REGULAR MEETING AGENDA
CITY COUNCIL OF THE CITY OF SAN JACINTO
Tuesday, June 2, 2026
5:00 PM CLOSED SESSION
5:30 BUDGET WORKSHOP
6:30 PM OPEN SESSION

COMMUNITY CENTER
625 S. PICO AVENUE
SAN JACINTO, CA 92583
951-487-7330

In compliance with the Americans with Disabilities Act, if you need special assistance to participate in this meeting, please contact the office of the City Clerk at 951-487-7330 ext. 339. Notification 48 hours prior to a meeting will enable the City to make reasonable arrangements to ensure accessibility to that meeting [28 CFR 35.102.35.104 ADA Title II].

The City Council meeting may be observed either virtually by accessing the City's website at https://horizon.agendalink.app/engage-v2/sanjacintoca/agendas and selecting the 'Watch' option for the applicable meeting, or in person at the San Jacinto Community Center.

Public Comments will only be accepted in person during the meeting or in writing to the City Clerk no later than 3:00 PM on the day of the meeting. Participants viewing the Livestream will not have a comment option.

Written public comments *may only be submitted via email* to comments@sanjacintoca.gov or by hard copy to the Office of the City Clerk at 595 S. San Jacinto Ave., San Jacinto, CA 92583, no later than 3:00 p.m. on the day of the meeting. Comments via text and social media (Facebook, Twitter, etc.) will not be accepted. Please identify the agenda item number and "PUBLIC COMMENT" in the subject line of the email or hard copy document. All written correspondence received by the 3:00 p.m. deadline will be distributed to the legislative body prior to the meeting and retained with the official meeting record. All email comments shall be subject to the same rules as would otherwise govern in-person speaker comments at the Council meeting.

Reading of Public Comments: The City Clerk will read all email comments, provided that the reading shall not exceed three (3) minutes or such other time as the Council may provide, consistent with the time limit for speakers at a Council meeting. The email comments submitted shall become part of the record of the Council meeting.

2. PUBLIC COMMENTS

3. CONSENT CALENDAR

A. City Council

A1. Waiver of Full Reading of Ordinace(s), and Reading by Title Only

A2. Minutes of the Regular City Council Meeting of May 5, 2026

RECOMMENDATION:

Staff recommends that the City Council approve the City Council Regular Meeting Minutes of May 7, 2026.

A3. Resolution Adding Limited Term Position and Approving Second Amendment to Employment Agreement with Robert A. Johnson

RECOMMENDATION:

Staff recommends that the City Council:

— 1. Adopt a Resolution No. 4126 Adding the Limited Term Position of Executive Director of San Jacinto Power and Special Advisor to the City Council to the Citywide Salary Schedule.

— 2. Approve the Second Amendment to the Employment Agreement with Robert A. Johnson and authorize the Mayor to execute the Second Amendment in substantially the form presented, subject to any minor, non-substantive revisions approved by the City Attorney.

A4. Annual Proceedings for Landscaping, Lighting, and Park District No. 1 (LLPD No. 1) – Initiation and Intent to Levy Assessments for Fiscal Year 2026–2027

RECOMMENDATION:

Staff recommends that the City Council take the following actions:

— 1) Adopt Resolution 4125 initiating proceedings and ordering the Assessment District Engineer to prepare and file the Engineer's Report for LLPD No. 1 for Fiscal Year 2026–2027, pursuant to Streets and Highways Code §22622

— 2)Adopt Resolution 4126 declaring the City's intent to levy and collect assessments within LLPD No. 1 for Fiscal Year 2026–2027, accepting the Engineer's Report, and setting June 16, 2026, as the date of the public hearing to consider the annual levy.

A5. Annual Proceedings for Landscaping, Lighting and Park District No. 2 (LLPD No. 2) – Initiation and Intent to Levy Assessments for FY 2026–2027

RECOMMENDATION:

Staff recommends that the City Council take the following actions:

— 1) Adopt Resolution 4127 to initiate proceedings and direct the Assessment District Engineer to prepare and file the Engineer's Report for LLPD No. 2 for FY 2026–2027, pursuant to Streets and Highways Code §22622

— 2) Adopt Resolution 4128 to accept the Engineer's Report, declare the City's intent to levy and collect assessments for FY 2026–2027, and set June 16, 2026, as the date of the public hearing

A6. The Thomsen Company, Inc. Professional Services Agreement EWA 13 for San Jacinto MDP Line E-2 Storm Drain Improvement Project (CIP# 15-003)

RECOMMENDATION:

Staff recommends the City Council take the following actions:

— 1. APPROVE the professional services agreement to The Thomsen Company, Inc. for the sum of $19,675;

— 2. AUTHORIZE the City Manager to execute the professional services agreement.

A7. Tri-Party Cooperative Agreement Between Riverside County Transportation Commission, County of Riverside, and City of San Jacinto for Ramona Expressway Reconstruction Project Between Warren Road and Sanderson Avenue (CIP# 26-007)

RECOMMENDATION:

Staff recommends the City Council take the following actions:

— 1. APPROVE as to form Cooperative Agreement No. 26-31-001-00;

— 2. AUTHORIZE the City Manager to execute the cooperative tri-party agreement between Riverside County Transportation Commission, County of Riverside, and the City of San Jacinto (Agreement No. 26-31-001-00) upon further review by City Attorney.

A8. Cooperative Agreement Between Riverside County Transportation Commission and the City of San Jacinto for Construction of Mid County Parkway Project - Construction Contract 3

RECOMMENDATION:

Staff recommends the City Council take the following actions:

— 1. APPROVE as to form Cooperative Agreement No. 25-31-094-00;

— 2. AUTHORIZE the City Manager to execute the cooperative agreement between Riverside County Transportation Commission and the City of San Jacinto (Agreement No. 25-31-094-00) upon further review by City Attorney.

A9. Professional Services Agreement for a Comprehensive Update to the City’s Landscape, Irrigation, Park, Basin, Parkway and Street Tree Design Standards

Staff recommends that the City Council:

1. APPROPRIATE an additional $100,000 from the City’s unallocated General Fund balance for the preparation of updated Citywide Landscape, Irrigation, Park, Basin, Parkway and Street Tree Design Standards;
2. AUTHORIZE the transfer of the previously budgeted $80,000 for Landscape Design Guideline updates in the Planning Division FY 2025/2026 budget, together with the additional appropriation, into CIP Project No. 26-013, Fund 199-9999-425.40-01;
3. AWARD a Professional Services Agreement to Community Works Design Group in the amount of $159,615.00 for professional consulting services associated with the preparation of the updated standards;
4. REJECT all other proposals; and
5. AUTHORIZE the City Manager to execute the Professional Services Agreement and all related contract documents.

A10. City Net PSA Renewal for Street Outreach and Emergency Shelter

City Net PSA Renewal for Street Outreach and Emergency Shelter

— 1. Approve the FY 2026-2027 Professional Services Agreement with City Net to provide comprehensive street outreach and emergency hotel services, and

— 2. Authorize the City Manager or their designee to sign the agreement.

4. PUBLIC HEARING

4.1 Sixth Amendment to the CR&R Solid Waste Franchise Agreement and Annual Rate Adjustment

Staff recommends that the City Council :

— 1. Conduct a public hearing to receive public comment and accept any protests.

— 2. Adopt Resolution No. 4129 - Approving the Sixth Amendment to the Franchise Agreement between the City of San Jacinto and CR&R Incorporated.

5. DISCUSSION ITEMS

A. City Council

A1. FY 26/27 Capital Improvement Program Engineering Update

RECOMMENDATION:

Staff recommends that the City Council receive and file an update of the City's Capital Improvement Program for FY 26/27.

A2. Revision to Line E of the San Jacinto Valley Master Drainage Plan

RECOMMENDATION:

Staff recommends the City Council take the following actions:

— 1. DETERMINE that, in accordance with CEQA Guidelines Sections 15162 and 15164, that the proposed Addendum to the previously adopted Environmental Impact Report for the San Jacinto Valley Master Drainage Plan (MDP) adequately addresses the Revision to Line E of the MDP, and that no subsequent or supplemental environmental review is required because the revision to Line E would not result in new or more significant environmental impacts than those previously analyzed and no substantial changes in circumstances have occurred that would create new or more significant environmental impacts.

— 2. APPROVE the revision to Line E of the San Jacinto Valley Master Drainage Plan, in conformance with the Preliminary Design Report.

— 3. 3. Direct Staff to revise the San Jacinto Valley Master Drainage Plan Map to reflect the modifications in the Preliminary Design Report.

6. CITY MANAGER UPDATE

7. FUTURE REQUESTS FROM CITY COUNCIL TO CITY MANAGER

8. CLOSED SESSION

8.1 Closed Session

9.1.1 CONFERENCE WITH LEGAL COUNSEL—ANTICIPATED LITIGATION

Significant exposure to litigation pursuant to paragraph (2) of subdivision (d) of Section 54956.9: 1 Case – Wright Construction Engineering Corp. v. City of San Jacinto, Government Code Claim dated March 23, 2026.

9. ADJOURNMENT

DOCUMENTS RELATED TO OPEN SESSION AGENDAS (SB343) - Any public record, relating to an open session agenda item, that is distributed within 72 hours prior to the meeting is available for public inspection at the public counter located in the Administration Building of City Hall, 595 S. San Jacinto Avenue, San Jacinto, CA 92583.

I, Julia Espinoza, City Clerk of the City of San Jacinto, do hereby certify that I caused to be posted the foregoing agenda this May 28, 2026 as requested by law.

_____

Julia Espinoza, City Clerk

Date Posted: May 28, 2026

Proclamation

Of The City of San Jacinto

National Police Week
May 10 – 16, 2026

WHEREAS, *National Police Week provides an opportunity for communities across the nation to recognize and honor the dedicated men and women of law enforcement who courageously serve and protect their communities each day; and*

WHEREAS, *peace officers play a vital role in preserving public safety, protecting life and property, and upholding the laws and constitutional rights of all citizens; and*

WHEREAS, *law enforcement officers demonstrate courage, professionalism, integrity, and an unwavering commitment to public service, often placing themselves in harm's way in service to others; and*

WHEREAS, *Congress and the President of the United States have designated May 10 through May 16, 2026, as National Police Week, and May 15, 2026, as Peace Officers Memorial Day; and*

WHEREAS, *Peace Officers Memorial Day honors those officers who have made the ultimate sacrifice in the line of duty and recognizes the families, friends, and colleagues they leave behind; and*

WHEREAS, *the City of San Jacinto recognizes and appreciates the dedication and sacrifice of all law enforcement personnel who faithfully serve the community; and*

WHEREAS, *the City of San Jacinto is committed to honoring the service and sacrifices of law enforcement officers and remembering those who have lost their lives in the line of duty.*

NOW, THEREFORE, BE IT RESOLVED, *that the City of San Jacinto hereby recognizes May 10 through May 16, 2026, as "National Police Week" and May 15, 2026, as "Peace Officers Memorial Day" in honor of the dedicated service, courage, and sacrifice of law enforcement officers throughout the nation.*

5. FUTURE REQUESTS FROM CITY COUNCIL TO CITY MANAGER

6. ADJOURNMENT

With no further business before the City Council, Mayor Ruiz adjourned the meeting at 7:57 p.m.

CITY OF SAN JACINTO:

_____
Crystal Ruiz, Mayor

ATTEST:

_____
Jill Theriot, Deputy City Clerk

Approved as read:
Approved as amended:

June 2, 2026

TO:	City Council
REQUESTED BY:	Craig Hayes, City Attorney
APPROVED BY:	Robert A. Johnson, City Manager
SUBJECT:	Resolution Adding Limited Term Position and Approving Second Amendment to Employment Agreement with Robert A. Johnson

RECOMMENDATION:

Staff recommends that the City Council:

1. Adopt **Resolution No. 4124** - Adding the Limited Term Position of Executive Director of San Jacinto Power and Special Advisor to the City Council to the Citywide Salary Schedule.
2. Approve the Second Amendment to the Employment Agreement with Robert A. Johnson and authorize the Mayor to execute the Second Amendment in substantially the form presented, subject to any minor, non-substantive revisions approved by the City Attorney.

DISCUSSION:

Resolution No. 4124 would add the limited-term position of Executive Director of San Jacinto Power and Special Advisor to the City Council to the Citywide Salary Schedule at a fixed monthly pay rate. The position is a limited term, at will, unrepresented, City Council appointed position outside the competitive service, subject to the applicable employment agreement approved by the City Council. The City classifies the position as exempt under the Fair Labor Standards Act, subject to applicable law. California Code of Regulations, title 2, section 570.5 requires CalPERS reportable pay rate to be listed on a publicly available pay schedule approved by the governing body, identifying the position title, pay rate, time base, effective date, revision date, and other required information.

In 2017, the City hired Robert A. Johnson to serve as City Manager under an employment agreement. On July 1, 2024, the City entered into a new employment agreement with Robert A. Johnson to continue to serve as City Manager through June 30, 2028 (“Employment Agreement”).

The Employment Agreement sets forth the City Manager’s duties, compensation, benefits, term, termination provisions, and other terms and conditions of employment. Mr. Johnson has notified the City Council of his desire to retire from his position as City Manager and, for a limited transition period, continue serving the City in an executive and advisory capacity. The proposed Second Amendment would memorialize that transition and provide for Mr. Johnson’s employment as Executive Director of San Jacinto Power and Special Advisor to the City Council upon the City Council appointing an interim City Manager and through December 31, 2026.

The duties of the Executive Director of San Jacinto Power and Special Advisor to the City Council are set forth in Exhibit “A” to the Second Amendment. In general, those duties include assisting with San Jacinto Power operations and related energy programs, assisting with transition-related matters, and continuing to support certain economic development and City property development efforts.

The Second Amendment provides that Mr. Johnson would not be entitled to any cost-of-living adjustment, annual salary adjustment, merit increase, market adjustment, or other increase in base salary during the transition period unless expressly approved by the City Council in a subsequent written amendment. During the transition period, Mr. Johnson's base salary would remain Twenty-Seven Thousand Five Hundred Twenty-Eight Dollars and Fifty Cents ($27,528.50) per month.

The Executive Director of San Jacinto Power and Special Advisor to the City Council is established by Resolution No. 4124, the compensation set forth in the Second Amendment matches the rate adopted in the Salary Schedule, and the City Council finds the consideration the City is receiving is commensurate with the compensation.

The Brown Act requires that prior to taking final action, the City Council shall orally report a summary of a recommendation for executive salary. The City Attorney will therefore provide an oral report of the proposed adjustment at the meeting.

FISCAL IMPACT:

During the transition period, Mr. Johnson's base salary would remain $27,528.50 per month, and his compensation and benefits would remain as provided in the Employment Agreement, as amended. The City also receives compensation in the amount of $12,000.00 per month from CalChoice for Mr. Johnson's work with CalChoice. This will partially offset Mr. Johnson's salary.

STATE OF CALIFORNIA)
COUNTY OF RIVERSIDE)ss
CITY OF SAN JACINTO)

RESOLUTION NO. 4123

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF SAN JACINTO, CALIFORNIA, ADDING THE LIMITED TERM POSITION OF EXECUTIVE DIRECTOR OF SAN JACINTO POWER AND SPECIAL ADVISOR TO THE CITY COUNCIL TO THE CITYWIDE SALARY SCHEDULE

WHEREAS, the City of San Jacinto is a general law city organized under the laws of the State of California;

WHEREAS, the City Council has approved or is considering approval of a second amendment to the City Manager Employment Agreement providing for a limited transition services period during which the incumbent will serve in the position of Executive Director of San Jacinto Power and Special Advisor to the City Council;

WHEREAS, the City Council desires to add that limited term position to the Citywide Salary Schedule at a fixed monthly pay rate;

WHEREAS, California Code of Regulations, title 2, section 570.5 requires CalPERS reportable pay rate to be listed on a publicly available pay schedule approved by the governing body, identifying the position title, pay rate, time base, effective date, revision date, and other required information;

WHEREAS, before taking final action, the City Council will orally report a summary of the recommended final action on the salary, salary schedule, and any fringe benefits for the position as required by Government Code section 54953, subdivision (d)(3); and

WHEREAS, the City Council finds that the position, compensation, and related transition services serve a legitimate public purpose and are in the best interests of the City and its residents.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of San Jacinto as follows:

Section 1. Recitals. The recitals above are true and correct and are incorporated into this Resolution as findings of the City Council.

Section 2. Salary Schedule Amendment. The Citywide Salary Schedule is amended to add the limited term position of Executive Director of San Jacinto Power and Special Advisor to the City Council at the pay rate and time base shown in Exhibit A. The amendment is effective as of the date of adoption of this Resolution, unless Exhibit A states a later effective date.

Section 3. Position Status. The position is a limited term, at will, unrepresented, Council appointed position outside the competitive service, subject to the applicable employment agreement approved by the City Council. The City classifies the position as exempt under the Fair Labor Standards Act, subject to applicable law. Nothing in this Resolution authorizes the incumbent to exercise City Manager authority after the transition date, or authorizes any individual City Council member to direct City staff except as permitted by law.

Section 4. Term. The position is authorized through December 31, 2026, unless earlier ended or later extended by subsequent City Council action in open session and reflected in the applicable employment agreement or other City records.

Section 5. CalPERS Reporting. The City Manager or Interim City Manager, Finance Director, and other appropriate City staff are directed to report compensation paid for the position to CalPERS only to the extent permitted by the Public Employees Retirement Law, CalPERS regulations, and other applicable law. Nothing in this Resolution characterizes as compensation earnable, pensionable compensation, or reportable compensation any amount that does not qualify under applicable law.

Section 6. Posting and Retention. The City Clerk is directed to post the amended Citywide Salary Schedule on the City website, make it available for public review during normal business hours, and retain it with all required revision records for not less than five years.

Section 7. Public Purpose. The City Council finds that the position and compensation serve a legitimate public purpose, are commensurate with the duties to be performed, and do not constitute a gift of public funds under Article XVI, section 6 of the California Constitution.

Section 8. CEQA. This Resolution is an administrative personnel action and is not a project under CEQA Guidelines section 15378, subdivision (b)(5). To the extent it is a project, it is exempt under CEQA Guidelines section 15061, subdivision (b)(3).

Section 9. Effective Date. This Resolution shall take effect immediately upon adoption.

PASSED, APPROVED, AND ADOPTED this 2nd day of June 2026, by the following vote:

EMPLOYMENT AGREEMENT
CITY MANAGER

THIS EMPLOYMENT AGREEMENT ("Agreement") is entered into as of July 1, 2024 (the "Effective Date"), between the **City of San Jacinto**, a municipal organization organized under the laws of the State of California ("City") and **Robert A. Johnson** ("City Manager" or "Employee"). City and City Manager are sometimes individually referred to as "Party" and collectively as "Parties."

RECITALS

A. City and Employee entered into an Employment Agreement dated July 1, 2019, where Employee agreed to serve as City Manager of City, which was amended four times and terminates June 30, 2025 (collectively, the "Original Agreement").

B. City and Employee now desire to enter into this Agreement, which shall terminate the Original Agreement on the Effective Date of this Agreement and supersede the Original Agreement.

I. TERM

The City hereby employs the Employee as City Manager commencing on July 1, 2024, and continuing through June 30, 2028 ("Term"). Upon expiration of this Term, this Agreement shall automatically renew for a period of one (1) year unless written notice expressing one Party's intention to terminate this Agreement is provided to the other Party by June 30, 2027. Following this initial automatic renewal period, this Agreement shall be automatically renewed for additional one-year periods on an ongoing basis unless written notice expressing one Party's intention to terminate this Agreement is provided to the other Party no less than one year prior to the expiration of whichever one year period is in effect at that time.

II. SALARY

Employee shall be entitled to no salary or compensation (other than the fringe benefits set forth in Section IX below) except as stated in this Section II as follows:

Employee's base salary shall be $25,255.50 per month, effective July 1, 2024. Employee shall be compensated on a pro rata basis of his base salary for the first and last months of his employment. Employee shall be paid pursuant to the procedures regularly established and as they may be amended by the City in its sole discretion.

On about July 1, 2025, and on each anniversary thereafter, the City Council shall consider, and when warranted award the Employee, an annual salary increase. Such increase shall be awarded at the City Council's discretion, based on the City Council's most recent personnel evaluation of Employee. Any salary increase shall be conditioned on the City Council's most recent personnel evaluation resulting in a finding that Employee has satisfactorily

DocuSign Envelope ID: AB8EC064-CFCB-4EA0-8FB7-D50EEB3D677E

performed all job duties. Each annual salary increase may be up to four (4) percent of Employee's base salary at the time of such evaluation.

Employee shall receive a yearly Cost of Living Adjustment ("COLA") of five (5) percent each City fiscal year.

Annual adjustments to salary shall be effective as of July 1 of the respective year of the adjustment. The annual adjustment shall not be implemented unless set forth in a written amendment to this Agreement, signed by both parties, that the City Council duly approves in an open session.

III. DUTIES

Employee shall perform the duties of the City Manager as prescribed by Section 2.12.060 of the San Jacinto Municipal Code. In addition to the powers and duties set forth in the Municipal Code, the City Manager shall have such powers and duties which are delegated to him by the City Council. The City Manager shall execute all powers and duties in accordance with the policies adopted by the City Council and the State of California Government Code.

IV. CITY MANAGER AND COUNCIL RESPONSIBILITIES

The City Manager shall be the Chief Executive Officer of the City. As such, the City Manager shall have the responsibility for implementing City Council policy, whereas the City Council shall retain the responsibility for formulating and adopting said policy.

The City Council and its members shall deal with the administrative services of the City only through the Employee, except for the purpose of inquiry. Neither the City Council nor any member thereof shall give orders to any subordinate of the Employee. Employee shall take direction only from a majority of the City Council as expressed at a duly noticed Brown Act meeting. Employee shall not be required to take direction from individual City Councilmembers or less than a majority of Councilmembers.

V. OTHER DUTIES

The City Manager (or his designee) shall: (1) review all policies proposed to the City Council and make appropriate recommendations to the Council; (2) periodically evaluate employees as provided for by California law and City policy; (3) advise the Council of possible sources of funds that might be available to implement present or contemplated City programs or services; (4) maintain and improve his professional competence by available means, including subscription to and reading of appropriate periodicals, and joining and participating in appropriate professional associations and their activities; (5) establish and maintain an appropriate community relations program; and (6) serve as liaison between the Council and as its designated representative with respect to all employer-employee matters, and make recommendations to the Council concerning those matters. Notwithstanding that a designee of the City Manager may perform said duties, the City Manager shall be the person ultimately

DocuSign Envelope ID: AB8EC064-CFCB-4EA0-8FB7-D50EEB3D677E

responsible to the Council for the proper implementation of the duties and responsibilities described in this Agreement.

VI. OUTSIDE PROFESSIONAL ACTIVITIES

The Employee may undertake outside professional activities for compensation, including consulting, teaching, training, speaking and writing provided they do not interfere with Employee's normal duties and are done only during non-business hours, personal leave or holiday time of Employee and are not done with any existing vendors or contractors of the City. Under no circumstances shall such outside activities create a conflict of interest with the duties of the City Manager and the interests of the City.

VII. EVALUATION

Employee shall meet with the City Council in closed session annually, beginning on or about July 1, 2025, to review the Employee's performance and to discuss the City Council's evaluation of said performance. It shall be Employee's obligation to remind City Council of the need to conduct this annual performance evaluation. Additional closed sessions may be scheduled at the direction of the City Council to discuss the Employee's performance as deemed necessary by the City Council.

VIII. TERMINATION

The Employee shall serve at the will and pleasure of the City Council and may be removed from office (terminated) at any time for any reason or no reason upon a majority vote of the City Council. Nothing in this Agreement shall prevent the City Council from terminating this Agreement and the services of the Employee at its sole discretion.

A. Termination without Cause

(i) Termination with Advance Notice. In the event Employee is terminated by the City without cause during the term of this Agreement, during which time Employee is willing and able to perform his duties under this Agreement, the City shall provide Employee with sixty (60) days' written notice prior to the effective date of termination. Upon termination, City shall provide Employee with: (1) twelve (12) months' salary; and (2) continuation of all existing health benefits currently offered the Employee, for the lesser of twelve (12) months or until Employee finds other employment, whichever occurs first. The salary and benefits shall be referred to collectively as "Severance Pay."

(ii) Termination without Advance Notice. In lieu of termination with notice as set forth in Subsection (i) above, the City may immediately terminate Employee from his employment without advance notice, in which case the Severance Pay shall be (1) twelve (12) months' salary; and (2) continuation of all existing health benefits currently offered the Employee, for the lesser of twelve (12) months or until Employee finds other employment, whichever occurs first.

DocuSign Envelope ID: AB8EC064-CFCB-4EA0-8FB7-D50EEB3D677E

(iii) In exchange for Severance Pay under either Subsections (i) or (ii) above, the Employee hereby expressly waives any right he may have under any applicable law, City policy, or otherwise to appeal or grieve his termination and the terms of this Agreement.

B. Termination for Cause

In the event that it is determined that the Employee has been terminated for cause, the Employee shall not be entitled to any Severance Pay. Termination shall be "for cause" if Employee: (i) acts in bad faith and to the detriment of the City; (ii) refuses or fails to act in accordance with any specific direction or order of the City Council; (iii) exhibits misconduct or dishonesty in regard to his employment or v) is determined to have mislead the City Council or engaged in any dishonesty during the application process or his interview with the City Council prior to his appointment as City Manager; (v) engages or is found to have engaged in any misconduct outside of his employment with the City that materially impacts the City's reputation; or (vi) is convicted of either a misdemeanor that materially impacts the City's reputation or Employee's ability to perform his duties or felony crime. The removal of the Employee from office pursuant to this paragraph shall be only on a majority vote of the whole City Council. In case of his intended removal, the Employee shall be furnished with a written notice stating the City Council's intention to remove him and the reasons therefore, at least thirty (30) days before the effective date of removal. Within seven (7) days after the furnishing of the Employee of such notice, he may, by writing, addressed to the City Council and delivered to the City Clerk, request a hearing before the City Council. Thereupon, the Mayor shall fix a time for such public hearing. Such hearing shall be held at the usual meeting place of the City Council, before the expiration of the aforesaid thirty (30) day period and the Employee shall attend and be heard. After furnishing the Employee with written notice of his intended removal from office, the City Council may suspend him from further duty, but his compensation shall continue until his removal by motion of the City Council, duly made and passed following the close of the public hearing. This Section VIII of this Agreement is mutually agreed to by the City Council and Employee in lieu of Municipal Code sections 2.12.080(B), pursuant to San Jacinto Municipal Code section 2.12.100.

C. Resignation

If Employee desires to resign from his position, he will provide the City Council with at least sixty (60) calendar days' notice, in writing. In the event that the Employee resigns from his employment with the City, the Employee shall not be entitled to any Severance Pay.

Notwithstanding the foregoing, if Employee desires to resign from his position after July 1, 2025, Employee may request to stay employed with the City for a six (6) month period and help the City Council transition to a new city manager. In that case, the City will provide Employee with: (1) six (6) months' salary; and (2) continuation of all existing health benefits currently offered the Employee. In exchange, the City Council may request City Manager to perform the following tasks: (1) choose an interim city manager to run the day to day operations of the City; and/or (2) run the city manager recruitment for a new, permanent city manager. During this six (6) month period, Employee will not be in the office at City Hall, but will be available on an as needed basis for consultation with the interim city manager, City

DocuSign Envelope ID: AB8EC064-CFCB-4EA0-8FB7-D50EEB3D677E

Council, and/or city attorney, either at City Hall, by video, or at another location. If appropriate, the City Council may allow and pay for Employee to attend annual conferences such as Cal Cities, SCAG, ICSC, etc.

D. Abuse of Office

Pursuant to Government Code Sections 53243, 53243.1 and 53243.2, if City Manager is convicted of a crime involving an abuse of his office or position, all of the following shall apply: (1) if City Manager is provided with administrative leave pay pending an investigation, City Manager shall be required to fully reimburse City such amounts paid; (2) if City pays for the criminal legal defense of City Manager (which would be in its sole discretion, as it is generally not obligated to pay for a criminal defense), City Manager shall be required to fully reimburse City such amounts paid; and (3) if this Agreement is terminated, any Severance Pay and Severance Benefits related to the termination that City Manager may receive from City shall be fully reimbursed to City or void if not yet paid to City Manager. For purposes of this Section, abuse of office or position means either: (1) an abuse of public authority, including waste, fraud, and violation of the law under color of authority; or (2) a crime against public justice, including, but not limited to, a crime described in Title 7 (commencing with Section 92) of Part 1 of the Penal Code. In addition to the salary and compensation in Section II, above, Employee shall be entitled only to the following fringe benefits:

IX. FRINGE BENEFITS

In addition to the salary and compensation in Section II, above, Employee shall be entitled only to the following fringe benefits:

A. Time Off

Employee shall be provided with paid time off as follows:

(i) Vacation time to be accrued on a pro rata basis each pay period at the rate of 160 hours per year.

(ii) Sick Leave accruing on a pro rata basis each pay period at a rate of 96 hours per year. Sick leave may accrue up to a maximum of 960 hours. Upon completion of two years of service with the City, Employee may sell back to the City up to 96 hours of sick leave at the end of each calendar year, provided that after selling back any sick leave, Employee still retains a balance of 100 hours.

(iii) Management leave accruing on a pro rata basis each pay period at a rate of 96 hours per year, which is in addition to sick leave and vacation time. Management leave time carries over for twelve (12) months and if not used during that period or the subsequent year, it expires. It may not be cashed out upon separation from employment.

(iv) Paid holidays as follows: New Year's Day, President's Day, Martin Luther King Day, Memorial Day, Independence Day, Labor Day, Veterans' Day, Thanksgiving Day,

DocuSign Envelope ID: AB8EC064-CFCB-4EA0-8FB7-D50EEB3D677E

Thanksgiving Friday, Christmas Eve, Christmas Day, and for each six month period or portion thereof one (1) floating holiday.

B. Retirement

Employee shall be enrolled in the City's retirement program through CalPERS consistent with the City's existing contract with CalPERS for such benefits and applicable law. In this regard, it is understood that Employee will be a "classic" CalPERS member under Tier II of the City's contract with CalPERS, which provides for a retirement formula of 2% at 55.

If Employee elects to participate in City's deferred compensation plan, City will match the Employee's annual contribution effective July 1, 2024.

C. Health/Dental/Vision Insurance

Employee shall be eligible to enroll in the City's health, dental, and vision plans to the same extent as and under the same terms of other management employees.

D. Cafeteria Benefit (Non-Health)

Employee shall be entitled to participate in the non-health cafeteria benefit to the extent and under the same rules that said benefit is also provided to management employees.

E. Life Insurance

The City shall provide employee with life insurance to the same extent as and under the same terms of other management employees.

F. Professional Membership

Upon approval by the City Council, the City will pay dues for Employee's membership in professional associations related to his position as City Manager or that are in the City's interests.

G. Automobile Allowance

City shall provide Employee with an automobile allowance of six hundred dollars ($600) per month, or portion thereof.

H. Cellular Phone Allowance

City shall provide Employee with the use of a cellular phone or a cellular phone allowance of one hundred fifty dollars ($150) per month, or portion thereof. The cellular phone shall not be used by persons other than the Employee. The Employee may use the cellular phone for incidental personal purposes, consistent with the City's adopted electronic device policy or

DocuSign Envelope ID: AB8EC064-CFCB-4EA0-8FB7-D50EEB3D677E

other applicable policies. The City shall also provide for maintenance, repair and replacement costs of said cellular phone, in accordance with City policy.

X. GENERAL PROVISIONS

A. Any modifications of this Agreement will be effective only if made in writing and signed by both the Employee and the City.

B. The salary and compensation set forth in Section II and the fringe benefits set forth in Section IX shall be the exclusive consideration provided to Employee under this Agreement. Employee shall not be entitled to any additional compensation, salary increases, or fringe benefits provided to any other city employees or bargaining groups unless this Agreement is duly amended to incorporate such provision.

C. All compensation, benefits and comparable payments to be provided to the Employee under this Agreement shall be less withholdings required by law. The compensation, benefits and comparable payments set forth in this Agreement shall be provided subject to any rules, regulations, agreements, or policies established for the City's management group, as of the date of this Agreement.

D. This Agreement supersedes any and all other agreements, either oral or written, between the Parties hereto with respect to the employment of the Employee by the City and contains all of the covenants and agreements between the Parties with respect to the employment of the Employee by the City.

E. Each Party agrees and acknowledges that no representations, inducements, promises or agreements, orally or otherwise, have been made by any Party, or anyone acting on behalf of any Party, which are not embodied herein and that any agreement, statement, or promise not contained in this Agreement shall not be valid or binding on either Party.

F. If any provision of this Agreement is held by a Court of competent jurisdiction to be invalid, void or unenforceable, the remaining provisions shall nevertheless continue in full force and effect without being impaired or invalidated in any way.

FIRST AMENDMENT TO EMPLOYMENT AGREEMENT CITY MANAGER
(July 1, 2025, Salary Adjustment)

A. The City of San Jacinto ("City") entered into an Employment Agreement, effective July 1, 2024, with Mr. Robert A. Johnson to serve as the City Manager of the City; and

B. Pursuant to the Employment Agreement, Mr. Johnson receives a yearly Cost of Living Adjustment ("COLA") of 5% effective July 1, 2025; and

C. Pursuant to the Employment Agreement, the City Council recently held an annual performance evaluation and determined that Mr. Johnson has met the prerequisites for an annual salary adjustment; and

D. The City Council grants a 4% annual salary adjustment that is to be set forth in section II of the Employment Agreement.

Now therefore, the Parties mutually agree and promise as follows:

1. Employee's base salary, to be set forth in Section II of the Employment Agreement, shall be amended to be $27,528.50 per month, effective July 1, 2025.

2. All other terms and conditions of the Agreement shall remain unmodified and in full force and effect.

SECOND AMENDMENT TO CITY MANAGER EMPLOYMENT AGREEMENT
(City Manager Transition and Executive Advisory Role)

This Second Amendment to the Employment Agreement ("Second Amendment") is made and entered into as of this 2nd day of June, 2026 ("Effective Date"), by and between the City of San Jacinto, a municipal corporation and general law city organized and existing under the laws of the State of California ("City), and Robert A. Johnson ("Employee"). City and Employee are sometimes referred to herein individually as a "Party" and collectively as the "Parties."

RECITALS

A. City and Employee entered into that certain Employment Agreement, dated, July 1, 2024, whereby Employee agreed to serve as City Manager of the City ("Agreement").

B. City and Employee subsequently entered into that certain First Amendment to the Employment Agreement ("First Amendment"), dated July 1, 2025, for the purposes of amending and increasing Employee's base salary.

C. Employee has notified the City Council of his desire to transition out of the position of City Manager and, for a limited transition period, continue serving the City in a different executive and advisory capacity; and

D. The City Council desires to provide for an orderly transition of executive management responsibilities, while retaining Employee's institutional knowledge, project experience, and assistance with certain City priorities.

E. The Parties therefore desire to amend the Agreement to memorialize Employee's transition from City Manager to Executive Director of San Jacinto Power and Special Advisor to the City Council, and to set forth the terms and conditions governing Employee's continued employment during the transition period.

NOW THEREFORE, in consideration of the mutual covenants, promises, and agreements set forth herein, the Parties mutually agree and promise as follows:

1. Incorporation of Recitals.

The Recitals set forth above are true and correct and are incorporated herein by this reference.

2. Transition from City Manager Position and Amendment of Title.

Upon the effective date of the City Council's appointment of an Interim City Manager ("Transition Date"), Employee shall cease serving as City Manager of the City and shall no longer possess, perform, or exercise the powers, duties, or authority of the City Manager under the San Jacinto Municipal Code, the Agreement, or otherwise, except to the extent expressly authorized by the City Council and permitted by law. The Parties acknowledge and agree that Employee's transition under this Second Amendment shall not, in and of itself, constitute a termination, removal, resignation, retirement from City employment, or separation from City service. Rather, as of the Transition Date, Employee shall continue in employment with the City in the amended position of Executive Director of San Jacinto Power and Special Advisor to the City Council, subject to the terms of the Agreement as amended by this Second Amendment. From and after the Transition Date, references in the Agreement to "City Manager" shall be deemed to refer to Employee in his amended capacity as Executive Director of San Jacinto Power and Special Advisor to the City Council.

3. Transition Services Period.

Unless earlier terminated in accordance with the Agreement as amended by this Second Amendment, Employee's employment in the amended position described herein shall commence on the Transition Date and

shall continue through December 31, 2026 ("Transition Services Period"). Upon expiration of the Transition Services Period, Employee's employment with the City shall end without further action by either Party, unless the Parties enter into a subsequent written amendment approved by the City Council and executed by both Parties. The expiration of the Transition Services Period shall not constitute a termination without cause by the City and shall not entitle Employee to Severance Pay or other separation compensation, except for any compensation, accrued leave cash-out, or benefits required by the Agreement, City policy, applicable benefit plan documents, or applicable law.

4. Amended Duties.

Effective as of the Transition Date, Sections III, IV, and V of the Agreement are hereby amended to provide that Employee shall perform the duties set forth in Exhibit "A," attached hereto and incorporated herein by this reference, together with such other duties as may be assigned by the City Council and agreed to by Employee in a manner consistent with this Second Amendment and applicable law. In the event a material question arises regarding whether a matter falls within Employee's amended duties or the authority of the Interim City Manager or successor City Manager, the matter shall be resolved by direction of the City Council, or pending such direction, by the Mayor in consultation with the City Attorney to the extent consistent with applicable law and the Agreement.

5. Compensation and Waiver of Further Salary Adjustments.

During the Transition Services Period, Employee's base salary shall remain Twenty-Seven Thousand Five Hundred Twenty-Eight Dollars and Fifty Cents ($27,528.50) per month. Employee acknowledges and agrees that, during the Transition Services Period, he shall not be entitled to any cost-of-living adjustment, annual salary adjustment, merit increase, market adjustment, or other increase in base salary otherwise provided for in Section II of the Agreement, any prior amendment, City policy, or City practice, unless expressly approved by the City Council in a subsequent written amendment to the Agreement. Section VII of the Agreement shall not apply during the Transition Services Period, and the City Council shall have no obligation to conduct an annual performance evaluation of Employee during the Transition Services Period. Except as expressly provided in this Second Amendment, Employee's compensation and benefits shall remain as provided in the Agreement, as previously amended.

6. Availability and Work Location.

Employee shall remain reasonably available by telephone, text message, electronic mail, video conference, and in person as necessary to perform the duties described in this Second Amendment. Employee shall be physically present at City offices approximately two (2) days per week, as time permits and as reasonably necessary for the performance of assigned duties, and may otherwise perform duties remotely or at such other locations as may be appropriate for the assigned work.

7. Termination During Transition Services Period.

Employee shall continue to serve at the will and pleasure of the City Council. During the Transition Services Period, the City Council may terminate Employee's employment without cause or for cause in accordance with Section VIII of the Agreement, as amended by this Second Amendment. Notwithstanding the foregoing, Section VIII(C) shall not apply during the Transition Services Period. In the event the City terminates Employee's employment without cause before expiration of the Transition Services Period, any Severance Pay shall be limited to the salary and health-benefit continuation Employee would have received from the effective date of termination through December 31, 2026. Employee shall not be entitled to Severance Pay if Employee voluntarily resigns, retires, separates from employment upon expiration of the Transition Services Period, or is terminated for cause. Section VIII.D of the Agreement, including the statutory reimbursement obligations set forth therein, shall remain in full force and effect.

8. No City Manager Authority Following Transition Date.

Employee shall not represent himself as City Manager after the Transition Date. Employee shall perform his duties in coordination with the Interim City Manager or successor City Manager, as appropriate. Employee's authority shall be limited to the duties set forth in Exhibit "A" and any further direction lawfully provided by the City Council.

9. Compliance with Law; Confidentiality.

Employee shall continue to comply with all applicable federal, state, and local laws, City policies, ethics rules, conflict-of-interest requirements, confidentiality obligations, and lawful directions of the City Council applicable to Employee's amended position.

10. No Other Amendments.

Except as expressly amended by this Second Amendment, the Agreement, as previously amended, shall remain unchanged and in full force and effect. In the event of any conflict between this Second Amendment and the Agreement or the First Amendment, this Second Amendment shall control.

EXHIBIT "A"

TRANSITION SERVICES DUTIES

During the Transition Services Period, Employee shall perform the following duties, subject to City Council direction, applicable law, and the terms of the Agreement as amended by the Second Amendment:

1. Executive Director of San Jacinto Power.

Employee shall serve as Executive Director of San Jacinto Power and shall assist with or oversee, as applicable, the following matters:

- San Jacinto Power day-to-day operations;
- Energy-efficiency projects;
- Residential solar and battery programs, including PowerChoice;
- Commercial and industrial solar and battery programs, including PowerChoice+;
- Carport, solar, battery, and electric-fueling-station projects, including projects involving City Hall/Library, the Community Center, and the San Jacinto Sheriff Station;
- Disadvantaged Communities energy-efficiency grants and programs, including programs focused on solar installation and energy-saving upgrades; and
- Mentoring and managing one 0.5 FTE employee assigned to San Jacinto Power or related programs.

2. CalChoice.

Employee may serve as Interim Chief Executive Officer of California Choice Energy Authority/CalChoice through December 31, 2026, subject to any required CalChoice approvals, authorizations, and applicable law. Nothing in this Second Amendment shall require Employee to serve in such capacity or limit CalChoice's authority with respect to that role.

3. Special Advisor to the City Council; Transition Support.

Employee shall serve as Special Advisor to the City Council and shall provide transition-related assistance, including:

- Assisting with the transition of direct reports and operational matters to the Interim City Manager;
- Assisting the City Attorney and Interim City Manager with larger projects, goals, and background matters not previously transitioned to staff;
- Providing background information, institutional knowledge, and mentoring to the Interim City Manager;
- Assisting the Interim City Manager with communication practices responsive to City Council needs;
- Assisting with organizational structure or change-management issues, if requested; and
- Assisting with structural reorganization or the filling of budgeted vacant positions, if requested and consistent with the Interim City Manager's authority.

4. Economic Development and City Property Development.

Employee shall continue to assist with economic development and City property development matters, including:

- Main Street and City property development;
- City acquisition of property on Main Street for potential development opportunities;
- Developer relationships related to investment in, and construction of, market-rate product on Main Street;
- Efforts to identify a partner to develop, construct, finance, or otherwise assist with a City Hall facility; and
- Assist with transition of relationships, project history, and institutional knowledge to the Interim City Manager or successor City Manager.

June 2, 2026

TO:	City Council
REQUESTED BY:	Kimberly Ganimian, Finance Director
APPROVED BY:	Robert A. Johnson, City Manager
SUBJECT:	Annual Proceedings for Landscaping, Lighting, and Park District No. 1 (LLPD No. 1) – Initiation and Intent to Levy Assessments for Fiscal Year 2026–2027

RECOMMENDATION:

Staff recommends that the City Council take the following actions:

1. Adopt **Resolution 4125** initiating proceedings and ordering the Assessment District Engineer to prepare and file the Engineer's Report for LLPD No. 1 for Fiscal Year 2026–2027, pursuant to Streets and Highways Code §22622.
2. Adopt **Resolution 4126** declaring the City's intent to levy and collect assessments within LLPD No. 1 for Fiscal Year 2026–2027, accepting the Engineer's Report, and setting June 16, 2026, as the date of the public hearing to consider the annual levy.

DISCUSSION:

Resolution of Initiation

LLPD No. 1 requires annual proceedings under the Landscape and Lighting Act of 1972, including initiation of the levy process, preparation of the Engineer's Report, and setting a public hearing. The Resolution of Initiation begins the FY 2026–2027 process and directs the Assessment District Engineer (NBS) to prepare the required report. No new parcels are being annexed this year other than those previously conditioned through development approvals. LLPD No. 1 is a pre-Proposition 218 district and does not include an automatic cost-of-living escalator. As a result, the maximum assessment cannot be increased without approval by property owners per Article XIIID of the California Constitution.

Resolution of Intent & Engineer's Report

The Resolution of Intent accepts the Engineer's Report and sets June 16, 2026, as the public hearing date. Assessments will remain unchanged from the prior fiscal year. Because LLPD No. 1 is a pre-Proposition 218 district without an escalation factor, increases cannot occur without property-owner approval. Current service costs continue to exceed assessment revenues, and a General Fund subsidy of approximately $1.2 million is anticipated to maintain existing service levels, subject to available funding.

Adoption of the Resolution of Intent is required to continue the annual levy and to provide notice to property owners of the upcoming public hearing.

FISCAL IMPACT:

There is no fiscal impact associated with adopting the Resolution of Initiation or the Resolution of Intent. These actions begin the annual assessment process and set the public hearing date. Any General Fund subsidy needed to support District operations will be addressed through the broader budget process.

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF SAN JACINTO, CALIFORNIA, INITIATING PROCEEDINGS PURSUANT TO THE LANDSCAPE AND LIGHTING ACT OF 1972 FOR THE LEVY AND COLLECTION OF THE ANNUAL ASSESSMENTS AND ORDERING THE DISTRICT'S ENGINEER TO PREPARE AND TO FILE A REPORT RELATED TO MAINTENANCE OF PUBLIC IMPROVEMENTS IN THE CITY OF SAN JACINTO LANDSCAPING, LIGHTING, AND PARK DISTRICT NO. 1, AND ANY ASSESSMENT THEREON FOR FISCAL YEAR 2026-2027

WHEREAS, heretofore the City of San Jacinto Landscaping, Lighting, and Park District No.1 was created pursuant to Part 2 of Division 15 of the California Streets and Highways Code (Section 22500, et. seq.); and

WHEREAS, California Streets and Highways Code Section 22622 provides that this Council shall adopt a Resolution generally describing any proposed new improvements or substantial changes in existing improvements in such a District and ordering the City Engineer, or designated District Engineer, to prepare and file a report related to annual maintenance and assessment in such a District; and

WHEREAS, no new improvements or substantial changes in existing improvements are proposed for said Landscaping, Lighting, and Park District No. 1 (LLPD No. 1); and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, BE IT RESOLVED, determined and ordered by the City Council of the City of San Jacinto, as follows:

Section 1: The Recitals, as set forth in this Resolution, are in all respects true and correct.

Section 2: NBS, the designated Assessment District Engineer, is ordered and directed to prepare an annual report as specified in the California Streets and Highways Code Section 22565, et. seq. with respect to the LLPD No.1 for Fiscal Year 2026-2027.

Section 3: The City Clerk shall certify to the adoption of this Resolution.

RESOLUTION NO. 4126

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF SAN JACINTO, CALIFORNIA, DECLARING ITS INTENTION TO LEVY AND COLLECT ASSESSMENTS WITHIN LANDSCAPING, LIGHTING AND PARK DISTRICT NO. 1 AND GIVING NOTICE OF AND SETTING THE TIME AND PLACE OF THE HEARING ON THE LEVY OF THE PROPOSED ASSESSMENT FOR FISCAL YEAR 2026-2027

WHEREAS, on June 16, 1992 the City Council of the City of San Jacinto, ("City") authorized the formation of Landscaping, Lighting, and Park District No. 1 (the "District") pursuant to the Landscaping and Lighting Act of 1972, Part 2 of Division 15 of the Streets and Highways Code (the "Act"), for the maintenance and servicing of street lights, landscaping, parkways and median islands; and

WHEREAS, in November 1996 the voters of the State of California passed Proposition 218 which added Article XIIID to the California Constitution requiring, among other things, new procedures for the approval of the levying of assessments against real property; and

WHEREAS, Article XIIID of the California Constitution requires that assessments comply with stated procedural and approval provisions by July 1, 1997, unless an assessment district meets certain exemptions as set forth in Section 5 of Article XIIID, which exemptions include the following**:**

"(a) any assessment imposed exclusively to finance the capital costs or maintenance and operation expenses for sidewalks, streets, sewers, water, flood control, drainage system or vector control."

"(b) any assessment imposed pursuant to a petition signed by the persons owning all of the parcels subject to the assessment at the time the assessment is initially imposed;" and

WHEREAS, the District assessments proposed for Fiscal Year 2026-2027 are exempt from Proposition 218 because the assessments are either general revenue for the operation and maintenance of street and highways, all expenditures thereunder qualifying as street maintenance as defined by the State of California, or the assessments were approved by the property owners on June 16, 1992, originally imposed prior to the passage of Proposition 218; and

WHEREAS, the Act also requires that the City comply with certain procedural and approval procedures before levying its annual assessments under an existing assessment district; and

WHEREAS, the adoption of this Resolution, among other things, is required in order to levy the proposed assessments for Fiscal Year 2026-2027 for the District; and

WHEREAS, by said Resolution the City Council ordered NBS, the company designated by this Council as the Assessment District Engineer, to file a report with the City Clerk in accordance with the Act; and

WHEREAS, NBS has filed such report with the City Clerk, and such report has been presented to and was considered by the City Council.

NOW THEREFORE, BE IT RESOLVED, determined and ordered by the City Council of the City of San Jacinto, California as follows:

Section 1. The City Council hereby declares its intention to levy and collect assessments for the District during the Fiscal Year 2026-2027 pursuant to the Act. The area to be assessed is located in the City of San Jacinto, Riverside County, California. The boundaries of the District are described in the report on file with the City Clerk.

Section 2. The purpose of the District is for maintenance and servicing of landscaping, irrigation, parkways, medians and street lighting.

Section 3. The report filed by NBS which is on file with the City Clerk and which has been considered by the City Council at the meeting at which this Resolution has been adopted, is hereby accepted. All interested persons are referred to that report for a full and detailed description of the work and improvements, the boundaries of the District, and the proposed assessments upon assessable lots and parcels of land with the District. The complete list of assessor parcel numbers can be found on file with the City Clerk.

Section 4. The Fiscal Year 2026-2027 assessments in each benefit zone within District are the same as the Fiscal Year 2025-2026 assessments and are not proposed to be increased.

Section 5. On Tuesday, June 16, 2026, at the hour of 6:30 p.m., or as soon thereafter during the course of its regularly scheduled meeting, the City Council will conduct a public hearing on the question of the levy of the proposed annual assessment. The hearing will be held at the San Jacinto Community Center, 625 S. Pico Avenue, San Jacinto, CA 92583.

Section 6 The City Clerk shall give notice of the time and place of said hearing by publishing a copy of this Resolution once in the Press Enterprise not less than 10 days before the date of the hearing pursuant to Section 22626 of the Streets and Highways Code.

Section 7. This Resolution is adopted pursuant to Section 22624 of the Streets and Highways Code.

APPROVED, SIGNED and ADOPTED this 2nd day of June, 2026:

1. ENGINEER'S LETTER

WHEREAS, the City Council of the City of San Jacinto (the "City"), State of California, directed NBS to prepare and file a report presenting plans and specifications describing the general nature, location and extent of the improvements to be maintained, and an estimate of the costs of the maintenance, operations and servicing of the improvements for the City of San Jacinto Landscaping, Lighting and Park District No. 1 (the "District") for Fiscal Year 2026/27; and

WHEREAS, the report includes a diagram for the District, showing the area and properties proposed to be assessed, an assessment of the estimated costs of the maintenance, operations and servicing of the improvements, and the net amount to be assessed upon all assessable lots and/or parcels within the District in proportion to the special benefit received; and

NOW THEREFORE, the assessments as detailed in this Engineer's Report and as summarized in the table below are made to cover the portion of the estimated costs of maintenance, operation and servicing of the improvements to be paid by the assessable real property within the District in proportion to the special benefit received.

Description	Maximum Rate Per AU	Maximum Amount	Actual Rate Per AU	Actual Amount[2]
Total Costs for District Improvements/Services		**$2,294,618.00**		**$2,294,618.00**
District Assessments				
Landscaping - Zone A-1 (Citywide)	$34.76	$254,802.44	$34.76	$254,802.44
Landscaping - Zone A-2 (Soboba Springs)	229.96	38,518.30	229.96	38,518.30
Landscaping - Zone A-3 (Rancho San Jacinto)	77.00	77,000.00	77.00	77,000.00
Lighting - Zone B (Lighted Areas)	25.89	238,917.45	25.89	238,917.45
Lighting - Zone C (Non-Lit Outlying Areas)	0.00	0.00	0.00	0.00
Parks - Zone D	14.67	50,363.43	14.67	50,363.43
Rounding and Adjustments		0.00		0.00
Total District Assessments		**$659,601.63**		**$659,601.63**
Contribution From Other Sources		234,800.00		234,800.00
Contribution From LLPD No. 2		198,899.00		198,899.00
Total Funds Available		**$1,093,300.63**		**$1,093,300.63**
Contribution From General Fund [1]		**$1,201,317.37**		**$1,201,317.37**

(1) Subject to available funds.
(2) The 2026/27 Actual Amount may differ slightly from the Assessment Roll and final applied levy amounts due to rounding.

I, the undersigned, respectfully submit the enclosed Engineer's Report and, to the best of my knowledge, information and belief, the Engineer's Report and assessments herein have been prepared and computed in accordance with the Assessment Law.

By: _____
John G. Egan
Assessment Engineer
R.C.E. 14853

2. OVERVIEW

This District, by special benefit assessments, provides funding for the installation, operation, maintenance and servicing of: street lights and traffic signals, landscaped areas (parkways and medians, etc.) and municipal parks; on a citywide basis; all of which are located on public land, public rights-of-way, or in landscaping easements within the City.

In November of 1996, the voters of California passed Proposition 218 which added Articles XIII C and XIII D to the California Constitution. These Constitutional provisions affect the procedural and substantive requirements for the levy of assessments. Among other things, the requirements provide that assessed parcels of real property must receive a special benefit from assessments. Assessments are also subject to new majority protest requirements. These new requirements apply, unless an assessment district meets certain exemptions set forth in Proposition 218.

The following assessments are exempt from the procedures and approval process of Article XIII D of the California Constitution:

A. Any assessment imposed exclusively to finance the capital costs or maintenance and/or operation expenses for sidewalks, streets, sewers, water, flood control, drainage systems, or vector control; or

B. Any assessment imposed pursuant to a petition signed by the persons owning all of the parcels subject to the assessment at the time the assessment is initially imposed.

Zone A (Including Sub-Zones A-1, A-2 and A-3), Zone B and Zone E of the District qualify as existing assessments exempt under exemption "A" described above. This conclusion has been reached using the definitions provided by the Office of the Controller for the State of California and the Guidelines Relating to Gas Tax Expenditures published by the division of local government affairs. Under this definition, street improvements include, but are not limited to, such things as street lighting and parkway and median landscaping.

Zone D park maintenance assessments within the District also qualify as an existing assessment exempt under exemption "B" described above in that the park maintenance assessment imposed was consented to by all of the persons owning all of the parcels subject to the park maintenance assessment at the time the assessment was initially imposed. The language of Articles XIII C and XIII D will be subject to future legislation and court decisions in order to clarify the specific intent of these Constitutional provisions. At the time that this report was prepared no such legislation or judicial guidance existed with regard to determining how the property owner consent exemption would apply. However, the drafter of these provisions, the Howard Jarvis Taxpayers Association, has stated that it intended to exempt from the procedural and substantive requirements those assessments being re-levied on an annual basis under an existing assessment district so long as the assessments are not increased. The proposed assessments for the 2026/27 Fiscal Year for the District fall within this exemption because they are merely the annual levy for assessments previously consented to by property owners, and are not being increased.

Section 22573, of the Landscaping and Lighting Act of 1972 (the “1972 Act”), requires assessments to be levied according to benefit rather than according to assessed value. The section states:

"The net amount to be assessed upon lands within an assessment district may be apportioned by any formula or method which fairly distributes the net amount among all assessable lots or parcels in proportion to the estimated special benefits to be received by each such lot or parcel from the improvements.

The determination of whether or not a lot or parcel will benefit from the improvements shall be made pursuant to the Improvement Act of 1911 (Division 7 commencing with Section 5000) [of the Streets and Highways Code, State of California]."

The 1972 Act also provides for the classification of various areas within an assessment district into different zones where, “by reason of variations in the nature, location and extent of the improvements, the various areas will receive differing degrees of benefit from the improvements. A zone shall consist of all territory which will receive substantially the same degree of benefit from the improvements." An assessment district may consist of contiguous or noncontiguous areas.

Although Proposition 218 mandates that parcels owned by public agencies be assessed if they receive special benefit from the improvements being serviced and maintained by the assessments; under the exemptions stated above, properties owned by public agencies, such as city, county, state, federal government, or board-governed special districts, are not assessed.

The word “parcel,” for the purposes of this report, refers to an individual property assigned its own assessor’s property identification number by the Riverside County Assessor’s Office. The Riverside County Auditor/Controller uses assessor’s property identification numbers and specific fund numbers to identify, on the tax roll, properties assessed for special district benefit assessments.

Following consideration of public comments at a noticed public hearing, and review of the Final Annual Engineer’s Report, the City Council may confirm the report as submitted and order the levy and collection of assessments for Fiscal Year 2026/27. If approved, the assessment information will be submitted to the Riverside County Auditor/Controller and included on the property tax roll for each benefiting parcel for Fiscal Year 2026/27.

3. PLANS AND SPECIFICATIONS FOR THE IMPROVEMENTS

Plans and specifications for the improvements have been prepared and approved as part of the improvement plans. These plans and specifications are on file and available for review at the office of the City Engineer and, by reference, have been made part of this report.

3.1 Landscaping and Park Maintenance

A map showing the location of all landscaping sub-zones and park maintenance areas within the District is on file at City Hall with the City Clerk and is made a part of this report by reference.

Servicing means the furnishing of:

1. Water for the irrigation of any landscape, park improvement, the operation of any fountains, or the maintenance of any other appurtenant improvements.
2. Electric current or energy, gas, or other illuminating agent for any public lighting facilities or for the lighting or operation of any other improvement.

Maintenance means the furnishing of services and materials for the ordinary and usual maintenance, operation and servicing of any improvement, including:

1. Installation, repair, removal or replacement of all or any part of any landscape, park improvement, including turf, shrub and tree plantings, statuary, fountains, other ornamental structures, lights, electrical systems, playground equipment, play courts, paving, curbs, gutters, sidewalks, and public restrooms.
2. Removal of graffiti by washing, painting, grinding, sanding, or other usual means.
3. Providing for the life, growth, health, and beauty of landscaping, including cultivation, irrigation, trimming, spraying, fertilizing, or treating for disease or injury.
4. The removal of trimmings, rubbish, debris, and other solid waste.
5. Land preparation which may be necessary for the installation, repair or replacement of landscape, park improvements, irrigation systems, sidewalks and drainage, including grading, leveling, cutting, filling, and sod.

3.2 Street Lights and Traffic Signals

A map showing the location of all street lights within the District is on file at City Hall with the City Clerk and is made a part of this report by reference.

Servicing means the furnishing of electric current or energy, gas or other illuminating agent for public street lighting and traffic signal facilities.

Maintenance means the furnishing of services and materials for the ordinary and usual installation, maintenance, operation, and servicing of any improvement, including the repair, removal, or replacement of all or any part of a component of the street lighting system, traffic signal system, or appurtenant horizontal or vertical surfaces (including graffiti removal).

3.3 Street Trees

Reference to Street Trees throughout this report is only a description of improvements that were proposed during initial formation of the District. The assessment for street trees, although approved by property owners during the initial formation of the District, was not levied by the City prior to the passage of Proposition 218. As such, since the District has been grandfathered in under the assessment methodology and assessment rates existing prior to Proposition 218, the assessment for street trees cannot be levied unless additional property owner approval is secured through the procedures outlined in Proposition 218.

4. ESTIMATE OF COSTS

The following table provides an estimate of the costs of the improvements for Fiscal Year 2026/27.

CITY OF SAN JACINTO
LANDSCAPING, LIGHTING AND PARK DISTRICT No. 1

Rounding and Adjustments	0.00	0.00	0.00	0.00	0.00	0.00	$0
TOTAL AMOUNT TO ASSESSMENT							**$659,602**

Notes:

1. Personnel Services is calculated based on estimated hours and a fully-burdened hourly rate, which includes amounts for salaries, fringe benefits, and other departmental operating expenditures that cannot be directly assigned to one zone. Accordingly, all other expenditures are those directly charged to each zone.
2. Supplies and Materials include office supplies, uniforms and safety equipment, small tools, etc.
3. Professional and Specialized Services include assessment engineering, legal counsel, City administration and County Auditor fees.
4. Repair and Maintenance includes building and vehicle R&M, parts and supplies for landscaping, irrigation and mowing, and street light R&M.
5. Contracts, Leases and Rents include weekend restroom maintenance, landscape maintenance contracts, traffic signal maintenance provided by Riverside County/CALTRANS, and vertical surface maintenance (graffiti abatement).
6. Utilities include water, electricity, and street light maintenance provided by SCE and City of San Jacinto.
7. Fund Transfer from Rancho San Jacinto LLPD No. 2 funds to finance the LLPD No. 2 component of shared facilities in Rancho San Jacinto, and to account for the LLPD No. 2 zones that don't have parks and contribute to the City-wide parks.
8. Subject to available funds.

5. METHOD OF APPORTIONMENT

5.1 Method of Apportionment

The net amount to be assessed upon lands within the District in accordance with this report is apportioned by a formula and method which fairly distributes the amount among all assessable lots or parcels in proportion to the estimated special benefit to be received by each lot or parcel from the improvements, namely the maintenance and servicing of public landscaping, lighting and park facilities within such District. The maintenance and servicing of public landscaping, lighting and park facilities installed and constructed in public places in the City provides a special benefit which is received by parcels within the specified zones of benefit in the District. Landscaping within the District enhances the aesthetic appeal of parcels within the landscaping zones. Such landscaping improves erosion resistance and dust control. Street lights improve ingress and egress from lots or parcels by illuminating access after sunset. Such street lights, by so improving ingress and egress, improve the security of such lots or parcels by improving the nighttime visibility of such lots or parcels and improve the access of emergency vehicles thereto and in the case of commercial lots or parcels, facilitate the opening and operation of business uses after sunset.

The primary benefits of landscaping are set forth below:

1. Improved aesthetic appeal of nearby parcels.
2. Green space within the urban environment.
3. Enhances wind breaks.
4. Improved erosion resistance.
5. Improved dust control.
6. Tends to instill a sense of pride within the neighborhood.

The primary benefits of municipal parks are as set forth below:

1. Designated sites where children may gather to play without danger from traffic.
2. Designated sites where adult, youth and family activities can take place (i.e., picnics, baseball and softball leagues, soccer leagues, other athletic activities, art festivals, animal shows, and training, etc.)
3. Green space and open space within the urban environment.
4. Availability of public restrooms.

The primary benefits of street lighting are set forth below:

1. Improvement to traffic circulation and reduction in nighttime accidents and attendant human misery and decrease in personal property loss.
2. The deterrence of crime and aid to police protection.
3. Promotion of business during nighttime hours.
4. Increased nighttime safety on roads and highways.

5. The improved ability of pedestrians and motorists to see, which helps people safely find their way.
6. Improved ingress and egress to lots and parcels.
7. Reduction in vandalism and other criminal acts, and reduced damage to improvements.

5.2 Zones of Benefit

The 1972 Act provides for areas within a district to be classified into different zones of benefit. The District is divided into separate zones and sub-zones for funding landscaping, lighting and park improvements. The various zones and sub-zones are delineated on the Assessment Diagram on file in the office of the City Clerk.

5.2.1 LANDSCAPING ZONES

Landscaping is divided into three (3) benefit sub-zones. These sub-zones are labeled A-1, A-2 and A-3 and are comprised of the areas described below:

Landscape Zone Descriptions:

1. Subzone A-1: All parcels in the fully inhabited areas of the City approximately bounded by the San Jacinto River, the southerly City Limit, the northerly prolongation of Pine Avenue, De Anza Drive, the San Diego Aqueduct, and the northerly City Limit to the San Jacinto River; with the exception of Subzones A-2 and A-3; and excluding parcels in Landscaping, Lighting and Park District No. 2.
2. Subzone A-2: All parcels in the Soboba Springs (Village IV) Tract.
3. Subzone A-3: All parcels in the Rancho San Jacinto area that are not in Landscaping, Lighting and Park District No. 2.

5.2.2 STREET LIGHTING ZONES

Street lighting is divided into two (2) benefit zones. These zones are labeled Zone B (lighted areas) and Zone C (non-lit outlying areas) and are comprised of the areas described below:

Street Lighting Zone Descriptions:

1. Zone B: Those parcels within the boundary of the District that have street lights installed within close proximity or that are surrounded by areas that have street lights.
2. Zone C: Those parcels within the boundary of the District that have no street lights within a reasonable distance. These parcels are primarily in outlying areas with little or no population.

5.2.3 PARKS ZONE

Parks are comprised of a single citywide benefit zone designated Zone D and as described below:

Parks Zone Description:

1. Zone D: All parcels within the District that are included in existing residential uses (including apartments, condominiums, PUD's, mobile home parks, recreational vehicle parks, etc.);

commercial/industrial uses; and churches/fraternal organizations; and are included in petitions signed when they were developed. No vacant parcels are included.

5.3 Assessment Formula

The formula used to calculate the amount spread to all parcels within the District for landscaping, street lighting, and parks starts with the basic assessment unit ("AU"). The basic AU is given a value of one (1) for a single-family residential parcel. From this base, the remaining parcels are related according to their equivalent benefit within each benefit zone or sub-zone. Zone A parcels are assessed for landscaping separately in three (3) sub-zones. Zone B parcels are assessed for street lighting and Zone C parcels are not assessed for street lighting. Zone D residential and commercial/industrial parcels containing dwelling units or business establishments are assessed for municipal parks.

Vacant parcels (agricultural, residential or commercial/industrial) are assigned 0.5 AU for landscaping and street lighting because they have a partial benefit due to the overall enhancement of the area and to the increase in accessibility from the installation and/or maintenance and servicing of said public improvements. Vacant parcels are not assessed for park maintenance.

Commercial/industrial and public utility parcels are assigned 3.0 AU per acre (1.0 AU minimum, 10.0 AU maximum) for landscaping, street lighting, and parks based upon the fact that one acre of commercial/industrial property is the equivalent of three single-family residences.

Small residences (less than 1,000 square feet and/or less than 50 feet of frontage) (Riverside County Land Use Code "RS") are assessed at a rate of 0.7 AU for landscaping and 1.0 AU for all other improvements due to smaller frontages relative to landscaping, but have the same benefit as other single-family residences from street lights and park maintenance.

Condominiums and PUD's are assigned 0.9 AU for each type of maintenance because, although these units have most of the characteristics of a single-family residence, they generally are somewhat smaller and have common areas and homeowner associations.

Apartments and common unit condominiums are assigned 0.6 AU per apartment unit for landscape maintenance and 0.8 AU for each of the other types of indicated public improvement because apartment units are typically smaller than a single-family residence.

Mobile homes are assigned 0.5 AU per mobile home unit for landscaping and 0.7 AU for street lighting and parks because these units are generally smaller than a single-family residence or condominium.

Recreational vehicle (RV) parks (own or rental) are assigned 0.3 AU for landscape maintenance and 0.7 AU for street lighting and parks for the same reasons cited for mobile homes, except that RV parks often have high vacancies, especially during the summer months.

Railroad parcels are assessed 0.5 AU per acre (1.0 AU minimum, 5.0 AU maximum) for street lighting only because street lighting causes a reduction in vandalism on railroad property and increases safety at railroad crossings, but receives less benefit than does a single-family residence because of the reduced activity on railroad tracks.

Churches and fraternal organizations are assigned 0.5 AU per acre (1.0 AU minimum, 4.0 AU maximum) for each type of indicated public improvement because these parcels obtain benefit from each type of improvement, but at a reduced rate due to the periodic use of the property.

Assessments by zone, if applicable, are additive. As the land use on any specific parcel changes from one fiscal year to the next, the applicable assessment rate shall also change to reflect the change in land use.

6. ASSESSMENT UNIT ("AU") METHOD

The following table shows the assessment formula using the AU method for the most common County land use codes.

CITY OF SAN JACINTO LANDSCAPING, LIGHTING AND PARK DISTRICT NO. 1 ASSESSMENT FORMULA USING ASSESSMENT UNIT (AU) METHOD

ASSESSMENT FORMULA USING ASSESSMENT UNIT (AU) METHOD
(Continued)

Notes:

1. Zone C is not assessed.
2. Public Utilities include gas, electricity, telephone, cable TV, etc. Public utility parcels are assessed in the same manner as commercial property because public utilities are “for profit” enterprises.
3. The fraternal organization category includes such organizations as the Elks Lodge, Moose Lodge, IOOF, Order of Eagles, Mason's, Women's Clubs, etc.
4. Public property includes that property that is exempt from assessment including property owned by the City, County, State, Federal Government, water districts and other special districts.

7. BOUNDARIES AND ASSESSMENT DIAGRAM

The boundaries of the District are completely within the City limits as shown on the maps on file with the City. The map below is for illustration purposes only. The boundary map and assessor's maps serve as the assessment diagram for the District. The lines and dimensions shown on the maps of the County Assessor for the current year are incorporated by reference herein and made part of this report. All parcels of real property included within the District are described in detail on the assessor's maps.

Parcels within Landscaping, Lighting and Park District No. 2, an assessment district formed in April 2002 and subsequent annexations thereto, that are within the boundaries of the District are not levied the District assessments.

8. ASSESSMENT ROLL

The assessment roll is provided on the following pages. The description of each lot or parcel as part of the records of the County Assessor are by reference made part of this report.

Parcel listing currently available with City Clerk or on City website upon adoption

TO:	City Council
REQUESTED BY:	Kimberly Ganimian, Finance Director
APPROVED BY:	Robert A. Johnson, City Manager
SUBJECT:	Annual Proceedings for Landscaping, Lighting and Park District No. 2 (LLPD No. 2) – Initiation and Intent to Levy Assessments for FY 2026–2027

RECOMMENDATION:

Staff recommends that the City Council take the following actions:

1. **Adopt Resolution 4127** to initiate proceedings and direct the Assessment District Engineer to prepare and file the Engineer's Report for LLPD No. 2 for FY 2026–2027, pursuant to Streets and Highways Code §22622.

2. **Adopt Resolution 4128** to accept the Engineer's Report, declare the City's intent to levy and collect assessments for FY 2026–2027, and set June 16, 2026, as the date of the public hearing.

DISCUSSION:

LLPD No. 2 consists of the original district area and approximately 91 annexation zones, totaling nearly 6,000 parcels. Annual proceedings are required under the Landscape and Lighting Act of 1972, including initiation of the levy process, preparation of the Engineer's Report, and setting a public hearing.

The Resolution of Initiation begins the FY 2026–2027 process and authorizes preparation of the Engineer's Report. The Resolution of Intent accepts that report and sets the public hearing date. LLPD No. 2 is a post-Proposition 218 district; its maximum assessment may increase annually by CPI (up to 7.5%), though actual levies are based on the cost of maintaining district improvements. New zones may require temporary reserves or operating advances until assessment revenues are received.

These actions are required to continue the annual levy and ensure the District can fund its maintenance obligations.

FISCAL IMPACT:

There is no fiscal impact associated with adoption of the Resolution of Initiation or the Resolution of Intent. These actions begin the annual assessment process and set the public hearing date. Failure to adopt the required resolutions would prevent the City from collecting LLPD No. 2 assessments, requiring the General Fund to cover all district costs.

RESOLUTION NO. 4127

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF SAN JACINTO, CALIFORNIA, INITIATING PROCEEDINGS PURSUANT TO THE LANDSCAPE AND LIGHTING ACT OF 1972 FOR THE LEVY AND COLLECTION OF THE ANNUAL ASSESSMENTS AND ORDERING THE DISTRICT'S ENGINEER TO PREPARE AND TO FILE A REPORT RELATED TO MAINTENANCE OF PUBLIC IMPROVEMENTS IN THE CITY OF SAN JACINTO LANDSCAPING, LIGHTING AND PARK DISTRICT NO. 2, AND ANY ASSESSMENT THEREON FOR FISCAL YEAR 2026-2027

WHEREAS, heretofore the City of San Jacinto Landscaping, Lighting and Park District No. 2 (LLPD No. 2) was created pursuant to Part 2 of Division 15 of the California Streets and Highways Code (§22500, et. seq.); and

WHEREAS, California Streets and Highways Code §22622 provides that this Council shall adopt a resolution generally describing any proposed new improvements or substantial changes in existing improvements in such a district and ordering the District's Engineer to prepare and file a report related to annual maintenance and assessment in such a district; and

WHEREAS, no new improvements or substantial changes in existing improvements are proposed for said LLPD No. 2; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, BE IT RESOLVED, determined, and ordered by the City Council of the City of San Jacinto, as follows:

Section 1: The recitals, as set forth in this Resolution, are in all respects true and correct.

Section 2: The City Engineer, or designated District Engineer, hereby is ordered and directed to prepare an annual report as specified in California Streets and Highways Code §§22565, et. seq., with respect to LLPD No. 2 for Fiscal Year 2026-2027.

Section 3: The City Clerk shall certify to the adoption of this Resolution.

RESOLUTION NO. 4128

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF SAN JACINTO, CALIFORNIA, DECLARING ITS INTENT TO LEVY AND COLLECT ASSESSMENTS WITHIN LANDSCAPING, LIGHTING AND PARK DISTRICT NO. 2, ACCEPTING THE ENGINEER'S REPORT AND GIVING NOTICE OF AND SETTING THE TIME AND PLACE OF THE HEARING ON THE LEVY OF THE PROPOSED ASSESSMENT FOR FISCAL YEAR 2026-2027

WHEREAS, on April 4, 2002 the City Council of the City of San Jacinto, (the "City") adopted Landscaping, Lighting and Park District No. 2 (the "District") pursuant to the Landscaping and Lighting Act of 1972, Part 2 of Division 15 of the Streets and Highways Code (the "Act"), for the maintenance and servicing of street lights, traffic signals, street trees, landscaping, parkways, median islands, drainage facilities, parks and appurtenant improvements; and

WHEREAS, in November 1996 the voters of the State of California passed Proposition 218 which added Articles XIIIC and XIIID to the California Constitution requiring, among other things, new procedures for the approval of the levying of assessments against real property; and

WHEREAS, Article XIIID of the California Constitution requires that assessments comply with stated procedural and approval provisions by July 1, 1997, unless an assessment district meets certain exemptions as set forth in Section 5 of the Article which exemptions include the following:

> "(a) any assessment imposed exclusively to finance the capital costs or maintenance and operation expenses for sidewalks, streets, sewers, water, flood control, drainage system or vector control."
>
> "(b) any assessment imposed pursuant to a petition signed by the persons owning all of the parcels subject to the assessment at the time the assessment is initially imposed;" and

WHEREAS, the District assessments proposed for Fiscal Year 2026-2027 are exempt from Proposition 218 because the assessments either generate revenue for the operation and maintenance of streets and highways, all expenditures thereunder qualifying as street maintenance as defined by the State of California or they were approved by petition of the property owners when the assessments were originally imposed; and

WHEREAS, no new improvements or substantial changes in existing improvements are proposed for said District; and

WHEREAS, the Act also requires that the City comply with certain procedural and approval procedures before levying its annual assessments under an existing assessment district; and

WHEREAS, the adoption of this Resolution, among other things, is required in order to levy the proposed assessments for Fiscal Year 2026-2027 for the District; and

WHEREAS, by said Resolution the City Council ordered NBS as the person and entity designated by this Council as the Engineer of Work for the District to file a report with the City Clerk in accordance with the Act; and

WHEREAS, NBS has filed such report with the City Clerk, and such report has been presented to and was considered by the City Council.

NOW THEREFORE, BE IT RESOLVED, determined, and ordered by the City Council of the City of San Jacinto, California as follows:

SECTION 1. The City Council hereby declares that it is its Intent to levy and collect assessments for the District during the Fiscal Year 2026-2027 pursuant to the Act. The area to be assessed is located in the City of San Jacinto, Riverside County, California. The boundaries of the District are described in the report on file with the City Clerk.

SECTION 2. The purpose of the District is for maintenance and servicing of street lights, traffic signals, street trees, landscaping, parkways, median islands, drainage facilities, parks and appurtenant improvements.

SECTION 3. The report prepared by NBS, which is on file with the City Clerk, and which has been considered by the City Council at the meeting at which this Resolution has been adopted, is hereby accepted. All interested persons are referred to said report for a full and detailed description of the work, the boundaries of the proposed assessment district, and the proposed assessments upon assessable lots and parcels of land with the District.

SECTION 4. The Fiscal Year 2026-2027 assessments in each benefit zone within the District are within the limits approved by petition of the property owners when the assessments were originally imposed.

SECTION 5. The City Council hereby declares that the Finance Director has authorization to adjust the District budget in the property tax lien year assessed to the amount authorized in the levy up to the maximum assessment. The Finance Director shall process budget adjustments within each zone to reflect the actual costs anticipated in each zone of benefit as assessed on the levy up to the maximum assessment.

SECTION 6. On Tuesday, June 16, 2026, at the hour of 6:30 p.m. or as soon thereafter, during the course of its regularly scheduled meeting, the City Council will conduct a public hearing on the question of the levy of the proposed annual assessment. The hearing will be held at the San Jacinto Community Center, 625 S. Pico Avenue, San Jacinto, CA 92583.

SECTION 7. The City Clerk shall give notice of the time and place of said hearing by publishing a copy of this Resolution once in the Press Enterprise not less than ten (10) days before the date of the hearing.

SECTION 8. This Resolution is adopted pursuant to Section 22622 of the Streets and Highways Code.

1. ENGINEER'S LETTER

WHEREAS, the City Council of the City of San Jacinto (the "City"), State of California, directed NBS Government Finance Group, (DBA "NBS"), to prepare and file a report presenting plans and specifications describing the general nature, location, and extent of the improvements to be maintained and an estimate of the costs of the maintenance, operations, and servicing of the improvements for the City of San Jacinto Landscaping, Lighting and Park District No. 2 (the "District") for Fiscal Year 2026/27.

WHEREAS, NBS has prepared this report which includes a diagram for the District, showing the area and properties proposed to be assessed, an assessment of the estimated costs of the maintenance, operations and servicing of the improvements, and the net amount to be assessed upon all assessable lots and/or parcels within the District in proportion to the special benefit received;

WHEREAS, the assessment rates and the annual rate escalation factor of the Riverside-San Bernardino-Ontario area for all urban consumers CPI (not to exceed 7.5%) were approved by property owners through the assessment balloting procedures set forth in Article XIII D Section 4 of the California Constitution (Proposition 218).

NOW THEREFORE, the assessments detailed in this Engineer's Report (the "Report") and as summarized in the table below are made to cover the portion of the estimated costs of maintenance, operation and servicing of the improvements to be paid by the assessable real property within the District in proportion to the special benefit received.

Description	Maximum Amount	Actual Amount (1)
Street Light and Traffic Signal Maintenance Levy	$888,942.21	$627,531.79
Park Maintenance Levy	3,163,036.32	2,350,629.26
Landscape Maintenance Levy	1,374,232.39	890,609.93
Storm Drain Levy	2,405,631.66	1,793,855.97
Detention Basin Levy	0.00	0.00
Graffiti Removal Levy	591,612.43	359,290.74
Sidewalk Maintenance Levy	6,998.26	1,259.01
Adjustment Rounding	0.00	(201.76)
Total	**$8,430,453.27**	**$6,022,974.94**

(1) The 2026/27 Actual Amount may differ slightly from the Assessment Roll and final applied levy amounts due to rounding.

I, the undersigned, respectfully submit the enclosed Engineer's Report and, to the best of my knowledge, information and belief, the Engineer's Report and assessments herein have been prepared and computed in accordance with the Assessment Law.

By: _____

John G. Egan
Assessment Engineer
R.C.E. 14853

2. OVERVIEW

2.1 Introduction

The Report describes the District and the charge per Assessment Unit (AU) for Fiscal Year 2026/27 based on the historical and estimated cost to maintain the improvements and provide the services that benefit parcels within the District. This District, by special benefit assessments, provides funding for the installation, operation, maintenance, and servicing of: streetlights and traffic signals; landscaped areas (parkways, medians, open space, detention/retention basins, etc.); municipal parks; drainage facilities; graffiti removal from horizontal and vertical surfaces which are appurtenant to the above items; all of which are located in public rights-of-way or easements in the District. The District is divided into multiple zones to allow the assessments to properly match the special benefits provided by the improvements to the assessed parcels within the District.

The word "parcel," for the purposes of this Report, refers to an individual property assigned its own assessor's property identification number by the Riverside County Assessor's Office. The Riverside County Auditor/Controller uses assessor's property identification numbers and specific fund numbers to identify on the tax roll properties assessed for special district benefit assessments.

Following consideration of public comments at a noticed public hearing and review of this Report, the City Council may confirm this Report as submitted and order the levy and collection of assessments for Fiscal Year 2026/27. If approved, the assessment information will be submitted to the County Auditor/Controller and included on the property tax roll for each benefiting parcel for Fiscal Year 2026/27.

3. PLANS AND SPECIFICATIONS FOR THE IMPROVEMENTS

Plans and specifications for the improvements have been prepared and approved as part of the improvement plans. These plans and specifications are on file and available for review at the office of the City Clerk and, by reference, have been made part of this Report.

The City Council in the Resolutions of Initiation and Intent for Fiscal Year 2014/15, in accordance with the Streets and Highways Code Section 22622, added a flood control basin to the improvements maintained in Zone 38 (Coventry Acres). The flood control basin is composed of lots 1 through 12, inclusive, and lots 78 through 83, inclusive, of Tract Number 31097, in the City of San Jacinto, County of Riverside, State of California, as per map recorded in Book 398 pages 94 through 103, inclusive, of maps, in the Office of the Riverside County Recorder. The lots that compose the flood control basin are also known as assessor's property identification numbers 434-520-001-9 through 434-520-012-9, inclusive, and 434-522-001-5 through 434-522-006-0, inclusive. The addition of the flood control basin to the improvements maintained by Zone 38 will not result in an increase to the annual maximum assessment as increased by the annual inflator, approved by the property owners, and assessable on real property within the boundaries of Zone 38. The flood control basin is necessary to protect the Tract and Zone improvements from flooding until other flood control measures are in place.

In Fiscal Year 2017/18, the authorized improvements for Zone 7 (Tesoro) included the repair of curbs, gutters, and sidewalks located within the boundaries of the District. These improvements and services are anticipated to be included in future years. The inclusion of these improvements maintained by Zone 7 will not result in an increase of the annual maximum assessment allowed.

4. SUMMARY OF ESTIMATE OF COSTS

The following table is a summary of the Fiscal Year 2026/27 estimate of costs.

Zone	2026/27 Levy Amount	2026/27 Maximum Rate	2026/27 Actual Rate	% of Maximum [1]
Zone 1 (Sagecrest)	$233,061.36	$929.66	$929.66	100%

(1) Percentages are approximate.

(2) The actual rate is greater than the 2026/27 levy amount due to the total AU being less than one AU.

5. ESTIMATE OF COSTS

The following pages provide an estimate of the costs of the improvements for Fiscal Year 2026/27 for each zone, to include the maximum amounts and actual amounts that will be levied. The City determines the percentage of the maximum amount to be levied in each zone based on the District's budget. These costs can include a reserve fund to cover a six-month portion of maintenance and servicing costs as well as an amount of surplus or deficit in the improvement fund from a previous fiscal year.

6. METHOD OF APPORTIONMENT

6.1 Method of Apportionment

The net amount to be assessed upon parcels within the District is apportioned by a formula and method designed to fairly distribute such amount among all assessable lots or parcels in proportion to the estimated special benefit to be received by each lot or parcel from the improvements within the District. The maintenance and servicing of public landscaping, lighting, park facilities and street trees installed and constructed in public places in the City provides a special benefit which is received by each and every lot or parcel within the specified zones of benefit in the District. Landscaping and street trees within the District enhance the aesthetic appeal of parcels within the landscaping and street tree zones. Such landscaping improves erosion resistance and dust control. Street lights improve ingress and egress of such lots or parcels by illuminating access after sunset. Such street lights, by so improving ingress and egress, improve the security of such lots or parcels by improving the nighttime visibility of such lots or parcels and improve the access of emergency vehicles thereto, and in the case of commercial lots or parcels, facilitate the opening and operation of business uses after sunset.

The primary benefits of landscaping and street trees are as set forth below.

1. Improved aesthetic appeal of nearby parcels.
2. Green space within the urban environment.
3. Enhances wind breaks.
4. Improved erosion resistance.
5. Improved dust control.
6. Tends to instill a sense of pride within the neighborhood.
7. The enhancement of the value of property which results from the foregoing benefits.

The primary benefits of municipal parks are as set forth below.

1. Designated sites where children may gather to play without danger from traffic.
2. Designated sites where adult, youth and family activities can take place (i.e., picnics, baseball and softball leagues, soccer leagues, other athletic activities, art festivals, animal shows and training, etc.)
3. Green space and open space within the urban environment.
4. Availability of public restrooms.
5. The enhancement of the value of property which results from the foregoing benefits.

The primary benefits of street lighting are set forth below:

1. Improvement to traffic circulation and reduction in nighttime accidents and attendant human misery and decrease in personal property loss.
2. The deterrence of crime and the aid to police protection.
3. Promotion of business during nighttime hours.
4. Increased nighttime safety on roads and highways.
5. The improved ability of pedestrians and motorists to see, which helps people safely find their way.
6. Improved ingress and egress to lots and parcels.
7. Reduction in vandalism and other criminal acts, and reduced damage to improvements.
8. The enhancement to the value of property which results from the foregoing benefits.

6.2 Assessment Formula

The basic formula used to calculate the amount spread to each lot or parcel within the District for each type of improvement or facility starts with an AU. The basic AU is given a value of one (1) for a single-family residential parcel. From this base, the remaining land use types are related according to their equivalent special benefit within a zone or future annexation. The purpose of this formula is to fairly equate special benefit conferred on property with differing land uses for each type of improvement or facility within a zone (e.g., single-family residential versus commercial office versus vacant property, for street lighting).

6.3 Assessment Unit Method

The following table shows the assessment formula using the AU method for common land uses:

Land Use	Landscaping Assessment Formula	Lighting Assessment Formula	Park Assessment Formula	Graffiti Removal	Drainage Assessment Formula
Residential Single Family	1.0 AU per Residential Unit	1.0 AU per Residential Unit	1.0 AU per Residential Unit	1.0 AU per Residential Unit	1.0 AU per Residential Unit
Commercial/ Industrial	3.0 AU per Assessable Acre	3.0 AU per Assessable Acre	3.0 AU per Assessable Acre	3.0 AU per Assessable Acre	3.0 AU per Assessable Acre
Apartments	0.6 AU per Parcel	0.6 AU per Parcel	0.6 AU per Parcel	0.6 AU per Parcel	0.6 AU per Parcel
Public Schools	0.0 AU per Parcel	0.5 AU per Assessable Acre	0.0 AU per Parcel	0.5 AU per Assessable Acre	0.5 AU per Assessable Acre
Churches	0.5 AU per Assessable Acre	0.5 AU per Assessable Acre	0.5 AU per Assessable Acre	0.5 AU per Assessable Acre	0.5 AU per Assessable Acre

6.4 Consumer Price Index (CPI) Inflation

The original assessment formula states that the maximum assessments will be increased annually based on the change in the Los Angeles-Riverside-Orange County CPI as of January published by the United States Department of Labor, Bureau of Labor Statistics; provided, however, that any annual increase shall not exceed seven and one-half percent (7.5%).

In January 2018, the Bureau of Labor Statistics (BLS) updated their geographic areas for computing CPI. Previously, the Los Angeles-Riverside-Orange County index was made up of Los Angeles, Orange, Riverside, San Bernardino, and Ventura counties. The BLS divided this index into two areas; one that represents Los Angeles and Orange counties (Los Angeles-Long Beach-Anaheim) and another that represents Riverside and San Bernardino counties (Riverside-San Bernardino-Ontario).

On June 19, 2018 a resolution was adopted by the City determining that the CPI to be used for future calculation of the maximum assessments is the Riverside-San Bernardino-Ontario Index beginning with the Fiscal Year 2019/20 calculation.

7. ASSESSMENT DIAGRAM

The assessment diagrams for each zone have been prepared in accordance with the Landscaping and Lighting Act of 1972 and are on file with the City. The lines and dimensions shown on maps of the County Assessor for the current year are incorporated by reference herein and made part of this report. All parcels of real property included within the District are described in detail on the assessor's maps.

8. ASSESSMENT ROLL

A listing of assessor's parcels subject to the assessments for Fiscal Year 2026/27, along with the assessment amounts, is on file in the office of the City Clerk and incorporated herein by reference. Based on County Assessor's secured roll data, current assessor's parcels, including corrected and/or new assessor's parcels, will be submitted and/or resubmitted to the County Auditor/Controller. The annual assessment amount to be levied and collected for the resubmitted parcel(s) shall be determined in accordance with the method of apportionment and assessment rate approved in this report. Therefore, if a single assessor's parcel has a status change in development, other land use change, or subdivides into multiple assessor's parcels, the charge amounts applied to each of the new assessor's parcels shall be recalculated and applied according to the approved method outlined in the method of apportionment and assessment rate rather than a proportionate share of the original assessment amount

Parcel listing currently available with City Clerk or on City website upon adoption

June 2, 2026

TO:	City Council
REQUESTED BY:	Stuart McKibbin
APPROVED BY:	Robert A. Johnson, City Manager
SUBJECT:	The Thomsen Company, Inc. Professional Services Agreement EWA 13 for San Jacinto MDP Line E-2 Storm Drain Improvement Project (CIP# 15-003)

RECOMMENDATION:

Staff recommends the City Council take the following actions:

1. **APPROVE** the professional services agreement to The Thomsen Company, Inc. for the sum of $19,675;
2. **AUTHORIZE** the City Manager to execute the professional services agreement.

BACKGROUND:

The City of San Jacinto has been planning and designing storm drain improvements along State Street from Menlo Avenue to the Line E channel south of 9th Street (Line E-2 Storm Drain Improvements). Line E-2 Storm Drain Improvements will consist of an underground storm drain ranging in pipe diameter from 30 to 72 inches. The planning and design involve coordination with the City of Hemet and all utility purveyors as major utility conflicts have been identified. A tri-party funding agreement has been executed with Riverside County Flood Control and Water Conservation District (RCFCD).

During the design of the storm drain improvements, it was discovered that some Southern California Edison (SCE) and SoCalGas utility lines are in conflict with the proposed storm drain system. The City is working with SCE and SoCalGas to resolve the conflicts by having the the utility purveyors relocate the utility lines in conflict. In order to understand the existing conflicts and the potential solutions, the City will need to pothole the utility lines believed to be in conflict and provide the data to the utility purveyors. SCE and SoCalGas will be responsible for providing the payment and labor for relocating the utility lines in conflict.

DISCUSSION:

The Thomsen Company, Inc. has previously provided the City with professional services consisting of topographical surveying and utility potholing for Line E-2 Storm Drain Improvements. Therefore, The Thomsen Company, Inc. already has much of the relevant data for Line E-2 Storm Drain Improvements and is familiar with the existing conditions and the end goal of the project.

Timeliness is an important factor for Line E-2 Storm Drain Improvements. Therefore, considering The Thomsen Company Inc.'s familiarity with the project, a sole source proposal from The Thomsen Company, Inc. is justified given the circumstances. However, as the cumulative total of the individual service agreements exceeds $100,000 the City's procurement policy requires Council approval.

City staff recommends the City Council award the professional services agreement to The Thomsen Company, Inc. for the sum of $19,675.

FISCAL IMPACT:

RCFCD has agreed to reimburse the City only for the construction of Line E-2 Storm Drain Improvements. There will be no impact to the General Fund. Project #15-003 has $4,631,017 remaining from Fund 039 (Flood Control) and Fund 141 (DIF: Streets).

CITY OF SAN JACINTO
PROFESSIONAL SERVICES AGREEMENT
San Jacinto MDP Line E-2 Storm Drain Improvement

1. **Parties and Date.** This Agreement is made and entered into this 20th day of May, 2026, by and between the City of San Jacinto, a municipal corporation, organized under the laws of the State of California, with its principal place of business at 595 South San Jacinto Avenue, San Jacinto, California 92583 ("City") and he Thomsen Company, Inc., a California corporation**,** with its principal place of business at 2587 S. San Jacinto Ave, San Jacinto, CA 92583, ("Vendor"). City and Vendor are sometimes individually referred to herein as "Party" and collectively as "Parties."

2. **Terms and Conditions.** The Parties shall comply with the Terms and Conditions attached hereto as Exhibit "A" and incorporated herein by this reference.

3. **Scope of Services; Schedule.** Vendor shall be solely responsible for providing all materials, labor, tools, equipment, water, light, power, transportation, and superintendence of every nature and all other services and all facilities necessary to execute, complete, and deliver the services as particularly described in the Scope of Services ("Services") attached hereto as Exhibit "B" and incorporated herein by this reference for the City's San Jacinto MDP Line E-2 Storm Drain Improvement. The Services shall be completed timely and in accordance with the Schedule of Services set forth in Exhibit "B".

4. **Term.** The term of this Agreement shall be from the Execution Date to December 31, 2027, unless earlier terminated as provided herein.

5. **Compensation.** Vendor shall receive compensation for Services rendered under this Agreement at the rates set forth in Exhibit "B" attached hereto and incorporated herein by this reference. The total compensation shall not exceed Nineteen Thousand Six Hundred Seventy Five Dollars ($19,675) ("Agreement Price"). Vendor's invoices shall include a detailed description of the Services performed. Invoices shall be submitted to City on a monthly basis. City shall review and pay all non-disputed and approved charges on such invoices in a timely manner. Vendor shall submit its final invoice to City within thirty (30) days from the last date of Services performed and failure to do so shall result in a waiver of payment from City.

6. **Insurance.** In accordance with Section 3 of the Terms and Conditions, Vendor shall, at its expense, procure and maintain for the duration of the Agreement such insurance policies as checked below and provide proof of such insurance policies in a form satisfactory to City.

Commercial General Liability Insurance:

☒ $1,000,000 per occurrence/$2,000,000 aggregate for bodily injury, personal injury, and property damage

Automobile Liability:

☒ $1,000,000 per occurrence for bodily injury and property damage.

Workers' Compensation:

☒ Statutory Limits / Employer's Liability $1,000,000 per occurrence

Professional Liability (Errors and Omissions):

☒ Errors & Omissions liability insurance $1,000,000 per claim and in the aggregate.

SIGNATURE PAGE TO SHORT FORM SERVICES AGREEMENT BY AND BETWEEN THE CITY OF SAN JACINTO AND THE THOMSEN COMPANY, INC.

IN WITNESS WHEREOF, the Parties hereto have executed this Agreement as of the date first written above.

TERMS AND CONDITIONS FOR SERVICES

1. Compliance with Law. Vendor shall comply with all applicable laws and regulations of the federal, state and local government. Vendor certifies that it fully complies with all requirements and restrictions of state and federal law respecting the employment of undocumented aliens, including, but not limited to, the Immigration Reform and Control Act of 1986, as may be amended from time to time. By its signature hereunder, Vendor certifies that it is aware of the provisions of Section 3700 of the California Labor Code which require every employer to be insured against liability for Workers' Compensation or to undertake self-insurance in accordance with the provisions of that Code, and agrees to comply with such provisions before commencing the performance of the Services. Vendor represents that it is an equal opportunity employer and it shall not discriminate against any subcontractor, employee or applicant for employment in violation of state or federal law. Vendor is aware of the requirements of California Labor Code Sections 1720 et seq. and 1770 et seq. ("Prevailing Wage Laws"), which require the payment of prevailing wage rates and the performance of other requirements on certain "public works" and "maintenance" projects. If the work is being performed as part of an applicable "public works" or "maintenance" project, as defined by the Prevailing Wage Laws, and if the total compensation is $1,000, Vendor agrees to fully comply with such Prevailing Wage Laws, including, along with subcontractors, being registered with the Department of Industrial Relations (Labor Code §§ 1725.1; 1771.1). It shall be mandatory upon the Vendor and all subcontractors to comply with all California Labor Code provisions, which include but are not limited to prevailing wages (Labor Code §§ 1771; 1774; 1775), employment of apprentices (Labor Code § 1777.5), certified payroll records (Labor Code §§ 1771.4; 1776), hours of labor (Labor Code §§ 1813; 1815) and debarment of contractors and subcontractors (Labor Code § 1777.1). This Agreement may be subject to compliance monitoring and enforcement.

2. Standard of Care. The Vendor shall perform the Services in accordance with generally accepted professional practices and principles and in a manner consistent with the level of care and skill ordinarily exercised by members of the profession practicing under similar conditions.

3. Insurance. If required by Section 6 of this Agreement, the Vendor shall take out and maintain during this Agreement: A. Commercial General Liability Insurance for bodily injury, personal injury and property damage, at least as broad as Insurance Services Office Commercial General Liability coverage (Occurrence Form CG 0001); B. Automobile Liability Insurance for bodily injury and property damage including coverage for owned, non-owned and hired vehicles, at least as broad as Insurance Services Office Form Number CA 0001 (ed. 10/13) covering automobile liability, Code 1 (any auto); C. Workers' Compensation; D. Professional Liability (Errors and Omissions) coverage for a term acceptable to the City. Insurance carriers shall be licensed and authorized to do business in California. Such insurance carrier shall have not less than an "A:VII" rating according to the latest Best Key Rating unless otherwise approved by City. Vendor shall add City, its officers, officials, employees, agents, and volunteers as additional insureds on Vendor's Commercial General Liability and Automobile Liability. Coverage provided by Vendor shall be primary and any insurance or self-insurance procured or maintained by City shall not be required to contribute with it. All required insurance coverages, except for the professional liability coverage, shall contain or be endorsed to waiver of subrogation in favor of the City, its officials, officers, employees, agents, and volunteers or shall specifically allow Vendor or others providing insurance evidence in compliance with these specifications to waive their right of recovery prior to a loss. Vendor hereby waives its own right of recovery against City, and shall require similar written express waivers and insurance clauses from each of its subconsultants.

4. Indemnification. To the fullest extent permitted by law, Vendor shall defend (with counsel of City's choosing), indemnify and hold the City, its officials, officers, employees, volunteers, and agents free and harmless from any and all claims, demands, causes of action, costs, expenses, liability, loss, damage or injury of any kind, in law or equity, to property or persons, including wrongful death (collectively, "Claims"), in any manner arising out of, pertaining to, or incident to any acts, errors or omissions, or willful misconduct of Vendor, its officials, officers, employees, subcontractors, consultants or agents in connection with the performance of the Vendor's Services, the project, or this Agreement, including without limitation the payment of all expert witness fees, attorney's fees and other related costs and expenses except such loss or damage which is caused by the sole negligence or willful misconduct of the City. Vendor's obligation to indemnify shall survive expiration or termination of this Agreement and shall not be restricted to insurance proceeds, if any, received by Vendor or the City, its officials, officers, employees, agents, or volunteers. If Vendor's obligation to defend, indemnify, and/or hold harmless arises out of Vendor's performance as a "design professional" (as that term is defined under Civil Code § 2782.8), then, and only to the extent required by Civil Code § 2782.8, which is fully incorporated herein, Vendor's indemnification obligation shall be limited to claims that arise out of, pertain to, or relate to the negligence, recklessness, or willful misconduct of the Vendor, and, upon Vendor obtaining a final adjudication by a court of competent jurisdiction, Vendor's liability for such claim, including the cost to defend, shall not exceed the Vendor's proportionate percentage of fault.

5. Laws; Venue. This Agreement shall be interpreted in accordance with the laws of the State of California. If any action is brought to interpret or enforce any term of this Agreement, the action shall be brought in a state or federal court situated in the County of Riverside, State of California.

6. Termination. The City may terminate the whole or any part of this Agreement for any or no reason by giving three (3) calendar days written notice to Vendor. In such event, City shall be immediately given title and possession to all original field notes, drawings and specifications, written reports and other documents produced or developed for the work. The City shall pay Vendor the reasonable value as determined by City of any portion of the Services completed prior to termination. The City shall not be liable for any costs other than the charges or portions thereof which are specified herein. Vendor shall not be entitled to payment for unperformed Services and shall not be entitled to damages or compensation for termination of the Services. Vendor may terminate its obligation to provide further work under this Agreement upon thirty (30) calendar days written notice to City only in the event of City's failure to perform in accordance with the terms of this Agreement through no fault of Vendor.

7. Changes. By written notice, City may from time to time, make changes to the Services furnished to City by Vendor. If such change causes an increase or decrease in the Agreement Price or in the time required for performance, Vendor or City shall promptly notify the other party thereof and assert its claim for adjustment within fifteen (15) days after the change is ordered, and an equitable adjustment shall be made. However, nothing in this clause shall excuse the Vendor from proceeding immediately with the Agreement as changed.

8. Force Majeure. The respective duties and obligations of the Parties hereunder shall be suspended while and so long as performance hereto is prevented or impeded by a Force Majeure Event. The Vendor will not receive an adjustment to the contract price or any other compensation. A Force Majeure Event shall mean an event that materially affects a party's performance and is one or more of the following: (1) Acts of God or other natural disasters occurring at the project site; (2) terrorism or other acts of a public enemy; (3) orders of governmental authorities (including, without limitation, unreasonable and unforeseeable delay in the issuance of permits or approvals by governmental authorities that are required for the work); (4) pandemics, epidemics or quarantine restrictions; and (5) strikes and other organized labor action occurring at the project site and the effects thereof on the work, only to the extent such strikes and other organized labor action are beyond the control of Vendor and its subcontractors, of every tier, and to the extent the effects thereof cannot be avoided by use of replacement workers. For purposes of this section, "orders of governmental authorities," includes ordinances, emergency proclamations and orders, rules to protect the public health, welfare and safety, and other actions of the City in its capacity as a municipal authority. Notwithstanding the foregoing, the City may still terminate this Agreement in accordance with Section 6.

9. Miscellaneous Terms. Vendor shall not assign, sublet, or transfer this Agreement or any rights under or interest in this Agreement without the written consent of the City. This Agreement may not be modified or altered except in writing signed by the Parties. There are no intended third party beneficiaries of any right or obligation of the Parties. This is an integrated Agreement representing the entire understanding of the Parties as to those matters contained herein, and supersedes and cancels any prior oral or written understanding or representations with respect to matters covered hereunder. Since the Parties or their agents have participated fully in the preparation of this Agreement, the language of this Agreement shall be construed simply, according to its fair meaning, and not strictly for or against any Party. The captions of the various paragraphs are for convenience and ease of reference only, and do not define, limit, augment, or describe the scope, content or intent of this Agreement. The unenforceability, invalidity or illegality of any provision(s) of this Agreement shall not render the other provisions unenforceable, invalid or illegal. Notice may be given or delivered by depositing the same in any United States Post Office, certified mail, return receipt requested, postage prepaid, addressed to the Parties to the addresses set forth in this Agreement. Vendor is retained as an independent contractor and is not an employee of the City. No employee or agent of Vendor shall become an employee of City. Vendor warrants that the individual who has signed this Agreement has the legal power, right and authority to make this Agreement and bind the Vendor hereto.

EXTRA WORK AUTHORIZATION NO. 13

DATE: May 6, 2026 **(REVISED 5-19-26)**

JOB NO.: 2022 - 008

CLIENT: CITY OF SAN JACINTO **(SJ-372)**

PROJECT: STATE ST. LINE E-2 STORM DRAIN

REQUESTED BY: MR. MOHANAD ALLAM, EIT

ACCOUNT NO.: 2022 – 008.013

This Extra Work Authorization **(EWA)** amends our original Agreement for Professional Services dated **May 8, 2022** and no additional work above or beyond said contract can be performed without an approved **Extra Work Authorization.**
All original Terms & Conditions of said Agreement shall remain in force as part of this EWA.

THE FOLLOWING EXTRA SERVICES HAVE BEEN REQUESTED FOR THE ADDITIONAL POT HOLES:

TASK 1- OFFICE CALCULATIONS: Conduct plan review and coordinate geometry calculations for pothole stake outs.

ESTIMATE (REDUCED) ..... $ 250.00

TASK 2- STAKE-OUT NEW GAS & SCE CROSSINGS:
Due to additional gas and SoCal Edison line crossing locations being requested, TCI shall stakeout the four (4) new locations requested by SoCal Gas and two (2) locations requested by (SCE). They are as follows:

- *Pothole #1= ¾-inch Gas service Noth of Station 14+50*
- *Pothole # 2= ½-inch Gas service South of Station 14+50*
- *Pothole #3= 8-inch Gas line at SD LAT 33 E/O State St. on Esplanade Ave.*
- *Pothole # 4=6-inch Gas line at SD LAT 33 @ 50' +/- E/O State St. on Esplanade Ave.*
- *Pothole # 5= SCE line at SD LAT 33 @ 50' +/- E/O State St. on Esplanade Ave.*
- *Pothole # 6= SCE line at SD LAT 34 @ 150'+/- E/O State St. on Esplanade Ave.*

ESTIMATE .....$ 1,120.00

TASK 3- UNDERGROUND UTILITY LOCATING: Our Consultant underground utility locators, ***ULTRA ENGINEERING CONTRACTORS, INC.***, has budgeted for the **six (6)** potholes to cover the points identified by the City Engineering Department.

The general scope for air/vacuuming excavation includes:

EXTRA WORK AUTHORIZATION NO. 13

- **Dig Alert-**Perform mark-outs & meetings and update Traffic Control Plans. **(Assumes existing permit can be used for this move-in)**

ESTIMATE ..... $ 3,280.00

- **Traffic Control-** Provide basic traffic control per **WATCH** Guidelines (Includes signs, cones, and 1 arrow board. No flaggers, message boards, etc. are included.)

ESTIMATE (for 1.5 days-REDUCED FROM 2 DAYS) $4,520.00

- **Potholing-** Includes Trucks with two technicians, equipment, excavation, documentation, and travel for **six (6)** potholes.

ESTIMATE (for 1.5 days-REDUCED FROM 2 DAYS) ..... $ 6,350.00

- **Pothole Repair-** Place "Rapid Set" concrete @ hole area only, no full panels replacement/curb replacement (Includes mix, pour, and broom finish for texture. Approx. 10 buckets of "**AquaPhalt"** for AC pavement holes. (No concrete repair is included)

ESTIMATE $1,200.00

TASK 4- SURVEY NEW POTHOLES: Per the City Project Engineer, our firm will use GPS survey equipment for this Task with an accepted standard vertical error of 0.10 of a foot. **There are six (6) potholes for this Task.**

ESTIMATE..... $ 1,120.00

TASK 5- COMPILE POTHOLE DATA: Download field survey data from the additional pothole survey and add the elevation data to the City CAD file drawing.

ESTIMATE..... $ 500.00

TASK 6- COORDINATION & MEETINGS: Attend virtual and telephone coordination meetings, as directed by City staff, to assist in on-going survey and design issues.

HOURLY (@ $175 Per hour for Principal – 2 hours are estimated-REDUCED FROM 4 HOURS) ..... $ 350.00

Ultra Engineering fuel sur-charge (2 rigs for 1.5 days) $615.00

In-House Reimbursables (survey supplies, mileage, etc.) $370.00

TOTAL ESTIMATE..... $ 19,675.00

CLIENT AUTHORIZATION:

IN ACCORDANCE WITH TITLE 16, CALIFORNIA CODE OF REGULATIONS, SECTION 463.5, NOTICE IS HEREBY GIVEN THAT THE PRINCIPALS OF THIS FIRM ARE CURRENTLY LICENSED BY THE CALIFORNIA BOARD FOR PROFESSIONAL ENGINEERS, LAND SURVEYORS AND GEOLOGISTS.

EXHIBIT "B"

THE THOMSEN COMPANY, INC.

June 2, 2026

TO:	City Council
REQUESTED BY:	Stuart McKibbin
APPROVED BY:	Robert A. Johnson, City Manager
SUBJECT:	Tri-Party Cooperative Agreement Between Riverside County Transportation Commission, County of Riverside, and City of San Jacinto for Ramona Expressway Reconstruction Project Between Warren Road and Sanderson Avenue (CIP# 26-007)

RECOMMENDATION:

Staff recommends the City Council take the following actions:

1. **APPROVE** as to form Cooperative Agreement No. 26-31-001-00;
2. **AUTHORIZE** the City Manager to execute the cooperative tri-party agreement between Riverside County Transportation Commission, County of Riverside, and the City of San Jacinto (Agreement No. 26-31-001-00) upon further review by City Attorney.

BACKGROUND:

The City of San Jacinto, County of Riverside, and Riverside County Transportation Commission (RCTC) have been planning the reconstruction of Ramona Expressway between Warren Road and Sanderson Avenue as the final phase of their Mid County Parkway construction projects. The reconstruction will consist of replacing asphalt and base to travel lanes that have not recently been rehabbed and provide a raised median while still allowing left hand turns into existing driveways. It is anticipated that there will be no right-of-way acquisition for this project. There is approximately 179,882 square feet of County right-of-way and approximately 597,655 square feet of City right-of-way within the project boundaries.

DISCUSSION:

RCTC, the County of Riverside, and the City of San Jacinto wish to enter into this Agreement No. 26-31-001-00 to establish roles and funding responsibilities of the Parties for the project. The County of Riverside will be the lead agency for the preparation of the Plans, Specifications, and Estimates (PS&E) and for the construction management of the project. The County of Riverside and the City of San Jacinto intend to enter into a subsequent service agreement to further define the roles and responsibilities of the agencies during construction. The future service agreement will be brought to City Council at a later date.

The engineer's estimate below is based on the current preliminary design plans. Final agency costs will be adjusted based on final design and actual expenditure. The County of Riverside would provide up to $2,000,000 of funding, RCTC would provide up to $8,000,000, the City of San Jacinto would provide up to $2,000,000.

PROJECT COST SHARE		
Jurisdiction of Improvements	**Total Estimated Cost**	**Maximum Agency Contribution**
County	$2,000,000	County - $2,000,000

City	$10,000,000	RCTC - $8,000,000 **City - $2,000,000**
Total	$12,000,000	

Staff recommends that the City Council approve Agreement No. 26-31-001-00 as to form and authorize City Manager to execute Agreement No. 26-31-001-00 upon further further review by City Attorney.

FISCAL IMPACT:

The City of San Jacinto is expected to pay up to $2,000,000 towards the project. This $2,000,000 will be allocated through SB 1 RMRA (Gas Tax), so it is anticipated that signing Agreement No. 26-31-001-00 will have no impact to the City's general fund.

Agreement No. 26-31-001-00

TRI-PARTY COOPERATIVE AGREEMENT BETWEEN

RIVERSIDE COUNTY TRANSPORTATION COMMISSION, COUNTY OF RIVERSIDE AND CITY OF SAN JACINTO

FOR RAMONA EXPRESSWAY RECONSTRUCTION PROJECT BETWEEN WARREN ROAD AND SANDERSON AVENUE

1. Parties and Date. This Agreement is made and entered into this ____ day of _____, 2026, by and between the Riverside County Transportation Commission ("RCTC"), the County of Riverside Transportation and Land Management Agency ("County") and City of San Jacinto ("City"). RCTC, the County and the City are sometimes referred to herein individually as "Party", and collectively as "Parties".

2. Recitals.

2.1 RCTC and the County have entered into a Cooperative Agreement for the Mid County Parkway Project – Construction Contract 3 ("MCP 3") (Agreement No. 22-31-045-00) for the MCP3 improvements within County jurisdiction.

2.2 RCTC and the City intend to enter into a Cooperative Agreement for the Mid County Parkway Project – Construction Contract 3 ("MCP 3") (Agreement No. 25-31-094-00) for the MCP3 improvements within City jurisdiction prior to or concurrently with entering into this Agreement. As referred to as "Future Project" in said agreement.

2.3 The limits of the MCP 3 project are from approximately one mile east of Rider Street to Warren Road.

2.4 The City has requested additional pavement improvements and related raised median safety improvements outside of the MCP 3 project limits to the east as described in Exhibit A, along Ramona Expressway between Warren Road and Sanderson Avenue. The current cost estimate only accounts for the pavement improvements. The Median Improvements will be bid as a Bid Alternate and can be deleted from the scope if it exceeds the budget threshold. All together this is referred to as the Ramona Expressway Reconstruction Project, "Project". The improvements are in both City and County jurisdictions. The improvements are referred to in this Tri-Party Cooperative Agreement as the "Project".

2.5 RCTC, the County, and the City wish to enter into this Tri-Party Cooperative Agreement, to establish roles and funding responsibilities of the Parties for the Project.

2.6 RCTC and the City have requested that the County be the lead agency for preparation of the Plans, Specifications & Estimates (PS&E) and construction phases of

DRAFT

the Project. It is anticipated that there will not be any Right of Way acquisition for this project.

2.7 The County has agreed to act as the lead agency for the preparation of the PS&E and construction phases of the Project.

2.8 The County and the City intend to enter into a subsequent Service agreement to cover the terms, conditions, and responsibilities for the Project. The roles and responsibilities of the agencies will be further defined in a future anticipated service agreement by and between County of Riverside and City of San Jacinto.

3. Terms.

3.1 Improvements Requested by the City. The Project entails the design and construction of pavement improvements and raised concrete median along Ramona Expressway between Warren Road and Sanderson Avenue. The Project limits consist of portions in both County jurisdiction and City jurisdiction, as further depicted in Exhibit "A" attached to this Agreement and incorporated herein by reference. The pavement improvements will be 0.58' Hot Mix Asphalt (HMA) over 2.10' of Class 2 Aggregate Base or equivalent as mutually approved by County and City. The pavement width will be from existing pavement to existing pavement limits. The Median Improvements will consist of demolition of asphalt pavement, openings for driveway access, and Type D-1 curb or equivalent as mutually approved by County and City. All of the improvements in Section 3.1 can be changed as mutually agreed by the parties.

3.2 Preparation of Design and Construction. The County shall be the lead agency for the preparation of the PS&E package and construction of the Project. The pavement improvements will be designed and constructed per County standards and specifications. This includes the work within the City jurisdiction.

3.3 Funding Obligations. The County has estimated the total cost of the Project to be approximately $12 million, with the work in County jurisdiction estimated at $2 million and the work in City jurisdiction estimated at $10 million. County will fund the work within County jurisdiction. RCTC will contribute 80% of the cost of the work within the City jurisdiction (approximately $8 million), with the City providing 20% of the cost of work within its jurisdiction (approximately $2 million). The funding to be provided by RCTC and City for the Project shall be adjusted based on actual costs incurred, subject to the limitations set forth below. The County will be responsible for any actual costs incurred for PS&E and construction within its jurisdiction. If Cooperative Agreement 22-31-045-00 or 25-31-094-00 is terminated due to City breach or termination, RCTC's funding obligations related to the Project shall terminate or be put on hold, as mutually agreed by the parties. If the actual costs of the Project are anticipated to exceed the above estimated amounts, the County will promptly notify RCTC and the City. The Median Improvements will be bid as a Bid Alternate and can be deleted from the scope if it exceeds the budget threshold.

A. RCTC's anticipated funding obligation to County is Eight Million Dollars ($8,000,000). County shall promptly notify RCTC if it is anticipated that RCTC's

share of Project costs will exceed said funding amount. Any increase in RCTC's anticipated funding obligation shall require written approval of RCTC's Executive Director. RCTC will not be responsible for any additional funding required in order to include the median improvements as part of the Project.

B. City's anticipated funding obligation to County is Two Million Dollars ($2,000,000). County shall promptly notify the City if it is anticipated that the City's share of Project costs will exceed said funding amount. Any increase in the City's anticipated funding obligation shall require written approval of the City Manager and City Council.

3.4 Payment; Invoices.

A. For Project work within the City jurisdiction to be funded by the County on a cost-reimbursement basis, County shall provide invoice statements to RCTC and the City, respectively, for Project expenses and supporting documentation incurred in accordance with this Cooperative Agreement, no less frequently than quarterly in any quarter in which reimbursable expenses are incurred, but not to exceed once per month. Invoice statements submitted by the County shall be in a form and include such detail and supporting documentation is reasonably requested by RCTC and the City.

B. RCTC and the City shall, respectively, timely review and pay approved invoice statements submitted by County within thirty (30) days. RCTC and the City shall, respectively, promptly notify County of any disputed charges in writing giving reasons therefor. If any invoice submitted by County is disputed by RCTC or the City, respectively, only that portion so disputed may be withheld from payment.

3.5 The City shall maintain, operate, and repair its facilities in a manner which avoids or minimizes, to the extent possible and reasonable, any impact to the Project.

3.6 Following completion of the Project work within the City jurisdiction and prior to final acceptance thereof, the City shall timely review and provide approval of the work or identify any punch list work within fifteen (15) days from the written request for the final inspection. The City shall assume responsibility of the Project facilities completed within the City jurisdiction upon final acceptance of the work by County, and shall be solely responsible and liable for the operation, maintenance and use of, including all subsequent public use of such Project facilities, at its sole cost and expense.

3.7 The City will make its best efforts to perform all obligations of the City related to the Project in such a manner as to allow the Project to progress as scheduled.

3.8 Maintenance. Upon construction completion, the County and City will be responsible for maintaining the Project within their respective jurisdictions.

3.9 Cooperation. The County, the City and RCTC agree to cooperate in the development of the Project and the implementation of this Agreement.

3.10 Indemnification.

DRAFT

A. RCTC shall indemnify, defend and hold the County and the City, their councils, officials, officers, employees, agents, consultants and contractors free and harmless from any and all claims, demands, causes of action, costs, expenses, liabilities, losses, damages or injuries, in law or in equity, to property or persons, including wrongful death, in any manner arising out of or incident to any negligent acts, omissions or breach of law, or willful misconduct of RCTC, its officials, officers, employees, agents, consultants or contractors in the performance of RCTC's obligations under this Cooperative Agreement, including the payment of all reasonable attorneys' fees.

B. The County shall indemnify, defend and hold RCTC and the City, their directors, officials, officers, employees, agents, consultants and contractors free and harmless from any and all claims, demands, causes of action, costs, expenses, liabilities, losses, damages or injuries, in law or in equity, to property or persons, including wrongful death, in any manner arising out of or incident to any negligent acts, omissions or breach of law, or willful misconduct of the County, its officials, officers, employees, agents, consultants or contractors in the performance of the County's obligations under this Cooperative Agreement, including the payment of all reasonable attorneys' fees.

C. The City shall indemnify, defend and hold RCTC and the County, their directors, officials, officers, employees, agents, consultants and contractors free and harmless from any and all claims, demands, causes of action, costs, expenses, liabilities, losses, damages or injuries, in law or in equity, to property or persons, including wrongful death, in any manner arising out of or incident to any negligent acts, omissions or breach of law, or willful misconduct of the City, its officials, officers, employees, agents, consultants or contractors in the performance of the City's obligations under this Cooperative Agreement, including the payment of all reasonable attorneys' fees.

3.11 Delivery of Notices. All notices and invoices permitted or required under this Cooperative Agreement shall be given to the respective Parties at the following address, or at such other address as the respective Parties may provide in writing for this purpose:

Attn: Director of Transportation

Such notice shall be deemed made when personally delivered, electronically delivered to the Directors above provided that receipt of such electronic delivery is confirmed to the sending Party by the receiving Party, or when mailed, forty-eight (48) hours after deposit in the U.S. Mail, first class postage prepaid and addressed to the Party at its applicable address. Actual notice shall be deemed adequate notice on the date actual notice occurred, regardless of the method of service.

3.12 Amendments. This Cooperative Agreement may be amended at any time by the mutual consent of the Parties by an instrument in writing.

3.13 Waiver. No delay or omission in the exercise of any right or remedy of a non-defaulting Party on any default shall impair such right or remedy or be construed as a waiver. No consent or approval of either Party shall be deemed to waive or render unnecessary such Party's consent to or approval of any subsequent act of the other Party. Any waiver by either Party of any default must be in writing and shall not be a waiver of any other default concerning the same or any other provision of this Cooperative Agreement.

3.14 Severability. In the event that any one or more of the phrases, sentences, clauses, paragraphs, or sections contained in this Cooperative Agreement shall be declared invalid or unenforceable by valid judgment or decree of a court of competent jurisdiction, such invalidity or unenforceability shall not affect any of the remaining phrases, sentences, clauses, paragraphs, or sections of this Funding Agreement, which shall be interpreted to carry out the intent of the parties hereunder.

3.15 Survival. All rights and obligations hereunder that by their nature are to continue after any expiration or termination of this Cooperative Agreement, shall survive any such expiration or termination.

3.16 Third Party Beneficiaries. There are no third-party beneficiaries to this Cooperative Agreement.

3.17 Termination. Any Party may terminate this Cooperative Agreement by giving thirty (30) days written notice thereof.

3.18 Entire Agreement. This Cooperative Agreement contains the entire agreement of the Parties relating to the subject matter hereof and supersedes all prior negotiations, agreements or understandings.

3.19 Counterparts. This Cooperative Agreement may be signed in counterparts, each of which shall constitute an original.

DEPICTION OF RAMONA EXPRESSWAY RECONSTRUCTION PROJECT

[ATTACHED BEHIND THIS PAGE]

DRAFT

June 2, 2026

TO:	City Council
REQUESTED BY:	Stuart McKibbin
APPROVED BY:	Robert A. Johnson, City Manager
SUBJECT:	Cooperative Agreement Between Riverside County Transportation Commission and the City of San Jacinto for Construction of Mid County Parkway Project - Construction Contract 3

RECOMMENDATION:

Staff recommends the City Council take the following actions:

1. **APPROVE** as to form Cooperative Agreement No. 25-31-094-00;
2. **AUTHORIZE** the City Manager to execute the cooperative agreement between Riverside County Transportation Commission and the City of San Jacinto (Agreement No. 25-31-094-00) upon further review by City Attorney.

BACKGROUND:

Riverside County Transportation Commission (RCTC) has been widening and reconstructing segments of Ramona Expressway between Warren Road and Rider Street in a project titled Mid County Parkway Ramona Expressway Construction Contract 3 (MCP3). MCP3 is the third phase of a larger project that includes a 16-mile stretch of Ramona Expressway/Mid County Parkway from State Route 79 to Interstate 215 at Placentia Avenue in the City of Perris. MCP3 will improve approximately 8.6 miles of Ramona Expressway in eastern Riverside County, running through unincorporated county land and the city of San Jacinto.

On September 10, 2025, RCTC received and opened bids for the MCP3 project with the winning bid coming from Skanska USA Civil West California District Inc. (Skanska) with a bid of $107,382,285. Since then, Skanska has begun the construction of MCP3 and Engineering has been attending their weekly construction meetings.

DISCUSSION:

The majority of MCP3 is within the County of Riverside's jurisdiction, but an approximate 1.7 mile segment lies within the City of San Jacinto jurisdiction. RCTC and the City of San Jacinto would like to enter into Cooperative Agreement No. 25-31-094-00. This agreement would establish the responsibilities between RCTC and the City to ensure a successful completion of the project. RCTC is the lead agency for the MCP3 project. RCTC will provide all the construction management and inspection services and provide the funds directly to Skanska. When construction is complete, the City of San Jacinto will own, operate, and maintain the improvements that lie within City of San Jacinto jurisdiction upon acceptance of the improved facilities.

Staff recommends that the City Council approve Agreement No. 25-31-094-00 as to form and authorize City Manager to execute Agreement No. 25-31-094-00 upon further review by City Attorney.

FISCAL IMPACT:

Approving and executing Agreement No. 25-31-094-00 will have no fiscal impact on the City's general fund as RCTC will be funding the MCP3 entirely.

COOPERATIVE AGREEMENT
BETWEEN
RIVERSIDE COUNTY TRANSPORTATION COMMISSION
AND
THE CITY OF SAN JACINTO

FOR CONSTRUCTION OF MID COUNTY PARKWAY PROJECT - CONSTRUCTION CONTRACT 3

This Cooperative Agreement ("Cooperative Agreement") is made and entered into this _____ day of _____, 2026 ("Effective Date") by and between the Riverside County Transportation Commission ("RCTC") and the City of San Jacinto ("City"). RCTC and the City are sometimes referred to herein individually as "Party", and collectively as "Parties".

RECITALS

WHEREAS, RCTC is undertaking the Mid County Parkway project ("MCP").

WHEREAS, RCTC, in cooperation with the Federal Highway Administration ("FHWA"), the California Department of Transportation ("Caltrans"), and the County of Riverside Transportation and Land Management Agency ("County"), as part of the MCP proposes to build a portion of the project in the City of San Jacinto and in unincorporated Riverside County, which is referred to in this Cooperative Agreement as the "Project".

WHEREAS, the Project will include: improvements to the existing Ramona Expressway, two new mix flow lanes in the eastbound direction from approximately one mile east of Rider Street to Warren Road. The design will include one of the two ultimate MCP bridges over the San Jacinto River, which will accommodate the eastbound lanes. Also included will be improvements to existing intersections, traffic signals, drainage facilities, and wildlife crossing and associated work. Roadway widening, drainage facilities, fencing, and utility relocation work will extend through City right of way, adjacent to County improvements. The Project is further described and depicted in Exhibit "A" attached to this Cooperative Agreement and incorporated herein by reference.

WHEREAS, the completed Project roadway and intersections will be at-grade and constructed according to County standards and specifications. This roadway will not be constructed into a six (6) lane State facility as initially intended in the original environmental document and will be constructed as a County facility. This has been documented in the environmental revalidation developed as part of this project.

WHEREAS, the Project is sometimes referred to by the Parties as the Mid County Parkway Project – Construction Contract 3.

WHEREAS, it is the intent of the Parties to enter into this Cooperative Agreement to establish and coordinate the responsibilities of the Parties with respect to the Project, establish certain opportunities for cooperation and coordination and set forth various

responsibilities of the Parties all as further set forth herein.

WHEREAS, the Parties acknowledge that RCTC has or shall fully comply with the California Environmental Quality Act (CEQA) and all other applicable laws, as a precondition to construction of the Project.

WHEREAS, RCTC intends, pursuant to a public bidding process in accordance with State law, to select a construction contractor to complete the Project ("Contractor").

WHEREAS, because the Project, if constructed, may impact City owned and/or maintained facilities, coordination between the Parties prior to and during construction of the Project is crucial to provide for mitigation of potential impacts that construction may have on the City, and to ensure that improvements within the City comply with applicable standards.

WHEREAS, the Project includes the following components:

- Right of Way Acquisition and Utility Relocation
- Construction
- Acceptance by the City for Operation and Maintenance of Improvements within City's Jurisdiction

WHEREAS, at the request of the City, the Project will also provide funding to the County for certain City requested pavement improvements between Warren Road and Sanderson Avenue, as further described below and in Agreement No. 26-31-001-00.

NOW THEREFORE, for good and valuable consideration, the receipt of which is hereby acknowledged, it is mutually understood and agreed by RCTC and the City as follows:

TERMS

1. Definitions. In addition to the definitions set forth in the recitals above, the following terms shall have the meanings as set forth below.

1.1 As used in this Cooperative Agreement, the term "City's Jurisdiction" shall mean and refer to the areas within the Project limits either owned and/or maintained by the City. As used herein, the term "City's Jurisdiction" expressly excludes the State highway and County owned right of way.

1.2 As used in this Cooperative Agreement, the term "County Standards" shall mean and refer to the County's standard plans, specifications, policies, guidelines, and ordinances, design criteria, construction details, and testing/inspection requirements, and amendments and supplements thereto, for work within the City's Jurisdiction, approved by the County and in effect prior to approval of the design.

2. Term. This Cooperative Agreement shall be effective as of the date first set forth above, and shall continue in effect until the Project is accepted by the City as referenced in Section 5.15, unless otherwise terminated as specified in this Cooperative Agreement ("Term").

3. Agreement to Cooperate. The Parties agree to mutually cooperate in order to help ensure that the Project is successfully completed with minimum impact to both Parties, and the public, and the City agrees to reasonably support the Project as appropriate, consistent with all applicable policies, procedures, and laws.

4. Additional Improvements Requested by City. The Project will provide funding to the County for construction of certain additional City requested pavement improvements ("Pavement Improvements") and raised median safety improvements ("Median Improvements") between Warren Road and Sanderson Avenue ("Future Project"). The Median Improvements will be bid as a bid alternate and can be deleted from the scope if these improvements exceed the budget threshold. The Pavement Improvements will be 0.58' Hot Mix Asphalt (HMA) over 2.10' of Class 2 Aggregate Base or equivalent as mutually approved by County and City. The pavement width will be from existing pavement to existing pavement limits, as detailed in Exhibit "B" attached to this Agreement and incorporated herein by reference. The Median Improvements will consist of demolition of asphalt pavement, openings for driveway access, and Type D-1 curb or equivalent as mutually approved by County and City. The Future Project will be designed and constructed by the County, and will include a portion of work within the County jurisdiction. The County has estimated the cost of the Future Project to be approximately $12 million, with the work in County jurisdiction estimated at $2 million and the work in City jurisdiction estimated at $10 million. RCTC will contribute 80% of the cost of the work within the City jurisdiction (approximately $8 million), with the City to provide 20% of the funding (approximately $2 million) based on actual costs incurred. In no case shall RCTC's contribution to the Future Project exceed $8 million. A separate triparty agreement will be entered into amongst the County, City and RCTC related to the Future Project. The County will implement the Future Project and administer program management, design, construction management and construction. The parties acknowledge that successful implementation of the Future Project will require coordination among the County, City, and RCTC, and express their mutual intent to work cooperatively and in good faith to finalize and execute such triparty agreement in a timely manner. The City may request periodic updates from the County and/or RCTC regarding the status of such agreement, and the parties agree to respond to such requests in a timely and reasonable manner.

5. Obligations of the City. If consistent with all applicable local, state and federal laws and regulations, the City agrees as follows:

5.1 The City may provide a City oversight engineer to oversee the work during construction within City right of way, at its own cost.

5.2 The City shall timely review design plans for the Project work to be completed within the City Jurisdiction, and provide any approvals or comments within

thirty (30) days of receipt of the plans. If the City fails to provide any comments or its approval within said time period, RCTC shall provide notice to the Planning Manager and City Engineer of the City that the design plans shall be deemed approved by the City if no comments are received within an additional 15 days. The City shall inspect the Project work completed within the City Jurisdiction upon written notice of completion of the work by RCTC to the City, and shall provide approval or identify any punch list work within fifteen (15) days.

5.3 The City shall not directly or indirectly encourage any third parties to object, oppose, delay, frustrate, or disrupt the full and complete design, analysis, consideration, potential approval, or implementation of the Project. . Such obligation shall extend both to RCTC's processes regarding the Project, but also to any other federal, state, or local review or permitting processes.

5.4 The City shall not request any mitigation measures, conditions or exactions that are disproportionate to the Project impacts or that lack a nexus to the Project impacts, as reasonably determined by mutual agreement of City and RCTC.

5.5 The City shall not take any action with the intent or effect of unreasonably delaying or impacting the timely implementation of the Project by RCTC.

5.6 The City shall timely process the required encroachment permits to cover the Contractor's work on the Project within the City right of way. Encroachment permits shall be processed in no more than five (5) working days after receipt of a complete encroachment permit application from Contractor. The City shall not issue any encroachment permits to any other contractors if the proposed work thereunder has the potential to delay or impact the Project, without first coordinating in good faith with the Contractor and RCTC to minimize such delay or impact. All required encroachment permits to be issued by City shall be issued in the name of RCTC.

5.7 The City shall permit ingress to and egress from the Project from City-maintained roads.

The City shall have appropriate representatives regularly attend meetings of the Contractor's task forces formed for public information, traffic management and detours, local street construction, and related construction work impacting the City, and shall provide input at such meetings related to Project work that may impact City residents.

5.8 The City shall waive any and all charges and fees related to plan review and inspections for the Project.

5.9 The City shall waive any street trenching restrictions/moratoriums currently in place within the City limits with respect to the Project work, and shall waive, to the extent necessary to accommodate the Project Work, any other local requirements that prohibit or interfere with construction of the Project to the extent permitted by state or federal law.

5.10 The City shall timely, so as not to delay the Project, review, approve, and execute any necessary agreements or amendments to agreements with RCTC, County and/or the Contractor related to the Project work or any Project facilities within the City's Jurisdiction.

5.11 The City shall relocate any City-owned utility that interferes with the Project.

5.12 The City shall not approve, without advance written notification to and consultation with RCTC, any land use plans, new projects or developments within its jurisdiction that are inconsistent with, may impact, or that interfere with the Project.

5.13 The City shall not allow any encroachment within the City's right of way if such encroachment may interfere with the Project or the Project construction, without first coordinating the same with the Contractor and RCTC.

5.14 The City shall install, maintain, operate, and repair its facilities in a manner which avoids or minimizes, to the extent possible and reasonable, any impact to the Project.

5.15 City agrees to provide, at no cost to the Project, oversight of the Project within the City limits including construction inspection and to provide prompt reviews and approvals of submittals. Following completion of the Project work within the City's Jurisdiction and prior to final acceptance thereof, the City shall timely review and provide approval of the work or identify any punch list work within fifteen (15) days from the written request for the final inspection. The City shall assume responsibility of the Project facilities completed within the City's Jurisdiction upon final acceptance of the work by County, and shall be solely responsible and liable for the operation, maintenance and use of, including all subsequent public use of such Project facilities, at no cost or expense to RCTC.

5.16 The City will make its best efforts to perform all obligations of the City related to the Project in such a manner as to allow the Project to progress as scheduled.

6. Obligations of RCTC.

6.1 RCTC shall be responsible for providing all services to complete the Project, or as reasonably necessary for Project completion. RCTC shall be responsible for the process of selecting Project Contractor in compliance with all applicable local, state and federal laws. RCTC shall be responsible for obtaining all applicable environmental clearances and permits necessary to complete the Project, and for acquiring all right of way as further detailed in Article 7.

6.2 RCTC shall incorporate, with City's review and concurrence, the County Standards for work within the City's Jurisdiction into the design, and shall require that improvements within the City's Jurisdiction be completed to such standards.

6.3 RCTC shall provide the City an opportunity to inspect the Project work during construction at City cost.

6.4 As between RCTC and the City, RCTC and its consultants shall be responsible for construction inspection of the Project work to ensure conformance with the construction contract. RCTC shall allow City staff to access the Project site, upon reasonable notice, to perform observation of any Project improvements. City inspectors shall communicate any construction deficiencies during construction, including a final punch list, to RCTC for completion. County has the final authority to accept the improvements.

6.5 RCTC shall assign any warranties for the Contractor's work on the Project within the City's Jurisdiction to the City upon City's contract acceptance of the Project, and County's final acceptance.

6.6 RCTC shall require its Contractor to obtain all required permits and approvals for all Project work including encroachment permits from City for construction of any Project work within the City's Jurisdiction.

6.7 RCTC shall include, in its contract with the Contractor, a requirement that the Contractor include the City as an additional insured and as an indemnified party under said agreement.

6.8 As between RCTC and the City, RCTC shall be responsible for design, reviews, approvals, and inspection of the Project work within the City's Jurisdiction to ensure conformance with the County Standards during completion of the Project design, selection of the Contractor, and during Project construction and maintenance periods.

6.9 Except in the case of an unforeseen circumstance, RCTC shall require its Contractor to provide at least a fifteen (15) day notification to City prior to any full or partial closure of any streets within City's Jurisdiction exceeding one (1) day in duration. Short term closures less than one (1) day in duration shall require forty eight (48) hours prior notice.

6.10 RCTC will institute a public outreach campaign to keep emergency responders, School District transportation department, transit operators, the residents of the City and the general public apprised of the Project work, and any street closures and other impacts to use of the County and City right of way that may result from the Project. In addition, RCTC shall develop and maintain a written Emergency Response plan that includes emergency contact information for RCTC's Contractor, County of Riverside, City of San Jacinto, emergency responders and Contractor personnel that would be expected to respond to an emergency situation.

6.11 RCTC shall provide to City as-built plans for Project work within City's Jurisdiction within 120 days of Notice of Completion.

7. RCTC Right of Way Obligations.

7.1 RCTC is responsible for all right of way work for the Project except as expressly set forth in this Cooperative Agreement.

7.2 RCTC will make all necessary arrangements with utility owners for the timely accommodation, protection, relocation, or removal of any existing utility facilities that conflict with construction of the Project or that violate City's encroachment policy.

7.3 For utility relocations within the City's Jurisdiction, RCTC will provide City a copy of conflict maps, relocation plans, proposed notices to owner, reports of investigation, and utility agreements (if applicable) for City's concurrence prior to issuing the notices to owner and executing the utility agreement. All utility conflicts will be fully addressed prior to Right-of-Way Certification and all arrangements for the protection, relocation, or removal of all conflicting facilities will be completed prior to construction contract award and included in the Project plans, specifications, and estimate.

7.4 RCTC will provide a land surveyor licensed in the State of California to be responsible for surveying and right-of-way engineering. All survey and right-of-way engineering documents will bear the professional seal, certificate number, registration classification, expiration date of certificate, and signature of the responsible surveyor.

7.5 RCTC will utilize a properly licensed consultant for all right-of-way activities. For properties within City Jurisdiction, RCTC shall provide the City with copies of appraisal reports and acquisition documents upon request. RCTC will submit a draft Right-of-Way Certification to City prior to the schedule Right-of-Way Certification milestone date for review. RCTC will submit a final Right-of-Way Certification to the City for approval prior to the advertising the construction contract. Physical and legal possession of the right-of-way must be completed prior to advertising the construction contract, unless Parties mutually agree to other arrangements in writing.

7.6 RCTC shall be the lead agency on eminent domain activities, if required for the Project.

7.7 Title to any property to be transferred to City by RCTC shall be free of all encumbrances and liens, except as to those items which City agrees are not in conflict with use of the property for roadway purposes. Upon acceptance, RCTC will provide City with a policy of title insurance in City's name.

8. Dispute Resolution: Legal Disputes. Unless otherwise specified herein, the Parties shall comply with the following procedure in the case of a dispute, claim or controversy arising under or in relation to this Cooperative Agreement.

8.1 Submission to RCTC Executive Director and Transportation Director. The dispute shall be referred for negotiation to the RCTC Executive Director and the City of San Jacinto City Manager ("City Manager"). The RCTC Executive Director and the City Manager agree to undertake good faith attempts to resolve said dispute, claim or controversy within ten (10) calendar days after the receipt of written notice from the Party alleging that a dispute, claim or controversy exists. The Parties additionally agree to

cooperate with the other Party in scheduling negotiation sessions. However, if said matter is not resolved within thirty (30) calendar days after the first negotiating session, either Party may then request that the matter be submitted to further dispute resolution procedures, as may be agreed upon by the Parties.

8.2 If a matter is not resolved within thirty (30) calendar days after the first negotiating session between the Executive Director and the City Manager, unless otherwise agreed upon in writing by the Parties, either Party may proceed with any other remedy available in law or in equity, including specific performance as set forth in Section 8.1.

8.3 To the extent legally permissible, the Parties agree not to take any action related to the dispute that would negatively impact the Project until the dispute resolution process is completed.

9. Specific Performance.

9.1 The Parties agree that irreparable damage would occur in the event that any of the provisions of this Cooperative Agreement were not performed in accordance with their specific terms or were otherwise breached. Accordingly, each of the Parties, in addition to any other available remedy in law or in equity, shall be entitled to specific performance of the terms hereof, including the issuance of an injunction or injunctions as a remedy for any such breach, to prevent breaches of this Cooperative Agreement and to enforce specifically the terms and provisions of this Cooperative Agreement, this being in addition to any other remedy to which they are entitled at law or in equity. Each of the Parties further hereby waives (a) any defense in any action for specific performance that a remedy at law would be adequate and (b) any requirement under any law to post security as a prerequisite to obtaining equitable relief. Notwithstanding anything to the contrary contained in this Cooperative Agreement, should RCTC obtain City's specific performance, City shall not have to reimburse RCTC pursuant to Section 17 of this Cooperative Agreement. Should City have to reimburse RCTC pursuant to Section 17 of this Cooperative Agreement, RCTC shall not be entitled to City's specific performance.

9.2 Prior to either Party instituting an action for specific performance, the Parties shall comply with the dispute resolution process set forth above in Section 8.1, and consistent with Section 8.3, to the extent legally permissible, the Parties agree not to take any action related to the dispute that would negatively impact the Project until the dispute resolution process is complete.

10. Indemnification.

10.1 RCTC shall indemnify, defend and hold the City, its directors, officials, officers, employees, agents, consultants and contractors free and harmless from any and all claims, demands, causes of action, costs, expenses, liabilities, losses, damages or injuries, in law or in equity, to property or persons, including wrongful death,

in any manner arising out of or incident to any negligent acts, omissions or breach of law, or willful misconduct of RCTC, its officials, officers, employees, agents, consultants or contractors in the performance of RCTC's obligations under this Cooperative Agreement, including the payment of all reasonable attorneys' fees.

10.2 The City shall indemnify, defend and hold RCTC, its directors, officials, officers, employees, agents, consultants and contractors free and harmless from any and all claims, demands, causes of action, costs, expenses, liabilities, losses, damages or injuries, in law or in equity, to property or persons, including wrongful death, in any manner arising out of or incident to any negligent acts, omissions or breach of law, or willful misconduct of the City, its officials, officers, employees, agents, consultants or contractors in the performance of the City's obligations under this Cooperative Agreement, including the payment of all reasonable attorneys' fees.

10.3 The indemnification provisions set forth in this Section 10 shall survive any expiration or termination of this Cooperative Agreement.

11. Disclaimer. In no event shall either Party be responsible or liable for the quality, suitability, operability or condition of any design or construction by the Project consultants or the Contractor, as applicable, and RCTC expressly disclaims any and all express or implied representations or warranties with respect thereto, including any warranties of suitability or fitness for use; provided, however, that nothing in this provision shall relieve RCTC of its obligations or liability arising from its failure to exercise reasonable oversight or supervision of the Project consultants or Contractor.

12. Force Majeure. The failure of performance by either Party (except for payment obligations) hereunder shall not be deemed to be a default where delays or defaults are due to war; insurrection; strikes; lock-outs; riots; floods; earthquakes; fires; casualties; acts of God; acts of the public enemy; epidemics; quarantine restrictions; freight embargoes; lack of transportation; governmental restrictions; unusually severe weather; inability to secure necessary labor, materials or tools; delays of any contractor, subcontractor, railroad, or suppliers; acts of the other Party; acts or failure to act of any other public or governmental agency or entity (other than that acts or failure to act of the Parties); or any other causes beyond the control or without the fault of the Party claiming an extension of time to perform or relief from default. An extension of time for any such cause shall be for the period of the enforced delay and shall commence to run from the time of the commencement of the cause, if notice by the Party claiming such extension is sent to the other Party within thirty (30) days of the commencement of the cause. Times of performance under this Cooperative Agreement may also be extended in writing by mutual agreement between the Parties.

13. Amendments. This Cooperative Agreement may be amended at any time by the mutual consent of the Parties by an instrument in writing.

14. Assignment of Cooperative Agreement. Neither Party may assign or transfer its respective rights or obligations under this Cooperative Agreement without the express written consent of the other Party. Any purported assignment or transfer by one

Party without the express written consent of the other Party shall be null and void and of no force or effect.

15. Waiver. No delay or omission in the exercise of any right or remedy of a non-defaulting Party on any default shall impair such right or remedy or be construed as a waiver. No consent or approval of either Party shall be deemed to waive or render unnecessary such Party's consent to or approval of any subsequent act of the other Party. Any waiver by either Party of any default must be in writing and shall not be a waiver of any other default concerning the same or any other provision of this Cooperative Agreement.

16. Severability. In the event that any one or more of the phrases, sentences, clauses, paragraphs, or sections contained in this Cooperative Agreement shall be declared invalid or unenforceable by valid judgment or decree of a court of competent jurisdiction, such invalidity or unenforceability shall not affect any of the remaining phrases, sentences, clauses, paragraphs, or sections of this Cooperative Agreement, which shall be interpreted to carry out the intent of the Parties hereunder.

17. Termination: Repayment Obligation.

17.1 Both RCTC and City shall have the right, with or without cause, to terminate this Cooperative Agreement, by giving thirty (30) calendar days written notice to the other Party, specifying the date of termination, provided that in the case of a termination for cause, prior notice and opportunity to cure, as specified below, shall first be provided to the Party in breach by the non-breaching Party. Notwithstanding the foregoing, following commencement of construction of the Project, the City may only terminate this Cooperative Agreement for cause, after providing RCTC notice of a material breach, and reasonable opportunity to cure, as specified below.

17.2 *City Termination for Convenience.* If the City terminates this Cooperative Agreement without cause, the City shall reimburse RCTC for its Project costs within the City limits only, including any Project termination costs, expended following the Effective Date of this Cooperative Agreement through the effective date of termination. In such case, the Parties shall enter into good faith negotiations to establish a reasonable repayment schedule and repayment mechanism. Upon repayment by City to RCTC in accordance with this section all Project documents (including but not limited to designs, studies, or plans). Project improvements, Project warranties, title to property for the Project, and any other deliverables or work paid by RCTC for the Project prior to the date of termination and re-paid by City shall become the sole property of City. The foregoing shall be provided subject to Section 11 of this Agreement. Except as set forth in Section 7.7, any property for the Project conveyed pursuant to this section shall be provided by RCTC "as is" and without warranty.

17.3 *RCTC Termination for Convenience.* If RCTC terminates this Cooperative Agreement without cause, RCTC shall transfer to City all Project documents (including but not limited to designs, studies, or plans), Project improvements, Project

warranties, title to property for the Project, and any other deliverables of work produced under this Agreement, to the extent procured or produced with funds provided by the City. The foregoing shall be provided by RCTC subject to Section 11 of this Agreement. Except as set forth in Section 7.7, any property for the Project conveyed pursuant to this section shall be provided by RCTC "as is" and without warranty. In the case of a RCTC's termination for convenience, the City shall have no re-payment obligation whatsoever.

17.4 *City Termination for Cause.* If RCTC materially breaches this Cooperative Agreement in a manner that impedes the ability of the Project to proceed as planned, the City may terminate this Cooperative Agreement for cause, after providing RCTC notice of such material breach and a reasonable opportunity to cure of at least sixty (60) days, subject to extension as set forth in Section 17.6 below. In the case of a termination for cause, RCTC shall transfer to City all Project documents (including but not limited to designs, studies, or plans), Project Improvements, Project warranties, title to property for the Project, and any other deliverables or work produced under this Agreement, to the extent procured or produced with funds provided by City. The foregoing shall be provided by RCTC subject to Section 11 of this Agreement. Except as set forth in Section 7.7. any property for the Project conveyed pursuant to this section shall be provide by RCTC "as is" and without warranty. The City shall notify RCTC of such material breach within thirty (30) days of the date that the City became aware of or reasonably should have become aware of the breach. In the case of termination for cause, the City shall have no re-payment obligation whatsoever. Prior to the City's termination for cause pursuant to this section, the Parties shall be required to undertake the dispute resolution process described in Section 8 above.

17.5 *RCTC Termination for Cause – Breach.* If the City refuses to issue permits for construction of the Project, takes any action in violation of the terms of this Cooperative Agreement that impedes the ability of the Project to proceed as planned, or fails to undertake its obligations under this Agreement, unless the City terminates for convenience as set forth above, RCTC may terminate this Cooperative Agreement for cause, after providing the City notice of such material breach and a reasonable opportunity to cure of at least sixty (60) days, subject to extension as set forth in Section 17.6 below, and the City shall reimburse RCTC for the Project costs expended within the City limits only following the Effective Date of this Cooperative Agreement through the effective date of termination. Such costs shall include the costs incurred by RCTC and paid to the County pursuant to Agreement No. 26-31-001-00, as referenced above, for the additional improvements requested by the City. In such case, the Parties shall enter into good faith negotiations to establish a reasonable repayment schedule and repayment mechanism. Prior to RCTC's termination for cause pursuant to this section, the Parties shall be required to undertake the dispute resolution process described in Section 8 above and RCTC shall be required to provide City with a cost estimate for the Project costs expended following the Effective Date of this Cooperative Agreement through the proposed effective date of termination. Upon repayment by City to RCTC in accordance

with this section, all Project documents (including but not limited to designs, studies, or plans), Project improvements, Project warranties, title to property for the Project, and any other deliverables or work paid by RCTC for the Project prior to the date of termination and repaid by City shall become the sole property of City. The foregoing shall be provided by RCTC subject to Section 11 of this Agreement. Except as set forth in Section 7.7, any property for the Project conveyed pursuant to this section shall be provided by RCTC “as is" and without warranty.

17.6 Cure Period Extensions. If the material breach identified by the non-breaching Party is not reasonably capable of cure within a sixty (60) day period following the non-breaching Party’s delivery of its notice of breach, then:

- The breaching Party shall, within thirty (30) days following receipt of the notice of breach, provide a written response to the non-breaching Party that (i) identifies the actions to be undertaken to cure the material breach (the “Cure Activities”) and (ii) identifies a schedule of performance for implementation and completion of the Cure Activities (the “Schedule”);

- The non-breaching Party shall review the proposed Cure Activities and Schedule for purposes of confirming the reasonableness thereof;

- At the request of the non-breaching Party, representatives of the Parties shall meet and confer for purposes of addressing any questions or concerns with respect to the Cure Activities and the Schedule;

- Upon confirming the reasonableness of the Cure Activities and Schedule (as may be adjusted to address concerns), the non-breaching Party shall grant an extension of the sixty (60) day cure period to correspond with the Schedule; and

- Provided that the breaching Party is diligently pursuing implementation of the Cure Activities in accordance with the Schedule, the breaching Party may request reasonable extensions of the Schedule, and the non-breaching Party shall not unreasonably withhold its consent to such requests.

The Parties shall continue to perform under this Cooperative Agreement during the cure period. Any dispute regarding Cure Activities or Schedule shall be subject to the dispute resolution process described in Section 8 above.

17.7 The repayment obligation set forth in this Section 17 shall survive any expiration or termination of this Cooperative Agreement.

17.8 If this Cooperative Agreement is terminated, RCTC shall, at RCTC’s expense, return the Project right-of-way within the City Jurisdiction to its original condition or to an acceptable safe and operable condition, as mutually agreed upon by the Parties.

18. Predetermination. Nothing in this Cooperative Agreement is intended by the Parties nor should be interpreted as predetermining any decisions or approvals by either Party's boards or commissions.

19. Survival. All rights and obligations hereunder that by their nature are to continue after any expiration or termination of this Cooperative Agreement, shall survive any such expiration or termination.

20. Third Party Beneficiaries. There are no third-party beneficiaries to this Cooperative Agreement.

21. Relationship of the Parties. RCTC is, for purposes relating to this Cooperative Agreement, an independent contractor of City and shall not be deemed an employee of City. It is expressly understood and agreed that RCTC (including its employees, agents, and subcontractors) shall in no event be entitled to any benefits to which City employees are entitled, including, but not limited to overtime, any retirement benefits, worker's compensation benefits, and injury leave or other leave benefits. There shall be no employer-employee relationship between the Parties and RCTC shall hold City harmless from any and all claims that may be made against City based upon any contention by third party that an employer-employee relationship exists by reason of this Cooperative Agreement.

22. Delivery of Notices. All notices permitted or required under this Cooperative Agreement shall be given to the respective Parties at the following address, or at such other address as the respective Parties may provide in writing for this purpose:

EXHIBIT "A"

PROJECT DESCRIPTION

The proposed Mid County Parkway – Construction Contract 3 Project will construct two new mix flow lanes in the eastbound direction from approximately one mile east of Rider Street to Warren Road. The design will include one of the two ultimate MCP bridges over the San Jacinto River, which will accommodate the eastbound lanes. Also included will be improvements to existing intersections, traffic signals, drainage facilities, and wildlife crossing and associated work. This work takes places in both the County and City jurisdictions. Work within the City of San Jacinto includes roadway widening, drainage facilities, fencing, and utility relocation work.

MCP 3 IMPROVEMENTS WITHIN SAN JACINTO

[ATTACHED BEHIND THIS PAGE]

June 2, 2026

TO:	City Council
REQUESTED BY:	Travis Randel, Deputy City Manager
APPROVED BY:	Robert A. Johnson, City Manager
SUBJECT:	Professional Services Agreement for a Comprehensive Update to the City's Landscape, Irrigation, Park, Basin, Parkway and Street Tree Design Standards

RECOMMENDATION:

That the City Council:

1. **APPROPRIATE** an additional $100,000 for the preparation of updated Citywide Landscape, Irrigation, Park, Basin, Parkway and Street Tree Design Standards;
2. **AUTHORIZE** the transfer of the previously budgeted $80,000 for Landscape Design Guideline updates in the Planning Division FY 2025/2026 budget, together with the additional appropriation, into CIP Project No. 26-013;
3. **AWARD** a Professional Services Agreement to Community Works Design Group in the amount of $159,615 for professional consulting services associated with the preparation of the updated standards subject to review of the City Attorney;
4. **REJECT** all other proposals; and
5. **AUTHORIZE** the City Manager to execute the Professional Services Agreement and all related contract documents.

DISCUSSION:

The City of San Jacinto is seeking to comprehensively update and consolidate its citywide landscape, irrigation, park, basin, parkway, and street tree design standards into a single coordinated and modernized standards manual. The City's current standards consist of a combination of older landscape guidelines, standard details, and project-specific requirements that have evolved over time and are dispersed across multiple documents. Many of these materials are outdated, incomplete, difficult to navigate, or inconsistent with current operational practices and regulatory requirements.

The proposed project will establish a unified set of standards governing landscaping, irrigation systems, parks, stormwater basins, parkways, trails, and related public improvements throughout the City. The resulting standards manual is intended to provide clear, practical, and enforceable guidance for City staff, developers, engineers, landscape architects, and contractors involved in the design, construction, rehabilitation, and long-term maintenance of public and private improvements associated with development projects.

The project is also intended to support implementation of several adopted City policies and planning documents, including General Plan 2040, the San Jacinto Trails Master Plan, parkland dedication requirements, and the City's adopted water efficiency requirements. In addition, the updated standards will assist the City in complying with evolving State requirements related to water conservation, including the California Model Water Efficient Landscape Ordinance (MWELO).

A primary operational objective of this project is to standardize materials, equipment, construction details, and approved design practices citywide. Standardization will improve long-term maintenance efficiency by reducing the variety of irrigation components, controllers, pumps, plant palettes, park amenities, and related infrastructure currently maintained by City staff. The updated standards will also improve compatibility between facilities, reduce lifecycle maintenance costs, streamline inventory management, and simplify future repair and replacement projects.

The standards will additionally improve the development review process by providing applicants with clear and predictable expectations early in project design. By consolidating requirements into a single user-friendly document with clearly illustrated standards, diagrams, technical details, and approved material specifications, the City anticipates reducing ambiguity during plan review and minimizing repetitive correction cycles.

To ensure a competitive and transparent consultant selection process, the City issued Request for Proposals No. SJ-PU-26-002 soliciting qualified professional consulting firms with experience in municipal landscape architecture, irrigation system design, park planning, and development standards preparation.

The City received two (2) complete and responsive proposals prior to the submission deadline. A third proposal was received but was determined to be non-responsive during the initial screening process due to missing required information.

An evaluation committee composed of City staff reviewed and scored each proposal based on the criteria identified in the Request for Proposals, including:

- Technical expertise and relevant municipal experience;
- Qualifications of the project team;
- Project understanding and technical approach;
- Ability to deliver a comprehensive and user-friendly standards document; and
- Overall value and cost effectiveness.

The proposal results are summarized below:

Consultant	Proposal Amount	Score
Community Works Design Group	$159,615.00	83
Van Dyke Landscape Architects	$120,010.00	76

Following review and evaluation of the proposals, staff recommends awarding the contract to Community Works Design Group.

Community Works Design Group demonstrated superior subject matter expertise and provided the strongest overall proposal in terms of project understanding, technical approach, municipal experience, and long-term operational value to the City. The firm demonstrated a detailed understanding of the City’s goals and operational needs and presented a comprehensive methodology for developing an accessible, searchable, and highly implementable standards manual.

In addition, Community Works Design Group possesses significant prior experience working with the City of San Jacinto, including preparation of the City’s original Landscape Design Guidelines and Parkway & Median Master Plan. Their proposal also emphasized long-term maintenance efficiency, water conservation, standardized equipment specifications, and development of practical implementation tools intended to streamline both plan review and field maintenance operations.

The proposed scope of work includes a comprehensive audit of the City's existing standards and municipal code requirements; development of updated park, landscape, irrigation, basin, and street tree standards; preparation of standard construction details and GIS-compatible plant palettes; development of residential prototype landscape plans; preparation of park amenity scoring systems; and assistance with public adoption and implementation of the final standards manual.

FISCAL IMPACT:

The FY 2025/2026 budget previously included $80,000 within the Planning Division budget, Account 011-1700-417.30-90, for preparation of updated Landscape Design Guidelines primarily focused on development-related landscape requirements. However, during development of the Request for Proposals and evaluation of the City's existing standards framework, staff identified that several additional and related standards documents are also outdated, fragmented, incomplete, or in need of consolidation and modernization. These additional areas include park development standards, irrigation standards, street tree standards, basin and stormwater facility standards, parkway standards, and related public infrastructure requirements.

Rather than addressing these documents independently over multiple future projects, staff determined that a comprehensive citywide standards update would provide the most efficient and cost-effective long-term approach. Consolidating these standards into a single coordinated manual will provide clear and consistent direction for both future development and ongoing City maintenance operations while improving internal coordination between departments responsible for planning, engineering, parks, landscape maintenance, stormwater, and public infrastructure.

Because the resulting standards will directly govern and improve the design, construction, operation, rehabilitation, and long-term maintenance of landscape improvements, irrigation systems, parks, parkways, stormwater facilities, basins, and related infrastructure maintained within the City's various landscape and maintenance assessment districts, staff anticipates proportionally allocating a portion of the additional project costs among the applicable Special Districts (LLPD-1, LLPD-2, and CFDs). These districts directly benefit from the preparation of updated and standardized maintenance and construction criteria intended to improve long-term operational efficiency, reduce maintenance costs, standardize equipment and materials, improve water efficiency, and extend the useful life of district-maintained infrastructure and facilities.

Staff is requesting an additional appropriation of $100,000, for a total project budget of $180,000 to be allocated to CIP Project No. 26-013, Account 199-9999-425.40-01.

The recommended contract amount with Community Works Design Group is $159,615. The remaining project budget will provide contingency for unforeseen additional services, document revisions, supplemental technical analysis, printing, and implementation support associated with the project.

The updated standards are also expected to reduce future maintenance expenditures associated with incompatible or inconsistent infrastructure installations and improve the City's ability to competitively bid maintenance and rehabilitation work through standardized specifications and approved materials lists.

City of San Jacinto

Request For Proposals

Comprehensive Update to the City's Landscape, Irrigation, Park, Basin, Parkway and Street Tree Design Standards

NOTICE INVITING PROPOSALS, RFP NO. SJ-PW-26-002

NOTICE IS HEREBY GIVEN that the City of San Jacinto ("City") is requesting proposals from qualified consultants to provide professional services as described in Request for Proposals No. **SJ-PU-26-002**.

Proposals shall be submitted electronically through the City of San Jacinto PlanetBids Portal: https://www.sanjacintoca.gov/government/bidsProposals

Copies of the Request for Proposals may be obtained through the City's PlanetBids portal. Vendors must register with PlanetBids in order to download solicitation documents and submit proposals.

The official schedule for this solicitation, including the proposal due date, question deadline, and any pre-proposal meeting information, will be posted on the PlanetBids portal. Proposers are responsible for monitoring PlanetBids for updates, addenda, and schedule information related to this RFP.

All proposals must be submitted electronically through the PlanetBids portal. Emailed, mailed, or hand-delivered submissions will not be accepted. Proposers are responsible for ensuring that their proposal is submitted prior to the deadline identified on PlanetBids. The City does not provide technical assistance for PlanetBids. You may contact PlanetBids technical support at (818) 992-1771 should you have issues accessing or submitting bids.

All requests for clarification regarding this RFP must be submitted through the PlanetBids Question and Answer (Q&A) section. Responses will be posted through PlanetBids and will be available to all registered vendors.

If a proposer intends to request exceptions to the requirements of the RFP or to the terms of the draft Professional Services Agreement, those exceptions must be clearly identified in the proposer's submission.

The City reserves the right to reject any or all proposals and to waive minor irregularities or informalities if it is determined to be in the best interest of the City.

For general questions regarding this solicitation, contact:

1. INTRODUCTION

The City of San Jacinto, one of the oldest communities in Riverside County, is a city rich in history, culture, and continued growth. Founded in 1870 and incorporated in 1888, San Jacinto has long served as a center for agriculture, ranching, and industry in the San Jacinto Valley. Located at the base of the San Jacinto Mountains, the City maintains a unique blend of small-town character while accommodating modern residential, commercial, and industrial development. Over the past two decades, San Jacinto has experienced substantial growth and continues to position itself as an important community within the Inland Empire.

As development continues, the City seeks to ensure that new neighborhoods, parks, streetscapes, and landscaped areas are designed in a consistent, sustainable, and maintainable manner. To support these goals, the City is seeking the services of a qualified consultant to assist in the preparation of comprehensive Citywide Landscape, Irrigation, Park, Basin, Parkway and Street Tree Design Standards.

This effort will build upon the City's long-range planning framework established through the adoption of Envision San Jacinto, General Plan 2040, adopted in 2022. The General Plan emphasizes sustainable development, high-quality public spaces, water conservation, and the creation of cohesive and attractive neighborhoods. Updated landscape and park design standards will serve as an important implementation tool to support these policies and guide future development throughout the community.

The purpose of this project is to develop clear, practical, and enforceable standards that will guide the design and construction of landscaping, parks, parkways, streetscapes, basins, and irrigation systems throughout the City of San Jacinto. These standards will establish consistent expectations for the design of both public and private improvements associated with development projects and City facilities. The standards will also support compliance with applicable state requirements, including the California Model Water Efficient Landscape Ordinance (MWELO), while promoting water conservation, long-term durability, and efficient maintenance practices.

The resulting standards manual is expected to include both narrative requirements and implementable technical exhibits, such as standard construction details, typical sections, approved equipment and material specifications, diagrams, and other technical guidance suitable for use during project design and plan review.

The resulting standards are intended to provide clear direction to developers, engineers, landscape architects, and City staff by establishing consistent expectations for landscaping, park development, irrigation systems, street trees, and related amenities. The standards will help streamline project review, improve long-term maintenance outcomes, and ensure that new development contributes positively to the City’s built and natural environment.

In addition to guiding the design and construction of new facilities, the preparation of standardized design criteria will also improve the City’s ability to maintain, repair, and rehabilitate landscaping, irrigation systems, basins, pumps, and related infrastructure over time. By establishing approved

materials, equipment specifications, and design details, the standards will allow the City to maintain consistency across facilities and streamline maintenance and replacement activities. When components such as irrigation equipment, pumps, controllers, or landscape elements require repair or replacement, staff will be able to rely on the adopted standards to prepare clear specifications and proceed directly to competitive bidding without first needing to evaluate or solicit acceptable equipment options. This approach will improve operational efficiency, reduce delays in maintenance projects, and help ensure that replacement components remain compatible with the City's established systems and maintenance practices.

The City of San Jacinto invites proposals from qualified firms with experience in landscape architecture, urban design, park planning, irrigation system design, and municipal development standards. The selected consultant will work closely with City staff to review existing materials, evaluate best practices from comparable jurisdictions, and prepare a comprehensive set of standards that are practical to implement and maintain.

2. PROJECT OBJECTIVES

The purpose of this project is to develop a comprehensive set of Citywide Landscape, Irrigation, Park, Basin, Parkway, and Street Tree Design Standards that will guide the design, construction, rehabilitation, and long-term maintenance of landscaping, park facilities, stormwater basins, basin pumps, and related infrastructure throughout the City of San Jacinto.

The City currently relies on a combination of older landscape guidelines, standard details, and project-specific requirements that have evolved over time. Some of these materials are outdated, incomplete, or difficult for applicants and staff to locate and interpret. As development activity continues throughout the City, there is a need to consolidate, update, and modernize these materials into a single coordinated set of standards that clearly define the City's expectations for public landscaping, park development, and streetscape improvements.

The resulting standards will apply to landscaping, park improvements, stormwater basins, basin pump facilities, parkways, streetscapes, trails, and related amenities constructed throughout the City of San Jacinto. The standards are intended to guide the design of both public and private improvements associated with development projects and City facilities. The standards will also provide guidance for the rehabilitation or replacement of existing landscaping and park facilities, ensuring that improvements installed over time remain consistent with the City's design expectations and maintenance capabilities.

The establishment of standardized materials, equipment specifications, and construction details will also improve the City's ability to maintain, repair, and rehabilitate these facilities over time. By clearly defining acceptable equipment types, park furnishings and amenities (such as playground equipment, shade structures, seating, trash receptacles, and similar features), irrigation components, pump systems, plant materials, and construction practices, the City will be able to streamline maintenance and replacement activities and prepare clear bid specifications without needing to re-evaluate acceptable design options for each project.

The project will also serve as an implementation tool for several existing City policies and plans, including the City's General Plan 2040, Subdivision regulations related to parkland dedication, and the San Jacinto Trails Master Plan. The updated standards will help ensure that future development contributes to a coordinated system of parks, landscaped corridors, and trail facilities throughout the community.

The City's intent is to develop standards that are clear, practical, and developer-friendly, allowing applicants to understand the City's expectations early in the project design process. By providing clearly defined requirements and standardized details, the City seeks to reduce ambiguity during plan review, minimize multiple plan check cycles, and improve the long-term quality and maintainability of public improvements.

This project will be managed by the City's Public Utilities Department, which will serve as the primary point of coordination for the consultant. However, the development of the standards will require close collaboration across multiple City departments and external agencies. The consultant

will be expected to work closely with staff from the Planning Division, Parks Division, Stormwater Division, the City's MS4/NPDES Program, the Building and Safety Division, and Engineering staff to ensure that the standards reflect operational needs, regulatory requirements, and development review processes. Coordination with the Police Department, Eastern Municipal Water District (EMWD), and Lake Hemet Water District may also be necessary to address public safety considerations, Crime Prevention Through Environmental Design (CPTED) principles, access requirements, recycled water use, and compatibility with EMWD irrigation and water system standards.

Key objectives of this project include:

- **Develop a comprehensive Landscape and Irrigation Standards Manual** that consolidates and updates the City's existing landscape design guidelines, plant lists, and standard construction details into a single coordinated document.

- **Review the City's existing Development Code and related municipal code provisions** governing landscape design, irrigation, park development, and subdivision improvements to ensure the proposed standards are consistent with adopted regulations. The consultant shall identify any conflicts, gaps, or outdated provisions and recommend updates or cross-references so that the Development Code and the new standards manual function as a coordinated and internally consistent framework.

- **Prepare Park Development Standards** that establish park classifications, minimum park sizes, amenity requirements, and design expectations consistent with the City's parkland dedication requirements and the Quimby Act.

- **Establish design and equipment standards** for stormwater basins and associated infrastructure, including landscape treatments, access requirements, fencing, safety features, and basin pump facilities where applicable.

- **Develop a flexible park amenity framework** that allows developers to design parks that respond to site conditions while still providing a consistent level of recreational value through minimum amenity categories and a scoring or point-based evaluation system.

- **Define standardized design criteria for park features and amenities** including playground equipment, sport courts, seating areas, shade structures, irrigation systems, lighting, drinking fountains, picnic areas, and other common park infrastructure to promote consistent design quality, durability, and maintainability across parks developed throughout the City.

- **Promote consistency in materials, equipment, and construction practices** to improve durability, reduce lifecycle costs, and support efficient long-term maintenance of City facilities.

- **Develop landscape and irrigation design standards** that are consistent with the California Model Water Efficient Landscape Ordinance (MWELO) and the City's adopted

Water Efficient Landscape Ordinance, ensuring that the resulting guidelines support compliance with existing regulatory requirements without creating conflicting or redundant standards.

- **Provide implementation guidance for the San Jacinto Trails Master Plan**, including trail classifications, cross sections, and design standards for trail facilities constructed as part of development projects.

- **Prepare prototypical water-efficient residential front yard landscape designs** that homeowners and builders may utilize when installing or rehabilitating landscaping. These designs should comply with applicable water efficiency requirements and be structured so that typical residential landscape installations can be completed without the need to retain a landscape architect.

- **Create a clear, accessible, and user-friendly standards document** that includes diagrams, standard details, graphic illustrations, photographs, and example applications to help developers, designers, homeowners, contractors, and City staff easily understand and apply the standards.

Ultimately, the goal of this project is to establish a practical and implementable set of standards that improves the quality, consistency, and long-term sustainability of landscaping, parks, basins, and streetscape facilities throughout the City of San Jacinto while supporting efficient project review, construction, and long-term maintenance operations.

The resulting documents should be organized in a manner that is highly intuitive and easy to navigate, with clearly structured sections, searchable content, cross-referenced standards, and visual examples that illustrate acceptable design solutions. The City anticipates that the standards may be organized into logical sections or chapters addressing topics such as landscape and irrigation design, park development, parkway and streetscape standards, basin facilities, and related infrastructure.

The City intends for the final standards manual to function not only as a regulatory document, but also as a practical design and implementation guide that applicants and staff can quickly reference during project planning, review, construction, and maintenance.

3. EXISTING PLANS AND REFERENCE DOCUMENTS

The City of San Jacinto has prepared and adopted several planning and design documents over time that address landscaping, parks, streetscapes, and open space development. These documents provide important background information and may inform the development of the new standards. However, many of these materials are outdated, incomplete, or lacking the intuitive design necessary for efficient use by stakeholders and City personnel.

The consultant will be expected to review these materials and evaluate their applicability to the proposed Citywide Landscape, Irrigation, Park, and Street Tree Design Standards. Where appropriate, relevant standards and design concepts may be incorporated into the updated document. In other cases, the consultant may recommend revisions, reorganization, or replacement of outdated standards.

The City recognizes that many landscape and park design standards, construction details, and technical specifications used by public agencies are based on widely accepted industry practices. The City is open to the incorporation or adaptation of proven standards, graphics, and technical details from other jurisdictions or previous consultant work where appropriate. The intent of this project is not to recreate common design details unnecessarily, but rather to assemble a practical and well-organized set of standards that reflect best practices and are tailored to the operational needs of the City of San Jacinto.

The following documents are provided for reference and will be made available to proposers through the City's PlanetBids procurement portal.

CITY OF SAN JACINTO GENERAL PLAN

The City adopted Envision San Jacinto, General Plan 2040 in 2022. The General Plan establishes the City's long-term vision for growth, land use, environmental sustainability, and community design. Policies related to parks, open space, streetscapes, sustainability, and community character should inform the development of the updated standards.

SAN JACINTO TRAILS MASTER PLAN

The San Jacinto Trails Master Plan identifies a system of multi-use trails and equestrian corridors intended to connect neighborhoods, parks, and open space areas throughout the community. The consultant shall review the Trails Master Plan and develop design standards, cross sections, and implementation guidance to support the construction of trail facilities as part of future development projects.

LANDSCAPE DESIGN GUIDELINES

The City previously adopted Landscape Design Guidelines that provide direction related to planting, parkway landscaping, wall and fence design, and other landscape elements. These

guidelines include plant palettes, planting details, and standard construction specifications. While portions of these guidelines may still be applicable, the document has not been comprehensively updated in many years and will require evaluation and modernization.

Landscape Standard Details

The City maintains a series of landscape and planting standard details that address items such as tree planting, shrub planting, irrigation components, root barriers, and related landscape construction practices. These details may serve as a starting point for the development of updated standard construction details.

Draft Landscape Guideline Update

In approximately 2017, the City initiated an effort to update its landscape design guidelines. Draft materials from that effort include proposed plant lists, irrigation guidance, and other landscape design recommendations. These materials were never formally adopted and have not been reviewed by current City staff. They are being provided to the consultant team as background reference material only. The consultant may review these materials and determine whether any elements should be incorporated, revised, or replaced as part of the new standards.

Subdivision Regulations And Parkland Dedication Requirements

The City's subdivision regulations, including parkland dedication requirements associated with residential development, are contained in Title 16 (Subdivisions) of the San Jacinto Municipal Code. Of particular relevance to this project are the provisions in Chapter 16.75 (Parkland Dedication and Fees), which implement parkland dedication requirements authorized under California Government Code Section 66477 (Quimby Act) and establish the methodology used to determine required park acreage based on projected residential population.

The updated park standards developed through this project should support the implementation of these subdivision requirements by providing clear guidance regarding park classifications, amenity expectations, and park development standards associated with new residential subdivisions.

The San Jacinto Municipal Code is available online and may be accessed at: **https://ecode360.com/47024306**.

4. SCOPE OF WORK

The City of San Jacinto is seeking a qualified consultant to assist in the preparation of comprehensive Citywide Landscape, Irrigation, Park, Basin, Parkway, and Street Tree Design Standards. The selected consultant will work collaboratively with City staff to review existing materials, evaluate best practices from comparable jurisdictions, and develop a coordinated set of standards to guide the design, construction, and rehabilitation of public landscaping and park facilities throughout the City.

The standards will primarily apply to landscaping, park improvements, stormwater basins, parkways, trails, and related amenities that will ultimately be owned, operated, or maintained by the City, including improvements constructed as part of private development projects or through Community Facilities Districts (CFDs). The standards should also provide guidance for the rehabilitation or replacement of existing City landscape and park facilities.

The consultant shall perform the tasks described below and/or may recommend modifications to the scope of work if necessary to better achieve the project objectives.

TASK 1 – PROJECT INITIATION AND COORDINATION

The consultant shall initiate the project and coordinate with City staff to confirm project objectives, scope, schedule, and deliverables. This task shall include a project kickoff meeting with City staff, review of existing plans and background materials provided by the City, and confirmation of the proposed structure and organization of the standards manual. The consultant shall also identify opportunities to incorporate best practices from comparable jurisdictions and confirm the overall work plan for completing the project.

Deliverables under this task include:

- **Project kickoff meeting** with City staff
- **Detailed work plan and project schedule** identifying key milestones and deliverables

TASK 2 – REVIEW OF EXISTING DOCUMENTS AND BEST PRACTICES

The consultant shall review existing City plans and reference documents to inform development of the updated standards. This review shall include existing landscape guidelines, plant lists, landscape standard details, and other materials previously prepared by the City. The consultant shall also review relevant planning documents, including the San Jacinto Trails Master Plan and subdivision regulations contained in Title 16 of the Municipal Code.

In addition, the consultant shall review applicable provisions of the California Model Water Efficient Landscape Ordinance (MWELO) and the City's Water Efficient Landscape Ordinance to ensure the proposed standards support compliance with existing regulatory requirements. Best

practices used by comparable jurisdictions for park development standards, irrigation systems, landscape design, and street tree programs should also be evaluated.

Deliverables under this task include:

- **A summary memorandum of findings and recommendations** to guide development of the updated standards.
- **A code and standards cross-reference matrix** identifying where the San Jacinto Municipal Code, including relevant provisions of the Development Code, references landscape, park, irrigation, basin, or related standards. The matrix shall also identify any conflicts, gaps, or recommended code cleanups or cross-reference updates necessary to ensure the Development Code and the new standards manual function as a coordinated and internally consistent framework.

TASK 3 – PARK CLASSIFICATION FRAMEWORK AND PARK DEVELOPMENT STANDARDS

The consultant shall develop a framework that establishes consistent expectations for park size, amenities, and development requirements associated with new residential development. The framework shall include development of a park classification system, which may include categories such as pocket parks, neighborhood parks, community parks, and regional parks, along with recommended park size ranges and general characteristics for each classification.

Standards should address usable park area, including treatment of slopes, drainage areas, and site constraints, and should coordinate with parkland dedication requirements established in Title 16 of the Municipal Code. Park amenity expectations should be based on the required parkland acreage associated with development rather than the total park site area when additional land is provided due to site constraints such as floodplains, fault zones, or other development limitations.

The consultant shall also develop a flexible park amenity evaluation framework that allows developers to respond to site conditions while ensuring each park provides an appropriate level of recreational value. This framework may include amenity categories, minimum amenity expectations by park classification, and a scoring or point-based system to ensure consistency across developments while allowing flexibility in park design.

Deliverables under this task include:

- **Park classification framework**
- **Park amenity evaluation** framework or scoring system

TASK 4 – PARK AMENITY DESIGN AND EQUIPMENT STANDARDS

The consultant shall develop design and construction standards for common park amenities and park infrastructure. These standards should establish consistent expectations for materials, equipment types, and construction practices that promote durability, safety, and efficient long-term maintenance by the City.

Standards should address common park features such as playground equipment and surfacing, sport courts and athletic areas, seating and picnic areas, shade structures and gazebos, drinking fountains, park utilities, lighting, and landscape and irrigation systems associated with park development.

Deliverables under this task include:

- **Design standards and preferred equipment specifications** for common park amenities.

TASK 5 – LANDSCAPE AND IRRIGATION DESIGN STANDARDS

The consultant shall prepare updated landscape and irrigation design standards applicable to public landscaping installed through development projects or rehabilitation of existing facilities. These standards shall address planting design, plant palettes appropriate for different landscape conditions, irrigation system design consistent with City maintenance practices, and preferred irrigation equipment currently utilized by the City.

Standards should include planting requirements, irrigation design criteria, root barrier requirements, and updated standard construction details for planting and irrigation systems. Landscape standards for detention basins and water quality facilities should also be included where applicable.

The standards developed under this task shall support compliance with the California Model Water Efficient Landscape Ordinance (MWELO) and the City's Water Efficient Landscape Ordinance.

Deliverables under this task include:

- **Landscape design standards** and plant palettes
- **Irrigation system standards** and standard construction details

TASK 6 – STREET TREE AND PARKWAY STANDARDS

The consultant shall prepare a Citywide street tree and parkway standards program addressing tree selection, planting design, and parkway landscaping associated with public streets. The program should identify appropriate tree species for the City's climate and soil conditions, establish spacing and placement standards, and address varying parkway widths and roadway classifications.

Standards should also address site constraints such as overhead utilities and provide guidance for layered landscaping approaches in areas such as reverse frontage parkways.

Deliverables under this task include:

- **Citywide street tree program** and parkway landscaping standards.

TASK 7 – TRAILS AND OPEN SPACE IMPLEMENTATION STANDARDS

The consultant shall prepare design standards supporting implementation of the San Jacinto Trails Master Plan. These standards should establish trail classifications, typical trail cross sections, recommended construction materials and should address integration of trail facilities within parks, subdivisions, and open space areas.

Deliverables under this task include:

- **Trail classifications and standard trail design guidance.**

TASK 8 – PROTOTYPICAL RESIDENTIAL FRONT YARD LANDSCAPE DESIGNS

The consultant shall prepare a set of prototypical water-efficient residential front yard landscape designs that homeowners and builders may utilize when installing or rehabilitating residential landscaping. These designs should incorporate water-efficient plant palettes and irrigation layouts consistent with MWELO requirements and should be designed so that typical residential installations can be implemented without requiring a landscape architect.

Deliverables under this task include:

- **At least four (4) prototypical front yard landscape designs** with corresponding irrigation layouts.

TASK 9 – BASIN AND STORMWATER FACILITY DESIGN STANDARDS

The consultant shall prepare landscape and facility design standards for stormwater detention basins and related stormwater infrastructure. These standards should address planting approaches appropriate for basin conditions, irrigation requirements where applicable, grading transitions and slopes, and integration with adjacent parks, trails, or open space areas. Standards shall be developed in coordination with the Stormwater Division and MS4/NPDES program requirements, including maintainability, access, safety, and treatment facility performance considerations.

Where basin pump systems are utilized, the consultant shall also address considerations related to maintenance access, operational functionality, preferred equipment and integration of pump infrastructure within landscaped basin environments.

Deliverables under this task include:

- **Landscape and design standards for stormwater basins** and related facilities.
- **Preferred equipment specifications** for stormwater basins.

Task 10 – Preparation of Draft and Final Standards Manual

The consultant shall prepare a comprehensive standards manual consolidating the results of the project into a coordinated, intuitive and user-friendly document. The manual shall include diagrams, illustrations, photographs, example applications, and standard construction details. The document should be organized so that users can easily locate and cross-reference applicable standards.

All graphics, standard details, and exhibits shall follow a consistent City formatting and numbering convention so the final document reads as a cohesive standards manual rather than a collection of materials from multiple sources.

Deliverables under this task include:

- **Draft standards manual** for City review
- **Final standards manual** incorporating City comments

Task 11 – Meetings and Project Coordination

The consultant shall participate in meetings necessary to complete the project and present draft and final standards to City decision makers.

Deliverables under this task include:

- **Regular coordination meetings** with City staff
- **Presentation of draft standards** to City staff
- **Attendance at one Planning Commission meeting**
- **Attendance at one City Council meeting** to present the final standards

Task 12 – Implementation and Adoption Support

The consultant shall provide limited support to assist the City with final implementation and adoption of the standards manual. This task is intended to address minor revisions, clarifications, or formatting adjustments that may arise during the final review and adoption process.

Work under this task may include refinement of graphics or standard details, clarification of standards language, preparation of supplemental materials requested by City staff, or assistance responding to comments received during Planning Commission or City Council review.

Support provided under this task shall be limited to revisions necessary to finalize the standards manual for adoption and publication and shall conclude upon City Council adoption of the standards.

Deliverables under this task may include:

- **Minor revisions** to the standards manual following City review
- **Supplemental graphics or clarification** of standards where requested by the City
- **Assistance with final document** formatting or preparation for publication

5. DELIVERABLES

The consultant shall prepare and submit the following deliverables as part of this project. Deliverables shall be provided in both digital and editable formats to allow the City to maintain and update the standards over time, including editable source files for graphics, diagrams, and standard details.

Unless otherwise directed by the City, all documents shall be submitted in electronic format. Draft deliverables will be reviewed by City staff and revised by the consultant prior to preparation of final deliverables.

1. Project Work Plan and Schedule

Within thirty (30) days of contract execution, the consultant shall prepare a detailed work plan and project schedule outlining major tasks, milestones, and anticipated deliverables.

The work plan shall include:

- Project schedule and timeline
- Key milestones, stakeholders and review periods
- Proposed meeting schedule
- Communication and coordination procedures

2. Existing Conditions and Best Practices Summary

The consultant shall prepare a technical memorandum summarizing findings from the review of existing City documents and best practices from comparable jurisdictions. The memorandum shall identify key issues, opportunities, and recommendations that will guide preparation of the updated standards.

The memorandum shall summarize relevant City plans, guidelines, and existing landscape and irrigation standards, and evaluate their applicability to the proposed standards manual.

Deliverables shall include:

- Identification of best practices and recommended approaches from comparable jurisdictions
- Key considerations that inform the development of the updated standards

3. Administrative Draft Standards Manual

The consultant shall prepare an Administrative Draft of the Citywide Landscape, Irrigation, Park, Basin, Parkway, and Street Tree Design Standards for review by City staff. The standards may be organized as a single manual or as multiple coordinated volumes or sections, as determined appropriate in consultation with City staff.

The Administrative Draft shall include all major components of the standards manual, including:

- Park classification framework and park development standards
- Park amenity standards and amenity evaluation framework
- Landscape and irrigation design standards
- Street tree and parkway standards
- Trails and open space implementation standards
- Prototypical residential front yard landscape designs
- Standard construction details and specifications
- Basin and stormwater facility design and standards

City staff will review the Administrative Draft and provide consolidated comments to the consultant.

4. Public Review Draft Standards Manual

Following incorporation of staff comments, the consultant shall prepare a Public Review Draft of the standards manual.

This version will be used for presentations to decision-making bodies and may be distributed for public review.

The Public Review Draft shall:

- Be organized in a clear, visually accessible format
- Include diagrams, graphics, and example applications
- Include cross-references and clear section headings to improve usability

5. Final Standards Manual

The consultant shall prepare a Final Standards Manual incorporating comments received from City staff, the Planning Commission, and the City Council, as applicable.

The final document shall be delivered in the following formats:

- Searchable PDF document with bookmarks and internal hyperlinks

- Editable document format (Microsoft Word or similar)
- Graphics and diagrams in editable format (Adobe Illustrator, InDesign, or similar)

All graphics, standard drawings, diagrams, and exhibits shall follow a consistent City of San Jacinto formatting, numbering, and labeling convention so that the final document appears as a cohesive standards manual rather than a compilation of materials from multiple sources. The document shall be structured to allow future updates by City staff without requiring complete reformatting.

6. Standard Construction Details

The consultant shall prepare updated standard construction details supporting the standards manual.

Deliverables shall include:

- Landscape planting details
- Irrigation system details
- Root barrier and planting installation details
- Parkway and streetscape sections
- Park amenity installation details
- Trail cross sections and construction details
- Basin landscape and facility standard details (grading transitions, pump access areas, planting zones, etc.)

All details shall be provided in:

- CAD format compatible with City systems
- PDF format for inclusion in the standards manual
- Plant palettes, street tree lists, and related data tables shall be provided in spreadsheet format compatible with the City's GIS or asset management systems.

7. Prototypical Residential Landscape Plans

The consultant shall prepare a set of prototypical residential front yard landscape plans.

Deliverables shall include:

- Graphic landscape plans
- Corresponding irrigation layouts
- Plant lists and planting schedules
- Example installation diagrams

These materials shall be prepared in a format suitable for distribution to homeowners and builders.

8. Park Planning Toolkit

The consultant shall prepare a Park Planning Toolkit to assist City staff and developers in evaluating park design proposals.

The toolkit may include:

- Park classification summary tables
- Park amenity scoring framework
- Amenity category definitions
- Example park programming layouts

This toolkit will be used by City staff during project review to evaluate compliance with park development standards.

9. Project Meetings And Presentations

The consultant shall prepare presentation materials and attend key project meetings necessary to complete the project, including:

- Project kickoff meeting
- Periodic coordination meetings with City staff
- Planning Commission presentation
- City Council presentation

Presentation materials shall be provided in digital format suitable for public meetings.

10. Final Project Files

At the completion of the project, the consultant shall provide the City with a complete set of project files including:

- Final standards manual
- Editable source files
- Graphics and diagrams
- CAD standard details
- Plant lists and data tables

All materials prepared under this contract shall become the property of the City of San Jacinto and may be used, reproduced, or modified by the City for future projects without restriction.

6. PROJECT SCHEDULE

The City anticipates completing the project within approximately six (6) to nine (9) months from contract execution. The schedule below represents the City's preliminary timeline and may be adjusted as necessary during the course of the project.

Proposers may recommend adjustments to the schedule in their proposals if necessary to successfully complete the scope of work.

Milestone	Estimated Timeline
Release of Request for Proposals	4/1/2026
Proposal Submission Deadline	4/27/26
Consultant Selection and Contract Award	5/5/26
Project Kickoff Meeting	Within 2 weeks of contract execution
Existing Conditions Review and Best Practices Summary	Month 1–2
Administrative Draft Standards Manual	Month 3–4
Staff Review and Revisions	Month 4–5
Public Review Draft Standards Manual	Month 5–6
Planning Commission Presentation	Month 6–7
City Council Presentation and Adoption	Month 7–9

The consultant shall coordinate closely with City staff throughout the project to ensure that key milestones are met and that adequate time is provided for staff review and revisions.

7. CONSULTANT QUALIFICATIONS

The City of San Jacinto is seeking proposals from qualified consulting firms or teams with demonstrated experience in the preparation of municipal landscape design standards, park planning standards, irrigation design standards, and street tree programs. The selected consultant will assist the City in developing a comprehensive set of standards that are practical to implement, consistent with applicable regulations, and compatible with the City's long-term maintenance capabilities.

Proposers should demonstrate experience with projects similar in scope and complexity to the work described in this Request for Proposals. Relevant experience includes the preparation of landscape design guidelines, park planning standards, irrigation design standards, street tree master plans, or similar development standards for municipalities. Experience working with cities experiencing residential growth and subdivision development is particularly desirable.

The consultant team should include professionals with expertise in landscape architecture, park and recreation planning, irrigation system design, and municipal development standards. Familiarity with water-efficient landscape practices and the California Model Water Efficient Landscape Ordinance (MWELO) is expected. Experience integrating park planning, landscaping, and streetscape design into subdivision development standards is also desirable. Where preparation of technical standards or construction details requires professional licensure under California law, the consultant team shall include appropriately licensed professionals, such as a California licensed Landscape Architect, Civil Engineer, or other qualified professional, as applicable.

Proposers shall identify the key personnel who will be assigned to the project and describe their qualifications and experience. The proposal should clearly identify the Project Manager and describe the roles and responsibilities of other key team members who will contribute to the project. The City expects that the Project Manager identified in the proposal will remain actively involved throughout the duration of the project.

Proposers should also demonstrate familiarity with regulatory and policy considerations relevant to this project, including parkland dedication requirements under Government Code Section 66477 (Quimby Act), municipal landscape and irrigation standards, and development review processes associated with subdivision projects.

As part of the proposal, firms should provide examples of recent projects that demonstrate relevant experience. These examples should include the project name and location, the client agency, a brief description of the work performed, and a contact person who can serve as a reference. Projects involving the preparation of municipal design standards or park planning guidelines will be given particular consideration.

8. PROPOSAL FORMAT AND SUBMISSION REQUIREMENTS

Proposals should be concise, well organized, and demonstrate the consultant's understanding of the City's objectives and ability to perform the work described in this Request for Proposals. Proposals should follow the general format outlined below so that all submissions can be evaluated consistently.

General Format Requirements

All proposals shall be formatted on 8.5" x 11" pages. Larger graphics or diagrams may be included on 11" x 17" pages where appropriate. Proposals must be submitted in PDF format and must be printable without password protection.

All proposal materials, except the Fee Proposal and sample work products, shall be combined into a single PDF file. The Fee Proposal shall be submitted as a separate PDF document. Sample work products or examples of similar projects shall be submitted as separate PDF attachments and shall not be included within the primary proposal document.

Proposals must be submitted electronically through the City's PlanetBids portal. Proposals submitted by email, mail, or in person will not be accepted.

Page limits provided below are intended to encourage concise responses. Page limits apply only to the primary proposal document and do not include the Fee Proposal or separate sample work attachments submitted in accordance with this section. The City reserves the right to disregard pages submitted in excess of the stated limits.

Proposal Content

Executive Summary (2 Pages Maximum)

Provide a brief overview of the proposing firm and a summary of the key elements of the proposal. The Executive Summary should clearly describe the firm's qualifications, understanding of the City's objectives, and the unique strengths the team brings to this project.

The summary should also identify the proposed Project Manager and briefly describe the composition of the consultant team, including key personnel and their roles on the project. Proposers should identify the primary office that will be responsible for managing the project and describe how the team will be organized to deliver the services described in this Request for Proposals.

Firm Qualifications And Relevant Experience (15 Pages Maximum)

This section should describe the qualifications of the proposing firm and demonstrate its experience with projects of similar scope and complexity. Proposers should describe their experience preparing municipal landscape design standards, irrigation standards, park planning guidelines, street tree programs, or similar planning and design standards for public agencies.

Proposers should also highlight experience developing comprehensive standards manuals or design guidelines that integrate landscaping, parks, streetscapes, trails, stormwater facilities, or other public infrastructure that will ultimately be maintained by a municipality.

Include descriptions of three to five recent projects that are most relevant to the work described in this RFP. For each project, identify the client, the general scope of work, the year completed, and the role of the firm.

If applicable, describe experience working with California cities, particularly in Southern California or in climates similar to the City of San Jacinto.

Project Team And Staffing (10 Pages Maximum)

Identify the proposed project team and describe the roles and responsibilities of key personnel. This section should demonstrate that the consultant has assembled a team with the technical expertise necessary to complete the work described in this RFP.

Provide an organizational chart showing the Project Manager and key staff who will be assigned to the project. Brief resumes should be included for key personnel who will have primary responsibility for completing the work. Resumes should identify each individual's role on the project, relevant experience, professional licenses or certifications, and office location.

Proposers should confirm the availability of key personnel identified in the proposal and describe their anticipated level of involvement throughout the project.

If subconsultants are proposed, identify their roles and explain how they will support the project team.

Project Understanding And Technical Approach (20 Pages Maximum)

This section should demonstrate the consultant's understanding of the City's goals and the scope of work described in this RFP. Proposers should describe their overall approach to developing clear, practical, and implementable standards that will guide landscape design, irrigation systems, park development, basin facilities, trails, and street tree planning within the City.

The resulting standards will be used by a range of audiences including design professionals, developers, City staff, and members of the public. Proposers should describe how they will prepare standards that maintain the technical rigor necessary for engineering and design professionals

while remaining clearly written, well organized, and understandable for users who may not have specialized technical expertise.

Proposers should describe how they will approach development of a coordinated standards manual that is practical for developers to implement, consistent with applicable regulations, and compatible with the City's long-term maintenance practices.

The proposal should explain how the consultant will approach the following key components of the project:

- Development of comprehensive landscape, irrigation, park, basin, and street tree standards that are practical and easy to implement
- Preparation of developer-friendly standards that streamline project review and reduce plan check iterations
- Development of prototypical front yard landscape concepts that allow homeowners to revitalize their landscaping and comply with water efficiency requirements without the need to hire a landscape architect
- Integration of existing City plans and policies, including the Subdivision Code, Trails Master Plan, and other planning documents
- Development of standardized details, equipment specifications, and design guidance that support efficient long-term maintenance of City facilities
- Preparation of a final document that is visually clear, searchable, well organized, and easy for developers, homeowners, and City staff to use

Proposers may also identify any additional tasks, technical considerations, or recommendations that would improve the overall quality, usability, and long-term effectiveness of the final standards manual.

Project Schedule And Work Plan (5 Pages Maximum)

Provide a proposed work plan and project schedule describing how the consultant will complete the work within the City's anticipated timeframe. The schedule should identify major project phases, key milestones, and anticipated review points with City staff.

Fee Proposal (Submitted As A Separate Document)

The Fee Proposal shall be submitted as a separate PDF document and shall include a not-to-exceed fee for completion of the project. The fee proposal should include a breakdown of costs by task or project phase and identify hourly rates for key personnel who may be assigned to the project.

The City reserves the right to negotiate the final scope and fee with the selected consultant.

Exceptions To The RFP Or Professional Services Agreement

If the proposer believes any portion of this Request for Proposals or the City's draft Professional Services Agreement requires clarification or modification, the proposer must clearly identify those items in this section of the proposal. Each requested exception shall identify the applicable section of the RFP or Professional Services Agreement and include a brief explanation of the reason for the proposed change. Where appropriate, proposers may also provide suggested alternative language.

Requests for clarification regarding the RFP requirements must be submitted through the formal question and answer process on the City's PlanetBids portal prior to the deadline for questions. The City may respond to such questions and, if necessary, issue an addendum to clarify or modify the RFP. The submission of an exception within a proposal does not substitute for the formal question and answer process.

The City reserves the right to accept or reject any proposed exception. Proposals containing significant or material exceptions to the requirements of this RFP or the Professional Services Agreement may be deemed non-responsive and may be rejected at the City's sole discretion.

If no exceptions are identified, the proposal will be interpreted to mean that the proposer accepts all terms and conditions of this Request for Proposals and the City's Professional Services Agreement.

Additional Information (Optional)

Proposers may include additional information they believe would assist the City in evaluating their proposal. Examples may include sample documents, excerpts from previously prepared standards manuals, graphic examples of similar work products, or other materials demonstrating the firm's experience with similar projects.

Examples of previous work products should be submitted as separate PDF attachments rather than included within the primary proposal document. These materials are intended to supplement the proposal and demonstrate the quality and organization of similar standards documents prepared by the proposer.

Additional materials provided under this section are optional and will not be evaluated as a separate scored component of the proposal. Any such materials will be reviewed only in conjunction with the information provided in the primary proposal document.

9. PROPOSAL EVALUATION CRITERIA

All proposals received in response to this Request for Proposals will be evaluated by a review committee composed of City staff. Proposals will be evaluated based on the consultant's qualifications, relevant experience, project approach, and ability to successfully complete the work described in this RFP.

The City reserves the right to request clarifications, conduct interviews with selected firms, or request additional information as part of the evaluation process.

Proposals will be evaluated based on the following criteria:

Evaluation Criteria	Maximum Points
Firm Qualifications and Relevant Experience	25
Project Team and Key Personnel	20
Project Understanding and Technical Approach	30
Project Schedule and Work Plan	10
Fee Proposal	15
Total Possible Points	**100**

FIRM QUALIFICATIONS AND RELEVANT EXPERIENCE

The City will evaluate the consultant's experience preparing municipal landscape standards, park planning documents, irrigation standards, or similar planning and design documents for public agencies. Consideration will also be given to experience working with California municipalities and familiarity with regulatory requirements such as the California Water Efficient Landscape Ordinance.

Project Team and Key Personnel

The City will evaluate the qualifications, experience, and availability of the proposed project manager and key staff assigned to the project, as well as the overall organization of the project team.

Project Understanding and Technical Approach

Proposals will be evaluated based on the consultant's understanding of the City's goals and the proposed approach to completing the work described in this RFP. Particular consideration will be given to the consultant's ability to develop clear, practical, and implementable standards that are easy for developers, homeowners, and City staff to use.

Project Schedule and Work Plan

The City will evaluate the proposed project schedule, including the consultant's ability to complete the work within the anticipated timeframe and to coordinate effectively with City staff throughout the project.

Fee Proposal

The City will evaluate the proposed project fee in relation to the scope of services and the value offered by the consultant.

10. CONSULTANT SELECTION PROCESS

The City will review all proposals received by the deadline and evaluate them based on the criteria outlined in Section 8 of this Request for Proposals. A review committee composed of City staff will evaluate the proposals and may prepare a shortlist of the most qualified firms.

At the City's discretion, shortlisted firms may be invited to participate in interviews or presentations to further discuss their qualifications, project approach, and ability to successfully complete the work described in this RFP. If interviews are conducted, the City may revise the evaluation scores based on the information presented during the interview process.

Following the evaluation process, the City intends to select the firm determined to be the most qualified to perform the services described in this RFP. The City will enter into negotiations with the selected consultant to finalize the scope of work, project schedule, and fee. If the City is unable to reach agreement with the selected consultant, the City reserves the right to terminate negotiations and enter into negotiations with the next highest-ranked firm.

The final selection of a consultant and approval of the Professional Services Agreement will be subject to approval by the City Council.

The City reserves the right to reject any or all proposals, to waive minor irregularities in any proposal, and to cancel this solicitation at any time if it is determined to be in the best interest of the City.

11. GENERAL CONDITIONS AND RESERVATION OF RIGHTS

The City reserves the right to modify, postpone, or cancel this Request for Proposals at any time if it is determined to be in the best interest of the City. The City also reserves the right to reject any or all proposals received and to waive minor irregularities or informalities in any proposal.

Issuance of this Request for Proposals does not obligate the City to award a contract or to pay any costs incurred by proposers in the preparation of proposals. All costs associated with the preparation and submission of proposals are the sole responsibility of the proposer.

All proposals submitted in response to this RFP become the property of the City of San Jacinto and will not be returned. Proposals may become public records subject to disclosure pursuant to the California Public Records Act following completion of the selection process. If a proposer includes information it believes to be confidential, proprietary, or a trade secret, such information must be clearly marked and identified as such. The City cannot guarantee confidentiality and will process any public records requests in accordance with applicable law.

Proposals shall remain valid for at least 120 days after the proposal due date unless extended by mutual agreement.

Proposers must disclose any actual or potential conflicts of interest, including any circumstances that could reasonably be perceived to affect the proposer's objectivity or ability to perform the services in the best interest of the City. The City reserves the right to disqualify any proposer based on a conflict of interest determination.

The City reserves the right to request clarification of any information submitted in a proposal and may request additional information from any proposer as part of the evaluation process. The City may also request interviews or presentations from selected firms if it determines that such interviews would assist in the evaluation of proposals.

The City reserves the right to negotiate the final scope of services, project schedule, and compensation with the selected consultant. If an agreement cannot be reached with the selected firm, the City reserves the right to terminate negotiations and proceed with negotiations with the next highest-ranked firm.

The City may issue written addenda to clarify or modify this Request for Proposals. All addenda will be issued through the City's PlanetBids portal. It is the responsibility of proposers to monitor the PlanetBids portal for addenda and to acknowledge receipt of all addenda in their proposal submission.

The selected consultant will be required to enter into a Professional Services Agreement with the City of San Jacinto. The draft Professional Services Agreement is provided with this RFP for review. Insurance, indemnification, and other contractual requirements will be governed by the terms of the Professional Services Agreement.

PROTEST PROCEDURE

A proposer that wishes to protest the City's notice of intent to award must submit a written protest within five (5) business days of the notice of intent to award. The protest must be submitted to the City representative identified in this RFP and must clearly describe the basis for the protest. The City Manager or their designee will review the protest and issue a written determination. The decision of the City shall be final.

12. PROFESSIONAL SERVICES AGREEMENT

A draft Professional Services Agreement (PSA) is included with this Request for Proposals as an attachment. The agreement establishes the City's standard contractual requirements, including insurance requirements, indemnification provisions, and general terms governing the performance of professional services.

The consultant selected through this RFP process will be required to enter into a Professional Services Agreement with the City of San Jacinto using the attached document. The City anticipates that the selected consultant will execute the agreement substantially in the form provided.

Proposers should carefully review the draft Professional Services Agreement prior to submitting a proposal. Any requested exceptions or proposed modifications to the agreement must be clearly identified in the proposer's response in accordance with the section titled Exceptions to the RFP or Professional Services Agreement.

The City reserves the right to reject proposals that include significant exceptions to the Professional Services Agreement. Minor modifications may be considered during contract negotiations at the City's sole discretion.

The final agreement, including scope of services, project schedule, and compensation, will be negotiated with the selected consultant and will be subject to approval by the San Jacinto City Council.

13. BACKGROUND AND REFERENCE DOCUMENTS

The following documents are available through the City's PlanetBids portal and are provided as background reference materials to assist proposers in understanding the City's existing standards, plans, and regulatory framework related to this project.

These materials are provided for informational purposes only and may not represent current policy or adopted standards. The selected consultant will be expected to review these materials and determine which elements should be retained, modified, or replaced as part of the development of the updated standards.

Reference materials available through PlanetBids may include, but are not limited to, the following:

Contract Documents

- Exhibit 1 - Draft Professional Services Agreement

City Codes and Adopted Plans

- Exhibit 2 - San Jacinto Municipal Code – Title 16 (Subdivision Regulations)
- Exhibit 3 - Envision San Jacinto – General Plan 2040
- Exhibit 4a - San Jacinto Trails Master Plan
- Exhibit 4b - San Jacinto Trails Master Plan Appendices

Existing Design Guidelines

- Exhibit 5 - City of San Jacinto Landscape Design Guidelines
- Exhibit 6 - Parkway and Median Master Plan

Previous Draft Materials (For Reference Only)

- Exhibit 7 - Draft Landscape and Irrigation Guideline Update Materials

These materials are intended to provide context regarding prior planning efforts and existing design guidance. Proposers are expected to review these materials when preparing their proposal; however, the City anticipates that the selected consultant will evaluate these documents and recommend updates or revisions as appropriate.

14. PROPOSAL SUBMISSION

Proposals must be submitted electronically through the City's PlanetBids portal by the deadline identified in the RFP schedule. The PlanetBids portal will serve as the official location for proposal submission, RFP updates, addenda, and responses to questions.

Proposers are responsible for monitoring the PlanetBids portal for any updates, clarifications, or addenda issued by the City. Failure to acknowledge issued addenda may result in the proposal being deemed non-responsive.

Proposals submitted after the deadline established in the PlanetBids portal will not be accepted. The City is not responsible for technical issues experienced by proposers during the submission process.

Questions regarding this Request for Proposals must be submitted through the PlanetBids Q&A module prior to the deadline for questions identified in the RFP schedule. Responses to questions will be posted through PlanetBids and will become part of the official procurement record.

SAN JACINTO

PROPOSAL FOR NO. SJ-PU-26-002:

COMPREHENSIVE UPDATE TO THE CITY'S LANDSCAPE, IRRIGATION, PARK, BASIN, PARKWAY AND STREET TREE DESIGN STANDARDS

RE: Proposal for Comprehensive Update to the City's Landscape, Irrigation, Park, Basin, Parkway and Street Tree Design Standards (RFP No. SJ-PU-26-002)

Dear Members of the Selection Committee:

RHA Community Works (RHA+CW) is pleased to submit this proposal to partner with the City of San Jacinto in the development of a unified, forward-thinking set of Landscape and Park Design Standards. We understand that as San Jacinto continues to experience significant residential growth, there is a critical need to consolidate disparate guidelines into a single, user-friendly manual that reflects the City's unique character, ensures long-term maintenance sustainability, and simplifies the development review process.

Our team is uniquely qualified to deliver a manual that balances aesthetic appeal with technical rigor. We bring deep expertise in California-specific mandates, including MWELO compliance and the General Plan 2040 framework, ensuring that the new standards are not only visionary but also legally and functionally enforceable. We also have a headstart, having assisted the City with their **San Jacinto Park and Recreation Master Plan and developing the initial Landscape Design Guidelines in 2005.**

Key strengths our team brings to this project include:

- **Integrated Park Planning & Landscape Architecture:** Our firm specializes in creating "scoring systems" and classification frameworks that provide developers with clear recreational requirements while maintaining flexibility for various site conditions.
- **Technical Excellence in Water Management:** With a focus on sustainable irrigation and basin design, we ensure that public spaces are resilient and cost-effective for the City to maintain over the long term.
- **Community-Centric Design:** We recognize the importance of empowering residents. Our approach includes the development of prototypical, water-efficient front-yard designs that allow homeowners to enhance their property while supporting City-wide water conservation goals.
- **Proven Municipal Experience:** As a firm with extensive experience in Southern California municipal park planning and grant-funded revitalizations, we understand the nuances of local climate, agricultural heritage, and the specific needs of Inland Empire communities.

RHA Community Works is committed to providing a collaborative and inclusive design process. We look forward to the opportunity to help San Jacinto set a new benchmark for public space excellence. We confirm, Doug Grove and Scott Rice, Managing Partners, are authorized to represent the firm and bind the company to all commitments made in this proposal.

Respectfully submitted,

EXECUTIVE SUMMARY

The Right Partner for San Jacinto's Future

The City of San Jacinto is at a pivotal moment of growth. As residential development accelerates, the need for a unified, technically rigorous, and sustainable set of design standards has never been more critical. RHA Community Works (RHA+CW) is uniquely positioned to deliver this comprehensive update. We do not just offer landscape architecture; we offer a partnership rooted in local institutional knowledge, technical excellence, and a proven commitment to San Jacinto's community fabric.

Why RHA Community Works is the Best Choice

1. Unmatched Local Context & Continuity

Unlike outside firms that must spend weeks learning the local landscape, RHA+CW is already deeply embedded in San Jacinto's planning ecosystem. Having spearheaded the San Jacinto Parks & Recreation Master Plan, we possess an intimate understanding of the City's existing assets, maintenance challenges, and the community's vision for the future. We are not starting from scratch; we are building upon a foundation of success that we helped create.

2. A Unified Standards Manual: From Fragmentation to Clarity

Currently, San Jacinto's design guidance is spread across various documents and municipal codes. RHA+CW specializes in consolidation. Our approach will transform these disparate pieces into a single, intuitive manual. This "one-stop-shop" resource will provide:

- ***For City Staff:*** Streamlined plan-check processes and enforceable standards that reduce administrative friction.
- ***For Developers:*** Clear, predictable requirements that eliminate ambiguity and accelerate project timelines.
- ***For Residents:*** High-quality public spaces and residential tools that enhance property values and community pride.

3. Technical Leadership in Sustainability & Water Management

In the face of California's evolving environmental mandates, RHA+CW leads with technical rigor. Our team includes Certified Access Specialists (CASp) and experts in the Model Water Efficient Landscape Ordinance (MWELO). We ensure that every standard—from basin pump facilities to irrigation trenching—is engineered for long-term operational efficiency. Our "Quality Control Program" ensures that the CAD Standard Details we provide are not just drawings, but high-performance templates that minimize change orders and maintenance costs.

4. Innovative Community Empowerment Tools

A standout feature of our proposal is the development of Prototypical Residential Designs. We recognize that homeowners are vital stakeholders in San Jacinto's water conservation goals. By providing pre-calculated, MWELO-compliant templates like "Inland Desert" and "Modern Mediterranean," we empower residents to beautify their properties while simultaneously reducing the City's residential permitting burden.

EXECUTIVE SUMMARY

Strategic Approach to the Scope of Work
Our methodology is designed to deliver a completed, adopted manual within a 6–9 month window, structured around three core pillars:

- **Audit & Alignment:** We begin with a comprehensive gap analysis of the General Plan 2040 and existing codes to ensure internal consistency and legal defensibility.

- **The "Scoring System" for Parks:** We will develop a flexible classification framework for parkland and amenities. This ensures that as the City grows, developers provide the appropriate level of recreational value, regardless of site-specific constraints.

- **Consensus-Driven Adoption:** Leveraging our experience with San Jacinto's leadership, we will lead the outreach to the Planning Commission and City Council. We focus on articulating the Value Proposition: how these standards protect the City's General Fund by reducing maintenance and improving the "Living Infrastructure" of the community.

Leadership Built on Municipal Expertise
To ensure the success of this project, RHA+CW has assembled a leadership team that combines high-level strategic vision with deep technical and regulatory proficiency.

- **Strategic Vision:** Led by Doug Grove, ASLA, LEED AP With decades of experience in large-scale municipal planning, Doug Grove brings an unparalleled background in master planning and community-wide design frameworks. Having served as the Principal-in-Charge for the San Jacinto Parks & Recreation Master Plan, Doug understands the macro-level goals of the City's General Plan 2040. His expertise ensures that these new design standards are not merely a collection of technical details, but a strategic tool that supports the City's long-term recreational and economic objectives.

- **Technical Rigor:** Led by Scott Rice, PLA, ASLA, CASp Scott Rice provides the essential technical bridge between design and enforceability. Drawing on his extensive experience as a City Landscape Architect and his background in Plan Check services, Scott understands exactly what municipal staff need to effectively review and approve developer submittals. As a Certified Access Specialist (CASp), he will ensure that all updated standards—from parkway circulation to park amenities—meet the highest benchmarks for accessibility and state compliance, reducing the City's long-term liability and administrative friction.

Commitment to Excellence
Led by Doug Grove and Scott Rice, RHA Community Works brings the perfect blend of public-sector perspective and private-sector innovation. Our prior experience with the City has refined our ability to deliver documents that are as practical for the maintenance crew as they are visionary for the City Council.

We are ready to hit the ground running to help San Jacinto set a new regional benchmark for public space, sustainability, and design excellence.

RHA Community Works is a landscape architecture and planning firm based in Riverside, California, with deep, multi-generational roots in the Southern California region. The firm was formed through the shared vision and meticulous craftsmanship of its founders and Managing Partners: Doug Grove, President of RHA Landscape Architects + Planners, and Scott Rice, President of Community Works Design Group. Each founder brings decades of proven leadership and industry experience. Prior to uniting their firms, both Doug and Scott served as successors to the founders of their respective, highly regarded practices.

Our team includes 20 dedicated professionals, including 12 licensed landscape architects, who work collaboratively under a team-based approach directed by the firm's principals and associates. Our multidisciplinary team bridges the gap between creative vision, technical feasibility, and environmental stewardship. RHA Community Works provides a comprehensive suite of services designed to enhance public spaces while ensuring long-term sustainability:

- **Public Works Planning & Design:** Expert development of neighborhood and community parks, sports complexes, skate parks, dog parks, and vibrant streetscapes that strengthen community branding.
- **Specialized Technical Consulting:** Targeted expertise in CASp/ADA accessibility auditing, comprehensive tree inventory and management, and advanced water conservation strategies.
- **Master Planning & Visualization:** Site-specific conceptual development supported by 3D photo-realistic rendering and inclusive community outreach programs to build local consensus.
- **Construction Support:** Delivery of meticulous construction documentation, precise cost estimating, and dedicated construction administration to ensure design intent is realized. Our team includes two **licensed C-27 landscape contractors.**
- **Plan Check & Inspection Services:** A seamless, dual-layer approach ensuring every project—from initial technical review to final field installation—meets 100% regulatory compliance and the highest construction standards.
- **Regulatory Compliance & Sustainability:** Proven success assisting Southern California municipalities in navigating complex mandates, including **SB 1383 (Organic Waste and Mulching)** and **AB 1572 (Non-Functional Turf)** requirements.

Our Approach

We utilize a collaborative team approach under the direction of our principals to ensure personalized service and on-budget delivery. Whether managing small area renovations or multi-million dollar new developments, we focus on safety, equity, and sustainability. Our "FUNnel" approach to community engagement ensures that all voices are heard, resulting in designs that truly reflect the interests of the constituents we serve. Our firms feature several leaders with public sector plan check and/or park planning experience, providing our team with a unique consulting perspective since we've been on your side of the table.

Integrity & Reliability

The unified firm of RHA+CW maintains an impeccable professional record. Neither RHA nor CWDG has:

- Any failures or refusals to complete a contract.
- Financial interests in other lines of business.
- Active or past claims for money or damages.
- History of Litigation, Adverse Judgments, or "For Cause" terminations.

A selection of our current on-call contracts are listed below:

City of Highland - On-Call Landscape Architectural Services	(1990-present)
County of Riverside FM - On-Call Landscape Architectural Services	(2000-present)
Riverside County Regional Park & Open-Space District - On-Call Landscape Architectural Services	(2011-present)
City of Redlands - On-Call Landscape Architectural Services	(2012-present)
Jurupa Area Recreation & Park District - On-Call Park Plan Check Services	(2015-present)
County of Riverside EDA - On-Call Certified Access Specialist (CASp) Services	(2017-present)
City of El Segundo - On-Call Landscape Architecture Services	(2019-present)
City of Ontario - On-Call Landscape Architecture Services	(2019-present)
City of Cypress - On-Call Landscape Architecture Services	(2019-present)
City of Los Angeles - On-Call Certified Access Specialist (CASp) Services Including Recreation & Parks Department, Adaptive Sports	(2020-present)
City of Palm Springs - On-Call Landscape Architecture Services	(2021-present)
City of Orange - On-Call Plan Check Services	(2021-present)
City of Carson - On-Call Landscape Architecture Services	(2022-present)
City of Anaheim - On-Call Landscape Architecture Services	(2023-present)
City of Eastvale - On-Call Plan Check & Landscape Architecture Services Including Landscape Architecture, Plan Check and Inspections	(2023-present)
City of Laguna Beach - On-Call Landscape Architecture & Plan Check Services	(2023-present)
City of Indian Wells - On-Call Landscape Architecture Services	(2023-present)
City of Pico Rivera - On-Call Landscape Architecture Services	(2023-present)
City of Long Beach - On-Call Landscape Architecture Services	(2024-present)

FIRM QUALIFICATIONS AND RELEVANT EXPERIENCE

We offer comprehensive planning and design services tailored to the unique needs of each client and project. Our scope of services includes:

Planning and Design
- Master Planning
- Preliminary Design Development
- Program Development
- Recreation Land-Use Planning
- Site Evaluation and Selection
- Site Planning
- Consensus Building
- General Consulting
- Community Outreach Campaigns
- Landscape Plan Check and Inspection Services
- Accessibility Consulting (CASp)

Construction Documentation and Support
- Working Drawings & Specifications
- Assistance During Bidding
- Construction Observation & Consulting
- Maintenance Guidelines and Observation

Award-Winning Design

RHA Community Works has received numerous accolades from respected organizations, including:
- American Society of Landscape Architects (ASLA)
- American Planning Association (APA)
- California Park and Recreation Society (CPRS)
- American Public Works Association (APWA)
- National Association of County Parks and Recreation Officials (NACPRO)

Notable award-winning projects include:
- Frisbie Park Expansion, Rialto
- Pikes Peak Park, Norco
- Lucinda Garcia Park, Monrovia
- Dolphin Park All-Abilities Playground, Carson
- Mercado Park, Perris
- California Citrus State Historic Park, Riverside
- Horseshoe Lake Park, Jurupa Valley
- Ayala Park, Bloomington
- Pico Park, Pico Rivera
- White Park, Riverside
- Aliso Viejo Ranch, Aliso Viejo
- Enchanted Hills Park, Perris
- Bob Belt's Beach Park, Needles
- Rancho Jurupa Park Expansion, Jurupa Valley
- Joe Sampson Park, Rialto
- Piru Skate Park, Piru, Ventura County
- Sycamore Highlands Park, Riverside

FIRM QUALIFICATIONS AND RELEVANT EXPERIENCE

Proposed Communication Process:

RHA Community Works will utilize Basecamp as our primary project management and collaboration hub, ensuring that City of San Jacinto staff stay connected and informed at every stage. This platform will serve as a vibrant, digital home for all task orders, housing real-time project schedules, meeting minutes, and draft deliverables in one organized space. By inviting the City's project managers into our workspace, we will provide full visibility into our creative process, allowing for seamless feedback and ensuring that every milestone is met with clear accountability. This streamlined approach will transform coordination into a straightforward, engaging experience, replacing cluttered email chains with a clear, reliable history of all project decisions and assets.

Staff:

The RHA organizational system utilizes a team approach. Under principal management, our project assignments are organized into teams of professionals, with each team led by a managing partner and/or principal based on best fit for each task order/project.

Doug Grove, PLA, ASLA, LEED AP	Managing Partner/Landscape Architect
Scott Rice, PLA, ASLA, LEED AP, CASp	Managing Partner/Landscape Architect
Greg Meek, PLA	Principal/Landscape Architect
David Black, PLA	Associate Principal/Landscape Architect
Dan Burkhart, PLA	Associate Principal/Landscape Architect
Lauren McHugh, PLA	Associate Principal/Landscape Architect
Allison Rush, PLA. CASp	Associate Principal/Landscape Architect
Andrew Lytle, PLA	Senior Project Manager/Landscape Architect
Mike Salazar, PLA	Senior Project Manager/Landscape Architect
Andres Virata, PLA, ASLA	Production Manager/Landscape Architect
Andy Emery, PLA	Construction Administration/Landscape Architect
Jennifer Salazar	Associate /Landscape Designer
Analicia Escobar-Gomez, MPA, CPRP	Director of Community Engagement
Luke Morris, PLA	Landscape Architect/Native Plant Specialist
Arielle Talley	Landscape Designer/GIS Specialist
Brian Espinoza	Landscape Designer
Jocelyn Aguirre	Landscape Designer
Savannah Baca	Landscape Designer
Marissa Trout	Office Manager
Rebecca Rice	Executive Assistant

Personnel Training Program:

RHA Community Works maintains a rigorous personnel training and professional development program designed to ensure our team remains at the forefront of technical and regulatory standards in Southern California. Our staff of 20 professionals, which includes 12 licensed landscape architects, participates in ongoing professional education to maintain active specialized certifications, including CLARB certification, Certified Access Specialist (CASp) continued education credits, and ISA Certified Arborist credentials. Training is conducted on a quarterly basis, focusing on emerging trends in sustainable urban development, permaculture, and the integration of innovative materials. Furthermore, our team undergoes regular internal workshops on Quality Control (QC) protocols to guarantee that all project deliverables meet the high standards of technical excellence and universal design required for municipal public works projects.

Site Specific Master Planning & Concept Development:
Our team excels at developing master plans and multi-phased developments. In addition to vibrant master plan documents our team also develops photo realistic 3-D renderings as part of our design process to ensure a fully cohesive and integrated site. This process allows us to make proactive design decisions for vertical plane elements. We find the 3-D visuals also help garner excitement around important projects and are an integral tool for funding support. As a standard practice, we provide scaled 3-D modeling to help the community understand how the proposed park improvements will actually appear, to help identify any conflicts well ahead of construction.

Above: Top renderings: Dolores Huerta Park playground and thematic wind screen for Futsal Multi-Use Courts in Fresno, CA.

Community Outreach:
RHA+CW recognizes the need for all voices in a community to be heard and incorporated into thoughtful designs. Our team aims to ensure all members of the community have the opportunity to participate in community outreach and planning processes.

Our team is currently working on final touches for the design of Dolores Huerta Park for the City of Fresno. As part of the preliminary design process, CWDG, now doing business as RHA+CW worked with the City to create a community outreach campaign in 4 different languages (Spanish, Punjabi, Hmong and English), to best serve their community.

We employ what we call the "FUNnel" approach to take the multitude of "wants" and narrow them down to a final concept that reflects the best interests of the City and its constituents- and we do so in a FUN way! We typically start by gathering general information by means of online and mail-out surveys ahead of the public design meetings, with ongoing input from the City, so that we can begin to prepare informed design decisions to facilitate a conceptual design that reflects the community's interest and not OUR interests. We focus on developing a strong sense of pride for each project by focusing on a placemaking that incorporates the community's identity.

Meetings and Presentations:
Our team has experience presenting to a variety of City Staff, Boards and Commissions. Doug Grove, Scott Rice, and Analicia Escobar-Gomez all have extensive experience presenting to special commissions, City Councils and other committees. We also find commissions and committees are a great place for garnering project feedback and support. It is often a good place to start soliciting feedback by going where people are already meeting.

Accessibility Consulting
We provide comprehensive Certified Access Specialist (CASp) services to help ensure your property complies with applicable accessibility standards and regulations. Our evaluations identify potential barriers to access and offer clear, practical recommendations for achieving compliance with the Americans with Disabilities Act (ADA) and California accessibility codes. Whether for new construction, renovations, or existing facilities, we deliver detailed reports, guidance on corrective measures, and support throughout the compliance process, helping reduce legal risk while promoting inclusive and accessible environments for all users.

Feasibility Studies:
RHA+CW's most recent Feasibility Study was completed for the City of Ontario as part of our on-call services. For this our team worked with the City to identify and prioritize park amenity renovations with accessibility and available funding in mind.

Utility Search and Coordination:
Our team has extensive experience with utility coordination. In addition, our subconsultants, Design West Engineering and Civil Engineers will assist these coordination efforts.

Contract Documents:
Our team focuses on constructibility by creating Construction Drawings will include site plans and details for all aspects of demolition, construction, civil, grading, planting, irrigation and specialty plans. Our construction details are crafted from a constructibility standpoint, supplemented with item-specific notes that reduce contractor "artistic license" and reduce likelihood of RFI's. Plans will identify recommended suppliers and products, with emphasis given to local sources, sustainable concepts, recycled/ recyclable materials, and durability of products. Each member of the RHA+CW team integrates their strengths, expertise and experience to ensure the best designs and most complete, constructible, contract documents are completed on-time and within budget for each project we take on.

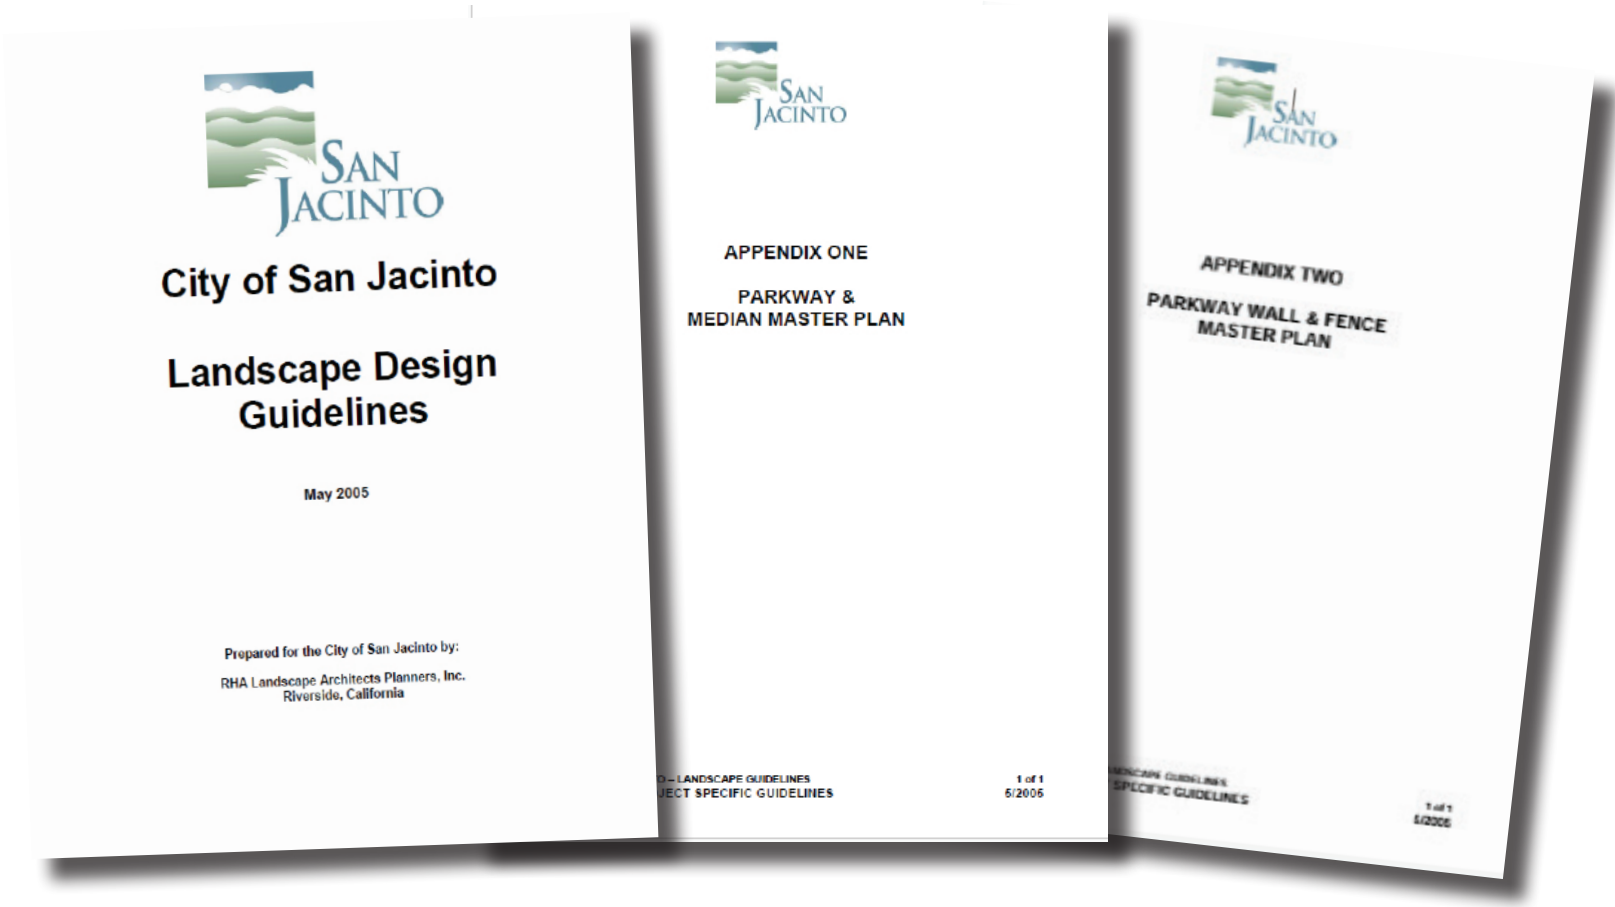
Cost Estimating:
We regularly prepare detailed construction plans, details, specifications and estimates for park projects, and strive to make our construction drawing packages the most biddable and buildable across the industry. Since we perform Landscape Plan Check for various agencies, our finger remains on the pulse of the industry, and are able to glean tips and tricks to making plans more readable, maintaining a good balance of notes and clarifications without overwhelming the drawings with redundant information. We are regularly receiving bids for various public work projects. Upon receiving the bid we also request from the two apparent low bidders their unit prices. We incorporate these updated unit prices into our own in-house cost estimates. This allows our firm to provide up-to date cost estimates for our clients.

Permits:
Our team has first hand plan check experience which comes in handy when it comes time to assist the City in obtaining approvals and/or permits from applicable agencies as needed. Our team has experience with the permitting processes with, USACE, CDFW, and SCAQMD.

Storm Water Best Management Practices:
We work with Civil Engineers who have extensive experience with designing using the principles of storm water best management practices (BMP). RHA+CW has also worked on many park and trail projects that feature unique and design integrated storm water BMP's. Our work with our teams also include WQMPs and SWPPPs where applicable and required.

Environmental:
In addition to Analicia Escobar-Gomez's background with CEQA/NEPA Compliance for park planning and public landscape projects, she also has background in facilitating AB52 Tribal Consultations.

Design Expertise: RHA+CW has successfully completed over 35 parks and recreation projects in the past five (5) years. Our team stays up to date on water-wise landscaping and irrigation with our Certified Irrigation Designer taking the lead in staying up to date with new techniques and technologies.



Site Specific Master Planning & Concept Development:
Our team excels at developing master plans and multi-phased developments. In addition to vibrant master plan documents our team also develops photo realistic 3-D renderings as part of our design process to ensure a fully cohesive and integrated site. This process allows us to make proactive design decisions for vertical plane elements. We find the 3-D visuals also help garner excitement around important projects and are an integral tool for funding support. As a standard practice, we provide scaled 3-D modeling to help the community understand how the proposed park improvements will actually appear, to help identify any conflicts well ahead of construction.

Leadership In Energy And Environmental Design
LEED certified and a leader in the design of energy efficient, water-wise parks and public spaces RHA Community Works actively encourages the employment of environmentally friendly sustainable design principles. We encourage clients to use green technologies and design principles to achieve innovative, resource conserving, maintenance friendly public facilities which provide long term budget savings.

Plan Checking Services
We have provided plan-checking services to various agencies for over three decades and have experienced licensed individuals on staff to provide this function. We have provided these services for the Cities of Highland, Banning, Perris, Rialto, Jurupa Valley and Corona.

Construction Support:
What sets RHA+CW during the Construction Support/Administration phase is our first hand experience as a licensed contractor, allowing us to closely monitor and track scheduling, budgets, and upcoming inspections. We work hard to drive the construction schedule and keep contractors accountable. We will participate in construction meetings when requested, and at a frequency determined by the City. Based on our observations at the site and on the contractor's application for payment, we will assist in determining the amount owed to the contractor. We will review job drawings, as-builts, RFI's, samples and other submissions of the contractor for conformance with the design of the project and for compliance with the information given in the conformance contract documents, for the project. We will review change orders and submittals for approval and issuance by the City. We will respond to requests for information from the contractor, and issue field bulletins. We will maintain updated RFI, Change Order and Submittal logs, which will be shared online via Basecamp app.

LANDSCAPE DESIGN GUIDELINES

CITY OF SAN JACINTO

RHA+CW INVOLVEMENT:
Stakeholder Outreach,
Document Development

CONTACT:
Tim Hults, City Manager
Prior to his 2017 retirement
Currently a Senior Associate at
The Collaborative
thults@thecollaborative.com

RHA, now doing business as, RHA Community Works has a long-standing history with the City of San Jacinto, having authored the City's original Landscape Design Guidelines and the Parkway & Median Master Plan. Our foundational work established the framework for the City's visual character and technical standards, covering everything from project-specific design criteria for residential front yards and commercial developments to specialized sections on slope stabilization and fire protection zones.

Beyond general standards, our team created the detailed Parkway & Median Master Plan, which provides specific planting themes and material palettes for major corridors like De Anza and Potter Road. This plan introduced water-wise strategies—such as the use of inert groundcovers and the restriction of turf in medians—well ahead of modern conservation mandates. By establishing clear requirements for street tree box sizes and wall materials, we provided the City with a durable roadmap for its public infrastructure. This deep historical knowledge of San Jacinto's existing guidelines gives us a significant head start in streamlining these documents into a modern, user-friendly comprehensive manual.

STREETSCAPE MASTER PLAN

REHABILITATION
CITY OF CARSON

RHA+CW INVOLVEMENT:
Conceptual Design, Photo Simulations, Implementation Plan and Cost Estimates

CONTACT:

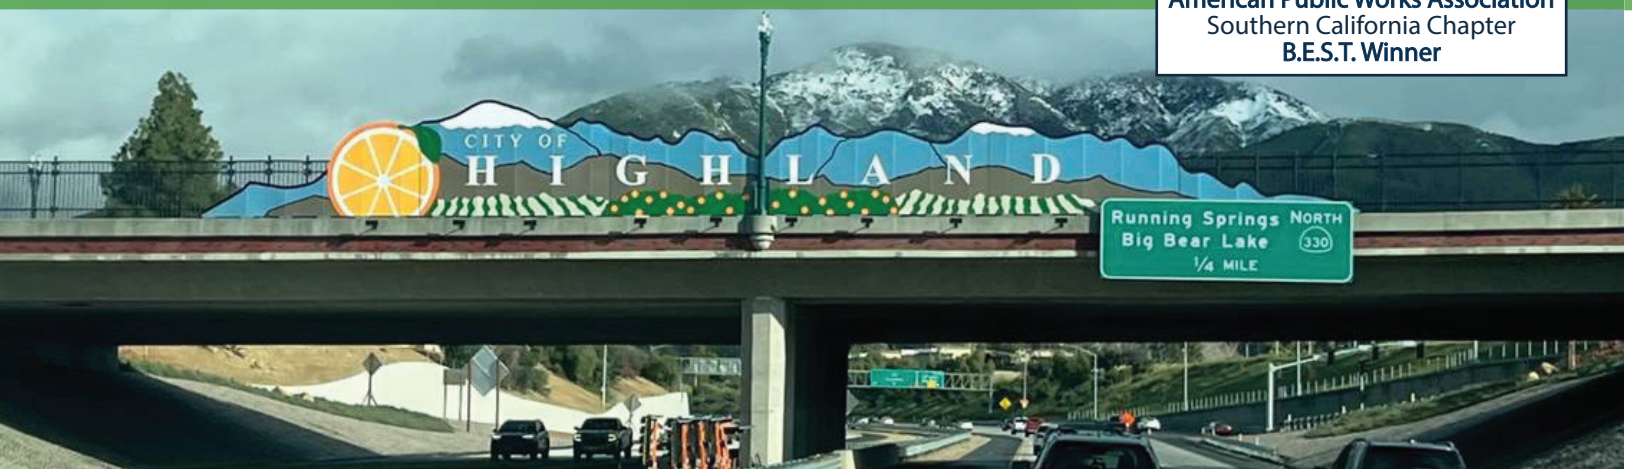
iholst@carsonca.gov

The CWDG team, now doing business as RHA+CW, has teamed with Breen Design Group to prepare a Streetscape Master Plan to address median rehabilitation throughout the City of Carson. Our team is working with the City's stakeholders to develop a comprehensive City-Wide median rehabilitation conceptual plan utilizing the City's new branding and future development plans. As part of this exercise we are in the process of developing cost estimates and implementation plan.

Our team has since completed construction plans for four (4) linear miles of median improvements throughout the City. We are currently teamed with Mour Architects on city-wide facade improvements plans in preparation for the 2028 Olympics.

LAGUNA BEACH PLAYGROUND MASTER PLAN

CITY OF LAGUNA BEACH



RHA+CW INVOLVEMENT:
Community Outreach,
Conceptual Design,
Photo Simulations,
Master Plan & CIP Prioritization Matrix

CONTACT:
Frank Lopez
Assistant City Engineer
flopez@lagunabeachcity.net
(949) 497-0741

CWDG, now doing businees as RHA+CW, served as the primary consultant for the City of Laguna Beach Playground Master Plan, leading the comprehensive effort to evaluate and provide a long-term strategy for the City's nine public playgrounds. CWDG's role was multifaceted, encompassing project leadership, technical analysis, and extensive community engagement to ensure the final plan was both technically sound and reflective of the community's vision.

As the lead consultant, CWDG was responsible for the overall management and delivery of the master plan. This began with meticulous on-site work, including detailed assessments of each playground's existing conditions. This was outlined in a $3.14 CIP Prioritization Matrix as part of the Playground Master Plan Approval by City Council.

PARKS & FACILITIES MASTER PLAN

NEW DEVELOPMENT
CITY OF CHINO

RHA+CW INVOLVEMENT:

Community & Stakeholder Outreach, Conceptual Design, Photo Simulations, Plan Development

CONTACT:

Sylvia Avalos, Director
Community Services, Parks & Recreation
(909) 334-3434
savalos@cityofchino.org

RHA, now doing business as RHA+CW, served as a key technical consultant, providing critical expertise in park inventory and facility assessment. Led by Doug Grove, the firm performed detailed evaluations of Chino's extensive park system, which includes over 25 named parks such as Central Park, Monte Vista Park, and the Nature Retreat Park. RHA's role was instrumental in identifying life-cycle needs and infrastructure improvements across the city's diverse recreational assets, ensuring that the master plan's recommendations were grounded in a thorough understanding of existing physical conditions. By integrating these technical assessments with community input, RHA helped establish a strategic roadmap for the sustainable development and maintenance of Chino's public spaces for the five-year planning period.

EXPERIENCE AND REFERENCES

ON-CALL SERVICES

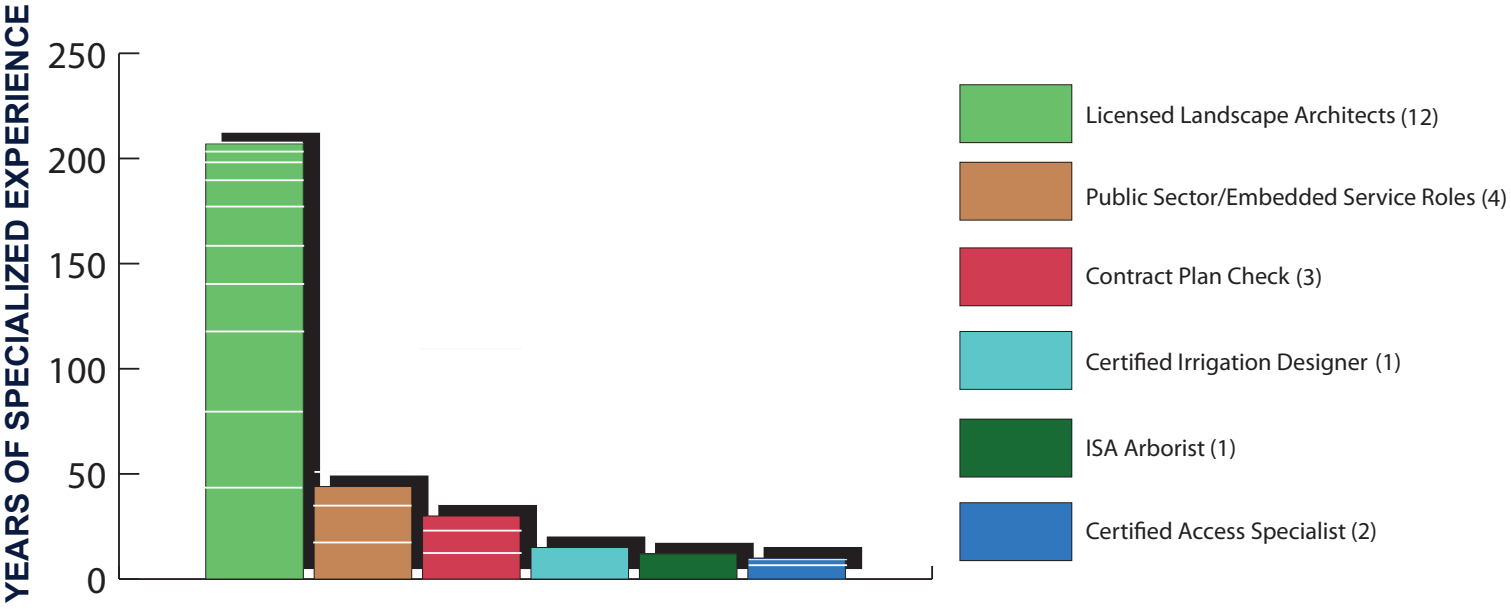
NEW DEVELOPMENT CITY OF EASTVALE

RHA+CW INVOLVEMENT:
Conceptual Design,
3D Modeling,
Construction Drawings,
Construction Administration
Plan Check & Inspections

CONTACT:
Yu Rhi Choi, Associate Engineer
951-361-0900
ychoi@eastvaleca.gov

CWDG, now doing business as RHA+CW, has served the City of Eastvale as a landscape architect consultant over the last decade and a half, since becoming a City. Scott Rice served as Landscape Architect for a wide variety of City contracts, including nearly all parks and trails within the City boundaries and even their Community Center. Featured above from Top Left clockwise: Entryway to Eastvale's Community Park and Sports Fields - Phase 1, 2.5 mile segment of Santa Ana River Trail, Bellegrave and Sumner City Entry Monument, and City of Eastvale Community Center.

In addition to our extensive landscape architectural work, our team most recently, serves as On-Call Plan Check and Inspection Services for their LMDD. Services provided by Dan Burkhart currently include, landscape maintenance inspection of their CFD, City tree inspection, City property damage documentation, landscape mapping, plan check and more.



PROJECT TEAM AND STAFFING

RHA+CW confirms that key personnel identified in the Organizational Chart identified below will remain during the term of the agreement. In the event there are proposed changes during the term of the agreement we will develop a transition plan for the City's approval. We are also happy to work with any other On-Call sub-consultants already contracted with the City of San Jacinto. Managing Partners, Doug Grove and Scott Rice, will serve as the main points-of-contact for the City of San Jacinto and Project Managers will be rotated in based on the needs of each task.

PROJECT TEAM AND STAFFING

RHA+CW'S CURRENT TEAM OFFERS OVER 200 YEARS OF COMBINED PARK PLANNING EXPERIENCE IN ADDITION TO THE SPECIALTIES BELOW:

YOUR COMMITTED TEAM LEADERSHIP TEAM

Doug Grove, LLA #2799 ASLA, LEED AP

Managing Partner - Principal Landscape Architect

Doug Grove is uniquely qualified to lead this contract as he currently oversees the **City of San Jacinto's Parks and Open-Space Master Plan**, providing him with an unmatched institutional understanding of the City's specific goals, community needs, and existing infrastructure. With over four decades of experience and a former presidency of the California Park and Recreation Society (CPRS), he offers a "concept-to-completion" leadership style that ensures every on-call project aligns seamlessly with San Jacinto's long-term strategic vision. His deep-rooted familiarity with the City's regulatory landscape and stakeholder priorities allows RHA Community Works to deliver highly efficient, technically sound designs that are ready for immediate implementation.

Scott Rice, LLA #5111 ASLA, LEED AP, CASp

Managing Partner - Principal Landscape Architect

With over 25 years of experience in public works projects, Mr. Rice provides executive oversight and high-level quality assurance for all CWDG municipal projects. **His certification as a Certified Access Specialist (CASp)** is a critical asset for the City of San Jacinto, as the RFP specifically requires all documents to be reviewed for ADA compliance. Mr. Rice will ensure that every design submittal meets the most stringent federal and state accessibility standards.

PROJECT TEAM AND STAFFING

YOUR COMMITTED TEAM OF EXPERTS

Greg Meek, LLA #2484 CPSI - Principal Landscape Architect
Greg brings over 45 years of professional experience, including over a decade as a **park development coordinator and senior landscape architect for major California municipalities,** providing him with a sophisticated understanding of capital improvement budgeting, professional service agreements, and the internal operations of public agencies.

Allison Rush, LLA #6378 CASp, CPSI - Associate Principal Landscape Architect
As a Licensed Landscape Architect and Director Of Design + Creativity with over 13 years of experience, Allison provides a dual layer of technical oversight as both a **Certified Access Specialist (CASp) and a Certified Playground Safety Inspector (CPSI)**. She oversees all graphics and overall cohesion for plans and graphics for the firm.

Dan Burkhart, LLA #6092 ASLA, ISA, sUAS - Associate Principal Landscape Architect
As the Director of Implementation and Value, Dan provides an "insider" perspective rooted in his previous service as a Senior Landscape Inspector. His diverse technical toolkit as a Licensed Landscape Architect, **ISA Certified Arborist, and FAA Licensed Drone Pilot** allows him to oversee project implementation with a unique focus on budget-conscious asset management.

Lauren McHugh, LLA #5578 - Associate Principal Landscape Architect
As a Project Manager and Associate Principal with RHA Community Works, Ms. McHugh brings over 19 years of dedicated experience to the firm, managing projects from preliminary design through construction documentation. She has specialized in diverse assignments including streetscapes, and worked on the **San Jacinto Park and Recreation Master Plan for the City of San Jacinto.**

Andrew Lytle, LLA #7165 Senior Project Manager/Landscape Architect
With over a decade of experience, Andrew brings a **high level of technical proficiency in 3D visualization** and the design of complex public infrastructure, including parks, schools, and trail systems. His expertise spans the full project lifecycle, from initial conceptual rendering and budget management to the rigorous navigation of permitting and construction-phase oversight.

Mike Salazar, LLA #5166 CLIA - Senior Project Manager/Landscape Architect
With over 20 years of experience, Mike specializes in bridging the gap between innovative design and the technical requirements of large-scale capital improvement programs. As a **LEED Accredited Professional and Certified Landscape Irrigation Auditor**, he brings a rigorous focus on sustainability and operational efficiency to the firm.

Analicia Escobar-Gomez MPA, CPRP - Director Of Community Engagement
Analicia provides a multifaceted perspective to the team, drawing on her diverse background as a designer and public sector planner to develop highly implementable solutions for municipal clients. **With nearly a decade of park planning experience**, she specializes in equity-driven, community-based design and has successfully led recent outreach campaigns for numerous California cities.

PROJECT TEAM AND STAFFING: SUBCONSULTANTS

While the RHA Community Works team will perform the majority of the project scopes for the City of San Jacinto our team also includes the following subconsultants if required to consult for their expertise:

PBLA Engineering, Inc. (PBLA) is a multi-disciplinary firm that offers a robust suite of professional design services, including civil engineering, planning, and landscape architecture, making them a versatile partner for municipal services. Their expertise in site development includes critical services such as precise grading and drainage design, hydrologic and hydraulic studies, and Digital Terrain Modeling, which ensure that the creative vision of a landscape architect is grounded in functional, buildable reality. PBLA is particularly adept at navigating the complexities of municipal infrastructure, providing essential support in Water Quality Management Plans (WQMP), NPDES compliance, and dry utility coordination. By bridging the gap between innovative landscape design and rigorous engineering standards, PBLA ensures that the design standards for the City of San Jacinto are not only aesthetically impactful but also structurally sound, sustainable, and fully compliant with state and local regulations.

Years of Collaboration: 2010-Current (15+ Years)

Design West Engineering (DWE) can provide all Electrical Engineering and Dry Utility design/ coordination services for City projects. We (RHA+CW) have teamed with DWE on many successful park projects across Southern California. We plan to utilize their expertise for lighting and security standards.

Years of Collaboration: 2000 - Current (25+ Years)

DOUG GROVE ASLA, PLA, LEED AP
MANAGING PARTNER / PRINCIPAL LANDSCAPE ARCHITECT

EDUCATION:
Bachelor of Science in Landscape Architecture
California State Polytechnic University, Pomona (1985)

Years of Experience: 40+
Years with Firm: 32

LICENSES + CERTIFICATES:
Licensed Landscape Architect
California #2799 (1987-current)

LEED Accredited Professional
United States Green Building Council (USGBC)

AFFILIATIONS:
Building Industry Association of Southern California (BIASC)
Board of Directors/ Executive Committee
Riverside County Chapter
President (2024-present)
Vice President (2023-2024)
Secretary (2022-2023)
Board Member (2018-present)

Building California Park & Recreation Society (CPRS)
CPRS Administrators Section
Director of Fundraising (2024-present)
President (2023-2024)
President Elect (2022-2023)
Vice President (2021-2022)

Mr. Grove serves as the Managing Partner and Principal Landscape Architect of RHA Community Works (RHA+CW), where he leverages over four decades of technical expertise and executive leadership. A 1985 graduate of California State Polytechnic University, Pomona, with a Bachelor of Science in Landscape Architecture, Mr. Grove has dedicated his career to the stewardship of public and private land, specializing in the intersection of community functionality and aesthetic design.

Throughout his tenure, Mr. Grove has become a definitive voice in the public works sector. His portfolio includes the successful design and project management of hundreds of park projects, alongside a diverse array of streetscapes, institutional facilities, and commercial environments. Beyond public infrastructure, he is highly regarded within the home-building industry for his strategic oversight of residential developments. This dual expertise allows him to navigate the unique requirements of both public and private stakeholders with a rare level of fluency.

Mr. Grove's approach is defined by a comprehensive, "concept-to-completion" philosophy. He is known for his ability to guide complex multidisciplinary teams through every phase of project development. This includes initial site planning and conceptual design, the rigorous production of construction documents, and the critical phase of construction observation. A key hallmark of his leadership is his proficiency in the regulatory arena; he is adept at coordinating public outreach, leading community meetings, and navigating the nuances of agency approvals to ensure that final drawings translate into seamless project delivery.

His commitment to the profession extends far beyond the studio. Mr. Grove is a prominent figure in the California landscape and recreation community, having served as the 2023–2024 State Board President for the California Park and Recreation Society (CPRS). His leadership within the organization also includes a past presidency of the CPRS State Development and Operations Section. Currently, he serves as the President of the Building Industry Association (BIA) for Riverside County, reflecting his deep-rooted influence in regional development.

Representative projects include (partial list):

- **Landscape Design Guidelines, City of San Jacinto**
- **Parks and Recreation Master Plan, City of San Jacinto**
- Victoria Avenue Beautification Plan, City of Riverside
- Parks & Facilities Master Plan, City of Chino

SCOTT RICE ASLA, PLA, LEED AP, CASp
MANAGING PARTNER /PRINCIPAL LANDSCAPE ARCHITECT

EDUCATION:

Bachelor of Science in Landscape Architecture
California State Polytechnic University, Pomona (2002)

Years of Experience: 25
Years with Firm: 20+

LICENSES + CERTIFICATES:

Licensed Landscape Architect
California #5111 (2005-current)
New York #2645 (2016-current)

Certified Access Specialist
California CASp-709 (2016-current)

AFFILIATIONS:

American Society of Landscape Architects (ASLA) / Southern California Chapter
Exec. Committee member (2021-present)
Chapter President (2024-2025)

County of San Bernardino
Building and Safety Appeals Board - Chairman (2025-present)
Physically Disabled Access Appeals Board Member (2019-present)

Building Industry Association of Southern California Board of Directors
San Bernardino County Chapter Board Member (2025-present)
Riverside County Chapter Board Member (2021-2025)
Leaders of Tomorrow Committee - Chairman (2017)

Certified Access Specialist Institute
Full Member (2016-present)

Mr. Scott Rice is President and Managing Principal of Community Works Design Group (CWDG). He has managed over $150 million of park projects during his tenure at CWDG. Scott oversees the development of construction documents, plan checking, cost estimating, conceptual rendering, and construction observation and management.

Scott graduated with honors from Cal Poly Pomona, earning a Bachelor of Science Degree in Landscape Architecture. He is a full member of the American Society of Landscape Architects (ASLA). Additionally, Scott is a LEED Accredited Professional (LEED AP), as designated by the United States Green Building Council (USGBC), and a Certified Access Specialist (CASp) as issued by the State of California, Division of the State Architect. Scott is one of only three Landscape Architects in California that currently hold CASp Certification.

Scott also serves as the City Landscape Architect for the City of Highland, California, and has acted in that capacity since 2005. Scott also has served as a Consultant Park Planner/ Plan Checker for Jurupa Area Recreation and Park District (JARPD) since 2015.

Mr. Rice draws on previous work experience in graphic design and golf course maintenance to integrate high aesthetic quality in balance with functional, cost-effective design. His focus is in Public Works projects for various municipalities throughout the State, including Park Planning of various scales, including Community, Neighborhood, Sports, and Pocket Parks, as well as median and parkway landscape, and LMD/ CFD planning. Specialized areas of involvement include Skate Parks, Dog Parks, and Accessible Play. In addition to Park Planning, Scott is seasoned in the landscape architectural development of Multi-family Housing, Planned Residential Communities, Highway Aesthetic Design, Custom Residential Planning, and various private/commercial ventures.

Representative projects include (partial list):

- **Carson Streetscape Master Plan, City of Carson**
- **Perris Landscape Design Guidelines, City of Perris**
- Safer Streets Phases 1 & 2, City of Indian Wells
- Streetscape Master Plan, City of Carson
- Laguna Beach Playground Master Plan, City of Laguna Beach
- City Landscape Architect, City of Highland (2005-Present)
- Greenspot Iron Bridge Kiosk, City of Highland

GREG MEEK PLA, CPSI
PRINCIPAL LANDSCAPE ARCHITECT

EDUCATION:
Bachelor of Arts in Landscape Architecture
California Texas A&M University (1979)
Performance Leadership
DunkinWorks (2016)
Resolve - Negotiations training
Agreement Dynamics Inc. 2017

Years of Experience: 47+

LICENSES + CERTIFICATES:
Licensed Landscape Architect
California #2484 (1984-current)

Certified Playground Safety Inspector

Mr. Greg Meek is a Principal Landscape Architect at RHA Community Works with over 47 years of extensive experience in both the public and private sectors. A graduate of Texas A&M University and a licensed professional since 1984, Greg offers a rare depth of institutional knowledge, including a notable three-year tenure as the Senior Landscape Architect for the City of San Jose. His career is defined by a mastery of public works administration, having spent a decade as a park development coordinator for various California municipalities. This background allows him to expertly navigate the complexities of agency capital budgets, the management of Park Impact fees, and the strategic planning of Capital Improvement Programs (CIP) for high-stakes infrastructure projects.

Greg's specialized expertise is particularly valuable for large-scale turf reduction and water conservation contracts. His experience as a consultant plan checker for cities such as Jurupa Valley, Rialto, and Diamond Bar ensures that all design documents undergo a rigorous internal review for technical accuracy and regulatory alignment. He is highly proficient in developing requests for services, negotiating fees, and managing multi-disciplinary teams to ensure that public projects—ranging from regional sports complexes to municipal streetscapes—are delivered with fiscal transparency and strict adherence to AB 1572 and MWELO mandates.

In addition to his administrative and design leadership, Greg is a Certified Playground Safety Inspector (CPSI), reflecting a career-long commitment to public safety and accessible design. His professional toolkit is further enhanced by advanced training in performance leadership and negotiation dynamics, skills he utilizes to facilitate consensus among stakeholders and governing agencies. Whether overseeing the modernization of a neighborhood park or coordinating complex facility improvements, Greg ensures that every RHA initiative is grounded in nearly five decades of technical excellence and a deep understanding of the unique operational requirements of California's public districts.

Representative projects include (partial list):

- Mead Valley Library (LEED Silver), County of Riverside
- Casmalia and Alder Street Beautification, City of Rialto
- Mission Boulevard Revitalization, Riverside County EDA Washington Park Play Area, City of El Segundo, California
- Jurupa Valley Planning Department Plan Checking, City of Jurupa Valley,
- Lake Cunningham Bike Park/ Extreme Sports Park, San Jose, California
- Grand Terrace Fitness Park, Grand Terrace, California

DANIEL BURKHART ASLA, PLA, ISA
ASSOCIATE PRINCIPAL LANDSCAPE ARCHITECT

EDUCATION:
Bachelor of Science in Landscape Architecture
California State Polytechnic University, Pomona (2001)

Years of Experience: 25
Years with Firm: 5

LICENSES + CERTIFICATES:

Full Member

Mr. Dan Burkhart is an Associate Landscape Architect at RHA Community Works, where he directs the firm's construction development and documentation processes with a focus on large-scale public works projects. With over 24 years of cross-disciplinary experience, Dan oversees technical plan checking, internal quality control, and comprehensive construction oversight. His professional journey, from early roles in municipal parks departments to serving as a General Superintendent for habitat restoration and mitigation, provides him with a unique "boots-on-the-ground" perspective that ensures designs are not only visionary but technically executable and maintainable.

As a specialist in sustainable infrastructure and public-sector contracts, Dan previously served as the Senior Landscape Inspector for the City of Yorba Linda. In this capacity, he managed extensive landscape maintenance assessment districts (LMAD), overseeing 500 acres of municipal landscape and a 22,000-tree urban forest. This experience on the agency side of the table is invaluable for turf reduction initiatives, as it allows him to anticipate the long-term operational needs of public districts while ensuring strict adherence to project specifications and water-efficiency mandates.

Dan holds a Bachelor of Science in Landscape Architecture from Cal Poly Pomona and maintains an elite technical toolkit, including certifications as a Licensed Contractor, Certified Arborist, FAA UAS Drone Pilot, and Qualified Applicator (QAL). Known as the "Coach" within the office, he is dedicated to mentoring staff and optimizing production efficiency to meet demanding project schedules. His diverse background in both design-build and municipal inspection makes him a key asset in delivering high-performance, AB 1572-compliant landscapes that stand up to the rigors of public use and maintenance.

Representative projects include (partial list):

- **Carson Streetscape Master Plan, City of Carson**
- **Perris Landscape Design Guidelines, City of Perris**
- Public Turf Conversion, City of Jurupa Valley
- Colton Median and Streetscape, City of Colton
- 5th Street Widening, City of Temecula
- Natural Parkland Trail, City of Highland
- 3rd and 5th Street Improvements, City of Highland

Mrs. Allison Rush is an Associate Principal Landscape Architect at RHA Community Works, specializing in the optimization of public spaces and the technical delivery of water-resilient infrastructure. With a Master of Landscape Architecture and a background in Architectural History, Allison excels at configuring environments that promote community health while meeting modern sustainability mandates. Her expertise is central to the firm's ability to transform underutilized areas into high-functioning, AB 1572-compliant landscapes that balance user experience with resource conservation.

With over a decade of experience in the California landscape industry, Allison has developed a sophisticated mastery of digital media and CAD-based production. She leverages advanced AutoCAD workflows, 3D modeling, and photo simulations to translate complex design guidelines into precise, constructible documents. These tools are critical in the public works sector, providing Districts with realistic visualizations of turf reduction and irrigation retrofits while ensuring that site grading and drainage plans align perfectly with local municipal standards and state water ordinances.

As a Certified Access Specialist (CASp) and Playground Safety Inspector, Allison ensures that every project exceeds universal design standards and safety requirements. Her technical fluency allows her to lead multidisciplinary teams through the intricacies of playground design and irrigation modernization, bridging the gap between creative intent and strict regulatory adherence. By maintaining a rigorous standard for construction documentation, she ensures that the firm's designs are not only visionary but technically sound and ready for seamless field implementation.

Representative projects include (partial list):

- **Carson Streetscape Master Plan, City of Carson**
- **Perris Landscape Design Guidelines, City of Perris**
- **Safer Streets Phases 1 & 2, City of Indian Wells**
- **Playground Master Plan, City of Laguna Beach**
- **Weston Park Redesign, City of Hemet**

LAUREN MCHUGH PLA
ASSOCIATE PRINCIPAL LANDSCAPE ARCHITECT

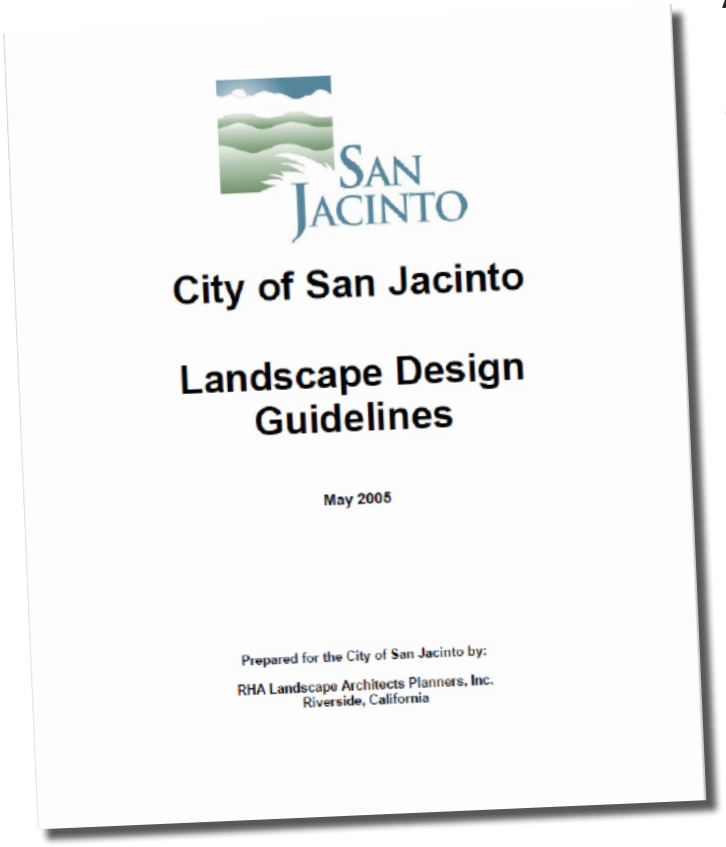
EDUCATION:

Bachelor of Arts in Landscape Architecture
California Texas A&M University (2006)

Years of Experience: 19+

Years with Firm: 19+

LICENSES + CERTIFICATES:



Licensed Landscape Architect
California #5578 (2009-current)

With nearly two decades of experience at RHA Community Works, Ms. McHugh has cultivated a specialized expertise in navigating the complexities of public-sector landscape architecture. As both an Associate Principal and Project Manager, she bridges the gap between high-level community planning and the technical rigor required for construction-ready documentation. Her career is defined by a versatile portfolio that transforms utilitarian infrastructure—such as roadway improvements and hospital grounds—into vibrant, functional environments. By overseeing projects from their earliest preliminary phases through to final construction, she ensures that the original design vision remains intact while meeting strict municipal standards and budgetary requirements.

Beyond her management capabilities, Ms. McHugh is a highly skilled practitioner of computer-aided graphic design, using advanced digital tools to bring conceptual landscapes to life for stakeholders and community members. Her work on large-scale regional parks and intricate pedestrian trail systems reflects a deep commitment to accessibility and ecological integration. Having earned her Bachelor of Science from California State Polytechnic University, Pomona, she applies a "learn by doing" philosophy to every assignment, ensuring that neighborhood parks and urban streetscapes are not only aesthetically pleasing but also resilient and sustainable. Her long-standing licensure and leadership within the firm serve as a testament to her dedication to the profession and the communities she serves.

Representative projects include:

- **San Jacinto Park and Recreation Master Plan, City of San Jacinto**
- Temple City Parks and Open Space Master Plan, City of Temple City
- Carlsbad Needs Assessment and Comprehensive Action Plan, City of Carlsbad
- Ladera Ranch Needs Assessment/Park and Recreation Master Plan, Ladera Ranch
- Orange Blossom Trail – Phase 1, City of Redlands
- Orange Blossom Trail – Phase 2, City of Redlands
- Arroyo Seco Pedestrian and Bicycle Trail, City of South Pasadena
- Gilman Ranch, RivCo Parks
- Celebration Park, City of Ontario
- Fergusson Park, City of Rialto
- Rancho Jurupa Regional Sports Complex, Riverside County EDA
- Rancho Jurupa Park – RV Park, Water Play & Miniature Golf, County of Riverside

A Proven Partnership for a Visionary Future

RHA Community Works has a long-standing history with the City of San Jacinto, dating back to 2005 when we authored the City's original Landscape Design Guidelines and the Parkway & Median Master Plan. Our foundational work established the framework for the City's visual character and technical standards, covering everything from project-specific design criteria for residential front yards and commercial developments to specialized sections on slope stabilization and fire protection zones. We also developed the comprehensive technical manual that governs plan submittals and review processes, ensuring a consistent and high-quality aesthetic across all municipal improvements. This deep historical knowledge of San Jacinto's existing guidelines gives us a significant head start in streamlining these documents into a modern, user-friendly comprehensive manual.

Since those initial projects, our firm has strategically merged with Community Works Design Group, significantly expanding our capacity and creative reach. This merger brings a wealth of additional experience from high-profile municipal projects, such as the development of the Playground Master Plan for the City of Laguna Beach and the Streetscape Master Plan for the City of Carson. By blending our intimate local knowledge of San Jacinto with our firm's broader expertise in stakeholder outreach and inclusive design, we are uniquely prepared to help the City refresh and simplify its various technical documents. Our goal is to consolidate these plans into a single, cohesive Comprehensive Guidance manual that serves as a functional tool for city staff, developers, and residents alike.

The continuity of our leadership is a primary asset for this undertaking. Our Principal Landscape Architect, Doug Grove, spearheaded the original Landscape Design Guideline process as well as the City's initial Park & Recreation Master Plan. His direct involvement ensures that the upcoming updates are built upon a solid understanding of the City's original intent while being expertly adapted for 21st-century needs. This "institutional memory" allows our team to bypass the typical learning curve associated with new consultants, positioning us to meet an ambitious 6–9 month completion timeframe without sacrificing the depth or quality of the final product.

Over the past 20 years, we have built on that foundation by master planning for dozens of surrounding communities and regional agencies—including the Cities of Chino, Riverside, San Clemente, and the Rim of the World Recreation and Park District. We are eager to bring this updated experience back to San Jacinto. With a talented team of 20 professional staff, we have the resources to transform dense technical data into a vibrant, graphic-heavy document. Our approach focuses on clarity and accessibility, utilizing easy-to-navigate tables, matrices, and highly visual prototypes to ensure that the City's vision is not only preserved but clearly communicated for decades to come.

Task 1: Project Initiation & Review

Success in the development of Citywide Landscape, Park, and Irrigation Design Standards begins with a shared vision and a rigorous audit of the City's existing regulatory framework. RHA Community Works views Task 1 not merely as an administrative startup, but as the foundational phase where the project's strategic alignment is secured.

Our team will initiate the project with a **Formal Kickoff Meeting involving key City stakeholders from Public Works, Planning, and Community Development.** The primary objective is to establish clear lines of communication, confirm the project schedule, and define the "Success Indicators" for the final manual. During this session, we will finalize the list of **"Stakeholder Technical Experts"** who will provide departmental oversight throughout the process.

Following the kickoff, our team will conduct a **Comprehensive Document Audit.** We will perform a "deep-dive" review of the following documents to identify "friction points" where current standards may inadvertently hinder the goals of the San Jacinto General Plan 2040:

- ***San Jacinto General Plan 2040:*** Ensuring the new standards facilitate the Land Use and Resource Management goals.
- ***San Jacinto Trails Master Plan:*** Aligning parkway and street tree standards with established trail connectivity goals.
- ***Housing Element & 2021-2029 Mandates:*** Identifying how landscape standards can support densification without sacrificing aesthetic or environmental quality.
- ***Existing Municipal Codes & Engineering Standards:*** Flagging outdated specifications that create maintenance burdens or conflict with modern irrigation technology.

This phase concludes with a **Project Review Memorandum,** which summarizes our findings and outlines the specific areas where current standards are most deficient or inconsistent. This memo serves as the roadmap for the technical updates in subsequent tasks.

Methodology Highlights

- ***Conflict Resolution:*** Identifying where Engineering requirements (e.g., utility clearances) and Landscape requirements (e.g., shade tree canopy) are at odds.

- ***Policy Mapping***: Linking every proposed standard back to a specific goal in the General Plan 2040 to ensure legal and planning defensibility.

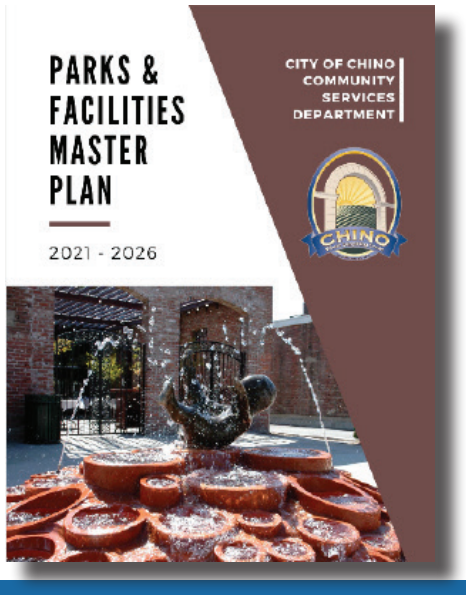
- ***Communication Protocol:*** Establishing a project-specific portal for the seamless exchange of CAD files, GIS data, and draft documents.

Relevant Experience

City of San Jacinto Park & Recreation Master Plan and Landscape Design Guidelines

Having previously developed the City's Park & Recreation Master Plan and Landscape Design Guidelines, RHA Community Works possesses an unparalleled "head start." We are already intimately familiar with San Jacinto's park inventory and community demographics. This historical knowledge allows us to move through Task 1 with greater speed and precision than any other firm, as we are building upon a foundation we helped create.

Task 2: Gap Analysis & Internal Consistency



A primary challenge in municipal development is the "silo effect," where standards authored by different departments—though well-intentioned—create practical conflicts in the field. Task 2 is a rigorous technical audit designed to eliminate these contradictions before they reach the drafting phase. RHA Community Works will conduct a cross-functional analysis of San Jacinto's landscape requirements against the standards of the Public Works, Planning, and Utilities Departments.

Our team will facilitate a series of Internal Stakeholder Work Sessions to map out existing regulatory overlaps. We will focus specifically on "Competing Right-of-Way Needs." For example, we will ensure that a Planning requirement for a specific street tree canopy size does not interfere with Public Works' line-of-sight safety mandates or Utility Department clearances for overhead power lines and underground water mains. By identifying these "Gap Areas" early, we prevent the need for costly field revisions or variance requests during the private development review process.

The deliverable for this task will be an Internal Consistency Matrix. This document will list every current landscape-related mandate and flag conflicting language found in the Municipal Code, Standard Drawings, or General Plan policies. This matrix ensures that the updated Landscape and Irrigation Design Standards manual becomes the "Single Source of Truth" for the City, providing developers and staff with a clear, unified path to project approval.

Methodology Highlights

- ***Regulatory Cross-Reference:*** Auditing the City's Engineering Standard Drawings to ensure that planting setbacks are compatible with utility trenching details.
- ***Feasibility Testing:*** Verifying that required parkway widths can actually accommodate the specified tree root balls and irrigation lateral lines without compromising sidewalk integrity.
- ***Enforcement Streamlining:*** Updating "Conditions of Approval" language to ensure it is consistent across all departments, reducing the administrative burden on City Planning staff during the entitlement process.

Relevant Experience

City of Chino Parks & Facilities Master Plan

During our work for the City of Chino, RHA Community Works faced a complex regulatory environment involving multiple overlapping master plans and municipal codes. Our team led a multi-departmental effort to streamline these requirements into a cohesive set of development standards. By acting as the bridge between the Parks and Public Works departments, we eliminated redundant requirements and created a unified "Amenities Menu" that simplified the development of over 100 acres of parkland, including the regionally significant Ruben S. Ayala Park.

Task 3: Park Classifications & Amenity Standards

A cohesive park system requires a clear organizational hierarchy to ensure that diverse community needs are met efficiently across the City's geographic footprint. RHA Community Works will develop a Park Classification Framework that categorizes San Jacinto's outdoor assets into distinct tiers, such as Pocket Parks, Neighborhood Parks, Community Parks, and Regional Sports Complexes. Each classification will be defined by specific acreage targets, service area radiuses, and intended user demographics, providing the City with a data-driven tool for future land acquisition and development.

Once the hierarchy is established, our team will define ***"Signature Amenity Standards"*** for each class. This ensures a baseline of quality and "equitable distribution" of essential features across all wards of the City. We will move beyond basic requirements to incorporate modern community priorities, establishing standards for:

- ***Inclusive Play Environments:*** Moving beyond basic ADA compliance to "Universal Design" that encourages play for children of all abilities.
- ***Climate Resilience:*** Mandating shade structures, "cool" surfacing, and integrated hydration stations as standard components for every park tier.
- ***Technology Integration:*** Standards for smart lighting, Wi-Fi zones, and security infrastructure.

The final deliverable for this task will be an Amenity Matrix included in the manual. This matrix will act as a "Developer's Playbook," clearly stating which amenities are mandatory, which are preferred, and which are prohibited for each park type. This level of clarity reduces the "back-and-forth" during the design review process and ensures that new developments contribute meaningfully to the City's overall recreational fabric.

Methodology Highlights

- ***Tiered Programming:*** Establishing "minimum viable programming" for small infill lots to ensure they offer high-value recreation despite space constraints.
- ***Service Radius Mapping:*** Using the hierarchy to identify "park deserts" where future Neighborhood Parks should be prioritized.
- ***Maintenance-First Design:*** Specifying standardized materials and finishes (e.g., specific anti-graffiti coatings or playground surfacing) across all classifications to streamline the City's long-term maintenance inventory.

Relevant Experience

RHA Community Works is currently spearheading the City of Upland's Parks and Recreation Master Plan, creating a visionary "roadmap" to modernize aging park infrastructure and equitably expand recreational access for a growing community. By integrating data-driven analysis with robust public engagement, the firm developed a strategic framework that balances the preservation of Upland's local character with innovative standards for climate resilience and inclusive play.

PROJECT UNDERSTANDING AND TECHNICAL APPROACH

To move San Jacinto toward a more cohesive and sustainable park system, RHA+CW will implement a comprehensive classification framework. This system will move beyond simple acreage counts to define the functional role of every space, ensuring that future developer contributions and City investments are strategically aligned.

1. Park Classification Framework

We will categorize all existing and future City assets into a four-tiered hierarchy. This allows the City to set specific standards for maintenance, equipment quality, and service radius:

2. Standards for Inclusive Play

RHA+CW goes beyond basic ADA compliance to embrace Universal Design. Our standards will mandate that San Jacinto's play areas are "multi-generational" and "multi-ability." In addition to our two (2) in-house Certified Access Specialists (CASp), we also offer two (2) in-house Certifed Playground Safety Inspectors (CPSI), giving our team a strong edge for Inclusive Play Design Standards.

3. Climate Resilience and Sustainable Infrastructure

Given the San Jacinto Valley's heat and water constraints, resilience is a technical necessity.

4. Smart Park Technology

We will future-proof San Jacinto's parks by integrating standards for "Smart" infrastructure that improves safety and operations.

Sample Park Classification Matrix shown below:

STANDARD *Feature / Amenity*	P TIER I **Pocket Park** *Under 1 Acre*	N TIER II **Neighborhood Park** *1 – 5 Acres*	C TIER III **Community Park** *10+ Acres*
Inclusive Playground	**Small Nodes** *Intimate play elements*	**Full Primary Structure** *ADA-compliant, mixed ages*	**Destination / Themed** *Signature regional draw*
Shade Coverage	**50%** *of seating areas*	**30%** *of total park area*	**40%** *of total park area*
Sports Facilities	*— Not Applicable —*	**Multi-Use Court** *Basketball / pickleball*	**Specialized Complexes** *League-grade fields & courts*
Restroom Facilities	*— Not Applicable —*	**Optional / Standard** *Pre-cast concrete units*	**Mandatory / Enhanced** *Year-round, family-style*
Smart Technology	**Lighting Only** *LED dusk-to-dawn*	**Wi-Fi + Smart Irrigation** *Public access & ET control*	**Full Sensor Suite** *Usage, air, soil & water*
Hydration Stations	**Standard Fountain** *Single-bubbler unit*	**Bottle Filler** *Fountain + refill spout*	**High-Capacity / Pet-Friendly** *Bubbler, filler & dog bowl*
Native Planting	**100%** *Fully native palette*	**70%** *30% active turf allowance*	**80%** *20% active turf allowance*

READING THE MATRIX
Each row defines the ***minimum*** standard by tier. Developers may exceed these thresholds with City approval.

PERCENTAGE BASIS
Shade and native-planting percentages are calculated against the measurable area defined for each tier.

ENFORCEMENT
Compliance is verified at the design-review phase and confirmed before acceptance into City maintenance inventory.

Task 4: Park Amenity Design and Equipment Standards

Traditional park requirements often rely on rigid, acreage-to-population ratios that can be difficult to implement on irregularly shaped or smaller infill development sites. To address this, RHA Community Works will develop a ***"Points-Based Amenity Menu"*** designed to prioritize qualitative community impact over quantitative land area alone. This system provides developers with the flexibility to meet City requirements through a diverse combination of high-value amenities that reflect the actual recreational needs of San Jacinto's residents.

Under this system, different park features, such as fitness stations, public art installations, shade structures, or multi-use trail connections, are assigned a "point value" based on their cost, maintenance intensity, and community demand. A developer might choose to provide a smaller physical park space that is "highly activated" with high-point amenities like a splash pad or inclusive playground, rather than a larger, passive open space with lower recreational utility. This "Value Scoring" approach ensures that even as the City densifies, the recreational opportunities available to residents remain high-quality and varied.

The final deliverable for this task will be a Scoring Worksheet included in the manual. This tool will allow City Planning staff to quickly evaluate a developer's proposal, ensuring it meets the minimum threshold of "Recreational Value Points" before project approval. It transforms the negotiation process between the City and developers into a clear, transparent, and objective exercise.

Methodology Highlights

- ***Amenity Weighting:*** Collaborating with City staff to assign points based on San Jacinto's specific priorities (e.g., higher points for water-efficient features or shade).

- ***Alternative Compliance:*** Creating a pathway for developers to fulfill recreational obligations through off-site trail improvements or contributions to regional park facilities when on-site options are limited.

- ***Future-Proofing:*** Designing the scoring system to be modular, allowing the City to update point values as community trends shift (e.g., adding points for pickleball courts or EV charging stations in park lots).

Relevant Experience

City of Carlsbad Needs Assessment and Action Plan

RHA Community Works utilized a sophisticated "Needs Assessment" logic for the City of Carlsbad that served as the precursor to a scoring system. We translated broad community desires into a quantifiable "Action Plan," where specific recreational gaps were identified and weighted. By establishing a data-driven framework for what the community lacked, we enabled the City to direct developer contributions toward the most impactful projects. We will adapt this successful logic to create a San Jacinto-specific scoring menu that balances developer flexibility with guaranteed community benefit.

Weston Park Redesign and Community Engagement

Through our recent work on the Weston Park Redesign in nearby Hemet, we have gained contemporary insights into the specific recreational preferences of Inland Empire residents. We understand the high value placed on shaded gathering spaces and safe, accessible play areas. This regional knowledge ensures that the "Point Values" we assign in the San Jacinto manual will accurately reflect the amenities that local families will actually use and cherish, rather than relying on generic national averages.

Sample Points-Based Amenity Menu shown below:

CATEGORY *Amenity Class*	50–100 pts TIER A **High-Value Amenity** *Signature / capital-intensive*	20–49 pts TIER B **Medium-Value Amenity** *Programmatic / flexible*	5–19 pts TIER C **Low-Value Amenity** *Supporting / site furnishing*
Active Play	• Inclusive Playground • Splash Pad	• Half-Court Basketball • Fitness Station	• Horseshoe Pit • Tetherball
Passive / Social	• Large Group Pavilion • Amphitheater	• Individual Picnic Gazebo • Dog Park	• Bench Seating • Trash Receptacles
Connectivity	• Class I Multi-Use Trail Link	• Decomposed Granite Internal Path	• Basic Wayfinding Signage
Resilience	• Smart Irrigation / Solar Lighting	• Engineered Shade Structure	• Drought-Tolerant Tree Canopy

SCORING BASIS

Points reflect ***relative contribution*** to park program, public benefit, and long-term value — not construction cost alone.

COMBINING VALUES

Total park scores are summed across categories. A balanced mix across all four rows is preferred over concentration in one category.

REVIEW AUTHORITY

Final point assignments are confirmed by the Community Development Director during design review, with discretion to adjust within tier ranges.

Task 5: Landscape Planting & Irrigation Design Standards

In the arid climate of the San Jacinto Valley, landscape design must transcend aesthetics to become a functional tool for environmental resilience and resource conservation. RHA Community Works will develop a ***"San Jacinto Resilient"*** Planting Framework that prioritizes long-term survivability while enhancing the City's visual character. Our approach centers on creating a diversified plant palette that is specifically adapted to the local microclimate, emphasizing low-water, fire-resistant, and non-invasive species.

A critical component of this task is the implementation of Hydro-zoning Standards. We will establish clear guidelines for grouping plants with similar water needs, ensuring that irrigation schedules are optimized and water waste is eliminated. Furthermore, our standards will address the "foundation" of landscape success: Soil Health and Management. We will provide technical specifications for soil testing, organic amendments, and mulching practices that improve water retention and reduce the need for synthetic fertilizers. By focusing on the biological health of the landscape, we ensure that the City's green infrastructure can withstand regional heatwaves and prolonged drought cycles.

The final deliverable will be an **Approved Plant Palette and Design Guideline section,** based on what has worked over the last 20 years from the original palette. This will include detailed "Instructional Guides" showing proper planting techniques, minimum spacing for maturity, and clear prohibited species lists to protect local biodiversity.

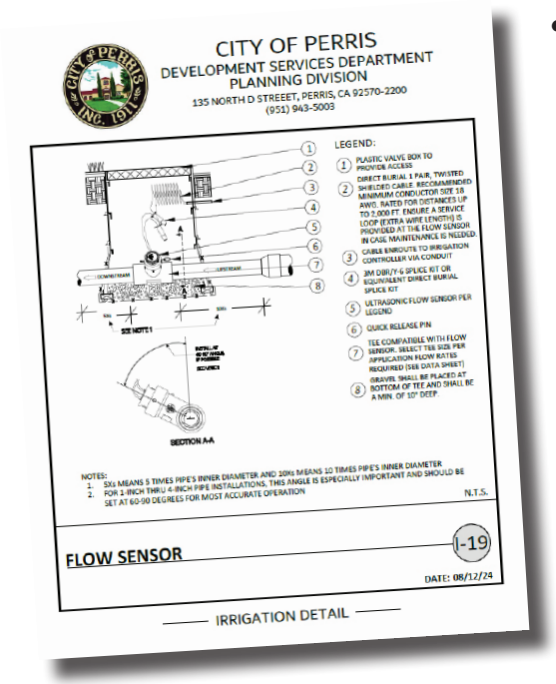
Methodology Highlights

- ***Climate-Specific Selection:*** Curating species that thrive in San Jacinto's specific USDA Hardiness Zone and Sunset Climate Zone, with a focus on pollinators and native-friendly varieties.

- ***Safety & Visibility Design:*** Integrating "Crime Prevention Through Environmental Design" (CPTED) principles to ensure planting heights and placements maintain clear sightlines for public safety.

- ***MWELO Integration:*** Ensuring every planting standard is pre-aligned with the California Model Water Efficient Landscape Ordinance to streamline the documentation process for developers.

Sample of an illustrated plant palette developed for Riverside County Office of Education shown right.



Task 5: Irrigation Design & Water Efficiency

In an era of increasing water scarcity and rigorous state mandates, irrigation design must be treated as a high-precision engineering discipline. RHA+CW will develop irrigation standards for San Jacinto that prioritize maximum efficiency, ease of maintenance, and full regulatory compliance. Our approach centers on the integration of "Smart" Irrigation Technology, moving the City away from static scheduling and toward dynamic, weather-based management. In addition to our in-house irrigation experts, David Black and Dan Burkhart, our team also has an in-house ***Certified Landscape Irrigation Auditor (CLIA).***.

Our team will mandate the use of state-of-the-art components, including:

- ***Weather-Based Irrigation Controllers (WBIC):*** Utilizing real-time evapotranspiration (ET) data to adjust watering schedules automatically.
- ***Flow Sensing and Master Valves:*** Implementing systems that detect "catastrophic" leaks or line breaks and automatically shut down the water source to prevent waste and infrastructure damage.
- ***High-Efficiency Delivery:*** Specifying pressure-regulating heads and multi-stream rotary nozzles that provide superior distribution uniformity and wind resistance.

A core deliverable of this task is ensuring that all technical specifications are 100% compliant with the California Model Water Efficient Landscape Ordinance (MWELO). We will provide the City with standardized ***"Water Budgeting"*** templates and documentation protocols that simplify the submittal process for developers while ensuring the City remains in good standing with state water-use reporting requirements.

CITY OF PERRIS
DEVELOPMENT SERVICES DEPARTMENT
PLANNING DIVISION
135 NORTH D STREEET, PERRIS, CA 92570-2200
(951) 943-5003

LEGEND:
1. PLASTIC VALVE BOX TO PROVIDE ACCESS
2. DIRECT BURIAL 3 PAIR, TWISTED SHIELDED CABLE. RECOMMENDED MINIMUM CONDUCTOR SIZE 18 AWG. RATED FOR DISTANCES UP TO 2,000 FT. ENSURE A SERVICE LOOP (EXTRA WIRE LENGTH) IS PROVIDED AT THE FLOW SENSOR IN CASE MAINTENANCE IS NEEDED
3. CABLE RUNOUTS TO IRRIGATION CONTROLLER VIA CONDUIT
4. 3M DBR/Y-6 SPLICE KIT OR EQUIVALENT DIRECT BURIAL SPLICE KIT
5. ULTRASONIC FLOW SENSOR PER LEGEND
6. QUICK RELEASE PIN
7. TEE COMPATIBLE WITH FLOW SENSOR. SELECT TEE SIZE PER APPLICATION FLOW RATES REQUIRED (SEE DATA SHEET)
8. GRAVEL SHALL BE PLACED AT BOTTOM OF TEE AND SHALL BE A MIN. OF 10" DEEP

SECTION A-A

NOTES:
1. 5XS MEANS 5 TIMES PIPE'S INNER DIAMETER AND 10XS MEANS 10 TIMES PIPE'S INNER DIAMETER
2. FOR 1-INCH THRU 4-INCH PIPE INSTALLATIONS, THIS ANGLE IS ESPECIALLY IMPORTANT AND SHOULD BE SET AT 60-90 DEGREES FOR MOST ACCURATE OPERATION

N.T.S.

FLOW SENSOR I-19
DATE: 08/12/24
IRRIGATION DETAIL

Methodology Highlights

- ***Subsurface Irrigation Standards:*** Establishing guidelines for the use of Netafim or similar dripline systems in narrow parkways and high-traffic areas to eliminate overspray and runoff.
- ***Central Control Compatibility:*** Ensuring all new irrigation hardware is compatible with the City's existing or future central control software, allowing staff to manage citywide water use from a single interface.
- ***Maintenance-Centric Specs:*** Standardizing on specific, high-durability brands and models to reduce the variety of spare parts the City must stock in its maintenance inventory.

Relevant Experience

RHA+CW developed the comprehensive landscape design guidelines and technical manual for the City of Perris, which includes a detailed approved tree list and standardized irrigation design details.

Task 6: Street Tree & Parkway Standards

Street trees and parkways are the most visible elements of a city's "living infrastructure," yet they are often the most difficult to maintain without clear, technically sound standards. RHA Community Works will update San Jacinto's approved street tree list and parkway specifications using a ***"Right Tree, Right Place, Right Way"*** philosophy. Our objective is to maximize the environmental benefits of the urban forest, such as shade-driven heat-island mitigation and improved air quality, while aggressively minimizing future liabilities like sidewalk heave, root-related utility damage, and excessive pruning costs. In addition to our in-house ISA Arborist, we also have a Certified Native Plant Specialist to help guide this task.

CLASSIFICATION *Roadway*	PARKWAY *Min. width*	CANOPY *Target %*	ROOT MANAGEMENT *Protection requirement*	IRRIGATION *Delivery standard*	SPECIES HABIT *Preferred form*
Major Arterial *e.g., San Jacinto Ave*	**10–15+** FEET	50%	3 LEVEL 3 — **Linear root barriers** (24" depth) + **structural soil** throughout tree well	**Sub-surface drip** or **high-efficiency rotors**	**High-canopy, large-stature** shade trees
Secondary Arterial *Cross-town corridors*	**8–10** FEET	40%	3 LEVEL 3 — **Linear root barriers** (24" depth)	**Sub-surface drip**	**Broad-headed**, medium-to-large stature
Collector Street *Neighborhood feeders*	**6–8** FEET	30%	2 LEVEL 2 — **Circular root guards** (18" depth)	**Bubblers** or **sub-surface drip**	**Upright / columnar** or medium stature
Residential Local *Interior neighborhood streets*	**5–6** FEET	25%	1 LEVEL 1 — **Individual tree root guards**	**Bubblers**	**Small-to-medium** stature, low-litter
Industrial / Commercial *Service & employment zones*	**6–10** FEET	30%	2 LEVEL 2 — **Linear barriers** at curb & sidewalk edges	**Sub-surface drip**	**High-durability**, pollution-tolerant

WIDTH MEASUREMENT
Minimum parkway width is measured from ***back-of-curb to back-of-sidewalk***, exclusive of any hardscape tree-well.

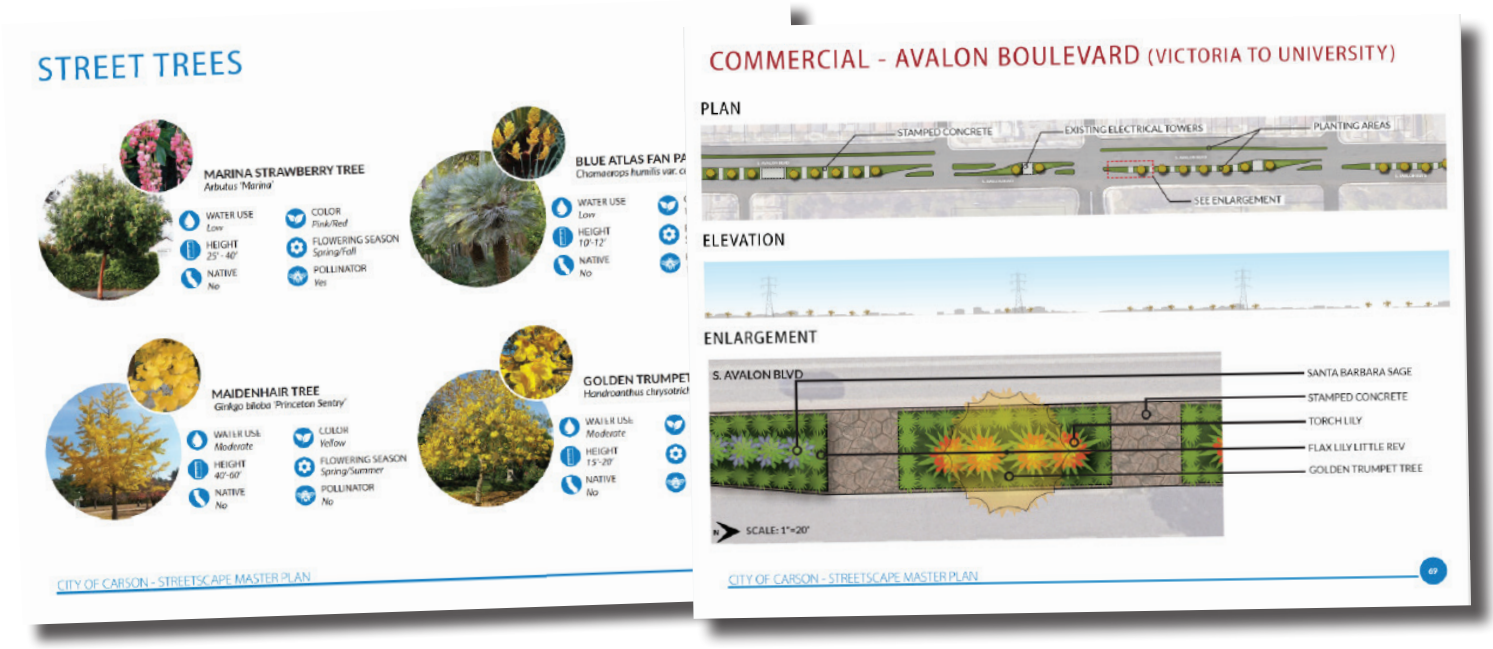
ROOT PROTECTION LEVELS
Level 1 = individual guards; ***Level 2*** = circular or edge barriers; ***Level 3*** = continuous linear barriers, often paired with structural soil.

SPECIES SELECTION
Preferred habit establishes scale fit; final species shall be drawn from the ***§ 3.5 Street Tree Species Matrix*** subject to utility and offset constraints.

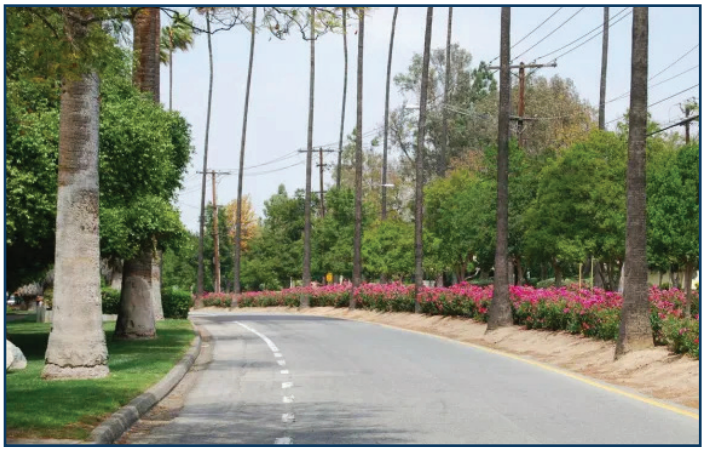
Our team will develop standards that account for the specific technical constraints of San Jacinto's diverse street types. We will establish mandatory **Root Management Standards**, specifying the use of deep-root barriers and structural soils where appropriate. Furthermore, we will define ***"Canopy-Coverage Targets"*** for different roadway classifications (Major Arterials vs. Residential Collectors) to ensure the City meets its long-term sustainability goals.

The final deliverable will include a **Street Tree Selection Matrix**, which categorizes trees by their growth habit, water needs, and susceptibility to pests. We will also provide clear cross-sectional diagrams for parkway widths, ensuring that planting areas are correctly sized to support healthy mature growth without compromising the integrity of adjacent curb and gutter infrastructure.

Methodology Highlights



- ***Urban Heat Mitigation:*** Prioritizing high-canopy, drought-tolerant species for pedestrian-heavy corridors to create "cool routes" as identified in the General Plan 2040.
- ***Maintenance-Friendly Specifications:*** Selecting species with high "litter resistance" and structural integrity to reduce the City's annual street-sweeping and emergency pruning expenditures.
- ***Trenching and Offset Standards:*** Establishing clear setback requirements for trees relative to streetlights, fire hydrants, and underground lateral lines to ensure long-term utility access.



Relevant Experience

Carson Streetscape Master Plan

In our work on the Carson Streetscape Master Plan, RHA Community Works tackled the challenge of transforming a high-traffic industrial and commercial corridor into a cohesive, pedestrian-friendly environment. We developed a comprehensive palette of street trees and parkway treatments that could withstand the rigors of heavy urban use while significantly improving the City's aesthetic identity. This project required precise coordination between aesthetic goals and the technical realities of existing underground infrastructure—a direct parallel to the work required for San Jacinto.

Sample pages from Carson Streetscape Master Plan shown below:

Victoria Avenue Beautification - City of Riverside

Managing the preservation and expansion of the historic Victoria Avenue corridor required a sophisticated understanding of parkway constraints. RHA Community Works navigated complex issues involving multi-use trails, legacy irrigation systems, and the long-term health of diverse tree species in high-visibility public rights-of-way. This experience in managing "signature" city corridors ensures that the standards we develop for San Jacinto will protect the City's heritage while preparing its infrastructure for future growth.

Task 7: Trails and Open Space Implementation Standards

The City of San Jacinto's unique geography, defined by its proximity to the San Jacinto River, agricultural heritage, and growing residential footprint, requires a specialized set of standards for its trails and open space network. RHA+CW will develop implementation standards that transition the visionary goals of the San Jacinto Trails Master Plan into actionable, constructible technical requirements. Our approach to Task 7 focuses on three core pillars: Safety & Visibility, Material Durability, and Regulatory Compliance.

Multi-Modal Trail Classification

Building upon the General Plan 2040 and the Trails Master Plan, RHA+CW will establish standardized cross-sections and technical specifications for the City's diverse trail hierarchy:

- ***Class I Multi-Use Paths:*** Standards for paved, off-street paths that accommodate both pedestrians and cyclists, focusing on proper width, vertical clearance, and ADA-compliant surfacing.

- ***Nature & Perimeter Trails:*** Development of specifications for stabilized decomposed granite (DG) or natural surface trails within open space buffers, prioritizing erosion control and habitat protection.

- ***Equestrian Trails:*** Specialized standards for San Jacinto's equestrian community, including appropriate fencing (e.g., lodgepole or white vinyl), specialized trail surfacing, and "hitching" or "rest station" amenities.

Safety, Wayfinding, and Inclusive Design

Open spaces are only effective if they are accessible and safe. Our team, led by Scott Rice (CASp), will ensure every trail standard meets the latest California Building Code (Title 24) accessibility requirements for outdoor developed areas.

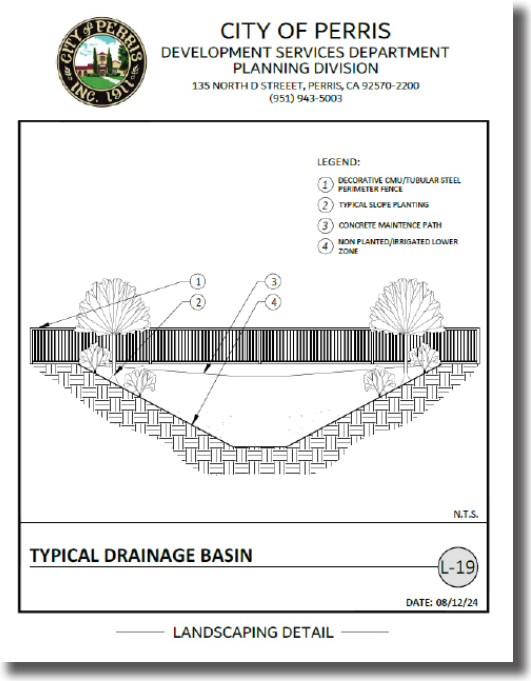
- ***CPTED Integration:*** We will apply "Crime Prevention Through Environmental Design" (CPTED) principles to trail standards, specifying appropriate lighting, sightline maintenance, and "defensible space" planting near trailheads.

- ***Unified Wayfinding:*** We will design a suite of standard trail signage, including mileage markers, directional kiosks, and interpretive educational panels that highlight San Jacinto's agricultural history and local ecology.

Maintenance-Driven Technical Details

To protect the City's General Fund, our standards prioritize long-term durability. We will provide AutoCAD-ready details for:

- ***Standardized Fencing & Bollards:*** Durable, low-maintenance options that clearly define public/private boundaries and prevent unauthorized vehicle access.



- ***Erosion & Drainage Control:*** Technical specifications for "outsloped" trails, water bars, and swales to minimize trail washouts and siltation in open space basins.

- ***Amenity "Kits":*** Pre-approved details for trail benches, waste receptacles, and pet waste stations to ensure a cohesive aesthetic across all city trails.

Task 8: Basin & Pump Station Standards

In modern municipal planning, stormwater infrastructure can no longer be viewed solely as a utilitarian necessity; it must be integrated into the community fabric as a multi-functional asset. RHA+CW will develop Integrated Basin Design Standards for San Jacinto that transform traditional dry and wet basins into aesthetic or recreational features, often referred to as "Nature-Based Infrastructure", while maintaining the highest level of engineering performance.

Our approach focuses on the "Dual-Use" potential of drainage areas. We will establish standards that allow basins to serve as passive open space, native habitat corridors, or even active recreational fields during dry weather, provided they meet strict safety and percolation requirements. Simultaneously, we will define Technical Infrastructure Specifications for the essential "hard" components of these systems, including:

- ***Pump Station Architecture:*** Creating standards for pump housing that utilize durable, anti-graffiti materials and aesthetic screening (such as decorative masonry or specialized planting) to minimize visual impact on neighboring properties.

- ***Safety and Security Fencing:*** Mandating high-quality, climb-resistant fencing that balances public safety with the City's aesthetic goals, moving away from standard chain-link in favor of more integrated, low-profile barrier designs.

- ***Erosion and Sediment Control:*** Providing technical details for forebays, energy dissipaters, and slope stabilization that utilize natural stone or reinforced vegetation to reduce long-term maintenance dredging.

The final deliverable will be a **Basin Technical Toolkit** that includes cross-sectional details for various basin types, pump station footprints, and a list of "Basin-Appropriate" vegetation that can survive periodic inundation and improve water quality through biofiltration.

Methodology Highlights

- ***Hydrological Integration:*** Working closely with City Engineers to ensure that aesthetic enhancements do not compromise the "Calculated Storage Capacity" or emergency overflow pathways of the basin.

- ***Low-Impact Development (LID):*** Aligning basin standards with regional water quality requirements to ensure they function as effective infiltration points for groundwater recharge.

- ***Accessibility and Egress:*** Establishing standards for maintenance access ramps that double as pedestrian paths or "observation points" for the community.

Task 9: Design Standards Manual Development

The most robust technical standards are ineffective if they are not accessible to the people who use them daily. RHA Community Works views the Design Standards Manual as the "User Interface" for San Jacinto's landscape policy. We will synthesize the complex technical requirements gathered in previous tasks into a visually intuitive, user-friendly document that serves as a definitive resource for City staff, private developers, and residents alike.

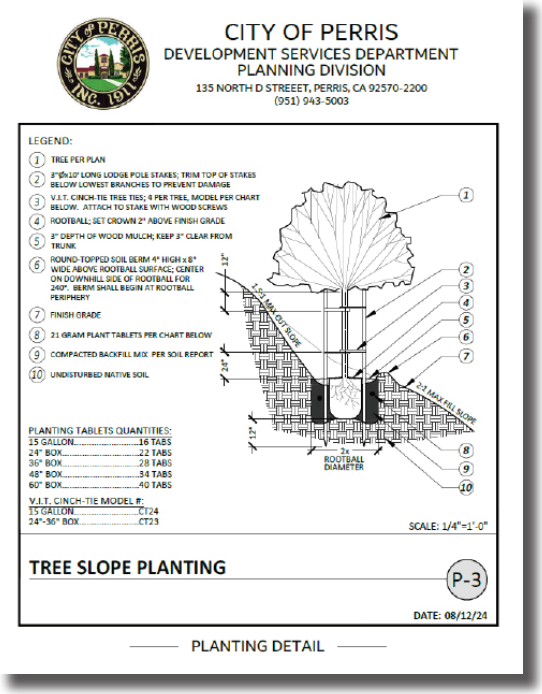
Our manual will move away from text-heavy, academic formats in favor of a graphically driven layout. Key features will include:

- ***"Checklist for Success" Sidebars:*** Each section will feature a summary of mandatory submittal items, allowing developers to self-audit their plans before they reach the City counter.
- ***Visual Glossaries:*** Complex technical terms and state mandates (like MWELO) will be explained through clear diagrams and "Dos and Don'ts" photography to eliminate ambiguity.
- ***Direct Code Alignment:*** The manual's organizational structure will mirror the San Jacinto Municipal Code, ensuring that users can easily cross-reference design guidelines with the underlying legal requirements.

The final deliverable will be a digitally optimized PDF with a clickable Table of Contents and indexed search capabilities, ensuring that the manual is as functional in the field on a tablet as it is in a printed binder at City Hall.

Methodology Highlights

- ***Tiered Information Design:*** Organizing the manual so that broad design principles are presented first, followed by increasingly specific technical details and CAD specifications.
- ***Maintenance-Focused Narratives:*** Including specific "Maintenance Expectations" for each design standard, helping the City's Public Works team understand the long-term resource commitment for various landscape treatments.
- ***Public/Private Distinction:*** Clearly delineating standards for public rights-of-way versus private developments to ensure developers understand their specific obligations.



Relevant Experience

Our team is excited about the opportunity of taking the City of San Jacinto's Landscape Design Guidelines we developed in 2005 with the City and transforming the framework into a beautiful masterpiece that will serve the City through 2040 and beyond.

Task 10: CAD Standard Details

A critical component of this update is the transition from conceptual guidelines to enforceable construction standards. RHA Community Works will develop a robust, comprehensive library of AutoCAD-ready technical details designed to serve as the City's definitive construction reference. These details will be engineered to streamline the plan check process, providing developers and contractors with a "City-stamped" toolkit that ensures consistency across all public and private improvements.

Our team will utilize a "Standardization First" philosophy, ensuring that every detail, from irrigation lateral trenching to complex playground safety surfacing, is optimized for San Jacinto's specific soil conditions, climate, and maintenance capabilities. By providing these details in digital formats (.DWG and .PDF), we eliminate ambiguity during the development review phase, reducing the back-and-forth between City staff and applicants.

The CAD library will be categorized for intuitive navigation and will include, but not be limited to:

- ***Irrigation Infrastructure:*** Precision details for smart controller assemblies, master valves, flow sensors, and water-efficient emission devices (bubblers, rotating nozzles, and subsurface drip).
- ***Hardscape and Site Furnishings:*** Standardized specifications for park benches, waste receptacles, bicycle racks, and decorative paving that align with the City's aesthetic identity.
- ***Park and Basin Specifics:*** Specialized details for basin side-slopes, overflow structures, and park-specific amenities such as shade structures and inclusive play equipment.
- ***Street Trees and Parkways:*** Standardized tree well dimensions, root barrier installations, and parkway planting details that prioritize visibility and urban heat island mitigation.

Quality Control and Technical Integrity

To ensure the longevity and accuracy of these documents, RHA Community Works will apply our firm's rigorous "Quality Control Program." This internal vetting process involves a multi-tiered review by our senior technical staff and a California-licensed Landscape Architect to ensure every line and callout adheres to the latest industry standards and state mandates, such as MWELO and the California Building Code (Title 24). Our reputation for producing technically outstanding documents across hundreds of public agency projects stems from this attention to detail. We do not simply provide "typical" drawings; we provide constructible, high-performance details that have been field-tested in municipal environments. This approach minimizes the risk of change orders during construction and ensures that the City of San Jacinto receives a landscape legacy built on a foundation of technical excellence. All final deliverables will be organized and formatted to integrate seamlessly into the City's existing engineering and planning workflows.

Task 11: Prototypical Residential Designs

To bridge the gap between municipal requirements and residential implementation, RHA Community Works will develop a suite of at least four "Prototypical Residential Design Templates." These templates are specifically designed to empower homeowners in San Jacinto to achieve beautiful, drought-resilient landscapes without the need for expensive private consultants. By providing pre-approved, professional-grade layouts, the City can ensure that residential growth contributes to the overarching goals of the General Plan 2040 while maintaining a cohesive and attractive community aesthetic.

Each prototype will be curated to reflect the local character and climate of the San Jacinto Valley, with potential themes such as the following to start:

- ***Inland Desert / High Desert Resilience:***
  Utilizing native species and rock mulches that thrive in local heat with minimal irrigation. This design prioritizes high-performance, heat-adapted vegetation to ensure a lush aesthetic that remains sustainable even during the most intense San Jacinto summers.

- ***Modern Mediterranean:***
  Focusing on structural plants, olive trees, and lavender for a sophisticated, low-water look that aligns with existing regional architecture. By utilizing silver-foliaged plants and evergreen structures, this prototype maintains a cool, refreshing atmosphere that enhances the curb appeal of local stucco and tile-roofed homes.

- ***Pollinator/Habitat Friendly:***
  A selection of flowering natives designed to support local biodiversity and "Living Landscapes." This landscape transforms your yard into a vital ecological corridor, inviting hummingbirds, butterflies, and beneficial insects to thrive among a colorful tapestry of seasonal blooms.

- ***Heritage Ranch:***
  Drawing inspiration from the region's agricultural roots with hardy, traditional plantings that require modern, efficient water management. By integrating rustic hardscaping with drought-resistant fruit trees and ornamental grasses, this design preserves the timeless charm of the valley's rural past while utilizing smart technology to significantly reduce water consumption.

Regulatory Streamlining and MWELO Compliance

A primary objective of this task is to reduce the administrative burden on City staff. Each design template will be pre-calculated for compliance with the California Model Water Efficient Landscape Ordinance (MWELO). By including pre-verified Hydrozone tables and Maximum Applied Water Allowance (MAWA) calculations within the templates, the City can offer an "Over-the-Counter" approval process for standard residential landscape permits. This "Plug-and-Play" approach ensures that even "non-professional" applicants submit plans that meet all state and local mandates on the first try, significantly reducing the volume of revisions and plan-check corrections.

Community Empowerment through Consensus Building

Leveraging our firm's deep experience in Consensus Building and Program Development, we will ensure these tools are truly accessible to the general public. We move beyond technical jargon to provide clear, illustrative "Step-by-Step" guides that include:

- ***User-Friendly Plant Palettes:***
  Photorealistic or highly illustrative plant keys that help homeowners visualize the mature state of their garden.

- ***Simplified Installation Guides:***
  Basic instructions for soil preparation, mulch application, and efficient irrigation setup.

- ***Maintenance Schedules:***
  Seasonal care instructions to ensure the long-term health and beauty of the new landscapes.

By applying our expertise in inclusive design and public outreach, RHA Community Works will deliver a program that transforms a complex regulatory requirement into a community benefit—fostering a sense of pride and stewardship among San Jacinto's residents while effectively managing the City's precious water resources.

Task 12: Public Outreach & Adoption Support

To bridge the gap between municipal requirements and residential implementation, RHA Community Works will develop a suite of at least four ***"Prototypical Residential Design Templates."*** These templates are specifically designed to empower homeowners in San Jacinto to achieve beautiful, drought-resilient landscapes without the need for expensive private consultants. By providing pre-approved, professional-grade layouts, the City can ensure that residential growth contributes to the overarching goals of the General Plan 2040 while maintaining a cohesive and attractive community aesthetic.

Each prototype will be curated to reflect the local character and climate of the San Jacinto Valley, with potential themes outlined in Task 11 such as:

- ***Inland Desert / High Desert Resilience***: Utilizing native species and rock mulches that thrive in local heat with minimal irrigation.
- ***Modern Mediterranean:*** Focusing on structural plants, olive trees, and lavender for a sophisticated, low-water look that aligns with existing regional architecture.
- ***Pollinator/Habitat Friendly:*** A selection of flowering natives designed to support local biodiversity and "Living Landscapes."
- ***Heritage Ranch:*** Drawing inspiration from the region's agricultural roots with hardy, traditional plantings that require modern, efficient water management.

Regulatory Streamlining and MWELO Compliance

A primary objective of this task is to reduce the administrative burden on City staff. Each design template will be pre-calculated for compliance with the California Model Water Efficient Landscape Ordinance (MWELO). By including pre-verified Hydrozone tables and Maximum Applied Water Allowance (MAWA) calculations within the templates, the City can offer an "Over-the-Counter" approval process for standard residential landscape permits. This "Plug-and-Play" approach ensures that even "non-professional" applicants submit plans that meet all state and local mandates on the first try, significantly reducing the volume of revisions and plan-check corrections.

Community Empowerment through Consensus Building

Leveraging our firm's deep experience in Consensus Building and Program Development, we will ensure these tools are truly accessible to the general public. Our team offers a dedicated in-house Director of Community Engagement who has worked on both sides of the fence. Analicia Escobar-Gomez, served as the Riverside County Regional Park and Open-Space District's Senior Park Planner for nearly 5 years, in addition, she is a Certified Park and Recreation Professional.

We move beyond technical jargon to provide clear, illustrative "Step-by-Step" guides that include:

- ***User-Friendly Plant Palettes:*** Photorealistic or highly illustrative plant keys that help homeowners visualize the mature state of their garden.
- ***Simplified Installation Guides:*** Basic instructions for soil preparation, mulch application, and efficient irrigation setup.
- ***Maintenance Schedules:*** Seasonal care instructions to ensure the long-term health and beauty of the new landscapes.

By applying our expertise in inclusive design and public outreach, RHA+CW will deliver a program that transforms a complex regulatory requirement into a community benefit—fostering a sense of pride and stewardship among San Jacinto's residents while effectively managing the City's precious water resources.

Final Deliverables

ID	DELIVERABLE CATEGORY *Scope of work*	DESCRIPTION & KEY COMPONENTS *Required content*	FORMAT(S) *Submission file types*
PHASE 1	**Initiation & Audit**		*2 deliverables · D1–D2*
D1	**Project Work Plan & Schedule** TIMELINE & OPERATIONS	Detailed Gantt chart, milestones, stakeholder list, meeting schedule, and coordination procedures.	PDF · MS Project
D2	**Existing Conditions & Best Practices Summary** AUDIT & BENCHMARKING	Technical memo reviewing **legacy City plans** and **comparable jurisdiction standards** to identify key opportunities and gap areas.	PDF · Word
PHASE 2	**Technical Production**		*5 deliverables · D3–D7*
D3	**Administrative Draft Standards Manual** THE TECHNICAL CORE	First full draft of the consolidated manual — **Park, Landscape, Irrigation, Basin, and Street Trees** — for staff-only technical review.	PDF · Word · InDesign
D4	**Standard Construction Details (CAD Library)** TECHNICAL PRODUCTION	Full set of **.DWG details** for planting, irrigation, root barriers, park amenities, trail sections, and basin pump / access facilities.	PDF · AutoCAD (.dwg)
D5	**Asset Data Tables & Plant Palettes** GIS INTEGRATION	Editable spreadsheets of approved **tree lists** and **plant data** compatible with City asset management systems.	Excel (.xlsx)
D6	**Prototypical Residential Landscape Plans** PUBLIC TOOLS	Graphic front-yard plans, irrigation layouts, and plant lists designed specifically for **homeowners and small builders**.	PDF · InDesign
D7	**Park Planning Toolkit** EVALUATION TOOLS	Classification tables, the **Point-Based Amenity Matrix**, and programming layouts to assist staff in project review.	PDF · Word · Excel
PHASE 3	**Review & Adoption**		*4 deliverables · D8–D11*
D8	**Public Review Draft Standards Manual** THE OUTREACH VERSION	Refined version of the manual incorporating **staff feedback**, designed for public distribution and decision-making bodies.	PDF · Word
D9	**Meeting & Presentation Materials** ADOPTION SUPPORT	Digital slide decks and high-impact boards for **Planning Commission** and **City Council** hearings.	PPT · PDF
D10	**Final Standards Manual** FINAL ADOPTED VERSION	A **searchable, hyperlinked PDF** incorporating final legislative edits, formatted as a cohesive, branded City document.	Searchable PDF
D11	**Final Project Files (Master Set)** TRANSFER OF OWNERSHIP	A complete archive of all editable source files, graphics, and diagrams, which become the **sole property of the City**.	Editable Source Files

P1 INITIATION & AUDIT
Foundational deliverables establishing ***project operations*** and a baseline understanding of existing conditions.

P2 TECHNICAL PRODUCTION
Substantive content: ***the Manual itself***, CAD library, GIS-ready asset data, homeowner templates, and Planning Toolkit.

P3 REVIEW & ADOPTION
Public-facing materials, ***hearing support***, final adopted Manual, and transfer of all editable source files to the City.

(This page intentionally left blank)

1. Project Schedule and Timeline

RHA+CW is prepared to initiate work immediately upon contract execution. We propose a focused 9-month timeline to ensure a thorough audit, creative development phase, and a seamless public adoption process. This schedule accounts for the technical complexity of consolidating the City's diverse standards while allowing sufficient time for the internal review cycles necessary for a high-quality final product.

- ***Months 1-2:*** Project Initiation, Document Audit, and Gap Analysis.

- ***Months 3-5:*** Technical Drafting of Standards, CAD Detail Library Creation, and Prototypical Residential Design Development.

- ***Months 6-7:*** Draft Manual Compilation and Internal City Staff Review.

- ***Months 8-9:*** Planning Commission/City Council Presentations and Final Adoption.

2. Key Milestones, Stakeholders, and Review Periods

Our work plan identifies critical path "Gatekeeper" milestones where City input is essential to project momentum.

- ***Milestone 1: Audit Findings Memo.***
  A summary of inconsistencies in current codes to be reviewed by Planning and Public Works staff.

- ***Milestone 2: 50% Technical Draft.***
  Review of the initial CAD library and park classification system.

- ***Milestone 3: 90% Administrative Draft Manual.***
  A 30-day formal review period for all departments (Engineering, Parks, Planning) to provide final consolidated feedback.

- ***Stakeholder Engagement:***
  Coordination will be prioritized with Public Works Maintenance (to ensure equipment standards align with current inventory) and the Planning Department (to ensure alignment with General Plan 2040).

3. Proposed Meeting Schedule

To maintain transparency and adherence to the schedule, RHA+CW proposes a structured meeting cadence:

- ***Kickoff Meeting:***
  Within 10 days of execution to align on communication protocols and data transfer.

- ***Monthly Project Status Meetings:***
  Virtual check-ins with the City Project Manager to review progress against the schedule and address any "roadblocks."

- ***Technical Working Sessions:***
  Up to three (3) focused workshops with maintenance and plan-check staff to vet specific irrigation and construction details.

- ***Public Hearings:***
  Strategic presentations to the Planning Commission and City Council during the adoption phase.

4. Communication and Coordination Procedures

Efficiency is driven by clear communication. RHA+CW will utilize the following protocols:

- ***Centralized Point of Contact:***
  All formal communication will flow through our Project Manager, Scott Rice, ensuring consistent messaging and accountability.

- ***Project Management Portal:***
  We will utilize a shared digital folder (Basecamp) for the real-time transfer of large CAD files, GIS data, and draft documents.

- ***Quality Control Log:***
  Every round of City feedback will be documented in a "Comment/Response Matrix," ensuring that every staff suggestion is either incorporated or addressed with a technical justification. This transparency ensures that the final manual is a true reflection of the City's collective expertise. We will also utilize Mentimeter to capture real-time stakeholder input and feedback.

PROJECT SCHEDULE AND WORK PLAN

This schedule establishes the three-phase delivery timeline for the Design Standards Manual — from initial audit through Council adoption — covering **May 2026 to January 2027**. *Dates are target milestones; deliverables are binding.*

ID	MILESTONE / TASK *Phase & scope*	START	END	TIMELINE MAY JUN JUL AUG SEP OCT NOV DEC JAN	DELIVERABLE *Required output*
PHASE 1	**Initiation & Audit**				*May 1 — Jun 15, 2026*
1.1	**Project Kick-off Meeting**	**May 4** 2026	**May 8** 2026		*Work Plan & Communication Protocol*
1.2	**Document Audit & Data Collection**	**May 11** 2026	**May 29** 2026		*Audit Log of Legacy Standards*
1.3	**Gap Analysis & Code Consistency**	**Jun 1** 2026	**Jun 15** 2026		*Memo: Technical Gap Analysis*
PHASE 2	**Technical Production**				
2.1	**Park Classification & Scoring Matrix**	**Jun 16** 2026	**Jul 15** 2026		*Draft Recreation Value Matrix*
2.2	**Landscape, Basin & Tree Standards**	**Jul 16** 2026	**Aug 30** 2026		*Draft Planting & Parkway Specs*
2.3	**CAD Standard Details Library**	**Aug 1** 2026	**Oct 15** 2026		*50% & 90% .DWG Detail Sets*
2.4	**Prototypical Residential Designs**	**Aug 15** 2026	**Oct 30** 2026		*Four (4) Resident-Ready Templates*
PHASE 3	**Review & Adoption**				
3.1	**Internal Staff Working Sessions**	**Nov 2** 2026	**Nov 20** 2026		*Consolidated Review Comments*
3.2	**Administrative Draft Manual**	**Nov 23** 2026	**Dec 18** 2026		*90% Administrative Draft*
3.3	**Planning Commission Presentation**	**Jan 11** 2027	**Jan 15** 2027		*Public Hearing Graphics*
3.4	**City Council Adoption**	**Jan 25** 2027	**Jan 29** 2027		*Final Adopted Design Standards*

P1 INITIATION & AUDIT

Establishes ***baseline*** through kick-off, legacy document audit, and gap analysis — ensuring technical production is grounded in current code & practice.

P2 TECHNICAL PRODUCTION

Core ***deliverable phase***: matrices, planting specs, CAD details, and residential templates. Parallel tasks drive the nine-week aggregate schedule.

P3 REVIEW & ADOPTION

Staff review, Administrative Draft, Planning Commission, and ***City Council adoption*** — culminating in the final Design Standards Manual.

EXCEPTIONS TO THE RFP OR PROFESSIONAL SERVICES AGREEMENT

RHA Community Works has conducted a comprehensive review of the Request for Proposals (RFP No. SJ-PU-26-002) and the City of San Jacinto's draft Professional Services Agreement. Based on our extensive history of providing professional landscape architectural and planning services to the City, we find the terms and conditions outlined in these documents to be consistent with industry standards and our established working relationship with the City.

RHA Community Works has no exceptions to the requirements of this RFP or the terms and conditions of the draft Professional Services Agreement.

By submitting this proposal, we affirm our full acceptance of the City's terms and our readiness to execute the agreement as drafted upon contract award. We are committed to adhering to all identified timelines, insurance requirements, and performance standards to ensure the successful delivery of the Comprehensive Update to the City's Design Standards.

CITY OF SAN JACINTO

PROFESSIONAL SERVICES AGREEMENT BETWEEN

THE CITY OF SAN JACINTO

AND

INSERT CONSULTANT NAME

DRAFT

1. PARTIES AND DATE.

This Agreement is made and entered into this 9th day of INSERT DATE, by and between the **City of San Jacinto**, a municipal corporation, organized under the laws of the State of California, with its principal place of business at 595 South San Jacinto Avenue, San Jacinto, California 92583 ("City") and **INSERT NAME**, a *California Corporation*, with its principal place of business at INSERT ADRESS ("Consultant"). City and Consultant are sometimes individually referred to herein as "Party" and collectively as "Parties."

2. RECITALS.

2.1 Consultant.

Consultant desires to perform and assume responsibility for the provision of certain professional services required by the City on the terms and conditions set forth in this Agreement. Consultant represents that it is experienced in providing professional hydrogeological services to public clients, is licensed in the State of California, and is familiar with the plans of City.

2.2 Project.

City desires to engage Consultant to render such professional services for the INSERT PROJECT NAME ("Project") as set forth in this Agreement.

3. TERMS.

3.1 Scope of Services and Term.

3.1.1 General Scope of Services. Consultant promises and agrees to furnish to the City all labor, materials, tools, equipment, services, and incidental and customary work necessary to fully and adequately supply the professional hydrogeological consulting services necessary for the Project ("Services"). The Services are more particularly described in Exhibit "A" attached hereto and incorporated herein by reference. All Services shall be subject to, and performed in accordance with, this Agreement, the exhibits attached hereto and incorporated herein by reference, and all applicable local, state and federal laws, rules and regulations.

3.1.2 Term. The term of this Agreement shall be from INSERT DATE, until INSERT DATE, unless earlier terminated as provided herein. Consultant shall complete the Services within the term of this Agreement, and shall meet any other established schedules and deadlines.

3.2 Compensation.

3.2.1 Compensation. Consultant shall receive compensation, including authorized reimbursements, for all Services rendered under this Agreement at the rates set forth in Exhibit "B" attached hereto and incorporated herein by reference. The total compensation shall not exceed INSERT AMOUNT without written approval of the City Council or City Manager, as applicable. Extra Work may be authorized, as described below, and if authorized,

will be compensated at the rates and manner set forth in this Agreement.

3.2.2 Payment of Compensation. Consultant shall submit to City a monthly invoice which indicates work completed and hours of Services rendered by Consultant. The invoice shall describe the amount of Services provided since the initial commencement date, or since the start of the subsequent billing periods, as appropriate, through the date of the invoice. City shall, within 30 days of receiving such invoice, review the invoice and pay all non-disputed and approved charges. If the City disputes any of Consultant's fees, the City shall give written notice to Consultant within thirty (30) days of receipt of an invoice of any disputed fees set forth therein. Payment shall not constitute acceptance of any Services completed by Consultant. The making of final payment shall not constitute a waiver of any claims by the City for any reason whatsoever.

3.2.3 Reimbursement for Expenses. Consultant shall not be reimbursed for any expenses unless authorized in writing by City, or included in Exhibit "B" of this Agreement.

3.2.4 Extra Work. At any time during the term of this Agreement, City may request that Consultant perform Extra Work. As used herein, "Extra Work" means any work which is determined by City to be necessary for the proper completion of the Project, but which the Parties did not reasonably anticipate would be necessary at the execution of this Agreement. Consultant shall not perform, nor be compensated for, Extra Work without written authorization from the City.

3.2.5 Rate Increases. In the event that this Agreement is renewed pursuant to Section 3.1.2, the rate set forth in Exhibit “B” may be adjusted each year at the time of renewal as set forth in Exhibit “B.”

3.3 Responsibilities of Consultant.

3.3.1 Independent Contractor; Control and Payment of Subordinates. The Services shall be performed by Consultant or under its supervision. Consultant will determine the means, methods and details of performing the Services subject to the requirements of this Agreement. City retains Consultant on an independent contractor basis and not as an employee. Consultant retains the right to perform similar or different services for others during the term of this Agreement. Any personnel performing the Services on behalf of Consultant shall also not be employees of City and shall at all times be under Consultant's exclusive direction and control. Neither City, nor any of its officials, officers, directors, employees or agents shall have control over the conduct of Consultant or any of Consultant's officers, employees, or agents, except as set forth in this Agreement. Consultant shall pay all wages, salaries, and other amounts due such personnel in connection with their performance of Services under this Agreement and as required by law. Consultant shall be responsible for all reports and obligations respecting such additional personnel, including, but not limited to: social security taxes, income tax withholding, unemployment insurance, disability insurance, and workers' compensation insurance.

3.3.2 Schedule of Services. Consultant shall perform the Services expeditiously, within the term of this Agreement, and in accordance with the Schedule of Services set forth in Exhibit "B" attached hereto and incorporated herein by reference. Consultant represents that it has the professional and technical personnel required to perform the Services in conformance with such conditions. In order to facilitate Consultant's

conformance with the Schedule, City shall respond to Consultant's submittals in a timely manner. Upon request of City, Consultant shall provide a more detailed schedule of anticipated performance to meet the Schedule of Services.

3.3.3 Conformance to Applicable Requirements. All work prepared by Consultant shall be subject to the approval of City.

3.3.4 Substitution of Key Personnel. Consultant has represented to City that certain key personnel will perform and coordinate the Services under this Agreement. Should one or more of such personnel become unavailable, Consultant may substitute other personnel of at least equal competence upon written approval of City. In the event that City and Consultant cannot agree as to the substitution of key personnel, City shall be entitled to terminate this Agreement for cause. The key personnel for performance of this Agreement are as follows: Mathew Osborn, Public Utilities Superintendent.

3.3.5 City's Representative. The City hereby designates Mathew Osborn, Public Utilities Superintendent, or his/her designee, to act as its representative in all matters pertaining to the administration and performance of this Agreement ("City's Representative"). City's Representative shall have the power to act on behalf of the City for review and approval of all products submitted by Consultant but not the authority to enlarge the Scope of Services or change the total compensation due to Consultant under this Agreement. The City Manager shall be authorized to act on City's behalf and to execute all necessary documents which enlarge the Scope of Services or change the Consultant's total compensation subject to the provisions contained in this Agreement. Consultant shall not accept direction or orders from any person other than the City Manager, City's Representative or his/her designee.

3.3.6 Consultant's Representative. Consultant hereby designates Russell Kyle, President/ Principal Hydrogeologist, or his/her designee, to act as its representative for the performance of this Agreement ("Consultant's Representative"). Consultant's Representative shall have full authority to represent and act on behalf of the Consultant for all purposes under this Agreement. The Consultant's Representative shall supervise and direct the Services, using his/her best skill and attention, and shall be responsible for all means, methods, techniques, sequences, and procedures and for the satisfactory coordination of all portions of the Services under this Agreement.

3.3.7 Coordination of Services. Consultant agrees to work closely with City staff in the performance of Services and shall be available to City's staff, consultants and other staff at all reasonable times.

3.3.8 Standard of Care; Performance of Employees. Consultant shall perform all Services under this Agreement in a skillful and competent manner, consistent with the standards generally recognized as being employed by professionals in the same discipline in the State of California. Consultant represents and maintains that it is skilled in the professional calling necessary to perform the Services. Consultant warrants that all employees and subconsultants shall have sufficient skill and experience to perform the Services assigned to them. Finally, Consultant represents that it, its employees and subconsultants have all licenses, permits, qualifications and approvals of whatever nature that are legally required to perform the Services, and that such licenses and approvals shall be maintained throughout the term of this Agreement. Consultant shall perform, at its own cost and expense and without reimbursement from the City, any services necessary to correct errors or omissions which are caused by the

Consultant's failure to comply with the standard of care provided for herein. Any employee of the Consultant or its subconsultants who is determined by the City to be uncooperative, incompetent, a threat to the adequate or timely completion of the Project, a threat to the safety of persons or property, or any employee who fails or refuses to perform the Services in a manner acceptable to the City, shall be promptly removed from the Project by the Consultant and shall not be re-employed to perform any of the Services or to work on the Project.

3.3.9 Period of Performance.

3.3.9.1 Consultant shall perform and complete all Services under this Agreement within the term set forth in Section 3.1.2 above ("Performance Time"). Consultant shall also perform the Services in strict accordance with any completion schedule or Project milestones described in Exhibits "A" or "B" attached hereto, or which may be separately agreed upon in writing by the City and Consultant ("Performance Milestones"). Consultant agrees that if the Services are not completed within the aforementioned Performance Time and/or pursuant to any such Project Milestones developed pursuant to provisions of this Agreement, it is understood, acknowledged and agreed that the City will suffer damage.

3.3.9.2 Neither City nor Consultant shall be considered in default of this Agreement for delays in performance caused by circumstances beyond the reasonable control of the non-performing Party. For purposes of this Agreement, such circumstances include a Force Majeure Event. A Force Majeure Event shall mean an event that materially affects a Party's performance and is one or more of the following: (1) Acts of God or other natural disasters; (2) terrorism or other acts of a public enemy; (3) orders of governmental authorities (including, without limitation, unreasonable and unforeseeable delay in the issuance of permits or approvals by governmental authorities that are required for the services); (4) strikes and other organized labor action occurring at the site and the effects thereof on the services, only to the extent such strikes and other organized labor action are beyond the control of Consultant and its subcontractors, and to the extent the effects thereof cannot be avoided by use of replacement workers; and (5) pandemics, epidemics or quarantine restrictions. For purposes of this section, "orders of governmental authorities," includes ordinances, emergency proclamations and orders, rules to protect the public health, welfare and safety, and other actions of a public agency applicable to the services and Agreement.

3.3.9.3 Should a Force Majeure Event occur, the non-performing Party shall, within a reasonable time of being prevented from performing, give written notice to the other Party describing the circumstances preventing continued performance and the efforts being made to resume performance of this Agreement. Force Majeure Events and/or delays, regardless of the Party responsible for the delay, shall not entitle Consultant to any additional compensation. Notwithstanding the foregoing in this section, the City may still terminate this Agreement in accordance with the termination provisions of this Agreement.

3.3.10 Laws and Regulations; Employee/Labor Certification. Consultant shall keep itself fully informed of and in compliance with all local, state and federal laws, rules and regulations in any manner affecting the performance of the Project or the Services, including all Cal/OSHA requirements, and shall give all notices required by law. Consultant shall be liable for all violations of such laws and regulations in connection with Services. If Consultant performs any work knowing it to be contrary to such laws, rules and regulations, Consultant shall be solely responsible for all costs arising therefrom. Consultant shall defend, indemnify and hold City, its officials, directors, officers, employees, agents, and volunteers free and

harmless, pursuant to the indemnification provisions of this Agreement, from any claim or liability arising out of any failure or alleged failure to comply with such laws, rules or regulations.

3.3.10.1 Employment Eligibility; Consultant. Consultant certifies that it fully complies with all requirements and restrictions of state and federal law respecting the employment of undocumented aliens, including, but not limited to, the Immigration Reform and Control Act of 1986, as may be amended from time to time and shall require all subconsultants and sub-subconsultants to comply with the same. Consultant certifies that it has not committed a violation of any such law within the five (5) years immediately preceding the date of execution of this Agreement, and shall not violate any such law at any time during the term of the Agreement.

3.3.10.2 Employment Eligibility; Failure to Comply. Each person executing this Agreement on behalf of Consultant verifies that they are a duly authorized officer of Consultant, and understands that any of the following shall be grounds for the City to terminate the Agreement for cause: (1) failure of Consultant or its subcontractors, consultants, sub-subcontractors or subconsultants to meet any of the requirements provided for in Sections 3.3.10.1 or 3.3.10.2; (2) any misrepresentation or material omission concerning compliance with such requirements (including in those verifications provided to the Consultant under Section 3.3.10.2); or (3) failure to immediately remove from the Project any person found not to be in compliance with such requirements.

3.3.10.3 Equal Opportunity Employment. Consultant represents that it is an equal opportunity employer and it shall not discriminate against any subconsultant, employee or applicant for employment because of race, religion, color, national origin, handicap, ancestry, sex or age. Such non-discrimination shall include, but not be limited to, all activities related to initial employment, upgrading, demotion, transfer, recruitment or recruitment advertising, layoff or termination. Consultant shall also comply with all relevant provisions of City's Minority Business Enterprise program, Affirmative Action Plan or other related programs or guidelines currently in effect or hereinafter enacted.

3.3.10.4 Air Quality. To the extent applicable, Consultant must fully comply with all applicable laws, rules and regulations in furnishing or using equipment and/or providing services, including, but not limited to, emissions limits and permitting requirements imposed by the South Coast Air Quality Management District (SCAQMD) and/or California Air Resources Board (CARB). Consultant shall indemnify City against any fines or penalties imposed by SCAQMD, CARB, or any other governmental or regulatory agency for violations of applicable laws, rules and/or regulations by Consultant, its subconsultants, or others for whom Consultant is responsible under its indemnity obligations provided for in this Agreement.

3.3.10.5 Water Quality Management and Compliance. Consultant shall keep itself and all subcontractors, staff, and employees fully informed of and in compliance with all local, state and federal laws, rules and regulations that may impact, or be implicated by the performance of the Services including, without limitation, all applicable provisions of the City's ordinances regulating water quality and storm water; the Federal Water Pollution Control Act (33 U.S.C. § 1251, *et seq.*); the California Porter-Cologne Water Quality Control Act (Water Code § 13000 *et seq*.); and any and all regulations, policies, or permits issued pursuant to any such authority. Consultant must additionally comply with the lawful requirements of the City, and any other municipality, drainage district, or other local agency with jurisdiction over the location where the Services are to be conducted, regulating water quality and storm water discharges.

City may seek damages from Consultant for delay in completing the Services caused by Consultant's failure to comply with the laws, regulations and policies described in this Section, or any other relevant water quality law, regulation, or policy.

3.3.10.6 Safety. Consultant shall execute and maintain its work so as to avoid injury or damage to any person or property. In carrying out its Services, the Consultant shall at all times be in compliance with all applicable local, state and federal laws, rules and regulations, and shall exercise all necessary precautions for the safety of employees appropriate to the nature of the work and the conditions under which the work is to be performed.

3.3.11 Insurance.

3.3.11.1 Time for Compliance. Consultant shall not commence work under this Agreement until it has provided evidence satisfactory to the City that it has secured all insurance required under this section. In addition, Consultant shall not allow any subconsultant to commence work on any subcontract until it has provided evidence satisfactory to the City that the subconsultant has secured all insurance required under this section. Failure to provide and maintain all required insurance shall be grounds for the City to terminate this Agreement for cause.

3.3.11.2 Types of Insurance Required. As a condition precedent to the effectiveness of this Agreement for work to be performed hereunder, and without limiting the indemnity provisions of the Agreement, the Consultant, in partial performance of its obligations under such Agreement, shall procure and maintain in full force and effect during the term of the Agreement the following policies of insurance. If the existing policies do not meet the insurance requirements set forth herein, Consultant agrees to amend, supplement or endorse the policies to do so.

(A) Commercial General Liability: Commercial General Liability Insurance which affords coverage at least as broad as Insurance Services Office "occurrence" form CG 00 01, or the exact equivalent, with limits of not less than $1,000,000 per occurrence and no less than $2,000,000 in the general aggregate. Defense costs shall be paid in addition to the limits. The policy shall contain no endorsements or provisions (1) limiting coverage for contractual liability; (2) excluding coverage for claims or suits by one insured against another (cross-liability); (3) products/completed operations liability; or (4) containing any other exclusion(s) contrary to the terms or purposes of this Agreement.

(B) Automobile Liability Insurance: Automobile Liability Insurance with coverage at least as broad as Insurance Services Office Form CA 00 01 covering "Any Auto" (Symbol 1), or the exact equivalent, covering bodily injury and property damage for all activities with limits of not less than $1,000,000 combined limit for each occurrence. **[***NOTE: If Consultant does not own any company vehicles or may not be able to purchase a Business Automobile Insurance Policy, the requirement may be satisfied by providing either of the following:** (1) a Personal Automobile Liability policy for the Consultant's own vehicle stipulating "Automobile Liability Insurance with a limit of not less than $1,000,000 each accident"; or (2) a non-owned auto endorsement to the Commercial General Liability policy if Consultant uses vehicles of others (e.g., vehicles of employees).

(C) Workers' Compensation: Workers' Compensation Insurance, as required by the State of California and Employer's Liability Insurance with a limit of not less than $1,000,000 per accident for bodily injury and disease.

3.3.11.3 Insurance Endorsements. Required insurance policies shall contain the following provisions, or Consultant shall provide endorsements on forms approved by the City to add the following provisions to the insurance policies:

(A) Automobile Liability. (1) Cancellation: Required insurance policies shall not be canceled or the coverage reduced until a thirty (30) day written notice of cancellation has been served upon the City except ten (10) days shall be allowed for non-payment of premium.

(B) Workers' Compensation: (1) Cancellation: Required insurance policies shall not be canceled or the coverage reduced until a thirty (30) day written notice of cancellation has been served upon the City except ten (10) days shall be allowed for non-payment of premium. (2) Waiver of Subrogation: A waiver of subrogation stating that the insurer waives all rights of subrogation against the City, its officials, officers, employees, agents, and volunteers.

3.3.11.4 Primary and Non-Contributing Insurance. All policies of insurance shall be primary and any other insurance, deductible, or self-insurance maintained by the City, its officials, officers, employees, agents, or volunteers shall not contribute with this primary insurance. Policies shall contain or be endorsed to contain such provisions.

3.3.11.5 Waiver of Subrogation. All required insurance coverages, except for the professional liability coverage, shall contain or be endorsed to waiver of subrogation in favor of the City, its officials, officers, employees, agents, and volunteers or shall specifically allow Consultant or others providing insurance evidence in compliance with these specifications to waive their right of recovery prior to a loss. Consultant hereby waives its own right of recovery against City, and shall require similar written express waivers and insurance clauses from each of its subconsultants.

3.3.11.6 Deductibles and Self-Insured Retentions. Any deductible or self-insured retention must be approved in writing by the City and shall protect the City, its officials, officers, employees, agents, and volunteers in the same manner and to the same extent as they would have been protected had the policy or policies not contained a deductible or self-insured retention.

3.3.11.7 Evidence of Insurance. The Consultant, concurrently with the execution of the Agreement, and as a condition precedent to the effectiveness thereof, shall deliver either certified copies of the required policies, or original certificates on forms approved by the City, together with all endorsements affecting each policy. Required insurance policies shall not be in compliance if they include any limiting provision or endorsement that has not been submitted to the City for approval. The certificates and endorsements for each insurance policy shall be signed by a person authorized by that insurer to bind coverage on its behalf. At least fifteen (15 days) prior to the expiration of any such policy, evidence of insurance showing that such insurance coverage has been renewed or extended shall be filed with the City. If such coverage is cancelled or reduced and not replaced immediately so as to avoid a lapse in the required coverage, Consultant shall, within ten (10) days after receipt of written notice of such

cancellation or reduction of coverage, file with the City evidence of insurance showing that the required insurance has been reinstated or has been provided through another insurance company or companies.

3.3.11.8 Acceptability of Insurers. Each such policy shall be from a company or companies with a current A.M. Best's rating of no less than A:VII and authorized to transact business of insurance in the State of California, or otherwise allowed to place insurance through surplus line brokers under applicable provisions of the California Insurance Code or any federal law.

3.3.11.9 Enforcement of Agreement Provisions (non estoppel). Consultant acknowledges and agrees that actual or alleged failure on the part of the City to inform Consultant of non-compliance with any requirement imposes no additional obligation on the City nor does it waive any rights hereunder.

3.3.11.10 Requirements Not Limiting. Requirement of specific coverage or minimum limits contained in this Section are not intended as a limitation on coverage, limits, or other requirement, or a waiver of any coverage normally provided by any insurance.

3.3.11.11 Additional Insurance Provisions

(A) The foregoing requirements as to the types and limits of insurance coverage to be maintained by Consultant, and any approval of said insurance by the City, is not intended to and shall not in any manner limit or qualify the liabilities and obligations otherwise assumed by the Consultant pursuant to this Agreement, including but not limited to, the provisions concerning indemnification.

(B) If at any time during the life of the Agreement, any policy of insurance required under this Agreement does not comply with these specifications or is canceled and not replaced, City has the right but not the duty to obtain the insurance it deems necessary and any premium paid by City will be promptly reimbursed by Consultant or City will withhold amounts sufficient to pay premium from Consultant payments. In the alternative, City may cancel this Agreement.

(C) The City may require the Consultant to provide complete copies of all insurance policies in effect for the duration of the Project.

(D) Neither the City nor any of its officials, officers, employees, agents or volunteers shall be personally responsible for any liability arising under or by virtue of this Agreement.

(E) The limits set forth herein shall apply separately to each insured against whom claims are made or suits are brought, except with respect to the limits of liability. Further the limits set forth herein shall not be construed to relieve the Consultant from liability in excess of such coverage, nor shall it limit the Consultant's indemnification obligations to the City and shall not preclude the City from taking such other actions available to the City under other provisions of the Agreement or law.

(F) Consultant shall report to the City, in addition to Consultant's insurer, any and all insurance claims submitted by Consultant in connection with the Services under this Agreement.

3.3.11.12 Insurance for Subconsultants. Consultant shall include all subconsultants engaged in any work for Consultant relating to this Agreement as additional insureds under the Consultant's policies, or the Consultant shall be responsible for causing subconsultants to purchase the appropriate insurance in compliance with the terms of these Insurance Requirements, including adding the City, its officials, officers, employees, agents, and volunteers as additional insureds to the subconsultant's policies. All policies of Commercial General Liability insurance provided by Consultant's subconsultants performing work relating to this Agreement shall be endorsed to name the City, its officials, officers, employees, agents and volunteers as additional insureds using endorsement form ISO CG 20 38 04 13 or an endorsement providing equivalent coverage. Consultant shall not allow any subconsultant to commence work on any subcontract relating to this Agreement until it has received satisfactory evidence of subconsultant's compliance with all insurance requirements under this Agreement, to the extent applicable. The Consultant shall provide satisfactory evidence of compliance with this section upon request of the City.

3.4 Labor Code Requirements.

3.4.1 Prevailing Wages. Consultant is aware of the requirements of California Labor Code Section 1720, et seq., and 1770, et seq., as well as California Code of Regulations, Title 8, Section 16000, et seq., ("Prevailing Wage Laws"), which require the payment of prevailing wage rates and the performance of other requirements on "public works" and "maintenance" projects. If the Services are being performed as part of an applicable "public works" or "maintenance" project, as defined by the Prevailing Wage Laws, and if the total compensation is $1,000 or more, Consultant agrees to fully comply with such Prevailing Wage Laws. City shall provide Consultant with a copy of the prevailing rates of per diem wages in effect at the commencement of this Agreement. Consultant shall make copies of the prevailing rates of per diem wages for each craft, classification or type of worker needed to execute the Services available to interested parties upon request, and shall post copies at the Consultant's principal place of business and at the project site. It is the intent of the parties to effectuate the requirements of sections 1771, 1774, 1775, 1776, 1777.5, 1813, and 1815 of the Labor Code within this Agreement, and Consultant shall therefore comply with such Labor Code sections to the fullest extent required by law. Consultant shall defend, indemnify and hold the City, its officials, officers, employees, agents, and volunteers free and harmless from any claim or liability arising out of any failure or alleged failure to comply with the Prevailing Wage Laws.

3.4.2 Registration/DIR Compliance. If the Services are being performed on a public works project of over $25,000 when the project is for construction, alteration, demolition, installation, or repair work, or a public works project of over $15,000 when the project is for maintenance work, in addition to the foregoing, then pursuant to Labor Code sections 1725.5 and 1771.1, the Consultant and all subconsultants must be registered with the Department of Industrial Relations ("DIR"). Consultant shall maintain registration for the duration of the Project and require the same of any subconsultants.

3.4.3 Compliance Monitoring. This Project may also be subject to compliance monitoring and enforcement by the DIR. It shall be Consultant's sole responsibility to comply with all applicable registration and labor compliance requirements, including the submission of

payroll records directly to the DIR. Any stop orders issued by the DIR against Consultant or any subconsultant that affect Consultant's performance of services, including any delay, shall be Consultant's sole responsibility. Any delay arising out of or resulting from such stop orders shall be considered Consultant caused delay and shall not be compensable by the City. Consultant shall defend, indemnify and hold the City, its officials, officers, employees and agents free and harmless from any claim or liability arising out of stop orders issued by the DIR against Consultant or any subconsultant.

3.4.4 Labor Certification. By its signature hereunder, Consultant certifies that it is aware of the provisions of Section 3700 of the California Labor Code which require every employer to be insured against liability for Worker's Compensation or to undertake self-insurance in accordance with the provisions of that Code, and agrees to comply with such provisions before commencing the performance of the Services.

3.5 Accounting Records.

3.5.1 Maintenance and Inspection. Consultant shall maintain complete and accurate records with respect to all costs and expenses incurred under this Agreement. All such records shall be clearly identifiable. Consultant shall allow a representative of City during normal business hours to examine, audit, and make transcripts or copies of such records and any other documents created pursuant to this Agreement. Consultant shall allow inspection of all work, data, documents, proceedings, and activities related to the Agreement for a period of three (3) years from the date of final payment under this Agreement.

3.6 General Provisions.

3.6.1 Termination of Agreement.

3.6.1.1 Grounds for Termination. City may, by written notice to Consultant, terminate the whole or any part of this Agreement at any time and without cause by giving written notice to Consultant of such termination, and specifying the effective date thereof, at least seven (7) days before the effective date of such termination. Upon termination, Consultant shall be compensated only for those Services which have been adequately rendered to City, and Consultant shall be entitled to no further compensation. Consultant may not terminate this Agreement except for cause. The rights and remedies of the City provided in this section shall not be exclusive and are in addition to any other rights and remedies provided by law, equity or under this Agreement.

3.6.1.2 Effect of Termination. If this Agreement is terminated as provided herein, City may require Consultant to provide all finished or unfinished Documents and Data and other information of any kind prepared by Consultant in connection with the performance of Services under this Agreement. Consultant shall be required to provide such document and other information within fifteen (15) days of the request.

3.6.1.3 Additional Services. In the event this Agreement is terminated in whole or in part as provided herein, City may procure, upon such terms and in such manner as it may determine appropriate, services similar to those terminated.

3.6.2 Delivery of Notices. All notices permitted or required under this Agreement shall be given to the respective parties at the following address, or at such other

address as the respective parties may provide in writing for this purpose:

Consultant: INSERT CONSULTANT INFO

City: City of San Jacinto
595 S. San Jacinto Avenue
San Jacinto, CA 92583
ATTN: INSERT NAME

Such notice shall be deemed made when personally delivered or when mailed, forty-eight (48) hours after deposit in the U.S. Mail, first class postage prepaid and addressed to the party at its applicable address. Actual notice shall be deemed adequate notice on the date actual notice occurred, regardless of the method of service.

3.6.3 Ownership of Materials and Confidentiality.

3.6.3.1 Documents & Data; Licensing of Intellectual Property. This Agreement creates a non-exclusive and perpetual license for City to copy, use, modify, reuse, or sublicense any and all copyrights, designs, and other intellectual property embodied in plans, specifications, studies, drawings, estimates, and other documents or works of authorship fixed in any tangible medium of expression, including but not limited to, physical drawings or data magnetically or otherwise recorded on computer diskettes, which are prepared or caused to be prepared by Consultant under this Agreement ("Documents & Data"). All Documents & Data shall be and remain the property of City, and shall not be used in whole or in substantial part by Consultant on other projects without the City's express written permission. Within thirty (30) days following the completion, suspension, abandonment or termination of this Agreement, Consultant shall provide to City reproducible copies of all Documents & Data, in a form and amount required by City. City reserves the right to select the method of document reproduction and to establish where the reproduction will be accomplished. The reproduction expense shall be borne by City at the actual cost of duplication. In the event of a dispute regarding the amount of compensation to which the Consultant is entitled under the termination provisions of this Agreement, Consultant shall provide all Documents & Data to City upon payment of the undisputed amount. Consultant shall have no right to retain or fail to provide to City any such documents pending resolution of the dispute. In addition, Consultant shall retain copies of all Documents & Data on file for a minimum of fifteen (15) years following completion of the Project, and shall make copies available to City upon the payment of actual reasonable duplication costs. Before destroying the Documents & Data following this retention period, Consultant shall make a reasonable effort to notify City and provide City with the opportunity to obtain the documents.

3.6.3.2 Subconsultants. Consultant shall require all subconsultants to agree in writing that City is granted a non-exclusive and perpetual license for any Documents & Data the subconsultant prepares under this Agreement. Consultant represents and warrants that Consultant has the legal right to license any and all Documents & Data. Consultant makes no such representation and warranty in regard to Documents & Data which were prepared by design professionals other than Consultant or its subconsultants, or those provided to Consultant by the City.

3.6.3.3 Right to Use. City shall not be limited in any way in its use or reuse of the Documents and Data or any part of them at any time for purposes of this Project or

another project, provided that any such use not within the purposes intended by this Agreement or on a project other than this Project without employing the services of Consultant shall be at City's sole risk. If City uses or reuses the Documents & Data on any project other than this Project, it shall remove the Consultant's seal from the Documents & Data and indemnify and hold harmless Consultant and its officers, directors, agents and employees from claims arising out of the negligent use or re-use of the Documents & Data on such other project. Consultant shall be responsible and liable for its Documents & Data, pursuant to the terms of this Agreement, only with respect to the condition of the Documents & Data at the time they are provided to the City upon completion, suspension, abandonment or termination. Consultant shall not be responsible or liable for any revisions to the Documents & Data made by any party other than Consultant, a party for whom the Consultant is legally responsible or liable, or anyone approved by the Consultant.

3.6.3.4 Indemnification. Consultant shall defend, indemnify and hold the City, its directors, officials, officers, employees, volunteers and agents free and harmless, pursuant to the indemnification provisions of this Agreement, for any alleged infringement of any patent, copyright, trade secret, trade name, trademark, or any other proprietary right of any person or entity in consequence of the use on the Project by City of the Documents & Data, including any method, process, product, or concept specified or depicted.

3.6.3.5 Confidentiality. All ideas, memoranda, specifications, plans, procedures, drawings, descriptions, computer program data, input record data, written information, and other Documents & Data either created by or provided to Consultant in connection with the performance of this Agreement shall be held confidential by Consultant. Such materials shall not, without the prior written consent of City, be used by Consultant for any purposes other than the performance of the Services. Nor shall such materials be disclosed to any person or entity not connected with the performance of the Services or the Project. Nothing furnished to Consultant which is otherwise known to Consultant or is generally known, or has become known, to the related industry shall be deemed confidential. Consultant shall not use City's name or insignia, photographs of the Project, or any publicity pertaining to the Services or the Project in any magazine, trade paper, newspaper, television or radio production or other similar medium without the prior written consent of City.

3.6.3.6 Confidential Information. The City shall refrain from releasing Consultant's proprietary information ("Proprietary Information") unless the City's legal counsel determines that the release of the Proprietary Information is required by the California Public Records Act or other applicable state or federal law, or order of a court of competent jurisdiction, in which case the City shall notify Consultant of its intention to release Proprietary Information. Consultant shall have five (5) working days after receipt of the release notice to give City written notice of Consultant's objection to the City's release of Proprietary Information. Consultant shall indemnify, defend and hold harmless the City, and its officers, directors, employees, and agents from and against all liability, loss, cost or expense (including attorney's fees) arising out of a legal action brought to compel the release of Proprietary Information. City shall not release the Proprietary Information after receipt of the objection notice unless either: (1) Consultant fails to fully indemnify, defend (with City's choice of legal counsel), and hold City harmless from any legal action brought to compel such release; and/or (2) a final and non-appealable order by a court of competent jurisdiction requires that City release such information.

3.6.4 Cooperation; Further Acts. The Parties shall fully cooperate with one another, and shall take any additional acts or sign any additional documents as may be

necessary, appropriate or convenient to attain the purposes of this Agreement.

3.6.5 Indemnification.

3.6.5.1 To the fullest extent permitted by law, Consultant shall defend (with counsel of City's choosing), indemnify and hold the City, its officials, officers, employees, volunteers, and agents free and harmless from any and all claims, demands, causes of action, costs, expenses, liability, loss, damage or injury of any kind, in law or equity, to property or persons, including wrongful death, in any manner arising out of, pertaining to, or incident to any acts, errors or omissions, or willful misconduct of Consultant, its officials, officers, employees, subcontractors, consultants or agents in connection with the performance of the Consultant's Services, the Project or this Agreement, including without limitation the payment of all damages, expert witness fees and attorney's fees and other related costs and expenses except such loss or damage caused by the sole negligence or willful misconduct of the City. Consultant's obligation to indemnify shall survive expiration or termination of this Agreement and shall not be restricted to insurance proceeds, if any, received by Consultant, the City, its officials, officers, employees, agents, or volunteers.

3.6.5.2 If Consultant's obligation to defend, indemnify, and/or hold harmless arises out of Consultant's performance as a "design professional" (as that term is defined under Civil Code section 2782.8), then, and only to the extent required by Civil Code section 2782.8, which is fully incorporated herein, Consultant's indemnification obligation shall be limited to claims that arise out of, pertain to, or relate to the negligence, recklessness, or willful misconduct of the Consultant, and, upon Consultant obtaining a final adjudication by a court of competent jurisdiction, Consultant's liability for such claim, including the cost to defend, shall not exceed the Consultant's proportionate percentage of fault.

3.6.6 Entire Agreement. This Agreement contains the entire Agreement of the parties with respect to the subject matter hereof, and supersedes all prior negotiations, understandings or agreements. This Agreement may only be modified by a writing signed by both parties.

3.6.7 Governing Law; Government Code Claim Compliance. This Agreement shall be governed by the laws of the State of California. Venue shall be in Riverside County. In addition to any and all contract requirements pertaining to notices of and requests for compensation or payment for extra work, disputed work, claims and/or changed conditions, Consultant must comply with the claim procedures set forth in Government Code sections 900 et seq. prior to filing any lawsuit against the City. Such Government Code claims and any subsequent lawsuit based upon the Government Code claims shall be limited to those matters that remain unresolved after all procedures pertaining to extra work, disputed work, claims, and/or changed conditions have been followed by Consultant. If no such Government Code claim is submitted, or if any prerequisite contractual requirements are not otherwise satisfied as specified herein, Consultant shall be barred from bringing and maintaining a valid lawsuit against the City.

3.6.8 Time of Essence. Time is of the essence for each and every provision of this Agreement.

3.6.9 City's Right to Employ Other Consultants. City reserves right to employ other consultants in connection with this Project.

3.6.10 Successors and Assigns. This Agreement shall be binding on the successors and assigns of the parties.

3.6.11 Assignment or Transfer. Consultant shall not assign, hypothecate, or transfer, either directly or by operation of law, this Agreement or any interest herein without the prior written consent of the City. Any attempt to do so shall be null and void, and any assignees, hypothecates or transferees shall acquire no right or interest by reason of such attempted assignment, hypothecation or transfer.

3.6.12 Construction; References; Captions. Since the Parties or their agents have participated fully in the preparation of this Agreement, the language of this Agreement shall be construed simply, according to its fair meaning, and not strictly for or against any Party. Any term referencing time, days or period for performance shall be deemed calendar days and not work days. All references to Consultant include all personnel, employees, agents, and subconsultants of Consultant, except as otherwise specified in this Agreement. All references to City include its elected officials, officers, employees, agents, and volunteers except as otherwise specified in this Agreement. The captions of the various articles and paragraphs are for convenience and ease of reference only, and do not define, limit, augment, or describe the scope, content, or intent of this Agreement.

3.6.13 Amendment; Modification. No supplement, modification, or amendment of this Agreement shall be binding unless executed in writing and signed by both Parties.

3.6.14 Waiver. No waiver of any default shall constitute a waiver of any other default or breach, whether of the same or other covenant or condition. No waiver, benefit, privilege, or service voluntarily given or performed by a Party shall give the other Party any contractual rights by custom, estoppel, or otherwise.

3.6.15 No Third-Party Beneficiaries. There are no intended third party beneficiaries of any right or obligation assumed by the Parties.

3.6.16 Invalidity; Severability. If any portion of this Agreement is declared invalid, illegal, or otherwise unenforceable by a court of competent jurisdiction, the remaining provisions shall continue in full force and effect.

3.6.17 Prohibited Interests. Consultant maintains and warrants that it has not employed nor retained any company or person, other than a bona fide employee working solely for Consultant, to solicit or secure this Agreement. Further, Consultant warrants that it has not paid nor has it agreed to pay any company or person, other than a bona fide employee working solely for Consultant, any fee, commission, percentage, brokerage fee, gift or other consideration contingent upon or resulting from the award or making of this Agreement. For breach or violation of this warranty, City shall have the right to rescind this Agreement without liability. For the term of this Agreement, no member, officer or employee of City, during the term of his or her service with City, shall have any direct interest in this Agreement, or obtain any present or anticipated material benefit arising therefrom.

3.6.18 Authority to Enter Agreement. Consultant has all requisite power and authority to conduct its business and to execute, deliver, and perform the Agreement. Each Party warrants that the individuals who have signed this Agreement have the legal power, right, and authority to make this Agreement and bind each respective Party.

3.6.19 Counterparts. This Agreement may be signed in counterparts, each of which shall constitute an original.

3.6.20 Survival. All rights and obligations hereunder that by their nature are to continue after any expiration or termination of this Agreement, including, but not limited to, the indemnification obligations, shall survive any such expiration or termination.

3.7 Subcontracting.

3.7.1 Prior Approval Required. Consultant shall not subcontract any portion of the work required by this Agreement, except as expressly stated herein, without prior written approval of City. Subcontracts, if any, shall contain a provision making them subject to all provisions stipulated in this Agreement.

DRAFT

EXHIBIT "A"
SCOPE OF SERVICES

DRAFT

EXHIBIT "B"
COMPENSATION & SCHEDULE OF SERVICES

June 2, 2026

TO:	City Council
REQUESTED BY:	Cynthia Espinosa, Director of Community Engagement and Communications
APPROVED BY:	Robert A. Johnson, City Manager
SUBJECT:	City Net PSA Renewal for Street Outreach and Emergency Shelter

RECOMMENDATION:

Staff recommends that City Council approve the FY 2026-2027 Professional Services Agreement with City Net to provide comprehensive street outreach and emergency hotel services, and authorize the City Manager or their designee to sign the agreement.

DISCUSSION:

The City of San Jacinto has maintained a long-standing commitment to reducing the impacts of homelessness and supporting the at-risk population within the community. Following the hiring of City Manager Robert Johnson in February 2017, the City Council directed staff to begin identifying resources, partnerships, and programmatic approaches to address these complex challenges.

Homelessness is a multifaceted socio-economic issue affecting communities nationwide, and effective response requires a coordinated, methodical approach supported by sustained resources. Since 2017, the City has taken incremental but intentional steps to build a foundation for a sustainable, long-term program focused on stabilization and support services, including access to mental health care, substance use treatment, housing navigation, job readiness, income stability, and improved overall quality of life.

One of the most significant ongoing challenges has been securing consistent, long-term funding for a “boots-on-the-ground” outreach model capable of providing comprehensive “wraparound” services to individuals identified through the City’s Homeless, At-Risk Population (HARP) efforts.

In June 2017, the City Council approved the expansion of the Code Enforcement Division with the addition of three Code Enforcement Officers and a supervisor, as well as two Problem-Oriented Policing (POP) Sheriff Deputies. This coordinated approach allowed the City to more effectively address quality-of-life concerns such as illegal dumping, graffiti, panhandling, vagrancy, encampments, and nuisance activity on both public and private property.

In early 2018, City leadership met with representatives from the City of Temecula to learn about their partnership with City Net and the success of their outreach and wraparound service model. At that time, the associated costs of implementing a comparable program in San Jacinto were determined to be cost-prohibitive. Despite this, the City continued to pursue regional collaboration through participation in Continuum of Care meetings and outreach efforts coordinated by Supervisor Washington’s office.

A top priority identified through both the Measure V campaign and the City’s community needs assessment was addressing homelessness in a more structured and sustainable way. With the passage of Measure V, the City was able to allocate resources to formally establish a dedicated Homeless, At-Risk Population Outreach Program (HARP Outreach), positioning the City to more effectively coordinate services and partnerships focused on this critical issue.

The City's partnership with City Net has been instrumental in advancing these efforts. City Net has not only provided direct outreach and case management services but has also supported the City in qualifying for and securing critical grant funding, including the Homeless Housing, Assistance and Prevention (HHAP) Program and the Encampment Resolution Fund (ERF). These funds have helped offset General Fund expenditures while expanding outreach and services beyond city boundaries.

Importantly, this regional approach has allowed the City to address encampments and individuals along the San Jacinto River and surrounding unincorporated areas. Without these services, many of the individuals in those areas would continue to migrate into city limits, placing additional strain on local resources and public services. City Net's consistent engagement, data tracking, and coordinated service delivery have strengthened the City's ability to demonstrate need, secure funding, and implement a more effective, regionally informed response to homelessness and at-risk population impacts.

In total for fiscal year 2025-2026, City Net made 1,172 contacts, averaged 112 clients enrolled in services monthly, and 44 of those individuals were serviced by the City's motel program and exited the streets of San Jacinto. Through City Net's outreach services over 150 police calls for service have been diverted, and 619 one on one case manager hours have been performed. This data shows the positive impact that the program has delivered. The services provided by City Net have been instrumental in addressing the critical needs of homeless and at-risk individuals within San Jacinto's community. The continuation of this contract will continue to offer hope and stability to the most vulnerable members in San Jacinto, and contribute to the overall positive well-being and quality of life of residents.

FISCAL IMPACT:

Funding for the City Net contract in an amount not to exceed $616,313.02 is included in the FY 2026-2027 budget, Account No. 010-9500-950.34-05.

CITY OF SAN JACINTO

PROFESSIONAL SERVICES AGREEMENT

1. PARTIES AND DATE.

This Agreement is made and entered into this 1st day of July, 2026, by and between the City of San Jacinto, a municipal corporation, organized under the laws of the State of California, with its principal place of business at 595 S. San Jacinto Avenue, San Jacinto, California 92583 ("City") and **City Net**, a **non-profit** with its principal place of business at **PO Box 4508 Atlantic Ave Ste. 292, Long Beach, CA 90807** (Consultant"). City and Consultant are sometimes individually referred to herein as "Party" and collectively as "Parties."

2. RECITALS.

2.1 Consultant.

Consultant desires to perform and assume responsibility for the provision of certain professional street outreach and engagement services to homeless consulting services required by the City on the terms and conditions set forth in this Agreement. Consultant represents that it is experienced in providing professional street outreach consulting services to public clients, is licensed in the State of California, and is familiar with the plans of City.

2.2 Project.

City desires to engage Consultant to render such professional **street outreach** consulting services for Street Outreach and Engagement through the HARP project ("Project") as set forth in this Agreement.

3. TERMS.

3.1 Scope of Services and Term.

3.1.1 General Scope of Services. Consultant promises and agrees to furnish to the City all labor, materials, tools, equipment, services, and incidental and customary work necessary to fully and adequately supply the professional street outreach consulting services necessary for the Project ("Services"). The Services are more particularly described in Exhibit "A" attached hereto and incorporated herein by reference. All Services shall be subject to, and performed in accordance with, this Agreement, the exhibits attached hereto and incorporated herein by reference, and all applicable local, state and federal laws, rules and regulations. Term. The term of this Agreement shall be from July 1, 2026 to June 30, 2027, unless earlier terminated as provided herein. Consultant shall complete the Services within the term of this Agreement, and shall meet any other established schedules and deadlines.

3.2 Responsibilities of Consultant.

3.2.1 Independent Contractor; Control and Payment of Subordinates. The Services shall be performed by Consultant or under its supervision. Consultant will determine the means, methods and details of performing the Services subject to the requirements of this Agreement. City retains Consultant on an independent contractor basis and not as an employee.

Consultant retains the right to perform similar or different services for others during the term of this Agreement. Any additional personnel performing the Services under this Agreement on behalf of Consultant shall also not be employees of City and shall at all times be under Consultant's exclusive direction and control. Neither City, nor any of its officials, officers, directors, employees or agents shall have control over the conduct of Consultant or any of Consultant's officers, employees, or agents, except as set forth in this Agreement. Consultant shall pay all wages, salaries, and other amounts due such personnel in connection with their performance of Services under this Agreement and as required by law. Consultant shall be responsible for all reports and obligations respecting such additional personnel, including, but not limited to: social security taxes, income tax withholding, unemployment insurance, disability insurance, and workers' compensation insurance.

3.2.2 Schedule of Services. Consultant shall perform the Services expeditiously, within the term of this Agreement, and in accordance with the Schedule of Services set forth in Exhibit "B" attached hereto and incorporated herein by reference. Consultant represents that it has the professional and technical personnel required to perform the Services in conformance with such conditions. In order to facilitate Consultant's conformance with the Schedule, City shall respond to Consultant's submittals in a timely manner. Upon request of City, Consultant shall provide a more detailed schedule of anticipated performance to meet the Schedule of Services.

3.2.3 Conformance to Applicable Requirements. All work prepared by Consultant shall be subject to the approval of City.

3.2.4 Substitution of Key Personnel. Consultant has represented to City that certain key personnel will perform and coordinate the Services under this Agreement. Should one or more of such personnel become unavailable, Consultant may substitute other personnel of at least equal competence upon written approval of City. In the event that City and Consultant cannot agree as to the substitution of key personnel, City shall be entitled to terminate this Agreement for cause. As discussed below, any personnel who fail or refuse to perform the Services in a manner acceptable to the City, or who are determined by the City to be uncooperative, incompetent, a threat to the adequate or timely completion of the Project or a threat to the safety of persons or property, shall be promptly removed from the Project by the Consultant at the request of the City. The key personnel for performance of this Agreement are as follows: Brad Fieldhouse, President and Jessica Bruce, Chief Program Officer.

3.2.5 City's Representative. The City hereby designates the City Manager, or his/her designee, to act as its representative in all matters pertaining to the administration and performance of this Agreement ("City's Representative"). City's Representative shall have the power to act on behalf of the City for review and approval of all products submitted by Consultant but not the authority to enlarge the Scope of Work or change the total compensation due to Consultant under this Agreement. The City Manager shall be authorized to act on City's behalf and to execute all necessary documents which enlarge the Scope of Work or change the Consultant's total compensation subject to the provisions contained in Section 3.3 of this Agreement. Consultant shall not accept direction or orders from any person other than the City Manager, City's Representative or his/her designee.

3.2.6 Consultant's Representative. Consultant hereby designates Brad Fieldhouse, or his/her designee, to act as its representative for the performance of this Agreement ("Consultant's Representative"). Consultant's Representative shall have full authority to represent and act on behalf of the Consultant for all purposes under this Agreement. The Consultant's

Representative shall supervise and direct the Services, using his/her best skill and attention, and shall be responsible for all means, methods, techniques, sequences, and procedures and for the satisfactory coordination of all portions of the Services under this Agreement.

3.2.7 Coordination of Services. Consultant agrees to work closely with City staff in the performance of Services and shall be available to City's staff, consultants and other staff at all reasonable times.

3.2.8 Standard of Care; Performance of Employees. Consultant shall perform all Services under this Agreement in a skillful and competent manner, consistent with the standards generally recognized as being employed by professionals in the same discipline in the State of California. Consultant represents and maintains that it is skilled in the professional calling necessary to perform the Services. Consultant warrants that all employees and sub consultants shall have sufficient skill and experience to perform the Services assigned to them. Finally, Consultant represents that it, its employees and sub consultants have all licenses, permits, qualifications and approvals of whatever nature that are legally required to perform the Services, and that such licenses and approvals shall be maintained throughout the term of this Agreement. As provided for in the indemnification provisions of this Agreement, Consultant shall perform, at its own cost and expense and without reimbursement from the City, any services necessary to correct errors or omissions which are caused by the Consultant's failure to comply with the standard of care provided for herein. Any employee of the Consultant or its sub-consultants who is determined by the City to be uncooperative, incompetent, a threat to the adequate or timely completion of the Project, a threat to the safety of persons or property, or any employee who fails or refuses to perform the Services in a manner acceptable to the City, shall be promptly removed from the Project by the Consultant and shall not be re-employed to perform any of the Services or to work on the Project.

3.2.9 Laws and Regulations; Employee/Labor Certification. Consultant shall keep itself fully informed of and in compliance with all local, state and federal laws, rules and regulations in any manner affecting the performance of the Project or the Services, including all Cal/OSHA requirements, and shall give all notices required by law. Consultant shall be liable for all violations of such laws and regulations in connection with Services. If Consultant performs any work knowing it to be contrary to such laws, rules and regulations, Consultant shall be solely responsible for all costs arising therefrom. Consultant shall defend, indemnify and hold City, its officials, directors, officers, employees, agents, and volunteers free and harmless, pursuant to the indemnification provisions of this Agreement, from any claim or liability arising out of any failure or alleged failure to comply with such laws, rules or regulations.

3.2.9.1 Employment Eligibility; Consultant. By executing this Agreement, Consultant verifies that it fully complies with all requirements and restrictions of state and federal law respecting the employment of undocumented aliens, including, but not limited to, the Immigration Reform and Control Act of 1986, as may be amended from time to time. Such requirements and restrictions include, but are not limited to, examination and retention of documentation confirming the identity and immigration status of each employee of the Consultant. Consultant also verifies that it has not committed a violation of any such law within the five (5) years immediately preceding the date of execution of this Agreement, and shall not violate any such law at any time during the term of the Agreement. Consultant shall avoid any violation of any such law during the term of this Agreement by participating in an electronic verification of work authorization program operated by the United States Department of Homeland Security, by participating in an equivalent federal work authorization program operated by the United States

Department of Homeland Security to verify information of newly hired employees, or by some other legally acceptable method. Consultant shall maintain records of each such verification, and shall make them available to the City or its representatives for inspection and copy at any time during normal business hours. The City shall not be responsible for any costs or expenses related to Consultant's compliance with the requirements provided for in Section 3.2.10 or any of its sub-sections.

3.2.9.2 Employment Eligibility; Subcontractors, Consultants, Sub-subcontractors and Subconsultants. To the same extent and under the same conditions as Consultant, Consultant shall require all of its subcontractors, consultants, sub-subcontractors and subconsultants performing any work relating to the Project or this Agreement to make the same verifications and comply with all requirements and restrictions provided for in Section 3.2.10.1.

3.2.9.3 Employment Eligibility; Failure to Comply. Each person executing this Agreement on behalf of Consultant verifies that they are a duly authorized officer of Consultant, and understands that any of the following shall be grounds for the City to terminate the Agreement for cause: (1) failure of Consultant or its subcontractors, consultants, sub-subcontractors or subconsultants to meet any of the requirements provided for in Sections 3.2.10.1 or 3.2.10.2; (2) any misrepresentation or material omission concerning compliance with such requirements (including in those verifications provided to the Consultant under Section 3.2.10.2); or (3) failure to immediately remove from the Project any person found not to be in compliance with such requirements.

3.2.9.4 Equal Opportunity Employment. Consultant represents that it is an equal opportunity employer and it shall not discriminate against any subconsultant, employee or applicant for employment because of race, religion, color, national origin, handicap, ancestry, sex or age. Such non-discrimination shall include, but not be limited to, all activities related to initial employment, upgrading, demotion, transfer, recruitment or recruitment advertising, layoff or termination. Consultant shall also comply with all relevant provisions of City's Minority Business Enterprise program, Affirmative Action Plan or other related programs or guidelines currently in effect or hereinafter enacted.

3.2.9.5 Air Quality. To the extent applicable, Consultant must fully comply with all applicable laws, rules and regulations in furnishing or using equipment and/or providing services, including, but not limited to, emissions limits and permitting requirements imposed by the South Coast Air Quality Management District (SCAQMD) and/or California Air Resources Board (CARB). Although the SCAQMD and CARB limits and requirements are more broad, Consultant shall specifically be aware of their application to "portable equipment", which definition is considered by SCAQMD and CARB to include any item of equipment with a fuel-powered engine. Consultant shall indemnify City against any fines or penalties imposed by SCAQMD, CARB, or any other governmental or regulatory agency for violations of applicable laws, rules and/or regulations by Consultant, its sub-consultants, or others for whom Consultant is responsible under its indemnity obligations provided for in this Agreement.

3.2.9.6 Safety. Consultant shall execute and maintain its work so as to avoid injury or damage to any person or property. In carrying out its Services, the Consultant shall at all times be in compliance with all applicable local, state and federal laws, rules and regulations, and shall exercise all necessary precautions for the safety of employees appropriate to the nature of the work and the conditions under which the work is to be performed. Safety precautions, where applicable, shall include, but shall not be limited to: (A) adequate life

protection and lifesaving equipment and procedures; (B) instructions in accident prevention for all employees and subconsultants, such as safe walkways, scaffolds, fall protection ladders, bridges, gang planks, confined space procedures, trenching and shoring, equipment and other safety devices, equipment and wearing apparel as are necessary or lawfully required to prevent accidents or injuries; and (C) adequate facilities for the proper inspection and maintenance of all safety measures.

3.2.10 Insurance.

3.2.10.1 Time for Compliance. Consultant shall not commence Services under this Agreement until it has provided evidence satisfactory to the City that it has secured all insurance required under this section. In addition, Consultant shall not allow any subconsultant to commence work on any subcontract until it has provided evidence satisfactory to the City that the subconsultant has secured all insurance required under this section. Failure to provide and maintain all required insurance shall be grounds for the City to terminate this Agreement for cause.

3.2.10.2 Minimum Requirements. Consultant shall, at its expense, procure and maintain for the duration of the Agreement insurance against claims for injuries to persons or damages to property which may arise from or in connection with the performance of the Agreement by the Consultant, its agents, representatives, employees or subconsultants. Consultant shall also require all of its subconsultants to procure and maintain the same insurance for the duration of the Agreement. Such insurance shall meet at least the following minimum levels of coverage:

(A) Minimum Scope of Insurance. Coverage shall be at least as broad as the latest version of the following: (1) *General Liability*: Insurance Services Office Commercial General Liability coverage (occurrence form CG 0001); (2) *Automobile Liability*: Insurance Services Office Business Auto Coverage form number CA 0001, code 1 (any auto); and (3) *Workers' Compensation and Employer's Liability*: Workers' Compensation insurance as required by the State of California and Employer's Liability Insurance.

(B) Minimum Limits of Insurance. Consultant shall maintain limits no less than: (1) *General Liability:* $1,000,000 per occurrence for bodily injury, personal injury and property damage. If Commercial General Liability Insurance or other form with general aggregate limit is used, including, but not limited to, form CG 2503, either the general aggregate limit shall apply separately to this Agreement/location or the general aggregate limit shall be twice the required occurrence limit; (2) *Automobile Liability:* $1,000,000 per accident for bodily injury and property damage; and (3) *Workers' Compensation and Employer's Liability:* Workers' Compensation limits as required by the Labor Code of the State of California. Employer's Liability limits of $1,000,000 per accident for bodily injury or disease.

3.2.10.3 Professional Liability. Consultant shall procure and maintain, and require its sub-consultants to procure and maintain, for a period of five (5) years following completion of the Project, errors and omissions liability insurance appropriate to their profession. Such insurance shall be in an amount not less than $1,000,000 MINIMUM; per claim, and shall be endorsed to include contractual liability.

3.2.10.4 Insurance Endorsements. The insurance policies shall contain the following provisions, or Consultant shall provide endorsements on forms supplied or approved by the City to add the following provisions to the insurance policies:

(A) General Liability. The general liability policy shall be endorsed to state that: (1) the City, its directors, officials, officers, employees, agents and volunteers shall be covered as additional insured with respect to the Work or operations performed by or on behalf of the Consultant, including materials, parts or equipment furnished in connection with such work; and (2) the insurance coverage shall be primary insurance as respects the City, its directors, officials, officers, employees, agents and volunteers, or if excess, shall stand in an unbroken chain of coverage excess of the Consultant's scheduled underlying coverage. Any insurance or self-insurance maintained by the City, its directors, officials, officers, employees, agents and volunteers shall be excess of the Consultant's insurance and shall not be called upon to contribute with it in any way.

(B) Automobile Liability. The automobile liability policy shall be endorsed to state that: (1) the City, its directors, officials, officers, employees, agents and volunteers shall be covered as additional insureds with respect to the ownership, operation, maintenance, use, loading or unloading of any auto owned, leased, hired or borrowed by the Consultant or for which the Consultant is responsible; and (2) the insurance coverage shall be primary insurance as respects the City, its directors, officials, officers, employees, agents and volunteers, or if excess, shall stand in an unbroken chain of coverage excess of the Consultant's scheduled underlying coverage. Any insurance or self-insurance maintained by the City, its directors, officials, officers, employees, agents and volunteers shall be excess of the Consultant's insurance and shall not be called upon to contribute with it in any way.

(C) Workers' Compensation and Employers Liability Coverage. The insurer shall agree to waive all rights of subrogation against the City, its directors, officials, officers, employees, agents and volunteers for losses paid under the terms of the insurance policy which arise from work performed by the Consultant.

(D) All Coverages. Each insurance policy required by this Agreement shall be endorsed to state that: (A) coverage shall not be suspended, voided, reduced or canceled except after thirty (30) days prior written notice by certified mail, return receipt requested, has been given to the City; and (B) any failure to comply with reporting or other provisions of the policies, including breaches of warranties, shall not affect coverage provided to the City, its directors, officials, officers, employees, agents and volunteers.

3.2.10.5 Separation of Insureds; No Special Limitations. All insurance required by this Section shall contain standard separation of insureds provisions. In addition, such insurance shall not contain any special limitations on the scope of protection afforded to the City, its directors, officials, officers, employees, agents and volunteers.

3.2.10.6 Deductibles and Self-Insurance Retentions. Any deductibles or self-insured retentions must be declared to and approved by the City. Consultant shall guarantee that, at the option of the City, either: (1) the insurer shall reduce or eliminate such deductibles or self-insured retentions as respects the City, its directors, officials, officers, employees, agents and volunteers; or (2) the Consultant shall procure a bond guaranteeing payment of losses and related investigation costs, claims and administrative and defense expenses.

3.2.10.7 Acceptability of Insurers. Insurance is to be placed with insurers with a current A.M. Best's rating no less than A:VIII, licensed to do business in California, and satisfactory to the City.

3.2.10.8 Verification of Coverage. Consultant shall furnish City with original certificates of insurance and endorsements effecting coverage required by this Agreement on forms satisfactory to the City. The certificates and endorsements for each insurance policy shall be signed by a person authorized by that insurer to bind coverage on its behalf, and shall be on forms provided by the City if requested. All certificates and endorsements must be received and approved by the City before work commences. The City reserves the right to require complete, certified copies of all required insurance policies, at any time.

3.2.10.9 Reporting of Claims. Consultant shall report to the City, in addition to Consultant's insurer, any and all insurance claims submitted by Consultant in connection with the Services under this Agreement.

3.2.10.10 Standard of Care. Consultant warrants that all employees and subcontractors shall have sufficient skill and experience to perform the work assigned to them without impacting water quality in violation of the laws, regulations and policies described in Section 3.2.12.2 of this Agreement. Consultant further warrants that it, its employees and subcontractors have or will receive adequate training, as determined by the City, regarding these requirements as they may relate to the Services.

3.2.10.11 Liability for Non-compliance.

(A) Indemnity: Failure to comply with laws, regulations, and ordinances listed in Section 3.2.14.2 of this Agreement is a violation of federal and state law. Notwithstanding any other indemnity contained in this Agreement, Consultant agrees to indemnify and hold harmless the City, its officials, officers, agents, employees and authorized volunteers from and against any and all claims, demands, losses or liabilities of any kind or nature which the City, its officials, officers, agents, employees and authorized volunteers may sustain or incur for noncompliance with the laws, regulations, and ordinances listed above, arising out of or in connection with the Services, except for liability resulting from the sole established negligence, willful misconduct or active negligence of the City, its officials, officers, agents, employees or authorized volunteers.

(B) Defense: City reserves the right to defend any enforcement action or civil action brought against the City for Consultant's failure to comply with any applicable water quality law, regulation, or policy. Consultant hereby agrees to be bound by, and to reimburse the City for the costs associated with, any settlement reached between the City and the relevant enforcement entity.

(C) Damages: City may seek damages from Consultant for delay in completing the Services caused by Consultant's failure to comply with the laws, regulations and policies described in Section 3.2.12.2 of this Agreement, or any other relevant water quality law, regulation, or policy.

3.3 Fees and Payments.

3.3.1 Compensation. Consultant shall receive compensation, including authorized reimbursements, for all Services rendered under this Agreement at the rates set forth in Exhibit "C" attached hereto and incorporated herein by reference. The total compensation shall

not exceed Six Hundred and Sixteen thousand, three hundred and thirteen dollars, and two cents ($616,313.02) for the City-Wide contract without written approval of the City Council or City Manager as applicable. Extra Work may be authorized, as described below, and if authorized, will be compensated at the rates and manner set forth in this Agreement.

3.3.2 Payment of Compensation. Consultant shall submit to City a monthly invoice which indicates work completed and hours of Services rendered by Consultant. The invoice shall describe the amount of Services provided since the initial commencement date, or since the start of the subsequent billing periods, as appropriate, through the date of the invoice. City shall, within 30 days of receiving such invoice, review the invoice and pay all non-disputed and approved charges thereon. If the City disputes any of Consultant's fees, the City shall give written notice to Consultant within thirty (30) days of receipt of an invoice of any disputed fees set forth therein.

3.3.3 Reimbursement for Expenses. Consultant shall not be reimbursed for any expenses unless authorized in writing by City, or included in Exhibit "B" of this Agreement.

3.3.4 Extra Work. At any time during the term of this Agreement, City may request that Consultant perform Extra Work. As used herein, "Extra Work" means any work which is determined by City to be necessary for the proper completion of the Project, but which the Parties did not reasonably anticipate would be necessary at the execution of this Agreement. Consultant shall not perform, nor be compensated for, Extra Work without written authorization from the City.

3.3.5 Rate Increases. In the event that this Agreement is renewed pursuant to Section 3.1.2, the rate set forth in Exhibit “B” may be adjusted each year at the time of renewal as set forth in Exhibit “C.”

3.4 Labor Code Requirements.

3.4.1 Prevailing Wages. Consultant is aware of the requirements of California Labor Code Section 1720, et seq., and 1770, et seq., as well as California Code of Regulations, Title 8, Section 16000, et seq., ("Prevailing Wage Laws"), which require the payment of prevailing wage rates and the performance of other requirements on "public works" and "maintenance" projects. If the Services are being performed as part of an applicable "public works" or "maintenance" project, as defined by the Prevailing Wage Laws, and if the total compensation is $1,000 or more, Consultant agrees to fully comply with such Prevailing Wage Laws. City shall provide Consultant with a copy of the prevailing rates of per diem wages in effect at the commencement of this Agreement. Consultant shall make copies of the prevailing rates of per diem wages for each craft, classification or type of worker needed to execute the Services available to interested parties upon request, and shall post copies at the Consultant's principal place of business and at the project site. It is the intent of the parties to effectuate the requirements of sections 1771, 1774, 1775, 1776, 1777.5, 1813, and 1815 of the Labor Code within this Agreement, and Consultant shall therefore comply with such Labor Code sections to the fullest extent required by law. Consultant shall defend, indemnify and hold the City, its officials, officers, employees, agents, and volunteers free and harmless from any claim or liability arising out of any failure or alleged failure to comply with the Prevailing Wage Laws.

3.4.2 Registration. If the Services are being performed on a public works project of over $25,000 when the project is for construction, alteration, demolition, installation, or repair

work, or a public works project of over $15,000 when the project is for maintenance work, in addition to the foregoing, then pursuant to Labor Code sections 1725.5 and 1771.1, the Consultant and all subconsultants must be registered with the Department of Industrial Relations ("DIR"). Consultant shall maintain registration for the duration of the project and require the same of any subconsultants. This project may also be subject to compliance monitoring and enforcement by the DIR. It shall be Consultant's sole responsibility to comply with all applicable registration and labor compliance requirements, including the submission of payroll records directly to the DIR.

3.4.3 Labor Certification. By its signature hereunder, Consultant certifies that it is aware of the provisions of Section 3700 of the California Labor Code which require every employer to be insured against liability for Worker's Compensation or to undertake self-insurance in accordance with the provisions of that Code, and agrees to comply with such provisions before commencing the performance of the Services.

3.5 Accounting Records.

3.5.1 Maintenance and Inspection. Consultant shall maintain complete and accurate records with respect to all costs and expenses incurred under this Agreement. All such records shall be clearly identifiable. Consultant shall allow a representative of City during normal business hours to examine, audit, and make transcripts or copies of such records and any other documents created pursuant to this Agreement. Consultant shall allow inspection of all work, data, documents, proceedings, and activities related to the Agreement for a period of three (3) years from the date of final payment under this Agreement.

3.6 General Provisions.

3.6.1 Termination of Agreement.

3.6.1.1 Grounds for Termination. City may, by written notice to Consultant, terminate the whole or any part of this Agreement at any time and without cause by giving written notice to Consultant of such termination, and specifying the effective date thereof, at least seven (7) days before the effective date of such termination. Upon termination, Consultant shall be compensated only for those services which have been adequately rendered to City, and Consultant shall be entitled to no further compensation. Consultant may not terminate this Agreement except for cause.

3.6.1.2 Effect of Termination. If this Agreement is terminated as provided herein, City may require Consultant to provide all finished or unfinished Documents and Data and other information of any kind prepared by Consultant in connection with the performance of Services under this Agreement. Consultant shall be required to provide such document and other information within fifteen (15) days of the request.

3.6.1.3 Additional Services. In the event this Agreement is terminated in whole or in part as provided herein, City may procure, upon such terms and in such manner as it may determine appropriate, services similar to those terminated.

3.6.2 Delivery of Notices. All notices permitted or required under this Agreement shall be given to the respective parties at the following address, or at such other address as the respective parties may provide in writing for this purpose:

Consultant: **City Net (Kingdom Causes INC)**
PO Box 4508 Atlantic Ave Ste. 292,
Long Beach, CA 90807
ATTN: **Brad Fieldhouse, President**

City: City of San Jacinto
595 S. San Jacinto Avenue
San Jacinto, CA 92583
ATTN: **City Manager**

Such notice shall be deemed made when personally delivered or when mailed, forty-eight (48) hours after deposit in the U.S. Mail, first class postage prepaid and addressed to the party at its applicable address. Actual notice shall be deemed adequate notice on the date actual notice occurred, regardless of the method of service.

3.6.3 Ownership of Materials and Confidentiality.

3.6.3.1 Documents & Data; Licensing of Intellectual Property. This Agreement creates a non-exclusive and perpetual license for City to copy, use, modify, reuse, or sublicense any and all copyrights, designs, and other intellectual property embodied in plans, specifications, studies, drawings, estimates, and other documents or works of authorship fixed in any tangible medium of expression, including but not limited to, physical drawings or data magnetically or otherwise recorded on computer diskettes, which are prepared or caused to be prepared by Consultant under this Agreement ("Documents & Data"). All Documents & Data shall be and remain the property of City, and shall not be used in whole or in substantial part by Consultant on other projects without the City's express written permission. Within thirty (30) days following the completion, suspension, abandonment or termination of this Agreement, Consultant shall provide to City reproducible copies of all Documents & Data, in a form and amount required by City. City reserves the right to select the method of document reproduction and to establish where the reproduction will be accomplished. The reproduction expense shall be borne by City at the actual cost of duplication. In the event of a dispute regarding the amount of compensation to which the Consultant is entitled under the termination provisions of this Agreement, Consultant shall provide all Documents & Data to City upon payment of the undisputed amount. Consultant shall have no right to retain or fail to provide to City any such documents pending resolution of the dispute. In addition, Consultant shall retain copies of all Documents & Data on file for a minimum of fifteen (15) years following completion of the Project, and shall make copies available to City upon the payment of actual reasonable duplication costs. Before destroying the Documents & Data following this retention period, Consultant shall make a reasonable effort to notify City and provide City with the opportunity to obtain the documents.

3.6.3.2 Subconsultants. Consultant shall require all subconsultants to agree in writing that City is granted a non-exclusive and perpetual license for any Documents & Data the subconsultant prepares under this Agreement. Consultant represents and warrants that Consultant has the legal right to license any and all Documents & Data. Consultant makes no such representation and warranty in regard to Documents & Data which were prepared by design professionals other than Consultant or its subconsultants, or those provided to Consultant by the City.

3.6.3.3 Right to Use. City shall not be limited in any way in its use or reuse of the Documents and Data or any part of them at any time for purposes of this Project or

another project, provided that any such use not within the purposes intended by this Agreement or on a project other than this Project without employing the services of Consultant shall be at City's sole risk. If City uses or reuses the Documents & Data on any project other than this Project, it shall remove the Consultant's seal from the Documents & Data and indemnify and hold harmless Consultant and its officers, directors, agents and employees from claims arising out of the negligent use or re-use of the Documents & Data on such other project. Consultant shall be responsible and liable for its Documents & Data, pursuant to the terms of this Agreement, only with respect to the condition of the Documents & Data at the time they are provided to the City upon completion, suspension, abandonment or termination. Consultant shall not be responsible or liable for any revisions to the Documents & Data made by any party other than Consultant, a party for whom the Consultant is legally responsible or liable, or anyone approved by the Consultant.

3.6.3.4 Indemnification. Consultant shall defend, indemnify and hold the City, its directors, officials, officers, employees, volunteers and agents free and harmless, pursuant to the indemnification provisions of this Agreement, for any alleged infringement of any patent, copyright, trade secret, trade name, trademark, or any other proprietary right of any person or entity in consequence of the use on the Project by City of the Documents & Data, including any method, process, product, or concept specified or depicted.

3.6.3.5 Confidentiality. All ideas, memoranda, specifications, plans, procedures, drawings, descriptions, computer program data, input record data, written information, and other Documents & Data either created by or provided to Consultant in connection with the performance of this Agreement shall be held confidential by Consultant. Such materials shall not, without the prior written consent of City, be used by Consultant for any purposes other than the performance of the Services. Nor shall such materials be disclosed to any person or entity not connected with the performance of the Services or the Project. Nothing furnished to Consultant which is otherwise known to Consultant or is generally known, or has become known, to the related industry shall be deemed confidential. Consultant shall not use City's name or insignia, photographs of the Project, or any publicity pertaining to the Services or the Project in any magazine, trade paper, newspaper, television or radio production or other similar medium without the prior written consent of City.

3.6.3.6 Confidential Information. The City shall refrain from releasing Consultant's proprietary information ("Proprietary Information") unless the City's legal counsel determines that the release of the Proprietary Information is required by the California Public Records Act or other applicable state or federal law, or order of a court of competent jurisdiction, in which case the City shall notify Consultant of its intention to release Proprietary Information. Consultant shall have five (5) working days after receipt of the Release Notice to give City written notice of Consultant's objection to the City's release of Proprietary Information. Consultant shall indemnify, defend and hold harmless the City, and its officers, directors, employees, and agents from and against all liability, loss, cost or expense (including attorney's fees) arising out of a legal action brought to compel the release of Proprietary Information. City shall not release the Proprietary Information after receipt of the Objection Notice unless either: (1) Consultant fails to fully indemnify, defend (with City's choice of legal counsel), and hold City harmless from any legal action brought to compel such release; and/or (2) a final and non-appealable order by a court of competent jurisdiction requires that City release such information.

3.6.4 Cooperation; Further Acts. The Parties shall fully cooperate with one another, and shall take any additional acts or sign any additional documents as may be necessary,

appropriate or convenient to attain the purposes of this Agreement.

3.6.5 Attorney's Fees. If either party commences an action against the other party, either legal, administrative or otherwise, arising out of or in connection with this Agreement, the prevailing party in such litigation shall be entitled to have and recover from the losing party reasonable attorney's fees and all other costs of such action.

3.6.6 Indemnification. To the fullest extent permitted by law, Consultant shall defend (with counsel of City's choosing), indemnify and hold the City, its officials, officers, employees, volunteers, and agents free and harmless from any and all claims, demands, causes of action, costs, expenses, liability, loss, damage or injury of any kind, in law or equity, to property or persons, including wrongful death, in any manner arising out of, pertaining to, or incident to any acts, errors or omissions, or willful misconduct of Consultant, its officials, officers, employees, subconsultants or agents in connection with the performance of the Consultant's Services, the Project or this Agreement, including without limitation the payment of all damages, expert witness fees and attorney's fees and other related costs and expenses. Consultant's obligation to indemnify shall not be restricted to insurance proceeds, if any, received by Consultant, the City, its officials, officers, employees, agents, or volunteers.

If Consultant's obligation to defend, indemnify, and/or hold harmless arises out of Consultant's performance as a "design professional" (as that term is defined under Civil Code section 2782.8), then, and only to the extent required by Civil Code section 2782.8, which is fully incorporated herein, Consultant's indemnification obligation shall be limited to claims that arise out of, pertain to, or relate to the negligence, recklessness, or willful misconduct of the Consultant, and, upon Consultant obtaining a final adjudication by a court of competent jurisdiction, Consultant's liability for such claim, including the cost to defend, shall not exceed the Consultant's proportionate percentage of fault.

3.6.7 Entire Agreement. This Agreement contains the entire Agreement of the parties with respect to the subject matter hereof, and supersedes all prior negotiations, understandings or agreements. This Agreement may only be modified by a writing signed by both parties.

3.6.8 Governing Law; Government Code Claim Compliance. This Agreement shall be governed by the laws of the State of California. Venue shall be in Riverside County. In addition to any and all contract requirements pertaining to notices of and requests for compensation or payment for extra work, disputed work, claims and/or changed conditions, Consultant must comply with the claim procedures set forth in Government Code sections 900 et seq. prior to filing any lawsuit against the City. Such Government Code claims and any subsequent lawsuit based upon the Government Code claims shall be limited to those matters that remain unresolved after all procedures pertaining to extra work, disputed work, claims, and/or changed conditions have been followed by Consultant. If no such Government Code claim is submitted, or if any prerequisite contractual requirements are not otherwise satisfied as specified herein, Consultant shall be barred from bringing and maintaining a valid lawsuit against the City.

3.6.9 Time of Essence. Time is of the essence for each and every provision of this Agreement.

3.6.10 City's Right to Employ Other Consultants. City reserves right to employ other consultants in connection with this Project.

3.6.11 Successors and Assigns. This Agreement shall be binding on the successors and assigns of the parties.

3.6.12 Assignment or Transfer. Consultant shall not assign, hypothecate, or transfer, either directly or by operation of law, this Agreement or any interest herein without the prior written consent of the City. Any attempt to do so shall be null and void, and any assignees, hypothecates or transferees shall acquire no right or interest by reason of such attempted assignment, hypothecation or transfer.

3.6.13 Construction; References; Captions. Since the Parties or their agents have participated fully in the preparation of this Agreement, the language of this Agreement shall be construed simply, according to its fair meaning, and not strictly for or against any Party. Any term referencing time, days or period for performance shall be deemed calendar days and not work days. All references to Consultant include all personnel, employees, agents, and subconsultants of Consultant, except as otherwise specified in this Agreement. All references to City include its elected officials, officers, employees, agents, and volunteers except as otherwise specified in this Agreement. The captions of the various articles and paragraphs are for convenience and ease of reference only, and do not define, limit, augment, or describe the scope, content, or intent of this Agreement.

3.6.14 Amendment; Modification. No supplement, modification, or amendment of this Agreement shall be binding unless executed in writing and signed by both Parties.

3.6.15 Waiver. No waiver of any default shall constitute a waiver of any other default or breach, whether of the same or other covenant or condition. No waiver, benefit, privilege, or service voluntarily given or performed by a Party shall give the other Party any contractual rights by custom, estoppel, or otherwise.

3.6.16 No Third-Party Beneficiaries. There are no intended third party beneficiaries of any right or obligation assumed by the Parties.

3.6.17 Invalidity; Severability. If any portion of this Agreement is declared invalid, illegal, or otherwise unenforceable by a court of competent jurisdiction, the remaining provisions shall continue in full force and effect.

3.6.18 Prohibited Interests. Consultant maintains and warrants that it has not employed nor retained any company or person, other than a bona fide employee working solely for Consultant, to solicit or secure this Agreement. Further, Consultant warrants that it has not paid nor has it agreed to pay any company or person, other than a bona fide employee working solely for Consultant, any fee, commission, percentage, brokerage fee, gift or other consideration contingent upon or resulting from the award or making of this Agreement. For breach or violation of this warranty, City shall have the right to rescind this Agreement without liability. For the term of this Agreement, no member, officer or employee of City, during the term of his or her service with City, shall have any direct interest in this Agreement, or obtain any present or anticipated material benefit arising therefrom.

3.6.19 Authority to Enter Agreement. Consultant has all requisite power and authority to conduct its business and to execute, deliver, and perform the Agreement. Each Party warrants that the individuals who have signed this Agreement have the legal power, right, and authority to make this Agreement and bind each respective Party.

3.6.20 Counterparts. This Agreement may be signed in counterparts, each of which shall constitute an original.

3.7 Subcontracting.

3.7.1 Prior Approval Required. Consultant shall not subcontract any portion of the work required by this Agreement, except as expressly stated herein, without prior written approval of City. Subcontracts, if any, shall contain a provision making them subject to all provisions stipulated in this Agreement.

PROFESSIONAL SERVICES AGREEMENT BY AND BETWEEN THE CITY OF SAN JACINTO AND City Net

CITY OF SAN JACINTO	**City Net**
By:	By:
Robert Johnson City Manager	Brad Fieldhouse President, City Net

Attest:

City Clerk

City Net

EXHIBIT "A"
SCOPE OF SERVICES

Vision

City Net proposes to provide street outreach and engagement services to homeless neighbors in San Jacinto, to engage them in case management with the goal of exiting them from the streets, with the long-term goal of dramatically reducing street-level homelessness in the city. City Net will participate in collaborative efforts of agencies from city government, law enforcement and other city first responders, advocacy and civic groups, nonprofit organizations, businesses, homeless neighbors and the faith community working together on shared goals and a common agenda.

Goals

1. Exit homeless neighbors from the streets of San Jacinto, prioritizing the most vulnerable, high-profile, and costly cases.
2. Assess clients' needs and refer to appropriate local shelter(s) and housing options.
3. Participate in the coordination of homeless activities in San Jacinto through aligned resources, mutually supportive activities, common agenda and share goals.
4. Reduce community costs related to homelessness in the city.
5. Connect homeless neighbors and city agencies to housing solutions throughout the region.

Outreach Schedule

City Net proposes a team of 2.0 FTE street outreach and engagement case managers, along with project leadership and support staff. City Net will deploy these case managers on street outreach and engagement in the city on a set schedule to cover M-F during regular business hours. Night and weekends coverage is available with advanced notice.

Term

Contract term is twelve months, from 7/1/26 through 6/30/27.

Budget

See attached for proposed budget for city-wide homeless.

General Approach

City Net engages in street outreach services for homeless neighbors as described below.

Street outreach is service delivery for the specific purpose of reaching out to unsheltered homeless neighbors; connecting them with emergency shelter, housing, or critical services; and providing urgent, non-facility-based care.

Individuals defined as unsheltered generally meet the following HUD criteria for homelessness: Category 1,literally homeless; and/or Category 4, fleeing/attempting to flee domestic violence (where the individual or household also meet the criteria for category 1) and are:

- living on the streets (or other places not meant for human habitation)
- unwilling or unable to access services in emergency shelter.

Housing First

All City Net programs are informed by and consistent with Housing First principals. Housing First is an approach to serving people experiencing homelessness that recognizes a homeless person must first be able to access a

decent, safe place to live, that does not limit length of stay (permanent housing), before stabilizing, improving health, reducing harmful behaviors, or increasing income. Under the Housing First approach, anyone experiencing homelessness is connected to a permanent home as quickly as possible, and programs remove barriers to accessing the housing, like requirements for sobriety or absence of criminal history. It is based on the "hierarchy of need:" people must access necessities—like a safe place to live and food to eat—before being able to achieve quality of life or pursue personal goals. Housing First also values choice not only in where to live, but whether to participate in services.

Finally, Housing First recognizes the need for robust supportive services upon housing placement. It is not "Housing Only" or "Housing Alone", but "Housing *First*", which implies that additional steps are generally needed to achieve successful long-term housing stability.

Trauma-Informed Care

City Net assumes that individuals and families who are homeless have been exposed to trauma. Research has shown that individuals who are homeless are likely to have experienced some form of previous trauma; homelessness itself can be viewed as a traumatic experience; and being homeless increases the risk of further victimization and retraumatization.

Therefore, our programs, policies and procedures are designed not only respond to the immediate crisis of homelessness, but to also contribute to the longer-term healing of homeless individuals. Trauma-Informed Care (TIC) offers a framework for providing services to traumatized individuals within a variety of service settings, including homelessness service settings.

Since trauma also influences how people approach and respond to services, City Net strives to recognize trauma symptoms, acknowledge the role that trauma has played in clients' lives, and better understand and address the needs of those with trauma histories. The goal of this approach is to avoid retraumatization and exacerbation of trauma symptoms.

This change in understanding can be illustrated by the difference between the questions "What's wrong with you?" vs. "What has happened to you?" While the terms violence, trauma, abuse, and post-traumatic stress disorder (PTSD) are frequently used interchangeably, it is useful to think of trauma as a response to violence or other overpowering negative experience such as abuse. Trauma refers to both the event and the particular response to an event. PTSD is one type of disorder resulting from trauma. Becoming "traumatized" varies greatly among individuals, and not everyone exposed to a potential traumatic event will be traumatized.

Trauma begins with an event or experience that overwhelms normal coping mechanisms. There

are physical and psychological reactions—which are normal—in response. Retraumatization refers to the psychological and/or physiological experience of being "triggered," i.e., when an environmental cue related to the trauma—such as a smell or a sound—triggers a full fight-or-flight response. Although environmental triggers cannot be eliminated, City Net seeks to create an environment—both a physical environment, and a framework of compassionate understanding in which the trauma survivor feels safe.

Motivational Interviewing

City Net employs Motivational Interviewing (MI) techniques in its programs. MI is a counseling method that helps people resolve ambivalent feelings and insecurities to find the internal motivation they need to change

their behavior. It is a practical, empathetic, and short-term process that takes into consideration how difficult it is to make life changes.

The core components of MI are to:

- Express and show empathy towards clients
- Support and articulate discrepancies between clients' goals and choices that take them away from goals
- Deal with resistance without confrontation
- Support self-efficacy
- Support client autonomy.

HMIS

All clients in this proposed project will be entered into/screened through the local Homeless Management Information System (HMIS) and, as appropriate for prospective candidates, the Coordinated Entry System (CES).City Net staff are trained in these systems, and our written policies and procedures state their work must be coordinated through these systems.

In addition to assuring that resources flow to the most vulnerable homeless individuals (through CES), these systems also provide a safeguard against duplication of services because we can see in HMIS what other services and benefits the client is receiving, as well as the agency who may be providing these services. Our case managers and housing navigators are trained to reach out to their counterparts at these other agencies to confirm provision of services, to case conference, and to clarify any questions around potential duplication.

Permanent Housing

Case managers link clients to the Coordinated Entry System (CES) to provide ongoing engagement, document collection, and case management services to facilitate a match to an appropriate permanent housing resource. Case managers also provide services in the context of CES, which is voluntary and client-centered, with the goalof identifying strengths and client-directed goals, while promoting health, recognition, and well-being with a focus on linking the client to a permanent housing resource and providing the necessary services needed to promote housing stability.

Client Referral Process

In accordance with our street outreach and engagement policies and procedures, City Net staff record all assessments and subsequent services in the Homeless Management Information System

(HMIS), which requires them to enter and maintain timely and complete client data.

City Net Case Managers are oriented to and trained in resources, homeless services, and organizations for collaboration and referral. They are highly trained to connect residents to shelter and housing resources, including in case managing clients from the streets into permanent supportive housing through CES. Staff representatives attend the local CoC meetings-- Homeless Provider Forums, Case Management Forums, Implementation Committees and the like. Resource lists are updated regularly and kept on-site. Protocols for offering and accepting referrals from other agencies are reviewed by staff, updated, shared and kept in a manual in the City Net offices.

City Net

City Net will refer homeless neighbors to emergency health and/or emergency mental health services to the extent that other customary emergency health services and treatments are unavailable or inaccessible to the homeless neighbor. A referral example is outpatient treatment of urgent medical conditions by licensed medical professionals in community-based settings (e.g., streets, parks, and campgrounds) to those eligible participants unwilling or unable to access emergency shelter or an appropriate healthcare facility.

Types of Services

City Net's street outreach services include services in the following categories: engagement services, case management, emergency health, emergency mental health, transportation, and services for special populations.

These activities are intended to help homeless neighbors to obtain appropriate supportive services, including assistance in obtaining permanent housing, medical health treatment, mental health treatment, counseling, supervision, and other services essential for achieving independent living. Supportive services may include providing access to and assistance in obtaining:

- Medicaid/Medi-Cal
- Women, Infants and Children (WIC)
- Food Stamps/Cal-Fresh/EBT
- Federal-State Unemployment Insurance Program
- Social Security Disability Insurance (SSDI)
- Supplemental Security Income (SSI)
- General Relief (GR)
- Other mainstream resources such as housing, health, social services, employment, education services and youth programs that an individual or family may be eligible to receive.

Engagement Services

Engagement Services are activities to locate, identify, and build relationships with unsheltered homeless people to offer immediate support, intervention, and connections with homeless assistance programs and/or mainstream social services and other housing programs. Specific activities include:

- Conducting an initial assessment of client needs and eligibility
- Providing informal crisis counseling
- Addressing urgent physical needs, such as providing meals, blankets, clothes, or toiletries
- Actively connecting and providing information and referrals to needed services.

Case Management

Case management activities to assess housing and service needs and arrange, coordinate

and/or monitor the delivery of individualized services. Specific activities include:

- Assessment and intake using HMIS
- Conducting initial evaluations including, verifying and documenting eligibility
- Counseling
- Developing/securing/coordinating services
- Helping obtain Federal, State, and local benefits
- Monitoring and evaluating program participant progress in particular programs
- Providing information and referrals to other providers
- Developing an individualized housing stabilization plan that leads to the attainment of stable permanent housing.

Emergency Health

City Net will refer homeless neighbors to emergency health services to the extent that other customary emergency health services and treatments are unavailable or inaccessible to the homeless neighbor. An example of emergency health services to which City Net will refer homeless neighbors is outpatient treatment of urgent medical conditions by licensed medical professionals in community-based settings (e.g., streets, parks, and campgrounds) to those eligible participants unwilling or unable to access emergency shelter or an appropriate healthcare facility. City Net may assist healthcare professionals in the case management aspects of the following activities:

- Assessing health problems and developing treatment plans
- Assistance in understanding health needs
- Providing directly or assisting to obtain appropriate emergency medical treatment
- Providing medication and follow-up services.

Emergency Mental Health

City Net will refer homeless neighbors to emergency mental health services to the extent that other customary emergency mental health services and treatments are unavailable or inaccessible to the homeless neighbor. An example of emergency health services to which City Net will refer homeless neighbors is outpatient treatment of urgent mental health conditions by licensed professionals in community-based setting (e.g., streets, parks, and campgrounds) to those eligible participants unable or unwilling to access emergency shelter or an appropriate mental health care facility. City Net may assist mental healthcare professionals in the case management aspects of the following activities:

- Crisis intervention
- Prescription of psychotropic medications
- Explanation about the use and management of medications
- Combinations of therapeutic approaches to address multiple problems.

Transportation

Occasionally, City Net may engage in transportation activities, including:

- Transporting unsheltered people to emergency shelters, emergency health, emergency mental health, or other service facilities

- Provision of public transportation for participants
- Transportation costs (bus tickets, gas, minor car repairs, etc.) to assist homeless neighbors to relocate out of the region, provided they have permanent housing there.
- Assisting program participants to use public transportation.

Services for Special Populations

Services for special populations are essential services that have been tailored to address the special needs of homeless youths, victims of domestic violence, dating violence, sexual assault, or stalking, including connections to services offered by rape crisis centers, domestic violence shelters, and other organizations that serve persons who meet the HUD homeless definition and have special needs.

Food and Emergency Services

Food and other emergency services will be given to clients primarily as they first move into housing and for emergency circumstances. During the duration of their tenancy, clients will be connected food banks and service agencies in the community as their primary resource for emergency needs.

COVID-19 Modifications

COVID-19 has caused widespread concern for the health and safety of those experiencing homelessness, as wellas concern for the environment and safety of greater community members and visitors. Living unsheltered may allow people to increase physical distance between themselves and others. However, sleeping outdoors does not provide protection from the environment, personal safety, adequate access to hygiene and sanitation facilities, or connection to services and healthcare.

During the pandemic, City Net's street outreach and engagement staff are ensuring that unsheltered homeless neighbors have access to services and updated information about COVID-19, by working to:

- Provide information to educate people about COVID-19: where they can get tested, how it spreads, health impacts, common symptoms, and other features of the disease.
- Use health messages and materials developed by credible public health sources, such as local and state public health departments or the Centers for Disease Control and Prevention (CDC).
- Provide educational materials about COVID-19 for non-English speakers, those with low literacy or intellectual disabilities, and people who are hearing or vision impaired.
- Ensure communication with clients about changes in homeless services policies and/or changes in physical location of services such as food, water, hygiene facilities, regular healthcare, and behavioral health resources.
- Provide health and hygiene interventions:
- Recommend that all clients wear masks any time they are around other people, noting exceptions suchas young children under age 2, anyone who has trouble breathing, or is unconscious, incapacitated, or otherwise unable to remove the mask without assistance.
- Provide clients with hygiene materials including items such as hand sanitizer, soap, shampoo, cleansing wipes, socks, blankets, non-perishable snacks, bottled water, sunscreen, gloves, toothbrush, toothpaste,and other items depending on client needs.

- Discourage clients from spending time in crowded places or gathering in large groups, for example at locations where food, water, or hygiene supplies are being distributed.
- If it is not possible for clients and staff to avoid crowded places, encourage spreading out (at least 6 feet between people) to the extent possible.
- Encourage proper waste disposal to prevent spread of disease and minimize risk.
- Continue providing linkages to homeless services, housing, medical, mental health, and substance use treatment, including provision of medication-assisted therapies.
- Maintain up-to-date contact information and areas frequented for each person.
- Coordinate, integrate, and leverage resources to maximize impact of services for individuals who are experiencing homelessness.
- Engage individuals and families not yet working with a CES Partner Agency, with a primary focus on unsheltered families and individuals in encampments.
- Conduct frequent visits to encampments known to have persons experiencing homelessness throughout the city.

Data Policy

The information City Net collects about individuals and families who access our services is confidentially stored in a local electronic database called the Homeless Management Information System (HMIS). HMIS securely records information (data) about people accessing housing and homeless services, which may include, but is not limited to, names and contact information, birthdates, demographic information, self-reported medical information, veteran status, disability status, etc. Under the HMIS Data-Sharing Agreement, the individual client data of those who consent to have their information stored in HMIS is only viewable by qualified staff at each participating agency. In order to participate in HMIS, leaders at each agency must sign an Agency Agreement that includes a commitment to protecting client data and maintaining confidentiality, and agency staff must pass multiple trainings that each go over the importance of client privacy.

City Net is accountable to our HMIS Data-Sharing partners, to the Orange County Continuum of Care, and to the Department of Housing and Urban Development (HUD) to maintain the privacy and security of the confidential personal information we collect about our clients and their families. Aside from these legal and funding-related obligations, we also believe we have an ethical responsibility to our clients to not share their personal data in ways to which they've not agreed. To ensure City Net's commitment to excellent data collection, privacy and security, analysis and reporting practices, City Net does not authorize external agencies to complete these functions on our behalf except in very limited circumstances and only with prior written approval and with City Net's full participation in all data reporting and analysis. This is so that City Net can responsibly provide context and analysis for the data City Net collects within collaborative efforts to coordinate the most effective services for our homeless neighbors, better understand homelessness in our community, assess the types of resources needed in our local area, and participate in generating aggregate statistical reports to HUD, which help to improve policy and bring adequate funding of services for the most vulnerable populations in our community, and so City Net can assure its ethical and legal responsibilities to homeless neighbors to not share their data in ways to which they have not agree.

Category	**Description**	**TOTAL**
De minimis rate for non-federal entity	Per 2 CFR 200.414-11, de minimis rate established for non-Federal entities who do not have negotiated Indirect Cost Rate. This fee is charged at a rate of 10% to offset expenses incurred by the organization but not billable as direct project expenses.	$56,028.46
	Indirect subtotal:	**$56,028.46**
Project TOTAL		**$616,313.02**

Notes: Rates current as of 4/16/25 and valid for 90 days from this date. Annual renewal(s) subject to cost of living increases consistent with local Consumer Price Index. Budget and/or programmatic deliverables will need modifications in the event of unforeseen increases in motel fees for room rentals, taxes, fees, etc.

June 2, 2026

TO:	City Council
REQUESTED BY:	Kimberly Ganimian, Finance Director
APPROVED BY:	Robert A. Johnson, City Manager
SUBJECT:	Sixth Amendment to the CR&R Solid Waste Franchise Agreement and Annual Rate Adjustment

RECOMMENDATION:

Staff recommends that the City Council:

1. Conduct a public hearing to receive public comment and accept any protests.
2. Adopt **Resolution 4129** - Approving the Sixth Amendment to the Franchise Agreement between the City of San Jacinto and CR&R Incorporated and the annual rate adjustments for solid waste collection and handling services.

DISCUSSION:

The City has an exclusive franchise agreement with CR&R Incorporated (CR&R) for the collection and handling of solid waste, recyclables, organic waste, and related services within the City of San Jacinto. Rates charged to residential and commercial customers are established under the Franchise Agreement and are adjusted annually based on inflationary indices and disposal fee pass-through costs.

The Franchise Agreement has been amended five times since its adoption in 2005 to incorporate legislative requirements, update rate methodologies, and modify service components. CR&R submitted its annual adjustment request for Fiscal Year 2026-27 on March 10, 2026, in accordance with the procedures established in the Fourth Amendment (2020) and reaffirmed in subsequent amendments.

The Franchise Agreement with CR&R specifies the circumstances required to annually adjust the rates for services. Per the agreement, these rates shall be adjusted each July 1st to reflect the changes in various applicable indices. The rates for both residential and commercial services will adjust July 1, 2026 for fiscal year 2026-2027. Based on data from the Bureau of Labor Statistics (BLS) for January 2025 through December 2025, the Consumer Price Index (CPI) increased by 2.94%. In addition, the County of Riverside's Waste Management Department has indicated that they will adjust their disposal rate by 3.28% from $43.63 per ton to $45.06 per ton. As permitted under the Franchise Agreement, these factors result in adjustments to residential, commercial, and ancillary service rates for the upcoming fiscal year.

Solid waste charges are determined based on the type of customer, and type of service provided to the customer which includes the frequency of service, and the type and size of container serving the property. The rate for the typical residential customer, consisting of three 96-gallon carts serviced weekly, will increase by $1.27, from $32.92 per month to $34.19 per month. The standard commercial 3-cubic yard bin with weekly service will increase $10.61 a month from $277.69 to $288.30 per month, and a 10-yard roll-off box will increase from $365.76 to $380.04 per month for a $14.28 increase. The adjusted rates are incorporated into 2026-2027 CR&R Rate Schedule, which replaces the prior Exhibit B in its entirety.

The Sixth Amendment memorializes the City's approval of the FY 2026-27 rate adjustments and updates Exhibit B to reflect the new rate schedule. Further, the Sixth Amendment allows for annual adjustments due to inflation and to pass through costs in wholesale service, commencing July 1, 2027, and any time thereafter through and including July 1, 2031. No other provisions of the Franchise Agreement are modified.

Based on the data supplied by both the BLS and the County of Riverside, CR&R prepared proposed rate schedules which pass these adjustments through to the various service rates. The proposed rate schedules for Solid Waste Charges attached to this report are for the period of July 1, 2026 to June 30, 2027.

Public Hearing Notice

In accordance with Proposition 218 requirements, a 45-day notice of the proposed Franchise Agreement Amendment and rate increase was sent to property owners and solid waste customers explaining the proposed residential and non-residential solid waste collection increase. The notice was provided in compliance with the procedures outlined in Proposition 218 and the California Constitution Article 13D. Cost increases will be passed through to the customer.

FISCAL IMPACT:

Solid waste collection, recycling and handling services for residential and commercial customers are paid for by the residential users, property owner or business owner receiving the service. No additional costs will be incurred by the City of San Jacinto.

CR&R INCORPORATED
environmental services

March 10, 2026

Mr. Rob Johnson
City Manager
City of San Jacinto
595 S San Jacinto Ave
San Jacinto, CA 92583

Re: Annual Rate Adjustment

Dear Rob,

Pursuant to our current agreement to provide Solid Waste and Recycling Services to the City of San Jacinto, CR&R Incorporated respectfully submits the attached information which outlines our Annual Rate Adjustment request for fiscal year 2026-2027. As you are aware, our current agreement stipulates the conditions upon which our rates may be adjusted on an annual basis. These rates shall be adjusted annually to reflect the changes in various applicable indices.

In reviewing the annual data from the Bureau of Labor Statistics (BLS), CPI has increased by 3.28%. In addition, the County of Riverside's Waste Management Department has indicated that they will increase their disposal fee by 2.94% for fiscal year 2026-2027. Therefore, based upon the data supplied by both the BLS and the County of Riverside, we have prepared the attached rate schedules which pass these adjustments through to the various rates. These new rates would become effective July 1, 2026. After these adjustments are applied, the new rate for your standard residential service will increase from $32.92 per month to $34.19 per month.

As we have stated in prior years, we greatly appreciate our long-standing relationship with the City of San Jacinto, as well as the opportunity that we have had to be of service to your residents and businesses. It truly has been and continues to be an honor and a privilege to be of service to the City. Please do not hesitate to call us if you should have any questions or comments. We look forward to any further assistance that we may be able to provide.

Respectfully,

J. Alex Braicovich
Sr. Regional V.P.
CR&R Incorporated

Cc: Chrystal Denning, Bill Higginbotham CR&R
Travis Randel, City of San Jacinto

RIVERSIDE COUNTY
DEPARTMENT OF
WASTE RESOURCES

Andy Cortez, General Manager-Chief Engineer

February 19, 2026

Alex Braicovich
CR&R
P.O. Box 1208
Perris, CA 92570

RE: Disposal Fee Increase – FY 2026/27

The Riverside County Department of Waste Resources (Department) is responsible for assuring that there is, and will be in the future, sufficient and accessible landfill space to properly serve the population of the County in its disposal needs. To fulfill this mandate, the Department continually maintains and expands County landfill sites, and encourages, supports, and develops recycling programs that minimize the dependence on landfill disposal facilities.

Due to sustained increases in labor expenses, capital improvement costs, regulatory compliance costs, and closed site maintenance, an increase in disposal rates is essential to allow for continued and improved services. This letter serves as a notice that subject to approval by the Riverside County Board of Supervisors, landfill disposal rates will increase in FY 26/27 by the Consumer Price Index (CPI), which is 2.94% for calendar year 2025. The FY 26/27 rate for the Perris Valley Transfer Station will be $45.06 per ton and $41.28 per ton for the Area 8 Transfer Station(s). The new rates will become effective for tonnage deliveries starting on July 1, 2026.

Thank you for your past cooperation and support.

Sincerely,

Andy Cortez Digitally signed by Andy Cortez Date: 2026.02.18 14:20:30 -08'00'

Andy Cortez
General Manager-Chief Engineer

STATE OF CALIFORNIA) **RESOLUTION NO. 4129**
COUNTY OF RIVERSIDE) ss
CITY OF SAN JACINTO)

SIXTH AMENDMENT TO THE FRANCHISE AGREEMENT BETWEEN THE CITY OF SAN JACINTO AND CR&R INCORPORATED

WHEREAS, the City of San Jacinto recognizes that the proper collection and disposal of all solid waste created, produced or brought into the City is a significant health and safety issue;

WHEREAS, CITY and CONTRACTOR entered into a certain Agreement for the Collection and Handling of Solid Waste dated March 17, 2005 (the "2005 Franchise Agreement");

WHEREAS, CITY and CONTRACTOR entered into a certain First Amendment to the Franchise Agreement between The City of San Jacinto and CR&R Incorporated dated April 15, 2010 (the "First Amendment");

WHEREAS, CITY and CONTRACTOR entered into a certain Second Amendment to the Franchise Agreement between The City of San Jacinto and CR&R Incorporated dated December 17, 2012 (the "Second Amendment");

WHEREAS, CITY and CONTRACTOR entered into a certain Third Amendment to the Franchise Agreement between The City of San Jacinto and CR&R Incorporated dated January 3, 2017 (the "Third Amendment");

WHEREAS, CITY and CONTRACTOR entered into a certain Fourth Amendment to the Franchise Agreement between The City of San Jacinto and CR&R Incorporated dated June 16, 2020 (the "Fourth Amendment");

WHEREAS, CITY and CONTRACTOR entered into a certain Fifth Amendment to the Franchise Agreement between The City of San Jacinto and CR&R Incorporated dated June 30, 2022 (the "Fifth Amendment");

WHEREAS, Section 15F of the 2005 Franchise Agreement provides that any amendment thereto must be in a written form duly executed by the parties in order to be valid; and

WHEREAS, CITY and CONTRACTOR desire to amend their 2005 Franchise Agreement, their 2010 First Amendment, their 2012 Second Amendment, their 2017 Third Amendment, their 2020 Fourth Amendment, and their 2022 Fifth Amendment in order to provide for certain service enhancements and address certain changes in the Bureau of Labor Statistics indexes.

NOW, THEREFORE, in consideration of the foregoing, and other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the parties agree as follows:

1. **Section 8.d. "Annual Adjustment of Rates" of the 2005 Exclusive Franchise Agreement is hereby deleted in its entirety and replaced as follows:**

Franchise Agreement Inflationary Indices Rate Adjustments
Solid Waste Charges will be adjusted annually for inflation and to pass through costs in wholesale service, commencing July 1, 2026, and any time thereafter through and including July 1, 2030, as follows:

1. Service Component Formula:
   a. Residential: (Solid Waste Charge x 85.5%) x 100% of the percentage increase or decrease in the Bureau of Labor Statistics Consumer Price Index for all Urban Consumers within the Riverside-San Bernardino-Ontario, CA. areas during the prior calendar year (Series ID CUURS49CSA0) ("CPI")
   b. Commercial: (Solid Waste Charge x 79%) x CPI

2. Landfill Tipping Fee Formula:
   a. Residential: (Solid Waste Charge x 14.5%) x 100% of the percentage increase or decrease in the rates adopted by the County of Riverside ("County Rate Increase")
   b. Commercial: (Solid Waste Charge x 21%) x County Rate Increase

3. Commercial Organic Rates CPI Formula:
   a. Service: (Service Component Rate x CPI)
   b. Digester: (Digester Component Rate x County Rate Increase)

All other rates in the approved rate schedule of Solid Waste Charges including, but not limited to, various fees and roll-off haul rates, shall also be adjusted by 100% of the change in the CPI. The comparison shall be made for each calendar year (Annual Change) during the term thereof and shall be effective each July 1st. The pass-through adjustments are referred to collectively as the "Pass-Through Adjustments."

The Pass-Through Adjustments shall be assumed for the five-year period identified above so that annual increases effective July 1, 2027 through July 1, 2031 shall be automatic upon the 30-day notice required under Government Code Section 53756(d). The Solid Waste Charges shall not increase by more than 15% in any fiscal year as a result of the Pass-Through Adjustments.

WHEREAS, the City has duly noticed the property owners and rate payers prior to 45 days of the public hearing in accordance with the noticing requirements of Proposition 218 and California Constitution article 13D. Such notice was

delivered by regular U.S. mail to the property owners based on the latest available county tax roll and each rate payer based each known postal address. The City understands that not all property owners are users of the service; and

NOW, THEREFORE, BE IT RESOLVED determined and ordered by the City Council of the City of San Jacinto, California, as follows**:**

1) Contractor is not in default of exclusive contract for collection and disposal of solid waste and recycling services.
2) Increase all solid waste and recycling rates as determined by the Solid Waste Recycling Rate Schedule for Billings after July 1, 2026, which is hereby attached and a part of this resolution. Beginning on July 1, 2026, and each July 1 thereafter, the fees may be increased by the City in accordance with this agreement

3) Establishment of solid waste rates in this resolution supersedes any and all prior resolutions.

Julia Espinoza, City Clerk
City of San Jacinto

June 2, 2026

TO:	City Council
REQUESTED BY:	Stuart McKibbin
APPROVED BY:	Robert A. Johnson, City Manager
SUBJECT:	FY 26/27 Capital Improvement Program Engineering Update

RECOMMENDATION:

Staff recommends that the City Council receive and file an update of the City's Capital Improvement Program for FY 26/27.

DISCUSSION:

The City's Capital Improvement Program (CIP) is an important mechanism for implementing the goals, policies, and recommendations of the General Plan. The City has a 5-year CIP that covers Fiscal Year (FY) 2026-27 through FY 2030-31.

This presentation serves to update the Council on recently constructed CIP projects, planned projects for FY 26-27, and to highlight certain projects for later Fiscal Years.

OVERVIEW:

The purpose of the Capital Improvement Program (CIP) is to summarize the milestone activities for the five (5) year CIP, starting in FY 26/27 and ending FY 30/31. The CIP Program guide provides a general overview of the CIP by highlighting significant projects, CIP process improvements, accomplishments, and provides a preview of upcoming projects.

The City's CIP is a compilation of Engineering's improvement projects financed by City Council adopted funding source budgets. CIP projects provide improvements and/or expansions to the City's existing infrastructure, assets, and systems. Projects are designed to enhance the overall quality of life, improve the public right of way and facilities, improve safety, and meet the goals of the City's Circulation Element.

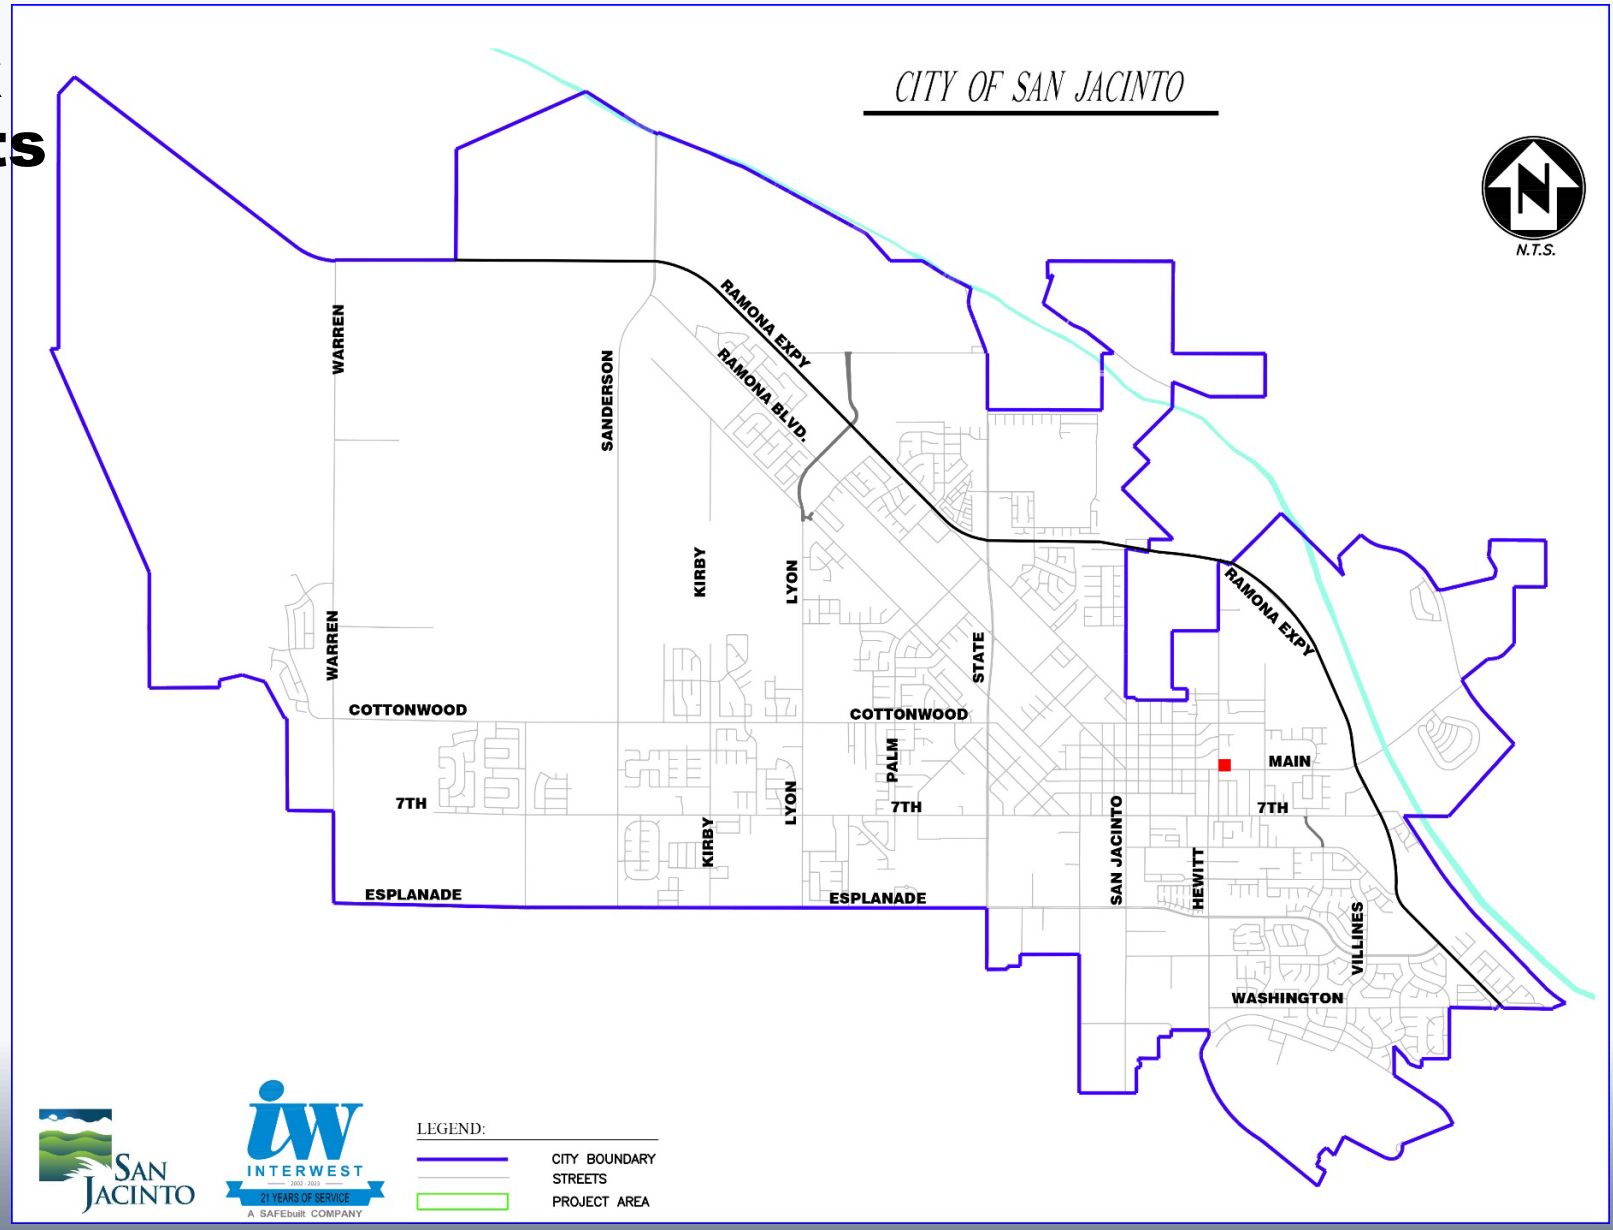
Capital Improvement Program

Fiscal Year 2026-2027



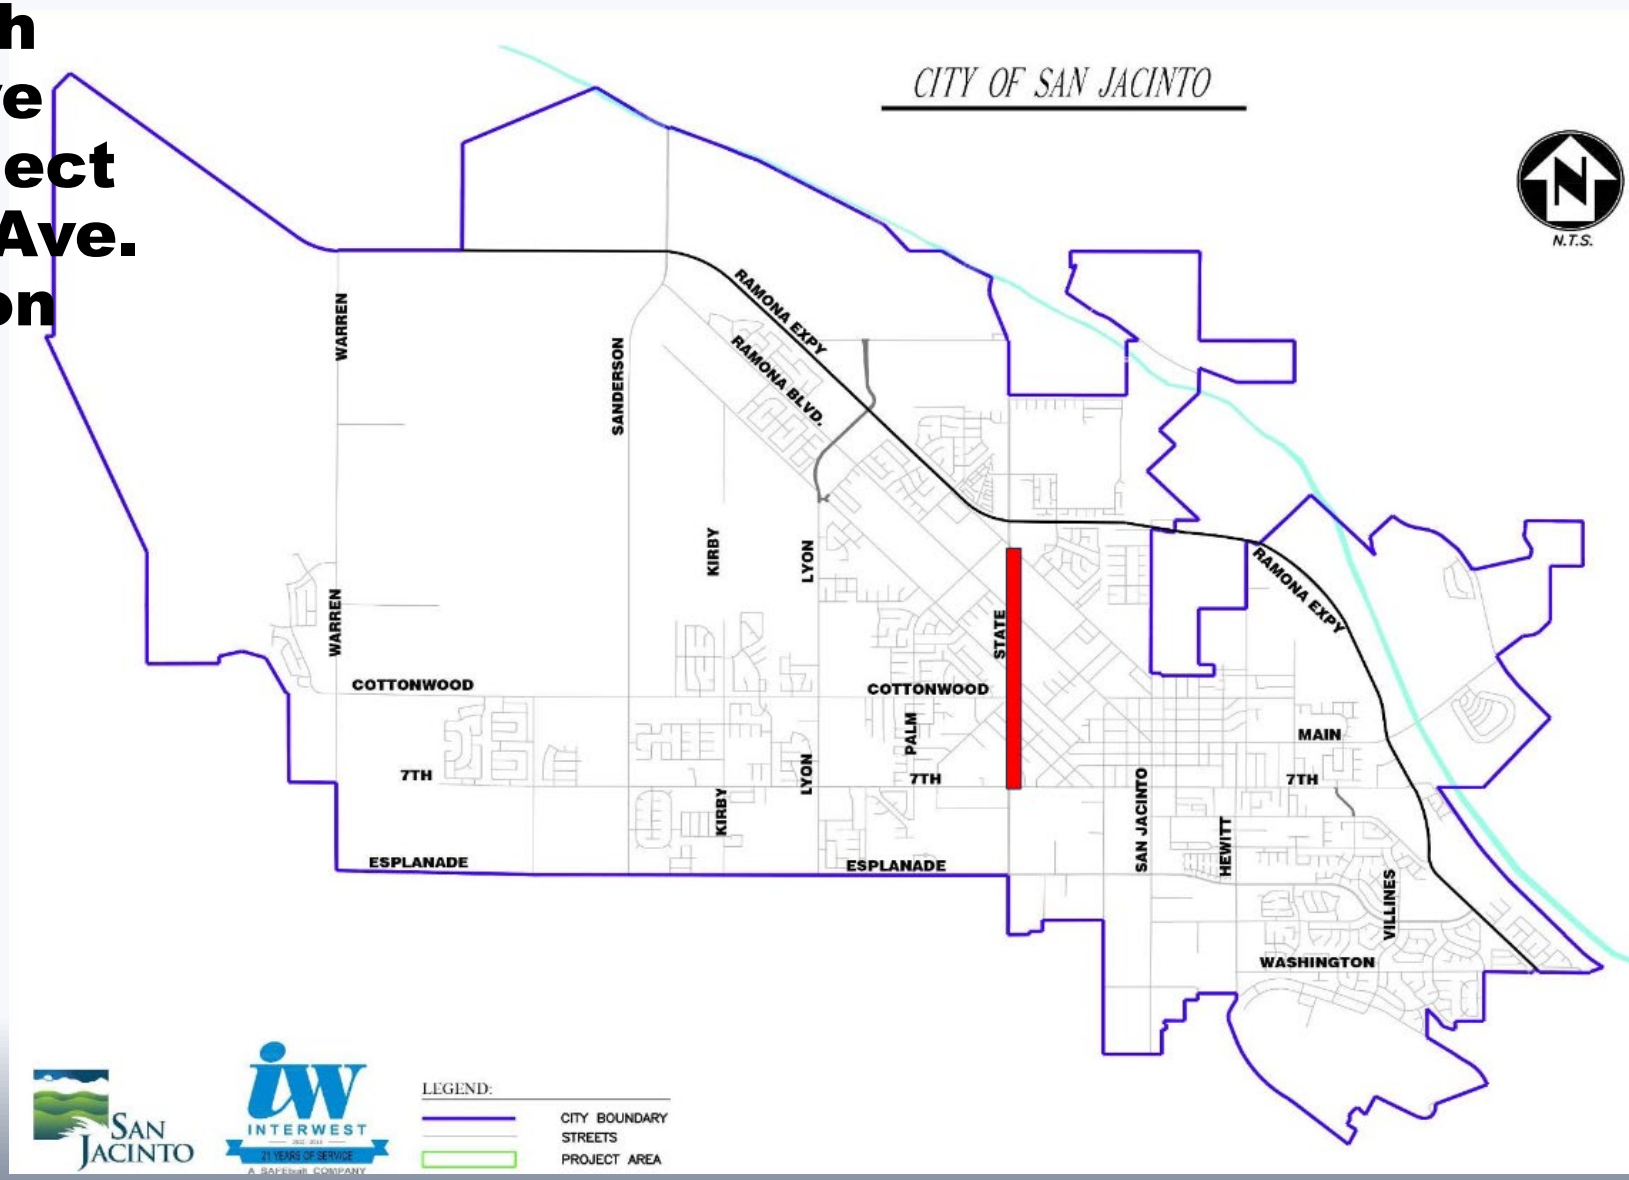
Capital Improvement Program Overview

Fiscal Year 2025/2026	Fiscal Year 2026/2027	Beyond Fiscal Year 2026/2027
$5,225,000	$29,500,000	$49,250,000

Completed Projects in FY 2025/2026

23-003 Mistletoe Park Restroom Improvements

- **Bid Amount:** $560,000
- **Actual cost:** $600,000
- **Completed:** December 2025
- **Funding Source: CDBG**

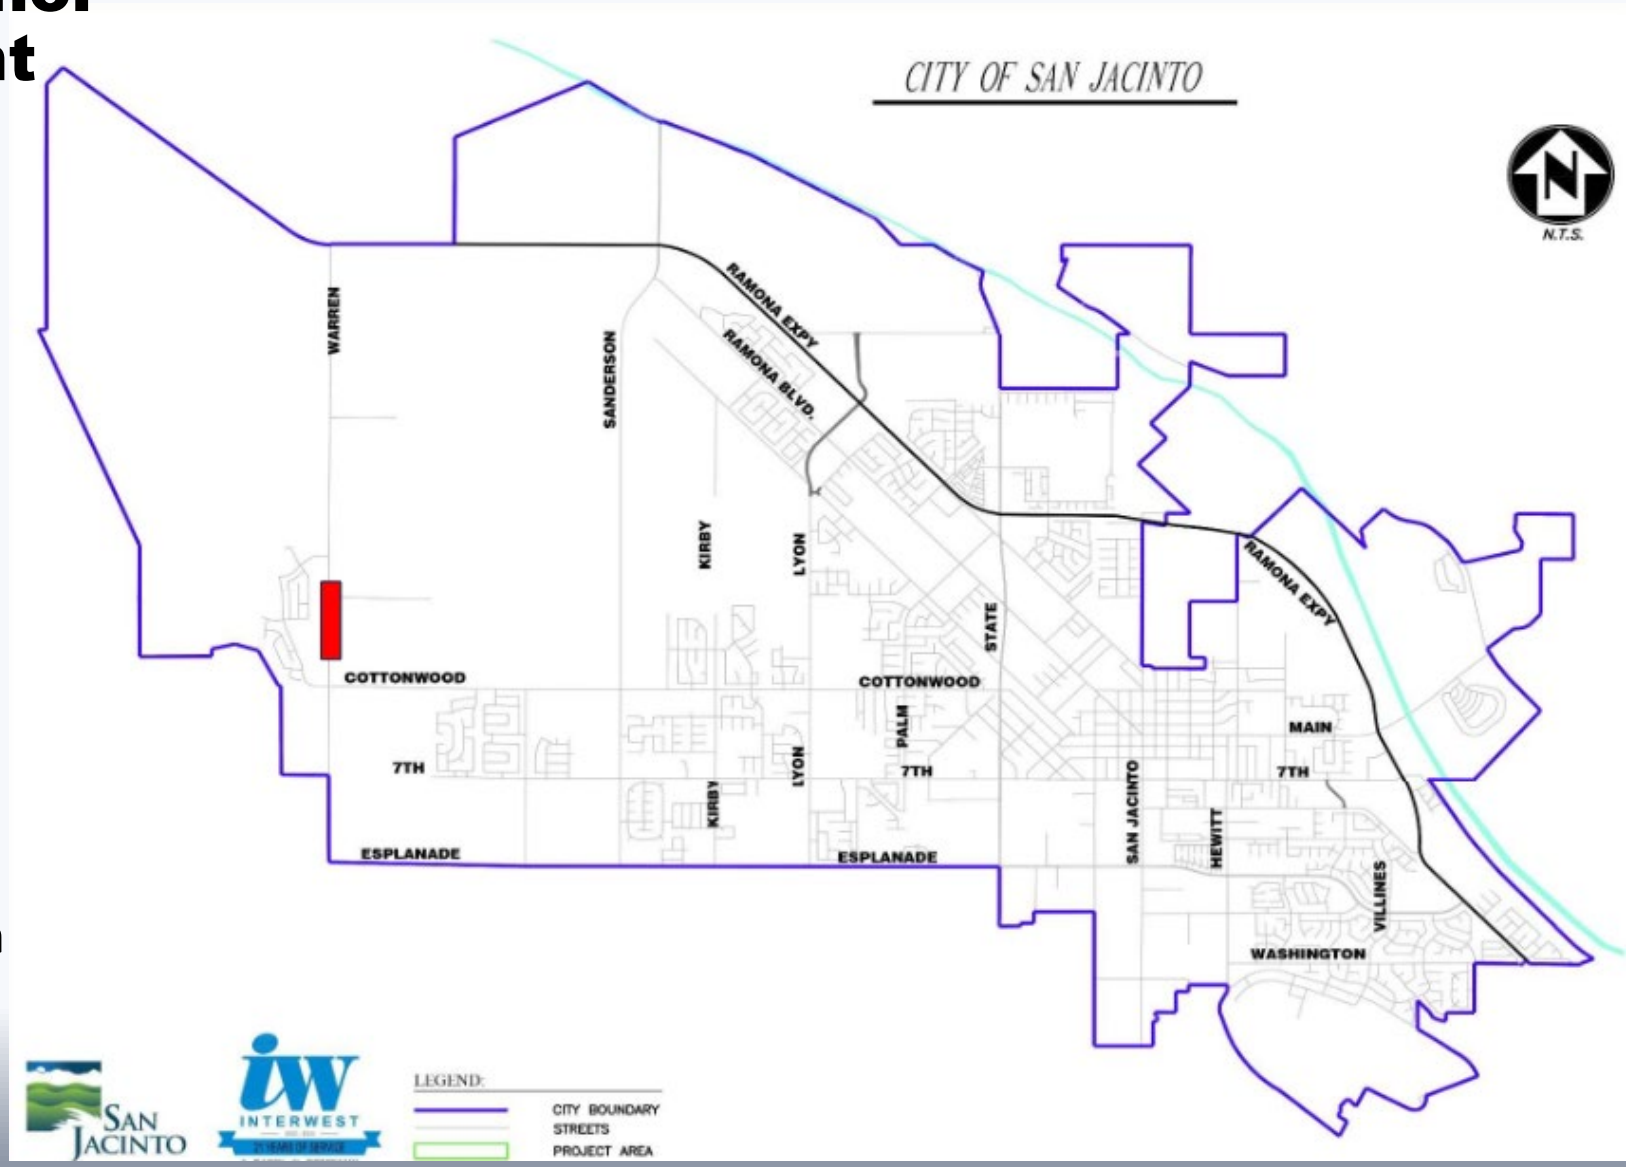


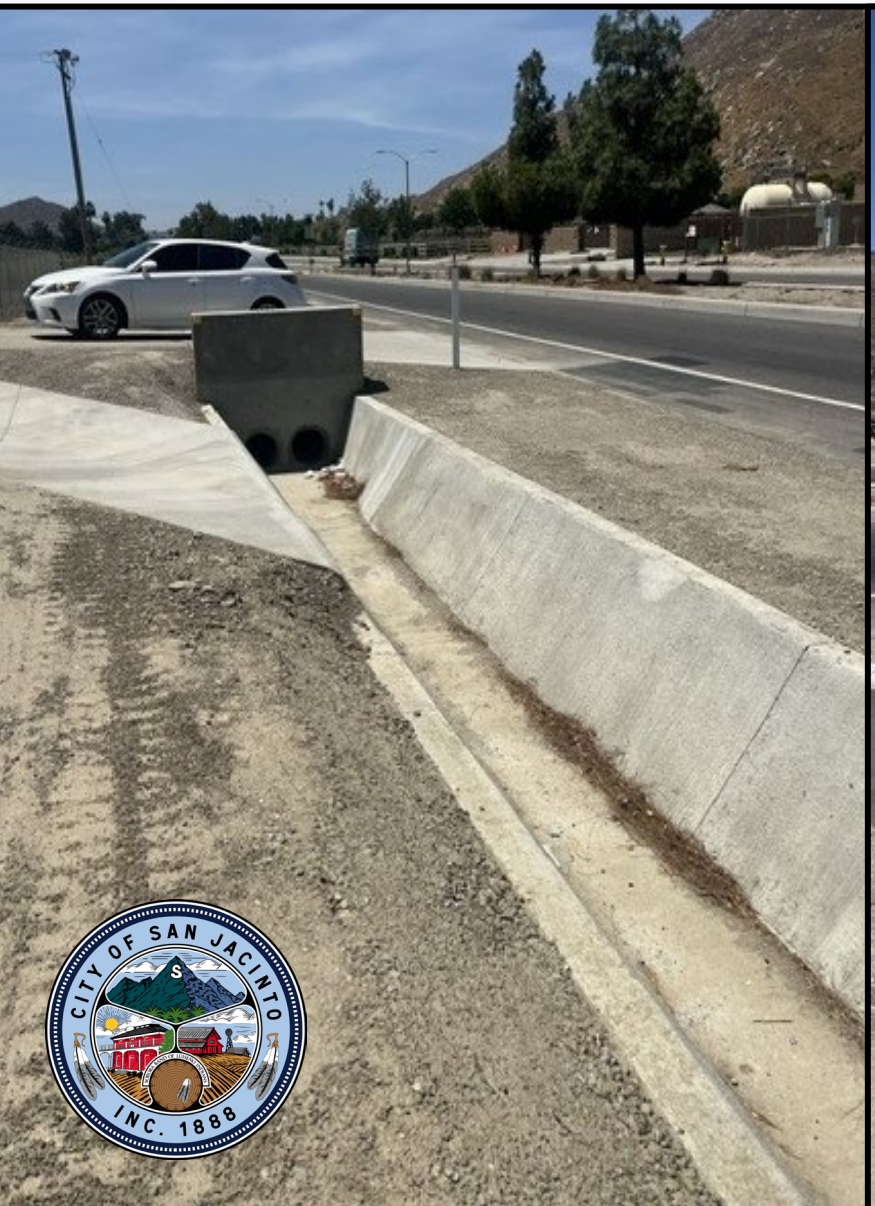
23-003 Mistletoe Park Restroom Improvements

24-001 State Street Improvements from 9th Street to Idyllwild Drive Street Improvement Project & Shaver St/San Jacinto Ave. Pavement Rehabilitation

- Bid Amount: $4,439,230
- Actual cost: $4,279,000
- Completed: September 2025
- Funding Source: Measure A
  ARPA
  DIF: Streets

24-001 State Street Improvements from 9th Street to Idyllwild Drive Street Improvement Project & Shaver St/San Jacinto Ave. Pavement Rehabilitation

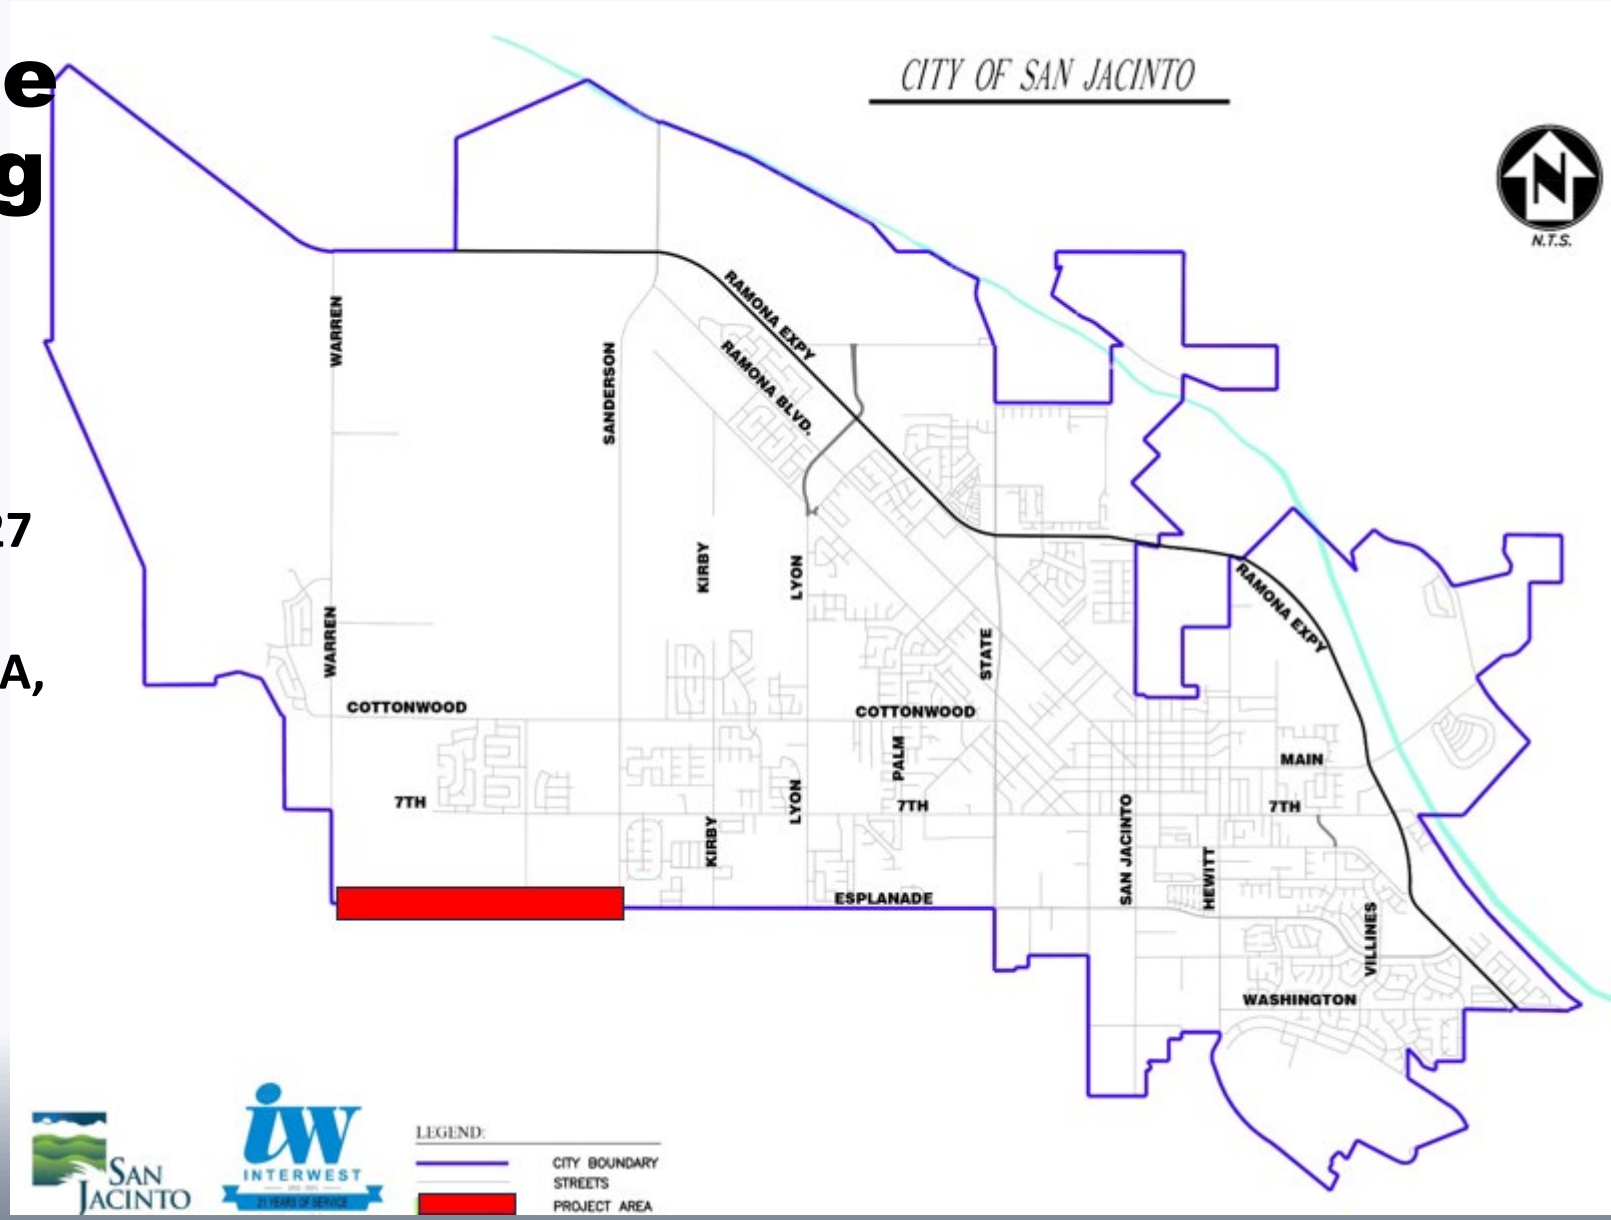




24-002 Warren Road Minor Drainage Improvement Project

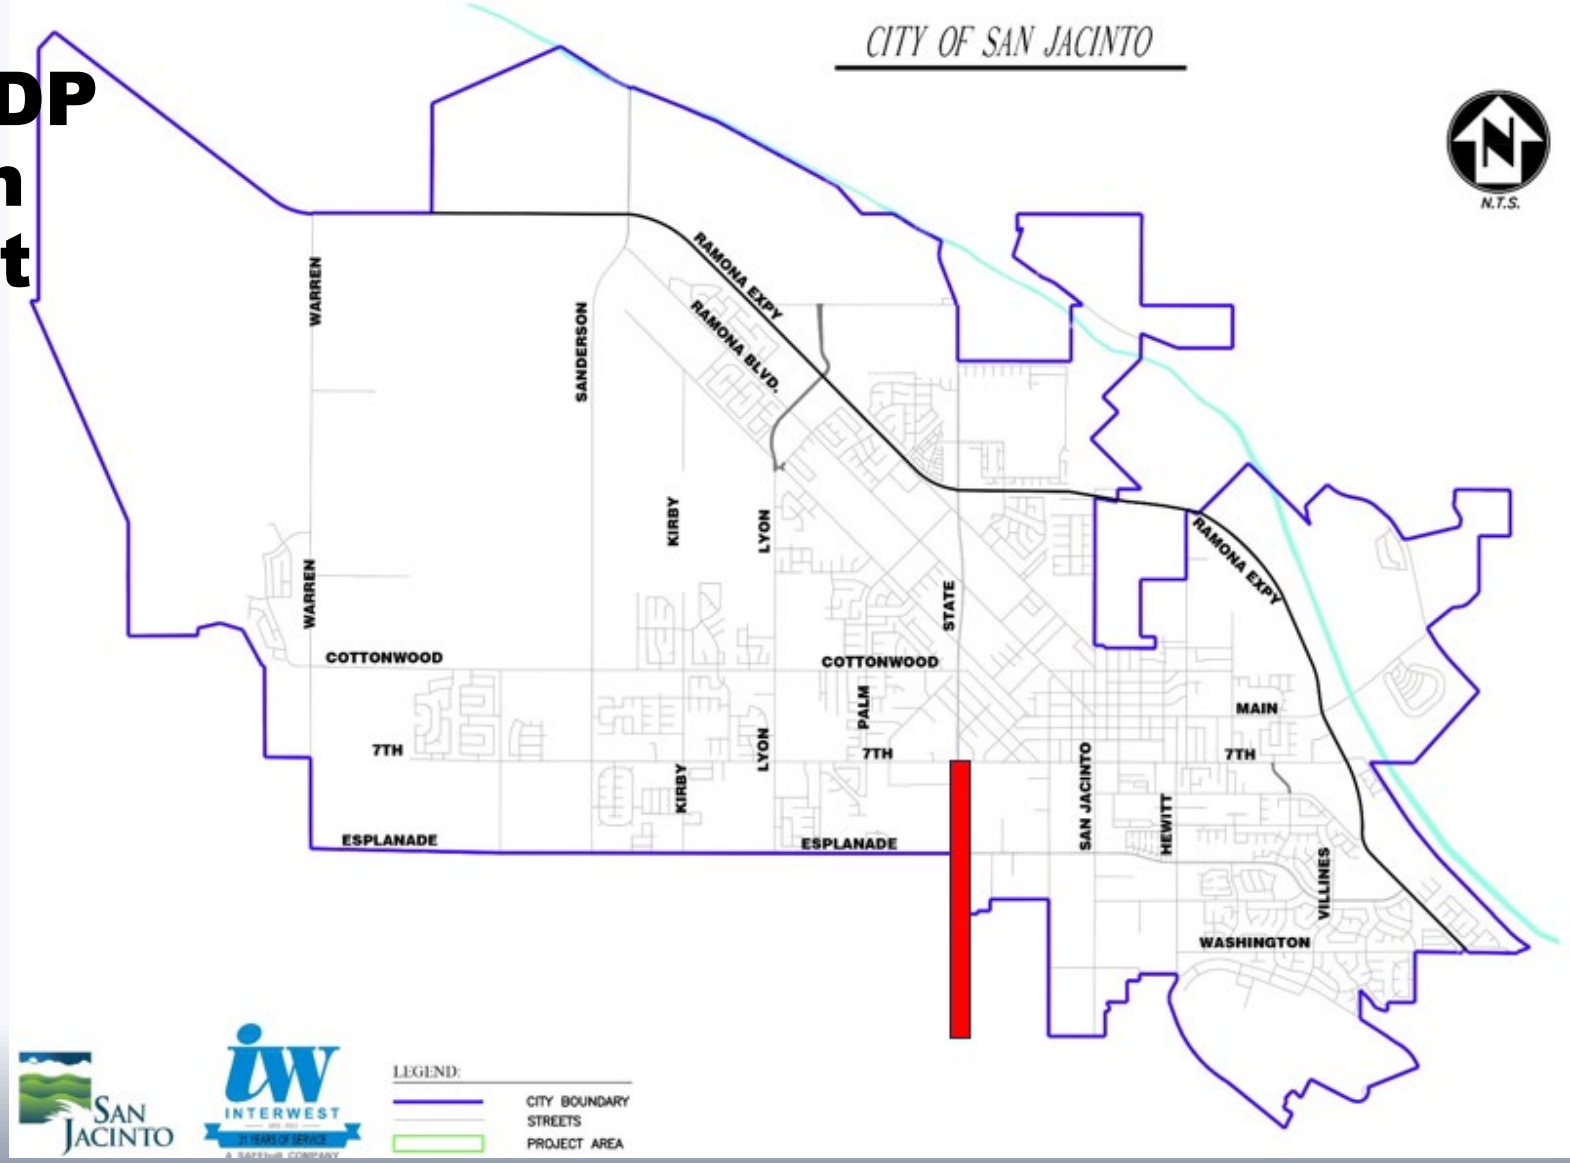
- **Bid Amount:** $331,750
- **Actual cost:** $342,190
- **Completed:** May 2025
- **Funding Source:** Special Subdivision Fund (KB Homes)
  RCFCD

24-002 Warren Road Minor Drainage Improvement Project



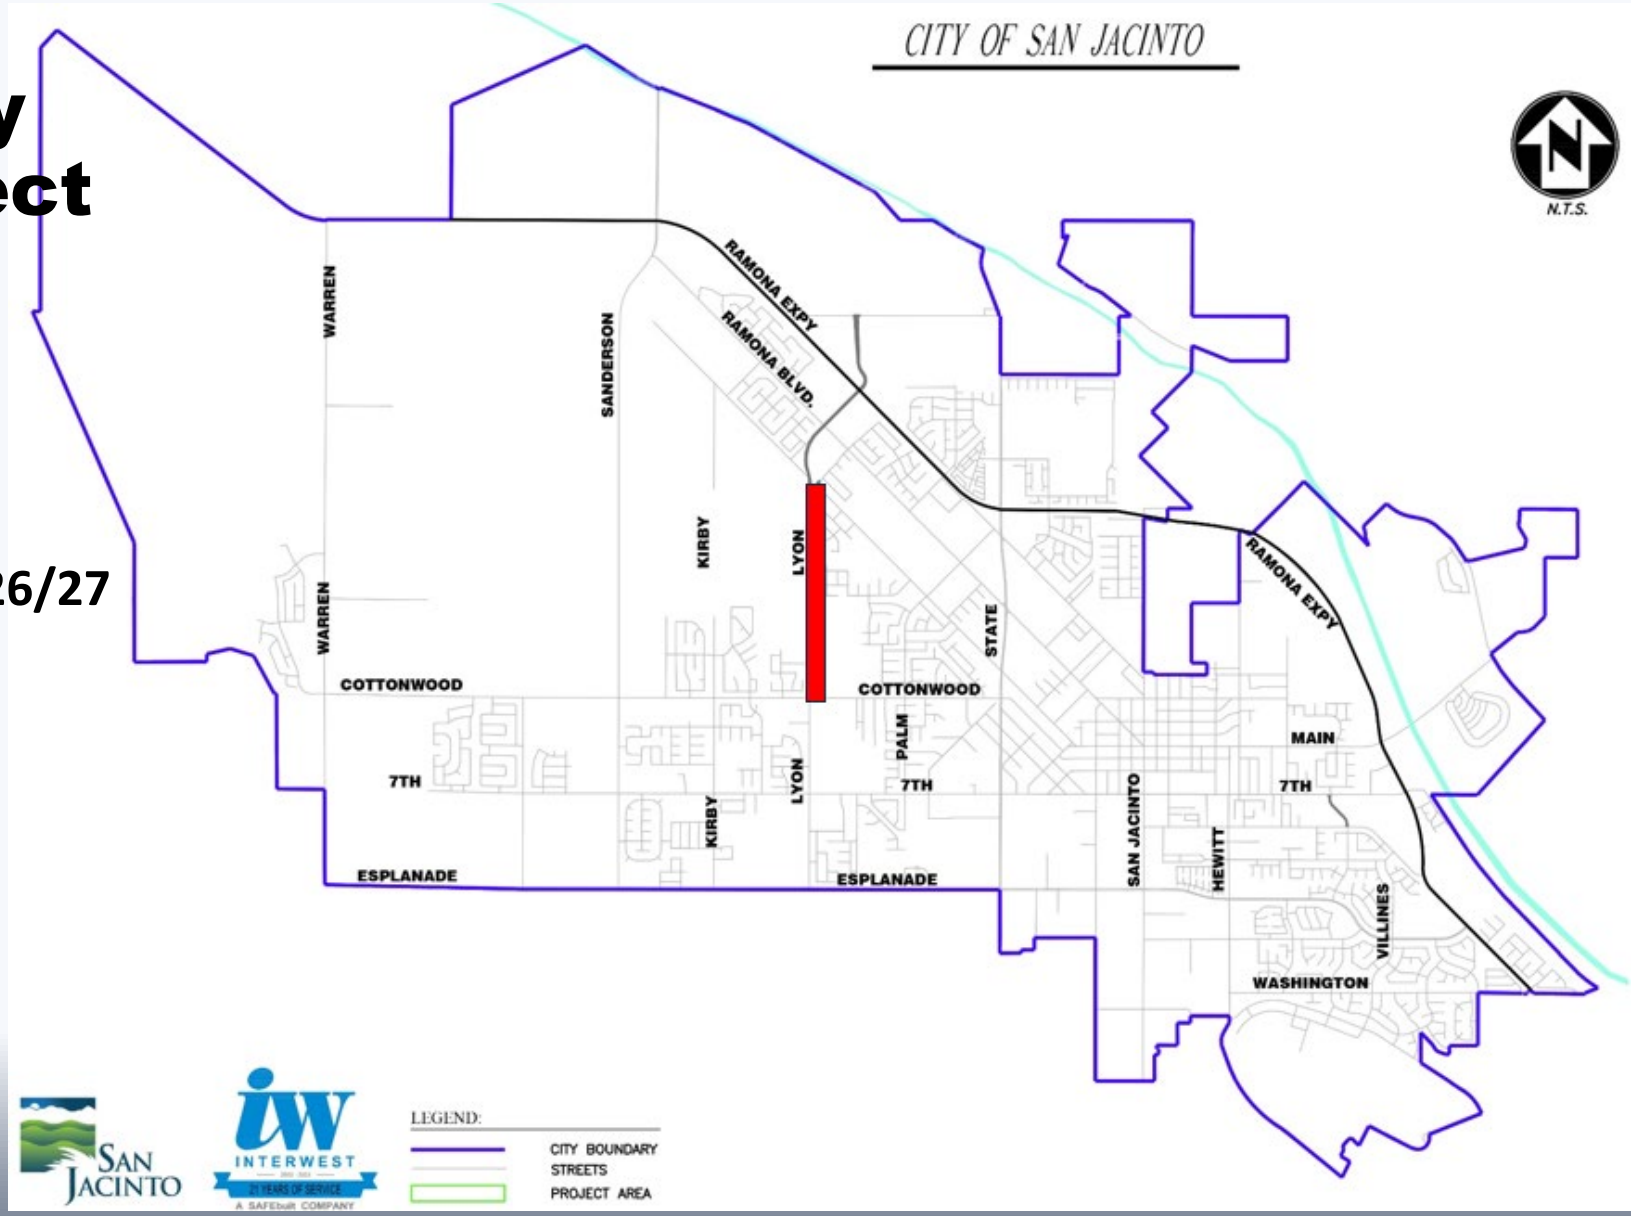
Construction Phase
Ongoing Projects

06-145 Esplanade Avenue Widening



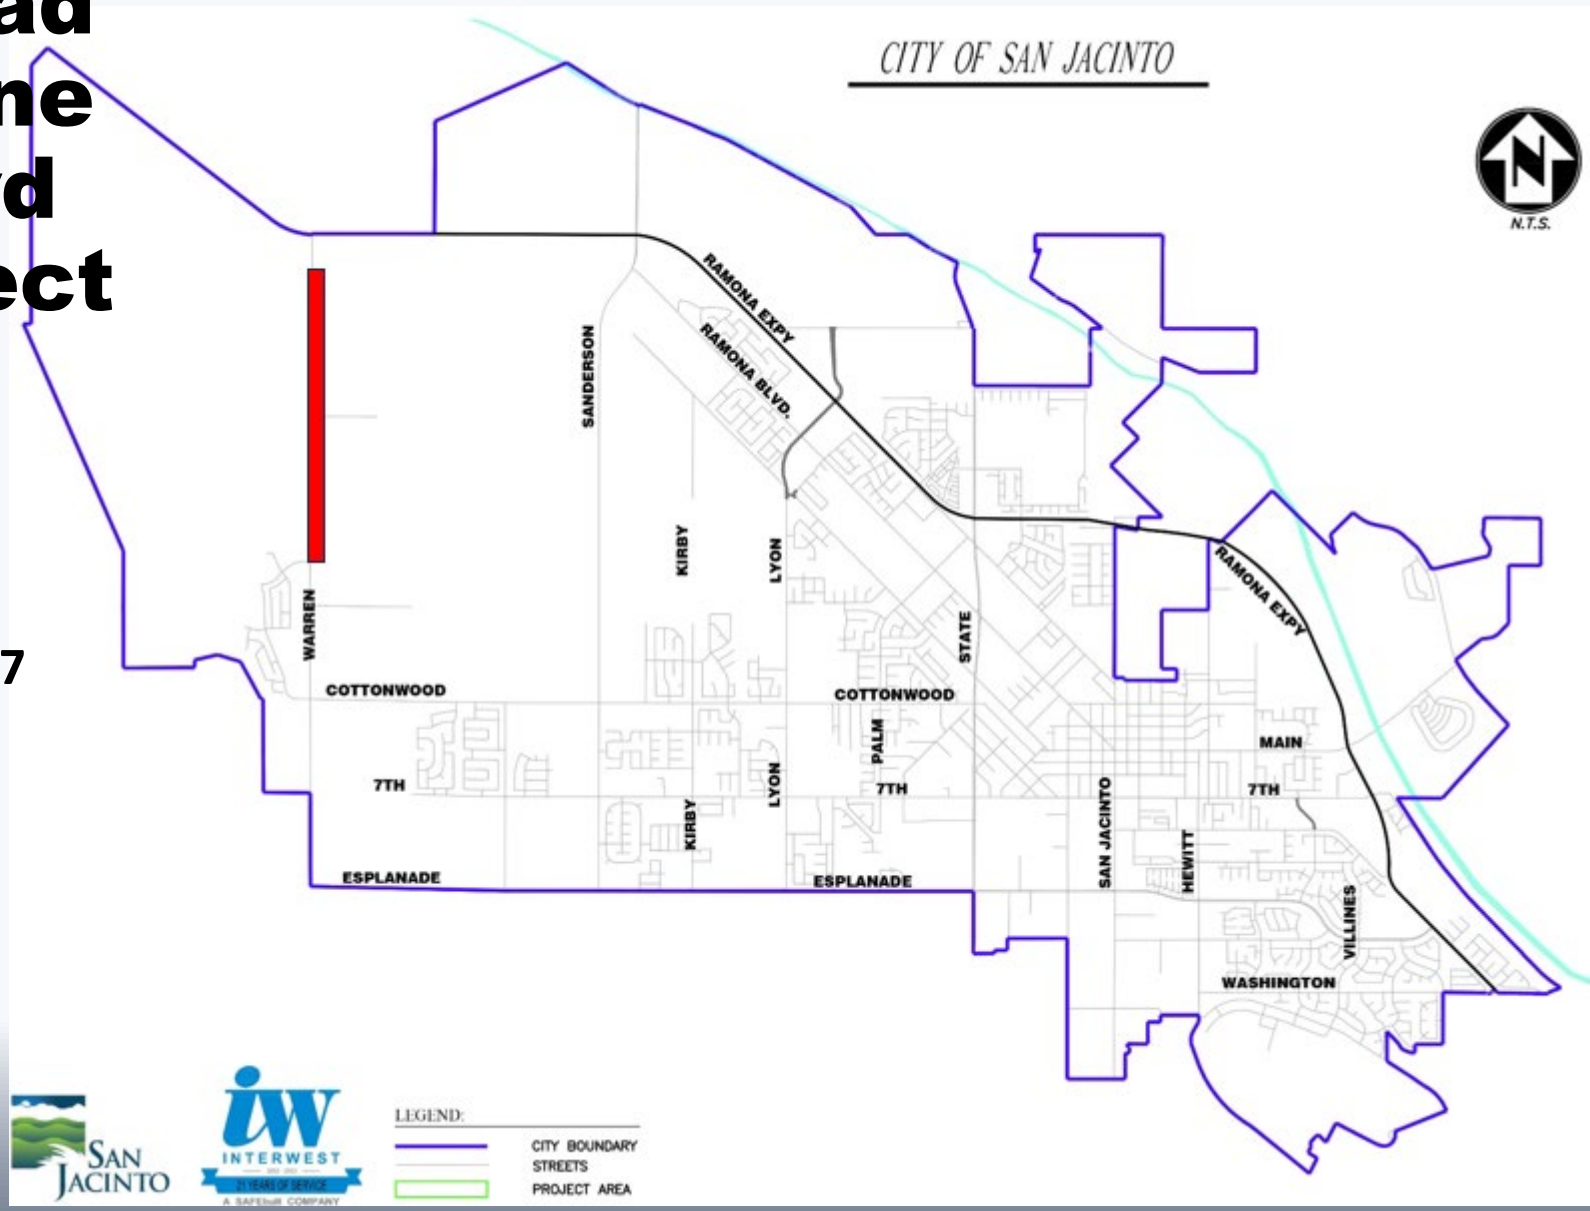
- Bid Amount: $8,083,000
- Estimated Total: $8,300,000
- Anticipated Completion: January 2027
- Funding Source: TUMF, Measure A, City of Hemet, MARA, EMWD

Upcoming Projects FY 2026/2027



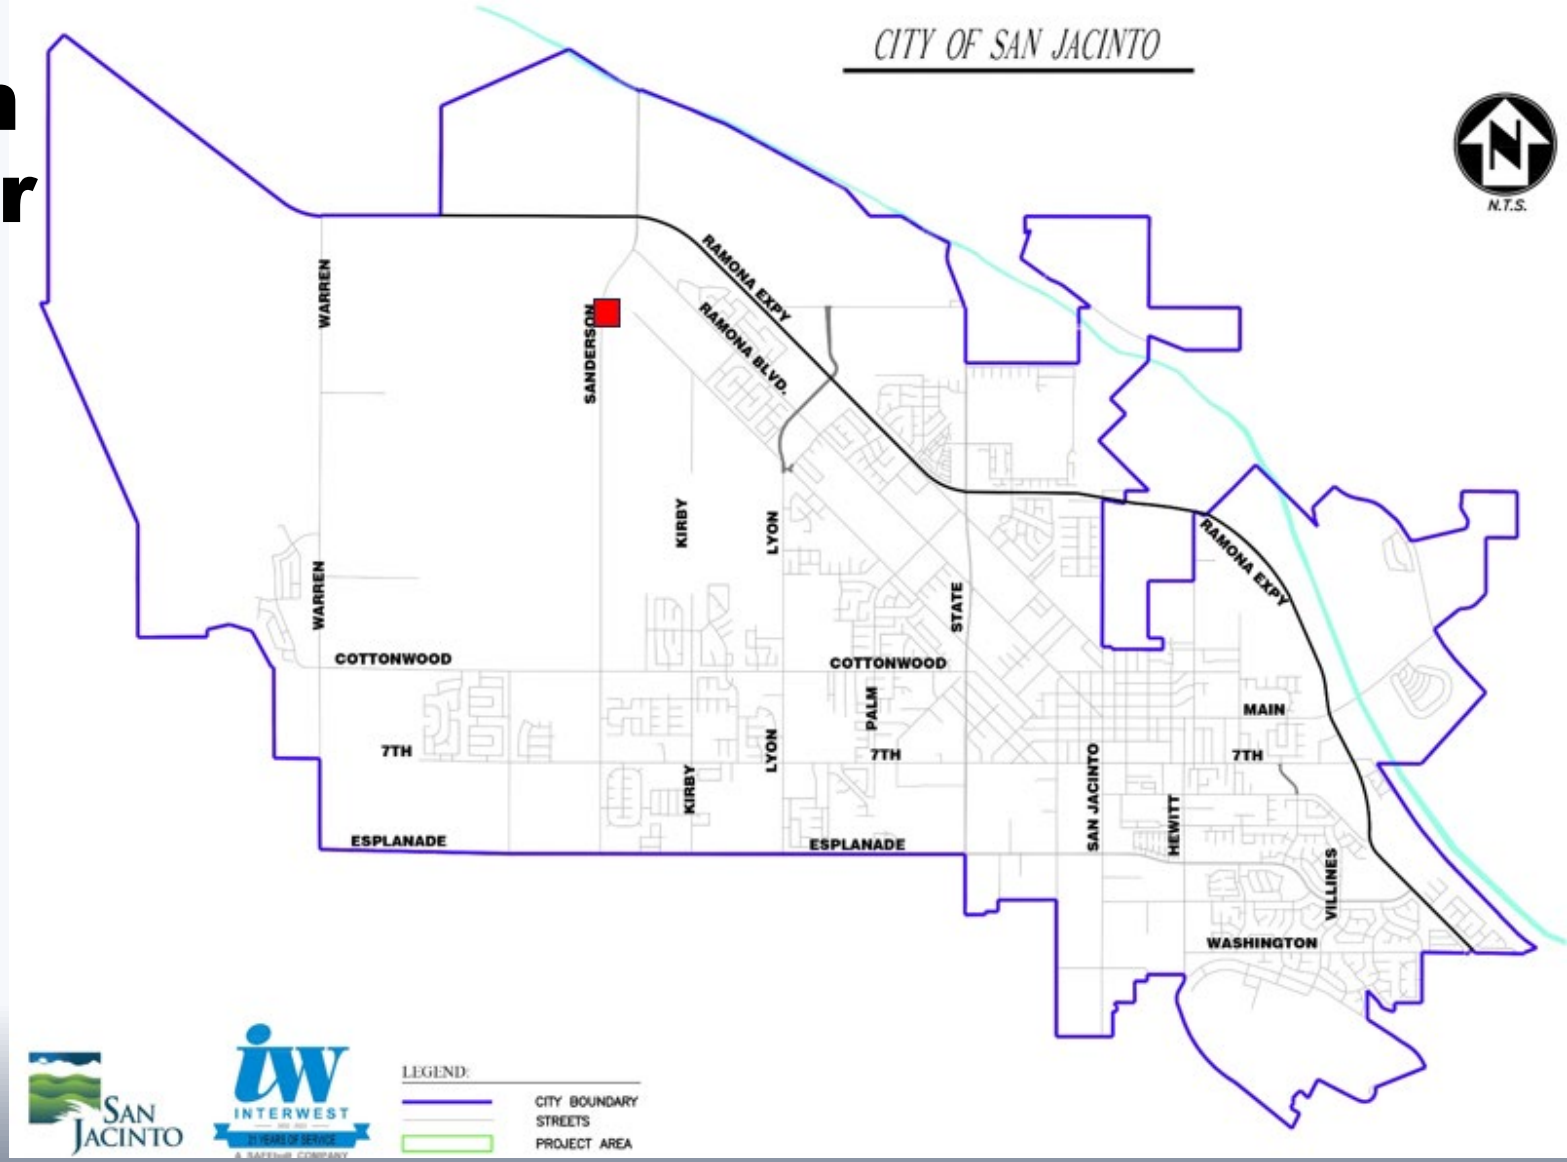
15-003 San Jacinto MDP Line E-2 Storm Drain Improvement Project

- Budgeted Amount: $4,858,871
- Estimated Cost: $8,900,00
- Anticipated Completion: Spring 2027
- Funding Source: Flood Control Fund, DIF: Streets



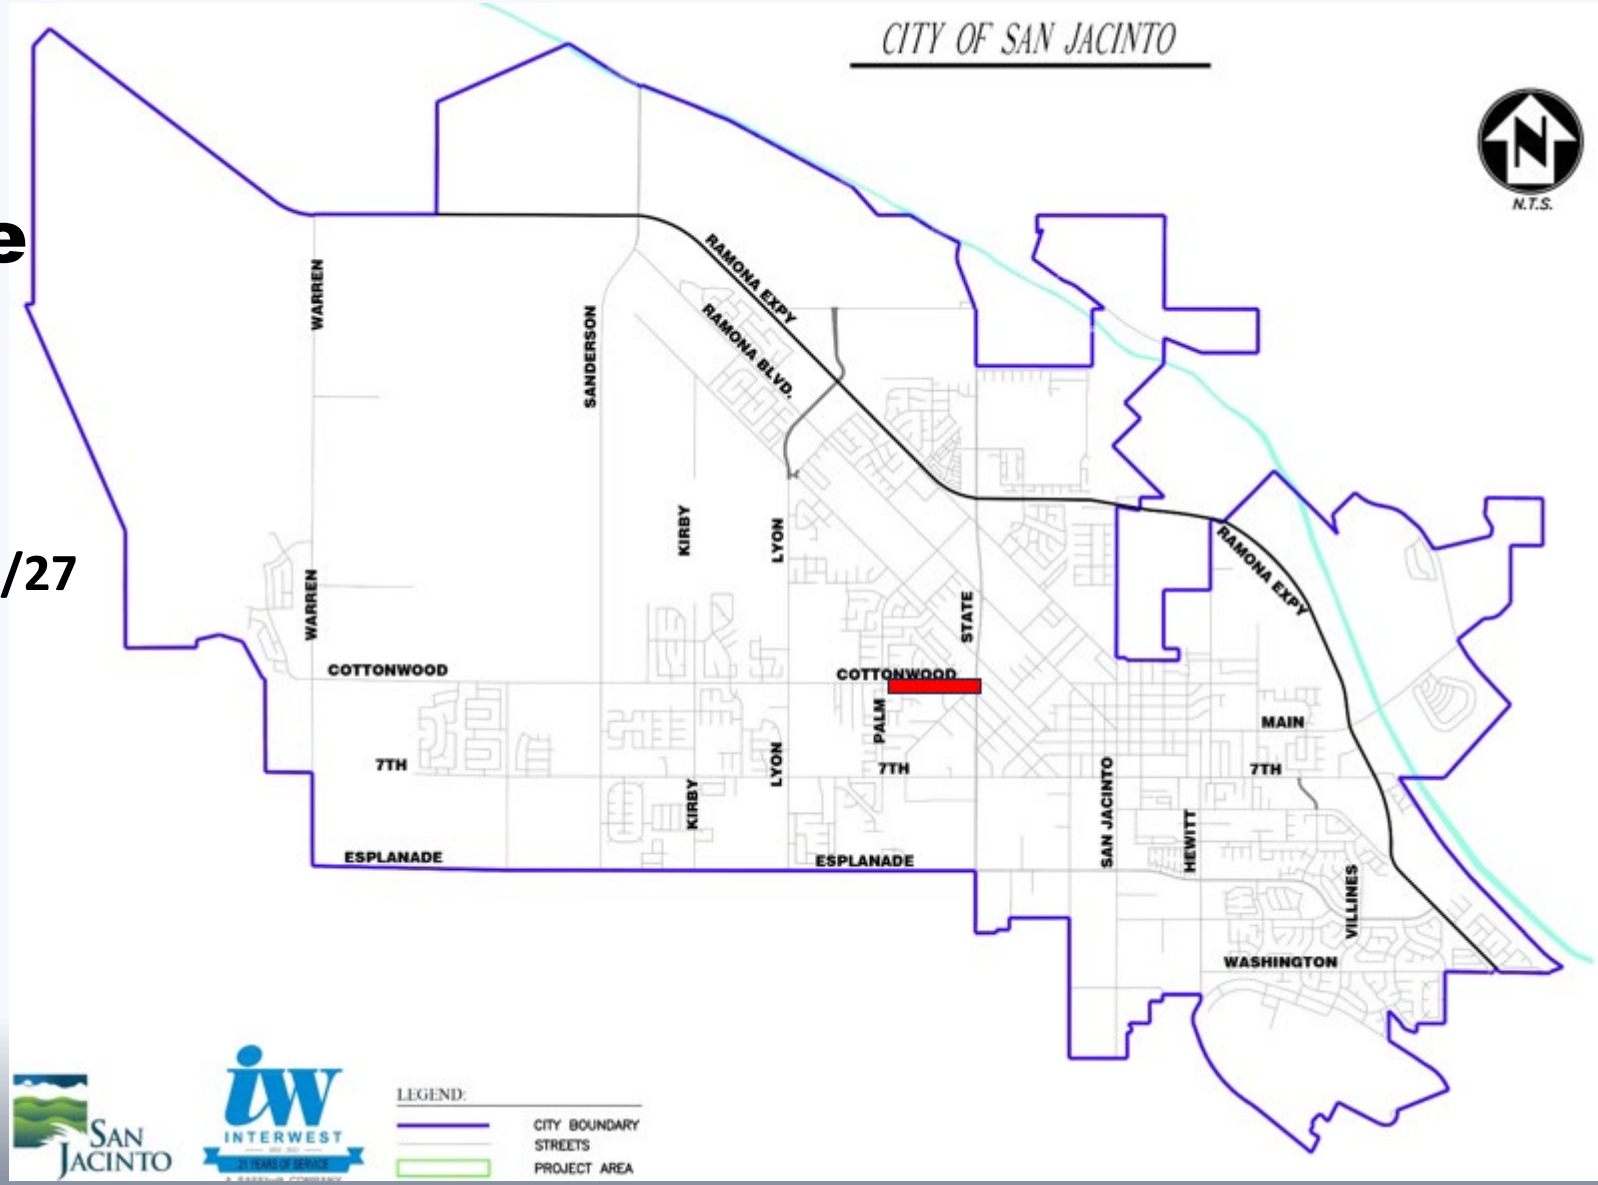
22-002 Lyon Ave Pedestrian Safety Improvement Project (Phase 2)

- Budgeted Amount: $856,000
- Estimated Cost: $820,000
- Anticipated Completion: Winter 2026/27
- Funding Source: SB821, Measure A



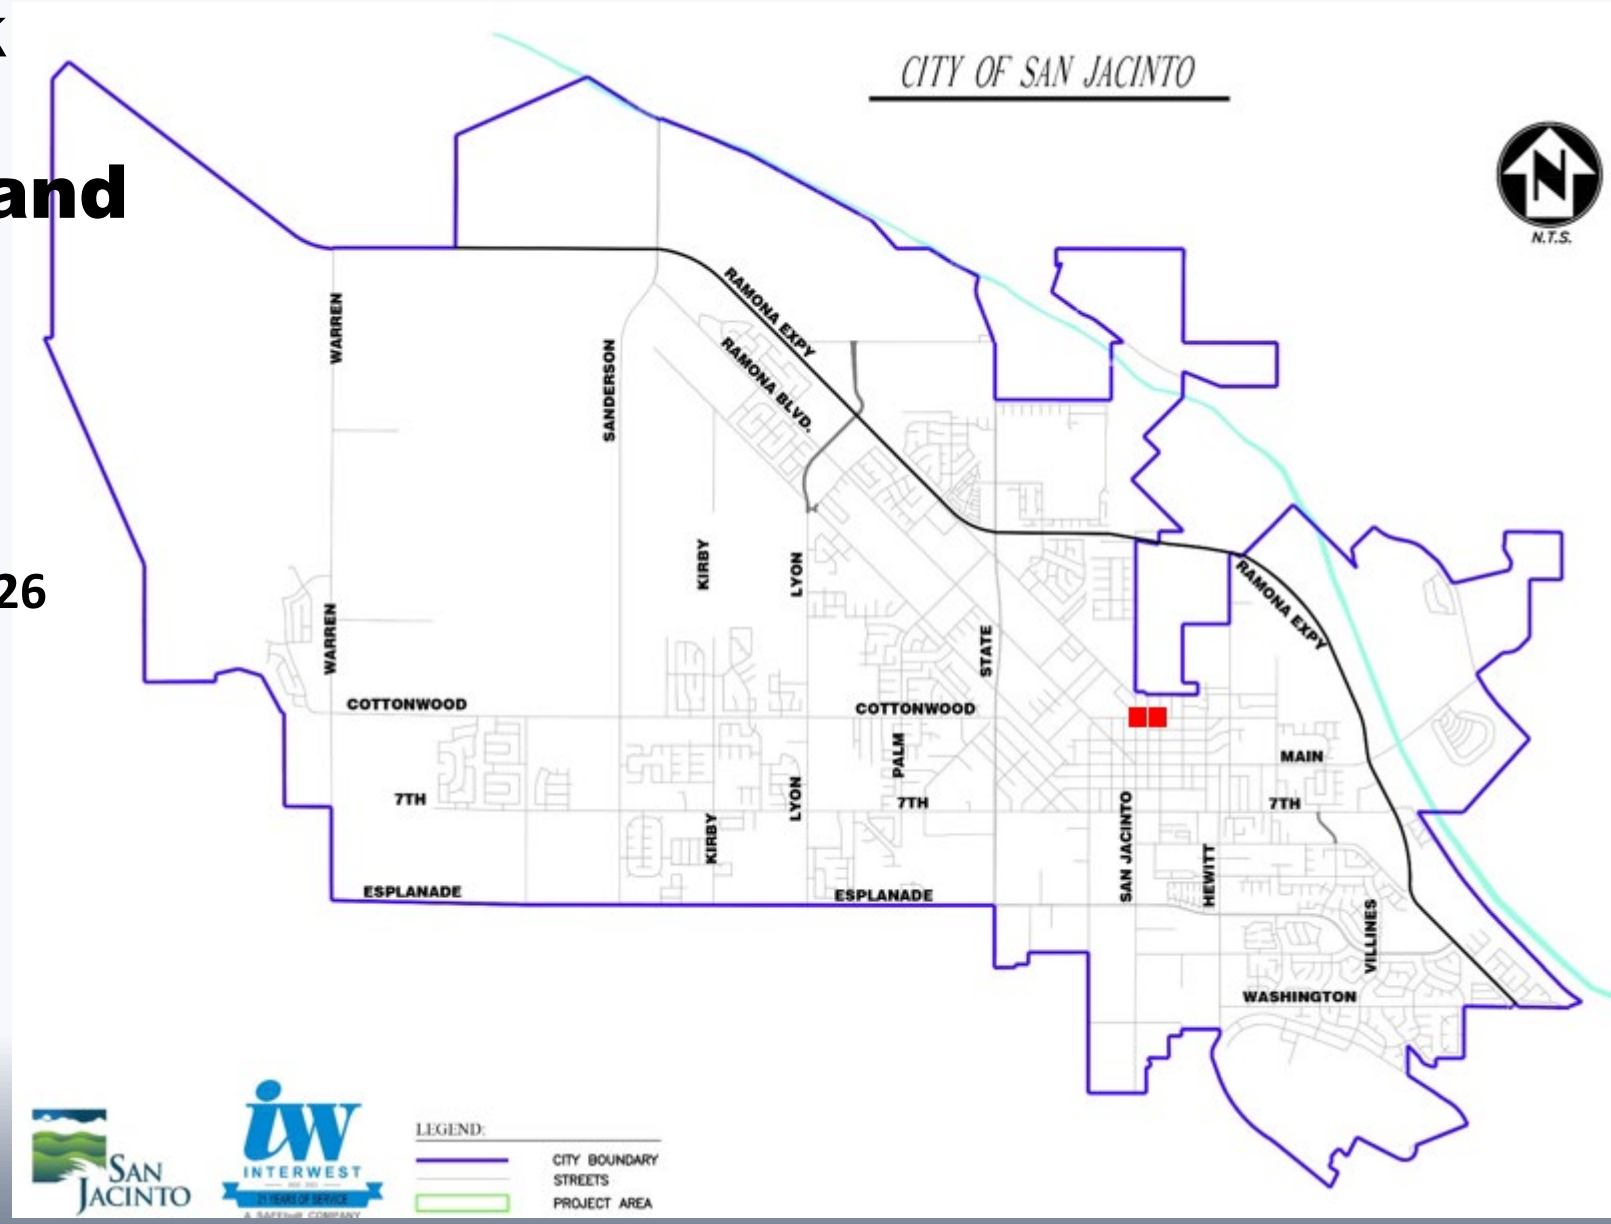
22-004 Warren Road Widening: Upperline Dr to Ramona Blvd Improvement Project (TUMF)

- Budgeted Amount: $4,692,980
- Estimated Cost: $10,400,000
- Anticipated Completion: Summer 2027
- Funding Source: TUMF, Measure A



22-012 Sanderson Ave Culvert Repair

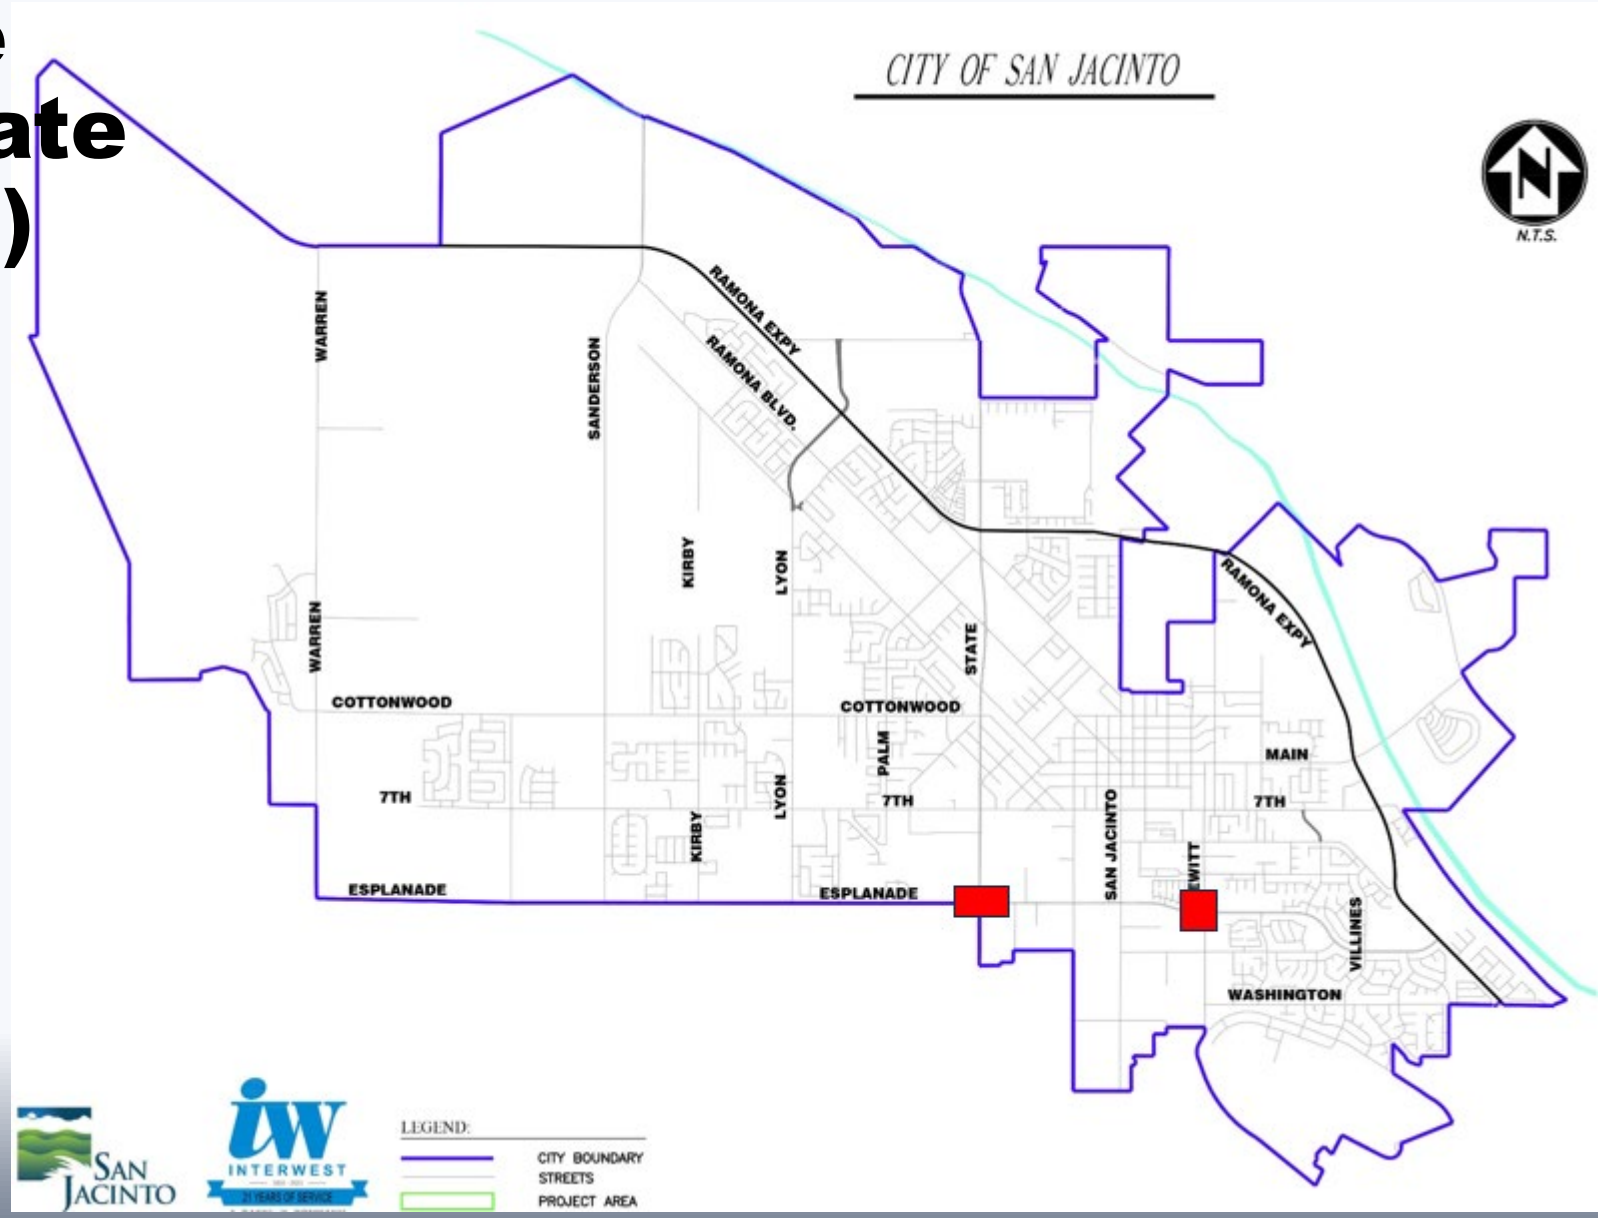
- Budgeted Amount: $175,000
- Estimated Cost: $254,000
- Anticipated Completion: Spring 2027
- Funding Source: RCFCD



25-003 Cottonwood Ave Rehab Between State St and Palm Ave

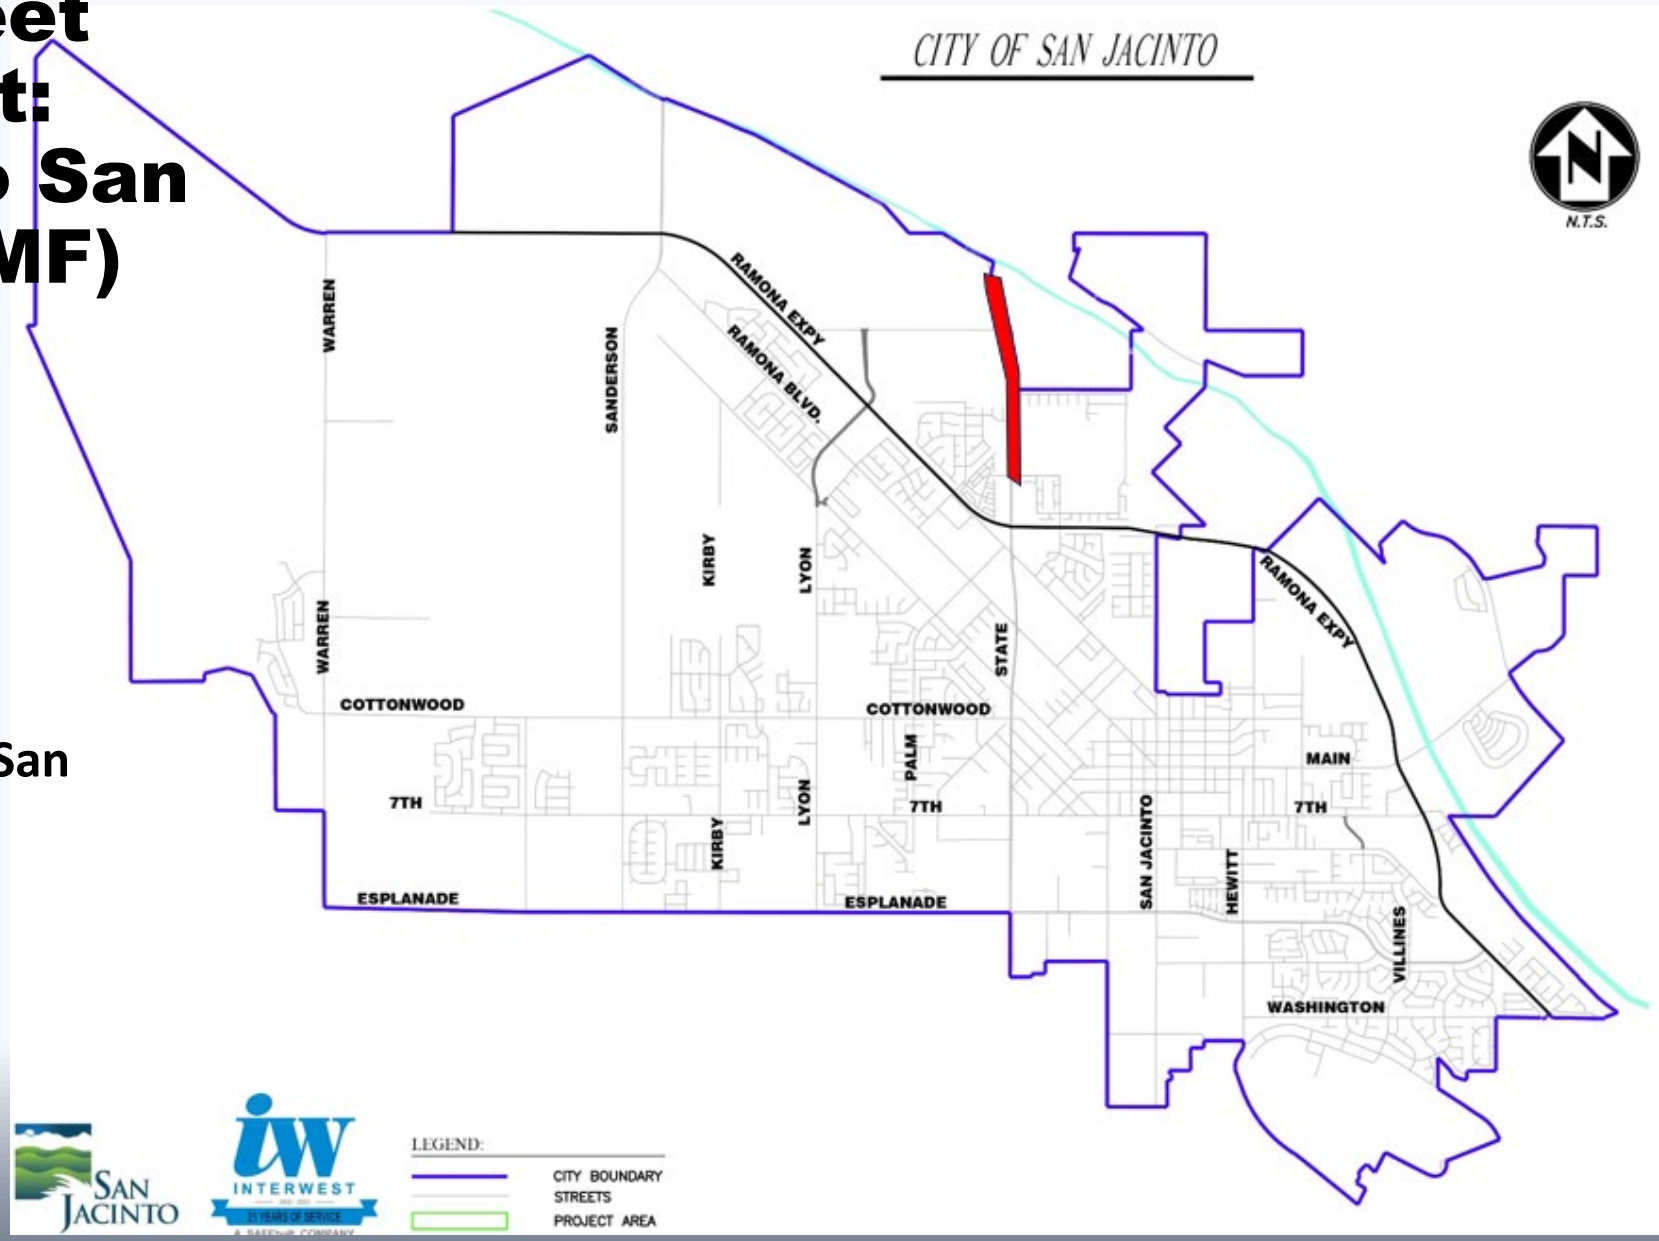
- Budgeted Amount: $765,000
- Estimated Cost: $766,000
- Anticipated Completion: Winter 2026/27
- Funding Source: Measure A

26-005 Crosswalk Improvements at 1st St/Estudillo Ave and 1st St/Pico Ave



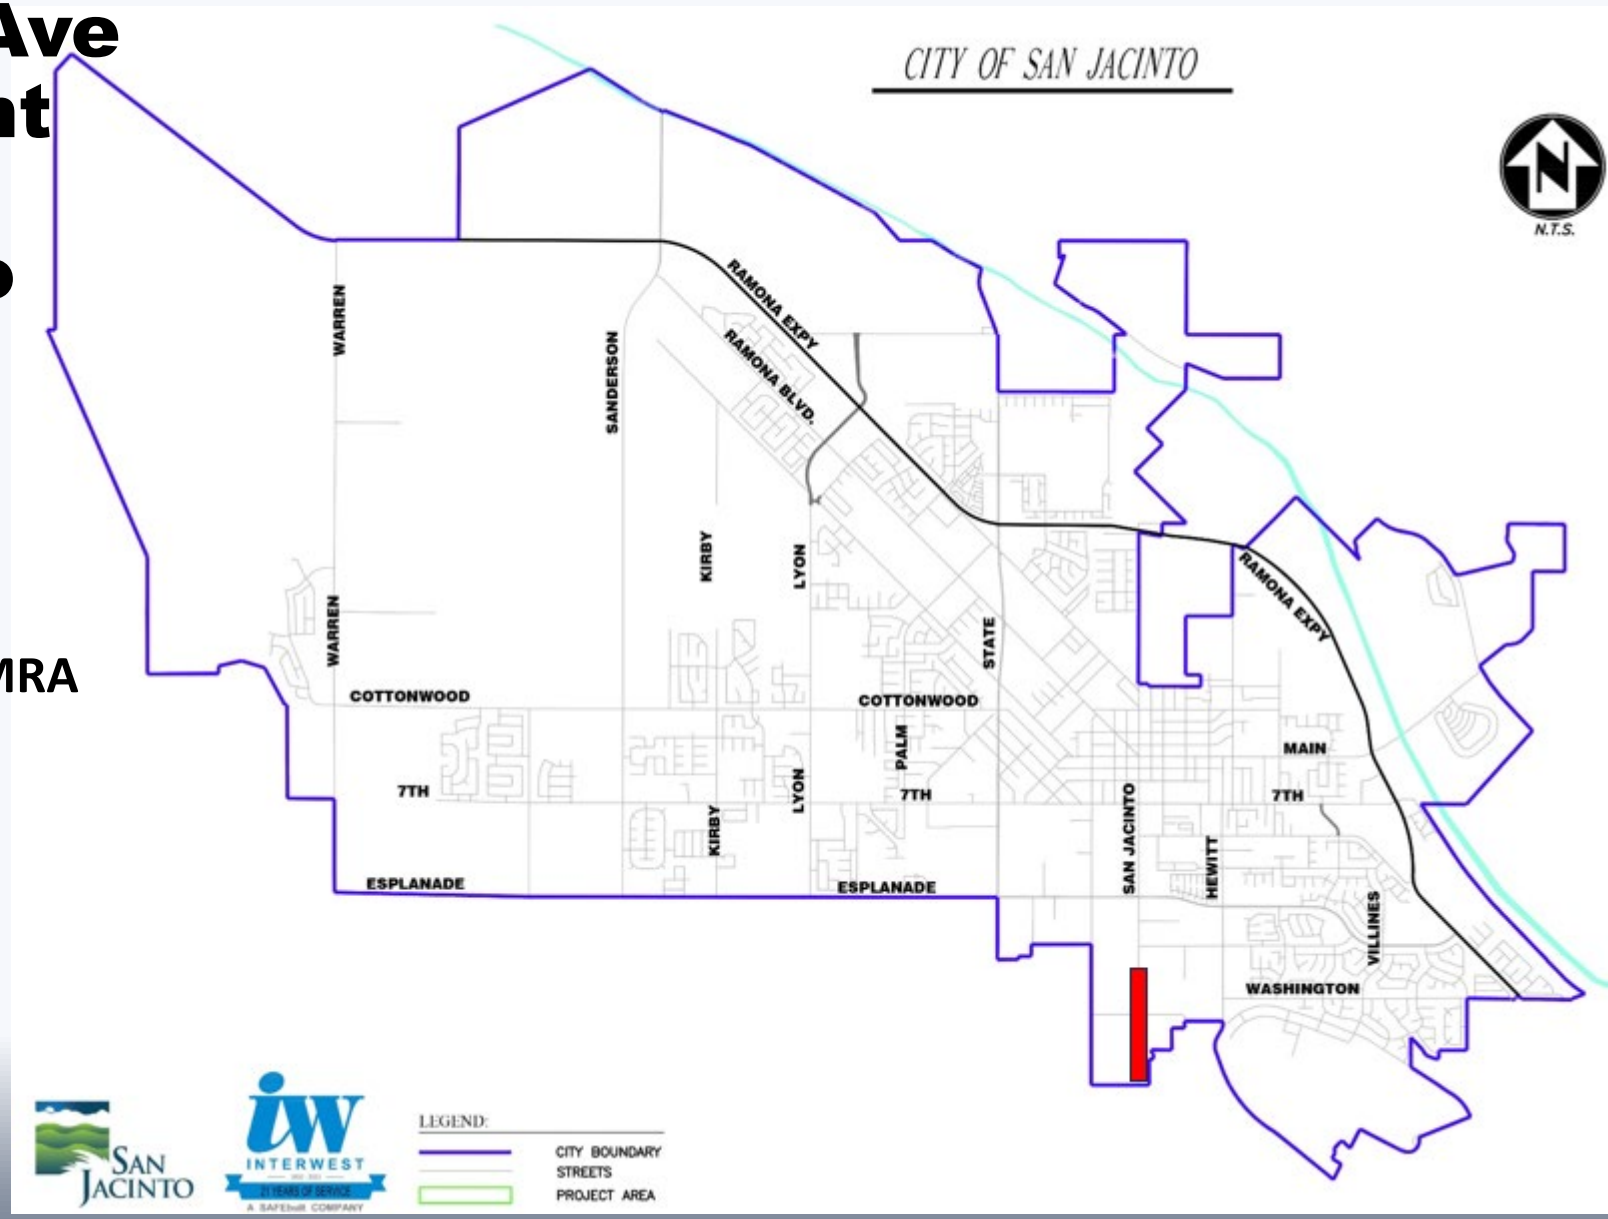
- Budgeted Amount: $252,000
- Estimated Cost: $252,000
- Anticipated Completion: Summer 2026
- Funding Source: Measure A

Upcoming Projects Beyond FY 2026/2027



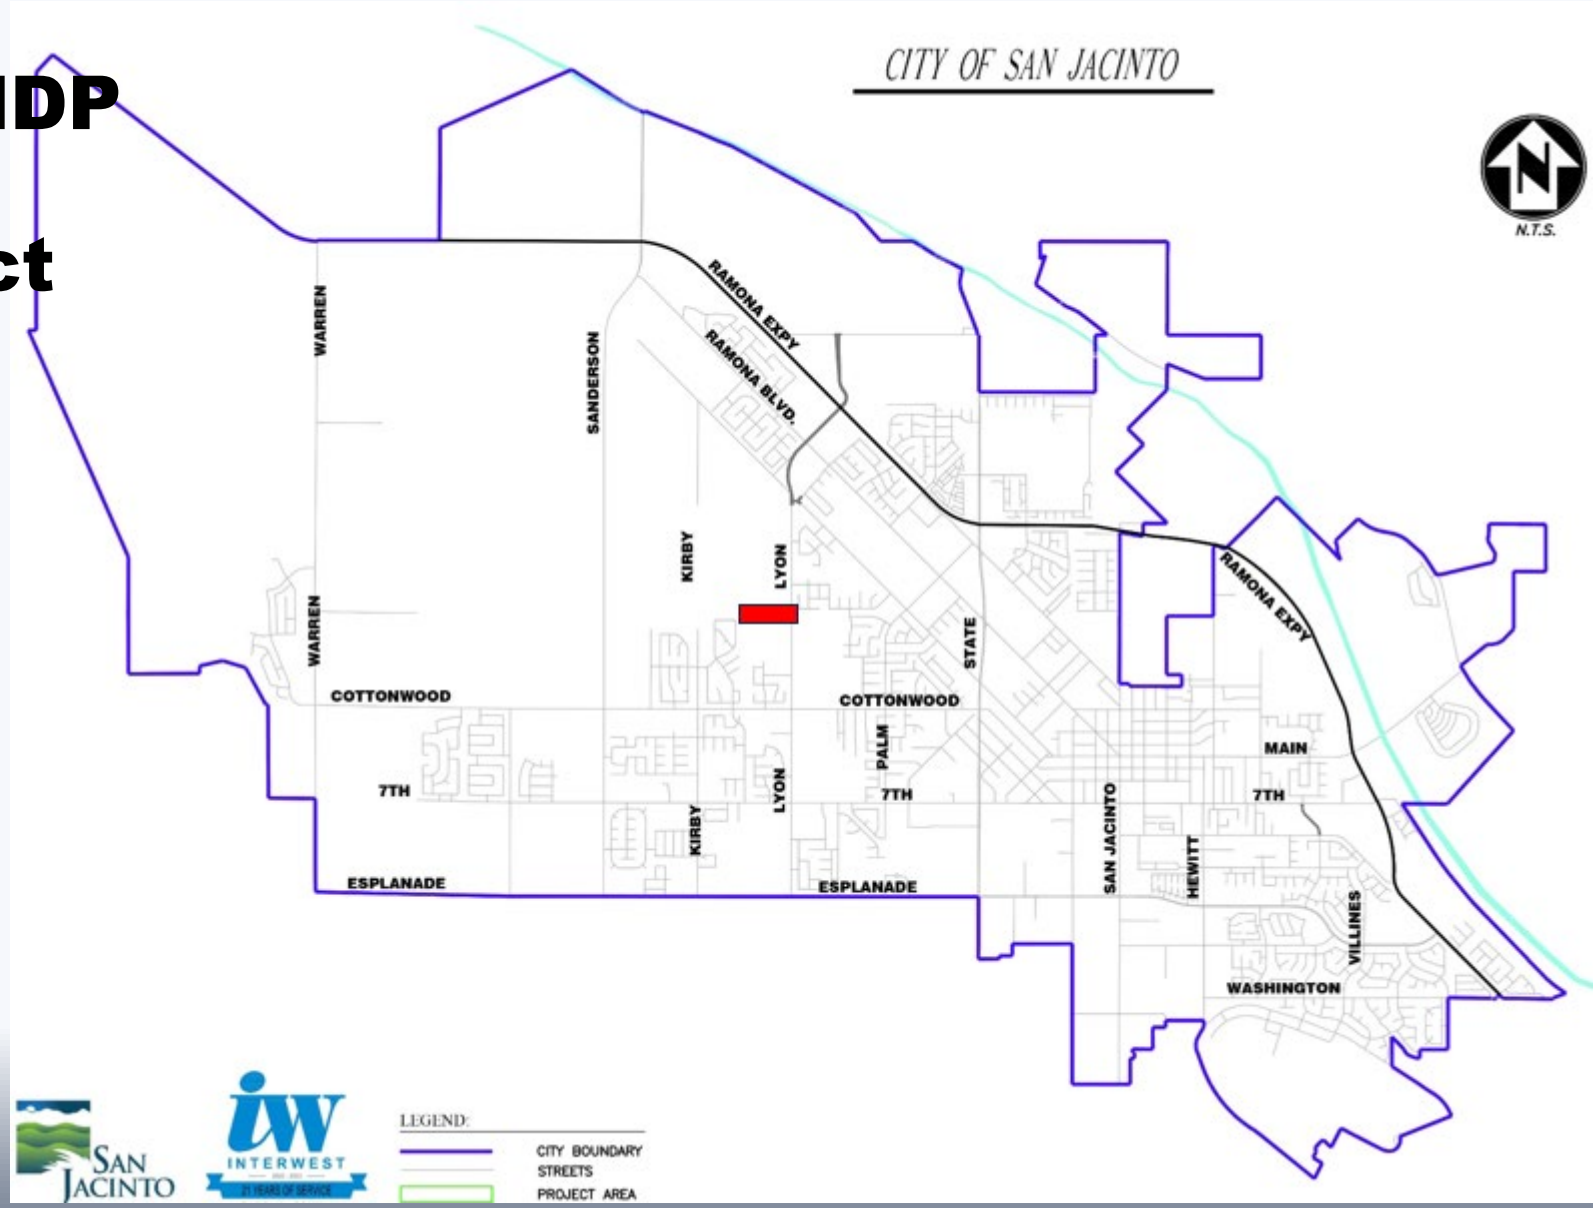
20-002 Citywide Traffic Signal Update Project (Phase 2)

- Budgeted Amount: $189,000
- Estimated Cost: $980,000
- Anticipated Completion: Fall 2027
- Funding Source: DIF: Streets



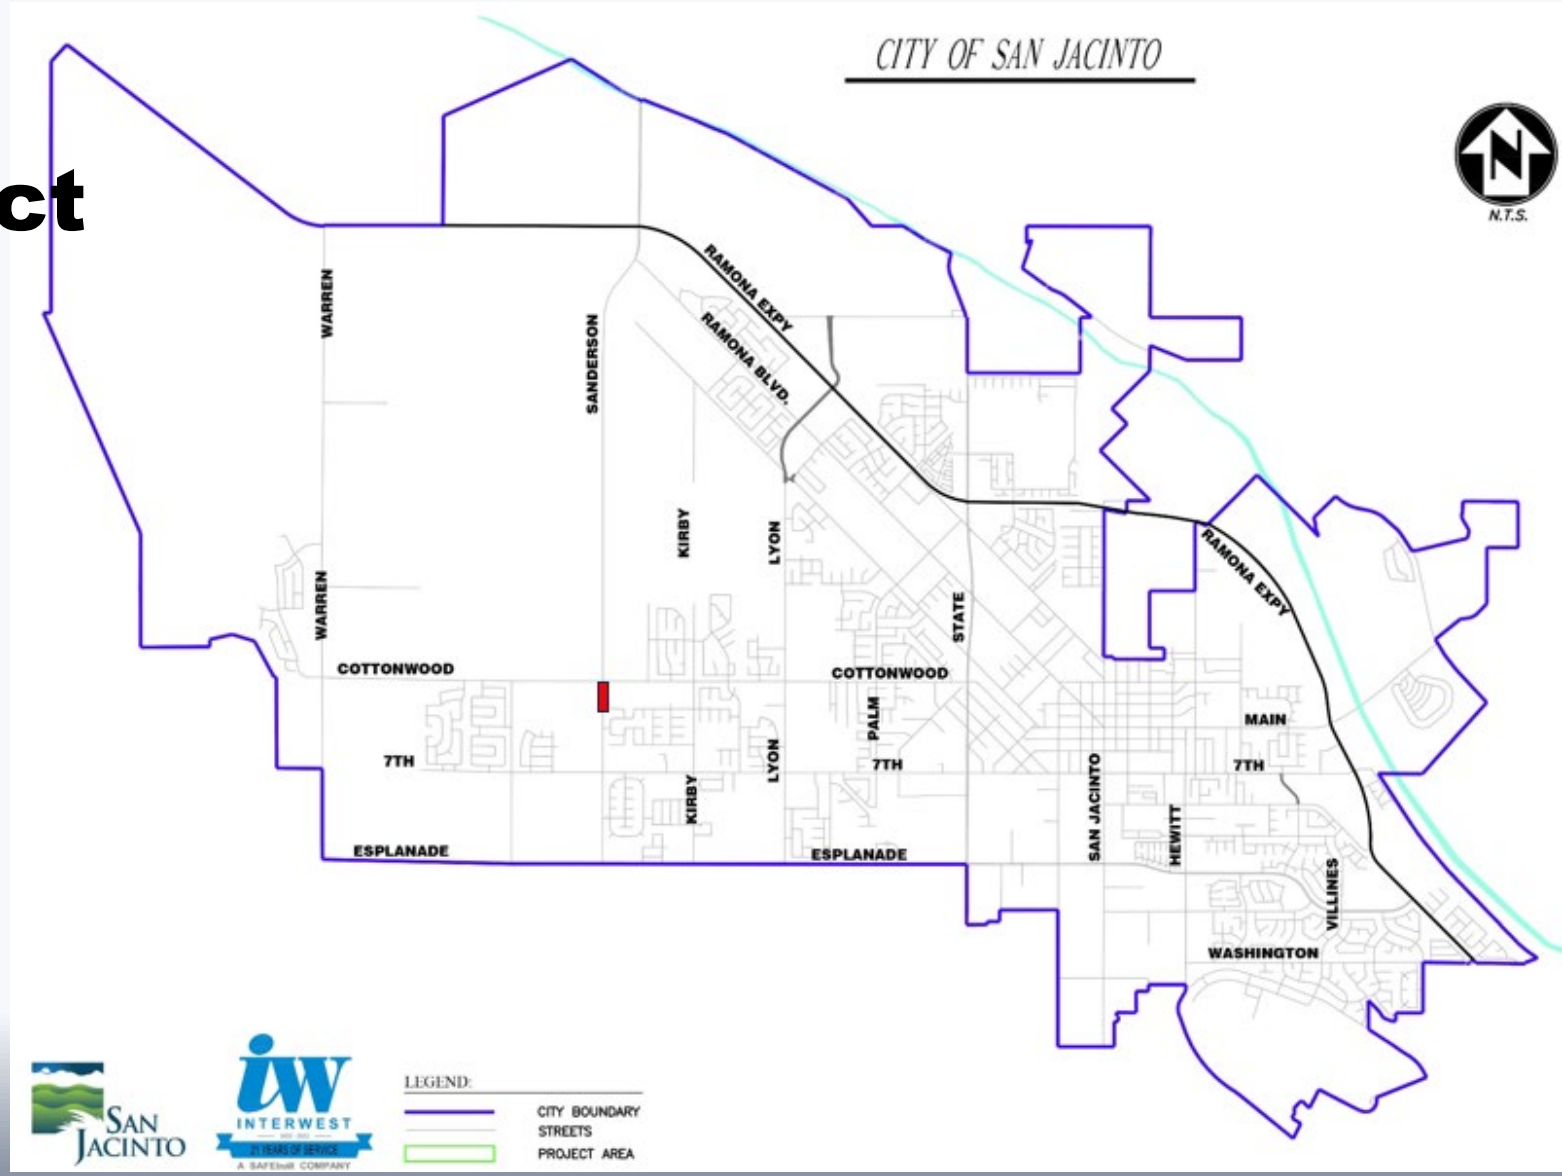
21-002 State Street Widening Project: Quandt Ranch Rd to San Jacinto River (TUMF)

- Budgeted Amount: $1,045,543
- Estimated Cost: $4,430,500
- Anticipated Completion: Fall 2027
- Funding Source: TUMF, Measure A
- Construction contract will include San Jacinto MDP Line H



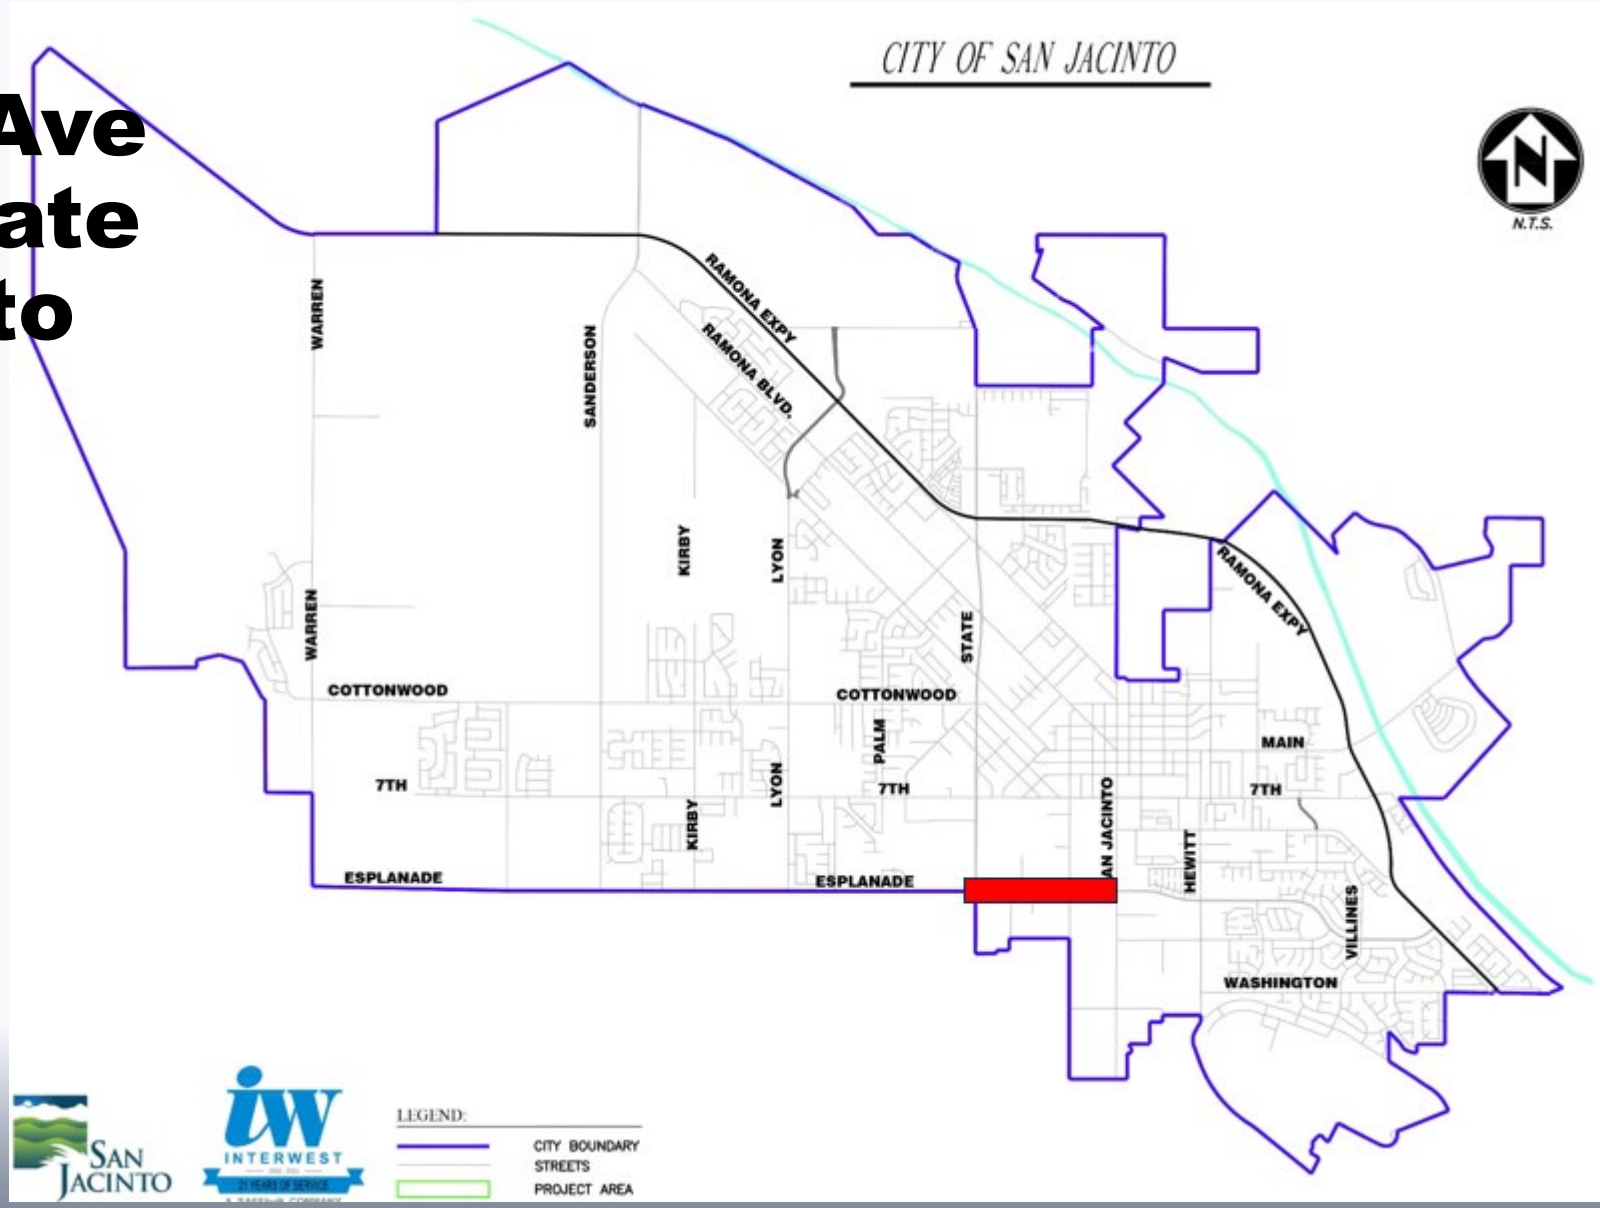
21-005 San Jacinto Ave Safety Improvement Project: Walmart Entrance to Menlo

- Budgeted Amount: $766,000
- Estimated Cost: $879,000
- Anticipated Completion: Spring 2027
- Funding Source: HSIP, Measure A, RMRA



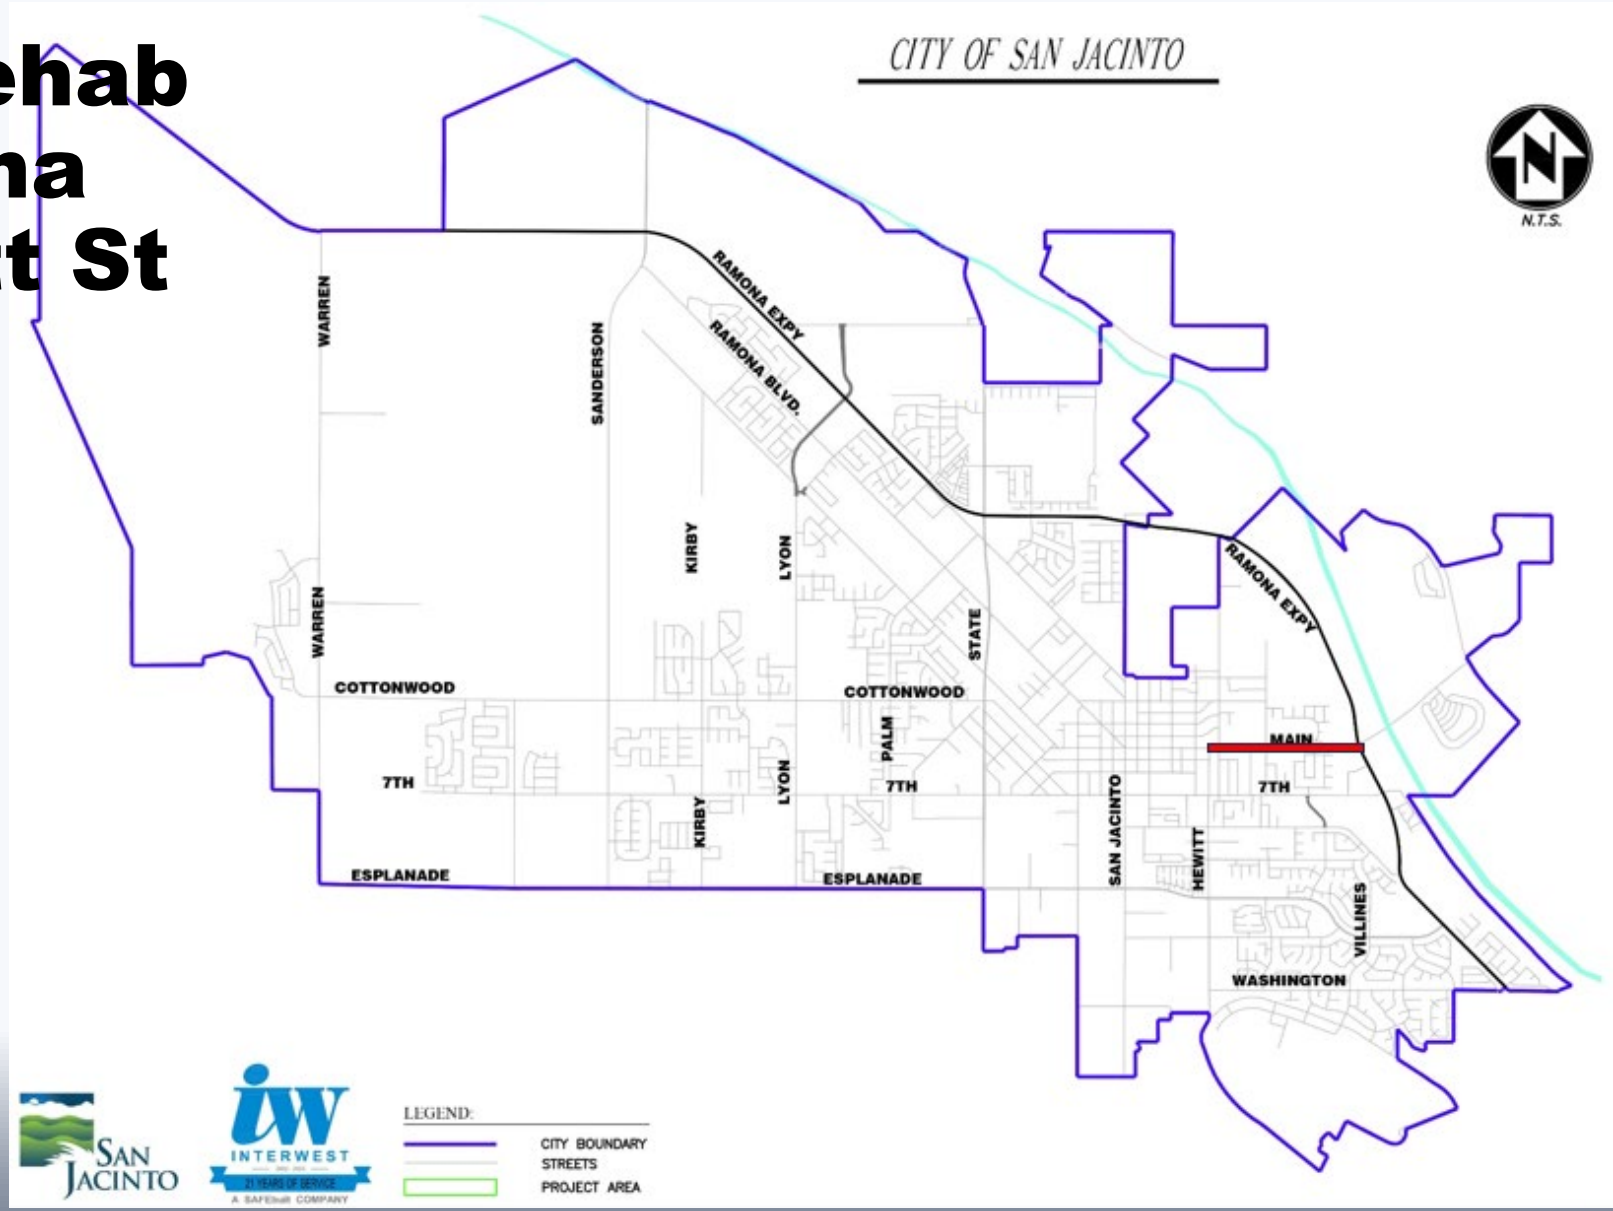
22-001 San Jacinto MDP Line G-3 Channel Improvement Project

- Budgeted Amount: $1,780,000
- Estimated Cost: $1,850,000
- Anticipated Completion: TBD
- Funding Source: RCFCD



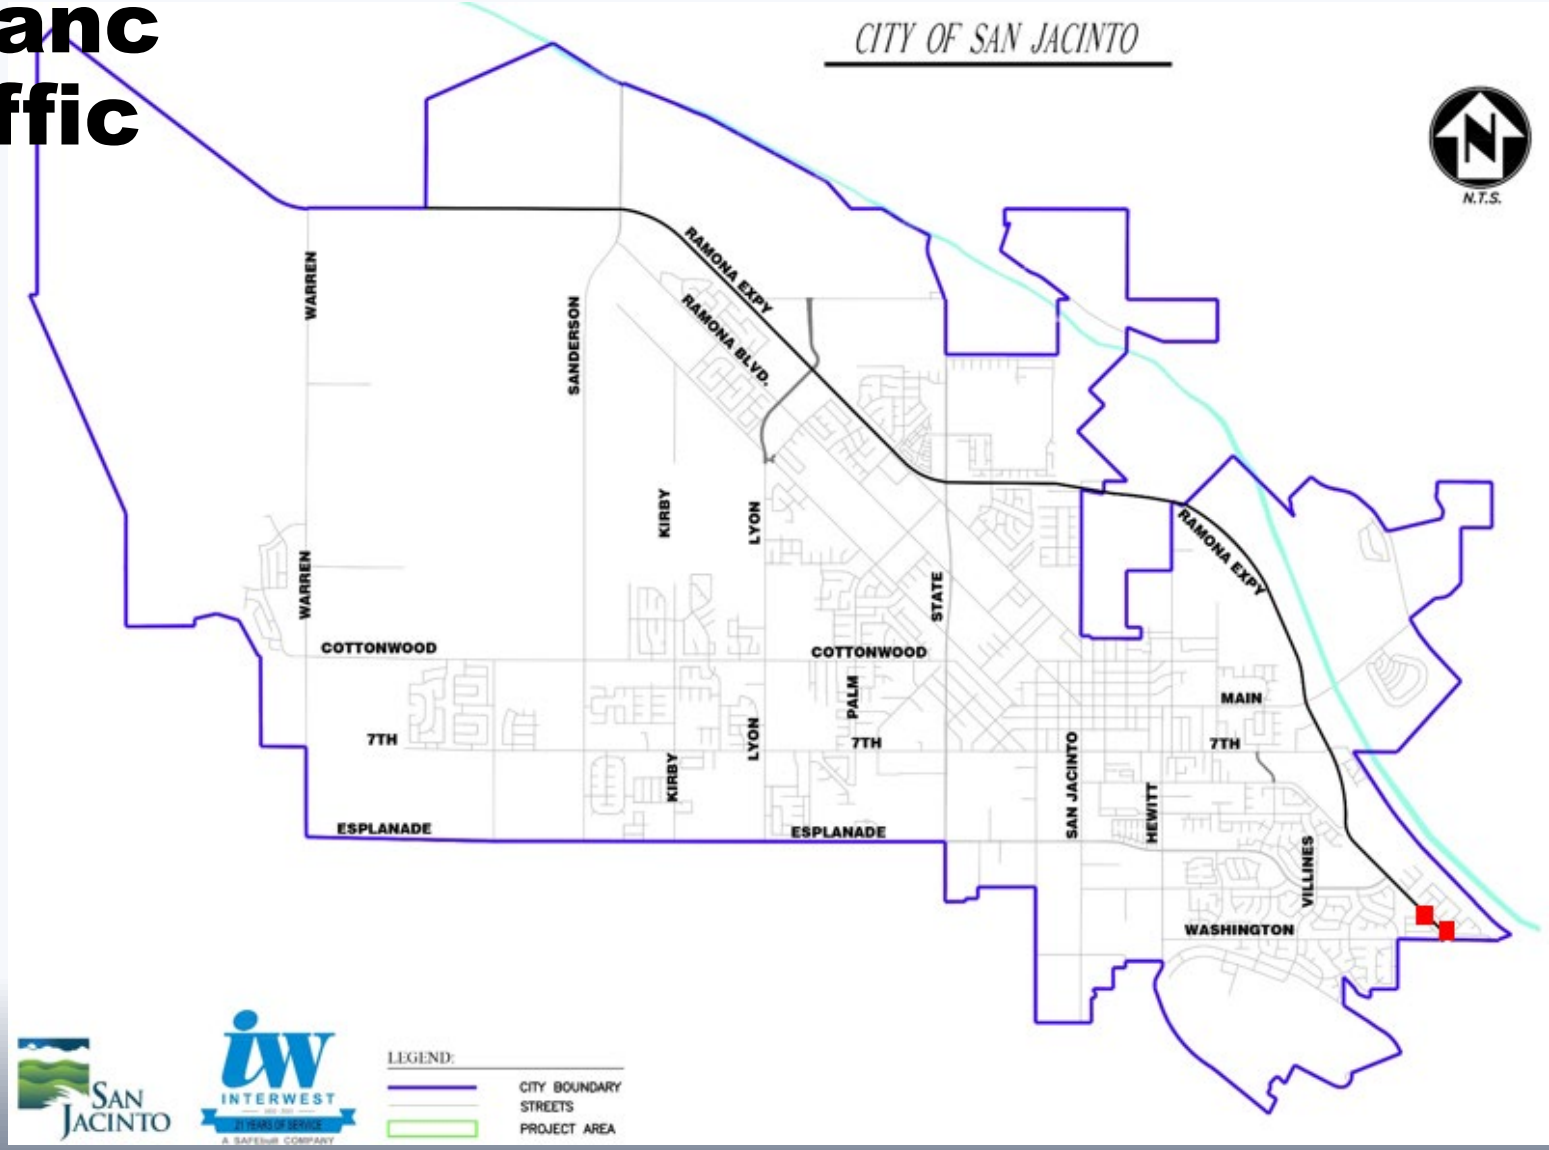
22-003 Parkside Minor Drainage Improvement Project

- Budgeted Amount: $238,000
- Estimated Cost: $255,000
- Anticipated Completion: Fall 2027
- Funding Source: LLPD Zone 46, RCFCD



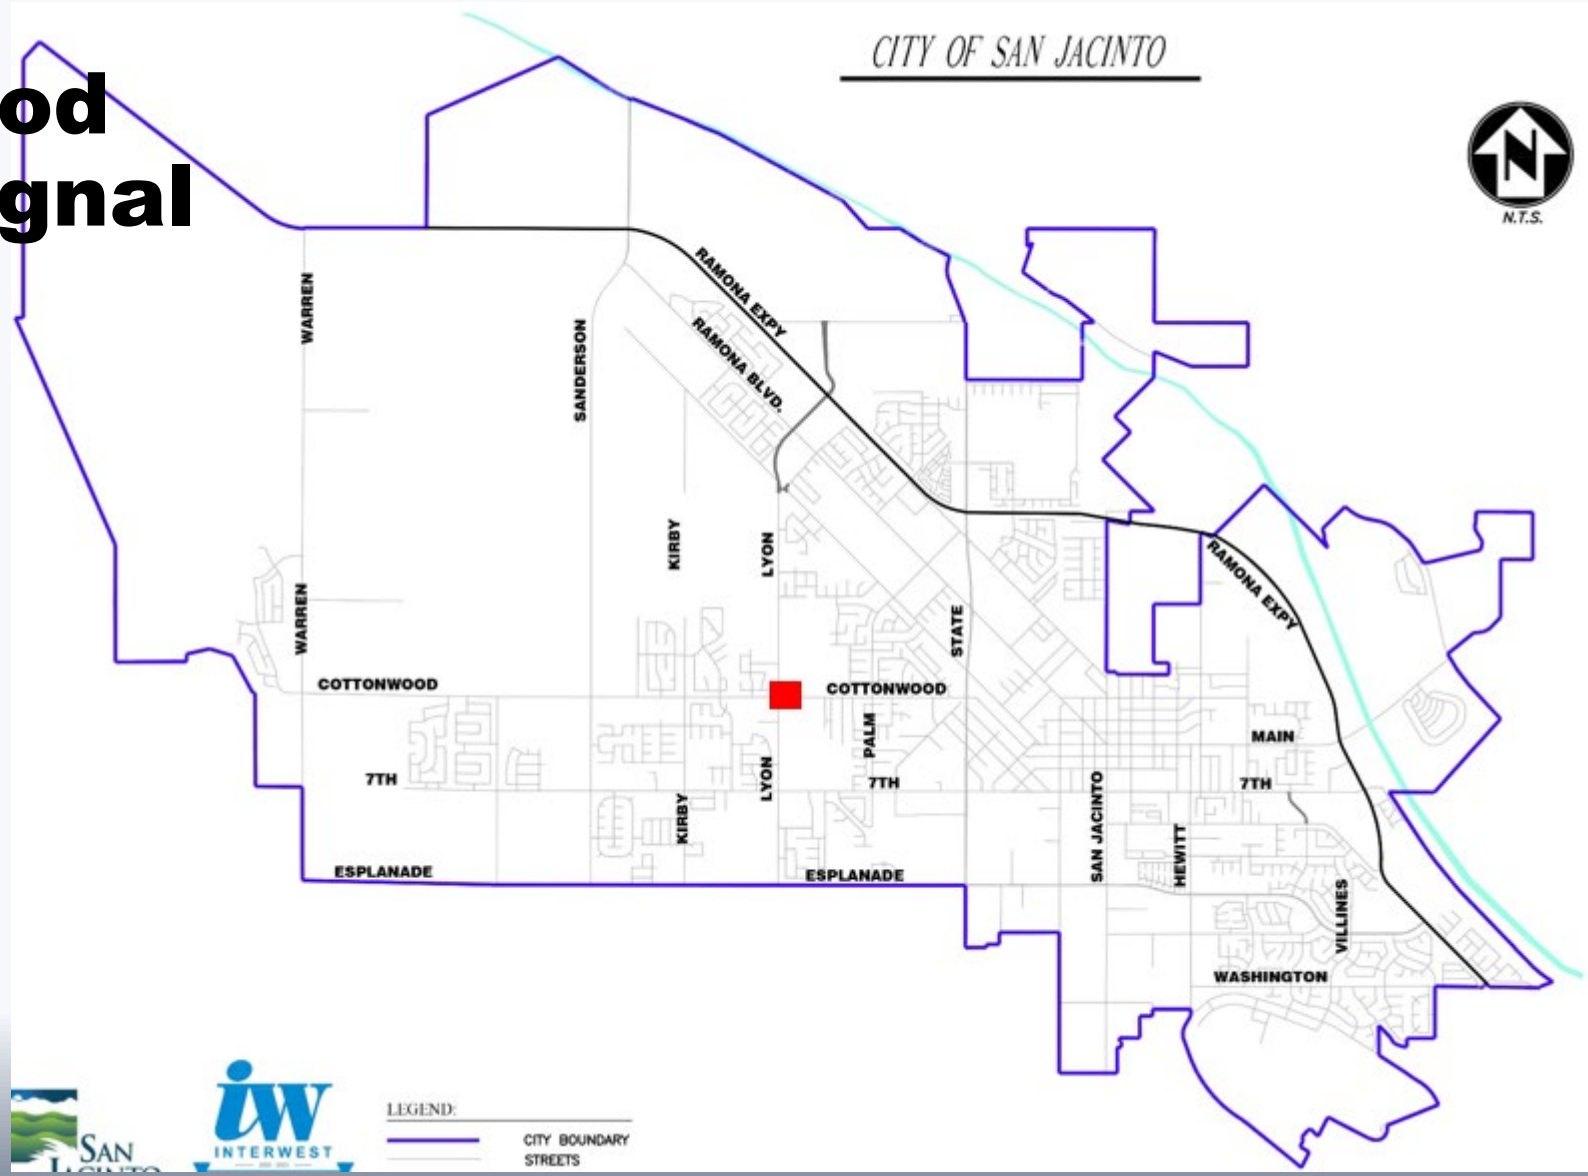
25-002 Esplanade Ave Rehab Between State St and San Jacinto Ave

- Budgeted Amount: $1,410,000
- Estimated Cost: $1,410,000
- Anticipated Completion: Fall 2027
- Funding Source: Measure A



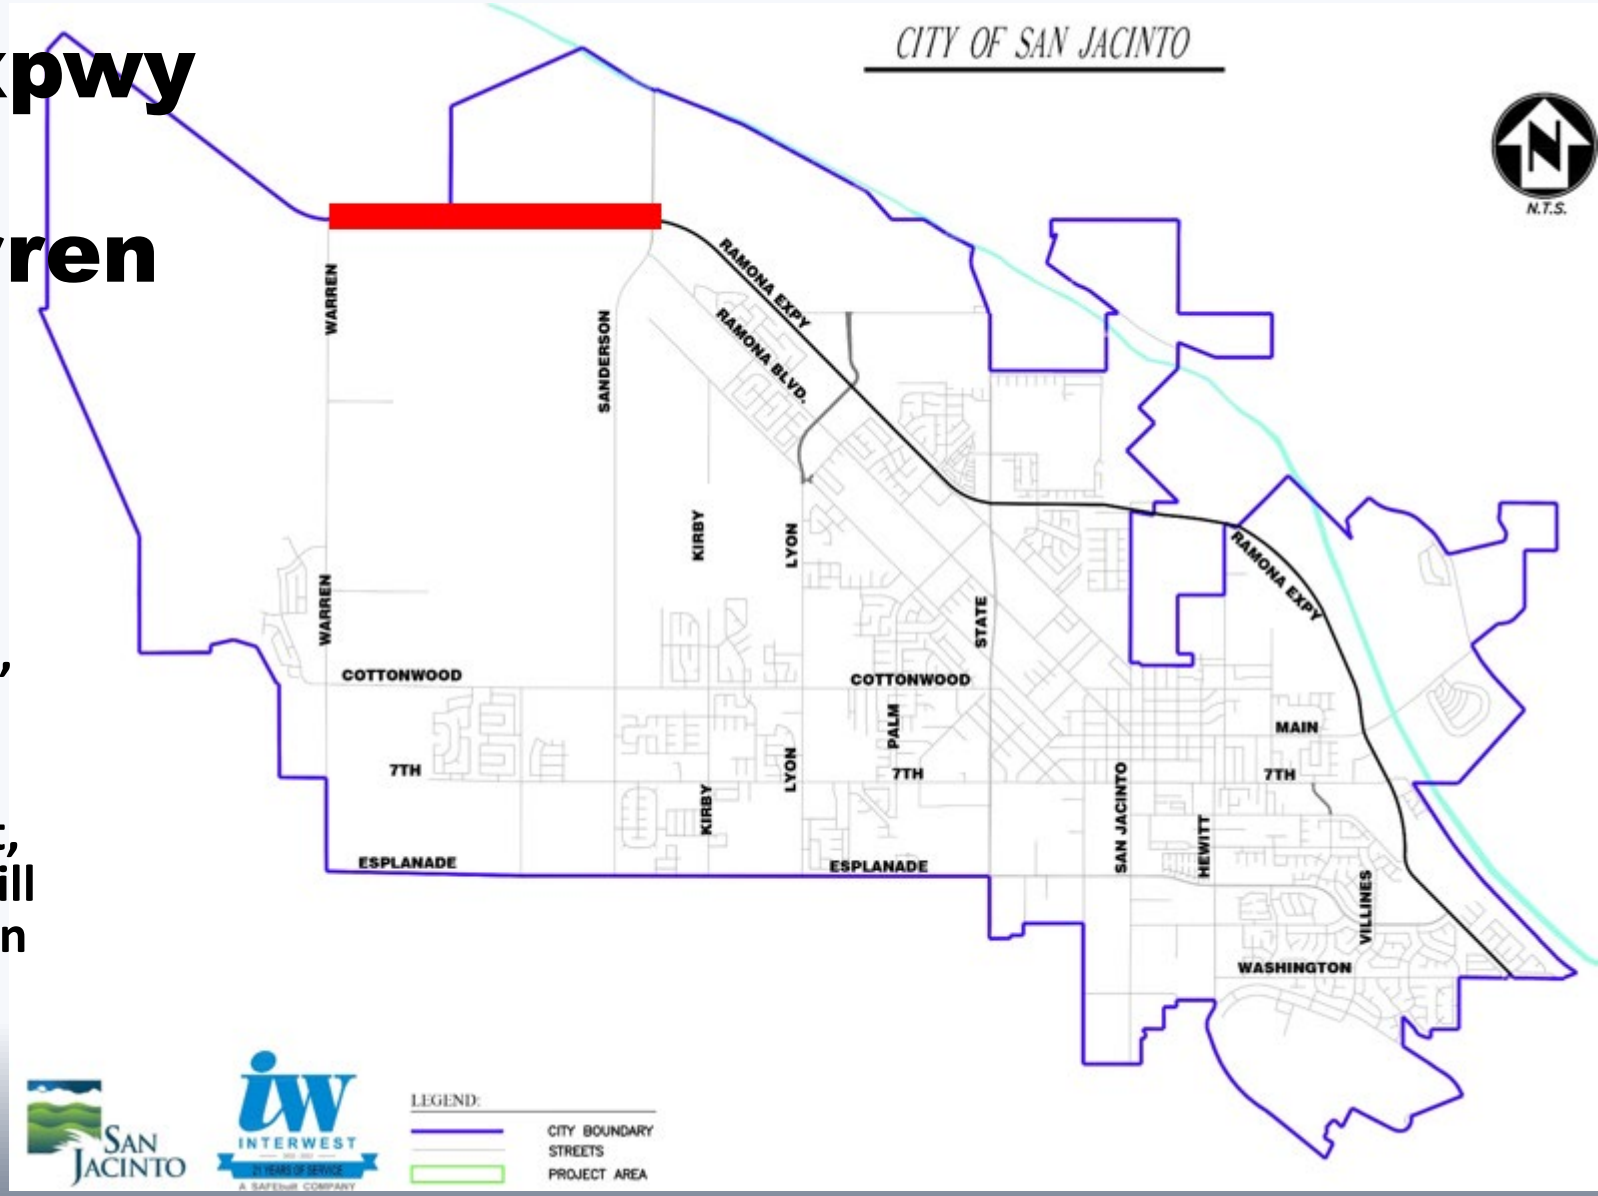
25-004 Main St Rehab between Ramona Expwy and Hewitt St

- Budgeted Amount: $986,000
- Estimated Cost: $986,000
- Anticipated Completion: Fall 2027
- Funding Source: Measure A



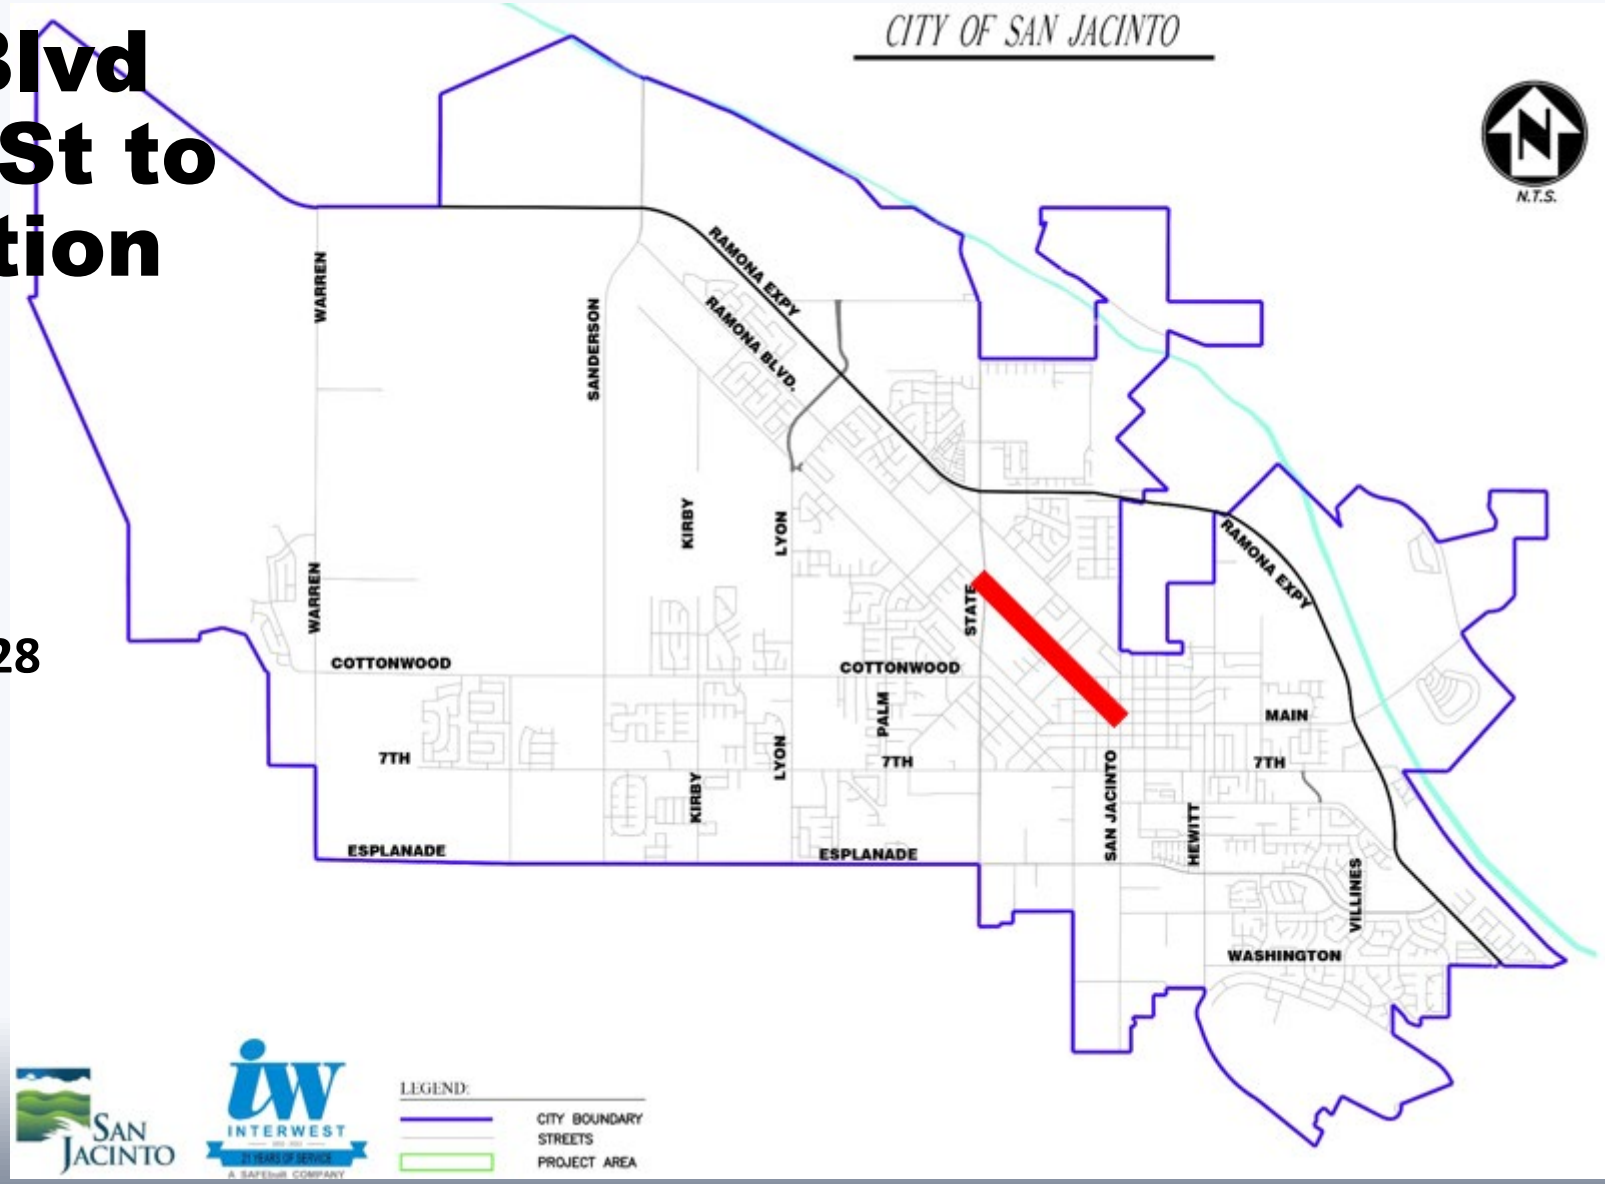
26-004 Rue Pinot Blanc and Rue Merlot Traffic Signal

- Budgeted Amount: $350,000
- Estimated Cost: $350,000
- Anticipated Completion: TBD
- Funding Source: DIF: Signal Fund 149



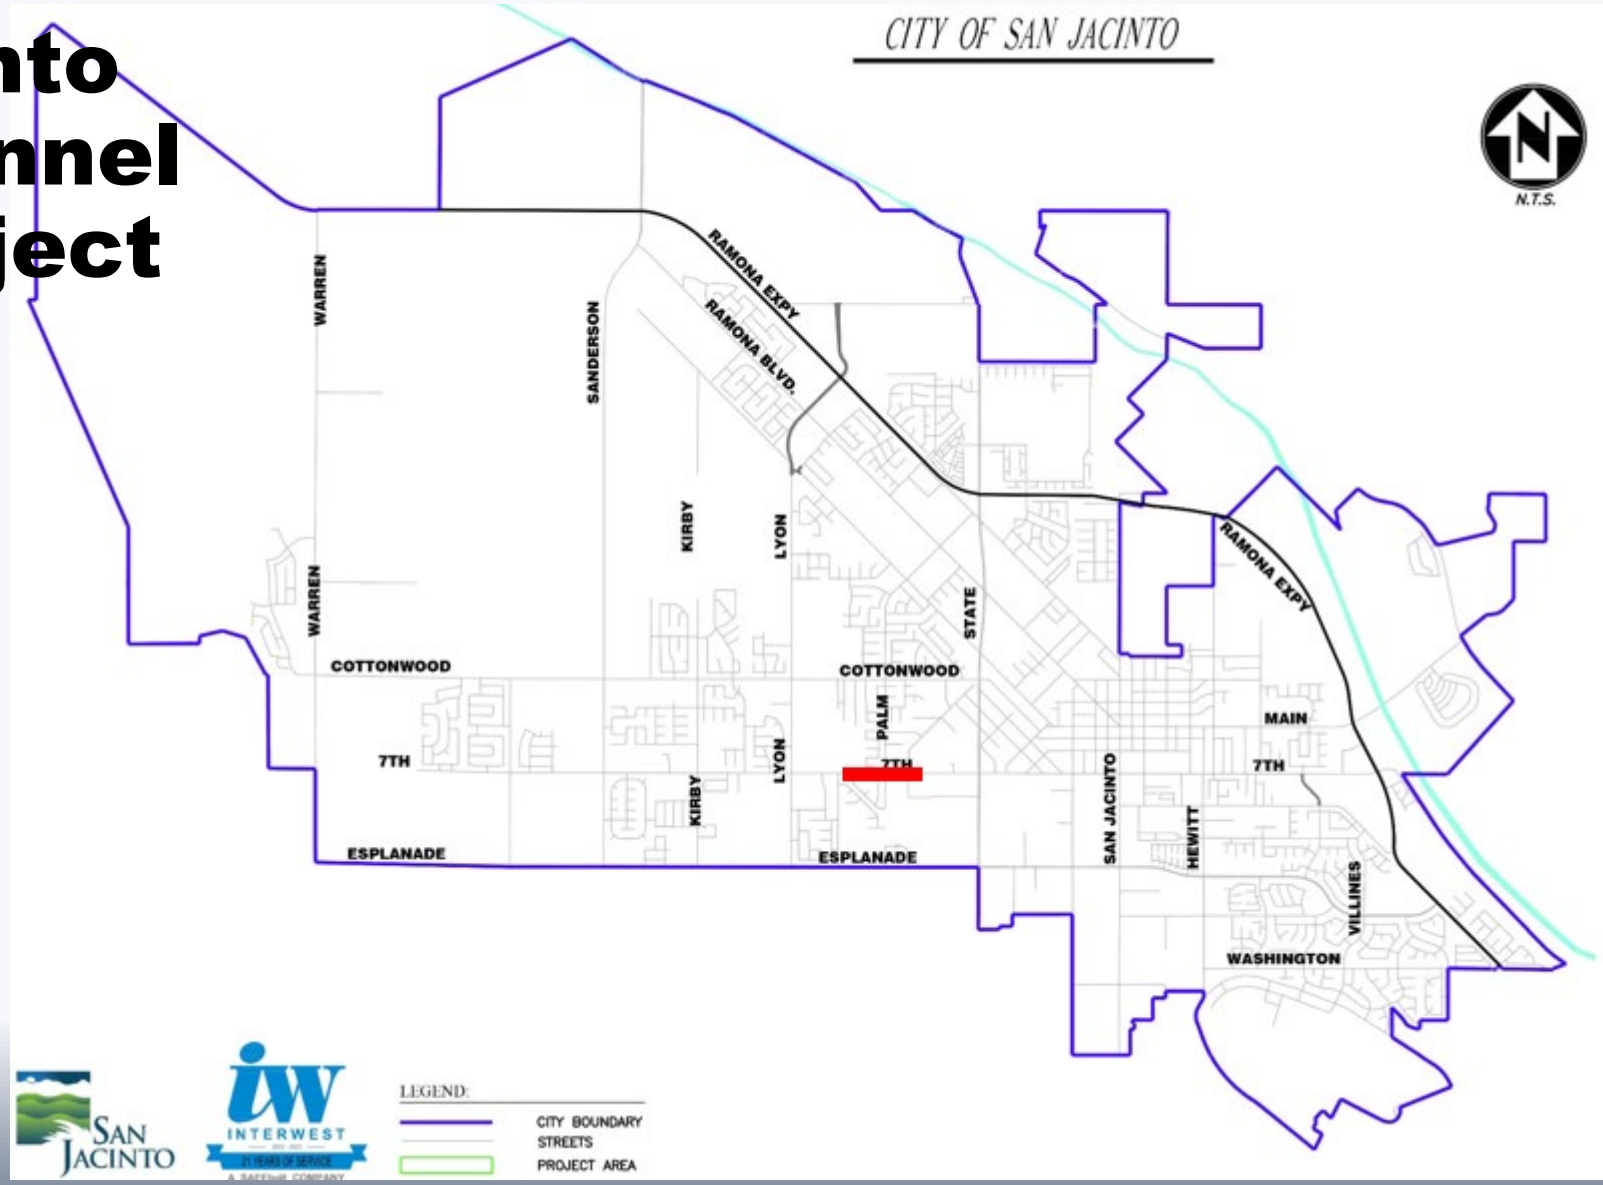
26-006 Cottonwood and Lyon Traffic Signal

- Budgeted Amount: $755,000
- Estimated Cost: $755,000
- Anticipated Completion: TBD
- Funding Source: Measure A



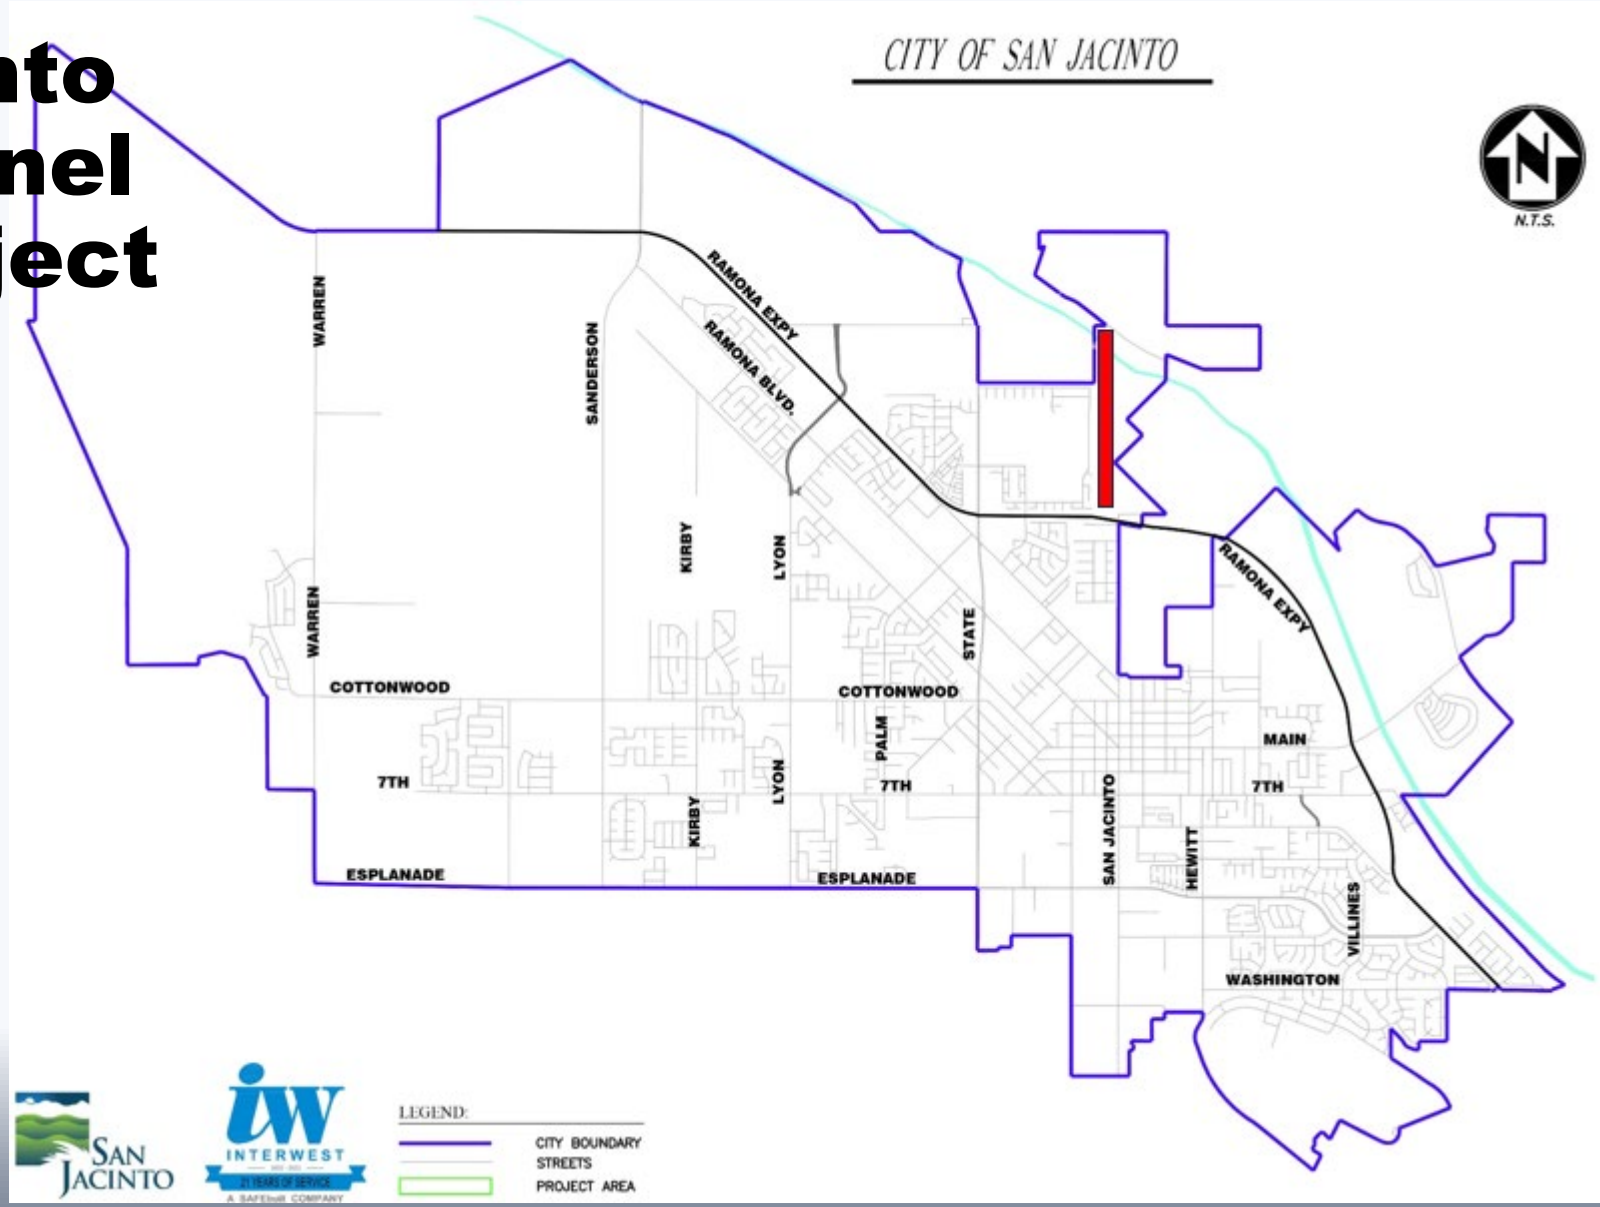
26-007 Ramona Expwy Repave from Sanderson to Warren

- Budgeted Amount: $2,000,000.00
- Estimated Cost: $12,000,000
- Anticipated Completion: TBD
- Funding Source: County, RCTC, RMRA, Measure A
- This is a joint project with RCTC, Riverside County Transportation Dept, and City of San Jacinto. San Jacinto will be responsible for 20% of construction cost within City right-of-way.



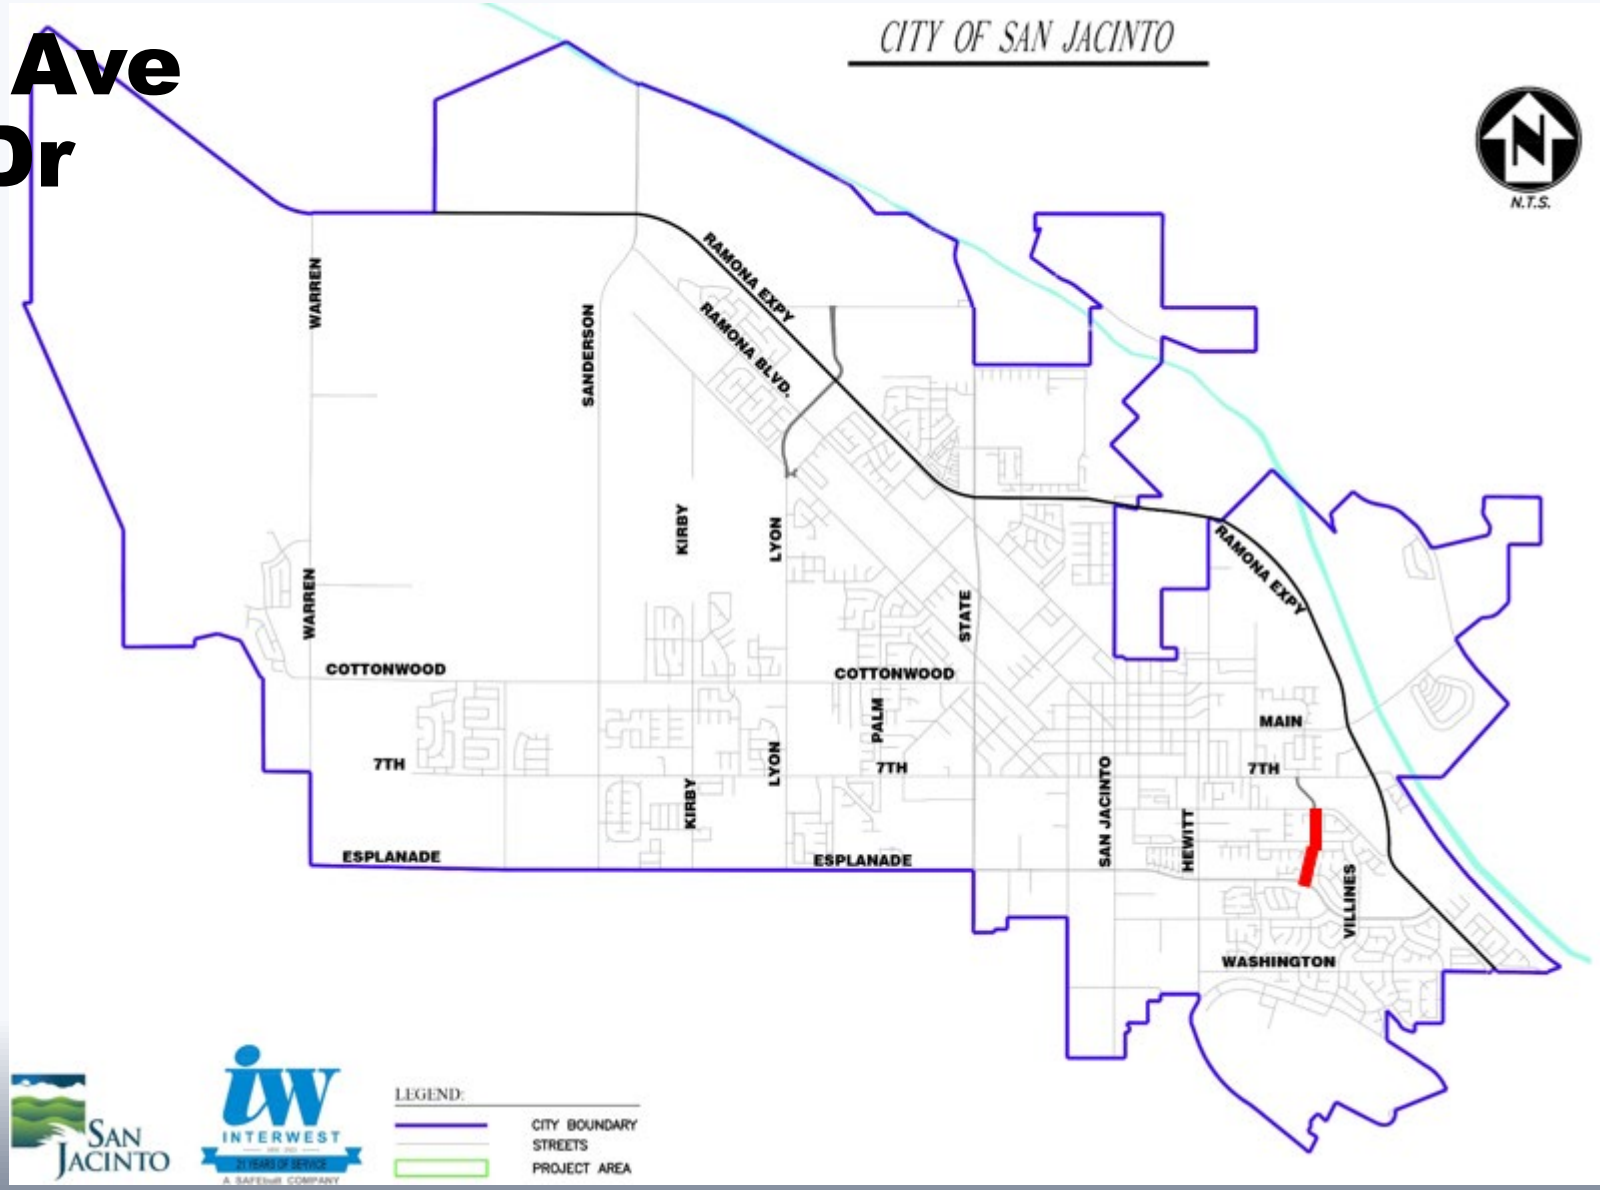
26-008 Ramona Blvd Rehab From State St to 5 Points Intersection

- Budgeted Amount: $1,450,000.00
- Estimated Cost: $1,410,000
- Anticipated Completion: Summer 2028
- Funding Source: RMRA



26-009 San Jacinto MDP Line E-4 Channel Improvement Project

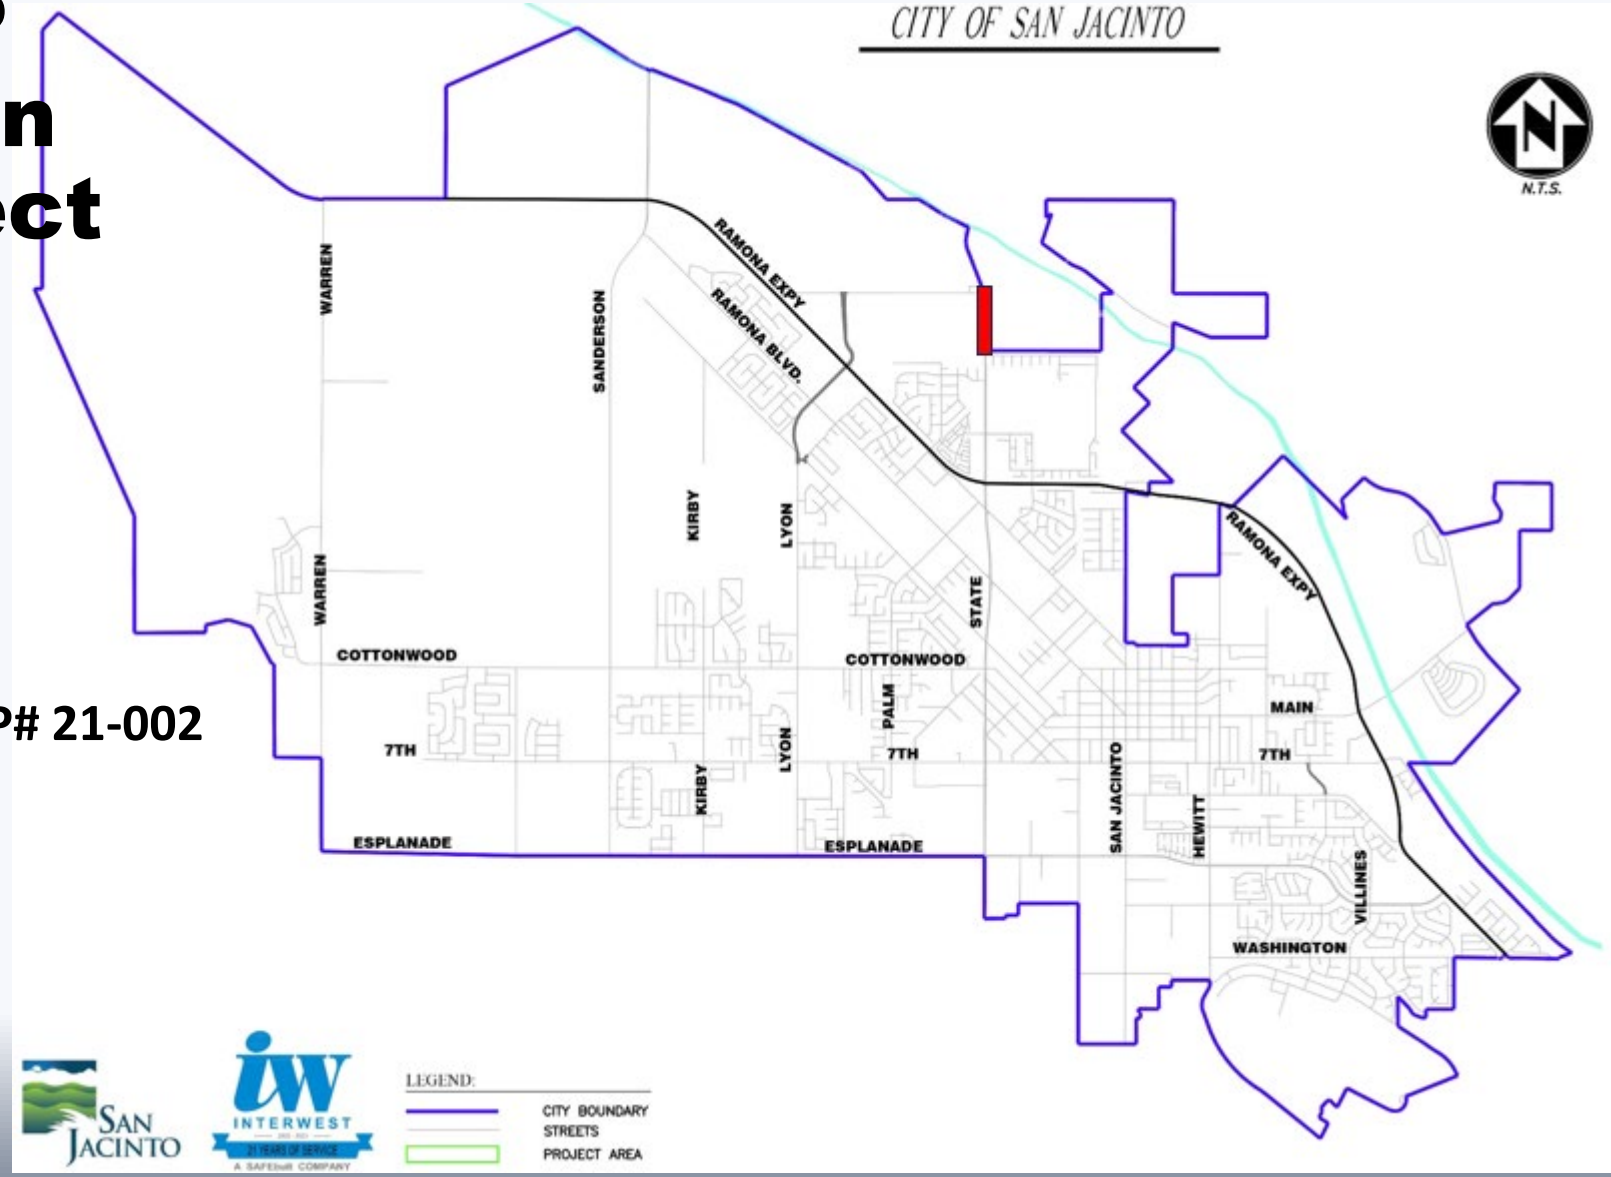
- Budgeted Amount: $1,040,000
- Estimated Cost: $3,600,000
- Anticipated Completion: TBD
- Funding Source: RCFCD
  - City to request extra funds from Flood Control for expanded scope.



26-010 San Jacinto MDP Line J Channel Improvement Project

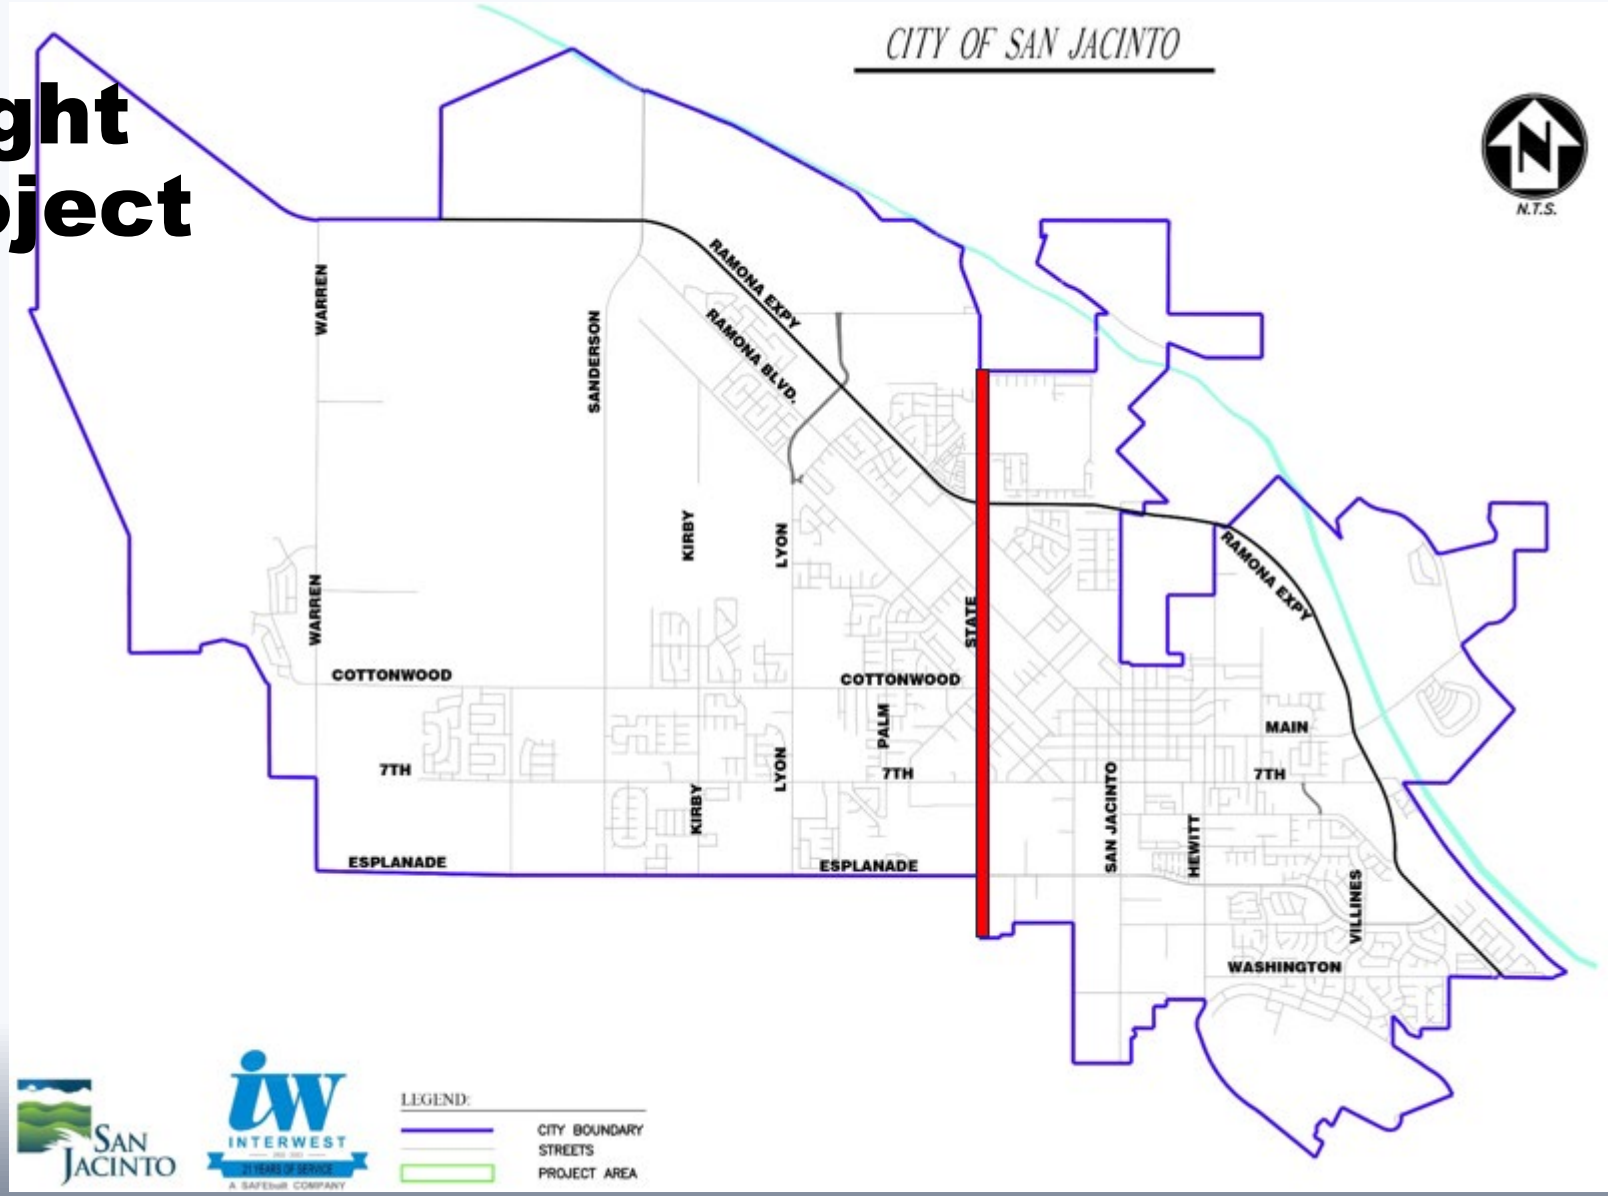
- Budgeted Amount: $4,040,000
- Estimated Cost: $4,038,000
- Anticipated Completion: TBD
- Funding Source: RCFCD

26-011 Esplanade Ave and Las Rosas Dr Improvements



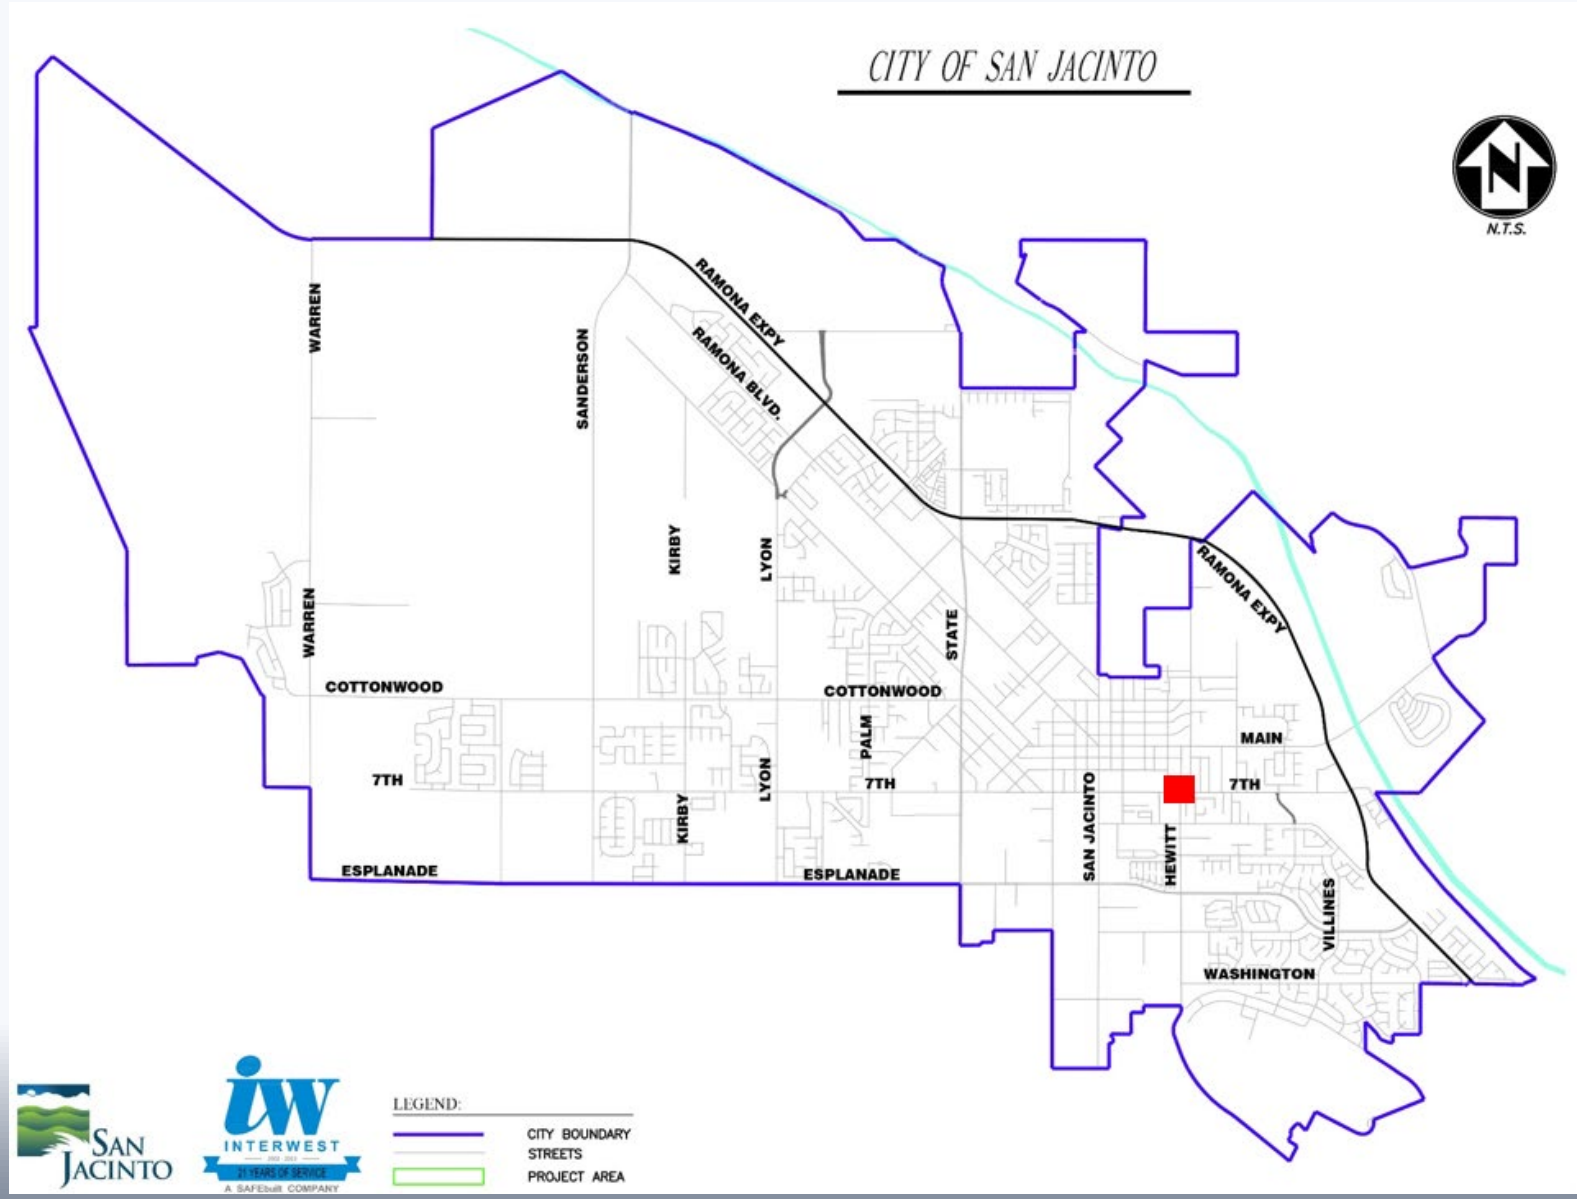
- Budgeted Amount: $751,000
- Estimated Cost: $752,000
- Anticipated Completion: Fall 2028
- Funding Source: RMRA

New CIP Projects



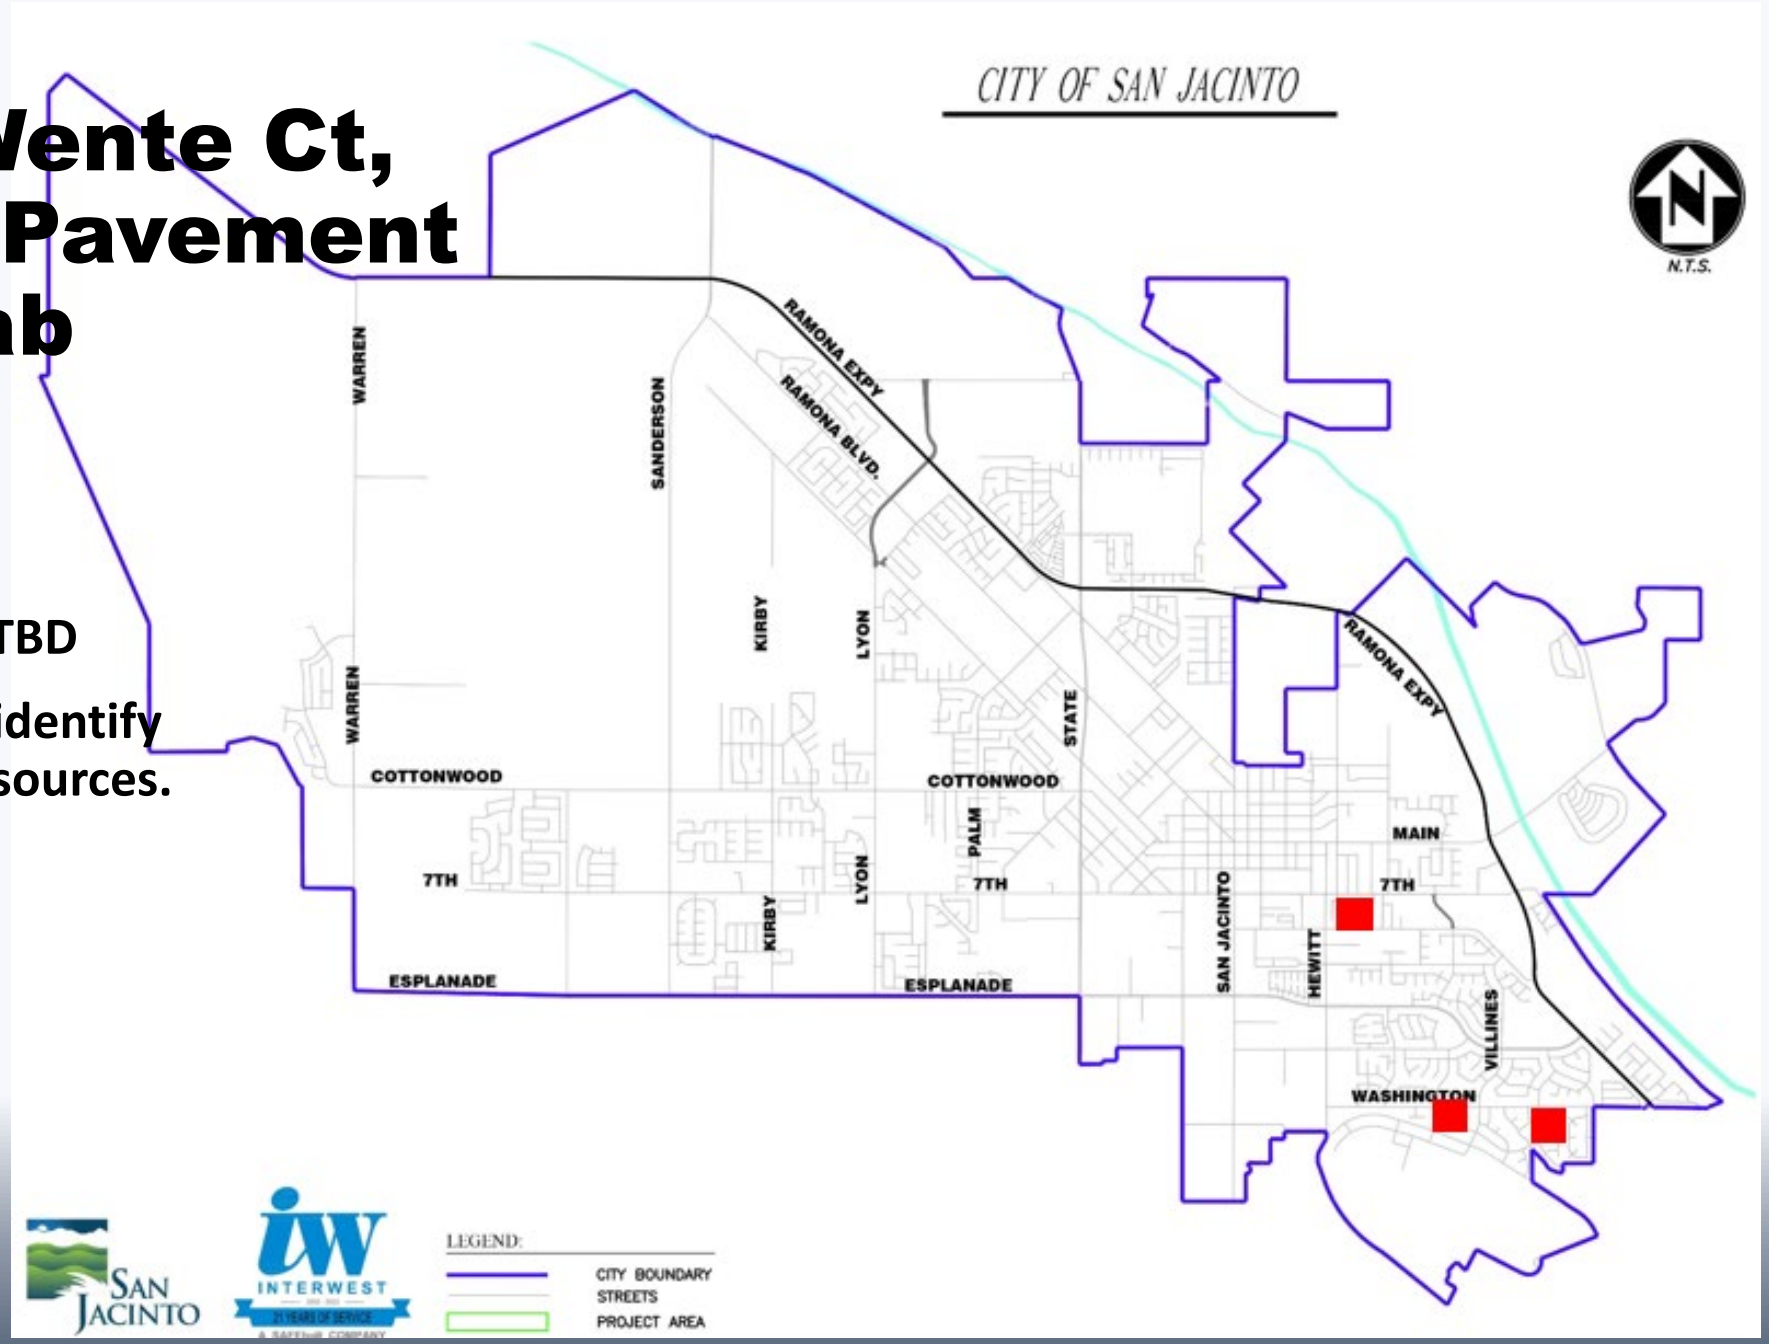
San Jacinto MDP Line H Storm Drain Improvement Project

- Budgeted Amount: $6,010,000
- Estimated Cost: $6,050,000
- Anticipated Completion: Fall 2027
- Funding Source: RCFCD
- Construction contract will include CIP# 21-002 State Street Widening Project



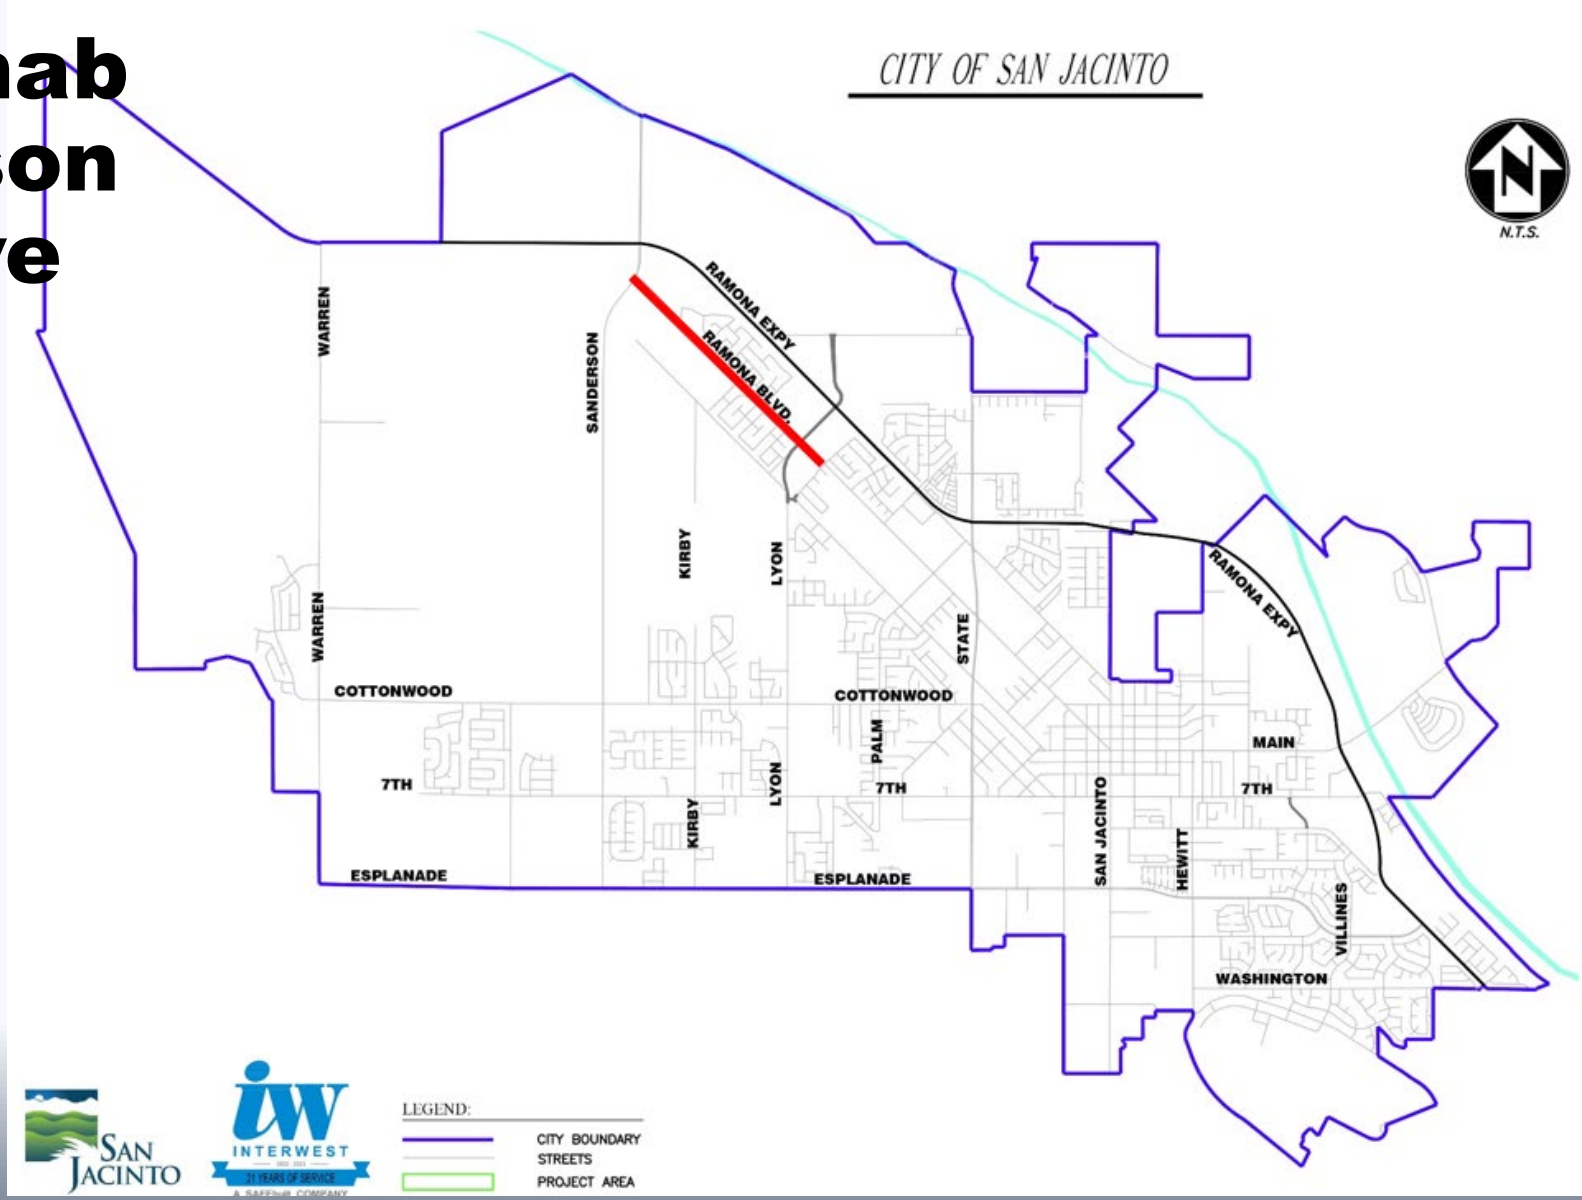
State St Streetlight Improvements Project

- Budgeted Amount: N/A
- Estimated Cost: $1,090,000
- Anticipated Completion: Fall 2028
- Funding Source: Need to identify funding sources.



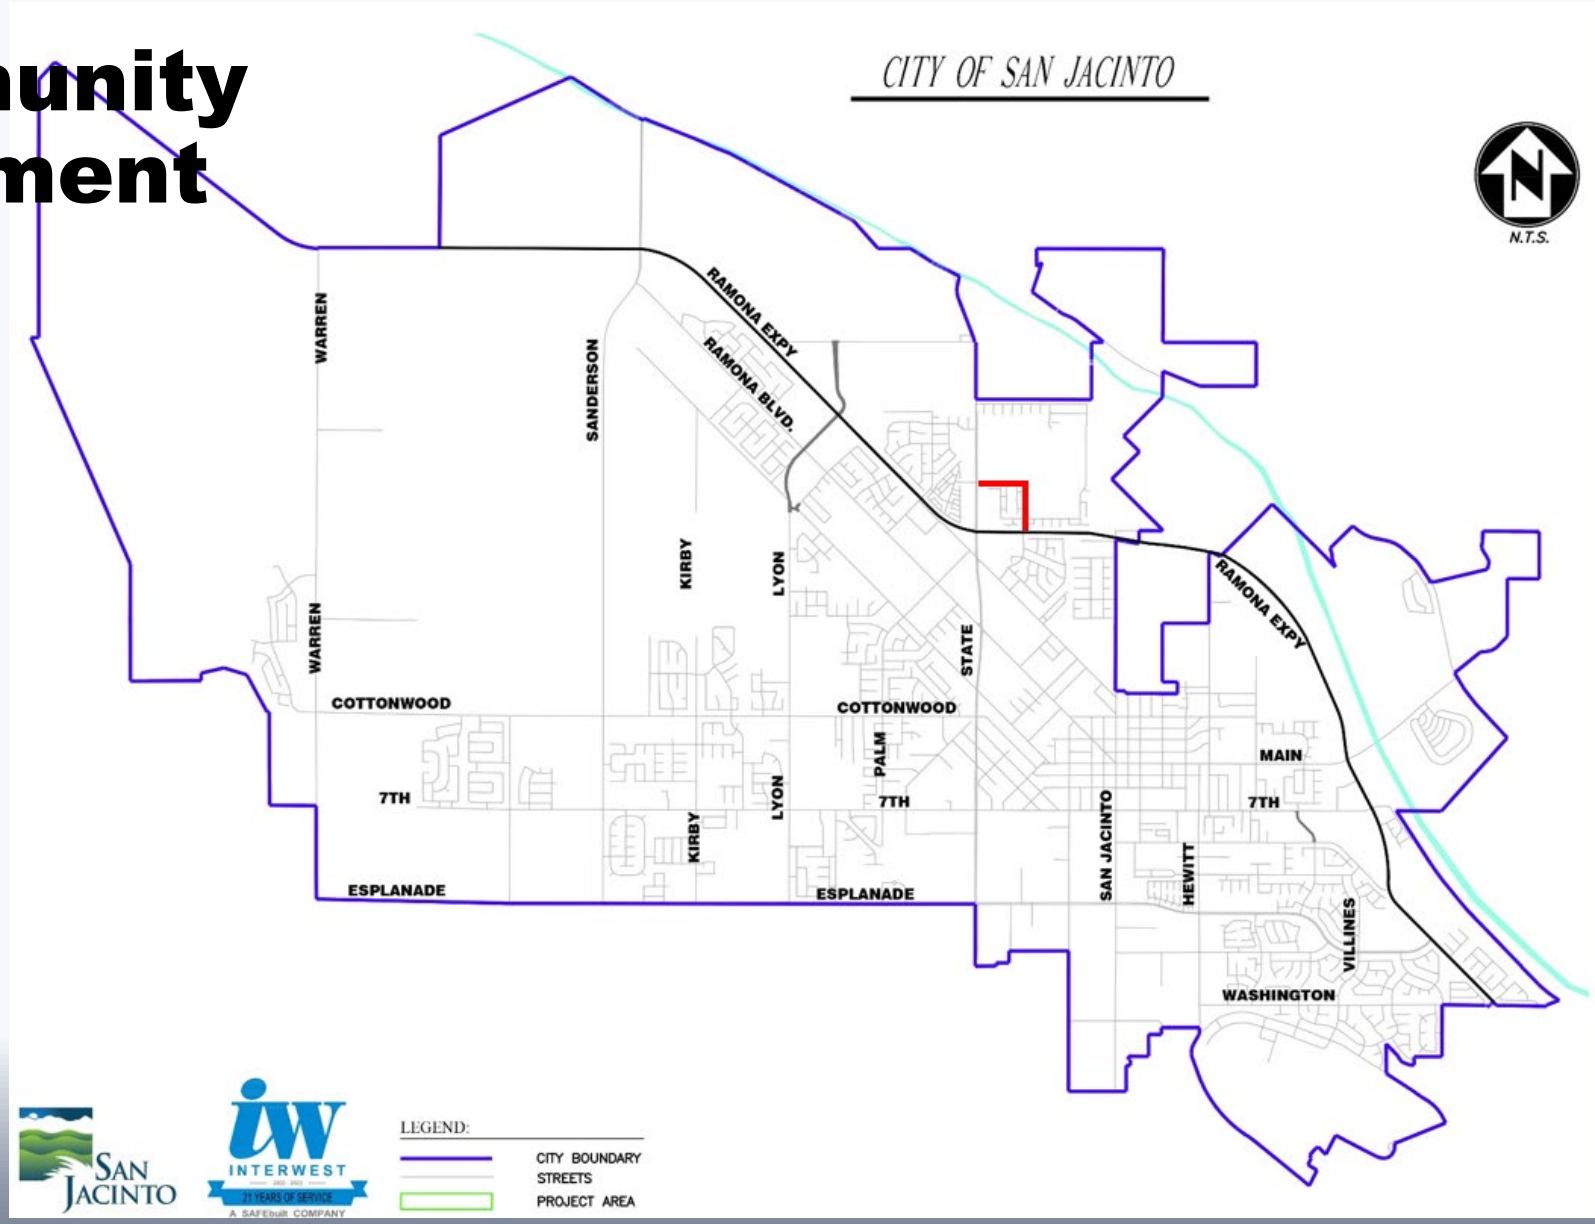
Hewitt St & 7th St Traffic Signal

- Budgeted Amount: $350,000
- Estimated Cost: $600,000
- Anticipated Completion: TBD
- Funding Source: Developer $350K



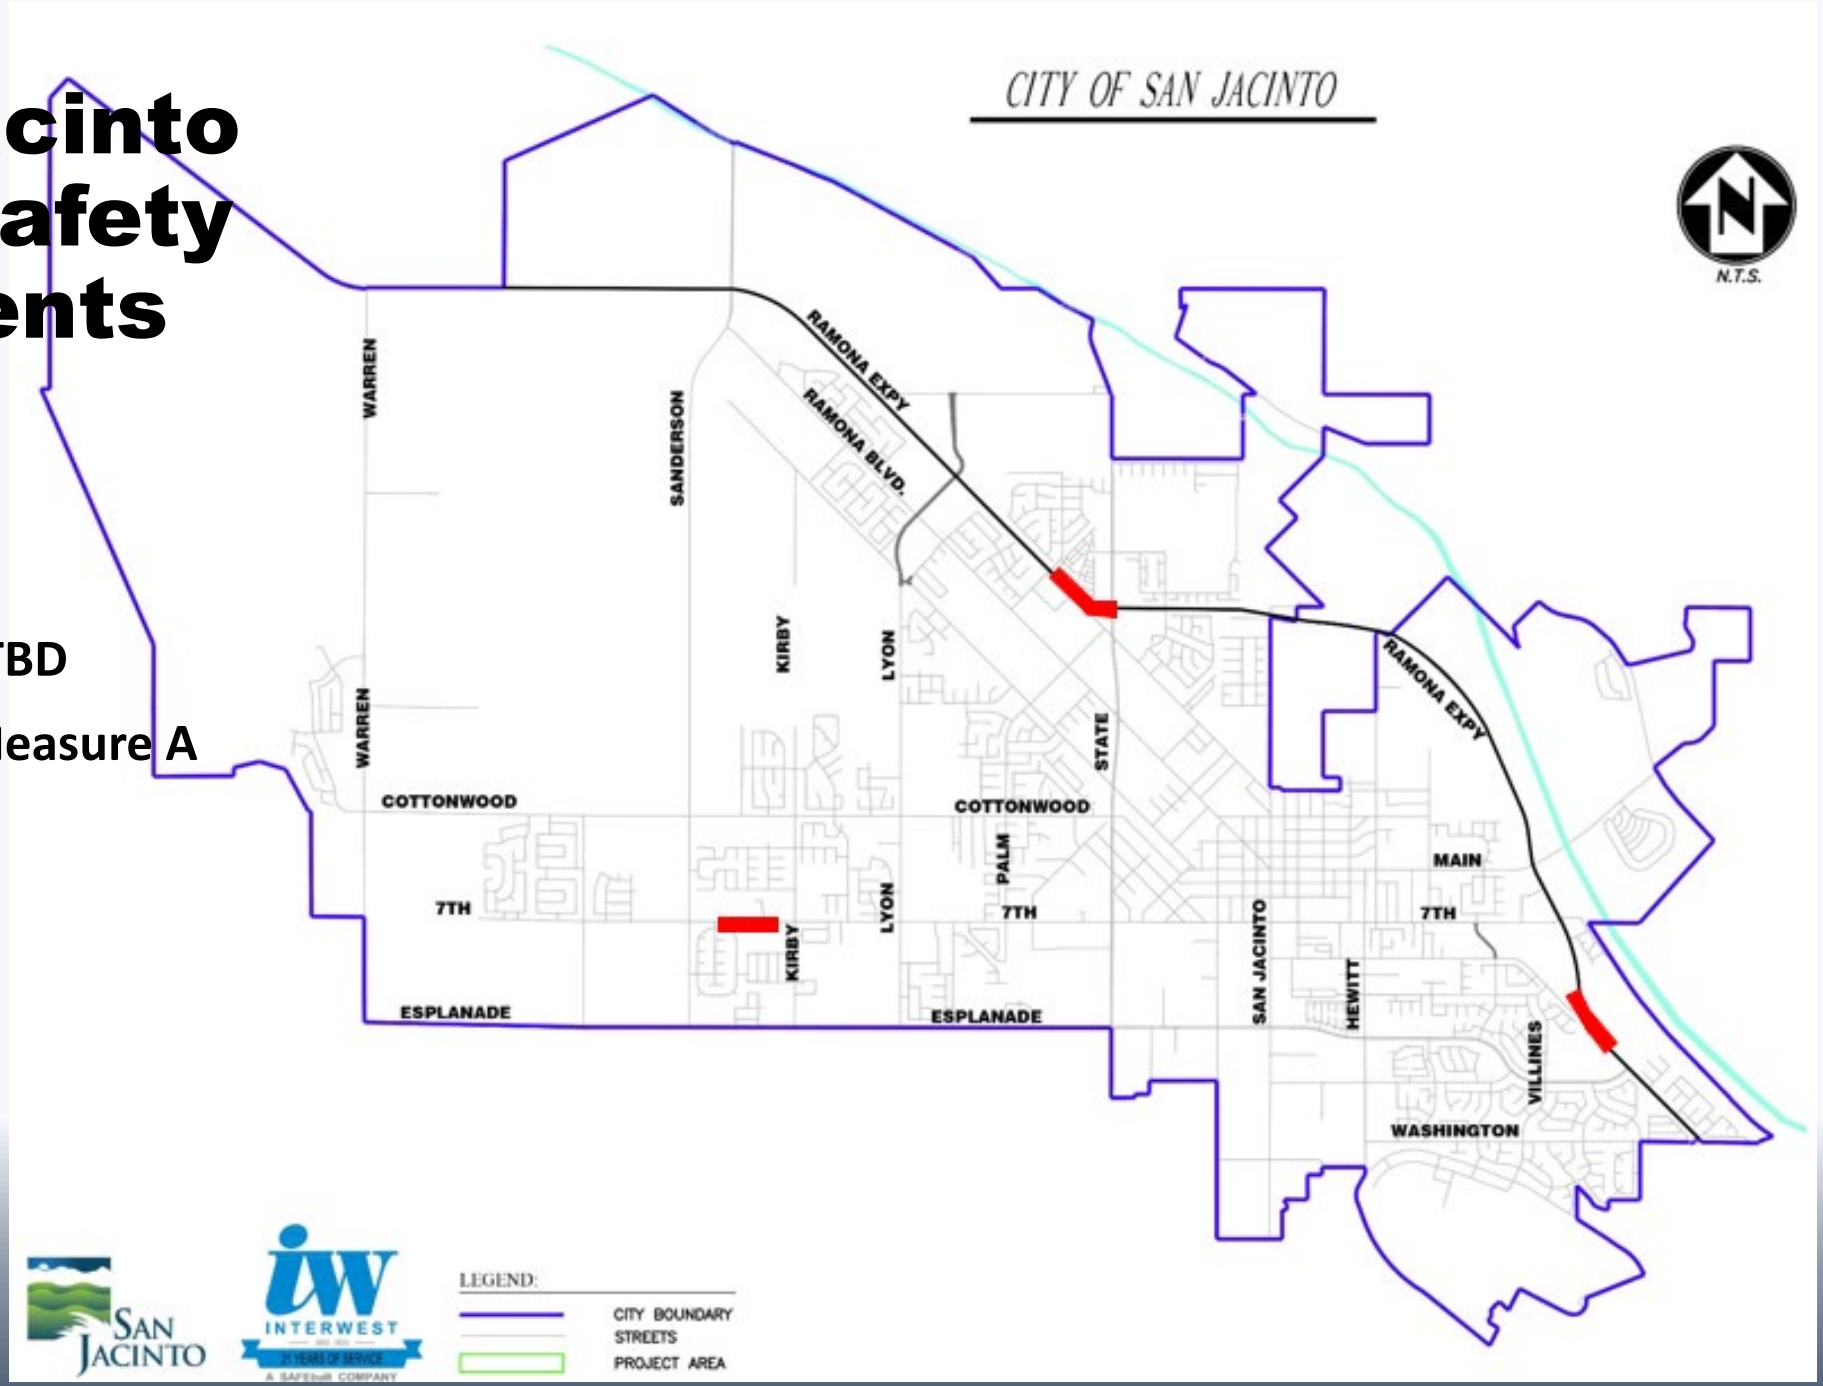
Kesha Ct, Wente Ct, and Napa Ct Pavement Rehab

- Budgeted Amount: N/A
- Estimated Cost: $630,000
- Anticipated Completion: TBD
- Funding Source: Need to identify funding sources.



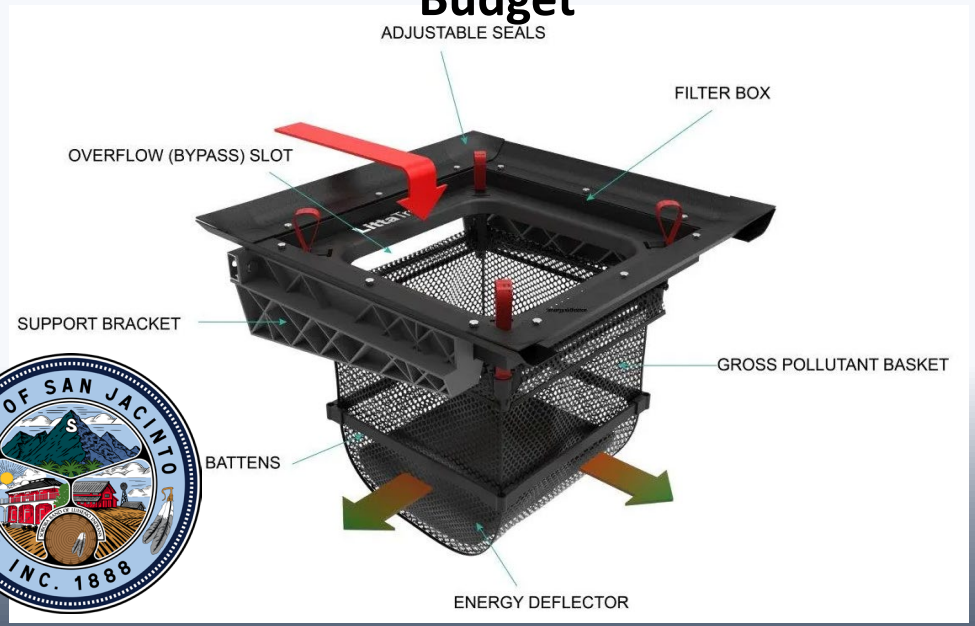
Ramona Expy Rehab Between Sanderson Ave and Lyon Ave

- Budgeted Amount: N/A
- Estimated Cost: $3,675,000
- Anticipated Completion: TBD
- Funding Source: Need to identify funding sources.



Eagle Road & Community College Drive Pavement Improvements

- Budgeted Amount: N/A
- Estimated Cost: $693,000
- Anticipated Completion: TBD
- Funding Source: RMRA

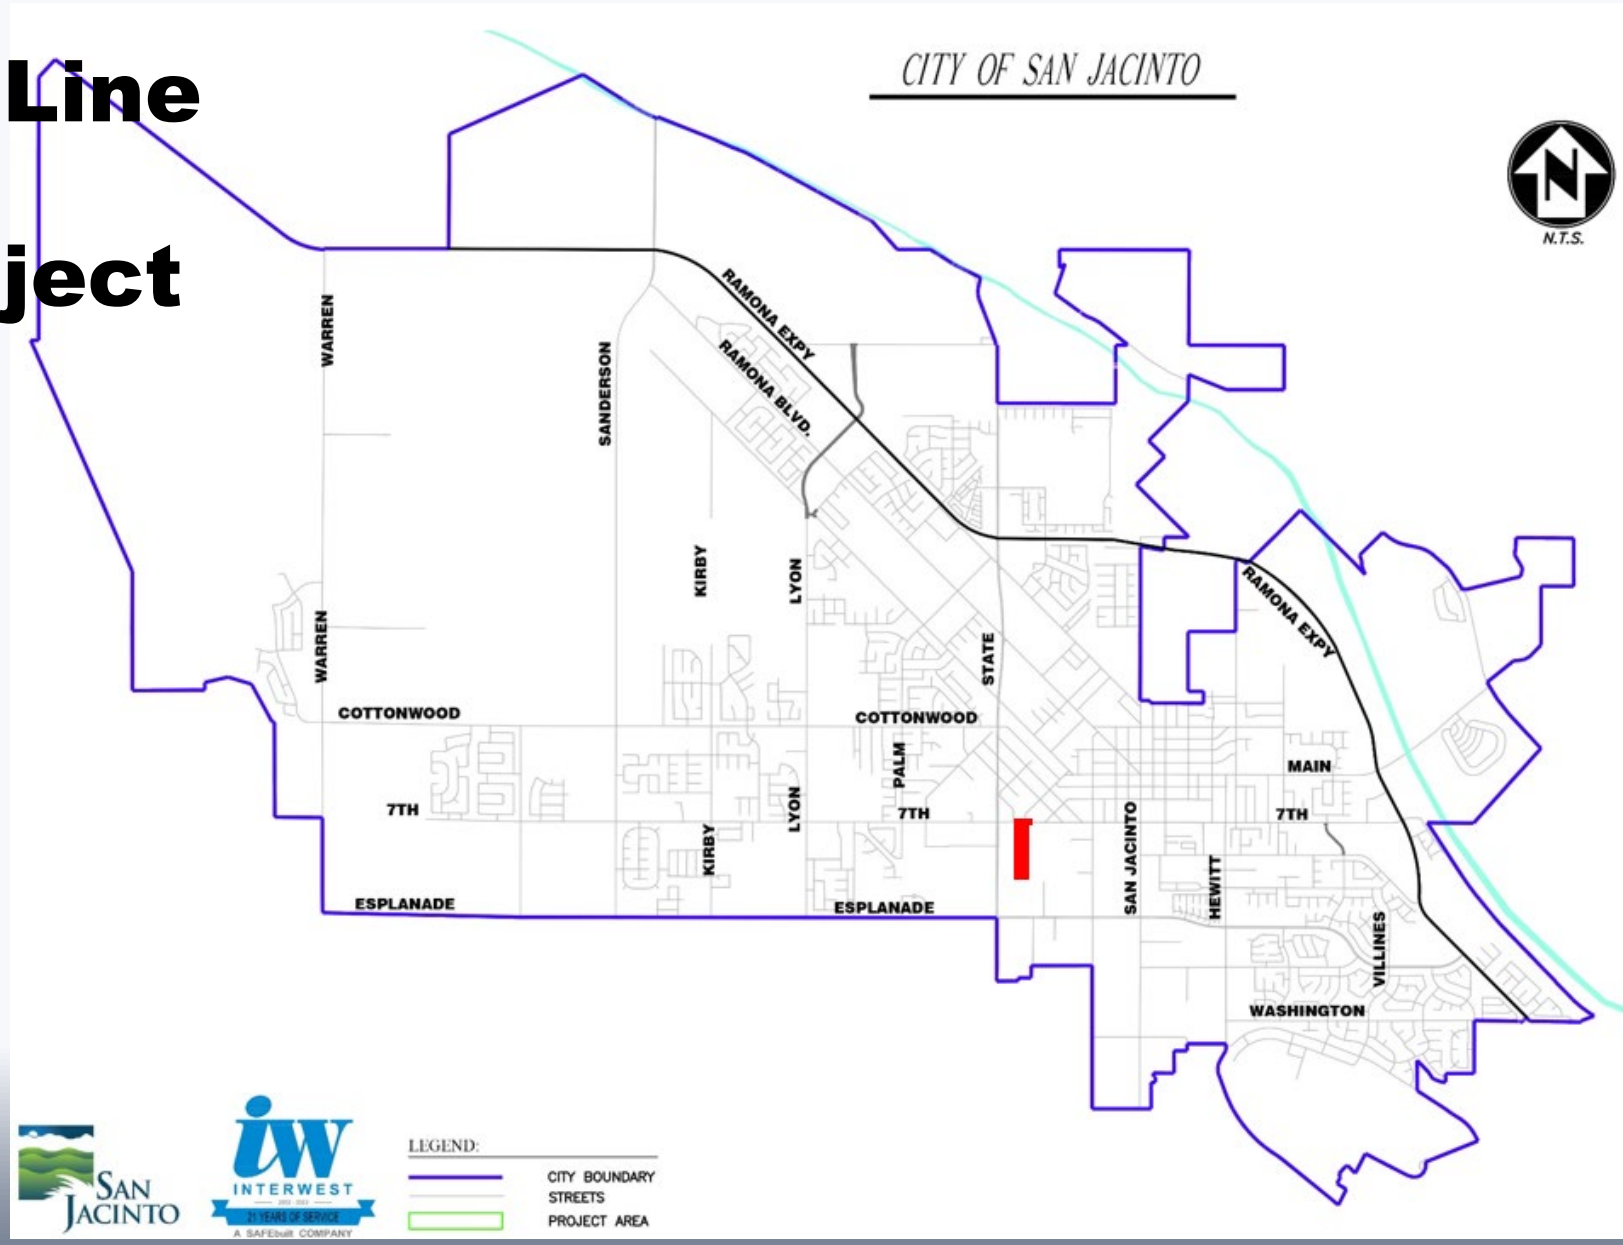


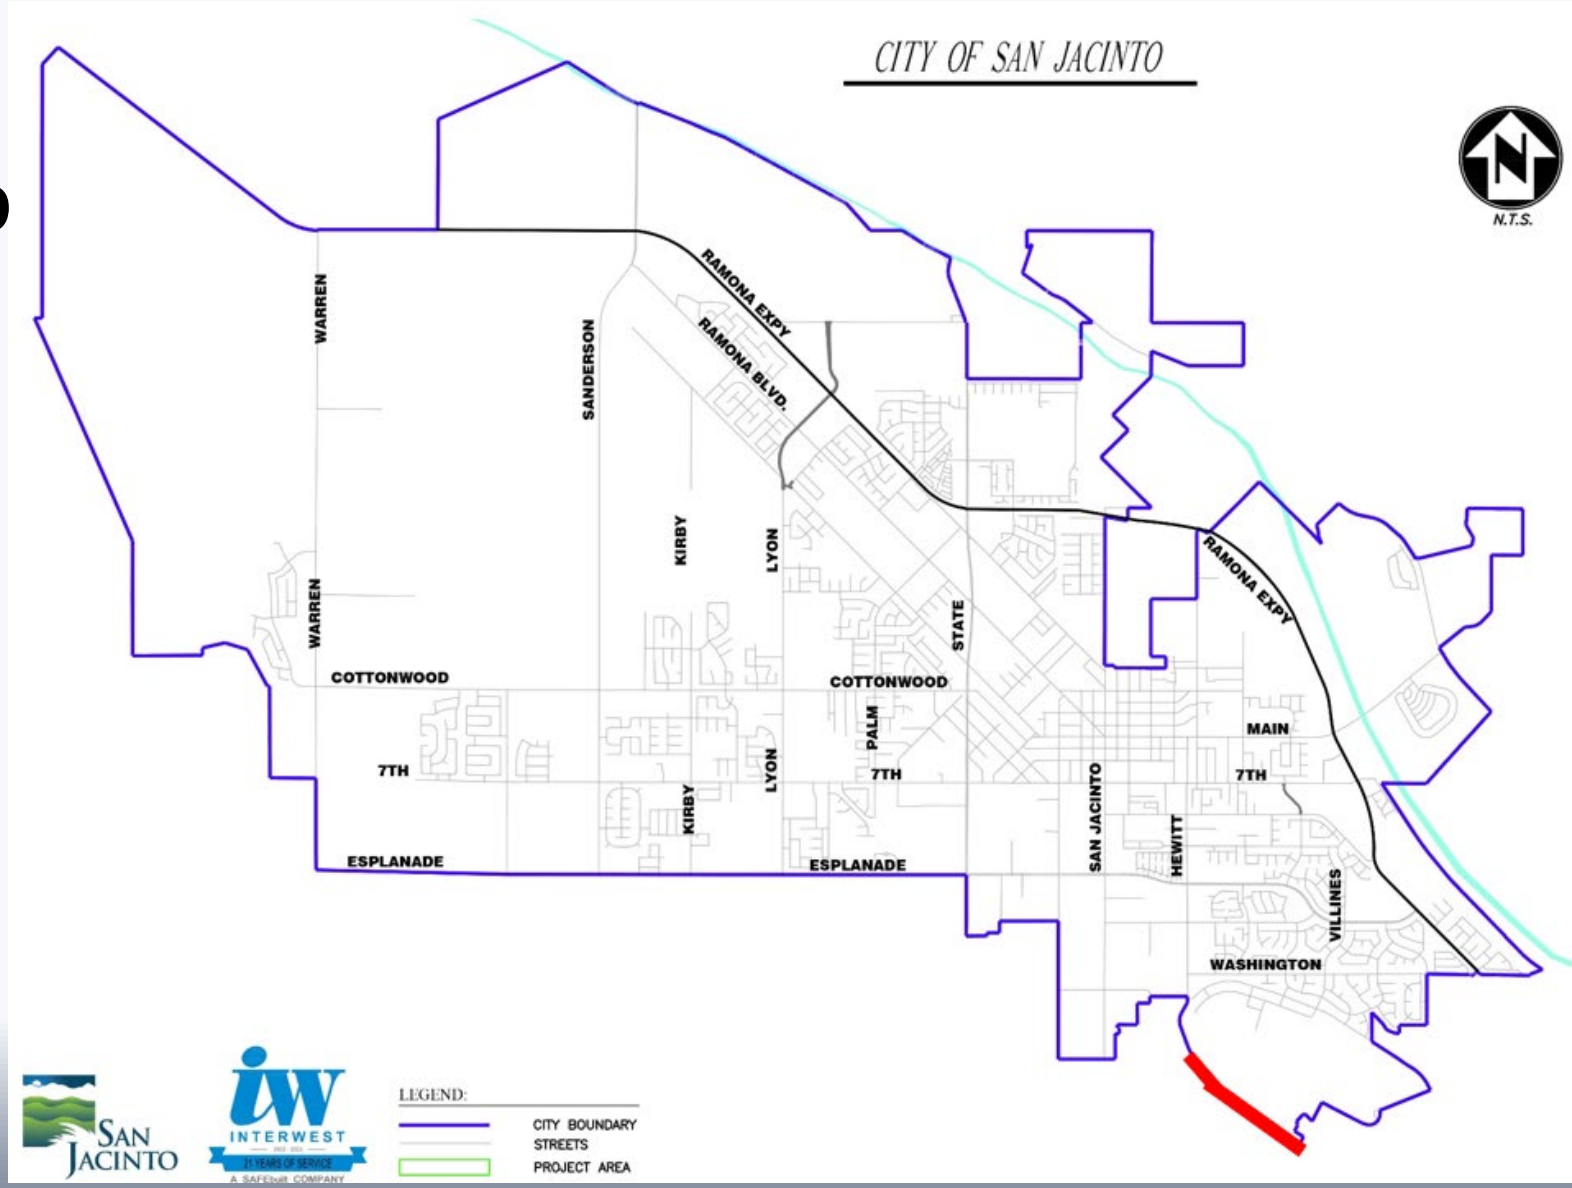
2026 San Jacinto Striping & Safety Improvements

- Budgeted Amount: N/A
- Estimated Cost: $400,000
- Anticipated Completion: TBD
- Funding Source: RMRA, Measure A

San Jacinto Catch Basin Retrofit Project

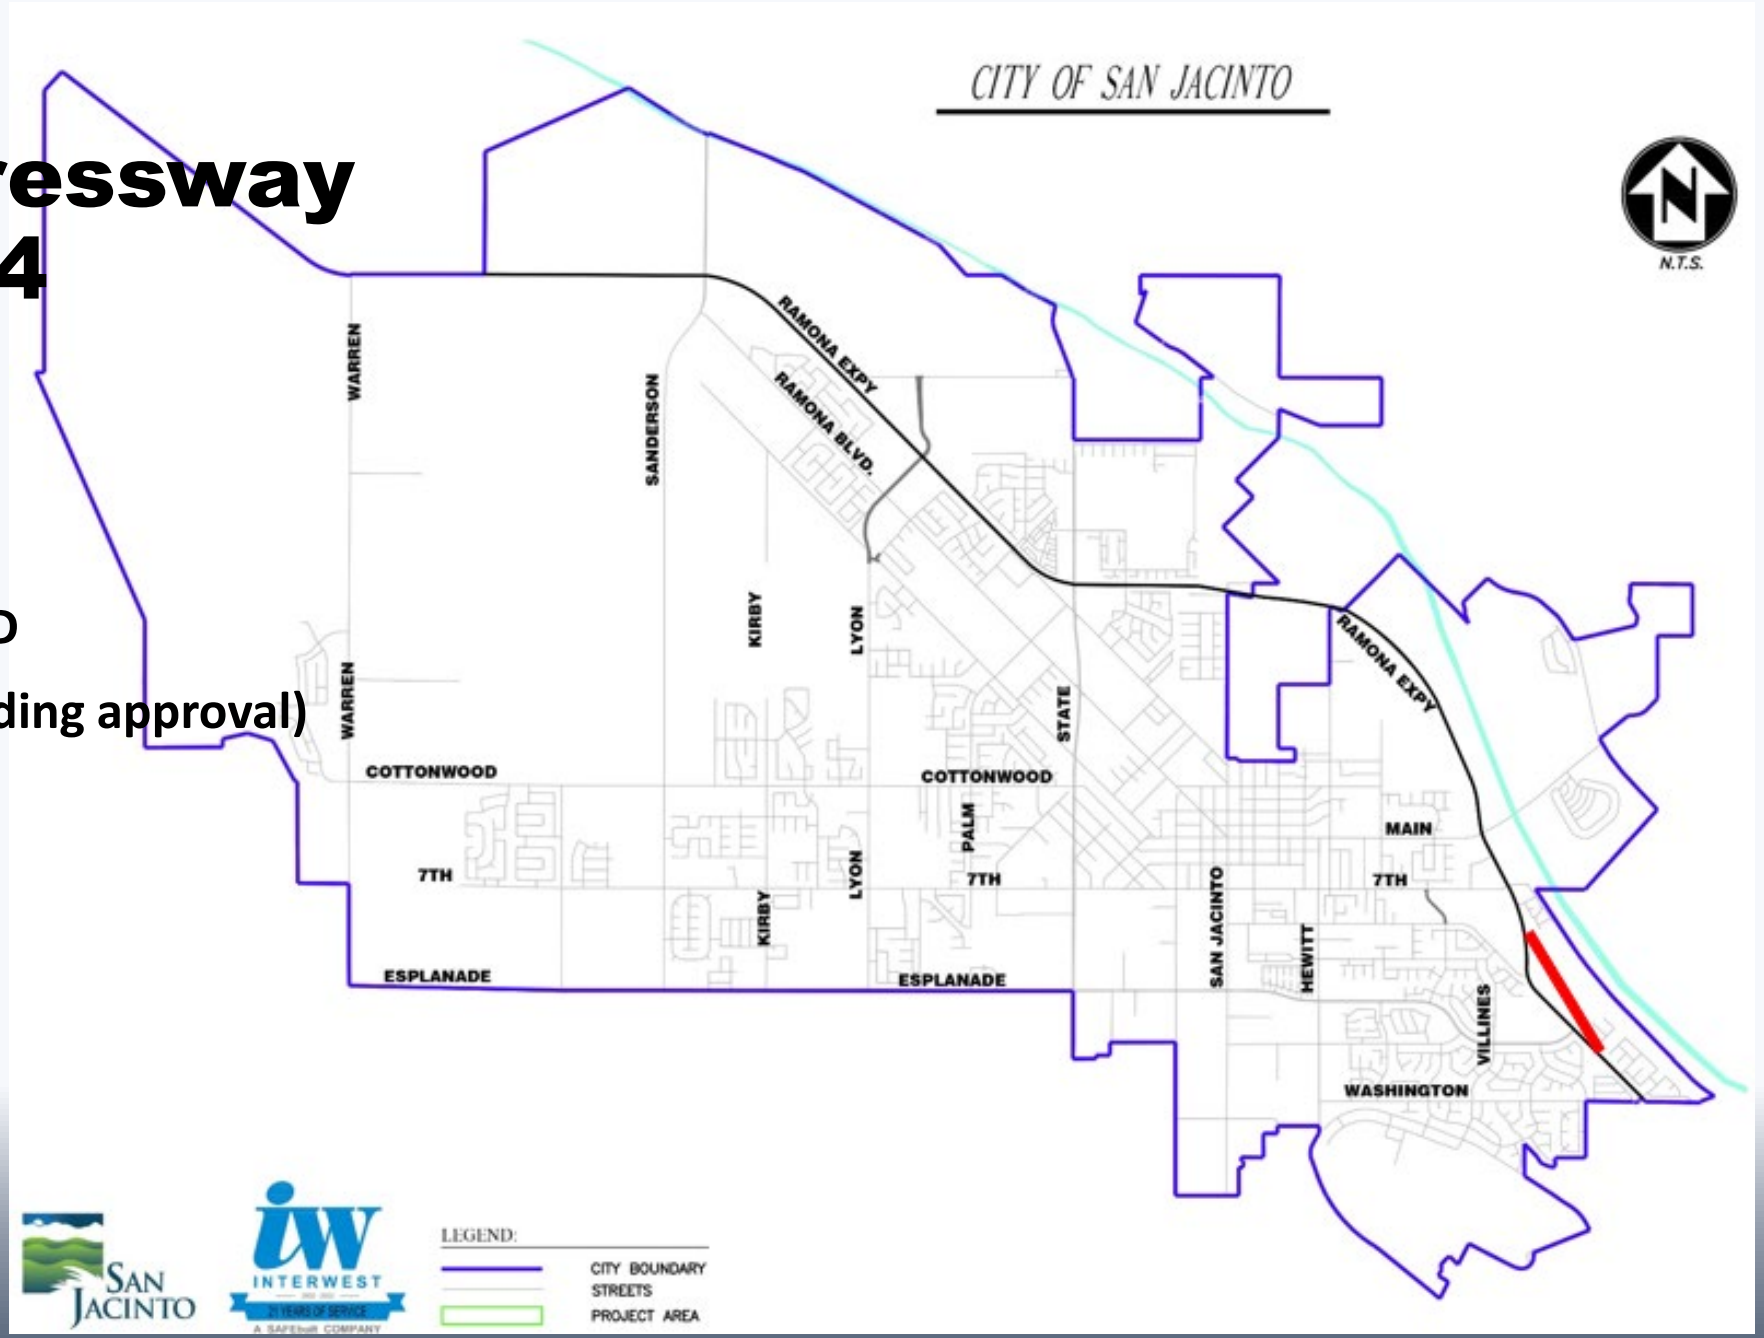
- **Budgeted Amount: N/A**
- **Estimated Cost: $321,000**
- **Anticipated Completion: TBD**
- **Funding Source: Public Utilities Budget**





San Jacinto MDP Line E-1 Channel Improvement Project

- Budgeted Amount: N/A
- Estimated Cost: $372,000
- Anticipated Completion: TBD
- Funding Source: City will apply for RCFD funding.



Park Avenue Pavement Rehab

- Budgeted Amount: N/A
- Estimated Cost: $734,000
- Anticipated Completion: TBD
- Funding Source: Need to identify funding sources.

Ramona Expressway Stage 4

- Budgeted Amount: N/A
- Estimated Cost: $1,000,000
- Anticipated Completion: TBD
- Funding Source: TUMF (pending approval)

Questions?

June 2, 2026

TO:	City Council
REQUESTED BY:	Stuart McKibbin
APPROVED BY:	Robert A. Johnson, City Manager
SUBJECT:	Revision to Line E of the San Jacinto Valley Master Drainage Plan

RECOMMENDATION:

Staff recommends the City Council:

1. **DETERMINE** that, in accordance with CEQA Guidelines Sections 15162 and 15164, that the proposed Addendum to the previously adopted Environmental Impact Report for the San Jacinto Valley Master Drainage Plan (MDP) adequately addresses the Revision to Line E of the MDP, and that no subsequent or supplemental environmental review is required because the revision to Line E would not result in new or more significant environmental impacts than those previously analyzed and no substantial changes in circumstances have occurred that would create new or more significant environmental impacts.
2. **APPROVE** the revision to Line E of the San Jacinto Valley Master Drainage Plan, in conformance with the Preliminary Design Report;
3. **DIRECT** Staff to revise the San Jacinto Valley Master Drainage Plan Map to reflect the modifications in the Preliminary Design Report.

DISCUSSION:

The Master Drainage Plan for the San Jacinto Valley (SJV-MDP) was adopted in October 2015 by the Board of Supervisors for the Riverside County Flood Control & Water Conservation District (RCFC&WCD). The SJV-MDP revised and replaced the San Jacinto Master Drainage Plan (SJMDP) and Northwest Hemet Master Drainage Plan (NW Hemet MDP) with a new master drainage plan for those areas plus additional areas to the west and north of the SJMDP and NW Hemet MDP. The boundaries of the SJV-MDP encompass approximately 27.4 square miles and are generally bounded by the San Jacinto River to the north, Meridian Street to the east, Florida Avenue to the south, and Warren Road to the west. The SJV-MDP includes land within the cities of San Jacinto and Hemet, in addition to unincorporated Riverside County.

Master Drainage Plans by their very nature, are living documents. They provide a baseline strategy that can be modified as areas build out. Such is the case with the SJV-MDP, which identifies, at a conceptual level, general alignments and locations of drainage facilities. Precise facility locations are dictated by conditions existing at the time each facility is designed. Likewise, the facility sizes identified in the SJV-MDP are preliminary.

An Environmental Impact Report (EIR) for the SJV- MDP and the San Jacinto Regional Area Drainage Plan (ADP) Amendment was certified by the San Jacinto City Council on January 14, 2013. The certified EIR analyzed the current alignment of MDP facilities (State Clearinghouse No. 2009041077).

On January 14, 2013, the San Jacinto City Council adopted Resolution No. 3454; certifying the SJV-MDP EIR, adopting the Mitigation Monitoring and Reporting Program (MMRP), and adopting a Statement of Overriding Considerations. That same date, the City Council also adopted Resolution No. 3455; adopting the San Jacinto Valley Master Drainage Plan, San Jacinto Regional Area Drainage Plan Amendment, and a revised interim drainage fee.

The SJV-MDP EIR provides a programmatic level analysis of the SJV-MDP and San Jacinto Valley Regional Area Drainage Plan Amendment (SJV-ADP Amendment) based on the conceptual location of the facilities identified in the SJV-MDP. Pursuant to Section 15168 of the State CEQA Guidelines, a program level environmental analysis enabled the City to examine the overall effects of implementing the SJV-MDP and SJV-ADP Amendment and approve that project. Following this approach, when individual SJV-MDP Facilities, also referred to as implementing projects, are proposed, the City, and/or RCFCWCD are required to examine each MDP Facility to determine if its effects were fully analyzed in the SJV-MDP EIR or if an additional facility-specific environmental document is required.

Line E is a planned regional drainage facility within the SJV-MDP that would provide a service to an approximately 1,870-acre tributary area. Construction of Line E does not remove properties from the 100-Year floodplain of the San Jacinto River. This will be accomplished by elevating them from the San Jacinto River Floodplain. Line E as identified in the SJV-MDP and evaluated in the SJV-MDP EIR is an earthen lined channel, extending upstream and north from the San Jacinto Reservoir west of Sanderson Avenue, turning west crossing Sanderson Avenue west continuing west parallel to and south of the Metropolitan Water District of Southern California's (Metropolitan's) Casa Loma Barrel No. 1 easement to SJV-MDP Line Z. The Line E-Y-Z Confluence Basin is identified in the SJV-MDP and evaluated in the SJV-MDP EIR as an unlined basin.

A Preliminary Design Report (PDR) and 30% long-axis plan were initiated for the construction of Line E. As the Project is within the jurisdiction of City of San Jacinto, Riverside County Flood Control & Water Conservation District, and impacts major existing or planned facilities operated by Eastern Municipal Water District ("EMWD"), Municipal Water District ("MWD"), and Riverside County Transportation Commission (RCTC), detailed coordination between all 5 agencies was required. During these meetings constraints were identified and an alternative alignment was identified during a process to avoid these constraints. Specifically, the proposed project alignment intentionally avoids the EMWD and MWD easements for pipelines located near the Project inlet, and, at the same time avoids the riparian habitat around the north side of the San Jacinto Reservoir. This has resulted in no hard connection between Line E and the San Jacinto Reservoir Spillway, as well as no hard connection between Line E and Line E-2. Maintenance access within private property has been considered and provided for in the Project. There is preliminary evidence of biological resources on the Chen Fei property (APN 436-010-003) located north of the proposed Golden Ocean Realty properties (APNs 436-030-001 and 436-170-001), as well as potentially environmentally sensitive areas along the south side of the Casa Loma Barrel No. 1 MWD right-of-way west of Sanderson Avenue, both of which the Project will avoid with the proposed design. The proposed Project also took into consideration several future projects planned by public agencies in the same area, such as RCTC and EMWD and was realigned to avoid conflicts with major sewer infrastructure located where the MDP planned a crossing of Sanderson Avenue near the De Anza Lift Station. Furthermore, the property, right-of-way acquisition is simplified and better controlled with the proposed alignment.

From upstream to downstream, the proposed Line E Channel begins north (downstream) of the San Jacinto Reservoir Spillway and north of Metropolitan's Casa Loma Barrel No. 2 easement, continuing north as an earthen trapezoidal channel parallel to, and east of, Sanderson Avenue through an agricultural parcel (APN 436-030-004), turning west underneath Sanderson Avenue through APN 436-010-003 and turning north, then west before future Record Road through APNs 432-030-010, 432-030-012, and 432-030-006 to the proposed Confluence Basin. The outflows from the proposed Confluence Basin would be conveyed northerly across Metropolitan's Casa Loma Barrel No. 1 and outflow at the terminus of Line E to an existing low-flow drainage channel that would, at some point in the future, be constructed as an ultimate MDP facility ("Line Z"), but is currently in interim condition.

As part of the design of the proposed Project, multiple meetings were conducted to solicit input on the proposed design. In addition, the alignment, hydraulics, and hydrology for the Project underwent two rounds of review with RCFC&WCD prior to the final PDR; the first in October of 2023 and second in December of 2023. RCFC&WCD reviewed the full PDR in February of 2024. An additional review was completed in April of 2024. A maintenance, revised alignment, and hydraulics review was completed by RCFC&WCD in October of 2024.

There have been 2 reviews conducted by MWD. The first in November of 2024, where MWD reviewed the PDR, Geotechnical Report, and Structural Report and the second in February of 2025, with MWD approval on March 3, 2025.

Because the Line E Channel would be a regional flood control facility pursuant to the adopted SJV-MDP, the RCFC&WCD would need to be able to maintain the Line E Channel and corresponding access roads throughout the life of the facility. Specifically, RCFC&WCD would maintain the training berms and inlet line and grade via a drainage easement and slope easement for the portion of the Line E channel, plus access roads, RCBs and drop structures, located within right-of-way that would be owned by RCFC&WCD within APNs 436-170-001, 436-030-004, 436-010-003, and 430-100-016. RCFC&WCD would maintain the portion of Line E, that crosses over the Casa Loma Barrel No. 1 and Metropolitan right-of-way via a maintenance easement. Alignment of the Line E Channel through private property will require dedication from applicable property owners as a condition of development, consent of applicable property owners, or formal acquisition,

The City of San Jacinto would maintain the Confluence Basin and pump, and the segment of the Line E Channel with 15-foot access roads within APNs 432-030-011, 432-030-012 and 432-030-010.

The result of the proposed Project meets the objective to remove flooding risk to the area from the upstream tributary area, and Line E conveys the modeled 100-Year flow rates within the design parameters required by RCFC&WCD.

ENVIRONMENTAL REVIEW:

In accordance with the California Environmental Quality Act (CEQA) (Public Resources Code Sections 21000–21177), the City of San Jacinto (hereinafter “San Jacinto” or “the City”), as Lead Agency, the City of Hemet and Riverside County Flood Control and Water Conservation District, as Responsible Agencies, prepared the SJV-MDP EIR (State Clearinghouse No. 200904177). The SJV-MDP EIR was circulated for a 30-day public review period from May 17, 2010 to June 30, 2010, pursuant to State CEQA Guidelines Section 15073. On January 14, 2013, the San Jacinto City Council adopted Resolution No. 3454; certifying the SJV-MDP EIR, adopting the Mitigation Monitoring and Reporting Program (MMRP), and adopting a Statement of Overriding Considerations. That same date, the City Council also adopted Resolution No. 3455; adopting the San Jacinto Valley Master Drainage Plan, San Jacinto Regional Area Drainage Plan Amendment, and a revised interim drainage fee.

On October 6, 2015, Riverside County Flood Control and Water Conservation District Board of Supervisors, as Responsible Agency, adopted Resolution F2015-06 which, considered the SJV-MDP EIR certified by the City, made Responsible Agency Findings, adopted the City’s MMRP, and adopted a Statement of Overriding Considerations. This resolution also rescinded the San Jacinto Area Master Drainage Plan and the Northwest Hemet Master Drainage Plan, and approved the SJV-MDP.

The SJV-MDP EIR provides a programmatic level analysis of the SJV-MDP and San Jacinto Valley Regional Area Drainage Plan Amendment (SJV-ADP Amendment) based on the conceptual location of the facilities identified in the SJV-MDP. Pursuant to Section 15168 of the State CEQA Guidelines, a program level environmental analysis enabled the City to examine the overall effects of implementing the SJV-MDP and SJV-ADP Amendment and approve that project. Following this approach, when individual SJV-MDP Facilities, also referred to as implementing projects or MDP Facilities. are proposed, the City, Hemet, and/or RCFCWCD are required to examine each MDP Facility to determine if its effects were fully analyzed in the SJV-MDP EIR or if an additional facility-specific environmental document, such as a Notice of Exemption (NOE), Addendum, Initial Study leading to a Negative Declaration or Mitigated Negative Declaration, Supplemental EIR, or Subsequent EIR is required. (SJV-MDP EIR, p. 1.0-7.)

The process for preparing an Addendum to a previously certified EIR is set forth in State CEQA Guidelines Section 15164. Addendum No. 1 to the SJV MDP EIR is included as Appendix A to the Staff Report. Based on the Findings included in Section 3 of the Addendum, the City has reviewed the Line E Project design report in light of the requirements defined under the State CEQA Guidelines using the Supplemental Environmental Checklist Form in Section 4 of the Addendum. The City, as the CEQA lead agency, has determined that none of the above conditions requiring preparation of a subsequent or supplemental MND or EIR apply. Therefore, an Addendum to the San Jacinto Master Drainage Plan (MDP) EIR is the appropriate environmental documentation for the Line E Project.

1. Introduction and Background

Addendum No. 1 to the EIR for the San Jacinto Valley Master Drainage Plan and San Jacinto Regional Area Drainage Plan Amendment for the Line E Project analyzes the impacts associated with construction and operation of two of the facilities identified in the San Jacinto Valley Master Drainage Plan (SJV-MDP), Line E and the Line E-Y-Z Confluence Basin, which are hereinafter collectively referred to as the "Line E Project" or "Project" in this Addendum. A full description of the proposed Line E Project is provided in Section 2, Project Description and Setting. The following paragraphs describe the approvals of the San Jacinto Valley Master Drainage Plan and San Jacinto Regional Area Drainage Plan Amendment EIR (hereinafter "SJV-MDP EIR.")

Previous Environmental Document

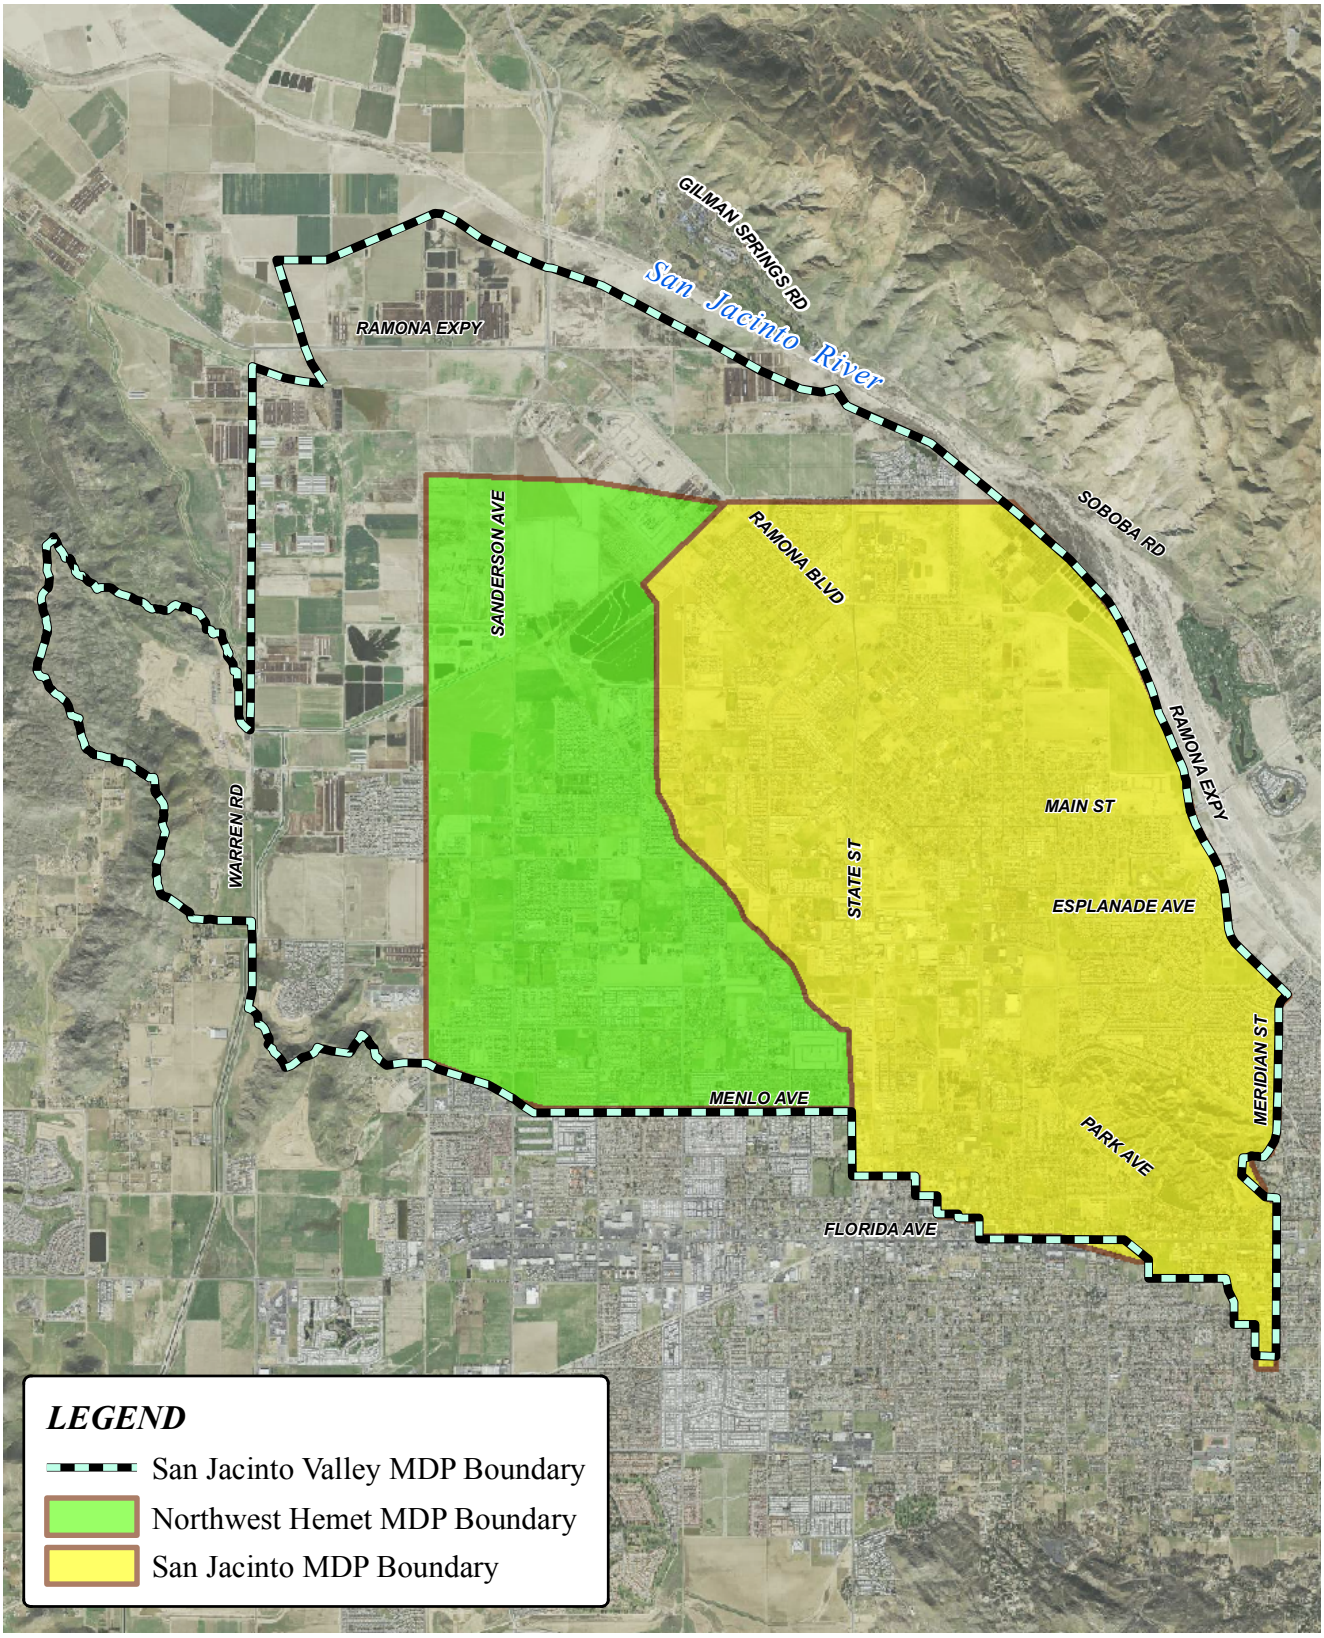
In accordance with the California Environmental Quality Act (CEQA) (Public Resources Code Sections 21000–21177), the City of San Jacinto (hereinafter "San Jacinto" or "the City"), as Lead Agency, the City of Hemet and Riverside County Flood Control and Water Conservation District, as Responsible Agencies, prepared the SJV-MDP EIR (State Clearinghouse No. 200904177). The SJV-MDP EIR was circulated for a 30-day public review period from May 17, 2010 to June 30, 2010, pursuant to State CEQA Guidelines Section 15073. On January 14, 2013, the San Jacinto City Council adopted Resolution No. 3454; certifying the SJV-MDP EIR, adopting the Mitigation Monitoring and Reporting Program (MMRP), and adopting a Statement of Overriding Considerations. That same date, the City Council also adopted Resolution No. 3455; adopting the San Jacinto Valley Master Drainage Plan, San Jacinto Regional Area Drainage Plan Amendment, and a revised interim drainage fee. The SJV-MDP EIR and MMRP are available for review at the following locations:

City of San Jacinto 595 S. San Jacinto Ave., San Jacinto, CA 92583	Riverside County Flood Control and Water Conservation District 1995 Market St. Riverside, CA 92501

On October 6, 2015, Riverside County Flood Control and Water Conservation District Board of Supervisors, as Responsible Agency, adopted Resolution F2015-06 which, considered the SJV-MDP EIR certified by the City, made Responsible Agency Findings, adopted the City's MMRP, and adopted a Statement of Overriding Considerations. This resolution also rescinded the San Jacinto Area Master Drainage Plan and the Northwest Hemet Master Drainage Plan, and approved the SJV-MDP.

The SJV-MDP EIR provides a programmatic level analysis of the SJV-MDP and San Jacinto Valley Regional Area Drainage Plan Amendment (SJV-ADP Amendment) based on the conceptual location of the facilities identified in the SJV-MDP. Pursuant to Section 15168 of the State CEQA Guidelines, a program level environmental analysis enabled the City to examine the overall effects of implementing the SJV-MDP and SJV-ADP Amendment and approve that project. Following this approach, when individual SJV-MDP Facilities, also referred to as implementing projects or MDP Facilities. are proposed, the City, Hemet, and/or RCFCWCD are required to examine each MDP Facility to determine if its effects were fully analyzed in the SJV-MDP EIR or if an additional facility-specific environmental document, such as a Notice of Exemption (NOE), Addendum, Initial Study leading to a Negative Declaration or Mitigated Negative Declaration, Supplemental EIR, or Subsequent EIR is required. (SJV-MDP EIR, p. 1.0-7.)

The SJV-MDP EIR identified the following impacts as significant and unavoidable: agricultural resources, air quality, and population/housing. Impacts to agricultural resources were determined to be significant and unavoidable because implementation of the SJV-MDP could support and encourage planned development per the San Jacinto, Riverside County, and Hemet General Plans within the boundaries of



the SJV-MDP. Based on the conceptual locations of MDP facilities, construction of the Line D Basin, which is anticipated to encompass approximately 15 acres, in addition to the open channels designated as Lines 1, 2, E, G-3, H, J-3, K, W, and X, which are anticipated to encompass approximately 122 acres would result in the direct conversion of approximately 137 acres of Important Farmland to a non-agricultural use by converting the property to flood control facilities. All of these facilities are within the City of San Jacinto except a small portion of Line 1, a portion of Line 2, most of Line J-3, and Line K, which were in unincorporated Riverside County at the time the SJV-MDP EIR was prepared. Implementation of the SJV-MDP would also facilitate development consistent with the San Jacinto, Riverside County, and Hemet General Plans, which could indirectly convert Important Farmland to non-agricultural uses. (SJV-MDP EIR, pp. 3.2-12 – 3.12-13, 5.0-18.)

Impacts to air quality resulting from implementation of the SJV-MDP were determined to be significant and unavoidable because depending on the facility or combination of MDP facilities constructed at any given time, SCAQMD regional significance thresholds for NOx, PM-10, and PM-2.5 and SCAQMD LSTs for PM-10 and PM-2.5 could be exceeded during construction. Although these are direct, short-term impacts that will cease once construction is complete, they remain unavoidable and are unmitigable because neither the City, Riverside County, or Hemet can control the number of facilities constructed at a given time. (SJV-MDP EIR, pp. 3.3-42 – 3.3-43,5.10-18.)

Regarding impacts to population/housing, the SJV-MDP could indirectly induce growth by removing one potential barrier to growth through the provision of flood control infrastructure. The Hemet, San Jacinto, and Riverside County General Plans identify the type of development and growth that would be allowed within the boundaries of the SJV-MDP. The SJV-MDP does not propose any changes to the land uses from what is identified in the aforementioned General Plans; thus, potential indirect impacts from development in the MDP project area are not expected to exceed the potential impacts that have already been disclosed in the EIRs prepared for the Hemet, San Jacinto, and Riverside County General Plans. However, because implementation of the SJV-MDP could indirectly induce substantial population growth in the MDP project area, impacts are considered significant. (SJV-MDP EIR, pp. 3.8-8, 5.0-18.)

San Jacinto Valley Master Drainage Plan Description

The SJV-MDP revised and replaced the San Jacinto Master Drainage Plan (SJMDP) and Northwest Hemet Master Drainage Plan (NW Hemet MDP) with a new master drainage plan for those areas plus additional areas to the west and north of the SJMDP and NW Hemet MDP. The boundaries of the SJV-MDP encompass approximately 27.4 square miles and are generally bounded by the San Jacinto River to the north, Meridian Street to the east, Florida Avenue to the south, and Warren Road to the west as shown on **Figure 1 – San Jacinto Valley MDP Boundary**. The SJV-MDP includes land within the cities of San Jacinto and Hemet, in addition to unincorporated Riverside County as summarized in **Table A – Acreages and Municipalities within the SJV-MDP** on the page following **Figure 1**.

Municipality	Approximate Acreage	Portion of Total MDP Area
San Jacinto	12,812	73.3%
Hemet	3,216	18.4%
Unincorporated County	1,449	8.3%
Total	17,476	100.0%

Source: SJV-MDP EIR, p. 2.0-1

The SJV-MDP presents an overview of the drainage problems within its boundaries and provides a conceptual solution to those problems. The SJV-MDP proposes a system of open channels (lined and un-lined), underground storm drains, and four detention basins as shown **on Figure 2 – San Jacinto Valley MDP Facilities**. Master Drainage Plans by their very nature, are living documents. They provide a baseline strategy that can be modified as areas build out. Such is the case with the SJV-MDP, which identifies, at a conceptual level, general alignments and locations of drainage facilities; the precise alignments of which would be determined at the time an individual facility is designed. Precise facility locations would be dictated by conditions existing at the time each facility is designed. Likewise, the facility sizes identified in the SJV-MDP are preliminary. Final sizing would be determined based on detailed analysis performed at the design stage. The SJV-MDP proposes the construction of approximately 50 miles of drainage facilities**.** (SJV-MDP EIR, p. 2.0-8.)

The proposed SJV-MDP facilities, when constructed, would require maintenance in order to retain flood control capacity. Following construction of the facilities, it is expected that RCFCWCD would operate and maintain most of the SJV-MDP storm drains, channels, and basins. Maintenance of storm drains and concrete channels typically consists of keeping these facilities and their side drains clear of debris and sediment, as well as annual repair of access roads (at a rate of two miles per day), repair of fences (approximately three to four times per year), and removing graffiti. On rare occasions, major repairs may be required following damaging storm events. Thus, major grading would not routinely occur while maintaining the underground storm drains and open concrete channels. To maintain the constructed facilities, RCFCWCD would occasionally use equipment similar to the types used to construct the proposed facilities. (SJV-MDP EIR, p. 2.0-14.)

RCFCWCD inspects earthen channels and basins approximately six to eight times per year. The routine maintenance of the earthen channels and basins would likely require the following activities: removal of deposition, repair of eroded slopes, and reduction of fire hazard by annually mowing and application of herbicides (approximately four to six times per year) as well as the maintenance activities described in the previous paragraph. Vegetation must be removed or mowed annually (or as necessary) to provide the designed hydraulic capacity. Any vegetation that may pose a fire hazard to adjacent structures must also be maintained. The design capacity of the facility and the frequency, duration, and velocity of runoff usually dictate the frequency of vegetation maintenance. Most facilities require some annual vegetation control. Maintenance of the earthen facilities would also include occasional erosion repair and sediment removal.

0 1 2 3 Miles

Figure 2 - San Jacinto Valley MDP Facilities

Line E Addendum

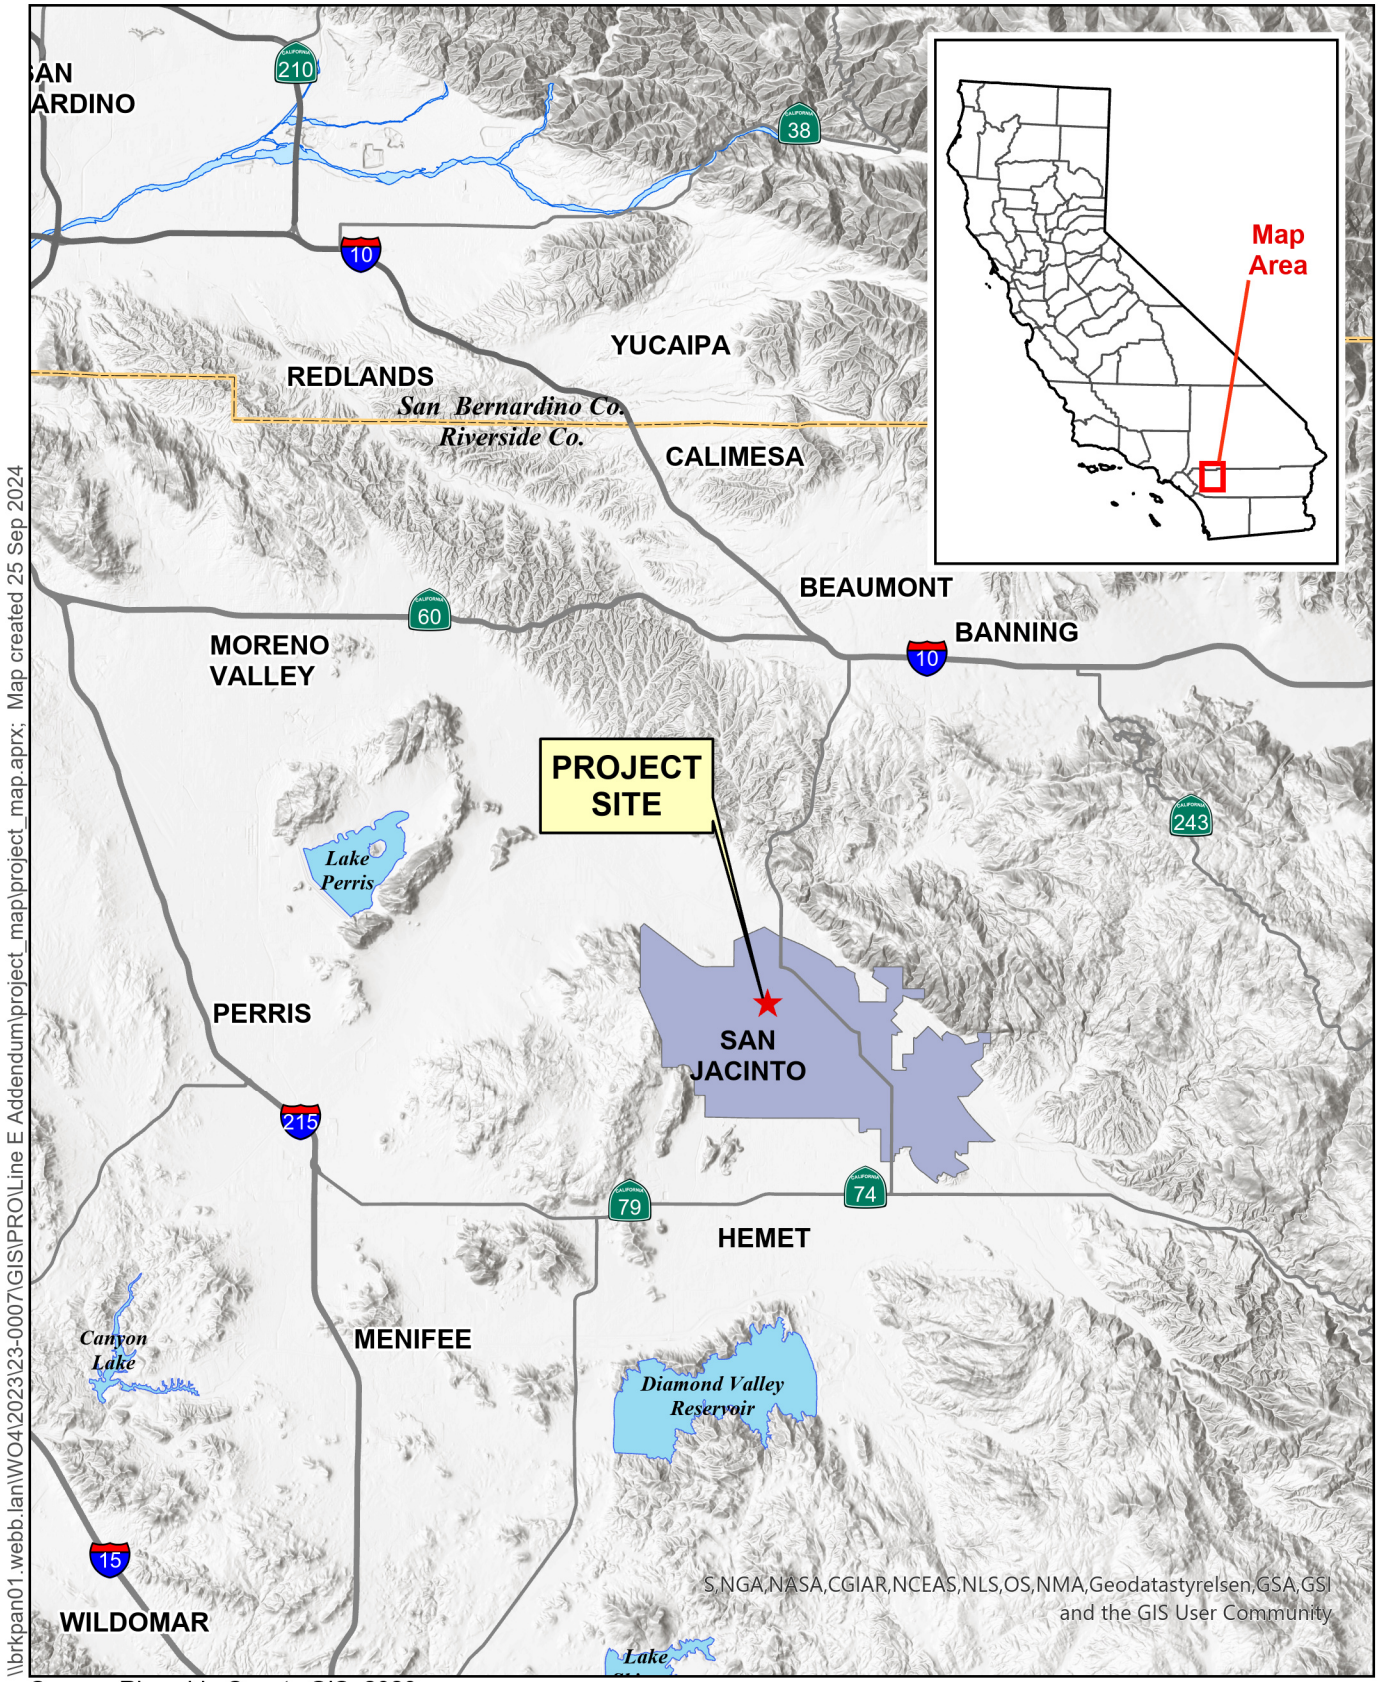
ALBERT A. WEBB ASSOCIATES

The frequency of these maintenance activities is a function of storm flows, and is difficult to estimate. RCFCWCD would occasionally need to substantially grade and repair the earthen facilities. (SJV-MDP EIR, p. 2.0-14.)

Line E as identified in the SJV-MDP and evaluated in the SJV-MDP EIR is earthen lined channel, extending upstream and north from the San Jacinto Reservoir west of Sanderson Avenue, turning west crossing Sanderson Avenue west continuing west parallel to and south of the Metropolitan Water District of Southern California's (Metropolitan's) Casa Loma Barrel No. 1 easement[1] to SJV-MDP Line Z. The Line E-Y-Z Confluence Basin is identified in the SJV-MDP and evaluated in the SJV-MDP EIR as an unlined basin.

[1] Casa Loma Barrel (or "Siphon") Nos. 1 and 2 are buried water pipelines owned and operated by The Metropolitan Water District of Southern California (Metropolitan).

2. Project Description



The proposed SJV-MDP Line E Channel and Line E-Y-Z Confluence Basin Project are located within San Jacinto (**Figure 3 – Regional Map**). As previously stated, the SJV-MDP identifies conceptual alignments, locations, and sizes of proposed drainage facilities with precise locations and sizes dictated by conditions existing at the time each facility is designed. Line E (hereinafter "Line E Channel") is one of the regional drainage facilities planned by the SJV-MDP that would serve an approximately 1,870-acre tributary area. The Line E-Y-Z Confluence Basin (hereinafter "Confluence Basin") is also a planned SJV-MDP facility to collect flows in a large basin from future SJV-MDP Lines E, Y, and Z. For purposes of this Addendum, the Line E Channel and Confluence Basin are collectively referred to as the "Project" or "Line E Project."

Drainage Facilities

From upstream to downstream, the Line E Channel begins north (downstream) of the San Jacinto Reservoir Spillway and north of Metropolitan's Casa Loma Barrel No. 2 easement, continuing north as an earthen trapezoidal channel parallel to, and east of, Sanderson Avenue through an agricultural parcel (APN 436-030-004), turning west underneath Sanderson Avenue through APN 436-010-003 and turning north, then west before future Record Road through APNs 432-030-010, 432-030-012, and 432-030-006 to the proposed Confluence Basin. The outflows from the proposed Confluence Basin would be conveyed northerly across Metropolitan's Casa Loma Barrel No. 1 and outflow at the terminus of Line E to an existing low-flow drainage channel that would, at some point in the future, be constructed as an ultimate MDP facility ("Line Z"), but is currently in interim condition. Refer to **Figure 4 – Project Map** and **Figure 5 – Project Components.**

The Line E Project components are shown on **Figure 5 – Project Components** and summarized as follows, from upstream (south) to downstream (north):

- Two earthen training berms with 20-foot-wide access roads on the top of each, with a 2:1 slope on the wet side of each training berms and a 20:1 slope on the dry side of each training berm. The Westerly Training Berm is 900 linear feet long and the Easterly Training Berm is approximately 1,514 linear feet long.
- Approximately 1,398 linear feet of earthen trapezoidal channel with 20-foot-wide access roads on both sides of the channel, a channel base width of 65-feet, channel height of up to 10-feet and channel side slopes with 4:1 ratio, and a total right-of-way width of 200-feet east of Sanderson Avenue within APNs 436-030-004 and 436-010-003. This portion of the channel includes three sets of six-cell 12-feet wide by 7-feet high reinforced concrete box (RCB) and concrete transition structures, each for future road crossings. This portion of the channel also includes three sloped rip-rap drop structures.
- One 14-feet wide by 7-feet high stub-out RCB connection for future SJV-MDP Line G, including channel paving and scour protection.
- Approximately 4,468 linear feet of earthen trapezoidal channel within APNs 432-030-010, 432-030-012, and 432-030-006 with 15-foot-wide access roads on both sides of the channel, a channel base width of 65-feet, channel height of up to 10-feet, channel side slopes with 4:1 ratio, and total right-of-way width of 200 feet. This segment of channel includes three sets of four-cell 20-feet wide by 9-feet high RCB and concrete transition structures and two sloped rip-rap drop structures.

Line E Addendum

ALBERT A. WEBB ASSOCIATES

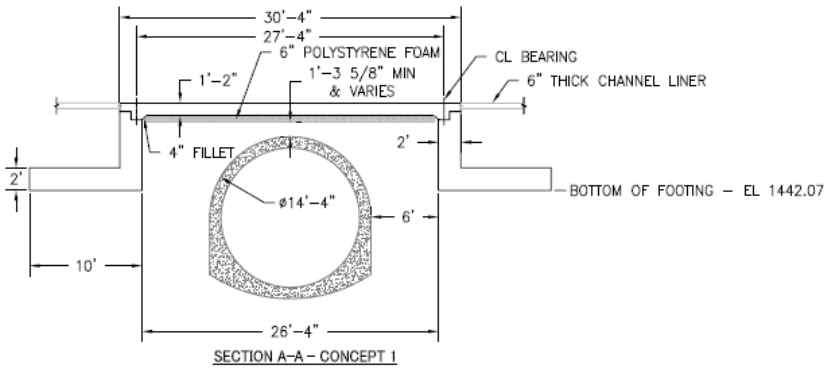
- Approximately 1,122 linear feet of concrete trapezoidal channel with 20-foot-wide access roads on both sides of channel, a channel base width of 155-feet, channel height of up to 5.5-feet, and channel side slopes with 1.5:1 ratio, and total right-of-way width of 270-feet for the channel segment, within APN 430-100-018, from future Record Road to the Metropolitan right-of-way. This segment includes one set of eight-cell 20-feet wide by 7-feet high RCB crossing Record Road (Ramona Boulevard).

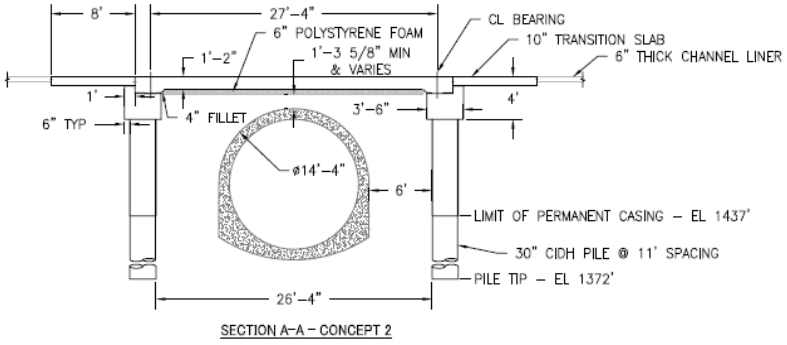
- One unlined SJV-MDP Confluence Basin with 57.5 acre-feet capacity over an area of 6.25 acres on APN 432-030-006, with a 72-hour drawdown. A City-maintained pump station would also be located on the Confluence Basin parcel (APN 432-030-006) to drain the Confluence Basin as well as a basin proposed by a separate project south of the Confluence Basin on APN 432-030-006.



- North of the Confluence Basin, across APNs 430-100-018, 430-100-012, and 430-100-013, approximately 200 linear feet of concrete trapezoidal channel crossing the Metropolitan Water District Casa Loma Barrel No. 1 right-of-way with 20-foot-wide access roads on both sides of the channel, a channel base width that 155 feet, channel height of up to 5.5-feet, channel side slopes that vary from a 10:1 ratio to a 23:1 ratio, and a 560-feet Metropolitan easement width. This segment of channel will provide access to easterly and westerly Metropolitan access roads from Record Road.

Casa Loma Barrel No. 1 Crossing

The Casa Loma Barrel No. 1 is an approximately 14.5-foot diameter reinforced concrete pipe. (Kleinfelder-B, p. 1.) Metropolitan has design policies for structures built over their buried pipelines. Given that the Line E Channel would cross over Casa Loma Barrel No. 1, two designs are being analyzed in this Addendum. Both design concepts support a reinforced concrete slab isolated from the soil above the Casa Loma Barrel No. 1 by a 6-inch layer of polystyrene foam. Concept 1 supports the concrete slab on shallow spread footing foundations and Concept 2 supports the concrete slab on cast-in-drilled-hole (CIDH) concrete piles drilled into deeper soil layers. The purpose of these designs is to prevent additional weight on the existing Casa Loma Barrel No. 1 from the proposed Line E channel, including the weight of maintenance vehicles and channel water. The crossing structure will be placed where soil cover over the existing Casa Loma Barrel No. 1 is less than four feet, or where needed according to soil settlement tests. (Kleinfelder-A.) An easement application with Metropolitan is being processed by RCFC&WCD for review and approval of the crossing of Metropolitan's Casa Loma Barrel No. 1. This easement would be in place prior to any construction in this right-of-way. Metropolitan approved the geotechnical and structural reports for the Casa Loma Barrel No. 1 Crossing in March 2025.



Concept 1: Relieving Slab on Spread Footings

A cross-section of the Concept 1 crossing, which is the preferred structural design, is shown on the following page.

Concept 1 is more consistent with the Detail SK-1 from Metropolitan's *Guidelines for Improvements and Construction Projects Proposed in the Area of Metropolitan's Facilities and Right-of-Way*. (Kleinfelder-A, pp. 1–2.)

Concept 2: Relieving Slab on Cast-in-Drilled-Hole Concrete Piles
A cross-section of the Concept 2 crossing is shown below.

Concept 2 is supported on CIDH concrete piles that rely on skin friction along the length of the pile. The top portion of these concrete piles are cased in a smooth steel casing to limit the transfer of the forces from the piles to the Casa Loma Barrel No. 1.

The *Structures Report,* which presents the design criteria, plans for the preliminary crossing, and preliminary design calculations for crossing the Casa Loma Barrel No. 1 is included as Appendix A.1 to this Addendum.

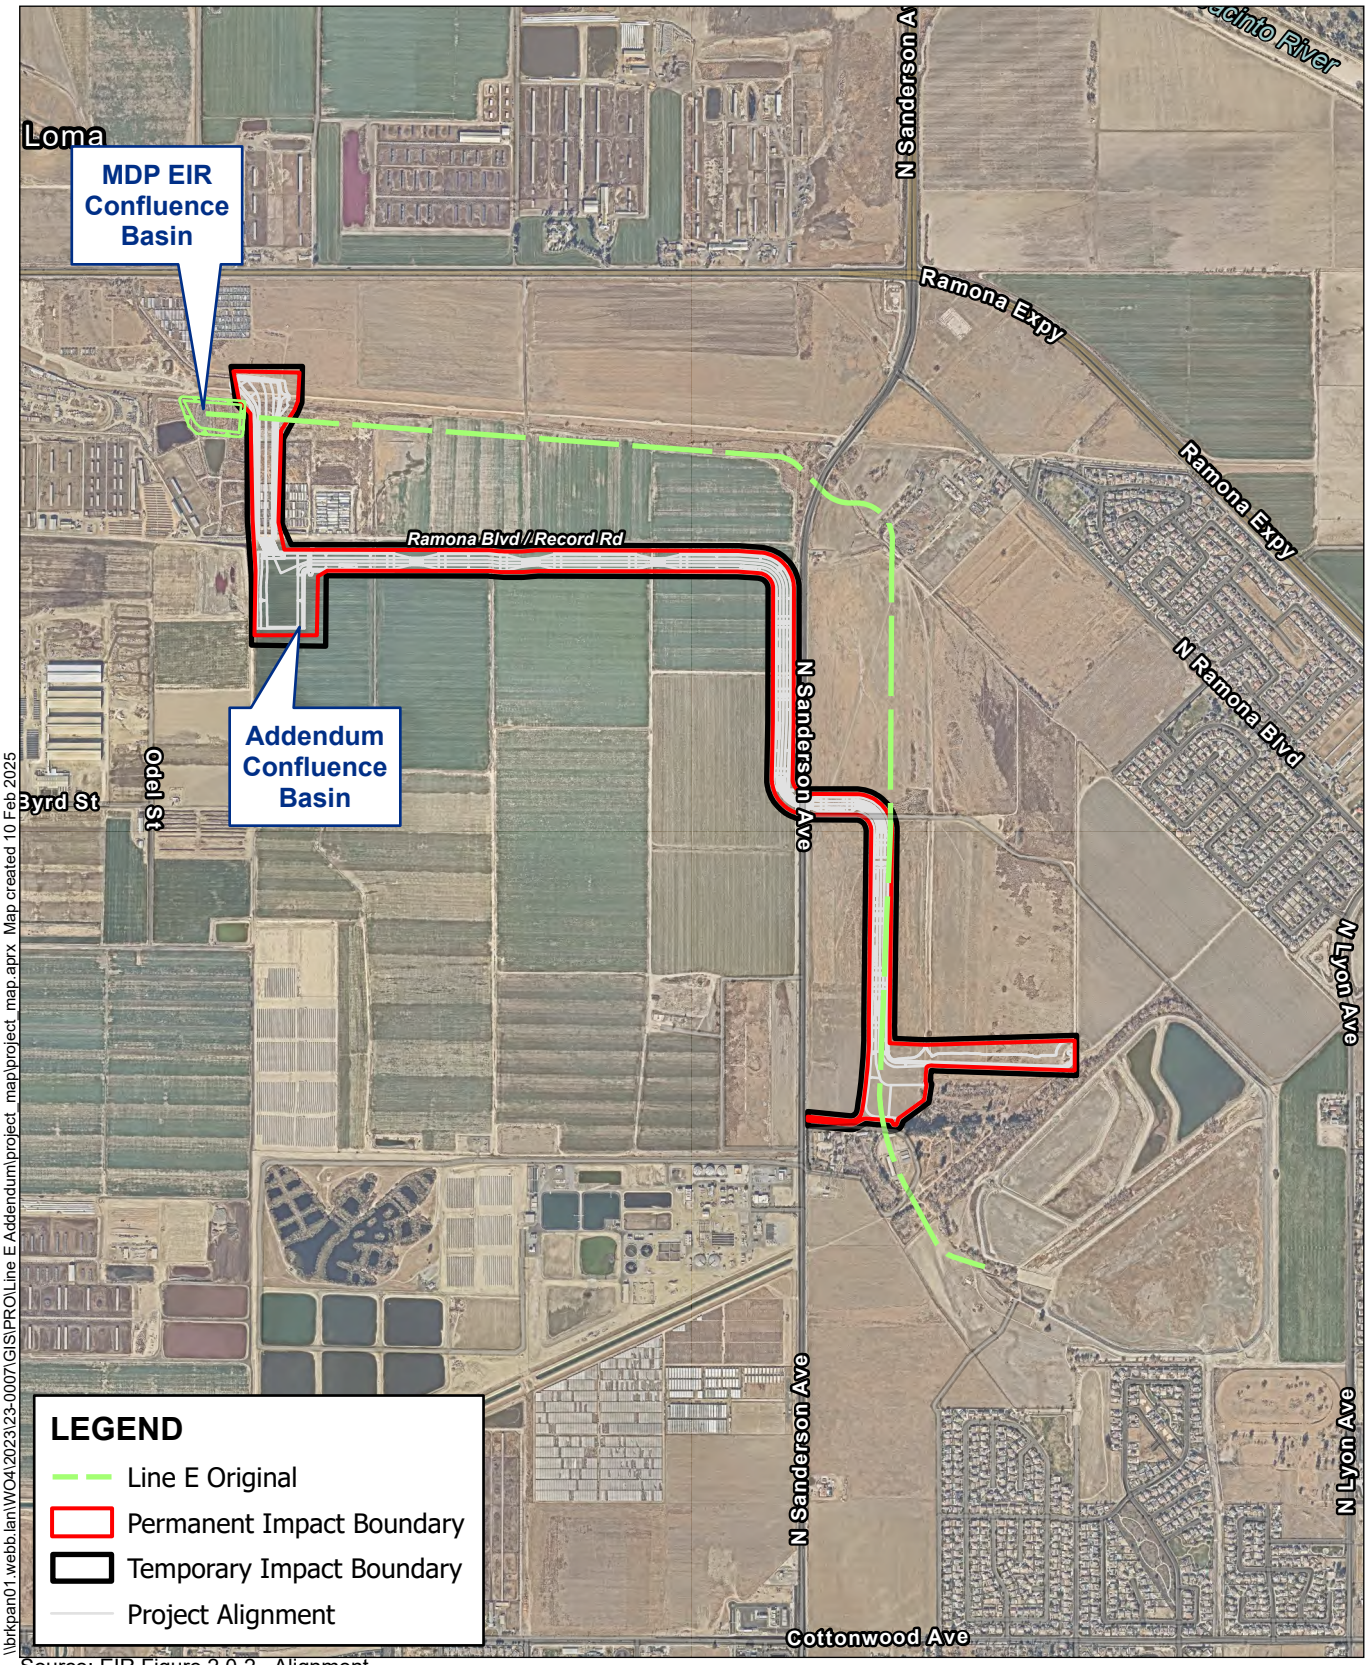
Geotechnical Recommendations for Crossing the Casa Loma Barrel No. 1.
Geotechnical recommendations for earthwork, design, and construction considerations for the Line E Channel crossing the Casa Loma Barrel No. 1 are set forth in the *Draft Geotechnical Investigation Report, San Jacinto Line E Strom Drain, San Jacinto California,* February 13, 2025, prepared by Klienfelder and included as Appendix A.2 to this Addendum.

Construction of the Line E Channel would involve cuts and fills over the Casa Loma Barrel No. 1. Grade changes, construction sequencing, flooding, and crossing structure footings could subject this pipeline to change in loads that could cause settlement due to an increase in overburden stress or heave due to a decrease in overburden stress. Metropolitan requires proposed improvements in the vicinity of their pipe to not induce displacements on their pipe of more than ¼-inch per 100 feet. As part of the Draft

Geotechnical Investigation Report, Kleinfelder performed numerical modeling of the subsurface conditions and proposed structures .The results of this analysis indicate the proposed improvements will meet Metropolitan's tolerance provided the key recommendations and assumptions presented below shall be implemented in the design and construction of the Casa Barrel No. 1 crossing and Line E Channel. (Kleinfelder-B, p. 18.) These recommendations are hereby made part of the Project Description.

- Excavations would not be completed at a time when Metropolitan has emptied the Casa Loma Barrel No. 1 (i.e. this pipeline is not in-service).
- The crossing structure footings are constructed following the 1/3 sequence of excavation and footing placement.
    - Excavation of the subsequent 1/3 shall not progress until the footing for the previous 1/3 is in-place.
    - Excavation slopes and benches shall not be flatter than 1.5H:1V.
- Excavation and footing construction sequence shall be completed simultaneously on the upstream and downstream sides of the Casa Loma Barrel No. 1. Simultaneously shall mean:
    - Elevations in excavations on either side shall not be more than 1 ft different.
    - The concrete footings shall be poured on both sides at the same time.
- Excavations shall not be backfilled until the full footing construction sequence is completed.
    - Backfill will consist of a medium weight flowable fill material (e.g. LCC) with a unit weight of approximately 85 pcf which does not require high vibration compactor equipment during placement. The medium weight flowable fill should have a friction angle of at least 30 degrees and cohesion of at least 50 pounds per square foot.
    - Backfill shall be completed simultaneously on the upstream and downstream sides of Casa Loma Barrel No. 1. Simultaneously shall mean elevations of the backfill on each side shall not be more than 1 ft different.
- Lightweight flowable fill shall be used for embankments within 50 feet from the edge of the Casa Loma Barrel No. 1. Embankment fill shall consist of lightweight flowable fill material (e.g. LCC) not to exceed a unit weight of 30 pcf and does not require compaction to limit vibration impacts.
- Embankment fill shall be placed such that the elevation difference across (upstream to downstream sides) the Casa Loma Barrel No. 1 is not greater than one foot at any time until final grades are established.
- The Line E Channel section shall limit the 100-yr flood event to a peak water elevation of 1453.47 feet.
- Vibrations on the Casa Loma Barrel No. 1 should be less than 0.5 inches/second for "continuous" sources based on guidance provided by Metropolitan. Based on *Caltrans Transportation and Construction Vibration Guidance Manual* (2020), vibratory rollers or similar equipment should not be used within 20 feet of the Casa Loma Barrel No. 1 to meet Metropolitan's limit.
- Any excavation within two feet of the Casa Loma Barrel No. 1 should be performed by "hand" equipment as approved by Metropolitan.
- Areas to receive fill that are not specified to require flowable fill as described above may utilize the on-site soil or import soil as structural fill in accordance with Section 6.9 of the *Draft Geotechnical Investigation Report*.

- Appropriate observations and inspections should be completed to ensure that the recommendations and assumptions made in the *Draft Geotechnical Investigation Report*. are followed during construction. Construction within Metropolitan's right-of-way should conform to the relevant Metropolitan construction standards, observations and inspections.



Proposed Line E Alignment Compared to the Conceptual MDP Alignment

The location of the proposed Line E Project alignment is compared with the conceptual SJV-MDP alignment on **Figure 6 – MDP EIR Alignment Compared to Addendum Alignment**. The Project is an improved design and the result of an iterative process to engineer around constraints that were identified during many stakeholder meetings including representatives from the City, RCFC&WCD, Metropolitan, Eastern Municipal Water District (EMWD), San Jacinto Master Developer, LLC (SJMD LLC),[2] and Riverside County Transportation Commission (RCTC). In addition, the alignment, hydraulics, and hydrology for the Project underwent three rounds of review with RCFC&WCD prior to preparation of the Preliminary Design Report (PDR) dated May 15, 2025. Two reviews have been conducted by Metropolitan. Metropolitan's substructures group approved the proposed Line E Alignment on March 3, 2025. (PDR, p. 4.) The PDR is available for review at the RCFC&WCD office.

Specifically, the Project alignment intentionally avoids EMWD and Metropolitan easements for pipelines located near the Line E Project inlet, and, at the same time avoids the riparian habitat around the north side of the San Jacinto Reservoir. This has resulted in no hard connection between Line E and the San Jacinto Reservoir Spillway, as well as no hard connection between Line E and Line E-2 (**Figure 5 – Project Components**). Maintenance access for RCFC&WCD within private property has been considered and provided for in the Project, as discussed herein. The Project design also avoids potentially environmentally sensitive areas on neighboring properties and along the south side of the Casa Loma Barrel No. 1 Metropolitan right-of-way west of Sanderson Avenue. The locations of several future projects planned by public agencies in the same area were also accounted for by the Line E Project. The Line E Channel was realigned to avoid conflicts with major sewer infrastructure located at the SJV-MDP planned crossing of Sanderson Avenue near the De Anza Lift Station. There are existing utilities that conflict with the proposed Line E Channel alignment, specifically the proposed RCB's that cross Sanderson Avenue. These utilities would be relocated as part of the Project and proposed utility crossings would be coordinated with adjacent developers and projects. Finally, by locating a portion of the Line E Channel on APNs 432-030-012, 432-030-011, and 432-030-010, which is owned by a willing property owner (SJMD, LLC), right-of-way acquisition is simplified. (PDR, pp. 7 – 8.) The location of existing utilities are shown on the Long-Axis Plan included in Appendix B of this Addendum.

Remainder of page intentionally blank

[2] San Jacinto Master Developer LLC, (SJMD, LLC) is the owner of approximately 514 acres within the SJV-MDP boundary consisting of APNs 432-030-006, 432-030-012, 432-030-010, and 432-030-011.

Proposed Line E Project Hydrology Compared to SJV-MDP Hydrology

The existing SJV-MDP hydrology is based on the *Master Drainage Plan Update for San Jacinto Valley West Area,* updated October 2008. Contributing flows to Line E include overflows from the San Jacinto Reservoir, tributary flows from SJV-MDP N Line E-2 located south of Line E, future SJV-MDP Line G, future SJV-MDP Line V, and future SJV-MDP Line Y. (PDR, p. 15.) The existing conditions for Line E flow rates have accounted for the contributing flows shown in **Table B –Existing MDP Hydrology Compared to Proposed Line E Project Hydrology** and on **Figure 7 – Original MDP Hydrology & Facilities**.

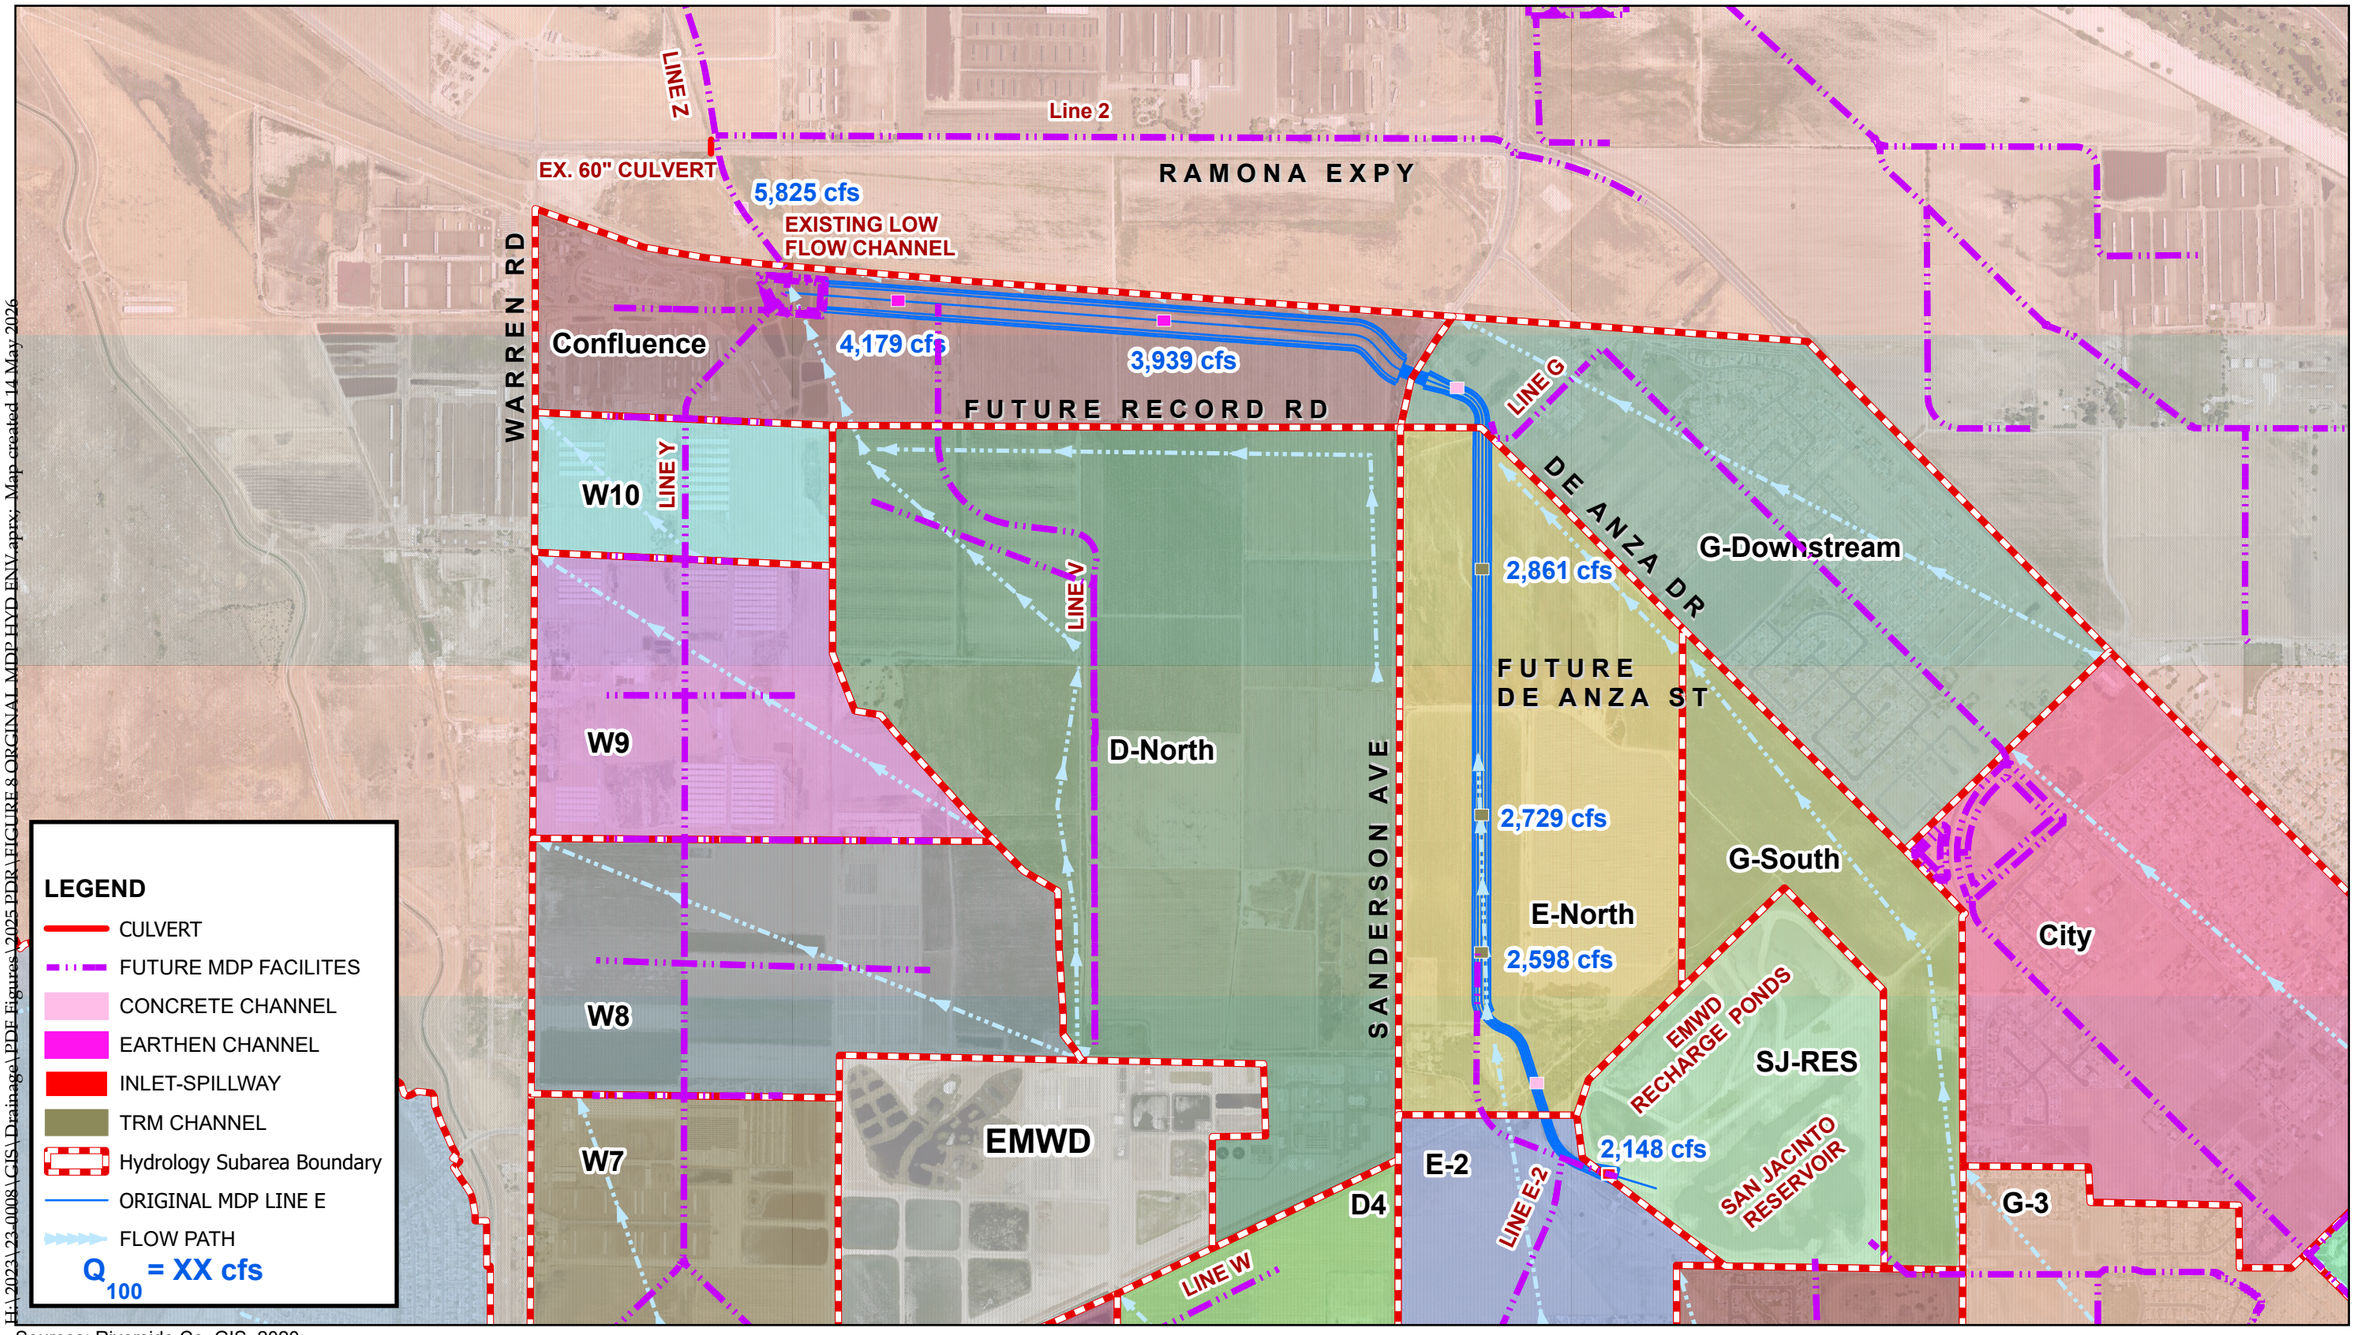

Table B – Existing MDP Hydrology Compared to Proposed Line E Project Hydrology

SJV-MDP Components	Existing MDP Flow Rates	Revised Flow Rates
Overflow from San Jacinto Reservoir	Q_{100} = 2,148 cfs	Q_{100} = 2,148 cfs
SJV-MDP N Line E-2	Q_{100} = 686 cfs Trap B=6 ft, D=6 ft, Z=1.5	Q_{100} = 527 cfs Trap B=6 ft, D=6 ft, Z=1.5
APN 436-170-001 contribution	Q_{100} = 521 cfs, RCP 14 ft (W) x 7 ft (H), assuming slope = 0.1%	Q_{100} = 295 cfs RCP 14 ft (W) x 7 ft (H), assuming slope = 0.1%
SJV-MDP Line G	Q_{100} = 518 cfs; RCB 8 ft (W) x 4 ft (H)	Q_{100} = 580 cfs; RCB 14 ft (W) x 6 ft (H)

SJV-MDP Line Y	Q_{100} = 1,646 cfs	Q_{100} = 1,646 cfs

Source: PDR, Table 1 and Table 2

Note: cfs = cubic feet per second; MDP = Master Drainage Plan; RCP = reinforced concrete pipe; RCB = reinforced concrete box; W = width; H = height; Trap = trapezoidal; Q_{100} means the flow rate in a 100-Year storm event.

The proposed Line E Project hydrology analysis is based on the same watershed subareas delineated in the original SJV-MDP *Master Drainage Plan Update for San Jacinto Valley West Area*. However three adjustments have been made to the Line E hydrology analysis: 1) land use revisions in Subarea E-2 to reflect actual land use conditions of APN 436-170-016, 2) changes in land use from residential to commercial for property , and 3) the removal of Subarea D north of the existing EMWD wastewater treatment plant (WWTP) because runoff from this area would be collected and treated by EMWD on their WWTP boundary. The land uses in the current condition have changed since the SJV MDP was prepared. The land uses changes outlined in number 1 and 2 above, results in the amount of stormwater comes off those sites, therefore the flow rates needed to be modified. Item number 3 above means that the storm water flows from Subarea D are now not a part of the flows that would influence Line E, therefore flow rates were adjusted down to accommodate for this change since the SJV MDP was prepared. These three conditions reflect the current conditions, which affect how the baseline hydrology analysis is conducted to design master plan level flood control facilities. Therefore, revised flow rates based on these three changed conditions were incorporated into the Line E Project analysis. The revised flow rates for the Line E Project are shown above in **Table B** and on **Figure 8– Revised MDP Hydrology & Facilities** . The results of these updates to the hydrology modeling represent a decreased flow rate reaching Line E than was previously analyzed in the SJV-MDP. (PDR, p. 17.)

FIGURE 8 - REVISED MDP HYDROLOGY & FACILITIES

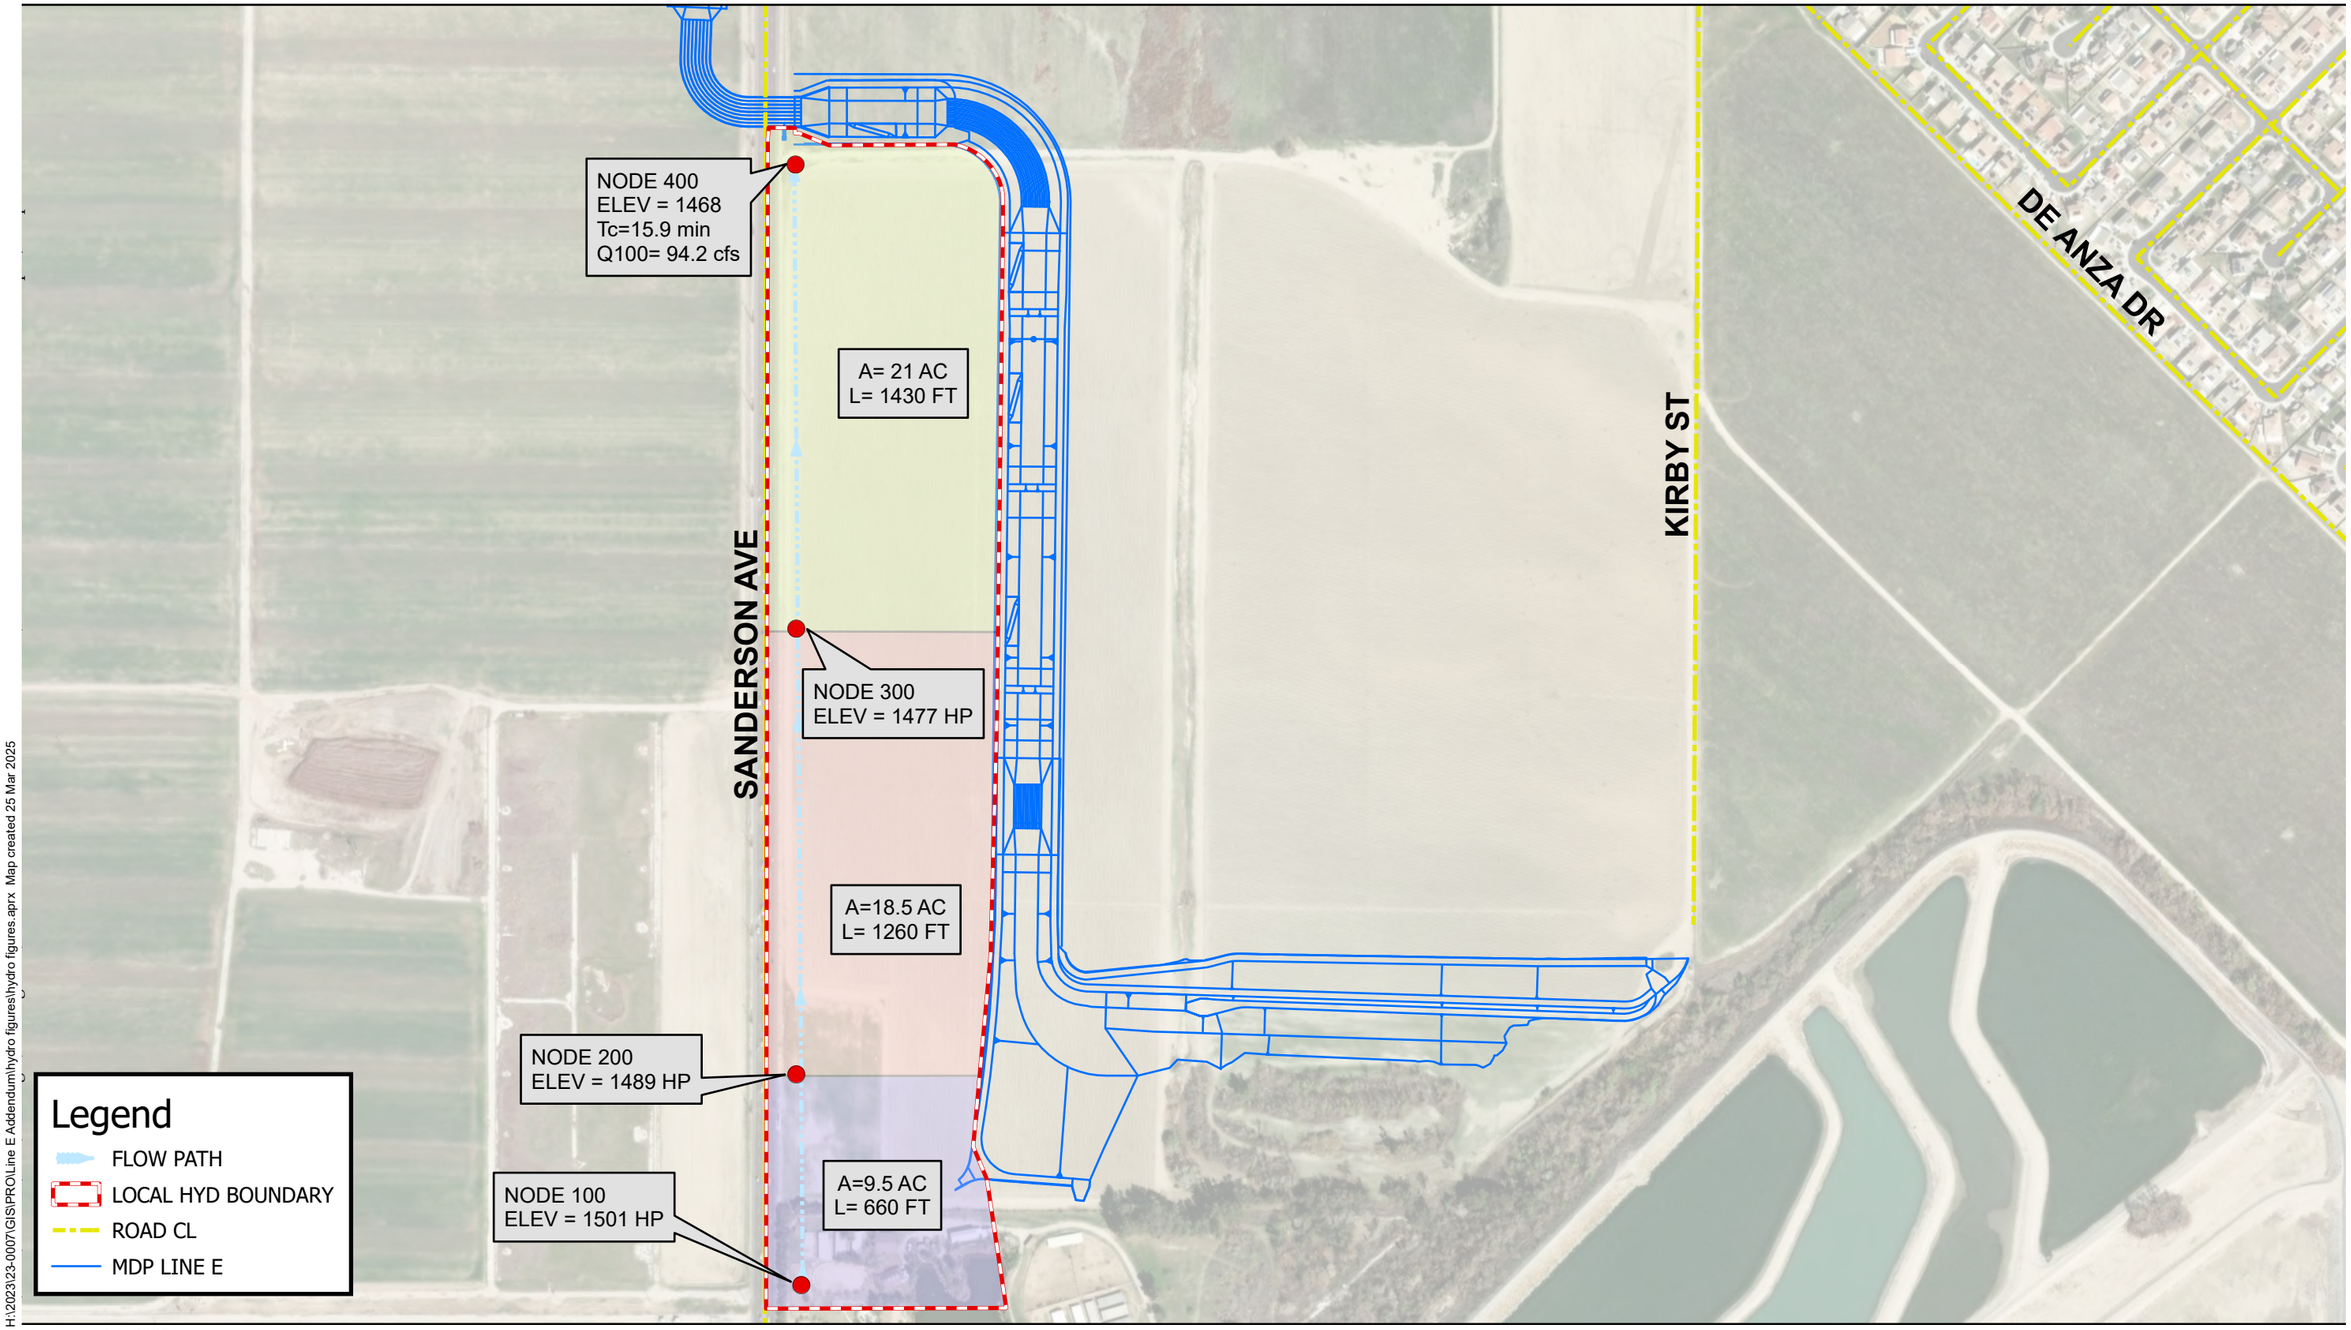
Line E Addendum

ALBERT A. WEBB ASSOCIATES

The proposed Line E design resulted in a need to confirm that the other facility connections into Line E could still be achieved. Therefore, the following facilities in the SJV MDP were rearranged from the original assumptions in the SJV-MDP. No changes to these other MDP facilities outlined below are being proposed; rather the list below demonstrates that these facilities can still function in the future even with the Line E alignment as proposed.

- Tributary flows from the south are directed to Subarea D-North-A and then into the proposed Confluence Basin or a basin proposed by a separate project south of the Confluence Basin on APN 432-030-010 to be pumped out to the Line E Channel north of Record Road (**Figure 8 – Revised MDP Hydrology & Facilities**);
- Proposed MDP Line Y would no longer join the Confluence Basin and would instead join Line E upstream of Casa Loma Barrel No. 1;
- Flows from the Confluence Subarea are being added to the Line E Channel in the area of Casa Loma Barrel No. 1, which was previously coming into Line E at Sanderson Avenue under the SJV MDP as originally proposed; and
- Line G is proposed on the opposite side of Sanderson Avenue as compared to the conceptual location shown in the SJV-MDP. (PDR, p. 17.)

The changes to SJV-MDP Facilities identified above, are not a part of the Line E Project evaluated in this Addendum because, there are no plans or funding to construct these facilities nor are the necessary for the Line E facility to function as proposed.



Local Hydrology at Sanderson Avenue
Currently, in the non- SJV-MDP implementation condition, a roadside ditch conveys stormwater along the east side of Sanderson Avenue as shown in the image below.

Because the proposed Line E Channel would cross Sanderson Avenue and intersect with this existing ditch, the contribution of flow from this roadside ditch to the Line E Channel was analyzed in the PDR. Results suggest that 49 acres drain to this roadside ditch, as shown on **Figure 9 – Local Flow Analysis**. The hydrology subareas are already accounted for in the overall SJV-MDP hydrology analysis. Therefore, the Line E Channel has been designed to accommodate the confluence of this ditch. A rate of 95 cubic feet per second (cfs) of runoff is generated and was used to size an inlet and lateral to Line E Channel. (PDR, p. 19.)

Local Flow Pattern at Casa Loma Barrel No. 1
The existing local drainage pattern is represented by the flow paths shown on **Figure 10 – Existing Local Drainage Patterns**. During small rain events, a significant amount of runoff sheet flows to either side of Sanderson Avenue and is conveyed northerly. As shown on **Figure 10**, the local existing drainage pattern flows northeasterly from the area south of Record Road (Ramona Boulevard) eventually to two existing culverts that cross the Casa Loma Barrel No. 1 right-of-way. Both culverts are 24-inch diameter corrugated metal pipes that sit atop the Casa Loma Barrel No. 1. During any rain event that generates flooding, these culverts are responsible for draining the area south of the Casa Loma Barrel No. 1 and bounded by Sanderson Avenue and the EMWD WWTP. In the post-Line E Project condition, the existing drainage patterns north of Record Road and east of Sanderson Avenue (i.e., east of the Line E Channel) would remain. The Line E Project would replace the existing low flow 24-inch diameter corrugated metal pipes that cross the Casa Loma Barrel No. 1 easement with two 24-inch diameter reinforced concrete pipes (RCPs) that outlet into Line E. (PDR, p. 21.)

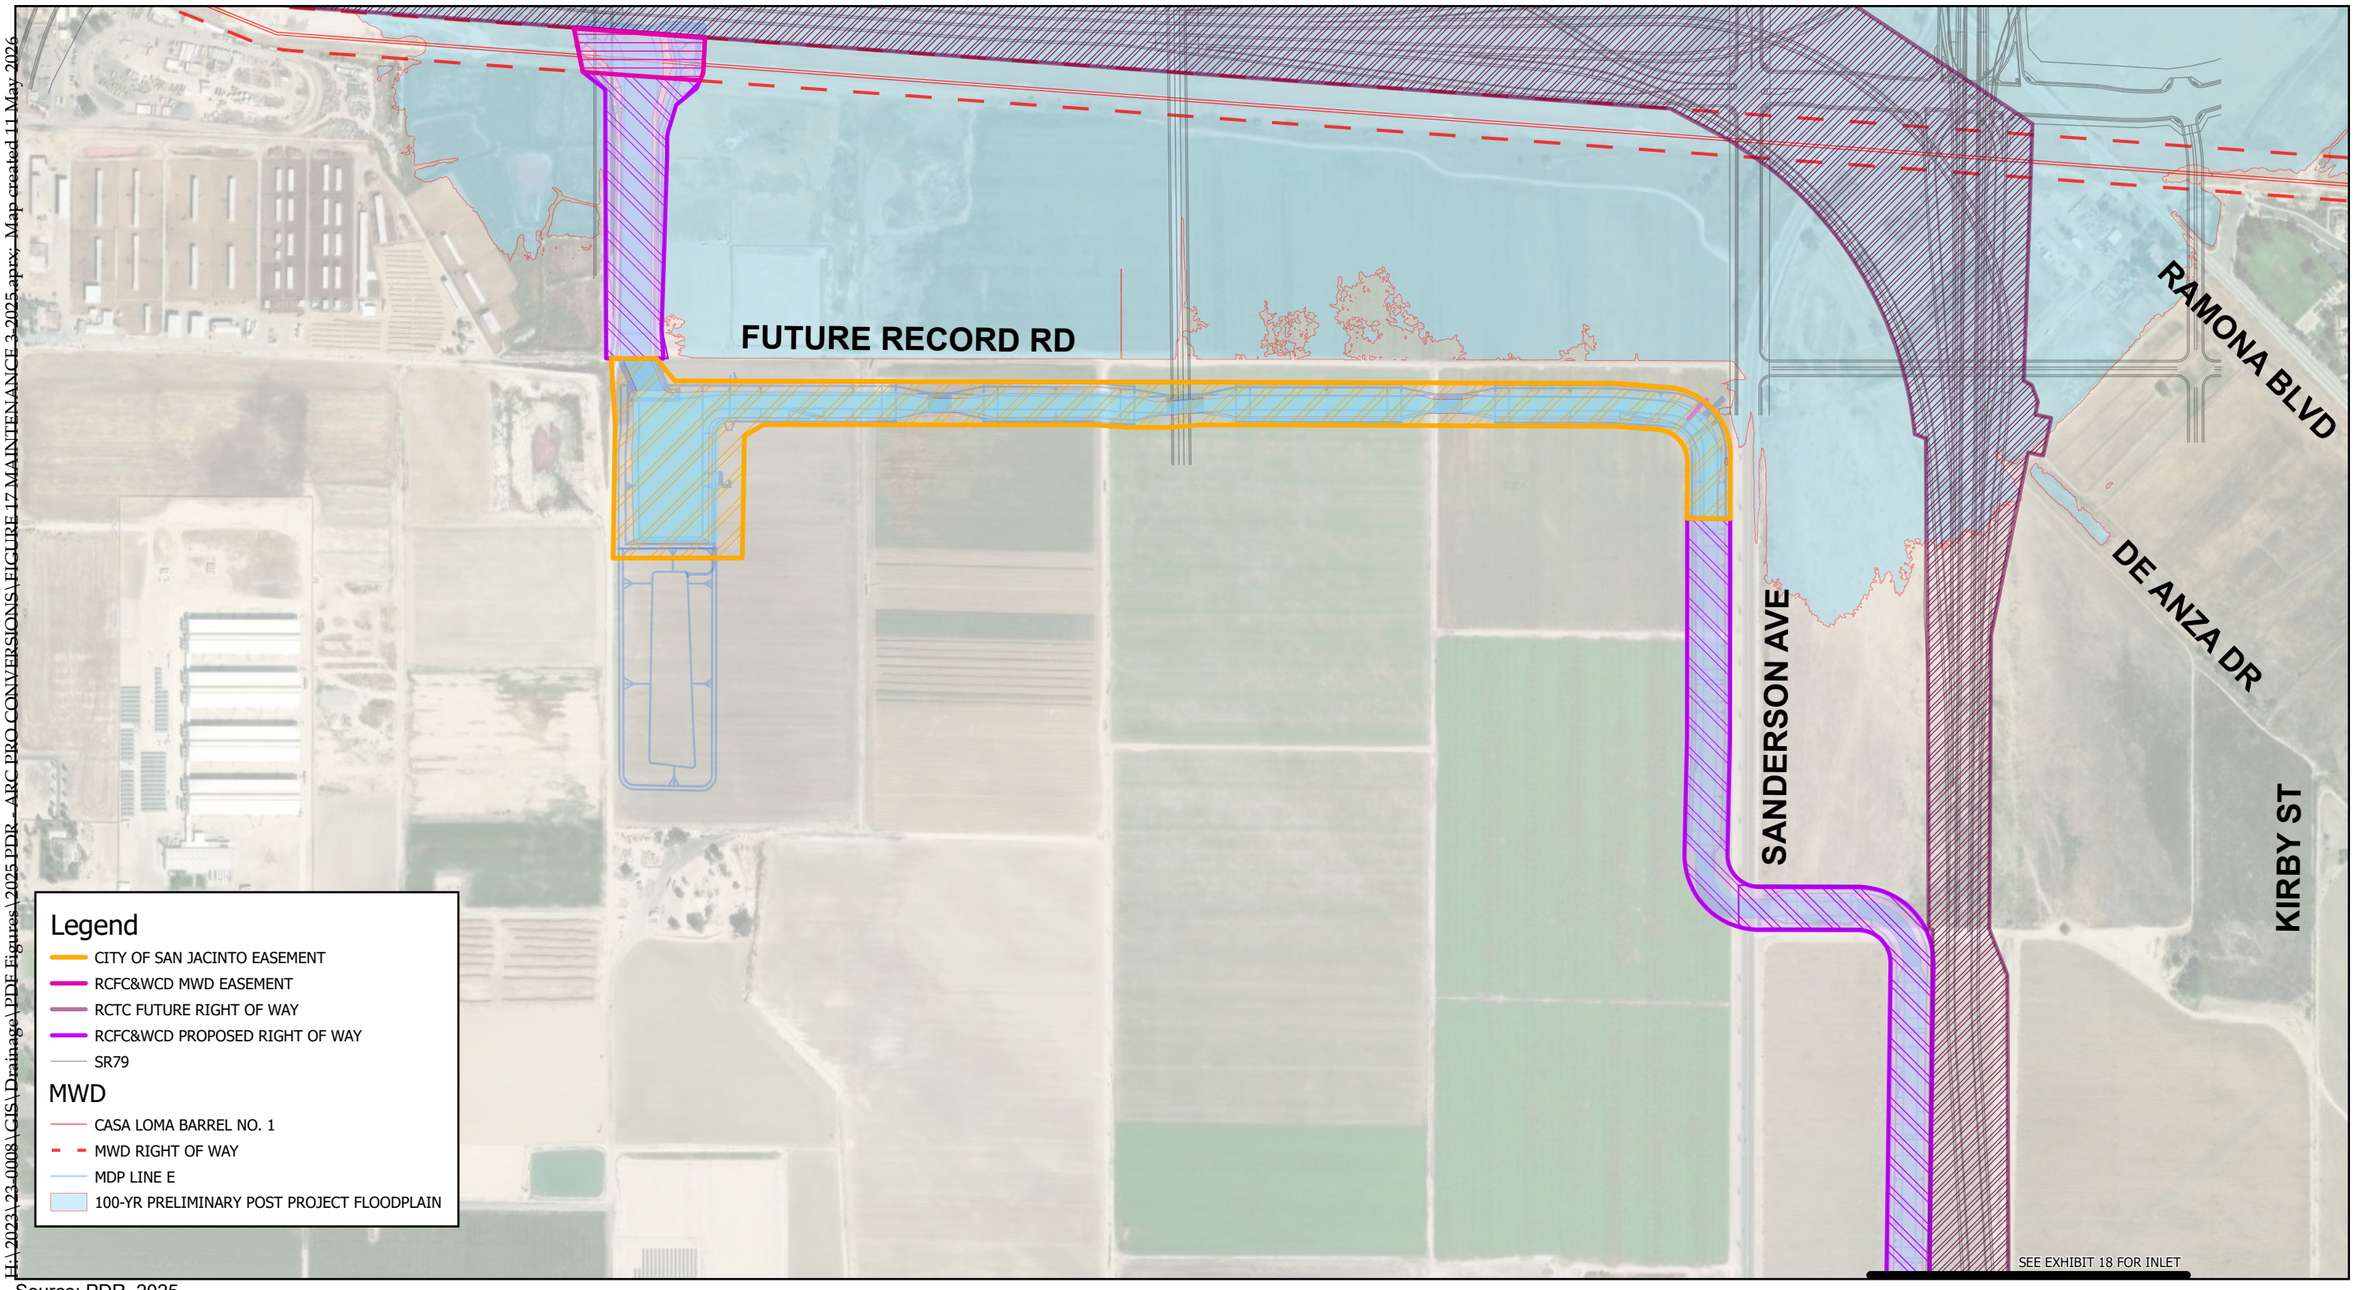
Maintenance

Because the Line E Channel would be a regional flood control facility pursuant to the adopted SJV-MDP, the RCFC&WCD would need to be able to maintain the Line E Channel and corresponding access roads throughout the life of the facility. Specifically, RCFC&WCD would maintain the training berms and inlet line and grade via a drainage easement and slope easement for the portion of the Line E channel, plus access roads, RCBs and drop structures, located within right-of-way that would be owned by RCFC&WCD within APNs 436-170-001, 436-030-004, 436-010-003, and 430-100-016. RCFC&WCD would maintain the portion of Line E, that crosses over the Casa Loma Barrel No. 1 and Metropolitan right-of-way via a maintenance easement. (PDR, p. 38.)

Maintenance activities to be undertaken by RCF&WCD include vegetation management, clean out of debris, slope and bottom repairs, access road maintenance and repair. Given the presence of potentially sensitive biological resources in the Line E Project area, the RCFC&WCD would not use rodenticides or pesticides for vegetation management. Mechanical and hand removal of vegetation would be used.



The City of San Jacinto would maintain the Confluence Basin and pump, and the segment of the Line E Channel with 15-foot access roads within APNs 432-030-011, 432-030-012 and 432-030-010. The City of San Jacinto would conduct the same types of maintenance activities as needed for the Line E Channel. (PDR, p. 38.)

Figure 11 – Lower Reach Maintenance Delineation and **Figure 12 –Upper Reach Maintenance Delineation** shows the overall maintenance and easement areas for the Line E Project. The activities needed to construct and the maintenance activities outlined above have been analyzed in this Addendum.

Discretionary Approvals by the City of San Jacinto

- As the CEQA Lead Agency, the City would approve the Line E Project Design Report (PDR) and adopt this Addendum for the Line E Project.
- At such time the City determines the entity to construct the Line E Project, per the SJV MDP EIR, "… all new facilities constructed by developers, San Jacinto, or Hemet, that require maintenance by RCFCWCD, would require RCFCWCD execution of a cooperative agreement and approval of plans and specifications".

Figure 12 - Upper Reach Maintenance Delineation

Line E Addendum

ALBERT A. WEBB ASSOCIATES

Required Permits and/or Approvals, Trustee and Responsible Agencies

Implementation of the Line E project would require permits or other forms of approval from the following public agencies prior to construction.

Riverside County Flood Control and Water Conservation District

As with the SJV-MDP EIR, RCFC&WCD would be a CEQA Responsible Agency for the Line E Project because RCFC&WCD would approve a cooperative agreement with the City of San Jacinto as well as any private entity that might be constructing the Line E facility. RCFC&WCD would ultimately own and maintain the portions of Line E described under the Maintenance subheading above and shown on **Figure 11 – Lower Reach Maintenance Delineation** and **Figure 12 –Upper Reach Maintenance Delineation.** RCFC&WCD would also have to approve all Line E-related plans and specifications prior to construction. As a CEQA responsible Agency, RCFC&WCD would utilize this Addendum for these subsequent approvals.

California Department of Fish and Wildlife

In addition to being a Trustee Agency for all wildlife resources in California, CDFW would be a Responsible Agency for the Line E Project. As discussed in the response to item D.3, implementation of the Line E Project would impact non-riparian streambed regulated by CDFW; therefore, a Section 1600 Streambed Alteration Agreement is required from CDFW per SJV-MDP EIR **MM Bio 3**.

Regional Water Quality Control Board, Santa Ana Region (RWQCB)

As discussed in the response to item D.3, implementation of the Line E Project would impact of non-wetland waters regulated by the Regional Board; therefore, a Waste Discharge Permit (WDR) would be required prior to construction. is required from the Regional Board and a Section 1600 Streambed Alteration Agreement is required from CDFW per SJV-MDP EIR **MM Bio 3**. Additionally, a National Pollutant Discharge Elimination System (NPDES) General Construction Permit would be required since the Project entails more than on acre of grading.

Metropolitan Water District of Southern California

Encroachment permits will be required to construct SJV-MDP facilities within the rights-of-way of the Colorado River Aqueduct, Casa Loma Siphons 1 and 2, Casa Loma Canal, San Diego Pipelines 1 and 2, San Diego Canal, Lakeview Pipeline, San Jacinto Pipeline, and the Inland Feeder. As part of that process, Metropolitan would also have to review the plans and specifications for the portion of Line E within its rights-of-way.

County of Riverside, City of San Jacinto

Encroachment permits would be required to construct any portion of the Line E Project within road rights-of-way. Obtaining right-of-way on private property would also be required.

3. Regulatory Background and Addendum CEQA Findings

This section sets forth the regulatory authority for the preparation of an Addendum and makes the findings necessary for consideration by San Jacinto, as lead agency, or any responsible agency, to adopt this Addendum. The process for preparing an Addendum to a previously certified EIR is set forth in State *CEQA Guidelines* Section 15164. Sections 15164(a) and (b) state:

(a) The lead agency or responsible agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary but none of the conditions described in Section 15162 calling for preparation of a subsequent EIR have occurred.

(b). An addendum to an adopted negative declaration may be prepared if only minor technical changes or additions are necessary or none of the conditions described in Section 15162 calling for the preparation of a subsequent EIR or negative declaration have occurred.

The Line E Project proposes drainage facilities, specifically the Line E channel and Line E-Y-Z Confluence Basin identified in the SJV-MDP and evaluated at a program level in the certified SJV-MDP EIR. As demonstrated in the following analysis, no new significant impacts will result from implementing the Line E Project.

State *CEQA Guidelines* Section 15162(a) lists the specific conditions that require preparation of a subsequent EIR or negative declaration rather than an addendum. These include one or more of the following:

(1) Substantial changes are proposed in the project which will require major revisions of the previous EIR or negative declaration due to the involvement of new, significant environmental effects or a substantial increase in the severity of previously identified significant effects;

(2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or Negative Declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or

(3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the Negative Declaration was adopted, shows any of the following:

(A) The project will have one or more significant effects not discussed in the previous EIR or negative declaration;

(B) Significant effects previously examined will be substantially more severe than shown in the previous EIR;

(C) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or

(D) Mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

The following discussion presents a summary of each condition in State *CEQA Guidelines* Section 15162 and how the Line E Project is consistent with such condition.

Section 15162(a)1: Substantial changes are proposed in the project which will require major revisions of the previous EIR or negative declaration due to the involvement of new, significant environmental effects or a substantial increase in the severity of previously identified significant effects.

No major changes or revisions, nor new significant effects or an increase in severity of previously identified significant effects in the SJV-MDP EIR have occurred. As outlined in the original SJV-MDP EIR, the SJV-MDP identifies a general alignment and location of the proposed MDP facilities, including Line E. Precise facility locations and final sizing would be dictated by conditions existing at the time each facility is designed based on detailed analysis performed at the design stage. (SJV-MDP EIR, p. 2.0-8.)

The Project is an improved design vs. the conceptual design set forth in the SJV-MDP. The Project design being evaluated herein is the result of an iterative process to engineer around constraints that were identified during many stakeholder meetings with representatives from the City, RCFC&WCD, Metropolitan, Eastern Municipal Water District (EMWD), the adjacent property owner (SJMD LLC), and the Riverside County Transportation Commission (RCTC) once the need for implementation of Line E was identified. In addition, the proposed alignment, hydraulics, and hydrology for the Line E Project underwent three rounds of review with RCFC&WCD as part of the Preliminary Design Report (PDR) preparation. **Figure 6 – MDP EIR Alignment Compared to Addendum Alignment** shows the locational refinements to the Line E Channel based on the design rationale discussed below as compared to the conceptual alignment identified in the SJV-MDP.

Specifically, the Line E Project alignment intentionally avoids EMWD and Metropolitan easements near the Project inlet, and, at the same time avoids riparian habitat around the north side of the San Jacinto Reservoir. This has resulted in no hard connection between Line E and the San Jacinto Reservoir Spillway, as well as no hard connection between Line E and Line E-2, which in turn has resulted in less biological impacts than was previously identified in the SJV-MDP EIR. Therefore, related to biological resources, the Proposed Project now lessens what could have been significant biological impacts associated with the hard connection of Line E to the San Jacinto Reservoir and Line E-2 (see **Figure 6**).

The Project design also avoids potentially environmentally sensitive areas on neighboring properties and along the south side of the Casa Loma Barrel No. 1 Metropolitan right-of-way west of Sanderson Avenue. The locations of several future projects planned by public agencies in the same area were also accounted for in the alignment now presented for the Line E Project. The Line E Channel was realigned to avoid conflicts with major sewer infrastructure located where the original SJV-MDP conceptual alignment planned a crossing of Sanderson Avenue near the De Anza Lift Station. There are also existing utilities that conflict with the proposed Project alignment, specifically the proposed RCBs that cross Sanderson Avenue. These utilities would be relocated as part of the area analyzed for the Line E Project and proposed utility crossings would be coordinated with adjacent developers and projects.

As shown by the analysis in Section 4 Supplemental Environmental Checklist Form, the shift in the proposed alignment of the Line E Channel namely the elimination of hard connections between Line E and the San Jacinto Reservoir Spillway and Line E-2, avoids potentially sensitive environmental areas, as well as major sewer infrastructure. These modifications now reflected in the Line E Project do not constitute a substantial change that would require major revisions of the SJV-MDP EIR due to the involvement of new, significant environmental effects or a substantial increase in the severity of previously identified significant effects.

Section 15162(a)2: Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or Negative Declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or

There are no substantial changes in the circumstances under which the Project would be undertaken compared to the analysis in the SJV-MDP EIR. There are no new significant environmental effects in the Line E Project area that have a substantial increase in severity. As shown in the analysis in Section 4 Supplemental Environmental Checklist Form herein, implementation of the proposed Project would not result in new significant environmental effects or any increase in the severity of previously identified environmental effects.

Section 15162(a)3: New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the Negative Declaration was adopted, shows any of the following:

(A) The project will have one or more significant effects not discussed in the previous EIR or negative declaration;

The significant effects found in the SJV-MDP EIR were related to agricultural resources, air quality and population/housing. There are no new issues or areas of substantial importance related to these issue areas that would constitute new information. Since the SJV-MDP EIR was prepared and certified, one new species has been listed as Candidate Species per the California Department of Fish and Wildlife; the Crotch's Bumble bee is now a species that under CEQA has to be considered and impacts evaluated and mitigated for as appropriate. The results of the analysis in Section 4 Supplemental Environmental Checklist Form, which includes current biological studies, indicates that no new significant effects related to biological resources will result from Line E implementation. It is settled law in California that subsequent changes to the guidelines or other regulations are not "new information" triggering section 21166(c). (*Concerned Dublin Citizens v. City of Dublin* (2013) 214 Cal.App.4th 1301, 1318-1320.) Accordingly, the listing of Crotch's Bumble bee does not necessitate the preparation of subsequent EIR or negative declaration.

(B) Significant effects previously examined will be substantially more severe than shown in the previous EIR;

The significant effects found in the SJV-MDP EIR were related to agricultural resources, air quality, and population/housing. The City adopted a Statement of Overriding Considerations for these areas. (SJV MDP EIR, p. 1.0-9.)

Direct impacts regarding agricultural resources were determined to be significant because implementation of the SJV-MDP would result in the conversion of approximately 122 acres of Farmland to flood control facilities. Indirect impacts to agricultural resources were determined to be significant because implementation of the SJV-MDP could support and encourage planned development per the Riverside County, San Jacinto, and Hemet General Plans within the boundaries of the SJV-MDP. This area contains approximately 4,600 acres of Agricultural Land as defined in CEQA Section 210060.1. Potential direct and indirect impacts associated with the loss of Farmland remains unavoidable and are unmitigable. (SJV-MDP EIR, p. 5.0-18.)

Direct impacts regarding air quality were determined to be significant because depending on the MDP Facility or combination of Facilities constructed at any given time, construction emissions may exceed the regional significance thresholds established by the South Coast Air Quality

Management District (SCAQMD) for oxides of nitrogen (NOx,) particulate matter that is 10 microns or less in diameter (PM-10) and particulate matter that is 2.5 microns or less in size (PM-2.5.) SCAQMD local significance thresholds (LSTs) for PM-10 and PM-2.5 could be exceeded during construction. Although these are direct, short-term impacts that will cease once construction is complete; they remain unavoidable and are unmitigable. (SJV-MDP EIR, p. 5.0-18.)

Implementation of the SJV-MDP could indirectly induce growth by removing one potential barrier to growth through the provision of flood control infrastructure. The Hemet, San Jacinto, and Riverside County General Plans identify the type of development and growth that would be allowed within the boundaries of the SJV-MDP. The SJV-MDP does not propose any changes to the land uses from what is identified in the aforementioned General Plans; thus, potential indirect impacts from development in the Project area are not expected to exceed the potential impacts that have already been disclosed in the EIRs prepared for the Hemet, San Jacinto, and Riverside County General Plans. However, because implementation of the proposed Project could indirectly induce substantial population growth in the Project area, impacts regarding population/housing are considered significant. (SJV-MDP EIR, p. 5.0-18.)

The following issue areas were found to be less than significant with or without mitigation: aesthetics, biological resources, cultural resources, geology/soils, hazards and hazardous materials, hydrology/water quality, land use/planning, mineral resources, noise, public services, recreation, transportation/traffic, and utilities/service systems. (SJV MDP EIR, p. 1.0-9.)

As shown in the analysis in Section 4 Supplemental Environmental Checklist Form, no new significant impacts to areas previously determined to be less than significant, nor any of the previously identified significant impact areas will be more severe, as a result of implementation of the proposed Project.

(C) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or

Table C – Mitigation Measures identifies the mitigation measures adopted as part of the Mitigation Monitoring and Reporting Program (MMRP) for the SJV-MDP, the applicability to the Line E Project, and, in certain instances, a clarified or new mitigation measure.

Table C – Mitigation Measures

SJV MDP EIR Mitigation Measure	Applicability to Line E Project	Line E Project Mitigation Measure
MM Air 1: During construction, ozone precursor emissions from all vehicles and construction equipment shall be controlled by maintaining equipment engines in good condition and in proper tune per manufacturers' specifications to the satisfaction of the jurisdiction in which the construction is taking	Not Applicable	**MM Air 1** through **MM Air 4** do not apply to the Line E Project because the Line E Project emissions are below the SCAQMD thresholds.

Table C – Mitigation Measures

SJV MDP EIR Mitigation Measure	Applicability to Line E Project	Line E Project Mitigation Measure
RWQCB, and CDFG jurisdiction. Impacts to jurisdictional waters will require authorization by the corresponding regulatory agency. If impacts are indicated, then jurisdictional water will either a) be avoided or b) necessary permits from requisite jurisdictions will be obtained.		*Project, an Approximately 14,000 Linear-Foot Drainage Alignment in the City of San Jacinto, Riverside County, California*, October 30, 2024, prepared by Glenn Lukos Associates, Inc. which is included as Appendix H to the *Biological Technical Report*, which is Appendix D.1 to this Addendum.
MM Bio 4: The project-specific mapping of riparian and unvegetated riverine features will be required pursuant to Section 6.1.2 of the MSHCP. For areas not excluded as artificially created, the MSHCP requires 100 percent avoidance of riparian/riverine areas. If avoidance is not feasible, then individual projects will require the approval of a DBESP including appropriate mitigation to offset the loss of functions and values as they pertain to the MSHCP-covered species. Riparian vegetation will also need to be evaluated for the least Bell's vireo, southwestern willow flycatcher, and western yellow-billed cuckoo. If suitable habitat is present, focused surveys for the species will be required. If avoidance is not feasible, then individual projects will require the approval of a DBESP including appropriate mitigation, i.e., on-site or off-site enhancement, restoration, establishment (creation), preservation, payment into habitat mitigation banks or in lieu fee programs, or a combination of one or more of these options.	Satisfied	This mitigation measure has been satisfied by preparation of the *Biological Technical Report for San Jacinto Valley Master Drainage Plan Line E, Located in the City of San Jacinto, Riverside County, California*, January 28, 2025, which is included as Appendix D.1 to this Addendum.
MM Bio 5: The project-specific mapping of vernal pools will be required pursuant to Section 6.1.2	Satisfied	This mitigation measure has been satisfied by preparation of the *Biological Technical Report for San*

Table C – Mitigation Measures

SJV MDP EIR Mitigation Measure	Applicability to Line E Project	Line E Project Mitigation Measure
of the MSHCP. As noted above, vernal pools (or similar seasonal ponding alkali playa areas) are expected to occur at least in the area comprising Cell Group V, but have the potential to occur elsewhere within the Project area. For areas not excluded as artificially created, the MSHCP requires 100 percent avoidance of vernal pools areas. If avoidance is not feasible, then individual projects will require the approval of a DBESP including appropriate mitigation to offset the loss of functions and values as they pertain to the MSHCP covered species. Vernal pools and other seasonal ponding depressions will also need to be evaluated for Riverside and Vernal pool fairy shrimp.		*Jacinto Valley Master Drainage Plan Line E, Located in the City of San Jacinto, Riverside County, California*, January 28, 2025, which is included as Appendix D.1 to this Addendum.
MM Bio 6: Within areas of suitable habitat associated with the Narrow Endemic Plant Species Survey Area (NEPSSA) and Criteria Area Plant Species Survey Area (CAPSSA), facility-specific focused plants surveys will be required. Including the smooth tarplant mapped as part of this study, the MSHCP requires at least 90 percent avoidance of areas providing long-term conservation value for the NEPSSA and CAPSSA target species. If avoidance is not feasible, then individual projects will require the approval of a DBESP, including appropriate mitigation, i.e., on-site or off-site enhancement, restoration, establishment (creation), preservation, payment into habitat mitigation banks or in lieu fee programs, or a combination of one	Satisfied	This mitigation measure has been satisfied by preparation of *Biological Technical Report for San Jacinto Valley Master Drainage Plan Line E, Located in the City of San Jacinto, Riverside County, California*, January 28, 2025, which is included as Appendix D.1 to this Addendum. NEPSSA surveys were conducted for the Line E Project and no NEPSSA plant species were detected during the focused surveys. While smooth tarplant is specifically called out in the original MM, this species is not subject to focused surveys because the project site is not located within the CASSA. However, smooth tarplant will be mitigated as part of **MM Bio E8.**

Table C – Mitigation Measures

SJV MDP EIR Mitigation Measure	Applicability to Line E Project	Line E Project Mitigation Measure
or more of these options. Furthermore, the smooth tarplant mapped within Cell Group V is expected to be required for conservation as part of the Cell Group V criteria.		
MM Bio 7: Focused surveys shall be conducted within potentially suitable habitat for Chaparral sand-verbena and South coast salt scale by a qualified biologist during the flowering season of these species and prior to construction activities. If special status plant species are found to be present in the footprint, further measures as recommended by a qualified biologist shall be taken to avoid or minimize adverse project effects to these species and their habitat. If avoidance is not feasible, then individual projects will require the approval of a DBESP including appropriate mitigation.	Not Applicable	This mitigation measure is not applicable, as the Line E Project does not have habitat for Chaparral sand-verbena or South coast salt scale.
MM Bio 8: Focused surveys shall be conducted within potentially suitable habitat for the San Bernardino kangaroo rat and Los Angeles pocket mouse by a qualified biologist during the appropriate season of these species and prior to construction activities. If these species are found to be present in the footprint, occupied habitat shall be fenced and avoided. If occupied habitat cannot be avoided, further measures as recommended by a qualified biologist and in consultation with the California Department of Fish and Game, shall to be taken to avoid or minimize adverse project effects to these species and their habitat.	Not Applicable	This mitigation measure is not applicable because there is no SBKR or LAPM habitat within the limits of the Line E Project.

Table C – Mitigation Measures

SJV MDP EIR Mitigation Measure	Applicability to Line E Project	Line E Project Mitigation Measure
The SJV MDP EIR did not specifically require LBV focused surveys, but in order to be compliant with the MSHCP, as required by the SJV MDP, the Line E Project does need to do additional mitigation related to LBV.	Added/Clarified	
The SJV MDP EIR did not specifically require preparation of a Habitat Mitigation and Monitoring Plan (HMMP); however, in order to be compliant with the MSHCP, as required by the SJV MDP, an HMMP will be required to reduce direct impacts to non-wetland waters of the Regional Board and non-riparian stream under California Department of Fish and Wildlife jurisdiction.	Added/Clarified	**MM Bio E8: Habitat Mitigation and Monitoring Plan.** In order to mitigate the 4.03 acres of riverine resources, including impacts associated with smooth tarplant found in these riverine areas, the Project proponent shall prepare a Habitat and Mitigation and Monitoring Plan (HMMP) and secure conservation property to be restored for alkali playa/meadow resources, including smooth tarplant. The HMMP shall be prepared on a property that is to be secured for conservation in perpetuity which will support at least 8.06 acres (2:1) of restored riverine alkali playa/meadow. The HMMP shall be submitted to the City of San Jacinto, CDFW and USFWS for review and approval. The HMMP will be used to support the mitigation necessary for impacts to the Waters of the State which require permits through the CDFW and Regional Board. The property shall be conveyed to a conservation entity such as Rivers and Lands Conservancy or other such entity as approved by CDFW and USFWS. The Project proponent will provide a non-wasting endowment to fund the management of the conservation/mitigation property in perpetuity.

Table C – Mitigation Measures

SJV MDP EIR Mitigation Measure	Applicability to Line E Project	Line E Project Mitigation Measure
MM Cultural 1: A paleontological resources field survey (or surveys) shall be completed prior to the earlier of issuance of a grading permit or construction of any SJV-MDP facility subject to further CEQA analysis. If the results of such survey (or surveys) identify the presence of potentially significant paleontological resources, avoidance or other appropriate measures (such as excavation, analysis, and interpretation of resources) potentially leading to curation in perpetuity in a facility that meets the standards of the State of California Guidelines for the Curation of Archaeological Collections (OHP 1993) and 36 CFR 79, shall be implemented.	Satisfied	This mitigation measure has been satisfied by preparation of the *Paleontological Resource Assessment for the San Jacinto Master Drainage Plan Line E, City of San Jacinto, Riverside County, California, January 2024,* prepared by Applied Earthworks (AE) and included as Appendix F of this Addendum.
MM Cultural 2a: Prior to the earlier of issuance of a grading permit or construction of any SJV MDP facility subject to further CEQA analysis, the San Jacinto Public Works Department, Hemet Public Works Department, or RCFCWCD shall require the Project applicant to commission an assessment of the potential for archeological and cultural resources to be performed by a qualified archaeologist in conjunction with recognized Native American tribes, including the Soboba Band of Luiseno Indians (Soboba), in order to determine the presence and extent of any such resources within the Project area and evaluate the significance of such resources. The assessment shall include a NAHC and CHRIS records search, a Phase I walkover survey, and preparation of an	Satisfied	This mitigation measure has been satisfied by preparation of the *Cultural Resource Study for the San Jacinto Master Drainage Plan Line E, City of San Jacinto, Riverside County, California, January 2024,* prepared by Applied Earthworks for the Line E Project and is included as Appendix E to this Addendum.

Table C – Mitigation Measures

SJV MDP EIR Mitigation Measure	Applicability to Line E Project	Line E Project Mitigation Measure
archaeological report containing the results of this assessment. Phase II archaeological evaluations will be completed prior to project approval if recommended in the assessment.		
MM Cultural 2b: The San Jacinto Public Works Department, Hemet Public Works Department, or RCFCWCD shall enter into a Treatment and Disposition Agreement (TDA) with Soboba to address treatment and disposition of archaeological and cultural resources and human remains associated with Soboba that may be uncovered or otherwise discovered during construction within the jurisdiction of the San Jacinto Public Works Department, Hemet Public Works Department, or RCFCWCD. The TDA may establish provisions for tribal monitors. Following execution of the TDA by the San Jacinto Public Works Department or Hemet Public Works Department and Soboba, the TDA will be incorporated by reference into individual grading permits for portions of the Project that are within the jurisdiction of San Jacinto Public Works Department or Hemet Public Works Department; TDAs executed between RCFCWCD and Soboba will be incorporated into the construction specifications.	Revised/Clarified	**CMM Cultural-2b: Archaeological Monitoring, Cultural Resources Worker Sensitivity Training, and Treatment and Disposition Plan.** Prior to the initiation of any Line E-Project-related surface grubbing or clearing and initial grading, the entity carrying out the project ~~the San Jacinto Public Works Department, Hemet Public Works Department, or RCFCWCD~~ shall retain a qualified professional archaeologist (the "Project Archaeologist") meeting the Secretary of the Interior's Professional Qualifications Standards for archaeology as defined at 36 CFR Part 61, Appendix A. The primary task of the Project Archaeologist shall be to monitor the initial ground-disturbing activities at the Line E Project site for the identification of any previously unknown archaeological and/or cultural resources. The Project Archeologist shall attend the pre-grading meeting with the City of San Jacinto Staff, the Line E Project construction manager, and any Line E Project contractors to conduct a mandatory **Cultural** Resources Worker Sensitivity Training to those in attendance. The Project Archaeologist or designated archaeological monitor shall have the authority to temporarily halt and redirect earth moving activities in

Table C – Mitigation Measures

SJV MDP EIR Mitigation Measure	Applicability to Line E Project	Line E Project Mitigation Measure
		the affected area if suspected archaeological resources are unearthed. Also prior to the initiation of any Line E Project-related surface grubbing or clearing and initial grading, the entity carrying out the project ~~San Jacinto Public Works Department~~, shall enter into a Treatment and Disposition Agreement (TDA) with the Soboba Band of Luiseño Indians to address treatment and disposition of archaeological and cultural resources and human remains associated with the Soboba Band of Luiseño Indians that may be uncovered or otherwise discovered during construction within the jurisdiction of the San Jacinto Public Works Department~~, Hemet Public Works Department, or RCFCWCD~~. The TDA may establish provisions for tribal monitors. Following execution of the TDA ~~by the San Jacinto Public Works Department and Soboba~~, the TDA ~~be incorporated by reference into individual grading permits for portions of the Project that are within the jurisdiction of San Jacinto Public Works Department or Hemet Public Works Department; TDAs executed between RCFCWCD and Soboba~~ will be incorporated into the Line E Project construction specifications.
MM Cultural 2c: If the archaeological/cultural resources assessment described in **MM Cultural 2a** demonstrates the potential for archaeological/cultural resources to occur on the Project site, tribal monitors, including those	**Revised/Clarified**	**CMM Cultural 2c**: **Inadvertent Finds.** ~~If the archaeological/cultural resources assessment described in MM Cultural 2a demonstrates the potential for archaeological/cultural resources to occur on the Project site, tribal monitors, including those~~

Table C – Mitigation Measures

SJV MDP EIR Mitigation Measure	Applicability to Line E Project	Line E Project Mitigation Measure
from Soboba, may be allowed to monitor, at such tribe's sole cost and expense, all grading, excavation, and ground-disturbing activities, including further surveys. Following the agreement of the San Jacinto Public Works Department, Hemet Public Works Department, or RCFCWCD, the designated archaeologist, the tribal monitor, and any applicable responsible or trustee agencies, grading, excavation, ground-disturbing activities shall be halted temporarily, and redirected in the event that any archaeological/cultural resources are discovered, in order to evaluate the significance of said archaeological /cultural resources. Any artifacts collected or recovered shall be cleaned, identified, catalogued, analyzed, and prepared for curation at an appropriate repository with permanent retrievable storage to allow for additional research in the future. Site records or site record updates (as appropriate) shall be prepared and submitted to the Eastern Information Center as a permanent record of the discovery.		~~from Soboba, may be allowed to monitor, at such tribe's sole cost and expense, all grading, excavation, and ground-disturbing activities, including further surveys. Following the agreement of the San Jacinto Public Works Department, Hemet Public Works Department, or RCFCWCD, the designated archaeologist, the tribal monitor, and any applicable responsible or trustee agencies,~~ Grading, excavation, ground-disturbing activities shall be halted temporarily by the Project Archaeologist, and redirected in the event that any archaeological/cultural resources are discovered during initial ground disturbing activities, in order to evaluate the significance of said archaeological/cultural resources. Any artifacts collected or recovered shall be cleaned, identified, catalogued, analyzed, and prepared for curation at an appropriate repository with permanent retrievable storage to allow for additional research in the future. Site records or site record updates (as appropriate) shall be prepared and submitted to the ~~Eastern Information Center~~ South Coastal Information Center as a permanent record of the discovery.
MM Cultural 3: Earth-moving activities encountering soils that are identified as Pleistocene-age or older alluvium, by the soils engineer, shall be monitored by a qualified paleontological monitor. Continuous monitoring shall be restricted to undisturbed older alluvium, which might be present	**Revised/Clarified**	**CMM Cultural 3: Paleontological Resources Mitigation Monitoring Plan.** Prior to the commencement of ground-disturbing activities, the City (or designee) shall retain a Project Paleontologist to prepare and implement a Paleontological Resources Mitigation Monitoring Plan (PRMMP) for the Line E

Table C – Mitigation Measures

SJV MDP EIR Mitigation Measure	Applicability to Line E Project	Line E Project Mitigation Measure
below the surface. To avoid construction delays, the monitor shall be prepared to quickly salvage fossils, as they are unearthed. The monitor shall remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates. The monitor shall have the authority to temporarily halt or divert grading equipment to allow for the removal of abundant or large specimens.		Project. The PRMMP shall include preparation and presentation of Paleontological Resources Workers Environmental Awareness Program (WEAP) to educate construction crews about the types of paleontological resources that may be encountered at the Line E Project site. The Paleontological Resources WEAP shall provide a description of the laws and ordinances protecting fossil resources, the types of fossil resources that may be encountered in the area, the role of the paleontological monitor, outline steps to follow in the event that a fossil discovery is made and provide contact information for the Project Paleontologist. The Project Paleontologist or designee(s) shall present the Paleontological Resources WEAP to the construction contractor and each of the construction crews working on the Project during a preconstruction meeting. The Paleontological Resources WEAP shall be taped and presented to any construction crew members who were not present at the preconstruction meeting during which it was initially presented prior to such crew members working on the Project. This training may be conducted concurrent with other preconstruction training (e.g., biological resources, safety). Earth-moving activities encountering soils that are identified as Pleistocene-age or older alluvium, by the soils engineer, shall be monitored by a qualified

Table C – Mitigation Measures

SJV MDP EIR Mitigation Measure	Applicability to Line E Project	Line E Project Mitigation Measure
		paleontological monitor as set forth in the PRMMP. Continuous monitoring shall be restricted to undisturbed older alluvium, which might be present below the surface. To avoid construction delays, the monitor shall be prepared to quickly salvage fossils, as they are unearthed. The monitor shall remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates. The monitor shall have the authority to temporarily halt or divert grading equipment to allow for the removal large specimens.
MM Cultural 4: All recovered specimens shall be prepared and stabilized for identification and permanent preservation, including the washing of sediment samples to recover small invertebrates and vertebrates.	Revised/Clarified	**CMM Cultural 4:** All recovered specimens shall be prepared and stabilized for identification and permanent preservation as set forth in the PRMMP prepared under **CMM Cultural 3**, including the washing of sediment samples to recover small invertebrates and vertebrates.
MM Cultural 5: Identification and curation of specimens into an established accredited museum repository with permanent retrievable paleontological storage shall be required. Mitigation of adverse impacts to significant paleontological resources is not complete until the curation process has been fully completed and documented.	Revised/Clarified	**CMM Cultural 5**: Identification and curation of recovered specimens into an established accredited museum repository with permanent retrievable paleontological storage shall be required as set forth in the PRMMP prepared under **CMM Cultural 3**. Mitigation of adverse impacts to significant paleontological resources is not complete until the curation process has been fully completed and documented.
MM Cultural 6: Preparation of a report of findings with an appended itemized inventory of specimens	Revised/Clarified	**CMM Cultural 6:** Preparation of a report of findings with an appended itemized inventory of specimens

Table C – Mitigation Measures

SJV MDP EIR Mitigation Measure	Applicability to Line E Project	Line E Project Mitigation Measure
shall be required. The submittal of the report to the Lead Agency and the curation of recovered specimens into an established, accredited museum repository would signify the completion of the mitigation program.		shall be required as set forth in the PRMMP prepared under **CMM Cultural 3**. The submittal of the report to the Lead Agency and the curation of recovered specimens into an established, accredited museum repository would signify the completion of the mitigation program.
MM Haz 1: As part of the final design of each SJV-MDP facility, the design engineer or designee shall check proposed sites for listing on the most recent Hazardous Waste and Substances List provided by the Riverside County Department of Environmental Health pursuant to Section 65962.5 of the Government Code. If the location of said facility is on the Hazardous Waste and Substances List, avoidance of that property or properties will be the first consideration; if avoidance is infeasible, **MM Haz 2** shall be implemented.	Satisfied	As required by SJV-MDP EIR **MM Haz 1**, the list compiled by Government Code Section 65962.5, known as the Cortese List, was reviewed to determine if any portion of the Line E Project site is on this list. None of the sites listed on the Cortese List are within or near the Line E Project disturbance area. This mitigation measure has been satisfied.
MM Haz 2: If the selected facility traverses a site listed on the Hazardous Waste and Substances List, and avoidance is not feasible or if there are other indications that a site could be contaminated, a Phase 1 Environmental Site Assessment (ESA) for such facility will be prepared. If the Phase 1 ESA identifies possible contamination along the facility alignment, then all recommended subsurface investigation measures listed in the Phase I ESA will be implemented. Based on subsurface investigations characterizing subsurface contamination, remediation	Not Applicable	This mitigation measure is not applicable, as the Line E Project is not on or in proximity to any known hazardous materials sites..

Table C – Mitigation Measures

SJV MDP EIR Mitigation Measure	Applicability to Line E Project	Line E Project Mitigation Measure
measures (such as excavation of contaminated soil, bioremediation, or soil-vapor extraction), shall be implemented for the applicable facility or an alternative facility alignment will be chosen.		
MM Haz 3: All environmental investigation and/or remediation shall be conducted under a Workplan approved by jurisdictional regulatory agencies overseeing hazardous waste cleanups until the applicable regulatory standard is met.	Not Applicable	This mitigation measure is not applicable because a Phase I Environmental Site Assessment (ESA) and Phase II ESA were prepared for the Line E Project (Appendices H.1 and H.2). Based on the findings of the Phase I ESA and Phase II ESA it was determined that no further environmental investigation or remediation is required.
MM Haz 4: Prior to any excavation or soil removal on known contaminated sites, or if contaminated soil (i.e., soil with a visible sheen or detectable odor) is encountered, a complete characterization of the soil will be conducted. Appropriate sampling shall be conducted prior to disposal of the excavated soil. If the soil is contaminated, it shall be properly disposed of according to California's Land Disposal restrictions (California Code of Regulations, Chapter 18, Title 22). If site remediation involves the removal of contamination, then contaminated material shall be transported off site by a licensed handler/hauler to a licensed hazardous waste disposal facility.	Not Applicable	This mitigation measure is not applicable as there are no known contaminated sites within the Line E Project site according to a recent Phase I ESA. Furthermore, a Phase II ESA was prepared for the Project which determined that no further environmental investigation is required.
MM Haz 5: If soil import is required for construction of a specific facility, proper sampling shall be conducted prior to the use of such imported soil	Not Applicable	This mitigation measure is not applicable because soil import is not required to construct the Line E.

Table C – Mitigation Measures

SJV MDP EIR Mitigation Measure	Applicability to Line E Project	Line E Project Mitigation Measure
to make sure that the imported soil is free of contamination.		
MM Haz 6: If during construction of a specific facility, soil and/or groundwater contamination is suspected, construction in the area of the suspected contamination shall cease and appropriate health and safety measures shall be implemented. The construction contractor shall contact the respective jurisdictional enforcement agency (i.e., San Jacinto, Hemet, Riverside County, RCFCWCD) to obtain the necessary information on appropriate measures and their implementation. The measures recommended by the applicable enforcement agency will be implemented.	Not Applicable	This mitigation measure is not applicable because the Phase I ESA did not identify ground water contamination and Phase II ESA did not identify soil contamination within the Project footprint.
Since the SJV-MDP EIR was prepared and certified, one new species has been listed as Candidate Species per the California Department of Fish and Wildlife; the Crotch's bumble bee (CBB) is now a species that under CEQA has to be considered and impacts evaluated and mitigated for as appropriate. Therefore, in order to be compliant, the Line E Project does need to do additional mitigation related to CBB.	Added	**MM Bio E1: Crotch's Bumble Bee Pre-Construction Survey and Construction Monitoring.** In order to avoid direct and indirect impacts to Crotch's bumble bee (CBB) which could establish themselves on the Project site before construction starts, prior to the start of any Project-related ground-disturbing activities a qualified CBB biologist (i.e., 1-2 years of experience performing CBB surveys, or, has a Memorandum of Understanding [MOU] with CDFW), shall perform the records searches and site surveys according to the methods set forth in the California Department of Fish and Wildlife *Survey Considerations for California Endangered Species Act Candidate Bumble Bee Species*, June 6, 2023 (the "2023 CDFW Survey Considerations"). The literature

Table C – Mitigation Measures

SJV MDP EIR Mitigation Measure	Applicability to Line E Project	Line E Project Mitigation Measure
		review and records search shall identify occurrences at the Project site and within a 5-mile buffer. The literature review and records search shall include: a report from the CDFW California Natural Diversity Data Base for a 10-mile radius of the project site; aerial photographs; and iNaturalist for bee sightings and nectar sources. Then, the qualified CBB biologist shall conduct on-site surveys for foraging and nesting bees. The surveys shall begin with a habitat assessment to evaluate the likelihood of bumble bees occurring within and adjacent to the project area. Then, foraging bumble bee and nesting surveys shall be conducted during the peak nectar blooming period (April through June 30). Habitat assessment and survey results shall be submitted to CDFW prior to the start of ground-disturbing project activities. Vegetation removal is allowable from November to January (note seasonal limitations for nesting birds in **MM Bio E4**). No monitoring is required if removal of vegetation occurs during this time period. However, vegetation removal/ground disturbances during the CBB flight season, which is February to October, will require preemptive focused CBB surveys and full-time biological monitoring for CBB to take place within the project limits. If Crotch's bumble bees are present, mitigation measure **MM Bio E2**, which required an avoidance plan shall be implemented. Construction monitoring for CBB may cease based on the professional

Table C – Mitigation Measures

SJV MDP EIR Mitigation Measure	Applicability to Line E Project	Line E Project Mitigation Measure
		judgement of the qualified CBB biologist that construction activities have already impacted the extent of the planned impact footprint. If an active CBB nest is detected during focused surveys conducted between April and June, or during the construction monitoring, then the qualified biologist shall establish a no-disturbance buffer zone (including foraging resources and flight corridors essential for supporting the colony) around the CBB nest. The qualified biologist and City shall notify CDFW and if needed, process an Incidental Take Permit (ITP) with CDFW (**MM Bio E3**). If a single CBB is observed during construction, CDFW shall be notified, and work shall be halted in that area until the qualified biologist deems the CBB has left the site. It is expected that if an ITP is needed, that the offsite mitigation which has similar habitat types would be required. If offsite mitigation for CBB is needed, then a CBB permitted land manager shall be hired by the City to ensure CBB habitat is intact on the offsite mitigation property.
	Added	**MM Bio E2: Crotch's Bumble Bee Avoidance Plan.** If Crotch's bumble bee is detected during pre-construction surveys outlined above in **MM Bio E1**, the City in consultation with the qualified CBB biologist shall develop a plan to fully avoid impacts to Crotch's bumble bee. The plan shall include effective, specific, enforceable, and feasible measures. An avoidance plan shall be submitted to the City

Table C – Mitigation Measures

SJV MDP EIR Mitigation Measure	Applicability to Line E Project	Line E Project Mitigation Measure
		prior to implementing Project-related ground-disturbing activities and/or vegetation removal where there may be impacts to Crotch's bumble bee.
	Added	**MM Bio E3: Incidental Take Permit for Crotch's Bumble Bee.** If Crotch's bumble bee is detected during the focused surveys and Crotch's bumble bee becomes formally listed under CESA or is still a Candidate species and if impacts to Crotch's bumble bee cannot be feasibly avoided during Project construction and activities, the City/qualified biologist shall coordinate with CDFW to obtain appropriate permits for incidental take of Crotch's bumble bee and provide appropriate mitigation for impacts to Crotch's bumble bee habitat. CDFW recommends the City mitigate for impacts to Crotch's bumble bee habitat at a ratio comparable to the Project's level of impacts.

All potentially significant impacts, except for agricultural resources] and indirect growth inducing impacts to population/housing, identified in the SJV-MDP EIR were determined to be less than significant with incorporation of mitigation measures. The Line E Project incorporates feasible mitigation to reduce potential impacts to less than significant.

(D) *Mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.*

See **Table C – Mitigation Measures**. All potentially significant impacts, except agricultural resources, air quality, and population/housing identified in the SJV-MDP EIR were determined to be less than significant with incorporation of mitigation measures. As shown in **Table C – Mitigation Measures,** certain mitigation measure have been satisfied by the preparation of Line E Project specific technical studies for air quality, biological resources, cultural resources, and searching hazardous materials databases. Other mitigation measures from the SJV-MDP EIR have been clarified to be specific to the Line E Project; however, these clarifications do not reduce

the effectiveness of the mitigation measures or change the significance determinations of the SJV-MDP EIR. New mitigation measures for potential impacts to biological resources would be implemented by the Line E Project; however, these measures are not mitigating new significant effects on the environment; rather, they identify specific actions to implement the more general SJV-MDP EIR mitigation measures. (*Mani Brothers Real Estate Group v. City of Los Angeles* (2007) 153 Cal.App.4th 1385, 1403 [Mitigation measures adopted when a project is approved may be changed or deleted in an addendum if the agency states a legitimate reason for making the changes and the reason is supported by substantial evidence]; see also *Napa Citizens for Honest Government v. Napa County Bd. of Supervisors* (2001) 91 Cal.App.4th 342, 359.) No new or more severe impacts are caused by the deletions or changes to the SJV-MDP EIR mitigation measures. Hence, no subsequent EIR is required.

Based on the above, the City has reviewed the Line E Project in light of the requirements defined under the State *CEQA Guidelines Section 15164* using the Supplemental Environmental Checklist Form in Section 4 of this Addendum. The City, as the CEQA lead agency, has determined that none of the above conditions requiring preparation of a subsequent or supplemental MND or EIR apply. Therefore, an addendum to the San Jacinto Master Drainage Plan (MDP) EIR is the appropriate environmental documentation for the Line E Project.

4. Supplemental Environmental Checklist Form

A. Project Title
San Jacinto Valley Master Drainage Plan Line E Project

B. Lead Agency Name, Address, Contact Person, and Phone Number
City of San Jacinto
595 S. San Jacinto Ave.,
San Jacinto, CA 92583
Kevin White, Planning Manager, (951) 487-7330 Ext. 306

C. Responsible Agency Name, Address, Contact Person. and Phone Number
Riverside County Flood Control and Water Conservation District
1995 Market St.
Riverside, CA 92501
Margaret Bornyasz, Senior Flood Control Planner, (951) 955-1200

D. Project Location
The proposed Project is generally located south of Ramona Expressway, north of Cottonwood Road, parallel to and east of Sanderson Avenue, in the City of San Jacinto, Riverside County, California as described in detail in Section 2 Project Description and shown on **Figure 3 – Regional Map** and **Figure 4 - Project Map**.

E. Project Sponsor's Name and Address
City of San Jacinto
595 S. San Jacinto Ave.
San Jacinto, CA

F. Total Project Area
Approximately 137.5 acres in total

G. Assessor's Parcel Number(s)
The Project encompasses all or portions of APNs 430-100-002, 430-100-009, 430-100-012, 430-100-013, 430-100-018, 432-030-006, 432-030-010, 432-030-012, 432-030-013, 436-010-003, 436-010-005, 436-030-004, 436-080-002, 436-080-003, 436-170-001, and 436-170-016.

H. Section, Township & Range
Sections 18,19, 20, and 29, Township 4 South and Range 1 West of the San Bernardino Baseline and Meridian, identified on the Lakeview, California USGS 7.5 Quadrangle Map as identified on **Figure 13 – USGS Topographic Map**.

I. Elevation
The Project site ranges in elevation from approximately 1,452 to 1,490 feet above mean sea level (AMSL).

J. General Plan Land Use Designation(s)

Table D – General Plan Land Use Designations

APN	GP Land Use Designation
430-100-002 430-100-013	Commercial
430-100-012	Water
430-100-009 430-100-018	Business Park
432-030-013 436-080-002	Low Density Residential
432-030-006 432-030-010	Villages Specific Plan
432-030-012	Medium Density Residential
436-030-004 436-170-001 436-170-016	Commercial; Medium Residential

Refer to **Figure 14 – General Plan Land Use Designations.**

K. Existing Zoning Designation(s)

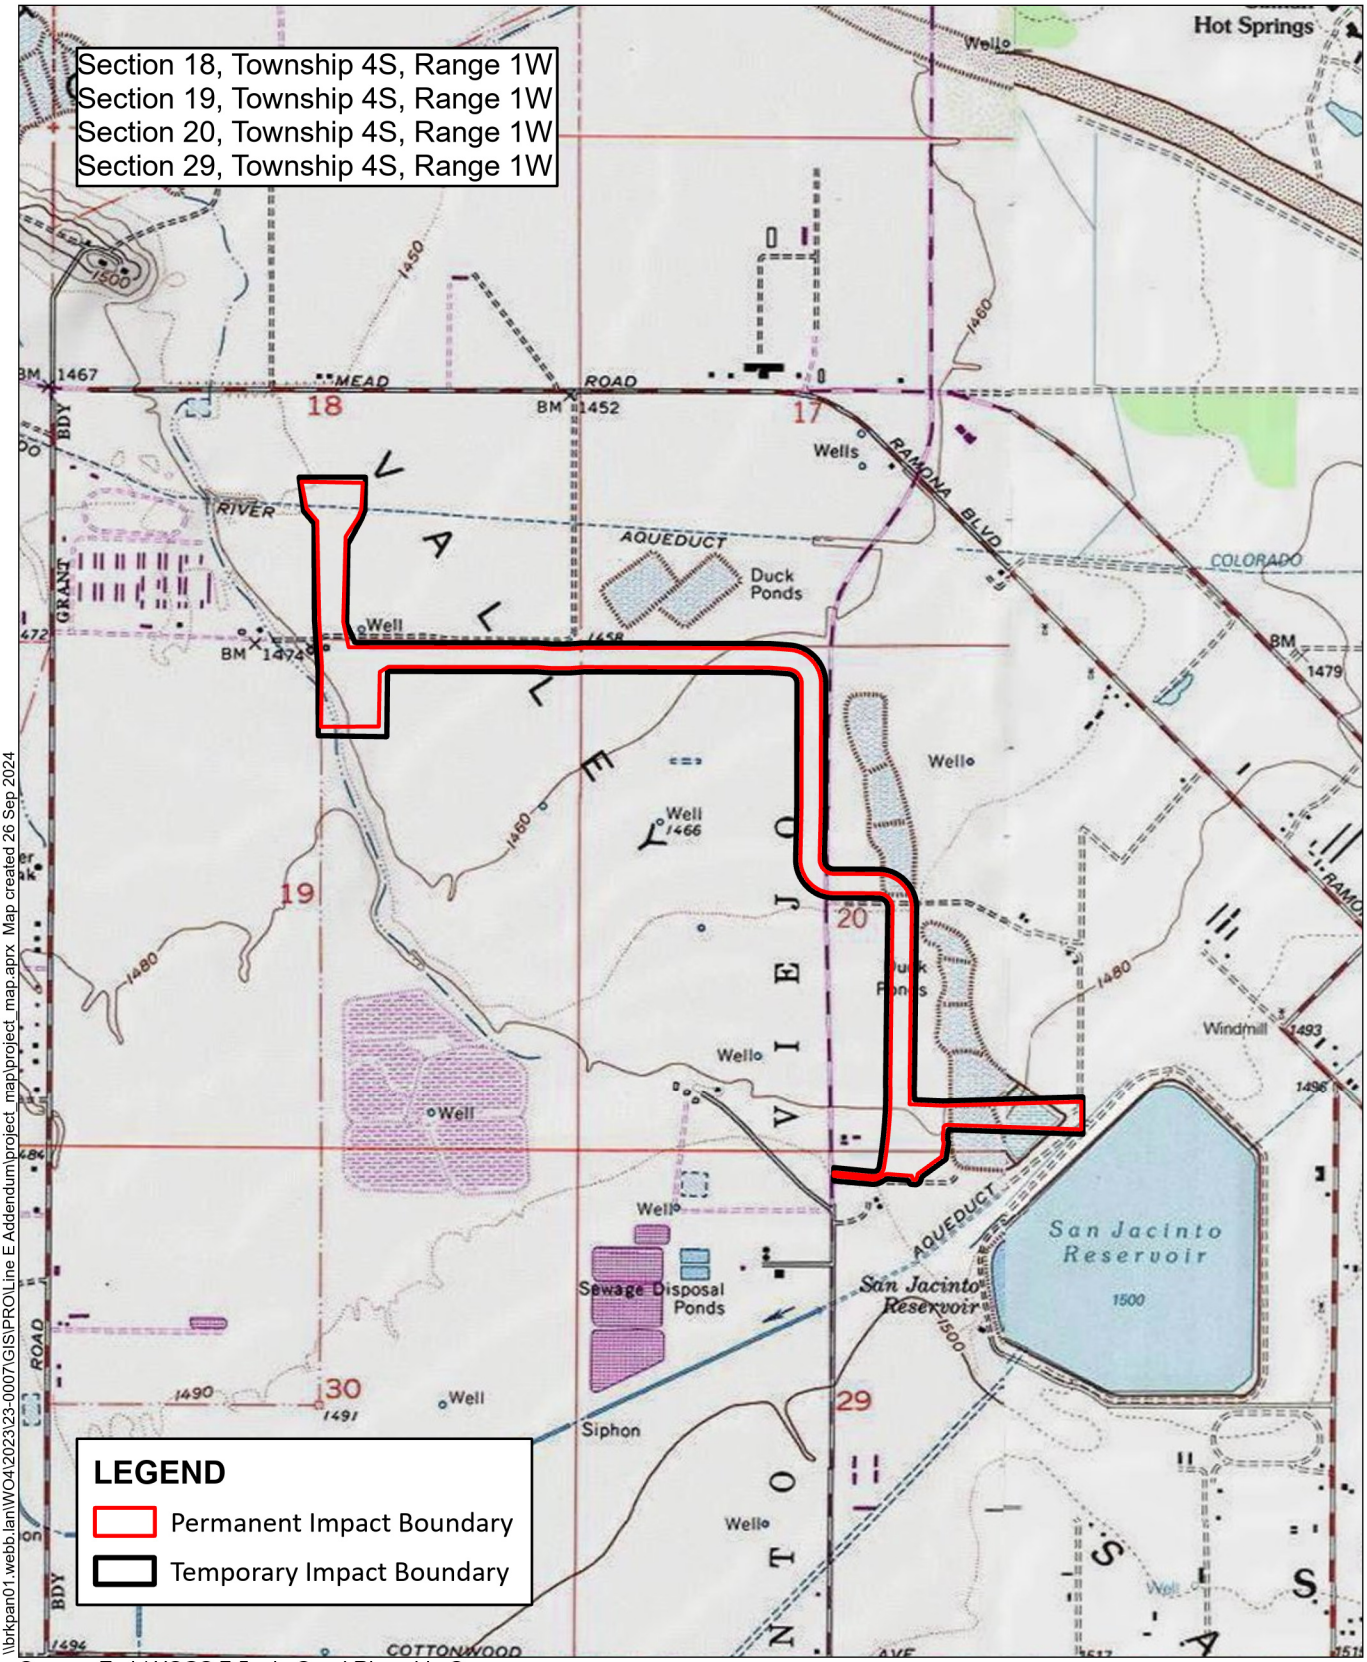

Table E – Zoning Designations

APN	Zoning Designation
430-100-002 430-100-013	CG – Commercial General
430-100-012	W – Water Source
430-100-009 430-100-018	OP – Office Park

L. Project Description

The proposed Project is the construction, operation, and maintenance of the SJV MDP Line E Channel and Line E-Y-Z Confluence Basin as in detail in Section 2.0 Project Description and shown on **Figure 4 – Project Map** and **Figure 5 – Project Components**

New Significant Environmental Effects or Substantially More Severe Significant Environmental Effects Compared to those Identified in the Previous CEQA Document

The subject areas checked below (X) were determined to be new significant environmental effects or to be previously identified effects that have a substantial increase in severity either due to a change in project, change in circumstances, or new information of substantial importance, as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Agriculture Resources	☐ Air Quality
☐ Biological Resources	☐ Cultural Resources	☐ Energy
☐ Geology / Soils	☐ Greenhouse Gases	☐ Hazards & Hazardous Materials
☐ Hydrology / Water Quality	☐ Land Use / Planning	☐ Mineral Resources
☐ Noise	☐ Population / Housing	☐ Public Services
☐ Recreation	☐ Transportation	☐ Tribal Cultural Resources
☐ Utilities / Service Systems	☐ Wildfire	☐ Mandatory Findings of Significance

Determination:

(To be completed by the Lead Agency)
On the basis of this initial evaluation:

☐ No substantial changes are proposed in the project and there are no substantial changes in the circumstances under which the project will be undertaken that will require major revisions to the previous approved ND or MND or certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects. Also, there is no “new information of substantial importance” as that term is used in CEQA Guidelines Section 15162(a)(3). Therefore, the previously adopted ND or MND or previously certified EIR adequately discusses the potential impacts of the project without modification.

☒ No substantial changes are proposed in the project and there are no substantial changes in the circumstances under which the project will be undertaken that will require major revisions to the previous approved ND or MND or certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects. Also, there is no “new information of substantial importance” as that term is used in CEQA Guidelines Section 15162(a)(3). Therefore, the previously adopted ND, MND or previously certified EIR adequately discusses the potential impacts of the project; however, minor changes require the preparation of an ADDENDUM.

☐ Substantial changes are proposed in the project or there are substantial changes in the circumstances under which the project will be undertaken that will require major revisions to the previous ND, MND or EIR due to the involvement of significant new environmental effects or a substantial increase in the severity of previously identified significant effects. Or, there is “new information of substantial importance,” as that term is used in CEQA Guidelines Section 15162(a)(3). However, all new potentially significant environmental effects or substantial

increases in the severity of previously identified significant effects are clearly reduced to below a level of significance through the incorporation of mitigation measures agreed to by the project applicant. Therefore, a SUBSEQUENT MND is required.

☐ Substantial changes are proposed in the project or there are substantial changes in the circumstances under which the project will be undertaken that will require major revisions to the previous environmental document due to the involvement of significant new environmental effects or a substantial increase in the severity of previously identified significant effects. Or, there is "new information of substantial importance," as that term is used in CEQA Guidelines Section 15162(a)(3). However, only minor changes or additions or changes would be necessary to make the previous EIR adequate for the project in the changed situation. Therefore, a SUPPLEMENTAL EIR is required.

☐ Substantial changes are proposed in the project or there are substantial changes in the circumstances under which the project will be undertaken that will require major revisions to the previous environmental document due to the involvement of significant new environmental effects or a substantial increase in the severity of previously identified significant effects. Or, there is "new information of substantial importance," as that term is used in CEQA Guidelines Section 15162(a)(3). Therefore, a SUBSEQUENT EIR is required.

Signature	Date
.Kevin White, Planning Manager	For City of San Jacinto

Evaluation of Environmental Impacts

1. A finding of “No New Impact/No Impact” means that the potential impact was fully analyzed and/or mitigated in the prior CEQA document and no new or different impacts will result from the proposed activity. A brief explanation is required for all answers except "No New Impact/No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No New Impact/No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g. the project falls outside a fault rupture zone). A "No New Impact/No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g. the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

2. A finding of “New Mitigation is Required” means that the project may have a new potentially significant impact on the environment or a substantially more severe impact than analyzed in the previously approved or certified CEQA document and that new mitigation is required to address the impact, but that the resultant significance is not changed from the original document.

3. A finding of “New Potentially Significant Impact” means that the project may have a new potentially significant impact on the environment or a substantially more severe impact than analyzed in the previously approved or certified CEQA document that cannot be mitigated to below a level of significance or be avoided.

4. A finding of “Reduced Impact” means that the analysis herein shows, or a previously infeasible mitigation measure is now available, or a previously infeasible alternative is now available that will reduce a significant impact identified in the previously prepared environmental document.

5. All answers must take account of the whole action involved, maintenance activities, areas needed for access, cumulative as well as project-level, indirect as well as direct, and construction impacts.

6. Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:

    a. Earlier Analyses Used. Identify and state where they are available for review.

    b. Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis. Describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the proposed action.

    c. Infeasible Mitigation Measures. Since the previous EIR was certified or previous ND or MND was adopted, discuss any mitigation measures or alternatives previously found not to be feasible that would in fact be feasible or that are considerably different from those previously analyzed and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measures or alternatives.

    d. Changes in Circumstances. Since the previous EIR was certified or previous ND or MND was adopted, discuss any changes in the project, changes in circumstances under which the project is

undertaken and/or "new information of substantial importance" that cause a change in conclusion regarding one or more effects discussed in the original document.

7. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g. general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.

8. Supporting Information Sources. A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.

9. This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.

10. The explanation of each issue should identify:
    a. the significance criteria or threshold, if any, used to evaluate each question;

    b. differences between the proposed activity and the previously approved project described in the approved ND or MND or certified EIR; and

    c. the previously approved mitigation measure identified, if any, to reduce the impact to less than significance.

A. AESTHETICS	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
Except as provided in Public Resource Code Section 21099, would the project?				
1) Have a substantial effect on a scenic vista?	☐	☐	☒	☐
2) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings and historic buildings within a state scenic highway?	☐	☐	☒	☐
3) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage points.) If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☒	☐
4) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☒	☐

Source(s): COR ORD 655; DOF; DOT

1) Have a substantial effect on a scenic vista?

SJV-MDP EIR Conclusion: Less than Significant Impact

The SJV-MDP EIR identified immediate views in the SJV-MDP area as agricultural and rural residential uses and the nearby Lakeview, Dawson, and San Jacinto Mountains. Distant views from the SJV-MDP area are the San Bernardino Mountains to the north, the Santa Ana Mountains to the west, and Palomar Mountain to the south. The mountains constitute a scenic vista. The SJV-MDP EIR Initial Study determined that implementation of the MDP would not impact scenic vistas because, to a large extent, the proposed facilities would be located at grade or below the ground surface, including underground storm drains, open channels, and detention basins. The detention basins would be incised. Above ground MDP facilities include detention basin embankments and maintenance roads adjacent to open channels. The detention basin embankments would be approximately three feet above ground and no greater than six feet above ground. Open channel maintenance roads will be located no more than a couple of feet above ground. The proposed MDP facilities would not obstruct views from the MDP project area or substantially affect scenic vistas. Exposed surfaces, construction debris, and construction equipment may temporarily impact the aesthetic quality of the immediate area in which construction is taking place; however, these impacts would be short-term and cease upon completion of each MSP facility. Because implementation of the MDP would not have a substantial effect on a scenic vista , impacts would be less than significant. (SJV-MDP IS, p. 8.)

Line E Project: No New Impact/No Impact

The only scenic vista in proximity to the Project site is the San Jacinto Mountains. The only above grade component of the Project are berms, which would direct flows into the Line E channel. The berms would be small in scale, approximately 5-feet high, which is the less than the height of the embankments evaluated in the SJV-MDP EIR. The berms would be vegetated. Due to the size and scale of the berms there would be no substantial adverse effect on views of the San Jacinto Mountains. The Line E channel would mostly be located at grade or below the ground surface. As analyzed in the SJV-MDP EIR Initial Study, exposed surfaces, construction debris, and construction equipment may cause temporary impacts, from the construction of the proposed channel at or below

grade. The Line E Project will result in the same temporary impacts during construction as the channel, from surface exposure, construction debris, and construction equipment.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to scenic vistas. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

2) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings and historic buildings within a state scenic highway?

SJV-MDP EIR Conclusion: Less than Significant Impact

There are no state designated or state eligible scenic highways in in proximity to proposed boundaries of the MDP area. The closest State Designated Scenic Highway is Highway 243 (Banning/Idyllwild Panoramic Highway), which is located over seven and one-half miles northeast of the MDP's northeastern boundary. State Route 74 (Florida Avenue), as it passes east to west through Hemet, is considered a State Eligible Scenic Highway. State Route 74 traverses through the southernmost portion of the Project area; however, there are no facilities proposed within one quarter mile of this State Eligible Scenic Highway. The closest proposed facilities are storm drains, which would not be visible after construction. For these reasons impacts will be less than significant. (SJV-MDP EIR, pp. 3.1-5 – 3.1-8.)

Line E Project: No New Impact/No Impact

As shown on **Figure 4 – Project Map**, no portion of Line E would be located in or near state designated Highway 243 (Banning/Idyllwild Panoramic Highway) or state eligible scenic highway State Route 74 (Florida Avenue). No portion of the Line E project would be visible from either Highway 243 or State Route 74 due to the distance of the Line E project from these highways.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to scenic resources. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

3) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage points.) If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

SJV-MDP EIR Conclusion: Less than Significant Impact

The proposed SJV-MDP Facilities are located in San Jacinto and unincorporated areas of Riverside County. Temporary impacts on the area's aesthetics, due to exposed surfaces, construction debris, and equipment, would be short-term and cease upon project completion, making them less than significant. Post-construction, the underground drainages would be hidden, and the visible open storm channels and detention basins would align aesthetically with the rural residential development, thus not degrading the character or quality of the project area. For these reasons impacts would be less than significant. (SJV-MDP IS, p. 8.)

Line E Project: No New Impact/No Impact

The proposed Line E Project would be constructed entirely within the incorporated area of San Jacinto. CEQA Statute section 21071(a) defines an incorporated city as being an urbanized area if it meets either of the following criteria:

(1) Has a population of at least 100,000 persons.

(2) Has a population of less than 100,000 persons if the population of that city and not more than two contiguous incorporated cities combined equals at least 100,000 persons.

Based on January 2024 Department of Finance E-1 Population and Housing Estimates for Cities, Counties, and the State data, San Jacinto has a population of 53,538 and Hemet has a population of 89,663. (DOF.) Because San Jacinto and Hemet, a contiguous city, have a combined population that adds up to more than 100,000 residents. Thus, per CEQA Statute section 21071(a)(1), the Project site is within an urbanized area. Therefore, this discussion addresses, would the Line E Project conflict with applicable zoning and other regulations governing scenic quality.

As shown on **Figure 14 – General Plan Land Use Designation** and **Figure 15 – Zoning Designation**, the Line E Project traverses land use and zoning designations that allow for a variety of urban uses including business park, commercial, and residential.

Regulations governing scenic quality in San Jacinto are contained in Title 17 of the San Jacinto Municipal Code, also known as the San Jacinto Development Code (SJDC). The SJDC provides specific development standards that influence the City's scenic views, visual character, and restrict lighting. The SJDC implements the San Jacinto General Plan 2040 goals and policies by classifying and regulating the specific uses of land and structures within the City. Article 2, Zones, Allowable Land Uses, and Zone-Specific Standards, of the SJDC establishes development standards. None of these standards are applicable to the Line E Project.

The Line E Channel would be at and below grade level, once construction is complete the ground surface will be returned to its previous condition. Berms would be built to direct flows into the proposed Line E channel, however they will not be of significant size to degrade the existing visual character or quality of public views. Therefore, implementation of the Line E Project would not degrade the existing visual character or quality of public views or conflict with applicable zoning and other regulations governing scenic quality.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to degrading the existing visual character or quality of public views or conflicting with applicable zoning and other regulations governing scenic quality. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

4) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

SJV-MDP EIR Conclusion: No Impact

The proposed flood control facilities would not require any lighting. The project does not generate any amount of light or glare; therefore, this will not conflict with any day or nighttime views in the area. Any lighting used during the construction phase will be temporary. The proposed flood control facilities will not create a new source of substantial light or glare. (SJV-MDP IS, pp. 8 – 9.)

Line E Project: No New Impact/No Impact

The proposed Line E Project is a flood control facility and will not require lighting. The project does not generate any amount of light or glare; therefore, this will not conflict with any day or nighttime views in the area. Any lighting used during the construction phase will be temporary and will be faced downward.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to new sources of light or glare. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

B. AGRICULTURE & FOREST RESOURCES	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:				
1) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland) as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☒	☐
2) Conflict with existing zoning for agricultural use or a Williamson Act contract?	☐	☐	☒	☐
3) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Govt. Code section 51104(g))?	☐	☐	☒	☐
4) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☒	☐
5) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☒	☐

Source(s): FMMP; GP DEIR

1) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland) as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources. Agency, to nonagricultural use.

SJV- MDP EIR Conclusion: Significant and Unavoidable Impact

Construction of the proposed open channels will be primarily located within or adjacent to road ROW. However, construction of SJV-MDP facilities will result in the direct conversion of approximately 122 acres of Important Farmland, comprised of 12 acres of Prime Farmland, 80 acres of Farmland of Statewide Importance, and 30 acres of Unique Farmland, to open storm channel facilities. This permanent conversion of Farmland is a potentially significant impact. (SJV-MDP EIR, pp. 3.2-12 – 3.2-13.)

Line E Project: No New Impact/No Impact

The proposed Line E Project is within Important Farmland designated land as shown on **Figure 16 – Farmland Map.** Construction and operation of the Line E Project would permanently convert approximately 81 acres of Farmland, comprised of 4 acres of Prime Farmland, 56 acres of Farmland of Statewide Importance, and 21 acres of Unique Farmland, to drainage facilities. This permanent conversion of Farmland is a potentially significant impact.

The Line E Project would not permanently convert Farmland, beyond what was analyzed in the SJV-MDP EIR. Because the Line E Project would not result in any new or increased significant impacts related to the conversion of Farmland to a non-agricultural use, this is not considered a new significant impact. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

2) Conflict with existing zoning for agricultural use, or a Williamson Act Contract.

SJV-MDP EIR Conclusion: Significant and Unavoidable Impact

The SJV-MDP conceptual alignment, including open channels Line 1, Line 2, Line 3, Line X, and the Line E-Y-Z Confluence Basin, is within properties under Williamson Act contracts. Construction would mainly occur within or adjacent to road rights-of-way, avoiding conflicts with Williamson Act contracts. However, converting approximately 6.3 acres of Farmland of Local Importance under a Williamson Act Contract to non-agricultural use for the Line E-Y-Z Confluence Basin would be a direct impact. Although the San Jacinto General Plan allows urban development on agricultural land, the Project's drainage infrastructure could indirectly lead to the development of agricultural lands or lands under Williamson Act contracts for urban uses, resulting in an indirect significant impact. (SJV-MDP EIR, p. 3.2-13.)

Line E Project: No New Impact/No Impact

San Jacinto General Plan does not have land use designations exclusive for agricultural uses. The San Jacinto Development Code does not have zoning districts exclusive for agricultural uses. Areas in San Jacinto, identified as Prime Farmland, Unique Farmland and Farmland of Statewide Importance, including within approved Specific Plan areas, are mostly designated for a mix of residential and non-residential development. (SJGP EIR, pp. 5.2-8 – 5.2-10.) The San Jacinto Development code does not address regional stormwater infrastructure; therefore the Line E Project does not conflict with existing zoning for agriculture use.

The San Jacinto General Plan allows urban development on agricultural land (SJ GP EIR, pp. 5.2-8 – 5.2-10), the Line E Project's drainage infrastructure could indirectly lead to the development of agricultural lands for urban uses, resulting in an indirect significant impact.

There are no Williamson Act contracted lands within San Jacinto. (SJGP EIR, p. 5.2-1.) Therefore, the Line E Project Site, including the Line E-Y-Z confluence basin, would not have a direct or indict conflict with a Williamson Act Contract.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts regarding conflicts with existing zoning for agricultural use or a Williamson Act contract. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

3) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g)), and

4) Result in the loss of forest land or conversion of forest land to non-forest use?

SJV-MDP EIR Conclusion: No impact

These thresholds were not a part of the State CEQA Guidelines at the time the SJV-MDP EIR was prepared. However, the *General Biological Assessment*, February 17, 2009, prepared for the SJV-MDP EIR did not identify forest land as present within the SJV-MDP Project area. Therefore, implementation of the SJV-MDP Project would not result in the loss of forest land or the conversion of forest land to non-forest uses. (SJV-MDP EIR, pp 3.4-38 – 3.4-39.)

Line E Project: No New Impact/No Impact

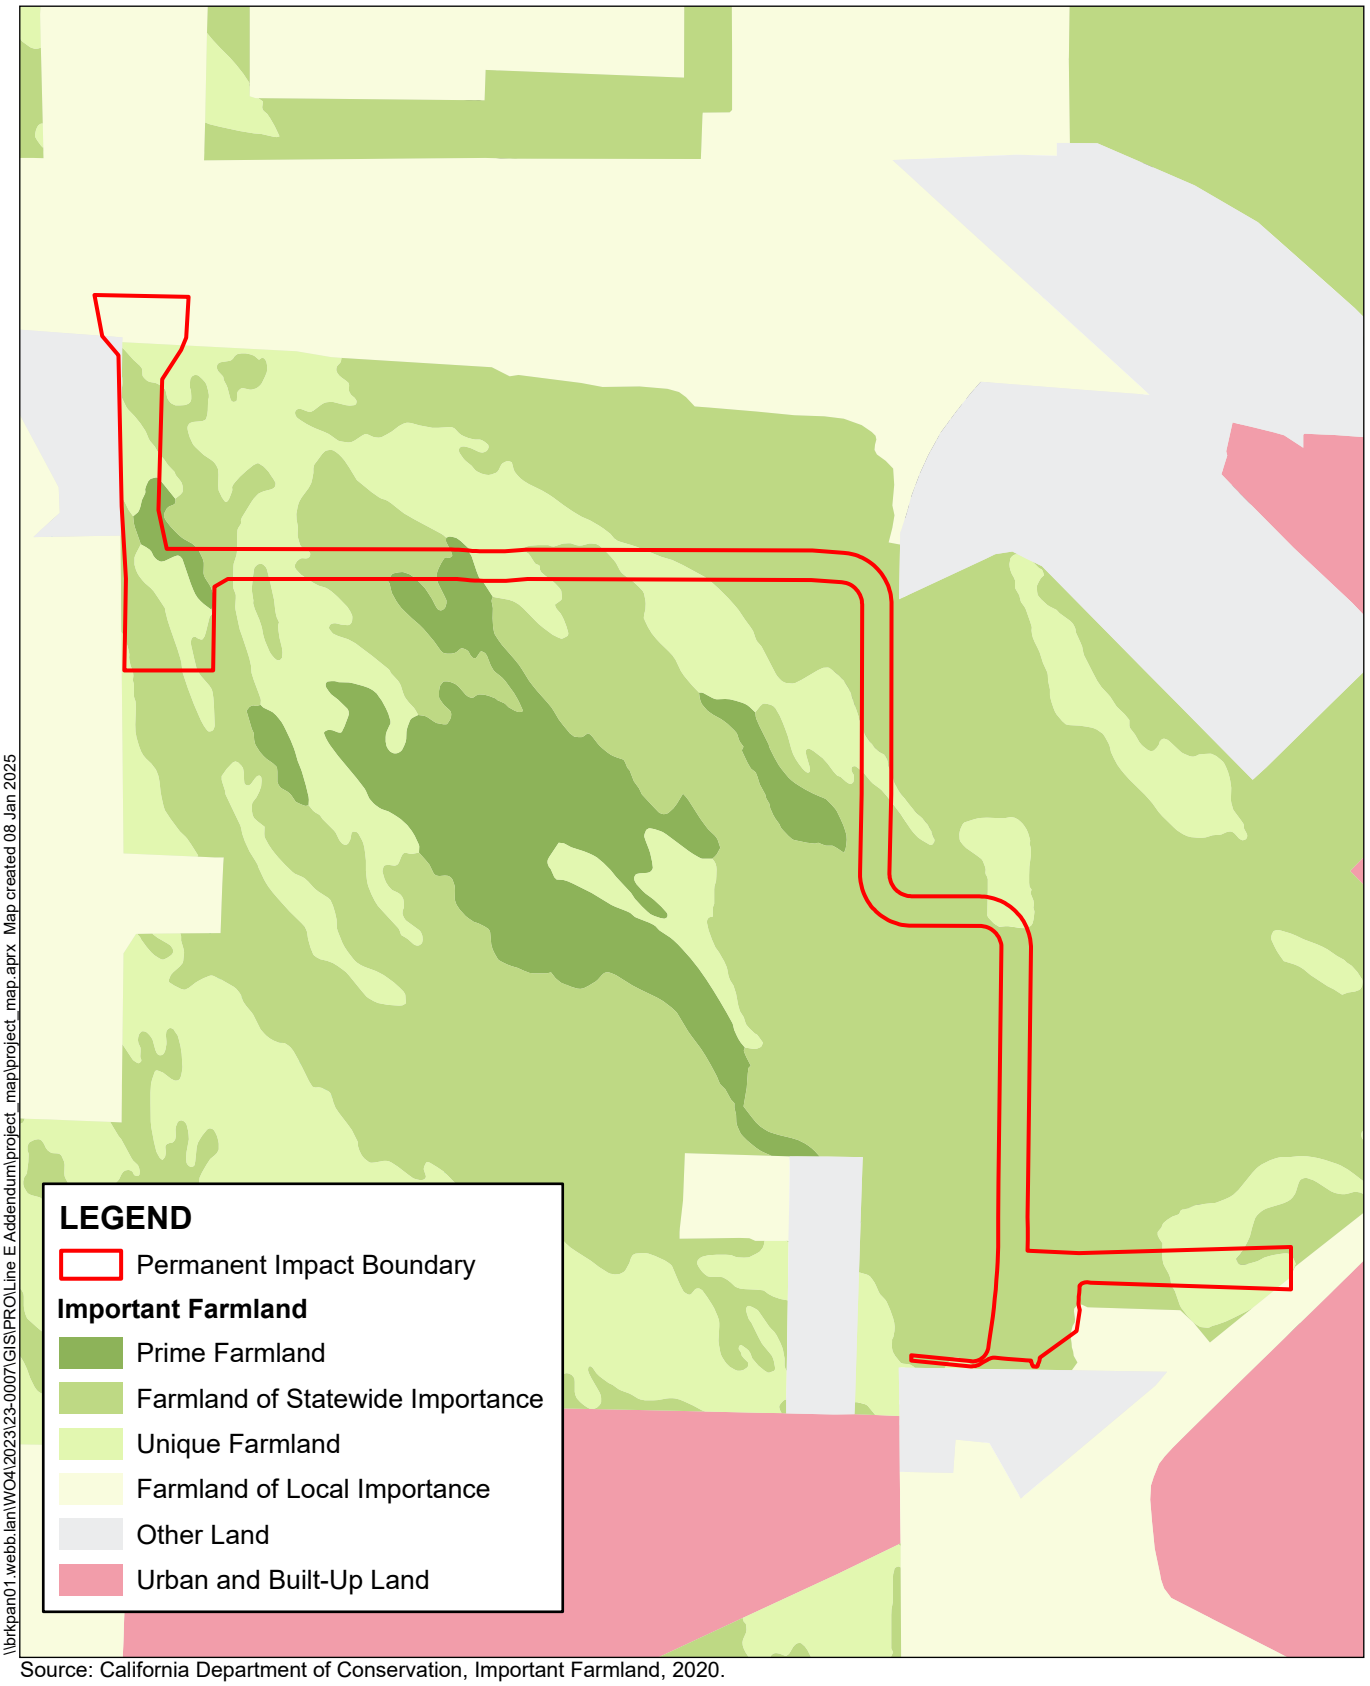
Forest land, as defined in Public Resources Code (PRC) Section 12220(g) is land that can support 10 percent of native tree cover of any species under natural conditions and that allows for the management of one or more forest resources. Timberland, as defined in PRC section 4526, means land, other than land owned by the federal government and land designated as experimental forest land, which is capable of growing a crop of trees for any commercial species, including Christmas trees.

According to San Jacinto General Plan EIR, there are no properties within the City limits that are zoned for forest land, timberland, or timberland production. (SJGP EIR, p. 5.2-4.) Therefore, implementation of the proposed Line E Project would not conflict with existing timberland zoning or result in the loss or conversation of forest land to non-forest use.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to forest land or timberland. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

5) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?

SJV-MDP EIR Conclusion: Significant and Unavoidable Impact



The proposed Project would provide drainage infrastructure that could support development of the Project area. Development of adjacent areas would result in the direct conversion of farmland (including Important Farmland) to non-agricultural uses. Consequently, the proposed SJV-MDP Project has the potential to indirectly convert farmland in the Project area. The direct conversion of farmland to non-agricultural uses would likely occur in the Project area with the build out of the San Jacinto, Hemet, and Riverside County General Plans. Because the proposed Project would likely support the conversion of farmland to non-agricultural uses, impacts are considered significant and unavoidable. (SJV-MDP EIR, pp 3.2-13 – 3.2-14.)

Line E Project: No New Impact/No Impact

As previously discussed in item B.1, the Line E Project would result in the direct conversion of approximately 81 acres of Farmland to storm drain facilities; which is a potentially significant impact. The drainage infrastructure proposed could support development of the Line E tributary area, which would result in the direct conversion of farmland (including Important Farmland) to non-agricultural uses. Consequently, the proposed Project has the potential to indirectly convert farmland in the within the Line E tributary area.

There is no forest land within San Jacinto; therefore, the Line E Project would not result in the conversion of forest land to a non-forest use.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to conversion of Farmland or forest land to non-agricultural or non-forest uses. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

ALBERT A. WEBB ASSOCIATES

C. AIR QUALITY	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
1) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐
2) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☒	☐
3) Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☒	☐
4) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☒	☐

Source(s): SCAQMD-A; SCAQMD-B; CARB-A; CalEEMod Output (Appendix C)

1) Conflict with or obstruct implementation of the applicable air quality plan?

The City is located in the South Coast Air Basin (Basin). The South Coast Air Quality Management District (SCAQMD) prepares the Air Quality Management Plan (AQMP) for the Basin. The SCAQMD sets forth a comprehensive program that will lead the Basin into compliance with all federal and state air quality standards. The AQMP's control measures and related emission reduction estimates are based upon emissions projections for a future development scenario derived from land use, population, and employment characteristics defined in consultation with local governments. Accordingly, if a project demonstrates compliance with local land use plans and/or population projections, then the AQMP would have taken into account such uses when it was developed.

SJV-MDP EIR Conclusion: Less than Significant Impact

The SJV-MDP EIR determined that the proposed infrastructure will not in and of itself result in any changes to the existing land use patterns in the project area, and the implementation of this project accommodates present and future development within the San Jacinto area, the project does not conflict with or obstruct the implementation of the AQMP, and impacts will be less than significant. (SJV-MDP IS, p. 10.)

Line E Project: No New Impact/No Impact

The proposed Line E Project is a facility approved in the SJV-MDP EIR.

Like the SJV-MDP, construction and operation of the Line E Project would not in and of itself result in any changes to the existing land use patterns in the City; thus, implementation of the Line E Project will not conflict of obstruct implementation of the AQMP.

For the reasons discussed above, implementation of the Line E Project would not result in any new or increased significant impacts related to conflicts with or obstruction of the SCAQMD Basin AQMP. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

2) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Air quality impacts can be described in short- and long-term perspectives. Short-term impacts are anticipated to occur during grading and project construction and consist of fugitive dust and other particulate matter, as well as exhaust emissions generated by construction-related vehicles. Long-term air quality impacts would occur once a project is in operation.

SJV-MDP EIR Conclusion: Significant and Unavoidable Impact

The portion of the Basin in which the Line E Project is located is designated as a non-attainment area for ozone, particulate matter less than 10 microns in diameter (PM-10), and particulate matter less than 2.5 microns in diameter (PM-2.5) under both state and federal standards. In addressing cumulative effects for air quality, the AQMP utilizes approved general plans; therefore, it is the most appropriate document to use in evaluating cumulative impacts of the proposed Project. As discussed in item C.1, above. the Line E Project would not conflict with or obstruct the implementation of the AQMP. The Project's short-term construction emissions for nitrogen oxides (NOx), PM-10, and PM-2.5 exceed the SCAQMD regional daily thresholds and were considered to be significant on a regional level. Implementation of mitigation measures **MM Air 1** through **MM Air 4** was required to reduce Project-generated emissions, however, the short-term impact after mitigation remained significant. Because it is only the Project's short-term emissions that are above thresholds for NOx, PM-10, and PM-2.5, and the impact is temporary (approximately six months in duration), the impact is not considered to have a cumulatively considerable net increase on ozone and PM-10, which are non-attainment in the region under both state and federal standards, and is considered less than significant. Potential impacts are considered less than significant with mitigation (SJV MDP EIR, pp. 3.3-29 – 3.3-35; 3.3-38 – 3.3-39; 3.3-42.)

MM Air 1: During construction, ozone precursor emissions from all vehicles and construction equipment shall be controlled by maintaining equipment engines in good condition and in proper tune per manufacturers' specifications to the satisfaction of the jurisdiction in which the construction is taking place, i.e., San Jacinto Public Works Department, Hemet Public Works Department, Riverside County Department of Building and Safety, or RCFCWCD. Equipment maintenance records and equipment design specification data sheets shall be kept on site during construction. Compliance with this measure shall be subject to periodic verification by the Jacinto Public Works Department, Hemet Public Works Department, or RCFCWCD.

MM Air 2: Signs shall be posted stating that all vehicles are prohibited from idling in excess of five minutes, both on and off site.

MM Air 3: Electricity from power poles shall be used instead of temporary diesel- or gasoline-powered generators to reduce the associated emissions.

MM Air 4: To reduce construction vehicle (truck) and equipment idling while waiting to enter/exit the site, the contractor shall submit a traffic control plan that will describe in detail safe detours to prevent traffic congestion to the best of the Project's ability, and provide temporary traffic control measures. To reduce traffic congestion, and therefore NOx, the plan shall include, as necessary, appropriate, and practicable the following: dedicated turn lanes for movement of construction trucks and equipment on and off site, scheduling of construction activities that affect traffic flow on the arterial system to off-

peak hour, rerouting of construction trucks away from congested streets or sensitive receptors, and/or signal synchronization to improve traffic flow.

Line E Project: No New Impact/No Impact

As with the SJV-MDP Project, the portion of the Basin within which the Line E Project is located is designated as a non-attainment area for PM-10 under state standards, and for ozone and PM-2.5 under both state and federal standards. (CARB-A.)

Construction of the Line E Project is also required to comply with existing SCAQMD rules for the reduction of fugitive dust emissions as established by Rule 403. Compliance with Rule 403 is achieved through application of standard best management practices (BMPs) in construction and operation activities, such as application of water or chemical stabilizers to disturbed soils, covering haul vehicles, restricting vehicle speeds on unpaved roads to 15 miles per hour, sweeping loose dirt from paved site access roadways, cessation of construction activity when winds exceed 25 miles per hour and establishing a permanent, stabilizing ground cover on finished sites. In addition, projects that disturb 50 or more acres or more of soil or move 5,000 cubic yards of materials per day are required to submit a Fugitive Dust Control Plan or a Large Operation Notification Form to SCAQMD. Based on the size of this Project's disturbance area (approximately 88 acres) a Fugitive Dust Control Plan or a Large Operation Notification Form would be required.

Short-term emissions from construction of the Line E Project were modeled using the CalEEMod version 2022.1 program (output included as Appendix C) using both Line E Project-specific assumptions and the default parameters within CalEEMod to evaluate whether the expected criteria air pollutant emissions generated as a result of construction of the proposed project would cause exceedances of the SCAQMD's thresholds for air quality in the Project area. The total construction period estimated for the proposed Project is approximately three years, beginning no sooner than August 2027; the analysis considered the project would be constructed all at once (no phasing) over a three-year period. The default parameters within CalEEMod were used and these default values reflect a worst-case scenario, which means that Project emissions are expected to be equal to or less than the estimated emissions. In addition to the default values used, assumptions relevant to model inputs for short-term construction emission estimates used are:

- Construction is anticipated to begin no sooner than August 2027. The Project construction consists of grading and excavation, and construction of the confluence basin, channel, and earthen training berms and was modeled as a single linear, grading and excavation activity. The modeled construction is shown below:

Construction Activity	Start Date	End Date	Total Working Days
Grading/Excavation	08/03/2027	08/03/2030	784 days

- The off-road equipment to be used is shown below based on engineering estimates. The engine tier for each piece of equipment is calculated using CalEEMod defaults for the statewide fleet average emissions factors. Each piece of equipment is assumed to operate eight hours per day:

Construction Activity	Off-Road Equipment	Unit Amount
Grading/Excavation	Crawler Tractor	1
	Excavator	3
	Grader	1
	Rollers	2
	Rubber Tired Loader	1

Construction Activity	Off-Road Equipment	Unit Amount
	Scrapers	2
	Signal Boards	6
	Tractor/Loaders/Backhoes	2
	Crane[1]	1
	Bore/Drill Rig[1]	1
	Air Compressors	1
	Plate Compactor	1
	Rough Terrain Forklifts	1

Notes: [1] Equipment added for the construction at the Casa Loma Barrel No. 1 crossing where the installation of either Rammed Aggregate Piers (RAP) or CIDH piles are anticipated.

- Project construction will require the export of approximately 515,734 cubic yards (CY) of soil. Using the CalEEMod default truck capacity of 16 cubic yards, this results in an estimated 82 one-way trips per day for soil export. The soil export site is the vacant land located south of Ramona/Record Road and west of Sanderson Avenue. Therefore, a hauling trip length of approximately three miles per trip was assumed.
- Six (6) one way vendor trips per day were added to the grading activity to account for material delivery of concrete and riprap per engineering estimates, using the CalEEMod default vendor trip length of 10.20 miles per one-way trip.
- To evaluate Project compliance with SCAQMD Rule 403 for fugitive dust control, the Project utilized the option of watering the Project site three times daily which achieves a control efficiency of 74 percent for PM-10 and PM-2.5 emissions. Two (2) daily vendor trips per day were added to account for water truck trips.

The results of this analysis are presented in **Table F – Estimated Maximum Daily Construction Emissions** in addition to the maximum emissions from the Line E facility evaluated in the SJV-MDP EIR.

Table F – Estimated Maximum Daily Construction Emissions

Activity	Peak Daily Emissions (lb/day)					
	VOC	NO_x	CO	SO_2	PM-10	PM-2.5
SCAQMD Daily Construction Thresholds[1]	**75**	**100**	**550**	**150**	**150**	**55**
2027	**3.86**	**32.80**	**43.10**	**0.09**	**3.10**	**1.48**
2028	3.72	31.00	42.70	0.09	3.00	1.38
2029	3.59	29.30	42.20	0.09	2.91	1.30

Line E in SJV-MDP Project EIR[2]	8.42	67.73	39.03	0.00	455.83	97.73

Note: See the detailed model output reports, included as Appendix C. Numbers are the maximum of summer or winter emissions in a given year and may not match due to rounding within the model.

[1] SCAQMD thresholds available at Air Quality Analysis Handbook (aqmd.gov)

[2] SJV-MDP EIR, Table 3.3-E

As shown in **Table F**, the construction emissions from the Line E Project are below the applicable SCAQMD thresholds and lower than the emissions reported for the Line E facility in the SJV-MDP EIR. The emissions estimates for this MDP Line Project are lower than those reported in the SJV-MDP EIR because of changes in the available modeling program that utilizes updated emission factors (newer equipment generates fewer emissions due to the implementation of newer regulatory requirements), emissions calculation methodologies, and default data. Because the Line E Project

emissions are below the SCAQMD thresholds, **MM Air 1** through **MM Air 4** do not apply to the Line E Project.

Operational emissions sources from the Line E Project are limited because the basin pumps are electric. The primary source of operational emissions is the routine visits by vehicles driven by maintenance personnel and are considered negligible. As with the SJV-MDP Project, long-term SJV-MDP operational emissions are considered negligible because the proposed SJV-MDP will not result in a change from the operation of the Existing MDPs (i.e., the San Jacinto MDP and the NW Hemet MDP) for the Project area.

For the reasons set forth above, implementation of the Line E Project would result in lower emissions than those reported in the SJV-MDP EIR and would not result in any new or increased significant impacts related to cumulatively considerable net increase of any criteria pollutant. Thus, there are no new impacts, changes, or new information associated with Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

3) Expose sensitive receptors to substantial pollutant concentrations?

A sensitive receptor is a person in the population who is particularly susceptible to health effects due to exposure to an air contaminant including children, the elderly, and persons with pre-existing respiratory and/or cardiovascular illness. SCAQMD defines a “sensitive receptor” as a land use or facility such as residences, schools, childcare centers, athletic facilities, playgrounds, retirement homes, and convalescent homes where these persons are typically located. (SCAQMD-A)

As part of the SCAQMD’s environmental justice program, attention has been focused on localized effects of air quality. Staff at SCAQMD has developed localized significance threshold (LST) methodology that can be used by public agencies to determine whether a project may generate significant adverse localized air quality impacts (both short- and long-term). (SCAQMD-B). LSTs represent the maximum emissions from a project that will not cause or contribute to an exceedance of the state ambient air quality standard, and are developed based on the ambient concentrations of that pollutant for each source receptor area (SRA). The SJV-MDP boundaries are within SRA 28.

SJV-MDP EIR Conclusion: Significant and Unavoidable Impact
The short-term construction of the SJV-MDP facilities will not result in any localized air quality impacts to sensitive receptors within the Project area for NOx or CO, during construction of Project facilities; however, emissions of PM-10 and PM-2.5 during construction are above SCAQMD recommended daily localized thresholds. Therefore, exposure of sensitive receptors to substantial pollution concentrations from short-term construction emissions is considered significant. Implementation of mitigation measures **MM Air 1** through **MM Air 4** was required to reduce Project-generated emissions, however, the short-term impact after mitigation remained significant. Due to the lack of stationary source emissions; no long-term localized significance threshold analysis is needed, and exposure of sensitive receptors to substantial pollution concentrations from long-term operational impacts is considered less than significant. (SJV MDP EIR, pp. 3.3-37; 3.3-41.)

Line E Project: No New Impact/No Impact
An LST analysis was prepared in accordance with the SCAQMD LST Methodology (SCAQMD-B) using the CalEEMod output included in Appendix C and is summarized below.

According to the LST methodology, only on-site emissions need to be analyzed. Emissions associated with vendor and worker trips are mobile source emissions that occur off site and are

therefore excluded. The emissions analyzed under the LST methodology are NO_2, CO, PM-10, and PM-2.5. SCAQMD has provided LST lookup tables to allow users to readily determine if the daily emissions for proposed construction or operational activities could result in significant localized air quality impacts for projects five acres or smaller. (SCAQMD-B). Although the Project disturbs approximately 88 acres in total, the Project is linear and will progress in a linear fashion and disturb a smaller area per day. To be conservative, the one-acre LST lookup tables were utilized to estimate the construction emissions.

The closest sensitive receptors are an existing residence southeast of the intersection of Sanderson Avenue and Record Road. The distance to the property line for this residence across Sanderson Avenue is approximately 88 feet (27 meters). LST Methodology states that Project's with boundaries located closer than 25 meters to the nearest receptor should use the LST distance of 25 meters for the analysis. The results are shown in the following table.

Table G – LST Results for Daily Construction Emissions

Activity	Peak Daily Emissions (lb/day)			
	NO_X	CO	PM-10	PM-2.5
LST for 1-acre at 25 meters	**162**	**750**	**4**	**3**
Grading/Excavation	30.40	38.30	2.04	1.20
Exceeds Threshold?	**No**	**No**	**No**	**No**
Line E in SJV-MDP Project EIR[1]	102.3	49.7	6.7	5.1

Note: The emissions reported are peak daily emissions from all years of Project construction. Detailed model reports included in Appendix C

[1] SJV-MDP EIR, Table 3.3-H

As shown in **Table G**, short-term emissions from the Line E Project are below the applicable SCAQMD thresholds and lower than the emissions reported for the Line E facility in the SJV-MDP EIR for the reasons cited in item C.2, above. Because the short-term construction emissions are below SCAQMD thresholds, SJV-MDP EIR mitigation measures **MM Air 1** through **MM Air 4** do not apply to the Line E Project.

The long-term sources of localized emissions from operation of the Line E Project are primarily from the electric pumps and in the form of mobile source emissions from the routine visits by vehicles driven by maintenance personnel, with no stationary sources of emissions present. The confluence basin will have four electric pumps that are used during storms and a backup diesel generator that is estimated to be no more than 250 horsepower (hp). According to SCAQMD LST methodology, LSTs would apply to the operational phase if a project includes stationary sources or on-site mobile equipment generating on-site emissions. Because the emergency generator will only be used during emergency power outages and routine testing, emissions would be negligible. The City of San Jacinto will be required to obtain an SCAQMD permit to install and operate the emergency generator. The SCAQMD permitting process would ensure that the Project meets regulatory requirements through the application review process and by placing specific operating conditions on the permit such as operating hour limits. As such, no further analysis of the emergency generator was prepared. For these reasons, the localized operational emissions will be less than significant.

Construction and operational emissions were also found to be less than significant, as indicated above. Therefore, the Line E Project will not expose sensitive receptors to substantial pollutant concentrations and impacts are considered less than significant without mitigation required.

For the reasons set forth above, implementation of the Line E Project would result in lower emissions than those reported in the SJV-MDP EIR and would not result in any new or increased significant impacts related to the exposure of sensitive receptors to substantial pollutant concentrations. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

4) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

SJV-MDP EIR Conclusion: Less than Significant Impact

The project presents the potential for generation of objectionable odors during project construction. Recognizing the relative location and distance of the surrounding residential development along the majority of the proposed MDP facilities, and the short-term duration of construction, the project will not subject a substantial number of people to objectionable odors. Potential impacts are considered less than significant. (SJV MDP IS, p. 11.)

Line E Project: No New Impact/No Impact

Implementation of the Line E Project presents the potential for generation of other emissions (such as those leading to odors) in the form of diesel exhaust during construction in the immediate vicinity of the Project site. Odors generated during construction will be short-term and will move along the alignment of the Project footprint as construction takes place and would cease to occur after construction is completed. Operation and maintenance of the Line E Project would also present the potential for odors from diesel exhaust from the maintenance vehicles and the emergency backup diesel generator; there would be no additional sources of odor related to operation of the electric pumps at the confluence basin. The routine visits by vehicles driven by maintenance personnel are not anticipated to increase in the Project vicinity; however, any potential odors resulting from routine maintenance would disperse quickly and cease after maintenance activities are completed. Similarly, operation of the backup generator will only be used during emergency power outages and routine testing, and any potential odors would disperse quickly. The long-term emissions, from the electric pumps, mobile sources, and a backup diesel generator, Thus, construction and operation of the Line E Project will not result in other emissions such as those leading to odors affecting a substantial number of people.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts regarding the creation of objectionable odors that would affect a substantial number of people. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

D. BIOLOGICAL RESOURCES	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
Would the project:				
1) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U. S. Wildlife Service?	☐	☒	☐	☐
2) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Game or U. S. Fish and Wildlife Service?	☐	☐	☒	☐

1) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U. S. Wildlife Service?

SJV-MDP EIR Conclusion: Less than Significant with Mitigation

Special-Status Plant Species

Twelve of the proposed linear facilities, Line Y, Lat Y-2 through Lat Y-11, and Line V are partially or entirely located within the Criteria Area Plant Species Survey Area (CAPSSA) 3. Several special-status plant species have low to high potential for occurrence along alignments within the MDP Project area. The construction of MDP Facilities is anticipated to result in direct impacts to smooth tarplant and Coulter's goldfields. Approximately 25,000 tarplant individual were counted within the conceptual alignments of the MDP Facilities, in addition to tens of thousands more in the areas adjacent to the MDP survey alignment. Specifically, the California Natural Diversity Database (CNNDB) showed records of smooth tarplant adjacent to the conceptual alignments of Lat Y-1, Lat Y-2, Lat Y-4, Line Z, Line E, and Line Y. The CNDDB showed records of Coulter's goldfields within the

vicinity of the conceptual alignment of Line Z. (SJV MDP EIR, p. 3.4-22.) Implementation of the proposed MDP Project would result in direct impacts to two special-status plant species not covered by the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP), but listed by the California Native Plant Society, Chaparral sand-verbena and South coast saltscale, However, due to the disturbed nature of conceptual alignment of the MDP Facilities and the limited area of linear construction impact, implementation of the SJV MDP is not anticipated to result in a significant loss of habitat for either of these species. (SJV MDP EIR, p. 3.4-24.) Nonetheless, to further identify the potential direct impacts to these species (number of plants and/or area impacted), focused surveys are required for these species during their flowering season and prior to construction. If these plants occur within the construction footprint, impacts to these species may be considered significant. However, with implementation of SJV MDP EIR **MM Bio 7**, impacts to special status plant species would be less than significant. (SJV MDP EIR, p. 3.4-22.)

> **MM Bio 7**: Focused surveys shall be conducted within potentially suitable habitat for Chaparral sand-verbena and South coast salt scale by a qualified biologist during the flowering season of these species and prior to construction activities. If special status plant species are found to be present in the footprint, further measures as recommended by a qualified biologist shall be taken to avoid or minimize adverse project effects to these species and their habitat. If avoidance is not feasible, then individual projects will require the approval of a DBESP including appropriate mitigation. (SJV MDP EIR, p. 3.441 – 3.4-42.)

Implementation of the SJV MDP is not anticipated to result in direct impacts to Munz's onion or many-stemmed dudleya. However, MDP Facility-specific surveys would be required during the appropriate time of the year to determine the presence/absence of all Narrow Endemic Plants and Criteria Area Plants within the construction footprint prior to installation of facilities. Implementation of SJV MDP EIR **MM Bio 6** is required to reduce potential impacts to sensitive plant species to less than significant levels. (SJV MDP EIR, pp. 3.4-22–3.4-25.)

> **MM Bio 6:** Within areas of suitable habitat associated with the Narrow Endemic Plant Species Survey Area (NEPSSA) and Criteria Area Plant Species Survey Area (CAPSSA), facility-specific focused plants surveys will be required. Including the smooth tarplant mapped as part of this study, the MSHCP requires at least 90 percent avoidance of areas providing long-term conservation value for the NEPSSA and CAPSSA target species. If avoidance is not feasible, then individual projects will require the approval of a DBESP including appropriate mitigation, i.e., on-site or off-site enhancement, restoration, establishment (creation), preservation, payment into habitat mitigation banks or in lieu fee programs, or a combination of one or more of these options. Furthermore, the smooth tarplant mapped within Cell Group V is expected to be required for conservation as part of the Cell Group V criteria. (SJV MDP EIR, p. 6.)

<u>Special-Status Wildlife Species</u>

Despite the fact that the MDP area is located in a predominately agricultural and disturbed environment, special-status native species, primarily birds, may occur in less than optimal and/or disturbed conditions, and may forage over agricultural habitats present in the Project area. Construction of proposed MDP Facilities would impact disturbed habitats potentially suitable for several species of raptors (e.g., white-tailed kite, northern harrier, Cooper's hawk, golden eagle, and burrowing owl). Because most potentially-occurring raptor species are very widespread and roam over large areas of foraging territory, these losses would amount to a relatively small, incremental reduction of seasonal foraging habitat and occasional use areas. Impacts to disturbed foraging

habitats would not constitute significant adverse impacts to any of the affected species, locally or regionally. (SJV-MDP EIR, p. 3.4-25.)

The MDP area contains trees, shrubs, ground cover, and structures that provide suitable habitat for nesting migratory birds, including raptors. If any vegetation or structures are to be removed during the nesting season (February 1 to August 31), MDP Facility-specific nesting bird surveys shall be conducted first to determine the presence/absence of active nests and if active nests are identified, appropriate avoidance buffers should be established in the nesting activity has completed, and fledglings have left the nest and are no longer dependent on the parents as required by SJV MDP EIR **MM Bio 1**. With implementation of this mitigation measure, potential impacts to sensitive and protected bird species would be less than significant. (SJV-MDP EIR, p. 3.4-25.)

> **MM Bio 1:** In order to avoid violation of the MBTA and California Fish and Game Code, site-preparation activities (removal of trees and vegetation) shall be avoided, to the greatest extent possible, during the nesting season (generally February 1 to August 31) of potentially occurring native and migratory bird species. If site-preparation activities are proposed during the nesting/breeding season (February 1 to August 31), a pre-activity field survey shall be to the issuance of grading permits, for private development projects, or prior to construction for public agency contracts, to determine if active nests of species protected by the MBTA or the California Fish and Game Code are present in the construction zone. If active nests are not located within the Project area and appropriate buffer, 500 feet of an active listed species or raptor nest, 300 feet of other sensitive or protected bird nests (non-listed), or within 100 feet of sensitive or protected songbird nests, construction may be conducted during the nesting/breeding season. However, if active nests are located during the pre-activity field survey, no grading or heavy equipment activity shall take place within at least 500 feet of an active listed species or raptor nest, 300 feet of other sensitive or protected (under MBTA or California Fish and Game Code) bird nests (non-listed), or within 100 feet of sensitive or protected songbird nests until the nest is no longer active.

Portions of the MDP area may provide suitable nesting habitat for burrowing owls. Although no burrowing owls were detected within the conceptual MDP Facility alignments or basin locations during the focused surveys conducted in 2008, much of the MDP area has a moderate to high probability to support owls, whether breeding pairs, resident individuals, or transient individuals. Construction noise and activity may disrupt normal breeding and nesting patterns or other activities and adversely impact burrowing owls if active nests are located near the proposed MDP Facilities at the time of construction. Therefore, mitigation measure SVJ-MDP EIR **MM Bio 2** would be implemented to reduce potential impacts from the construction of MDP Facilities to less than significant. (SJV-MDP EIR, p. 3.4-26.)

> **MM Bio 2**: Facility-specific habitat assessments and focused surveys for burrowing owls will be conducted within burrowing owl survey areas. A pre-construction survey for resident burrowing owls will also be conducted by a qualified biologist within 30 days prior to commencement of grading and construction activities within those portions of the Project site containing suitable burrowing owl habitat. If ground-disturbing activities in these areas are delayed or suspended for more than 30 days after the pre-construction survey, the area shall be resurveyed for owls. Take of active nests shall be avoided. The pre-construction survey and any relocation activity will be conducted in accordance with MSHCP instructions and/or guidelines. (SJV-MDP EIR, p. 3.4-40.)

San Bernardino kangaroo rat (SBKR) (*Dipodomys merriami parvus*) was determined to have a low potential to occur within the MDP area. Los Angeles pocket mouse (LAPM) (*Perognathus longimembris brevinasus*) was also determined to have a low potential to occur within the Project area. The extreme northern end of the conceptual alignment of Line K terminates at the end of the mammal survey area for SBKR and LAPM, however the conceptual alignments of all of the other MDP Facilities are located outside the mammal survey areas. (SJV-MDP EIR, p. 3.4-26.)

Line E Project: New Mitigation is Required

This discussion is based on the *Biological Technical Report for San Jacinto Valley Master Drainage Plan Line E, Located in the City of San Jacinto, Riverside County, California*, January 28, 2025 prepared by Glenn Lukos Associates, Inc. This document is hereinafter referred to as the BTR and is included as Appendix D.1 to this Addendum. Preparation of the BTR and focused surveys satisfies SJV-MDP EIR mitigation measures **MM Bio 2, MM Bio 3, MM Bio 4, MM Bio 5**, and **MM Bio 6**.

Special-Status Plant Species

The Line E Project is mostly within the NEPSSA survey area outlined in Section 6.1.3 of the MSHCP (GLA-A, p. 4.) The BTR evaluated a total of 49 special status plant species through general biological surveys, habitat assessments, and focused surveys. Species were evaluated based on the following factors: (i) species identified by the CNDDB and CNPS as occurring (either currently or historically) on or in the vicinity of the Project site, (iii) applicable MSHCP survey areas, and (iii) any other special status plants that are known to occur within the vicinity of the Line E Project site, or for which potentially suitable habitat occurs within the site. Of the 49 special status species evaluated, 32 species do not occur[5] on the Line E Project site, 15 species were confirmed absent,[6] and one species was present, smooth tarplant (*Centromadia pungens* ssp. *Laevis)*. Refer to Table 4-2 of the BTR for a complete listing of the species evaluated. (GLA-A, pp. 31 – 36.)

The proposed Line E Project would impact one special-status plant species, smooth tarplant (*Centromadia pungens* ssp. *laevis*). A population of approximately 2,500 individuals were detected within the Project site during the 2024 focused plant surveys conducted for the BTR. The smooth tarplant found during focused plant surveys were located within disturbed areas adjacent to agricultural fields and/or roadways as shown on **Figure 17 – Smooth Tarplant**.[7] (GLA-A, pp. 36, 57.)

The MSHCP provides coverage for impacts to smooth tarplant, provided that a project is consistent with requirements pertaining to the species. Because the Line E Project site is not located within an MSHCP survey area for smooth tarplant, MSHCP avoidance/conservation requirements pursuant to MSHCP Section 6.3.2 do not apply to this Project. The Project site is not in the CAPSSA, so impacts to smooth tarplant are covered without project-specific avoidance or mitigation requirements pursuant to Section 6.3.2 of the MSHCP. However, approximately 1,670 smooth tarplant individuals were documented as occurring within portions of the Project site associated with riverine resources pursuant to MSHCP Section 6.1.2. (GLA-B, pp. 4, 15.) Therefore, impacts to the smooth tarplant resulting from construction and operation of the Line E Project would be less than significant through implementation of **MM Bio E8**.

---

[5] Does not occur means the site does not contain habitat for the species and/or the site does not occur within the geographic range for the species.

[6] Confirmed absent means the site contains suitable habitat for the species, but the species has been confirmed absent through focused surveys

[7] Figures commence on page 101, following the Biological Resources discussion.

Special-Status Wildlife Species

The BTR evaluated a total of 45 special status animal species through general biological surveys, habitat assessments, and focused surveys, four invertebrates, 12 amphibians, 18 birds, and 11 mammals. Species were evaluated based on the following factors: (i) species identified by the CNDDB as occurring (either currently or historically) on or in the vicinity of the Line E Project site, (ii) applicable MSHCP survey areas, and (iii) any other special status animals that are known to occur within the vicinity of the Project site, or for which potentially suitable habitat occurs within the site. (GLA-A, pp. 36 – 37.) Of the four special status invertebrate species evaluated, one species does not occur on the Line E Project site, two species were confirmed absent, and one species has the potential to occur, Crotch's bumble bee (*Bombus crotchii*). (GLA-A, p. 37.)

Of the 12 special status amphibian species evaluated, five species do not occur on the Line E Project site and 7 species are not expected to occur.[8] (GLA-A, pp. 37 – 38.) Of the 18 special status bird species evaluated, five species do not occur on the Line E Project site, one species was confirmed absent, and 12 species are either not on the Project site due to lack of habitat but were detected immediately offsite, or do not nest on the Project site but have the potential to forage. (GLA-A, pp. 38 – 40.) Of the 11 special status mammalian species evaluated, 7 species do not occur on the Line E Project site, two species are not expected to occur due to high levels of soil disturbance associated with past and current agricultural operations, and two bat species do not roost on the Project site but were detected offsite acoustically during focused surveys. (GLA-A, pp. 40 – 41.) Refer to Table 4-3 of the BTR for a complete listing of the species evaluated. (GLA-A, pp. 37 – 71.)

Special Status Invertebrate Species

Four special status invertebrate species were evaluated for the Project site: Crotch's bumble bee (*Bom bus crotchii*) Quino checkerspot butterfly (*Euphydryas editha quino*), Riverside fairy shrimp (*Streptocephalus woottoni),* and Vernal pool fairy shrimp (*Branchinecta lynchi*). The Quino checkerspot butterfly does not occur on the Project Site. (GLA-A, p. 37.) The other three species are discussed below.

Crotch's Bumble Bee: Crotch's bumble bee (CBB), is designated as a State Candidate species under the California Endangered Species Act (CESA) and is not a covered species under the MSHCP. Focused surveys were conducted during peak bloom periods that encompass the queen flight season (February through March) as well as the Colony Active Period (April through August) for the Project site. A total of 6 surveys were conducted through the months of March to June to take advantage of the different blooming periods of floral resources. The CBB surveys were conducted in accordance with CDFW's 2023 *Survey Considerations for California Endangered Species Act (CESA) Candidate Bumble Bee Species*. (GLA-D, pp. 2-3.) Most of the Line E Project's disturbance limits are not suitable for this species due to historic and current agricultural uses, which results in regular disturbances. However, smaller portions of the Project site, which largely consist of disturbed/ruderal areas adjacent to the agricultural fields, contain annual floral resources that could be used by CBB individuals, if present. (GLA-A, p. 42.) The CBB was not detected during the focused surveys for the Project site.

Lesser portions of the Project site support annual floral resources that could be visited by CBB individuals, and the Project site contains small mammal burrows that could be used for nesting by

[8] Not expected to occur means the species is not expected to occur on the site due to low habitat quality; however, absence cannot be ruled out.

active CBB colonies or used for overwintering. Additionally, CBB was incidentally detected outside of the Line E Project impact area, but adjacent to the Project site during focused riparian bird surveys conducted by GLA biologists on June 27, 2024. A single CBB was observed utilizing branching phacelia (*Phacelia ramosissima*) adjacent to the willow riparian habitat. (GLA-A, p. 42.) This incidental detection, is not evidence that CBB occupies the Project site; however, the confirmed presence of CBB near the Project site reinforces the potential use of limited portions of the Project site by CBB. During the 2025 focused survey period, one bumble bee species, the California bumble bee (*Bombus fervidus californicus*) was observed during the June 12, 2025 survey using the branching phacelia which is located immediately offsite No bumble bee species, including the CBB were detected on the Project site. (GLA-D, p. 4). However, implementation of the Line E Project has the potential to impact CBB. As a State Candidate Species, if implementation of the Line E Project results in a direct take of CBB, and Incidental Take Permit (ITP) could be required under CESA through coordination with the California Department of Fish and Wildlife (CDFW). If present, mitigation for the loss of CBB habitat would consist of the preservation of habitat known to support CBB at a biological value equal or greater to any habitat impacted by the Project. The preserved habitat might be enhanced and/or restored, as applicable, and the habitat would be managed in perpetuity with a long-term endowment. (GLA-A, pp. 58-59.) Thus, to reduce impacts to CBB to less than significant, the Line E Project would implement mitigation measures **MM Bio E1, MM Bio E2**, and **MM Bio E3**.

MM Bio E1: Crotch's Bumble Bee Pre-Construction Survey and Construction Monitoring. In order to avoid direct and indirect impacts to Crotch's bumble bee (CBB) which could establish themselves on the Project site before construction starts, prior to the start of any Project-related ground-disturbing activities a qualified CBB biologist (i.e., 1-2 years of experience performing CBB surveys, or, has a Memorandum of Understanding [MOU] with CDFW), shall perform the records searches and site surveys according to the methods set forth in the California Department of Fish and Wildlife *Survey Considerations for California Endangered Species Act Candidate Bumble Bee Species*, June 6, 2023 (the "2023 CDFW Survey Considerations"). The literature review and records search shall identify occurrences at the Project site and within a 5-mile buffer. The literature review and records search shall include: a report from the CDFW California Natural Diversity Data Base for a 10-mile radius of the project site; aerial photographs; and iNaturalist for bee sightings and nectar sources. Then, the qualified CBB biologist shall conduct on-site surveys for foraging and nesting bees. The surveys shall begin with a habitat assessment to evaluate the likelihood of bumble bees occurring within and adjacent to the project area. Then, foraging bumble bee and nesting surveys shall be conducted during the peak nectar blooming period (April through June 30). Habitat assessment and survey results shall be submitted to CDFW prior to the start of ground-disturbing project activities. Vegetation removal is allowable from November to January (note seasonal limitations for nesting birds in MM Bio E4). No monitoring is required if removal of vegetation occurs during this time period. However, vegetation removal/ground disturbances during the CBB flight season, which is February to October, will require preemptive focused CBB surveys and full-time biological monitoring for CBB to take place within the project limits. If Crotch's bumble bees are present, mitigation measure **MM Bio E2**, which required an avoidance plan shall be implemented. Construction monitoring for CBB may cease based on the professional judgement of the qualified CBB biologist that construction activities have already impacted the extent of the planned impact footprint. If an active CBB nest is detected during focused surveys conducted between April and June, or during the construction monitoring, then the

qualified biologist shall establish a no-disturbance buffer zone (including foraging resources and flight corridors essential for supporting the colony) around the CBB nest. The qualified biologist and City shall notify CDFW and if needed, process an Incidental Take Permit (ITP) with CDFW (**MM Bio E3**). If a single CBB is observed during construction, CDFW shall be notified, and work shall be halted in that area until the qualified biologist deems the CBB has left the site. It is expected that if an ITP is needed, that the offsite mitigation which has similar habitat types would be required. If offsite mitigation for CBB is needed, then a CBB permitted land manager shall be hired by the City to ensure CBB habitat is intact on the offsite mitigation property.

MM Bio E2: Crotch's Bumble Bee Avoidance Plan. If Crotch's bumble bee is detected during pre-construction surveys outlined above in **MM Bio E1**, the City in consultation with the qualified CBB biologist shall develop a plan to fully avoid impacts to Crotch's bumble bee. The plan shall include effective, specific, enforceable, and feasible measures. An avoidance plan shall be submitted to the City prior to implementing Project-related ground-disturbing activities and/or vegetation removal where there may be impacts to Crotch's bumble bee.

MM Bio E3: Incidental Take Permit for Crotch's Bumble Bee. If Crotch's bumble bee is detected during the focused surveys and Crotch's bumble bee becomes formally listed under CESA or is still a Candidate species and if impacts to Crotch's bumble bee cannot be feasibly avoided during Project construction and activities, the City/qualified biologist shall coordinate with CDFW to obtain appropriate permits for incidental take of Crotch's bumble bee and provide appropriate mitigation for impacts to Crotch's bumble bee habitat. CDFW recommends the City mitigate for impacts to Crotch's bumble bee habitat at a ratio comparable to the Project's level of impacts.

Fairy Shrimp: The Line E Project site contains five features that pond seasonally and were surveyed by GLA to determine the presence/absence of federally-listed fairy shrimp, federally-listed Riverside fairy shrimp (*Streptocephalus woottoni*), San Diego fairy shrimp (*Branchinecta sandiegonensis*), and vernal pool fairy shrimp (*Branchinecta lynchi*). The surveyed features are identified on **Figures 18a through 18e – Fairy Shrimp Results Map** as E-1, 46, 5, 4, and E-2, respectively. The fairy shrimp surveys were conducted in accordance with the USFWS *Survey Guidelines for the Listed Large Branchiopods* (Survey Guidelines) dated November 13, 2017.

The non-listed versatile fairy shrimp (*Branchinecta lindahli*) was detected in just one of the five features during the wet season survey, feature 5, which consists of vehicle ruts within a dirt road. The dry season survey of Feature 5 detected *Branchinecta* cysts, which were successfully hatched and reared to identify individuals as the versatile fairy shrimp, thus corroborating the results of the wet season survey. (GLA-A, p. 46.)

No fairy shrimp were detected in the other five features (features E-1, 46, 4, and E-2) during the wet season surveys. Features 4, 46 and E-2 also consist of vehicle ruts in dirt roads. Feature E-1 corresponds with the large inundation area associated with Drainage Area A.[9] No *Branchinecta* cysts were detected within features 4 and 46 during the 2023 dry season surveys. The results of dry season surveys are pending for features E-1 and E-2; however, based on the negative results of the

[9] Drainage area A is shown on **Figure 22 – CDFW Jurisdictional Area** and discussed in the response to item D.3.

wet season surveys fairy shrimp cysts are not expected to be present. (GLA-A, p. 46.) Thus, implementation of the Line E project would not impact listed fairy shrimp. (GLA-A, p. 74.)

Special Status Amphibian Species
The Line E Project is not located within an amphibian species survey area pursuant to Section 6.3.2 of the MSHCP. No special status amphibian species occur or are expected to occur within the disturbance limits of the Line E Project site, due to lack of suitable habitat. (GLA-A, p. 74.)

Special Status Bird Species
No special status bird species were detected within the Line E Project disturbance area, however four species were detected adjacent to the southern portion of the Project site: Least Bell's Vireo (*Vireo bellii pusillus*), Burrowing Owl (*Athene cunicularia)*, Northern Harrier (*Circus cyaneus*), Yellow-breasted chat (*Icteria virens*), and Yellow warbler (*Setophagia petechia*). (GLA-A, pp. 42 – 45.)

Least Bell's Vireo: The least Bell's vireo (LBV) is state and federally listed as endangered, and is covered under the MSHCP. The Line E Project footprint does not contain riparian habitat to support the LBV. As shown on **Figure 19 – Least Bell's Vireo Survey Results**, the southern (upstream) end of the proposed Project however, is adjacent to habitat occupied by LBV where overflows from the San Jacinto Reservoir would enter Line E. Construction of the Line E Project would not remove any riparian habitat associated with the area of LBV habitat; therefore, there would be no direct impacts to LBV. However, because of the proximity of the LBV territory to the Project site, there is a potential for temporary noise impacts during construction adjacent to the riparian habitat if work were to occur while LBV are present.

Objective 3 of the MSHCP Species Conservation Objectives for LBV states that avoidance of occupied LBV habitat must include a 100-meter (approximately 300 feet) buffer, which is meant to address the potential for edge effects from development. The proposed Line E Project limits are within 100 feet of the nearest occupied habitat for LBV, temporary indirect effects are possible if construction activities occur within 300 feet. No indirect impacts to LBV would occur once construction within 300 feet of occupied habitat ceases. (GLA-A, p. 59.) To reduce potential temporary noise impacts resulting from Project construction to less than significant, mitigation measures **MM Bio E4, MM Bio E5,** and/or **MM Bio E6** shall be implemented.

> **MM Bio E4: Establishment of Least Bell's Vireo Construction Buffer:** To avoid indirect impacts to least Bell's vireo (LBV), Project construction and site preparation activities including, but not limited to vegetation clearing and grubbing within 300 feet of LBV habitat, shall be conducted outside of the LBV breeding season (March 15 to September 30), if feasible. Prior to construction outside of the breeding season, a qualified biologist shall oversee the establishment of a highly visible and maintained 300-foot buffer. Inspection and maintenance of the buffer shall be performed at a minimum of once a weekly, but more often if needed.
>
> **MM Bio E5: Least Bell's Vireo Pre-Construction Surveys and Monitoring:** If construction activities must occur during the LBV breeding season (March 15 to September 30) and have not yet already begun within the 300-foot buffer by March 15 of any given year, pre-construction surveys shall commence after March 15 and shall occur once a week for three consecutive weeks prior to commencement of construction activities to confirm the presence of LBV. The last visit shall occur no more than three (3) days prior to commencement of construction activities. The preconstruction survey visits

shall be conducted by a qualified biologist familiar with songs, whisper songs, calls, scolds, and plumage characteristics of adult and juvenile vireos. Surveys shall be conducted between dawn and 11:00 am. Surveys shall not be conducted during periods of excessive or abnormal cold, heat, wind, rain, or other inclement weather that individually or collectively may reduce the likelihood of detection. Prior to performing the preconstruction surveys, a map shall be created illustrating the LBV habitat and all detections of LBV shall be mapped and tracked.

If LBV are not detected during the initial three preconstruction surveys, then weekly clearance surveys shall continue following the same methodology as the preconstruction surveys. All detections of LBV shall be mapped with behavior tracked across detections/sightings. The qualified biologist must have experience with nesting ecology and behavior of LBV to determine pre-nesting/nesting behavior. If at any time it is determined by the qualified biologist that construction activities are negatively affecting LBV, including modification of behavior, work shall be halted and CDFW and USFWS shall be contacted on next steps. If LBV are not detected after a minimum of eight survey visits (three preconstruction surveys and five additional clearance surveys), the weekly visits shall cease and work within the 300-foot buffer shall be allowed to continue without additional restrictions.

If construction activities within the 300-foot buffer have already begun before March 15, the qualified biologist shall simply initiate weekly clearance surveys after March 15 while the construction activities continue. If LBV are detected, then mitigation measure **MM Bio E6** shall be implemented. However, if LBV are not detected after a minimum of nine clearance surveys, then weekly visits shall cease and work within the 300-foot buffer shall be allowed to continue without additional restrictions.

MM Bio E6: Least Bell's Vireo Construction Mitigation: Prior to the start of construction, a qualified biologist shall flag and fence the boundary of the LBV habitat areas, assumed to be occupied by LBV. A second fence, 300 feet from the boundary fence shall be constructed. If construction occurs during the breeding season (March 15 through September 30) and if activities need to occur between the boundary fence and the 300 foot buffer fence, then the contractor shall employ the following measures:

1. Install a 12-foot tall temporary noise barrier at the perimeter of the limits of disturbance between the construction activities and the adjacent LBV habitat, as determined by a qualified biologist. The barrier shall be continuous without openings, holes or cracks, and shall reach the ground. The barrier may be constructed with 1-inch plywood and provide a reduction of at least 10 dBA to ensure noise levels do not exceed 65 dBA to the adjacent LBV habitat. Other materials providing the same reduction shall also be permitted.
2. Within 300 feet of the LBV habitat areas, heavy grade rubber mats/pad shall be used within the bed of the trucks. These mats will help attenuate initial impact noise generated when an excavator drops rock and debris into the bed of the truck. These mats shall be maintained and/or replaced as necessary.
3. During Project site excavation and grading within 300 feet of the LBV habitat area, construction contractors shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers, consistent with manufacturer standards.

4. The contractor shall place all stationary construction equipment so that emitted noise is directed away from the LBV habitat area.
5. Equipment shall be shut off and not left to idle when not in use.
6. The contractor shall not locate equipment staging within 1,000 feet of the LBV habitat area.
7. The use of heavy equipment or vibratory rollers and soil compressors shall be limited within 300 feet of the LBV habitat area, to the greatest degree possible.

Burrowing Owl: The Line E Project site is within the MSHCP Burrowing Owl Survey Area; therefore a habitat assessment is required to determine if focused burrowing owl surveys are warranted for the Line E Project. As shown on **Figure 20 – Burrowing Owl Survey Map**, Glenn Lukos Associates biologists conducted focused burrowing owl surveys because suitable habitat was identified within the Line E footprint, in 2022 and 2024. (GLA-A, pp. 10 – 11.) The completion of the focused burrowing owl surveys satisfied the portion of SJV-MDP EIR **MM Bio 2** requiring MDP Facility-specific habitat assessments and focused surveys.

No burrowing owls were detected within the Project footprint. Based on the survey results, the Project would not impact burrowing owl habitat with long-term conservation value; therefore, MSHCP avoidance/mitigation requirements are not applicable to the Project. However, because the Project contains suitable habitat, including burrows, a pre-construction burrowing owl survey is required per MSHCP Section 6.3.2. (GLA-A, p. 69.) Because a portion of SJV-MDP EIR **MM Bio 2** has already been completed, mitigation measure **MM Bio E7**, which amplifies the requirements of the preconstruction survey clarifies and replaces SJV-MDP EIR **MM Bio 2** for the Line E Project.

> **MM Bio E7 (replaces MM Bio 2): Burrowing Owl Preconstruction Survey:** To avoid direct impacts to burrowing owls and comply with MSHCP Objective 6 for burrowing owls, A 30-day pre-construction survey for burrowing owls shall be conducted prior to any future Project-related ground-disturbing activities (e.g., vegetation clearing, clearing and grubbing, tree removal, site watering, equipment staging, etc.) to ensure that no owls have colonized the Project site in the days or weeks preceding the ground-disturbing activities. If burrowing owls have colonized the Project site prior to the initiation of ground-disturbing activities, the Project proponent shall immediately inform the Regional Conservation Authority (RCA) and the Wildlife Agencies and shall coordinate with the RCA and the Wildlife Agencies (CDFW and United States Fish and Wildlife Service), including the possibility of preparing a Burrowing Owl Protection and Relocation Plan, prior to initiating ground disturbance. If ground disturbing activities take place, but the Project site is left undisturbed for more than 30 days, another preconstruction survey shall be conducted to ensure that burrowing owl have not colonized the Project site since it was last disturbed. If burrowing owls are found, the Project proponent shall immediately inform the RCA and the Wildlife Agencies and shall coordinate with the RCA and the Wildlife Agencies, including the possibility of preparing a Burrowing Owl Protection and Relocation Plan before construction resumes.

Northern Harrier: One northern harrier was detected flying offsite within agricultural and riparian areas during the biological surveys. As a result of the historical and current land practices, the Project site does not support nesting habitat for northern harriers; however, this species is expected to forage opportunistically over the Project site. The northern harrier is an MSHCP covered species. (GLA-A, p. 43.)

Yellow-breasted Chat: The Project site does not contain suitable habitat for the yellow-breasted chat; however, at least one chat was detected in the riparian habitat adjacent to the southern end of the Line E Project footprint in the same area occupied by LBV that was surveyed to evaluate the potential for indirect impacts during Project construction. The yellow-breasted chat is an MSHCP covered species. (GLA-A, p. 44.)

Yellow Warbler: The Project site does not contain suitable habitat for the yellow warbler; however, warbler was detected in the riparian habitat adjacent to the southern end of the Line E Project footprint in the same area occupied by LBV that was surveyed to evaluate the potential for indirect impacts during Project construction. The yellow warbler is an MSHCP covered species. (GLA-A, p. 44.)

The following special status bird species were not observed on or adjacent to the Project site, but have a potential to occur at the Project site: Golden eagle (*Aquila chrysaetos*), Loggerhead shrike (*Lanius ludovicianus*), *Purple martin (Progne subis), Swainson's hawk (Buteo swainsoni), Tricolored blackbird (Agelaius tricolor), White-tailed kite (Elanus leucurus), and Yellow-headed blackbird (Xanthocephalus xanthocephalus).* The Project site does not support suitable nesting habitat for these species; however, it does provide various qualities of foraging habitat. All of the aforementioned special status birds are MSHCP covered species. Therefore, no avoidance/mitigation measures apply to this Project for these species. (GLA-A, pp. 44 – 45, 59 – 61.)

Special Status Mammalian Species

Eleven special status mammalian species were evaluated for the Project site: American badger (*Taxidea taxus),* Los Angeles pocket mouse (*Perognathus longimembris brevinasus),* Pallid bat (*Antrozous pallidus),* Palm Springs roundtailed ground squirrel (*Xerospermophilus tereticaudus chlorus*), San Bernardino kangaroo rat (*Dipodomys merriami parvus),* San Diego desert woodrat (*Neotoma lepida intermedia),* Southern grasshopper mouse (*Onychomys torridus ramona),* Stephens' kangaroo rat (*Dipodomys stephensi),* Townsend's bigeared bat (*Corynorhinus townsendii),* Western mastiff bat *(Eumops perotis californicus),* and Western yellow bat (*Lasiurus xanthinus).* American badger, pallid bat, Palm Springs roundtailed ground squirrel, San Bernardino kangaroo rat, San Diego desert woodrat, and Townsend's big-eared bat do not occur on the Project site. Los Angeles pocket mouse, Southern grasshopper mouse, and Stephens' kangaroo rat are not expected to occur on the Project site due to the high levels of soil disturbance associated with past and current agricultural operations. (GLA-A, pp. 40 – 41.) As discussed in the following paragraphs, western mastiff bat and western yellow bat do not roost on the Project site but were detected offsite acoustically during focused surveys.

Western Mastiff Bat and Western Yellow Bat: The western mastiff bat and western yellow bat are designated as a CDFW species of special concern and a Western Bat Working Group (WBWG) high priority species. (These species are not covered under the MSHCP.) Both species occur year-round in southern California. The western mastiff bat is typically associated with open, semi-arid to arid habitats including dry desert washes, flood plains, chaparral, oak woodland, montane meadows, grassland and agricultural areas. This species roosts in cliff faces and occasionally in buildings that provide unobstructed entry and exit access. The western yellow bat is typically associated with valley foothill, riparian, desert wash, desert riparian and palm oasis habitats, where they often roost in trees taller than three meters in height. Native and non-native palm trees are also known to provide suitable roosting habitat for the species. (GLA-A, p. 43.)

GLA biologists conducted a focused bat survey on April 29, 2024 within the offsite adjacent riparian habitat at the southern end of the Line E disturbance area. The bat survey consisted of a combination of acoustic and emergence surveys and focused on detecting potential roosting areas (day and night) that included, but were not limited to, rocky outcroppings, palm trees, eucalyptus trees, and riparian vegetation. Potential roosting areas were inspected visually for evidence of roosting that included urine staining, guano concentrations, and/or audible bats. In addition to the visual surveys, four ultrasonic acoustic recording devices were deployed throughout the bat study area. All acoustic data was recorded in full spectrum and was processed and analyzed with Sonobat 4.2.2 bat call analysis software using the California Southwest classifier. All acoustic calls were manually reviewed and vetted using multiple Sonobat acoustic reference libraries and other reference materials. (GLA-A, p. 14.)

Both the western mastiff bat and western yellow bat were detected faintly acoustically during the focused bat survey. The faint acoustical signatures detected outside the Project site were indicative of individuals flying high over or near the Project site as part of their foraging foray. The Project site is generally devoid of trees and does not support suitable roosting habitat (including maternity roosts for either of these species. The offsite bat survey area contains suitable roosting habitat, including habitat for maternity roosting. Although the Project site does not contain any roosting habitat, the site provides opportunistic foraging habitat as part of these bats' large foraging range. (GLA-A, pp. 43, 47.)

Although the western mastiff bat and western yellow bat were not confirmed roosting offsite, potential roosting habitat including palm trees are located more than 200 feet from the Project's limits of disturbance. As such, the Project is not expected to indirectly affect roosting bats. The Project does have the potential to impact bat foraging habitat; however, the loss of foraging habitat would not be considered as a substantial adverse effect because of the presence of foraging habitat on surrounding lands. Therefore, potential impacts to sensitive bat species resulting from the implementation of the Line E Project would be less than significant and no mitigation is required.

For the reasons set forth in the above paragraphs, there would be no significant impacts to sensitive species, because all potential impacts would be less than significant with mitigation.

The clarifications to the SJV MDP EIR mitigation measures do not reduce the effectiveness of the mitigation measures or change the significance determinations of the SJV-MDP EIR. New mitigation measures for potential impacts to biological resources would be implemented by the Line E Project; however, these measures are not mitigating new significant effects on the environment; rather, they identify specific actions to implement the more general SJV-MDP EIR mitigation measures. As such, the clarification of SJV-MDP EIR mitigation measures and the Line E Project-specific mitigation measures do not mitigate for new impacts, and do not constitute substantial new information that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

2) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Game or U. S. Fish and Wildlife Service?

SJV-MDP EIR Conclusion: Less than Significant with Mitigation

Approximately 6.38 acres of riparian habitat were mapped within the Project alignments and contained native riparian vegetation including willow (*Salix spp*.), mule fat (*Baccharis salicifolia*), and Freemont's cottonwood (*Populus fremontii*). Much of the riparian vegetation occurs in scattered isolated patches, though at least one of the surveyed alignments terminates at the edge of extensive

riparian habitat associated with the San Jacinto River. The remaining majority of the SJV-MDP alignments extend through disturbed areas supporting a predominance of non-native and native ruderal vegetation, including non-native grasses, though these areas are often interspersed with remnants of alkali playa vegetation. Some of the remnant alkali playa areas exhibited evidence of seasonal ponding, though at the time of surveys there was not enough vegetation to adequately evaluate the features as vernal pools. (SJV-MDP EIR, p. 3.4-26.)

The studied riparian areas varied from roadside/agricultural ditches to ponds and basins, including extensive riparian habitat along the San Jacinto River. Some areas qualify as MSHCP Riparian Areas, though others would likely be excluded due to their artificial nature. As required by SJV-MDP mitigation measures **MM Bio 4** and **MM Bio 5**, MDP Facility-specific mapping would be required to determine which areas are subject to MSHCP requirements. (SJV-MDP EIR, p. 3.4-27.)

> **MM Bio 4:** The project-specific mapping of riparian and unvegetated riverine features will be required pursuant to Section 6.1.2 of the MSHCP. For areas not excluded as artificially created, the MSHCP requires 100 percent avoidance of riparian/riverine areas. If avoidance is not feasible, then individual projects will require the approval of a DBESP including appropriate mitigation to offset the loss of functions and values as they pertain to the MSHCP-covered species. Riparian vegetation will also need to be evaluated for the least Bell's vireo, southwestern willow flycatcher, and western yellow-billed cuckoo. If suitable habitat is present, focused surveys for the species will be required. If avoidance is not feasible, then individual projects will require the approval of a DBESP including appropriate mitigation, i.e., on-site or off-site enhancement, restoration, establishment (creation), preservation, payment into habitat mitigation banks or in lieu fee programs, or a combination of one or more of these options
>
> **MM Bio 5:** The project-specific mapping of vernal pools will be required pursuant to Section 6.1.2 of the MSHCP. As noted above, vernal pools (or similar seasonal ponding alkali playa areas) are expected to occur at least in the area comprising Cell Group V, but have the potential to occur elsewhere within the Project area. For areas not excluded as artificially created, the MSHCP requires 100 percent avoidance of vernal pools areas. If avoidance is not feasible, then individual projects will require the approval of a DBESP including appropriate mitigation to offset the loss of functions and values as they pertain to the MSHCP covered species. Vernal pools and other seasonal ponding depressions will also need to be evaluated for Riverside and Vernal pool fairy shrimp.

Vernal pools in the MDP area rely on rainfall for maintenance and would continue to receive local runoff. If suitable habitat for species listed in Section 6.1.2 of the MSHCP (least Bell's vireo, southwestern willow flycatcher, western yellow-billed cuckoo, Riverside fairy shrimp, Santa Rosa Plateau fairy shrimp, and vernal pool fairy shrimp) is found within the MDP Project area, and avoidance is not possible, mitigation measures shall be implemented according to MSHCP species-specific objectives. (SJV-MDP EIR, p. 3.4-27.)

Implementation of the MDP would not de-water any potential vernal or riparian areas, as it would not alter velocity, volume, or seasonal flow of the San Jacinto River 100-year floodplain. Although development within the SJV-MDP Project area would result in changes to the existing local hydrology, local hydrology would not be significantly impacted by construction of the MDP facilities alone. Areas that currently pond or receive sheet flow would continue to do so during small storm events at the

local level. Stormwater from larger storm events would be collected and conveyed through the MDP Facilities. (SJV-MDP EIR, p. 3.4-27.)

Riparian habitat in the MDP Project area is mostly associated with the San Jacinto River, occurring along MDP Line 3, Line 4, Line 5, Line 6, Line E, Line H, Line J, and Line Z. The San Jacinto River Levee Stage 4 Project, once completed, would alter the 100-year floodplain along the MDP area's northern boundary, but its impacts are not part of the MDP Project and would be addressed separately. Compliance with mitigation measures **MM Bio 4, MM Bio 5,** and Section 6.1.2 of the MSHCP would reduce potential impacts to riparian habitats/vernal pools and associated species to less than significant levels. (SJV MDP EIR, pp. 3.4-26-3.4-27). Riparian habitats associated with potentially jurisdictional drainage features are discussed in the response to item D.3.

Line E Project: No New Impacts/Less than Significant Impacts

The proposed Line E Project would not impact the sensitive vegetation communities identified in the SJV MDP impact area because no sensitive communities are present within the Line E disturbance area. Implementation of the Line E Project would permanently impact approximately 87.11 acres of lands through grading, including areas of remedial grading that will not be restored to pre-project conditions. Permanent impacts include approximately 69.34 acres of agricultural fields, 8.49 acres of annual brome grasslands, 6.17 acres of disturbed and developed areas, and 3.10 acres of perennial pepper weed-prickly lettuce patches. The proposed Project would also temporarily impact approximately 33.22 acres of lands through project implementation. (Refer to **Figure 21 – Vegetation Map**.)

The temporary impacts from the proposed Line E project consist of disturbance within narrow construction easements along either side of the proposed Line E boundary required to construct the facilities. No permanent impacts will occur within the temporary construction easement area because these areas would be restored to pre-construction contours and will be hydroseeded with a native plant mix. The temporary impacts include approximately 25.07 acres of agricultural fields, 3.43 acres of annual brome grasslands, 4.25 acres of disturbed and developed areas, 0.03 acre of eucalyptus groves, and 0.44 acre of perennial pepper weed-prickly lettuce patches. (GLA-B, p. 8.)

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to substantial adverse effects on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Game or U. S. Fish and Wildlife Service. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

3) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

SJV-MDP EIR Conclusion: Less than Significant with Mitigation

The MDP Project area contains roadside ditches and other ditches, which if later are shown to be historic diversions of natural waters, would be potential jurisdictional waters. However, the majority (if not all) of these ditches would be considered as non-relatively permanent waters and as such these features would need to be evaluated in facility-specific jurisdictional delineations to determine if they exhibit a significant nexus to traditionally navigable waters, and therefore jurisdictional. Ditches that are shown to have been wholly excavated in uplands would not be subject to the jurisdiction of the U. S. Army Corps of Engineers (ACOE). (SJV-MDP EIR, p. 3.4-28.)

Areas supporting hydrophytic vegetation would need to be evaluated at an MDP Facility-specific level to determine whether they satisfy wetland criteria. Any "isolated" wetlands will need to be evaluated by the ACOE and the Environmental Protection Agency (EPA) following their joint regulatory guidance, in order to confirm whether any of the "isolated" wetlands would be jurisdictional. With implementation of **MM Bio 3**, potential impacts to federally-protected wetlands would be reduced to less than significant levels. (SJV MDP EIR, p. 3.4-28.)

> **MM Bio 3:** Project-specific delineations will be required to determine the limits of the U.S. Army Corp of Engineers (ACOE), RWQCB, and CDFG jurisdiction. Impacts to jurisdictional waters will require authorization by the corresponding regulatory agency. If impacts are indicated, then jurisdictional water will either a) be avoided or b) be minimized by limiting the degree or magnitude of the action and its implementation; rectifying the impact by repairing, rehabilitating, or restoring, the impacted environment; reducing or eliminating the impact over time by preservation and maintenance operations during the life of the action; compensating for the impact by replacing or providing substitute resources or environments in addition to obtaining the necessary permits from requisite jurisdictions.

Line E Project: No New Impacts/Less than Significant Impacts with Mitigation
This discussion is based on the *Jurisdictional Delineation of the Master Drainage Plan (MDP) Line E Project, an Approximately 14,000 Linear-Foot Drainage Alignment in the City of San Jacinto, Riverside County, California*, October 30, 2024, prepared by Glenn Lukos Associates, Inc. This document is hereinafter referred to as the JD Report. The JD Report is Appendix H to the BTR, which is Appendix D.1 to this Addendum. Preparation of the JD Report satisfies SJV-MDP EIR mitigation measure **MM Bio 3**.

The Line E Project site does not contain any state or federally protected wetlands as discussed in the following paragraphs. (GLA-C, pp. 10-13.)

The Line E Project site contains three drainage features, shown as Drainages A through C that function as agricultural ditches in addition to an area, shown as Drainage Area A on **Figure 22 – CDFW Jurisdictional Area**. Drainage Area A was inundated as a result of agricultural irrigation and two heavier than normal wet seasons. (GLA-C, p. 15.)

U.S. Army Corps of Engineers (Corps) Jurisdiction
No Corps jurisdiction is present within the Line E Project site. Ditches A through C and Drainage Area A, flow and/or collect water only in direct response to precipitation and were completely dry during the GLA's most recent field investigation. Therefore, they are not relatively permanent, standing or continuously flowing bodies of water and are not considered waters of the U.S. as defined in 33 CFR Part 328.3(a). Additionally, ditches that are excavated wholly in and draining only dry land and do not carry a relatively permanent flow of water, and artificial ponds used as stock watering, irrigation, and/or settling basins, are excluded from being waters of the waters of the U.S. pursuant to 33 CFR Part 328.3(b). (GLA-C, p. 10.)

Regional Water Quality Board (Regional Board) Jurisdiction
Regional Board jurisdiction associated with the Line E Project site encompasses 3.68 acres, none of which consist of wetland waters of the State. Regional Board jurisdiction is shown on **Figure 23 – Regional Board Jurisdictional Area** and summarized in **Table H** below.

Table H – Summary of Regional Board Jurisdiction

Feature Name	Regional Board Non-Wetland Waters (acres)	Regional Board Jurisdictional Waters (acres)	Total Regional Board Jurisdiction (acres)	Length (linear feet)
Drainage A	0.17	0.00	0.17	980
Drainage Area A	3.30	0.00	3.30	---
Drainage B	0.03	0.00	0.03	302
Drainage C	0.18	0.00	0.18	419
Total	**3.68**	**0.00**	**3.68**	**1,701**

Source, GLA-C, Table 1
Note: Sum of individual parts may not equal sum total due to rounding error.

Drainage A: Regional Board jurisdiction associated with Drainage A is located in the northwestern portion of the Line E Project site and A consists of several man-made earthen ditches that together convey agricultural runoff in a northwestward direction for approximately 980 linear feet before continuing offsite and eventually terminating in a basin adjacent to Ramona Expressway. Drainage A exhibits an ordinary high water mark (OHWM) ranging from one to 15 feet in width. (GLA-C, pp. 11-12.)

Vegetation associated with Drainage A consists of non-native upland grasses and forbs including ripgut brome (*Bromus diandrus*), red brome (*Bromus rubens*), black mustard (*Brassica nigra*), fiddleneck (*Amsinckia menziesii*), cheeseweed (*Malva parviflora*), Russian thistle (*Salsola tragus*), stinknet (*Oncosiphon pilulifer*). A single Gooding's willow (*Salix gooddingii*) is located in the southeastern portion of Drainage A. (GLA-C, pp. 11-12.)

Drainage Area A: Regional Board jurisdiction associated with Drainage Area A totals 3.30 acres, none of which consists of State wetlands. Drainage Area A is located in the northwestern portion of the Line E Project site and consists of relatively flat undeveloped land that appears to have been disced as recently as December 2020, according to historic aerial imagery. It does not appear that this area has been planted or otherwise maintained since December 2020. Drainage Area A conveys flows in a generally northwestern direction towards Drainage A during periods following heavy rain when adjacent agricultural ditches have flooded. Furthermore, corrugated metal culverts that convey flows within Drainage A under a dirt access road appear to have been clogged by debris, which likely contributes to backup of flood waters in Drainage Area A. (GLA-C, p. 12.)

Drainage Area A was assessed for wetland indicators. Drainage Area A contained two dominant plant species, salt heliotrope (*Heliotropium curassavicum*) and alkali mallow (*Malvella leprosa*), which do not meet the parameters for hydrophytic vegetation. A 12-inch deep soil pit was dug within Drainage Area A which contained silty loam 2. No redox features or other indicators of hydric soils were observed; however, soils within this area are strongly alkali. Primary indicators of hydrology, i.e., surface area cracks, were observed within Drainage Area A. Although Drainage Area A met the indicators for hydrology, due to the lack of lacked hydrophytic vegetation and hydric soils Drainage Area A was determined not to be a wetland. (GLA-C, pp. 12-13.) Refer to the JD Report for details regarding the wetland assessment.

Drainage B: Regional Board jurisdiction associated with Drainage B totals 0.03 acres, none of which consists of State wetlands. Drainage B is a manmade earthen ditch located in the center of the Line E Project Site that crosses the alignment of Line E and conveys agricultural runoff in a northward direction for approximately 302 linear feet before leaving the Line E Project site. Drainage B exhibits an OHWM that averages four feet in width. The offsite portion of Drainage B, which is north of the Line E alignment, appears to convey flows to Drainage Area A during periods of heavy rain. Drainage B is ephemeral and at the time of the surveys did not contain any surface water and was generally unvegetated. However, Russian thistle, Canada horseweed, and black mustard were observed immediately adjacent to the drainage along the top of the bank. (GLA-C, p. 13.)

Drainage C: Regional Board jurisdiction associated with Drainage C totals 0.18 acre, none of which consists of State wetlands. Drainage C is a man-made earthen ditch, located in the southeastern portion of the Line E Project site, that conveys flows northward away from the San Jacinto Reservoir Overflow for approximately 419 linear feet before continuing offsite and terminating as sheet flow in an adjacent agricultural field. Drainage C exhibits an OHWM ranging from 10 to 30 feet in width. A rip-rap headwall and culvert previously existed separating the offsite riparian area to the south from the remainder of Drainage C to the north. Currently, the rip-rap headwall and culvert appear to have been destroyed and flows now bypass the culvert and continue around the riprap through a highly eroded area to the east of the culvert. According to historic aerial imagery, Drainage C is typically characterized by an ephemeral flow regime. However, at the time of the initial site visit, Drainage C contained surface water in its southernmost reach, immediately adjacent to the San Jacinto Reservoir Overflow area. Drainage C was completely dry during the most recent site visit. (GLA-C, p. 13.)

Vegetation associated with Drainage C includes a mix of native and non-native species such as common toad rush (*Juncus bufonius*), Bermuda grass, annual beard grass (*Polypogon monspeliensis*), stinknet (*Oncosiphon piluliferum*), annual yellow sweetclover (*Melilotus indicus*), Canada horseweed, alkali mallow, cocklebur (*Xanthium sp.*), and various other nonnative grasses. A single Gooding's willow is located atop the eastern bank just outside of the Line E Project boundary to the north. (GLA-C, p. 13.)

California Department of Fish and Wildlife (CDFW) Jurisdiction
CDFW jurisdiction associated with the Line E Project site encompasses 3.88 acres, none of which consist of riparian stream. A total of 1,701 linear feet of CDFW non-riparian stream is present on the Line E Project site. CDFW jurisdiction is shown on **Figure 22 – CDFW Jurisdictional Area** and summarized in **Table I** below.

Table I – Summary of CDFW Jurisdiction

Feature Name	CDFW Non-Riparian Stream (acres)	CDFW Riparian Stream (acres)	Total CDFW Jurisdiction (acres)	Length (linear feet)
Drainage A	0.26	0.00	0.26	980
Drainage Area A	3.30	0.00	3.30	---
Drainage B	0.03	0.00	0.03	302
Drainage C	0.29	0.00	0.29	419

Table I – Summary of CDFW Jurisdiction

Feature Name	CDFW Non-Riparian Stream (acres)	CDFW Riparian Stream (acres)	Total CDFW Jurisdiction (acres)	Length (linear feet)
Total	**3.88**	**0.00**	**3.88**	**1,701**

Source, GLA-C, Table 2
Note: Sum of individual parts may not equal sum total due to rounding error.

Drainage A: Regional Board jurisdiction associated with Drainage A totals 0.26, none of which consists of riparian habitat. Drainage A exhibits a stream course that ranges from one to 25 feet in width. (GLA-C, p. 15.) The location, function and vegetation associated with Drainage A are discussed above under the *Regional Board Jurisdiction* subheading.

Drainage Area A: CDFW jurisdiction associated with Drainage Area A totals 3.30 acres, none of which consists of riparian habitat. (GLA-C, p. 15.) The location, function and vegetation associated with Drainage Area A are discussed above under the *Regional Board Jurisdiction* subheading.

Drainage B: CDFW jurisdiction associated with Drainage B totals 0.03 acres, none of which consists of State wetlands. (GLA-C, pp. 15-16.) The location, function and vegetation associated with Drainage Area B are discussed above under the *Regional Board Jurisdiction* subheading.

Drainage C: CDFW jurisdiction associated with Drainage C totals 0.29 acres, none of which consists of riparian habitat. (GLA-C, p. 16.) The location, function and vegetation associated with Drainage Area B are discussed above under the *Regional Board Jurisdiction* subheading.

Implementation of the Line E Project would impact 3.68 acres of non-wetland waters regulated by the Regional Board and 3.88 acres of non-riparian streambed regulated by CDFW; therefore, a Waste Discharge Permit (WDR) is required from the Regional Board and a Section 1600 Streambed Alteration Agreement is required from CDFW per SJV-MDP EIR **MM Bio 3**.

The proposed Line E channel includes at least 10.02 acres of soft-bottom channel. Although the Line E project would direct flood flows within the Line E tributary area, these flows would be directed in the same direction as per the existing condition. Although the Line E channel would be subject to flood control maintenance (vegetation management, clean out of debris, slope and bottom repairs, and access road maintenance and repair), none of these activities precludes or negatively affects the conveyance of water to downstream resources in the same direction and relatively same amounts as the existing condition. The flows will still reach the same area to the northwest, just following a different route. The existing MDP hydrology Q_{100} flow is 5,825 cfs at the northerly side of the MWD right-of-way. In the proposed Line E condition, the total Q_{100} flow decreases to 5,440 cfs at this same location. (PDR, pp. 15, 19)

Additionally, as outlined above in **Table H – Summary of Regional Board Jurisdiction and Table I – Summary of CDFW Jurisdiction**, the construction of Line E would result in impacts to 3.68 acres of non-wetlands waters under the jurisdiction of the Regional Board, necessitating the need for a WDR permit, as well as 3.88 acres of non-riparian stream under the jurisdiction of the CDFW, necessitating the need for a CDFW Section 1600 permit.

The Line E Project proposes to mitigate these impacts by enhancing and restoring at a minimum 2:1 ratio to the CDFW impacts (at least 7.76 acres). The 7.76 acres would be proposed to be located on a future restoration site to be located within the existing San Jacinto River 100 -year floodplain, contain alkali soils and have historically or currently support alkali meadow/vernal pool habitat and hydrology. The restoration site will be acquired and conveyed to a conservation land entity such as the Rivers and Lands Conservancy and managed in perpetuity for conservation.

A Habitat Mitigation and Monitoring Plan (HMMP) would be prepared to detail the methods to implement the proposed enhancement/restoration. The HMMP would identify the proposed plant palettes, maintenance, and monitoring efforts, and propose success criteria. (GLA-B, p. 19.) Within the restoration area, the non-native vegetation shall be removed and re-planted with native riparian species (container stock and seed). The restoration area shall be monitored and maintained for at least five years to achieve success criteria. The restoration area shall be protected via a conservation easement and a long-term endowment shall be established to manage the restoration area in perpetuity. (GLA-B, p. 19) This restoration proposal is outlined in mitigation measure **MM Bio E8**.

> **MM Bio-E8: Habitat Mitigation and Monitoring Plan**. In order to mitigate the 4.03 acres of riverine resources, including impacts associated with smooth tarplant found in these riverine areas, the Project proponent shall prepare a Habitat and Mitigation and Monitoring Plan (HMMP) and secure conservation property to be restored for alkali playa/meadow resources, including smooth tarplant. The HMMP shall be prepared on a property that is to be secured for conservation in perpetuity which will support at least 8.06 acres (2:1) of restored riverine alkali playa/meadow. The HMMP shall be submitted to the City of San Jacinto, CDFW and USFWS for review an approval. The HMMP will be used to support the mitigation necessary for impacts to the Waters of the State which require permits through the CDFW and Regional Board. The property shall be conveyed to a conservation entity such as Rivers and Lands Conservancy or other such entity as approved by CDFW and USFWS. The Project proponent will provide a non-wasting endowment to fund the management of the conservation/mitigation property in perpetuity.

Vernal Pools

The Line E Project site does not contain MSHCP vernal pools. Five areas were noted as inundated within the Project site, corresponding to the five features (4, 5, 46, E-1 and E2) that are described below as having been evaluated through focused surveys for listed fairy shrimp. Features 4, 5, 46 and E-2 are all unvegetated vehicle ruts in dirt roads. Feature E-1 consists of a large, inundated area that is described above as Drainage Area A. Drainage Area A was determined not to exhibit all three parameters of a wetland, specifically the inundated area did not exhibit a predominance of hydrophytic vegetation, and therefore the feature is not considered as a vernal pool. (GLA-A, p. 55.)

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to adverse effects on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

4) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

SJV-MDP EIR Conclusion: Less than Significant with Mitigation

Portions of the MDP Project area coincide with MSHCP Proposed Core 5 which is comprised of the portion of the upper San Jacinto River extending from the San Jacinto Mountains to just west of State Street. The portion of the San Jacinto River is crucial for maintaining floodplain processes, water quality, and habitat quality, benefiting species like mountain lions and bobcats. There are no other waterways in the MDP Project area that could serve as movement corridors. Flood control activities and adjacent planned land uses could adversely affect species such as the arroyo toad, San Bernardino kangaroo rat, least Bell's vireo, southwestern willow flycatcher, and Los Angeles pocket mouse. However, with the implementation of mitigation measures from the SJV MDP EIR, **MM Bio 2, MM Bio 4, MM Bio 5, MM Bio 6,** and **MM Bio 8**, set forth in the response to item D.1, impacts regarding interfering with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impeding the use of native wildlife nursery sites are considered less than significant. (SJV MDP EIR, p. 3.4-38.)

Line E Project: No New Impact/Less than Significant with Mitigation

The Line E Project site is not located within a regionally significant wildlife linkage or corridor, including any Core Areas or MSHCP existing or proposed Linkages. (GLA-A, p. 63.) The Line E Project would not result in the construction of physical barriers to wildlife movement and construction impacts will be temporary in nature. The Line E Project site does not contain any wildlife nurseries.

The Line E Project has the potential to impact active bird nests if vegetation is removed during the nesting season (February 1 to September 15). Impacts to nesting birds are prohibited by the MBTA and California Fish and Game Code. Although impacts to native birds are prohibited by MBTA and similar provisions of California Fish and Game Code, Although impacts to native birds are prohibited by MBTA and similar provisions of California Fish and Game Code, impacts to native birds resulting from implementation of the Line E Project would not be a significant impact under CEQA. The native birds with potential to nest on the Project site would be those that are extremely common to the region and highly adapted to human landscapes (e.g., house finch, killdeer). The number of individuals potentially affected by the Line E Project would not significantly affect regional, let alone local populations of such species. (GLA-A, p. 63.) Nonetheless, the Line E Project would implement SJV MDP **MM Bio 1**, as clarified below and renumbered **CMM Bio 1 (**CMM = Clarified Mitigation Measure**)**. to be specific to this Project. (clarifying language is shown in underline (example text) and deletions are shown in strike-through (~~example text~~).

> ~~**MM Bio 1**~~ **CMM Bio 1:** In order to avoid violation of the MBTA and California Fish and Game Code, site-preparation activities (removal of trees and vegetation) shall be avoided, to the greatest extent possible, during the nesting season (generally February 1 to September 15 ~~August 31~~) of potentially occurring native and migratory bird species. If site-preparation activities are proposed during the nesting/breeding season (February 1 to September 15 ~~August 31~~), a pre-activity field survey shall be conducted by a qualified biologist ~~be to the issuance of grading permits, for private development projects, or~~ prior to ~~construction for public agency contracts~~, within three days prior to any disturbance of the Line E Project site, including disking, demolition activities, and grading, to determine if active nests of species protected by the MBTA or the California Fish and Game Code are present in the construction zone. ~~If active nests are not located within the Project area and appropriate buffer, 500 feet of an active listed species or raptor nest, 300 feet of other sensitive or protected bird nests (non-listed), or within 100 feet of sensitive or protected songbird nests, construction may be conducted during the nesting/breeding season. However, i~~ If active nests are located during the pre-activity field survey, ~~no~~

~~grading or heavy equipment activity shall take place within at least 500 feet of an active listed species or raptor nest, 300 feet of other sensitive or protected (under MBTA or California Fish and Game Code) bird nests (non-listed), or within 100 feet of sensitive or protected songbird nest~~s the biologist shall establish suitable buffers around the nests, and the buffer areas shall be avoided until the nest is no longer occupied and juvenile birds can survive independently from the nests. ~~active.~~

For the reasons set forth above, implementation of the Line E Project would not interfere with the movement of any native or migratory fish or wildlife species or impact wildlife corridors. Clarification of **SJV-MDP EIR MM Bio 1** to meet the specifics of the Line E Project and renumbering this mitigation measure to **CMM Bio 1** does not constitute a change to the SVJ MDP Project or new information of substantial importance per CEQA Guidelines section 15162. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

5) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

SJV-MDP EIR Conclusion: Less than Significant

The San Jacinto General Plan contains several policies relating to the conservation and protection of natural resources, including conservation and protection of important plant communities and wildlife habitats, and the conservation of important natural resources such as mature trees, rock outcroppings, hills, etc. Implementation of the proposed MDP Project may adversely affect important plant communities and wildlife habitats. (SJV-MDP EIR, p. 3.4-39.)

The Project does not propose any above-ground structures that would require the removal of important natural resources and, through compliance with the MSHCP, would conserve important resources such as mature trees, rock outcroppings, hills, ridges, and other prominent land forms, as open space. The location of specific SJV-MDP facilities is dictated by engineering and hydraulic concerns. The Project shall meet the goal of the City of Hemet and comply with the policies of the SJVAP through compliance with the MSHCP, therefore impacts are less than significant. (SJV MDP EIR, p. 3.4-39.)

Line E Project: No New Impacts/No Impacts

On November 15, 2022 San Jacinto adopted *Envision San Jacinto – General Plan 2040* (General Plan 2040). The Resource Management Element of General Plan 2040 contains policies related to the conservation and protection of natural resources. The Line E Project would not conflict with any local policies or ordinances protecting biological resources. (GLA-A, p. 63.)

The City's adoption of General Plan 2040 does not constitute new information of substantial importance per CEQA Guidelines section 15162. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

6) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Conservation Community Plan, or other approved local, regional, or state conservation plan?

SJV-MDP EIR Conclusion: Less than Significant with Mitigation

The MDP Project area is located within the Stephens' Kangaroo Rat Habitat Conservation Plan (SKR HCP) and the MSHCP.

The SKR HCP establishes a mechanism for the long-term conservation of the Stephens' kangaroo rat. (SKR). Potential impacts to the SKR are mitigated on a regional basis through compliance with the MSHCP and the SKR HCP. As the MDP Project area is not in a core reserve, implementation of the SJV-MDP would conflict with the SKR HCP and impacts are less than significant. (SJV-MDP EIR, p. 3.4-37.)

The MSHCP serves as a comprehensive, multi-jurisdictional Habitat Conservation Plan (HCP), pursuant to Section (a)(1)(B) of the ESA, as well as a Natural Communities Conservation Plan (NCCP) under the State NCCP Act of 2001. (SJV-MDP, p. 3.4-21.) The MSHCP establishes Criteria Area boundaries in order to facilitate the process by which properties are evaluated for inclusion in the MSHCP Conservation Area. Because some of the MDP Facilities are located within MSHCP Criteria Areas, the JPR process would be conducted by the Western Riverside County Regional Conservation Authority (RCA) for those MDP Facilities located within an MSHCP Criteria Cell prior to construction. Criteria Cells that would be considered in the JPR process include Cells 2666, 2774, 2775, 2878, 2363, 2364, 2461, 2462, 2568, 2569, 2674, 2893, 2981, and 3291. (SJV-MDP EIR, p. 3.4-29.) The conceptual alignment for Line E, as shown in the SJV-MDP EIR, is not within an MSHCP Criteria Cell.

In accordance with the MSHCP, the SJV-MDP was reviewed for consistency with MSHCP Section 3.2.1 (Public Quasi/Public [PQP] Lands), Section 6.1.2 (Protection of Species Associated with Riparian/Riverine Areas and Vernal Pool), Section 6.1.3 (Protection of Narrow Endemic Plant Species), Section 6.1.4 (Guidelines Pertaining to the Urban/Wildlands Interface), and Section 6.3.2 (Additional Survey Needs and Procedures). The SJV MDP EIR concluded that with implementation of mitigation measures **MM Bio 2, MM Bio 4, MM Bio 5, MM Bio 6, and MM Bio 8,** the MDP Project would be is consistent with the MSHCP and potential impacts regarding conflicting with an approved local, regional, or state conservation plan would be less than significant. (SJV-MDP EIR, p. 3.4-37.)

The MDP Project is not located within any other adopted HCP or NCCP. The proposed Project will not conflict with an approved local, regional, or state conservation plan and potential impacts are less than significant. (SJV MDP EIR, pp. 3.4-29 - 3.4-37.)

Line E Project: No New Impacts/No Impacts

The Line E Project is located within the MSHCP; however, the Line E Project site is not located within an MSHCP Criteria Cell, and JPR is not required.

The BTR provides an analysis of the Line E Project with regard to compliance with the biological aspects of the MSHCP. Specifically the BTR analyzed consistency with MSHCP Reserve assembly requirements, compliance and consistency with Section 6.1.2 (Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools), Section 6.1.3 (Protection of Narrow Endemic Plant Species; NEPSSA), Section 6.1.4 (Guidelines Pertaining to the Urban/Wildlands Interface), and Section 6.3.2 (Additional Survey Needs and Procedures). As such, the Project will not conflict with the provisions of the MSHCP as discussed below.

MSHCP Reserve Assembly Requirements

The Project site is not in the MSHCP Criteria Area and therefore the Project is not subject to MSHCP Reserve Assembly requirements. (GLA-A, p. 73.)

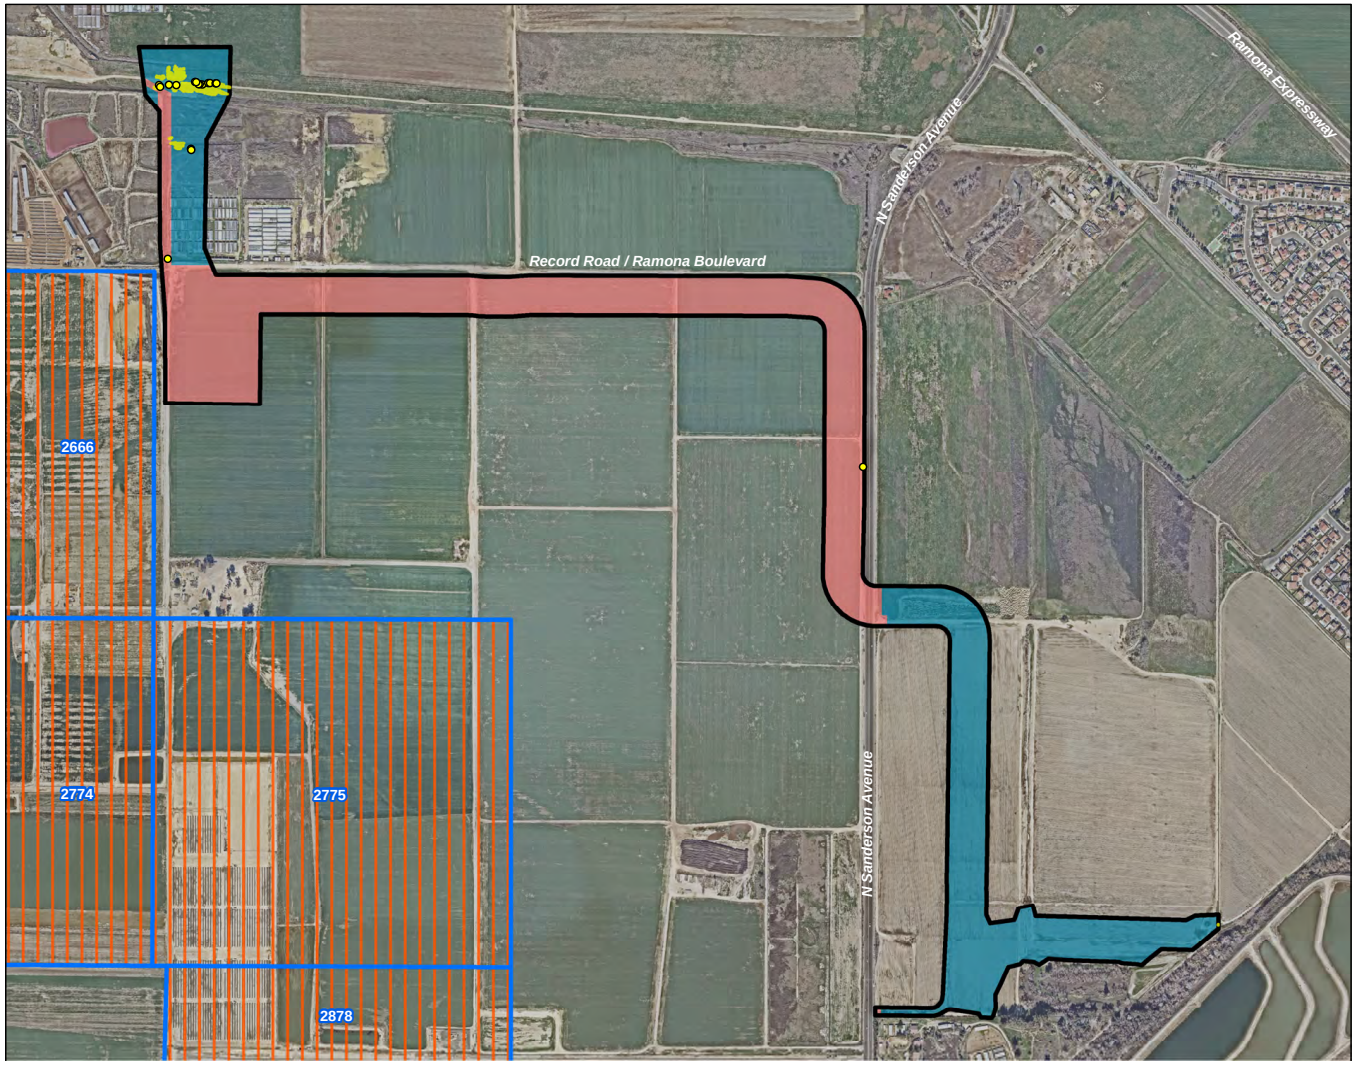
Section 6.1.2 – Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools
The Line E Project will impact 0.15 acres of MSHCP non-riparian riverine areas, as shown on **Figure 24 – MSHCP Riverine Areas**, which are identical to the areas of CDFW jurisdiction shown on ***Table* I**, and **Figure 22**. The purpose of the Line E Project is to re-route existing storm water flows into the proposed Line E channel. The existing direction of flows are from the southeast starting at the San Jacinto Reservoir to the northwest across Ramona Expressway (refer to **Figure 4 – Project Map**). The general direction and relatively same amount of storm water flows at the 100-year storm level would be maintained after implementation of Line E. Although the proposed Line E channel would be subject to flood control maintenance (vegetation management and structural repairs, as needed), the Line E channel would have at least 10.02 acres with a soft (unpaved) bottom and would function in the same or similar manner as the existing, human-altered drainage features (i.e. agricultural ditches). In order to address consistency with ***Section 6.1.2*** of the MSHCP and to evaluate the effects to riparian and/or riverine resources, a Determination of Biologically Equivalent or Superior Preservation (DBESP) process. (GLA-A, p. 73.) The *Determination of Biologically Equivalent or Superior Preservation (DBESP) Analysis for Impacts to MSHCP Riparian/Riverine Area, San Jacinto Valley Master Drain Plan Line E,* January 20, 2026 was prepared by GLA and is included and is included as Appendix D.2 to this Addendum. The DBESP was submitted to the Wildlife Agencies by the City of San Jacinto on February 25, 2025. The Wildlife Agencies requested additional information on April 23, 2025 and a response to that request was provided on June 6, 2025. On July 25, 2025 the Wildlife Agencies responded to the City. On August 28, 2025 the City (including consultants) and Wildlife Agency staff attended a site walk of the Line E area. The City submitted a revised DBESP to the Wildlife Agencies' comments on January 21, 2026.

The DBESP evaluated potential impacts to riverine areas and narrow endemic plant species, criteria area species, and burrowing owl which are discussed below. The proposed Project, through grading and reconfiguration, will impact 3.88 acres of riverine areas. The general direction of riverine flows will be maintained after implementation of Line E. The impacts to the existing riverine areas are considered permanent given that the segments of the exact drainage features will not be restored in the same configuration. Through preparation and implementation of an HMMP as set forth in mitigation measure **MM Bio E8**, impacts to riverine areas would be less than significant.

Construction of the Line E Project has the potential to result in indirect impacts to LBV within the riparian habitat adjacent to the southern (upstream) end of the Line E Project Site. (Refer to **Figure 19 – Least Bell's Vireo Survey Results**.) However, with implementation of mitigation measures **MM Bio E4, MM Bio E5, and/or MM Bio E6**, which establishes construction buffers, provides for pre-construction surveys, biological monitoring, and installation of a noise barrier, indirect impacts to LBV would be less than significant. (GLA-A, pp. 70 – 72, 74.)

Five seasonal ponding features (refer to **Figures 18a through 18e – Fairy Shrimp Results Map**) were surveyed by GLA to determine the presence/absence of federally-listed fairy shrimp and for determinations as to whether any of these features met the definition of a vernal pool. The results of these surveys indicate implementation of the Line E Project would not impact listed fairy shrimp, nor are any of these features considered vernal pools. (GLA-A, pp. 46, 55, 74.)

As part of the fairy shrimp survey, five areas noted as inundated within the Line E Project Site, identified **Figures 18a through 18e** as features E-1, 46, 5, 4, and E-2, were evaluated to determine of any of them are vernal pools.



Features 4, 5,46 and E-2 are all unvegetated vehicle ruts in dirt roads. Feature E-1 consists of a large, inundated area that is described in this Addendum and the BTR as Drainage Area A. Drainage Area A was determined not to exhibit all three parameters of a wetland, specifically the inundated area did not exhibit a predominance of hydrophytic vegetation. Therefore, Drainage Area A is not considered as a vernal pool. Because there are no vernal pools present on the Project site, implementation of the Line E project would not impact any vernal pools. (GLA-A, pp. 55, 74.)

Section 6.1.3 – Protection of Narrow Endemic Plant Species
Most of the Project site is located within the MSHCP Narrow Endemic Plant Species Survey Area (NEPSSA), except for approximately 3,000 linear feet of the Project alignment corresponding with the northeastern corner of APNs 432-030-012 and 432-030-010. No NEPSSA plant species were detected during the focused surveys, and therefore the Line E Project would not impact Narrow Endemic Plant Species. (GLA-A, p. 74.)

Section 6.1.4 – Guidelines Pertaining to the Urban/Wildlands Interface
The Line E Project would not be located adjacent to the MSHCP Conservation Area; however as mentioned above in the *Section 6.1.2* discussion, a portion of Line E would be located adjacent to existing riparian habitat that supports sensitive species and that would be enhanced/restored per mitigation measure **MM Bio E8**. (GLA-A, p. 74.)

Section 6.3.2 Additional Survey Needs and Procedures
As discussed in the response to item D.1, the Line E Project occurs within the burrowing owl survey area. Focused burrowing owl surveys were conducted for the proposed Project site, and no burrowing owls were detected; however, potential suitable habitat exists within the Line E Project site. In compliance with MSHCP requirements and mitigation measure **MM Bio E7** (which clarifies and replaces SJV-MDP EIR **MM Bio 2**), preconstruction burrowing owl surveys shall be conducted within 30 days of site disturbance. The Line E project does not occur within the amphibian or mammal survey areas, or within the CAPSSA; therefore, focused surveys were not required for these species. One Criteria Area Plant Species, smooth tarplant, was detected within the Project site (see **Figure 17**). Ditch A, Ditch D, and Drainage Area A support smooth tarplant, and as noted above, these locations are identified as riverine areas within agricultural areas. Given that a proportion of the smooth tarplant individuals are associated with riparian/riverine resources, mitigation measure **MM Bio E8** would address impacts to riparian/riverine areas pursuant to MSHCP Section 6.1.2 and reduce impacts to less than significant. The Project site does not occur within the CAPSSA and vernal pools are not present on the Project site, therefore the MSHCP requirements pertaining to CAPSSA species and vernal pools do not apply. (GLA-B, pp. 3-5.)

For the reasons set forth above, implementation of the Line E Project would not conflict with the provisions of an adopted Habitat Conservation Plan, Natural Conservation Community Plan, or other approved local, regional, or state conservation plan. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

E. CULTURAL RESOURCES	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
Would the project:				
1) Cause a substantial adverse change in the significance of a historical resource, pursuant to California Code of Regulations, Section 15064.5?	☐	☐	☒	☐
2) Cause a substantial adverse change in the significance of an archaeological resource, pursuant to California Code of Regulations, Section 15064.5?	☐	☐	☒	☐
3) Disturb any human remains, including those interred outside of formal cemeteries?	☐	☐	☒	☐

Source(s): AE-A; SJV-MDP EIR

1) Cause a substantial adverse change in the significance of a historical resource, pursuant to California Code of Regulations, Section 15064.5?

SJV-MDP EIR Conclusion: Less than Significant Impact

Significant effects upon historic structures or features are evaluated by determining the presence or absence of historic status with respect to the feature in question, and then determining the potential for project implementation to affect the structure or feature if it possesses historic status.

One historic resource was identified within the MDP Project area of potential effect (APE), known as Site 33-015743, which is south of Seventh Street. This resource is located within the boundaries of a segment of the former San Jacinto Valley Railway that dates to 1888. The resource was previously recorded and evaluated for historical significance, and it appears to qualify as a "historical resource" as defined by CEQA. (SJV-MDP EIR, p. 3.5-11.)

According to the conceptual alignments and facilities identified in the SJV-MDP, MDP Project-related activities at railway location would be limited to trenching for the installation of an underground storm drain within the railway ROW. If construction within the railway ROW is limited to underground facilities, and does not include the intersection of any MDP Facilities with the rail line or associated railway structures, implementation of the MPD Project would not result in the destruction or relocation of the railway nor would it alter the basic characteristics of the site. Therefore, the proposed SJV-MDP would not cause a substantial adverse change in the significance of Site 33-015743, the only historical resource encountered in the portions of the MDP Project footprint studied (SJV-MDP EIR, p. 3.5-14.)

A vernacular commercial building at 301 N. State Street, known as "Rocios Party Rentals," is located within the proposed SJV-MDP footprint. However, because this structure was constructed after 1967, was not considered a potential historical resource at the time the SJV-MDP EIR was certified. No other potential historical resources were encountered within or adjacent to the SJV-MDP Project footprint. (SJV-MDP EIR, p. 3.5-11.)

The facility locations and alignments shown in the SJV-MDP are conceptual. If at final design any SJV-MDP Facilities are in the vicinity of the former San Jacinto Railway, the conceptual plans change to include construction of above-ground structures or the removal of existing tracks or other railroad-related structures within the ROW, this would be considered a modification of the SJV-MDP Project

for which subsequent CEQA analysis (i.e., initial study, negative declaration, addendum to the EIR, subsequent EIR, or supplemental EIR) would be required. (SJV-MDP EIR, p. 3.5-15.)

Portions of the SJV-MDP Project footprint were inaccessible to field survey personnel and could not be surveyed; thus, it is possible that historical resources could be present on the portions of the SJV-MDP Project's footprint that could not be surveyed and a field survey would be required for these facilities per mitigation measure **MM Cultural 2a**. Therefore, the implementation of mitigation measures **MM Cultural 2a through, MM Cultural 2c** are required to reduce potential impacts to historical and archaeological resources to less than significant. (SJV-MDP, EIR. P. 3.5-15.)

> **MM Cultural 2a:** Prior to the earlier of issuance of a grading permit or construction of any SJV-MDP facility subject to further CEQA analysis, the San Jacinto Public Works Department, Hemet Public Works Department, or RCFCWCD shall require the Project applicant to commission an assessment of the potential for archeological and cultural resources to be performed by a qualified archaeologist in conjunction with recognized Native American tribes, including the Soboba Band of Luiseno Indians (Soboba), in order to determine the presence and extent of any such resources within the Project area and evaluate the significance of such resources. The assessment shall include a NAHC and CHRIS records search, a Phase I walkover survey, and preparation of an archaeological report containing the results of this assessment. Phase II archaeological evaluations will be completed prior to project approval if recommended in the assessment.
>
> **MM Cultural 2b:** The San Jacinto Public Works Department, Hemet Public Works Department, or RCFCWCD shall enter into a Treatment and Disposition Agreement (TDA) with Soboba to address treatment and disposition of archaeological and cultural resources and human remains associated with Soboba that may be uncovered or otherwise discovered during construction within the jurisdiction of the San Jacinto Public Works Department, Hemet Public Works Department, or RCFCWCD. The TDA may establish provisions for tribal monitors. Following execution of the TDA by the San Jacinto Public Works Department or Hemet Public Works Department and Soboba, the TDA will be incorporated by reference into individual grading permits for portions of the Project that are within the jurisdiction of San Jacinto Public Works Department or Hemet Public Works Department; TDAs executed between RCFCWCD and Soboba will be incorporated into the construction specifications.
>
> **MM Cultural 2c:** If the archaeological/cultural resources assessment described in **MM Cultural 2a** demonstrates the potential for archaeological/cultural resources to occur on the Project site, tribal monitors, including those from Soboba, may be allowed to monitor, at such tribe's sole cost and expense, all grading, excavation, and ground-disturbing activities, including further surveys. Following the agreement of the San Jacinto Public Works Department, Hemet Public Works Department, or RCFCWCD, the designated archaeologist, the tribal monitor, and any applicable responsible or trustee agencies, grading, excavation, ground-disturbing activities shall be halted temporarily, and redirected in the event that any archaeological/cultural resources are discovered, in order to evaluate the significance of said archaeological/cultural resources. Any artifacts collected or recovered shall be cleaned, identified, catalogued, analyzed, and prepared for curation at an appropriate repository with permanent retrievable storage to allow for e future. Site records or site record updates (as appropriate) shall be prepared and

submitted to the Eastern Information Center as a permanent record of the discovery. (SJV MDP EIR, pp. 3.5-14 - 3.5-15, 3.5-17 - 3.5-18.)

Line E Project: No New Impact/No Impact

This discussion is based on the *Cultural Resource Study for the San Jacinto Master Drainage Plan Line E, City of San Jacinto, Riverside County, California,* January 2024, prepared by Applied Earthworks for the Line E Project. This report is hereinafter referred to as the CRS and is included as Appendix E to this Addendum. Preparation of the CRS satisfies SJV-MDP mitigation measure **MM Cultural 2a.**

According to the CRS, the Line E Project area is heavily disturbed on the surface by agricultural activity, road development, in addition to modern structures. Portions of the Line E Project site were inaccessible to field survey personnel and could not be surveyed. The records search resulted in identification of a total of eight previously recorded cultural resources within a 0.5-mile search radius of the Line E Project site. Of the eight previously recorded cultural resources, five were identified as historical built-environment resources, and of these resources, the Colorado River Aqueduct and it various segments (CA-RIV-6726H/33-011265) is the only resource documented within the Line E Project site. (AE-A, p. 15.) The Colorado River Aqueduct was constructed in the early 1930s and extends approximately 232 miles from the Whitsett Intake Pumping Plant in Lake Havasu to its terminus at Lake Mathews. This resource has been recommended as eligible for listing in the National Register of Historic Places (NRHP) under Criteria A, C, and D and a portion of the aqueduct was determined to be eligible for the NRHP with concurrence from the State Historic Preservation Officer. (CRHR). (AE, pp. 15 – 16.)

The Colorado River Aqueduct crosses underground through the Line E Project at Casa Loma Barrel No. 1 as shown on **Figure 5 – Project Components**. As discussed in the Project Description, the Line E Channel has been designed to cross over Casa Loma Barrel No. 1 and would be constructed in such a manner as to not impact this pipeline. Therefore, the segment of the Colorado River Aqueduct within the Line E Disturbance area is outside of the Line E Project's vertical limits and would not be directly impacted by construction or operation of the Line E Project. (AE-A, p. 21.) The existence of Line E above the Casa Loma Barrel No. 1 does not affect the historical significance of this feature.

For the reasons set forth above, implementation of the Line E Project would not cause a substantial adverse change in the significance of a historical resource, pursuant to California Code of Regulations, Section 15064.5. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

2) Cause a substantial adverse change in the significance of an archaeological resource, pursuant to California Code of Regulations, Section 15064.5?

SJV-MDP EIR Conclusion: Less than Significant Impact

Numerous prehistoric—i.e., Native American—archaeological sites have been found in the area consisting of various amounts of habitation debris such as: ceramic shards, chipped stone and groundstone tools, debitage, midden soils, fire-affected rock, and sometimes human remains. Bedrock milling features and, less frequently, petroglyphs, have been found in the San Jacinto Valley in areas where bedrock outcrops are present. However, no evidence of any prehistoric archaeological cultural resource was found within or adjacent to that portion of the Project footprint that could be surveyed. Based on the results of the records searches, Native American consultations, and field

surveys, no archaeological resources were identified for those SJV-MDP Facilities that were surveyed. However, because portions of the MDP Project footprint were unable to be surveyed due to restricted access and Native American monitoring has been requested, the SJV MPD Project would implement mitigation measures **MM Cultural 2a through MM Cultural 2c** (set forth in the response to item E.1, to reduce potential impacts to archaeological resources to less than significant. (SJV MDP EIR, pp. 3.5-15 - 3.5-16.)

Line E Project: No New Impact/No Impact

The records search conducted as part of the CRS resulted in identification of a total of eight previously recorded cultural resources within a 0.5-mile search radius of the Project site. Six of these were identified as archaeological resources consisting of three pre-historic isolated artifacts, one historic refuse scatters, two irrigation wells, and two built-environment resources were identified. During the intensive pedestrian survey completed as part of the CRS, no previously unrecorded cultural resources were encountered within the Line E Project area. (AE, pp. 15, 23.)

As part of the CRS, a Sacred Lands File (SLF) search from the Native American Heritage Commission (NAHC) was conducted. The results of the SLF search were negative and indicated that there are no known Native American cultural resources within the immediate area of the Line E Project. (AE, p. 17.) At the suggestion of the NAHC, 15 Native American individuals and organizations traditionally and culturally affiliated with the geographic area of the Project area were contacted by AE. Of the 15 individuals and organizations contacted, the following seven tribes responded: Agua Caliente Band of Cahuilla Indians, Augustine Band of Cahuilla Indians, Cahuilla Band of Indians, Pechanga Band of Indians, Rincon Band of Luiseño Indians, San Manuel Band of Mission Indians, and Soboba Band of Luiseño Indians.

The Project falls within the traditional land use area of the Agua Caliente Band of Cahuilla Indians. The Augustine Band of Cahuilla Indians and the Cahuilla Band of Indians are unaware of any cultural resources that would be affected by the Project but request to be notified immediately if any resources are discovered during development. However, because this Project is within the Cahuilla Band's traditional land use, they requested to participate in monitoring once construction begins. The Pechanga Band of Indians requested consultation on the Project, as part of the Project area is within a Traditional Cultural Property. The Rincon Band of Luiseño Indians has no additional information to provide, but they recommend that AE directly contact Soboba of Luiseño Indians as they are closer to the Project and may have pertinent information. The San Manuel Band of Mission Indians will not participate as the Project is located outside of Serrano ancestral territory. The Soboba Band of Luiseño Indians stated that the Line E Project is within an area of high concern for Tribal Cultural Resources. (AE, p. 23.)

AE did not encounter any previously unrecorded cultural resources within the Project site. Previous prehistoric isolated finds and historic archaeological sites identified by the records search in the buffer for the current Project indicate a potential for subsurface deposits. The Project area is disturbed, and soil sensitivity appears low. The cultural resources identified adjacent to the Project area suggest some potential for subsurface archaeological deposits. Although the likelihood of the presence of intact archaeological deposits is low, in order to provide protection in the unlikely event that archeological resources are unearthed during construction the Line E Project will comply with clarified mitigation measures **CMM Cultural 2b** and **CMM Cultural 2c.**

CMM Cultural-2b: Archaeological Monitoring, Cultural Resources Worker Sensitivity Training, and Treatment and Disposition Plan. Prior to the initiation of

any Line E-Project-related surface grubbing or clearing and initial grading, the entity carrying out the project ~~the San Jacinto Public Works Department, Hemet Public Works Department, or RCFCWCD~~ shall retain a qualified professional archaeologist (the "Project Archaeologist") meeting the Secretary of the Interior's Professional Qualifications Standards for archaeology as defined at 36 CFR Part 61, Appendix A. The primary task of the Project Archaeologist shall be to monitor the initial ground-disturbing activities at the Line E Project site for the identification of any previously unknown archaeological and/or cultural resources.

The Project Archeologist shall attend the pre-grading meeting with the City of San Jacinto Staff, the Line E Project construction manager, and any Line E Project contractors to conduct a mandatory Cultural Resources Worker Sensitivity Training to those in attendance. The Project Archaeologist or designated archaeological monitor shall have the authority to temporarily halt and redirect earth moving activities in the affected area if suspected archaeological resources are unearthed.

Also prior to the initiation of any Line E Project-related surface grubbing or clearing and initial grading, the entity carrying out the project ~~San Jacinto Public Works Department,~~ shall enter into a Treatment and Disposition Agreement (TDA) with the Soboba Band of Luiseño Indians to address treatment and disposition of archaeological and cultural resources and human remains associated with the Soboba Band of Luiseño Indians that may be uncovered or otherwise discovered during construction within the jurisdiction of the San Jacinto Public Works Department~~, Hemet Public Works Department, or RCFCWCD~~. The TDA may establish provisions for tribal monitors. Following execution of the TDA ~~by the San Jacinto Public Works Department and Soboba~~, the TDA ~~be incorporated by reference into individual grading permits for portions of the Project that are within the jurisdiction of San Jacinto Public Works Department or Hemet Public Works Department; TDAs executed between RCFCWCD and Soboba~~ will be incorporated into the Line E Project construction specifications.

CMM Cultural 2c: **Inadvertent Finds.** ~~If the archaeological/cultural resources assessment described in MM Cultural 2a demonstrates the potential for archaeological/cultural resources to occur on the Project site, tribal monitors, including those from Soboba, may be allowed to monitor, at such tribe's sole cost and expense, all grading, excavation, and ground-disturbing activities, including further surveys.~~ ~~Following the agreement of the San Jacinto Public Works Department, Hemet Public Works Department, or RCFCWCD, the designated archaeologist, the tribal monitor, and any applicable responsible or trustee agencies,~~ Grading, excavation, ground-disturbing activities shall be halted temporarily by the Project Archaeologist, and redirected in the event that any archaeological/cultural resources are discovered during initial ground disturbing activities, in order to evaluate the significance of said archaeological/cultural resources. Any artifacts collected or recovered shall be cleaned, identified, catalogued, analyzed, and prepared for curation at an appropriate repository with permanent retrievable storage to allow for additional research in the future. Site records or site record updates (as appropriate) shall be prepared and submitted to the ~~Eastern Information Center~~ South Coastal Information Center as a permanent record of the discovery.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts resulting in a substantial adverse change in the significance of an archaeological resource, pursuant to California Code of Regulations, Section 15064.5. Clarification of the SJV-MDP EIR mitigation measures to be Line E Project-specific does not mitigate new impacts or constitute new information of substantial importance. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

3) Disturb any human remains, including those interred outside of formal cemeteries?

SJV-MDP EIR Conclusion: Less than Significant Impact

The SJV-MDP EIR determined that no cemeteries are located within the MDP Project area, and due to its previously disturbed condition, discovering human remains is unlikely; thus, the MDP Project is not expected to disturb any human remains. If suspected human remains are found during construction of any MDP Facility, all activities in the vicinity of the remains shall cease and the contractor shall immediately notify the County Coroner, pursuant to California Health & Safety Code Section 7050.5 and California Resource Protection Code Section 5097.98. Therefore, potential impacts to disturbing any human remains would be less than significant. (SJV-MDP IS, p. 17.)

Line E Project: No New Impact/No Impact

In the unlikely event that unknown human remains are uncovered during construction of the Line E Project, pursuant to law, the proper authorities would be notified and standard procedures for the respectful handling of human remains would be adhered to in compliance with California Code of Regulations (CCR) Title 14, Chapter 3, Section 15064.5(e); Public Resources Code (PRC) Division 5, Chapter 1.75, Section 5097.98; State Health and Safety Code (HSC) Division 7, Part 1, Chapter 2, Section 7050.5. Through compliance with these regulations, potential impacts associated with disturbing human remains would less than significant.

For the reasons set forth above, the disturbance of human remains is unlikely and if suspected human remains are found during construction of the Line E Project, construction activities would stop and the provisions of state law would be followed. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

F. ENERGY	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
Would the project:				
1) Result in potentially significant environmental impacts due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☒	☐
2) Conflict with or obstruct a State or Local plan for renewable energy or energy efficiency?	☐	☐	☒	☐

Source(s): CEC; Project Description, Energy Tables (Appendix G)

1) Result in potentially significant environmental impacts due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

SJV-MDP EIR Conclusion: Less Than Significant Impact.
This threshold was not a part of the State CEQA Guidelines at the time the SJV-MDP EIR was prepared. However, pursuant to State CEQA Guidelines Section 15126.2(c), the Project's irreversible environmental changes were evaluated. The proposed SJV-MDP Facilities would not result in a large commitment of non-renewable resources, besides the temporary use of non-renewable resources (e.g., fossil fuels) during construction. (SJV-MDP EIR, p. 5.0-19.) Additionally, all the information necessary to evaluate the Project's energy consumption was available.

Construction of the SJV-MDP Facilities would be intermittent as individual facilities are implemented over time. Construction would require the use of heavy equipment, as well as construction workers and vendors traveling to and from the SJV-MDP Facilities construction sites. Construction equipment requires diesel as the fuel source and construction worker and vendor trips use both gasoline and diesel fuel. Fuel consumption from on-site heavy-duty construction equipment and construction vehicles would be temporary and cease once construction is complete, which would represent a negligible demand on energy resources. Furthermore, operations of the SJV-MDP Facilities do not consume energy beyond infrequent maintenance service. As such, the impact on energy consumption would be less than significant.

Line E Project: No New Impact/No Impact
As an infrastructure project, the majority of impacts associated with the Line E Project would be short-term. As analyzed above, in item C.2, the construction of the Line E Project is anticipated to take approximately three years and would require the use of equipment for grading/excavation, as well as construction workers and vendors traveling to and from the Line E Project site. Construction equipment requires diesel as the fuel source and construction worker and vendor trips use both gasoline and diesel fuel. Line E Project-related fuel consumption was estimated and is included in Appendix G – Energy Tables. Construction of the Line E Project is estimated to use approximately 329,340 gallons of diesel fuel and 30,632 gallons of gasoline. (See Appendix G.)

Fuel consumption from on-site heavy-duty construction equipment and construction would be temporary in nature and uses a limited number of equipment, which would represent a negligible demand on energy resources. There are no unusual Line E Project characteristics that would necessitate the use of construction equipment that would be less energy-efficient than at comparable construction sites in other parts of the State.

Energy used during operation of the Line E Project would primarily result from electricity usage from the confluence basin pumps. These pumps are estimated to use approximately 240 kilowatts (kW) per hour. The amount of time these pumps would operate in a given year will vary depending on the volume of water being pumped during each storm and the storm frequency. For example, the estimated average runtime for the pumps to drain a 100-year storm is approximately 47.3 hours, which would result in approximately 11,352 kilowatt-hours kWh (240 kW x 47.3 hours = 11,352 kWh). This represents a negligible demand on Southern California Edison's (SCE's) energy resources, which consumed 85,670 gigawatt hours (GWh) in 2022 (CEC), and therefore would not operate in a manner that is wasteful or inefficient. Additionally, the Line E Project would also use gasoline and diesel fuel use during operation and routine maintenance of the backup generator and for maintenance fuel use, which would also be negligible.

For the reasons set forth in the preceding paragraphs, implementation of the Line E Project would not result in any new or increased significant impacts related to wasteful, inefficient, or unnecessary consumption of energy during construction or operation. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

2) Conflict with or obstruct a State or Local plan for renewable energy or energy efficiency?

SJV-MDP EIR Conclusion: Less Than Significant Impact.
This threshold was not a part of the State CEQA Guidelines at the time the SJV-MDP EIR was prepared. However, all the information necessary to evaluate the MDP Project's consistency with applicable renewable energy plans was available.

The SJV-MDP Project, and any of its implementing facilities, would comply with the state and local regulations that pertain to renewable energy or energy efficiency. However, there are no specific plans for these types of facilities. Therefore, impacts regarding conflicts with or obstruction of a renewable energy plan or energy efficiency would be less than significant.

Line E Project: No New Impact/No Impact
The Line E Project would not conflict with or obstruct implementation of any state or local plans for renewable energy or energy efficiency because there are no applicable plans for these types of facilities.

As such, implementation of the Line E Project would not result in any new or increased significant impacts regarding obstruction of state or local plans renewable energy or energy efficiency. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

Source(s): Kleinfelder-A, Kleinfelder-B, GP DEIR; Project Description; AE-A, SJV-MDP IS

1) Cause potential substantial adverse effects, including the risk of loss, injury or death involving: Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42; and

2) Cause potential substantial adverse effects, including the risk of loss, injury or death involving: Strong seismic ground shaking?

SJV-MDP EIR Conclusion: Less than Significant Impact

Portions of the proposed MDP project lie within an Alquist-Priolo Earthquake Fault Zone. While the MDP Project does not include facilities or structures that would be inhabited by humans, and as such would not expose persons directly to substantial adverse effects from ground shaking. Detention

basin failure due to ground shaking could indirectly cause flooding during high water periods. However, the likelihood of an earthquake coinciding with such events is low. Additionally, the proposed MDP Facilities would be designed and constructed to withstand expected ground shaking and potential soil instability, based on geotechnical reports that would be prepared as part of the final design for the MDP Facilities. Because recommendations from the geotechnical engineer would be incorporated into the final design and construction of the MDP Facilities, potential impacts from seismic hazards would be less than significant. (SJV-MDP IS, p. 18.)

Line E Project: No New Impact/No Impact

This discussion is based on the *Structures Report*, February 14, 2025, and the *Draft Geotechnical Investigation Report, San Jacinto Line E Storm Drain, San Jacinto California*, February 13, 2025, hereinafter referred to as the Draft Geotechnical Report. Both of these documents were prepared by Kleinfelder, Inc. and are included as Appendices B.1 and B.2 of this Addendum.

The Line E Project is within the zone of influence for several faults which are considered active or potentially active and capable of producing seismic shaking at the site that could potentially be damaging to buildings and appurtenant structures. Specifically, as shown on **Figure 25 – Fault Location Map**, the Line E Project site is east of and adjacent to the Casa Loma fault strand of the San Jacinto fault zone (SJFZ). The Casa Loma fault intersects the proposed Confluence Basin at the north end of the Line E Project site and the proposed Line E inlet at the south end of the Line E Project site. (Kleinfelder-A, p. 10.) The Alquist-Priolo Fault Zone setback associated with the mapped fault traces impinges on the proposed Line E Channel alignment at the south end of the Project limits near Bridge Street and Sanderson Avenue, and at the north end where the alignment crosses Record Road. (Kleinfelder-B, p. 12.)

It is anticipated that the Line E Project site would periodically experience ground acceleration as the result of moderate to large magnitude earthquakes on faults outside the Line E Project area. According to the Draft Geotechnical Report, the risk for surface fault rupture within the Line E Project site is high. (Kleinfelder-B, p. 13.)

The Line E Project would construct approximately 200 linear feet of concrete trapezoidal channel across the Metropolitan Water District Casa Loma Barrel No. 1 right-of-way with access roads on both sides of the channel, and side slopes varying from a 10:1 ratio to a 23:1 ratio. Metropolitan has design policies for structures built over their buried pipelines. Given that the Line E Channel would cross over Casa Loma Barrel No. 1, two designs are being analyzed in this Addendum. The purpose of these designs is to prevent additional weight on the existing Casa Loma Barrel No. 1 from the proposed Line E channel, including the weight of maintenance vehicles and channel water.

The Draft Geotechnical Report concluded that the Line E Project is geotechnically feasible, provided the recommended seismic design parameters regarding earthwork, design, and construction considerations presented in the Draft Geotechnical Report are followed during design and construction. (Kleinfelder-B, pp. 14 – 15.) These recommendations are identified in the Project Description under the subheading **Geotechnical Recommendations for Crossing the Casa Loma Barrel No. 1** and made a part of the Line E Project. Because the design and construction of the Line E Project would incorporate the recommendations of the Draft Geotechnical Report, potential adverse effects including risk of loss, injury, or death involving rupture of a known earthquake fault and strong seismic ground shaking would be less than significant.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to rupture of a known earthquake fault or strong seismic ground shaking. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

3) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: Seismic-related ground failure, including liquefaction?

SJV-MDP EIR Conclusion: Less than Significant Impact

The majority of the proposed MDP Facility alignments and detention basin locations are in areas with moderate susceptibility to liquefaction, with some small areas identified as very high, high, and low susceptibility. Because the project does not include structures inhabited by humans, it will not directly expose people to seismic-related ground failure. Detention basin failure from ground shaking could indirectly cause flooding during high water periods, but the probability of an earthquake coinciding with such events is low. The facilities will be designed and constructed to withstand expected ground shaking and potential soil instability, as per recommendations from geotechnical reports prepared during the design phase of MDP Facilities. Therefore, impacts regarding liquefaction and seismic-related ground failure are considered less than significant. (SJV-MDP EIR, p. 18.)

Line E Project: No New Impact/No Impact

The Line E Project site is within an area identified as having a moderate potential for liquefaction. Liquefaction could occur within interbedded sand layers through the upper 60 feet below ground surface. Settlement resulting from liquefaction could be a potential impact if it were to result in damage the Line E Channel or to Metropolitan's Casa Loma Barrel No. 1 Siphon where the Line E Channel crosses this pipeline. The Draft Geotechnical Report estimated liquefaction could occur within interbedded sand layers throughout the upper 60-feet below g round surface and total liquefaction-induced settlements in the vicinity of the proposed Metropolitan pipeline crossing could be approximately 2 inches, which is considered generally negligible in this area. (Kleinfelder-B, pp. 16 – 17.) Because the design and construction of the Line E Project would incorporate the recommendations of the Draft Geotechnical Report, which are made a part of the Line E Project as discussed in the Project Description, impacts regarding rupture of a known earthquake fault and strong seismic ground shaking, including liquefaction would be less than significant.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to strong seismic ground shaking, including liquefaction. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

4) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: Landslides?

SJV-MDP EIR Conclusion: Less than Significant Impact

The Project area is relatively flat and not susceptible to seismically induced landslides. Furthermore, because the Project is not located on a hillside and does not include habitable structures, the potential impacts to people or structures due to landslides are considered less than significant. (SJV-MDP IS, p. 19.).

Line E Project: No New Impact/No Impact
The implementation of the Line E Project would not result in or cause landslides because the topography of Line E Project site is predominately flat. Therefore, no impacts from the Line E Project would occur with regard to landslides.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to landslides. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

5) Result in substantial soil erosion or the loss of topsoil?

SJV-MDP EIR Conclusion: Less than Significant Impact
The proposed alignments and basins are on level ground and will not significantly alter topography or create unstable soil conditions. The project includes at-grade, above-ground, and below-ground stormwater conveyance facilities and detention basins. While there is potential for short-term topsoil loss during construction due to runoff and erosion, this will be minimized by adhering to the National Pollutant Discharge Elimination System (NPDES) general construction permit. This permit requires a Storm Water Pollution Prevention Plan (SWPPP) to be prepared and implemented during construction. The SWPPP will include Best Management Practices (BMPs) to reduce soil erosion and topsoil loss. Therefore, potential impacts from soil erosion or topsoil loss during construction are considered less than significant. (SJV-MDP IS, p. 19.)

Line E Project: No New Impact/No Impact
The Proposed Line E Project site is primarily farmland on the distal margin of the San Jacinto River and the risk of erosion is considered low to moderate. (Kleinfelder-B, p. 13.) Pursuant to existing regulatory requirements, San Jacinto would obtain coverage under the NPDES general construction permit from the State Water Resources Control Board and prepare a SWPPP prior to construction activities that would implemented during construction activities. The SWPPP would incorporate applicable Best Management Practices (BMPs) to minimize the loss of topsoil and prevent substantial erosion.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to substantial soil erosion or loss of topsoil. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

6) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?

SJV-MDP EIR Conclusion: Less than Significant Impact
The majority of the proposed SJV-MDP Project would be located in an area with moderate liquefaction susceptibility due to deep groundwater and susceptible sediments, with some sections spanning areas of very-high, high, and low susceptibility. The SJV-MDP Project does not include habitable structures, thus it will not directly expose people to significant effects from seismic-related ground failure. The San Jacinto Valley, where the MDP Project is situated, has documented subsidence issues but is not susceptible to landslides. The proposed MDP Facilities would be designed and constructed to withstand expected ground shaking and potential soil instability. A geotechnical report will be prepared, and all recommended measures will be incorporated into the

final design and construction. Therefore, potential impacts from soil instability are considered less than significant. (SJV-MDP IS, p. 19.)

Line E Project: No New Impact/No Impact
Construction and operation of the Line E Project would not significantly contribute to landslides, lateral spreading, subsidence, or liquefaction, and it would not be situated on unstable soil. Because the design and construction of the Line E Project would incorporate the recommendations of the Draft Geotechnical Report, which are made a part of the Line E Project as discussed in the Project Description, impacts regarding geologic stability would be less than significant.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to geologic stability. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

7) Be located on expansive soil, as defined in Section 1803.5.3 of the California Building Code (2019), creating substantial direct or indirect risks to life or property?

SJV-MDP EIR Conclusion: Less than Significant Impact
Expansive soils contain significant clay particles that can shrink or swell with changes in water content, exerting stress on structures. The project alignment spans various soil series (Chino, Cieneba, Cortina, Dello, Domino, Exeter, Friant, Gorgonio, Grangeville, Greenfield, Hanford, Metz, Pachappa, Rockland, San Emigdio, Traver, Vista, Waukena, and Willows), which have a low to moderate shrink-swell potential and minimal clay content. The Willows series, which does have some clay, comprises only 0.1% of the project area. Because the MDP Project Area is not located on known expansive soils, it would not create substantial risks to life or property due to expansive soils. (SJV-MDP IS, p. 20.)

Line E Project: No New Impact/No Impact
The Draft Geotechnical Report concluded the soils encountered were silty or granular in nature with an Expansion Index values of 34 and 44, which indicates these soils have a “low” expansion potential. Because the design and construction of the Line E Project would incorporate the recommendations of the Draft Geotechnical Report to ensure suitable soils, which are made a part of the Line E Project as discussed in the Project Description, impacts regarding a substantial direct or indirect risk to life or property resulting from expansive soils would be less than significant.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts regarding a substantial direct or indirect risk to life or property resulting from expansive soils. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

8) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

SJV-MDP EIR Conclusion: No Impact
The proposed MDP Project would not generate the need for septic tanks or alternative wastewater disposal systems. (MDP EIR IS, p. 20.)

Line E Project: No New Impact/No Impact
The Line E Project does not include septic tanks or alternative wastewater disposal systems. Therefore, no impact from the Line E Project would occur regarding soil capabilities for alternative waste systems.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to soils capable of supporting septic tanks or alternative wastewater disposal systems. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

9) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

SJV-MDP EIR Conclusion: Less than Significant with Mitigation
The Paleontological Resources Assessment conducted for the SJV MDP EIR indicated that the MDP Project's surficial soils, consisting of Recent (Holocene) alluvium, have a low potential for significant fossil remains. However, these younger sediments rest on older Pleistocene-age sediments, which have a high potential to yield significant vertebrate fossils. Thus, while the surface potential for paleontological resources is low, the subsurface potential is high. Fossils in similar sediments have typically been found deeper than 10 feet, but some have been found as shallow as three feet, particularly near hills. Because not all SJV-MDP Facilities could be surveyed and MDP Project excavations would exceed three feet in depth, implementing mitigation measures **MM Cultural 1**, and **MM Cultural 3** through **MM Cultural 6** would reduce potential impacts to paleontological resources to less than significant. (SJV MDP EIR, p. 3.5-17.)

> **MM Cultural 1:** A paleontological resources field survey (or surveys) shall be completed prior to the earlier of issuance of a grading permit or construction of any SJV-MDP facility subject to further CEQA analysis. If the results of such survey (or surveys) identify the presence of potentially significant paleontological resources, avoidance or other appropriate measures (such as excavation, analysis, and interpretation of resources) potentially leading to curation in perpetuity in a facility that meets the standards of the State of California Guidelines for the Curation of Archaeological Collections (OHP 1993) and 36 CFR 79, shall be implemented.
>
> **MM Cultural 3:** Earth-moving activities encountering soils that are identified as Pleistocene-age or older alluvium, by the soils engineer, shall be monitored by a qualified paleontological monitor. Continuous monitoring shall be restricted to undisturbed older alluvium, which might be present below the surface. To avoid construction delays, the monitor shall be prepared to quickly salvage fossils, as they are unearthed. The monitor shall remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates. The monitor shall have the authority to temporarily halt or divert grading equipment to allow for the removal large specimens.
>
> **MM Cultural 4:** All recovered specimens shall be prepared and stabilized for identification and permanent preservation, including the washing of sediment samples to recover small invertebrates and vertebrates.
>
> **MM Cultural 5**: Identification and curation of recovered specimens into an established accredited museum repository with permanent retrievable paleontological storage shall

be required. Mitigation of adverse impacts to significant paleontological resources is not complete until the curation process has been fully completed and documented.

MM Cultural 6: Preparation of a report of findings with an appended itemized inventory of specimens shall be required. The submittal of the report to the Lead Agency and the curation of recovered specimens into an established, accredited museum repository would signify the completion of the mitigation program.

Line E Project: No New Impact/No Impact

This discussion is based on the *Paleontological Resource Assessment for the San Jacinto Master Drainage Plan Line E, City of San Jacinto, Riverside County, California*, January 2024, prepared by Applied Earthworks (AE) and included as Appendix F of this Addendum. Preparation of the *Paleontological Resource Assessment* satisfies SJV-MDP mitigation measure **MM Cultural 1**.

Through desktop studies and field surveys, AE determined the paleontological resource potential of the Line E Project site. The desktop studies included a review of published and unpublished literature and maps, as well as museum records searches. The purpose of these studies was to identify the geologic units in the Line E Project site and to determine whether previously recorded paleontological localities occur either within the Line E Project site, or within the same geologic units nearby but outside the Line E Project site. (AE-B, p. 10.)

A records search was conducted through the University of California Museum of Paleontology (UCMP) online database which did not list any localities within a 10-mile radius of the Line E Project site. The Paleobiology Database (PBDB) does not list any fossil localities from Pleistocene alluvial deposits within the Line E Project site but shows numerous localities reported from Lakeview five to six miles west. The Western Science Center of Hemet (WSC) search did not yield any localities within the Line E Project site, although numerous localities are listed from Pleistocene alluvial deposits reported during construction of the Eastside Pipeline Project 1.5–2 miles southwest of the Line E Project site. The Natural History Museum of Los Angeles County (NHMLAC) records search results do not report any localities within the Line E Project site, although several nearby localities to the south-southwest are listed from geologic units similar to those mapped in or in the vicinity of the Project site. (AE-B, p. 15.)

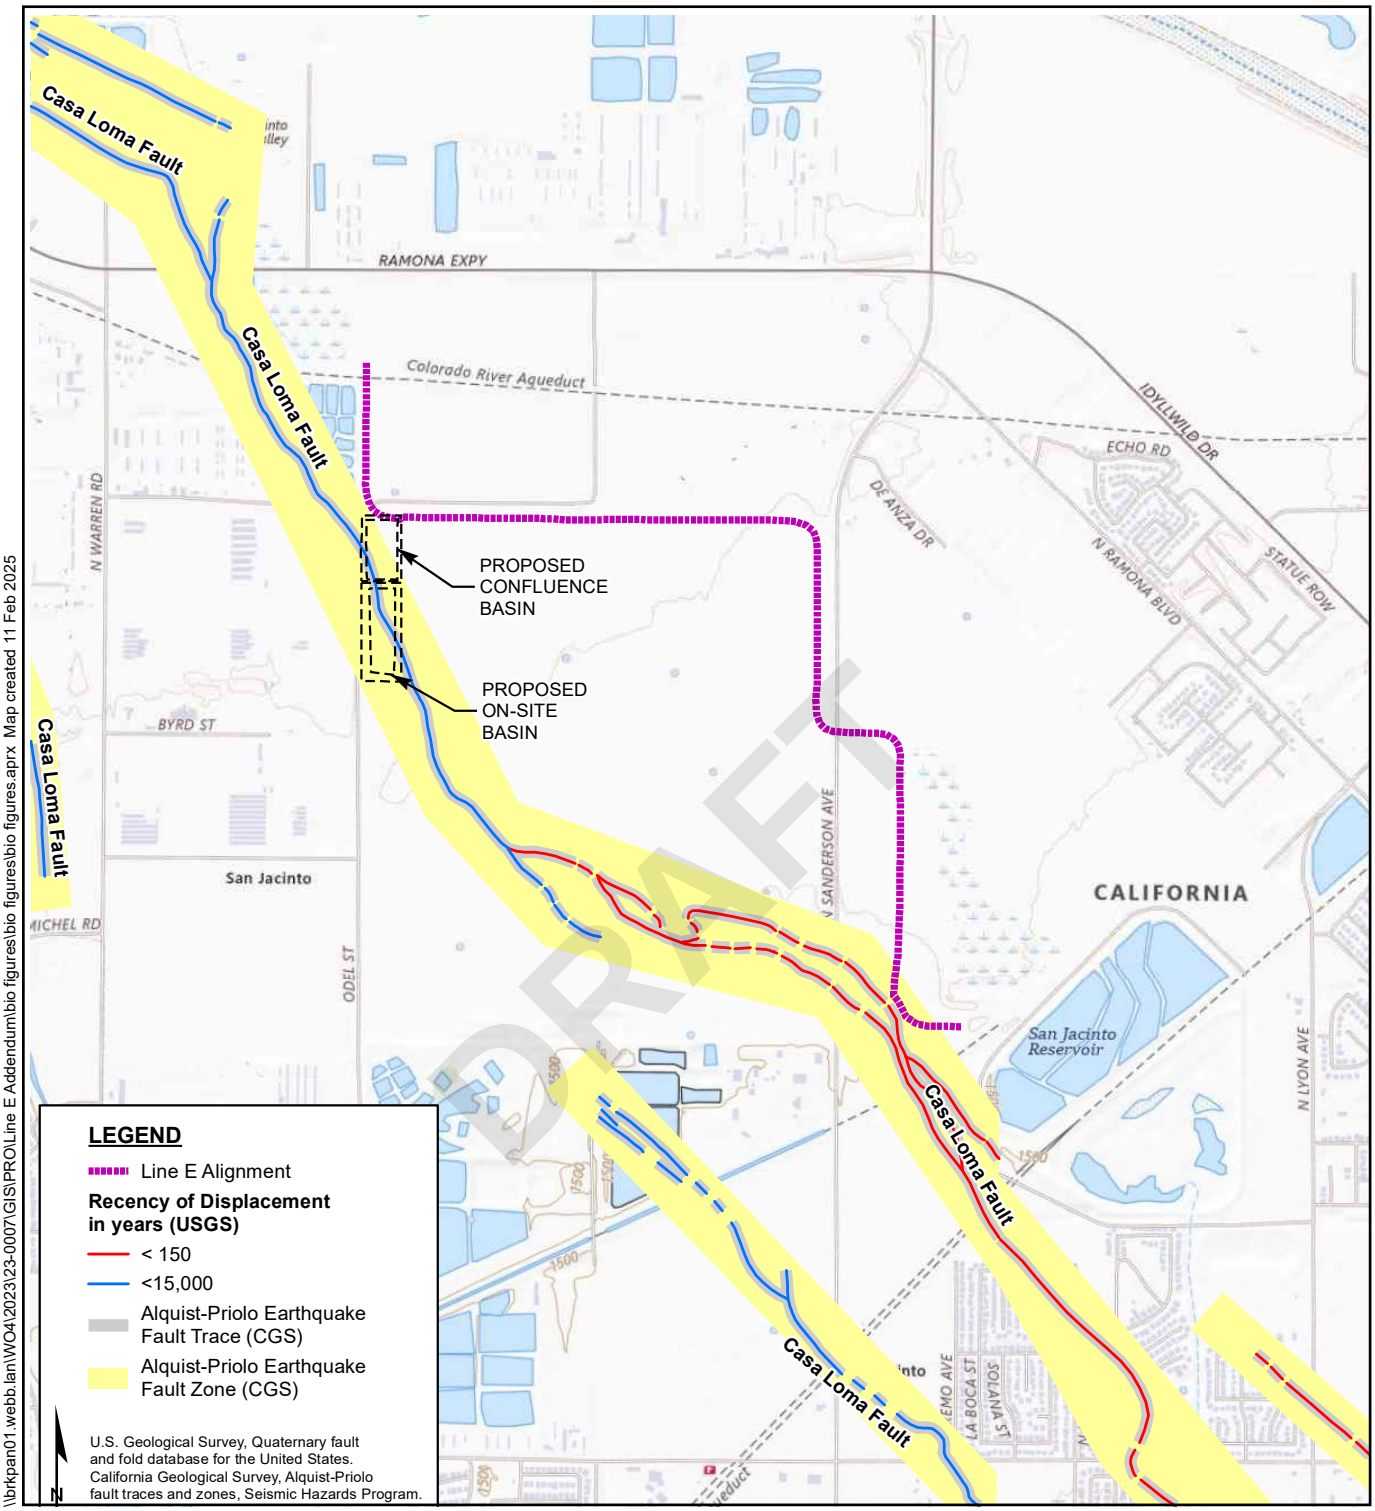
During the field survey, low ground visibility and the absence of geologic outcrops or road cuts limited AE's close field examinations of the surficial geology of the Line E Project site. The ground surface throughout the Line E Project site was mostly obscured by vegetation, particularly in much of the northwestern and southeastern subareas and in the east-west stretch of the alignment parallel to Ramona Expressway. AE observed exposed sediments in a few locations, most of these exposed sediments appear to have been previously disturbed from cultivation or landscaping. (AE-B, p. 15.)

AE did not observe any notable changes in lithology and did not encounter any paleontological resources during the survey. AE has determined that the Project site has High B Sensitivity based on Riverside County's sensitivity rankings. No paleontological resources were encountered during the geotechnical investigation. AE did not observe any exposures of unequivocally undisturbed alluvial deposits during the survey. Based on the presence of artificial fill in all of the boring logs and the extent of previous disturbance to the Line E Project site, most of the sediments AE observed during the survey may have been the locally derived artificial fill. Therefore, the surficial sediments in the Line E Project site are unlikely to yield significant paleontological resources. However, AE's desktop studies indicate deposits of Qyva/Qya as well as Qyv1a have a high potential of preserving significant

paleontological resources particularly with increasing depth. Sediments matching the descriptions of Qyva/Qya at a depth of 0.5–2.5 feet below ground surface, just below artificial fill, were found throughout the Line E Project site. (AE-B, p. 19.) Therefore, the Line E Project would implement clarified SJV-MDP EIR mitigation measures **CMM Cultural 3 through** C**MM Cultural 6,** set forth below, to reduce impacts to paleontological resources to less than significant.

CMM Cultural 3: Paleontological Resources Mitigation Monitoring Plan. Prior to the commencement of ground-disturbing activities, the City (or designee) shall retain a Project Paleontologist to prepare and implement a Paleontological Resources Mitigation Monitoring Plan (PRMMP) for the Line E Project. The PRMMP shall include preparation and presentation of Paleontological Resources Workers Environmental Awareness Program (WEAP) to educate construction crews about the types of paleontological resources that may be encountered at the Line E Project site. The Paleontological Resources WEAP shall provide a description of the laws and ordinances protecting fossil resources, the types of fossil resources that may be encountered in the area, the role of the paleontological monitor, outline steps to follow in the event that a fossil discovery is made and provide contact information for the Project Paleontologist. The Project Paleontologist or designee(s) shall present the Paleontological Resources WEAP to the construction contractor and each of the construction crews working on the Project during a preconstruction meeting. The Paleontological Resources WEAP shall be taped and presented to any construction crew members who were not present at the preconstruction meeting during which it was initially presented prior to such crew members working on the Project. This training may be conducted concurrent with other preconstruction training (e.g., biological resources, safety).

Earth-moving activities encountering soils that are identified as Pleistocene-age or older alluvium, by the soils engineer, shall be monitored by a qualified paleontological monitor as set forth in the PRMMP. Continuous monitoring shall be restricted to undisturbed older alluvium, which might be present below the surface. To avoid construction delays, the monitor shall be prepared to quickly salvage fossils, as they are unearthed. The monitor shall remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates. The monitor shall have the authority to temporarily halt or divert grading equipment to allow for the removal large specimens.



CMM Cultural 4: All recovered specimens shall be prepared and stabilized for identification and permanent preservation as set forth in the PRMMP prepared under **CMM Cultural 3**, including the washing of sediment samples to recover small invertebrates and vertebrates.

CMM Cultural 5: Identification and curation of recovered specimens into an established accredited museum repository with permanent retrievable paleontological storage shall be required as set forth in the PRMMP prepared under **CMM Cultural 3**. Mitigation of adverse impacts to significant paleontological resources is not complete until the curation process has been fully completed and documented.

CMM Cultural 6: Preparation of a report of findings with an appended itemized inventory of specimens shall be required as set forth in the PRMMP prepared under **CMM Cultural 3**. The submittal of the report to the Lead Agency and the curation of recovered

specimens into an established, accredited museum repository would signify the completion of the mitigation program.

For the reasons set forth above, the Line E Project would not result in any new or increased significant impacts related the direct or indirect destruction of a unique paleontological resource or site or unique geologic feature. Clarification of the SJV-MDP mitigation measures to be Line E Project-specific does not mitigate new impacts or constitute new information of substantial importance that would require preparation of a Supplemental or Subsequent EIR. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

H. GREENHOUSE GAS EMISSIONS	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
Would the project:				
1) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐
2) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	☒	☐

Source(s): Project Description; CalEEMod Output (Appendix C); CAPCOA; SJ GP; SCAQMD-C.

1) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

SJV-MDP EIR Conclusion: Less Than Significant Impact

The SJV-MDP EIR determined that greenhouse gas (GHG) emissions would result from fuel usage by construction equipment and related activities, such as construction worker trips. Model results indicate an estimated 2,373 metric tonnes of carbon dioxide equivalents ($MTCO_2E$) will occur in the four modeled scenarios analyzed. The SJV-MDP EIR determined that the CO_2 emissions of 2,373 $MTCO_2$ from construction emissions do not exceed the SCAQMD recommended screening level of 3,000 $MTCO_2$/year for commercial projects. The commercial project screening level was used in the SJV-MDP EIR because (1) neither CARB nor SCAQMD had identified or recommended a screening level for infrastructure projects and (2) the commercial screening level provides a more conservative basis because it is substantially lower than the screening level for industrial projects of 7,000 $MTCO_2$/year from non-transportation sources. Although the draft SCAQMD GHG threshold guidance document released in October 2008 recommends that construction emissions be amortized for a project lifetime of 30 years to ensure that GHG reduction measures address construction GHG emissions as part of the operational reduction strategies, construction emissions were not amortized. (SJV-MDP EIR pp. 3.3-40 – 3.3-41.) Thus, the SJV-MDP EIR analysis, which compared total construction emissions to the identified threshold, utilized a conservative approach. Nonetheless, the amortized emissions from construction of facilities analyzed in the SJV-MDP EIR would equal approximately 79 $MTCO_2E$ per year.

The SJV-MDP EIR determined that long term emissions from the proposed SJV-MDP facilities would primarily be in the form of mobile source emissions from the infrequent visits by vehicles driven by maintenance personnel with no stationary sources of emissions present. This and any other maintenance-related activity will not result in additional sources of emissions when compared to the existing maintenance routine of the current MDPs for the area. Therefore, long-term impacts related to the San Jacinto Valley MDP facility operation are considered negligible and were not evaluated. (SJV-MDP EIR p. 3.3-41.)

Because the SJV-MDP Project will not generate GHG emissions that will exceed SCAQMD draft screening thresholds, impacts will be less than significant. (SJV-MDP EIR p. 3.3-41.)

Line E Project: No New Impact/No Impact

Greenhouse gas emissions from the Line E Project were modeled using the CalEEMod version 2022.1 program (included as Appendix C) to evaluate whether the expected criteria GHG emissions

would exceed the SCAQMD draft screening significance threshold of 3,000 $MTCO_2E/yr$.[10] The CalEEMod model calculates GHG emissions from fuel usage by construction equipment and construction-related activities, such as construction worker trips, which were previously identified in item C.2, above. **Table J – Project Construction Equipment GHG Emissions**, summarizes the CalEEMod results for the following GHGs: carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), refrigerants (R), and carbon dioxide equivalent (CO_2E).

Table J – Project Construction Equipment GHG Emissions

Year	Metric Tons per year (MT/yr)				
	Total CO_2	Total CH_4	Total N_2O	Total R	Total CO_2E
2027	505	0.02	0.01	0.10	510
2028	1,220	0.05	0.03	0.21	1,231
2029	1,212	0.05	0.03	0.19	1,223
2030	711	0.03	0.02	0.10	718
Total	3,648	0.15	0.09	0.60	3,682
				Amortized	**122.73**

Note: See detailed model output reports, included as Appendix C.

As shown in **Table J**, the estimated 3,682 $MTCO_2E$ will occur from the Project construction equipment over the course of the estimated three-year construction period. The draft SCAQMD GHG threshold guidance document released in October 2008 recommends that construction emissions be amortized for a project lifetime of 30 years to ensure that GHG reduction measures address construction GHG emissions as part of the operational reduction strategies. (SCAQMD-C). As such, the amortized emissions, which equate to approximately 122.73 $MTCO_2E$ per year, were also shown.

The operation of the Line E Project will generate GHG emissions from the operation of the electric pumps for the proposed basin, backup generator usage during routine maintenance and emergency power outages and infrequent visits by vehicles driven by maintenance personnel. As indicated in item F.1, above, these pumps are estimated to use approximately 240 kilowatts (kW) per hour. The amount of time these pumps will operate in a given year will vary depending on the volume of water being pumped during each storm and the storm frequency. For example, the estimated average runtime for the pumps to drain a 100-year storm is approximately 47.3 hours, which would result in approximately 11,352 kilowatt-hours kWh (240 kW x 47.3 hours = 11,352 kWh). The GHG emissions from operation of the electric pumps during a 100-year storm event were calculated outside of CalEEMod using the estimated pump usage and the 2030 Southern California Edison (SCE) carbon intensity data from the CalEEMod User's Guide (CAPCOA) of 263 pounds of CO_2E per megawatt-hour (MWh). Based on the estimated usage of 11,352 kWh, the estimated GHG emissions from electric pumps during a 100-year storm event will be approximately 1.35 $MTCO_2E$. The proposed Project's GHG emissions from amortized construction activities combined with estimated operation activities are not anticipated to exceed the SCAQMD screening threshold of 3,000 MT CO_2E/yr. Due to the estimated amount of emissions from Project construction and average pump electricity usage

[10] http://www.aqmd.gov/docs/default-source/ceqa/handbook/greenhouse-gases-(ghg)-ceqa-significance-thresholds/year-2008-2009/ghg-meeting-15/ghg-meeting-15-main-presentation.pdf?sfvrsn=2

during operations as well as the nominal emissions from routine maintenance, the proposed Project will not generate a substantial amount of GHG emissions.

For the reasons set forth in the preceding paragraphs, implementation of the Line E Project would not result in any new or increased significant impacts related to greenhouse gas emissions. Thus, there are no new impacts, changes, or new information with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

2) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

SJV-MDP EIR Conclusion: Less Than Significant Impact

This threshold was not a part of the State CEQA Guidelines at the time the SJV-MDP EIR was prepared. However, the SJV-MDP EIR evaluated GHG emissions impacts and applicable regulatory requirements. Because the MDP Project would not generate GHG emissions that will exceed SCAQMD draft screening thresholds nor were any applicable plans, policies or regulations identified that the Project would require the Project to implement, impacts will be less than significant. (SJV-MDP EIR, pp. 3.3-20 – 3.3-28; 3.3-40 – 3.3-41.)

Line E Project: No New Impact/No Impact

The City of San Jacinto does not have an adopted a Climate Action Plan nor are there any other applicable plans, policies, or regulations adopted for the purpose of reducing GHG emissions for an infrastructure project such as this. San Jacinto General Plan 2040 does set forth goals, policies, and actions to reduce GHG emissions within the Resource Management Element (SJ GP, pp. 84, 98-99.) The Line E Project would not obstruct implementation of any plan, policy, or regulation adopted for the purpose of reducing GHG emissions because the Line E Project is an infrastructure project to serve the City of San Jacinto for existing and future growth consistent with San Jacinto General Plan 2040. (SJ GP, p. 108.)

As such, implementation of the Line E Project would not result in any new or increased significant impacts related to conflicts or obstruction of any applicable plan, policy or regulation adopted for the purpose of reducing the emissions of GHGs. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

I. HAZARDS AND HAZARDOUS MATERIALS	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
Would the project:				
1) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
2) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐
3) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☒	☐
4) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☒	☐
5) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excess noise for people residing or working in the project area?	☐	☐	☒	☐
6) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
7) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	☐	☐	☒	☐

Source(s): SJV MDP IS; GP DEIR; Project Description; EnviroStor; Cortese

1) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

SJV-MDP EIR Conclusion: Less than Significant Impact

The SJV-MDP EIR determined that proposed MDP Project's construction would only involve the use of typical construction materials, such as petroleum products and other similar substances. These materials would be transported to the site for equipment fueling. Future maintenance may occasionally use herbicides and pesticides in compliance with federal, state, and local regulations. Standard protocols and best management practices (BMPs) will ensure proper storage and use of these materials. All activities involving hazardous substances will adhere to relevant regulations, ensuring the project does not pose a significant hazard to the public or the environment. Therefore, the impacts are considered less than significant. (SJV-MDP IS, p. 20.)

Line E Project: No New Impact/No Impact

Storm water is not considered a hazardous material. As analyzed in the SJV-MDP EIR, construction of the Line E Project construction would only involve the use of typical construction materials, such as vehicle and equipment grease, gasoline, lubricants, pipe/joint sealers, which are common on construction sites, are not considered hazardous or acutely hazardous in the amounts used on

construction sites. Therefore, no impacts from the Line E Project would occur with regard to the creation of a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials.

For the reasons set forth above, the Line E Project would not result in any new or increased significant impacts related to the creation of a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

2) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

SJV-MDP EIR Conclusion: Less than Significant with Mitigation

As part of the SJV-MDP EIR, a search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR) for documented hazardous material sites for the MDP Project area and within a one-mile radius of the Project boundary. The EDR report listed a total of 64 sites within one-mile of the proposed Project. Of the 64 recorded sites, 27 are adjacent to the conceptual alignments of the proposed facilities and 11 of those sites are potentially contaminated. The potentially contaminated sites are located near the conceptual alignments of the following SJV-MDP Facilities: North Line A-1, Line B, Line B-1, Line C-4, Line D, Line E-1, Line E-2, Line H, Line J-2 and Line J-3. (SJV-MDP EIR, pp. 3.6-20 – 3.6-22.)

The SJV-MDP EIR determined that although no significant impacts from hazards or hazardous materials are anticipated from the project or its construction and operations, unanticipated contamination from sources like leaking underground storage tanks or unauthorized chemical releases could be encountered. However, the implementation of mitigation measures **MM Haz 1** through **MM Haz 6** will reduce these potential impacts to less than significant levels. (SJV-MDP EIR, p. 3.6-22.)

> **MM Haz 1:** As part of the final design of each SJV-MDP facility, the design engineer or designee shall check proposed sites for listing on the most recent Hazardous Waste and Substances List provided by the Riverside County Department of Environmental Health pursuant to Section 65962.5 of the Government Code. If the location of said facility is on the Hazardous Waste and Substances List, avoidance of that property or properties will be the first consideration; if avoidance is infeasible, **MM Haz 2** shall be implemented.
>
> **MM Haz 2:** If the selected facility traverses a site listed on the Hazardous Waste and Substances List, and avoidance is not feasible or if there are other indications that a site could be contaminated, a Phase 1 Environmental Site Assessment (ESA) for such facility will be prepared. If the Phase 1 ESA identifies possible contamination along the facility alignment, then all recommended subsurface investigation measures listed in the Phase I ESA will be implemented. Based on subsurface investigations characterizing subsurface contamination, remediation measures (such as excavation of contaminated soil, bioremediation, or soil-vapor extraction), shall be implemented for the applicable facility or an alternative facility alignment will be chosen.
>
> **MM Haz 3:** All environmental investigation and/or remediation (such as excavation of contaminated soil, bioremediation, or soil-vapor extraction) shall be conducted under a

Workplan approved by jurisdictional regulatory agencies overseeing hazardous waste cleanups until the applicable regulatory standard is met.

MM Haz 4: Prior to any excavation or soil removal on known contaminated sites, or if contaminated soil (i.e., soil with a visible sheen or detectable odor) is encountered, a complete characterization of the soil will be conducted. Appropriate sampling shall be conducted prior to disposal of the excavated soil. If the soil is contaminated, it shall be properly disposed of according to California's Land Disposal restrictions (California Code of Regulations, Chapter 18, Title 22). If site remediation involves the removal of contamination, then contaminated material shall be transported off-site by a licensed handler/hauler to a licensed hazardous waste disposal facility.

MM Haz 5: If soil import is required for construction of a specific facility, proper sampling shall be conducted prior to the use of such imported soil to make sure that the imported soil is free of contamination.

MM Haz 6: If during construction of a specific facility, soil and/or groundwater contamination is suspected, construction in the area of the suspected contamination shall cease and appropriate health and safety measures shall be implemented. The construction contractor shall contact the respective jurisdictional enforcement agency (i.e., San Jacinto, Hemet, Riverside County, RCFCWCD) to obtain the necessary information on appropriate measures and their implementation. The measures recommended by the applicable enforcement agency will be implemented.

Line E Project: No New Impact/No Impact

The Line E Project site is not in proximity to any of the hazardous materials sites identified in the EDR report for the SJV MDP EIR. As required by SJV-MDP EIR **MM Haz 1**, the site was reviewed on the California Department of Toxic Substances Control databases. Based on the review of the California Department of Toxic Substances Control Envirostor and Geotracker databases, there are no hazardous waste facilities and sites with known contamination. (Envirostor.) Because Line E does not traverse a site listed on the Hazards Waste and Substances List, SJV-MDP EIR mitigation measure **MM HAZ 2** is not applicable. Nonetheless, both a Phase I Environmental Site Assessment (ESA) and a Phase II ESA were prepared by Roux Associates, Inc, *Phase I Environmental Site Assessment North Sanderson Avenue and Record Road, San Jacinto, California*, dated January 30, 2024 and *Phase II Subsurface Investigation Letter Report, Line (Proposed Irrigation Channel), North Sanderson Avenue and Record Road, San Jacinto, Riverside County, California, dated March 14, 2024*. These documents are hereinafter referred to as the Phase I ESA and Phase II ESA and are included as Appendices H.1 and H.2 to this Addendum.

The Phase I ESA was prepared in accordance with the American Society for Testing Materials (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-21). The Phase I ESA involved site reconnaissance, regulatory record review, and review of historical sources. (ROUX-A, pp. 1, 4.) The Phase I ESA identified a Recognized Environmental Condition (REC) in connection with current and historical agricultural operations in the Line E Project area. Based on long-term agricultural uses, it was determined that possible agricultural chemicals such as organochlorine pesticides (OCPs), lead-based and arsenic based pesticides may have been used and thus may have impacted soils. (ROUX-A, p. 22.) Thus, the Phase II subsurface investigation was conducted.

As part of Phase II ESA, shallow soil sampling was conducted in general accordance with DTSC's *Interim Guidance for Sampling Agricultural Properties*, dated August 7, 2008. A total of 54 soil samples were collected at a depth of 0.5 feet below ground surface (bgs) and composited in 13 samples that were analyzed for OCPs; eight (8) discrete samples were also analyzed for lead and arsenic. The analytical results were compared to the United States Environmental Protection Agency (USEPA) Regional Screening Levels (RSLs) and/or DTSC Human and Ecological Risk Office (HERO) Human Health Risk Assessment Health Risk Assessment (HHRA) Note Number 3 DTSC-modified Screening Levels (DTSC SLs) for commercial/industrial soil. Because the Line E project does not include any residential component, the commercial/industrial screening levels are appropriately used. In addition, total lead and arsenic concentrations were compared with regional background levels, as presented in *Background Concentrations of Trace and Major Elements in California Soils and Determination of a Southern California Regional Background Arsenic Concentration in Soil*. (ROUX-B, p. 2.)

No OCP constituents were reported above laboratory method reporting limits (MRLs). All MRLS were below applicable USEPA RSLs and DTSC SLs. (ROUX-B, p. 2.) Arsenic was detected above the laboratory reporting limit at concentrations ranging from 1.0 to 1.4 milligrams per kilogram (mg/kg). Arsenic was also detected above the DTSC SL of 0.36 mg/kg for commercial/industrial soil. However, arsenic did not exceed the regional background concentration of 12 mg/kg in any sample, and it did not exceed the USEPA RSL of 3.0 mg/kg for commercial/industrial soil. Lead was detected above the laboratory reporting limit at concentrations ranging from 1.8 to 2.4 mg/kg. Lead was detected below the DTSC SL of 500 mg/kg for commercial/industrial soil and below the USEPA RSL of 800 mg/kg for commercial/industrial soil. (ROUX-B, p. 3) Because the results of the Phase II ESA subsurface investigation determined that OCP, arsenic, and lead concentrations were below conservative regulatory thresholds for commercial/industrial land uses and regional background concentrations, no further investigation is recommended. (ROUX-B, p. 3.).

The Phase I ESA also identified Other Environmental Features (OEFs) in an adjoining dairy farm north of Record Road and west of the Line E alignment. The dairy farm features several ponds likely used to store dairy farm effluent including manure thus, the potential generation and migration of methane gas. (ROUX-A, p .22.)

Based on the results of the Phase I ESA and Phase II ESA, SJV-MDP EIR mitigation measures **MM Haz 3, MM Haz 4,** and **MM Haz-6** are not applicable to the Line E Project. Because soil import is not anticipated **MM Haz 5** is also not applicable.

As discussed in the response to item I.1 above, storm water is not considered a hazardous material and construction of the Line E Project would only involve the use of typical construction materials, such as vehicle and equipment grease, gasoline, lubricants, pipe/joint sealers, which are common on construction sites and are not considered hazardous or acutely hazardous in the amounts that would be used during construction of the Line E Project. Operation and maintenance of the Line E Project is not anticipated to require the use of significant amounts of hazardous materials, as rodenticides and pesticides. Therefore, impacts regarding the creation of a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment would be less than significant.

For the reasons set forth above, the Line E Project would not result in any new or increased impacts regarding the creation of a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the

environment. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

3) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

SJV-MDP EIR Conclusion: Less than Significant
The SJV-MDP IS determined that the proposed MDP Project is a master drainage plan, that would identify drainage facilities that may be constructed at some future date. Implementation of the SJV-MDP would ultimately involve the construction and maintenance of storm water conveyance facilities and detention basins. The MDP Facilities would not emit hazardous emissions or include the handling of acutely hazardous materials, substances, or wastes. Potential impacts to existing or proposed schools would be less than significant. (SJV-MDP IS, p. 21.)

Line E Project: No New Impact/No Impact
There are no existing or proposed schools within a one-quarter-mile radius of the Line E Project site. The closest existing school to the Line E Project site is Megan Cope Elementary which is approximately three-quarter mile from the southern end of the Project Disturbance area. Thus, the Line E Project would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school because there are no existing or proposed schools within one-quarter-mile of Line E Project site.

For the reasons set forth above, the Line E Project would not result in any new or increased significant impacts related to the emission of hazardous emissions or handling hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

4) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

SJV-MDP EIR Conclusion: Less than Significant with Mitigation
A search of available environmental records was conducted and reviewed for the SJV-MDP EIR. The environmental records listed a total of 64 sites within one-mile of the proposed project alignment, however the Project proposes facilities within close vicinity of 27 sites classified as hazardous materials sites under various regulatory statuses. None of these sites are on the Cortese List. As discussed in the response to item I.2. the SJV-MDP EIR determined that although no significant impacts from hazards or hazardous materials are anticipated from the project or its construction and operations, unanticipated contamination from sources like leaking underground storage tanks or unauthorized chemical releases could occur and these potential impacts would be reduced to less than significant through implementation of mitigation measures **MM Haz 1** through **MM Haz 6.** (SJV-MDP EIR, pp. 3.6-20 – 3.6-22.)

Line E Project: No New Impact/No Impact.
As required by SJV-MDP EIR **MM Haz 1**, the list compiled by Government Code Section 65962.5, known as the Cortese List, was reviewed to determine if any portion of the Line E Project site is on this list. None of the sites listed on the Cortese List are within or near the Line E Project disturbance area. Additionally, a review of the California Department of Toxic Substances Control's EnviroStor

database, which identifies sites that have known contamination or sites for where there may be reasons to investigate further, indicates there are no known environmental hazards or hazardous facilities in proximity to the Line E Project disturbance area. Because the Line E Project is not on or in proximity to a known hazardous materials site, implementation of the Line E Project would not create a significant hazard to the public or the environment. Because there are no known hazardous materials sites, SJV-MDP EIR mitigation measure **MM Haz 2** is not applicable. As discussed above in *item I.2*, the soil samples conducted as part of the Phase II ESA found that OCP, arsenic, and lead concentrations were below conservative regulatory thresholds for commercial/industrial land uses and regional background concentration therefore, no further investigation is needed. (ROUX-B, p. 3)

For the reasons set forth above, the Line E Project would not result in any new or increased significant impacts related to a significant hazard to the public or the environment resulting from the Project site being included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

5) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excess noise for people residing or working in the project area?

SJV-MDP EIR Conclusion: Less than Significant Impact
The SJV-MDP EIR determined that the nearest airport is the Hemet-Ryan Airport located less than one mile southwest from the southernmost portion of the proposed project. As the project will not result in the construction of new places of employment or new homes, impacts are considered less than significant. (SJV-MDP IS, p. 22.)

Line E Project: No New Impact/No Impact
The Line E Project site is located approximately four miles from Hemet-Ryan Airport and is not within the Hemet-Ryan Airport Land Use Compatibility Plan. Due to the distance from the Hemet-Ryan Airport and because the project would not involve the construction of new places of employment or new homes, there would be no impacts regarding airport noise.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to hazards from an airport. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

6) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

SJV-MDP EIR Conclusion: Less than Significant
The SVJ-MDP EIR determined that implementation of the proposed project would not interfere with evacuation or emergency response plans because road access would be maintained or detours provided during project construction. (SJV-MDP IS, p. 21.)

Line E Project: No New Impact/No Impact
Operation and maintenance of the Line E Project would not interfere with evacuation or emergency response plans as the Line E Project consists of storm water drainage facilities. If any road closures are required during construction, a traffic control plan would be prepared to maintain emergency

access or identify detours, if needed. Therefore, any potential impacts regarding emergency response would be less than significant and no mitigation is required.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to impairing implementation of or physical interference with an adopted emergency response plan or emergency evacuation plan. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

7) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

SJV-MDP EIR Conclusion: Less than Significant Impact

The SJV-MDP EIR determined the proposed facilities are located within an area designated as having a high susceptibility for wildfires; however, the project includes construction and maintenance of storm water conveyance facilities and detention basins which would not expose people or structures to a significant risk of loss, injury, or death involving wildland fires. Impacts are considered less than significant. (SJV-MDP IS, p. 22.)

Line E Project: No New Impact/No Impact

The 2019 Fire Hazard Severity Zone map from the San Jacinto GP EIR, shows the Line E Project area is surrounded by areas designated as having a high susceptibility for wildfires. (SJGP EIR, p. 5.20-27.) The Line E Project is the construction and maintenance of storm water conveyance facilities and detention basins, which would not directly expose people or structures to a significant risk of loss, injury, or death involving wildland fires.

The Line E project could indirectly induce new development in areas with a high susceptibility for wildfires. Protection from wildland fires is realized through creation of defensible areas around structures, the use of fire-resistant building materials, and coordinated emergency response. All new construction in San Jacinto is required to adhere to standards and requirements set forth in the San Jacinto Municipal Code, which incorporates the California Fire Code. In accordance with San Jacinto Development Code Section 17.300.050, all development located in or adjacent to wildfire prone areas would be required to prepare a fire management plan, which would be reviewed by the Riverside County Fire Department and may include additional fire protection measures (e.g., landscape or open space buffers), maintenance programs for weed and vegetation abatement, installation of fire-resistant plants, and the use of noncombustible building materials. Future development in San Jacinto would be required to comply with the provisions of federal, State, and local requirements related to wildland fire hazards, including State fire safety regulations associated with wildland-urban interfaces, fire-safe building standards, and defensible space requirements. As future development and infrastructure projects are considered by SA, each project would be evaluated for potential impacts, specific to the project, associated with wildland fire hazards as required under CEQA. Therefore, through compliance with existing federal, State, and local laws and regulations related to wildland fire hazards and implementation of the San Jacinto General Plan 2040 goals, policies, and actions, indirect impacts regarding the exposure of people or structures to significant loss, injury, or death involving wildland fires would be less than significant. (SJGP EIR, pp. 5.9-38 – 5.9-39.)

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts regarding the exposure of people or structures that either directly or indirectly could lead to significant risk of loss, injury or death involving wildland fires. Thus, there are

no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

J. HYDROLOGY AND WATER QUALITY	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
Would the project:				
1) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☒	☐
2) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☒	☐
3) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces in a manner which would result in: substantial erosion or siltation on- or off-site?	☐	☐	☒	☐
4) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite?	☐	☐	☒	☐
5) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	☐	☐	☒	☐
6) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would impede or redirect flood flows?	☐	☐	☒	☐
7) In flood hazard, tsunami, or seiche zones, risk the release of pollutants due to project inundation?	☐	☐	☒	☐
8) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☒	☐

Source(s): GP DEIR; USGS, PDR, RWQCB

1) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

SJV-MDP EIR Conclusion: Less than Significant Impact

The SJV-MDP EIR determined that the proposed MDP Project would not significantly increase impervious surfaces, as it involves underground storm drain pipelines, trapezoidal channels, and earthen basins. The SJV-MDP aims to create a comprehensive stormwater drainage system to

support land use plans for San Jacinto, Hemet, and Riverside County, reducing current flooding issues. The drainage facilities would not generate significant runoff or pollutants, and detention basins will help settle sediments and attenuate peak flow rates.

Construction activities will be regulated by the RWQCB under the NPDES permit program, ensuring compliance with water quality standards. The project and future developments will adhere to water quality regulations, resulting in less-than-significant impacts on water quality. San Jacinto, Hemet, and Riverside County, as co-permittees under the MS4 permit, will manage stormwater runoff and eliminate illegal discharges. They will ensure that development projects incorporate BMPs to reduce stormwater contaminants.

Facilities near Metropolitan's infrastructure will require detailed plan submissions for review and approval, further ensuring minimal water quality impacts. Thus, the project's potential water quality impacts are anticipated to be less than significant. (SJV-MDP EIR, pp. 3.7-28 – 3.7-30.)

Line E Project: No New Impact/No Impact

Construction of the Line E Project would be required to comply with the RWQCB under the NPDES permit program, ensuring compliance with water quality standards during construction. The Line E Project in and of itself does not need to comply with WQMP requirements. The developments tributary to the Project would adhere to WQMP requirements, resulting in less than significant impacts to the water quality of stormwater conveyed by the Line E Project and to the receiving waters downstream of the Line E Project (e.g., San Jacinto River). San Jacinto and the Riverside County Flood Control and Water Conservation District, as co-permittees of the MS4 permit, would manage stormwater runoff quality and quantity, and minimize illegal discharges of non-stormwater to the extent practicable throughout their jurisdictions including the Project area.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

2) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

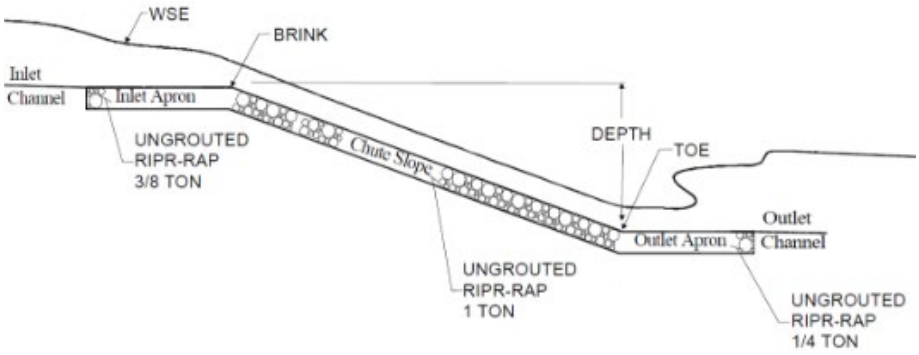
SJV-MDP EIR Conclusion: Less than Significant Impact

The SJV-MDP EIR determined the proposed facilities are designed to convey stormwater without extracting groundwater or significantly increasing impervious surfaces. The earthen channels and basins will enhance regional groundwater recharge. Therefore, the project will not deplete groundwater supplies or interfere with recharge, resulting in less-than-significant impacts. (SJV-MDP IS, p. 23.)

Line E Project: No New Impact/No Impact

The Line E Project will not cause depletion of, or interfere with groundwater recharge, as this Project would convey stormwater. The segment of the Line E channel that is earthen and the earthen Confluence Basin could provide opportunity for groundwater recharge as they will be unlined facilities. As with the SJV EIR, there would be no use for groundwater nor interference with groundwater recharge from the Line E Project.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to groundwater supplies or groundwater recharge. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.



3) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces in a manner which would result in substantial erosion or siltation on- or off-site?

SJV-MDP EIR Conclusion: Less than Significant Impact

The MDP Facilities would primarily be constructed using earthen basins and channels to manage stormwater flow and increase percolation. While concrete-lined trapezoidal channels would add some impervious surfaces, the overall impact is minimal. Implementation of the SJV-MDP would improve drainage by directing flows, and future developments will follow the Riverside County WQMP to minimize impervious areas. Designed to handle 100-year stormwater flows, the Project will not cause on-site or off-site flooding. Impacts are considered less than significant, with no mitigation measures necessary. (SJV-MDP EIR, pp. 3.7-30 – 3.7-31.)

Line E Project: No New Impact/No Impact

The proposed Line E Project would have an earthen Confluence Basin and a mostly earthen channel to convey stormwater flows and facilitate percolation. The proportion of the Project channel that is earthen far exceeds the proportion that consists of concrete aprons upstream and downstream of ungrouted riprap drop structures ("Sloped Trapezoidal Rock Drop Structures"). The profile along the centerline of the Sloped Trapezoidal Rock Drop Structure is shown below:

The Project will alter the existing drainage pattern of the area by narrowly conveying flood flows into Line E instead of wide sheet flows across roads and fields as it does in the current condition. The Project does not alter the course of a stream or river as there are none in the Project area. According to the Project Preliminary Design Report (PDR), the Line E channel has been engineered to adequately convey flood flows from its tributary area up to the 100-Year flood event allowing plant growth within the channel. (PDR, p. 36.) Through the design of accommodating vegetation to grow within the channel, this vegetation would provide inadvertent stormwater treatment by slowing the speed of the water and allowing sediment to drop out of the water column as well as biological uptake of contaminants before outletting downstream, and therefore reducing erosion or siltation effects.

Future developments within the Line E tributary area would contribute runoff to the flows conveyed by Line E. These developments are required to comply with NPDES requirements for construction-phase erosion and sediment controls and post-construction WQMP requirements to treat stormwater runoff

prior to discharge into Line E. Therefore, the Line E Project would not create downstream erosion impacts from the indirect contributions of upstream developments.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to erosion or siltation on- or off-site. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

4) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite?

SJV-MDP EIR Conclusion: Less than Significant Impact

The SJV-MDP Project includes a conceptual plan for constructing and maintaining storm drain facilities. While these facilities will generally follow the existing drainage pattern of the area on a large scale, they will alter the drainage pattern locally within the Master Plan area to reduce flooding potential. The SJV-MDP will guide the location and size of drainage facilities needed by the City of San Jacinto or others as the area develops, and to resolve existing flooding issues. Many SJV-MDP drainage facilities are expected to be constructed alongside local development projects, with conditions of approval ensuring that impacts on surface runoff are less than significant. (SJV-MDP IS, p.24.)

Line E Project: No New Impact/No Impact

As stated previously in item J.4., the Project will alter the local drainage pattern by conveying flows in a channel instead of wide sheet flows. Also, the Project will have a minimal increase in impervious area (i.e., concrete aprons downstream and upstream of ungrouted riprap drop structures) and the Project would not alter an existing stream or river. The purpose of the Project is to reduce the chance of flooding by conveying flood flows into an engineered, flood control channel. According to the Project Preliminary Design Report (PDR), the channel has been engineered to adequately convey flood flows of its tributary area for up to the 100-Year flood event in a controlled manner that will not result in flooding which could cause adverse scour of the proposed channel, nor to downstream areas. (PDR, p. 36.)

The Project is within two FEMA flood hazard zones/flooding areas: one from the north of the Project related to the San Jacinto River (FEMA flood plan zone AE), and one from the south related to the San Jacinto Reservoir (FEMA flood plain zone A). (PDR, p. 10.) The Project would reduce the flooding associated with the San Jacinto Reservoir. (PDR, Figure 15.) However, after construction of the Line E Project, a portion of the Line E Channel would remain within the 100-Year floodplain of the San Jacinto River. (PDR, p. 10.)

To address the downstream flooding potential, the Confluence Basin to which the Line E Channel outlets would have approximately 57 acre-feet of capacity (approximately 16 million gallons) including 7.1 acre-feet (approximately 2 million gallons) of dead storage volume over an area of 6.25 acres with a 72-hour drawdown period. (PDR, p. 32.) The dead storage volume is the water below the elevation of the spillway and has no free flow outlet. The dead storage volume of the Confluence Basin will be released downstream/offsite at a controlled rate using a proposed pump station. (PDR, p. 32.) Once the pumps release the dead storage through the outlet of Line E, these flows would occur in the same areas that already receive flooding in the exiting condition. (PDR, Figure 16 – Existing Floodplain and Preliminary Post Project Floodplain.) The downstream/offsite property to which the Project outlets is

within the 100-Year floodplain of the San Jacinto River, by the time the dead storage volume of the Confluence Basin is exceeded, the downstream/offsite property will already be in a state of flooding due to the river (PDR, p. 37.)

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to increasing the rate of runoff resulting in flooding on- or off-site. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

5) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

SJV-MDP EIR Conclusion: Less than Significant Impact

The SJV-MDP EIR determined that implementation of the Master Drainage Plan would not contribute runoff water that would exceed storm water drainage systems. The SJV-MDP aims to create a comprehensive stormwater drainage system to support land use plans for San Jacinto, Hemet, and Riverside County, reducing current flooding issues. The drainage facilities will not generate significant runoff or pollutants, and detention basins will help settle sediments and attenuate peak flow rates. The Project will comply with NPDES general construction permit requirements and will obtain applicable dewatering permits from the SWRCB, no substantial sources of polluted runoff will be generated from project construction or operations. Therefore, impacts were determined to be less than significant with mitigation. (SJV-MDP EIR, pp. 3.7-28 – 3.7-34.)

Line E Project: No New Impact/No Impact

The Line E Project is the construction of a stormwater drainage system so that existing and planned runoff capacity is being achieved. As stated previously in the response to item J.4, the Line E Project would alter the local drainage pattern by conveying flows in a channel instead of wide sheet flows. Also, the Line E Project would have a minimal increase in impervious area (i.e., concrete aprons downstream and upstream of ungrouted riprap drop structures) and the Line E Project would not alter an existing stream or river. The purpose of the Line E Project is to reduce the chance of flooding by conveying flood flows into an engineered, flood control channel. As stated previously in the response to item J.5, up to 57.6 acre-feet of runoff conveyed by the Line E Channel would be held in the proposed Confluence Basin and then slowly released using a proposed pump station to downstream/offsite properties. The 7.1 acre-feet of dead storage volume in the Line E Channel and Confluence Basin would address the majority of storm events. The controlled release by the pump station has been designed so that Line E Project has the capacity to convey the runoff/discharge the project area. (PDR, p. 36.)

The SJV-MDP contemplates Line E being connected with other drainage facilities, none of which are being proposed for implementation at this time. The downstream/offsite facility to which the Line E Project outlets is an interim-condition earthen channel (referred to as a low-flow channel). (PDR, p. 36.) At some point in the future when development warrants, an ultimate SJV-MDP facility (Line Z) would be constructed in its place. (PDR, p. 5.) Ultimately as contemplated in the SJV-MDP, Line Z reaches the San Jacinto River. The existing downstream/offsite low-flow channel is constrained by a 60-inch diameter reinforced concrete pipe (RCP) culvert at Ramona Expressway. Line E flows onto the downstream/offsite property are within the 100-Year floodplain of the San Jacinto River. Line E flows will be comingled with the flooding that occurs with the San Jacinto River.

Although the Project would exceed the capacity of existing downstream/offsite drainage systems during a large flood event, the existing downstream drainage system would already be flooded because of the San Jacinto River's flood zone, and the contribution of additional flows from the Project would be insignificant compared to the existing flooding (PDR, p. 37 and PDR MDP Line E 2D HEC-RAS Low Flow Analysis, MDP Line E Proposed Low Flow Condition 2D HEC-RAS Work Map, p. 2 of 4.) When downstream SJV-MDP facilities are constructed to ultimate design in the future, such as Line Z, then the Line E Project's contribution would be contained within said future downstream MDP facilities. (PDR, p. 5.)

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to runoff that would exceed the capacity of existing or planned stormwater drainage systems or additional sources of polluted runoff. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

6) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would impede or redirect flood flows?

SJV-MDP EIR Conclusion: Less than Significant Impact

The SJV-MDP EIR determined that although the Master Drainage Plan will be constructed within areas mapped as 100-year flood hazard zones, the placement of these flood control facilities within such areas is necessary due to the relatively flat topography of the project area. The proposed MDP facilities will redirect sheet flows across the project area into basins, open channels, and underground storm drains, conveying these flows towards the San Jacinto River to the north. Once completed, the proposed drainage system will provide 100-year protection and eliminate major flood hazards in the project area. Because the construction of the proposed MDP facilities, in conjunction with the San Jacinto River Levee Stage 4 Project, would alleviate flooding potential within the project area, impacts are considered less than significant. (SJV-MDP EIR, pp. 3.7-32 – 3.7-33.)

Line E Project: No New Impact/No Impact

The purpose of the Line E Project is to prevent impeding or redirecting flows that would cause significant impacts, in an area with no existing streams or rivers that would have to be redirected or impeded. There are currently no formal flood control facilities within the Line E Project area, beyond some roadside ditches and sheet flow flooding is a common event in this area. Therefore, as outlined above, the Line E project conveys stormwater flows in a manner which will facilitate the capacity needed in the Project area to prevent flooding, erosion and will not redirect or impede these flows which then results in potentially significant impacts. Rather, the Project entails conveying stormwater in same location and direction as the existing conditions. Existing flooding occurring in the Project area will remain as long as the SJV-MDP is not built out.

Therefore, implementation of the Line E Project would not result in any new or increased significant impacts related to impeding or redirecting flood flows. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR.

7) In flood hazard, tsunami, or seiche zones, risk the release of pollutants due to project inundation?

SJV-MDP EIR Conclusion: Less than Significant Impact
The SJV-MDP EIR determined the MDP Project is not located within an area that would be subject to seiche, tsunami, or mudflow. The proposed basins would only store floodwaters temporarily during large and infrequent storm events further limiting the potential for inundation that would impact people or structures. Impacts are considered less than significant. (SJV-MDP IS, pp. 25 – 26.)

Line E Project: No New Impact/No Impact
Tsunamis are large waves that occur in coastal areas. The City is not located in a coastal area; therefore, there is no risk for the release of pollutants due to inundation by tsunami.

Seiches are seismically-induced oscillation or sloshing of water contained in enclosed bodies including lakes, ponds, reservoirs, and swimming pools. This hazard is dependent upon the frequency of seismic waves, distance and direction from the epicenter, and site-specific design criteria of the enclosed body of water. The proposed Confluence Basin would be like an enclosed body of water, but it has a 72-hour drawdown time, which means it can be drained completely within 72 hours and therefore presents a very unlikely seiche risk.

The Line E Project alignment is not located within an area that would be subjected to seiche, tsunami, or mudflow. (SJV-MDP IS, pp. 25-26.) Therefore, the release of pollutants due to flood, seiche or tsunami is not anticipated.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to the release of pollutants due to project inundation. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No new analysis is required.

8) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

SJV-MDP EIR Conclusion: Less than Significant
Refer to item J.1, above. The SJV-MDP EIR determined impacts to a water quality control plan or sustainable groundwater management plan would be less than significant. (SJV-MDP EIR, pp. 3.7-28 – 3.7-3.0.)

Line E Project: No New Impact/No Impact
The Regional Water Quality Control Board (RWQCB) sets water quality standards for all ground water and surface waters within the Santa Ana River Watershed, which includes the Line E Project area. Substantial regulation currently exists that addresses stormwater runoff and keeping non-stormwater pollutants out of receiving waters, including the statewide construction general permit (CGP) (i.e., SWPPP). The Line E Project would comply with these regulations. Through compliance with said regulations, the Project will be consistent with the RWQCB Water Quality Control Plan (Basin Plan).

The Project is located within an adjudicated portion of the San Jacinto Groundwater Basin (Basin) identified as the Hemet-San Jacinto Basin as defined by the Hemet-San Jacinto (HSJ) Stipulated Judgment (Riverside County Superior Court Case No. RIC 1207274, April 18, 2013). The purpose of the adjudication is to declare the individual and collective rights to surface water and groundwater in the basin "…and the imposition of a physical solution to achieve the optimum, reasonable, beneficial use of the waters of the Basin pursuant to section 2 of article X of the California Constitution" (Judgment, p. 5.)

The 2013 HSJ Judgment adopted The Hemet/San Jacinto Groundwater Management Area Water Management Plan (Management Plan) on November 7, 2007. The eight primary goals of the Management Plan are:

- Address pumping overdraft and declining groundwater levels,
- Provide for Soboba Band of Luiseno Indians' prior and paramount water rights,
- Ensure reliable water supply,
- Provide for planned urban growth,
- Protect and enhance water quality,
- Develop cost-effective water supply,
- Provide adequate monitoring for water supply and water quality, and
- Supersede the Fruitvale Judgment and Decree.

The Stipulated Judgment delineates the Basin into management zones. The Stipulated Judgment appointed the Hemet-San Jacinto Watermaster to oversee management of the Basin. The Watermaster consists of a board composed of one elected official and one alternate selected by each of the public agencies involved in the Judgment (i.e., EMWD, Lake Hemet Municipal Water District, City of Hemet, and City of San Jacinto) and one Private Pumper representative and one Private Pumper alternate. The court appointed Watermaster implements the HSJ Groundwater Management Plan. The Line E Project site is not a designated recharge site and is not slated to become one in the future. As such, development of the Project will not conflict with or obstruct the requirements of the Judgment.

Through implementation of existing regulations related to water quality and groundwater management, the Project would not conflict with or obstruct a water quality control plan or groundwater management plan.. Thus, there are no impacts, in this regard.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to the implementation of a water quality control plan or sustainable groundwater management plan Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

K. LAND USE/PLANNING	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
Would the project:				
1) Physically divide an established community?	☐	☐	☒	☐
2) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation of an agency with jurisdiction adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☒	☐

Source(s): Project Description, SJV-MDP IS

1) Physically divide an established community?

SJV-MDP EIR Conclusion: No Impact

SJV-MDP EIR determined that the primary goal of the proposed project is to manage flooding caused by stormwater runoff. The facilities will be situated at grade or below the ground surface, ensuring they do not physically divide any communities. Necessary crossings for streets, pedestrians, and wildlife over open channels would be provided. The proposed detention basins are within undeveloped areas. (SJV-MDP IS, 26.)

Line E Project: No New Impact/No Impact

There is not an existing community within immediate proximity to the Line E Project. The majority of the land surrounding the Line E Project disturbance area is vacant/agricultural with the exception of a few scattered residences and an Eastern Municipal Water District facility as shown on **Figure 26 – Existing Development**). Thus, no established communities would be divided as a result of implementation of the Line E Project.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts regarding physically dividing an established community. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

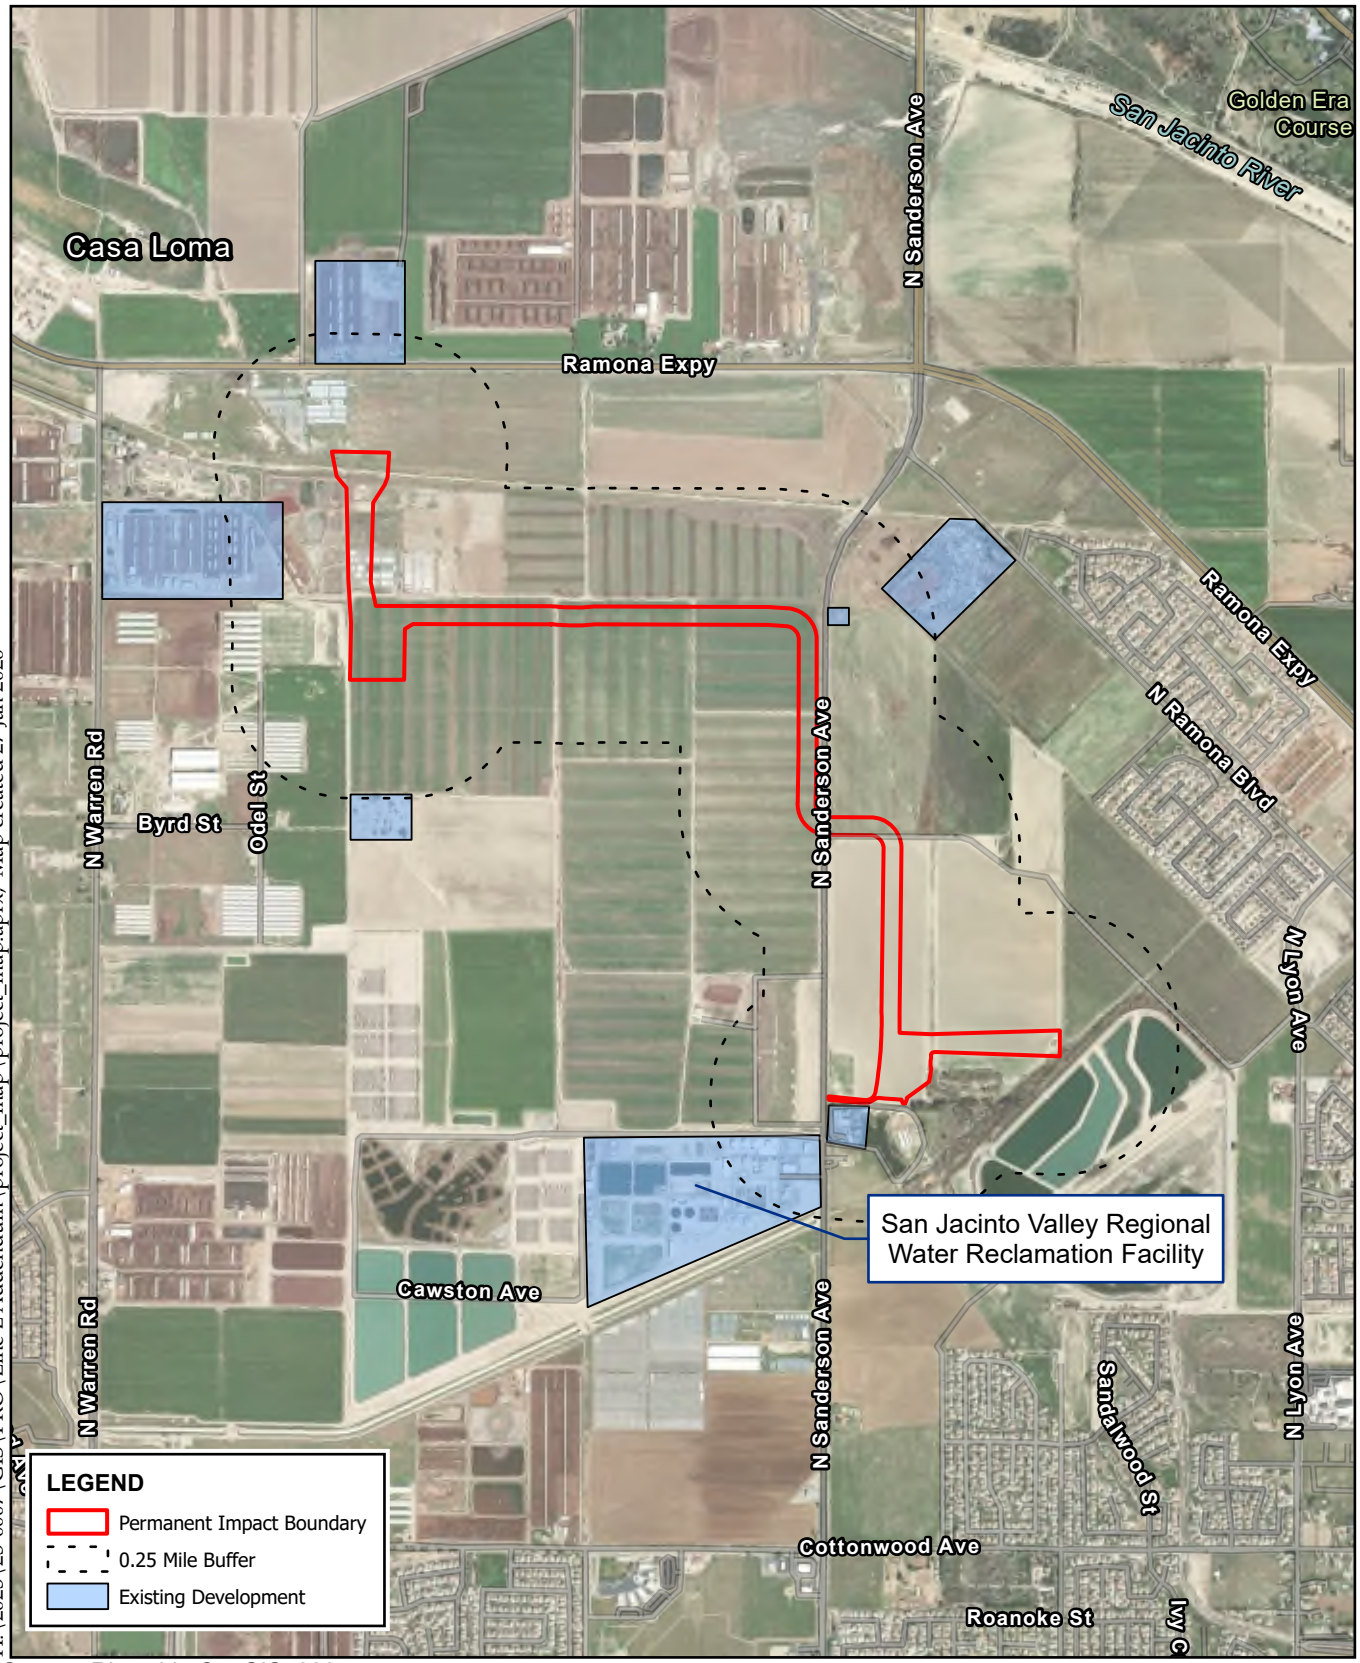
2) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation of an agency with jurisdiction adopted for the purpose of avoiding or mitigating an environmental effect?

SJV-MDP EIR Conclusion: Less than Significant Impact

The proposed SJV-MDP is located within the City of San Jacinto, the City of Hemet, and unincorporated Riverside County. The drainage facility alignments are primarily situated within or adjacent to road rights-of-way and disturbed open areas. Typically, master planned drainage facilities are integrated into general plans, specific plans, and other land use plans adopted by the local lead agency with land use authority. This proposed project will not conflict with existing land use designations or zoning within the MDP Project area. Additionally, Section 18.2.a(b) of Riverside County Ordinance No. 348 exempts public agency projects like this one from County zoning regulations. Therefore, potential impacts are considered less than significant.

Line E Project: No New Impact/No Impact

The Line E Project implements one of the SJV MDP Facilities. The SJV-MDP was adopted to control and mitigate flooding in the City of San Jacinto and portions of the City of Hemet and unincorporated



Riverside County. Further, the San Jacinto General Plan Land Use Element provides for a development and resource conservation pattern that preserves and protects San Jacinto's unique character while promoting opportunities for economic development, local job growth, and expanded housing opportunities. The Line E Project would remain consistent with the land use goals and policies identified in the Land Use Element. Additionally, the San Jacinto General Plan Resource Management Element encourages the protection and enhancement of natural and man-made resources in the City. The Project would be consistent with the land use goals and policies identified in the Resource Management Element. Therefore, the Project is consistent with the San Jacinto General Plan.

The San Jacinto Noise Ordinance, which is set forth in Municipal Code Chapter 8.40 – Noise Control is designed to protect people from non-transportation noise sources such as construction activity; commercial, industrial, and agricultural operations. Through compliance with the City of San Jacinto Municipal Code Chapter 8.40.050-A, the Line E Project would not result in a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Project in excess of standards established in the local general plan, noise ordinance adopted for the purpose of avoiding or mitigating an environmental effect. Refer to the discussion below in item M.2.

Additionally, the Project is also consistent with the MSHCP of which San Jacinto is a Permittee, as discussed above in item D.6.

Therefore, the Line E Project would not conflict with local land use plans, policies, or regulations adopted for the purpose of avoiding or mitigating an environmental effect because it proposes drainage facilities consistent with the existing land use designations in the Line E Project area and would comply with the provisions of the San Jacinto Noise Ordinance.

For the reasons set forth above, implementation of the Line E Project would not conflict with any land use plan, policy, or regulation of an agency with jurisdiction adopted for the purpose of avoiding or mitigating an environmental effect. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

ALBERT A. WEBB ASSOCIATES

L. MINERAL RESOURCES	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
Would the project:				
1) Result in the loss of availability of a known mineral resource that would be of value to the region or the residents of the state?	☐	☐	☒	☐
2) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	☐	☐	☒	☐

Source(s): SJV-MDP IS, GP DEIR

1) Result in the loss of availability of a known mineral resource that would be of value to the region or the residents of the state?

SJV-MDP EIR Conclusion: Less than Significant Impact

The SJV-MDP EIR determined that the proposed MDP Project is located in the Mineral Resources Zone (MRZ-3) area, where the presence of mineral deposits is likely but their significance is undetermined. The drainage facility conceptual alignments are mainly within or adjacent to road rights-of-way and disturbed agricultural areas, which would not significantly impact known mineral resources. The MDP detention basins are also not situated on identified mineral resources and, being excavated earthen structures, their construction would not permanently affect mineral resource availability. Therefore, the MDP Project's potential impacts to known mineral resources are considered less than significant. (SJV-MDP IS, p. 26.)

Line E Project: No New Impact/No Impact

The Line E Project site is primarily disturbed agricultural land within MRZ-3. The City has no known or identified mineral resources of regional or statewide importance. (SJGP EIR, pp. 5.12-3, 5.12-7.) Therefore, no impact would occur regarding the loss of known mineral resources that would be of value to the region or residents of the state.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to the loss of availability of a known mineral resource that would be of value to the region or the residents of the state. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

2) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

SJV-MDP EIR Conclusion: Less than Significant Impact

The SJV-MDP IS determined that implementation of the SJV-MDP would not significantly impact known mineral resources. (SJV-MDP IS, p. 26.)

Line E Project: No New Impact/No Impact

The Line E Project disturbance area does not contain any locally important mineral resources recovery sites delineated on a local general plan, specific plan, or other land use plan. (SJGP EIR, pp. 5.12-3, 5.12-7.) There would be no impacts in this regard.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

M. NOISE	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
Would the project result in:				
1) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan, noise ordinance, or applicable standards of other agencies?	☐	☐	☒	☐
2) Generation of excessive ground-borne vibration or ground-borne noise levels?	☐	☐	☒	☐
3) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project expose people residing or working in the Project area to excessive noise levels?	☐	☐	☒	☐

Source(s): SJV-MDP IS, GP DEIR

1) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan, noise ordinance, or applicable standards of other agencies?

SJV-MDP EIR Conclusion: Less than Significant Impact

The SJV-MDP EIR determined that construction of MDP Facilities would involve heavy equipment such as backhoes, excavators, cranes, water trucks, wheeled loaders, blades/road graders, tunnel/boring machines, and dump trucks. Construction would also include truck trips to move, cut, and fill material for the proposed basins. Maintenance operations would include the use of utility trucks and occasionally, heavy machinery such as: excavators, scrapers, mowers, dozers, or backhoes to maintain the basins. These types of equipment can generate noise levels from 65-95 dBA at 50 feet. Riverside County Ordinance 457 restricts construction activities near residences between 6:00 p.m. and 6:00 a.m. from June to September, and between 6:00 p.m. and 7:00 a.m. from October to May. San Jacinto also requires compliance with its noise regulations to minimize temporary construction noise impacts. Construction may create significant short-term noise increases, which would cease when construction of the MDP Facility is complete. Maintenance activities would generate less noise than construction and occur infrequently and briefly. Therefore, through compliance with local noise ordinances, impacts would be less than significant and no mitigation is required. (SJV-MDP IS, p. 27.)

Line E Project: No New Impact/No Impact

Construction of the Line E Project would entail the use of the same types of equipment analyzed in the SJV MDP EIR. Specifically for Line E, it is expected the type of construction equipment used would include: off-road construction equipment, crawler tractor, excavators, graders, rollers, rubber tired loader, scrapers, signal boards, tractor/loaders/backhoes, crane, bore/drill rig, air compressors, plate compactor, and rough terrain forklifts. These types of equipment can generate noise levels from 80 dBA L_{max}[11] to 85 dBA L_{max} at 50 feet. (Caltrans, p. 7-22; FTA, p. 176.)

[11] L_{max} is the highest sound power level in a specific time period. (Caltrans).

Given that all Line E Project construction would take place within San Jacinto, the San Jacinto Noise Ordinance, which is set forth in Municipal Code Chapter 8.40 – Noise Control, is the applicable noise ordinance. The San Jacinto Noise Ordinance is designed to protect people from non-transportation noise sources such as construction activity; commercial, industrial, and agricultural operations. Stationary noise source standards are set forth in Municipal Code Chapter 8.40.050-A, which states*, The following noise standards for maximum allowable noise level due to stationary noise sources shall apply to all development and infrastructure projects, unless otherwise specifically indicated:*

Type of Land Use	***Allowed Equivalent Noise Level (dBA L_{eq})***	
	7:00 a.m. to 10:00 p.m.	***10:00 p.m. to 7:00 a.m.***
All single-family residential properties	*65*	*45*
All multifamily residential properties and mobile home parks	*65*	*50*
All commercial property	*65*	*60*
The residential portion of mixed-use properties	*70*	*70*
All manufacturing or industrial properties and all other uses	*70*	*70*

San Jacinto regulates construction noise per Municipal Code Chapter 8.40.090, which states:

A. The erection (including excavation), demolition, alteration or repair of any building shall occur between the hours of seven a.m. and seven p.m. on weekdays and Saturdays, and between nine a.m. and six p.m. on Sundays and holidays, except when such work complies with the terms of a temporary use permit which may be issued by the community development director or his or her designee, upon a showing of sufficient need due to hot or inclement weather, or the use of an unusually long process material, or other circumstances of unusual and compelling nature.

B. No landowner, construction company owner, contractor, subcontractor or employer shall permit or allow any person or persons working under their direction and control to operate any tool, equipment or machine in violation of the provisions of this section.

C. Exceptions.

1. The provisions of this section shall not apply to emergency construction work performed by a private party when authorized by the city manager or his or her designee;

2. The maintenance, repair or improvement of any public work or facility by public employees, by any person or persons acting pursuant to a public works contract, or by any person or persons performing such work or pursuant to the direction of, or on behalf of, any public agency; provided, however, this exception shall not apply to the City of San Jacinto, or its employees, contractors or agents, unless:

a. The city manager or a department head determines that the maintenance, repair or improvement is immediately necessary to maintain public services; or

b. The maintenance, repair or improvement is of a nature that cannot feasibly be conducted during normal business hours; or

c. The city council has approved project specifications, contract provisions, or an environmental document that specifically authorizes construction during hours of the day that would otherwise be prohibited pursuant to this section;

3. Any construction that complies with the noise limits specified in Section 8.40.040 or 8.40.050.

Construction of the Line E Project would occur during daytime hours which minimizes potential noise impacts to nearby residences. Based on San Jacinto Municipal Code Chapter 8.40.050-A, the daytime construction noise threshold is 65 dBA L_{eq}. Using a construction noise level of 85 dBA L_{max} and assuming there is no intervening barrier between the construction equipment and noise receiver, construction noise may exceed 65 dBA at a distance of less than 500 feet[12] from where construction equipment is operating. This means, to comply with the noise limits set forth in Municipal Code Chapter 8.40.050-A, temporary noise barriers may be required if there are any sensitive receptors, such as occupied residences, less than 500 feet away. The closest sensitive receptors are an existing residence southeast of the intersection of Sanderson Avenue and Record Road. The distance to the property line for this residence across Sanderson Avenue is approximately 88 feet (27 meters). Should this residence still be occupied at the time of construction, the City could use a temporary noise barrier per this Municipal Code section if determined necessary.

(SJV-MDP IS, p. 27.) The Line E Project consists of stormwater drainage facilities, which will not generate noise once it is in operation. Other than maintenance, there would be no long-term noise resulting from operation of the Line E Project. Through compliance with the City of San Jacinto Municipal Code Chapter 8.40.050-A, the Line E Project would not result in a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Project in excess of standards established in the local general plan, noise ordinance, or applicable standards of other agencies.

For the reasons set forth in the preceding paragraphs, implementation of the Line E Project would not result in any new or increased significant impacts resulting in a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Line E Project area in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is needed.

2) Generation of excessive ground-borne vibration or ground-borne noise levels?

SJV-MDP EIR Conclusion: Less than Significant

The SJV-MDP IS determined that the construction of the proposed project would generate temporary groundborne vibration and noise typical of grading activities. While these vibrations may temporarily affect nearby offices and residences, they would be short-term and not excessive. Therefore, potential impacts are considered less than significant. (SJV-MDP IS, p. 27.)

---

[12] Distance calculated for R_2 using the formula $SPL_2 = SPL_1 – 20 \log(R_2/R_1)$ where SPL_1 = 85 dBA L_{max}; SPL_2 = 65 dBA $L_{eq;}$; R_1 = 50 feet.

Line E Project: No New Impact/No Impact
Construction activities that produce vibration that can be felt by adjacent land uses include the use of vibratory equipment, large bulldozers, and pile drivers. The primary sources of vibration during construction are usually vibratory rollers and large bulldozers. (SJGP EIR, p. 5.13-45.)

The only sensitive historic structure that could be affected by construction of the Line E Project is Metropolitan's Casa Loma Barrel No. 1. Metropolitan currently limits the vibrations within the existing siphon to 0.5 in/sec PPV to prevent damage to this structure from excessive vibrations. Depending on the design choice for how the Line E Channel crosses the Casa Loma Barrel No. 1, there is a potential to impose significant vibrations on this siphon. Preliminary analysis indicates it is feasible that construction induced vibrations from caisson drilling would not exceed Metropolitan's vibration limit of 0.5 PPV. (Kleinfelder-A, p. 2.) Therefore, because construction-related vibration would be temporary and under Metropolitan's limits, impacts regarding the generation of excessive ground-borne vibration or ground-borne noise levels would be less than significant.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to a generation of excessive ground-borne vibration or ground-borne noise levels. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

3) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project expose people residing or working in the Project area to excessive noise levels?

SJV-MDP EIR Conclusion: Less than Significant Impact
The SJV-MDP EIR determined the nearest airport to the Project area is, the Hemet-Ryan Airport located in Hemet less than one mile southwest from the southernmost portion of the MDP boundary. As the SJV-MDP Project would not result in the construction of new places of employment or new homes, the MDP Project would not involve placing people in a noisy environment near an airport or private airstrip. Potential impacts are considered less than significant. (SJV-MDP IS, p. 28.)

Line E Project: No New Impact/No Impact
As discussed in the response to item I.5, the Line E Project site is located approximately four miles from Hemet-Ryan Airport and is not within the Hemet-Ryan Airport Land Use Compatibility Plan. Due to the distance from the Hemet-Ryan Airport and because the project would not involve the construction of new places of employment or new homes, implementation of the Line E Project would not expose people residing or working in the Project area to excessive noise levels.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related the exposure of people to excessive noise levels from a private air strip, public airport, or public use airport. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

N. POPULATION AND HOUSING	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
Would the project:				
1) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☒	☐
2) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☒	☐

Source(s): DOF, SCAG

1) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

SJV-MDP EIR Conclusion: Significant and Unavoidable Impact

The SJV-MDP does not include the construction of new homes or businesses, and therefore would not directly induce substantial population growth in the MDP area. Implementation of the SJV-MDP may indirectly induce substantial population growth in the SJV-MDP boundaries by providing flood control infrastructure. As a comprehensive, area-wide master drainage plan, the SJV-MDP is sized and designed to accommodate continued development throughout the San Jacinto Valley per the San Jacinto, Hemet, and Riverside County General Plans. New development would be accompanied by construction of both on-site storm detention basins and related structures in the near term, and construction of master plan facilities in San Jacinto and Hemet that would accompany longer term improvements to the San Jacinto River channel. It is important to note, that while a project may have a potential to induce growth, it does not automatically result in growth. Growth can only happen through capital investment in new economic opportunities by the public or private sectors. (SJV-MDP EIR. pp. 3.8-6 – 3.8-7.)

The SJV-MDP EIR determined the MDP Project could indirectly induce population growth in the San Jacinto Valley by removing one potential barrier to growth, by providing planned drainage infrastructure. The City of San Jacinto, the City of Hemet and the County of Riverside General Plans outline the type of development and growth that would be allowed in the area. Thus potential indirect impacts from development in the project area are not expected to exceed the potential impacts that have already been disclosed in their General Plan EIRs. Yet, because implementation of the proposed Project could indirectly induce substantial population growth in San Jacinto, Hemet, and portions of unincorporated Riverside County, impacts are considered significant. However, no mitigation measures can reduce these indirect impacts to less than significant levels, necessitating a Statement of Overriding Considerations prior to approval of the SJV-MDP Project. (SJV-MDP EIR, pp. 3.8-6 – 3.8-9.)

Line E Project: No New Impact/No Impact

The Line E Project would not directly induce population growth, as it does not introduce housing or long-term employment opportunities. As a regional drainage facility, the Line E Project has the potential to indirectly induce population growth in the Line E subwatershed by removing an obstacle to development. Since approval of the SJV-MDP Project in 2013, San Jacinto and Riverside County updated their respective General Plans and population projections in 2022 and

2015, respectively. Implementation of the Line E Project would indirectly facilitate future planned growth per the General Plans for San Jacinto, Hemet, and Riverside County. Thus potential indirect impacts from development Line E subwatershed are not expected to exceed the potential impacts that have already been analyzed and disclosed in the current San Jacinto, Hemet, and Riverside County General Plan EIRs.

Additionally, the SJV MDP still remains the guiding document to address stormwater and flooding control within the Line E Project area. Because the Line E Project would not directly or indirectly induce substantial unplanned population growth, there would be no new impact in this regard.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts resulting from the direct or indirect inducement of substantial unplanned population growth in the Line E Project subwatershed. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

2) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

SJV-MDP EIR Conclusion: Less than Significant Impact

The SJV-MDP EIR determined the construction of the proposed MDP Facilities in the conceptual locations shown in the SJV-MDP EIR is not anticipated to displace any existing homes. Because no homes are being displaced, the construction of replacement housing is not required. Potential impacts would be less than significant. (SJV-MDP IS, p. 29.)

Line E Project: No New Impact/No Impact

Construction of the Line E Project would not require the displacement of existing people or housing; therefore construction of replacement housing is not required.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts regarding the displacement of existing people or housing and the construction of replacement housing. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

O. PUBLIC SERVICES	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the following public services:				
1) Fire Protection	☐	☐	☒	☐
2) Police Protection	☐	☐	☒	☐
3) Schools	☐	☐	☒	☐
4) Parks	☐	☐	☒	☐
5) Other Public Facilities	☐	☐	☒	☐

Source(s): SJGP; SJGP EIR; SJDFS; USD; SJV-MDP IS

1) Fire Protection?

SJV-MDP EIR Conclusion: No Impact

The SJV-MDP EIR determined the proposed MDP Facilities would not require additional services or extended response times for fire protection services. When constructed, the proposed SJV-MDP Facilities should reduce the need for fire department resources related to flooding. (SJV-MDP IS, p. 29.)

Line E Project: No New Impact/No Impact

The Line E Project does not propose any new or physically altered government facilities. The Line E Project would not directly result in the need for new or physically altered fire protection facilities.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant substantial adverse physical impacts associated with the provision of new or physically altered government facilities or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives related to fire protection. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

2) Police Protection?

SJV-MDP EIR Conclusion: No Impact

The SJV MDP EIR determined that construction of the proposed SJV-MDP Facilities does not include new homes or businesses that would require additional police protection facilities, services or extended response times. Therefore, no impacts are anticipated. (SJV-MDP IS, p. 29.)

Line E Project: No New Impact/No Impact

The Line E Project does not propose any new or physically altered police protection facilities. The Line E Project would not directly result in the need for new or physically altered police protection facilities.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant substantial adverse physical impacts associated with the provision of new or physically altered police protection facilities or the need for new or physically altered police facilities,

the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives related to police protection. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

3) Schools?

SJV-MDP EIR Conclusion: No Impact
The SJV MDP EIR determined the proposed SJV-MDP Project does not involve new housing or employment opportunities that would affect local school enrollment or the need for new school facilities. Because school facilities would not be impacted by implementation of the SJV-MDP, no impacts are anticipated. (SJV-MDP IS, p. 29.)

Line E Project: No New Impact/No Impact
The Line E Project does not propose any new or physically altered school facilities. The Line E Project would not directly result in the need for new or physically altered school facilities.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant substantial adverse physical impacts associated with the provision of new or physically altered school facilities or the need for new or physically altered school facilities, the construction of which could cause significant environmental impacts. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

4) Parks?

SJV-MDP EIR Conclusion: No Impact
The SJV-MDP EIR determined that none of the proposed MDP Facilities would interfere with or have adverse impacts on parks. Nor would the project involve new housing or employment opportunities that would result in the need for new or physically altered park facilities. Therefore, no impacts are anticipated. (SJV-MDP IS, p. 30.)

Line E Project: No New Impact/No Impact
The Line E Project does not propose any new or physically altered park facilities. The Line E Project would not directly result in the need for new or physically altered park facilities.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant substantial adverse physical impacts associated with the provision of new or physically altered park facilities or the need for new or physically altered park facilities to maintain park standards, the construction of which could cause significant environmental impacts. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

5) Other Public Facilities?

SJV-MDP EIR Conclusion: No Impact
The SJV MDP EIR determined that there are no other public facilitates that would be adversely impacted by the construction of the proposed project. Therefore, no impacts are anticipated. (SJV-MDP IS, p. 30.)

Line E Project: No New Impact/No Impact

Other than the proposed drainage improvements, the Line E Project does not propose any new or physically altered government. The Line E Project would not directly result in the need for new or physically altered government facilities.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant substantial adverse physical impacts associated with the provision of new or physically altered other public facilities or the need for new or physically altered public facilities, the construction of which could cause significant environmental impacts. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

P. RECREATION	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
Would the project:				
1) Increase the use of existing neighborhood or regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐
2) Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☒	☐

Source(s): SJGP; SJGP DEIR; SJV-MDP IS

1) Increase the use of existing neighborhood or regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

SJV-MDP EIR Conclusion: No Impact

The SJV-MDP EIR determined that the MDP Project does not include new homes or businesses that would increase the use of existing parks or recreational facilities. Therefore, no impacts are anticipated. (SJV-MDP IS, p. 30.)

Line E Project: No New Impact/No Impact

The Line E Project does not include new homes or businesses that would generate residents or employees that would use parks and recreational facilities. As such, there would be no increase in the use of existing parks or recreations facilities such that substantial physical deterioration of the facility would occur or be accelerated.

For the reasons set forth above, implementation of the Line E Project would not increase in the use of existing parks or recreations facilities such that substantial physical deterioration of the facility would occur or be accelerated. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

2) Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

SJV-MDP EIR Conclusion: No Impact

The SJV-MDP EIR determined that construction of the proposed MDP Project does not include housing or employment opportunities and would not trigger the need for construction or expansion of recreational facilities. However, the proposed Project basins could be designed for dual-use purposes. No impacts are anticipated. (SJV-MDP IS, p. 30.)

Line E Project: No New Impact/No Impact

The Line E Project, does not include recreational facilities. The Line E Project would not require the construction or expansion of recreational facilities. As such, there would be no adverse physical effect on the environment resulting from the construction of expansion of recreational facilities.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to the construction or expansion of recreational facilities which might have an adverse physical effect on the environment. Thus, there are no new impacts, changes,

or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

Q. TRANSPORTATION	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
Would the project:				
1) Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	☐	☐	☒	☐
2) Conflict or be inconsistent with *State CEQA Guidelines* section 15064.3, subdivision (b)?	☐	☐	☒	☐
3) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐
4) Result in inadequate emergency access or access to nearby uses?	☐	☐	☒	☐

Source(s): Project Description

1) Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?

SJV-MDP EIR Conclusion: Less than Significant Impact
The SJV-MDP EIR determined that the project will be partially constructed within road rights-of-way, causing minor, short-term increases in vehicle traffic due to construction activities. This may result in slight delays or temporary congestion. Encroachment permits and traffic control plans will be obtained and approved by the relevant governing agencies to address these short-term traffic impacts. Consequently, potential impacts are considered less than significant.

Line E Project: No New Impact/No Impact
As an infrastructure project, the Line E Project would not in it of itself conflict with any program, plan, ordinance, or policy addressing the circulation system because the Line E Project is an earthen and underground channel located within ROW or proposed ROW. The Line E Project would be required to provide a traffic control plan for the construction of the Project. Through compliance with required traffic control plans, impacts to any program, plan, ordinance, or policy addressing the circulation system would be less than significant and no new mitigation is required.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related any program, plan, ordinance, or policy addressing the circulation system. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

2) Conflict or be inconsistent with *State CEQA Guidelines* section 15064.3, subdivision (b)?

SJV-MDP EIR Conclusion: Less than Significant Impact
This threshold was not a part of the State CEQA Guidelines at the time the SJV-MDP EIR was prepared. Senate Bill 743 (SB 743) was passed by the California State Legislature and signed into law by Governor Brown in 2013. SB 743 required the Office of Planning and Research and the California Natural Resources Agency to develop alternative methods of measuring transportation impacts under the California Environmental Quality Act (CEQA). In December 2018, the California Natural Resources Agency finalized updates to the CEQA Guidelines, which included SB 743. CEQA

Guidelines Section 15064.3 provides that transportation impacts of projects are, in general, best measured by evaluating the project's vehicle miles traveled (VMT). As stated in CEQA Guidelines Section 15064.3(b)(2), “projects that reduce, or have no impact on, vehicle miles traveled should be presumed to cause a less than significant transportation impact.” The SJV-MDP EIR determined that the adoption of the MDP and the construction and operation of the facilities would not cause an increase in traffic and are not traffic generating. (SJV-MDP EIR, pp. 30-32.) As such, the impact on traffic was determined to be less than significant.

Line E Project: No New Impact/No Impact
The Line E Project will construct an earthen and underground stormwater channel that would temporarily increase traffic in the area as a result of construction-related vehicles. However, because water facilities are not trip generators, there would be no ongoing operational net increase in VMTs. Therefore, the Project would not conflict with or be inconsistent with CEQA Guidelines section 15064.3. subdivision (b). Thus, the Project’s impacts related to VMT would be less than significant.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related VMT. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

3) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

SJV-MDP EIR Conclusion: No Impact
The SJV-MDP EIR determined that construction of the project will not change current or future roadway configurations nor alter the area in such a way to introduce a new hazard or increase hazards. (SJV-MDP IS, p. 31.) Therefore, no impacts are anticipated.

Line E Project: No New Impact/No Impact
As stated in the SJV-MDP EIR, the construction of MDP facilities, including the Line E Project, which will be primarily earthen and underground within existing and proposed roadways, will not alter current roadway configurations or introduce new hazards. Therefore, the Line E Project would not result in impacts related to hazards due to design features.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to substantially increase hazards. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

4) Result in inadequate emergency access or access to nearby uses?

SJV-MDP EIR Conclusion: No Impact
The SJV-MDP EIR determined that construction of the proposed project will not reconfigure current roadways that would result in inadequate emergency access. Access would be maintained throughout the construction activities. Therefore, no impacts are anticipated.(SJV-MDP IS, p. 31.)

Line E Project: No New Impact/No Impact
The Line E Project would not result in inadequate emergency access because the construction of the channel would not reconfigure current roadways that would result in inadequate emergency access. During temporary construction activities, as discussed above in item Q.1, traffic control measures to

accommodate local traffic and ensure the safety of drivers and workers during construction would be implemented. Additionally, in accordance with the original findings of the SJV-MDP EIR, access would be maintained throughout construction. Therefore, the Line E Project would not result in impacts related to inadequate emergency.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to inadequate emergency access. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

R. TRIBAL CULTURAL RESOURCES	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
Would the project cause a substantial adverse change in the significance of a Tribal Cultural Resource, defined in Public Resources Code section 21074 as either a site, feature, place, or cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American Tribe, and that is:				
1) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1 (k), or	☐	☐	☒	☐
2) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision I of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☐	☒	☐

Source(s): SJV-MDP EIR, AE-GP DEIR

Analysis of Project Effect and Determination of Significance

1) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1 (k) or

2) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision I of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision I(c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?

SJV-MDP EIR Conclusion: Less than Significant Impact

These thresholds were not a part of the State CEQA Guidelines at the time the SJV-MDP EIR was prepared. As discussed in Section E. Cultural Resources, prehistoric cultural resources were evaluated at a program level as not all of the conceptual alignments for the SJV-MDP Facilities could be surveyed. The results of a Native American Heritage Commission (NAHC) sacred lands record search conducted during preparation of the *Historical/Archeological Resources Survey Report, San Jacinto Master Drainage Plan,* October 8, 2008 (Appendix D.1 to the SJV-MDP EIR), identified the presence of Native American cultural resources within the SJV-MDP Project's boundary and suggested the Soboba Band of Luiseño Indians and 10 other local Native American representatives be contacted for further information. Correspondence was initiated with contacts of the 11 organizations on the referral list provided by NAHC, in addition to the Ramona Band of Cahuilla Indians, Morongo Band of Indians, Soboba Band of Luiseño Indians, and Temecula Band of Luiseño Mission Indians. No specific sites of Native American cultural concern were identified within the SJV-MDP Project boundary by any of the tribal representatives contacted; however, the presence of a Native American monitor was requested. Because portions of the conceptual footprint of the SJV-MDP Facilities were unable to be surveyed due to restricted access and Native American monitoring was requested, SJV-MDP EIR mitigation measures **MM Cultural 2a through MM Cultural 2c**, as set forth in item E.2 would be implemented to reduce impacts to cultural resources, to less than significant. (SJV-MDP EIR, pp. 3.5-15 – 3.5-16.)

Line E Project: No New Impact/No Impact

Effective July 1, 2015, Assembly Bill 52 (AB 52), signed into law in 2014, amends CEQA and establishes new requirements for tribal consultation. The law applies to all projects that have a notice of preparation or notice of negative declaration/mitigated negative declaration. It also broadly defines a new resource category of "tribal cultural resource" and establishes a more robust process for meaningful consultation that includes:

- Prescribed notification and response timelines
- Consultation on alternatives, resource identification, significance determinations, impact evaluation, and mitigation measures
- Documentation of all consultation efforts to support CEQA findings.

AB 52 does not apply to the Line E Project as neither a notice of preparation nor notice of intent to adopt a negative declaration/mitigated negative declaration is being issued. As identified in the response to item E.2, above, no prehistoric archaeological resources were documented within or adjacent to the site and no specific sites of Native American cultural concern were identified within the SJV-MDP Project boundary by any of the tribal representatives contacted.

As discussed in response item E.2, preparation of the *Cultural Resource Study for the San Jacinto Master Drainage Plan Line E, City of San Jacinto, Riverside County, California*, satisfies SJV-MDP mitigation measure **MM Cultural 2a.** Based on the results and recommendations of that study, the Line E Project would implement clarified mitigation measures **CMM Cultural 2b** and **CMM Cultural 2c**, as set forth above in item E.2**.** These clarified mitigation measures update, clarify, and amplify the requirements of SJV-MDP **MM Cultural 2b** and **MM Cultural 2c** for monitoring, preparation of a treatment and disposition plan, and the process to be followed for an inadvertent find. The clarified mitigation measures does not provide mitigation for a new potentially significant impact not disclosed in the SJV-MDP EIR.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts resulting in a substantial adverse change in the significance of a tribal cultural resource. Clarification of the SJV-MDP EIR mitigation measures to be Line E Project-specific does not mitigate new impacts or constitute new information of substantial importance. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

S. UTILITIES AND SERVICE SYSTEMS	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
Would the project:				
1) Require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☒	☐
2) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	☐	☐	☒	☐
3) Result in a determination by the wastewater treatment provider that serves or may service the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☒	☐
4) Generate solid waste in excess of State or Local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☒	☐
5) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☒	☐

Source(s): Project Description; SJV-MDP IS; UWMP; WSCP; WCSMP

Analysis of Project Effect and Determination of Significance

1) Require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

SJV-MDP EIR Conclusion: Less than Significant Impact

The SJV-MDP EIR determined that the MDP project would not generate wastewater, eliminating the need for wastewater treatment. However, constructing the proposed drainage facilities may necessitate relocating existing water and sewer lines. These relocations would take place within the SJV-MDP Project's impact area and would not result in significant impacts beyond those already associated with the proposed MDP Project. Therefore, potential impacts are considered less than significant. (SJV-MDP IS, p. 32.)

Line E Project Conclusion: No New Impact/No Impact

Existing utilities in conflict with the Line E Channel's RCBs crossing at Sanderson Avenue are shown on the Long Axis Plan included in Appendix B. Any proposed utility crossings would be coordinated with adjacent property owners and/or developers and projects to the extent that information is available, and relocation plans would be prepared during the final design phase. (PDR, p. 8.)

For the reasons set forth above, the implementation of the Line E Project, would not require the relocation or construction of additional water, stormwater drainage, electric power, natural gas, or telecommunications facilities beyond those analyzed originally. Therefore, there are no new impacts,

changes, or new information associated with the Line E Project that would necessitate the preparation of a Supplemental or Subsequent EIR. No further analysis is required.

2) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?

SJV-MDP EIR Conclusion: Less than Significant Impact
The SJV-MDP EIR determined the SJV-MDP Project does not involve activities that would require permanent water supplies. Construction of the proposed MDP Facilities would necessitate short-term water use in order to provide for dust control. Impacts are less than significant. (SJV-MDP IS, p. 33.)

Line E Project Conclusion: No New Impact/No Impact
The Line E Project would use water for dust control during construction. Operation and maintenance of the Line E Project does not involve activities that would require permanent water supplies.

For the reasons set forth above, the implementation of the Line E Project would not result in any new or increased significant impacts related to reasonably foreseeable future development during normal, dry, and multiple-dry years. Therefore, there are no new impacts, changes, or new information associated with the Line E Project that would necessitate the preparation of a Supplemental or Subsequent EIR. No further analysis is required.

3) Result in a determination by the wastewater treatment provider that serves or may service the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

SJV-MDP EIR Conclusion: No Impact
The SJV-MDP IS determined implementation of the MDP Project would not generate wastewater. No new wastewater treatment facilities are required as a result of the proposed SJV-MDP Project. (SJV-MDP IS, p. 33.)

Line E Project Conclusion: No New Impact/No Impact
The Line E Project consists of stormwater drainage facilities which would not generate wastewater. Thus, no new wastewater treatment facilities are required as a result of the proposed SJV-MDP Project.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts regarding the capacity of the City (as wastewater treatment provider) to serve its existing commitments. Thus there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

4) Generate solid waste in excess of State or Local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

SJV-MDP EIR Conclusion: No Impact
The SJV-MDP EIR determined the MDP Project would not generate solid waste or require landfill services long-term. Construction waste would mainly consist of trash from crews and minimal debris, with demolition possibly needed. Temporary construction and demolition waste is expected to be minimal, not exceeding a single commercial dumpster per week per phase. Local landfills, such as Badlands and Lamb Canyon, have sufficient capacity to accept this waste. (SJV-MDP IS, p. 33.)

Line E Project Conclusion: No New Impact/No Impact
As with the SJV-MDP Project, solid waste generated during the construction of the Line E Project is expected to be minimal. Local landfills, such as Badlands and Lamb Canyon, have sufficient capacity to accept this waste. Additionally, construction of the Line E Project would be required to comply with Municipal Code Chapter 8.34, Construction and Demolition Waste Management, which requires diversion of a minimum of 50 percent of the construction and demolition debris, in compliance with State and local statutory goals and policies, and creation of a mechanism to secure compliance with the stated diversion requirement to reduce the amount of waste generated within San Jacinto. (SJGP EIR, p. 5.9-13.)

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts regarding the generation of solid waste in excess of State or Local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals related to solid waste. Thus there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

5) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

SJV-MDP EIR Conclusion: No Impact
As discussed in item S.5. above, the SJV-MDP EIR determined the proposed project would not generate large quantities of solid waste on a long-term basis. The disposal of construction waste will comply with all federal, state, and local statutes and regulations regarding solid waste. Potential impacts are less than significant. (SJV-MDP IS, p. 33.)

Line E Project Conclusion: No New Impact/No Impact
As discussed in item S.5, above, construction of the Line E Project would be required to comply with Municipal Code Chapter 8.34, Construction and Demolition Waste Management, which requires diversion of a minimum of 50 percent of the construction and demolition debris, in compliance with State and local statutory goals and policies, and creation of a mechanism to secure compliance with the stated diversion requirement. Thus, the disposal of construction waste would comply with all federal, state, and local statutes and regulations regarding solid waste.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to compliance with federal, state, and local management and reduction statues and regulations related to solid waste. Thus there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

T. WILDFIRE	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
If located in or near a state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
1) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
2) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☒	☐
3) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☒	☐
4) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☒	☐

Source(s): CALFIRE; GP DEIR; GP

1) Substantially impair an adopted emergency response plan or emergency evacuation plan?

SJV-MDP EIR Conclusion: Less than Significant Impact

This threshold was not a part of the State CEQA *Guidelines* at the time the SJV-MDP EIR was prepared. However, as discussed in item I.6. above, the SJV MDP EIR determined the SJV-MDP area is not located within a designated hazardous fire area. The proposed MDP Facilities would not interfere with evacuation or emergency response plans. Road access would be maintained or detours would be provided during project construction. Implementation of the MDP would not expose people or structures to a significant risk of loss, injury or death involving wildland fires. Therefore, impacts are less than significant, and no mitigation is required. (SJV-MDP IS, p. 21.)

Line E Project: No New Impact/No Impact

As discussed in the response to item I.6., above, the Line E Project is not located within a designated hazardous fire area. Road access would be maintained or detours would be provided during Project construction so as not to not interfere with evacuation or impair execution of emergency response plans.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts related to substantially impairing and adopted emergency response plan or emergency evacuation plan. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

2) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

SJV-MDP EIR Conclusion: Less than Significant Impact
This threshold was not a part of the State CEQA Guidelines at the time the SJV-MDP EIR was prepared. However, as discussed in item I.6., above, the SJV-MDP EIR determined the MDP Project area, was not located within a designated hazardous fire area. Further, The SJV-MDP does not propose habitable structures; thus, there would be no project occupants. Implementation of the MDP would not expose people or structures to a significant risk of loss, injury or death involving wildland fires. Therefore, impacts are less than significant, and no mitigation is required. (SJV-MDP IS, p. 21.)

Line E Project: No New Impact/No Impact
The Line E Project involves the construction of a channel and confluence basin and does not propose any habitable structures. Therefore, the Line E Project would not expose people or structures to significant risks from runoff, post-fire slope instability, or drainage changes. Therefore, the impacts are considered less than significant.

For the reasons set forth above, implementation of the Line E Project would not expose people or structures to significant risks resulting from flooding or landslides. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

3) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

SJV-MDP EIR Conclusion: Less than Significant Impact
This threshold was not a part of the State CEQA Guidelines at the time the SJV-MDP EIR was prepared. However, as discussed in item I.6., above, the SJV-MDP EIR determined the Master Drainage Plan area, are not located within a designated hazardous fire area. Implementation of the MDP would not expose people or structures to a significant risk of loss, injury or death involving wildland fires. Therefore, impacts are less than significant, and no mitigation is required. (SJV-MDP IS, p. 21.).

Line E Project: No New Impact/No Impact
The Line E Project involves the construction of a stormwater drainage channel, in an area that is either vacant or used for active agriculture. The area the Line E Project is located within would not require installation or maintenance of infrastructure that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment. Therefore, the Line E Project impacts related to exacerbated fire risk would be less than significant.

For the reasons set forth above, implementation of the Line E Project would result in infrastructure that may exacerbate fire risks. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

4) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

SJV-MDP EIR Conclusion: Less than Significant Impact
This threshold was not a part of the State CEQA Guidelines at the time the SJV-MDP EIR was prepared. However, as discussed in item I.6., above, the SJV-MDP EIR determined the Master Drainage Plan area, is not located within a designated hazardous fire area. Implementation of the

SJV-MDP would not expose people or structures to a significant risk of loss, injury or death involving wildland fires. Therefore, impacts are less than significant, and no mitigation is required. (SJV-MDP IS, p. 21.)

Line E Project: No New Impact/No Impact

The Line E Project does not include habitable structures, nor would it substantially alter existing drainage patterns. Therefore, there would be no impacts with regard to exposing people or structures to significant risks resulting from runoff, post-fire instability, or drainage changes.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased significant impacts regarding exposure to post-fire risks. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

U. MANDATORY FINDINGS OF SIGNIFICANCE	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
Does the Project:				
1) Have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self- sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number, or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?	☐	☒	☐	☐
2) Have impacts which are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, other current projects, and probable future projects)?	☐	☐	☒	☐
3) Have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☐	☒	☐

Source(s): Analysis in this Addendum, AE-A, GLA-A, GLA-B

1) Have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self- sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number, or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?

SJV-MDP EIR Conclusion: Less than Significant with Mitigation.

Potential to Degrade the Quality of the Environment: Construction and operation of the SJV-MDP Project does not have the potential to degrade the quality of the environment. As indicated in the analysis in the MDP IS/EIR, either no impacts, less than significant impacts, or less than significant impacts with mitigation incorporated would occur with respect to each of the environmental issues analyzed in the SJV-MDP Project.

Potential to Impact Biological Resources:. Implementation of the SJV-MDP, has the potential to impact special status species, birds protected by the Migratory Bird Treaty Act and/or California Department of Fish and Game Code, riparian habitat, and drainage ditches regulated by CDFW. All potentially significant impacts to biological resources would be avoided or reduced to a less than significant impact with the implementation of SVJ-MDP EIR mitigation measures **MM Bio 1** through **MM Bio-8**. (SJV MDP EIR, pp. 3.4-22 – 3.4-28; 5.0-8 - 5.0-9.)

Potential to Eliminate Important Examples of the Major Periods of California History or Prehistory: Impacts related to historic and archaeological resources were found to be less than significant within the portions of the Project footprint surveyed. Additional surveys, documentation, and coordination with Native American Tribes will be required through **MM Cultural 1** through **MM Cultural 4** No unique geologic feature is known to exist and no fossils have been documented in the Project

footprint. However, the Project footprint is underlain by deposits that could potentially have a high sensitivity for paleontological resources. Mitigation measures **MM Cultural 5 through MM Cultural 8** outline specific measures that will be taken if certain soil types or any artifacts are unearthed during construction activities. Therefore, through implementation of proposed mitigation measures, potential impacts to cultural resources will be reduced to less than significant. (SJV MDP EIR, p. 5.0-13.)

Therefore, the potential of the SJV-MDP to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or an endangered plant or animal or eliminate important examples of the major periods of California history or prehistory would be less than significant with mitigation incorporated.

Line E Project: New Mitigation is Required

Potential to Degrade the Quality of the Environment: Construction of the Line E Project does not have the potential to degrade the quality of the environment. As indicated in the analysis in this Addendum, there is no substantial change in the significance of impacts from those disclosed in the SJV-MDP EIR. This means no new potentially significant impacts. The analysis determined either new mitigation required, or no new impact/no impact, or reduced impact would occur with respect to each to the environmental issues analyzed in this Addendum.

Potential to Impact Biological Resources: The results of the *Biological Technical Report and Jurisdictional Delineation of the Master Drainage Plan* (MDP) *Line E Project*, as well as the *Determination of Biologically Equivalent or Superior Preservation (DBESP) Analysis for Impacts to MSHCP Riparian/Riverine Area, San Jacinto Valley Master Drain Plan Line E*, and the analysis in the responses to items D.1 through D.4 above, indicate the Line E Project has the potential to impact special status species, birds protected by the Migratory Bird Treaty Act and/or California Department of Fish and Game Code, non-wetland waters regulated by the Regional Board and non-riparian streambed regulated by CDFW. However, with implementation of **MM Bio-E1, MM Bio-E2, MM Bio-E3**, **MM Bio-E4, MM Bio-E5, MM Bio-E6, MM Bio-E7, MM Bio-E8** and clarified mitigation measure **CMM Bio-1**, potential impacts to biological resources would be reduced to less than significant. Preparation of the BTR and focused surveys satisfies SJV-MDP EIR mitigation measures **MM Bio 2, MM Bio 3, MM Bio 4, MM Bio 5,** and **MM Bio 6.**

Potential to Eliminate Important Examples of the Major Periods of California History or Prehistory: The results of the *Cultural Resource Study for the San Jacinto Master Drainage Plan Line E, City of San Jacinto, Riverside County, California*, (CRS) identifies the entire Line E area as heavily disturbed on the surface by agricultural activity, road development, and addition of modern structures. It was concluded the Colorado River Aqueduct is eligible for listing, but is outside of the Project's vertical limits, and therefore would not be affected by this Project. Although, the likelihood of the presence of intact archaeological deposits is low, in order to provide protection in the unlikely event that archaeological resources are unearthed during construction, the Line E Project will implement clarified mitigation measures **CMM Cultural-2b** and **CMM Cultural-2c**. Preparation of the CRS satisfies SJV-MDP mitigation measure **MM Cultural 2a**. Through compliance with applicable regulations and clarified mitigation measures (**CMM Cultural 2b** and **CMM Cultural 2c**) impacts to important examples of California history or prehistory would be less than significant.

For the reasons set forth above, implementation of the Line E Project would not result in any new potentially significant impacts regarding potential to degrade the environment, potential to impact

biological resources, and potential to eliminate important examples of the major periods of California history or prehistory. New mitigation is required for the Line E Project to address potential impacts to Crotch's bumble bee and special status bird species; however through implementation of mitigation measures, impacts will be less than significant. This does not change the determination made in the SJV-MDP. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent EIR. No further analysis is required.

2) **Have impacts which are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, other current projects, and probable future projects)?**

SJV-MDP EIR Conclusion: Significant and Unavoidable

The SJV-MDP EIR concluded potential environmental impacts resulting from implementation of the SJV-MDP are temporary and would cease once construction is complete except for impacts to agricultural resources, and population and housing, specifically indirect growth inducement. The SJV-MDP boundaries contains approximately 4,600 acres of "Agricultural Land" as defined in Section 210060.1 of CEQA, implementation of the Project will have significant indirect and direct impacts to agricultural resources. Depending on the facility or combination of facilities constructed at any given time, SCAQMD regional significance thresholds for NOx, PM-10, and PM-2.5 and SCAQMD LSTs for PM-10 and PM-2.5 could be exceeded during construction. Although these are direct, short-term impacts that would cease once construction is complete. the impact is not considered to have a cumulatively considerable net increase on ozone and PM-10, which are non-attainment in the region under both state and federal standards, and is considered less than significant. The SJV-MDP has the potential to indirectly induce substantial population growth in San Jacinto, Hemet, and portions of unincorporated Riverside County by removing an obstacle to development. However, the potential indirect impacts would not exceed the impacts that have already been addressed during the adoption of the San Jacinto General Plan EIR (May 2006), the Hemet General Plan Final EIR (August 1992), or the Riverside County General Plan Final EIR (October 2003).

The SJV MDP is consistent with local and regional plans. The SJV MDP adheres to all other land use plans and policies with jurisdiction in the area and will not increase traffic volumes or VMT within the area. However, because the SJV MDP could indirectly induce growth and potentially exceed SCAQMD significance thresholds, Cumulative impacts would be significant and unavoidable. (SJV MDP EIR, pp. 5.0-6-8, 5.0-15-17.)

Line E Project: No New Impact/ No Impact

As discussed in the responses to Sections C, D, F, H, J, K, L, and M, the Line E Project is consistent with local and regional plans, and its mitigated air quality emissions do not exceed established thresholds of significance. The Line E Project adheres to all other land use plans and policies in San Jacinto and would not increase VMT. The Line E Project is not considered growth-inducing as defined by CEQA Guidelines Section 15126.2(d) because it would not induce, either directly or indirectly, population and/or housing growth beyond what is envisioned by San Jacinto General Plan. Therefore, construction and operation of the Line E Project would not result in incremental impacts that are considered cumulatively considerable.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased incremental significant impacts that are cumulatively considerable. Thus, there are no new

impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent MND. No further analysis is required.

3) Have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?

SJV-MDP EIR Conclusion: Less than Significant with Mitigation.
Effects on human beings were evaluated as part of the aesthetics, air quality, geology and soils, hazards and hazardous materials, hydrology and water quality, noise, population and housing, and traffic sections of the SJV MDP EIR. Except for indirect growth inducement, impacts to aesthetics, air quality, geology and soils, hazards and hazardous materials, hydrology and water quality, noise and traffic were found to be less than significant, or less than significant with mitigation incorporated.

Line E Project: No New Impact/ No Impact
This Addendum evaluated effects on human beings as part of the aesthetics, air quality, geology and soils, hazards and hazardous materials, hydrology and water quality, noise, population and housing, and traffic and determined there is no substantial change in the significance of impacts from those disclosed in the SJV MDP EIR. Therefore, there are no new potential direct or indirect impacts on human beings resulting from the Line E Project.

For the reasons set forth above, implementation of the Line E Project would not result in any new or increased environmental effects that would cause substantial adverse effects on human beings. Thus, there are no new impacts, changes, or new information associated with the Line E Project that would require preparation of a Supplemental or Subsequent MND. No further analysis is required.

5. Earlier Analysis/References Incorporated by Reference

Section 15150 of the State *CEQA Guidelines* permits and encourages an environmental document to incorporate, by reference, other documents that provide relevant data. The documents summarized below are incorporated by reference, and the pertinent material is summarized throughout this Initial Study, where that information is relevant to the analysis of potential impacts of the Project. All documents incorporated by reference are available for review at, or can be obtained through, the City of San Jacinto Planning Department.

STRUCTURES REPORT

February 14, 2025
Kleinfelder Project No.: 24002328.001A

Mr. Eric Hays
Albert A. Webb Associates
3788 McCray Street
Riverside, California 92506

Subject: Structural Design of Line E Channel Crossing over MWD Casa Loma Barrel No. 1
San Jacinto, California

Introduction

This report discusses the development of a preliminary crossing design for the proposed Line E channel over the existing Casa Loma Barrel No.1 Siphon operated by the Metropolitan Water District (MWD). This report discusses the concepts considered for this crossing and why one concept was ultimately chosen over the other. Additionally, this report presents the design criteria, plans for the preliminary crossing and the preliminary design calculations. Finally, construction restrictions and a preliminary construction work plan are discussed.

Crossing Concepts

Two concepts were developed for the proposed crossing. Both concepts support a reinforced concrete "relieving slab" isolated from the soil above the siphon by a 6-inch layer of polystyrene foam. The first concept is supported on shallow spread footing foundations, and the second concept is supported on cast-in-drilled-hole (CIDH) concrete piles. Preliminary geometries and dimensions for both concepts are presented in Attachment 1.

Concept 1: Relieving Slab on Spread Footings

This concept is more consistent with the MWD Detail SK-1 from the *Guidelines for Improvements and Construction Projects Proposed in the Area of Metropolitan's Facilities and Right-of-Way*. An advantage of this concept is that it simplifies the settlement analysis by limiting the effects of the crossing structure on the global settlement behavior. The primary drawback of this concept is that, due to the quality of the native soil, the local settlement beneath the crossing is higher than in Concept 2. One mitigation method for this issue is to stage the construction to allow foundation settlement due to backfill and dead load to

© 2024 Kleinfelder

KLEINFELDER 770 First Avenue, Suite 400, San Diego, CA 92101 p | 619.831.4600 f | 619.232.1039

occur prior to the placement of the channel liner. Using this methodology, differential settlement between the crossing structure and the channel liner can be limited to under 1 inch. Another drawback of this concept is that it requires greater excavation than Concept 2 which, in turn, can impose greater heave on the siphon during the construction sequence. The magnitude of this heave can be reduced by dividing up the footing excavation and placing segments of the footings prior to excavating the full length of the footing.

Concept 2: Relieving Slab on CIDH Concrete Piles

This concept is supported on CIDH concrete piles that rely on skin friction along the length of the pile. The top portion of these concrete piles are cased in a smooth steel casing to limit the transfer of the forces from the piles to the siphon. The main benefit of this concept is that the crossing settlement can be reduced by increasing the pile length. Also, the overall structure width of Concept 2 is 14 feet less than Concept 1, allowing more room in the right of way for future MWD projects. One disadvantage of this concept is that, because the concrete piles are supported on deeper soil layers, the crossing structure may not necessarily settle with the adjacent surface level structures. This means that if significant subsidence or liquefaction occurs, the crossing structure may settle less than the surrounding structures resulting in it ending higher than the adjacent liner. A transition slab was incorporated into this option to mitigate this potential. Additionally, the installation of these piles has the potential to impose significant vibrations on the existing siphon. Preliminary analysis using of Caltrans' Transportation Construction Vibration Guidance Manual (April 2020) showed that drilling shafts at this distance from the siphon without exceeding the sustained peak particle velocity limit of 0.5 in/sec set by MWD is feasible. It should be noted though, there is some uncertainty in this analysis given the variability of soils and equipment.

Proposed Crossing Design

Of the concepts considered, the relieving slab on shallow foundations (Concept 1) was chosen as the proposed crossing type. This crossing geometry was chosen because its main limitations, including large crossing settlements and heave during excavation, can be mitigated to acceptable levels through construction staging. The CIDH concrete piles in Concept 2 present greater risk to the siphon during construction. Additionally, the possibility of the crossing rising above the adjacent channel lining due to the surrounding soil subsiding could infringe on the functionality of the channel. Preliminary plans for the proposed crossing are provided in Attachment 4, and preliminary structural calculations supporting this design are provided in Attachment 5.

Design Criteria

The crossing is designed according to AASHTO LRFD Bridge Design Specifications 8th Edition with Caltrans Amendments, dated August 2019 and Errata dated June 2024 as modified by the project specific Design Criteria Memo dated 01-12-2024 (provided in Attachment 2). In addition to the H-20 design vehicle discussed in the Design Criteria Memo, the anticipated service vehicles used by Riverside County Flood Control, a Volvo EC300E Excavator (36.5 Ton) and a Caterpillar D6 Bulldozer (24.25 Ton), are also considered. These two additional vehicles are treated as typical design vehicles, and their demand is

© 2024 Kleinfelder

included in the live load envelopes for Strength IA and Service IA load combinations. The geometries for these vehicles are presented in Attachment 5.

Settlement Analysis

A preliminary global settlement analysis using PLAXIS 3D was conducted for both concepts and included the adjacent channel berms. This settlement analysis calculated the displacement imposed on the existing siphon due to the crossing structure and berm construction sequence along with the subsequent water and live loading on the crossing and the surrounding area. This analysis determined the necessity of using lightweight fill (preliminarily assumed 30 pcf maximum unit weight) for the channel berms within the vicinity of the siphon (see Attachment 3 for preliminary limits of lightweight fill). Based on this analysis the proposed crossing would satisfy the MWD limit of 0.25 inches of settlement over 100 feet. This settlement analysis is discussed in the Project Geotechnical Investigation Report.

Construction Restrictions and Methods

Restrictions must be placed on staging and methods of construction to mitigate detrimental effects on the siphon during the construction of the crossing structure. These restrictions will be introduced here. Additionally, a preliminary work plan for the construction of this crossing is presented in Attachment 6.

Excavation for the footings shall be conducted symmetrically on either side of the siphon. The excavation and placement of the footings shall be broken into three stages to prevent excessive heave on the siphon. Additionally, to limit vibrational impacts to the siphon, flowable backfill shall be used for backfilling the footing. Placement of this backfill is to be conducted simultaneously on either side of the siphon and in front and behind the footings. A maximum difference in backfill depth of 1 foot is allowable in both locations. Excavation and backfill restrictions are discussed in greater detail in the Project Geotechnical Investigation Report.

MWD requires any excavation within 2 feet of the siphon to be performed with hand equipment. The footings are located such that the 1.5H:1V excavation slope does not infringe in this 2-foot buffer zone. The final cover over directly over the siphon is less than 2 feet and will require infringing on this buffer zone. As discussed in the preliminary work plan (Attachment 5) it is proposed that a vacuum truck be used to safely remove the soil in this region.

The formwork for the stem of the footing shall be supported without bracing against the soil covering the siphon. This can be achieved by bracing against heel of the footing and across to the stem formwork on the opposite side of the siphon. The base of the footing may be poured neat against the sides of the excavation.

Design Criteria Memo

PROJECT DESCRIPTION

This design criteria memo pertains to the proposed crossing structure to span the existing Casa Loma Barrel No. 1 Siphon. The crossing is located just west of the city of San Jacinto in Riverside County, California where the proposed San Jacinto Valley Master Drainage Plan (MDP) Line E storm water channel crosses the existing siphon. The purpose of the crossing structure is to prevent additional loading on the existing siphon due to channel loads including potential maintenance vehicles and water loads. The crossing structure will be placed where soil cover over the existing siphon is reduced to under 4 feet or where warranted by the results of settlement analysis.

DESIGN METHODOLOGY

The crossing will be designed according to AASHTO LRFD Bridge Design Specifications 8th Edition with Caltrans Amendments, dated August 2019 and Errata, dated October 2019 (AASHTO LRFD). Project specific requirements and modifications will be listed in the following sections. The Municipal Water District's (MWD) "Improvement and Construction Guidelines" (dated July 2018) is incorporated into this design criteria.

DESIGN LOAD

The crossing structure will be designed to support a single H-20 truck design vehicle with a multiple presence factor of 1.0. The crossing will be designed to resist the weight of water loading; the water height will match the height of the adjacent canal berms for strength loads cases and will match the 100-year flood level for service load cases. Vehicle loading and water loading will not be considered concurrently. Seismic loading will be checked to ensure the crossing structure does not impart additional seismic surcharge on the existing siphon. The applicable load combinations from the tables below will be used for the design of the crossing structures:

© 2024 Kleinfelder

KLEINFELDER 770 First Avenue, Suite 400, San Diego, CA 92101 p | 619.831.4600 f | 619.232.1039

CROSSING LOAD COMBINATIONS

Load Combination	DC, DD, DW, EH, EV, ES, EL, PS, CR & SH *	LL, IM, CE, BR, PL & LS	WA	TU	EQ
Strength IA	Υ_p	1.75	0	0.5/1.2	0
Strength IB	Υ_p	0	1	0.5/1.2	0
Service IA	1	1	0	1.0/1.2	0
Service IB	1	0	1	1.0/1.2	0
Extreme I	1	0	0	0	1

*Load factors for permanent loads are based on AASTHTO LRFD Table 3.4.1-2

GEOMETRIC LIMITS

The crossing structure will be designed to provide a minimum of 6 inches of undisturbed soil over the top of the Casa Loma Barrel No. 1 Siphon. Additionally, the crossing structure will be designed to allow for a compressible blanket, consisting of 6 inches of expanded polystyrene foam, to be placed between the bottom of the structure and top of the undisturbed soil. This compressible blanket will extend a minimum 1 foot past the edge of the existing siphon. If footings are used for the crossing structure, the edge of the footing will be offset a minimum of 5 feet from the outside of the existing siphon and placed so that a line running at a 45-degree angle from the toe of footing does not intersect the outside circumference of the existing siphon. If driven pile foundations are used to support the crossing structure no portion of the pile will infringe on a region within 20 feet of the center of the existing siphon. If drilled micropile or cast-in-place pile foundations are used, no portion of the pile will be placed within 5 feet of the outside of the existing siphon. If pile foundations are used, the piles will be detailed to prevent down drag forces from being developed above the centerline of the existing siphon.

DISPLACEMENT LIMITS

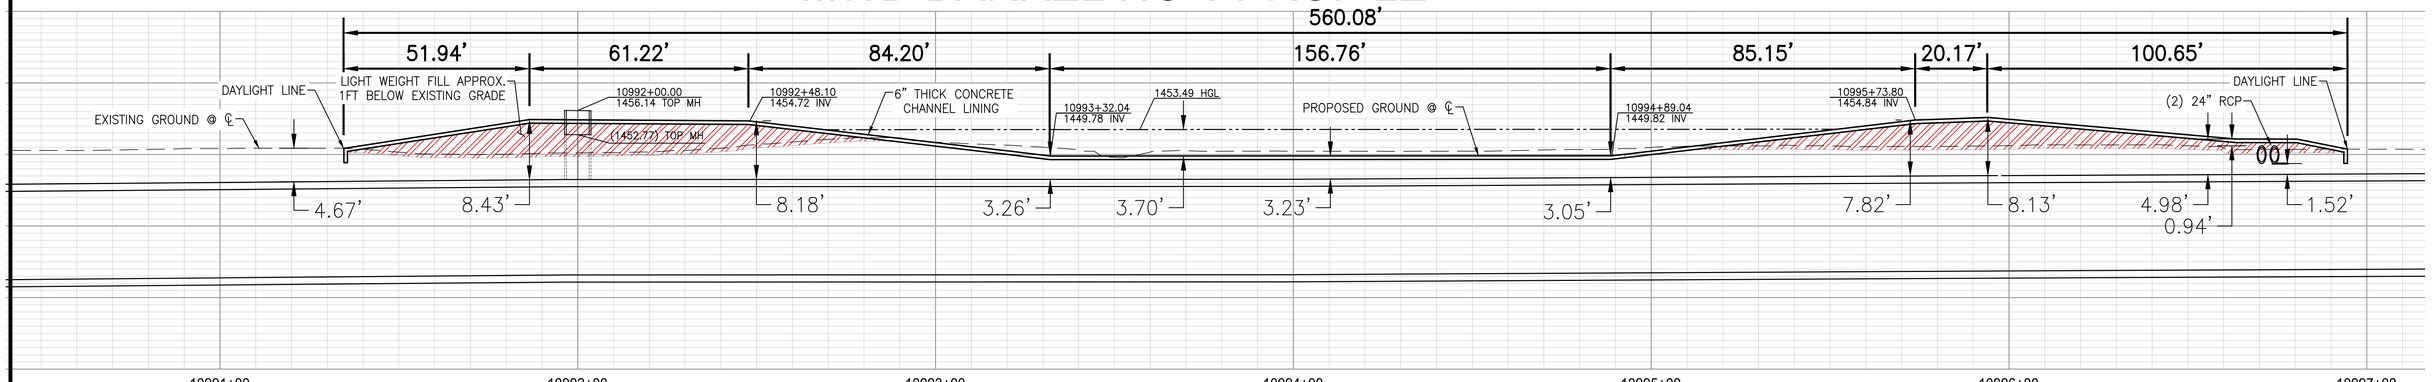
The maximum allowable differential settlement along the length of the existing siphon will not exceed ¼ inch over 100 feet. Differential settlement between the crossing structure and the adjacent channel liner will not exceed 1 inch. The combined crossing long-term structural deformation, short-term structural deformations and soil settlement will not exceed the thickness of the compressible blanket. Service load combinations will be used for the calculation of displacements.

CONCRETE COVER

AASHTO LRFD-CA Table 5.10.1-1 provides minimum concrete cover over reinforcement depending on the components and site conditions. Based on the geotechnical investigation this site is considered a non-marine environment with non-corrosive soil. Therefore, where concrete components are adjacent to soil, a minimum concrete cover of 3 inches will be used. A minimum of 2 inches of cover will be used for any surface exposed to the channel flow. A minimum of 1.5 inches of cover will be used for surfaces adjacent to the polystyrene foam. Where necessary, according to Caltrans Memo to Designer 10-5, these minimum

© 2024 Kleinfelder

covers may be reduced by utilizing epoxy coated rebar (ECR) and/or supplementary cementitious materials (SCM). Cover may be reduced by ½ inch when using post-fabricated ECRs and 1 inch when using pre-fabricated ECRs and/or SCM. By no means will clear cover be reduced below 1 inch.



CRACK CONTROL

AASHTO LRFD Article 5.6.7 provides a check to limit crack width under service level loading. Two design levels are given: Class 1 applies to conditions where a wider crack width is acceptable due to reduced concerns of appearance and corrosion. Class 2 applies where reducing crack width is desirable to improve appearance and corrosion resistance. A Class 2 exposure factor will be used for an surfaces exposed to the channel flow. A Class 1 exposure factor will be used elsewhere.

GENERAL NOTES:

DESIGN SPECIFICATIONS:
AASHTO LRFD BRIDGE DESIGN SPECIFICATIONS, 8TH EDITION 2017, AND THE CALIFORNIA AMENDMENTS, PREFACE DATED APRIL 2019 WITH JUNE 2024 ERRATA

CONSTRUCTION SPECIFICATIONS:

EXISTING CONDITIONS:
BEFORE PROCEEDING WITH ANY WORK, THE CONTRACTOR SHALL REVIEW EXISTING SITE CONDITIONS, VERIFY ALL DIMENSIONS AND VERIFY THE EXACT LOCATION OF EXISTING UTILITIES.

CONCRETE:
SLAB CONCRETE SHALL BE F'C = 5 KSI COMPRESSIVE STRENGTH @ 28 DAYS.
FOOTING CONCRETE SHALL BE F'C =3.6 KSI COMPRESSIVE STRENGTH @ 28 DAYS.

REINFORCING STEEL:
ALL REINFORCING STEEL SHALL BE ASTM A615 GRADE 60

CONSTRUCTION STAGING:
EXCAVATION, FOOTING PLACEMENT AND BACKFILL SHALL BE CONDUCTED CONCURRENTLY AND SYMMETRICALLY ON EITHER SIDE OF THE SIPHON. A MAXIMUM DIFFERENCE OF 1 FOOT IS ALLOWED BETWEEN THE EXCAVATION, CONCRETE AND BACKFILL ON EITHER SIDE OF THE SIPHON. THE PLACEMENT OF THE ADJACENT CONCRETE LINER SHALL OCCUR NO LESS THAN 1 WEEK AFTER THE PLACEMENT OF THE CROSSING SLAB.

BACKFILL:
BACKFILL SHALL CONSIST OF MEDIUM WEIGHT FLOWABLE FILL (UNIT WEIGHT OF 85 PCF ±). BACKFILL ON EITHER SIDE OF THE FOOTING SHALL BE PLACED CONCURRENTLY AND SYMETRICALLY SO THAT THE DIFFERENCE IN FILL DEPTH IS NOT GREATER THAN 1 FOOT.

NOT FOR CONSTRUCTION

Project Information

Project Discussion:
The San Jacinto Line E Storm Drain Project involves the design of approximately 3-miles of storm drain channel in the City of San Jacinto, California. Near the end of this proposed storm drain channel it crosses the existing Casa Loma Barrel No. 1 Siphon operated by the Metropolitan Water District (MWD). The construction of this channel requires the removal of some cover over the existing siphon. MWD requires a relieving slab to be constructed over this siphon if the cover is reduced below 4 feet. In order to construct the proposed channel a crossing over this existing siphon must be designed to support both the channel water loading and channel service vehicles.

Location:
San Jacinto, California

Structure Type:
28'-4" Single span 1'-2" deep reinforced concrete slab supported on spread footings.

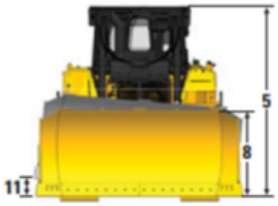
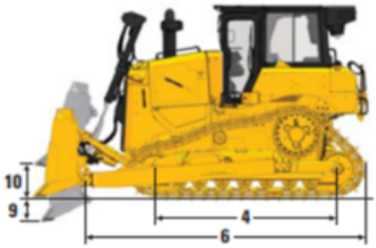
D6/D6 XE Track-Type Tractors Specifications

Configuration Tables – D6/D6 XE

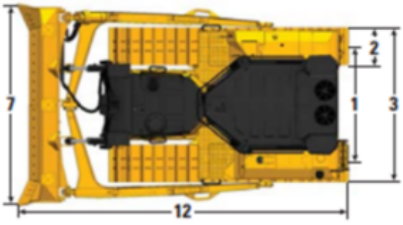
	Configuration	D6/D6 XE*	
	Operating Weight**	22 000 kg	48,500 lb
	Shipping Weight***	19 060 kg	42,020 lb
	Ground Pressure (ISO 16754)	54 kPa	7.9 psi
	Undercarriage (Standard)	42 Section with 7 Bottom Rollers	
1	Track Gauge	1.930 m	76 in
2	Width of Maximum Track Shoe	0.610 m	24 in
3	Width over Tracks	2.540 m	100 in
	Width over Trunnions	2.692 m	106 in
4	Length of Track on Ground	2.964 m	116.7 in
	Ground Contact Area (ISO 16754)	3.992 m²	6188 in²
	Track Pitch	0.2028 m	7.9 in
	Grouser Height (Moderate Service)	0.065 m	2.6 in
	Ground Clearance	0.361 m	14.2 in
	Oscillation at Front Idler	0.103 m	4.0 in
5	Machine Height****	3.172 m	124.9 in
6	Length of Machine without Blade	4.730 m	186.2 in



All dimensions above with Heavy Duty undercarriage with Moderate Service shoes of maximum width for configuration, 6 SU blade, and calculated per ISO 16754 unless otherwise specified.



*XE power train adds 0.7 kPA (0.1 psi) and 273 kg (600 lb) to the published ground pressure and weights.



**Operating weight includes blade, lubricants, coolant, full fuel tank, ROPS/FOPS cab, drawbar, and 75 kg (165 lb) operator.

***Shipping weight includes blade lift cylinders, lubricants, coolant, 10% fuel, ROPS/FOPS cab, and drawbar.

****Machine height from tip of grouser to top of Product Link™ Antenna. For sweeps, add 66 mm (2.6 in) to overall machine height. For forestry sweeps, add 122 mm (4.4 in). With Extreme Service Track Shoes add 12 mm (0.5 in). When Cat GRADE with 3D antennas are installed there is no addition to machine height.

5.3 Superstructure Design

Slab Design - H20 - Longitudinal

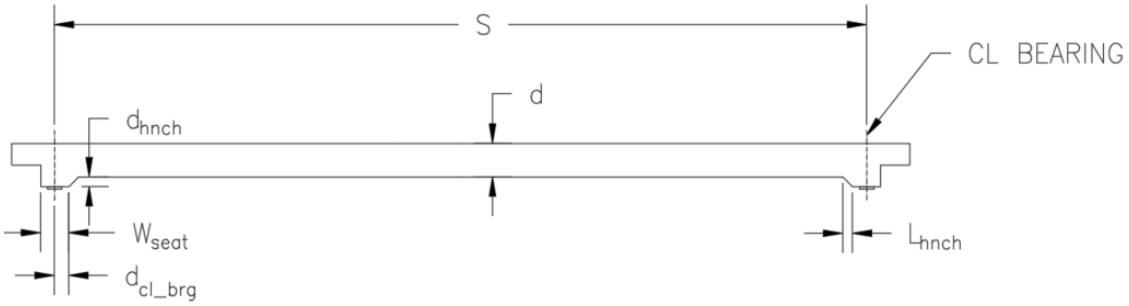
Included in these calculations are checks for:

+Flexure
+Minimum Reinforcement
+Crack Control
+Shear
+Longitudinal Reinforcement (Combined Shear-Flexure)
+Deflection
+Distribution Reinforcement
+Temperature and Shrinkage

Section:

$W := 40\ ft$ — Max expansion joint spacing

$S := 28\ ft + 4\ in = 28.33\ ft$ — Span length



$d_{cl_brg} := 6\ in$ — Distance to bearing CL

$d := 14\ in$ — Slab depth

$d_{hnch} := 4\ in$ — Haunch depth

$L_{hnch} := d_{hnch} = 0.333\ ft$ — Length haunch

$W_{seat} := 1\ ft$ — Seat width

Equivalent strip width For Box Culverts, AASHTO 4.6.2.10.2:

$$E := 96\ in + 1.44\ \frac{S}{ft} \cdot in = 11.4\ ft$$

$b := E = 11.4\ ft$ — Section width

Material Properties:

$f'_c := 5\ ksi$ — Nominal Concrete strength

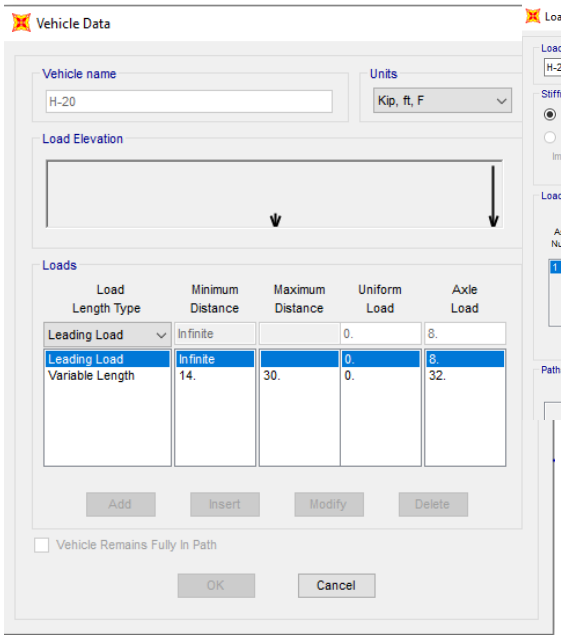
$\beta_1 := min\left(0.85, 0.85 - 0.05\left(\frac{f'_c}{ksi} - 4\right)\right) = 0.8$ — AASHTO 2017, 5.6.2.2

$\gamma_{c_ur} := \max\left(\left(0.14 + 0.001 \cdot \frac{f'_c}{ksi}\right), 0.145\right)\ kip \cdot ft^{-3} = 145\ pcf$ — Concrete unit weight (AASHTO 2017, Table 3.5.1-1):

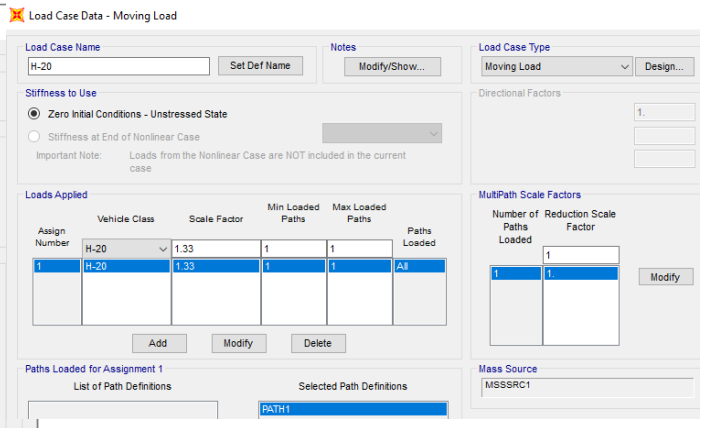
$E_c := 33000 \cdot \left(\frac{\gamma_{c_ur}}{kip \cdot ft^{-3}}\right)^{1.5} \cdot \sqrt{f'_c} \cdot ksi^{0.5} = 4074\ ksi$ — AASHTO 2017, EQ 5.4.2.4-1 Concrete modulus of elasticity

$\gamma_c := \max\left(\gamma_{c_ur} + 0.005\ kip \cdot ft^{-3}, 150\ pcf\right) = 150\ pcf$

$E_s := 29000\ ksi$ — Steel modulus of elasticity



$n := \text{round}\left(\frac{E_s}{E_c}\right) = 7$



$\gamma_w := 62.4\ pcf$

$\gamma_s := 125\ pcf$

SAP2000 Model

Slab Demands:

$\delta_{DL} := 0.367\ in$ Instantaneous dead load deflections based on effective section properties

$\delta_{LL} := 0.462\ in$ Live load deflections based on effective section properties H-20

$\delta_{WA_ser} := 0.484\ in$ Water load deflections based on effective section properties

$n_{mag} := \max\left(3 - 1.2\left(\frac{A'_s}{A_s}\right), 1.6\right) = 2.814$

$\delta_{Total_LT} := \max(\delta_{LL} + n_{mag} \cdot \delta_{DL}, \delta_{WA_ser} + n_{mag} \cdot \delta_{DL}) = 1.517\ in$

$\delta_{settle_Net} := 1\ in$ Settlement after placement of foundation and backfill

$\delta_{Total} := \delta_{Total_LT} + \delta_{settle_Net} = 2.517\ in$ <6 in, OK

Distribution Reinforcement (AASHTO 2017, 9.7.3.2):

Primary reinforcement is perpendicular to traffic:

$$P_{dist} := min\left(\frac{220}{100\sqrt{S \cdot ft^{-1}}}, 67\%\right) = 41.33\%$$

$$A_{dist_req} := P_{dist} \cdot \frac{(A_s)}{E} = 0.827\ \frac{in^2}{ft}$$

Use #7 @ 9"

$$A_{bar_dist} := A_{bar}(7) = 0.6\ in^2$$

$$s_{dist} := 8\ in$$

$$A_{dist} := \frac{A_{bar_dist}}{s_{dist}} = 0.9\ \frac{in^2}{ft}$$

$$DCR_{dist} := \frac{A_{dist_req}}{A_{dist}} = 0.918$$ <1, OK

Temperature and Shrinkage (AASHTO LRFD 2017, 5.10.6):

By inspection the #5@12 T&S in the 12" slab over the 14" fuel line will control, check this case.

$d_{cl_brg} = 0.5\ ft$

$L_{slb} := S + 2 \cdot \left(2\ ft - d_{cl_brg}\right) = 31.333\ ft$

$b_0 := min\left(W, L_{slb}\right) \cdot in^{-1} = 376$ Slab width (inches)

$h_0 := d \cdot in^{-1} = 14$ Slab thickness (inches)

$f_{y0} := 60$

$$A_{s_min} := \left(\frac{1.3 \cdot b_0 \cdot h_0}{2 \cdot \left(b_0 + h_0\right) \cdot f_{y0}}\right) \frac{in^2}{ft} = 0.146\ \frac{in^2}{ft}$$

Transverse reinforcement (#5s @ 12" spacing)

$b_{sz} := 5$

$A_{s_0} := A_{bar}\left(b_{sz}\right) = 0.31\ in^2$

$s_0 := 12\ in$

$$A_{s0} := \frac{A_{s_0}}{s_0} = 0.31\ \frac{in^2}{ft}$$

$\frac{A_{s_min}}{A_{s0}} = 0.472$ <1, OK

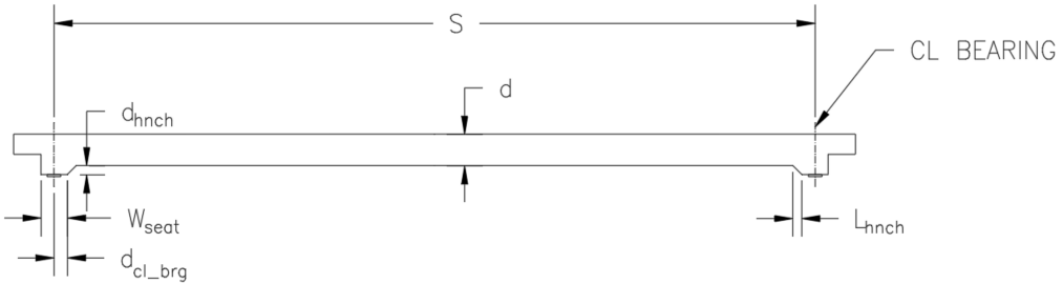
Slab Design - H20 - Transverse

Included in these calculations are checks for:

+Flexure
+Minimum Reinforcement
+Crack Control
+Shear
+Longitudinal Reinforcement (Combined Shear-Flexure)
+Deflection

Section:

$S := 28\ ft + 4\ in = 28.33\ ft$ Span length



$d_{cl_brg} := 6\ in$ Distance to bearing CL

$d := 14\ in$ Slab depth

$d_{hnch} := 4\ in$ Haunch depth

$L_{hnch} := d_{hnch} = 4\ in$ Length haunch

$W_{seat} := 1\ ft$ Seat width

Equivalent strip width, per AASHTO Article 4.6.2.10.3, when traffic travels perpendicular to the span the provisions of Article 4.6.2.1 should be used. due to its length it is assumed he slab will be placed in sections creating joints perpendicular to the direction of traffic. To account for this only half the effective width is used per 4.6.2.1.4c.

$$E_p := 0.5 \left(26\ in + 6.6 \frac{S}{ft} \cdot in\right) = 8.875\ ft$$

$b := E_p = 8.875\ ft$ Section width

Material Properties:

Slab Design - Excavator and Bulldozer

Included in these calculations are checks for:

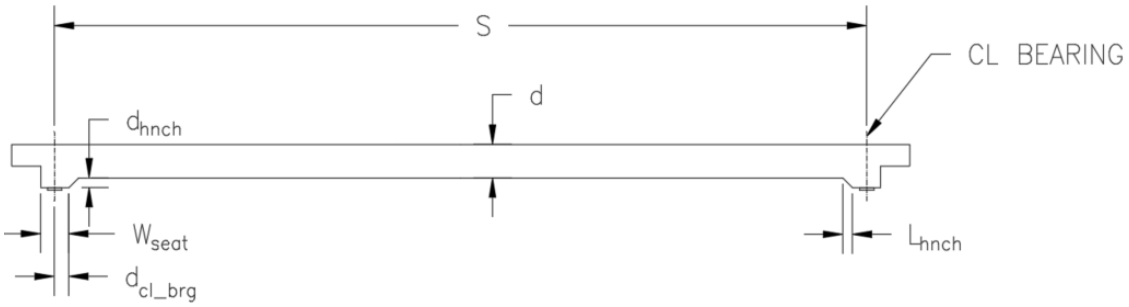
+Flexure
+Minimum Reinforcement
+Crack Control
+Shear
+Longitudinal Reinforcement (Combined Shear-Flexure)

Analysis:

The excavator and bulldozer vehicles that will be used to service this channel have a axle widths and patch loadings inconsistent with the standard AASHTO design vehicles. Because of this the equivalent strip width methodolgy used elsewhere in these calculations is not appropriate. To analyze the force effects of these vehicles an shell model is created in SAP2000. This model uses thick shell elements with a 5" mesh size. The slab is supported by pins at the center of the bearings. Area loads are applied on the slab over the area of the track. The excavator and bulldozer are placed longitudinally and tranversely on the slab as shown on the following sheets.

Section:

$S := 28\ ft + 4\ in = 28.33\ ft$ Span length



$d_{cl_brg} := 6\ in$ Distance to bearing CL

$d := 14\ in$ Slab depth

$d_{hnch} := 4\ in$ Haunch depth

Bulldozer - Transverse - Shear

A shear stress concentration was observed near the bearings in all three shear load cases with the maximum magnitude shown in the longitudinal excavator load case.

To determine a clearer demand a model was refined with 1"x1" mesh in the vicinity of the bearing and with the bearing modelled by a number of springs with a realistic total stiffness based on the bearing design. The stress concentration is located within the end diaphragm so demand is taken at the edge of fillet 10" from the CL of bearing.

Spring Stiffness

$\varepsilon_{brg} := 6.95\%$	Bearing compressive strain (see bearing design)
$\sigma_{brg} := 703\ psi$	Bearing compressive stress (see bearing design)
$E_{brg} := \frac{\sigma_{brg}}{\varepsilon_{brg}} = 10115\ psi$	Effective bearing elastic modulus

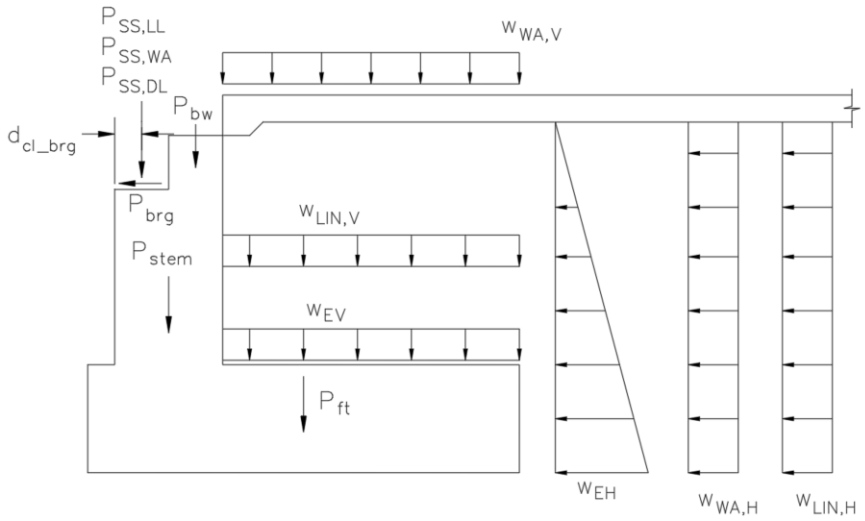
6.3.1 External Stability

Wall Global Stability Check

Typical Footing Height



Crossing Slab Geometry:

$S_{slab_clr} := 27.33\ ft$	Clear slab span
$t_{slab} := 14\ in$	Minimum slab depth
$t_{hnch} := 4\ in$	Depth of haunch
$t_{end} := 9\ in$	Depth slab extension

Foundation Wall Geometry:

$W_{seat} := 12\ in$	Seat width
$t_{ft} := 24\ in$	Footing thickness
$t_{stem} := 24\ in$	Stem thickness
$H := 7.75\ ft$	Wall height
$H_{bw} := t_{slab} + t_{hnch} - t_{end} = 9\ in$	Backwall height
$W_{ft} := 10\ ft$	Length of footing
$t_{liner} := 6\ in$	Liner thickness
$d_{cl_brg} := 0.5\ ft$	Distance to centerline of bearing
$L_{toe} := 0.5\ ft$	Length of footing toe
$t_{bw} := t_{stem} - W_{seat} = 1\ ft$	Backwall thickness
$e_{brg} := 0.5 \cdot W_{ft} - d_{cl_brg} - L_{toe} = 4\ ft$	Bearing load eccentricity from footing center

Demand:

Crossing Slab Dead Loads:

$\gamma_{c_slab} := 150\ pcf$ Crossing slab concrete unit weight

Cross sectional area of crossing slab:

$A_{slab} := S_{slab_clr} \cdot t_{slab} + 2\ \left(0.5 \cdot t_{hnch}{}^2 + t_{end} \cdot t_{bw} + W_{seat} \cdot \left(t_{hnch} + t_{slab}\right)\right) = 36.496\ ft^2$

$P_{SS_DL} := \gamma_{c_slab} \cdot \left(0.5 \cdot A_{slab}\right) = 2.737\ klf$ Tributary slab weight

$M_{SS_DL} := P_{SS_DL} \cdot e_{brg} = 10.949\ \frac{kip \cdot ft}{ft}$ Moment about center of footing

Crossing Slab Water Loads:

$\gamma_w := 62.4\ pcf$ Water unit weight

$h_{w_ser} := 3.7\ ft$ Water depth service loading

$p_{WA_ser} := \gamma_w \cdot h_{w_ser} = 0.231\ ksf$ Pressure due to service water level

Tributary slab water loading:

$L_{slab_trib} := 0.5\ S_{slab_clr} + W_{seat} + t_{bw} = 15.665\ ft$

$P_{SS_WA_ser} := p_{WA_ser} \cdot L_{slab_trib} = 3.617\ klf$

Moments about center of footing

$M_{SS_WA_ser} := P_{SS_WA_ser} \cdot e_{brg} = 14.467\ \frac{kip \cdot ft}{ft}$

Crossing Slab Live Loads:

See calculations at the end of section for the calculation of the distributed live load

$P_{SS_LL} := 3.53\ klf$ — Live load distributed load

$M_{SS_LL} := P_{SS_LL} \cdot e_{brg} = 14.12\ \frac{kip \cdot ft}{ft}$ — Live load Moment

Wall Dead Load:

$\gamma_c := 150\ pcf$ — Typical concrete unit weight

$P_{bw} := \gamma_c \cdot (t_{bw}) \cdot (H_{bw}) = 0.113\ klf$ — Backwall load

$e_{bw} := 0.5\ W_{ft} - (W_{seat} + 0.5\ t_{bw} + L_{toe}) = 3\ ft$ — Backwall eccentricity

$P_{stem} := \gamma_c \cdot (t_{stem})\ (H - (t_{slab} + t_{hnch}) - t_{ft}) = 1.275\ klf$ — Stem load

$e_{stem} := 0.5\ W_{ft} - (0.5\ t_{stem} + L_{toe}) = 3.5\ ft$ — Stem eccentricity

$P_{ft} := \gamma_c \cdot (t_{ft})\ (W_{ft}) = 3\ klf$ — Footing load

$e_{ft} := 0.5\ W_{ft} - 0.5\ W_{ft} = 0\ ft$ — Footing eccentricity

$P_{DC} := P_{bw} + P_{stem} + P_{ft} = 4.388\ klf$ — Dead load

$M_{DC} := P_{bw} \cdot e_{bw} + P_{stem} \cdot e_{stem} + P_{ft} \cdot e_{ft} = 4.8\ \frac{kip \cdot ft}{ft}$ — Dead moment

$e_{DC} := \frac{M_{DC}}{P_{DC}} = 1.094\ ft$ — Dead load eccentricity

Soil Loading:

$\gamma_s := 85\ pcf$ Unit weight of soil

$k_a := 0.33$ Active coefficient of soil

$L_{heel} := W_{ft} - t_{stem} - L_{toe} = 7.5\ ft$ Length of heel

$p_{EV} := \left(H - t_{liner} - t_{ft}\right) \cdot \gamma_s = 0.446\ ksf$ Vertical soil pressure on footing

$P_{EV_heel} := L_{heel} \cdot p_{EV} = 3.347\ klf$ Vertical soil load on heel

$e_{EV_heel} := 0.5\ W_{ft} - \left(L_{toe} + t_{stem} + 0.5\ L_{heel}\right) = -1.25\ ft$ Eccentricity of vert heel soil load

$P_{EV_toe} := L_{toe} \cdot p_{EV} = 0.223\ klf$

$e_{EV_toe} := 0.5\ W_{ft} - \left(0.5\ L_{toe}\right) = 4.75\ ft$

$M_{EV} := P_{EV_heel} \cdot e_{EV_heel} + P_{EV_toe} \cdot e_{EV_toe} = -3.124\ \frac{kip \cdot ft}{ft}$ Moment of Vert soil load on wall

$P_{EV} := P_{EV_heel} + P_{EV_toe} = 3.57\ klf$ Vertical soil load

$e_{EV} := \frac{M_{EV}}{P_{EV}} = -0.875\ ft$ Eccentricity of vertical soil load on heel

$p_{EH} := \left(H - t_{liner}\right) \cdot k_a \cdot \gamma_s = 0.203\ ksf$ Maximum hrz soil pressure

$P_{EH} := 0.5 \cdot \left(H - t_{liner}\right) \cdot p_{EH} = 0.737\ klf$ Horizontal soil load on wall

$e_{EH} := 0.333\ \left(H - t_{liner}\right) = 2.414\ ft$ Eccentricity of hrz soil load

$M_{EH} := P_{EH} \cdot e_{EH} = 1.78\ \frac{kip \cdot ft}{ft}$ Moment of hrz soil load on wall

Liner Surcharge:

$p_{LIN_V} := \gamma_c \cdot t_{liner} = 0.075\ ksf$ Liner vertical surcharge pressure

$P_{LIN_V} := p_{LIN_V} \cdot L_{heel} = 0.563\ klf$ Liner vertical surcharge load

$e_{LIN_V} := 0.5\ W_{ft} - \left(L_{toe} + t_{stem} + 0.5\ L_{heel}\right) = -1.25\ ft$ Liner vertical surcharge eccentricity

$M_{LIN_V} := P_{LIN_V} \cdot e_{LIN_V} = -0.703\ \frac{kip \cdot ft}{ft}$ Moment of liner vertical surcharge

$p_{LIN_H} := \gamma_c \cdot t_{liner} \cdot k_a = 0.025\ ksf$ Liner hrz. surcharge pressure

$P_{LIN_H} := p_{LIN_H} \cdot \left(H - t_{liner}\right) = 0.179\ klf$ Liner horizontal surcharge load

$e_{LIN_H} := 0.5\ \left(H - t_{liner}\right) = 3.625\ ft$ Liner hrz. surcharge eccentricity

$M_{LIN_H} := P_{LIN_H} \cdot e_{LIN_H} = 0.65\ \frac{kip \cdot ft}{ft}$ Moment of liner hrz. surcharge

Water Surcharge:

$p_{WA_V_ser} := \gamma_w \cdot h_{w_ser} = 0.231$ **ksf** — Pressure from service water level

$P_{WA_V_ser} := L_{heel} \cdot p_{WA_V_ser} = 1.732$ **klf** — Load due to service water level

$e_{WA_V} := 0.5\ W_{ft} - \left(L_{toe} + t_{stem} + 0.5\ L_{heel}\right) = -1.25$ **ft** — Water load eccentricity

$M_{WA_V_ser} := P_{WA_V_ser} \cdot e_{WA_V} = -2.165\ \frac{\textbf{kip} \cdot \textbf{ft}}{\textbf{ft}}$ — Moment due to service water load

$p_{WA_H_ser} := \gamma_w \cdot h_{w_ser} \cdot k_a = 0.076$ **ksf** — Hrz pressure from service water level

$P_{WA_H_ser} := \left(H - t_{liner}\right) \cdot p_{WA_H_ser} = 0.552$ **klf** — Hrz load due to service water level

$e_{WA_H} := 0.5\ \left(H - t_{liner}\right) = 3.625$ **ft** — Hrz water load eccentricity

$M_{WA_H_ser} := P_{WA_H_ser} \cdot e_{WA_H} = 2.002\ \frac{\textbf{kip} \cdot \textbf{ft}}{\textbf{ft}}$ — Moment due to service hrz water load

Transverse Bearing Load:

$\mu := 0.2$ — Coefficient of friction between concrete and neoprene

$P_{SS_DL} = 2.737$ **klf**

$P_{brg_H} := \mu \cdot P_{SS_DL} = 0.547$ **klf**

$e_{brg_H} := H - t_{slab} - t_{hnch} = 6.25$ **ft**

$M_{brg_H} := P_{brg_H} \cdot e_{brg_H} = 3.422\ \frac{\textbf{kip} \cdot \textbf{ft}}{\textbf{ft}}$

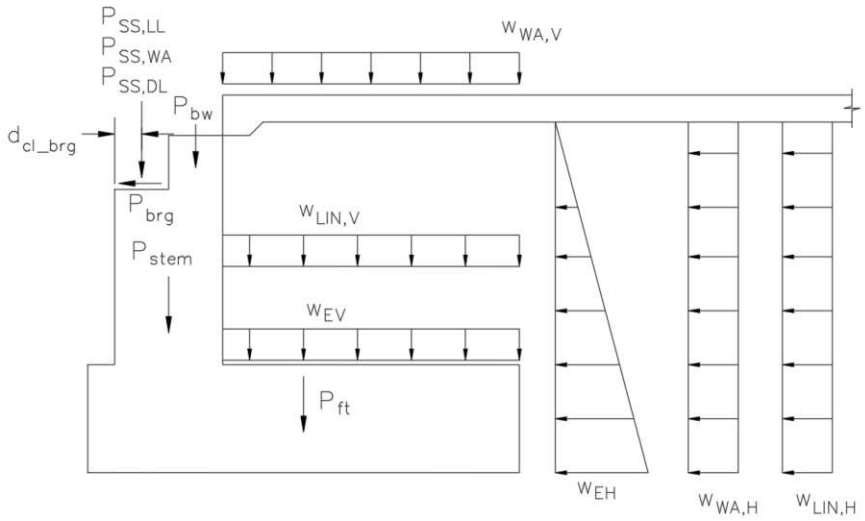
Wall Global Stability Check

Maximum Footing Height



Crossing Slab Geometry:

$S_{slab_clr} := 27.33\ ft$	Clear slab span
$t_{slab} := 14\ in$	Minimum slab depth
$t_{hnch} := 4\ in$	Depth of haunch
$t_{end} := 9\ in$	Depth slab extension

Foundation Wall Geometry:

$W_{seat} := 12\ in$	Seat width
$t_{ft} := 24\ in$	Footing thickness
$t_{stem} := 24\ in$	Stem thickness
$H := 9.25\ ft$	Wall height
$H_{bw} := t_{slab} + t_{hnch} - t_{end} = 9\ in$	Backwall height
$W_{ft} := 10\ ft$	Length of footing
$t_{liner} := 6\ in$	Liner thickness
$d_{cl_brg} := 0.5\ ft$	Distance to centerline of bearing
$L_{toe} := 0.5\ ft$	Length of footing toe
$t_{bw} := t_{stem} - W_{seat} = 1\ ft$	Backwall thickness
$e_{brg} := 0.5 \cdot W_{ft} - d_{cl_brg} - L_{toe} = 4\ ft$	Bearing load eccentricity from footing center

Demand:

Crossing Slab Dead Loads:

$\gamma_{c_slab} := 150\ pcf$ Crossing slab concrete unit weight

Cross sectional area of crossing slab:

$A_{slab} := S_{slab_clr} \cdot t_{slab} + 2\ \left(0.5 \cdot t_{hnch}{}^2 + t_{end} \cdot t_{bw} + W_{seat} \cdot \left(t_{hnch} + t_{slab}\right)\right) = 36.496\ ft^2$

$P_{SS_DL} := \gamma_{c_slab} \cdot \left(0.5 \cdot A_{slab}\right) = 2.737\ klf$ Tributary slab weight

$M_{SS_DL} := P_{SS_DL} \cdot e_{brg} = 10.949\ \frac{kip \cdot ft}{ft}$ Moment about center of footing

Crossing Slab Water Loads:

$\gamma_w := 62.4\ pcf$ Water unit weight

$h_{w_ser} := 2.2\ ft$ Water depth service loading

$p_{WA_ser} := \gamma_w \cdot h_{w_ser} = 0.137\ ksf$ Pressure due to service water level

Tributary slab water loading:

$L_{slab_trib} := 0.5\ S_{slab_clr} + W_{seat} + t_{bw} = 15.665\ ft$

$P_{SS_WA_ser} := p_{WA_ser} \cdot L_{slab_trib} = 2.15\ klf$

Moments about center of footing

$M_{SS_WA_ser} := P_{SS_WA_ser} \cdot e_{brg} = 8.602\ \frac{kip \cdot ft}{ft}$

Crossing Slab Live Loads:

See calculations at the end of section for the calculation of the distributed live load

$P_{SS_LL} := 3.03\ klf$ — Live load distributed load

$M_{SS_LL} := P_{SS_LL} \cdot e_{brg} = 12.12\ \frac{kip \cdot ft}{ft}$ — Live load Moment

Wall Dead Load:

$\gamma_c := 150\ pcf$ — Typical concrete unit weight

$P_{bw} := \gamma_c \cdot (t_{bw}) \cdot (H_{bw}) = 0.113\ klf$ — Backwall load

$e_{bw} := 0.5\ W_{ft} - (W_{seat} + 0.5\ t_{bw} + L_{toe}) = 3\ ft$ — Backwall eccentricity

$P_{stem} := \gamma_c \cdot (t_{stem})\ (H - (t_{slab} + t_{hnch}) - t_{ft}) = 1.725\ klf$ — Stem load

$e_{stem} := 0.5\ W_{ft} - (0.5\ t_{stem} + L_{toe}) = 3.5\ ft$ — Stem eccentricity

$P_{ft} := \gamma_c \cdot (t_{ft})\ (W_{ft}) = 3\ klf$ — Footing load

$e_{ft} := 0.5\ W_{ft} - 0.5\ W_{ft} = 0\ ft$ — Footing eccentricity

$P_{DC} := P_{bw} + P_{stem} + P_{ft} = 4.838\ klf$ — Dead load

$M_{DC} := P_{bw} \cdot e_{bw} + P_{stem} \cdot e_{stem} + P_{ft} \cdot e_{ft} = 6.375\ \frac{kip \cdot ft}{ft}$ — Dead moment

$e_{DC} := \frac{M_{DC}}{P_{DC}} = 1.318\ ft$ — Dead load eccentricity

Soil Loading:

$\gamma_s := 85\ pcf$ Unit weight of soil

$k_a := 0.33$ Active coefficient of soil

$L_{heel} := W_{ft} - t_{stem} - L_{toe} = 7.5\ ft$ Length of heel

$p_{EV} := \left(H - t_{liner} - t_{ft}\right) \cdot \gamma_s = 0.574\ ksf$ Vertical soil pressure on footing

$P_{EV_heel} := L_{heel} \cdot p_{EV} = 4.303\ klf$ Vertical soil load on heel

$e_{EV_heel} := 0.5\ W_{ft} - \left(L_{toe} + t_{stem} + 0.5\ L_{heel}\right) = -1.25\ ft$ Eccentricity of vert heel soil load

$P_{EV_toe} := L_{toe} \cdot p_{EV} = 0.287\ klf$

$e_{EV_toe} := 0.5\ W_{ft} - \left(0.5\ L_{toe}\right) = 4.75\ ft$

$M_{EV} := P_{EV_heel} \cdot e_{EV_heel} + P_{EV_toe} \cdot e_{EV_toe} = -4.016\ \frac{kip \cdot ft}{ft}$ Moment of Vert soil load on wall

$P_{EV} := P_{EV_heel} + P_{EV_toe} = 4.59\ klf$ Vertical soil load

$e_{EV} := \frac{M_{EV}}{P_{EV}} = -0.875\ ft$ Eccentricity of vertical soil load on heel

$p_{EH} := \left(H - t_{liner}\right) \cdot k_a \cdot \gamma_s = 0.245\ ksf$ Maximum hrz soil pressure

$P_{EH} := 0.5 \cdot \left(H - t_{liner}\right) \cdot p_{EH} = 1.074\ klf$ Horizontal soil load on wall

$e_{EH} := 0.333\ \left(H - t_{liner}\right) = 2.914\ ft$ Eccentricity of hrz soil load

$M_{EH} := P_{EH} \cdot e_{EH} = 3.129\ \frac{kip \cdot ft}{ft}$ Moment of hrz soil load on wall

Liner Surcharge:

$p_{LIN_V} := \gamma_c \cdot t_{liner} = 0.075\ ksf$ Liner vertical surcharge pressure

$P_{LIN_V} := p_{LIN_V} \cdot L_{heel} = 0.563\ klf$ Liner vertical surcharge load

$e_{LIN_V} := 0.5\ W_{ft} - \left(L_{toe} + t_{stem} + 0.5\ L_{heel}\right) = -1.25\ ft$ Liner vertical surcharge eccentricity

$M_{LIN_V} := P_{LIN_V} \cdot e_{LIN_V} = -0.703\ \frac{kip \cdot ft}{ft}$ Moment of liner vertical surcharge

$p_{LIN_H} := \gamma_c \cdot t_{liner} \cdot k_a = 0.025\ ksf$ Liner hrz. surcharge pressure

$P_{LIN_H} := p_{LIN_H} \cdot \left(H - t_{liner}\right) = 0.217\ klf$ Liner horizontal surcharge load

$e_{LIN_H} := 0.5\ \left(H - t_{liner}\right) = 4.375\ ft$ Liner hrz. surcharge eccentricity

$M_{LIN_H} := P_{LIN_H} \cdot e_{LIN_H} = 0.947\ \frac{kip \cdot ft}{ft}$ Moment of liner hrz. surcharge

Water Surcharge:

$p_{WA_V_ser} := \gamma_w \cdot h_{w_ser} = 0.137$ **ksf** — Pressure from service water level

$P_{WA_V_ser} := L_{heel} \cdot p_{WA_V_ser} = 1.03$ **klf** — Load due to service water level

$e_{WA_V} := 0.5\ W_{ft} - \left(L_{toe} + t_{stem} + 0.5\ L_{heel}\right) = -1.25$ **ft** — Water load eccentricity

$M_{WA_V_ser} := P_{WA_V_ser} \cdot e_{WA_V} = -1.287\ \frac{\textbf{kip} \cdot \textbf{ft}}{\textbf{ft}}$ — Moment due to service water load

$p_{WA_H_ser} := \gamma_w \cdot h_{w_ser} \cdot k_a = 0.045$ **ksf** — Hrz pressure from service water level

$P_{WA_H_ser} := \left(H - t_{liner}\right) \cdot p_{WA_H_ser} = 0.396$ **klf** — Hrz load due to service water level

$e_{WA_H} := 0.5\ \left(H - t_{liner}\right) = 4.375$ **ft** — Hrz water load eccentricity

$M_{WA_H_ser} := P_{WA_H_ser} \cdot e_{WA_H} = 1.734\ \frac{\textbf{kip} \cdot \textbf{ft}}{\textbf{ft}}$ — Moment due to service hrz water load

Transverse Bearing Load:

$\mu := 0.2$ — Coefficient of friction between concrete and neoprene

$P_{SS_DL} = 2.737$ **klf**

$P_{brg_H} := \mu \cdot P_{SS_DL} = 0.547$ **klf**

$e_{brg_H} := H - t_{slab} - t_{hnch} = 7.75$ **ft**

$M_{brg_H} := P_{brg_H} \cdot e_{brg_H} = 4.243\ \frac{\textbf{kip} \cdot \textbf{ft}}{\textbf{ft}}$

6.3.2 Stem and Footing Design

Stem Structural Check

Included in these calculations are checks for:

+Flexure
+Minimum Reinforcement
+Crack Control
+Shear
+Longitudinal Reinforcement (Combined Shear-Flexure)

Section:

$b := 1\ ft$ Footing strip width

$d := 24\ in$ Footing depth

Material Properties:

$f'_c := 3.6\ ksi$ Nominal Concrete strength

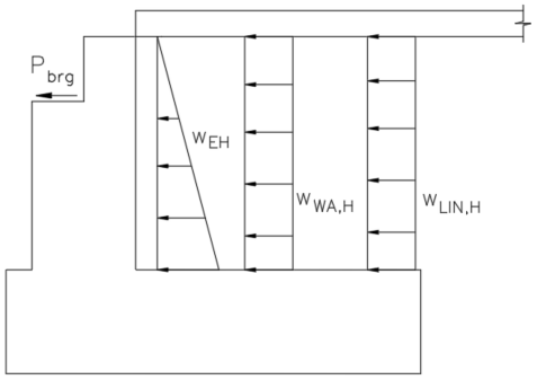
$\beta_1 := min\left(0.85, 0.85 - 0.05\left(\frac{f'_c}{ksi} - 4\right)\right) = 0.85$ AASHTO 2017, 5.6.2.2

$\gamma_{c_ur} := \max\left(\left(0.14 + 0.001 \cdot \frac{f'_c}{ksi}\right), 0.145\right)\ kip \cdot ft^{-3} = 145\ pcf$ Concrete unit weight (AASHTO 2017, Table 3.5.1-1):

$E_c := 33000 \cdot \left(\frac{\gamma_{c_ur}}{kip \cdot ft^{-3}}\right)^{1.5} \cdot \sqrt{f'_c} \cdot ksi^{0.5} = 3457\ ksi$ AASHTO 2017, EQ 5.4.2.4-1 Concrete modulus of elasticity

$E_s := 29000\ ksi$ Steel modulus of elasticity

$n := \text{round}\left(\frac{E_s}{E_c}\right) = 8$



Resistance Factors:

$\phi_f := 0.9$

$\phi_c := 0.75$

$\phi_v := 0.9$

Footing Demands:

$DC_{MinR_neg} := \frac{M_{r_min}}{\phi_f \cdot M_n} = 0.566$ <1, OK

Crack Control by Distribution of Reinforcing (AASHTO 2017, 5.6.7):

$s_1 := s = 12\ in$ Spacing of flexure steel

$M_s = 7.63\ kip \cdot ft$
$d_s = 20.655\ in$
$b = 12\ in$
$n = 8$
$d_c := d - d_s = 3.345\ in$
$h := d = 2\ ft$

$$\beta_s := 1 + \frac{d_c}{0.7\ (h - d_c)} = 1.231$$

$\gamma_e := 1$ Assume Exposure Class 1, low visibility

for rectangular sections: $\frac{-b_{cap} \cdot y_{rec}^{\ 2}}{2} + n \cdot A_{s1}\left(d_{s1_n} - y_{rec}\right) + n \cdot A_{s2}\left(d_{s2_n} - y_{rec}\right) = 0$

$a_o := \frac{-b}{2}$
$b_o := -n \cdot A_s$ $A_s = 0.31\ in^2$
$c_o := n \cdot \left(A_s \cdot d_s\right)$

$$y := \frac{-b_o - \sqrt{b_o^{\ 2} - 4 \cdot a_o \cdot c_o}}{2 \cdot a_o} = 2.723\ in$$

$$I_{eff} := \frac{b \cdot y^3}{3} + n \cdot \left(A_s \cdot \left(d_s - y\right)^2\right) = 878\ in^4$$

$$f_{ss} := \operatorname{abs}\left(n \cdot \frac{M_s \cdot \left(d_s - y\right)}{I_{eff}}\right) = 14.957\ ksi$$ Stress in flexure steel at service loading

$$s_{max} := \left(\frac{700\ \gamma_e \cdot ksi}{\beta_s \cdot f_{ss}} - 2\ \frac{d_c}{1\ in}\right) in = 31.319\ in$$

$DC_{CrC} := \frac{s_1}{s_{max}} = 0.383$ <1, OK

Maximum Shear:

Demands at Section:

$V_u = 3.6\ kip$ Vertical shear force on section

+ Shear Calculations:

Transverse Steel:

No steel provided

d_v Calculation:

$f_y = 60\ ksi$ $A_s = 0.31\ in^2$ $d_s = 20.655\ in$

$d_{v1} := 0.72 \cdot (d) = 17.28\ in$

$d_{v2} := 0.9 \cdot (d_s) = 18.59\ in$

$d_v := \max(d_{v1}, d_{v2}) = 18.59\ in$

Vc and Vs calculations (AASHTO 2017, 5.7.3.3):

$f'_c = 3.6\ ksi$
$b_v := b = 12\ in$

$\theta := 45\ deg$

$\beta := 2.0$

$V_s := 0\ kip$ AASHTO 2017, (5.7.3.3-4)

$V_c := 0.0316 \cdot \beta \cdot \sqrt{f'_c} \cdot ksi^{0.5} \cdot b_v \cdot d_v = 27\ kip$ AASHTO 2017, (5.7.3.3-3)

Shear Capacity Calculation (AASHTO 2017, 5.7.3.3):

$\phi V_{n1} := \phi_v \cdot 0.25 \cdot f'_c \cdot b_v \cdot d_v = 181\ kip$

$\phi V_{n2} := \phi_v \cdot (V_s + V_c) = 24\ kip$

$\phi V_n := min(\phi V_{n1}, \phi V_{n2}) = 24.1\ kip$

$DCR := \frac{\text{abs}(V_u)}{\phi V_n} = 0.15$ <1, OK

+Longitudinal Reinforcement Calculation:

Longitudinal Reinforcement (AASHTO 2017, 5.7.3.5):

Flexural Component:

$M_u = 12.12\ kip \cdot ft \qquad d_v = 18.59\ in \qquad \phi_f = 0.9$

$$D_M := \frac{\text{abs}\left(M_u\right)}{\phi_f \cdot d_v} = 9\ kip$$

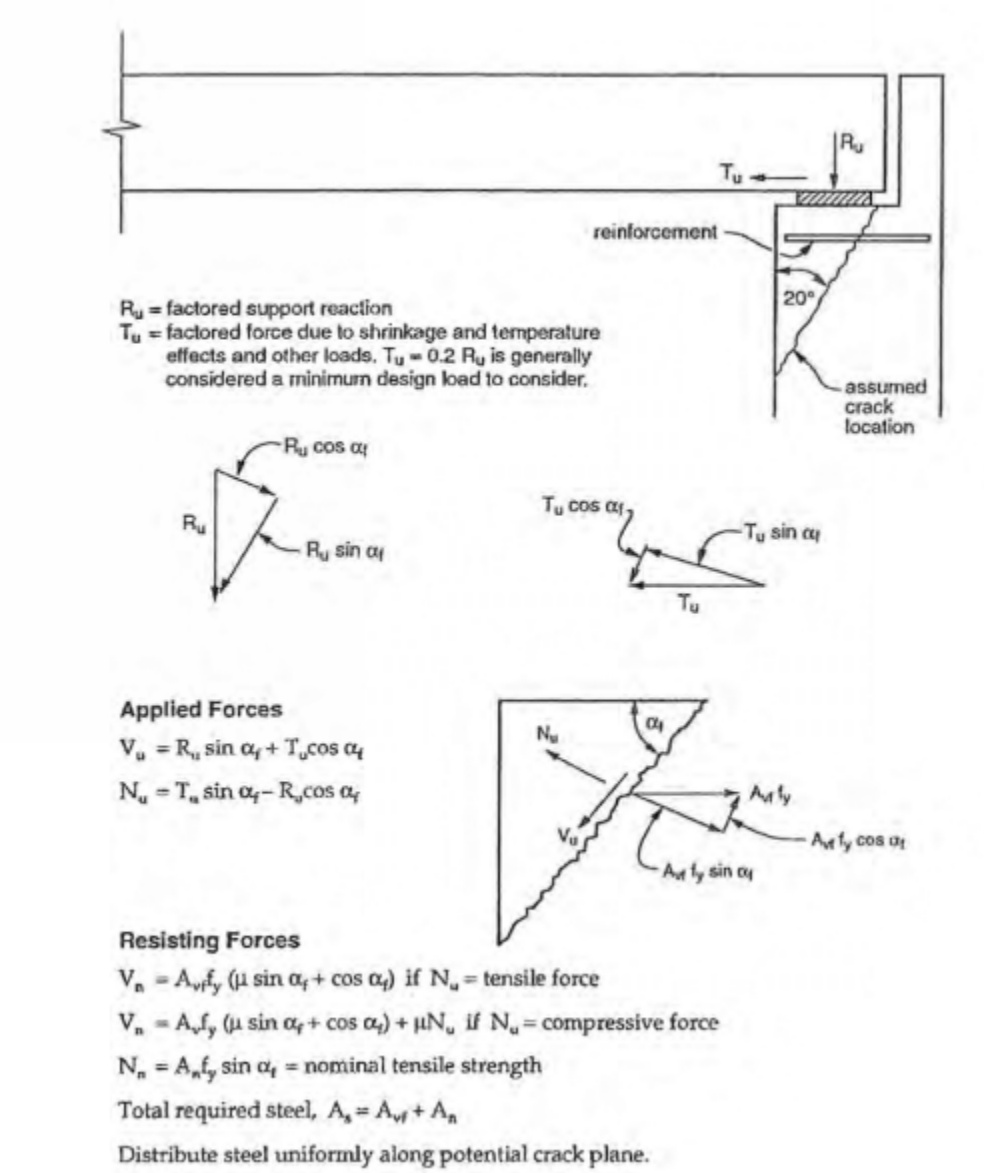
Shear/Torsion Component:

$V_u = 3.6\ kip \qquad V_s = 0\ kip \qquad V_p := 0\ kip$

$$V_s := min\left(\frac{\text{abs}\left(V_u\right)}{\phi_v}, V_s\right) = 0\ kip$$

$$D_V := \cot\left(\theta\right) \cdot \left(\left|\frac{V_u}{\phi_v} + V_p\right| - 0.5 \cdot V_s\right) = 4\ kip$$

Capacity Check:



$A_s = 0.31\ in^2 \qquad f_y = 60\ ksi$

$$C := A_s \cdot f_y = 19\ kip$$

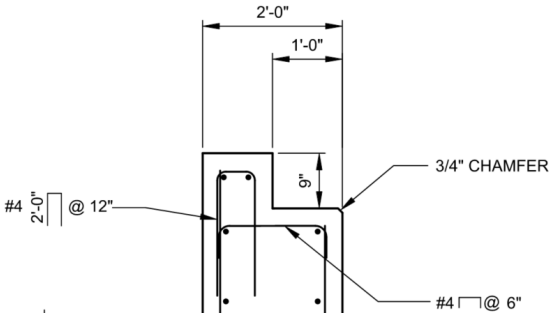
$$\frac{D_M + D_V}{C} = 0.68$$ <1, OK

Stem Longitudinal Top Reinforcement (BDP 1994, 2-143)

Check the longitudinal reinforcement underneath the bearings.

$R_u := 67.25\ \textit{kip}$

$R_{perm_fact} := 13.2\ \textit{kip}$



$T_u := 0.2\ \left(R_{perm_fact}\right) = 2.64\ \textit{kip}$

$\alpha_f := 70\ \textit{deg}$

$V_u := R_u \cdot \sin\left(\alpha_f\right) + T_u \cdot \cos\left(\alpha_f\right) = 64.097\ \textit{kip}$ Shear load along failure plane

$N_u := T_u \cdot \sin\left(\alpha_f\right) - R_u \cdot \cos\left(\alpha_f\right) = -20.52\ \textit{kip}$ Load perpendicular to failure plane (Negative = Compression)

There are #4 @ 6" along the seat, assume a minimum of three fall within failure plane under the 10" long bearing pad

$A_s := 3 \cdot A_{bar}(4) = 0.6\ in^2$

$f_y := 60\ ksi$

$\mu := 1.4$ AASHTO 2017, 5.7.4.4. Monolithically placed concrete

$\phi_v := 0.9$

Hooked Reinforcing Development (AASHTO 2017, 5.10.8.2.4)

Bar Location: #5 Stem Bars

Bar Size	#5		
A_{bar}	0.31	in^2	Area of Bar
d_b	0.63	in	Diameter of Bar
N_{bundle}	1		Number of Bars in Bundle
A_{total}	0.31	in^2	Total Bundle Area
$d_{b,eq}$	0.63	in	Equivalent Diameter
f_y	60	ksi	Rebar Yield Stress
f'_c	3.6		Concrete Ultimate Stress
l_{hb} (ft)	**1.04**	ft	Basic Development Length
λ	**1.0**		Light Weight Aggregate Factor (1 or 1.3)
λ_{cw}	**1.0**		Coating Factor (1 or 1.2)
λ_{rc}	**0.8**		Confinement Factor (1 or 0.8)
λ_{er}	**1.0**		Excess Reinforcement Factor
l_d	**0.83**	ft	Modified Development Length

$$l_{db} = \frac{38 * d_b}{60} * \frac{f_y}{\sqrt{f'_c}}$$

$$l_d = \frac{l_{hb} * \lambda_{cw} * \lambda_{rc}}{\lambda}$$

Note: the excess reinforcement factor (λ_{er}) can be appied on a case by case basis. Development length can still not be less than $8d_b$ or 6"

Footing Structural Check

Included in these calculations are checks for:

+Flexure
+Minimum Reinforcement
+Crack Control
+Shear
+Longitudinal Reinforcement (Combined Shear-Flexure)

Section:

$b := 1\ ft$ Footing strip width

$d := 24\ in$ Footing depth

Material Properties:

$f'_c := 3.6\ ksi$ Nominal Concrete strength

$\beta_1 := min\left(0.85, 0.85 - 0.05\left(\frac{f'_c}{ksi} - 4\right)\right) = 0.85$ AASHTO 2017, 5.6.2.2

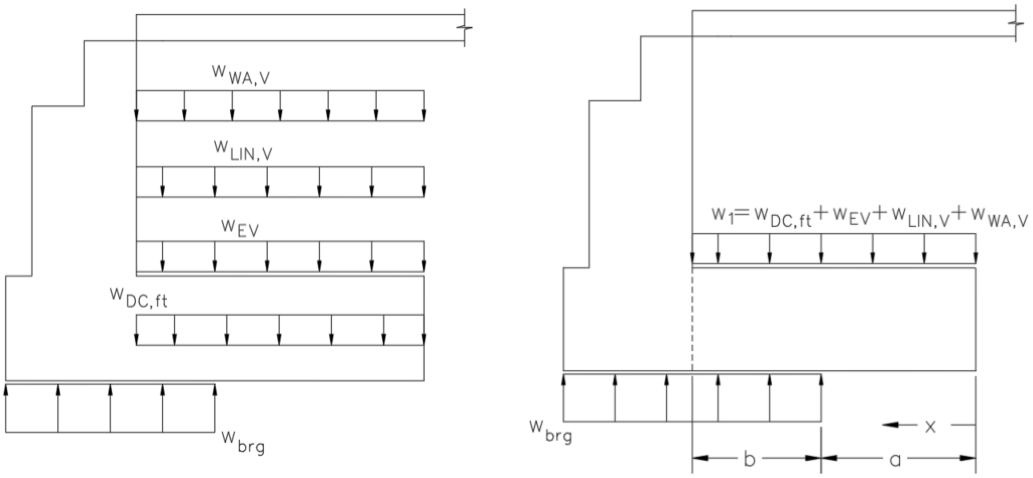
$\gamma_{c_ur} := \max\left(\left(0.14 + 0.001 \cdot \frac{f'_c}{ksi}\right), 0.145\right)\ kip \cdot ft^{-3} = 145\ pcf$ Concrete unit weight (AASHTO 2017, Table 3.5.1-1):

$E_c := 33000 \cdot \left(\frac{\gamma_{c_ur}}{kip \cdot ft^{-3}}\right)^{1.5} \cdot \sqrt{f'_c} \cdot ksi^{0.5} = 3457\ ksi$ AASHTO 2017, EQ 5.4.2.4-1 Concrete modulus of elasticity

$E_s := 29000\ ksi$ Steel modulus of elasticity

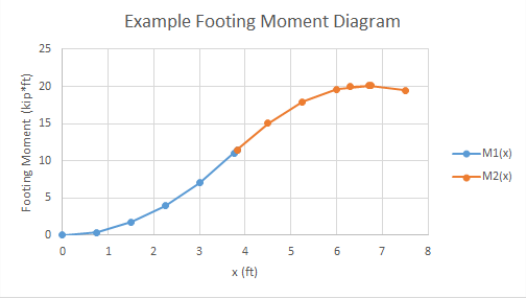
$n := \text{round}\left(\frac{E_s}{E_c}\right) = 8$

Resistance Factors:



$\phi_f := 0.9$

$\phi_c := 0.75$



$\phi_v := 0.9$

Footing Demands:

By inspection the max footing depth will control.

$M_u := 20.14\ kip \cdot ft$ Maximum factored footing moment

$M_s := 13.42\ kip \cdot ft$ Maximum service footing moment

$V_u := 6\ kip$ Maximum factored footing shear

+In-Plane Flexural Calculations:

Longitudinal Reinforcement:
#6s @ 12":

$b_{sz} := 6$ — Bar size

$s := 12\ in$ — Bar spacing

$A_s := b \cdot \frac{A_{bar}(b_{sz})}{s} = 0.44\ in^2$ — Area of longitudinal reinforcement

$f_y := 60\ ksi$ — Nominal yield stress of longitudinal reinforcement

$d_{c1} := 3\ in$ — Cover on longitudinal reinforcement

$d_s := d - (d_{c1} + 0.5\ d_{ba}(b_{sz})) = 20.56\ in$ — Depth to CG of reinforcement layers.

Concrete Compression Block (AASHTO 2017, 5.6.3.1.1):

$c := \frac{A_s \cdot f_y}{0.85 \cdot f'_c \cdot \beta_1 \cdot b} = 0.85\ in$ — AASHTO 2012, 5.7.3.1.1-4

$\varepsilon_t := (d_s - c)\ \frac{0.003}{c} = 0.06992$

$f_{s1} := min(f_y, E_s \cdot \varepsilon_t) = 60\ ksi$

$c := \frac{A_s \cdot f_{s1}}{0.85 \cdot f'_c \cdot \beta_1 \cdot b} = 0.85\ in$

$\varepsilon_t := (d_s - c)\ \frac{0.003}{c} = 0.07$

$f_{s2} := min(f_y, E_s \cdot \varepsilon_t) = 60\ ksi$

$f_s := f_{s2}$

$a := \beta_1 \cdot c = 0.72\ in$ — Depth of equivalent stress block.

Flexural Resistance Factor (AASHTO 2017, 5.5.4.2 & 5.6.2.1)

$$\varepsilon_{cl} := 0.002 + (0.004 - 0.002) \cdot \frac{(f_y - 60\ ksi)}{(100\ ksi - 60\ ksi)} = 0.002$$

$$\varepsilon_{tl} := 0.005 + (0.008 - 0.005) \cdot \frac{(f_y - 75\ ksi)}{(100\ ksi - 75\ ksi)} = 0.0032$$

$$\phi_f := \max\left(min\left(0.75 + \frac{0.15\ (\varepsilon_t - \varepsilon_{cl})}{\varepsilon_{tl} - \varepsilon_{cl}}, 0.9\right), 0.75\right) = 0.9$$

Flexural Resistance (AASHTO 2017, 5.6.3.2):

$$M_n := A_s \cdot f_s \cdot \left(d_s - \frac{a}{2}\right) = 44\ kip \cdot ft$$

$$DC_{M3} := \frac{\text{abs}(M_u)}{\phi_f \cdot M_n} = 0.504$$ <1, OK

Minimum Reinforcement (AASHTO 2017, 5.6.3.3):

$d = 2\ ft \qquad b = 1\ ft \qquad f'_c = 3.6\ ksi$

$\gamma_1 := 1.6$ Flexural Cracking Variability Factor (All other concrete structures)

$\gamma_2 := 0$ Prestress Variability Factor (N/A)

$\gamma_3 := 0.75$ Yield:Ultimate Ratio (A706, Gr.60)

$S_c := \frac{d^2 \cdot b}{6} = 1152\ in^3$ Gross Section Modulus

$S_{nc} := S_c$ Full Section is Monolithic

$f_r := 0.24 \cdot \sqrt{f'_c} \cdot ksi^{0.5} = 0.455\ ksi$

$f_{cpe_btm} := 0\ ksi$

$M_{cr} := \gamma_3 \cdot \left(\left(\gamma_1 \cdot f_r + \gamma_2 \cdot f_{cpe_btm} \right) \cdot S_c \right) = 52\ kip \cdot ft$

$M_u = 20.1\ kip \cdot ft$

$M_{r_min} := min\left(\text{abs}\left(1.33 \cdot M_u \right), M_{cr} \right) = 27\ kip \cdot ft$

$\phi_f \cdot M_n = 40\ kip \cdot ft$

$DC_{MinR_neg} := \frac{M_{r_min}}{\phi_f \cdot M_n} = 0.67$ <1, OK

Crack Control by Distribution of Reinforcing (AASHTO 2017, 5.6.7):

$s_1 := s = 12\ in$ Spacing of flexure steel

$M_s = 13.42\ kip \cdot ft$
$d_s = 20.56\ in$
$b = 12\ in$
$n = 8$
$d_c := d - d_s = 3.44\ in$
$h := d = 2\ ft$

$$\beta_s := 1 + \frac{d_c}{0.7\ (h - d_c)} = 1.239$$

$\gamma_e := 1$ Assume Exposure Class 1, low visibility

for rectangular sections: $\frac{-b_{cap} \cdot y_{rec}^{\ 2}}{2} + n \cdot A_{s1}\left(d_{s1_n} - y_{rec}\right) + n \cdot A_{s2}\left(d_{s2_n} - y_{rec}\right) = 0$

$a_o := \frac{-b}{2}$
$b_o := -n \cdot A_s$ $A_s = 0.44\ in^2$
$c_o := n \cdot \left(A_s \cdot d_s\right)$

$$y := \frac{-b_o - \sqrt{b_o^{\ 2} - 4 \cdot a_o \cdot c_o}}{2 \cdot a_o} = 3.192\ in$$

$$I_{eff} := \frac{b \cdot y^3}{3} + n \cdot \left(A_s \cdot \left(d_s - y\right)^2\right) = 1192\ in^4$$

$$f_{ss} := \text{abs}\left(n \cdot \frac{M_s \cdot \left(d_s - y\right)}{I_{eff}}\right) = 18.773\ ksi$$ Stress in flexure steel at service loading

$$s_{max} := \left(\frac{700\ \gamma_e \cdot ksi}{\beta_s \cdot f_{ss}} - 2\ \frac{d_c}{1\ in}\right) in = 23.214\ in$$

$DC_{CrC} := \frac{s_1}{s_{max}} = 0.517$ <1, OK

Maximum Shear:

Demands at Section:

$V_u = 6$ *kip* Vertical shear force on section

+ Shear Calculations:

Transverse Steel:

No steel provided

d_v Calculation:

$f_y = 60$ *ksi* $A_s = 0.44$ *in*^{2} $d_s = 20.56$ *in*

$d_{v1} := 0.72 \cdot (d) = 17.28$ *in*

$d_{v2} := 0.9 \cdot (d_s) = 18.5$ *in*

$d_v := \max(d_{v1}, d_{v2}) = 18.5$ *in*

Vc and Vs calculations (AASHTO 2017, 5.7.3.3):

$f'_c = 3.6$ *ksi*
$b_v := b = 12$ *in*

$\theta := 45$ *deg*

$\beta := 2.0$

$V_s := 0$ *kip* AASHTO 2017, (5.7.3.3-4)

$V_c := 0.0316 \cdot \beta \cdot \sqrt{f'_c} \cdot ksi^{0.5} \cdot b_v \cdot d_v = 27$ *kip* AASHTO 2017, (5.7.3.3-3)

Shear Capacity Calculation (AASHTO 2017, 5.7.3.3):

$\phi V_{n1} := \phi_v \cdot 0.25 \cdot f'_c \cdot b_v \cdot d_v = 180$ *kip*

$\phi V_{n2} := \phi_v \cdot (V_s + V_c) = 24$ *kip*

$\phi V_n := min(\phi V_{n1}, \phi V_{n2}) = 24$ *kip*

$DCR := \frac{\text{abs}(V_u)}{\phi V_n} = 0.25$ <1, OK

+Longitudinal Reinforcement Calculation:

Longitudinal Reinforcement (AASHTO 2017, 5.7.3.5):

Flexural Component:

$M_u = 20.14\ kip \cdot ft \qquad d_v = 18.5\ in \qquad \phi_f = 0.9$

$D_M := \frac{\text{abs}(M_u)}{\phi_f \cdot d_v} = 15\ kip$

Shear/Torsion Component:

$V_u = 6\ kip \qquad V_s = 0\ kip \qquad V_p := 0\ kip$

$V_s := min\left(\frac{\text{abs}(V_u)}{\phi_v}, V_s\right) = 0\ kip$

$D_V := \cot(\theta) \cdot \left(\left|\frac{V_u}{\phi_v} + V_p\right| - 0.5 \cdot V_s\right) = 7\ kip$

Capacity Check:

$A_s = 0.44\ in^2 \qquad f_y = 60\ ksi$

$C := A_s \cdot f_y = 26\ kip$

$\frac{D_M + D_V}{C} = 0.8$ <1, OK

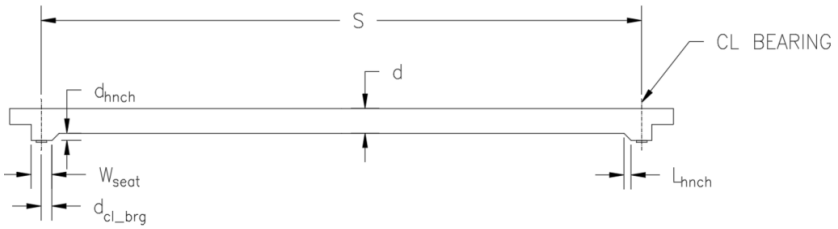
7.3 Slab Seismic Design

Slab Seismic Design



According Caltrans SDC 2.0 section Article 7.2.2 where peak ground accelerations greater than or equal to 0.6g the superstructure shall be design for vertical ground excitation. According to this article these superstructures shall be designed for a uniform load equal to 25% of the superstructes dead load upward or downward. By inspection the strength load case will control for the downward verticle load. This section checks the top mat of reinforcing to resist this upward seismic force.

Section:

$S := 28\ ft + 4\ in = 28.33\ ft$ Span length

$d := 14\ in$ Slab depth

$b := 1\ ft$ Equivalent strip width

Material Properties:

$f'_c := 5\ ksi$ Nominal Concrete strength

$\beta_1 := min\left(0.85, 0.85 - 0.05\left(\frac{f'_c}{ksi} - 4\right)\right) = 0.8$ AASHTO 2017, 5.6.2.2

7.4 Footing Seismic Design

Footing Seismic Design

In a seismic event it is anticipated that the joint between the crossing slab and the footing it is moving towards will close transfering the inertial force from the crossing slab to the footing. This section will check the footings capacity to resist this inertial load

Section:

$S_{slab_clr} := 27.33\ ft$	Clear slab span
$H_{wall} := 9.25\ ft$	Max wall height
$t_{stem} := 2\ ft$	Stem thickness
$t_{ft} := 2\ ft$	Footing thickness
$t_{hnch} := 4\ in$	Haunch thickness
$t_{end} := 9\ in$	Depth slab extension
$\gamma_c := 150\ pcf$	Concrete unit weight
$\gamma_s := 85\ pcf$	Soil unit weight
$L_{toe} := 0.5\ ft$	Length of toe
$W_{ft} := 10\ ft$	Width of footing
$W_{seat} := 1\ ft$	Seat width
$t_{liner} := 6\ in$	Liner thickness
$t_{slab} := 14\ in$	Slab thickness
$b := 1\ ft$	Equivalent strip width
$t_{bw} := 1\ ft$	Backwall thickness
$H_{bw} := 9\ in$	Backwall height
$PGA := 1.062$	Peak ground acceleration

External Stability Checks

The following section will check the external stability of the footing (sliding and bearing checks) to resist the inertial loads of the slab in addition to the the inetials of the footing and the surrounding retained soils.

Vertical Dead Load:

$t_{ft} := 2\ ft$ — Footing thickness

$L_{heel} := W_{ft} - L_{toe} - t_{stem} = 7.5\ ft$ — Heel Length

$d_{cl_brg} := 0.5\ ft$ — Distance to centerline of bearing

Cross sectional area of crossing slab:

$A_{slab} := S_{slab_clr} \cdot t_{slab} + 2\ \left(0.5 \cdot t_{hnch}{}^2 + t_{end} \cdot t_{bw} + W_{seat} \cdot \left(t_{hnch} + t_{slab}\right)\right) = 36.496\ ft^2$

$e_{brg} := 0.5 \cdot W_{ft} - d_{cl_brg} - L_{toe} = 4\ ft$ — Bearing eccentricity

$P_{DL_slab} := \gamma_c \cdot \left(0.5 \cdot A_{slab}\right) \cdot b = 2.737\ kip$ — Slab weight

$M_{DL_slab} := P_{DL_slab} \cdot e_{brg} = 10.949\ kip \cdot ft$ — Moment due to slab

$P_{DL_bw} := \gamma_c \cdot \left(t_{bw}\right) \cdot \left(H_{bw}\right) \cdot b = 0.113\ kip$ — Backwall load

$e_{DL_bw} := 0.5\ W_{ft} - \left(W_{seat} + 0.5\ t_{bw} + L_{toe}\right) = 3\ ft$ — Backwall eccentricity

$M_{DL_bw} := P_{DL_bw} \cdot e_{DL_bw} = 0.338\ kip \cdot ft$ — Moment due to backwall

$P_{DL_stm} := \gamma_c \cdot t_{stem}\ \left(H_{wall} - \left(t_{slab} + t_{hnch}\right) - t_{ft}\right) \cdot b = 1.725\ kip$ — Stem load

$e_{DL_stm} := 0.5\ W_{ft} - \left(0.5\ t_{stem} + L_{toe}\right) = 3.5\ ft$ — Stem eccentricity

$M_{DL_stm} := P_{DL_stm} \cdot e_{DL_stm} = 6.038\ kip \cdot ft$ — Moment due to stem

$P_{DL_ft} := \gamma_c \cdot \left(t_{ft}\right)\ \left(W_{ft}\right) \cdot b = 3\ ft \cdot klf$ — Footing load

$e_{DL_ft} := 0.5\ W_{ft} - 0.5\ W_{ft} = 0\ ft$ — Footing eccentricity

$P_{DC} := P_{DL_slab} + P_{DL_bw} + P_{DL_stm} + P_{DL_ft} = 7.575\ kip$ — Dead load

$M_{DC} := M_{DL_slab} + M_{DL_bw} + M_{DL_stm} = 17.324\ kip \cdot ft$ — Moment due to dead load

Liner Surcharge:

$t_{liner} = 6\ in$

$\gamma_c = 150\ pcf$

$P_{ES} := \gamma_c \cdot t_{liner} \cdot b \cdot L_{heel} = 0.563\ kip$

$e_{ES} := 0.5\ L_{heel} - 0.5\ W_{ft} = -1.25\ ft$

$M_{ES} := P_{ES} \cdot e_{ES} = -0.703\ kip \cdot ft$

Vertical Soil Load:

$\gamma_s = 85\ pcf$ Unit weight of soil

$L_{heel} := W_{ft} - t_{stem} - L_{toe} = 7.5\ ft$ Length of heel

$p_{EV} := \left(H_{wall} - t_{liner} - t_{ft}\right) \cdot \gamma_s = 0.574\ ksf$ Vertical soil pressure on footing

$P_{EV_heel} := L_{heel} \cdot p_{EV} \cdot b = 4.303\ kip$ Vertical soil load on heel

$e_{EV_heel} := 0.5\ W_{ft} - \left(L_{toe} + t_{stem} + 0.5\ L_{heel}\right) = -1.25\ ft$ Eccentricity of vert heel soil load

$P_{EV_toe} := L_{toe} \cdot p_{EV} \cdot b = 0.287\ kip$

$e_{EV_toe} := 0.5\ W_{ft} - \left(0.5\ L_{toe}\right) = 4.75\ ft$

$M_{EV} := P_{EV_heel} \cdot e_{EV_heel} + P_{EV_toe} \cdot e_{EV_toe} = -4.016\ kip \cdot ft$ Moment of Vert soil load on wall

$P_{EV} := P_{EV_heel} + P_{EV_toe} = 4.59\ kip$ Vertical soil load

$e_{EV} := \frac{M_{EV}}{P_{EV}} = -0.875\ ft$ Eccentricity of vertical soil load

$P_{perm} := P_{DC} + P_{ES} + P_{EV} = 12.73\ kip$

$M_{perm} := M_{EV} + M_{DC} + M_{ES} = 12.6\ kip \cdot ft$

Horizontal Inertial Load:

$PGA = 1.062$ Peak ground acceleration

$k_h := 0.5 \cdot PGA = 0.531$ Caltrans STP 11.29

Backwall inertial loads:

$P_{IR_bw} := -k_h \cdot P_{DL_bw} = -0.06$ *kip*

$e_{IR_bw} := H_{wall} - t_{liner} - 0.5 \cdot H_{bw} = 8.375$ *ft*

$M_{IR_bw} := P_{IR_bw} \cdot e_{IR_bw} = -0.5$ *kip·ft*

Stem inertial loads:

$P_{IR_stm} := -k_h \cdot P_{DL_stm} = -0.916$ *kip*

$e_{IR_stm} := 0.5 \left(H_{wall} - t_{ft} - H_{bw}\right) + t_{ft} = 5.25$ *ft*

$M_{IR_stm} := P_{IR_stm} \cdot e_{IR_stm} = -4.809$ *kip·ft*

Footing inertial loads:

$P_{IR_ft} := -k_h \cdot P_{DL_ft} = -1.593$ *kip*

$e_{IR_ft} := 0.5 \cdot t_{ft} = 1$ *ft*

$M_{IR_ft} := P_{IR_ft} \cdot e_{IR_ft} = -1.593$ *kip·ft*

Soil inertial loads:

$P_{IR_soil} := -k_h \cdot P_{EV} = -2.437$ *kip*

$e_{IR_soil} := e_{IR_stm}$

$M_{IR_soil} := P_{IR_soil} \cdot e_{IR_soil}$

Slab inertial loads:

$P_{IR_slab} := -2 \cdot P_{DL_slab} \cdot PGA = -5.814$ *kip*

$e_{IR_slab} := e_{IR_bw} = 8.375$ *ft*

$M_{IR_slab} := P_{IR_slab} \cdot e_{IR_slab} = -48.691$ *kip·ft*

$P_{IR} := P_{IR_slab} + P_{IR_stm} + P_{IR_ft} + P_{IR_soil} + P_{IR_bw} = -10.82$ *kip*

$M_{IR} := M_{IR_slab} + M_{IR_stm} + M_{IR_ft} + M_{IR_soil} + M_{IR_bw} = -68.39$ *kip·ft*

Active Earth Load:

$\gamma_s := 85\ pcf$ Unit weight of soil

$k_a := 0.33$ Active coefficient of soil

$t_{slab} := 14\ in$ Liner thickness

$p_a := -\left(H_{wall} - t_{slab}\right) \cdot k_a \cdot \gamma_s = -0.227\ ksf$ Maximum hrz soil pressure

$P_a := 0.5 \cdot \left(H_{wall} - t_{slab}\right) \cdot p_a \cdot b = -0.916\ kip$ Active soil load on wall

$e_a := \frac{H_{wall} - t_{slab}}{3} = 2.694\ ft$ Eccentricity of active earth pressure

$M_a := P_a \cdot e_a = -2.469\ kip \cdot ft$ Active soil moment

Seismic Active Earth Load:

$\gamma_s = 85\ pcf$ Unit weight of soil

$k_{AE} := 0.63$ Seismic active coefficient of soil

$t_{slab} = 14\ in$ Liner thickness

$p_{AE} := -\left(H_{wall} - t_{slab}\right) \cdot k_{AE} \cdot \gamma_s = -0.433\ ksf$ Maximum hrz soil pressure

$P_{AE} := 0.5 \cdot \left(H_{wall} - t_{slab}\right) \cdot p_{AE} \cdot b = -1.749\ kip$ Seisimc soil load

$e_{AE} := e_a = 2.694\ ft$ Eccentricity of Seisimc soil load

$M_{AE} := P_{AE} \cdot e_{AE} = -4.714\ kip \cdot ft$ Seisimc soil moment

Passive Resistance:

$p_{pas} := 250\ \frac{psf}{ft}$

$p_{pas_mx} := min\left(p_{pas} \cdot \left(H_{wall} - t_{liner}\right), 2500\ psf\right) = 2.188\ ksf$

$R_{passive} := 0.5\ p_{pas_mx} \cdot \left(H_{wall} - t_{liner}\right) \cdot b = 9.57\ kip$ Passive soil resistance

$e_{pas} := \frac{H_{wall} - t_{liner}}{3} = 2.917\ ft$ Passive resistance eccentricity

$M_{pas} := R_{passive} \cdot e_{pas} = 27.913\ kip \cdot ft$ Passive soil moment

Bearing Check:

According to Caltrans STP 11.29:

$M_{EQ1} := M_{IR} + 0.5\ M_{AE} = -70.746\ kip \cdot ft$

$M_{EQ2} := 0.5\ M_{IR} + M_{AE} = -38.908\ kip \cdot ft$

$M_{EQ3} := M_{IR} + M_a = -70.858\ kip \cdot ft$

$M_{EQ} := min\left(M_{EQ1}, M_{EQ2}, M_{EQ3}\right) = -70.858\ kip \cdot ft$

$M_{EX} := M_{perm} + M_{pas} + M_{EQ} = -30.34\ kip \cdot ft$ Combined seismic moment

$P_{perm} = 12.727\ kip$ Permenant vertical load

$e := \frac{M_{EX}}{P_{perm}} = -2.384\ ft$ Combined seismic eccentricity

$B' := W_{ft} - \left|2 \cdot e\right| = 5.232\ ft$ Effective footing width

$\sigma_{EX} := \frac{P_{perm}}{B' \cdot b} = 2.432\ ksf$ Seismic bearing pressure

$\sigma_{a_tran} := 4\ ksf$ Allowable bearing pressure for transient loading

$DCR := \frac{\sigma_{EX}}{\sigma_{a_tran}} = 0.608$ <1, OK

Sliding Check:

$DCR := \frac{\text{abs}(V_{EQ_ft})}{\phi V_n} = 0.211$ <1, OK

+Longitudinal Reinforcement Calculation:

Longitudinal Reinforcement (AASHTO 2017, 5.7.3.5):

Flexural Component:

$M_{EQ_ft} = -35.475\ kip \cdot ft \quad d_v = 18.5\ in \qquad \phi_f = 1$

$D_M := \frac{\text{abs}\left(M_{EQ_ft}\right)}{\phi_f \cdot d_v} = 23\ kip$

Shear/Torsion Component:

$V_{EQ_ft} = -5.612\ kip \quad V_s = 0\ kip \qquad V_p := 0\ kip$

$V_s := min\left(\frac{\text{abs}\left(V_{EQ_ft}\right)}{\phi_v}, V_s\right) = 0\ kip$

$D_V := \cot(\theta) \cdot \left(\left|\frac{V_{EQ_ft}}{\phi_v} + V_p\right| - 0.5 \cdot V_s\right) = 6\ kip$

Capacity Check:

$A_s = 0.44\ in^2 \qquad f_y = 60\ ksi$

$C := A_s \cdot f_{ye} = 30\ kip$

$\frac{D_M + D_V}{C} = 0.96$ <1, OK

Backwall Check

In a seismic event it is anticipated that the joint between the crossing slab will close transfering the inertial force from the crossing slab to one of the footings. This force will transfer to the footing through the backwall of the footing. This section will check that the backwall is capable transfering this load

Material Properties:

$f'_c := 3.6\ ksi$ — Nominal Concrete strength

$\gamma_c := 150\ pcf = 150\ pcf$ — Concrete modulus of elasticity

$f_y = (6 \cdot 10^4)\ psi$ — Reinforcing steel stress

Resistance Factors (Caltrans SDC 2.0, 3.6):

$\phi_f = 1$

$\phi_v := 1$

Demand:

$A_{slab} := 36.5\ ft^2$ — Slab cross section area (from footing design)

$P_{slab} := 2 \cdot P_{DL_slab} = 5.474\ kip$

$PGA = 1.062$ — Peak ground acceleration

$P_{IR_slab} := PGA \cdot P_{slab} = 5.814\ kip$ — Load due to vertical siesmic load

$P_{IR_bw} := P_{IR_slab} = 5.814\ kip$

Interface Shear (AASHTO 2017, 5.7.4):

Miminimum Area of Interface Shear Reinforcement (AASHTO 2017, 5.7.4.2)

$t_{bw} = 1\ ft$ $f_y = 60\ ksi$

$b = 1\ ft$

$A_{cv} := t_{bw} \cdot b = 1\ ft^2$

$$A_{vf_min} := \frac{0.05 \cdot A_{cv} \cdot ksi}{f_y} = 0.12\ in^2$$

use (2) #4s @ 12"

$n := 2$

$s := 12\ in$

$b_{sz} := 4$

$$A_{vf} := \frac{n \cdot A_{bar}(b_{sz})}{s} \cdot b = 0.4\ in^2$$

Check Interface Shear (AASHTO 2017, 5.7.4.3)

Normal weight concrete placed monolithically:

$c := 0.4\ ksi$	Cohesion factor
$\mu := 1.4$	Friction factor
$K_1 := 0.25$	Fraction of concrete strength available
$K_2 := 1.5\ ksi$	Limiting interface shear resistance
$P_c := 0\ kip$	Compression on interface

$$V_{ni_1} := c \cdot A_{cv} + \mu \cdot (A_{vf} \cdot f_y + P_c) = 91.2\ kip$$

$V_{ni_2} := K_1 \cdot f'_c \cdot A_{cv} = 129.6\ kip$

$V_{ni_3} := K_2 \cdot A_{cv} = 216\ kip$

$V_{ni} := min(V_{ni_1}, V_{ni_2}, V_{ni_3}) = 91.2\ kip$

$$DCR := \frac{\phi_v \cdot P_{IR_bw}}{V_{ni}} = 0.064$$ <1, OK

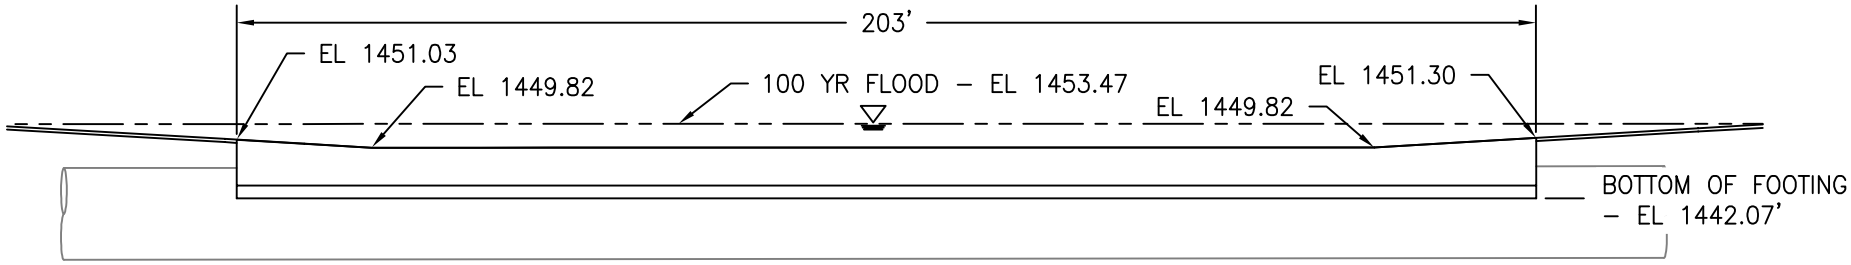
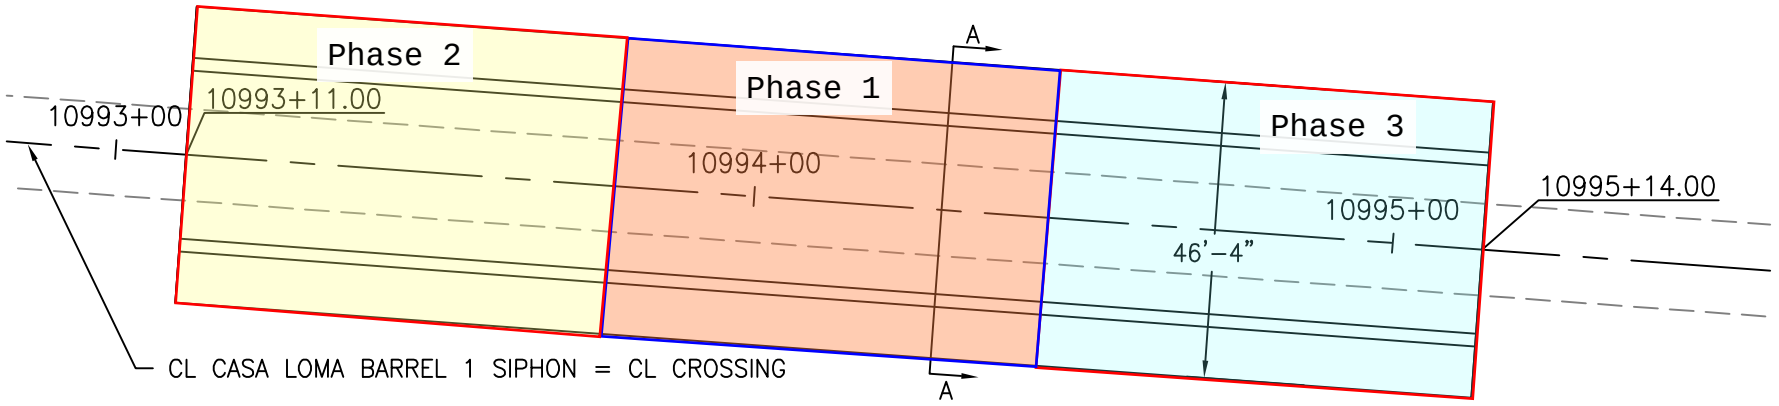
Shea San Jacinto – Casa Loma Barrel Shallow Foundation Work Plan

The Casa Loma Barrel No. 1 will have a shallow foundation constructed per the attached concept. Prior to excavation and construction, the existing line will be located. A vactor truck will slot trench and expose the top of the entire length of the pipeline within the work zone. The work zone will be cleared and grubbed and all vegetation removed and disposed of. The foundation will be constructed in three separate phases per the highlighted plan on the attachment. Each phase will follow the same sequence.



No more than one phase will be excavated to the bottom of the footing at a time. Both sides are to have the same sequence number completed prior to continuing to the next step. Concrete will be placed using a boom pump. No concrete trucks will be permitted to drive within the barrel protection zone.

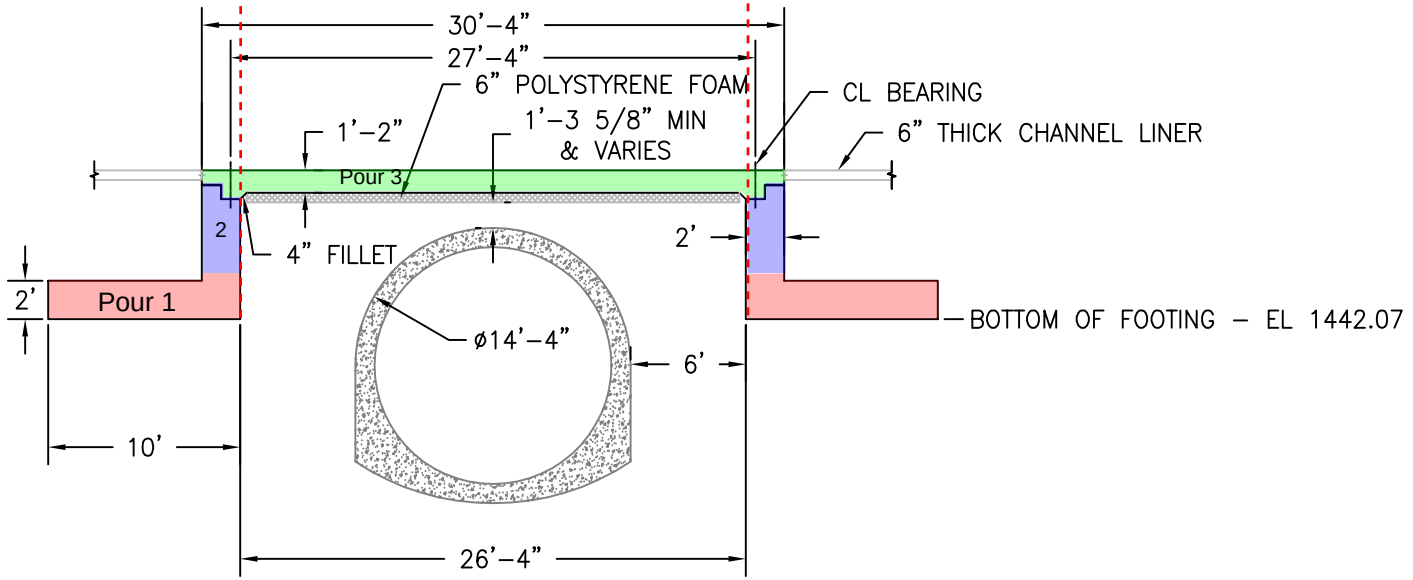
1. The footings will be excavated from North and South concurrently with two Linkbelt 350x excavators. Excavators will be set away from the barrel and each will have a spotter for guidance. The entire footing will not be excavated all at one time on one side. Both sides will be excavated in equal lifts. The excavation will be 10’ wide and 7.75’ deep. Excavated materials will be spoiled behind the excavators and away from the barrel. Spoils will be pushed using a John Deere 644 wheel loader. The temporary excavation will be sloped 1.5:1.
2. The 10’ wide x 2’ high spread footing will be formed and poured first on both sides. The footing will have a 6” starter wall for the next pour.
3. The 5.75’ high footing wall will be formed and poured.



Once sufficient concrete strength has been reached for all footings, the footing will be backfilled with flowable fill to meet the unit weight and strength criteria in the Geotech report.

The top slab over the barrel will be graded using a John Deere 210LE skip loader after which 6” thick polystyrene foam boards will be placed. The top slab will be formed and poured.

ATTACHMENT 6 - PRELIMINARY FOUNDATION WORK PLAN



PROFILE – CONCEPT 1

Protected Zone

PLAN – CONCEPT 1

Protected Zone - No equipment heavier than John Deere 210LE Skip Loader to be used.

SUBJECT: **DRAFT Geotechnical Investigation Report**
San Jacinto Line E Storm Drain
San Jacinto, California

Dear Mr. Hays:

Kleinfelder, Inc. (Kleinfelder) is pleased to present this DRAFT Geotechnical Investigation Report for the San Jacinto Line E Storm Drain project in San Jacinto, California. This report summarizes the findings of our investigation and presents geotechnical design parameters and recommendations for design and construction of the project.

We appreciate the opportunity to be of service on this project. If you have any questions, comments, or require additional information, please do not hesitate to contact the undersigned.

Sincerely,

KLEINFELDER, INC.

1 INTRODUCTION

This report presents the results of our geotechnical investigation for the San Jacinto Line E Storm Drain project in San Jacinto, California. The project location is shown on Figure 1, Site Vicinity Map. The purpose of the investigation was to evaluate surface and subsurface conditions in the area of planned improvements and to provide geotechnical recommendations for earthwork, design and construction considerations.

The conclusions and recommendations presented in this report are based on subsurface conditions encountered at the locations of our field investigation, laboratory testing, and our evaluation of the data. The provisions and requirements outlined in the Limitations section of this report are also an integral part of the development of our conclusions and recommendations.

1.1 PROJECT DESCRIPTION

We understand that the project involves design of an approximate 3-mile storm drain channel to be constructed in the City of San Jacinto. The new storm drain channel will be constructed near the existing ground surface and the majority of the alignment will consist of an earthen channel with a 65-foot base width, heights up to 10 feet, side slopes inclined at 4:1 (Horizontal:Vertical), and several sloped rip-rap drops along the alignment. In addition, several 6 to 8-cell reinforced concrete box (RCB) culverts with cell widths up to 14 feet and cell heights up to 9 feet are planned at existing or proposed roadways along the alignment. Storm water flow is generally south to north and a training berm is proposed on the south end of the alignment. At the northern portion of the alignment the proposed earthen channel terminates at a proposed confluence basin and the remainder of the alignment converts to a concrete channel with a 145-foot base width, height up to 10 feet, and side slopes inclined at 1.5:1 (H:V).

At the northern end of the proposed concrete channel portion, the proposed alignment crosses an existing Metropolitan Water District (MWD) pipeline (Casa Loma Siphon No. 1). We understand this pipeline is an approximately 14.5-foot diameter reinforced concrete pipe. It is proposed to cross the MWD pipeline with a relieving slab (approximately 14-inch thick concrete slab overlying a 6-inch low density polystyrene foam) supported on shallow footings to minimize adding loads to the existing pipeline. Per MWD requirements, we understand the crossing structure is required when cover over their pipe is less than 4 feet. We understand the crossing structure slab will be approximately 203 feet long and 31 feet wide. Footings will be continuous, approximately 10 feet wide, and approximately 7 to 9 feet deep.

1.2 PURPOSE AND SCOPE

The purpose of this study was to investigate and evaluate the surface and subsurface conditions along the proposed project alignment. Field explorations were performed along the alignment to identify potential geologic hazards and provide geotechnical recommendations for design and construction of the project.

The services performed as part of this investigation were provided in general accordance with our proposal dated June 28, 2023. Specifically, our scope of work includes the following:

- A description of the proposed project including a site vicinity map and a site plan showing the locations of the subsurface explorations;
- A discussion of historical and geologic research pertinent to the proposed project;
- A summary of the surficial and subsurface site conditions encountered during our field investigation;
- A discussion of geologic hazards;
- Analysis for liquefaction potential;
- Recommendations for seismic design parameters;
- Analysis for MWD pipeline settlement;
- Recommendations for design and construction of the proposed MWD pipeline crossing;
- Recommendations for site preparation, earthwork, temporary slope inclinations, fill placement, and compaction specifications;
- Recommendations for temporary shoring;
- Recommendations for subgrade preparation and support of storm drain channel;
- Recommendations for pavement structural sections;
- Preliminary evaluation of the corrosion potential of the on-site soils; and
- Appendices including logs of borings and CPTs, laboratory test results, and surface wave measurement results.

DRAFT

Copyright 2025 Kleinfelder

2 BACKGROUND STUDIES

2.1 LITERATURE REVIEW

Geologic and geotechnical literature was reviewed including reports, maps, and other documents prepared by the California Geological Survey (CGS), the U.S. Geological Survey (USGS), and other agencies. We also reviewed maps and preliminary documents pertaining to previous investigations at the site prepared by Leighton and Associates, Schaefer Dixon Associates, and SoCalGeo.

These reports, maps and other documents are listed in Section 8, References. Pertinent findings and information contained within these maps and reports are discussed within the body of this report.

2.2 FIELD RECONNAISSANCE

A field reconnaissance of the site was performed prior to initiation of our subsurface investigation program and following our literature review. The purposes of the field reconnaissance were as follows:

- Visit and observe site conditions at proposed exploration locations;
- Evaluate equipment accessibility for field investigations;
- Document earth materials and geologic conditions present along the alignment and surrounding area; and
- Evaluate features identified during the literature review.

DRAFT

Copyright 2025 Kleinfelder

3 FIELD INVESTIGATION

The field investigation activities for this project commenced with utility clearance for proposed boring and Cone Penetrometer Tests (CPT) explorations. Following utility clearance, the field investigation included drilling and sampling of 19 hollow-stem auger borings and performing 2 CPTs. Discussions of the field investigation program including utility clearances, exploration methods and sampling methods are provided below.

3.1 UTILITY CLEARANCES

Prior to beginning the field exploration program, Underground Service Alert (USA) was contacted to identify potential conflicts between the planned exploration locations and existing, documented, underground utilities. Ground penetrating radar was also performed for utility clearances at the exploration locations. Furthermore, the boring and CPT locations were hand augured generally to 5 feet below the existing ground surface before commencing work.

3.2 FIELD EXPLORATION

The subsurface exploration program included drilling 19 hollow-stem auger borings, performing 2 CPTs, and performing 2 seismic surface wave measurement arrays along the project alignment for geotechnical characterization purposes. The borings were drilled between September 26, 2023 and September 28, 2023. The CPTs were performed on October 11, 2023. The seismic surface wave measurement arrays were performed on September 23, 2024 and September 24, 2024.

DRAFT

In general, the borings were located along the storm drain alignment, with adjustments made in the field as needed to avoid access or utility conflicts. The CPT locations and seismic surface wave measurement arrays were performed in the vicinity of the proposed MWD pipeline crossing. The approximate locations of the exploration locations are shown on Figure 2, Exploration Location Map.

3.3 SOIL BORINGS

For this project, 19 soil borings were drilled using truck-mounted hollow-stem auger drill rigs supplied by 2R Drilling of Chino, California. Hollow-Stem Auger (HSA) drill rigs were equipped with 8-inch outside diameter (O.D.) continuous flight, hollow-stem augers. The auger method was used following the general ASTM guidelines D1452 “Standard Practice for Soil

Copyright 2025 Kleinfelder

Investigation and Sampling by Hollow-Stem Augers." The drilling equipment was selected based on anticipated subsurface conditions and vehicle access. The borings were drilled to a depth of approximately 20 feet below ground surface (bgs), with exception to the borings in the vicinity of the proposed MWD pipeline crossing (B-1 and B-2) and at the southern end of the concrete channel portion of the alignment (B-4), which were drilled to approximately 50 feet bgs. Four (4) of the 19 borings were converted to piezometers (Borings B-6, B-9, B-14, and B-15). The remainder of the borings were backfilled with excess soil cuttings upon completion.

Subsurface conditions encountered in the soil borings were logged by an experienced engineer or geologist, under the review and direction of a licensed Engineering Geologist or Geotechnical Engineer, who also performed the sampling described below. Soils were logged in general accordance with the Unified Soils Classification System. The boring logs are presented in Appendix A, Field Exploration.

3.4 SAMPLING METHODS FOR SOIL BORINGS

Disturbed and relatively undisturbed samples of the subsurface materials were obtained from the borings using Standard Penetration test (SPT) samplers and California-type (CAL) samplers, respectively. The SPT sampler has a 1.375-inch inside diameter and a 2.0-inch outside diameter. The CAL sampler has a 2.42-inch inside diameter and a 3.0-inch outside diameter. Samples were collected in accordance with the general guidelines of ASTM D1586 "Standard Test Method for Penetration Test and Split-Barrel Sampling of Soils."

Samples were driven 18 inches into the soil using a 140-pound automatic hammer falling 30 inches. SPT and CAL samples were obtained at 5-foot intervals alternating between the SPT and the CAL until reaching the boring target depth. Large bulk samples were also obtained within the upper 5 feet from each boring.

The number of blows required to drive the samplers were recorded for each 6-inch penetration interval. The number of blows required to drive the samplers for the last 12 inches, or the interval achieved where higher resistance was encountered, is referred to as the blow count and is noted on the boring logs. The blow counts recorded on the boring logs are recorded in 6-inch intervals. Where the sample was driven less than 12 inches, the number of blows to drive the sample for each 6-inch segment, or portion thereof, is shown on the logs. For example, 50/4" indicates 50 blows to drive the sampler 4 inches to refusal. After the samplers were withdrawn from the test borings, select samples were carefully removed, sealed to reduce moisture loss, and transported to our laboratory for testing.

DRAFT

Copyright 2025 Kleinfelder

3.5 CONE PENETRATION TESTING

Two CPTs were performed in the vicinity of the proposed MWD pipeline crossing because potentially liquefiable soils were anticipated. The CPTs were performed by Kehoe Testing & Engineering, Inc. of Huntington Beach, California using a 30-ton truck rig. The CPTs were advanced to a maximum depth of 100 ft bgs. Upon completion, the CPTs were backfilled with hydrated bentonite chips. The CPT visual plots and data are presented in Appendix A, Field Exploration.

3.6 SURFACE WAVE MEASUREMENT TESTING

Two seismic surface wave measurement arrays were performed in the vicinity of the proposed MWD pipeline crossing to determine shear (S) wave velocity profiles in support of the MWD pipeline settlement analysis. The surface wave measurements were performed by GEOVision of Corona, California. The approximate array locations are shown on Figure 2. A detailed report of the surface wave measurements is presented in Appendix C, Surface Wave Measurements Report.

4 LABORATORY TESTING

4.1 GEOTECHNICAL TESTING

Laboratory testing was performed on samples obtained from the borings following field exploration. Laboratory tests were performed on drive and bulk soil samples to estimate engineering characteristics of the various earth materials encountered. Selected samples from the borings were tested to evaluate their physical characteristics and engineering properties. The laboratory testing program was formulated with the emphasis on evaluating the density, plasticity, shear strength, and gradation of the soils encountered. Classifications made in the field were modified as appropriate, based on the laboratory test results. The description of the subsurface conditions and classifications presented in the boring logs reflect the changes made as a result of the laboratory tests.

The laboratory index tests, and engineering property tests performed included determination of in-situ moisture content and dry density, wash sieve, sieve & hydrometer analysis, Atterberg limits, direct shear, consolidation testing, expansion index, compaction curve testing, R-Value, and preliminary corrosivity testing including pH, minimum resistivity, sulfate content, and chloride content. Laboratory test results are presented in Appendix B, Laboratory Testing.

5 SITE CONDITIONS

5.1 TOPOGRAPGHY AND DRAINAGE

The project is in the San Jacinto Valley in west Riverside County, about 4 miles northwest of the city of San Jacinto, California. The project site is in an area of farmland on the floodplain on the southwest side of the San Jacinto River, which is channelized in the northern San Jacinto Valley and which drains northwest before turning southwest toward Lake Elsinore. The site is on the west side of the valley below the granitic highlands of the Lakeview Mountains to the west and the San Jacinto Mountains to the east.

5.2 GEOLOGIC SETTING

California is divided into eleven natural geomorphic provinces that are recognized based on geology, landscape or landform, topographic relief, and climate. The project is in the Peninsular Ranges province which extends from the San Gabriel and San Bernardino mountains north of the site southward into lower California, and from the coast eastward to the Colorado Desert (Norris and Webb, 1990).

The Peninsular Ranges are a series of northwest-trending mountain ranges and valleys subparallel to major faults branching from the San Andreas fault system. The Peninsular Ranges are divided into three fault-bounded structural blocks comprised of mostly granitic rocks intruding sedimentary rocks and older metamorphic rocks (Norris and Webb, 1990). The project area is near the north end of the middle (Perris) block.

The north end of the Perris block is bounded by active faults: the Sierra Madre fault on the north, the Elsinore fault on the west, and the San Jacinto fault on the east. The site is in the San Jacinto fault zone (SJFZ) at the east edge of the Perris block.

The northwest-striking SJFZ is a major right-lateral strike-slip fault zone in southern California (Onderdonk et al., 2013). The San Jacinto Valley is a pull-apart basin bounded on the northeast by the Claremont strand of the SJFZ and on the southwestern margin of the valley by the Casa Loma fault strand, two of the many fault strands that make up the SJFZ. Northwest of the site, the Casa Loma fault bounds a 1.5-mile-wide extensional step-over at Mystic Lake (a sag pond), and to the southeast the Casa Loma fault is co-linear with the Clark fault, the primary strand of the central SJFZ (Rockwell et al., 2015). The Casa Loma fault intersects the proposed onsite

DRAFT

Copyright 2025 Kleinfelder

and confluence basins at the north end of the alignment and the proposed Line E inlet at the south end (USGS, 2006).

The proposed alignment lies east of the Casa Loma fault (USGS, 2006), with the exception of the onsite basin, and is within the structural basin part of the San Jacinto Valley between the Casa Loma and Claremont faults. The thickness of valley sediments within the structural basin between the Casa Loma and Claremont faults may exceed 5000 feet, but valley sediments are much thinner west of the Casa Loma fault, reaching maximum depths of about 900 feet (DWR, 2013).

5.3 STATIGRAPHY

The proposed alignment occupies the floodplain of the San Jacinto River and is underlain by alluvium comprised of sandy fluvial deposits and silty to clayey overbank (flood) deposits. Geologic mapping by Morton et al. (2001) shows young alluvial deposits east of the Casa Loma fault scarp and slightly older deposits west of the scarp, which was a barrier to flood deposition. Radiocarbon dates from detrital charcoal samples collected near the alignment for studies of the Casa Loma fault (Schaefer Dixon, 1993; Givler et al., 2022) indicate the fault juxtaposes late Holocene deposits on the east against latest Pleistocene to early Holocene deposits on the west.

Following are brief descriptions of the soil units encountered in our borings. Detailed logs are presented in Appendix A.

5.3.1 Artificial Fill

Artificial fill is present locally along portions of the study area, generally beneath existing roads. The fill overlies native materials and generally consists of a thin veneer of locally-derived sandy silt and silty sand. The fill soils are considered undocumented and are not shown.

5.3.2 Young Alluvium (axial valley floor deposits [Qya])

Holocene-age sandy fluvial deposits and silty to clayey overbank (flood) deposits associated with the San Jacinto River (Morton et al., 2001). Alluvial soils were encountered in borings B-1 through B-19 and primarily consisted of fine silty sand and sandy silt, with lesser amounts of silt, sand, and clayey sand. Boreholes drilled farther from the river channel encountered slightly finer soils, consistent with floodplain deposition. Relative density ranges from predominantly loose to medium dense and stiff to very stiff.

DRAFT

Copyright 2025 Kleinfelder

5.4 FAULTING AND SEISMICITY

5.4.1 Faulting

The project is in seismically active southern California. The project is within the zone of influence for several faults which are considered active or potentially active. An active fault is a fault that has experienced seismic activity during historic time (since roughly 1800) or exhibits evidence of surface displacement during Holocene time (Bryant and Hart, 2007; CGS, 2018). The definition of "potentially active" varies. A generally accepted definition of "potentially active" is a fault showing evidence of displacement that is older than 11,700 years (Holocene age) and younger than 2.6 million years (Pleistocene age). However, "potentially active" is no longer used as criteria for zoning by the California Geologic Survey (CGS). The terms "sufficiently active" and "well-defined" are now used by the CGS as criteria for zoning faults under the Alquist-Priolo (AP) Earthquake Fault Act. A "sufficiently active fault" is a fault that shows evidence of Holocene surface displacement along one or more of its segments and branches, while a "well-defined fault" is a fault whose trace is clearly detectable by a trained geologist as a physical feature at or just below the ground surface. The definition "inactive" generally implies that a fault has not been active since the beginning of the Pleistocene Epoch (older than 2.6 million years old).

The project site is east of and adjacent to the Casa Loma fault strand of the SJFZ, and the Casa Loma fault intersects the proposed onsite and confluence basins at the north end of the alignment and the proposed Line E inlet at the south end (USGS, 2006). The SJFZ has a geologic slip rate of 12-18 mm/year (Blisniuk et al. 2013; Rockwell et al. 2015). Paleoseismic data along the SJFZ indicate an average recurrence interval of surface-rupturing earthquakes of 185–254 years with moment magnitudes (Mw) ranging from 6.75 to 7.7 and per-event displacements of approximate 1.0 to 4.0 meters (Salisbury et al. 2012; Onderdonk et al. 2013; 2015; Rockwell et al. 2015).

5.4.2 Seismicity

The project is within the zone of influence for several faults which are considered active or potentially active and which are capable of producing seismic shaking at the site that could potentially be damaging to buildings and appurtenant structures. It is anticipated that the project site will periodically experience ground acceleration as the result of moderate to large magnitude earthquakes on faults outside the project area.

A number of earthquakes have occurred within the region of the site (approximately a 50-kilometer, or 31-mile, radius) during historic time (since 1800), including two earthquakes on

DRAFT

Copyright 2025 Kleinfelder

the SJFZ (Table 1). The largest of these historic earthquakes was a Mw 6.8 event on the SJFZ centered only 8 miles from the project area which resulted in ground rupture near the proposed Line E inlet at the south end of the project alignment.

Table 1
Historic Earthquakes within 50 km of Site (>Mw 4.9)

Earthquake Name	Distance (miles)	Magnitude (Mw)	Date	Latitude	Longitude
San Jacinto	8	6.8	4/21/1918	33.750014	-116.883430
North San Jacinto Fault	18	6.3	7/22/1923	33.999690	-117.238216
Elsinore	25	6	5/15/1910	33.749453	-117.450194
Big Bear	26	6.4	6/28/1992	34.175257	-116.867476
North Palm Springs	27	5.6	7/8/1986	33.998575	-116.608877

5.5 GROUNDWATER

Information on groundwater presented in this report is based on information derived from our geotechnical investigation, review of recent data from temporary groundwater observation wells installed in the vicinity of the project (SoCalGeo, 2022), and review of observation well water levels in the database of the State of California Department of Water Resources (DWR, 2021).

Groundwater was encountered in several borings drilled during this investigation in the floodplain of the San Jacinto River (Appendix A). Groundwater was measured in the borings when first encountered and then measured again at the completion of the borehole. Groundwater was encountered in 12 of the 19 borings drilled at depths ranging from approximately 6 feet to 33 feet bgs, with shallow water (6 to 12 feet bgs) encountered near the San Jacinto Reservoir adjacent to the south end of the alignment. There are several ponds or retention basins in the site vicinity, including the San Jacinto Reservoir, which may contribute to shallow water conditions, together with agriculture irrigation. Kleinfelder borings B-6, B-9, B-14, and B-15 were converted to piezometers and groundwater readings were taken following the field exploration, as summarized in the table below.

DRAFT

Copyright 2025 Kleinfelder

Table 2
Summary of Piezometer Groundwater Measurements

Date	Groundwater Depth (ft bgs)			
	B-6	B-9	B-14	B-15
Initial Drill Date	18.5 (9/27/2023)	17.5 (9/27/2023)	17.5 (9/26/2023)	18.5 (9/26/2023)
12/20/2023	7.5	14.8	15.8	16.0

We reviewed data from 16 temporary groundwater observation wells that were installed in the vicinity of the project as part of a proposed commercial/industrial development (SoCalGeo, 2022). The wells were installed at various depths, depending on the depth groundwater was encountered, and water level measurements were taken three times between January and March 2022. Groundwater levels in the wells were generally similar to the various depths groundwater was encountered during borehole drilling for the subject project, with the exception of four wells installed in and adjacent to the Casa Loma fault which did not encounter groundwater despite well depths of 61.5 to 66.5 feet bgs. The absence of groundwater along the Casa Loma fault may reflect the presence of recent, Holocene-age alluvium on the east side of the fault scarp but not on the west side (Morton et al., 2001).

There are several groundwater observation wells in the State database (DWR, 2021) showing data for 2021-2023 that are within or adjacent to the project footprint. Nearby wells on both sides of the Casa Loma fault were found to have similar groundwater depths of approximately 200 feet bgs. This observation suggests there is a lower aquifer with similar groundwater levels on both sides of the fault, and an upper (possibly perched) aquifer that is limited to the recent, Holocene-age alluvium that was deposited east of the Casa Loma fault scarp. The proposed project is located east of the fault where shallow groundwater is present.

5.6 GEOLOGIC HAZARDS

5.6.1 Fault Rupture

As discussed in Section 5.4.1, the Casa Loma strand of the SJFZ is adjacent to the north and south ends of the proposed drainage alignment, and the mapped trace of the fault (USGS, 2006) intersects the Line E inlet and basin facilities. The AP Fault Zone setback associated with the mapped fault traces (CGS, 2021) impinges on the proposed channel alignment at the south end near Bridge Street and Sanderson Avenue, and at the north end where the alignment crosses Record Road.

DRAFT

Copyright 2025 Kleinfelder

The AP Fault Zone setback does not appear conservative. Fault trench exploration and mapping performed about one-half mile northwest of the Line E inlet for a proposed residential development (Leighton, 2004) indicates that sections of the Casa Loma fault have numerous splays and that these fault splays effectively widen the fault zone by 250 feet or more.

Consequently, it is our opinion that the risk of surface fault rupture within the project alignment is high. A map presenting the location of the project alignment relative to the nearest faults is provided in Figure 3, Fault Location Map.

5.6.2 Flood Hazard

Based on Flood Hazard Maps available through the Federal Emergency Management Agency (FEMA) online service (FEMA, 2021), most of the project alignment lies within or adjacent to special flood hazard areas. Flood risk areas subject to inundation by a 1% annual chance flood (100-year flood) are presented (FEMA zone A or AE). Overall, the risk of flooding along the alignment is considered high. However, we anticipate construction of the proposed storm drain will warrant modifications to the referenced Flood Hazard Map. We anticipate the proposed storm drain improvements will decrease flood risk caused by potential flooding of the San Jacinto Reservoir south of the proposed alignment, however the proposed storm drain improvements would not change the flood risk caused by potential flooding of the San Jacinto River north of the proposed alignment.

DRAFT

5.6.3 Erosion

Erosion and sedimentation are natural processes that occur on slopes, hillsides, and natural drainages. The proposed storm drain alignment site is farmland on the distal margin of floodplain of the San Jacinto River and the risk of erosion is considered low to moderate, whereas the risk of sedimentation is considered moderate because the proposed open drainage channel will act as a sediment sink in the event of a flood. Scour and sedimentation analysis is beyond the scope of this study.

6 ENGINEERING CONCLUSIONS AND RECOMMENDATIONS

6.1 GENERAL

Based on the results of the field explorations, laboratory testing, and our engineering analyses conducted during this study, it is our professional opinion that the proposed project is geotechnically feasible provided the recommendations presented in this report are incorporated into the project design and construction. The following opinions, conclusions, and recommendations are based on the properties of the materials encountered in the field explorations, the results of the laboratory testing program, and our engineering analyses performed. Our recommendations regarding the geotechnical aspects of the design and construction of the project are presented in the following sections.

6.2 SEISMIC DESIGN CONSIDERATIONS

6.2.1 Seismic Design Parameters

According to ACSE/SEI 7-16 (2016), which is incorporated into the 2022 California Building Code (CBC) by reference, sites subject to liquefaction, as discussed below, should be classified as Site Class F, which requires a site response analysis. However, ACSE/SEI 7-16 states that for a short period (less than ½ second) structure on liquefiable soils, Site Class D or E may be used instead of Site Class F to estimate design seismic loading on the structure. The selection of Site Class D or E is based on the assessment of the site soil profile assuming no liquefaction. We have assumed that the period of the structures will be less than ½ second. The assumption that the structures have a period of less than ½ second should be verified by the project structural engineer.

Based on data obtained from our field explorations, published geologic literature and maps, and on our interpretation of the 2022 CBC criteria, it is our opinion that the project site may be classified as Site Class D, Stiff Soil, according to Section 1613 of 2022 CBC and Table 20.3-1 of ASCE/SEI 7-16 (2016). Approximate coordinates for the site are noted below.

- Latitude: 33.8208° N
- Longitude: 117.0247° W

In accordance with Section 11.4.8 of ASCE 7-16, a site-specific ground motion hazard analysis is required for Site Class D sites with an S1 greater than 0.2 g. However, a site-specific ground

DRAFT

Copyright 2025 Kleinfelder

motion hazard analysis is not required if the exceptions in Section 11.4.8 of ASCE 7-16 are taken. In accordance with the 2022 CBC, which adopts Supplement 3 of the ASCE 7-16, the exception would be if the values of the parameters S_{M1} and S_{D1} are increased by 50 percent. The assumption that the exception will be used should be verified by the project structural engineer during final design based on the governing code. Based on the assumption that the exception will be taken in accordance with the governing code, the 2022 CBC Seismic Design Parameters (non site-specific) for the project site are provided in Table 3.

Table 3
2022 CBC Seismic Design Parameters

DESIGN PARAMETER	RECOMMENDED VALUE
Site Class	D
S_s (g)	2.138
S_1 (g)	0.866
F_a	1.0
F_v	N/A*
S_{MS} (g)	2.138
S_{M1} (g)	N/A
S_{DS} (g)	1.425
S_{D1} (g)	N/A
PGA_M (g)	1.062

*Section 11.4.8 of ASCE 7-16 requires a site-specific ground motion hazard analysis be performed for Site Class D sites with S_1 values greater than or equal to 0.2g unless exceptions are taken. If exceptions are taken, then a F_v value of 1.7 could be used only to calculate the T_s value.

DRAFT

6.3 LIQUEFACTION AND SEISMICALLY INDUCED SETTLEMENT

Soil liquefaction is a phenomenon in which saturated, cohesionless soils lose their strength due to the build-up of excess pore water pressure during cyclic loading such as that induced by earthquakes. The primary factors affecting the liquefaction potential of a soil deposit are: 1) intensity and duration of earthquake shaking, 2) soil type and relative density, 3) overburden pressures, and 4) depth to groundwater. Soils most susceptible to liquefaction are clean, loose, uniformly graded, fine-grained sands, and non-plastic silts that are saturated. Silty sands and silts, under certain site conditions, may also be susceptible to liquefaction.

Generalized liquefaction potential zones have been mapped for areas of Riverside County (Riverside County, 2021). The zones are based on generalized criteria for sediment types,

Copyright 2025 Kleinfelder

groundwater levels, and ground shaking potential. Based on the screening criteria used to develop the generalized maps, the project alignment is identified as having a moderate potential for liquefaction.

The potential for liquefaction settlement in the vicinity of the proposed MWD pipeline crossing was evaluated using data from the CPTs performed for the project and CPT liquefaction assessment software (Cliq v.3.0.3.4). Although hollow stem auger borings were performed at the locations of potentially liquefiable soils, the blow count data is generally not as reliable as CPT data for liquefaction calculations. Samples collected from the borings and associated laboratory tests were used in verifying the CPT results.

The proposed MWD pipeline crossing area is underlain primarily by sandy silt and silty sand. The apparent density of the granular soil layers ranged from loose to medium dense. When encountered, groundwater levels in the borings ranged from approximately 6 to 33 feet below the ground surface. A design groundwater level of 5 feet bgs was used in the liquefaction calculations, which corresponds to the anticipated highest groundwater level at the site.

Two important input parameters for the liquefaction analysis are PGA and the earthquake magnitude. According to Chapter 18 of the 2022 California Building Code (CBC) the PGA used for liquefaction analysis should be consistent with the maximum considered earthquake ground motions. The 2022 CBC states that the peak ground acceleration shall be determined in accordance with Section 11.8.3 of ASCE 7-16. We determined the peak ground acceleration for each vault and transition structure location where liquefiable soils were present. The design PGA_M used in the liquefaction analysis was 1.06g. In order to estimate the controlling magnitude at the site, the 2014 USGS interactive deaggregation tool was used from the United States Geological Survey (USGS), and a dominant earthquake modal magnitude of 8.1 was calculated, utilizing a 2% exceedance probability in 50 years (return period of about 2,475 years) according to the 2022 CBC and ASCE/SEI 7-16.

Our analyses indicated that liquefaction could occur within interbedded sand layers throughout the upper 60 feet bgs. We have used procedures outlined in Moss et al. (2006) for CPT-based liquefaction triggering and estimation of volumetric compaction or settlement. Estimated total liquefaction-induced settlements in the vicinity of the proposed MWD pipeline crossing result in approximately 2 inches based on the CPT results. Based on the results of our field investigations, the subsurface soil conditions in the MWD pipeline crossing area is generally uniform. The CPTs were performed at locations approximately 300 feet from each other and the difference in liquefaction settlement results is less than ¼-inch. Based on these conditions,

DRAFT

Copyright 2025 Kleinfelder

differential liquefaction-induced settlement is considered generally negligible in the MWD pipeline crossing area. We have ignored any liquefaction and associated settlements below a depth of 60 feet, as their effects on the surface should be minimal. The results of our liquefaction calculations are included in Appendix C, Liquefaction Analysis.

It should be noted the calculated liquefaction settlement is a free-field settlement independent of existing or proposed improvements. Based on liquefaction analysis results by SoCalGeo (2021), other portions of the site in the vicinity of the proposed storm drain alignment may experience approximately 2 to 6 inches of liquefaction settlement during a design level earthquake event.

6.4 MWD PIPELINE CROSSING

6.4.1 Foundations

Based on the results of our field explorations, laboratory testing, and geotechnical analyses, the proposed MWD pipeline crossing may be supported on shallow footing foundations. Recommendations for the design and construction of shallow foundations are presented below.

DRAFT

Allowable Soil Bearing Pressure

Footings embedded at least 5 feet below the lowest adjacent exterior grade may be designed for a net allowable soil bearing pressure of 3,000 pounds per square foot (psf) for dead plus sustained live loads. The footing dimension and reinforcement should be designed by the structural engineer; however, continuous footings should have a minimum width of 18 inches. A one-third increase in the above bearing pressure can be used for transient wind or seismic loads.

Estimated Settlements

Based on design initial dead and service loads provided by the structural engineer, we estimate total static settlement of foundations designed and constructed in accordance with the recommendations presented above to be on the order of ½ inch for initial dead loads and grading and 1½ inches when including service and flood loads. Based on the generally granular nature of the subsurface soils, the initial dead load settlement is anticipated to be generally “immediate” (on the order of days to weeks). We understand the construction will be staged such that the initial dead load settlement will have occurred prior to allowing service loads to be imposed. Provided this construction staging is performed, total settlement of footings is

Copyright 2025 Kleinfelder

estimated to be up to 1 inch and differential static settlement between similarly loaded footings is estimated to be less than 1 inch over 50 feet.

In addition to the estimated static settlement, as previously discussed, it is estimated that liquefaction-induced settlement of saturated sandy soils due to strong ground shaking during an MCE-level seismic event could be on the order of 2 inches of total settlement, however, based on the generally uniform soil conditions in the MWD crossing area, differential liquefaction-induced settlement is considered generally negligible. We anticipate the liquefaction induced settlement impacts will be relatively similar between the crossing structure and the MWD pipe.

Lateral Resistance

Lateral load resistance may be derived from passive resistance along the vertical sides of the footings, friction acting at the base of the footing, or a combination of the two. An allowable passive resistance of 250 psf per foot of depth may be used for design. Allowable passive resistance values should not exceed 2,500 psf. An allowable coefficient of friction of 0.3 between the base of the footings and the on-site soils can be used for sliding resistance using the dead load normal stresses. Friction and passive resistance may be combined without reduction. We recommend that the first foot of soil cover be neglected in the passive resistance calculations if the ground surface is not protected from erosion or disturbance by a slab, pavement, or in a similar manner.

DRAFT

6.4.2 MWD Pipeline Settlement

Construction of the proposed storm drain would involve cuts and fills over the existing MWD pipeline. Grade changes, construction sequencing, flooding, and crossing structure footings could subject the MWD pipeline to change in loads that could cause settlement due to an increase in overburden stress or heave due to a decrease in overburden stress. We understand MWD requires proposed improvements in the vicinity of their pipe to not induce displacements on their pipe of more than ¼-inch per 100 feet. We have performed numerical modeling of the subsurface conditions and proposed structures using the 3-D finite element program PLAXIS 3D. The details and results of these analyses are included in Appendix E. The results of the analysis indicate the proposed improvements will meet MWD's tolerance provided the key recommendations and assumptions presented below are implemented in the design and construction of the crossing and storm drain.

Copyright 2025 Kleinfelder

The results of the analysis are presented in Appendix E, Numerical Analysis of Proposed Crossing. The key recommendations and assumptions utilized in the modeling that must be implemented in the design and construction of the crossing and storm drain channel are:

- Excavations will not be completed at a time when MWD has emptied the pipeline (i.e. it is not in-service).
- The crossing structure footings are constructed following the 1/3 sequence of excavation and footing placement.
    - Excavation of the subsequent 1/3 shall not progress until the footing for the previous 1/3 is in-place.
    - Excavation slopes and benches shall not be flatter than 1.5H:1V.
- Excavation and footing construction sequence shall be completed simultaneously on the upstream and downstream sides of the MWD pipeline. Simultaneously shall mean:
    - Elevations in excavations on either side shall not be more than 1 ft different.
    - The concrete footings shall be poured on both sides at the same time.
- Excavations shall not be backfilled until the full footing construction sequence is completed.
    - Backfill will consist of a medium weight flowable fill material (e.g. LCC) with a unit weight of approximately 85 pcf which does not require high vibration compactor equipment during placement. The medium weight flowable fill should have a friction angle of at least 30 degrees and cohesion of at least 50 psf.
    - Backfill shall be completed simultaneously on the upstream and downstream sides of the MWD pipeline. Simultaneously shall mean elevations of the backfill on each side shall not be more than 1 ft different.
- Lightweight flowable fill shall be used for embankments within 50 ft from the edge of the MWD pipe. Embankment fill shall consist of lightweight flowable fill material (e.g. LCC) not to exceed a unit weight of 30 pcf and does not require compaction to limit vibration impacts.
- Embankment fill shall be placed such that the elevation difference across (upstream to downstream sides) the MWD pipe is not greater than 1 ft at any time until final grades are established.

DRAFT

Copyright 2025 Kleinfelder

- The channel section shall limit the 100-yr flood event to a peak water elevation of 1453.47 ft.

6.4.3 Additional Constructability Considerations

Construction of the proposed MWD pipe crossing and storm drain in the vicinity of the existing MWD pipe while meeting MWD's requirements is considered feasible provided the key recommendations and assumptions utilized in the modeling provided above are implemented during design and construction. In addition, the following constructability considerations should also be considered based on MWD requirements.

- Vibrations on the MWD pipe should be less than 0.5 inches/second for "continuous" sources based on guidance provided by MWD. Based on Caltrans *Transportation and Construction Vibration Guidance Manual* (2020), vibratory rollers or similar equipment should not be used within 20 feet of the MWD pipe to meet MWD's limit.
- Any excavation within 2 feet of the MWD pipe should be performed by "hand" equipment as approved by MWD.
- Areas to receive fill that are not specified to require flowable fill as described above may utilize the on-site soil or import soil as structural fill in accordance with Section 6.9.
- Appropriate observations and inspections should be completed to ensure that the recommendations and assumptions made during our evaluation are followed during construction. Construction within the MWD right-of-way should conform to the relevant MWD construction standards, observations and inspections.

DRAFT

6.5 EXPANSIVE SOILS

Expansive soils are characterized by their ability to undergo significant volume change (shrink or swell) due to variations in moisture content. Changes in soil moisture content can result from rainfall, landscape irrigation, utility leakage, roof drainage, perched groundwater, drought, or other factors, and may cause unacceptable settlement or heave of structures, concrete slabs supported-on-grade, or pavements supported over these materials. Depending on the extent and location below finished subgrade, expansive soils can have a detrimental effect on structures.

In general, the soils encountered at the majority of the borings were silty or granular in nature. Laboratory testing resulted in Expansion Index values of 34 and 44, indicating a "low" expansion

Copyright 2025 Kleinfelder

potential. If import soil materials are used during construction, testing of the final subgrade soils should be performed to further evaluate the expansion potential.

6.6 CORROSIVITY

Selected near-surface soil samples from borings throughout the alignment were tested for potential corrosion to concrete and reinforcing steel. The samples were tested in general accordance with California Standard Test Methods to evaluate pH, minimum electrical resistivity, soluble sulfates, and chlorides content. These tests are only an indicator of soil corrosivity for the samples tested. Other soils found on site may be more, less, or of a similar corrosive nature.

Resistivity values ranged from 299 to 1,763 ohm-cm. Resistivity values less than 1,000 ohm-cm are considered extremely corrosive to buried ferrous metals. Resistivity values between 1,000 to 3,000 to ohm-cm are considered highly corrosive to buried ferrous metals (Roberge, 2006).

The concentrations of soluble sulfates indicate that the subsurface soils represent a Class S0 exposure to sulfate attack on concrete in contact with the soil based on ACI 318-19 Table 19.3.1.1 (ACI, 2019). Therefore, in accordance with ACI Building Code 318-19, no special provisions for selection of cement type are required.

The values obtained from corrosion potential testing are shown in Appendix B, Laboratory Testing. Kleinfelder's scope of services does not include corrosion engineering and, therefore, a detailed analysis of the corrosion test results is not included. We recommend the review of these results and consultation of a corrosion expert for further evaluation, if necessary.

6.7 TEMPORARY SHORING

6.7.1 General

Temporary shoring may be required where space or other restrictions do not allow a sloped excavation. Design and installation are the responsibility of the contractor. Temporary shoring may consist of a turn-key shoring system, soldier piles and lagging, or other system. Recommendations for design of temporary shoring are presented below.

The contractor's shoring design should be provided by a civil engineer registered in the State of California and experienced in the design and construction of shoring under similar conditions. Once the final excavation and shoring plans are complete, the plans and design should be

DRAFT

Copyright 2025 Kleinfelder

reviewed by Kleinfelder for conformance with the design intent and geotechnical recommendations provided herein.

6.7.2 Lateral Pressures

For the design of cantilevered shoring, an equivalent fluid pressure of 40 pounds per cubic foot (pcf) for drained conditions or 82 pcf for undrained conditions may be used for level backfill. Where the surface of the retained earth slopes up away from the shoring, a greater pressure should be used. Design data can be developed for additional cases when the design conditions are established.

In addition to the recommended earth pressure, any surcharge (live, including traffic, or dead load) located within a 1H:1V plane drawn upward from the base of the shored excavation should be added to the lateral earth pressures. The lateral contribution of a uniform surcharge load located immediately behind the wall may be calculated by multiplying the surcharge by 0.36 for the level backfill condition. Lateral load contributions of surcharges located at a distance behind the shored wall may be provided once the load configurations and layouts are known. As a minimum, a 2-foot equivalent soil surcharge (250 psf) is recommended to account for traffic or nominal construction loads. Stockpiled material should not be placed closer to the edge of an excavation than a distance equal to the depth of the excavation, and never closer than 4 feet from the edge of the excavation.

DRAFT

6.7.3 Design of Soldier Piles

All soldier piles should extend to a sufficient depth below the excavation bottom to provide the required lateral resistance. We recommend the required embedment depths be calculated based on the principles of force and moment equilibrium. For this method, the ultimate passive pressure against soldier piles that extend below the level of excavation may be assumed to be equivalent to a fluid pressure of 250 pcf, with a maximum resistance value of 2,500 psf. To account for arching, the passive resistance may be assumed to act over a width 2.0 times the width of the embedded portion of the pile, provided adjacent piles are spaced at least 3.0 pile diameters, center-to-center.

Drilling of the soldier pile shafts could be accomplished using heavy-duty drilling equipment. Groundwater may be encountered. The piles may be constructed partly below groundwater and, therefore, caving of the pile shafts should be anticipated and will need to be prevented. Temporary steel casing may be required to stabilize the sides of the pile shaft. Concrete for piles should be placed immediately after the drilling of the hole is complete. The concrete should

Copyright 2025 Kleinfelder

be pumped to the bottom of the drilled shaft using a tremie. Once concrete pumping is initiated, a minimum head of 5 feet of concrete above the bottom of the tremie should be established and maintained throughout the concrete placement to prevent contamination of the concrete by soil inclusions. If steel casing is used, the casing should be removed as the concrete is placed.

To develop full lateral resistance, provisions should be taken to assure firm contact between the soldier piles and undisturbed materials. The concrete placed in the soldier pile excavations may be a lean-mix concrete. However, the concrete used in that portion of the soldier pile that is below the planned excavated level should provide sufficient strength to adequately transfer the imposed loads to the surrounding materials.

6.7.4 Lagging

Continuous treated timber lagging and/or steel plates should be used between the soldier piles. The lagging/steel plates should be installed as the excavation proceeds. If treated timber is used, the lagging may remain in place after backfilling. The lagging should be designed for the recommended earth pressure but limited to a maximum value of 400 psf.

Some caving and running of the upper soils should be anticipated. To reduce the potential for loss of ground and settlement of the soil behind the wall, the contractor should backfill any space between the lagging and the cut slope with clean sand or sand-cement slurry after installation.

DRAFT

6.7.5 Deflection

Shoring adjacent to existing structures or improvements should be designed and constructed to reduce potential movement. The shoring system designer should evaluate potential deflections in their design. If the deflection analysis indicates excessive deflections, positive reinforcements such as tie backs may be needed.

6.7.6 Monitoring

Some deflection of the shored excavation should be anticipated during the planned excavation. We recommend the project civil engineer perform a survey of all existing utilities and structures adjacent to the shored excavation. The purpose of this survey would be to evaluate the ability of existing utility lines or improvements to withstand horizontal movements associated with a shored excavation and to establish the baseline condition in case of unfounded claims of

Copyright 2025 Kleinfelder

damage. If existing improvements are not capable of withstanding anticipated lateral movements, alternative shoring systems may be required.

Horizontal and vertical movements of the shoring system should be monitored by a licensed surveyor. The construction monitoring and performance of the shoring system are ultimately the contractor's responsibility. However, at a minimum, we recommend that the top of shoring be surveyed prior to excavation and that the top and bottom of the soldier beams be surveyed on a weekly basis until the shoring is not needed. Surveying should consist of measuring movements in vertical and two perpendicular horizontal directions.

6.8 REINFORCED CONCRETE BOX DESIGN

6.8.1 Design Parameters

The following geotechnical design recommendations are provided for the design of standard reinforced concrete box (RCB) for use along the entire storm drain project alignment.

Table 4
Standardized RCB Parameters

Soil Description	Sandy Silt to Silty Sand
Soil Density	110 pcf
Active Earth Pressure (Equivalent Fluid Pressure)	40 pcf (Drained) 20 pcf (Undrained***) 35 pcf (Seismic Increment*)
At-Rest Earth Pressure** (Equivalent Fluid Pressure)	60 pcf (Drained) 30 pcf (Undrained***)
Soil Cohesion	50 psf
Ultimate Passive Resistance	250 pcf
Coefficient of Friction	0.3
Allowable Net Bearing Pressure	2,000 psf

*Retaining structures supporting more than 6 feet of backfill should be designed to support an incremental seismic lateral pressure, which is applied as a triangular pressure distribution with a maximum pressure at the bottom of the retaining structure, similar to the active lateral earth pressure.

**For restrained retaining structures (at-rest condition), use the static active earth pressure and seismic increment to check the seismic condition; use at-rest earth pressure only to check the static condition; the larger loading of both cases should be used for the design of restrained retaining structure.

***Retaining structures should be designed with adequate drainage to reduce the potential for a buildup of hydrostatic pressures. For retaining structures where drainage outlets are not feasible, the undrained earth pressures listed above should be used. In addition to the above lateral pressures, walls should be designed to resist hydrostatic pressures. Hydrostatic pressures should assume a unit weight of 62.4 pcf and extend the full height of the wall. Hydrostatic pressure is applied as a triangular pressure distribution with a maximum pressure at the bottom of the wall, similar to the active lateral earth pressure. The resultant force may be assumed to at a height of 0.33H above the wall footing, where H is the retaining wall height.

DRAFT

Copyright 2025 Kleinfelder

6.8.2 Estimated RCB Settlement

The static settlement of individual RCB's will vary, depending on the depth of embedment, the plan dimensions of the vaults and the actual loading. We estimate the maximum total static settlement of vaults designed and constructed in accordance with the recommendations in this report to be on the order of 1 inch or less. Differential settlement is expected to be less than ½ inch, provided vaults are founded on similar materials. The estimated settlements discussed above do not include potential seismically-induced settlement discussed in Section 6.3.

6.9 EARTHWORK AND GRADING

Grading plans were not available for the project at the time this report was prepared. We anticipate earthwork and grading will be relatively minor. The final grading plans should be reviewed and, if needed, additional recommendations should be provided.

6.9.1 Site Preparation

All site preparation and earthwork operations should be performed in accordance with applicable codes, safety regulations, and other local, state, or federal specifications. All references to maximum unit weight should be established in accordance with the current ASTM Standard Test Method D1557 and may supersede references cited herein. The earthwork operations should be observed and tested by a representative of Kleinfelder.

DRAFT

6.9.2 Stripping and Grubbing

Prior to general site grading, existing pavement, vegetation, organic topsoil, existing fill soils, and debris shall be stripped and disposed of outside the construction limits. Deeper stripping or grubbing may be required where concentrations of fill debris, organic soils, existing trees, or thick root mats are encountered during site grading. Stripped topsoil (less any debris) may be stockpiled and reused for landscape purposes elsewhere on the project; however, this material should not be incorporated into any engineered fill.

In areas where existing trees will be removed, care should be taken to remove the root-ball, roots exceeding 1 inch in diameter, remaining organics, and to backfill the excavations with compacted engineered fill. We strongly recommend having a representative of Kleinfelder present during tree removal, in areas to receive fill or beneath foundations to observe removal of large roots and subsequent scarification and recompaction. Engineered fill should be placed and compacted in accordance with recommendations provided below.

Copyright 2025 Kleinfelder

6.9.3 Earthwork

At the RCB subgrade and storm drain bottoms, the exposed surface should be scarified to a minimum depth of 6 inches, moisture-conditioned, and compacted to at least 90 percent relative compaction. Any areas of loose or yielding soils should be over-excavated and re-compacted. Any soils that cannot be compacted, or are otherwise unsuitable for the planned use, should be excavated and disposed of from the project site and replaced with suitable engineered fill.

All materials to be placed as fill should be free of vegetation, organics, debris, and other deleterious materials. During fill placement, “oversize” material should be placed accordingly. Oversize material is any material with maximum dimension greater than 3 inches. All oversize material should be exported to an appropriate disposal facility. The larger rock, if any, will require special handling to reduce its size or place as windrows in a rock disposal fill.

All fill placed should be placed in horizontal lifts less than 8 inches in loose thickness, moisture-conditioned to within 2 percent of the optimum moisture content and compacted to 90 percent relative compaction per ASTM D1557. Engineered fill placed within the upper 12 inches of unpaved access roads or 12 inches below pavement subgrades should be compacted to at least 95 percent relative compaction of the maximum dry density obtained by ASTM D1557.

Import materials, if required, should have an Expansion Index (EI) of less than 20 with no more than 30 percent of the particles passing the No. 200 sieve and no particles greater than 3 inches in maximum dimension. The maximum EI for imported soils may be modified by the project geotechnical engineer depending on its proposed use. Imported fill should be documented to be free of hazardous materials, including petroleum or petroleum byproducts, chemicals and harmful minerals. Kleinfelder should evaluate the proposed imported materials prior to their transportation and use on site.

6.9.4 Temporary Excavations

All excavations must comply with applicable federal, state, and local safety regulations including the current OSHA Excavation and Trench Safety Standards. Construction site safety generally is the sole responsibility of the Contractor, who shall also be solely responsible for the means, methods, and sequencing of construction operations. We are providing the information below solely as a service to our client. Under no circumstances should the information provided be interpreted to mean that Kleinfelder is assuming responsibility for construction site safety or the Contractor’s activities. Such responsibility is not being implied and should not be inferred.

DRAFT

Copyright 2025 Kleinfelder

Temporary cut slopes up to 15 feet high may be sloped back at an inclination of no steeper than 1.5:1 (horizontal to vertical) in the existing site soils. Minor sloughing and/or raveling of sandy slopes should be anticipated as they dry out. If signs of slope instability are observed, the inclination recommended above should be decreased until stability of the slope is obtained. Kleinfelder should be onsite full time to observe the temporary backcuts. Where space for sloped embankments is not available, shoring will be necessary. All applicable excavation safety requirements and regulations, including OSHA requirements, should be met.

Where sloped excavations are used, the tops of the slopes should be barricaded so that vehicles and storage loads do not encroach the tops of excavated slopes within a distance equal to the depth of the excavation. Greater setback may be necessary when considering heavy vehicles, such as concrete trucks and cranes. Kleinfelder should be advised of such heavy vehicle loadings so that specific setback requirements can be established. If temporary construction slopes are to be maintained during the rainy season, berms are recommended along the tops of the slopes to reduce runoff that may enter the excavation and erode the slope faces. Stockpiled material should not be placed closer to the edge of an excavation than a distance equal to the depth of the excavation, and never closer than 4 feet from the edge of the excavation.

Temporary, shallow excavations with vertical side slopes less than 4 feet high should generally be stable, although sloughing may be encountered in the granular deposits. Vertical excavations greater than 4 feet high should not be attempted without appropriate shoring to prevent local instability. All trench excavations should be braced and shored in accordance with good construction practice and all applicable safety ordinances and codes. The contractor should be responsible for the structural design and safety of the temporary shoring system, and we recommend that this design be submitted to Kleinfelder for review to check that our recommendations have been incorporated. For planning purposes, the on-site soils may be considered as a Type C soil, as defined using the current OSHA soil classification.

DRAFT

6.9.5 Unstable Subgrade Conditions

Groundwater may be encountered during site grading. We recommend that a dewatering plan be prepared such that the groundwater is maintained below the storm drain subgrade elevation during construction. Following dewatering, we anticipate pumping subgrade conditions may be encountered, and the subgrade may need to be stabilized. An unstable subgrade could be over-excavated 12 to 24 inches below the subgrade elevation and replaced with an equal amount of ¾- or 1-inch compacted crushed rock wrapped by geotextile fabric. The geotextile fabric should

Copyright 2025 Kleinfelder

consist of a woven geotextile, such as Mirafi 600X or equivalent. The final depth of removal will depend upon the conditions observed in the field once over-excavation begins. The geotextile fabric should be placed in accordance with the manufacturer's recommendations. Alternate stabilization methods approved by Kleinfelder may also be performed.

6.10 PERMANENT SLOPES

Permanent slopes may be constructed for the proposed project. The following sections provide general recommendations for both fill and cut slopes. Revised recommendations may be needed based on our review of the final project plans.

6.10.1 Fill Slopes

Fill slopes may be inclined up to 2:1 (horizontal:vertical) or flatter. Where the toe of a fill slope terminates on a natural or cut slope, a keyway is required at the toe of the fill slope. The fill slope keyway should be a minimum width of 15 feet, with a minimum depth of 3 feet into competent natural material and should extend a distance equal to the depth of the keyway beyond the toe of the fill. Benching should be cut into the existing slope to bind the fill to the slope. Benches should be step-like in profile, with each bench not less than four feet in height and established in competent material. Figure 4, Typical Engineered Fill Slope Detail shows a typical section for a fill slope including keyway and benching. For slopes 10 feet high or less, the keyway depth and width may be reduced as presented in Table 5 below.

DRAFT

Table 5
Minimum Keyway Recommendations

Keyway Recommendations for Fill Slopes			
Slope Height	5 feet or less	> 5 feet to 10 feet	> 10 feet
Minimum Keyway Depth	1 foot into competent material	2 feet into competent material	3 feet into competent material
Minimum Keyway Width	8 feet *	8 feet	15 feet

* For fill slopes 5 feet or less in height, further evaluation of the keyway width can be made by the Engineer of Record based on field conditions and construction methods employed.

Compressible or other unsuitable soils should be removed from the slope prior to benching. Competent material is defined as being essentially free of loose soil, heavy fracturing or erosion prone material and is established by the Geotechnical Consultant during grading. Following

Copyright 2025 Kleinfelder

completion of the excavation for the keyway, the project Geotechnical Consultant shall observe the keyway prior to backfilling with certified engineered fill.

Depending on fill slope construction and actual site conditions encountered in the field to be verified by the Geotechnical Engineer or their representative, back drains may be required within the compacted fill to prevent the buildup of hydrostatic pressures behind the fill slope. Field conditions, such as observed seepage, or the presence of water within the slope may require the use of subdrains to adequately prevent buildup of hydrostatic pressures behind the fill slope. In general, fill slopes with design heights less than 10 feet will likely not require subdrains.

When constructing fill slopes, the contractor shall avoid spillage of loose material down the face of the slope during dumping and rolling conditions. Preferably, the incoming load shall be dumped behind the face of the slope and bladed into place. As a preferred method, the slope should be over-built and then trimmed back to expose a compacted core. As an alternative method, after each 4 feet of vertical height has been obtained, the contractor shall compact the outer face of the slope by backing the tamping roller over the top of the slope and thoroughly covering the entire slope surface with overlapping passes of the roller and accepted by geotechnical engineer of record. The foregoing should be repeated after the placement of each 4-foot thickness of fill.

DRAFT

As discussed previously, fill slopes should conform to the requirements of the “Earthwork” section of this report and should contain no particles greater than 3 inches in maximum dimension. The fill slope surface should be compacted to a minimum of 90 percent relative compaction per ASTM D1557, or as specified in the project plans and specifications. Surface drainage control, such as berms at the tops of slopes, should be included in the design of fill slopes to direct sheet flow away from the tops of slopes and reduce the potential for slope erosion.

6.10.2 Cut Slopes

In general, cut slopes should be a maximum inclination of 2:1 (horizontal:vertical). Due to the potential for adverse geologic conditions, cut slopes proposed in formational material should be evaluated on a case-by-case basis. We recommend that a qualified geologist be on site during grading of the cut slopes to map the exposed geology for consistency with the conditions presented in this report. Revised recommendations may be needed based on the in-grading mapping.

Copyright 2025 Kleinfelder

6.11 EXCAVATION CHARACTERISTICS

In general, the drilling equipment used for our geotechnical investigation was able to reach the target depths at all of the borings, suggesting that the subsurface soils can be excavated with conventional excavation equipment.

6.12 SCOUR CONSIDERATIONS

We understand scour analysis will be performed by others. The near-surface soil generally consisted of sandy silt and silty sand. The sieve analysis results presented in Appendix B can be used to support scour analyses. The grain size representing percent passing 50% (D_{50}) obtained from the sieve analyses of the near-surface soil are summarized in Table 6 below.

Table 6
D_{50} Results

Boring Number	Depth (ft)	D_{50} (mm)
B-1	5	0.072
B-2	5	0.045
B-3	0 – 5	>0.1
B-4	0 – 5	0.14
B-5	5	0.025
B-6	0 – 5	0.040
B-7	0 – 5	0.094
B-8	5	0.052
B-9	5	0.13
B-10	0 – 5	0.067
B-11	0 – 5	0.071
B-12	0 - 5	0.059
B-13	0 – 5	0.10
B-14	0 – 5	0.76
B-15	0 – 5	0.31
B-16	5	0.096

6.13 PAVEMENT RECOMMENDATIONS

6.13.1 Asphalt Concrete

If proposed access roads will be paved, the required pavement structural sections will depend on the expected wheel loads, volume of traffic, and subgrade soils. The Traffic Indexes (TI's) assumed should be reviewed by the project Owner, Architect, and/or Civil Engineer to evaluate their suitability for this project. Changes in the TI's will affect the corresponding pavement section. The pavement subgrade should be prepared just prior to placement of the base course. Positive drainage of the paved areas should be provided since moisture infiltration into the subgrade may decrease the life of pavements. A preliminary asphalt concrete pavement section is provided in Table 7, below.

Table 7
Preliminary Asphalt Concrete Pavement Sections
(Design R-value = 50)

Assumed Traffic Index (TI)	Minimum Asphalt Concrete (inches)	Minimum Aggregate Base (inches)
5	3.0	4.0

DRAFT

Based on laboratory testing results, a design R-Value of 50 was selected for pavement design. Since the characteristics of the near-surface soils can change as a result of grading, we recommend that representative subgrade samples be obtained during grading and additional R value tests performed. Should the results of these tests indicate a significant difference, the design pavement section(s) provided above may need to be revised. Pavement sections provided above are contingent on the following recommendations being implemented during construction.

- The upper 12 inches of subgrade below pavements should be compacted to at least 95 percent relative compaction.
- Subgrade soils should be in a stable, non-pumping condition at the time aggregate base materials are placed and compacted.
- Aggregate base materials should be compacted to at least 95 percent relative compaction.
- Adequate drainage (both surface and subsurface) should be provided such that the subgrade soils and aggregate base materials are not allowed to become wet.

Copyright 2025 Kleinfelder

- Aggregate base materials should meet current Caltrans specifications for Class II aggregate base rock or crushed miscellaneous base as specified in the "Standard Specifications for Public Work Construction" ("Greenbook").
- The asphalt pavement should be placed in accordance with “Green Book” specifications or the City of San Jacinto requirements, as appropriate. We recommend that the asphalt pavement be placed in a single layer of ½-inch aggregate mix for pavements 4 inches thick or less. If the pavement section is over 4 inches thick, then the asphalt should be placed in at least two layers of mix. The first layer should consist of a base or coarse layer (¾-inch mix). The second layer (i.e., top layer) should consist of a medium or fine layer of ½-inch mix.

6.13.2 Portland Cement Concrete

Portland cement concrete (PCC) pavement should have a minimum 28-day compressive strength of 3,000 psi. Control joints should be spaced approximately every 10 feet. The concrete pavement section should be placed on at least 18 inches of engineered fill compacted to at least 90 percent of the maximum dry density with the upper 12 inches below pavements compacted to at least 95 percent relative compaction. Prior to fill placement, the exposed subgrade should be scarified to a depth of 8 inches, uniformly moisture conditioned to near optimum moisture content at the time of compaction. The following table presents our recommendations of Portland Cement Concrete pavement sections.

DRAFT

Table 8
Preliminary PCC Pavement Sections

Assumed Traffic Index (TI)	Minimum Concrete Thickness (inches; using a 28-day compressive strength of 3,000 psi)	Minimum Concrete Thickness (inches; using a 28-day compressive strength of 4,000 psi)
5	6.5	6.0

As an alternative to placing PCC pavements directly over 18 inches of engineered fill, 6 inches of aggregate base material may be added between the PCC and engineered fill to provide additional load distribution, drainage, and an option to reduce the thickness of the recommended PCC. If 6 inches of aggregate base material (compacted to 95% relative compaction) is used between the recommended 18 inches of engineered fill and PCC pavement, the recommended PCC thickness may be reduced by ½ inch. Aggregate base materials should meet current Caltrans specifications for Class 2 aggregate base or crushed

Copyright 2025 Kleinfelder

miscellaneous base as specified in the "Standard Specifications for Public Work Construction" ("Greenbook").

7 LIMITATIONS

Recommendations contained in this report are based on our field observations and subsurface explorations, laboratory tests, and our present knowledge of the proposed project. It is possible that soil conditions could vary between or beyond the points explored. If soil conditions are encountered during construction, which differ from those described herein, we should be notified immediately in order that a review may be made and any supplemental recommendations provided. If the scope of the proposed project, including the proposed foundation systems or vault locations, change from that described in this report, our recommendations should also be reviewed and a response issued. References to elevations and locations provided within this report were based upon general information provided for our use. Kleinfelder did not provide surveying services.

Other standards or documents referenced in any given standard cited in this report, or otherwise relied upon by the authors of this report, are only mentioned in the given standard; they are not incorporated into it or "included by reference," as the latter term is used relative to contracts or other matters of law.

We have strived to prepare the findings, conclusions, and recommendations in this report in a manner consistent with the standards of care and skill ordinarily exercised by members of this profession practicing under similar conditions in the geographic vicinity and at the time the services were performed. No warranty or guarantee, express or implied, is made. Information and recommendations presented in this report should not be extrapolated to other areas or be used for other projects without our prior review and response.

This report may be used only by Albert A. Webb Associates and their subcontractors and only for the purposes stated, within a reasonable time from its issuance. Land use, site conditions (both on site and off site) or other factors may change over time, and additional work may be required with the passage of time. Any party other than Albert A. Webb Associates and their subcontractors who wishes to use this report shall notify Kleinfelder of such intended use. Based on the intended use of the report, Kleinfelder may require that additional work be performed and that an updated report be issued. Non-compliance with any of these requirements by the client or anyone else will release Kleinfelder from any liability resulting from the use of this report by any unauthorized party.

DRAFT

Copyright 2025 Kleinfelder

Kleinfelder will assume no responsibility or liability whatsoever for any claim, damage, or injury which results from pre-existing hazardous materials being encountered or present on the project site, or from the discovery of such hazardous materials.

TYPICAL ENGINEERED FILL SLOPE DETAIL

SAN JACINTO LINE E STORM DRAIN
SAN JACINTO, CALIFORNIA

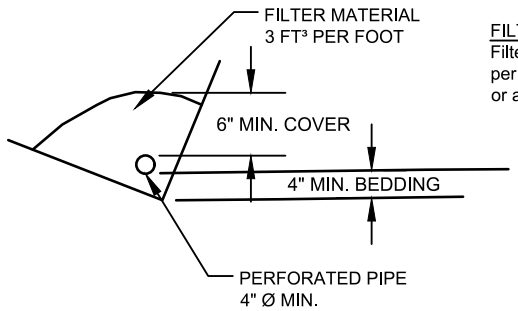

FIGURE: 4

DRAFT

DETAIL A:

PERFORATED PIPE SURROUNDED BY FILTER MATERIAL

FILTER MATERIAL:
Filter material shall be class 2 permeable material per State of California Standards Specifications, or an approved alternate.

NOTES:

1) FINAL BENCHING AND KEYWAY EXCAVATION DEPTHS AND DETAILS SUBJECT TO EVALUATION OF FIELD CONDITIONS.
2) DIMENSIONS AND LOCATIONS OF SUB DRAINAGE ARE APPROXIMATE. ACTUAL INSTALLATION TO BE BASED ON FIELD CONDITIONS.
3) GRADE PIPES TO DRAIN TO AN APPROPRIATE DISCHARGE FACILITY.
4) INSTALL CLEANOUTS AT ENDS, ANGLES, AND JUNCTIONS OF PIPE.
5) BENCH SHALL BE REQUIRED WHEN NATURAL SLOPES ARE EQUAL TO OR STEEPER THAN 5:1 OR WHEN RECOMMENDED BY THE FIELD ENGINEER.
6) SUBDRAINAGE: BACK DRAIN SHOULD BE REQUIRED AT THE DISCRETION OF THE GEOTECHNICAL CONSULTANT.

APPENDIX A
FIELD EXPLORATION

DRAFT

APPENDIX A
FIELD EXPLORATION

Field explorations included a site reconnaissance and subsurface explorations. During the site reconnaissance phase, each proposed boring site was visited to evaluate exploration equipment, accessibility, and general site conditions. The subsurface exploration program included drilling 19 hollow-stem auger borings and performing 2 CPTs.

The borings were drilled to depths ranging from approximately 20 to 50 feet bgs. Truck-mounted hollow-stem auger drill rigs supplied by 2R Drilling of Chino, California were used for the soil borings. Hollow-Stem Auger (HSA) drill rigs were equipped with 8-inch outside diameter (O.D.) continuous flight, hollow-stem augers.

The CPTs were advanced to a maximum depth of 100 ft bgs. The CPTs were performed by Kehoe Testing & Engineering, Inc. of Huntington Beach, California using a 30-ton truck rig.

Disturbed and relatively undisturbed samples of the subsurface materials were obtained from the borings using Standard Penetration test (SPT) samplers and California-type (CAL) samplers, respectively. The SPT sampler has a 1.375-inch inside diameter and a 2.0-inch outside diameter. The CAL sampler has a 2.42-inch inside diameter and a 3.0-inch outside diameter. Samples were driven 18 inches into the soil using a 140-pound automatic hammer falling 30 inches. SPT and CAL samples were obtained at 5-foot intervals alternating between the SPT and the CAL until reaching the boring target depth. Large bulk samples were also obtained within the upper 5 feet from each boring. The number of blows required to drive the samplers were recorded for each 6-inch penetration interval. The number of blows required to drive the samplers for the last 12 inches, or the interval achieved where higher resistance was encountered, is referred to as the blow count and is noted on the boring logs. Where the sample was driven less than 12 inches, the number of blows to drive the sample for each 6-inch segment, or portion thereof, is shown on the logs. For example, 50/4" indicates 50 blows to drive the sampler 4 inches to refusal. After the samplers were withdrawn from the test borings, select samples were carefully removed, sealed to reduce moisture loss, and transported to AP Engineering and Testing, Inc. for testing.

A legend to the logs is presented as Figure A-1 and A-2. The boring logs are presented as Figure A-3 through A-24. The logs describe the earth materials encountered, indicate the locations of the samples obtained, and show field and laboratory tests performed. The excavations were logged by an engineer from Kleinfelder using methods outlined in the Unified Soil Classification System (USCS) and general procedures established in ASTM D2488. The

DRAFT

Copyright 2025 Kleinfelder

boundaries between soil types shown on the logs are approximate because the transition between different soil layers may be gradual. The CPT visual plots and data are also attached in Appendix A following the logs.

NOTES

- The report and graphics key are an integral part of these logs. All data and interpretations in this log are subject to the explanations and limitations stated in the report.
- Solid lines separating strata on the logs represent approximate boundaries only, dashed lines are inferred or extrapolated boundaries. Actual transitions may be gradual or differ from those represented.
- No warranty is provided as to the continuity of soil or rock conditions between individual sample locations.
- Logs represent general soil or rock conditions observed at the point of exploration on the date indicated.
- In general, Unified Soil Classification System (ASTM D2488/D2487) designations presented on the logs were based on visual classification in the field and were modified where appropriate based on gradation and index property testing.
- Fine grained soils that plot within the hatched area on the Plasticity Chart, and coarse grained soils with between 5% and 12% passing the No. 200 sieve require dual USCS symbols, ie., CL-ML, GW-GM, GP-GM, GW-GC, GP-GC, GC-GM, SW-SM, SP-SM, SW-SC, SP-SC, SC-SM.
- If sampler is not able to be driven at least 6 inches then 50/X indicates number of blows required to drive the identified sampler X inches with a pound hammer falling inches.

GRAIN SIZE[1]

DESCRIPTION		SIEVE SIZE	GRAIN SIZE
Boulders		>12 in.	>12 in. (304.8 mm.)
Cobbles		3 - 12 in.	3 - 12 in. (76.2 - 304.8 mm.)
Gravel	coarse	3/4 -3 in.	3/4 -3 in. (19 - 76.2 mm.)
	fine	#4 - 3/4 in.	0.19 - 0.75 in. (4.8 - 19 mm.)
Sand	coarse	#10 - #4	0.079 - 0.19 in. (2 - 4.9 mm.)
	medium	#40 - #10	0.017 - 0.079 in. (0.43 - 2 mm.)
	fine	#200 - #40	0.0029 - 0.017 in. (0.07 - 0.43 mm.)
Fines		Passing #200	<0.0029 in. (<0.07 mm.)

SECONDARY CONSTITUENT[1]

Term of Use	AMOUNT	
	Secondary Constituent is Fine Grained	Secondary Constituent is Coarse Grained
Trace	<5%	<15%
With	≥5 to <15%	≥15 to <30%
Modifier	≥15%	≥30%

PLASTICITY[1]

DESCRIPTION	CRITERIA
Non-Plastic	A 1/8 in. (3 mm) thread cannot be rolled at any water content.
Low	The thread can barely be rolled and the lump cannot be formed when drier than the plastic limit.
Medium	The thread is easy to roll and not much time is required to reach the plastic limit. The thread cannot be rerolled after reaching the plastic limit. The lump crumbles when drier than the plastic limit.
High	It takes considerable time rolling and kneading to reach the plastic limit. The thread can be rerolled several times after reaching the plastic limit. The lump can be formed without crumbling when drier than the plastic limit.

MOISTURE CONTENT[1]

DESCRIPTION	FIELD TEST
Dry	Absence of moisture, dusty, dry to the touch
Moist	Damp but no visible water
Wet	Visible free water, usually soil is below water table

CONSISTENCY - FINE-GRAINED SOIL[2, 3]

CONSISTENCY	SPT - N (# blows / ft)	Pocket Pen (tsf)	UNCONFINED COMPRESSIVE STRENGTH (Q_u)(psf)	VISUAL / MANUAL CRITERIA
Very Soft	<2	PP < 0.25	<500	Easily penetrated several inches by fist
Soft	2 - 4	0.25 ≤ PP <0.5	500 - 1,000	Easily penetrated several inches by thumb
Medium Stiff	4 - 8	0.5 ≤ PP <1	1,000 - 2,000	Can be penetrated several inches by thumb with moderate effort
Stiff	8 - 15	1 ≤ PP <2	2,000 - 4,000	Readily indented by thumb but penetrated only with great effort
Very Stiff	15 - 30	2 ≤ PP <4	4,000 - 8,000	Readily indented by thumbnail
Hard	>30	4 ≤ PP	>8,000	Indented by thumbnail with difficulty

APPARENT DENSITY - COARSE-GRAINED SOIL[2]

APPARENT DENSITY	SPT-N (# blows / ft)
Very Loose	<4
Loose	4 - 10
Medium Dense	10 - 30
Dense	30 - 50
Very Dense	>50

STRUCTURE[1]

DESCRIPTION	CRITERIA
Stratified	Alternating layers of varying material or color with layers at least 1/4-in. (6mm) thick, note thickness.
Laminated	Alternating layers of varying material or color with the layers less than 1/4-in. (6 mm) thick, note thickness.
Fissured	Breaks along definite planes of fracture with little resistance to fracturing.
Slickensided	Fracture planes appear polished or glossy, sometimes striated.
Blocky	Cohesive soil that can be broken down into small angular lumps which resist further breakdown.
Lensed	Inclusion of small pockets of different soils, such as small lenses of sand scattered through a mass of clay; note thickness.
Homogeneous	Same color and appearance throughout

ANGULARITY[1]

DESCRIPTION	CRITERIA
Angular	Particles have sharp edges and relatively plane sides with unpolished surfaces.
Subangular	Particles are similar to angular description but have rounded edges.
Subrounded	Particles have nearly plane sides but have well-rounded corners and edges.
Rounded	Particles have smoothly curved sides and no edges.

REACTION WITH HYDROCHLORIC ACID[1]

DESCRIPTION	FIELD TEST
None	No visible reaction
Weak	Some reaction, with bubbles forming slowly
Strong	Violent reaction, with bubbles forming immediately

CEMENTATION[1]

DESCRIPTION	FIELD TEST
Weakly	Crumbles or breaks with handling or little finger pressure
Moderately	Crumbles or breaks with considerable finger pressure
Strongly	Will not crumble or break with finger pressure

DRAFT

The boring was terminated at approximately 21.5 ft. below ground surface. The boring was backfilled with auger cuttings on September 27, 2023.

GROUNDWATER LEVEL INFORMATION:
Groundwater was not observed during drilling or after completion.

GENERAL NOTES:
The exploration location and elevation are approximate and were estimated by Google Earth.

DRAFT

The boring was terminated at approximately 21.5 ft. below ground surface. The boring was backfilled with auger cuttings on September 28, 2023.

GROUNDWATER LEVEL INFORMATION:
Groundwater was not observed during drilling or after completion.

GENERAL NOTES:
The exploration location and elevation are approximate and were estimated by Google Earth.

APPENDIX B
LABORATORY TESTING

Laboratory tests were performed on drive and bulk soil samples to estimate engineering characteristics of the various earth materials encountered. Testing was performed by Kleinfelder's Ontario, California lab and AP Engineering & Testing, Inc. (AP) of Pomona, California. The test results are presented herein. Visual classifications presented on the lab plates were performed by AP during their laboratory testing and may differ from those presented on the boring logs provided in Appendix A.

IN-SITU MOISTURE CONTENT AND DRY UNIT WEIGHT

In-situ moisture content and dry unit weight tests were performed on samples that could be recovered in a relatively undisturbed condition. Moisture content was evaluated in general accordance with ASTM Test Method D2216. Dry unit weight was evaluated in general accordance with ASTM Test Method D7263. The results are presented on the boring logs in Appendix A.

WASH SIEVE

To provide information on the fines content of the soil layers at the site, wash sieves were performed to determine the percentage passing the #200 sieve. The wash sieves were performed in accordance with ASTM Test Method D1140. The results are presented on the boring logs in Appendix A.

GRAIN SIZE DISTRIBUTION

Sieve & hydrometer analyses were performed on soil samples to evaluate the gradation of the material and to aid in soil classification. Tests were performed in general accordance with ASTM Standard Test Method D6913. The results are presented on the boring logs in Appendix A and in the attached laboratory data in Appendix B.

ATTERBERG LIMITS (PLASTICITY INDEX)

Plasticity limit and liquid limit testing was performed on soil samples to evaluate behavior conditions at varying water contents. Testing was performed in general accordance with ASTM Standard Test Method D4318. The results are presented on the boring logs in Appendix A and in the attached laboratory data in Appendix B.

DIRECT SHEAR

Direct shear strength tests were performed by AP on drive samples to evaluate the drained shear strength of the onsite soils. Samples were tested in a near-saturated condition in general accordance with ASTM Test Method D 3080 (consolidated, drained). The results are presented in the attached laboratory data in Appendix B.

CONSOLIDATION TEST

Consolidation testing was performed by AP on selected relatively undisturbed samples by AP Engineering in accordance with ASTM D 2435. The tests were performed on 1.0-inch-high, 2.41-inch diameter samples. After trimming the ends, the sample was placed in a consolidometer and an initial reading was recorded. The sample was saturated during loading, and thereafter, the sample was incrementally loaded. The results are presented in the attached laboratory data in Appendix B.

EXPANSION INDEX

Expansion Index testing was performed on near surface bulk samples to determine the expansion potential of the soil. The testing was performed in accordance with ASTM Standard Test Method D4829. The results are presented in the attached laboratory data in Appendix B.

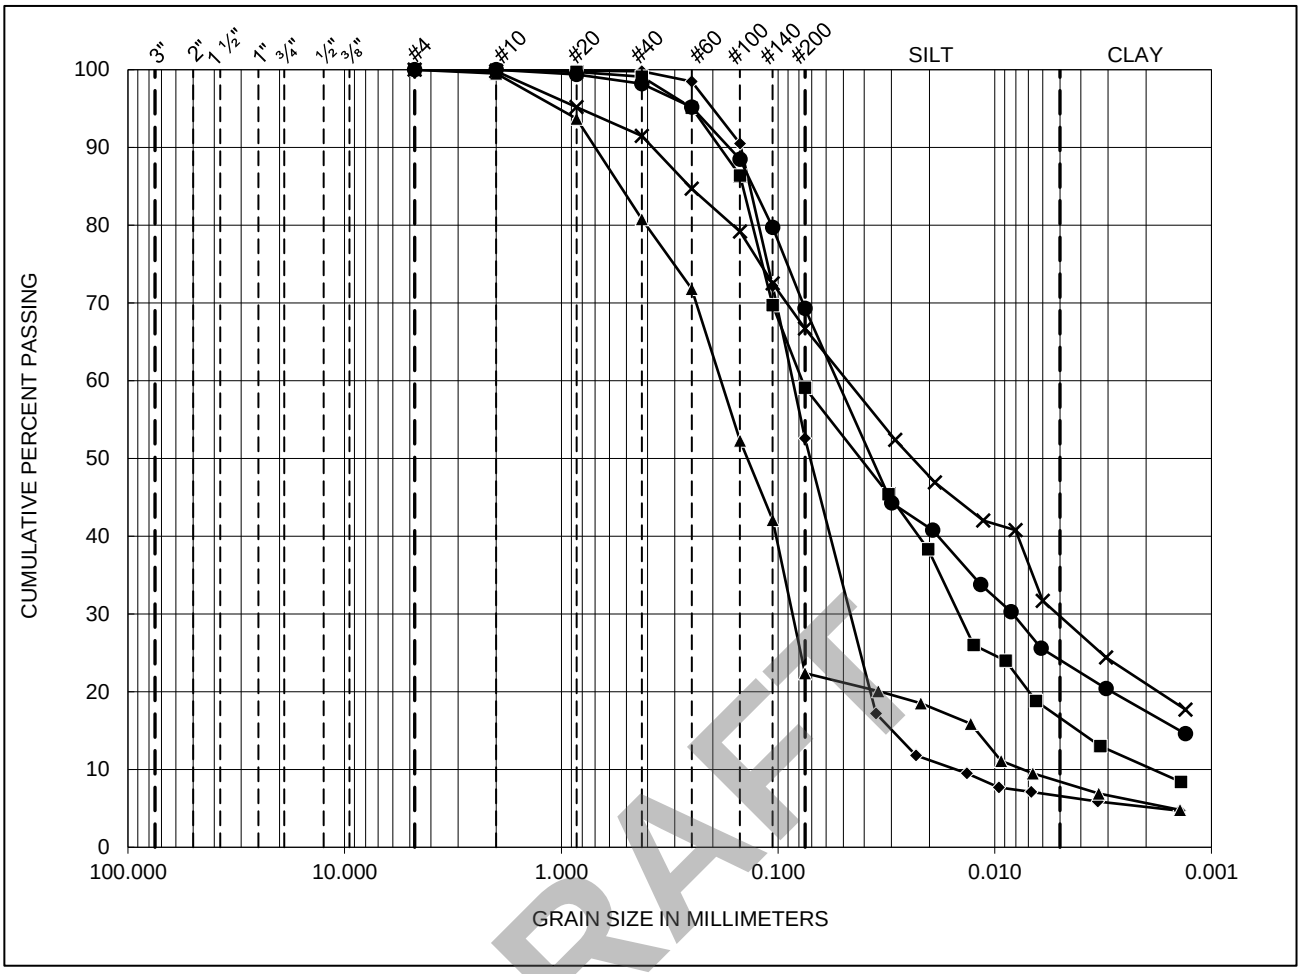
COMPACTION TESTING (MAXIMUM DRY DENSITY-OPTIMUM MOISTURE)

Maximum dry density-optimum moisture tests were performed on select bulk samples of the on-site soils to determine compaction characteristics. The tests were performed in accordance with ASTM Standard Test Method D1557. The results are presented in the attached laboratory data in Appendix B.

R-VALUE TESTING

Resistance value (R-value) tests were performed on bulk soil samples obtained to evaluate pavement support characteristics of the near-surface onsite soils. R-value tests were performed in accordance with ASTM Standard Test Method D2844. The results are presented in the attached laboratory data in Appendix B.

DRAFT



Copyright 2025 Kleinfelder

CORROSIVITY TESTS

Chemical analyses were performed on samples of the near surface soil by AP to estimate pH, minimum resistivity, soluble sulfate, and chloride contents. The tests were performed in accordance with Caltrans standards. The results are presented in the attached laboratory data in Appendix B.

1 INTRODUCTION

In-situ seismic measurements using active- and passive-source surface wave techniques were performed along two transects in San Jacinto, California. The purpose of this investigation was to provide a shear (S) wave velocity profile to a depth of 100 feet at 5 (or more) test locations per transect. The active-source surface wave technique utilized during this investigation consisted of the multi-channel analysis of surface waves (MASW) method. The passive-source surface wave technique consisted of the linear array microtremor method. The locations of the active- and passive-source surface wave arrays are shown on Figure 1 and Table 1.

At many sites, active surface wave techniques (MASW) with the utilization of portable energy sources, such as hammers and weight drops, are sufficient to obtain S-wave velocity soundings to 100 ft depths. At sites with high ambient noise levels and/or very soft soils, these energy sources may not be sufficient to image to this depth and a larger energy source, such as a bulldozer, is necessary. Alternatively, passive surface wave techniques, such as the array microtremor technique can be used to extend the depth of investigation at sites that have adequate ambient noise conditions.

This report contains the results of the active and passive surface wave measurements conducted at the site. An overview of the surface wave methods is given in Section 2. Field and data reduction procedures are discussed in Sections 3 and 4, respectively. Data modeling is presented in Section 5 and results are discussed in Section 6. References and our professional certification are provided in Sections 7 and 8, respectively.

DRAFT

2 Overview of Surface Wave Techniques

2.1 Introduction

Active- and passive-source (ambient vibration) surface wave techniques are routinely utilized for site characterization. Active surface wave techniques include the spectral analysis of surface waves (SASW) and multi-channel array surface wave (MASW) methods. Passive surface wave techniques include the horizontal over vertical spectral ratio (HVSR) technique and the array and refraction microtremor methods.

The basis of surface wave methods is the dispersive characteristic of Rayleigh and Love waves when propagating in a layered medium. Surface waves of different wavelengths (λ) or frequencies (f) sample different depth. As a result of the variance in the shear stiffness of the distinct layers, waves with different wavelengths propagate at different phase velocities; hence, dispersion. A surface wave dispersion curve is the variation of V_R or V_L with λ or f. The Rayleigh wave phase velocity (V_R) depends primarily on the material properties (V_S, mass density, and Poisson's ratio or compression wave velocity) over a depth of approximately one wavelength. The Love wave phase velocity (V_L) depends primarily on V_S and mass density. Rayleigh and Love wave propagation are also affected by damping or seismic quality factor (Q). Rayleigh wave techniques are utilized to measure vertically polarized S-waves (S_V-wave); whereas Love wave techniques are utilized to measure horizontally polarized S-waves (S_H-wave).

DRAFT

2.2 Surface Wave Techniques

The MASW and array microtremor techniques were utilized during this investigation and are discussed below.

2.2.1 MASW Technique

A description of the MASW method is given by Park, 1999a and 1999b and Foti, 2000. Ground motions are typically recorded by 24 or more geophones spaced 1 to 3 m apart along a linear array and connected to a seismograph. Energy sources for shallow investigations include various sized hammers and vehicle mounted weight drops. When applying the MASW technique to develop a one-dimensional (1-D) V_S model, it is preferable to use multiple-source offsets from both ends of the array. The most commonly applied MASW technique is the Rayleigh-wave based MASW method, which we refer to as MAS_RW to distinguish from Love-wave based MASW (MAS_LW). MAS_RW and MAS_LW acquisition can easily be combined with P- and S-wave seismic refraction acquisition, respectively. MAS_RW data are generally recorded using a vertical source and vertical geophone but may also be recorded using a horizontal geophone with radial (in-line) orientation. MAS_LW data are recorded using transversely orientated horizontal source and transverse horizontal geophone.

A wavefield transform is applied to the time-history data to convert the seismic record from time-offset space to frequency-wavenumber (f-k) space in which the fundamental or higher surface-wave modes can be easily identified as energy maxima and picked. Frequency and/or wavenumber can easily be mapped to phase velocity, slowness, or wavelength using the following properties: $k = 2\pi/\lambda$, $\lambda = v/f$. Common wave-field transforms include: the f-k transform, slant-stack transform, frequency domain beamformer, and phase-shift transform. The

minimum wavelength that can be recovered from MASW data set without spatial aliasing is equal to the minimum receiver spacing. Occasionally, SASW analysis procedures are used to extract surface wave dispersion data, from fixed receiver pairs, at smaller wavelengths than can be recovered by wavefield transformation. Multiple source offsets, and limiting minimum and maximum wavelengths, are required to construct a dispersion curve bandwidth necessary to develop a robust V_S model (Yoon and Rix, 2009; Li and Rosenblad, 2011).

Although the clear majority of MASW surveys record Rayleigh waves, it has been shown that Love wave techniques can be more effective in some environments, particularly shallow rock sites and sites with a highly attenuative, low velocity surface layer (Xia, et al., 2012; **GEO***Vision*, 2012). Rayleigh wave techniques, however, are generally more effective at sites where velocity gradually increases with depth because larger energy sources are readily available for the generation of Rayleigh waves. Rayleigh wave techniques are also more applicable to sites with high velocity layers and/or velocity inversions because the presence of such structures is more apparent in the Rayleigh wave dispersion curves than in Love wave dispersion curves. Rayleigh wave techniques are preferable at sites with a high velocity surface layer because Love waves do not theoretically exist in such environments. Joint inversion of Rayleigh and Love wave data may yield more accurate V_S models in anisotropic materials.

2.2.2 Array Microtremor Technique

A detailed discussion of the array microtremor method can be found in Okada, 2003. Unlike active source techniques, the array microtremor technique (also referred to as passive surface wave method) records ambient noise and ground motions emanating from ocean wave activity, wind noise, traffic, industrial activity, construction, etc. The technique uses 4 or more receivers aligned in a 2-dimensional array. Triangle, circle, semi-circle, and “L” shaped arrays are commonly used, although any 2-dimensional arrangement of receivers can be used. For investigations of the upper 100 m, receivers typically consist of 1 to 4.5 Hz geophones. For deeper investigations, 5 to 120 s seismometers are generally utilized.

The surface wave dispersion curve is typically estimated from array microtremor data using various f-k methods such as beamforming (Lacoss, et al., 1969), and maximum-likelihood (Capon, 1969), and the spatial-autocorrelation (SPAC) method. The SPAC method was originally based on work by Aki (1957) and has since been extended and modified (Ling and Okada, 1993 and Ohori *et al*., 2002) to permit the use of noncircular arrays, and is now collectively referred to as extended spatial autocorrelation (ESPAC or ESAC). SPAC methods are expected to perform better when noise sources are azimuthally well-distributed (e.g., in a large urban area). The minimum wavelength surface wave that can be extracted from an array microtremor dataset acquired utilizing a symmetric array is typically set equal to the minimum receiver spacing. The maximum wavelength is often set equal to twice the maximum receiver separation for SPAC analysis.

DRAFT

2.3 Surface Wave Dispersion Curve Modeling

The dispersion curves generated from the active and passive surface wave soundings are generally combined and modeled using iterative forward and inverse modeling routines. The final model profile is assumed to represent actual site conditions. The theoretical model used to interpret the dispersion curve assumes horizontally layered, laterally invariant, homogeneous-isotropic material. Although these conditions are seldom strictly met at a site, the results of active and/or passive surface wave testing provide a good "global" estimate of the material properties along the array. The results may be more representative of the site than a borehole "point" estimate.

MAS_RW and/or passive surface-wave modeling may involve modeling of the fundamental mode, some form of effective mode, or multiple individual modes (multi-mode). The fundamental mode assumption is generally applicable to modeling Rayleigh-wave dispersion data collected at normally dispersive sites, providing there are not abrupt increases in velocity or steep velocity gradients. Effective-mode or multi-mode approaches are often required for irregularly dispersive sites and sites with steep velocity gradients at shallow depth. If active and passive surface wave data are combined or MAS_RW data are combined from multiple seismic records with different source offsets and receiver gathers, then effective-mode computations are limited to algorithms that assume far-field plane Rayleigh wave propagation. Local search (e.g., linearized matrix inversion methods) or global search methods (neighborhood algorithm; Monte Carlo approaches such as simulated annealing, generic algorithms) are typically used to solve the inverse problem.

The maximum wavelength (λ_{max}) recovered from a surface wave data set is typically used to estimate depth of investigation although a sensitivity analysis of the V_S models would be a more robust means to estimate depth of investigation. For normally dispersive velocity profiles with a gradual increase in V_S with depth, the maximum depth of investigation is on the order of $\lambda_{max}/2$ for both Rayleigh and Love wave dispersion data. For velocity profiles with an abrupt increase in V_S at depth, the maximum depth of investigation is on the order of $\lambda_{max}/3$ for Rayleigh wave dispersion data but less than $\lambda_{max}/3$ for Love wave dispersion data. The depth of investigation can be highly variable for sites with complex velocity structure (including high velocity layers).

As with all surface geophysical methods, the inversion of surface wave dispersion data does not yield a unique V_S model and multiple possible solutions may equally fit the experimental data. Based on experience at other sites, the shear wave velocity models (V_S and layer thicknesses) determined by surface wave testing are within 20% of the velocities and layer thicknesses that would be determined by other seismic methods (Brown, 1998). The average velocity of the upper 30 m (V_{S30}), however, is much more accurate, often to better than 5%, because it is not sensitive to the layering in the model. V_{S30} does not appear to suffer from the non-uniqueness inherent in V_S models derived from surface wave dispersion curves (Martin et al., 2006, Comina et al., 2011). Therefore, V_{S30} is more accurately estimated from the inversion of surface wave dispersion data than the resulting V_S models.

DRAFT

3 FIELD PROCEDURES

Surface wave data were collected along two transects, whose locations were provided by Kleinfelder and confirmed by a company representative. The locations of the transects are shown in Figure 1 and coordinates of the array centers (corresponding to the modeled Vs profiles) and endpoints are provided in Table 1. Two types of surface wave data were acquired at each site: an active-source surface wave array to characterize near-surface velocity structure and a passive-source surface wave array to characterize deeper velocity structure.

The surface wave equipment consisted of four Geometrics Geode signal enhancement seismographs, 4.5 Hz vertical geophones, and seismic cables. The geophone array consisted of 96 live geophones with a nominal spacing of 10 feet, for a total array length of 950 feet. Active MASW sources included 4 lb. and 20 lb. sledgehammers, and a 240 lb. accelerated weight drop (AWD).

Shot points were located between 30 and 300 feet from the end geophone locations and at regular intervals in the interior of the array. At least twenty-four active source locations were occupied with the 4-lb hammer and either the AWD or the 20-lb sledgehammer. Data from the active source impacts were averaged in the field to improve the signal-to-noise ratio. In total this resulted in 48 source locations, and ~720 hammer blows for the project. Ambient noise measurements were made along the passive array for 60 minutes (Array 1) and 53 minutes (Array 2) with a 2 MS sample rate. The field geometry and associated files names were documented in field notes. All field data were saved to hard disk and backed up daily on a remote server.

DRAFT

4 DATA ANALYSIS AND RESULTS

The MASW data were reduced using the software Seismic Pro Surface V10 developed by Geogiga, SeisImager Pick win (Geometrics, Inc.), and multiple in-house utilities for various data extraction and formatting tasks. Because each transect was acquired in a "fully-live" configuration of 96 active receivers, common-midpoint cross-correlation gathers (CMPCC) were generated that organized the common receiver pairs for every shot gather. This allowed for 2-D smooth-model inversion modeling. The surface wave data were modeled using the fundamental mode routine in SeisImager Waves. Data inputs into the modeling software include layer thickness, S-wave velocity, P-wave velocity or Poisson's ratio, and mass density. P-wave velocity and mass density only have a very small influence (i.e., less than 10%) on the S-wave velocity model generated from a surface wave dispersion curve. However, realistic assumptions for P-wave velocity, which is significantly impacted by the location of the saturated zone, and mass density will slightly improve the accuracy of the S-wave velocity model.

During the modeling process an initial velocity model was generated based on provided preliminary CPT summaries. Kleinfelder provided estimates of water table depth (30 feet for Array 1; 16 feet for Array 2), wet and dry unit weights (85 and 115 lbs. per cubic foot, respectively), and Poisson's ratio (0.33). These inputs were used in the initial modeling phase. A first-pass inverse modeling routine was performed, and the results were compared to general characteristics of the dispersion curves. Layer thicknesses were adjusted, and the inversion process repeated until a V_S model was developed with low RMS error between the observed and calculated dispersion curves. Once an acceptable V_S model was developed, layer thicknesses were again adjusted, and the inversion process repeated to compare V_S models with similar RMS error to examine non-uniqueness.

Using the 2-D inversion routine in SeisImager WaveEQ, a 1-D shear-wave velocity profile was generated every 120-feet along each of the two transects shown in Figure 1. The modeled V_S profiles for each transect are presented as Figures 2-3. The resolution decreases gradually with depth due to the loss of sensitivity of the dispersion curve to changes in V_S at greater depth. The V_S profile used to match the field data is provided in tabular form in English units as Tables 2-15. The reported inferred values for P-wave velocity, Poisson's Ratio, and density were calculated based on the shear-wave velocity model results – not direct measurements or lab tests. The initial stage of the modeling process included input parameters provided by Kleinfelder, but these tabulated results show some variation, particularly with respect to density values. The "inferred density" values are based on the relationship between shear-wave velocity and density as described by Boore (2015).

DRAFT

This geophysical investigation was conducted under the supervision of a California Professional Geophysicist using industry-standard methods and equipment. A high degree of professionalism was maintained during the project from the field investigation and data acquisition, through data processing interpretation and reporting. Original field data files, field notes and observations, and other pertinent information are maintained in the project files and are available for the client to review for a period of at least one year.

A professional geophysicist's certification of interpreted geophysical conditions comprises a declaration of his/her professional judgment. It does not constitute a warranty or guarantee, expressed or implied, nor does it relieve any other party of its responsibility to abide by contract documents, applicable codes, standards, regulations or ordinances.

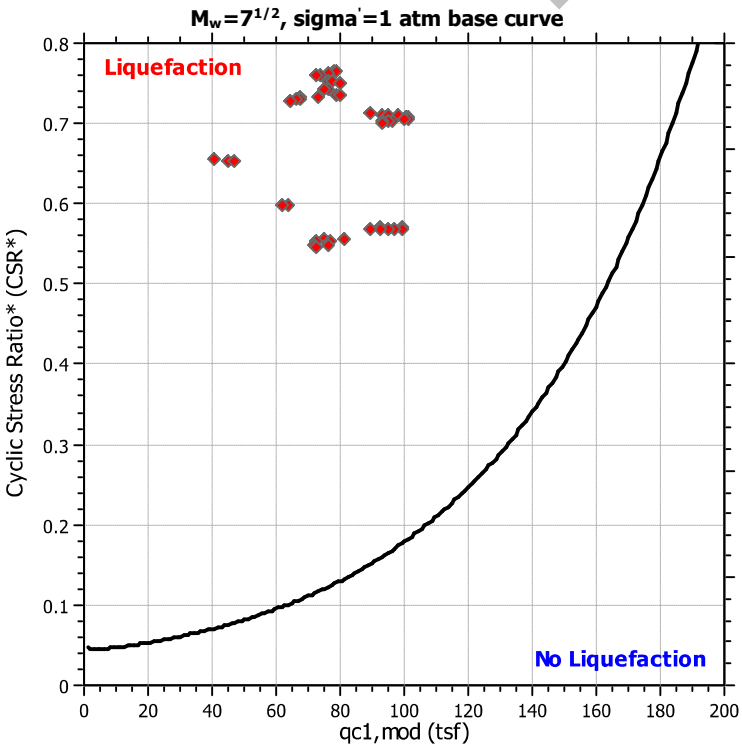
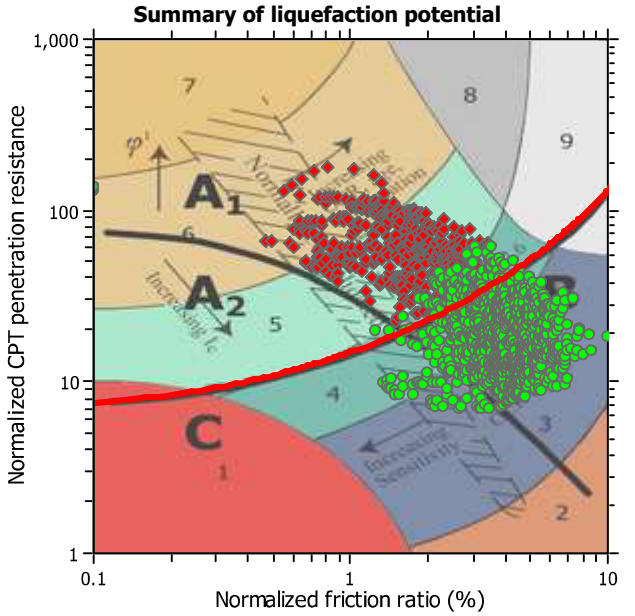
LIQUEFACTION ANALYSIS REPORT



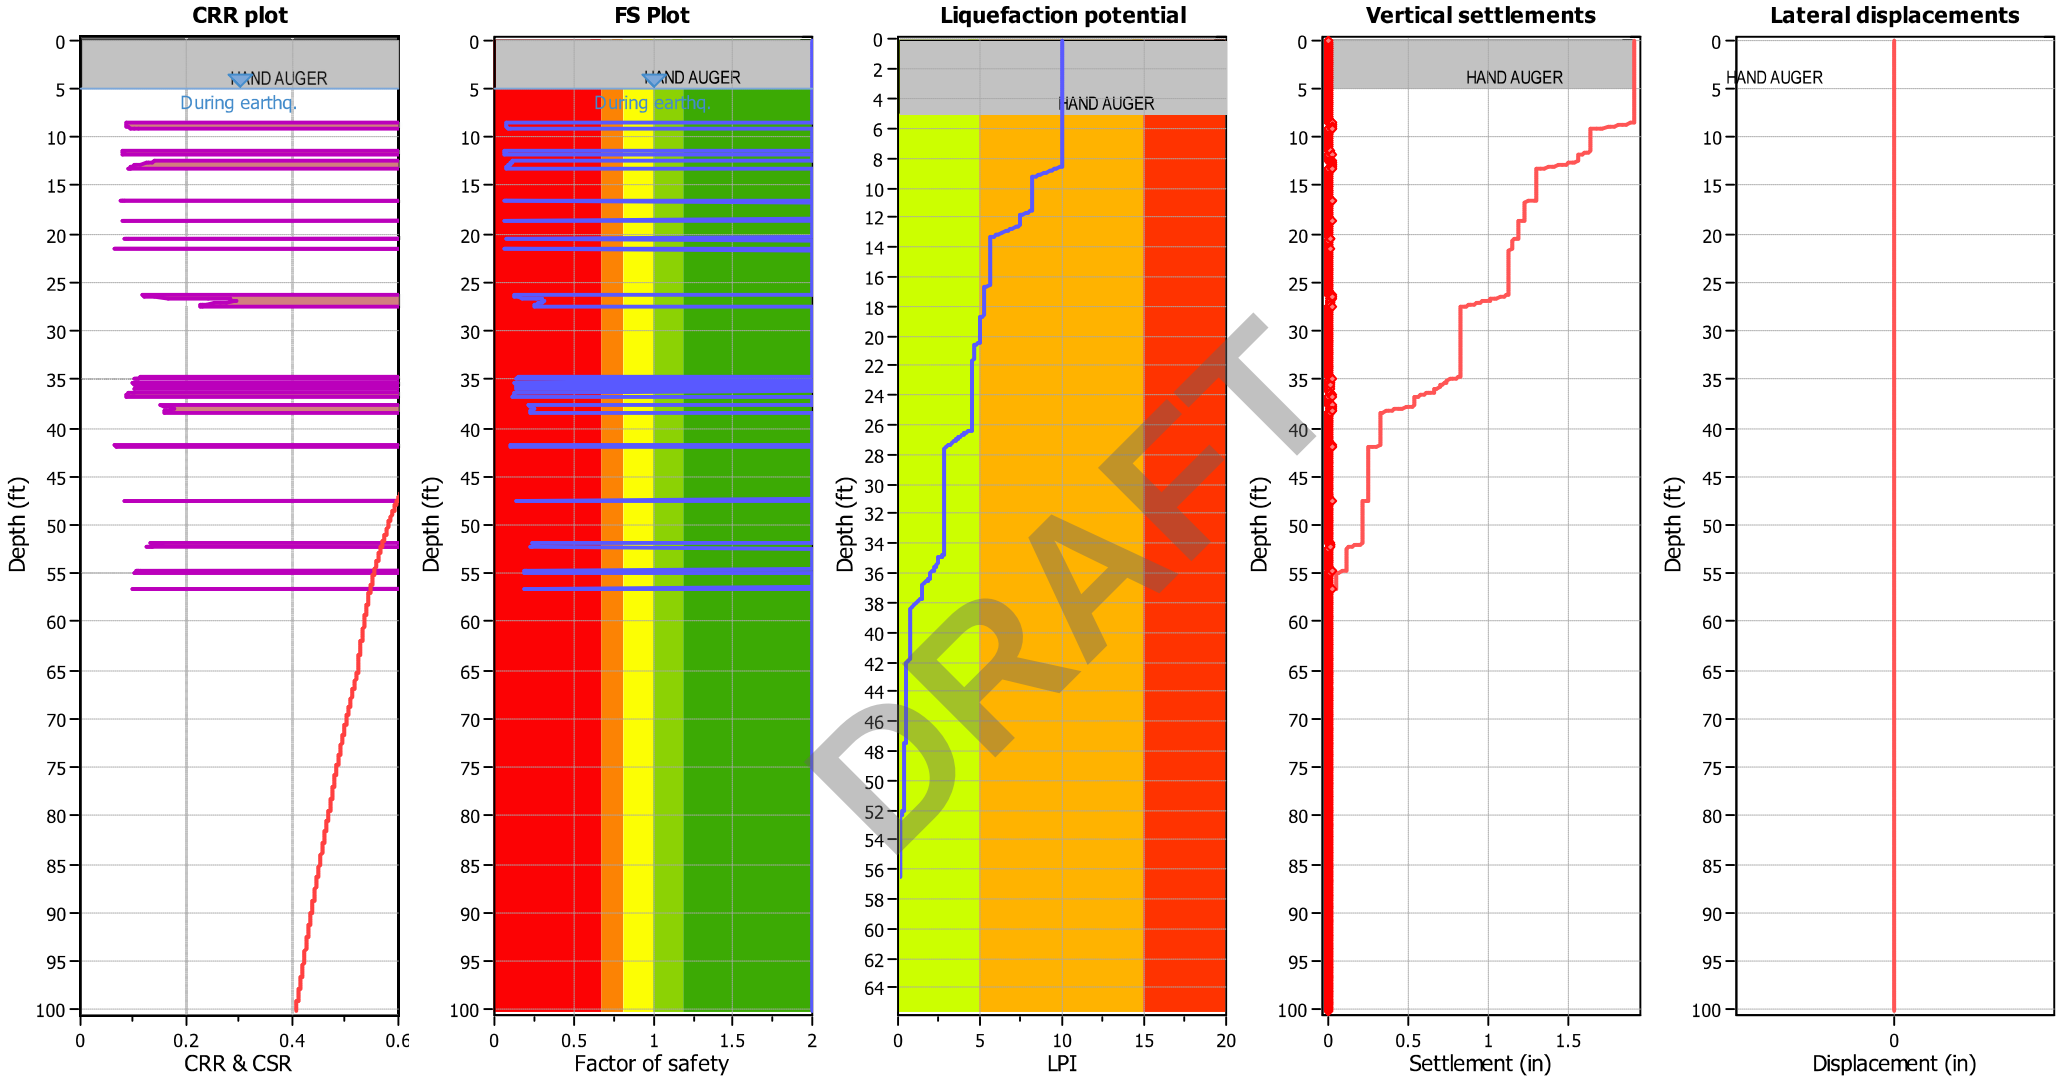
Project title : San Jacinto Line E Storm Drain **Location : San Jacinto, CA**



CPT file : CPT-1

Input parameters and analysis data

Analysis method:	Moss et al. (2006)	G.W.T. (in-situ):	16.50 ft	Use fill:	No	Clay like behavior applied:	Sands only
Fines correction method:	Moss et al. (2006)	G.W.T. (earthq.):	5.00 ft	Fill height:	N/A	Limit depth applied:	Yes
Points to test:	Based on Ic value	Average results interval:	1	Fill weight:	N/A	Limit depth:	60.00 ft
Earthquake magnitude M_w:	8.10	Ic cut-off value:	2.60	Trans. detect. applied:	Yes	MSF method:	Method based
Peak ground acceleration:	1.06	Unit weight calculation:	Based on SBT	K_σ applied:	Yes		



Zone A_1: Cyclic liquefaction likely depending on size and duration of cyclic loading
Zone A_2: Cyclic liquefaction and strength loss likely depending on loading and ground geometry
Zone B: Liquefaction and post-earthquake strength loss unlikely, check cyclic softening
Zone C: Cyclic liquefaction and strength loss possible depending on soil plasticity, brittleness/sensitivity, strain to peak undrained strength and ground geometry

Liquefaction analysis overall plots

Input parameters and analysis data

Analysis method:	Moss et al. (2006)	Depth to water table (erthq.):	5.00 ft	Fill weight:	N/A
Fines correction method:	Moss et al. (2006)	Average results interval:	1	Transition detect. applied:	Yes
Points to test:	Based on Ic value	Ic cut-off value:	2.60	K_σ applied:	Yes
Earthquake magnitude M_w:	8.10	Unit weight calculation:	Based on SBT	Clay like behavior applied:	Sands only
Peak ground acceleration:	1.06	Use fill:	No	Limit depth applied:	Yes
Depth to water table (insitu):	16.50 ft	Fill height:	N/A	Limit depth:	60.00 ft

F.S. color scheme

- Almost certain it will liquefy
- Very likely to liquefy
- Liquefaction and no liq. are equally likely
- Unlike to liquefy
- Almost certain it will not liquefy

LPI color scheme

- Very high risk
- High risk
- Low risk

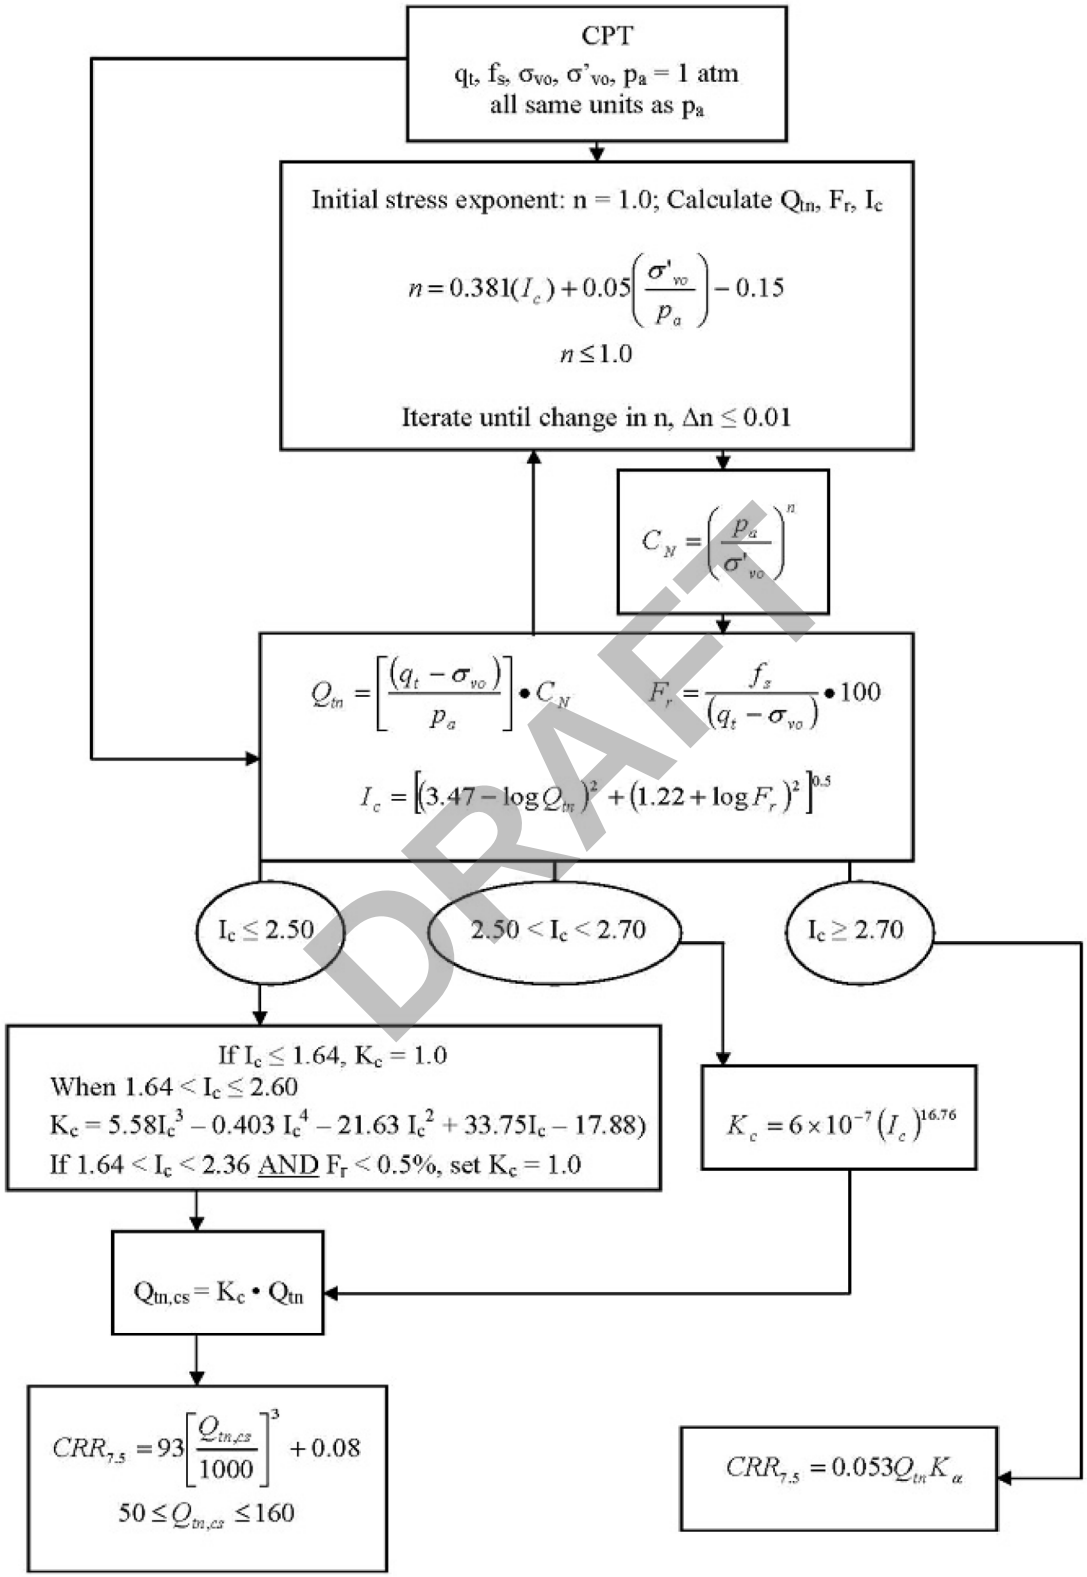
Procedure for the evaluation of soil liquefaction resistance, NCEER (1998)

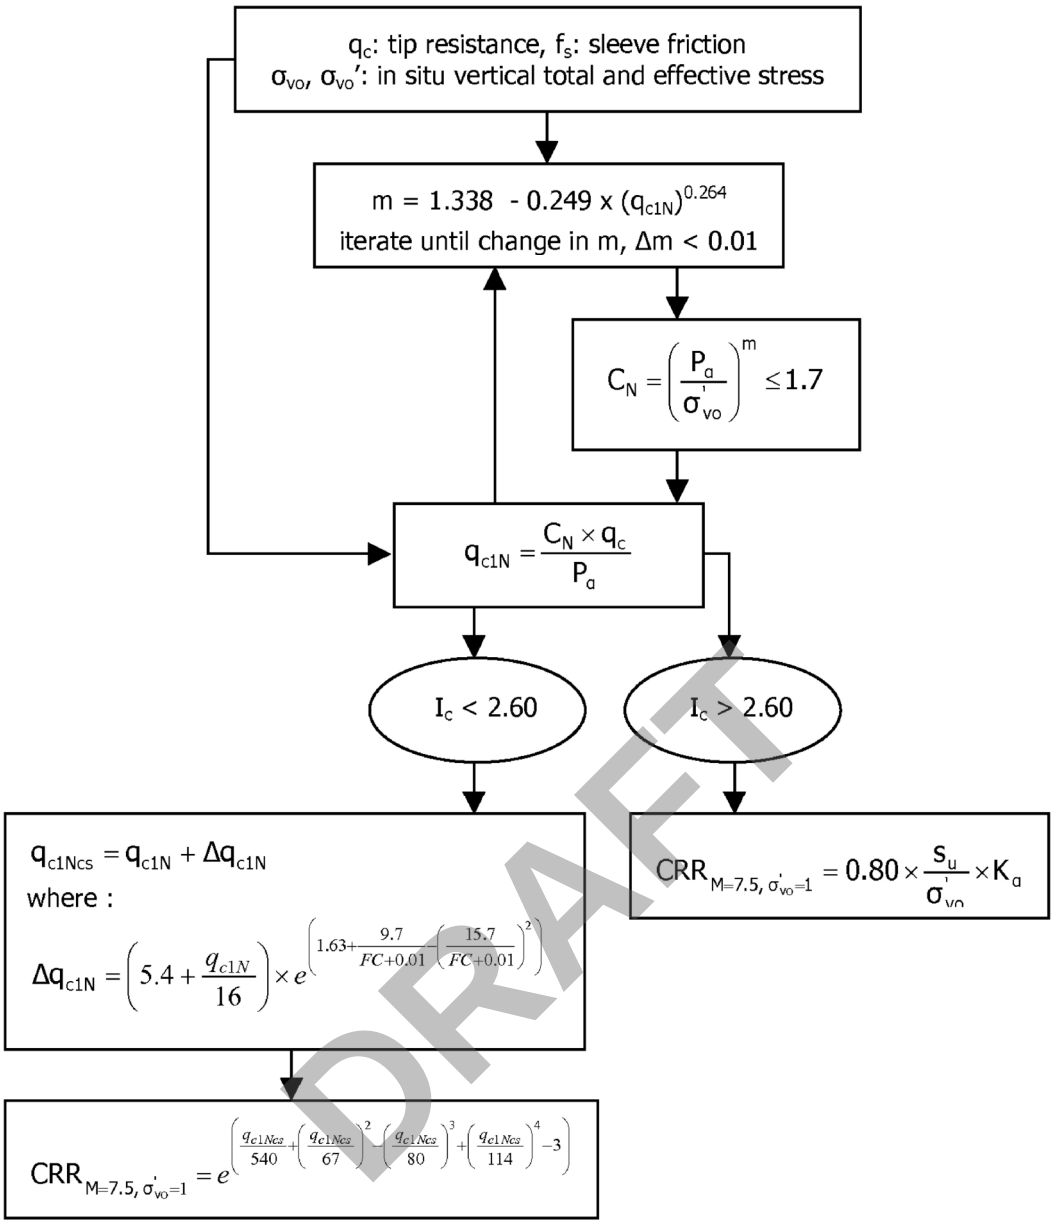
Calculation of soil resistance against liquefaction is performed according to the Robertson & Wride (1998) procedure. The procedure used in the software, slightly differs from the one originally published in NCEER-97-0022 (Proceedings of the NCEER Workshop on Evaluation of Liquefaction Resistance of Soils). The revised procedure is presented below in the form of a flowchart[1]:



DRAFT

[1] "Estimating liquefaction-induced ground settlements from CPT for level ground", G. Zhang, P.K. Robertson, and R.W.I. Brachman

Procedure for the evaluation of soil liquefaction resistance (all soils), Robertson (2010)



Calculation of soil resistance against liquefaction is performed according to the Robertson & Wride (1998) procedure. This procedure used in the software, slightly differs from the one originally published in NCEER-97-0022 (Proceedings of the NCEER Workshop on Evaluation of Liquefaction Resistance of Soils). The revised procedure is presented below in the form of a flowchart[1]:

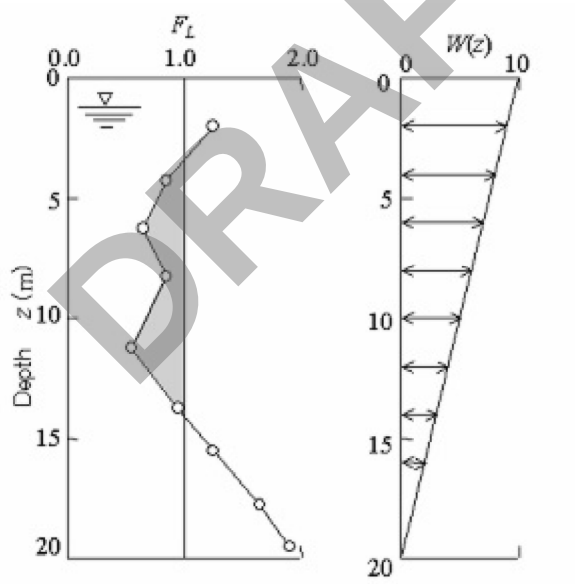
Liquefaction Potential Index (LPI) calculation procedure

Calculation of the Liquefaction Potential Index (LPI) is used to interpret the liquefaction assessment calculations in terms of severity over depth. The calculation procedure is based on the methology developed by Iwasaki (1982) and is adopted by AFPS.

To estimate the severity of liquefaction extent at a given site, LPI is calculated based on the following equation:



$$\mathbf{LPI} = \int_0^{20} (10 - 0{,}5z) \times F_L \times dz$$

where:
F_L = 1 - F.S. when F.S. less than 1
F_L = 0 when F.S. greater than 1
z depth of measurment in meters

Values of LPI range between zero (0) when no test point is characterized as liquefiable and 100 when all points are characterized as susceptible to liquefaction. Iwasaki proposed four (4) discrete categories based on the numeric value of LPI:

- LPI = 0 : Liquefaction risk is very low
- 0 < LPI <= 5 : Liquefaction risk is low
- 5 < LPI <= 15 : Liquefaction risk is high
- LPI > 15 : Liquefaction risk is very high

DRAFT

Graphical presentation of the LPI calculation procedure

Shear-Induced Building Settlement (Ds) calculation procedure

The shear-induced building settlement (Ds) due to liquefaction below the building can be estimated using the relationship developed by Bray and Macedo (2017):

$$Ln(Ds) = c1 + c2 * LBS + 0.58 * Ln\left(Tanh\left(\frac{HL}{6}\right)\right) + 4.59 * Ln(Q) - 0.42 * Ln(Q)^2 - 0.02 * B + 0.84 * Ln(CAVdp) + 0.41 * Ln(Sa1) + \varepsilon$$

where Ds is in the units of mm, c1= -8.35 and c2= 0.072 for LBS ≤ 16, and c1= -7.48 and c2= 0.014 otherwise. Q is the building contact pressure in units of kPa, HL is the cumulative thickness of the liquefiable layers in the units of m, B is the building width in the units of m, CAVdp is a standardized version of the cumulative absolute velocity in the units of g-s, Sa1 is 5%-damped pseudo-acceleration response spectral value at a period of 1 s in the units of g, and ε is a normal random variable with zero mean and 0.50 standard deviation in Ln units. The liquefaction-induced building settlement index (LBS) is:

$$LBS = \sum W * \frac{\varepsilon_{shear}}{z} dz$$

where z (m) is the depth measured from the ground surface > 0, W is a foundation-weighting factor wherein W = 0.0 for z less than Df, which is the embedment depth of the foundation, and W = 1.0 otherwise. The shear strain parameter (ε_shear) is the liquefaction-induced free-field shear strain (in %) estimated using Zhang et al. (2004). It is calculated based on the estimated Dr of the liquefied soil layer and the calculated safety factor against liquefaction triggering (FSL).

APPENDIX E:
TECHNICAL MEMORANDUM

February 13, 2025
Kleinfelder Project No.: 24002328.001A

Mr. Eric Hays
Albert A. Webb Associates
3788 McCray Street
Riverside, California 92506

Subject: **DRAFT Technical Memorandum: Numerical Analysis of Proposed Crossing**
San Jacinto Line E Storm Drain
Metropolitan Water District Casa Loma Barrel No. 1 Crossing
San Jacinto, California

Dear Mr. Hays:

Kleinfelder is pleased to present this DRAFT Technical Memorandum detailing the 3D Numerical Analysis for the proposed crossing of the San Jacinto Line E Storm Drain over the Metropolitan Water District's (MWD) Casa Loma Barrel No. 1. This memorandum is presented as an appendix to this geotechnical report for the subject project. The geotechnical report discusses Kleinfelder's field investigation, laboratory testing, geologic setting and hazards (including faulting and seismicity), ground water discussion, and engineering conclusions and recommendations for various aspects of the project.

We understand that MWD requirements for induced displacement of the Casa Loma Barrel No. 1 are very stringent at ¼-inch per 100 ft tolerances. Given the importance of the Casa Loma Barrel No. 1 and MWD requirements, Kleinfelder has completed numerical modeling of the subsurface conditions and structures using the 3-D finite element program PLAXIS 3D Version 20.04.00.790 published by Bentley. This memorandum includes the results of our calculations, results, and recommendations regarding the proposed MWD Casa Loma Barrel No. 1 crossing structure and associated embankments for the flood-control structures. Discussed in this memorandum are:

- Project Description
- Preliminary Crossing Structure
- Subsurface Conditions & Soil Parameters
- Soil Constitutive Models
- Structural Components & Other Materials
- Model Construction, Boundary Conditions & Meshing
- Loading Conditions
- Model Staging
- Evaluation of Results
- Conclusions and Recommendations

This memorandum is subject to the limitations contained in our geotechnical report.

PROJECT DESCRIPTION

We understand the project involves the design of an approximate 3-mile storm drain channel to be constructed in the City of San Jacinto. The new storm drain channel will be constructed near the existing ground surface and the majority of the alignment consists of earth embankment channels and several reinforced concrete box culverts. Storm water flow is generally south to north and in the northern portion of the alignment the proposed channel terminates at a proposed confluence basin.

In the vicinity of the MWD pipeline (Casa Loma Barrel No. 1), the channel transitions to a concrete channel with an approximate 160-ft base width with side slopes inclined about 15 to 17:1 (H:V). At the proposed crossing, the proposed channel and embankment cross-section is approximately 560-ft wide. A preliminary plan including contours of the proposed embankments and channel and a cross-section at the MWD pipeline crossing, dated 10/15/24 were provided by Albert A Webb Associates (Webb), shown in in Attachment A as Figure E1. CAD files and data used to construct these plans were also provided by Webb and utilized to construct surfaces for the 3D modeling.

Due to the low cover present over the MWD pipeline, the proposed construction also includes a bridge structure to facilitate possible equipment and vehicle loads, using a transfer slab on supporting foundations to limit induced displacement and stresses in the MWD pipeline. Two preliminary options were considered for the crossing structure: Option 1 - Shallow Spread Footings, and Option 2 – Deep Foundations consisting of cast-in-drilled hole (CIDH) shafts. Kleinfelder is the structural engineer for this proposed crossing structure and provided the structural loading and was consulted in selection and modeling of the structural elements, as discussed in later sections of this memorandum.

DRAFT

PRELIMINARY CROSSING STRUCTURE

Two options were evaluated to support the proposed crossing structure: 1) a shallow foundation option and 2) a deep foundation option. Preliminary modeling of both solutions was conducted to evaluate the feasibility of the proposed construction. However, after preliminary modeling showed that the controlling induced displacement of the pipeline was primarily controlled by the embankment fills and flood loading, the pile option did not appear to be necessary for the crossing. In addition, difficult construction conditions, economic feasibility and other considerations have moved the preferred solution towards the shallow foundation option. As such, this memorandum focuses on the shallow foundation model development and results.

Additional discussion of the two options and selection considerations can be found in this geotechnical report and our separate structural report (Kleinfelder, 2024).

SUBSURFACE CONDITIONS & SOIL PARAMETERS

We reviewed the geotechnical borings, laboratory test data, and other geotechnical analyses completed by Kleinfelder for the project for relevant information to define the mechanical behavior, including correlations to stiffness and strength characteristics. The various correlations and select laboratory test results were plotted in depth profiles to evaluate and select the relevant parameters for the proposed soil constitutive models. Plots of the profiles are provided in Figures E2 to E5. Based on elevation data provided by Webb, the approximate average ground surface in the vicinity is about EL. 1449.5 ft. For the purposes of plotting the soil parameters versus elevation, we have used a ground surface of EL. 1450 ft.

© 2025 Kleinfelder

Groundwater levels appear to vary significantly throughout the region with potential for different regimes due to faulting and other geologic conditions, see the discussion in our geotechnical report. In the area of the proposed crossing, the groundwater elevations noted in our borings range from approximately 34.5 ft to 16.5 ft below ground surface. For the purposes of our analyses, we have assumed that the groundwater depth of 16.5 ft or EL. 1433.5 ft.

The soils logged in the borings near the proposed crossing and indicated by the soil behavior type CPT soil behavior type are predominantly silty sand to sandy silt with some interbedded silt and clay soils. Due to the non-plastic to low plasticity and interbedded deposition we expect that the soils will exhibit drained behavior and that if excess pore-pressures are produced they will likely dissipate within the time frame of the expected loading conditions. As such the model behavior of the soils is defined as drained and the effects of excess pore-pressure neglected.

After discussions with MWD, additional geophysical testing was conducted to measure the shear-wave velocity (V_S) and therefore, the stiffness of the subsurface conditions. The report from GEOVision detailing the data collection and processing is Appendix C of this geotechnical report. The average V_S profiles of the two arrays, one conducted north and one south of the MWD pipeline are shown on the soil property figures. The elastic modulus (E) calculated from the shear-wave velocity data using the relationship $G_{max} = \rho V_S^2$, where G_{max} is the maximum or low-shear strain (< 10^{-4} to 10^{-3} %) shear modulus and ρ is the soil mass density and Poisson's ratio derived from the soil strength. Additionally, to adjusted G_{max} from low shear strains (< 10^{-4} to 10^{-3} %) to strain magnitudes expected in the modeling (~0.1 to 1%), the V_S was divided by a factor of either 2 or 3 to calculate an implied G and subsequent E moduli and provide a reference for the values used in the constitutive models. Plots of these implied elastic modulus are shown on Figures E4a and E4b.

DRAFT

SOIL CONSTITUTIVE MODELS

The constitutive models define the stress-strain behavior of the soil. The primary characteristics considered when selecting the soil constitutive model, included the ability of the constitutive model to:

1. provide a reasonable fit to the expected stress-strain behavior.
2. capture the depth/stress dependent stiffness characteristics evidenced by the in-situ and V_S data.
3. provide both unload and reload moduli.

Within PLAXIS, there are several constitutive models available. However, two were considered as part of this study: 1) the linear-elastic perfectly plastic (Mohr-Coulomb) model and 2) the hardening soil (Hardening) model. Each model requires several inputs that define the behavior, with the primary being the soil strength parameters (c = cohesion, ϕ = friction angle) and stiffness parameters (varies dependent on the model). Both models were considered for use in the 3D model.

The Mohr-Coulomb model presents the simpler model stiffness inputs with the stiffness behavior defined by the elastic modulus (E) and Poisson's Ratio (ν). As the elastic modulus does change with shear strain, care must be taken in selected this parameter for the appropriate stress/strain levels expected in the modeling. An option to vary the stiffness with depth/elevation is provided in PLAXIS and was utilized to better match the observed variation in stiffness with depth. One drawback of the Mohr-Coulomb model as implemented in PLAXIS, is that the definition of an unload/reload modulus is not allowed. The Mohr-Coulomb was utilized for the embankment fills, geofoam, and concrete volumes as discussed further below.

© 2025 Kleinfelder

The Hardening model is also a Mohr-Coulomb model, in that the strength behavior is governed by Mohr-Coulomb strength envelope. However, the model is different in that it incorporates hardening plasticity (e.g. decreasing stiffness with plastic straining) (Shanz 1998). This allows for the modeling of non-linear stress-strain behavior that is observed in soil laboratory testing, often called "hyperbolic soil" behavior and implemented by Duncan and Chang (1970). Shanz et. al. (1998 and 1999) built on the Duncan and Chang (1970) framework to make the required input parameters more easily defined and related to conventional geotechnical engineering properties, as well as more technical aspects that we would refer the reader to either the PLAXIS, FLAC, or source papers for more information. Specific to this study, the hardening model allows for a stress dependent stiffness definition and the non-linear hyperbolic stress-strain behavior observed in the laboratory testing. The implementation of this model also allows for the definition of an unload/reload modulus making the model well suited for excavation analyses. The Hardening model is used for the naturally deposited Sandy SILT to Silty SAND soils observed in the geotechnical investigation.

As a summary of the similarities and differences between the Mohr-Coulomb and Hardening model:

Model Aspect	Mohr-Coulomb	Hardening
Strength Envelope	Mohr-Coulomb	Mohr-Coulomb
Stiffness Dependency	Yes, through depth.	Yes, through stress.
Stress-Strain Behavior	Perfectly Elastic, Perfectly Plastic	Hyperbolic, Perfectly Plastic
Unload/Reload Modulus	No	Yes

Table E1 shows the input various input parameters selected for the models. As the goal of this study is to evaluate the induced displacements in the MWD pipeline, particular care was taken when selecting the various input parameters related to the stiffness of the soil models. Figure E6 is included to help show how the Hardening model input stiffness parameters relate to the stress-strain behavior. The stress-dependent E_{50} stiffness computed per Eq. 151 of the PLAXIS manual is plotted on Figure E4a. The initial modulus (E_i) shown on Figure E6 is also plotted on Figure E4a for comparison purposes computation per Eq. 136 of the PLAXIS manual. The stress-dependent elastic unload/reload modulus (E_{ur}) is likewise computed per Eq. 139 of the PLAXIS manual and plotted on Figure E4b. For comparison with the V_S data, the E_{50} represents an approximate dividing factor of 3.5 to the measured V_S data. Likewise, the E_i and E_{ur} for comparison are an approximate dividing factor of 2.65 to the measured V_S data.

DRAFT

Table E1: Soil Constitutive Model Parameters for Silty SAND to Sandy SILT Soils

Parameter	Description	Hardening
E_{50}^{ref} (ksf)	Reference Secant Elastic Modulus at 50% of Strength Failure	180
E_{oed}^{ref} (ksf)	Reference Oedometer Modulus at 50% of Strength Failure	200
E_{ur}^{ref} (ksf)	Reference Unload/Reload Modulus at 50% of Strength Failure	600
m	Power for Stress Dependency of Stiffness	0.8
P_{ref} (psf)	Reference Stress for Stiffness (Used Atmospheric Pressure)	2116
K_0^{nc}	At-Rest Earth Pressure Coefficient for Normal Consolidation (Based on the Design Friction Angle)	0.5
R_f	Failure Ratio (Ratio of q_a / q_f in Figure E6)	0.9
v_{ur}	Poisson's Ratio for Unload/Reload Modulus	0.2
v	Poisson's Ratio (Based on the Design Friction Angle)	0.33
γ_{unsat} (pcf)	Dry Unit Weight	85

© 2025 Kleinfelder

Parameter	Description	Hardening
γ_{sat} (pcf)	Saturated Unit Weight	115
c (psf)	Cohesion	50
ϕ (deg)	Friction Angle	30
ψ (deg)	Dilatancy Angle	0
σ_t (psf)	Tensile Strength	0

Laboratory testing conducted on select soil samples were digitized and imported into PLAXIS for use in the soil test module, which simulates common types of laboratory tests in the finite element framework, to assist with the calibration of the soil constitutive model parameters and stress-strain behavior. Figures E7 to E9 show the results of the laboratory direct simple shear tests with the Hardening model. For reference, the equivalent elastic modulus calculated from the V_S /2 data is included on the figures.

The final selected parameters were selected to present a reasonable match to the shape and behavior of the laboratory testing, but the soil stiffnesses relied upon the correlations and Vs measurements as the soil samples used for laboratory testing were taken from thick-walled SPT samplers and were likely subjected to sample disturbance than would particularly affect the small stiffness behavior during laboratory testing. Otherwise, the soil parameters selected present a reasonable match to the laboratory testing based on our professional experience and judgment.

STRUCTURAL COMPONENTS & OTHER MATERIALS

The structural components modeled included the MWD pipeline and proposed crossing structure shallow footings, both of which are concrete. In discussion with MWD and Kleinfelder's structural engineering team, we understand that the compressive strength of the concrete to be 3000 psi and 3600 psi for each component, respectively. The compressive strengths are not directly used as inputs to the selected linear-elastic constitutive models and instead used to calculate the elastic modulus (E_C) following Eq. 19.2.2.1.b of ACI 318-19. To account for possible cracking, a 50% reduction was applied to the calculated E_C. Other necessary inputs include, Poisson's ratio was taken as 0.2, and unit weight taken as 150 pcf. Sensitivity analyses were performed for the concrete constitutive model parameters and no significant effect on the model results were found, likely due to the much larger relative stiffness of the concrete compared to the soils.

The thickness and dimensions of the MWD pipeline and proposed concrete footings were provided by information from Webb and Kleinfelder's structural team. The preliminary cross section of the MWD pipe and proposed shallow foundation concept used to construction the PLAXIS model are shown in Figure E10. The MWD pipeline was modeled as "plate" or shell elements with virtual thickness of 1 ft and necessary simplification to a circular section was made to model the pipeline. The MWD pipeline invert was placed at EL. 1432.85. The concrete footings were modeled using volume elements like the soil materials. The modeling including 1.5H:1V excavation extents anticipated during construction to install the footings. We understand that some minor revisions to the footing shape and possible excavation extents (i.e. using soil forming to reduce the excavation) will be incorporated into the final design to facilitate construction formwork and reduce the need for lateral bracing that may impact the MWD pipeline. Details and discussion of the structural analysis can be found in Kleinfelder's structural report (Kleinfelder, 2024). The proposed changes have been discussed with the project team and are not expected to impact the results of the PLAXIS modeling as 1) only small changes are expected to the footing

DRAFT

© 2025 Kleinfelder

loads and footing concrete volumes, and 2) the model results controlling the displacement are drive by the embankment fills and the 100-yr flood loads (discussed further in later sections).

Interface elements were included in the model to control the normal and shear behavior between the concrete footing and the adjacent soils, which allows for non-rigid connections between these elements. The interface parameters automatically derived based on the adjacent material with a manual input factor to reduce the shear strength of the soil, which should be determined based on the interfacing materials. Interface friction angles for fine sandy silt (non-plastic silt) presented in the NAVFAC (1982a) range from 17 to 19 degrees. Using an interface friction angle of 18 degrees and 30 degrees soil friction angle, this results in a reduction factor from the soil strength to soil-concrete interface strength of 0.56. This factor was applied for all soil materials.

In addition to the structural elements, the modeling utilized volume elements to represent the various embankment fills and other materials proposed materials needed to maintain the induced displacement criterion for the MWD pipeline. These consist of geofoam proposed to be placed below the crossing structure slab, lightweight flowable fill, consisting of lightweight cellular concrete, proposed as the primary fill material within the specified distance from the MWD pipeline alignment, and structural fill, consisting of soil material, for the remaining areas outside the crossing and assumed to consist of properly placed and compaction soils similar to the on-site soils. The Mohr-Coulomb constitutive model was selected for these materials as 1) significant unload/reload behavior is not expected (e.g. excavations) in these materials and 2) in-situ and laboratory testing was not available to confirm the stress-dependent behavior, nor that non-linear behavior exhibited by the Hardening model would be appropriate for these materials, and 3) the primary purpose of the fill volumes is to more accurately represent the added weight and resultant stresses on the model.

DRAFT

The selected input parameters from available literature are presented in Table E2.

Table E2: Fill Material Constitutive Model Parameters

Parameter	Description	Structural Fill (Soil Material)	Lightweight Flowable Fill (LCC)[1]	EPS Geofoam (Underslab Fill)[2]
E (ksf)	Elastic Modulus	500	2140	216
v	Poisson's Ratio (Based on the Design Friction Angle)	0.33	0.3	0.15
γ_{unsat} (pcf)	Dry Unit Weight	127.5	30	2.4
γ_{sat} (pcf)	Saturated Unit Weight	127.5	30	2.4
c (psf)	Cohesion	50	5	1080
ϕ (deg)	Friction Angle	30	34	0
ψ (deg)	Dilatancy Angle	0		
σ_t (psf)	Tensile Strength	0		

1. LCC = Lightweight Cellular Concrete, parameters estimated from Legatski (1994) and Tiwari, et. al. (2017)
2. Parameters taken as EPS-39 Geofoam.

MODEL CONSTRUCTION, BOUNDARY CONDITIONS & MESHING

Model boundary conditions for static analyses were not altered from the default PLAXIS conditions, which consist of fixed displacements in all directions for the bottom of the model, fixed displacements normal to the lateral extents, and the surface of the model is free in all directions. The horizontal boundaries were

© 2025 Kleinfelder

set such that along the pipeline (the approximate model x-direction) the model extended about 55 ft beyond the extents of the proposed fills. Roughly perpendicular to the pipeline (the approximate model y-direction) the model was extended to about 70 ft from the closet distance to the centerline of the pipe alignment. Based on our review of the induced displacements and stresses due to the fills and loads, the model boundary conditions appear to be at a sufficient distance to have not significantly influenced the model results in the vicinity of the pipeline (the area of interest).

Geometric objects were constructed in PLAXIS to represent the embankment fills, pipeline, footings, and excavations. The embankment point cloud data was provided in AutoCAD files provided by Webb. The point cloud data was imported using the related feature in PLAXIS, which discretizes the data into a triangular irregular network (TIN) to provide an elevation surface. This surface was then laid on the average approximate ground surface within the model boundaries to generate the fill volumes for the embankments and channel alignment. The use of the average approximate ground surface was a necessary simplification because of issues with the merging of the existing and proposed surfaces caused by floating point precision of intersecting planes. Based on our review of the existing elevation data, we expect that this necessary simplification should have overall minor impact on the results of the modeling as the existing surface was relatively flat, particularly in the area around the pipeline, and by using the average, the relative ± elevation differences should be roughly offsetting. Other geometric objects were constructed in the model using the simpler polygonal tools in PLAXIS to match the proposed structural footing and excavation dimensions and elevations and existing pipeline alignment.

Meshing of the model was completed using PLAXIS's internal meshing routines and control parameters prescribed such that elements around areas of interest (e.g. the footings, excavations, and pipeline), were approximately 2 ft in size. Elements away from the areas of interest were gradually increased in size by the PLAXIS routines to allow for more efficient computations. Figure E11 shows a plan view of the model mesh. The meshed geometry was evaluated to ensure the meshing routines produced reasonably sized and shaped elements. Some small and elongated elements were generated but were deemed acceptable as they were generally located towards the model boundaries and edges of the fills and not expected to significantly impact the results.

DRAFT

LOADING CONDITIONS

Several loading conditions were considered during our evaluation and were provided by Kleinfelder's structural team, including:

- Water Load in the Pipe (Initializing Condition)
- Dead Loads of the Bridge Slab
- Water Load on the Bridge Slab & Modeled Channel
- Live Loads of Equipment on the Bridge Slab

We understand from discussion with MWD that this portion of the pipeline alignment the water inside the pipe is gravity flowing. Therefore, the water load was included in the model to better reflect the actual conditions. The water load was incorporated as a volume material with the parameters shown in Table E3 to better represent the weight and stress distribution to the model. An interface was included between the pipe and the elements to eliminate rigid connections between the water and pipe elements.

© 2025 Kleinfelder

Table E3: Water Constitutive Model Parameters

Parameter	Description	Water
K (ksf)	Bulk Modulus	43,170
v	Poisson's Ratio (Based on the Design Friction Angle)	0.499
γ (pcf)	Unit Weight	62.4
Su (psf)	Shear Strength[1]	5
σ_t (psf)	Tensile Strength	0

1. A minimal amount of shear strength was given to the water material to allow the model to converge.

More detailed discussion of the loads applied by the proposed crossing structure can be found in Kleinfelder's structural report (Kleinfelder, 2024). We note that minor differences in the applied slab dead load (~3%) shown in our structural report due to the slight changes in the footing geometry, extending the crossing slab. However, we don't anticipate that these will present significant changes to the PLAXIS model results as the worst-case displacement conditions are controlled by the embankment placement and 100-yr flood loading. The 100-yr flood elevation has not changed and due to the inclusion of the surface load, the overall model loading in this condition would not change. Table E4 shows the loading conditions applied to the PLAXIS model. Based on the rough profile dimensions and elevations show on Figure E1, we anticipate that the anticipated 100-yr flood load and embankment loads using light weight fill will add stresses at the existing ground surface in the range 200 to 300 psf. These loading conditions were incorporated into our model staging discussed further below.

Table E4: Footing Loads from Transfer Slab

Loading Condition	Description	Applied Load
Dead	Dead Load of Slab	2.65 k/ft
Water[1]	100-yr Flood Load on Slab	3.5 k/ft
Live Load	Excavator Transverse[2,3]	5.54 k/ft
	Excavator Longitudinal[2,4]	36.47 k

1. The 100-yr flood load was also included as surface load applied across the proposed channel formed by the embankments. The surface load utilized PLAXIS features to apply a 62.4 pcf vertical load increment from the reference elevation of 1453.47 ft (the provided 100-yr flood elevation) at the MWD alignment.
2. When the live loads were applied, they were only applied to the upstream crossing structure footing.
3. Transverse load was applied of a 13.17 ft length and placed in three locations along the bridge (left side, centered, and right side), as provided by the structural team.
4. Longitudinal load was applied as a point load at three locations along the bridge (left side, centered, and right side), as provided by the structural team.

DRAFT

MODEL STAGING

Once the constitutive models for the various components were defined and the geometries created, the model staging and sequencing were developed in PLAXIS. Construction staging was utilized in PLAXIS to initiate existing stresses and strains within the model, including the existing MWD pipeline. This was followed by staging of excavations, footing sequencing, backfilling, and various loading conditions. The construction staging followed these steps:

- Step 0: Initial Phase - This step is used to initiate stresses into the model and displacements/strains are reset following this step.
    - 0.a: PLAXIS K_0 Routine & Gravity Loading

© 2025 Kleinfelder

    - 0.b: Activation of MWD Pipe – the MWD pipe is "wished" into place and external interface is activated.
    - 0.c: Add Water Inside the MWD Pipe – the water is "wished" into place and interface activated.
- Step 1: Excavate & Place Footings – This represents construction sequencing used to limit the uplift of the MWD pipe. The crossing structure is divided into 1/3 sections and excavation and placing of the footings is done on both side of the pipe simultaneously to limit lateral displacements of the MWD pipe. See the conclusions and recommendations section for more discussion.
    - 1.a: Excavate Center 1/3
    - 1.b: Construct Center 1/3 Footing
    - 1.c: Excavate Left 1/3
    - 1.d: Construct Left 1/3 Footing
    - 1.e: Excavate Right 1/3
    - 1.f: Construct Right 1/3 Footing
- Step 2: Backfill Footings – This represents the backfilling of the constructed footings. The crossing structure will be backfilled with medium weight flowable fill/LCC to limit induced vibrations that may impact the MWD pipeline. The structural design of the backfill requires that the LCC has similar unit weight and strengths to the existing soils for overturning and confinement. Therefore, the model sequencing backfills with the existing soil.
- Step 3: Place Channel Embankments – This represents the fill placement to construct the channel embankments.
- Step 4: Apply Dead Loads from Slab – This represents the construction of the transfer slab.
- Step 5: Apply Various Loads – This represents the various loading conditions applied to the footings by the loads on the transfer slab and the 100-yr flood load. We note that these loading conditions are not expected to occur at the same time and are therefore branches in the analysis tree.
    - 5.a: 100-yr Flood Load
        - 5.a.1: Remove 100-yr Flood Load
    - 5.b: Transverse Excavator on Left
    - 5.c: Transverse Excavator on Center
    - 5.d: Transverse Excavator on Right
    - 5.e: Longitudinal Excavator on Left
    - 5.f: Longitudinal Excavator on Center
    - 5.g: Longitudinal Excavator on Right

Figures E12 to E30 show a view of the model for each of these steps.

EVALUATION OF RESULTS

Based on discussions with MWD, we understand that the following results are desired to evaluate the impact of the proposed construction on the MWD pipeline:

- Vertical Displacement Profiles
- Lateral Displacements
- Longitudinal Stress Profiles (Extreme Fiber)
- Hoop Stress Profiles (Extreme Fiber)

DRAFT

© 2025 Kleinfelder

The requested results are presented for select load cases in the figures outlined in Table E5.

Table E5: Summary of Profile Results

Modeling Stage	Results Shown	Figure #
Step 1: Full Length Excavation	Vertical Displacement (Crown & Invert)	E31
Step 1a-f: Staged Excavations	Vertical Displacement (Invert Comparison)	E32
	Vertical Displacement (Crown & Invert at Each Stage)	E33 to E38
	Lateral Displacement (Spring Lines at Each Stage)	E39
Step 3: Place Channel Embankments	Vertical Displacement – Full Weight vs Light Weight Comparison (Crown & Invert)	E40
	Lateral Displacement (Spring Lines)	E41
Step 4-5a.1: 100-yr Flood Loading	Vertical Displacement (Crown Comparison)	E42
	Vertical Displacement (Crown & Invert)	E43 to E45
	Lateral Displacement (Spring Lines)	E46
Step 5.b to 5.g: Various Equipment Load Cases	Vertical Displacement (Crown Comparison)	E47
PLAXIS Pipe Axis and Stress Derivation	N/A	E48
Step 1.e, 3, 5.a	Longitudinal Stress (Crown)	E49 to E51
	Longitudinal Stress (Invert)	E52 to E54
	Hoop Stress (Crown)	E55 to E57
	Hoop Stress (Invert)	E58 to E60
	Hoop Stress (Downstream Spring Line)	E61 to E63
	Hoop Stress (Upstream Spring Line)	E64 to E66

Excavations for Footings

Initial construction sequencing considered the potential that footing excavations may be made on one side of the pipe then the other. Modeling results of this scenario showed that the lateral induced displacement from excavating on one side then the other exceeded the allowed tolerances before combining with the potential uplift. Therefore, during conversations with the design team and contractors the limitation of simultaneous excavation was discussed and determined that simultaneous excavation would be possible and not overly burdensome to the construction effort and additional refinements and results for the "unbalance excavation" scenario are not included.

Figure E31 shows the vertical displacement results for the full-length excavation. The results indicate that the Hardening model exceeds the ¼ inch per 100-ft differential tolerance. As such, additional consideration was given to sequencing the excavation and construction of the footing into 1/3 lengths where a portion of the footing is excavated then constructed before additional excavation is completed. Figure E32 shows the results of the 1/3-staging sequence for the pipe invert, which shows the higher vertical displacements. The full-length excavation is shown for reference.

Figures E33 to E38 show the results of the vertical displacement results for the staged excavations (Step 1a to 1f, respectively). The results are shown for the crown and invert to evaluate the potential squashing of the pipe. Again, the full-length excavation is shown for reference. Vertical displacement results after backfilling of the footing show that the uplift of the pipe is reversed and the displacements nearly return to zero, showing some pipe settlement due to the added footing weight.

Figure E39 shows the resulting lateral displacement profiles at the pipe spring lines for each construction sequencing step. The results from the full-length excavation are shown for reference. We note that only minor changes were observed between the excavation and footing placement, so many of the profiles are overlapped. Maximum estimated lateral displacements are on the order of 0.07 inches.

Full Weight vs Light Weight Fill

Initial considerations for the proposed embankments revolved around the embankment material. Figure E40 shows the vertical displacement results using full weight fill, consisting of soil structural fill as defined in our geotechnical report, for the full extents of the model domain at both the pipe invert and crown. Maximum predicted displacements are on the order of 5/8 to 3/4 inches with differentials over a 100 ft span of up to about 5/8 inch, which exceed the acceptable tolerances. Therefore, lightweight flowable fill will be required in the proximity of the MWD pipeline.

Based on the induced displacements of the full weight fill, the lightweight material's unit weight was selected to be 30 pcf. We anticipate that the most readily available material is a lightweight cellular concrete (LCC) and developed the constitutive model parameters based on this material, as discussed previously. We selected a distance of 50 feet from the edge of the MWD pipe alignment as the area in which the LCC will be required. This was a combination of engineering judgement and to provide adequate distance such that vibratory compaction equipment needed to place and compact structural fill would present minimal impact to the pipe. Figure E40 also shows the vertical displacement results using the lightweight fill, which met the ¼-inch over 100 ft criteria.

DRAFT

© 2025 Kleinfelder

Figure E41 shows the lateral displacement results at the pipe spring lines using the full weight and light weight fill.

Dead, Live & 100-yr Flood Loads

Figure E42 shows the progression from Step 3 with the lightweight fill to Step 5.a.1, which follows the possible loading sequence of a 100-yr flood load being applied after construction of the crossing structure. For clarity, these figures are shown just for the pipe crown, which shows more displacement (dashed lines in Figure E40). The peak displacement induced by the 100-yr flood load is about 0.4 inches. The unloading phase indicates that no permanent displacement of the pipe is expected after the 100-yr flood loading. This is likely due to the low stresses added stresses during the peak flood load, about 250 psf based on the bridge and flood elevations. This load added stress results in only small strain development in the soil constitutive models, where the loading modulus of the Hardening model is closer to the initial elastic modulus (Ei) in Figure E4a. Inspection of the Ei in Figure E4a and the unload/reload modulus (Eur) in Figure E4b indicates that these moduli are similar for most of the profile depth. Therefore, it appears that the results seen in Figure E42 are in-line with the expected model behavior.

Figures E43 to E45 show the results for both the invert and crown in Steps 4, 5.a, and 5.a.1, respectively, to evaluate the pipe squashing. Figure E46 shows the results lateral displacements for the various steps during the 100-yr flood sequence at the pipe spring lines.

Figures E47 show the vertical displacement results for the remaining equipment load cases, including Steps 3 and 4 for reference at the pipe crown. We note that the induced vertical displacements from the equipment loads are very similar to the slab dead load and each other and are overlapping on the presented plots. Additionally, the displacements are much less than the peak displacement exhibited by the 100-yr flood load. Therefore, for simplicity we have not included the lateral displacement or pipe crown vs invert results.

The displacement results show that the ¼-inch over 100 ft criteria are met, provided the assumptions regarding the proposed materials, extents, and sequencing are met.

Stress Profiles

We understand that MWD wishes to evaluate the predicted stresses from the explicit modeling of the pipe. The results provided by PLAXIS for shell elements are the axial, shear, and bending moment forces per unit length along three local axes. The local axes of the pipe shell element correspond with Axis 1 – Longitudinal, Axis 2 – Hoop, Axis 3 – Perpendicular to the Shell. Figure E48a shows these local axes from the model. These results were used in conjunction with the element thickness to calculate the various requested stresses in the pipe following bending stress equations, shown in Figure E48b. Based on these calculations, at any given profile (e.g. the longitudinal stresses at the pipe crown) there are three possible stresses that can be reported:

- Axial Stress
- Combined Stress (Axial + Bending)
- Combined Stress (Axial - Bending)

DRAFT

© 2025 Kleinfelder

As the MWD Casa Loma Barrel is constructed of concrete, we have focused the results on the "tension side" combined stress (axial + bending) as this will present the more positive or more tensile stresses in the pipe elements at the subject location.

To emphasize the model conditions expected to have the most significant impact on pipe stresses due to induced displacements, we present the stress results for Steps 1.e, 3, and 5.a. As the pipe stresses are initialized during Step 0.c, but not reset, each plot contains the initial stress after adding the water into the pipe to evaluate the induced changes at each stage.

Figures E49 to E54 show the longitudinal fiber stresses for each selected step at the invert and crown model results. Likewise, Figures E55 to E60 show the hoop fiber stresses at the invert and crown, and Figures E61 to E66 shows the hoop fiber stresses at the pipe spring lines. We note that some chattering is present in the stress data. Based on a response from PLAXIS support, they believe this is an artifact caused by the extrapolation of the stress/force data from the internal gaussian stress points to the points at which the data is extracted (generally at the nodes of the elements). PLAXIS stated that artifact would not affect the estimated pipe deflections. It is possible that reduction of the pipe element mesh may reduce this noise but would likely still be present to some degree due to the triangular elements. Based on the subsequent discussion with MWD, it was decided not to further refine the pipe mesh.

CONCLUSIONS AND RECOMMENDATIONS

Based on the analyses completed, the proposed flood channel and associated embankments/crossing structure are expected to induce less than the required ¼" inch over 100 ft displacement tolerance required by MWD, provided the recommendations contained in this memorandum and geotechnical report, and Kleinfelder's structural engineering report are followed. The key recommendations and assumptions utilized in the modeling that must be implemented in the design and construction of the crossing are:

- Excavations will not be completed at a time when MWD has emptied the pipeline (i.e. it is not in-service).
- The crossing structure footings are constructed following the 1/3 sequence of excavation and footing placement.
    - Excavation of the subsequent 1/3 shall not progress until the footing for the previous 1/3 is in-place.
    - Excavation slopes and benches shall not be flatter than 1.5H:1V.
- Excavation and footing construction sequence shall be completed simultaneously on the upstream and downstream sides of the MWD pipeline. Simultaneously shall mean:
    - Elevations in excavations on either side shall not be more than 1 ft different.
    - The concrete footings shall be poured on both sides at the same time.
- Excavations shall not be backfilled until the full footing construction sequence is completed.
    - Backfill will consist of a flowable fill material (e.g. LCC) with a unit weight of approximately 85 pcf which does not require high vibration compactor equipment during placement.
    - Backfill shall be completed simultaneously on the upstream and downstream sides of the MWD pipeline. Simultaneously shall mean elevations of the backfill on each side shall not be more than 1 ft different.

DRAFT

© 2025 Kleinfelder

- Lightweight flowable fill shall be used for embankments within 50 ft from the edge of the MWD pipe. Embankment fill shall consist of lightweight flowable fill material (e.g. LCC) not to exceed a unit weight of 30 pcf and does not require compaction to limit vibration impacts.
- Embankment fill shall be placed such that the elevation difference across (upstream to downstream sides) the MWD pipe is not greater than 1 ft at any time until final grades are established.
- The channel section shall limit the 100-yr flood event to a peak water elevation of 1453.47 ft.

Additional construction considerations, such as subgrade preparation for footings and fill placement are discussed in the geotechnical report.

LIMITATIONS

Kleinfelder has been provided information by and discussed the modeling evaluation with representatives of MWD, Webb, and Alabasi (the contractor), which were used in developing our model geometries, parameters, sequencing and assumptions. The results of this evaluations are in part reliant on provided information and feasibility of the construction limitations. Actual geometries and conditions will be different than those evaluated and engineering judgement is necessary to interpret and apply the analysis results to the realities of the project conditions. Kleinfelder should be notified of any changed conditions or plans that are in conflict with the assumptions and project understanding detailed in this analysis. Failure to notify Kleinfelder of changes and, therefore, inappropriately applying our conclusions and recommendations to the project are at the responsibility of those entities.

This technical memorandum is also subject to the limitations contained within our geotechnical report prepared for the project.

Respectfully submitted,

KLEINFELDER

MDP LIne E Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

3. Construction Emissions Details

3.1. Linear, Grading & Excavation (2027) - Unmitigated

3.3. Linear, Grading & Excavation (2028) - Unmitigated

3.5. Linear, Grading & Excavation (2029) - Unmitigated

3.7. Linear, Grading & Excavation (2030) - Unmitigated

4. Operations Emissions Details

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	MDP LIne E
Construction Start Date	8/3/2027
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.50
Precipitation (days)	22.4
Location	33.81646365711711, -117.00760059525169
County	Riverside-South Coast
City	San Jacinto
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	5574
EDFZ	11
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.26

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Road Construction	3.01	Mile	88.0	0.00	—	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Un/Mit.	TOG	ROG	NOx	CO	SO2	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	BCO2	NBCO2	CO2T	CH4	N2O	R	CO2e
Daily, Summer (Max)	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (sq. ft.)	Acres Paved (acres)
Linear, Grading & Excavation	—	515,734	88.0	0.00	—

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Road Construction	88.0	100%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2027	176	532	0.03	< 0.005
2028	176	532	0.03	< 0.005
2029	176	532	0.03	< 0.005
2030	176	532	0.03	< 0.005

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	26.7	annual days of extreme heat
Extreme Precipitation	2.85	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	24.6	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	3	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A

Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	3	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	97.1
AQ-PM	42.7
AQ-DPM	12.5
Drinking Water	10.2
Lead Risk Housing	27.2
Pesticides	84.0
Toxic Releases	26.4
Traffic	42.0
Effect Indicators	—
CleanUp Sites	53.4
Groundwater	94.5
Haz Waste Facilities/Generators	51.7
Impaired Water Bodies	0.00
Solid Waste	76.4
Sensitive Population	—
Asthma	66.8
Cardio-vascular	87.6
Low Birth Weights	41.7
Socioeconomic Factor Indicators	—
Education	63.8
Housing	36.7
Linguistic	13.3
Poverty	64.0
Unemployment	85.8

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	36.48145772
Employed	12.39573977
Median HI	48.73604517
Education	—
Bachelor's or higher	24.38085461
High school enrollment	100
Preschool enrollment	53.81752855
Transportation	—
Auto Access	75.69613756
Active commuting	40.7160272

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	68.0
Healthy Places Index Score for Project Location (b)	35.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Construction: Construction Phases	Per Engineering Estimates
Construction: Off-Road Equipment	Per Engineering Estimates
Construction: Trips and VMT	Eight (8) daily vendor trips per day were added to account for material delivery and water truck trips. Soil export trip length 3 miles.

1.0 INTRODUCTION

1.1 Background and Scope of Work

This document provides the results of general biological surveys and focused biological surveys for the 120.33-acre San Jacinto Valley Master Drainage Plan (SJV MDP) Line E (the Project) located in the City of San Jacinto, Riverside County, California. This report identifies and evaluates impacts to biological resources associated with the proposed Project in the context of the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP), the California Environmental Quality Act (CEQA), and State and Federal regulations such as the Endangered Species Act (ESA), Clean Water Act (CWA), and the California Fish and Game Code.

The overall SJV MDP was prepared and approved in 2013 by the City of San Jacinto and in 2015 by Riverside County Flood Control and Water Conservation District. In 2008, GLA performed a general biological resource analysis for the SJV MDP, which included some focused surveys for portions of the MDP alignments. GLA recommended measures to be applied to future studies of specific facilities, such as Line E. The current Line E alignment is mostly not in the same location as when GLA evaluated the MDP in 2008, and none of the current alignment was accessed for focused surveys in 2008. However, the studies that were performed by GLA in 2024 for the current Line E alignment generally followed the measures for future studies that GLA recommended in the 2009 report. This included recommendations for focused plant surveys, focused animal surveys (fairy shrimp, burrowing owl, least Bell's vireo), the mapping of MSHCP riparian and/or riverine resources and vernal pools, and the delineation of jurisdictional waters. As described below, each of these recommendations were implemented for the current Line E Project site.

The scope of this report includes a discussion of existing conditions for the 120.33-acre Project site, all methods employed regarding the general biological surveys and focused biological surveys, the documentation of botanical and wildlife resources identified (including special-status species), and an analysis of impacts to biological resources. Methods of the study include a review of relevant literature, field surveys, and a Geographical Information System (GIS)-based analysis of vegetation communities. As appropriate, this report is consistent with accepted scientific and technical standards and survey guideline requirements issued by the U.S. Fish and Wildlife Service (USFWS), the California Department of Fish and Wildlife (CDFW), the California Native Plant Society (CNPS), and other applicable agencies/organizations.

The field study focused on a number of primary objectives that would comply with CEQA and MSHCP requirements, including (1) general biological surveys; (2) vegetation mapping; (3) habitat assessments for special-status plant species (including species with applicable MSHCP survey requirements); (4) habitat assessments for special-status wildlife species (including species with applicable MSHCP survey requirements); (5) assessment for the presence of wildlife migration and colonial nursery sites; (6) assessments for MSHCP riparian/riverine areas and vernal pools; and (7) assessments for areas subject to the jurisdiction of the U.S. Army Corps of Engineers (Corps) jurisdiction pursuant to Section 404 of the Clean Water Act, State Water Quality Control Board pursuant to Section 401 of the Clean Water Act, and CDFW jurisdiction

pursuant to Division 2, Chapter 6, Section 1600–1616 of the California Fish and Game Code. Observations of all plant and wildlife species were recorded during the biological studies and are included as Appendix A: Floral Compendium and Appendix B: Faunal Compendium.

1.2 Project Location

The Project site is in the City of San Jacinto, Riverside County, California [Exhibit 1 – Regional Map] within unsectioned portions of Township 4 South, and Range 1 West of the Lakeview and San Jacinto, California USGS 7.5-minute quadrangle maps [Exhibit 2 – Vicinity Map]. The Project site is generally bound by San Jacinto Reservoir to the south, North Sanderson Avenue to the east and west, and Ramona Expressway to the north. Exhibit 3 identifies the general study area for the Project. Specifically, the Universal Transverse Mercator (UTM) coordinates corresponding to the site are 499923.20 mE and 3740091.36 mN.

1.3 Project Description

For this report, the term "Project site" is defined as the 120.33 acres of land that is proposed for direct impact by the Project [Exhibit 3A – Aerial Map]. The Project site consists of Assessor's Parcel Numbers (APNs): 430-100-002, 430-100-009, 430-100-012, 430-100-013, 430-100-018, 432-030-006, 432-030-010, 432-030-012, 436-010-003, 436-010-005, 436-030-004, and 436-170-001.

The proposed Project (Line E) is an implementing project of the San Jacinto Valley Master Drainage Plan (SJV MDP). The SJV MDP was prepared and approved in 2013 by the City of San Jacinto and approved in 2015 by Riverside County Flood Control and Water Conservation District. Facilities associated with the Line E Project include a channel, basin, training berms, and access roads. The Project is a planned regional drainage facility that would provide a service to an approximately 1,870-acre tributary area.

Starting north of the San Jacinto Reservoir, the Project includes two training berms, continuing north as an earthen trapezoidal channel parallel to, and east of, Sanderson Avenue, turning west underneath Sanderson Avenue onto the northern portion of the proposed San Jacinto Commerce Center Specific Plan (SJCCSP) property and turning north, then west to the proposed MDP Line E-Y-Z Confluence Basin (Confluence Basin), which will be located on the site proposed to be the SJCCSP, continuing north from the Confluence Basin as a concrete channel and crossing over a buried pipeline known as Casa Loma Barrel No. 1, which is owned and operated by The Metropolitan Water District of Southern California (MWD). Access roads would be provided on both sides of the Line E Channel and the training berms. The Confluence Basin will not be lined with concrete and will include a pump station to drain the basin.

The Line E channel alignment will consist of an earthen channel with a 65-foot base width, heights up to 10 feet, side slopes inclined at 4:1 (Horizontal:Vertical), and several sloped rip-rap drops along the nearly three-mile alignment.

The Project design includes 20-foot-wide access roads (included within the permanent impacts) located on both sides of the channel along with reinforced concrete box (RCB) culverts, one of

which will intersect Sanderson Avenue, while the remaining culverts will intersect future roadways. Storm water flow will generally occur from southeast to northwest. To maintain as much of the existing flow patterns at the southern end of the alignment, at the outlet of the San Jacinto Reservoir, training berms are proposed as opposed to channelization.

At the northern portion of the alignment the proposed earthen channel terminates at a proposed Confluence Basin and the remainder of the alignment converts to a concrete trapezoidal channel with a 155-foot base width, height up to 5.5 feet, and side slopes inclined at 1.5:1 (H:V). At the northern end of the proposed concrete channel portion, the proposed alignment crosses the existing MWD buried pipeline (Casa Loma Siphon No. 1) via a bridge-type structure to avoid adding loads to the existing pipeline.

Since the Project will be a regional flood control facility pursuant to the adopted SJV MDP, the Riverside County Flood Control and Water Conservation District (Flood Control) will need to be able to maintain the channel and access roads throughout the life of the facility. Maintenance activities include vegetation management, cleaning out of debris, slope and bottom repairs, access road maintenance and repair. All the intended maintenance areas have been coordinated with and are included within the permanent impact acreages reported herein. Given the sensitivity of the biological resources in the area, the Flood Control District will not use rodenticides or pesticides for vegetation management; rather mechanical and hand removal of vegetation will be utilized.

1.4 Relationship of the Project Site to the MSHCP

1.4.1 MSHCP Background

The Western Riverside County MSHCP is a comprehensive habitat conservation/planning program for Western Riverside County. The intent of the MSHCP is to preserve native vegetation and meet the habitat needs of multiple species, rather than focusing preservation efforts on one species at a time. The MSHCP provides coverage (including take authorization for listed species) for special-status plant and animal species, as well as mitigation for impacts to special-status species and associated native habitats.

Through agreements with the U.S. Fish and Wildlife Service (USFWS) and CDFW, the MSHCP designates 146 special-status animal and plant species as Covered Species, of which the majority have no project-specific survey/conservation requirements. The MSHCP provides mitigation for project-specific impacts to these species for Projects that are compliant/consistent with MSHCP requirements, such that the impacts are reduced to below a level of significance pursuant to CEQA.

The Covered Species that are not yet adequately conserved have additional requirements in order for these species to ultimately be considered "adequately conserved". A number of these species have survey requirements based on a project's occurrence within a designated MSHCP survey area and/or based on the presence of suitable habitat. These include Narrow Endemic Plant Species (MSHCP *Volume I, Section 6.1.3*), as identified by the Narrow Endemic Plant Species Survey Areas (NEPSSA); Criteria Area Plant Species (MSHCP *Volume I, Section 6.3.2*)

identified by the Criteria Area Plant Species Survey Areas (CAPSSA); animals species (burrowing owl, mammals, amphibians) identified by survey areas (MSHCP *Volume I, Section 6.3.2*); and species associated with riparian/riverine areas and vernal pool habitats, i.e., least Bell's vireo, southwestern willow flycatcher, western yellow-billed cuckoo, and three species of listed fairy shrimp (MSHCP *Volume I, Section 6.1.2*). An additional 28 species (MSHCP *Volume I*, *Table 9.3*) not yet adequately conserved have species-specific objectives for the species to become adequately conserved. However, these species do not have project-specific survey requirements.

The goal of the MSHCP is to have a total Conservation Area of more than 500,000 acres, including approximately 347,000 acres on existing Public/Quasi-Public (PQP) Lands, and approximately 153,000 acres of Additional Reserve Lands targeted within the MSHCP Criteria Area. The MSHCP is divided into 16 separate Area Plans, each with its own conservation goals and objectives. Within each Area Plan, the Criteria Area is divided into Subunits and further divided into Criteria Cells and Cell Groups (a group of criteria cells). Each Cell Group and ungrouped, independent Cell has designated "criteria" for the purpose of targeting additional conservation lands for acquisition. Projects located within the Criteria Area are subject to the Habitat Evaluation and Acquisition Negotiation Strategy (HANS) process to determine if lands are targeted for inclusion in the MSHCP Reserve. In addition, all Projects located within the Criteria Area are subject to the Joint Project Review (JPR) process, where the Project is reviewed by the Regional Conservation Authority (RCA) to determine overall compliance/consistency with the biological requirements of the MSHCP.

1.4.2 Relationship of the Project Site to the MSHCP

The Project site is located within San Jacinto Valley Area Plan of the MSHCP. The Project site is not located within the MSHCP Criteria Area or the MSHCP Criteria Area Plant Species Survey Area (CAPSSA) [Exhibit 4B – MSHCP Survey Areas Map]. The northwestern portion of the Project site is located adjacent, but outside of the MSHCP Criteria Area [Exhibit 4A – MSHCP Overlay Map]. The Project site is also not located within the MSHCP Mammal or Amphibian Survey Areas, or Core and Linkage areas.

Most of the Project site is located within the MSHCP Narrow Endemic Plant Species Survey Area (NEPSSA) [Exhibit 4B], except for approximately 3,000 linear feet of the Project alignment corresponding with the northeastern corner of the SJCCSP property. Therefore, pursuant to the MSHCP, the following target plant species must be evaluated through habitat assessments and focused surveys within the survey area: California Orcutt grass (*Orcuttia californica*), Munz's onion (*Allium munzii*), many-stemmed dudleya (*Dudleya multicaulis)*, San Diego ambrosia (*Ambrosia pumila*), spreading navarretia (*Navarretia fossalis*), and Wright's trichocoronis (*Trichocoronis wrightii var. wrightii*).

Nearly all the Project site is located within the MSHCP Burrowing Owl Survey Area [Exhibit 4B]. Therefore, pursuant to the MSHCP, the burrowing owl (*Athene cunicularia*) must be evaluated through a habitat assessment and focused surveys (if suitable habitat is present).

Within the designated Survey Areas, the MSHCP requires habitat assessments, and focused surveys within areas of suitable habitat. For locations with positive survey results, the MSHCP requires that 90 percent of those portions of the property that provide for long-term conservation value for the identified species shall be avoided until it is demonstrated that conservation goals for the particular species have been met throughout the MSHCP. Findings of equivalency shall be made demonstrating that the 90-percent standard has been met, if applicable. If equivalency findings cannot be demonstrated, then "biologically equivalent or superior preservation" must be provided.

2.0 METHODOLOGY

In order to adequately identify biological resources in accordance with the requirements of CEQA, Glenn Lukos Associates (GLA) assembled biological data consisting of the following main components:

- Delineation of aquatic resources (including wetlands and riparian habitat) subject to the jurisdiction of the U.S. Army Corps of Engineers (Corps), Regional Water Quality Control Board (Regional Board), CDFW, and MSHCP riparian/riverine areas and vernal pools policy
- Performance of vegetation mapping for the Project site
- Performance of habitat assessments, and site-specific biological surveys, to evaluate the presence/absence of special-status species in accordance with the requirements of CEQA and the MSHCP
- Performance of a focused survey for rare plants
- Performance of a focused survey for burrowing owl
- Performance of a focused survey for least Bell's vireo
- Performance of a focused survey for the southwestern willow flycatcher
- Performance of a focused survey for Crotch's bumble bee

The focus of the biological surveys was determined through initial site reconnaissance, a review of the California Natural Diversity Database (CNDDB) (CDFW 2024), CNPS 9th edition online inventory (CNPS 2024), Natural Resource Conservation Service soil data (NRCS 2024), MSHCP species and habitat maps and sensitive soil maps (Dudek 2003), other pertinent literature, and knowledge of the region. Site-specific general surveys within the Project site were conducted on foot in the proposed impacted areas for each target plant or animal species identified below. Table 2-1 provides a summary list of survey dates and survey types.

Table 2-1. Summary of Biological Surveys for the Project Site

Survey Type	2021 Survey Dates	2022 Survey Dates	2023 Survey Dates	2024 Survey Dates	2025 Survey Dates	Biologist(s)
General Biological Survey Habitat Assessment		3/2	2/22	3/11, 3/15		CW, JA, JS, WJ

Individual plants and wildlife species were evaluated in this report based on their "special-status." For this report, plants were considered "special-status" based on one or more of the following criteria:

- Listing through the Federal and/or State Endangered Species Act (ESA)
- California Rare Plant Rank 1A, 1B, 2A, 2B, 3, or 4

Wildlife species were considered "special-status" based on one or more of the following criteria:

- Listing through the Federal and/or State ESA
- Designation by the State as a Species of Special Concern (SSC) or California Fully Protected (FP) species

Vegetation communities and habitats were considered "special-status" based on one or more of the following criteria:

- Global (G) and/or State (S) ranking of category 3 or less (see Section 3.2.2 below for further explanation)
- Riparian/riverine habitat

2.1 Botanical Resources

A site-specific survey program was designed to accurately document the botanical resources within the Project site, and consisted of five components: (1) a literature search; (2) preparation of a list of target special-status plant species and sensitive vegetation communities that could occur within the Project site; (3) general field reconnaissance survey(s); (4) vegetation mapping according to the List of Vegetation Alliances and Associations; and (5) habitat assessments and focused surveys for special-status plants (including those with MSHCP requirements).

2.1.1 Literature Search

Prior to conducting fieldwork, pertinent literature on the flora of the region was examined. A thorough archival review was conducted using available literature and other historical records. These resources included the following:

- California Native Plant Society, Rare Plant Program. Inventory of Rare and Endangered Plants of California (online edition, v9.5) (CNPS 2024); and

- CNDDB for the USGS 7.5′ quadrangle(s): Lakeview and San Jacinto (CDFW 2024).

2.1.2 Vegetation Mapping

The MSHCP utilizes vegetation mapping for the overall Plan area derived from baseline mapping conducted in 1995, with updates provided in 2005 and 2012. Vegetation types were classified according to Holland (1986). The MSHCP states that the baseline vegetation map is limited by the timeframe within which the data were assembled as well as the precision of those data, and that the current extent and character of vegetation communities may differ from that depicted on the MSHCP vegetation map.

Vegetation communities within the Project site were mapped according to the List of Vegetation Alliances and Associations (or Natural Communities List). The list is based on A Manual of California Vegetation, Second Edition or MCVII, which is the California expression of the National Vegetation Classification. Where necessary, deviations were made when areas did not fit into exact vegetation descriptions. These vegetation communities were named based on the dominant plant species present. Plant communities were mapped in the field directly onto a 200-scale (1”=200’) aerial photograph.

2.1.3 Special-Status Plant Species and Habitats Evaluated for the Project Site

A literature search was conducted to obtain a list of special-status plants with the potential to occur within the Project site. The CNDDB was initially consulted to determine well-known occurrences of plants and habitats of special concern in the region. Other sources used to develop a list of target species for the survey program included the CNPS online inventory 2024 and the MSHCP (Dudek 2003).

Most of the Project site is located within the MSHCP Narrow Endemic Plant Species Survey Area (NEPSSA) [Exhibit 4B], except for approximately 3,000 linear feet of the Project alignment corresponding with the northeastern corner of the SJCCSP property. Pursuant to the MSHCP, the following target species must be evaluated through habitat assessments and focused surveys (if suitable habitat is present): Munz’s onion, San Diego ambrosia, many-stemmed dudleya, spreading navarretia, California Orcutt grass, and Wright’s trichocoronis.

Based on this information, vegetation profiles and a list of target sensitive plant species and habitats that could occur within the Project site were developed and incorporated into a mapping and survey program to achieve the following goals: (1) characterize the vegetation associations

and land use; (2) prepare a detailed floristic compendium; (3) identify the potential for any special-status plants that may occur within the Project site; and (4) prepare a map showing the distribution of any sensitive botanical resources associated with the Project site, if applicable.

2.1.4 Botanical Surveys

GLA biologists performed general and focused plant surveys for the Project site in 2022 and 2023 (middle segment) and 2024 (northwestern and southeastern segments). In 2022, surveys were performed on March 2 (Jillian Stephens and Wanisa Jaikwang), and April 13 and May 30 (Jillian Stephens). In 2023, focused surveys were performed on February 22 and April 27 (Jillian Stephens), May 26 (Amy Black), and June 1 (Amy Black and David Smith). In 2024, focused surveys were performed on April 8 (Ian Rhodes), June 25 (Amy Black and Bailey Perrizo) and June 26 (Ian Rhodes).

Survey(s) were conducted in accordance with accepted botanical survey guidelines (CDFW 2018, CNPS 2001, Nelson 1984, USFWS 2000). As applicable, survey(s) were conducted at appropriate times based on precipitation and flowering periods. An aerial photograph, a soil map, and/or a topographic map were used to determine the community types and other physical features that may support sensitive and uncommon taxa or communities within the Project site. Survey(s) were conducted by following meandering transects within target areas of suitable habitat. All plant species encountered during the field survey(s) were identified and recorded following the above-referenced guidelines. A complete list of the plant species observed is provided in Appendix A. Scientific nomenclature and common names used in this report follow Baldwin et al. (2012), and Munz (1974).

2.2 Wildlife Resources

Wildlife species were evaluated and detected during the field survey(s) by sight, call, tracks, and scat. Site reconnaissance was conducted in such a manner as to allow inspection of the entire Project site by direct observation, including the use of binoculars. Observations of physical evidence and direct sightings of wildlife were recorded in field notes during the visit(s). A complete list of wildlife species observed within the Project site is provided in Appendix B. Scientific nomenclature and common names for vertebrate species referred to in this report follow the Complete List of Amphibian, Reptile, Bird, and Mammal Species in California (CDFW 2016), Standard Common and Scientific Names for North American Amphibians, Turtles, Reptiles, and Crocodilians 6th Edition, Collins and Taggart (2009) for amphibians and reptiles, and the American Ornithological Society Checklist of Middle and North American Birds (Chesser et al. 2024) for birds. The methodology (including any applicable survey protocols) utilized to conduct general survey(s), habitat assessment(s), and/or focused surveys for special-status animals are included below.

2.2.1 General Surveys

Birds

During the general biological and reconnaissance survey within the Project site, birds were identified incidentally within each habitat type. Birds were detected by both direct observation and by vocalizations and were recorded in field notes.

Mammals

During general biological and reconnaissance survey within the Project site, mammals were identified incidentally within each habitat type. Mammals were detected both by direct observations and by the presence of diagnostic sign (i.e. tracks, burrows, scat, etc.).

Reptiles and Amphibians

During general biological and reconnaissance surveys within the Project site, reptiles and amphibians were identified incidentally during surveys within each habitat type. Habitats were examined for diagnostic reptile sign, which include shed skins, scat, tracks, snake prints, and lizard tail drag marks. All reptiles and amphibian species observed, as well as diagnostic sign, were recorded in field notes.

2.2.2 Special-Status Animal Species Evaluated for the Project Site

A literature search was conducted to obtain a list of special-status wildlife species with the potential to occur within the Project site. Species were evaluated based on three factors, including: 1) species identified by the CNDDB as occurring (either currently or historically) on or in vicinity of the Project site, (2) species survey areas as identified by the MSHCP for the Project site; and 3) any other special-status animals that are known to occur within the vicinity of the Project site, or for which potentially suitable habitat occurs on the Project site.

2.2.3 Habitat Assessment for Special-Status Animal Species

GLA biologists conducted habitat assessments for special-status animal species for the Project site, including on March 2, 2022 (Jillian Stephens and Wanisa Jaikwang) and on March 11 and 15, 2024 (Jeff Ahrens and Chris Waterston). An aerial photograph, soil map and/or topographic map were used to determine the community types and other physical features that may support special-status and uncommon taxa within the Project site.

2.2.4 Focused Surveys for Special-Status Animals Species

Burrowing Owl

The Project site is within the MSHCP Burrowing Owl (*Athene cunicularia*) Survey Area and therefore a habitat assessment is required (in accordance with the 2006 MSHCP Burrowing Owl Survey Instructions) to determine if focused burrowing owl surveys are warranted for the Project

site. The Burrowing Owl Survey Instructions are divided into three components: Step I (habitat assessment), Step II-A (focused burrow survey), and Step II-B (focused burrowing owl survey). The Step I habitat assessment is used to determine if a Project site exhibits the base-habitat conditions for burrowing owls, i.e., whether a site contains open habitats with the potential to contain fossorial mammal burrows to support burrowing owls.

Burrowing owl surveys were performed in 2022 for the middle portion of the Project alignment and in 2024 for the northwestern and southeastern portions of the Project [Exhibit 9 – Burrowing Owl Survey Map]. Step I habitat assessments were conducted by Stephanie Cashin and Wanisa Jaikwang on March 7, 2022, and by Jeff Ahrens on March 20, 2024. The Step I habitat assessments were conducted by walking meandering transects throughout the Project site to identify small mammal burrows or man-made structures that may be used by owls, as well as assessing the vegetation for suitability (i.e., areas of low growing grassland vegetation and/or lacking dense scrub). Additionally, a 500 feet buffer zone around the project boundary was visually inspected with binoculars.

Focused burrow surveys (Step II-A) were conducted on March 7, 2022, and March 20, 2024, concurrent with the first focused survey visits (Step II-B). The remaining focused survey visits for the respective survey areas were conducted on March 14, April 6, April 18, May 4, May 9, June 6 and June 13, 2022 (Amy Black, Stephanie Cashin, Brinna Lee, David Smith, Wanisa Jaikwang, and Joseph Vu), and on April 18, May 9, and July 8, 2024 (David Smith and Brinna Lee). The burrowing owl survey visits are to be conducted during a period from one hour prior to sunrise to two hours after sunrise or two hours before sunset to one hour after sunset. All survey visits were conducted in the morning within the allotted timeframe. The surveys were conducted during weather that was conducive to observing owls outside their burrows and detecting burrowing owl sign, and not during rain, high winds (> 20 mph), dense fog, or temperatures over 90 °F. Additionally, all work was performed more than 5 days after a rain event.

Focused burrowing owl surveys were conducted by walking meandering transects throughout areas of suitable habitat. Transects were spaced between 22 feet and 65 feet apart, adjusting for vegetation height and density, in order to provide adequate visual coverage of the survey areas. At the start of each transect, and at least every 320 feet along transects, binoculars were used to scan the survey area for burrowing owls. All suitable burrows were inspected for diagnostic owl sign (e.g., pellets, prey remains, whitewash, feathers, bones, and decoration) in order to identify potentially occupied burrows. Exhibit 9 identifies the burrowing owl survey areas, transect locations, and the 500-foot buffer area. Table 2-2 summarizes the 2022 burrowing owl survey visits and Table 2-3 summarizes the 2024 burrowing owl survey visits. The results of the burrowing owl surveys are documented in Section 4.0 of this report.

Table 2-2. Summary of 2022 Burrowing Owl Surveys

Survey Date	Survey Number	Biologist(s)	Start/End Temperature (°F)	Start/End Wind Speed (mph)	Cloud Cover (%)

Least Bell's Vireo

GLA biologists Stephanie Cashin, Hannah Craddock, Joseph Vu, and Chris Waterston conducted focused surveys for the least Bell's vireo (*Vireo bellii pusillus*) within the adjacent (offsite) riparian habitat. Surveys were conducted in accordance with the 2001 USFWS survey guidelines, which stipulate that eight surveys should be conducted between April 10 and July 31, with a minimum of ten days separating each survey visit.

Focused surveys were conducted on April 11, April 23, May 7, June 12, June 27, July 9, July 19, and July 29, 2024. Pursuant to the survey guidelines, the surveys were conducted between sunrise and 11:00 a.m. Weather conditions during the surveys were conducive to a high level of bird activity. Table 2-4 summarizes the vireo survey visits. The results of the vireo surveys are documented in Section 4.0 of this report.

Table 2-4. Summary of Least Bell's Vireo Surveys

Survey Date	Survey Number	Biologist(s)	Start/End Time	Start/End Temperature (°F)	Start/End Wind Speed (mph)	Cloud Cover (%)

SC= Stephanie Cashin, HC = Hannah Craddock, JV = Joseph Vu, CW = Chris Waterston						

Southwestern Willow Flycatcher

GLA biologist Jeff Ahrens (TE 052159-6) conducted focused surveys for the southwestern willow flycatcher (*Empidonax traillii extimus*) within the adjacent (offsite) riparian habitat. Surveys were conducted in accordance with the 2010 USFWS survey guidelines, which stipulate five survey visits between May 15 and July 17, divided into three survey periods. The southwestern willow flycatcher is one of four subspecies of willow flycatcher that occur within southern California but is the only subspecies that breeds in southern California. The other subspecies may occur in southern California as they migrate through the area onwards to northern breeding areas but will not breed in southern California. If present, these subspecies may be detected during the first and/or second survey periods. The presence of the southwestern willow flycatcher is determined by willow flycatchers that remain in southern California during the third survey period.

Focused surveys were conducted on May 20, June 11, June 21, June 27, and July 3, 2024. Mr. Ahrens was accompanied by GLA biologist Chris Waterston (non-permitted) on June 27, 2024. All surveys were conducted between one hour prior to sunrise and were completed before 10:45 a.m. Weather conditions during the surveys were conducive to a high level of bird activity. Table 2-5 summarizes the flycatcher survey visits. The southwestern willow flycatcher report is included as Appendix H.

Table 2-5. Summary of Southwestern Willow Flycatcher Surveys

Crotch's Bumble Bee

GLA biologists Jeff Ahrens, Stephanie Cashin, and Ian Rhodes performed focused foraging surveys for Crotch's bumble bee (*Bombus crotchii*; CBB) in suitable habitat areas of the Project during the 2025 survey period. All three biologists are familiar with bumble bee natural history, bumble bee species identification and have detected the CBB on numerous sites throughout southern California. In addition, Ms. Cashin (S-202690004-20273-001) holds a Scientific Collecting Permit (SCP) and a Section 2081(a) permit authorizing capture and release of CESA Candidate and/or TVPICP List bumble bees, including CBB.

Surveys generally followed the methods described by CDFW (2023) in *Survey Considerations for California Endangered Species Act (CESA) Candidate Bumble Bee Species*, which is not a mandated survey protocol, but instead "is intended to assist CDFW staff, project proponents, and consultants in developing, proposing, and evaluating survey protocols and surveys on a project-specific basis." The *Survey Considerations* provides an overview of and incorporates the methodology of established protocols (e.g. the USFWS rusty patched bumble bee protocol [USFWS 2019]), while allowing for modifications to the number and type of surveys based on factors including the size of a Project site, the vegetation alliances and the phenology of the floral resources present within those alliances, and the patchiness of suitable habitat. The *Survey Considerations* state that survey efforts should include multiple survey visits, with the timing of the visits determined on a project-by-project basis based on seasonality and when CBB utilization will most likely occur. The timing of the surveys may vary depending on the location, elevation, seasonal rainfall, average ambient air temperatures, and local seasonal weather conditions.

To increase probability of detecting foraging bumble bees, survey efforts at the Project site were conducted during peak bloom periods that encompass the queen flight season (February through March) as well as the Colony Active Period (April through August) when the queen, daughters, and males are generally active. Surveys were spaced at least two to four weeks apart throughout the queen flight season and Colony Active Period to take advantage of the different blooming periods of floral resources.

The Project site supports both annual and perennial floral resources with the potential for utilization by CBB. The annual floral resources onsite (that CBB are known to use) consisted of common fiddleneck (*Amsinckia intermedia)*, which was located primarily east of North Sanderson Avenue and along the edges of agricultural areas within the western portion of the site. Other annual species including smooth tarplant (*Centromadia pungens* ssp.), which have not been documented to be utilized by CBB were also surveyed. Perennial floral resources onsite with potential to be utilized by CBB was limited to alfalfa (*Medicago sativa*). Alfalfa is generally considered to be a perennial plant as it can live for more than two years, but at the Project site, alfalfa is generally grown as a short-season annual row crop that is rotated. Alfalfa within the Project site occurred west of North Sanderson Avenue. In addition to alfalfa, a small patch of branching phacelia (*Phacelia ramosissima*) was detected immediately offsite along the southeasternmost portion of the Project site within riparian habitat and was visually monitored when it was flowering as CBB is known to forage on it. Focused surveys were conducted on March 28, April 18, May 7, June 3, June 12, and June 25, 2025, which captured the peak blooming periods of both annual and perennial floral resources.

Photo vouchers of *Bombus* species were obtained by photographing bumble bees in situ from multiple angles with a professional level telephoto zoom lens and a camera body with a sensor capable of producing highly detailed images to ensure sufficient detail of identifying characteristics. Pursuant to the survey guidelines, the surveys were conducted between an hour after sunrise up until two hours before sunset, during times when weather conditions during the surveys are conducive to a high level of bee activity with temperatures generally 52-90 degrees Fahrenheit and wind less than seven miles per hour. Table 2-6 summarizes the CBB survey visits. The results of the CBB surveys are documented in Section 4.0 of this report. The CBB report is included as Appendix I.

Table 2-6. Summary of Crotch's Bumble Bee Surveys

Fairy Shrimp

The Project site contains five features/inundation areas that were surveyed by GLA biologists to determine the presence/absence of listed fairy shrimp. Three of the features, identified as #4, 5 and 46, were surveyed in 2021/2022 (wet season) and 2023 (dry season) for a separate project whose study area overlaps with that of the Line E Project site. The other two features, identified as E-1 and E-2, were surveyed in 2023/2024 (wet and dry seasons) for the Project.

Wet Season Surveys

The 2021/2022 wet season surveys (Features 4, 5 and 46) were conducted by GLA biologist Frank Wegscheider (TE-038716-4). The 2023/2024 wet season surveys (Features E-1 and E-2) were conducted by GLA biologists Stephanie Cashin (TE-20280D-0) and Chris Waterston (ESPER-2380694), assisted by GLA field staff David Smith and Velvet Park.

The wet season surveys were performed in accordance with the USFWS *Survey Guidelines for the Listed Large Branchiopods* (Survey Guidelines) dated November 13, 2017. Prior to the initiation of sampling, site visits were conducted following rainfall events to identify those features meeting the minimum hydrologic conditions for sampling. The Survey Guidelines generally consider that features containing a minimum of three centimeters (cm) of ponding at least 24 hours after rain events should be evaluated for surveys, but more specifically, sampling is required for any features ponded for at least seven days, and every seven days thereafter until the features are dry or have remained inundated continuously for 120 days. Surveys are to be re-initiated for any features that dry up and re-inundate.

Sampling for the presence of fairy shrimp was performed using a dip net within representative portions of the depression bottom, edges, and vertical water column when there was adequate ponding. Specimens were placed into vials, with labels containing identifying each depression with its unique identifying number. The vials contained a 95% ethanol solution to preserve the specimens. Specimens were identified in the field when feasible, otherwise identification was completed in a lab setting.

Dry Season Surveys

Dry season surveys for Features 4, 5 and 46 were initiated in October 2023 with the collection of soil samples by GLA biologist David Moskovitz (PER0010680-0), with assistance from Stephanie Cashin and Chris Waterston, and from GLA trainees David Smith and Velvet Park (under supervision). Soil processing and culturing was performed by Brent Helm (TE-795930-12). The dry season surveys for Features E-1 and E-2 were conducted on September 20, 2024, by GLA biologist Chris Waterston (ESPER-2380694) with assistance from Stephanie Cashin (PER11730977-1), and from GLA trainee Velvet Park (under supervision). Soil processing and culturing was performed by Frank Wegscheider (TE-038716-4).

Soil sample collection followed the USFWS *Survey Guidelines for the Listed Large Branchiopods* (Survey Guidelines).[2] Soil samples were collected when the pools were dry using

[2] USFWS. *Survey Guidelines for the Listed Large Branchiopods*, Revised: November 13, 2017.

a hand trowel to collect intact chunks of soil from the top 1–3 cm of pool sediment. The number of soil samples collected from each of features was based on feature size according to the Survey Guidelines. Starting at the edge of each depression, samples were taken from equidistant points along the longest transect and widest transect of each depression. Additional samples were taken at the deepest part of each feature. Soil samples of approximately 100 milliliters (ml) each were removed at each sub-sample location using a hand trowel and were combined into a labeled bag for each feature with the collection date, location and feature ID, and name of collector for future processing.

Special-Status Bats

GLA biologists Jeff Ahrens and Stephanie Cashin conducted a focused bat survey on April 29, 2024, within the adjacent (offsite) riparian habitat. The bat survey was comprised of a combination of acoustic and emergence surveys and focused on detecting potential roosting areas (day and night) that included, but were not limited to, rocky outcroppings, palm trees, eucalyptus trees, and riparian vegetation. Potential roosting areas were inspected visually for evidence of roosting that included urine staining, guano concentrations, and/or audible bats. A Seek Compact Pro Thermal imager attached to an iPhone or iPad was used to assist in detecting heat signatures of bats within and exiting from potential roost areas.

Four ultrasonic acoustic recording devices were deployed throughout the bat Study area. Recording devices included two Pettersson M500-384 microphones attached to two Microsoft Surface Pros running Sonobat Live recording software and also included two Wildlife Acoustics EchoMeter 2 Pro microphones attached to an Apple iPad.

All acoustic data was recorded in full spectrum and was processed and analyzed with Sonobat 4.2.2 bat call analysis software using the California Southwest classifier. All acoustic calls were manually reviewed and vetted using multiple Sonobat acoustic reference libraries and reference materials including Echolocation Call Characteristics of California Bats (Humboldt State University, 2018) and Echolocation Call Characteristics of Western U.S. Bats (Humboldt State University, 2018). Table 2-7 summarizes the focused bat survey visits.

Table 2-7. Summary of Focused Bat Surveys

Survey Date	Biologist(s)	Start/End Time	Start/End Temperature (°F)	Start/End Wind Speed (mph)	Cloud Cover
04/29/2024	JA/SC	1800/2230	71/63	4-5/2-4	None
JA = Jeff Ahrens, SC = Stephanie Cashin					

2.3 Jurisdictional Waters

The Project site was delineated on May 23, May 24, June 27, and September 20, 2024, by GLA regulatory specialists Lesley Lokovic-Gamber and Velvet Park to identify the limits of

jurisdictional waters, including waters of the U.S. (including wetlands) subject to the jurisdiction of the Corps and Regional Board pursuant to Sections 404 and 401 of the CWA, waters of the State (including wetlands) subject to Regional Board jurisdiction pursuant to Section 13260 of the CWC, and streambed/riparian vegetation subject to CDFW jurisdiction pursuant to Section 1600 of the California Fish and Game Code. Prior to beginning the field delineation a 200-scale color aerial photograph and the previously cited USGS topographic maps were examined to determine the locations of potentially jurisdictional areas. Suspected jurisdictional areas were field checked for the presence of definable channels and/or wetland vegetation, soils and hydrology. Potential wetland habitats at the subject site were evaluated using the methodology set forth in the U.S. Army Corps of Engineers 1987 Wetland Delineation Manual[3] (Wetland Manual) and the 2008 Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Supplement (Arid West Supplement)[4]. The presence of an Ordinary High Water Mark (OHWM) was determined using the 2008 Field Guide to Identification of the Ordinary High Water Mark (OHWM) in the Arid West Region of the Western United States[5] in conjunction with the Updated Datasheet for the Identification of the Ordinary High Water Mark (OHWM) in the Arid West Region of the Western United States.[6] While in the field the limits of the OHWM, wetlands (if applicable), and CDFW jurisdiction were recorded using GPS technology and/or on copies of the aerial photography. Other data were recorded onto the appropriate datasheets.

2.4 MSHCP Riparian/Riverine Areas and Vernal Pools

Volume I, Section 6.1.2 of the MSHCP describes the process through which protection of riparian/riverine areas and vernal pools would occur within the MSHCP Plan Area. The purpose is to ensure that the biological functions and values of these areas throughout the MSHCP Plan Area are maintained such that habitat values for species inside the MSHCP Conservation Area are maintained. The MSHCP requires that as projects are proposed within the overall Plan Area, the effect of those projects on riparian/riverine areas and vernal pools must be addressed.

The MSHCP defines riparian/riverine areas as *lands which contain Habitat dominated by trees, shrubs, persistent emergent mosses and lichens, which occur close to or which depend upon soils moisture from a nearby fresh water source; or areas with fresh water flow during all or a portion of the year.*

ERDC/CRREL TN-10-1. Hanover, NH: U.S. Army Engineer Research and Development Center, Cold Regions Research and Engineering Laboratory.

The MSHCP defines vernal pools as "seasonal wetlands that occur in depression areas that have wetlands indicators of all three parameters (soils, vegetation, and hydrology) during the wetter portion of the growing season but normally lack wetland indictors of hydrology and/or vegetation during the drier portion of the growing season."

With the exception of wetlands created for the purpose of providing wetlands habitat or resulting from human actions to create open waters or from the alteration of natural stream courses, areas demonstrating characteristics as described above which are artificially created are not included in these definitions.

GLA surveyed the Project site for riparian/riverine areas and vernal pool/seasonal pool habitat, including features with the potential to support fairy shrimp. To assess for vernal/seasonal pools (including fairy shrimp habitat), GLA biologists evaluated the topography of the site, including whether the site contained depressional features/topography with the potential to become inundated; whether the site contained soils associated with vernal/seasonal pools; and whether the site supported plants that suggested areas of localized ponding. The Project site was evaluated for riparian/riverine areas on May 23 and 24, June 27, and September 20, 2024.

3.0 REGULATORY SETTING

The proposed Project is subject to state and federal laws and regulations associated with a number of regulatory programs. These programs often overlap and were developed to protect natural resources, including state and federally listed plants and animals; aquatic resources including rivers and creeks, ephemeral streambeds, wetlands, and areas of riparian habitat; special-status species which are not listed as threatened or endangered by the state or federal governments; and special-status vegetation communities.

3.1 Endangered Species Acts

3.1.1 California Endangered Species Act

California's Endangered Species Act (CESA) defines an endangered species as "a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant which is in serious danger of becoming extinct throughout all, or a significant portion, of its range due to one or more causes, including loss of habitat, change in habitat, overexploitation, predation, competition, or disease." The State defines a threatened species as "a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant that, although not presently threatened with extinction, is likely to become an endangered species in the foreseeable future in the absence of the special protection and management efforts required by this chapter. Any animal determined by the commission as rare on or before January 1, 1985, is a threatened species." Candidate species are defined as "a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant that the commission has formally noticed as being under review by the department for addition to either the list of endangered species or the list of threatened species, or a species for which the commission has published a notice of proposed regulation to add the species to either list."

Candidate species may be afforded temporary protection as though they were already listed as threatened or endangered at the discretion of the Fish and Game Commission.

Article 3, Sections 2080 through 2085, of the CESA addresses the taking of threatened, endangered, or candidate species by stating "No person shall import into this state, export out of this state, or take, possess, purchase, or sell within this state, any species, or any part or product thereof, that the commission determines to be an endangered species or a threatened species, or attempt any of those acts, except as otherwise provided." Under the CESA, "take" is defined as "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill." Exceptions authorized by the state to allow "take" require permits or memoranda of understanding and can be authorized for endangered species, threatened species, or candidate species for scientific, educational, or management purposes and for take incidental to otherwise lawful activities. Section 1913 of the California Fish and Game Code provides that notification is required prior to disturbance.

3.1.2 Federal Endangered Species Act

The FESA of 1973 defines an endangered species as "any species that is in danger of extinction throughout all or a significant portion of its range." A threatened species is defined as "any species that is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range." Under provisions of Section 9(a)(1)(B) of the FESA it is unlawful to "take" any listed species. "Take" is defined in Section 3(18) of FESA: "...harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct." Further, the USFWS, through regulation, has interpreted the terms "harm" and "harass" to include certain types of habitat modification that result in injury to, or death of species as forms of "take." These interpretations, however, are generally considered and applied on a case-by-case basis and often vary from species to species. In a case where a property owner seeks permission from a federal agency for an action that could affect a federally listed plant and animal species, the property owner and agency are required to consult with USFWS. Section 9(a)(2)(b) of the FESA addresses the protections afforded to listed plants.

3.1.3 State and Federal Take Authorizations

Federal or state authorizations of impacts to or incidental take of a listed species by a private individual or other private entity would be granted in one of the following ways:

- Section 7 of the FESA stipulates that any federal action that may affect a species listed as threatened or endangered requires a formal consultation with USFWS to ensure that the action is not likely to jeopardize the continued existence of the listed species or result in destruction or adverse modification of designated critical habitat. 16 U.S.C. 1536(a)(2).
- In 1982, the FESA was amended to give private landowners the ability to develop Habitat Conservation Plans (HCP) pursuant to Section 10(a) of the FESA. Upon development of an HCP, the USFWS can issue incidental take permits for listed species where the HCP specifies at minimum, the following: (1) the level of impact that will result from the taking, (2) steps that will minimize and mitigate the impacts, (3) funding necessary to implement the plan, (4) alternative actions to the taking considered by the applicant and

the reasons why such alternatives were not chosen, and (5) such other measures that the Secretary of the Interior may require as being necessary or appropriate for the plan.

- In certain circumstances, Section 2080.1 of the California Fish and Game Code allows CDFW to adopt the federal incidental take statement or the 10(a) permit as its own based on its findings that the federal permit adequately protects the species under state law.

3.1.4 Take Authorizations Pursuant to the MSHCP

The Western Riverside County MSHCP was adopted on June 17, 2003, and an Implementing Agreement (IA) was executed between the federal and state wildlife agencies and participating entities. The MSHCP is a comprehensive habitat conservation-planning program for western Riverside County. The intent of the MSHCP is to preserve native vegetation and meet the habitat needs of multiple species, rather than focusing preservation efforts on one species at a time. As such, the MSHCP is intended to streamline review of individual projects with respect to the species and habitats addressed in the MSHCP, and to provide for an overall Conservation Area that would be of greater benefit to biological resources than would result from a piecemeal regulatory approach. The MSHCP provides coverage (including take authorization for listed species) for special-status plant and animal species, as well as mitigation for impacts to sensitive species pursuant to Section 10(a) of the FESA.

Through agreements with the U.S. Fish and Wildlife Service (USFWS) and the California Department of Fish and Wildlife (CDFW), the MSHCP designates 146 special-status animal and plant species that receive some level of coverage under the plan. Of the 146 "Covered Species" designated under the MSHCP, most of these species have no additional survey/conservation requirements. In addition, through project participation with the MSHCP, the MSHCP provides mitigation for project-specific impacts to Covered Species so that the impacts would be reduced to below a level of significance pursuant to CEQA. As noted above, project-specific survey requirements exist for species designated as "Covered Species not yet adequately conserved". These include Narrow Endemic Plant Species, as identified by the Narrow Endemic Plant Species Survey Areas (NEPSSA); Criteria Area Plant Species identified by the Criteria Area Species Survey Areas (CASSA); animal species as identified by survey area; and plant and animal species associated with riparian/riverine areas and vernal pool habitats (*Volume I, Section 6.1.2* of the MSHCP document).

For projects that have a federal nexus such as through federal Clean Water Act Section 404 permitting, take authorization for federally listed covered species would occur under Section 7 (not Section 10) of FESA and that USFWS would provide a MSHCP consistency review of the proposed project, resulting in a biological opinion. The biological opinion would require no more compensation than what is required to be consistent with the MSHCP.

3.2 California Environmental Quality Act

3.2.1 CEQA Guidelines Section 15380

CEQA requires evaluation of a project's impacts on biological resources and provides guidelines and thresholds for use by lead agencies for evaluating the significance of proposed impacts. Sections 5.1.1 and 5.2.2 below set forth these thresholds and guidelines. Furthermore, pursuant

to the CEQA Guidelines Section 15380, CEQA provides protection for non-listed species that could potentially meet the criteria for state listing. For plants, CDFW recognizes that plants with a California Rare Plant Rank (CRPR) of 1A, 1B, 2A, or 2B in the CNPS *Inventory of Rare and Endangered Plants in California* may meet the criteria for listing and should be considered under CEQA. CDFW also recommends protection of plants that are regionally important, such as locally rare species, disjunct populations of more common plants, or plants with a CRPR of 3 or 4.

3.2.2 Special-Status Plants, Wildlife and Vegetation Communities Evaluated Under CEQA

Federally Designated Special-Status Species

Within recent years, the USFWS instituted changes in the listing status of candidate species. Former C1 (candidate) species are now referred to simply as candidate species and represent the only candidates for listing. Former C2 species (for which the USFWS had insufficient evidence to warrant listing) and C3 species (either extinct, no longer a valid taxon or more abundant than was formerly believed) are no longer considered as candidate species. Therefore, these species are no longer maintained in list form by the USFWS, nor are they formally protected. This term is employed in this document but carries no official protection. All references to federally protected species in this report (whether listed, proposed for listing, or candidate) include the most current published status or candidate category to which each species has been assigned by USFWS.

For this report the following acronyms are used for federal special-status species:

- FE Federally listed as Endangered
- FT Federally listed as Threatened
- FPE Federally proposed for listing as Endangered
- FPT Federally proposed for listing as Threatened
- FC Federal Candidate Species (former C1 species)

State-Designated Special-Status Species

Some mammals and birds are protected by the state as Fully Protected (FP) Mammals or Fully Protected Birds, as described in the California Fish and Game Code, Sections 4700 and 3511, respectively. California SSC are designated as vulnerable to extinction due to declining population levels, limited ranges, and/or continuing threats. This list is primarily a working document for the CDFW's CNDDB project. Informally listed taxa are not protected but warrant consideration in the preparation of biotic assessments. For some species, the CNDDB is only concerned with specific portions of the life history, such as roosts, rookeries, or nest sites.

For this report the following acronyms are used for State special-status species:

- SE State-listed as Endangered
- ST State-listed as Threatened

- SR State-listed as Rare
- SCE State Candidate for listing as Endangered
- SCT State Candidate for listing as Threatened
- FP State Fully Protected
- SSC State Species of Special Concern

CNDDB Global/State Rankings

The CNDDB provides global and state rankings for species and communities based on a system developed by The Nature Conservancy to measure rarity of a species. The ranking provides a shorthand formula about the rarity of a species/community and is based on the best information available from multiple sources, including state and federal listings, and other groups that recognize species as sensitive (e.g., Bureau of Land Management, Audubon Society, etc.). State and global rankings are used to prioritize conservation and protection efforts so that the rarest species/communities receive immediate attention. In both cases, the lower ranking (i.e., G1 or S1) indicates extreme rarity. Rare species are given a ranking from 1 to 3. Species with a ranking of 4 or 5 is considered to be common. If the exact global/state ranking is undetermined, a range is generally provided. For example, a global ranking of "G1G3" indicates that a species/community global rarity is between G1 and G3. If the animal being considered is a subspecies of a broader species, a "T" ranking is attached to the global ranking. The following are descriptions of global and state rankings:

Global Rankings

- G1 – Critically imperiled globally because of extreme rarity (5 or fewer occurrences), or because of some factor(s) making it especially vulnerable to extinction.
- G2 – Imperiled globally because of rarity (6-20 occurrences), or because of some other factor(s) making it very vulnerable to extinction throughout its range.
- G3 – Either very rare and local throughout its range (21 to 100 occurrences) or found locally (even abundantly at some of its locations) in a restricted range (e.g., a physiographic region), or because of some other factor(s) making it vulnerable to extinction throughout its range.
- G4 – Uncommon but not rare; some cause for long-term concern due to declines or other factors.
- G5 – Common, widespread and abundant.

State Rankings

- S1 – Extremely rare; typically 5 or fewer known occurrences in the state; or only a few remaining individuals; may be especially vulnerable to extirpation.
- S2 – Very rare; typically between 6 and 20 known occurrences; may be susceptible to becoming extirpated.
- S3 – Rare to uncommon; typically 21 to 50 known occurrences; S3 ranked species are not yet susceptible to becoming extirpated in the state but may be if additional populations are destroyed.

- S4 - Uncommon but not rare; some cause for long-term concern due to declines or other factors.
- S5 - Common, widespread, and abundant in the state.

California Native Plant Society/CNDDB California Rare Plant Ranks

CNPS is a private plant conservation organization dedicated to the monitoring and protection of sensitive species in California. In a collaborative effort with CDFW's CNDDB Project, the CNPS Ninth Edition of the *Inventory of Rare and Endangered Plants of California* categorizes plants of interest into six California Rare Plant Ranks (CRPR) based on their geographic distribution and potential threats to existing populations. The CNPS Inventory is used by CDFW as the candidate species list for plants that may be listed as state Threatened and Endangered by CDFW. The six categories of rarity that are summarized in Table 3-1

Table 3-1. California Rare Plant Ranks 1, 2, 3, & 4, and Threat Code Extensions

CRPR	Comments
Rank 1A – Plants Presumed Extirpated in California and Either Rare or Extinct Elsewhere	Thought to be extinct in California based on a lack of observation or detection for many years.
Rank 1B – Plants Rare, Threatened, or Endangered in California and Elsewhere	Species, which are generally rare throughout their range that are also judged to be vulnerable to other threats such as declining habitat.
Rank 2A – Plants presumed Extirpated in California, But Common Elsewhere	Species that are presumed extinct in California but more common outside of California
Rank 2B – Plants Rare, Threatened or Endangered in California, But More Common Elsewhere	Species that are rare in California but more common outside of California
Rank 3 – Plants About Which More Information Is Needed (A Review List)	Species that are thought to be rare or in decline but CNPS lacks the information needed to assign to the appropriate list. In most instances, the extent of surveys for these species is not sufficient to allow CNPS to accurately assess whether these species should be assigned to a specific rank. In addition, many of the Rank 3 species have associated taxonomic problems such that the validity of their current taxonomy is unclear.
Rank 4 – Plants of Limited Distribution (A Watch List)	Species that are currently thought to be limited in distribution or range whose vulnerability or susceptibility to threat is currently low. In some cases, as noted above for Rank 3 species, CNPS lacks survey data to accurately determine status in California. Many species have been placed on Rank 4 in previous editions of the "Inventory" and have been removed as survey data has indicated that the species are more common than previously thought. CNPS recommends that species currently included on this list should be monitored to ensure that future substantial declines are minimized.
Extension	**Comments**
.1 – Seriously endangered in California	Species with over 80% of occurrences threatened and/or have a high degree and immediacy of threat.

CRPR	Comments
.2 – Fairly endangered in California	Species with 20-80% of occurrences threatened.
.3 – Not very endangered in California	Species with <20% of occurrences threatened or with no current threats known.

3.3 Jurisdictional Waters

3.3.1 Army Corps of Engineers

Pursuant to Section 404 of the Clean Water Act, the Corps regulates the discharge of dredged and/or fill material into waters of the United States. The term "waters of the United States" is defined in Corps regulations at 33 CFR Part 328.3(a) as:

(1) Waters which are:

(i) Currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide;

(ii) The territorial seas; or

(iii) Interstate waters;

(2) Impoundments of waters otherwise defined as waters of the United States under this definition, other than impoundments of waters identified under paragraph (a)(5) of this section;

(3) Tributaries of waters identified in paragraphs (a)(1) or (2) of this section that are relatively permanent, standing or continuously flowing bodies of water;

(4) Wetlands adjacent to the following waters:

(i) Waters identified in paragraph (a)(1) of this section; or

(ii) Relatively permanent, standing or continuously flowing bodies of water identified in paragraph (a)(2) or (a)(3) of this section and with a continuous surface connection to those waters;

(5) Intrastate lakes and ponds not identified in paragraphs (a)(1) through (4) of this section that are relatively permanent, standing or continuously flowing bodies of water with a continuous surface connection to the waters identified in paragraph (a)(1) or (a)(3) of this section.

Corps regulations at 33 CFR Part 328.3(b) exclude the following from being "waters of the United States" even where they otherwise meet the terms of paragraphs (a)(2) through (5) above:

(1) Waste treatment systems, including treatment ponds or lagoons, designed to meet the requirements of the Clean Water Act;

(2) Prior converted cropland designated by the Secretary of Agriculture. The exclusion would cease upon a change of use, which means that the area is no longer available for the production of agricultural commodities. Notwithstanding the determination of an area's status as prior converted cropland by any other Federal agency, for the purposes of the Clean Water

Act, the final authority regarding Clean Water Act jurisdiction remains with EPA;

(3) Ditches (including roadside ditches) excavated wholly in and draining only dry land and that do not carry a relatively permanent flow of water;

(4) Artificially irrigated areas that would revert to dry land if the irrigation ceased;

(5) Artificial lakes or ponds created by excavating or diking dry land to collect and retain water and which are used exclusively for such purposes as stock watering, irrigation, settling basins, or rice growing;

(6) Artificial reflecting or swimming pools or other small ornamental bodies of water created by excavating or diking dry land to retain water for primarily aesthetic reasons;

(7) Waterfilled depressions created in dry land incidental to construction activity and pits excavated in dry land for the purpose of obtaining fill, sand, or gravel unless and until the construction or excavation operation is abandoned and the resulting body of water meets the definition of waters of the United States; and

(8) Swales and erosional features (e.g., gullies, small washes) characterized by low volume, infrequent, or short duration flow.

In the absence of wetlands, the limits of Corps jurisdiction in non-tidal waters, such as intermittent streams, extend to the OHWM which is defined at 33 CFR 328.3(c)(4) as:

> ...that line on the shore established by the fluctuation of water and indicated by physical characteristics such as clear, natural line impressed on the bank, shelving, changes in the character of soil, destruction of terrestrial vegetation, the presence of litter and debris, or other appropriate means that consider the characteristics of the surrounding areas.

"Adjacent" wetlands are defined by 33 CFR 328.3(c)(2) as those wetlands "having a continuous surface connection" to other waters of the United States.

Wetland Definition Pursuant to Section 404 of the Clean Water Act

The term "wetlands" (a subset of "waters of the United States") is defined at 33 CFR 328.3(c)(1) as "areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas." In 1987 the Corps published the Wetland Manual to guide its field personnel in determining jurisdictional wetland boundaries. The methodology set forth in the Wetland Manual and the Arid West Supplement generally require that, in order to be considered a wetland, the vegetation, soils, and hydrology of an area exhibit at least minimal hydric characteristics. While the Wetland Manual and Arid West Supplement provide great detail in methodology and allow for varying special conditions, a wetland should normally meet each of the following three criteria:

- More than 50 percent of the dominant plant species at the site must be hydrophytic in nature as published in the most current national wetland plant list;

- Soils must exhibit physical and/or chemical characteristics indicative of permanent or periodic saturation (e.g., a gleyed color, or mottles with a matrix of low chroma indicating a relatively consistent fluctuation between aerobic and anaerobic conditions); and

- Whereas the Wetland Manual requires that hydrologic characteristics indicate that the ground is saturated to within 12 inches of the surface for at least five percent of the growing season during a normal rainfall year, the Arid West Supplement does not include a quantitative criteria with the exception for areas with "problematic hydrophytic vegetation", which require a minimum of 14 days of ponding to be considered a wetland.

Solid Waste Agency of Northern Cook County v. United States Army Corps of Engineers, et al.

Pursuant to Article I, Section 8 of the U.S. Constitution, federal regulatory authority extends only to activities that affect interstate commerce. In the early 1980s the Corps interpreted the interstate commerce requirement in a manner that restricted Corps jurisdiction on isolated (intrastate) waters. On September 12, 1985, the U.S. Environmental Protection Agency (EPA) asserted that Corps jurisdiction extended to isolated waters that are used or could be used by migratory birds or endangered species, and the definition of "waters of the United States" in Corps regulations was modified as quoted above from 33 CFR 328.3(a).
On January 9, 2001, the Supreme Court of the United States issued a ruling on *Solid Waste Agency of Northern Cook County v. United States Army Corps of Engineers, et al.* (SWANCC). In this case the Court was asked whether use of an isolated, intrastate pond by migratory birds is a sufficient interstate commerce connection to bring the pond into federal jurisdiction of Section 404 of the Clean Water Act.

The written opinion notes that the court's previous support of the Corps' expansion of jurisdiction beyond navigable waters (*United States v. Riverside Bayview Homes, Inc*.) was for a wetland that abutted a navigable water and that the court did not express any opinion on the question of the authority of the Corps to regulate wetlands that are not adjacent to bodies of open water. The current opinion goes on to state:

> In order to rule for the respondents here, we would have to hold that the jurisdiction of the Corps extends to ponds that are not adjacent to open water. We conclude that the text of the statute will not allow this.

Therefore, we believe that the court's opinion goes beyond the migratory bird issue and says that no isolated, intrastate water is subject to the provisions of Section 404(a) of the Clean Water Act (regardless of any interstate commerce connection). However, the Corps and EPA have issued a joint memorandum which states that they are interpreting the ruling to address only the migratory bird issue and leaving the other interstate commerce clause nexuses intact.

3.3.2 Regional Water Quality Control Board

The State Water Resource Control Board and each of its nine Regional Boards regulate the discharge of waste (dredged or fill material) into waters of the United States[7] and waters of the state. Waters of the United States are defined above in Section II.A and waters of the state are defined as "any surface water or groundwater, including saline waters, within the boundaries of the state" (California Water Code 13050[e]).

Section 401 of the CWA requires certification for any federal permit or license authorizing impacts to waters of the U.S. (i.e., waters that are within federal jurisdiction), such as Section 404 of the CWA and Section 10 of the Safe Rivers and Harbors Act, to ensure that the impacts do not violate state water quality standards. When a project could impact waters outside of federal jurisdiction, the Regional Board has the authority under the Porter-Cologne Water Quality Control Act to issue Waste Discharge Requirements (WDRs) to ensure that impacts do not violate state water quality standards. Clean Water Act Section 401 Water Quality Certifications, WDRs, and waivers of WDRs are also referred to as orders or permits.

State Wetland Definition

The Water Boards define an area as wetland[8] as follows: "An area is wetland if, under normal circumstances, (1) the area has continuous or recurrent saturation of the upper substrate caused by groundwater, or shallow surface water, or both; (2) the duration of such saturation is sufficient to cause anaerobic conditions in the upper substrate; and (3) the area's vegetation is dominated by hydrophytes or the area lacks vegetation."

The following wetlands are waters of the state:

1. Natural wetlands;
2. Wetlands created by modification of a surface water of the state;[9] and
3. Artificial wetlands[10] that meet any of the following criteria:

[7] Therefore, wetlands that meet the current definition, or any historic definition, of waters of the U.S. are waters of the state. In 2000, the State Water Resources Control Board determined that all waters of the U.S. are also waters of the state by regulation, prior to any regulatory or judicial limitations on the federal definition of waters of the U.S. (California Code or Regulations title 23, section 3831(w)). This regulation has remained in effect despite subsequent changes to the federal definition. Therefore, waters of the state includes features that have been determined by the U.S. Environmental Protection Agency (U.S. EPA) or the U.S. Army Corps of Engineers (Corps) to be "waters of the U.S." in an approved jurisdictional determination; "waters of the U.S." identified in an aquatic resource report verified by the Corps upon which a permitting decision was based; and features that are consistent with any current or historic final judicial interpretation of "waters of the U.S." or any current or historic federal regulation defining "waters of the U.S." under the federal Clean Water Act.

[8] State Water Resources Control Board. 2019. State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State. [For Inclusion in the Water Quality Control Plans for Inland Surface Waters and Enclosed Bays and Estuaries and Ocean Waters of California].

[9] "Created by modification of a surface water of the state" means that the wetland that is being evaluated was created by modifying an area that was a surface water of the state at the time of such modification. It does not include a wetland that is created in a location where a water of the state had existed historically, but had already been completely eliminated at some time prior to the creation of the wetland. The wetland being evaluated does not become a water of the state due solely to a diversion of water from a different water of the state.

[10] Artificial wetlands are wetlands that result from human activity.

a. Approved by an agency as compensatory mitigation for impacts to other waters of the state, except where the approving agency explicitly identifies the mitigation as being of limited duration;
b. Specifically identified in a water quality control plan as a wetland or other water of the state;
c. Resulted from historic human activity, is not subject to ongoing operation and maintenance, and has become a relatively permanent part of the natural landscape; or
d. Greater than or equal to one acre in size, unless the artificial wetland was constructed, and is currently used and maintained, primarily for one or more of the following purposes (i.e., the following artificial wetlands are not waters of the state unless they also satisfy the criteria set forth in 2, 3a, or 3b):

i. Industrial or municipal wastewater treatment or disposal,
ii. Settling of sediment,
iii. Detention, retention, infiltration, or treatment of stormwater runoff and other pollutants or runoff subject to regulation under a municipal, construction, or industrial stormwater permitting program,
iv. Treatment of surface waters,
v. Agricultural crop irrigation or stock watering,
vi. Fire suppression,
vii. Industrial processing or cooling,
viii. Active surface mining – even if the site is managed for interim wetlands functions and values,
ix. Log storage,
x. Treatment, storage, or distribution of recycled water, or
xi. Maximizing groundwater recharge (this does not include wetlands that have incidental groundwater recharge benefits); or
xii. Fields flooded for rice growing.[11]

All artificial wetlands that are less than an acre in size and do not satisfy the criteria set forth in 2, 3.a, 3.b, or 3.c are not waters of the state. If an aquatic feature meets the wetland definition, the burden is on the applicant to demonstrate that the wetland is not a water of the state.

[11] Fields used for the cultivation of rice (including wild rice) that have not been abandoned due to five consecutive years of non-use for the cultivation of rice (including wild rice) that are determined to be a water of the state in accordance with these Procedures shall not have beneficial use designations applied to them through the Water Quality Control Plan for the Sacramento and San Joaquin River Basins, except as otherwise required by federal law for fields that are considered to be waters of the United States. Further, agricultural inputs legally applied to fields used for the cultivation of rice (including wild rice) shall not constitute a discharge of waste to a water of the state. Agricultural inputs that migrate to a surface water or groundwater may be considered a discharge of waste and are subject to waste discharge requirements or waivers of such requirements pursuant to the Water Board's authority to issue or waive waste discharge requirements or take other actions as applicable.

3.3.3 California Department of Fish and Wildlife

Pursuant to Division 2, Chapter 6, Sections 1600-1603 of the California Fish and Game Code, the CDFW regulates all diversions, obstructions, or changes to the natural flow or bed, channel, or bank of any river, stream, or lake, which supports fish or wildlife.

CDFW defines a stream (including creeks and rivers) as "a body of water that flows at least periodically or intermittently through a bed or channel having banks and supports fish or other aquatic life. This includes watercourses having surface or subsurface flow that supports or has supported riparian vegetation." CDFW's definition of "lake" includes "natural lakes or man-made reservoirs." CDFW also defines a stream as "a body of water that flows, or has flowed, over a given course during the historic hydrologic regime, and where the width of its course can reasonably be identified by physical or biological indicators."

It is important to note that the Fish and Game Code defines fish and wildlife to include: all wild animals, birds, plants, fish, amphibians, invertebrates, reptiles, and related ecological communities including the habitat upon which they depend for continued viability (FGC Division 0.5, Chapter 1, section 89.5). Furthermore, Division 2, Chapter 5, Article 6, Section 1600 et seq. of the California Fish and Game Code does not limit jurisdiction to areas defined by specific flow events, seasonal changes in water flow, or presence/absence of vegetation types or communities.

4.0 RESULTS

This section provides the results of general biological surveys, vegetation mapping, habitat assessments and focused surveys for special-status plants and animals, an assessment for MSHCP riparian/riverine areas and vernal pools, and a jurisdictional delineation for Waters of the United States (including wetlands) subject to the jurisdiction of the Corps and Regional Board, and streams (including riparian vegetation) and lakes subject to the jurisdiction of CDFW.

4.1 Existing Conditions

The Project site is flat and supports active agricultural uses throughout most of the alignment. Elevation ranges from approximately 1,488 feet above mean sea level (AMSL) to 1,446 feet AMSL. A review of historical aerial photography confirmed that since the late 1960's, most of the Project site and environs have been used for agricultural purposes. As a result, the agricultural lands cycle between periods of vegetation with field crops and periods where the lands are generally unvegetated due to tilling. Other fields that are not consistently farmed are vegetated with a mixture of non-native ruderal plant species and remnant crop plants. The edge areas of the agricultural fields are dominated by non-native plant species, but in some areas support native species, such as smooth tarplant (*Centromadia pungens* ssp. *laevis*), which is discussed later in this report. The Project site also contains disturbed/developed areas including unpaved roadways. The Project site contains agricultural ditches (Drainages A-F) that convey storm runoff and irrigation water through portions of the Project site, as well as an area where

constructed berms and debris-clogged culverts result in a backup of storm flows and irrigation runoff (Drainage Area A). These drainage features are further discussed below in Section 4.10 and 4.11.

As depicted on Exhibit 6 [Soils Map], the National Cooperative Soil Survey (NCSS) has identified the following soil types as occurring (currently or historically) within the Project site:

- Chino silt loam, drained, saline-alkali;
- Chino silt loam, drained, strongly saline-alkali;
- Dello loamy find sand, 0-2% slopes;
- Dello loamy fine sand, saline-alkali, 0-5% slopes;
- Grangeville loamy fine sand, drained, 0-5%slopes;
- Grangeville sandy loam, sandy substratum, drained, saline-alkali, 0-5% slopes;
- Grangeville fine sandy loam, poorly drained, saline-alkali, 0-5% slopes;
- Grangeville fine sandy loam, saline-alkali, 0-5% slopes;
- Grangeville fine sandy loam, loamy substratum drained, saline-alkali, 0-2% slopes;
- Traver loamy fine sand, saline-alkali, eroded;
- Traver fine sandy loam, saline-alkali; and
- Traver fine sandy loam, strongly saline-alkali, eroded; and water.

4.2 Vegetation Mapping

The Project site supports the following five vegetation types: Disturbed Agricultural Areas (Agricultural Fields), Bromus hordeaceus Herbaceous Semi-Natural Alliance (Annual Brome Grasslands), Disturbed/Developed Areas (Disturbed and Developed Areas), Lepidium latifolium – Lactuca serriola Herbaceous Semi-Natural Alliance (Perennial Pepper Weed –Prickly Lettuce Patches), and Eucalyptus globulus Woodland Semi-Natural Alliance (Eucalyptus Groves).

Table 4-1 provides a summary of the vegetation types and their corresponding acreage. Descriptions of each vegetation type follow the table. A Vegetation Map is attached as Exhibit 5. Photographs depicting the Project site are provided as Exhibit 10.

Table 4-1. Summary of Vegetation/Land Use Types for the Project Site

Vegetation/Land Use Type	Project Site (acres)
Disturbed Agricultural Areas (Agriculture Fields)	94.41
Bromus hordeaceus Herbaceous Semi-Natural Alliance (Annual Brome Grasslands)	11.92
Disturbed and Developed Areas	10.43
Eucalyptus globulus Woodland Semi-Natural Alliance (Eucalyptus Groves)	0.03

Vegetation/Land Use Type	Project Site (acres)
Lepidium latifolium – Lactuca serriola Herbaceous Semi-Natural Alliance (Perennial Pepper Weed-Prickly Lettuce Patches)	3.54
Total	**120.33**

Disturbed Agricultural Areas (Agriculture Fields)
The Agricultural Fields are areas used for agricultural operations. Notable herbaceous species within these areas in order of descending dominance include summer mustard (*Hirschfeldia incana*), Russian thistle (*Salsola tragus*), foxtail barley (*Hordeum murinum*), common stork's bill (*Erodium cicutarium*), cheeseweed (*Malva parviflora*), smooth tarplant (*Centromadia pungens ssp. laevis*), stinknet (*Oncosiphon pilulifer*), London rocket (*Sisymbrium irio*), slender wild oat (*Avena barbata*), and Menzie's fiddlenecks (*Amsinckia menziesii*). During the growing season, watermelon (*Citrullus lanatus*) is the primary crop being grown.

The Project site supports approximately 94.41 acres of Agricultural Fields. In general, these areas occur in the middle and southeastern portions of the Project site [Exhibit 5 – Vegetation Map].

***Bromus hordeaceus* Herbaceous Semi-Natural Alliance (Annual Brome Grasslands)**
The Annual Brome Grasslands is dominated by soft brome (*Bromus hordeaceus*), which comprises a minimum of thirty to fifty percent relative cover in the herbaceous layer, per the membership rules of the MCV. Co-dominant herbaceous species in order of descending dominance include foxtail barley, common stork's bill, cheeseweed, branching phacelia (*Phacelia ramosissima*), smooth tarplant, stinknet, London rocket, slender wild oat, and Menzie's fiddlenecks.

The Project site supports approximately 11.92 acres of the Annual Brome Grasslands. In general, the alliance occurs in the northwestern and southeastern portions of the Project site [Exhibit 5 – Vegetation Map].

Disturbed/Developed Areas
The Disturbed/Developed Areas are bare areas or spaces with historic or present land use. Notable herbaceous species within these areas in order of descending dominance include foxtail barley, common stork's bill, cheeseweed, smooth tarplant, stinknet, London rocket, slender wild oat, and Menzie's fiddlenecks.

The Project site supports approximately 10.43 acres of Disturbed/Developed Areas. In general, these disturbed areas occur throughout the Project site on roads and other areas with previous or current land use, including greenhouses [Exhibit 5 – Vegetation Map].

***Eucalyptus globulus* Woodland Semi-Natural Alliance (Eucalyptus Groves)**
The Eucalyptus Groves are dominated by blue gum (*Eucalyptus globulus*), which comprises a minimum of fifty to eighty percent relative cover in the tree canopy, per the membership rules of

the MCV. Associated species in the herbaceous understory in order of descending dominance include foxtail barley, common stork's bill, cheeseweed, branching phacelia, smooth tarplant, stinknet, London rocket, slender wild oat, summer mustard, and Menzie's fiddlenecks.

The Project site supports approximately 0.03 acre of Eucalyptus Groves. In general, the alliance occurs in the southeastern portion of the Project site [Exhibit 5 – Vegetation Map].

***Lepidium latifolium – Lactuca serriola* Herbaceous Semi-Natural Alliance (Perennial Pepper Weed-Prickly Lettuce Patches)**

The Perennial Pepper Weed-Prickly Lettuce Patches are dominated by perennial pepper weed (*Lepidium latifolium*) and prickly lettuce (*Lactuca serriola*), which comprise a minimum of thirty to fifty percent relative cover in the herbaceous layer, per the membership rules of the MCV. Co-dominant herbaceous species in order of descending dominance include fivehorn smotherweed (*Bassia hyssopifolia*), spiny cocklebur (*Xanthium spinosum*), Russian thistle (*Salsola tragus*), foxtail barley, smilo grass (*Stipa miliacea*), creeping rye (*Elymus triticoides*), common Mediterranean grass (*Schismus barbatus*), and Menzie's fiddlenecks (*Amsinckia menziesii*).

The Project site supports approximately 3.54 acres of the Perennial Pepper Weed-Prickly Lettuce Patches. In general, the alliance occurs in the middle and southeastern portions of the Project site [Exhibit 5 – Vegetation Map].

4.3 Special-Status Vegetation Communities

The CNDDB identifies the following five special-status vegetation communities for the Lakeview and San Jacinto quadrangle maps: desert fan palm oasis woodland, southern coast live oak riparian forest, southern cottonwood willow riparian forest, southern mixed riparian forest, southern riparian scrub. The Project site does not contain any special-status vegetation types, including those identified by the CNDDB.

4.4 Special-Status Plants

The following special-status plants were detected at the Project site: smooth tarplant. Table 4-2 provides a list of special-status plants evaluated for the Project site through general biological surveys, habitat assessments, and focused surveys. Species were evaluated based on the following factors: 1) species identified by the CNDDB and CNPS as occurring (either currently or historically) on or in the vicinity of the Project site, 2) applicable MSHCP survey areas, and 3) any other special-status plants that are known to occur within the vicinity of the Project site, or for which potentially suitable habitat occurs within the site.

Table 4-2. Special-Status Plants Evaluated for the Project Site

Species Name	Status	Habitat Requirements	Occurrence
Alvin Meadow beadstraw *Galium californicum* ssp. *primum*	Federal: None State: None CRPR: Rank 1B.2 MSHCP: MSHCP(f)	Granitic and sandy soils in chaparral and lower montane coniferous forest.	Does not occur.

Species Name	Status	Habitat Requirements	Occurrence
California beardtongue *Penstemon californicus*	Federal: None State: None CRPR: Rank 1B.2 MSHCP: MSHCP	Sandy soils in chaparral, lower montane coniferous forest, and pinyon and juniper woodland.	Does not occur.
California Orcutt grass *Orcuttia californica*	Federal: FE State: SE CRPR: Rank 1B.1 MSHCP: MSHCP(b)	Vernal pools	Confirmed absent.
California satintail *Imperata brevifolia*	Federal: None State: None CRPR: Rank 2B.1 MSHCP: None	Mesic soils in chaparral, coastal scrub, Mojavean desert scrub, meadows and seeps (often alkali), and riparian scrub.	Does not occur.
California screw moss *Tortula californica*	Federal: None State: None CRPR: Rank 1B.2 MSHCP: None	Sandy soil in chenopod scrub, and valley and foothill grassland.	Does not occur.
Chaparral sand-verbena *Abronia villosa* var. *aurita*	Federal: None State: None CRPR: Rank 1B.1 MSHCP: None	Sandy soils in chaparral, coastal sage scrub.	Does not occur.
Coachella Valley milk-vetch *Astragalus lentiginosus* var. *coachellae*	Federal: FE State: None CRPR: Rank 1B.2 MSHCP: None	Desert dunes, sandy Sonoran desert scrub.	Does not occur.
Coulter's goldfields *Lasthenia glabrata* ssp. *coulteri*	Federal: None State: None CRPR: Rank 1B.1 MSHCP: MSHCP(d)	Playas, vernal pools, marshes and swamps (coastal salt).	Confirmed absent.
Davidson's saltscale *Atriplex serenana* var. *davidsonii*	Federal: None State: None CRPR: Rank 1B.2 MSHCP: MSHCP(d)	Alkaline soils in coastal sage scrub, coastal bluff scrub.	Does not occur.
Engelmann oak *Quercus engelmannii*	Federal: None State: None CRPR: Rank 4.2 MSHCP: MSHCP	Chaparral, cismontane woodland, riparian woodland, valley and foothill grassland.	Does not occur.
Horn's milk-vetch *Astragalus hornii* var. *hornii*	Federal: None State: None CRPR: Rank 1B.1 MSHCP: None	Lake margins with alkaline soils, meadows and seeps, and playas.	Confirmed absent.
Intermediate mariposa-lily *Calochortus weedii* var. *intermedius*	Federal: None State: None CRPR: Rank 1B.2 MSHCP: MSHCP	Rocky soils in chaparral, coastal sage scrub, valley and foothill grassland.	Does not occur.
Jaeger's (bush) milk-vetch *Astragalus pachypus* var. *jaegeri*	Federal: None State: None CRPR: Rank 1B.1 MSHCP: MSHCP	Sandy or rocky soils in chaparral, cismontane woodland, coastal scrub, and valley and foothill grassland.	Does not occur.

Species Name	Status	Habitat Requirements	Occurrence
Laguna Mountains jewelflower *Streptanthus bernardinus*	Federal: None State: None CRPR: Rank 4.3 MSHCP: None	Chaparral and lower montane coniferous forest.	Does not occur.
Latimer's woodland-gilia *Saltugilia latimeri*	Federal: None State: None CRPR: Rank 1B.2 MSHCP: None	Rocky or sandy, often granitic soils (sometimes washes) in chaparral, Mojavean desert scrub, and Pinyon and juniper woodland.	Does not occur.
Lemon lily *Lilium parryi*	Federal: None State: None CRPR: Rank 1B.2 MSHCP: MSHCP(f)	Mesic soils in lower montane coniferous forest, meadows and seeps, riparian forest, and upper montane coniferous forest.	Does not occur.
Little mousetail *Myosurus minimus* ssp. *apus*	Federal: None State: None CRPR: Rank 3.1 MSHCP: MSHCP(d)	Valley and foothill grassland, vernal pools (alkaline soils).	Confirmed absent
Long-spined spineflower *Chorizanthe polygonoides* var. *longispina*	Federal: None State: None CRPR: Rank 1B.2 MSHCP: MSHCP	Clay soils in chaparral, coastal sage scrub, meadows and seeps, and valley and foothill grasslands	Does not occur.
Mesa horkelia *Horkelia cuneata* var. *puberula*	Federal: None State: None CRPR: Rank 1B.1 MSHCP: None	Sandy or gravelly soils in chaparral (maritime), cismontane woodland, and coastal scrub.	Does not occur.
Mojave tarplant *Deinandra mohavensis*	Federal: None State: SE CRPR: Rank 1B.3 MSHCP: MSHCP(e)	Chaparral (mesic soils) and riparian scrub.	Does not occur.
Mud nama *Nama stenocarpum*	Federal: None State: None CRPR: Rank 2B.2 MSHCP: MSHCP(d)	Marshes and swamps	Confirmed absent.
Munz's onion *Allium munzii*	Federal: FE State: ST CRPR: Rank 1B.1 MSHCP: MSHCP(b)	Clay soils in chaparral, coastal sage scrub, and valley and foothill grasslands	Does not occur.
Narrow-leaf sandpaper-plant *Petalonyx linearis*	Federal: None State: None CRPR: Rank 2B.3 MSHCP: None	Sandy or rocky canyons, Mojavean desert scrub, and Sonoran desert scrub.	Does not occur.
Palmer's grapplinghook *Harpagonella palmeri*	Federal: None State: None CRPR: Rank 4.2 MSHCP: MSHCP	Chaparral, coastal sage scrub, valley and foothill grassland. Occurring in clay soils.	Does not occur.
Palmer's mariposa lily *Calochortus palmeri* var. *palmeri*	Federal: None State: None CRPR: Rank 1B.2 MSHCP: None	Mesic soils in chaparral, lower montane coniferous forest, and meadows and seeps.	Does not occur.

Species Name	Status	Habitat Requirements	Occurrence
Paniculate tarplant *Deinandra paniculata*	Federal: None State: None CRPR: Rank 4.2 MSHCP: None	Usually in vernally mesic, sometimes sandy soils in coastal scrub, valley and foothill grassland, and vernal pools.	Confirmed absent.
Parish's brittlescale *Atriplex parishii*	Federal: None State: None CRPR: Rank 1B.1 MSHCP: MSHCP(d)	Chenopod scrub, playas, vernal pools.	Confirmed absent.
Parry's spineflower *Chorizanthe parryi* var. *parryi*	Federal: None State: None CRPR: Rank 1B.1 MSHCP: MSHCP	Sandy or rocky soils in open habitats of chaparral and coastal sage scrub.	Does not occur.
Payson's jewelflower *Caulanthus simulans*	Federal: None State: None CRPR: Rank 4.2 MSHCP: MSHCP	Sandy or granitic soils in chaparral and coastal scrub.	Does not occur.
Peninsular spineflower *Chorizanthe leptotheca*	Federal: None State: None CRPR: Rank 4.2 MSHCP: MSHCP	Alluvial fan, granitic. Chaparral, coastal scrub, lower montane coniferous forest.	Does not occur.
Plummer's mariposa lily *Calochortus plummerae*	Federal: None State: None CRPR: Rank 4.2 MSHCP: MSHCP	Granitic, rock soils within chaparral, cismontane woodland, coastal sage scrub, lower montane coniferous forest, valley and foothill grassland.	Does not occur.
Robinson's pepper grass *Lepidium virginicum* var. *robinsonii*	Federal: None State: None CRPR: Rank 4.3 MSHCP: None	Chaparral, coastal sage scrub	Does not occur.
Salt Spring checkerbloom *Sidalcea neomexicana*	Federal: None State: None CRPR: Rank 2B.2 MSHCP: None	Mesic, alkaline soils in chaparral, coastal sage scrub, lower montane coniferous forest, Mojavean desert scrub, and playas.	Confirmed absent.
San Bernardino aster *Symphyotrichum defoliatum*	Federal: None State: None CRPR: Rank 1B.2 MSHCP: None	Cismontane woodland, coastal scrub, lower montane coniferous forest, meadows and seeps, marshes and swamps, valley and foothill grassland (vernally mesic).	Confirmed absent.
San Felipe monardella *Monardella nana* ssp. *leptosiphon*	Federal: None State: None CRPR: Rank 1B.2 MSHCP: None	Chaparral and lower montane coniferous forest.	Does not occur.
San Jacinto mariposa-lily *Calochortus palmeri* var. *munzii*	Federal: None State: None CRPR: Rank 1B.2 MSHCP: MSHCP(b)	Chaparral, lower montane coniferous forest, meadows and seeps.	Confirmed absent.
San Jacinto Mountains bedstraw *Galium angustifolium* ssp. *jacinticum*	Federal: None State: None CRPR: Rank 1B.3 MSHCP: MSHCP(b)	Lower montane coniferous forest.	Does not occur.

Species Name	Status	Habitat Requirements	Occurrence
San Jacinto Valley crownscale *Atriplex coronata* var. *notatior*	Federal: FE State: None CRPR: Rank 1B.1 MSHCP: MSHCP(d)	Alkaline soils in chenopod scrub, valley and foothill grassland, vernal pools.	Confirmed absent.
Slender-horned spineflower *Dodecahema leptoceras*	Federal: FE State: SE CRPR: Rank 1B.1 MSHCP: MSHCP(b)	Sandy soils in alluvial scrub, chaparral, cismontane woodland.	Does not occur.
Smooth tarplant *Centromadia pungens* ssp. *laevis*	Federal: None State: None CRPR: Rank 1B.1 MSHCP: MSHCP(d)	Alkaline soils in chenopod scrub, meadows and seeps, playas, riparian woodland, valley and foothill grasslands, disturbed habitats.	Occurs on site.
Southern mountains skullcap *Scutellaria bolanderi* ssp. *austromontana*	Federal: None State: None CRPR: Rank 1B.2 MSHCP: None	Mesic soils in chaparral, cismontane woodland, lower montane coniferous forest.	Does not occur.
Spiny-hair blazing star *Mentzelia tricuspis*	Federal: None State: None CRPR: Rank 2B.1 MSHCP: Noe	Sandy, gravelly, slopes, and washes. Mojavean desert scrub.	Does not occur.
Spreading navarretia *Navarretia fossalis*	Federal: FT State: None CRPR: Rank 1B.1 MSHCP: MSHCP(b)	Vernal pools, playas, chenopod scrub, marshes and swamps (assorted shallow freshwater).	Confirmed absent.
Thread-leaved brodiaea *Brodiaea filifolia*	Federal: FT State: SE CRPR: Rank 1B.1 MSHCP: MSHCP(d)	Clay soils in chaparral (openings), cismontane woodland, coastal sage scrub, playas, valley and foothill grassland, vernal pools.	Confirmed absent.
Vernal barley *Hordeum intercedens*	Federal: None State: None CRPR: Rank 3.2 MSHCP: MSHCP	Coastal dunes, coastal sage scrub, valley and foothill grassland (saline flats and depressions), vernal pools.	Confirmed absent.
White rabbit-tobacco *Pseudognaphalium leucocephalum*	Federal: None State: None CRPR: Rank 2B.2 MSHCP: None	Sandy or gravelly soils in chaparral, cismontane woodland, coastal scrub, and riparian woodland.	Does not occur.
White-bracted spineflower *Chorizanthe xanti* var. *leucotheca*	Federal: None State: None CRPR: Rank 1B.2 MSHCP: None	Sandy or gravelly soils in Mojavean desert scrub and pinyon and juniper woodland.	Does not occur.
Wright's trichocoronis *Trichocoronis wrightii* var. *wrightii*	Federal: None State: None CRPR: Rank 2B.1 MSHCP: MSHCP(b)	Alkaline soils in meadows and seeps, marshes and swamps, riparian scrub, vernal pools.	Confirmed absent.

Species Name	Status	Habitat Requirements	Occurrence
Yucaipa onion *Allium marvinii*	Federal: None State: None CRPR: Rank 1B.2 MSHCP: MSHCP(b)	Chaparral (clay, openings).	Does not occur.

STATUS

Federal
FE – Federally Endangered
FT – Federally Threatened
FC – Federal Candidate

State
SE – State Endangered
ST – State Threatened

CNPS
Rank 1A – Plants presumed extirpated in California and either rare or extinct elsewhere.
Rank 1B – Plants rare, threatened, or endangered in California and elsewhere.
Rank 2A – Plants presumed extirpated in California, but common elsewhere.
Rank 2B – Plants rare, threatened, or endangered in California, but more common elsewhere.
Rank 3 – Plants about which more information is needed (a review list).
Rank 4 – Plants of limited distribution (a watch list).

Threat Code extension
.1 – Seriously endangered in California (over 80% occurrences threatened)
.2 – Fairly endangered in California (20-80% occurrences threatened)
.3 – Not very endangered in California (<20% of occurrences threatened or no current threats known)

MSHCP
MSHCP = No additional action necessary
MSHCP(a) = Surveys may be required as part of wetlands mapping
MSHCP(b) = Surveys may be required within the Narrow Endemic Plant Species survey area
MSHCP(c) = Surveys may be required within locations shown on survey maps
MSHCP(d) = Surveys may be required within Criteria Area
MSHCP(e) = Conservation requirements identified in species-specific conservation objectives need to be met before classified as a Covered Species
MSHCP(f) = Covered species when a Memorandum of Understanding is executed with the Forest Service Land

OCCURRENCE

- Does not occur – The site does not contain habitat for the species and/or the site does not occur within the geographic range of the species.
- Confirmed absent – The site contains suitable habitat for the species, but the species has been confirmed absent through focused surveys.
- Not expected to occur – The species is not expected to occur onsite due to low habitat quality, however absence cannot be ruled out.
- Potential to occur – The species has a potential to occur based on suitable habitat, however its presence/absence has not been confirmed.
- Confirmed present – The species was detected onsite incidentally or through focused surveys.

4.4.1 Special-Status Plants Detected at the Project Site

Smooth Tarplant (*Centromadia pungens* ssp. *laevis***)** is a CRPR 1B.1 species, indicating that it is rare, threatened, or endangered in California and elsewhere, and is seriously endangered in

California. This species is an annual herb in the sunflower family that blooms from April to September. It is adapted to disturbed areas, and poorly drained flats, depressions, and grasslands.

A population of approximately 2,500 individuals was detected at the Project site during the 2024 focused plant surveys. The majority of smooth tarplant was detected in the northwestern portion of the Project site [Exhibit 8 – Smooth Tarplant Survey Results Map]. The majority of the mapped smooth tarplant was in disturbed areas on either side of a dirt access road within the MWD property, as well as three other locations associated with disturbed areas. A portion of the smooth tarplant individuals are associated with the Riparian/Riverine Resources. As is discussed further below, the Line E alignment is not within the CAPSSA for smooth tarplant.

4.5 Special-Status Animals

No special-status animals were detected at the Project site, although some special-status species were detected offsite in the adjacent riparian habitat, including least Bell's vireo, yellow warbler, yellow-breasted chat, northern harrier, western mastiff bat and western yellow bat. Table 4-3 provides a list of special-status animals evaluated for the Project site through general biological surveys, habitat assessments, and focused surveys. Species were evaluated based on the following factors, including: 1) species identified by the CNDDB as occurring (either currently or historically) on or in the vicinity of the Project site, 2) applicable MSHCP survey areas, and 3) any other special-status animals that are known to occur within the vicinity of the Project site, for which potentially suitable habitat occurs on the site.

Table 4-3. Special-Status Animals Evaluated for the Project Site

Species Name	Status	Habitat Requirements	Occurrence
Invertebrates			
Crotch bumble bee *Bombus crotchii*	Federal: None State: CE (candidate endangered) MSHCP: None	Relatively warm and dry sites, including the inner Coast Range of California and margins of the Mojave Desert.	Confirmed absent during focused surveys.
Quino checkerspot butterfly *Euphydryas editha quino*	Federal: FE State: None MSHCP: MSHCP	Larval and adult phases each have distinct habitat requirements tied to host plant species and topography. Larval host plants include *Plantago erecta* and *Castilleja exserta*. Adults occur on sparsely vegetated rounded hilltops and ridgelines, and are known to disperse through disturbed habitats to reach suitable nectar plants.	Does not occur.
Riverside fairy shrimp *Streptocephalus woottoni*	Federal: FE State: None MSHCP: MSHCP(a)	Restricted to deep seasonal vernal pools, vernal pool-like ephemeral ponds, and stock ponds.	Confirmed absent during focused surveys.
Vernal pool fairy shrimp *Branchinecta lynchi*	Federal: FT State: None	Seasonal vernal pools	Confirmed absent during focused surveys.

Species Name	Status	Habitat Requirements	Occurrence
	MSHCP: MSHCP(a)		
Amphibians			
Arroyo toad *Anaxyrus californicus*	Federal: FE State: SSC MSHCP: MSHCP(c)	Breed, forage, and/or aestivate in aquatic habitats, riparian, coastal sage scrub, oak, and chaparral habitats. Breeding pools must be open and shallow with minimal current, and with a sand or pea gravel substrate overlain with sand or flocculent silt. Adjacent banks with sandy or gravely terraces and very little herbaceous cover for adult and juvenile foraging areas, within a moderate riparian canopy of cottonwood, willow, or oak.	Does not occur.
Southern mountain yellow-legged frog *Rana muscosa*	Federal: FE State: SE MSHCP: MSHCP(c)	Streams and small pools in ponderosa pine, montane hardwood-conifer, and montane riparian habitat types.	Does not occur.
Western spadefoot *Spea hammondii*	Federal: None State: SSC MSHCP: MSHCP	Seasonal pools in coastal sage scrub, chaparral, and grassland habitats.	Not expected to occur.
Reptiles			
California glossy snake *Arizona elegans occidentalis*	Federal: None State: SSC MSHCP: None	Inhabits arid scrub, rocky washes, grasslands, chaparral.	Not expected to occur.
Coast horned lizard *Phrynosoma blainvillii*	Federal: None State: SSC MSHCP: MSHCP	Occurs in a variety of vegetation types including coastal sage scrub, chaparral, annual grassland, oak woodland, and riparian woodlands.	Not expected to occur.
Coast patch-nosed snake *Salvadora hexalepis virgultea*	Federal: None State: SSC MSHCP: None	Occurs in coastal chaparral, desert scrub, washes, sandy flats, and rocky areas.	Does not occur.
Coastal whiptail *Aspidoscelis tigris stejnegeri (multiscutatus)*	Federal: None State: SSC MSHCP: MSHCP	Open, often rocky areas with little vegetation, or sunny microhabitats within shrub or grassland associations.	Not expected to occur.
Red-diamond rattlesnake *Crotalus ruber*	Federal: None State: SSC MSHCP: MSHCP	Habitats with heavy brush and rock outcrops, including coastal sage scrub and chaparral.	Not expected to occur.
San Diego banded gecko *Coleonyx variegatus abbotti*	Federal: None State: SSC MSHCP: MSHCP	Primarily a desert species, but also occurs in cismontane chaparral, desert scrub, and open sand dunes.	Does not occur.
Southern California legless lizard *Anniella stebbinsi*	Federal: None State: SSC MSHCP: None	Broadleaved upland forest, chaparral, coastal dunes, coastal scrub; found in a broader range of habitats that any of the other species in the genus. Often locally abundant, specimens are found in	Not expected to occur.

Species Name	Status	Habitat Requirements	Occurrence
		coastal sand dunes and a variety of interior habitats, including sandy washes and alluvial fans	
Southern rubber boa *Charina umbratica*	Federal: None State: ST MSHCP: MSHCP(f)	Restricted to the San Bernardino and San Jacinto Mountain, in a variety of montane forest habitats. Found in vicinity of streams or wet meadows. Requires loose, moist soil for burrowing. Seeks cover in rotting logs.	Does not occur.
Southwestern pond turtle *Emys marmorata*	Federal: Proposed Threatened State: SSC MSHCP: MSHCP	Slow-moving permanent or intermittent streams, small ponds and lakes, reservoirs, abandoned gravel pits, permanent and ephemeral shallow wetlands, stock ponds, and treatment lagoons. Abundant basking sites and cover necessary, including logs, rocks, submerged vegetation, and undercut banks.	Not expected to occur.
Birds			
Black swift (nesting) *Cypseloides niger*	Federal: None State: SSC MSHCP: MSHCP	Nests in forested areas near rivers in dark, damp areas. Forages in skies over mountainous areas and on coastal cliffs.	Does not occur.
Burrowing owl (burrow sites & some wintering sites) *Athene cunicularia*	Federal: None State: CE, SSC MSHCP: MSHCP(c)	Shortgrass prairies, grasslands, lowland scrub, agricultural lands (particularly rangelands), coastal dunes, desert floors, and some artificial, open areas as a year-long resident. Occupies abandoned ground squirrel burrows as well as artificial structures such as culverts and underpasses.	Confirmed absent during focused surveys.
Coastal cactus wren (San Diego & Orange County only) *Campylorhynchus brunneicapillus sandiegensis*	Federal: None State: SSC MSHCP: MSHCP	Occurs almost exclusively in cactus (cholla and prickly pear) dominated coastal sage scrub.	Does not occur.
Coastal California gnatcatcher *Polioptila californica californica*	Federal: FT State: SSC MSHCP: MSHCP	Low elevation coastal sage scrub and coastal bluff scrub.	Does not occur.
Golden eagle (nesting & wintering) *Aquila chrysaetos*	Federal: None State: FP MSHCP: MSHCP	In southern California, occupies grasslands, brushlands, deserts, oak savannas, open coniferous forests, and montane valleys. Nests on rock outcrops and ledges.	Does not nest on site. Potential to forage opportunistically over the Project site and environs.
Le Conte's thrasher *Toxostoma lecontei*	Federal: None State: SSC MSHCP: None	Desert scrub, mesquite, tall riparian brush and, locally, chaparral.	Does not occur.

Species Name	Status	Habitat Requirements	Occurrence
Least Bell's vireo (nesting) *Vireo bellii pusillus*	Federal: FE State: SE MSHCP: MSHCP(a)	Dense riparian habitats with a stratified canopy, including southern willow scrub, mule fat scrub, and riparian forest.	Does not occur in the Project site due to the absence of suitable habitat. Detected offsite immediately south of the Project site during focused surveys.
Loggerhead shrike (nesting) *Lanius ludovicianus*	Federal: None State: SSC MSHCP: MSHCP	Forages over open ground within areas of short vegetation, pastures with fence rows, old orchards, mowed roadsides, cemeteries, golf courses, riparian areas, open woodland, agricultural fields, desert washes, desert scrub, grassland, broken chaparral and beach with scattered shrubs.	Low potential to nest on site due to a general lack of suitable habitat. Potential to forage on site.
Northern harrier (nesting) *Circus hudsonius*	Federal: None State: SSC MSHCP: MSHCP	A variety of habitats, including open wetlands, grasslands, wet pasture, old fields, dry uplands, and croplands.	Occurs on site foraging. Not expected to nest onsite due to historic and current agricultural practices.
Purple martin (nesting) *Progne subis*	Federal: None State: SSC MSHCP: MSHCP	Forage over towns, cities, parks, open fields, dunes, streams, wet meadows, beaver ponds, and other open areas. Nest in woodpecker holes in mountain forests or Pacific lowlands.	Potential to forage on site. Not expected to nest onsite due to lack of suitable nesting habitat on site.
Southwestern willow flycatcher (nesting) *Empidonax traillii extimus*	Federal: FE State: SE MSHCP: MSHCP(a)	Riparian woodlands along streams and rivers with mature dense thickets of trees and shrubs.	Does not occur onsite. Confirmed absent during focused surveys conducted offsite, adjacent to the southernmost portion of the Project site.
Swainson's hawk (nesting) *Buteo swainsoni*	Federal: None State: ST MSHCP: MSHCP	Summer in wide open spaces of the American West. Nest in grasslands, but can use sage flats and agricultural lands. Nests are placed in lone trees.	Has potential to forage onsite when wintering. Does not nest onsite – outside known nesting range of the species.
Tricolored blackbird (nesting colony) *Agelaius tricolor*	Federal: None State: CE, SSC MSHCP: MSHCP	Breeding colonies require nearby water, a suitable nesting substrate, and open-range foraging habitat of natural grassland, woodland, or agricultural cropland.	Not expected to nest onsite. Potential to forage on site.
Western yellow-billed cuckoo (nesting) *Coccyzus americanus occidentalis*	Federal: FT State: SE MSHCP: MSHCP(a)	Dense, wide riparian woodlands with well-developed understories.	Does not occur onsite.
White-tailed kite (nesting) *Elanus leucurus*	Federal: None State: FP MSHCP: MSHCP	Low elevation open grasslands, savannah-like habitats, agricultural areas, wetlands, and oak woodlands. Dense canopies used for nesting and cover.	Not expected to nest on site due to a lack of suitable habitat. Potential to forage onsite.

Species Name	Status	Habitat Requirements	Occurrence
Yellow warbler (nesting) *Setophaga petechia*	Federal: None State: SSC MSHCP: MSHCP	Breed in lowland and foothill riparian woodlands dominated by cottonwoods, alders, or willows and other small trees and shrubs typical of low, open-canopy riparian woodland. During migration, forages in woodland, forest, and shrub habitats.	Does not occur onsite. Detected offsite, adjacent to the southernmost portion of the Project site.
Yellow-breasted chat (nesting) *Icteria virens*	Federal: None State: SSC MSHCP: MSHCP	Dense, relatively wide riparian woodlands and thickets of willows, vine tangles, and dense brush with well-developed understories.	Does not occur onsite. Detected offsite, adjacent to the southernmost portion of the Project site.
Yellow-headed blackbird (nesting) *Xanthocephalus xanthocephalus*	Federal: None State: SSC MSHCP: None	Breed and roost in freshwater wetlands with dense, emergent vegetation such as cattails. Often forage in fields, typically wintering in large, open agricultural areas.	Not expected to nest onsite. Potential to forage on site.
Mammals			
American badger *Taxidea taxus*	Federal: None State: SSC MSHCP: None	Most abundant in drier open stages of most scrub, forest, and herbaceous habitats, with friable soils.	Does not occur onsite.
Los Angeles pocket mouse *Perognathus longimembris brevinasus*	Federal: None State: SSC MSHCP: MSHCP(c)	Fine, sandy soils in coastal sage scrub and grasslands.	Not expected to occur due to high levels of soil disturbance associated with past and current agricultural operations.
Pallid bat *Antrozous pallidus*	Federal: None State: SSC WBWG: H MSHCP: None	Deserts, grasslands, shrublands, woodlands, and forests. Most common in open, dry habitats with rocky areas for roosting.	Does not occur on site. Not detected during offsite focused surveys.
Palm Springs round-tailed ground squirrel *Xerospermophilus tereticaudus chlorus*	Federal: None State: SSC MSHCP: None	Sandy desert in low, flat areas, commonly in communities dominated by mesquite and creosotebush. Also in urban areas and parks.	Does not occur onsite.
San Bernardino kangaroo rat *Dipodomys merriami parvus*	Federal: FE State: SC (state candidate) MSHCP: MSHCP(c)	Typically found in Riversidean alluvial fan sage scrub and sandy loam soils, alluvial fans and floodplains, and along washes with nearby sage scrub.	Does not occur onsite.
San Diego desert woodrat *Neotoma lepida intermedia*	Federal: None State: SSC MSHCP: MSHCP	Occurs in a variety of shrub and desert habitats, primarily associated with rock outcrops, boulders, cacti, or areas of dense undergrowth.	Does not occur onsite.
Southern grasshopper mouse *Onychomys torridus ramona*	Federal: None State: SSC MSHCP: None	Desert areas, especially scrub habitats with friable soils for digging. Prefers low to moderate shrub cover.	Not expected to occur due to high levels of soil disturbance associated with past and current agricultural operations.
Stephens' kangaroo rat *Dipodomys stephensi*	Federal: FE State: ST MSHCP: MSHCP SKR HCP: Covered	Open grasslands or sparse shrublands with less than 50% vegetation cover during the summer.	Not expected to occur due to high levels of soil disturbance associated with

Species Name	Status	Habitat Requirements	Occurrence
			historic and current agricultural operations.
Townsend's big-eared bat *Corynorhinus townsendii*	Federal: None State: SSC WBWG: H MSHCP: None	Coniferous forests and woodlands, deciduous riparian woodland, semi-desert and montane shrublands.	Does not occur on site. Not detected during offsite focused surveys.
Western mastiff bat *Eumops perotis californicus*	Federal: None State: SSC WBWG: H MSHCP: None	Occurs in many open, semi-arid to arid habitats, including conifer and deciduous woodlands, coastal scrub, grasslands, and chaparral. Roosts in crevices in cliff faces, high buildings, trees, and tunnels.	Does not roost on site. Detected offsite acoustically during focused surveys.
Western yellow bat *Lasiurus xanthinus*	Federal: None State: SSC WBWG: H MSHCP: None	Found in valley foothill riparian, desert riparian, desert wash, and palm oasis habitats. Roosts in trees, particularly palms. Forages over water and among trees.	Does not roost on site. Detected offsite acoustically during focused surveys.

STATUS

Federal
FE – Federally Endangered
FT – Federally Threatened
FPT – Federally Proposed Threatened
FC – Federal Candidate
BGEPA– Bald and Golden Eagle Protection Act

State
SE – State Endangered
ST – State Threatened
SC– State Candidate
CFP – California Fully-Protected Species
SSC – Species of Special Concern

MSHCP
MSHCP = No additional action necessary
MSHCP(a) = Surveys may be required as part of wetlands mapping
MSHCP(b) = Surveys may be required within the Narrow Endemic Plant Species survey area
MSHCP(c) = Surveys may be required within locations shown on survey maps
