations.

* * * * * * * * * * * *

The City Council will hold a public meeting on June 16, 2026 to determine the assessments based upon the costs for FY 2026-2027 which are anticipated to be incurred by the City and which are to be recovered through assessments as required by the Landscaping and Lighting District Act of 1972.

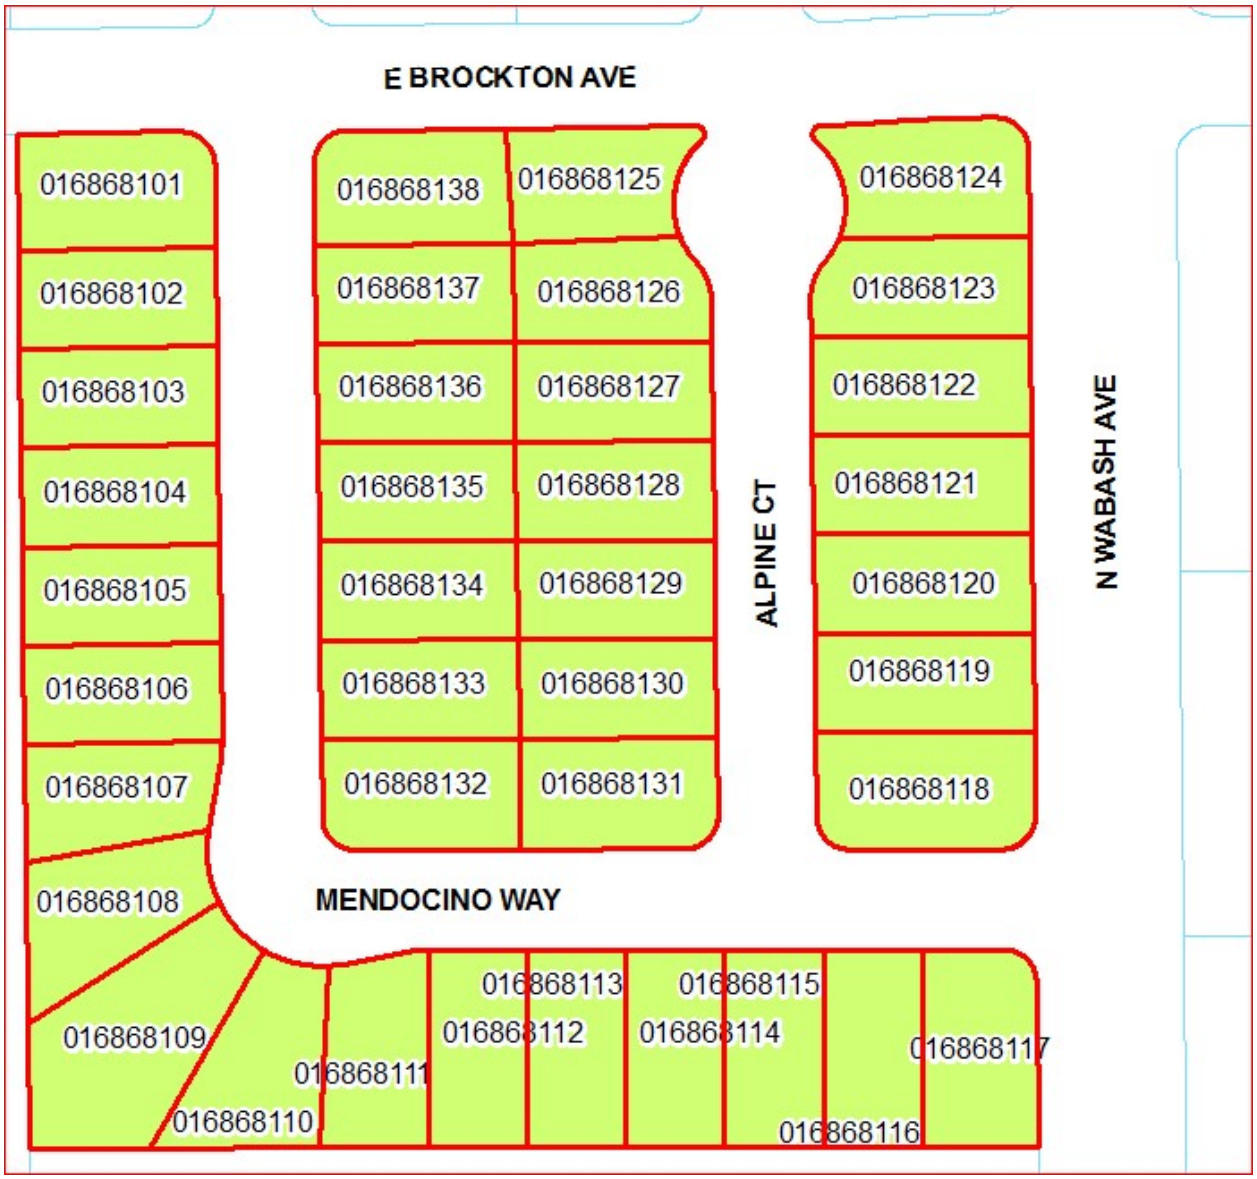
General comments

Each annexation has its own diagram.

North is up unless notated otherwise.

The assessor's parcel numbers are shown as a 9 digit number.



A dark red line delineates the boundary of each annexation.

A shaded background is typically used to indicate parcels within the Landscape Maintenance District.

RESOLUTIONS

Resolution No. 8769 – Institute proceedings and appointment of engineer
Resolution No. 8770 – Preliminary approval of engineer's report
Resolution No. 8771 – Declaring intention to levy assessments
Resolution No. 8773 – Confirming assessments

THIS PAGE INTENTIONALLY LEFT BLANK

RESOLUTION NO. 8769

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS INSTITUTING PROCEEDINGS FOR THE CONTINUED LEVY OF ASSESSMENTS, APPOINTING AN ASSESSMENT ENGINEER, AND ORDERING THE PREPARATION OF AN ENGINEER'S REPORT IN THE MATTER OF STREET LIGHTING DISTRICT NO. 1 AND LANDSCAPE MAINTENANCE DISTRICT NO. 1

WHEREAS, the City Council of the City of Redlands (this "City Council") has determined that the public interest, convenience and necessity requires the installation, operation and maintenance of a street lighting system and other facilities as set forth in Section 22525 of the California Streets and Highways Code; and

WHEREAS, it has been determined by the City Council of the City of Redlands (this "City Council"), that the public interest, convenience and necessity requires the maintenance of landscaping as set forth in Section 22525 of the California Streets and Highways Code; and

WHEREAS, this City Council has formed Redlands' Street Lighting District No. 1 to pay the costs associated with the installation, operation and maintenance of such street lighting system and other facilities; and

WHEREAS, this City Council has formed Redlands' Landscape Maintenance District No. 1 to pay the costs for the maintenance such landscaping; and

WHEREAS, it is the desire of this City Council to initiate proceedings and order the preparation of an engineer's report to levy assessments for fiscal year 2026-2027 upon properties located within Street Lighting District No. 1 and Landscape Maintenance District No. 1; and

WHEREAS, this City Council further desires to appoint Donald Young, RCE No. 49918, One Stop Permit Center Manager, as the "Assessment Engineer" for Street Lighting District No. 1 and Landscape Maintenance District No. 1;

NOW, THEREFORE, the City Council of the City of Redlands does hereby find, determine and resolve as follows:

Section 1. That the public interest, convenience and necessity requires the continued levy of assessments within Street Lighting District No. 1 for the purpose of installing, operating and maintaining street lights and associated facilities as authorized by Section 22620 of the California Streets and Highways Code and in compliance with Article XIIID, and Section 19 of Article XVI, of the California Constitution.

Section 2. That the public interest, convenience and necessity requires the continued levy of assessments within Landscape Maintenance District No. 1 for the purpose of maintaining landscaping and improvements as authorized by Section 22620 of the California Streets and

Highways Code and in compliance with the requirements of Article XIIID and Section 19 of Article XVI of the California Constitution.

Section 3. That the properties to be assessed for the installation, operation and maintenance of the street lighting facilities shall be those properties located within the boundaries of Street Lighting District No. 1.

Section 4. That the properties to be assessed for the maintenance and operation of the landscaping and improvements shall be those properties located within the boundaries of Landscape Maintenance District No. 1.

Section 5. That the proceedings for the continued levy of assessments within Street Lighting District No. 1 and Landscape Maintenance District No. 1 shall be conducted in accordance the with provisions of Division 15 of the California Streets and Highways Code (the Landscaping and Lighting Act of 1972) and in compliance with the requirements of Article XIIID, and Section 19 of Article XVI, of the California Constitution.

Section 6. That Donald Young, RCE No. 49918, One Stop Permit Center Manager, having an office located at 35 Cajon Street, Suite 15A, Redlands, California, is hereby appointed "Assessment Engineer" and shall have the authority conferred upon the Assessment Engineer by the Landscaping and Lighting Act of 1972.

Section 7. That the Assessment Engineer is hereby ordered to prepare a report in accordance with the Landscaping and Lighting Act of 1972.

ADOPTED, SIGNED AND APPROVED this 5th day of May, 2026.

RESOLUTION NO. 8770

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS GIVING PRELIMINARY APPROVAL OF THE ENGINEER'S REPORTS FOR FISCAL YEAR 2026-2027 FOR STREET LIGHTING DISTRICT NO. 1 AND LANDSCAPE MAINTENANCE DISTRICT NO. 1

WHEREAS, the City Council of the City of Redlands (the "City Council") has heretofore determined that the public interest, convenience and necessity require the maintenance and operation of street lighting and appurtenant facilities, as set forth in Section 22525 of the Streets and Highways Code, within the incorporated boundaries of the City of Redlands; and

WHEREAS, the City Council has heretofore determined that the public interest, convenience and necessity require the maintenance of landscape and irrigation facilities set forth in Section 22525 of the Streets and Highways Code, State of California, within the incorporated boundaries of the City of Redlands; and

WHEREAS, Donald Young, One Stop Permit Center Manager, 35 Cajon Street, Suite 15A, Redlands, California, has been appointed "Assessment Engineer" with all provisions of Part 2 of Division 15 of the Streets and Highways Code applicable to the Engineer being applied to the "Assessment Engineer;" and

WHEREAS, Sections 22622 and 22623 of the Streets and Highways Code require that an Engineer's Report be prepared and filed annually, specifying the assessments to be levied against the benefitting properties within the City's Street Lighting District No. 1 and Landscape Maintenance District No. 1; and

WHEREAS, the Assessment Engineer has prepared and filed with the City Clerk reports in writing as required by the Landscaping and Lighting Act of 1972 and in compliance with Article XIIID of the California Constitution; and

WHEREAS, the City Council has duly considered said reports and each and every part thereof; and finds that each and every part of said reports is sufficient, and that no part of said reports requires modification in any respect;

NOW, THEREFORE, be it resolved by the City Council of the City of Redlands as follows:

Section 1. That the Engineer's estimate of the itemized costs and expenses of said work and of the incidental expenses in connection therewith, contained in said reports be, and each of them are hereby, preliminarily approved and confirmed.

Section 2. That the diagrams showing the Street Lighting District No. 1 and Landscape Maintenance District No. 1, referred to and described in said reports, and the boundaries of the lots and parcels of land within such assessment district as the same existed at the time of passage of this resolution, are hereby preliminarily approved and confirmed.

Section 3. That the proposed assessment upon the properties in Street Lighting District No. 1 and Landscape Maintenance District No. 1, in proportion to the estimated benefit to be received by such properties, respectively, from said work and of the incidental expenses thereof, as contained in said report is hereby preliminarily approved and confirmed.

Section 4. That said reports shall stand as the Engineer's Report for the purposes of all subsequent proceedings for Street Lighting District No. 1 and Landscape Maintenance District No. 1.

APPROVED AND ADOPTED this 2nd day of June, 2026.

RESOLUTION NO. 8771

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS DECLARING ITS INTENTION TO LEVY AND COLLECT ASSESSMENTS WITHIN REDLANDS' STREET LIGHTING ASSESSMENT DISTRICT NO. 1 AND LANDSCAPE ASSESSMENT DISTRICT NO. 1 FOR FISCAL YEAR 2025-2026 PURSUANT TO THE LANDSCAPING AND LIGHTING ACT OF 1972, AND ESTABLISHING A TIME AND PLACE FOR PUBLIC HEARINGS FOR THE TWO DISTRICTS TO CONSIDER PROTESTS

BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF REDLANDS AS FOLLOWS:

Section 1. The City Council of the City of Redlands hereby (1) finds that the public interest and convenience requires, and (2) declares its intention to levy and collect, assessments against the lots and parcels of property within an existing assessment districts designated "Redlands' Street Lighting Assessment District No. 1 and Landscape Assessment District No. 1" (the "Districts") pursuant to the provisions of the Landscaping and Lighting Act of 1972, Part 2 of Division 15 of the Streets and Highways Code (commencing with Section 22500) (the "Act") for fiscal year 2026-2027, commencing July 1, 2026, and ending June 30, 2027, to pay for the costs and expenses of the improvements described in Section 3 hereof.

Section 2. Reference is hereby made to a map on file in the office of the City Clerk and open for public inspection for a description of the exterior boundaries of the Districts.

Section 3. The proposed improvements are briefly described as follows: The operation, maintenance and servicing of public within the District, including the operation, maintenance and servicing of public lighting facilities and landscaping, including safety lighting, traffic signals, trees, shrubs, grass and other ornamental vegetation, and appurtenant facilities, located along public roadways, streets and rights-of-way within the boundaries of the Districts. "Maintenance" means the furnishing of services and materials for the ordinary and usual maintenance, operation and servicing of the public lighting and landscaping facilities, and appurtenant facilities, including repair, removal or replacement of all or part of any of the public lighting and landscaping facilities, or appurtenant facilities. "Servicing" means the maintenance of any of the public lighting and landscaping facilities or appurtenant facilities, including the furnishing of electric current, energy or gas for the operation of any of the lighting facilities and the furnishing of water for the irrigation of any of the landscaping facilities.

Section 4. The assessments to be levied and collected against the assessable lots and parcels of property within the Districts for fiscal year 2026-2027 are not proposed to increase from the assessments levied and collected for fiscal year 1997-1998.

Section 5. Public property owned by any public agency and in use in the performance of a public function which is included within the boundaries of the Districts shall not be subject to assessment to be made under these proceedings to cover any of the costs and expenses of the improvements.

Section 6. All railroad, gas, water and electric utility rights-of-way are included within the Districts and shall be assessed in accordance with the benefits received from the improvements.

Section 7. Reference is hereby made to the Reports of the Engineer entitled "City of Redlands Street Lighting District No. 1 Engineer's Report for Fiscal Year 2026-2027" and "City of Redlands Landscape Maintenance District No. 1 Engineer's Report for Fiscal Year 2026-2027" on file in the office of the City Clerk for a full and detailed description of the improvements, the boundaries of the District and any zones therein and the proposed assessments upon assessable lots and parcels of land within the District.

Section 8. NOTICE IS HEREBY GIVEN THAT THE CITY COUNCIL APPOINTS TUESDAY, THE 16TH DAY OF JUNE, 2026, AT THE HOUR OF 6:00 P.M., OR AS SOON THEREAFTER AS THE MATTER MAY BE HEARD, IN THE COUNCIL CHAMBERS AT CITY HALL, CITY OF REDLANDS, 35 CAJON STREET, SUITE 2, REDLANDS, CALIFORNIA 92373, AS THE TIME AND PLACE FOR TWO PUBLIC HEARINGS TO CONSIDER PROTESTS OR OBJECTIONS TO THE LEVY OF THE PROPOSED ASSESSMENTS IN CONNECTION WITH THE DISTRICTS. All interested persons shall be afforded the opportunity to hear and be heard. Any interested person may file a written protest with the City Clerk prior to the conclusion of the hearing. A written protest shall state all grounds of objection. A protest by a property owner shall contain a description sufficient to identify the property owned by the signer thereof. The City Council shall consider all oral statements and all written protests made or filed by any interested person.

Section 9. The City Clerk is hereby authorized and directed to give notice of such hearing in accordance with law.

Section 10. The City Council hereby determines and declares that the proposed assessments constitute a continuation of assessments existing on the effective date of Article XIIID, that the assessments are imposed exclusively to finance the maintenance and operation expenses for streets and that the assessments are exempt from the requirements of Article XIIID, Section 4 of the California Constitution.

Section 11. The City Council hereby designates Donald Young, One Stop Permit Center Manager, telephone number (909) 798-7585 x6, to answer inquiries regarding the hearing, protest proceedings and procedural or technical matters.

ADOPTED, SIGNED AND APPROVED this 2nd day of June, 2026.

RESOLUTION NO. 8773

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS CONFIRMING A DIAGRAM AND ASSESSMENT FOR THE 2023-2024 FISCAL YEAR IN CONNECTION WITH LANDSCAPE MAINTENANCE DISTRICT NO. 1 PURSUANT TO THE LANDSCAPING AND LIGHTING ACT OF 1972, PART 2 OF DIVISION 15 OF THE CALIFORNIA STREETS AND HIGHWAYS CODE

BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF REDLANDS AS FOLLOWS:

Section 1. Pursuant to its adoption of a prior resolution, the City Council of the City of Redlands initiated proceedings and declared its intention to levy an assessment against the assessable lots and parcels of property within an existing assessment district designated "Landscape Maintenance District No 1" (the District) pursuant to the provisions of the Landscaping and Lighting Act of 1972, Part 2 of Division 15 of the California Streets and Highways Code (commencing with Section 22500) (the "Act") for the fiscal year commencing July 1, 2026, and ending June 30, 2027, and ordered Donald Young, One Stop Permit Center Manager, to prepare and file a written report in accordance with Article 4 of Chapter 1 of the Act. The City Council, by prior resolution, approved such Engineer's Report.

Section 2. Following notice duly given in accordance with law, this City Council has held a full and fair public hearing regarding the Engineer's Report and the levy and collection of the proposed assessment within the District for fiscal year 2026-2027 to pay for the costs and expenses of the improvements described in the Engineer's Report pursuant to the terms and provisions of the Act. All interested persons were afforded the opportunity to hear, and be heard regarding, protests and objections to the levy and collection of the proposed assessment against lots or parcels of property within the District. The City Council considered all oral and written statements, protests and communications made or filed by interested persons.

Section 3. Based upon its review of the Engineer's Report and other reports and information, this City Council hereby finds and determines that (i) the land within the District will be benefited by the improvements described in the Engineer's Report (ii) the District includes all of the lands so benefited, and (iii) the net amount to be assessed upon the lands with the District for the 2023-2024 fiscal year in accordance with the Engineer's Report is apportioned by a formula and method which fairly distributes the net amount among all assessable lots or parcels in proportion to the estimated benefits to be received by each such lot or parcel from the improvements. Any and all oral and written protests and objections are hereby overruled by the City Council.

Section 4. The City Council declares that the diagram and assessment in the Engineer's Report are hereby confirmed as filed.

Section 5. The City Council hereby orders the improvements described in the Engineer's Report to be made.

Section 6. The assessment is in compliance with the provisions of the Act and the City Council has complied with all law pertaining to the levy of an annual assessment pursuant to the Act.

Section 7. The assessments to be levied and collected against the assessable lots and parcels of property within the District for fiscal year 2026-2027 are not proposed to increase from the assessment levied and collected for fiscal year 1997-1998.

Section 8. The assessment is levied without regard to property valuation.

Section 9. Public property owned by any public agency and in use in the performance of a public function which is included within the boundaries of the District shall not be subject to assessment to be made under these proceedings to pay for any of the costs and expenses of the improvements.

Section 10. The assessment is levied for the purpose of paying the costs and expenses of the improvements described in the Engineer's Report for fiscal year 2026-2027.

Section 11. The improvements described in the Engineer's Report shall be performed pursuant to law.

Section 12. The County Auditor of San Bernardino County shall enter on the County Assessment Roll opposite each lot or parcel of land the amount of the assessment and such assessments shall then be collected at the same time and in the same manner as the County taxes collected. After collection by the County, the net amount of the assessments shall be paid to the City Treasurer.

Section 13. The City Treasurer shall deposit all moneys representing assessments collected by the County to the credit of a special fund for Landscape Maintenance District No. 1.

Section 14. The adoption of this Resolution constitutes the levy of an assessment against the lots and parcels of land in the District for the fiscal year commencing July 1, 2026, and ending June 30, 2027.

Section 15. The City Clerk is hereby authorized and directed to file the diagram and assessment, or a certified copy of the diagram and assessment, with the County Auditor, together with a certified copy of this Resolution upon its adoption.

Section 16. A certified copy of the assessment and diagram shall be filed in the City's Facilities and Community Services Department, with a duplicate copy on file in the office of the City Clerk and open for public inspection.

ADOPTED, SIGNED AND APPROVED this 16th day of June, 2026.

City Council **AGENDA ITEM NO. I14.**

DATE: June 2, 2026

TO: Honorable Mayor and City Council Members

SUBJECT: Approve a grant of easement to Southern California Edison over Lot “F” of Tract No. 20528 and determine that granting of an easement is exempt from environmental review pursuant to Section 15061(b)(3) of the State's guidelines implementing the California Environmental Quality Act (Facilities and Community Services Department Director Crocker)

MOTION:

If the City Council determines that staff's recommendation is appropriate, the following motions are provided:

1. I move that the City Council determine that the granting of an easement is exempt from environmental review pursuant to Section 15061(b)(3) of the State's Guidelines Implementing the California Environmental Quality Act; and

2. I move that the City Council grant an easement to Southern California Edison over Lot “F” of Tract No. 20528 for the future installation and maintenance of a transformer and related future electrical facilities, and authorize the Mayor to execute the Grant of Easement.

RECOMMENDATION:

Staff recommends that the City Council determine that the granting of an easement is exempt from environmental review pursuant to Section 15061(b)(3) of the State's Guidelines implementing the California Environmental Quality Act (CEQA)

Staff further recommends that the City Council approve a Grant of Easement for electrical facilities to Southern California Edison over Lot “F” of Tract No. 20528 in order to accommodate the future installation of a transformer necessary to serve anticipated electrical demand.

DISCUSSION:

Following approval of Tract No. 20336 and Specific Plan No. 64, the Specific Plan project boundaries were expanded to include parcels located south of Domestic Avenue. Tentative Tract Map No. 20528 was subsequently approved, subdividing 14.62 gross acres of land into 117 residential lots, along with a public parking area adjacent to Interstate 210 and a trail extension connecting to the Santa Ana River Trail.

Final Tract Map No. 20528 was approved by the City Council on September 16, 2025. Upon recordation, Lot "F" was dedicated to the City in fee ownership and designated for landscape and drainage improvements.

Subsequent to map approval, Southern California Edison completed design plans identifying the need for additional electrical infrastructure to meet projected service demands within the development. To facilitate this improvement, the developer, Meritage Homes, submitted a request for the City to grant an easement over a portion of Lot "F."

The proposed easement will allow for the installation and ongoing maintenance of a transformer and associated electrical facilities necessary to support current and future residents. The easement area is compatible with the site's intended landscape and drainage functions and will not interfere with those uses.

Pursuant to Section 15061(b)(3) of the California Environmental Quality Act Guidelines, the proposed action is exempt from environmental review, as it can be seen with certainty that granting the easement will not result in a significant effect on the environment.

SUBMITTED BY:
Tabitha Crocker, Facilities and Community Services Department Director

	GVM MT-8171-H1 APN 0167-061-01	APPROVED: REAL PROPERTIES	BY SLS/BT	DATE 11/20/2025

CITY OF REDLANDS (hereinafter referred to as "Grantor"), hereby grants to SOUTHERN CALIFORNIA EDISON COMPANY, a corporation, its successors and assigns (hereinafter referred to as "Grantee"), an easement and right of way to construct, use, maintain, operate, alter, add to, repair, replace, reconstruct, inspect and remove at any time and from time to time underground electrical supply systems and communication systems (hereinafter referred to as "systems"), consisting of wires, underground conduits, cables, vaults, manholes, handholes, and including above-ground enclosures, markers and concrete pads and other appurtenant fixtures and equipment necessary or useful for distributing electrical energy and for transmitting intelligence, data and/or communications (eg. through fiber optic cable), in, on, over, under, across and along that certain real property in the County of San Bernardino, State of California, described as follows:

A 6.00 FOOT WIDE STRIP OF LAND LYING WITHIN LOT F OF TRACT NO. 20528, AS PER MAP FILED IN BOOK 371, PAGES 42 THROUGH 52 OF MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, THE CENTERLINE OF SAID STRIP IS DESCRIBED AS FOLLOWS:

COMMENCING AT THE SOUTHWEST CORNER OF SAID LOT F;

THENCE ALONG THE WESTERLY LINE OF SAID LOT F, NORTH 00°41'02" WEST 309.93 FEET TO THE **TRUE POINT OF BEGINNING**;

THENCE LEAVING SAID WESTERLY LINE, SOUTH 57°21'34" EAST 8.17 FEET;

THENCE SOUTH 19°12'08" EAST 8.17 FEET;

THENCE SOUTH 00°08'04" EAST 287.62 FEET TO THE BEGINNING OF A TANGENT CURVE, CONCAVE TO THE NORTHEAST AND HAVING A RADIUS OF 12.50 FEET;

THENCE SOUTHERLY AND SOUTHEASTERLY ALONG SAID CURVE, THROUGH A CENTRAL ANGLE OF 77°10'27" AN ARC DISTANCE OF 16.84 FEET;

THENCE SOUTH 77°18'32" EAST 36.79 FEET;

THENCE SOUTH 67°37'27" EAST 8.83 FEET TO THE **POINT OF TERMINUS** IN THE SOUTHERLY LINE OF SAID LOT F.

THE SIDELINES OF SAID STRIP ARE TO BE PROLONGED OR SHORTENED TO TERMINATE SOUTHEASTERLY IN THE SOUTHERLY AND EASTERLY LINES OF SAID LOT F AND TO JOIN AT THE ANGLE POINTS.

EXCEPTING THEREFROM ANY PORTION INCLUDED WITHIN PUBLIC STREET.

It is understood and agreed that the above description is approximate only, it being the intention of the Grantor(s) to grant an easement for said systems as constructed. The centerline of the easement shall be coincidental with the centerline of said systems as constructed in, on, over, under, across, and along the Grantor(s) property.

This legal description was prepared pursuant to Sec. 8730(c) of the Business & Professions Code.

Grantor agrees for himself, his heirs and assigns, not to erect, place or maintain, nor to permit the erection, placement or maintenance of any building, planter boxes, earth fill or other structures except walls and fences on the above described real property. The Grantee, and its contractors, agents and employees, shall have the right to trim or cut tree roots as may endanger or interfere with said systems and shall have free access to said systems and every part thereof, at all times, for the purpose of exercising the rights herein granted; provided, however, that in making any excavation on said property of the Grantor, the Grantee shall make the same in such a manner as will cause the least injury to the surface of the ground around such excavation, and shall replace the earth so removed by it and restore the surface of the ground to as near the same condition as it was prior to such excavation as is practicable.

Don Young
City of Redlands
35 Cajon Street, Suite 15A
Redlands, CA 92373

SUBJECT: SCE Easement within Lot F of Tract 20528

Dear Mr. Young,

Meritage Homes of California, Inc. requests the City of Redlands approve the granting of an easement within Lot F (the City Park parking lot extension) of Tract 20528 to Southern California Edison. This easement will allow for the undergrounding of power poles and conduit existing in TR 20528. This will be needed to serve the adjacent well site at APN 0292-071-13-0000.

Please let me know if you have any questions on this at either (949) 372-3315 or at Nicholas.harris@meritagehomes.com.

Sincerely,
Meritage Homes

Nicholas Harris

City Council **AGENDA ITEM NO. I15.**

DATE: June 2, 2026

TO: Honorable Mayor and City Council Members

SUBJECT: Approve a Facility Use Agreement with Redlands Theatre Festival for use of the Sewall Theater within Prospect Park and determine that approval of the Agreement with Redlands Theatre Festival is exempt from environmental review pursuant to Section 15061(b)(3) of the State's guidelines implementing the California Environmental Quality Act (Facilities and Community Services Department Director Crocker)

MOTION(S):

If the City Council determines that staff's recommendation is appropriate, the following motions are provided:

1. I move that the City Council determine that approval of the Facility Use Agreement with Redlands Theatre Festival is exempt from environmental review pursuant to Section 15061 (b)(3) of the State's guidelines implementing the California Environmental Quality Act Guidelines; and

2. I move that the City Council approve the Facility Use Agreement with Redlands Theatre Festival for use of the Sewall Theater within Prospect Park.

RECOMMENDATION:

Staff recommends that the City Council approve the agreement with Redlands Theatre Festival for use of the Sewall Theater within Prospect Park. In addition, staff recommends that the City Council determine that approval of the agreement is exempt from environmental review pursuant to Section 15061(b)(3) of the State's guidelines implementing the California Environmental Quality Act.

DISCUSSION:

For more than 50 years, the City of Redlands and the Redlands Theatre Festival (RTF) have maintained a longstanding partnership to provide outdoor theatrical performances for the community at Prospect Park. This collaboration has resulted in the development and ongoing use of the Sewall Theater, an outdoor venue that has become a valued cultural asset and community gathering space. This partnership has contributed to improvements within Prospect Park and has supported consistent public access to live theater and cultural programming.

The prior rental and use agreement between the City and RTF has expired. RTF has requested that the City enter into a new agreement to allow for the continued use and operation of the Sewall Theater for theatrical performances and related activities. The proposed agreement formalizes the terms under which RTF may continue its longstanding programming at the facility while clarifying operational responsibilities between the parties.

Under the proposed agreement, the City will continue to make the Sewall Theater available to RTF for theatrical performances, rehearsals, receptions, and fundraising activities. The agreement establishes a three-year term and maintains a nominal rent of one dollar ($1) per year, reflecting the public benefit provided by RTF's programming. Consistent with prior arrangements, RTF will be responsible for the day-to-day maintenance and upkeep of the facility and associated improvements, ensuring that the premises are kept in good order and repair, subject to reasonable wear and tear. The City will retain responsibility for major structural components of the facility, including structural elements, plumbing systems, and primary electrical infrastructure.

The agreement also clarifies that the City retains the right to schedule and book third-party uses of the facility during periods when RTF is not utilizing the theater. In such instances, the City will collect any associated fees, and third-party users will be required to provide appropriate insurance and indemnification. RTF will not be obligated to provide staffing or equipment for third-party events unless separately agreed. Additionally, RTF is required to obtain prior written City approval before undertaking any improvements to the facility, ensuring continued City oversight of capital changes to the property.

The agreement includes standard provisions related to insurance, indemnification, assignment restrictions and termination rights, including the ability for either party to terminate the agreement with 30 days' written notice. These provisions are intended to protect the City's interests while allowing flexibility in the event that future operational or policy considerations change.

Approval of the proposed agreement will authorize the continued use of the Sewall Theater by the Redlands Theatre Festival under updated terms and conditions, ensuring the continuation of a longstanding community partnership and the provision of cultural programming within Prospect Park.

Approval of the agreement is categorically exempt from environmental review pursuant to Section 15061(b)(3) of the State CEQA Guidelines, which applies to activities where it can be seen with certainty that there is no possibility that the activity may have a significant effect on the environment. The proposed action involves the continued use of an existing City facility and does not result in an expansion or intensification of use beyond what has historically occurred.

ALTERNATIVES:

The City Council may deny the approval of the agreement or request changes.

STRATEGIC PLAN:

Priority A, Strategic Objective 1: Beautification, Arts and Culture.

RENTAL AND USE AGREEMENT BY AND BETWEEN THE CITY OF REDLANDS AND REDLANDS THEATRE FESTIVAL

This Rental and Use Agreement ("Agreement") is made and entered into this 2nd day of June, 2026 ("Effective Date"), by and between the City of Redlands, a municipal corporation and general law city (hereinafter "City") and the Redlands Theatre Festival, Inc., a California 501(c)(3) non-profit public benefit corporation (hereinafter "Non-Profit"). City and Non-Profit are sometimes individually referred to herein as a "Party" and, together, as the "Parties."

RECITALS

WHEREAS, City is the owner of a building located at 1352 Prospect Drive in the city of Redlands and commonly known as the Sewall Theatre; and

WHEREAS, Non-Profit is a California non-profit corporation and a 501(c)(3) tax exempt corporation which desires to utilize the Sewall Theatre for performances, rehearsals, receptions, and fundraising activities; and

WHEREAS, Parties entered into a two-year Rental and Use Agreement dated May 2, 2024 for use of the Sewall Theatre, and the parties desire to enter into this new Agreement to set forth terms and conditions under which City will continue to rent the Sewall Theatre to Non-Profit;

NOW, THEREFORE, in consideration of the mutual promises contained herein, the City of Redlands and Non-Profit agree as follows:

AGREEMENT

Section 1. Premises. City hereby rents to Non-Profit that certain building located at Prospect Park in the city of Redlands commonly known as the Sewall Theatre (the "Premises"). The Premises are more particularly shown in Exhibit "A," which is attached hereto and incorporated herein by this reference.

Section 2. Term. Unless terminated earlier as provided for herein, this Agreement shall be for a term of three (3) years commencing on the Effective Date of this Agreement.

Section 3. Rent. Non-Profit shall pay City rent in the sum of one dollar ($1) per year for use and occupancy of the Premises. The first year's rent payment shall be paid within ten (10) days of the Effective Date of this Agreement. Subsequently, the rent shall be payable on or before the anniversary date of the Effective Date each year during the term of this Agreement at the office of the Revenue Division located at 35 Cajon Street, Suite 15 B, Redlands, California 92373.

Section 4. Use of Premises.

A. The Premises shall be used for theatrical performances conducted at the Sewell Theater, and for rehearsals, receptions and fund-raising activities. No other use of the Premises by Non-Profit is permitted without the prior written consent of City.

B. City retains the right to use the Premises for itself, and to accept bookings by third parties for use of the Premises, during times when the Premises are not used by Non-Profit; provided, however, such use and bookings for third parties shall not include use of the offices, storage rooms, or equipment rooms of the Premises (the "Excluded Areas"). The Excluded Areas are more particularly shown in Exhibit "B," attached hereto and incorporated herein by this reference. All fees charged for third party bookings shall be established by City and shall be the property of City.

C. In connection with any third party bookings of the Premises, City shall require the third party to secure liability insurance satisfactory to City and Non-Profit for the use of the Premises and to provide City and Non-Profit with certificates of insurance naming City and Non-Profit as additional insureds, and to agree to indemnify and hold City and Non-Profit harmless in connection with any claims, damages, losses, costs and liabilities arising from the third party's use of the Premises.

D. At City's request, Non-Profit shall issue the appropriate key(s) to third parties who have booked areas of the Premises through City, provided that such third parties have presented Non-Profit with a copy of City's approved reservation form and satisfied the insurance and indemnification requirements with respect to City and Non-Profit referenced in Section 8 below and have paid Non-Profit a deposit against return of the keys to Non-Profit. Non-Profit shall have no obligation to provide any services, staff, sound, lighting, or other equipment to any third party. Any arrangement for utilization of Non-Profit's services, staff, sound, lighting, or other equipment shall be made by separate written agreement with Non-Profit on the terms and conditions (including payment of fees) specified by Non-Profit. Non-Profit shall have no obligation to provide access to the Excluded Areas to any third party.

E. Non-Profit may utilize the wooden sign, located at the south corner of the intersection of Cajon Street and Highland Avenue, between May 5th and August 15th of each year, for the advertisement or promotion of theater events.

Section 5. Utilities. City shall pay all costs associated with the furnishing of water, sewer, and solid waste services to the Premises during the term of this Agreement.

Section 6. Maintenance of Premises.

A. Non-Profit shall, at its own cost, maintain the Premises and all improvements therein in good order and repair, present condition and reasonable wear and tear excepted, except as provided in Subsection B, below. Should an inspection disclose the need for maintenance or repairs, City shall provide Non-Profit with written notice of the items requiring repair or maintenance. If action is not taken on such items by Non-Profit within sixty (60) days from the provision of such notice, City may enter the Premises and take whatever action is necessary to

perform such maintenance or repairs at Non-Profit's expense. Non-Profit shall also be responsible for any costs of any repairs to the structural elements of the Premises caused by Non-Profit acts of omission of its employees, agents, or invitees during the term of this Agreement.

B. City shall be responsible for maintenance and repair of all the structural elements, the plumbing systems, and the electrical system of the Premises. "Structural Elements" shall include the roof, gutters, downspouts, walls, doors, windows, stairs, structural supports, and foundation of the Premises. "Electrical System" shall include the electric meter and the power line to the distribution pole. Non-Profit shall be responsible for the breaker panel and its connections into the Premises. Non-Profit shall be responsible for the repair and maintenance of the Premises and all improvements in good order and repair. City shall be responsible for the repair of any damages and wear and tear to the Premises arising from any third-party bookings under Subsection 4 B.

C. On the expiration or earlier termination of this Agreement, Non-Profit shall promptly surrender and deliver the Premises to City in as good condition as the Premises are in on the Effective date of this Agreement, excluding reasonable wear and tear.

Section 7. Improvements.

A. Non-Profit shall not make any improvements to the Premises without the prior written consent of City except that, after making reasonable attempts to contact City for its approval, Non-Profit may undertake minor maintenance and repairs to the Premises which Non-Profit reasonably determines are immediately necessary to protect against injury to persons or property. Within three (3) days of performing any minor maintenance or repairs not verbally approved by City, Non-Profit shall provide written notification to City of the same. All Non-Profit proposals for improvements shall be submitted in writing to City for its consideration and prior approval. City shall approve or disapprove such proposals within twenty (20) days of their submission. With the prior written consent of City, Non-Profit may enter into contracts and agreements for improvement work to be performed by contractors and is responsible for complying with prevailing wage law, when applicable. Non-Profit shall have the right to remove all improvements made by it to the Premises provided such removal results in no damage to the Premises. Improvements not removed by Non-Profit shall, on expiration or earlier termination of this Agreement, remain on the Premises and become the property of City.

B. Non-Profit and City representatives may meet to discuss improvement progress under this Agreement on an annual basis (dates of which to be agreed upon by the Parties), or at the written request of either Party, to discuss any concerns related to the work to be performed under this Agreement.

Section 8. Indemnity.

A. Non-Profit shall defend (with counsel reasonably acceptable to City), indemnify, and hold harmless City, and its elected and appointed officials, officers, and employees, from and against any and all liability resulting from the Non-Profit's negligent acts or omissions, and

intentional wrongful acts of Non-Profit, and its agents, and employees, volunteers, and invitees, during Non-Profit's occupation and use of the Premises during the term of this Agreement.

B. City shall defend, indemnify, and hold harmless Non-Profit, its officers, directors and employees from and against any and all liability resulting from the City's sole negligent acts or omissions, and intentional wrongful acts of City, and its agents and employees during Non-Profit's occupation and use of the Premises during the term of this Agreement.

Section 9. Public Liability and Property Damage. Non-Profit shall procure and maintain for the duration of this Agreement, insurance against claims for injuries to persons or damages to property which may arise from or in connection with the rental of the facilities and the activities of the Non-Profit, their guests, agents, representatives, employees, volunteers, or subcontractors.

A. General Commercial Liability Insurance. Coverage shall be at least as broad as Insurance Services Office (ISO) Form CG 00 01 covering Commercial General Liability (CGL) on an "occurrence" basis, including property damage, bodily injury, and personal & advertising injury with limits no less than $1,000,000 per occurrence and $2,000,000 general aggregate. If Non-Profit maintains broader coverage and/or higher limits than the minimums shown above, the City requires and shall be entitled to the broader coverage and/or the higher limits maintained by the Renter. Any available insurance proceeds in excess of the specified minimum limits of insurance and coverage shall be available to the City.

(i) Workers' Compensation. As applicable, Non-Profit shall have Workers' Compensation coverage, as required by the State of California, with Statutory Limits, and Employer's Liability Insurance with limit of no less than $1,000,000 per accident for bodily injury or disease, to cover employees and volunteers of Non-Profit and shall execute Exhibit "C."

B. Insurance Requirements. The insurance policies required herein are to contain, or be endorsed to contain, the following provisions:

(i) Additional Insured Status. The City, its officers, officials, employees, and volunteers are to be covered as additional insureds on the CGL policy with respect to liability arising out of the rental of the facility. General liability coverage can be provided in the form of an endorsement to Non-Profit's insurance at least as broad as ISO Form CG 20 11 12 19 or if not available, CG 20 43 12 19.

(ii) Primary Coverage. For any claims related to this contract, Non-Profit's insurance coverage shall be primary and non-contributory insurance coverage at least as broad as ISO CG 20 01 04 13 as respects the City, its officers, officials, employees, and volunteers. Any insurance or self-insurance maintained by Non-Profit, its officers, officials, employees, or volunteers shall be excess of the City's insurance and shall not contribute with it. This also applies to any Excess or Umbrella liability policies.

(iii) Umbrella or Excess Policy. Non-Profit may use Umbrella or Excess Policies to provide the liability limits as required in this agreement. This form of insurance will be acceptable provided that all of the Primary and Umbrella or Excess Policies shall provide all of the insurance coverages herein required, including, but not limited to, primary and non-contributory, additional insured, Self-Insured Retentions (SIRs), indemnity, and defense requirements.

(iv) Notice of Cancellation. Each insurance policy required above shall provide that coverage shall not be canceled, except with notice to the City.

(v) Waiver of Subrogation. Non-Profit hereby grants to City a waiver of any right to subrogation which any insurer of Non-Profit may acquire against the City by virtue of the payment of any loss under such insurance. Non-Profit agrees to obtain any endorsement that may be necessary to affect this waiver of subrogation and provide a copy to the City, but this provision applies regardless of whether or not an endorsement has been issued.

(vi) Acceptability of Insurers. Insurance is to be placed with insurers authorized to conduct business in the state with a current A.M. Best's rating of no less than A:VII, unless otherwise acceptable to the City.

(vii) Verification of Coverage. Non-Profit shall furnish the City with original Certificates of Insurance including all required amendatory endorsements (or copies of the applicable policy language effecting coverage required by this clause) to the City before use of the facility begins. All certificates and endorsements are to be received and approved by the City at least five days before Non-Profit commences activities.

Section 10. Assignment/subletting. Non-Profit shall not encumber, assign, sublease, or otherwise transfer this Agreement, or any right or interest therein, without the prior written consent of City. Any such encumbrance, assignment, sublease or transfer without such prior consent of City shall constitute an immediate breach of this Agreement and may, at the sole discretion of City, result in the immediate termination of this Agreement.

Section 11. Attorneys' Fees. In the event any action is commenced to enforce or interpret the terms or conditions of this Agreement, the prevailing party shall, in addition to any costs and other relief, be entitled to the recovery of its reasonable attorneys' fees, including fees for use of in-house counsel by a Party.

Section 12. Notices. Any notice or other communication required, or which may be given, pursuant to this Agreement, shall be in writing. Any such notice shall be deemed delivered (i) on the date of delivery in person; (ii) five (5) days after deposit in first class registered mail, with return receipt requested; (iii) on the actual delivery date if deposited with an overnight courier; or (iv) on the date sent by facsimile or electronic mail transmission (including PDF), if confirmed with a copy sent contemporaneously by first class, certified, registered or express mail; in each case properly posted and fully prepaid to the appropriate address set forth below, or such other address as a Party may provide notice in accordance with this section:

Section 13. Entire Agreement. This Agreement constitutes the entire agreement between City and Non-Profit regarding the rental of the Premises to Non-Profit. Any prior written or oral agreements or representations respecting the Premises by City or Non-Profit not expressly set forth herein are null and void.

Section 14. Amendments. Any amendment to this Agreement shall be in writing and executed by the Parties.

Section 15. Termination. This Agreement may be terminated by either Party by giving thirty (30) days prior written notice to the other Party. In the event of any termination of this Agreement, in addition to any other rights or remedies City may have, City shall have the immediate right of reentry and may remove all persons and property from the Premises; and store the same in a public warehouse or elsewhere at the cost of Non-Profit. All remedies of City under this section shall be cumulative and in addition to any other legal or equitable rights and remedies which City may have.

Section 16. Waiver. No waiver by either Party of any provision of this Agreement shall be deemed to be a waiver of any other provision of this Agreement, or of any subsequent breach by either Party of the same or any other provision of this Agreement.

Section 17. Severability. If any provision of this Agreement is held invalid or unenforceable for any reason, this Agreement shall otherwise remain in full force and effect and shall be construed in all respects as if such invalid or unenforceable provision were omitted.

WORKERS' COMPENSATION INSURANCE CERTIFICATION

Every employer, except the State, shall secure the payment of compensation in one or more of the following ways:

(a) By being insured against liability to pay compensation by one or more insurers duly authorized to write compensation insurance in this State.

(b) By securing from the Director of Industrial Relations, a certificate of consent to self-insure either as an individual employer, or as one employer in a group of employers, which may be given upon furnishing proof satisfactory to the Director of Industrial Relations of ability to self-insure and to pay any compensation that may become due to his or her employees

CHECK ONE

____I am aware of the provisions of Section 3700 of the Labor Code which requires every employer to be insured against liability for Workers' Compensation or to undertake self-insurance in accordance with the provisions of that Code, and I will comply with such provisions before commencing the performance of the work and activities required or permitted under this Agreement. (Labor Code SS 1861).

____I affirm that at all times; in performing the work and activities required or permitted under this Agreement, I shall not employ any person in any manner such that I become subject to the workers' compensation laws of California. However, at any time, if I employ any person such that I become subject to the workers' compensation laws of California, immediately I shall provide the City with a certificate of consent to self-insure, or a certification of workers' compensation insurance.

I certify under penalty of perjury' under the laws of the State of California that the information and representations made in this certificate are true and correct.

FACILITY USE AGREEMENT BY AND BETWEEN THE CITY OF REDLANDS AND REDLANDS THEATRE FESTIVAL

This Facility Use Agreement ("Agreement") is made and entered into this 21st day of May, 2024 ("Effective Date"), by and between the City of Redlands, a municipal corporation and general law city (hereinafter "City") and the Redlands Theatre Festival, Inc. a California non-profit corporation (hereinafter "RTF"). City and RTF are sometimes individually referred to herein as a "Party" and, together, as the "Parties."

RECITALS

WHEREAS, City is the owner of a building located at 1352 Prospect Drive within Prospect Park in the City of Redlands and commonly known as the Sewall Theatre; and

WHEREAS, RTF desires to utilize the Sewall Theatre for performances, rehearsals, receptions, and fundraising activities; and

WHEREAS, City and RTF have been parties to multiple facility use agreements over the last fifteen years for the use of the Sewall Theatre, and desire to enter into this new agreement to set forth terms and conditions under which City will continue the use the Sewall Theatre to RTF;

NOW, THEREFORE, in consideration of the mutual promises contained herein, the City of Redlands and Redlands Theatre Festival agree as follows:

AGREEMENT

Section 1. Premises.

A. City hereby allows RTF use of that certain building located at Prospect Park in the City of Redlands commonly known as the Sewall Theatre (the "Premises") subject to the terms and conditions set forth herein. The Premises are more particularly shown in Exhibit "A," which is attached hereto and incorporated herein by this reference.

B. RTF acknowledges and agrees that City is the owner of Premises and that nothing in this Agreement grants to RTF any rights, title, or interest in the Premises, except for the revocable, non-exclusive right to use the Premises as provided in this Agreement. RTF is not a tenant or lessee of City and holds no rights of tenancy or leasehold in relation to the Premises.

Section 2. Term. Unless terminated earlier as provided for herein, this Agreement shall be for a term of two (2) years commencing on its Effective Date.

Section 3. Use of Premises.

A. The Premises shall be used for theatrical performances conducted at the Sewall Theater, and for rehearsals, receptions, and fundraising activities. No other use of the Premises by RTF is permitted without the prior written consent of the City.

B. City retains the right to use the Premises for itself, and to accept bookings by third parties for use of the Premises, during times when the Premises are not used by RTF; provided, however, such use and bookings for third parties shall not include use of the offices, storage rooms, or equipment rooms of the Premises (the "Excluded Areas"). The Excluded Areas are more particularly shown in Exhibit "B," attached hereto and incorporated herein by this reference. All fees charged for third party bookings shall be established by the City and shall be the property of City.

C. In connection with any third party bookings of the Premises, City shall require the third party to secure liability insurance satisfactory to City and RTF for the use of the Premises and to provide City and RTF with certificates of insurance naming City and RTF as additional insureds, and to agree to indemnify and hold City and RTF harmless in connection with any claims, damages, losses, costs, and liabilities arising from the third party's use of the Premises.

D. At City's request, RTF shall issue the appropriate key(s) to third parties who have booked areas of the Premises through City, provided that such third parties have presented RTF with a copy of City's approved reservation form and satisfied the insurance and indemnification requirements with respect to City and RTF referenced in Section 8 below and have paid RTF a deposit against return of the keys to RTF. RTF shall have no obligation to provide any services, staff, sound, lighting, or other equipment to any third party. Any arrangement for utilization of RTF's services, staff, sound, lighting, or other equipment shall be made by separate written agreement with RTF on the terms and conditions (including payment of fees) specified by RTF. RTF shall have no obligation to provide access to the Excluded Areas to any third party.

E. RTF may utilize the wooden sign, located at the south corner of the intersection of Cajon Street and Highland Avenue, between May 2nd and August 15th of each year, for the advertisement or promotion of theater events.

Section 5. Utilities. City shall pay all costs associated with the furnishing of water, sewer, and solid waste services to the Premises during the term of this Agreement.

Section 6. Maintenance of Premises.

A. RTF shall, at its own cost, maintain the Premises and all improvements therein in good order and repair, present condition and reasonable wear and tear excepted, except as provided in Subsection B, below. City shall have the right to enter the Premises, at reasonable times, for inspection and maintenance purposes. Should an inspection disclose the need for maintenance or repairs due to the acts or omissions of RTF's employees, agents, or invitees, City shall provide RTF with written notice of the items requiring repair or maintenance. If action is not taken on such items by RTF within sixty (60) days from the provision of such notice, City may enter the Premises and take whatever action is necessary to perform such maintenance or repairs at RTF's expense. RTF shall also be responsible for any costs of any repairs to the structural elements of the Premises caused by RTF acts of omission of its employees, agents, or invitees during the term of this Agreement.

B. On the expiration or earlier termination of this Agreement, RTF shall promptly

surrender and deliver the Premises to City in as good condition as the Premises are in on the Effective date of this Agreement, excluding reasonable wear and tear.

Section 7. Improvements.

A. RTF shall not make any improvements to the Premises without the prior written consent of City except that, after making reasonable attempts to contact City for its approval, RTF may undertake minor maintenance and repairs to the Premises which RTF reasonably determines are immediately necessary to protect against injury to persons or property. Within three (3) days of performing any minor maintenance or repairs not verbally approved by City, RTF shall provide written notification to City of the same. All RTF proposals for improvements shall be submitted in writing to City for its consideration and prior approval. City shall approve or disapprove such proposals within thirty (30) days of their submission. With the prior written consent of City, RTF may enter into contracts and agreements for improvement work to be performed by contractors in compliance with the City's Purchasing Ordinance and prevailing wage laws, and shall require contractor insurance and bonding as required by the City. RTF shall have the right to remove all improvements made by it to the Premises provided such removal results in no damage to the Premises. Improvements not removed by RTF shall, on expiration or earlier termination of this Agreement, remain on the Premises and become the property of City.

B. RTF and City representatives may meet to discuss improvement progress under this Agreement on an annual basis (dates of which to be agreed upon by the Parties), or at the written request of either Party, to discuss any concerns related to the work to be performed under this Agreement.

Section 8. Indemnity.

A. RTF shall defend (with counsel reasonably acceptable to City), indemnify, and hold harmless City, and its elected and appointed officials, officers, and employees, from and against any and all liability resulting from the RTF's negligent acts or omissions, and intentional wrongful acts of RTF, and its agents, and employees, and invitees, during RTF's occupation and use of the Premises during the term of this Agreement.

B. City shall defend, indemnify, and hold harmless RTF, its officers, directors, and employees from and against any and all liability resulting from the City's negligent acts or omissions, and intentional wrongful acts of City, and its agents and employees during RTF's occupation and use of the Premises during the term of this Agreement.

Section 9. Public Liability and Property Damage Insurance. RTF shall maintain, at its own cost the term of this Agreement, public liability insurance in the amount of One Million Dollars ($1,000,000) per occurrence and Two Million Dollars ($2,000,000) in the aggregate, issued by an insurance company acceptable to City. RTF shall provide City with a renewed certificate of insurance and endorsements showing City as an additional insured on the policy prior to RTF's use and occupancy of the Premises. Such insurance shall be primary with respect to City and non-contributory to any insurance or self-insurance maintained by City. The policy shall

require that before amending or canceling the policy, the issuing insurance company shall give City at least thirty (30) days prior written notice. City and RTF acknowledge and agree that the insurance required of RTF is subject to annual review by City and subject to increases in the amount and scope of coverage, as reasonably determined by City.

Section 10. Assignment/subletting. RTF shall not encumber, assign, sublease, or otherwise transfer this Agreement, or any right or interest therein, without the prior written consent of City. Any such encumbrance, assignment, sublease, or transfer without such prior consent of City shall constitute an immediate breach of this Agreement and may, at the sole discretion of City, result in the immediate termination of this Agreement.

Section 11. Attorneys' Fees. In the event any action is commenced to enforce or interpret the terms or conditions of this Agreement, the prevailing party shall, in addition to any costs and other relief, be entitled to the recovery of its reasonable attorneys' fees, including fees for use of in-house counsel by a Party.

Section 12. Notices. Any notice or other communication required, or which may be given, pursuant to this Agreement, shall be in writing. Any such notice shall be deemed delivered (i) on the date of delivery in person; (ii) five (5) days after deposit in first class registered mail, with return receipt requested; (iii) on the actual delivery date if deposited with an overnight courier; or (iv) on the date sent by facsimile or electronic mail transmission (including PDF), if confirmed with a copy sent contemporaneously by first class, certified, registered or express mail; in each case properly posted and fully prepaid to the appropriate address set forth below, or such other address as a Party may provide notice in accordance with this section:

Section 13. Entire Agreement. This Agreement constitutes the entire agreement between City and RTF regarding the use of the Premises to RTF. Any prior written or oral agreements or representations respecting the Premises by City or RTF not expressly set forth herein are null and void.

Section 14. Amendments. Any amendment to this Agreement shall be in writing and executed by the Parties.

Section 15. Termination. This Agreement may be terminated by either Party by giving thirty (30) days prior written notice to the other Party. In the event of any termination of this

Agreement, in addition to any other rights or remedies City may have, City shall have the immediate right of reentry and may remove all persons and property from the Premises; and store the same in a public warehouse or elsewhere at the cost of RTF. All remedies of City under this section shall be cumulative and in addition to any other legal or equitable rights and remedies which City may have.

Section 16. Waiver. No waiver by either Party of any provision of this Agreement shall be deemed to be a waiver of any other provision of this Agreement, or of any subsequent breach by either Party of the same or any other provision of this Agreement.

Section 17. Severability. If any provision of this Agreement is held invalid or unenforceable for any reason, this Agreement shall otherwise remain in full force and effect and shall be construed in all respects as if such invalid or unenforceable provision were omitted.

Executed on the 21st day of May, 2024, at Redlands, California.

2020 (11/01/2020-10/31/2021)	PO BOX 2702 CRESTLINE, CA 923252702	$50,000

City Council **AGENDA ITEM NO. I16.**

DATE: June 2, 2026

TO: Honorable Mayor and City Council Members

SUBJECT: Approve a request for in-kind support in the amount of $82,803.92, related to the Redlands Fourth of July event hosted on Saturday, July 4, 2026 by the Redlands Fourth of July Committee, Inc.; revise the previously approved $50,000 City contribution to authorize partial disbursement prior to the event; approve temporary street closures related to the event; authorize sale and consumption of alcoholic beverages at the event; and determine that the event is categorically exempt from environmental review pursuant to Section 15311(c) of the state's guidelines implementing the California Environmental Quality Act (Facilities and Community Services Department Director Crocker)

MOTION:

If the City Council determines that staff's recommendation is appropriate, the following motions are provided:

1. I move that the City Council determine that the approval of the event is exempt from environmental review pursuant to Section 15311(c) of the State's guidelines implementing the California Environmental Quality Act; and

2. I move to approve the request for in-kind support in the amount of $82,803.92; and revise the previously approved City contribution of $50,000 to authorize disbursement of fifty percent (50%) of the contribution prior to the event and the remaining fifty percent (50%) following the event; and

3. I move to approve the temporary street closures listed in the application, and authorize the sale and consumption of alcoholic beverages, for the annual Redlands Fourth of July event to be held on Saturday, July 4, 2026.

RECOMMENDATION:

Staff further recommends that the City Council approve the request for in-kind support in the amount of $82,803.92 related to the Fourth of July event hosted by the Redlands Fourth of July Committee, Inc., on Saturday, July 4, 2026; revise the previously approved City contribution of $50,000 to authorize disbursement of fifty percent (50%) of the contribution prior to the event and the remaining fifty percent (50%) following the event; approve temporary street closures; and authorize the sale and consumption of alcoholic beverages at the event.

DISCUSSION:

The Facilities and Community Services Department manages the administration and issuance of permits for special events held in public areas of the city. Upon the issuance of a special event permit, the event may take place contingent on the event organizer paying the required fees. The city recognizes the value of partnering with non-profit agencies and organizations to provide beneficial services to the community. In an effort to support programs that provide community benefit, the City Council will, from time to time, consider the authorization of in-kind support, including the use of city equipment, staff, and facilities for special events.

Redlands Fourth of July Committee, Inc., is a registered non-profit organization operating out of the City of Redlands and has held its Fourth of July celebration in the City annually since 1968. According to the submitted application, all funds generated pay for the expenses associated with facilitating the Fourth of July fireworks show, park and parade activities within the City of Redlands.

Redlands Fourth of July Committee, Inc. is requesting in-kind support in the amount of $82,803.92 for departmental resources, including Police, Fire, and Facilities and Community Services (FCS) personnel and FCS park facilities and equipment. Previously, the City Council approved $58,001.34 in in-kind support for last year’s 48th annual Redlands Fourth of July event, hosted on Friday, July 4, 2025.

In addition, the committee is requesting the periodic, temporary street closures on Saturday, July 4, 2026. The request includes the reservation of Sylvan Park for Saturday, July 4, 2026, from 6:00 a.m. to 3:00 p.m., the temporary closure of surrounding streets including portions of East Colton Avenue, Chapel Street, Stillman Avenue, East High Avenue, Division Street, Park Avenue, and University Street between the hours of 8:00 a.m. and 12:00 p.m. In addition, the committee is also requesting the temporary closure of streets of Highland Avenue, Dearborn Street, Fifth Avenue and Marion Road between 1:00 p.m. and 11:00 p.m. for the fireworks display to be held at Moore Middle School.

The Redlands Fourth of July Committee is requesting permission to serve alcohol at the event. City Council approval is also necessary to authorize the consumption and sale of alcohol for this event due to its proposed location within a beer garden on Fifth Avenue, adjacent to Moore Middle School, between 4:00 p.m. and 10:00 p.m. Staff's approval authority is limited to only enclosed public areas in public parks as defined by Resolution No. 7559.

On Tuesday, March 17, 2026, the City Council approved a contribution of $50,000 for the 2026 Fourth of July Celebration to the Redlands Fourth of July Committee and determined that the financial support serves as a public benefit.

At the time of approval, the contribution was anticipated to be disbursed following the event. The Redlands Fourth of July Committee has since requested that a portion of the contribution be provided prior to the event to assist with upfront operational costs and event-related cash flow needs. Staff is recommending that the City Council authorize disbursement of fifty percent (50%) of the approved contribution prior to the event, with the remaining balance to be disbursed following the event.

The event is exempt from the requirements of the California Environmental Quality Act’s guidelines pursuant to Section 15311(c). Section 15311(c), accessory structures Class 11 facilities, consists of the construction or replacement of minor structure accessory to existing commercial, industrial, or institutional facilities, including placement of seasonal or temporary use items such as mobile food units, portable restrooms or similar items in generally the same locations from time to time in publicly owned parks or other facilities designed for public use.

ALTERNATIVES:

The City Council may elect to deny the request for in-kind support, deny the request for temporary street closures and direct staff accordingly.

STRATEGIC PLAN:

Priority A - Quality of Life, Beautification, Arts and Culture.

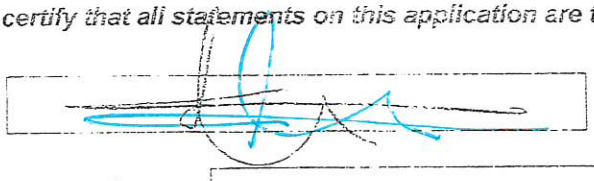
Updated 6/2021

As a part of our commitment to fiscal responsibility, the City of Redlands gathers data associated with the economic and social benefits associated with in-kind support. Please provide estimates, as applicable, for your event.

Positive outcomes for your organization from this

Sylvan Park and Fireworks Show are packed with people we feel represents our success



Describe what economic benefit and impact this event will bring to the City:

Redlands is known throughout the Inland Empire for hosting Sylvan Park activities and Fireworks Show bringing people to our community

In April 2002, the City Council adopted Resolution No. 6038, which encourages groups or organizations requesting in-kind support from the City to use local businesses when procuring goods and services associated with the event. Receipts will need to be submitted through a follow up form. Failure to submit post event documentation (within 15 days) may affect future requests.

	Proposed Event	Previous Event Actuals	Vendors
Attendance: Redlands Residents	75%	75%	
Attendance: Non-Residents	25%	25%	
Food & Beverage Sales	0	0	
Merchandise Sales	10,000.	10,976.	
Ticket/Entrance Fees	59,000.	59,155.	
Other	60,000.	62,600.	
Total Revenue	129,000.	132,731	

I certify that all statements on this application are true and complete to the best of my knowledge.

REDLANDS 4TH OF JULY COMMITTEE INC
A NONPROFIT CORPORATION
278 TENNESSEE STREET SUITE 12
REDLANDS, CA 92373

Dear Applicant:

We're pleased to tell you we determined you're exempt from federal income tax under Internal Revenue Code (IRC) Section 501(c)(3). Donors can deduct contributions they make to you under IRC Section 170. You're also qualified to receive tax deductible bequests, devises, transfers or gifts under Section 2055, 2106, or 2522. This letter could help resolve questions on your exempt status. Please keep it for your records.

Organizations exempt under IRC Section 501(c)(3) are further classified as either public charities or private foundations. We determined you're a public charity under the IRC Section listed at the top of this letter.

Based on the information you submitted with your application, we approved your request for reinstatement under Revenue Procedure 2014-11. Your effective date of exemption, as listed at the top of this letter, is the postmark date of your application.
Your exemption under IRC Section 501(c)(3) is effective as of the date listed at the top of this letter.
You were exempt under Section 501(c)(4) prior to this date.

If we indicated at the top of this letter that you're required to file Form 990/990-EZ/990-N, our records show you're required to file an annual information return (Form 990 or Form 990-EZ) or electronic notice (Form 990-N, the e-Postcard). If you don't file a required return or notice for three consecutive years, your exempt status will be automatically revoked.

If we indicated at the top of this letter that an addendum applies, the enclosed addendum is an integral part of this letter.

For important information about your responsibilities as a tax-exempt organization, go to www.irs.gov/charities. Enter "4221-PC" in the search bar to view Publication 4221-PC, Compliance Guide for 501(c)(3) Public Charities, which describes your recordkeeping, reporting, and disclosure requirements.

Sincerely,

Stephen A. Martin

Staff Notes:

In anticipation of the City Council's consideration of this request, staff has compiled the following table outlining costs related to fees established by Resolution of the City Council and departmental charges pertaining to personnel and equipment resources necessary for the support of the event. The departmental charges are costs outside of normal City operations that would not be incurred by the City if the special event was not taking place.

Departmental Charges (Personnel & Equipment)	**2026-2027 Amount**	**Type**	**2025-2026 Amount**
Police Personnel[1]	$61,656.00	Hard Cost	$45,324.00
Fire Personnel[1]	$6,547.92	Hard Cost	$1,007.34
Facilities & Community Services Personnel[1]	$10,800.00	Hard Cost	$9,000.00
Personnel & Equipment Subtotal	**$79,003.92**		$55,331.34
Fees Established by City Council Resolution			
Park Reservation	$225.00	Soft Cost	$225.00
FCS Equipment	$3,575.00	Soft Cost	$1,505.00
Fire Equipment	$0.00	Soft Cost	$940.00
Fees Subtotal	**$3,800.00**		**$2,670.00**
Total Departmental Charges and Fees	**$82,803.92**		$58,001.34
	$79,003.92 **$3,800.00** **$82,803.92**	Hard Cost Soft Cost Total	**$55,331.34** **$2,670.00** **$58,001.34**

[1]*Personnel costs are calculated conservatively assuming the highest staff cost scenario. Actual costs may vary on the day of the event based on the actual staff present. Actual costs will be confirmed following the event and will be included in a reconciliation report presented to the City Council.*

The following table summarizes the total estimated costs associated with the use of City resources and waiver of fees approved for events scheduled during Fiscal Year 2026-27 to date:

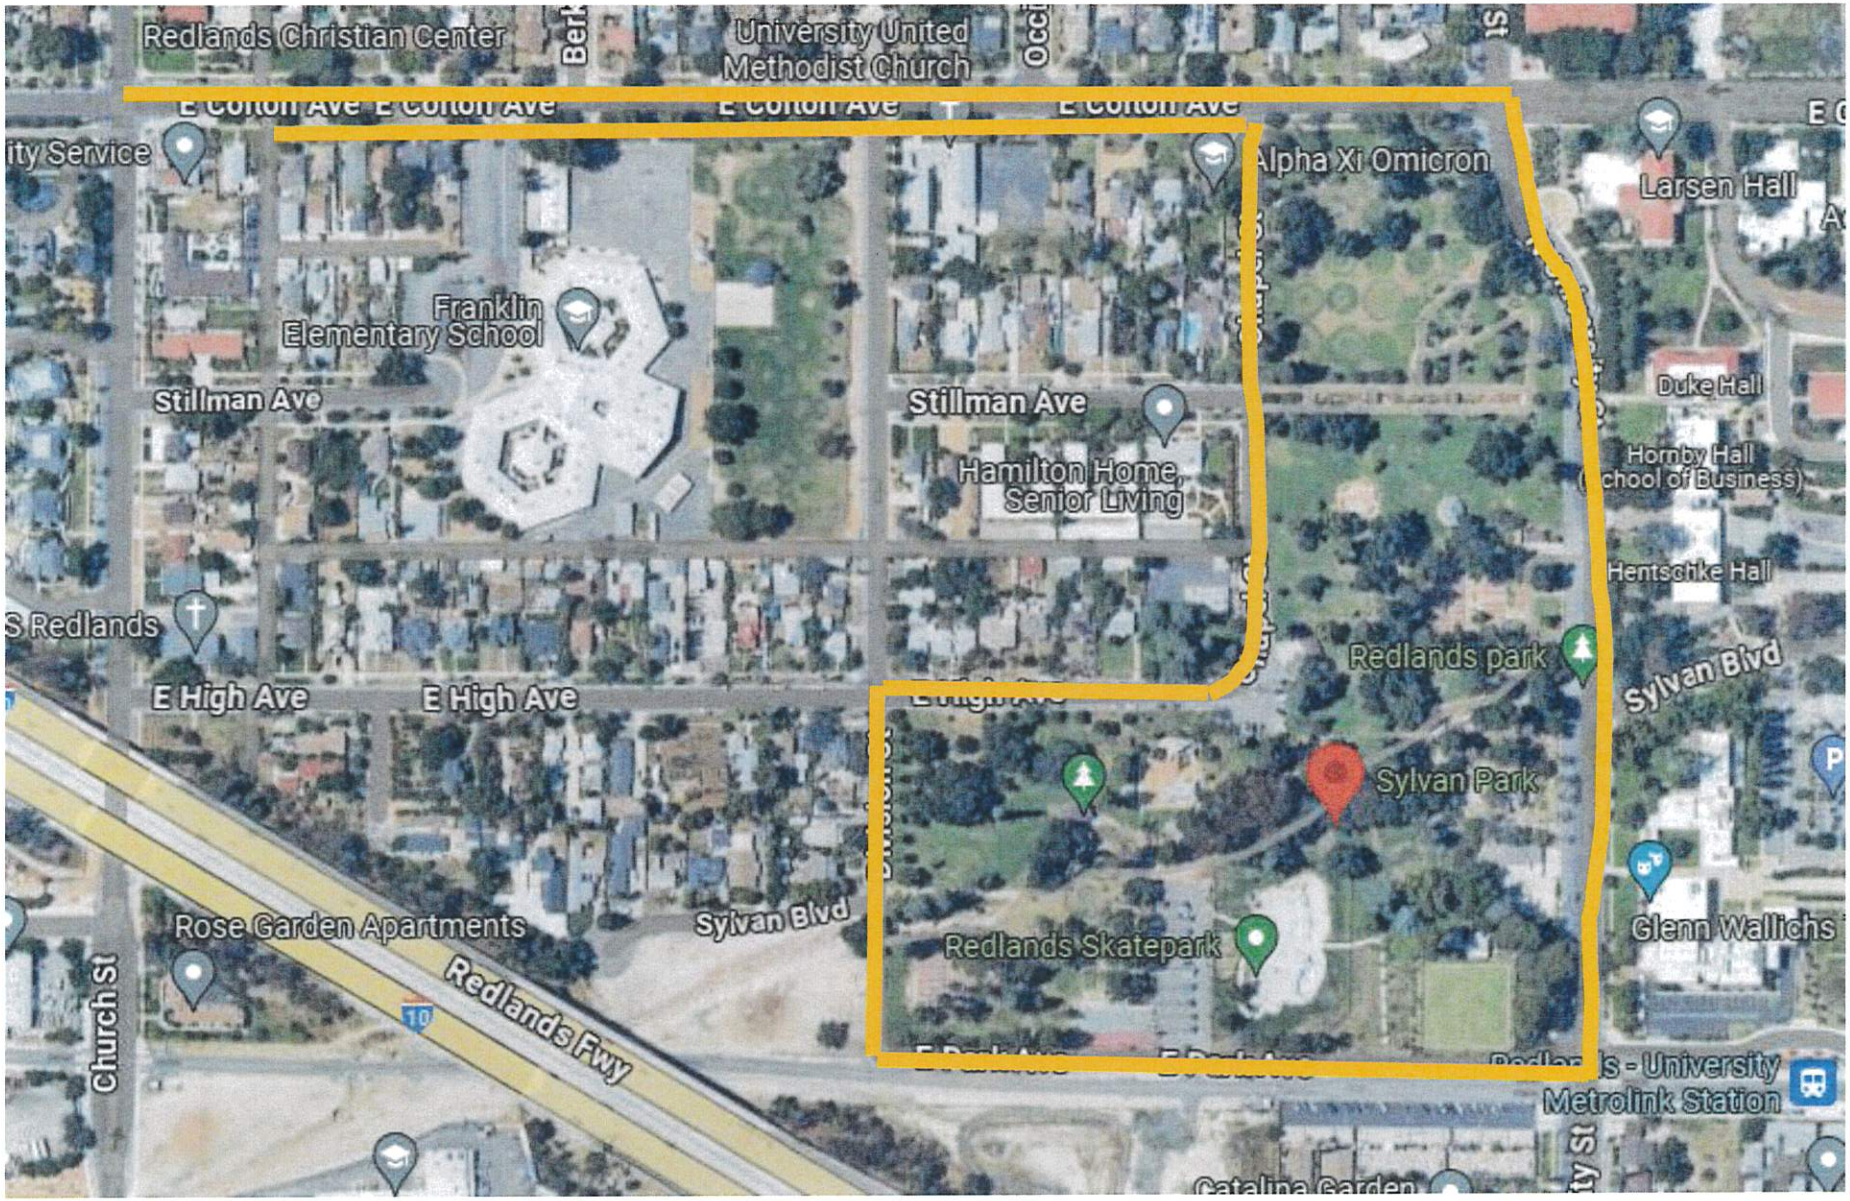

TABLE 2: FY 2026-27 Fee Waivers to date

Hard Costs	**Soft Costs**	**Deposits Refunded**	**Waiver Amount**	**Net Amount**
$46,411.28	$7,801.00	$0.00	$54,212.28	$54,212.28

City Council **AGENDA ITEM NO. I17.**

DATE: June 2, 2026

TO: Honorable Mayor and City Council Members

SUBJECT: Approve a Public Works Construction Contract to David Ollis Landscape Development, Inc., in an amount not to exceed $128,601.30 to complete the Gateway Refresh Project FCS01132026KG; and determination that approval of the contract is exempt from the California Environmental Quality Act pursuant to Section 15303 of the CEQA Guidelines (Facilities and Community Services Department Director Crocker)

MOTION:

If the City Council determines that staff's recommendation is appropriate, the following motions are provided:

1. I move that the City Council determine that approval of the contract and project as categorically exempt from environmental review in accordance with Section 15303 of the State's guidelines implementing the California Environmental Quality Act: and

2. I move that City Council approve a Public Works Construction Contract to David Ollis Landscape Development, Inc., in an amount not to exceed One Hundred Twenty-Eight Thousand, Six Hundred One Dollars and Thirty Cents ($128,601.30) to complete the Gateway Refresh Project FCS01132026KG.

RECOMMENDATION:

Staff recommend that the City Council determine that approval of the contract and project is categorically exempt from environmental review in accordance with Section 15303 of the State's guidelines implementing the California Environmental Quality Act: and

Staff recommend that City Council approve a Public Works Construction Contract to David Ollis Landscape Development, Inc., in an amount not to exceed One Hundred Twenty-Eight Thousand, Six Hundred One Dollars and Thirty Cents ($128,601.30) to complete the Gateway Refresh Project FCS01132026KG.

DISCUSSION:

The original I-10 Gateway Project was approved by City Council during the May 17th, 2016, meeting. The project included aesthetic improvements within the Caltrans right-of-way at the on/off-ramps to Interstate 10 in downtown Redlands at Sixth Street, Orange Street and Eureka Street. These improvements were designed to serve as a gateway feature for residents and visitors traveling to Redlands. Enhancements included the construction and installation of gateway monuments, ornamental fencing, and replanting of nearly all existing landscaping in the area.

Since the project's completion nearly a decade ago, some plants, shrubs, and tree species have proven less suitable for the area. Additionally, certain species have been removed from approved planting palettes due to pest and disease issues. As a result, portions of the site have lost landscaping and no longer meet the intended aesthetic standards. The scope of work for this refresh project includes, inspection and repair of all irrigation, electrical and lighting systems, landscape clean-up and replacement (Aloe, Bougainvillea, Rosemary, Catclaw), and the removal and replacement of hard surface materials (decomposed granite, mulch, pebbles, and rocks).

On January 21, 2026, Staff advertised the Gateway Refresh Project, FCS01132026KG. On February 11, 2026, the City Clerk received and opened three (3) bids:

BID OPENING REPORT SUMMARY

BIDDER	BID AMOUNT
David Ollis Landscape Development, Inc., Redlands, CA	$128,601.30
Greenfield, Hacienda Heights, CA	$138,850.00
All American Building Services, Santa Clarita, CA	$217,847.85

Staff reviewed all bids for responsiveness and compliance with bid requirements; David Ollis Landscape Development, Inc., was determined to be the lowest responsive bidder.

The project is expected to be completed within one hundred and twenty (120) calendar days following issuance of a Notice to Proceed to the Contractor.

ALTERNATIVES:

City Council may deny the staff recommendations and provide alternate directions.

STRATEGIC PLAN:

Supports Priority A – Quality of Life; Strategic Objective 1. Beautification, Arts and Culture.

SUBMITTED BY:
Tabitha Crocker, Facilities & Community Services Director

RECOMMENDED BY:
Charles M. Duggan Jr., City Manager

REVIEWED BY:
Yvette M. Abich Garcia, City Attorney
Janice McConnell, Assistant City Manager
James Garland, Interim Management Services/Finance Director
Dana Abramovitz-Daniel, Procurement Manager

PREPARED BY:
Marion Cronin, Administrative Analyst

FISCAL IMPACT

Fiscal Year: 2025-26

Revenue Generating: No

Amount: $128,601.30

Budgeted Y/N: Yes

Account No.: 101303-8501 and 101304-6710

Additional Appropriation Required: No

Discussion:

The requested amount of $128,601.30 is already included in the departments budget. Funding for this project is split between Parks division budget, $90,000, and Streets division budget, $38,601.30.

PUBLIC WORK CONSTRUCTION CONTRACT

This Public Work Construction Contract ("Contract") is made and entered into this 2nd day of June, 2026, by and between the City of Redlands, a municipal corporation, organized and existing under the laws of the State of California (hereinafter "City"), and David Ollis Landscape Development, Inc. (hereinafter "Contractor"). City and Contractor are sometimes individually referred to herein as a "Party" and, together, as the "Parties."

In consideration of the mutual promises contained herein, City and Contractor agree as follows:

1. **SCOPE OF WORK:** Contractor shall furnish all materials and will perform all of the work for the following: Gateway Refresh Project, complete all items as required by the Contract Documents (as herein defined) and Specifications for City's Gateway Refresh Project FCS01132026KG, per the Gateway Refresh Project Planting Plans (the "Work").

2. **CONTRACT SUM:** City shall pay Contractor the sum of One Hundred Twenty-Eight Thousand Six Hundred One Dollars and Thirty Cents ($128,601.30) as consideration for its performance of the Work in accordance with the terms and conditions set forth in the Contract Documents. Pursuant to Public Contract Code Section 22300, Contractor has the option to deposit securities with an escrow agent as a substitute for retention of earnings required to be withheld by City pursuant to an escrow agreement as set forth in Public Contract Code Section 22300.

3. **TIME FOR COMPLETION:** The Work shall be completed within one hundred twenty (120) calendar days from and after the date of City's issuance of a Notice to Proceed to Contractor.

4. **LIQUIDATED DAMAGES:** Contractor's failure to complete the Work within the time allowed will result in damages being sustained by City. Such damages are, and will continue to be, impracticable and extremely difficult to determine. Accordingly, Contractor shall pay to City, or have withheld from monies due to Contractor, the sum of Five Hundred dollars ($500.00) for each consecutive calendar day in excess of the specified time for completion of the Work. Execution of this Contract shall constitute agreement by City and Contractor that Five Hundred dollars ($500.00) per day is the estimated damage to City caused by the failure of Contractor to complete the work within the allowed time. Such sum is liquidated damages and shall not be construed as a penalty and may be deducted from payments due Contractor if such delay occurs.

5. **CONTRACT DOCUMENTS:** This Contract incorporates by reference the following: Notice Inviting Bids, Instructions to Bidders, Contractor's Proposal, Bid Bond, Agreement, Performance Bond, Labor and Material Bond, Plans, General Conditions, Special Provisions and Specifications, and any addenda thereto (collectively, the "Contract Documents").

6. **ATTORNEYS' FEES:** In the event any action is commenced to enforce or interpret the terms or conditions of this Contract, or the Contract Documents, the prevailing Party in such action, in addition to any costs and other relief, shall be entitled to recover its reasonable attorneys' fees, including fees for use of in-house counsel by a Party.

7. **RESOLUTION OF CONSTRUCTION CLAIMS:** Claims by Contractor in the amount of Three Hundred Seventy-Five Thousand dollars ($375,000) or less shall be made by Contractor and processed by the City pursuant to the provisions of Part 3, Chapter 1, Article 1.5 of the Public Contract Code (commencing with Section 20104). All claims shall be in writing and include the documents necessary to substantiate the claim. Nothing in subdivision (a) of Public Contract Code

Section 20104.2 shall extend the time limit or supersede the notice requirements provided in this case from filing claims by Contractor.

8. **ELIGIBILITY OF CONTRACTOR/SUBCONTRACTOR:** Contractor and all of its subcontractors shall abide by California Public Contract Code, Section 6109, and California Labor Code Sections 1777.1 and/or 1777.7, and certify that they are not debarred and are eligible to work on this project.

9. **ASSIGNMENT OF AGREEMENT:** No assignment by a Party of any rights or interests under this Contract shall be binding on another Party without the written consent of the Party sought to be bound.

10. **SUCCESSORS AND ASSIGNS:** City and Contractor each binds itself and their respective successors and assigns in respect to all covenants, agreements, and obligations contained in the Contract Documents.

11. **SEVERABILITY:** Any provision or part of the Contract Documents held to be void or unenforceable under any law or regulation shall be deemed stricken, and all remaining provisions shall continue to be valid and binding upon City and Contractor.

[Signatures on next page]

IN WITNESS WHEREOF, the Parties hereto have executed this Contract the day and year first written above.

FCS01132026KG

Every employer, except the State, shall secure the payment of compensation in one or more of the following ways:

a. By being insured against liability to pay compensation by one or more insurers duly authorized to write compensation insurance in this State.
b. By securing from the Director of Industrial Relations, a certificate of consent to self-insure, either as an individual employer, or as one employer in a group of employers, which may be given upon furnishing proof satisfactory to the Director of Industrial Relations of ability to self-insure and to pay any compensation that may become due to his or her employees.

CHECK ONE

_____I am aware of the provisions of Section 3700 of the Labor Code which requires every employer to be insured against liability for Workers' Compensation or to undertake self-insurance in accordance with the provisions of that Code, and I will comply with such provisions before commencing the performance of the work and activities required or permitted under this Agreement. (Labor Code §1861).

_____I affirm that at all times, in performing the work and activities required or permitted under this Agreement, I shall not employ any person in any manner such that I become subject to the workers' compensation laws of California. However, at any time, if I employ any person such that I become subject to the workers' compensation laws of California, immediately I shall provide the City with a certificate of consent to self-insure, or a certification of workers' compensation insurance.

I certify under penalty of perjury under the laws of the State of California that the information and representations made in this certificate are true and correct.

Dated this _____ day of _____, 2026.

(Labor Code Section 1861 provides that the above certificate must be signed and filed by the Contractor with the Owner prior to performing the work of the contract.)

FAITHFUL PERFORMANCE BOND

Whereas, the City of Redlands ("City"), State of California, and David Ollis Landscape Development, Inc. (hereinafter designated as "Principal"), have entered into an agreement dated June 2, 2026 ("Agreement") whereby Principal agrees to install and complete certain public improvements (the "Work"), which said Agreement is identified as Gateway Refresh Project FCS01132026KG and is hereby referred to and made a part hereof; and

Whereas, said Principal is required under the terms of the Agreement to furnish a bond for the faithful performance of the Work, now, therefore, we, the Principal and, _____, as Surety, are held and firmly bound unto the City in the penal sum of One Hundred Twenty-Eight Thousand Six Hundred One Dollars and Thirty Cents ($128,601.30) lawful money of the United States, for the payment of which sum we bind ourselves, and our heirs, successors, executors and administrators, jointly and severally, firmly by these presents.

The condition of this obligation is such that if the above bounded Principal, his or its heirs, executors, administrators, successors or assigns, shall in all things stand to and abide by, and well and truly keep and perform the covenants, conditions and provisions in the Agreement and any alteration thereof made as therein provided, on his or its part, to be kept and performed at the time and in the manner therein specified, and in all respects according to their true intent and meaning, and shall faithfully fulfill the one-year guarantee of all materials and workmanship, and shall defend, indemnify and save harmless the City and its elected officials, officers, agents and employees, as therein stipulated, then this obligation shall become null and void; otherwise it shall be and remain in full force and effect.

As a part of the obligation secured hereby and in addition to the face amount specified therefor, there shall be included costs and reasonable expenses and fees, including reasonable attorneys' fees, incurred by the City in successfully enforcing such obligations, all to be taxed as costs and included in the judgment rendered.

As a condition precedent to the satisfactory completion of the Work, the above obligation shall hold good for a period of one (1) year or longer if required by the Agreement after the acceptance of the work by the City, during which time if the Principal shall fail to make full, complete, and satisfactory repair and replacements and totally protect the City from loss or damage made evident during this period from the date of completion of the Work, and resulting from or caused by defective materials or faulty workmanship, the above obligation in penal sum thereof shall remain in full force and effect. The obligations of Surety hereunder shall continue so long as any obligation of the Principal remains.

Whenever the Principal shall be, and is declared by the City to be, in default under the Agreement, the City having performed the City obligations thereunder, the Surety shall promptly remedy the default, or shall promptly, at the City's option:

1. Complete the Work in accordance with its terms and conditions; or

2. Obtain a bid or bids for completing the Work in accordance with its terms and conditions, and upon determination by Surety of the lowest responsive and responsible bidder, arrange for a contract between such bidder and the City, and make available as work progresses sufficient funds to pay the cost of completion of the Work less the balance of the Agreement price,

but not exceeding, including other costs and damages for which Surety may be liable hereunder, the amount set forth above. The term "balance of the Agreement price," as used in this paragraph, shall mean the total amount payable to the Principal by the City under the Agreement and any modifications thereto, less the amount previously properly paid by the City to the Principal.

Surety expressly agrees that the City may reject any contractor or subcontractor which may be proposed by Surety in fulfillment of its obligations in the event of default by the Principal.

Surety shall not utilize the Principal in completing the Work nor shall Surety accept a bid from the Principal for completion of the Work if the City, when declaring the Principal in default, notifies Surety of the City's objection to the Principal's further participation in the completion of the Work.

No right of action shall accrue on the bond to or for the use of any person or corporation other than the City named herein or the successors or assigns of the City. Any suit under this bond must be instituted within the applicable statute of limitations period.

The said Surety, for value received, hereby stipulates and agrees that no change, extension of time, alteration or addition to the terms of the Agreement or to the work to be performed thereunder or the Specifications accompanying the same shall in any way affect its obligations on this bond, and it does hereby waive notice of any such change, extension of time, alteration or addition to the terms of the Agreement or to the work or to the specifications.

No final settlement between the City and the Principal shall abridge the right of any beneficiary hereunder whose claim may be unsatisfied.

The Principal and Surety agree that if the City is required to engage the services of any attorney in connection with the enforcement of this bond, each shall pay the City's reasonable attorneys' fees incurred, with or without suit, in addition to the above sum.

In witness whereof, this instrument has been duly executed by the Principal and Surety above named, on _____, 2026.

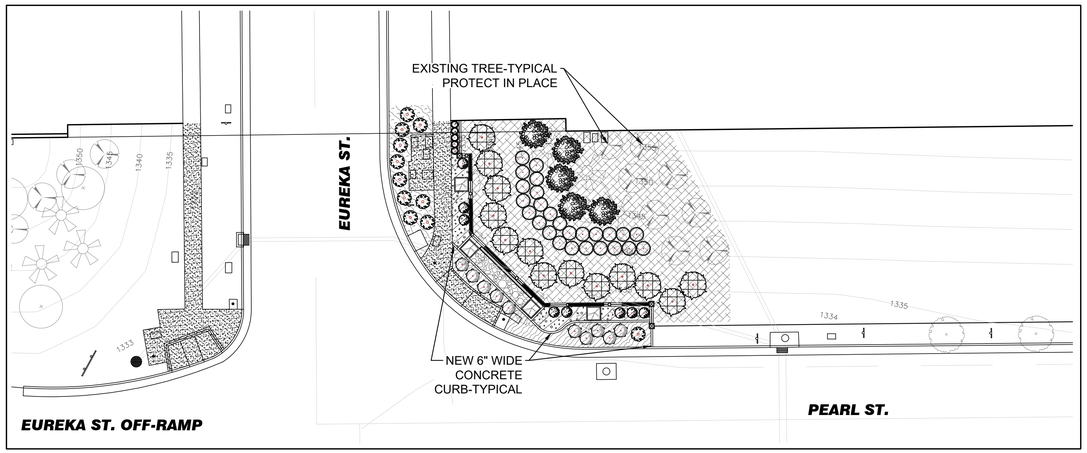
LABOR AND MATERIAL BOND

Whereas, the City Council of the City of Redlands, State of California, and David Ollis Landscape Development, Inc. (hereinafter designated as "Principal") have entered into an agreement (the "Agreement") whereby Principal agrees to install and complete certain designated public improvements (the "Work"), which said agreement, dated June 2, 2026, and identified as Gateway Refresh Project FCS01132026KG is hereby referred to and made a part hereof; and

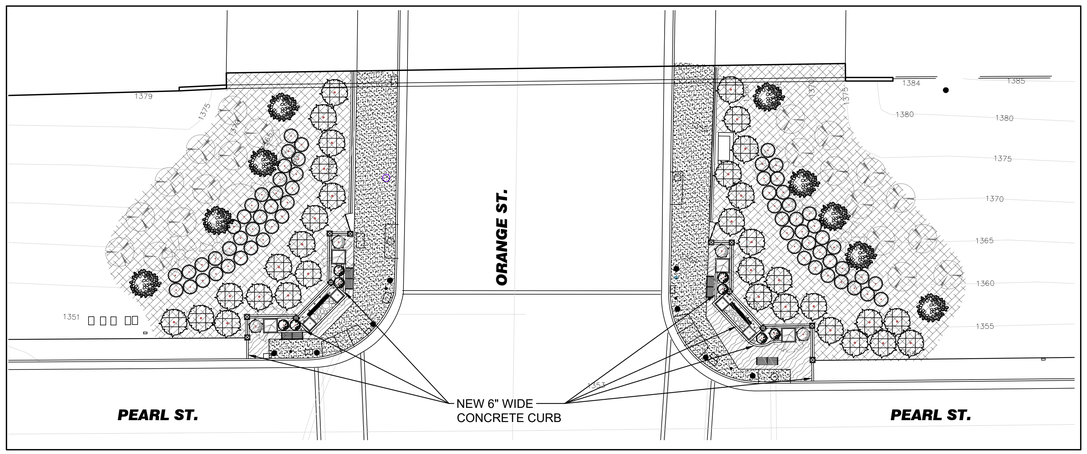
Whereas, under the terms of the Agreement, Principal is required before commencing the performance of the Work, to file a good and sufficient Labor and Material bond with the City of Redlands to secure the claims to which reference is made in Title 3 (commencing with Section 9550) of Part 6 of Division 4 of the Civil Code of the State of California.

Now, therefore, said Principal and the undersigned as corporate surety, are held firmly bound unto the City and all contractors, subcontractors, laborers, material men and other persons employed in the performance of the Agreement and referred to in the aforesaid Code of Civil Procedure in the sum of One Hundred Twenty-Eight Thousand Six Hundred One Dollars and Thirty Cents ($128,601.30) for materials furnished or labor thereon of any kind, or for amounts due under the Unemployment Insurance Act with respect to such work or labor, that said surety will pay the same in an amount not exceeding the amount hereinabove set forth, and also in case suit is brought upon this bond, will pay, in addition to the face amount thereof, costs and reasonable expenses and fees, including reasonable attorneys' fees, incurred by the City in successfully enforcing such obligation, to be awarded and fixed by the court, and to be taxed as costs and to be included in the judgment therein rendered.



It is hereby expressly stipulated and agreed that this bond shall insure to the benefit of any and all persons, companies and corporations entitled to file claims under Title 3 (commencing with Section 9550) of Part 6 of Division 4 of the Civil Code, so as to give a right of action to them or their assigns in any suit brought upon this bond.

Should the condition of this bond be fully performed, then this obligation shall become null and void, otherwise it shall be and remain in full force and effect.



The surety hereby stipulates and agrees that no change, extension of time, alteration or addition to the terms of the Agreement or the specifications accompanying the same shall in any manner affect its obligations on this bond, and it does hereby waive notice of any such change, extension of time, alteration or addition.

In witness whereof, this instrument has been duly executed by the Principal and surety above named, on _____, 2026.

PLANTING NOTES

GENERAL
ALL LANDSCAPE INSTALLATION SHALL BE PERFORMED BY A LICENSED CONTRACTOR WITH A C–27 LICENSE OR GREATER.

LAYOUT OF ELEMENTS:
CONTRACTOR SHALL SCALE ALL PLANT MATERIALS OFF THE PLANS TO DETERMINE THEIR APPROXIMATE LOCATIONS. REFER TO PLANT SPACING NOTES IN THE PLANTING LEGEND. MAINTAIN A DISTANCE FROM ALL HARDSCAPE ELEMENTS AND GROUND COVERS ONE–HALF THE AMOUNT OF THE SPACING INDICATED IN THE PLANTING LEGEND OR ½ THE SCALED DIMENSION OF THE SHRUB.

SOILS TEST:
AFTER ALL ROUGH GRADING HAS BEEN COMPLETED BUT PRIOR TO SOIL PREPARATION, THE CONTRACTOR SHALL OBTAIN A SOIL TEST FOR AGRICULTURAL SUITABILITY, FERTILITY AND WATER INFILTRATION RATE. TEST SHALL BE PREPARED BY A CALIFORNIA ASSOCIATION OF AGRICULTURAL LABORATORIES MEMBER. FURNISH ONE COPY OF TEST RESULTS TO THE LANDSCAPE ARCHITECT FOR REVIEW PRIOR TO COMMENCING WITH SOIL CONDITIONING. SOILS TEST REPORT SHALL SUPERSEDE ALL SPECIFICATIONS. SOILS TESTING FACILITY SHALL BE INFORMED OF THE REQUIREMENT OF USING ESTABLISH AMENDMENTS PER PLANTING SPECIFICATIONS.

SEE PLANTING SPECIFICATIONS FOR MINIMAL AMENDMENTS TO BE USED FOR BID PURPOSES. ALL FINAL SOIL CONDITIONING AND AMENDING SHALL BE PER SOILS TEST RECOMMENDATIONS. TEST SHALL INCLUDE THE FOLLOWING ITEMS: SOIL TYPE (TEXTURE), PH, TOTAL SOLUBLE SALTS (BY ELECTRICAL CONDUCTIVITY OF THE SOIL SATURATION EXTRACT), BORON LEVEL, EXCHANGEABLE SODIUM PERCENTAGE, NUTRIENTS (N.P.K.), MICRO NUTRIENTS (NO3, NH4, P, K, Ca, Mg, Na, B, Zn, Fe, Cu, Mn, S), PERCOLATION, % OF ORGANIC MATTER, CATION EXCHANGE CAPACITY, BASE SATURATION, EXCESS LIME OR CARBONATES.

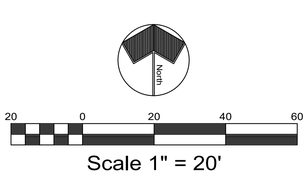
PLANT AVAILABILITY:
PLANTS CALLED OUT ON THESE PLANS WERE RESEARCHED AND DETERMINED TO BE AVAILABLE AT THE TIME OF DESIGN. IT IS THE CONTRACTOR'S RESPONSIBILITY, UPON AWARD OF THE CONTRACT, TO IMMEDIATELY PROCURE ALL PLANT MATERIAL CALLED OUT ON THESE PLANS AND GUARANTEE THEIR AVAILABILITY AT THE TIME OF PLANTING. NO PLANT SUBSTITUTIONS WILL BE PERMITTED WITHOUT THE PRIOR APPROVAL OF THE CITY/LANDSCAPE ARCHITECT.

EROSION CONTROL:
SLOPES EXCEEDING 3:1 SHALL RECEIVE EROSION CONTROL NETTING EQUAL TO WESTERN EXCELSIOR #EXCEL CC–4. NETTING TO BE INSTALLED PER MANUFACTURER'S RECOMMENDATIONS AND STAPLED AS REQUIRED.

SHRUB PLANTING:
BACKFILL MIX FOR TREES AND SHRUBS SHALL CONSIST OF A MINIMUM OF 70% CLEAN ON–SITE SOIL AND 30% CUSTOM AMENDMENT MIX WCP–33. REFER TO SOILS TEST RESULT REQUIRED ABOVE FOR FINAL BACKFILL RECOMMENDATIONS. PLANT PER DETAIL SHEET LPD–1. ALL EXCESS SOIL CREATED DURING THE AMENDING PROCESS SHALL BE REMOVED FROM SITE AND LEGALLY DISPOSED OF.

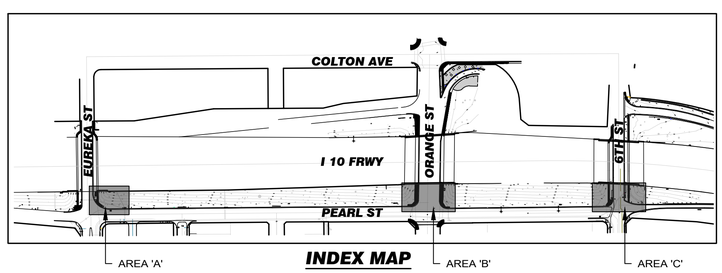
QUANTITIES:
QUANTITIES SHOWN ARE AN AID ONLY, CONTRACTOR SHALL VERIFY ALL QUANTITIES PRIOR TO BIDDING/ COMMENCING WORK.

ENVIRONMENTAL ISSUES:
THE CONTRACTOR SHALL BE RESPONSIBLE FOR COMPLYING WITH ALL STORM WATER PHASE I AND II RULES AND ANY OTHER ENVIRONMENTAL PROTECTION LAWS IN EFFECT AT THE TIME OF CONSTRUCTION.



LANDSCAPE CERTIFICATIONS/DOCUMENTATION:
CONTRACTOR SHALL BE RESPONSIBLE FOR REVIEWING, AND COMPLYING WITH, ALL STATE AND LOCAL ORDINANCES REGARDING THE WATER USAGE CERTIFICATIONS ON THIS PROJECT SITE.

IRRIGATION INSPECTION NOTE TO CONTRACTOR:



THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONTACTING THE CITY TO FACILITATE ALL IRRIGATION INSPECTIONS REQUIRED THAT RELATE TO OBTAINING CERTIFICATIONS OF COMPLETION.

EXISTING UTILITIES NOTE:

CONTRACTOR TO VERIFY THE LOCATION OF ALL EXISTING UTILITIES IN THE PROJECT AREA ABOVE AND BELOW THE GROUND WHETHER SHOWN OR NOT SHOWN ON THESE PLANS. ANY DAMAGE TO THE EXISTING UTILITIES SHALL BE REPAIRED OR REPLACED WITH NEW AND LIKE MATERIAL TO THE OWNER'S STANDARDS AND SPECIFICATIONS AT NO ADDITIONAL COST TO THE OWNER OR THE CITY.

City Council **AGENDA ITEM NO. J1.**

DATE: June 2, 2026

TO: Honorable Mayor and City Council Members

SUBJECT: Discussion and possible action relating to the cancellation of the August 4 and August 18, 2026 regular meetings of the City Council (Mayor Saucedo)

MOTION:

If the City Council concurs with Mayor Saucedo, the following motion is provided.

I move to approve the cancellation of the August 4 and August 18, 2026, regular meetings of the City Council.

DISCUSSION:

With City Council concurrence, I recommend the cancellation of the August 4 and August 18, 2026, regular meetings of the City Council. As the Council is aware, regular meetings in August have been canceled to allow Council Members and staff the opportunity to vacation or take time off with their families. Staff will work diligently to bring forward the necessary agenda reports to the meeting of July 21, 2026; therefore, staff believes there will be no impact or delay in City matters by the cancellation of the August 4 and August 18, 2026, regular meetings of the City Council.

The next regular meeting will be held on September 1, 2026.

SUBMITTED BY:

Mayor Mario Saucedo

City Council **AGENDA ITEM NO. J2.**

DATE: June 2, 2026

TO: Honorable Mayor and City Council Members

SUBJECT: Conference Report - 2026 City County Conference of the San Bernardino County Transit Authority (SBCTA) (Mayor Saucedo)

DISCUSSION:

For this evening's City Council Meeting, Mayor Saucedo will provide a report relating to his attendance at the 2026 City County Conference hosted by the San Bernardino County Transit Authority, held May 14 - 15 in Lake Arrowhead, California at the Lake Arrowhead Resort. The City County Conference brings together elected officials and agency staff to hear presentations about important countywide topics. Mayor Pro Tem Shaw was unable to attend this evening's meeting and has submitted his report in writing.

mshaw@cityofredlands.org

On May 14, 2026, I attended the 2026 San Bernardino County Transportation Authority City County Conference in Lake Arrowhead.

The General Session featured the directors of Ontario and San Bernardino International Airport and the conversation was excellent. Learning how the logistics industry plays into the overall airport operational environment and the value that brings to the region as a logistics hub was eye-opening. Furthermore, the proliferation of drone technology and the role San Bernardino Airport is playing in that space was insightful. As Redlands expands its use of drones, San Bernardino Airport will be a tremendous resource to draw upon.

The first breakout session dealt with AI in Government and was one of the most informative and intriguing discussions I've heard in quite some time. Listening to County Fire Chief Dan Munsey share some of the ways that AI technology can be employed in local government and the rapidly changing rules associated with their use demonstrated that we need to fully embrace the AI technology and leverage it to improve our service delivery and efficiency in many routine practices.

The second breakout session was related to many of the creative employment paths being created within the county, particularly for youth and at-risk populations. Preparing the Next Generation of the County's Workforce was a panel discussion that showed how the county, a local school district and a local Chamber of Commerce are all working towards providing career opportunities by increasing the skills and qualifications of our high school students and at-risk populations so they can achieve long term employment.

Finally, Thursday's second General Session was led by former County CEO Greg Devereaux and he led Randall Lewis and Mark Torres through a discussion on Building the Future: Delivering Housing at Scale in San Bernardino County. To hear two industry executives with decades of experience explain the obstacles being placed upon home builders, the impact of the ridiculous policies being implemented at the state level and the realities of building in today's economy painted a clear picture as to why we are so far behind in our ability to construct a sufficient amount of homes for our population.

City Council **AGENDA ITEM NO. J3.**

DATE: June 2, 2026

TO: Honorable Mayor and City Council Members

SUBJECT: Conference Report - 2026 Regional Conference of the Southern California Association of Governments (SCAG) and General Assembly (Council Member Davis)

DISCUSSION:

For this evening's City Council Meeting, Council Member Davis will provide a report relating to her attendance at the 2026 Regional Conference of the Southern California Association of Governments (SCAG) and General Assembly held May 7–8, 2026, at the JW Marriott Desert Springs Resort & Spa in Palm Desert, California. Mayor Pro Tem Shaw was unable to attend this evening's meeting and has submitted his report in writing.

On May 7th and 8th, 2026, I attended the Southern California Association of Governments Annual Conference in Palm Desert. I was selected as the City's Voting Delegate and represented the City of Redlands during the General Assembly Meeting and voted on the proposed budget and general business items.

During the afternoon, I attended a session on Harnessing Mega-Events to Accelerate Southern California's Mobility where they discussed how events like the FIFA World Cup and Summer Olympics have provided a catalyst for local governments and private sector entities to partner and advance transportation solutions that will not only benefit the events in the short term, but the provide support to the transportation network for many years to come.

I also attended the Forecasting the Future of an AI-Fueled Economy discussion which centered around the use of AI and AI tools to increase efficiency and promote better decision making by relying on data points, often synthesized and organized with the assistance of artificial intelligence.

On Friday, a keynote address was provided by Suneel Gupta, followed by a session titled The Future of Regions: Innovating Institutions for a New Era. While the concept was important, breaking down silos to create more efficient project implementation, the delivery and panel discussion was somewhat ineffective.

City Council **AGENDA ITEM NO. K1.**

DATE: June 2, 2026

TO: Honorable Mayor and City Council Members

SUBJECT: Public Hearing regarding Assembly Bill 2561 Vacancy and Recruitment Report (Assistant City Manager McConnell)

PROCEDURE FOR PUBLIC HEARING:

1. Mayor declares the meeting open as a public hearing.
2. Mayor calls upon Department Director for report.
3. Mayor calls for questions/comments from members of the City Council.
4. Mayor calls for comments/questions/testimony from the labor group that made a request to speak.
5. Mayor calls on members of the public (3 minutes per speaker)
6. Mayor calls upon City Clerk to note any written comments received.
7. Mayor closes the public hearing.
8. City Council considers the motion and votes.

MOTION:

If the City Council determines that staff's recommendation is appropriate, the following motion is provided:

I move to receive and file the vacancy report and status of recruitment and retention efforts as required by Assembly Bill 2561.

DISCUSSION:

Effective January 1, 2025, Assembly Bill 2561 added Government Code Section 3502.3, which mandates that public agencies present the status of vacancies and recruitment and retention efforts during a public hearing before the agency's governing body at least once per fiscal year. Recognized employee organizations are entitled to present at the public hearing. The law also requires the City identify any necessary changes to policies, procedures, and recruitment activities that may lead to obstacles in the hiring process.

Position Data

In 2025, the City of Redlands was budgeted for 607 full-time employees.

- 96 full-time employees separated from employment.
- 110 full-time employees were hired.

In 2025, The City successfully managed recruitment efforts, including:

- Social media: Leveraged LinkedIn Recruiting and other platforms to promote the City, broaden candidate outreach and support direct sourcing efforts.
- Career Fairs: Attended career fairs to connect with a diverse pool of candidates and identify potential talent for current and future job opportunities.
- Reduce Time to Fill: Streamlined the hiring process through collaboration with department directors on recruitment timelines.
- Hiring incentives: Utilized hiring incentives for hard-to-fill positions and prominently featured them in job postings to attract candidates.
- Continuous recruitment efforts for hard-to-fill positions.
- Competitive benefits: Developed a benefits guide to highlight benefit offerings to candidates.

The city also continued to enhance retention strategies, including:

- Strengthened the onboarding experience to better integrate new hires and align them with organizational values and launched an onboarding video showcasing the City, its workforce, culture, mission, and values.
- Wellness initiatives: Promoted a positive work environment and helped reduce burnout through programs like fitness challenges, mental health resources, and wellness and financial workshops.
- Employee engagement: Strengthened employee engagement by cultivating a culture of connection and involvement through targeted employee engagement initiatives.
- Training and Development: Launched Management and Leadership Workshops to equip current and emerging leaders with key skills in communication, decision-making, team building, and strategic thinking. Helping foster organizational success and a culture of continuous growth.

Vacancy Rates by Bargaining Unit:

- The Redlands Association of Department Directors (RADD) had a 0% vacancy rate.
- The Redlands Association of Management Employees (RAME) had a 5.3% vacancy rate.
- The Redlands Association of Mid-Management Employees (RAMME) had a 5.1% vacancy rate.
- The Redlands Association of Safety Management Employees (RASME) had a 0% vacancy rate.
- The Redlands Association of Fire Management Employees (RAFME) had a 0% vacancy rate.
- The Redlands Association of Civilian Safety Employees (RCSEA) had a 16.4% vacancy rate.
- The Redlands Profession Firefighters Association (RPFA) had a 3.7% vacancy rate.
- The Redlands Police Officers Association (RPOA) had a 9.9% vacancy rate.
- The TEAMSTERS Local #1932 had an 4.7% vacancy rate.

As permitted under Government Code Section 3502.3(b) and city policy, recognized employee organizations shall have the right to present information, concerns, and recommendations at the Public Hearing.

City of Redlands

AB2561
2026 Vacancy Rate Information

Presented by Jenna Yorck, Human Resources Manager

June 2, 2026

City of Redlands

AB2561

- Effective January 1, 2025, AB 2561 mandated that California public agencies present updates on job vacancies, recruitment, and retention efforts during a public hearing before their governing body at least once per fiscal year.

- The goal is to enhance transparency regarding staffing challenges and to address vacancies and provide a forum for employee organizations and the public to engage in addressing staffing challenges.

City of Redlands

Local Government Staffing Challenges

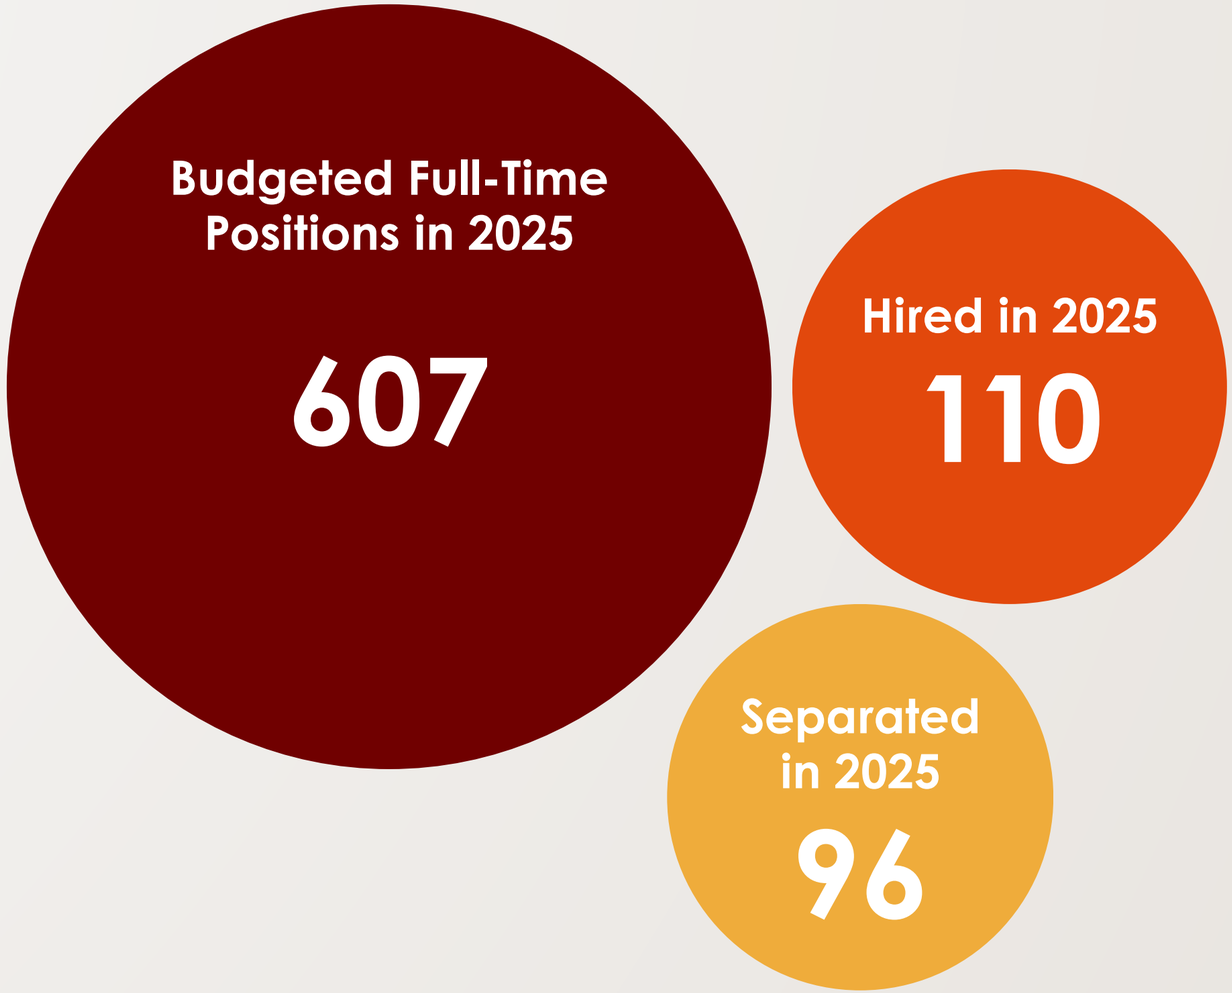
Job Vacancies

Limited pool of qualified candidates, increased competition from private sector, and evolving job expectations.

High Vacancy Rates

Understaffing leads to burnout and increased turnover that further exacerbate staffing challenges.

Public Agency Operations



Ensuring that public agency opeartions are appropriately staffed and high vacancy rates do not undermine public employee labor relations.

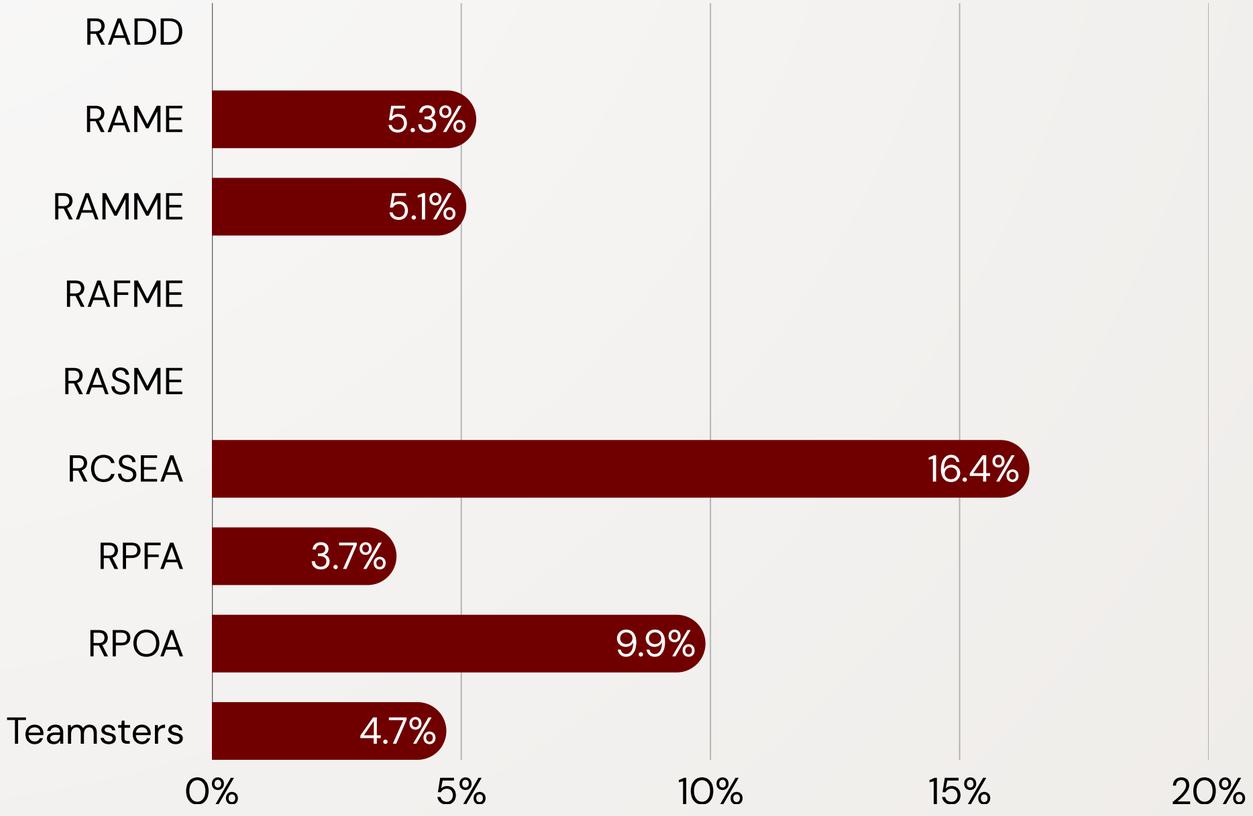
City of Redlands

Position Data

As of April 2026, the City of Redlands had a total of 607 budgeted full-time positions.

- Hired in 2025
  - 110 full-time employees
- Separated in 2025
  - 96 full-time employees

City of Redlands



High Vacancy Rate Reporting

If the number of job vacancies within a single bargaining unit meets or exceeds 20% of the total number of authorized full-time positions, the public agency shall, upon request of the recognized employee organization, include all of the following information during the public hearing:

- Total number of vacancies
- Number of applicants
- Average time to fill positions
- Opportunities to improve compensation and working conditions

City of Redlands

2025-2026 Bargaining Unit Vacancy Rates

As of April 1, 2026, all bargaining units had a vacancy rate below 20%.

City of Redlands

Recruitment Strategies

Social Media

Leveraged LinkedIn Recruiting, Instagram, and other platforms to promote the city and support direct sourcing efforts, generating 138K+ impressions and over 3K engagements (reactions, comments, reposts) through data-driven content strategies.

Career Fairs

Represented the City at 2 career fairs to engage a diverse candidate pool and identify talent for current and future roles, and hosted 4 students for Civics Day to foster community awareness and early career interest.

Reduce Time to Fill

Streamlining hiring process through effective collaboration with department heads on the recruitment timeline.

Hiring Incentives

Utilizing hiring incentives for hard-to-fill positions andprominently featuring them in job postings to attract candidates.

Continuous Recruitments

Utilized for hard to fill positions to establish a pool of qualified candidates for current and future vacancies.

City Benefits

Developed benefits guide to highlight benefit offerings to candidates.

City of Redlands

Retention Strategies

Enhanced Onboarding

Integrate new hires and align them with organizational values, culture, mission and values from day one.

Training & Development

Launched HR workshops to enhance organizational sucess and culture of growth.

Employee Engagement

Cultivating a culture of connection and involvement through engagement initiatives.

Wellness Initiatives

Offer programs to support mental health, wellness and fitness initiatives to reduce burnout and promote positive work environment.

Tuition Reimbursement

Supports employee career development and succession planning.

Promotional Opportunities

Showcasing promotional and transfer opportunities through internal communication and city-wide notifications.

City of Redlands

Thank You

Jenna Yorck
Human Resources Manager

jyorck@redlands.gov

City Council **AGENDA ITEM NO. K2.**

DATE: June 2, 2026

TO: Honorable Mayor and City Council Members

SUBJECT: Public Hearing to consider Resolution No. 8786 adopting the Water Shortage Contingency Plan (Municipal Utilities and Engineering Director Heredia)

PROCEDURE FOR PUBLIC HEARING:

1. Mayor declares the meeting open as a public hearing.
2. Mayor calls upon Department Director for report.
3. Mayor calls for questions/comments from members of the City Council.
4. Mayor calls for comments/questions/testimony from members of the public (3 minutes per speaker)
5. Mayor calls upon City Clerk to note any written comments received.
6. Mayor closes the public hearing.
7. City Council considers the motion and votes.

MOTION:

If the City Council determines that staff's recommendation is appropriate, the following motion is provided:

I move that the City Council adopt Resolution No. 8786.

RECOMMENDATION:

Staff recommends the City Council adopt Resolution No. 8786 and determine that adoption of Resolution No. 8786 is exempt from environmental review pursuant to Section 15061(b)(3) of the State's guidelines implementing the California Environmental Quality Act.

DISCUSSION:

In 2018, the California Legislature revised the Urban Water Management Plan (UWMP) requirements and mandated the inclusion of a Water Shortage Contingency Plan (WSCP) with specific elements. A WSCP provides an action plan to prepare for and respond to drought or catastrophic water supply shortages. Water shortages may be caused by water quality changes, climate change, regional power outages and/or natural disasters. The State may also declare a statewide drought emergency and mandate that water suppliers reduce deliveries, as occurred in 2014. The Redlands WSCP was prepared in conjunction with the Redlands 2025 UWMP. However, the Redlands WSCP is a stand-alone document that can be modified at any time. The WSCP is compliant with California Water Code (CWC) Section 10632 and incorporates guidance from the State of California Department of Water Resources (DWR) UWMP Guidebook. The WSCP is the tool Redlands uses to prevent catastrophic water service interruptions during water shortages, with the ultimate goal of maintaining a reliable long-range water supply.

The City's WSCP includes the following:

Water Service Reliability Analysis	A summary of Redlands' water supply reliability that identifies key issues that may trigger a shortage condition.
Annual Water Supply and Demand Assessment Procedures	A description of key data inputs, evaluation criteria, and methodology for assessing system reliability and the steps to formally declare any water shortage levels and response actions.
Six Shortage Stages	Establishes water shortage levels to clearly identify and prepare for shortages.
Shortage Response Actions	A description of the response actions that may be implemented for each stage to reduce supply and demand gaps.
Communication Protocols	A description of communication protocols for each shortage stage to ensure customers, the public, and government agencies are informed of shortage conditions and requirements.
Compliance and Enforcement	A description of potential compliance and enforcement actions.
Legal Authority	A list of legal documents granting the City authority to declare a water shortage and implement response actions.
Financial Consequences of WSCP Implementation	A description of potential financial impacts resulting from implementing water shortage stages and mitigation strategies to reduce financial burdens.
Monitoring and Reporting	A summary of monitoring and reporting techniques to evaluate the effectiveness of shortage response actions. The results are used to determine if additional response actions should be considered, or if response actions should be reduced.
WSCP Refinement Procedures	A description of factors that may trigger updates to the WSCP, and the process to do so.

Special Water Features Distinctions	A clarification that water use for decorative features shall be limited unless necessary to sustain aquatic life. Decorative features include ornamental fountains, ponds, and other aesthetic features.
Plan Adoption, Submittal, and Availability	A description of the process for WSCP adoption, submittal, and availability after each revision.

The WSCP references and incorporates provisions of the existing Redlands Water Conservation Plan (WCP) as required by the CWC.

Adoption of the WSCP is categorically exempt from environmental review pursuant to Section15061 (b)(3) of the State's guidelines implementing the California Environmental Quality Act.

ALTERNATIVES:

The City Council can choose to deny adoption of Resolution No. 8786

RESOLUTION NO. 8786

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS ADOPTING THE WATER SHORTAGE CONTINGENCY PLAN

WHEREAS, the California Urban Water Management Planning Act, Water Code Section 10610 et seq. (the "UWMP Act"), mandates that every urban supplier of water providing water for municipal purposes to more than 3,000 customers or supplying more than 3,000 acre feet of water annually, prepare and adopt, in accordance with prescribed requirements, a Water Shortage Contingency Plan ("WSCP"); and

WHEREAS, the City of Redlands meets the definition of an urban water supplier for purposes of the UWMP Act; and

WHEREAS, the UWMP Act specifies the requirements and procedures for adopting such WSCP; and

WHEREAS, pursuant to recent amendments to the UWMP Act, urban water suppliers are required to adopt and electronically submit their WSCPs to the California Department of Water Resources by July 1, 2026; and

WHEREAS, the City of Redlands has prepared a WSCP in accordance with the UWMP Act and SB X7-7 and, in accordance with applicable legal requirements, has undertaken certain coordination, notice, public involvement, public comment, and other procedures in relation to its WSCP; and

WHEREAS, the WSCP references and incorporates the provisions of the City of Redlands' Water Conservation Plan, Ordinance Nos. 2151 and 2751; and

WHEREAS, in accordance with the UWMP Act, the City of Redlands has prepared its WSCP with its own staff, with the assistance of consulting professionals, and in cooperation with other governmental agencies, and has utilized and relied upon industry standards and the expertise of industry professionals in preparing its WSCP, and has also utilized the California Department of Water Resources Guidebook for Urban Water Suppliers to Prepare 2025 Urban Water Management Plans, in preparing its WSCP; and

WHEREAS, in accordance with applicable law, including Water Code sections 10608.26 and 10642, and Government Code section 6066, a notice of a public hearing regarding the City of Redlands' WSCP was published within the jurisdiction of the City of Redlands on April 10, 2026, and April 17, 2026; and

WHEREAS, in accordance with applicable law, including but not limited to Water Code sections 10608.26 and 10642, a public hearing was held on June 2, 2026, at 6:00 P.M., or soon thereafter as the matter could be heard, in order to provide members of the public and other interested entities with the opportunity to be heard in connection with proposed adoption of the WSCP and issues related thereto; and

WHEREAS, pursuant to said public hearing on the WSCP, the City of Redlands, among other things, encouraged the active involvement of diverse social, cultural, and economic members of the community within City of Redlands' service area with regard to the preparation of the WSCP, encouraged community input regarding City of Redlands' WSCP; and

WHEREAS, the City Council of City of Redlands has reviewed and considered the purposes and requirements of the UWMP Act, the contents of the WSCP, and the documentation contained in the administrative record in support of the WSCP, and has determined that the factual analyses and conclusions set forth in the WSCP are legally sufficient; and

WHEREAS, the City Council desires to adopt the WSCP in order to comply with the UWMP Act.

NOW THEREFORE BE IT RESOLVED, THE CITY COUNCIL OF THE CITY OF REDLANDS HEREBY RESOLVE AS FOLLOWS:

Section 1. The City Council hereby finds and determines that the adoption of this Resolution is exempt from review and under the California Environmental Quality Act Guidelines Section 15061(b)(3) because it can be seen with certainty that this Water Shortage Contingency Plans will have no significant impact on the environment.

Section 2. The Water Shortage Contingency Plan is hereby adopted, as amended by any changes incorporated by the City Council as a result of input received at the public hearing and ordered filed with the City Clerk.

Section 3. The Municipal Utilities and Engineering Department Director ("MUED Director") is hereby authorized and directed to include a copy of this Resolution in the City of Redlands' WSCP.

Section 4. The MUED Director is hereby authorized and directed, in accordance with Water Code sections 10621(d) and 10644(a)(1)-(2), to electronically submit a copy of the WSCP to the California Department of Water Resources no later than July 1, 2026.

Section 5. The MUED Director is hereby authorized and directed, in accordance with Water Code section 10644(a), to submit a copy of the WSCP to the California State Library, and any city or county within which the City of Redlands provides water supplies no later than thirty (30) days after this adoption date.

Section 6. The MUED Director is hereby authorized and directed, in accordance with Water Code section 10645, to make the WSCP available for public review at the City of Redlands' offices during normal business hours and on the City of Redlands website no later than thirty (30) days after filing a copy of the WSCP with the California Department of Water Resources.

Section 7. The MUED Director is hereby authorized and directed, in accordance with Water Code Section 10635(b), to provide that portion of the WSCP prepared pursuant to Water

Code Section 10635(a) to any city or county within which the City of Redlands provides water supplies no later than sixty (60) days after submitting a copy of the WSCP with the California Department of Water Resources.

Section 8. The MUED Director is hereby authorized and directed to implement the WSCP in accordance with the UWMP Act and to provide recommendations to the City Council regarding the necessary budgets, procedures, rules, regulations or further actions to carry out the effective and equitable implementation of the WSCP.

ADOPTED, SIGNED AND APPROVED this 2nd day of June, 2026.

WSCP	Water Shortage Contingency Plan

City of Redlands

This Water Shortage Contingency Plan is a strategic plan that the City of Redlands (Redlands or the City) uses to prepare for and respond to water shortages.

A water shortage occurs when the water supply available is insufficient to meet the normally expected customer water use at a given point in time. A shortage may occur due to a number of reasons. This includes water supply quality changes, climate change, drought, regional power outages, and catastrophic events (e.g., earthquakes). Additionally, the State may declare a statewide drought emergency and mandate that water suppliers reduce demands. The WSCP serves as the operating manual that Redlands will use to prevent catastrophic service disruptions through proactive, rather than reactive, mitigation of water shortages.

This WSCP provides a process for an annual water supply and demand assessment and structured steps designed to respond to actual conditions. This level of detailed planning and preparation provides accountability and predictability to help Redlands maintain reliable supplies and reduce the impact of any supply shortages and/or interruptions.

This WSCP was prepared in conjunction with Redlands 2025 UWMP, which is included in the 2025 Regional Urban Water Management Plan (2025 RUWMP) and is a standalone document that can be modified as needed. This document is compliant with the California Water Code (CWC) Section 10632 and incorporates guidance from the State of California Department of Water Resources (DWR) UWMP Guidebook.

IN THIS SECTION

- Water Service Reliability
- Annual Water Supply and Demand Assessment
- Supply Shortage Stages and Response Actions

The WSCP describes the following:

1. **Water Service Reliability Analysis:** Summarizes Redland's water supply analysis and reliability and identifies any key issues that may trigger a shortage condition.
2. **Annual Water Supply and Demand Assessment Procedures:** Describes the key data inputs, evaluation criteria, and methodology for assessing the system's reliability for the coming year and the steps to formally declare any water shortage stages and response actions.
3. **Water Shortage Stages:** Establishes water shortage stages to clearly identify and prepare for shortages.
4. **Shortage Response Actions:** Describes the response actions that may be implemented or considered for each stage to reduce gaps between supply and demand.
5. **Communication Protocols:** Describes communication protocols under each stage to ensure customers, the public, and government agencies are informed of shortage conditions and requirements.
6. **Compliance and Enforcement:** Defines compliance and enforcement actions available to administer demand reductions.
7. **Legal Authority:** Lists the legal documents that grant the City the authority to declare a water shortage and implement and enforce response actions.
8. **Financial Consequences of WSCP Implementation:** Describes the anticipated financial impact of implementing water shortage stages and identifies mitigation strategies to offset financial burdens.
9. **Monitoring and Reporting:** Summarizes the monitoring and reporting techniques to evaluate the effectiveness of shortage response actions and overall WSCP implementation. Results are used to determine if shortage response actions should be adjusted.
10. **WSCP Refinement Procedures:** Describes the factors that may trigger updates to the WSCP and outlines how to complete an update.
11. **Plan Adoption, Submittal, and Availability:** Describes the process for the WSCP adoption, submittal, and availability after each revision.

1.0 Water Service Reliability Analysis

As part of the 2025 RUWMP, Redlands completed a water supply reliability analysis for normal, single-dry, and five-year consecutive dry year periods from 2030-2050. A Drought Risk Assessment (DRA) was also performed to analyze supply reliability under five consecutive years of drought from 2021-2025. As described in Chapter 3 of the 2025 RUWMP, the effects of a local drought are not immediately recognized since the region uses the local groundwater basins to simulate a large reservoir for long-term storage. Redlands is able to pump additional groundwater to meet increased demands in dry years and participates in efforts to replenish the basins with imported and local water through regional recharge programs. Additionally, Redlands implements several ongoing water conservation measures. Regional recharge programs and conservation help to optimize and enhance the use of regional water resources.

Based on the 2025 RUWMP analysis, Redlands's water supply is reliable and not expected to see impactful change under drought conditions.

Even though localized drought conditions should not affect supply, other shortages may occur due to a number of reasons, such as water supply quality changes, regional power outage, State mandates for water use efficiency standards, and catastrophic events (e.g., earthquakes). Therefore, Redlands will use this WSCP as appropriate to address shortages and other supply emergencies.

2.0 Annual Water Supply and Demand Assessment Procedures

As an urban water supplier, Redlands must prepare and submit an Annual Water Supply and Demand Assessment (Annual Assessment or AWSDA) by July 1 each year pursuant to CWC Section 10632.1. The Annual Assessment is an evaluation of the near-term outlook for supplies and demands to determine whether the potential for a supply shortage exists and whether there is a need to trigger a WSCP shortage stage and response actions in the current calendar year to maintain supply reliability. This process will take place at the same time each year based on known circumstances and information available to Redlands at the time of analysis and can be updated or revised at any time if circumstances change.

Redlands will convene an internal WSCP Team to conduct the Annual Assessment each year.

The WSCP Team may include the following staff:

- Water Conservation Specialist
- Water Utility Manager
- Water Production Operations Superintendent

- Regulatory Compliance Officer
- Revenue Manager

The Annual Assessment procedure, including key data inputs and evaluation criteria, is summarized in Table 1. The Annual Assessment procedure and timeline, along with how it integrates with the annual assessment that will be conducted on a regional basis in parallel, is shown graphically in Figure 1.

Table 1: Annual Assessment Procedure

TIMING	ASSESSMENT ACTIVITIES	PROCEDURE, KEY DATA INPUTS, EVALUATION CRITERIA AND OTHER CONSIDERATIONS	STAFF RESPONSIBLE
JAN – FEB	Estimate unconstrained demands for coming year	Demands will be estimated based on water sales forecasts from annual budget or prior year demands plus any anticipated changes.	Water Conservation Specialist, Water Production Operations Superintendent
JAN – FEB	Estimate available supplies for the year, considering the following year will be dry	Each December, Redlands submits an order to San Bernardino Valley Municipal Water District (San Bernardino Valley or SBV) for the volume of State Water Project (SWP) water that is planned for use the following year. If the requested volume is not available due to reduced SWP supplies, Redlands will meet with San Bernardino Valley and other SWP users to discuss reducing SWP orders and may update the Annual Assessment to reflect a shift from SWP to groundwater production, if needed. The remainder of supply needs not met from SWP, and surface water will be pumped from the San Bernardino Basin Area (SBBA). The SBBA is sustainably managed to provide long-term supply reliability and is not anticipated to be significantly impacted in dry years. In the unlikely event that local supplies are reduced, Redlands will coordinate with the other agencies to identify available supplies for the coming year.	Water Conservation Specialist, Water Production Operations Superintendent, Water Utility Manager
JAN – FEB	Consider potential constraints that may impact supply delivery	Identify any known regional or Redlands infrastructure issues that may pertain to near-term water supply reliability, including repairs, construction, and environmental mitigation measures that may temporarily constrain capabilities, as well as any new projects that may add to system capacity. Identify any facilities out of service due to water quality problems, equipment failure, storm damage, etc. that may impact normal water deliveries. Identify any potential or emerging impacts to groundwater quality, such as emerging regulatory constraints that may limit use of available supplies for potable needs. Depending on infrastructure in question, Bear Valley Mutual Water Company (BVMWC) may need to be consulted.	Water Conservation Specialist, Water Production Operations Superintendent, Water Utility Manager Optional: BVMWC-General Manager, San Bernardino Valley Staff

TIMING	ASSESSMENT ACTIVITIES	PROCEDURE, KEY DATA INPUTS, EVALUATION CRITERIA AND OTHER CONSIDERATIONS	STAFF RESPONSIBLE
FEB	Convene WSCP Team to conduct Annual Assessment	Compare supplies and demands and discuss any constraints that may impact supply delivery. If the potential for a shortage exists, determine which shortage response stage and actions are recommended to reduce/eliminate the shortage. Additionally, if the State declares a drought state of emergency and requires demand reductions, the WSCP Team will determine which water shortage stage and response actions are needed to comply with the State mandate.	WSCP Team
MAY/JUNE	City Council	If the potential for a shortage exists or the State has mandated demand reductions, the results of the Annual Assessment will be presented to the Redlands City Council, including the recommended shortage stage and response actions. The City Council may order the implementation of a shortage stage and will adopt a resolution declaring the applicable water shortage stage.	Municipal Utilities and Engineering Department, City Manager's Office, Redlands City Council
ON-GOING	Implement WSCP actions, if needed	Relevant members of Redlands staff will implement shortage response actions associated with the declared water shortage stage.	WSCP Team
BY JULY 1	Submit Retail Annual Assessment	Send Final Retail Annual Assessment to DWR.	Water Conservation Specialist

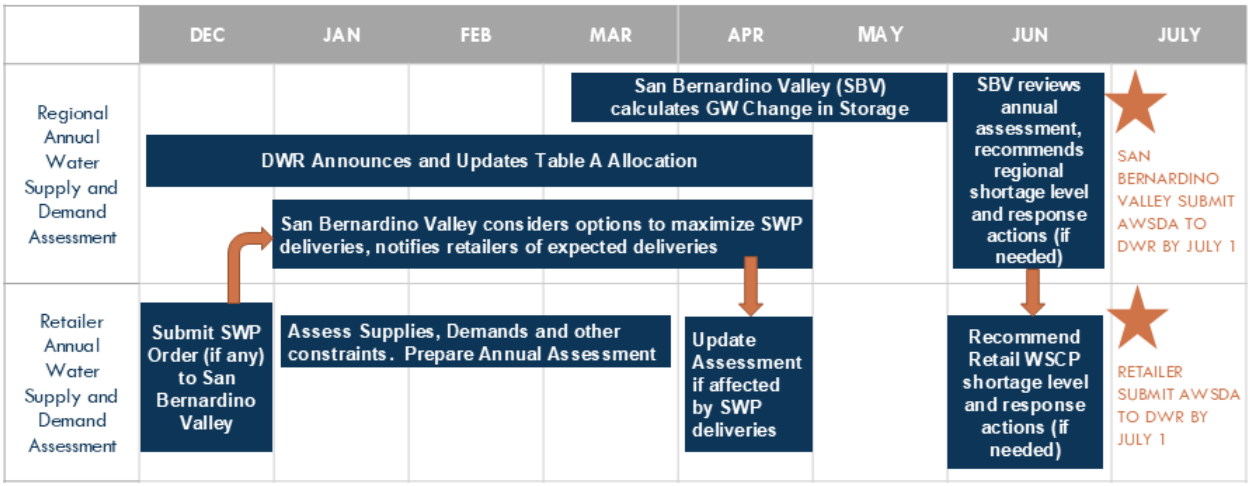

Figure 1: Regional and Retail Agency Annual Assessment Process and Timeline

3.0 Water Shortage Stages

Redlands does not foresee imposing a water shortage stage based on climate conditions, except under the State's direction, as occurred in 2014 and again in 2022 with Governor Newsom's Executive Order N-7-22 (EO N-7-22), which required that urban water suppliers implement demand reduction actions listed in the supplier's state standard shortage stage 2. However, Redlands does see a greater likelihood of imposing a water shortage stage due to a catastrophic failure of infrastructure or emerging regulatory constraints on groundwater quality. If a potential water supply shortage is identified in the Annual Assessment, this section provides information on the water shortage stages and response actions that Redlands may implement.

Redlands uses four (4) shortage stages to identify and respond to water shortage emergencies. At a minimum, Redlands encourages baseline conservation efforts year-round, regardless of a shortage emergency.

Stage I: Voluntary Conservation Measures

A small decrease, up to 15 percent, in water supply is expected. Water users are requested to limit their water use from June 1 to October 1 of each year to an amount necessary for health, safety, economic necessity, and irrigation. Water users should use water wisely and prevent its waste or unreasonable use.

Stage II: Mandatory Compliance; Water Alert

A water shortage of up to 25 percent is expected. Redlands will implement several mandatory restrictions.

Stage III: Mandatory Compliance; Water Warning

A more significant decrease in water supply is expected, with a shortage of up to 25 percent. Redlands will implement restrictions in addition to those implemented in stages I and II.

Stage IV: Mandatory Compliance; Water Emergency

Water supplies are in danger of being depleted to a point where such uses as human consumption, sanitation, and fire protection would be endangered. This would be a decrease in supply of more than 50 percent, most likely associated with a natural disaster.

The CWC outlines six standard water shortage stages that correspond to a gap in supply compared to normal year availability. The six standard water shortage stages correspond to progressively increasing estimated shortage conditions (up to 10-, 20-, 30-, 40-, 50-percent, and greater than 50-percent shortage compared to the normal reliability condition) and align with the response actions that a water supplier would implement to meet the severity of the impending shortages.

The CWC allows suppliers with an existing WSCP that uses different water shortage stages to comply with the six standard stages by developing and including a cross-reference relating its existing shortage categories to the six standard water shortage stages. Redlands is maintaining

its current four shortage stages for this WSCP. A crosswalk was developed that defines how Redlands' current four water shortage stages will align with DWR's standardized six stages of shortage. A visual representation of this alignment is shown in Figure 2 and Table 2.

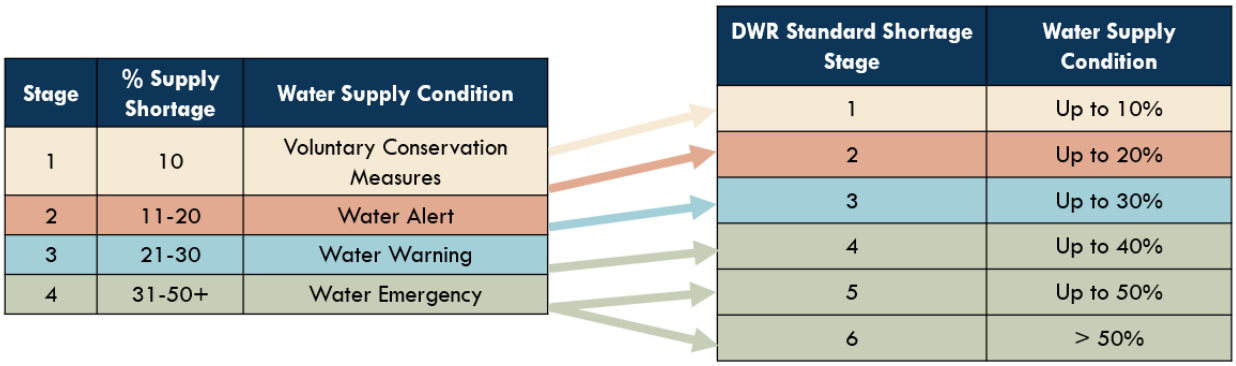

Figure 2: Crosswalk to DWR's Six Standard Stages

Table 2: DWR Table 8-1 Water Shortage Contingency Plan Stages

DWR STANDARD SHORTAGE LEVEL	DWR PERCENT SHORTAGE RANGE	REDLANDS' SHORTAGE LEVEL	REDLANDS' PERCENT SHORTAGE LEVEL
1	Up to 10%	Voluntary Conservation Measures (Redlands Stage 1)	Up to 10%
2	Up to 20%	Mandatory Compliance; Water Alert (Redlands Stage 2)	11-20%
3	Up to 30%	Mandatory Compliance; Water Warning (Redlands Stage 3)	21-30%
4	Up to 40%	Mandatory Compliance; Water Emergency (Redlands Stage 4)	31-50+%
5	Up to 50%	Mandatory Compliance; Water Emergency (Redlands Stage 4)	31-50+%
6	>50%	Mandatory Compliance; Water Emergency (Redlands Stage 4)	31-50+%

Note: One stage in the Water Shortage Contingency Plan must address a water shortage of 50%.

4.0 Shortage Response Actions

This section was completed pursuant to CWC Section 10632(a)(4) and 10632.5(a) and describes the response actions that must be implemented or considered for each stage to minimize social and economic impacts to the community.

In accordance with CWC 10632(b), Redlands analyzes and defines water features that are artificially supplied with water, including ponds, lakes, waterfalls, and fountains, separately from swimming pools and spas.

4.1 Supply Augmentation

Table 3 identifies the supply augmentation actions Redlands can take in the event of a water shortage condition. Redlands currently maintains interconnections with the City of Loma Linda and Western Heights Water Company. During water shortage emergencies, Redlands may be able to obtain supplemental water supply through these connections, if available.

Table 3: DWR 8-2R Supply Augmentation & Other Actions

SHORTAGE LEVEL	SUPPLY AUGMENTATION METHODS AND OTHER ACTIONS BY WATER SUPPLIER	HOW MUCH IS THIS GOING TO REDUCE THE SHORTAGE GAP?	ADDITIONAL EXPLANATION OR REFERENCE
4	Other purchases	~3%	Utilize intertie with City of Loma Linda. Mutual Aid agreement between Cities, September 1987
4	Other purchases	~3%	Utilize intertie with Western Heights Water Company. Intertie constructed August 2016

Note: The above shortage level corresponds to Redlands' four existing shortage stages.

4.2 Demand Reduction

In addition to prohibitions on end uses, which are the responsibility of customers, Redlands is committed to lead by example. In 2015, Redlands created a "Plan of Action" (POA) that outlines efforts to improve outreach and resources for customers and increase water efficiency at its own facilities. This four-phase approach includes increasing efforts and funding in correlation with increasing water reduction requirements. Many elements of this plan have been completed, are ongoing, or are in process of completion. Table 4 summarizes these efforts and end use prohibitions.

Table 4: DWR 8-3R Demand Reduction Actions

SHORTAGE LEVEL	DEMAND REDUCTION ACTIONS	HOW MUCH IS THIS GOING TO REDUCE THE SHORTAGE GAP?	ADDITIONAL EXPLANATION OR REFERENCE	PENALTY, CHARGE, OR OTHER ENFORCEMENT
All	Expand Public Information Campaign	0-20%		No
All	Improve Customer Billing	0-1%		No
All	Offer Water Use Surveys	0-1%		No
All	Provide Rebates on Plumbing Fixtures, Devices and Appliances	0-1%		No
All	Provide Rebates for Landscape Irrigation Efficiency	0-1%		No
All	Provide Rebates for Turf Replacement	0-1%		No
All	Reduce System Water Loss	0-5%		No
All	Other	0-5%	Upgrades to increase recycled water use.	No
1	Other	0-5%	Voluntary, Landscape - Adjust landscape irrigation fixtures and systems to avoid waste.	No
1	Other	0-1%	Voluntary, install water saving devices.	No
1	Other	0-1%	Voluntary, select low-water-demand plants for new landscaping.	No
1	CII - Restaurants may only serve water upon request	0-1%	Voluntary, Restrict water service in restaurants.	No

SHORTAGE LEVEL	DEMAND REDUCTION ACTIONS	HOW MUCH IS THIS GOING TO REDUCE THE SHORTAGE GAP?	ADDITIONAL EXPLANATION OR REFERENCE	PENALTY, CHARGE, OR OTHER ENFORCEMENT
1	Landscape - Restrict or prohibit runoff from landscape irrigation	0-1%	Adjust sprinklers and irrigation systems to avoid overspray, runoff, and waste. Avoid watering on windy days.	No
2	Water Waste Patrols	0-5%	Efforts in Phase 2 of City's Plan of Action.	Yes
2	Other	0-1%	Increased regional collaboration to ensure sufficient water supplies for the entire region.	No
2	Landscape - Limit landscape irrigation by sprinkler to specific times	5-10%	Irrigation of lawns, gardens, landscaped areas, trees, shrubs, or other plants utilizing individual sprinklers or sprinkler systems is prohibited between the hours 12:00 P.M. and 8:00 P.M.	Yes
2	Landscape - Limit landscape irrigation by sprinkler to specific days	5-10%	Irrigation of lawns, gardens, landscaped areas, trees, shrubs, or other plants utilizing individual sprinklers or sprinkler systems is allowed only on an irrigation day designated by the city.	Yes
2	Landscape - Other landscape restriction or prohibition	0-1%	Commercial agriculture exempt from limit on irrigation days and times but shall curtail all non-essential water use.	Yes
2	Other	0-1%	Washing of any vehicles/mobile equipment is limited to allowed watering days and times and only with handheld bucket, or hose equipped with automatic shut-off nozzle.	Yes
2	Other - Prohibit use of fire hydrants for construction purposes	0-1%	Use of water from fire hydrants is limited to firefighting and other activities necessary to maintain the health, safety, and welfare of the citizens of Redlands. The use of water piped from fire hydrants and sprinkled for construction purposes is prohibited.	Yes
2	Pool/Spa Prohibition	0-1%	The refilling or adding of water to uncovered swimming or wading pools or spas is allowed only on designated irrigation days and is prohibited between the hours of 12:00 P.M. and 8:00 P.M.	Yes

SHORTAGE LEVEL	DEMAND REDUCTION ACTIONS	HOW MUCH IS THIS GOING TO REDUCE THE SHORTAGE GAP?	ADDITIONAL EXPLANATION OR REFERENCE	PENALTY, CHARGE, OR OTHER ENFORCEMENT
2	Decorative Water Features-Use is Prohibited	0-1%	The operation of any ornamental fountain or other structure making similar decorative use of water is prohibited, unless the fountain or structure has a recycling system.	Yes
2	Washing/Sprinkling of Foundations/ Structures	0-1%	Allowed only by City Permit.	Yes
2	Landscape - Other landscape restriction or prohibition	0-5%	Golf greens and tees are only allowed irrigation on allowed watering days and times. Fairway irrigation is absolutely prohibited. Exemption from restrictions: Golf course irrigation utilizing treated wastewater or reused water.	Yes
2	CII - Restaurants may only serve water upon request	0-1%	Restaurants shall not serve water to customers except upon specific customer request.	Yes
2	Other - Customers must repair leaks, breaks, and malfunctions	0-5%	Failure to repair controllable leaks is prohibited.	Yes
2	Other - Prohibit use of water for washing hard surfaces	0-1%	Use of running water to wash driveways, sidewalks, parking areas, patios, tennis courts, and other paved areas is prohibited.	Yes
2	Landscape - Restrict or prohibit runoff from landscape irrigation	0-5%	Failure to prevent excessive runoff from irrigation activities is prohibited.	Yes
3	Other	0-1%	Implement hotline and email address for water waste reporting.	No
3	Other	0-1%	Develop internal Drought Task Force to collaborate on different methods to reduce consumption under each City department's purview of responsibilities.	No

SHORTAGE LEVEL	DEMAND REDUCTION ACTIONS	HOW MUCH IS THIS GOING TO REDUCE THE SHORTAGE GAP?	ADDITIONAL EXPLANATION OR REFERENCE	PENALTY, CHARGE, OR OTHER ENFORCEMENT
3	Landscape - Other landscape restrictions or prohibition	0-5%	All outdoor irrigation of vegetation shall occur only on allowed days and times using only handheld hoses, drip irrigation, handheld buckets, or permanently installed automatic sprinkler systems.	Yes
3	Landscape - Other landscape restriction or prohibition	0-1%	Golf tee area watering is prohibited. Except when irrigated with treated wastewater or reused water.	Yes
4	Landscape - Prohibit all landscape irrigation	10-30%	All outdoor irrigation of vegetation shall be allowed only between the hours of 8:00 P.M. and 12:00 A.M. on designated irrigation days.	Yes
4	Other - Prohibit vehicle/mobile equipment washing except at commercial car washes and service stations	0-1%	The washing of automobiles, trucks, trailers, boats, airplanes, and other types of mobile equipment not occurring upon the immediate premises of commercial car washes and commercial service stations and not in the immediate interest of the public health or safety is prohibited.	Yes
4	Other - Prohibit vehicle/mobile equipment washing except at commercial car washes and service stations		The washing of automobiles, trucks, trailers, boats, airplanes, or other types of mobile equipment upon the immediate premises of commercial car washes and commercial service stations shall occur only between the hours of 12:00 P.M and 6:00 P.M.	
4	Landscape - Other landscape restriction or prohibition	0-5%	Commercial Agriculture irrigation is only permitted on designated days and times and only using handheld hoses, drip irrigation systems, or handheld buckets.	Yes
4	Other water feature or swimming pool restriction	0-1%	The filling, refilling, or adding of water to uncovered swimming or wading pools and spas is prohibited at any time of day or night.	Yes

SHORTAGE LEVEL	DEMAND REDUCTION ACTIONS	HOW MUCH IS THIS GOING TO REDUCE THE SHORTAGE GAP?	ADDITIONAL EXPLANATION OR REFERENCE	PENALTY, CHARGE, OR OTHER ENFORCEMENT
4	Water Features - Restrict water use for decorative water features, such as fountains	0-1%	The operation of any ornamental fountain or similar structure is prohibited.	Yes
4	Other	0-1%	The issuance of new service connections and meters is prohibited.	Yes

Notes: The above shortage levels correspond to Redlands' four existing shortage stages.

A surcharge is applied to a customer's utility bill on the 3rd violation. When in a particular stage, all elements of less restrictive stages shall apply as well.

4.3 Operational Changes and Additional Mandatory Restrictions

During shortage conditions, operations may be affected by supply augmentation or demand reduction responses. Redlands will consider its operational procedures when it completes its Annual Assessment. Any additional mandatory restrictions implemented in response to the declaration of a shortage response stage, beyond the actions listed in Table 3 and Table 4, are listed in Redlands' Ordinance No. 2151 in January 1991 and Ordinance No. 2751 in 2011, which make up the City of Redlands Water Conservation Plan ("Plan"), provided in Attachment 1.

4.4 Emergency Response Plan

In December 2025, Redlands completed a Risk and Resilience Assessment (RRA) and by June 30th, 2026, will have completed the Emergency Response Plan (ERP) in accordance with America's Water Infrastructure Act (AWIA) of 2018. The purpose of the RRA and ERP is to meet the AWIA compliance requirements and plan for long-term resilience of Redlands' infrastructure. The RRA assessed Redlands' water system to identify critical assets and processes that may be vulnerable to human and natural hazards, and to identify measures that can be taken to reduce risk and enhance resilience from service disruption for the benefit of customers. The RRA identifies and characterizes both infrastructure-specific and system-wide vulnerabilities and threats and quantifies the consequences of disruption. The RRA also identifies various options (and constraints) in addressing and mitigating risk. The RRA, in conjunction with the ERP, charts a course for water system resilience. The RRA also provided various recommendations to increase reliability of Redlands' system. Since critical pieces of infrastructure and specific vulnerabilities are detailed in the RRA and ERP, the contents of these documents are confidential and for use by Redlands' staff only. However, Redlands can confirm that these assessments will meet the requirements set forth by AWIA and evaluate seismic risks and mitigation actions to Redlands' infrastructure.

In the event of a water shortage emergency resulting from equipment failure, power outage, or other catastrophe, Redlands is prepared to purchase emergency water supplies from nearby agencies while repairs or other remedial actions are underway. Redlands may also implement its four-stage plan for conservation, as described above, with either voluntary or mandatory reductions depending on the severity of the shortage. For severe disasters (Stage 4), mandatory water use reductions are specified.

4.5 Seismic Risk Assessment and Mitigation Plan

Disasters, such as earthquakes, can and will occur without notice. In addition to the AWIA RRA and ERP (underway), the City of Redlands has a 2021 Local Hazard Mitigation Plan (LHMP) that includes an assessment of seismic risk and mitigation strategies. The LHMP is included as Attachment 2.

The seismic hazards evaluated include fault rupture, liquefaction and seismic shaking and assessed the threat to critical facilities. The LHMP concluded that there are potential mitigation activities to reduce the risk of damage in earthquakes. These include structural mitigation of vulnerable building structures and infrastructure facilities.

In 2022, Redlands completed a Condition, Seismic, and Structural Assessment for their water infrastructure, which will include specific mitigation actions.

4.6 Shortage Response Action Effectiveness

Redlands has estimated the effectiveness of shortage response actions in Table 3 and Table 4, when data pertaining to such actions is available. It is expected that response actions effectiveness is also a result of successful communication and outreach efforts.

5.0 Communication Protocols

Redlands prioritizes effective communication, especially in times of a water shortage emergency. Redlands has a protocol in place to communicate with the public, government agencies, and other interested parties about water shortages and any anticipated or triggered shortage response actions. Communication methods may include email, bill inserts, handouts, informative flyers, direct mail pieces to newspapers, bus shelter advertisements, news releases, social media outreach, website content, electronic signboards along major transportation routes, Emergency Notification System phone and text alerts, and the City's Government Access cable television station. Redlands provides reminders about shortage stages as they develop, and Redlands encourages conservation at all times.

6.0 Compliance and Enforcement

For prohibitions on end uses, customers will receive a violation should they violate restrictions set forth in the stage currently in effect and the preceding stages. Upon third violation, a surcharge is imposed on the customer's next regular water bill. The surcharge consists of a percentage of the customer's commodity charge on the most recent water bill, based on the stage then in effect.

The surcharge for each stage is as follows:

- **Stage II: 25 percent**
- **Stage III: 50 percent**
- **Stage IV: 75 percent**

If a water customer cited for a third violation fails or refuses to comply with the requirements of this chapter or to pay any outstanding water bills including surcharges, the City Manager is hereby granted discretionary authority pursuant to CWC section 375 to cause a flow-restricting device to be installed at the meter to reduce water availability to the customer's service address. Pursuant to CWC section 35423, if installation of a flow restrictor is infeasible, impractical or is unlikely to induce compliance with this chapter, the City Manager may authorize a shut-off of service to the premises involved (Ord. 2151 § 1, 1991).

A city water user may file a request for relief from any provision of this chapter. The City Manager shall review all requests and hold a hearing with each applicant. The City Manager may grant relief from the provisions of this chapter if he determines that special circumstances make compliance not reasonably possible, or that the restrictions herein would either:

- Cause an unnecessary and undue hardship to the water user or the public; or
- Cause an emergency condition affecting the health, sanitation, fire protection, or safety of the water user or of the public.

Such relief may be granted only upon written request to the City. Upon granting such relief, the City Manager may impose any conditions he determines to be just and proper. The City Manager shall make his determination within fourteen (14) days of receipt of the request for relief and shall inform the applicant of the decision in writing.

An applicant shall have the right to appeal the City Manager's decision regarding his or her application to the City Council or its designee. The appeal must be in writing and received by the City within ten (10) days of the date of the City Manager's written decision. The appeal shall be heard by the City Council or its designee within a reasonable period of time from the date the appeal is filed. The City shall provide written notice to the applicant of the time and date of the hearing. The City Council or its designee, at its discretion, may affirm, reverse, or modify the City Manager's decision and impose any conditions it deems proper. The decision of the City Council shall be final (Ord. 2151 § 1, 1991).

7.0 Legal Authority

To offset the prolonged effects of a drought period or other emergency, the City Council adopted Ordinance No. 2151 in January 1991, and Ordinance No. 2751 in 2011, which make up the City of Redlands Water Conservation Plan (“Plan”), the City’s water shortage contingency plan. These ordinances collectively provide water conservation measures in order to minimize the effect of a water shortage on the citizens of the community. The Plan includes provisions that will significantly reduce the waste and inefficient use of water, thereby extending the available water resources required for the domestic and fire protection needs of the City and general public. The adopted Plan, approved by City Council, can be found in Attachment 1.

7.1 Water Shortage Emergency Declaration

In accordance with CWC Section Division 1, Section 350, the City Council shall declare a water shortage emergency condition to prevail within the area served by such distributor whenever it finds and determines that the ordinary demands and requirements of water consumers cannot be satisfied without depleting the water supply of the distributor to the extent that there would be insufficient water for human consumption, sanitation, and fire protection.

7.2 Local/Regional Emergency Declaration

If a water shortage is approaching, Redlands shall coordinate with any of the cities and counties in its service area for the possible proclamation of a local emergency.

8.0 Financial Consequences of WSCP Implementation

Implementation of any stage of the Plan and CWC Chapter 3.3 (Excessive Residential Water Use During Drought) requiring mandatory restrictions may cause a decrease in revenues and an increase in expenditures. The State drought emergency declaration of 2014-2017 resulted in decreased revenue and increased expenditures. Mandatory restrictions were required, necessitating an increase in staffing to target water use reduction requirements and an increase in outreach efforts. Like most agencies, the majority of the City's costs are fixed, and the combination of decreasing revenues and increased expenditures required implementation of revenue adjustments.

Although the City had reserve funds, reserve funds are typically reserved for emergencies needing immediate attention where time constraints of a rate study, customer noticing, and public hearings would impede immediate actions. The City determined it was not sound financial practice to spend reserve funds to address declining sales due to drought but rather addressed revenue shortages with a rate adjustment. It is expected that in the event of another water shortage emergency, the City would follow the same protocol to address a revenue decrease and/or expenditure increase. In the case where revenue adjustments and use of reserve funds are not options, the City would postpone capital improvement projects to offset diminished revenues.

9.0 Monitoring and Reporting

The water savings from implementation of the WSCP will be determined based on monthly production reports which are reviewed and compared to production reports and pumping statistics from prior months and the same period of the prior year. Under shortage conditions, these production reports could be prepared as often as daily. At first, the cumulative consumption for the various sectors (e.g., residential, commercial, etc.) will be evaluated for reaching the target level. Then if needed, individual accounts will be monitored. Weather and other possible influences may be accounted for in the evaluation.

10.0 WSCP Refinement Procedures

The WSCP is best prepared and implemented as an adaptive management plan. Redlands will use results obtained from their monitoring and reporting program to evaluate any needs for revisions. Potential changes to the WSCP that would warrant an update include, but are not limited to, any changes to trigger conditions, changes to the shortage stage structure, and/or changes to customer reduction actions.

Any prospective changes to the WSCP would need to be presented to Redlands' City Council for discretionary approval. Once discretionary approval has been granted, Redlands will hold a public hearing, obtain any comments, and adopt the updated WSCP. Notices for refinement and the public hearing date will be published in the local newspaper in advance of any public meetings.

11.0 Plan Adoption, Submittal, and Availability

Redlands adopted this WSCP with the 2025 RUWMP. The 2025 RUWMP and WSCP were made available for public review in May 2026, and a public hearing was held on June 2, 2026, to receive public input on the draft 2025 RUWMP and the WSCP.

The Redlands City Council adopted the 2025 RUWMP and the WSCP at a public meeting on June 2, 2026. The resolution of adoption is included as Attachment 3.

This WSCP was submitted to DWR through the WUEData portal before the deadline of July 1, 2026.

This WSCP will be available to the public on the City of Redlands' website.

If Redlands identifies the need to amend this WSCP, it will follow the same procedures for notification to cities, counties, and the public as used for the 2025 RUWMP and for initial adoption of the WSCP.

Attachment 1

City of Redlands Water Conservation Plan

1

Chapter 13.06
WATER CONSERVATION PLAN

13.06.010: TITLE:

This chapter establishes the *CITY OF REDLANDS WATER CONSERVATION PLAN.* (Ord. 2151 § 1, 1991)

13.06.020: INTENT:

The city council of the city of Redlands declares that the public health, safety and general welfare requires that water resources available to the city be put to maximum beneficial use, that the waste or unreasonable use of water be prevented, and that the conservation of such water must occur to protect the people and property of the city of Redlands. (Ord. 2151 § 1, 1991)

13.06.030: PURPOSE AND SCOPE:

A. The purpose of this chapter is to reduce the nonessential use of water to conserve city water supplies, thereby minimizing the effect of a shortage of water supplies on city users. The water conservation plan here established is to:

1. Protect the health, safety, and welfare of the citizens and property owners of the city;

2. Assure the maximum beneficial use of city water supplies; and

3. Attempt to provide sufficient water supplies to meet the basic needs of human consumption, sanitation and fire protection.

B. This chapter shall remain in effect until the city council declares by ordinance that the provisions of this chapter are no longer applicable to existing water supply conditions and the supply of water available for distribution within the city's service area has been replenished or augmented. (Ord. 2151 § 1, 1991)

13.06.040: AUTHORIZATION:

A. The city is authorized to implement the provisions of this chapter following a public hearing as specified below upon the city council's determination by majority vote of the entire council that such implementation is necessary to protect the public health and safety.

B. A public hearing shall be held to determine whether to adopt a water conservation plan, and, if so, which measures provided herein should be implemented. A similar public hearing shall be held by the city council prior to the implementation or termination of each incremental water conservation stage pursuant to section 13.06.080 of this chapter. Notice of the time and place of these public hearings shall be published not less than ten (10) days before the hearing in a newspaper of general circulation.

C. Upon adoption by the city council, the provisions of this chapter shall become effective immediately. Notice of the implementation of successive stages of water conservation shall be given to water users immediately both by publication at least once in a newspaper of general circulation within ten (10) days after adoption, and by a notice enclosed with the next regular city invoice for water or utility service.

D. If the city council cannot meet in time to act to protect the public interest pursuant to this chapter, the city manager or his designee is hereby authorized and directed to implement such provisions of this chapter upon his or her written determination that the city cannot supply adequate water to meet the ordinary demands of water consumers, and that such implementation is necessary to protect the public health or safety. Such written determination shall be presented to the city council at its next meeting for review, revocation or ratification. Such meeting shall be held as soon as possible. (Ord. 2151 § 1, 1991)

13.06.050: APPLICATION:

The provisions of this chapter shall apply to all persons, customers, and property served water by the city wherever situated. (Ord. 2151 § 1, 1991)

13.06.060: GENERAL PROHIBITION:

No water user shall make, cause, use, or permit the use of water supplied by the city for residential, commercial, industrial, agricultural, governmental or any other use in a manner contrary to this chapter. Waste or the unreasonable or nonbeneficial use of water is prohibited in the city of Redlands. (Ord. 2151 § 1, 1991)

13.06.070: MANDATORY CONSERVATION; STAGE CRITERIA:

The director of the public works department shall recommend guidelines for adoption by the city council setting forth the criteria to determine when water supply conditions in the city require the implementation or termination of each water conservation stage. Such guidelines shall be updated when the director determines that water availability so requires. The director shall include in such guidelines a calendar symbol system designating allowed days for irrigation. (Ord. 2151 § 1, 1991)

13.06.080: MANDATORY CONSERVATION; PHASE IMPLEMENTATION:

The public works department shall monitor the projected supply and demand for water by its customers on a daily basis during the months of June, July, August, September, and October and shall recommend to the city manager the extent of conservation required through the implementation and/or termination of particular conservation stages to allow the department to prudently plan for and supply water to its customers. Thereafter, the city manager may recommend to the city council the implementation or termination of the appropriate stage of water conservation in accordance with the applicable provisions of this chapter. The city council may implement or terminate the appropriate stage pursuant to section 13.06.040 of this chapter. Notice of the implementation or termination of each stage shall be given pursuant to subsection 13.06.040C of this chapter.

A. Stage I, Voluntary Conservation Measures: Water users are requested to limit their water use from June 1 to October 1 of each year to an amount necessary for health, safety, economic necessity and irrigation. Water users should use water wisely and prevent its waste or unreasonable use.

   The following actions are recommended:

   1. Adjust sprinklers and irrigation systems to avoid overspray, runoff, and waste. Avoid watering on windy days;

   2. Install water saving devices, such as low flow showerheads and faucet aerators;

   3. Select low water demand shrubs, ground covers and trees for new landscaping;

4. Restrict water service in restaurants.

B. Stage II, Mandatory Compliance; Water Alert: When implemented pursuant to subsection 13.06.040B of this chapter and noticed pursuant to subsection 13.06.040C of this chapter, the following restrictions shall apply to the use of water supplied by the city in addition to the recommendations of stage I:

1. Irrigation of lawns, gardens, landscaped areas, trees, shrubs, or other plants utilizing individual sprinklers or sprinkler systems is allowed only on an irrigation day designated by the city and is prohibited between the hours of twelve o'clock (12:00) noon and eight o'clock (8:00) P.M. However, irrigation is permitted at any time if:

   a. A handheld hose is used, or

   b. A handheld, faucet filled bucket containing five (5) gallons or less is used, or

   c. A drip irrigation system is used.

   Commercial nurseries, commercial farmers, and grove settings requiring twenty four (24) hour irrigation cycles, are exempt from stage II irrigation restrictions, but shall curtail all nonessential water use.

2. The washing of automobiles, trucks, trailers, boats, aircraft and other types of mobile equipment is allowed only on designated irrigation days and is prohibited between the hours of twelve o'clock (12:00) noon and eight o'clock (8:00) P.M. Mobile equipment washing shall be done only with a handheld bucket or a handheld hose equipped with a positive shutoff nozzle for quick rinses.

   Notwithstanding the above, washing of such equipment may be done at any time on the immediate premises of a commercial car wash or commercial service station with washwater recycling facilities. Garbage trucks and vehicles to transport food and perishables are exempt from these regulations if the public health or safety requires frequent vehicle cleaning.

3. The washing or sprinkling of foundations or structures shall be allowed only by city permit. Regulations for such permit shall be enacted by resolution.

4. The refilling or adding of water to uncovered swimming or wading pools or spas is allowed only on designated irrigation days and is prohibited between the hours of twelve o'clock (12:00) noon and eight o'clock (8:00) P.M.

5. The operation of any ornamental fountain or other structure making similar decorative use of water is prohibited, unless the fountain or structure has a recycling system.

6. The use of water for irrigation of golf greens and tees is allowed only on designated irrigation days and is prohibited between twelve o'clock (12:00) noon and eight o'clock (8:00) P.M. The irrigation of golf course fairways is absolutely prohibited. The irrigation of golf courses utilizing treated wastewater or reused water is not subject to these prohibitions.

7. Restaurants shall not serve water to customers except upon specific customer request.

8. Failure to repair controllable leaks is prohibited.

9. Use of running water to wash driveways, sidewalks, parking areas, patios, tennis courts and other paved areas is prohibited.

10. Failure to prevent excessive runoff from irrigation activities is prohibited.

11. Use of water from fire hydrants is limited to firefighting and other activities necessary to maintain the health, safety, and welfare of the citizens of Redlands. The use of water piped from fire hydrants and sprinkled for construction purposes is prohibited.

C. Stage III, Mandatory Compliance; Water Warning: When implemented pursuant to subsection 13.06.040B of this chapter and noticed pursuant to subsection 13.06.040C of this chapter, the following restrictions, in addition to all elements of stages I and II, shall apply:

1. All outdoor irrigation of vegetation shall occur only on designated days using handheld hoses, drip irrigation, or handheld buckets and is prohibited between the hours of twelve o'clock (12:00) noon and eight o'clock (8:00) P.M.

   Exemption: Permanently installed automatic sprinkler systems may be used on designated irrigation days but are prohibited between the hours of twelve o'clock (12:00) noon and eight o'clock (8:00) P.M.

2. The watering of golf tee areas is prohibited except with treated wastewater or reused water.

D. Stage IV, Mandatory Compliance; Water Emergency: Pursuant to California Water Code section 350 et seq., the city council may declare a water shortage emergency upon its determination that the ordinary demands of city water users cannot be satisfied without depleting the city water supply to a point of insufficient water for human consumption, sanitation and fire protection. When implemented pursuant to subsection 13.06.040B of this chapter and noticed pursuant to subsection 13.06.040C of this chapter, the following restrictions, in addition to all elements of stages I, II and III, shall apply:

1. All outdoor irrigation of vegetation shall be allowed only between the hours of eight o'clock (8:00) P.M. and twelve o'clock (12:00) midnight on designated irrigation days.

2. The washing of automobiles, trucks, trailers, boats, airplanes, and other types of mobile equipment not occurring upon the immediate premises of commercial car washes and commercial service stations and not in the immediate interest of the public health or safety is prohibited.

3. The washing of automobiles, trucks, trailers, boats, airplanes, or other types of mobile equipment upon the immediate premises of commercial car washes and commercial service stations shall occur only between the hours of twelve o'clock (12:00) noon and six o'clock (6:00) P.M.

4. Commercial nurseries and commercial farmers using city water shall water only on designated irrigation days between the hours of ten o'clock (10:00) A.M. and six o'clock (6:00) P.M. and shall use only handheld hoses, drip irrigation systems, or handheld buckets.

5. The filling, refilling, or adding of water to uncovered swimming or wading pools and spas is prohibited at any time of day or night.

6. The operation of any ornamental fountain or similar structure is prohibited.

7. The issuance of new service connections and meters is prohibited. (Ord. 2151 § 1, 1991)

13.06.090: RELIEF FROM COMPLIANCE:

A city water user may file a request for relief from any provision of this chapter. The city manager shall review all requests and hold a hearing with each applicant. The city manager may grant relief from the provisions of this chapter if he determines that special circumstances make compliance not reasonably possible, or that the restrictions herein would either:

A. Cause an unnecessary and undue hardship to the water user or the public; or

B. Cause an emergency condition affecting the health, sanitation, fire protection or safety of the water user or of the public.

Such relief may be granted only upon written request to the city. Upon granting such relief, the city manager may impose any conditions he determines to be just and proper. The city manager shall make his determination within fourteen (14) days of receipt of the request for relief and shall inform the applicant of the decision in writing.

An applicant shall have the right to appeal the city manager's decision regarding his or her application to the city council or its designee. The appeal must be in writing and received by the city within ten (10) days of the date of the city manager's written decision. The appeal shall be heard by the city council or its designee within a reasonable period of time from the date the appeal is filed. The city shall provide written notice to the applicant of the time and date of the hearing. The city council or its designee, at its discretion, may affirm, reverse or modify the city manager's decision and impose any

conditions it deems proper. The decision of the city council shall be final. (Ord. 2151 § 1, 1991)

13.06.100: FAILURE TO COMPLY:

Violation by any customer of the water use prohibitions of this chapter shall be penalized as follows:

A. First Violation; Notice Of Noncompliance: The city manager is authorized and directed to issue a written notice of noncompliance to any water user who, in the reasonable judgment of the city manager, has failed or refused in a significant way to comply with those water use curtailment provisions of this chapter currently in effect. Any such notice of violation shall specify the time, place and manner of noncompliance, and shall specify a reasonable period to achieve compliance. Any notice of noncompliance shall be directed to the customer of record for the premises where the noncompliance was observed. Delivery may be through regular mail or by personal delivery with a declaration of delivery returned to the city manager.

B. Second Violation; Warning Of Penalties: For a second violation by any customer of the water use curtailment provisions of this chapter currently in effect, a written warning notice of the future imposition of penalties on the customer's water bill shall be issued. Any such warning notice shall specify the time, place and manner of noncompliance and shall require compliance within two (2) days. Any warning notice shall be directed to the customer of record for the premises where the violation has occurred. Delivery will be made by personal delivery with a declaration of delivery returned to the city manager.

C. Third Violation; Imposition Of Penalties:

1. For a third violation by any customer of this chapter, a citation shall be issued and a surcharge imposed on the customer's next regular water bill. The surcharge shall consist of a percentage of the customer's commodity charge as shown on the most recent water bill, based upon the water conservation stage then in effect at the time of the most recent violation. The penalty surcharge for each stage is shown below:

Stage II		25 percent
Stage III		50 percent
Stage IV		75 percent

As an example, if a water user's most recent commodity charge is twenty five dollars ($25.00), a third violation while the city is in stage III would result in the imposition of a twelve dollar fifty cent ($12.50) surcharge.

2. If a water customer cited for a third violation fails or refuses to comply with the requirements of this chapter or to pay any outstanding water bills including surcharges, the city manager is hereby granted discretionary authority pursuant to California Water Code section 375 to cause a flow restricting device to be installed at the meter to reduce water availability to the customer's service address. Pursuant to California Water Code section 35423, if installation of a flow restrictor is infeasible, impractical or is unlikely to induce compliance with this chapter, the city manager may authorize a shutoff of service to the premises involved. (Ord. 2151 § 1, 1991)

13.06.110: HEARING REGARDING VIOLATIONS:

A. Any customer receiving notice of a second or subsequent violation pursuant to section 13.06.100 of this chapter shall have a right to a hearing by the city manager within fifteen (15) days of mailing or other delivery of the notice of violation.

B. The customer's written request for a hearing within the fifteen (15) day period shall automatically stay the imposition of monetary penalties on the customer's water bill until the city manager renders his decision. The decision of the city manager shall be final and not subject to further appeal pursuant to this code. (Ord. 2751, 2011)

13.06.120: CITY MANAGER DELEGATION:

The city manager may delegate all duties and responsibilities hereunder. (Ord. 2151 § 1, 1991)

13.06.130: SEVERABILITY:

If any provision, section, subsection, sentence, clause, or phrase of this chapter, or the application of same to any person or set of circumstances is held to be unconstitutional, void, or invalid, such decision shall not affect the remaining portions of this chapter which

shall remain in full force and effect, and all provisions of this chapter are declared to be severable for that purpose. (Ord. 2151 § 1, 1991)

13.06.140: INCOMPATIBLE PROVISIONS:

To the extent any provision of this chapter is incompatible with or at variance with any prior adopted ordinance or resolution, the provisions of this chapter shall take precedence, and all prior ordinances and resolutions shall be interpreted to harmonize with and not change the provisions of this chapter. (Ord. 2151 § 1, 1991)

13.06.150: PUBLIC HEALTH AND SAFETY NOT TO BE AFFECTED:

Nothing in this chapter shall be construed to require the city to curtail the supply of water to any customer when such water is required by that customer to maintain an adequate level of public health or public safety. (Ord. 2151 § 1, 1991)

13.06.160: EXEMPTION FROM CALIFORNIA ENVIRONMENTAL QUALITY ACT:

The city council determines that the adoption of this chapter and implementation of the measures set forth herein are exempt from review under the California environmental quality act[1] because it is an action taken to mitigate or prevent a water shortage emergency, and to protect natural resources. The city council directs the city manager or his designee to prepare and file a notice of exemption as soon as possible following adoption of the ordinance codified in this chapter. (Ord. 2151 § 1, 1991)

PREFACE

Impacts from hazards are a challenge to jurisdictions, its leaders, and its citizens. After catastrophic disaster events communities can experience power outages, loss of telecommunications and water service, limited access to fuel, and closed roadways in addition to significant damage to buildings, mass injuries, and loss of life. Depending on the magnitude of the event, recovery from these events can take weeks, months, and in some instances, years. The goal of many communities is to reduce the potential impacts thus shortening the recovery time. In emergency management, this is generally called mitigation.

Mitigation is defined by the Department of Homeland Security (DHS)-Federal Emergency Management Agency (FEMA) as "*any action taken to reduce and/or eliminate the long-term risk to human life and property from natural hazards*." Mitigation is one of the primary phases of the Disaster Cycle and is the only phase specifically dedicated to breaking the cycle of damage. The goal of mitigation is to build resiliency within the community; enabling a more efficient and effective response to and recovery from disasters.

To assist communities become more resilient to hazards, FEMA developed a program and guidance around the creation of Local Hazard Mitigation Plans (LHMPs). LHMPs promote a comprehensive planning process, requiring an assessment of local capabilities against impacts from hazards in order to identify potential projects and/or strategies.

With an approved and adopted LHMP, cities, counties, and special districts are eligible for Federal Hazard Mitigation Assistance (HMA) grants offered through FEMA: Hazard Mitigation Grant Program (HMGP), Building Resilient Infrastructure and Communities (BRIC; formerly Pre-Disaster Mitigation- PDM), and Flood Management Assistance (FMA). The HMA grants are a great source of funding to help implement local mitigation actions identified in the LHMPs.

This update to the City of Redlands LHMP built upon previous mitigation efforts in the City and incorporated new, relevant information into the plan. Part of this update process also includes reassessing and reevaluating: local capabilities (personnel resources, governance, technical skills, and fiscal resources); community hazards (identification, impacts, and prioritization); and mitigation goals, objectives, and measures/actions. Significant consideration was given to acknowledging new (and existing) challenges and issues facing the City (i.e., pandemic, extension of the commuter rail, civil disturbance, technology disruption, wind driven wildfire events). During this update, the City tried to take a more comprehensive, strategic approach to the LHMP. This led to reorganizing the plan and also adding, renaming, and expanding hazards and mitigation actions.

Because the LHMP must include information to meet federal requirements and guidance it includes information not traditionally found in other planning documents. This can lead to a large, cumbersome document, making it difficult to easily access specific information. In an attempt to ensure the LHMP contains all required information and is user-friendly; it has been organized as follows:

Chapter 1: ***Introduction***- provides information on the purpose of the plan, outlines the scope of the work, and presents the adoption process and authority.

Chapter 2: ***Planning Process***- provides information on the methodology used to prepare the LHMP, including a list of the Planning Team members and the public outreach efforts.

Chapter 3: ***Community Profile***- provides background information on the City, ensuring all Planning Team members have a common understanding of the dynamics within the community.

Chapter 4: ***Capability Assessment***- provides information on the current mitigation efforts by the City, including department roles and responsibilities, existing plans/programs/codes, and available funding.

Chapter 5: ***Hazard Assessment***- provides information on hazards within the City and assesses the priority of each hazard.

Chapter 6: ***Risk Assessment***- provides information on the potential impacts, through exposure and loss (damage) estimates for each hazard within the City.

Chapter 7: ***Mitigation Strategies***- provides information on the actions/projects the City is proposing to address the vulnerabilities to the high-risk hazards within the City.

Chapter 8: ***Plan Administration***- provides information on how the City intends to keep the LHMP current, incorporate it into other efforts, and share it with the public.

1 INTRODUCTION

The Local Hazard Mitigation Plan (LHMP) is a "*living document*" that should be reviewed, reevaluated, monitored, and revised to reflect changing conditions and new information. As required, the LHMP must be updated every five (5) years to remain in compliance with regulations to receive Federal Hazard Mitigation Assistance (HMA) grants. The City of Redlands has had several approved and adopted LHMPs, the latest being in 2015. This LHMP is an update to the 2015 City of Redlands LHMP.

1.1 PURPOSE OF THE PLAN

The purpose of this plan is to outline a mitigation strategy to help reduce and/or eliminate impacts from hazards within the City of Redlands.

1.2 SCOPE OF THE PLAN

The scope of this plan is to: 1) assess relevant existing conditions and capabilities within the City; 2) identify potential hazards and their impacts within the City; and 3) propose mitigation actions to address the impacts to the high-priority hazards within the City. In support of the above scope, this update will: evaluate mitigation progress since the approved and adopted LHMP: implement and document a comprehensive planning process: present actions to maintain and integrate the LHMP with other City plans: and, establish methods to continuously inform and educate the public on hazards and potential actions that can be taken to reduce and/or eliminate impacts.

1.3 HAZARD MITIGATION PLANNING DIRECTIVE

In 2000, the Federal Emergency Management Agency (FEMA) adopted revisions to Title 44 of the Code of Federal Regulations (44 CFR). This revision is known as "Disaster Mitigation Act (DMA) 2000". Section 322 (a-d) of DMA 2000 requires that local governments, as a condition of receiving federal disaster mitigation funds, have an approved and adopted Hazard Mitigation Plan (HMP) that describes the process for assessing hazards, risks and vulnerabilities; identifying and prioritizing mitigation actions; and soliciting input from the community (public), key stakeholders, and adjacent jurisdictions/agencies.

1.4 PROMULGATION AUTHORITY

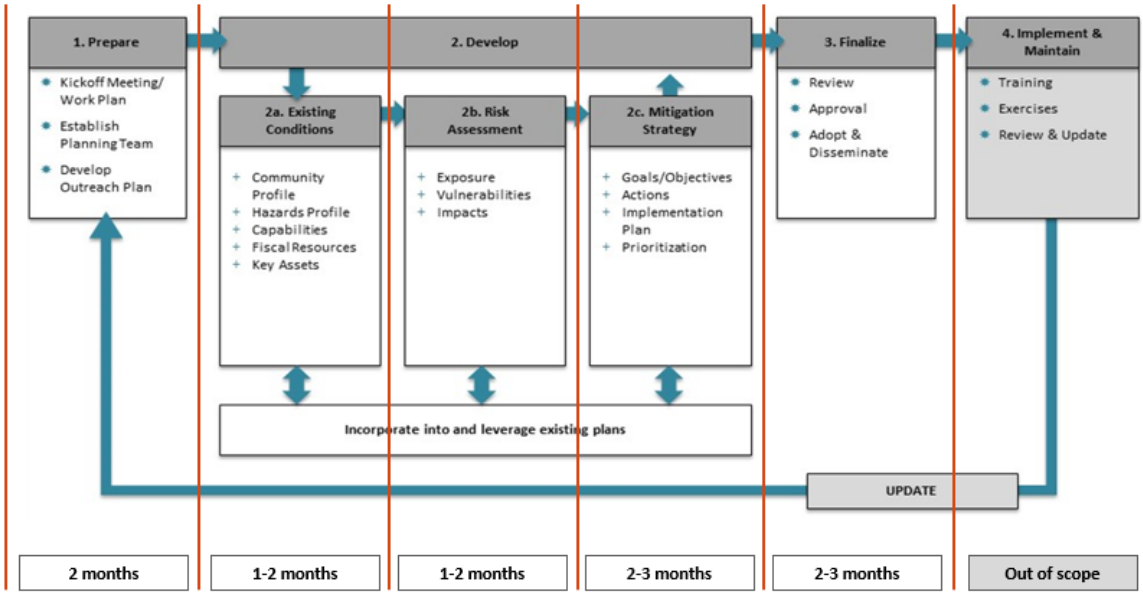
The City Council is the legislative body of the City of Redlands. It decides policy for the municipal government, enacts laws, and oversees all activities of the City. The City Council also serves as the governing body of the City of Redlands Redevelopment Agency. The promulgation authority is vested in the members of the City Council. A list of the members of Redlands City Council include:

Mayor	Paul Barich	***Council Member***	Paul Foster
Mayor Pro Tem	Eddie Tejada	***Council Member***	Denise Davis
		Council Member	Jenna Guzman-Lowery

1.5 LOCAL HAZARD MITIGATION PLAN ADOPTION

The update of the City of Redlands LHMP was reviewed and adopted by the City Council on November 16, 2021, under Resolution 8268. A copy of the Resolution is in **Appendix 1**.

2 PLANNING PROCESS



2.1 OVERVIEW

This section demonstrates the methodology used by the City of Redlands to develop the LHMP. FEMA's LHMP development guidance outlines recommended actions, emphasizing involving the "*whole community*" in the planning process. The whole community concept promotes the inclusion of not only emergency managers but other City department representatives (e.g., zoning, floodplain management, public works, community, and economic development), as well as, outside partners (e.g., surrounding counties/cities, special districts, lifelines companies, businesses leaders) to participate in the LHMP effort. The concept also includes outreach to the general public to bring awareness to community hazards and the planning effort. Soliciting and considering input from diverse interests is essential to building a comprehensive plan and gaining community-wide support for the plan.

2.2 METHODOLOGY AND TIMELINE

To complete the update of LHMP, the City of Redlands incorporated a three (3) phase planning process: 1) Prepare; 2) Develop; and, 3) Finalize (**Figure 2.1**). Phase 2- Develop, has three (3) sub-phases that establish the current conditions, determine the risk and vulnerabilities, and identifies strategies and projects. In addition to the phases, Figure 2.1 also depicts the timeline to complete the project. While this methodology is in alignment with the FEMA guidance, sequence and naming of phases were adjusted to better suit the City of Redlands' needs.

Figure 2.1- Planning Methodology

Under the *Prepare* phase general project tasks were completed. This included conducting an Administrative Kickoff meeting with the consultant, validation of the Planning Team, an identification of the Public Outreach effort, and a Kickoff meeting with the Planning Team.

As mentioned, the *Develop* phase had three (3) sub-phases. During the Existing Conditions sub-phase, the Planning Team confirmed current City mitigation capabilities, including identification of departments supporting mitigation, current governance guiding mitigation efforts, identification of fiscal resource availability to possibly support mitigation, discussion of key assets, and identification and description of local hazards within the City. Under the Risk Assessment sub-phase, the Planning Team reviewed exposure and impacts of hazards within the City; and prioritized hazards. The final sub-phase, Mitigation Strategies, had the Planning Team discuss previous mitigation efforts, identify and prioritize new mitigation projects, and develop an implementation plan for each project.

Throughout the *Develop* Phase, plans and other documents, both internal and external, were also analyzed and leveraged to ensure decisions were based on the best available information and that proposed actions were compatible with other efforts. And conversely, efforts were made to encourage results from the LHMP planning process were considered and incorporated into other planning efforts.

The last phase of the planning process methodology was *Finalize*. During this phase the Planning Team reviewed and provided additional comments on the complete LHMP before being forwarded to the California Governor's Office of Emergency Services (Cal OES) and FEMA. This phase also included addressing both Cal OES and FEMA comments and working with the City Council to adopt the LHMP.

During the planning process, draft LHMP sections (i.e., Capabilities, Hazards, Risk, Mitigation Strategies) were disseminated for review and comment as the Planning Team moved through each phase and sub-phase. This helped the Planning Teams focus their review on the subject matter at hand and enforced the relationship between the phases. At the end of the planning process, another review cycle was provided, this time with all draft sections under one cover.

2.3 PLANNING TEAM

Building on the whole community concept, a Planning Team was established to assist with the updating of the City of Redlands LHMP. The primary goal of the Planning Team is to help define and identify the strategies within the LHMP. The Planning Team was led by representatives from the City of Redlands Fire Department. The City of Redlands Fire Department representatives took on the responsibilities of Project Manager and facilitated and coordinated Planning Team activates. Additionally, the City of Redlands Fire Department hired a consultant to provide technical support and prepare the final updated LHMP.

2.3.1 MEMBERS

The Planning Team was comprised of subject matter experts who could provide great benefit to the team or represented specific topics covered by the LHMP. Leveraging the list of Planning Team members during the last update to the LHMP, the City of Redlands Fire Department and its consultant evaluated and confirmed the list of Planning Team members. An email invite was sent out to each Planning Team member and a series of follow-up telephone calls were conducted to discuss to project and confirm participation. Keeping the Planning Team to a manageable number of members while ensuring that all perspectives are captured and/or included in the process is challenging. To balance this, the Planning Team members were urged to act as liaisons to community groups with whom they regularly interact with, exchanging thoughts on the LHMP with other groups in the community. Planning Team member

were encouraged to communicate the direction and status of the planning effort to their outside members and in return they were expected to bring outside perspectives to the Planning Team. The City of Redlands took great efforts to engage and include as many Planning Team members as possible. A list of the Planning Team members can be found in **Appendix 2**.

2.3.2 MEETINGS

There were a series of meetings held with the Planning Team. Each meeting had a primary focus and provided an opportunity to discuss/review information and exchange ideas. Below is a list of the Planning Team meetings (**Table 2.1**) and Planning Team member attendance at each meeting can be found in **Appendix 3**:

Table 2.1- Planning Team Meetings

Date	Purpose of the Meeting
Jun 16, 2020	Project Kickoff- Discussed: Goal/Objectives of LHMPs, Type of Information Needed, Role of the Planning Team, LHMP Update Process, Public Outreach Effort, and Project Timeline
Aug 18, 2020	Prepare- Discussed: 1) relationship between EOPs and LHMPs, 2) FEMA Review Tool, 3) 2015 LHMP sections- Community Profile, Capabilities, Key Assets, and Hazards. Solicit feedback on draft LHMP sections
Sep 21, 2020	Existing Conditions- Discuss: 1) Key Assets, and 2) Hazards (Identification). Solicit feedback on draft LHMP sections
Oct 19, 2020	Existing Conditions- Discuss: 1) Key Assets, and 2) Hazards (Priority). Solicit feedback on draft LHMP sections
Nov 16, 2020	Existing Conditions- Discuss: 1) Hazards (Profiles, Priority). Solicit feedback on draft LHMP sections
Jan 14, 2021	Risk Assessment- Review of Hazard 1) Exposure, 2) Impacts, and 3) Prioritization. Solicit feedback on draft LHMP sections
Mar 16, 2021	Mitigation Strategies- Review of 1) Previous Projects, 2) Previous Goals/Objectives, and 3) Identification of New Projects
Apr 07, 2021	Mitigation Strategies- Discussion of 1) New Projects, and 2) Project Implementation Plan
May 25, 2021	Draft Plan- Review of draft LHMP; including Public Comments
Sep 16, 2021	*Draft Plan*- Review of Cal OES/FEMA Comments on draft LHMP. Discuss next steps

2.4 COMMUNITY STAKEHOLDER INVOLVEMENT

2.4.1 RECURRING COORDINATION

The City of Redlands attends and coordinates several meetings with community stakeholders focused on Emergency Management topics (i.e., response, recovery, mitigation, preparedness, prevention). Prior to the LHMP update process, the City leveraged these meetings to announce and discuss the City's intent to update its LHMP and solicit participation from stakeholder representatives. Many these stakeholder meetings are organized by San Bernardino County Fire Department Office of Emergency Services (OES). The San Bernardino County Fire Department OES leads the San Bernardino Operational Area (OA) efforts. It's role as lead is to support local governments response and recovery operations. The San Bernardino County Fire Department OES also encourages coordination across local governments and community stakeholders. Some of these efforts include:

- San Bernardino County OA Stakeholder Group- meetings focused on maintaining, coordinating, and updating the OA Multi-hazard LHMP and the individual city LHMPs
- Critical Route Planning Committee- has a committee that develops and validates countywide routes and alternate routes for use in evacuating residents from a disaster area while simultaneously allowing first responders' access into a disaster area without congestion and gridlock.
- California Governor's Office of Emergency Services Annual Exercise- coordinates the OA's participation in the exercise. The purpose for participation is to better prepare for regional, catastrophic events, ensuring an effective multi-agency/multi-jurisdictional response.

The City of Redlands also meets quarterly with the Voluntary Organizations Active in Disasters (VOAD) group. The San Bernardino County chapter of the VOAD group is a community network of non-partisan membership organizations that serves as the forum to share knowledge and resources to help communities prepare for and recover from disasters. Further, VOAD fosters efficient delivery of available member resources to persons with unmet needs affected by disaster.

At the local-level, the City of Redlands meets with faith-based organizations monthly. This group coordinates all faith-based organizations in the City of Redlands. The group supports positive interfaith relationships, enhance non-violent attitudes & behavior, support peace & promote goodwill in the Redlands Community. During Disasters this group supports the city not only in having volunteers, but also in being the emotional and religious support.

2.4.2 STAKEHOLDER MITIGATION RELATED PLANNING RESOURCES

To ensure consistency within the region, the City of Redlands Fire Department and its consultant ensured the Planning Team reviewed and was aware of the state HMP and several LHMPs from surrounding jurisdictions. This list included:

- State of California Hazard Mitigation Plan
- San Bernardino County Multi-Jurisdictional Hazard Mitigation Plan
- Yucaipa, City of
- Loma Linda, City of
- Colton, City of
- Riverside County Multi-Jurisdictional Hazard Mitigation Plan
- Calimesa, City of

While not technically considered a mitigation plan, the Planning Team also reviewed available Emergency Operations Plans (EOPs) and the General Plan Safety Elements from the jurisdictions above. The value of reviewing EOPs is to understand how the City of Redlands and other communities within the region will respond to events and the type of equipment and facilities they will be reliant upon. Gaining this perspective, the Planning Team was able to incorporate these considerations into its LHMP. Although there is a concerted effort to incorporate LHMP information into the General Plan Safety Elements, that is not always the case. A review of the Safety Elements can provide additional insight into hazards within the community and present a closer tie to community-wide goals and objectives.

2.5 PUBLIC OUTREACH

For the purposes of the LHMP, the public is defined as any person within the jurisdiction or adjacent areas, not part of the Planning Team, not acting in an official capacity of a recognized form or level of government. There were two (2) different Public Outreach campaigns used during the City of Redlands LHMP update process: the first informing the community of the efforts to update to the LHMP and the second educating the community of hazards and mitigation actions. Below is a summary of the campaigns:

2.5.1 LHMP AWARENESS CAMPAIGN

This campaign presents the strategy of how the City of Redlands engaged the public during the LHMP update process. A significant piece of the FEMA's LHMP guidance is to ensure the "*whole community*" is involved. A significant element of FEMA's "*whole community*" concept is the general public.

The public outreach strategy worked in conjunction with LHMP planning process and timeline. As the Planning Team completed critical milestones, key information was disseminated to the public for consideration and input. Because of the pandemic (COVID), there were limited options and opportunities to reach out to the public. All public outreach efforts were done virtually. The City of Redlands held two (2) public meetings: one (1) at the start of the project; and, one (1) at the end of the project. In between, there were a series of status update provided through the city website, keeping the general public aware of the progress and status of the project.

This outreach strategy shared information about the project kickoff, hazards and potential impacts within the community, current mitigation capabilities, and proposed mitigation actions. The information was shared through presentations, status updates, and handout materials, through meetings, social media platforms (Facebook, Twitter, Instagram, LinkedIn, Nextdoor), media (print, broadcast), and other announcements.

For the update process, the City of Redlands leveraged the existing City Disaster Council to engage the public. The Disaster Council holds regular, ongoing meetings with the public and its purpose was in alignment with the LHMP efforts. On October 8, 2020, the City of Redlands issued a press release, via email and the city website, announcing the LHMP as an agenda item for the October 26th Disaster Council meeting. The Disaster Council agenda is also disseminated to registered users and the general public.

A second Public Outreach meeting was held on April 26, 2021, to provide an overview of the draft LHMP; a meeting announcement went out the beginning of April. The presentation informed the community of the LHMP planning process and the hazards included in the LHMP. The presentation presented an overview of the chapters in the LHMP, highlighting the proposed mitigation actions; inviting the public to review and submit comments on the draft LHMP.

Attendance at the Public Outreach meetings were good considering the challenges from the COVID-19 pandemic and competing priorities. In addition to the COVID-19 pandemic, the community has faced regional wildfires. Presentations were prepared for each meeting to inform the public on mitigation, the LHMP update planning process, and to walk the public through the LHMP content. During the meetings, some comments were received, most requesting clarification of the presentation material. The draft LHMP was made available to the public through the City of Redlands website. The website also provided a function that allowed the public to submit comments on the LHMP after their review. The Planning Team received minor comments during the Public Outreach review period, one requesting to simplify the

material for public use (NOTE: The Planning Team already identified a Mitigation Measure/Action to create mitigation material for public outreach/education purposes). All comments were shared with the Planning Team; and revisions were incorporated into the LHMP where appropriate. The public announcements and presentations for both meetings can be found in **Appendix 4**.

2.5.2 MITIGATION AWARENESS CAMPAIGN

Over past few years, the City of Redlands established both regular meetings and ad hoc meetings/events to educate and exchange information on mitigation within the city. The regular meetings involve the re-establishment of the Disaster Council. The Disaster Council consist of existing groups that support a strong team merging sectors of the community including elected officials, emergency management, first responders, volunteer services, major industry and commercial, healthcare and education. The Disaster Council meets quarterly. Ad hoc meeting/events consist of events run by the city or others that may provide opportunities to share and exchange information about mitigation. The City organized and/or participated in a number of initiatives to inform the public of hazards in the community and discussed possible mitigation actions. The City sponsors and staff information booths at local events, encourages Community Emergency Response Team (CERT) training, and participates in several regular community-based stakeholder and public meetings. The CERT training helps the City educate citizens about hazards and train citizens to be self-sufficient following a major disaster, while staffing information booths provide City staff with the opportunity to provide literature and handouts pertaining to mitigation strategies and emergency and disaster preparedness. The City has also used surveys in the past to determine the level of knowledge local citizens already have about potential disasters and assess areas of vulnerability to various types of disasters. The City also leverages its social media platforms (Facebook, Twitter, Instagram, LinkedIn, Nextdoor), media (print, broadcast), and other general public announcements to disseminate vital information about hazards in the community, relevant programs being undertaken to safeguard the public from the effects of hazards, and actions the public can take to prepare themselves for events.

3 COMMUNITY PROFILE

The purpose of this section is to present an overview of the City of Redlands, providing the Planning Team with a common understanding of the existing conditions and perspective on select aspects within the community. Gaining a common understanding of the existing conditions provides the basis on which the Planning Team can assess the impacts of hazards, as well as, identify needed mitigation actions.

3.1 LOCATION

The City of Redlands is located at the base of the San Bernardino Mountains in southwestern San Bernardino County, eight (8) miles east of the City of San Bernardino, sixty-three (63) miles east of the Los Angeles metropolitan area, and one-hundred- ten (110) miles north of San Diego (**Figure 3.1**). The City of Redlands planning area covers approximately 46 square miles. The planning area covers the City of Redlands (approximately 37.5 square miles), the City's Sphere of Influence (SOI), and an unincorporated County island (referred to as the "Donut Hole). The SOI is represented in light gold (east of the City of Redlands) and the Donut Hole in tan (northwest portion of the City of Redlands) on Figure 3.1.

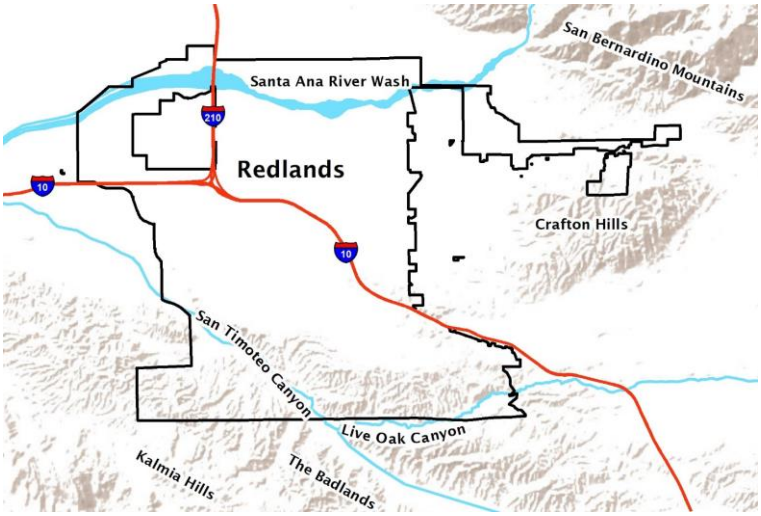

Figure 3.2- Surrounding Jurisdictions to the City of Redlands

3.2 GEOGRAPHY

The City is located in what is known as the East Valley Corridor of the Inland Empire. Surrounding physical features include the San Bernardino Mountains (11,503 feet in elevation) and the Santa Ana River (and/or wash) located on the valley floor at the base of San Bernardino Mountains to the north, the Crafton Hills (3,297 feet in elevation) to the east, and San Timoteo Canyon, the Badlands Mountain range- 2,520 feet, the Kalmia Hills- 2,405 feet and Live Oak Canyon (at base of the San Timoteo Badlands Mountain range) to the south (**Figure 3.3**). Interstate 10 (I-10) freeway which bisects the City east to west, stretches from the Pacific Ocean to Atlantic Ocean; and courses through the major cities of Los Angeles, Phoenix, San Antonio, Houston, Baton Rouge, Mobile, and Jacksonville. The City is also served by State Route 210 which intersects with I-10 Freeway close to the west City limit.

Figure 3.3- Physical Features Around the City of Redlands

There are two (2) principal streams that drain into the City of Redlands, each of presents identifiable flood hazards at peak flows:

- **Santa Ana River/Mill Creek**- The Santa Ana River/Mill Creek emerges from its mountain canyon 5 miles northeast of Redlands, spreads out in shallow, braided channels more than a 1.5-mile-wide wash, mantled with fluvial debris. In 1965, 1966, 1969, 1976, 1980, 1992, 1993, and 1995 the flood waters from the upper regions of the Santa Ana River/Mill Creek were responsible for extensive damage to Orange Street and Alabama Street, ranging from washouts from five to six-foot high flood waters, to extensive, permanent damages from uncontrollable runoff from the upper regions of the San Bernardino mountains.
- **Mission Zanja,** *also known as Mill Creek Zanja and Mission Storm Drain*- The Mission Zanja was constructed for water supply in 1819. Diverting water from Mill Creek, the Zanja carried water for 12 miles to support the San Bernardino Assistance and surrounding farms and ranches. Today, as it traverses an east/west direction, the Zanja drains major portions of the City through various storm drain systems. During significant storm periods, the Zanja poses a serious threat to the community, and is presently being studied by the U. S. Army Corps of Engineers to determine if Corps funding might be available for design and construction of facilities to remove the flood hazard. The Mission Zanja, from the 2800 block of Mentone Boulevard to the west edge of Sylvan Park, is a designated landmark, and part of the National Register of Historic Places.

3.3 HISTORY

Once part of the Spanish Mission lands, Redlands was incorporated in 1888 following an influx of wealthy easterners and mid westerners. Early settlers brought their cultures, traditions and treasures, adding to the City's reputation as a cultural and educational community. Agriculture prospered with the navel orange and many citrus groves still surround Redlands today. More than a hundred years ago the seed which became the city of Redlands was planted by two young Easterners who shared a dream of an idyllic agricultural and residential community.

Redlands was the shared dream of Frank E. Brown, a civil engineer and Yale graduate, and E. G. Judson, a New York stockbroker, who met in Southern California in late 1870's. Naming their Redlands colony for the color of the adobe soil, the two busily laid out a city, brought water from the mountains to the community, introduced the newly discovered Washington navel orange, and recruited settlers. It wasn't long before Redlands proudly proclaimed itself the Navel Orange Capital of the World.

One group of early settlers called itself the Chicago Colony and created what is now the downtown business district. They named the principal shopping street for State Street in Chicago.

In 1889, twins Alfred H. and Albert K. Smiley came to Redlands, and the town was changed forever. The Smiley brothers, well-known educators and resort owners from New York, established a tradition of philanthropy with their donation of the A.K. Smiley public library and park in 1889. Two decades later, the Clarence G. Whites gave the Prosellis at the Redlands Bowl, and Robert Watchorns built the Lincoln Shrine next to the library. These and many others built a city that was known as the "Jewel of the Inland Empire."

The interval from 1920-1930 was another period of growth and prosperity, largely due to the citrus industry. The town's other "industry," the University of Redlands, expanded as well and a general increase in population occurred. Another regional contributor was the establishment of Norton Air Force Base, which remained an active military facility until 1994. Because of Redlands' historic and cultural heritage, the City attracted many commissioned military personnel as residents. The closure of Norton Air Force

Base, coupled with a declining economy beginning in 1990, had a negative impact on the City's economic stability.

3.4 CLIMATE

Redlands' climate is typical of Southern California inland areas. Residents of the City experience mild winters, low annual rainfall, and prolonged, dry summers. (**Table 3.1**)

Table 3.1- Average Temperature and Precipitation in Redlands

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Annual

3.5 DEMOGRAPHICS

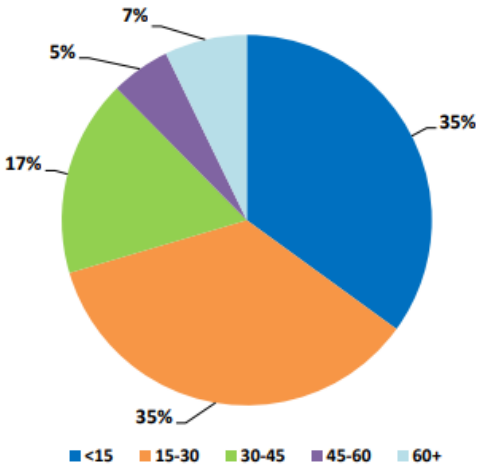
According to the U.S. Census Bureau 2019 estimate, the total population of San Bernardino County is approximately 2,171,600 people. Most of the County's population is in the valley areas located in the southwestern portion of the County. The County's population has grown by approximately 121,690 people (6.4%) since the 2010 population of 2,040,910 persons. This rate of growth was relatively slower than the population growth in three neighboring Southern California counties (Riverside County with 11.3%, San Diego County with 7.7%, and Kern County with 6.6%), but much higher than the next three other counties in (Los Angeles County with 2.88%, Ventura County with 3.13%, and Orange County 5.62%).

The population in City of Redlands is estimated to be 71,513 (US Census, 2019 estimate), slightly up from the 2018 estimate of 71,196. The City of Redlands 2019 population estimate represents approximately 3.3% of the population residing within San Bernardino County. The City of Redlands population has increased approximately 12% since 2000; lower than the population growth in the San Bernardino County (27.2%) over the same period. The historical population estimates for the City of Redlands are shown in **Figure 3.4**.

Figure 3.4- Historical Population Estimates for the City of Redlands, 2000-2018

Source: California Department of Finance, E-5, 2000-2018

Below are some additional relevant population statistics from the 2019 U.S. Census estimate for the City of Redlands:



- 22.9% under 18 years old
- 15.4% over the age 65
- 61.7% between the ages of 18 and 65
- 25.5% reported speaking a language other than English at home
- 88.9% over the age of 25 are high school graduates
- 38.6% have attained a Bachelor's Degree or higher
- 6.9% over the age of 65 with a disability
- $72,523 median household income
- 13.6% living below the poverty level

In addition to the above information, the Planning Team reviewed information from Southern California Association of Government (SCAG). In 2008, SCAG initiated the Local Profiles which provided a variety of demographic, economic, education, housing, and transportation information about each member jurisdiction and are updated every two years. The SCAG region includes six counties (Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura) and 191 incorporated cities. In addition, the SCAG region is a major hub of global economic activity, representing the 16th largest economy in the world, and is considered the nation's gateway for international trade with two of the largest ports in the nation. Below is some information from the SCAG Local Profile for the City of Redlands (2019):

- 26,973 Housing Units in the City of Redlands (or 3.7% of San Bernardino County)
- 57.5% own their homes, and 42.5% rent
- Mean drive time to work in the City of Redlands is 22.8 minutes (compared to 30.9 minutes for San Bernardino County)

According to the US Census American Community Survey (2017), 70% of the City of Redlands population commute over 45 minutes to work (**Figure 3.5**)

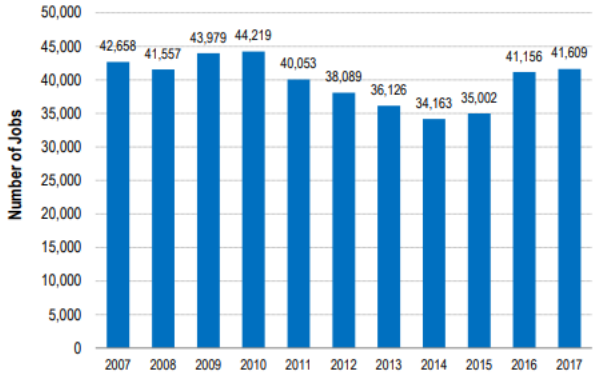
Figure 3.5- Travel Time to Work (minutes) City of Redlands

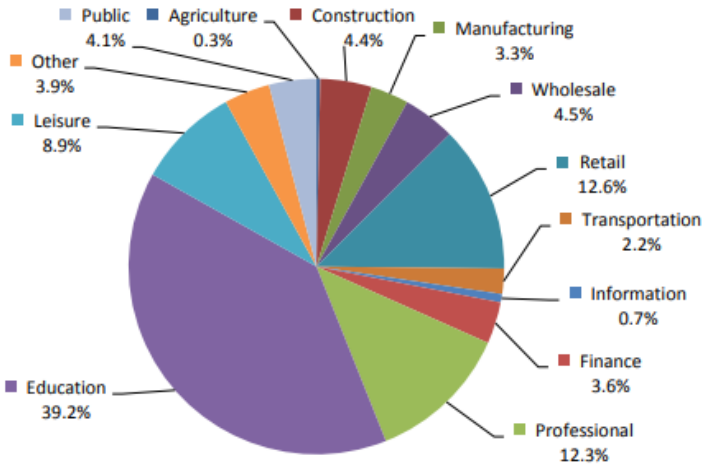
3.6 ECONOMY

According to the SCAG report, the total number of jobs in the City of Redlands is 41,610 (or 5.4% of jobs located in San Bernardino County). The total number of jobs in the City of Redlands reflects a 2.5% decrease (1,049 jobs) from 2007 (**Figure 3.6**). A more detailed breakdown of the jobs in the City of Redlands is depicted in **Figure 3.7**. Below is a summary of some of the larger losses in job sectors since 2007:

- Manufacturing: 1,204 jobs in 2017(a 40.4% decrease)
- Construction: 1,619 jobs in 2017 (a 42.3% decrease)
- Retail: 4,621 jobs in 2017(a 17.7% decrease)
- Professional/Management: 4,510 jobs in 2017 (a 56.7% decrease)

Figure 3.6- Total Number of Jobs in the City of Redlands- 2007-2017





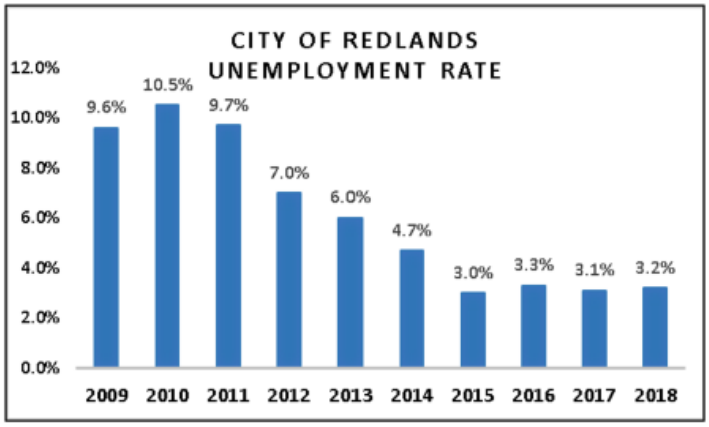


Figure 3.7- Total Number of Jobs in the City of Redlands- 2007-2017

As presented in the Comprehensive Annual Financial Report, The City of Redlands' economy is based largely in the service and trade sectors (health care, retail trade, technology, and education) and light manufacturing. Since 2007-2008, the vacancy rate for industrial and manufacturing space has declined significantly as the City expanded its manufacturing and industrial base. This growth has added to the relative stability of the unemployment rate over the years since the 2007-2009 economic recession.

During that time the unemployment rate rose to a high in 2010 of 10.5%, declining in the following years to reach 3.2% by 2018 (**Figure 3.8**).

Figure 3.8- Unemployment Rate, City of Redlands

3.6.1 MAJOR EMPLOYERS IN REDLANDS AND SURROUNDING VICINITY

Major industries with headquarters or divisions located within the City's boundaries (or in close proximity) include computer technology manufacturers, electrical controls, several financial and insurance institutions, and educational institutions. Within the "Donut Hole"- the unincorporated 1,100-acre island of parcels, located in the northwestern portion of the city, a number of large warehouse distribution centers were developed over the past several, alongside a variety of retail establishments. Major employers in the City and the Donut Hole are presented in **Table 3.2**.

Table 3.2- Major Employers

Employer	Number of Employees

3.7 LAND USE

Land Use in the City of Redlands is guided by the General Plan, Zoning Laws, and Municipal Building Codes. The Land Use element of the General Plan supports opportunities to create a cohesive and attractive image for each district and neighborhood. The City of Redland's Land Use Plan includes three related parts: 1) description of allowed land uses; 2) overlay districts; and 3) the location of allowed land use. **Table 3.3** provides a summary of the permitted Land Uses and the maximum density.

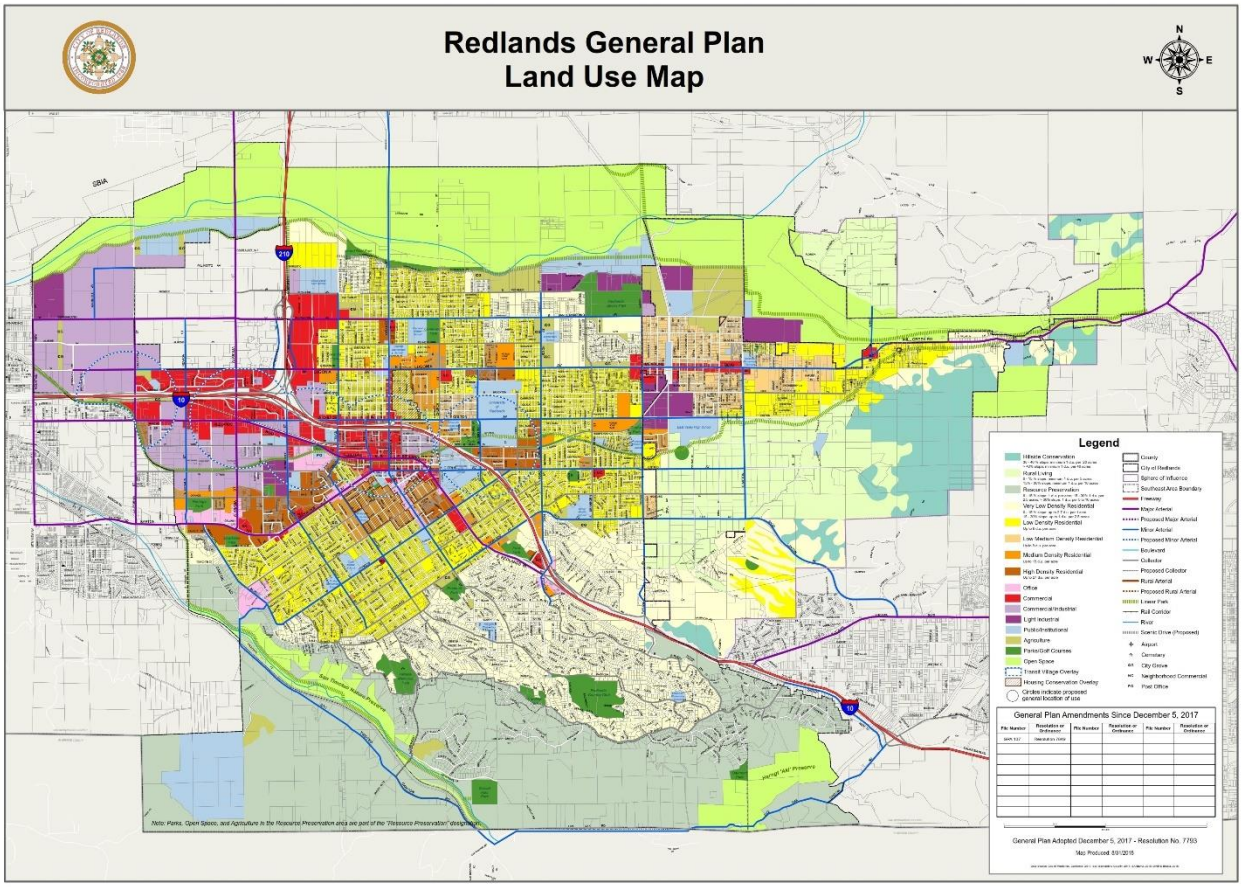

Table 3.3- Land Use Categories

Land Use	Maximum Density
Residential	
Rural Living	*0.2 dwelling unit/gross acre*
Very Low	*2.7 dwelling unit/gross acre*
Low	*6.0 dwelling unit/gross acre*

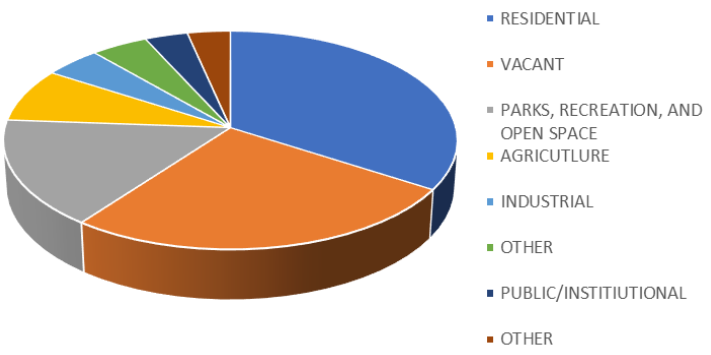
3.7.1 POTENTIAL LAND USE



The Land Use in the City of Redlands consists of the following categories: Agriculture; Commercial; Industrial; Office; Residential; Public/Institutional; Vacant; Parks; Open Space, and Recreational; and other (airport, utilities, parking lots, and water). As presented in the City of Redlands General Plan, the proposed distribution of the land uses within the City limits can be seen in **Figure 3.9**.

Figure 3.9. General Plan Land Use Map

According to the City of Redlands General Plan, the breakdown of Land Use in the Planning Area (**Figure 3.10**) includes: Residential (30%); Vacant (23%); Parks, Recreation, and Open Space (14%); Agriculture (7%); Industrial (4%); Other (4%), Public/Institutional (3%); and Commercial (3%).

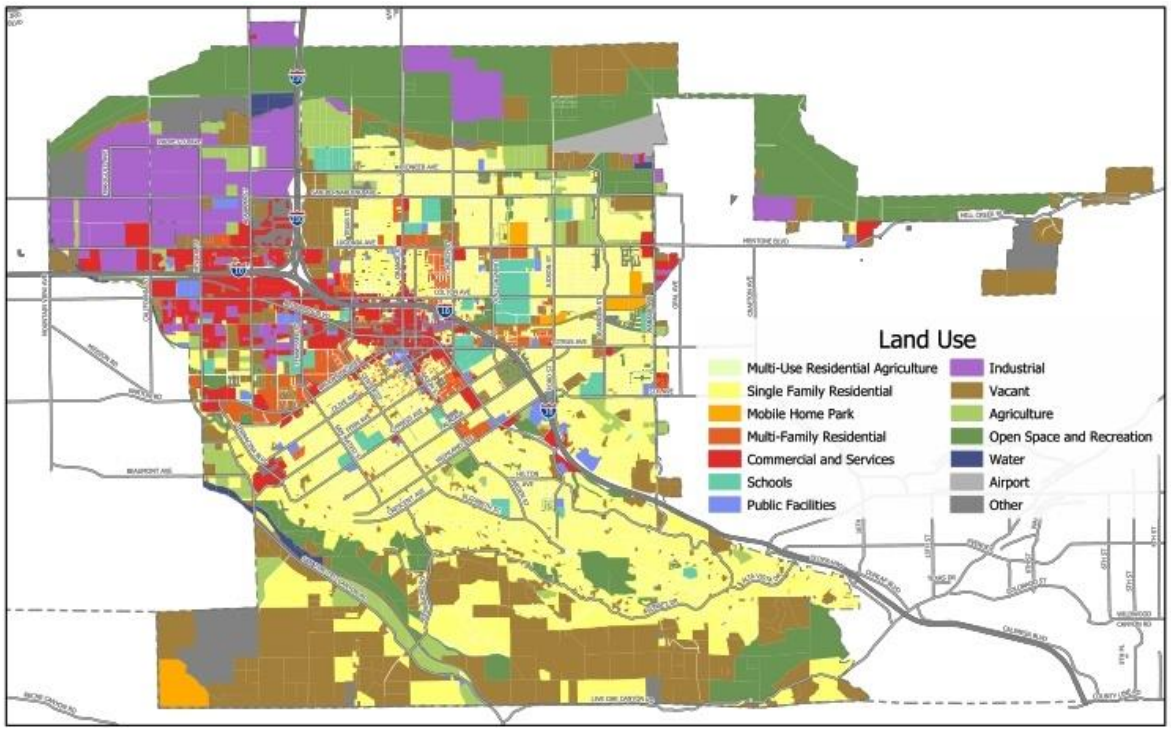


Figure 3.10- Land Use Distribution

3.7.2 EXISTING LAND USE

While the General Plan Land Use illustrates potential buildout of the City, **Figure3.11** depicts the current, existing Land Use within the city.

Figure 3.11- Existing Land Use Map

The LHMP, also leveraged information from the FEMA-sponsored San Bernardino County Essential Facilities Risk Assessment (*SBEFRA*) project. The *SBEFRA* project improved Hazus model default data to better reflect what was currently "on-the-ground" and use it for flood and earthquake loss estimation analysis (damage) and exposure assessment for wildfire. **Table 3.6** presents the "*improved*" Hazus data for City of Redlands.

Table 3.6- Improved Hazus Default Data- City of Redlands

Building Stock	Building Count	Building Replacement Value ($1,000)	Contents Replacement Value ($1,000)	Building Sq. Ft. (1,000 Sq. Ft.)
Residential	19,661	$4,586,535	$2,293,253	39,193
Commercial	790	$2,000,690	$2,077,158	20,969
Industrial	116	$154,116	$231,174	2,020
Other	524	$449,264	$219,703	2,817
TOTAL	**21,091**	**$7,190,605**	**$4,821,288**	**64,998**
Concrete	223	$572,025

Reinforced Masonry	398	$617,472		
Steel	142	$264,195		
URM	59	$73,705		
Wood Frame (Other)	990	$1,406,583		
Wood Frame (SFR)	18,141	$3,820,407		
TOTAL	**21,091**	**$7,190,605**		

3.7.3 DEVELOPMENT TRENDS

Limited incremental growth has occurred within the City of Redlands since the adopted 2015 LHMP. All development occurring over the past few years was constructed in accordance with all local land use, building codes, zoning, and environmental requirements, and applicable State and Federal regulations. Because of the limited growth and rigorous project review over the past five (5) years, there have been no changes to the community's vulnerability.

Because much of the City of Redlands has already been developed, no significant growth is anticipated over the next five (5) years. Projected development is expected to be for small infill and redevelopment projects, not of any significant scale. Many of these sites are concentrated in the East Valley Corridor and Transit Village areas. The City has prepared Specific Plan for both of these areas to ensure measured and safe development.

According to the 2035 General Plan, the projected population at buildout in the City of Redlands is 79,013 persons, with an additional 14,611 persons in the Sphere of Influence (SOI) outside the city's current boundaries. Buildout projections in the 2035 General Plan only factor in the potential maximums based on Land Use and Zoning designations; it does not consider other factors that may limit growth (e.g., downturn in the economy, building material shortages, etc.). At full build-out by year 2035, the General Plan suggests that there may be the following additional types of development: 4,703 new residential structures (2,676 in the City and 2,027 in the SOI); up to 3,135,379 square feet of additional commercial development; up to 300,704 square feet of additional office development, up to 2,943,653 square feet of commercial/industrial development; up to 1,599,503 square feet of additional industrial development; and up to 115,815 square feet of additional public/institutional development. The new 2035 General Plan generally encourages new development to occur on infill lots in core areas of the city (e.g., the Transit

Villages Concept), thereby trying to avoid unrestrained expansion or sprawl around the city's periphery (such as new residential subdivisions in hillside, open space, and high fire hazard areas).

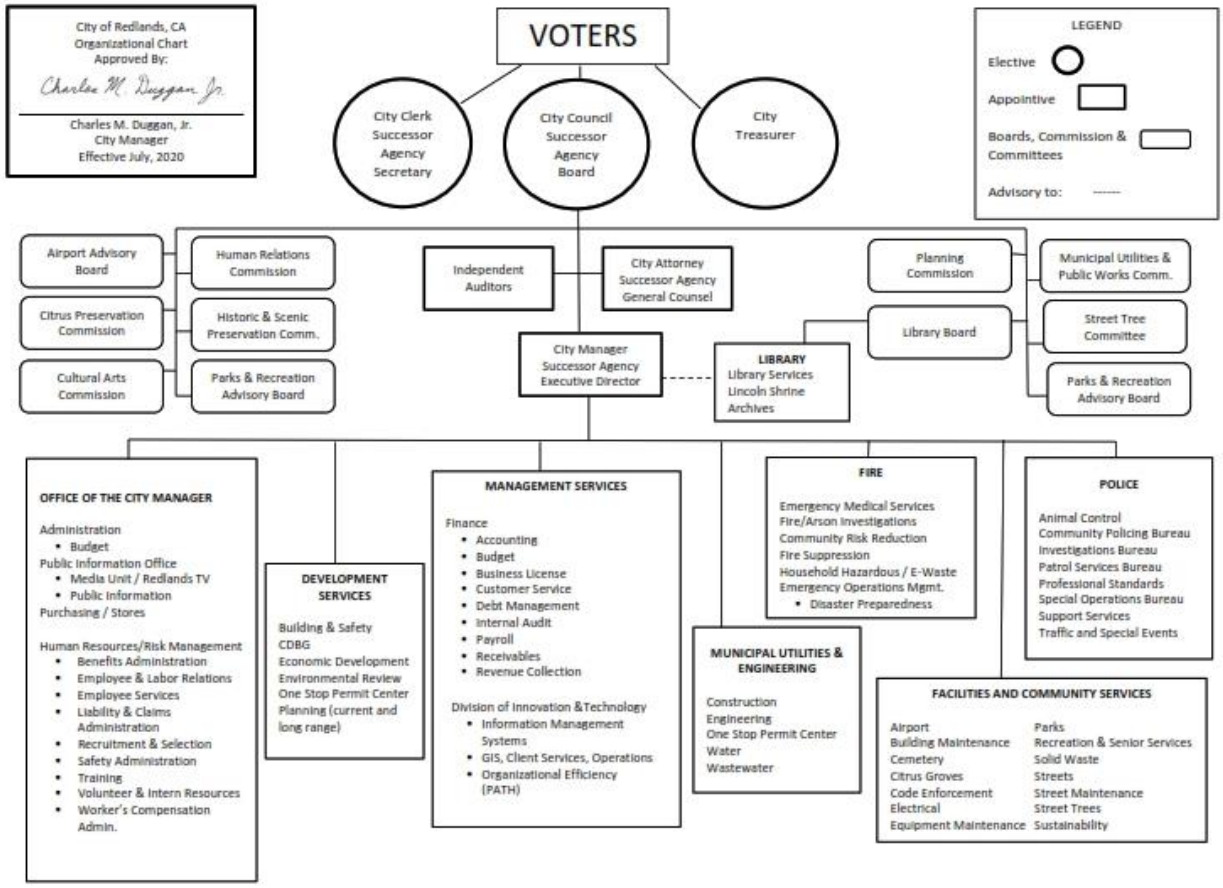
Whether the projections are realized or not, all future development proposed for the City of Redlands will continue to be reviewed to ensure compliance with all relevant land use and zoning regulations, building codes and fire codes, and environmental and engineering standards. Additionally, the LHMP will be referenced during the review of proposed development projects to assess exposure (or risk) to community hazards. The LHMP will also serve as a reference for any suggested mitigation measures to reduce and/or eliminate risk from those hazards.

3.8 KEY ASSETS

A subset of the general building stock are key buildings the City will rely on when responding to and recovering from disaster events. Because of the role and importance of these facilities, the City needs to ensure the facilities are maintained and will be functional during and after disasters. Also, part of these key assets are systems and equipment used to perform certain functions and/or operations. The list of key assets includes, but are not limited to: Police Stations, Fire Stations, City Hall, Water facilities, Hospitals/Medical facilities, airports, Community Centers, Corporate Maintenance Yards, Library and, Schools. A list of Key Assets can be found in **Appendix 5**.

4 CAPABILITY ASSESSMENT

The purpose of this section is to capture the different resources available to the City of Redlands in support of mitigation. In an effort to efficiently demonstrate these resources, the section has been organized by: Personnel Resource; Mitigation Governance Resources; Technical Resources; and, Fiscal Resources.



4.1 PERSONNEL RESOURCES

This sub section demonstrates the City of Redlands capability to dedicate and/or assign, long-term or short-term, workforce to mitigation efforts. There are four (4) primary ways the City of Redlands can provide personnel resources: directly from the City of Redlands government workforce; through Contracts, through Volunteer organizations; through Mutual Aid; and, through Partnerships.

4.1.1 GOVERNMENT

The City of Redlands is a full service, general law city. The major services provided include: Police, Fire, Water, Wastewater, Solid Waste, Engineering, Public Works and Community Development. The City is governed by a five-member City Council, who also chair several Boards, Committees, and Commissions. The City Council is support by the City Clerk's Office, the City Treasurer, and the City Manager. The City Manager oversees the Office of the City Manager staff, Development Services, Management Services, Municipal Utilities & Engineering, Fire, Facilities and Community Services, and Police. The organization structure of the City of Redlands is depicted in **Figure 4.1**.

Figure 4.1- City of Redlands Organizational Structure

While each City department plays a role with regard to emergency Preparedness and Response, not all have a role in Mitigation. The City of Redlands has an established Emergency Management Division under the Fire Department. Below is a summary of the City departments and their role:

- **Office of the City Manager**- The Office of the City Manager oversees the city departments and administers the day-to-day operations of the city. The Office of The City Manager is responsible for maintaining and updating the City's Administrative Policies and Procedures (CAPP) Manual. The policies and procedures contained within CAPP Manual reflect not only the City's values as an employer, but also convey the standards that the City has for its employee. The Office of Human Resources and Risk Management, Public Information Office, and Purchasing are also part of the Office of the City Manager.
  - *Office of Human Resources and Risk Management*- The Office Human Resources and Risk Management supports the over 500 full and part-time employees to provide the highest quality of service to the local community. The Risk Management Division maintains a set of operating principles that serve as the foundation for how we interact with residents, colleagues, employees and other stakeholders.
  - *Public Information Office*- The Public Information Officer (PIO) is responsible for the regular dissemination of public information about the City of Redlands to the media. The PIO hosts press conferences, writes press releases and articles for publication in magazines and newsletters and helps coordinate public events. The Public Information Officer also oversees

the City's Government Access cable TV channels 3 (Spectrum customers) and 35 (Verizon customers). The Public Information Office includes the Redlands TV video unit, which produces original programming regarding municipal services for Redlands TV

- *Purchasing*- City of Redlands Purchasing Division serves as the central acquisition point for equipment and services. The Central Warehouse provides all types of commodities to all City departments. The Division is the sole authority for the purchase of supplies, services or equipment. This division also handles items declared as surplus for redistribution, sale or disposal per the City Municipal Code.

- **Development Services**- The Development Services Department provides quality service to customers through professionalism, integrity and the efficient use of resources. The Department endeavors to enhance and protect the urban and natural environment of the city helping to ensure that Redlands remains an ideal place to live and work. Functional divisions include: Building and Safety; Economic Development; and, Planning.
  - *Building & Safety*- conducts building inspections, plan review and permit processing
  - *Economic Development*- business attraction and retention, workforce development and tourism promotion
  - *Planning*- land development, application review, general plan, specific plan, long-range planning and historic preservation) as well as the administration of the Community Development Block Grant (CDBG) Program
- **Management Services**- The Management Services/Finance Department is comprised of the divisions of Finance, Revenue, Utility Billing Customer Service, Geographic Information Systems (GIS) and Innovation & Technology
  - *Finance Division- performs the functions of administration, accounting and budgeting, payroll, accounts payable and accounts receivable. Other responsibilities of the division include administration of all City related debts/bonds, preparation of regular financial analysis, responsibility for the annual budget process and spending oversight, performance of periodic internal audits of City operations, as well as coordination of the City's annual audit and preparation of all related reports as required by law.*
  - *Revenue- responsible for the collection of all fees, taxes and penalties owed to the city, safekeeping of the funds invested, and deposited in various financial institutions.*
  - *Utility Billing Customer Service- provides accurate and timely billing for water, wastewater, solid waste, street cleaning and household hazardous waste services. In addition to providing billing services, the Customer Service Division is a cross-functional team that provides assistance to customers for information on their utility bill.*
  - *Innovation & Technology*- includes both the Information Technology (IT) and Geographic Information Systems (GIS)
- **Municipal Utilities & Engineering**- is organized into several divisions which include capital improvement engineering services, land development engineering, water and wastewater operations and maintenance and utility administration. Municipal Utilities & Engineering (MUED) plans, designs and constructs Redlands' physical infrastructure for the residents and businesses in the City, making it a desirable place to live, work, and visit. MUED is responsible for delivering the following services to the City's residents and businesses:
  - *Utility Operations: water production and distribution; non-potable water distribution; and wastewater collection, treatment, and disposal*
  - *Engineering review and inspection of development proposals for compliance with State and City codes, standards, and other governmental requirements relating to land subdivisions, grading, drainage, and improvements within the City right-of-way*

- *Management, rehabilitation, and replacement of infrastructure such as water mains, sewer mains, storm drains, streets, and traffic signals to provide reliable service to the community*
- *Development and construction of new public facilities to protect and enhance Redlands' livability*
- *Floodplain Management- administrators of the National Flood Insurance Program (NFIP)*

- **Fire**- mission is to provide a safe, professional and courteous team that strives to exceed the expectations of the community and our organization. This mission requires our members to be part of a capable, aggressive, all-risk fire department that is focused on "Preserving the Past and Protecting the Future" of those we serve. The Fire Suppression & Operations Division of the Fire Department is responsible for putting out fires, emergency rescues and medical emergency response.
  - *Hazardous Materials Response Team*- consists of eighteen (18) active members, with ten (10) members trained to the "Specialist" Level, and eight (8) members trained to the "Technician" Level. All trained personnel are also members of the San Bernardino County Inter-Agency Hazardous Materials Response Team, and respond countywide, through a countywide mutual aid agreement. Personnel maintain their skills by attending monthly training sessions. Redlands is covered by the LEPC for California Region VI (CA05), located in Hemet. The City is a member of a Countywide Hazardous Materials Response Team. As a part of this, all City of Redlands Fire Department field employees are trained in Hazardous Materials First Responder Certifications. The Countywide team would provide a response if the level of hazard were above the certified level of City Staff. From there, the County Hazardous Materials response team would provide for the evacuation, mitigation and facilitation of cleanup efforts in the event of an accidental release of hazardous materials.
  - *Community Risk Reduction*- Operating under the direction of the Fire Chief, and guided by the California Fire Code (CFC), the goal of the Fire Prevention Division is to safeguard the community from fire through programs ensuring adherence to fire regulations, public education, and mitigation.
  - *Emergency Management*- Emergency Management coordinates all activities related to disaster planning, response, recovery and mitigation (Ord. 2639 § 1, 2006: Ord. 2485 § 3, 2002). The Emergency Management's focus under mitigation is identifying, analyzing potential hazards, and recommending appropriate countermeasures.
- **Facilities and Community Services**- ensures residents, businesses and visitors enjoy City services and facilities including parks, recreation and senior services, trees, City-owned groves, solid waste removal and recycling, code enforcement, the maintenance of street lights, traffic signals and streets as well as oversight of the Downtown area, Redlands Municipal Airport and Hillside Memorial Park Cemetery. All services and support are coordinated under comprehensive Green Initiatives.
  - Citrus Division- The City's citrus operation operates as an enterprise fund. The revenue received from the harvesting of the crops is used to continue the care of maintenance of the groves. The City of Redlands owns 21 citrus groves throughout the city totaling 184 acres. They include Valencia Oranges, Navel Oranges, Ruby Star Grapefruit, and Rio Grapefruit
  - *Code Enforcement*- The Code Enforcement Division is dedicated to enhancing the quality of life for the residents of Redlands by enforcing local Building, Zoning and Public Nuisance Ordinances. This Division is responsible for enforcing codes which address public health and safety issues, including regulations related to rubbish, garbage, specific nuisances, removal of vegetation, zoning, housing, dangerous buildings, and inoperable and unlicensed vehicles on

private property. Enforcement actions are taken in response to requests for action received from residents.

- *Solid Waste & Recycling Services*- currently services over 20,000 customers for solid waste, green waste, food waste, and recycling services. The Solid Waste Division is seeking new technologies and services which will not only preserve our environment, but provide more efficient and economical collection, recycling, and disposal of waste materials, while meeting all health, safety, and regulatory requirements. In addition to this service, the Division also provides roll-off services for the entire City of Redlands.
- *Streets & Lights Division*- provides general maintenance and repair of 314 miles of street, 90 miles of storm drains, 72 City-owned traffic signals, approximately 5,000 City-owned street lights and routine street sweeping services on public roadways within the City
- *Street Trees*- maintains approximately 53,875 tree sites located within the City's right-of-way. The Trees Division, in partnership with the Redlands Street Tree Committee, is dedicated to the continued enhancement, maintenance, and care of this living asset.
- *Building Maintenance Division*- performs both routine maintenance and emergency service for all City-owned facilities. The Division consists of three (3) full-time and one (1) part time positions and provides a wide range of building maintenance functions maintenance services to approximately 385,000 square feet of City facilities. The Division also administers contracts for various vendors to provide ongoing and/or specialized maintenance services.

- **Police**- dedicated to bolstering the public's trust through accountability to high standards of performance, ethics, transparency, and professional conduct. Strives to serve the community in a fair and just manner.
  - *Community Services Bureau*- reaches out to the residential and business communities to establish and maintain cooperative relationships that keep the City of Redlands a safe and enjoyable community
  - *Traffic Safety Unit*- focuses on Traffic Education, Moving Violations, and Parking Citations. The Patrol Services Bureau is comprised of Patrol, Custody, and the Field Training and Evaluation Program
  - *Special Services Bureau*- is comprised of the following specialized units: Investigations Unit, Multiple Enforcement Team (MET), Street Enforcement Team (SET), Crisis Negotiations Team, K-9 Unit, and the Special Weapons and Tactics (SWAT) Team
  - *Support Services Bureau*- offers a wide variety of services that provide a vital link between the community and public safety personnel within the Police Department and other law enforcement agencies

4.1.2 CONTRACTORS

The City of Redlands is able to hire contract employee. A contract employee is an individual retained by the City for a predetermined time and price. Benefits of hiring contract employees include:

- Ability to hire workers for short-term projects, on an as-needed basis
- Ability to hire highly skilled individuals for which there is no one in-house qualifications
  - *usually little to no downtime as noticed with onboarding new staff*
- Lower overhead operating costs
  - *do not need to pay taxes (social security, workers compensation) or provide benefits (unemployment, health, sick leave, vacation time, retirement or profit sharing)*
  - *usually do not need to provide office space or equipment*

Disadvantages of hiring contract employees include:

- May work for several employers simultaneously and may not be available when needed
- Integrating with City staff can be difficult because of remote working and unfamiliar with city organization and resources

4.1.3 VOLUNTEERS

The City of Redlands has the ability to leverage volunteer workers. A volunteer worker generally means anyone who agrees to work for free, California labor laws narrow in on a more specific definition of a volunteer. According to California Labor Code Section 1720.4, which defines volunteering in California labor law, an individual must perform services freely and without coercion for a civic, humanitarian or charitable purpose to be considered a volunteer. To legally volunteer, an individual must offer her services to a public agency or nonprofit organization. Businesses may not legally utilize volunteers.

California labor law permits the extension workers' compensation to volunteers during their time in service. Workers' compensation is a type of insurance that covers employees in the event of industrial accidents or occupational injury. Often, public agencies will grant volunteers insurance protection under workers' compensation to help encourage volunteering and avoid the potential for lawsuits. In order to be deemed an employee for workers' compensation, the organization -- whether public or private -- usually must declare a volunteer as such prior to an injury incident. Under the law, this declaration should be in writing through a resolution of the governing body of the organization or agency, such as its board of directors.

Unpaid internships are another volunteer opportunity the City can leverage, however, some criteria must be meet. California Labor Relations Department has provided some clarification regarding unpaid internships. Unpaid internships are a type of volunteering that is intended to provide educational opportunities -- and in some cases, school credit -- for volunteers. As of April 2010, the California Labor Relations Department applies six criteria based on federal law when determining the legality of an unpaid internship: 1) the experience must resemble those of vocational schools, 2) the experience is primarily for the benefit of the intern, 3) the intern does not displace a regular employee, 4) the intern's services provide no immediate advantage to the employer, 5) the intern is not entitled to a job at the end of his internship, and 6) both the employer and intern have a mutual understanding that no compensation is expected for the internship.

4.1.4 MUTUAL AID

The City of Redlands has several mutual aid agreements; most focused on emergency management. An emergency management mutual aid agreement defines and formalizes the arrangement to lend assistance across jurisdictional boundaries in situations that exhausted internal resources or there is a need for increased capabilities. Some of the City of Redlands mutual aid agreements are with the state of California. This enables the state to either request or fulfill requests for mutual aid from one region to another; enabling locals to maintain readiness in their region.

4.1.5 PARTNERSHIPS

The City of Redlands has the ability to enter into partnerships with surrounding cities and counties, and outside agencies, special districts, and companies. Partnerships are an arrangement where parties agree to cooperate to advance their mutual interests. In most cases partnerships are done through a

Memorandum of Understanding (MOU) outlining the scope of work, the mission, and roles and responsibilities.

4.2 MITIGATION GOVERNANCE RESOURCES

There are a variety of governance directly related to or influence mitigation efforts. This governance generally falls under: 1) Laws, Regulations, Codes, and Ordinances; 2) Plans, Studies, and Reports; and, 3) Programs. While the intent is to capture City-level information, there are some state-level and/or county-level information that has direct implications on the City. As can be expected, the City has greater ability revise, adjust, add, and remove governance to better reflect needs on governance it sponsors. The City regularly assess and evaluates the effectiveness of its governance and incorporates changes to help meet the intended goal. The City does provide input and comments on governance sponsored by other organizations but because the intended audience of the governance is usually greater than the City, it is not always incorporated. To ensure there is a comprehensive list of governance, relevant state-level and/or county-level information is also captured.

4.2.1 LAWS, REGULATIONS, CODES, AND ORDINANCES

Title: Senate Bill (SB) 379
Sponsor: State of California, Senate
Description: In 2017, the California State Senate approved Senate Bill (SB) 379 which requires the General Plan's Safety Element to address climate adaptation and resilience strategies. This must be done after the next revision to the Local Hazard Mitigation Plan (LHMP) or by January 2022 if the city/county does not have a LHMP. If the jurisdiction has an approved and adopted LHMP it can be summarized and incorporated by reference into the Safety Element.

Title: Assembly Bill (SB) 477
Sponsor: State of California, Assembly
Description: In 2019, the California State Assembly approved Assembly Bill (AB) 477. AB 477 requires local jurisdictions (cities/counties) to include representatives from the access and functional needs population in the next update of the Emergency Plan. The primary focus areas include, but are not limited to: emergency communications, emergency evacuations, and emergency sheltering.

Title: Assemble Bill (AB) 2140
Sponsor: State of California, Assembly
Description: In 2006, the California State Assembly approved Assembly Bill (AB) 2140. AB 2140 enables the state of California to provide greater than 75% of the eligible state share if a local jurisdiction (city/county) has an approved and adopted LHMP as part of the General Plan's Safety Element.

Title: California Building Codes
Sponsor: State of California
Description: The City abides by and is governed by California 2010 Building Codes adopted in February 2014, including sections on electric, plumbing, mechanical, green, and residential requirements, standards and regulations.

Title: San Bernardino County Building Codes
Sponsor: San Bernardino County
Description: An amendment to Title 6 of the County of San Bernardino Building Code to adopt by reference the 2010 Editions of the California Building Standards Codes became effective on January 2011.

Title: California Zoning Ordinance
Sponsor: State of California
Description: The City has adopted a Zoning Ordinances as part of the General Plan process. These ordinances regulate land use and map the official land use and hazard overlay districts, to include safety hazard and environmental protection areas.

Title: Model Water Efficient Landscape Ordinance
Sponsor: State of California
Description: Over the years, the State of California has been promoting water conservation for all new development within the State. In a drought-prone California, where approximately 60 percent of all residential water is used in landscape applications, California lawmakers have adopted such legislation as Assembly Bill (AB) 325 (1990), AB 2717 (2004), and AB 1881 (2006) that outline, and in some instances mandate, the practice of water conservation in landscape applications. As part of AB 325, the Department of Water Resources (DWR) prepare and promote the State's first Model Water Efficient Landscape Ordinance (MWELO). In 2006, State lawmakers adopted AB 1881, which gave guidelines and timelines for revision of the State's MWELO and mandated that every city, county, or other agency within the State of California adopt the State's revised MWELO, or be in compliance with it through their own ordinance, by January 2010. San Bernardino County has adopted and revise Development Code Chapter 83.10 which sets forth landscaping and irrigation standards within the unincorporated areas of the County.

Title: Emergency Planning and Community Right-to-Know Act
Sponsor: State of California
Description: The Emergency Planning and Community Right-to-Know Act (EPCRA) was created to help communities plan for emergencies involving hazardous substances. EPCRA has four (4) major provisions: one (1) deals with emergency planning and three (3) deal with chemical reporting. EPCRA local emergency planning requirements (Sections 301 to 303) stipulate that every community in the United States must be part of a comprehensive emergency response plan. Facilities are required to participate in the planning process. State Emergency Response Commissions (SERCs) oversee the implementation of EPCRA requirements in each state.

Title: Hazard Mitigation Plan Ordinance
Sponsor: City of Redlands
Description: The City of Redlands has adopted Ordinances 2639 and 2485 that require the Emergency Management to be responsible for the development and update of the City of Redlands Emergency Multi-hazard Functional Plan and Hazard Mitigation Plan. Emergency Multi-hazard Functional Plan shall provide for the effective mobilization of all of the resources of the City, both public and private, to meet any condition constituting a local emergency, state of emergency, or state of war emergency. Both plans shall take effect upon adoption by resolution of the city council. (Ord. 2639 § 3, 2006: Ord. 2485 § 4 [5], 2002). The City of Redlands Title 2 – Administration and Personnel Chapter 2.52.150 – Emergency Organization Ordinance 2639).

4.2.2 PLANS, REPORTS, STUDIES

Title: General Plan and Environmental Impact Report
Sponsor: City of Redlands
Description: All cities and counties in California are required to adopt a General Plan that lays out major policy goals. The General Plan includes elements, which are sections that address a variety of important topics. The element most closely related to Mitigation is the Safety and Hazardous Waste Element, which focuses on natural, technological, and other human caused hazards. The aim of the Safety and Hazardous Waste Element is to reduce the potential risk of death, injury, property damage, and economic and social

dislocation resulting from fires, floods, earthquakes, landslides, and other hazards. The Safety and Hazardous Waste Element identifies all significant hazards and risks in a community and defines policies to mitigate and respond to those risks. In addition to ensuring that the General Plan incorporates information from the LHMP in to the Safety Element, the General Plan is also reviewed while producing the LHMP to ensure goals, objectives, and mitigation actions are compatible and in sync with each other.

Title: Emergency Operations Plan
Sponsor: City of Redlands
Description: all-hazard plan describing how the City will organize and respond to incidents. It is based on and is compatible with the laws, regulations, plans, and policies listed above. The Emergency Operations Plan (EOP) also addresses the integration and coordination of resources and activities with other Governmental Agencies, Special Districts, and private-sector partners.

Title: Transit Villages Specific Plan (Draft)
Sponsor: City of Redlands
Description: This Specific Plan provides a "*road map*" for the growth and change for the plan area until the year 2040. It is comprised of unique and customized standards that enable the City to shape or reshape its streets and public spaces and property owners to develop or redevelop their properties according to the vision of the Specific Plan. The Specific Plan area is generally bound to the west by Kansas Street, Redlands Boulevard, Alabama Street, and Tennessee Street; to the north by the I-10 Freeway, Colton Avenue, and Sylvan Boulevard; to the east by Judson Street; and the south by Citrus Avenue, Central Avenue, Redlands Boulevard, Olive Avenue, Brookside Avenues, Ash Street, Pine Avenue, Tennessee Street, and State Street.

Title: Drainage Master Plan
Sponsor: City of Redlands
Description: The Master Plan of Storm Drainage covers the City and adjacent areas that are tributary to the major regional flood control facilities that traverse through the City. The City of Redlands has a long history of flooding during moderate to severe storm events. One of the main causes for flooding is the lack of conveyance capacity in the historical channel of Mission Zanja (Zanja). The Zanja, formerly known as the Mill Creek Zanja, is a surface channel that flows from the Crafton Hills area, west to 9th Street, near downtown Redlands, where it transitions into a box culvert. The Zanja was built by the natives in 1819 as a water-supply, irrigation ditch, pulling flows from Mill Creek. Due to extensive flooding and development, the diversion of flow from Mill Creek was blocked. Nonetheless, the Zanja was never improved to convey local storm flows and the drainage area tributary to the 9th Street storm drain still produces flows that far exceed the capacity of the box culvert, causing extensive flooding through the downtown area.

Title: Strategic Plan: 2014-2017
Sponsor: City of Redlands
Description: Utilizing the City Council's five (5) priority focus areas of Fiscal Accountability, Economic Development, Infrastructure, Land Resource Management, Safety and Community Services, the Strategic Plan highlights activities and accomplishments that City staff will complete in the coming three years.

Title: Existing Conditions Report
Sponsor: City of Redlands
Description: Part of the General Plan. Used to provide background information and technical analysis to inform the planning process. The report describes Redlands' planning context and delves into the topics of land use and development; growth management; demographics and economics; community design; transportation and circulation; parks, recreation, and open space; historic resources; biological resources; hazards; public utilities and services; and noise.

Title: Downtown Specific Plan
Sponsor: City of Redlands
Description: The plan's primary goal is to support the economic vitality of Downtown Redlands, and it seeks to facilitate the development of financial, technical, professional and research-development offices and services Downtown, supported by retail, restaurants, entertainment, and cultural activities. Downtown Specific Plan covers a larger area, including residential and civic areas in south Downtown. The plan also has a new emphasis on mixed-use and transit-oriented development, including guidelines to ensure compatibility with historic buildings. The plan identifies districts and corridors, and provides direction for vehicle and pedestrian circulation, and pedestrian-oriented street design.

Title: East Valley Corridor Specific Plan
Sponsor: City of Redlands
Description: aims to strengthen the local economy, attract major businesses, and result in the orderly and aesthetic development of industrial, commercial, and residential areas in the East Valley Corridor Specific Plan (EVCSP) plan area. The EVCSP plan area is composed of 4,350 acres adjacent to I-10 and I-210, and includes portions of the City of Redlands and the City of Loma Linda, as well as unincorporated area under jurisdiction of San Bernardino County (the "Donut Hole") surrounded by the City of Redlands.

Title: Community Sustainability Plan
Sponsor: City of Redlands
Description: a conceptual framework for sustainability policy related to water conservation, green buildings, waste reduction, climate friendly purchasing, renewable energy, carbon emissions, land use.

Title: Economic Development Action Plan
Sponsor: City of Redlands
Description: identifies strategies to attract businesses to Redlands, retain and expand existing businesses, develop a skilled workforce, and market Redlands to visitors.

Title: Redlands Municipal Airport Master Plan
Sponsor: City of Redlands
Description: Plan in order to preserve investment in the airport, reflect community needs, attract airport tenants and users, preserve the environment, strengthen the economy, and ensure safety.

Title: Climate Action Plan
Sponsor: City of Redlands
Description: demonstrate how the City will comply with State of California's Green House Gas (GHG) emission reduction standards. As a Qualified GHG Reduction Strategy, the CAP will also enable streamlined environmental review of future development projects, in accordance with the California Environmental Quality Act (CEQA)

Title: San Bernardino County Desert Area Groundwater Inventory and Atlas
Sponsor: San Bernardino County Fire Department OES
Description: The San Bernardino County Desert Area Groundwater Inventory (DGI) and Atlas includes a database providing locational and water depth information for specific regions of the County that currently do not have a groundwater inventory. This DGI and Atlas provides information applicable for flood mitigation or ground water availability for usage during severe drought. The location and water depth in the inventory are important for an earthquake hazard analysis, if liquefaction potential exists. California Department of Water Resources will give priority to local agencies with adopted groundwater management plans (SB1938 compliant), and which demonstrate collaboration with other local agencies in managing groundwater basins. County's groundwater management ordinance satisfies this requirement.

Title: Drainage Studies
Sponsor: San Bernardino County Public Works-Solid Waste Management Division
Description: Drainage studies including review of upstream properties, site drainage area, potential upstream development, and site-specific development will help to mitigate damage from future storm events. San Bernardino County owns landfill sites, transfer stations and closed disposal sites where combined site property totals several hundred acres. Landfills and disposal site properties include acreage that has been constructed to design grades and may include improved drainage systems. Also, within most landfill and disposal site properties there are many acres of property that remain in its natural state including native vegetation and natural grades. During severe weather events both engineered areas and undisturbed areas are subject to erosion from storm run-off. The erosion can range from minor to severe depending on the storm event and amount of precipitation. Most sites where engineered drainage systems are in place hold up well experiencing only minor erosion and debris flow. However, during major storm events, runoff from native and unimproved areas carrying solids and debris flow may compromise downstream drainage systems and overwhelm system facilities.

Title: Mass Care and Shelter Plan Concept of Operations
Sponsor: San Bernardino County Fire Department OES/ American Red Cross
Description: Outlines the framework of a new one-stop shelter concept, Shelter Operations Compound (SHOC). It combines a shelter, a Local Assistance Center (LAC) and a Non- LAC Unit in one easy location. Residents can access public information and referral services through the LAC, and then take a short walk to the Non-LAC Unit for communication, postal services, and other private organizations/business at little to no cost. The ConOps also helped to sync local resources, encourage local self-sufficiency, foster partnership between public and private agencies, and serve as a reference document for the region.

Title: Water Conservation Plan
Sponsor: City of Redlands
Description: Chapter 13.06 of the Redlands Municipal Code (RMC), provides guidance on how to reduce the nonessential use of water to conserve city water supplies, thereby minimizing the effect of a shortage of water supplies on city users. The water conservation plan here established is to: 1) protect the health, safety, and welfare of the citizens and property owners of the city; 2) assure the maximum beneficial use of city water supplies; and, 3) attempt to provide sufficient water supplies to meet the basic needs of human consumption, sanitation and fire protection.

4.2.3 PROGRAMS

The City of Redlands currently has the following mitigation programs to address the top hazards which are Flood, Wildfire, Earthquakes, Drought and Hazardous Material. It should be noted that some of these programs were listed under Mitigation Strategy section under the previous LHMP. However, because they are ongoing programs, they have since been removed from the Mitigation Strategy section and only captured here.

Title: Flood Programs
Sponsor: City of Redlands
Description: The City has implemented the Flood Control, ADA Ramps, Sidewalks, Trees and Parks (FAST) Program to inform the City of Redlands residents of funding needs for critical infrastructure and to solicit residents' input regarding the preparation of a possible ballot measure to provide revenue to meet those needs. Community Outreach is done through CERT, Market night and Safety Fairs. There are also Pamphlets provided to residence on flood insurance, and flood preparedness. Redlands has committed to a variety of mitigation measures that will progressively lower flood insurance premiums for those

residents whose properties are located within the floodplain and require the added level of insurance protection provided through the National Flood Insurance Program (NFIP). The City of Redlands has participated with the NFIP since 10/01/2007 and is a class 9. The City of Redlands sends out notifications to residents upon receipt of FEMA Letter of Map Revisions (LOMR) Letters. Residents that reside in flood prone zones are provided brochures about the NFIP. Public notices are published in the San Bernardino County Sun newspaper, Federal Register and Flood Hazard Mapping website. Our continued compliance include: community outreach, LOMR notifications, Flood Insurance brochure and provide FEMA Mapping tools and provide tools on City of Redlands website.

Title: Wildfire Program
Sponsor: City of Redlands
Description: The City has an on-going Vegetation Management and Weed Abatement Program to manage weeds and brush and provided the defensible space (100-foot clearance) for areas prone to wildfire due to high vegetation area.

Title: Earthquake/Geologic Hazard Program
Sponsor: City of Redlands
Description: Since 1982, the City of Redlands has participated in long term recovery programs for earthquakes, wildfires and floods. This program provides continued stability to sustain and continue infrastructure services.

Title: Drought Program
Sponsor: City of Redlands
Description: The City of Redlands is in the process of updating Ordinance 2151 Water Conservation Plan to address drought. The plan will implement a plan to conserve city water supplies, thereby minimizing the effect of a shortage of water supplies on city users.

Title: Hazardous Materials Program
Sponsor: City of Redlands
Description: The City of Redlands in coordination with the County of San Bernardino is providing an outreach program to limit the negative impacts associated with inappropriate discard of hazardous material into the environment. This outreach program will provide community awareness of how to dispose of the hazardous material. The outreach material will be provided at emergency preparedness fairs and fire safety fairs.

Title: Mass Care and Shelter Trailer/Cache Program
Sponsor: City of Redlands
Description: To increase Mass Care and Shelter capability of the county, grants from 2008-2009 Homeland Security Grant Program (HSGP) and 2009 Riverside Regional Urban Area Security Initiative (UASI) funded the Mass Care and Shelter Trailer/Cache Program. In December 2012, the program will have procured 36 trailers/caches equipped with mass care and shelter supplies, strategically placed throughout the County and ready for rapid deployment. It is expected to serve over 7,200 residents. In addition to enhancing the comfort levels of shelter residents, the program will produce standardized documents and protocols for procuring and maintaining Mass Care and Shelter trailers/caches. The City of Redlands obtained one of the 200 person trailers in December 2013.

Title: Disaster Council
Sponsor: City of Redlands
Description: In October 2013, the City of Redlands re-implemented its Disaster Council. The meetings are Chaired by the Mayor and Co-Chaired by the City Manager. Disaster Council meetings provide for

communication and coordination between the public and private sectors in the City in analyzing and developing plans, projects, policies, and procedures for emergency operations.

Title: Community Emergency Response Team (CERT)
Sponsor: City of Redlands
Description: The City of Redlands recently re-implemented CERT training in October 2013. This three-day course will provide the citizens of Redlands the much-needed training to prepare in an event of emergency or a disaster. Currently, the city has 150 people trained in personal preparedness.

Title: Emergency Communications Group
Sponsor: City of Redlands
Description: This group is responsible for redundant emergency communications and provides supplemental communication assistance to City agencies in the event of a disaster, emergency, or other designated event. The Federal Communications Commission (FCC) in Part 97, Sub-part E of the Commission's Rules provide for the Radio Amateur Civil Emergency Service (RACES). The purpose of RACES is to provide communication support to government during periods of local, regional or national emergency.

4.3 TECHNICAL RESOURCES

4.3.1 PROFICIENCIES AND EXPERTISE

The City of Redlands has many proficiencies and expertise that can be leveraged in support of mitigation efforts. In addition to public safety and fire suppression capabilities, the City has access to staff with skills in Engineering/Construction, Planning, Environmental, Project/Grant Management, Economic Development, Debris Removal, HazMat Response, and Water resources.

4.3.2 TECHNOLOGY

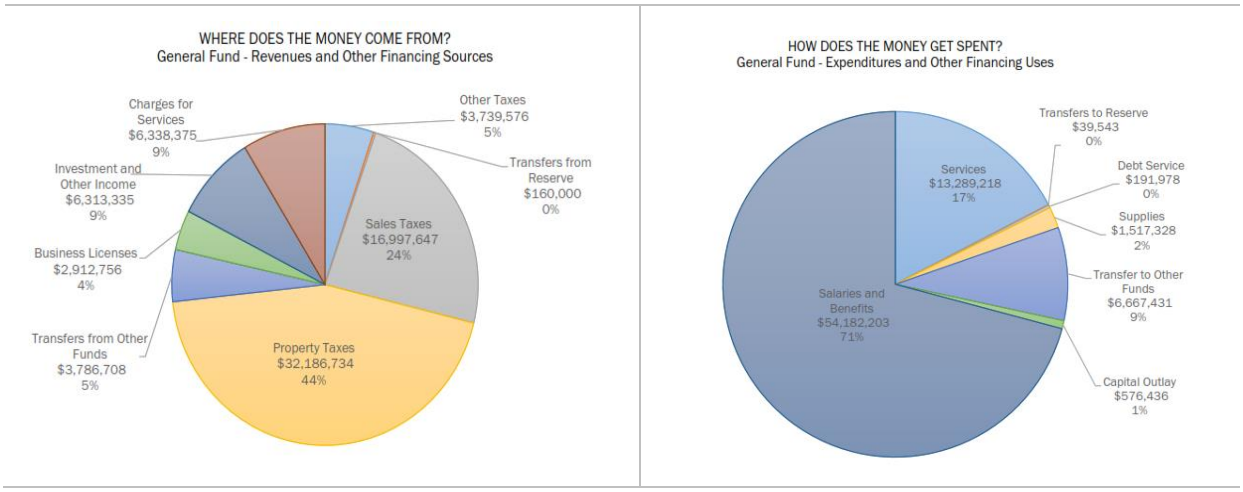
As with many jurisdictions, the City of Redlands has been increasing its technology capabilities. This includes providing secure platforms to store and access information, means of ensuring continuity of government, and general technical support. A significant capability available to support mitigation efforts is the establishment of the Geographic Information Systems (GIS) group. GIS is a computer system for capturing, storing, checking, and displaying data related to positions on Earth's surface. By relating seemingly unrelated data, GIS can help individuals and organizations better understand spatial patterns and relationships. The GIS group is able to analyze and generate reports of critical data (land use, built environment, natural environment), able to demonstrate potential ramifications of actions or events, and generate graphic representation of results.

4.3.3 COMMUNICATIONS

The City of Redlands has several platforms to communicate with staff, surrounding jurisdictions, and the general public. In addition to the standard methods (telephone/cell phones, emails), the City has inoperable communication capabilities (radio communications and satellite communications). In addition to the above, 2-way communications platforms, there are several "push" platforms that can be used. These consist of television, broadcast radio, websites, and social media (Facebook, Twitter, Instagram, Nextdoor).

The City of Redlands Emergency Notification System will communicate emergency and other urgent messages to residents and community members within Redlands. The system uses both text and voice messages to keep residents and community members in Redlands informed in case of emergencies that affect areas in which they live or work. With this information, residents and businesses can make arrangements to help ensure the safety of family members, employees, pets, and property in the event of fires, floods, earthquakes, or other types of disasters. In the event of an emergency, residents and community members will receive a message with the latest information and safety instructions. The system is programmed to know whether or not the message has been delivered to a person, recorded to voicemail, or was not delivered due to a telephone system error. The system will continue to attempt to deliver its message until the message is successfully delivered to a person, or until the message expires. The system utilizes the area's 9-1-1 database, provided by the local telephone company, and thus is able to contact land-line telephones whether listed or unlisted.

4.4 FISCAL RESOURCES



The financial resources of the City of Redlands are allocated to and accounted for in various funds based upon the purposes for which the funds are to be spent and the means by which spending activities are controlled. The varies funds include: Governmental Funds; Proprietary Funds; and, Fiduciary Funds.

- **Governmental Funds-** used for most of city governmental functions. There are four (4) types of Governmental Funds: General Fund; Special Fund; Debt Services Fund; and, Capital Project Funds.
  - *General Fund- the operating fund used to account for all activities, expect those requires to be accounted for in another fund*
  - *Special Fund- used for proceeds of specific revenue sources that are restricted to expenditures of special purposes*
  - *Debt Services Fund- used for accumulation of resources and the payment of principal, interest and related costs of general long-0term debt*
  - *Capital Project Funds- used for resources for the acquisition or construction of major capital facilities*
- **Proprietary Funds**- used for government's business-type activities. These funds recover the cost of providing services through fees and charges on those who use their services. There are two (2) types of Proprietary Funds: Enterprise Funds, and, Internal Services Funds.
  - *Enterprise Funds- used for services provided primarily to external customers and legal requirements or management policy required services, including capital, be fully recovered through fees and charges*
  - *Internal Services Funds- used for services provided to other funds, departments, or agencies of the government. Costs are allocated to the benefitting funds in the form of fees and charges in order to recover the full cost of providing services*
- **Fiduciary Funds**- used for assets held in a trustee or agency capacity for outside parties, including individuals, private organizations and other government.

4.4.1 GOVERNMENT FUND

The primary account under the Government Fund is the General Fund. Reallocation of the General Fund is the main source of funds the City can access to implement mitigation projects. The following figure from the Comprehensive Annual Financial Report (CARF) illustrate where the City of Redlands General Funds come from and how the General Fund money is spent (**Figure 4.2**).

Figure 4.2- City of Redlands General Fund Allocation

According to the CARF, by the end of June 2019, the total fund balance reported for the general fund was $39,647,517, an increase of $3.9 million, or 10.9%, from the prior year fund balance of $35,734,630. As a measure of the General Fund's liquidity, it can be useful to compare the total fund balance to total fund expenditures, which indicates that fund balance is 59.3% of general fund expenditures, however only $17,654,773 of the $39.6 million fund balance is unassigned. The unassigned fund balance of $17.7 million, together with the $8.3 million fund balance committed to stabilization arrangement (contingencies), is the only portion of fund balance readily available for spending and represents 39.1% of general fund expenditures. Total general fund expenditures this year were $66.3 million, which is 4.9% greater than the prior year amount of $63.3 million, and total General Fund revenues was $72.6 million, or 5.8% greater than the prior year amount of $68.6 million.

4.4.2 PROPRIETARY AND FIDUCIARY FUNDS

Other means to implementing mitigation projects is the utilization of Proprietary and Fiduciary Funds. While there are a variety of options that the City may be able to access under these funds, the primary funds will be those secured through project grants, such as the FEMA Hazard Mitigation Assistance (HMA) programs- Hazard Mitigation Grant Program- HMGP, Flood Mitigation Assistance- FMA, or Building Resilient Infrastructure and Communities- BRIC (formerly, the Pre-Disaster Mitigation- PDM program). Currently, other than the grant to fund the update of this LHMP, the City has not received any FEMA HMA grants over the past five (5) years.

5 HAZARD ASSESSMENT

5.1 OVERVIEW

The purpose of this section is to capture the approach used by the City of Redlands LHMP Planning Team to identify and prioritize (screen) hazards in its community. This is an important step to ensure all potential hazards are considered and relevant hazards ranked as to the greatest concern within the community.

This section also presents relevant information (profiles) on each hazard in the community. The "*Hazard Profiles*" provide a description of the hazard, the location and/or extent of the hazard within the community, the history of the hazard within the community, the probability of the hazard occurring in the community, and a discussion of any considerations needed due to changing conditions (i.e., climate). This information was referenced when prioritizing hazards.

5.2 HAZARD IDENTIFICATION

The Planning Team went through an extensive effort to identify all of the hazards present in the community. The Planning Team started with the list of hazards in the City of Redlands 2015 LHMP and augment the list as necessary. This augmentation considered adding, removing, and renaming of hazards to create a list of all potential hazards in the community. The Planning Team utilized several external resources to ensure they were considering all potential hazards. These resources included the State of California HMP (2018), the San Bernardino County OA LHMP (2017), and several other surrounding community LHMPs (i.e., Colton, Loma Linda, Yucaipa). This helped the Planning Team understand statewide, countywide, and surrounding area hazard concerns. Each hazard identified in the external resources were reviewed and considered by the Planning Team. After careful review and consideration, the Planning Team identified the following hazards for inclusion in the City of Redlands LHMP update:

- Aircraft Accident/Incident
- Civil Disturbance
- Dam Breach
- Drought
- Earthquake
- Energy Shortage/Power Outage
- Extreme Temperature
- Flood
- Hazardous Material Accident
- Infectious Disease
- Infestation
- Landslide
- Technology Disruption
- Terrorism
- Train Accident/Incident
- Wildfire
- Windstorm

As a note, no hazards from the City of Redlands 2015 LHMP were removed, however, the Planning Team added four (4) new hazards: *aircraft accident/incident*, *civil disturbance, technology disruption,* and *train*

accident/incident. It is also important to note that the Planning Team did revise the name and description of some hazards to provide more clarity and understanding of the hazard. This step also led to separating and creating distinct individual hazards (i.e., Power Outage/Excessive Heat). The changes to the hazard descriptions and other relevant hazard information are captured under sub section 5.4- *Hazard Profiles*.

5.3 HAZARD SCREENING AND PRIORITIZATION

After the list of hazards was identified, the Planning Team went through a process to prioritized (screened) the hazards to determine which hazards created the greatest concern in the community. The Planning Team utilized the same non-numerical ranking system that was implemented during the last update to the City of Redlands LHMP. This process consists of generating a qualitative ranking, High, Medium, or Low rating for: 1) *Probability*; and, 2) *Impact* from each hazard. As part of this process, the following criteria (definitions) were applied:

- **Probability**

  High: (Highly Likely/Likely) There may or may not have been historic occurrences of the hazard in the community or region but experts feel that it is likely that the hazard will occur in the community. Citizens feel that there is a likelihood of occurrence.

  Medium: (Possible) There may or may not have been a historic occurrence of the hazard in the community or region but experts feel that it is possible that the hazard could occur in the community. Citizens may feel that there is a likelihood of occurrence.

  Low: (Unlikely) There have been no historic occurrences of the hazard in the community or region and both experts and citizens agree that it is highly unlikely that the hazard will occur in the community.

- **Impact**

  High: (Catastrophic/Critical) Both experts and citizens feel that the consequences will be significant in terms of building damage and loss of life.

  Medium: (Limited, but not insignificant) Consequences are thought to be modest in terms of building damage and loss of life, limited either in geographic extent or magnitude.

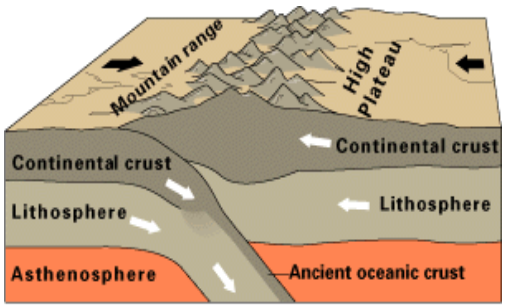
  Low: (Negligible) Consequences are thought to be minimal in terms of building damage and loss of life, limited either in geographic extent or magnitude.

After each hazard was ranked using the above criteria, the results were displayed in a graph to assist the Planning Team validate the results (**Figure 5.1**). The Planning Team determined all hazards falling within the gray-colored boxes were Tier I priority hazards, those within the blue-colored boxes were Tier II priority hazards, and those within the white-colored boxes were Tier III priority hazards. The higher priority hazards (Tier I and Tier II), reflect those hazards the Planning Team determined the community should focus on over the next five (5) years. This does not mean that the community will not address the lower priority hazards. It means if resources are limited (i.e., funding, staffing), the primary focus will be on the higher priority hazards.

Figure 5.1- Hazard Prioritization Matrix

		Impact		
		High	**Medium**	**Low**
Probability	**High**	• Energy Shortage/Power Outage	• Wildfire • Windstorm	
	Medium	• Earthquake • Flood • Infectious Disease	• Aircraft Accident/Incident • HazMat Accident • Civil Disturbance • Landslide • Train Accident/Incident	• Drought • Infestation • Extreme Temperature
	Low	• Technology Disruption	• Terrorism • Dam Breach	

5.4 HAZARD PROFILES



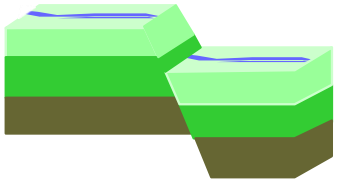
The Hazard Profiles include the incorporation of all new information, material, and reports to better help the Planning Team and the community understand the hazard. The hazards are organized alphabetically by the priority screening ranking (i.e., Tier I, Tier II, and Tier III). The hazards assessed by the Planning Team are summarized below:

5.4.1 TIER I

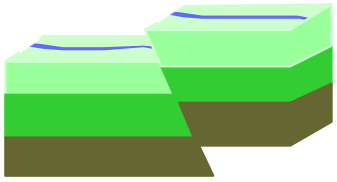
The hazards, in alphabetical order, under Tier I include: Earthquake; Energy Shortage/Power Outage; Flood; Infectious Disease; Wildfire; and, Windstorm

5.4.1.1 EARTHQUAKE

- **Ranking-** *Probability*- Medium; *Impact*- High
- **Description**



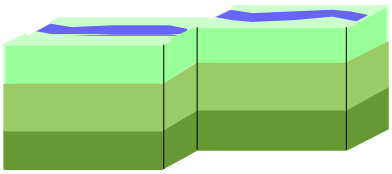
Continental-continental convergence



An earthquake is caused by a release of strain within or along the edge of the Earth's tectonic plates, producing ground motion, surface fault rupture, and secondary hazards such as ground failure. For hundreds of millions of years, the forces of plate tectonics have shaped the Earth as the huge plates that form the Earth's surface move slowly over, under, and past each other. Sometimes the movement is gradual. At other times, the plates are locked together, unable to release the accumulating energy. When the accumulated energy grows strong enough, the plates break free causing the ground to shake. Most earthquakes occur at the boundaries where the plates meet; however, some earthquakes occur in the middle of plates.

The severity of the shaking increases with the amount of energy released, decreases with distance from the causative fault or epicenter, and is amplified by soft soils. After just a few seconds, earthquakes can cause massive damage and extensive casualties. A fault is a fracture between blocks of the earth's crust where either side moves relative to the other along a parallel plane to the fracture.

There are three (3) different types of earthquake faults: 1) Normal, 2) Thrust; and, 3) Strike-slip. Normal fault and Thrust faults are examples of dip-slip faults. Dip-slip faults are slanted fractures where the blocks mostly shift vertically. If the earth above an inclined fault moves down, the fault is called a normal fault, but when the rock above the fault moves up, the fault is called a reverse (or trust) fault. Thrust faults have a reverse fault with a dip of 45° or less.



Normal Fault

Thrust Fault

Strike-slip faults are vertical or almost vertical rifts where the earth's plates move mostly horizontally. From the observer's perspective, if the opposite block looking across the fault moves to the right, the slip style is called a right lateral fault; if the block moves left, the shift is called a left lateral fault.

Strike-slip Fault

The effect of an earthquake on various locations throughout the felt area is called the intensity. The intensity scale consists of a series of certain key responses such as people awakening, movement of furniture, damage to chimneys, and total destruction of property. The scale currently used in the United States is the Modified Mercalli Intensity (MMI) Scale (**Table 5.1**). It was developed in 1931 by the American seismologists Harry Wood and Frank Neumann. This scale is composed of increasing levels of intensity designated by Roman numerals that range from imperceptible shaking (MMI I) to catastrophic destruction (MMI X). It does not have a mathematical basis; instead, it is an empirical scale based on observed effects.

Table 5.1- Modified Mercalli Intensity (MMI) Scale

Intensity	Shaking	Description
I	Not Felt	Not felt except by a very few under especially favorable conditions.
II	Weak	Felt only by a few persons at rest, especially on upper floors of buildings
III	Weak	Felt quite noticeably by persons indoors, especially on upper floors of buildings. Many people do not recognize it as an earthquake. Standing motor cars may rock slightly. Vibrations similar to the passing of a truck. Duration estimated
IV	Light	Felt indoors by many, outdoors by few during the day. At night, some awakened. Dishes, windows, doors disturbed; walls make cracking sound. Sensation like heavy truck striking building. Standing motor cars rocked noticeably.
V	Moderate	Felt by nearly everyone; many awakened. Some dishes, windows broken. Unstable objects overturned. Pendulum clocks may stop
VI	Strong	Felt by all, many frightened. Some heavy furniture moved; a few instances of fallen plaster. Damage slight
VII	Very Strong	Damage negligible in buildings of good design and construction; slight to moderate in well-built ordinary structures; considerable damage in poorly built or badly designed structures; some chimneys broken
VIII	Severe	Damage slight in specially designed structures; considerable damage in ordinary substantial buildings with partial collapse. Damage great in poorly built structures. Fall of chimneys, factory stacks, columns, monuments, walls. Heavy furniture overturned
IX	Violent	Damage considerable in specially designed structures; well-designed frame structures thrown out of plumb. Damage great in substantial buildings, with partial collapse. Buildings shifted off foundations
X	Extreme	Some well-built wooden structures destroyed; most masonry and frame structures destroyed with foundations. Rails bent

However, most people are familiar with the Richter scale, a method of rating earthquakes based on the amplitude of seismic waves - an indirect measure of energy released (**Table 5.2**). The Richter scale is logarithmic. Each one-point increase corresponds to a 10-fold increase in the amplitude of the seismic shock waves and a 32-fold increase in energy released. For example, an earthquake registering magnitude 7.0 on the Richter scale releases over 1,000 times more energy than an earthquake registering magnitude 5.0. It should be noted that while an earthquake may have many intensity values across the impacted area, there is just one Richter magnitude associated with each event.

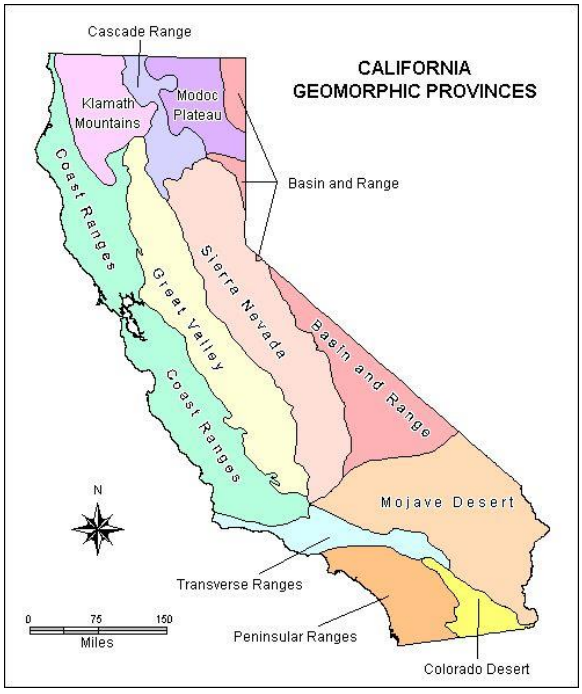


Table 5.2 Richter Scale

Magnitude	Earthquake Effects
0-1.9	*Micro*- Not felt by people
2.0-2.9	*Minor*- Felt by few people
3.0-3.9	*Minor*- Felt by some people, inside objective can be seen shaking
4.0-4.9	*Light*- Felt by most people, inside object shake and fall
5.0-5.9	*Moderate*- Felt by everyone, damage and possible collapse of unreinforced buildings
6.0-6.9	*Strong*- Felt by everyone, widespread shaking/damage, some buildings collapse
7.0-7.9	*Major*- Felt by everyone, widespread shaking/damage, many buildings collapse
8.0 or greater	*Great*- Felt by everyone, widespread shaking/damage, most buildings collapse

Ground shaking and ground deformation (i.e., surface fault rupture, landslides, and liquefaction) are the specific hazards associated with earthquakes. The severity of these hazards depends on several factors, including soil and slope conditions, proximity to the fault, magnitude, and the type of earthquake.

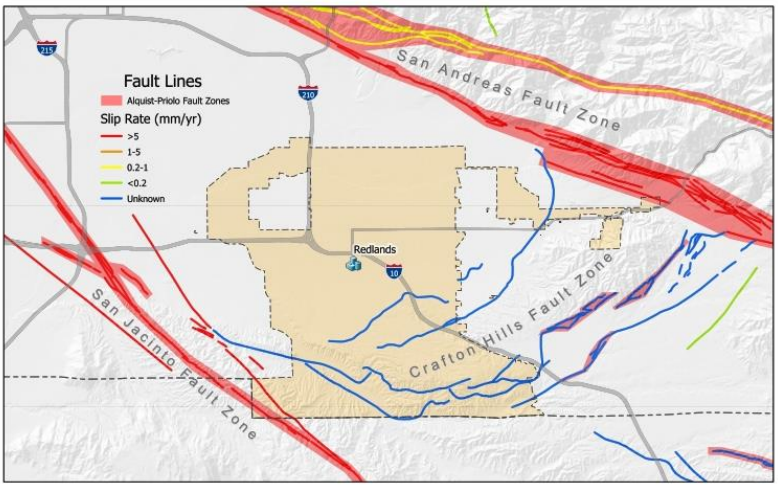
- *Ground Shaking*- Ground shaking is the motion felt on the earth's surface caused by seismic waves generated by the earthquake. It is the primary cause of earthquake damage. The strength of ground shaking depends on the magnitude of the earthquake, the type of fault, distance from the epicenter (where the earthquake originates), and local soil conditions. Soils and soft sedimentary rocks near the earth's surface can amplify earthquake ground shaking. Amplification increases the magnitude of the seismic waves generated by the earthquake. The amount of amplification is influenced by the thickness of geologic materials and their physical properties. Buildings and structures built on soft and unconsolidated soils can face greater risk. Amplification can also occur in areas with deep sediment filled basins and on ridge tops. Peak Ground Acceleration (PGA) is a measure of the strength of ground shaking. Larger PGAs result in greater damage to structures. PGA is used to depict the risk of damage from future earthquakes by showing earthquake ground motions that have a specified probability (10%, 5%, or 2%) of being exceeded in 50 years return period. These values are often used for reference in construction design, and in assessing relative hazards when making economic and safety decisions.
- *Surface Fault Rupture*- As previously mentioned, the sudden sliding of one part of the earth's crust past another releases the vast storage of elastic energy in the rocks as an earthquake. The resulting fracture is known as a fault, while the sliding movement of earth on either side of a fault is called fault rupture. Fault rupture generally begins below the ground surface at the earthquake hypocenter, typically between three and ten miles below the ground surface in California. If an earthquake is large enough, the fault rupture will reach the ground surface (referred to as "surface fault rupture"), wreaking havoc on structures built across its path. Structures built across the fault are a risk of significant damage from surface fault rupture. In California, the 1972 Alquist-Priola Earthquake Fault Zoning Act prohibits the siting of most structures for human occupancy across traces of active faults that constitute a potential hazard to structures from surface faulting. Recent large earthquakes in Turkey and Taiwan have shown that few structures built across the surface traces of faults can withstand the large displacements that may occur during an earthquake.
- *Landslides*- Earthquake-induced landslides are secondary earthquake hazards that occur from ground shaking. They can destroy the roads, buildings, utilities, and other critical facilities necessary to respond and recover from an earthquake. Many communities in Southern California have a high likelihood of encountering such risks, especially in areas with steep slopes. (NOTE: while mentioned here, landslides are covered under a separate hazards)
- *Liquefaction*- Liquefaction is the phenomenon that occurs when ground shaking causes loose, saturated soils to lose strength and act like viscous fluid. Liquefaction causes two types of ground failure: lateral spread and loss of bearing strength. Lateral spreads develop on gentle slopes and entail the sidelong movement of large masses of soil as an underlying layer liquefies. Loss of bearing strength occurs when the soil supporting structures liquefy, causing the structures to settle, resulting in damage and, in some cases, collapse.

- **Location and Extent**

As noted by the California Geological Survey, California is divided into eleven (11) geomorphic provinces. California's geomorphic provinces are naturally defined geologic regions that display a distinct landscape or landform. Each region displays unique, defining features based on geology, faults, topographic relief and climate. These geomorphic provinces are remarkably diverse. They provide spectacular vistas and unique opportunities to learn about earth's geologic processes and history. These geomorphic provinces each have the potential to create significant earthquakes and associated hazards. The City of Redlands is located in a high seismic activity zone in the Transverse Range geologic province. The Transverse Ranges are an east-west trending series of steep mountain ranges and valleys. The east-west structure of the Transverse Ranges is oblique to the normal northwest trend of coastal California, hence the name "Transverse." The province extends offshore to include San Miguel, Santa Rosa, and Santa Cruz islands. Its eastern extension, the San Bernardino Mountains, has been displaced to the south along the San Andreas Fault. Intense north-south compression is squeezing the Transverse Ranges. As a result, this is one of the most rapidly rising regions on earth. Great thicknesses of Cenozoic petroleum-rich sedimentary rocks have been folded and faulted, making this one of the important oil-producing areas in the United States.

The more significant faults within the region include the San Andreas Fault, the San Jacinto Fault, and the Crafton Hills Fault Zone. The City of Redlands is geographically located between active traces of the San Andreas Fault located to the northeast of the City, and the San Jacinto Fault located to the southwest of the City, with the Crafton Hills Fault Zone located southeastern of the city (**Figure 5.2**). The San Jacinto Fault forms the southwestern boundary of the San Bernardino Valley and intersects the City of Redlands at its southwest corner. The fault zone extends approximately 120 miles in distance from its point of origin in the San Bernardino Valley at the San Andreas Fault. The formation of this juncture exists within the geographical location of the Devore Pass. The southernmost section of the zone travels northwest of El Centro. The San Bernardino segment of the San Andreas Fault is located to the east of the City of Redlands. This 50 km segment is considered to be "*the currently active segment of the San Andreas fault system to the northwest of Gorgonio Pass*". The Crafton Hills Fault Zone is a series of normal faults, each about 10 km in length or less, located just to the east of the City of Redlands, between the San Jacinto and San Andreas Faults.

Figure 5.2- Earthquake Fault Zones in the Vicinity of the City of Redlands



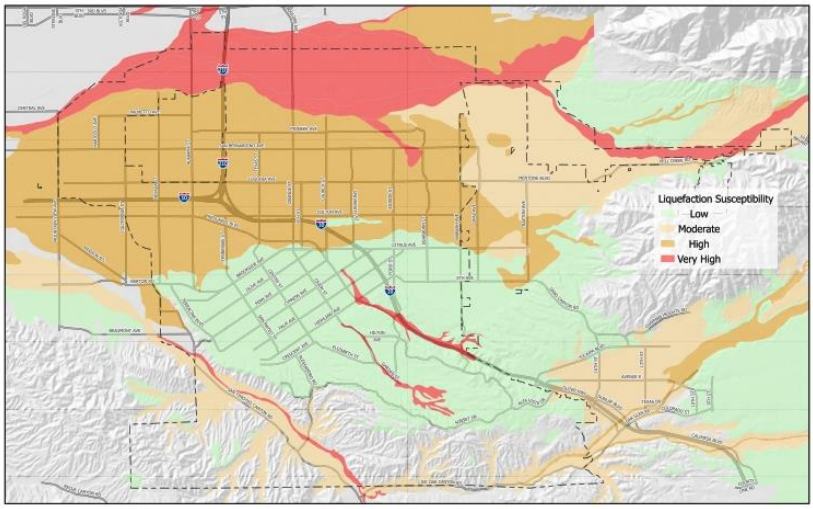


Figure 5.3 depicting the liquefaction susceptibility areas in the vicinity of the City of Redlands. There are considerable areas of Very High and High liquefaction susceptibility in areas of sandy soil associated with the Santa Ana River, the Mission Zanja, and San Timoteo Creek, but the City of Redlands is located within an area of Low landslide susceptibility.

Figure 5.3- Liquefaction Susceptibility in the Vicinity of the City of Redlands

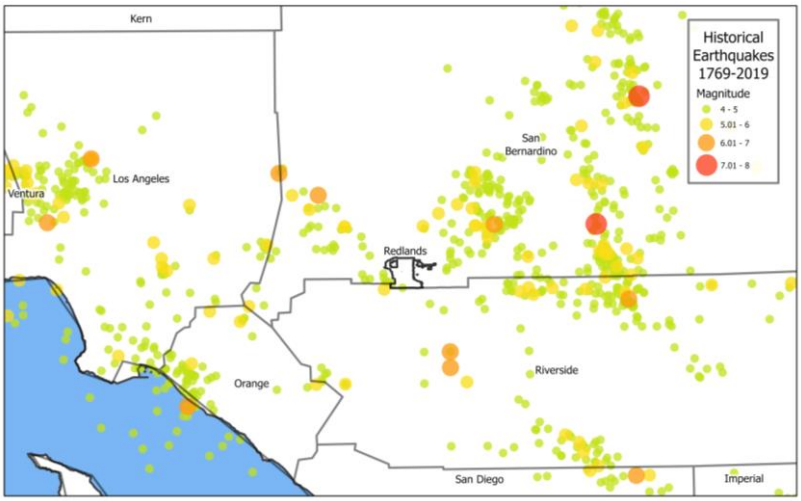
- **History**

There are 45 states and territories in the United States at "moderate" to "very high" risk from earthquakes, and they are located in every region of the country. California experiences the most frequent damaging earthquakes; however, Alaska experiences the greatest number of large earthquakes—most located in uninhabited areas. The largest earthquakes felt in the United States were along the New Madrid Fault in Missouri, where a three-month long series of quakes from 1811 to 1812 included three quakes larger than a magnitude of 8 on the Richter scale. These earthquakes were felt over the entire Eastern

United States, with Missouri, Tennessee, Kentucky, Indiana, Illinois, Ohio, Alabama, Arkansas, and Mississippi experiencing the strongest ground shaking.

Historical and geological records show that California has a long history of seismic events (a list of significant earthquakes can be found in **Appendix 5**). In California, movement between the North American and the Pacific tectonic plates manifest primarily along a region known as the San Andreas Fault system. Experts believe the San Andreas Fault is capable of producing an earthquake of magnitude 8.0+ over the next few years. The San Andreas Fault is considered the "*Master Fault*" because it has frequent (geologically speaking), large earthquakes, and it controls the seismic hazard in southern California. Faults in the San Andreas Fault zone that passes through Los Angeles County are part of the very active southern segment. This segment includes historically active, active, potentially active, and inactive faults.

Southern California area has experienced several earthquakes, two very large earthquakes, the Fort Tejon in 1857 (M7.9) and the Owens Valley in 1872 (M7.6) are evidence of the tremendously damaging potential of earthquakes in Southern California. The Fort Tejon earthquake surface rupture broke the portions of the central and southern segments of the San Andreas Fault system (Cholame, Carrizo, and Mojave segments), resulting in displacements of as much as 27 feet (9 meters) along the rupture zone. These fault segments are thought to have an incident recurrence interval of between 104 and 296 years. The most recent significant earthquake event affecting the region was the Northridge Earthquake. At 4:31 A.M. on Monday, January 17, 1994, a very damaging earthquake with a magnitude of 6.7 struck the San Fernando Valley. In the following days and weeks, thousands of aftershocks occurred, causing additional damage to affected structures. Effects of the earthquake were felt north into Ventura County, south in Orange County, and east into Riverside and San Bernardino Counties.



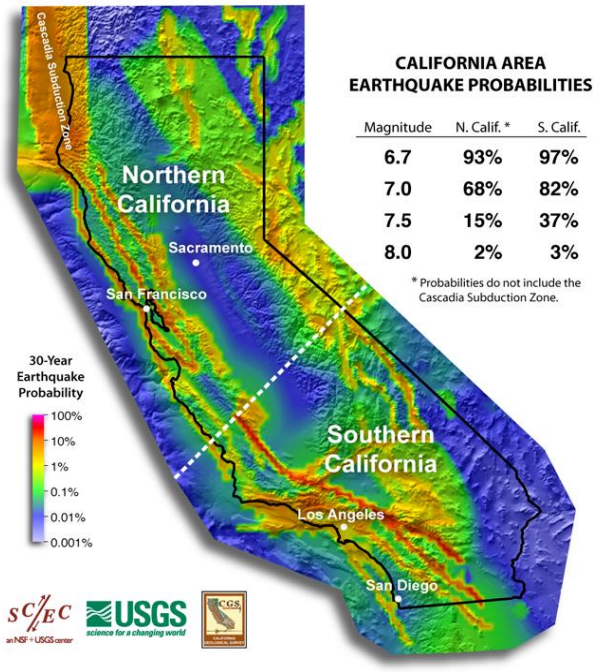
In June of 1992, the M7.3 Landers Earthquake ruptured 85 km (53 miles) along a series of faults in a roughly contiguous fault system, including the Johnson Valley, Landers, Homestead Valley, Emerson and Camp Rock faults. Strong shaking was felt in the City of Redlands. The largest aftershock of the Landers earthquake was the M6.4 Big Bear Earthquake, which caused damage and landslides in the Big Bear area. Declared as Disaster FEMA-947-DR CA, these earthquakes resulted in structural damage to many residential dwellings in Redlands, including chimneys and foundation slippage. Other significant earthquake events in the region included:

- *Newport-Inglewood Earthquake, 6.4m (1933)- 120 deaths, over $50 million in damage*
- *San Fernando (Sylmar) Earthquake, 6.5m (1971)- 65 deaths, over $500 million in damage*
- *Whittier Narrows Earthquake 5.9m (1987)- 8 deaths, over $358 million in damage*
- *Sierra Madre Earthquake 5.8m (1991)- 2 deaths, over $40 million in damage*
- *Chino Hills Earthquake 5.4m (2008)- no casualties and only minor damage*
- *City of Los Angeles Earthquake 4.7m (2009)- no casualties and minor to moderate damage*
- *El Mayor Cucapah Earthquake 7.2m (2010)- major damages to the area and Imperial County*
- *Calimesa 4.1m (2011)- no casualties and minor to moderate damage*
- *La Habra Earthquake 5.1m (2014)- no casualties and minor to moderate damage*
- *Fontana Earthquake 4.4m (2014)- no casualties and minor to moderate damage*
- *Running Springs 4.6m (2014)- no casualties and minor to moderate damage*
- *Fontana 4.2m (2015)- no casualties and minor to moderate damage*
- *Big Bear Lake 4.0m (2015)- no casualties and minor to moderate damage*
- *Muscoy 4.4m (2015)- no casualties and minor to moderate damage*

- *Banning 4.4m (2016)- no casualties and minor to moderate damage*
- *Cabazon 4.5m (2017)- no casualties and minor to moderate damage*
- *Big Bear 3.5m (2018)- no casualties and minor to moderate damage*
- *Trona (2019)- no casualties and minor to moderate damage*
- *Ridgecrest 7.1m (2019)- no casualties and minor to moderate damage*

Figure 5.4 displays historical epicenters of historical earthquakes located in southern California since 1568.

Figure 5.4- Historical Earthquakes in Southern California since 1568



- **Probability**

Earthquakes strike suddenly, without warning. Earthquakes can occur at any time of the year and at any time of the day or night. On a yearly basis, 70 to 75 damaging earthquakes occur throughout the world. Recent estimates of expected annualized earthquake loss for the U.S. totals $5.3 billion per year, with 66% ($3.5 billion) concentrated within the State of California, and $397 million in Riverside and San Bernardino Counties (FEMA, 2008[1]).

The probability of a significant (M6.7 or greater) earthquake occurring in Southern California in the next 30 years has been estimated to be 97% by the 2007 California Working Group on Earthquake Probability, as shown in **Figure 5.5**. California Area 30-Year Earthquake Probabilities. (USGS Open-File Report 2007-1437).

[1] "HAZUS®MH Estimated Annualized Earthquake Losses for the United States", FEMA 366, April, 2008.

Figure 5.5- California Area 30-Year Earthquake Probabilities

- **Climate Change Considerations**

To date, no credible evidence has been provided that links climate to earthquakes. However, climate and weather does play a significant role in the response and recovery from earthquakes. Effects from climate change could create cascading complications and impacts.

5.4.1.2 ENERGY SHORTAGE/POWER OUTAGE

- **Ranking**- *Probability*- High; *Impact*- High
- **Description**

For the purposes of this LHMP, Energy Shortage/Power Outage hazards are confined to rolling blackouts or brownouts and Public Safety Power Shutdown (PSPS) events. While some accidents can cause energy shortage/power outage, they are usually smaller, localized events and are not part of this assessment. Additionally, Energy Shortage/Power Outage hazards can be consequences from other events. These energy shortage/power outage consequences are discussed under the primary hazard event (high winds, wildfire, earthquake). A brownout is a partial, temporary reduction in total system capacity, while a blackout is a complete interruption in power. A brownout is caused by high electricity demand that is near or above a utility's production capacity. When this occurs, the utility may reduce the flow of electricity to certain areas to prevent a blackout. The state of California has also implemented "Flex Alerts" to bring awareness to times in which supply and demand of power could become an issue. A blackout is a large-scale service interruption that can happen as a result of severe weather or equipment failure at power plants. There are several factors that can play into energy shortage/power outage: 1) increased demand within the city; and, 2) increased demand elsewhere. Because Southern California Edison is part of the

western power grid, increases in other parts in the west region could curtail the energy available to the City.

PSPS events are initiated by power utility companies and are implemented in response to severe weather events. The purpose is to mitigate the increased fire risk during "red flag" weather conditions. Red flag weather conditions include: high winds, low humidity, and high temperatures. By shutting off power, the utility companies are ensuring that electrical equipment, which can arc and spark, during severe events, will not exacerbate or start a fire.

- **Location and Extent**

An Energy Shortage/Power Outage events can occur throughout the entire City.

- **History**

Southern California has experienced a population growth over the years. This coupled with changes to daily life styles (heavier reliance on power) and changing weather patterns have contributed to a higher demand for power over recent years. Because of this, the City of Redlands, like other parts of California, have had energy shortage/power outage events related to the failure of the statewide or regional systems not being able to meet demand. The Energy Shortage/Power Outage events usually occur during the warmer summer months and have lasted for a few hours and in some cases days. Recently, the City has experienced several Energy Shortage/Power Outage events due to the power company's implementing PSPS events in response to Red Flag weather conditions. Similar to the power outage during the summer months, these PSPS energy shortage/power outage are relativity short in duration.

- **Probability**

There are no studies that predict the probability of Energy Shortage/Power Outage events; however, it is expected that there is a higher probability of events occurring during the warmer summer months and during Red Flag (high temperatures, low humidity, high wind) events.

- **Climate Change Considerations**

Climate can play a significant role in Energy Shortage/Power Outage events. As temperatures rise due to changing conditions, it will have significant impacts on energy supply and demand. Additionally, changing climate conditions can create more Red Flag events, causing the power companies to consider to turn off power to lessen the potential fire threat.

5.4.1.3 FLOOD

- **Ranking-** *Probability*- Medium; *Impact*- High
- **Description**

A flood is a temporary condition (short-duration or long-duration) of partial or complete inundation on land that is normally dry. This condition is generally caused by precipitation (i.e., rainfall). Several factors determine the severity of floods, including rainfall intensity and duration, antecedent moisture conditions, surface permeability, and geographic characteristics of the watershed such as shape and slope. Other causes of flooding can include a ruptured dam or levee, rapid ice or snow melting in the mountains, under-engineered infrastructure, or even a poorly placed beaver dam can overwhelm a river or channel and send

water spreading over adjacent land or floodplains. According to FEMA, there are several different types of floods and under some there are subtypes. The flooding types and subtypes include:

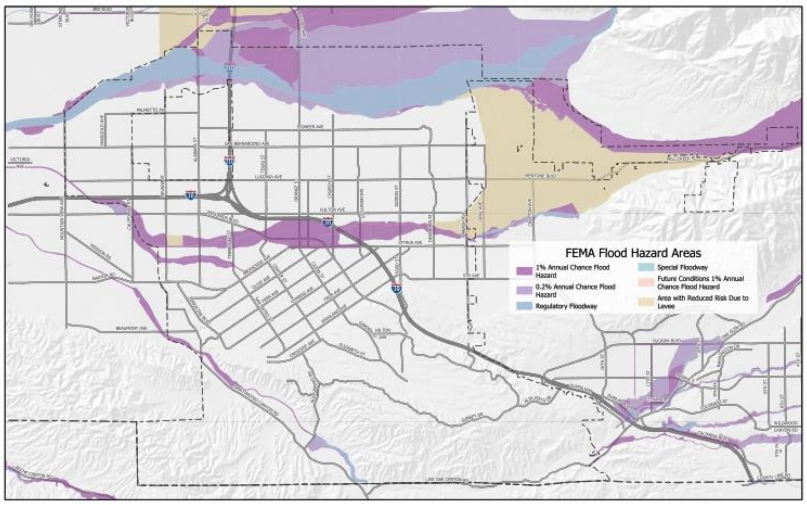
- *Riverine Flooding*- River/Stream Overbank Flooding, Flash Floods, Dam and Levee Failure, Alluvia Fans, Ice Jam Flooding, Moveable Bed Streams
- *Urban Drainage*- Drainage system capacity deficiencies
- *Ground Failures*- Mud flood and Mud flows, Subsidence, Liquefaction
  (*NOTE: while mentioned here, mud flows are covered under landslide hazards and Subsidence and Liquefaction hazards are covered under earthquake hazards*)
- *Fluctuating Lake Levels*- Increase volume caused by rain, snowmelt, and other runoffs
- *Coastal Flooding and Erosion- Storm Surge*

In California, some of the more common types of flooding fall under Riverine Flooding (i.e., flash flooding), Urban Flooding, and Coastal Flooding (i.e., storm surge). Floods can take several hours to days to develop. A flash flood is a flood occurring in a watershed where the time of travel of the peak of flow from one end of the watershed to the other is less than six hours. Coastal flooding occurs when storms produce large ocean waves that sweep across coastlines making landfall. The following flood characterization designates the amount of time for response:

- *Flood Watch*- a flood is possible in the area. Advanced warning
- *Flood Warning*- flooding is already occurring or will occur soon in the area. Advanced warning
- *Flash Flood Watch*- a flash flood is possible in the area. Little-to-no advanced warning
- *Flash Flood Warning*- flooding is already occurring or will occur soon in the area. Little-to-no advanced warning

- **Location and Extent**

The geographical location, climate, and topography of the City of Redlands make the city prone to flooding. In Redlands, floods usually occur during the winter "*wet*" season, the time of year with the highest precipitation totals or heavy rainfalls. During significant rainfall years, the season is characterized by high intensity rainfalls and rapid runoffs or discharge. These storm events have: inundate streams; flooded areas; create debris flows (i.e., sediment, rock, dead trees) that have plug culverts and damage bridges/overpasses; and/or, eroded or scared the landscape. The common type of flooding in the City of Redlands is:



- *Alluvial Fan*- Alluvial fan flooding occurs in the steep arid or semiarid mountains found throughout California. Alluvial fans are fan-shaped deposits of eroded rock and soil carried out of mountains and into valley floors by landslides, mudslides, mudflows, and surface runoff. At the beginning of the valley, alluvial fans are steep and narrow with boulders and other coarse material. The deposited material becomes increasingly fine as the gradient decreases and the material, mainly gravels, sand and mud, spreads. When rain falls, runoff from the canyon walls flows as a high-velocity sheet that channels into rivulets, and then to natural drainage courses. The rapidly moving water often carries large boulders and other material from the watershed depositing them into runoff channels, blocking the flow of water. Floodwater then spills out onto the fan, with each event finding a new channel that

soon fills up with deposits and overflows. Flooding in alluvial fans often can cause greater damage than clear-water flooding.

- *Flash Flood*- A flash flood is a rapid flooding of low-lying areas, rivers and streams that is caused by the intense rainfall associated with a thunderstorm, or multiple thunderstorms. Flash floods also occur when a man-made structure, such as a dam, collapses. Flash flooding occurs when the ground under a storm becomes saturated with water so quickly that it cannot be absorbed. The runoff collects in low-lying areas and flows rapidly downhill. As a result, anything in its path is suddenly in rising water. A typical flash flood begins with a slow-moving thunderstorm. This usually takes longer to move out of the affected areas and causes the area to endure a greater amount of rainfall for a longer period of time. In addition, a thunderstorm may pass over an affected area repeatedly, dumping even more rainfall. A large amount of rainfall in a short time can result in flash flood conditions, as can a dam failure or other sudden spill. The National Weather Service's definition of a flash flood is a flood occurring in a watershed where the time of travel of the peak of flow from one end of the watershed to the other is less than six hours.
- *Urban Drainage*- The heavy rainfall associated with these storm systems contributes to urban flooding in a number of ways. Primarily, heavy rainfall will often overwhelm the capacity of the conventional drainage system made up of storm drains, catch basins, sewers, and additional natural mechanisms for storm-water management. These systems typically cannot handle more than one or two inches of rainfall per hour before they begin to backup and overflow. This amount is further diminished if the storm drains, and other components of the storm-water management system, have not been adequately maintained, are clogged with debris such as trash or natural waste, or are old and in a state of disrepair. Heavy rainfall, combined with storm-water runoff, can cause local waterways to rise and overflow their banks.

Four (4) streams drain Redlands, each of which represents a potential flood hazard at peak flows; 1) the Santa Ana River/Mill Creek (located at the northern edge of the City), 2) the Mission Zanja (also known as Mill Creek Zanja and Mission Storm Drain), 3) San Timoteo Creek and 4) Live Oak Creek. The Santa Ana River/Mill Creek emerges from its mountain canyon 5 miles northeast of Redlands, spreads out in shallow, braided channels more than a 1.5-mile-wide wash, mantled with fluvial debris. The Mission Zanja (in the southwest part of the City) was constructed for water supply in 1819. Diverting water from Mill Creek, the Zanja carried water for 12 miles to support the San Bernardino Asistencia and surrounding farms and ranches. Today, as it traverses an east/west direction, the Zanja drains major portions of the City through various storm drain systems. Taking into account these features and other factors, FEMA has developed Flood Hazard Maps. The most common flood hazard map is the Federal Emergency Management Agency (FEMA) 100-year flood zone map (**Figure 5.6**). The 100-year flood zone map depicts areas within the City of Redlands that may be prone to flooding. It is worth to note that FEMA is in the process of updating the area flood maps around Redlands. These updates will be incorporated into future LHMPs.

Figure 5.6- FEMA Flood Hazard Areas for the City of Redlands

The flood hazard zones depicted on the map are derived from FEMA Flood Insurance Rate Maps (FIRM) and indicate the probability of flooding happening over a given period of time. FEMA National Flood Insurance Program (NFIP) produces FIRMs. The FIRM identifies potential flood risk in geographic areas. The FIRMs are the official map of a community on which FEMA has delineated both the special flood hazard areas and the risk premium zones applicable to the community. Historically, FIRMs were produced on paper; however, over recent years FEMA has begun the process of creating digital versions- *DFIRM*. Because of the volume of area, not all FIRMs have been digitized. Due to the limited detail and large scale of the base maps used for most FIRMs, much interpolation between contour lines is done in mapping the floodplain boundaries. This is why you may find discrepancies when actual ground elevations are surveyed: the maps are just the best available graphic representations of the Base Flood Elevations (BFEs). Definitions of flood zone designations are provided in **Table 5.3**.

Table 5.3- FEMA Flood Zone Designations

Risk Level	Flood Zone	Description
High	A	Areas with a 1% annual chance of flooding and a 26% chance of flooding over the life of a 30-year mortgage. Because detailed analyses are not performed for such areas; no depths or base flood elevations are shown within these zones.
	AE	The base floodplain where base flood elevations are provided.
	AH	Areas with a 1% annual chance of shallow flooding, usually in the form of a pond, with an average depth ranging from 1 to 3 feet. These areas have a 26% chance of flooding over the life of a 30-year mortgage. Base flood elevations derived from detailed analyses are shown at selected intervals within these zones.
	AO	River or stream flood hazard areas, and areas with a 1% or greater chance of shallow flooding each year, usually in the form of sheet flow, with an average depth ranging from 1 to 3 feet. These areas have a 26% chance of flooding over the life of a 30-year mortgage. Average flood depths derived from detailed analyses are shown within these zones.
Moderate to Low	X (Shaded)	Area of moderate flood hazard, usually the area between the limits of the 100-year and 500-year floods.
	X (Unshaded)	Area of minimal flood hazard, usually depicted on FIRMs as above the 500-year flood level. Zone X is the area determined to be outside the 500-year flood and protected by levee from 100-year flood.
Undetermined	D	Areas with possible but undetermined flood hazards. No flood hazard analysis has been conducted. Flood insurance rates are commensurate with the uncertainty of the flood risk.

The City of Redlands has also conducted focused flood studies in the area; the majority of which are for the downtown area. The most recent work was done to augment the Redlands Master Plan of Drainage, to better understand the extent of flooding under the proposed Transit Village Specific Plan project. Redlands Master Plan of Drainage utilized the Environmental Protection Agency (EPA) Storm Water Management Model (SWMM) to identify flooding potential in the downtown area. Inputs into the model included the then-planned Opal Basin. Because the Opal Basin was not realized and there was a need to expand the downtown area under the Redlands Master Plan of Drainage, another EPA SWMM was run. The results of the expanded EPA SWMM run for downtown Redlands is depicted in **Figure 5.7** and **Figure 5.8**.

Figure 5.7- Redlands Transit Village- 100-year Proposed

- **History**

While not always a significant event, floods inundate portions of the City of Redlands almost every year. These smaller flood events create issues for local residents and business with everything from traffic congestion to localized water damage. Most of the smaller flood events do not rise to the level of significance (i.e., requiring local, county, state, or federal declarations) and do not require activation of the City of Redlands Emergency Operations Center (EOC). The City has not experienced a significant flood event since 2011. The significant flood events have been known to create considerable impacts. During some significant flood events the flood waters from the upper regions of the Santa Ana River/Mill Creek were responsible for extensive damage to Orange Street and Alabama Street, ranging from washouts from five to six-foot high flood waters, to extensive, permanent damages from uncontrollable runoff from the upper regions of the San Bernardino mountains. The following information provides a summary of the historic significant flooding events in the City of Redlands:

- *FEMA 1952-DR-CA*- (January 2011) The City of Redlands sustained more than 600,000 in damages costs associated with Emergency Protection and debris removal. The amounts included salaries, benefits, overtime and other professional and special contractual services for repairs and maintenance supplies. Several repairs of damages in various locations in the amount of $282, 050; $7,870 for repairs of damages on Bond Avenue, Fern Avenue, and Brookside Avenue; $4,000 with for geologic evaluations services; $10,722 for restriping San Timoteo Road from Alessandro Road to Fern Street; $12, 585 for emergency street sweeping of San Timoteo Canyon; and $6,487 for surfacing of damaged playground at Jennie Davis Park.
- *FEMA 1884-DR-CA*- (March 2010) The City of Redlands sustained a significant amount of damage due to the heavy rains and associated flooding.
- *FEMA 1577-DR-CA*- (December 27, 2004) The City of Redlands sustained over $40,000 in damages were sustained as a result of the storm.
- *FEMA 1203-DR-CA*- (February 1998) Redlands experienced a continuing series of storms. On February 27 and 28, 1998, the strongest storm created a 2-day event that resulted in considerable damage and private property loss.
- *FEMA 1046-DR-CA*- (March 1995) The second storm series resulted in more than $12,000 in damage. The most significant damage, however, was the loss of the temporary emergency crossings at Orange and Alabama Streets. Warm tropical rain, coupled with an extreme snowmelt, created severe flooding conditions in the Santa Ana River. Mud, debris, and boulders swept away both roads, which were replaced in 1993 (FEMA 979) at a cost of $570,000.
- *FEMA 979-DR-CA*- (January 1993) Produced the most significant damage to the City of Redlands in recent history. Recurrent flooding during the months of December through March resulted in an over saturation of soil which promoted long-term effects of storm waters in the City and region. Tropical rains melted a heavy snowpack at the higher elevations, producing increased flood activity. With approximately $6.5 Million in damages, but no loss of life, these storms finally claimed both the Alabama Street and Orange Street bridges. The Mission Zanja again produced flooding along its banks at Sylvan Blvd. and Judson Street, resulting in channel improvements at that intersection. Partial collapse of the Zanja occurred again in Sylvan Park. Landslides crushed the Monkey Face Falls waterline, which provides water to residents of Mountain Home Village. One additional water line, serving sparse residences north of the Santa Ana River, was washed out. Repair was affected in October 1993, following subsidence of the Santa Ana River. Several city-owned buildings sustained water damage, including the Smiley Library, which is on the National Register of Historic Places. Landslides occurred in the San Timoteo/Live Oak Canyon area, resulting in road closures for a portion of the three-month Declaration period.
- *FEMA 935-DR-CA*- (February 1992) significant flooding occurred as a result of major storm systems moving through Southern California. The three-day storm system produced most of the 14.96 rainfalls for 1991-92. Historically, the Santa Ana River and Mission Zanja were the cause of the most significant damages, and due to extensive build out of the southeast area, storm runoff produced increased flooding of the Country Club area. Most significantly, water run-off from the populated Country Club area traversed a private elementary school as well as Ford Street and developed subdivisions to the north. School property was damaged as a result of flood waters flowing through the school's parking lot and only street entrance, resulting in a lawsuit against the City. The Bear Valley Pipeline, generally located in Mill Creek

near Greenspot Road and Florida Street, sustained damage to approximately 400 feet of steel pipe and supports. There was no loss of life or public property.

- *February 1980 Floods*- produced a mirror image of prior floods, as extensive damage again occurred as a result of rising storm waters and runoff from the upper regions of the Santa Ana River. The Santa Ana River at Alabama Street changed course and completely washed out the road in two locations, plugged existing culverts, eroded shoulders at various locations, scoured the existing A.C. pavement and washed out the existing pipe on the north end of the river. Minor erosion damage occurred on various City streets and some private property. The Zanja experienced collapse between Redlands Boulevard and State Street near Kendall Drive, as well as in a portion of the channel in Sylvan Park.
- *September 1976 Flood*- an intense local thunderstorm dropped most of its precipitation in a 20-30-minute period. At one spot, 3 ½ inches of rain fell during this time. This heavy rain produced an extremely high rate of runoff, which quickly exceeded the capacity of local drainage systems. Major overflows occurred on the eastern edge of Redlands' downtown business district, flooding the area and depositing mud up to three feet deep. Damages to houses, businesses, roads, and flood control facilities reached $2 million. Mission Zanja overflowed again in 1978, depositing water up to 30 inches deep in some places.
- *Flood of January 1969*- The storms and floods caused the deaths of at least 13 persons. "An intense downpour on January 25, 1969, climaxed a nine-day period of heavy precipitation. From 10 to 20 inches of rain fell in the lowlands, from 25 to more than 50 inches in the mountains. Emergency crews prevented large property damage with sandbagging and other emergency work. Flooding could have been worse, but the ground was not saturated prior to the storms, so water was able to percolate into the ground.
- *February 1969 Flood*- Occurred one month after the January storm series hit. Since the ground was by then saturated, property damage was more severe. The runoff from the storms resulted in the greatest flood of record on many streams in the upper Santa Ana River basin. Flooding from Mission Zanja deposited debris on streets, eroded road shoulders and parts of the Zanja's rock and mortar channel, washed out the bridge at New Jersey Street, damaged several residences, and inundated four citrus packing plans and several commercial businesses. Estimated damages were $304,000." (US Army Corps of Engineers, LA District, Information Bulletin, July 1984.) Flood damages in San Bernardino County from both floods were more than $54,000,000. Damages to residential property in the County were widespread. Damages in the Cucamonga area were particularly heavy: hundreds of people were forced to leave their homes – some for as long as 3 months. Damages to businesses and industrial property in San Bernardino County also were great. Agricultural losses were very severe. Flood damaged sewer lines and sewage-treatment plants posed a threat to the lives and health of many residents of San Bernardino County.
- *OEP-233-DR*- (December 1966) a series of three storms swept through San Bernardino County. December recorded the fourth most severe rainfall period in 76 years of San Bernardino rainfall history with a near-record 4.23. Nearly one-half mile of Alabama Street was washed out during flows up to five feet deep. Violent flows from the Santa Ana River also severely eroded the north levee protecting the Redlands Sewage Treatment Plant. The Zanja again overflowed east of Wabash Avenue, poured through an orange grove and flooded the Crafton School Yard. The University area, as well as the Central Business District, was layered with tons of mud and debris. The north approach to the Kansas Street Bridge was washed

away, and flows undercut the abutment, dropping the north end of the bridge about two feet. The bridges at both Iowa and New Jersey Streets suffered similar damages.

- *OEP-211-DR*- (November 1965) a series of five storm periods, ranging from light to severe, inflicted extensive damage in the region. The most severe of these storms occurred between November 20 and 25, when 11 deaths (6 in San Bernardino County) were attributed to the storms. Property damage estimates greater than $11 million were recorded. Within Redlands' jurisdiction, Alabama Street suffered extensive damage due to flood waters from the upper regions of the Santa Ana River/Mill Creek. Resultant flows put the Redlands Sewage Treatment Plan out of operation, took the city's largest water reservoir off line and produced significant damage throughout the northern portion of Redlands and its Central Business District. The Mission Zanja Creek, which flows through Redlands from a controlled diversion of Mill Creek for irrigation purposes, produced significant levels of mud and debris deposits, and flooded homes along Sylvan Boulevard. Water carried tons of mud from construction-bared slopes along Palo Alto Drive across Country Club Drive and through the storm drain channel, which bisects the golf course. Many intersections throughout the City were flooded, with gutters filled to overflowing with heavy runoff. Floodwater from the overflow of the Zanja flooded the basement of the Crafton Elementary School.
- *November 1965 Flood*- a damaging general storm occurred throughout Southern California, following on the heels of a smaller general storm, which occurred about a week earlier. The antecedent rainfall conditions from the earlier storm left watersheds with a residual moisture content in the soils thus contributing to the accelerated runoff that occurred as a result of the intense precipitation. Above freezing temperatures in the mountain areas further contributed to increased runoff. Major flood-producing waters emanated from the highest watersheds in the 10,000-foot ranges. The storm has been placed in the category of a small flood likely to recur every 5-15 years. Mill Creek flow was of about a 15-year frequency, the Santa Ana Canyon flow about a 5-year frequency, and Cucamonga Creek somewhat greater that a 10-year frequency.
- *August 1965 Flood*- In what was called an “electrifying” flash flood, muddy water cascaded destructively through the City’s streets. The muddy runoff overtaxed the capacities of storm drains and spewed across streets and highways into low-lying areas. Water swept into the basements of the Crafton and Kingsbury schools and flowed through the lobby of Provident Federal Savings at Orange and State and into the basement where the vaults were flooded. Two youths were rescued after they were swept 1 ¾ miles along a storm drain system, portions of which are buried pipe extending through downtown Redlands.
- *April 1965 Flood*- During this flood event, fast-moving water spilled out of the debris-choked channel in numerous spots, creating a serious flood hazard to low-lying homes between Dearborn and University Streets. City officials generally blamed poor maintenance of the Zanja for the flood. One house at Lincoln and Laramie Streets was partially flooded while foot-deep water swirled through the yards of many homes along the Zanja. Small bridges used for access from Sylvan Boulevard to homes on the other side were under water, but withstood the pressure.

- **Probability**

Flooding tends to occur in the summer and early fall because of the monsoon and is typified by increased humidity and high summer temperatures. The County of San Bernardino Flood Control District initiated a report following the floods of January and February 1969, which summed up the repetition of flood

damage in Redlands and vicinity. It stated that "*A review of the occurrence of past floods of serious magnitude in San Bernardino Valley shows that one may be expected on the average of every 20 to 21 years. 'Great floods' have been recorded for the years 1825, 1862, 1867, 1884, 1891, 1916, 1938, 1969 and 1993. Available records indicated that the greatest of these by far was the flood of January 1862. If the reconstructed data for that storm is reasonably accurate, it would have been approximately a once-in-350-years flood!*"

The standard measure for flooding is the "*100-year flood*", a benchmark used by the FEMA to establish a standard of flood control in communities throughout the country. The 100-year flood is also referred to as the "regulatory" or "base" flood. The term 100-year flood is often incorrectly used and can be misleading. The correct designation is "*the 1% annual chance flood*", meaning there is a 1% chance that a flood of that intensity and elevation will occur in any given year, not that the flood will occur once every hundred years.

The 100-year Flood map of the City of Redlands is shown in Figure 1 under the Flood Location and Extent subsection. As defined by FEMA, Zone A, AE, AE Floodway, AH, and AO (lighter shades of blue) indicate a 1% annual chance of flooding; while Zone Shaded X (dark blue) indicates a 0.2% of annual chance of flooding. Complete definitions of flood zone designations are provided in Table 1 under the Flood Location and Extent subsection.

- **Climate Change Considerations**

Climate change acts as an amplifier to flood hazards. Extreme weather events have become more frequent over the past 40 to 50 years and this trend is projected to continue. Rising sea levels and shifting weather patterns (temperate, winds) are expected to have a significant impact on rainfall frequency, intensity and distribution; which in turn will have a significant impact on the frequency of flood occurrences. Additionally, warmer weather patterns increase snowmelt, which in turn produces more runoff to the lower elevations.

5.4.1.4 INFECTIOUS DISEASE

- **Ranking-** *Probability*- Medium; *Impact*- High
- **Description**

Infectious Disease is a broad term used to describe illness caused by a specific type of bacterium, parasite, virus, or fungus organisms. Below is a brief overview of the main infectious disease types:

- *Bacterial Infections*- Responsible for a variety of diseases from strep throat to meningitis and tuberculosis.
- *Fungal Infections*- There are roughly 300 types of fungi known to cause infectious disease. Common types include ringworm, blastomycosis, histoplasmosis, and pneumocystis pneumonia.
- *Parasitic Infections*- Responsible for a variety of diseases including malaria, Chagas disease, and toxocariasis.
- *Viral Infections*- Responsible for a variety of diseases including the common cold, influenza, mononucleosis, smallpox, and HIV/AIDS.

These organisms can be transmitted:

- *Person-to-person (e.g., measles, mumps, meningococcal disease, tuberculosis)*
- *By consuming contaminated food or water, also known as foodborne (e.g.: salmonella, E.coli, botulinum toxin)*
- *Through animal bites (i.e., mosquito, ticks, fleas) also known as vector-borne (e.g.: West Nile virus, dengue, Zika, malaria).*

Newly emerging infectious diseases include Ebola, Zika, Severe acute respiratory syndrome (SARS), Middle East respiratory syndrome (MERS), avian influenza. The current pandemic (COVID-19) is linked to the SARS virus. The SARS coronavirus (SARS-CoV) is a virus identified in 2003. SARS-CoV is thought to be an animal virus from an as-yet-uncertain animal reservoir, perhaps bats, that spread to other animals (civet cats) and first infected humans in the Guangdong province of southern China in 2002. In 2019, in Wuhan China a new coronavirus was discovered. The coronavirus is closely related to the SARS coronavirus. The new virus goes by both COVID-19, standing for coronavirus disease 2019, and SARS CoV-2. Additional detail about the impacts of the COVID 19 can be found under the History section.

Also, of concern are the threats of potential biological terrorism (bioterrorism), the intentional release or spread of disease (or toxins). Bioterrorism, also known as biological warfare, is not new and has been used for centuries. As early as 600 BC, military leaders have implemented practices to poison water supplies and infect citizens/soldiers to gain strategic advantages in their efforts to conquer territories. Today there have been occurrences are both at the large scale (by military) and small scale (by terrorist organizations or individuals). No matter the purpose, the release of organisms could have devastating effects on an international, national, state, or local level if it is a highly infectious disease.

Infectious disease emergencies are incidents caused by these organisms, with the potential for significant illness or death in the population. The impact of infectious disease emergencies can also the local economy through loss of production and costs of treating or preventing spread of the disease. The ability to recover from an infectious disease emergency will depend on:

- *The type of biological agent (organism)*
- *The availability of prophylaxis (i.e., vaccine) for responders and the public*
- *The scale of the current and ongoing exposure*
- *The mode of transmission and whether transmission can be interrupted*
- *Whether the event is affecting critical infrastructure such as transportation, law enforcement, health care, and the medical and food supply chains.*

There are three (3) common levels (or categories) of infectious disease emergencies: Outbreaks, Epidemics, and Pandemics.

- *Outbreak*- when there are more cases than would be normally expected, often suddenly, of an infectious disease in a community or facility.
- *Epidemic*- when there are more cases than would be normally expected of an infectious disease, often suddenly, in a population of a large geographic area.
- *Pandemic*- refers to an epidemic that has spread over several countries or continents, usually affecting a large number of people.

Outbreaks, epidemics, or pandemics can occur when a new virus emerges to which the population has little immunity. Public Health measures are used to control outbreaks, epidemics, or pandemics of

infectious diseases, and are especially important for diseases with high morbidity or mortality and limited medical prophylaxis and/or rapid treatment. Public Health measures to control disease include:

- *Isolation and quarantine of persons or products, and legal closure of food establishments*
- *Control of contaminated food through recall of product*
- *Control of contaminated water through "Do Not Use", "Do Not Drink" or "Boil Water" orders*
- *Vector control spraying to target animals, bugs, and/or inspects*

- **Location and Extent**

An infectious disease incident can occur throughout the entire city any time during year.

- **History**

Infectious diseases have been of concern for many years. It is only recently, because of COVID-19 that the potential risk has been heightened. As sited by the Centers for Disease Control and Prevention (CDC), the 20th century saw three (3) pandemics, the most notable of which was the 1918 Spanish influenza pandemic that was responsible for 20 million deaths throughout the world. The pandemics are now known to represent three (3) different antigenic subtypes of influenza A virus: H1N1 (in 1918), H2N2 (Asian Influenza in 1957), and H3N2 (Hong Kong Influenza in 1968). Not classified as true pandemics are three (3) notable epidemics: a pseudo pandemic in 1947 with low death rates, an epidemic in 1977 that was a pandemic in children, and an abortive epidemic of swine influenza in 1976 that was feared to have pandemic potential. Major influenza epidemics show no predictable periodicity or pattern, and all differ from one another. Evidence suggests that true pandemics with changes in hemagglutinin subtypes arise from genetic reassortment with animal influenza A viruses.

Currently, the world is dealing with the effects of COVID-19. According to the CDC, COVID-19 was first identified in Wuhan, China, in December 2019. Although most people who have COVID-19 have mild symptoms, COVID-19 can also cause severe illness and even death. Some groups, including older adults and people who have certain underlying medical conditions, are at increased risk of severe illness. Because it is a new virus, scientists are learning more each day. New cases of and death rates from COVID-19 are rising globally each day. Potential vaccines are being tested but to date, there is no known cure.

Locally, the City of Redlands has been impacted by COVID-19 both from an economic standpoint, as well as its citizen impacted by the virus. Other infectious disease events include the 2009 H1N1, 2003 Avian Flu, 2015-17 Zika, 2014-16 West African Ebola; 2015 West Nile, 2013 large scale Tuberculosis, 2004 botulism Type A, 2003 West Nile, and the 2020 Hepatitis A outbreak.

- **Probability**

There is an annual risk of experiencing an infectious disease outbreak in the City of Redlands. While there is a continued threat from a novel influenza virus the potential threat of outbreaks and epidemics have been increased due expanding global trade and accessible national and international travel. Infectious disease outbreaks and epidemics occur on an ongoing basis.

Aside from the City of Redlands currently dealing with the effects from COVID-19, annual outbreaks of the seasonal flu usually occur during the late fall through early spring. Most people have natural immunity, and a seasonal flu vaccine is generally available. According to the CDC, in a typical year, approximately 5

to 20 percent of the population gets the seasonal flu and flu-related deaths range from 3,300 to 48,600 (average 23,600).

Bird flu (H5N1) is an influenza A virus subtype that is highly contagious among birds; although rare, some human infections with the Bird flu virus have occurred. Most confirmed cases have occurred in Asia, Africa, the Pacific, Europe and the Near East. According to the CDC, there are currently no confirmed human cases of Bird flu infections but it remains a serious concern with the potential to cause a deadly pandemic.

Swine flu (H1N1) was first detected in the United States in April 2009. This virus was a unique combination of influenza virus genes never previously identified in either animals or people. The Swine flu virus caused more illness in young people and pregnant women than is usual for prior flu seasons, and was declared a Worldwide Pandemic by the World Health Organization.

- **Climate Change Considerations**

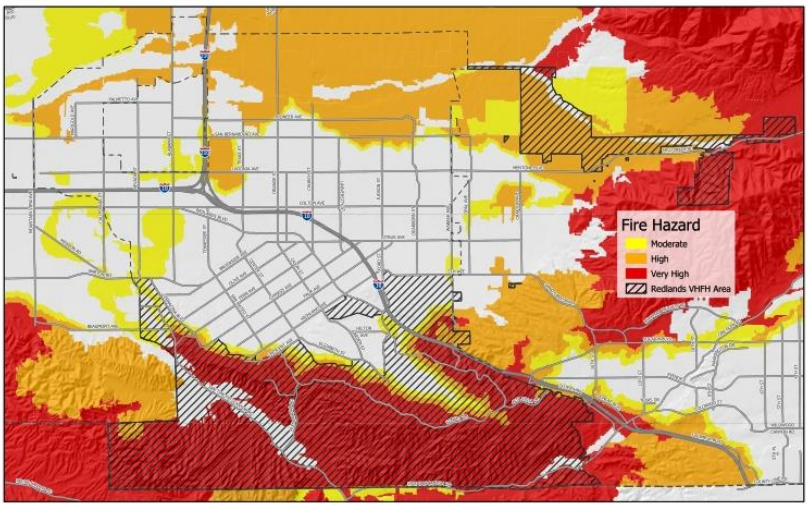
While many vector-borne diseases, such as malaria, yellow fever, dengue, and murine typhus, are rarely seen in the United States, the United States are susceptible to these vector-borne diseases. Many vector-borne diseases are climate sensitive and ecological shifts associated with climate change are expected to impact the distribution and incidences of these diseases. Changes in temperature and precipitation directly affect vector born disease transmission through pathogen-host interaction, and indirectly through ecosystem changes and species composition. As temperatures increases vectors can spread into new areas that were previously too cold. For example, two (2) mosquito vectors that carry malaria are now found at the U.S.-Mexico border.

5.4.1.5 WILDFIRE

- **Ranking-** *Probability*- High; *Impact*- High
- **Description**

Wildfires can be started by natural and mad-made causes. There are three (3) different classes of wild land or wildfires: 1) surface; 2) ground; and, 3) crown. A “Surface fire” is the most common type and burns along the floor of a forest, moving slowly and killing or damaging trees. A “Ground fire”; usually started by lightning, are fed by subterranean roots, and smolder on or below the forest floor. A “Crown fire” spread rapidly by wind and move quickly by jumping along the tops of trees. Wildfires can be classified as either a wildland fire or a wildland-urban interface (WUI) fire. Wildland fires involve situations where a fire occurs in an area that is relatively undeveloped except for the possible existence of basic infrastructure such as roads and power lines. A WUI fire includes situations in which a wildland fire enters an area that is developed with structures and other human developments. In WUI fires, the fire is fueled by both naturally occurring vegetation and the urban structural elements themselves. According to the National Fire Plan issued by the U.S. Departments of Agriculture and Interior, the wildland-urban interface is defined as “*…the line, area, or zone where structures and other human development meet or intermingle with undeveloped wildland or vegetative fuels.*”

The WUI fire can be subdivided into three (3) categories (NWUIFPP, 1998): 1) classic wildland-urban interface; 2) the mixed wildland-urban interface; and, 3) the occluded wildland-urban interface. The *classic wildland-urban interface* exists where well-defined urban and suburban development presses up against open expanses of wildland areas. The *mixed wildland-urban interface* is characterized by isolated



homes, subdivisions, and small communities situated predominantly in wildland settings. The *occluded wildland- urban interface* exists where islands of wildland vegetation occur inside a largely urbanized area. Generally, many of the areas at risk within the City of Redlands fall into the classic wildland-urban interface category.

Certain conditions must be present for a wildfire hazard to occur; a large source of fuel must be present, the weather must be conducive (generally hot, dry, and windy), and fire suppression sources must not be able to easily suppress and control the fire. The cause of a majority of wildfires is human-induced or lightning; however, once burning, wildfire behavior is based on three (3) primary factors: 1) fuel; 2) topography; and, weather. Fuel will affect the potential size and behavior of a wildfire depending on the amount present, its burning qualities (e.g., level of moisture), and its horizontal and vertical continuity. Topography affects the movement of air, and thus the fire, over the ground surface. The terrain can also change the speed at which the fire travels, and the ability of firefighters to reach and extinguish the fire. Weather as manifested in temperature, humidity and wind (both short and long term) affect the probability, severity, and duration of wildfires. Other factors that create concern are drought conditions and development (the build environment). Drought conditions bring on contributing concerns in that it can lead to relatively drier conditions and leave reservoirs and water tables lower; thus, creating hotter fires and less water to fight the fires. The expansion of the built environment into previously unoccupied areas introduces more people to the hazard and in some cases make response actions more challenging.

- **Location and Extent**

The climate, topography, and vegetation in Redlands is conducive to annual wildfire events. California Department of Forestry and Fire Protection, Fire and Resource Assessment Program (CDF-FRAP) was established and mandated to map areas of significant fire hazards based on fuels (vegetation), terrain, weather, and other relevant factors. These zones, referred to as Fire Hazard Severity Zones (FHSZ), define the application of various mitigation strategies to reduce risk associated with wildland fires. CDF-FRAP developed data that displays the relative risk to areas of significant population density from wildfire. This data is created by intersecting residential housing unit density with proximate fire threat, to give a relative measure of potential loss of structures and threats to public safety from wildfire. The maps below show the “very high” Fire Hazard Severity Zones located in Redlands for state and local responsibility areas (**Figure 5.9**).

Figure 5.9- Fire Hazard Severity Zones- City of Redlands

Due to a combination of topography, weather, and fuel, and exacerbated by potentially high winds and limited access, the southern portion of the City of Redlands is highly susceptible to wildland fire hazards. The slopes of San Timoteo and Live Oak canyons, the Badlands to the south, and the Crafton Hills to the east are not only difficult for firefighters and their equipment to reach, but the hill's steepness and configuration can result in the rapid upslope spread of fire.

Limited rainfall, low humidity, and seasonal high temperatures continue to contribute to the desiccation of the grasses and chaparral which cover the foothills, providing prime fuel for intense burns. Although some of the canyons are shielded from the direct impact of the powerful, dry Santa Ana winds, their occurrence generally aggravates the fire hazard. In addition, the presence of human activities in or near a wildland area dramatically increases the risk of a major fire due to careless smokers, illegal campfires, and other related risks. As noted above, the canyon areas located at the southwest of the City (and the surrounding areas) are the zones of highest hazard.

- **History**

Historically, fires in the City of Redlands have started in either San Timoteo or Live Oak Canyon and burn from a western to easterly direction, driven by prevailing winds and topography. **Figure 5.10** depicts the location of significant wildfires since 1950 in the City of Redlands, while **Table 5.4** shows the year and acres of reported wildfires in the City of Redlands since 2000.

Figure 5.10- Fire History for the City of Redlands and Vicinity, 1950-2020

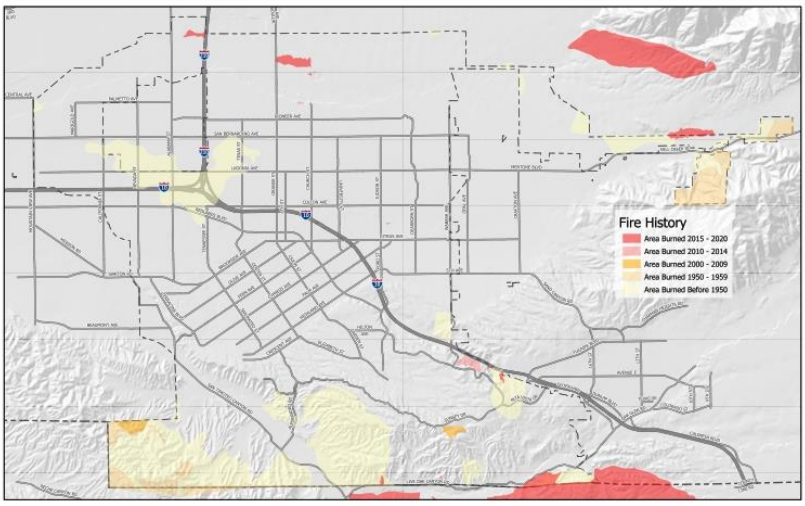


Table 5.4- Recent Fires Occurring in the Vicinity of the City of Redlands, 2000-2020

Name	Acres	Year
Reche	1,798	2001
Locust	1,899	2003
Mill Creek	173	2004
Hatchery	200	2005

Wash Fire	11	2017
Outer Highway 10	4	2018
Freeway	1	2019
Live	3	2019
Sandalwood	1,005	2019
El Dorado	22,744	2020
Mentone Fire	41	2020
Orange Fire	37	2020
Orange Fire 2	23	2020
Bruder Fire	147	2020

- *Reche/Redlands Fires*- This wind-driven fire originated in Riverside County, in an area known as Reche Canyon. The fire burned northeast over a period of approximately 2 hours, entering San Bernardino County and threatening residents in the area of San Timoteo Canyon and Pilgrim Road. We were notified by Riverside County that the fire was moving into our county and expected to burn into San Timoteo Canyon. They requested us to assemble engines for structure protection along Pilgrim Road in San Timoteo Canyon. The fire was diverted away from these structures because of backfiring operations, air support and hand crews into San Timoteo. Overall, the fire damaged approximately 700 acres by containment.
- *Compost Fire*- This fire occurred within the High Fire Hazard Area of the City of Redlands. This area is subject to a great deal of commuter and transient activity between counties. Fire was located at 1901 Alessandro Road, and caused by illegal dumping of organic materials within the San Timoteo Canyon. Chemical reaction resulted in spontaneous combustion of the compost heap at Sunset Hills Kennels. A unified command was established, including numerous Strike Teams, Hand Crews, Fixed Wing Aircraft, Helicopters and Manpower. The fire consumed 140 acres, and resulted in one firefighter injury.
- *Canyon Fire*- Sparking from railroad train traffic ignited this vegetation fire, which started adjacent to the Southern Pacific tracks north of San Timoteo Canyon Road and west of Alessandro Road. The high temperature was 99 degrees, with humidity at 24%. The fire was one-quarter acre in size, with medium fuel and moderate rate of spread. Winds were out of the west and steady, at 10 miles per hour. Limited access and erratic winds increased the spread of the fire, which spotted along the base of the hills, west of Smiley Ridge. The fire spread north, up the west slope of the Smiley Ridge subdivision. Winds increased, causing a spot fire in the flats east of Alessandro, adjacent to Sunset Hills Ranch. Increased erratic winds caused another spot fire to occur north of the first, now in heavier brush. Incoming resources attempted a hose lay up the flanks, but terrain and weather conditions advanced the spot out of reach. Due to topography and weather conditions, additional resources were ordered. Due to the fire's potential, a unified command was established, and structure groups assigned. Aircraft dropped on all flanks of the fire, and dozers cut lines on two divisions. Hand crews were also placed on all Divisions to facilitate a line between the burned and unburned areas. The fire was 50% contained around midnight and 70% contained by 0600 hours on 9/10/96. The fire consumed 250 acres, with no loss of structures. Effective suppression tactics, ignition resistant construction requirements, residential sprinklers, and fuel modification allowed this fire to move eastward with no structure loss or damage. The fire then presented the potential of structure loss in older existing neighborhoods where these types of fuel modification had not been conditioned 15-20 years previous. This posed a threat for conflagration potential, and this is where the Fire Department would like to address hazard mitigation through grant implementation for existing property owners. Costs shown in damage figures are strictly related to overhead, manpower and equipment.

- **Probability**

The majority of work done to estimate the probability of wildfire occurrence has been around identifying the potential areas for wildfire to occur. As previously mentioned, vegetation, weather, and topography were the significant elements in identifying areas of potential threat to wildfire occurrences. The area south and east of the city of Redlands is marked by mountains, foothills, and canyons are covered in susceptible vegetation. A large amount of the native vegetation in the Redlands area is commonly called chaparral, it is a dense and scrubby bush that has evolved to persist in a fire-prone habitat. Chaparral

plants will eventually age and die; however, they will not be replaced by new growth until a fire rejuvenates the area. Chamise, manzanita and ceanothus are all examples of chaparral which are quite common in the Redlands area. The City of Redlands climate, with its warm and dry summers, contributes to low relative humidity and low fuel moistures. When combined with high fuel loading, the potential for a catastrophic wildfire event is significant. Three (3) weather conditions specific to Redlands that may cause the ignition and/or impact the behavior of wildfires are as follows:

- *Thunderstorms and the associated lightning are a significant source of fire starts, and usually occurs mid to late summer*
- *High winds can become steady up to 20 mph and gust up to 30-40 mph throughout the year but are most likely to exacerbate wildland fires during the months of August through October when dry vegetation conditions are generally present*
- *Hot, dry conditions most commonly occur in August and September*

This knowledge and understanding are a key driver in the methodology of the CDF-FRAP program. According the CDF, the FRAP "very high" Fire Hazard Severity Zone maps are based on data and models of, potential fuels over a 30- to 50-year time horizon and their associated expected fire behavior and expected burn probabilities to quantify the likelihood and nature of vegetation fore exposure to buildings. This indicates a very high likelihood of wildfire occurrence in the area. As such, Redlands is susceptible to annual wildfire risk. An aspect of wildfires that needs greater consideration within the City of Redlands is man-made caused wildfires. Over the past few years, the City has noticed an increase in the number of wildfires started by arsonists, illegal homeless encampments, and improper use of fireworks. All of these factors have increased the probability of wildfires in the City.

- **Climate Change Considerations**

Climate change plays a significant role in wildfire hazards. The changing conditions from wet to dry can create more fuel; the increased possibility of high winds increase risk and present a challenge, and drought conditions could hinder ability to contain fires. Large wildfires also have several indirect effects beyond those of a smaller, local fire. These may include air quality and health issues, road closures, business closures, and other forms of losses. Furthermore, large wildfires increase the threat of other disasters such as landslide and flooding.

5.4.1.6 WINDSTORM

- **Ranking**- *Probability*- High; *Impact*- Medium
- **Description**

Winds are often referred to according to their strength, and the direction from which they are blowing. Wind is caused by the difference in pressure from one point on the earth's surface to another. Wind is created by air moving from the area of "*higher*" pressure to the area of "*lower*" pressure; the difference in pressure over a certain distance, determines the strength of the wind. Air does not move directly from the point of highest pressure to the point of lowest pressure. The earth's rotation affects the air flow by deflecting it to the right. This effect is called the Coriolis Effect. In the Northern Hemisphere, this causes air to flow clockwise around high-pressure areas and counter-clockwise around low-pressure areas.

Winds are categorized by types and each type is associated with wind speeds: breeze (<0-31 mph), gale (32-65 mph), storm (66-72 mph), and hurricane (73-139> mph). Within each category are sub classifications with differential names depending on geographic location (i.e., tropical depression, tropical storm/cyclone) and/or categories (i.e., category 3 hurricane). Damage from winds account for half of all severe reports in the lower 48 states and is more common than damage from tornadoes. Winds are also measured using the Beaufort Scale. The Beaufort Scale categories winds by wind speed, using Force categories between 0-12 to measure speed and summarize descriptions (**Table 5.5**).

Table 5.5- Beaufort Scale

Category (Force)	Speed (MPH)	Description
0	0-1	Calm. Smoke rises vertically and the sea is flat.
1	1-3	Light air. The direction of the wind is shown by drifting smoke, but not wind vanes.
2	4-7	Light breeze. Wind is felt on the face, leaves rustle, and wind vanes move. Small wavelets appear on the ocean, but do not break
3	8-12	Gentle breeze. Leaves and small twigs are in motion, and light flags extend. Larg3 wavelets appear on the ocean and crests begin to break.
4	13-18	Moderate breeze. Dust and loose paper become airborne, and small branches move. Small waves appear on the ocean.
5	19-24	Fresh breeze. Small trees begin to sway and moderate waves appear.
6	25-31	Strong breeze. Large branches are in motion, and holding an umbrella becomes difficult. Large waves begin to form.
7	32-38	Near gale. Whole trees are in motion, and walking against the wind can be hard. Foam from breaking waves is blown in streaks.
8	39-46	Gale. Walking is difficult and twigs break off trees.
9	47-54	Severe gale. There is slight structural damage, and the crests of waves begin to topple.
10	55-63	Storm. Trees are uprooted and there is considerable damage to structures. Very high waves form in long, overhanging crests.
11	63-72	Violent storm. There is widespread structural damage, exceptionally high waves form, and the ocean is completely covered in foam.
12	>73	Hurricane. There is devastating structural damage. On the ocean, the air is filled with foam and spray.

For the purposes of the LHMP, windstorms include both 1) cyclonic winds and 2) significant straight-line, with little-to-no precipitation.

Cyclonic winds are the wind which swirl counter-clockwise in the northern hemisphere or clockwise in the southern hemisphere. The biggest differences between hurricanes and tornadoes are how big they are and how long they last. Hurricanes are typically hundreds of miles in diameter, with high winds and heavy rains over the entire region. Hurricanes can last for days or even weeks. Tornadoes usually last no more than a few minutes.

- *Hurricane*- A rotating low-pressure weather system (storm) that has organized thunderstorms but no fronts (a boundary separating two air masses of different densities. Hurricanes originate in the Atlantic basin, which includes the Atlantic Ocean, Caribbean Sea, and Gulf of Mexico, the eastern North Pacific Ocean, and, less frequently, the central North Pacific Ocean. Hurricanes develop in stages; working their way up to hurricane status:
  - *Tropical Wave*- A low-pressure trough moving generally westward with the trade winds.

- *Tropical Disturbance*- An organized area of thunderstorms that usually forms in the tropics. Typically, they maintain their identity for 24 hours and are accompanied by heavy rains and gusty winds.
- *Tropical Cyclone*- A generic term for any organized low pressure that develops over tropical and sometimes sub-tropical waters. Tropical depressions, tropical storms, and hurricanes are all example of tropical cyclones.
- *Tropical Depression*- An organized area of low pressure in which sustained winds are 38 mph or less.
- *Tropical Storm*- A tropical cyclone with maximum sustained wind speeds that range from 39 to 73 mph.
- *Hurricane*- A tropical cyclone with sustained winds of at least 74 mph.

After the storm reaches Hurricane status, the Saffir-Simpson Hurricane Wind Scale is used to categorizes hurricanes by sustained wind speeds (**Table 5.6**).

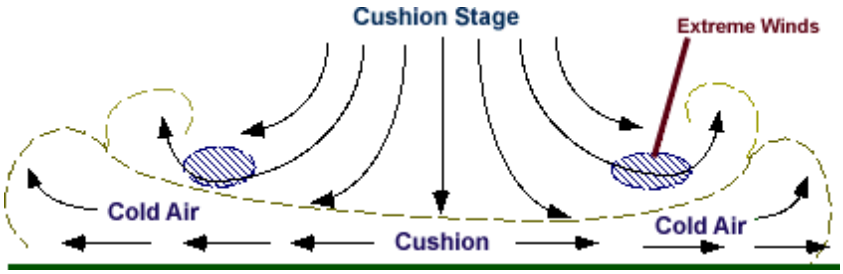
Table 5.6- Saffir-Simpson Hurricane Wind Scale

Category	Wind Speed	Description
1	74-95	Very dangerous winds will produce some damage: Well-constructed frame homes could have damage to roof, shingles, vinyl siding and gutters. Large branches of trees will snap and shallowly rooted trees may be toppled. Extensive damage to power lines and poles likely will result in power outages that could last a few to several days
2	96-110	Extremely dangerous winds will cause extensive damage: Well-constructed frame homes could sustain major roof and siding damage. Many shallowly rooted trees will be snapped or uprooted and block numerous roads. Near-total power loss is expected with outages that could last from several days to weeks.
3	111-129	Devastating damage will occur: Well-built framed homes may incur major damage or removal of roof decking and gable ends. Many trees will be snapped or uprooted, blocking numerous roads. Electricity and water will be unavailable for several days to weeks after the storm passes
4	130-156	Catastrophic damage will occur: Well-built framed homes can sustain severe damage with loss of most of the roof structure and/or some exterior walls. Most trees will be snapped or uprooted and power poles downed. Fallen trees and power poles will isolate residential areas. Power outages will last weeks to possibly months. Most of the area will be uninhabitable for weeks or months
5	>156	Catastrophic damage will occur: A high percentage of framed homes will be destroyed, with total roof failure and wall collapse. Fallen trees and power poles will isolate residential areas. Power outages will last for weeks to possibly months. Most of the area will be uninhabitable for weeks or months

- *Tornado*- A tornado is a rapidly (violent) rotating column of air that is in contact with both the surface of the Earth and a cumulonimbus cloud or, in rare cases, the base of a cumulus cloud. Tornadoes come in many shapes and sizes, and are often visible in the form of a condensation funnel originating from the base of a cumulonimbus cloud, with a cloud of rotating debris and dust beneath it. Most tornadoes have wind speeds less than 110 miles per hour, are about 250 feet across, and travel a few miles before dissipating. The most violent tornadoes are capable of tremendous destruction with wind speeds of up to 300 mph. They can destroy large buildings, uproot trees and throw vehicles hundreds of yards. They can also drive straw into trees. Damage paths can be in excess of one mile wide to 50 miles long.

Most tornadoes form from thunderstorms. They need warm, moist air from the Gulf of Mexico and cool, dry air from Canada. When these two air masses meet, they create instability in the atmosphere. A change in wind direction and an increase in wind speed with increasing height creates an invisible, horizontal spinning effect in the lower atmosphere. Rising air within the updraft tilts the rotating air from horizontal to vertical. An area of rotation, 2-6 miles wide, now extends through much of the storm. Most strong and violent tornadoes form within this area of strong rotation. Tornadoes are measured by the Fujita Tornado Scale (**Table 5.7**) which classifies tornadoes by intensity categories, based on the maximum winds occurring within the funnel.

Table 5.7- Fujita Tornado Scale

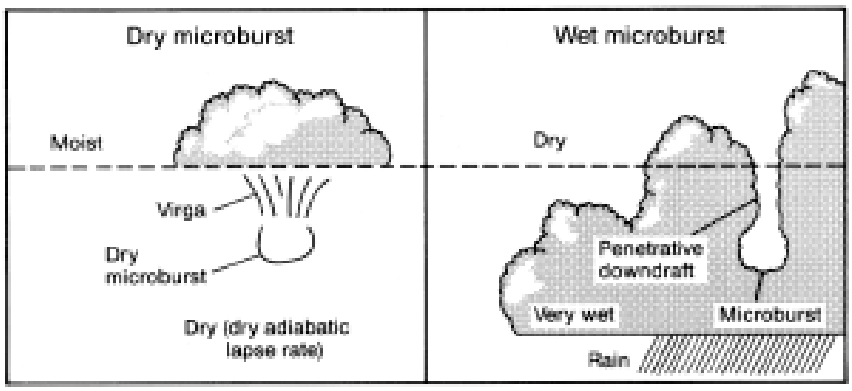


Category	Wind Speed	Description
F0	40-72 miles per hour	Gale Tornado. Light Damage: Some damage to chimneys; breaks twigs and branches off trees; pushes over shallow-rooted trees; damages signboards; some windows broken; hurricane wind speed begins at 73 miles per hour.
F1	73-112 miles per hour	Moderate Tornado. Moderate Damage: Peels surfaces off roofs; mobile homes pushed off foundations or overturned; outbuildings demolished; moving autos pushed off the roads; trees snapped or broken.
F2	113-157 miles per hour	Significant Tornado. Considerable Damage: Roofs torn off frame houses; mobile homes demolished; frame houses with weak foundations lifted and moved; boxcars pushed over; large trees snapped or uprooted; light-object missiles generated.
F3	158-206 miles per hour	Severe Tornado. Severe Damage: Roofs and some walls torn off well-constructed houses; trains overturned; most trees in forests uprooted; heavy cars lifted off the ground and thrown; weak pavement blown off roads.
F4	207-260 miles per hour	Devastating Tornado. Devastating Damage: Well-constructed homes leveled; structures with weak foundations blown off some distance; cars thrown and disintegrated; large missiles generated; trees in forest uprooted and carried some distance away.
F5	261-318 miles per hour	Incredible Tornado. Incredible Damage: Strong frame houses lifted off foundations and carried considerable distance to disintegrate; automobile-sized missiles fly through the air in excess of 300 feet (100 meters); trees debarked; incredible phenomena will occur.
F6-12	>319 miles per hour	The maximum wind speeds of tornadoes are not expected to reach the F6 wind speeds.

Straight-line winds are common with the gust front of a thunderstorm or originate with a downburst from a thunderstorm. The winds can gust to 130 mph and winds of 58 mph or more and can last for more than twenty minutes. Straight-line wind events are most common during the spring when instability is highest and weather fronts routinely cross the country. These storms have wind speeds capable of reaching up to 100 mph, capable of producing a path of damage extending for hundreds of miles. Terms and characteristics of damaging straight-line wind events include:

- *Derecho*- Derechos, Spanish for “straight”, are a widespread, long-lived, straight-line wind storm event that is associated with a land-based, fast-moving group of severe thunderstorms. Derechos can cause hurricane-force winds, tornadoes, heavy rains, and flash floods. A warm-

weather phenomenon, derechos occur mostly in summer, especially during June, July, and August.



- *Updrafts/Downdraft*- Localized regions of warm or cool air will exhibit vertical movement (updrafts/downdrafts). Updrafts are small-scale current of rising air, often within a cloud. A mass of warm air will typically be less dense than the surrounding region, and so will rise until it reaches air that is either warmer or less dense than itself. The converse will occur for a mass of cool air, and is known as subsidence. This movement of large volumes of air, especially when regions of hot, wet air rise, can create large clouds, and is the central source of thunderstorms. Drafts can also be conceived by low or high-pressure regions. A low-pressure region will attract air from the surrounding area, which will move towards the center and then rise, creating an updraft. A high-pressure region will then attract air from the surrounding area, which will move towards the center and sink, spawning a downdraft.
- *Downburst*- Strong, downdraft winds flowing out of a thunderstorm cell. A downburst is a straight- direction surface wind in excess of 39 miles per hour caused by a small-scale, strong downdraft from the base of convective thundershowers and thunderstorms. Downbursts of all sizes descend from the upper regions of severe thunderstorms when the air accelerates downward through either exceptionally strong evaporative cooling or by very heavy rain, which drags dry air down with it. When the rapidly descending air strikes the ground, it spreads outward in all directions, like a fast-running faucet stream hitting the bottom of the sink.

There are two (2) sub-categories of downbursts: the larger macrobursts and small microbursts.

Macroburst- Macrobursts are downbursts with winds up to 117 miles per hour which spread across a path greater than 2.5 miles wide at the surface and which last from 5 to 30 minutes.

Microburst- Microbursts are strong, damaging winds which strike the ground and often give the impression a tornado has struck. They frequently occur during intense

thunderstorms. The origin of a microburst is downward moving air from a thunderstorm's core. But unlike a tornado, they affect only a rather small area, less than 2.5 miles in diameter from the initial point of downdraft impact. An intense microburst can result in damaging winds near 170 miles per hour and often lasts for less than five minutes. There are two (2) types of microburst windstorms: dry and wet.

- *Gust Front*- A gust front is the leading edge of rain-cooled air that clashes with warmer thunderstorm inflow. Gust fronts are characterized by a wind shift, temperature drop, and gusty winds out ahead of a thunderstorm. Sometimes the winds push up air above them, forming a shelf cloud or detached roll cloud.
- *Haboob*- Haboobs, Arabic for blasting/drifting, is a type of intense dust storm carried on an atmospheric gravity current (i.e., thunderstorm), also known as a weather front. When a thunderstorm collapses, and begins to release precipitation, wind directions reverse, gusting outward from the storm and generally gusting the strongest in the direction of the storm's travel. Haboobs occur regularly in arid regions throughout the world.

In Southern California, Santa Ana winds are considered a windstorm event. Santa Ana winds are katabatic winds- Greek for *"flowing downhill"*. These winds occur below the passes and canyons of the coastal ranges of Southern California and in the Los Angeles basin. Santa Ana winds often blow with exceptional speed in the Santa Ana Canyon (the canyon from which it derives its name). Santa Ana winds are strong, extremely dry (low humidity) down-slope winds that originate from cool, dry high pressure air masses in the Great Basin region (the high plateau east of the Sierra Mountains and west of the Rocky Mountains, including most of Nevada and Utah) and affect Southern California. These winds come up, over, and are pulled southward down the eastern side of the Sierra Nevadas and into the Southern California region. The air warms as it descends toward the California coast at the rate of 5 degrees Fahrenheit per 1000 feet due to compressional heating. Thus, compressional heating provides the primary source of warming. The air is dry since it originated in the desert, and it dries out even more as it is heated.

Forecasters at the National Weather Service offices in Oxnard and San Diego usually place speed minimums on these winds and reserve the use of "*Santa Ana*" for winds greater than 25 knots. These winds accelerate to speeds of 35 knots as they move through canyons and passes, with gusts to 50 or even 60 knots. Santa Ana winds can happen anytime during the year but are most prevalent in the autumn and winter months. The most significant hazard associated with Santa Ana winds is an increased wildfire danger, but Santa Ana winds can also cause downed trees and power lines, and property damage, as well as causing potentially hazardous conditions for RV's, semi-trailers, aircraft and boaters.

- **Location and Extent**

Although tornadoes and hurricanes are rare, the entire City of Redlands is susceptible to various types of windstorms.

- **History**

As mentioned, tornadoes and hurricanes are rare in the area but the City of Redlands has experienced significant straight-line winds events. Over the past five (5) years, the City has noticed an increase in local straight-line wind events. Many of the straight-line wind events do not rise to the level of significance or require the activation of the City's EOC but they do leave behind a trail of damage. The straight-line wind

events range in strength of wind and duration but they all have similar impacts; downed trees and powerlines, injuries, and minor structural damage. These straight-line wind events create issues for local resident and business, including property damage and traffic congestion.

- **Probability**

The City of Redlands is at risk of windstorms at any given time during the calendar year. However, as previously mentioned they are more prevalent in the autumn and winter months. Santa Ana winds, which commonly occur between October and February, and can, reach speeds of more than 100 miles per hour. Tornadoes and/or Hurricanes occur infrequently in California, which has a statewide average of just 5 tornadoes/hurricanes a year. This is significantly less than states located in the US' "*tornado alley*", which can experience as many as 50–100 tornadoes per year or along the southern Atlantic US/Gulf of Mexico region which can experience twelve (12) named storms, six (6) hurricanes, and three (3) major hurricanes each year**.** In addition, most California tornadoes and hurricanes are considered "weak"; the historical average occurrence rate of Strong – Violent events in California is zero.

- **Climate Change Considerations**

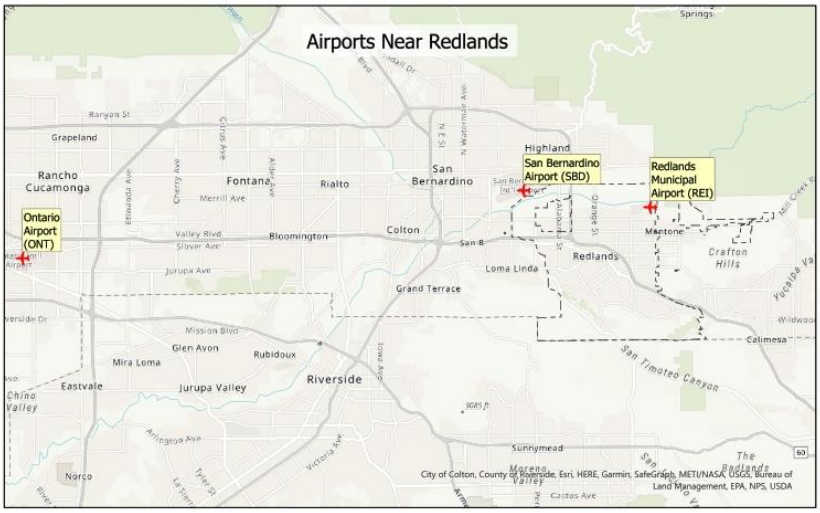
Climate change will play a significant role with windstorm events. The changing conditions are expected to cause a significant amplification to many existing conditions. Because of this, climate change might impact the frequency and intensity of windstorms. Climate change, although still being studied, could have an effect on high- and low-pressure zones. High- and low-pressure zones are created by many factors, but many are related to uneven heating of the earth's surface by the sun. Many of the factors that go into the heating of the earth's surface, but many may be impacted by Climate change (i.e., type of vegetation in areas impact ability to absorb heat, amount of snow cover which reflects heat). In addition to altering and possibly increasing frequency of significant winds in the area. This indicates that the City of Redlands could experience a greater number of windstorm events in the future.

5.4.2 TIER II

The hazards, in alphabetical order, under Tier 1I include: Aircraft Accident/Incident; Civil Disturbance; Drought; Extreme Temperature, Hazardous Material Accident; Infestation; Landslide; Technology Disruption; and, Train Accident/Incident.

5.4.2.1 AIRCRAFT ACCIDENT/INCIDENT

- **Ranking-** *Probability*- Medium; *Impact*- Medium
- **Description**



Aircraft Accidents/Incidents can occur "*in-flight*" or "*on ground*", that either cause death and injuries or cause substantial damage to an aircraft and/or airport facilities. This can include fatalities or injuries as a result of: 1) being in the aircraft, 2) direct contact with any part of the aircraft, including parts which have become detached from the aircraft, or 3) direct exposure to jet blast (with excepts). Damages includes accidents/incidents that affect the structural strength, performance or flight characteristics of the aircraft and/or airport requiring major repair or replacement and incidents where the aircraft is missing or is completely inaccessible. For purposes of this LHMP, the definition of "aircraft accident" does not include "unmanned aircraft accident,".

- **Location and Extent**

Since 1947, the Redlands Municipal Airport (REI) has been serving the area's aviation community. Redlands Municipal Airport is a 180-acre facility with a 4,570 foot long by 75-foot-wide runway serving

approximately 240 based aircraft. In addition to the Redlands Municipal Airport, the Ontario International Airport (ONT) and the San Bernardino International Airport (SBD) are in close proximity to the City of Redlands. **Figure 5.11** depicts the location of the three (3) local airports in the general area of the City of Redlands.

Figure 5.11- Airports Around the City of Redlands

In addition to the local airports, there are four (4) large commercial airports operating in the region. The City of Redlands is transected by the flight pattern from LAX, ONT, SBD, and March Air Reserve Base.

- **History**

The City of Redlands has suffered several accidents/incidents in the past. **Table 5.8** provides an overview of the events that have occurred since 2008, according to the National Transportation Safety Board (NTSB) Case Analysis and Reporting Online (CAROL) Query Tool. All reported aircraft accidents involved small craft, aircraft.

Table 5.8- Aircraft Accidents Since 2008

Accidents	Total	Dates
Incidents	8	
Incident Injury Type		
Fatal	*3*	*Jun 2020, Feb 2010, Sep 2009*
Serious	*1*	*Sep 2011*
Minor	*1*	*Mar 2015*
None	*3*	*May 2015, Jul 2013, Sep 2011*

- **Probability**

The possibility of an aircraft accident/incident occurring in the City of Redlands will continue to exist due to the location (and existing use) of the Redlands Municipal Airport, SBD, ONT, and March Air Reserve Base. It is worth to note, that the Redlands Municipal Airport also supports the US Forest Service and CAL FIRE NOT heliports during fire seasons. Based on historic events and known increase safety standards, it is anticipated that future accidents/incidents will be minimal. The risk to the City of Redlands associated with these types of accidents/incidents is similar to other general aviation airports in southern California.

- **Climate Change Considerations**

While there are many devices that monitor and/or track weather conditions, it is expected that changing conditions are going to impact air travel. From the simplest of impacts from temperatures altering takeoffs and landing, to increase in rains and winds altering flight patterns, changes in our environment could increase the likelihood of an aircraft accidents/incidents.

5.4.2.2 CIVIL DISTURBANCE

- **Ranking-** *Probability*- Medium; *Impact*- Medium
- **Description**

Civil Disturbance is a term generally used to describe disorderly conduct or a breakdown of orderly society by a large group of people. Civil Disturbance can range from a form of protest against major socio-political problems to riots.

- **Location and Extent**

Civil Disturbance can occur in any part of the City of Redlands. However, it is generally located within larger, more concentrated, commercial areas.

- **History**

No significant historical incidents to report to date. However, there have been a few small incidents that have occurred due to recent social and political movements.

- **Probability**

There are no studies that predict the probability of civil disturbance occurrences.

- **Climate Change Considerations**

While there is no direct linkage between climate change and civil disturbances, there could be indirect linkages. As climate change impacts are either felt or perceived to be felt it could ignite passions within people to demonstrate against possible causes or enablers.

5.4.2.3 DROUGHT

- **Ranking-** *Probability*- Medium; *Impact*- Low
- **Description**

Drought can best be thought of as a condition of water shortage for a particular user in a particular location. Drought is a gradual phenomenon and generally are not signified by one or two dry years. California's extensive system of water supply infrastructure (reservoirs, groundwater basins, and interregional conveyance facilities) generally mitigates the effects of short-term dry periods for most water users. However, drought conditions are present when a region receives below-average precipitation, resulting in prolonged shortages in its water supply, whether its water supply is provided by atmospheric, surface, or ground water means. A drought can last for months or years, or may be declared after as few as 15 days.

Drought is not a purely physical phenomenon, but rather an interplay between natural water availability and human demands for water supply. The precise definition of drought is made complex owing to political considerations, but there are generally four (4) types of conditions that are referred to as drought:

- *Meteorological drought is brought about when there is a prolonged period with less than average precipitation.*
- *Agricultural drought is brought about when there is insufficient moisture for average crop or range production. This condition can arise, even in times of average precipitation, owing to soil conditions or agricultural techniques.*
- *Hydrologic drought is brought about when the water reserves available in sources such as aquifers, lakes, and reservoirs fall below the statistical average. This condition can arise, even in times of average (or above average) precipitation, when increased usage of water diminishes the reserves.*
- *Socioeconomic drought associates the supply and demand of water services with elements of meteorological, hydrologic, and agricultural drought. Socioeconomic drought occurs when the demand for water exceeds the supply as a result of weather-related supply shortfall.*

The U.S. Drought Monitor, established in 1999, is a weekly map of drought conditions produced jointly by the National Oceanic and Atmospheric Administration, the U.S. Department of Agriculture, and the National Drought Mitigation Center at the University of Nebraska-Lincoln. The map is based on measurements of climatic, hydrologic and soil conditions as well as reported impacts and observations from more than 350 contributors around the country. Droughts are generally categorized into five (5) categories: D1) Abnormally Dry, D2) Moderate Drought; D3) Severe Drought; D4) Extreme Drought; and, D5) Exceptional Drought. There are many considerations that are factored into the determining the drought status; these include consideration of status on the: Palmer Drought Severity Index; CPC Soil Moisture Model; USGS Weekly Streamflow; Standardized Precipitation Index; and Objective Drought Indicator Blends.

- **Location and Extent**

The entire City of Redlands is subject to drought conditions and water shortages.

- **History**

It was only recently that the State of California emerged from a proclaimed a State of Emergency due to extremely dry conditions. The longest duration of drought (D1-D4) in California lasted 376 weeks beginning on December 27, 2011 and ending on March 5, 2019. The most intense period of drought occurred 2014 and 2017, where at its peak over 50% of the land in California was under Exceptional Drought (D4) conditions. The City of Redlands has experienced several droughts, most recently during the statewide drought from 2011-2019.

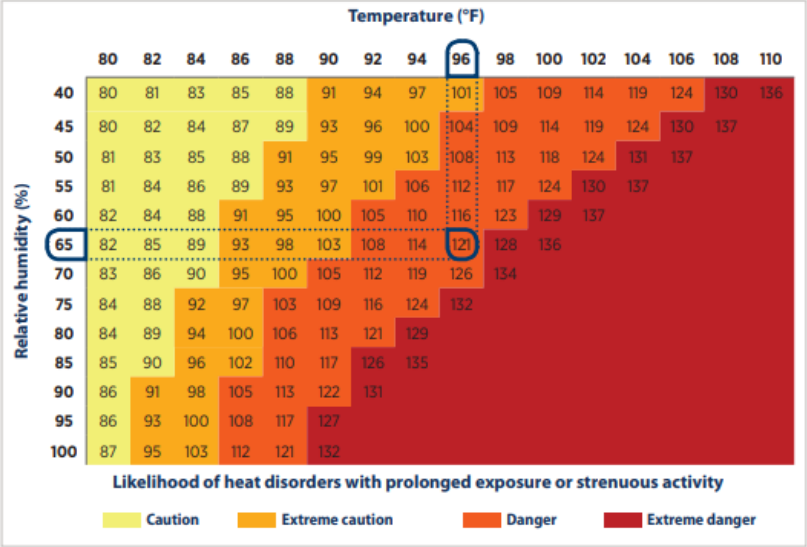
- **Probability**

In any given year, California and the City of Redlands can be subject to drought conditions and water shortages. This is especially true since much of the water is provided by outside resources, resources that a shared with others. It is also important to note that droughts do not happen over night, they are a slow buildup of conditions. On average, seventy-five percent (75%) of the state's annual precipitation occurs in the "wet season"- *November thru March*. December, January, and February generally see the most precipitation but there have been many early and late season storms that bring in a substantial amount

of precipitation. One of the best ways to predict drought conditions is to study the status of the El Niño Southern Oscillation (ENSO) patterns. In California. ENSO is a periodic shifting of ocean atmosphere conditions in the tropical Pacific that ranges from El Niño (warm phase) to neutral to La Niña (cold phase). La Niña conditions tend to favor a drier outlook for Southern California; while the El Niño conditions favor stronger, and wetter storms.

- **Climate Change Considerations**

Climate change has the potential to make drought events more common in the West, including California. Extreme heat creates conditions more conducive for evaporation of moisture from the ground, thereby increasing the possibility of drought. A warming planet could lead to earlier melting of winter snow packs, leaving lower stream flows and drier conditions in the late spring and summer. Snow packs are important in terms of providing water storage and ensuring adequate supply in the summer, when water is most needed. Changing precipitation distribution and intensity have the potential to cause more of the precipitation that does fall to run-off rather than be stored. The result of these processes is an increased potential for more frequent and more severe periods of drought.



5.4.2.4 EXTREME TEMPERATURE

- **Ranking-** *Probability*- Medium; *Impact*- Low
- **Description**

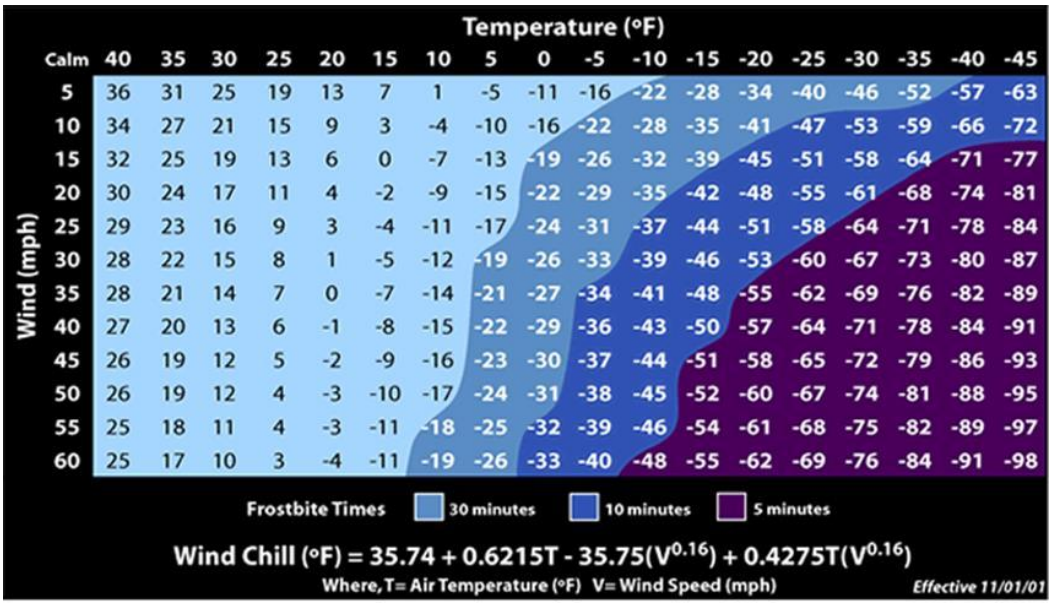
For the purposes of the LHMP, Extreme Temperatures include both 1) extreme heat and 2) freezing weather conditions.

Extreme Heat conditions, according to the EPA and CDC, is defined as weather that is much hotter and more humid than average for a particular time and place. The heat index is a measure of how hot it feels when relative humidity is factored in with the actual air temperature (**Figure 5.12**). Relative humidity is the percentage of moisture in the air compared with the maximum amount of moisture the air can hold. Humidity is an important factor in how hot it feels because when humidity is high, water doesn't evaporate as easily, so it's harder for your body to cool off by sweating.

Figure 5.12- NOAA's National Weather Service Heat Index

Extreme heat is not just a nuisance; it kills hundreds of Americans every year and causes many more to become seriously ill. Measures to prevent illness are generally common sense, including staying cool indoors, keeping hydrated, limiting physical activity, and monitoring those at highest risk.

Freeze conditions are noted when there are sustained temperatures below freezing (32F). Prolonged freezing temperatures can pose a risk to vulnerable populations, particularly if combined with power outages. When combined with precipitation, ice can form on roadways, trees, and power lines creating secondary hazard conditions. Extreme cold can result in significant damage to homes and businesses (e.g., from burst pipes), and can cause significant health problems, such as hypothermia and frostbite. Agriculture and livestock are subject to damage and life loss, and may cause economic impacts as well. The NOAA provides three (3) different categories of actions for freeze events: advisory, watch, and warning.



- *Frost Advisory* is issued when the minimum temperature is forecast to be 33 to 36 degrees on clear and calm nights during the growing season.
- *Freeze Watch* is issued when there is a potential for significant, widespread freezing temperatures within the next 24–36 hours.
- *Freeze Warning* is issued when significant, widespread freezing temperatures are expected.

Prolonged freezing temperatures can pose a risk to vulnerable populations, particularly if combined with power outages. Exposure to cold can cause significant health problems, such as frostbite or hypothermia and become life-threatening. When combined with extreme cold temperatures, winds can compound the events creating a phenomenon known as "wind chill" factor.

Wind Chill is the term used to describe the rate of heat loss on the human body resulting from the combined effect of low temperature and wind. As winds increase, heat is carried away from the body at a faster rate, driving down both the skin temperature and eventually the internal body temperature. Animals are also affected by wind chill; however, cars, plants and other objects are not. **Figure 5.13** shows the NWS Wind Chill Chart which uses science and other information to provide an

accurate, understandable, and useful formula for calculating the dangers from winter winds and freezing temperatures.

Figure 5.13 -Wind Chill Chart

- **Location and Extent**

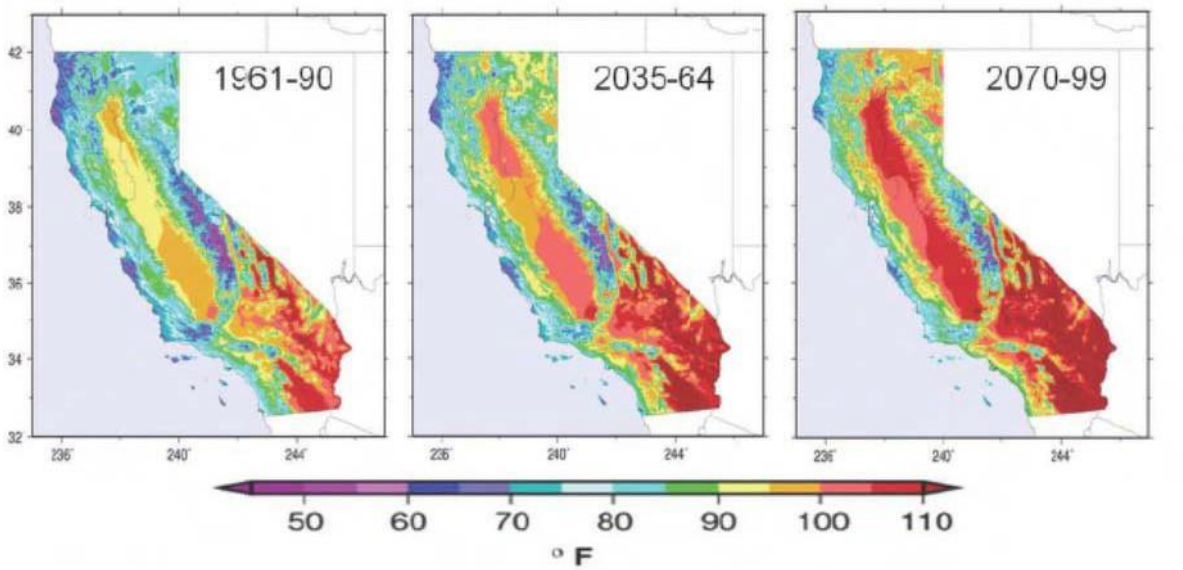
The entire city is subject to Extreme Heat and/or Freeze conditions. While, this will affect humans, a significant impact would be felt on livestock and agriculture. The City of Redlands also has several agriculture growers that produce citrus and other crops.

- **History**

The City of Redlands experiences extreme temperatures on an annual basis. In most instances, the events are short in duration and do not create significant impacts on the community. Some of the minor events do require the City to take action including dissemination of Public Service Announcements, checking in with vulnerable populations (elderly, homeless), and opening and/or coordinate with others to open heating and/or cooling centers. Some of the more significant extreme weather events in the region include:

- *In 2010 an extreme heat event occurred in impacting the Southeastern Desert Region.*
- *In 2007 an extreme cold event damaged citrus, row, field and nursery crops county-wide, including agriculture.*
- *In 2006, San Bernardino County experienced an extreme heat event affecting the Valley communities.*

- **Probability**



In any given year the City could experience Extreme Heat or Freeze events.

- **Climate Change Considerations**

Climate plays a significant role in Excessive Heat and Freeze events. As temperatures rise and fall due to changing conditions, Californians will face greater possibility of Extreme Heat or Freeze events. Depending on the model and the study referenced, freezing spells are likely to increase and/or decrease in frequency

as climate conditions change. By mid-century, extreme heat events in urban centers could cause two to three times more heat-related deaths than occur today. By 2100, The California Energy Commission is projecting hotter temperatures are expected throughout the state, with an increase of 3 to 5.5°F under the lower emissions scenario and 8 to 10.5°F under the higher emissions scenario (**Figure 5.14**).

Figure 5.14- Comparison between Historic and Projected Temperature

According to the EPA and CDC, the chances are increasing that an Extreme Heat or Freeze event could happen where you live because, the average temperatures are rising, both in the United States and around the world:

- *Globally, the annual average temperature has been rising since the beginning of the 20th century, and temperatures are expected to continue to rise through the end of this century.*
- *Worldwide, 15 of the 16 warmest years on record have occurred since 2000, with the exception of 1998*

5.4.2.5 HAZARDOUS MATERIAL ACCIDENT

- **Ranking**- *Probability*- Medium; *Impact*- Medium
- **Description**

Hazardous materials are used and/or created in manufacturing, agriculture, service industries (e.g., gas stations, dry cleaners), and health care facilities. Several household products such as cleaning supplies and paint are also considered hazardous materials. These chemicals and hazardous materials may be corrosive or otherwise damaging over time. The US Department of Transportation (US DOT) classifies hazard chemicals/materials into the following classification system:

- *Class 1*- Explosives
- *Class 2*- Flammable, non-flammable, and poisonous gases
- *Class 3*- Flammable liquids
- *Class 4*- Flammable, spontaneously combustible, and dangerous when wet solids
- *Class 5*- Oxidizers and organic peroxides
- *Class 6*- Toxic (poisonous) substances

- *Class 7*- Radioactive materials
- *Class 8*- Corrosive substances
- *Class 9*- Miscellaneous dangerous goods/hazardous materials and articles

The release of these chemicals and/or materials into a community can have devastating effects. A hazardous materials release could also result in public health risks, fires, and/or explosions. Contamination may be carried out of the immediate area of the incident by people, vehicles, wind, and water. Weather conditions can increase the size and intensity of the Hazardous Materials Release. Typography, such as hills and canyons, can increase the size of the release or make it more difficult to contain. There are several types of hazardous materials releases:

- *Fixed-Site Releases*- releases involving the production and manufacturing, handling, and storage of a hazardous product at a single facility as well as any releases that may occur at a designated hazardous waste disposal site.
- *Transportation-Related Releases*- Includes releases that occur while the hazardous material is in transit from one facility to another or en route to be disposed of at a designated hazardous waste disposal site (e.g., on highways, railways, airports, or in pipelines).
- *Intentional Releases*- includes criminal acts and acts of terrorism in which a hazardous material is used to intentionally cause injuries and/or fatalities, damage the environment and/or property, or advance a political or social agenda.

- **Location and Extent**

As outlined above, hazardous materials can be found throughout the community. The location and identity of facilities that store hazardous materials must be reported to local and federal governments as required by the Emergency Planning and Community Right-to-Know Act (EPCRA). Many facilities have their own hazardous materials guides and response plans, including transportation companies who transport hazardous materials. The release of hazardous materials into the environment can cause a multitude of problems. Although these incidents can happen almost anywhere, certain areas of Redlands are at higher risk, such as near roadways that are frequently used to transport hazardous materials and locations with industrial facilities that use, store, and/or dispose of such materials. Areas crossed by railways, waterways, airways, and pipelines also have increased potential for mishaps. **Table 5.9** provides a list of sites within the City of Redlands.

Table 5.9- Registered Hazardous Chemical Sites in the City of Redlands

Site/Facility Name	Location
Crafton-Redlands area	Bunker hill groundwater sub-basin
Edison/Redlands II (Redlands Boulevard) MGP	501-525 w. Redlands Boulevard at Kendall
Jorco Chemical Company	32185 east outer Highway 10
Judson Street Elementary School	Judson Street/Pennsylvania Avenue
Layne Christensen Redlands property	1675 West Park Avenue
Lockheed Propulsion Corporation	1500 Crafton Avenue
New High School No.3	Texas Street/w. Pioneer Avenue
QA Processor Service	302 Alabama Street, ste8
Redlands Airport	1745 Sessums Drive
Redlands Community Day School	Alabama Street/West Park Avenue
Redlands Early Education Center	1712 West Park Avenue
Redlands Farming Company	780 West San Bernardino Avenue
SoCal gas/Redlands I (State Street.) MGP	State Street at Redlands Boulevard

Teledyne Battery Products	840 W Brockton Avenue

- **History**

A significant hazardous materials events in San Bernardino County included the February 1996 train derailment in the Cajon Pass. A 49-car Burlington Northern-Santa Fe freight train en route from Barstow, California, to Los Angeles, derailed near Cajon Junction, killing the conductor and a trainman, and seriously injuring the engineer. The derailment resulted in a rail car pile-up which included five cars containing hazardous materials. The train ignited, and continued to burn for several days, requiring immediate closure of I-15, extended closure of SR-138, and a secondary closure of I-15 three days later due to the potential explosion of a tank car containing butyl acrylate. In addition to the train crew casualties, 32 people suffered minor injuries (21 police officers, 8 California Transportation Department personnel, and 3 civilians). According to the National Transportation Safety Board (NTSB), the total economic cost of the incident reached almost $9.5 million, including equipment, environmental and other costs.

Within the City of Redlands, the Fire Department has the responsibility for responding to hazardous materials incidents. The City of Redlands Fire Department has responded to a series of hazardous material incidents over the years. While most are routine in natural and do not require significant resources, there have been a handful of incidents that have required greater response and recovery coordination/effort. **Figure 5.15** depicts the location of the more significant hazardous material incidents within the City of Redlands between 1999-2020 and **Table 5.10** provides details of the events.

Figure 5.15- Hazardous Material Spills City of Redlands (1999-2020)

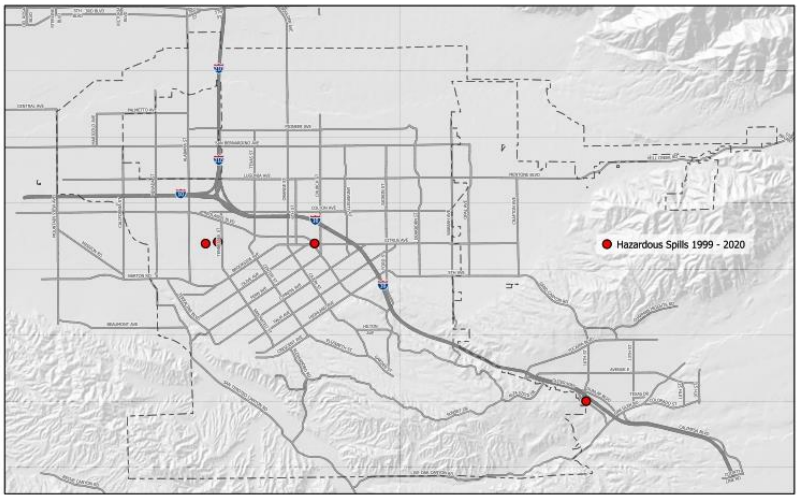


Table 5.10- Hazardous Material Spills City of Redlands (1999-2020)

Address	Date	Quantity	Unit of Measure	Commodity
12910 16th Street	10/11/1999	50	LGA	acrylic acid, stabilized
300 Kansas Street	4/2/2008	160	SLB	batteries, wet, filled with acid, electric storage
539 E Redlands Boulevard	8/1/2000	300	LGA	gasoline
301 Tennessee Street	2/14/2018	56	LGA	diesel fuel

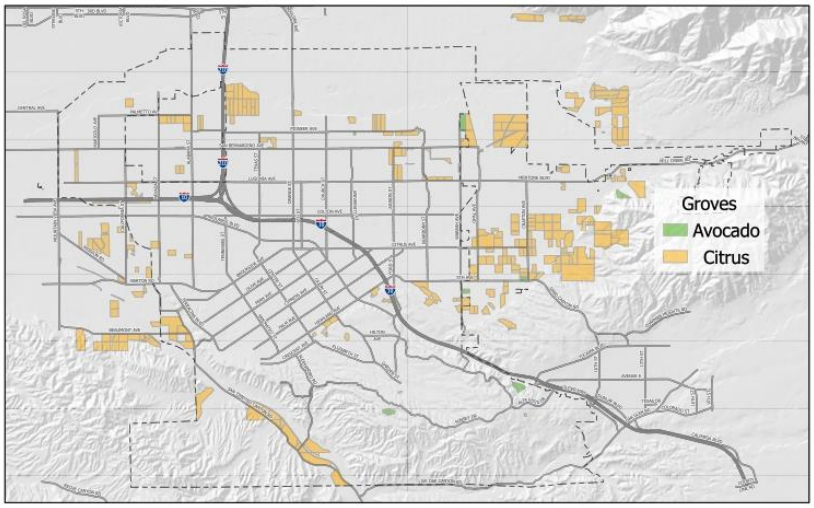
- **Probability**

The release of chemicals and hazardous materials can occur anywhere in the city but are more likely on or near major transportation corridors. Incidences can occur during production, storage, transportation, and/or during use or disposal of materials. Communities can be at risk if a chemical is used unsafely or released in harmful amounts into the environment. Hazardous materials can cause death, serious injury, long lasting health effects, and damage to buildings, the environment, homes, and other property.

- **Climate Change Considerations**

While there is little evidence to link climate change increase occurrences of chemical and hazardous material releases, weather plays a significant factor in certain aspects of chemical and hazardous material releases. Changing conditions can create more mishaps and accidents with production, storage, transportation, use, and disposal of chemicals and hazardous materials. Additionally, changing conditions could impact the response and recovery efforts after releases.

5.4.2.6 INFESTATION



- **Ranking-** *Probability*- Medium; *Impact*- Low
- **Description**

Agricultural pests and disease infestation occur when an undesirable organism inhabits an area in a manner that causes serious harm to agriculture crops, livestock or poultry, and wild land vegetation or animals. Countless insects and diseases live on, in, and around plants and animals in all environments. Most are harmless, while some can cause significant damage and loss. Under some conditions, insects and diseases that have been relatively harmless can become hazardous. For example, severe drought conditions can weaken trees and make them more susceptible to destruction from insect attacks than they would be under normal conditions.

- **Location and Extent**

The City of Redlands has several agriculture crops (orange groves) but limited commercial livestock or poultry. However, the City of Redlands, much like most cities have areas and vegetation susceptible to infestations. Impacts to local plants happen throughout the entire city. Impacts on wildland vegetation or animals generally happened in interface areas along edges of the community (i.e., Crafton Foothills, Live Oak Canyon, Sam Timoteo Canyon, San Bernardino Mountains). The location of the groves is depicted on **Figure 5.16**.

Figure 5.16- Citrus Groves

- **History**

As mentioned, the city is vulnerable to insect infestation. Infestations of Mediterranean Fruit Fly, Oriental Fruit Fly, Gypsy Moth, Glassy-winged Sharpshooter, Asian Citrus Psyllid, and Light-Brown Apple Moth have all occurred in the last 30 years; however, there are not detailed records to list each event. Diseases such as Chrysanthemum White Rust and Pierce's Disease of Grapes have caused significant losses to local plants and impacts on wildland vegetation or animals.

Emergencies related to insect infestation have impacted San Bernardino County and its local jurisdictions in the last decade, including an increased fire risk due to Bark Beetle infestation of trees in 2003, and mosquito-borne West Nile Virus in 2007. Since 2002, the Bark Beetle infestation has required removal of 99,500 acres of affected trees in the San Bernardino National Forest, as well as on private lands, at a cost of $4 million in grants and matching funds. However, both the Bark Beetle and West Nile Virus infestations are under control and did not seriously impact the City of Redlands. Additionally, while future infestation issues are possible, the impact on the City of Redlands is generally expected to be limited and no major impact to the community.

- **Probability**

Due to its interaction with the global economy, its mild Mediterranean climate, and its diversified agricultural and native landscape, the City of Redlands can experience impacts from agricultural pests and diseases annually.

- **Climate Change Considerations**

Continued climate change is likely to alter the abundance and types of pests, lengthen pests' breeding season, and increase pathogen growth rates. For example, the pink bollworm, a common pest of cotton crops, is currently a problem only in southern desert valleys because it cannot survive winter frosts elsewhere in the state. However, if winter temperatures rise 3 to 4.5°F, the pink bollworm's range would likely expand northward, which could lead to substantial economic and ecological consequences for the state.

Temperature is not the only climatic influence on pests. For example, some insects are unable to cope in extreme drought, while others cannot survive in extremely wet conditions. Furthermore, while warming speeds up the lifecycles of many insects, suggesting that pest problems could increase, some insects may grow more slowly as elevated carbon dioxide levels decrease the protein content of the leaves on which they feed (California Climate Change Center 2006).

5.4.2.7 LANDSLIDE

- **Ranking-** *Probability*- Medium; *Impact*- Medium
- **Description**

Landslides can be defined as the movement of a mass of rock, debris, or earth down an incline. According to the USGS, the term "*landslide*" encompasses five (5) modes of slope movement: falls, topples, slides, spreads, and flows.

- *Falls are masses of soil or rock that dislodge from steep slopes and free-fall, bounce, or roll downslope.*
- *Topples move by the forward pivoting of a mass around an axis below the displaced mass.*
- *Spreads (lateral) commonly induced by liquefaction of material in an earthquake, move by horizontal extension and shear or tensile fractures.*
- *Slides displace masses of material along one or more discrete planes.*
  - In "rotational" sliding, the slide plane is curved and the mass rotates backwards around an axis parallel to the slope;
  - In "translational" sliding, the failure surface is more or less planar and the mass moves parallel to the ground surface.
- *Flows mobilize as a deforming, viscous mass without a discrete failure plane.*

Landslides can be caused by natural processes or by man-made activities. Landslides occurs when down-slope forces (gravity) exceed the resistance (strength) of the earth materials. Landslides can be initiated by rainfall, snowmelt, changes in water level, stream erosion, changes in ground water, earthquakes, volcanic activity, disturbance by human activities, or any combination of these factors. Two (2) of the more common types of landslides include:

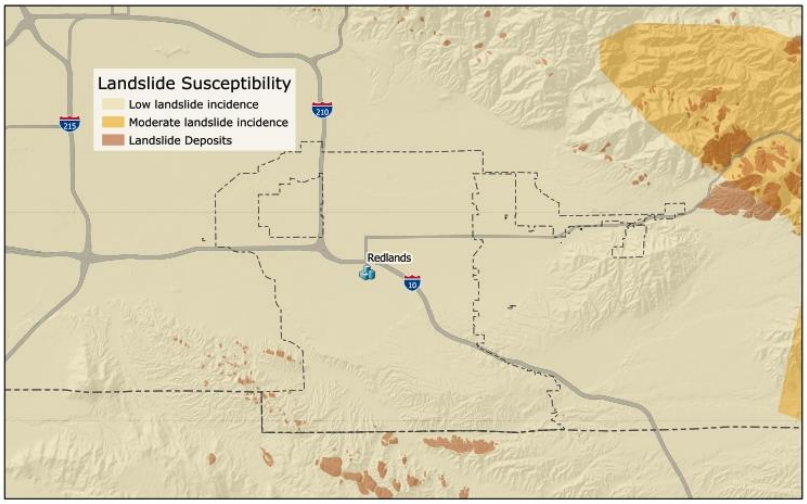
- *Mudflows*- defined as flows or rivers of liquid mud down a hillside on the surface of normally dry land. They occur when water saturates the ground, usually following long and heavy rain falls, or rapid snow melt. Mud forms and flows down slope if there is no ground cover such as brush or trees to hold the soil in place.
- *Debris Flow*- defined when water begins to wash material from a slope or when water sheets off of a newly burned stretch of land. Chaparral land is especially susceptible to debris flows after a fire. The flow will pick up speed and debris as it descends the slope. As the system gradually picks up speed it takes on the characteristics of a basic river system, carrying everything in its path along with it.

Fast-moving (or rapidly-moving) landslides present the greatest risk to human life, and people living in or traveling through areas prone to rapidly moving landslides are at increased risk of serious injury. Debris-flows can travel down a hillside with speeds up to 200 miles per hour (though more commonly, 30-50 miles per hour), depending on the slope angle and type of earth and debris in the flow.

Slow-moving landslides can occur on relatively gentle slopes and can cause significant property damage but are less likely to result in serious human injuries. Slow-moving slides include rotational slides, where sliding material moves along a curved surface, and translational slides, where movement occurs along a flat surface. These slides are generally slow-moving and can be deep. Slumps are small rotational slides that are generally shallow.

The size of a landslide usually depends on the geology and the initial cause of the landslide. Landslides vary greatly in their volume of rock and soil; the length, width, and depth of the area affected; frequency of occurrence; and speed of movement. Some characteristics that determine the type of landslide are slope of the hillside, moisture content, and the nature of the underlying materials. Landslides are given different names, depending on the type of failure and their composition and characteristics.

Many landslides are difficult to mitigate, particularly in areas of large historic movement with weak underlying geologic materials. As communities continue to modify the terrain and influence natural processes, it is important to be aware of the physical properties of the underlying soils as they, along with climate, create landslide hazards. Proper planning cannot completely eliminate the threat of landslides to the safety of people, property, and infrastructure; however, without proper planning, landslide hazards will be even more common and more destructive.



- **Location and Extent**

The California Geological Survey is in the process of recording and mapping historical and potential landslides in the state. The location and extent of landslides are extremely difficult to predict and are usually based on historical event and/or soil type and topography. Landslides have the potential to occur in areas with one or more of the following conditions:

- *On or close to steep hills*
- *Steep road-cuts or excavations*
- *Existing landslides or places of known historic landslides (such sites often have tilted power lines, trees tilted in various directions, cracks in the ground, and irregular-surfaced ground)*
- *Steep areas where surface runoff is channeled, such as below culverts, V -shaped valleys, canyon bottoms, and steep stream channels*
- *Fan-shaped areas of sediment and boulder accumulation at the outlets of canyons*
- *Canyon areas below hillside and mountains that have recently (within 1-6 years) been subjected to a wildland fire.*

Figure 5.17 depicts the location around the City of Redlands of low landslide incidence on the USGS' Landslide Incidence and Susceptibility in the Conterminous United States map (Overview map, 2001), which shows areas of landslides and areas susceptible to future land sliding (defined to include most types of gravitational mass movement such as rock falls, debris flows, and the failure of engineered soil materials).

Figure 5.17- Landslide Incidence in the Vicinity of the City of Redlands

- **History**

Historically, the majority of landslides in Redlands have been a secondary hazard to other hazards (i.e., earthquakes, floods); there have been no known previous occurrences of landslides documented in the City of Redlands.

- **Probability**

Landslides are a common hazard in California. Weathering and the decomposition of geologic materials produce conditions conducive to landslides, and human activity further exacerbates many landslide problems. It is difficult to estimate the probability of occurrence for landslide as no landslide susceptibility maps have been prepared for Redlands. However, recently there has been increased probability for mud flows and debris flows due to wildfire events in the area.

- **Climate Change Considerations**

Climate change can increase the probability, frequency, and/or intensity of landslides. Changes in precipitation, specifically the increased frequency of intense precipitation, can result in significant water run-off, which may cause landslides. Additionally, increase in wildfire hazards will result in loss of hillside vegetation. The loss of hillside vegetation will increase the likelihood of debris and mudflows. This could result in landslides occurring in areas not previously identified.

5.4.2.8 TECHNOLOGY DISRUPTION

- **Ranking-** *Probability*- Low; *Impact*- High
- **Description**

Technology disruption includes both deliberate (cyber-attacks) or accidental (equipment failure or human error) actions that can cause the loss of use of technology and/or data. A cyber threat/attack is a circumstance or event that has or indicates the potential to exploit technology vulnerabilities and to adversely impact organizational operations, organizational assets (including information and information systems), individuals, other organizations, or society. Critical infrastructure, such as utilities and

telecommunications, are also potential targets. Cyber threats/attacks are most easily described as either external threats (where attacks originate outside of established networks) or internal/insider threats (where attacks originate from users who have existing access to an internal network). Examples of cyber threats/attacks include: malware and hacking, phishing, denial of service attacks, ransomware, and state-sponsored hacking. Any one of these threats, if initiated, and successful, can produce a cyber-attack that has major implications throughout the organization. Recent report produced by Verizon (2020) analyzes 32,002 security incidents and 3,950 confirmed breaches from 81 global contributors from 81 countries and indicate the following trends:

- *86% of data breaches for financial gain - up from 71% in 2019*
- *Cloud-based data under attack – web application attacks double to 43%*
- *67% of breaches caused by credential theft, errors and social attacks*
- *Clearly identified cyber-breach pathways enable a "Defender Advantage" in the fight against cyber-crime*
- *On-going patching successful - fewer than 1 in 20 breaches exploit vulnerabilities*
- *37% of credential theft breaches used stolen or weak credentials*
- *25% involved phishing*
- *Human error accounted for 22%*

- **Location and Extent**

Technology disruptions can happen anywhere within the City but will generally be targeted towards larger corporations or government organizations.

- **History**

While there have been several smaller cyber threats and hacking, none have reached a level of significance. However, the frequency of cyber-attacks on public and private sector organizations in general, continues to rise.

- **Probability**

The probability of technology disruptions is on the rise globally, national, and locally. The probability of occurrence of cyber threats is rapidly increasing, especially with increased reliance on the Internet and cloud-based computing. However, cyber security threats/attacks will generally be targeted towards larger corporations or state/national governments which are not located within the county.

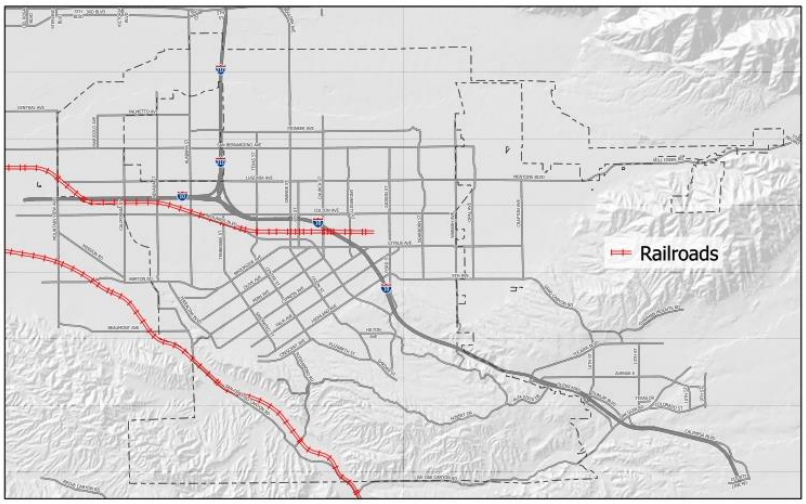
Local governments are increasingly being targeted by cyber criminals on the basis that they have fewer resources to defend themselves. Unlike natural hazards, where there is historical data, and some predictive modeling can occur, cyber-attacks are an emerging hazard, which are more challenging to anticipate

- **Climate Change Considerations**

While there is little evidence to link climate change to increase in occurrences of cyber security threats/attacks, the target could be related to persons/groups with issues with individuals or companies they perceive to have effect on the climate (i.e., greenhouse gas producers) within the community. And much like terrorism, depending on the consequence of the cyber-attack, it could hinder the response and recovery efforts.

5.4.2.9 TRAIN ACCIDENT/INCIDENT

- **Ranking-** *Probability*- Low; *Impact*- Medium
- **Description**



Train derailments are defined as any accidents involving public or private trains carrying passengers or cargo along the rail corridor. Cargo commodities include such things as hazardous materials, fuel (including oil), agriculture, meats, and non-consumables (*NOTE: hazardous materials incident are covered under a separate hazard*). Train derailments, like other transportation accidents, are less likely to lead to a state or federal disaster declaration, than other hazards previously and afore mentioned.

- **Location and Extent**

Trains running through the City of Redlands carry both commuters and commodities (**Figure 5.18**). However, San Bernardino County is currently in the final stages of extending the Metrolink line to the City of Redlands. This will increase the frequency of trips and volume of riders/passengers, thus increasing the potential for commuter-related train incidents.

Train accidents are generally localized, and the incidents result in limited impacts at the community level. However, if there are volatile or flammable substances on the train and the train is in a highly populated or densely forested area, death, injuries, and damage to homes, infrastructure, and the environment, including forest fires can occur.

Figure 5.18- Rail Lines in Vicinity of the City of Redlands

- **History**

There have been no historical train derailments incidents within the City of Redlands.

- **Probability**

Train accidents can occur any time during the year. Because of current plans to extend the commuter rail into the City of Redlands, it is expected that the provability of an incident/accident will increase.

- **Climate Change Considerations**

Weather conditions have been known to play a significant role in some train derailments globally. While current train operations anticipate and plan for current and future weather conditions, sudden changes

to weather conditions and weather patterns can affect the safe movement of trains. Additionally, climate change could impact response and recovery operations.

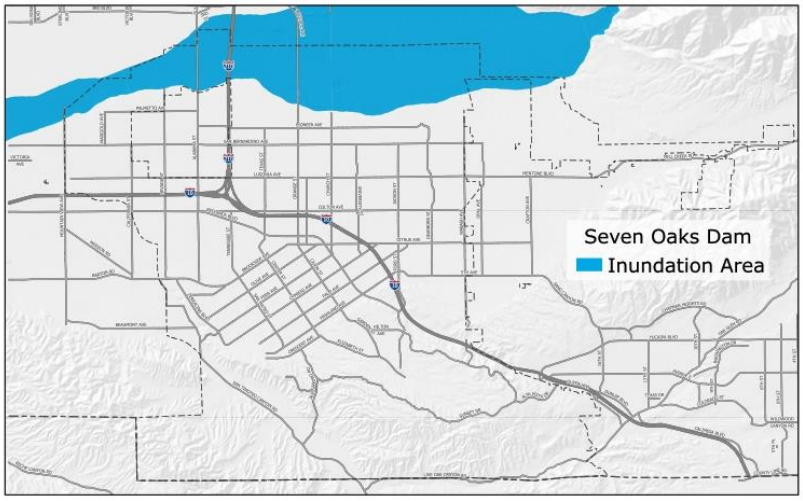
5.4.3 TIER III

The hazard under Tier III includes Dam Breach and Terrorism.

5.4.3.1 DAM BREACH

- **Ranking-** *Probability*- Low; *Impact*- Medium
- **Description**

Because of California's seasonal and climatic conditions, water storage is critical. Dams and reservoirs help reserve (store) the water necessary for agriculture, hydroelectric power, recreational activities, environmental protection, and a stable drinking water supply. They are also critical tools in flood and debris control. Based on the function, dams can be classified as: storage dam, diversion dam, detention dam, debris dam, or coffer dam. In addition to the classifications there are several types of dams:



- *Gravity Dams- concrete, rubber masonry*
- *Embankment Dams- earth or rock*
- *Arch/Multiple Arch Dams- concrete*
- *Buttress Dams- concrete, timber, steel*

Along with their many benefits, dams and reservoirs present formidable consequences if not properly designed, built, and maintained. Failures to dams and reservoir are generally due to old age, poor design/construction, lack of maintenance, structural damage, improper siting, landslides flowing into a reservoir, or terrorist actions. Structural damage is often a result of a flood, erosion, or earthquake. A catastrophic dam/reservoir failure could inundate the area downstream. The degree of flood impact is dependent upon topography, vegetation, duration and intensity of rainfall with consequent storm water runoff. The force of the water is large enough to carry boulders, trees, automobiles, and even houses along a destructive path downstream. Another factor in dam/reservoir failures is heavy or increased precipitation, especially in very short periods of time. This increase in rainfall can crested dams, weaken structures, and erode supports. The potential for casualties, environmental damage, and economic loss is great. Damage to electric generating facilities and transmission lines could impact life support systems in communities outside the immediate hazard area.

- **Location and Extent**

As shown in **Figure 5.19**, the northernmost portions of the City of Redlands, along the Santa Ana River margin, are located within the potential dam inundation area for Seven Oaks Dam as mapped by San Bernardino County ISD/GIS as part of the San Bernardino County General Plan. Construction of this modern dam by the U.S. Army Corps of Engineers was completed in 1999. Designed for flood control, its location near the San Andreas Fault resulted in the dam's being designed to resist earthquake damage for events as large as a M8 earthquake.

Figure 5.19- Dam Inundation Areas in the City of Redlands

- **History**

The State of California and the federal government have a rigorous Dam Safety Program. This is a proactive program that ensure proper planning in the event of failure but also sets standards for dam design and maintenance. Because of this, many potential issues have been addressed and/or resolved. Within the City of Redlands, no significant dam failures have occurred.

- **Probability**

Dam failure events are infrequent and usually coincide with the events that cause them, such as earthquakes, landslides, excessive rainfall and snowmelt. These impacts can also be exacerbated by aging or poor maintenance of the structures. There is a "residual risk" associated with dams; residual risk is the risk that remains after safeguards have been implemented. For dams, the residual risk is associated with events beyond those that the facility was designed to withstand. However, the probability of occurrence of any type of dam failure event is considered to be low in today's regulatory and dam safety oversight environment.

- **Climate Change Considerations**

Increased rainfall from changing climate conditions could present a risk to dams and reservoirs in area if volume of runoff is greater than the dam's capacity. This could cause the County to release stored water into the downstream water courses in order to ensure the integrity of the dam.

5.4.3.2 TERRORISM

- **Ranking-** *Probability*- Low; *Impact*- Medium
- **Description**

Terrorism has become an undeniable reality throughout the United States. The term terrorism refers to intentional, criminal malicious acts. There is no single, universally accepted definition of terrorism, and it can be interpreted in many ways. Terrorism is defined in the Code of Federal Regulations as "...t*he unlawful use of force and violence against persons or property to intimidate or coerce a government, the*

civilian population, or any segment thereof, in furtherance of political or social objectives." (28 CFR, Section 0.85). For the purposes of this plan, terrorism refers to the use of weapons of mass destruction, including biological, chemical, nuclear, and radiological weapons; arson, incendiary, explosive, and armed attacks; industrial sabotage and intentional hazardous materials releases; and cyber terrorism. Many of these incidents can be a well-planned, coordinated attacks with multiple suspects, or the result of a lone individual on a rampage. Conventional Attacks/Active Shooter incidents are generally considered a lone individual incident; some are considered "homegrown violent extremists" inspired by foreign terrorist groups.

- **Location and Extent**

Terrorism can occur throughout the entire city but due to terrorisms' intended purpose to cause the greatest amount of destruction it would most likely happen in more populous areas (high value, visually recognized targets) where more devastation, fear, and chaos will ensue.

- **History**

The City and surrounding area have experienced several terrorism (Active Shooter) events. In March of 2016, the police responded to a single shooter incident at Office Depot. There was one (1) minor injury reported. In April of 2017, there was also a shooting at North Park Elementary, part of the Redlands Unified School District. The shooting was an apparent murder–suicide and an act of domestic violence. Three people died from their wounds and another student was wounded and hospitalized. However, the most significant Active Shooter event in the area occurred December of 2015 at the Inland Regional Center in San Bernardino. Fourteen (14) people were killed and 22 others were seriously injured. The pursuit to capture the shooters lead the police to the City of Redlands. The shooters were killed in a shootout, which also left two (2) officers injured.

- **Probability**

All City businesses and facilities are perceived as a soft target; however, due to the intended purpose of terrorism, it would most likely happen in more populous urban areas where more devastation (and fear) will ensue.

- **Climate Change Considerations**

While there is little evidence to link climate change increasing occurrences of terrorism. However, depending on the type of attack, it could intensify the incident (i.e., Improvised Explosive Device- *IED* during high wind event), and hinder the response and recovery efforts (i.e., evacuation during flooding).

6 RISK ASSESSMENT

6.1 OVERVIEW

The purpose of this section is to estimate the potential exposure and vulnerability (impacts) of hazards within the City of Redlands. While an emphasis will be on the built environment (residential, non-residential, critical facilities, etc.), the economy, and the general population; other areas may be considered (i.e., lifelines, environment). The focus of this section will be on Tier I hazards. As presented in Section 5.0- Hazard Assessment, the Planning Team ranked hazards into tiers: Tier I, Tier II, and Tier III hazards. Understanding potential impacts (damage and losses) is essential to decision-making at all levels of government, providing a basis for developing mitigation plans and policies, emergency preparedness and response and recovery planning. To accomplish this, two (2) different approaches were used:

Scientific Loss Estimation Modeling

The scientific loss estimation modeling efforts included the utilization of the FEMA Hazus model. Hazus is a nationally applicable standardized methodology that estimates potential losses from floods, earthquakes, hurricane winds and tsunamis. Hazus uses state-of-the-art Geographic Information Systems (GIS) software to map hazard data and estimate potential *physical damage* to residential, commercial, schools, critical facilities, and infrastructure; *economic loss*, including lost jobs, business interruptions, repair, and reconstruction cost; and, *social impacts*, including estimating shelter requirements, displaces households, and population exposure to the hazard.

Hazus standard configuration allows for "*out-of-the-box*" regional or community-wide loss assessment using default (Level 1) building inventory databases, aggregated to the census tract (for earthquakes) or census block (for floods) level. Hazus also allows for the replacement of the default data with data that better reflects the area. In 2009, FEMA sponsored a project to leverage and improve San Bernardino County Assessor data for general building stock and utilize it in Hazus for county-level flood and earthquake analysis (San Bernardino County Essential Facilities Risk Assessment- *SBEFRA*). The SBEFRA project incorporated enhanced flood data from information on the FEMA updated (2008) Digital Flood Insurance Rate Map (DFIRM). The results of the SBEFRA project were leveraged and incorporated into this plan.

Exposure Assessment

Because scientific loss estimation models are not available for all types of hazards, a different approach was used on some hazards to identify potential impacts; exposure assessments. There are two (2) kinds of exposure assessment: 1) when there a hazard exposure area (or footprint); and, 2) when an exposure area (footprint) does not exist.

A hazard exposure footprint enables you to determine areas in the planning area where you are either "*in*" or "out" of the hazard (i.e., wildfire). With this footprint, the Planning Team was able to determine elements within the hazard area and conduct a qualitative assessment of the potential impact. For those hazards where an exposure footprint does not exist (i.e., infectious disease, energy shortage/power outage), the assessment is done for the entire planning area/City. Neither approach provides an estimate potential damage but provides an understanding of the exposure and as such,

the potential loss during events. Types of elements that were considered during the exposure assessment were general building stock, populations, lifeline infrastructure, economy, and the environment. **Table 6.1** provides a summary of relevant building stock from Hazus, population, and economy information presented in *Section 3.0- Community Profile*. This information provides a reference point which can be used to assess the potential impacts from the hazard.

Table 6.1- Summary of Building Stock, Population, and Economy within the City of Redlands

BUILDING STOCK	Building Count	Building Replacement Value ($1,000)	Contents Replacement Value ($1,000)	Building Sq. Ft. (1,000 Sq. Ft.)
Residential	19,661	$4,586,535	$2,293,253	39,193

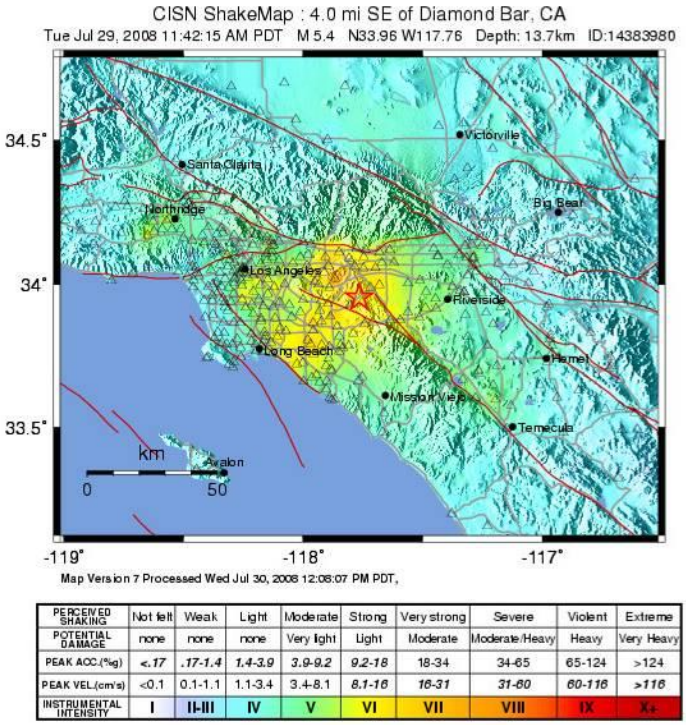
TOTAL	**41,609**	**100%**		

Additionally, the FEMA-funded SBEFRA project also did an exposure assessment of facilities deemed critical under the project (i.e., police stations, fire stations, emergency operations centers, schools). The SBEFRA project did a damage assessment of critical facilities for earthquake and an exposure assessment of critical facilities for Flood and Wildfire.

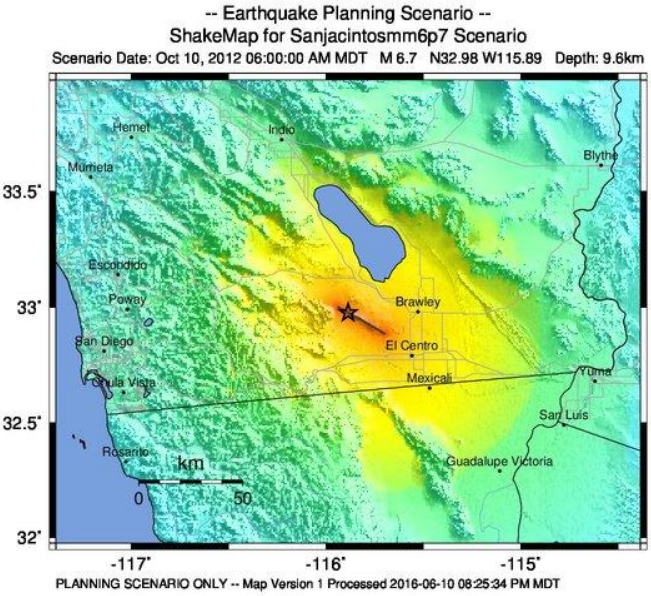
6.2 TIER I HAZARDS



6.2.1 EARTHQUAKE

To understand the vulnerability to Earthquakes in the City of Redlands, a scientific loss estimation model was used. The City of Redlands leveraged the Hazus assessment and critical facilities exposure assessment conducted under the SBEFRA Project. The Planning Team ranked this hazard as a HIGH impact during the hazard prioritization process.

6.2.1.1 HAZUS ASSESSMENT



The SBEFRA Project looked at three (3) earthquake scenarios: the M7.8 Shakeout Scenario, a M6.7 San Jacinto scenario earthquake, and a M6.7 Chino Hills Scenario earthquake (**Figure 6.1**, **Figure 6.2**, and **Figure 6.3**). A summary of the Hazus results is presented in **Table 6.2**. It should be noted that the casualty figures reported are not direct Hazus outputs; they are estimates in more medically-meaningful categories derived from Hazus outputs using a "calibration" methodology developed using historic injury data from the 1994 Northridge and other California earthquakes (Seligson & Shoaf, 2003). The method was also recently applied for the San Andreas "ShakeOut" Scenario developed by the USGS and others for the 2008 Golden Guardian statewide disaster exercise (Jones et al., 2008). Also as noted previously, Hazus estimates earthquake impacts at the census tract level. Accordingly, building count totals may differ from totals reported in the flood risk assessment**,** which were developed at the census block level.

6.2.1.2 CRITICAL FACILITIES EXPOSURE ASSESSMENT

Damage and functionality of critical facilities identified in the FEMA-funded SBEFRA project were estimated for the earthquake scenarios identified above using HAZUS. Results are presented in **Table 6.3.** As shown, three of the four fire stations existing in 2009 are expected to be less than 50% functional in a M7.8 earthquake on the San Andreas fault (ShakeOut scenario), although physical damage is likely to be considered Moderate or less (none of the stations are have probabilities of experiencing moderate or greater damage exceeding 50%). In this same event, the EOC is expected to have functionality between 50-75%, while the Redlands Police Department is expected to have less than 50% functionality and its probability of being in the Moderate or greater damage state exceeds 50%. The Police Department is also expected to have less than 50% functionality in the M6.7 San Jacinto earthquake scenario.

Table 6.3- Estimated Essential Facility Earthquake Impacts (Hazus)

		Earthquake Scenario		
		M7.8 ShakeOut	M6.7 San Jacinto	M6.7 Chino Hills
Fire Stations	**Redlands Fire Department**			
	Total Number of Buildings	**4**		
	Damage			
	# Blgs with >50% Probability of Moderate or Greater Damage	0	0	0
	# Blgs with >50% Probability of Complete Damage	0	0	0
	Functionality			
	Functionality < 50 % on Day 1	3	0	0
	Functionality 50 - 75% on Day 1	1	4	0
	Functionality >75% Day 1	0	0	4
EOCs	**City of Redlands**			
	Total Number of Buildings	**1**		
	Damage			
	# Blgs with >50% Probability of Moderate or Greater Damage	0	0	0
	# Blgs with >50% Probability of Complete Damage	0	0	0
	Functionality			
	Functionality < 50 % on Day 1	0	0	0
	Functionality 50 - 75% on Day 1	1	0	0
	Functionality >75% Day 1	0	1	1

		Earthquake Scenario		
		M7.8 ShakeOut	M6.7 San Jacinto	M6.7 Chino Hills
Police Station	**Redlands Police Department**			
	Total Number of Buildings	**1**		
	Damage			
	# Blgs with >50% Probability of Moderate or Greater Damage	1	0	0
	# Blgs with >50% Probability of Complete Damage	0	0	0
	Functionality			
	Functionality < 50 % on Day 1	1	1	0
	Functionality 50 - 75% on Day 1	0	0	0
	Functionality >75% Day 1	0	0	1

Under the FEMA-funded SBEFRA project, the earthquake exposure analysis also included an assessment of Liquefaction Susceptibility Zones. The analysis identified several facilities in High and Very High Liquefaction Susceptibility zones:

- Three (3) Fire Station (FS 262, FS 263, and FS 264)
- Emergency Operations Center
- Four (4) Police Department (Community Policing Station, Animal Control, Redlands Community Senior Center, Police Annex)
- Two (2) Municipal Utility facility (Corporate Yard)
- City Hall

Because the school district participated in the FEMA-funded SBEFRA project, it was possible to develop damage and functionality estimates for the Redlands Unified School District's (District or RUSD) facilities in each of the three scenario earthquakes. An overall summary of the District's performance, in terms of damage and functionality on the day of the earthquake, is given in **Table 6.4**

Table 6.4- Estimated Earthquake Impacts for the Redlands Unified School District Summary (Hazus)

	Earthquake Scenario		
	M7.8 ShakeOut	M6.7 San Jacinto	M6.7 Chino Hills
Total Number of Buildings	**592**		
Damage			
# Buildings with >50% Probability of Moderate or Greater Damage	79	18	0
# Buildings with >50% Probability of Complete Damage	17	0	0
Functionality			
Functionality < 50 % on Day 1	519	101	0
Functionality 50 - 75% on Day 1	73	448	1
Functionality >75% Day 1	0	43	591

As shown in Table 6.4, 79 buildings have a high likelihood (>50% probability) of experiencing Moderate or greater damage in the M7.8 ShakeOut Scenario earthquake on the San Andreas Fault; 17 of these are likely (have >50% probability) to suffer Complete damage. These 79 buildings are located on 19 different campuses (*see* Table 6). The campuses with the most buildings in this category are Redlands High School (29) and Clement Middle School (10). In the San Jacinto scenario earthquake, there are 18 buildings on 9 campuses likely to experience Moderate or greater damage.

Overall, 519 of the 592 buildings are expected to have initial functionality of less than 50% on Day 1 following the M7.8 ShakeOut scenario earthquake; these buildings are spread across virtually all facility locations (*see* Table 6) number decrease to 101 buildings on 16 campuses with less than 50% functionality

following a M6.7 San Jacinto scenario earthquake, with no buildings expected to have less than 50% functionality following a M6.7 Chino Hills scenario earthquake.

Damage information for each campus in the two earthquake events shown to cause potential damage (the M7.8 ShakeOut Scenario and the M6.7 San Jacinto Scenario earthquakes) is given in **Table 6.5**, while **Table 6.6** provides campus level functionality estimates for all three events.

The FEMA-funded SBEFRA project also assessed Liquefaction Susceptibility risk for the RUSD facilities. The assessment found:

- Fifty-three (53) buildings in the Moderate zone (Arroyo Verde Elementary, Fallsvale Elementary, and Mentone Elementary)
- Two hundred-nineteen (219) buildings in the High zone (Central Admin./Enrollment Center, Clement Middle, District Office-North, District Office-South, Judson & Brown Elem., Lugonia Elem., Mission Elem., Orangewood High, Redlands East Valley High, Supply Center, Victoria Elem
- One-hundred (100) buildings in the Very High zone (Beattie Middle, Highland Grove Elem., Redlands High, Transportation

6.2.2 ENERGY SHORTAGE/POWER OUTAGE

To understand the vulnerability to Power Outage in the City of Redlands, an exposure assessment was used. Because there is not a hazard exposure area (or footprint), the Planning Team considered potential impacts within the entire City. A power outage could have a considerable impact on the population, built environment, lifeline infrastructure, and the economy. The Planning Team ranked this hazard as a HIGH impact during the hazard prioritization process.

- *Population*- Our communities have become more reliant on power for gadgets and appliances to perform basic daily activities. This loss of power will not only be an inconvenience but could become a life-threatening experience. Many citizens rely on power to operate medical machinery to survive (i.e., oxygen tanks, dialysis machines).
- *Built Environment*- Power outages have a significant impact on buildings. While in most cases it will not damage the structure, the loss of power will impact the buildings functionality. This includes loss of: lighting, HVAC, electrical outlets, communications, and elevators in taller buildings.
- *Lifeline Infrastructure*- Because of interdependencies, the loss of power can impact several other lifeline systems (i.e., water, telecommunications, natural gas, fuel). While there are backup systems for some aspects of the system, depending on the length of time, many systems will loss functionality or be required to shut down for safety.
- *Economy*- If lifeline systems shutdown and/or fail, there are rippling effects on the economy as there is an inability to provided services and/or move merchandise. Additionally, implementation of temporary mitigation actions could impact operating budgets.

While a power outage can vary in size and length of time, in the City of Redlands, it is expected to be smaller and of limited time.

6.2.3 FLOOD

To understand the flood vulnerability in the City of Redlands, a scientific loss estimation model was used and an exposure assessment was performed. The City of Redlands leverage the Hazus assessment and critical facilities exposure assessment that was conducted as part of the SBEFRA Project and conducted an exposure assessment of its list key assets, general building stock, and population against flood hazard zones. While the Hazus model and the exposure assessment does a good job of estimating damage and potential injuries from the damage, it does not consider challenges from illegal encampments within the watershed and along the riverbeds. These encampments have created an increased concern and extra work for city officials during potential flood events. This vulnerability needs to be better understood and analyzed; and actions taken to help reduce and/or eliminate potential future risk from flooding.

Another aspect that is not part of the Hazus model and the exposure assessment is the National Flood Insurance Program (NFIP). As previously mentioned, the City of Redlands is a NFIP participating community and takes an active role in floodplain management. An important part of its role is to understand and address reoccurring losses, particularly with regards to NFIP claims. A recent check of repetitive and severe repetitive loss properties conducted by FEMA Region IX's NFIP Unit indicates that there are no repetitive or severe repetitive loss properties in the City of Redlands.

The Planning Team ranked this hazard as a HIGH impact during the hazard prioritization process.

6.2.3.1 HAZUS ASSESSMENT

Under the SBEFRA Project, three (3) flood scenarios were analyzed: a 100-year flood, a 100-year flood without levee protection, and a 500-year flood. **Table 6.7** provides the Hazus losses estimated for the County in each of these scenarios.

Table 6.7- Regional Flood Impacts to San Bernardino County (Hazus)

	Regional Risk Assessment Results	Flood Scenario		
		100-year	100-year*	500-year
Regional Risk	Economic loss due to building damage ($B)	0.46	1.6	2.7
	Total building-related direct economic loss ($B)	1.4	5.4	8.6
	# of buildings in the Complete Damage State	345	350	1,105
	Total # Displaced Households	14,828	52,856	86,062
	Total # people needing short-term shelter	32,095	138,991	231,452
	Debris Generated (million tons)	0.1	0.23	0.37

**- 100-year Flood without levee protection*

Unfortunately, the County results can't be disaggregated to individual City-level using publicly-available information. However, the City of Redlands represents 4% of the values of the entire County. Making a simplifying assumption of a uniform distribution of flood risk across the County, the City of Redlands could be expected to suffer as much as:

- $18 million in economic loss due to building damage in a 100-year flood
- $64 million in a 100-year flood event without levee protection
- $108 million in a 500-year flood event
- Have 14 buildings in Complete Damage State during the 100-year event and 44 buildings in Complete Damage State during the 500-year event
- Have 593 displaced households during a 100-year event with levee protection (2,114 households without levee protection); and 3,442 households displaced during a 500-year event
- Of the displaced household, the city can expect 5,560 people needing shelter during a 100-year event with levee protection (1,284 people without levee protection); and 9,258 people during a 500-year event

The SBEFRA project also produced facility-level flood risk assessment results for the 100-year, 100-year without levee protection, and 500-year flood scenarios for the identified essential facilities (Emergency Operations Centers-*EOC*, Police Stations, Fire Stations). The City of Redlands' existing fire stations, police station and EOC were all determined to be functional in each of the three (3) flood scenarios.

To determine a more robust estimate of the potential flood risk faced by the City of Redlands, a quantitative assessment of exposure to flooding was also performed. The improved census-block level general building stock data generated by the SBEFRA project was overlain onto maps of flood hazard (FEMA's National Flood Hazard Layer) to quantify the amount of the building inventory that falls within each hazard zone. The results of this overlay are provided in **Table 6.8**.

Table 6.8- Redlands Building Inventory Exposure to Flood Hazards

Notes: *Special Flood Zone Areas are defined in the Hazard Assessment section under Flood*

As shown in the Table 6.8, most of the city's buildings are located outside of mapped areas subject to flooding (i.e., Zone X). However, $410 million (6%) of the City's building value (3.2% of the buildings by count) is subject to inundation by the 1% Annual Chance (100-year) Flood. Should these buildings suffer flood losses on the order of 12–16% (e.g., the expected range of damage possible for: a two-story home with no basement, a typical retail store, a typical office, or a typical industrial facility, each with two feet

of flood water, as modeled by the Hazus software's damage function library), building damage could reach $50–65 million dollars, significantly more than was estimated from countywide loss estimates assuming uniform risk.

Further, while most of the building value at risk in the 100-year floodplain is commercial development (67%), more than 400 residential buildings are also exposed. Very little inventory (<1%) is exposed to the 500-year flood hazard (Zone X (Shaded)—0.2% Annual chance (500yr) Flood), and just 1% is located in areas of levee protection for the 100-year flood (Zone X Protected by Levee—Areas protected from the 1% annual chance flood).

It should be noted that the totals in this Table 6.8 will vary slightly from those presented in Community Profile sections, because it was developed by identifying individual census blocks falling within the boundaries of each hazard zone, and will therefore produce a more refined overlay assessment than a similar analysis conducted using census tract data. The table in the Community Profile section was developed from census tract data.

6.2.3.2 CRITICAL FACILITIES EXPOSURE ASSESSMENT

Under the FEMA-funded SBEFRA project, a flood exposure analysis of the critical facilities was performed. The analysis identified one (1) Fire station (Fire Station 261) and eighty-eight (88) RUSD buildings (Redlands High School, Supply Center) in Zone AO; and one-hundred-thirty (130) RUSD buildings and one (1) Municipal Utility facility (Hinkley Surface Water Treatment Plant) in Zone X. The other critical facilities were all located in Zone X (Unshaded).

6.2.4 INFECTIOUS DISEASE

To understand the vulnerability to Infectious Disease in the City of Redlands, an exposure assessment was used. Because there is not a hazard exposure area (or footprint), the Planning Team considered potential impacts within the entire City. The city, as well as the state, country, and the world, are vulnerable to infectious disease caused by either newly emerging or existing diseases spread person to person, through a vector, or through food. A significant infectious disease outbreak, epidemic, and/or pandemic could impact a large portion of the population, create challenges on the built environment, overburden essential public services, and effect the economy. The Planning Team ranked this hazard as a HIGH impact during the hazard prioritization process.

- *Population/Environment*- Populations (or other living organisms) are hardest hit during Infectious Disease events. As observed during the COVID pandemic, exposure to infectious diseases can range from mild conditions to fatalities; each having a significant impact on services provided. Another consideration is addressing the challenges and needs of vulnerable populations (elderly, homeless).
- *Built Environment*- Depending on the type of infectious disease event, impact to buildings may include increased use of equipment (i.e., HVAC, water) and adaptive reuse of space. Additionally, it could also include deferred maintenance to equipment if employees and vendors are unavailable.
- *Economy*- Infectious Disease events can have a significant impact on the economy. While outbreaks and some epidemics may be less impactful, larger epidemics and pandemics can be

devastating. This can range from loss of livestock to loss of business due to limited shoppers, employees, and/or tenants.

County Public Health departments develop and exercise response plans related to infectious disease outbreaks, epidemics, and pandemics. Plans are developed through the coordination efforts of partner agencies to establish a solid foundation for improved coordination and intervention by all participants. The plans, however, are focused on public health-related issues and actions. They lack response efforts needed for recovery of the economy and other aspects.

The City of Redlands, as the rest of the world, is currently going through a pandemic with the Coronavirus (COVID-19). Because of the nature of the infectious disease and the duration gain control over the pandemic, there have been significant impact on the local population and the economy. This has led to closure of local schools and businesses, surge in hospital visits, loss of lives, and loss of jobs.

6.2.5 WILDFIRE

To understand the vulnerability to Wildfire in the City of Redlands, an exposure assessment was used. Because there is a hazard exposure area (or footprint), the Planning Team assessed potential impacts against the building stock, population, and key assets within the hazard footprint. The California Department of Forestry and Fire Protection's (CAL FIRE) has created and maintains the Fire Hazard Severity Zones maps. These maps, part of the Fire and Resource Assessment Program (FRAP), look at both State Responsibility Areas (SRA) and Local Responsibility Areas (LRA).

The City of Redlands leverage the exposure assessment of the general building stock and the critical facilities conducted as part of the SBEFRA Project against Fire Hazard Severity Zones. While there is good exposure information to leverage, some considerations should be given to addressing man-made ignitions. This includes the use (or inappropriate use) of fireworks, deliberate ignitions of fires, and the use of fires in homeless encampments. The Planning Team ranked this hazard as a MEDIUM impact during the hazard prioritization process.

6.2.5.1 GENERAL BUILDING STOCK EXPOSURE ASSESSMENT

For this effort, the improved census-block level building data generated by the SBEFRA project was overlain onto CAL FIRE Fire Hazard Severity Zone maps to quantify the amount of the building inventory that falls within each hazard zone. The results of this overlay are provided in **Table 6.9**. It should be noted that mapped fire hazard severity zones affecting the City are all within LRA. The totals in the table (e.g., total building exposure value, total building square footage, etc.) were derived from census "block" data and will vary slightly from those presented in other tables which were developed from census "tract" data.

Table 6.9- City of Redlands Building Inventory Exposure to CAL FIRE Hazard Zones

Building Inventory Data by General Occupancy	CAL FIRE—Fire Hazard Severity Zones					
	Very High	High	Moderate	Non-wildland/ Non-urban	Urban Unzoned	Total
Building Count						
Residential	1,688	870	1,367	379	15,183	19,487

% of Total	8%	4%	9%	13%	67%	100%
Building Replacement Value ($1,000)						
Residential	611,516	242,849	365,552	54,011	3,215,862	4,489,790
Commercial	28,447	17,177	173,989	515,605	819,510	1,554,728
Industrial	0	0	52,426	2,170	81,634	136,230
Other	8,845	1,413	5,181	12,938	406,863	435,240
Total	**648,808**	**261,439**	**597,148**	**584,724**	**4,523,869**	**6,615,988**
% of Total	10%	4%	9%	9%	68%	100%
Contents Replacement Value ($1,000)						
Residential	305,758	121,425	182,778	27,006	1,607,915	2,244,882
Commercial	30,827	17,177	187,873	515,605	879,714	1,631,196
Industrial	0	0	78,640	3,255	122,451	204,346
Other	2,873	1,413	3,957	2,748	197,518	208,509
Total	**339,458**	**140,015**	**453,248**	**548,614**	**2,807,598**	**4,288,933**
% of Total	8%	3%	11%	13%	65%	100%

As shown in the Table 6.9, most of the city's buildings (80% of buildings, 77% of building value) are located outside of mapped wildfire hazard areas (i.e., are located in "non-wildland/non-urban" or "urban unzoned" areas). However, 10% of the City's building value is located in the area of Very High Fire Hazard Severity, with an additional 4% located in High Severity, and 9% in Moderate Severity. Most of the exposure to these fire hazard severity zones is residential construction; 1688, 870 and 1367 residential buildings are located in the Very High, High and Moderate Zones respectively, valued at more than $611 million, $242 million, and $365 million.

6.2.5.2 CRITICAL FACILITIES EXPOSURE ASSESSMENT

Under the FEMA-funded SBEFRA project, a wildfire exposure analysis of the critical facilities was performed. The analysis of the Federal and Local Responsibly Area Fire Hazard Severity Zones identified:

- One (1) Fire Station (Fire Station 262) in the Moderate Local Responsibly Area Fire Hazard Severity Zone

- Two (2) Municipal Utility facilities (Henry Tate Water Treatment Plant, Hinkley Surface Water Treatment Plant) and one-hundred-forty-eight (148) RUSD buildings (Arroyo Verde Elementary., Beattie Middle, Highland Grove Elementary., Mariposa Elementary., Mission Elementary., Redlands East Valley High) in the High Local Responsibly Area Fire Hazard Severity Zone
- Twenty-seven (27) RUSD buildings (Cram Elementary) in the Very High Local Responsibly Area Fire Hazard Severity Zone
- Three (3) RUSD buildings (Fallsvale Elementary) in the Very High Federal Responsibly Area Fire Hazard Severity Zone

6.2.6 WINDSTORM

To understand the vulnerability to Windstorms in the City of Redlands, an exposure assessment was used. Because there is not a hazard exposure area (or footprint), the Planning Team considered potential impacts within the entire City. Windstorm events have become more frequent, longer lasting, and are more severe/intense than before. Windstorms have the capability of being of long or short duration. While longer duration events can have significant impact on the population, built environment, lifeline infrastructure, environment, and/or the economy; shorter duration events can be just as damaging if the winds are powerful. Windstorm events could also trigger other hazards. For example, prolonged periods of high winds, could damage power lines; creating power outages and/or wildfires. The Planning Team ranked this hazard as a MEDIUM impact during the hazard prioritization process.

- *Population*- While rare, windstorms have been responsible for injuries and loss of life. High winds have been known to knock people down and cause significant injuries, especially with the elderly. Collapsed structures and flying debris carried along by extreme winds can directly contribute to injuries and loss of life. This is particularly true for falling limbs or branches, or entire trees during wind events. Falling trees can bring electric power lines down to the pavement, creating the possibility of lethal electric shock. Rising population growth and new infrastructure in the region creates a higher probability for damage to occur from windstorms as more life and property are exposed to risk.
- *Built Environment*- Both residential and commercial structures are susceptible to damage. Wind pressure can create a direct and frontal assault on a structure, pushing walls, doors, and windows inward. Conversely, passing currents can create lift suction forces that pull building components and surfaces outward. With extreme wind forces, the roof or entire building can fail, causing considerable. Windstorms can also collapse or damage roads, bridges, traffic signals, streetlights, and other facilities. During periods of extremely strong winds, major roads and highways can be temporarily closed to personal, commercial (high profile trucks), and recreational vehicle traffic. Roads blocked by may also have severe consequences to people who need access to emergency services. Emergency response operations can be complicated when roads are blocked or when power supplies are interrupted.
- *Lifelines*- Historically, falling trees and other flying debris have been the major cause of power outages in the region. Windstorms such as strong microbursts and Santa Ana Wind conditions can cause flying debris and downed utility lines. Winds can also knock out or cause damage to telecommunications equipment (cell towers and/or antennas). Many lifeline systems rely on telecommunication systems to manage and monitor systems.

- *Economy*- Windstorms can result in direct damage and indirect consequences (interrupted services) to the local economy. Direct impacts include loss of business; while secondary (indirect) impacts include damage to buildings, personnel, and other vital equipment.
- *Environment*- During wet winters, saturated soils cause trees to become less stable and more vulnerable to uprooting from high winds. In some instances, this lose could include some older, more historical (or sentimental) trees in the area or involve several trees, changing the characteristic of the area.

6.3 TIER II AND TIER III HAZARDS

As mentioned, this section is focused on Tier I hazards. However, because there are no loss estimation models for the hazards in Tier II and Tier III and the only vulnerability assessment that can be performed is an exposure assessment; the Planning Team decided to include an overview of the vulnerabilities of the Tier II and Tier III hazards. Below is a summary of the assessment:

6.3.1 TIER II HAZARDS

- *Aircraft Accident/Incident*- To understand the vulnerability to Aircraft Accidents/Incidents in the City of Redlands, an exposure assessment was used. Because there is not a hazard exposure area (or footprint), the Planning Team considered potential impacts within the entire City. An Aircraft Accident/Incident, depending on the size of the aircraft and the location of the incident, could have a considerable impact on the population (loss of life from the accident), buildings (damage to structures from debris), economy (shut down of areas to recover), and the environment (fire following, loss of vegetation/habitats, reconfiguration of landscape). The Planning Team ranked this hazard as a MEDIUM impact during the hazard prioritization process.
- *Civil Disturbance*- To understand the vulnerability to Civil Disturbance in the City of Redlands, an exposure assessment was used. Because there is not a hazard exposure area (or footprint), the Planning Team considered potential impacts within the entire City. Southern California is a frequent site of demonstrations due to its high profile and presence of significant government functions and buildings. It is conceivable that a demonstration or movement could turn to violence and begin spreading into neighboring communities. While the City of Redlands does not have a history of civil disturbances, it has a high profile in the area. Civil disturbance can vary in size and length of time, however, in the City of Redlands, it is expected to be smaller and of limited time. A civil disturbance, depending on the cause and effect, could have a considerable impact on the population (injuries, fatalities), built environment (destruction to property), lifeline infrastructure (damage to equipment), economy (disruption to normal business), and the environment (destruction to property). The Planning Team ranked this hazard as a HIGH impact during the hazard prioritization process.
- *Drought*- Because there is not a hazard exposure area (or footprint), the Planning Team considered potential impacts within the entire City. A drought event could have a considerable impact on the population (injuries, fatalities), lifeline infrastructure (damage to equipment), economy (disruption to normal business), and the environment (destruction to landscape). The Planning Team ranked this hazard as a LOW impact during the hazard prioritization process.
- *Extreme Temperature*- Because there is not a hazard exposure area (or footprint), the Planning Team considered potential impacts within the entire City. An Extreme Temperature event could have a considerable impact on the population, built environment, lifeline infrastructure, economy, and the environment. Exposure to extreme heat can result in illness (such as heat stroke

or heat exhaustion) or death for those at greatest risk, including: infants and children up to four years of age; people who overexert during work or exercise; people 65 years of age or older; people who are ill or on certain medications; the homeless population; and, people who are overweight. Extreme temperatures can cause equipment to become overburden and possible fail. Depending on the type of equipment impacted, it could over heat structures, create electric al overloads, and warp (or melt) pieces. If lifeline systems shutdown and/or fail, there are rippling effects on the economy as there is an inability to provided services and/or move merchandise. Additionally, extreme temperatures may require implementation of mitigation actions that impact operating budgets. Extreme temperatures could noticeably impact water supplies and vegetation/landscape. The Planning Team ranked this hazard as a LOW impact during the hazard prioritization process.

- *Hazardous Material Accident*- Because there is not a hazard exposure area (or footprint), the Planning Team considered potential impacts within the entire City. A chemical/hazardous materials spill, depending on the cause and effect, could have a considerable impact on the population (injuries, fatalities), built environment (destruction to property), lifeline infrastructure (damage to equipment), economy (disruption to normal business), and the environment (destruction to property). The Planning Team ranked this hazard as a MEDIUM impact during the hazard prioritization process.
- *Infestation*- Because there is not a hazard exposure area (or footprint), the Planning Team considered potential impacts within the entire City. An infestation event could have a considerable impact on the population (injuries, fatalities), economy (disruption to normal business), and the environment (destruction to landscape/crops). The Planning Team ranked this hazard as a LOW impact during the hazard prioritization process.
- *Landslide*- Because there is a hazard exposure area (or footprint), the Planning Team assessed potential impacts against the building stock, population, and key assets within and around the hazard footprint. The current hazard footprint (*see* Figure 5.16, under Hazard Profile) is located in in areas with very little development and population. However, a landslide event could potentially impact people who may be in the area (injuries, fatalities), damage some property and lifeline infrastructure systems and equipment, disrupt the economy, and damage the environment. The Planning Team ranked this hazard as a MEDIUM impact during the hazard prioritization process.
- *Technology Disruption*- Because there is not a hazard exposure area (or footprint), the Planning Team considered potential impacts within the entire City. A cybersecurity even depending on the cause and effect, could have a considerable impact on the population (injuries, fatalities), built environment (destruction to property), lifeline infrastructure (damage to equipment), and economy (disruption to normal business). The Planning Team ranked this hazard as a HIGH impact during the hazard prioritization process.
- *Train Accident/Incident*- Because there is a hazard exposure area (or footprint), the Planning Team assessed potential impacts against the building stock, population, and key assets within and around the hazard footprint. A train derailment event could have a considerable impact on the population (injuries, fatalities), built environment (destruction to property), lifeline infrastructure (damage to equipment), economy (disruption to normal business), and the environment (reconfiguration of landscape). The Planning Team ranked this hazard as a MEDIUM impact during the hazard prioritization process.

6.3.2 TIER III HAZARDS

- *Dam Breach*- Because there is a hazard exposure area (or footprint), the Planning Team assessed potential impacts against the building stock, population, and key assets within the hazard footprint. The current hazard footprint (*see* Figure 5.12, under Hazard Profile) is located in an area with very little development and population. However, a dam breach could potentially impact people who may be in the area (injuries, fatalities), damage some property and lifeline infrastructure systems and equipment, disrupt the economy, and damage the environment. The Planning Team ranked this hazard as a MEDIUM impact during the hazard prioritization process.
- *Terrorism*- Because there is not a hazard exposure area (or footprint), the Planning Team considered potential impacts within the entire City. A terrorism event, depending on the cause and effect, could have a considerable impact on the population (injuries, fatalities), built environment (destruction to property), lifeline infrastructure (damage to equipment), economy (disruption to normal business), and the environment (reconfiguration of landscape). The Planning Team ranked this hazard as a MEDIUM impact during the hazard prioritization process.

7 MITIGATION STRATEGY

7.1 OVERVIEW

The mitigation strategy for the City of Redlands is based on informed assumptions, recognizing both mitigation challenges and opportunities, with the ultimate mission of creating a disaster resistant and sustainable community for the future. The mitigation strategy is derived from an in-depth understanding of possible deficiencies between potential vulnerabilities and existing capabilities, with the mitigation objectives in mind. The mitigation strategy built upon the previous mitigation actions identified in the City of Redlands 2015 LHMP and was expanded to consider current needs.

7.2 MITIGATION GOALS AND OBJECTIVES

To better assist with the identification of mitigation measures, mitigation goals and objectives were developed. The mitigation goals and objectives support the City's mitigation mission to create a disaster resistant and sustainable community. Well defined goals and objectives help focus efforts and ensure progress toward the mitigation mission. The mitigation goal and objectives were used by the Planning Team as a starting point prior to identifying mitigation measures. The goals and objectives include:

- **GOAL 1: Minimize Life Loss and Injuries**
  - Objective 1.1 Improve understanding of the hazards (location, vulnerability, and measures needed).
  - Objective 1.2 Exchange information about hazards, vulnerabilities, and mitigation measures with all levels of governments, private sector, and the public.
  - Objective 1.3 Ensure that all facilities meet current applicable regulations, standards, and ordinances designed to protect life safety.
  - Objective 1.4 Identify and modify high risk structures to meet life safety standards.
  - Objective 1.5 Improve emergency communications and public warning systems.
  - Objective 1.6 Develop policies and procedures to better serve disadvantaged and vulnerable populations.
- **GOAL 2: Minimize Damage to Structures, Property, and Equipment**
  - Objective 2.1 Encourage new development to occur in locations that avoid or minimize exposure to hazards.
  - Objective 2.2 Develop and adopt enhanced land use, design, and construction policies designed to reduce property loss to hazards.
  - Objective 2.3 Incorporate mitigation into repairs, major alterations, new development, and redevelopment projects in areas subject to substantial life safety risks.
  - Objective 2.4 Ensure that all facilities meet current applicable codes, standards, and ordinances, encourage incorporation of mitigation measures for all structures.
  - Objective 2.5 Encourage non-structural retrofitting on elements and equipment within facilities.
- **GOAL 3: Protect the Environment**
  - Objective 3.1 Implement mitigation and watershed protection strategies that reduce loss of wildlife, habitat, and water.
  - Objective 3.2 Implement mitigation and protection strategies that reduce loss of cultural, historic and environmental resources.

Objective 3.3 Enhance, rehabilitate, and protect natural systems and environmental resources.
Objective 3.4 Encourage balance between natural resource management and land use planning.

- **GOAL 4: Promote Public Awareness of Hazards**
  - Objective 4.1 Develop and implement strategies to bring a greater understanding of the risks associated with hazards, individual preparedness activities, and the benefits of hazard mitigation.
  - Objective 4.2 Develop and implement strategies to bring a greater understanding of mitigation, disaster preparedness, and recovery programs.
  - Objective 4.3 Establish and maintain partnerships between all levels of local government, the private sector, the business community, community groups, and institutions of higher learning that exchange information on hazards and the benefits of mitigation measures.
- **GOAL 5: Improve Emergency Management Capability**
  - Objective 5.1 Identify the need for, and acquire, any special emergency management equipment to enhance response capabilities for specific hazards.
  - Objective 5.2 Develop and maintain emergency plans (Response, Recovery, Preparedness, Prevention, Mitigation)
  - Objective 5.3 Establish and maintain emergency management systems and facilities
  - Objective 5.4 Develop and maintain Public-Private Partnerships
  - Objective 5.5 Develop and maintain Memorandums of Understanding/Mutual Aid Agreements
  - Objective 5.6 Develop, maintain, and share essential data (demographics, hazards, buildings, resources, personnel)
  - Objective 5.7 Develop, maintain, and implement emergency management training curriculum
  - Objective 5.8 Design and implement disaster response exercises (tabletop, functional, full-scale)
- **GOAL 6: Ensure Continuity of Government and Operations**
  - Objective 6.1 Develop, maintain, and exercise Business Continuity Plans; ensuring compatibility with emergency management plans.
  - Objective 6.2 Ensure reliability for vital communications
  - Objective 6.3 Protect vital records
  - Objective 6.4 Protect essential Information Technology equipment and systems
  - Objective 6.5 Promote resiliency of essential functions to minimize economic loss/disruption
  - Objective 6.6 Maintain list of Key Assets and ensure their functionality after hazard events
  - Objective 6.7 Maintain a list of essential personnel and vendors with contact information
  - Objective 6.8 Identify and acquire any necessary equipment to maintain functionality

7.3 PROGRESS IMPLEMENTING MITIGATION MEASURES

As part of the LHMP update process, the Planning Team reviewed the mitigation actions included in the previous plan. The review included identifying the status of the mitigation action (Completed, Not Started, In Progress, or No Longer Needed). Those mitigation actions that were determined to be "On Going" where placed under the Mitigation Governance section of Capabilities Assessment chapter. In other words, the Planning Team deemed that since the mitigation measure did not have a start or stop date, it should not be placed under this section and should be captured in the Mitigation Governance with the other ongoing mitigation programs. For all mitigation actions listed as Not Started, the Planning Team discussed whether or not the mitigation action was still needed. If deemed "as needed", the mitigation

measure was carried over to the new list of mitigation measures. Additionally, descriptions of the carried over, needed mitigation actions were reviewed and, in some cases, the name was changed, the scope was expanded, and/or the mitigation measures was merged with another (i.e., public outreach for all hazards, not just earthquakes). **Table 7-1** indicates the status of each of the mitigation measures from the previous plan.

Table 7-1. Status of Previous Mitigation Measures

Mitigation Measure	Hazard	Status
Mission Zanja- improve drainage	Flood	Not Started
Reservoir Canyon- improve drainage	Flood	Not Started
Downtown- improve drainage	Flood	Not Started
South City- improve drainage	Flood	Not Started
North City- improve drainage	Flood	Not Started
Water Conservation Plan- develop and implement	Drought	Not Started
Vegetation Reduction- abatement program	Wildfire	Ongoing program
Vegetation Management- inspection program	Wildfire	Ongoing program
Fire Resistant Community- outreach and education	Wildfire	Not Started
Household Hazardous Waste- Reduction Program	Hazardous Material	Ongoing program
County Hazardous Materials Responders	Hazardous Material	Not Started
Self-contained Breathing Apparatus- equipment purchase	Hazardous Material	Complete
Education and Outreach- structural retrofitting	Earthquake	Not Started
Structural Retrofitting- City-owned buildings	Earthquake	Not Started
Drought Emergency Plan	Drought	Not Started
Public Outreach, Emergency Notification System, and database of Unreinforced Masonry buildings	Earthquake	Not Started
Emergency Circulation Master Plan	Hazardous Material	Not Started

7.4 MITIGATION MEASURE PRIORITIZATION

The Planning Team used the STAPLEE Criteria (Social, Technical, Administrative, Political, Legal, Economic, and Environmental) to evaluate the feasibility of each of the mitigation measures being considered for inclusion in the LHMP update. The STAPLEE process helped the Planning Team understand possible challenges that could hinder the ability to implement the mitigation measure. The STAPLEE criteria as includes the following considerations:

- **Social**
  - *Is the proposed action socially acceptable to the community?*
  - *Are there equity issues involved that would mean that one segment of the community is treated unfairly?*
  - *Will the action cause social disruption?*
- **Technical**
  - *Will the proposed action work?*
  - *Will it create more problems than it solves?*
  - *Does it solve a problem or only a symptom?*
  - *Is it the most useful action in light of other community goals?*
- **Administrative**
  - *Can the community implement the action?*
  - *Is there someone to coordinate and lead the effort?*

- *Is there sufficient funding, staff, and technical support available?*
- *Are there ongoing administrative requirements that need to be met?*

- **Political**
  - *Is the action politically acceptable?*
  - *Is there public support both to implement and to maintain the project?*
- **Legal**
  - *Is the community authorized to implement the proposed action? Is there a clear legal basis or precedent for this activity?*
  - *Are there legal side effects? Could the activity be construed as a taking?*
  - *Is the proposed action allowed by the general plan, or must the general plan be amended to allow the proposed action?*
  - *Will the community be liable for action or lack of action?*
  - *Will the activity be challenged?*
- **Economic**
  - *What are the costs and benefits of this action?*
  - *Do the benefits exceed the costs?*
  - *Are initial, maintenance, and administrative costs taken into account?*
  - *Has funding been secured for the proposed action? If not, what are the potential sources (public, non-profit, and private)?*
  - *How will this action affect the fiscal capability of the community?*
  - *What burden will this action place on the tax base or local economy?*
  - *What are the budget and revenue effects of this activity?*
  - *Does the action contribute to other community goals, such as capital improvements or economic development?*
  - *What benefits will the action provide?*
- **Environmental**
  - *How will the action affect the environment?*
  - *Will the action need environmental regulatory approvals?*
  - *Will it meet local and state regulatory requirements?*
  - *Are endangered or threatened species likely to be affected?*

Each proposed mitigation measure was assessed and given a score between 1–5 where 5 is favorable/beneficial (or NO major issues/opposition) and 1 is unfavorable/not beneficial (or major issues/opposition) for each of the STAPLEE criteria. The scores were then totaled and a final score was established for each mitigation measure. A relative comparison of mitigation measures helps understand which mitigation measure may have the greatest potential for implementation. However, the Planning Team recognized that this ranking does not (and should not) preclude the City from funding mitigation actions lower on the list first, especially if funding is available.

7.5 MITIGATION MEASURES

The focus of the mitigation measures was on the “high” priority (Tier I) hazards (Earthquake, Energy Shortage/Power Outage, Flood, Infectious Disease, Wildfire, and Windstorm); however, some mitigation measures do address other hazards or cut across all hazards. Mitigation measures were identified by assessing the effectiveness of current capabilities (existing plans, policies, and programs) against the

expected impacts (vulnerabilities). **Table 7-2** represents the proposed mitigation measures identified by the Planning Team.

Table 7-2. Proposed Mitigation Actions

	Mitigation Action	Hazard	Goal
1	Create and maintain a Key Asset Database	Multi	1, 2, 5, 6
2	Develop and maintain Emergency Circulation (Traffic) Plan(s); acquire necessary equipment to support implementation	Multi	1, 4, 5, 6
3	Develop and maintain Memorandums of Understanding (MOUs) and Public-Private Partnerships in support of emergency management and business continuity	Multi	1, 2, 3, 4, 5, 6
4	Develop and maintain Business Continuity Plan(s), emphasize loss of technology (Tech Down) situation	Multi	1, 2, 3, 4, 5, 6
5	Develop and maintain an Emergency Public Communications Plan; acquire necessary equipment and maintain systems to support implementation	Multi	1, 4, 5, 6
6	Develop and maintain an Energy Strategic Plan; acquire necessary equipment to support implementation	Multi	1, 2, 3, 4, 5, 6
7	Develop and maintain a Hazards Public Outreach Program; acquire necessary material/equipment/systems to support implementation	Multi	1, 2, 3, 4, 5, 6
8	Update and maintain an Emergency Operations Plan (EOP); acquire necessary equipment/systems to support implementation	Multi	1, 4, 5, 6
9	Develop a Policy to Incorporate Hazard Risk into other plans and development efforts	Multi	1, 2, 3, 4, 5, 6
10	Develop and/or incorporate Emergency Management Training and Exercise Program into existing training and exercise programs	Multi	1, 2, 3, 4, 5, 6
11	Conduct an Assessment of City-owned Lifeline infrastructure; acquire equipment and materials as need to support implementation. Projects could include: pipeline replacement, adding security systems, retrofit of existing facilities/equipment, incorporating backup generators, and other upgrades and improvements.	Multi	2,3,5,6
12	Participate and continue support of the OA Stakeholder Group	Multi	1,3,4,5,6
13	Establish and maintain the Hazard Mitigation Planning Team	Multi	1,2,3,4,5,6
14	Conduct an Assessment of City-owned Facilities; perform Structural and Non-structural Retrofits as needed	Multi	1,2,4,6
15	Develop a Building Condition Assessment Report for typical of building construction types in the City; develop a program to support structural and non-structural retrofitting	Multi	1,2,4,6
16	Develop and maintain a Vegetation Management Plan	Multi	1,2,3,4
17	Increase coordination with Lifeline Stakeholders to better understand their improvement, mitigation, and resiliency efforts	Multi	1, 2, 5, 6
18	Develop protocols and ensure appropriate personnel are signed up and receive Earthquake Notifications from USGS	Earthquake	1,2, 3, 4, 5, 6
19	Coordinate with Southern California Edison Emergency Management	Energy Shortage/ Power Outage	
20	Continue support of the County Floodplain Management Plan	Flood	4, 5, 6

	Mitigation Action	Hazard	Goal
21	Formalize and expand the role of the Floodplain Manager/NFIP Coordinator	Flood	1, 2, 3, 4
22	Conduct drainage improvements on Mission Zanja	Flood	1, 2, 3
23	Conduct drainage improvements on Reservoir Canyon	Flood	1, 2, 3
24	Conduct drainage improvements in Downtown	Flood	1, 2, 3
25	Conduct drainage improvements in South City	Flood	1, 2, 3
26	Conduct drainage improvements in North City	Flood	1, 2, 3
27	Develop, maintain, and disseminate an Infectious Disease Response Plan; acquire equipment, supplies, and other material as needed to support role	Infectious Disease	1, 4, 5, 6
28	Ensure Fire Resistant Materials are incorporated into existing building modifications and/or future development	Wildfire	1, 2, 4, 6
29	Incorporate Defensive Space Standards in existing and future building designs	Wildfire	1, 2, 4, 6
30	Coordinate with San Bernardino International and Ontario International Airport's Emergency Management Division	Aircraft Accident/Incident	1, 2, 4, 5
31	Coordinate with the County, surrounding local cities, and the regional Fusion Center	Civil Disturbance	1, 2, 4, 5, 6
32	Coordinate with Ca Department of Water Resources	Dam Breach	1, 2, 3, 4
33	Coordinate with State and local Governments; acquire equipment, supplies, and other material as needed to support role	Drought	1, 2, 3, 4, 5, 6
34	Develop and maintain a Water Conservation Plan; implement recommendations	Drought	1, 2, 3, 4
35	Develop and maintain a Drought Emergency Plan; acquire equipment, supplies, and other material as needed to support role	Drought	1, 2, 3, 4, 5, 6
36	Coordinate with State of California local Governments; acquire equipment, supplies, and other material as needed to support role	Extreme Temperature	1, 2, 3, 4, 5, 6
37	Develop and maintain an Extreme Temperature Emergency Plan; acquire equipment, supplies, and other material as needed to support implementation	Extreme Temperature	1, 2, 3, 4, 5
38	Formalize, maintain, and promote the Hazardous Materials Program; acquire necessary equipment, material, and supplies needed to support implementation	Hazardous Material Accident	1, 2, 3, 4, 5
39	Enforce and support annual Training and Exercises	Hazardous Material Accident	1, 2, 3, 4, 5
40	Coordinate with local citrus growers; acquire equipment, supplies, and other material as needed to support role	Infestation	2, 3, 4, 5
41	Work with State and County officials; acquire equipment, supplies, and other material as needed to support role	Infestation	2, 3, 4, 5
42	Develop and maintain a Technology Master Plan; acquire equipment as needed to support implementation	Technology Disruption	1, 2, 4, 5, 6
43	Develop and maintain IT Incident Response Plans; implement recommendations	Technology Disruption	1, 2, 4, 5, 6
44	Coordinate with NTSB, Regional Association of governments, and County Transportation Department; acquire equipment, supplies, and other material as needed to support role	Train Accident/Incident	1, 4, 5

	Mitigation Action	Hazard	Goal
45	Coordinate with the County, surrounding local cities, and the regional Fusion Center; acquire equipment, supplies, and other material as needed to support role	Terrorism	1, 2, 3, 4, 5, 6

The Planning Team made assessments to determine if plans, policies, and/or programs needed to be expanded and/or improved; and whether those changes would support reducing the hazard. Any recommended changes to plans, policies, and programs are reflective in Table 7.2. It is also worth to note, that consideration was also given to needed plans, policies, and programs. They too are also included in Table 7.2.

7.6 MITIGATION MEASURE IMPLEMENTATION PLAN

The following table (**Table 7-3**) reflects the implementation plan for each mitigation measure. The implementation plan identifies the lead department responsible for the action, the estimated cost, potential funding source to support the action, and the proposed timeframe for completion. It is important to note that while a lead department is identified, that some other City departments (i.e., Information Technology, Police, Fire, or Facilities) may actually take the lead depending on the project (i.e., Memorandums of Understanding- *MOUs* and Business Continuity Plan- *BCPs*). Emergency Management may coordinate the effort but the other City departments may actually take the lead to complete the particular MOU or BCP. Additionally, the City intends to actively search for other possible funding source to help implement the mitigation measures but those resources are not known at this time to be listed. It is also worth to note that the City has listed Hazard Mitigation Assistance (HMA) grants under several of the mitigation measures. The City recognizes that HMA grants include the Hazard Mitigation Grant Program (HMGP), Building Resilient Infrastructure and Communities (BRIC), and Flood Mitigation Assistance (FMA) funding. It was deemed better by the Planning Team to list it collectively, instead of only selecting 1 or 2 of the grant programs as to not limit consideration under the other grant programs.

Table 7-3. Mitigation Measure- Implementation Plan

	Mitigation Action	Lead	Cost	Timeframe	Funding	Score
1	Create and maintain a Key Asset Database	Emergency Management	<$100,000	< 1 year	General Fund	35
8	Update and maintain an Emergency Operations Plan (EOP); acquire necessary equipment/systems to support implementation	Emergency Management	<$100,000	< 1 year	General Fund/HMA	35
12	Participate and continue support of the OA Stakeholder Group	Emergency Management	<$100,000	<1 year	General Fund/HMA	35
13	Establish and maintain the Hazard Mitigation Planning Team	Emergency Management	<$100,000	<1 year	General Fund/HMA	35
30	Coordinate with San Bernardino International and Ontario International Airport's Emergency Management Division	Facilitates and Community Services	<$100,000	<1 year	General Fund	35

	Mitigation Action	Lead	Cost	Timeframe	Funding	Score
31	Coordinate with the County, surrounding local cities, and the regional Fusion Center	Police	<$100,000	<1 year	General Fund	35
17	Increase coordination with Lifeline Stakeholders to better understand their improvement, mitigation, and resiliency efforts	Emergency Management	<$100,000	1-3 years	General Fund	34
19	Coordinate with Southern California Edison Emergency Management	Municipal Utilities & Engineering	<$100,000	< 1 year	General Fund/ HMA	34
3	Develop and maintain Memorandums of Understanding (MOUs) and Public-Private Partnerships in support of emergency management and business continuity	Emergency Management	<$100,000	1-3 years	General Fund	33
7	Develop and maintain a Hazards Public Outreach Program; acquire necessary material/equipment/systems to support implementation	Emergency Management	<$100,000	< 1 year	General Fund/HMA	33
38	Formalize, maintain, and promote the Hazardous Materials Program; acquire necessary equipment, material, and supplies needed to support implementation	Fire	$100,000-$300,000	<1 year	General Fund	33
39	Enforce and support annual Training and Exercises	Fire / Emergency Management	$100,000-$300,000	1-3 years	General Fund/HMA	33
44	Coordinate with NTSB, Regional Association of governments, and County Transportation Department; acquire equipment, supplies, and other material as needed to support role	Facilities and Community Services	<$100,000	<1 year	General Fund	33
4	Develop and maintain Business Continuity Plan(s), emphasize loss of technology (Tech Down) situation	Emergency Management	$100,000-$300,000	1-3 years	General Fund/HMA	32
5	Develop and maintain an Emergency Public Communications Plan; acquire necessary equipment and maintain systems to support implementation	Emergency Management	<$100,000	< 1 year	General Fund/HMA	32
21	Formalize and expand the role of the Floodplain Manager/NFIP Coordinator	Municipal Utilities & Engineering	<$100,000	< 1 year	General Fund/ HMA	32

	Mitigation Action	Lead	Cost	Timeframe	Funding	Score
28	Ensure Fire Resistant Materials are incorporated into existing building modifications and/or future development	Fire	$100,000-$300,000	1-3 years	General Fund/ HMA	32
29	Incorporate Defensive Space Standards in existing and future building designs	Fire/Development Services	$100,000-$300,000	1-3 years	General Fund/ HMA	32
45	Coordinate with the County, surrounding local cities, and the regional Fusion Center; acquire equipment, supplies, and other material as needed to support role	Police	$300,000-$500,000	1-3 Years	General Fund / EMPG	32
2	Develop and maintain Emergency Circulation (Traffic) Plan(s); acquire necessary equipment to support implementation	Police / Facilities and Community Services	<$100,000	1-3 years	General Fund/ HMA	31
9	Develop a Policy to Incorporate Hazard Risk into other plans and development efforts	Office of City Manager	<$100,000	< 1 year	General Fund	31
20	Continue support of the County Floodplain Management Plan	Municipal Utilities & Engineering	<$100,000	< 1 year	General Fund/ HMA	31
42	Develop and maintain a Technology Master Plan; acquire equipment as needed to support implementation	Management Services	$100,000-$300,000	1-3 Years	General Fund	31
43	Develop and maintain IT Incident Response Plans; implement recommendations	Management Services	$100,000-$300,000	1-3 Years	General Fund	31
10	Develop and/or incorporate Emergency Management Training and Exercise Program into existing training and exercise programs	Emergency Management	$100,000-$300,00	1-3 years	General Fund/HMA	30
33	Coordinate with State and local Governments; acquire equipment, supplies, and other material as needed to support role	Emergency Management / Municipal Utilities & Engineering	$100,000-$300,000	1-3 Years	General Fund/EMPG	30
11	Conduct an Assessment of City-owned Lifeline infrastructure; acquire equipment and materials as need to support implementation	Municipal Utilities & Engineering	$500,000-$1,000,00	3-5 years	General Fund/HMA	29
14	Conduct an Assessment of City-owned Facilities; perform Structural and Non-structural Retrofits as needed	Municipal Utilities & Engineering	$500,000-$1,000,000	3-5 years	General Fund/HMA	29

	Mitigation Action	Lead	Cost	Timeframe	Funding	Score
15	Develop a Building Condition Assessment Report for typical of building construction types in the City; develop a program to support structural and non-structural retrofitting	Building Division	$100,000-$300,000	1-3 years	General Fund/HMA	29
16	Develop and maintain a Vegetation Management Plan	Facilities and Community Services	<$100,000	1-3 years	General Fund/HMA	29
27	Develop, maintain, and disseminate an Infectious Disease Response Plan; acquire equipment, supplies, and other material as needed to support role	Emergency Management	<$100,000	1-3 years	General Fund/ HMA	29
34	Develop and maintain a Water Conservation Plan; implement recommendations	Municipal Utilities & Engineering	$100,000-$300,000	<1 year	General Fund	29
35	Develop and maintain a Drought Emergency Plan; acquire equipment, supplies, and other material as needed to support role	Emergency Management / Municipal Utilities & Engineering	$100,000-$300,000	<1 year	General Fund	29
36	Coordinate with State of California local Governments; acquire equipment, supplies, and other material as needed to support role	Emergency Management	$100,000-$300,000	<1 year	General Fund	29
37	Develop and maintain an Extreme Temperature Emergency Plan; acquire equipment, supplies, and other material as needed to support implementation	Emergency Management	$100,000-$300,000	<1 year	General Fund	29
40	Coordinate with local citrus growers; acquire equipment, supplies, and other material as needed to support role	Facilities and Community Services	<$100,000	<1 year	General Fund	29
41	Work with State and County officials; acquire equipment, supplies, and other material as needed to support role	Facilities and Community Services	$100,000-$300,000	<1 year	General Fund	29
6	Develop and maintain an Energy Strategic Plan; acquire necessary equipment to support implementation	Municipal Utilities & Engineering	<$100,000	1-3 years	General Fund/HMA	28
32	Coordinate with Ca Department of Water Resources	Municipal Utilities & Engineering	<$100,000	<1 year	General Fund	28
18	Develop protocols and ensure appropriate personnel are signed up and receive Earthquake Notifications from USGS	Emergency Management	<$100,000	< 1 year	General Fund/ HMA	26

	Mitigation Action	Lead	Cost	Timeframe	Funding	Score
22	Conduct drainage improvements on Mission Zanja	Municipal Utilities & Engineering	> $1,000,000	3-5 years	General Fund/ HMA	26
23	Conduct drainage improvements on Reservoir Canyon	Municipal Utilities & Engineering	> $1,000,000	3-5 years	General Fund/ HMA	26
24	Conduct drainage improvements in Downtown	Municipal Utilities & Engineering	> $1,000,000	3-5 years	General Fund/ HMA	26
25	Conduct drainage improvements in South City	Municipal Utilities & Engineering	> $1,000,000	3-5 years	General Fund/ HMA	26
26	Conduct drainage improvements in North City	Municipal Utilities & Engineering	> $1,000,000	3-5 years	General Fund/ HMA	26

8 PLAN ADMINISTRATION

8.1 MONITORING, EVALUATING AND UPDATING THE PLAN

The City of Redlands Fire Department Emergency Management Division will lead the effort and will be responsible for ensuring that this plan is being monitored and evaluated over the next five (5) years. While there is not a confirmed meeting schedule, the Emergency Management Division will ensure that at a minimum there is an annual meeting of the Hazard Mitigation Planning Team and possibly other interested stakeholders to discuss the LHMP. The first annual meeting will occur one (1) year from the date of FEMA approval. The annual review with the Hazard Mitigation Planning Team will include; not limited to:

- Status on progress towards implementing mitigation measures
- The need for additional and/or removal of mitigation measures
- Adjustments to the mitigation measure and/or implementation plan
- Addition to the Goals and/or objectives
- Revisions to the Hazard Profiles, primarily focused on description, history, location

In addition to the annual meetings, the Emergency Management Division may also leverage existing meetings to review, evaluate, and discuss progress on the mitigation actions set forth in this plan. The Emergency Management Division will ensure that the LHMP is an agenda item or incorporated into the discussion in those meetings whenever appropriate.

The Hazard Mitigation Planning Team will also visit the LHMP after significant hazard events; ensuring Lessons Learned and other vital information is captured for incorporation into future LHMP updates. This will provide the Hazard Mitigation Planning Team with an opportunity to evaluate the value of any implemented mitigation actions, validate the needs of the remaining mitigation actions, and possibly identify additional mitigation actions.

Information obtained from all of these meetings will be captured by the Emergency Management Division and made available for the next LHMP update.

The Emergency Management Division will also lead the effort to update the LHMP. Understanding the need not to have the LHMP expire, the Emergency Management Division will begin the process of updating the LHMP two (2) years prior to the plan expiration date. The Emergency Management Division may or may not seek another Hazard Mitigation Assistance grant or the assistance of a consultant to support this effort. If either of these are true, the Emergency Management Division will incorporate appropriate time to account for those needs.

8.2 INCORPORATION INTO OTHER PLANNING EFFORTS

The City of Redlands is aware of the hazards that face its community, as historic incidents prove that disasters are a common occurrence in this area. The City will continue to strive toward protecting the life, property and economy of the City. The City of Redlands also supports an all-hazard approach, encouraging information sharing between City Departments to incorporate into other planning efforts. As other plans are developed, the LHMP information will be leveraged and incorporated when other plans could benefit

from a better understanding of hazards and the potential mitigation measures that can be taken. Over the past five (5) years, fiscal and personnel challenges has limited the City's ability to fully incorporated the LHMP into other plans. While previous Planning Team members have championed and shared LHMP information during other planning efforts, there has not been a formalized process to truly integrate the LHMP information into other plans. The City is still facing some of those same challenges but is committed to keep pushing for better integration of LHMP information. The City of Redlands is anticipating incorporating and/or leveraging the information from the LHMP into the:

- Emergency Operation Plan
- Water System Emergency Response Plan
- Water Conservation Management Plan (Title 13 – 13.06.010)
- Fire Protection Master Plan (Title 15, Section 15.20.580)
- Spill Prevention Control & Countermeasure Plan
- Storm Water Pollution Prevention Plan (Title 3 3.48.020 and 3.56.020)
- Business Emergency Contingency Plan
- Sewer Capital Improvement (Title 3 – 3.44.020)
- Vegetation Management (Title 15, Section 15.20.560)
- Wildland-Urban Interface Fire Area (Title 15, Section 15.20.550)
- Earthquake – Hazardous Building (Title 15, Section 15.52.020)

The City of Redlands incorporated by reference the previously LHMP into the City's General Plan Safety Element. As opportunities present themselves, the City will make every effort to incorporate the new LHMP information into the City's General Plan, where appropriate. In the meantime, the LHMP will be utilized to assess future development in accordance with the General Plan. In addition to reviewing future development against relevant land use and zoning regulations, building codes and fire codes, and environmental and engineering standards, it will also be reviewed against the LHMP. Proposed development projects will be assessed to determine exposure (or risk) to community hazards. The LHMP will also serve as a reference for suggested mitigation measures to reduce and/or eliminate risk from those hazards.

8.3 CONTINUED STAKEHOLDER AND PUBLIC INVOLVEMENT

As mentioned under Section 2.4 and 2.5, the City of Redlands will organize and/or participate in a variety of meetings/events to share and exchange information about mitigation with stakeholders and the public. The City will use its social media platforms and when, appropriate, leverage stakeholder and community social media platforms to announce the meetings/events. The City will also continue to provide public forms with our quarterly Disaster Council which gives the public and local emergency managers the opportunity to collaborate and coordinate prior to an emergency occurring.

8.4 POINT OF CONTACT

Comments or suggestions regarding this plan may be submitted to:

Fire Department; Emergency Management Division
Esther Martinez, Emergency Management Specialist
35 Cajon Street, Suite 12
Redlands, Ca 92373

APPENDIX 1 ADOPTION RESOLUTION

RESOLUTION NO. 8268

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS ADOPTING THE CITY OF REDLANDS HAZARD MITIGATION PLAN AS REQUIRED BY THE FEDERAL DISASTER MITIGATION AND COST REDUCTION ACT OF 2000

WHEREAS, President William J. Clinton signed H. R. 707, the Disaster Mitigation and Cost Reduction Act of 2000, into law on October 30, 2000; and

WHEREAS, the Disaster Mitigation Act of 2000 requires all jurisdictions to be covered by a Local Hazard Mitigation Plan to be eligible for Federal Emergency Management Agency post - disaster funds; and

WHERAS, local mitigation plans are required as a condition of receiving project grant funds under the Hazard Mitigation Assistance Grants and Public Assistance Eligibility; and

WHEREAS, the city of Redlands' Fire Department has acted as the lead agency in the development of the City of Redlands Hazard Mitigation Plan; and

WHEREAS, the City's Fire Department has coordinated the development of the Hazard Mitigation Plan; and

WHEREAS, the City's Fire Department is concerned about mitigating potential losses from natural disasters before they occur; and

WHEREAS, the plan identifies potential hazards, potential losses and potential mitigation measures to limit losses; and

WHEREAS, the City of Redlands General Plan Safety Element references/incorporates the Local Hazard Mitigation Plan; and

WHEREAS, the California State Governor's Office of Emergency Services and Federal Emergency Management Agency have reviewed the plan; and

WHEREAS, formal adoption of the plan by the Redlands City Council is required before final approval of the plan can be obtained from the Federal Emergency Management Agency; and

WHEREAS, the City Council has determined that it would be in the best interests of the City and its residents and visitors as a whole, to adopt the Hazard Mitigation Plan;

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Redlands as follows:

Section 1. The City Council adopts the City of Redlands Hazard Mitigation Plan, dated November 2021, to meet the requirements of the Disaster Mitigation and Cost Reduction Act of 2000, and directs the Redlands Fire Department Emergency Management Division to forward the Hazard Mitigation Plan to the Governor's Office of Emergency Services and Federal Emergency Management Agency on behalf of the City for final approval.

Section 2. A certified copy of the City of Redlands Hazard Mitigation Plan shall be placed on file with the City Clerk's office and is available for viewing by the public.

ADOPTED, SIGNED AND APPROVED this 16th day of November, 2021.

Paul T. Barich, Mayor

ATTEST:

Jeanne Donaldson, City Clerk

I, Jeanne Donaldson, City Clerk of the City of Redlands, hereby certify that the foregoing resolution was duly adopted by the City Council at a regular meeting thereof held on the 16th day of November, 2021

AYES: Councilmembers Foster, Tejeda, Davis, Guzman-Lowry; Mayor Barich
NOES: None
ABSENT: None
ABSTAINED: None

Jeanne Donaldson, City Clerk

APPENDIX 2 PLANNING TEAM MEMBERS

Agency	Department	Staff	Position
City of Redlands	Airport	Shaffer, Carl	Airport Supervisor
City of Redlands	City Manager's Office	Baker, Carl	Public Information Officer
City of Redlands	City Manager's Office	McConnell, Janice	Assistant City Manager
City of Redlands	Development Services	Esparza, Cruz	Economic Development Manager
City of Redlands	Development Services	Foote, Brian	Planning Director
City of Redlands	Facilities and Community Services	Sullivan, Tim	Assistant Director
City of Redlands	Finance	Jenner, Farrah	Assistant Finance Director
City of Redlands	Fire	Anderson, Vincent	Fire Marshal
City of Redlands	Fire	Crews, Carly	EMS Coordinator
City of Redlands	Fire	Martinez, Esther	Emergency Operations Specialist
City of Redlands	Fire	Reyes, Bruni	Management Analyst
City of Redlands	Fire	Sessler, Rich	Deputy Chief
City of Redlands	Human Resources	Ng, Tommi	Assistant Director
City of Redlands	Innovation and Technology	Resh, Tom	GIS Supervisor/Web Administrator
City of Redlands	Innovation and Technology	Sanchez, Sandra	Information Technology
City of Redlands	Library	McCue, Don	Director
City of Redlands	Municipal Utilities and Engineering	Watson, Kevin	Operations Manager

HOW TO SUBMIT COMMENTS: Following public health recommendations to limit public gatherings during the COVID-19 pandemic, City Manager Charles M. Duggan Jr., acting as the City of Redlands Emergency Services Director has directed that Commission/Board meetings be closed to the public until further notice or until the current local State of Emergency has been lifted.

In order to have your public comment read into the public record at the meeting, members of the public are asked to submit comments (250 words or less) prior to Thursday, October 22, 2020 at 5:00 p.m. to Esther Martinez by email at **emartinez@cityofredlands.org** or by telephone at (909) 307-7313.

In compliance with the Americans with Disabilities Act, if you need special assistance to participate in this meeting, please contact the Goutam Dobey of Municipal Utilities/Engineering Department at (909) 798-7584 ext. 5. Notification 48 hours prior to the meeting will enable the City to make reasonable arrangements to ensure accessibility to this meeting. (28 CFR 35.102-35.104 ADA Title II)

Individuals with a disability, consistent with the Americans with Disabilities Act, who need assistance with public comment, may contact Esther Martinez by telephone (909) 307-7313 or by email at **emartinez@cityofredlands.org** at least two hours before the meeting to make alternate arrangements.

A. Call to Order (Mayor Paul W. Foster)

B. Pledge of Allegiance (Mayor Paul W. Foster)

C. Public Comment (Mayor Paul W. Foster)
(At this time, the Disaster Council chair will read all public comments, up to 250 words, into record if they are received in accordance with the deadlines stated above. Please Note: The Disaster Council may not discuss or take action on any public comment made..

D. Introductions / Welcome (Chief Sessler)

E. Approval of Minutes (Mayor Paul W. Foster)

F. Old Business
1. No Follow-up items

G. New Business
1. Presentation by Andy Petrow from APetrow Consulting "City of Redlands Local Hazard Mitigation Plan Update"
    a. https://www.cityofredlands.org/sites/main/files/file-attachments/redlands_final_hmp_april_2015.pdf?1552928023

H. Member Announcements (Roundtable)

I. Possible agenda items for next meeting (?)

J. Adjournment
(The next Disaster Council Meeting will be held on January 25, 2021)

In compliance with the Americans with Disabilities Act, if you need special assistance to participate in this meeting, please contact the Goutam Dobey of Municipal Utilities/Engineering Department at (909) 798-7584 ext. 5. Notification 48 hours prior to the meeting will enable the City to make reasonable arrangements to ensure accessibility to this meeting. (28 CFR 35.102-35.104 ADA Title II)

City of Redlands

Local Hazard Mitigation Plan Update

PUBLIC KICKOFF MEETING/PRESENTATION

OCTOBER 26, 2020

Purpose of the Meeting/Presentation

- Introduce the Project
  - What and Why were are doing it
- Gain Common Understanding of:
  - Mitigation
  - Local Hazard Mitigation Plans (LHMP)
- Increase Awareness of the City of Redlands LHMP and Update Process
  - What hazards are being addressed
  - How the LHMP will be updated
- Set expectations moving forward
  - How you can keep updated on progress

Agenda

- Background
- Definition of Mitigation
- Local Hazard Mitigation Plans (LHMP) Overview
- City of Redlands LHMP Overview
- Public Outreach Effort
- Next Steps

Background

- FEMA provides funds after disasters to mitigate future impacts
- Historically difficult to identify eligible projects
  - *pressure to obligate funds*
- In 2000, FEMA revised regulations to require an LHMP to received mitigation funds
- LHMP must be comprehensive and identify projects
  - *Project must be in LHMP to be eligible for funding*

Definition of Mitigation

- Part of the Disaster Cycle
- FEMA defines Mitigation as the *"effort to reduce and/or eliminate loss of life and property by lessening the impacts from hazards"*
- Benefits of mitigation include:
  - Saved lives
  - Reduced damage to property
  - Reduced economic losses
  - Minimized social disruption
  - Shorter recovery period for the community

Local Hazard Mitigation Plans

Goal-

- To develop a strategy to reduce and/or eliminate impacts from hazards

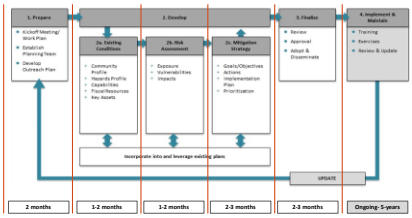
Objectives-

- Apply a comprehensive planning approach
  - Involve the Whole Community (regional stakeholders)
  - Address Multi-hazards
  - Engage the public
- Understand capabilities and vulnerabilities to hazards
  - Identify Key Assets
- Identify projects and actions
- Integrated with other planning efforts

Local Hazard Mitigation Plans (cont)

LHMP Requirements

- Locals prepare, adopt, and maintain….must be update every 5 years
- Cal OES reviews
- FEMA approves



What are Cal OES/FEMA are looking for……

- Proper documentation of planning process
- Current community, hazard, and impact information
- Validation/Identification of projects and actions
- Method for plan review (updating) and implementation
- Verification plan was adopted

City of Redlands LHMP

- Last Approved and Adopted in 2015
- Can be found on the City's website
  https://www.cityofredlands.org/pod/emergency-plans
- Analyzed the following hazards
  - Chemical Agents
  - Chemical/Hazardous Materials Spill
  - Crop Losses/Freezing
  - Dam Breach
  - Disease
  - Drought
  - Earthquake
  - Energy/Power Outage/Excessive Heat
  - Flooding
  - Infestation
  - Mudslide/Landslide
  - Tornado
  - Wildfire
  - Windstorm
- Mitigation Actions (projects) focused on priority hazards

City of Redlands LHMP (cont)

City of Redlands LHMP (cont)

Planning Team

- Representatives from the City Departments
- Representatives from Regional Stakeholders
  - State
  - County
  - Special Districts
  - Non-governmental Organizations
  - Lifelines
  - Hospitals/Care Facilities
  - Businesses (large employment corporations)
- Consultant Team

Public Outreach Effort

- Because of COVID-19 challenges with, outreach will be done virtually
- Two (2) public meetings
  - Project kickoff….*this meeting*
  - Draft plan review
- Status Updates
  - City Social Media (Website, FaceBook, Instagram, LinkedIn, Twitter)
  - Other Social Media (NextDoor, stakeholder social media platforms)
  - Leverage City Council/Community meetings
  - *Possibly* Newspapers/letters (local, regional, city, community organizations)
  - *Possibly* Flyer Announcements (inserts in invoices/bills)

Next Steps

- Review public comments
- Hold additional Planning Team meetings
- Prepare and Review draft LHMP sections
- Provide status updates to the public

Contacts

- Esther Martinez
  - (909) 798-7600
  - emartinez@cityofredlands.org
- Andy Petrow
  - (818) 294-5472

City of Redlands

Local Hazard Mitigation Plan Update

PUBLIC KICKOFF MEETING/PRESENTATION

APRIL 26, 2021

Purpose of the Meeting/Presentation

- Quick Overview of the Project
  - What is a Local Hazard Mitigation Plan (LHMP)
  - Why are we updating the LHMP
- Review Information in the draft LHMP
  - Federal Requirements
  - List of Community Hazards
  - Proposed Mitigation Measures/Actions
- Discuss Next Steps
  - What is left to do

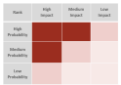
Overview

- FEMA provides funds to mitigate hazard impacts but require a LHMP
  - *Mitigation measure/action must be in LHMP to be eligible*
- LHMP = City's strategy to mitigate impacts from hazards
  - *Must include a comprehensive planning process*
  - *Must understand capabilities and vulnerabilities*
  - *Must include mitigation measures/actions*
- LHMP must be updated every 5 years
  - *City of Redlands last updated in 2015*

Federal Requirements

- Locals prepare, adopt, and maintain
- Cal OES reviews
- FEMA approves

What are Cal OES/FEMA are looking for……



- Documentation of planning process
- List of current capabilities and hazards
- Understanding of impacts (vulnerability)
- Identification of mitigation measures/actions
- Plan for maintaining and implementing LHMP

Capability Assessment

- What tools are in your mitigation toolbox
- Resources
  - ***Personnel-*** *who works (can work) on mitigation efforts*
  - ***Governance-*** *what rules are in place to support mitigation*
  - ***Technical-*** *what special skills are available to support mitigation*
  - ***Fiscal-*** *what kind of funding is available for mitigation efforts*

Hazards in the Draft LHMP

- Analyze all hazards in the community
  - *Provide Description, History, Location, other information*
- Screen (prioritize) all hazards
  - *Probability vs Impact*
- Hazards in the LHMP; Priority hazards in **bold**
  - Aircraft Accident/Incident
  - Chemical Agent Release
  - Civil Disturbance
  - Dam Breach
  - Drought
  - **Earthquake**
  - **Energy Shortage/Power Outage**
  - Extreme Temperature
  - **Flood**
  - Hazardous Material Accident
  - **Infectious Disease**
  - Infestation
  - Landslide
  - Technology Disruption
  - Train Accident/Incident
  - **Wildfire**
  - **Windstorm**

Vulnerability Assessment

- Quantitative Impacts
  - *Damage Assessment models (Hazus)*
  - *Exposure Assessment (hazard footprint)*
- Qualitative Impacts
  - *Population*
  - *Built Environment*
  - *Lifelines*
  - *Economy*
  - *Environment*

Mitigation Strategy

- Only need to address *priority* hazards
- Includes actions that cut across multiple hazards
- Actions need to be prioritized
  - *Assessed against typical challenges to projects (feasibility assessment)*
- Must have an implementation plan
  - *Identify lead Department*
  - *Estimate on how long it will take*
  - *Estimate how much it may cost*
  - *Identify possible funding sources*

Proposed Mitigation Measures/Actions

- Develop a **Key Asset** Database
- Adopt policy to **incorporate hazards** into relevant city plans/programs
- Develop/Expand **MOUs** and **Public-Private Partnerships**
- Develop/Expand **Public Outreach** efforts regarding hazards
- Develop/Expand **Emergency Management Training and Exercises**
- **Assess City-owned Facilities** (structural/non-structural retrofitting)
- Develop **Mitigation Reference Guide** for privately-owned Facilities
- **Build Closer Working Relationship** with utilities, government (State, County, locals), Airports/Rail, Citrus Growers, local Businesses, Faith-based organizations
- **Improve Drainage** throughout the City

Proposed Mitigation Measures/Actions (*cont.*)

- Develop/Expand **Plans/Assessments;** *implement recommendations*
  - *Business Continuity Plan*
  - *Emergency Circulation Plan*
  - *Emergency Operations Plan*
  - *Emergency Public Communications Plan*
  - *Energy Strategic Plan*
  - *Extreme Temperature Plan*
  - *Infectious Disease Response/Recovery Plan*
  - *Technology Master Plan; including an IT Incident Response Plan*
  - *Vegetation Management Plan*
  - *Water Conservation/Drought Emergency Plan*

Next Steps

- Review public comments
  - *Draft LHMP can be found on City website by end of the week*
- Finalize draft LHMP with the Planning Team
- Submit and Review draft LHMP with Cal OES/FEMA
  - *Revise as needed*
- City Council Adoption

Contacts

Appendix 6 List of Significant Earthquakes in California Since 1700

Date	Magnitude	Name, Location, or Region Affected	Loss of Life and Property
1700, Jan. 26	9.0	Offshore, somewhere between Cape Mendocino and Canada	Limited data available, magnitude is an estimate. Shook northern California, Oregon, Washington, and southern British Columbia; caused tsunami damage to villages in Japan and western US
1857, Jan 9	7.9	Great Fort Tejon earthquake	1 dead; damage from Monterey to San Bernardino County
1906, Apr 18	7.8	Great 1906 San Francisco Earthquake and Fire	3,000 dead; $524 million in property damage (includes damage from fire)
1838, Jun	7.4	San Francisco to San Juan Bautista	Limited data available, magnitude is an estimate. Damage to San Francisco and Santa Clara
1872, Mar 26	7.4	Owens Valley	27 dead; 56 injured; $250,000 in property damage
1980, Nov 8	7.4	West of Eureka	6 injured; $2 million in property damage
1812, Dec 8	7.3	Wrightwood	Limited data available, magnitude is an estimate. 40 dead at San Juan Capistrano
1892, Feb 24	7.3	Laguna Salida, Baja California	Damage to San Diego and Imperial Valley
1922, Jan 31	7.3	Offshore, about 70 mi W of Eureka	
1952, Jul 21	7.3	Kern County earthquake	12 dead; $60 million in property damage
1954, Dec 16	7.3	Fairview Peak, near Fallon, NV	
1992, Jun 28	7.3	Landers	1 dead; 402 injured; $91.1 million in property damage
1923, Jan 22	7.2	Off Cape Mendocino	Destructive in Humboldt County; strongly felt in Reno
1932, Dec 21	7.2	Cedar Mountain, near Gabbs, NV	
1992, Apr 25	7.2	Petrolia	356 injured; $48.3 million in property damage
1812, Dec 21	7.1	Los Angeles, Ventura, Santa Barbara	Limited data available, magnitude is an estimate. 1 dead
1927, Nov 4	7.1	40 km west of Lompoc	Damage in Santa Barbara and San Luis Obispo counties
1954, Dec 16	7.1	Dixie Valley, near Fallon, NV	
1868, Oct 21	7.0	Hayward Fault	30 dead; $350,000 in property damage
1899, Apr 16	7.0	Offshore, about 80 miles west of Eureka	
1934, Dec 31	7.0	In Mexico, about 100 miles SE of El Centro	
1940, May 19	7.0	Imperial Valley	9 dead; $6 million in property damage
1991, Aug 17	7.0	Offshore, about 100 miles NW of Eureka	Preceded by two quakes (M 6.3 and 6.2) on Aug. 16 and 17
1994, Sep 1	7.0	Offshore, about 70 miles W of Cape Mendocino	
1873, Nov 23	6.9	Crescent City region	Damage in California-Oregon border area
1989, Oct 17	6.9	Loma Prieta	63 dead; 3,737 injured; $6 billion in property damage

1872, Mar 26	6.8	Owens Valley	Aftershock of previous entry
1872, Apr 11	6.8	Owens Valley	Aftershock of March 26, 1872 quake
1890, Feb 9	6.8	San Jacinto fault?	Little damage
1918, Apr 21	6.8	San Jacinto	1 dead; several injuries; $200,000 in property damage
1925, Jun 29	6.8	Santa Barbara	13 dead; $8 million in property damage
1954, Jul 6	6.8	Rainbow Mountain, near Fallon, NV	
1999, Oct 16	7.1	Bullion Mountains (Hector Mine)	Minimal injuries and damage due to sparse population in affected area
1954, Aug 24	6.8	Rainbow Mountain, near Fallon, NV	
1976, Nov 26	6.8	Offshore, about 100 mi WNW of Eureka	
1898, Apr 15	6.7	Fort Bragg - Mendocino	Limited data available, magnitude is an estimate. Damage from Fort Bragg to Mendocino; 3 houses collapsed; landslides reported
1899, Dec 25	6.7	San Jacinto and Hemet	6 dead; $50,000 in property damage
1994, Jan 17	6.7	Northridge	57 dead; more than 9,000 injured; about $40 billion in property damage
1892, Apr 19	6.6	Vacaville	1 dead; $225,000 in property damage
1915, Nov 21	6.6	In Mexico, about 60 miles S of El Centro	
1941, Feb 9	6.6	Offshore, about 65 miles W of Eureka	
1954, Dec 21	6.6	East of Arcata	1 dead; several injured; $2.1 million in property damage
1968, Apr 8	6.6	Borrego Mountain	
1971, Feb 9	6.6	San Fernando	65 dead; more than 2,000 injured; $505 million in losses
1987, Nov 24	6.6	Superstition Hills	part of above damage
1992, Apr 26	6.6	Petrolia	Aftershock of the Apr. 25 quake
1992, Apr 26	6.6	Petrolia	Another aftershock of Apr. 25 quake
1852, Nov 29	6.5	Near Fort Yuma, Arizona	Limited data available, magnitude is an estimate.
1860, Mar 15	6.5	Carson City	Limited data available, magnitude is an estimate.
1865, Oct 8	6.5	Santa Cruz Mountains	$0.5 million in property damage
1918, Jul 15	6.5	Offshore, about 40 W of Eureka	
1934, Jul 6	6.5	Offshore, about 100 mi WNW of Eureka	
1934, Dec 30	6.5	In Mexico, about 40 miles S of El Centro	
1947, Apr 10	6.5	East of Yermo	
1956, Feb 9	6.5	In Mexico, about 80 miles SW of El Centro	
1979, Oct 15	6.5	Imperial Valley	9 injured; $30 million in property damage
1992, June 28	6.5	Big Bear	Included with Landers losses, above
2003, Dec 22	6.5	San Simeon	

1836, Jun 10	6.4	Near San Juan Bautista	Limited data available, magnitude is estimate. Older reports reported quake as possibly larger and centered near Oakland
1898, Mar 31	6.4	Mare Island	$350,000 in property damage
1991, Jul 12	6.6	Offshore west of Crescent City	
1899, Jul 22	6.4	Wrightwood	Chimneys knocked down; landslides reported
1911, Jul 1	6.4	Morgan Hill area	
1933, Mar 11	6.4	Long Beach	115 dead; $40 million in property damage
1942, Oct 21	6.4	About 25 miles W of Westmoreland	
1983, May 2	6.4	Coalinga	
1986, Jul 21	6.4	Chalfant Valley	
1800, Nov 22	6.3	San Diego/San Juan Capistrano region	Limited data available, magnitude is an estimate. Damaged adobe walls of missions in San Diego and San Juan Capistrano
1922, Mar 10	6.3	Parkfield	
1995, Feb 19	6.3	Offshore, about 70 miles W of Cape Mendocino	
1980, May 25	6.2	Mammoth Lakes	
1984, Apr 24	6.2	Morgan Hill	$8 million in property damage
1908, Nov 4	6.0	SW of Death Valley	
1948, Dec 4	6.0	East of Yermo	
1980, May 25	6.0	Mammoth Lakes	
1987, Oct 1	6.0	Whittier Narrows	8 dead; $358 million in property damage to 10,500 homes and businesses

Attachment 3

Adoption Resolution

3

City Council **AGENDA ITEM NO. K3.**

DATE: June 2, 2026

TO: Honorable Mayor and City Council Members

SUBJECT: Public Hearing to consider Resolution No. 8785 adopting Part 1, Part 2- Chapter 4, Part 3 and Part 4- Appendix D of the 2025 Regional Urban Water Management Plan (Municipal Utilities and Engineering Director Heredia)

PROCEDURE FOR PUBLIC HEARING:

1. Mayor declares the meeting open as a public hearing.
2. Mayor calls upon Department Director for report.
3. Mayor calls for questions/comments from members of the City Council.
4. Mayor calls for comments/questions/testimony from members of the public (3 minutes per speaker)
5. Mayor calls upon City Clerk to note any written comments received.
6. Mayor closes the public hearing.
7. City Council considers the motion and votes.

MOTION:

If the City Council determines that staff's recommendation is appropriate, the following motion is provided:

I move that the City Council adopt Resolution No. 8785

RECOMMENDATION:

Staff recommends City Council adopt Resolution No. 8785, and determine that this action is exempt from environmental review pursuant to Section 15061 (b)(3) of the State's guidelines implementing the California Environmental Quality Act.

DISCUSSION:

Every five (5) years, the City is required to develop an Urban Water Management Plan (UWMP) in accordance with the Urban Water Management Planning Act. The Act states that "every urban water supplier that provides water to 3,000 or more customers, or that provides more than 3,000 acre-feet of water annually, should make every effort to ensure an appropriate level of reliability in its water service area sufficient to meet the needs of its various categories of customers during normal, dry, and multiple dry years." The plan must be formally adopted by City Council and submitted to the California Department of Water Resources (DWR) no later than July 1, 2026. In 2025, regional agencies located within the Bunker Hill basin began developing a regional UWMP, rather than individual agency UWMPs. This approach benefits all agencies involved by consolidating UWMP development efforts, which reduces costs for each agency.

The City of Redlands and regional water suppliers developed individual chapters as required by DWR reporting requirements into a single comprehensive planning document known as the 2025 Regional Urban Water Management Plan (Plan). Resolution No. 8785 adopts Part 1, Part 2- Chapter 4, Part 3, and Part 4- Appendix D of the Plan. Part 1 and Part 3 include regional context and supporting information. Part 2 and Part 4 include individual agency UWMPs and supporting information. Adoption of these specific portions of the UWMP allows future amendments by individual agencies without the need for all agencies to adopt an entirely new Plan.

Adoption of Resolution No. 8785 is exempt from environmental review pursuant to Section 15061(b)(3) of the State's guidelines implementing the California Environmental Quality Act as it has no possibility of having a significant effect on the environment.

ALTERNATIVES:

The City Council may choose to deny adoption of Resolution No. 8785; however, elements of the Plan included in adoption of the resolutions are mandated by the State.

SUBMITTED BY:
Monica Heredia, Municipal Utilities and Engineering Director

RECOMMENDED BY:
Charles M. Duggan Jr., City Manager

REVIEWED BY:
Yvette M. Abich Garcia, City Attorney
Janice McConnell, Assistant City Manager
James Garland, Interim Management Services/Finance Director

PREPARED BY:
Paul Mariscal, Water Utility Manager

FISCAL IMPACT

Fiscal Year: FY 2025/26

Revenue Generating: No

Amount: N/A

Budgeted Y/N: N/A

Account No.: N/A

Additional Appropriation Required: No

Discussion:

There is no direct fiscal impact.

RESOLUTION NO. 8785

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF REDLANDS ADOPTING THE 2025 UPPER SANTA ANA RIVER WATERSHED REGIONAL URBAN WATER MANAGEMENT PLAN

WHEREAS, the City of Redlands and other water managers in the upper Santa Ana River watershed have long recognized the importance of regional collaboration and integration of single purpose efforts and regularly work across jurisdictional boundaries to implement regional multi-benefit projects and programs that address multiple water resource management issues, including local and imported water supplies, recycled water, storm water management, groundwater management, water use efficiency, habitat and open space management, and many others; and

WHEREAS, The California Urban Water Management Planning Act, Water Code Section 10610 et seq. ("UWMP Act"), mandates that every urban supplier of water providing water for municipal purposes to more than 3,000 customers or supplying more than 3,000 acre-feet of water annually, prepare an Urban Water Management Plan ("UWMP"); and

WHEREAS, City of Redlands meets the definition of an urban water supplier for purposes of the UWMP Act; and

WHEREAS, the UWMP Act requires that said UWMP be updated and adopted at least once every five years on or before July 1, in years ending in six and one; and

WHEREAS, the UWMP Act allows for water suppliers to work together to develop a cooperative regional UWMP and in 2010, 2015, and 2020, the San Bernardino Valley Regional UWMP (RUWMP) was prepared collaboratively by multiple water suppliers to collectively meet the requirements of the UMWP Act; and

WHEREAS, the 2025 RUWMP document is organized into four parts: Part 1 – Regional Context, Part 2 – Individual Agency UWMPs, Part 3 – Regional Supporting Information and Part 4 – Individual Agency Supporting Information; and

WHEREAS, as a participant in the 2025 RUWMP, the City of Redlands has prepared those portions of the RUWMP applicable to the City of Redlands to meet the requirements of the UWMP Act and other applicable laws and regulations, which include Part 1, Part 2 Chapter 4: City of Redlands UWMP, Part 3, and Part 4 Appendix D: City of Redlands Supporting Information; and

WHEREAS, in accordance with applicable legal requirements, the City of Redlands has undertaken certain coordination, notice, public involvement, public comment, and other procedures in relation to the 2025 RUWMP; and

WHEREAS, in accordance with the UWMP Act, The City of Redlands has prepared the 2025 RUWMP with staff from its own agency, with the assistance of consulting professionals, and in cooperation with other governmental agencies, and has utilized and relied upon industry standards and the expertise of industry professionals in preparing its 2025 RUWMP, and has also utilized the DWR Guidebook for Urban Water Suppliers to Prepare 2025 Urban Water

Management Plans; and

WHEREAS, in accordance with applicable law, a Notice of a Public Hearing regarding the City of Redlands' adoption of Part 1, Part 2-Chapter 4, Part 3 and Part 4-Appendix D of the 2025 RUWMP was published within the jurisdiction of the City of Redlands on April 10, 2026, and April 17, 2026; and

WHEREAS, in accordance with applicable law, including but not limited to Water Code sections 10608.26 and 10642, a public hearing was held on June 2, 2026, at 6:00 P.M., or soon thereafter, in order to provide members of the public and other interested entities with the opportunity to be heard in connection with proposed adoption of the 2025 RUWMP and issues related thereto; and

WHEREAS, pursuant to said public hearing on the 2025 RUWMP, the City of Redlands, among other things, encouraged the active involvement of diverse social, cultural, and economic members of the community within the City of Redlands' service area with regard to the preparation of the Plan, and encouraged community input regarding the 2025 RUWMP; and

WHEREAS, the City Council has reviewed and considered the purposes and requirements of the UWMP Act, the contents of the 2025 RUWMP, and the documentation contained in the administrative record in support of the 2025 RUWMP, and has determined that the factual analyses and conclusions set forth in the 2025 RUWMP are legally sufficient; and

WHEREAS, the City Council desires to adopt Part 1, Part 2 Chapter 4, Part 3 and Part 4, Appendix D of the 2025 RUWMP in order to comply with the UWMP Act.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF REDLANDS AS FOLLOWS:

Section 1. The City Council hereby finds and determines that the adoption of this Resolution is exempt from review and under the California Environmental Quality Act Guidelines Section 15061(b)(3) because it can be seen with certainty that this Urban Water Management Plan will have no significant impact on the environment.

Section 2. Part 1, Part 2-Chapter 4, Part 3 and Part 4-Appendix D of the 2025 RUWMP is hereby adopted as amended by changes incorporated by the City Council as a result of input received (if any) at the public hearing and ordered filed with the Clerk of the City Council.

Section 3. The Municipal Utilities and Engineering Department Director ("MUED Director") is hereby authorized and directed to include a copy of this Resolution in the 2025 RUWMP.

Section 4. The MUED Director is hereby authorized and directed, in accordance with Water Code sections 10621(d) and 10644(a)(1)-(2), to electronically submit a copy of the City of Redlands' portions of the 2025 RUWMP to DWR no later than July 1, 2026.

Section 5. The MUED Director is hereby authorized and directed, in accordance with

Water Code section 10644(a), to submit a copy of the 2025 RUWMP to the California State Library, and any city or county within which the City of Redlands provides water supplies no later than thirty (30) days after this adoption date.

Section 6. The MUED Director is hereby authorized and directed, in accordance with Water Code section 10645, to make the 2025 RUWMP available for public review at the City of Redlands' offices during normal business hours and on the City of Redlands' website no later than thirty (30) days after filing a copy of the 2025 RUWMP with DWR.

Section 7. The MUED Director is hereby authorized and directed, in accordance with Water Code Section 10635(b), to provide that portion of the 2025 RUWMP prepared pursuant to Water Code Section 10635(a) to any city or county within which The City of Redlands provides water supplies no later than thirty (30) days after submitting a copy to DWR;

Section 8. The MUED Director is hereby authorized and directed to implement the 2025 RUWMP in accordance with the UWMP Act and to provide recommendations to the City Council regarding the necessary budgets, procedures, rules, regulations, or further actions to carry out the effective and equitable implementation of the 2025 RUWMP in collaboration with the regional partners.

ADOPTED, SIGNED AND APPROVED this 2nd of June, 2026.

_____
Mario Saucedo, Mayor

ATTEST:

_____
Jeanne Donaldson, City Clerk

I, Jeanne Donaldson, City Clerk of the City of Redlands, hereby certify that the foregoing resolution was duly adopted by the City Council at a regular meeting thereof held on the 2nd day of June, 2026, by the following vote:

AYES:
NOES:
ABSENT:
ABSTAIN:

_____
Jeanne Donaldson, City Clerk

2025 San Bernardino Valley Regional Urban Water Management Plan

Executive Summary

2025 San Bernardino Valley Regional Urban Water Management Plan

Due to the dedicated and collaborative efforts of the regional water managers, water resources in the San Bernardino Valley continue to support thriving communities and are vital to protect and enhance natural resources. Water supply reliability over the next 25 years continues to remain strong and will be able to withstand uncertainties, including extended drought conditions.

The 2025 Regional Urban Water Management Plan (RUWMP or Plan) was prepared as a collaborative effort by nine Participating Agencies: San Bernardino Valley Municipal Water District, City of Colton, City of Loma Linda, City of Redlands, City of Rialto, City of San Bernardino Municipal Water Department, Riverside Highland Water Company, South Mesa Water Company, and West Valley Water District.

SAN BERNARDINO VALLEY

CITY OF LOMA LINDA CALIFORNIA INCORPORATED 1970

CITY OF REDLANDS INCORPORATED 1888

CITY OF RIALTO, CALIFORNIA INCORPORATED NOV. 17, 1911

RIVERSIDE HIGHLAND WATER COMPANY Est. 1898 THINK · PLAN · PERFORM · CONSERVATION

CITY OF SAN BERNARDINO WATER DEPT.

SOUTH MESA WATER COMPANY CALIMESA, CALIF.

West Valley Water District

Purpose of the Plan

The California Water Code requires urban water suppliers within the state to prepare and adopt Urban Water Management Plans (UWMPs) for submission to the California Department of Water Resources (DWR) every 5 years. A UWMP describes water supply planning for a 25-year planning period in five-year increments and identifies water supplies needed to meet existing and future demands. The demand analysis identifies supply reliability under three hydrologic or rainfall conditions: an average (or normal) year, a single-dry year, and multiple-dry years.

A UWMP is intended to function as a planning tool to guide broad-perspective decision making by water supply managers. It is a long-term, general planning document, rather than an exact blueprint for supply and demand management. Water management in California is not a matter of certainty, and planning projections may change in response to a number of factors. The long term perspective provided by a UWMP supports decisions by water managers to invest in feasible and cost-effective options and opportunities to maintain water supply reliability into the future.

This UWMP addresses several planning objectives, including:

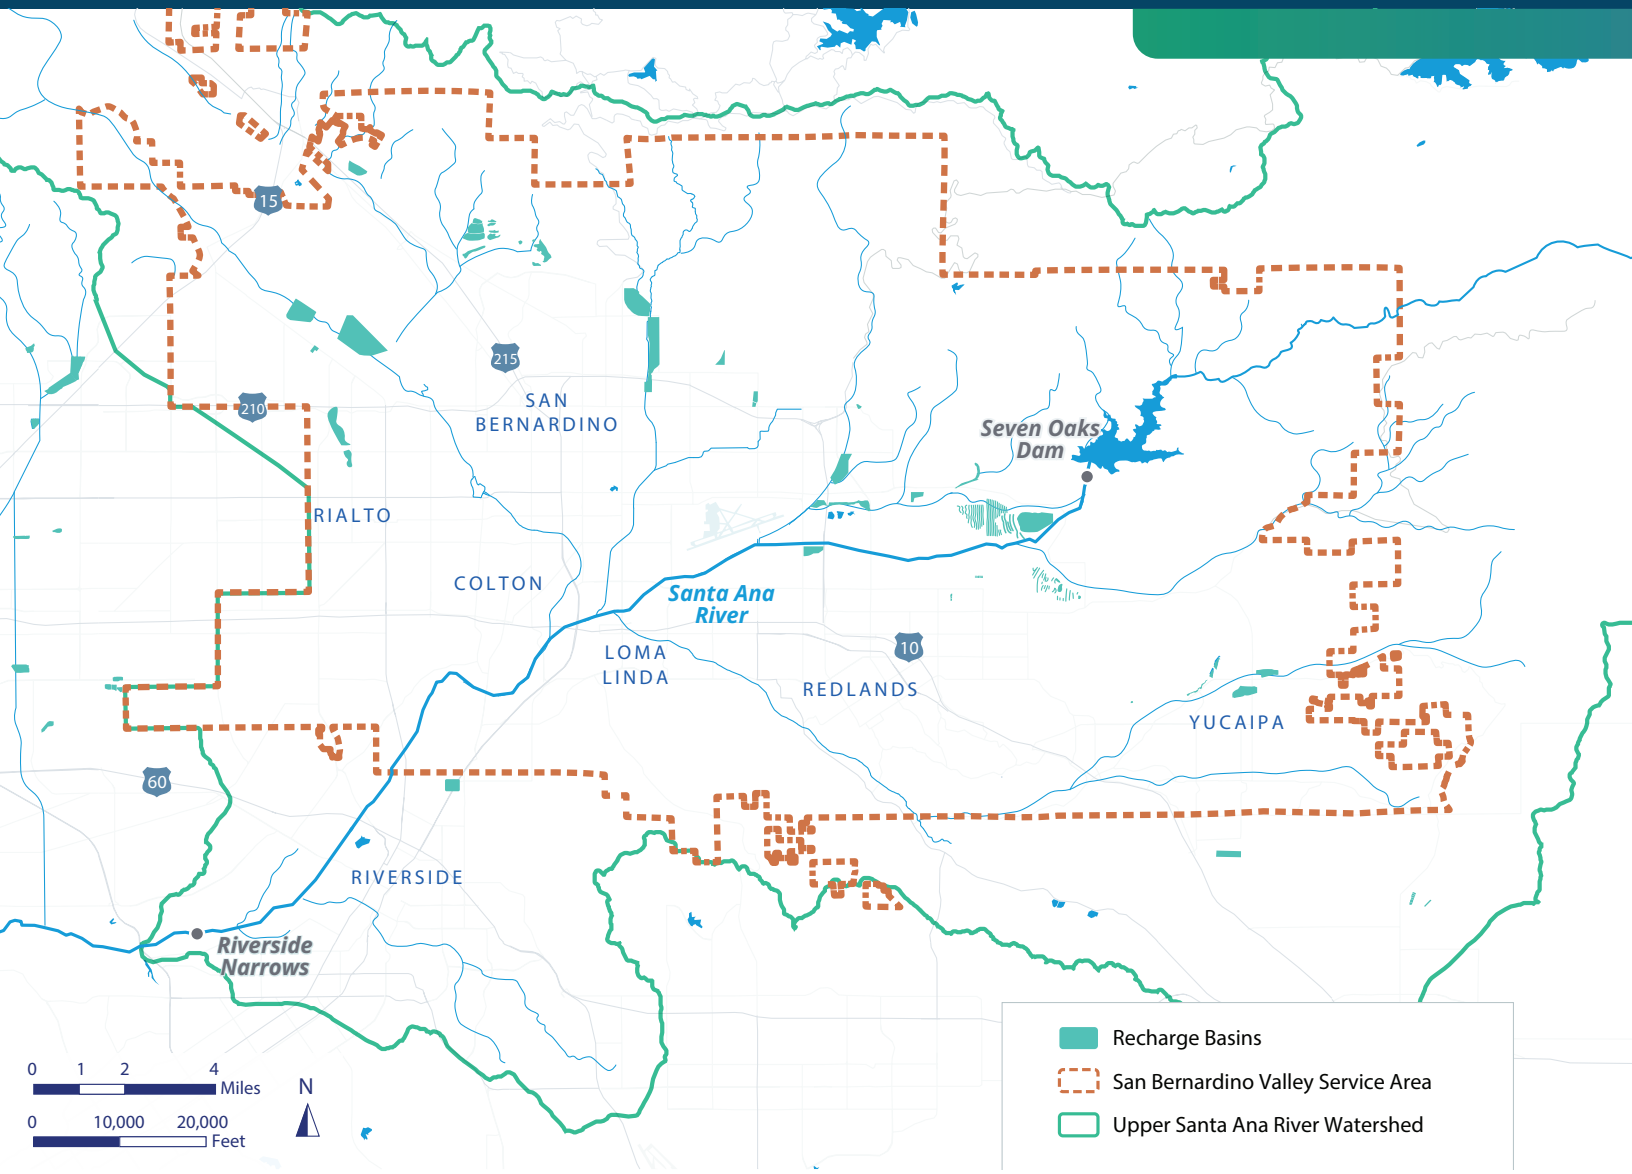
1. Identification of the potential sources of water supply and the reasonable amount of supply available from each source.
2. Estimation of probable water demand based on a reasonable set of assumptions regarding growth and the implementation of good water management practices.
3. Evaluation of how current and future water supply and demand compare, based on the supplies anticipated to be pursued.

Regional Collaboration

Beginning with the 2010 UWMP cycle, San Bernardino Valley Municipal Water District (San Bernardino Valley), the region's wholesale water supplier, and several retail water agencies in the region have collaborated to prepare a San Bernardino Valley Regional UWMP (RUWMP) that addresses the entire San Bernardino Valley service area (Region).

The purpose of jointly preparing the RUWMP is to facilitate a consistent evaluation of water sources common to the various agencies, to take advantage of group knowledge and experience, and to reduce collective preparation costs. The unique document structure of the RUWMP preserves each agency's ability to independently convey unique water management considerations for their service area while leveraging the regional information and activities that are applicable to all.

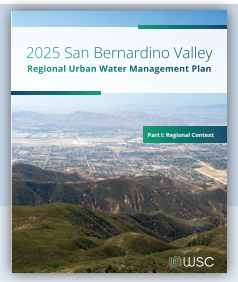
In addition to the Participating Agencies, this RUWMP incorporates data from other agencies within the San Bernardino Valley that rely wholly or partially on the shared water resources analyzed in this Plan. While these agencies are not signatories to this RUWMP, their water demands and associated supply needs are included to accurately evaluate regional water supply reliability through 2050.



Key Takeaways

- **Coordinated regional planning:** Since 2010, San Bernardino Valley and regional retailers have jointly prepared a Regional UWMP to consistently evaluate shared water resources and reduce planning costs.
- **Local flexibility with regional consistency:** The RUWMP structure supports agency-specific planning while relying on common regional analyses and data.
- **Complete view of shared water demands:** The Plan includes demands from both participating and non-signatory agencies to accurately assess regional water supply reliability through 2050.

Service Area

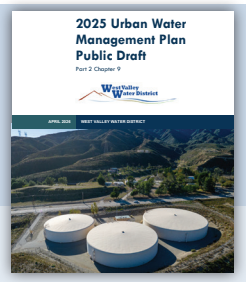


San Bernardino Valley and eight retail water agencies collaborated to produce this 2025 RUWMP spanning the San Bernardino Valley service area. The Region encompasses more than 350 square miles and includes a vast metropolitan area that is home to approximately 725,000 residents and a robust and diverse economy.

Organization of the Plan

The organization of the 2025 RUWMP is depicted below.

Each Participating Agency adopted the Regional Context and Supporting Information, Parts 1 and 3, and their respective chapters and appendices of Parts 2 and 4.

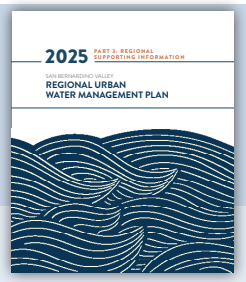


Regional Context

Part 1 contains the information needed to meet a portion of the UWMP Act requirements for the local agencies who are using this Plan to meet their 2025 UWMP Requirements.

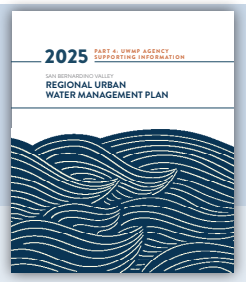
CONTENTS

1. Introduction
2. Region Description
3. Regional Water Sources and Management
4. Regional Water Use
5. Comparison of Regional Supplies and Demands



Local Agency UWMPs

Part 2 provides supplemental information for the nine local agencies who are using this Plan to meet their 2025 UWMP requirements.



CONTENTS

1. San Bernardino Valley Municipal Water District
2. City of Colton
3. City of Loma Linda
4. City of Redlands
5. City of Rialto
6. Riverside Highland Water Company
7. San Bernardino Municipal Water Department
8. South Mesa Water Company
9. West Valley Water District

Regional Supporting Information

Part 3 includes all of the supporting documentation referenced in Part 1 that is applicable to the region as well as the regulatory compliance guide that DWR will use to verify that Part 1 meets requirements.

UWMP Agency Supporting Information

Part 4 includes a set of supporting documentation for each Participating Agency corresponding to their respective chapters in Part 2. Documents will include the regulatory compliance guide that DWR will use to verify the agency has met the UWMP Act requirements, the agency's Water Shortage Contingency Plan and other documents specific to each agency.

Outreach and Engagement

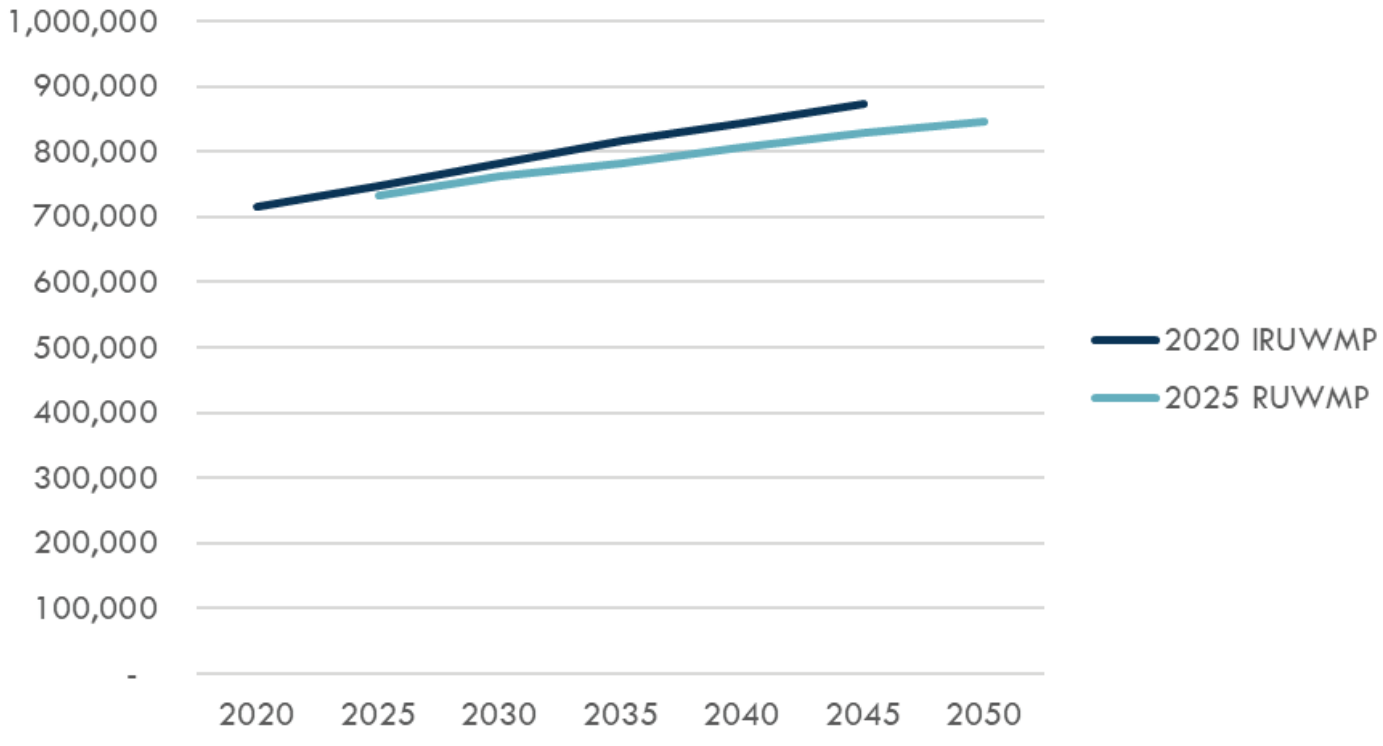
Management of water resources in the Region takes place within a complex legal and institutional framework. Development of this RUWMP involved the cooperation of many parties engaged in regional water management as well as the public.

In accordance with the UWMP Act, the Participating Agencies issued a Notice of Plan Preparation to cities and counties, as well as other entities in the region, engaged in water management on March 3, 2026, more than 60 days prior to the public hearings. This notice informed stakeholders that the 2025 RUWMP was being prepared and invited input.

The Participating Agencies encouraged public participation in the preparation of this Plan to incorporate public feedback on water management and reliability in the Region. Public comments on the draft RUWMP were invited via email announcements, website postings and newspaper notices, and during the public hearing prior to each Participating Agency adopting the RUWMP.

In addition, two workshops with the Participating Agencies were conducted to align the approach for RUWMP preparation and to review the results of the regional water supply and demand analysis. Direct engagement with non-participating agencies who rely wholly or partially on the shared water resources was conducted to share information and promote consistency with individual retail agency UWMPs that are not part of this RUWMP.

Key Takeaways



- **Developed with regional partners and public input.**
- **Notice of Plan Preparation sent more than 60 days before hearings.**
- **Comments gathered via email, web, newspaper, and public hearings.**
- **Two workshops aligned approach and reviewed supply/demand results.**

Regional Growth

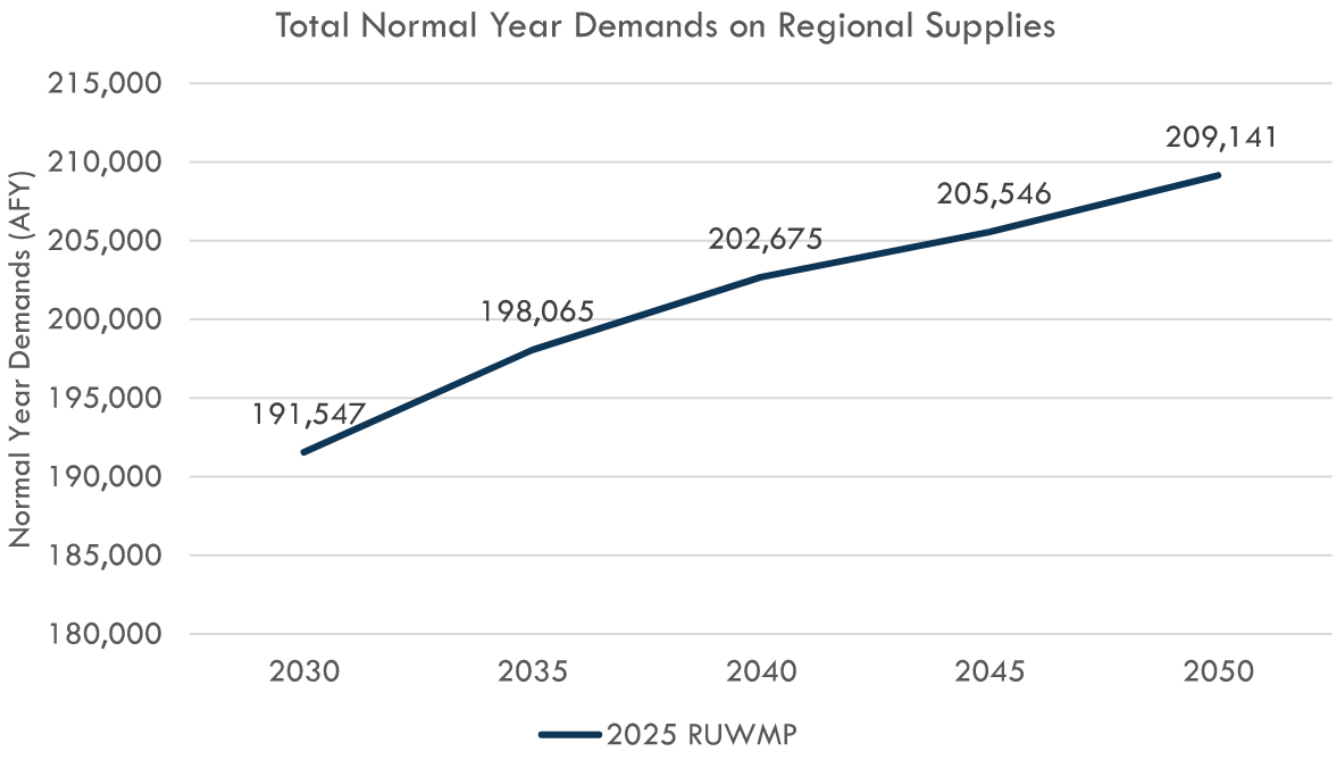
The Region has experienced rapid growth in the past, adding approximately 8,000 people each year from 1990 to 2010. Growth slowed from 2010 to 2020 and is projected to continue at a more moderate rate than previously projected, according to the recent growth forecast developed by Southern California Association of Governments (SCAG) for the 2024 Connect SoCal Regional Transportation Plan (2024 RTP).

SCAG's 2024 population growth projections have declined from the last Connect SoCal RTP in 2020 due to ongoing economic impacts of COVID-19, pandemic-related death increases, increasingly negative net domestic migration, decline in births, and near-zero level of foreign immigration. SCAG's 2024 update uses a 2019 base year and incorporates a broader data range from 2016 to 2022, capturing key post-COVID shifts in population, employment, and household trends.

Figure ES-1: Population Projection for the San Bernardino Valley Service Area

While the 2024 SCAG RTP projects slower growth, the population within the San Bernardino Valley service area is expected to grow by about 140,000 by 2050 from a 2020 Census value of 709,858. By 2050, the San Bernardino Valley service area is expected to have a population of approximately 847,000 people.

Key Takeaways



- **The Region grew rapidly from 1990 to 2010, then slowed from 2010 to 2020. Future growth is projected to remain moderate.**
- **SCAG's 2024 projections are lower than the 2020 RTP, reflecting post-COVID shifts**
- **Despite slower growth, the service area population is still projected to rise by approximatley 140,000 by 2050.**

Regional Demand

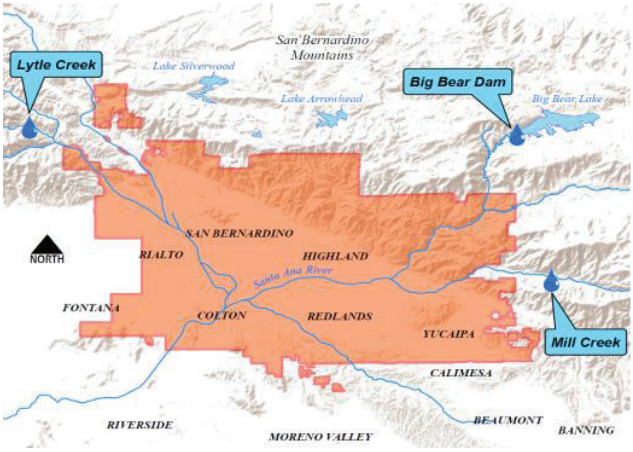
As a result of slower projected population growth, and continued gains in water use efficiency, the total demand projections in this RUWMP are also slightly lower than the projections from 2020, totaling approximately 209,000 acre-feet per year (AFY) by 2050, including demands for potable water, recycled water and non-potable groundwater.

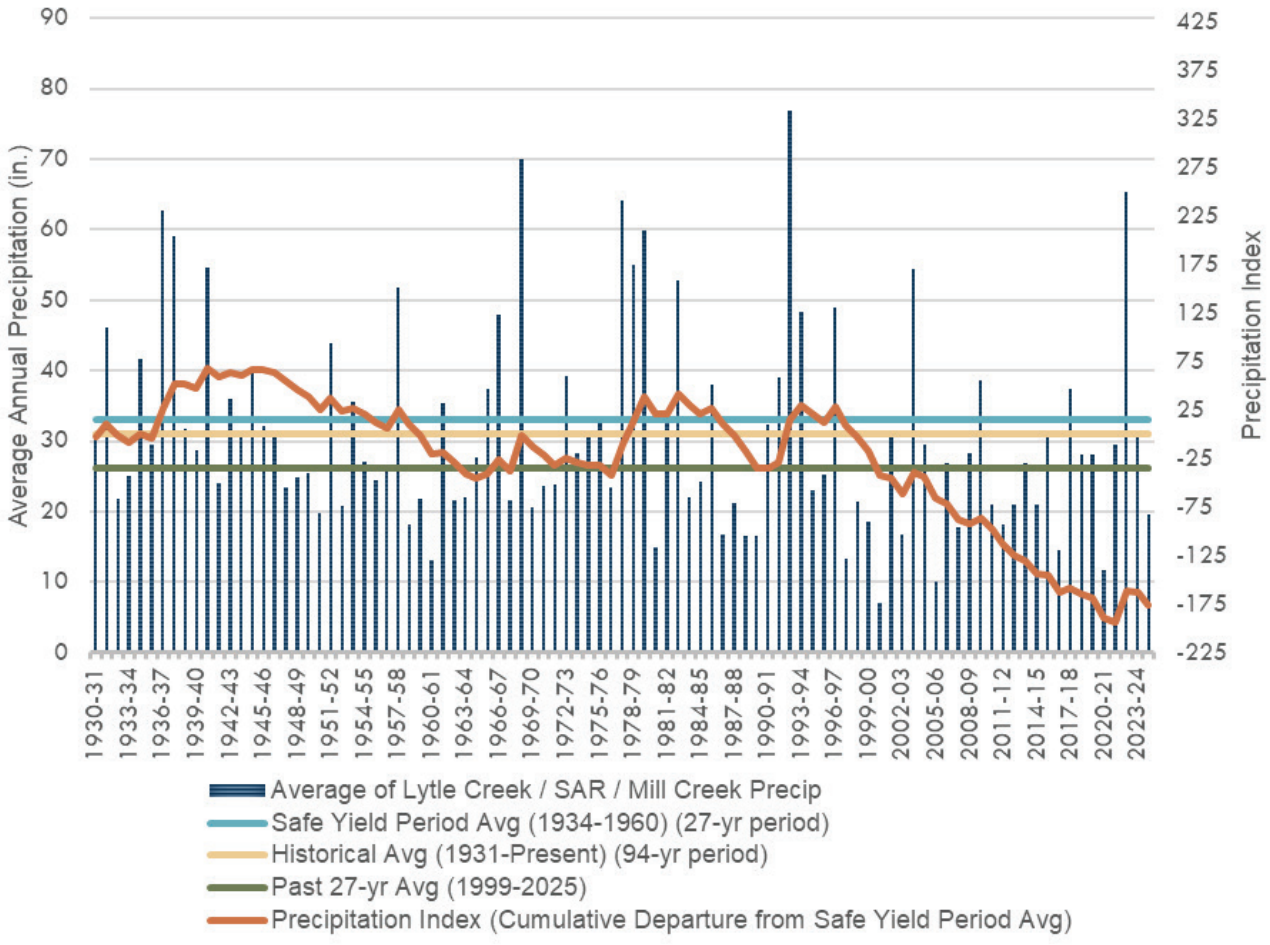
These totals include demands from all entities within the San Bernardino Valley that rely wholly or partially on the shared water resources analyzed in this RUWMP. For agencies who rely only partially on supplies evaluated in the Plan, the demand projection only includes their use of Regional supplies analyzed in this Plan to ensure a consistent comparison of supplies and demands.

Figure ES-2: Regional Demand Projections for Regional Supplies in the RUWMP

Regional Climate

Climate in the Region is characterized by relatively hot, dry summers and cool winters with intermittent precipitation. The historical record indicates that periods of below-average precipitation can last more than 30 years, such as the dry period that extended from 1939 to 1969. The Region has been experiencing an ongoing drought since 1999, indicated by a long term downward trend in the Precipitation Index, except for a few wet years.





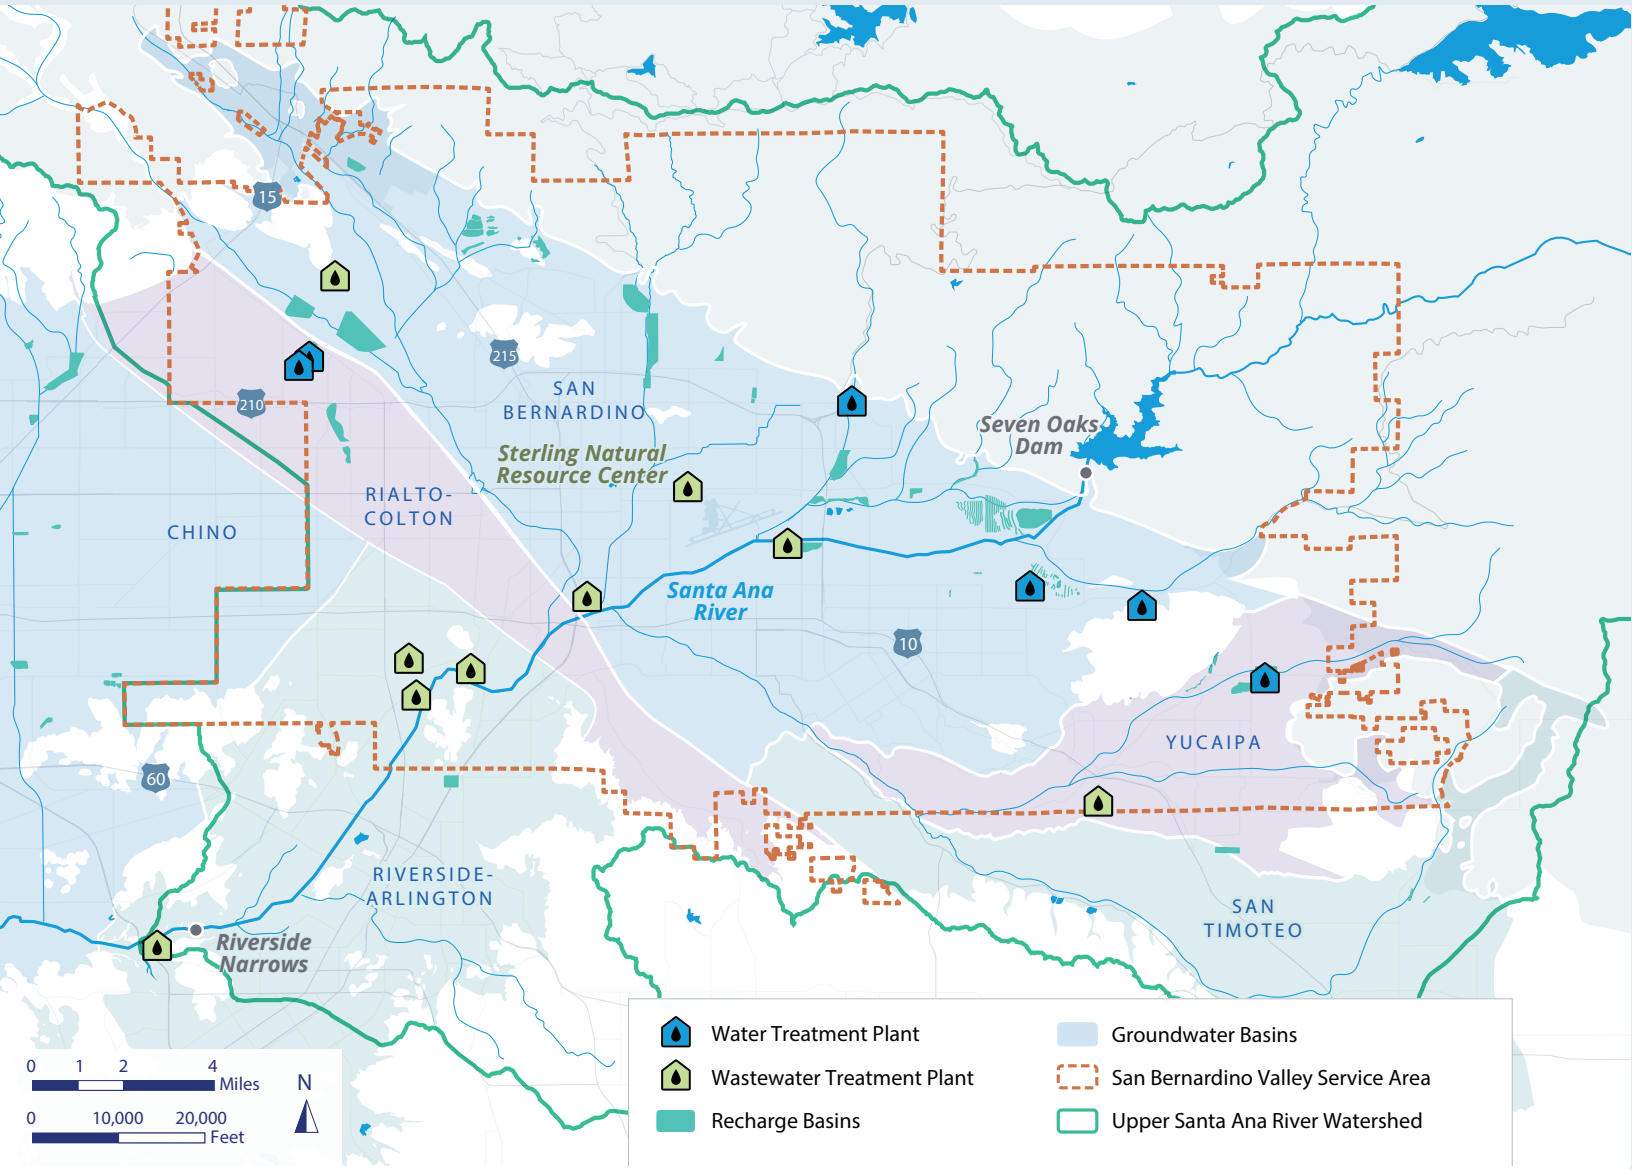


Figure ES-3: San Bernardino Basin Precipitation Index

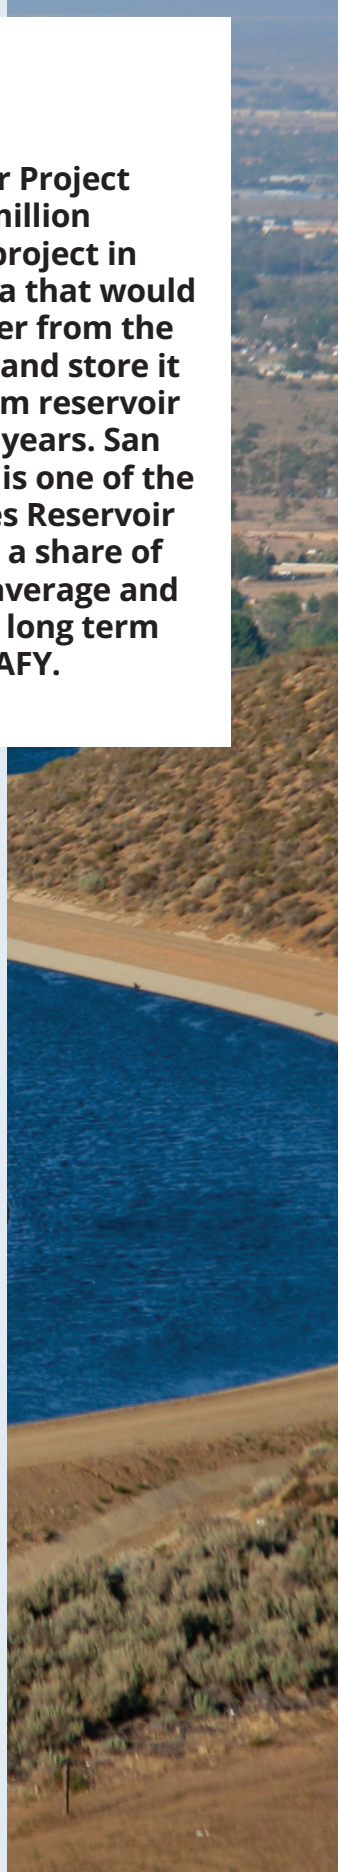
Regional Water Sources

The Region's diverse water supplies support the regional economy, environment and quality of life.

Securing a reliable water supply is the primary mission of San Bernardino Valley and the Participating Agencies. The Region relies on a diversified portfolio of water supplies to meet the needs of its residential, commercial, and institutional customers. The Region's water supply portfolio consists of imported water, local groundwater, local surface water and recycled water.



Imported Water

San Bernardino Valley's imported water comes from the State Water Project (SWP). San Bernardino Valley is the fifth largest State Water Contractor, with a maximum annual entitlement of 102,600 acre foot (AF). However, the amount of SWP water delivered in a given year depends on a number of factors, including the demand for the supply, amount of rainfall, snowpack, runoff, water in storage, pumping capacity from the Delta, and legal/regulatory constraints on SWP operation. Regulatory and environmental constraints have changed over time, becoming more restrictive and impacting SWP availability. According to modeling projections provided in the DWR 2025 SWP Delivery Capability Report (DCR), future long-term average SWP deliveries are expected to be 54% of total allocations under current conditions and 46% under 2043 conditions, when accounting for the impacts of climate change. During very dry years, allocations have been as low as 5%, which occurred in 2014, 2021 and 2022. During a 5-year drought, allocations are expected to average 15% over that period. However, during wet years, a much larger portion of the allocation is available; this Plan is based on 83% for a wet year, but in 2023, SWP allocations reached the full 100%.

Due to the broad range of SWP supply availability in different year types, storage is a fundamental component of regional water management that enables the Region to maximize beneficial use of SWP supplies when they are available and store them for use in future droughts. Local groundwater basins have over 10 million AF of total storage capacity to support optimization of SWP supplies.

Sites Reservoir

The Sites Reservoir Project is a proposed 1.5 million AF water storage project in northern California that would capture extra water from the Sacramento River and store it in a large off stream reservoir for use during dry years. San Bernardino Valley is one of the proponents of Sites Reservoir and would receive a share of the water during average and drier years, with a long term average of 11,200 AFY.

Local Surface Water

Local surface water is diverted from the Santa Ana River and two of its tributaries — Mill Creek and Lytle Creek — and either treated for potable use, delivered as non-potable irrigation water, or routed into spreading basins for groundwater recharge.

Surface water flows can be highly variable from year to year. When surface water flows are low, retail agencies shift their supply strategy to use groundwater and/or SWP water instead of local surface water. During wet periods when local surface water flows are high, retail agencies typically prioritize this supply, and excess flows are captured for recharge to maximize local storage for use in future dry years.

Enhanced Recharge

In 2025, San Bernardino Valley, in partnership with Western Municipal Water District, Riverside Public Utilities, and San Bernardino Valley Water Conservation District, proudly marked the completion of the Santa Ana River Enhanced Recharge Phase 1B Project, which will allow up to 80,000 AF of local stormwater per year during wet years to be captured and stored in the local aquifer, creating a critical supply of groundwater for future drought years.

Groundwater

Local groundwater provides about 80% of the supply for Participating Agencies in an average year. All of the Region's groundwater is produced from four distinct groundwater basins: San Bernardino, Rialto-Colton, Riverside-Arlington, and Yucaipa. Together, these four basins provide over 140,000 AFY of annual supply and a total of 10 million AF of local storage capacity. The Region's primary drought resilience strategy is to recharge water into these basins when it is available to provide stored water for use in dry years.

Key Takeaways

- The Region has a diverse portfolio of imported water, groundwater, local surface water, and recycled water.
- Groundwater provides approximately 80% of the Region's supply in an average year and 10 million AF of local groundwater storage capacity provides a critical resource for drought resilience.
- Local surface water and imported water supplies are highly variable but can be captured and recharged, along with recycled water, to increase local groundwater storage for use during dry years.

Recycled Water

The development and use of recycled water is another important water supply strategy for the Region. Recycled water supply is highly reliable because wastewater flows to treatment plants remain relatively constant during dry hydrologic conditions. For this reason, recycled water is often considered a drought-proof supply. Some of the retail agencies in the Region provide recycled water to their customers for non-potable uses, such as irrigation and industrial cooling water. The Region also recently began recharging recycled water into the San Bernardino Basin to increase groundwater storage. The agencies in the Region plan to expand recycled water use in the future, both for non-potable uses and groundwater recharge, to increase long- term regional water supply reliability and drought resilience.

Regional Recycled Water System

In 2024, the first phase of the Regional Recycled Water System was completed when highly treated water from East Valley Water District's Sterling Natural Resource Center began recharging the San Bernardino Basin at the newly constructed Weaver Basins to store local water for future use.

Water Supply Reliability

Every urban water supplier is required to assess the reliability of its water service under normal year, single-dry year, and multiple-dry year hydrologic conditions. Multiple factors can impact supply reliability, including legal, environmental, water quality, and climatic factors. These factors can result in immediate, near-term, or long-term impacts to reliability and must be considered in future planning.

The Region's ongoing efforts to maximize capture of supplies in wet years for later use in dry years is the most important step toward improving the long term reliability of supplies. In addition to the core supplies included in the supply reliability analysis, the Region continues to invest in additional supply and storage projects to improve long term resilience and supply reliability, including ongoing and expanded recharge of recycled water, imported water, and local stormwater. By 2050, these collective investments in recharge are projected to contribute over 60,000 AF of additional groundwater storage each year, on average.

Key Takeaways

- **Reliability is assessed for normal, single-dry, and multiple-dry (5-dry) years.**
- **The Region improves reliability by storing water in wet years through groundwater recharge.**
- **The Region projects sufficient supplies under normal, single-dry, and 5-dry conditions, with no anticipated shortages over the next 25 years.**

Imported Water Reliability

Of the supplies in the San Bernardino Valley service area, imported water has the highest sensitivity to hydrologic conditions and is subject to reduced availability due to drought, environmental factors, and climate change. These projected supply impacts are included in this analysis and have the potential to limit the amount of water available for groundwater recharge over time, with the impacts being essentially the same in single dry and 5-dry year periods. However, the implementation of the planned Sites Reservoir, which is incorporated into this analysis beginning in 2040, would significantly increase dry year imported water supplies to offset the impacts of SWP reductions.

Local Water Reliability

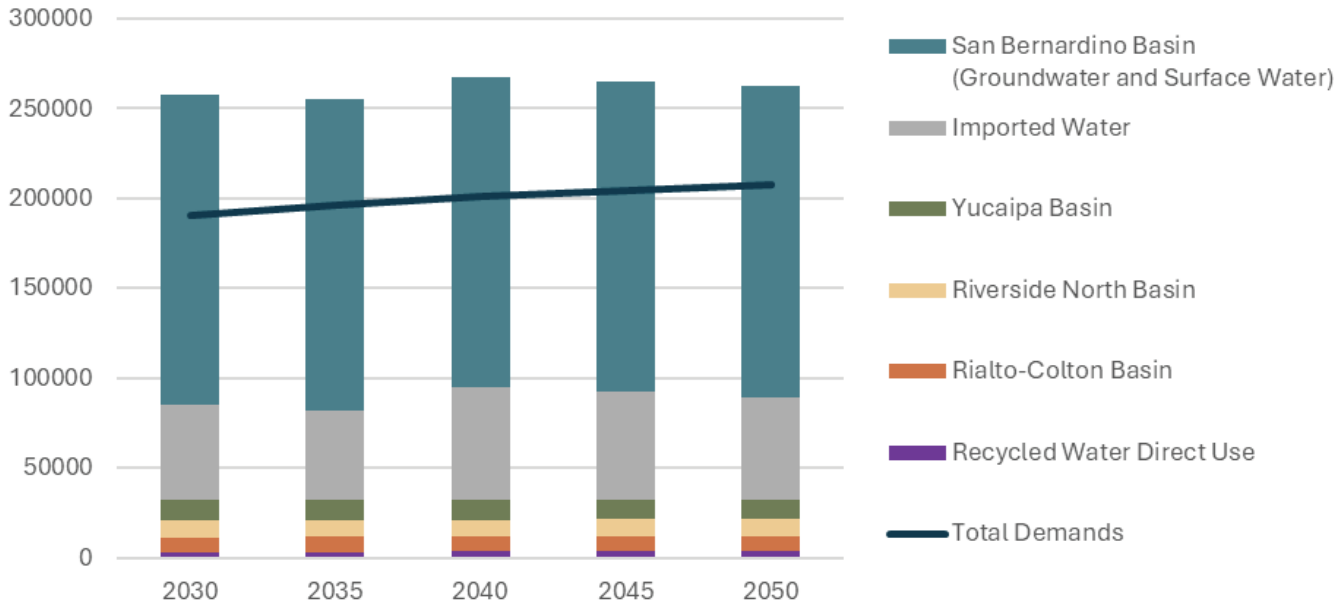
Groundwater in the local basins can be considered drought resistant, as long as sufficient water is stored during wet periods for use during dry periods, which is the Region's core water management strategy. Although local surface water is reduced during drought, it is included in the safe yield of the San Bernardino Basin, so it is not evaluated separately in this analysis. Recycled water is similarly drought resistant, and available recycled water supplies exceed planned uses. Therefore, groundwater and recycled water are assumed to have the same yield in normal year, single-dry year, and multiple-dry year drought scenarios.

Long Term Supply Reliability

As shown in Figure ES-4 (Normal Year Supply and Demand Balance) and Figure ES-5 (Single Dry and 5-Dry Year Supply and Demand Balance) on the next page, the Region projects to have sufficient supplies to meet demands under normal year supply and demand conditions as well as single-dry year and 5-dry year conditions, with a surplus in all years types.

Due to long standing and ongoing collaborative efforts of the regional water managers, water resources in the San Bernardino Valley continue to be reliable, with no anticipated shortages in the next 25 years, including during extended drought conditions.

Figure ES-4: Normal Year Supply and Demand Balance (AFY)



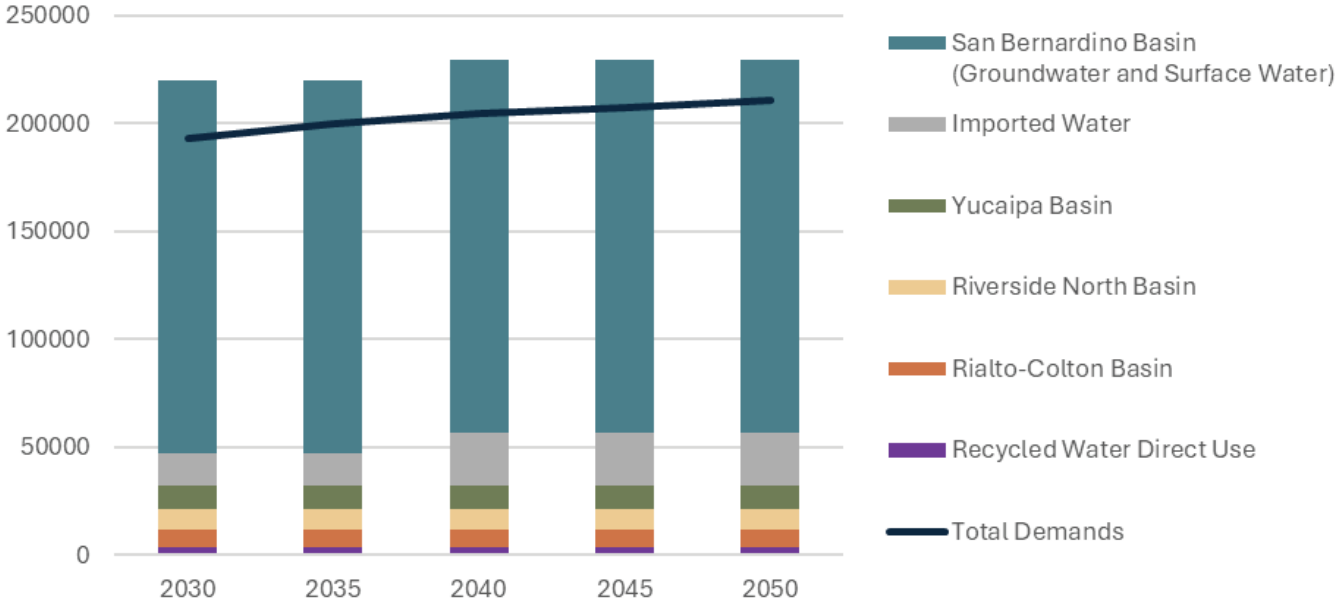


Figure ES-5: Single Dry and 5-Dry Year Supply and Demand Balance (AFY)

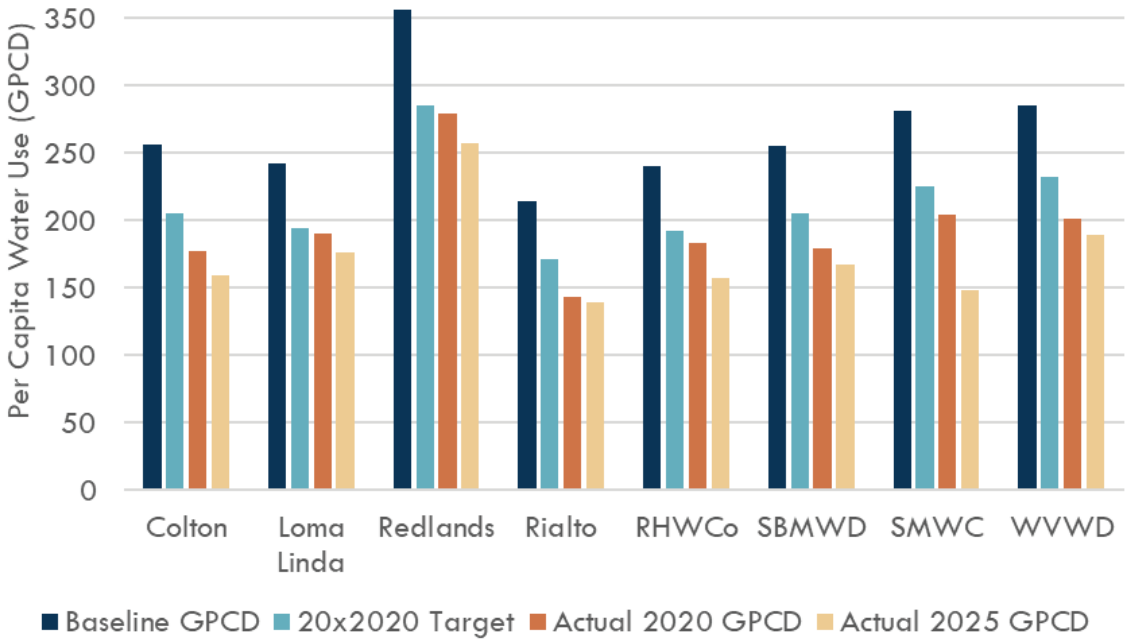
Water Efficiency and Conservation

The Region has invested in expanding and optimizing local water resources to improve enhance long term water supply reliability for its residents. At the same time, the Region continues to advance water use efficiency and conservation programs that have meaningfully reduced per-capita demand and strengthened long-term supply reliability. These conservation efforts are a core component of the Region's resource management strategy and help maximize the value of available supplies.

Since 2005, there have been several regulatory changes related to conservation, including new standards for plumbing fixtures, a new landscape ordinance, a state universal retrofit ordinance, metering and billing requirements, new green building standards, demand reduction goals and permanent State-mandated restrictions that were implemented in response to the most recent statewide drought.

Each of the eight participating retail agencies maintain conservation programs to reduce water waste and manage customer demand and San Bernardino Valley provides support at a regional level. These proactive conservation programs, in conjunction with passive conservation due to changes in codes and ordinances, have resulted in significant reductions in retail water use within the Region.



Key Takeaways

- **The Region's conservation programs have reduced per-capita demand and strengthened long-term supply reliability**
- **Under SB X7-7, agencies exceeded the required 20% per-capita reduction by 2020, and the Region continues to align with "Making Conservation a California Way of Life" requirements.**

The Water Conservation Act of 2009 (SB X7-7) required a 20% reduction in urban per capita water use in California by December 31, 2020 (20 by 2020). The bill required each urban retail water supplier to determine their baseline per capita water use (gallons per capita per day or gpcd), develop an urban water use target for year 2020 and set a 2015 interim urban water use target. Each of the agencies participating in this Plan met their 2020 targets, and some have continued to reduce their per capita water demand beyond the 2020 target. These reductions in per capita water use essentially expand the water supply for the Region by reducing use of regional supplies to meet existing demands.

Going forward, retail suppliers continue to improve water use efficiency and align with the State's urban water use management strategy (Making Conservation a California Way of Life), the result of two 2018 policy bills enacted by the California Legislature (SB 606 and AB 1668).

Figure ES-6: SB X7-7 Compliance and Water Use Efficiency Improvements

Water Shortage Contingency Plan

The Water Shortage Contingency Plan (WSCP) is a strategic plan that the participating agencies use to prepare for and respond to foreseeable and unforeseeable water shortages.

Although the Plan demonstrates the Region's strong long term supply reliability, agencies must still plan for potential short term shortages. A shortage may occur due to several reasons, such as water supply quality changes, climate change, drought, regional power outage, and catastrophic events (e.g., earthquake). Additionally, the State may declare a statewide drought emergency and mandate that water suppliers reduce demands, as occurred in 2014 and 2022. Each agency's WSCP serves as an operating manual that it will use to prevent catastrophic service disruptions through proactive, rather than reactive, mitigation of water shortages. Each WSCP provides a process for an annual water supply and demand assessment and structured steps designed to respond to actual conditions. Although the water agencies in the Region do not foresee implementing water shortage levels under normal conditions, this level of detailed planning and preparation provide accountability and predictability and help the Region's water agencies maintain reliable supplies and reduce the impacts of any supply shortages and/or interruptions.

1.0 Introduction

This Regional Urban Water Management Plan was prepared by San Bernardino Valley Municipal Water District, a wholesale water agency and State Water Contractor, and eight retail water agencies including City of Colton, City of Loma Linda, City of Redlands, City of Rialto, Riverside Highland Water Company, San Bernardino Municipal Water Department, South Mesa Water Company, and West Valley Water District to satisfy the requirements of the Urban Water Management Plan Act. This chapter describes the purpose of the 2025 San Bernardino Valley Regional Urban Water Management Plan, how it is organized, and its relationship to other regional planning efforts in the San Bernardino Valley. This chapter also describes the collaborative process to develop the plan and coordination with stakeholders and the public prior to adoption.

IN THIS SECTION

- Background and Purpose
- Plan Organization
- Plan Preparation and Coordination
- Plan Adoption

This document presents the 2025 San Bernardino Valley Regional Urban Water Management Plan (Plan or RUWMP).

1.1 Background and Purpose

1.1.1 Regional UWMP

The California Water Code requires urban water suppliers within the state to prepare and adopt Urban Water Management Plans (UWMPs) for submission to the California Department of Water Resources (DWR). The UWMPs, which are required to be filed every five years, must satisfy the requirements of the Urban Water Management Planning Act (UWMP Act) of 1983, including amendments that have been made to the UWMP Act and other applicable regulations. The UWMP Act requires urban water suppliers serving 3,000 or more connections or supplying more than 3,000 acre-feet (AF) of water annually, to prepare an UWMP. For wholesale water agencies without retail connections, the requirement is triggered by the annual delivery of 3,000 AF or more. Since the original UWMP Act was passed, it has undergone significant expansion in response to droughts, groundwater overdraft, regulatory revisions, and changing climatic conditions that affect the reliability of each water supplier. Implementation of the UWMP Act is overseen by DWR.

An UWMP is intended to function as a planning tool to guide broad-perspective decision making by water supply managers. A UWMP is a long-term, general planning document, rather than an exact blueprint for supply and demand management. Water management in California is not a matter of certainty, and planning projections may change in response to a number of factors. From this perspective, it is appropriate to look at an UWMP as a general planning framework, not a specific action plan.

It is an effort to generally answer a series of planning questions including:

1. What are the potential sources of supply and what is the reasonable amount of supply available from each of them?
2. What is the probable demand, given a reasonable set of assumptions about growth and implementation of good water management practices?
3. How well do supply and demand figures match up now and, in the future, based on the supplies that are anticipated to be pursued?

Using these “framework” questions and resulting answers, the implementing agency may pursue a range of feasible and cost-effective options and opportunities to meet projected demands.

Water purveyors within a region are permitted by DWR to work together to develop a cooperative Regional UWMP or RUWMP. In 2010, 2015, 2020 and 2025, a regional approach was used by the San Bernardino Valley Municipal Water District (San Bernardino Valley or SBVMWD), a wholesale water supplier, and several retail water agencies who coordinated to prepare the San Bernardino Valley RUWMP. The purpose of jointly preparing the RUWMP is to

facilitate a consistent evaluation of water sources common to the various agencies, to take advantage of group knowledge and experience, and to reduce collective preparation costs. The RUWMP is focused on meeting reporting requirements established by DWR to implement the California Water Code. The unique document structure of the RUWMP preserves each agency's ability to independently convey unique water management considerations for their service area while leveraging the regional information and activities that are applicable to all.

Some of the retail water agencies in the San Bernardino Valley prepare separate UWMPs that are not directly included in this Plan. Table 1-1 provides a summary of RUWMP participation for each urban water supplier in the region for prior RUWMPs and this 2025 UWMP. Participating Agencies and other water agencies in the region are described further in Section 2.2.

Table 1-1: RUWMP Participating Agencies

PARTICIPATING AGENCY	2010 RUWMP	2015 RUWMP	2020 IRUWMP	2025 RUMWP
Bear Valley Mutual Water Company				
City of Colton	✓	✓	✓	✓
City of Loma Linda	✓	✓	✓	✓
City of Redlands	✓	✓	✓	✓
City of Rialto		✓	✓	✓
City of San Bernardino Municipal Water Department	✓	✓	✓	✓
East Valley Water District	✓	✓	✓	
Fontana Water Company				
Riverside Highland Water Company		✓	✓	✓
San Bernardino Valley Municipal Water District	✓	✓	✓	✓
South Mesa Water Company			✓	✓
West Valley Water District	✓	✓	✓	✓
Western Heights Water Company				
Yucaipa Valley Water District	✓	✓	✓	

In addition to the Participating Agencies, this RUWMP incorporates data from other agencies within the San Bernardino Valley that rely wholly or partially on the shared water resources analyzed in this Plan. While these agencies are not participants in this RUWMP, their water demands and associated supply needs are included to accurately evaluate regional water supply reliability through 2050. For the agencies preparing separate 2025 UWMPs (East Valley Water District, Fontana Water Company and Yucaipa Valley Water District), updated projections

from their respective 2025 UWMPs were incorporated into this Plan. For the agencies who are not urban water suppliers and do not prepare UWMPs, their demands and associated supply needs were estimated and incorporated into this Plan based on direct input from the agency, records of prior water use, or assumed to be the same as projections from the 2020 IRUWMP.

1.1.2 Integrated Regional Water Management and Other Regional Planning

Integrated Regional Water Management

State lawmakers created the Integrated Regional Water Management (IRWM) Planning Act in 2002 to encourage local entities to improve water quality and water supply reliability to meet the state's overall agricultural, domestic, industrial, and environmental water needs. IRWM is an efficient model for inclusive and equitable water management planning and delivers higher value for investments by utilizing early and collaborative stakeholder processes to develop multi-benefit projects that help diversify a region's water management portfolio to achieve multiple social, economic, and environmental benefits and to prioritize funding that may become available from the State. The primary purpose of an IRWM Plan is to encourage integrated planning among the agencies in a region. The IRWM Plan provides a comprehensive look at the area's water resources and includes integrated management strategies to help meet the long-term water needs of the area.

The Santa Ana Watershed Project Authority (SAWPA) is the DWR recognized IRWM Regional Agency for the entire Santa Ana watershed and has led collaborative process to prepare and regularly updated the watershed wide IRWM Plan known as One Water One Watershed (OWOW). The OWOW plan was last updated in 2018 and the OWOW Plan Update 2018 still serves as the official IRWM Plan for the Santa Ana Watershed.

In 2005, the San Bernardino Valley and 15 other agencies in the Upper Santa Ana River (SAR) watershed (Region or Upper SAR Region) decided to voluntarily develop the first IRWM Plan for its subarea of the watershed to collaboratively develop water management strategies for the communities of the Upper SAR watershed; the plan was completed in 2007. The agencies that developed the 2007 Upper SAR IRWM Plan formed a Technical Advisory Group (TAG) to implement the plan, which later became the Basin Technical Advisory Committee (BTAC). The BTAC is still actively collaborating to manage regional water resources, and the region has since formed several additional collaborative forums that focus on specific regional topics.

Agencies that participate in the BTAC at the time of this Plan include:

- **Bear Valley Mutual Water Company**
- **City of Colton**
- **City of Loma Linda**
- **City of Redlands Municipal Utilities and Engineering Department**
- **City of Rialto**
- **City of Riverside Public Utilities Department (Riverside Public Utilities)**
- **East Valley Water District**
- **Elsinore Valley Municipal Water District (Meeks and Daly Water Company)**
- **Fontana Water Company**
- **San Bernardino County Flood Control District**
- **San Bernardino Municipal Water Department**
- **San Bernardino Valley**
- **San Bernardino Valley Water Conservation District**
- **West Valley Water District**
- **Western Municipal Water District**
- **Yucaipa Valley Water District**

The Upper SAR IRWM Plan is a critical document for prioritizing regional investments in water management and facilitating the use of state and federal grant funds for those projects. In 2020, both the Upper SAR IRWM Plan and the San Bernardino Valley Regional UWMP were due to be updated and there is significant overlap in the content of the two plans. Rather than updating these overlapping documents independently, San Bernardino Valley and its regional partners decided to combine them into a single new, single cohesive document. This combined document, the 2020 Upper Santa Ana Watershed Integrated Regional Urban Water Management Plan (IRUWMP) was the first of its kind in California and met all of the requirements of both the UWMP Act and the IRWM Planning Act.

The IRWM Roundtable of Regions, a group comprised of all IRWM regions in the State, has been working for over 20 years to advocate to the State for continued funding and commitment to sustaining and strengthening the IRWM program. However, with the 2023 California Water Plan, the state demonstrated a move toward a watershed approach, leaving the future of IRWMs unclear. Prop 4, the $10 billion climate bond that was approved by voters in 2024, allocated just $100 million specifically for IRWM for the entire State. However, IRWMs may still compete for other Prop 4 funds in groundwater, watershed resilience, nature-based solutions, flood, drought and other multi-benefit projects. In 2025 the Roundtable of Regions completed the IRWM Transition Plan, proposing a framework by which the IRWMs may transition into, and collaborate within, the State's proposed Watershed Resilience Program, which is discussed in the following section. DWR continues to attend Roundtable of Regions meetings and has accepted and discussed the Transition Plan with the Roundtable Steering Committee.

For the 2025 UMWP update cycle, due to uncertainty about the evolution of the IRWM program, the stakeholders in the region decided not to update the combined IRUWMP. Instead, this 2025 RUWMP was prepared, similar the 2010 and 2015 RUWMPs. Integrated regional water management remains a critical priority for the region and is being addressed through multiple ongoing collaborative efforts and anticipated future watershed scale planning.

Watershed Resilience

DWR recently developed the 2024 Watershed Resilience Program Guidelines to advance the vision and framework laid out in the State's California Water Plan Update 2023 to better prepare and plan for a future with climate extremes. The Watershed Resilience Program re-orients the State's priorities around more equitable and climate-resilient water systems by defining three updated themes: Addressing Climate Urgency, Strengthening Watershed Resilience and Achieving Equity.

While the Watershed Resilience Program is fundamentally similar to IRWM, it appears that the State is moving toward Watershed Resilience Plans as the vehicle to provide State support and funding to increase regional climate resilience.

Prop 4 allocates over $1.8 billion to support planning and holistically integrated projects in the categories of climate change resiliency including groundwater sustainability, water supply and storage, flood management, wildfire prevention, habitat enhancement and watershed restoration. Five two-year pilot projects on how watersheds may work collaboratively to identify and develop strategies to address climate risks in specific watersheds are reaching completion as of spring 2026.

Through continued regional and watershed wide collaboration with SAWPA, San Bernardino Valley and the retail water agencies in the region will continue to conduct integrated regional water management and adapt to evolving State frameworks and position the region for future State funding of critical water needs. In 2024, San Bernardino Valley adopted a Climate Adaptation and Resilience Plan that will serve as a bridge document for the region in transitioning to the new State framework.

San Bernardino Basin Optimization and Stewardship Program

In 2024, the BTAC agencies completed Phase 1 of the San Bernardino Basin Optimization and Stewardship Program (SBBOSP) and are currently in the beginning stages of Phase 2, which is envisioned to define a new framework for basin management and ultimately identify the projects, actions, and funding mechanisms needed to achieve sustainability, equity, and optimization of local water resources.

While focused initially on the San Bernadino Basin, the SBBOSP is ultimately expected to more broadly address regional water needs and define an integrated strategy to achieve basin sustainability through optimized management of existing and new water resources and infrastructure. SBBOSP Phase 2 will address many of the aspects of the current IRUWMP and will also help position the Upper SAR Watershed for a potential future transition to the State's new Watershed Resilience Program.

1.2 Plan Organization

This Plan is organized to meet the requirements of the UWMP Act. Each participating agency has reviewed, adopted, and will implement portions of this Plan relevant to their agency. To streamline reporting and avoid redundant information, this Plan is organized into four parts:

Part 1: Regional Context

Part 1 contains the information needed to meet a portion of the UWMP Act requirements and provides regional context. Many of the participating agencies utilize the same water resources and have similar water uses. Part 1 is organized into the following chapters:

- **Chapter 1:** Introduction
- **Chapter 2:** Region Description
- **Chapter 3:** Regional Water Sources and Management
- **Chapter 4:** Regional Water Use
- **Chapter 5:** Comparison of Regional Supplies and Demands

Part 2: Individual Agency UWMPs

Part 2 includes a chapter for each of the nine participating retail agencies. Each chapter is supplemental to the regional information presented in Part 1 and contains the additional information and analysis for each agency needed to meet the UWMP Act requirements. Each agency chapter provides service area information, past water use, projections of population, demand, and supply for a 25-year planning period, an evaluation of water supply reliability and drought risk assessment, a description of demand management measures and a summary of the agency's Water Shortage Contingency Plan. Part 2 is organized into the following chapters:

- **Chapter 1:** San Bernadino Valley
- **Chapter 2:** City of Colton
- **Chapter 3:** City of Loma Linda
- **Chapter 4:** City of Redlands
- **Chapter 5:** City of Rialto
- **Chapter 6** Riverside Highland Water Company
- **Chapter 7** San Bernardino Municipal Water Department
- **Chapter 8** South Mesa Water Company
- **Chapter 9** West Valley Water District

Part 3: Regional Supporting Information

Part 3 includes all the supporting documentation referenced in Part 1 that is applicable to the region.

Part 4: Local Agency Supporting Information

Part 4 includes a set of supporting documentation for each UWMP Agency corresponding to their respective chapters in Part 2. Documents for each agency will include the regulatory

compliance guide that DWR will use to verify the agency has met the UWMP Act requirements, proof of public hearing notices, water supply agreements specific to that agency, the Water Shortage Contingency Plan and the completed tables that are required to be submitted to DWR.

1.3 Plan Preparation and Coordination

Management of water resources in the Region takes place within a complex legal and institutional framework. Development of this RUWMP involved the cooperation of many parties engaged in regional water management as well as the public.

In accordance with the UWMP Act, the Participating Agencies issued a Notice of Plan Preparation to cities and counties, as well as additional stakeholders within the region at least 60 days prior to the public hearing (notice was distributed on 3/4/2026). This notice informed stakeholders that the 2025 RUWMP was being prepared and invited input. A copy of the 60-day Notice letter is included in Part 3.

The Participating Agencies encouraged public participation in the preparation of this Plan to incorporate public feedback on water management and reliability in the Region. The Participating Agencies solicited public involvement in the planning process by presenting updates at regularly scheduled BTAC meetings and at some of their regularly scheduled Board and Council meetings, as well as soliciting public comments on the draft RUWMP via email announcements, website postings and newspaper notices. Copies of each agency's newspaper notice is included in their respective appendix in Pat 4.

In addition, 2 workshops with the Participating Agencies were conducted to align the approach for RUWMP preparation and to review the results of the regional water supply and demand analysis.

The following Regional Land Use Planning and stakeholder agencies received the 60-Day Notice of Plan Preparation:

- Bear Valley Mutual Water Company
- Beaumont-Cherry Valley Water District
- Cal. State San Bernardino/Institute for Watershed Resiliency
- City of Calimesa
- City of Colton
- City of Fontana
- City of Grand Terrace
- City of Highland
- City of Loma Linda
- City of Redlands
- City of Rialto
- City of San Bernardino
- City of Yucaipa
- County of Riverside
- County of San Bernardino
- Crafton Hills College
- East Valley Water District

- Elsinore Valley Municipal Water District
- Fontana Water Company
- Inland Empire Resources Conservation District
- Muscoy Mutual Water Company
- Rialto Water Services, LLC-Veolia
- Riverside Highland Water Company
- Riverside Local Agency Formation Commission (LAFCO)
- Riverside Public Utilities
- Rubidoux Community Services District
- San Bernardino County Flood Control District
- San Bernardino County Local Agency Formation Commission (LAFCO)
- San Bernardino Municipal Water Department
- San Bernardino Valley Municipal Water District
- San Bernardino Valley Water Conservation District
- San Gorgonio Pass Water Agency
- San Manuel Band of Mission Indians
- Santa Ana Watershed Project Authority
- South Mesa Water Company
- Terrace Water Company
- United States Forest Service
- West Valley Water District
- Western Heights Mutual Water Company
- Yucaipa Valley Water District
- Yucaipa-Calimesa Joint Unified School District

1.4 Plan Adoption

Each participating agency has reviewed, adopted, and will implement the portions of this Plan relevant to their agency. Not all parts of the plan are applicable to every participating agency and any subsequent changes made to individual agency UWMP Chapters, if any, should not affect the other agencies who participated in Plan preparation. In recognition of this, the Plan was organized so that agencies could adopt only the parts of the plan that are applicable.

All participating agencies adopted Part 1 and Part 3, which comprise the information needed to provide the regional context. In addition to Part 1 and Part 3, participating agencies adopted their respective chapters of Part 2 and their respective Appendices in Part 4. Additional information on each UWMP Agency's adoption process in accordance with the UWMP Act is provided in each agency chapter in Part 2.

The Plan participants adopted the relevant parts of the Plan beginning in May and June 2026. Following adoption, the Plan was submitted to DWR, the California State Library, and a copy was provided to all stakeholders identified in Section 1.3. Resolutions adopting the RUWMP are provided in each agency's appendix in Part 4.

2.0 Region Description

This section describes the characteristics of the Region and the San Bernardino Valley service area, including population, land use, and climate. This section also describes the many local agencies and water companies that have a role in managing water resources within the Region. Water resources within the Region are described in Section 3.

IN THIS SECTION

- Location
- Water Agencies in the Region
- Population and Demographics
- Land Uses
- Regional Climate

2.1 Location

The SAR watershed is the largest stream system in Southern California. The headwaters originate in the San Bernardino Mountains and are discharged to the Pacific Ocean approximately 100 miles to the southwest between Newport Beach and Huntington Beach. The SAR watershed covers over 2,650 square miles of widely varying forested, rural, and urban terrain and covers the more populated urban areas of San Bernardino, Riverside, and Orange Counties, as well as a lesser portion of Los Angeles County. Disputes over the use of water in the SAR led to the subdivision of the watershed into the Upper SAR watershed and Lower SAR watershed just upstream of Prado Dam.

The Upper SAR watershed covers 852 square miles, approximately 32% of the total SAR watershed, and is primarily located in San Bernardino and Riverside Counties. The Region includes the Big Bear Valley as well as the cities and communities of San Bernardino, Yucaipa, Redlands, Highland, Rialto, Mentone, Colton, Grand Terrace, Loma Linda, Beaumont, and Riverside.

The Upper SAR watershed is defined by the area that contributes surface runoff to the Riverside Narrows at U.S. Geological Survey (USGS) Gage 11066460. There are numerous tributaries that contribute flow to the main stem of the SAR in the Region, including Mill Creek, City Creek, Plunge Creek (a tributary of City Creek), Mission Zanja Creek (located just upstream of the San Timoteo Creek), San Timoteo Creek, East Twin Creek, Warm Creek, and Lytle Creek.

For the purpose of this RUWMP, the Region is defined as the wholesale service area of the San Bernardino Valley Municipal Water District, which comprises a large portion of the Upper SAR Watershed in San Bernardino County, as shown in Figure 2-1.

2.2 Water Agencies in the Region

The Region is home to dozens of cities, water districts, mutual water companies, flood control districts, and other local water management agencies with an interest in the responsible management of water supply resources (e.g., storage, conveyance, treatment, flood protection, and recreation) and sustainable stewardship (e.g., water quality and biological resource protection) of the watershed. The challenges facing water agencies in the Upper SAR include the effects of population growth that increase water demand and decrease natural hydrological processes and groundwater recharge, the reduction of imported water availability, the effects of climate change, water quality, a changing regulatory environment, and affordability of water infrastructure projects. Water agencies in the Region are shown in Figure 2-2 and described in Section 2.2.1.

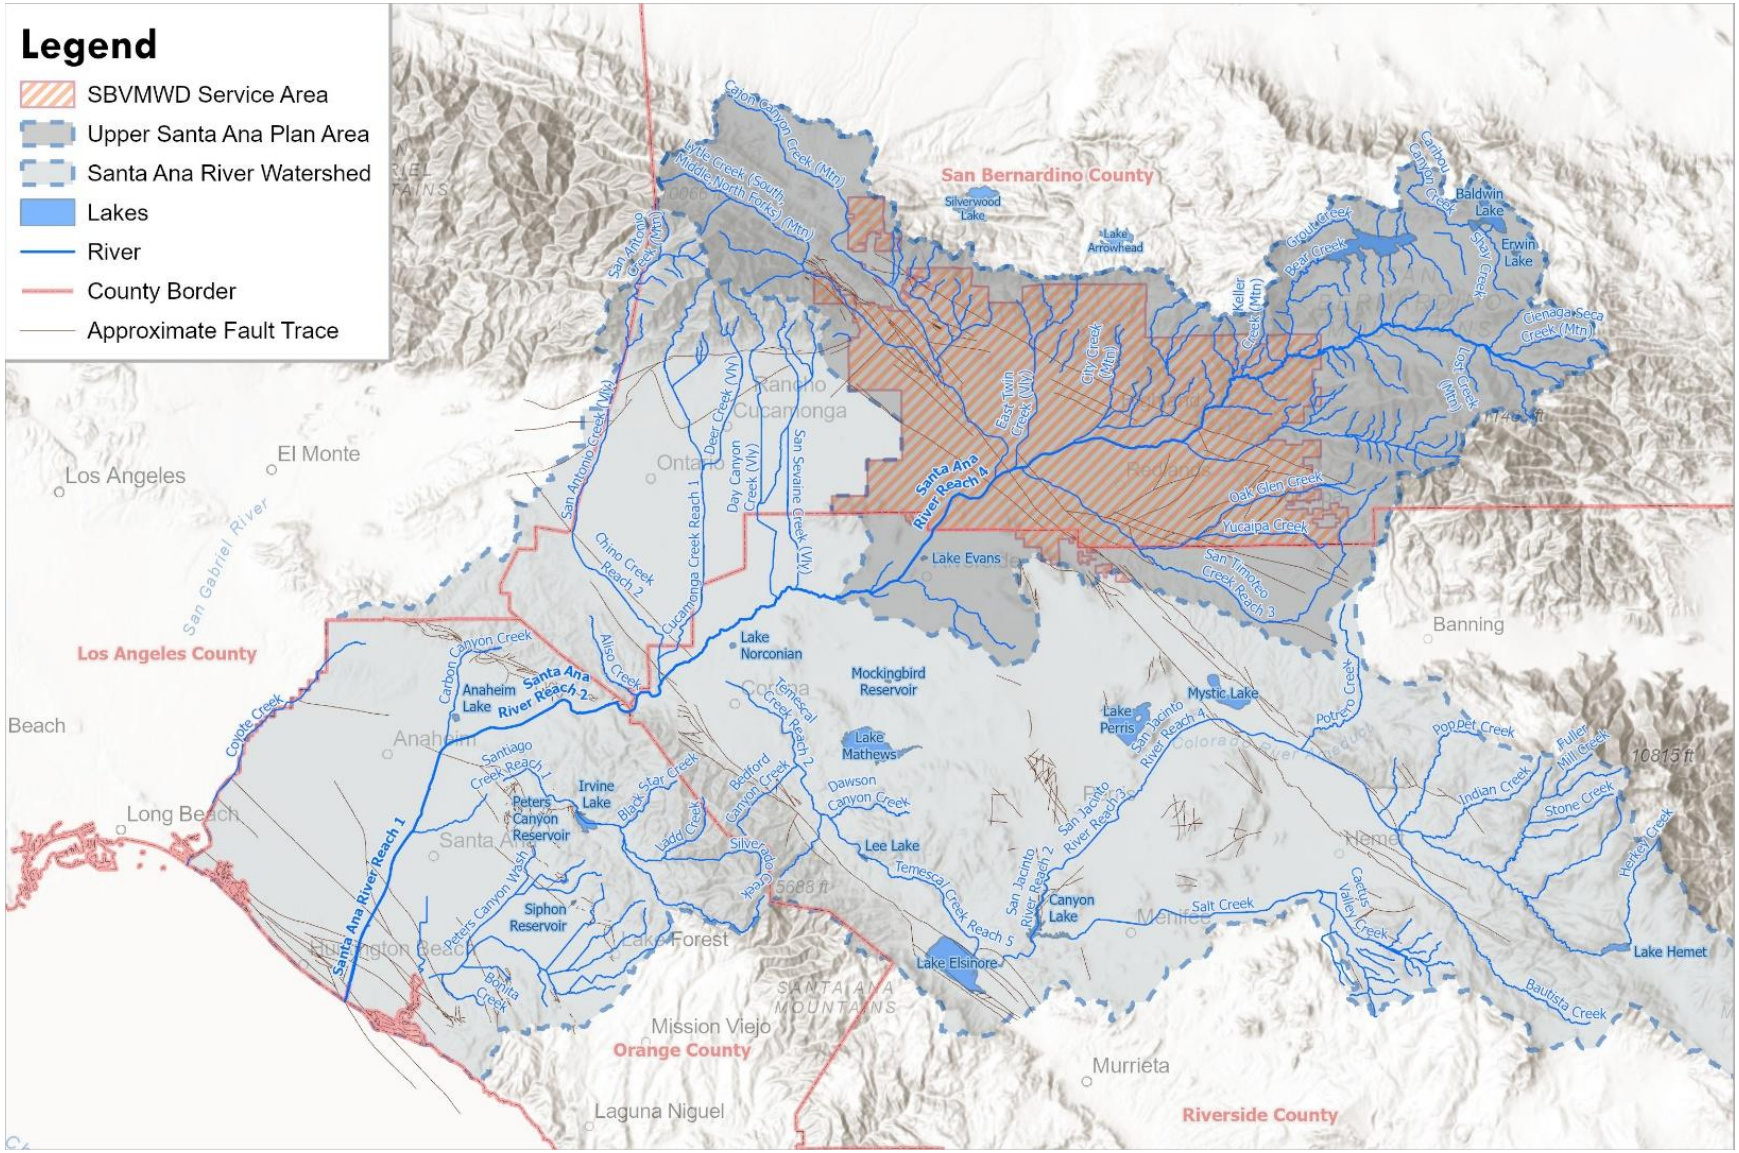

Figure 2-1: Upper Santa Ana River Watershed and RUWMP Boundary

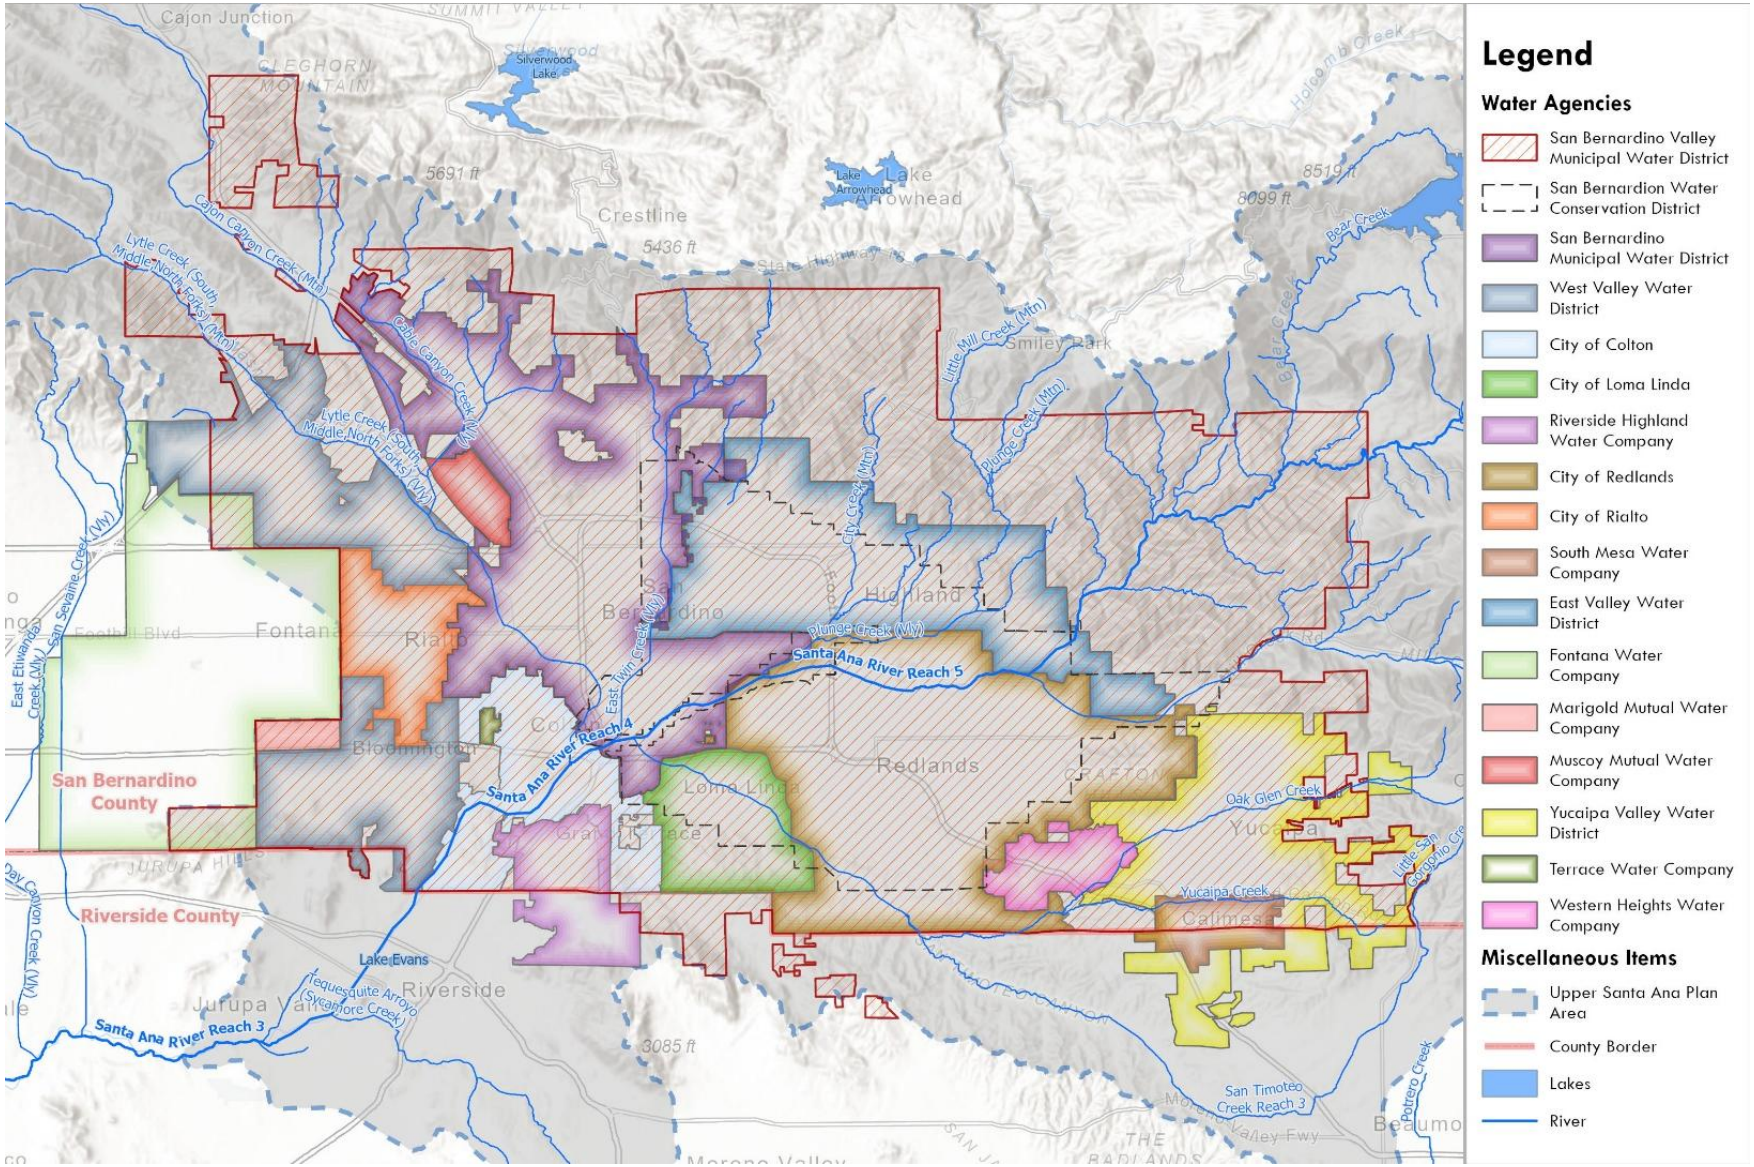

Figure 2-2: Water Management Agencies in the Region

2.2.1 2025 RUWMP Participating Agencies

This section describes the water supply agencies participating in this 2025 RUWMP.

2.2.1.1 San Bernardino Valley Municipal Water District (San Bernardino Valley)

San Bernardino Valley was formed in 1954, under the Municipal Water District Act of 1911 (California Water Code Section 71000 et seq.) as a regional agency to plan a long-range water supply for the San Bernardino Valley. San Bernardino Valley imports water into its service area through participation in the State Water Project (SWP) and manages groundwater storage within its boundaries. Its enabling act includes a broad range of powers to provide water, wastewater and stormwater disposal, recreation, and fire protection services. San Bernardino Valley does not deliver water directly to retail water customers.

San Bernardino Valley covers about 353 square miles mainly in southwestern San Bernardino County, about 60 miles east of Los Angeles. It spans the eastern two-thirds of the San Bernardino Valley, the Crafton Hills, and a portion of the Yucaipa Valley and includes the cities and communities of San Bernardino, Colton, Loma Linda, Redlands, Rialto, Fontana, Bloomington, Highland, East Highland, Grand Terrace, Mentone, and Yucaipa.

San Bernardino Valley is responsible for long-range water supply management, including importing supplemental SWP water to meet orders from retail agencies, and facilitating the management of groundwater basins within its boundaries. San Bernardino Valley also represents the San Bernardino Entities in mitigating extractions over the production amounts specified in the Orange County and Western Judgments explained below. San Bernardino Valley has specific responsibilities for monitoring groundwater supplies in the SBB and Rialto-Colton Subbasin, and for a portion of the minimum SAR flow required at the Riverside Narrows under the Orange County and Western Judgments.

San Bernardino Valley takes delivery of SWP water at the Devil Canyon Power Plant Afterbay, which is located just within its northern boundary. The SWP water is conveyed 17 miles eastward to various spreading grounds and agricultural and wholesale delivery points. Water is also conveyed westward for direct delivery in the SBB and Rialto-Colton Subbasin.

In the 1960s, dry conditions resulted in the over-commitment of water resources in the SAR watershed which led to lawsuits between water users in the upper and lower watersheds regarding both surface flows and groundwater. The lawsuits culminated in 1969 in the Orange County and Western Judgments. Under the terms of the judgments, San Bernardino Valley became responsible for providing a portion of the specified SAR base flow to Orange County and for providing replenishment in the Rialto-Colton Basin and SBB under certain conditions. If the conditions of either judgment are not met by the natural water supply, including new conservation, San Bernardino Valley, on behalf of the San Bernardino Entities, is required to deliver supplemental water to offset the deficiency. The judgments resolved the major water

rights issues that had prevented the development of long-term, region-wide water supply plans and established specific objectives for the management of the groundwater basins.

Court-appointed Watermaster committees administer both Judgments; as a member of the Watermaster committees, San Bernardino Valley is directly responsible for ensuring that groundwater and surface water resources are effectively managed per the terms of the Judgments for the benefit of the region.

This Plan includes the San Bernardino Valley UWMP; see Part 2, Chapter 1 for more information.

2.2.1.2 City of Colton

The City of Colton (Colton) is a community founded in 1875 and incorporated in 1887. Colton, through the Water and Wastewater Division of its Public Utilities Department, provides water service to a majority of the residents and businesses located within Colton's corporate boundary, as well as to those in certain adjacent unincorporated areas of San Bernardino County. All of Colton's water supply is local groundwater pumped from the SBB, the Rialto-Colton subbasin, and the Riverside North subbasin.

This Plan includes the Colton UWMP; see Part 2, Chapter 2 for more information.

2.2.1.3 City of Loma Linda

The City of Loma Linda (hereafter Loma Linda) was incorporated in 1970. The Public Works Department provides potable water service to an area of approximately 7.8 square miles that includes the Veterans Administration Hospital and the Loma Linda Community Hospital. Loma Linda does not provide water service to the Loma Linda University Campus or Medical Center facilities, which operate on a separate self-contained system. Loma Linda's primary water supply is groundwater from the SBB. Loma Linda also has two emergency connections to the City of San Bernardino and one to the City of Redlands to meet its supplemental needs. Loma Linda also provides wastewater collection service.

This Plan includes the Loma Linda UWMP; see Part 2, Chapter 3 for more information.

2.2.1.4 City of Redlands

For more than 90 years, the City of Redlands (hereafter Redlands) has been providing high-quality drinking water to the Redlands, Mentone area, Crafton Hills College, and a portion of unincorporated San Bernardino County known as the donut hole. The water utility service area generally coincides with the area designated by the Local Area Formation Commission (LAFCO) as the City and its sphere of influence. The service area encompasses 36 square miles inside the Redlands city boundaries and a relatively small area outside the city boundaries, but within the sphere of influence. Redlands supplies a blend of local groundwater, local surface water, and imported water purchased from San Bernardino Valley. Redlands owns and operates two water treatment plants, Tate and Hinckley, which receive either surface water or imported water and treat it to potable standards. Redlands also owns and operates a sewer

collection system and the Redlands Wastewater Treatment Facility, which produces recycled water for industrial and irrigation purposes, including supplying water to the Southern California Edison Mountainview Power Plant.

This Plan includes the Redlands UWMP; see Part 2, Chapter 4 for more information.

2.2.1.5 City of Rialto

The City of Rialto (hereafter Rialto) is provided water service by three different water agencies: The City of Rialto municipal water system through its water system operator (Veolia, through Rialto Water Services), the West Valley Water District (WVWD), and the Fontana Union Water Company (FUWC). Each agency has its own water supply and resources and must meet its demands through those resources. The City of Rialto municipal water system provides potable, non-potable, and recycled water at retail to customers primarily within the City of Rialto and serves approximately one-half of the population of the City. The service area is essentially the incorporated area of the City of Rialto located between Interstate 10 and State Route 210.

Rialto's water supply sources include local surface water from Lytle Creek, groundwater from four local groundwater basins, and water purchased from San Bernardino Valley and delivered through the Baseline Feeder. Surface water treatment of Lytle Creek water is provided by the Oliver P. Roemer Water Filtration Facility owned and operated by WVWD. Rialto owns a portion of the capacity of that plant. Rialto also has an agreement to purchase excess SBB water from SBMWD, when available. Rialto provides wastewater collection and treatment services for its residents and some residents of the City of Fontana through an Extra-Territorial Agreement.

This Plan includes the Rialto UWMP; see Part 2, Chapter 5 for more information.

2.2.1.6 Riverside Highland Water Company

The Riverside Highland Water Company (RHWC) provides domestic and irrigation water services to the City of Grand Terrace, portions of the City of Colton, and portions of the unincorporated areas of the Counties of San Bernardino and Riverside. 51% of RHWC's service area lies within the San Bernardino Valley service area and the remainder is within the service area of Western Municipal Water District (Western). RHWC obtains water from the Lytle Creek Subbasin, the SBB, the Rialto-Colton Subbasin, Riverside North, and Riverside South Basins.

This Plan includes the RHWC UWMP; see Part 2, Chapter 6 for more information.

2.2.1.7 San Bernardino Municipal Water Department

The City of San Bernardino is served by a municipal utility, the San Bernardino Municipal Water Department (SBMWD). SBMWD was created as a municipal utility by the City of San Bernardino Charter. The SBMWD water service area is approximately 45 square miles, providing water to approximately 210,000 persons in the City of San Bernardino and unincorporated areas of San Bernardino County. SBMWD produces all of its water supply from wells in the SBB. In addition to potable water, SBMWD provides wastewater collection and

treatment services and is developing a recycled water system for groundwater recharge and non-potable reuse.

This Plan includes the SBMWD UWMP; see Part 2, Chapter 7 for more information.

2.2.1.8 South Mesa Water Company

South Mesa Water Company (SMWC) is a mutual water company, which was established in 1912 as a successor to the earliest land and water companies in the area dating back to the 19th Century. SMWC provides domestic and irrigation water service to its shareholders within its service territory, which comprises a portion of the City of Yucaipa in San Bernardino County and a portion of the City of Calimesa in Riverside County. 55% of SMWC is within SBVMWD's service area in San Bernardino County, and 45% is within San Gorgonio Pass Water Agency's service area in Riverside County. SMWC's water supply includes locally produced groundwater from the Yucaipa Sub-basin, and also groundwater produced from the adjacent adjudicated Beaumont Basin in accordance with SMWC's adjudicated water rights.

This Plan includes the SMWC UWMP; see Part 2, Chapter 8 for more information.

2.2.1.9 West Valley Water District

West Valley Water District (WVWD) is a County Water District, a public agency of the State of California, organized and existing under the County Water District Law (Division 12, Section 30,000 of the Water Code) of the State of California. WVWD provides domestic water service to customers throughout southwestern San Bernardino County and a small portion within northern Riverside County. 92% of WVWD's service area lies within San Bernardino Valley's boundaries (the remainder is in IEUA's boundaries). WVWD's service area is approximately 31 square miles, serving portions of the Cities of Rialto, Fontana, Colton, and Jurupa Valley, and unincorporated areas of San Bernardino County. WVWD utilizes water from five groundwater basins and treats surface water from Lytle Creek and SWP water at its Oliver P. Roemer Water Filtration Facility.

This Plan includes the WVWD UWMP; see Part 2, Chapter 9 for more information.

2.2.2 Other Regional Water Suppliers

In addition to the Participating Agencies, this RUWMP incorporates data from other agencies within the San Bernardino Valley that rely wholly or partially on the shared water resources analyzed in this Plan. While these agencies are not participants in this RUWMP, their water demands and associated supply needs are included to accurately evaluate regional water supply reliability through 2050.

For the agencies preparing separate 2025 UWMPs, updated projections from their respective 2025 UWMPs were incorporated into this Plan. These agencies are:

- East Valley Water District (EVWD) (wholly within SBVMWD service area)
- Fontana Water Company (FWC) (partially within SBVMWD service area)

- Yucaipa Valley Water District (YVWD) (partially within SBVMWD service area)

Some of the supply projections shown in this RUWMP for YVWD differ from those shown in YVWD's 2025 UWMP. YVWD's 2025 UWMP shows all potentially available supplies and a supply surplus at the retailer level, whereas this RUWMP uses a different approach to the regional supply analysis that focuses on specific supplies that agencies intend to use to meet future demands and evaluates total supply surplus on a regional level. This RUWMP includes assumptions about future supply use for YVWD to align with this regional methodology, but all retailers have the flexibility to modify their supply strategies to meet their demands.

FWC and YVWD also use other supplies from outside the region to meet their demands that are not evaluated in this RUWMP so the analysis in this Plan include only the portion of their demands that are expected to be met by supplies evaluated in this Plan.

For the agencies who are not urban water suppliers and do not prepare UWMPs, their demands and associated supply needs were estimated and incorporated into this Plan based on direct input from the agency, water supply agreements, records of prior water use, or assumed to be the same as projections from the 2020 IRUWMP. These agencies are:

- Bear Valley Mutal Water Company
- Marygold Mutual Water Company
- Muscoy Mutual Water Company
- Western Heights Water Company
- Other Private Pumpers/Users within the Region

2.3 Population and Demographics

2.3.1 Historic Population and Projected Growth in the Region

The population of the Region (San Bernardino Valley service area) has experienced rapid growth in the past. Figure 2-3 shows the Census populations for the Region from 1990 to 2020. The Region grew by approximately 8,000 people each year between 1990 and 2010, which is about 1.4% growth annually for 20 years. Growth from 2010 to 2020 slowed to 0.7% annually. As of the 2020 Census, the total population within the San Bernardino Valley service area was 709,585 people.

As noted above, this RUWMP comprises nine water suppliers, eight of which directly supply water to customers. The 2025 population estimates for each participating agency are provided in Table 2-1. For details on how the population estimate was developed, refer to the agency's corresponding UWMP chapter in Part 2. The total 2025 population for the Region was estimated by summing the estimated 2025 population for each Participating Agency that lies within the SBVMWD boundary (plus YVWD and EVWD who provided 2025 population estimates) and assuming the portion of the population outside these collective boundaries grew at the same rate between 2020 and 2025 (0.68% annually from 2020 to 2025).

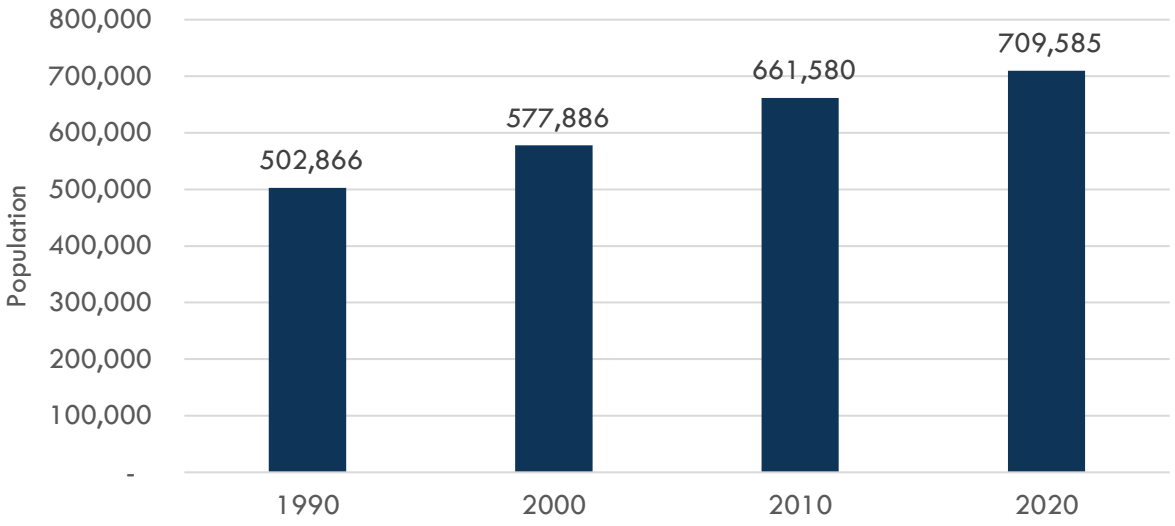

Figure 2-3: San Bernardino Valley Service Area Historic Census Population, 1990-2020

Table 2-1: 2025 RUWMP Population

AGENCY	2025 AGENCY POPULATION ESTIMATE	2025 POPULATION ESTIMATE WITHIN SBVMWD
City of Colton	49,038	49,038
City of Loma Linda	26,273	26,273
City of Redlands	84,183	84,183
City of Rialto	59,264	59,264
Riverside Highland Water Company (51% in SBVMWD)	24,467	12,566
San Bernardino Municipal Water Department	207,872	207,872
South Mesa Water Company (55% in SBVMWD)	12,761	7,007
West Valley Water District (92% in SBVMWD)	96,123	87,972
Non-Participating Areas within SBVMWD		199,712
Total RUWMP 2025 Population for SBVMWD		**733,887**

2.3.2 Future Population Projections in the Plan Area

The Southern California Association of Governments (SCAG) has developed a growth forecast for the 2024 Connect SoCal Regional Transportation Plan (2024 RTP). The 2024 RTP includes population, households, and employment projections for the SCAG region for years 2019, 2035, and 2050 across approximately 13,062 transportation analysis zones (TAZs) within the SCAG region. These forecasts are based on land use data, the 2020 Census, and the Cycle 6 Regional Housing Needs Assessment (RHNA).

In 2022, SCAG launched the Local Data Exchange (LDX), a tool where jurisdictions can directly input their data. This change has increased data input, participation, and validation for the 2019, 2035, and 2050 projections. SCAG's projections undergo extensive local review, incorporating zoning information from city and county general plans, input from local planners and jurisdictions, and coordination with local or regional land use authorities.

SCAG publishes jurisdiction- and TAZ-level data as GIS shapefiles of their projections on a granular local level. These values were used to derive a SCAG population growth rate for the Region by intersecting the SCAG GIS data with the San Bernardino Valley service area.

SCAG's 2024 population growth projections have declined from the last Connect SoCal RTP in 2020, due to ongoing economic impacts of COVID-19, pandemic-related death increases, increasingly negative net domestic migration, decline in births, and near-zero level of foreign immigration. SCAG's 2024 update uses a 2019 base year and incorporates a broader data range from 2016 to 2022, capturing key post-COVID shifts in population, employment, and household trends.

While 2024 SCAG projects slower growth, the result still shows an increase in population within the San Bernardino Valley service area, which is estimated to grow by about 100,000 people by 2050 from a 2020 Census value of 709,585. By 2050, the San Bernardino Valley service area is expected to have a population of approximately 810,000 people, per SCAG. This population projection trend is shown in Table 2-2. Table 2-3 shows SCAG projections of households and employment for the San Bernardino Valley service area.

Table 2-2: SCAG Population Projection for the San Bernardino Valley Service Area (Not Used)

	2025	2030	2035	2040	2045	2050
Population	**723,975**	**737,697**	**751,420**	**771,510**	**791,600**	**811,689**
Average Annual % Increase		0.4%	0.4%	0.5%	0.5%	0.5%
Annual Average Change, per year		2,745	2,745	4,018	4,018	4,018

Table 2-3: Households and Employment Projection for the San Bernardino Valley Service Area

	2025	2030	2035	2040	2045	2050
Households	**222,821**	**235,338**	**247,856**	**256,576**	**265,297**	**274,018**
Average Annual % Increase		1.1%	1.0%	0.7%	0.7%	0.6%
Annual Average Change, per year		2,503	2,503	1,744	1,744	1,744
Employment	**314,459**	**329,949**	**345,439**	**356,329**	**367,219**	**378,109**
Average Annual % Increase		1.0%	0.9%	0.6%	0.6%	0.6%
Annual Average Change, per year		3,098	3,098	2,178	2,178	2,178

A separate set of population projections was also made for San Bernardino Valley that based on the total of the population projection forecasts of the agencies within it. In general, participating agencies in this Plan forecasted population based on known upcoming developments and SCAG's household growth rate, assuming a consistent rate of persons per household in the future. This led to higher population projections than SCAG projected, as shown by comparing Table 2-4 to Table 2-2. The population projections in Table 2-4 are used for this RUWMP.

Table 2-4: Population Projection for the San Bernardino Valley Service Area with Local Agency Input (Official)

	2025	2030	2035	2040	2045	2050
Population	**733,887**	**762,280**	**782,611**	**805,910**	**829,974**	**847,127**
Average Annual % Increase		0.76%	0.53%	0.59%	0.59%	0.41%
Annual Average Change, per year		5,679	4,066	4,660	4,813	3,430

As shown in Figure 2-4, future population is expected to increase at a similar but slower rate, compared to previous estimates from the 2020 IRUWMP, which were based on SCAG's 2020 RTP.

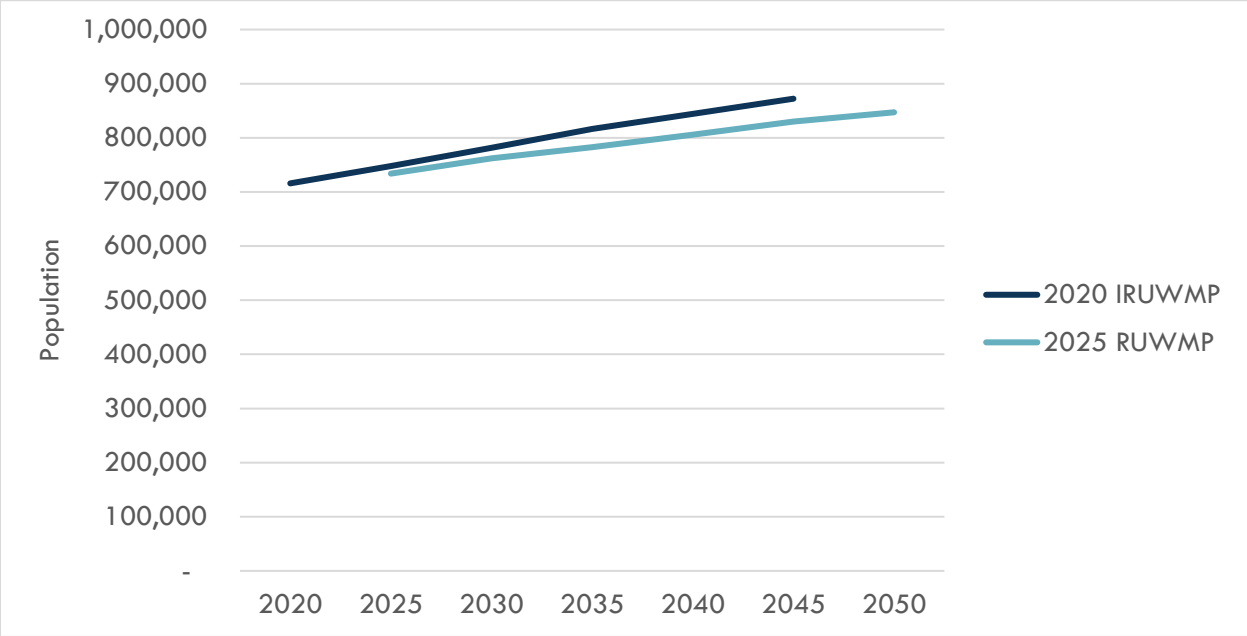

Figure 2-4: Population Projection for the San Bernardino Valley Service Area with Local Agency Input (Official)

2.3.3 Economic Condition and Social and Cultural Composition of the Region

Like most communities in Southern California, the Region has seen a continued increase in population and change in the economic base as agricultural and vacant land is replaced with residential housing, leading to urban and service sector jobs.

Much of the population growth of the Region since the 1970s is linked with the economies of Los Angeles and Orange Counties because they are within commuter range, and the housing prices in the Region are more affordable. Also, population growth over the past three decades is attributed to a marked increase in immigration from Mexico, Latin America, and the Pacific Rim.

Before the COVID-19 pandemic, employment in the Inland Empire was increasing at a steady pace, according to California's Employment Development Department and U.C. Riverside School of Business Center for Economic Forecasting. The latest economic briefing from SCAG for San Bernardino County notes that in 2025, the economy advanced more slowly. The unemployment rate increased slightly to 5.9%, similar to the entire SCAG region. The Inland Empire added 6,400 nonfarm jobs and 14,600 jobs. SCAG projections indicate that unemployment may continue to rise and job growth may slow down due to political and social impacts (Southern California Association of Governments, December 2025).

According to the State of Workers in the Inland Empire 2025 (Inland Empire Labor and Community Center, 2025) report prepared by the Inland Empire Labor and Community Center at UC Riverside, the Inland Empire workforce is younger, more racially diverse, and more heavily concentrated in low-wage sectors compared to the rest of California. A significant portion of the workforce lacks access to colleges, universities, and other skills-training opportunities, which contributes to continued employment in low-wage industries and limits opportunities for upward mobility.

The Inland Empire also exhibits a strong commuter dynamic, with many residents traveling to neighboring regions such as Orange, Los Angeles, and San Diego counties for employment. Nearly 25 percent of Inland Empire residents commute to other parts of California for work. In addition, shifts following the COVID-19 pandemic have resulted in 12 percent of workers engaging in remote work arrangements.

While the Inland Empire shares several major industries with the broader Southern California region, warehousing and truck transportation are especially prominent. Construction and educational services also rank among the region’s leading industries. Overall, the Inland Empire economy remains highly reliant on logistics-related employment.

2.4 Land Uses

The Region recognizes the importance of collaboration between land use planning and water resources management. Within the Region, local planning is conducted by counties, cities, local agencies, and special districts. San Bernardino County, cities, and water agencies within the Region coordinate as part of the San Bernardino Countywide Vision Process. Part of this process involves collaboration between water resource managers and land use planners on the water element to create mutually beneficial opportunities that ensure adequate water supplies and quality to support future population and economic growth within the County.

Additionally, SCAG prepares demographic forecasts based on land use data through an extensive process that emphasizes input from local planners in coordination with local or regional land use authorities, incorporating essential information to reflect anticipated future populations and land uses. SCAG's projections undergo extensive local review, incorporate zoning information from city and county general plans, and are supported by Environmental Impact Reports. The future water needs for the Region evaluated in this Plan are informed by SCAG's population, housing and employment growth projections are therefore rooted in regional land use planning.

Figure 2-5 presents the current land use within the Region based on SCAG's regional land use dataset. The total area of the Region is approximately 225,675 acres, of which 69,500 acres, or about 31%, are covered by the national forest located in the easterly and northerly areas of the Region. Single family residential makes up the next largest land use of approximately 21%, followed by specific plan designations of 11%.

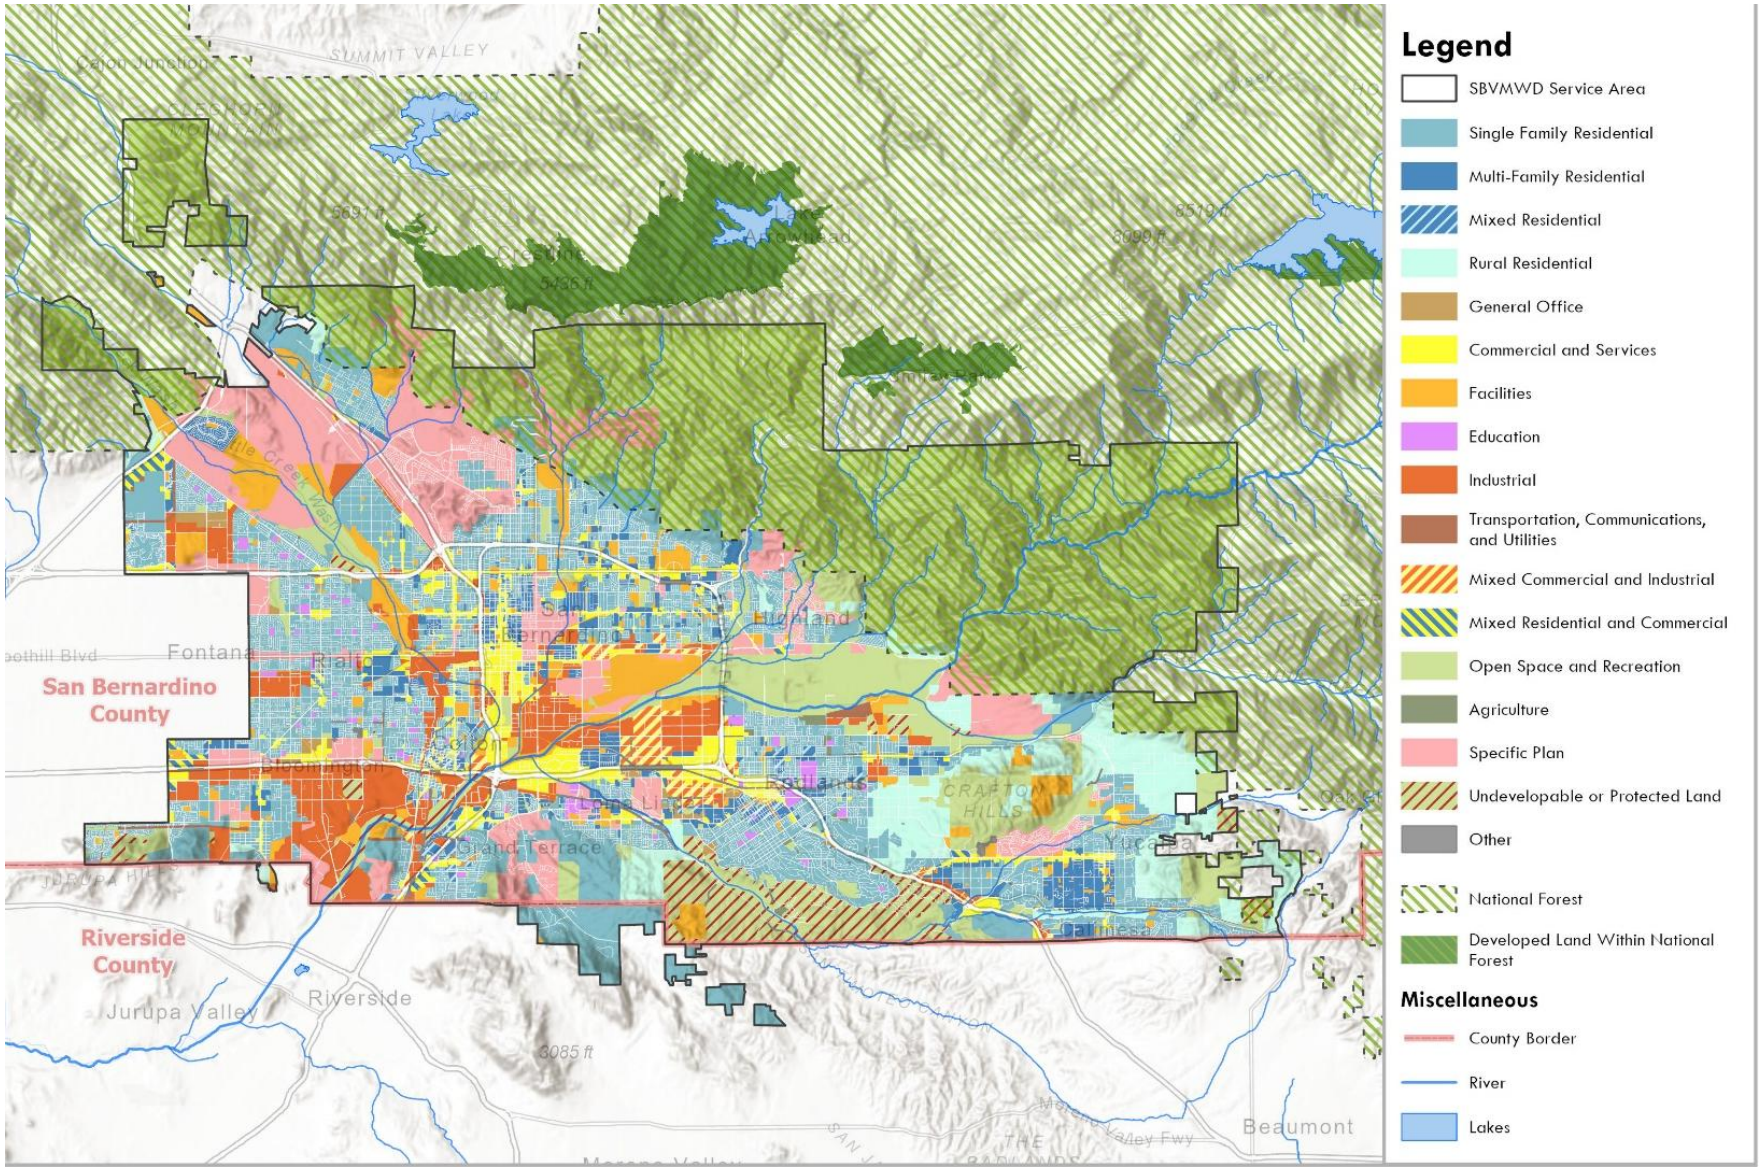

Figure 2-5: Land Use within the Region

2.5 Regional Climate

2.5.1 Current Regional Climate

Climate in the Region is characterized by relatively hot, dry summers and cool winters with intermittent precipitation. The largest portion (73%) of average annual precipitation occurs during December through March and rainless periods of several months are common in the summer. Precipitation is nearly always in the form of rain in the lower elevations and mostly in the form of snow above about 6,000 feet mean sea level (msl) in the San Bernardino Mountains. Mean annual precipitation ranges from about 12 inches in the vicinity of Riverside, to about 20 inches at the base of the San Bernardino Mountains, to more than 35 inches along the crest of the mountains.

The historical record indicates that period of below-average precipitation can last more than 30 years, such as the dry period that extended from 1938 to 1968. As shown by precipitation data in Figure 2-6, the Region has been experiencing an ongoing drought since 1999, indicated by a long-term downward trend in the Precipitation Index, except for a few wet years.

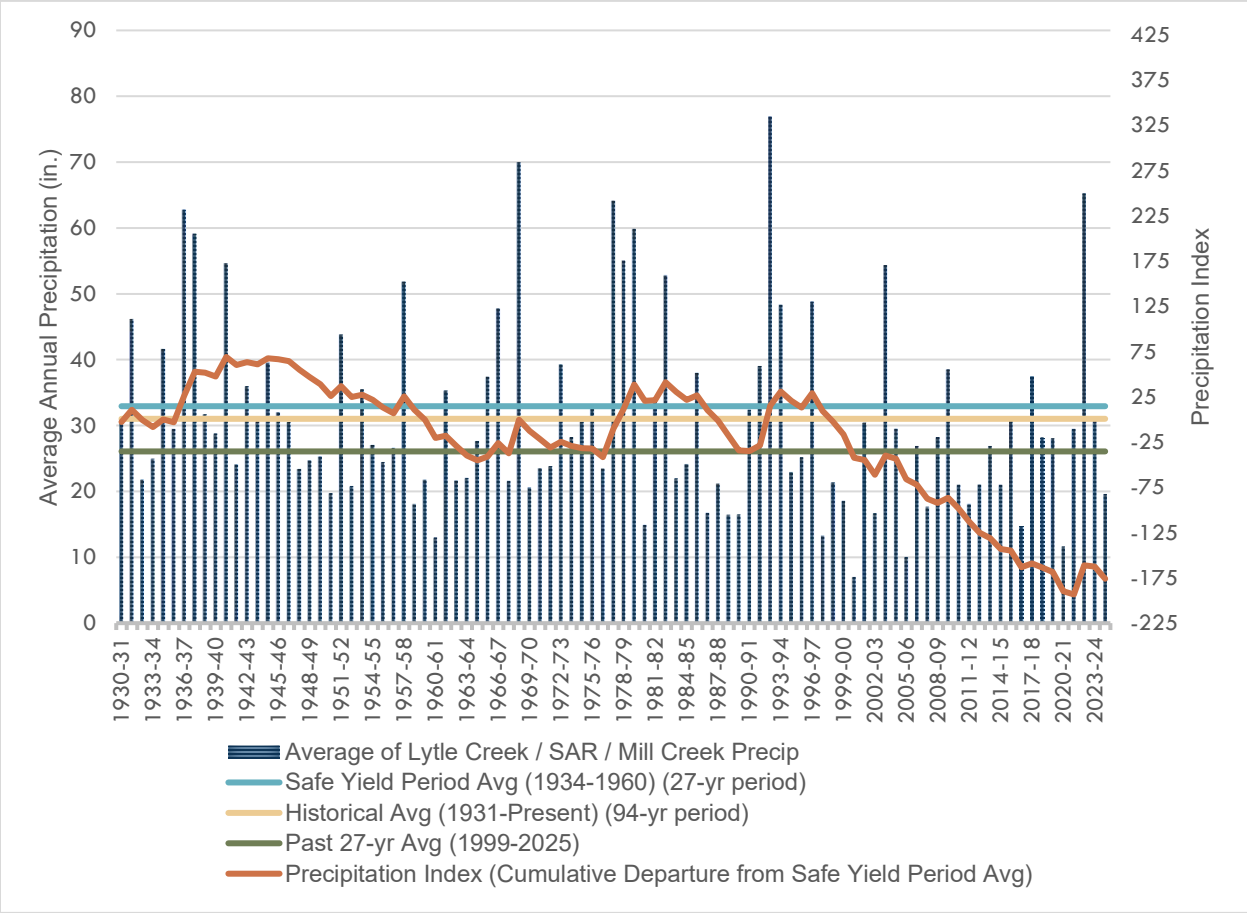

Figure 2-6: San Bernardino Basin Precipitation Index

2.5.2 Potential Effects of Climate Change

Climate change modeling for the SAR watershed suggests that a changing climate will have multiple effects on the Region. Adaptation and mitigation measures will be necessary to account for these effects to maintain long term water supply reliability.

San Bernardino Valley completed a Climate Adaptation and Resilience Plan (2024 CARP) in 2024 to strengthen water reliability and address existing and future climate change impacts. The 2024 CARP identified the following key climate risks for the San Bernardino Valley service area (San Bernardino Valley, 2024):

- **Drought:** Drought duration and intensity is expected to increase in the future, limiting water supply, increasing water demand and straining local groundwater resources and ecosystems.
- **Extreme Heat:** Extreme heat events are projected to become more common, which will lead to more frequent regional power disruptions, increased wildfire risk, increased evapotranspiration, higher water demand, and degraded ecosystems.
- **Wildfire:** Wildfire events are expected to become more likely in the future, which will increase the risk of damaged infrastructure, operational disruptions, power outages, and damaged ecosystems, particularly in the Upper SAR Watershed.
- **Extreme Precipitation and Flooding:** Extreme precipitation and flooding events are projected to become more likely, increasing landslide, soil erosion and mudflow, and liquefaction risk in certain locations.
- **Sea Level Rise:** Climate impacts to the SWP, including wildfire, reduced snowpack, sea-level rise, and increased temperatures, may disrupt SWP operations and infrastructure and will increase the variability and risk of imported water deliveries.
- **Landslides:** Landslides can be triggered by an increase in the frequency and severity of wildfire and heavy precipitation events that threaten assets and infrastructure situated on or near slopes, particularly at the hills and valley interface.

Additionally, the State's Cal-Adapt website provides a number of tools to use to estimate the effects of climate change at a local level. The Cal-Adapt Extreme Heat tool shows that in the future the number of days over 95°F will increase in multiple locations. The Region chose three cities with different temperature ranges to compare the increase across the upper watershed. The cities of Riverside, San Bernardino and Big Bear were used to see the projections of the number of days that would be above 95°F and the results are shown in Table 2-5. The numbers of high temperature days in Riverside and San Bernardino are believed to double between the present and 2070. Similar increases in temperature can be anticipated throughout the inland valleys. These increased temperature levels will increase water demands across the watershed mainly for agricultural and irrigation purposes. Although not projected to be above 95°F, higher temperature days in Big Bear have the potential to affect the forest ecosystem and the snow related recreational activities in the area.

Table 2-5: Average Number of Days per Year Exceeding 95°F

CITY	OBSERVED HISTORICAL (1961-1990)	2050	2070
Riverside	39	81	96
San Bernardino	30	68	82
Big Bear	0	0	0

Source: Cal-Adapt, Extreme Heat Days & Warm Nights tool: https://cmip5.cal-adapt.org/tools/extreme-weather/. Accessed June 2025; the link has been updated since it was accessed. Scenario: RCP 4.5. Threshold temperature: 95°F. Models: Default GCMs.

The forest ecosystems in the San Bernardino National Forest are currently on the decline. Alpine and subalpine forests are anticipated to decrease in area by fifty to seventy percent by 2100. It is believed that increased greenhouse gas emissions are a primary factor contributing to the decline of these fragile ecosystems. Wildfire risk is anticipated to increase particularly in the urban-wildland interface communities. Wildfires can pose serious threats not only to forest ecosystems, but also to critical water infrastructure. More frequent wildfires may also increase sediment and contaminant flows within the watershed, consequently degrading the quality of surface water bodies that are an important part of the ecosystem and Region's water supply.

While high elevation ecosystems decrease, the severity of future floods is likely to increase. The likelihood of a 200-year storm event or longer is anticipated to be significantly higher in 2070. This increases the potential for negative impacts on nearby infrastructure. Furthermore, storms are expected to be more severe but less frequent. Despite these assumptions, the aftermath of a severe storm is highly variable. It is known that there are significant variabilities in the results of storm severity.

In addition to changes in ecosystems and storm severity, warmer temperatures may also decrease the annual amount of snow fall and increase the instance of rain in higher elevations. This alteration of precipitation type is likely to cause negative impacts for snow related recreational activities characteristic of the area's ski resorts. From a local standpoint, Big Bear and Snow Valley both lie below 3000 m and are anticipated to experience a decline in snowpack by 2070. Furthermore, it is projected that there will be a decrease in overall winter precipitation of the area by 2070, which will impact mountain runoff and surface water availability, which is an important part of the Region's water supply.

On a larger scale, the increased temperatures could affect the Sierras in a similar way, threatening the reliability of the SWP. Water quality could also suffer due to changes in precipitation and rising temperatures. Potential impacts such as increased contaminant concentrations and algal growth could increase water treatment needs.

Regional efforts to mitigate the effects of climate change on water supply reliability are discussed in Chapter 5.0.

3.0 Regional Water Sources and Management

This Section describes the current and planned water resources available within the region for the 25-year period covered by the Plan. Management of the various water sources is also described, including legal judgements and regional management groups.

IN THIS SECTION

- Imported Water
- Groundwater
- Surface Water
- Recycled Water
- Other Supplies
- Water Quality
- Planned Projects

Securing a reliable water supply is the primary mission of San Bernardino Valley and the Participating Agencies. The Region relies on a diversified portfolio of water supplies to meet the needs of its residential, commercial, and institutional customers. The Region's water supply portfolio consists of imported water, local groundwater, local surface water and recycled water. This chapter describes the current and planned water resources available to the Region through 2050. It also details the management frameworks – including legal judgments, Watermasters, and regional agreements – that govern how these resources are extracted, stored, and shared among the agencies. Table 3-1 provides a high-level overview of the water sources currently utilized by each agency and producer within the San Bernardino Valley service area.

Table 3-1: Overview of Water Sources Used by Retail Agencies in the Region

3.1 Imported Water

Imported water from the California State Water Project (SWP), is available to the Region from the East Branch through San Bernardino Valley, the Region's State Water Contractor.

San Bernardino Valley is the fifth largest State Water Contractor, with an annual entitlement of 102,600 AF. SBVMWD takes delivery of SWP water at the Devil Canyon Afterbay. From this location, SBVMWD can deliver water to the west via the Devil Canyon – Azusa Pipeline (owned by San Gabriel Valley Municipal Water District and that SBVMWD owns conveyance capacity within) or to the east via the Foothill Pipeline (owned by SBVMWD). SBVMWD can also deliver to YVWD and San Gorgonio Pass Water Agency through the East Branch Extension of the SWP downstream of the Foothill Pipeline.

San Gorgonio Pass Water Agency is downstream of SBVMWD on the East Branch of the California Aqueduct. See the San Gorgonio Pass Water Agency 2025 UWMP for more information. SBVMWD and the SGPWA coordinate work as they both share capacity along the East Branch Extension. Two retail water districts included in this plan (YVWD and SMWC) are co-located within the SBVMWD and SGPWA service areas. In addition to operating some mutually used facilities, the SBVMWD and SGPWA have an agreement in place to share excess imported supplies when available, which is included in Part 3 Appendix B.

Metropolitan provides SWP water to portions of the Region through their member agencies, Western and Inland Empire Utilities Agency (IEUA). Western does not currently deliver imported water to its retail agencies within the Region but may in the future. FWC and WVWD are co-located within both the SBVMWD and IEUA service areas and FWC uses imported water from both IEUA and SBVMWD.

In 2021, SBVMWD entered into a new Coordinated Operating Agreement (COA) with Metropolitan that would sell them most of SBVMWD's surplus imported water; this COA replaced the previous version that expired in 2016. One of the terms of the COA requires Metropolitan to offer 50% of any surplus water purchased under this agreement to their member agencies in the SARCCUP Program. The COA is included in Part 3 Appendix B. Metropolitan and its member agencies that are part of the SARCCUP have also developed a companion agreement that describes how SARCCUP will function within Metropolitan's existing policies.

3.1.1 SWP Overview

Imported water is available to the Region from the California State Water Project (SWP), which is the largest state-built, multi-purpose water project in the country; it is paid for by the 29 State Water Contractors, including SBVMWD, SGPWA and MWDSC and operated and maintained by DWR. It was authorized by the California State Legislature in 1959, with the construction of most initial facilities completed by 1973. The SWP is a water storage and delivery system of reservoirs, aqueducts, power plants and pumping plants. Its main purpose is to capture and store water at Lake Oroville and distribute it to the 29 State Water Contractors in Northern California, the San Francisco Bay Area, the San Joaquin Valley, the Central Coast, and

Southern California. Of the contracted water supply, approximately 70 percent goes to urban users and 30 percent goes to agricultural users. The SWP makes deliveries to two-thirds of California's population. The SWP is also operated to improve water quality in the Sacramento-San Joaquin Delta, control Feather River flood waters, provide recreation, and enhance fish and wildlife.

The SWP includes 34 storage facilities, reservoirs, and lakes, 20 pumping plants, four pumping-generating plants, five hydro-electric plants, and approximately 701 miles of aqueducts and pipelines. The primary water source for the SWP is the Feather River, a tributary of the Sacramento River. Water released from Oroville Dam on the Feather River flows down natural river channels to the Sacramento-San Joaquin River Delta (Delta). While some SWP supplies are pumped from the northern Delta into the North Bay Aqueduct, the vast majority of SWP supplies are pumped from the southern Delta into the 444-mile-long California Aqueduct. The California Aqueduct conveys water along the west side of the San Joaquin Valley to Edmonston Pumping Plant, where water is pumped over the Tehachapi Mountains. The aqueduct then divides into the East and West Branches.

Each SWP contractor's SWP Water Supply Contract includes a "Table A," which lists the maximum amount of water an agency is entitled to throughout the life of the contract. The Table A amount is each contractor's proportionate share, or "allocation," of the SWP water supply. However, actual deliveries of SWP water each year vary, based mainly on the amount of precipitation (for other factors, see Section 3.1.2 below).

While the primary supply of water available from the SWP is allocated Table A supply, SWP supplies in addition to Table A water are periodically available, including "Article 56C" carryover water, "Article 21" water, "Article 57" water from other State Water Contractors via the Water Management Tool, and DWR "Dry Year Purchase Programs". Pursuant to the long-term water supply contracts, SWP contractors have the opportunity to carry over a portion of their allocated water approved for delivery in the current year for delivery during the next year (Article 56C) with advance notice when they submit their initial request for Table A water, or within the last three months of the delivery year. The carryover program was designed to encourage the most efficient and beneficial use of water and to avoid obligating the contractors to "use or lose" the water by December 31 of each year. The water supply contracts outline the criteria for carrying over Table A water from one year to the next. Normally, carryover water is water that has been exported during the year, has not been delivered to the contractor during that year, and has remained stored in the SWP share of San Luis Reservoir to be delivered during the following year. Storage for carryover water no longer becomes available to the contractors if it interferes with storage of SWP water for project needs.

Article 21 water (which refers to the SWP contract provision defining this supply) is water that may be made available by DWR when excess flows are available in the Delta (i.e., when Delta outflow requirements have been met, SWP storage south of the Delta is full, and conveyance capacity is available beyond that being used for SWP operations and delivery of allocated and scheduled Table A supplies). Article 21 water is made available on an unscheduled and

interruptible basis and is typically available only in average to wet years, generally only for a limited time in the late winter.

In wet periods, the amount of water available may exceed the amount of storage in the SWP system. During these times, State Water Contractors may have excess SWP water. San Bernardino Valley has agreements, in place, to sell surplus water to SGPWA and Metropolitan Water District of Southern California.

Delta Conveyance Project

Consistent with Executive Order N-10-19, in early 2019, the state announced a new single tunnel project, which proposed a set of new diversion intakes along Sacramento River in the north Delta for SWP. In 2019 DWR initiated planning and environmental review for a single tunnel Delta Conveyance Project (DCP) to protect the reliability of SWP supplies from the effects of climate change and seismic events, among other risks. DWR's current schedule for the DCP environmental planning and permitting extends through the end of 2027 and additional steps are needed before construction can start by 2030. DCP will potentially be operational in 2050 following extensive planning, permitting and construction.

3.1.2 Imported Water Supply Reliability

This section presents the imported water supply reliability assumptions used in San Bernardino Valley's water supply reliability analysis to meet the requirements of the UWMP Act.

The amount of SWP water delivered to State Water Contractors in a given year depends on a number of factors, including the demand for the supply, amount of rainfall, snowpack, runoff, water in storage, pumping capacity from the Delta, and legal/regulatory constraints on SWP operation. Water delivery reliability depends on three general factors: the availability of water, the ability to convey water to the desired point of delivery, and the magnitude of demand for the water. Urban SWP contractors' requests for SWP water, which were low in the early years of the SWP, have been steadily increasing over time. Regulatory constraints have changed over time, becoming more restrictive. The last 15 years of SWP deliveries to San Bernardino Valley are presented in Table 3-2.

Table 3-2: Historical State Water Project Deliveries to San Bernardino Valley and Final SWP Table A Allocations

CALENDAR YEAR	TOTAL DELIVERIES (AF)	FINAL TABLE A ALLOCATION
2010	30,310	50%
2011	29,129	80%
2012	40,216	65%
2013	31,020	35%

CALENDAR YEAR	TOTAL DELIVERIES (AF)	FINAL TABLE A ALLOCATION
2014	19,223	5%
2015	35,430	20%
2016	62,600	60%
2017	78,396	85%
2018	44,307	35%
2019	78,478	75%
2020	23,504	20%
2021	16,822	5%
2022	12,781	5%
2023	61,756	100%
2024	76,914	40%
2025	70,190	50%

Note: As of 1/29/26, the 2026 Table A allocation is at 30%, but has not yet been finalized for 2026.

3.1.2.1 Normal Year and Long-Term State Water Project Availability

DWR prepares a biennial report to assist SWP contractors and local planners in assessing the availability of supplies from the SWP. DWR issued its most recent update, the 2025 Draft DWR State Water Project Delivery Capability Report (DCR), in December 2025. In this update, DWR provides SWP supply estimates for SWP contractors to use in their planning efforts, including for use in their 2025 UWMPs.

The 2025 DCR includes DWR's estimates of SWP water supply availability under both existing (2025) and future conditions (2043). The 2025 DCR also included three climate change scenarios that impact future conditions based on the percent level of concern (LOC) projected by 2043, which vary change in temperature, change in average precipitation, change in precipitation intensification, and sea level rise. Of the three scenarios (50%, 75%, and 95% LOC), the 75% LOC was chosen for this report to represent future SWP water supply availability.

The following is a plain-language description excerpt from the Draft 2025 DCR:

The 75th percentile LOC scenario represents a 2043 worse-than-average future for the SWP. It includes the following changes relative to current conditions:

- *1.7°C (~3°F) temperature increase.*
- *Similar average precipitation.*
- *12% increase in the 99th percentile daily precipitation event (more intensity).*
- *30 cm (~12 in) of sea level rise at the Golden Gate Bridge.*

Land use is representative of existing levels of development and regulations are represented by current regulations, including the 2019 US Fish and Wildlife Service and National Marine Fisheries Service biological opinions, its associated Incidental Take Permit, and the 2018 addendum to the Coordinated Operations Agreement between the SWP and Central Valley Project. Ongoing processes, such as the Agreements to Support Healthy Rivers and Landscapes and the 2021 Reinitiation of Consultation for Long-Term Operations of the Central Valley Project and State Water Project, are not included in the modeling.

Users of this scenario should assume that current climate model simulations indicate that actual 2043 climate conditions would have about a 25% change of being worse than the conditions represented in this scenario. Put another way, there is an approximate 25% chance that planning to only *this scenario would leave an agency under-planned and potentially under prepared for the actual climate change conditions to which they need to operate. This scenario may be considered a moderate risk aversion scenario, as it provides significantly more challenging future conditions than the 50th percentile LOC but does not provide the most extreme planning conditions.*

Based on the 75th percentile LOC, long-term average SWP deliveries are 54% under current conditions and 46% under 2043 conditions. In-between and out years were calculated using linear interpolation. Long-term average SWP deliveries represent both the long-term average and normal year supply conditions and are presented in Table 3-3.

Table 3-3: SWP Long-term Average (1922-2021) Modeled Anticipated Table A Allocations to San Bernardino Valley

STATE WATER PROJECT SUPPLIES	2025	2030	2035	2040	2045	2050
% of Table A Amount Available	54%	51%	49%	46%	43%	41%
Anticipated Deliveries (AFY)	55,404	52,668	49,932	47,196	44,460	41,724

Source: 2025 Draft DWR Delivery Capability Report

3.1.2.2 Dry Year, Multiple Dry Year, and Wet Year State Water Project Availability

DWR's 2025 Delivery Capability Report indicates that the modeled single dry year SWP water supply allocations for 1977, 2014, and 2021 are 6%, 8%, and 10% under existing conditions. Under 75th percentile LOC 2043 conditions, the allocations are 1%, 6%, and 7%, respectively. Historically, the lowest final SWP allocations were 5% in 2014, 2021, and 2022.

Each year by October 1, SWP contractors submit their requests for SWP supplies for the following calendar year. By December 1, DWR estimates the available water supply for the following year and sets an initial supply allocation based on the total of all contractors' requests, current reservoir storage, forecasted hydrology through the next year, and target reservoir storage for the end of the next year. The most uncertain of these factors is the forecasted hydrology. In setting water supply allocations, DWR uses a conservative 90% hydrologic forecast, where nine out of ten years will be wetter and one out of ten years drier than assumed. DWR re-evaluates its estimate of available supplies throughout the runoff season of winter and early spring, using updated reservoir storage and hydrologic forecasts, and revises SWP supply allocations as warranted. Since most of California's annual precipitation falls in the winter and early spring, by the end of spring the supply available for the year is much more certain, and in most years DWR issues its final SWP allocation by this time. While most of the water supply is certain by this time, runoff in the late fall remains somewhat variable as the next year's runoff season begins. A drier than forecasted fall can result in not meeting end-of-year reservoir storage targets, which means less water available in storage for the following year.

Water year 2013 was a year with two hydrologic extremes. October through December 2012 was one of the wettest fall periods on record but was followed by the driest consecutive 12 months on record. The supply allocation for 2013 was a low 35% allocation. However, the 2013 hydrology ended up being even drier than DWR's conservative hydrologic forecast, so the SWP began 2014 with reservoir storage lower than targeted levels and less stored water available for 2014 supplies. Compounding this low storage situation, 2014 also was a critically dry year, with runoff for water year 2014 the fourth driest on record.

The exceedingly dry sequence from the beginning of January 2013 through the end of 2014 was one of the driest two-year periods in the historical record. As noted above, the circumstances that led to the low SWP water supply allocation were unusual, however extremely low precipitation in 2021 and 2022 led to additional years of 5% allocations. San Bernardino Valley's UWMP assumes 5% for all future single dry years.

For consecutive dry years, this Plan assumes conditions from the 6-year drought period 1929-1934. For wet years, this Plan assumes conditions from 2017. Single dry, multiple dry, and wet year SWP allocations are presented in Table 3-4 and the modeled range of water supply availability by year used in each scenario is shown in Figure 3-1. Note that the values in Figure 3-1 are based on "existing conditions" and not the 75% level of concern climate change scenario, so these values will be higher than the values chosen for the UWMP analysis in Table 3-4.

Table 3-4: Estimated SWP Table A Supply Reliability in Dry, Multiple Dry, and Wet Years

State Water Project Supplies	2025	2030	2035	2040	2045
Single Dry Year (2014, 2021, 2022)					
% of Table A Amount Available[1]	5%	5%	5%	5%	5%
Anticipated Deliveries (AFY)	5,130	5,130	5,130	5,130	5,130
Multiple Dry Year (1929-1934)					
% of Table A Amount Available	15%	14%	14%	14%	14%
Anticipated Deliveries (AFY)	15,105	14,820	14,535	14,250	13,965
Wet Year (1983)					
% of Table A Amount Available	84%	83%	83%	82%	82%
Anticipated Deliveries (AFY)	86,184	85,158	85,158	84,132	84,132

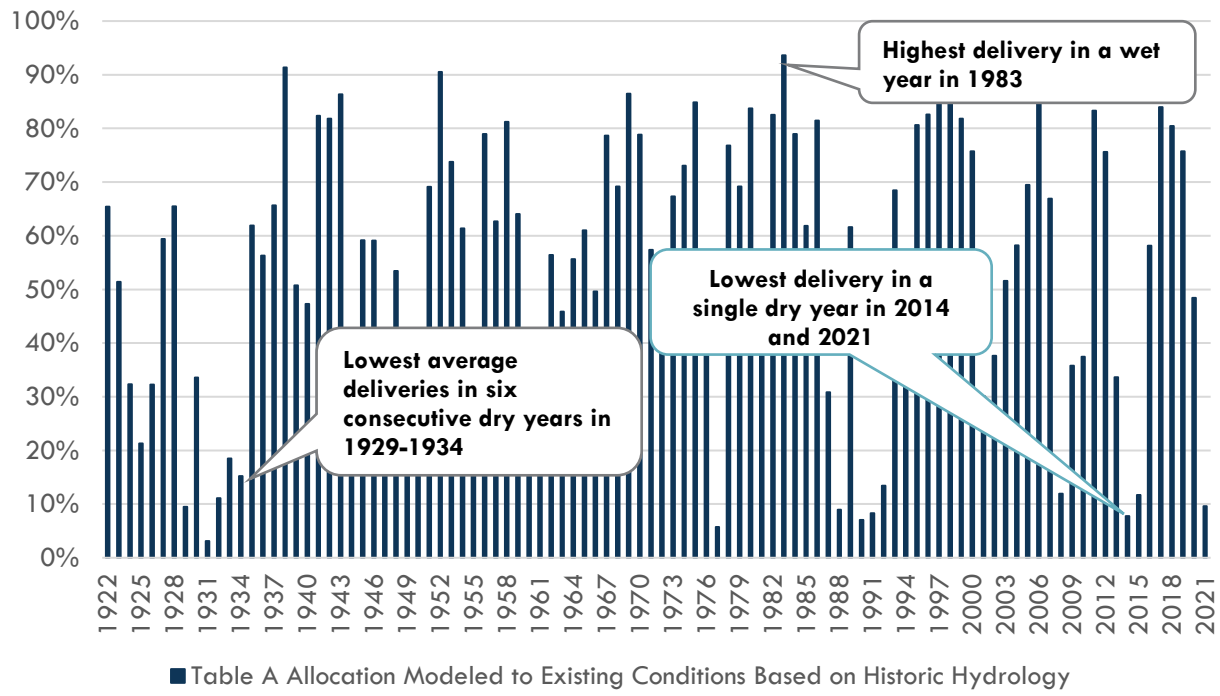

Figure 3-1: Modeled SWP Table A Availability for Dry Year, Six Consecutive Dry Years, Wet Year, Based on Historical Hydrologic Data and Existing Conditions

3.1.3 Sites Reservoir and Delta Conveyance Project

Sites Reservoir is a proposed new 1,500,000 acre-feet off-stream storage reservoir in northern California near Maxwell. Sacramento River flows will be diverted in wet, normal, dry, and critically dry years when Shasta Dam releases and/or unregulated flow from tributaries between Keswick Dam and Sites Reservoir diversion points exceed minimum flow requirements. Typically, releases will be made during dry periods, but some releases will be made in all years types (Sites Project Authority, 2023). Sites Reservoir also will accommodate exchanges between Lake Shasta and Sites, and Lake Oroville and Sites. The proponents of Sites Reservoir include 31 entities including San Bernardino Valley, who has made financial contributions to its planning and development. As a financial contributor to the project, SBVMWD would receive a share of deliveries to South of Delta agencies.

The final EIS/EIR for Sites Reservoir has been approved. Sites Reservoir is funded through a combination of state and federal funding, including California Proposition 1 (2014), Water Infrastructure Improvements for the Nation Act (WIIN), Infrastructure Investment and Jobs Act (IIJA), and an Environmental Protection Agency Water Infrastructure Finance and Innovation Act (WIFIA) loan, as well as funding support from project participants.

The Delta Conveyance Project (DCP) is a proposed water supply tunnel beneath the Delta that would add two additional diversion structures on the Sacramento River, north of the Delta, to work in combination with the South of Delta diversion facility at Clifton Court Forebay near Tracy

to allow DWR increased operational flexibility when moving SWP water to State Water Contractors South of Delta. By diverting water further up river, the salinity levels are less impacted by sea level rise, leading to reduced carriage water losses used to manage salinity at the current intakes. The Benefit-Cost Analysis of the Delta Conveyance Project report suggests that the DCP would increase long-term average total SWP Table A allocations by 403,000 AFY (approximately 9 percentage points) (Berkeley Research Group, 2024). The DCP forecasted operation date is after 2050, so it is outside the scope of this RUWMP.

Sites Reservoir and the DCP would increase SWP supplies over the long-term average, leading to more groundwater recharge, and would decrease the likelihood of SWP curtailments in direct deliveries to local agencies during dry years. Based on CalSIM3 modeling done in March 2026, the estimated long-term average deliveries from Sites Reservoir to SBVMWD are 11,200 AFY.

For purposes of this Plan, it is estimated that the Sites Reservoir Project will begin producing delivery benefits for San Bernardino Valley in 2040. DWR estimates of SWP supply reliability in its 2025 Delivery Capability Report are based on existing facilities, and do not include the proposed Sites Reservoir. For supply projections made for years 2030 through 2035, it is assumed that SWP reliability is equal to values shown in Table 3-3 (for normal years) and Table 3-4 (for dry, consecutive dry, and wet years). For supply projections made for years 2040 and beyond, 11,200 AFY deliveries from Sites Reservoir are included for normal years and single dry years. For the five consecutive dry year scenario, it is assumed that SBVMWD will have 50,000 AFY in storage at the beginning of the period and will use 10,000 AFY in each of the five dry years (Table 3-5). Section 5.1 discusses Sites Reservoir impacts to water supplies in more detail.

Table 3-5: Sites Reservoir Yield to SBVMWD

Year Type	Sites Reservoir Yield
Long-Term Average	11,200 AFY
Normal Year	11,200 AFY
Single Dry Year	11,200 AFY
Five Consecutive Dry Years	10,000 AFY

3.1.4 General Imported Water Strategy

As described in Section 3.1.1, there are several programs that give SBVMWD flexibility to increase deliveries above the Table A allocation in a given year, including the use of carry over water. As urban contractor demands increase in the future, the amount of water turned back and available for purchase will likely diminish. In critical dry years, DWR has formed Dry Year

Water Purchase Programs for contractors needing additional supplies. Through these programs, water is purchased by DWR from willing sellers in areas that have available supplies and is then sold by DWR to contractors willing to purchase those supplies. Because the availability of these supplies is somewhat uncertain and do not represent a large quantity of water, they are not included as supplies available to San Bernardino Valley in this Plan. However, San Bernardino Valley's access to these supplies when they are available may enable it to improve the reliability of its SWP supplies in extremely dry years to help meet its direct delivery demands. The main strategy San Bernardino Valley will use to supplement supplies in dry years is wet year water stored in local groundwater basins and water banks. San Bernardino Valley is already implementing conjunctive use in the SBB and there are plans to develop additional conjunctive use programs.

3.2 Groundwater

Local precipitation that runs off as surface water and soaks into the ground, called "groundwater", meets about 80% of the demand of participating agencies in an average year. This section provides a description of local groundwater and surface water management in the San Bernardino Valley, including court judgments, groundwater management plans, and groundwater pumping rights. The groundwater basins utilized by agencies in the region are depicted in Figure 3-2.

3.2.1 Regional Groundwater and Surface Water Management

There are several court judgments, agreements, settlements and groundwater management plans that apply to multiple groundwater basins and surface water supplies in the region. These broader regional water management frameworks are described in this section and additional court judgments and agreements that apply only to a single basin are described in the applicable subsection for that basin.

3.2.1.1 Western Judgement & Orange County Judgment

The Western Judgment, entered simultaneously with the Orange County Judgment, proportioned the water resources within the upper Santa Ana River watershed amongst the residents of the watershed.

The Orange County Judgment ensures minimum flows in the Santa Ana River to Orange County and the Western Judgment generally provides for:

- A determination of safe yield of the San Bernardino Basin Area (SBBA) at 232,100 AFY, which includes surface water from the SAR, Mill Creek and Lytle Creek.
- Allocation of 27.95 percent of the safe yield, which equates to 64,862 AFY, to the Plaintiffs (agencies within Riverside County or Riverside Entities). An obligation of the non-plaintiff parties (agencies within San Bernardino County or San Bernardino Entities) to provide replenishment anytime their cumulative extractions exceed 72.05 percent of the safe yield, which equates to 167,238 AFY, but no limit on total extractions.
- An obligation of the Riverside Entities to replenish the Colton Basin Area and the Riverside North Basins if extractions for use in Riverside County in aggregate exceed the amount recorded during the base period (1959-1963), which was 3,381 AFY and 21,085 AFY, respectively.
- An obligation of the San Bernardino Entities to replenish the Colton Basin Area and Riverside North Basin Areas if water levels are lower than 822.04 MSL in specified index wells.

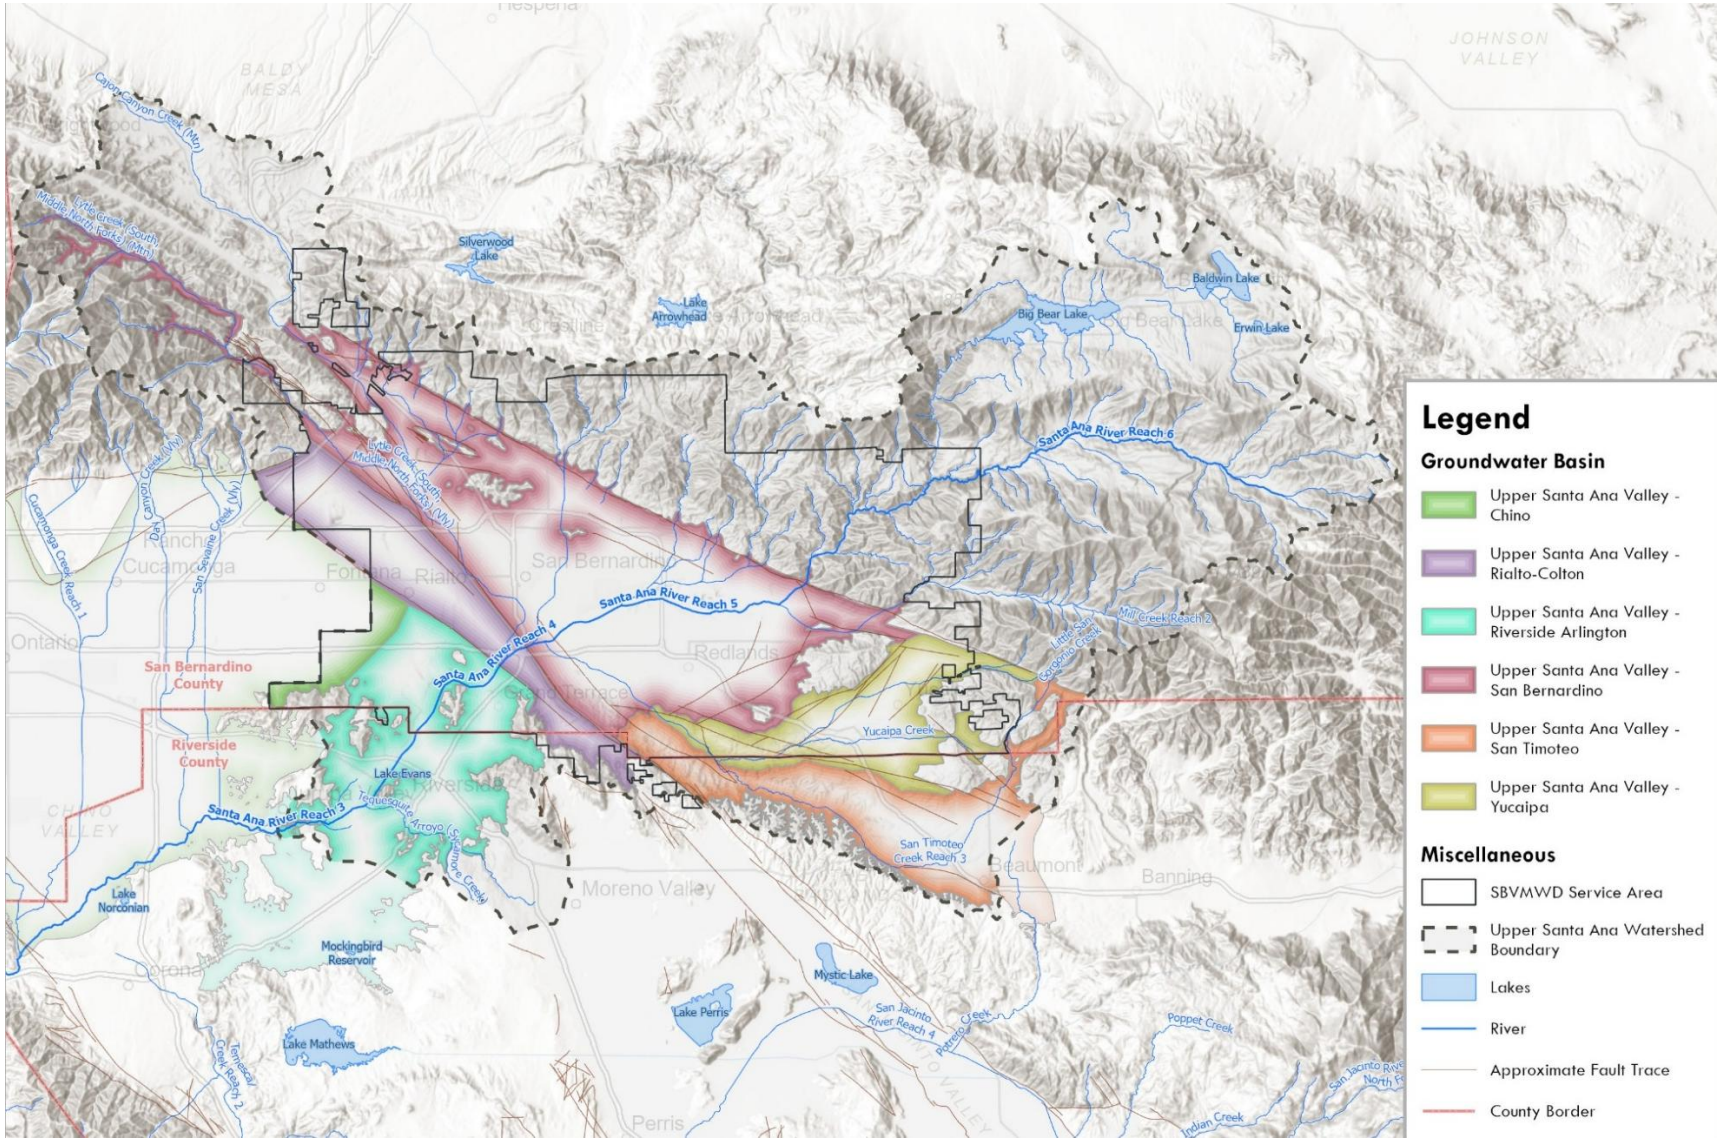

Figure 3-2: Groundwater Basins of the Region

The Riverside Entities include the City of Riverside (the successor to the Riverside Water Company and the Gage Canal Company), Riverside Highland Water Company, Meeks & Daley Water Company, and Regents of the University of California and each have an assigned fixed pumping right based on an allocation of the safe yield for the Riverside Entities. According to the Western Judgment, the Riverside Entities must not extract more than their respective portions of the safe yield on a 5-year average basis, adjusted for any net gains or losses of water to the SBBA. San Bernardino Entities do not have individual assigned pumping rights and are collectively allowed to extract more than their portion of the safe yield. The Judgment requires the San Bernardino Entities to provide replenishment water whenever the cumulative extractions exceed the cumulative safe yield. If the cumulative extractions are less than the cumulative safe yield, a "credit" is earned. When cumulative extractions are greater than the cumulative safe yield, a "debit" is taken. To date, the cumulative extractions have been less than the cumulative safe yield since the judgment was signed so that the San Bernardino Entities have never been required to recharge the basin under the terms of the Western Judgment.

San Bernardino County Entities are represented by San Bernardino Valley and Riverside County Entities are represented by Western Municipal Water District (Western). The Judgments establish a Watermaster to be responsible, on behalf of the numerous parties bound thereby, for ensuring implementation of the judgments. The Watermaster for the Western Judgment is made up of one representative from San Bernardino Valley and Western.

The Western Judgment contemplates that the parties will develop "new conservation" which is defined as any increase in replenishment from natural precipitation which results from operation of works and facilities not in existence as of 1969, other than works installed to offset losses from flood control channelization. The Western Judgment specifies that the parties to the Judgment have the right to participate in any new conservation projects, provided they pay the appropriate share of the cost. The net effect of new conservation is an increase in safe yield for both the Plaintiffs and non-Plaintiffs. A copy of the Western Judgment is provided in Part 3 Appendix B.

In 2013, both the Plaintiffs and Non-Plaintiffs agreed to participate in the cost to capture some of the water that historically flowed to the ocean. This New Conservation was due to the construction and operation of the Seven Oaks Dam. The 2015 Annual Report for the Western-San Bernardino Annual Report effectively increases the safe yield for both Parties as shown in Table 3-6.

Table 3-6: Adjusted SBBA Rights Due to New Conservation Allocation

Parties	Percentage	Safe Yield Allocation (AF)	New Conservation Allocation (AF)	Adjusted Right (AF)
Non- Plaintiffs	72.05%	167,238	5,507	172,745
Plaintiffs	27.95%	64,862	2,136	66,998
City of Riverside		52,199	1,719	53,918
Riverside Highland Water Company		4,294	141	4,435
Meeks & Daley Water Company		7,833	258	8,091
Regents of the University of California		536	18	554
Total Sum of Extractions	100%	232,100	7,643	239,743

The Western-San Bernardino Watermaster provides an annual accounting of both the plaintiff and non-plaintiff extractions and a comparison to the safe yield. . As of the accounting performed for the 2025 Annual Western-San Bernardino Watermaster Report, the Non-Plaintiffs have 623,692 AF of net credit accumulated in the SBB and are, therefore, not required to recharge. Although there is no recharge requirement under the Judgment, the San Bernardino Entities have continued to recharge the SBB voluntarily since 1973.

Orange County Judgment

In 1963, the Orange County Water District (OCWD) filed suit against substantially all water users in the area tributary to Prado Dam seeking adjudication of water rights on the Santa Ana River. The litigation ultimately involved over 4,000 served water users and water agencies, the four largest of which were OCWD, San Bernardino Valley, Western, and the Chino Basin Municipal Water District (now the Inland Empire Utilities Agency). Given the magnitude of the potential litigation, these four districts and other parties developed a settlement that was approved by the Orange County Superior Court in a stipulated judgment entered on April 17, 1969, Orange County Water District v. City of Chino et al., Case No. 117628 (Orange County Judgment). The Orange County Judgment imposes a physical solution that requires parties in the upper Santa Ana River watershed to deliver a minimum quantity of water to points

downstream including Riverside Narrows and Prado Dam. A provision of the Orange County Judgment related to conservation establishes that, once the flow requirements are met, the Upper Area parties "may engage in unlimited water conservation activities, including spreading, impounding, and other methods, in the area above Prado Reservoir". The Orange County Judgment is administered by the five-member Santa Ana River Watermaster that reports annually to the court and the four representative agencies. San Bernardino Valley, the Inland Empire Utilities Agency, and Western nominate one member each to the Watermaster, OCWD nominates two members, and members are appointed by the court. A copy of the Orange County Judgment is provided in Part 3 Appendix B.

3.2.1.2 Seven Oaks Accord

On July 21, 2004, San Bernardino Valley, Western, the City of Redlands, EVWD, Bear Valley Mutula Water Company (BVMWC), Lugonia Water Company, North Fork Water Company, and Redlands Water Company signed a settlement agreement known as the Seven Oaks Accord (Accord). The Accord calls for San Bernardino Valley and Western to recognize the prior rights of the water users up to 88 cubic feet per second from the natural flow of the Santa Ana River. In exchange, the water users agreed to withdraw their protests to the water right application submitted by San Bernardino Valley on behalf of itself and Western. All the parties to the Accord have agreed to support the granting of other necessary permits to allow San Bernardino Valley and Western to divert water from the Santa Ana River for direct use, groundwater recharge, or exchanges. By means of the Accord, San Bernardino Valley agreed to modify its water right applications to incorporate implementation of the Accord. Additionally, the Accord requires San Bernardino Valley and Western to develop a groundwater spreading program in cooperation with other parties, "that is intended to maintain groundwater levels at the specified wells at relatively constant levels, in spite of the inevitable fluctuations due to hydrologic variation". As part of compliance with the Seven Oaks Accord, the BTAC has prepared a Regional Water Management Plan annually since 2008.

3.2.1.3 Annual Regional Water Management Plan and Cooperative Recharge

As discussed in Section 1.1.2, the BTAC was formed by the first IRWMP to implement the IRWMP and provide a forum to discuss technical issues regarding water management. BTAC works cooperatively and strives to make decisions by consensus. Currently, BTAC meets quarterly or as needed.

Each year, BTAC develops the Regional Water Management Plan that is considered by the two agencies that make up the Western Watermaster: San Bernardino Valley and Western Municipal Water District. The plan generally establishes a recharge threshold to ensure water levels do not increase liquefaction potential or move contamination plumes. The primary purpose of the Plan is for the coordinated use of available water resources and to cooperatively manage recharge without causing undesirable impacts. Since 2020, BTAC members have recharged over 180,000 acre-feet of local stormwater, recycled water, and SWP water largely

through facilities operated by the San Bernardino Valley Water Conservation District and the San Bernardino County Flood Control District.

The latest version of the BTAC Regional Water Management Plan is available at http://www.sbvmwd.com/about-us/local-water-conditions.

3.2.2 San Bernardino Basin

The San Bernardino Basin (SBB) boundary used in this Plan is the California Department of Water Resources (DWR) Bulletin 118 Boundary for the San Bernardino subbasin (8-002.06) of the Upper Santa Ana Valley Region. The SBB was previously referred to by DWR as the Bunker Hill subbasin until 2018, when the name was formally changed to the San Bernardino subbasin. The majority of the northeastern and southeastern boundaries of the SBB coincide with the groundwater adjudication boundary in the 1969 Western-San Bernardino Judgment (Western Judgment), which refers to the "San Bernardino Basin Area" or SBBA, as discussed in Section 3.2.1.1.

The SBB has a surface area of approximately 141 square miles and lies between the San Andreas and San Jacinto faults. The basin is bordered on the northwest by the San Gabriel Mountains and Cucamonga fault zone; on the northeast by the San Bernardino Mountains and San Andreas fault zone; on the east by the Banning fault and Crafton Hills; and on the south by a low, east-facing escarpment of the San Jacinto fault and the San Timoteo Badlands. Alluvial fans extend from the base of the mountains and hills that surround the valley and coalesce to form a broad, sloping alluvial plain in the central part of the valley.

3.2.2.1 Lytle Creek Sub basin

Lytle Creek Basin is part of the SBB, and it is not identified as a separate sub-basin in DWR Bulletin 118; however, the sub basin is an integral part of the Upper Santa Ana Valley Groundwater Basin. Historically, local agencies have recognized Lytle Creek sub basin as a distinct groundwater sub basin, and it is subject to a separate court judgement as described in the following section. In the Western Judgment, the Bunker Hill and Lytle Creek sub basins are combined into the SBBA. The 1969 Western Judgment did not incorporate, supersede, or reopen the 1924 Lytle Creek Basin Judgment. The Lytle Creek Basin remains governed by its own adjudication, although it is commonly grouped within the SBBA for administrative, hydrologic, and reporting purposes.

However, the three separate water-bearing zones and intervening confining zones of the Bunker Hill sub basin are not observed in the Lytle sub basin. Sediments within the Lytle sub basin are, for the most part, highly permeable, and the aquifer has a high specific yield. High permeability and specific yield tend to result in an aquifer that responds rapidly to changes in inflow (precipitation and streamflow) and outflow (groundwater pumping, streamflow, and subsurface outflow).

Lytle Creek sub basin is adjoined on the west by the Rialto-Colton sub basin along the Lytle Creek fault, and on the east and southeast by the Bunker Hill sub basin along the Loma Linda

fault and Barrier G. The northwestern border of the sub basin is delineated by the San Gabriel Mountains, and runoff from the mountains flows south/southeast through Lytle and Cajon Creeks into the basin.

Numerous groundwater barriers are present within Lytle Creek sub basin, resulting in six compartments within the sub basin. Barriers A through D divide the northwestern portion of the sub basin into five sub-areas and the southeastern portion of the sub basin comprises the sixth sub-area. Barrier F divides the northwestern sub-areas from the southeastern sub-area. Studies have shown that the groundwater barriers are less permeable with depth. When groundwater levels are high during wet years, more leakage occurs across the barriers than when groundwater levels are lower (i.e., during dry years). The amount of pumping in each sub-area, in large part, controls the movement of groundwater across the barrier within the older alluvium but not the younger alluvium.

3.2.2.1.1 1924 Lytle Creek Basin Judgment

The Lytle Creek Basin Judgment (1924 Judgment) was issued by the Superior Court of San Bernardino County on January 28, 1924, in *City of San Bernardino v. Fontana Water Co. et al*. (Judgment No. 17030). The judgment establishes a foundational legal framework governing groundwater rights and related surface water operations within the Lytle Creek Region, a defined area downstream of Lytle Creek Canyon.

The judgment was intended to resolve competing claims among municipal, private, and mutual water companies. Consistent with adjudicated basin practice, it did not create new water rights, but instead recognized and quantified existing rights as they existed at the time. Importantly, the judgment incorporates and builds upon prior surface water rights established under the 1897 McKinley Decree, while focusing more directly on the allocation and management of groundwater resources.

The 1924 Judgment defines the Lytle Creek Region as a geographically bounded area influenced by flows from Lytle Creek and recognizes the hydraulic connection between surface flows and groundwater within this region. Groundwater is treated as a shared resource, with quantified extraction rights assigned to a defined group of appropriators.

A key operational feature of the judgment is the regulation of diversions at the Fontana Power Company intake. The decree imposes conditions to ensure that sufficient flows continue downstream into the Lytle Creek channel and wash, particularly during variable flow conditions. These provisions are intended to support natural groundwater recharge through spreading in the creek's alluvial system. During certain periods (including the winter season), flows are prioritized to meet downstream domestic and irrigation needs, with excess water allowed to pass for recharge when available.

To oversee implementation, the judgment established a five-member Watermaster committee, responsible for administering the decree, including oversight of diversion practices and recharge activities. Administration of these responsibilities continues today through successor entities,

including the Lytle Creek Water Conservation Association, which coordinates basin operations among the parties.

The 1924 Judgment assigns quantified groundwater rights to twelve appropriators, expressed in "miner's inches," with one inch defined as a continuous flow equal to 1/50 of a cubic foot per second. The original appropriators primarily consisted of water companies and a limited number of public entities, including:

- City of San Bernardino
- City of Colton
- Rialto Domestic Water Company (rights later acquired by the City of Rialto)
- Fontana-related water companies
- Citizens Water Company
- Riverside Highland Water Company
- Terrace Water Company
- Rancheria Water Company
- Other mutual water companies
- One identified individual appropriator (James Barnhill)

While the 1924 Judgment remains an important component of water rights administration in the area, it functions as part of a broader legal and operational framework that has evolved over time, including subsequent adjudications and modern groundwater management practices. A copy of the 1924 Judgment is provided in Part 3, Appendix B.

3.2.3 Rialto-Colton Sub basin

The Rialto-Colton sub basin (DWR 8-02.04) underlies a portion of the upper Santa Ana Valley in southwestern San Bernardino County and northwestern Riverside County. This sub basin is about 10 miles long and varies in width from about 3.5 miles in the northwestern part to about 1.5 miles in the southeastern part. This sub basin is bounded by the San Gabriel Mountains on the northwest, the San Jacinto fault on the northeast, the Badlands on the southeast, and the Rialto-Colton fault on the southwest. The Santa Ana River cuts across the southeastern part of the basin. The basin generally drains to the southeast, toward the Santa Ana River. Warm and Lytle Creeks join near the southeastern boundary of the basin and flow to meet the Santa Ana River near the center of the southeastern part of the sub basin.

The principal natural recharge areas are Lytle Creek, Reche Canyon in the southeastern part, and the Santa Ana River in the south-central part. Lesser amounts of recharge are provided by percolation of precipitation to the valley floor, underflow, and irrigation and septic returns. Underflow occurs from fractured basement rock and through the San Jacinto fault in younger Santa Ana River deposits at the south end of the sub basin and in the northern reaches of the

San Jacinto fault system. Groundwater recharge has historically been augmented through the use of spreading basins, however the original spreading basins used are no longer in operation due to ineffectiveness. The region is working on new spreading basins at the Cactus Basins east of the former Rialto Airport.

The groundwater extractions in the Rialto-Colton sub basin are governed by the Rialto Basin Decree, the Rialto Basin Settlement Agreement, and the Western Judgment. The basin was adjudicated under the 1961 Decree No. 81,264 of the Superior Court of San Bernardino County and is managed by the Rialto Basin Management Association (stipulated parties of the judgment). The Rialto Basin Decree only provides the rights of the stipulated parties to pump out of the Rialto Basin, which is an area defined within the Decree that is smaller than the Rialto-Colton sub basin and includes only a portion of the northwestern half of the Rialto-Colton Basin. The boundary of the Rialto Basin is described in the Rialto Decree as Exhibit 1. A copy of the Rialto Basin Decree is provided in Part 3 Appendix B.

When the basin's three index wells (WVWD Well No. 11, and 16, and Rialto's Well 4) have average mean groundwater level elevations above 1002.3 feet mean sea level (msl) when measured during March, April, or May, the stipulated parties have no restrictions on yearly extractions. When the average standing water levels in the three index wells falls below 1002.3 feet msl but is above 969.7 feet msl, the Rialto Basin Decree stipulated parties are restricted to total extraction rights of 15,290 AFY distributed amongst the parties as shown in Table 3-7.

When the average of the three index wells drops below 969.7 feet msl, ground water extractions are reduced for all parties stipulated in the decree by 1 percent per foot below the 969.7-foot level, but not to exceed 50-percent reduction. Historic reductions to adjustable rights are summarized in Table 3-8.

Table 3-7: 1961 Decree Adjudicated Rights to the Rialto Basin

Member	Adjustable Rights	Fixed Rights	Total Rights	Water Rights Allocation Percentage
Colton	3,010	890	3,900	25%
Rialto	2,846	1,520	4,366	29%
WVWD	5,594	510	6,104	40%
FUWC	550	370	920	6%
Total	12,000	3,290	15,290	100%

Table 3-8: Historic Reductions to Pumping Rights in the Rialto Decree Area

Water Year	% Reduction
2009-10	7
2010-11	14
2011-12	19
2012-13	17
2013-14	27
2014-15	32
2015-16	30
2016-17	31
2017-18	38
2018-19	39
2019-20	29
2020-21	29
2021-22	40
2022-23	41
2023-24	49
2024-25	50

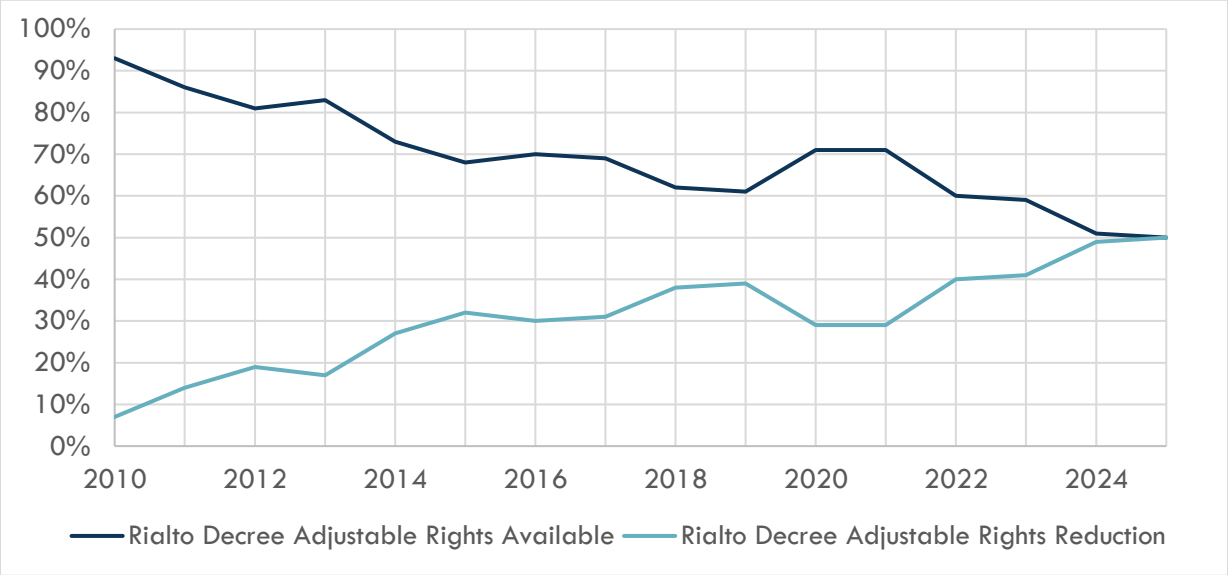

Figure 3-3: Rialto Decree % Adjustable Pumping Rights Reductions

Fontana Water Company and the City of Rialto extract water from a small area referred to as "No Man's Land" that is outside the boundary of the Rialto Basin in the 1961 Decree but is still believed to be within the Rialto-Colton sub basin. In 2018, Rialto, Colton, WVWD, San Bernardino Valley, Cucamonga Valley Water District, and Fontana Water Company entered into a Settlement Agreement that resulted in Fontana's No Man's Land production of 5,014-acre feet/year being counted as part of the Rialto Basin production limits in the 1961 Decree in addition to the total established decree rights of 15,290 AFY. The Settlement Agreement also obligates Fontana Water Company to recharge 61,000 acre-ft of supplemental water into the Rialto Basin. San Bernardino Valley agreed to facilitate obtaining and delivering up to 61,000 acre feet of replenishment water to recharge the Rialto Basin using the proceeds of a Replenishment and Sustainability Assessment (RSA), paid by the Fontana Water Company on an annual basis. Per the intent of the agreement, the replenishment water must be from an imported water source "outside" of San Bernardino Valley's SWP Table A allocation, unless San Bernardino Valley declares a portion of its Table A surplus. Furthermore, the agreement contemplated that San Bernardino Valley may accomplish the replenishment by means of exchanges, in-lieu recharge, direct recharge, direct delivery or other means reasonably acceptable to the settlement parties. The rights of the parties of the Settlement Agreement to extract water from the Rialto Basin based on the 1961 Decree and the Settlement Agreement are provided in Table 3-9. As part of the Settlement Agreement, these parties also agreed to form a Rialto Basin Groundwater Council (RBGC), which was established in February 2021.

The purposes of the RBGC is to provide for the funding, integration, and coordination of managing the Rialto Basin groundwater supply, including maintenance of conveyance and groundwater recharge facilities, and developing groundwater management strategies with other agencies in the region (Rialto Basin Groundwater Council, 2025). A Draft Rialto Basin Groundwater Management Plan (GWMP) has been developed to evaluate Rialto Basin

conditions and perform hydrogeologic modeling analysis of current and potential future conditions. Preliminary results indicate that groundwater replenishment is needed to raise groundwater levels and reverse reduced water rights allocation from year to year.

Table 3-9: 2018 Settlement Agreement Updated Adjudicated Rights to the Rialto Basin

Member	Adjustable Rights	Fixed Rights	No Man's Land Adjustable Rights	Total Rights	Water Rights Allocation Percentage
Colton	3,010	890	0	3,900	19%
Rialto	2,846	1,520	0	4,366	22%
WVWD	5,594	510	0	6,104	30%
FUWC	550	370	5,014	5,934	29%
Total	12,000	3,290	5,014	20,304	100%

The Rialto-Colton sub basin is named the "Colton Basin Area" in the Western Judgment.

The Western Judgment requires the average lowest static water levels in three index wells in the Rialto-Colton Basin and Riverside North Basins to be no lower than 822.04 feet above msl. If the water levels fall below 822.04 feet above msl, the non-plaintiffs are obligated to recharge the basin with imported water or reduce extractions. Extractions by the plaintiffs are limited to 3,381 AFY.

The safe yield for the Rialto-Colton Basin was not defined by the Western Judgment or the Rialto Basin decree. For the purpose of the supply reliability analysis in this Plan, the available supply from the Rialto-Colton Basin for the San Bernardino Entities is assumed to be equal to their Base Period Production (1959-1963) in the Western Judgment, which was 8,235 AFY. However, the Western Judgment does not limit pumping so extractions can exceed this value. The groundwater elevations in the three index wells fell below the threshold of 822.04 feet above msl from 2018 to 2022 but have since increased to 852.93 feet above msl as of calendar year 2024 so no recharge is required and current extractions can continue. However, understanding the increasing variability in the frequency and quantity of precipitation in the region, the Watermaster agencies continue to work towards long-term sustainability of the basins. In addition to the Judgment-provided actions to achieve compliance, San Bernardino Valley and Western Water are working cooperatively to develop a response plan with specific actions to increase water levels in the Colton and Riverside North Basin Areas. Actions in the

Plan will be triggered when the static level in the key wells falls below San Bernardino Valley's replenishment threshold in the Judgment.

Riverside Highland Water Company is considered a Riverside County Entity in the Western Judgment, and its production is capped at 227 AFY, its portion of the 3,381 AFY extraction limit specified in the judgment.

3.2.4 Riverside-Arlington Sub basin

The Riverside-Arlington sub basin, (DWR 8-02.03) underlies part of the Santa Ana River Valley in northwest Riverside County and southwest San Bernardino County. This sub basin is bounded by impermeable rocks of Box Springs Mountains on the southeast, Arlington Mountain on the south, La Sierra Heights and Mount Rubidoux on the northwest, and the Jurupa Mountains on the north. The northeast boundary is formed by the Rialto-Colton fault, and a portion of the northern boundary is a groundwater divide beneath the community of Bloomington. The Santa Ana River flows over the northern portion of the sub basin. Annual average precipitation ranges from about 10 to 14 inches. The Riverside-Arlington sub basin is replenished by infiltration from Santa Ana River flow, underflow past the Rialto-Colton fault, intermittent underflow from the Chino sub basin, return irrigation flow, and deep percolation of precipitation.

The Western Judgment includes the Riverside Basin Area which consists of a portion of the Riverside-Arlington sub-basin upstream of Riverside Narrows. Groundwater extractions in the Riverside North Groundwater Basin (the portion of the Riverside Basin Area in San Bernardino County) are governed by the Western Judgment. Extractions from the Riverside North Basin by Riverside County Entities are limited to 21,085 AFY by the Judgment. Extractions by San Bernardino County Entities are unlimited, provided that water levels at three index wells in the Rialto-Colton and Riverside North Basins stay above 822.04 feet above msl. For the purpose of the supply reliability analysis in this Plan, the available supply from the Riverside Arlington Basin for the San Bernardino Entities is assumed to be equal to their Base Period Production (1959-1963) in the Western Judgment, which was 9,609 AFY. However, the Western Judgment does not limit pumping so extractions can exceed this value. As described for the Rialto-Colton Basin, the groundwater elevations in the three index wells were above the recharge threshold as of calendar year 2024 so no recharge is required and current extractions can continue.

Riverside Highland Water Company is considered a Riverside County Entity in the Western Judgment, and its production in Riverside North is capped at 3,752 AFY, its portion of the 21,085 AFY extraction limit specified in the judgment. The Riverside County Entities can also extract a total of 29,663 AFY from Riverside South, of which Riverside Highland Water Company is entitled to 555 AFY.

3.2.5 Yucaipa Sub basin

The Yucaipa sub basin (DWR 8-02.07) underlies the southeast part of San Bernardino Valley. It is bounded on the northeast by the San Andreas fault, on the northwest by the Crafton fault, on

the west by the Redlands fault and the Crafton Hills, on the south by the Banning fault, and on the east by the Yucaipa Hills. The average annual precipitation ranges from 12 to 28 inches. This part of the San Bernardino Valley is drained by Oak Glen, Wilson, and Yucaipa Creeks south and west into San Timoteo Wash, a tributary to the Santa Ana River.

Natural recharge to the sub basin is from percolation of precipitation and infiltration within the channels of overlying streams, particularly Yucaipa and Oak Glen Creeks; underflow from the fractures within the surrounding bedrock beneath the sub basin; and artificial recharge of local stormwater and imported water at spreading grounds.

The Yucaipa Subbasin is a DWR high-priority groundwater basin and is subject to SGMA. In July 2017, San Bernardino Valley, the City of Calimesa, City of Redlands, San Gorgonio Pass Water Agency (Pass), South Mesa Water Company, South Mountain Water Company, Western Heights Water Company, City of Yucaipa, and Yucaipa Valley Water District formed the Yucaipa Sustainable Groundwater Management Agency (Yucaipa-SGMA) under the Sustainable Groundwater Management Act (SGMA). The City of Calimesa and the City of Redlands later withdrew from the Yucaipa SGMA. The Yucaipa-SGMA Groundwater Sustainability Plan (GSP) was completed in January 2022 and received approval from DWR in January 2024.

The Yucaipa GSP evaluated supplies and demands on the basin, established sustainability goals including recharge obligations to address any shortages between supplies and demands, and identified management actions and impacts of the GSP. The GSP establishes a framework for how the basin will be managed collaboratively by all entities who rely upon the basin.

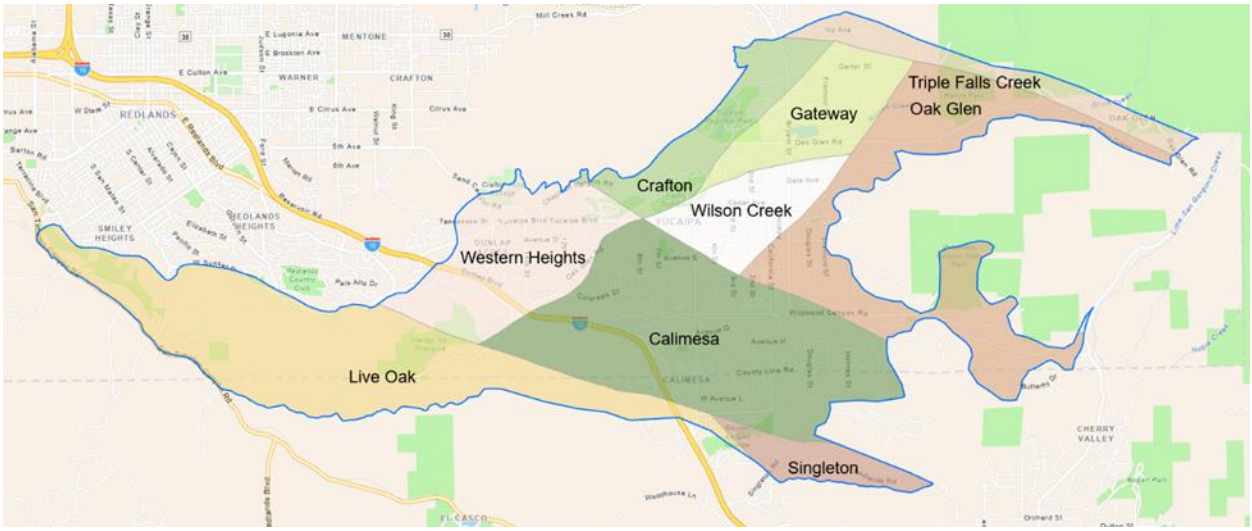

Figure 3-4: Yucaipa Basin Groundwater Management Zones

3.2.6 San Timoteo Sub basin

The San Timoteo Sub basin (DWR 8-02.08) is largely outside of the San Bernardino Valley service area but is one of the sources used by YVWD and SMWC (SMWC produces groundwater from the adjudicated Beaumont Basin area discussed below). The San Timoteo

sub basin underlies Cherry Valley and the City of Beaumont in southwestern San Bernardino and northwestern Riverside counties. The sub basin is bounded to the north and northeast by the Banning fault and impermeable rocks of the San Bernardino Mountains, Crafton Hills, and Yucaipa Hills; on the south by the San Jacinto fault; on the west by the San Jacinto Mountains; and on the east by a topographic drainage divide with the Colorado River hydrologic region. The surface is drained by Little San Gorgonio Creek and San Timoteo Canyon to the Santa Ana River. Average annual precipitation ranges from 12 to 14 inches in the western part to 16 to 18 inches in the eastern part of the sub basin.

Holocene-age alluvium, which consists of unconsolidated clay, silt, sand, and gravel, is the principal water-bearing unit in this sub basin. The alluvium, which is probably thickest near the City of Beaumont, thins toward the southwest and is not present in the central part of the sub basin. The Pliocene-Pleistocene-age San Timoteo Formation consists of alluvial deposits that have been folded and eroded. These deposits are widely distributed and principally composed of gravel, silt, and clay, with comparatively small amounts of calcite-cemented conglomerate. The clasts are chiefly granitic, with lesser amounts of volcanic and metamorphic pebbles and cobbles. The total thickness of the San Timoteo Formation is estimated to be between 1,500 and 2,000 feet, but logs of deep wells near the central part of the sub basin indicate water-bearing gravels to depths of only 700 to 1,000 feet.

The Banning and Cherry Valley faults and two unnamed faults in the northeast part of the sub basin offset impermeable basement rocks, stepping down to the south. Water levels change across the Banning fault, dropping 100 to 200 feet to the south. In the western part of the sub basin, water levels drop to the south about 75 feet across the Loma Linda fault and about 50 feet across the San Timoteo barrier. In the northeastern part of the sub basin, water levels drop to the south across two unnamed faults. Each of these faults appears to disrupt groundwater movement in the sub basin.

Groundwater is replenished by subsurface inflow and percolation of precipitation, runoff, wastewater discharge, and imported water. Runoff and imported water are delivered to streambeds and spreading grounds for percolation. The San Timoteo Subbasin is not adjudicated, and reliable estimates of total groundwater extractions are not available. However, water table elevations within the San Timoteo Subbasin have not declined over the years which is likely due to the constant flow of treated wastewater from YVWD that flows through San Timoteo Creek.

The San Timoteo Subbasin was originally designated by DWR as a medium-priority groundwater basin subject to SGMA. In 2017, the San Timoteo Groundwater Sustainability Agency was formed by a Memorandum of Agreement (MOA) between the City of Redlands, SGPWA, BCVWD and YVWD to manage the non-adjudicated portion of the San Timoteo Subbasin. In 2018, Eastern Municipal Water District submitted a Basin Boundary Modification Request for the San Timoteo Subbasin that was subsequently approved by DWR.

In 2019, the basin was reprioritized as a very low priority by DWR and therefore preparation of a GSP is not required by SGMA, but encouraged and authorized. In 2020, a revised MOA was

adopted by YVWD, the City of Redlands, BCVWD and the City of Banning reforming the San Timoteo GSA to further the shared intent of the parties to maximize funding opportunities, increase transparency and foster cooperation. It was agreed by the Parties of the San Timoteo GSA to establish Management Areas for the GSA for each agency's respective boundaries and to initially create separate GSPs for each Management Area that could be consolidated into a single GSP in the event that the priority of the basin is changed by DWR and a GSP is required. The lead agency for each management area, shown in Figure 3-5, is independently responsible for the development of a GSP for their respective Management Areas. The parties agreed to work together and with local stakeholders to carry out the policy, purposes, and requirements of SGMA within the boundaries of the San Timoteo GSA.

The adjudicated portion of the San Timoteo Subbasin, the Beaumont Basin Adjudicated Area, is managed by the Beaumont Basin Watermaster and not the San Timoteo GSA, as discussed in the following section.

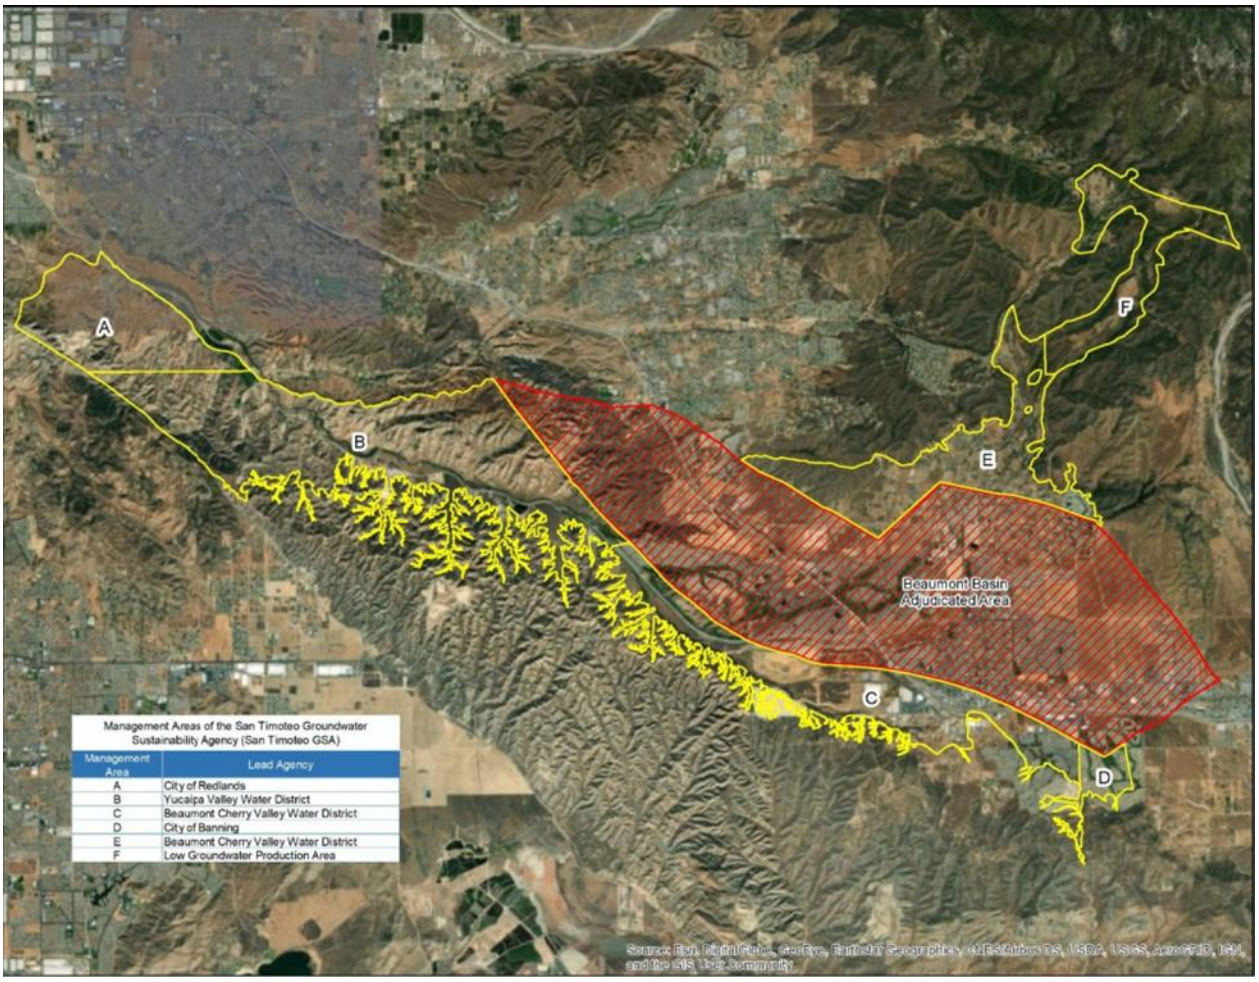

Figure 3-5: San Timoteo Subbasin Management Areas

3.2.6.1 Beaumont Groundwater Basin

DWR considers the Beaumont Groundwater Basin to be composed of two other groundwater basins, primarily the San Timoteo sub basin of the Upper Santa Ana Valley Groundwater Basin (DWR 8-02.08) and the San Gorgonio Pass Sub basin (No. 7-21.04). Locally, the Beaumont Basin is treated as a distinct basin. The Beaumont Basin is one of the sources used by YVWD and SMWC.

The Beaumont Basin is located in northwestern Riverside County, south of the Yucaipa Basin. The basin eventually drains to San Timoteo Creek, a tributary of the Santa Ana River, and covers approximately 26 square miles. Groundwater elevations generally slope from the northeast to southwest in the basin.

Groundwater within the basin is predominantly found in Holocene age alluvium and in the San Timoteo Formation. While the San Timoteo Formation extends to depths in excess of 1,500 feet, water bearing sediments within the Beaumont Basin exist to depths of 700 to 1,000 feet.

Estimates for total groundwater storage capacity within the basin vary. The Beaumont Basin storage capacity is estimated at approximately 1,000,000 AF.

In February 2004, the San Timoteo Watershed Management Authority filed a judgment adjudicating the groundwater rights in the Beaumont Basin and assigned the Beaumont Basin Watermaster (BBW) with the authority to manage the groundwater basin. The Beaumont Basin Watermaster is comprised of managers from the Beaumont Cherry Valley Water District, City of Banning, City of Beaumont, SMWC, and YVWD. The Beaumont Basin Watermaster originally established a long-term yield for the Beaumont Basin of 8,560 AFY. The adjudication of the Beaumont Basin has defined overlying and appropriator pumping rights and also allows for supplemental water to be stored and recovered from the basin.

The safe yield is reevaluated every ten years and on April 1st, 2015, the BBW approved the adoption of Resolution 2015-01 (2013 Reevaluation of the Beaumont Basin Safe Yield Report and Redetermination of the Safe Yield of the Beaumont Basin), which reduced the safe yield to 6,700 AFY. The 2023 Reevaluation of the Beaumont Basin Safe Yield recommended a Safe Yield of 7,100 AFY for 2024 through 2033.

The Beaumont Basin Watermaster Website provides copies of the Judgment, Annual Reports and related information: https://beaumontbasinwatermaster.org/.

The Judgement includes a controlled overdraft (temporary surplus) provision that allows extraction up to 160,000 AF over the 10-year period immediately following the Judgement inception. During the first 10 years, the agencies could extract 16,000 AFY; after the first 10 years, extractions are limited to the amount each agency has in storage or credit. Agencies must provide the BBW with funds necessary to replace any amount of overproduction that may have occurred over a 5-year consecutive period.

3.2.7 Recharge Area Programs

Conjunctive use of surface water and groundwater is a long-standing practice in the Region with artificial recharge of the Region's groundwater basins occurring as early as 1912. Storage of imported water and local surface water during wet years, as well as recycled water, helps the Region be resilient to drought and agencies have already invested in groundwater wells to produce the stored water. Numerous groundwater spreading grounds have been developed to recharge the groundwater basins when adequate surface water supply is available. See Chapters 4 and 5 for a summary of estimated recharge for each groundwater basin in the Region and the volume of SWP expected to be available for recharge.

Because of the extremely permeable sand and gravel deposits in the Region's groundwater basins, maximum instantaneous recharge rates are high. Because of the size of several of the recharge basins and exceptionally permeable material, a larger quantity of water could be imported and recharged along the base of the San Bernardino Mountains, if necessary. Any additional recharge is carefully planned and implemented to avoid liquefaction and unacceptable decreases or increases in groundwater levels in the basins.

Numerous existing groundwater recharge facilities (spreading grounds or spreading basins) are located in the SBB, Rialto-Colton, and Yucaipa Subbasins. Existing and proposed recharge basins are shown in Figure 3-6 and selected characteristics are summarized in Table 3-10.

SBVWCD facilities are used for both native water (Safe Yield), additional stormwater (new Santa Ana River water rights), and SWP recharge. In addition to incidental stormwater capture, existing turnouts provide SWP water to most recharge facilities.

Table 3-10: Regional Recharge Basins

Facility Name	Owner	Underlying GW Basin	Recharge Water Sources
Waterman Basin	SBCFCD	SBB/Bunker Hill A	Stormwater, SWP
East Twin Creek Spreading Grounds	SBCFCD	SBB/Bunker Hill A	Stormwater, SWP
Redlands Recharge Basins	Redlands	SBB/Bunker Hill B	Treated Wastewater (disposal)
Lytle Creek North WRP Effluent Disposal Ponds	San Bernardino County Special Districts Department (SBCSDD)	SBB/Lytle Basin	Treated Wastewater (disposal)
Wilson Basin	SBCFCD	Yucaipa Basin	Stormwater, SWP
Sweetwater Basins	SBCFCD	Bunker Hill	Stormwater, SWP
Santa Ana	SBVWCD	SBB/Bunker Hill B	Local surface water, SWP
Santa Ana Low	SBVWCD	SBB/Bunker Hill B	Local surface water, SWP
Mill Creek	SBVWCD	SBB/Bunker Hill B	Local surface water, SWP
Oak Glen	SBCFCD, YVWD	Yucaipa Basin	Stormwater, SWP
County Line Road Recharge Basin	SMWC, SBVMWD, SGPWA	Yucaipa Basin	SWP
Weaver Basins	San Bernardino Valley	SBB/Bunker Hill B	Recycled Water for groundwater recharge

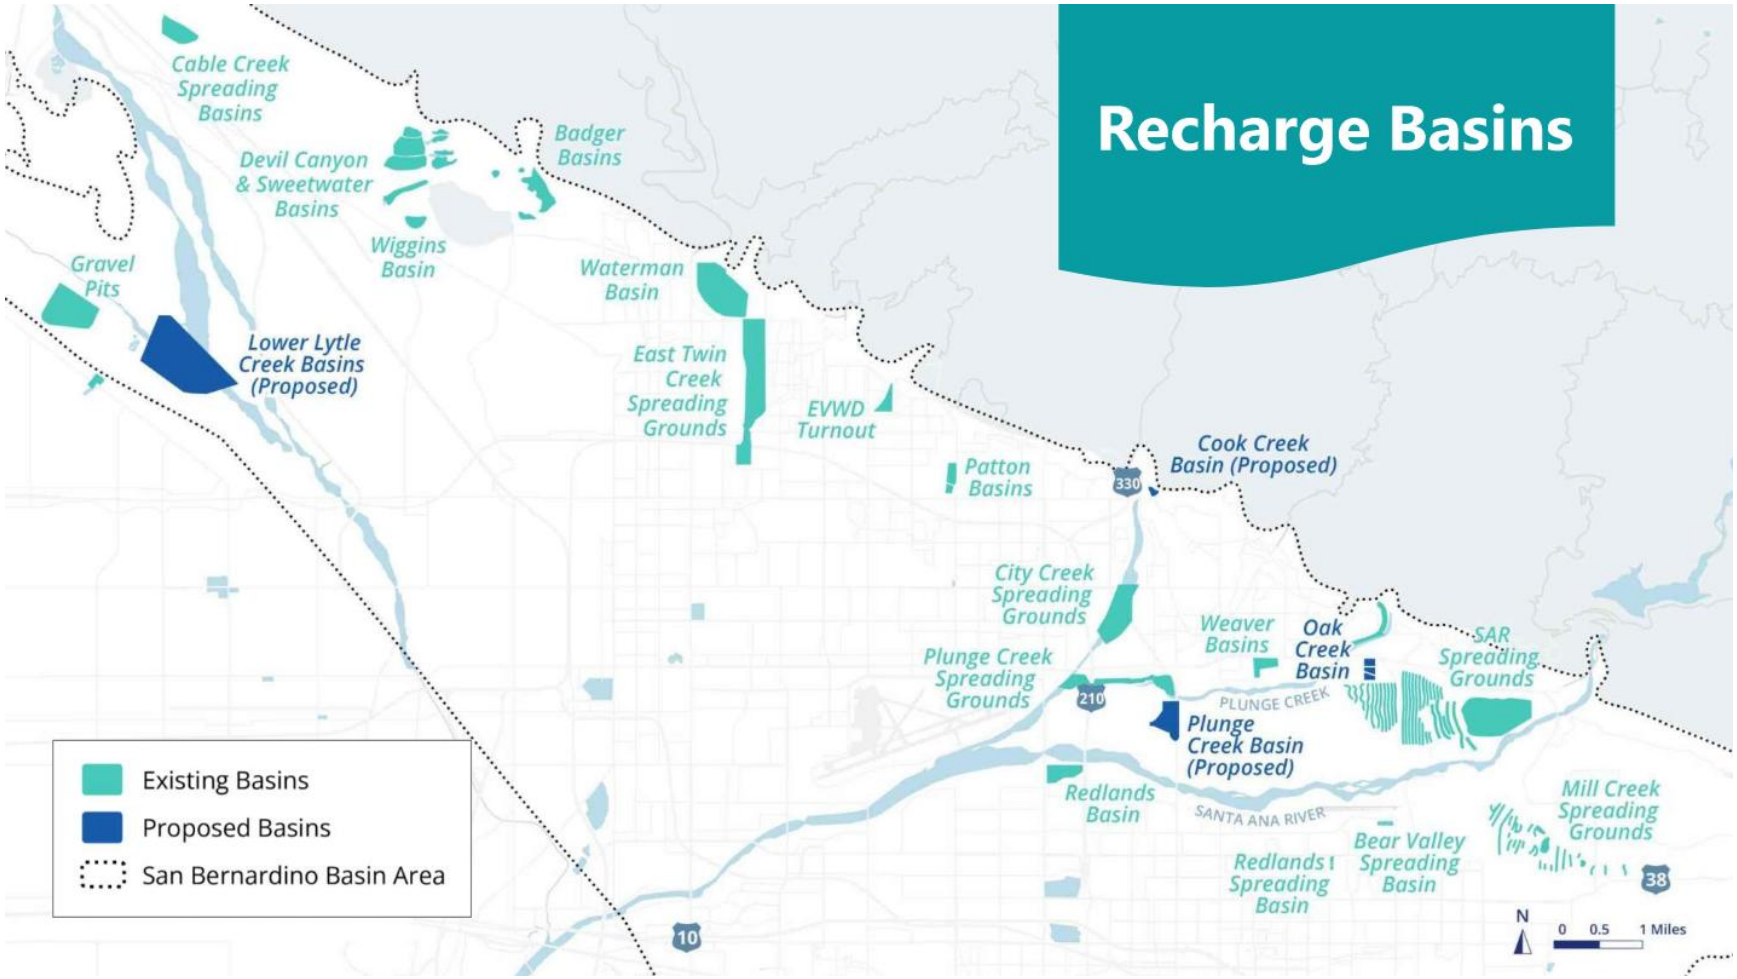

Figure 3-6: Groundwater Recharge Basins, from San Bernardino Basin Context Summary (WSC, 2024)

3.3 Surface Water

As described in Section 3.2.1.13.2.1 and 3.2.2, surface water supplies in the Region include flows from the Santa Ana River and two if its tributaries, Mill Creek and Lytle Creek. All these sources are managed in conjunction with SBB groundwater per the terms of the Western Judgment and the 1924 Lytle Creek Basin Judgment.

The retail water agencies in the Region that divert and treat local surface water as part of their potable water supply are West Valley Water District (who also diverts surface water rights on behalf of the City of Rialto), the City of Redlands, East Valley Water District and Fontana Water Company. Additionally, there are numerous other surface water rights holders in the Region that divert water for non-potable irrigation use.

Surface water flows can be highly variable from year to year. The largest monthly flows typically occur in February and March, and the lowest monthly flows typically occur between August and October. When surface water is available, retail water agencies typically prioritize this supply due to the typically high quality and low cost gravity conveyance to the treatment plants. When surface water flows are low, or the quality is degraded due to high storm flows, fires, or other impacts, retail agencies and other water rights holders shift their supply strategy to use groundwater and/or SWP water instead of local surface water. The associated water rights can be produced as either surface water or groundwater so the total supply available to these agencies does not change. SAR and Mill Creek surface water flows that are not diverted by retail suppliers for treatment, are generally recharged to retain the supply for future use as groundwater.

3.4 Stormwater

As discussed previously, stormwater capture is a critical component of the Region's conjunctive use and groundwater management strategy. Stormwater management has been an ongoing challenge in the Region and flood control facilities, such as detention basins, have provided much needed control of these flows. While conveying flood water safely through the upper SAR watershed is of critical importance, detaining runoff for recharge is also desirable. The region's groundwater managers are working with flood control agencies to optimize the use of these flood control facilities to increase the recharge of stormwater into the groundwater basin. The goal is to strike a balance between flood control and recharge that will ensure protection from flooding, while providing additional supplies to meet growing future demands and to supplement these supplies during drought years. San Bernardino Valley has had an agreement with SBCFCD since 1972 which allows San Bernardino Valley to recharge water in flood control detention basins. Additionally, the Conservation District has a Planning Memorandum of understanding (MOU) with SBCFCD that identifies SBCFCD facilities where stormwater may be diverted for recharge purposes, granted that diversion does not impact SBCFCD's facilities functionality and purpose to maintain protection from floods. Future studies pertaining to eligible facilities, the amount and quality of storm water flows for recharge, the location and capacity of SBCFCD facilities, recharge impacts to groundwater levels, migration of contaminant plumes, sand and gravel extraction or other land uses in the vicinity, subsidence protection, endangered and sensitive species habitat preservation, and any other concerns will need to be evaluated (San Bernardino County Flood Control District, January 2021).

The native water historically captured and recharged at the existing recharge facilities is embedded in the natural safe yield calculations for the SBB, except for the additional amount the Watermaster determined to be New Conservation because of the construction of Seven Oaks Dam. For proposed recharge activities that were not part of the safe yield calculation, the Western -San Bernardino Watermaster evaluates whether the recharge will result in a net increase to the SBB that would be considered New Conservation under the Western Judgment.

3.5 Recycled Water

The development and utilization of recycled water is another important water supply strategy for the Region. Although implementing recycled water infrastructure requires significant capital investment, the supply is highly reliable because wastewater flows to treatment plants remain relatively constant during dry hydrologic conditions. For this reason, recycled water is often considered a "drought-proof" supply.

Some retail agencies in the Region provide recycled water to their customers for non-potable use, such as irrigation and industrial cooling water. The Region has also recently begun using recycled water for groundwater recharge in the SBB. Recycled water produced in the San Bernardino Valley service area that is not currently used for non-potable reuse or groundwater recharge is either disposed of in disposal ponds that overlie SBB or discharged to the SAR or its tributaries. Recycled water discharges have become a critical source of water that sustains habitat in natural rivers and streams, including the Santa Ana Sucker, which is a Federally listed endangered species. Development of new recycled water supplies in the upper SAR watershed must be balanced with the need to conserve and maintain this habitat in accordance with the Upper Santa Ana River Habitat Conservation Plan (River HCP), which is under review by the United States Fish and Wildlife Service and is anticipated to be approved in 2026. Additionally, recycled water discharges to SAR are used to meet the Region's downstream obligations. San Bernardino Valley contracted with the City of San Bernardino and the City of Colton to ensure that the RIX facility continues to release quantities of treated effluent to the SAR adequate to fulfill San Bernardino Valley service area's obligation to provide 15,250 AF of baseflow each year at the Riverside Narrows as called for in the Orange County Judgment.

Wastewater treatment facilities in the Region are described in the next section, followed by a description of existing and planned recycled water programs in the Region. Potential recycled water supplies for each retailer are described in their respective chapters in Part 2. Anticipated recycled water supplies are included in the regional summary of supplies in Chapters 4 and 5.

3.5.1 Wastewater

There are 8 publicly owned WWTPs located within the Region as shown in Table 3-11.

Table 3-11: Wastewater Treatment Plans in the Region

FACILITY	INFLUENT FLOW SOURCE	CAPACITY (MGD)	2025 AVERAGE FLOW (MGD)	EFFLUENT USE
San Bernardino County Special Districts Department Lytle Creek North WRP	SBCSDD, WVWD	1.75	0.4 (est.)	Non-potable reuse for Irrigation and Dust Control Remaining discharged onsite disposal ponds
Rialto WWTP	Rialto	11.7	7	Discharged to Rialto Channel/SAR
Colton WRP	Colton & RHWC	10.4	5	Conveyed to RIX
SBMWD WRP	SBMWD, Loma Linda	33	15	Conveyed to RIX. Planned TTS will produce RW for groundwater recharge
RIX WWTP	Colton WRP & SBWRP	40	19	100% Discharged to SAR
Redlands WWTF	Redlands	9.5	5	Non-potable reuse for Irrigation and Industrial Remaining discharged to onsite disposal ponds
YVWD WRWRF	YVWD	8	3.8 (est.)	Non-potable reuse for irrigation Remaining discharged to San Timoteo Creek Groundwater recharge (planned)
EVWD SNRC	EVWD	8	6	Groundwater recharge

3.5.2 Recycled Water Programs

Several agencies in the Region have existing recycled water programs or plans to improve recycled water production capacity and use in the future, as discussed in the following subsections.

3.5.2.1 Regional Recycled Water System

SBVMWD, SBMWD, City of Redlands and EVWD have partnered to form the Bunker Hill Regional Recycled Water Coalition to facilitate recharge or disposal of recycled water into the SBB and to construct a Regional Recycled Water System.

In 2024, EVWD began operating the Sterling Natural Resource Center (SNRC), a water reclamation plant which produces tertiary treated recycled water that is used for groundwater recharge at the Weaver Basins, a set of recharge basins on the north side of the Santa Ana River that are owned by SBVMWD. SNRC's treatment train includes headworks, fine screens, membrane bioreactor (MBR) with aeration tanks, and ultraviolet (UV) disinfection. The facility also includes a food waste handling system, odor control, and anaerobic digesters for solids. SNRC's current capacity is 8 MGD with provisions to be expanded to 10 MGD (11,200 AFY) under buildout conditions within EVWD's service area. SNRC came online in early 2024, operating at 6 MGD after all planned flow had been diverted to SNRC. Since the Weaver Basins are the only discharge point, all 6 MGD is being recharged into SBB and all future flows are planned to be discharged there as well.

SBMWD's Water Reclamation Plant (SBWRP) is a 33 MGD secondary water reclamation facility located at 399 Chander Place, San Bernardino, CA 92408 that treats wastewater from the cities of Loma Linda and San Bernardino and nearby San Bernardino County areas. The SBWRP formerly also treated wastewater from EVWD until the construction of SNRC. The SBWRP was constructed in 1958 and produces secondary effluent through a treatment train consisting of headworks, primary clarifiers, aeration basins, and secondary clarifiers. The SBWRP currently treats approximately 15 MGD.

Effluent from the SBWRP is conveyed to a separate facility where it combines with secondary effluent from the City of Colton's WWTP and is treated to tertiary standards at the Rapid Infiltration and Extraction (RIX) facility. The RIX process works by distributing effluent to percolation basins adjacent to the Santa Ana River, where it undergoes soil aquifer treatment and is then extracted by downgradient wells, treated by UV disinfection, then discharged to the Santa Ana River. The RIX facility also has cloth filtration and granular media filtration systems that can be used when additional capacity is needed. Effluent from the RIX plant is considered tertiary by CCR Title 22 standards. The RIX discharge to the Santa Ana River is used to meet flow obligations from both the 1969 Orange County Judgment and the River HCP, although the discharge is currently more than what is required to meet those commitments and can be reduced.

The Tertiary Treatment System (TTS) adds tertiary treatment after the secondary treatment train on the SBWRP site. TTS Phase 1 is complete and produces recycled water for onsite use only at the SBWRP. Phase 2 of TTS would consist of additional cloth disk filters, UV disinfection, discharge pumping facilities, and an extension of the Regional Recycled Water Pipeline to the SBWRP so tertiary effluent can be recharged at the Weaver Basins. SBMWD is also considering a future TTS Phase 3 to produce additional recycled water for recharge, provided there is excess flow beyond the discharge obligations.

SBVMWD owns the Weaver Basins and the Regional Recycled Water Pipeline, which conveys recycled water from SNRC to the Weaver Basins. A future phase may expand the pipeline to ultimately convey TTS Phase 2 recycled water from TTS to the Weaver Basins. The Regional Recycled Water System is shown in Figure 3-7.

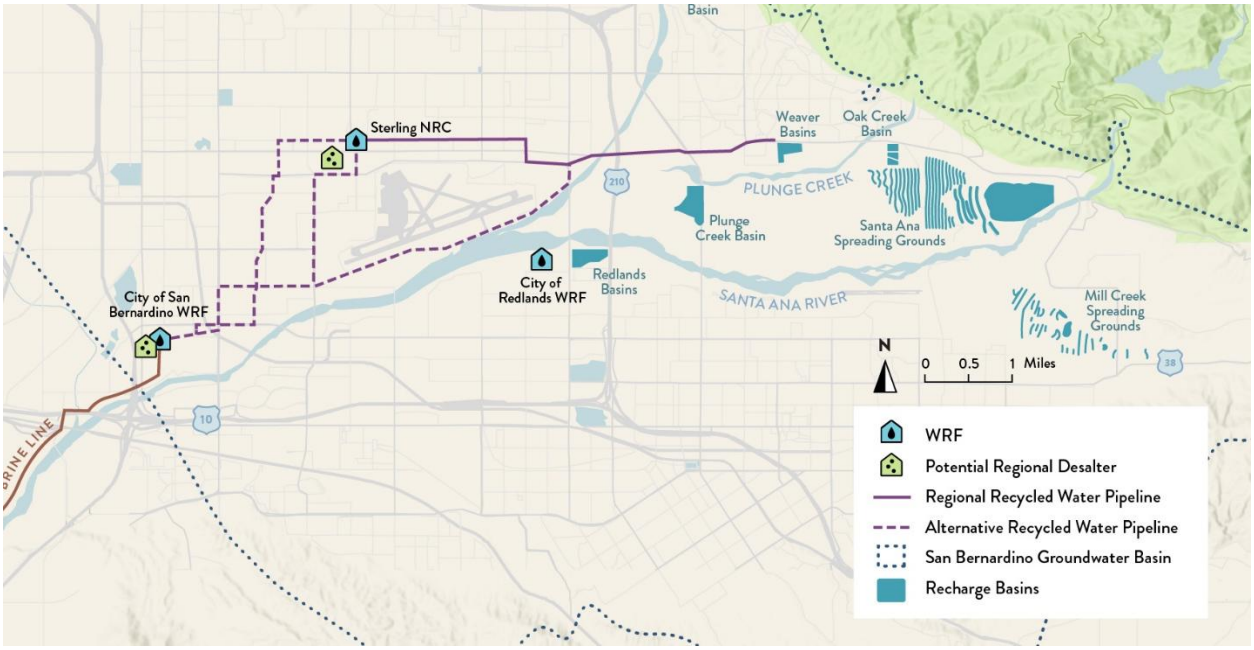

Figure 3-7: Regional Recycled Water Facilities

3.5.2.2 Recycled Water Use for Redlands

Redlands operates the Redlands Wastewater Reclamation Facility (WRF), a 9.5 MGD water reclamation facility that treats wastewater from the City of Redlands. The WRF was constructed in the 1960s and produces both secondary and tertiary effluent through a 6.5 MGD capacity MBR plant and a 3.0 MGD capacity conventional activated sludge plant. Tertiary effluent is provided to customers for irrigation and industrial use. Secondary effluent from the conventional plant is disposed of in a set of disposal ponds (the Redlands Basins) that overlie SBB south of the Santa Ana River. Redlands recently finished a preliminary design to expand recycled water deliveries within their 1350 pressure zone to assist in meeting peak irrigation demands in their blended non-potable/recycled system.

3.5.2.3 Recycled Water Use for City of Rialto

The City of Rialto operates the Rialto WWTP which was originally constructed in 1955 and serves the City of Rialto, portions of the Cities of Colton and Fontana, and unincorporated areas of San Bernardino County. It has been upgraded and expanded multiple times, most recently in 2020. Following secondary treatment, the current treatment train includes cloth disk filters and chlorination with sodium hypochlorite to meet California Title 22 tertiary recycled water standards. The City of Rialto uses plant effluent for various functions around the WWTP and formerly delivered water to Caltrans for irrigation of the I-10 median but does not currently use or sell recycled water. Rialto currently discharges all of its tertiary treated effluent to the Rialto Channel, which is tributary to the SAR.

The City of Rialto currently has a requirement to provide 7 cfs or 3.8 MGD for the benefit of the habitat in the Rialto Channel/Santa Ana River. For the protection of the habitat in the Santa Ana River, the River HCP identified that it is desirable to remove the Rialto WWTP flows from the Rialto Channel during the summer months, when the temperature of the water has an adverse impact on native species. The City of Rialto is currently designing the Habitat Nature Center Project, a roughly 8-acre lake and wetland facility located on the south side of the Rialto WWTP property. The lake will be filled with dechlorinated effluent from the Rialto WWTP via a series of fill laterals on the north and west sides of the lake and will be drained using a pump station in the southeast corner of the lake which will discharge into the Rialto Channel at the same location as the Rialto WWTP's existing discharge point. Habitat Nature Center's purpose is to provide wetland habitat, improve water quality, remove salt and nitrogen from the Santa Ana River ecosystem, and reduce discharge temperatures for downstream sensitive fish species, while also providing walking space and educational opportunities. The required inflow for Habitat Nature Center is not yet finalized but is estimated to be approximately 1 MGD.

The City of Rialto also entered into a long-term recycled water purchase agreement with the Inland Empire Utilities Agency (IEUA) in 2022. Under the agreement, which has a 50-year term, Rialto sells a portion of its excess tertiary recycled water supply that would otherwise be discharged to the Santa Ana River, particularly during the summer months when removing the discharge from the Rialto Channel provides habitat benefits. Under the agreement, IEUA will have exclusive rights to divert a constant flow of 7 MGD of Rialto's recycled water into the IEUA recycled water system annually from May 1st to October 31st, and IEUA may purchase additional recycled water when available.

3.6 Transfers and Exchanges

3.6.1 Transfers and Exchanges

Regional exchange programs are discussed in this section and agency specific transfers and exchanges are discussed in chapters for each individual agency in Part 2.

3.6.1.1 Exchange Plan

On May 3, 1976, the San Bernardino Valley Water Conservation District (Conservation District), San Bernardino Valley, BVMWC, City of Redlands, Crafton Water Company, EVWD, Lugonia Water Company, North Fork Water Company (now owned by EVWD), Redlands Water Company, and YVWD entered into the Santa Ana River – Mill Creek Cooperative Water Project Agreement (Exchange Plan). The Exchange Plan provided a way for San Bernardino Valley to provide SWP water to the Yucaipa area, by exchange, before San Bernardino Valley had a pipeline to deliver SWP water directly to Yucaipa. Since the construction of the State Water Project East Branch Extension and the Crafton Hills Pump Station, SWP water deliveries can be made directly to Yucaipa so that San Bernardino Valley no longer requires the Exchange Plan.

In 2019, the parties to the Exchange Plan began the process of reviewing the plan to determine if it would be beneficial to amend the agreement to enable exchanges that may help the region overcome issues like varying surface water quality, or an outage on the State Water Project. The discussions did not result in an amendment to the Exchange Plan but may be revisited again in the future. The original Exchange Plan is still in effect.

3.6.1.2 Metropolitan Coordinated Operating Agreement

In 2021, SBVMWD entered into a new Coordinated Operating Agreement (COA) with Metropolitan that would sell them SBVMWD's surplus imported water when available; this COA replaced the previous version that expired in 2016. One of the terms of the COA requires Metropolitan to offer 50% of any surplus water purchased under this agreement to their member agencies in the SARCCUP Program. The COA is included in Part 3 Appendix B.

3.7 Groundwater Banking Programs

As stated previously, storing water in local groundwater basins during wet years for later use during droughts is one of the primary management strategies in the Region.

3.7.1 SARCCUP and BHCUP

The five regional water agencies in the Santa Ana River Watershed have identified a watershed scale project, the Santa Ana River Conservation and Conjunctive Use Program (SARCCUP), a cooperative program with Metropolitan and other agencies in the Santa Ana Watershed to store imported water during wet years for use during dry years.

The group includes representatives from the following regional water agencies:

- San Bernardino Valley
- Western
- Eastern Municipal Water District
- IEUA
- Orange County Water District

The program goals of SARCCUP include:

- Providing watershed-wide benefits based upon regional collaboration
- Creating significant new dry-year yield
- Increasing the resiliency and reliability of the water supply

SARCCUP includes four separate groundwater banks located in different groundwater basins within the Santa Ana Watershed, including a comprehensive conjunctive use program in the SBB. SARCCUP will provide water for the SBB and the companion project, Bunker Hill Conjunctive Use Program (BHCUP) provides the extraction facilities for the SBB.

Conjunctive use will benefit the retail water agencies with wells in the San Bernardino Basin by increasing water levels and reducing pumping costs. The portion of these projects ultimately available to agencies in the San Bernardino Valley can provide up to 29,500 acre-feet of dry year yield (single year) for up to three years.

3.8 Development of Desalination

3.8.1 Opportunities for Brackish Water and/or Groundwater Desalination

Desalination, or desalting, is a process to create drinking water from water containing higher salt levels. Desalination can use a thermal distillation process or a membrane process (such as electrodialysis or reverse osmosis). All desalination processes produce a brine waste stream that must be disposed of. Brackish groundwater desalting is not currently needed in the San Bernardino Valley.

3.8.2 Opportunities for Seawater Desalination

Because the San Bernardino Valley is an inland area and has developed less costly management strategies to achieve a reliable water supply, the region is not pursuing this option.

3.9 Water Quality

This section discussed the water quality of each of the Region's supplies, along with associated impacts to supply reliability.

3.9.1 Imported Water Quality

San Bernardino Valley imports water through the SWP which is Sierra snow melt with consistently low TDS levels of 200 to 300 mg/L (DWR 2003a) except during periods of drought, flood events, reservoir management practices, and salt input from local streams.

DWR has conducted water quality monitoring for the SWP since 1968. Initially, this program sought to monitor eutrophication (an increase in chemical nutrients) and salinity in the SWP. Over time, the water quality program expanded to include parameters of concern for drinking water, recreation, and wildlife. Water quality samples are collected at regular intervals throughout the year for chemical, physical, and biological parameters. The SWP water has moderate total organic carbon levels, resulting in higher disinfection byproduct (DBP) formation, and also has some taste and odor causing compounds. Real time data and forecasting for SWP water quality is available on DWR's website (https://water.ca.gov/Programs/State-Water-Project/Operations-and-Maintenance/Water-Quality). SWP quality is suitable for treatment and potable use and for groundwater recharge.

In order to protect against any water quality impacts from imported water, the City of Corona, City of Riverside, Eastern Metropolitan Water District, Elsinore Valley Municipal Water District, Orange County Water District, San Bernardino Valley, San Gorgonio Pass Water Agency, and Western (Recharge Parties) entered into the "Cooperative Agreement to Protect Water Quality and Encourage the Conjunctive Uses of Imported Water in the Santa Ana River Basin" with the SARWQCB in 2007. The initial term of the agreement was 10 years, and it has been extended to January 18, 2028 and is expected to continue into the foreseeable future.

This order states that long-term conjunctive use of groundwater in the Region requires that the quality of water in groundwater basins in the region be managed to meet the water quality objectives for nitrogen and TDS (collectively, the Salinity Objectives) adopted by the SARWQCB in the 1995 Water Quality Control Plan for the Santa Ana River Basin, as amended in 2004 by R8- 2004-0001 (Basin Plan).

The parties that recharge imported water within the Santa Ana Region (Recharging Parties) agree to collect, compile, and analyze the total inorganic nitrogen (TIN) and TDS water quality data necessary to determine whether the intentional recharge of imported water in the region may have a significant adverse impact on compliance with the Salinity Objectives within the Region.

This agreement provides a framework for groundwater recharge of imported water and will facilitate conjunctive management in the region while protecting water quality. A copy of the agreement is included in Part 3 Appendix B.

3.9.2 Groundwater Quality

Groundwater quality varies among the Region's groundwater basins due to geology and faulting patterns and recharge points, and from anthropogenic sources of contamination.

3.9.2.1 Ambient Water Quality

The Basin Plan for the Santa Ana River Basin (Region 8) requires the implementation of a watershed-wide TDS and nitrogen groundwater monitoring program to determine ambient water quality (AWQ) in groundwater, assess compliance with groundwater quality objectives, and determine if assimilative capacity exists in groundwater management zones (GMZs). To date, seven AWQ determinations have been made with the most recently completed for the 1998 to 2018 time period. The AWQ computation for the period through 2021 is expected to be complete in 2026, after which the AWQ will be recomputed every 5 years. The AWQ computation for the period through 2026 is expected to be complete in 2028. The GMZs are shown in Figure 3-8.

According to the Basin Plan (RWQCB, 2016a): "TDS and nitrate-nitrogen water quality objectives for each management zone are based on historical concentrations of TDS and nitrate-nitrogen from 1954 through 1973 and are referred to herein as the 'antidegradation' objectives. This period brackets 1968, when the State Water Resources Control Board (State Water Board) adopted the state's antidegradation policy in Resolution No. 68-16, "Policy with Respect to Maintaining High Quality Waters". This Resolution establishes a benchmark for assessing and considering authorization of degradation of water quality.

By definition, assimilative capacity is determined to be the difference between the objective and the current AWQ: if the current quality of the GMZ is better than the water quality objective, then assimilative capacity exists. Assimilative capacity does not exist if the current quality of a GMZ is the same as or poorer than the water quality objectives.

According to the Basin Plan (RWQCB, 2016a), when a GMZ has little or no assimilative capacity: "The Regional Board addresses such situations by providing dischargers with the opportunity to participate in TDS offset programs, such as the use of desalters, in lieu of compliance with numerical TDS limits. These offset provisions are incorporated into waste discharge requirements . . . An alternative that dischargers might pursue in these circumstances is revision of the TDS or nitrogen objectives, through the Basin Plan amendment process. Consideration of less stringent objectives would necessitate comprehensive antidegradation review, including the demonstrations that beneficial uses would be protected and that water quality consistent with maximum benefit to the people of the State would be maintained . . . a number of dischargers have pursued this 'maximum benefit objective' approach, leading to the inclusion of 'maximum benefit' objectives and implementation strategies in this Basin Plan.

Discharges to areas where the 'maximum benefit' objectives apply will be regulated in conformance with these implementation strategies."

The 2021 AWQ for the GMZs with "maximum benefit" objectives were determined in 2023 for the Yucaipa GMZ and the San Timoteo GMZ. The 2021 AWQ for the remaining GMZs is expected to be complete in 2026, after which the AWQ will be recomputed every 5 years. The AWQ computation for the period through 2026 is expected to be completed in 2028 (West Yost, October 2023). Table 3-12 shows the water quality objectives for both TDS and Nitrate for the nine (9) groundwater GMZs used within the Region. As shown in the table below, the San Timoteo and Yucaipa GMZs have "maximum benefit" water quality objectives that require the implementation of certain projects and programs by specific dischargers as part of their maximum benefit demonstrations is required for the continued application of the "maximum benefit" objectives. The bold orange numbers in the table indicate that the 2018 AWQ is above the WQO and assimilative capacity does not exist.

Table 3-12: Total Dissolved Solids Water Quality Objectives, Ambient Water Quality, and Assimilative Capacity

GROUNDWATER MANAGEMENT ZONE	DWR BASIN NAME	WATER QUALITY OBJECTIVE	2018 AMBIENT TDS	WATER QUALITY OBJECTIVE NITRATE	2018 AMBIENT NITRATE
Bunker Hill-A	SBB	310	**330**	2.7	**3.9**
Bunker Hill-B	SBB	330	280	7.3	5.8
Lytle	SBB	260	240	1.5	**2.4**
Colton	Rialto-Colton	410	**490**	2.7	**3.3**
Rialto	Rialto Colton	230	**240**	2.0	**3.4**
Riverside A	Riverside-Arlington	560	440	6.2	5.6
San Timoteo, "maximum benefit"	San Timoteo	400	**420**	5.0	2.0
San Timoteo, "antidegradation"	San Timoteo	300	**420**	2.7	2.0
Yucaipa, "maximum benefit"	Yucaipa	370	320	5.0	**6.2**

GROUNDWATER MANAGEMENT ZONE	DWR BASIN NAME	WATER QUALITY OBJECTIVE	2018 AMBIENT TDS	WATER QUALITY OBJECTIVE NITRATE	2018 AMBIENT NITRATE
Yucaipa, "antidegradation"	Yucaipa	320	320	4.2	**6.2**

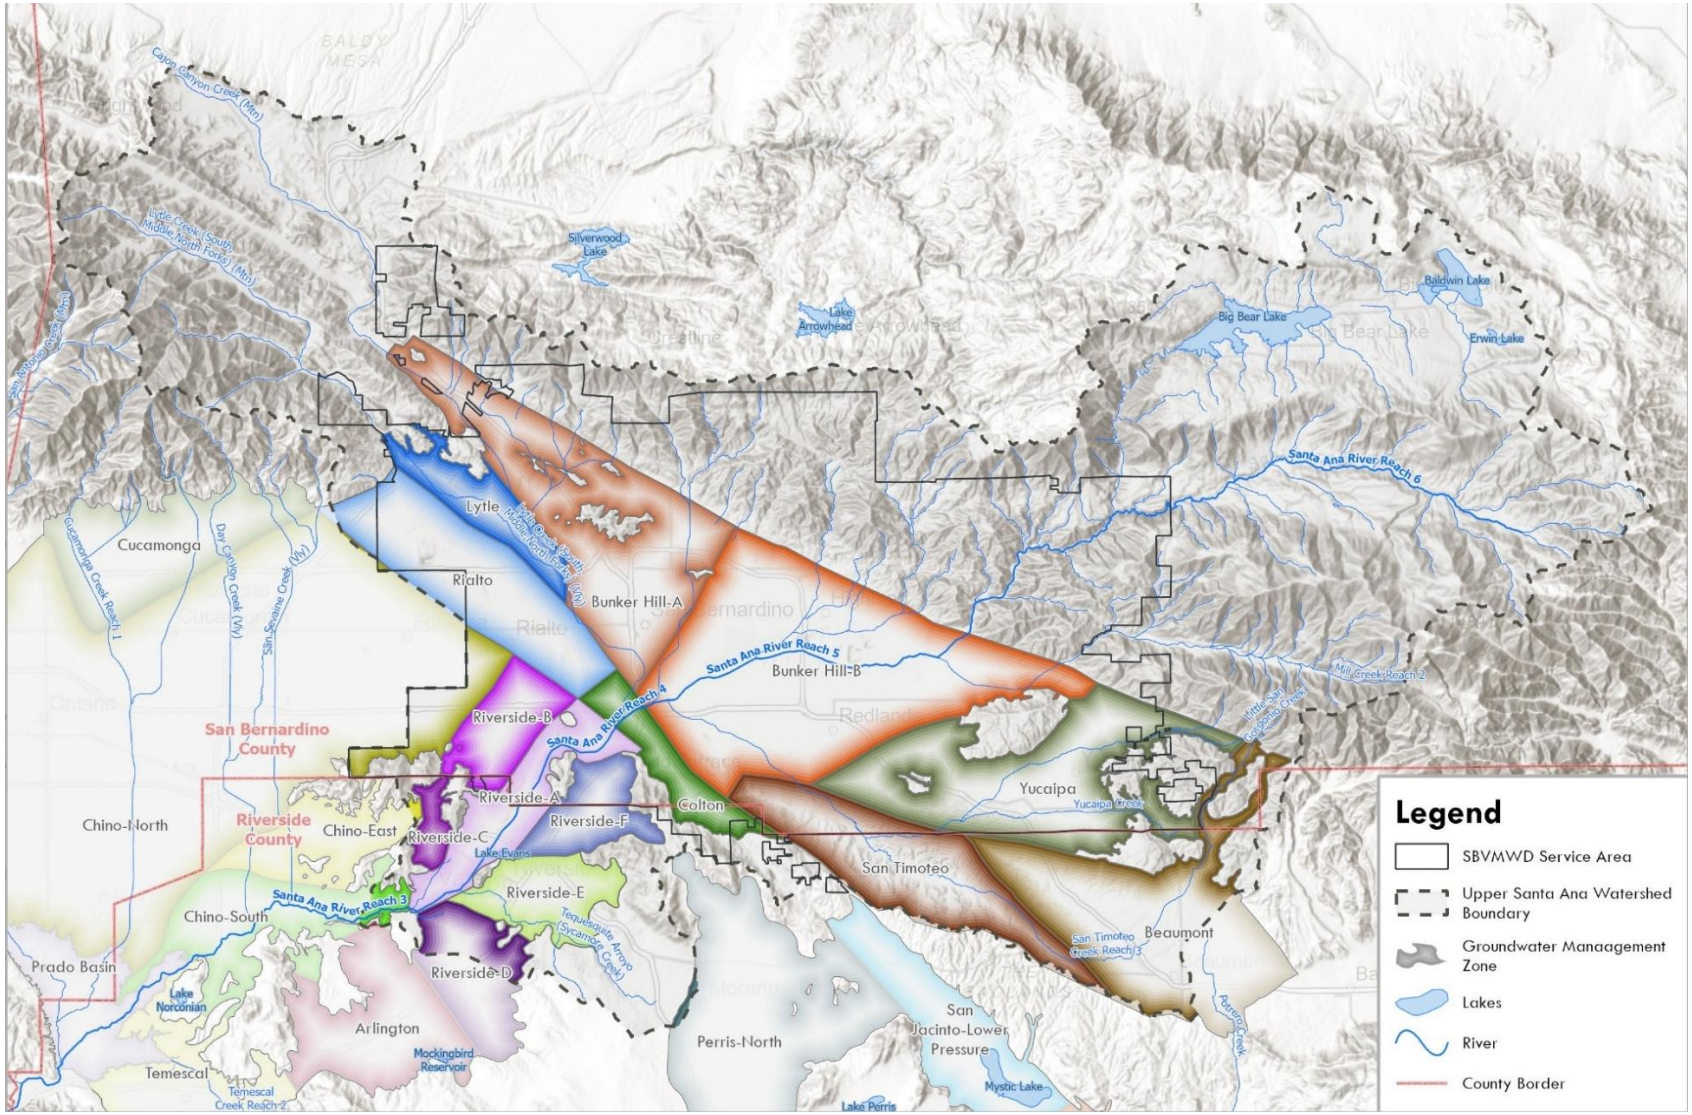

Figure 3-8: Groundwater Management Zones in the Region

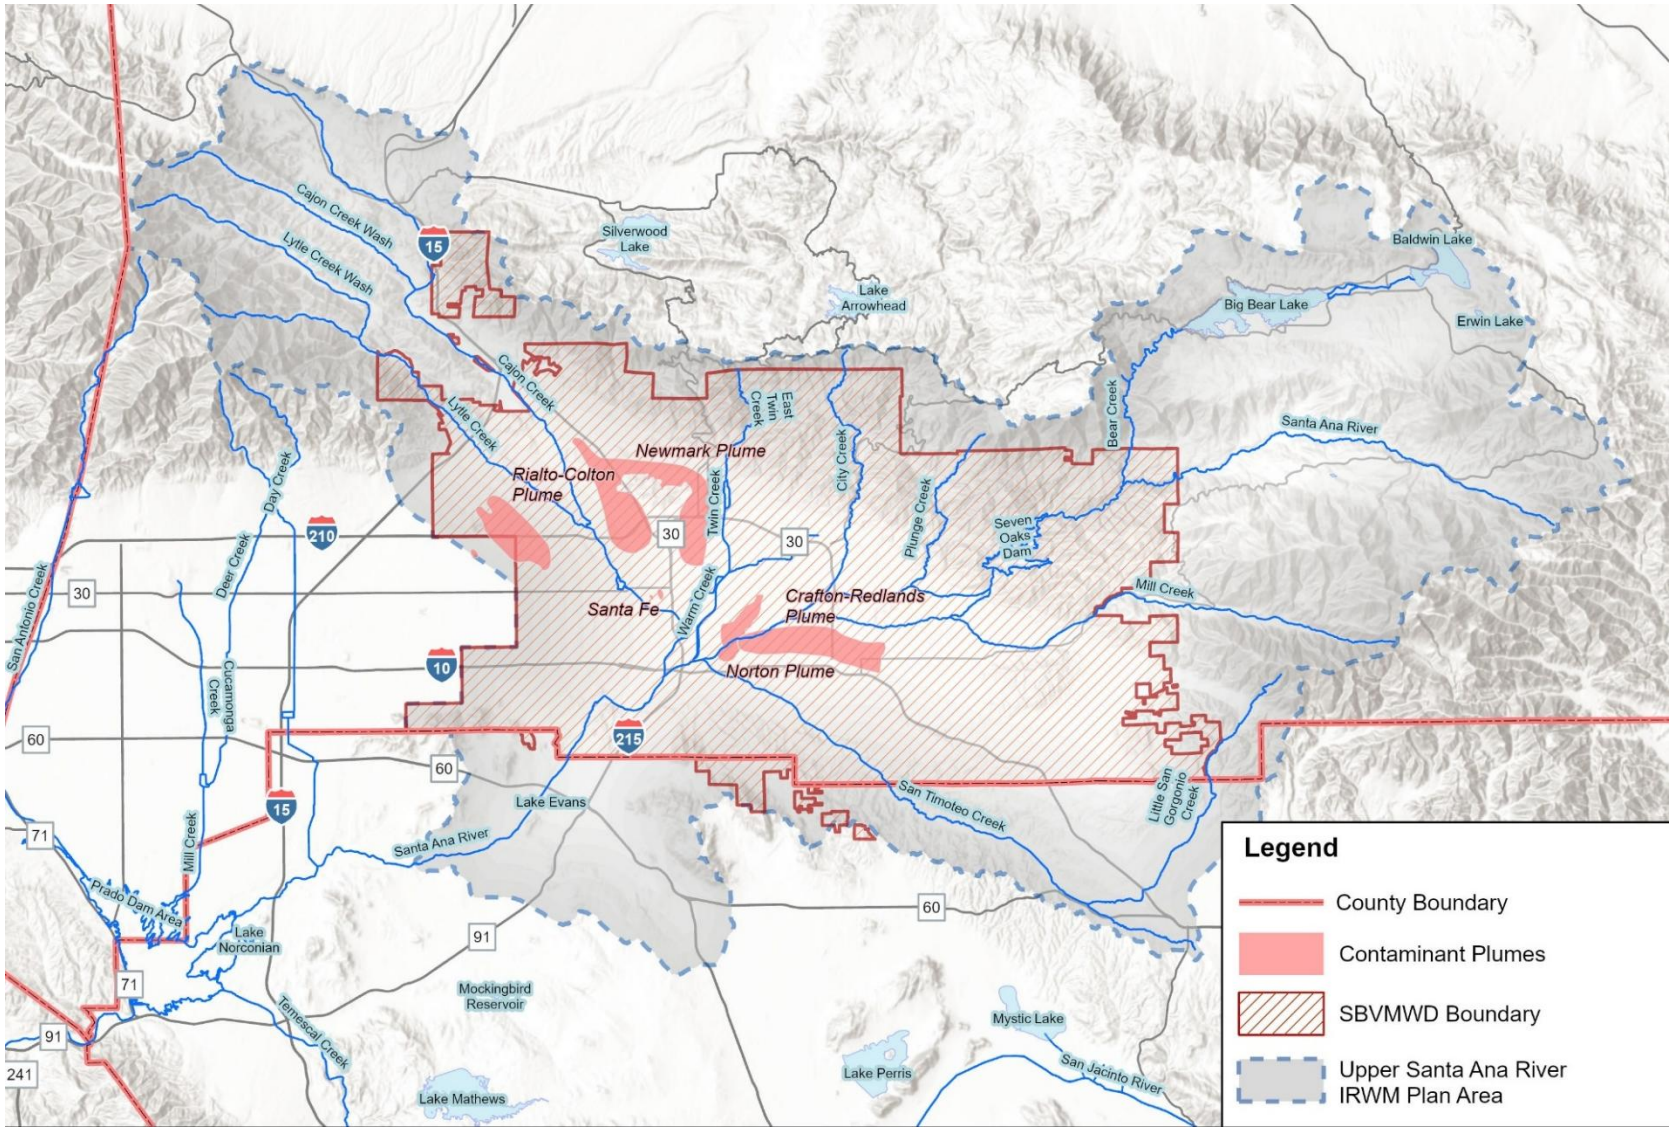

Figure 3-9: Groundwater Contaminant Plumes in the Region

3.9.2.2 Groundwater Plumes

The Region has the following groundwater contaminant plumes, described further below and depicted in Figure 3-9:

- The Crafton-Redlands plume, with trichloroethylene (TCE) and lower levels of perchloroethylene (PCE), debromochloropropane (DBCP) and perchlorate (SBB)
- The Norton Air Force Base TCE and PCE plume (SBB)
- The Muscoy and Newmark plumes near the Shandin Hills, which are Superfund sites with TCE and PCE (SBB)
- The Santa Fe plume with PCE, TCE, and 1,2 dichloroethylene (1,2-DCE) (SBB)
- Rialto Area Perchlorate Plume (Rialto-Colton Basin)
- North Riverside Basin MTBE Contamination (Riverside North Basin)

Separately from the foregoing remediation efforts, Fontana Water Company currently operates and maintains a groundwater remediation project at its Plant F10 pursuant to a long-term agreement with San Bernardino County, the owner and operator of the Mid Valley Sanitary Landfill and corresponding Clean-Up and Abatement Order issued to San Bernardino County by the RWQCB. The 5,000-gallons per minute (gpm) treatment plant utilizes liquid phase granular activated carbon to treat for volatile organic compounds including, but not limited to, PCE, TCE, 1,1-DCE, and cis-1,2-DCE. The plant treats and removes those contaminants from groundwater extracted from both the Rialto-Colton and No Man's Land sub basins.

3.9.2.2.1 Crafton-Redlands Plume

Two commingled plumes, comprising the Crafton-Redlands plume, have impacted water supply wells for the cities of Riverside, Redlands, and Loma Linda, including Loma Linda University wells since they were discovered in 1980. One plume contains TCE and the other perchlorate; both are in the upper 300 to 400 feet of groundwater. Both plumes are attributed to the former Lockheed Propulsion Company site located at the eastern end of the SBB. The site comprises 495 acres and was in operation from 1954 to 1974. Current RWQCB orders regarding the Crafton-Redlands plumes issued to Lockheed Martin Corporation (Lockheed) include Investigation Order No. 94-11, Cleanup and Abatement Order No. 94-37, and Cleanup and Abatement Order No. 97-58 (as amended by RWQCB Order No. 01-56). The Investigation Order No. 94-11 applies to the former Lockheed Propulsion Company site. Cleanup and Abatement Order No. 94-37 and Cleanup and Abatement Order No. 97-58 (as amended by Order No. 01-56) apply to the Crafton-Redlands TCE plume and perchlorate plume, respectively, both downgradient of the former Lockheed Propulsion Company site.

As required by the SARWQCB, Lockheed has prepared contingency plans to address impacts of the plume on water supply wells. These include blending, treatment, and/or providing alternative water supply sources. The remedy consists of four regional treatment plants and one wellhead treatment facility that are intended to treat water containing TCE and/or perchlorate with concentrations above the maximum contaminant level (MCL), which is 5 ppb for TCE and 6 ppb for perchlorate. Three of the treatment plants (Raub, Tippecanoe and Sunnyside) and the

wellhead treatment facility (Gage 46-1R-IX) are connected to City of Riverside water supply wells. One of the treatment plants (Richardson) is connected to City of Loma Linda water supply wells (Tetra Tech, Inc., 2022). In 2004, Lockheed installed a temporary perchlorate treatment system on the City of Redlands' Rees well to remove perchlorate. This system remained in operation until 2007 and was removed in 2009. In 2010, Lockheed funded the conversion of a portion of the existing granular activate carbon (GAC) treatment facility at the Rees well to ion exchange (IX) treatment for perchlorate removal and this system is currently in service, operated by City of Redlands.

As a result of the cleanup operation, the plumes have been contained and the quality of groundwater is improving. The mass of TCE and perchlorate in Basin groundwater has been on a 20- year declining trend and continues to decline. The areas of the TCE and perchlorate plumes have been shrinking for 20 years and continue to decline. The highest concentrations of trichloroethene and perchlorate in the Basin have also been on a general downward trend. Finally, the number of water supply wells that exceed the maximum contaminant level for trichloroethene and perchlorate have been declining. Based on 2021 data, four water supply wells exceed the MCL for TCE (Gage 51-1, Gage 29-3R, Richardson #5, and Mountain View #6). Based on 2021 data, several water supply wells currently exceed the MCL for perchlorate of industrial origin (Gage 29-3R, Gage 51-1, Gage 92-1, Richardson #5, Mountain View #6) (Tetra Tech, Inc., 2022). The maximum TCE concentration detected during the 2020 comprehensive groundwater sampling event was 13 ppb and the maximum perchlorate concentration detected during the 2020 comprehensive groundwater sampling event was 47 µg/L (Tetra Tech, 2020).

3.9.2.2.2 Norton Air Force Base Plume

The Norton Air Force Base plume, located just to the southwest of the former installation in the City of San Bernardino, is a major contaminant plume, consisting primarily of TCE and PCE. The plume has impaired 10 wells owned by the City of Riverside and the City of San Bernardino. Cleanup efforts by the Air Force, consisting of soil removal, soil gas extraction, and groundwater treatment, have significantly reduced this plume. The treatment plants now operate in a standby mode.

3.9.2.2.3 Newmark and Muscoy Plumes

Within the City of San Bernardino, the Newmark plume and the Muscoy plume consist primarily of PCE and TCE. The plumes have impacted San Bernardino water supply wells. Under the federal Superfund Program, the U.S. Environmental Protection Agency (EPA) has implemented cleanup of these plumes, including use of groundwater extraction and treatment using granulated activated carbon. The treated water is then used to supplement the City of San Bernardino's potable water supply.

3.9.2.2.4 Sante Fe Plume

The Santa Fe groundwater plume consists primarily of 1,2-DCE, TCE, and PCE. This plume is currently being monitored.

3.9.2.2.5 Rialto Area Perchlorate Plume

Since 2002, the SARWQCB has been conducting an investigation of groundwater contamination in the area of the City of Rialto. The focus of the investigation has been facilities located on a 160-acre site in Rialto. The site has also been designated as a Superfund site by the US EPA. In 2005 the SARWQCB Executive Officer issued a Cleanup and Abatement Order and subsequent amendments naming a number of responsible parties. Since that time, the Cleanup and Abatement Order has been the subject of challenges in petitions filed by entities named as parties responsible for the contamination.

In September 2010, EPA issued the Interim Action Record of Decision to the Source Area Operable Unit (SAOU) of the B.F. Goodrich Superfund Site, now referred to as the "Rockets, Fireworks, and Flares Superfund Site". The EPA's Remedy required Emhart Industries to install, operate, and maintain a groundwater pump and treatment system to intercept and control the spread of contaminated groundwater from the 160-acre parcel. The EPA Remedy is designed to capture and remove perchlorate and Trichloroethylene (TCE) in the groundwater in the Rialto-Colton Groundwater Basin emanating from a 160-acre parcel located in north Rialto.

On August 12, 2015, the Rialto, Colton, the County of San Bernardino and Emhart Industries (Emhart), entered into a Four-Party Implementation Agreement to implement the interim remedial action plan as required by the Consent Decree as entered on July 2, 2013. The remedial action required by the Work Consent Decree was selected and approved and overseen by the EPA. A copy of the Four Party Agreement is included in Part 3 Appendix B.

The County and Emhart agreed that the EPA Remedy would be combined with an existing groundwater extraction and treatment remedy designed and constructed by the County to capture and remove perchlorate and TCE in the Basin due to the landfill and required by the SARWQCB. This combined project is referred to as the "Combined Remedy" project.

The Combined Remedy includes:

1. Installing a new extraction well (EW-1), located at the northwest corner of Jerry Eves Park and piping to the water treatment system,
2. Expanding the existing County groundwater treatment system at the Rialto 3 well site to treat extracted water from EW-1,
3. Upgrading the chlorination station at the Combined Remedy site,
4. Constructing an inter-tie between Rialto and Colton to deliver Colton's water rights produced out of EW-1 and,
5. System improvements to the Colton's drinking water distribution system, specifically modifications made by Emhart to a reservoir and pump station.

3.9.2.2.6 North Riverside Basin MTBE Contamination

In 1988, the SARWQCB issued a Cleanup and Abatement Order to the SFPP Colton Fuel Terminal (owned by Kinder Morgan) located in Bloomington, California. The Terminal, which is located just south of the I-10 freeway on the east side of Riverside Avenue, is a bulk petroleum

storage and distribution facility which was built in the 1950s. It currently occupies 82 acres and contains 32 refined petroleum product tanks and fuel-loading racks where transport tanker trucks are filled.

In response to the Cleanup and Abatement Order, a monitoring and extraction well network for the Terminal was constructed. It consists of 131 wells in and around the Terminal as well as 14 soil vapor extraction wells. The site samples for Benzene, methyl tertiary butyl ether (MTBE) and tertiary butyl alcohol (TBA).

3.9.3 Surface Water Quality

Three reaches of the SAR run through the Region: Reach 6, which spans from the headwaters of the watershed to Seven Oaks Dam, Reach 5 which spans from Seven Oaks Dam to the San Jacinto Fault in San Bernardino and Reach 4 which spans from the San Jacinto Fault to Mission Blvd. in Riverside. Surface water is diverted from Reaches 5 and 6 for treatment, irrigation use and groundwater recharge. Treated wastewater effluent is discharged to Reach 4.

Reaches 1 and 2 of Mill Creek also run through the Region: Reach 1 spans from the confluence with Santa Ana River to the Bridge Crossing Route 38 at Upper Powerhouse and Reach 2 spans from the Bridge Crossing Route 38 at Upper Powerhouse to the Headwaters. Surface water is diverted for treatment, irrigation use and groundwater recharge.

Water quality within the Upper SAR watershed is addressed through several plans, regulations and guidelines including the Basin Plan, which includes beneficial use designations and water quality objectives. Those water bodies not meeting the Basin Plan water quality objectives and determined to have beneficial uses are listed on the State's 303(d) list of impaired water bodies and require a TMDL to be developed. Table 3-13 shows the water bodies in the Region watershed that are listed on the State's 303(d) list for water quality impairments.

Two TMDLs have been adopted to address the above impairments in the Upper SAR:

- TMDLs for Bacterial Indicators in the Middle Santa Ana River Watershed (February 3, 2005): Addresses pathogens in the Santa Ana River, Reach 3.
- Nutrient TMDL for Dry Hydrological Conditions for Big Bear Lake (April 21, 2006): Addresses nutrients in Big Bear Lake.

Table 3-13: 303(d) Listed Water Bodies in the Region

WATER BODY	IMPAIRMENTS
Big Bear Lake	Mercury, Noxious Aquatic Plants, Nutrients, PCBs
Lytle Creek	Pathogens
Mill Creek, Reach 1	Pathogens
Mill Creek, Reach 2	Pathogens
Santa Ana River, Reach 6 (Seven Oaks Dam to Headwaters)	Cadmium, Copper, Lead
Santa Ana River, Reach 4 (Mission Blvd. in Riverside to San Jacinto Fault)	Pathogens
Santa Ana River, Reach 3 (Prado Dam to Mission Blvd. – Baseflow)	Copper (wet weather only), Lead, Pathogens

The SARWQCB states that the quality of the SAR is a function of the quantity and quality of the various components of the flows (SARWQCB 1995). Three components make up the flow of the water in the SAR: (1) storm flows, (2) baseflow, and (3) non-tributary flow. The relative proportion of these components varies throughout the year.

The first component, storm flows, results directly from rainfall, usually occurring between the months of December and April. Much of the rainfall and surface water runoff from the storms is captured and percolated into the groundwater basins. The quality of storm flow water is highly variable.

Baseflow makes up the second component of water flow in the SAR, a large portion coming from the discharge of treated wastewater into the river in addition to rising groundwater in the basin. This baseflow includes the non-point source discharges as well as the uncontrolled and unregulated agricultural and urban runoff. Water quality objectives are set in relation to the baseflow in the river, not to the total flow in the river (see Table 3-14). The intent of these objectives is to protect the river's groundwater recharge beneficial use. Compliance with these objectives is verified by annual measurement of the baseflow quality.

Table 3-14: SAR Basin Surface Water Quality Objectives (WQO) in mg/L

INLAND SURFACE STREAMS	TDS	HARDNESS (CaCO3)	SODIUM (Na)	CHLORIDE (Cl)	TOTAL INORGANIC NITROGEN (TIN)[1]	SULFATE (SO4)	CHEMICAL OXYGEN DEMAND (COD)
SAR Reach 4	550	---	---	---	10	---	30
SAR Reach 5	300	190	30	20	5	60	25
SAR Reach 6	200	100	30	10	1	20	5
Mill Creek Reach 1	200	100	30	10	1	20	5
Mill Creek Reach 2	110	100	25	5	1	15	5

Source: SARWQCB 2019

Note: [1]Total nitrogen, filtered sample.

The SARWQCB sets discharge requirements on wastewater discharges, the major source of baseflow in the SAR. Waste discharge requirements are developed on the basis of the limited assimilative capacity of the river. Non-point source discharges, generally from urban runoff and agricultural tailwater, are regulated by requiring compliance with Best Management Practices (BMPs), where appropriate.

The third component of flow in the SAR that influences water quality is characterized by the SARWQCB as non-tributary flow. Non-tributary flow is generally imported water released in the upper basin for recharge in the lower basin (SARWQCB 1995).

Streams on the Santa Ana Basin generally have increasing dissolved minerals as one goes downstream. This effect is due to the fact that water is used, recycled, and used again. The magnitude or amount of TDS concentration rises with each use of water. Groundwater also enters basin streams in some reaches, and their sampling indicated that some of the highest TDS (and in some cases nitrates) may occur at sites on the valley floor that are dominated by rising groundwater (USGS 2006). Nitrate concentrations are higher in Santa Ana Basin streams receiving treated wastewater than in streams without treated wastewater. The principal source of nitrate is fertilizer from historic agricultural operations.

Table 3-15 provides a summary of the available historical surface water quality data for TDS and nitrogen at points along the SAR (USGS 2007).

Table 3-15: Average Historic Surface Water Quality for Locations on the SAR (1990-2001) (mg/L)

WATER QUALITY CONSTITUENT	METROPOLITAN CROSSING GAGE (REACH 3)[A]	RIX-RIALTO EFFLUENT OUTFALL (REACH 4)[A]	MENTONE GAGE (REACH 5)[A]
TDS	560[b]	520[c]	230[b]
TDS Basin Plan Objective by Reach	700	550	300
Total Inorganic Nitrogen (TIN)	7.3[b]	8.5[c]	0.3[b]
TIN Basin Plan Objective by Reach	10[d]	10	5

Notes: a. USGS gage data. Data for River Only Mentone Gage begins in October 1998. Data for Riverside Narrows Gage begins in August 1997.

b. USGS 2004.
c. The TDS and TIN values assigned for RIX-Rialto are the maximum values that occurred during 2001-2002 as reported in Table 4.4-9 of the SBMWD RIX Facility Recycled Water Sales Program Preliminary Environmental Impact Report (PEIR), March 2003.
d. Total nitrogen, filtered sample.

3.9.4 Salt and Nutrient Management Plan

The Basin Plan includes a Salt and Nutrient Management Plan for the SAR watershed as a whole. In addition, the stakeholders who use groundwater from basins in the Upper Santa Ana River Watershed have formed an SNMP Workgroup and are collaboratively investigating the salt and nutrient loading to several of the underlying groundwater basins, particularly SBB. Prolonged droughts have highlighted the need for an enhanced water supply portfolio, which includes plans to increase stormwater capture and recycled water use. Without access to sufficient assimilative capacity for TDS, existing and new recycled water projects in the SBB may be subject to costly salt removal using advanced treatment such as reverse osmosis (RO). The SNMP Workgroup is considering preparing a Subregional SNMP as part of a comprehensive approach that would offset TDS in the future as needed to support continued use of recycled water in the SBB. Through regional collaboration and additional technical analysis and commitments, a Subregional SNMP could support the use of TDS assimilative capacity and provide flexibility in the implementation timing of the selected salinity management strategies, subject to approval by the Santa Ana Water Board. A Subregional SNMP would further evaluate the impacts of recycled water recharge projects on the BH-B GMZ, provide for enhanced monitoring of the quality of the basin, and establish specific commitments to offset the impacts of the recycled water projects. A Subregional SNMP would include sufficient

antidegradation analysis and demonstration of maximum benefit to people of the State to justify a request to use assimilative capacity. This would inform future permitting efforts for recycled water projects discharging to the BH-B GMZ.

Preliminary actions to prepare a Subregional SNMP were taken from 2021 through 2023, including the development of the Upper Santa Ana River Watershed Salt and Nutrient Management Strategy Study (SNMSS) by the SNMP Workgroup, which is currently comprised of a series of 5 Technical Memorandums (TMs):

- Phase 1 TM #1 – *Water Quality Characterization*
- Phase 1 TM #2 – *Nitrogen Losses During Recycled Water Recharge in the Upper Santa Ana Watershed, Technical Workplan*
- Phase 2 TM #1 – *Volume and Quality of Imported Water and Stormwater Captured by Active Recharge Projects in the San Bernardino Basin*
- Phase 2 TM #2 – *Recycled Water Evaluation*
- Phase 2 TM #3 – *Characterize the Probable Cumulative Impacts to Groundwater Quality*

Following completion of the Phase 2 TM #3, the Bunker Hill Regional Recycled Water Coalition prepared the Bunker Hill Regional Recycled Water Salinity Management Feasibility Study, which was completed in February 2025. The purpose of the Feasibility Study is to identify, screen, and evaluate multiple salinity management strategies to protect the beneficial uses of the BH-B GMZ while supporting continued and expanded use of recycled water. The Feasibility Study concluded that a regional recycled water desalter would ultimately be needed to maintain compliance with the WQO in the SBB. However, prior to initiating implementation of a regional desalter, the Feasibility Study recommended that the Coalition and the SNMP Workgroup complete several ongoing and near-term planning efforts that will enable them to refine the future groundwater quality analysis, the total TDS offset requirements, the timing of when the desalter would be needed, and the sizing of the desalter (Water Systems Consulting, Inc., 2025).

In early 2026, the SNMP Workgroup (which includes the Coalition members) initiated Phase 3 of the SNMSS, which will use updated hydrology and planning inputs to update and refine the future groundwater quality analysis. Following the completion of Phase 3, it is anticipated that the Coalition and the SNMP Workgroup, in collaboration with the Regional Board, will determine whether to move forward with preparation of a Subregional SNMP.

3.9.5 Water Quality Impacts on Supply Reliability

Imported water quality from the SWP is typically suitable for potable use following conventional treatment and for groundwater recharge. Even during drought periods when TDS can be elevated, the water quality does not constrain the use of SWP locally because it is well below the MCLs and groundwater quality is managed over a 20-year period, allowing for natural variations in water quality.

Groundwater quality is monitored, tracked, and addressed by implementing treatment or blending, as necessary. In addition to the groundwater plumes described above, there are other contaminants in the basin, including but not limited to nitrate and DBCP, which can require treatment. There are also emerging contaminants and new water quality regulations which could increase the level of required treatment, particularly per and polyfluoroalkyl substances (PFAS).

PFAS are manmade fluorinated organic compounds found in and used in the manufacturing of common items such as carpet, clothing, fabric, food packaging, nonstick cookware, and fire-retardant foams. PFAS are synthetically made to be resistant to both water and liquids, are not easily broken down and destroyed, and are believed to have adverse health effects. At the federal level, EPA finalized National Primary Drinking Water Regulations for certain PFAS compounds in April 2024, establishing enforceable MCLs of 4 parts per trillion (ppt) for perfluorooctanoic acid (PFOA) and perfluorooctane sulfonic acid (PFOS) under the Safe Drinking Water Act. EPA also adopted MCLs for several additional PFAS compounds and a mixture-based hazard index in the 2024 rule; however, in May 2025, EPA announced its intent to retain the PFOA and PFOS MCLs while reconsidering or rescinding the remaining PFAS standards and extending compliance deadlines, with further rulemaking anticipated. In California, the State Water Resources Control Board has not yet adopted state-specific MCLs for PFAS but has established notification levels and response levels for multiple PFAS compounds, including PFOA, PFOS, and PFHxS, which trigger required actions when exceeded. California has identified PFAS drinking water standards as a highest regulatory priority and is in the process of adopting federal PFAS MCLs and evaluating additional California-specific regulatory approaches, including potential treatment-based standards.

Water agencies are responsible for providing treatment to ensure their potable water supply meets all applicable water quality regulations. When new drinking water rules are implemented, or when contaminant concentrations in wells increase unexpectedly, water suppliers must either blend affected wells with other sources to meet the MCLs or take the wells offline until treatment can be employed to meet the MCLs. It can take several years to fund, design and construct new treatment facilities so supply reliability can be impacted on a short term basis until corrective measures can be implemented. When this occurs, agencies typically shift to other water sources or rely on excess well capacity that is not affected.

Local surface water supply is generally of very high quality and is suitable for groundwater recharge and potable use following conventional treatment. TDS levels typically are typically consistent, averaging 178 mg/l. However, there are times when water quality is degraded by high storm flows and other conditions in the upper portion of the watershed, such as the 2024 Line Fire that burned nearly 44,000 acres of the Santa Ana Watershed. During these conditions, the water is often not suitable for treatment and potable use because the treatment processes are not designed to handle high turbidity and other constituents typically present in storm flows. During these periods, water agencies with treatment plants must stop diverting surface water and either use imported water at their treatment plants or shift to groundwater pumping to meet demands.

For recharge, the first flush of storms flows with the highest levels of debris and turbidity are typically allowed to flow by to limit maintenance needs, with recharge diversions beginning a few hours after the initial storm. Sediment buildup in the recharge basins is expected for stormwater capture and sediment removal is part of routine basin operation, so stormwater quality is generally not a concern for recharge.

3.10 Planned Water Supply Projects and Programs

The agencies in the Region have collaborated to manage the region's unique water supply, water quality, flood, and habitat challenges. These challenges are key considerations in the implementation of new water supply projects in the Region, as described in this section.

3.10.1 Recycled Water

Planned recycled water projects are described in Section 3.5.

3.10.2 Groundwater Recharge

One of the primary water supply strategies of the region is to recharge groundwater through spreading of imported water or through direct use of imported water which results in in-lieu recharge, managing floods and increasing stormwater recharge, and percolating recycled water. The region utilizes multiple spreading basins to recharge imported water and excess surface water, percolates effluent from multiple wastewater treatment facilities, and receives some recharge through percolation of stormwater. Potential new recharge projects under development are described in the following subsections and summarized in Table 3-16. The implementation timing for these projects has not yet been finalized by the Region. For the purposes of this Plan, it is assumed that one new project will be constructed in each 5-year period. The average long term yield of all of the projects is approximately 2,000 AFY so it is assumed that volume of new stormwater capture will be implemented every 5 years.

3.10.2.1 Santa Ana River Tributary Active Recharge Projects and Program for Expansion of Recharge Capacity (PERC) Projects

The Active Recharge Project is a collection of potential stormwater capture projects envisioned to help enhance capture and recharge of surface water into the SBB.

In 2015, a stormwater flow and capture analysis was performed to determine:

- The volume of surface water which has historically migrated out of the SBB.
- The volume of surface water that is generated internally within the SBB as the result of historical and on-going urbanization of the SBB.
- The quantity of stormwater that is generated by the major tributary creeks to the Santa Ana River.
- The location and preliminary (conceptual) designs of potential new stormwater capture facilities that could maximize the capture and recharge of surface water flows.
- Potential environmental constraints for each of the selected tributaries.
- Potential modifications to existing retention basins and spreading grounds to further increase surface water capture and recharge.
- The volume of potential additional recharge to the SBB and the effect to surface water volumes leaving the SBB that will occur as a result of implementation of an active recharge project (this remaining flow out of the SBB would be available for recharge in

the proposed Riverside North Aquifer Storage and Recovery Project; see Section 3.10.2.4).

The study included preparation of proposed conceptual designs for new and improved existing surface water capture and recharge facilities in areas of the tributary creeks having the greatest stormwater flows and the least number of environmental constraints.

A Partnership Agreement for joint Active Recharge Project development under the River HCP was entered into by SBVMWD and the Conservation District in January 2019 (2019 Agreement). This Agreement built upon the past history between the two agencies for cooperating and pooling resources for the regional betterment of the availability, quality and flexibility of groundwater supplies and management. SBVWCD sought conservation easements on 295 acres of Conservation District property for use as mitigation under the River HCP, which includes the Active Recharge Projects as Covered Activities. The 2019 Agreement established payment from SBVMWD to Conservation District for a total of $36,950,000 for these conservation easements, and provided that these funds would be used by the Conservation District in furtherance of water conservation efforts, land acquisitions, water quality or supply facilities development, such as implementation of a subset of the Active Recharge Projects in the Conservation District Service area, which were later renamed as the Program for Expansion of Recharge Capacity (PERC) projects. In addition, a PERC Policy Committee (Policy Committee) was established to review and advise the Conservation District on the development of the PERC projects. The Policy Committee includes the general managers and one Board appointed member of both the Conservation District and SBVMWD, or their designees, and one representative of the BTAC.

In late 2025, the Conservation District completed the Final Draft PERC Comprehensive Feasibility Study (PERC CFS), which consists of Volumes 1 through 4. The PERC CFS evaluated ten PERC project alternatives in the Upper Santa Ana River Watershed located at six recharge sites within the Waterman, Twin, Lynwood, Oak Creek, Plunge Creek, and Mill Creek watersheds, all of which would recharge local runoff into the Basin. Each site was evaluated for hydrology, grading design, operational potential, and environmental conditions. The updated long term yields from the PERC CFS are included in this Plan.

3.10.2.2 Santa Ana River Enhanced Recharge Project

The Enhanced Recharge Project is located on the Santa Ana River and has the capacity to divert up to 500 cubic feet per second (cfs) and up to approximately 80,000 AFY downstream of Seven Oaks Dam. The first phase of the project (upstream diversion and sedimentation facilities) was completed in 2019, the second phase of the project (enhanced recharge basins and facilities) was completed in 2024, and a future third phase will complete additional flexibility and redundancy improvements to optimize the diversion and delivery of diverted water for direct use and recharge.

3.10.2.3 Cactus Basin Recharge

San Bernardino Valley and the members of the Rialto Groundwater Council are working with SBCFCD to pursue recharge of imported SWP water into the existing Cactus Basins, which overlie the Rialto-Colton basin and are currently used for flood control only. The proposed project includes recharging imported water into Cactus Basins 3/3A and 5 and construction of the Cactus Basins Pipeline, approximately 2,200 feet from the Devil Canyon Azusa Pipeline to Cactus Basins. Recharge is planned to occur only during the dry season when the basins are not needed for flood control.

3.10.2.4 Riverside North Aquifer Storage and Recovery

The Riverside North Aquifer Storage and Recovery Project is a proposed storm water capture project located in the southern portion of the City of Colton and north of the City of Grand Terrace. The project consists of proposed in-channel and off-channel recharge. The proposed off-channel recharge facility location is along the west side of the Santa Ana River and proposes the construction of up to eight individual recharge basins encompassing approximately 25 acres. The in-channel recharge basin proposes construction of an inflatable dam across the Santa Ana River channel, which can be raised and lowered depending on the amount of water flowing in the river. This project is estimated to provide up to 6,000 acre-feet of new water per year. The in-channel and off-channel water captured will be recharged into the Riverside North sub basin and a portion of the retained water will be diverted to the Riverside Canal pipeline for direct use.

Proposed new recharge projects under development are described in the following subsections and summarized in Table 3-16.

Table 3-16: Potential Groundwater Recharge Projects

PROJECT NAME	BASIN	ESTIMATED YIELD (AFY)	WATER SOURCE RECHARGED
Cactus Basins	Rialto-Colton	3,000	SWP
Lynwood Basins	SBB	687	Stormwater
Mill Creek Basin Grading (Alternatives 1, 2, or 3)	SBB	2,248 - 3,751	Stormwater
Oak Creek Basins	SBB	1,020	Stormwater
Plunge Creek – Interim Alternative	SBB	1,790	Stormwater
Plunge Creek – Ultimate Alternative	SBB	3,656	Stormwater

PROJECT NAME	BASIN	ESTIMATED YIELD (AFY)	WATER SOURCE RECHARGED
Twin Creek (Small or Large Grading Alternatives)	SBB	480 – 1,900	Stormwater
Waterman Basin Grading	SBB	2,171	Stormwater
Devil Creek Basin	SBB	2,051	Stormwater
Cable Creek Basins	SBB	2,389	Stormwater
Cajon Creek	SBB	TBD	Stormwater
Cajon – Vulcan 1 Basins	SBB	579	Stormwater
Vulcan 2	SBB	782	Stormwater
Daley Canyon	SBB	TBD	Stormwater
Little Sand Creek	SBB	TBD	Stormwater
Enhanced Recharge in SAR Basins, Phases 1C	SBB	N/A	Stormwater
Lytle Creek Basin	SBB/Lytle	3,620	Stormwater
Lytle – Cajon Basin	SBB/Lytle	1,090	Stormwater
Riverside North Aquifer Storage & Recovery (Rubber Dam)	Riverside-Arlington	6,000	Stormwater
Oak Glen and Wilson Creek	Yucaipa	TBD	Stormwater
San Timoteo Creek	Yucaipa	TBD	Stormwater
Sand Creek	Yucaipa	TBD	Stormwater
Wildwood Creek	Yucaipa	TBD	Stormwater
Yucaipa Creek	Yucaipa	TBD	Stormwater
Zanja Creek	Yucaipa	TBD	Stormwater

4.0 Regional Water Use

This chapter provides a summary of the projected water demands for the Region through 2050, by agency and source. This chapter also describes the significant improvements in water use efficiency that have been achieved within the Region as well as planned water use efficiency programs.

IN THIS SECTION

- Total Regional Water Demand
- Demand by Source
- Water Use Efficiency

4.1 Total Regional Water Demand

As described in Part 1 Chapter 2, the most recent population projections for the Region show slower growth than projected in previous plans. Accordingly, the total demand projections in this Plan are slightly lower than the projections from 2020 due to slower growth and increased water use efficiency.

Figure 4-1 shows a comparison of the 2020 IRUWMP vs. 2025 RUWMP demand projections and Table 4-1 summarizes the 2025 demand projections for Participating Agencies for a normal year from 2030 to 2050. This includes potable, non-potable, and recycled water demands, but excludes demands for water going into groundwater recharge. For the three Participating Agencies which are partially outside of SBVMWD (WVWD, RHWC, and SMWC), their entire service area demand is represented.

Table 4-1: Regional Demand Projections, 2030 - 2050 (AFY)

AGENCY	2030	2035	2040	2045	2050
Colton[1]	9,445	9,703	9,882	10,060	10,239
Loma Linda	5,195	5,318	5,434	5,553	5,676
Redlands	28,820	29,882	30,678	31,474	32,271
Rialto	9,475	9,610	9,745	9,880	10,015
RHWC	5,269	5,216	5,245	5,275	5,305
SBMWD	38,925	40,044	41,233	42,421	43,610
SMWC	2,348	2,502	2,532	2,561	2,591
WVWD	21,907	23,071	23,903	24,783	24,783
Total, Participating Agencies	121,384	125,346	128,652	132,007	134,490

Note 1: Terrace Water Company demands are included in Colton's demands.

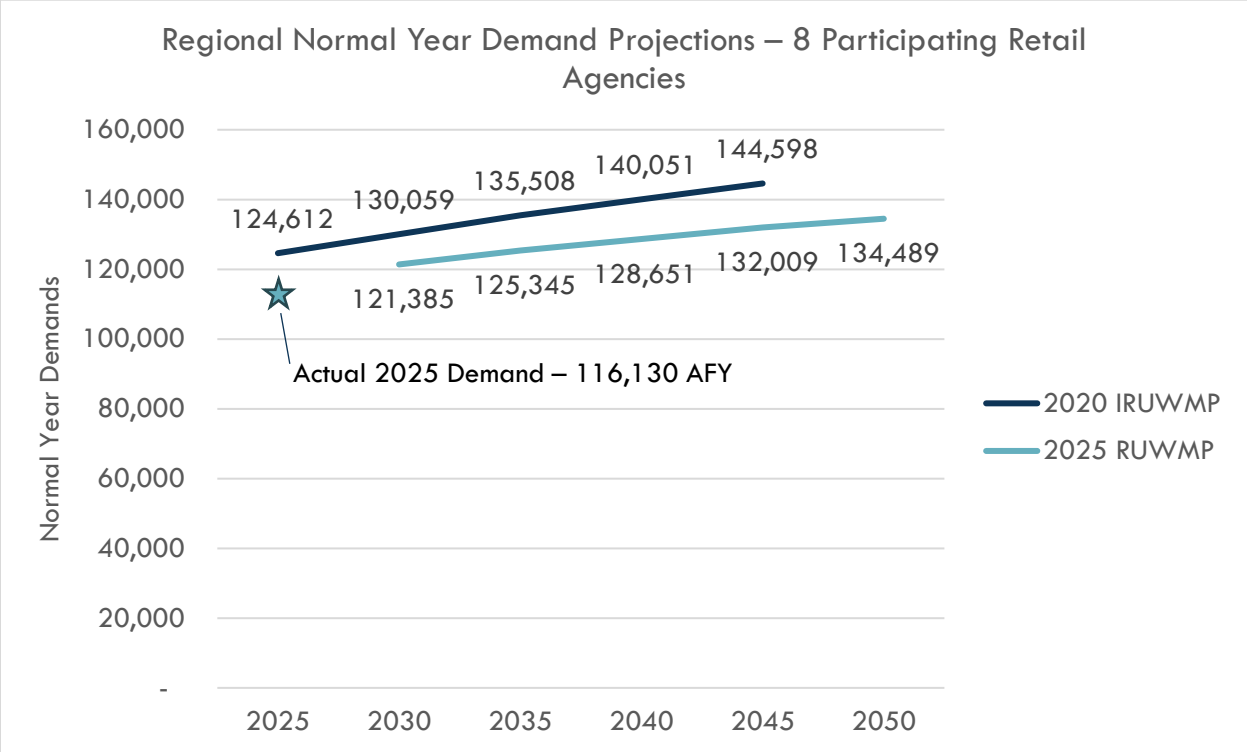

Figure 4-1: Comparison of 2020 and 2025 Demand Projections for Participating 2025 RUWMP Agencies

In addition to the Participating Agencies, this RUWMP incorporates data from other agencies within San Bernardino Valley that rely wholly or partially on the shared water resources analyzed in this Plan. While these agencies are not participants in this RUWMP, their water demands and associated supply needs are included to accurately evaluate regional water supply reliability through 2050.

For the urban water suppliers preparing separate 2025 UWMPs (EVWD, FWC, and YVWD), demand projections from their respective 2025 UWMPs were incorporated into this Plan. For agencies who use external supplies not evaluated in this Plan, only the portion of their demand that will be met by supplies in this Plan are included in the regional demand totals.

Fontana Water Company's demands within the region are set to their projected use of regional water resources (SWP water from SBVMWD, Lytle Creek surface water, Lytle groundwater [SBB], and Rialto-Colton groundwater), but exclude demands met by other external sources.

Similarly, YVWD's demands within the Region are based on the projected use of groundwater from SBB and Yucaipa Basin and SWP from SBVMWD only. Some of the supply projections shown in this RUWMP for YVWD differ from those shown in YVWD's 2025 UWMP. YVWD's 2025 UWMP shows all potentially available supplies and a supply surplus at the retailer level, whereas this RUWMP uses a different approach to the regional supply analysis that focuses on specific supplies that agencies intend to use to meet future demands and evaluates total supply surplus on a regional level. This RUWMP includes assumptions about future supply use for

YVWD to align with this regional methodology, but all retailers have the flexibility to modify their supply strategies to meet their demands.

SMWC total demands are included in their UWMP Chapter in Part 2, but for the regional demand analysis, only their projected use of Yucaipa Basin Groundwater is included.

RHWC's use of SBB groundwater is not included in the regional demands because the Riverside Entities' portion of the SBB supply is not evaluated in this Plan.

For the agencies who are not urban water suppliers and do not prepare UWMPs, their demands and associated supply needs were estimated and incorporated into this Plan based on direct input from the agency, records of prior water use, or assumed to be the same as projections from the 2020 IRUWMP.

Figure 4-2 shows demand projections for regional supplies for all regional agencies for a normal year from 2030 to 2050. This includes potable, non-potable, and recycled water demands, but excludes demands for water used for groundwater recharge. The total projected water demands of participating and non-participating agencies within SBVMWD's service area are expected to increase by approximately 17,000 AFY between 2030 and 2050.

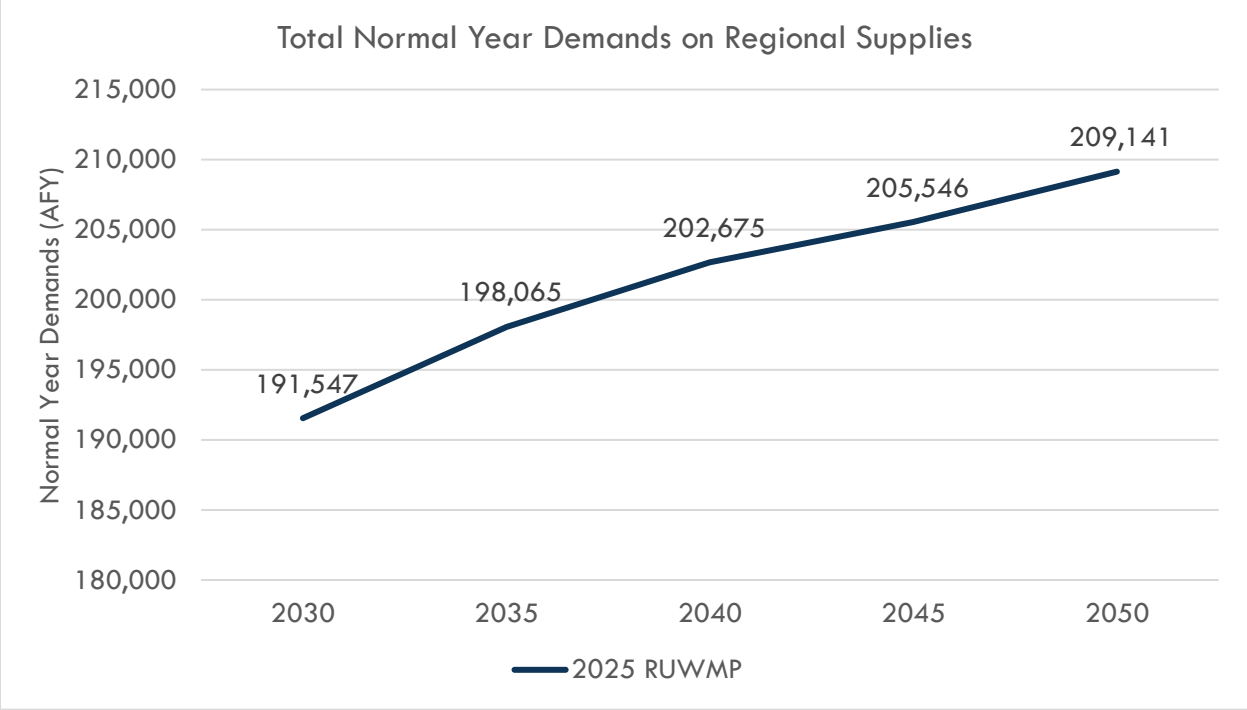

Figure 4-2: Regional Demand Projections for Regional Supplies in the RUWMP 15 Agencies plus Other/Private San Bernardino County Entities

4.2 Demands for Local Groundwater and Surface Water Supplies

This section summarizes the anticipated demand for each water source based on the planned use by each agency in the Region. For basins subject to the Western Judgement, demands are subtotaled by San Bernardino County Entities and compared to the pumping provisions in the Western Judgement specific to the San Bernardino County Entities. For agencies participating in this Plan, demand projections were developed for normal years, and then a breakdown of which supplies would be used to meet those demands was prepared, providing planned production from each supply source. For agencies not participating in this plan, projected production from each supply source was either based on information provided by that agency, or on 2020 IRUWMP projections.

4.2.1 San Bernardino Basin

As detailed in Part 1 Chapter 3, local groundwater sustainability under the Judgment is generally maintained by providing supplemental recharge whenever cumulative extractions exceed cumulative safe yield or when groundwater levels are lower than certain specific water level elevations in specified wells. In the SBB, any supplemental supply determined by the Watermaster as “New Conservation” (which can include recycled water or stormwater recharge) increases the safe yield and any “return flow” from sources outside of the safe yield calculation are credited against cumulative extractions for the purpose of determining the recharge obligation.

For the SBB, the Watermaster assumes a 36% return flow for extractions above safe yield and imported water use. In this Plan, the 36% return flow is not credited to supply in the SBB to be conservative and avoid potential double-counting. Although ongoing and future recycled water recharge and stormwater capture projects do add water to the SBB, they are also not credited as supplies in addition to the safe yield established by the Judgment, because they have not been determined to be “New Conservation” by the Watermaster.

Table 4-2: Planned Pumping and Diversions from San Bernardino Basin (AFY)

AGENCY	2030	2035	2040	2045	2050
SBB Groundwater	**106,773**	**112,113**	**115,927**	**118,001**	**120,797**
Colton[1]	1,950	2,208	2,387	2,565	2,744
Loma Linda	5,195	5,318	5,434	5,553	5,676
Redlands	14,963	15,872	16,537	17,202	17,867
Rialto	5,917	6,052	6,187	4,722	4,857
SBMWD	37,581	38,700	39,889	41,077	42,266
WVWD	6,759	7,923	8,755	9,635	9,635
East Valley Water District	14,789	16,372	16,871	17,378	17,885
Fontana Water Company	6,390	6,390	6,390	6,390	6,390
Muscoy Mutual Water Co.	1,600	1,600	1,600	1,600	1,600
Other/Private SB Pumpers	10,878	10,878	10,878	10,878	10,878
Yucaipa Valley Water District	750	800	1,000	1,000	1,000
SBB Surface Water	**21,665**	**21,767**	**21,799**	**21,831**	**21,864**
Redlands	9,500	9,500	9,500	9,500	9,500
Rialto	1,000	1,000	1,000	1,000	1,000
WVWD	3,800	3,800	3,800	3,800	3,800
Bear Valley Mutual Water Co.	1,557	1,557	1,557	1,557	1,557
East Valley Water District	948	1,050	1,082	1,114	1,147
Fontana Water Company	4,860	4,860	4,860	4,860	4,860
Total SBB Production, San Bernardino County Entities	**128,428**	**133,880**	**137,726**	**139,862**	**142,661**
RHWC (Riverside County Entity)	1,800	1,800	1,800	1,800	1,800

Note 1: Terrace Water Company production is included in Colton's production.

SBB planned production and Judgment safe yield are compared in Table 4-3. RHWC is a Riverside County entity in the Judgment which has numerical rights to the SBB and pumps within them. Their production is captured in Table 4-2, but their production and rights are not included in the San Bernardino County Entities obligations in the Judgment, so they are not reflected in Table 4-2.

Table 4-3: SBB Supply and Demand Balance (AFY)

SAN BERNARDINO COUNTY ENTITIES	2030	2035	2040	2045	2050
Total Planned Pumping and Diversions	128,428	133,880	137,726	139,862	142,661
Adjusted Safe Yield with New Conservation[1]	172,745	172,745	172,745	172,745	172,745
Judgment-based Need for Imported Water Recharge	Not required	Not required	Not required	Not required	Not required
Judgment-based Surplus Supply	44,307	38,865	35,019	32,913	30,084

Note 1: Per the Western-San Bernardino Judgment, 36% of direct deliveries and extractions over safe yield are credit as a return flow that increase SBB production rights. That is not reflected in this analysis to be conservative.

Despite not being obligated to recharge the SBB under the terms of the Judgment, the region is proactively investing in projects to recharge the SBB to protect the sustainability of the Basin. Table 4-4 and Figure 4-3 shows existing and proposed projects which would supplement storage in the SBB. The recycled water and stormwater capture projects have not been evaluated by the Watermaster to determine whether they are “New Conservation” under the Judgment. While these projects do increase recharge into the SBB, at the time of the Judgment was made most of the area was on septic systems and more of the area was undeveloped, so a portion of the water recharged due to current stormwater capture and recycled water projects may have already been included in the original safe yield number. Therefore, they are excluded from the supply totals in this Plan to avoid double counting supplies. Table 4-4 also includes recycled water projects which offset the use of potable supplies in the SBB.

Table 4-4: Existing and Proposed SBB Supply Improvement Projects (AFY)

	2030	2035	2040	2045	2050
Existing SBB Local Supply Projects	**17,738**	**18,064**	**18,354**	**18,649**	**18,951**
SNRC Recharge at Weaver Basins	9,000	9,000	9,000	9,000	9,000
Redlands WRF Recharge (disposal)[4]	4,037	4,210	4,368	4,532	4,702
Redlands Recycled Water Direct Use	3,357	3,510	3,642	3,773	3,905
SBMWD TTS Phase 1 (1.2 MGD)[1]	1,344	1,344	1,344	1,344	1,344
Potential SBB Local Supply Projects	**6,256**	**8,256**	**10,256**	**12,256**	**18,736**
SBWRP TTS Phase 2 (3.8 MGD)[1]	4,256	4,256	4,256	4,256	4,256
SBWRP TTS Phase 3 (4.0 MGD)					4,480
Stormwater Capture Projects	2,000	4,000	6,000	8,000	10,000
Potential SBB Imported Supply Projects	**16,000**	**16,000**	**27,200**	**27,200**	**27,200**
Imported Water Recharge[2]	16,000	16,000	16,000	16,000	16,000
Sites Reservoir – Long-term Average[3]			11,200	11,200	11,200
Total Existing and Potential SBB Supply Projects	**39,994**	**42,320**	**55,810**	**58,105**	**64,887**

Notes: [1]Tertiary Treatment System Phase 1 (1.2 MGD) is active and produces recycled water for onsite use only and does not include recycled water recharge. Phase 2 is the first phase with recharge. Phase 3 is anticipated by 2050.

[2]16,000 AFY is the current average annual voluntary imported water recharge into the SBB from 2000-2025.

[3]Latest CalSIM3 model predicts 11,200 AFY long-term average yield to SBVMWD from Sites Reservoir. Most of this supply would go toward the SBB in the form of direct recharge or in-lieu recharge from decreased pumping.

[4]Bunker Hill Salinity Management Feasibility Study (Water Systems Consulting, Inc., 2025).

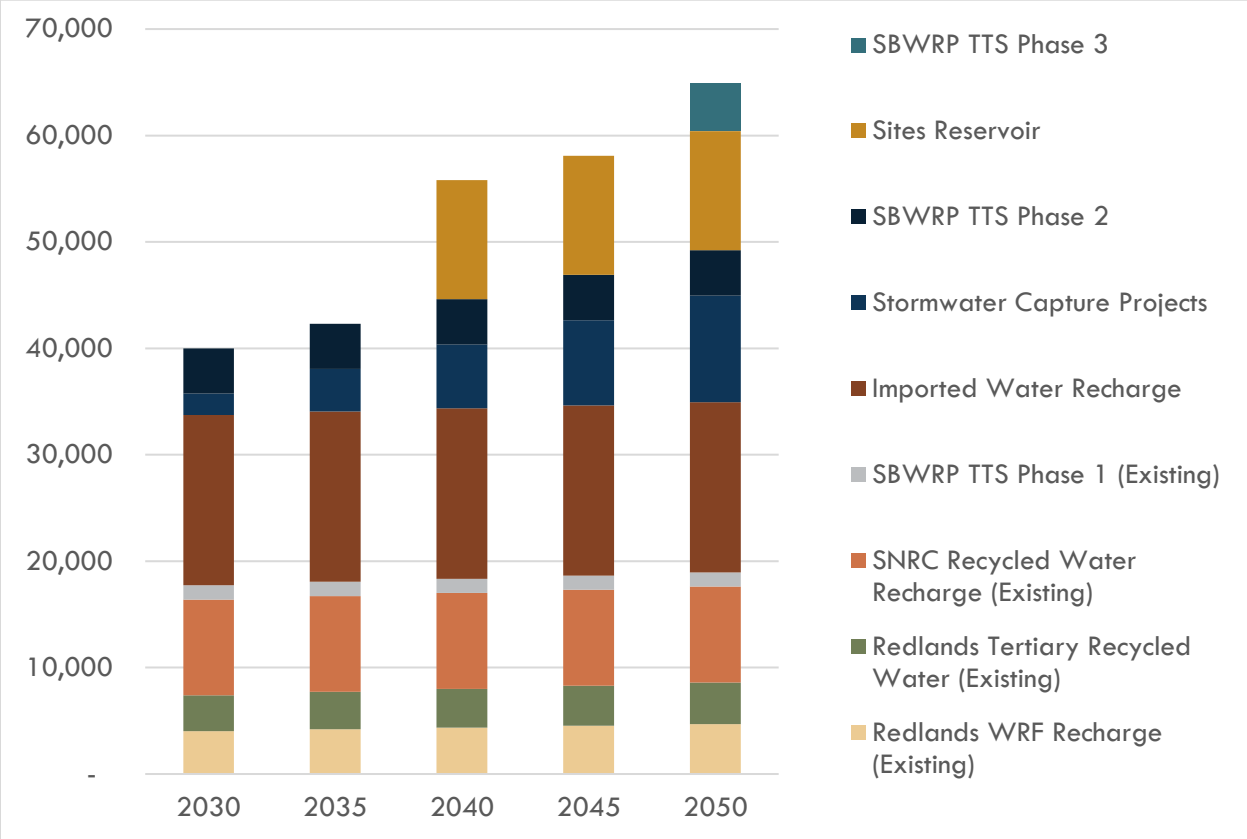

Figure 4-3: Existing and Proposed SBB Supply Improvement Projects (AFY)

4.2.2 Rialto-Colton Basin

Planned normal year production from the Rialto-Colton Basin is summarized in Table 4-5. Due to low groundwater levels, pumping within the Rialto Basin Decree boundary is assumed to remain at a 50% curtailment throughout the planning period for this Plan (see Section 3.2). Colton has two wells outside of the Decree boundary, and Other/Private wells are outside the scope of the Decree.

Table 4-5: Planned Pumping from Rialto-Colton (AFY)

AGENCY	2030	2035	2040	2045	2050
Colton	3,395	3,395	3,395	3,395	3,395
Rialto[2]	1,343	1,343	1,343	2,943	2,943
WVWD	3,307	3,307	3,307	3,307	3,307
Fontana Water Company[2]	4,750	4,750	4,750	3,150	3,150
Other/Private SB Pumpers	70	70	70	70	70
Total Rialto-Colton Basin Production, San Bernardino County Entities	**12,865**	**12,865**	**12,865**	**12,865**	**12,865**

Notes: [1]San Bernardino County entities base period production (1959-1963) was 8,235 AFY. Even when production exceeds base period production, recharge is not required as long as the three index wells water level is above 822 ft.

[2]After 2040, a 1,600 AFY lease of Rialto Basin production rights from Rialto to FWC will end so a like amount of production is assumed to shift from FWC back to Rialto.

There is no current obligation to recharge the Rialto-Colton Basin under the Western Judgment, because the mean water level of three index wells is above 822.04 ft (see Section 3.2). However, to restore water levels in the Rialto Basin Decree area, the following recharge efforts are planned:

- Up to 2,500 AFY via in-lieu recharge by FWC through the Summit WTP

  In accordance with the Settlement Agreement described in Section 3.2.3, this in-lieu recharge approach is part of the FWC's obligation to deliver 61,000 AF of replenishment water to recharge the Rialto Basin. Per the intent of the agreement, the replenishment water must be from an imported water source "outside" of San Bernardino Valley's Table A allocation, unless San Bernardino Valley declares a portion of its Table A surplus.

- 3,000 AFY long-term average recharge through SWP spreading at Cactus Basins.

In addition to the recharge required by the Settlement Agreement, members of the Rialto Groundwater Council can voluntarily purchase SWP from SBVMWD's Table A supply to recharge the Rialto-Colton Basin, once the Cactus Basin Recharge project is implemented.

4.2.3 Riverside North Basin

Planned normal year production from the Riverside North Basin is summarized in Table 4-6. There is no current obligation to recharge the Riverside North Basin under the Western Judgment, because the mean water level of three index wells is above 822.04 ft (see Section 3.2). There are currently no recharge efforts planned, however two possible recharge methods have been proposed: the Riverside North Aquifer Storage and Recovery (Rubber Dam) project (discussed in Section 3.10.2.4) and imported water spreading at turnout WR-23.

Table 4-6: Planned Pumping from Riverside North Basin (AFY)

AGENCY	2030	2035	2040	2045	2050
Colton	4,100	4,100	4,100	4,100	4,100
Rialto	1,200	1,200	1,200	1,200	1,200
WVWD	1,041	1,041	1,041	1,041	1,041
Other/Private SB Pumpers	1,520	1,520	1,520	1,520	1,520
RIX Over-extractions[2]	2,700	2,700	2,700	2,700	2,700
Total Riverside North Basin Production, San Bernardino County Entities	**10,561**	**10,561**	**10,561**	**10,561**	**10,561**
RHWC[3]	**3,219**	**3,166**	**3,195**	**3,225**	**3,255**

Notes: [1]San Bernardino County entities base period production (1959-1963) was 9,609 AFY. Even when production exceeds base period production, recharge is not required as long as the three index wells water level is above 822 ft.

[2]RIX Over-extractions are groundwater extractions by RIX treated with UV disinfection and discharged to the Santa Ana River in excess of groundwater infiltrations from the RIX plant in order to maintain hydraulic control. The estimate of 2,700 AFY is from the year 2040 estimate from the SBMWD SBWRP 2020 Facilities Master Plan.

[3]RHWC is a Riverside County entity in the Judgment which has numerical rights to the SBB and pumps within them.

4.2.4 Yucaipa Basin

Planned normal year production from the Yucaipa Basin is summarized in Table 4-7. The Yucaipa Basin is managed by a Groundwater Sustainability Plan which established the sustainable yield at 10,980 AFY. Planned production is below the safe yield, so recharge is not required. However, YVWD and Western Heights Water Company are planning voluntary recharge projects, which are estimated to recharge 5,500 AFY long-term average into the Yucaipa Basin.

Table 4-7: Planned Pumping from Yucaipa Basin (AFY)

AGENCY	2030	2035	2040	2045	2050
South Mesa Water Company	1,878	2,002	2,025	2,049	2,073
Yucaipa Valley Water District	3,045	3,500	4,000	4,500	5,000
Western Heights Water Company	2,200	2,200	2,200	2,200	2,200
South Mountain Water Company	540	540	540	540	540
Total	**7,663**	**8,242**	**8,765**	**9,289**	**9,813**
Yucaipa Basin GSP Safe Yield	10,980	10,980	10,980	10,980	10,980
Supply Surplus	**3,317**	**2,738**	**2,215**	**1,691**	**1,167**

4.3 Demands for Imported Water

In the Region, imported water is used for direct deliveries to several retail water producers, direct delivery to Bear Valley Mutual Water Company in-lieu of releases from Big Bear Lake, and groundwater recharge.

4.3.1 Direct Deliveries

Several retail water producers have water treatment plants to treat imported water. The following agencies are planning to continue taking direct delivery of imported water in the future: EVWD, Redlands, WVWD, YVWD, FWC, CLAWA, and Marygold Mutual Water Company (via WVWD).

4.3.2 In-Lieu Deliveries

Bear Valley Mutual Water Company constructed the original Bear Valley Dam in 1884 to create Big Bear Lake as a storage reservoir for their customers, downstream farmers. In 1964, the residents of Big Bear Lake formed the Big Bear Municipal Water District (Big Bear Municipal) in an effort to eliminate Lake releases to Bear Valley Mutual so that the lake level would remain high for recreational use and tourism. After more than a decade of litigation, a Judgment was executed in 1977 which reduced the amount of Lake releases to Bear Valley Mutual. Under the terms of the 1977 Judgment, Big Bear Municipal purchased from Bear Valley Mutual the lake bottom, Bear Valley Dam, and the right to utilize and manage the surface of Big Bear Lake for recreation and wildlife. In return, deliveries to Bear Valley Mutual were capped at a total of 65,000 AF in any ten-year period. These deliveries can be made in the form of Lake releases or can be provided from other sources “in-lieu” of Lake releases (in-lieu deliveries). In-lieu deliveries to Bear Valley Mutual are preferable to Big Bear Municipal since they do not result in water being removed from the lake.

In 1996, Big Bear Municipal Water District entered into a water purchase agreement with San Bernardino Valley that reduces the amount of water Big Bear Municipal must release from Big Bear Lake. For an annual payment to San Bernardino Valley, San Bernardino Valley provides SWP water for the downstream water needs that would have historically been met by lake releases whenever the Lake is at specified levels. San Bernardino Valley may also provide water from other sources when the SWP supply is limited. This historic agreement helped Big Bear Municipal achieve its mission of Lake level stabilization for recreation while providing Bear Valley Mutual with the water it needs for its customers. Under the terms of the Agreement, Bear Valley Mutual may request any amount of delivery for a given year, provided that the total of all their requested deliveries do not exceed 65,000 AF in any ten-year period. Bear Valley Mutual typically limits its request to no more than the ten-year average, or 6,500 AFY. SBVMWD may also provide water from other sources, such as groundwater in storage, when the SWP supply is limited.

4.3.3 Groundwater Recharge

One of the primary water management strategies in the Region is to store imported water when it is available so that it can be used during drought periods. Any unused San Bernardino Valley SWP water is available to be purchased by retail agencies and other customers to be stored in the regional groundwater basins for later pumping.

4.3.4 Total Imported Water Demands

Requests for delivery of supplemental imported water in the SBVMWD service area are subject to approval as set forth in SBVMWD Resolution 888. Table 4-8 summarizes projected normal year direct and in-lieu demands for imported water during the period of this Plan. Planned deliveries may be higher or lower depending on SWP Table A allocation and available carryover water. Projected uses of imported water for groundwater recharge is discussed further in Section 5.1.1.2.

Table 4-8: Normal Year Imported Water Direct Deliveries (AFY)

AGENCY	2030	2035	2040	2045	2050
Redlands	1,000	1,000	1,000	1,000	1,000
CLAWA	60	60	60	60	60
WVWD	7,000	7,000	7,000	7,000	7,000
BVMWC	6,500	6,500	6,500	6,500	6,500
EVWD	3,223	3,568	3,677	3,788	3,898
FWC	3,200	3,200	3,200	3,200	3,200
Marygold MWC	320	320	320	320	320
YVWD	6,000	6,000	6,000	6,000	6,000
Total	27,303	27,648	27,757	27,868	27,978

4.4 Demands for Recycled Water

Some water agencies in the Region are currently using recycled water to meet non-potable demands and for groundwater recharge. Additional recycled water production and use is planned in the future. Table 4-9 summarizes the anticipated future uses of recycled water and additional details are included in each agency's respective chapter in Part 2.

Table 4-9: Recycled Water Use Projections (AFY)

AGENCY[1]	2030	2035	2040	2045	2050
Direct Use (Non-Potable)	**4,716**	**4,869**	**5,001**	**5,132**	**5,264**
Redlands	3,357	3,510	3,642	3,773	3,905
Rialto	15	15	15	15	15
SBMWD	1,344	1,344	1,344	1,344	1,344
Groundwater Recharge (all in SBB)	**17,293**	**17,466**	**17,624**	**17,788**	**22,438**
Redlands[2]	4,037	4,210	4,368	4,532	4,702
SBMWD	4,256	4,256	4,256	4,256	8,736
EVWD	9,000	9,000	9,000	9,000	9,000

Notes: [1] While YVWD and FWC are included in other supply tables that are shared supplies with participating agencies, they are excluded from this table because their direct non-potable recycled water use is independent of participating agencies.

[2]Bunker Hill Salinity Management Feasibility Study (Water Systems Consulting, Inc., 2025).

4.5 Water Use Efficiency

The Region has invested in expanding and optimizing local water resources to improve long term water supply reliability for its residents. At the same time, the Region continues to advance water use efficiency and conservation programs that have meaningfully reduced per-capita demand and strengthened long-term supply reliability. These conservation efforts are a core component of the Region's resource management strategy and help maximize the value of available supplies.

Since 2005, there have been several regulatory changes related to conservation including new standards for plumbing fixtures, a new landscape ordinance, a state universal retrofit ordinance, metering and billing requirements, new Green Building standards, demand reduction goals and more.

4.5.1 Reducing Per Capita Water Use

The Water Conservation Act of 2009 (SB X7-7) required a 20-percent reduction in urban per capita water use in California by December 31, 2020 (20 by 2020). The bill required each urban retail water supplier to determine their baseline per capita water use (gallons per capita per day

or gpcd), develop an urban water use target for year 2020 and set a 2015 interim urban water use target. Each of the agencies participating in this Plan have met their 2020 targets, as shown in Figure 4-4 and some have continued to reduce their per capita water demand beyond the 2020 target. These significant reductions in per capita water use essentially expand the water supply for the Region by reducing use of local groundwater supplies.

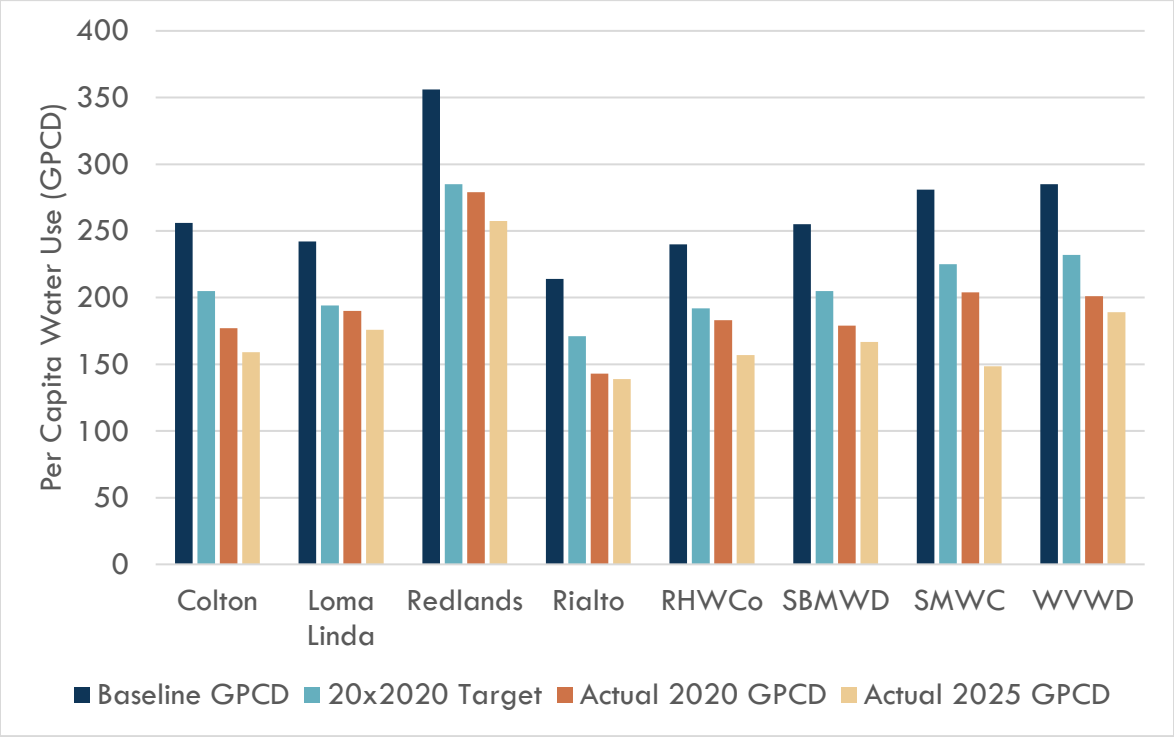

Figure 4-4: 20x2020 Compliance

4.5.2 New Water Conservation Legislation

Going forward, Participating Agencies that are retail suppliers are continuing to align with new water use efficiency standards from the CWOL Regulation, which supersede SBX7-7 standards. In 2018, two policy bills were enacted by the California Legislature, Assembly Bill 1668 (AB1668, Friedman) and Senate Bill 606 (SB606, Hertzberg), collectively referred to as the "2018 Water Conservation Legislation." Based on the 2018 Water Conservation Legislation, related legislation, and subsequent adoption of the CWOL Regulation, each urban retail water supplier must calculate and comply with its specific Urban Water Use Objective (UWUO), with efficiency standards becoming increasingly stringent through 2040. DWR and the State Water Resources Control Board (State Board) have developed a reporting framework for calculating the UWUO and compliance annually. The UWUO is composed of several standards to create one comprehensive objective, as shown in Figure 4-5 and described further below. Additionally, each urban retail water supplier must submit an Annual Water Use Report (AWUR) starting January 1, 2024 to document progress toward complying with the UWUO regulations. The

required calculations and reporting associated with the CWOL Regulations are complex and extensive and are therefore not required to be included in the UWMP.

Figure 4-5. Urban Water Use Objectives Regulation Overview

Indoor Residential

The indoor residential water use standard was set as part of Senate Bill (SB) 1157, which adopts recommendations made by DWR and the State Water Board to reduce indoor water use targets from 55 gpcd to 47 gpcd by 2025 and 42 gpcd by 2030.

Outdoor Residential

Outdoor residential use is expected to be based on the amount of irrigable area and an increasingly stringent landscape efficiency factor with compliance progress measured annually through 2035, when the efficiency factor is proposed to remain constant. The SWRCB assists agencies in calculating outdoor residential use budgets by providing aerial imagery that delineates irrigable irrigated, irrigable but not irrigated, and non-irrigable areas. This data has been provided to suppliers and is expected to be updated in five-year cycles.

Commercial, Industrial, and Institutional Landscape

Commercial, industrial, and institutional (CII) standards will be based on total gallons used and will require implementation of dedicated irrigation meters or in-lieu technologies, and other performance measures for conservation. Additionally, CII customer accounts will need to be classified into specific and general categories for reporting and compliance over the course of several years yet to be determined by the State.

4.5.2.1 Water Loss

The water loss component of the UWUO is a standalone component that must be met on its own beginning in 2028, as described in this section.

Distribution system water losses are the physical potable water losses from the water system, calculated as the difference between water produced and the amount of water billed to customers plus other authorized uses of water. Sources of water loss include:

- Leaks from water lines – Leakage from water pipes is a common occurrence in water systems. A significant number of leaks remain undetected over long periods of time as

they are very small; however, these small leaks contribute to the overall water loss. Aging pipes typically have more leaks.
- Water used for flushing and fire hydrant operations.
- Unauthorized uses or theft of water.
- Customer Meter Inaccuracies – Customer meters can under-represent actual consumption in the water system

In accordance with DWR requirements, the individual retail agencies have quantified their water losses, using the American Water Works Association (AWWA) Water Audit process, in their respective UWMPs. Water lost through leaks represents a loss of revenue for the retail agencies and increases the amount of groundwater or surface water that must be produced. Because the region relies so heavily on groundwater, this water is not permanently lost; it eventually contributes to recharge of the local groundwater basin.

CWC Section 10608.34 required the State Water Board to develop water loss performance standards for urban retail water suppliers to minimize water waste through system leaks. Water loss performance standards were developed through a rulemaking that became effective in 2023. Under the regulations, each supplier will be required to comply, by 2028, with an individualized volumetric water loss standard based on real loss, using the economic model developed by the State Water Board and the supplier's own unique data. Real loss is the physical loss of water from water distribution systems, as opposed to apparent losses, which are revenue losses due to meter inaccuracies, billing errors or unauthorized consumption. A supplier's baseline water loss is calculated as the average water loss from at least 3 of the 4 water loss audits from 2017 – 2020. The real water loss performance standard is based on gallons per service connection per day (gpscd), or gallons per mile of pipe per day (gpmd), depending on how the supplier reports real loss. Post-2028 compliance with volumetric water loss standards will be assessed every three years based on the average of the supplier's real loss from the preceding three years, with an allowed variation of 5 gallons per connection per day above the supplier's water loss standard. Apparent loss standards are equal to the baseline apparent loss and compliance is evaluated at the same time as compliance with the Real Water Loss Performance Standard.

Although the compliance period has not yet started, CWC Section 10631 (d)(3)(C) requires water suppliers to provide data in the UWMP to show whether the supplier met its State Water Board water loss performance standard. Each supplier's 2025 UWMP includes a discussion water loss performance and actions that are being taken to reduce water loss.

4.5.3 Regional Demand Management Measures

San Bernardino Valley has consistently invested in water conservation efforts since its Water Conservation Master Plan was first adopted in 2007. The demand reduction measures in the Master Plan were incorporated into the 2010 RUWMP, 2015 RUWMP, and 2020 IRUWMP updates and are making a measurable impact on demand reduction.

In 2021, SBVMWD developed an enhanced Demand Management Program that will use demand management measures (DMMs) as the basis for funding and assessing the performance of water conservation measures, programs, and incentives within the Region. This data-oriented and performance-based approach will allow SBVMWD to fund a wide range of water conservation measures, programs and incentives proposed by retail suppliers that will have a greater impact on reducing the total amount of water use.

The overarching goal is consistent demand management into the future. The proposed program includes both demand-side and supply-side conservation and is cost effective through economies of scale and leveraging grant funding for the service area. The program focuses on enhancing the technical, managerial, and financial capacity of retail agencies to deliver on urban water conservation and utilize broad-based partnerships and public engagement to help the retail agencies meet their upcoming water use objectives.

Demand Management Measures being implemented by individual retail agencies are described in their respective UWMPs.

5.0 Comparison of Regional Supplies and Demands

This chapter compares the total supplies and demands in the Region under various hydrologic scenarios, including an average (or "normal") year, single dry year, 5-year drought. Wet year impacts and water quality impacts are also discussed. The analysis concludes that the Region has sufficient supplies to meet demands through 2050 in all analyzed hydrologic scenarios.

IN THIS SECTION

- Regional Supply and Demand Balance
- Imported Water Recharge
- Dry and 5-Dry Year Balances

The UWMP Act requires urban water suppliers to assess water supply reliability by comparing total projected water use with the projected water supply over the next twenty years or beyond in 5-year increments. The UWMP Act also requires an assessment for a single-dry year and 5-year drought.

5.1 Water Supply Reliability

Chapter 3 provided information about regional water supplies and Chapter 4 provided information on total projected demands during a normal year. This section compares the total supplies and demands in the Region under the different hydrologic conditions listed above. A discussion of the supplies and demands for each participating retail agency are described in their respective chapters in Part 2, or the respective UWMPs of non-participating agencies.

5.1.1 Imported Water Supply Reliability

Imported water supply reliability is discussed in detail in Section 3.1. According to the 2025 Delivery Capability Report, SBVMWD expects its Table A allocation to vary depending on the type of year, and generally be reduced in the future. For single dry years, SBVMWD anticipates taking delivery of 10,000 AFY of carryover water stored from previous years to supplement Table A deliveries. During 5-year droughts, it is assumed that carryover water will not be available. SBVMWD prioritizes direct deliveries to surface water treatment plants when supplies are limited and coordinates with the requesting agencies to allocate available supplies if full delivery requests cannot be met. For purposes of this Plan, an example of direct delivery curtailments are given during dry years, however this Plan does not prescribe how supplies will actually be distributed when all delivery requests cannot be met. As described in Section 3.1, SBVMWD has invested in Sites Reservoir, which is anticipated to provide deliveries by 2040 and will supplement water supplies during single dry and multiple dry years.

Table 5-1: San Bernardino Valley Anticipated Imported Water Supplies (AFY)

	2030	2035	2040	2045	2050
Normal Year (1922-2021)					
% Table A Available (Table 3-3)	51%	49%	46%	43%	41%

Storage from Sites Reservoir (Section 3.1.3)	-	-	-	-	-
Total Wet Year Supply	**86,184**	**85,158**	**85,158**	**84,132**	**85,132**

5.1.1.1 Dry Year Direct Delivery Reductions

Direct delivery imported water demands are met by normal year Table A allocations. In both single dry and consecutive dry years, approximately 15,000 AFY of imported water is available (excluding Sites Reservoir), as shown in Table 5-1. The numbers differ slightly; single dry years have lower Table A allocations but have carryover water available, and multiple dry years have higher Table A allocations and are assumed to have no carryover water available. Normal year direct delivery demands are projected to be 27,648 AFY in 2035 (see Section 4.3.1). Direct deliveries would need to be reduced from normal year levels in response to lower imported water availability until Sites Reservoir is online in 2040. Table 5-2 provides an example of how direct deliveries could be reduced in dry years to align with available supply. However, this Plan does not prescribe how supplies will be distributed when all delivery requests cannot be met (actual deliveries would be determined by SBVMWD in collaboration with the retailers requesting direct delivery in a given year). These example reductions were applied in each participating agency's UWMP dry year water supply reliability analysis.

BVMWC typically receives 6,500 AFY of imported water in-lieu of receiving Big Bear Lake releases (see Section 4.3.2). SBVMWD can deliver SBB groundwater to BVMWC instead of imported water if imported water supplies are not available. In 2022, which was a very dry year with 5% Table A allocation, BVMWC took 1,750 AFY of imported water and 6,500 AFY of SBB groundwater. There may be operational requirements that prevent Bear Valley Mutual from taking any less imported water, so 1,750 AFY was considered the minimum quantity of imported water that could be given to BVMWC, with the balance of its in-lieu demand met by SBB groundwater. The remaining agencies would distribute the remaining imported water proportionally to normal year supplies, each receiving approximately 40% less than normal year deliveries.

Starting in 2040, Sites Reservoir would provide supplemental imported water supplies in dry years that would avoid the need for a reduction in direct deliveries to any agency except for BVMWC, which would have varying reductions of up to 4,000 AFY through 2050 that would be made up with in-lieu SBB groundwater.

Table 5-2: Example Reductions in Imported Water Direct Deliveries (AFY)

AGENCY	2035 NORMAL YEAR DELIVERY	2035 DRY YEAR DELIVERY
Redlands	1,000	600
CLAWA	60	36
WVWD	7,000	4,200
BVMWC	6,500	1,750

AGENCY	2035 NORMAL YEAR DELIVERY	2035 DRY YEAR DELIVERY
EVWD	3,568	2,141
Marygold MWC	320	192
FWC	320	1,920
YVWD	6,000	3,600
Total Demand	**27,648**	**14,439**
2035 Single Dry Year Imported Water Available		**15,130**
2035 Five Consecutive Dry Year Imported Water Available		**14,820**

5.1.1.2 Imported Water Recharge

While recharge is not currently required under the Western Judgment or under the Yucaipa GSP for any groundwater basin in this Plan, the regional water agencies remain committed to proactively recharging groundwater basins with imported water, when available in excess of direct delivery demands. Table 5-3 shows the proposed voluntary recharge amounts for each basin over a long-term average, totaling 22,500 AFY. Recharge typically does not occur in dry years since Table A supplies are prioritized for direct deliveries, therefore during wet years, more recharge must occur to achieve the desired long-term average.

Table 5-3: Proposed Long-term Average Imported Water Recharge (AFY)

BASIN	QUANTITY	NOTES
San Bernardino Basin	16,000 AFY	2000-2025 average imported water recharge
Rialto-Colton Basin	3,000 AFY	Cactus basin spreading
Yucaipa Basin	3,000 AFY	YVWD purchases, 2021-2025 average
Yucaipa Basin	500 AFY	WHWC ASR well

BASIN	QUANTITY	NOTES
Total	22,500 AFY	Long-term average

[1]FWC in-lieu Rialto-Colton Basin recharge through the Summit WTP is excluded because it generally does not use Table A supplies.

Table 5-4 the amount of imported water available for recharge in normal years and wet years. During wet years, agencies may also take more imported water as direct deliveries above their normal year amounts, which would have an in-lieu recharge effect as they use less groundwater.

Table 5-4: Imported Water Recharge and Available Supply in Different Year Types (AFY)

	2030	2035	2040	2045	2050
Normal Year / Long-Term Average					
Available Imported Water Supplies	52,668	49,932	58,396	55,660	52,924
Direct Delivery Demands	27,303	27,648	27,757	27,868	27,978
Available for Recharge	25,365	22,284	30,639	27,792	24,946
Wet Year					
Available Imported Water Supplies	86,184	85,158	85,158	84,132	84,132
Direct Delivery Demands	27,303	27,648	27,757	27,868	27,978
Available for Recharge	58,881	57,510	57,401	56,264	56,154

The Region has enough imported water supplies to meet direct delivery demands and the 22,500 AFY of proposed recharge. Starting in 2040, due to falling Table A allocations with climate change, long-term average Table A allocations alone would not provide enough for normal year direct deliveries and 22,500 AFY of recharge. However, with Sites Reservoir yielding deliveries starting in 2040, the region would be able to meet normal year direct deliveries and 22,500 AFY of recharge, as shown in years 2040-2050 in Table 5-4. Without Sites Reservoir, the region would be more susceptible to reduced long-term average recharge and reductions in direct deliveries in dry years, resulting in increased reliance on groundwater. Additional local stormwater capture projects could be considered to achieve the desired groundwater recharge (see Section 3.10.2).

5.1.2 Local Water Supply Reliability

During multi-year and single-year droughts, total SWP supplies and local surface water supplies are reduced so the Region is more reliant upon groundwater.

Although local and imported surface water supplies are highly dependent on local and statewide hydrology, the Region benefits from more than 5.6 million acre-feet of available groundwater storage capacity in the San Bernardino Basin,1.7 million acre-feet of available groundwater storage in the Rialto-Colton Basin, and 2.8 million acre-feet of available groundwater storage in the Yucaipa Basin (Geoscience, 2020). The San Bernardino Basin and Yucaipa Basin can be recharged with imported water and are used to store water when supplies are available and then pumped in dry years. The Rialto Basin will also soon be able to be recharged with imported water. By maximizing deliveries of SWP water in wet years when those supplies are available and supplementing that with other local supplies like stormwater capture and recycled water, the Region expects to accrue sufficient storage to enable a high level of water supply reliability, even during extended droughts.

Annual change in storage evaluations prepared by San Bernardino Valley show that the SBB experiences significant increases in storage during wet years such as 2005, 2011, 2019, and 2023, as shown in Table 5-5.

Table 5-5: SBB Storage Increase in Wet Years

YEAR	INCREASE IN GROUNDWATER IN STORAGE (AF)
2005	223,000
2011	159,000
2019	161,000
2023	223,000

In addition to existing recharge programs, SBVMWD, SBVWCD, Western, SBMWD and RPU are currently developing Projects for Enhanced Recharge Capacity (PERC) and additional Active Recharge Projects (see Section 3.10.2). The list of projects has not been prioritized or scheduled for construction, but for purposes of this Plan, it is assumed that one recharge project will come online every five years starting in 2030, with an average long-term yield of 2,000 AFY per project.

Storing local surface water and imported SWP water in the local groundwater basins in wet years for later use during dry periods will continue to be one of the foundational water management strategies in the Region. As a result of this strategy and the demonstrated success, the available supply from the local groundwater basins in this analysis is not reduced in dry and multiple dry years.

5.2 Summary of Regional Supplies and Demands

5.2.1 Normal Year

In a normal year, SWP and local surface water supplies are used at retail agency treatment plants and any unused SWP supply is available to be recharged. Some non-potable demands in the region are met with recycled water and additional recycled water is recharged into the SBB. The remaining demands are met from local groundwater sources.

Table 5-6 and Figure 5-1 provide a comparison of regional water supplies and demands for a normal year and demonstrate that adequate regional supplies are anticipated for years 2030 to 2050 under normal/average conditions. In a normal year across all of the supplies available in the region, there is a surplus of supply, which results in accumulated storage in local groundwater basins for use in dry years.

Table 5-6: Normal Year Regional Supply and Demand Balance

	2030	2035	2040	2045	2050
San Bernardino Basin					
Surface Water Production	21,665	21,767	21,799	21,831	21,864

Total Supplies	258,953	256,370	264,966	262,361	259,757
Total Supply Balance	**67,407**	**58,306**	**62,290**	**56,814**	**50,615**

Notes: [1]Excludes RHWC demands on each supply source and its rights to produce from those basins.

[2]Rialto-Colton and Riverside North Basins are not under recharge obligations because the three key index wells are above 822 ft. If projected pumping above baselines leads to falling groundwater levels and triggers a recharge obligation, imported water supplies can be used to recharge the basins.

[3]Includes Sites Reservoir starting in 2040.

[4]Balance of imported water is available for recharge.

[5]Excludes recycled water recharge, summarized in Section 4.4.

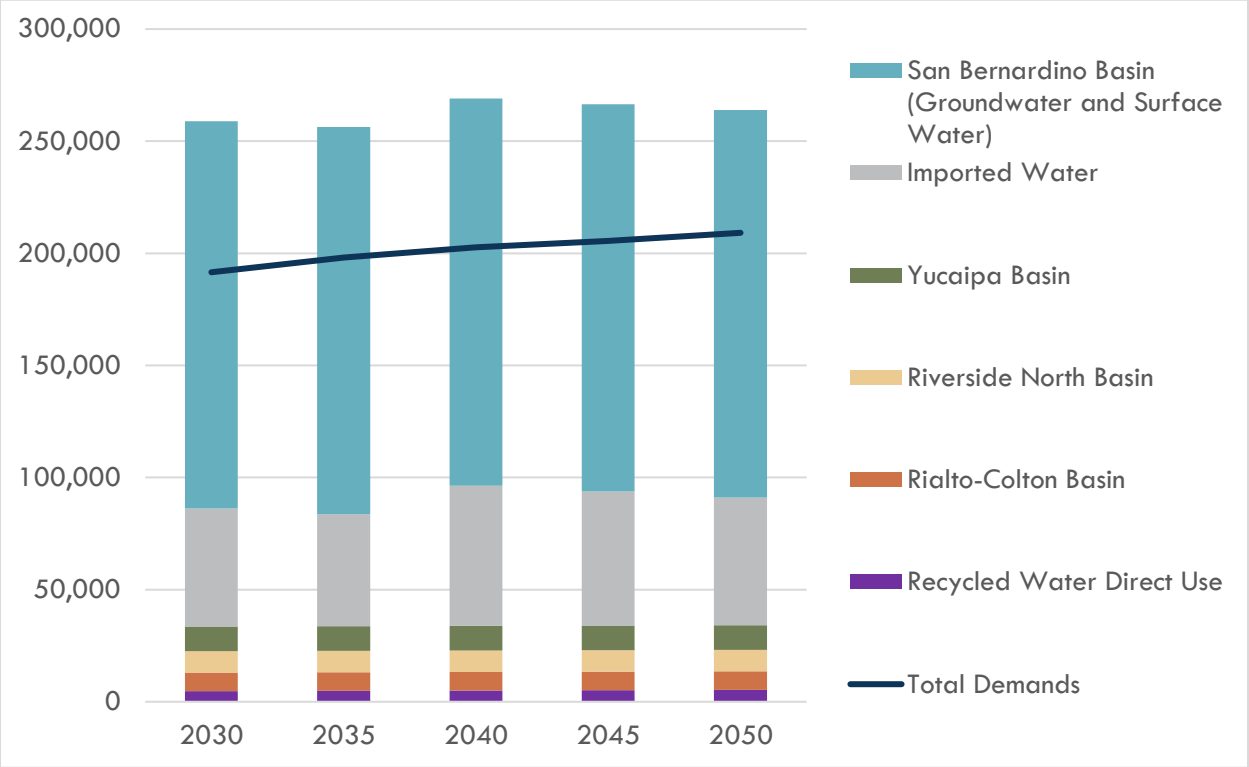

Figure 5-1: Normal Year Regional Supply and Demand Balance (AFY)

While the Region currently has sufficient supplies, it continues to invest in additional water supply projects to ensure it has enough for the future. Figure 5-2 shows that the Region currently has invested in over 17,000 AFY of recycled water recharge and direct use in the SBB and has identified projects to provide an additional 45,000 AFY in recharge of stormwater, imported water, and recycled water by 2050.

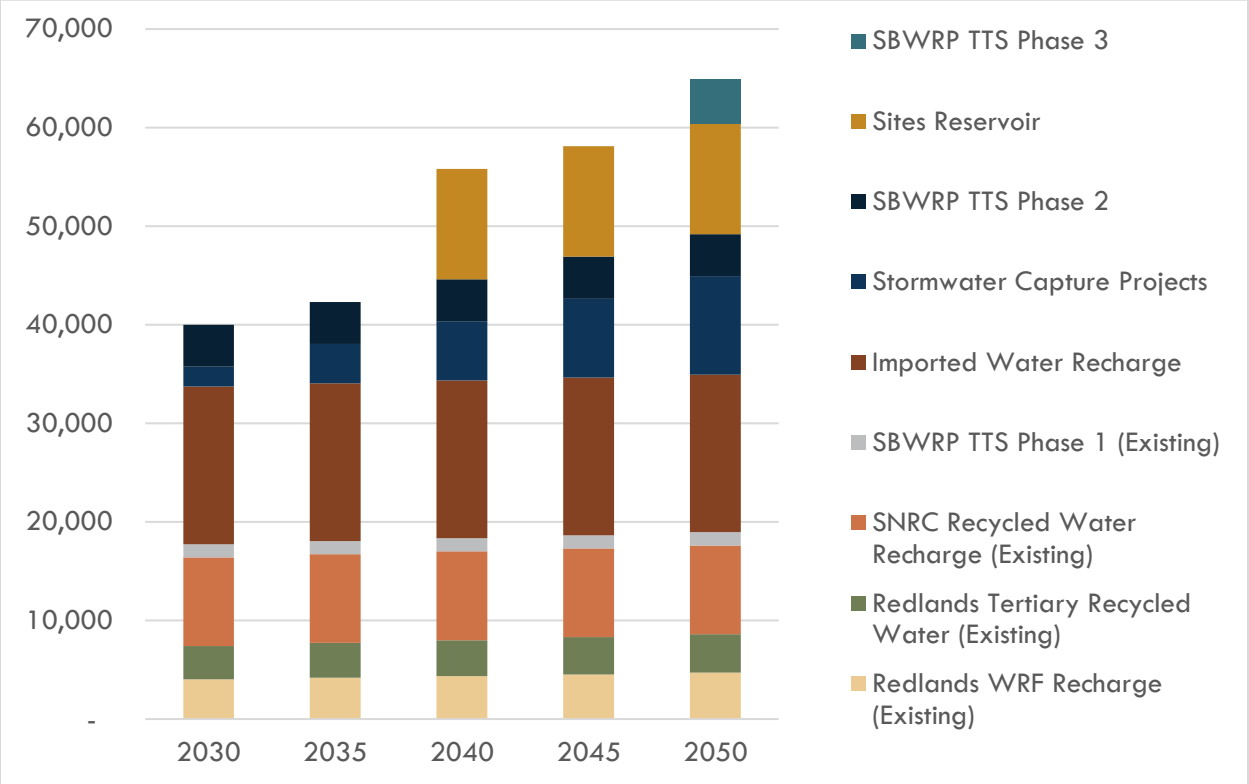

Figure 5-2: Existing and Proposed SBB Supply Improvement Projects (AFY)

5.2.2 Single Dry Year

In addition to population and employment, two major factors that affect water usage are weather and water conservation. Historically, when the weather is hot and dry, water usage increases due to outdoor irrigation uses. The increases vary according to the number of consecutive years of hot, dry weather and the conservation activities imposed. For this analysis it is estimated that total regional demands will increase by approximately 5 percent during dry years, based on an average of dry year demand increases across all Participating Agencies.

Table 5-7 and Figure 5-3 provide a comparison of regional water supplies and demands for a single dry year and demonstrate that adequate regional supplies are anticipated for years 2030 to 2050 even under dry conditions.

Total dry year demands in Table 5-7 do not appear significantly higher than normal year demands in Table 5-6 despite the 5% increase in demands during dry years. This is because some non-participating agencies receive less supplies from this region during dry years but make up those supplies by relying on supplies outside the scope of this Plan, therefore the demand on those supplies does not appear in this table. For instance, FWC receives approximately 6,500 AFY less in dry years from SBB Groundwater (Lytle), SBB Surface Water (Lytle Creek), and Imported Water from SBVMWD, but makes up those supplies as well as weather-related demand increases with Chino Basin groundwater and/or imported water from IEUA, which are not recorded as demands in this table.

Table 5-7: Single Dry Year Regional Supply and Demand Balance (AFY)

	2030	2035	2040	2045	2050
San Bernardino Basin Supply	172,745	172,745	172,745	172,745	172,745
Rialto-Colton Basin Supply	8,235	8,235	8,235	8,235	8,235
Riverside North Basin Supply	9,609	9,609	9,609	9,609	9,609
Yucaipa Basin Supply	10,980	10,980	10,980	10,980	10,980
Imported Water Supply	15,130	15,130	26,330	26,330	26,330
Recycled Water Supply	4,716	4,869	5,001	5,132	5,264
Total Single Dry Year Supplies	**222,621**	**222,775**	**234,105**	**234,237**	**234,368**
Total Dry Year Demands	194,299	201,143	205,984	208,999	212,773
Total Supply Balance	**28,322**	**21,632**	**28,122**	**25,238**	**21,595**

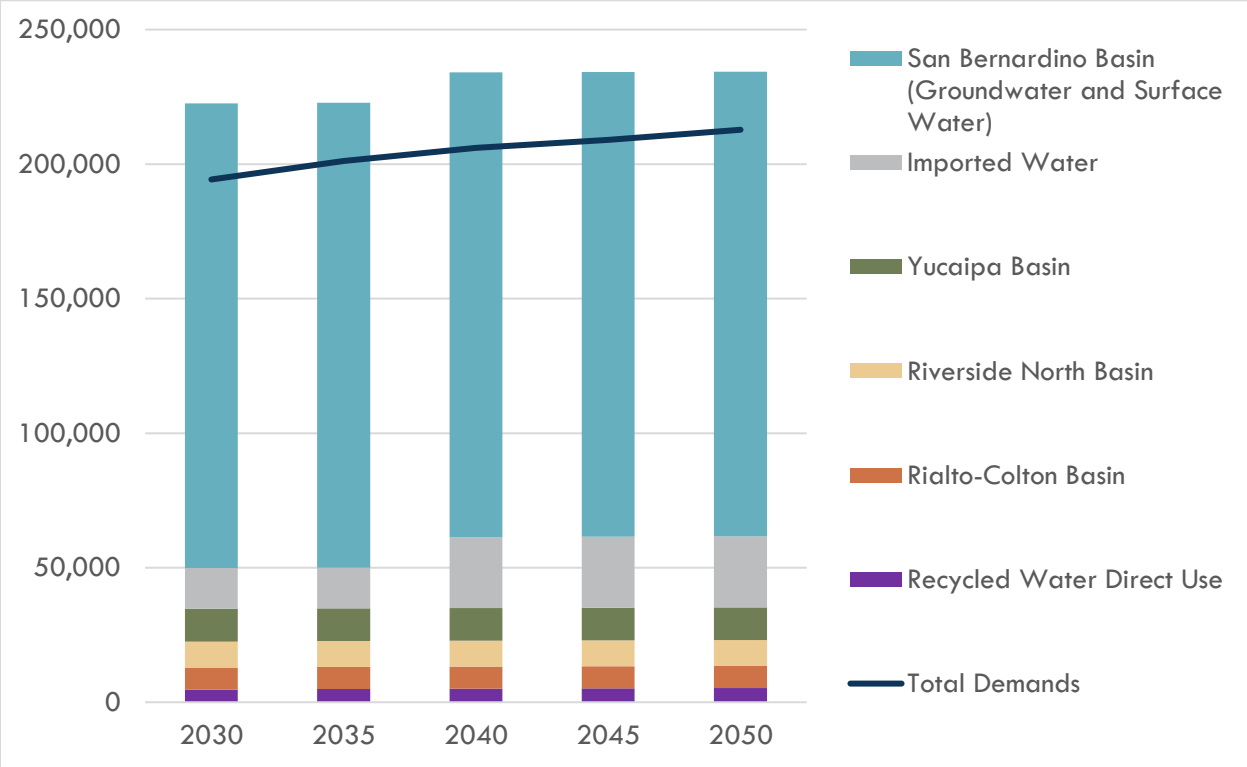

Figure 5-3: Single Dry Year Regional Supply and Demand Balance (AFY)

5.2.3 5-Year Drought

For this analysis, it is estimated that total regional demands will increase by approximately 5 percent during dry periods, including a 5-year drought. Although conservation efforts may be effective in reducing demands during the later years of a 5-year drought, a 5% increase is assumed to be constant through the 5-year drought to be conservative.

During a 5-year drought, Table A supplies are, on average, higher than a single dry year, but carryover water is assumed not to be available. Because of this, slightly less imported water is available in each year of a 5-year drought as a single dry year. Starting in 2040, supplemental imported water supplies from Sites Reservoir help to meet the demands of direct deliveries.

Table 5-8 and Figure 5-4 provide a comparison of regional water supplies and demands for a 5-year drought and demonstrate that adequate regional supplies are anticipated for years 2030 to 2050 even under extended dry conditions.

Total dry year demands in Table 5-8 do not appear significantly higher than normal year demands in Table 5-6 despite the 5% increase in demands during dry years. This is because some non-participating agencies receive less supplies from this region during dry years but make up those supplies by relying on supplies outside the scope of this Plan, therefore the demand on those supplies does not appear in this table, as explained in the Single Dry Year analysis.

Table 5-8: Five Consecutive Dry Year Regional Supply and Demand Balance (AFY)

	2030	2035	2040	2045	2050
San Bernardino Basin Supply	172,745	172,745	172,745	172,745	172,745
Rialto-Colton Basin Supply	8,235	8,235	8,235	8,235	8,235
Riverside North Basin Supply	9,609	9,609	9,609	9,609	9,609
Yucaipa Basin Supply	10,980	10,980	10,980	10,980	10,980
Imported Water Supply	15,105	14,820	24,535	24,250	23,965
Recycled Water Supply	4,716	4,869	5,001	5,132	5,264
Total 5-Year Drought Year Supplies	**221,390**	**221,259**	**231,105**	**230,951**	**230,798**
Total Dry Year Demands	194,299	201,143	205,984	208,999	212,773
Total Supply Balance	**27,091**	**20,116**	**25,121**	**21,952**	**18,024**

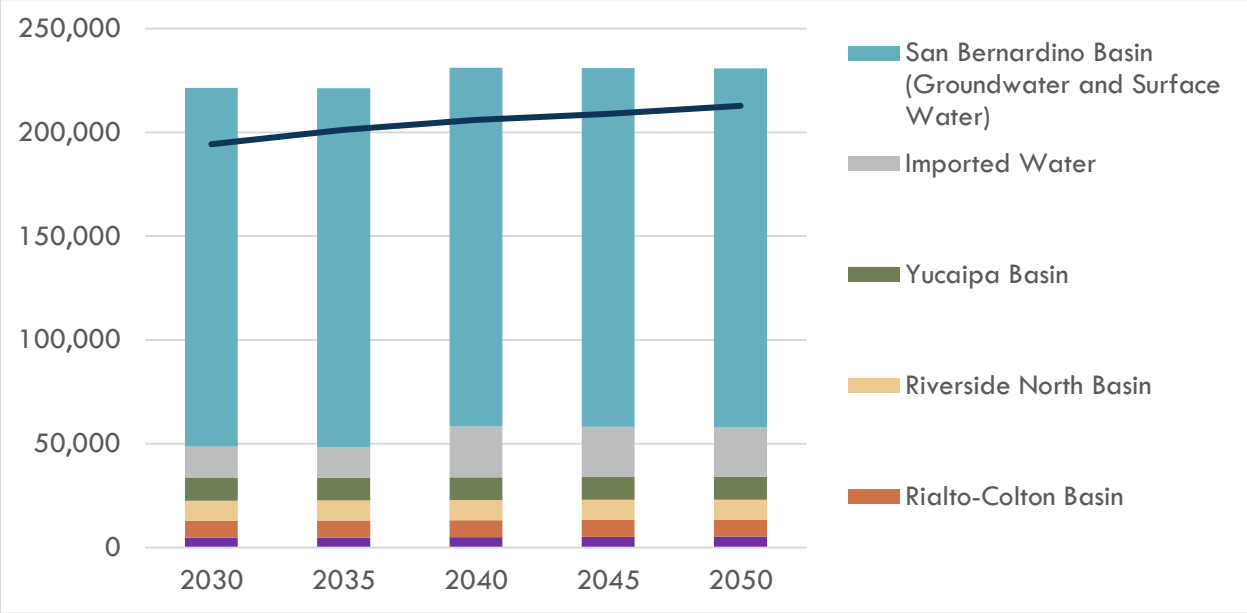

Figure 5-4: Five Consecutive Dry Year Regional Supply and Demand Balance

5.2.4 Long-Term Drought

Analysis of a long-term drought is not required by the UWMP Act but was included in this Plan as a qualitative discussion to be comprehensive and demonstrate how the Region responds to extended droughts. Figure 5-5 shows how imported water supplies may be impacted during a period of 20 dry years, assuming a 95% level of concern of climate change risk (95% likely to not be worse than this), to be conservative. The most recently modeled 20-year period had average SWP Table A allocations of 37%, and the lowest 20-year allocation period modeled was 1922-1941 with a 35% allocation. Long-term droughts typically have average higher supply than a single dry year or five-year drought, because there are typically some wetter years scattered throughout a long-term drought, as shown in Figure 5-5.

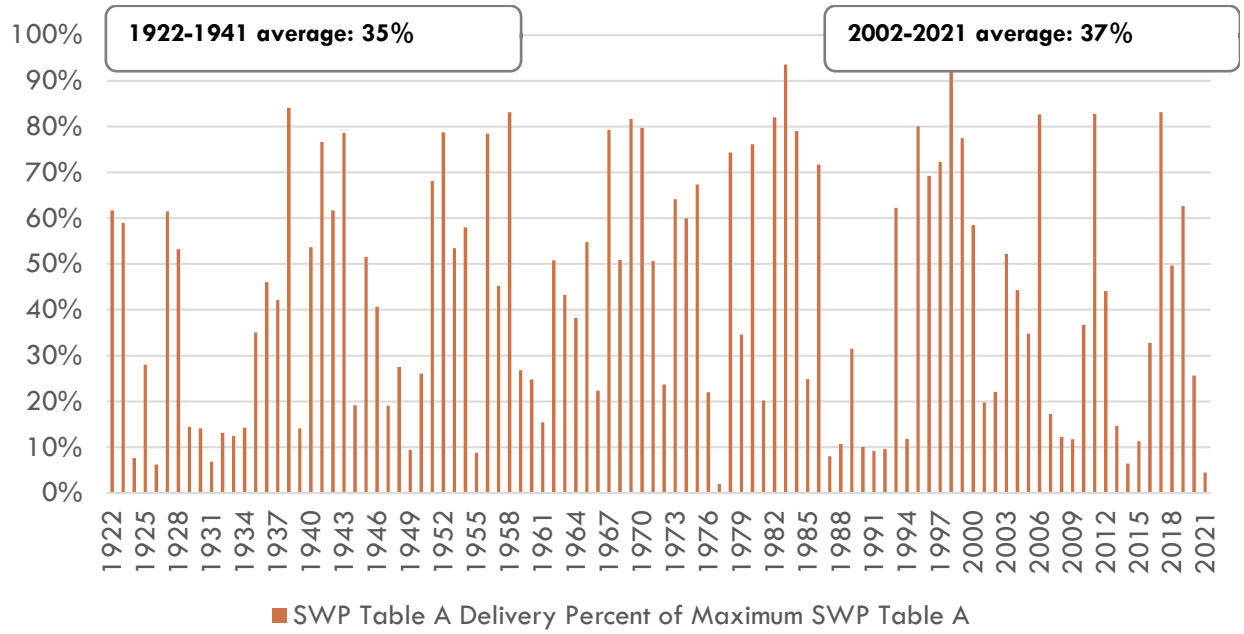

Figure 5-5: Modeled Table A Allocation at 95% Climate Change Level of Concern Based on Historic Hydrology (2025 DCR)

In an extended drought, the Region would continue to prioritize direct deliveries with imported water. A 35% average SWP allocation equates to 35,910 AFY of Table A supply and would be sufficient to meet SBVMWD's demand for direct deliveries, but with little leftover to recharge compared to the region's recharge targets in Section 5.1.1.2. Higher temperatures and lower rainfall during drought would also lead to higher outdoor water use in many years, similar to a 5-year drought.

The Region has invested in groundwater recharge to prepare for extended droughts and currently has 4.9 million acre-feet stored in the San Bernardino Basin and 2.2 million acre-feet stored in the Yucaipa Basin as of 2025, and an additional 2.2 million acre-feet between the Rialto-Colton Basin and Riverside Basin (as of 2020), which can all be drawn upon if needed. Over the course of a drought, groundwater levels would decline as natural and supplemental recharge is limited and groundwater pumping is higher than usual. However, wetter years within the long-term drought period would provide critical opportunities to recharge groundwater supplies drawn down over time. Figure 5-6 shows how during the last extended drought, which started around 2000, the San Bernardino Basin experienced reduced groundwater in storage over time. It also shows that in the occasional wet years such as 2005, 2011, 2019, and 2023, storage levels temporarily rebounded due to natural and supplemental recharge, which helped support ongoing reliance on groundwater storage during subsequent dry years.

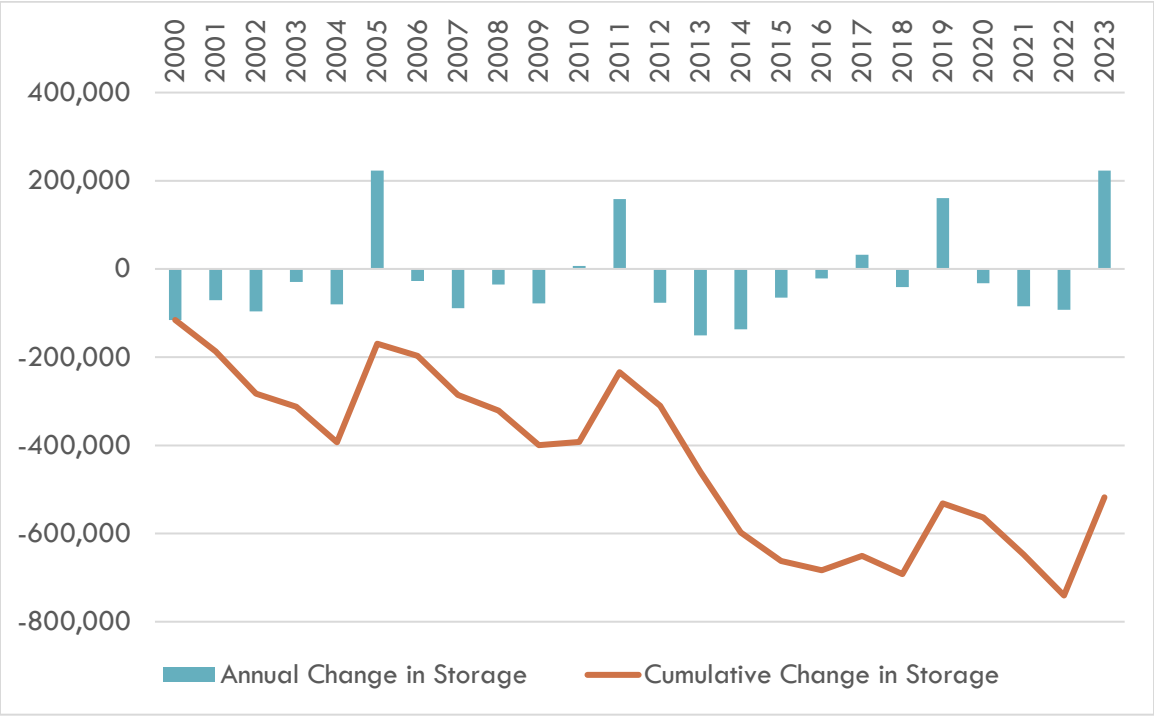

Figure 5-6: San Bernardino Basin Groundwater Change in Storage (AFY)

Finally, each supplier in the region has also prepared Water Shortage Contingency Plans that outline demand management actions that could be implemented if needed in an extended drought to help reduce demand and stretch available supplies. The Region has invested in a diverse set of supplies and infrastructure and has focused on maximizing groundwater storage to prepare itself for future dry periods. The Region intends to further expand recharge opportunities to provide additional supply reliability during future long-term droughts.

4 City of Redlands

This chapter describes information specific to the City of Redlands (Redlands or City), its supplies, demands, and water use efficiency programs. The information and analysis in this chapter are supplemental to the regional information presented in Part 1 of the 2025 RUWMP and is provided to meet the City of Redlands' reporting requirements for 2025 under the UWMP Act.

IN THIS SECTION

- System Description
- Water Use
- SBX7-7 Compliance
- Water Supply
- Water Service Reliability
- Drought Risk Assessment
- Water Shortage Contingency Plan Summary
- Demand Management Measures
- Adoption, Submittal, and Implementation

4.1 System Description

Redlands has provided water services to the community since 1910. Redlands is a retail public water supplier that meets the definition of an urban water supplier with over 23,500 municipal water service connections in 2025.

The water utility service area generally coincides with the City's incorporated area and sphere of influence. The service area encompasses 36.25 square miles inside the City's corporate boundaries and 13.85 square miles outside City boundaries. Water use is largely attributed to landscape irrigation due to arid climate and large residential lots, and some residential lots with agricultural irrigation demands.

A small part in the southeastern section of the City is currently served by Western Heights Mutual Water Company and is not part of this UWMP. Figure 4-1 shows the Redlands water service area.

All volumes of water in this chapter are presented in units of Acre-Feet (AF). One AF is the volume of water required to cover one acre with one foot of water, or approximately 325,851 gallons.

This section describes the population and land uses within Redlands' service area. The regional climate, which includes Redlands' service area, is described in Part 1, Chapter 2 of the 2025 RUWMP.

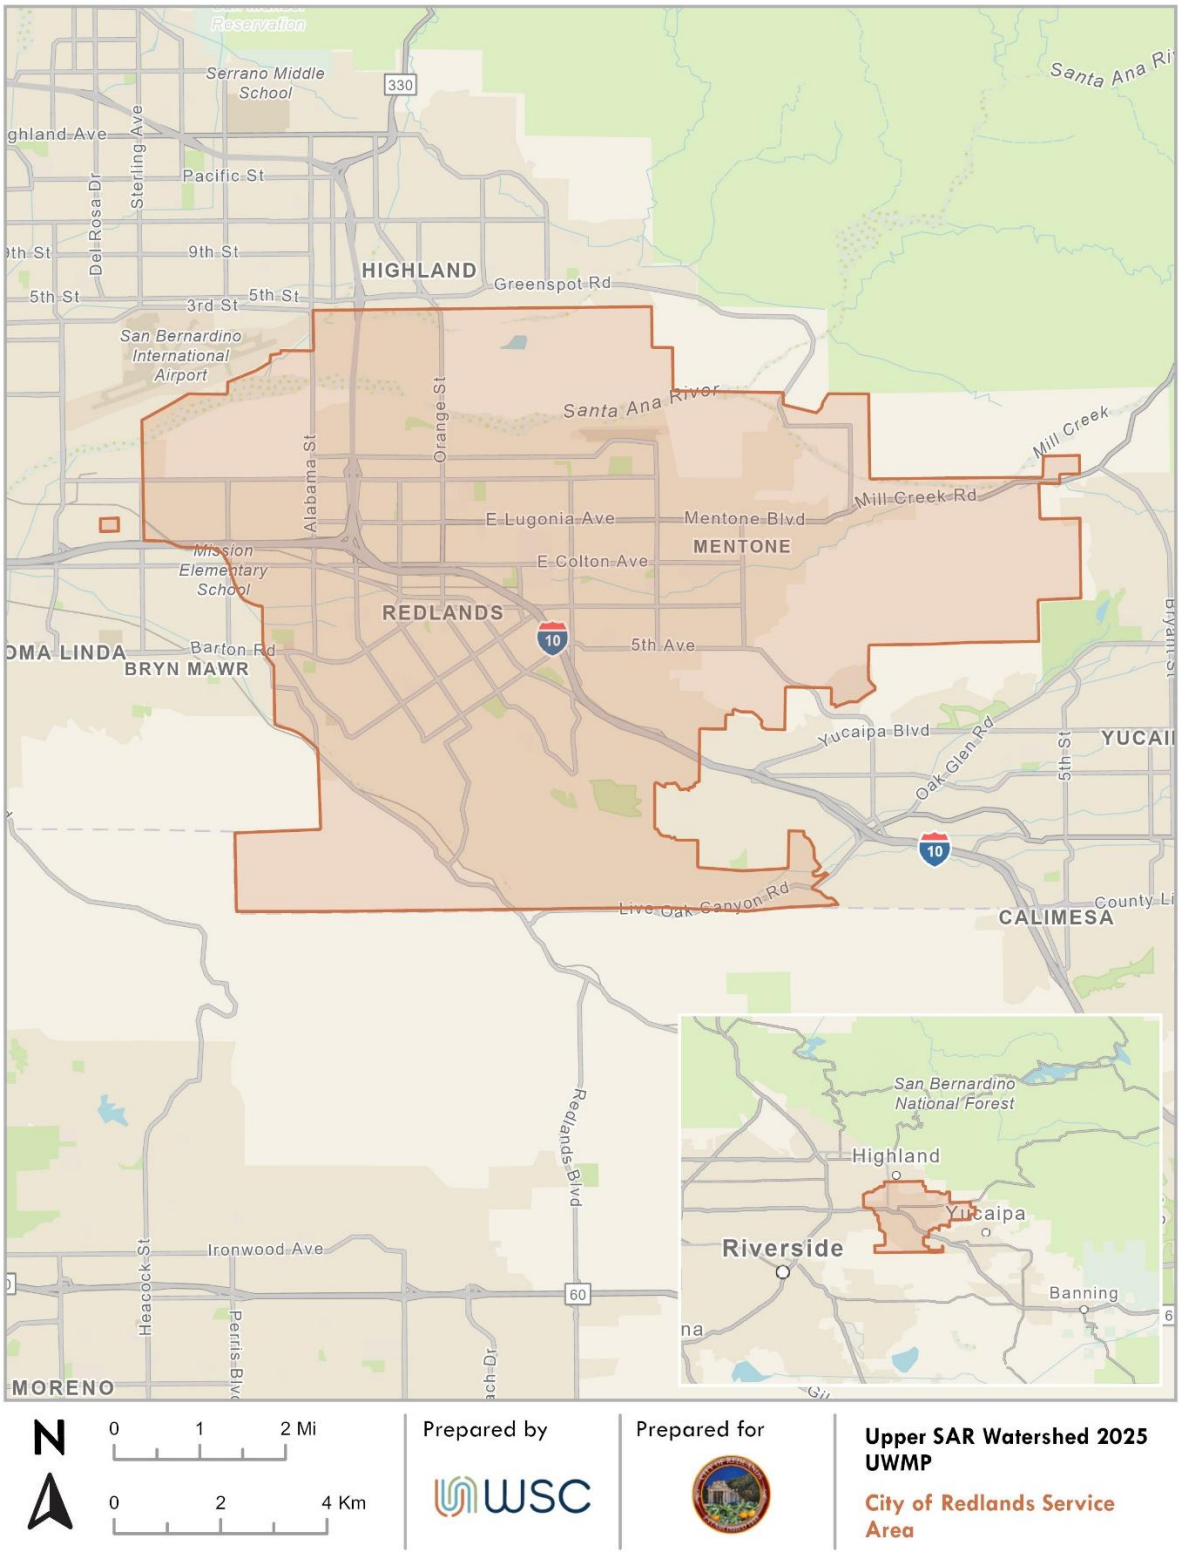

Figure 4-1: City of Redlands Water Service Area Map

4.1.1 Population

Estimates of population served by Redlands are based on the 2020 U.S. Census Bureau and the Southern California Association of Governments (SCAG) (Governments, Connect SoCal Regional Transportation Plan (RTP), 2024). A geographic information systems (GIS) analysis of 2020 Census data was used to determine the Redlands 2020 service area population. The 2020 population and the number of residential connections served by Redlands in 2020 were used to derive a 2020 persons per residential connection factor of 3.96. This factor was then multiplied by the number of residential connections in 2024 to estimate the 2024 population served by Redlands. As discussed in Section 4.2.2, connection data can be irregular due to billing cycles, so the 2024 calculated population is the official 2025 population is reported in this plan.

To project the population served by Redlands from 2030 to 2050, average annual household growth rates from SCAG projections were applied to the 2024 population estimate. SCAG prepared population, household, and employment estimates for 2019, 2035, and 2050 as part of the 2024 Connect SoCal Regional Transportation Plan based on land use data in the region through extensive processes that emphasizes input from local planners and is done in coordination with local or regional land use authorities, incorporating essential information to reflect anticipated future populations and land uses. SCAG's projections undergo extensive local review, incorporate zoning information from city and county general plans, and are supported by Environmental Impact Reports.

A GIS analysis of SCAG projection data was used to determine the SCAG growth rates specific to the Redlands service area. SCAG projected an increase in the number of households from 2019 to 2035 averaging 0.84% per year and from 2035 to 2050 averaging 0.45% per year. Estimated current and projected populations of the Redlands service area are included in Table 4-1.

Table 4-1: DWR 3-1R Current and Projected Population

POPULATION SERVED	2025	2030	2035	2040	2045	2050
TOTAL:	84,183	88,516	92,297	94,910	97,597	100,361

4.1.2 Land Use

Per the 2017 Redlands General Plan, 27% of the land within Redlands city limits is single-family residential, 3% is multi-family residential, 3% is commercial, 5% is industrial, 4% is public and institutional facilities, 16% is parks and open space, 4% is agricultural, and 5% is other uses including the Redlands Municipal Airport, utilities facilities, and public parking lots. The balance is made up of vacant land and public and private rights of way (railroads and private roads). This is shown in Figure 4-2. While the city limits is a smaller area than the water service area, it still generally represents the land uses of the water service area.

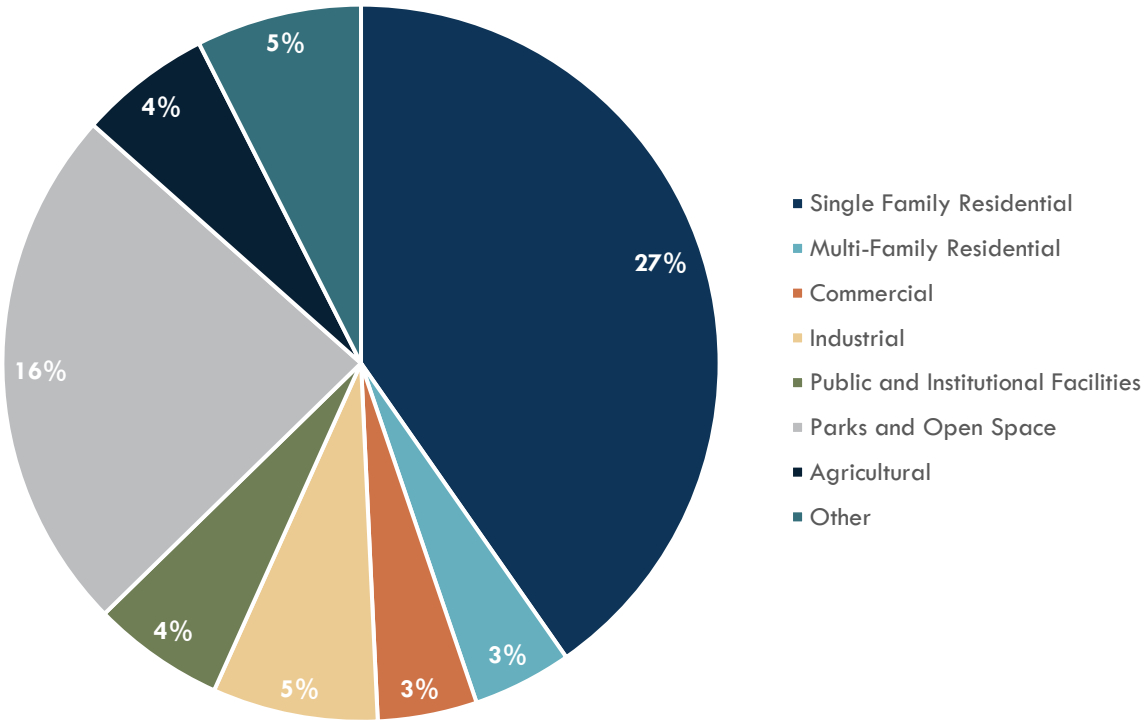

Figure 4-2: Land Uses Within the City of Redlands

4.2 Water Use

This section describes the current and projected water uses within Redlands' service area.

4.2.1 Potable versus Non-Potable Water Use

In addition to serving potable water for domestic use, Redlands provides non-potable groundwater and recycled water to customers in its service area for irrigation and industrial uses. Recycled water from the City of Redlands Wastewater Treatment Plant (WWTP) is used by the Mountain View Power Plant and the California Street Landfill. Recycled water that is not used by those two customers is used by some landscape customers. This recycled water supply to landscape customers is sometimes augmented by non-potable water from wells. Redlands also maintains other separate non-potable systems that are supplied exclusively by non-potable groundwater, which also deliver to non-potable landscape customers, as well as non-potable agricultural irrigation and non-potable commercial/industrial customers.

4.2.2 Water Use by Sector

Redlands categorizes its water customers into six categories for potable deliveries: Single-Family, Multi-Family, Commercial/Institutional, Landscape, Agricultural Irrigation, and Other, which includes fire suppression, construction water, and bulk water sales. Redlands also makes deliveries of non-potable water to three customer categories: Commercial/Institutional, Landscape, and Agricultural/Landscape Irrigation. Redlands delivers recycled water to Mountain View Power Plant and a landfill. There are also 70 approved and 67 active landscape customers that receive a blend of non-potable groundwater and recycled water, listed as recycled water customers throughout this Plan. The number of connections by customer class from 2021 to 2025 is presented in Table 4-2. Redlands utilizes bi-monthly billing which can cause inconsistencies in some categories of connections data, as shown by a perceived reduction in connections from 2021 to 2022 and 2024 to 2025.

Table 4-2: City of Redlands 2021-2025 Connections by Customer Class

CUSTOMER CLASS	2021	2022	2023	2024	2025
Single-Family	19,274	19,139	19,250	20,087	19,590
Multi-Family	972	973	1,001	1,185	1,005
Commercial/Institutional	1,378	1,361	1,373	1,399	1,327
Landscape	533	536	545	544	571
Agricultural Irrigation	16	16	17	17	20
Other	693	684	708	661	766
Non-Pot – Commercial/Institutional	11	11	12	11	12
Non-Pot – Landscape	136	139	144	147	148
Non-Pot – Agricultural Irrigation	3	1	1	-	-
Total Potable and Non-Pot	23,016	22,860	23,051	24,051	23,439
Recycled Water	60	60	62	65	67
TOTAL:	**23,076**	**22,920**	**23,113**	**24,116**	**23,506**

4.2.2.1 Past Water Use

Redlands' actual water use by customer class from 2021-2025 is shown in Table 4-3 and Figure 4-3. Approximately 89% of Redlands deliveries are potable water. Of potable deliveries, approximately 58% are to single-family connections, followed by 13% to multi-family connections, 14% to commercial and institutional connections, with the balance going to landscape, irrigation, and other connections.

Table 4-3: 2021-2025 Actual Water Use (AF)

CUSTOMER CLASS	2021	2022	2023	2024	2025
Single-Family	13,079	12,440	10,912	11,732	12,467
Multi-Family	3,053	2,959	2,700	2,836	2,887
Commercial/Institutional	2,855	3,046	2,942	4,198	3,040
Landscape	2,347	2,325	1,941	2,255	2,353
Agricultural Irrigation	339	401	295	356	476
Other	235	159	167	166	212
Non-Pot – Commercial/Institutional	166	189	217	165	209
Non-Pot – Landscape	1,404	1,426	1,467	1,211	1,383
Non-Pot – Agricultural Irrigation	2	2	-	-	-
Water Losses	2,954	2,880	1,026	915	1,202
TOTAL POTABLE AND NON-POTABLE:	**26,433**	**25,828**	**21,667**	**23,835**	**24,229**
Recycled Water – Direct	1,986	3,042	2,854	2,329	1,705
TOTAL DEMAND:	**28,419**	**28,870**	**24,521**	**26,164**	**25,934**

Notes: Recycled Water – Direct customers include Mountain View Power Plant, California Street Landfill, and some Landscape customers. These recycled water Landscape customers occasionally receive a blend of non-potable groundwater (max of 760 AFY annually from 2021-2025; 40 AFY in 2025) depending on operational needs. This non-potable groundwater is included in the Recycled Water – Direct line item. All customer categories listed as Non-Pot only receive non-potable groundwater.

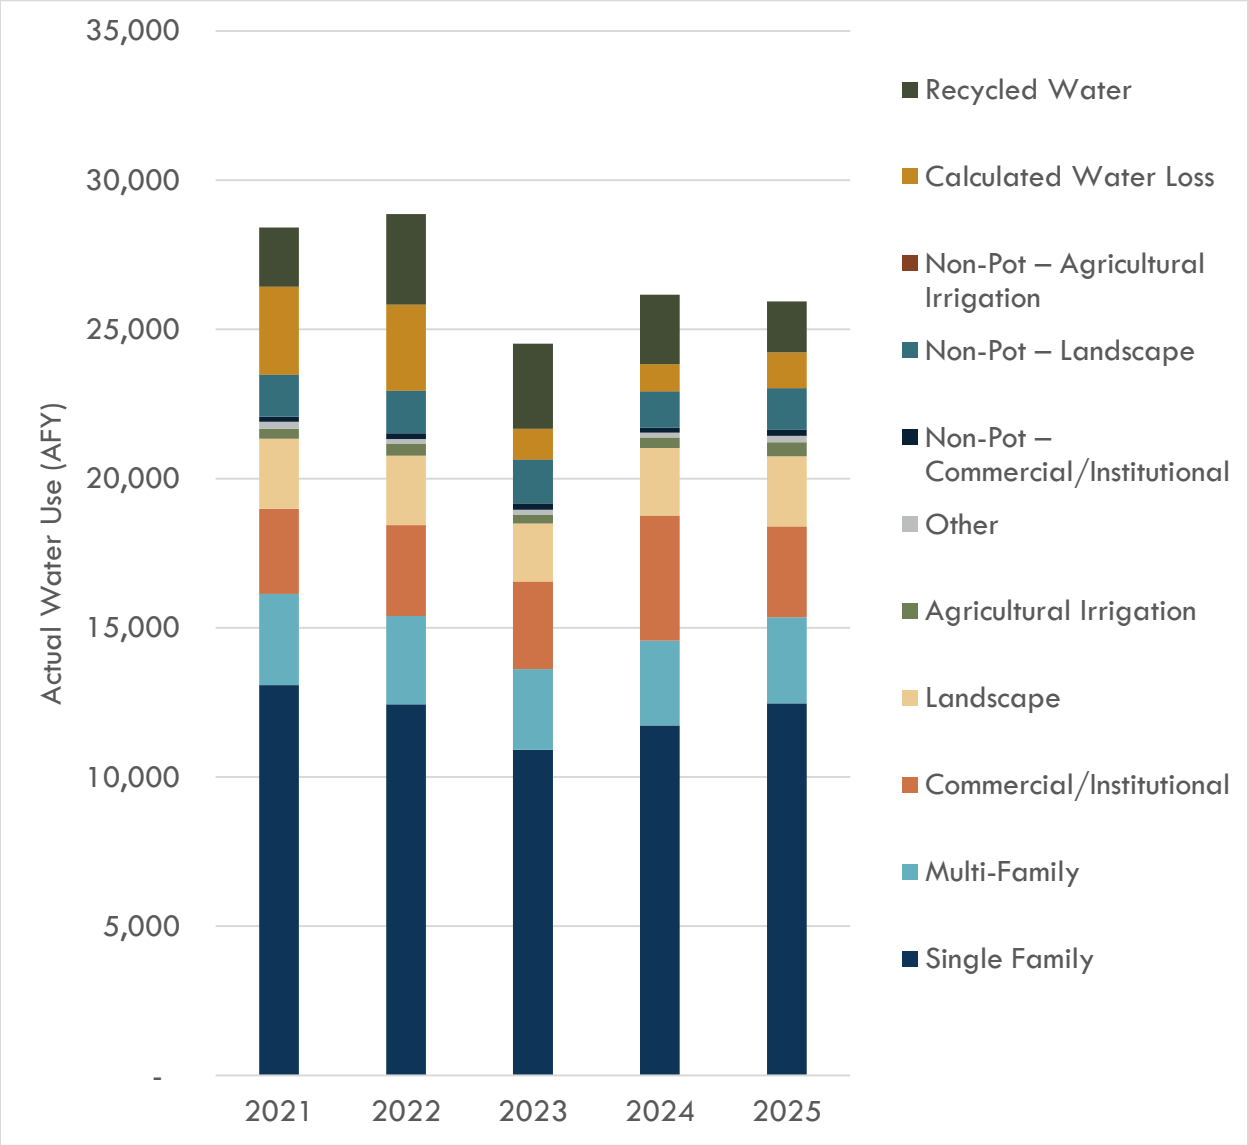

Figure 4-3: City of Redlands 2021-2025 Water Consumption by Customer Class

4.2.2.2 Distribution System Water Losses

Distribution system water losses are the physical potable water losses from the point of water entry to the distribution system to the point of delivery to the customer's system. Water loss can result from aging infrastructure, leaks, seepage, theft, metering inaccuracies, data handling errors, and other causes. Addressing water losses can increase water supplies and recover revenue. Redlands monitors its water loss and prepares an annual American Water Works Association (AWWA) Water Audit to estimate the volume of water loss. Redlands has submitted all required water loss audits to the State Water Resources Control Board (SWRCB), as shown in Table 4-4.

Table 4-4: DWR 4-5R Month Water Loss Audit Reporting

Public Water System ID # Reported in Table 2-1R	Reporting Period	Submitted to DWR Water Loss Audit Program
CA3610037	2020	Yes
CA3610037	2021	Yes
CA3610037	2022	Yes
CA3610037	2023	Yes
CA3610037	2024	Yes

4.2.2.3 Progress Toward Meeting the Water Loss Performance Standard

California Water Code (CWC) Section 10608.34 required the SWRCB to develop water loss performance standards for urban retail water suppliers to minimize water waste through system leaks. Water loss performance standards were developed through a rulemaking that became effective in 2023. Under the regulations, each supplier will be required to comply, by 2028, with an individualized volumetric water loss standard based on real loss, using the economic model developed by the SWRCB and the supplier's own unique data. Real loss is the physical loss of water from water distribution systems, as opposed to apparent losses, which are revenue losses due to meter inaccuracies, billing errors, or unauthorized consumption. A supplier's baseline water loss is calculated as the average water loss from at least three of the four water loss audits from 2017 – 2020. The real water loss performance standard is based on gallons per service connection per day (gpscd), or gallons per mile of pipe per day (gpmd), depending on how the supplier reports real loss. Post-2028 compliance with volumetric water loss standards will be assessed every three years based on the average of the supplier's real loss from the preceding three years, with an allowed variation of five gpscd above the supplier's water loss standard. Apparent loss standards are equal to the baseline apparent loss and compliance is evaluated at the same time as compliance with the Real Water Loss Performance Standard.

Although the compliance period has not yet started, CWC Section 10631 (d)(3)(C) requires water suppliers to provide data in the UWMP to show whether the supplier met its SWRCB water loss performance standard.

Based on data released by the SWRCB on January 30, 2026, Redlands' baseline water loss is 46.1 gpscd, which is made up of the baseline real water loss standard of 24.8 gpscd, and the baseline apparent loss standard of 29.6 gpscd. As shown in Table 4-5, based on the most recent water loss audit from 2024, Redlands has met the real water loss and apparent water loss performance standards. Section 4.1 discusses Redlands' programs to assess and manage distribution system real loss.

Table 4-5: DWR 4-6R Progress Towards 2028 Water Loss Standard

Public System ID # Reported in Submittal Table 2-1R	Did the Water Board Calculate a Water Loss Standard for this Public System?	2028 Real Water Loss Standard per Unit per day	Units for Real Water Loss Standard	Number of Units	Volume of Total Real Water Loss (from AWWA Water Loss Audit)	2025 or Most Recent Year Real Water Loss per Unit per Day	2028 Apparent Water Loss Standard per Unit per Day	Units for Apparent Water Loss	Number of Connections	Volume of Total Apparent Loss (from AWWA Water Loss Audit)	2025 or Most Recent Year Apparent Water Loss per Unit per Day

gpscd = gallons per service connection per day

4.2.3 Projected Water Use

Various demand projection scenarios and conditions were considered for this UWMP. Historic demand trends and water use per connection for each connection type (single-family residential, multi-family residential, commercial, etc.) were assessed along with expected growth rates to project demand through 2050. The major assumptions used to develop demand projections are listed below and summarized in Table 4-6.

Baseline Water Use: A historic baseline period is used to approximate "normal" demand patterns representative of what is expected in the future given normal conditions for influential factors impacting demand, known as "demand drivers." A key demand driver is rainfall. Baseline years incorporate impacts of dry and wet years since demand typically fluctuates with rainfall due to the need for more irrigation in dry years and less in wet years. For this UWMP, a baseline period of 2021-2024 is used, which captures two dry years and one wet year. A baseline water use per connection was established for each connection type.

Connection Growth Rate: Indoor residential usage is considered separately from outdoor usage since indoor use is associated with people in a housing unit and outdoor use is associated with the landscape of a housing unit. Therefore, the growth of "indoor residential connections" and "outdoor residential connections" are considered separately just for purposes of projecting demand (residential services only have one connection, except multi-family units may have dedicated landscape irrigation connections). Indoor residential "connections" are projected to scale with population and outdoor residential "connections" are projected to scale with household projections. Since Redlands is basing population growth off household growth (see Section 4.1.1), these rates will be the same. Commercial, Industrial, and Institutional (CII) and Landscape connections were assumed to grow at the SCAG employment growth rate.

Water Loss: 2021-2024 losses ranged from 4% to 11%. This demand projection assumes water losses will be 8% through 2050.

Total Projected Demand ("status quo"): For each connection type, the baseline water use per connection was multiplied by the projected future number of connections to estimate future water use by connection type. The water loss percentage was applied to the subtotal of demand for all connection types to determine the total projected future demand. This represents a "status quo" future demand assuming demand patterns remain the same as the baseline period.

Table 4-6: Demand Projection Assumptions

Parameter	Assumption	Value
Baseline	2021-2024	N/A
Residential Growth Rate	SCAG Households	0.84% by 2035 0.56% 2035 - 2050
CII Growth Rate	SCAG Employee Growth Rate	0.84% by 2035
Landscape Growth Rate	SCAG Employee Growth Rate	0.52% 2035 - 2050
Water Losses	Baseline average	8%

Improvements in Per-Connection Water Use: To reflect that Urban Water Use Objective (UWUO) requirements, building code changes, and social behavior changes may impact future water use, the following assumptions were made for how existing and future connections' water use will change:

- **Existing Connections**
  - Indoor residential use will become 1% more efficient by 2030.
  - Outdoor residential use will become 1% more efficient by 2030.
  - Landscape use will become 1% more efficient by 2030.
- **Future Connections**
  - Residential indoor water use will become 9% more efficient by 2030, reflecting that indoor water use in future connections should be 42 gpcd (or less) due to water efficiency standards and building codes.
  - Residential outdoor water use will become 10% more efficient by 2030.
  - Landscape water use will become 10% more efficient by 2030.

Recycled Water Direct Use: Projected recycled water use by the Mountain View Power Plant and California Street Landfill is based on 2021-2024 average deliveries throughout the planning horizon. Projected recycled water use by landscape connections is based on 2021-2024 deliveries and is expected to grow as new connections come online per the SCAG employee growth rate. Some existing Non-Pot – Landscape customers currently served all non-potable groundwater are assumed to be converted to recycled water as the recycled water system is improved. For simplicity, the recycled water demand projections assume that the blended system will not need to be augmented with non-potable groundwater, however under certain operating conditions this may still occur.

Projected future demands by customer class are presented in Table 4-7, Table 4-8, and Figure 4-4.

Table 4-7: DWR 4-2R Projected Demands for Potable, Non-Potable, and Recycled Water (AFY)

CUSTOMER CLASS	2030	2035	2040	2045	2050
Single-Family	12,806	13,285	13,642	13,999	14,356
Multi-Family	3,435	3,564	3,659	3,755	3,851
Commercial/Institutional	3,447	3,588	3,685	3,782	3,879
Landscape	2,300	2,386	2,445	2,504	2,563
Agricultural Irrigation	360	360	360	360	360
Other	175	175	175	175	175
Non-Pot – Commercial/Institutional	180	180	180	180	180
Non-Pot – Landscape	820	820	820	820	820
Non-Pot – Agricultural Irrigation	-	-	-	-	-
Water Losses	1,941	2,015	2,072	2,128	2,184
Recycled Water – Direct	3,357	3,510	3,642	3,773	3,905
TOTAL:	**28,821**	**29,882**	**30,678**	**31,474**	**32,271**

Notes: Recycled Water – Direct customers include Mountain View Power Plant, California Street Landfill, and some Landscape customers which in this projection are assumed to only receive recycled water. All customer categories listed as Non-Pot only receive non-potable groundwater.

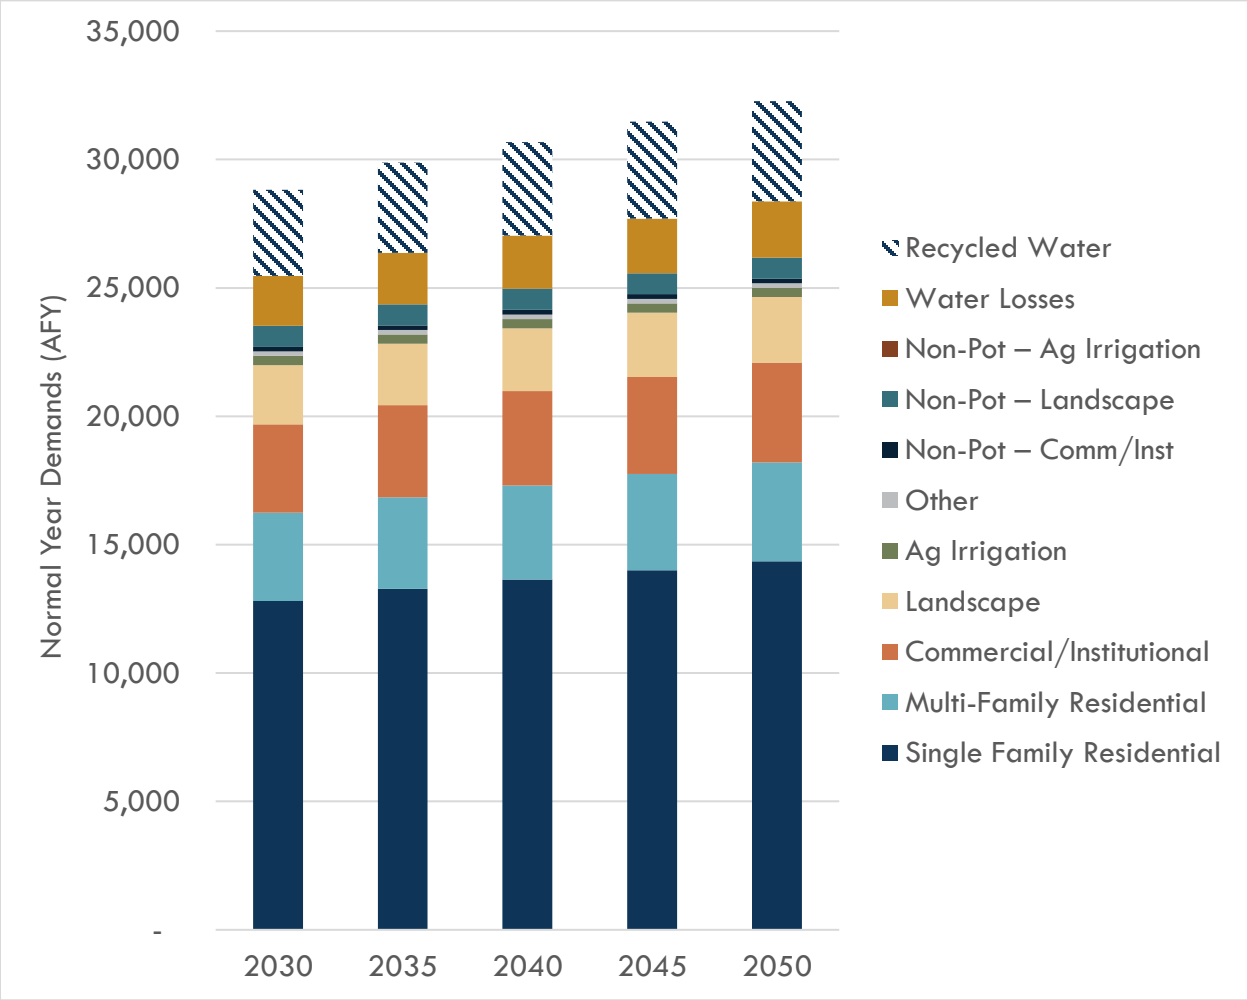

Figure 4-4: City of Redlands Projected Water Demand, by Customer Class

4.2.4 Water Use for Lower Income Households

Senate Bill 1087 requires water use projections in a UWMP include the projected water use for single-family and multi-family residential housing for lower income households as identified in the housing element of any city or county in the service area of the supplier. The Regional Housing Needs Assessment (RHNA) establishes housing needs for each jurisdiction over the applicable planning period. SCAG adopted the 6th Cycle RHNA Allocation Plan, which covers the planning period from October 2021 through October 2029 (Governments, Connect SoCal Regional Transportation Plan (RTP), 2021)). SCAG's population and household projections inform the RHNA Allocation Plan and are used in the determination and allocation of housing needs, including lower income housing, for individual jurisdictions. The growth projections in this UWMP are based on SCAG projections for the service area and therefore also incorporate the lower income housing projections. The projected demands in this UWMP represent water use from all future growth and are inclusive of water use for lower income households. Table 4-9 demonstrates compliance with Senate Bill 1087.

Table 4-9: DWR 4-3R Inclusion in Water Use Projections

Are Future Water Savings Included in Projections?	Yes
Are Lower Income Residential Demands Included in Projections?	Yes

4.2.5 Climate Change Considerations

A topic of growing concern for water planners and managers is climate change and the potential impacts it could have on California's future water supplies.

Recent climate change modeling for the Santa Ana River watershed suggests that a changing climate will have multiple effects on the Region. Adaptation and mitigation measures will be necessary to account for these effects. Part 1, Chapter 2 of the 2025 RUWMP includes an assessment of the potential impacts of climate change.

4.3 SBX7-7 Compliance & Future Water Use Efficiency Requirements

The Water Conservation Act of 2009 (SBX7-7) was incorporated into the UWMP Act in 2009 and required that all water suppliers increase water use efficiency with the overall goal to decrease per-capita water consumption within the state by 20 percent by the year 2020.

SBX7-7 required DWR to develop certain criteria, methods, and standard reporting forms through a public process that water suppliers could use to establish their baseline water use and determine their water conservation targets. SBX7-7 and DWR's *Methodologies for Calculating Baseline and Compliance Urban Per Capita Water Use* (State of California Department of Water Resources, 2021) specify methodologies for determining the baseline water demand, 2015 interim urban water use target, and the 2020 urban water use target for Redlands as described in the 2020 IRUWMP. This section also demonstrates that Redlands achieved its 2020 water use target.

Table 4-10 below establishes Redlands' 2020 actual and 2020 target gallons per capita per day (GPCD). As shown, Redlands met its 2020 target. Most recently, in 2025, the water use was 257 GPCD, which is well below the 2020 target of 285 GPCD.

Table 4-10: SBX7-7 2020 Target Progress

2020 Target GPCD	2020 Actual GPCD	Did Supplier Achieve Target?
285[2]	279[1]	Yes

[1]The 2020 Actual GPCD value was calculated in the 2020 IRUWMP using a population for the City of Redlands that was artificially low, which made the reported value of 279 artificially high. This was because the 2020 IRUWMP used the city limits of Redlands to determine 2020 population, rather than the water service area. The water service area is larger and has a larger population.

[2]The 2020 Target GPCD was calculated during the 2015 RUWMP Update, which used the correct water service area. The correct water service area was also used in determining 2025 GPCD. Redlands met the SBX7-7 requirements in 2020 and in 2025. No action is required.

New water use efficiency standards from the "Making Conservation a California Way of Life Regulation" (CWOL Regulation) supersede SBX7-7 standards. In 2018, two policy bills were enacted by the California Legislature, Assembly Bill 1668 (AB1668, 2018), and Senate Bill 606 (SB606, 2018), collectively referred to as the "2018 Water Conservation Legislation." Based on the 2018 Water Conservation Legislation, related legislation, and subsequent adoption of the CWOL Regulation, each urban retail water supplier must comply with its UWUO. DWR and the SWRCB have developed a reporting framework for calculating the UWUO and compliance annually with efficiency standards becoming increasingly stringent through 2040.

Redlands has an agreement with Bear Valley Mutual Water Company (BVMWC) under which BVMWC lets Redlands use some of its water rights to the Santa Ana River to be treated and delivered to potable customers, and in exchange Redlands serves a set of BVMWC customers off their potable water system. There are approximately 139 single-family residential connections served under this arrangement, and many of them also irrigate agricultural land on their property. These connections account for approximately 8% of single-family water use, but account for less than 1% of single-family connections. This arrangement leads to an inflation of per capita water demand for Redlands.

4.4 Water Supply

Redlands' water supply is composed primarily of surface water from the Santa Ana River and Mill Creek and supplemented by groundwater extracted from the Bunker Hill Basin (part of the San Bernardino Basin) and Yucaipa Basin (through 2023) and a small amount of imported water. More information about local groundwater basins is included in Part 1, Chapter 3 of the 2025 RUWMP.

4.4.1 Purchased or Imported Water

Imported water from the State Water Project (SWP) is available for Redlands to purchase from San Bernardino Valley Mutal Water District (San Bernardino Valley or SBVMWD) when needed. Redlands has purchased supplemental SWP water only in years when surface water flows have not been able to meet demands and on occasion when surface water supplies are turbid and require blending or for other operational purposes. Redlands will continue to request SWP water in these situations. However, during SWP outages or extended dry periods, Redlands will prioritize use from other sources.

If SWP water is not available in a future year, Redlands will shift to increase groundwater production and may implement conservation measures to reduce demands if needed. Redlands contributes to regional efforts to recharge the Bunker Hill groundwater basin with SWP water and local surface water in wet years when available so that storage is available for use in dry years when other supplies may be limited.

4.4.2 Groundwater

Redlands extracts groundwater from the Bunker Hill Subbasin (also known as San Bernardino Basin or SBB). Redlands' historical production for the past five years is shown in Table 4-11. Extractions shown include both potable and non-potable water. Redlands was the majority shareholder in South Mountain Water Company through 2023 and received water from South Mountain Water Company wells producing from the Yucaipa Subbasin. Redlands has sold its majority interest in South Mountain Water Company and no longer receives water from the Yucaipa Subbasin.

Table 4-11: DWR 6-1R Groundwater Volume Pumped (AF)

GROUNDWATER TYPE	LOCATION OR BASIN NAME	2021	2022	2023	2024	2025
Alluvial Basin	Bunker Hill (part of SBB)	18,392	18,293	13,067	13,215	18,232
Alluvial Basin	Yucaipa	697	906	422	-	-
	TOTAL:	19,089	19,199	13,489	13,215	18,232

4.4.3 Surface Water

The City receives its surface water from the following sources:

- **Mill Creek Watershed:** Water from the Mill Creek watershed is treated at Henry Tate (Tate) Surface Water Treatment Plant (SWTP).
- **Santa Ana River Watershed:** Water from the Santa Ana River watershed is treated at the Horace P. Hinckley SWTP.

Redlands has ownership in a variety of mutual water companies to supply water to Redlands' Tate and Hinckley SWTP's. For decades, the City has increased its ownership in these companies in an effort to increase its access to a reliable local source of water. Based on a 10-year average from 2016-2025, surface water totals 44% of Redland's annual potable production.

As discussed in Section 4.4.1, Redlands sometimes supplements surface water supplies with SWP water, which is then treated at Tate or Hinckley SWTP and distributed for potable use.

4.4.4 Stormwater

Redlands is participating in regional project planning efforts to capture additional stormwater for purposes of groundwater recharge to increase sustainability of the basins Redlands produces water from. These regional projects are discussed in Part 1, Chapter 3 of the 2025 RUWMP.

4.4.5 Wastewater and Recycled Water

Redlands is a sewer agency that treats approximately 5.1 million gallons of wastewater daily as of 2025. Redlands' Wastewater Treatment Plant (WWTP) has the capability of treating 9.5 million gallons per day (MGD) to a secondary level. Of that, 6.5 MGD can be treated to a Title 22 tertiary recycled water level.

Redlands utilizes all wastewater collected and treated at its WWTP in its service area for:

- Distribution to customers
- Percolation into Bunker Hill

Treated wastewater distributed to customers is tertiary treated, known as Title 22-Recycled Water. Redland's recycled water customers include Southern California Edison (SCE) Company, California Street Landfill, and recycled/non-potable water customers located in the 1350 pressure zone. SCE uses recycled water as cooling water at its Mountain View Power Plant and recycled/non-potable water customers use recycled water for irrigation when supply is available. All remaining wastewater is treated to a secondary level and released into spreading basins located east of the WWTP for recharge back into Bunker Hill basin. Based on 2025 volumes, approximately 1.5 MGD of treated wastewater was used as recycled water supply for customers, and 3.3 MGD was used for recharge. The remaining water was used within the WWTP or accounted for as losses through the process, meter inaccuracies or evaporation. Information about wastewater collected and treated is presented in Table 4-12 and Table 4-13.

4.4.5.1 Potential, Current, and Projected Recycled Water Uses

The expansion of the recycled water system is limited by its supply, as well as infrastructure development and the Title 22-Recycled Water permitting process. However, because Redlands requires new commercial development to provide dual metering for irrigation systems, to accommodate the use of recycled/non-potable water, all recycled water may be utilized for distribution to recycled/non-potable water customers in the 1350 zone and eventually the 1570 pressure zone, as demand and infrastructure increases. Redlands recently developed a preliminary design to expand recycled water deliveries to the 1350 zone for irrigation use. Recycled water system expansion is expected to include additional storage to meet peak irrigation demands in the blended non-potable/recycled system. These facilities will decrease reliance on non-potable groundwater from the San Bernardino Basin and/or accommodate more non-potable/recycled irrigation customers and demands. Redlands also has plans for a second recycled water reservoir and distribution system upgrades to increase utilization of recycled water supplies.

Table 4-12: DWR 6-2R Wastewater Collected within Service Area in 2025 (AF)

NAME OF WASTEWATER COLLECTION AGENCY	WASTEWATER VOLUME METERED OR ESTIMATED	WASTEWATER VOLUME COLLECTED FROM UWMP SERVICE AREA IN 2025	NAME OF WASTEWATER TREATMENT PLANT (WWTP) AND PLACE ID NUMBER	WASTEWATER TREATMENT PLANT LOCATED WITH UWMP AREA
City of Redlands	Metered	5,685	Redlands WWRF, Place ID 259148	Yes
	TOTAL:	**5,685**		

Table 4-13: DWR 6-3R Wastewater Treatment and Discharge within Service Area in 2025 (AF)

WASTEWATER TREATMENT PLANT NAME & PLACE ID NUMBER	DOES THIS PLANT TREAT WASTEWATER GENERATED OUTSIDE THE UWMP SERVICE AREA	2025 VOLUME OF WASTEWATER RECEIVED FROM UWMP SERVICE AREA	TOTAL 2025 VOLUME OF WATER TREATED	WATER RECYCLED WITHIN UWMP SERVICE AREA		WATER RECYCLED OUTSIDE OF UWMP SERVICE AREA		EFFLUENT DISCHARGE THAT IS NOT A PERMITTED RECYCLED WATER USE		REQUIRED DISCHARGE FOR INSTREAM FLOW		DELIVERED TO ANOTHER ENTITY FOR ADDITIONAL TREATMENT		
				TREATMENT LEVEL	VOLUME	TREATMENT LEVEL	VOLUME	TREATMENT LEVEL	VOLUME	TREATMENT LEVEL	VOLUME	TREATMENT LEVEL	VOLUME	NAME OF OTHER ENTITY
Redlands WWRF, Place ID 259148	No	5,685	5,685	Tertiary	1,665		-	Secondary, Disinfected-23	3,663		-		-	
	TOTAL:	**5,685**	**5,685**		**1,665**		**-**		**3,663**					

4.4.6 Water Exchanges and Transfers

Redlands exchanges water with San Bernardino Valley and local water companies through various agreements.

4.4.6.1 Emergency Interties

Redlands has two interties with neighboring water agencies, Western Heights Water Company and the City of Loma Linda.

4.4.7 Future Water Projects

The City is planning to construct recycled water system improvements to replace irrigation demands on potable and non-potable supplies with recycled water (see Section 4.4.5.1).

Additionally, the City completed a seismic assessment of its water infrastructure that identified projects to strengthen the infrastructure to further enhance reliability during a catastrophic earthquake. Based on the results of this assessment, Redlands is designing replacement reservoirs for the existing Sunset Reservoir. Construction of two replacement reservoirs is planned for 2028-2029.

Redlands is replacing the Tate SWTP influent Mill Creek pipeline crossing to improve supply reliability, with construction schedule for 2028-2029.

Redlands is drilling one new potable well (Alta Well) in the San Bernardino Basin which is planned to be constructed in 2026-2027. Redlands is also equipping existing Wells 38 and 39 with ion exchange wellhead treatment to combat water quality issues, also expected in 2026-2027. These projects will improve Redlands' ability to access its San Bernardino Basin groundwater supply.

4.4.8 Summary of Existing and Planned Sources of Water

Redlands' water supply is composed primarily of surface water from the Santa Ana River and Mill Creek and supplemented by groundwater extracted from the Bunker Hill Basin (part of the San Bernardino Basin) and a small amount of imported water when needed. This same mix of supplies is anticipated to be used in the future.

The volume of water utilized from each source in 2025 is summarized in Table 4-14 and projected supply by source is summarized in Table 4-15. In 2025, Santa Ana River supplies were interrupted due to poor water quality after the Line Fire, and San Bernardino Basin groundwater was relied on to make up the balance. Supply reliability is discussed in more detail in Section 4.5.

Table 4-14: DWR 6-8R Actual Water Supplies in 2025 (AF)

WATER SUPPLY	ADDITIONAL DETAIL	ACTUAL VOLUME	WATER QUALITY	TOTAL RIGHT OR SAFE WATER YIELD
Groundwater (Not Desalinated)	Bunker Hill (Part of SBB)	17,043	Drinking Water	
Groundwater (Not Desalinated)	Bunker Hill (Part of SBB)	1,189	Other Non-Potable Water	
Surface water (Not Desalinated)	Santa Ana River (Part of SBB)	1,033	Drinking Water	
Surface water (Not Desalinated)	Mill Creek (Part of SBB)	4,097	Drinking Water	
Purchased or Imported Water	SWP – Direct	907	Drinking Water	
Recycled Water	Recycled Water – Direct	1,665	Recycled Water	
	TOTAL:	**25,934**		

Table 4-15: DWR 6-9R Projected Water Supplies (AF)

		2030	2035	2040	2045	2050
WATER SUPPLY	**ADDITIONAL DETAIL**	**REASONABLY AVAILABLE VOLUME**	**REASONABLY AVAILABLE VOLUME**	**REASONABLY AVAILABLE VOLUME**	**REASONABLY AVAILABLE VOLUME**	**REASONABLY AVAILABLE VOLUME**
Groundwater (Not Desalinated)	Bunker Hill (Part of SBB), Potable	13,963	14,872	15,537	16,202	16,867
Groundwater (Not Desalinated)	Bunker Hill (Part of SBB), Non-potable	1,000	1,000	1,000	1,000	1,000
Surface water (Not Desalinated)	Santa Ana River (Part of SBB)	4,000	4,000	4,000	4,000	4,000
Surface water (Not Desalinated)	Mill Creek (part of SBB)	5,500	5,500	5,500	5,500	5,500
Purchased or Imported Water	SWP – Direct	1,000	1,000	1,000	1,000	1,000
Recycled Water	Recycled Water – Direct	3,357	3,510	3,642	3,773	3,905
	TOTAL:	**28,821**	**29,882**	**30,678**	**31,474**	**32,271**

Table 4-16: DWR 7-2R Normal Year Supply and Demand Comparison (AF)

	2030	2035	2040	2045	2050
Supply Totals From Table 6-9R	28,821	29,882	30,678	31,474	32,271
Demand Totals From Table 4-2R	28,821	29,882	30,678	31,474	32,271
DIFFERENCE:	-	-	-	-	-

Note: Redlands has sufficient supplies to meet all normal year demands. When surface water supplies are interrupted or unavailable due to low rainfall, Redlands can switch to utilize San Bernardino Basin groundwater to meet demands. Redlands can also utilize imported water from the SWP when it is available. Supply reliability is discussed further in Section 4.5.

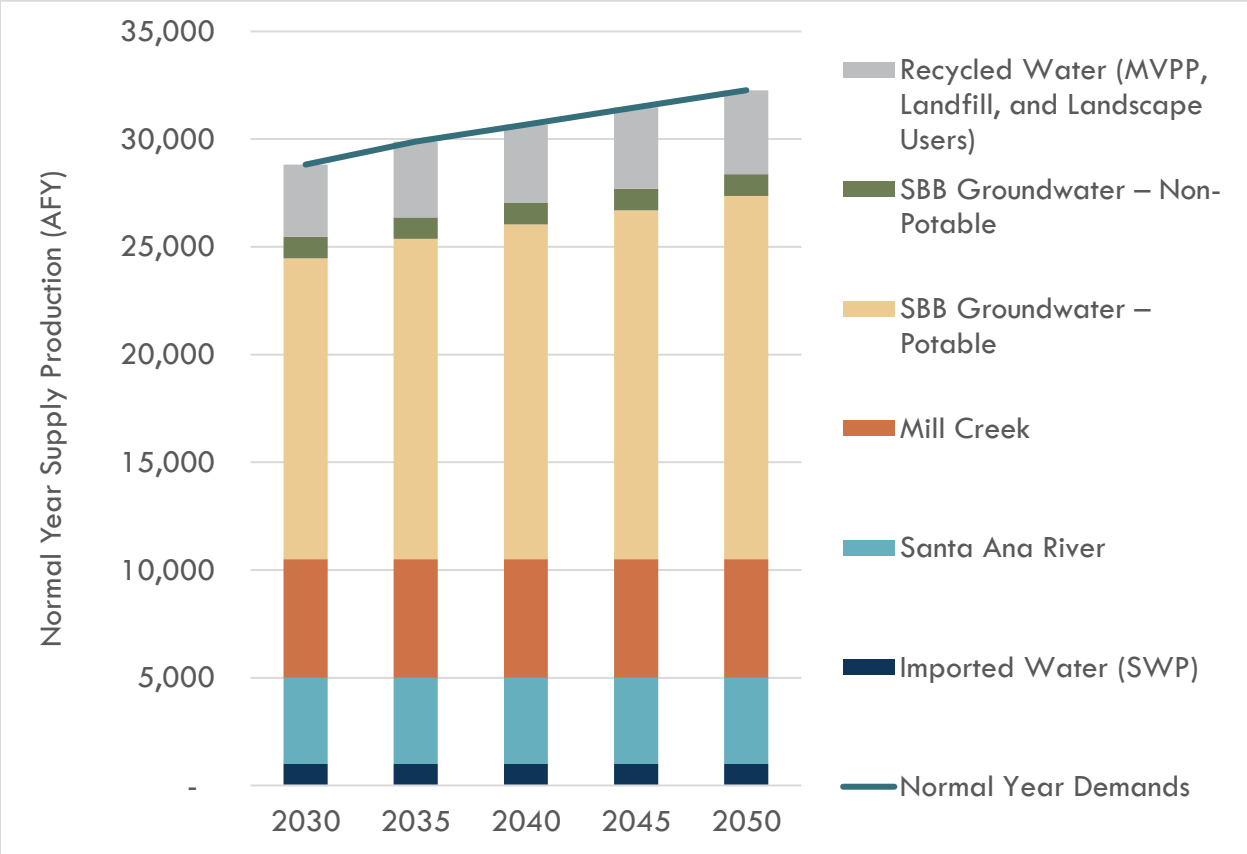

Figure 4-5: City of Redlands Projected Supply and Demand Comparison

4.4.9 Energy Intensity

Redlands monitors energy consumed at its facilities. In 2025, Redlands used approximately 12,735,307 kWh on production of imported water, groundwater, and surface water; treatment of imported water and surface water; and distribution of potable water supplies. Over this period, Redlands produced 22,637 AF of potable water, for an average energy intensity of 563 kWh/AF.

4.5 Water Service Reliability Assessment

This section considers Redlands' water supply reliability during normal years, single dry years, and up to five consecutive dry water years. The supply reliability assessment discusses factors that could potentially limit the expected quantity of water available from Redlands' current source of supply through 2050.

4.5.1 Constraints on Water Sources

Redlands has three water sources that may be constrained:

- **Imported SWP water**: supplies reduced in dry years.
- **Mill Creek surface water**: supplies reduced in dry years OR when high turbidity prevents treatment.
- **Santa Ana River surface water**: supplies reduced in dry years OR when high turbidity prevents treatment.

Poor water quality in the Mill Creek and Santa Ana River watersheds can be due to flooding.

4.5.2 Year Type Characterization

In general, groundwater is less vulnerable to seasonal and climatic changes than surface water (i.e., local and imported) supplies. The Western-San Bernardino Watermaster, in collaboration with the Basin Technical Advisory Committee (BTAC), monitor groundwater levels and implement supplemental recharge to maintain long term sustainability of local groundwater sources. Further discussion of regional water resource management is included in Part 1, Chapter 3 of the 2025 RUWMP.

Per UWMP requirements, Redlands has evaluated reliability for an average year, single dry year, and a five consecutive dry year period.

The UWMP Act defines these years as:

- **Normal Year:** This condition represents the water supplies a supplier considers available during normal conditions. This could be a single year or averaged range of years that most closely represents the average water supply available.
- **Single Dry Year:** The single dry year is recommended to be the year that represents the lowest water supply available.
- **Five-Consecutive Year Drought:** The driest five-year historical sequence for the Supplier, which may be the lowest average water supply available for five years in a row.

4.5.3 Water Service Reliability

The results of the reliability assessment are summarized in the tables below.

Under single dry and consecutive dry year conditions, the assessment assumes that demands will increase by as much as 4% due to increased outdoor water use. Although water use may decrease in the later years of a multiple year drought due to implementation of conservation

measures and drought messaging, the assessment is based on a 4% increase throughout the 5-year drought to be conservative.

As described in Part 1, Chapter 3 of the 2025 RUWMP, the effects of a local drought are not immediately recognized since the region uses the local groundwater basins to simulate a large reservoir for long term storage. If surface water flows and SWP supplies are reduced in dry years, the City will shift to increase groundwater production in Bunker Hill and increase conservation measures to reduce demands if needed. The City contributes to regional efforts to recharge the Bunker Hill groundwater basin with SWP water and local surface water in wet years when available so that storage is available for use in dry years. As a result, Redlands' total supplies are not reduced in dry years so 2025 is considered the base year for all year types. Based on the analysis, Redlands does not anticipate any shortage due to single or consecutive dry years. Even though localized drought conditions should not affect supply, Redlands participates in several ongoing water conservation measures and regional recharge projects to optimize and enhance the use and reliability of regional water resources. Redlands also has a water shortage contingency plan to put into action as appropriate to reduce the demand during critical drought years or other supply emergencies.

A summary of the basis of water year data is presented in Table 4-17. The percent of average supply increases in drought years because Redlands's groundwater production will increase to meet an assumed increase in demands.

Table 4-17: Basis of Water Year Data

YEAR TYPE	BASE YEAR	AVAILABLE SUPPLY IF YEAR TYPE REPEATS AS PERCENT OF AVERAGE SUPPLY
Average Year	2025	100%
Single Dry Year	2025	104%
Consecutive Dry Year 1st Year	2025	104%
Consecutive Dry Year 2nd Year	2025	104%
Consecutive Dry Year 3rd Year	2025	104%
Consecutive Dry Year 4th Year	2025	104%
Consecutive Dry Year 5th Year	2025	104%

The projected supply and demand during a normal year are shown in Figure 4-5. The projected supply and demand during a single dry year are shown in Table 4-18. Redlands' demands in single dry years are assumed to increase by 4% above normal year demands. The local groundwater basins Redlands produces water from have storage for use in dry years so

Redlands can produce the volume of water needed to meet 100% of demands in single dry years. Redlands' supplies are 100% reliable during single dry years.

Table 4-18: DWR 7-3R Single Dry Year Supply and Demand Comparison (AF)

	2030	2035	2040	2045	2050
Supply Totals	30,085	31,193	32,024	32,855	33,687
Demand Totals	30,085	31,193	32,024	32,855	33,687
DIFFERENCE:	-	-	-	-	-

The projected supply and demand during five consecutive dry years are shown in Table 4-19. Redlands' demands in multiple dry years are assumed to increase by 4% above normal year demands. The local groundwater basins Redlands produces water from have storage for use in dry years so Redlands can produce the volume of water needed to meet 100% of demands in multiple dry years. Redlands's supplies are 100% reliable during multiple dry years.

Table 4-19: DWR 7-4R Multiple Dry Years Supply and Demand Comparison (AF)

		2030	2035	2040	2045	2050
FIRST YEAR	Supply Totals	30,085	31,193	32,024	32,855	33,687
	Demand Totals	30,085	31,193	32,024	32,855	33,687
	DIFFERENCE:	-	-	-	-	-
SECOND YEAR	Supply Totals	30,085	31,193	32,024	32,855	33,687
	Demand Totals	30,085	31,193	32,024	32,855	33,687
	DIFFERENCE:	-	-	-	-	-
THIRD YEAR	Supply Totals	30,085	31,193	32,024	32,855	33,687
	Demand Totals	30,085	31,193	32,024	32,855	33,687
	DIFFERENCE:	-	-	-	-	-
FOURTH YEAR	Supply Totals	30,085	31,193	32,024	32,855	33,687
	Demand Totals	30,085	31,193	32,024	32,855	33,687
	DIFFERENCE:	-	-	-	-	-
FIFTH YEAR	Supply Totals	30,085	31,193	32,024	32,855	33,687
	Demand Totals	30,085	31,193	32,024	32,855	33,687
	DIFFERENCE:	-	-	-	-	-

4.6 Drought Risk Assessment

The Drought Risk Assessment focuses on the five-year consecutive drought scenario beginning in 2026. Because Redlands has access to groundwater basins with significant storage, total available supplies do not vary on a monthly or seasonal basis, so this analysis is conducted on an annual basis. Projected demands and supplies from 2026-2030 are shown in Table 4-20.

Demands for 2026-2030 were assumed to increase at a uniform rate between the 2025 actual use and 2030 projected use. The 2025 and 2030 values were increased by 4% to reflect higher anticipated demands during dry years, based on the same methodology when calculating the five-dry consecutive years scenario.

Although projections in this Plan show that the regional water supplies are sufficient to meet the demands of Redlands and the Region as a whole, even during a 5-year drought (see Part 1, Chapter 5 of the 2025 RUWMP), Redlands remains committed to water conservation and to being a good steward of regional water resources to preserve supplies for the future due to the possibility of experiencing more severe droughts than anticipated in this Plan.

Table 4-20: Five-Year Drought Risk Assessment (AF)

2026	Gross Water Use	27,674
	Total Supplies	27,674
	SURPLUS:	-
2027	Gross Water Use	28,277
	Total Supplies	28,277
	SURPLUS:	-
2028	Gross Water Use	28,880
	Total Supplies	28,880
	SURPLUS:	-
2029	Gross Water Use	29,482
	Total Supplies	29,482
	SURPLUS:	-
2030	Gross Water Use	30,085
	Total Supplies	30,085
	SURPLUS:	-

4.7 Water Shortage Contingency Plan

The Water Shortage Contingency Plan (WSCP) is a strategic plan that Redlands uses to prepare for and respond to foreseeable and unforeseeable water shortages. A water shortage occurs when water supply available is insufficient to meet the normally expected customer water use at a given point in time. A shortage may occur due to a number of reasons, such as water supply quality changes, climate change, drought, regional power outage, and catastrophic events (e.g., earthquake). Additionally, the State may declare a statewide drought emergency and mandate that water suppliers reduce demands, as occurred in 2014 and 2022. The WSCP serves as the operating manual that Redlands will use to prevent catastrophic service disruptions through proactive, rather than reactive, mitigation of water shortages. The WSCP provides a process for an annual water supply and demand assessment and structured steps designed to respond to actual conditions. The level of detailed planning and preparation provide accountability and predictability and will help Redlands maintain reliable supplies and reduce the impacts of any supply shortages and/or interruptions.

The WSCP was prepared in conjunction with the 2025 RUWMP and is a standalone document that can be modified as needed. Redlands' WSCP is attached in Part 4 Appendix D of the 2025 RUWMP.

4.8 Demand Management Measures

Redlands is committed to an effective water conservation program and has had a program in place since 1997. The Demand Management Measures (DMMs) section outlines the water conservation framework Redlands has utilized over the past five years, currently is implementing, and plans to implement to reduce demand. By successfully achieving its SBX7-7 targets in 2020 and 2025, Redlands has demonstrated the effectiveness of its conservation strategy. Moving forward, these measures will serve as the foundation for meeting new urban water use objectives and ensuring long-term supply reliability.

4.8.1 Existing Demand Management Measures

Consistent with CWC requirements, the following details the specific demand management measures within the service area. These programs represent Redlands' ongoing commitment to water use efficiency and are designed to maintain consumption levels below established benchmarks. Redlands intends to continue programs for the foreseeable future to provide stable, sustainable water management for all customers.

4.8.1.1 Water Waste Prevention Ordinances

In 1991, Redlands enacted Municipal Code Chapter 13.06 which established Redlands' Water Conservation Plan to address water waste and shortages (see Part 4 Appendix D of the 2025 RUWMP). The ordinance prohibits the unreasonable use of water and assures the maximum beneficial use of water supplies in addition to outlining conservation stages based on water supply availability. However, Stage I requires only voluntary conservation from June 1-October 1 and does not require any specific prohibition of water waste. As State mandates on water use practices increase, Redlands intends to modify the Ordinance by adding additional stages as well as require specific prohibitions of water waste at all times.

4.8.1.2 Metering

Redlands' water distribution system is fully metered and supported by a maintenance and replacement program established in 2008. Following a 2020 accuracy study involving randomized testing, Redlands launched a five-year capital improvement project to replace all inaccurate meters. Currently, Advanced Metering Infrastructure (AMI) is utilized for all customer meters, and Redlands continues to conduct annual testing focused on large meters.

4.8.1.3 Conservation Pricing

Redlands currently uses a traditional tiered rate structure that promotes water conservation at an accurate price for the service provided. The traditional tiered rate structure has two components, a service charge, which is based on meter size, and a commodity charge. The commodity charge is based on the amount of water delivered and increases as the amount of water delivered increases, based on the cost of providing the additional amounts of water. This increase is due to Redlands utilizing its least expensive sources first before using more costly sources. The amount of water available within each of the three tiers is based on a 10-year

average of water utilized from each source. Regardless of the customer type, each customer receives the same amount of water from each tier throughout the year.

4.8.1.4 Public Education and Outreach

Redlands continues to advance its conservation framework through public education and outreach, driven by the mandates of SBX7-7, lessons from recent droughts, and evolving urban water use objectives. This framework reinforces customer responsibility while ensuring Redlands provides the essential educational outreach needed to drive successful conservation.

Redlands uses multiple methods to reach customers and improve engagement in conservation programs and include:

- **High-User Outreach:** Direct notification and consultation for the top 10% of water users.
- **Sustainable Landscapes**: Design and maintenance of four local demonstration gardens to model climate-appropriate landscaping.
- **Regional Collaboration**: Active participation in regional water-saving marketing campaigns.
- **Educational Programming**: Hosting community-wide outreach and instructional events.
- **Direct Billing**: Inclusion of bill messages and year-over-year water use comparison charts.
- **Print Media**: Bulk postcard mailers, Consumer Confidence Report advertisements, and local newspaper placements.
- **Digital Outreach**: Updates via Redlands' website, social media channels, and smartphone app.
- **Physical Signage**: Electronic signboards, street banners, and a consistent presence at community events.

In 2017, Redlands created an educational program focused on educating children on water waste and efficiency outdoors. The program is built on the story of sibling alligators--Ira the irriGATOR and Eva the investiGATOR, who go on adventures to teach children about proper outdoor irrigation techniques for turf and low water use plants and how to identify water waste. Approximately 70% of water use in Redlands is attributed to outdoor irrigation. This campaign expects to yield long-term water savings as its focus assists in shifting mindsets to view water efficiency and water saving landscapes as the "new normal" for California.

In addition, Redlands prioritizes resident education through on-site technical assistance, including Irrigation Timer Scheduling and Water Use Analysis. These programs help customers understand their water meter, usage, and optimal irrigation scheduling.

4.8.1.5 Programs to Assess and Manage Distribution System Water Loss

From 2019 to 2025, Redlands replaced approximately 29 miles of pipeline to maintain reliability of the distribution system. As a result of the aggressive water pipeline replacement program, approximately 50 leaks occur each year on the distribution mainlines. Additionally, conducting

the annual water loss audits has allowed Redlands to identify areas needing improvement and develop plans to further reduce system water loss.

4.8.1.6 Water Conservation Program Coordination and Staffing Support

Redlands' water conservation program currently staffs two full-time employees. One full-time staff person has been dedicated to water conservation since 2007. Since 2015, one additional full-time staff has been added to assist with implementing and enforcing water conservation mandates.

Efforts to implement these DMM's have been both significant and successful. Since implementation of State restrictions in 2014, Redlands has nearly tripled its water conservation budget. From 2020 to 2025, over $1.8 million has been spent on conservation rebates, messaging, and programs. Additionally, Redlands has watering restrictions in place with active enforcement by our water waste investigators, which has resulted in the issuance of about 250 violations during the last five years.

4.8.2 Other Demand Management Measures

Redlands also maintains a robust rebate program which includes:

- Weather Based Irrigation Controllers (WBIC's)
- Drought Tolerant Lawn Conversions
- Synthetic Turf Replacement
- Water Efficient Clothes Washers
- High Efficiency Sprinkler Nozzles
- High Efficiency Toilets

Additionally, Redlands offers free water saving products to customers to assist in water conservation. These products have included:

- Hose nozzles
- Toilet leak detection tablets
- Lawn/plant moisture meters
- Low water use plants (at local events)
- Shower timers
- Faucet aerators
- Water efficiency educational collateral

From 2020 to 2025, over 515 devices have been issued to customers.

Redlands is also removing all turf from the remaining Redlands-owned medians and converting over 200 Redlands-operated irrigation controllers to weather-based irrigation controllers connected to a centralized system. Significant water savings are anticipated from this conversion as these controllers control the irrigation for large areas of Redlands-owned right of way, trails, facilities, parks, and community fields.

4.9 Adoption, Submittal, and Implementation

This section describes Redlands' process for adopting, submitting, and implementing the 2025 RUWMP and Redlands' WSCP.

4.9.1 Notice of Public Hearing

A joint notice was provided on behalf of all agencies whose 2025 UWMPs are part of the 2025 Regional Urban Water Management Plan (RUWMP) to all cities and counties and other stakeholders within the region that the 2025 RUWMP is being prepared for. This notice was sent at least 60 days prior to Redlands' public hearing. The recipients are identified in Part 1, Chapter 1 of the 2025 RUWMP and include all cities and counties within Redlands' service area. A second notice was provided to these cities and counties with the date and time of the public hearing and the location where the report was available for review.

Redlands provided notice to the public through its website and published announcements of the public hearing in a newspaper on two occasions before the hearing. Copies of the proof of publication are included in Part 4 Appendix D of the 2025 RUWMP.

4.9.2 Public Hearing and Adoption

Redlands held a public hearing on June 2, 2026, to hear public comment and consider adopting this 2025 RUWMP and Redlands' WSCP.

As part of the public hearing, Redlands provided information on their baseline values, water use targets and compliance, and implementation plan required in the Water Conservation Act of 2009. The public hearing on the 2025 RUWMP took place before the adoption of the Plan, which allowed Redlands the opportunity to modify the 2025 RUWMP in response to any public input before adoption. After the hearing, the Plan was adopted as prepared or as modified after the hearing.

Redlands' adoption resolution for the 2025 RUWMP and Redlands' WSCP is included in Part 4 Appendix D of the 2025 RUWMP.

4.9.3 Plan Submittal

Redlands will submit the 2025 RUWMP and Redlands's WSCP to DWR, the State Library, and cities and counties within 30 days after adoption. The 2025 RUWMP submittal to DWR will be done electronically through WUEdata, an online submittal tool.

4.9.4 Public Availability

No later than 30 days after filing a copy of its Plan with DWR, Redlands will make the plan available for public review during normal business hours in the City's Municipal Utilities and Engineering Department located at 35 Cajon Street, Suite 15 A, Redlands, California 92373, and by posting the plans on the City's website for public viewing.

4.9.5 Amending an Adopted UWMP or Water Shortage Contingency Plan

If the adopted 2025 RUWMP or Redlands' WSCP is amended, each of the steps for notification, public hearing, adoption, and submittal will also be followed for the amended plan.

Subject: Notice of Preparation of the 2025 San Bernardino Valley Regional Urban Water Management Plan and Water Shortage Contingency Plan

Dear Regional Stakeholder,

San Bernardino Valley Municipal Water District and its partners (Participating Agencies) are in the process of preparing the 2025 San Bernardino Valley Regional Urban Water Management Plan (RUWMP) and Water Shortage Contingency Plan (WSCP) in compliance with the Urban Water Management Planning Act. An update of the San Bernardino Valley Municipal Water District and its Participating Agencies' UWMP is required every five (5) years.

Water Code section 10621(b) requires an urban water supplier updating its UWMP and WSCP to notify cities and counties within its service area of the update at least sixty (60) days prior to holding a public hearing thereby encouraging public involvement and agency coordination. This letter serves as notice that the Participating Agencies that are using the 2025 RUWMP, plan to adopt and submit the 2025 RUMWP by July 1st, 2026. The Participating Agencies will also be adopting their respective updated WSCPs as part of the 2025 RUWMP.

A copy of the 2025 RUWMP, which will include the WSCPs for each of the Participating Agencies, will be available for review prior to the public hearing and adoption meeting on the Participating Agencies' websites. Each Participating Agency will hold an individual public hearing on their respective chapters of the 2025 RUWMP and WSCP. The public hearings will be noticed and announced by each Participating Agencies' public meeting agenda; each agency's website address is shown in the table below.

RECITALS

a. Complaint. The complaint herein was filed on October 18, 1963, seeking an adjudication of water rights against substantially all water users in the area tributary to Prado Dam in the Santa Ana River Watershed.

b. Cross-Complaints. Thirteen cross-complaints were subsequently filed in the period of February 22 to March 22, 1968, by which said adjudication of rights was extended to substantially all water users within the Santa Ana River Watershed downstream from Prado Dam.

c. Physical and Legal Complexities. The physical and legal complexities of the case as framed by the complaint and cross-complaints are unprecedented. In excess of 4,000 individual parties have been served and the water supply and water rights of an entire stream system extending over 2,000 square miles and into four counties have been brought into issue. Every type and nature of water rights known to California law, excepting only Pueblo rights, is in issue in the case. Engineering studies by the parties jointly and severally leading toward adjudication of these rights or, in the alternative, to a physical solution, have required the expenditure of over four years' time and many hundreds of thousands of dollars.

d. Need for Physical Solution. It is apparent to the parties and to the Court that development of a physical solution based upon a formula for inter-basin allocation of obligations and rights is in the best interests of all the parties and is in furtherance of the water policy of the State. For purposes of such a physical solution, it is neither necessary nor helpful to define individual rights of all claimants within the watershed. Nontributary supplemental sources of water are or will be available to the parties in quantities sufficient to assure implementation of a solution involving inter-basin allocation of the natural water

supply of the Santa Ana River system. Sufficient information and data of a general nature are known to formulate a reasonable and just allocation as between the major hydrologic sub-areas within the watershed, and such a physical solution will allow the public agencies and water users within each such major hydrologic sub-area to proceed with orderly water resource planning and development.

e. Parties. Orange County Water District, Chino Basin Municipal Water District, Western Municipal Water District of Riverside County and San Bernardino Valley Municipal Water District are public districts overlying, in the aggregate, substantially all of the major areas of water use within the watershed. Said districts have the statutory power and financial resources to implement a physical solution. Accordingly, dismissals have been entered as to all defendants and cross-defendants other than said four public districts.

f. Cooperation by Dismissed Parties. As a condition of dismissal of said defendants and cross-defendants, certain of said parties have stipulated to cooperate and support the inter-basin water quality and water management objectives of the physical solution and this Judgment.

DECREE

NOW, THEREFORE, IT IS HEREBY ORDERED, ADJUDGED AND DECREED:

1. Jurisdiction. The Court has jurisdiction of the subject matter of this action and of the parties herein.

2. Exhibits. The following exhibits are attached to this Judgment and made a part hereof.

(a) Exhibit A -- map entitled "Santa Ana River Watershed", showing boundaries and other relevant features of the area subject to this Judgment.

(b) Exhibit B -- Engineering Appendix.

3. Definitions. As used in this Judgment, the following

terms shall have the meanings herein set forth:

(a) OCWD -- Orange County Water District, appearing and acting individually and in a representative capacity for and on behalf of all riparian, overlying and other landowners, water users and inhabitants within said District pursuant to Subdivision 7 of Section 2 of the Orange County Water District Act, as amended.

(b) CBMWD -- Chino Basin Municipal Water District, appearing and acting pursuant to Section 71751 of the California Water Code.

(c) WMWD -- Western Municipal Water District of Riverside County, appearing and acting pursuant to said Section 71751.

(d) SBVMWD -- San Bernardino Valley Municipal Water District, appearing and acting pursuant to said Section 71751.

Eastern not included

(e) Upper Districts -- CBMWD, WMWD and SBVMWD.

(f) Upper Area -- The area on Exhibit A which lies upstream from Prado.

(g) Lower Area -- The area on Exhibit A which lies downstream from Prado.

(h) Prado -- Said term shall be synonomous with Prado Dam, a facility constructed and maintained by the United States Corps of Engineers, as shown on Exhibit A.

(i) Riverside Narrows -- That bedrock narrows in the Santa Ana River indicated as such on Exhibit A.

(j) Storm Flow -- That portion of the total surface flow passing a point of measurement, which originates from precipitation and runoff without having first percolated to ground water storage in the zone of saturation, calculated in accordance with procedures

referred to in Exhibit B.

(k) Base Flow -- That portion of the total surface flow passing a point of measurement, which remains after deduction of Storm Flow, and modified as follows:

(1) At Prado. Base Flow shall:

(i) include any water caused to be delivered by CBMWD or WMWD directly to OCWD, pursuant to its direction and control and not measured at the gages at Prado;

(ii) exclude any nontributary water or reclaimed sewage water purchased by OCWD and delivered into the river upstream and which subsequently passes Prado, and

(iii) exclude water salvaged from evapo-transpiration losses by OCWD on lands presently owned by it above Prado.

(2) At Riverside Narrows. Base Flow shall:

(i) include any water caused to be delivered by SBVMWD directly to CBMWD or WMWD pursuant to their direction and control, or directly to OCWD with the consent of CBMWD and WMWD and pursuant to the direction and control of OCWD, and not measured at the gage at Riverside Narrows;

(ii) exclude any nontributary water purchased by CBMWD, WMWD or OCWD and delivered into the river upstream and which subsequently passes Riverside Narrows; and

(iii) exclude any effluent discharged from the City of Riverside sewage treatment plant.

(l) TDS -- Total dissolved solids determined as set forth in Exhibit B.

(m) Water Year -- The period from October 1 to the following September 30. Where reference is made herein to "year" or "annual", such terms shall be construed as referring to Water Year, unless the context indicates otherwise.

(n) Adjusted Base Flow -- Actual Base Flow in each year adjusted for quality as provided hereinbelow. Compliance with the respective obligations under Paragraph 5 shall be measured by the Adjusted Base Flow.

4. Declaration of Rights. Substantially all of the parties to this action, whether situate in Upper Area or Lower Area have or claim rights to the use of a portion of the water supply of the Santa Ana River system. In the aggregate, water users and other entities in Lower Area have rights, as against all Upper Area claimants, to receive an average annual supply of 42,000 acre feet of Base Flow at Prado, together with the right to all Storm Flow reaching Prado Reservoir. Water users and other entities in Upper Area have rights in the aggregate, as against all Lower Area claimants, to divert, pump, extract, conserve, store and use all surface and ground water supplies originating within Upper Area without interference or restraint by Lower Area claimants, so long as Lower Area receives the water to which it is entitled under this Judgment and there is compliance with all of its provisions.

5. Physical Solution. The Court hereby declares the following physical solution to be a fair and equitable basis for satisfaction of all said rights in the aggregate between Lower Area and Upper Area. The parties are hereby ordered and directed to comply with this Physical Solution and such compliance shall constitute full and complete satisfaction of the rights declared in

Paragraph 4 hereof.

(a) General Format. In general outline, SBVMWD shall be responsible for the delivery of an average annual amount of Base Flow at Riverside Narrows. CBMWD and WMWD shall jointly be responsible for an average annual amount of Base Flow at Prado. Insofar as Lower Area claimants are concerned, Upper Area water users and other entities may engage in unlimited water conservation activities, including spreading, impounding and other methods, in the area above Prado Reservoir, so long as Lower Area receives the water to which it is entitled under the Judgment and there is compliance with all of its provisions. Lower Area water users and other entities may make full conservation use of Prado Dam and reservoir, subject only to flood control use.

(b) Obligation of SBVMWD. SBVMWD shall be responsible for an average annual Adjusted Base Flow of 15,250 acre feet at Riverside Narrows. A continuing account, as described in Exhibit B, shall be maintained of actual Base Flow at Riverside Narrows, with all adjustments thereof and any cumulative debit or credit. Each year the obligation to provide Base Flow shall be subject to the following:

(1) Minimum Annual Quantities. Without regard to any cumulative credits, or any adjustment for quality for the current Water Year under subparagraph (2) hereof, SBVMWD each year shall be responsible at Riverside Narrows for not less than 13,420 acre feet of Base Flow plus one-third of any cumulative debit; provided, however, that for any year

commencing on or after October 1, 1986, when there is no cumulative debit, or for any year prior to 1986 whenever the cumulative credit exceeds 10,000 acre feet, said minimum shall be 12,420 acre feet.

(2) Adjustment for Quality. The amount of Base Flow at Riverside Narrows received during any year shall be subject to adjustment based upon the weighted average annual TDS in such Base Flow, as follows:

If the Weighted Average TDS in Base Flow at Riverside Narrows is:	Then the Adjusted Base Flow shall be determined by the formula:
Greater than 700 ppm	$Q - \frac{11}{15,250} Q\ (TDS-700)$
600 ppm - 700 ppm	Q
Less than 600 ppm	$Q + \frac{11}{15,250} Q\ (600-TDS)$

Where: Q = Base Flow actually received.

(3) Periodic Reduction of Cumulative Debit. At least once in any ten (10) consecutive years subsequent to October 1, 1976, SBVMWD shall provide sufficient quantities of Base Flow at Riverside Narrows to discharge completely any cumulative debits. Any cumulative credits shall remain on the books of account until used to offset any subsequent debits, or until otherwise disposed of by SBVMWD.

(c) Obligation of CBMWD and WMWD. CBMWD and WMWD shall be responsible for an average annual Adjusted Base Flow of 42,000 acre feet at Prado. A continuing account, as described in Exhibit B, shall

(l) TDS -- Total dissolved solids determined as set forth in Exhibit B.

(m) Water Year -- The period from October 1 to the following September 30. Where reference is made herein to "year" or "annual", such terms shall be construed as referring to Water Year, unless the context indicates otherwise.

(n) Adjusted Base Flow -- Actual Base Flow in each year adjusted for quality as provided hereinbelow. Compliance with the respective obligations under Paragraph 5 shall be measured by the Adjusted Base Flow.

4. Declaration of Rights. Substantially all of the parties to this action, whether situate in Upper Area or Lower Area have or claim rights to the use of a portion of the water supply of the Santa Ana River system. In the aggregate, water users and other entities in Lower Area have rights, as against all Upper Area claimants, to receive an average annual supply of 42,000 acre feet of Base Flow at Prado, together with the right to all Storm Flow reaching Prado Reservoir. Water users and other entities in Upper Area have rights in the aggregate, as against all Lower Area claimants, to divert, pump, extract, conserve, store and use all surface and ground water supplies originating within Upper Area without interference or restraint by Lower Area claimants, so long as Lower Area receives the water to which it is entitled under this Judgment and there is compliance with all of its provisions.

5. Physical Solution. The Court hereby declares the following physical solution to be a fair and equitable basis for satisfaction of all said rights in the aggregate between Lower Area and Upper Area. The parties are hereby ordered and directed to comply with this Physical Solution and such compliance shall constitute full and complete satisfaction of the rights declared in

Paragraph 4 hereof.

(a) General Format. In general outline, SBVMWD shall be responsible for the delivery of an average annual amount of Base Flow at Riverside Narrows. CBMWD and WMWD shall jointly be responsible for an average annual amount of Base Flow at Prado. Insofar as Lower Area claimants are concerned, Upper Area water users and other entities may engage in unlimited water conservation activities, including spreading, impounding and other methods, in the area above Prado Reservoir, so long as Lower Area receives the water to which it is entitled under the Judgment and there is compliance with all of its provisions. Lower Area water users and other entities may make full conservation use of Prado Dam and reservoir, subject only to flood control use.

(b) Obligation of SBVMWD. SBVMWD shall be responsible for an average annual Adjusted Base Flow of 15,250 acre feet at Riverside Narrows. A continuing account, as described in Exhibit B, shall be maintained of actual Base Flow at Riverside Narrows, with all adjustments thereof and any cumulative debit or credit. Each year the obligation to provide Base Flow shall be subject to the following:

(1) Minimum Annual Quantities. Without regard to any cumulative credits, or any adjustment for quality for the current Water Year under subparagraph (2) hereof, SBVMWD each year shall be responsible at Riverside Narrows for not less than 13,420 acre feet of Base Flow plus one-third of any cumulative debit; provided, however, that for any year

commencing on or after October 1, 1986, when there is no cumulative debit, or for any year prior to 1986 whenever the cumulative credit exceeds 10,000 acre feet, said minimum shall be 12,420 acre feet.

(2) Adjustment for Quality. The amount of Base Flow at Riverside Narrows received during any year shall be subject to adjustment based upon the weighted average annual TDS in such Base Flow, as follows:

If the Weighted Average TDS in Base Flow at Riverside Narrows is:	Then the Adjusted Base Flow shall be determined by the formula:
Greater than 700 ppm	$Q - \frac{11}{15,250} Q (TDS-700)$
600 ppm - 700 ppm	Q
Less than 600 ppm	$Q + \frac{11}{15,250} Q (600-TDS)$

Where: Q = Base Flow actually received.

(3) Periodic Reduction of Cumulative Debit. At least once in any ten (10) consecutive years subsequent to October 1, 1976, SBVMWD shall provide sufficient quantities of Base Flow at Riverside Narrows to discharge completely any cumulative debits. Any cumulative credits shall remain on the books of account until used to offset any subsequent debits, or until otherwise disposed of by SBVMWD.

(c) Obligation of CBMWD and WMWD. CBMWD and WMWD shall be responsible for an average annual Adjusted Base Flow of 42,000 acre feet at Prado. A continuing account, as described in Exhibit B, shall

be maintained of actual Base Flow at Prado, with all adjustments thereof and any cumulative debit or credit. Each year the obligation to provide Base Flow shall be subject to the following:

(1) Minimum Annual Quantities. Without regard to any cumulative credits, or any adjustments for quality for the current Water Year under subparagraph (2) hereof, CBMWD and WMWD each year shall be responsible for not less than 37,000 acre feet of Base Flow at Prado, plus one-third of any cumulative debit; provided, however, that for any year commencing on or after October 1, 1986, when there is no cumulative debit, or for any year prior to 1986 whenever the cumulative credit exceeds 30,000 acre feet, said minimum shall be 34,000 acre feet.

(2) Adjustment for Quality. The amount of Base Flow at Prado received during any year shall be subject to adjustment based upon the weighted average annual TDS in Base Flow and Storm Flow at Prado as follows:

If the Weighted Average TDS in Base Flow and Storm Flow at Prado is:	Then the Adjusted Base Flow shall be determined by the formula:
Greater than 800 ppm	$Q - \frac{35}{42,000} Q\ (TDS-800)$
700 ppm - 800 ppm	Q
Less than 700 ppm	$Q + \frac{35}{42,000} Q\ (700-TDS)$

Where: Q = Base Flow actually received.

(3) Periodic Reduction of Cumulative Debit. At least once in ten (10) consecutive years subsequent to October 1, 1976, CBMWD and WMWD shall

provide sufficient quantities of Base Flow at Prado to discharge completely any cumulative debits. Any cumulative credits shall remain on the books of account until used to offset any subsequent debits, or until otherwise disposed of by CBMWD and WMWD.

(d) Inter-basin Export. Upper Districts are hereby restrained and enjoined from exporting water from Lower Area to Upper Area, directly or indirectly. OCWD is enjoined and restrained from pumping, producing and exporting or directly or indirectly causing water to flow from Upper to Lower Area, except as to salvage of evapo-transpiration losses, as follows: OCWD owns certain lands within and above Prado Reservoir on which it has or claims certain rights to salvage evapo-transpiration losses by pumping or otherwise. Pumping for said salvage purposes shall not exceed 5,000 acre feet of ground water in any water year. Only the actual net salvage, as determined by the Watermaster, shall be excluded from Base Flow.

(e) Inter-basin Acquisition of Rights. The acquisition by Upper Districts or other Upper Area entities of Lower Area water rights shall in no way affect or reduce Lower Area's entitlement; and the acquisition of Upper Area water rights by OCWD or other Lower Area entities shall be deemed to be included within the aggregate entitlement of Lower Area and shall not increase said entitlement.

(f) Effective Date. Obligations under this physical solution shall accrue from and after October 1, 1970.

6. Prior Adjudications. So long as SBVMWD is in

commencing on or after October 1, 1986, when there is no cumulative debit, or for any year prior to 1986 whenever the cumulative credit exceeds 10,000 acre feet, said minimum shall be 12,420 acre feet.

(2) Adjustment for Quality. The amount of Base Flow at Riverside Narrows received during any year shall be subject to adjustment based upon the weighted average annual TDS in such Base Flow, as follows:

If the Weighted Average TDS in Base Flow at Riverside Narrows is:	Then the Adjusted Base Flow shall be determined by the formula:
Greater than 700 ppm	$Q - \frac{11}{15,250} Q\ (TDS-700)$
600 ppm - 700 ppm	Q
Less than 600 ppm	$Q + \frac{11}{15,250} Q\ (600-TDS)$

Where: Q = Base Flow actually received.

(3) Periodic Reduction of Cumulative Debit. At least once in any ten (10) consecutive years subsequent to October 1, 1976, SBVMWD shall provide sufficient quantities of Base Flow at Riverside Narrows to discharge completely any cumulative debits. Any cumulative credits shall remain on the books of account until used to offset any subsequent debits, or until otherwise disposed of by SBVMWD.

(c) Obligation of CBMWD and WMWD. CBMWD and WMWD shall be responsible for an average annual Adjusted Base Flow of 42,000 acre feet at Prado. A continuing account, as described in Exhibit B, shall

be maintained of actual Base Flow at Prado, with all adjustments thereof and any cumulative debit or credit. Each year the obligation to provide Base Flow shall be subject to the following:

(1) Minimum Annual Quantities. Without regard to any cumulative credits, or any adjustments for quality for the current Water Year under subparagraph (2) hereof, CBMWD and WMWD each year shall be responsible for not less than 37,000 acre feet of Base Flow at Prado, plus one-third of any cumulative debit; provided, however, that for any year commencing on or after October 1, 1986, when there is no cumulative debit, or for any year prior to 1986 whenever the cumulative credit exceeds 30,000 acre feet, said minimum shall be 34,000 acre feet.

(2) Adjustment for Quality. The amount of Base Flow at Prado received during any year shall be subject to adjustment based upon the weighted average annual TDS in Base Flow and Storm Flow at Prado as follows:

If the Weighted Average TDS in Base Flow and Storm Flow at Prado is:	Then the Adjusted Base Flow shall be determined by the formula:
Greater than 800 ppm	$Q - \frac{35}{42,000} Q\ (TDS-800)$
700 ppm - 800 ppm	Q
Less than 700 ppm	$Q + \frac{35}{42,000} Q\ (700-TDS)$

Where: Q = Base Flow actually received.

(3) Periodic Reduction of Cumulative Debit. At least once in ten (10) consecutive years subsequent to October 1, 1976, CBMWD and WMWD shall

provide sufficient quantities of Base Flow at Prado to discharge completely any cumulative debits. Any cumulative credits shall remain on the books of account until used to offset any subsequent debits, or until otherwise disposed of by CBMWD and WMWD.

(d) Inter-basin Export. Upper Districts are hereby restrained and enjoined from exporting water from Lower Area to Upper Area, directly or indirectly. OCWD is enjoined and restrained from pumping, producing and exporting or directly or indirectly causing water to flow from Upper to Lower Area, except as to salvage of evapo-transpiration losses, as follows: OCWD owns certain lands within and above Prado Reservoir on which it has or claims certain rights to salvage evapo-transpiration losses by pumping or otherwise. Pumping for said salvage purposes shall not exceed 5,000 acre feet of ground water in any water year. Only the actual net salvage, as determined by the Watermaster, shall be excluded from Base Flow.

(e) Inter-basin Acquisition of Rights. The acquisition by Upper Districts or other Upper Area entities of Lower Area water rights shall in no way affect or reduce Lower Area's entitlement; and the acquisition of Upper Area water rights by OCWD or other Lower Area entities shall be deemed to be included within the aggregate entitlement of Lower Area and shall not increase said entitlement.

(f) Effective Date. Obligations under this physical solution shall accrue from and after October 1, 1970.

6. Prior Adjudications. So long as SBVMWD is in

compliance with the terms of the physical solution herein, OCWD is enjoined and restrained from enforcing the judgments listed below against SBVMWD or any entities within or partially within SBVMWD which have stipulated to accept and adopt such physical solution. So long as WMWD and CBMWD are in compliance with the terms of the physical solution, OCWD is enjoined and restrained from enforcing the judgments listed below against WMWD and CBMWD or any entities within or partially within WMWD or CBMWD which have stipulated to accept and adopt such physical solution.

(a) The Irvine Company, plaintiff, Orange County Water District, intervenor, vs. San Bernardino Valley Water Conservation District, et al., defendants, U. S. Dist. Ct., S.D. Cal. Civ. No. Y-36-M, judgments entered September 11, 1942 (Judgment Book 11 page 134), and recorded Book 1540 page 251 and Book 1541 page 85, Official Records of San Bernardino County.

(b) Orange County Water District vs. City of Riverside, et al., San Bernardino Superior Court No. 84671.

7. Watermaster. The Watermaster, when appointed by the Court, shall administer and enforce the provisions of this Judgment and the instructions and subsequent orders of this Court.

(a) Composition, Nomination and Appointment. The Watermaster shall consist of a committee composed of five (5) persons. CBMWD, WMWD and SBVMWD shall each have the right to nominate one representative and OCWD shall have the right to nominate two (2) representatives to the Watermaster committee. Each such nomination shall be made in writing, served upon the other parties to the Stipulation for this Judgment and filed with the Court. Said Watermaster representatives shall be appointed by and serve at

the pleasure of and until further order of this Court.

(b) Watermaster Determinations. Each and every finding and determination of the Watermaster shall be made in writing certified to be by unanimous action of all members of the Watermaster Committee. In the event of failure or inability of said Watermaster Committee to reach unanimous agreement, the fact, issue, or determination in question shall forthwith be certified to this Court by the Watermaster, and after due notice to the parties and opportunity for hearing, said matter shall be determined by order of this Court.

(c) Annual Report. The Watermaster shall report to the Court and to each party in writing not more than five (5) months after the end of each Water Year, each of the items required by Paragraph 4 of the Engineering Appendix, Exhibit B hereto, and such other items as the parties may mutually request or the Watermaster may deem to be appropriate. All of the books and records of the Watermaster which are used in the preparation of, or are relevant to, such reported data, determinations and reports shall be open to inspection by the parties to the Stipulation for Judgment herein.

(d) Watermaster Service Expenses. The fees, compensation and expenses of each representative on the Watermaster shall be borne by the district which nominated such person. All other Watermaster service costs and expenses shall be borne by the parties in the following proportions:

OCWD - 40%

CBMWD - 20%

SBVMWD - 20%

WMWD - 20%

The Watermaster may from time to time in its discretion require advances of operating capital from the parties in said proportions.

8. Continuing Jurisdiction of the Court. Full jurisdiction, power and authority are retained and reserved by the Court for the purpose of enabling the Court, upon application of any party or of the Watermaster by motion and upon at least 30 days' notice thereof, and after hearing thereon:

(a) To make such further or supplemental orders or directions as may be necessary or appropriate for the construction, enforcement or carrying out of this Judgment, and

(b) To modify, amend or amplify any of the provisions of this Judgment whenever substantial changes or developments affecting the physical, hydrological or other conditions dealt with herein may, in the Court's opinion, justify or require such modification, amendment or amplification; provided, however, that no such modification, amendment or amplification shall change or alter (1) the average annual obligation of CBMWD and WMWD for delivery of 42,000 acre feet of Base Flow per year at Prado, (2) the average annual obligation of SBVMWD for delivery of 15,250 acre feet of Base Flow per year at Riverside Narrows, (3) the respective minimum Base Flows at Riverside Narrows and Prado, nor (4) the right of the parties to this Judgment or of those who stipulate to accept and adopt the physical solution herein to conserve or store flows.

9. Notices. All notices, requests, objections, reports and other papers permitted or required by the terms of this

Judgment shall be given or made by written document and shall be served by mail on each party and its attorney entitled to notice and where required or appropriate, on the Watermaster. For all purposes of this paragraph, the mailing address of each party and attorney entitled to notice shall be that set forth below its signature in the Stipulation for Judgment, until changed as provided below. If any party or attorney for a party desires to change its designation of mailing address, it shall file a written notice of such change with the Clerk of this Court and shall serve a copy thereof by mail on the Watermaster. Upon receipt of any such notice, the Watermaster shall promptly give written notice thereof. Watermaster addresses for notice purposes shall be as specified in the orders appointing each representative on the Watermaster.

10. Successors. No party shall dissolve, nor shall it abandon or transfer all or substantially all of its powers or property, without first providing for its obligations under this Judgment to be assumed by a successor public agency, with the powers and resources to perform hereunder. Any such successor shall be approved by the Court after notice to all parties and an opportunity for hearing.

11. Future Actions. In the event that any Lower Area claimant shall in the future obtain from any court of competent jurisdiction a decree awarding to such claimant a right to receive a stated amount of water from the Upper Area for use in the Lower Area, any water delivered pursuant to such decree shall be considered as part of Base Flow. In the event that the relief obtained by any such claimant is in the form of a restriction imposed upon production and the use of water in Upper Area, rather than a right to receive a stated amount of water, then notwithstanding the proviso in Paragraph 8, any Upper District may apply to the Court to modify the physical solution herein.

12. Costs. None of the parties shall recover any costs from any other party.

ENGINEERING APPENDIX

The purpose of the Engineering Appendix is to establish the basis for measurements, calculations and determinations required in the operation of the physical solution.

1. Measurements.

In administering the physical solution, it will be necessary to determine the quantity and quality of stream flow and flow in pipelines or other conveyance facilities at several points along the Santa Ana River. Watermaster shall make, or obtain from United States Geological Survey (USGS), flood control districts or other entities, all measurements necessary for making the determinations required by the Judgment.

a. Change in Measuring Device or Location. If any measuring device used or useful in making such determinations is inoperative, abandoned, changed or moved, Watermaster shall estimate the quantity that would have been measured at the station had it been operative at its original location, or may use a substitute device or location.

b. Erroneous Measurement. If Watermaster determines there is an error in any measurement or record, he may utilize his estimate in lieu of said measurement or record.

c. Preliminary Records. Watermaster may utilize preliminary records of measurement. If revisions are subsequently made in the records, Watermaster may reflect such changes in subsequent accounting.

2. Determination of Flow Components.

Since the records available only provide data on the total quantity of surface flow and since storm runoff occurs during and following periods of rainfall, Watermaster must determine what portion of total measured surface flow at Prado and at Riverside

Narrows is Storm Flow and what portion is Base Flow.

Under paragraph 3(k) of the Judgment, certain categories of water are to be included or excluded from Base Flow. As such waters may or may not be measured by the USGS gages at Prado and/or Riverside Narrows, Watermaster must make appropriate adjustments to account for the same.

The parties, in reaching the physical solution provided for in the Judgment, used certain procedures to separate or scalp the Storm Flow from the total measured surface flow and to determine Base Flow. These procedures are reflected in the Work Papers of the engineers, bound copies of which shall be filed with the Watermaster. Watermaster shall use either the same procedures or procedures which will give equivalent results, giving due consideration to all sources of the surface flow measured at the gages, to changes in the amounts and the proportionate contributions of each source, and to changes in location of measuring points.

3. Water Quality Determinations.

It will be necessary to determine for each water year the weighted average Total Dissolved Solids (TDS) content of the Base Flow at Riverside Narrows and of the total flow at Prado.

TDS shall be determined by the method set forth under "B. Filterable Residual", starting on page 245 of Standard Methods for Examination of Water and Wastewater, Twelfth Edition, 1965, Library of Congress Catalog Card No. 55-1979. The drying temperature shall be 180° centigrade. Milligrams per liter (mg/l) shall be deemed equivalent to parts per million (ppm) for purposes of the Judgment.

a. Procedure at Prado.

(1) Determinations of the electrical conductivity at 25°C. near the gaging station at Prado shall be made or obtained.

(2) A sufficient number of determinations of TDS of the flow at the same point shall be

made or obtained to provide the relationship between TDS and electrical conductivity for all rates of flow. This relationship shall be used to determine the average daily TDS weighted by flow, for each day of the year. During periods of Storm Flow, samples shall be taken at least daily.

(3) The annual weighted average TDS of all waters passing Prado shall be determined. Any direct deliveries or flows which are included or excluded in the definition of Base Flow as set forth in paragraph 3(k) of the Judgment, shall be similarly included or excluded in the calculation of the annual weighted average TDS.

b. Procedure at Riverside Narrows. The procedure to adjust Base Flow at Riverside Narrows shall be the same as that outlined in paragraph a. above, except that the annual weighted average TDS of Base Flow only is to be determined. Therefore during periods of Storm Flow, the TDS of Base Flow shall be estimated.

4. Accounting.

Utilizing the appropriate obligations set forth in the Judgment and the measurements, calculations and determinations described in this Engineering Appendix, Watermaster shall maintain a continuing account for each year of the following items.

a. Prado Accounting.

(1) Base Flow at Prado. See Paragraph 2 of this Engineering Appendix and Paragraph 3(k) of the Judgment.

(2) Annual Weighted TDS of Total Flow at Prado. See Paragraph 3a of this Engineering Appendix.

(3) Annual Adjusted Base Flow. See Paragraph 5(c)(2) of the Judgment and items (1) and (2) above.

(4) Cumulative Adjusted Base Flow. This is the cumulation of quantities shown in item (3) above.

(5) Cumulative Entitlement of OCWD at Prado. This is the product of 42,000 acre feet multiplied by the number of years after October 1, 1970.

(6) Cumulative Credit or Debit. This is item (4) minus item (5).

(7) One-third of Cumulative Debit. This is equal to one-third of any cumulative debit shown in item (6) above.

(8) Minimum Required Base Flow in Following Year. This is the minimum quantity of Base Flow at Prado which CBMWD and WMWD must jointly cause to occur in the following year determined in accordance with paragraph 5(c)(1) of the Judgment and utilizing item (7) above.

b. Riverside Narrows Accounting.

(1) Base Flow at Riverside Narrows. See Paragraph 2 of this Engineering Appendix and Paragraph 3(k) of the Judgment.

(2) Annual Weighted TDS of Base Flow at Riverside Narrows. See Paragraph 3b of this Engineering Appendix.

(3) Annual Adjusted Base Flow. See

Paragraph 5(b)(2) of the Judgment and items (1) and (2) above.

(4) Cumulative Adjusted Base Flow. This is the cumulation of quantities shown in item (3) above.

(5) Cumulative Entitlement of CBMWD and WMWD at Riverside Narrows. This is the product of 15,250 acre feet multiplied by the number of years after October 1, 1970.

(6) Cumulative Credit or Debit. This is item (4) minus item (5).

(7) One-third of Cumulative Debit. This is equal to one-third of any cumulative debit shown in item (6) above.

(8) Minimum Required Base Flow in Following Year. This is the minimum quantity of Base Flow at Riverside Narrows which SBVMWD must cause to occur in the following year determined in accordance with Paragraph 5(b)(1) of the Judgment and utilizing item (7) above.

RECITALS

(a) Complaint. The complaint in this action was filed by certain parties exporting water from the area defined herein as the San Bernardino Basin Area for use within Western, and sought a general adjudication of water rights.

(b) Orange County Water District Action. Subsequently the Orange County Water District filed an action for the adjudication of the water rights of substantially all water users in the area tributary to Prado Dam in the Santa Ana River Watershed. A decree of physical solution has been entered in such action whereby individual water users were dismissed, and San Bernardino Valley and Western assumed responsibility for the deliveries of certain flows at Riverside Narrows and Prado respectively.

(c) Physical Solution. The Judgment herein will further implement the physical solution in the Orange County Water District action, as well as determine the rights of the hereinafter named Plaintiffs to extract water from the San Bernardino Basin Area, and provide for replenishment of the area above Riverside Narrows. Such Judgment is fair and equitable, in the best interests of the parties, and in furtherance of the water policy of the State. San Bernardino Valley has the statutory power and resources to effectuate this Judgment and accordingly the other defendants may be dismissed.

(d) Stipulation. The parties named herein through their respective counsel have proposed and filed a written stipulation agreeing to the making and entry of this Judgment. By reason of such stipulation, and good cause appearing

04/08/2009 14:37 9494981712 WE INC PAGE 05

therefor,

IT IS HEREBY ORDERED, ADJUDGED AND DECREED as follows:

I

ACTIVE PARTIES

(a) The parties to this Judgment are as follows:

(1) Plaintiff Western Municipal Water District of Riverside County, a California municipal water district, herein often called "Western", appearing and acting pursuant to Section 71751 of the Water Code;

(2) Plaintiff City of Riverside, a municipal corporation;

(3) Plaintiffs Riverside Highland Water Company, Agua Mansa Water Company and Meeks & Daley Water Company, each of which is a mutual water company and a California corporation;

(4) Plaintiff The Regents of the University of California, a California public corporation;

(5) Defendant San Bernardino Valley Municipal Water District, a California municipal water district, herein often called "San Bernardino Valley", appearing and acting pursuant to Section 71751 of the Water Code;

(b) This Judgment shall inure to the benefit of and be binding upon, the successors and assigns of the parties.

II

DISMISSED PARTIES

All parties other than those named in the preceding Paragraph I are dismissed without prejudice.

04/08/2003 14:37 9494981712 WE INC PAGE 08

III

PRIOR JUDGMENTS

(a) The Judgment dated and entered on May 13, 1959, in that certain action filed in the Superior Court of the State of California in and for the County of San Bernardino, entitled and numbered "San Bernardino Valley Water Conservation District, a State Agency, Plaintiff v. Riverside Water Company, a corporation, et al., Defendants", No. 97031, is superseded effective January 1, 1971, and for so long as this Judgment remains in effect as to any party hereto that was a party to that action, and as to any party hereto that is a successor in interest to the rights determined in that action.

(b) The Judgment dated June 23, 1965, and entered on April 21, 1966, in that certain action filed in the Superior Court of the State of California in and for the County of San Bernardino entitled and numbered "San Bernardino Valley Water Conservation District, a State Agency, Plaintiff, v. Riverside Water Company, a corporation, et al., Defendants," No. 111614, is superseded effective January 1, 1971, and for so long as this Judgment remains in effect as to any party hereto that was a party to that action, and as to any party hereto that is a successor in interest to any rights determined in that action.

(c) As used in this Paragraph III only, "party" includes any person or entity which stipulates with the parties hereto to accept this Judgment.

04/08/2003 14:37 9494981712 WE INC PAGE 07

IV

DEFINITIONS

The following ground water basins and tributary areas are situated within the Santa Ana River watershed upstream from Riverside Narrows and are tributary thereto, and their approximate locations and boundaries for purposes of this Judgment are shown upon the map attached hereto as Appendix "A"; San Bernardino Basin Area (the area above Bunker Hill Dike, but excluding certain mountainous regions and the Yucaipa, San Timoteo, Oak Glen and Beaumont Basins); Colton Basin Area, Riverside Basin Area within San Bernardino County, and Riverside Basin Area within Riverside County.

As used herein the following terms shall have the meanings herein set forth:

(a) Bunker Hill Dike - The San Jacinto Fault, located approximately as shown on Appendix "A", and forming the principal downstream boundary of the San Bernardino Basin Area.

(b) Riverside Narrows - That bedrock narrows in the Santa Ana River indicated on Appendix "A".

(c) Extractions - Any form of the verb or noun shall include pumping, diverting, taking or withdrawing water, either surface or subsurface, by any means whatsoever, except extractions for hydroelectric generation to the extent that such flows are returned to the stream, and except for diversions for replenishment.

(d) Natural Precipitation - Precipitation which falls naturally in the Santa Ana River watershed.

(e) Imported Water - Water brought into the Santa Ana River watershed from sources of origin outside such watershed.

04/08/2003 14:37 9494981712 WE INC PAGE 32

(f) Replenishment - Artificial recharge of the ground water body achieved through the spreading or retention of water for the purpose of causing it to percolate and join the underlying ground water body, or injection of water into the ground water resources by means of wells; provided that as used with reference to any obligation of Western to replenish the Riverside Basin Area in Riverside County, the term replenishment shall include any water caused to be delivered by Western for which credit is received by San Bernardino Valley against its obligation under the Orange County Judgment to provide base flow at Riverside Narrows.

(g) Safe Yield - Safe yield is that maximum average annual amount of water that could be extracted from the surface and subsurface water resources of an area over a period of time sufficiently long to represent or approximate long-time mean climatological conditions, with a given areal pattern of extractions, under a particular set of physical conditions or structures as such affect the net recharge to the ground water body, and with a given amount of usable underground storage capacity, without resulting in long-term, progressive lowering of ground water levels or other undesirable result. In determining the operational criteria to avoid such adverse results, consideration shall be given to maincenance of adequate ground water quality, subsurface outflow, costs of pumping, and other relevant factors.

The amount of safe yield is dependent in part upon the amount of water which can be stored in and used from the ground water reservoir over a period of normal water supply under a given set of conditions. Safe yield is thus related to factors which influence or control ground water recharge, and

04/08/2003 14:37 9494981712 WE INC PAGE 08

to the amount of storage space available to carry over recharge occurring in years of above average supply to years of deficient supply. Recharge, in turn, depends on the available surface water supply and the factors influencing the percolation of that supply to the water table.

Safe yield shall be determined in part through the evaluation of the average net groundwater recharge which would occur if the culture of the safe yield year had existed over a period of normal native supply.

(h) Natural Safe Yield - That portion of the safe yield of the San Bernardino Basin Area which could be derived solely from natural precipitation in the absence of imported water and the return flows therefrom, and without contributions from new conservation. If in the future any natural runoff tributary to the San Bernardino Basin Area is diverted away from that Basin Area so that it is not included in the calculation of natural safe yield, any replacement made thereof by San Bernardino Valley or entities within it from imported water shall be included in such calculation.

(i) New Conservation - Any increase in replenishment from natural precipitation which results from operation of works and facilities not now in existence, other than those works installed and operations which may be initiated to offset losses caused by increased flood control channelization.

(j) Year - A calendar year from January 1 through December 31. The term "annual" shall refer to the same period of time.

(k) Orange County Judgment - The final judgment in Orange County Water District v. City of Chino, et al., Orange County Superior Court No. 117628, as it may from time to

04/08/2003 14:37 9494981712 WE INC PAGE 09

time be modified.

(l) Return Flow - That portion of the water applied for use in any particular ground water basin which subsequently reaches the ground water body in that basin.

(m) Five Year Period - a period of five consecutive years.

V

EXTRACTIONS FROM THE SAN BERNARDINO BASIN AREA

(a) For Use by Plaintiffs. The average annual extractions from the San Bernardino Basin Area delivered for use in each service area by each Plaintiff for the five year period ending with 1963 are hereby determined to be as set forth in Table B-1 of Appendix "B". The amount for each such Plaintiff delivered for use in each service area as set forth in Table B-1 shall be designated, for purposes of this Judgment, as its "base right" for such service area.

(b) For Use by Others. The total actual average annual extractions from the San Bernardino Basin Area by entities other than Plaintiffs for use within San Bernardino County for the five year period ending with 1963 are assumed to be 165,407 acre feet; the correct figure shall be determined by the Watermaster as herein provided.

VI

SAN BERNARDINO BASIN AREA RIGHTS AND REPLENISHMENT

(a) Determination of Natural Safe Yield. The natural safe yield of the San Bernardino Basin Area shall be computed by the Watermaster, reported to and determined initially by supplemental order of this Court, and thereafter

04/08/2003 14:37 9494981712 ME INC PAGE 10

shall be subject to the continuing jurisdiction thereof.

(b) Annual Adjusted Rights of Plaintiffs.

1. The annual "adjusted right" of each Plaintiff to extract water from the San Bernardino Basin Area for use in each service area designated in Table B-1 shall be equal to the sum of the following:

(a) its base right for such service area, until the natural safe yield of the San Bernardino Basin Area is determined, and thereafter its percentage of such natural safe yield determined by the methods used in Table B-2; and (b) an equal percentage for each service area of any new conservation, provided the conditions of the subparagraph 2 below have been met.

2. In order that the annual adjusted right of each such Plaintiff shall include its same respective percentage of any new conservation, such Plaintiff shall pay its proportionate share of the costs thereof. Each Plaintiff shall have the right to participate in new conservation projects, under procedures to be determined by the Watermaster for notice to Plaintiffs of the planned construction of such projects. With respect to any new conservation brought about by Federal installations, the term "costs" as used herein shall refer to any local share required to be paid in connection with such project. Each Plaintiff shall make its payment at times satisfactory to the constructing agency, and new conservation shall be credited to any participating Plaintiff as such conservation is effected.

04/08/2003 14:37 9494981712 WE INC PAGE 11

3. In any five year period, each Plaintiff shall have the right to extract from the San Bernardino Basin Area for use in each service area designated in Table B-1 an amount of water equal to five times its adjusted right for such service area; provided, however, that extractions by each Plaintiff in any year in any service area shall not exceed such Plaintiff's adjusted right for that service area by more than 30 percent.

4. If the natural safe yield of the San Bernardino Basin Area has not been determined by January 1, 1972, the initial determination thereof shall be retroactive to that date and the rights of the Plaintiffs, and the replenishment obligation of San Bernardino Valley as hereinafter set forth, shall be adjusted as of such date. Any excess extractions by Plaintiffs shall be charged against their respective adjusted rights over the next five year period, or in the alternative, Plaintiffs may pay to San Bernardino Valley the full cost of any replenishment which it has provided as replenishment for such excess extractions. Any obligation upon San Bernardino Valley to provide additional replenishment, by virtue of such retroactive determination of natural safe yield, may also be discharged over such next five year period.

5. Plaintiffs and each of them and their agents and assigns are enjoined from extracting any more water from the San Bernardino Basin Area than is permitted under this Judgment. Changes in place

04/08/2003 14:37 9494981712 WE INC PAGE 12

of use of any such water from one service area to another shall not be made without the prior approval of Court upon a finding of compliance with Paragraph XV(b) of this Judgment. So long as San Bernardino Valley is in compliance with all its obligations hereunder, and Plaintiffs are allowed to extract the water provided for in this Judgment, Plaintiffs are further enjoined from bringing any action to limit the water extracted from the San Bernardino Basin Area for use within San Bernardino Valley.

6. Nothing in this Judgment shall prevent future agreements between San Bernardino Valley and Western under which additional extractions may be made from the San Bernardino Basin Area, subject to the availability of imported water not required by San Bernardino Valley, and subject to payment satisfactory to San Bernardino Valley for replenishment required to compensate for such additional extractions.

(c) San Bernardino Valley Replenishment. San Bernardino Valley shall provide imported water for replenishment of the San Bernardino Basin Area at least equal to the amount by which extractions therefrom for use within San Bernardino County exceed during any five year period the sum of: (a) five times the total average annual extractions determined under Paragraph V(b) hereof, adjusted as may be required by the natural safe yield of the San Bernardino Basin Area; and (b) any new conservation to which users within San Bernardino Valley are entitled. Such replenishment shall be

04/08/2003 14:37 9499817l2 ME INC PAGE 13

supplied in the year following any five year period; provided that during the first five year period, San Bernardino Valley shall supply annual amounts on account of its obligations hereunder, and such amounts shall be not less than fifty percent of the gross amount of excess extractions in the previous year.

1. Against its replenishment obligation over any five year period San Bernardino Valley shall receive credit for that portion of such excess extractions that returns to the ground water of the San Bernardino Basin Area.

2. San Bernardino Valley shall also receive credit against any future replenishment obligations for all replenishment which it provides in excess of that required herein, and for any amounts which may be extracted without replenishment obligation, which in fact are not extracted.

(d) In this subparagraph (d), "person" and "entity" mean only those persons and entities, and their successors in interest, which have stipulated with the parties to this Judgment within six months after its entry to accept this Judgment.

San Bernardino Valley agrees that the base rights of persons or entities other than Plaintiffs to extract water from the San Bernardino Basin Area for use within San Bernardino Valley will be determined by the average annual quantity extracted by such person or entity during the five year period ending with 1963. After the natural safe yield of the San Bernardino Basin Area is determined hereunder, such

04/08/2003 14:37 9494981712 ME INC PAGE 14

base rights will be adjusted to such natural safe yield; the adjusted right of each such person or entity shall be that percentage of natural safe yield as determined hereunder from time to time which the unadjusted right of such person or entity is of the amount determined under Paragraph V(b).

San Bernardino Valley further agrees that in the event the right to extract water of any of such persons or entities in the San Bernardino Basin Area is adjudicated and legal restrictions placed on such extractions which prevent extracting of water by said persons or entities in an amount equal to their base rights, or after natural safe yield is determined, their adjusted rights, San Bernardino Valley will furnish to such persons or entities or recharge the ground water resources in the area of extraction for their benefit with imported water, without direct charge to such persons or entities therefor, so that the base rights, or adjusted rights, as the case may be, may be taken by the person or entity.

Under the provisions hereof relating to furnishing of such water by San Bernardino Valley, such persons or entities shall be entitled to extract in addition to their base rights or adjusted rights any quantities of water spread for repumping in their area of extractions, which has been delivered to them by a mutual water company under base rights or adjusted base rights included by the Watermaster under the provisions of Paragraph V (b) hereof. Extractions must be made within three years of spreading to so qualify.

04/08/2003 14:37 9494981712 WE INC PAGE 15

VII

WATER DISCHARGED ACROSS THE BUNKER HILL DIKE

San Bernardino Valley shall keep in force an agreement with the City of San Bernardino that the present annual quantity of municipal sewage effluent discharged across Bunker Hill Dike, assumed for all purposes herein to be 16,000 acre feet annually, shall be committed to the discharge of the downstream obligations imposed on San Bernardino Valley under this Judgment or under the Orange County Judgment, and that such effluent shall comply with the requirements of the Santa Ana River Basin Regional Water Quality Control Board in effect December 31, 1968.

VIII

EXTRACTIONS FROM COLTON BASIN AREA AND RIVERSIDE BASIN AREA IN SAN BERNARDINO COUNTY.

(a) The average annual extractions from the Colton Basin Area and that portion of the Riverside Basin Area within San Bernardino County, for use outside San Bernardino Valley, for the five year period ending with 1963 are assumed to be 3,349 acre feet and 20,191 acre feet, respectively; the correct figures shall be determined by the Watermaster as herein provided.

(b) Over any five year period, there may be extracted from each such Basin Area for use outside San Bernardino Valley, without replenishment obligation, an amount equal to five times such annual average for the Basin Area; provided, however, that if extractions in any year exceed such average by more than 20 percent, Western shall provide replenishment in the following year equal to the excess

04/08/2003 14:37 9494981712 WE INC PAGE 16

extractions over such 20 percent peaking allowance.

(c). To the extent that extractions from each such Basin Area for use outside San Bernardino Valley exceed the amounts specified in the next preceding Paragraph (b), Western shall provide replenishment. Except for any extractions in excess of the 20 percent peaking allowance, such replenishment shall be supplied in the year following any five year period, and shall not be from reclaimed water produced within San Bernardino Valley. Such replenishment shall also be of a quality at least equal to the water extracted from the Basin Area being recharged; provided, that water from the State Water Project shall be deemed to be of acceptable quality. Replenishment shall be supplied to the Basin Area from which any excess extractions have occurred and in the vicinity of the place of the excess extractions to the extent required to preclude influence on the water level in the three wells below designated; provided that discharge of imported water into the Santa Ana River or Warm Creek from a connection on the State Aqueduct near the confluence thereof, if released in accordance with a schedule approved by the Watermaster to achieve compliance with the objectives of this Judgment, shall satisfy any obligation of Western to provide replenishment in the Colton Basin Area, or that portion of the Riverside Basin Area in San Bernardino County, or the Riverside Basin Area in Riverside County.

(d) Extractions from the Colton Basin Area and that portion of the Riverside Basin Area within San Bernardino County, for use within San Bernardino Valley, shall not be limited. However, except for any required replenishment by Western, San Bernardino Valley shall provide the water to maintain the static water levels in the area, as determined by wells numbered

04/08/2003 14:37 9494981712 WE INC PAGE 17

1S 4W 21 Q3, 1S 4W 29 H1, and 1S 4W 29 Q1 at an average level no lower than that which existed in the Fall season of 1963. Such 1963 average water level is hereby determined to be 822.04 feet above sea level. In future years, the level shall be computed by averaging the lowest static water levels in each of the three wells occurring at or about the same time of the year, provided that no measurements will be used which reflect the undue influence of pumping in nearby wells, or in the three wells, or pumping from the Riverside Basin in Riverside County in excess of that determined pursuant to Paragraph IX(a) hereof.

(e) Extractions by Plaintiffs from the Colton Basin Area and the portion of the Riverside Basin Area in San Bernardino County may be transferred to the San Bernardino Basin Area if the level specified in Paragraph (d) above is not maintained, but only to the extent necessary to restore such 1963 average water level, provided that Western is not in default in any of its replenishment obligations. San Bernardino Valley shall be required to replenish the San Bernardino Basin Area in an amount equal to any extractions so transferred. San Bernardino Valley shall be relieved of responsibility toward the maintenance of such 1963 average water level to the extent that Plaintiffs have physical facilities available to accommodate such transfers of extractions, and insofar as such transfers can be legally accomplished.

(f) The Colton Basin Area and the portion of the Riverside Basin Area in San Bernardino County constitute a major source of water supply for lands and inhabitants in both San Bernardino Valley and Western, and the parties hereto have a mutual interest in the maintenance of water quality in these Basin Areas and in the preservation of such supply. If

04/08/2003 14:37 9494981712 WE INC PAGE 18

the water quality in such Areas, as monitored by the City of Riverside wells along the river, falls below the Objectives set therefor by the Santa Ana River Basin Regional Water Quality Control Board, the Court shall have jurisdiction to modify the obligations of San Bernardino Valley to include, in addition to its obligation to maintain the average 1963 water level, reasonable provisions for the maintenance of such water quality.

(g) The primary objectives of Paragraph VIII and related provisions are to allow maximum flexibility to San Bernardino Valley in the operation of a coordinated replenishment and management program, both above and below Bunker Hill Dike; to protect San Bernardino Valley against increased extractions in the area between Bunker Hill Dike and Riverside Narrows, which without adequate provision for replenishment might adversely affect base flow at Riverside Narrows, for which it is responsible under the Orange County Judgment; and to protect the area as a major source of ground water supply available to satisfy the historic extractions therefrom for use within Western, without regard to the method of operation which may be adopted by San Bernardino Valley for the San Bernardino Basin Area, and without regard to the effect of such operation upon the historic supply to the area below Bunker Hill Dike.

If these provisions should prove either inequitable or unworkable, the Court upon the application of any party hereto shall retain jurisdiction to modify this Judgment so as to regulate the area between Bunker Hill Dike and Riverside Narrows on a safe yield basis; provided that under such method of operation, (1) base rights shall be determined on the basis of total average annual extractions for use within San Bernardino Valley and Western, respectively, for the five year period ending

04/08/2003 14:37 9494981712 WE INC PAGE 19

with 1963; (3) such base rights for use in both Districts shall be subject to whatever adjustment may be required by the safe yield of the area, and in the aggregate shall not be exceeded unless replenishment therefor is provided; (3) in calculating safe yield, the outflow from the area at Riverside Narrows shall be determined insofar as practical by the base flow obligations imposed on San Bernardino Valley under the Orange County Judgment; and (4) San Bernardino Valley shall be required to provide replenishment for any deficiency between the actual outflow and the outflow obligation across Bunker Hill Dike as established by safe yield analysis using the base period of 1934 through 1960.

IX

EXTRACTIONS FROM THE PORTION OF RIVERSIDE BASIN AREA IN RIVERSIDE COUNTY WHICH IS TRIBUTARY TO RIVERSIDE NARROWS.

(a) The average annual extractions from the portion of the Riverside Basin Area in Riverside County which is tributary to Riverside Narrows, for use in Riverside County, for the five year period ending with 1963 are assumed to be 30,044 acre feet; the correct figures shall be determined by the Watermaster as herein provided.

(b) Over any five year period, there may be extracted from such Basin Area, without replenishment obligation, an amount equal to five times such annual average for the Basin Area; provided, however, that if extractions in any year exceed such average by more than 20 percent, Western shall provide replenishment in the following year equal to the excess extractions over such 20 percent peaking allowance.

(c) To the extent that extractions from such Basin Area exceed the amounts specified in the next preceding

04/08/2003 14:37 9494981712 ME INC PAGE 20

Paragraph (b), Western shall provide replenishment. Except for any extractions in excess of the 20 percent peaking allowance, such replenishment shall be supplied in the year following any five year period, and shall be provided at or above Riverside Narrows.

(d) Western shall also provide such replenishment to offset any reduction in return flow now contributing to the base flow at Riverside Narrows, which reduction in return flow results from the conversion of agricultural uses of water within Western to domestic or other uses connected to sewage or waste disposal systems, the effluent from which is not tributary to the rising water at Riverside Narrows.

X

REPLENISHMENT TO OFFSET NEW EXPORTS OF WATER TO AREAS NOT TRIBUTARY TO RIVERSIDE NARROWS.

Certain average annual amounts of water extracted from the San Bernardino Basin Area and the area downstream therefrom to Riverside Narrows during the five year period ending in 1963 have been exported for use outside of the area tributary to Riverside Narrows and are assumed to be 50,667 acre feet annually as set forth in Table C-1 of Appendix "C"; the correct amount shall be determined by the Watermaster as herein provided. Western shall be obligated to provide replenishment at or above Riverside Narrows for any increase over such exports by Western or entities within it from such areas for use within areas not tributary to Riverside Narrows. San Bernardino Valley shall be obligated to provide replenishment for any increase over the exports from San Bernardino Valley for use in any area not within Western nor tributary to Riverside Narrows as set forth in Table C-2 of

04/08/2003 14:37 9494981712 WE INC PAGE 21

Appendix "C", such amounts being subject to correction by the Watermaster, or for any exports from the San Bernardino Basin Area for use in the Yucaipa, San Timoteo, Oak Glen and Beaumont Basins.

XI

REPLENISHMENT CREDITS AND ADJUSTMENT FOR QUALITY

(a) All replenishment provided by Western under Paragraph IX and all credits received against such replenishment obligation shall be subject to the same adjustments for water quality applicable to base flow at Riverside Narrows, as set forth in the Orange County Judgment.

(b) Western shall receive credit against its replenishment obligations incurred under this Judgment for the following:

1. As against its replenishment obligation under Paragraph VIII, any return flow to the Colton Basin Area or the portion of the Riverside Basin Area within San Bernardino County, respectively, resulting from any excess extractions therefrom; and as against its replenishment obligation under Paragraph IX, any return flow to the portion of the Riverside Basin Area in Riverside County, which contributes to the base flow at Riverside Narrows, resulting from any excess extractions therefrom, or from the Riverside Basin Area in San Bernardino County, or from the Colton Basin Area.

2. Subject to adjustment under Paragraph (a) hereof, any increase over the present amounts of sewage effluent discharged from

04/08/2003 14:37 9494981712 WE INC PAGE 22

treatment plants within Riverside County which are tributary to Riverside Narrows, and which results from the use of imported water.

3. Any replenishment which may be provided in excess of that required; any amounts which hereunder are allowed to be extracted from the Colton and Riverside Basin Areas without replenishment obligation by Western, and which in fact are not extracted; any storm flows conserved between Bunker Hill Dike and Riverside Narrows by works financed solely by Western, or entities within it, which would not otherwise contribute to base flow at Riverside Narrows; and any return flow from imported water used in Riverside County which contributes to base flow at Riverside Narrows; provided, however, that such use of the underground storage capacity in each of the above situations does not adversely affect San Bernardino Valley in the discharge of its obligations at Riverside Narrows under the Orange County Judgment, nor interfere with the accomplishment by San Bernardino Valley of the primary objectives of Paragraph VIII, as stated in Subdivision (g).

(c) The replenishment obligations of Western under this Judgment shall not apply during such times as amounts of base flow at Riverside Narrows and the amounts of water stored in the ground water resources below Bunker Hill Dike and tributary to the maintenance of such flow are found by Order of the Court to be sufficient to satisfy any obligation which San Bernardino Valley may have under this Judgment, or under the

04/08/2003 14:37 9494981712 WE INC PAGE 23

Orange County Judgment, and if the Court further finds by Order that during such times any such increase in pumping, changes in use or exports would not adversely affect San Bernardino Valley in the future.

(d) The replenishment obligations of San Bernardino Valley under Paragraph X of this Judgment for increase in exports from the Colton and Riverside Basin Areas within San Bernardino Valley below the Bunker Hill Dike shall not apply during such times as the amounts of water in the ground water resources of such area are found by Order of the Court to be sufficient to satisfy the obligations which San Bernardino Valley may have to Plaintiffs under this Judgment, and if the Court further finds by Order that during such times any such increases in exports would not adversely affect Plaintiffs in the future.

XII

CONVEYANCE OF WATER BY SAN BERNARDINO VALLEY TO RIVERSIDE NARROWS.

If San Bernardino Valley determines that it will convey reclaimed sewage effluent, or other water, to or near Riverside Narrows, to meet its obligations under this or the Orange County Judgment, the City of Riverside shall make available to San Bernardino Valley for that purpose any unused capacity in the former Riverside Water Company canal, and the Washington and Monroe Street storm drains, without cost except for any alterations or capital improvements which may be required, or any additional maintenance and operation costs which may result. The use of those facilities shall be subject to the requirements of the Santa Ana River Basin Regional Water Quality Control Board and of the State Health Department, and compliance

04/08/2003 14:37 9494981712 WE INC PAGE 24

therewith shall be San Bernardino Valley's responsibility.

XIII

WATERMASTER

(a) This Judgment and the instructions and subsequent orders of this Court shall be administered and enforced by a Watermaster. The parties hereto shall make such measurements and furnish such information as the Watermaster may reasonably require, and the Watermaster may verify such measurements and information and obtain additional measurements and information as the Watermaster may deem appropriate.

(b) The Watermaster shall consist of a committee of two persons. San Bernardino Valley and Western shall each have the right to nominate one of such persons. Each such nomination shall be made in writing, served upon the other parties to this Judgment, and filed in Court. Such person shall be appointed by and serve at the pleasure of and until further order of this Court. If either Western or San Bernardino Valley shall at any time nominate a substitute appointee in place of the last appointee to represent it, such appointee shall be appointed by the Court in place of such last appointee.

(c) Appendix "D" to this Judgment contains some of the data which have been used in preparation of this Judgment, and shall be utilized by the Watermaster in connection with any questions of interpretation.

(d) Each and every finding and determination of the Watermaster shall be made in writing certified to be by unanimous action of both members of the Watermaster committee. In the event of failure or inability of such Watermaster Committee to reach agreement, the Watermaster committee may determine to submit the dispute to a third person to be selected

04/08/2003 14:37 9494981712 WE INC PAGE 25

by them, or if they are unable to agree on a selection, to be selected by the Court, in which case the decision of the third person shall be binding on the parties; otherwise the fact, issue, or determination in question shall forthwith be certified to this Court by the Watermaster, and after due notice to the parties and opportunity for hearing, said matter shall be determined by order of this Court, which may refer the matter for prior recommendation to the State Water Resources Control Board. Such order of the Court shall be a determination by the Watermaster within the meaning of this Judgment.

(e) The Watermaster shall report to the Court and to each party hereto in writing not more than seven (7) months after the end of each year, or within such other time as the Court may fix, on each determination made by it pursuant to this Judgment, and such other items as the parties may mutually request or the Watermaster may deem to be appropriate. All of the books and records of the Watermaster which are used in the preparation of, or are relevant to, such reported data, determinations and reports shall be open to inspection by the parties hereto. At the request of any party this Court will establish a procedure for the filing and hearing of objections to the Watermaster's report.

(f) The fees, compensation and expenses of each person on the Watermaster shall be borne by the District which nominated such person. All other Watermaster service costs and expenses shall be borne by San Bernardino Valley and Western equally.

(g) The Watermaster shall initially compute and report to the Court the natural safe yield of the San Bernardino Basin Area, said computation to be based upon the cultural

04/08/2003 14:37 5494981712 WE INC PAGE 26

conditions equivalent to those existing during the five calendar year period ending with 1963.

(b) The Watermaster shall as soon as practical determine the correct figures for Paragraphs V(b), VI(b)1, VIII(a), IX(a) and X, as the basis for an appropriate supplemental order of this Court.

XIV

CONTINUING JURISDICTION OF THE COURT

(a) The Court hereby reserves continuing jurisdiction of the subject matter and parties to this Judgment, and upon application of any party, or upon its own motion, may review and redetermine, among other things, the following matters and any matters incident thereto:

1. The hydrologic condition of any one or all of the separate basins described in this Judgment in order to determine from time to time the safe yield of the San Bernardino Basin Area.

2. The desirability of appointing a different Watermaster or a permanent neutral member of the Watermaster, or of changing or more clearly defining the duties of the Watermaster.

3. The desirability of providing for increases or decreases in the extraction of any particular party because of emergency requirements or in order that such party may secure its proportionate share of its rights as determined herein.

4. The adjusted rights of the Plaintiffs as required to comply with the provisions hereof with respect to changes in the natural safe yield of the San Bernardino Basin

04/08/2003 14:37 9494981712 WE INC PAGE 27

Area. If such changes occur, the Court shall adjudge that the adjusted rights and replenishment obligations of each party shall be changed proportionately to the respective base rights.

5. Conforming the obligations of San Bernardino Valley under this Judgment to the terms of any new judgment hereafter entered adjudicating the water rights within San Bernardino Valley, if inconsistencies of the two judgments impose hardship on San Bernardino Valley.

6. Adjusting the figures in Paragraphs V(b), VI(b) 1, VIII(a) IX(a), and X, to conform to determination by the Watermaster.

7. Credit allowed for return flow in the San Bernardino Basin Area if water levels therein drop to the point of causing undue hardship upon any party.

8. Other matters not herein specifically set forth which might occur in the future and which would be of benefit to the parties in the utilization of the surface and ground water supply described in this Judgment, and not inconsistent with the respective rights of the parties as herein established and determined.

(b) Any party may apply to the Court under its continuing jurisdiction for any appropriate modification of this Judgment if its presently available sources of imported water are exhausted and it is unable to obtain additional supplies of imported water at a reasonable cost, or if there is any substantial delay in the delivery of imported water through the State Water Project.

04/08/2003 14:37 9494981712 WE INC PAGE 28

XV

SAVING CLAUSES

(a) Nothing in this Judgment precludes San Bernardino Valley, Western, or any other party from exercising such rights as it may have or obtain under law to spread, store underground and recapture imported water, provided that any such use of the underground storage capacity of the San Bernardino Basin Area by Western or any entity within it shall not interfere with any replenishment program of the Basin Area.

(b) Changes in the place and kind of water use, and in the transfer of rights to the use of water, may be made in the absence of injury to others or prejudice to the obligations of either San Bernardino Valley or Western under Judgment or the Orange County Judgment.

(c) If any Plaintiff shall desire to transfer all or any of its water rights to extract water within San Bernardino Valley to a person, firm, or corporation, public or private, who or which is not then bound by this Judgment, such Plaintiff shall as a condition to being discharged as hereinafter provided cause such transferee to appear in this action and file a valid and effective express assumption of the obligations imposed upon such Plaintiff under this Judgment as to such transferred water rights. Such appearance and assumption of obligation shall include the filing of a designation of the address to which shall be mailed all notices, requests, objections, reports and other papers permitted or required by the terms of this Judgment.

If any Plaintiff shall have transferred all of its said water rights and each transferee not theretofore bound by this Judgment as a Plaintiff shall have appeared in this action

04/08/2003 14:37 9494981712 WE INC PAGE 29

and filed a valid and effective express assumption of the obligations imposed upon such Plaintiff under this Judgment as to such transferred water rights, such transferring Plaintiff shall thereupon be discharged from all obligations hereunder. If any Plaintiff shall cease to own any rights in and to the water supply declared herein and shall have caused the appearance and assumption provided for in the third preceding sentence with respect to each voluntary transfer, then upon application to this Court and after notice and hearing such Plaintiff shall thereupon be relieved and discharged from all further obligations hereunder. Any such discharge of any Plaintiff hereunder shall not impair the aggregate rights of defendant San Bernardino Valley or the responsibility hereunder of the remaining Plaintiffs or any of the successors.

(d) Non-use of any right to take water as provided herein shall not result in any loss of the right. San Bernardino Valley does not guarantee any of the rights set out herein for Western and the other Plaintiffs as against the claims of third parties not bound hereby. If Western or the other Plaintiffs herein should be prevented by acts of third parties within San Bernardino County from extracting the amounts of water allowed them by this Judgment, they shall have the right to apply to this Court for any appropriate relief, including vacation of this Judgment, in which latter case all parties shall be restored to their status prior to this Judgment insofar as possible.

(e) Any replenishment obligation imposed hereunder on San Bernardino Valley may be deferred until imported water first is available to San Bernardino Valley under its contract with the California Department of Water Resources and the

04/08/2003 14:37 9494981712 WE INC PAGE 30

obligation so accumulated may be discharged in five approximately equal annual installments thereafter.

(f) No agreement has been reached concerning the method by which the cost of providing replenishment will be financed, and no provision of this Judgment, nor its failure to contain any provision, shall be construed to reflect any agreement relating to the taxation or assessment of extractions.

XVI

EFFECTIVE DATE

The provisions of Paragraphs III and V to XII of this Judgment shall be in effect from and after January 1, 1971; the remaining provisions are in effect immediately.

XVII

COSTS

No party shall recover its costs herein as against any other party.

THE CLERK WILL ENTER THIS JUDGMENT FORTHWITH.

SUPERIOR COURT OF THE STATE OF CALIFORNIA

FOR THE COUNTY OF SAN BERNARDINO

THE LYTLE CREEK WATER AND IMPROVEMENT COMPANY, a corporation,

Plaintiff,

vs.

FONTANA RANCHOS WATER COMPANY, a corporation; HIGHLAND AVENUE WATER COMPANY, a corporation; CITIZENS LAND AND WATER COMPANY OF BLOOMINGTON, a corporation; CITY OF RIALTO, a municipal corporation; and CITY OF COLTON, a municipal corporation; et al.,

Defendants.

No. 81264 -

DECREE

WHEREAS, there has been filed in the above-entitled action a Stipulation for Judgment duly executed by and on the part of each and all of the following named parties to said action (who are collectively hereinafter referred to as "stipulating parties"), to-wit: The Lytle Creek Water and Improvement Company, a corporation (hereinafter referred to as "Lytle Creek"); Citizens Land and Water Company of Bloomington, a corporation (hereinafter referred to as "Citizens"); Fontana Union Water Company, a corporation (hereinafter referred to as "Fontana Union"); City of Colton, a municipal corporation (hereinafter referred to as "Colton"); City of Rialto, a municipal corporation (hereinafter referred to as "Rialto"); and Semi-Tropic County Water District, a county water district organized and existing under the California County Water District Law (hereinafter referred to as "Semi-Tropic"); and

WHEREAS, the Fontana Union was sued herein as John Doe

Company No. 1 a corporation and the Complaint herein should be amended accordingly; and

WHEREAS it appears that Semi-Tropic should be joined as a defendant in this action; and

WHEREAS, the action has been dismissed as to each of the defendants Fontana Ranchos Water Company, a corporation, and Highland Avenue Water Company, a corporation; and

WHEREAS the Court has heard and considered evidence on the part of the various stipulating parties; and

WHEREAS the parties have in said Stipulation for Judgment waived Findings of Fact and Conclusions of Law;

NOW, THEREFORE, IT IS HEREBY ORDERED, ADJUDGED, AND DECREED as follows:

1. The Complaint herein is hereby amended to set forth the true name of the defendant John Doe Company No. 1, a corporation, which is Fontana Union Water Company, a corporation.

2. Semi-Tropic County Water District is hereby joined as a defendant in this action.

3. As used herein the terms listed below shall have the respective meanings next following them, viz:

(a) "Rialto Basin" or "Basin" shall mean that certain territory in the County of San Bernardino State of California, which is more particularly described on Exhibit "1".

(b) "Year" shall mean a twelve month period commencing on October 1 and ending on the next following September 30.

(c) "Acre Foot" of water shall mean that quantity of water which will cover one acre to a depth of one foot, also being 43,560 cubic feet, and which also is equal to a flow of 25.208 miner's inches of water for 24 hours.

4. Except as provided herein no stipulating party shall have any priority to take water from the Basin, and the rights of the parties to take

BURR & HELLYER
ATTORNEYS AT LAW
SAN BERNARDINO, CALIFORNIA

water from the Basin as between themselves are set forth herein.

5. Subject to the pro rata reductions hereinafter set forth, the amount of water in acre feet to which the stipulating parties are respectively entitled to extract from the Basin in each year are as follows:

Colton	3,010 acre feet
Rialto	1,580 acre feet
Citizens	3,260 acre feet
Fontana Union	550 acre feet
Lytle Creek	3,600 acre feet
Semi-Tropic	-0- acre feet

6. The following described wells in the Basin are designated and referred to herein as index wells for the purpose of determining the elevation above sea level of the ground waters within the Basin. These wells are as follows:

(a) "Duncan Well" - presently owned by Rialto, having State Location No. 1S/5W-3A1, State Serial No. D-1084, located 109 feet South of the center line of Baseline and 233 feet West of the center line of Cactus Avenue.

(b) "Willow Street Well" - presently owned by Lytle Creek, having State Location No. 1S/5W-2K1, State Serial No. D-1085, located 202 feet East of the center line of Willow Street and 133 feet North of the center line of Victoria Avenue.

(c) "Boyd Well" - presently owned by Citizens, having State Location No. 1S/5W-12L1, State Serial No. D-1095, located 109 feet West of the center line of Eucalyptus Street and 155 feet North of the center line of Wilson Street.

For the purpose of determination of the elevation of water above sea level in the said index wells, the elevation above sea level of each of the index wells is established as follows:

(a) "Duncan Well"	1352.79
(b) "Willow Street Well"	1287.00
(c) "Boyd Well"	1177.19

If for any reason any or all of said wells shall not be available

SUHR & HELLYER
ATTORNEYS AT LAW
SAN BERNARDINO, CALIFORNIA

2195 AM 8

for measurement the identity and location of a substitute index well or wells may be determined by a written stipulation executed by at least three-fourths in number of the stipulating parties (or their successor(s) in interest) and filed in this action or in default of said stipulation, by order of this Court.

The elevation of the water level above sea level of each of the index wells shall be measured in each of the months of March, April, and May in each year. Each stipulating party shall be entitled from time to time to designate one individual to be present and observe such measurements. Measurements shall be made by the owners of the respective wells or such other person, firm or corporation which three-fourths in number of the stipulating parties shall designate to do so. Such measurements shall be made at such times as the index well measured is not being pumped and has not been pumped within the preceding twenty-four hours.

7 As used herein the term "spring-high water level" for a year at each of the index wells shall mean the highest elevation in feet above sea level of the surface of the water table which shall be measured in each respective index well at any one of the monthly measurements during either March, April, or May.

In any year in which the average of the elevation of the spring-high water level in the three index wells is above elevation 1002.3 feet above mean sea level, no stipulating party shall be limited in the amount of water which may be pumped from the Basin. However, no stipulating party shall acquire any additional right to extract water from the Basin by reason of extracting more than such party is entitled under paragraph 5 above.

In any year in which the average of the elevations of the spring-high water level in the three index wells is between 1002.3 feet above mean sea level and 969.7 feet above mean sea level, each party shall be entitled to pump from the Basin in such year only the amount of water to which such party is entitled as specified in paragraph 5 above.

In any year in which the average of the elevations of the spring-high water level in the three index wells is below 969.7 feet above mean sea level, then the amount of water which the stipulating parties shall

2195 W.S.

be entitled to pump from the Basin during such year shall be reduced one per cent (1%) for each one (1) foot that the said average is below 969.7 feet above mean sea level, and not cumulatively to be reduced more than fifty per cent (50%).

9 If any stipulating party acquires any of the wells located within the Basin which are described on Exhibit "2", which is attached hereto and hereby incorporated herein, such party shall have the additional right to extract water from the Rialto Basin annually in the amount set forth on said Exhibit "2" opposite the description of the respective wells.

10. Each stipulating party shall maintain records of all its extractions of water from the Basin so that it can be determined therefrom what extraction of water was taken from each well or combination of wells or other water sources in the Basin from which such party received water in each year. Each stipulating party shall equip each of its wells with a water metering device which shall accurately measure the entire quantity of water pumped from the well. Each stipulating party shall allow the other stipulating parties access upon reasonable notice to the wells of such party to permit of inspection and testing the metering equipment.

Upon written demand of any stipulating party, the party keeping such records shall within thirty (30) days after receipt of such demand supply to the party making such demand or other person designated by such party in such demand a written statement of the amount of water (in acre feet) so taken from each such well or combination of wells or other sources for each year after 1961 with respect to which no such statement has previously been supplied.

11. Every provision of this judgment in favor of all applies to any party hereto and also applies to and inures to the benefit of and shall also bind all of the heirs, legal representatives successors and assigns of such party.

12. Nothing in this judgment contained shall prevent any stipulating party from selling or otherwise disposing of or purchasing or otherwise acquiring any rights to extract water from the Basin which may be adjudged to belong to any other stipulating party; but any such right to acquire or to dispose of shall remain subject to any limitation or restrictions herein expressed.

13. The stipulating parties will unite in opposing any new taking

SURR & HELLYER
ATTORNEYS AT LAW
SAN BERNARDINO, CALIFORNIA

of water from the Basin by other than a stipulating party or parties and will prorate the expenses in making such opposition, including litigation or engineering expenses, provided that:

(a) The term "new taking" shall not include any water development in the Basin hereafter made for the sole purpose of maintaining but not increasing any quantity of water now being taken from the Basin by the person who may hereafter make such development; or in the exercise by any person of an overlying right who is not a stipulating party.

(b) If any stipulating party does not join in prosecuting any future suit to prevent, enjoin or limit any such new or unlawful taking, such stipulating party not so joining shall bear proratably the expenses of such suit, including attorneys' fees and engineering fees, only if final judgment is rendered in such suit preventing enjoining or limiting such taking.

14. No stipulating party shall be entitled to recover court costs from any other stipulating party in this proceeding.

15. The court will retain jurisdiction to enter modifications of this decree upon a finding of changed circumstances.

16. In the event through litigation of the supply of water in the Basin, or by reason of adjudication in any subsequent action, the stipulating parties in the aggregate shall be unable to pump and extract from the Basin a quantity of water so great as the aggregate water is set forth herein, the stipulating parties shall prorate the aggregate quantity of water available in the Basin as long as such inability shall continue.

17. The listing herein of any number of acre feet for any party to this action other than a stipulating party shall not be deemed an admission by any stipulating party that a non-stipulating party is entitled to any water whatsoever from the Basin, nor as to the quantity which such non-stipulating party may take from the Basin, but each such figure for any non-stipulating party is listed in order that the stipulating parties may between themselves agree as to their rights to extract water on account of acquisition of the wells of non-stipulating parties.

18. As between stipulating parties only no extraction of water

from the Basin by any stipulating party in excess of the amount herein provided to be taken by such party shall be deemed adverse to any other stipulating party, and each stipulating party hereby waives as against each other stipulating party the right to plead any statute of limitation or latches with respect to water extracted by such party in excess of such amount.

19. No objection shall ever be made by any party to this judgment as to the interest or right of any such party as herein defined or as to the validity of this judgment not so defining such interest or right on the ground that such interest or right as so defined is not consistent with or warranted by the pleadings in this action relative thereto, and if in any case it shall appear that any such interest or right as so defined is in fact not consistent with or warranted by such pleadings then such pleadings shall be deemed and treated as amended to conform to and sustain such interest and right as herein defined, and said pleadings shall be deemed sufficient to support this judgment.

Each of the parties to this judgment waives all right of appeal therefrom and no appeal shall be taken by any party hereto from this judgment or any part thereof and the same shall constitute a final judgment.

DONE IN OPEN COURT this 24th day of November, 1964.

SUPERIOR COURT OF THE STATE OF CALIFORNIA

FOR THE COUNTY OF SAN BERNARDINO

THE LYTLE CREEK WATER AND IMPROVEMENT COMPANY, a corporation, Plaintiff, vs. FONTANA RANCHOS WATER COMPANY, a corporation; HIGHLAND AVENUE WATER COMPANY, a corporation; CITIZENS LAND AND WATER COMPANY OF BLOOMINGTON, a corporation; CITY OF RIALTO, a municipal corporation; and CITY OF COLTON, a municipal corporation; et al., Defendants.	No. 81264 DECREE

WHEREAS, there has been filed in the above-entitled action a Stipulation for Judgment duly executed by and on the part of each and all of the following named parties to said action (who are collectively hereinafter referred to as "stipulating parties"), to-wit: The Lytle Creek Water and Improvement Company, a corporation (hereinafter referred to as "Lytle Creek"); Citizens Land and Water Company of Bloomington, a corporation (hereinafter referred to as "Citizens"); Fontana Union Water Company, a corporation (hereinafter referred to as "Fontana Union"); City of Colton, a municipal corporation (hereinafter referred to as "Colton"); City of Rialto, a municipal corporation (hereinafter referred to as "Rialto"); and Semi-Tropic County Water District, a county water district organized and existing under the California County Water District Law (hereinafter referred to as "Semi-Tropic"); and

WHEREAS, the Fontana Union was sued herein as John Doe

Company No. 1, a corporation, and the Complaint herein should be amended accordingly; and

WHEREAS, it appears that Semi-Tropic should be joined as a defendant in this action; and

WHEREAS, the action has been dismissed as to each of the defendants Fontana Ranchos Water Company, a corporation, and Highland Avenue Water Company, a corporation; and

WHEREAS, the Court has heard and considered evidence on the part of the various stipulating parties; and

WHEREAS, the parties have in said Stipulation for Judgment waived Findings of Fact and Conclusions of Law;

NOW, THEREFORE, IT IS HEREBY ORDERED, ADJUDGED, AND DECREED as follows:

1. The Complaint herein is hereby amended to set forth the true name of the defendant John Doe Company No. 1, a corporation, which is Fontana Union Water Company, a corporation.

2. Semi-Tropic County Water District is hereby joined as a defendant in this action.

3. As used herein the terms listed below shall have the respective meanings next following them, viz:

(a) "Rialto Basin" or "Basin" shall mean that certain territory in the County of San Bernardino, State of California, which is more particularly described upon Exhibit "1", and which also includes all percolating water and underground water and water sources underlying said territory.

(b) "Year" shall mean a twelve month period commencing on October 1 and ending on the next following September 30.

(c) "Acre Foot" of water shall mean that quantity of water which will cover one acre to a depth of one foot, also being 43,560 cubic feet, and which also is equal to a flow of 25.208 miner's inches of water for 24 hours.

4. Except as provided herein no stipulating party shall have any priority to take water from the Basin, and the rights of the parties to take

SURR & HELLYER
ATTORNEYS AT LAW
SAN BERNARDINO, CALIFORNIA

water from the Basin as between themselves are set forth herein.

5. Subject to the pro rata reductions hereinafter set forth, the amount of water in acre feet to which the stipulating parties are respectively entitled to extract from the Basin in each year are as follows:

Colton	3,010 acre feet - 3400
Rialto	1,580 acre feet - 3100
Citizens	3,260 acre feet
Fontana Union	550 acre feet — 970 - 1200
Lytle Creek	3,600 acre feet

6. The following described wells in the Basin are designated and referred to herein as index wells for the purpose of determining the elevation above sea level of the ground waters within the Basin. These wells are as follows:

(a) "Duncan Well" - presently owned by Rialto, having State Location No. 1S/5W-3A1, State Serial No. D-1084, located 109 feet South of the center line of Baseline and 233 feet West of the center line of Cactus Avenue.

(b) "Willow Street Well" - presently owned by Lytle Creek, having State Location No. 1S/5W-2K1, State Serial No. D-1085, located 202 feet East of the center line of Willow Street and 133 feet North of the center line of Victoria Avenue.

(c) "Boyd Well" - presently owned by Citizens, having State Location No. 1S/5W-12L1, State Serial No. D-1095, located 109 feet West of the center line of Eucalyptus Street and 155 feet North of the center line of Wilson Street.

For the purpose of determination of the elevation of water above sea level in the said index wells, the elevation above sea level of each of the index wells is established as follows:

(a) "Duncan Well"

(b) "Willow Street Well"

(c) "Boyd Well"

If for any reason any or all of said wells shall not be available

SURR & HEL... R
ATTORNEYS AT LAW
SAN BERNARDINO, CALIFORNIA

for measurement, the identity and location of a substitute index well or wells may be determined by a written stipulation executed by at least three-fourths in number of the stipulating parties (or their successor(s) in interest) and filed in this action, or in default of said stipulation, by order of this Court.

The elevation of the water level above sea level of each of the index wells shall be measured in each of the months of March, April, and May in each year. Each stipulating party shall be entitled from time to time to designate one individual to be present and observe such measurements. Measurements shall be made by the owners of the respective wells or such other person, firm or corporation which three-fourths in number of the stipulating parties shall designate to do so. Such measurements shall be made at such times as the index well measured is not being pumped and has not been pumped within the preceding twenty-four hours.

7. As used herein the term "spring-high water level" for a year at each of the index wells shall mean the highest elevation in feet above sea level of the surface of the water table which shall be measured in each respective index well at any one of the monthly measurements during either March, April, or May.

In any year in which the average of the elevation of the spring-high water level in the three index wells is above elevation 1002.3 feet above mean sea level, no stipulating party shall be limited in the amount of water which may be pumped from the Basin. However, no stipulating party shall acquire any additional right to extract water from the Basin by reason of extracting more than such party is entitled under paragraph 5 above.

In any year in which the average of the elevations of the spring-high water level in the three index wells is between 1002.3 feet above mean sea level and 969.7 feet above mean sea level, each party shall be entitled to pump from the Basin in such year only the amount of water to which such party is entitled as specified in paragraph 5 above.

In any year in which the average of the elevations of the spring-high water level in the three index wells is below 969.7 feet above mean sea level, then the amount of water which the stipulating parties shall

SURR & HELL
ATTORNEYS AT LAW
SAN BERNARDINO, CALIFORNIA

be entitled to pump from the Basin during such year shall be reduced ten per cent (10%) for each one (1) foot that the said average is below 969.7 feet above mean sea level.

9. If any stipulating party acquires any of the wells located within the Basin which are described on Exhibit "2", which is attached hereto and hereby incorporated herein, such party shall have the additional right to extract water from the Rialto Basin annually in the amount set forth on said Exhibit "2" opposite the description of the respective wells.

10. Each stipulating party shall maintain records of all extractions of water from the Basin so that it can be determined therefrom what extraction of water was taken from each well or combination of wells or other water sources in the Basin from which such party received water in each year.

Upon written demand of any stipulating party, the party keeping such records shall within thirty (30) days after receipt of such demand supply to the party making such demand, or other person designated by such party in such demand, a written statement of the amount of water (in acre feet) so taken from each such well or combination of wells or other sources for each year after 1961 with respect to which no such statement has previously been supplied.

11. Every provision of this judgment in favor of all applies to any party hereto and also applies to and inures to the benefit of and shall also bind all of the heirs, legal representatives, successors and assigns of such party.

12. Nothing in this judgment contained shall prevent any stipulating party from selling or otherwise disposing of or purchasing or otherwise acquiring any rights to extract water from the Basin which may be adjudged to belong to any other stipulating party; but any such right to acquire or so dispose of shall remain subject to any limitation or restrictions herein expressed.

13. The stipulating parties will unite in opposing any new taking of water from the Basin other than a stipulating party or parties and will prorate the expenses in making such opposition, including litigation or engineer-

SURR & HEL_ _R
ATTORNEYS AT LAW
SAN BERNARDINO, CALIFORNIA

ing expenses, provided that:

(a) The term "new taking" shall not include any water development in the Basin hereafter made for the sole purpose of maintaining but not increasing any quantity of water now being taken from the Basin by the person who may hereafter make such development.

(b) If any stipulating party does not join in prosecuting any future suit to prevent, enjoin or limit any such new or unlawful taking, such stipulating party not so joining shall bear proratably the expenses of such suit, including attorneys' fees and engineering fees, only if final judgment is rendered in such suit preventing enjoining or limiting such taking.

14. No stipulating party shall be entitled to recover court costs from any other stipulating party in this proceeding.

15. The Court will render jurisdiction to enter modifications of this decree.

16. In the event through litigation of the supply of water in the Basin, or by reason of adjudiciation in any subsequent action, the stipulating parties in the aggregate shall be unable to pump and extract from the Basin a quantity of water so great as the aggregate water is set forth herein, the stipulating parties shall prorate the aggregate quantity of water available in the Basin as long as such inability shall continue.

17. The listing herein of any number of acre feet for any party to this action other than a stipulating party shall not be deemed an admission by any stipulating party that a non-stipulating party is entitled to any water whatsoever from the Basin, nor as to the quantity which such non-stipulating party may take from the Basin, but each such figure for any non-stipulating party is listed in order that the stipulating parties may between themselves agree as to their rights to extract water on account of acquisition of the wells of non-stipulating parties.

18. As between stipulating parties only no extraction of water from the Basin by any stipulating party in excess of the amount herein provided to be taken by such party shall be deemed adverse to any other stipulating party, and each stipulating party hereby waives as against each other stipulating

SURR & HELL...R
ATTORNEYS AT LAW
SAN BERNARDINO, CALIFORNIA

party the right to plead any statute of limitation or latches with respect to water extracted by such party in excess of such amount.

19. No objection shall ever be made by any party to this judgment as to the interest or right of any such party as herein defined or as to the validity of this judgment not so defining such interest or right on the ground that such interest or right as so defined is not consistent with or warranted by the pleadings in this action relative thereto, and if in any case it shall appear that any such interest or right as so defined is in fact not consistent with or warranted by such pleadings then such pleadings shall be deemed and treated as amended to conform to and sustain such interest and right as herein defined, and said pleadings shall be deemed sufficient to support this judgment.

Each of the parties to this judgment waives all right of appeal therefrom and no appeal shall be taken by any party hereto from this judgment or any part thereof and the same shall constitute a final judgment.

DONE IN OPEN COURT this _____ day of _____, 1961.

Exhibit "2"

RIALTO BASIN GROUNDWATER COUNCIL

FRAMEWORK AGREEMENT

This RIALTO BASIN **GROUNDWATER COUNCIL FRAMEWORK AGREEMENT** ("**Agreement**") is entered into and effective this ___ day of _____, 2020 by and among the City of Colton ("**Colton**"), the City of Rialto ("**Rialto**"), Fontana Union Water Company ("**FUWC**") and West Valley Water District ("**WVWD**"), each of which is referred to as a "**Party**," for the purpose of coordinating, developing, and implementing groundwater management activities that individually or cumulatively address groundwater management in, and groundwater sustainability throughout, the Rialto Basin as defined in Section 1.1.8 below.

RECITALS

WHEREAS, on and after September 12, 2018, in an effort to commit to sustainable groundwater management principles, the Parties, San Bernardino Valley Municipal Water District, San Gabriel Valley Water Company, Fontana Water Company and Cucamonga Valley Water District ("Cucamonga") entered into a Settlement Agreement as defined in Section 1.1.9 below;

WHEREAS, the Settlement Agreement requires completion of this Framework Agreement within one year of the final Settlement Agreement amendments executed in February 2019;

WHEREAS, the Settlement Agreement contained Condition 3, titled "Cooperative and Sustainable Groundwater Management of the Rialto-Colton Basin;"

WHEREAS, Condition 3 (1.) of the Settlement Agreement requires the parties to develop, adopt and implement a sustainable groundwater management plan.

WHEREAS, Condition 3 (l.) of the Settlement Agreement states that if the Parties agree, the sustainable groundwater management plan is to include a new index well regime, the possibility of establishing an operating safe yield, and/or other groundwater management tools.

WHEREAS, by joining the Settlement Agreement, the Parties to this Agreement accepted and agreed to the Recitals, Definitions, Principles and Agreements set forth in the Settlement Agreement, including Condition 3 (l.).

WHEREAS, the Parties to this Agreement all overlie, produce water from, or are otherwise invested in the management and long-term sustainability of the groundwater of the Rialto Basin as identified on the Map attached hereto as Exhibit A;

WHEREAS, The Rialto Basin is part of the Rialto Subbasin which underlies a portion of the upper Santa Ana Valley in southwestern San Bernardino County and northwestern Riverside County. This Subbasin is bounded by the San Gabriel Mountains on the north, the San Jacinto

fault on the east, the Rialto Basin boundary on the south, and the Rialto fault on the west. Lytle Creek flows through this part of the valley southeastward to its confluence with the Santa Ana River in the southern part of the Subbasin;

WHEREAS, the groundwater supplies of the Rialto Basin are governed by a court decree dated December 22, 1961 (the "1961 Decree") in the case styled *The Lytle Creek Water and Improvement Company v. Fontana Ranchos Water Company, et al.*, San Bernardino County Superior Court, Case No. 81264. A copy of the 1961 Decree is attached hereto as Exhibit D;

WHEREAS, pursuant to the Settlement Agreement, FUWCs No Man's Land production of 5,014 acre feet/year will be counted as part of the Rialto Basin production limits in the 1961 decree, and it is the intention of the Parties in forming the Rialto Basin Groundwater Council to apply, administer, and conform to the requirements and provisions of the 1961 Decree.

WHEREAS, Water Code Section 10720.8(a) identifies the Rialto Basin as an adjudicated groundwater basin. As such, the Rialto Basin is exempt from the Sustainable Groundwater Management Act (SGMA) passed by the California Legislature in September 2014, other than providing certain kinds of data to the Department of Water Resources per Water Code Section 10720.8(f);

WHEREAS, notwithstanding that the Rialto Basin is not required to comply with SGMA, the Parties to this Agreement wish to coordinate their efforts to identify their respective access to, and application of, water supplies, and to harmonize use of such supplies with available groundwater in the Rialto Basin. Working to ensure that the water imported into the Rialto Basin and the facilities used to apply both imported and native water supplies to productive beneficial uses for groundwater replenishment, will allow the Rialto Basin to be maintained and managed in a sustainable manner over the long-term. The Parties recognize that the key to success in this effort is a coordinated effort with other groundwater management entities as well as the development of a strategy for coordination of recharge activities throughout the Rialto Basin;

WHEREAS, ensuring water supply reliability and long-term effectiveness and viability of recharge facilities has become increasingly important, and proactive efforts are needed to improve and mitigate low groundwater levels in the Rialto Basin through the spreading of imported water supplies, which at times are limited in availability, due to drought, environmental, and other restrictions. One purpose of this Agreement is to facilitate the cooperation of the Parties which is essential to prevent overdraft or other negative impacts during an extended drought, and for the foreseeable future;

WHEREAS, the Parties, individually and collectively, are committed to cost effective and cooperative groundwater management that respects the interests and concerns of all of the parties and the communities that they serve and which rely on the Rialto Basin for their water supply;.

WHEREAS, **t**he Parties hereby enter into this Agreement for the purpose of establishing the Rialto Basin Groundwater Council ("RBGC") to take the preliminary steps necessary to prepare for and coordinate the management of groundwater supply resources throughout the

Rialto Basin, coordinate maintenance of conveyance and recharge facilities, and coordinate with existing groundwater agencies in the Rialto Basin to expedite such management strategies. The RBGC will ensure overall coordination and sustainable management of the Rialto Basin; and,

WHEREAS, the Parties have agreed that the preliminary steps for establishing RBGC will include preparation of formation documents and procedures, the engagement of necessary experts, and the development of a budget and funding procedure for the RBGC as memorialized in this Agreement.

AGREEMENT

NOW THEREFORE, in consideration of the matters recited and the mutual promises, covenants, and conditions set forth in this Agreement, the Parties hereby agree as follows:

1. DEFINITIONS

1.1 Definitions. In addition to the terms that may be defined elsewhere in this Agreement, the following terms when used in this Agreement shall be defined as follows:

1.1.1 "***Agreement"*** means this Rialto Basin Groundwater Council Agreement.

1.1.2 ***"Annual Rialto Basin Groundwater Report***" shall mean the annual report prepared by the RBGC, to cover topics including, but not limited to, the following: annual production, recharge, environmental issues, exchanges, and all other actions and topics material to groundwater conditions in the Rialto Basin. In preparing such report, the RBGC may consult with, and draw from, data and information provided by Santa Ana River and Western/ San Bernardino Watermasters and/or other reliable sources regarding annual groundwater conditions.

1.1.3 "***BTAC***" shall mean the Basin Technical Advisory Committee, as originally created under the auspices of the Upper Santa Ana River Watershed Integrated Regional Water Management Plan, as such Committee may be modified from time to time to allow for the additional participation of one or more Parties to this Agreement. The RBGC may request BTAC to undertake specified actions in support of the RBGC's efforts.

1.1.4 **"Cost Share"** shall mean that portion of the overall annual operating costs of the RBGC assigned to a Party pursuant to the Equitable Allocation, as based on the annual budget of the RBGC.

1.1.5 "***Effective Date***" shall mean the date that the last Party executes this Agreement.

1.1.6 "***Equitable Allocation***" shall mean the manner of determining the facilities' operations and maintenance ("O&M") costs and supplemental water cost, for each Party based on an annual approved budget. This allocation will be shared equally by the Parties for the applicable RBGC budget year.

1.1.7 **No Man's Land"** shall mean that portion of the Rialto-Colton Basin that is outside the Rialto Basin as shown on the maps attached as Exhibit A to the Settlement Agreement.

1.1.8 **"Rialto Basin"** shall mean that portion of the Rialto-Colton Basin defined in the 1961 Decree.

1.1.9 **"Settlement Agreement"** shall mean the settlement agreement dated September 12, 2018, as amended, that concluded the litigation styled *San Bernardino Municipal Water District et al v. San Gabriel Water Company et al,* a copy of which is attached as Exhibit C to this Agreement.

2. TERM

This Agreement shall become operative on the Effective Date.

3. COUNCIL CREATION AND PURPOSE

3.1 Creation of the RBGC. There is hereby created the Rialto Basin Groundwater Council. The RBGC shall be, to the extent permitted by law, the forum within which the Parties shall coordinate the access to and utilization of native and imported water supplies for application to the recharge and replenishment of the Rialto Basin, and for the maintenance, and repair of recharge and conveyance facilities for both native and imported supplies to replenish the Rialto Basin, consistent with applicable law and judicial decrees. The RBGC is not a public agency subject to Government Code Sections 54950 et seq.,nor is it a joint exercise of powers agreement as defined by Government Code sections 6300 et seq.

3.2 Purpose of the Agreement. The purpose of this Agreement, and the creation of the RBGC, is to provide for the funding, integration, and coordination of the management of native and imported water and associated groundwater replenishment facilities within the Rialto Basin. The purpose is also the facilitation of implementation of policies and initiatives through the legal authorities of one or more Parties for the purpose of cooperatively managing certain aspects of the Rialto Basin including, but not limited to, accessing and applying imported water supplies to augment and complement native water supplies toward the goal of maintaining the long-term yield of the Rialto Basin, ensuring that overdraft or other negative impacts are prevented in the future and eliminated over time, and undertaking supply reliability activities that are approved by the RBGC and included in the annual approved budget.

3.3 Membership of the RBGC. The RBGC shall consist of one representative and one alternate from each Party. RBGC members shall be appointed in the manner set forth in Section 3.4 of this Agreement.

3.4 Appointment of Members to the RBGC. For Colton, Rialto and WVWD, the representative member of the RGBC shall be a publicly elected official of the Party and for FUWC the representative shall be a member of its Board of Directors. Each Party shall also appoint one alternate representative who shall be a publicly elected official of the Party or a member of its Board of Directors or senior management level employee of the Party.

Members of the RBGC shall serve throughout the term of this Agreement, provided that such members may be subject to removal and replacement by the appointing Party.

4. COUNCIL MEETINGS AND ACTIONS

4.1 Initial Meeting. The initial meeting of the RBGC shall be held at a location overlying the Rialto Basin. The RBGC shall select a President to chair its meetings, a Vice President to serve if the President is unavailable, a Secretary to record RBGC proceedings and actions, and any other officers it deems appropriate for the successful and efficient conduct of its business.

4.2 Regular Meeting Schedule and Rules of Proceeding. The RBGC shall establish a regular meeting time and place. The RBGC may vote to change the regular meeting time and place, provided that the new location remains at a place overlying the Rialto Basin. The RBGC may adopt, promulgate, repeal, or revise further rules of debate, presentation of motions, voting and proxies, process, or proceedings, as it may deem appropriate. The Parties agree that the RBGC and its Board of Directors is and shall be subject to the Ralph M. Brown Act (Cal. Government Code section 54953 et seq.,) ("Brown Act") and that meetings and other applicable operations of the RBGC will be undertaken in compliance with the Brown Act..

4.3 Quorum. A quorum of the RBGC shall consist of three members. In the absence of a quorum, no business may be transacted beyond the adjournment of a meeting by the remaining members. For efficiency, business may be discussed and action recommended for the consent calendar ratification at the next regular meeting. A member shall be deemed present for the determination of a quorum if the member is present at the meeting in person, or if the member participates in the meeting telephonically upon such rules and procedures as the RBGC may promulgate.

4.4 RBGC Voting Rights. Each member of the RBGC shall have an equal voting right and three votes are required to pass any proposals for organizational, procedural, and administrative purposes only.

4.4.1 Fiscal items, including but not limited to, approval of the annual budget of the RBGC and any expenditures for O& M expenses related to groundwater recharge and replenishment activities, costs of such facilities, and the cost of purchasing, transporting, and delivering supplemental water for groundwater recharge shall require the unanimous vote of the members and the subsequent approval by their respective governing boards or councils.

4.4.2 Subject to the Equitable Allocation and Cost Share requirements, any change in annual assessments necessary to support the work of the RBGC shall require the unanimous vote of the members and the subsequent approval by their respective governing boards or councils.

4.5 Minutes. The RBGC shall cause minutes to be kept of all meetings of the RBGC and any appointed Ad Hoc or Standing Committees. The RBGC shall further cause a copy of draft minutes to be forwarded to each member of the RBGC and to each Party, which may be done electronically, or by way of posting to a commonly available website or digital portal.

5. ANNUAL BUDGETING AND EXPENDITURE APPROVAL

5.1 The fiscal year of the RBGC shall be July 1 through June 30. The RBGC shall develop, circulate, and approve an annual budget for the funding of native supply capture and bringing water supply to the Rialto Basin, and for the maintenance and repair of groundwater recharge or water conveyance facilities serving replenishment of the Rialto Basin. The RBGC shall coordinate with BTAC to determine the likely allocation of available State Water Project imported water supplies, and other available non-native sources of water, the likely unit cost of such water, and the recharge needs of the Rialto Basin, in terms of quantities of water, locations where Rialto Basin conditions would most benefit from recharge, condition and availability of facilities to accomplish such recharge, and cost. From these sources, the RBGC shall prepare a budget that recommends all of the following:

(a) the amount of water supplies available to be purchased or otherwise acquired by RBGC members in the coming year;

(b) the recommended application or distribution of such water supplies to various parts of the Rialto Basin as recharge or as in-lieu supplies;

(c) the estimated cost of all ongoing maintenance, repair, and operation costs for then-existing and future groundwater recharge and conveyance facilities serving to replenish the Rialto Basin;

(d) any capital improvement projects approved by the RBGC

(e) any administrative costs of the RBGC; and

(f) proposed allocation of all expenditures in the budget among RBGC members as their portion of the Cost Share based upon the Equitable Allocation and Cost Share Requirements in this Agreement.

5.1.2 No later than March 1 prior to the beginning of the year for which the budget is to operate, the proposed budget shall be presented and circulated to all RBGC members for review and analysis. The circulated budget shall include the underlying presumptions and worksheets upon which it is based.

5.1.3 No later than sixty (60) days after each member agency's budget has been approved by their respective governing bodies, the RBGC shall meet to deliberate and pass upon the budget. The RBGC may accept, reject, or modify in any way the budget as proposed. Adoption of the budget shall require unanimous approval by the members and the subsequent approval by their respective governing boards or councils.

5.2 The RBGC shall appoint an entity that is responsible for the accounting and revenue collection functions of the RBGC by tracking and securing the funding from the RBGC members pursuant to the approved annual budget, and consistent with the approved cost allocations among the RBGC members therein, for all imported water supplies. The appointed

entity shall perform the accounting and revenue collection functions of the RBGC in tracking and securing the funding from its members pursuant to the approved annual budget, and consistent with the approved cost allocations among the RBGC members therein, for all facilities costs. In the event of any delinquency, the approved entity may request the RBGC to appoint it, or any other RBGC member or group of members, to represent the RBGC in securing collection of unpaid and owing amounts from any delinquent member or members. The reasonably incurred costs of such collection efforts may be reimbursed to the agent the RBGC authorized to go forward with them, and may be added as an administrative cost to other members, or as a credit against future amounts owing to the RBGC from such authorized agent.

5.3 No later than six (6) months into the budget year for which any budget is adopted by the RBGC, the RBGC shall prepare a year-in-process budget review, to assess the validity and accuracy of the presumptions upon which the budget was based, identify any budget savings or additional expenditures, assess any additional opportunities for groundwater replenishment that may have come available since the passing of the budget, and otherwise assess and recommend to the RBGC any potential amendment to the existing year budget, or suggestions for the following year's budget, as changing conditions may warrant.

6. COUNCIL POWERS AND DUTIES

6.1 The RBGC shall exercise the following powers:

6.1.1 To adopt rules, regulations, policies, bylaws and procedures governing the operation of the RBGC.

6.1.2 To produce an Annual Rialto Basin Groundwater Report, using as may be appropriate data regarding groundwater conditions available from Western Municipal Watermaster, or other sources. The Annual Report shall include data showing each Party's production from the Rialto Basin and recharge or replenishment, if any, to the Rialto Basin.

6.1.3 To monitor groundwater production and extractions in coordination with BTAC.

6.1.4 To make, after consultation with BTAC, annual recommendations for the amount of additional artificial recharge for the Rialto Basin from imported sources as a complement to native sources, and to plan for the development and application of such additional sources of recharge.

6.1.5 To establish as-needed Ad Hoc and Standing Committees for the purpose of making recommendations to the RBGC. Committees shall exist for the term specified in the action creating the committee, and the RBGC may dissolve a committee at any time through a majority vote of three voting members.

6.1.6 To contract, on behalf of the RBGC, for the services of engineers, attorneys, planners, financial consultants, and separate and apart therefrom, to appoint agents and representatives to employ such other staff persons as necessary. The BTAC will provide technical support for the RBGC, upon such terms as the RBGC and BTAC shall agree in writing.

6.1.7 To collect and monitor all data related and beneficial to the development, adoption and implementation of appropriate groundwater level management for the Rialto Basin.

6.1.8 To collect assessments from RBGC members as authorized in the approved budget.

6.1.9 To cooperate, act in conjunction, and contract with the United States, the State of California, or any agency thereof, counties, municipalities, public and private corporations of any kind (including without limitation, investor-owned utilities), and individuals, or any of them, for any and all purposes necessary or convenient for the purposes of this Agreement.

6.1.10 To accumulate operating and reserve funds and invest the same as allowed by law for the purposes of the RBGC.

6.1.11 As may be permitted by law, to apply for and accept grants, contributions, donations and loans, including under any federal, state or local programs for assistance in developing or implementing any of its projects or programs in connection with any project untaken in the RBGC's name.

6.1.12 To implement the Cost Share in a manner that qualifies as a pass through charge under the Constitutional requirements of Proposition 218, California Public Utilities Commission ratemaking policies and procedures, and similar revenue-raising requirements.

6.1.13 To exercise any power necessary or incidental to the foregoing powers in the manner and according to the procedures provided for under the law applicable to the Parties to this Agreement.

7. FUNDING RBGC ACTIVITIES

7.1 Funding for RBGC activities shall be as provided in Section 1.1.6. This mechanism is based in part on a regional sharing of Operation and Maintenance costs for Rialto Basin recharge activities, as those Operation and Maintenance costs shall be determined by the RBGC in its annual budgeting, in conjunction with BTAC. All Parties shall share in the Operation and Maintenance cost components in accordance with the provisions in Section 1.1.6 of this Agreement.

8. DISPUTE RESOLUTION

8.1 The Parties recognize that there may be disputes regarding the obligations of the Parties or the interpretation of this Agreement. The Parties agree that they may attempt to resolve disputes as follows:

8.2 Statement Describing Alleged Violation of Agreement. A Party or Parties alleging a violation of this Agreement (the "**Initiating Party(ies)**") shall provide a written

statement describing all facts that it believes constitute a violation of this Agreement to the Party(ies) alleged to have violated the terms of this Agreement (the "**Responding Party(ies)**").

8.3 Response to Statement of Alleged Violation. The Responding Party(ies) shall have sixty (60) days from the date of the written statement to prepare a written response to the allegation of a violation of this Agreement and serve that response on the Initiating Party(ies) or to cure the alleged violation to the reasonable satisfaction of the Initiating Party(ies). The Initiating Party(ies) and the Responding Party(ies) shall then meet within thirty (30) days of the date of the response to attempt to resolve the dispute amicably.

8.4 Mediation of Dispute. If the Initiating Party(ies) and the Responding Party(ies) cannot resolve the dispute within ninety (90) days of the date of the written response, they shall engage a mediator, experienced in water-related disputes, to attempt to resolve the dispute. Each Party shall ensure that it is represented at the mediation by a representative with authority to settle. These representatives of the Initiating Party(ies) and the Responding Party(ies) may consult with staff and/or technical consultants during the mediation and such staff and/or technical consultants may be present during the mediation. The costs of the mediator shall be divided evenly between the Initiating Party(ies) and the Responding Party(ies). The decision of the mediator shall be non-binding.

8.5 Reservation of Rights. Subject to the above requirements, in the event that mediation fails, each Party retains and may exercise all legal and equitable rights and remedies it may have to enforce the terms of this Agreement; provided, that prior to commencing litigation, a Party shall provide at least five (5) calendar days' written notice of its intent to sue to all Parties.

9 RELATIONSHIP TO WATER RIGHTS AND PRIOR AGREEMENTS

9.1 Water Rights and Existing Agreements. Nothing in this Agreement is intended to modify the water rights of the Parties, whether existing under a judgment, proceedings of the State Water Resources Control Board, or the common law, other than incorporating production right from No Man's Land Basin into the Rialto Basin. Nothing in this Agreement is intended to modify any existing agreements between and among the Parties, unless expressly stated herein.

9.2 Agreements Among Water Users. Nothing in this Agreement is intended to modify the rights of the signatories of this Agreement among themselves.

9.3 Judgments. Nothing in this Agreement is intended to modify the rights of the Parties under the terms of the 1961 Decree.. However, FUWC's production capacities of 5,014 acre-feet/year from No Man's Land shall be acknowledged and incorporated into the Rialto Basin production capacity limits in the 1961 decree.. It is the intention of the Parties in forming the RBGC to apply, administer, and conform to the requirements and provisions of the 1961 Decree. In the event of any conflict, except for incorporating FUWC's production in No Man's Land into the Rialto Basin production capacity limits in the 1961 decree, between the actions of the RBGC and the requirements and provisions of the 1961 Decree, the latter shall control.

9.4 No Admissions. Nothing in this Agreement shall be construed as an admission by any Party regarding any subject matter of this Agreement, including but not limited to the water rights or priorities of the Parties.

9.5 Preservation of Rights. The Parties agree that this Agreement, to the extent allowed by law, preserves all rights of the Parties as they may exist as of the Effective Date of this Agreement. Except as provided in Section 9.3, nothing in this Agreement is to be construed as altering the priorities or entitlements of water right holders among themselves to water from the Santa Ana River or the Rialto Basin.

10. MISCELLANEOUS

10.1 Authority. Each signatory of this Agreement represents that s/he is authorized to execute this Agreement on behalf of the Party for which s/he signs. Each Party represents that it has legal authority to enter into this Agreement and to perform all obligations under this Agreement, and that by doing so, such Party is not in breach or violation of any other agreement or contract.

10.2 Amendment. This Agreement may be amended or modified only by a written instrument approved by all voting members.

10.3 Jurisdiction and Venue. This Agreement shall be governed by and construed in accordance with the laws of the State of California. Any suit, action, or proceeding brought under the scope of this Agreement shall be brought and maintained to the extent allowed by law in the Superior Court, County of San Bernardino, California and shall be deemed related to the 1961 Rialto Basin Decree, San Bernardino County Superior Court Action No. 81264 and to *San Bernardino Valley Municipal Water District et al. v. San Gabriel Water Company et al*..

10.4 Headings. The paragraph headings used in this Agreement are intended for convenience only and shall not be used in interpreting this Agreement or in determining any of the rights or obligations of the Parties to this Agreement.

10.5 Construction and Interpretation. This Agreement has been arrived at through negotiations, and each Party has had a full and fair opportunity to revise the terms of this Agreement. As a result, the normal rule of construction that any ambiguities are to be resolved against the drafting Party shall not apply in the construction or interpretation of this Agreement.

10.6 Entire Agreement. This Agreement constitutes the entire agreement of the Parties with respect to its subject matter, and supersedes any prior oral or written agreement, understanding, or representation relating to the subject matter of this Agreement.

10.7 Partial Invalidity. If, after the date of execution of this Agreement, any provision of this Agreement is held to be illegal, invalid, or unenforceable under present or future laws or adjudicatory decisions effective during the term of this Agreement, such provision shall be fully severable. However, in lieu thereof; there shall be added a provision as similar in terms to such illegal, invalid or unenforceable provision as may be possible and be legal, valid and enforceable.

10.8 Successors and Assigns. To the extent authorized by law, this Agreement shall be binding on and inure to the benefit of the successors and assigns of the respective Parties to this Agreement. No Party may assign its interests in or obligations under this Agreement without the written consent of the other Parties, which consent shall not be unreasonably withheld or delayed.

10.9 Waivers. Waiver of any breach or default hereunder shall not constitute a continuing waiver or a waiver of any subsequent breach either of the same or of another provision of this Agreement, and forbearance to enforce one or more of the remedies provided in this Agreement shall not be deemed to be a waiver of that remedy.

10.10 Necessary Actions. Each Party agrees to execute and deliver additional documents and instruments and to take any additional actions as may be reasonably required to carry out the purposes of this Agreement.

10.11 Compliance with Law. In performing their respective obligations under this Agreement, the Parties shall comply with and conform to all applicable laws, rules, regulations and ordinances.

10.12 Third Party Beneficiaries. This Agreement shall not create any right or interest in any non-Party or in any member of the public as a third party beneficiary.

10.13 Notices. All notices, requests, demands or other communications required or permitted under this Agreement shall be in writing unless provided otherwise in this Agreement and shall be deemed to have been duly given and received on: (i) the date of service if served personally or served by facsimile transmission on the Party by delivery to the person(s) at the address(es) designated below, which designation may be changed from time to time by a Party in writing; (ii) on the first day after mailing, if mailed by Federal Express, U.S. Express Mail, or other similar overnight courier service, postage prepaid, and addressed as provided below, or (iii) on the third day after mailing if mailed to the Party to whom notice is to be given by first class mail, registered or certified, postage prepaid, addressed as follows:

SETTLEMENT AGREEMENT

Relating to the Diversion of Water from the Santa Ana River System

This Settlement Agreement Relating to the Diversion of Water From the Santa Ana River ("**Agreement**") is entered into this 21st day of July, 2004 ("Effective Date") by and among: San Bernardino Valley Municipal Water District ("**Muni**") and Western Municipal Water District of Riverside County ("**Western**") (collectively, Muni and Western are referred to as the "**Applicants**"); the City of Redlands ("**Redlands**"); East Valley Water District ("**East Valley**"); and Bear Valley Mutual Water Company, Lugonia Water Company, North Fork Water Company and Redlands Water Company ("**Bear Valley**"), (collectively, Redlands, East Valley and Bear Valley are referred to as the "**Water Users**"). Each of the parties to this Agreement is referred to herein as a "**Party**" and the parties are collectively referred to herein as the "**Parties**."

Recitals

Applicants have filed with the State Water Resources Control Board ("**SWRCB**") Application Nos. 31165 and 31370 (collectively, the "**Applications**") to appropriate water from the Santa Ana River for direct diversion and/or storage. Water Users have filed protests against the Applications alleging infringement of Water Users' senior water rights and adverse impacts on the environment. The Parties wish to resolve these protests without the need for a lengthy and expensive water rights hearing.

Agreements

1. *Withdrawal of Protests Presently Pending Before the SWRCB.*

   a. *Withdrawal of Protests.* Within twenty business days after the date on which Water Users receive a draft environmental impact report on the Applications for public review, Water Users shall each send to the SWRCB, via certified mail with a copy to Applicants, a letter withdrawing their respective protests against the Applications. Said letters shall be in the form provided in Exhibit A and incorporated herein by reference. Applicants shall provide Water Users with notice of the release of the draft environmental impact report via facsimile transmission upon its release.

   b. *Support for Applications.* Water Users shall, simultaneously with the withdrawal of their respective protests to the Applications, also each send, via certified mail with a copy to Applicants, letters to the SWRCB supporting the issuance of permits to Applicants for the diversion and storage of the full quantities of water from the Santa Ana River identified in the Applications. Such letters shall be in the form provided in Exhibit B and incorporated herein by reference. Water Users shall also, upon written request by Applicants, send similar letters to local, state and federal agencies supporting the issuance of all other permits or regulatory approvals that may be necessary for Applicants to implement their plans to divert water from the Santa Ana River, including seasonal water conservation at Seven Oaks Dam and Reservoir, as reflected in the Applications. A list of all permits/approvals that Applicants presently believe may be required to implement the Applications is included in Exhibit B and incorporated herein by reference. Applicants shall update this list annually if additional permits/approvals become necessary to implement the plans identified in the Applications and Water Users agree not to object to such additional permits/approvals that may be needed to implement the Applications.

c. *Incorporation of Settlement in Applications.* Applicants shall, within twenty business days of the date on which Applicants issue a draft environmental impact report on the Applications for public review, amend the Applications to incorporate the terms of this Agreement therein and request the SWRCB to incorporate the terms of this Agreement in any permits issued to Applicants.

2. *Effect of Agreement.* Paragraphs 3 to 11 of this Agreement shall not take effect unless and until: (i) the Parties complete the review and analysis, if any, that may be required by the terms of the California Environmental Quality Act of the potential physical change in the environment of implementing those provisions and (ii) the SWRCB approves the Applications, in whole or in part, and issues water rights permits to Applicants pursuant thereto. In the event that the SWRCB denies the Applications in their entirety, paragraphs 3 to 11 of this Agreement shall immediately be deemed null and void and no Party shall be bound thereby. In the event that the SWRCB approves the Applications by the issuance of permits which contain terms or provisions that are inconsistent with the terms or provisions of this Agreement, the Parties shall implement the terms or provisions of this Agreement to the extent legally permissible.

3. *Diversions from the Santa Ana River*

a. *Diversions by Water Users.* Subject to the conditions contained in subparagraphs 3(a)(1) to 3(a)(7) below, any rights granted Applicants by the SWRCB to divert water from the Santa Ana River shall be subject to the prior right of Water Users to divert up to the first 88 cfs of the natural flow of the Santa Ana River and Applicants shall not, during the term of this Agreement, object to, nor challenge by way of any administrative proceeding, judicial proceeding or otherwise, Water Users' combined diversion of up to the first 88 cfs of the natural flow of the Santa Ana River, as defined in paragraph 3(a)(7) below. Such diversion may include, without limitation, Water Users' diversion of water at rates sufficient to:

(i) equal the present and future treatment capacity of the Hinckley Treatment Plant or other water treatment plants used to deliver water for municipal and industrial purposes within Water Users' respective service areas, (ii) meet the irrigation demand from agricultural areas within Water Users' respective service areas, and (iii) satisfy other permitted uses of water as described in paragraphs 3(a)(1) and 3(a)(6) below. Nothing in this Agreement shall be interpreted to allow Water Users, under any circumstances, to divert water other than the first 88 cfs of the natural flow of the Santa Ana River.

(1) *"Run of the River" Basis for Diversions.* All diversions by Water Users from the Santa Ana River must be made on a "run of the river" basis (i.e., diversions for immediate delivery for beneficial use without storage of any kind, either above or below ground) for delivery within Water Users' combined service areas, *provided, however*, that Water Users may spread a portion of the natural flow of the Santa Ana River as provided in paragraph 4 below and may store a portion of the natural flow of the Santa Ana River as provided in paragraph 3(a)(6) below.

(2) *Natural Flow of the Santa Ana River.* The "natural flow of the Santa Ana River" is defined for purposes of this Agreement as the flow of the Santa Ana River in the Southern California Edison Company power conduit as measured downstream of Seven Oaks Dam, and the river pickup located downstream from Seven Oaks Dam and upstream from the afterbay of Southern California Edison Santa Ana River Powerhouse No. 3, less: (1) any releases from Bear Valley's Lake Account, and/or (2) any releases or spills from Big Bear Municipal Water District's Lake Account, as those accounts are defined in the 1977 judgment in *Big Bear Municipal Water District v. North Fork Water Company et al.* (San

Bernardino County Superior Court No. 165493) dated February 4, 1977, a copy of which is attached hereto as Exhibit C and incorporated herein by reference (the "**1977 Judgment**"). Water Users may divert up to the full 88 cfs using the combination of the Southern California Edison power conduit and the river pickup located downstream from Seven Oaks Dam and upstream from the afterbay of Southern California Edison Santa Ana River Powerhouse No. 3. The facilities described in this subparagraph are depicted in the map attached hereto as Exhibit D and incorporated herein by reference. If Southern California Edison sells or otherwise disposes of the power conduit system, Water User's right to divert the first 88 cfs of the natural flow of the Santa Ana River shall remain unaffected.

(3) *Water Users' Service Areas.* The Water Users' combined service areas are defined more precisely in Exhibit E, which is attached hereto and incorporated herein by reference.

(4) *Water Users' Points of Diversion.* Nothing in this Agreement is intended to prevent the Water Users from diverting water from points of diversion that they each respectively use at present. A list of such points of diversion is attached as Exhibit F and incorporated herein by reference. Water Users agree that Applicants may divert the water that is the subject of the Applications from Water Users' points of diversion, *provided* that Applicants may only divert water from Water Users' points of diversion during those times when there is diversion capacity available at those points of diversion which is excess to the needs of Water Users. Water Users shall execute the necessary documents, if any, to evidence full permission to Applicants to

divert water from Water Users' points of diversion, subject to the above restriction.

(5) *Cooperative Water Project Agreement Credits.* Nothing in this Agreement is to be construed as precluding Water Users from delivering water in a manner that generates Deferred Exchange Water Credits under the terms of the Santa Ana River-Mill Creek Cooperative Water Project Agreement (the "Cooperative Water Project Agreement").

(6) *Permitted Surface Storage.* Nothing in this Agreement shall: (i) preclude Bear Valley from storing water to the extent needed for system surface storage in the Mentone Reservoir at its present location to meet the needs/demands of its shareholders or (ii) preclude Bear Valley's shareholders from storing water in Crafton Reservoir at its present location to meet the needs/demands of its shareholders. Nothing in this Agreement is intended to interfere with Redlands' and East Valley's regulatory storage of potable water above ground prior to delivery of that water to retail or wholesale customers.

(7) *No Rights to Seven Oaks Reservoir.* Nothing in this Agreement shall be construed as granting Water Users any right to water that is conserved at Seven Oaks Reservoir or as granting Water Users any right to store water at Seven Oaks Reservoir; provided, however, Water Users may divert, at the Bear Valley River Pickup, up to 88 cfs of the natural flow of the Santa Ana River that is temporarily detained behind Seven Oaks Dam.

b. *Applicants' Diversion Rights.* Water Users shall not object to Applicants' diversion, pursuant to a permit or license issued by the SWRCB, of all water in the Santa Ana River in excess of the actual combined diversions

of Water Users, which, pursuant to paragraph 3(a) above, shall not exceed 88 cfs. Water Users shall have no claims to or rights in the water diverted by Applicants provided that nothing in this Agreement is to be construed as prohibiting Water Users from participating in programs developed or implemented by Applicants on the same terms and conditions as other water purveyors in the San Bernardino Valley.

4. *Groundwater Spreading Program.* Applicants, after consultation with Water Users, shall develop and manage a groundwater spreading program that is intended to maintain groundwater levels at the wells specified in Exhibit G at relatively constant levels, in spite of the inevitable fluctuations due to hydrologic variation. The groundwater spreading program shall identify target water level ranges in the specified wells and shall be subject to the requirement that such spreading not worsen the problem of high groundwater levels in the Pressure Zone. The determination of whether a particular action will worsen groundwater levels in the Pressure Zone shall be made using the integrated surface and groundwater models used by Applicants in the environmental impact report for the Applications, as those models may be refined in the future.

a. *Development and Implementation of Program.* Applicants shall adopt such an integrated management program within five years of the date on which the SWRCB grants Applicants a permit to divert water from the Santa Ana River. Water Users agree to limit spreading in the San Bernardino Basin Area so as to conform to an annual management plan adopted by Applicants that is consistent with the terms of this Agreement.

b. *Spreading by Water Users.* As part of the groundwater spreading program developed by Applicants, Bear Valley may, in lieu of a portion of its share of the 88 cfs of direct diversions of the natural flow of the Santa Ana River described in paragraph 3(a) above, divert up to a maximum collective total of 9 cfs for spreading at either the South Airport spreading basins and/or at the West Mill Creek spreading grounds. These spreading

grounds are shown on the map depicted in Exhibit H and incorporated herein by reference. The other Water Users, including but not limited to Redlands and East Valley, will also be able to participate in the spreading program by spreading a portion of their respective shares of the natural flows of the Santa Ana River within the 88 cfs limit described in paragraph 3(a) at the locations specified in Exhibit H. The maximum total spreading that may be done by all Water Users, in all locations at any given time, may not exceed a rate of 20 cfs, provided that such spreading shall not worsen high groundwater levels in the Pressure Zone as defined in paragraph 4 above. All spreading by Water Users is intended to be operated on a "put and take" basis with extractions occurring within one year of the date spread and Water Users shall report all spreading to Applicants on an annual basis for inclusion in the Watermaster's report pursuant to the *Western* Judgment identified in paragraph 7(c) below.

5. *Service of Water by Water Users.* In accordance with all applicable provisions of law, Water Users shall only deliver surface water or groundwater:

a. within Water Users' respective Service Areas as identified in Exhibit E, as modified from time to time in accordance with applicable law;

b. on a retail basis in areas outside Water Users' respective Service Areas where a Water User provides such service on a 365 day/year basis; or

c. on a non-retail basis outside Water Users' respective Service Areas and within the San Bernardino Basin Area, *provided that* if a Water User wishes to provide water on a non-retail basis outside its Service Area and within the San Bernardino Basin Area, it shall provide Applicants with at least 30 days' written notice of such proposed non-retail service. If Applicants do not object in writing to such proposed non-retail service within 15 days from the date of the notice, the Water User may proceed with such non-retail service of water. If Applicants object to such

proposed non-retail service, Applicants and the Water User shall promptly meet to consider whether the provision of non-retail water service would reduce or interfere with the diversion of water by Applicants. If the integrated groundwater/surface water model referred to in paragraph 4 above shows that the proposal for non-retail service would not have any impacts on the location, timing, quantity, spreading or other characteristic of Applicants' diversions, then the Water User may implement the proposal. In all other cases, the proposal for non-retail service shall only be implemented with the prior written consent of Applicants, which shall not be unreasonably withheld or unduly delayed.

6. *Banking and Exchanges.*

a. *By Water Users.* Save in cases of emergencies, water diverted by Water Users may only be wheeled, banked, exchanged or transferred, directly or indirectly, in lieu or otherwise in the manner allowed by the Cooperative Water Project Agreement.

b. *By Applicants.* Water Users acknowledge that Applicants intend to bank and/or exchange substantial quantities of native Santa Ana River water for water imported from the State Water Project or other sources of imported or native water pursuant to a comprehensive program for water banking and/or exchanges in the San Bernardino Valley and elsewhere in Southern California that includes, but is not limited to, the groundwater spreading plan described in paragraph 4 above, and that is not inconsistent with the terms of this Agreement.

c. *Pursuant to Applicants' Program.* Water Users acknowledge that Applicants intend to develop a comprehensive program for water banking and/or exchanges in the San Bernardino Valley and elsewhere in Southern California that includes, but is not limited to, the groundwater spreading plan described in paragraph 4 above. Water Users may participate in such

comprehensive water banking/exchange program on the same terms as other water purveyors.

d. *Definition of Emergency.* For purposes of this Agreement, the term "**emergency**" shall be defined as provided in California Code of Regulations, title 14, section 15359.

7. *State Project Water.* Applicants reserve the right to store State Water Project water in Seven Oaks Reservoir, either in conjunction with or separately from, the storage of conserved water from the Santa Ana River system. Water Users will not object to such storage of State Water Project water in Seven Oaks Reservoir to the extent that such storage is not inconsistent with the terms of this Agreement.

8. *Water Subject to Agreement.* This Agreement addresses the Parties' use of raw water (including surface water, non-contaminated groundwater and groundwater treated to remove contaminants) and potable water. Nothing in this Agreement shall be construed to regulate the Parties' use of recycled municipal wastewater.

9. *Relationship to Other Agreements and Judgments.*

a. *Cooperative Water Project Agreement.* Nothing in this Agreement is intended to modify the rights of the Parties under the Cooperative Water Project Agreement.

b. *Agreements Among Water Users.* Nothing in this Agreement is intended to modify the rights of Water Users among themselves.

c. *Judgments.* Nothing in this Agreement is intended to modify the rights of the Parties under the terms of the 1977 Judgment or the judgments in *Orange County Water District v. City of Chino et al.* (Orange County Superior Court, Case No. 117628, April 17, 1969) and *Western Municipal Water District of Riverside County v. East San Bernardino County Water District et al.* (Riverside County Superior Court Case No. 78426, April 17, 1969).

10. *No Admissions.* Nothing in this Agreement shall be construed as an admission by any Party regarding any subject matter of this Agreement, including but not limited to the water rights of the Parties. The Parties agree that Evidence Code sections 1152 and 1154 render this Agreement inadmissible as evidence against any of the Parties in any adjudicative proceeding, except a proceeding to enforce or interpret the terms or conditions of this Agreement and/or the terms or conditions of a permit or permits issued to Applicants by the SWRCB pursuant to the Applications. In particular, nothing in this Agreement shall be construed as an admission by Applicants relating to the priority, nature, quantity or other characteristic of the water rights claimed by Water Users or a waiver of any contentions by Applicants relating to Water Users' claimed water rights.

11. *Preservation of Rights.* The Parties agree that this Agreement is in settlement of water right disputes and preserves all rights of the Parties as they may exist as of the Effective Date of this Agreement. Nothing in this Agreement is to be construed as altering the priorities or entitlements of Water Users among themselves to water from the Santa Ana River.

12. *Administration of Agreement*

a. *Recordation of Agreement.* Applicants shall, within ten days of the Effective Date of this Agreement, cause this Agreement to be recorded in the Official Records of the County of San Bernardino. Applicants shall provide Water Users with recorded copies of this Agreement promptly upon the receipt of such copies from the County of San Bernardino.

b. *Books and Records.* Each Party shall have access to and the right to examine any of the other Party's pertinent books, documents, papers or other records (including, without limitation, records contained on electronic media) relating to the performance of that Party's obligations pursuant to this Agreement. The Parties shall each retain all such books, documents, papers or other records to facilitate such review. Access to

each Party's books and records shall be during normal business hours only. Nothing in this paragraph shall be construed to operate as a waiver of any applicable privileges.

c. *Disputes*. The Parties recognize that there may be disputes regarding the obligations of the Parties or the interpretation of this Agreement. The Parties agree that they may attempt to resolve disputes as follows:

(1) *Statement Describing Alleged Violation of Agreement.* A Party or Parties alleging a violation of this Agreement (the "**Initiating Party(ies)**") shall provide a written statement describing all facts that it believes constitute a violation of this Agreement to the Party(ies) alleged to have violated the terms of this Agreement (the "**Responding Party(ies)**").

(2) *Response to Statement of Alleged Violation.* The Responding Party(ies) shall have sixty days from the date of the written statement to prepare a written response to the allegation of a violation of this Agreement and serve that response on the Initiating Party(ies) or to cure the alleged violation to the reasonable satisfaction of the Initiating Party(ies). The Initiating Party(ies) and the Responding Party(ies) shall then meet within thirty days of the date of the response to attempt to resolve the dispute amicably.

(3) *Mediation of Dispute.* If the Initiating Party(ies) and the Responding Party(ies) cannot resolve the dispute within ninety days of the date of the written response, they shall engage a mediator, experienced in water-related disputes, to attempt to resolve the dispute. Each Party shall ensure that it is represented at the mediation by a Director or Trustee. These representatives of the Initiating Party(ies) and the Responding Party(ies) may consult

with staff and/or technical consultants during the mediation and such staff and/or technical consultants may be present during the mediation. The costs of the mediator shall be divided evenly between the Initiating Party(ies) and the Responding Party(ies).

(4) *Reservation of Rights.* Nothing in this paragraph 12 shall require a Party to comply with the dispute resolution process contained herein and each Party retains and may exercise at any time all legal and equitable rights and remedies it may have to enforce the terms of this Agreement; provided, that prior to commencing litigation, a Party shall provide at least five calendar days' written notice of its intent to sue to all Parties.

13. *Implementation of Agreement.* This Agreement shall become effective upon its approval by Muni, Western, Redlands, Bear Valley Mutual Water Company, and East Valley. Other Parties identified above shall have 90 days from the Effective Date to execute this Agreement.

14. *Environmental Impact Report.* Applicants shall include thresholds of significance and mitigation measures in substantially the form set forth in Exhibit I in their environmental impact report for the Applications.

15. *General Provisions.*

a. *Authority.* Each signatory of this Agreement represents that s/he is authorized to execute this Agreement on behalf of the Party for which s/he signs. Each Party represents that it has legal authority to enter into this Agreement and to perform all obligations under this Agreement.

b. *Amendment.* This Agreement may be amended or modified only by a written instrument executed by each of the Parties to this Agreement.

c. *Jurisdiction and Venue.* This Agreement shall be governed by and construed in accordance with the laws of the State of California, except for

its conflicts of law rules. Any suit, action, or proceeding brought under the scope of this Agreement shall be brought and maintained to the extent allowed by law in the County of San Bernardino, California.

d. *Headings.* The paragraph headings used in this Agreement are intended for convenience only and shall not be used in interpreting this Agreement or in determining any of the rights or obligations of the Parties to this Agreement.

e. *Construction and Interpretation.* This Agreement has been arrived at through negotiations and each Party has had a full and fair opportunity to revise the terms of this Agreement. As a result, the normal rule of construction that any ambiguities are to be resolved against the drafting Party shall not apply in the construction or interpretation of this Agreement.

f. *Entire Agreement.* This Agreement constitutes the entire agreement of the Parties with respect to the subject matter of this Agreement and supersedes any prior oral or written agreement, understanding, or representation relating to the subject matter of this Agreement.

g. *Partial Invalidity.* If, after the date of execution of this Agreement, any provision of this Agreement is held to be illegal, invalid, or unenforceable under present or future laws effective during the term of this Agreement, such provision shall be fully severable. However, in lieu thereof, there shall be added a provision as similar in terms to such illegal, invalid or unenforceable provision as may be possible and be legal, valid and enforceable.

h. *Successors and Assigns.* This Agreement shall be binding on and inure to the benefit of the successors and assigns of the respective Parties to this Agreement. No Party may assign its interests in or obligations under this

Agreement without the written consent of the other Parties, which consent shall not be unreasonably withheld or delayed.

i. *Waivers*. Waiver of any breach or default hereunder shall not constitute a continuing waiver or a waiver of any subsequent breach either of the same or of another provision of this Agreement and forbearance to enforce one or more of the remedies provided in this Agreement shall not be deemed to be a waiver of that remedy.

j. *Attorneys' Fees and Costs*. The prevailing Party in any litigation or other action to enforce or interpret this Agreement shall be entitled to reasonable attorneys' fees, expert witnesses' fees, costs of suit, and other and necessary disbursements in addition to any other relief deemed appropriate by a court of competent jurisdiction.

k. *Necessary Actions*. Each Party agrees to execute and deliver additional documents and instruments and to take any additional actions as may be reasonably required to carry out the purposes of this Agreement.

l. *Compliance with Law*. In performing their respective obligations under this Agreement, the Parties shall comply with and conform to all applicable laws, rules, regulations and ordinances.

m. *Third Party Beneficiaries*. This Agreement shall not create any right or interest in any non-Party or in any member of the public as a third party beneficiary.

n. *Counterparts*. This Agreement may be executed in one or more counterparts, each of which shall be deemed to be an original, but all of which together shall constitute but one and the same instrument.

o. *Notices*. All notices, requests, demands or other communications required or permitted under this Agreement shall be in writing unless provided otherwise in this Agreement and shall be deemed to have been duly given

and received on: (i) the date of service if served personally or served by facsimile transmission on the Party to whom notice is to be given at the address(es) provided below, (ii) on the first day after mailing, if mailed by Federal Express, U.S. Express Mail, or other similar overnight courier service, postage prepaid, and addressed as provided below, or (iii) on the third day after mailing if mailed to the Party to whom notice is to be given by first class mail, registered or certified, postage prepaid, addressed as follows:

Re: Withdrawal of Protest by _____
Application Nos. 31165 and 31370
Santa Ana River, San Bernardino County

Dear Chairman Baggett:

_____ ("Protestant") has filed protests against Application Nos. 31165 and 31370 which have been filed with the State Water Resources Control Board (the "SWRCB") by San Bernardino Valley Municipal Water District and Western Municipal Water District of Riverside County ("Applicants"). Protestant and Applicants have now approved a settlement agreement that resolves all of the matters that were the subjects of Protestant's objections to Application Nos. 31165 and 31370. Protestant, accordingly, hereby withdraws its protests to Application Nos. 31165 and 31370. A copy of that executed settlement agreement is enclosed with this letter.

Please feel free to call if you or your staff have questions regarding this withdrawal of protests.

Very truly yours,

ENIBIT B

Arthur G. Baggett, Jr.
Chairman
State Water Resources Control Board
1101 I Street
Sacramento, California 95814

Re: Letter of Support by _____
Application Nos. 31165 and 31370
Santa Ana River, San Bernardino County

Dear Chairman Baggett:

_____ ("Protestant") has filed protests against Application Nos. 31165 and 31370 (collectively, the "Applications") which have been filed with the State Water Resources Control Board ("SWRCB") by San Bernardino Valley Municipal Water District and Western Municipal Water District of Riverside County (collectively, "Applicants"). Protestant and Applicants have now approved and executed a settlement agreement that resolves all of the matters that were the subjects of Protestant's objections to the Applications.

Protestant hereby supports the SWRCB's issuance of permits to Applicants for the diversion and storage of the full quantities of water from the Santa Ana River identified in the Applications. Protestant also supports the issuance of all other permits or other regulatory approvals that may be necessary for Applicants to implement their plans to divert water from the Santa Ana Rive, including seasonal water conservation at Seven Oaks Dam and Reservoir, as reflected in the Applications.

Please feel free to call if you or your staff have questions regarding this letter in support of the Applications.

Very truly yours,

Permits Potentially Required for Water Conservation at Seven Oaks Dam

The following is a list of permits that may, depending upon site-specific circumstances, be required in order for the Applicants to implement their plans for seasonal water conservation at Seven Oaks Dam. Applicants will identify necessary permits after the completion of the Final EIR on seasonal water conservation.

Agency	*Permits/Approvals*
U.S. Army Corps of Engineers	• Approval for any physical alterations to Seven Oaks Dam and its operations, including seasonal water conservation • Approval for new pipelines to connect to facilities of Seven Oaks Dam • Permits/approvals per Section 404 of the Clean Water Act (for the discharge of dredged and fill material into waters of the United States) • Permits/approvals per Section 10 of the Rivers and Harbors Act (for construction in waterways) • Compliance with the National Environmental Policy Act (in conjunction with other Federal agencies)
U.S. Fish and Wildlife Service	• Permits/approvals per the Federal Endangered Species Act, Fish & Wildlife Coordination Act, Migratory Bird Treaty Act and similar statutes (including, if needed, incidental take permits)
U.S. Forest Service	• Access agreements/permits for construction within the San Bernardino National Forest and other compliance with applicable Forest Plan(s) • Special use permit for water conservation at Seven Oaks Dam
California State Water Resources Control Board	• Approval of Muni/Western water rights applications 31165 and 31370 • Clean Water Act Section 401 certification for all federal permits
Santa Ana Regional Water Quality Control Board	• Clean Water Act Section 401 certification for water quality/stormwater runoff during construction • National Pollutant Discharge Elimination System (NPDES) permit for ongoing pipeline cleaning and maintenance activities
California Department of Fish and Game	• Section 2081 and other permits per the California Endangered Species Act, the Fully Protected Species Act, the Natural Communities Conservation Program Act, and similar statutes (including, if needed, incidental take permits) • Section 1602 Streambed Alteration Agreement • Compliance with Section 5937 and similar statutes requiring that fish be kept in good condition below a dam or reservoir

Agency	*Permits/Approvals*
State Historic Preservation Officer	• Consultation per Section 106 of the National Historic Preservation Act
South Coast Air Quality Control Board	• Permit to Construct • Approval of the fugitive dust emissions plan
County of San Bernardino	• Road Encroachment and Closure permit • Flood Control Right-of-Way (for construction in the floodplain) • Soil Erosion and Sediment Control Permit
City of Highland	• Grading permits • Road encroachment and closure permits
City of Rialto	• Grading permits • Road encroachment and closure permits
San Bernardino Flood Control District, Orange County Flood Control District, and Riverside County Flood Control and Water Conservation District (Local Sponsors of Seven Oaks Dam)	• Encroachment permits and access agreements • Agreement(s) to implement seasonal water conservation at Seven Oaks Dam
Metropolitan Water District of Southern California	• Encroachment permits and access agreements • Exchange agreement (Attachment 5 to Coordinated Operating Agreement for Conveyance Facilities and State Water Project Supplies)

V. Dennis Wardle
County Clerk

SUPERIOR COURT OF THE STATE OF CALIFORNIA

FOR THE COUNTY OF SAN BERNARDINO

BIG BEAR MUNICIPAL WATER DISTRICT, Plaintiff v. NORTH FORK WATER COMPANY et al., Defendants	No. 165493 JUDGMENT

This action having been pending on appeal from a prior judgment of this Court, and the parties having stipulated to a form of judgment disposing of the issues raised by the complaint, and the Court of Appeal, pursuant to stipulation, having remanded the case for proceedings in accordance with said Stipulation for Judgment, and good cause appearing

IT IS HEREBY ORDERED, ADJUDGED AND DECREED as follows:

I. DEFINITIONS AND EXHIBITS

1. Definitions. As used in this judgment, the following terms shall have the meanings herein set forth:

(a) Basin Make-up Water. Water provided by District to

DONALD D. STARK
ATTORNEY AT LAW
33 BUSINESS CENTER
DRIVE

replace water lost to San Bernardino Basin by reason of operations under terms of the physical solution herein.

(b) Bear Creek. That certain tributary of the Santa Ana River rising in Upper Bear Creek Watershed and flowing past the Dam and down to the confluence of said creek and river, all as shown on Exhibit "A".

(c) Confluence. The point at which Bear Creek joins the Santa Ana River, as shown on Exhibit "A".

(d) Conservation District. San Bernardino Valley Water Conservation District.

(e) Dam. The multiple-arch concrete dam constructed in 1911 at the location shown on Exhibit "A".

(f) District. Big Bear Municipal Water District.

(g) Division Box. The structure at the discharge from Power Plant No. 3, where Mutual divides the flow from the Edison Conduit between the North Fork and Redlands Canals.

(h) Edison. Southern California Edison Company.

(i) Edison Diversion. The works and facilities of Edison at the Confluence used to divert water into the Edison Conduit.

(j) Edison Conduit. The canal, pipeline and tunnels extending from the Edison Diversion, through Power Plants Nos. 1, 2 and 3 to the High Line and Division Box.

(k) Fiscal Year. July 1 to June 30, following.

(l) In Lieu Water. Water which is to be provided pursuant to the Physical Solution to Mutual by District, without cost to Mutual, in lieu of releases of Lake water.

(m) Lake. Big Bear Lake, being the body of water

DONALD D. STARK
ATTORNEY AT LAW
[illegible] BUSINESS CENTER
DRIVE

impounded by the Dam.

(n) Lake Storage Right. The right of Mutual to use the full storage capacity of the Lake for storage of water diverted at the Dam, pursuant to Mutual's appropriative right, which storage right was expressly reserved by Mutual in its conveyance of the Lake Properties to Bear Valley Mutual Water Company Partial Liquidation Trust.

(o) Mill Creek Exchange. The Santa Ana River-Mill Creek Cooperative Water Project Agreement, dated May 3, 1976, as amended from time to time.

(p) Mouth of the Canyon. The location at which the Santa Ana River passes from its mountain canyon onto the alluvial valley overlying San Bernardino Basin, as shown on Exhibits "A" and "C".

(q) Mutual. Bear Valley Mutual Water Company.

(r) Mutual's Lake Water Operations. The calculated, hypothetical account of operation of the lake under conditions of In Lieu Water deliveries pursuant to the physical solution herein, which account shall be maintained by Watermaster in accordance with Watermaster Criteria.

(s) North Fork Agreement. That certain agreement dated May 23, 1885, between Bear Valley Land and Water Company and North Fork Water Company, attached as Exhibit "E".

(t) Prior Right Agreements. Collectively, the North Fork Agreement and the Sunnyside Agreement, Exhibits "E" and "F".

(u) Prior Right Companies. Collectively, North Fork Water Company, Lugonia Water Company and Redlands Water

DONALD D. STARK
ATTORNEY AT LAW
MB BUSINESS CENTER
DRIVE
IRVINE, CALIF. 92715

Company.

(v) San Bernardino Basin. The ground water basin underlying the San Bernardino Valley above the Bunker Hill Fault and downstream from the Mouth of the Canyon.

(w) Sunnyside Agreement. That certain agreement dated February 27, 1886, between The Shareholders in South Fork Ditch of the Santa Ana River, Sunnyside Division, and Bear Valley Land and Water Company, attached as Exhibit "F".

(x) Upper Bear Creek Watershed. The surface drainage area tributary to the Dam and drained by Bear Creek and its tributaries, as shown on Exhibit "A".

(y) Upper Santa Ana River Watershed. The surface drainage area tributary to the Edison Diversion on the Santa Ana River, as shown on Exhibit "A".

(z) Watermaster Criteria. The detailed engineering criteria, set forth in Exhibit "D".

Geographical Names, not otherwise defined herein, are used with reference to their appearance on Exhibits "A", "B" and "C".

2. Exhibits. The following exhibits are attached to this Judgment and by this reference are made a part hereof:

"A" -- General Location Map.

"B" -- Hydrologic Map of Upper Bear Creek Watershed.

"C" -- Map showing diversion facilities and relevant system of Mutual.

"D" -- Watermaster Operating Criteria.

"E" -- North Fork Agreement.

"F" -- Sunnyside Agreement.

IRVINE, CALIF. 92715
(714) 752-0471

II. DECLARATIONS

A. HYDROLOGY

3. Upper Bear Creek Watershed is commonly known as Bear Valley. Its surrounding mountains rise to elevations of 8500 feet, and the watershed extends down to the Dam at elevation 6743 feet. Said watershed is drained by Bear Creek and its tributaries. Immediately easterly of Upper Bear Creek Watershed is the watershed of Baldwin Lake. The dominant geographic feature in Upper Bear Creek Watershed is the Lake, which has existed continuously since 1883. Surrounding the Lake are several mountain communities, the largest of which is Big Bear Village, situate on the southerly border of the Lake. Easterly of Big Bear Village and within Baldwin Lake Watershed is Big Bear City. Domestic water service in Upper Bear Creek Watershed is provided by Southern California Water Company, a public utility, Big Bear City Community Services District, and through individual domestic wells. All of the privately-held lands in Upper Bear Creek Watershed lie within the boundaries of District.

4. Early Santa Ana River Diversions. The earliest appropriations of water from the Santa Ana River commence in 1856 from the Santa Ana River as it traversed San Bernardino Basin. Two successor diversions developed by progressive moving of canal and diversion facilities upstream to the Mouth of the Canyon, from which the North Fork Canal distributed water northwesterly into San Bernardino Basin and the Sunnyside Ditch distributed water southwesterly to the vicinity of Redlands. Above these canals there subsequently developed ancillary facilities to serve higher ground through the Edwards Canal and High Line, respectively. The

DONALD D. STARK
ATTORNEY AT LAW
[illegible] BUSINESS CENTER DRIVE
IRVINE, CALIF. 92715
(714) 752-8071

North Fork and Sunnyside diversions had established and claimed rights to substantially the entire surface flow of the Santa Ana River at the Mouth of the Canyon by 1883, when the predecessors of Mutual undertook to build the original dam at the Lake. In order to preserve the prior appropriative rights of the North Fork and Sunnyside diversions, Mutual's predecessors entered into the Prior Right Agreements, which agreements are still in effect.

5. Mutual's Diversion Practices. Mutual has multiple sources of supply, but its major, historic source is and has been stream flow from the Santa Ana River at the Edison Diversion, the supplementing of flows between the Edison Diversion and Mouth of the Canyon, and releases by Edison onto the High Line and to the Division Box. From the end of the Edison Conduit delivery is made through the Edwards and North Fork Canals and the Redlands Canal and High Line to satisfy the rights of Prior Right Companies and to meet the needs of Mutual's irrigation shareholders. The diversion facilities utilized by Mutual are shown on Exhibit "C".

6. District's Water Supply. District and its inhabitants rely entirely upon the precipitation and runoff within Upper Bear Creek Watershed for their water supplies for direct use and for recharge of the several small ground water basins in said watershed. District does not have physical, or economically-feasible, access to significant supplies of supplemental nontributary sources of water. Although some inhabitants of District have riparian, overlying and appropriative rights to waters of Upper Bear Creek Watershed, neither District nor its inhabitants have any rights to water in storage in the Lake, or the right to store water in the Lake except to the extent that there is surplus

DONALD D. STARK
ATTORNEY AT LAW
11 BUSINESS CENTER DRIVE
IRVINE, CALIF. 92718
(714) 752-0971

storage capacity in the Lake not utilized by Mutual.

B. DECLARATION OF RIGHTS

7. Mutual. Mutual is the owner of an appropriative right, with the priorities of 1883 and 1909, to divert at the Dam and store in the Lake for subsequent release and beneficial use within Mutual's service area of all of the flow of Bear Creek at the Dam and Lake. Said diversion shall be at such rate as may be reasonably necessary to meet the requirements of Mutual's stockholders, not exceeding 65,000 acre feet in any ten (10) year period, as determined by the Board of Directors of Mutual in its sole discretion. Said rights have become prescriptive in nature as to all water right claimants downstream from the Dam, excepting only the rights of Prior Right Companies.

8. Prior Right Companies. Prior Right Companies, as the successors to the earliest diversion rights at the Mouth of the Canyon, are the owners of the prior appropriative rights confirmed by the Prior Right Agreements, which contractual rights constitute a burden and charge upon the said appropriative right of Mutual. The exact nature, scope and extent of the rights of prior right companies are set forth in said Prior Right Agreements (Exhibits "E" and "F"), and said agreements are hereby confirmed and shall remain otherwise unimpaired by the declarations and determination of this Judgment.

9. Conservation District. Conservation District owns an appropriative right to divert and spread storm flows of the Santa Ana River at and below the Mouth of the Canyon, for the benefit of water right claimants within Conservation District. Said rights are derived from and based upon

DONALD D. STARK
ATTORNEY AT LAW
18 BUSINESS CENTER DRIVE
IRVINE, CALIF. 92714
(714) 752-0971

License No. 2831, Permit No. 2488 (0300 acre feet) and License No. 2832, Permit No. 2593 (2100 acre feet), issued by the Division of Water Rights of the California Water Resources Control Board, and from a prior statutory filing by Conservation District's predecessors dated October 6, 1911.

10. San Bernardino Basin Producers within the boundaries of Conservation District have rights in and to the safe yield of said San Bernardino Basin. Said safe yield is dependent, in part, on the flow of the river at the Mouth of the Canyon and return flows from applied water delivered by Mutual to its stockholders for use overlying the Basin. Both of said sources have historically included, from time to time, waters released from Upper Bear Creek Watershed through or over the Dam.

11. District. District owns the Dam and reservoir behind it, subject to the right of Mutual to store water in the Lake, pursuant to its appropriative right. To the extent that, at any time, there is surplus storage capacity in the reservoir not utilized by Mutual, District has the right to store water therein, including water acquired by reason of operation of the physical solution herein decreed or from any source or sources other than the surface flow of Bear Creek and its tributaries, or from non-tributary streams provided such non-tributary water has been diverted into the Lake by Mutual.

III. INJUNCTIONS

12. Against District. District, its officers, agents and employees are hereby ENJOINED AND RESTRAINED from interfering with

DONALD D. STARK
ATTORNEY AT LAW
11 BUSINESS CENTER
DRIVE
WINE, CALIF. 92210

the release of water from the Lake to meet the requirements of Mutual, except in compliance with the physical solution hereinafter decreed.

IV. CONTINUING JURISDICTION

13. Continuing Jurisdiction. Full jurisdiction, power and authority are retained and reserved to the Court for the purpose of enabling the Court, upon application of any party by motion and upon 30 days' notice hereof, and after hearing thereon, to make such further and supplemental orders or directions as may be necessary or appropriate for interpretation, enforcement or carrying out this Judgment. The Court may award attorneys' fees to the prevailing party in any further proceedings, pursuant to this paragraph.

V. WATERMASTER

A. APPOINTMENT AND COMPOSITION

14. Watermaster Committee. The Court will appoint a Watermaster Committee, by subsequent order, in accordance with the following procedure:

(a) Nominations. On or before sixty (60) days after entry of judgment herein, nominations shall be submitted by a separate pleading filed herein. For said purpose, one nominee each shall be submitted by District, Mutual and Conservation District.

(b) Appointment. The three nominees, if acceptable to the Court, will thereupon be appointed by such subsequent order.

DONALD D. STARK
ATTORNEY AT LAW
11 BUSINESS CENTER DRIVE
IRVINE, CALIF. 92718
(714) 752-0971

(c) Term. Watermaster representatives shall serve for terms of five (5) years, unless sooner removed by the Court on its own motion or at the request of the party nominating any such Watermaster representative.

(d) Watermaster Action. Said Watermaster members, acting as a committee, shall be and constitute the Watermaster, for purposes of administering the provisions of this Judgment and subsequent orders of the Court. Action of a majority of Watermaster members shall constitute action of Watermaster.

B. POWERS AND DUTIES

15. Powers and Duties. Subject to the continuing supervision and control of the Court, Watermaster shall have and may exercise the express powers, and shall perform the duties, as provided in this Judgment or hereafter ordered or authorized by the Court in the exercise of the Court's continuing jurisdiction.

16. Rules and Regulations. Watermaster shall make and adopt appropriate rules and regulations for conduct of Watermaster affairs, including meeting schedules and procedures. Said rules and regulations shall be submitted to and approved by the Court. Thereafter, Watermaster may amend said rules from time to time, upon notice to all parties and with the approval of the Court. A copy of said rules and regulations, and of any amendments thereof, shall be mailed to each party.

17. Studies. Watermaster shall undertake such studies and investigations and collect and maintain such hydrologic and other data and records as are necessary to implement the Physical Solution herein.

DONALD D. STARK
ATTORNEY AT LAW
31 BUSINESS CENTER
DRIVE
IRVINE, CALIF. 92715
(714) 752-0071

18. Accounting. Watermaster shall make calculations and maintain accounts to reflect both actual operation of Big Bear Lake and Mutual's Lake Water Operations. Said accounts shall be maintained in accordance with Watermaster Criteria.

19. Watermaster Expenses. Each party shall pay the costs and expenses of the representative of such party on Watermaster. The obligation for and cost of making measurements and accumulating basic data shall be assumed and paid as follows:

(a) At and upstream from Dam -- District.

(b) Downstream from Dam -- Mutual and Conservation District, in shares to be agreed upon from time to time.

New or additional measurements, relevant hydrologic studies or other activities of Watermaster involving significant cost shall be paid pursuant to unanimous agreement entered into before such costs are incurred. In the absence of agreement, the Court will, by subsequent order, allocate any necessary common Watermaster expenses.

20. Reports. Watermaster shall prepare, serve on all parties and file with the Court an annual report on or before April 1 of each year, which shall set forth the accounting for water under the Physical Solution, and a report on all significant Watermaster activity during the preceding calendar year.

21. Review Procedures. All actions, decisions or rules of Watermaster shall be subject to review by the Court on its own motion or on timely motion by any party or Watermaster member, as follows:

(a) Effective Date of Watermaster Action. Any action,

DONALD D. STARK
ATTORNEY AT LAW
11 BUSINESS CENTER DRIVE
WINE, CALIFORNIA 91710
(714) 980-8971

decision or rule of Watermaster shall be deemed to have occurred or been enacted on the date on which written notice thereof is mailed. Mailing of copies of approved Watermaster minutes to the parties shall constitute such notice to all parties.

(b) Noticed Motion. Any party or Watermaster member may, by a regularly noticed motion, apply to the Court for review of any Watermaster's action, decision or rule. Notice of such motion shall be mailed to Watermaster and to all parties. Unless otherwise ordered by the Court, such motion shall not operate to stay the effect of such Watermaster action, decision or rule.

(c) Time for Motion. Notice of motion to review any Watermaster action, decision or rule shall be served and filed within ninety (90) days after such Watermaster action, decision or rule.

(d) De Novo Nature of Proceedings. Upon the filing of any such motion, the Court shall require the moving party to notify the parties and Watermaster of a date for taking evidence and argument. On the date so designated, the Court will review de novo the question at issue. Watermaster's findings or decision, if any, may be received in evidence at said hearing, but shall not constitute presumptive or prima facie proof of any fact in issue.

(e) Decision. The decision of the Court in such proceeding shall be an appealable supplemental order in this case. When the same is final, it shall be binding upon the Watermaster and all parties.

DONALD D. STARK
ATTORNEY AT LAW
[illegible] BUSINESS CENTER
DRIVE
[illegible], CALIF. 92708
(714) 730-6071

VI. PHYSICAL SOLUTION

23. Need For Physical Solution. There exists a need for additional water for recreational and wildlife enhancement purposes within District. There is not an economically feasible source of supplemental water available to meet the needs of District and its inhabitants for such purposes. Any such use by District of the waters in storage in the Lake will be junior to the declared rights of Mutual and other defendants herein. Supplemental sources of water may, from time to time, be available within defendants' areas of use (other than Edison), but are more expensive than waters which might be diverted from storage in the Lake. In order to assure the maximum beneficial use of waters of the State, in accordance with the mandate Article X Section 2 of the Constitution, it is appropriate that the Court adopt a physical solution herein.

24. General Plan of Operation. In general terms, the physical solution hereafter decreed will provide for retention of waters of Bear Creek in the Lake by reason of delivery of In Lieu Water to Mutual's system. The costs of In Lieu Water and Basin Make-up Water shall be borne solely by District as consideration for the right to retain an equivalent quantity of stored water in the Lake for District's account.

25. District's Right to Provide In Lieu Water. District shall have the right to provide In Lieu Water to Mutual, at District's sole expense, to be delivered into Mutual's system at locations designated by Mutual, as a condition of retaining in the

KALD D. STARK
TORNEY AT LAW
BUSINESS CENTER

Lake water which would otherwise be required by Mutual for its use. Such In Lieu Water may be provided from any one or more of the following sources, or any other source usable for Mutual's purposes, and of comparable quality to waters released or subject to release from the Lake:

(a) Wells in San Bernardino Basin owned by Mutual.

(b) Third party wells or other sources, which are available under contract, lease or other arrangements with Mutual.

(c) Exchange water under the Mill Creek Exchange.

(d) State Project Water.

Provided, that Watermaster shall determine whether production of ground water pursuant to subparagraphs (a) or (b) hereof will hav an unreasonable and adverse effect on water levels in any adjacen wells. In the event of such finding, Watermaster may prohibit us of such well or wells for production of In Lieu Water until Watermaster determines that such adverse effect is eliminated.

Provided, moreover:

(e) High Line Obligation. Because of the requirements by Mutual for delivery of water through its High Line and to the Edwards Canal, it is necessary that a minimum of 12 cfs be diverted into the Edison Conduit from all sources, including Santa Ana River and Bear Creek water at the Edison Diversion, canyon wells and surface inflow between the Ediso Diversion and the Mouth of the Canyon. To the extent that said supplies fall below 12 cfs at the forebay of Edison Power House No. 3, being the start of the High Line, Distric shall release water to make up any deficiency therein from

DONALD D. STARK
ATTORNEY AT LAW
[illegible] BUSINESS CENTER DRIVE
IRVINE, CALIF. 92715
(714) 752-0971

water in storage in the Lake. Said High Line obligation shall supersede District's In Lieu Water right unless and until In Lieu Water can be provided by District to meet said High Line requirements from other sources.

(f) Dry Year Releases. In the event, by reason of natural disaster or extreme drought, or otherwise, Mutual is unable to meet its obligation under the Prior Right Agreements to Prior Right Companies, and there exists water in storage in the Lake which is not otherwise available to Mutual, District shall make such releases as are necessary t enable Mutual to meet said Prior Right obligations. In such event, District shall acquire a right to replacement of suc quantities in the Lake for its account from the next natural inflow to the Lake, which would otherwise be credited to Mutual.

26. Basin Make-up Water. District's lake stabilization operations by exercise of its in lieu right may have some adverse impact on the supplies of water to the San Bernardino Basin.

27. Procedures for In Lieu Water. In the operation of District's In Lieu right, the following procedures shall be followed:

(a) District's Election to Provide In Lieu Water. District shall, on or before April 15 of each year, notify Mutual of District's intent to provide In Lieu Water during the following fiscal year, and shall designate the maximum amount it is prepared to so provide. District may, during any year, on ninety (90) day written notice, amend or modify the amount of In Lieu Water so specified.

DONALD D. STARK
ATTORNEY AT LAW
81 BUSINESS CENTER
DRIVE
IRVINE, CALIF. 92715
(714) 752-8071

(b) Mutual's Order. At such time as Mutual's board, in its sole discretion, may determine that it requires the release of water from the Lake for the use of Mutual and the Prior Right Companies, Mutual shall notify District and, to the extent that District has indicated an intent to provide In Lieu Water, Mutual shall reasonably cooperate with, and give assistance to District in obtaining water from In Lieu Water sources. Any Lake water required by Mutual and not supplied by In Lieu Water shall be provided by District by Lake releases on at least 12 hours' notice by Mutual.

(c) Costs. Costs of In Lieu Water obtained by Mutual on behalf of District shall include all actual operating, maintenance and administrative costs attributable, in good accounting practice, to the acquisition of such In Lieu Water. Said costs shall also include pump tax applicable to such water, if any. In the event any well, pump, motor, booster pump or pipeline of Mutual used for production or delivery of In Lieu Water is required to be replaced at a time when such facility is being used for the production or delivery of In Lieu Water, District shall advance the cost of replacing such item; provided, however, that at the end of ten years after the completion of such replacement Mutual will reimburse District that percentage of the cost of such replacement which the number of hours said facility has been used by Mutual for its account during such ten-year period bears to the total number of hours such facility has been used during the ten-year period, plus interest on such amount at the rate of six percent (6%) per annum. In the event an

RONALD D. STARK
ATTORNEY AT LAW
300 BUSINESS CENTER
DRIVE
IRVINE, CALIF. 92715

such facility is being used by Mutual for its own account at the time of such replacement, Mutual shall pay such replacement cost and shall be reimbursed by District in the same manner as provided above. All such replacement facilities shall be and remain the property of Mutual.

(d) Payment. Any costs incurred by Mutual with relation to In Lieu Water deliveries shall be paid by District within thirty (30) days of receipt of approved billing therefor. All bills for such In Lieu Water shall be submitted to and approved by Watermaster, provided, however, that Watermaster may, if it deems it to be appropriate, require District to maintain on deposit reasonable sums to insure advance payment of current costs in order to relieve Mutual of any financial burden in connection with said In Lieu Water.

28. Procedure for Basin Make-up Water. Watermaster shall annually calculate the net amount of these various adjustments. District shall be obligated to periodically balance any resulting net deficiencies in recharge to the San Bernardino Basin as Watermaster shall determine. Balancing of any deficiency in said account shall occur at least once in each ten (10) year period, the time of delivery within said period to be at the option of District; provided, that in no event shall such negative impact be allowed to exceed 15,000 acre feet; provided, further, that if the net deficiency exceeds 10,000 acre feet, District shall reduce the net deficiency to at least 10,000 acre feet within the succeeding two (2) years; provided, however, that District shall, at the election of Conservation District on or before January 1, 1981,

DONALD D. STARK
ATTORNEY AT LAW
301 BUSINESS CENTER
DRIVE
IRVINE, CALIF. 92715
(714) 752-0721

reimburse Conservation District for the cost of up to 10,000 acre feet of replenishment water, at not to exceed the Mill Creek Exchange price to members. Such payment shall result in an equivalent credit to District's account for Basin Make-up Water. To the extent practical, recharge will be directed to the sub-basins of San Bernardino Basin proportionally to the pattern of extraction of In Lieu Water hereunder.

29. Accounting. Watermaster shall maintain three basic accounts, in accordance with Watermaster Operating Criteria, as follows:

(a) District's Lake Water Operation. A detailed account to reflect actual operation of the Lake by District shall be maintained.

(b) Mutual's Lake Water Operations. In addition, a corollary account shall be maintained to simulate the effect of Mutual's operations with regard to Lake water under the In Lieu Water operations.

(c) Basin Make-up Account. An account of District's annual and cumulative obligation for Basin Make-up Water shall also be maintained.

30. District's Obligation to Maintain Dam. Pursuant to District's stipulation and agreement, District shall perpetually maintain and protect the Dam and Lake to preserve and maintain the existing usable storage capacity of the Lake and shall comply with all dam safety regulations of the State of California or other appropriate public authority. No excavation or filling of the Lake or any part thereof shall be done within 500 feet of the Dam, except as necessary for repair, maintenance or replacement of the

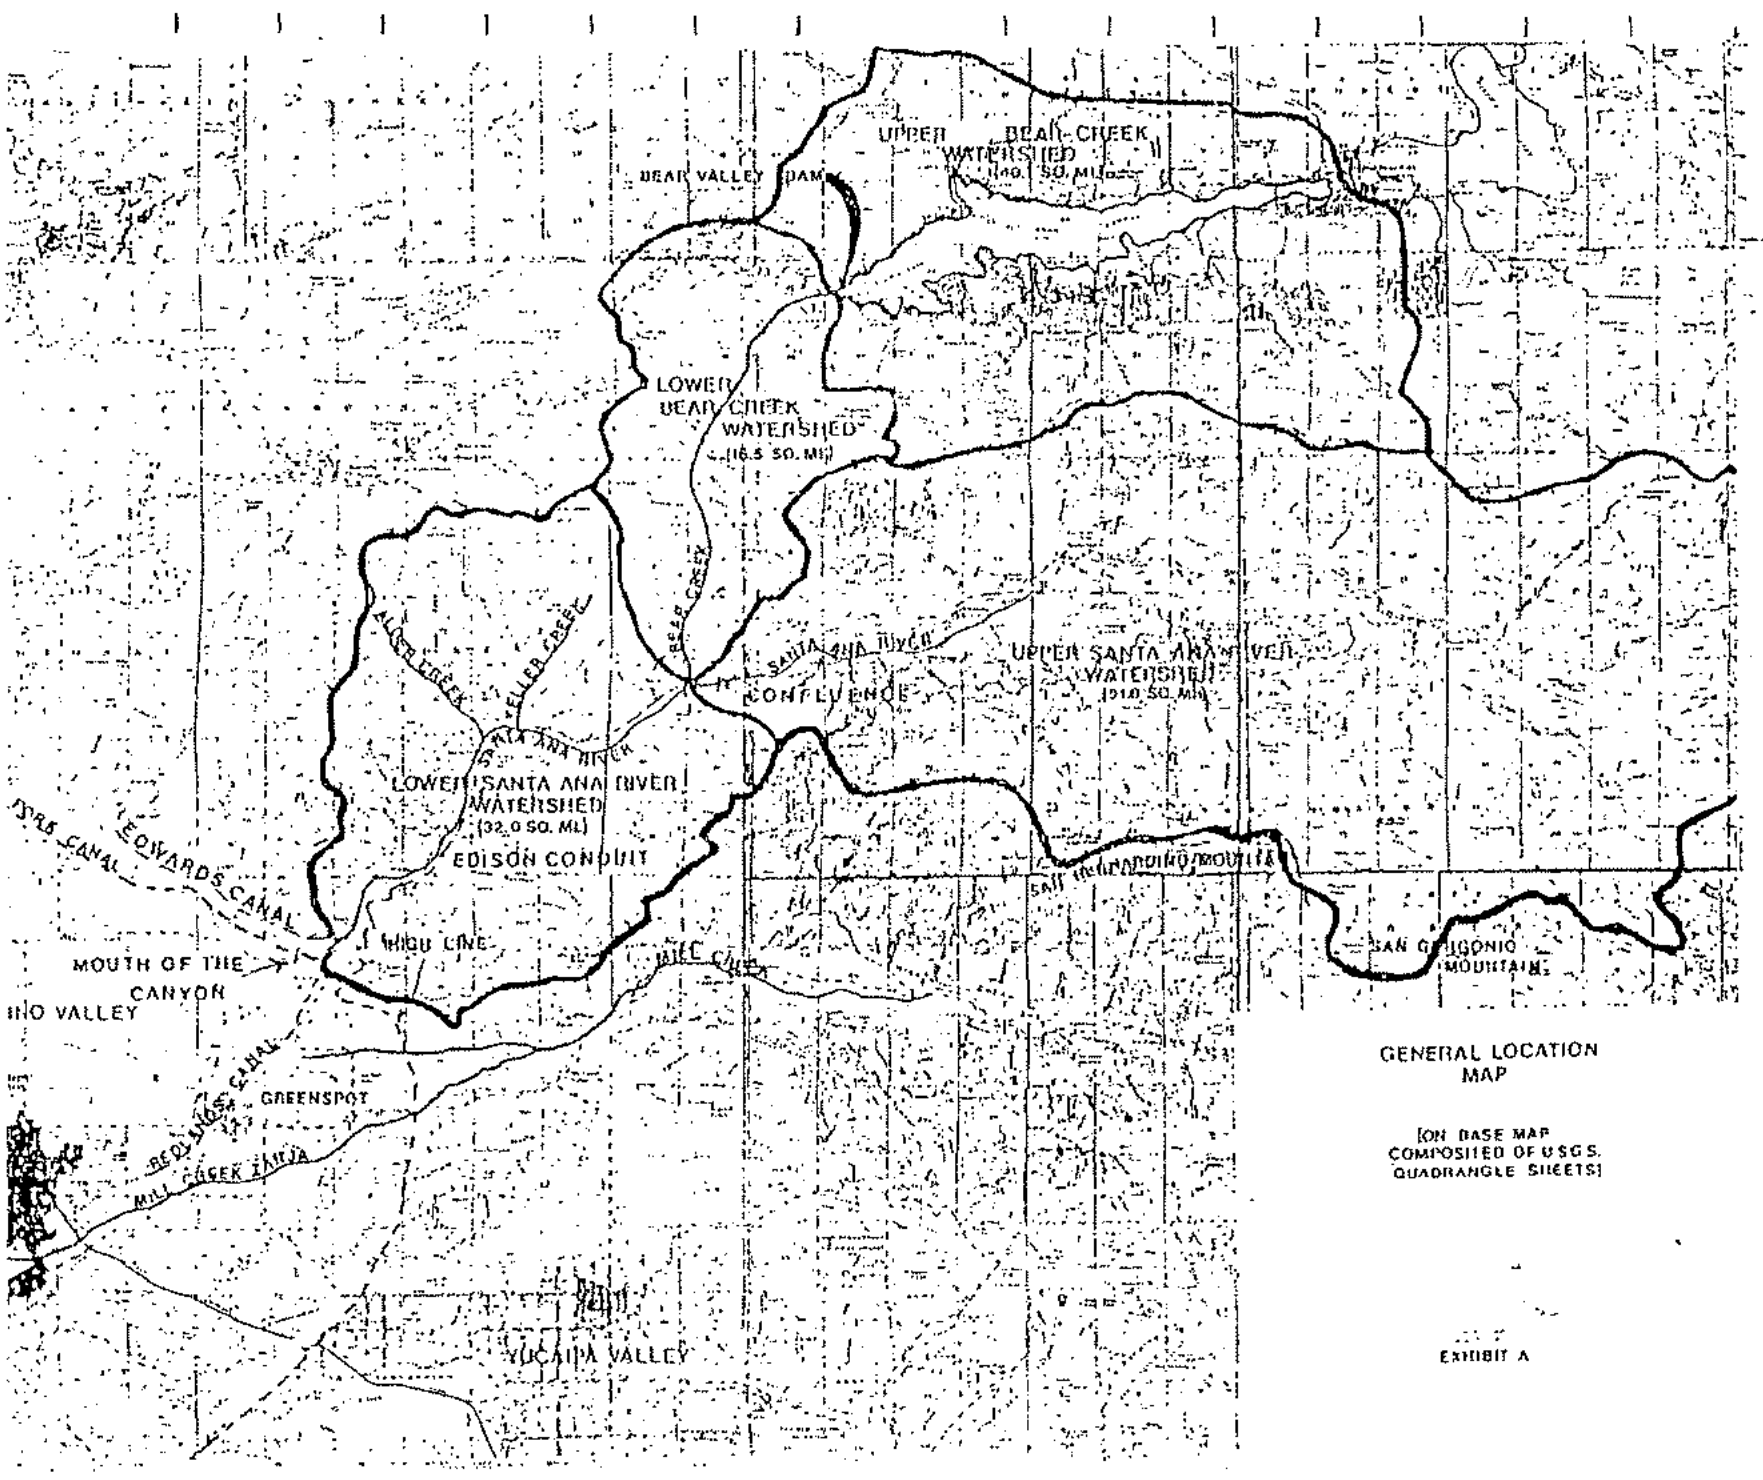
Dam.

31. District to Hold Mutual Harmless. District shall hold Mutual free and harmless from any and all liability, cost or expense (including attorney's fees) arising from District's operation of the Lake pursuant to the Lake Surface Rights, and shall cause Mutual to be named as an additional insured on any public liability insurance policies which District may obtain covering its operation of the Lake.



32. Physical Solution Agreement. That certain "Physical Solution Agreement" heretofore entered into between District, Mutual and Conservation District on December 23, 1976, is superseded by this Judgment.

33. Costs. No party shall recover any costs in this proceeding from any other party.

DATED: FEBRUARY 4, 1977.

WATERMASTER OPERATING CRITERIA

The following operating criteria shall guide and bind Watermaster in administering the provisions of this Physical Solution Agreement:

1. Basic Data. Watermaster shall accumulate basic data in the form of measurements or estimates of the following flows or hydrologic facts which Watermaster may determine to be necessary to maintenance of accounts required by the physical solution. In the accumulation of such data, Watermaster shall observe the following criteria:

(a) Lake Elevations. Monthly readings shall be taken on or about the first of each month of the elevation of the lake surface as shown on the gage located at the Dam.

(b) Lake Evaporation. Evaporation stations shall be strategically located in the vicinity of the lake and average monthly rates of evaporation shall be calculated therefrom.

(c) Precipitation. Average total rainfall in Upper Bear Creek Watershed shall be derived from weighted analysis of rainfall stations to be designated or established by Watermaster.

(d) Surface Flows.

(1) Natural Tributary Inflow to Lake. All

measurable or observable surface inflow to the lake from Upper Bear Creek Watershed shall be measured or estimated, directly or indirectly, and aggregated monthly.

(2) Non-tributary Diversions to Lake. Mutual currently causes waters of Siberia Creek Watershed to be diverted from Bluff Lake into Lake, and flood flows of Van Dusen Creek in Baldwin Lake Watershed to be similarly diverted. Such diversions of non-tributary waters, together with any additional such diversions shall be measured or calculated monthly and credited to the party causing such diversion. In the event Mutual desires to cease or abandon either its Bluff Lake or Van Dusen diversions, and District maintains or enlarges such flows at District's expense, such flows shall be credited to District's account in calculating water in storage vis-a-vis Mutual. In such event, accounting for such flows, for purposes of Basin Make-up Water obligations, shall depend upon whether the waters diverted are naturally tributary to the Santa Ana River or not.

(3) Dam Releases. All intentional releases of water through the Dam shall be continuously measured and recorded.

(4) Dam Spills. Any spills of water over the Dam shall be measured or estimated and recorded monthly.

(5) Dam Leakage. All leakage through the dam shall be measured or estimated and a correlation between leakage and lake elevation shall be developed if possible.

(6) Santa Ana River at the Confluence with Bear Creek shall be calculated.

(7) Bear Creek at the Confluence with Santa Ana River shall be calculated.

(8) Santa Ana River at the Mouth of the Canyon shall be measured and average daily flows recorded. (This is currently being maintained by U.S.G.S.)

(e) Canyon Subsurface Diversions. Average subsurface diversions at Canyon Wells #1 and #2 shall be recorded monthly.

(f) Diversions at Mouth of the Canyon. Monthly quantities diverted at the Mouth of the Canyon shall be separately measured and recorded for diversions to

(1) High Line

(2) Redlands Canal

(3) North Fork Canal

(4) Edwards Canal

(5) Conservation District Spreading Grounds.

(6) Amount not diverted.

(g) In Lieu Water Deliveries shall be separately recorded as to place of delivery into Mutual's system, monthly quantity and type of source, i.e., whether from

(1) Mutual's wells

(2) Third party wells

(3) Exchange Water, or

(4) Direct Delivery of State Project Water.

(h) New Water Use by Mutual's Shareholders in Upper Santa Ana River Watershed, by reason of location of additional shares in said area, shall be accumulated monthly and recorded.

(i) Additional Points of Measurement as determined from time to time to be necessary, in the opinion of Watermaster.

2. Determinations and Calculations. Based upon the foregoing basic data, Watermaster shall make the following determinations and calculations:

(a) Net Monthly Lake Inflow shall be determined, together with its components of:

(1) Natural inflow and precipitation on the Lake, plus

(2) Diverted non-tributary inflows by reason of

[a] Mutual's activity (i.e., Van Dusen Creek and Bluff Lake),

[b] District's activity (such as,

but not limited to, proposed Rathbone reclamation operation), less

(3) Export from Upper Bear Creek Watershed (i.e., BBAWA project).

(b) Monthly Evaporation shall be calculated for both

(1) Actual lake operations, and

(2) Mutual's Lake Water Operation.

(c) Monthly Releases shall be accumulated for both

(1) Actual lake operations, and

(2) In Lieu Water deliveries.

(d) Spills and Leakage shall be accumulated for

(1) Actual lake operations, and

(2) Mutual's Lake Water Operation.

(e) Monthly Change in Storage shall be calculated for

(1) Actual lake operations, and

(2) Mutual's Lake Water Operation.

(f) Area and Capacity Curve will be developed for the Lake under current conditions.

3. Accounts.

(a) Mutual's Water In Storage shall be determined as follows for each month:

Beginning storage

+ Total Inflow

- Import from Non-tributary sources by District

- Pumped groundwater introduced into Lake

+ Net Sewage Export from Upper Bear Creek Watershed

- In Lieu Water delivered

- Releases or uses by Mutual

- Spill chargeable to Mutual account

- Leakage chargeable to Mutual operation

- Evaporation charged to Mutual operation

= Mutual's month-end water in storage.

(b) District's Water in Storage. Any water actually in storage in excess of Mutual's water in storage, as calculated above, shall be for the account of District. So long as District has water in storage, all spills from the Lake shall be deemed District water.

(c) Basin Make-Up Water Account. Accounting for Basin Make-up Water Deficiency or Credit shall be pursuant to the following:

$$[(.50)(R_d) + (.51)(S_d) + (.50)(P_d)] - [(.50)(R_m) + (.51)(S_m)] = \text{Deficiency or Credit.}$$

Wherein:

R_m = Releases which would have been made under Mutual Operation.

S_m = Spill which would have occurred under Mutual Operation.

R_d = Releases actually made under District Operation.

S_d = Spill which actually occurred under District Operation.

P_d = In lieu water purchased by District from San Bernardino Valley MWD or the Management Committee of the Mill Creek Exchange and delivered under District Operation to Mutual for service area requirements.

4. Supplemental Inflow to Lake and Export from Upper Bear Creek Watershed. In accounting for water in storage in the Lake to Mutual's account and calculating District's obligation for Basin make-up water, the effect of certain existing and potential diversion and export practices must be accommodated.

(a) Supplemental Inflow. Whether inflow to the Lake is supplemented from surface streams, production of ground water, diversion of reclaimed water or otherwise, it shall be credited to the water-in-storage account of Mutual or District, in accordance with which party causes such inflow to be so supplemented. In the event an existing diversion by Mutual is enlarged or expanded by District, at its sole expense, an allocation of resulting flows shall be made by Watermaster.

Such supplemented inflow shall be accounted for in the calculation of District's Basin Make-up Water obligation depending upon whether the source of any such surface water was tributary or non-tributary to the Santa Ana River.

(b) Export from Upper Bear Creek Watershed. Conservation District has entered into an agreement with Big Bear Area Regional Wastewater Agency, County

Service Area No. 53, and the Big Bear Lake Sanitation District relating to the export of wastewater from the Santa Ana Watershed by said agencies. The agreement terminates on June 30, 1985.

In the event gross export from Upper Bear Creek Watershed to any area not tributary to the Santa Ana River exceeds gross import to the Santa Ana River Watershed within Upper Bear Creek Watershed, calculated inflow to the Lake shall be increased each year, beginning with the calendar year 1986 by the amount by which such gross export exceeds imports. If gross import exceeds gross export, said excess shall be credited against District's Basin Make-up Water obligation.

EXHIBIT "E"

THIS AGREEMENT, made this 23rd. day of May, 1905, by and between the Bear Valley Land and Water Company, a corporation party of the first part, and the North Fork Water Company, a corporation, and the undersigned, other than the said two corporations owners of water in the North Fork Ditch of the Santa Ana River, and Crum and Van Leuven Ditch, parties of the second part;

WITNESSETH: Parties of the second part are desirous of making an arrangement with the party of the first part whereby the supply of water available to said parties of the second part may be made certain and secure during the months of June, July, August, September, October and November, and are further desirous of increasing the present capacity of the said North Fork Ditch and completing the construction of the same,

NOW THEREFORE, Know all men by these presents;

I.

Parties of the second part agree that all their respective water, water rights and interests over and above the amount or quantity herein stipulated to be furnished and allowed to or attained by the parties of the second part may be perpetually held and enjoyed by the party of the first part for its use, benefit and disposal, subject to the terms and conditions of this agreement, and except as herein limited, it being expressly understood however, that each party of the second part retain the right to sell, convey, transfer, mortgage, pledge or otherwise dispose of his or its respective rights or interests in said water or water rights or in this agreement, subject also to the terms and conditions hereof.

II.

The parties of the first part agree to furnish and deliver to the parties of the second part continuously during the following months of each and every year hereafter the number of inches of water, under a four inch pressure, hereinafter mentioned, as allotted to each of said monthsrespectively, to-wit; June, Five Hundred (500) inches; July, Six Hundred (600) in inches;; August, Six Hundred (600) inches; September, Five Hundred and fifty (550) inches; October, Four Hundred and fifty (450) inches; November, Four Hundred (400) inches.

It being expressly understood and agreed that at the written request of a majority in interest of the parties of the second part, based upon their respective interests, in said water and water rights the amount to said months as above respectively allotted, may be changed for the current year in which said request is made, in the manner following, to-wit; If it is desired that the allowance as above set forth for any month be lessened, such diminution shall be allowed and the amount so diminished from any one month shall be added to some other of said months succeeding; provided that the allowance or addition so made shall not increase for any one month the amount of six hundred inches.

III.

It is understood and agreed that during the months of December, January, February, March, April and May, one-fourth of all the water flowing in the Santa Ana River at the point known as the Divide, (exclusive of water placed therein by parties of the first part) being the only place where the

waters of the North Fork and South Fork Ditches, so called, are divided, shall belong and be delivered to parties of the second part by parties of the first part. It being further understood and agreed that the surplus of all waters so apportioned to parties of the second part which is not required or desired to be used by parties of the second part, may be used by parties of the first part; always providing that parties of the second part shall be the sole judges of whether such surplus water is or is not required by them; all waste water at the end of the said North Fork Ditch shall belong to party of the first part. This stricken out by supplemental agreement

IV.

It is further understood and agreed that in the event of there being upwards of Thirteen Hundred (1300) inches of water in the said Santa Ana River at the point of 'Divide' aforesaid, in its natural flow exclusive of water therein placed by act of parties of the first part during the month of June of any year, then one-half of the surplus of said water shall belong and be delivered by party of the first part to parties of the second part and the division and allotment of surplus shall in no way affect or control the allotment of water hereinbefore specified under Caption II hereof, and shall be considered as and be wholly independent thereof.

This stricken out by supplemental agreement

V.

All division or allotment of water under this agreement as between party of the first part and the parties of the second part shall be measured and made at the point on the Santa Ana Canon or River hereinbefore referred to and known as the 'Divide'.

VI.

Parties of the second part agree within two years from

the date hereof to complete the Ditch of the North Fork Water Company by enlarging the same where not already paved and cemented and where not already of such capacity to a size sufficient to carry fifteen hundred (1500) inches of water, and by substantially cementing and paving such portions so to be enlarged aforesaid and to pay one-half of the expense of such enlargement, paving and cementing together with one-half of the expense of maintaining the said ditch when completed as aforesaid, and party of the first part hereby agrees to pay the other half of said expense.

VII.

On the execution of this agreement party of the first part agrees to pay the parties of the second part the sum of Two Thousand ($2000) Dollars, and on the first day of January, 1886, the further sum of Two Thousand ($2000) Dollars as a consideration for the half interest in the said North Fork Ditch mentioned. By the North Fork Ditch is meant the main ditch commencing at or near the 'Divide' aforementioned, and extending to Raven corner and as described in Articles of Incorporation of North Fork Ditch Company.

VIII.

It is further understood and agreed that until said ditch shall be enlarged to a capacity of Fifteen Hundred (1500) inches as hereinbefore stated, no greater amount of water shall be allowed to flow into or through said ditch by party of the first part than twelve hundred (1200) inches without the written consent of a majority of the water interests of parties of the second part.

IX.

The capacity of said ditch may be at any time hereafter

increased beyond said fifteen hundred (1500) inches by either party of the first part or parties of the second part, in which event the expense of said enlargement may be borne in equal proportions by the parties hereto, and in that event said parties shall be entitled to share equally in the use and enjoyment of said increased capacity. In the event however, that either of the parties hereto shall fail or refuse to unite with the other of said parties in effecting said increase of capacity, or in promptly paying one-half of the expenses of making the same, then and in that case the parties so failing or refusing shall not be entitled to the use or enjoyment of said increased capacity or of any of the benefits thereof.

X.

It is understood and agreed that substantially one-half of all water taken from the Santa Ana River aside from that which may be supplied from the Bear Valley Reservoir shall at all times flow in said North Fork Ditch.

XI.

It is further understood and agreed that the party of the first part shall be under no obligation to furnish water to parties of the second part as hereinbefore provided until on and after June 1st, 1886. And that until said date all the water of said River which parties of the second part have used, or to which they have been entitled prior to the date hereof shall be used as heretofore and in the same proportions irrespective of the allotments mentioned under this agreement.

XII.

Each individual of the parties of the second part agrees

for himself and itself and his and its successors in interest respectively to contribute and pay the proportions of the expenses necessary to carry out and fulfill so much of this agreement as is to be carried out, fulfilled or performed by or on the part of the parties of the second part in proportion to the interest or shares of parties of the second part in the said water rights, ditches or privileges owned by each of said parties of the second part in said North Fork Ditch and water right.

For the purpose of equitably adjusting and distributing the division of the expenses aforesaid for the construction and maintainance of said North Fork Ditch among the owners thereof, parties hereto of the second part among themselves, said ditch shall be considered in two sections; one from the divide aforesaid down to and including the head or distributing gate of the Crum Ditch known as section one; and the other from said head or distributing gate of the Crum Ditch to the end of said North Fork Ditch, known as section two.

Those using water or drawing water from any portion of said North Fork Ditch shall pay in proportion to their respective rights or shares in and to said ditch, water or water privileges for the expenses of constructing or repairing of said section one, and those using water in or from section two of said ditch shall pay according to their respective shares or rights in said ditch, water or water privileges for the construction and repair of said section.

XIII.

If at any time the party of the first part shall fail to

comply with the terms and conditions of this agreement in furnishing and delivering water to the parties of the second part or their successors in interest, then it shall forfeit all right, franchises, privileges and interest derived from parties of the second part, under and by virtue of this agreement, and all rights, franchises and privileges or interests hereby conceded to it by said parties of the second part, or created in pursuance of the terms hereof, may be resumed and retained by said parties of the second part, the same as if this agreement had not been made. And all rights and interests of said party of the first part to the said North Fork Ditch shall cease and determine. But a temporary failure or interruption of not more than ten days after said party of the first part has received written notice thereof from said parties of the second part, resulting from unforeseen or unexpected accident not attributable to the negligence or fault of the party of the first part shall not be considered such a failure as to work such forfeiture— it being the intention not to favor or take advantage of mere technical breaches of this agreement, but that the same shall receive a fair and liberal construction to promote substantial justice and fair dealing between the parties hereto.

XIV.

In all matters or things to be acted upon or done or decided by or concerning the affairs, conduct, management or interest of the parties of the second part under this agreement; A majority in interest of said parties of the second part shall control.

XV.

The parties of both parts (that is, each part) are each to have an equal voice in the construction, management and repairs of said ditch, and if they cannot agree in respect to such matters or any of them, then each party shall select a referee to decide such matters of difference; with power to said referees in case of a disagreement between them to select an umpire or third person, and a decision of a majority of said referees so selected shall be binding upon the parties hereto.

XVI.

It is understood and agreed by all the parties hereto that time is of the essence of this agreement — but if from act of God or any unforeseen accident, elemental or otherwise, not attributable to the negligence or default of party of the first part whereby their dam or other works for the supply of water may be temporarily destroyed or injured; then in event that all of the natural flow of the water of the Santa Ana River and its tributaries to which parties of the second part may be entitled independent of this agreement, be permitted by party of the first part to flow down to the "Divide" of the North Fork and South Fork Ditches, - then no damages or forfeiture is to ensue.

XVII.

It is further agreed by party of the first part that in event of said party increasing the capacity of said North Fork ditch beyond fifteen hundred (1500) inches and conducting a greater amount of water therein than said number of inches an any breakage or damage to said ditch or any part thereof shall be caused attributable to said increased flow - then said party of the first part is at its own expense to immediately

repair said ditch and to pay all of said damages.

IN WITNESS, WHEREOF, the parties hereto sign their respective names this 23 day of May 1885.

EXHIBIT "E"

This supplemental agreement made this 27th day of June 1895 by and between the North Fork Water Company of the one part and the Bear Valley Land and Water Company of the other part, all of San Bernardino County, State of California, with intent to modify and render more definite and certain a certain contract heretofore made between said parties and other owners of the North Fork Water Ditch and Right.

WITNESSETH: That it is understood and agreed that section four of said agreement of May 23, 1895, be, and the same is hereby stricken out, cancelled and declared of no force and effect.

It is also understood, covenanted and agreed by the said Bear Valley Land and Water Company to and with the said North Fork Water Company and other owners of and in the North Fork Ditch, not members of said corporation, that during the months of June, July, August and September of each year the parties of the second part in said agreement of May 23, 1895, shall have the right to pass over or draw back any amount of water they may designate from any month to any month of either of their aforesaid months, not exceeding the limit of six hundred inches in any one month and the aggregate amount of water for said four months shall not exceed twenty-two hundred and fifty inches.

The last clause of section three of the agreement of May 23, 1895, in reference to waste water is stricken out.

This agreement is intended to embrace all parties drawing water through the North Fork Ditch, and especially the portion of said water belonging to the Crane and Van Leuven Ditch.

And subject to the modification herein contained all

EXHIBIT "E"

other provisions of said agreement of May 22nd, 1885, are in full force and effect.

In Witness Whereof, the respective parties hereto have set their hands and seals this day and year first above written.

Beattie, respectively President and Secretary of the North Fork Water Company and J. S. Burt and E. A. Holt respectively President and Secretary of the Bear Valley Land and Water Company, personally known to me to be the persons described in and the respective officers of the corporations that executed the within instrument, and acknowledged to me that such corporations executed the same. In Witness Thereof, I have hereunto set my hand and affixed my official seal, the day and year in this certificate first above written.

(SEAL)

E. N. Morse,

Notary Public.

EXHIBIT "E"

This Memorandum, made this 27th day of February, A. D., 1906, between the undersigned of the shareholders in the South Fork Ditch of the Santa Ana River, Sunnyside Division, parties of the first part, and the Bear Valley Land and Water Company, a corporation, party of the second part witnesseth:

Whereas parties of the first part and their co-owners in the said ditch above named are the owners of the right to use all of the half of the flow of the Santa Ana River divided at the point in the mouth of the Santa Ana Canon commonly known as the divide, and are desirous of making an arrangement with party of the second part thereby the supply of water available to parties of the first part, may be made certain and secure during the months of May, June, July, August and September and October.

Now Therefore, know all men by these presents, I. That parties of the first part agree that all of their respective water water-rights and interests in such water and ditches hereinbefore mentioned over and above the amount or quantity herein stipulated to be furnished and allowed to or retained by said parties of the first part may be perpetually held and enjoyed by party of the second part for its use, benefit and disposal subject to the terms and conditions of this agreement and except as herein limited; it being expressly understood however that each party of the first part retains the right to sell, convey, transfer, mortgage, pledge or otherwise dispose of his respective right or interests in said water or water rights or in this agreement subject also to the terms and conditions hereof.

II. The party of the second part agrees to furnish and de-

liver to parties of the first part continuously through the following named months of each and every year hereafter the number of inches of water under a four inch pressure hereinafter next mentioned as alloted to each of said months respectively, to-wit:

May	466-2/3	inches.
June	466-2/3	inches.
July	466-2/3	inches.
August	466-2/3	inches.
September	466-2/3	inches
October	466-2/3	inches

It being expressly understood and agreed that upon the written request of a majority in interest of the parties of the first part based upon their respective interests in said water and water-rights, the amounts to said months above respectively alloted may be changed for the current year in which said request is made in the manner following, to-wit:

If it be desired that the allowance as above set forth for any of said months be lessened, such a diminution shall be allowed and the amount so diminished from any one month shall be added to some other of said months designated by parties of the first part, provided that the allowance or addition so made shall not increase for any one month the amount to more than six hundred (600) inches, such request to be made in writing to party of second part on or before April 20th of such year.

III. The party of the second part agrees to furnish and deliver to parties of the first part continuously through the following named months, three hundred (3000 inches of

water measured under a four (4) inch pressure, to-wit; November, December, January, February, March of each and every year hereafter; provided that in case in any such months in any year it is found that there is flowing in said river at the divide a greater quantity of water than six hundred inches going to parties of the second part by the terms of this contract, then one half of the excess above six hundred inches up to and making a maximum of six hundred inches going to parties of the first part, shall be added to and be furnished to parties of the first part for such three hundred inches for any of such months and on the other hand; if it is found that there is flowing in said river at the divide a less quantity of water than six hundred inches going to parties of the second part by the terms of this contract, then one half of such deficiency shall be deducted from three hundred inches and the remainder only shall be for such months furnished to parties of the first part.

IV. It is understood and agreed that a quantity of water taken from the Santa Ana River aside from that which may be supplied from the Bear Valley reservoir substantially the same as that which has heretofore ordinarily flowed through the ditch of parties of the first part shall at all times hereafter flow through said ditch or such other ditch as may be constructed in lieu thereof.

V. It is further understood and agreed that the party of the second part shall be under no obligation to furnish water to parties of the first part as hereinbefore provided until on and after June 1st, 1886, and that until said date all the water of said river which parties of the first part have used, or to which they have been entitled prior to the date hereof,

EXHIBIT "B"

shall be used as heretofore and in the same proportions irrespective of the allotments mentioned under this agreement.

VI. It is further understood and agreed that party of the second part shall bear the whole cost and expense of constructing any ditch, or continuation, extension or enlargement of any ditch that may be built in lieu of addition to or in connection with the whole or any part of the ditch of parties of the first part and shall further keep said ditch in good repair and condition at its own cost and expense.

VII. If at any time party of the second part shall fail to comply with the terms and conditions of this agreement in furnishing and delivering water to the parties of the first part or their successors in interest, in that event, it shall forfeit all rights, franchises, privileges and interests derived from parties of the first part under and by virtue of this agreement and all rights, franchises, and privileges and interests hereby conceded to it by said parties of the first part or created in pursuance of the terms hereof may be reclaimed and retained by said parties of the first part the same as if this agreement had not been made, and all rights and interests of said party of the second part in the said ditch of parties of the first part shall cease and determine, and further, in the event of such failure on the part of the party of the second part and of the forfeiture hereinbefore provided for in case party of the second part shall have constructed any ditch in lieu of the whole or any portion of the ditch of parties of the first part, or shall have improved or increased the same, then and in that event parties of the first part are hereby granted the right to purchase such new or increased or

improved ditch constructed or to be constructed in lieu of their old ditch or any part thereof as aforesaid, if such purchase seems to them expedient upon the basis and at a price to be fixed as follows; to-wit: Parties of the first part and party of the second part shall each respectively appoint a disinterested person to act as an appraiser and in the event of said appraisers failing to agree, the two appraisers thus appointed shall select a third person to act with them as appraiser, and in the event of their failing to agree upon such third person, the Judge of the Superior Court of the County of San Bernardino may appoint such person, and a decision of the majority of said appraisers shall control in the event that said ditch so proposed to be purchased as aforesaid shall be of a capacity no greater than that required to ~~maxmx~~ convey two thousand (2000) inches of water measured under a four inch pressure; said appraisers shall view said ditch and determine its actual value at the time of such examination and shall report the result of their determination in the matter in writing within ten (10) days thereafter to the parties hereto or their assigns, and in the event of said ditch being of a capacity to convey more than two thousand (2000) inches of water measured under a four (4) inch pressure then said appraisers in making their estimate shall disregard the excess of capacity over two thousand (2000) inches, and shall appraise said ditch at the price that a ditch with a ~~~~ capacity of no more than two thousand (2000) inches similarly constructed and in like repair would be reasonably worth.

And in either event, the parties hereto bind themselves, their heirs, executors, administrators, assigns and succes-

sors, to abide by the decision of said appraisers or a majority of them in the premises.

In case however, the forfeiture of the right of party of the second part as hereinbefore set forth, parties of the first part do not elect to purchase said ditch as hereinbefore provided, then, and in that event, it is understood and agreed that said parties of the first part shall have and they are hereby granted a perpetual right of way through such ditch for the conveyance of 600 inches of water; the excess over 600 inches of capacity of such ditch to belong to parties of second part.

It is further understood and agreed in regard to the matter of forfeiture hereinbefore referred to that a temporary failure or interruption in the performance of the condition and agreements herein stipulated as by party of the second part to be kept and performed if for not more than ten (10) days after party of the second part has received written notice thereof from parties of the first part resulting from unforseen or unexpected accident not attributable to the negligence or fault of party of the second part shall not be considered such failure as to work such forfeiture; it being the intention of all the parties hereto not to favor or take advantage of mere technical breaches of this agreement, but that the same shall receive a fair and liberal construction to promote substantial justice and fair dealing between the parties hereto.

VIII. In all matters or things to be acted upon or done or decided by or concerning the affairs, conduct, management or interests of parties of the first part under this agreement,

d/majority in interest of said parties of said parties of the first part shall control.

IX. It is understood and agreed by all the parties hereto that time is of the essence of this agreement; but if from the act of God, or any unforseen accident elemental or otherwise not attributable to the negligence or default of the party of the second part whereby its dam or other works for the supply of water may be temporarily destroyed or injured, then in the event that all the natural flow of the water of the Santa Ana River and its tributaries to which the parties of the first part may be entitled, independent of this agreement, be permitted by party of the second part to flow down to the divide with the Redlands ditch at the place commonly known as the Sycamore Tree, then no damage shall be claimed or forfeiture ensue.

X. It is further understood and agreed that party of the second part shall permit no trespass upon, nor interference with the right of parties of the first part in or to any of the waters of the Santa Ana River during the time that this contract shall remain in force and that said party of the second part may take such prompt steps by litigation, or otherwise lawfully and which the particular exigency may require to prevent any infringement by third parties upon the rights of parties of the first part, or any of them, in or to any of said water.

And it is further understood and agreed that in the event of the failure of party of the second part to take such necessary steps for the purposes aforesaid parties of the first part hereby reserve to themselves the right to proceed in

their own manner and behalf in said matter in such way as to them seems most advisable for the abatement or prosecution of such trespass or interference, anything in this contract to the contrary notwithstanding.

XI. All division or allotment of water under this agreement as between parties of the first part and party of the second part shall be measured and made at the divide, so called, between the ditch of parties of the first part and the Redlands Ditch at or near the point commonly known as the Sycamore Tree

In Witness Whereof the parties hereto have hereunto interchangeably set their hands and seals the day and year first above written.

STIPULATION FOR ABANDONMENT AND

DISMISSAL OF APPEAL

RECITALS:

This action is pending on appeal from judgment entered on an order sustaining a demurrer to the amended complaint, without leave to amend.

Pending this appeal, the parties have succeeded at negotiating an agreed solution to the several lawsuits and disputes which have heretofore existed between them.

It is the purpose of this stipulation to obtain an order of this Honorable Appellate Court dismissing the appeal and issuing a remittitur forthwith, with each party to bear its own costs on appeal.

STIPULATION:

IT IS HEREBY STIPULATED by and between the parties hereto that the appeal herein is abandoned and dismissed and that this Honorable Appellate Court may enter its order remitting this matter forthwith to the Superior Court of the State of California, for the County of San Bernardino, with each party to bear its own costs on appeal.

Dated: January 19, 1977.

Thresholds of Significance and Mitigation Measures
To be Included in Applicants' EIR

1. Threshold of Significance: Reduction in Groundwater Levels at Index Wells Outside the Pressure Zone

A reduction in groundwater levels outside the Pressure Zone is significant if the analysis in this EIR, using the integrated surface water and groundwater model developed by the project proponents, predicts that the project would reduce static groundwater levels at one or more index wells, on average, by more than 10 feet during a repetition of the 39-year base period hydrology, as compared to static water levels in the absence of the project.

2. Threshold of Significance: Increase in Groundwater Levels at Index Wells Within the Pressure Zone

An increase in groundwater levels in the Pressure Zone is significant if the analysis in this EIR, using the integrated surface water and groundwater model developed by the project proponents, predicts that the project would increase static groundwater levels at one or more index wells in the Pressure Zone, on average, by more than 10 feet during a repetition of the 39-year base period hydrology, as compared to static water levels in the absence of the project.

3. Mitigation Measure : Targeted Sp reading to Maintain Groundwater Levels

To avoid a significant effect on groundwater levels at one or more index wells located outside the Pressure Zone, the project proponents shall spread sufficient water to maintain static groundwater levels at the affected index wells to reduce this project impact to a less-than-significant level.

4. Mitigation Measure : Limitation on Spreading to Prevent High Groundwater Levels.

To avoid a significant effect on groundwater levels in the Pressure Zone, the project proponents shall curtail their spreading or direct other parties engaged in the spreading of water to replenish the San Bernardino Basin to curtail their spreading to reduce this project impact to a less-than-significant level.

Project Title: Settlement Agreement Relating to the Diversion of Water from the Santa Ana River System (the "Seven Oaks Accord")

Project Location - Specific: See description of project, below.

Project Location – Cities: San Bernardino, Highland, Rialto, Colton, Redlands, and Terrace, Loma Linda, and Yucaipa

Project Location - Counties: San Bernardino and Riverside Counties

Description of Nature, Purpose, and Beneficiaries of Project:
San Bernardino Valley Municipal Water District and Western Municipal Water District of Riverside County have filed applications with the State Water Resources Control Board ("SWRCB") to appropriate water from the Santa Ana River for direct diversion and/or storage. The City of Redlands, East Valley Water District and Bear Valley Mutual Water Company (among others) have filed protests against the applications alleging infringement of their senior water rights and adverse impacts on the environment. The project is the execution of a settlement agreement, approved by the parties, to resolve the protests without the need for a lengthy and expensive water rights hearing. The execution of the settlement agreement will have no physical impact on the environment.

Name of Public Agency Approving Project: San Bernardino Valley Municipal Water District, Western Municipal Water District of Riverside County, City of Redlands, East Valley Water District.

Name of Person or Agency Carrying Out Project: San Bernardino Valley Municipal Water District, Western Municipal Water District of Riverside County, the City of Redlands, East Valley Water District, Bear Valley Mutual Water Company, Lugonia Water Company, North Fork Water Company, and Redlands Water Company.

Exempt Status: (*check one*)

☐ Ministerial (Sec. 21080(b)(1); 15268);
☐ Declared Emergency (Sec. 21080(b)(3); 15269(a));
☐ Emergency Project (Sec. 21080(b)(4); 15269(b)(c));
☐ Categorical Exemption. State type and section number:
☐ Statutory Exemptions:State code number:

Reasons why project is exempt: The project is the execution of a settlement agreement which requires the withdrawal of protests to applications presently pending before the SWRCB, the submission of letters in support of the applications, and an amendment to the applications. Consequently, there is no possibility that the project will result in a physical change to the environment and the project is exempt pursuant to the general rule that CEQA applies only to projects which have the potential for causing a significant effect on the environment. CEQA Guidelines §15061(b)(3).

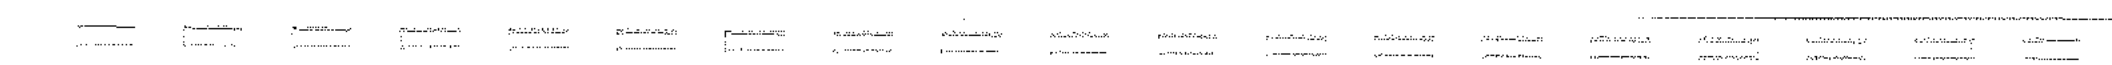
☐ Signed by Lead Agency
☐ Signed by Applicant

Date received for filing at OPR:_



Determination of Exempt Status – Execution of Seven Oaks Accord

The execution of the Seven Oaks Accord is a project that is exempt from environmental analysis under the terms of the California Environmental Quality Act ("CEQA"). A project is exempt from CEQA if a lead agency can determine with certainty that there is no possibility that the activity in question may have a significant effect on the environment. (Cal. Code Regs. tit. 14, §15061, subd. (b)(3)); No Oil, Inc. v. City of Los Angeles (1974) 13 Cal.3d 68, 74.) The purpose of this exemption is to provide "a short way for agencies to deal with discretionary activities which could arguably be subject to the CEQA process but which common sense provides should not be subject to the Act." (Cal. Code Regs. tit. 14, discussion following §15061; Davidon Homes v. City of San Jose (1997) 54 Cal.App.4th 106, 112.)

An agency can determine that a project will have no significant effect on the environment where the project will have no direct environmental effect and is not an implementation step in a comprehensive plan which can ultimately result in physical changes to the environment. (Kaufman & Broad-South Bay, Inc. v. Morgan Hill Unified School District (1992) 9 Cal.App.4th 464, 474, 476.) In Kaufman & Broad-South Bay, Inc., the court held that an environmental analysis was not required for the formation of a community facilities district, emphasizing the absence of a causal link between the action and the alleged environmental impact, the construction of new schools. (Id. at 474.) Although the District could foreseeably construct new schools in the future, the court found that the formation of a community facilities district was not an "essential step" in a chain of events leading to a change in the environment. (Id.)

Here, the project involves the execution of a settlement agreement that resolves protests against water rights applications presently pending before the State Water Resources Control Board. The project itself requires administrative activities consisting of the withdrawal of protests to applications, a submission of letters in support of applications, and an amendment to the application. The project is exempt from CEQA for at least two reasons. First, the execution of a settlement agreement is not an "essential step" in the processing of the two water right applications before the State Water Resources Control Board; accordingly, under Kaufman & Broad-South Bay, Inc., the adoption of the settlement agreement is exempt from further analysis under CEQA. Second, given the nature of the project (i.e., the exchange of correspondence with the State Water Resources Control Board), common sense dictates that it can be seen with certainty that the project will not have an adverse impact on the physical environment. Similar to Kaufman & Broad-South Bay, Inc., and consistent with the terms of the settlement agreement itself, environmental impacts resulting from future decisions related to the Project will be examined at the time those decisions are made. (9 Cal.App.4th at 473.)

For these reasons, San Bernardino Valley Municipal Water District, Western Municipal Water District of Riverside County, the City of Redlands, and East Valley Water District can determine with certainty that there is no possibility that the project may have a significant effect on the environment.

FONTANA WATER COMPANY, a corporation, FONTANA UNION WATER COMPANY, a corporation, FONTANA POWER COMPANY, a corporation, FONTANA FARMS COMPANY, a corporation, FONTANA COMPANY, a corporation, LYTLE CREEK WATER AND IMPROVEMENT COMPANY, a corporation, CITIZENS LAND AND WATER COMPANY OF BLOOMINGTON, a corporation, RIVERSIDE HIGHLAND WATER COMPANY, a corporation, RANCHERIA WATER COMPANY, a corporation, MUTUAL LAND AND WATER COMPANY OF RIALTO, a corporation, TERRACE WATER COMPANY, a corporation, THE GAGE CANAL COMPANY, a corporation, RIVERSIDE TRUST COMPANY, LIMITED, a corporation, RIVERSIDE

No. 17030

ORANGE COMPANY, LIMITED, a corporation, CITY OF COLTON, a municipal corporation, GATE CITY ICE AND PRECOOLING COMPANY, a corporation, COLTON CITY WATER COMPANY, a corporation, MEEKS AND DALEY WATER COMPANY, a corporation, FONTANA LAND COMPANY, a corporation, JOHNHUB WATER COMPANY, a corporation, FONTANA DEVELOPMENT COMPANY, a corporation, NORTH COLTON WATER COMPANY, a corporation, LAWSON WELL COMPANY, a corporation, ALTA VISTA WATER COMPANY, a corporation, CLARA VISTA WATER COMPANY, a corporation, ORCHARD MUTUAL WATER COMPANY, a corporation, EAST RIVERSIDE WATER COMPANY, a corporation, JAMES BARNHILL, JOHN DOE, RICHARD ROE, SAM BLACK, JOE WHITE, SAM WHITE, CHARLES WHITE, TOM BROWN, SARAH BROWN, CHARLES BROWN, MARY BROWN, CHARLES LOW and JOHN LOW, and RIALTO DOMESTIC WATER COMPANY, a corporation,

Defendants.

WHEREAS there has been filed in this action a stipulation for judgment, duly executed by and on the part of the plaintiff above named and by and on the part of each and all of the following named defendants in this action, to-wit: Fontana Water Company, a corporation;

Fontana Union Water Company, a corporation; Fontana Power Company, a corporation, Fontana Farms Company, a corporation; Fontana Land Company, a corporation, Lytle Creek Water and Improvement Company, a corporation; Citizens Land and Water Company of Bloomington, a corporation; Riverside Highland Water Company, a corporation; Rancheria Water Company, a corporation; Mutual Land and Water Company of Rialto, a corporation; Terrace Water Company, a corporation; City of Colton, a municipal corporation; Rialto Domestic Water Company, a corporation; and James Barnhill (said Barnhill being erroneously sued herein, under the name of "W. W. Barnhill"),

NOW THEREFORE, by reason of said stipulation, and pursuant to the terms and provisions thereof,

IT IS HEREBY ORDERED, ADJUDGED AND DECREED by the Court as follows:

I.

This action is hereby dismissed as to each and all of the defendants, other than those above named as parties to said stipulation; and each and all cross-complaints or cross-actions, filed or pending by or between any of the parties to said stipulation, above named are dismissed.

II.

As between the plaintiff and each and all of the defendants, above named, as parties to said stipulation, and as to each and all of said defendants as between themselves, excepting as set forth in Paragraph XXI hereof, it is further

ADJUDGED AND DECREED, as follows:

III.

That an inch of water, as the term is used herein, shall mean such quantity of water, in continuous flow, as will supply one-fiftieth part of a cubic foot of water per second of time.

IV.

That from time immemorial, there has flowed, and now flows, in Lytle Creek Canyon, in San Bernardino County, California, a natural stream, known as "Lytle Creek," and there exists below the mouth of said canyon, a certain pressure pipe line, belonging to said Power Company, and the cement intake diverting water into said pipe line, is situate on the west side of said stream, very near the mouth of said canyon, and at a distance of about 1662 feet north of a point in the north boundary of the Muscupiabe Rancho, between stations 48 and 49 thereof, where said boundary intersects the center line of Riverside Avenue, as delineated on the map showing subdivision of the lands of the Semi-Tropic Land and Water Company, (said location of said intake having been sometimes heretofore erroneously designated in the pleadings herein and elsewhere, as being about 2375 feet north of said point of intersection), said Map being recorded in the office of the County Recorder of said County, in Book 6 of Maps, page 12 thereof; and said Power Company, for more than five years last past, has been and now is diverting from said creek, at said intake, by means of said pipe line, the waters of said Creek, flowing at said intake not exceediig 3000 inches, and is conducting said waters to the power house of said Power Company, situated on Farm Lot 66, designated on said Map, which waters,

upon being discharged from said Power House, belong to and are distributed to sundry parties, for their use, in proportion to their rights and interests therein.

V.

That in the San Bernardino Valley in said County, there exists, and lies below, and to the southeast of the mouth of said canyon, an area of land herein designated as "Lytle Creek Region" which, for the purposes of this decree, is defined and described as follows:

Commencing at a point in the center line of Mill Street, in the City of San Bernardino, in said County, situate 300 feet east of the center line of Mt. Vernon Avenue; thence north 400 feet; thence west to the center line of Mt. Vernon Avenue; thence running north along the center line of Mt. Vernon Avenue, to the intersection thereof with the center line of Fourth Street, (said street being identical with Foothill Boulevard); thence running west along the center line of Fourth Street, to a point where the center line of Fourth Street would intersect the center line of Muscott Avenue, if said Avenue were extended south; thence running north to the point of intersection of center line of Muscott Avenue with center line of Base Line; thence running west along center line of Base Line, to the southeast corner of Section 31, Township 1 North, Range 4 West, S. B. B. & M.; thence running north to the southwesterly boundary of the right of way of Atchison, Topeka and Santa Fe Railway Company (on which right of way are located the main railroad tracks of said Railroad Company, running from said City, through Cajon Pass); thence following along said southwesterly boundary of said right of way, to the point of intersection thereof, with the State Highway

at Verdemont; thence following said Highway to the point of intersection thereof, with the north line of Township 1 North, Range 5 West, San Bernardino Base and Meridian; thence running west, along the north line of Township 1 North, Range 5 West, San Bernardino Base and Meridian, to the northwest corner of said last mentioned township; thence running southeasterly to a point situate five feet east of the most easterly point of said intake of said pipe line of said Power Company, thence running southeasterly and following upon and along a line parallel with the east side of that certain cement canal, formerly known as the "Semi-Tropic Canal" (the intake of which canal is identical with said intake of said pipe line), and at all points five feet distant in a northeasterly direction from the east side of said Canal, to a point where said line would intersect the northwesterly line of Farm Lot 68, designated on said Map, if said northwesterly line of said Lot were projected southwest; thence along said northwesterly line of said Lot, to the foot of the ridge or bluff known as the "Rialto Bench," thence running southeasterly along the foot of said bluff, to a point where the foot of said bluff intersects the center line of said Mill Street; running thence east, along the center line of Mill Street, to the place of beginning.

VI.

That whenever there shall be discharge from said Power House, surplus water in excess of the quantity at the time required to satisfy the domestic and irrigation needs of the respective parties, entitled to receive and use water discharged from said Power House, all of such surplus water, so discharged, shall be used for

replenishing the underground water sources of said Lytle Creek Region, and to that end, shall be delivered by said Power Company, to and upon the wash of said Lytle Creek, by a cement conduit, at the highest point on the westerly margin of said wash, to which such water can reasonably be conducted by gravity flow from said Power House. Such replenishment work, as to the water so delivered upon said wash, shall be performed under the supervision and direction of the Committee hereinafter mentioned.

VII.

That all water flowing at said intake of said pipe line of said Power Company, between the 15th day of December, and the 15th day of the next succeeding month of April, of each year hereafter elapsing, shall be diverted and applied in the manner and in accordance with the priorities hereinafter set forth, to-wit:

First: To supply to said pipe line 2000 inches of water, or such larger quantity as may, at the time, be required and taken for immediate use for irrigation or domestic purposes, by the parties entitled to receive and use water discharged from said Power House, not exceeding the extent of their respective rights to such water.

Second: To supply additional water to said pipe line, to the extent of an aggregate amount of 3000 inches, (inclusive of the water specified in the next preceding subdivision "First"), except and provided that all or any part of such additional water shall be allowed to flow past said intake, into the wash or channel of said creek, for replenishing the underground water of said

Region, whenever so requested in writing by the said Improvement Company, except during periods:

(a) When the quantity of water flowing in said creek at said intake, exceeds 4000 inches, in which event such excess water may be diverted through said pipe line, until the total quantity of water, diverted therethrough, amounts to 2500 inches, or

(b) When the quantity of water, flowing in said creek, at said intake exceeds 5000 inches, in which event, such excess water may be diverted through said pipe line, until the total quantity of water, diverted therethrough, amounts to 3000 inches.

Third: All water, so permitted to pass said intake, shall be used, as far as reasonably practicable, for replenishing the underground water contained in the entire area of the Lytle Creek Wash, situate below said intake, provided that at all times, so far as is reasonably practicable, the upper portion of said wash shall be so replenished with water until no more water can be sunk therein, before such replenishment is performed on the portion of said wash lying south of Highland Avenue, or lying east of the west boundary of the lands in said Region now owned by the Muscoy Water Company.

Fourth: If, at the end of five years, from date hereof, said Improvement Company or their successors in interest, decide that the water producing capacity of wells, situate south of an east and west line drawn through said Power House, and north of said Highland Avenue, would be benefited and increased by conducting at said intake, into said pipe line, a quantity of water not exceeding 3000 inches, then and in that event, all of the water flowing at said intake, shall at all times

thereafter, be turned into said pipe line, to the extent of said 3000 inches, instead of permitting a portion of such waters to flow past said intake, as aforesaid, and at said Power House, all surplus water, in excess of the quantity at the time required to meet the then requirements of the respective parties, entitled to receive and use water discharged from said Power House, shall be used in accordance with, and be subject to the provisions of Paragraph VI hereof.

VII-a

That no water shall ever be conducted by any party hereto, from that certain tract of land, situated in said San Bernardino County, described as follows:

Beginning at a point on the center line of hereinbefore mentioned Muscott Avenue, said point being situate one-half mile north of said Base Line; running thence south to the center line of said Fourth Street; running thence west, along said center line of Fourth Street, to the point of intersection thereof with the center line of the right of way, for electrical transmission line, of Southern Sierras Power Company; running thence northwesterly along said center line of said right of way, to a point where said center line of said right of way would intersect a line drawn due west from said point of beginning; thence running east to said point of beginning.

VIII.

That in order to conserve, in the most economical and effectual method, all waters which, under the provisions hereof, are from time to time to be used for replenishing the underground water sources of said Region, and also, for further replenishing the underground water

supply of said Region, to conserve, so far as may be reasonably practicable, the surplus, or flood waters, of streams or canyons tributary to said Region, a committee of five persons shall annually be appointed in the month of September of each year, which committee shall have full charge and direction of such water conservation work, and of all expenditures relating thereto, provided that, in case of disagreement or difference of opinion, the power of such committee shall be exercised by concurrence of a majority of its members. One of the members of said committee shall be so appointed by said Improvement Company; one by said Citizens Company; one by said Union Water Company, one by said Mutual Company, Rancheria Water Company, Riverside Company and said City of San Bernardino; and one by said Terrace Water Company, James Barnhill and City of Colton, and each of said members shall serve for one year, and until his successor is appointed and no member of said committee shall receive any compensation for serving thereon. Vacancies on said committee shall also be filled by appointment, to be made in like manner as aforesaid, by the party or parties which made the appointment of the member whose place so becomes vacant, and any person appointed to fill such vacancies shall fill out the unexpired term of his predecessor. Subject to the provisions hereof, said committee is hereby authorized to, from time to time, install any water conservation works, including the construction of dams, ditches, cuts, obstructions, and shafts on land in said Lytle Creek Wash, lying north of Fourth Street, (said street being identical with Foothill Boulevard) and also in and along any canyon, the waters of which are tributary to said Region, and take all other steps,

as in its uncontrolled discretion may be deemed expedient, in order to accomplish the underground conservation of such waters, provided that nothing herein shall be construed as authorizing said committee to trespass upon the property or rights of any party or to do any act that would infringe upon or impair or interfere with the right of any party to the use of any water to which such party shall be entitled. The expense of installing such system and maintaining the same, and carrying on said work of water conservation, shall be borne and paid, subject to the provisions hereof, by the Fontana Companies, Citizens Company, Riverside Company, Improvement Company, Mutual Company, Rancheria Water Company, Rialto Domestic Water Company, City of Colton, City of San Bernardino, Terrace Water Company, and James Barnhill, in the same proportions that the maximum quantity of water which each of said eleven parties (or group of parties), is allotted hereunder, the right to pump from said Region, bears to the aggregate maximum quantity of water which all of said parties are alloted hereunder the right to pump from said Region, provided that in the event of any other person or corporation joining in said conservation work, and paying a proportion of the expense thereof, the proportions of said expense to be borne by said parties, as hereinbefore set forth, shall be correspondingly and equitably reduced. Said committee, in the month of October of each year, and from time to time thereafter, as they may deem proper, shall make an estimate of the amount of money at the time required to be paid to said committee by said eleven parties hereto above named, in order to meet the expense for conservation work as aforesaid, at the

time being undertaken, or in contemplation by said committee.

Said committee shall thereupon present to each of said eleven parties, a bill for the proportionate amount so to be paid by such party, and if any party shall fail to pay such bill, within thirty days after it shall be so presented to such party, then said committee may bring, and it shall be its duty to bring, suit against such party for the amount of such bill, together with costs, including a reasonable attorneys' fee to be fixed by the court in which such suit shall be brought.

Any and all lands, owned by any of said specified parties who are to bear the expense of said conservation work as aforesaid, situate in said Lytle Creek Region, and lying north of said "Fourth Street," and not suitable for the growing of crops thereon, may be used at any and all times for spreading water thereon, and sinking and conserving water therein, by means of dams, obstructions, ditches, cuts and shafts, or by taking such other steps as may be deemed expedient by said committee, provided however, that such water conservation work shall not be done in such a manner as to injure or interfere with the use of any pumping plant, structure or other improvement, situate on any land where such work is performed.

IX.

That the maximum quantity of water which said plaintiff, City of San Bernardino, shall be, and is entitled to take from said Region, and use beyond the confines thereof, is such quantity of water, which when added to the water said plaintiff is entitled to have delivered to it, from said Lytle Creek, will amount in the

aggregate, (inclusive of said Lytle Creek Water) to 325 inches of water, and said plaintiff shall not be entitled to divert, at any time, from said Region, an amount of water in excess of said 325 inches. Of said quantity of water, 225 inches and no more may be pumped or diverted from that certain tract of land in said Region, comprising 10.09 acres, and forming a part of tract known as the "McKenzie Tract" (said tract of 10.09 acres being more particularly described in that certain deed running from William L. McKenzie, and others, to said plaintiff, and recorded in Book 109 of Deeds, at page 303 thereof, in the office of the County Recorder of said San Bernardino County), and none of said 225 inches shall ever be diverted by plaintiff from any other portion of said Region.

Said plaintiff is also the owner of the right to take, divert and use water from that portion of the San Bernardino Valley, lying east of the easterly boundary line of said Lytle Creek Region and east of a line beginning at the point of intersection of the State Highway with the south boundary line of Section 34, Township 2 North, Range 5 West, S. B. B. & M., and running thence to the northwest corner of said Section 34, and north of the center line of Mill Street, extended east to Sterling Avenue, and from streams tributary to said portion of said valley, situate in said portion of said valley, either from the surface flow of such streams, or from wells bored or to be bored in said portion of said valley, to such extent as may be reasonably necessary to supply the needs of said city and its inhabitants with water for supplying needs and purposes within said City. The right of said plaintiff to take water from the surface flow of Lytle Creek, to the extent of 100 inches, shall

not be affected or diminished by any claims of the Fontana Companies, or any of them to salvage water, by reason of any water of Lytle Creek being conducted or conveyed in or through pipe lines, or conduits of any kind.

X.

That, subject to the provisions of this paragraph, the maximum quantity of water which said Rialto Domestic Water Company shall be, and is entitled to take from said Region and use beyond the confines thereof, is such quantity of water which, when added to the water said Company is entitled to have delivered to it from said Lytle Creek, will amount in the aggregate (inclusive of said Lytle Creek Water) to 143.22 inches of water, and said Company shall not be entitled to divert, at any time from said Region, an amount of water in excess of said quantity hereinbefore in this paragraph specified. Of said quantity of water, 100 inches and no more may be pumped from said Region by said Company, provided that:

(a) None of said 100 inches of water shall be taken from any well or water development situate south of a line located parallel to, and situate three-fourths of a mile north of, Highland Avenue.

(b) The right of said Company to so pump and take said one hundred inches of water, shall be exercised only to such extent as shall be necessary to supply the City of Rialto, and the inhabitants thereof, with water for municipal and domestic uses and purposes, and for the irrigation of flowers, trees and lawns, within said City, and then only during such times as the 43.22 inches of water (now supplied by said Company to the

inhabitants of said City) is inadequate, or unsuitable for such purposes or uses.

(c) None of said 100 inches of water shall, at any time, be used outside of the now, or hereafter existing corporate limits of said City of Rialto, except to the extent that said 43.22 inches is now being used outside said City.

(d) Nothing in this Paragraph X contained shall be construed as vesting in said Company the right to take any portion of said 100 inches of water from any well or water development, without the consent of the owner of the land on which such well or water development is situated.

(e) The right to pump and take said 100 inches of water from said region shall be exercised only in the event such right shall be transferred to the City of Rialto.

(f) The water derived from said 100 inches water right, other than water supplied for fire hydrants, sewers, stores and buildings, not used for dwellings, shall not be furnished to the inhabitants of said City of Rialto, except through meters and when charged for at meter rates.

XI.

That the maximum quantity of water which said Improvement Company shall be, and is entitled to take from said Region, and use beyond the confines thereof, is, such quantity of water, which when added to the water said Company is entitled to have delivered to it from said Lytle Creek, will amount in the aggregate (inclusive of said Lytle Creek Water), to 1026.23 inches, and said Improvement Company shall not be en-

titled to divert at any time, from said Region, an amount of water in excess of said quantity in this paragraph hereinbefore specified. 'Of said quantity of water, only 700 inches may be pumped and diverted from said Region, by said Improvement Company, except during such periods when the quantity of water said Company is deriving from said Lytle Creek, is temporarily reduced to a quantity of less than 326.23 inches, during which periods additional water may be pumped and diverted from said Region by said Company, but only to an extent sufficient to supply such deficiency of said Lytle Creek Water, and only so long as such deficiency continues. Said pumping of said 700 inches of water by said Improvement Company shall be confined to the Ferguson Ranch, (said Ranch being the real property described in that certain deed, dated November 20th, 1908, and executed by Fontana Development Company, and recorded in the office of the County Recorder of said San Bernardino County, in Book 429 of Deeds, page 103 thereof), and said Company is not entitled to pump any water from any other part of said Region.

XII.

That the maximum quantity of water, which said Mutual Company shall be, and is entitled to take and conduct from said Region, and use beyond the confines thereof, is 125 inches of water, and said Mutual Company shall not be entitled to divert at any time, from said Region, an amount of water in excess of said 125 inches, all of which said quantity of water may be pumped by said Company from said Region, but all of said water shall be taken from wells, or water de-

velopments situate south of Highland Avenue, and north of Base Line.

XIII.

That the maximum quantity of water which said Riverside Company shall be, and is entitled to take from said Region, and use beyond the confines thereof, is 450 inches of water, and said Riverside Company shall not be entitled to divert at any time, from said Region, an amount of water in excess of said 450 inches, all of which said quantity of water may be pumped or diverted by said Company from said Region, but all of said water shall be taken from wells or water developments situate south of Highland Avenue, and north of Base Line.

XIV.

That the maximum quantity of water which said Rancheria Water Company shall be, and is entitled to take from said Region, and use beyond the confines thereof, is 120 inches of water, and said Company shall not be entitled to divert at any time from said Region, an amount of water in excess of 120 inches, all of which said quantity of water may be pumped or diverted by said Company from said Region, but all of said water shall be taken from wells or water developments, situate south of Highland Avenue, and north of said Fourth Street.

XV.

That the maximum quantity of water which said Citizens Company shall be, and is entitled to take from

said Region, and use beyond the confines thereof, is 1300 inches of water, and said Citizens Company shall not be entitled to divert, at any time, from said Region, an amount of water in excess of said 1300 inches, all of which said quantity of water may be pumped or diverted by said Company from said Region, provided that:

(a) No more than 200 inches shall ever be diverted or pumped by said Citizens Company, from that part of said Ferguson Ranch specified in that certain deed, executed by the Semi-Tropic Land and Water Company, to the Rialto Irrigation District, and recorded in the office of the County Recorder of said San Bernardino County, in Book 187 of Deeds, at page 213 thereof, and

(b) No more than 585 inches shall ever be diverted from said Region by said Citizens Company, from the northeast quarter of Section 36, Township 1 North, Range 5 West, S. B. B. & M., and

(c) No more than 150 inches shall ever be diverted or pumped by said Citizens Company, from that certain tract of land, situate in said Region, described as follows, to-wit:

Commencing at a point on the Base Line two thousand and fifty feet east of the southwest corner of Township 1 North, Range 4 West, San Bernardino Base and Meridian, and running thence due east 250 feet; thence north 14 degrees west, 344 feet; thence north 24 degrees 10 minutes West, 839.7 feet; thence north 39 degrees, 56 minutes west, 1096 feet; thence due west 674 feet; thence south 8 degrees, 20 minutes east, 500 feet; thence south 34 degrees, 15 minutes east, 1119 feet; thence south 58 degrees, 35 minutes east, 998-7/10 feet, to the place of beginning.

(d) None of the remaining quantity of said 1300 inches of water shall ever be diverted or pumped by said Citizens Company, from any lands in said Region, lying to the north of Base Line, but nothing herein contained shall be construed as obligating said Citizens Company, to divert any specific quantity of water from lands lying north of Base Line, to the end that any quantity of water may be diverted by said Company, from lands in said Region lying south of Base Line, so long as such quantity, when added to the quantity of water which said Company may be then contemporaneously taking from said Region, from lands north of Base Line, shall not exceed in the aggregate, said maximum quantity of 1300 inches of water; provided however, that in the event of said Company diverting at any time from said Region, a total quantity of water, exceeding 1100 inches, then all of such excess water shall be taken by said Company from lands in said Region lying south of a line drawn parallel to, and situate 2500 feet south of Base Line.

(e) Said Citizens Company shall never be entitled to divert any water from that certain tract of land situate in said Region, and described as follows:

Beginning at the southeast corner of the northeast quarter of the northeast quarter of Section 36, Township 1 North, Range 5 West, San Bernardino Base and Meridian; running thence west, 11.89 chains to a post, thence north 3 degrees 10 minutes west, 20 chains to a post on the north line of said Section, thence east 1 chain, thence south 32 degrees east, 8.32 chains to a post; thence south 2 degrees west, 2.06 chains to a post; thence south 54 degrees east, 4.59 chains to a post; thence south 83 degrees east, 4.40 chains to the east line

of said Section, thence south 8.48 chains to the place of beginning.

XVI.

The maximum quantity of water which James Barnhill (sued herein under the erroneus name of "W. W. Barnhill"), shall be, and is entitled to take from said Region, and use beyond the confines thereof, is seventy-five inches of water and said Barnhill shall not be entitled to divert, at any time, from said Region, an amount of water in excess of said 75 inches, all of which said quantity of water may be pumped by him from said Region, but all of said water shall be taken from wells, or water developments, situate south of the existing right of way of Atchison, Topeka and Santa Fe Railway Company (on which said right of way are located the railroad tracts extending from said City of San Bernardino, to the City of Rialto), and north of said Mill Street.

XVII.

That the maximum quantity of water, which said Terrace Water Company shall be, and is entitled to take from said Region, and use beyond the confines thereof, is 150 inches of water, and said Terrace Water Company shall not be entitled to divert, at any time, from said Region, an amount of water in excess of said 150 inches, but all of said water shall be taken from wells or water developments, situate south of said right of way of said Railway Company mentioned in the next preceding paragraph hereof, and north of said Mill Street. All of said water may be pumped.

XVIII.

That the maximum quantity of water which said City of Colton shall be, and is entitled to take from said

and its tributaries, and from said Lytle Creek Region, and conduct from said Region, and use beyond the confines thereof, shall amount to an aggregate quantity of 3480.78 inches, and said Fontana Companies shall never be entited either collectively or separately to divert, beyond said confines, at any time from said water sources, or any of them, an amount of water in excess of said quantity in this paragraph hereinbefore specified. Of said 3480.78 inches of water, 1300 inches and no more may be pumped and diverted from said Region, by said Fontana Companies, provided that:

(a) No more than three hundred inches shall ever be pumped from the next hereinafter described tract of land, and said 300 inches shall be pumped from no other place; said tract being that certain tract, in said Region, described as follows:

That portion of the Southwest portion of the Muscupiabe Rancho, described as follows:

Beginning at station O of the north boundary of the Muscupiabe Rancho, which point is situate near the northeasterly bank of Lytle Creek, and near the mouth of Lytle Creek Canyon;

Thence following and along the northerly boundary of said Muscupiabe Ranch, South 67 degrees, 52 minutes East, thirty-five and fifty-three hundredths (35.53) chains to station 1 of said Muscupiabe Rancho; thence south 48 degrees, 14 minutes west, fifty-six and seventy-six hundredths (56.76) chains to the southwesterly corner of Farm Lot Ten (10) designated on the Map showing SUBDIVISION OF LANDS BELONGING TO SEMI-TROPIC LAND AND WATER COMPANY, recorded in Book 6 of Maps, at page 12, in the office of the County Recorder of said San Bernardino County;

Region, and use beyond the confines thereof, is 600 inches of water, and said City shall not be entitled to divert, at any time, from said Region, an amount of water in excess of said 600 inches, all of which said quantity of water may be pumped by said City from said Region, but all of said water shall be taken from wells or water developments situate south of the last mentioned right of way of said Railway Company, and north of said Mill Street, and none of said water shall be used west of the highway, running approximately north and south, situate on the Rialto Bench, and known as "Rancho Avenue."

XIX.

As used herein, (1) the term "Fontana Companies," refers to Fontana Water Company, Fontana Union Water Company, Fontana Power Company, Fontana Farms Company, and Fontana Land Company; (2) the term "Citizens Company" refers to the Citizens Land and Water Company of Bloomington; (3) the term "Riverside Company" refers to the Riverside Highland Water Company; (4) the term "Improvement Company" refers to the Lytle Creek Water and Improvement Company; (5) the term "Mutual Company" refers to the Mutual Land and Water Company of Rialto; (6) the term "Power Company" refers to the Fontana Power Company, and (7) the term "Union Water Company" refers to Fontana Union Water Company.

XX.

That the maximum quantity of water which said Fontana Companies shall be, and are collectively entitled to take from the surface and sub-surface waters of said Lytle Creek, and from said Lytle Creek Canyon,

Thence north 24 degrees, 43 minutes west, eighty-four and twenty-four hundredths (84.24) chains to a point in the north boundary of said Muscupiabe Rancho; said point being identical with the north corner of Farm Lot One (1), designated on said Map; thence, following and along the north boundary of the Muscupiabe Ranch, south fifty-one degrees, thirty minutes east, eleven and fifty-hundredths (11.50) chains to Station 49 thereof;

Thence, south 63 degrees, 00 minutes east, 40 chains to Station 0 of said Muscupiabe Rancho, the place of beginning.

Containing two hundred twelve and nineteen hundredths (212.19) acres.

(b) No more than 200 inches shall ever be pumped and diverted from said Region, from that certain tract of land in said Region, described as follows:

Commencing at a point on Line 2-3 of the northeasterly boundary of the southwest portion of the Rancho Muscupiabe, said point being north 45 degrees, 0 minutes west, one hundred thirty-seven and three-tenths chains from the southeast corner of Section 25, Township 1 North, Range 5 West, San Bernardino Base and Meridian; thence following the northeasterly boundary line of lands heretofore conveyed by the Fontana Development Company, to the Lytle Creek Water and Improvement Company, by deed recorded in Book 429 of Deeds, page 103, south 71 degrees, 13 minutes west, thirty-four and twenty-eight hundredths chains; thence still following said boundary north eighty-two degrees, fifty-nine minutes west, eighteen and seventy-three hundredths chains, for a point of beginning; thence from said point of beginning north fifty-four degrees,

fifteen minutes west, eighty-three and four hundredths chains; thence south 35 degrees, 45 minutes west, along the boundary line of the land conveyed by the Fontana Development Company to the Fontana Union Water Company, by deed recorded in Book 505 of Deeds, page 274, to the northwesterly corner of Lot 64, of Map showing subdivision of lands belonging to the Semi-Tropic Land and Water Company, as per plat recorded in Book 6 of Maps, page 12, of the records of said County, including the western portion of the Muscupiabe Grant, as per plat recorded in Book 7 of Maps, page 23, of the records of said County; thence from said northwesterly corner of said Lot 64, easterly and along the northeast line of Lots 64, 66, 68, 70, 72, 74 and 76, to the westerly point of land conveyed by the Fontana Development Company to the Lytle Creek Water and Improvement Company, by deed recorded in Book 429 of Deeds, page 103, et. seq.; thence following the north boundary of said tract south 82 degrees, 59 minutes east, twenty-six and twenty-seven hundredths chains, more or less, to point of beginning.

(c) None of the remaining 800 inches, or any portion of said 1300 inches of water, shall ever be pumped by said Fontana Companies, or any of them, from any portion of said Region lying to the south, or southeasterly of a line drawn from the southeast corner of Farm Lot 68, designated on said Map, to that certain point situate on the boundary of said Muscupiabe Rancho, designated or known as "Stake No. 3" (which said last mentioned point is situate very near to the northeast corner of Section 22, Township 1 North, Range 5 west, S. B. B. & M.); thence running due east to the southwesterly boundary of said right of way of

said Atchison, Topeka and Santa Fe Railway Company, hereinbefore mentioned, save and except that 150 inches of said 1300 inches of water may be pumped or diverted from lands in said Region lying below or to the south or southeasterly of said line.

(d) No water, pumped in said Region by any of said Fontana Companies, shall ever be conducted east of the west boundary of the lands in said Region now owned by the Muscoy Water Company, a corporation, provided however, that if any of the said Fontana Companies shall exercise the right to substitute for 150 inches of the surface waters of said Lytle Creek other water (said right being specifically provided for in that certain judgment rendered by the Superior Court of said San Bernardino County, in Action numbered 9383 in said Court, a copy of which judgment is recorded in the office of the County Recorder of said County, in Book 369 of Deeds at page 323 thereof, which said judgment is based upon that certain contract, dated October 26, 1891, wherein John L. Campbell granted to the Semi-Tropic Land and Water Company, the right to make such substitution of such water), then and in that event, such substituted water, not exceeding 150 inches, may be conducted anywhere.

(e) No water, except the 300 inches permitted to be pumped hereunder, from the tract of land described in Subdivision (a) of this Paragraph XX, shall ever be pumped and diverted by any of said Fontana Companies, from said Region, except and provided that whenever the quantity of water which said Fontana Companies are deriving from said Lytle Creek, at said intake, when added to any water that shall at the time be actually pumped from said tract (there shall be no

obligation to pump any water from said tract), shall amount in the aggregate to less than 2500 inches, then, so long as such deficiency shall continue, said Fontana Companies may take and divert from said Region from any or all of said other areas hereinbefore specified (but not more from any one of said areas than the maximum that they are entitled to take from such tract as hereinbefore stated) such quantity of water as may be necessary to make up such deficiency and maintain such aggregate supply of 2500 inches.

(f) Said quantity of 2500 inches and said maximum quantity of 3480.78 inches of water, hereinbefore referred to in this Paragraph XX, both relate exclusively to water which said Fontana Companies are entitled to take for their own use for irrigation and other beneficial purposes, beyond the confines of said Region.

XXI.

Nothing herein contained shall settle, bind or affect any question, matter or right existing between any of said Fontana Companies only, the purpose of this decree being to define and adjudicate the rights involved herein, of each and all of the respective parties hereto, other than said Fontana Companies, and also to adjudicate the collective rights of all of said Fontana Companies, constituting one group of defendants, without affecting any right which any of said Fontana Companies may have against any other of said Fontana Companies.

XXII.

That, except as provided in Paragraph XXIV hereof, no well shall ever be sunk hereafter by any party to

this action, within a distance of 200 feet of the north boundary line of said Ferguson Ranch, and it is further decreed that none of said Fontana Companies shall be entitled to hereafter pump any water in said Lytle Creek Canyon, at any time when such water is not needed for irrigation purposes.

XXIII.

Nothing contained herein shall be construed as permitting or shall permit, any water to be diverted from said Region, or from any water sources herein menitoned, at any time when the water so diverted is not reasonably needed for some useful or beneficial purpose, and it shall not be deemed a useful or beneficial purpose within the meaning of this paragraph, to use water:

(a) For irrigating, between the 15th day of November and the 15th day of March, of the next succeeding year, any grain or cereal crop, unless such crop is growing in an orchard;

(b) For saturating or causing water to sink in lands, lying outside of the said Region and canyon, for the purpose of accomplishing underground storing of water, or of adding to the water contained in such lands, nor for excercising unreasonable irrigation of crops or trees growing thereon.

XXIV.

That none of the parties to this action shall ever be entitled hereafter, to sink any well within a distance of 500 feet from any other well, owned, or operated by any other party to this action, except for substituting a new well in lieu of any now existing well, within said distance, for the sole purpose of maintaining, but not in-

creasing, the quantity of water now taken by such existing well, within such distance, provided however, that if it is desired to sink such new well within said distance, then such new well shall be always located as near as reasonably practicable to the existing old well for which it is to be substituted, as aforesaid.

XXV.

That each and all of the parties to this action, when taking any water from any water source mentioned herein, shall install, and at all times maintain respectively, at every point at which such water is so taken, such measuring box or weir or other measuring device, as will show readily and accurately the quantity of water at the time being taken at such point, which box and weir or other device, shall be installed and maintained as directed by, and to the satisfaction of said committee on water conservation, and shall at all times be open to inspection by an member of said committee, and by any party to this action.

XXVI.

Nothing herein contained shall be construed as vesting any new right in any of the parties hereto, to enter upon and take water from any water development or well situate on any property of any other party hereto, but the provisions of this paragraph shall not impair or affect any existing right of any party hereto.

XXVII.

That the rights of each and all of the said parties to pump water from said Region, as hereinbefore specified and defined are, as between said parties, equal and cor-

relative, without any priority or superiority of right, except as hereinbefore specifically stated or provided as to a particular interest or right, as between particular specified parties.

XXVIII.

That every provision of this decree in favor of, or applying to any party hereto, shall also apply to, and inure to the benefit of, and also bind each and all of the heirs, legal representatives, successors and assigns of such party.

XXIX.

That nothing herein decreed shall impair, abridge, or affect any existing right of any party hereto, which is now established by decree of court, or by other record, to have delivered, or to share in water from the surface flow of said Lytle Creek, except as may hereinbefore be otherwise specifically provided. Nothing herein decreed shall impair, abridge or affect any existing right of any party hereto to practice water conservation by sinking water in said Lytle Creek Canyon.

XXX.

That each and all of the parties hereto, and the agents and employees of each of them, are hereby perpetually restrained and enjoined from doing any act or thing in violation of the provisions of this decree.

XXXI.

None of the several maximum quantities of water which the parties hereto are respectively entitled to take from said Region, and use beyond the confines thereof, as herein specified, shall be increased or affected by the

future acquiring of additional lands in said Region by any of said parties; provided, however, anything to the contrary herein contained notwithstanding, should any party hereto hereafter purchase from any other party hereto the herein specified right to divert water of such other party, such purchasing party shall be entitled to exercise such purchased right of diverting water from said Region, in addition to the right allotted hereunder to such purchasing party.

XXXII.

No objection shall ever be made by any of said parties as to the interest or right of any party, as hereinbefore specified and defined, or as to the validity of this judgment in so specifying or defining such interest or right, on the ground that such interest or right, as so specified or defined, is not consistent with or warranted by the pleadings relative thereto; and if, in any case, it shall appear that any such interest or right, as so specified and defined, is in fact not consistent with or warranted by such pleading as actually filed, then such pleading shall be deemed and treated as amended, to conform to and sustain such interest and right as hereinbefore specified and defined.

XXXIII.

Each of said parties waives all right of appeal from this judgment, and no appeal shall be taken by any party or parties from this judgment or any part thereof.

XXXIV.

No party to this judgment shall be entitled to recover costs from any other party.

AGREEMENT
BETWEEN
BIG BEAR MUNICIPAL WATER DISTRICT
AND
SAN BERNARDINO VALLEY MUNICIPAL WATER DISTRICT

This Agreement is entered into between Big Bear Municipal Water District (hereinafter "BIG BEAR") and San Bernardino Valley Municipal Water District (hereinafter "VALLEY MUNICIPAL").

R E C I T A L S

A. BIG BEAR is obligated to release water from Big Bear Lake (hereinafter "Lake") to Bear Valley Mutual Water Company (hereinafter "BEAR VALLEY"), or to provide other water in lieu of releases from the Lake. This obligation arises from the judgment in *Big Bear Municipal Water District* v. *North Fork Water Co. et al.*, Case 165493, Superior Court, County of San Bernardino (hereinafter "1977 Judgment"). The 1977 Judgment also created the Big Bear Watermaster. Under the 1977 Judgment, BEAR VALLEY may call on BIG BEAR to deliver up to 65,000 acre-feet of water from the Lake in any ten-year period if BEAR VALLEY has water in BEAR VALLEY's Lake Account, as determined by the Big Bear Watermaster.

B. BIG BEAR wishes to obtain a long-term supply of in-lieu water to satisfy part of the obligation to deliver water to BEAR VALLEY. VALLEY MUNICIPAL has a long-term water supply contract with the California Department of Water Resources and access to other sources, and wishes to provide in-lieu water to BIG BEAR.

////

SBVMWD LEGAL
DOCUMENT 1645

C. If BIG BEAR's Lake Release Policy first adopted May 1, 1987 (hereinafter "Lake Release Policy") had been in effect under the 1977 Judgment, BIG BEAR would have released 2,000 acre-feet of water per year, on average, from the Lake to Bear Creek for use by BEAR VALLEY during the 26-year period, October 1, 1934 to September 30, 1960. This policy is attached as Exhibit "1". BIG BEAR currently removes up to 1,000 acre-feet per year of snow-making water from the Lake, half of which returns to the Lake when the snow melts. The Lake Release Policy contemplates continuation of this activity at current volumes.

D. If the 1977 Judgment, the Lake Release Policy and this Agreement had been in effect in said period, VALLEY MUNICIPAL would have been called upon to deliver to BEAR VALLEY up to 4,500 acre-feet of water per year, on average, as in-lieu water for BIG BEAR.

E. VALLEY MUNICIPAL has instituted litigation against BIG BEAR and others, which litigation seeks a judicial determination of the rights of the water producers and users within the San Bernardino Basin (hereinafter "Basin") to water from the Basin and to water which historically flowed from Bear Creek and the Lake to the Basin. This litigation is currently on appeal in the California Court of Appeal, Fourth District, Division One, in San Diego (No. D020907).

F. BIG BEAR and VALLEY MUNICIPAL wish to enter into an agreement which will satisfy the in-lieu water requirements of BIG BEAR and end said litigation.

////

////

C O V E N A N T S

NOW, THEREFORE, IT IS AGREED by and between the parties hereto as follows:

1. In each calendar year, when BEAR VALLEY demands Lake water pursuant to the 1977 Judgment, BIG BEAR shall make Lake releases to meet such demands to the extent such releases are consistent with the Lake Release Policy. Releases shall be made in response to any demand which BEAR VALLEY is entitled to make pursuant to the 1977 Judgment, whether for irrigation or other purposes. If BIG BEAR acquires any right (a) to store in the Lake reclaimed water currently discharged outside the watershed or other water imported from outside the watershed, or (b) to remove water from the Lake, then the parties shall make reasonable adjustment of this release obligation to allow BIG BEAR to enjoy the benefits of such water, provided that no such adjustment shall have the effect of reducing the average annual quantity of usable Lake releases contemplated under this Agreement.

2. In each calendar year, whenever Lake releases under the Lake Release Policy are not sufficient to meet BEAR VALLEY's Lake release demands, VALLEY MUNICIPAL shall deliver in-lieu water to satisfy the remainder of those demands. For purposes hereof BEAR VALLEY's Lake release demands shall be limited to water which BEAR VALLEY is entitled to demand from BIG BEAR (a) out of its Lake account under the 1977 Judgment, computed using the same formulas and coefficients used in the Big Bear Watermaster Eighteenth Annual Report dated July 26, 1995, or (b) pursuant to subparagraphs 25(e) and 25(f) of the 1977 Judgment. This water can be provided from the State Water Project, wells, the Santa Ana

River, Exchange Water under the "Santa Ana River – Mill Creek Cooperative Water Project Agreement" (dated May 3, 1976 and recorded in Book 9008, Pages 1 *et seq.*, Official Records of San Bernardino County) or any other lawful source. If VALLEY MUNICIPAL's in-lieu deliveries result in an obligation by BIG BEAR to provide Basin Make-up water under the 1977 Judgment (as determined using the same formulas and coefficients used in the Big Bear Watermaster's Eighteenth Annual Report dated July 26, 1995), VALLEY MUNICIPAL shall provide replenishment water to bring the Basin Make-up Account up to the minimum balance contemplated by the 1977 Judgment. For purposes of the immediately preceding sentence, the percentage credit allowance for stock water deliveries for spreading in Table 4.C of said Annual Report shall be assumed to be 0%.

3. Prior to May 1, 1996, VALLEY MUNICIPAL shall pay sufficient amounts into an escrow account to provide for defeasance of BIG BEAR's remaining payments under the 1989 Certificates of Participation which funded purchase of the well and well sites described in Exhibit "2" attached hereto. Immediately after establishment of the escrow account BIG BEAR shall convey by grant deed to VALLEY MUNICIPAL marketable title to said well and well sites.

4. Immediately after execution of this Agreement BIG BEAR shall convey to VALLEY MUNICIPAL, free of liens and unpaid assessments, all right, title and interest in and to all BEAR VALLEY stock now owned by BIG BEAR, as described in Exhibit "3" attached hereto.

////

5. BIG BEAR shall pay VALLEY MUNICIPAL the following amounts:

a. Commencing July 1, 1996 and on each July 1 through 2005, BIG BEAR shall pay VALLEY MUNICIPAL the smaller of:

i. $834,000, or

ii. The product of $834,000 times a fraction in which the denominator is BIG BEAR's assessed value for fiscal year 1995-96 and the numerator is BIG BEAR's assessed value for the fiscal year prior to the fiscal year in which the payment is due. Provided that the annual amount paid shall be not less than 90% of $834,000.

b. Commencing July 1, 2006 and on each July 1 through 2016, BIG BEAR shall pay VALLEY MUNICIPAL the larger of:

i. $834,000, or

ii. The product of $834,000 times a fraction in which the denominator is BIG BEAR's assessed value for fiscal year 2004-05 and the numerator is BIG BEAR's assessed value for the fiscal year prior to the fiscal year in which the payment is due.

c. Commencing July 1, 2017 and on each July 1 thereafter during the life of this Agreement, BIG BEAR shall pay VALLEY MUNICIPAL the larger of:

i. $895,000, or

ii. The product of $895,000 times a fraction in which the denominator is BIG BEAR's assessed value for fiscal year 2004-05 and the numerator is BIG BEAR's assessed value

for the fiscal year prior to the fiscal year in which the payment is due.

As used in this section the term "assessed value" means the Total Net Value After RDA as determined by the San Bernardino County Auditor-Controller. For example, the "assessed value" for 1995-96 is $2,087,130,141.

6. BIG BEAR hereby pledges revenues from its general property tax allocation through the County of San Bernardino as sole security for the payments set forth in this Agreement.

7. BIG BEAR shall not acquire stock, or exercise rights pursuant to stock, in water companies within VALLEY MUNICIPAL.

8. As long as VALLEY MUNICIPAL meets its obligation to deliver water hereunder, BIG BEAR shall not drill or operate wells, or cause wells to be drilled or operated on its behalf, within VALLEY MUNICIPAL except wells which may be operated by, or on behalf of, VALLEY MUNICIPAL to meet the terms of this Agreement.

9. BIG BEAR shall keep adequate records of the water level in the Lake and of the date and amount of each release made in response to demands from BEAR VALLEY and shall submit these records annually to VALLEY MUNICIPAL. VALLEY MUNICIPAL shall keep adequate records of the source and quantity of all water it delivers under this Agreement and shall submit these records annually to BIG BEAR.

10. As long as BIG BEAR makes the releases and payments set forth in paragraphs 1 and 5 hereof, VALLEY MUNICIPAL shall not

////

make any other claim regarding prior obligations of BIG BEAR to the Basin.

11. Each party to this Agreement shall abandon or dismiss its appeal in the pending litigation (No. D020907), with each party bearing its own costs and attorney fees therein.

12. This Agreement shall remain in force through the term of VALLEY MUNICIPAL's water supply contract with the California Department of Water Resources, as it may be extended from time to time.

13. This Agreement may be amended only by written agreement of the Parties hereto pursuant to action of their respective boards of directors.

14. **ARBITRATION OF DISPUTES:**

Any disputes between the Parties arising from this Agreement shall be resolved by binding arbitration in accordance with the California Code of Civil Procedure, Part III, Title 9 (commencing with section 1280) and Title 9.3 (commencing with section 1298). Provided, however, parties shall be entitled to discovery under the rules of the Code of Civil Procedure, the arbitrator(s) shall issue a written opinion adequately explaining the basis of the award, and in any proceeding to confirm, correct or vacate an award, the court may consider and correct errors of law.

NOTICE: BY INITIALLING IN THE SPACE BELOW YOU ARE AGREEING TO HAVE ANY DISPUTE ARISING OUT OF THE MATTERS INCLUDED IN THE 'ARBITRATION OF DISPUTES' PROVISION DECIDED BY NEUTRAL ARBITRATION AS PROVIDED BY CALIFORNIA LAW AND YOU ARE GIVING UP ANY RIGHTS YOU MIGHT POSSESS TO HAVE THE DISPUTE LITIGATED IN A COURT OR JURY TRIAL. BY INITIALLING IN THE SPACE BELOW YOU ARE GIVING UP YOUR JUDICIAL RIGHTS TO DISCOVERY AND APPEAL, UNLESS THOSE RIGHTS ARE SPECIFICALLY INCLUDED IN THE 'ARBITRATION OF DISPUTES' PROVISION. IF YOU REFUSE TO SUBMIT TO ARBITRATION AFTER AGREEING TO THIS

PROVISION, YOU MAY BE COMPELLED TO ARBITRATE UNDER THE AUTHORITY OF THE CALIFORNIA CODE OF CIVIL PROCEDURE. YOUR AGREEMENT TO THIS ARBITRATION PROVISION IS VOLUNTARY.

WE HAVE READ AND UNDERSTAND THE FOREGOING AND AGREE TO SUBMIT DISPUTES ARISING OUT OF THE MATTERS INCLUDED IN THE 'ARBITRATION OF DISPUTES' PROVISION TO NEUTRAL ARBITRATION.

If the dispute in arbitration involves changes in circumstances after execution of this Agreement, the arbitrator(s) shall consider any remedies which may be legally available in response to such changes.

15. Nothing in this Agreement is intended to create, nor shall anything herein be construed as creating, any rights in, benefits for or obligations to, any person or entity other than BIG BEAR and VALLEY MUNICIPAL.

16. This Agreement shall be effective as of the date set forth below.

IN WITNESS WHEREOF this Agreement is executed by the persons authorized by the parties' respective Boards of Directors.

EXHIBIT "1"

Big Bear Municipal Water District's Lake Release Policy was first adopted on May 1, 1987.

Policy states:

"1. When the Lake is within the top four feet, the irrigation demands from Bear Valley Mutual will be met with Lake releases;

2. When the Lake is between four and six feet below full, the District intends to obtain in-lieu water between the months of May 1 and October 31. Between November 1 and April 30, water required would be released from Big Bear Lake.

3. When the Lake is between six and seven feet below full, the Board of Directors shall determine whether to release from the Lake;

4. When the Lake is more than seven feet below full, the District intends to obtain in-lieu water throughout the year."

SURPLUS WATER SALE AGREEMENT

This Surplus Water Sale Agreement ("Agreement") is made and entered into as of 6th day of June, 2018, by and between the SAN GORGONIO PASS WATER AGENCY ("Agency") and SAN BERNARDINO VALLEY MUNICIPAL WATER DISTRICT ("District"). Agency and District are sometimes individually referred to herein as a "Party" and collectively as the "Parties".

RECITALS

A. Agency and District are state water contractors and regional water agencies that provide water on a wholesale basis to retail water providers and other public agencies within their respective service areas. There are two retail water providers that are within the service areas of both Agency and District. Those retailers are the Yucaipa Valley Water District and the South Mesa Water Company (collectively referred to as "Retailers"); and

B. Agency desires additional water supplies of all kinds to improve its water supply reliability, including wet year yield; and

C. Agency and District have a long history of cooperative efforts to serve water to their respective service areas, including water exchanges and sharing capacity in the East Branch Extension; and

D. District anticipates that from time to time, it may have surplus State Water Project water ("Surplus Water") that is surplus to the needs of its retail customers; and

E. District has adopted its Ordinance 79 which establishes procedures for the surplus and sale of surplus State Water Project Water; and

F. District desires to provide Agency the first right of refusal to purchase up to 5,000 acre-feet of District's Surplus Water per calendar year; and

G. Agency desires to purchase Surplus Water from District under the terms and conditions set forth in this Agreement and in a manner that is consistent with Ordinance 79.

NOW THEREFORE, in consideration of the foregoing recitals and the promises and covenants contained herein, the Parties agree as follows:

1. **Term of Agreement.**

The term of this Agreement shall commence on January 1, 2018 and end on December 31, 2032. ("Term").

2. **Purchase and Sale of Surplus Water.**

(a) District may determine, in its sole discretion, the amount of Surplus Water that will be available for purchase during each calendar year of the term of this Agreement. Notwithstanding the foregoing, if District determines that Surplus Water is available, District shall provide Agency the right of first refusal to purchase up to the first 5,000 acre feet of said Surplus Water.

(b) On or before June 15 of each year during the Term, District shall provide notice to Agency of the amount of Surplus Water that is available for purchase for that calendar year. Agency shall then have 30 days from the date of said notice to notify District of the amount of said Surplus Water that it wishes to purchase for that applicable year.

3. **Purchase Price for Surplus Water.**

The purchase price for Surplus Water delivered by District to Agency shall be the sum of the costs as calculated in subsections (a) and (b) below.

(a) The cost of the water shall be based on the State Water Project Table A allocation as determined for the applicable year as follows:

Final SWP Allocation	Cost Per Acre-Foot
0 - 20%	$400
21 - 40%	$300
41 - 60%	$200
61 - 100%	$100

(b) The power cost to move the Surplus Water through the State Water Project facilities, District facilities, and then to the Point of Delivery as defined herein, shall be paid as follows: (i) Agency shall pay to District power costs at the power cost rate established for the State Water Project for the applicable year. The actual power costs shall be reconciled on or before the end of the calendar year following the year of the delivery. In the event it is determined that Agency has underpaid power costs, Agency shall make payment for the amount owed to District within 30 days of said determination. In the event it is determined that Agency has overpaid power costs, Agency may elect to either receive payment from District within 30 days from the date of said determination or to apply said amount as a credit toward power costs for a subsequent year.

(c) On or before expiration of each 5-year period during the Term, the Parties shall meet and confer in good faith in regard to whether the amount and/or calculation of the purchase price should be changed. In the event the Parties cannot agree as to a new or different amount or calculation, then either Party shall have the right to terminate this Agreement. Unless a Party elects to so terminate this Agreement, the purchase price then in effect shall remain in effect unless or until the Parties reach an agreement to make any such change.

4. **Delivery of Water.**

(a) **Point of Delivery.** The physical point of delivery ("Point of Delivery") of Surplus Water pursuant to this Agreement includes, but is not limited to, the following locations:

Delivery Location	Reach Number
Various locations in the San Bernardino Basin	EBX – 1, 2A, 2B, 2C
Various locations in the Yucaipa Basin	EBX – 3B
Various locations in the Beaumont Basin;	EBX – 4A, 4B

(b) **Delivery Schedule.** District will cooperate with Agency to coordinate for the delivery at the Point of Delivery upon a mutually agreeable delivery schedule.

5. **Use of Water in the San Gorgonio Pass Water Agency Service Area.** Agency shall only purchase the amount of Surplus Water that it is able to put to beneficial use within its service area.

6. **Resale of Surplus Water.** During the applicable year, Agency shall first offer to sell fifty percent (50%) of any Surplus Water to the Retailers, per the current pricing policy of Agency.

The Retailers share of Surplus Water described in this Section will be equally divided up to a Retailer share of two thousand (2,000) acre-feet. Any Retailer share more than 2,000 acre-feet will be offered to the Retailers in proportion to the amount of imported water each Retailer has purchased from Agency over the previous 3 calendar years.

Each Retailer shall notify Agency within 30 days of said offer as to whether, and to what extent, each Retailer desires to purchase Surplus Water. If one Retailer elects not to purchase any share, or elects to purchase less than its share, then the balance shall be made available to the other Retailer.

In the event the Retailers elect not to purchase all of the water described in this Section, Agency may purchase the remainder of the water.

7. **Regulatory Requirements**. The implementation of this Agreement shall be subject to satisfaction by District and Agency of applicable legal and regulatory requirements.

8. **Default and Termination**. In the event either Party fails to make any payment under this Agreement when due, or fails to perform any obligation otherwise required by this Agreement, the non-defaulting Party shall demand in writing that the defaulting Party cure such non-performance. The defaulting Party shall have ninety (90) days after receipt of such demand to cure. In the event the defaulting Party fails to cure a default within the ninety (90) day period, the non-defaulting Party may pursue any applicable action in law or equity including, but not limited to, termination, specific performance and/or damages for breach of this Agreement.

9. **Entire Agreement**. This Agreement contains the entire understanding between the Parties with respect to its subject matter, and supersedes all prior agreements, oral or written, and all prior or contemporaneous discussions or negotiations between the Parties. This Agreement cannot be amended except in writing signed by both Parties.

10. **No Waiver**. Any failure or delay on the part of either Party to exercise any right under this Agreement shall not constitute a waiver of the right, and shall not preclude such Party from exercising or enforcing the right, or any other provision of this Agreement, on any subsequent occasion.

11. **Notices**. All notices or other communications required or desired to be given pursuant to this Agreement shall be in writing and shall be hand-delivered or sent by a reputable overnight courier service providing delivery confirmation. Each such notice or communication shall be deemed to be duly given when hand-delivered or one (1) day after being deposited for next day delivery with an overnight courier. Each such notice or communication shall be

addressed to the Parties at their respective addresses set forth next to their signatures below, or such other address as a Party notifies the other in writing.

12. **Severability**. If any provision of this Agreement is finally determined by a court to be invalid or unenforceable as written, the provision shall, if possible, be enforced to the extent reasonable under the circumstances and otherwise shall be deemed deleted from this Agreement. The other provisions of this Agreement shall remain in full force and effect so long as the material purposes of the Agreement and understandings of the Parties are not impaired.

IN WITNESS WHEREOF, the Parties have executed this agreement as of the date first written above.

PROPORTION OF 500: The remaining 500 AF will be proportioned per Section 6 of this agreement, in proportion to the amount of SWP water each retailer purchased over the previous three (3) years

FOUR PARTY IMPLEMENTATION AGREEMENT

This Implementation Agreement ("Agreement") is made and entered into on the Effective Date (as defined herein) by and between Emhart Industries, Inc. ("Emhart"), the City of Rialto and the Rialto Utility Authority (collectively, "Rialto"), the City of Colton, ("Colton"), and the County of San Bernardino ("County"). Emhart, Rialto, Colton and the County are referred to individually herein as a "Party" and collectively as the "Parties."

RECITALS

The Purpose of this Agreement

A. This Agreement facilitates implementation of the interim remedial action required by the Consent Decree (Dkt. No. 1820) entered on July 2, 2013, by the United States District Court for the Central District of California (the "District Court"), in *City of Colton v. American Promotional Events, Inc.-West, et al.*, Case No. ED CV 09-01864 PSG (SSx), and related consolidated actions (the "Work Consent Decree").

B. The remedial action required by the Work Consent Decree was selected and approved, and will be overseen, by the United States Environmental Protection Agency ("USEPA" or "EPA") pursuant to its authority under the Comprehensive Environmental Response, Compensation and Liability Act ("CERCLA"), 42 U.S.C. § 9601, *et seq*. (the "EPA Remedy," as defined below). The EPA Remedy is designed to capture and remove perchlorate and trichloroethylene ("TCE") in groundwater in the Rialto-Colton Groundwater Basin ("Basin") emanating from a 160-acre parcel located in Rialto, California (the "160-Acre Parcel").

C. As set forth herein and in the County/Emhart Implementation Agreement, the EPA Remedy will be combined with an existing groundwater extraction and treatment remedy designed and constructed by the County to capture and remove perchlorate and TCE in the Basin as required by the California Regional Water Quality Control Board, Santa Ana Region (the "Regional Board Remedy," as defined below).

D. Upon Emhart's completion of construction and permitting necessary to combine the EPA Remedy and the Regional Board Remedy ("Combined

Remedies," as defined below), Rialto will operate the Combined Remedies to provide potable drinking water to Rialto's and, if necessary, Colton's municipal water supply systems.

The Regional Board Remedy

E. In January 2003, the Regional Water Quality Control Board, Santa Ana Region ("Regional Board") adopted Cleanup and Abatement Order No. R8-2003-0013, which required the County to develop and implement a remedial action to abate perchlorate in groundwater in the Basin allegedly migrating from County property ("Cleanup Order"). In September 2004, the Regional Board adopted Order No. R8-2004-0072, amending the Cleanup Order to require the County to provide Rialto with replacement water for City of Rialto Well No. 3 ("CR-3") ("Water Replacement Order"). The Cleanup Order and the Water Replacement Order are collectively referred to herein as the "Regional Board Order."

F. In 2005, pursuant to the Regional Board Order, the County completed a remedial investigation and feasibility study ("RI/FS") which identified a former bunker area where munitions had been stored during the Second World War ("Bunker Area") and the Stonehurst Property (which is not owned or operated by the County) as potential source areas of perchlorate subject to the Regional Board Order. The RI/FS and subsequent studies by the County concluded that current and past disposal units of the Mid-Valley Sanitary Landfill ("MVSL") were not sources of perchlorate contamination. The RI/FS concluded that perchlorate and VOC impacts to groundwater near CR-3 likely originated in source areas located in the vicinity of Unit 5 of the MVSL and/or the Stonehurst Property.

G. In 2005, the County and Rialto entered into an agreement titled "Water Replacement Order Implementation Agreement and Water Rights Lease," effective April 1, 2005 ("County/Rialto Implementation Agreement"), which, among other things, facilitates the County's compliance with the Regional Board Order.

H. In 2006, the County commenced operation of the Regional Board Remedy under the oversight of the Regional Board pursuant to the Regional Board Order. In December 2007, the County issued an updated design report that proposed to install two additional groundwater extraction wells, now known as

Miro-2 and Miro-3, to be connected to the treatment plant at CR-3. In February 2008, the Regional Board approved this plan as proposed by the County. In July 2011, the County submitted to the Regional Board an Operations, Monitoring and Maintenance Plan ("OMMP"), which among other things, proposed to vary the production rate from the Regional Board Remedy by season, to enable the output from the County's groundwater treatment plant to better match the Rialto seasonal water demand (compared to operating at a fixed rate 24 hours a day, 365 days a year). In February 2012, the Regional Board approved the OMMP pumping schedule as proposed by the County. As the permitee under its Domestic Water Supply Permit No. 71-009, Rialto operates the County's groundwater treatment plant located on Linden Avenue adjacent to CR-3 as set forth in the County/Rialto Implementation Agreement.

I. In August 2010, the County, Colton, and Rialto entered into a Standby Agreement whereby the County leased certain water rights from Colton ("County/Colton/Rialto Standby Agreement"), which, among other things, further facilitates the County's compliance with the Regional Board Order.

The EPA Remedy

J. In January 2009, USEPA commenced its RI/FS process for the 160-Acre Parcel, which is located immediately north and east of the County's MVSL. In September 2009, USEPA listed the 160-Acre Parcel on the National Priorities List ("NPL") as the B.F. Goodrich Superfund Site. By placing the B.F. Goodrich Superfund Site on the NPL, USEPA assumed jurisdiction and control over its cleanup. On December 11, 2013, USEPA changed the name of the B.F. Goodrich Superfund Site to the Rockets, Fireworks, and Flares Superfund Site.

K. In September 2010, the USEPA issued the *Interim Action Record of Decision* for the Source Area Operable Unit ("SAOU") of the B.F. Goodrich Superfund Site ("2010 ROD"), requiring the installation, operation, and maintenance of a groundwater pump-and-treat system to intercept and control the spread of contaminated groundwater from the 160-Acre Parcel.

Federal Court Actions

L. In 2004, Rialto filed an action in the District Court, known as *City of Rialto v. United States Department of Defense et al.*, Civil Action No. ED CV 04-00079-PSG-SSx. In early 2005, Colton filed a similar action in the District Court,

known as *City of Colton v. American Promotional Events, Inc.-West, et al.*, Civil Action No. ED CV 05-01479 PSG (SSx). Rialto and Colton brought their respective actions against a number of defendants, including the County and Emhart, seeking response costs and injunctive relief to, among other things, ensure that perchlorate and TCE in the Basin would be cleaned up.

M. In February 2010, the United States, on behalf of USEPA, filed an action in the District Court under CERCLA and the Resource Conservation and Recovery Act ("RCRA"), 42 U.S.C. § 6901, *et seq*., known as *United States of America v. Goodrich Corporation et al.*, CV 10-8245 PSG (SSx), seeking, among other things, from a number of defendants, including Emhart but not the County, response costs and performance of the necessary response actions at the B.F. Goodrich Superfund Site (the "United States Action"). Emhart and other defendants sued by the United States then filed Third-Party Complaints and Cross-Claims against the County and others.

N. In June 2010, the District Court consolidated the United States Action with actions which had been re-filed by: Rialto, Case No. 09-07501 PSG (SSx) in October 2009; Colton, Case No. CV 09-01864 PSG (SSx) in October 2009; Emhart, Case No. 09-07508 PSG (SSx) in October 2009, the County, Case No. 09-06632 PSG (SSx) in September 2009, and two additional cases related to groundwater contamination in the Basin, also re-filed in late 2009, as *City of Colton v. American Promotional Events, Inc.-West, et al.*, Case No. 09-01864 (SSx) (the "Consolidated Actions").

O. Between 2011 and 2014, the claims, which had been brought by and against the United States, the County, Rialto, Colton, Emhart, and most other parties in the Consolidated Actions, were resolved by settlements memorialized in the Work Consent Decree, the County Consent Decree entered in January 2012, the PSI Consent Decree entered in March 2013, the Goodrich/UTC Consent Decree entered in July 2013, and other settlements.

The Combined Remedies

P. In June 2013, the USEPA approved Emhart's proposal for a Combined Capture System. In May 2014, the USEPA approved the final design of the Combined Remedies including a Combined Treatment Plant.

Q. In accordance with Paragraphs 10 and 12 of the Work Consent Decree, this Agreement sets forth the Parties' respective rights and obligations regarding implementation of the Combined Remedies. The Parties have separately entered into additional agreements (e.g., the County/Rialto Implementation Agreement, the County/Colton/Rialto Standby Agreement, the County/Emhart Implementation Agreement, and the County Consent Decree) which address, among other things, certain rights and obligations among the parties to those agreements related to the Regional Board Remedy, the EPA Remedy, and/or the Combined Remedies.

Recitals A through Q, above, are not intended to and do not create any rights or obligations among the Parties to this Agreement.

AGREEMENT

NOW, THEREFORE, the Parties agree as follows:

I. Definitions

A. "1961 Decree" means the Decree entered on December 22, 1961, in *The Lytle Creek Water and Improvement Co. v. Fontana Ranchos Water Co. et al.,* San Bernardino County Superior Court Case No. 81264, as it may be modified.

B. "Basin" means the Rialto-Colton Groundwater Basin.

C. "Claims" means any third-party claim for losses, damages, actions or liability.

D. "Closure" means, for Emhart, EPA's determination that the Performance Standards set forth in the Work Consent Decree have been met so that Emhart has no further obligation to operate any portion of the Combined Remedies; and, for the County, the Regional Board's determination that the County has met its remedial obligations so that the County has no further obligation to operate any portion of the Combined Remedies.

E. "Colton Water Budget" means a document, detailing Colton's anticipated month-by-month minimum needs and maximum capacity to accept water generated by the Combined Remedies for the upcoming Water Year, subject to the Colton Water Rights, that Colton will provide annually to Rialto, the

County, and Emhart to assist the Parties in their development of the annual Water Management Plan for the Combined Remedies.

F. "Colton's DDW Permit" means domestic water supply Permit No. 03-13-96P-001 issued to Colton by DDW on June 28, 1996, as it has been and may be amended in the future.

G. "Colton Water Rights" means Colton's water rights in the Basin under the 1961 Decree.

H. "Combined Capture System" means the extraction wells and associated conveyance piping connected to the Combined Treatment Plant necessary for operation of the Combined Remedies. There are currently three existing extraction wells (Miro-2, Miro-3, and CR-3) and one planned extraction well (EW-1) that will be connected to the Combined Treatment Plant; the locations of these wells and associated piping are shown on Exhibit C (Conceptual Diagram of Combined Capture System). This definition includes any additional extraction wells and associated piping that may be added in the future, as necessary or appropriate to comply with the Work Consent Decree or Regional Board Order.

I. "Combined Remedies" means the Combined Capture System and the Combined Treatment Plant, but does not include groundwater monitoring wells.

J. "Combined Treatment Plant" or "CTP" means a system of groundwater treatment components, consisting of (1) the County treatment plant at CR-3, in place as of the Effective Date, constructed by the County to comply with the Regional Board Order; (2) the expansion of the County treatment plant constructed by Emhart, after the Effective Date, to comply with the Work Consent Decree (as described in detail in the final design approved by EPA on May 19, 2014); and (3) any future expansion of such treatment plant as necessary or appropriate to comply with the Work Consent Decree or the Regional Board Order.

K. "Combined Treatment Plant Lease Area" means the Combined Treatment Plant Lease Area as defined in Exhibit J hereto.

L. "County Consent Decree" means the Consent Order and Judgment entered by the United States District Court for the Central District of California on

January 31, 2012 in *City of Colton v. American Promotional Events, Inc-West et al.*, Case No. 09-1864 PSG (SSx) (Dkt. No. 1258).

M. "County/Emhart Implementation Agreement" means the separate Implementation Agreement entered into between the County and Emhart in accordance with Paragraph 12 of the Work Consent Decree concurrently with this Agreement.

N. "County/Rialto Implementation Agreement" means the agreement titled "Water Replacement Order Implementation Agreement and Water Rights Lease," entered by Rialto, the Rialto Utility Authority, and the County, effective April 1, 2005.

O. "CR-3" means City of Rialto well No. 3.

P. "DDW" means the California State Water Resources Control Board Division of Drinking Water, formerly, the California Department of Public Health Division of Drinking Water.

Q. "Effective Date" means the date the last Party executes this Agreement.

R. "EPA" or "USEPA" means the United States Environmental Protection Agency.

S. "EPA Remedy" means the system of extraction wells, conveyance pipelines, and the expansion of the County's groundwater treatment plant to be constructed by Emhart required by the Work Consent Decree.

T. "Regional Board Order" means Cleanup and Abatement Order No. R8-2003-0013, adopted by the Regional Water Quality Control Board, Santa Ana Region ("Regional Board"), on January 17, 2003, as amended by Order No. R8-2004-0072, adopted by the Regional Board, on September 17, 2004, and as Order No. R8-2003-0013 may be amended in the future.

U. "Regional Board Remedy" means the system of extraction wells, conveyance pipelines, and groundwater treatment plant operated by the County in compliance with the Regional Board Order.

V. "Replacement Water" means potable water acquired from a water purveyor other than Rialto holding a DDW domestic water supply permit and delivered to Rialto, or the acquisition of additional water rights in the Basin, by the County for use by Rialto.

W. "Rialto Water Budget" means a document, detailing Rialto's anticipated month-by-month minimum needs and maximum capacity to accept water generated by the Combined Remedies for the upcoming Water Year, subject to the Rialto Water Rights, that Rialto will provide annually to Colton, the County, and Emhart to assist the Parties in their development of the annual Water Management Plan for the Combined Remedies.

X. "Rialto Water Rights" means certain water rights in the Basin that Rialto has leased to the County as set forth in the County/Rialto Implementation Agreement.

Y. "Rialto's DDW Permit" means domestic water supply Permit No. 71-009 issued to Rialto by DDW on January 8, 1971, as amended by Permit Amendment No. 05-13-06PA-005 issued on May 8, 2006, Permit Amendment No. 05-13-09PA-042 issued on January 4, 2010, and as permit No. 71-009 may be amended in the future.

Z. "SOW" means the Statement of Work attached as Appendix F to the Work Consent Decree.

AA. "Summer Months" means May through September, inclusive.

BB. "Water Year" means October 1 through the following September 30.

CC. "Winter Months" means October through the following April, inclusive.

DD. "Work" means all activities and obligations Emhart is required to perform under the Work Consent Decree, except the activities required under Section XXIII (Retention of Records) of the Work Consent Decree.

EE. "Work Consent Decree" means the Consent Decree entered by the United States District Court for the Central District of California on July 2, 2013 in *City of Colton v. American Promotional Events, Inc-West et al.*, Case No. 09-1864 PSG (SSx) (Dkt. No. 1820) as it may be amended in the future.

II. The Remedial Objectives of the Combined Remedies

A. Emhart is responsible for meeting the remedial action objectives set forth in the Work Consent Decree.

B. The County is responsible for complying with the Regional Board Order, including meeting the remedial action objectives developed pursuant thereto.

C. If, in the future, in connection with their respective responsibilities to meet the remedial action objectives the Regional Board Order or the Work Consent Decree, the County or Emhart needs to modify or expand the Combined Remedies, associated conveyance pipelines, monitoring wells, or any part thereof, the Parties shall meet and confer in good faith to discuss any such necessary expansion or modification in accordance with their obligations under the Work Consent Decree, the County Consent Decree and the County/Rialto Implementation Agreement. Nothing in this Paragraph limits or expands the rights and obligations of the Parties under such agreements.

III. The Design, Permitting, Installation, and Construction of the Work

A. Emhart's Responsibilities

1. Emhart shall ensure that knowledgeable representatives are available, as reasonably necessary, to consult with Rialto, Colton, and the County during the design, permitting, installation, and construction phases of the Work.

2. Subject to the terms of the Work Consent Decree, Emhart is responsible for the cost of the design, permitting, installation, and/or construction of:

a. the new extraction well(s) necessary to perform the Work;

b. the expansion of the County's groundwater treatment plant at CR-3 necessary to perform the Work;

c. the additional piping and infrastructure necessary to:

i. connect the new extraction well(s) to the Combined Treatment Plant;

ii. connect the Combined Treatment Plant to the existing Rialto municipal water supply system;

iii. deliver water to the Colton municipal water supply system pursuant to Emhart's lease of Colton Water Rights either through the existing Rialto municipal water supply system or by some other means agreed to by the Parties in writing; and

iv. deliver water to a water purveyor (other than Colton) which is to receive water pursuant to a lease of water rights to Emhart, either through the existing Rialto municipal water supply system or by some other means agreed to by the Parties;

d. obtaining modification of Colton and Rialto's DDW Permits as necessary for operation of the Combined Remedies to satisfy Emhart's obligations under the Work Consent Decree; and

e. any expansion or modification of the Combined Remedies required to satisfy Emhart's obligations under the Work Consent Decree.

3. During the design, permitting, installation, construction, startup and shakedown phases of the Work, and prior to obtaining modification of Colton and Rialto's DDW Permits as necessary for operation of the Combined Remedies, Emhart shall not interfere with the County's ability to operate the Regional Board Remedy in a manner consistent with and without degradation to the County's obligations under the Regional Board Order and the County/Rialto Implementation Agreement.

4. During the design, permitting, installation, and construction phases of the Work within the jurisdiction of Rialto or Colton, Emhart shall comply with the applicable permitting and approval processes required by the Rialto or Colton municipal codes, as applicable, as set forth in Paragraphs VII. A and B, below.

B. Colton's Responsibilities

1. During the design, permitting, installation, and construction phases of the Work, Colton shall (a) ensure that knowledgeable representatives

are available, as reasonably necessary, to work with Emhart, Rialto, and the County; and (b) provide Emhart access as set forth in Paragraph VII.A, below.

C. Rialto's Responsibilities

1. During the design, permitting, installation, and construction phases of the Work, Rialto shall ensure that knowledgeable representatives are available, as reasonably necessary, to work with Colton and the County.

2. During the design, permitting, installation, and construction phases of the Work, Rialto shall ensure that knowledgeable representatives are available, as reasonably necessary, to work with Emhart, provided that Emhart reimburses Rialto for:

a. the cost of time incurred by Rialto's consultant Peter Fox (or Rialto's designated alternate consultant, West Yost Associates) reasonably required to provide information, evaluate information provided, or attend meetings, as needed, during the design, permitting and construction phases of the Work, except for the first 10 hours of the consultant's time, on a "time and materials" basis (the procedure for reimbursement of these costs is set forth in Exhibit A); and

b. any other Rialto personnel or consultant costs, including, but not limited to, costs to conduct any required plan checks, engineering checks, and/or reviews associated with permits issued by Rialto which are necessary during the design, permitting, and construction phases of the Work, up to a total amount not to exceed $20,000, which, as of the Effective Date, Emhart has paid to Rialto.

3. During the design, permitting, installation and construction phase of the Work, Rialto shall provide Emhart access as set forth in Paragraph VII.B, below.

D. County Responsibilities

During the design, permitting, installation, and construction phases of the Work, the County shall: (a) not unreasonably deny the availability of knowledgeable representatives to work with Rialto, Colton, and Emhart; and (b) provide Emhart with access to the County's groundwater treatment plant at CR-3 as necessary to expand the treatment plant consistent with the

County/Emhart Implementation Agreement. Upon the effective date of the lease attached hereto as Exhibit J, Rialto consents to the County's grant of such access to Emhart in accordance with Paragraph 10.a.v of the County/Rialto Implementation Agreement and Paragraph 36 of Exhibit K thereto.

IV. Operation and Maintenance of the Combined Remedies

A. Commencement of Rights and Obligations in Paragraph IV

1. The Parties' rights and obligations in this Paragraph IV shall be effective upon approval by DDW of the amendment of Colton and Rialto's DDW Permits necessary to allow water generated by the Combined Remedies to be delivered to Rialto and Colton customers.

2. Prior to issuance of the amendment of Rialto's DDW Permit to operate the Combined Remedies, Emhart is required by DDW to demonstrate effective operation of the new treatment components of the Combined Treatment Plant. Emhart shall be responsible for all costs of energy used by Emhart as a result of that demonstration. Following completion of the demonstration period, Emhart, the County and Rialto shall meet and confer to determine the costs of energy, for which Emhart and the County shall reimburse Rialto consistent with the cost allocation methodology set forth in Paragraphs IV.F.2.d.ii and iii.

B. Party Coordination During the Operation and Maintenance of the Combined Remedies

Emhart, the County, Rialto, and Colton shall not unreasonably deny the availability of knowledgeable representatives to consult with each other during the operation and maintenance of the Combined Remedies.

C. Operation and Maintenance of the Combined Treatment Plant

1. Rialto, as the operator of the Combined Treatment Plant and permitee under Rialto's DDW Permit, shall, in its sole discretion, operate and maintain the Combined Treatment Plant.

2. Rialto shall employ or contract with a qualified person or persons who is/are authorized by law to operate the Combined Treatment Plant.

3. The Anticipated Combined Remedies Operation and Maintenance Activities are set forth in Exhibit B, hereto.

4. As set forth in Paragraph IV.F, below, Emhart and the County shall pay to Rialto the cost to operate and maintain the Combined Treatment Plant.

D. Operation, Maintenance, and Management of the Combined Capture System

1. Rialto shall, in its sole discretion, operate and maintain the Combined Capture System, except that Emhart and the County shall determine the pump rates for each extraction well necessary to achieve the remedial objectives of the Combined Remedies.

2. As set forth in Paragraph IV.F, below, Emhart and the County shall pay to Rialto the cost to operate and maintain the Combined Capture System.

3. Unless otherwise agreed to in writing between Rialto, the County and Emhart (at the sole discretion of each), Rialto shall be responsible for collecting and analyzing all groundwater samples as required under Rialto's DDW Permit; provided, however, as of the Effective Date (and until otherwise agreed in writing by Rialto and the County), the County shall be responsible for collecting and analyzing groundwater samples from County-installed monitoring wells, as required by Rialto's DDW Permit, and providing that data to Rialto.

4. As between Rialto and the County, this Paragraph IV and Exhibits B (Anticipated Combined Remedies Operation and Maintenance Activities) and H (Annual Allocation of CR-3/CTP Energy Costs and Reconciliation of Combined Remedies Energy Costs) supersede and supplant Paragraphs 4, 5.a.i and 5.b and Exhibit I of the County/Rialto Implementation Agreement.

E. Transport and Distribution of Water

1. The treated water generated by the Combined Remedies shall be delivered to the Rialto municipal water supply system. Rialto shall transport water through its existing municipal water supply system: (a) for distribution to Rialto's customers pursuant to County's lease of Rialto Water Rights; (b) to Colton's municipal water supply system pursuant to Emhart and the County's

leases of Colton Water Rights (to the extent the piping and infrastructure for such transport exist or are constructed by Emhart pursuant to Paragraph IV.E.2); and (c), if necessary, to a water purveyor other than Colton, if the piping and infrastructure exists for such transport and if such water purveyor agrees to accept such water at no increased cost to Rialto. Nothing in this Paragraph precludes the Parties from arranging, by written agreement, for the transportation of water to Colton or any other water purveyor by other means, in accordance with the requirements in Paragraph V.B.1.a.

2. To the extent that Rialto's existing piping and infrastructure are insufficient to allow transport of the volume of water necessary to meet Emhart's remedial obligations under the Work Consent Decree to the Colton municipal water supply system, or, if necessary, the municipal water supply system of a water purveyor other than Colton, and the Parties do not otherwise arrange for delivery of water to Colton or another water purveyor by other means, Emhart shall install reasonably necessary additional piping and infrastructure to allow such transport (between Rialto and Colton or between Rialto and another water purveyor, at locations within the jurisdictional boundaries of Rialto approved by Rialto in its sole discretion).

3. Nothing in this Agreement alters, limits, or otherwise affects Rialto's authority to properly and safely operate and maintain, in its sole discretion, the Rialto municipal water supply system. Nothing in this Agreement, including the preceding sentence, alters, limits, or otherwise affects Rialto's obligation to deliver water as set forth in the Work Consent Decree.

4. **Water Quality Requirements**

a. Rialto Resolution No. 5248 (June, 21, 2005), attached as Exhibit E, requires Rialto groundwater production wells to be shut down and prohibits water from entering Rialto's municipal water supply system when standard water testing techniques show any detectable levels of perchlorate in such water.

b. Treated water generated by the Combined Remedies: (i) shall meet all federal and state statutory and regulatory requirements governing municipal drinking water; (ii) shall be non-detect for perchlorate under the California state detection limit for purposes of reporting ("DLR") set forth in Title 17 of the California Code of Regulations, Section 64432(d), Table 64432-A,

which is currently 0.004 mg/L; and (iii) shall not be blended with any water in which perchlorate was detected in a test using the DLR.

c. The Parties recognize that the DLR for perchlorate may change. If such a change occurs and the treated water from the Combined Remedies is unable to satisfy the requirements of Paragraph IV.E.4.b.ii, above, the Parties shall meet and confer in good faith to discuss whether any potential modification to the Combined Treatment Plant is feasible in order to meet the requirements in Paragraph IV.E.4.b.ii, above and, if not, whether any potential modification to Paragraph IV.E.4.b.ii, above, is appropriate. Nothing in this Paragraph IV.E.4.c affects Paragraph IV.E.4.f., below.

d. If the Parties are unable to reach an agreement on any dispute arising under Paragraph IV.E.4.c, above, that dispute shall be resolved in accordance with the dispute resolution provisions set forth in Paragraph 10.2 of the County Consent Decree. While Emhart is not a party to the County Consent Decree, it hereby agrees, with regard to disputes arising under Paragraph IV.E.4.c, above, to be bound by the dispute resolution process set forth in Paragraph 10.2 of the County Consent Decree.

e. Notwithstanding the requirements of Paragraph IV.E.4.b.ii, or the outcomes of the processes described in Paragraphs IV.E.4.c or d, above, the water generated by the Combined Remedies shall be treated to obtain a water quality consistent with (but not greater than) the level of the water quality obtained by other treatment systems used by Rialto to treat water produced from its other groundwater production wells impacted by perchlorate.

f. Nothing in this Paragraph IV.E.4 modifies the rights of the County, Rialto, or Colton in Paragraphs 4.2 and 10.2 of the County Consent Decree.

F. Cost of Operating and Maintaining the Combined Remedies

1. Governing Principles

a. As provided for in Paragraphs IV.C.1 and IV.D.1, above, Rialto shall operate and maintain the Combined Remedies as described in Exhibit B, hereto, subject to Emhart's and the County's responsibility for the actual costs of such operation and maintenance as set forth in this Paragraph IV.F.

Exhibit B describes the anticipated activities for operation and maintenance of the Combined Remedies and is for illustration and budgeting purposes only and does not create any legal rights, obligations, responsibilities or duties, contractual or otherwise, among the Parties or any third party.

b. Emhart is responsible, as set forth in the Work Consent Decree, for the costs to operate and maintain the Combined Remedies to meet the remedial action objectives described in Paragraph 3.1 of the SOW.

c. The County is responsible, as set forth in the Regional Board Order, for the costs to operate and maintain the Combined Remedies to meet the remedial action objectives set forth in the Regional Board Order.

d. The County and Emhart have agreed to allocate the costs of operation and maintenance of the Combined Remedies as set forth in the County/Emhart Implementation Agreement. Nothing in the County/Emhart Implementation Agreement supersedes, abrogates or modifies Emhart's or the County's responsibility for the costs to operate and maintain the Combined Remedies as set forth herein.

2. **Billing and Payment of Operation and Maintenance Costs**

a. **Administrative Costs:** Following the submission of an invoice by Rialto, Emhart and the County shall pay Rialto for its annual administrative staff costs on the first business day following October 1 of each year, or within sixty days of receipt of the invoice from Rialto, whichever occurs later. This payment is to compensate Rialto for its annual administrative staff costs incurred in implementing this Agreement.

i. For the first five years of operation of the Combined Remedies, the amount of the administrative cost shall be $25,000.

ii. The administrative cost shall be adjusted annually by the percentage change, if any, in the fully burdened rate for Rialto's Director of Public Works/City Engineer.

iii. After the first five years of operation of the Combined Remedies, and every five years thereafter, the County, Emhart, and Rialto shall meet and confer in good faith to determine whether the administrative cost shall be modified to more accurately reflect actual annual

administrative staff costs incurred by Rialto in implementing this Agreement. If the County, Emhart, and Rialto are unable to agree, the payment for Rialto's administrative staff costs set forth in Paragraphs IV.f.2.a.i. and ii shall not change.

iv. Upon termination of participation in the Combined Remedies by either the County or Emhart pursuant to Paragraph XIII. A., the non-terminating Party and Rialto shall meet and confer to determine an appropriate administrative cost to accurately reflect Rialto's administrative staff costs to implement this Agreement thereafter. If Rialto and the non-terminating Party are unable to agree, the dispute shall be resolved pursuant to the Dispute Resolution provisions of Paragraph XII.

b. **Operation and Maintenance Costs:** Emhart and the County shall pay Rialto the cost to operate and maintain the Combined Remedies, as follows:

i. By August 1 of each year, Rialto (or its third party contractor) shall prepare and submit to Emhart and the County a budget for the work necessary to operate and maintain the Combined Remedies in a cost-effective manner ("Annual O&M Budget"). The form to be used for the Annual O&M Budget is attached hereto as Exhibit F.

ii. If no changes are proposed, the Annual O&M Budget for the prior year shall continue in effect for the coming year.

iii. Within 10 business days of Emhart's and the County's receipt of the Annual O&M Budget from Rialto, the County and Emhart shall submit their joint comments on the Annual O&M Budget in good faith, which Rialto shall review and consider in good faith. Within 10 business days of submission of the joint comments, Emhart, the County, and Rialto shall, if necessary, meet and confer to discuss those comments. Any disputes regarding the appropriateness of the Annual O&M Budget shall be raised within 10 business days of that meeting and shall be subject to the Dispute Resolution provisions of Paragraph XII.

iv. Upon resolution of the Annual O&M Budget, Rialto shall send a single invoice to both Emhart and the County for 50% of the total budgeted amount set forth therein. Within 60 days of receipt of Rialto's invoice, Emhart and the County shall pay Rialto that invoiced amount. On or after

February 1 of the following year, Rialto shall invoice Emhart and the County for the balance of the total budgeted amount set forth in the Annual O&M Budget. Within 60 days of Rialto's invoice, Emhart and the County shall pay Rialto that invoiced amount. Rialto shall deposit and maintain the monies paid in these installments in a separate restricted fund that is committed to be used only for the purpose of paying for items set forth in the Annual O&M Budget.

v. Rialto shall timely pay invoices for the costs of operation and maintenance of the Combined Remedies.

vi. For purposes of tracking the monthly costs incurred pursuant to the Annual O&M Budget, Rialto shall submit to the County and Emhart, on or before the fifth day of each month, copies of invoices for the costs of work paid in the preceding month in accordance with the Annual O&M Budget, along with any supporting documentation reasonably requested by Emhart and/or the County.

vii. On or before October 1 of each year, Rialto, the County, and Emhart shall meet and confer to reconcile any variance between actual costs of operation and maintenance of the Combined Remedies incurred and paid by Rialto and the Annual O&M Budget and corresponding payments made by Emhart and the County for the preceding year.

1. If, pursuant to Paragraph IV.F.2.b.vii, Rialto, the County, and Emhart agree that the actual costs of operation and maintenance of the Combined Remedies incurred and paid by Rialto were *greater* than the Annual O&M Budget and corresponding payments made by Emhart and the County, Emhart and the County shall, within 45 days of such determination, make an additional payment equal to the amount by which the actual costs incurred and paid by Rialto exceeded the Annual O&M Budget.

2. If, pursuant to Paragraph IV.F.2.b.vii, Rialto, the County, and Emhart agree that the actual costs of operation and maintenance of the Combined Remedies incurred and paid by Rialto were *less* than the Annual O&M Budget and corresponding payments made by Emhart and the County, Emhart and the County shall reduce the next installment payment due under Paragraph IV.F.2.b.iv by an amount equal to the amount by which the actual costs incurred and paid by Rialto were less than the Annual O&M Budget.

3. To the extent Rialto, the County, and Emhart are unable to agree as provided for in Paragraph IV.F.2.b.vii.1 and 2, above, any undisputed amount shall be paid as provided above, and the disputed amount shall be resolved pursuant to Paragraph XII, below. If, upon resolution of the dispute, a payment is due to Rialto, the County and Emhart shall pay Rialto the amount due within 45 days. If, upon resolution of the dispute, a credit is due to the County and Emhart, that credit shall be applied against the next installment payment due under Paragraph IV.F.2.b.iv.

c. **Vendor Costs:** Operation and maintenance of the Combined Remedies will require, from time to time, materials, services, and equipment repair or replacement provided by third-party vendors ("Vendor Services"). Rialto, or its third party contractor, as operator of the Combined Remedies, shall have authority to approve or reject any contracted Vendor Services in its sole discretion. Prior to DDW's issuance of the amendments to Rialto and Colton's DDW Permits necessary for operation of the Combined Remedies and Rialto's commencement of such operation, the County and Emhart shall contract (either together or separately) with Rialto, Rialto's third party contractor, or another third-party contractor to obtain, pay for, and bill the County and Emhart directly for such Vendor Services.

d. **Energy Costs:** The Parties shall allocate the energy costs to operate the Combined Remedies as set forth in this Paragraph IV.F.2.d, as follows:

i. **Combined Capture System Lifting Costs**

1. Colton shall reimburse Emhart for the lifting cost of each acre foot of water delivered to Colton (pursuant to Emhart's lease of Colton Water Rights under Paragraph V.B) at the rate of the electrical costs that Colton would otherwise incur to lift an acre foot of water when operating its extraction wells in the Basin ("Colton's Baseline Lifting Cost"). The procedure for determining Colton's Baseline Lifting Cost is set forth in Exhibit G.

2. Colton shall reimburse the County for the lifting cost of each acre foot of water delivered to Colton (pursuant to the County's lease of Colton Water Rights under Paragraph V.A) at the rate of Colton's Baseline Lifting Cost.

3. Because Rialto pays the energy costs metered at CR-3, the County shall reimburse Rialto for all costs to lift water pumped at CR-3 and delivered to Colton for compliance with the Regional Board Order.

4. Because Rialto pays the energy costs metered at CR-3, Emhart shall reimburse Rialto for all costs to lift water pumped at CR-3 and delivered to Colton for compliance with the Work Consent Decree.

5. Emhart shall reimburse the County for the cost of lifting water pumped at Miro-2 and/or Miro-3 and delivered to Colton for compliance with the Work Consent Decree, if any, equal to the actual lifting costs for such water.

6. The County shall reimburse Rialto for the net incremental cost of lifting water pumped at CR-3 for compliance with the Regional Board Order and delivered to Rialto, which is intended to represent the additional cost of lifting groundwater at CR-3 for compliance with the Regional Board Order during Southern California Edison's peak demand period when Rialto would not normally operate, as partially offset by the reduced electrical costs that are related to pumping groundwater from CR-3 to an open reservoir rather than to Rialto's pressurized pipeline.

7. Rialto shall reimburse the County for the cost of lifting water that Rialto receives for its use from wells for which the County initially pays the lifting costs (i.e., Miro-2 and Miro-3) pursuant to the County's lease of Rialto Water Rights equal to (a) the cost Rialto would otherwise incur to lift such water at CR-3 absent the Combined Remedies, or (b) the actual costs to the County, whichever is less.

ii. **Combined Treatment Plant Energy Costs:** Because Rialto initially pays the energy costs metered at CR-3, which include both energy used to operate the Combined Treatment Plant components and energy used to pump groundwater at CR-3, the County and Emhart shall reimburse Rialto for all energy costs to operate the Combined Treatment Plant.

iii. **Procedures for Reimbursement of Energy Costs**

1. Exhibit H sets forth the procedures for reimbursement of the energy costs identified in Paragraphs IV.F.2.d.i. and ii, above.

2. The energy cost allocations in this Paragraph VI.F.2.d and Exhibit H are not intended to affect or impair the ability of the County and Emhart to agree on a different allocation between themselves.

e. **Dispute Resolution Regarding Costs of Operation and Maintenance of the Combined Remedies:** If the County and/or Emhart believe that any cost of operation and/or maintenance of the Combined Remedies as provided in this Paragraph IV.F incurred by Rialto is unnecessary, the County, Emhart, and Rialto shall meet and confer in good faith to resolve the dispute. If the Parties are unable to agree, Emhart and the County shall nevertheless pay the disputed amount, subject to any reimbursement or credit from Rialto upon a determination, pursuant to the Dispute Resolution provisions in Paragraph XII, that such work was unnecessary.

V. The Lease of Colton and Rialto Water Rights Necessary for the Combined Remedies

A. Rialto and Colton Water Rights Leased to the County

1. Rialto has leased its water rights in the Basin to the County to the extent set forth in the County/Rialto Implementation Agreement.

2. Colton has leased 200 acre-feet (AF) per Water Year of its water rights in the Basin to the County as set forth in the County/Colton/Rialto Standby Agreement.

3. To the extent Emhart does not use all Colton Water Rights leased to Emhart as described below, in a given Water Year, the County may, in that Water Year, utilize such rights on the same terms that Colton leases those rights to Emhart as set forth in this Paragraph V so long as an equivalent volume of water is delivered to Colton in that Water Year consistent with the WMP.

B. Colton Water Rights Leased to Emhart

1. Colton hereby leases to Emhart its water rights in the Basin necessary to perform the Work to the maximum extent Colton has such rights

under the 1961 Decree, less the 200 AF leased to the County in the County/Colton/Rialto Standby Agreement, as follows:

a. In each Water Year, Colton shall receive an amount of potable water, either from the Rialto municipal water supply system or by some other means agreed to by the Parties in writing, equal to the amount of water rights utilized by Emhart in that Water Year as provided in this Paragraph V.

b. Colton shall, at Emhart's request, take all reasonable actions to manage its municipal water supply system, including, if necessary, curtailing production at other Colton-owned water production wells in the Basin, to ensure that its water rights leased to Emhart as provided in this Paragraph V can be utilized for the Work.

c. To the extent that the County does not use all of the 200 AF of Colton Water Rights leased to the County in a given Water Year, Emhart may utilize the remainder to pump and treat water for compliance with the Work Consent Decree so long as an equivalent volume of water is delivered to Colton in that Water Year consistent with the WMP.

C. General Terms Related to County and Emhart Leases of Colton Water Rights

1. In any given Water Year, Emhart and the County may deliver water to Colton, pursuant to their respective water rights leases on a schedule designed to maximize the efficiency and minimize the cost of the operation of the Combined Remedies subject to Colton's seasonal water demands and the WMP in accordance with Paragraph VI.

2. In any given Water Year, to the extent that Emhart and the County do not utilize all of Colton's available water rights in the Basin pursuant to their respective water rights leases and this Agreement, Colton shall have the right to use or sell any of its remaining water rights in the Basin as it sees fit.

3. If Emhart terminates its participation in this Agreement pursuant to Paragraph XIII and the County continues to operate the Combined Remedies, or any portion thereof, the County shall, at its option, succeed to Emhart's lease of Colton water rights.

VI. Management and Distribution of Treated Water

A. Recitals

1. This Paragraph VI.A provides background to guide the Parties' in their development of an ongoing water management plan that balances the extraction requirements of the Combined Remedies, the Rialto and Colton Water Rights, and the water supply needs of Colton and Rialto ("Water Management Plan" or "WMP").

2. The County believes that delivery of water leased by the County and Emhart from Rialto and Colton on a coordinated schedule may reduce the need for the County to provide Replacement Water to Rialto as provided in the County/Rialto Implementation Agreement while meeting Rialto's water demands as set forth in the Rialto Water Budget.

3. The County desires to minimize the use of Rialto Water Rights in the low demand Winter Months by prioritizing distribution of the Combined Treatment Plant output to Colton during the Winter Months, thereby maximizing the availability of Rialto Water Rights in the Summer Months.

4. Emhart, Colton, and Rialto support including the County's desired prioritized distribution of water in the WMP, as set forth in this Paragraph VI. A and subject to the provisions in this Paragraph VI.

5. Nothing in this Paragraph VI. A. creates any rights or obligations among the Parties.

B. The Water Management Plan

The Water Management Plan (WMP) is the Microsoft Excel file contained in the compact disc (CD) attached as Exhibit I. To assist and guide the Parties in their annual preparation of the WMP, Exhibit I also includes a paper copy of a WMP with sample inputs and a paper copy of the WMP displaying the spreadsheet formulas used in the file.

1. Information Exchange

a. On or about April 15 of each year, Colton, Rialto, the County, and Emhart shall meet and confer to develop the WMP for the upcoming

Water Year. At least one week prior to this meeting, the Parties shall exchange the following information for input into the WMP (Exhibit I) as follows:

i. Step 1: the County and Emhart shall provide the Parties with their planned month-by-month water output from the Combined Remedies (i) by well and (ii) allocated between the volume of water required to achieve the remedial obligations of Emhart and the County, respectively, as provided in the County/Emhart Implementation Agreement.

ii. Step 2: Colton shall provide the Parties with the Colton Water Rights that Colton anticipates will be available. Rialto shall provide the Parties with the Rialto Water Rights that Rialto anticipates will be available.

iii. Step 3: Colton shall provide the Parties with its anticipated month-by-month minimum needs for water generated by the Combined Remedies during the Summer Months and maximum ability to accept water from the Combined Remedies during the Winter Months ("Colton Water Budget") as follows:

1. In determining its minimum needs for water generated by the Combined Remedies during the Summer Months, Colton shall consider the availability and cost of utilizing its out-of-Basin resources during the Summer Months. To the extent such utilization does not, in a material way, increase costs or administrative burdens, or otherwise restrict Colton's ability to manage its water resources, Colton will endeavor to utilize those resources during the Summer Months.

2. If Colton determines that its use of out-of-Basin resources would result in such material costs, burdens, or restrictions, Colton and the County shall meet and confer, if the County so requests, to provide the County with the opportunity to compensate Colton for such costs, burdens, and/or restrictions in exchange for Colton's use of those resources to facilitate the County's desired water distribution schedule. If the County elects not to so compensate Colton, Colton shall have no obligation to use its out-of-Basin resources pursuant to this Paragraph.

iv. Step 4: Rialto shall provide the Parties with the (1) the monthly maximum volume of water deliverable to the Rialto municipal water supply system from the Combined Remedies; and (2) the maximum

monthly operational flow rate for delivery of water to Colton through the Rialto municipal water supply system unless the Parties agree in writing for delivery of water to Colton by some other means. If the Parties agree in writing for delivery of water to Colton by some other means, the Parties shall provide the maximum monthly operational flow rate for delivery of water to Colton by those means.

v. Step 5: Rialto shall provide the Parties with its anticipated month-by-month minimum needs for water generated by the Combined Remedies, subject to the Rialto Water Rights that Rialto anticipates will be available ("Rialto Water Budget").

b. During the period of demonstration required for amendment of Rialto's DDW Permit necessary for operation of the Combined Remedies, the Parties shall meet and confer to discuss initiation of the WMP commencing with the issuance of such amendment.

2. **Prioritization of Water Production and Distribution**

a. Step 6: Emhart and the County shall seek to prioritize production of water in the Summer Months over production in the Winter Months, and the Parties shall seek to prioritize distribution of that produced water to Colton during the Winter Months, to the extent that such prioritization:

i. does not exceed the total necessary annual output of the Combined Remedies for the Water Year as determined in Step 1 of the WMP;

ii. meets Colton's minimum water needs as set forth in Step 3 of the WMP;

iii. does not exceed Colton's maximum water needs during the Winter Months as set forth in Step 3 of the WMP;

iv. does not exceed the maximum operational flow rates set forth in Step 4 of the WMP;

v. meets Rialto's minimum water needs during the Winter Months, as set forth in Step 5 of the WMP;

vi. does not require Emhart, Colton, or Rialto to incur additional material costs it would not otherwise incur;

vii. does not impair Emhart's ability to comply with the terms of the Work Consent Decree; and

viii. provides that Emhart has priority to deliver water associated with its pumping to Colton, up to the maximum operational flow rate for delivery of water to Colton as set forth in Step 4 of the WMP to the extent such operational flow rate exists as a result of infrastructure improvements funded by Emhart.

ix. provides that, in any month, to the extent that water pumped by Emhart does not meet Colton's minimum water needs as set forth in Step 3 of the WMP, the County shall preferentially utilize the Colton Water Rights it has leased from Colton and an equivalent amount of water shall be delivered to Colton, provided such a shift does not require the County to incur additional material costs it would not otherwise incur.

b. Step 7: The Parties shall make any necessary modifications to the WMP as required by the limitations of Paragraph VI.B.2.a.

c. If the Parties agree upon a prioritized production and distribution schedule for the WMP, that plan shall be memorialized in Table 1 of Exhibit I and water shall be produced and distributed as set forth therein, subject to any modifications made pursuant to the Parties' monthly review described in Paragraph VI.C.

3. **Default Distribution and Production of Water**

a. If, after completing the process described in Paragraph VI.B.2, the Parties are unable to agree upon a prioritized distribution and production schedule for the WMP for the upcoming Water Year, the WMP shall default to the schedule provided in Table 2 of Exhibit I (Default Water Delivery Schedule), as follows:

i. During the Winter Months, Colton shall receive, in each month: (a) a volume of water equivalent to that pumped by Emhart to achieve its remedial obligations during that month as set forth in Step 1 of the WMP, subject to Colton's seasonal water needs; and (b) 28.6 AF (200 AF divided

by seven Winter Months) of Colton Water Rights leased to the County, as pumped to achieve the County's remedial obligations, subject to the limitations in Paragraph VI.B.3.b. To the extent that such 28.6 AF cannot be delivered in a Winter Month, the balance of such water shall be distributed to Colton in Summer Months, subject to the limitations in Paragraph VI.B.3.b;

ii. During the Winter Months, Rialto shall receive, in each month, a volume of water equivalent to that pumped by the County to achieve its remedial obligations during that month as set forth in Step 1 of the WMP, minus the amount delivered to Colton for the County as set forth in Paragraph VI.B.3.a.i;

iii. During the Summer Months, Colton shall receive, in each month, a volume of water equivalent to that pumped by Emhart to achieve its remedial obligations during that month as set forth in Step 1 of the WMP;

iv. During the Summer Months, Rialto shall receive, in each month, a volume of water equivalent to that pumped by the County to achieve its remedial obligations during that month; and

v. If Emhart does not use all of the Colton Water Rights in a Water Year, the County may pump and treat that unused water for delivery to Colton if needed for the County remedial obligations or negotiate with Colton regarding other use of such water.

b. Any default WMP shall:

i. not exceed the total necessary annual output of the Combined Remedies for the Water Year as determined in Step 1 of the WMP;

ii. meet Colton's minimum water needs as set forth in Step 3 of the WMP;

iii. not exceed Colton's maximum water needs during the Winter Months as set forth in the Colton Water Budget;

iv. not exceed the maximum operational flow rates set forth in Step 4 of the WMP;

v. meet Rialto's minimum water needs during the Winter Months, as set forth in the Rialto Water Budget; and

vi. provide that Emhart has priority to deliver water associated with its pumping to Colton, up to the maximum operational flow rate for delivery of water to Colton set forth in Step 4 of the WMP to the extent such operational flow rate exists as a result of infrastructure improvements funded by Emhart.

c. For Step 7 of the WMP, the Parties shall make any necessary modifications to the WMP as required by the limitations of Paragraph VI.B.3.b.

d. If the Parties have not agreed upon a production and distribution schedule, the default production and distribution schedule for the WMP shall be memorialized in Table 2 of Exhibit I and water shall be produced and delivered according to that schedule for that Water Year until an alternative schedule is agreed upon by the Parties.

4. **Other Limitations Applicable to All WMPs**

a. The Combined Remedies shall not produce more water than is required to meet the County's and Emhart's respective remedial obligations, absent an agreement of the Parties to do so.

b. The amount of water delivered to Rialto for use by and distribution to Rialto customers from the Combined Remedy in each Winter Month shall not exceed the volume of water pumped for compliance with the Regional Board Order in that month.

5. **Effect of Rialto Water Budget on Replacement Water Obligations Under County/Rialto Implementation Agreement**

a. As between Rialto and County: If the Rialto Water Budget, subject to Rialto Water Rights, in a given Water Year will not be satisfied by treated water from the Combined Remedies on a per month basis, then the requirements and procedures relating to Replacement Water as set forth in the County/Rialto Implementation Agreement shall apply as between the County and Rialto to the extent those provisions require the County to provide Replacement Water to Rialto. In the event Rialto's Water Budget requires more than 100 AF

per month in the Winter Months, then the County will not have a Replacement Water obligation for the water Rialto receives pursuant to Rialto's Water Budget in excess of 100 AF per month in the Winter Months. In the event that Rialto receives 100 AF per month or less in a Winter Month consistent with the Rialto Water Budget, the County shall not have a Replacement Water obligation to Rialto associated with those water rights.

b. As between Rialto and the County: The annual planning meeting required pursuant to Paragraph VI.B.1.a of this Agreement shall occur in conjunction with the annual planning meeting required pursuant to Paragraph 2.a of the County/Rialto Implementation Agreement and that all references to "annual planning meeting" in the County/Rialto Implementation Agreement shall mean the annual planning meeting required pursuant to Paragraph VI.B.1.a. This Agreement hereby supersedes subparts (a), (b), and (c) of the first sentence of Paragraph 2.a, at page 9, of the County/Rialto Implementation Agreement.

C. Monthly Review of WMP

1. On or about the fifth day of each month (other than the one in which the annual planning meeting occurs), the Parties shall meet and confer in good faith to review the WMP for the balance of the Water Year and determine whether any adjustments to the WMP are needed based on any changes in (a) anticipated output from the Combined Remedies; (b) the Rialto Water Budget; (c) the Colton Water Budget; (d) available Rialto Water Rights; or (e) available Colton Water Rights.

2. In the event that a change in the anticipated output of the Combined Remedies would result in the Combined Remedies not meeting Colton's minimum water needs, Emhart and the County shall provide Colton with at least four (4) months' notice prior to implementing such change in output.

3. If pursuant to Paragraph VI.C.1. the Parties determine that adjustments to the WMP, consistent with Paragraphs VI.B.2.a. (for prioritized delivery) or VI.B.3.a. (for default delivery), are necessary, the Parties shall modify the WMP for that Water Year accordingly.

4. If the Parties are unable to agree upon a requested modification to the WMP for that Water Year under this Paragraph VI.C, such dispute shall be resolved pursuant to the dispute resolution provisions of

Paragraph XII. Until any such dispute is resolved, water shall be delivered, to the extent feasible, pursuant to the most recently agreed upon WMP.

5. As between Rialto and the County, the monthly planning meeting required pursuant to Paragraph 2.c of the County/Rialto Implementation Agreement shall occur in conjunction with the monthly meeting required pursuant to Paragraph VI.C.1 of this Agreement. This Paragraph IV.C.5 does not otherwise modify Paragraph 2.c of the County/Rialto Implementation Agreement.

D. Delivery and Acceptance of Treated Water

1. The water generated by the Combined Remedies shall be delivered to the Rialto municipal water supply system in volumes and at times in accordance with the WMP. Rialto shall meter and record the volume of water extracted from the Combined Capture System in accordance with the WMP and report those metered totals to the Parties at the monthly meetings described in Paragraph VI.C.1.

2. If its municipal water supply system has sufficient capacity, Rialto shall accept the total output delivered from the Combined Remedies to the Rialto municipal water supply system in volumes and at times in accordance with the WMP.

3. Subject to Paragraph IV.E, Rialto shall deliver water from its municipal water supply system to the Colton municipal water supply system in volumes and at times in accordance with the WMP, provided that Rialto receives the necessary volume of water from the Combined Remedies as provided for in the WMP. Rialto shall meter and record the volume of water delivered to Colton and report those metered totals to the Parties at the monthly meetings described in Paragraph VI.C.1. Alternatively, the Parties may agree in writing for some other means of delivering some or all of such water to Colton.

4. Colton shall accept, in each Water Year, water delivered from the Rialto municipal water supply system to the Colton municipal water supply system, or by some other means agreed to by the Parties in writing, in volumes and at times in accordance with the WMP.

5. Rialto shall receive, in each Water Year, a volume of water from the Combined Remedies equivalent to the Rialto Water Rights utilized by the County for the Combined Remedies in accordance with the WMP. If, in any Water

Year, Rialto receives less water from the Combined Remedies than the Rialto Water Rights, the County shall notify Rialto that it may pump a volume of water equivalent to those remaining Rialto Water Rights from its other wells in the Basin.

6. Colton shall receive, in each Water Year, a volume of water from the Combined Remedies equivalent to the Colton Water Rights utilized by the County and Emhart for the Combined Remedies in accordance with the WMP. If, in any Water Year, Colton receives less water from the Combined Remedies than the Colton Water Rights, the County and Emhart shall notify Colton that it may pump a volume of water equivalent to those remaining Colton Water Rights from its other wells in the Basin.

7. Nothing in this Agreement supersedes, abrogates or modifies the County's obligation to provide Replacement Water to Rialto as provided in the County/Rialto Implementation Agreement, except as provided in Paragraph VI.B.5.

8. As between the County and Rialto, water delivered to Colton pursuant to this Agreement is not subject to Paragraph 3.c of the County/Rialto Implementation Agreement.

VII. Access to Colton and Rialto Property

A. Emhart Access to Colton Property

1. Colton shall provide Emhart with access to and use of Colton real property and/or public rights of way for construction (at Emhart's cost) of the piping and infrastructure necessary to provide for delivery of water to the Colton municipal water supply system as set forth in Paragraph VI. This access shall be provided in the form of a Right-of-Way Permit issued by Colton in accordance with Chapter 12.12 of the Colton Municipal Code.

2. As provided for in Paragraph 10. a. 1) of the Work Consent Decree, Colton shall provide Emhart access to the Colton real property and/or rights-of-way as described in Paragraph VII. A. 1. for no fee, cost, or charge of any kind that would otherwise be required by the Colton Municipal Code.

B. Emhart Access to Rialto Property; Rialto Permitting, Review and Approvals

1. Rialto shall provide Emhart with access to certain real property and public rights of way owned and/or controlled by Rialto to be used for the following:

a. Up to two groundwater extraction wells (EW-1 and EW-2) to be reviewed and approved pursuant to Rialto's "Conditional Development Permit" in accordance with Chapter 18.66 of the Rialto Municipal Code and "Precise Plan of Design" approval process as provided in Rialto City Council Resolution No. 2507, dated April 5, 1983. This access shall be documented in an encroachment permit issued by Rialto in accordance with Chapter 11.04 of the Rialto Municipal Code and a lease agreement to be executed following the foregoing approval in the form attached hereto as Exhibit J.

b. Conveyance piping connecting the extraction well(s) to the Combined Treatment Plant, to be reviewed and approved pursuant to Rialto's "Conditional Development Permit" in accordance with Chapter 18.66 of the Rialto Municipal Code and "Precise Plan of Design" approval process as provided in Rialto City Council Resolution No. 2507, dated April 5, 1983. Upon such approval, this access shall be documented in an Encroachment License Agreement in accordance with Chapter 11.05 of the City of Rialto Municipal Code. The conveyance piping connecting EW-1 to the Combined Treatment Plant shall be installed (i) prior to, or (ii) at the same time and in coordination with Rialto's project to widen Ayala Drive from Baseline Road to Renaissance Parkway.

c. Development and/or future modification of the Combined Treatment Plant, within the footprint depicted in Exhibit K, to be reviewed and approved pursuant to Rialto's "Conditional Development Permit" in accordance with Chapter 18.66 of the Rialto Municipal Code and "Precise Plan of Design" approval process as provided in Rialto City Council Resolution No. 2507, dated April 5, 1983. This access shall be documented in a lease agreement to be executed following the foregoing approval in the form attached hereto as Exhibit J.

d. Distribution piping and any necessary valves connecting the Combined Treatment Plant to Rialto's municipal water supply system, to be reviewed and approved pursuant to Rialto's "Conditional Development Permit" in

accordance with Chapter 18.66 of the Rialto Municipal Code and "Precise Plan of Design" approval process as provided in Rialto City Council Resolution No. 2507, dated April 5, 1983. Upon such approval, this access shall be documented in an Encroachment Permit issued by Rialto in accordance with Chapter 11.04 of the City of Rialto Municipal Code. The location of the currently anticipated new pipeline needed to connect the Combined Treatment Plant to Rialto's municipal water supply system shall be consistent with the location/alignment of the piping depicted in the conceptual diagram included as Exhibit D.

e. If needed, distribution piping (including sampling station) and infrastructure necessary for the delivery of water to Colton's municipal water supply system to be reviewed and approved pursuant to Rialto's "Conditional Development Permit" in accordance with Chapter 18.66 of the Rialto Municipal Code and "Precise Plan of Design" approval process as provided in Rialto City Council Resolution No. 2507, dated April 5, 1983. Upon such approval, this access shall be documented in an Encroachment Permit issued by Rialto in accordance with Chapter 11.04 of the City of Rialto Municipal Code.

f. If needed, and as reasonably necessary, distribution piping and infrastructure necessary for the delivery of water to a water purveyor other than Colton, to be reviewed and approved pursuant to Rialto's "Conditional Development Permit" in accordance with Chapter 18.66 of the Rialto Municipal Code and "Precise Plan of Design" approval process as provided in Rialto City Council Resolution No. 2507, dated April 5, 1983. Upon such approval, this access shall be documented in an Encroachment Permit issued by Rialto in accordance with Chapter 11.04 of the City of Rialto Municipal Code.

g. Up to seven monitoring wells, two piezometers required by DDW for EW-1, one piezometer required by DDW for CR-3, and additional piezometers as may be required by DDW upon installation of EW-2; installation of these wells and piezometers shall be reviewed and approved pursuant to encroachment permits issued by Rialto in accordance with Chapter 11.04 of the City of Rialto Municipal Code.

2. All wells, pipelines, and other facilities described above and within the jurisdictional boundaries of Rialto, shall: (a) be located, to the maximum extent feasible, in public rights of way; (b) be consistent with Rialto's land use and development plans and entitlements for such properties; and (c) be in locations approved by Rialto in its sole discretion.

3. Costs of Access, Permitting, Review, and Approvals:

a. Because Emhart has paid Rialto $20,000 as described in Paragraph III.C.2.b., Rialto shall not charge Emhart any additional fee or cost in providing the access, review, and approvals described in Paragraph VII.B.1.

b. Access for monitoring and sampling of wells and piezometers located on Rialto real property or rights of way shall be documented in an Encroachment License Agreement in accordance with Chapter 11.05 of the City of Rialto Municipal Code; provided that Rialto shall not charge Emhart any fee or cost associated with such agreement or sampling.

c. Nothing in this Agreement modifies Rialto's and Emhart's rights and obligations under the Work Consent Decree regarding access, permitting, review, and approvals necessary to perform the Work beyond that identified in Paragraph VII.B.1.

4. Emhart shall pay Rialto, within 60 days of the Effective Date, $50,000 to (a) un-encumber the land within the Combined Treatment Plant Lease Area that is subject to Rialto's agreements with Lewis-Hillwood Rialto Company, LLC ("LHR"); and (b) satisfy all aesthetic requirements of Rialto and/or LHR (or any subsequent developer) for the Combined Treatment Plant Lease Area.

C. County Access to Rialto Property

1. Rialto shall provide the County access to certain Rialto property as set forth in the County/Rialto Implementation Agreement, the lease executed pursuant to that agreement, and any amendment to that lease.
