In addition, the project will also provide a funding mechanism to support public safety throughout the Project and City, which is typically accomplished by annexation of the project site into an existing Public Safety CFD.

General Notes, Requirements, and Conditions of Approval

Site Plan and Design Review and 6 Use Permits to establish a 116,205 square foot Shopping Center & a Tentative Parcel Map to subdivide 14.5 Acres into 12 parcels. (PROJ23-0013)

Approval Date: TBD
Effective Date: TBD
Expiration Date: TBD

PROJECT LOCATION: Southeast Corner of State Street and Ramona Expressway
San Jacinto, CA
APN(s): 434-080-025, 026

APPLICANT: Rich Development Enterprises, LLC
Attn: Tab Johnson
600 N. Tustin Avenue, Suite 150
Santa Ana, CA 92705

ACCEPTED AND AGREED TO BY: _____

Applicant (signature) Date

PROJECT DESCRIPTION

A Site Plan & Design Review to construct a 116,205-square foot shopping center on 14.5 acres. The project includes a Tentative Parcel Map (TPM 38831) to subdivide the property into 12 parcels, a Conditional Use Permit to allow alcohol sales within the convenience store of a service station, and 5 Minor Use Permits for the development of 4 restaurants with drive-thru service, and a car wash with drive-thru service. In addition, the project contains 4 major tenants that includes 1 grocery store with alcohol sales and 3 retailers totaling a maximum of 85,000 square feet, 1 shops retail/restaurant building and a retail pad totaling a maximum of 12,000 square feet. PROJ23-0013, USE 23-0009, USE23-0011, USE 23-0012, USE23-0013, USE23-0014, USE24-0038, USE24-0052.

General Requirements & Information

A) This approval is for a Site Plan and Design Review (SPDR), a Conditional Use Permit (CUP), five Minor Use Permits, and a Tentative Parcel Map (PROJ23-0013) for the phased development of a commercial shopping center that includes:
   a. USE23-0009 a Site Plan & Design Review for the overall site plan and the design of a 116,205 square foot shopping center.
   b. SUB23-0005, a Tentative Parcel Map (TPM 38831) to subdivide two parcels totaling 14.5-acres lot into 12 commercial lots.
   c. USE24-0052, a Conditional Use Permit to allow the sale of beer and wine (Type-20) within a Service Station that includes a gasoline station and a 3,956 square foot convenience store).
   d. USE23-0011, a Minor Use Permit for a 3,886 square foot restaurant, with outdoor seating and a drive-thru lane. (Pad 1)
   e. USE23-0012, a Minor Use Permit for a 3,203 square foot restaurant with a drive-thru lane. (Pad 2)
   f. USE24-0038, a Minor Use Permit for a 5,705 square foot retail/restaurant building with a drive-thru lane. (Pad 3)
   g. USE23-0013, a Minor Use Permit for a 3,203 square foot restaurant with a drive-thru lane. (Pad 4)
   h. USE23-0014, a Minor Use Permit for an automated car wash with three queuing lanes.

B) The applicant/licensee shall by accepting these conditions agree to defend (with legal counsel of City's selection), indemnify, and hold harmless the City and its elected and appointed officials, agents, attorneys, employees and officers, from any action, claim or proceeding brought against the City or its elected and appointed officials, agents, employees and officers to attack, set aside, void, or annul a discretionary land use approval of the City, which action is brought within the applicable statute of limitations. The required indemnification shall include damages awarded against the City, if any, costs of suit, attorneys' fees and other costs and expenses incurred in connection with the action.

C) All plans subsequently submitted to the City shall be in substantial conformance with the plans in this approval, as conditioned. This condition applies to site plans, grading plans, landscape plans, building plans, elevations, and all other illustrations, text, or plans submitted to the City in connection with the Project. Conditions of approval shall be included on all subsequent plans, including construction plans.

D) The effective date of issuance of this Project is TBD. The approval will lapse if improvements have not commenced within three (3) years from the date upon which the approval was granted unless a time extension is approved by the City's applicable review authority. Applications for time extensions must be received prior to the expiration date.

E) The Project shall comply with all required standards of the Development Code, Subdivision Ordinance, and Municipal Code in their entirety, unless specifically approved under this entitlement or approved to deviate.

F) The project authorized under this permit shall be in compliance with and not violate any federal, state, or local laws, rules, regulations, or ordinances, or any conditions of approval. Failure to comply with these requirements shall constitute grounds for revocation of the permit.

G) This approval may be revoked if the project is operated or maintained in a manner that constitutes a nuisance or adversely affects public health, safety, or welfare.

H) The City shall have the right to inspect the site and facilities to ensure compliance with the conditions of approval and other requirements and to recover its actual costs related to such inspections from the property owner, tenant, or any responsible party.

I) This permit shall run with the land associated with the project and continue to be valid upon change of ownership. All applicable conditions of approval shall continue to apply with a change in property ownership.

J) The developer, applicant, or successor-in-interest shall pay any outstanding planning application or processing fees within ten (10) days of the City's request, and prior to permits being exercised. Failure to do so will be grounds for

revocation of one or more of the following cases: PROJ23-0013, USE 23-0009, SUB23-0005, USE23-0011, USE 23-0012, USE23-0013, USE23-0014, USE24-0038, and USE24-0052.

K) The applicant/project shall be subject to all applicable development fees at the rate in effect at the time of building permit issuance. Such fees may include but not be limited to Development Impact Fees ("DIF"), Park Fees, School Fees, Transportation Uniform Mitigation Fees ("TUMF"), and Multiple Species Habitat Conservation Plan Fees ("MSHCP Fees"), and school fees (school fees paid directly to school district; evidence must be provided for school fee).

L) Associated landscaping, irrigation, fences, walls, hedges shall comply with Chapters 17.315 (Fences, Walls and Hedges) and 17.325 (Water Efficient Landscape and Irrigation) of the Development Code and all applicable Landscaping and Wall standards within the San Jacinto Landscape Design Guidelines, as determined by the Planning Division.

M) Utility location shall comply with City of San Jacinto Municipal Code Section 15.32.

N) Signs shall be permitted in accordance with Chapter 17.335 – Sign Regulations of the Development Code. A separate sign application, including fees and additional sets of plans, will be necessary prior to sign permit issuance. Any signs shown on plans for this approval are conceptual and are not approved. A master sign program may be necessary for specific signage or projects, as provided by the City Sign Regulations. All signage, including sign programs, shall be consistent with and in conformance with Chapter 17.335.

O) Construction shall adhere to the requirements of the San Jacinto Municipal Code.

P) Commencement of use or construction of buildings/structures approved by this entitlement cannot occur until all applicable conditions of approval for this project have been met and satisfied, in accordance to approved timing requirements, as determined by the City.

Q) The City may conduct a periodic review of the Use Permits to ensure proper compliance with this Development Code and any developmental or operational conditions of approval.

R) In the event of a conflict between any conditions for this approval, the most stringent in the opinion of the City shall prevail or as determined by City Planning.

S) The contractor should locate equipment staging areas that will create the greatest distance between construction-related noise/vibration sources and sensitive receptors nearest the project site during all project construction. Idling equipment should be turned off when not in use. Locate generators, and stationary construction equipment as far from any adjacent sensitive receptors, as reasonably feasible.

T) Any construction debris or rubbish shall be picked up on a daily basis, unless approved by the Planning Division.

U) The following Conditions of Approval incorporate mitigation measures from the proposed Mitigated Negative Declaration (MND).

Engineering Department General Requirements & Information

V) With respect to the Conditions of Approval for the above referenced project, the City of San Jacinto requires that the developer/property owner provide street improvements and/or road dedications in accordance with the City of San Jacinto Municipal Code, as listed below. It is understood that the site plan correctly shows all existing and proposed easements, traveled ways, rights-of-way, and drainage courses with appropriate Q's and their omission may require the site plan to be resubmitted for further consideration. These ordinances and the following conditions are essential parts and requirement occurring in ONE is as binding as though occurring in all. They are intended to be complimentary and to describe the conditions for a complete design of the improvements. Unless otherwise noted, all offsite improvements as conditioned shall be installed prior to issuance of any occupancy permits. All questions regarding the true meaning of the conditions shall be referred to the City Engineer's office. In the event of a conflict between any conditions stated below, those imposed by Planning Department and others, and requirements identified in the approved Traffic impact Analysis, the most stringent in the opinion of the City shall prevail.

W) The project grading shall be in a manner to perpetuate existing natural patterns. Any deviation from this, concentration or increase in runoff must have approval of adjacent property owners and City Engineer. The developer/property owner shall accept the offsite runoff and convey to acceptable outlet.

X) Prior to commencement of any construction or installation of fencing in public right-of-way, an encroachment permit shall be obtained from the City Engineer's office.

Y) The developer/property owner shall secure City's and appropriate agencies' clearances and approvals of the improvement plans.

Timing	Responsible Department	Prior to a Specific Date	Met?
7 Days Prior of Site Disturbance	Planning	1) **Mitigation Measure BIO-2:** Ground disturbing and vegetation removal activities shall be conducted outside of the nesting bird season. If these activities must occur during the nesting season, a nesting bird survey should be conducted within 7 days prior to any ground disturbing activities to determine if any nesting birds occur within the project site. If nesting birds are not found within the project site, no further actions are required. If nesting birds are observed on site, no impacts shall occur within 250 feet (500 feet for raptors) of any active nests. Construction activity may only occur within 250 feet of an active nest at the discretion of a biological monitor. Submit documentation to the Planning Division.	☐
30 Days Prior to Site Disturbance	Planning	2) **Mitigation Measure BIO-1:** A burrowing owl preconstruction survey shall be conducted no more than 30 days prior to any ground disturbance at the project site. Submit documentation to the Planning Division.	☐

Timing	Responsible Department	Prior to Grading or Similar Activities	Met?
Prior to Grading or Similar Activity	Planning	3) **Mitigation Measure CR-1:** Unanticipated Discovery of Cultural Resources In the event that previously undocumented historic or archaeological resources are unearthed during project construction, all earth-disturbing work near the find must be temporarily suspended or redirected until an archaeologist has evaluated the nature of the find and determined appropriate treatment. Once the resource has been properly treated or protected, work in the area may resume. A Native American representative shall be retained to monitor any mitigation work associated with Native American cultural material. Provide acknowledgment from the contractor.	☐
Prior to Grading or Similar Activity	Planning	4) **Mitigation Measure CR-2:** Unanticipated Discovery of Human Remains In the event that human remains are encountered during the course of any future development California State Law (Health and Safety Code Section 7050.5 and Section 5079.98 of the Public Resources Code) states that no further earth disturbance shall occur at the location of the find until the Riverside County Coroner has been notified. If the remains are determined to be prehistoric, the Coroner will notify the Native American Heritage Commission, which will determine and notify a Most Likely Descendant (MLD). With the permission of the landowner of his/her authorized representative, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC. Provide acknowledgment from the contractor.	☐

Prior to Grading or Similar Activity	Planning	5) **Mitigation Measure GEO-1:** Prior to issuance of grading permits, the developer shall provide documentation to the City for review and approval that: 1) confirms that grading and construction plans prepared for the project have included the recommendations intended to minimize impacts associated with ground shaking that are provided in the Geotechnical Study and 2) determine that the grading and plans adhere to City of San Jacinto The Magnet March 27, 2024 26 Draft Initial/MND City construction development standards as well as the seismic design parameters of the California Uniform Building Code.	☐
Prior to Grading or Similar Activity	Planning	6) **Mitigation Measure GEO-2:** Prior to issuance of grading permits, the developer shall provide documentation to the City for review and approval that a SWPPP is prepared, that it is implemented, and that the erosion control measures recommended in the Geotechnical Study are included appropriately.	☐
Prior to Grading or Similar Activity	Planning	7) **Mitigation Measure GEO-3:** Prior to the issuance of grading permits, the developer shall provide documentation to the City for review and approval that that measures related to the prevention of subsidence and collapse provided in the Geotechnical Study are included on construction plans and implemented in the field. City staff shall also verify that project grading and construction plans adhere to City construction development standards as well as the seismic design parameters of the California Uniform Building Code.	☐

Prior to Grading or Similar Activity	Planning	8) **Mitigation Measure GEO-4:** Prior to the issuance of grading permits, the developer shall provide documentation to the City for review and approval that those measures intended to avoid impacts related to expansive soils provided in the City of San Jacinto. The Magnet March 27, 2024 28 Draft Initial/MND Geotechnical Study are included on construction plans and implemented in the field; and that project grading and construction plans adhere to City construction development standards as well as the seismic design parameters of the California Uniform Building Code.	☐
Prior to Grading or Similar Activity	Planning	9) **Mitigation Measure GEO-5:** In the event that paleontological resources are unearthed during grading, ground disturbance activities shall be temporarily suspended or redirected until a paleontologist has evaluated the nature and significance of the find. If the discovery proves to be significant under CEQA, additional work such as preservation in place or data recovery, shall occur as required by the paleontologist in coordination with City staff and descendants and/or stakeholder groups, as warranted. Once the resource has been properly treated or protected, work in the area may resume. Provide an acknowledgment from the contractor.	☐

Prior to Grading or Similar Activity	Planning	10) **Mitigation Measure TCR-1**: Prior to the issuance of a grading permit, the Developer shall retain a professional archaeologist to conduct monitoring of all ground disturbing activities. The project Archaeologist shall have the authority to temporarily redirect earthmoving activities in the event that suspected archaeological resources are unearthed during project construction. The project archeologist shall attend the pre-grading meeting with the City, the construction manager and any contractors, and Consulting Tribal representatives; and will conduct a mandatory Cultural Resources Worker Sensitivity Training to those in attendance. The archaeological monitor shall have the authority to temporarily halt and redirect earth moving activities in the affected area in the event that suspected archaeological resources are unearthed. Provide documentation to the City for review and approval.	☐
Prior to Grading or Similar Activity	Planning	11) **Mitigation Measure TCR-2**: Prior to grading permit issuance, the developer shall enter into a Treatment and Disposition Agreement (TDA) with the Soboba Band of Luiseño Indians to address treatment and disposition of archaeological, or Tribal Cultural Resources and human remains associated with the Soboba Band of Luiseño Indians that may be uncovered or otherwise discovered during ground-disturbing activities related to the project, if monitoring deemed necessary by Soboba Band of Luiseño Indians. The TDA will establish provisions for tribal monitoring and shall be submitted to the Planning Division once it has been executed. Provide documentation to the City for review and approval.	☐

Prior to Grading or Similar Activity	Planning	12) **Mitigation Measure TCR-3:** The project Archaeologist, in consultation with the Consulting Tribe(s), the contractor, and the City, shall develop a CRMP in consultation pursuant to the definition in AB52 to address the details, timing and responsibility of all archaeological and cultural activities that will occur on the project site. A consulting Tribe is defined as a Tribe that initiated the AB 52 tribal consultation process for the project, has not opted out of the AB 52 consultation process, and has completed AB 52 consultation with the City as provided for in Cal Pub Res Code Section 21080.3.2(b)(1) of AB52. Details in the Plan shall include: a. Project description and location b. Project grading and development scheduling; c. Roles and responsibilities of individuals on the project; d. The pre-grading meeting and Cultural Resources Worker Sensitivity Training details; e. The protocols and stipulations that the contractor, City, Consulting Tribe (s) and project archaeologist will follow in the event of inadvertent cultural resources discoveries, human remains/cremations, sacred and ceremonial items, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation. f. The type of recordation needed for inadvertent finds and the stipulations of recordation of sacred items. g. Contact information of relevant individuals for the project. Provide documentation to the City for review and approval.	☐

Prior to Grading or Similar Activity	Planning	13) **Mitigation Measure TCR-4:** If human remains, grave goods, ceremonial items, and/or sacred items are encountered, work will immediately halt within the immediate area and any nearby area reasonably suspected to overlie adjacent remains, and a 100-foot ESA boundary will be established to protect the find from impact, and the Soboba Band of Luiseno Indians and the City of San Jacinto Planning Division shall be immediately notified. In accordance with Section 7050.5 of the California Health and Safety Code and State CEQA Guidelines Section 15064.5(e), if human remains are found, the Riverside County Coroner's office shall be notified by the permittee within 24 hours of the discovery. County Coroner's determination regarding the origin of the remains and any required notification is described in Section 7050.5 of the California Health and Safety Code and State CEQA Guidelines Section 15064.5(e). No further excavation or disturbance of the potential human remains, or any area reasonably suspected to overlie additional remains, shall occur until a determination has been made, any notifications have been sent and received, and the Riverside County Coroner's Office has cleared the site. Provide an acknowledgment from the contractor.	☐

Prior to Grading or Similar Activity	Planning	14) **Mitigation Measure TCR-5:** It is understood by all parties that unless otherwise required by law, the site of any reburial of Native American human remains or associated grave goods shall not be disclosed and shall not be governed by public disclosure requirements of the California Public Records Act. The Coroner, pursuant to the specific exemption set forth in California Government Code 6254 (r)., parties, and Lead Agencies, will be asked to withhold public disclosure information related to such reburial, pursuant to the specific exemption set forth in California Government Code 6254 (r).	☐
Prior to Grading or Similar Activity	Planning	15) **Mitigation Measure TCR-6:** Prior to final inspection, the developer/permit holder shall prompt the project Archeologist to submit two (2) copies of the Phase III Data Recovery report (if required for the project) and the Phase IV Cultural Resources Monitoring Report that complies with the Community Development Department's requirements for such reports. The Phase IV report shall include evidence of the required cultural/historical sensitivity training for the construction staff held during the pre-grade meeting. The Community Development Department shall review the reports to determine adequate mitigation compliance. Provided the reports are adequate, the Community Development Department shall clear this condition. Once the report(s) are determined to be adequate, two (2) copies shall be submitted to the Eastern Information Center (EIC) at the University of California Riverside (UCR) and one (1) copy shall be submitted to the Consulting Tribe(s) Cultural Resources Department(s).	☐
Prior to Grading or Similar Activity	Planning	16) A copy of all pages of these conditions of approval shall be included in the construction drawing packages for building, landscape, irrigation, grading permits/approvals, etc.	☐

Prior to Grading or Similar Activity	Planning	17) The developer/applicant or successor in interest shall pay any outstanding fees.	☐
Prior to Grading or Similar Activity	Planning	18) The contractor shall provide a letter that agrees to comply with the following requirements to the satisfaction of the Building & Safety Division: a. The site shall be watered on an on-going basis to control dust during construction and grading. b. There shall be regular street sweeping and clean-up of adjacent streets to minimize the amount of dust put into the air from motor vehicle travel. c. Mud and dirt shall be removed from construction equipment and vehicles prior to leaving the site to ensure they do not spread dirt into the street. d. An energy conservation plan showing compliance with Title 24 (Building Standards) of the California Administrative Code shall also be provided.	☐
Prior to Grading or Similar Activity	Planning	19) The contractor shall provide a letter that agrees to implement the following best practices during the construction phase of the development. a. Limit construction to the daytime hours (7:00 am to 7:00 pm) and prohibit construction on Sundays and holidays. b. At least 10 days prior to the start of construction activities, a sign shall be posted at the entrance(s) to the job site, clearly visible to the public, that includes permitted construction on days and hours, as well as telephone numbers of the City's and contractor's authorized representative that are assigned to respond in the event of a noise or vibration complaint. If the authorized contractor's representative receives a	☐

		complaint, he/she shall investigate, take appropriate corrective action, and report to the City. c. During the entire active construction period, equipment and trucks used for the project construction shall utilize the best available noise control techniques (e.g., improved mufflers, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds), wherever feasible. d. During the entire active construction period, stationary noise sources shall be located as far from sensitive receptors as possible, and they shall be incorporated to the extent feasible. e. Select haul routes that avoid the greatest amount of sensitive use areas. Avoid soil hauling through residential areas. f. Signs shall be posted at the job site entrance(s), within the on-site construction zones, and along queueing lanes (if any) to reinforce the prohibition of unnecessary engine idling. All other equipment shall be turned off if not in use for more than 5 minutes. During the entire active construction period and to the extent feasible, the use of noise-producing signals, including horns, whistles, alarms, and bells, shall be for safety warning purposes only. The construction manager shall use smart back-up alarms, which automatically adjust the alarm level based on the background noise level, or switch off back-up alarms and replace with human spotters in compliance with all safety requirements and laws.	
Prior to Grading or Similar Activity	Planning	20) Grading plans shall include an ADA path of travel.	☐

Prior to Grading or Similar Activity	Planning	21) The development shall be subject to all provisions of City of San Jacinto Municipal Code section 13.44, which establishes Urban Stormwater Runoff Management and discharge controls to improve Water Quality and comply with Federal/State Regulations and any subsequent amendments, revisions or ordinances pertaining thereto.	☐
Prior to Grading or Similar Activity	Planning	22) A Final Water Quality Management Plan ("FWQMP") shall be submitted and approved. FWQMPs shall include a project description and identify on-site Best Management Practices ("BMPs") that will be used to reduce pollutants into the storm drain system to maximum extent practical. The FWQMP shall identify the structural and non-structural measures consistent with the City's adopted requirements. BMPs are approved in concept by a Master Water Quality Management Plan ("MWQMP"). The individual parcels/lots or parts of the project shall submit individual FWQMP Addendums, including plans and details providing the elevations and slopes of the any basin(s) and other details for the proposed structural BMPs. The City Engineer, or designee, shall review and approve the FWQMP document(s), plans, and details. The property owners, applicant or developer shall also provide a signed, agreement(s), presenting shared responsibilities for the BMP maintenance, which shall be recorded.	☐
Prior to Grading or Similar Activity	Engineering	23) The developer/property owner shall have an approved grading plan, executed grading agreement as directed by the City Engineer, and posted securities.	☐
Prior to Grading or Similar Activity	Engineering	24) The developer/property owner shall submit the following plans and reports to the City Engineer for review and approval: a.Onsite Grading and Erosion Control Plans – Plans shall show the approved WDID number.	☐

		b.Geotechnical Report c. Storm Drain Improvement Plan d.Hydrology and Hydraulic Analysis e.Final WQMP (for reference) f. Sewer and Water Improvement Plan, per Fire Department and EMWD standards, shall be submitted to the City Engineer for review and approval. Fire Department and EMWD approval of Water Improvement Plan is required prior to City Engineer's approval. The designs shall comply with EMWD, RCFCD, Riverside County Transportation Department, Caltrans, City of San Jacinto, and ADA most recent standards, criteria, and requirement and in effect at the time of construction and shall be coordinated with the approved plans of the adjacent developments.	

Timing	Responsible Department	Prior to Recordation of the Final Map	Met?
Prior to Recordation of the Final Map	Engineering	25) A parcel map shall be filed for review and approval by the City Engineer.	☐
Prior to Recordation of the Final Map	Engineering	26) The developer/property owner shall have approved improvement plans, executed subdivision agreement, and posted securities.	☐
Prior to Recordation of the Final Map	Engineering	27) All easements and/or rights-of-way shall be offered for dedication to the public or other appropriate agencies in perpetuity and shall continue in force until the City or the appropriate agency accepts or abandons such offers. All dedications shall be free from all encumbrances as approved by the City Engineer.	☐
Prior to Recordation of the Final Map	Engineering	28) If applicable, the developer shall enter into a Cooperative Agreement with the City and Riverside County Flood Control and Water Conservation District establishing the terms and conditions covering the inspection, operation and maintenance of Master Drainage Plan facilities required to be constructed as part of the project.	☐
Prior to Recordation of the Final Map	Engineering	29) The following statement shall be added to the Parcel Map: NOTICE OF DRAINAGE FEES Notice is hereby given that this property is located in San Jacinto Valley Area Drainage Plan which was adopted by the City of San Jacinto pursuant to Ordinance 13-01 and Section 66001, et seq, of the Government Code and that said property is subject to fees for said drainage area. Notice is further given that, pursuant to Ordinance 13-01, payment of the drainage fees shall be paid to the City of San Jacinto prior to issuance of the building permit for a parcel, and that the property owner shall pay the	☐

		fee required at the rate in effect at the time of issuance of the actual permit.	
Prior to Recordation of the Final Map	Engineering	30) The developer/property owner shall submit the following plans and reports to the City Engineer for review and approval: a. Onsite Grading and Erosion Control Plans – Plans shall show the approved WDID number. b. Geotechnical Report c. Street Improvement Plan d. Storm Drain Improvement Plan e. Hydrology and Hydraulic Analysis f. Final WQMP (for reference) g. Sewer and Water Improvement Plan, per Fire Department and EMWD standards, shall be submitted to the City Engineer for review and approval. Fire Department and EMWD approval of Water Improvement Plan is required prior to City Engineer's approval. h. Street Light Plan prepared by a registered Electrical Engineer i. Signing and Striping Plan j. Traffic Signal Modification Plan	☐

		The design shall comply with EMWD, RCFCD, Riverside County Transportation Department, Caltrans, City of San Jacinto, and ADA most recent standards, criteria, and requirement and in effect at the time of construction and shall be coordinated with the approved plans of the adjacent developments.	
Prior to Recordation	Special Districts	31) The Developer shall establish a funding mechanism for the maintenance of public improvements. • Annexation into the Public Facilities Maintenance Community Facilities District (CFD 2020-1) is an option to fulfill the funding requirement for maintenance of public improvements. If a property owner opts not to annex into a CFD, the funding mechanism (HOA/POA) must be fully established to satisfy this condition. The Developer shall also establish a funding mechanism for the public safety services. • Annexation into the Public Safety Community Facilities Districts (CFD) is an option to fulfill the funding requirement for public safety services. *Funding of services under the City's CFDs will consist of an annual assessment based on the costs of such services, as determined by a Maintenance Cost Estimate.*	☐

Timing	Responsible Department	Prior to Issuance of Building Permit	Met?
Prior to Issuance of Building Permits	Planning	32) The proposed project may be built in various phases. Each building will require the submittal of building permit plans, including architecture, design, colors, and materials. Plans shall be substantially consistent with plans approved through this entitlement, as determined by City Planning.	☐
Prior to Issuance of Building Permits	Planning	33) A site construction plan shall be submitted for review and approval that details the entity (tenant or master developer) who is responsible to construct parking areas, drive aisles, landscape areas, and parking lot lighting.	☐
Prior to Issuance of Building Permits	Planning	34) Any use that includes the provision of shopping carts, such as a grocery store or similar retail establishment, shall incorporate designated Shopping Cart Corrals. Cart corrals shall be constructed of decorative, durable materials, such as block with a stucco finish, stone veneer, or other architecturally compatible treatments, to ensure visual consistency with the overall project design. The placement and design of cart corrals shall minimize visual clutter, support efficient cart management, and maintain a high-quality appearance throughout the site.	☐
Prior to Issuance of Building Permits	Planning	35) A copy of all pages of these conditions of approval shall be included in the construction drawing packages for building, landscape, irrigation, grading permits/approvals, etc.	☐
Prior to Issuance of Building Permits	Planning	36) All HVAC equipment shall be fully shielded behind parapet walls from line of sight of adjacent properties.	☐
Prior to Issuance of Building Permits	Planning	37) Prior to the issuance of building permits, the applicant shall submit an Outdoor Lighting Plan, including a full photometric analysis, to the City Planning Division for review and approval. The plan shall apply to all outdoor public or common areas, including but not limited to parking lots, drive aisles, pedestrian pathways, plazas, and building frontage areas. The Outdoor Lighting Plan shall comply with the following requirements:	☐

		• Adequate Illumination: All access driveways and circulation routes serving each use shall be provided with adequate lighting to ensure safe vehicular and pedestrian movement. • Fixture Specifications: The plan shall include manufacturer cut sheets and details for all proposed light fixtures, including mounting height, lumen output, shielding, and color temperature. • Responsibility Map: The submittal shall include a site map clearly identifying lighting zones and areas of maintenance responsibility. • All lighting shall be fully shielded or otherwise designed to prevent glare, light trespass beyond the property line, illumination onto public rights of way, or upward light emission into the night sky.	
Prior to Issuance of Building Permits	Planning	38) All ground-mounted equipment (i.e., gas/electric meters, utility/mechanical cabinets, etc.) shall be screened from view from any street or private property adjacent to the project site. Solid walls or landscape features may be used for ground screening; Chain-link fencing is not an approved ground screening material.	☐
Prior to Issuance of Building Permits	Planning	39) The applicant/developer/property owner shall provide water service to this project in accordance with the requirements of the appropriate utility purveyors. This project is within City of San Jacinto water service area. If the Developer utilizes the City of San Jacinto water service, the developer will need to install a looped system to ensure adequate pressure and flow. In order to create the looped system the developer will need to tie into the City's existing 10" C900 water main on Eagle just South of Ramona Expressway and run it through the development to State Street. In addition, install a new water main on State Street, south to Idyllwild Drive and East on Idyllwild to Eagle Road where the City's main currently terminates.	☐

		Alternatively, the developer has the option to utilize EMWD for water service if the project site is annexed into the EMWD water service area. Water improvements shall be installed per EMWD Standards and Fire Department requirements. A letter or similar documentation acceptable to the City verifying compliance shall be provided to the Planning Division for review and clearance.	
Prior to Issuance of Building Permits	Planning	40) The applicant/developer/property owner shall provide sewer service to this project in accordance with the requirements of EMWD and sewer improvements shall be installed per EMWD Standards. A letter and/or inter-agency agreement from EMWD to the City verifying compliance shall be provided to the Planning Division for review and clearance.	☐
Prior to Issuance of Building Permits	Planning	41) Prior to issuance of building permits for each individual building, the applicant shall submit plans for the associated trash enclosure(s) and receptacle areas. All trash enclosure designs shall substantially conform to the approved prototypical trash enclosures for the Shopping Center, including materials, dimensions, access features, screening elements, and functional components.	☐
Prior to Issuance of Building Permits	Planning	42) Submit a Master Sign Plan(s) and applications, pursuant to the Development Code and any applicable sign program, for review and approval.	☐
Prior to Issuance of Building Permits	Planning	43) All parking and drive aisles shall be developed in compliance with Chapter 17.330 (Off-Street Parking and Loading Standards) and screened from public right-of-way and public view with a landscape hedge or decorative wall, as approved by City Planning.	☐
Prior to Issuance of Building Permits	Planning	44) Building plans shall include an ADA path of travel.	☐

Prior to Issuance of Building Permits	Planning	45) The applicant shall submit a complete Master Landscape and Irrigation Plan(s) and associated application(s) to the City Planning Division for review and approval, consistent with the Development Code and the City's Landscape Design Guidelines. The submittal shall identify all proposed landscape areas throughout the site and shall include a Landscape Phasing Plan that clearly delineates the timing and sequencing of landscape installation for each phase of development.	☐
Prior to Issuance of Building Permits	Planning	46) Prior to the issuance of building permits or tenant improvement permits for each individual building or parcel, the tenant shall submit a Landscape and Irrigation Plan for review and approval by the City Planning Division. All tenant-level landscape plans shall substantially conform to the approved Master Landscape and Irrigation Plan for the Shopping Center, including plant palette, irrigation design, materials, and overall landscape character.	☐
Prior to Issuance of Building Permits	Planning	47) All loading docks and trash compactors shall be screened from public view or enclosed within the proposed building. Submit plans for review and approval.	☐
Prior to Issuance of Building Permits	Planning	48) The developer/applicant or successor in interest shall ensure the following pursuant to Section XII. I of the 2010 NPDES Permit. Field verification that structural Site Design, Source Control, and Treatment Control BMPs are designed, constructed, and functional in accordance with the approved Final Water Quality Management Plan (WQMP). The City WQMP Inspector will be notified of the required inspections during construction.	☐
Prior to Issuance of Building Permits	Building	49) Submit building application, plans, and applicable fees for construction and installation of project components.	☐
Prior to Issuance of Building Permits	Building	50) Gates or other obstructions to required Fire Department vehicle access roads shall be approved by the Fire Department prior to construction.	☐

Prior to Issuance of Building Permits	Building	51) This project is located within the limits of the San Jacinto Regional Area Drainage Plan for which drainage fees have been adopted. Drainage fee shall be paid to the City of San Jacinto prior to the issuance of a permit. Fees are subject to change and shall be in the amount adopted at the time.	☐
Prior to Issuance of Building Permits	Building	52) This project shall be subject to the payment of the adopted Traffic Signal Mitigation fees and the Transportation Uniform Mitigation Fee (TUMF), exempted by the ordinance establishing the TUMF program. The fees shall be subject to the provisions of the enabling ordinance and based upon the fee schedule in effect at the time.	☐
Prior to Issuance of Building Permits	Building	53) This project is subject to the payment of fees for the Multi-Species Habitat Conservation Plan (MSHCP), exempted by the ordinance establishing the MSHCP program. The fees shall be subject to the provisions of the enabling ordinance and based upon the fee schedule in effect at the time.	☐
Prior to Issuance of Building Permits	Engineering	54) All conditions required “Prior to the Issuance of a Grading Permit” have been met to the satisfaction of the City.	☐

Prior to Issuance of Building Permits	Engineering	55) Buildings or other required improvements shall not cross parcel lines. If any building or required improvements conflict, a parcel map shall be filed for review and approval and shall be recorded prior to construction of Pad 1 or the service station. Alternatively, a lot merger, lot line adjustment, or CC&R can be recorded to resolve any potential conflicts between existing lot lines and proposed structures. All building setbacks must comply with the City's Development Code. After recordation, a digital (pdf) copy of the recorded map shall be submitted to the Engineering Department.	☐
Prior to Issuance of Building Permits	Engineering	56) Ramona Expressway is classified as an Arterial (146'/110') per the General Plan. A 71-foot half width right-of-way is currently dedicated along the property northerly frontage. The applicant/property owner shall dedicate the required additional 2-feet of right-of-way to provide for a 73-foot half width right-of-way.	☐
Prior to Issuance of Building Permits	Engineering	57) State Street is classified as an Arterial(112'/76') per the City General Plan. A 55-foot half width right-of-way is currently dedicated along the property westerly frontage. The developer/property owner shall dedicate the required additional one foot (1') of right of way to provide 56-foot half width right-of-way.	☐
Prior to Issuance of Building Permits	Engineering	58) Eagle Road is classified as a Modified Collector (66'/48') per the Riverside County Standards. The developer/property owner shall verify the existing right-of-way. If necessary, the developer/property owner shall dedicate the appropriate right-of-way to achieve a 33-foot half width right-of-way along the property's easterly frontage.	☐

Prior to Issuance of Building Permits	Engineering	59) This Property is located in the San Jacinto Valley Area Drainage Plan which was adopted by the City of San Jacinto pursuant to Ordinance 13-01 and Section 66001, et seq, of the Government Code and that said property is subject to fees for said drainage area. Payment of the drainage fees shall be paid to the City of San Jacinto prior to issuance of each phase of improvements. The property owner shall pay the fee required at the rate in effect at the time of issuance of the actual permit, based on the amount of impervious area created.	☐
Prior to Issuance of Building Permits	Engineering	60) Property line corner cutbacks shall be dedicated per County of Riverside Standard No. 805. Curb ramps shall include concrete truncated domes per ADA standards.	☐
Prior to Issuance of Building Permits	Engineering	61) The developer/property owner shall submit to Engineering and Building & Safety a compaction certification from the Soils Engineer in compliance with the approved geotechnical/soils report and the pad elevation certification from the Civil Engineer in compliance with the approved Precise Grading Plan.	☐
Prior to Issuance of Building Permits	Engineering	62) All easements and/or rights-of-way shall be offered for dedication to the public or other appropriate agencies in perpetuity and shall continue in force until the City or the appropriate agency accepts or abandons such offers. All dedications shall be free from all encumbrances as approved by the City Engineer.	☐
Prior to Issuance of Building Permits	Engineering	63) All weather access per Fire Department standards shall be provided to each permitted buildings per the Precise Grading Plan.	☐
Prior to Issuance of Building Permits	Cal Fire – Riverside County Fire Department	64) Fire Protection Water Supplies/Fire Flow - Minimum fire flow for the construction of all buildings is required per CFC Appendix B or other approved method. Prior to building permit issuance for new construction, the applicant shall provide documentation to show there exists a water system capable of delivering the required fire flow. Specific design	☐

		features may increase or decrease the required fire flow. Reference CFC 507.3.	
Prior to Issuance of Building Permits	Cal Fire – Riverside County Fire Department	65) Fire Protection Water Supplies/Hydrants - The minimum number of fire hydrants required, as well as the location and spacing of fire hydrants, shall comply with CFC Appendix C and NFPA 24. Fire hydrants shall be located no more than 400 feet from all portions of the exterior of the building along an approved route on a fire apparatus access road, unless otherwise approved by the Fire Department. Fire hydrants shall be at least 40 feet from the building it is serving. A fire hydrant shall be located within 20 to 100 feet of the fire department connection for buildings protected with a fire sprinkler system. The size and number of outlets required for the approved fire hydrants are 4" x 2 ½" x 2 ½" (super hydrant). Reference CFC 507.5, CFC Appendix C and NFPA 24 7.2.3.	☐
Prior to Issuance of Building Permits	Cal Fire – Riverside County Fire Department	66) Fire Department Access - Fire apparatus access roads shall be provided to within 150 feet of all exterior portions of buildings, except for the south wall of Major 1 and Major 2, since the south wall has no openings, is rated with 8" CMU wall, and the buildings will have an increased sprinkler density. Fire apparatus access roads shall have an unobstructed width of not less than 24 feet. Dead-end fire apparatus access roads in excess of 150 feet shall be provided with an approved turn around. The minimum required turning radius of a fire apparatus access road is 45 feet outside radius and 24 feet inside radius. The construction of the fire apparatus access roads shall be all weather and capable of sustaining 80,000 lbs. Unless otherwise approved, the grade of a fire apparatus access road shall not exceed 16 percent, and the cross slope shall not exceed 2.5 percent. The angles of approach and departure for fire apparatus access roads shall be a maximum of 6 percent grade change for 25 feet of approach/departure. Reference CFC 503.1.1, 503.2.1 as amended by the County of Riverside and Riverside County Office of the Fire Marshal Guideline OFM-01A.	☐

Prior to Issuance of Building Permits	Cal Fire – Riverside County Fire Department	67) Fire Department Access Turn Around - Dead-end fire apparatus access roads in excess of 150 feet in length shall be provided with a bulb turnaround at the terminus measuring a minimum of 45 feet outside radius and 24 feet inside radius. Parallel parking around the perimeter of the bulb is acceptable provided the bulb outside turning radius is increased by 8 feet. In-lieu of a bulb, a hammer-head type turnaround is acceptable where the top of the "T" dimension is 120 feet with the stem in the center. Additional turnaround designs may be acceptable as approved by the Fire Department. Reference CFC 503.1.1, 503.2.1 as amended by the County of Riverside and Riverside County Office of the Fire Marshal Guideline OFM-01A.	☐
Prior to Issuance of Building Permits	Cal Fire – Riverside County Fire Department	68) Secondary Access – Unless otherwise approved by the Fire Department, dead end fire apparatus access roads shall not exceed Secondary egress/access fire apparatus access roads shall provide independent egress/access from/to the area or as otherwise approved by the Fire Department. Secondary egress/access fire apparatus access roads shall be as remote as possible from the primary fire apparatus access road to reduce the possibility that both routes will be obstructed by a single emergency. Additional fire apparatus access roads based on the potential for impairment by vehicle congestion, condition of terrain, climatic conditions, anticipated magnitude of a potential incident, or other factors that could limit access may be required by the Fire Department. Reference CFC 503.1.2 and Riverside County Office of the Fire Marshal Guidelines.	☐

Prior to Issuance of Building Permits	Cal Fire – Riverside County Fire Department	69) Fire Department Construction Permit Review - Submittal of construction plans to the Fire Department will be required. Final fire and life safety conditions will be addressed when the Fire Department reviews these plans. These conditions will be based on California Fire Code, California Building Code (CBC), and related codes/standards adopted at the time of construction plan submittal. Reference CFC 105.1.	☐
Prior to Issuance of Building Permits	Cal Fire – Riverside County Fire Department	70) Fire Sprinkler System - All new commercial buildings and structures 3,600 square feet or larger will be required to install a fire sprinkler system. Reference CFC 903.2 as amended by the City of San Jacinto Municipal Code.	☐
Prior to Issuance of Building Permits	Cal Fire – Riverside County Fire Department	71) Fire Alarm and Detection System - A water flow monitoring system and/or fire alarm system may be required as determined at time of building construction plan review. Reference CFC 903.4 and CFC 907.2.	☐
Prior to Issuance of Building Permits	Cal Fire – Riverside County Fire Department	72) Unlimited Area Building - Based upon the building construction type and requirements of the California Building Code (CBC), 60 feet of open space (with some reductions permitted) may be required around the building. Consult with your architect for additional information. Reference CBC 507.	☐
Prior to Issuance of Building Permits	Cal Fire – Riverside County Fire Department	73) Gate Access: All electronically operated gates shall be provided with Knox key switches and automatic sensors for access. These gates shall be provided with access to gate equipment or another method to open the gate if there is a power failure. (Manual gates shall not be locked unless a Knox Box containing the key to the lock is installed in an approved location on the approach side of the gate). A pedestrian gate, if used to provide access, shall be a minimum 3 feet wide and provided with a Knox Box/Padlock if locked. Reference CFC 506.1.	☐

Prior to Issuance of Building Permits	Cal Fire – Riverside County Fire Department	74) Water Plans: If fire hydrants are required to be installed, applicant/developer shall furnish the water system fire hydrant plans to the Fire Department for review and approval prior to building permit issuance. Plans shall be signed by a registered civil engineer, and shall confirm hydrant type, location, spacing, and minimum fire flow. Once plans are signed and approved by the local water authority, the originals shall be presented to the Fire Department for review and approval. Reference CFC 105.4.1.	☐

Timing	Responsible Department	Prior to the Issuance of a Certificate of Occupancy	Met?
Prior to the Certificate of Occupancy	Planning	75) Landscape and Irrigation must be installed per the approved plans. All items included on the approved landscape and irrigation plans, such as landscaping and planting, irrigation systems and components, dust control measures, walls/fences, pedestrian walkways, etc., shall be installed. Parkway landscaping on State Street shall be installed prior to the occupancy of Pad1, the Carwash or any Major Tenant. Parkway landscaping on Ramona Expressway between State Street and the eastern side of Village of San Jacinto Driveway shall be installed prior to Pad 1, the Service Station or any Major Tenant. Parkway landscaping on Ramona Expressway between the western portion of Village of San Jacinto Driveway and Eagle Road shall be installed prior to Pad 2, Pad 3, Pad 4, Pad, 5 or any Major Tenant.	☐
Prior to the Certificate of Occupancy	Planning	76) All required on-site improvements shall be installed per approved plans.	☐

Prior to the Certificate of Occupancy	Planning	77) Primary driveways and adjacent landscaping planters shall be installed as follows: • Pad 1 require completion of the access driveway on State Street, the western driveway and the driveway at Village San Jacinto. In addition, the three driveways shall be connected with a drive aisle in accordance with the approved Site Plan. • Carwash shall require completion of the access driveway on State Street and the western driveway on Ramona Expressway. In addition, the two driveways shall be connected with a drive aisle in accordance with the approved Site Plan. • The service station shall require the completion of the western driveway and the driveway at Village of San Jacinto. In addition, the two driveways shall be connected with a drive aisle north and south of the fuel Canopy in accordance with the approved Site Plan. • Pad 2, Pad 3 and Pad 4 shall require the completion of the driveway at Village of San Jacinto and the eastern driveway. In addition, the two driveways shall be connected with the proposed east-west driveway south of the aforementioned pads in accordance with the approved Site Plan. • Pad 5 shall require the eastern driveway to be completed and connected to the northern driveway on Eagle Road in accordance with the approved Site Plan.	☐

		• Shops 1 and Major 1 shall require the completion of the State Street Driveway, the western driveway, and the Village of San Jacinto Driveway. In addition, the driveways shall be connected with a completed drive-aisle in accordance with the approved Site Plan. • Major 2, Major 3, and Major 4 shall require the completion of the driveway on State Street, the driveway at Village of San Jacinto and all proposed driveways on Eagle Road. In addition, the driveways shall be connected with a completed drive-aisle in accordance with the approved Site Plan.	
Prior to the Certificate of Occupancy	Planning	78) Lighting shall be provided throughout the parking area at all hours of customer and employee use in accordance with the lighting phasing plan.	☐
Prior to the Certificate of Occupancy	Planning	79) All site improvements shall be installed or constructed per approved building permit plans required for each building/tenant per phasing exhibits.	☐
Prior to the Certificate of Occupancy	Planning	80) The developer/applicant shall prepare a Master Property Owner's Association for City review and approval. The document shall include provisions for maintenance of all common and public areas, reciprocal parking and access, consistent uniform signage and architectural theme, building colors, and materials for the Project, and maintenance responsibilities in the event any assessment district is reduced or eliminated. The City may enforce its interests in the CC&Rs.	☐

Prior to the Certificate of Occupancy	Planning	81) The developer/applicant or successor in interest shall submit the following items for the landscape and irrigation development and maintenance: a. The signed Landscape Certificate of Completion pursuant to Section 17.325.070 – Certificate of Completion of the Development Code; b. The irrigation scheduling pursuant to Section 17.325.080 – Irrigation Scheduling of the Development Code; c. The Landscape and Irrigation Maintenance Schedule pursuant to Section 17.325.090 – Landscape and Irrigation Maintenance Schedule of the Development Code; and d. The Irrigation Audit, Irrigation Survey, and Irrigation Water Use Analysis are pursuant to Section 17.325.100 — Irrigation Audit, Irrigation Survey, and Irrigation Water Use Analysis of the Development Code.	☐
Prior to the Certificate of Occupancy	Planning	82) All walls and fences shall be installed per the fence and wall plan.	☐

Prior to the Certificate of Occupancy	Planning	83) All new and existing onsite utilities shall be located underground. Appurtenances and associated equipment including, but not limited to, surface-mounted transformers, pedestal-mounted terminal boxes and meter cabinets, and concealed ducts in an underground system, may be placed aboveground. Where such facilities are not undergrounded such appurtenances and equipment shall be screened from public view by block enclosures and/or landscaping.	☐
Prior to the Certificate of Occupancy	Planning	84) All utility substructures shall be located away and/or screened from public view with landscaping materials. Plans shall be submitted to verify conformity, as determined by City Planning.	☐
Prior to the Certificate of Occupancy	Planning	85) Provide written certification from the responsible contractor that the parking lot lighting was installed per approved plans and lighting does not exceed one-half foot candle lighting along all property lines.	☐
Prior to the Certificate of Occupancy	Building	86) All department/agency requirements and signoffs shall be complete and obtained.	☐
Prior to the Certificate of Occupancy	Building	87) Specific addresses for each building shall be provided to make such number plainly visible from the public street, avenue, court, or alley upon which property fronts, and shall be contrasting color and background.	☐

Prior to the Certificate of Occupancy	Building	88) Pursuant to the traffic impact analysis (TIA) prepared by Linscott, Law, & Greenspan Engineers, the developer/property owner shall: Pay the project's fair share of 50.34% of the total estimated construction cost of the State Street/Community College Drive traffic signal. As an alternative to paying fair share fees, the developer/property owner may opt to construct the above-mentioned improvements in which the City would support entering into an Improvement and Credit Agreement that would offset construction costs by providing credit for the project's Traffic Signalization and Transportation Uniform Mitigation development fee obligation. This condition is required prior to the Occupancy of any Major Tenant.	☐
Prior to the Certificate of Occupancy	Engineering	89) The developer/property owner shall construct the traffic signal modifications at the intersection of State Street and Ramona Expressway to accommodate the addition of a northbound left-turn lane, to comply with Appendix G of the 2040 General Plan. This condition is required to be met prior to Pad 1, the Service Station, the Carwash or any Major Tenant.	☐

Prior to the Certificate of Occupancy	Engineering	90) The developer/property owner shall install signage and striping to accommodate proposed improvements on State Street and Ramona Expressway. The signage and striping at the State Street/Ramona Expressway intersection shall include the addition of a northbound left-turn lane, to comply with Appendix G of the 2040 General Plan. This condition is required to be met prior to the occupancy of Pad1, the Carwash, Service Station, Shops 1, or any Major Tenant.	☐

Prior to the Certificate of Occupancy	Engineering	91) Ramona Expressway classified as an Arterial (146'/110'). The portion of the Ramona Expressway between State Street and the Village of San Jacinto half width dedicated right-of-way, shall be improved to provide for 8-inch curb and gutter located 55-foot south of centerline, pavement using a TI of 11.0 and PG 70-10, ~~37-foot wide parkway consisting of a Class I Multi-Use Path per City of San Jacinto Trails Master plan~~, landscaping, and streetlights subject to the result of a photometric study prepared by a registered electrical engineer, per City of San Jacinto, County of Riverside and Caltrans standards. The existing curb and gutter is placed at an acceptable location and can remain in place if it is determined to be in good condition at the time of permits. The portion of the Ramona Expressway between State Street and the eastern most part of the driveway at Village of San Jacinto is required to be completed prior to occupancy of Pad 1, the Service Station, Shops 1, or any Major tenant. The portion of the Ramona Expressway between the western most point of Village of San Jacinto driveway and Eagle Road is required to be met prior to occupancy Pad 2, Pad 3, Pad4, Pad 5, or any Major tenant.	☐
Prior to the Certificate of Occupancy	Engineering	92) Install raised landscaped median on Ramona Expressway on the east side of "Village at San Jacinto" Intersection to Eagle Road comparable to the existing median west of the said intersection This condition shall be met prior to occupancy of Pad 2, Pad 3, Pad 4, Pad 5, or any Major tenant as approved by the City Engineer.	☐

Prior to the Certificate of Occupancy	Engineering	93) State Street classified as an Arterial (112′/76′) (with 12-foot landscaped median) along the property westerly frontage within the dedicated right-of-way shall be improved to provide for a 56-foot wide halfwidth right-of-way, asphalt paving using a TI of 9.0 and PG 70-10 (for all northbound lanes and the southbound lane adjacent to the median), 8-inch curb and gutter 45-feet east of centerline, Class II buffered bike lane per City of San Jacinto Trails Master Plan, sidewalk and streetlights subject to the photometric analysis, per City of San Jacinto, County of Riverside and Caltrans standards. Existing improvements can remain if determined to be in good condition by the City Engineer. This condition will not require storm water improvements on the west side of State Street for local drainage. This condition is required to be met prior to occupancy of Pad 1, the Carwash, the Service Station, Shops 1, or Major 1.	☐
Prior to the Certificate of Occupancy	Engineering	94) Install a raised landscaped median on State Street from Idyllwild Drive to Ramona Expressway comparable to the existing median located on State Street, north of Ramona Expressway, and as approved by the City Engineer. This condition is required to be met prior to occupancy of Pad 1, the Carwash, the Service Station, Shops 1, or any Major 1.	☐

Prior to the Certificate of Occupancy	Engineering	95) Eagle Road classified as a Modified Collector (66'/48') within the dedicated right-of-way shall be improved to provide for a 33-foot wide halfwidth right-of-way. Eagle Road shall be paved using a TI of 8.0 and PG 64-10, 8- inch curb and gutter 24-feet west of centerline, 6-foot wide sidewalk, landscaping, and streetlights subject to the photometric analysis, per City of San Jacinto, County of Riverside and Caltrans standards. The curb, gutter and paving can remain in place if it is determined to be in good condition at the time of permits per as determined by the City Engineer. This condition is required to be met prior to occupancy of Pad 4, Pad 5, or any Major Tenant.	☐
Prior to the Certificate of Occupancy	Engineering	96) If the existing pavement is not in good condition the developer/property owner may use grind and overlay technique as determined by the City Engineer.	☐
Prior to the Certificate of Occupancy	Engineering	97) The developer/property owner shall provide for utility trench surface repair as directed by the City Engineer if applicable.	☐

Prior to the Certificate of Occupancy	Engineering	98) The project is impacted by San Jacinto Valley Master Drainage Plan facilities, Line H and Line H-1. PM 22092 dedicated a 40-foot wide easement for storm drain purposes that crosses the site and was intended for Line H-1. The applicant has submitted a drainage study that proposes an alternative to the adopted master drainage plan. The study would take advantage of an existing 24-inch and 18-inch pipe system in Ramona Expressway (identified as Line H-3) to collect and convey runoff to the existing Line H crossing under Ramona Expressway. The developer/property owner shall upsize Line H-3 to accommodate the tributary 10-year flow rate. The City has no objection to the vacation of the existing drainage easement for Line H-1. Line H should be extended from the existing crossing to the project's southwest corner, an adequate inlet shall be provided at the terminus of Line H. This segment of Line H should be designed to convey the tributary 10-year flow rate. Plans for the drainage improvements, along with supporting hydrology and hydraulic calculations shall be submitted for approval. This condition is required to be met prior to occupancy of any building.	☐
Prior to the Certificate of Occupancy	Special Districts	99)Annexation into the applicable CFDs must be complete.	☐

Prior to the Certificate of Occupancy	Special Districts	100) Development must comply with Storm Water Basin & Pump Specifications and Standards. Privately maintained storm water and water quality systems will be required to submit an Irrevocable Offer of Dedication, or similar dedication language upon map recordation, for each basin lot.	☐
Prior to the Certificate of Occupancy	Special Districts	101) Development must comply with Landscape and Irrigation Design Guidelines.	☐
Prior to the Certificate of Occupancy	Special Districts	102) Landscape improvements shall include irrigation meters and backflow devices with tampering preventive cage, exclusive for right-of-way landscaping. Right-of-way landscaping must be divided from private property by form or mow-curb or other approved materials.	☐
Prior to the Certificate of Occupancy	Special Districts	103) Landscape areas in the right-of-way shall include an independent irrigation control system, with separate electric meter, exclusive for right-of-way landscaping. Cal-Sense version approved by the Public Utilities Superintendent is required for City maintained irrigation areas. (Must be operational and certified by Cal-Sense)	☐

Timing	Responsible Department	Prior to Acceptance of Public Improvements	Met?
Prior to Acceptance of Public Improvements	Special Districts	104) Developer will ensure that funds are available for maintenance, in the event that improvements are completed, and ready for City takeover, PRIOR to levy collection. • The first installment of collected assessments is paid to the City in January of each year. In the event that takeover is requested before the first installment is paid to the City, the Developer will either: ❖ Pay an advancement of funds for the months included from takeover to collection (amount to be set by cost estimate at annexation) OR ❖ Continue to maintain improvements until City has acquired enough funds to sustain maintenance or until first assessment installment is received, whichever is first	☐
Prior to Acceptance of Public Improvements	Special Districts	105) Upon acceptance and City take-over, developer will ensure that a minimum of one-year warranty is in place for landscape, irrigation, and basin integrity, inclusive pumps and mechanical equipment used for the maintenance of the improvements taken over.	☐

Timing	Responsible Department	Operational / Performance / Ongoing Conditions	
Operational	Planning	106) Required parking shall remain usable and accessible, and lighting shall be provided, as approved, at all hours of customer and employee use. The use of parking and loading spaces for customers and employees, including ADA spaces, shall not be prevented, prohibited, limited, restricted, eliminated or adapted for other use excepted as follows: • Use of parking spaces for drive-thru overflow to prevent traffic backup onto shopping center roads, or city streets in a manner acceptable to the City; • Special Events with an approved Temporary Use Permit.	☐
Operational	Planning	107) All landscaped areas shall be maintained in a thriving condition, free of weeds, trash and debris.	☐
Operational	Planning	108) Deliveries, loading and unloading activities, and trash pick-up hours shall be limited to daytime hours only (7:00 a.m. to 7:00 p.m.) for Major 3 and Major 4.	☐
Operational	Planning	109) The business shall maintain lighting to illuminate for security and safety of parking and access areas at no less than one-foot candle of illumination at ground level.	☐
Operational	Planning	110) Any business selling alcohol shall maintain an active ABC license issued and maintained by the California Department of ABC.	☐
Operational	Planning	111) The permittee of any alcohol sales shall conform to the regulations of the Department of Alcoholic Beverage Control (ABC).	☐
Operational	Planning	112) Any premises approved to sell alcohol shall be posted to indicate that it is unlawful for anyone to drink or consume any alcoholic beverage in any public place.	☐

Operational	Planning	113) The Permittee shall remove litter from the premises, public sidewalks, and parking lots daily and keep the areas swept weekly to prevent debris buildup. Trash cans shall be added, and "No Littering" signs shall be posted on the premises.	☐
Operational	Planning	114) The owner and management of the establishment selling alcoholic beverages shall provide ABC-approved and/or certified training for all employees who sell or serve alcoholic drinks at the first available opportunity or no later than thirty (30) days from the employee's date of employment.	☐
Operational	Planning	115) No outdoor storage and display/sales is permitted without an approved Temporary Use Permit.	☐
Operational	Building	116) All required Fire Department vehicle access roads shall be maintained in a passable condition at all times for emergency Fire Department use.	☐
Operational	Building	117) Contact the Community Development Department, specifically the Building and Safety Division, if water supply for fire hydrants is lost or if pressure is dramatically reduced.	☐
Operational	Building	118) Outdoor dining areas must be cleaned daily and kept free of debris.	☐

Re: APPEAL of PROJ23-0013, USE 23-0009, USE23-0011, USE 23-0012, USE23-0013, USE23-0014, USE24-0038 and USE24-0052 to CITY COUNCIL

Ms. Matley and Mr. White,

I write you on behalf of our partnership, Ramona San Jacinto, LLC ("Rich Development"), as owners and applicants of the proposed development of real property identified as APNs 434-080-025 (12.5ac) and 434-080-026 (2 ac), located at the Southeast corner of State St and Ramona Expressway (Hwy 79), within the City of San Jacinto ("Property").

Kindly accept this letter as our formal request to appeal the following conditions of approval to City Council.

As a quick background, our intention has always been to build a high quality, attractive shopping center that honors the community, attracts patrons, create jobs, is a tax revenue generator for the City and reflects the best of San Jacinto. We first submitted a pre-application and received staff feedback back in September of 2023. We've been working hard on this project for over 3 years.

In that time, we've grown to accept some difficult market realities. Costs continue to climb. Interest rates remain high. Lenders are conservative. Cap Rates remain high, and rents are relatively flat, which means that valuations are low.

San Jacinto is an emerging commercial market that is exciting to us. Because of today's marketplace, as noted above, we are very concerned we will not be able to find and fund the revenues needed to construct the project with the conditions of approval noted below.
The basis for our appeal is our principled notion that regional infrastructure must be paid for by all of the users of that infrastructure, and it is unfair to burden a single project with conditions of approval that results in a disproportionate contribution to those facilities. The term "fair share" suggests a reasonable proportionality which we feel has not been applied here.

We've worked closely with staff and are grateful for their efforts, but we recognize that there is a limit to their discretion. We also sincerely appreciate the Planning Commission's consideration but unfortunately have reached a point where we must appeal to City Council.

Rich Development
600 N. Tustin Ave., Ste. 150
Santa Ana, CA 92705

Contested Conditions of Approval

Condition 98)

The project is impacted by San Jacinto Valley Master Drainage Plan facilities, Line H and Line H-1. PM 22092 dedicated a 40-foot wide easement for storm drain purposes that crosses the site and was intended for Line H-1.

The applicant has submitted a drainage study that proposes an alternative to the adopted master drainage plan. The study would take advantage of an existing 24-inch and 18-inch pipe system in Ramona Expressway (identified as Line H-3) to collect and convey runoff to the existing Line H crossing under Ramona Expressway. The developer/property owner shall upsize Line H-3 to accommodate the tributary 10-year flow rate. The City has no objection to the vacation of the existing drainage easement for Line H-1. Line H should be extended from the existing crossing to the project's southwest corner, an adequate inlet shall be provided at the terminus of Line H. This segment of Line H should be designed to convey the tributary 10-year flow rate. Plans for the drainage improvements, along with supporting hydrology and hydraulic calculations shall be submitted for approval.

This condition is required to be met prior to occupancy of any building.

Appeal

The San Jacinto Valley Master Drainage Plan (SJCMDP) suggests that H-1 line bisect the property, but at some point, in the past, the City departed from this plan and instead installed an undersized line through the subject property, with no easement. Our proposed project would not contribute any runoff to that line. We feel strongly that there is no nexus for exacting an improvement on this neighborhood retail project. These past decisions have created an erroneous set of circumstances that we are now required to resolve. We feel it's only fair that the upstream users of this line should continue to contribute to the Valley Master Drainage fee program so that this improvement can be completed at a later date by use of these funds.

Condition 88)

Pursuant to the traffic impact analysis (TIA) prepared by Linscott, Law, & Greenspan Engineers, the developer/property owner shall:

Pay the project's fair share of 50.34% of the total estimated construction cost of the State Street/Community College Drive traffic signal.

As an alternative to paying fair share fees, the developer/property owner may opt to construct the above-mentioned improvements in which the City would support entering into an Improvement and Credit Agreement that would offset construction costs by providing

credit for the project's Traffic Signalization and Transportation Uniform Mitigation development fee obligation.

This condition is required prior to the Occupancy of any Major Tenant.

Appeal

City staff scoped our traffic impact study and included the intersection of State and Community College, which is already failing by their standards. The nature of the study is an antiquated approach called Level of Service (LOS) which penalizes trip generation. The new modern standard is Vehicle Miles Traveled (VMT) which encourages infill development.

Our position is that the intersection is failing because of the College and they should bear the cost of improving their own traffic issues.

Please note that there are undeveloped properties on the west of that intersection. The city may need to condemn and acquire additional right-of-way, likely must pay fair market value, and then construct a signal. We question if a signal, as mitigation, is even feasible.

We humbly request that the City waive this condition of approval.

Condition 91)

Ramona Expressway classified as an Arterial (146'/110'). The portion of the Ramona Expressway between State Street and the Village of San Jacinto half width dedicated right-of-way, shall be improved to provide for 8-inch curb and gutter located 55-foot south of centerline, pavement using a TI of 11.0 and PG 70-10, 37-foot wide parkway consisting of a Class I Multi-Use Path per City of San Jacinto Trails Master plan, landscaping, and streetlights subject to the result of a photometric study prepared by a registered electrical engineer, per City of San Jacinto, County of Riverside and Caltrans standards.

The existing curb and gutter is placed at an acceptable location and can remain in place if it is determined to be in good condition at the time of permits.

The portion of the Ramona Expressway between State Street and the eastern most part of the driveway at Village of San Jacinto is required to be completed prior to occupancy of Pad 1, the Service Station, Shops 1, or any Major tenant.

The portion of the Ramona Expressway between the western most point of Village of San Jacinto driveway and Eagle Road is required to be met prior to occupancy Pad 2, Pad 3, Pad4, Pad 5, or any Major tenant.

Appeal

We have worked with staff for years interpret San Jacinto standards and reflect them in our design. We object to the nature of these conditions which point back to unclear standards. The plans should govern and provide us with reasonable assurances moving forward.

In addition, our position is that the existing curb and gutter is located in the correct location and should not need replacement unless damaged. There is no 37' parkway proposed and we are unclear as to the implications of the Trails Master Plan.

Condition 92)

> *Install raised landscaped median on Ramona Expressway on the east side of "Village at San Jacinto" Intersection to Eagle Road comparable to the existing median west of the said intersection.*
> *This condition shall be met prior to occupancy of Pad 2, Pad 3, Pad 4, Pad 5, or any Major tenant as approved by the City Engineer.*

Appeal

We request that this exaction be removed.

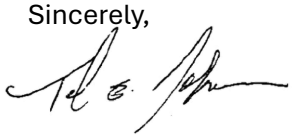
Condition 93)

> *State Street classified as an Arterial (112'/76') (with 12-foot landscaped median) along the property westerly frontage within the dedicated right-of-way shall be improved to provide for a 56-foot wide halfwidth right-of-way, asphalt paving using a TI of 9.0 and PG 70-10 (for all northbound lanes and the southbound lane adjacent to the median), 8-inch curb and gutter 45-feet east of centerline, Class II buffered bike lane per City of San Jacinto Trails Master Plan, sidewalk and streetlights subject to the photometric analysis, per City of San Jacinto, County of Riverside and Caltrans standards.*
>
> *Existing improvements can remain if determined to be in good condition by the City Engineer. This condition will not require storm water improvements on the west side of State Street for local drainage.*
>
> *This condition is required to be met prior to occupancy of Pad 1, the Carwash, the Service Station, Shops 1, or Major 1.*

Appeal

This median is along our frontage and is being requested to extend all the way down to the intersection of Idlewild and State St. This median could be striped, but the city wants the raised median as there is an existing issue with left turns across State from the parcels on the east side of State St. We have legitimate drainage and scope-creep concerns. We also don't believe that the project should be solely responsible for the improvement.

Conclusion



You will note that the conditions of approvals attempt to exact regional infrastructure in the form of major storm drains and traffic improvements. We are contributing to the runoff at State Street, which has existing flooding issues, caused by projects south and east of this intersection. Understanding that our project could not function because of the existing conditions, we are

committed to installing a major regional storm drain extension to allow State St to function safely. This is a major cost to our project, and we hope that council members will take this into consideration for our requests to have these additional regional improvements noted above removed as part of our project approval. We understand that fee credits will be available for some of this work, but they will not be enough to offset the cost of these major public works projects that our project is being burdened with as conditions of approval. We remain concerned that the total cost of offsite improvements is too much for the project to bear.

In closing, my partners and I are truly excited to deliver a high-quality project to the City of San Jacinto and appreciate your consideration. I'm available to answer any questions.

Thank you for your assistance.

Sincerely,

Tab Johnson

THE MAGNET – CONDITIONS OF APPROVAL APPEAL ITEMS/COST IMPACTS

Condition 98:

The project is impacted by San Jacinto Valley Master Drainage Plan facilities, Line H and Line H-1. PM 22092 dedicated a 40-foot wide easement for storm drain purposes that crosses the site and was intended for Line H-1.

The applicant has submitted a drainage study that proposes an alternative to the adopted master drainage plan. The study would take advantage of an existing 24-inch and 18-inch pipe system in Ramona Expressway (identified as Line H-3) to collect and convey runoff to the existing Line H crossing under Ramona Expressway. The developer/property owner shall upsize Line H-3 to accommodate the tributary 10-year flow rate. The City has no objection to the vacation of the existing drainage easement for Line H-1. Line H should be extended from the existing crossing to the project's southwest corner, an adequate inlet shall be provided at the terminus of Line H. This segment of Line H should be designed to convey the tributary 10-year flow rate. Plans for the drainage improvements, along with supporting hydrology and hydraulic calculations shall be submitted for approval.

This condition is required to be met prior to occupancy of any building.

Cost Estimate: $461,882

Condition 88:

Pursuant to the traffic impact analysis (TIA) prepared by Linscott, Law, & Greenspan Engineers, the developer/property owner shall:

Pay the project's fair share of 50.34% of the total estimated construction cost of the State Street/Community College Drive traffic signal.

As an alternative to paying fair share fees, the developer/property owner may opt to construct the above-mentioned improvements in which the City would support entering into an Improvement and Credit Agreement that would offset construction costs by providing credit for the project's Traffic Signalization and Transportation Uniform Mitigation development fee obligation.

This condition is required prior to the Occupancy of any Major Tenant.

Cost Estimate: $251,700 (City Estimate $500,000 x 50.34% Share Percentage)

Condition 91:

Ramona Expressway classified as an Arterial (146'/110'). The portion of the Ramona Expressway between State Street and the Village of San Jacinto half width dedicated right-of-way, shall be improved to provide for 8-inch curb and gutter located 55-foot south of centerline, pavement using a TI of 11.0 and PG 70-10, 37-foot wide parkway consisting of a Class I Multi-Use Path per City of San Jacinto Trails Master plan, landscaping, and streetlights subject to the result of a photometric study prepared by a registered electrical engineer, per City of San Jacinto, County of Riverside and Caltrans standards.

The existing curb and gutter is placed at an acceptable location and can remain in place if it is determined to be in good condition at the time of permits.

The portion of the Ramona Expressway between State Street and the eastern most part of the driveway at Village of San Jacinto is required to be completed prior to occupancy of Pad 1, the Service Station, Shops 1, or any Major tenant.

The portion of the Ramona Expressway between the western most point of Village of San Jacinto driveway and Eagle Road is required to be met prior to occupancy Pad 2, Pad 3, Pad4, Pad 5, or any Major tenant.

Cost Estimate:

- **Ramona Path - $98,480**
- **Ramona Curb and Gutter - $34,468**
- **TOTAL: $132,948**

Condition 92:

Install raised landscaped median on Ramona Expressway on the east side of "Village at San Jacinto" Intersection to Eagle Road comparable to the existing median west of the said intersection.

This condition shall be met prior to occupancy of Pad 2, Pad 3, Pad 4, Pad 5, or any Major tenant as approved by the City Engineer.

Cost Estimate: $115,000

Condition 93:

State Street classified as an Arterial (112'/76') (with 12-foot landscaped median) along the property westerly frontage within the dedicated right-of-way shall be improved to provide for a 56-foot wide halfwidth right-of-way, asphalt paving using a TI of 9.0 and PG 70-10 (for all northbound lanes and the southbound lane adjacent to the median), 8-inch curb and gutter 45-feet east of centerline, Class II buffered bike lane per City of San Jacinto Trails Master Plan, sidewalk and streetlights subject to the photometric analysis, per City of San Jacinto, County of Riverside and Caltrans standards.

Existing improvements can remain if determined to be in good condition by the City Engineer. This condition will not require storm water improvements on the west side of State Street for local drainage.

This condition is required to be met prior to occupancy of Pad 1, the Carwash, the Service Station, Shops 1, or Major 1.

Cost Estimate:

- **State Street Bike Path - $18,000**
- **State Street Curb and Gutter - $14,336**
- **State Street Median - $75,000**
- **TOTAL: $107,336**

May 26, 2026

TO:	Planning Commission
REQUESTED BY:	Kevin White, Planning Manager
APPROVED BY:	Travis Randel, Deputy City Manager
SUBJECT:	The Magnet Shopping Center (PROJ23-0013)

Staff Recommends that the Planning Commission:

1. DETERMINE that the proposed Project will not have a significant effect on the environment with the incorporation of mitigation measures based on the findings set forth in the case record and ADOPT a Mitigated Negative Declaration (MND) and associated Mitigation Monitoring and Reporting Program, pursuant to the California Environmental Quality Act (CEQA); and

2. APPROVE PROJ23-0013 to establish the Magnet Shopping Center that includes the following:

a. A Site Plan & Design Review (USE23-0009) for the overall site plan and the design of a 119,476 square foot shopping center.

b. Tentative Parcel Map (TPM) 38831 (SUB23-0005) to subdivide a 14.44-acre lot into 12 commercial lots.

c. A Conditional Use Permit (USE24-0052), to allow alcohol sales within a Service Station that includes a gasoline station and a 3,956 square foot convenience store.

d. A Minor Use Permit (USE23-0011) for a 3,886 square foot restaurant, with outdoor seating and a drive-thru lane. (Pad 1)

e. A Minor Use Permit (USE23-0012) for a 3,203 square foot restaurant with a drive-thru lane. (Pad 2)

f. A Minor Use Permit (USE24-0038) for a 5,705 square foot retail/restaurant building with a drive-thru lane. (Pad 3)

g. A Minor Use Permit (USE23-0013) for a 3,203 square foot restaurant with a drive-thru lane. (Pad 4)

h. A Minor Use Permit (USE23-0014) for an automated 3,588 square foot car wash with three queuing lanes.

DISCUSSION:

The proposed project is a submittal by Rich Development Enterprise, LLC to establish the Magnet Shopping Center. The project includes four Major Tenant buildings that total a maximum of 84,923 square feet, including a 16,012 square feet grocery store, a drive-thru car wash within a building that is 3,588 square feet, a service station with a convenience store that is 3,956 square feet, retail and shop buildings that total a maximum of 11,040 square feet, four restaurants with drive-thru service that total 15,551 square feet, and three restaurants without a drive-thru that totals 5,524 square feet. Overall, the shopping center would allow a maximum of 119,476 square feet of general commercial uses. In addition, the shopping center includes accessory on-site parking, drive aisles, trash enclosure and landscaping. The project also includes a subdivision to create 12 commercial lots on 14.50 acres.

To facilitate the project, the applicant submitted a Site Plan and Design Review for the overall development, five Minor Use Permits for the restaurants with drive-thru service and the carwash, a Conditional Use Permit for alcohol sales within the service station convenience store, and a Tentative Parcel Map for the subdivision.

The project site is comprised of two contiguous rectangular-shaped parcels totaling approximately 14.44 acres and is located on the south side of Ramona Expressway, between State Street and Eagle Road. The site is relatively flat and does not have any noticeable slopes. The project site has been vacant for over twenty years and highly disturbed throughout the years. Currently the site is dominated by weeds and non-native herbs.

ANALYSIS:

The General Plan designation for the site is Commercial (C). The Commercial designation provides for a variety of retail and service-oriented business activities at various intensities to serve the local community and population, as well as the broader market area. The site is zoned Commercial General (CG), which is applied to areas appropriate for general commercial and daily shopping needs of a broad market area, including retail sales and business, professional, and personal services that are accessible to transit corridors. The CG zone is consistent with the Commercial General Plan Land Use Designation.

Project Site and Surrounding Land Use, General Plan, and Zoning

	Land Use	**General Plan**	**Zoning**
Project Site	***Vacant***	***Commercial (C)***	***Commercial Gen***
North	Shopping Center Single Family Residential	Commercial (C) & Low Density Residential (LDR)	Commercial Gene Residential, Low D
South	Vacant Single Family Residences	Commercial (C) & Low Density Residential (LDR)	Commercial Neigh Residential, Low D
East	Single Family Residences	Low Density Residential (LDR) &	Residential, Low D
West	Service Station	Commercial (C)	Commercial Gene

Site Plan and Design Review:

The project includes 12 buildings (uses) with six located along Ramona Expressway and six buildings located along the southern property line. In between the two rows of buildings are several drive aisles that interconnect which would allow circulation for passenger vehicles, trucks making deliveries and emergency services.

Pad 1 is located at the intersection of State Street and Ramona Expressway. The proposed restaurant is 3,886 square feet that is positioned adjacent to Ramona Expressway. The primary entrance to the restaurant is on the south side of the building that faces the parking lot. Pad 1 includes two drive-thru lanes that begin southeast of the proposed building, which merge into a single lane. The drive-thru lane then wraps around the proposed restaurant before terminating at a drive-aisle on the west side of the building. The drive-thru lane allows vehicle queuing spaces for more than 20 vehicles, which greatly exceeds the 7 spaces required by the Development Code. Pad 1 includes an outdoor seating area and an enhanced landscape area situated west of the building.

A service station is proposed east of the Pad 1, with the two uses separated by a right in/right-out driveway on Ramona Expressway with a customer entrance on the south side of the building. The service station includes a 3,956 square foot convenience store that is located adjacent to Ramona Expressway that has an entrance on the south side of the building. South of the convenience store the project proposes parking spaces and 6 fuel dispensers with 12 pumps situated underneath a fuel canopy.

Pads 2, 3 and 4 are located east of the Service Station, and the primary vehicular entrance to the project site. Pad 2 is a restaurant that totals 3,203 square feet, Pad 3 is 5,705 square feet building that includes up to three suites that could be utilized for individual restaurants, and Pad 4 is a restaurant that totals 3,203 square feet. Each pad will have a drive-thru lane that contains queuing spaces for at least 10 vehicles. The drive-lane begins on the east side of each building and wraps around the building terminating on the west side of each building. The building entrances and the proposed parking are located on the south side of the building.

Pad 5 is located at the southwest corner of Ramona Expressway and Eagle Road, and is west of Pad 4 and a right-in/right-out driveway that provides access to Ramona Expressway. The proposed retail building is also adjacent to Ramona Expressway; however, the front entrance and parking lot are located on the east side of the building. The building is anticipated to be occupied by an auto parts store.

The proposed Carwash is located along the southern edge of the property adjacent to State Street. The proposed carwash will be within a building that is 3,588 square feet The carwash includes three drive-thru lanes that converge into a single lane (tunnel). South of the carwash are parking spaces with self-service vacuum cleaners. Additional parking and drive aisles are proposed east of the carwash.

The Shops and Major 1 buildings are located east of the carwash. The shops building is 3,990 square feet and will allow for a maximum of two suites that may be utilized for retail or restaurants. The building will be oriented to the west and include an outdoor patio area that is 250 square feet, which is located on the north side of the building. Major 1 is directly adjacent to Shops building to the west totaling 16,012 square feet. Directly in front of the building is a proposed cart corral and parking spaces. Behind the building is the location of the proposed loading dock that will be utilized for Major 1. The use is anticipated to be occupied by a Grocery Store.

Major 2, Major 3, and Major 4.

The applicant has submitted two alternative site plan configurations for the project. The alternatives are identical in all respects except for the layout and building footprints of Major 2, Major 3, and Major 4, and minor drive aisle and parking modification. All other site elements including access, landscaping, pad buildings, and overall project intensity remain substantially unchanged between the two alternatives. The purpose of the alternatives is to provide flexibility in securing future tenants while maintaining consistency with the approved development standards and design framework.

Alternative 1.

- Major 2 is 22,083 square feet and proposed for general retail. It includes a primary entrance on north side of the building with parking north of the building. A loading dock is located at the southern (rear portion of the building) which will be accessed from the drive aisle to the east.
- Major 3 is 8,675 square feet and proposed for general retail. It includes a primary entrance on north side of the building. Parking is provided in front of the building, with additional parking located directly east. No loading dock is proposed for this building.
- Major 4 is located east of Major 3, with the two buildings separated by a drive aisle. Major 4 is also west of Eagle Road. The building is 34,688 square feet with a north-facing entrance. Parking is provided in front (north side), with additional parking and a drive aisle along the east side. A loading zone facing north is located on the east side of the building. Staff-recommended conditions of approval require the loading area to be screened from public view, which may be accomplished through decorative gates or enclosure of the loading area.

Alternative 2.

- Major 2 is 35,160 square feet and proposed for general retail. It includes a loading dock on the eastern side of the building that opens to the north. The staff recommended conditions of approval require the loading area to be screened from public view, which may be accomplished through decorative gates or enclosure of the loading area.
- Major 3 is 8,537 square feet and proposed for general retail. In this configuration, Major 3 remains east of Major 2, separated by a drive aisle. No loading dock is proposed.

- In this configuration, Major 4 is directly adjacent to Major 3, and west of Eagle Road. The proposed building will be 25,020 square feet with a north-facing orientation. Parking is provided north of the building with additional parking and a drive aisle along the east side. The loading zone remains on the east side of the building and faces north. Staff-recommended conditions of approval require the loading area to be screened from public view, which may be accomplished through decorative gates or enclosure of the loading area.

Road Improvements/Circulation

The main access to the project site will come from a driveway located directly south of the intersection at Ramona Expressway and Village at San Jacinto. This existing intersection is signalized and therefore the full turning movements will be permitted in and out of the proposed shopping center. In addition, the site will have six additional points of ingress and egress as follows:

- A right-in/right-out driveway on Ramona Expressway that is east of Village at San Jacinto between Pad 1 and the service station,
- A right-in/right-out driveway on Ramona Expressway that is west of Village at San Jacinto between Pad 4 and Pad 5,
- A right-in/right-out driveway on State Street located between Pad 1 and the proposed Carwash;
- A driveway on Eagle Road directly south of Pad 5,
- A driveway on Eagle Road directly north of Major 4, and
- A driveway on Eagle Road directly south of Major 4.

The driveways will be connected through a network of drive aisles to provide access to all facets of the site.

The Conditions of Approval require road improvements at each of the three roadways that are adjacent to project. On Ramona Expressway the applicant will be allowed to utilize the existing curb and gutter, however the conditions of approval require a 2-foot dedication, installation of raised landscaped median, sidewalk and streetlights. On State Street the project will require a 1-foot dedication, install a raised landscaped median, widen a portion of the roadway, relocate a portion of the existing curb and gutter, install sidewalk and streetlights. With respect to Eagle Road, the applicant will be required to install sidewalk and potential streetlights. In addition, signing and striping plans and traffic signal modifications will be necessary to address General Plan Consistency. As a result, State street will add a second left hand turn lane on to Ramona Expressway.

A traffic study was submitted for the project which noted the project would negatively impact a single off-site intersection on State Street at Community College Drive. To mitigate the impact the conditions of approval require the payment of a fair share contribution (50.34%) of the construction cost of the traffic signal. Completion of the road improvements or the payment of a fair share contribution will address the traffic that would be created by the project.

Drainage Improvements

State Street currently experiences flooding during nuisance rain events, which would impact the ingress and egress for the project. The project is required to extend an existing storm drain on State Street and install catch basins which will reduce flooding impacts.

Additionally, a San Jacinto Valley Master Drainage Plan facility (H-1) was planned to run through the project site. An existing drainage line that does not meet the requirements of the San Jacinto Valley Master Drainage Plan Facility currently traverses the site which carries water past the site. The developer will be required to remove the existing drainage line on their property and replace it with a new 10-year drainage facility on Ramona Expressway with new catch basins to address flooding on Ramona Expressway and to collect run-off that will protect their site. The new facility will be equivalent to the Master Drainage Plan (H-1).

Water and Wastewater

The Conditions of Approval require the developer to establish a water and sewer connection. The project is within City of San Jacinto water service area. If the Developer utilizes the City of San Jacinto water service, the developer will need to install a looped system to ensure adequate pressure and flow. In order to create the looped system the developer will need to tie into the City's existing water main on Eagle just South of Ramona Expressway and run it through the development to State Street. In addition, install a new water main on State Street, south to Idyllwild Drive and East on Idyllwild to Eagle Road where the City's main currently terminates. Alternatively, the developer has the option to Utilize Eastern Municipal Water District (EMWD) for water service if the project has been annexed into the EMWD water service area. Wastewater will be provided through the EMWD system with an inter-agency agreement.

Development Standards

The design of the project has been analyzed to ensure compliance with the standards for the CG zone listed in the development code as noted in the table below:

Commercial General (CG) Development Standards:			
	Required	Proposed	Compliant?
Maximum FAR	0.50	0.19	Yes
Front Setback	10 ft.	21 ft.	Yes
Side Interior Setback:			
Abutting nonresidential	None Required	0	Yes
Side (street) Setback	10 ft.	32 ft.	Yes
Rear Setback:			
Abutting nonresidential	None Required	0	Yes
Abutting residential **	34 ft.	35 ft.	Yes
Maximum Height	45 ft.	42 ft.	Yes
Maximum Impervious Coverage	85%	83%	Yes

** Setback is based on the height of the proposed building that is adjacent residential.

Architecture and Materials

The proposed buildings utilize a coordinated palette of materials and colors that complement. Smooth-finish stucco in neutral tones, stone veneer accents, parapet articulation, and aluminum storefront systems create a unified architectural identity across the center. Staff finds the design well-articulated, contextually appropriate, and consistent with the City's expectations for high-quality commercial development.

The shopping center includes several restaurant pads with drive-thru components. These tenants typically incorporate brand-specific architectural elements, such as signature colors, materials, and façade treatments. The brand specific features will be integrated in a manner that complements the center's primary architectural theme, avoiding visual conflict through consistent massing, parapet heights, material quality, and coordinated color palettes. Staff finds that this approach appropriately balances tenant identity with a cohesive overall design character, consistent with the City's expectations for high-quality commercial development.

Landscaping

The project proposes landscaping adjacent to each of the existing roads, along the southern border of the project site, within the parking lots, and adjacent to entrance drives and around specific buildings. In total 17.8 percent of the site will be landscaped with the key landscape areas as follows:

1. A minimum 20-foot landscape setback adjacent to Ramona Expressway.
2. A minimum 12-foot landscape setback adjacent to State Street.
3. An enhanced landscape area at the corner of State Street and Ramona Expressway.
4. A minimum 10-foot landscape setback adjacent to Eagle Road.
5. A 10-foot landscape setback behind Major 4 and a portion of Major 3 to buffer the project site from the existing residences to the south.

A Conceptual Landscape Plan was submitted as part of the project to illustrate the landscape areas. Specific designs and plant material will be incorporated into final landscape plans. All landscaping elements have been designed in accordance with the City's adopted Landscape Design Guidelines and Water-Efficient Landscape Ordinance (WELO), ensuring compliance with both aesthetic and environmental performance standards. The planting plan will be supported by an automatic irrigation system, designed to maximize water efficiency and maintain long-term plant health.

Parking

The project provides a total of 572 parking spaces exceeding the minimum requirement of 495 spaces established by the Development Code for the proposed uses. This surplus ensures ample parking availability for customers and employees of the various uses. The conditions of approval of required a reciprocal parking agreement which will allow all businesses within the Shopping Center to utilize the parking throughout the development as part of a Master Property Owners Association. A detailed breakdown of required and provided parking is included in the table below:

Parking Analysis			
Land Use	**Calculation**	**Required**	**Provided**
Major 1 – Grocery Store,1 space per 225 square feet	16,012/225	57	75
Major 2 – Retail, 1 space per 300 square feet.	35,160/300	94	99
Major 3 – Retail, 1 space per 300 square feet.	8,537/300	23	27
Major 4 – Retail, 1 space per 300 square feet.	25,020/300	66	75

Shops 1 – Retail, 1 space per 300 square feet.	2,000/300	6	10
Shops 1 – Restaurant, 1 space per 200 square feet	2000/200	8	12
Carwash – Stacking area for each automatic car wash lane - 4 times the capacity of the automatic car wash lane Carwash drying	3 x 4	12	30+ 18 drying spaces
Pad1 - Restaurant with Drive-Thru 1st 2,000 sq. ft. = 1 per 200-sq. ft.+ Over 2,000 sq. ft. = 1 per additional 60 sq. ft. GFA 1 per 50 sq.ft patio = 1 per 50 sq. ft	 2000/200+ 1,886/60 1,650	 8 25 26	 14 33 35
Service Station with C-Store -1 space per 250 sq. ft 4 stalls per pump. (six pumps)	3,956/250 6x4	13 19	15 22
Pad 2 - Restaurant with Drive-Thru 1st 2,000 sq. ft. = 1 per 200-sq. ft.+ Over 2,000 sq. ft. = 1 per additional 60 sq. ft. GFA	2000/200+ 1,203/60	8 16	12 16
Pad 3 - Restaurant with Drive-Thru 1st 2,000 sq. ft. = 1 per 200-sq. ft.+ Over 2,000 sq. ft. = 1 per additional 60 sq. ft. GFA	2000/200+ 1,203/60	8 19	10 22
Pad 4 - Restaurant with Drive-Thru 1st 2,000 sq. ft. = 1 per 200-sq. ft.+ Over 2,000 sq. ft. = 1 per additional 60 sq. ft. GFA	2000/200 1,203/60	10 19	8 19
Pad 5 - Retail, 1 space per 300 square	7,216/300	29	36
Total		469	572

Note: All required spaces reflect a 20% reduction as allowed by the Development Code for Shopping Center greater than 100,000 square feet.

Minor Use Permit–Restaurants with a Drive-Thru & Carwash (USE23-0011, USE23-0012, USE23-0013, USE23-0014, & USE24-0038)

Each of the proposed restaurants and the carwash includes a drive-thru lane; therefore, a Minor Use Permit (MUP) is required for each. The MUP's ensure that each component of the drive-thru (such as the location of the speaker within the drive-thru) are located in areas where they won't be disruptive to residential uses or other sensitive uses. As designed the site meets all requirements for drive-thru use. The drive-thru's are consistent with the General Plan and Zoning, are compatible with the existing and future land uses, and will not be materially detrimental to health, safety and welfare. The development includes a condition of approval to ensure that the speaker volume at the drive-thru conforms to levels established in the municipal code.

Alcohol Sales

Currently there are two businesses that propose to have alcohol sales. They include the proposed service station, which would sell alcohol within the convenience store and Major 1(Grocery Store).

Convenience Store

Alcohol sales are proposed in the convenience store utilizing a Type 20 Alcoholic Beverage Control (ABC) License. A Type 20 License allows for the sale of beer and wine, for offsite consumption. As required by the Development Code, the applicant submitted a Conditional Use Permit (CUP) to allow staff and the Planning Commission to evaluate the operational characteristics of the use. The convenience store will operate as an ancillary component of the service station, with alcohol sales representing a small portion of the overall merchandise mix. The project includes security lighting, and signage prohibiting on-site consumption. These features are consistent with the City's alcohol-related performance standards and help ensure safe and responsible operation.

Grocery Store

The applicant is also requesting to sell alcohol within Major 1 (Grocery Store). As is common with most grocery stores, the applicant is also proposing to sell alcoholic beverages, utilizing a Type 21 Alcoholic Beverage Control (ABC) License. A Type 21 License allows for the sale of beer, wine and distilled spirits for offsite consumption. Generally, the sale of Alcohol for off-site consumption requires a Conditional Use Permit; however, the development code specifically exempts larger grocery stores (those over 10,000 square feet) from this requirement.

Both businesses are still required to adhere to development standards placed on businesses that sell alcohol. The following is a list of applicable standards related to the sale of alcohol:

Alcohol Standards

Required/Permitted	**Consistent**
600-foot separation from a school, place of worship, public park or similar use	Yes, there are no schools or places or worships parks, or similar uses within 600 feet.
100 feet from an existing residential dwelling or property zoned for residential uses	Yes, the nearest residence is more than 150 feet f closest business with alcohol sales.
Business Shall be fully visible from the Street	Yes, the facilities are fully visible from Ramona Expı and/or State Street.

Lighting to provide illumination for security	Yes, the site includes security lighting.

Overconcentration and Public Convenience or Necessity (PCorN)

The California Department of Alcoholic Beverage Control (ABC) authorizes a set number of off-sale licenses within each Census Tract based on the resident population. Census Tract 435.09 is authorized for three off-sale licenses and currently has three active licenses, which technically creates an “over concentration” under ABC standards if the proposed businesses are permitted to sell alcohol.

Existing licenses

Status	**License Type**	**Original Issue Date**	**Premises Address**	**Business Nan**
ACTIVE	20	04/13/1992	720 W RAMONA EXPRESSWAY	CHEVRON G STATION
ACTIVE	21	6/27/2008	1271 N STATE STREET	STATER BR SUPERMARK
ACTIVE	20	10/12/2010	697 STATE STREET	MOBILE GAS

When additional businesses seek a license in a Census Tract that will result in an overconcentration, ABC requires the local jurisdiction to determine whether the issuance of an additional license serves the Public Convenience or Necessity (PCorN). In reviewing the specifics of this project, staff finds that sufficient evidence exists to support a PCorN determination for the following reasons:

- The project is located along State Street and Ramona Expressway, two major regional thoroughfares that are planned and zoned for higher-intensity commercial development.
- Appropriateness of Alcohol Sales at a Full-Service Grocery Store. Within the proposed grocery store alcohol sales are incidental to the primary business of selling groceries and household goods. Unlike liquor stores or stand-alone alcohol retailers, grocery stores provide alcohol as one of many items available to local residents, typically purchased for off-site consumption as part of a family shopping trip. Allowing an additional license in this context serves the convenience of the community without creating the types of impacts often associated with higher concentrations of small-scale alcohol outlets.
- Service stations along major corridors provide essential convenience goods to motorists, commuters, and regional travelers. Allowing incidental off-sale alcohol at a service station aligns with the established commercial function of the corridor.
- At service stations, alcohol sales are ancillary to the primary fueling and convenience retail use. This reduces the likelihood of loitering, nuisance behavior, or high-frequency alcohol purchases.
- Because the area is designed for commercial uses, the presence of off-sale alcohol at a service station is consistent with the intended land use pattern and does not represent an incompatible intensification of alcohol availability.
- The City’s General Plan designates the project site for Community Commercial uses, and the concentration of businesses, including grocery stores and service stations are consistent with those policies. The presence of multiple off-sale licenses in the tract reflects the intended land use character of the corridor rather than an over-saturation of alcohol-related businesses. The proposed use complements the existing commercial mix and provides additional options for residents.
- The project is conditioned to include adequate site lighting and signage prohibiting on-site alcohol consumption. The Police Department has reviewed the application and raised no objection.

For these reasons, staff concludes that approval of a PCorN finding is warranted. The license will serve the convenience and needs of the community by allowing alcohol sales incidental to a full-service grocery store in a corridor specifically planned for commercial activity.

Subdivision – Tentative Parcel Map 38831 (SUB24-0013)

The project includes a Tentative Parcel Map (TPM 38831) to subdivide the 14.5-acre site into twelve parcels. The map is designed in a manner that would allow each of the individual buildings, to be owned individually. There are 12 building/uses proposed as part of the project and 12 proposed parcels. Prior to recordation of TPM 38831, the developer will be required to ensure the provisions of maintenance are established, and access and parking are shared throughout the development.

ENVIRONMENTAL ANALYSIS:

The City of San Jacinto is the lead agency on the proposed Project and has reviewed all submitted drafts, technical studies, and reports. An Initial Study was prepared for the proposed project to evaluate potential impacts on the environment as required by the California Environmental Quality Act. The initial study reflects the City's independent judgment, including technical reports prepared for the project.

Biological Resources

The subject property is not located within a Criteria Area of the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP). As such, the Project does not have to comply with the requirements of the MSHCP. However, an MSHCP query indicated that a burrowing owl survey is the only biological survey requirement for the project site.

A survey of the project site occurred and biologists walked the entire site. The entire project site was assessed to determine the extent of plant communities and to evaluate the presence of jurisdictional features, and riparian/riverine habitat. The burrowing owl surveys included walking parallel 20 meter transects throughout the site while looking for any potential burrows that would serve as refuge for burrowing owls. Additionally, the biologist looked for the presence of owl feathers, whitewash, and owl pellets. Buffer surveys were only conducted on the southern boundary where suitable habitat was present. The Burrowing owl surveys were negative for the project area and surrounding buffer. However, there are several California ground squirrel (CGS) burrows present on site but none of the CGS burrows had any sign of burrowing owls such as feathers, tracks, whitewash, pellets, or owls.

Due to the presence of numerous CGS burrows on site, the site has the potential to support burrowing owls in the future. Therefore, it is recommended that ground disturbing activities occur outside of nesting season and include a pre-construction survey for Burrowing Owls 30-days prior to any ground disturbance on the site.

Noise

Noise from construction and operational activities would add to the existing noise environment of the project site and immediate vicinity. Sensitive receptors located near the project site could be exposed to project related noise. The closest sensitive receptors are residents located south of the project site. A six-foot high masonry wall currently separates the residential development from the project site. To highest noise levels according to the Noise Study will occur during construction. The highest noise levels from construction are predicted to range from approximately 88 dBA Lmax to 104 dBA Lmax at the nearest receivers 10 feet to the southeast. These maximum noise levels are considered to be a peak exposure, applicable to not more than 10–15% of the total construction period, only while the construction activity is taking place along the property boundary closest to these nearest off-site receivers. An existing block wall that separates the proposed use from residential properties will reduce the noise impacts during construction to an allowable level.

In terms of operational noise, traffic associated with parking lots is the most common at a shopping center. The noise associated with a parking lot is typically not at a sufficient volume to exceed community noise standards. At the southeast corner of the project site, the noise could range between 53 dBA and 63 dBA at 50 feet. However, as noted previously, there is an existing seven-foot noise barrier wall. Furthermore, parking lot noise will be partially masked by the proposed buildings. As such, parking lot noise levels will not exceed the City's Day-night average exterior sound level standard for residential use (65 dBA) and the City's nighttime noise standards (45 dBA).

Traffic

A Traffic Impact Analysis was prepared for the project, which analyzed the forecast traffic conditions associated with the Project. The project is identified as being located within a low VMT area and will have a less than significant impact. However, the proposed project is expected to generate approximately 11,265 average daily trips (ADT) that will result in deficiencies at one intersections: 1) State Street at Community College Drive (50.34%). Payment of fees will reduce the impact to less than significant. In addition, the project site includes several improvements to each of the three roadways adjacent to the project as discussed earlier in this report.

Mitigated Negative Declaration

Based upon the information contained in the Initial Study and pursuant to the requirements of CEQA; it has been determined that this Project, with the incorporation of mitigation measures, will not have a significant impact on the environment. The mitigation measures required to reduce or mitigate the impacts of this Project on the environment are included in the Project design and/or the Mitigation Monitoring Program and will be included as part of the Mitigated Negative Declaration for this Project. As a result, it is recommended that the Planning Commission recommend that the City Council adopt a Mitigated Negative Declaration for this Project.

PUBLIC NOTICE AND COMMENTS:

A 10-day notice of public hearing was advertised on May 16, 2026, in the Press Enterprise. In addition, notices of the public hearing were mailed to all property owners within a 300-foot radius of the project site.

Public Comments

Two residents submitted written comments expressing opposition to the proposed Magnet Shopping Center at State Street and Ramona Expressway. The commenters believe the project does not reflect the needs of nearby neighborhoods and raises significant concerns related to traffic, pedestrian safety, noise, and public safety.

The letters cite the number of drive-thru restaurants, the car wash, and the gas station as uses that will generate substantial new traffic and congestion, potentially creating unsafe conditions for pedestrians, including students who walk in the area. The commenters also express concern about cut-through traffic into adjacent residential neighborhoods.

In addition, the residents note existing issues with property crime, such as mailbox break-ins, and believe that a large commercial center may increase loitering, theft, and other security problems at a time when law enforcement resources are already limited.

The commenters request that the Planning Commission reconsider the project, deny the Mitigated Negative Declaration, and require preparation of a full Environmental Impact Report (EIR) to evaluate potential safety, noise, and security impacts on surrounding residential areas.

Staff has reviewed the concerns raised by nearby residents and staff finds that the Magnet Shopping Center is consistent with the General Plan and the Commercial General (CG) zoning, which specifically anticipates retail, restaurant, and service-oriented uses along major corridors such as State Street and Ramona Expressway.

The project introduces a full-service grocery store, general retail, and multi-tenant commercial buildings that expand the range of goods and services available to the community. It also provides new employment opportunities, increased sales tax revenue, and significant public improvements, including sidewalks, streetlights, landscaped medians, and drainage upgrades.

A project-specific traffic study concluded that all intersections will operate at acceptable levels, and the project will contribute its fair share to a new traffic signal at State Street and Community College Drive. Pedestrian safety is improved through new sidewalks, internal walkways, and lighting enhancements.

Noise, lighting, and operational impacts were evaluated in the environmental document, and required mitigation measures ensure the project will not create significant impacts to nearby residences.

While staff acknowledges the desire for additional community amenities, the City cannot require a private property owner to develop specific commercial businesses. The proposed project complies with all applicable regulations and aligns with the City's long-range vision for this commercial corridor. For these reasons, staff continues to recommend approval of the project.

FINDINGS OF FACT:

Minor Use Permit Findings – Restaurants with Drive-Thru Service (USE23-011, 0012, 0013, 0038)

1. The proposed use is consistent with the General Plan and any applicable specific plan.

The restaurants with drive-thru service are consistent with the Commercial (C) General Plan designation, which supports a broad range of retail and service-oriented uses along major transportation corridors. The use will contribute to the commercial character of the area and supports General Plan goals related to economic development, commercial vitality, and convenient access to goods and services. No specific plan applies to the site.

2. The proposed use is allowed within the applicable zone and complies with all other applicable provisions of the Development Code and Municipal Code.

The Commercial General (CG) zone allows restaurants with drive-thru service subject to approval of a Minor Use Permit. The proposed pads meet all applicable development standards, including setbacks, height, parking, landscaping, and circulation requirements. Drive-thru lanes, speaker boxes, and menu boards are located and designed in compliance with the Development Code.

3. The design, location, size, and operating characteristics of the proposed activity will be compatible with existing and future land uses in the vicinity.

The drive-thru restaurants are located along Ramona Expressway and are consistent with the existing commercial uses on the north side of Ramona Expressway. The buildings are oriented to activate with pedestrian and vehicular traffic. Drive-thru operations are designed to avoid conflicts with adjacent uses, with queuing areas sized to prevent spillover and speaker boxes oriented away from residential areas. The use is compatible with the anticipated future development.

4. The proposed use will not be materially detrimental to the health, safety, or general welfare of the public or otherwise injurious to the environment or property.

The site provides adequate access, circulation, lighting, and parking to support safe operation. Drive-thru lanes are separated from pedestrian walkways and internal circulation routes to the extent feasible. Environmental review through the Mitigated Negative Declaration confirms that the project will not result in new or more severe environmental impacts. No detrimental effects to public health, safety, or welfare are anticipated.

5. The site is physically suitable for the proposed use.

a. Design, location, shape, size, and operating characteristics: The restaurant pads are appropriately sized and configured to accommodate buildings, drive-thru lanes, queuing, parking, and landscaping.

b. Public and emergency vehicle access: Multiple access points and internal drive aisles provide adequate emergency access.

c. Public protection services: The site is served by existing police and fire services, and the project does not create unusual service demands.

d. The provision of utilities (e.g., potable water, schools, solid waste collection and disposal, storm drainage, wastewater collection, treatment, and disposal, etc.).: All necessary utilities are available and adequate to serve the proposed restaurants.

6. The applicant agrees in writing to comply with all conditions of approval.

The applicant has agreed to comply with all conditions imposed by the review authority for the Minor Use Permits.

Minor Use Permit Findings - Drive-Thru Carwash (USE23-0014)

1. The proposed use is consistent with the General Plan and any applicable specific plan.

The carwash is consistent with the Commercial (C) General Plan designation, which supports a broad range of retail and service-oriented uses along major transportation corridors. The drive-thru car wash will contribute to the commercial character of the area and support General Plan goals related to economic development, commercial vitality, and convenient access to goods and services. No specific plan applies to the site.

2. The proposed use is allowed within the applicable zone and complies with all other applicable provisions of the Development Code and Municipal Code.

The Commercial General (CG) zone allows drive-thru carwashes subject to approval of a Minor Use Permit. The proposed location meets all applicable development standards, including setbacks, height, parking, landscaping, and circulation requirements. Drive-thru lanes and menu boards are located and designed in compliance with the Development Code.

3. The design, location, size, and operating characteristics of the proposed activity will be compatible with existing and future land uses in the vicinity.

The drive-thru carwash is located along State Street and is consistent with the existing commercial uses in the vicinity of the project. The building is oriented to activate with pedestrian and vehicular traffic. Drive-thru operations are designed to avoid conflicts with adjacent uses, with queuing areas sized to prevent spillover. The use is compatible with the commercial context and anticipated future development.

4. The proposed use will not be materially detrimental to the health, safety, or general welfare of the public or otherwise injurious to the environment or property.

The site provides adequate access, circulation, lighting, and parking to support safe operation. Drive-thru lanes are separated from pedestrian walkways and internal circulation routes to the extent feasible. Environmental review through the Mitigated Negative Declaration confirms that the project will not result in new or more severe environmental impacts. No detrimental effects to public health, safety, or welfare are anticipated.

5. The site is physically suitable for the proposed use.

a. Design, location, shape, size, and operating characteristics: The carwash appropriately sized and configured to accommodate buildings, drive-thru lanes, queuing, parking, and landscaping.

b. Public and emergency vehicle access: Multiple access points and internal drive aisles provide adequate emergency access.

c. Public protection services: The site is served by existing police and fire services, and the project does not create unusual service demands.

d. The provision of utilities (e.g., potable water, schools, solid waste collection and disposal, storm drainage, wastewater collection, treatment, and disposal, etc.).: All necessary utilities are available and adequate to serve the proposed restaurants.

6. The applicant agrees in writing to comply with all conditions of approval.

The applicant has agreed to comply with all conditions imposed by the review authority for the Minor Use Permits.

CONDITIONAL USE PERMIT FINDINGS (USE24-0052)

1. **The proposed use is consistent with the General Plan and any applicable specific plan;**

   The proposed use is consistent with the General Plan and zoning. The Commercial (C) General Plan land use designation provides for a variety of retail and service-oriented business activities, including both small and large-scale commercial development with retail, entertainment, and/or service uses. This designation allows for uses such as hotels, auto sales, auto repair, auto repair related uses, "big box" retail, factory outlets, and movie theaters. Uses such as offices, and others that are determined to be employment generators and compatible with commercial uses may also be allowed. The convenience store with service station is consistent with the General Plan land use designation, and it is not located within a Specific Plan.

2. **The proposed use is allowed within the applicable zone and complies with all other applicable provisions of this Development Code and the Municipal Code;**

   The proposed use is permitted within the applicable zoning district and complies with all relevant provisions of the Development Code and Municipal Code. The proposed service station and convenience store are consistent with the Commercial General (CG) zoning designation as the service station, and convenience store are listed as allowed uses, subject to a use permit. The CG zone is intended for areas suited to retail and service-oriented businesses, supporting both small- and large-scale commercial development. Located along major corridors (State Street and Ramona Expressway) the proposed project will offer services to the community. These transit corridors play a vital role in shaping the City's image and enhancing quality of life for residents and visitors. As conditioned, the project supports this objective and contributes positively to the character of the area, aligning with the intent of the CG zone.

3. **The design, location, size, and operating characteristics of the proposed activity will be compatible with the existing and future land uses in the vicinity;**

   The design, location, size, and operating characteristics of the proposed activity will be compatible with the existing, and future land uses in the vicinity. Property surrounding the service station are also designated CG and accommodate commercial uses.

4. **The proposed use will not be materially detrimental to the health, safety and general welfare of the public or otherwise injurious to the environment or to the property or improvements within the area.**

   The proposed use will not be materially detrimental to the health, safety, or general welfare of the public, nor will it be injurious to the environment or nearby properties and improvements. The project has been designed in compliance with all applicable building and fire codes. It also includes specific design features such as, controlled access driveways, appropriate lighting, and landscaping that promote safety and minimize potential impacts. Additionally, Conditions of Approval have been incorporated to address potential concerns related to noise, traffic circulation, and property maintenance. As a result, the project is expected to operate in

a manner that is compatible with the surrounding area and protective of public and environmental health.

5. **The site is physically suitable in terms of:**

   a. **Its design, location, shape, size, and operating characteristics of the proposed use;**

      The design, location, size, and operating characteristics of the proposed activity will be compatible with the existing, and future land uses in the vicinity. The Project is physically suitable for the proposed Project as the site is generally flat, and zoned for commercial uses.

   b. **The provision of public and emergency vehicle (e.g., fire and medical) access;**

      The site is designed to provide adequate access for emergency vehicles. The site plan has been reviewed by the Police and Fire Departments, and as conditioned, meets their requirements.

   c. **Public protection services (e.g., fire protection, police protection, etc.); and**

      The Project is consistent with the General Plan which helps to ensure that public protection services are available. The project has also been reviewed by the Police and Fire Departments, and as conditioned, meets their requirements.

   d. **The provision of utilities (e.g., potable water, schools, solid waste collection and disposal, storm drainage, wastewater collection, treatment, and disposal, etc.).**

      The Project will be connecting to all required utilities and as conditioned will be providing the required trash enclosures for solid waste disposal.

ADDITIONAL FINDINGS REGULATED BY SECTION 17.430.040 (H) – ALCOHOL SALES:

1. **The proposed use will not be detrimental to surrounding properties and neighborhoods including ensuring that the use does not contribute to loitering, public drunkenness, noise, obstructing pedestrian and vehicular traffic, parking, crime, interference with pedestrian corridors used by children, defacement and damage to structures.**

   The proposed use will not be detrimental as service stations along major corridors provide essential convenience goods to motorists, commuters, and regional travelers. Allowing incidental off-sale alcohol at a service station aligns with the established commercial function of the corridor.

   At service stations, alcohol sales are ancillary to the primary fueling and convenience retail use. These businesses typically offer a limited selection of beer and wine, not the broader inventory associated with liquor stores or specialty alcohol retailers. This reduces the likelihood of loitering, nuisance behavior, or high-frequency alcohol purchases.

2. **The proposed use will not adversely impact the suitability of adjacent commercially zoned properties for commercial uses.**

   The proposed use will not adversely affect the suitability of adjacent commercially zoned properties for commercial development. The project which includes a service station with a convenience store is compatible with both existing and planned uses typically found along major transportation corridors such as State Street and Ramona Expressway. As designed and conditioned, it will be consistent with surrounding and future commercial uses.

3. **The proposed use will not adversely affect the welfare of residents in the area or result in an undue concentration in the neighborhood of establishments dispensing alcoholic beverages, including beer and wine. For purposes of this Subparagraph, "undue concentration" shall be as defined in Business and Professions Code Section 23958.4.**

   The proposed use will not negatively impact the welfare of nearby residents, nor will it result in an undue concentration of establishments selling alcoholic beverages, including beer and wine, within the neighborhood. The project was transmitted to the Sheriff's Department, and there were no concerns identified.

   Notwithstanding Subparagraph 3 above, the review authority may approve a Conditional Use Permit despite an undue concentration of establishments dispensing alcoholic beverages, as defined in Business and Professions Code 23958.4, if the review authority first finds that the public convenience and necessity would be served by the issuance of the Conditional Use Permit and the use otherwise meets the remaining findings of this Subsection.

PUBLIC CONVENIENCE OR NECESSITY (PCorN) FINDINGS OF FACT: 17.430.040(I)

1. The public convenience would be served by the establishment of the proposed use.

The public convenience will be served by allowing alcohol sales within the Magnet Shopping Center. Alcohol sales are ancillary to the proposed grocery store and fueling and convenience retail use of the Service Station. This combination of services will improve access to everyday shopping needs for the San Jacinto community. The City's General Plan designates site for Community Commercial uses, and the concentration of businesses, including grocery stores and service stations are consistent with those policies. The presence of multiple off-sale licenses in the tract reflects the intended land use character of the corridor rather than an over-saturation of alcohol-related businesses. The proposed use complements the existing commercial mix and provides additional options for residents.

2. The proposed use is not anticipated to be the source of nuisance behavior associated with excessive consumption of alcoholic beverages.

The project has been designed and conditioned to prevent nuisance behavior. The requested license authorizes off-site sales only and does not permit on-site consumption of alcohol. The site has been developed to include adequate lighting, visibility, and access, all of which discourage loitering and other unwanted activity. Conditions of approval require that landscaping and parking lot lighting be properly maintained, and signage will be posted indicating that drinking alcohol in public areas is unlawful. Together, these measures ensure that neither the grocery store or service station will be a source of nuisance behavior related to excessive alcohol consumption.

3. The proposed use would not be detrimental to the public health, safety, or welfare.

As conditioned, the service station with convenience store will not be detrimental to the public health, safety, or welfare. Operational conditions require that the site be adequately lit, landscaped, and maintained, and the store will operate in compliance with all ABC regulations. Alcohol sales will occur only as part of a larger shopping experience, further limiting the likelihood of adverse impacts. With these safeguards in place, the project will function as a safe and compatible use within the shopping center.

4. The proposed use would not increase the severity of existing law enforcement or public nuisance problems in the surrounding area.

The addition of alcohol sales at this location is not expected to increase law enforcement or nuisance issues. The San Jacinto Sherrif's Department has reviewed the application and raised no objection to the issuance of the license. The site's layout and security features, provides a safe environment for alcohol sales. Customers purchasing alcohol in conjunction with gas and other grocery items are less likely to engage in nuisance activity than patrons of stand-alone liquor stores. As a result, the proposed use will not increase the severity of existing law enforcement demands or public nuisance problems in the area.

5. The proposed use is consistent with the objectives, policies, general land uses, and programs of the general plan, and any applicable specific plan.

The project is consistent with the City's General Plan land use designation of Community Commercial (CC), which envisions a variety of retail and service-oriented businesses serving both local residents and the regional market area. Alcohol sales are consistent with this land use framework and represent a logical component of a commercial center designed to meet community shopping needs. The project site is not located within a specific plan area, and therefore no conflict arises.

TENTATIVE PARCEL MAP FINDINGS: Map 38831 (SUB24-0005)

1. **The proposed subdivision and the design and improvements of the subdivision is consistent with the development code, general plan, any applicable specific plan, and the San Jacinto Municipal Code.**

   The subdivision is consistent with the Commercial (C) General Plan designation and the Commercial General (CG) zoning district. The proposed parcel configuration supports commercial development consistent with the approved Site Plan and Design Review, Minor Use Permits, and Conditional Use Permit. The map complies with applicable subdivision standards, access requirements, infrastructure provisions, and Municipal Code requirements. No specific plan applies to the site.

2. **The tentative map does not propose to divide land which is subject to a contract entered into pursuant to the California Land Conservation Act of 1965, or the land is subject to a Land Conservation Act contract but the resulting parcels following division of the land will be of an adequate size to sustain their agricultural use.**

   The property is not subject to a Land Conservation Act contract. Therefore, this finding is satisfied.

3. **The site is physically suitable for the type and proposed density of development proposed by the tentative map.**

   The 14.50-acre site is physically suitable for subdivision into 12 commercial parcels. The site has adequate area, access, topography, and utility availability to accommodate the proposed commercial uses. The parcel configuration allows for shared access, reciprocal parking, and coordinated infrastructure improvements consistent with the approved development plan.

4. **The design of the subdivision and the proposed improvements, with conditions of approval, are either:**

   1. **Not likely to cause significant environmental damage or substantially and avoidably injure fish or wildlife or their habitat; or**

   2. **An environmental impact report under which a finding has been made pursuant to Public Resources Code Section 21081(a)(3) that specific economic, social, or other considerations make infeasible mitigation measures or project alternatives identified in the environmental impact report.**

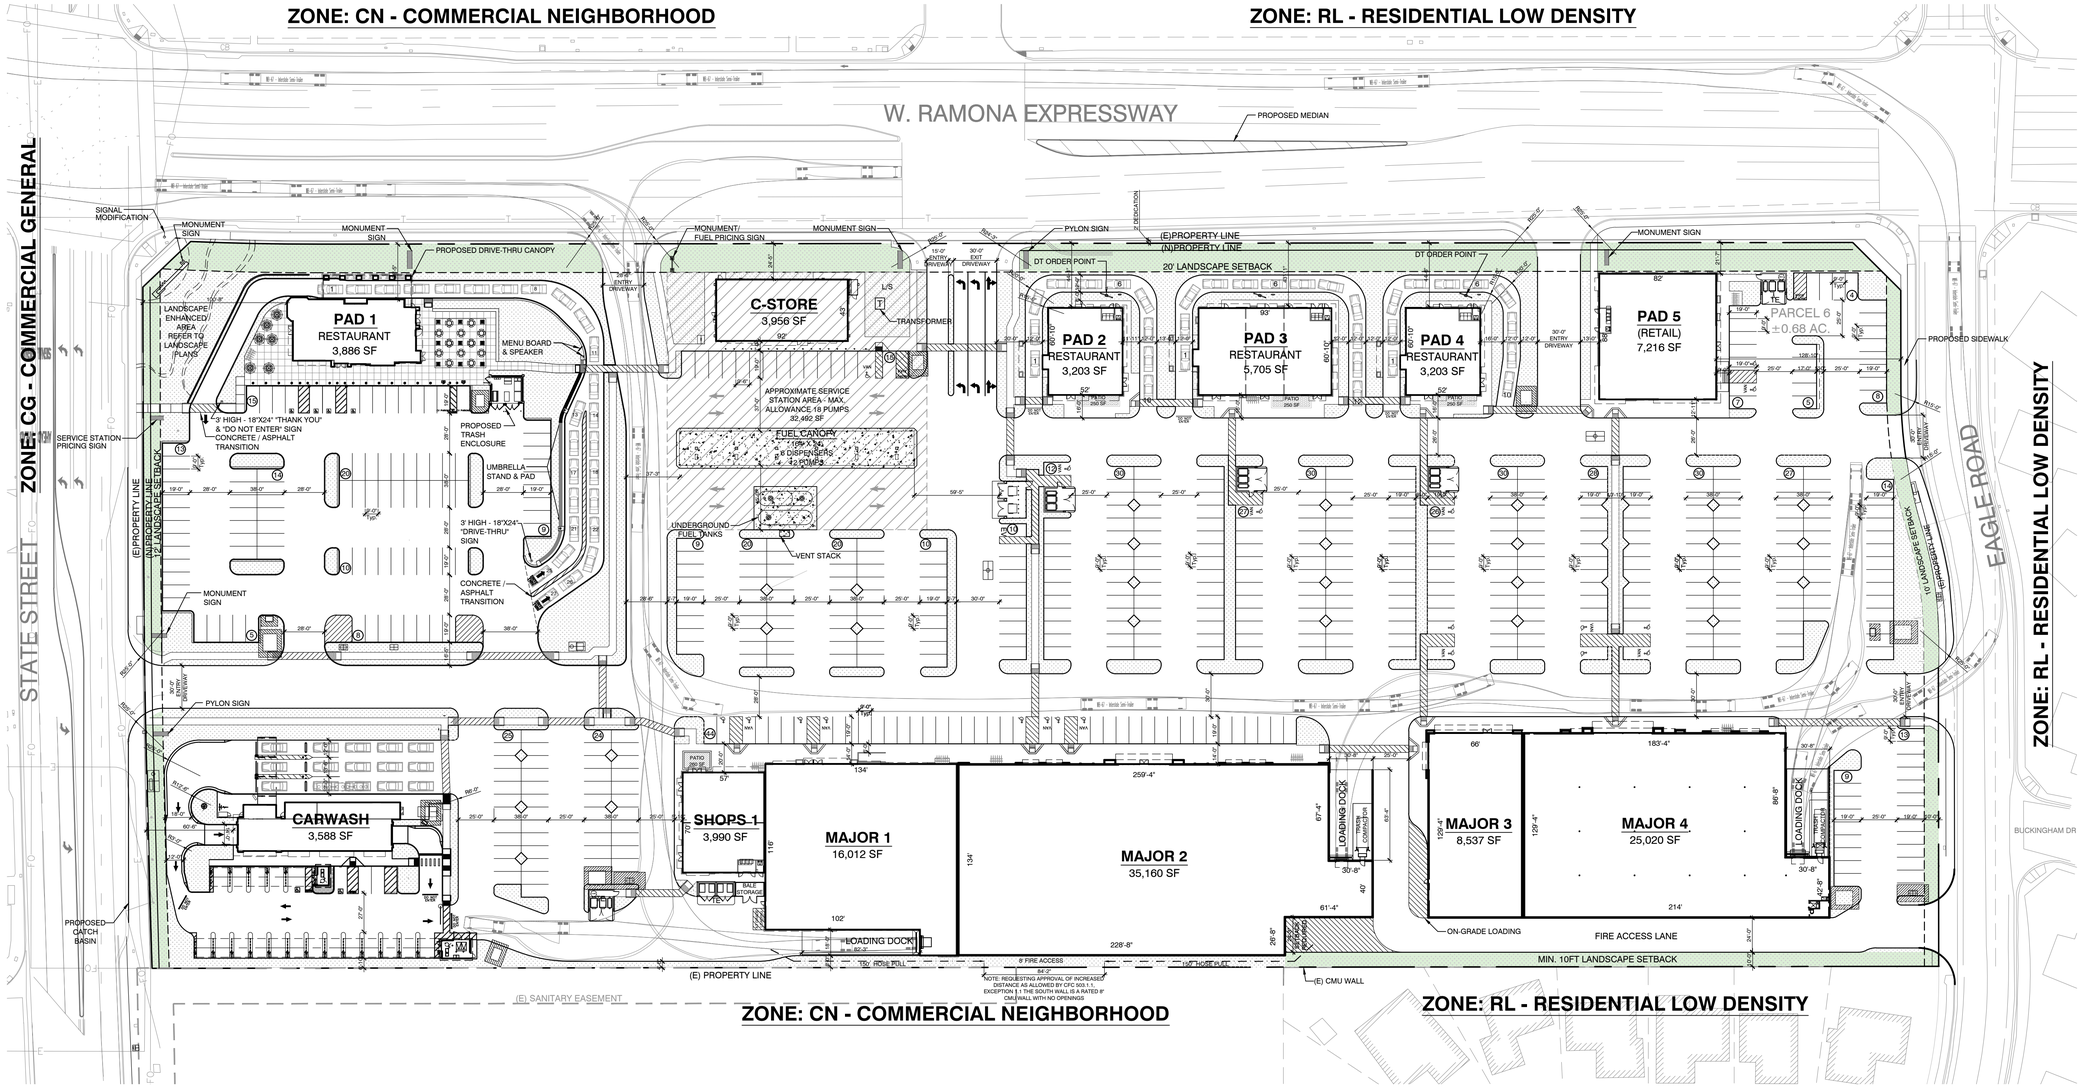
   Based upon the information contained in the Initial Study and pursuant to the requirements of CEQA; it has been determined that this Project, with the incorporation of mitigation measures, will not have a significant impact on the environment. The mitigation measures required to reduce or mitigate the impacts of this Project on the environment are included in the Project design and/or the Mitigation Monitoring Program and will be included as part of the Mitigated Negative Declaration for this Project.

5. **The design of the subdivision and the type of improvements are not likely to cause serious public health problems.**

   The subdivision provides for adequate circulation, access, storm drainage, utilities, and public safety services. Required infrastructure improvements, including roadway improvements along State Street, Ramona Expressway and Eagle Road, which will be constructed in accordance with City standards. The subdivision is not expected to create conditions that would pose serious public health concerns as noted in Mitigated Negative Declaration.

6. **The design of the subdivision provides for future passive or natural heating or cooling opportunities in the subdivision to the extent feasible.**

   The subdivision creates commercial parcels that allow for flexible building orientation and site design. Furthermore, the Site Plan and Design Review will include required landscaping, and shading elements. The proposed structures will incorporate energy-efficient design features consistent with applicable building codes.



7. **The design of the subdivision and the type of improvements will not conflict with easements acquired by the public at large for access through or use of property within the proposed subdivision, or the design of the alternate easements which are substantially equivalent to those previously acquired by the public will be provided.**

   The Tentative Parcel Map has been designed to maintain all existing public rights-of-way and access easements serving State Street, Ramona Expressway and Eagle Road. Required frontage improvements, including curb, gutter, sidewalk, parkway landscaping, will be constructed within existing or dedicated public right-of-way consistent with City standards. The proposed internal circulation system and access points are coordinated with the public street network and do not eliminate or obstruct any public access easements.

   Any existing utility or access easements within the subdivision boundaries will either remain in place, be relocated, or relinquished, if necessary, through separate instrument in a manner that provides substantially equivalent public access and utility function. The subdivision also requires a Master Property Owners Association and reciprocal access and parking agreements to ensure continued shared access and circulation throughout the development. Accordingly, the design of the subdivision and the proposed improvements do not conflict with public easements or access rights.

8. **The subdivision is consistent with the city's parkland dedication requirements (per the Quimby Act), as applicable, in accordance with Chapter 16.75 (Parkland Dedication and Fees).**

The Tentative Parcel Map is for commercial subdivision purposes and does not propose the creation of residential dwelling units. Chapter 16.75 of the San Jacinto Municipal Code, adopted pursuant to the Quimby Act, applies to residential subdivisions that generate demand for park and recreational facilities. Because the proposed subdivision does not include residential development, parkland dedication or in-lieu fees are not required. In addition, the City's adopted Development Impact Fee program does not assess park impact fees on Retail Commercial or Non-Retail Commercial/Industrial land uses. Therefore, the subdivision is consistent with the City's parkland dedication requirements and no parkland dedication or fee obligation is triggered.

ACCEPTED AND AGREED TO BY: _____

Applicant (signature) Date

PROJECT DESCRIPTION

A Site Plan & Design Review to construct a 116,205-square foot shopping center on 14.5 acres. The project includes a Tentative Parcel Map (TPM 38831) to subdivide the property into 12 parcels, a Conditional Use Permit to allow alcohol sales within the convenience store of a service station, and 5 Minor Use Permits for the development of 4 restaurants with drive-thru service, and a car wash with drive-thru service. In addition, the project contains 4 major tenants that includes 1 grocery store with alcohol sales and 3 retailers totaling a maximum of 85,000 square feet, 1 shops retail/restaurant building and a retail pad totaling a maximum of 12,000 square feet. PROJ23-0013, USE 23-0009, USE23-0011, USE 23-0012, USE23-0013, USE23-0014, USE24-0038, USE24-0052.

General Requirements & Information

A) This approval is for a Site Plan and Design Review (SPDR), a Conditional Use Permit (CUP), five Minor Use Permits, and a Tentative Parcel Map (PROJ23-0013) for the phased development of a commercial shopping center that includes:
   a. USE23-0009 a Site Plan & Design Review for the overall site plan and the design of a 116,205 square foot shopping center.
   b. SUB23-0005, a Tentative Parcel Map (TPM 38831) to subdivide two parcels totaling 14.5-acres lot into 12 commercial lots.
   c. USE24-0052, a Conditional Use Permit to allow the sale of beer and wine (Type-20) within a Service Station that includes a gasoline station and a 3,956 square foot convenience store).
   d. USE23-0011, a Minor Use Permit for a 3,886 square foot restaurant, with outdoor seating and a drive-thru lane. (Pad 1)
   e. USE23-0012, a Minor Use Permit for a 3,203 square foot restaurant with a drive-thru lane. (Pad 2)
   f. USE24-0038, a Minor Use Permit for a 5,705 square foot retail/restaurant building with a drive-thru lane. (Pad 3)
   g. USE23-0013, a Minor Use Permit for a 3,203 square foot restaurant with a drive-thru lane. (Pad 4)
   h. USE23-0014, a Minor Use Permit for an automated car wash with three queuing lanes.

B) The applicant/licensee shall by accepting these conditions agree to defend (with legal counsel of City's selection), indemnify, and hold harmless the City and its elected and appointed officials, agents, attorneys, employees and officers, from any action, claim or proceeding brought against the City or its elected and appointed officials, agents, employees and officers to attack, set aside, void, or annul a discretionary land use approval of the City, which action is brought within the applicable statute of limitations. The required indemnification shall include damages awarded against the City, if any, costs of suit, attorneys' fees and other costs and expenses incurred in connection with the action.

C) All plans subsequently submitted to the City shall be in substantial conformance with the plans in this approval, as conditioned. This condition applies to site plans, grading plans, landscape plans, building plans, elevations, and all other illustrations, text, or plans submitted to the City in connection with the Project. Conditions of approval shall be included on all subsequent plans, including construction plans.

D) The effective date of issuance of this Project is June 9, 2026. The approval will lapse if improvements have not commenced within three (3) years from the date upon which the approval was granted unless a time extension is approved by the City's applicable review authority. Applications for time extensions must be received prior to the expiration date.

E) The Project shall comply with all required standards of the Development Code, Subdivision Ordinance, and Municipal Code in their entirety, unless specifically approved under this entitlement or approved to deviate.

F) The project authorized under this permit shall be in compliance with and not violate any federal, state, or local laws, rules, regulations, or ordinances, or any conditions of approval. Failure to comply with these requirements shall constitute grounds for revocation of the permit.

G) This approval may be revoked if the project is operated or maintained in a manner that constitutes a nuisance or adversely affects public health, safety, or welfare.

H) The City shall have the right to inspect the site and facilities to ensure compliance with the conditions of approval and other requirements and to recover its actual costs related to such inspections from the property owner, tenant, or any responsible party.

I) This permit shall run with the land associated with the project and continue to be valid upon change of ownership. All applicable conditions of approval shall continue to apply with a change in property ownership.

J) The developer, applicant, or successor-in-interest shall pay any outstanding planning application or processing fees within ten (10) days of the City's request, and prior to permits being exercised. Failure to do so will be grounds for revocation of one or more of the following cases: PROJ23-0013, USE 23-0009, SUB23-0005, USE23-0011, USE 23-0012, USE23-0013, USE23-0014, USE24-0038, and USE24-0052.

K) The applicant/project shall be subject to all applicable development fees at the rate in effect at the time of building permit issuance. Such fees may include but not be limited to Development Impact Fees ("DIF"), Park Fees, School Fees, Transportation Uniform Mitigation Fees ("TUMF"), and Multiple Species Habitat Conservation Plan Fees ("MSHCP Fees"), and school fees (school fees paid directly to school district; evidence must be provided for school fee).

L) Associated landscaping, irrigation, fences, walls, hedges shall comply with Chapters 17.315 (Fences, Walls and Hedges) and 17.325 (Water Efficient Landscape and Irrigation) of the Development Code and all applicable Landscaping and Wall standards within the San Jacinto Landscape Design Guidelines, as determined by the Planning Division.

M) Utility location shall comply with City of San Jacinto Municipal Code Section 15.32.

N) Signs shall be permitted in accordance with Chapter 17.335 – Sign Regulations of the Development Code. A separate sign application, including fees and additional sets of plans, will be necessary prior to sign permit issuance. Any signs shown on plans for this approval are conceptual and are not approved. A master sign program may be necessary for specific signage or projects, as provided by the City Sign Regulations. All signage, including sign programs, shall be consistent with and in conformance with Chapter 17.335.

O) Construction shall adhere to the requirements of the San Jacinto Municipal Code.

P) Commencement of use or construction of buildings/structures approved by this entitlement cannot occur until all applicable conditions of approval for this project have been met and satisfied, in accordance to approved timing requirements, as determined by the City.

Q) The City may conduct a periodic review of the Use Permits to ensure proper compliance with this Development Code and any developmental or operational conditions of approval.

R) In the event of a conflict between any conditions for this approval, the most stringent in the opinion of the City shall prevail or as determined by City Planning.

S) The contractor should locate equipment staging areas that will create the greatest distance between construction-related noise/vibration sources and sensitive receptors nearest the project site during all project construction. Idling equipment should be turned off when not in use. Locate generators, and stationary construction equipment as far from any adjacent sensitive receptors, as reasonably feasible.

T) Any construction debris or rubbish shall be picked up on a daily basis, unless approved by the Planning Division.

U) The following Conditions of Approval incorporate mitigation measures from the proposed Mitigated Negative Declaration (MND).

Engineering Department General Requirements & Information

V) With respect to the Conditions of Approval for the above referenced project, the City of San Jacinto requires that the developer/property owner provide street improvements and/or road dedications in accordance with the City of San Jacinto Municipal Code, as listed below. It is understood that the site plan correctly shows all existing and proposed easements, traveled ways, rights-of-way, and drainage courses with appropriate Q's and their omission may require the site plan to be resubmitted for further consideration. These ordinances and the following conditions are essential parts and requirement occurring in ONE is as binding as though occurring in all. They are intended to be complimentary and to describe the conditions for a complete design of the improvements. Unless otherwise noted, all offsite improvements as conditioned shall be installed prior to issuance of any occupancy permits. All questions regarding the true meaning of the conditions shall be referred to the City Engineer's office. In the event of a conflict between any conditions stated below, those imposed by Planning Department and others, and requirements identified in the approved Traffic impact Analysis, the most stringent in the opinion of the City shall prevail.

W) The project grading shall be in a manner to perpetuate existing natural patterns. Any deviation from this, concentration or increase in runoff must have approval of adjacent property owners and City Engineer. The developer/property owner shall accept the offsite runoff and convey to acceptable outlet.

X) Prior to commencement of any construction or installation of fencing in public right-of-way, an encroachment permit shall be obtained from the City Engineer's office.

Y) The developer/property owner shall secure City's and appropriate agencies' clearances and approvals of the improvement plans.

Timing	Responsible Department	Prior to a Specific Date	Met?
7 Days Prior of Site Disturbance	Planning	1) **Mitigation Measure BIO-2:** Ground disturbing and vegetation removal activities shall be conducted outside of the nesting bird season. If these activities must occur during the nesting season, a nesting bird survey should be conducted within 7 days prior to any ground disturbing activities to determine if any nesting birds occur within the project site. If nesting birds are not found within the project site, no further actions are required. If nesting birds are observed on site, no impacts shall occur within 250 feet (500 feet for raptors) of any active nests. Construction activity may only occur within 250 feet of an active nest at the discretion of a biological monitor. Submit documentation to the Planning Division.	☐
30 Days Prior to Site Disturbance	Planning	2) **Mitigation Measure BIO-1:** A burrowing owl preconstruction survey shall be conducted no more than 30 days prior to any ground disturbance at the project site. Submit documentation to the Planning Division.	☐

Timing	Responsible Department	Prior to Grading or Similar Activities	Met?
Prior to Grading or Similar Activity	Planning	3) **Mitigation Measure CR-1:** Unanticipated Discovery of Cultural Resources In the event that previously undocumented historic or archaeological resources are unearthed during project construction, all earth-disturbing work near the find must be temporarily suspended or redirected until an archaeologist has evaluated the nature of the find and determined appropriate treatment. Once the resource has been properly treated or protected, work in the area may resume. A Native American representative shall be retained to monitor any mitigation work associated with Native American cultural material. Provide acknowledgment from the contractor.	☐
Prior to Grading or Similar Activity	Planning	4) **Mitigation Measure CR-2:** Unanticipated Discovery of Human Remains In the event that human remains are encountered during the course of any future development California State Law (Health and Safety Code Section 7050.5 and Section 5079.98 of the Public Resources Code) states that no further earth disturbance shall occur at the location of the find until the Riverside County Coroner has been notified. If the remains are determined to be prehistoric, the Coroner will notify the Native American Heritage Commission, which will determine and notify a Most Likely Descendant (MLD). With the permission of the landowner of his/her authorized representative, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC. Provide acknowledgment from the contractor.	☐

Prior to Grading or Similar Activity	Planning	5) **Mitigation Measure GEO-1:** Prior to issuance of grading permits, the developer shall provide documentation to the City for review and approval that: 1) confirms that grading and construction plans prepared for the project have included the recommendations intended to minimize impacts associated with ground shaking that are provided in the Geotechnical Study and 2) determine that the grading and plans adhere to City of San Jacinto The Magnet March 27, 2024 26 Draft Initial/MND City construction development standards as well as the seismic design parameters of the California Uniform Building Code.	☐
Prior to Grading or Similar Activity	Planning	6) **Mitigation Measure GEO-2:** Prior to issuance of grading permits, the developer shall provide documentation to the City for review and approval that a SWPPP is prepared, that it is implemented, and that the erosion control measures recommended in the Geotechnical Study are included appropriately.	☐
Prior to Grading or Similar Activity	Planning	7) **Mitigation Measure GEO-3:** Prior to the issuance of grading permits, the developer shall provide documentation to the City for review and approval that that measures related to the prevention of subsidence and collapse provided in the Geotechnical Study are included on construction plans and implemented in the field. City staff shall also verify that project grading and construction plans adhere to City construction development standards as well as the seismic design parameters of the California Uniform Building Code.	☐

Prior to Grading or Similar Activity	Planning	8) **Mitigation Measure GEO-4:** Prior to the issuance of grading permits, the developer shall provide documentation to the City for review and approval that those measures intended to avoid impacts related to expansive soils provided in the City of San Jacinto. The Magnet March 27, 2024 28 Draft Initial/MND Geotechnical Study are included on construction plans and implemented in the field; and that project grading and construction plans adhere to City construction development standards as well as the seismic design parameters of the California Uniform Building Code.	☐
Prior to Grading or Similar Activity	Planning	9) **Mitigation Measure GEO-5:** In the event that paleontological resources are unearthed during grading, ground disturbance activities shall be temporarily suspended or redirected until a paleontologist has evaluated the nature and significance of the find. If the discovery proves to be significant under CEQA, additional work such as preservation in place or data recovery, shall occur as required by the paleontologist in coordination with City staff and descendants and/or stakeholder groups, as warranted. Once the resource has been properly treated or protected, work in the area may resume. Provide an acknowledgment from the contractor.	☐

Prior to Grading or Similar Activity	Planning	10) **Mitigation Measure TCR-1**: Prior to the issuance of a grading permit, the Developer shall retain a professional archaeologist to conduct monitoring of all ground disturbing activities. The project Archaeologist shall have the authority to temporarily redirect earthmoving activities in the event that suspected archaeological resources are unearthed during project construction. The project archeologist shall attend the pre-grading meeting with the City, the construction manager and any contractors, and Consulting Tribal representatives; and will conduct a mandatory Cultural Resources Worker Sensitivity Training to those in attendance. The archaeological monitor shall have the authority to temporarily halt and redirect earth moving activities in the affected area in the event that suspected archaeological resources are unearthed. Provide documentation to the City for review and approval.	☐
Prior to Grading or Similar Activity	Planning	11) **Mitigation Measure TCR-2**: Prior to grading permit issuance, the developer shall enter into a Treatment and Disposition Agreement (TDA) with the Soboba Band of Luiseño Indians to address treatment and disposition of archaeological, or Tribal Cultural Resources and human remains associated with the Soboba Band of Luiseño Indians that may be uncovered or otherwise discovered during ground-disturbing activities related to the project, if monitoring deemed necessary by Soboba Band of Luiseño Indians. The TDA will establish provisions for tribal monitoring and shall be submitted to the Planning Division once it has been executed. Provide documentation to the City for review and approval.	☐

Prior to Grading or Similar Activity	Planning	12) **Mitigation Measure TCR-3:** The project Archaeologist, in consultation with the Consulting Tribe(s), the contractor, and the City, shall develop a CRMP in consultation pursuant to the definition in AB52 to address the details, timing and responsibility of all archaeological and cultural activities that will occur on the project site. A consulting Tribe is defined as a Tribe that initiated the AB 52 tribal consultation process for the project, has not opted out of the AB 52 consultation process, and has completed AB 52 consultation with the City as provided for in Cal Pub Res Code Section 21080.3.2(b)(1) of AB52. Details in the Plan shall include: a. Project description and location b. Project grading and development scheduling; c. Roles and responsibilities of individuals on the project; d. The pre-grading meeting and Cultural Resources Worker Sensitivity Training details; e. The protocols and stipulations that the contractor, City, Consulting Tribe (s) and project archaeologist will follow in the event of inadvertent cultural resources discoveries, human remains/cremations, sacred and ceremonial items, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation. f. The type of recordation needed for inadvertent finds and the stipulations of recordation of sacred items. g. Contact information of relevant individuals for the project. Provide documentation to the City for review and approval.	☐

Prior to Grading or Similar Activity	Planning	13) **Mitigation Measure TCR-4:** If human remains, grave goods, ceremonial items, and/or sacred items are encountered, work will immediately halt within the immediate area and any nearby area reasonably suspected to overlie adjacent remains, and a 100-foot ESA boundary will be established to protect the find from impact, and the Soboba Band of Luiseno Indians and the City of San Jacinto Planning Division shall be immediately notified. In accordance with Section 7050.5 of the California Health and Safety Code and State CEQA Guidelines Section 15064.5(e), if human remains are found, the Riverside County Coroner's office shall be notified by the permittee within 24 hours of the discovery. County Coroner's determination regarding the origin of the remains and any required notification is described in Section 7050.5 of the California Health and Safety Code and State CEQA Guidelines Section 15064.5(e). No further excavation or disturbance of the potential human remains, or any area reasonably suspected to overlie additional remains, shall occur until a determination has been made, any notifications have been sent and received, and the Riverside County Coroner's Office has cleared the site. Provide an acknowledgment from the contractor.	☐

Prior to Grading or Similar Activity	Planning	14) **Mitigation Measure TCR-5:** It is understood by all parties that unless otherwise required by law, the site of any reburial of Native American human remains or associated grave goods shall not be disclosed and shall not be governed by public disclosure requirements of the California Public Records Act. The Coroner, pursuant to the specific exemption set forth in California Government Code 6254 (r)., parties, and Lead Agencies, will be asked to withhold public disclosure information related to such reburial, pursuant to the specific exemption set forth in California Government Code 6254 (r).	☐
Prior to Grading or Similar Activity	Planning	15) **Mitigation Measure TCR-6:** Prior to final inspection, the developer/permit holder shall prompt the project Archeologist to submit two (2) copies of the Phase III Data Recovery report (if required for the project) and the Phase IV Cultural Resources Monitoring Report that complies with the Community Development Department's requirements for such reports. The Phase IV report shall include evidence of the required cultural/historical sensitivity training for the construction staff held during the pre-grade meeting. The Community Development Department shall review the reports to determine adequate mitigation compliance. Provided the reports are adequate, the Community Development Department shall clear this condition. Once the report(s) are determined to be adequate, two (2) copies shall be submitted to the Eastern Information Center (EIC) at the University of California Riverside (UCR) and one (1) copy shall be submitted to the Consulting Tribe(s) Cultural Resources Department(s).	☐
Prior to Grading or Similar Activity	Planning	16) A copy of all pages of these conditions of approval shall be included in the construction drawing packages for building, landscape, irrigation, grading permits/approvals, etc.	☐

Prior to Grading or Similar Activity	Planning	17) The developer/applicant or successor in interest shall pay any outstanding fees.	☐
Prior to Grading or Similar Activity	Planning	18) The contractor shall provide a letter that agrees to comply with the following requirements to the satisfaction of the Building & Safety Division: a. The site shall be watered on an on-going basis to control dust during construction and grading. b. There shall be regular street sweeping and clean-up of adjacent streets to minimize the amount of dust put into the air from motor vehicle travel. c. Mud and dirt shall be removed from construction equipment and vehicles prior to leaving the site to ensure they do not spread dirt into the street. d. An energy conservation plan showing compliance with Title 24 (Building Standards) of the California Administrative Code shall also be provided.	☐
Prior to Grading or Similar Activity	Planning	19) The contractor shall provide a letter that agrees to implement the following best practices during the construction phase of the development. a. Limit construction to the daytime hours (7:00 am to 7:00 pm) and prohibit construction on Sundays and holidays. b. At least 10 days prior to the start of construction activities, a sign shall be posted at the entrance(s) to the job site, clearly visible to the public, that includes permitted construction on days and hours, as well as telephone numbers of the City's and contractor's authorized representative that are assigned to respond in the event of a noise or vibration complaint. If the authorized contractor's representative receives a	☐

		complaint, he/she shall investigate, take appropriate corrective action, and report to the City. c. During the entire active construction period, equipment and trucks used for the project construction shall utilize the best available noise control techniques (e.g., improved mufflers, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds), wherever feasible. d. During the entire active construction period, stationary noise sources shall be located as far from sensitive receptors as possible, and they shall be incorporated to the extent feasible. e. Select haul routes that avoid the greatest amount of sensitive use areas. Avoid soil hauling through residential areas. f. Signs shall be posted at the job site entrance(s), within the on-site construction zones, and along queueing lanes (if any) to reinforce the prohibition of unnecessary engine idling. All other equipment shall be turned off if not in use for more than 5 minutes. During the entire active construction period and to the extent feasible, the use of noise-producing signals, including horns, whistles, alarms, and bells, shall be for safety warning purposes only. The construction manager shall use smart back-up alarms, which automatically adjust the alarm level based on the background noise level, or switch off back-up alarms and replace with human spotters in compliance with all safety requirements and laws.	
Prior to Grading or Similar Activity	Planning	20) Grading plans shall include an ADA path of travel.	☐

Prior to Grading or Similar Activity	Planning	21) The development shall be subject to all provisions of City of San Jacinto Municipal Code section 13.44, which establishes Urban Stormwater Runoff Management and discharge controls to improve Water Quality and comply with Federal/State Regulations and any subsequent amendments, revisions or ordinances pertaining thereto.	☐
Prior to Grading or Similar Activity	Planning	22) A Final Water Quality Management Plan ("FWQMP") shall be submitted and approved. FWQMPs shall include a project description and identify on-site Best Management Practices ("BMPs") that will be used to reduce pollutants into the storm drain system to maximum extent practical. The FWQMP shall identify the structural and non-structural measures consistent with the City's adopted requirements. BMPs are approved in concept by a Master Water Quality Management Plan ("MWQMP"). The individual parcels/lots or parts of the project shall submit individual FWQMP Addendums, including plans and details providing the elevations and slopes of the any basin(s) and other details for the proposed structural BMPs. The City Engineer, or designee, shall review and approve the FWQMP document(s), plans, and details. The property owners, applicant or developer shall also provide a signed, agreement(s), presenting shared responsibilities for the BMP maintenance, which shall be recorded.	☐
Prior to Grading or Similar Activity	Engineering	23) The developer/property owner shall have an approved grading plan, executed grading agreement as directed by the City Engineer, and posted securities.	☐
Prior to Grading or Similar Activity	Engineering	24) The developer/property owner shall submit the following plans and reports to the City Engineer for review and approval: a.Onsite Grading and Erosion Control Plans – Plans shall show the approved WDID number.	☐

		b. Geotechnical Report c. Storm Drain Improvement Plan d. Hydrology and Hydraulic Analysis e. Final WQMP (for reference) f. Sewer and Water Improvement Plan, per Fire Department and EMWD standards, shall be submitted to the City Engineer for review and approval. Fire Department and EMWD approval of Water Improvement Plan is required prior to City Engineer's approval. The designs shall comply with EMWD, RCFCD, Riverside County Transportation Department, Caltrans, City of San Jacinto, and ADA most recent standards, criteria, and requirement and in effect at the time of construction and shall be coordinated with the approved plans of the adjacent developments.	

Timing	Responsible Department	Prior to Recordation of the Final Map	Met?
Prior to Recordation of the Final Map	Engineering	25) A parcel map shall be filed for review and approval by the City Engineer.	☐
Prior to Recordation of the Final Map	Engineering	26) The developer/property owner shall have approved improvement plans, executed subdivision agreement, and posted securities.	☐
Prior to Recordation of the Final Map	Engineering	27) All easements and/or rights-of-way shall be offered for dedication to the public or other appropriate agencies in perpetuity and shall continue in force until the City or the appropriate agency accepts or abandons such offers. All dedications shall be free from all encumbrances as approved by the City Engineer.	☐
Prior to Recordation of the Final Map	Engineering	28) If applicable, the developer shall enter into a Cooperative Agreement with the City and Riverside County Flood Control and Water Conservation District establishing the terms and conditions covering the inspection, operation and maintenance of Master Drainage Plan facilities required to be constructed as part of the project.	☐
Prior to Recordation of the Final Map	Engineering	29) The following statement shall be added to the Parcel Map: NOTICE OF DRAINAGE FEES Notice is hereby given that this property is located in San Jacinto Valley Area Drainage Plan which was adopted by the City of San Jacinto pursuant to Ordinance 13-01 and Section 66001, et seq, of the Government Code and that said property is subject to fees for said drainage area. Notice is further given that, pursuant to Ordinance 13-01, payment of the drainage fees shall be paid to the City of San Jacinto prior to issuance of the building permit for a parcel, and that the property owner shall pay the	☐

		fee required at the rate in effect at the time of issuance of the actual permit.	
Prior to Recordation of the Final Map	Engineering	30) The developer/property owner shall submit the following plans and reports to the City Engineer for review and approval: a. Onsite Grading and Erosion Control Plans – Plans shall show the approved WDID number. b. Geotechnical Report c. Street Improvement Plan d. Storm Drain Improvement Plan e. Hydrology and Hydraulic Analysis f. Final WQMP (for reference) g. Sewer and Water Improvement Plan, per Fire Department and EMWD standards, shall be submitted to the City Engineer for review and approval. Fire Department and EMWD approval of Water Improvement Plan is required prior to City Engineer's approval. h. Street Light Plan prepared by a registered Electrical Engineer i. Signing and Striping Plan j. Traffic Signal Modification Plan	☐

		The design shall comply with EMWD, RCFCD, Riverside County Transportation Department, Caltrans, City of San Jacinto, and ADA most recent standards, criteria, and requirement and in effect at the time of construction and shall be coordinated with the approved plans of the adjacent developments.	
Prior to Recordation	Special Districts	31) The Developer shall establish a funding mechanism for the maintenance of public improvements. • Annexation into the Public Facilities Maintenance Community Facilities District (CFD 2020-1) is an option to fulfill the funding requirement for maintenance of public improvements. If a property owner opts not to annex into a CFD, the funding mechanism (HOA/POA) must be fully established to satisfy this condition. The Developer shall also establish a funding mechanism for the public safety services. • Annexation into the Public Safety Community Facilities Districts (CFD) is an option to fulfill the funding requirement for public safety services. *Funding of services under the City's CFDs will consist of an annual assessment based on the costs of such services, as determined by a Maintenance Cost Estimate.*	☐

Timing	Responsible Department	Prior to Issuance of Building Permit	Met?
Prior to Issuance of Building Permits	Planning	32) The proposed project may be built in various phases. Each building will require the submittal of building permit plans, including architecture, design, colors, and materials. Plans shall be substantially consistent with plans approved through this entitlement, as determined by City Planning.	☐
Prior to Issuance of Building Permits	Planning	33) A site construction plan shall be submitted for review and approval that details the entity (tenant or master developer) who is responsible to construct parking areas, drive aisles, landscape areas, and parking lot lighting.	☐
Prior to Issuance of Building Permits	Planning	34) Any use that includes the provision of shopping carts, such as a grocery store or similar retail establishment, shall incorporate designated Shopping Cart Corrals. Cart corrals shall be constructed of decorative, durable materials, such as block with a stucco finish, stone veneer, or other architecturally compatible treatments, to ensure visual consistency with the overall project design. The placement and design of cart corrals shall minimize visual clutter, support efficient cart management, and maintain a high-quality appearance throughout the site.	☐
Prior to Issuance of Building Permits	Planning	35) A copy of all pages of these conditions of approval shall be included in the construction drawing packages for building, landscape, irrigation, grading permits/approvals, etc.	☐
Prior to Issuance of Building Permits	Planning	36) All HVAC equipment shall be fully shielded behind parapet walls from line of sight of adjacent properties.	☐
Prior to Issuance of Building Permits	Planning	37) Prior to the issuance of building permits, the applicant shall submit an Outdoor Lighting Plan, including a full photometric analysis, to the City Planning Division for review and approval. The plan shall apply to all outdoor public or common areas, including but not limited to parking lots, drive aisles, pedestrian pathways, plazas, and building frontage areas. The Outdoor Lighting Plan shall comply with the following requirements:	☐

		• Adequate Illumination: All access driveways and circulation routes serving each use shall be provided with adequate lighting to ensure safe vehicular and pedestrian movement. • Fixture Specifications: The plan shall include manufacturer cut sheets and details for all proposed light fixtures, including mounting height, lumen output, shielding, and color temperature. • Responsibility Map: The submittal shall include a site map clearly identifying lighting zones and areas of maintenance responsibility. • All lighting shall be fully shielded or otherwise designed to prevent glare, light trespass beyond the property line, illumination onto public rights of way, or upward light emission into the night sky.	
Prior to Issuance of Building Permits	Planning	38) All ground-mounted equipment (i.e., gas/electric meters, utility/mechanical cabinets, etc.) shall be screened from view from any street or private property adjacent to the project site. Solid walls or landscape features may be used for ground screening; Chain-link fencing is not an approved ground screening material.	☐
Prior to Issuance of Building Permits	Planning	39) The applicant/developer/property owner shall provide water service to this project in accordance with the requirements of the appropriate utility purveyors. This project is within City of San Jacinto water service area. If the Developer utilizes the City of San Jacinto water service, the developer will need to install a looped system to ensure adequate pressure and flow. In order to create the looped system the developer will need to tie into the City's existing 10" C900 water main on Eagle just South of Ramona Expressway and run it through the development to State Street. In addition, install a new water main on State Street, south to Idyllwild Drive and East on Idyllwild to Eagle Road where the City's main currently terminates.	☐

		Alternatively, the developer has the option to utilize EMWD for water service if the project site is annexed into the EMWD water service area. Water improvements shall be installed per EMWD Standards and Fire Department requirements. A letter or similar documentation acceptable to the City verifying compliance shall be provided to the Planning Division for review and clearance.	
Prior to Issuance of Building Permits	Planning	40) The applicant/developer/property owner shall provide sewer service to this project in accordance with the requirements of EMWD and sewer improvements shall be installed per EMWD Standards. A letter and/or inter-agency agreement from EMWD to the City verifying compliance shall be provided to the Planning Division for review and clearance.	☐
Prior to Issuance of Building Permits	Planning	41) Prior to issuance of building permits for each individual building, the applicant shall submit plans for the associated trash enclosure(s) and receptacle areas. All trash enclosure designs shall substantially conform to the approved prototypical trash enclosures for the Shopping Center, including materials, dimensions, access features, screening elements, and functional components.	☐
Prior to Issuance of Building Permits	Planning	42) Submit a Master Sign Plan(s) and applications, pursuant to the Development Code and any applicable sign program, for review and approval.	☐
Prior to Issuance of Building Permits	Planning	43) All parking and drive aisles shall be developed in compliance with Chapter 17.330 (Off-Street Parking and Loading Standards) and screened from public right-of-way and public view with a landscape hedge or decorative wall, as approved by City Planning.	☐
Prior to Issuance of Building Permits	Planning	44) Building plans shall include an ADA path of travel.	☐

Prior to Issuance of Building Permits	Planning	45) The applicant shall submit a complete Master Landscape and Irrigation Plan(s) and associated application(s) to the City Planning Division for review and approval, consistent with the Development Code and the City's Landscape Design Guidelines. The submittal shall identify all proposed landscape areas throughout the site and shall include a Landscape Phasing Plan that clearly delineates the timing and sequencing of landscape installation for each phase of development.	☐
Prior to Issuance of Building Permits	Planning	46) Prior to the issuance of building permits or tenant improvement permits for each individual building or parcel, the tenant shall submit a Landscape and Irrigation Plan for review and approval by the City Planning Division. All tenant-level landscape plans shall substantially conform to the approved Master Landscape and Irrigation Plan for the Shopping Center, including plant palette, irrigation design, materials, and overall landscape character.	☐
Prior to Issuance of Building Permits	Planning	47) All loading docks and trash compactors shall be screened from public view or enclosed within the proposed building. Submit plans for review and approval.	☐
Prior to Issuance of Building Permits	Planning	48) The developer/applicant or successor in interest shall ensure the following pursuant to Section XII. I of the 2010 NPDES Permit. Field verification that structural Site Design, Source Control, and Treatment Control BMPs are designed, constructed, and functional in accordance with the approved Final Water Quality Management Plan (WQMP). The City WQMP Inspector will be notified of the required inspections during construction.	☐
Prior to Issuance of Building Permits	Building	49) Submit building application, plans, and applicable fees for construction and installation of project components.	☐
Prior to Issuance of Building Permits	Building	50) Gates or other obstructions to required Fire Department vehicle access roads shall be approved by the Fire Department prior to construction.	☐

Prior to Issuance of Building Permits	Building	51) This project is located within the limits of the San Jacinto Regional Area Drainage Plan for which drainage fees have been adopted. Drainage fee shall be paid to the City of San Jacinto prior to the issuance of a permit. Fees are subject to change and shall be in the amount adopted at the time.	☐
Prior to Issuance of Building Permits	Building	52) This project shall be subject to the payment of the adopted Traffic Signal Mitigation fees and the Transportation Uniform Mitigation Fee (TUMF), exempted by the ordinance establishing the TUMF program. The fees shall be subject to the provisions of the enabling ordinance and based upon the fee schedule in effect at the time.	☐
Prior to Issuance of Building Permits	Building	53) This project is subject to the payment of fees for the Multi-Species Habitat Conservation Plan (MSHCP), exempted by the ordinance establishing the MSHCP program. The fees shall be subject to the provisions of the enabling ordinance and based upon the fee schedule in effect at the time.	☐
Prior to Issuance of Building Permits	Engineering	54) All conditions required “Prior to the Issuance of a Grading Permit” have been met to the satisfaction of the City.	☐

Prior to Issuance of Building Permits	Engineering	55) Buildings or other required improvements shall not cross parcel lines. If any building or required improvements conflict, a parcel map shall be filed for review and approval and shall be recorded prior to construction of Pad 1 or the service station. Alternatively, a lot merger, lot line adjustment, or CC&R can be recorded to resolve any potential conflicts between existing lot lines and proposed structures. All building setbacks must comply with the City's Development Code. After recordation, a digital (pdf) copy of the recorded map shall be submitted to the Engineering Department.	☐
Prior to Issuance of Building Permits	Engineering	56) Ramona Expressway is classified as an Arterial (146'/110') per the General Plan. A 71-foot half width right-of-way is currently dedicated along the property northerly frontage. The applicant/property owner shall dedicate the required additional 2-feet of right-of-way to provide for a 73-foot half width right-of-way.	☐
Prior to Issuance of Building Permits	Engineering	57) State Street is classified as an Arterial(112'/76') per the City General Plan. A 55-foot half width right-of-way is currently dedicated along the property westerly frontage. The developer/property owner shall dedicate the required additional one foot (1') of right of way to provide 56-foot half width right-of-way.	☐
Prior to Issuance of Building Permits	Engineering	58) Eagle Road is classified as a Modified Collector (66'/48') per the Riverside County Standards. The developer/property owner shall verify the existing right-of-way. If necessary, the developer/property owner shall dedicate the appropriate right-of-way to achieve a 33-foot half width right-of-way along the property's easterly frontage.	☐

Prior to Issuance of Building Permits	Engineering	59) This Property is located in the San Jacinto Valley Area Drainage Plan which was adopted by the City of San Jacinto pursuant to Ordinance 13-01 and Section 66001, et seq, of the Government Code and that said property is subject to fees for said drainage area. Payment of the drainage fees shall be paid to the City of San Jacinto prior to issuance of each phase of improvements. The property owner shall pay the fee required at the rate in effect at the time of issuance of the actual permit, based on the amount of impervious area created.	☐
Prior to Issuance of Building Permits	Engineering	60) Property line corner cutbacks shall be dedicated per County of Riverside Standard No. 805. Curb ramps shall include concrete truncated domes per ADA standards.	☐
Prior to Issuance of Building Permits	Engineering	61) The developer/property owner shall submit to Engineering and Building & Safety a compaction certification from the Soils Engineer in compliance with the approved geotechnical/soils report and the pad elevation certification from the Civil Engineer in compliance with the approved Precise Grading Plan.	☐
Prior to Issuance of Building Permits	Engineering	62) All easements and/or rights-of-way shall be offered for dedication to the public or other appropriate agencies in perpetuity and shall continue in force until the City or the appropriate agency accepts or abandons such offers. All dedications shall be free from all encumbrances as approved by the City Engineer.	☐
Prior to Issuance of Building Permits	Engineering	63) All weather access per Fire Department standards shall be provided to each permitted buildings per the Precise Grading Plan.	☐
Prior to Issuance of Building Permits	Cal Fire – Riverside County Fire Department	64) Fire Protection Water Supplies/Fire Flow - Minimum fire flow for the construction of all buildings is required per CFC Appendix B or other approved method. Prior to building permit issuance for new construction, the applicant shall provide documentation to show there exists a water system capable of delivering the required fire flow. Specific design	☐

		features may increase or decrease the required fire flow. Reference CFC 507.3.	
Prior to Issuance of Building Permits	Cal Fire – Riverside County Fire Department	65) Fire Protection Water Supplies/Hydrants - The minimum number of fire hydrants required, as well as the location and spacing of fire hydrants, shall comply with CFC Appendix C and NFPA 24. Fire hydrants shall be located no more than 400 feet from all portions of the exterior of the building along an approved route on a fire apparatus access road, unless otherwise approved by the Fire Department. Fire hydrants shall be at least 40 feet from the building it is serving. A fire hydrant shall be located within 20 to 100 feet of the fire department connection for buildings protected with a fire sprinkler system. The size and number of outlets required for the approved fire hydrants are 4" x 2 ½" x 2 ½" (super hydrant). Reference CFC 507.5, CFC Appendix C and NFPA 24 7.2.3.	☐
Prior to Issuance of Building Permits	Cal Fire – Riverside County Fire Department	66) Fire Department Access - Fire apparatus access roads shall be provided to within 150 feet of all exterior portions of buildings, except for the south wall of Major 1 and Major 2, since the south wall has no openings, is rated with 8" CMU wall, and the buildings will have an increased sprinkler density. Fire apparatus access roads shall have an unobstructed width of not less than 24 feet. Dead-end fire apparatus access roads in excess of 150 feet shall be provided with an approved turn around. The minimum required turning radius of a fire apparatus access road is 45 feet outside radius and 24 feet inside radius. The construction of the fire apparatus access roads shall be all weather and capable of sustaining 80,000 lbs. Unless otherwise approved, the grade of a fire apparatus access road shall not exceed 16 percent, and the cross slope shall not exceed 2.5 percent. The angles of approach and departure for fire apparatus access roads shall be a maximum of 6 percent grade change for 25 feet of approach/departure. Reference CFC 503.1.1, 503.2.1 as amended by the County of Riverside and Riverside County Office of the Fire Marshal Guideline OFM-01A.	☐

Prior to Issuance of Building Permits	Cal Fire – Riverside County Fire Department	67) Fire Department Access Turn Around - Dead-end fire apparatus access roads in excess of 150 feet in length shall be provided with a bulb turnaround at the terminus measuring a minimum of 45 feet outside radius and 24 feet inside radius. Parallel parking around the perimeter of the bulb is acceptable provided the bulb outside turning radius is increased by 8 feet. In-lieu of a bulb, a hammer-head type turnaround is acceptable where the top of the "T" dimension is 120 feet with the stem in the center. Additional turnaround designs may be acceptable as approved by the Fire Department. Reference CFC 503.1.1, 503.2.1 as amended by the County of Riverside and Riverside County Office of the Fire Marshal Guideline OFM-01A.	☐
Prior to Issuance of Building Permits	Cal Fire – Riverside County Fire Department	68) Secondary Access – Unless otherwise approved by the Fire Department, dead end fire apparatus access roads shall not exceed Secondary egress/access fire apparatus access roads shall provide independent egress/access from/to the area or as otherwise approved by the Fire Department. Secondary egress/access fire apparatus access roads shall be as remote as possible from the primary fire apparatus access road to reduce the possibility that both routes will be obstructed by a single emergency. Additional fire apparatus access roads based on the potential for impairment by vehicle congestion, condition of terrain, climatic conditions, anticipated magnitude of a potential incident, or other factors that could limit access may be required by the Fire Department. Reference CFC 503.1.2 and Riverside County Office of the Fire Marshal Guidelines.	☐

Prior to Issuance of Building Permits	Cal Fire – Riverside County Fire Department	69) Fire Department Construction Permit Review - Submittal of construction plans to the Fire Department will be required. Final fire and life safety conditions will be addressed when the Fire Department reviews these plans. These conditions will be based on California Fire Code, California Building Code (CBC), and related codes/standards adopted at the time of construction plan submittal. Reference CFC 105.1.	☐
Prior to Issuance of Building Permits	Cal Fire – Riverside County Fire Department	70) Fire Sprinkler System - All new commercial buildings and structures 3,600 square feet or larger will be required to install a fire sprinkler system. Reference CFC 903.2 as amended by the City of San Jacinto Municipal Code.	☐
Prior to Issuance of Building Permits	Cal Fire – Riverside County Fire Department	71) Fire Alarm and Detection System - A water flow monitoring system and/or fire alarm system may be required as determined at time of building construction plan review. Reference CFC 903.4 and CFC 907.2.	☐
Prior to Issuance of Building Permits	Cal Fire – Riverside County Fire Department	72) Unlimited Area Building - Based upon the building construction type and requirements of the California Building Code (CBC), 60 feet of open space (with some reductions permitted) may be required around the building. Consult with your architect for additional information. Reference CBC 507.	☐
Prior to Issuance of Building Permits	Cal Fire – Riverside County Fire Department	73) Gate Access: All electronically operated gates shall be provided with Knox key switches and automatic sensors for access. These gates shall be provided with access to gate equipment or another method to open the gate if there is a power failure. (Manual gates shall not be locked unless a Knox Box containing the key to the lock is installed in an approved location on the approach side of the gate). A pedestrian gate, if used to provide access, shall be a minimum 3 feet wide and provided with a Knox Box/Padlock if locked. Reference CFC 506.1.	☐

Prior to Issuance of Building Permits	Cal Fire – Riverside County Fire Department	74) Water Plans: If fire hydrants are required to be installed, applicant/developer shall furnish the water system fire hydrant plans to the Fire Department for review and approval prior to building permit issuance. Plans shall be signed by a registered civil engineer, and shall confirm hydrant type, location, spacing, and minimum fire flow. Once plans are signed and approved by the local water authority, the originals shall be presented to the Fire Department for review and approval. Reference CFC 105.4.1.	☐

Timing	Responsible Department	Prior to the Issuance of a Certificate of Occupancy	Met?
Prior to the Certificate of Occupancy	Planning	75) Landscape and Irrigation must be installed per the approved plans. All items included on the approved landscape and irrigation plans, such as landscaping and planting, irrigation systems and components, dust control measures, walls/fences, pedestrian walkways, etc., shall be installed. Parkway landscaping on State Street shall be installed prior to the occupancy of Pad1, the Carwash or any Major Tenant. Parkway landscaping on Ramona Expressway between State Street and the eastern side of Village of San Jacinto Driveway shall be installed prior to Pad 1, the Service Station or any Major Tenant. Parkway landscaping on Ramona Expressway between the western portion of Village of San Jacinto Driveway and Eagle Road shall be installed prior to Pad 2, Pad 3, Pad 4, Pad, 5 or any Major Tenant.	☐
Prior to the Certificate of Occupancy	Planning	76) All required on-site improvements shall be installed per approved plans.	☐

Prior to the Certificate of Occupancy	Planning	77) Primary driveways and adjacent landscaping planters shall be installed as follows: • Pad 1 require completion of the access driveway on State Street, the western driveway and the driveway at Village San Jacinto. In addition, the three driveways shall be connected with a drive aisle in accordance with the approved Site Plan. • Carwash shall require completion of the access driveway on State Street and the western driveway on Ramona Expressway. In addition, the two driveways shall be connected with a drive aisle in accordance with the approved Site Plan. • The service station shall require the completion of the western driveway and the driveway at Village of San Jacinto. In addition, the two driveways shall be connected with a drive aisle north and south of the fuel Canopy in accordance with the approved Site Plan. • Pad 2, Pad 3 and Pad 4 shall require the completion of the driveway at Village of San Jacinto and the eastern driveway. In addition, the two driveways shall be connected with the proposed east-west driveway south of the aforementioned pads in accordance with the approved Site Plan. • Pad 5 shall require the eastern driveway to be completed and connected to the northern driveway on Eagle Road in accordance with the approved Site Plan.	☐

		• Shops 1 and Major 1 shall require the completion of the State Street Driveway, the western driveway, and the Village of San Jacinto Driveway. In addition, the driveways shall be connected with a completed drive-aisle in accordance with the approved Site Plan. • Major 2, Major 3, and Major 4 shall require the completion of the driveway on State Street, the driveway at Village of San Jacinto and all proposed driveways on Eagle Road. In addition, the driveways shall be connected with a completed drive-aisle in accordance with the approved Site Plan.	
Prior to the Certificate of Occupancy	Planning	78) Lighting shall be provided throughout the parking area at all hours of customer and employee use in accordance with the lighting phasing plan.	☐
Prior to the Certificate of Occupancy	Planning	79) All site improvements shall be installed or constructed per approved building permit plans required for each building/tenant per phasing exhibits.	☐
Prior to the Certificate of Occupancy	Planning	80) The developer/applicant shall prepare a Master Property Owner's Association for City review and approval. The document shall include provisions for maintenance of all common and public areas, reciprocal parking and access, consistent uniform signage and architectural theme, building colors, and materials for the Project, and maintenance responsibilities in the event any assessment district is reduced or eliminated. The City may enforce its interests in the CC&Rs.	☐

Prior to the Certificate of Occupancy	Planning	81) The developer/applicant or successor in interest shall submit the following items for the landscape and irrigation development and maintenance: a. The signed Landscape Certificate of Completion pursuant to Section 17.325.070 – Certificate of Completion of the Development Code; b. The irrigation scheduling pursuant to Section 17.325.080 – Irrigation Scheduling of the Development Code; c. The Landscape and Irrigation Maintenance Schedule pursuant to Section 17.325.090 – Landscape and Irrigation Maintenance Schedule of the Development Code; and d. The Irrigation Audit, Irrigation Survey, and Irrigation Water Use Analysis are pursuant to Section 17.325.100 — Irrigation Audit, Irrigation Survey, and Irrigation Water Use Analysis of the Development Code.	☐
Prior to the Certificate of Occupancy	Planning	82) All walls and fences shall be installed per the fence and wall plan.	☐

Prior to the Certificate of Occupancy	Planning	83) All new and existing onsite utilities shall be located underground. Appurtenances and associated equipment including, but not limited to, surface-mounted transformers, pedestal-mounted terminal boxes and meter cabinets, and concealed ducts in an underground system, may be placed aboveground. Where such facilities are not undergrounded such appurtenances and equipment shall be screened from public view by block enclosures and/or landscaping.	☐
Prior to the Certificate of Occupancy	Planning	84) All utility substructures shall be located away and/or screened from public view with landscaping materials. Plans shall be submitted to verify conformity, as determined by City Planning.	☐
Prior to the Certificate of Occupancy	Planning	85) Provide written certification from the responsible contractor that the parking lot lighting was installed per approved plans and lighting does not exceed one-half foot candle lighting along all property lines.	☐
Prior to the Certificate of Occupancy	Building	86) All department/agency requirements and signoffs shall be complete and obtained.	☐
Prior to the Certificate of Occupancy	Building	87) Specific addresses for each building shall be provided to make such number plainly visible from the public street, avenue, court, or alley upon which property fronts, and shall be contrasting color and background.	☐

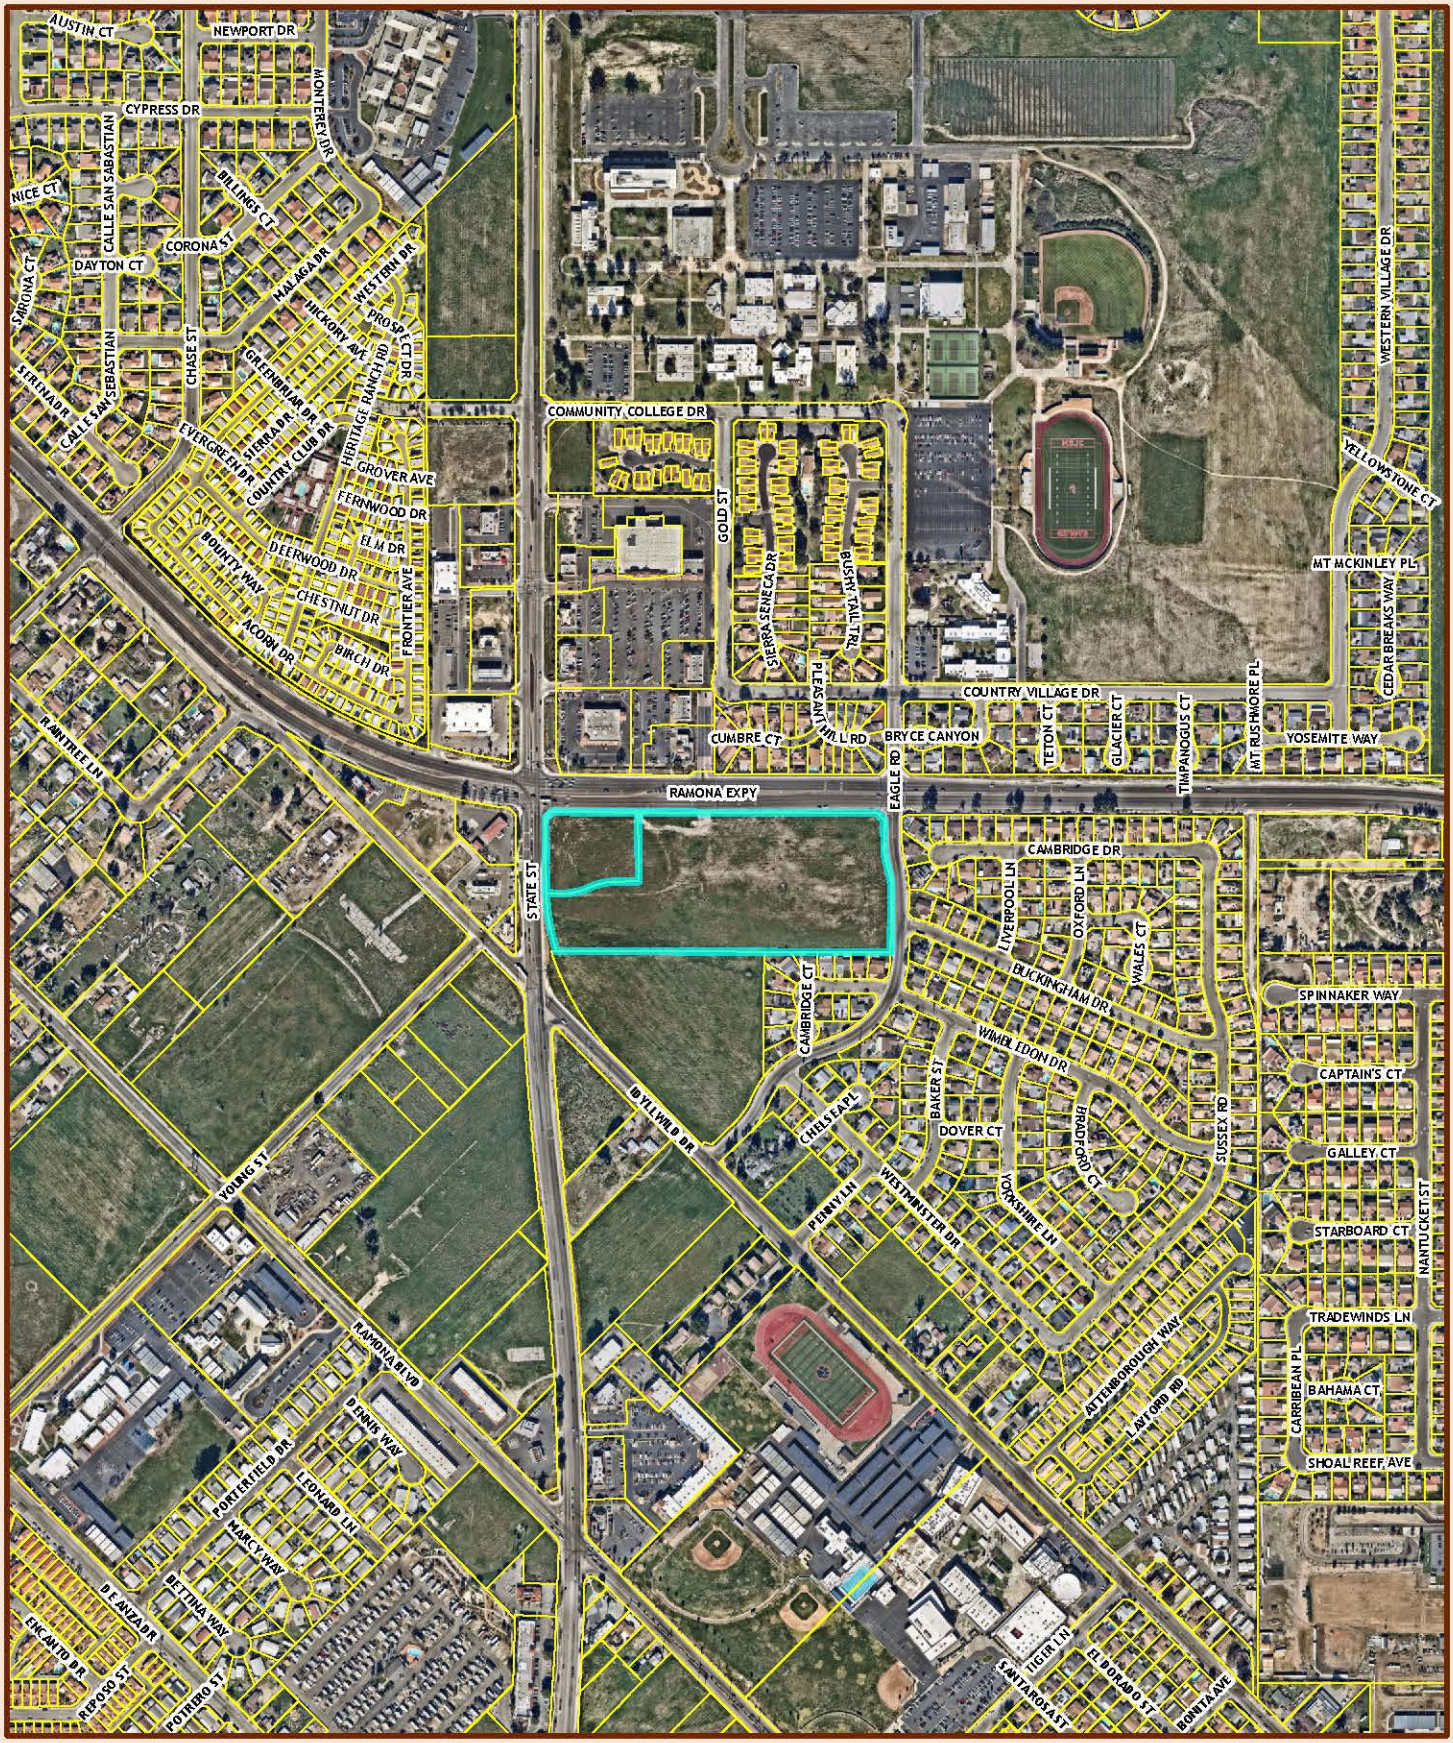
Prior to the Certificate of Occupancy	Building	88) Pursuant to the traffic impact analysis (TIA) prepared by Linscott, Law, & Greenspan Engineers, the developer/property owner shall: Pay the project's fair share of 50.34% of the total estimated construction cost of the State Street/Community College Drive traffic signal. As an alternative to paying fair share fees, the developer/property owner may opt to construct the above-mentioned improvements in which the City would support entering into an Improvement and Credit Agreement that would offset construction costs by providing credit for the project's Traffic Signalization and Transportation Uniform Mitigation development fee obligation. This condition is required prior to the Occupancy of any Major Tenant.	☐
Prior to the Certificate of Occupancy	Engineering	89) The developer/property owner shall construct the traffic signal modifications at the intersection of State Street and Ramona Expressway to accommodate the addition of a northbound left-turn lane, the addition of a southbound right-turn lane, and to comply with Appendix G of the 2040 General Plan. This condition is required to be met prior to Pad 1, the Service Station, the Carwash or any Major Tenant.	☐

Prior to the Certificate of Occupancy	Engineering	90) The developer/property owner shall install signage and striping to accommodate proposed improvements on State Street and Ramona Expressway. The signage and striping at the State Street/Ramona Expressway intersection shall include the addition of a northbound left-turn lane, the addition of a southbound right-turn lane, and comply with Appendix G of the 2040 General Plan. This condition is required to be met prior to the occupancy of Pad1, the Carwash, Service Station, Shops 1, or any Major Tenant.	☐

Prior to the Certificate of Occupancy	Engineering	91) Ramona Expressway classified as an Arterial (146'/110'). The portion of the Ramona Expressway between State Street and the Village of San Jacinto half width dedicated right-of-way, shall be improved to provide for 8-inch curb and gutter located 55-foot south of centerline, pavement using a TI of 11.0 and PG 70-10, 37-foot wide parkway consisting of a Class I Multi-Use Path per City of San Jacinto Trails Master plan, landscaping, and streetlights subject to the result of a photometric study prepared by a registered electrical engineer, per City of San Jacinto, County of Riverside and Caltrans standards. The existing curb and gutter is placed at an acceptable location and can remain in place if it is determined to be in good condition at the time of permits. The portion of the Ramona Expressway between State Street and the eastern most part of the driveway at Village of San Jacinto is required to be completed prior to occupancy of Pad 1, the Service Station, Shops 1, or any Major tenant. The portion of the Ramona Expressway between the western most point of Village of San Jacinto driveway and Eagle Road is required to be met prior to occupancy Pad 2, Pad 3, Pad4, Pad 5, or any Major tenant.	☐
Prior to the Certificate of Occupancy	Engineering	92) Install raised landscaped median on Ramona Expressway on the east side of "Village at San Jacinto" Intersection to Eagle Road comparable to the existing median west of the said intersection This condition shall be met prior to occupancy of Pad 2, Pad 3, Pad 4, Pad 5, or any Major tenant as approved by the City Engineer.	☐

Prior to the Certificate of Occupancy	Engineering	93) State Street classified as an Arterial (112′/76′) (with 12-foot landscaped median) along the property westerly frontage within the dedicated right-of-way shall be improved to provide for a 56-foot wide halfwidth right-of-way, asphalt paving using a TI of 9.0 and PG 70-10 (for all northbound lanes and the southbound lane adjacent to the median), 8-inch curb and gutter 45-feet east of centerline, Class II buffered bike lane per City of San Jacinto Trails Master Plan, sidewalk and streetlights subject to the photometric analysis, per City of San Jacinto, County of Riverside and Caltrans standards. Existing improvements can remain if determined to be in good condition by the City Engineer. This condition will not require storm water improvements on the west side of State Street for local drainage. This condition is required to be met prior to occupancy of Pad 1, the Carwash, the Service Station, Shops 1, or Major 1.	☐
Prior to the Certificate of Occupancy	Engineering	94) Install a raised landscaped median on State Street from Idyllwild Drive to Ramona Expressway comparable to the existing median located on State Street, north of Ramona Expressway, and as approved by the City Engineer. This condition is required to be met prior to occupancy of Pad 1, the Carwash, the Service Station, Shops 1, or any Major 1.	☐

Prior to the Certificate of Occupancy	Engineering	95) Eagle Road classified as a Modified Collector (66'/48') within the dedicated right-of-way shall be improved to provide for a 33-foot wide halfwidth right-of-way. Eagle Road shall be paved using a TI of 8.0 and PG 64-10, 8- inch curb and gutter 24-feet west of centerline, 6-foot wide sidewalk, landscaping, and streetlights subject to the photometric analysis, per City of San Jacinto, County of Riverside and Caltrans standards. The curb, gutter and paving can remain in place if it is determined to be in good condition at the time of permits per as determined by the City Engineer. This condition is required to be met prior to occupancy of Pad 4, Pad 5, or any Major Tenant.	☐
Prior to the Certificate of Occupancy	Engineering	96) If the existing pavement is not in good condition the developer/property owner may use grind and overlay technique as determined by the City Engineer.	☐
Prior to the Certificate of Occupancy	Engineering	97) The developer/property owner shall provide for utility trench surface repair as directed by the City Engineer if applicable.	☐



Prior to the Certificate of Occupancy	Engineering	98) The project is impacted by San Jacinto Valley Master Drainage Plan facilities, Line H and Line H-1. PM 22092 dedicated a 40-foot wide easement for storm drain purposes that crosses the site and was intended for Line H-1. The applicant has submitted a drainage study that proposes an alternative to the adopted master drainage plan. The study would take advantage of an existing 24-inch and 18-inch pipe system in Ramona Expressway (identified as Line H-3) to collect and convey runoff to the existing Line H crossing under Ramona Expressway. The developer/property owner shall upsize Line H-3 to accommodate the tributary 10-year flow rate. The City has no objection to the vacation of the existing drainage easement for Line H-1. Line H should be extended from the existing crossing to the project's southwest corner, an adequate inlet shall be provided at the terminus of Line H. This segment of Line H should be designed to convey the tributary 10-year flow rate. Plans for the drainage improvements, along with supporting hydrology and hydraulic calculations shall be submitted for approval. This condition is required to be met prior to occupancy of any building.	☐
Prior to the Certificate of Occupancy	Special Districts	99)Annexation into the applicable CFDs must be complete.	☐

Prior to the Certificate of Occupancy	Special Districts	100) Development must comply with Storm Water Basin & Pump Specifications and Standards. Privately maintained storm water and water quality systems will be required to submit an Irrevocable Offer of Dedication, or similar dedication language upon map recordation, for each basin lot.	☐
Prior to the Certificate of Occupancy	Special Districts	101) Development must comply with Landscape and Irrigation Design Guidelines.	☐
Prior to the Certificate of Occupancy	Special Districts	102) Landscape improvements shall include irrigation meters and backflow devices with tampering preventive cage, exclusive for right-of-way landscaping. Right-of-way landscaping must be divided from private property by form or mow-curb or other approved materials.	☐
Prior to the Certificate of Occupancy	Special Districts	103) Landscape areas in the right-of-way shall include an independent irrigation control system, with separate electric meter, exclusive for right-of-way landscaping. Cal-Sense version approved by the Public Utilities Superintendent is required for City maintained irrigation areas. (Must be operational and certified by Cal-Sense)	☐

Timing	Responsible Department	Prior to Acceptance of Public Improvements	Met?
Prior to Acceptance of Public Improvements	Special Districts	104) Developer will ensure that funds are available for maintenance, in the event that improvements are completed, and ready for City takeover, PRIOR to levy collection. • The first installment of collected assessments is paid to the City in January of each year. In the event that takeover is requested before the first installment is paid to the City, the Developer will either: ❖ Pay an advancement of funds for the months included from takeover to collection (amount to be set by cost estimate at annexation) OR ❖ Continue to maintain improvements until City has acquired enough funds to sustain maintenance or until first assessment installment is received, whichever is first	☐
Prior to Acceptance of Public Improvements	Special Districts	105) Upon acceptance and City take-over, developer will ensure that a minimum of one-year warranty is in place for landscape, irrigation, and basin integrity, inclusive pumps and mechanical equipment used for the maintenance of the improvements taken over.	☐

Timing	Responsible Department	Operational / Performance / Ongoing Conditions	
Operational	Planning	106) Required parking shall remain usable and accessible, and lighting shall be provided, as approved, at all hours of customer and employee use. The use of parking and loading spaces for customers and employees, including ADA spaces, shall not be prevented, prohibited, limited, restricted, eliminated or adapted for other use excepted as follows: • Use of parking spaces for drive-thru overflow to prevent traffic backup onto shopping center roads, or city streets in a manner acceptable to the City; • Special Events with an approved Temporary Use Permit.	☐
Operational	Planning	107) All landscaped areas shall be maintained in a thriving condition, free of weeds, trash and debris.	☐
Operational	Planning	108) Deliveries, loading and unloading activities, and trash pick-up hours shall be limited to daytime hours only (7:00 a.m. to 7:00 p.m.) for Major 3 and Major 4.	☐
Operational	Planning	109) The business shall maintain lighting to illuminate for security and safety of parking and access areas at no less than one-foot candle of illumination at ground level.	☐
Operational	Planning	110) Any business selling alcohol shall maintain an active ABC license issued and maintained by the California Department of ABC.	☐
Operational	Planning	111) The permittee of any alcohol sales shall conform to the regulations of the Department of Alcoholic Beverage Control (ABC).	☐
Operational	Planning	112) Any premises approved to sell alcohol shall be posted to indicate that it is unlawful for anyone to drink or consume any alcoholic beverage in any public place.	☐

Operational	Planning	113) The Permittee shall remove litter from the premises, public sidewalks, and parking lots daily and keep the areas swept weekly to prevent debris buildup. Trash cans shall be added, and "No Littering" signs shall be posted on the premises.	☐
Operational	Planning	114) The owner and management of the establishment selling alcoholic beverages shall provide ABC-approved and/or certified training for all employees who sell or serve alcoholic drinks at the first available opportunity or no later than thirty (30) days from the employee's date of employment.	☐
Operational	Planning	115) No outdoor storage and display/sales is permitted without an approved Temporary Use Permit.	☐
Operational	Building	116) All required Fire Department vehicle access roads shall be maintained in a passable condition at all times for emergency Fire Department use.	☐
Operational	Building	117) Contact the Community Development Department, specifically the Building and Safety Division, if water supply for fire hydrants is lost or if pressure is dramatically reduced.	☐
Operational	Building	118) Outdoor dining areas must be cleaned daily and kept free of debris.	☐

To the San Jacinto Planning Commission,

I am writing to strongly oppose the proposed Magnet Shopping Center (PROJ23-0013) at State Street and Ramona Expressway due to severe safety and traffic concerns for the adjacent residential communities.

The inclusion of four drive-thrus, a car wash, and a gas station will create an unacceptable surge in traffic, endangering local pedestrians and leading to cut-through traffic in our neighborhood. Furthermore, our neighborhood is already experiencing unaddressed property crimes, such as ongoing mailbox break-ins, which local law enforcement and city officials currently lack the resources to resolve. Introducing a massive, high-traffic commercial center will inevitably bring more property crime and loitering into our immediate backyards, further overwhelming our limited public safety resources.

I urge the Planning Commission to deny the Mitigated Negative Declaration and reject this project until a full Environmental Impact Report (EIR) is conducted to evaluate the direct safety, noise, and security impacts on our neighborhood.

Subject: Public Comment – Opposition to Proposed Magnet Shopping Center (Case No. PROJ23-0013)

[**NOTICE:** This message originated outside of City of San Jacinto -- **DO NOT CLICK** on **links** or open **attachments** unless you are sure the content is safe.]

Good afternoon,

My name is Elizabeth Osorio , and I am a resident living near the proposed development site at State Street and Ramona Expressway. I am writing to express my concerns regarding the proposed Magnet Shopping Center.

While I understand the importance of commercial growth in our community, I do not believe this particular project reflects the needs or best interests of nearby residents. The proposal includes multiple drive-thru restaurants, a car wash, and additional convenience retail. However, our area is already saturated with similar businesses, including several fast-food establishments and existing car wash services within close proximity.

Adding more of the same does not meaningfully improve the quality of life for residents. Instead, it contributes to increased traffic, noise, congestion, and environmental impact without offering new or diverse amenities to the community.

Additionally, there is a nearby high school, and many students walk through these streets daily. Increasing the number of drive-thru businesses and high-traffic retail areas raises concerns about pedestrian safety, traffic flow, and overall student well-being. Developments of this nature can also lead to increased loitering and activity that may not be appropriate so close to a school environment.

I would strongly encourage the Planning Commission to consider

developments that better serve the long-term well-being of San Jacinto residents. For example, there is a clear need for:

- Health-focused grocery options or higher-quality food retailers
- Family-oriented spaces such as improved parks or recreational areas
- Businesses that promote economic growth while enhancing community value

As a nearby resident, I respectfully ask that you reconsider the current proposal and prioritize developments that bring balance, diversity, and meaningful benefit to our neighborhood.

Thank you for your time and consideration.

Sincerely,

Elizabeth Osorio

B. PROJECT DESCRIPTION, LOCATION AND SETTING

1. Project Location

The project site is located within the City of San Jacinto (City), which is located at the base of the San Jacinto Mountains and adjacent to the San Jacinto River (see Figure 1). The City is approximately 26 square miles (16,700 acres) and is located south of the City of Beaumont, west of the City of Perris, and north of the City of Hemet in Western Riverside County. State Route 79 (SR 79) runs through the City and is a primary corridor for regional access to San Jacinto. (see Figure 1).

The project site is located at the southeast corner of Ramona Expressway (SR79) and State Street, which is a four-lane arterial roadway (see Figure 2). The project site is comprised of two contiguous rectangular-shaped parcels of land totaling approximately 14.44 acres (Riverside Assessor's Parcel Numbers [APNs] 434-080-025 and -026).

2. General Plan Designation and Zoning

Land Use Designation: Commercial (C)

Zoning: Commercial General (CG)

3. Project Description

The proposed project is a commercial development on 14.44 acres to include the following types of commercial land uses with a total building area of 114,135 square feet (sf), all single story:

Building Label	Proposed Use	Square Footage
Major 1	Retail	16,012
Major 2	Retail	9,603
Major 3	Retail	22,066
Major 4	Retail	5,200
Major 5	Retail	20,000
Shops 1	Retail/Restaurant	6,539/2,223
Shops 2	Retail/Restaurant	2,500/2,000
Car Wash	Commercial	3,589
Convenience Store/Gas Station (8 fuel pumps and canopy)	Retail	5,198
Pad 1	Restaurant	2,497 SF
Pad 2	Restaurant	3,212 SF
Pad 3	Restaurant	3,012 SF
Pad 4	Restaurant	3,820 SF
Pad 5	Retail	7,052 SF
Total		**114,523 SF**

The project site will be accessed via W. Ramona Expressway (3 driveways), State Street (1 driveway), and Eagle Road (1 driveway). 594 parking stalls are proposed throughout the project site, exceeding the number that is required (536 stalls). Bicycle parking is also provided (56 stalls), which also exceeds what is required (54 stalls).

The proposed project is consistent with the existing zoning and associated design criteria. Building setbacks all exceed what is required and the proposed maximum building height (38 feet) is seven feet lower than the allowed 45 feet.

The proposed building facades will consist of metal panels, canopies, louvers, and doors; composite wood siding; and plaster. They will be painted with neutral browns and greys with occasional modest highlights of primary colors.

As shown in the prepared conceptual landscape plan, the project will adhere to all City design guidelines, codes, and regulations. A permanent irrigation system will be installed. Approximately 17.3 percent of the project site will be landscaped with approximately 393 trees, 48 palms, 2,884 five-gallon shrubs, and 721 one-gallon shrubs. The proposed hardscape will include benches, bicycle parking, pathways, art, and walls.

Offsite improvements are proposed within the State Street, Ramona Expressway, and Eagle Road rights-of-way as presented below:

State Street

- Widening of State Street with installation of a landscaped median,
- Sidewalk, curb, and gutter improvements/repairs along the project frontage,
- A catch basin and a 48-inch public storm drain line with 18-inch (southwest corner of the site) and 36-inch (northwest corner of the site) laterals connecting from the project site.
- One driveway

Ramona Expressway

- A landscaped median in Ramona Expressway,
- New sidewalk, curb, and gutter along the project frontage,
- New 8-inch sewer line from the project site to a sanitary line within Ramona Expressway,
- Two 8-inch water connections, and
- Three driveways.

Eagle Avenue

- A new sidewalk along the project frontage, and
- One driveway.

Off-site Water and Sewer Improvements

There are two options to serve the project water and sewer need. One option is to use the City of San Jacinto water and sewer system and the second option is to use Eastern Municipal Water District (EMWD) service.

City Water and Sewer Service Option

If the project developer elects to use the City Water System, a new loop water system will be installed as indicated below:

a) A new connection to the existing water within the Eagle Avenue right-of-way to a private main water line crossing the project site to State Avenue. Domestic services for the project will be provided from the private loop with city meters.

b) A new public water main within the State Street right-of-way running south to Idyllwild Drive.

c) A new public water line within the Idyllwild Drive right-of-way from State Avenue to Eagle Road, connecting to the existing water line within the Eagle Road right-of-way.

d) Sewer service will be provided via a connection to the existing sewer line located within the Eagle Avenue right-of-way; a connection to the existing sewer line located within the Idyllwild Drive right-of-way; including a public sewer line within the State Road right-of-way to the connection point in Idyllwild Road.

Eastern Municipal Water District (EMWD) Water and Sewer Service Option

If the project developer elects to use EMWD for water and sewer service, the following improvements will be conducted as part of the proposed project:

a) Manifold connections to existing water lines on Ramona Expressway and State Street rights-of-way.

b) A private water loop for fire service

c) A sewer lateral connection the existing Sewer line within the Ramona Expressway right-of-way.

The applicant is requesting the following entitlements:

- Site Plan and Design Review
- Subdivision (Tentative Parcel Map)
- MUP for Outdoor Dining
- (4x) MUP for each Restaurant w/ Drive Thru

Construction of the project is expected to begin in the Fall of 2024. The project will be developed in its entirety in one phase. The anticipated construction schedule is presented below.

- Site preparation – 2 weeks
- Grading – 2 weeks
- Building construction – 6 months
- Paving – 1 ½ weeks
- Architectural Coating – 3 ½ weeks

4. Land Uses and Setting

Project Site

The project site is currently vacant. It is relatively flat with an elevation of 1,519 feet above mean sea level (msl). There is no noticeable slope. The onsite vegetation is dominated by weeds and non-native herbs and there are no trees present on the site. None of the onsite soils are listed as sensitive in the Multiple Species Habitat Conservation Plan (MSHCP) or provide suitable habitat for any sensitive plant species.

Surrounding Land Uses

Surrounding land uses include commercial development to the north across Ramona Expressway and west across North State Street; single-family residential to the east and southeast; and a vacant previously disturbed lot to the southwest.

Existing Land Use, General Plan Designation and Zoning			
	Existing Land Use	**General Plan Designation**	**Zoning**
Project Site	**Vacant/Disturbed**	**Commercial (C)**	**Commercial General (CG)**
North	Shopping center and single-family residential (SFR)	C and Residential Low Density (LDR)	CG and Residential, Low Density (RL)
South	Vacant/Disturbed and SFR	C and LDR	Commercial Neighborhood (CN) and RL
East	SFR	LDR	RL
West	Commercial (restaurant and fuel station)	C	CG

5. Native American Consultation

Consultation under Assembly Bill (AB) 52 commenced on December 20, 2023. Notices were sent to the following tribes: Agua Caliente Band of Cahuilla Indians, Torres Martinez Desert Cahuilla Indians, Morongo Band of Mission Indians, Rincon Bank of Luiseño Indians, San Manuel Band of Mission Indians, and Soboba Band of Luiseño Indians. Responses were received from the Soboba Band of Luiseño Indians See section #18. Tribal Cultural Resources.

6. Necessary Approvals from Other Agencies

(e.g., permits, financing approval, or participation agreement):

- Building and Grading Permits
- Santa Ana Regional Water Quality Control Board (RWQCB) National Water Pollutant Discharge Elimination System (NPDES) approval and water discharge requirements.
- City of San Jacinto or Eastern Municipal Water District (EMWD) water and wastewater connection permits.

- Western Riverside MSHCP Consistency Approval

D. ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below will be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Agriculture & Forestry Resources	☐ Air Quality
☒ Biological Resources	☒ Cultural Resources	☐ Energy
☒ Geology & Soils	☐ Greenhouse Gas Emissions	☐ Hazards & Hazardous Materials
☐ Hydrology & Water Quality	☒ Land Use & Planning	☐ Mineral Resources
☐ Noise	☐ Population & Housing	☐ Public Services
☐ Recreation	☒ Transportation	☒ Tribal Cultural Resources
☐ Utilities & Service Systems	☐ Wildfire	☒ Mandatory Findings of Significance

E. LEAD AGENCY DETERMINATION

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a **NEGATIVE DECLARATION** will be prepared.

☒ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. **A MITIGATED NEGATIVE DECLARATION** will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An **ENVIRONMENTAL IMPACT REPORT** is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier **EIR** or **NEGATIVE DECLARATION** pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier **EIR** or **NEGATIVE DECLARATION**, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

☐ I find that the proposed project has previously been analyzed as part of an earlier CEQA document (which either mitigated the project or adopted impacts pursuant to findings) adopted/certified pursuant to the State CEQA Guidelines and the County's adopted Local CEQA Guidelines. The proposed project is a component of the whole action analyzed in the previously adopted/certified CEQA document.

☐ I find that the proposed project has previously been analyzed as part of an earlier CEQA document (which either mitigated the project or adopted impacts pursuant to findings) adopted/certified pursuant to State and County CEQA Guidelines. Minor additions and/or clarifications are needed to make the previous documentation adequate to cover the project which are documented in this addendum to the earlier CEQA document (CEQA Section 15164).

☐ I find that the proposed project has previously been analyzed as part of an earlier CEQA document (which either mitigated the project or adopted impacts pursuant to findings) adopted/certified pursuant to State and County CEQA Guidelines. However, there is important new information and/or substantial changes have occurred requiring the preparation of an additional CEQA document (ND or EIR) pursuant to CEQA Guidelines Sections 15162 through 15163

Signature _____ Date _____

Printed Name _____ For _____

F. ISSUES & SUPPORTING INFORMATION SOURCES	Potentially Significant Impact	Less Than Significant with Mitigation	Less Than Significant Impact	No Impact
1. Aesthetics Will the project:				
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☒	☐

Response:
For purposes of determining significance under CEQA, a scenic vista is defined as an area that is designated and accessible to the public for the express purposes of viewing and sightseeing. This includes any such areas designated by a federal, state, or local agency. The City of San Jacinto (City) has not designated any scenic vistas.

Furthermore, although the introduction of new development at the project site may partially obstruct existing views of the San Jacinto and Santa Rosa mountains from adjacent residential land uses, the proposed project is consistent with the existing General Plan and Zoning regulations. Proposed building setbacks all exceed what is required and the proposed maximum building height (38 feet) is seven feet lower than the allowed 45 feet.

After project construction, views of the mountains will still be available from public locations depending on the viewer's specific location. Based on the analysis above, direct impacts to a scenic vista will not occur and potential indirect impacts to offsite public viewsheds will be less than significant. No mitigation is required

b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒

Response:
The State Scenic Highway Program was established by the California Department of Transportation (Caltrans) to preserve and protect scenic highway corridors from change that will diminish the aesthetic value of lands adjacent to state highways. Highways may be designated as scenic depending upon how much of the natural landscape can be seen by travelers, the scenic quality of the landscape, and the extent to which development intrudes upon the traveler's enjoyment of the view. According to the California State Scenic Highway Mapping System, there are no designated or eligible state scenic highways within the viewshed of the proposed project that will be significantly impacted by the project. There will be no impact to State scenic highways. No mitigation is required.

c) In non-urbanized areas, will the project substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, will the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☐	☒

Response:
The project site is located at a busy intersection in a suburban area surrounded by single family and commercial land uses. Policy RM-1.2 of the Natural Resource Element of the City General Plan defines scenic resources as mature trees, rock outcroppings, hillsides,

ridgelines, and other natural prominent landforms. Based on this definition, there are no scenic resources in the vicinity of or on the project site. The proposed project will be consistent with the developed nature of the project area. Impacts will be less than significant. No mitigation is required.

d) Create a new source of substantial light or glare which will adversely affect day or nighttime views in the area?	☐	☐	☒	☐

Response:

City Development Code (SJDC) Section 17.300.080, *Outdoor Light and Glare,* regulates light and glare by providing that exterior lights be shielded or modified, and located so as to eliminate spillover illumination or glare onto adjoining properties and to prohibit any interference with the normal operation or enjoyment of adjacent property.

SJDC Section 17.330.080, *Parking Design and Development Standards,* provides lighting requirements for parking areas. These include requirements that parking area light standards have a maximum height of 25 feet as measured from the usable parking or driving surface, and that illumination of parking lots and adjacent pedestrian areas does not exceed one-half foot-candle along lot lines of a project.

The project site is currently vacant with no existing sources of light or glare. The area surrounding the project is developed with urbanized land uses that provide various levels of nighttime lighting. Construction activities for the proposed project will occur during the day. Therefore, no temporary nighttime construction lighting impacts will occur. Operation of the proposed project will introduce new sources of commercial and street lighting next to and into the project site. The proposed lighting will be similar to the type and level of existing commercial lighting provided in the project vicinity and will be designed to direct light downward within the property to minimize spillover illumination and glare consistent with the City's Municipal Code. Potential light and glare impacts will be less than significant. No mitigation is required.

Sources:

1. San Jacinto General Plan
2. Final Environmental Impact Report City of San Jacinto General Plan
3. San Jacinto Municipal Code

2. Agriculture and Forest Resources – In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest protocols adopted by the California Air Resources Board. Will the project:

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒

Response:

The project site is not zoned for agricultural use or designated by the California Department of Conservation (DOC) as Prime Farmland or Farmland of Statewide Importance. The project site does not contain any land zoned as forest land or trees with commercial timber

value. The project will not involve any development that will convert agricultural land to a non-agricultural use, conflict with existing zoning of forest land or timberland, result in the loss or conversion of forest land to non-forest uses, interrupt ongoing agricultural activity, or conflict with a Williamson Act contract. Therefore, the project will have no impact on agricultural, forest land, or timberland resources. No impacts to them will occur and no mitigation is required.

b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒

Response:
See discussion for (a) above.

c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	☒

Response:
See discussion for (a) above.

d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒

Response:
See discussion for (a) above.

e) Involve other changes in the existing environment which, due to their location or nature, could result in the conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒

Response:
See discussion for (a) above.

Sources:
1. San Jacinto General Plan
2. Final Environmental Impact Report, City of San Jacinto General Plan
3. Project Application Materials

3. Air Quality – Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. **Will the project:**

a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐

Response:
The State Air Quality Implementation Plan (SIP) is a document prepared by each state describing existing air quality conditions and measures that will be followed to attain and maintain federal standards. The SIP prepared for California is administered by the California Air Resources Board (CARB), which has overall responsibility for compiling emission inventories, developing suggested control measures, providing oversight to local programs in light of statewide air quality maintenance, and air pollution prevention. The project site is located within the South Coast Air Quality Management District (SCAQMD), which in coordination with the Southern California Association of Governments (SCAG) is responsible for developing, updating, and implementing the Air Quality Management Plan (AQMP) for the South Coast Air Basin (SCAB).

An Air Quality, Greenhouse Gas, and Energy Impact Study (AQ/GHG/Energy study) was prepared by MD Acoustics, LLC. The AQ/GHG/Energy study found that neither

construction nor operational-source emissions (regional and local) will cause a violation or substantively contribute to a violation of the California Ambient Air Quality Standards (CAAQS) or National Ambient Air Quality Standards (NAAQS) as the project emissions do not exceed SCAQMD thresholds as shown in the table below. Furthermore the project, the project will comply with all applicable SCAQMD construction-source emission reduction rules and guidelines. Therefore, the project will not conflict with or obstruct implementation of the South Coast AQMP. This impact is less than significant. No mitigation is required.

Regional Construction-Related Pollutant Emissions

	Pollutant Emissions (pounds/day)					
Activity	ROG	NOx	CO	SO_2	PM10	PM2.5
Total for overlapping phases	73.08	21.13	28.26	0.03	1.50	1.09
SCAQMD Thresholds	75	100	550	150	150	55
Exceeds Thresholds?	No	No	No	No	No	No

Local Construction Emissions at the Nearest Receptors

	On-Site Pollutant Emissions (pounds/day)			
Activity	NOx	CO	PM10	PM2.5
Total for overlapping phases	19.92	24.25	0.92	0.85
SCAQMD Thresholds[1]	325	1,677	11.0	6.7
Exceeds Threshold?	No	No	No	No

Regional Operational Pollutant Emissions

	Pollutant Emissions (pounds/day)					
Activity	ROG	NOx	CO	SO2	PM10	PM2.5
Total Emissions	53.37	47.94	405.48	0.95	81.66	21.26
SCAQMD Thresholds	55	55	550	150	150	55
Exceeds Threshold?	No	No	No	No	No	No

Local Operational Emissions at the Nearest Receptors

	On-Site Pollutant Emissions (pounds/day)[1]			
On-Site Emission Source	NOx	CO	PM10	PM2.5
Total Emissions	2.22	18.81	2.78	0.77
SCAQMD Thresholds for 25 meters[5]	371	1965	4	2
Exceeds Threshold?	No	No	No	No

b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☒	☐

Response:

The project area is out of attainment for both ozone and PM10 particulate matter. Construction and operation of cumulative projects will further degrade the local air quality, as well as the air quality of the South Coast Air Basin. The incremental addition of pollutants will primarily be from increased vehicle traffic from residential, commercial, and industrial development and the use of heavy equipment and trucks associated with the construction of these projects in the project area. Air quality will be temporarily degraded during project

construction activities that may occur separately or simultaneously with other projects. However, in accordance with the SCAQMD methodology, projects that do not exceed the SCAQMD criteria or can be mitigated to less than criteria levels are not significant and do not add to the overall cumulative impact. As noted in section 3. A above, the project will not exceed the SCAQMD thresholds for pollutant emissions. Therefore, because the project will not cause any exceedences in the applicable thresholds, the project's contribution to cumulative impacts is less than significant. No mitigation is required.

c) Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☒	☐

Response:

Sensitive receptors are populations that are more susceptible to the effects of air pollution than the population at large, such as the very young, the elderly, and those suffering from certain illnesses or disabilities. The populations residing at the single-family residences located north, south, and east of the project site may be affected by project emissions. Although grading and construction related emissions associated with the project could generate fugitive dust emissions at these receptors, they will not exceed air quality standards, and are temporary. Furthermore, construction of the proposed project will comply with existing SCAQMD rules for the reduction of fugitive dust emissions. Compliance with this rule is achieved through application of standard best management practices in construction and operation activities, such as application of water or chemical stabilizers to disturbed soils, managing haul road dust by application of water, covering haul vehicles, restricting vehicle speeds on unpaved roads to 15 mph, sweeping loose dirt from paved site access roadways, cessation of construction activity when winds exceed 25 mph and establishing a permanent, stabilizing ground cover on finished sites. In addition, projects that disturb 50 acres or more of soil or move 5,000 cubic yards of materials per day are required to submit a Fugitive Dust Control Plan or a Large Operation Notification Form to SCAQMD. Based on the size of the Project area (disturbance area of approximately 14.5 acres) and the fact that the project won't export more than 5,000 cubic yards of material a day a Fugitive Dust Control Plan or Large Operation Notification would not be required.

SCAQMD's Rule 403 minimum requirements require that the application of the best available dust control measures are used for all grading operations and include the application of water or other soil stabilizers in sufficient quantity to prevent the generation of visible dust plumes. Compliance with Rule 403 would require the use of water trucks during all phases where earth moving operations would occur. Compliance with Rule 403 is required.

The greatest potential for toxic air contaminant emissions would be related to diesel particulate emissions associated with heavy equipment operations during construction of the proposed project. However, given the relatively low amount of heavy-duty construction equipment and construction schedule, the proposed project will not result in a long-term substantial source of toxic air containment emissions and corresponding individual cancer risk.

Project operational-sourced emissions will not exceed regional operational air quality thresholds or result in or cause a significant localized air quality impacts as discussed in the AQ/GHG/Energy study. Additionally, project-related traffic will not cause or result in CO concentrations exceeding applicable state and/or federal standards (CO "hotspots").

Project operational-source emissions will therefore not adversely affect sensitive receptors within the vicinity of the project. Impacts will be less than significant and no mitigation is required.

d) Result in other emissions (such as those leading to odors adversely affecting a substantial number of people?	☐	☐	☒	☐

Response:

Potential sources that may emit odors during construction activities include the application of materials such as asphalt pavement. The objectionable odors that may be produced during the construction process are short-term in nature and the odor emissions are expected to cease upon the drying or hardening of the odor producing materials. Diesel exhaust and VOCs will be emitted during construction of the project, which are objectionable to some; however, emissions will disperse rapidly from the project site and therefore should not reach an objectionable level at the nearest sensitive receptors. Due to the short-term nature and limited amounts of odor producing materials being utilized, no significant impact related to odors will occur during construction of the proposed project.

The SCAQMD recommends that odor impacts be addressed in a qualitative manner. Such an analysis shall determine whether the project will result in excessive nuisance odors, as defined under the California Code of Regulations and Section 41700 of the California Health and Safety Code, and thus will constitute a public nuisance related to air quality.

Potential sources that may emit odors during the on-going operations of the proposed project will include odor emissions from the fueling station, trash storage areas, and vehicle emissions. Due to the distance of the nearest receptors from the project site and through compliance with SCAQMD's Rule 402 no significant impact related to odors will occur during the on-going operations of the proposed project. No mitigation is required.

Sources:

1. San Jacinto General Plan
2. Final Environmental Impact Report, City of San Jacinto General Plan
3. Project Application Materials
4. Project Air Quality/Greenhouse Gas Emissions Report, MD Acoustics, 2023 (Appendix A).

4. Biological Resources Will the project:

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☒	☐	☐

Response:

A Habitat Assessment and MSHCP Consistency Analysis was prepared by Phoenix Biological Consulting (biological resources study). Per the biological resources study the Multi-Species Conservation Program (MSHCP) was queried to determine what type of habitat assessment and potential survey requirements were necessary for the project site. The MSHCP query results indicated that there are no criteria cells in close proximity to the project site, nor are there any defined waterways. The query also indicated that surveys on the project site for burrowing owl were indicated. No other potential sensitive species or sensitive habitat was identified in the online RCA MSHCP database query.

Field investigations were conducted at the site in May and June of 2022 and verified in March of 2024 to determine the extent of existing plant communities on the project site and to evaluate the presence of burrowing owls, jurisdictional features, and riparian/riverine

habitat. The entire project site was found to be covered in ruderal or non-native grassland which is dominated by non-native plant species adapted to disturbance. Field investigation findings were verified in March of 2024. There are no trees on the project site.

Although no burrowing owls were found on the project site or on the surrounding buffer, several California ground squirrel (CGS) burrows were present on the project site. None of the CGS burrows had any sign of burrowing owls such as feathers, tracks, whitewash, pellets, or owls. However, due to the presence of numerous CGS burrows on site, a preconstruction survey for burrowing owl is recommended prior to ground disturbance to ensure no burrowing owls have moved onto the site since the burrowing owl survey was completed.

The project site was also found to have suitable ground nesting habitat for avian species. Although the MSHCP does not cover impacts to nesting birds, they are protected under section 3503 of CDFW code and the Migratory Bird Treaty Act (MBTA).

Potential impacts to nesting birds can be eliminated if vegetation suitable for nesting activity is removed outside of the nesting bird season, which typically begins in February and lasts until the end of August.

Impacts related to implementation of the MSHCP will be less than significant with implementation of the following mitigation measures.

Mitigation Measure BIO-1: A burrowing owl preconstruction survey shall be conducted no more than 30 days prior to any ground disturbance at the project site.

Mitigation Measure BIO-2: Ground disturbing and vegetation removal activities shall be conducted outside of the nesting bird season. If these activities must occur during the nesting season, a nesting bird survey should be conducted within 7 days prior to any ground disturbing activities to determine if any nesting birds occur within the project site. If nesting birds are not found within the project site, no further actions are required. If nesting birds are observed on site, no impacts shall occur within 250 feet (500 feet for raptors) of any active nests. Construction activity may only occur within 250 feet of an active nest at the discretion of a biological monitor.

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☒	☐	☐

Response:

Potential burrowing owl and nesting bird habitat was identified on the project site. No riparian habitat or other sensitive natural communities were identified. The entire project site consists of ruderal or non-native grassland. Per the MSHCP Geographical System (GIS) layers ruderal and non-native grassland is dominated by non-native plant species adapted to disturbance. With implementation of Mitigation Measures BIO-1 and BIO-2 (listed above), impacts to burrowing owls and nesting birds will be less than significant.

c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒

Response:

Per the biological resource study prepared for the project, there are no protected wetlands on or near the project site. No mitigation is required.

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with an established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☐	☒

Response:

Wildlife movement corridors, or habitat linkages, are generally defined as connections between habitat patches that allow for physical and genetic exchange between otherwise isolated animal populations.

The project site is not located in an Essential Connectivity Area (ECA) as mapped in the California Essential Habitat Connectivity project: In addition, much of the land in the City has been converted from open space to commercial industrial, residential, and recreational uses, resulting in habitat fragmentation. Therefore, regional wildlife movement in the vicinity of the project site is limited. Because the project site does not provide a wildlife corridor, habitat linkage, or nursery site for migratory fish or wildlife species, there will be no impact. No mitigation is required.

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☐	☒

Response:

The entire project site consists of ruderal or non-native grassland which is dominated by non-native plant species adapted to disturbance and there are no trees on the project site.

Other than the MSHCP, which is a regional plan, there are no local policies or ordinances that apply to the protection of onsite nesting bird and burrowing owl habitat. No inconsistencies with local policies or ordinances will occur. No mitigation is required.

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or another approved local, regional, or state habitat conservation plan?	☐	☐	☒	☐

Response:

Please see response to 4.a) above.

Sources:

1. San Jacinto General Plan
2. Final Environmental Impact Report, City of San Jacinto General Plan
3. Project Application Materials
4. Project Biological Resources Report and MSHCP Consistency Analysis, Phoenix Biological Consulting, 2022 (Appendix B).
5. Preconstruction Survey APN 434-080-025 & 026. Phoenix Biological Consulting, 2024 (Appendix B)

5. Cultural Resources – Will the project:

a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	☐	☒	☐	☐

Response:

Review of historic topographic maps and aerial photographs indicated the historic-period buildings, associated features, and landscaping dating to the 1950s or later were removed from the project parcels sometime between the mid-1980s and mid-1990s. A field survey was also conducted for the proposed project which confirmed that the condition was generally consistent with that of the previous site description and indicated so on the site record, with four additional (undocumented) features identified.

The resource within the project area (33-024106) was previously evaluated as not a "historical resource" under CEQA (Goodwin 2015). The previously undocumented features

are marginal, all date to the 1940s (decades after the period of significance for the City, during its formative era of 1869–1888), there is no historic-period refuse within the project area, and the previous evaluation of this portion of the resource (within APNs 434-080-025-2 and 434-080-026-3) as not a "historical resource" under CEQA remains valid (Shephard 2007; Goodwin 2014). Therefore, any impacts to historic resources are less than significant with the following mitigation measure.

Mitigation Measure CR-1: Unanticipated Discovery of Cultural Resources
In the event that previously undocumented historic or archaeological resources are unearthed during project construction, all earth-disturbing work near the find must be temporarily suspended or redirected until an archaeologist has evaluated the nature of the find and determined appropriate treatment. Once the resource has been properly treated or protected, work in the area may resume. A Native American representative shall be retained to monitor any mitigation work associated with Native American cultural material.

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	☐	☒	☐	☐

Response:
The Cultural Resource Assessment prepared for the project determined that it is unlikely that there other archaeological resources (other than the historical resource discussed above) on the project site and no further investigations or archaeological monitoring are recommended. If any unforeseen resources are encountered during earthmoving activities on the project site, implementation of Mitigation Measure CR-1 (above) will ensure that impacts will be less than significant.

c) Disturb any human remains, including those interred outside of formally dedicated cemeteries?	☐	☒	☐	☐

Response:
No human remains or cemeteries are known to exist within or near the project footprint. However, there is always the potential that subsurface construction activities could encounter and potentially damage or destroy previously undiscovered human remains. Accordingly, this is considered a potentially significant impact. In the event of the accidental discovery or recognition of any human remains, CEQA Guidelines Section 15064.5; Health and Safety Code Section 7050.5; Public Resources Code Section 5097.94 and Section 5097.98 must be followed. With the implementation of Mitigation Measure CR- 2, potential impacts to human remains will be less than significant.

Mitigation Measure CR-2: Unanticipated Discovery of Human Remains
In the event that human remains are encountered during the course of any future development California State Law (Health and Safety Code Section 7050.5 and Section 5079.98 of the Public Resources Code) states that no further earth disturbance shall occur at the location of the find until the Riverside County Coroner has been notified. If the remains are determined to be prehistoric, the Coroner will notify the Native American Heritage Commission, which will determine and notify a Most Likely Descendant (MLD). With the permission of the landowner of his/her authorized representative, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC.

Implementation of Mitigation Measure CR-1 and Mitigation Measure CR-2 will reduce potential impacts to archaeological resources, paleontological resources, and human remains by ensuring that any cultural resources encountered during project activities are handled in a suitable manner.

2. Final Environmental Impact Report, City of San Jacinto General Plan
3. Project Application Materials
4. Cultural Resources Assessment, LSA 2023 (Appendix C)

6. Energy – Will the project:

a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☒	☐

Response:

Energy consumption in support of or related to project operations would include transportation energy demands (energy consumed by employee and patron vehicles accessing the project site) and facilities energy demands (energy consumed by building operations and site maintenance activities). Per the AQ/GHG/Energy Study prepared for the project, on-site construction equipment is expected to consume 21,687 gallons of diesel fuel; and construction worker, vendor, and hauling vehicles are expected to use up to 6,884 gallons of fuel. Project construction electrical consumption is expected to reach 38,646 kilowatt-hours (kWhs). All construction equipment will conform to CARB regulations and California emissions standards and the CARB Airborne Toxic Control Measure that limits idling times of construction vehicles to no more than five minutes. Equipment employed in construction of the project would therefore not result in inefficient, wasteful, or unnecessary consumption of fuel.

Energy consumption in support of or related to project operations would include transportation energy demands (energy consumed by employee and patron vehicles accessing the project site) and facilities energy demands (energy consumed by building operations and site maintenance activities). Operation of the project is expected to result in the consumption of up to 2,257,495 gallons of fuel per year. Trip generation generated by the proposed project is consistent with other similar commercial uses of similar scale and configuration as reflected in the traffic data. That is, the proposed project does not propose uses or operations that would inherently result in excessive and wasteful vehicle trips, nor associated excess and wasteful vehicle energy consumption. Therefore, project transportation energy consumption would not be considered inefficient, wasteful, or otherwise unnecessary.

The proposed land uses are expected to consume 2,223,725 kBTU[1] per year in natural gas and 1,991,634 kWh per year in the form of electricity. In 2022, the non-residential sector of the County of Riverside consumed approximately 8,720 million kWh of electricity. In 2022, the non-residential sector of the County of Riverside consumed approximately 147 million therms of gas. Therefore, the increase in both electricity and natural gas demand from the proposed project is insignificant compared to the County's 2022 demand. Furthermore, the project will be required to comply with the California Green Building Standards Code Title 24 energy efficiency requirements (CALGreen). Specifically, the project will be subject to mandatory measures for nonresidential buildings that are intended to reduce project energy demand include weather-resistant exterior walls, designated recycling areas for solid waste disposal, and HVAC air filters with a Minimum Efficiency

[1] kBTU = one-thousand British Thermal Units.

Reporting Value (MERV) of 8. Minimum standards for lighting efficiency are also established (CalGreen Section 5.106.8.1). Project impacts related to energy consumption are less than significant. No mitigation is required.

b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☒	☐

Response:

Consistency with the Integrated Energy Policy Report (California Energy Commission) As the state's primary energy policy and planning agency, the California Energy Commission prepares the Integrated Energy Policy Report (IEPR)—which provides a cohesive approach to identifying and solving California's pressing energy needs and issues—and collaborates with state and federal agencies, utilities, and other stakeholders to develop and implement energy plans and policies. The IEPR includes assessments and analyses of California's energy industry supply, production, transportation, delivery and distribution, demand, and prices. It also includes forecasts of electricity and natural gas demand for 10-year periods. Electricity would be provided to the Project by SCE. SCE's Clean Power and Electrification Pathway (CPEP) white paper builds on existing state programs and policies. As such, the project is consistent with, and would not otherwise interfere with, nor obstruct implementation of the goals presented in the 2022 IEPR. Additionally, the project will comply with the applicable Title 24 standards which would ensure that the project energy demands would not be inefficient, wasteful, or otherwise unnecessary. As such, development of the proposed project would support the goals presented in the 2022 IEPR.

Consistency with State of California Energy Plan (California Energy Commission) The Project site is located along major transportation corridors with proximate access to the Interstate freeway system. The site selected for the project facilitates access and takes advantage of existing infrastructure systems. The Project therefore supports urban design and planning processes identified under the State of California Energy Plan, is consistent with, and would not otherwise interfere with or obstruct, implementation of the State of California Energy Plan.

Consistency with California Code Titel 24, Part 6, Energy Efficiency Standards The 2022 version of Title 24 was adopted by the CEC and will become effective on January 1, 2023. The proposed project would be required to comply with the Title 24 standards in place at the time plan check submittals are made. Therefore, the project would not result in a significant impact on energy resources. The proposed Project would be subject to Title 24 standards.

Consistency with California Code Title 24, Part 11, CALGreen As previously stated, CCR, Title 24, Part 11: CALGreen is a comprehensive and uniform regulatory code for all residential, commercial, and school buildings that went in effect on January 1, 2009, and is administered by the California Building Standards Commission. CALGreen is updated on a regular basis, with the most recently approved update consisting of the 2022 California Green Building Code Standards that were published on July 1, 2022, and became effective on January 1, 2023. The Project would be required to comply with the applicable standards in place at the time plan check submittals are made.

Consistency with 350 The proposed project would use energy from SCE, which has committed to diversifying their portfolio of energy sources by increasing energy from wind and solar sources. No feature of the Project would interfere with the implementation of SB

350. Additionally, the Project would be designed and constructed to implement the energy efficiency measures for new industrial developments and would include several measures designed to reduce energy consumption. As shown above, the Project would not conflict with any of the state or local plans. As such, a less than significant impact is expected.

The proposed project will not conflict with or obstruct state or local plans for renewable energy or energy efficiency. This impact is less than significant. No mitigation is required.

Sources:

1. San Jacinto General Plan
2. Final Environmental Impact Report City of San Jacinto General Plan
3. San Jacinto Municipal Code
4. AQ/GHG Report (Energy section), MD Acoustics, 2023 (Appendix A)

7. Geology and Soils – Will the project:

a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving:

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to https://www.conservation.ca.gov/cgs/Documents/SP_042.pdf	☐	☐	☒	☐

Response:

The site is not within a currently established State of California Earthquake Fault Zone for surface fault rupture hazards. No active faults with the potential for surface fault rupture are known to pass directly beneath the site. Therefore, the potential for surface rupture due to faulting occurring beneath the site during the design life of the proposed development is considered low. This impact is less than significant No mitigation for this impact is required.

ii) Strong seismic ground shaking?	☐	☒	☐	☐

Response:

The Project site is situated within a seismically active region with several active faults. Active faults with the potential to cause ground shaking in the City include the San Jacinto Fault (Claremont Fault and Casa Loma Fault Segments), San Andreas Fault, and the Elsinore Fault. These faults will have the potential to produce an earthquake estimated up to 7.38 on the Richter Scale, according to the Geotechnical Investigation (Sladden 2021a). In the event an earthquake of this magnitude occurs, the Project site could experience periodic shaking, possibly of considerable intensity.

The Geotechnical Study prepared for the project includes several measures that are intended to minimize impacts associated with ground shaking including fil methodology, the type of fill, the overexcavation and recompaction of fill, the testing of fill, foundation and footing recommendations, slab thickness criteria, retaining wall parameters, load bearing capacities, and the supervision and documentation of these activities, etc. Impacts related to strong seismic ground shaking will be less than significant with implementation of these measures in addition to compliance with existing City construction development standards and seismic design parameters found in the California Uniform Building Code.

Mitigation Measure GEO-1: Prior to issuance of grading permits, the City shall 1) confirm that grading and construction plans prepared for the project have included the recommendations intended to minimize impacts associated with ground shaking that are provided in the Geotechnical Study and 2) determine that the grading and plans adhere to

City construction development standards as well as the seismic design parameters of the California Uniform Building Code.

iii) Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐

Response:
Per the Geotechnical study prepared for the project soils encountered on the project site consisted predominately of loose to dense silty sand, sand with various amounts of silt or clay, poorly graded sand with various amounts of silt; and firm to very stiff sandy silt with various amounts of clay. Free groundwater was not encountered during this investigation. The historically highest groundwater is estimated to be at a depth of 40 feet below ground surface based on the County of Riverside Geologic Hazards Map (2004) and regional groundwater data.

Although the Riverside County Office of Information Technology GIS website shows the subject site to be in a moderate liquefaction potential area, more detailed analysis conducted by the Geotechnical Engineer as provided in the Geotechnical Study prepared for the project, shows that the on-site soils have a low potential for liquefaction and that the total liquefaction-induced settlement was calculated to be negligible. Implementation of design criteria provided in the Geotechnical study will further reduce any potential for liquefaction. This impact is less than significant and no mitigation is required.

iv) Landslides?	☐	☐	☒	☐

Response:
The project site is on a gently (<5%) sloping grade, over 1 mile from the nearest significant topographic change. As such, landslide/slope instability/rock fall issues pose a very low risk. This impact will be less than significant. No mitigation is required.

b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐

Response:
Temporary land clearing, import and stockpiling of fill material, and grading activities associated with project construction will uncover soil, which could be subject to erosion impacts. Additionally, construction equipment and vehicles could indirectly transport sediment to offsite locations. The Geotechnical Study prepared for the project includes measures intended to minimize soil erosion during construction including winterization and protection of exposed soils and protection of temporary excavations and slope faces during rainfall. A Storm Water Pollution Prevention Plan (SWPPP) will also be prepared and implemented for the project in accordance with the State Water Board National Pollutant Discharge Elimination System (NPDES) Construction Stormwater General Permit requirements. The SWPPP will provide a list of Best Management Practices (BMPs) to minimize potential adverse erosion impacts. Example BMPs include the use of silt fences or fiber rolls to trap sediment onsite and covering stockpiles for dust control and during rain events.

Once the project is constructed, the new development will permanently minimize loss of topsoil and control erosion with hardscape surfaces, landscaping, and by directing runoff within the site to water quality/stormwater detention basins.

Implementation of the erosion control measures provided in the Geotechnical Study prepared for the project and implementation of SWPPP BMPs will minimize erosion during project construction, and the project's design will reduce the potential for permanent erosion. This impact is less than significant. No mitigation is required.

Mitigation Measure GEO-2: Prior to issuance of grading permits, the City shall confirm that a SWPPP is prepared, that it is implemented, and that the erosion control measures recommended in the Geotechnical Study are included appropriately.

c) Be located on a geologic unit or soil that is unstable, or that will become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☒	☐	☐

Response:

As discussed previously, there are no substantial liquefaction or landslide risks at the project site. Lateral spreading is a phenomenon associated with liquefaction in which soils move laterally during seismic shaking. Due to the relatively flat topography of the site, the likelihood of lateral spreading is also low.

Subsidence and collapse refer to the caving in or sinking of land. According to the Geotechnical Study prepared for the project, the upper soils at the project site are moisture-sensitive and moderately collapsible under saturated conditions. Therefore, there is a moderate risk of post-construction movement of the foundations and floor systems of proposed structures from subsidence. Measures to reduce impacts associated with subsidence and collapse are provided in the Geotechnical Study prepared for the project. They include the use of fill, the type of fill, the overexcavation and recompaction of fill, the testing of fill, foundation and footing recommendations, slab thickness criteria, retaining wall parameters, load bearing capacities, and the supervision and documentation of these activities, etc.

Mitigation Measure GEO-3: Prior to the issuance of grading permits, the City shall confirm that measures related to the prevention of subsidence and collapse provided in the Geotechnical Study are included on construction plans and implemented in the field. City staff shall also verify that project grading and construction plans adhere to City construction development standards as well as the seismic design parameters of the California Uniform Building Code.

d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☐	☒	☐	☐

Response:

Expansive soils are generally clays, which increase in volume when saturated and shrink when dried. Various amounts of clay exist throughout the upper soil layers of the project site, indicating the potential for expansive soil hazards. Therefore, there is the potential for expansion and collapse of soils that could damage the proposed structures. The Geotechnical Study prepared for the project recommends the use of imported fill where appropriate, limitation of the slump of the concrete, proper concrete placement and curing, and place crack control joints at periodic intervals, in particular, where re-entrant slab corners occur. Concrete finishing and curing of concrete will also be conducted in in accordance with the latest guidelines provided by the American Concrete Institute, Portland Cement Association, and the American Society for Testing and Materials. Impacts related to expansive soils will be less than significant with implementation of the relevant recommendations made in the Geotechnical Study prepared for the project and adherence to other City and State requirements concerning concrete installation.

Mitigation Measure GEO-4: Prior to the issuance of grading permits, the City shall confirm that measures intended to avoid impacts related to expansive soils provided in the

Geotechnical Study are included on construction plans and implemented in the field; and that project grading and construction plans adhere to City construction development standards as well as the seismic design parameters of the California Uniform Building Code.

e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☐	☒

Response:
The project will be connected to the City's or EMWS's existing sewer system for wastewater disposal and will not require a septic system. Therefore, the project will not result in impacts associated with the use of septic tanks or alternative wastewater disposal systems.

f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☒	☐	☐

Response:
Sand, gravel, clay, and other unconsolidated materials that overlie bedrock are known as surficial deposits. Surficial deposits in the vicinity of the subject site are indicated on regional geologic maps to be comprised predominately of Quaternary alluvium. Specifically, formational materials mapped at the subject site are surficial sediments that are considered to have a "High Sensitivity at Depth" in regards to the likelihood of encountering paleontological resources. So although no paleontological resources have yet been identified on project site, it is possible that proposed ground moving activities could unearth previously undiscovered paleontological resources. Therefore, impacts will be potentially significant and Mitigation Measure GEO-5 is required to ensure proper handling of potentially unanticipated paleontological resources.

Mitigation Measure GEO-5: In the event that paleontological resources are unearthed during grading, ground disturbance activities shall be temporarily suspended or redirected until a paleontologist has evaluated the nature and significance of the find. If the discovery proves to be significant under CEQA, additional work such as preservation in place or data recovery, shall occur as required by the paleontologist in coordination with City staff and descendants and/or stakeholder groups, as warranted. Once the resource has been properly treated or protected, work in the area may resume.

3. San Jacinto Municipal Code
4. Geotechnical Investigation, Salem Engineering Group, 2023 (Appendix D)

8. Greenhouse Gas Emissions – Will the project:

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐

Response:
Construction and operation of the proposed project will result in greenhouse gas emissions. Per the AQ/GHG/Energy study prepared for the project, project construction activities are

expected to generate a total of 296.07 MTCO2e[2], or 9.87 MTCO2e per year when averaged over 30 years[3],

With project operation, greenhouse gas emissions will also occur over the life of the project. The operational emissions for the project are expected to be 16,594 metric tons of CO2e per year.

The City of San Jacinto is part of the Western Riverside Council of Government (WRCOG). The WRCOG adopted the WRCOG Subregional Climate Action Plan (CAP) in September 2014. Twelve cities in the subregion joined efforts to develop the Subregional CAP, which set forth a subregional emissions reduction target, emissions reduction measures, and action steps to assist each community to demonstrate consistency with California's Global Warming Solutions Act of 2006 (Assembly Bill [AB] 32). The CAP consists of an emissions reduction target of 15% below 2010 levels by 2020 and 49% below 2010 levels by 2035. As indicated in the CAP the emission reduction target of 15% from 2010 levels equates to a GHG emissions reduction of nearly 2,330,647 metric tons below business-as-usual (BAU) conditions by 2020. In order to reach these goals, the CAP provides feasible strategies, while affording its communities other economic and environmental benefits. Therefore, to determine whether the project's GHG emissions are significant, this analysis uses the WRCOG CAP. The project has been designed to be consistent with the WRCOG CAP as presented below. Impacts would be less than significant. No mitigation is required.

Project Consistency with Applicable WRCOG Subregional CAP Reduction Measures

E-1: Energy Action Plan	Improve municipal and community wide energy efficiency and reduce energy consumption through the adoption of local Energy Action Plans (EAP)	Not directly applicable to the project; however, the project will be compliant with the current Title 24 and CALGreen standards
E-3: Shade Trees	Strategically plant trees to reduce the urban heat island effect.	The proposed project is to include trees per City requirements for new developments.
T-2: Bicycle Parking	Provide additional options for bicycle parking.	The proposed project will follow City requirements for bicycle parking.
T-8: Density	Improve jobs-housing balance and reduce vehicle miles traveled by increasing household and employment densities.	The proposed project is commercial and located within 0.25 miles of a residential community.
T-10: Design/Site Planning	Design neighborhoods and sites to reduce VMT.	The proposed project is commercial and located within 0.25 miles of a residential community.
T-14: Voluntary Transportation Demand Management	Reduce demand for roadway travel through incentives for alternative modes of transportation and disincentives for driving.	The proposed project is commercial and located within 0.25 miles of a residential community.

[2] MTCO2e + metric tons of carbon dioxide equivalents (includes carbon dioxide, methane, and nitrous oxide.
[3] The emissions are averaged over 30 years because the average is added to the operational emission calculations per SCAQMD.

SW-1: Yard Waste Collection	Provide green waste collection bins community-side.	The project will be required to comply with City programs, such as the City's recycling and waste reduction program, which complies with the 75 percent reduction required by 2020 per AB 341.
SW-2: Food Scrap and Paper Division	Divert food and paper waste from landfills by implementing collection system.	The project will be required to comply with City programs, such as the City's recycling and waste reduction program, which complies with the 75 percent reduction required by 2020 per AB 341.

Source: WRCOG Subregional Climate Action Plan (2014)

b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emission of greenhouse gases?	☐	☐	☒	☐

Response:

As noted above, the City of San Jacinto is participating the WRCOG Subregional Climate Action Plan and the project is consistent with applicable CAP reduction measures.

The CARB Climate Change Scoping Plan (December 2008) is also applicable to the project. The Scoping Plan "proposes a comprehensive set of actions designed to reduce overall greenhouse gas emissions in California, improve our environment, reduce our dependence on oil, diversify our energy sources, save energy, create new jobs, and enhance public health". Originally approved in 2008, the plan has been updated twice, once in 2014 and again in 2017. The 2017 Scoping Plan builds upon the successful framework established by the Initial Scoping Plan and First Update, while identifying new, technologically feasible, and cost-effective strategies to ensure that California meets its GHG reduction targets in a way that promotes and rewards innovation, continues to foster economic growth, and delivers improvements to the environment and public health, including in disadvantaged communities.

The plan includes policies to require direct GHG reductions at some of the State's largest stationary sources and mobile sources. These policies include the use of lower GHG fuels, efficiency regulations, and the Cap-and Trade Program, which constrains and reduces emissions at covered sources. As the latest 2017 Scoping Plan builds upon previous versions, project consistency with applicable strategies of both the 2008 and 2017 Plan is provided below. As indicated, the project is consistent with the applicable strategies and will result in a less than significant impact. No mitigation is required.

2008 Scoping Plan Measures to Reduce Greenhouse Gas Emissions	**Project Compliance with Measure**
California Light-Duty Vehicle Greenhouse Gas Standards-Implement adopted standards and planned second phase of the program. Align zero-emission vehicle, alternative and renewable fuel and vehicle technology programs with long-term climate change goals.	Consistent. These are CARB enforced standards; vehicles that access the project site are required to comply with the standards and therefore will comply with the strategy.

Energy Efficient-Maximize energy efficiency building and appliance standards; pursue additional efficiency including new technologies, policy, and implementation mechanisms. Pursue comparable investment in energy efficiency from all retail providers of electricity in California.	Consistent. The project will be compliant with the current Title 24 standards.
Low Carbon Fuel Standard-Develop and adopt the Low Carbon Fuel Standard.	Consistent. These are CARB enforced standards; vehicles that access the project site are required to comply with the standards and therefore will comply with the strategy.
Medium/Heavy-Duty Vehicles-Adopt medium and heavy-duty vehicle efficiency measures.	Consistent. These are CARB enforced standards; vehicles that access the project site are required to comply with the standards and therefore will comply with the strategy.
Green Building Strategy-Expand the use of green building practices to reduce the carbon footprint of California's new and existing inventory of buildings.	Consistent. The California Green Building Standards Code (proposed Part 11, Title 24) was adopted as part of the California Building Standards Code in the CCR. Part 11 establishes voluntary standards, that are mandatory in the 2022 edition of the Code, on planning and design for sustainable site development, energy efficiency (in excess of the California Energy Code requirements), water conservation, material conservation, and interna air contaminants. The project will be subject to these mandatory standards.
High Global Warming Potential Gases-Adopt measures to reduce high global warming potential gases.	Consistent. CARB identified five measures that reduce hydrofluorocarbon emissions from vehicular and commercial refrigeration systems vehicles that access the project site that are required to comply with the measures will comply with the strategy.
Water-Continue efficiency programs and use cleaner energy sources to move and treat water.	Consistent. The project will comply with all applicable City ordinances and CALGreen requirements.
2017 Scoping Plan Recommended Actions to Reduce Greenhouse Gas Emissions	**Project Compliance with Recommended Action**
Implement Mobile Source Strategy: Further increase GHG stringency on all light-duty vehicles beyond existing Advanced Clear Car regulations.	Consistent. These are CARB enforced standards; vehicles that access the project site are required to comply with the standards and therefore will comply with the strategy.
Implement Mobile Source Strategy: At least 1.5 million zero emission and plug-in hybrid light-duty electric vehicles by 2025 and at least 4.2 million zero emission and plug-in hybrid light-duty electric vehicles by 2030.	Consistent. These are CARB enforced standards; vehicles that access the project site are required to comply with the standards and therefore will comply with the strategy.

Implement Mobile Source Strategy: Innovative Clean Transit: Transition to a suite of to-be-determined innovative clean transit options. Assumed 20 percent of new urban buses purchased beginning in 2018 will be zero emission buses with the penetration of zero-emission technology ramped up to 100 percent of new sales in 2030. Also, new natural gas buses, starting in 2018, and diesel buses, starting in 2020, meet the optional heavy-duty-low-Nox standard.	Consistent. These are CARB enforced standards; vehicles that access the project site are required to comply with the standards and therefore will comply with the strategy.
Implement Mobile Source Strategy: Last Mile Delivery: New regulation that would result in the use of low NOX or cleaner engines and the deployment of increasing numbers of zero-emission trucks primarily for class 3-7 last mile delivery trucks in California. This measure assumes ZEVs comprise 2.5 percent of new Class 3-7 truck sales in local fleets starting in 2020, increasing to 10 percent in 2025 and remaining flat through 2030.	Consistent. These are CARB enforced standards; vehicles that access the project site are required to comply with the standards and therefore will comply with the strategy.
Implement SB 350 by 2030; Establish annual targets for statewide energy efficiency savings and demand reduction that will achieve a cumulative doubling of statewide energy efficiency savings in electricity and natural gas end uses by 2030.	Consistent. The project will be compliant with the current Title 24 standards.
By 2019, develop regulations and programs to support organic waste landfill reduction goals in the Short-Lived Climate Pollutant Reduction Strategies and SB 1383.	Consistent. The project will be required to comply with City programs, such as City's recycling and waste reduction program, which complies with the 75 percent reduction required by 2020 per AB 341.

Source: CARB Scoping Plan (2008 and 2017)

Sources:

1. San Jacinto General Plan
2. Final Environmental Impact Report, City of San Jacinto General Plan
3. Project Application Materials
4. Project Air Quality/Greenhouse Gas Emissions Report, MD Acoustics, 2023 (Appendix A).

9. Hazards and Hazardous Materials – Will the project:

a)	Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐

Response:
Construction activities at the project site would involve the use of hazardous materials such as fuel, asphalt, lubricants, toxic solvents, pesticides, and herbicides which would be transported to and from the site and be present temporarily during construction. These potentially hazardous materials would not be used in quantities sufficient enough to pose a significant hazard to public health and safety or the environment, and their use during construction would be short-term.

Operation of the project would involve the use of hazardous materials such as cleaners, solvents, paints, degreasers, pesticides, fertilizers, and other custodial products, as well as gasoline/diesel. The materials used and stored onsite would be clearly labeled and safely stored in compliance with state and federal requirements. A permit to operate an underground storage tank (UST) system is required per California Code of Regulations Title 23, Division 3, Chapter 16, California Health and Safety Code Section (25280-25299.8) and Riverside County Ordinance 617. These regulations mandate the testing and frequent inspections of the UST facilities. The project occupant(s) would be required to prepare a Spill Contingency Plan to be filed with the County of Riverside Hazardous Materials Department. All operations of the gas station and related USTs would be required to comply with all federal, state, and local laws regulating the management and use of hazardous materials. With the exercise of normal safety practices, the proposed project would not create substantial hazards to the public or the environment. Therefore, a less than significant impact would occur.

The transport, use, storage, and disposal of hazardous materials would be required to comply with existing regulations established by several agencies, including the Department of Toxic Substances Control, the US Environmental Protection Agency (EPA), the US Department of Transportation, and the Occupational Safety and Health Administration. Moreover, any businesses that transport, generate, use, and/or dispose of hazardous materials in the City are subject to existing local hazardous materials regulations, such as those implemented by the Riverside County Department of Environmental Health which is the Certified Unified Program Agency (CUPA) for Riverside County. This program is responsible for consolidating, coordinating, and making consistent the administrative requirements, permits, inspections, and enforcement activities of state standards regarding the transportation, use, and disposal of hazardous materials in Riverside County, including the City of San Jacinto. Compliance with federal, state, and local laws and regulations would result in a less than significant impact. No mitigation is required.

b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐

Response:
As described in the response to 9.a, above, construction and operation of the proposed project would involve the transport, storage, and use of hazardous materials on the site including common cleaning substances, building maintenance products, lubricants, paints, solvents, herbicides, pesticides, fertilizers, and most notably diesel and gasoline fuel for the gas station. An impact could occur if construction and operation of the proposed project create conditions where hazardous materials could easily contaminate surrounding soil, water, or air.

Construction projects typically maintain supplies onsite for containing and cleaning small spills of hazardous materials. However, construction activities would not involve a significant amount of hazardous materials, and their use would be temporary. Furthermore, project construction workers would be trained on the proper use, storage, and disposal of hazardous materials.

Operation of the commercial land uses would not warrant use of hazardous materials in quantities that could result in hazardous conditions. However, operation of the proposed gas station could result in hazardous materials due to the potential to have liquefied petroleum gas (LPG) tanks; operation of the gas station would require a permit. All on-site activities during construction and operation would be required to adhere to federal, state, and local regulations for the management and disposal of hazardous materials, including but not limited to California Code of Regulations Title 23, Division 3, Chapter 16, California Health and Safety Code Section (25280-25299.8) and Riverside County Ordinance 617. Also, construction activities would be conducted in accordance with the Storm Water Pollution Prevention Plan (SWPPP) as part of the NPDES permit, as detailed in Section V.10, Hydrology and Water Quality. The primary objective of the SWPPP is to identify, construct, implement, and maintain BMPs to reduce eliminate pollutants in stormwater discharges and authorized non-stormwater discharges from the construction site. BMPs for hazardous materials include, but are not limited to, off-site refueling, placement of generators on impervious surfaces, establishing clean out areas for cement, etc. While the risk of exposure to hazardous materials cannot be eliminated, adherence to existing regulations would ensure compliance with safety standards related to the use and storage of hazardous materials and with the safety procedures mandated by applicable federal, state, and local laws and regulations. Therefore, transport, use, and/or disposal of hazardous materials during construction and operation of the proposed project would be properly managed, and impacts would be less than significant. No mitigation is required.

c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☐	☒

Response:

The nearest school to the project site is Mt. San Jacinto College, located 0.28 miles to the north of the project site. As discussed above in Section 4.9.a and 4.9.b, hazardous materials used during temporary construction activities and commercial land use will be common in type and of low-concentration properties. With the additional distance and separation between the offsite school and project site, no impacts are anticipated.

d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, will it create a significant hazard to the public or the environment?	☐	☐	☐	☒

Response:

The project site is not included on a list of hazardous materials databases compiled by the California Department of Toxic Substances Control (DTSC) or the State Water Resources Control Board (SWRCB) (DTSC 2022; SWRCB 2022). According to the Phase I ESA, the project site is not listed on environmental databases for hazardous sites, and there are no Leaking Underground Storage Tank (LUST)/Spill sites on site. Per the Phase I Report prepared for the project site, there is no evidence of significant environmental concern or recognized environmental conditions in connection with the project site. Therefore, no impact would occur. No mitigation is required.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, will the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	☒

Response:

The project will not be within two (2) miles of a public airport or public use airport; or result in a safety hazard or excessive noise for people residing or working in the project area. The project site is not located within an airport land use plan and there are no public airports within two (2) miles of the project site. The nearest airport is Hemet-Ryan Airport located approximately four miles southwest of the project site. Therefore, no impacts will occur.

f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐

Response:

According to the General Plan Public Safety Element, the purpose of the City's Emergency Preparedness Plan is to respond to emergency situations with a coordinated system of emergency service providers and facilities. The Emergency Preparedness Plan is intended to maximize the efforts of emergency service providers (e.g., fire, medical, and law enforcement) and minimize human suffering and property damage during disasters. It also supports high-level multi-jurisdictional cooperation and communication for emergency planning and management. In the event evacuation is required, the Riverside County Sheriff's Department will identify and direct traffic to designated emergency evacuation routes. Owners and lessees of the proposed buildings and land uses will be expected to comply with the City's emergency response plans. No long-term impacts are anticipated.

During construction, there could be the potential for temporary lane closures to allow for utility connections. However, the temporary lane closures will be for a short period of time and will be implemented in accordance with recommendations provided in the California Temporary Traffic Control Handbook to ensure that emergency access will be maintained at all times. Temporary construction activities will not physically impair or interfere with emergency response plans in the project vicinity. Therefore, potential impacts associated with conflicts to emergency response plans will be less than significant.

g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	☐	☐	☒	☐

Response:

As discussed in Section 20, *Wildfire*, the project site is not within a very high fire hazard severity zone (VHFHSZ). The project will not substantially exacerbate existing wildfire hazards in the area and will provide adequate emergency access. Impacts related to wildland fire exposure will be less than significant.

1. San Jacinto General Plan
2. Final Environmental Impact Report, City of San Jacinto General Plan
3. Project Application Materials
4. Phase I ESA, Salem Engineering Group, 2023 (Appendix E)

10. Hydrology/Water Quality – **Will the project**:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☒	☐

Response:
The project site currently slopes generally from southeast to northwest. During construction, there will be the potential that degraded surface water runoff generated from the construction site could be conveyed into local and regional drainage facilities. Depending on the constituents in the surface water, the water quality of the project area surface water bodies could be reduced, which could conflict with beneficial uses established for the applicable surface water bodies. The proposed project will disturb more than one acre of area and will, therefore, be required to obtain a NPDES State General Construction Permit from the State Water Resources Control Board. In accordance with the State General Construction Permit, the project applicant will be required to file a Notice of Intent (NOI) to the Storm Water Report Tracking System and obtain a waste discharger identification number from the State Water Resources Control Board. Additionally, the General Construction Permit requires the development and implementation of a SWPPP. The SWPPP will identify Best Management Practices (BMPs) to minimize degraded surface water runoff impacts. Such measures will include a site map that shows the construction site perimeter, existing and proposed buildings, parking areas, roadways, storm drain collection and discharge points before and after construction. Additionally, structural BMP placement will include use of sandbags or waddles near drainages, use of rumble racks or wheel washers or other measures to avoid sediment transport. Compliance with the NPDES short-term regulatory requirements will reduce potential short-term construction related impacts to water quality to less than significant.

The long-term operation of the proposed project will generate surface water runoff that could contain pollutants that could conflict with applicable surface water beneficial uses. The proposed project will be regulated under NPDES Municipal Stormwater Permits issued by the Regional Water Quality Control Board and will be required to comply with the City's Stormwater Program Management Ordinance to reduce the amounts of impervious areas and capture and treat or infiltrate stormwater runoff.

Two Water Quality Management Plans (WQMPs) have been prepared for the proposed project in accordance with the requirements of the non-point source NPDES Permit for Waste Discharge Requirements. One WQMP was prepared for the overall project site and another WQMP was specifically prepared for the proposed gas station and convenience store to be located within the project site. Although a separate WQMP was prepared for the gas station and convenience store, they are also evaluated as part of the overall WQMP prepared for the project site. Per the WQMPs, the proposed project will divert surface runoff away from buildings and into several catch basins located throughout the surface parking area to an underground infiltration basin for treatment and recharge. Flows beyond the required treatment volume will discharge from the underground infiltration basin to a proposed 48" reinforced concrete pipe (RCP) storm drain line on State Street. The proposed 48" RCP storm drain line is an extension of the existing storm drain line. In addition, the WQMPs outline several non-structural source control BMPs to be implemented during project operation, including but not limited to include education of property owners and lessees of the properties, common area landscape management, litter control, catch basin inspection, maintenance of landscaping with minimum or no pesticides, and street sweeping. Structural BMPs may include storm drain system stenciling, design outdoor hazardous material storage areas to reduce pollutant introduction, and design trash enclosures to reduce pollutant introduction. Compliance with WQMP non-structural

and structural and treatment control measures will reduce potential long-term operational impacts to water quality to less than significant.

b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☒	☐

Response:
Project implementation will not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin. The project site is not located on an active groundwater recharge basin and the proposed project does involve the construction of any groundwater wells that will extract groundwater. The project also includes onsite detention/infiltration basins to allow for collection and percolation of stormwater flows generated by the new impervious surfaces. The project will have no activities that will substantially decrease groundwater supplies or interfere substantially with groundwater recharge.

c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which will:

i) Result in substantial erosion or siltation on- or off-site?	☐	☐	☒	☐

Response:
The project has been designed to maintain the existing drainage pattern on the project site. During earthwork activities, there could be the potential that uncovered soils on the project site could be exposed to water erosion and/or wind erosion impacts. Additionally, there will be the potential that construction vehicles and construction equipment could transport sediment onto local streets and into local drainage systems. As discussed above, the proposed project will be required to prepare a SWPPP per the General Construction Permit and will require implementation of BMPs to avoid erosion and sediment transfer impacts. Potential erosion and sediment transfer impacts will be less than significant.

ii) Substantially increase the rate or amount of surface runoff in a manner which will result in flooding on- or offsite?	☐	☐	☒	☐

Response:
The imperviousness of existing site conditions and of the proposed condition was utilized to calculate expected stormwater runoff on- and off-site. According to the Hydrology study prepared for the project, proposed conditions are expected to result in an increase of 8.24 cubic feet squared (CFS) during a 100-year storm event over the current vacant lot conditions and an increase of 5.7 CFS during a 10-year storm. The hydrologic analysis conducted for the project shows that the proposed 48-inch RCP extension to Line H-2 will have capacity to convey the 10-yr storm event without the need for onsite flow mitigation. The developer's construction of the Line H-2 extension will be provided to capture the onsite flows from the project site and to benefit the City in the future plans to complete the Master Plan of Drainage facilities that would alleviate potential flooding within the surface. Impacts will be less than significant.

iii) Create or contribute runoff water which will exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	☐	☐	☒	☐

Response:
See Response 10.c.ii, above regarding the amount of runoff and capacity. Regarding additional sources of polluted runoff, the proposed project will be required to comply with

NPDES General Construction Permit requirements and Municipal Code regulations. With compliance with the project drainage plan, WQMP, Municipal Code regulations and NPDES General Construction Permit requirements, potential water impacts will be less than significant.

iv) Impede or redirect flood flows?	☐	☐	☒	☐

Response:
Implementation of the proposed project will not impede or redirect flood flows. As shown on Federal Emergency Management Agency (FEMA) floodplain mapping, the project site is located in Flood Zone X, denoting an area with reduced flood risk because of a levee. Per the WQMP prepared for the project the existing system has the capacity to handle 10-year storm flows. Impacts will be less than significant.

d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☒	☐

Response:
According to the City of San Jacinto General Plan Draft Environmental Impact Report (EIR), *Figure 5.10-4 FEMA Flood Map*, the project site is not located in a flood zone. The project site is located in an inundation area associated with Little Lake, as shown in *Figure 5.10-5 Dam Inundation Map,* of the Draft EIR. In the event of dam failure at Little Lake, the project site will be susceptible to flooding that will increase the risk for the release of pollutants. Pursuant to the 2022 General Plan Draft EIR, Little Lake is a small 5-acre lake located in eastern Hemet that includes a small dam. Little Lake is owned and operated by the Lake Hemet Municipal Water District and has no history of dam failure. Acceptable performance of the dam is expected under all structural loading conditions (static, hydrologic, seismic) in accordance with the minimum applicable state or Federal regulatory criteria or tolerable risk guidelines. Monitoring and mitigation of dam failure is constantly occurring at both the federal and state levels and dam failure inundation maps are reviewed and approved by the California Office of Emergency Services. Sellers of real estate within inundation zones are also required to disclose this information to prospective buyers. Based on the information provided above and with implementation of standard Federal and state policies and regulations, potential impacts associated with release of pollutants from a flood hazard will be less than significant. The project site is also not located near the ocean or other large body of water that could result in exposure to a tsunami or seiche; therefore, impacts are considered less than significant.

e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☐	☒

Response:
The proposed project will implement the BMPs provided in the SWPPP and the WQMP prepared for the project which will treat onsite low flows to protect beneficial uses for surface waters identified in the Santa Ana Basin Plan. Project impacts to water quality would be less than significant.

In 2014, the California Legislature enacted the Sustainable Groundwater Management Act (SGMA), which requires local groundwater management agencies to sustainably manage groundwater resources. The project site overlines the San Jacinto Groundwater Basin. Eastern Municipal Water District (EMWD) has developed a Groundwater Sustainability Plan (GSP) in September 2021 for the San Jacinto Groundwater Basin in compliance with the Sustainable Groundwater Management Act. The purpose of this GSP is to define the groundwater conditions that will be used to ensure ongoing, long-term, sustainable management of the groundwater resources within the Plan Area. The GSP identifies

potential constraints that could affect groundwater sustainability and potential actions to mitigate the effects. EMWD evaluates the GSP at least every five (5) years from adoption of the plan to monitor the health of the groundwater basin and if adaptive actions are needed to maintain sustainability. At this time, adaptive management actions are not required to maintain sustainability because of rising groundwater levels and increased groundwater in storage over the past 30 years.

The proposed project is consistent with the City of San Jacinto General Plan and the water demands for the project are accounted for in the EMWD Urban Water Management Plan which includes available groundwater supplies. Therefore, the proposed project will not conflict with the Eastern Municipal Water District Groundwater Sustainability Plan.

1. San Jacinto General Plan
2. Final Environmental Impact Report, City of San Jacinto General Plan
3. Project Application Materials

11. Land Use – Will the project result in:

a) Physically divide an established community?	☐	☐	☐	☒

Response:

The project site is currently an undeveloped lot situated at the intersection of two arterial highways, within a general suburban setting of the City that is in transition from undeveloped and rural-residential lands to medium density residential and commercial development. No improvements are proposed that would divide the community, redirect traffic through existing residential neighborhoods, nor will it introduce any physical barriers between the project site and surrounding area. Therefore, no impacts will occur regarding physically dividing an established community.

b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☒	☐	☐

Response:

The project site is designated for Commercial land uses in the City's General Plan Land Use Element and also zoned for commercial land uses (Commercial General). The proposed project is consistent with General Plan goals and policies relevant to commercial land uses and an allowed use in the Commercial General zone. The project will also be consistent with applicable air quality, greenhouse gas and energy plans and policies and the RCA MSHCP with implementation of MM Bio 1. Impacts will be less than significant with mitigation.

Sources:

1. San Jacinto General Plan
2. Final Environmental Impact Report, City of San Jacinto General Plan
3. Project Application Materials

12. Mineral Resources – Will the project:

a) Result in the loss of availability of a known mineral resource that will be of value to the region and the residents of the state?	☐	☐	☐	☒

Response:

The potential for mineral resource extraction within the City of San Jacinto is limited. The nearest mineral resource extraction site is the Jack Rabbit Canyon Quarry, a sand and gravel quarry, which is not within five miles of the project site. There are no known mineral

resources of regional or statewide significance in the project vicinity. Consequently, there will be no impacts to mineral resources of local or statewide value.

b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	☐	☐	☐	☒

Response:
See response for (a) above.

Sources:
1. San Jacinto General Plan
2. Final Environmental Impact Report City of San Jacinto General Plan
3. San Jacinto Municipal Code
4. The Surface Mining and Reclamation Act of 1975 (SMARA, Public Resources Code, Sections 2710-2796), https://www.conservation.ca.gov/dmr/lawsandregulations

13. Noise – Will the project result in:

a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies? Or generate excessive groundborne vibration or groundborne noise levels?	☐	☐	☒	☐

Response:

Construction

Construction activities generally are temporary and have a short duration, resulting in periodic increases in the ambient noise environment. Construction activities will occur over approximately eight months and will include the following phases: grading, building construction, paving, and architectural coating. Ground-borne noise and other types of construction-related noise impacts typically occur during the initial demolition and grading phase. This phase of construction has the potential to create the highest levels of noise. Typical noise levels generated by construction equipment are shown in the Table below, Maximum Construction Noise Levels. It should be noted that the noise levels identified in this table 3 are maximum sound levels (Lmax), which are the highest individual sound occurring at an individual time period. Operating cycles for these types of construction equipment may involve one or two minutes of full power operation followed by three to four minutes at lower power settings. Other primary sources of acoustical disturbance will be due to random incidents, which will last less than one minute (such as dropping large pieces of equipment or the hydraulic movement of machinery lifts).

Type of Equipment	Acoustical Use Factor[1]	L_{max} at 50 Feet (dBA)[2]	L_{max} at 10 Feet (dBA)
Backhoe	40	78	92
Compressor	40	78	92
Concrete Saw	20	90	104
Dozer	40	82	96
Dump Truck	40	76	90
Excavator	40	81	95
Flatbed Truck	40	74	88
Grader	40	85	99
Loader	40	79	93
Paver	50	77	91
Roller	20	80	94
Scraper	40	85	99
Tractor	40	84	98
Water Truck	40	80	89
Welder	40	74	88

Note:
1. Acoustical Use Factor (percent): Estimates the fraction of time each piece of construction equipment is operating at full power (i.e., its loudest condition) during a construction operation.
2. These noise levels represent the A-weighted maximum sound level (L_{max}) measured at a distance of 50 feet from the construction equipment.
Source: Federal Highway Administration, Roadway Construction Noise Model (FHWA-HEP-05-054), January 2006.

As shown, the highest noise levels from construction are predicted to range from approximately 88 dBA Lmax to 104 dBA Lmax at the nearest receivers 10 feet to the southeast. These maximum noise levels are considered to be a peak exposure, applicable to not more than 10–15% of the total construction period, only while the construction activity is taking place along the property boundary closest to these nearest off-site receivers. The City does not have established numerical noise standards for construction noise if the construction activities occur within the allowable hours specified by the Municipal Code. Section 8.040.090 (A) of the City of San Jacinto Municipal Code allows construction activities between the hours of 7:00 a.m. and 7:00 p.m. Monday through Saturday. No construction is allowed on Sunday or federal holidays. Construction occurring consistent with these provisions is exempt from noise regulations described in the City of San Jacinto's Noise Ordinance.

Operation

Implementation of the project will result in changes to existing noise levels on and around the project site by developing new stationary sources of noise, including introduction of heating, ventilation, and air conditioning (HVAC) equipment. These sources may affect noise-sensitive vicinity land uses off the project site. HVAC units will be installed on the roof of the proposed commercial buildings. Typically, HVAC equipment noise is approximately 66 dBA at 3 feet from the source.1 Based upon the Inverse Square Law, sound levels decrease by 6 dBA for each doubling of distance from the source.[2] The nearest sensitive receptors to the project site are the single-family residences located adjacent to the southeast. However, HVAC units will be located at the center of the rooftop and will be located approximately 72 feet from the nearest sensitive receptor to the southeast. Noise from the proposed HVAC units will be approximately 38 dBA at 72 feet and will not be audible above the existing noise levels. In addition, the proposed HVAC units will be shielded by a screen, which will further attenuate operational noise from the

HVAC units. Therefore, the proposed HVAC units will not generate noise levels in excess of City of San Jacinto's maximum exterior noise level of 65 dBA Leq during daytime and 45 dBA Leq during nighttime. Thus, the proposed project will not result in significant noise impacts from HVAC units at the nearest sensitive receptor, and stationary noise levels from the proposed HVAC units will comply with the City's Municipal Code Noise Ordinance. Impacts in this regard will be less than significant.

Traffic associated with parking lots is typically not of sufficient volume to exceed community noise standards, which are based on a time-averaged scale such as the CNEL scale. However, the instantaneous maximum sound levels generated by a car door slamming, engine starting up, and car pass-bys may be an annoyance to adjacent noise-sensitive receptors. The project proposes 532 parking spaces within the project site. The nearest sensitive receptor (single-family uses) to the proposed parking lot will be located approximately 55 feet to the east of the project site. Parking lot noise levels could range between 53 dBA and 63 dBA at 50 feet. However, there is an existing seven-foot noise barrier wall along the western property line of the residential uses to the east which will shield the parking lot noise. Further, parking lot noise will be partially masked by background noise from traffic along Eagle Road and Ramona Expressway. As such, parking lot noise levels will not exceed the City's day-night average exterior sound level standard for residential use (65 dBA) and the City's nighttime noise standards (45 dBA). As such, the noise impacts from parking lot activities will be less than significant.

The proposed automated carwash facility including a machine dryer will be a total of 110 feet long and will be located at the southwestern side of the project site. Typical measured noise level from the car wash activities is approximately 78 dBA at 45 feet from the car wash exit.[4] The nearest sensitive receptor to the project site is the single-family residence located approximately 600 feet to the east of the proposed car wash exit. Noise from the proposed car wash activities will be approximately 55 dBA at 600 feet and will not exceed the City's daytime noise standard of 65 dBA for single-family residential uses. The proposed car wash will not be operational during the nighttime hours. Thus, the proposed project will not result in significant noise impacts from car wash activities to the nearest sensitive receptor, and stationary noise levels from the proposed car wash activities will comply with the City's Municipal Code Noise Ordinance. Impacts in this regard will be less than significant.

Based on the Trip Generation Data received from the project's traffic engineers, the proposed project is expected to generate approximately 11,265 average daily trips (ADT). The project is expected to provide access along Ramona Expressway and State Street. Based on the City of San Jacinto General Plan Noise Impact Study prepared by MD Acoustics, LLC dated July 15, 2022, existing traffic volumes along Ramona Expressway and State Street will be approximately 20,150 and 22,050 respectively. As a conservative analysis, the proposed project ADT will represent increases of approximately 55 percent and 51 percent in the daily traffic compared to the existing traffic conditions on Ramona Expressway and State Street respectively. According to Caltrans, a doubling of traffic (100 percent increase) on a roadway will result in a perceptible increase in traffic noise levels (3 dBA).

As a result, project-related increases in traffic volume will not significantly increase the existing traffic noise levels. Thus, the project's operational traffic noise levels are not expected to be significant.

Vibration

Project construction can generate varying degrees of groundborne vibration, depending on the construction procedure and the construction equipment used. Operation of construction equipment generates vibrations that spread through the ground and diminish in amplitude with distance from the source. The effect on buildings in the vicinity of a construction site often varies depending on soil type, ground strata, and construction characteristics of the receiver building(s). The Caltrans Transportation and Construction Vibration Manual identifies various vibration damage criteria for different building classes. This evaluation uses the Caltrans architectural damage criterion for continuous vibrations at residential buildings of 0.2 inch-per second (inch/second) Peak Particle Velocity (PPV). The types of construction vibration impacts include human annoyance and building damage.

Based on the site plan, construction activities will likely take place as near as approximately 15 feet from the nearest residential use south of the project. However, it is acknowledged that construction activities will occur throughout the project site and will not be concentrated at the point closest to the nearest structure. Based on the vibration levels presented in Table 4, ground vibration generated by heavy-duty equipment will range from approximately 0.0065 to 0.1915 in/sec PPV at 15 feet from the source of activity. As such, the nearest residential buildings located 15 feet southeast of the project site will not be exposed to vibration levels exceeding the Caltrans 0.2 in/sec PPV significance threshold for vibration. Additionally, groundborne vibration during construction will be a temporary impact and will cease completely when construction ends. Once operational, the project will not be a source of groundborne vibration. Impacts will be less than significant.

The project will not involve operation of trains or heavy trucks, as such operational vibration impacts from the project will be less than significant.

b) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, will the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☒	☐

Response:

The nearest airports are Hemet-Ryan Airport located approximately 5.2 miles to the southwest of the project site. Furthermore, the project site is not located within the private or public airports within 2 miles radius. Impacts will be less than significant.

Sources:

1. San Jacinto General Plan
2. Final Environmental Impact Report City of San Jacinto General Plan
3. San Jacinto Municipal Code
4. Project Noise Study, MAT Engineering, 2023 (Appendix F)

14. Population and Housing – Will the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?	☐	☐	☒	☐

Response:
Although the proposed project does not include any residential development the proposed commercial development will provide new job opportunities in San Jacinto, which could indirectly induce population growth should employees relocate to the city. However, due to the nature of project-related employment opportunities and the connected nature of the region, employees will likely be drawn from the local workforce and will not result in the relocation of any new residents to San Jacinto. Most employees will likely be drawn from the existing local population. Therefore, impacts related to population and housing will be less than significant. No mitigation is required.

b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

Response:
The project involves the construction of a commercial development on a vacant lot. The project will not displace existing housing or people. There will be no impact. No mitigation is required.

Sources:
5. San Jacinto General Plan
6. Final Environmental Impact Report City of San Jacinto General Plan
7. San Jacinto Municipal Code

15. Public Services – Will the project:

a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
i) Fire protection?	☐	☐	☒	☐

Response:
The Riverside County Fire Department (RCFD) will provide fire protection service to the project site. Although project implementation will incrementally increase the demand for fire services, this increased demand for fire service will not affect the City of San Jacinto's current Class 3 Insurance Services Office (ISO) Rating or require the construction of a new fire station or improvements to an existing station to maintain response times. The project will be responsible for the payment of development impact fees to offset future fire protection needs. Additionally, the project will be required to comply with applicable RCFD codes, ordinances, and regulations regarding fire prevention and suppression measures; fire hydrants and sprinkler systems; emergency access; and other similar requirements. Payment of development impact fees and compliance with fire code standards will reduce potential impacts to fire protection service to less than significant.

ii) Police protection?	☐	☐	☒	☐

Response:
The project will incrementally increase the need for law enforcement protection services. The Riverside County Sheriff's Department will provide police protection service for the project site. Services offered by the Sherriff's Department include police patrol, traffic enforcement, Community Oriented Policing and Problem Solving (COPPS), investigations, bicycle patrol, canine team, Allied Riverside Cities Narcotics Enforcement Team (ARCNET), animal control, police explorers, citizen volunteers, Drug Abuse Resistance Education (DARE), and neighborhood watch. The City will continue to ensure that the level of service provided by the Sheriff's Department corresponds to the number of residents

and businesses within the City, as well as to current law enforcement problems. The project will contribute by paying development impact fees and by generating revenue to fund existing and future Sheriff's Department facilities. Potential impacts to the Sheriff's Department services will be less than significant. No mitigation is required.

iii) Schools?	☐	☐	☒	☐

Response:
The project site is within the San Jacinto Unified School District (SJUSD). SJUSD serves areas within the cities of San Jacinto, Hemet, Moreno Valley, Beaumont, and unincorporated areas within the County of Riverside. SJUSD currently educates a total student population of approximately 10,590 kindergarten through twelfth grade students. The School District currently operates seven (7) elementary school sites, two (2) middle school sites, and two (2) high school sites. An additional elementary school is planned near Vernon Avenue and Ramona Expressway. As the project is commercial in nature and the majority of the employees are expected to come from areas served by SJUSD, there will not be a significant increase in students such that school facilities could be significantly impacted. No mitigation is required.

iv) Parks?	☐	☐	☐	☒

Response:
The City maintains ten park sites, including Sallee Park, Rancho Park, Francisco Estudillo Heritage Park, Mistletoe Park, Harvest Park, Sagecrest Park, Skyview Park, Soboba Springs Park, Druding Park, and Hoffman Park. The Quimby Act allows local governments to exact funding for parks from developers of residential subdivisions, through the dedication of parkland or in-lieu fees, or both. The City implements the Quimby Act, which requires parkland dedication of three (3) acres per 1,000 residents or an in-lieu fee payment as a required condition of approval for a residential subdivision. To ensure sufficient park and recreational opportunities, the City has established a citywide parkland standard of five (5) acres per 1,000 residents. However, the Quimby Act does not apply to commercial projects. As described in Section 13, *Population and Housing*, the project does not include residential development and is not expected to result in a significant growth in population. Therefore, the project will not result in a substantial increased need for, use of, or deterioration of nearby recreational facilities. There will be no impact. No mitigation is required.

v) Other public facilities?	☐	☐	☐	☒

Response:
As described in Section 13, *Population and Housing*, the project does not include residential development and is not expected to result in a significant growth in population. Therefore, the project will not result in substantial increased need for, use of, or deterioration of public facilities. There will be no impact. No mitigation is required.

Sources:
1. San Jacinto General Plan
2. Final Environmental Impact Report City of San Jacinto General Plan
3. San Jacinto Municipal Code

16. Recreation – Will the project:

a) Will the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility will occur or be accelerated?	☐	☐	☐	☒

Response:
As described in Section 13, *Population and Housing*, the project does not include residential development and is not expected to result in a significant growth in population. Therefore, the project will not result in substantial increased need for, use of or deterioration of nearby recreational facilities. There will be no impact. No mitigation is required.

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which have an adverse physical effect on the environment?	☐	☐	☐	☒

Response:
The project will not result in an increased need of or expansion of recreational facilities, nor are any proposed. No impact would occur. No mitigation is required.

Sources:
1. Project Application Materials

17. Transportation – **Will the project:**

a) Conflict with program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☐	☐	☒	☐

Response:
The City of San Jacinto General Plan Mobility Element includes goals and policies that are intended to implement the City's circulation plans. The project's consistency with policies pertinent to the proposed project are presented below.

M-1.1 Balanced Circulation System. Provide for a balanced circulation system that promotes the safe and efficient movement of people and goods throughout the City.

The proposed project is consistent with the existing General Plan land use designations and does not propose or require any changes to the City's Circulation Plan. Project generated vehicle traffic will however result in deficiencies in two intersections which will require physical improvements 1) State Street at Community College Drive (50.34%), and 2) State Street at Ramona Expressway (26.46%). Payment of these fees will reduce this impact to less than significant. The project is consistent with this policy.

M-1.2 Access and Mobility. Strive to maintain sufficient access and mobility for all modes of travel and users of the roadway network.

The project site is served by Riverside Transit Agency (RTA) bus service, City Route 44. The bus stops nearest to the project site are located along State Street on the west side, just north of Idyllwild Drive, and on the east side just north of Ramona Expressway. The project is consistent with this policy.

M-1.3 Maintenance and Infrastructure. Support the circulation system with consistent maintenance and necessary infrastructure improvements, such as flood control and bridges, as funding is available.

The proposed project will be subject to the payment of fair share fees for cumulative impacts to two intersections that will require physical improvements, 1) State Street at Community College Drive (50.34%), and 2) State Street at Ramona Expressway

(26.46%). Payment of these fees will reduce this impact to less than significant. The project is consistent with this policy.

M-1.4 Truck Routes. Maintain a truck route network that supports the efficient movement of goods within and beyond the City, while minimizing noise and safety hazards to the extent feasible.

Section 10.08.040 of the SJMC identifies designated truck routes in the City. Ramona Expressway and State Street are designated as truck routes for commercial vehicles which exceed fourteen thousand (14,000) pounds. These roadways both serve the project site. The project is consistent with this policy.

M-1.5 Transportation Improvements for All Users. Encourage roadway, sidewalk, and median improvements that enhance the visual character of the roadway system and promote pedestrian and bicycle safety.

The project includes improvements to State Street include a 6-foot sidewalk along the project frontage. The project will also install a raised landscaped median along Ramona Expressway and repair damaged sidewalks. The project is consistent with this policy.

M-1.6 Americans with Disabilities Act (ADA) Accessibility. Manage and improve the City's transportation network to be safe, accessible, and consistent with the Americans with Disabilities Act (ADA) to allow mobility-impaired users to safely travel within and beyond the City.

The proposed plans are consistent with the Chapter 17.330 of the City’s development code that provides requirements regarding the number of parking spaces and design requirements for ADA accessibility. The project is consistent with this policy.

M-1.7 Safe Routes to Schools. Work with the San Jacinto Unified School District and Hemet Unified School District in the City to maintain Safe Routes to School and encourage parents and children to walk or bike to schools.

The project will be improving existing sidewalks along State Street and providing new sidewalks along Ramona Expressway. San Jacinto High School is located approximately 0.2 mile south of the project site along Idyllwild Drive and San Jacinto Community College is located The Betty Gibbel Regional Learning Center (grades 6-12) is located approximately 485 feet north/northeast of the project site and accessed via Ramona Expressway and Eagle Road; and Mount San Jacinto Junior College is located approximately 700 feet north/northeast of the project site which has several access points from State Street, Eagle Road and W. Community College Drive. Mountain View High School and De Anza Elementary school are located approximately 1,390 and 1,925 feet southwest of the project site.

The SJUD works together with the Hemet Unified School District (HUSD) to provide transportation for students. The HUSD has published a “Transportation Safety Plan”. This plan provided information about who is eligible to ride a HUSD school bus to school, policies about parent supervision to school and to and from bus stops, expectations for

student and bus driver behavior and bus safety. The project does not interfere with the SJUSD's efforts to provide safe routes to school. The project is consistent with this policy.

The project will be consistent with the applicable plans, policies, and ordinances. Payment of funds to the Transportation Uniform Mitigation Fee (TUMF) program, the City of San Jacinto Development Impact Fee (DIF) program, or as a fair share contribution not found to be covered by a pre-existing fee program will result in impacts that are less than significant.

b) Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	☒	☐

Response:
The project will not conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b). On December 28, 2018, the California Natural Resources Agency adopted revised CEQA Guidelines in accordance with SB 743, which changed the way transportation studies are conducted in CEQA documents. Vehicle miles traveled (VMT) replaced motorist delay and level of service as the metric for determining level of impacts and significance under CEQA. Consistent with the new metric of VMT for analysis of transportation impacts, this analysis follows VMT guidelines set forth by the City of San Jacinto Traffic Impact Analysis (TIA) Guidelines for VMT and Level of Service Assessment adopted in June 2020.

The City utilizes the WRCOG VMT Screening Tool to determine if a project will meet certain criteria that "screen out" a project from a VMT analysis or require a VMT analysis be prepared. The project's Traffic Impact Analysis contains the screening output results. As shown in the screening output, for land use projects using the WRCOG VMT Screening Tool, the project is identified as being located within a low VMT area; and therefore, the project is presumed to have a less than significant impact.

c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐

Response:
The project will not include sharp curves, dangerous intersections, or incompatible uses that will increase hazards. The three driveways included in the project will be designed to meet applicable safety standards and codes and will not cause a safety hazard. Impacts will be less than significant.

d) Result in inadequate emergency access?	☐	☐	☒	☐

Response:
The project provides three ingress/egress points as described above. These driveways included in the project will be designed to meet applicable safety standards and codes and will not cause a safety hazard. The queuing analysis contained in the project's traffic study indicates that storage length will not be exceeded. In addition, no permanent road closures will occur during construction or operations. Project design will not cause any other alterations on the site that will result in inadequate emergency access. Impacts will be less than significant.

5. HUSD https://4.files.edl.io/b7f5/08/14/23/151941-69c67ec4-c095-4a59-83e9-706b4f52a9bb.pdf

18. Tribal Cultural Resources – Will the project:				
a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or	☐	☒	☐	☐

Response:

As of July 1, 2015, California Assembly Bill 52 of 2014 (AB 52) was enacted and expands CEQA by defining a new resource category, "tribal cultural resources." AB 52 establishes that "A project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment" (Public Resources Code [PRC] Section 21084.2). It further states that the lead agency shall establish measures to avoid impacts that will alter the significant characteristics of a tribal cultural resource, when feasible (PRC Section 21084.3).

PRC Section 21074 (a)(1)(A) and (B) defines tribal cultural resources as "sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe" and is:

1. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or
2. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying these criteria, the lead agency shall consider the significance of the resource to a California Native American tribe.

AB 52 also establishes a formal consultation process for California tribes regarding those resources. The consultation process must be completed before a CEQA document can be certified. Under AB 52, lead agencies are required to "begin consultation with a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project." Native American tribes to be included in the process are those that have requested notice of projects proposed within the jurisdiction of the lead agency.

As discussed above under *Cultural Resources*, there are no known cultural resources at the project site and no resources listed in the California Register of Historical Resources (California State Parks 2019). The City commenced consultation with potentially interested Native American stakeholders under Assembly Bill (AB) 52 on December 20, 2023. Notices were sent to the following tribes: Agua Caliente Band of Cahuilla Indians, Torres Martinez Desert Cahuilla Indians, Morongo Band of Mission Indians, Rincon Bank of Luiseño Indians, San Manuel Band of Mission Indians, and Soboba Band of Luiseño Indians. Responses were received from the Soboba Band of Luiseño Indians See section #18. Tribal Cultural Resources.

Although excavation and grading will not impact known tribal cultural resources, the possibility for unknown resources to be encountered cannot be completely ruled out. Implementation of the mitigation measures below will reduce potential impacts to tribal cultural resources to a less-than-significant level by ensuring that any discovery of archaeological resources of Native American origin are appropriately identified and processed, as applicable.

The following mitigation measure will reduce potential impacts to tribal cultural resources to a less-than-significant level.

Mitigation Measure TCR-1: Prior to the issuance of a grading permit, the Developer shall retain a professional archaeologist to conduct monitoring of all ground disturbing activities. The project Archaeologist shall have the authority to temporarily redirect earthmoving activities in the event that suspected archaeological resources are unearthed during project construction. The project archeologist shall attend the pre-grading meeting with the City, the construction manager and any contractors, and Consulting Tribal representatives; and will conduct a mandatory Cultural Resources Worker Sensitivity Training to those in attendance. The archaeological monitor shall have the authority to temporarily halt and redirect earth moving activities in the affected area in the event that suspected archaeological resources are unearthed.

Mitigation Measure TCR-2: Prior to grading permit issuance, the developer shall enter into a Treatment and Disposition Agreement (TDA) with the Soboba Band of Luiseño Indians to address treatment and disposition of archaeological, or Tribal Cultural Resources and human remains associated with the Soboba Band of Luiseño Indians that may be uncovered or otherwise discovered during ground-disturbing activities related to the project, if monitoring deemed necessary by Soboba Band of Luiseño Indians. The TDA will establish provisions for tribal monitoring and shall be submitted to the Planning Division once it has been executed.

Mitigation Measure TCR-3: The project Archaeologist, in consultation with the Consulting Tribe(s), the contractor, and the City, shall develop a CRMP in consultation pursuant to the definition in AB52 to address the details, timing and responsibility of all archaeological and cultural activities that will occur on the project site. A consulting Tribe is defined as a Tribe that initiated the AB 52 tribal consultation process for the project, has not opted out of the AB 52 consultation process, and has completed AB 52 consultation with the City as provided for in Cal Pub Res Code Section 21080.3.2(b)(1) of AB52. Details in the Plan shall include:

a. Project description and location
b. Project grading and development scheduling;
c. Roles and responsibilities of individuals on the project;
d. The pre-grading meeting and Cultural Resources Worker Sensitivity Training details;
e. The protocols and stipulations that the contractor, City, Consulting Tribe (s) and project archaeologist will follow in the event of inadvertent cultural resources discoveries, human remains/cremations, sacred and ceremonial items, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.
f. The type of recordation needed for inadvertent finds and the stipulations of recordation of sacred items.
g. Contact information of relevant individuals for the project;

Mitigation Measure TCR-4: If human remains, grave goods, ceremonial items, and/or sacred items are encountered, work will immediately halt within the immediate area and any nearby area reasonably suspected to overlie adjacent remains, and a 100-foot ESA boundary will be established to protect the find from impact, and the Soboba Band of Luiseno Indians and the City of San Jacinto Planning Division shall be immediately notified.

In accordance with Section 7050.5 of the California Health and Safety Code and State CEQA Guidelines Section 15064.5(e), if human remains are found, the Riverside County Coroner's office shall be notified by the permittee within 24 hours of the discovery. County Coroner's determination regarding the origin of the remains and any required notification is described in Section 7050.5 of the California Health and Safety Code and State CEQA Guidelines Section 15064.5(e). No further excavation or disturbance of the potential human remains, or any area reasonably suspected to overlie additional remains, shall occur until a determination has been made, any notifications have been sent and received, and the Riverside County Coroner's Office has cleared the site.

Mitigation Measure TCR-5: It is understood by all parties that unless otherwise required by law, the site of any reburial of Native American human remains or associated grave goods shall not be disclosed and shall not be governed by public disclosure requirements of the California Public Records Act. The Coroner, pursuant to the specific exemption set forth in California Government Code 6254 (r)., parties, and Lead Agencies, will be asked to withhold public disclosure information related to such reburial, pursuant to the specific exemption set forth in California Government Code 6254 (r).

Mitigation Measure TCR-6: Prior to final inspection, the developer/permit holder shall prompt the project Archeologist to submit two (2) copies of the Phase III Data Recovery report (if required for the project) and the Phase IV Cultural Resources Monitoring Report that complies with the Community Development Department's requirements for such reports. The Phase IV report shall include evidence of the required cultural/historical sensitivity training for the construction staff held during the pre-grade meeting. The Community Development Department shall review the reports to determine adequate mitigation compliance. Provided the reports are adequate, the Community Development Department shall clear this condition. Once the report(s) are determined to be adequate, two (2) copies shall be submitted to the Eastern Information Center (EIC) at the University of California Riverside (UCR) and one (1) copy shall be submitted to the Consulting Tribe(s) Cultural Resources Department(s).

ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☒	☐	☐

Response:
See response for (a) above.
Sources:

19. Utilities and Service Systems – Will the project:

a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☒	☐

Response:
Utility providers that will provide service to the project site are as follows:

- Water – Eastern Municipal Water District (EWMD) or the City of San Jacinto
- Sewer – EMWD or the City of San Jacinto
- Gas – Southern California Gas
- Electricity – Southern California Edison
- Communication – Frontier

The project will not require or result in substantial relocations but may include minor construction to connect to existing utility lines. As stated, these improvements will be minor, be within existing road rights-of-way, and are not expected to result in significant environmental effects. There are two options to serve the project water and sewer need. One option is to use the City of San Jacinto water and sewer

system and the second option is to use Eastern Municipal Water District (EMWD) service.

City Water and Sewer Service Option

If the project developer elects to use the City water system, connections to existing City sewer lines will be made and a new loop water system will be installed as part of the project as described below:

a) A new connection to the existing water within the Eagle Avenue right-of-way to a private main water line crossing the project site to State Avenue. Domestic services for the project will be provided from the private loop with city meters.

b) A new public water main within the State Street right-of-way running south to Idyllwild Drive.

c) A new public water line within the Idyllwild Drive right-of-way from State Avenue to Eagle Road, connecting to the existing water line within the Eagle Road right-of-way.

d) Sewer service will be provided via a connection to the existing sewer line located within the Eagle Avenue right-of-way; a connection to the existing sewer line located within the Idyllwild Drive right-of-way; including a public sewer line within the State Road right-of-way to the connection point in Idyllwild Road.

Eastern Municipal Water District (EMWD) Water and Sewer Service Option

If the project developer elects to use EMWD for water and sewer service, the following improvements will be conducted as part of the proposed project:

a) Manifold connections to existing water lines on Ramona Expressway and State Street rights-of-way.

b) A private water loop for fire service

c) A sewer lateral connection the existing Sewer line within the Ramona Expressway right-of-way.

A catch basin and laterals to a storm drain line within State Street is proposed.

The project site itself is currently undeveloped without any onsite utility systems. As part of the proposed project utility lines will be extended onto the project site to provide services to the proposed land uses. Construction of new utilities and connections to offsite utility systems will involve some minor trenching. Potential impacts will be short-term and construction BMPs will be in place to minimize construction related impacts. Each utility service provider will coordinate the design/installation and will review for compliance with utility systems construction standards. Coordination with utility providers and compliance with utility standards will reduce potential impacts to less than significant.

	☐	☐	☒	☐

Response:
Project implementation will increase water demand over the current condition. Water may be provided to the site from City infrastructure or from EMWD infrastructure. The water supply and water demand provided in the EMWD Urban Water Management Plan (UWMP) is based on local growth projections provided in the City of San Jacinto General Plan. The proposed project will be consistent with the City of Jacinto General Plan. Therefore, the water demands for the project will be accounted for in the 2025-2044 UWMP. Furthermore, the UWMP identifies that there will be increased water supplies to account for future growth within the EMWD service area and that there will be adequate water supplies for normal, single dry, and multiple dry years. EMWD has indicated through coordination on the project that they will have sufficient water supplies available to serve the project from existing entitlement and resources and no new or expanded entitlement will be needed.

As described in the Project Description, the project may utilize City of San Jacinto or EMWD water service. The final water plan design for the project will be required to comply with either the City or EMWD Development Process, which will involve due diligence conditions, review of design and plan check review. Additionally, water improvements will be required to comply with either City or EMWD Engineering Standards and Specifications (as applicable) to ensure water efficient facilities and water conservation measures are incorporated into the project. The proposed project will be required to coordinate with the City or EMWD and secure a Will Serve Letter which will indicate that the City or EMWD will have the ability to provide adequate water service to the proposed project. With coordination and compliance with the City or EMWD Development Processes and implementation of project-specific input received from the City or EMWD, long-term operational impacts associated with providing water services to the project will be less than significant.

c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☒	☐

Response:
Sanitary sewer service for the project will be provided to the site by either EMWD or by the City of San Jacinto. The project will extend the sewer line onto the project site to provide sewer collection service for the proposed commercial land uses. Additionally, as part of the final design, the project will be required to coordinate with the City and secure a Will Serve Letter, which will ensure that the City will have the ability to provide adequate

wastewater service. Based on coordination with the City, long-term operational impacts associated with providing wastewater service to the project will be less than significant.

EMWD provides wastewater services to approximately 239,000 customers within its service area and currently treats approximately 43 million gallons per day (MGD) of wastewater at four (4) active regional water reclamation facilities. Wastewater treatment for the proposed project will be treated at the San Jacinto Valley Regional Water Reclamation Facility (SJVRWRF). In 2015, the SJVRWRF was increased to a maximum capacity of 14 million gallons per day (EMWD 2021).

The expansion of SJVRWRF was based on future growth projections in the San Jacinto Valley provided by local cities and the County of Riverside. The growth projections for the City and associated wastewater demands for the project will be accounted for as part of the design of the expansion plans for the SJVRWRF. In addition, the total amount of projected wastewater flow to EMWD's SJVRWRF for the year 2040 will be approximately 16.4 MGD, pursuant to the City of San Jacinto General Plan Draft EIR. The current capacity for the SJVRWRF is 14 MGD and the maximum capacity for the SJVRWRF is 27 MGD. Therefore, the ultimate capacity of the SJVRWRF will be able to meet the projected wastewater production from the City of San Jacinto, including the project. The increase in wastewater treatment generated by the project will have a less than significant impact.

d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☒	☐

Response:

The proposed project will not generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals. Although project implementation will increase the demand for solid waste disposal over the current condition, CR&R Incorporated, Environmental Services, will collect the solid waste and transport it to the Lamb Canyon Landfill or El Sobrante Landfill. The Lamb Canyon and El Sobrante Landfills are permitted to receive 5,000 tons of solid waste per day and 16,054 tons of solid waste per day, respectively. The Lamb Canyon Landfill has a maximum permitted capacity of 39,681,513 cubic yards with a remaining capacity of over 10,000,000 cubic yards. The El Sobrante Landfill has a maximum permitted capacity of 209,910,000 cubic yards with a remaining capacity of over 100,000,000 cubic yards. The 7.4 tons of solid waste generated daily from the project will be well below the daily amount of solid waste disposal permitted by the Lamb Canyon and El Sobrante Landfills. The amount of solid waste generated during project construction will not exceed the capacity of local facilities or exceed state or local standards. Potential impacts associated with providing solid waste disposal service to the proposed project will be less than significant.

e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☒	☐

Response:

The project will produce solid waste associated with the construction stages as well as during operation. Applicable regulations include California's Integrated Waste Management Act of 1989 (AB 939), which required cities and counties throughout the state to divert 50% of all solid waste from landfills through source reduction, recycling, and composting; 2008 modifications of AB 939 reflect a per-capita requirement rather than

tonnage; AB 341, which increased the statewide goal for waste diversion to 75 percent by 2020; and the California Solid Waste Reuse and Recycling Access Act (AB 1327), which requires local agencies to adopt an ordinance to set aside areas for collecting and loading recyclable materials in development projects. AB-341 requires all commercial businesses and public entities that generate 4 cubic yards or more of waste per week to have a recycling program in place.

To comply with the above laws and disposal requirements, BMPs will be employed to reduce solid waste disposal such as the recycling of all plastic bags, containers, and green waste composting, chipping, and shredding. Additionally, BMPs will be implemented to reduce the solid waste generated from construction activities, and where feasible, will recycle construction debris. With implementation of BMPs and compliance with the California Department of Resources Recycling and Recovery disposal requirements, potential solid waste disposal impacts will be less than significant. Project implementation will not conflict with the ability to comply with these regulations.

2. Final Environmental Impact Report City of San Jacinto General Plan
3. San Jacinto Municipal Code
4. CalRecycle

20. Wildfire – If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, **will the project:**

a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐

Response:

The project site is designated Local Responsibility Area for fire protection responsibility and is not in or near a very high fire hazard severity zone (VHFHSZ). As described in Section 17, *Transportation/Traffic*, the project will provide emergency access, and will not result in significant impacts to the circulation system. Therefore, the project will not substantially adversely affect emergency response or evacuation. Because the project is not in or in the immediate vicinity of a very high fire hazard severity zone and will not adversely affect emergency response or evacuation, this impact will be less than significant. No mitigation is required.

b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☒	☐

Response:

As described above, the project site is not in a VHFHSZ and development of the site will not substantially change the existing fire hazards in the area. The project will require standard infrastructure associated with commercial development, such as water and electricity, but will not require infrastructure associated with fire hazard prevention/response other than a water connection. Impacts will be less than significant. No mitigation is required.

c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☒	☐

Response:

See response for (b) above.

d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☒	☐

Response:

The project site is relatively flat. As described in Section 7, *Geology and Soils*, and Section 10, *Hydrology and Water Quality*, there are no substantial hazards related to landslides or flooding in the vicinity of the project site. Therefore, impacts related to post-fire flooding or landslide risks will be less than significant.

Sources:

1. San Jacinto General Plan
2. Final Environmental Impact Report City of San Jacinto General Plan
3. San Jacinto Municipal Code

21. Mandatory Findings of Significance

a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☒	☐	☐

Response:

As discussed in Section of this Initial Study, the project has the potential to impact burrowing owl habitat. This impact, however, is less than significant with the implementation of MM Bio-1. No other sensitive biological resources were identified on the project site. Impacts will be less than significant with the implementation of MM BIO-1. No significant historical resources were identified on the project site.

b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)?	☐	☒	☐	☐

Response:

The project does not have impacts which are individually limited, but cumulatively considerable with the incorporation of the mitigation measures and monitoring activities detailed above.

c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☒	☐	☐

Response:

The proposed project will not result in environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly, with the implementation of the mitigation measures and monitoring activities detailed above.

GLOSSARY OF TERMS

AQMP	Air Quality Management Plan
CAAQS	California Ambient Air Quality Standards
CARB	California Air Resources Board
CEQA	California Environmental Quality Act
CFCs	Chlorofluorocarbons
CH_4	Methane
CNG	Compressed natural gas
CO	Carbon monoxide
CO_2	Carbon dioxide
CO_2e	Carbon dioxide equivalent
DPM	Diesel particulate matter
GHG	Greenhouse gas
HFCs	Hydrofluorocarbons
LST	Localized Significant Thresholds
$MTCO_2e$	Metric tons of carbon dioxide equivalent
$MMTCO_2e$	Million metric tons of carbon dioxide equivalent
NAAQS	National Ambient Air Quality Standards
NOx	Nitrogen Oxides
NO_2	Nitrogen dioxide
N_2O	Nitrous oxide
O_3	Ozone
PFCs	Perfluorocarbons
PM	Particle matter
PM10	Particles that are less than 10 micrometers in diameter
PM2.5	Particles that are less than 2.5 micrometers in diameter
PMI	Point of maximum impact
PPM	Parts per million
PPB	Parts per billion
RTIP	Regional Transportation Improvement Plan
RTP	Regional Transportation Plan
SCAB	South Coast Air Basin
SCAQMD	South Coast Air Quality Management District
SF_6	Sulfur hexafluoride
SIP	State Implementation Plan
SOx	Sulfur Oxides
SRA	Source/Receptor Area
TAC	Toxic air contaminants
VOC	Volatile organic compounds
WRCC	Western Regional Climate Center

1.0 Introduction

1.1 Purpose of Analysis and Study Objectives

This air quality, greenhouse gas (GHG), and energy analysis was prepared to evaluate whether the estimated criteria pollutants and GHG emissions generated from the project would cause a significant impact to the air resources in the project area. This assessment was conducted within the context of the California Environmental Quality Act (CEQA, California Public Resources Code Sections 21000, et seq.). The assessment is consistent with the methodology and emission factors endorsed by South Coast Air Quality Management District (SCAQMD), California Air Resource Board (CARB), and the United States Environmental Protection Agency (US EPA).

1.2 Project Summary

1.2.1 Site Location

The Project site is located at the southeast corner of West Ramona Expressway and North State Street in the City of San Jacinto, CA (APN: 434-080-025, 026) as shown in Exhibit A. The site has residential uses and vacant land adjacent to the south, Ramona Expressway to the north, State Street to the west, and Eagle Road to the east.

1.2.2 Project Description

The project proposes to develop a 14.50-acre lot with commercial and retail uses including restaurants, a car wash, a convenience store with fuel station, and retail stores. Exhibit B provides the project Site Plan.

Construction activities within the Project area will consist of site preparation, on-site grading, building, paving, and architectural coating. Table 1 summarizes the land use description for the Project Site.

Table 1: Land Use Summary

Land Use	Unit Amount	Size Metric
Convenience Market with Gas Pumps	8	Pumps
Strip Mall	93.195	Thousand Square Feet
Fast Food Restaurant with Drive Thru	12.541	Thousand Square Feet
Automobile Care Center	3.590	Thousand Square Feet
Parking Lot[2]	11.6	Acres

1.2.3 Sensitive Receptors

Sensitive receptors are considered land uses or other types of population groups that are more sensitive to air pollution than others due to their exposure. Sensitive population groups include children, the elderly, the acutely and chronically ill, and those with cardio-respiratory diseases. For CEQA purposes, a sensitive receptor would be a location where a sensitive individual could remain for 24-hours or longer, such as residencies, hospitals, and schools (etc).

The closest existing sensitive receptors (to the site area) are the single-family residences located approximately 25 feet to the south.

1.3 Executive Summary of Findings and Mitigation Measures

The following is a summary of the analysis results:

Construction-Source Emissions
Project construction-source emissions would not exceed applicable regional thresholds of significance established by the SCAQMD. For localized emissions, the project will not exceed applicable Localized Significance Thresholds (LSTs) established by the SCAQMD.

Project construction-source emissions would not conflict with the Basin Air Quality Management Plan (AQMP). As discussed herein, the project will comply with all applicable SCAQMD construction-source emission reduction rules and guidelines. Project construction source emissions would not cause or substantively contribute to violation of the California Ambient Air Quality Standards (CAAQS) or National Ambient Air Quality Standards (NAAQS).

Established requirements addressing construction equipment operations, and construction material use, storage, and disposal requirements act to minimize odor impacts that may result from construction activities. Moreover, construction-source odor emissions would be temporary, short-term, and intermittent in nature and would not result in persistent impacts that would affect substantial numbers of people. Potential construction-source odor impacts are therefore considered less-than-significant.

Operational-Source Emissions
Project operational-sourced emissions would not exceed regional operational air quality thresholds. Project operational-source emissions would not result in or cause a significant localized air quality impact as discussed in the Operations-Related Local Air Quality Impacts section of this report. Additionally, project-related traffic will not cause or result in CO concentrations exceeding applicable state and/or federal standards (CO “hotspots). Project operational-source emissions would therefore not adversely affect sensitive receptors within the vicinity of the project.

Project operational-source emissions would not conflict with the Basin Air Quality Management Plan (AQMP). The project would not result in a significant cumulative impact. The project does not propose any such uses or activities that would result in potentially significant operational-source odor impacts. Potential operational-source odor impacts are therefore considered less-than significant.

Project-related GHG emissions meet the goals of the WRCOG Subregional Climate Action Plan (CAP) and are also considered to be less than significant. The project also complies with the goals of the CARB Scoping Plan, AB-32, and SB-32**.**

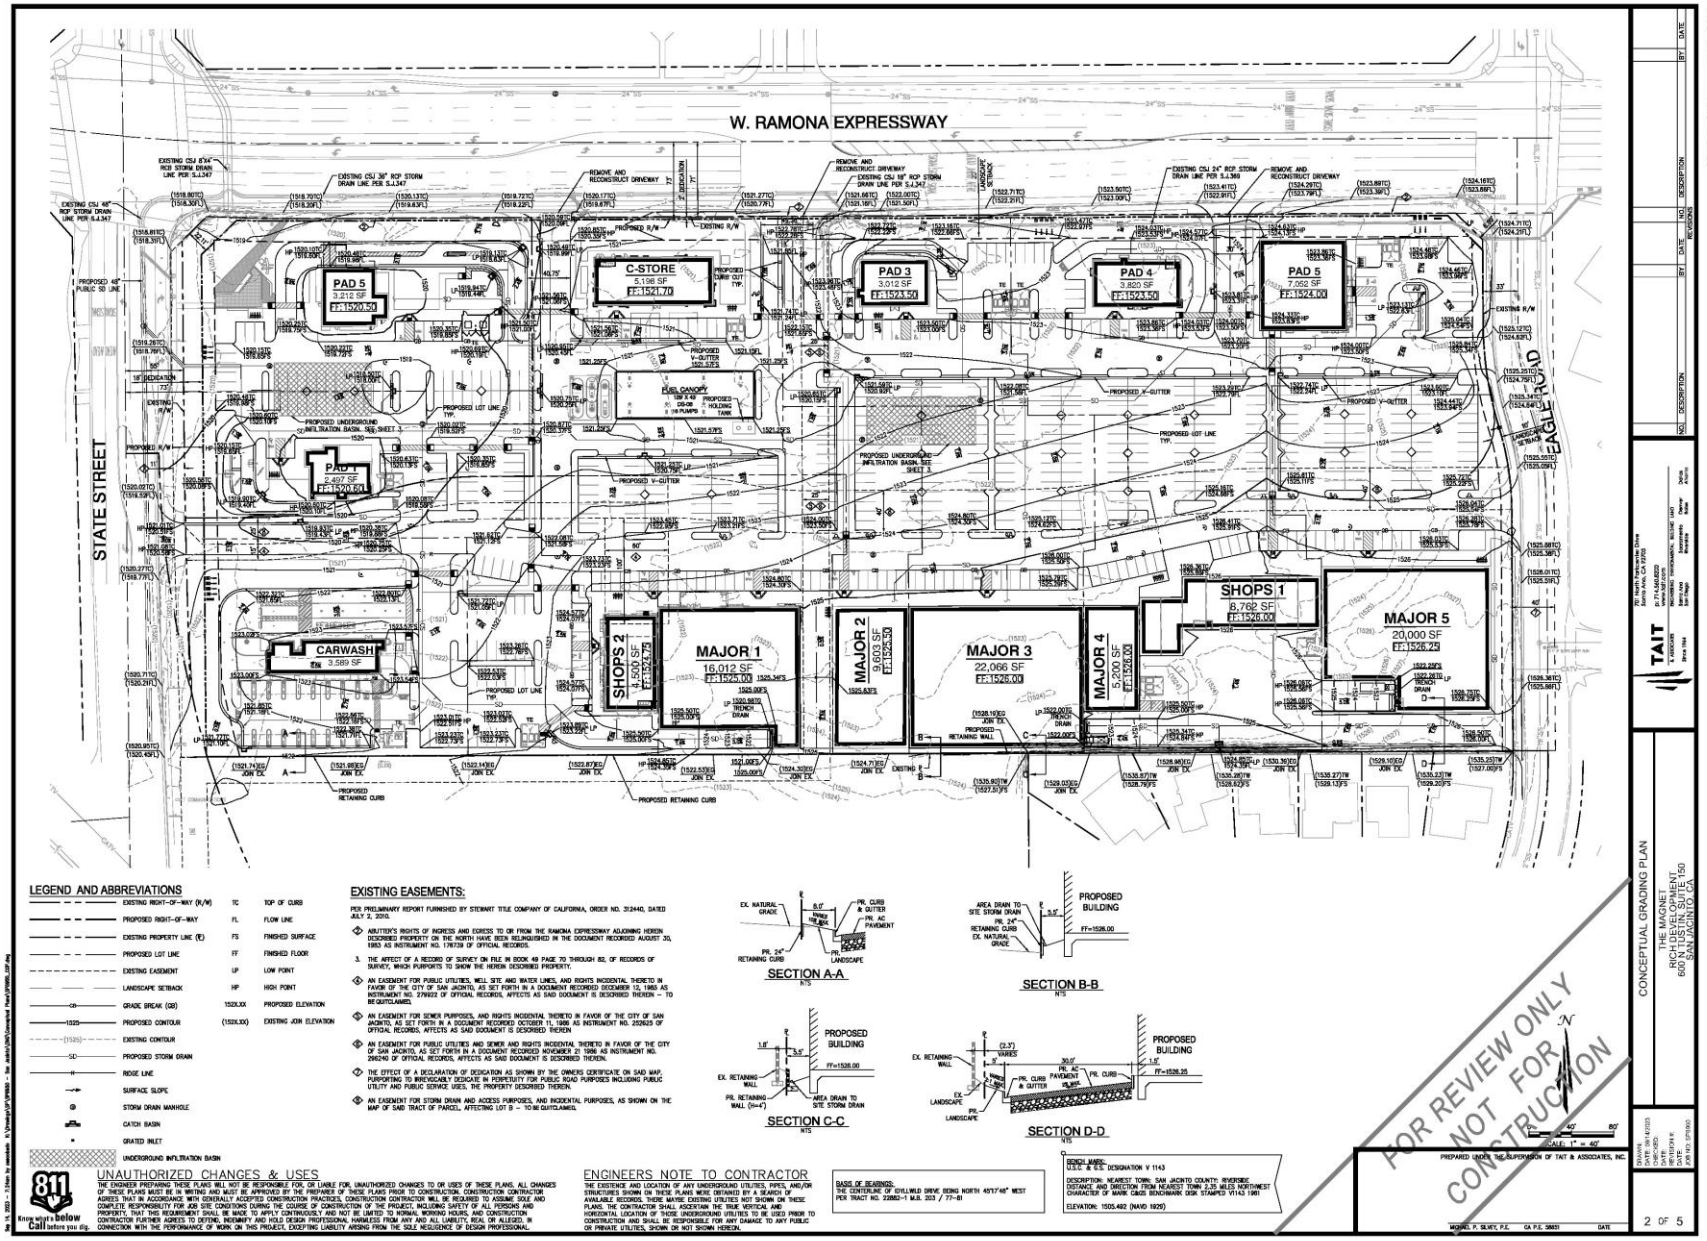
Mitigation Measures

A. Construction Measures

Adherence to SCAQMD Rule 403 is required.

No construction mitigation required.

B. Operational Measures to Reduce Greenhouse Gas Emissions



No operational mitigation required.

2.0 Regulatory Framework and Background

2.1 Air Quality Regulatory Setting

Air pollutants are regulated at the national, state, and air basin level; each agency has a different level of regulatory responsibility. The United States Environmental Protection Agency (EPA) regulates at the national level. The California Air Resources Board (ARB) regulates at the state level. The South Coast Air Quality Management District (SCAQMD) regulates at the air basin level.

2.1.1 National and State

The EPA is responsible for global, international, and interstate air pollution issues and policies. The EPA sets national vehicle and stationary source emission standards, oversees approval of all State Implementation Plans, provides research and guidance for air pollution programs, and sets National Air Quality Standards, also known as federal standards. There are six common air pollutants, called criteria pollutants, which were identified from the provisions of the Clean Air Act of 1970.

- Ozone
- Nitrogen Dioxide
- Lead
- Particulate Matter (PM10 and PM2.5)
- Carbon Monoxide
- Particulate Matter
- Sulfur Dioxide

The federal standards were set to protect public health, including that of sensitive individuals; thus, the standards continue to change as more medical research is available regarding the health effects of the criteria pollutants. Primary federal standards are the levels of air quality necessary, with an adequate margin of safety, to project the public health.

A State Implementation Plan is a document prepared by each state describing existing air quality conditions and measures that will be followed to attain and maintain federal standards. The State Implementation Plan for the State of California is administered by the ARB, which has overall responsibility for statewide air quality maintenance and air pollution prevention. California's State Implementation Plan incorporates individual federal attainment plans for regional air districts—air district prepares their federal attainment plan, which sent to ARB to be approved and incorporated into the California State Implementation Plan. Federal attainment plans include the technical foundation for understanding air quality (e.g., emission inventories and air quality monitoring), control measures and strategies, and enforcement mechanisms. See http://www.arb.ca.gov/research/aaqs/aaqs.htm for additional information on criteria pollutants and air quality standards.

The federal and state ambient air quality standards are summarized in Table 2 and can also be found at http://www.arb.ca.gov/research/aaqs/aaqs2.pdf.

Table 2: Ambient Air Quality Standards

Pollutant	Averaging Time	California Standards[1]		National Standards[2]		
		Concentrations[3]	Method[4]	Primary[3,5]	Secondary[3,6]	Method[7]
Ozone (O3)	1-Hour	0.09 ppm	Ultraviolet Photometry	- -	Same as Primary Standard	Ultraviolet Photometry
	8-Hour	0.070 ppm		0.070 ppm (147 µg/m³)		
Respirable Particulate Matter (PM10)[8]	24-Hour	50 µg/m³	Gravimetric or Beta Attenuation	150 µ/m³	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	20 µg/m³		- -		
Fine Particulate Matter (PM2.5)[8]	24-Hour	- -	- -	35 µg/m³	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	12 µg/m³	Gravimetric or Beta Attenuation	12 µg/m³	15 µg/m³	
Carbon Monoxide (CO)	1-Hour	20 ppm (23 µg/m³)	Non-Dispersive Infrared Photometry (NDIR)	35 ppm (40 µg/m³)	- -	Non-Dispersive Infrared Photometry (NDIR)
	8-Hour	9.0 ppm (10 µg/m³)		9 ppm (10 µg/m³)	- -	
	8-Hour (Lake Tahoe)	6 ppm (7 µg/m³)		- -	- -	
Nitrogen Dioxide (NO_2)[9]	1-Hour	0.18 ppm (339 µg/m³)	Gas Phase Chemiluminescence	100 ppb (188 µg/m³)	- -	Gas Phase Chemiluminescence
	Annual Arithmetic Mean	0.030 ppm (357 µg/m³)		0.053 ppm (100 µg/m³)	Same as Primary Standard	
Sulfur Dioxide (SO_2)[10]	1-Hour	0.25 ppm (655 µg/m³)	Ultraviolet Fluorescence	75 ppb (196 µg/m³)	- -	Ultraviolet Fluorescence; Spectrophotometry (Pararosaniline Method)
	3-Hour	- -		- -	0.5 ppm (1300 mg/m³)	
	24-Hour	0.04 ppm (105 µg/m³)		0.14 ppm (for certain areas)[10]	- -	
	Annual Arithmetic Mean	- -		0.130ppm (for certain areas)[10]	- -	
Lead[11,12]	30 Day Average	1.5 µg/m³	Atomic Absorption	- -		High Volume Sampler and Atomic Absorption
	Calendar Qrtr	- -		1.5 µg/m³ (for certain areas)[12]	Same as Primary Standard	
	Rolling 3-Month Average	- -		0.15 µg/m³		
Visibility Reducing Particles[13]	8-Hour	See footnote 13	Beta Attenuation and Transmittance through Filter Tape	No National Standards		
Sulfates	24-Hour	25 µg/m³	Ion Chromatography			
Hydrogen Sulfide	1-Hour	0.03 ppm (42 µg/m³)	Ultraviolet Fluorescence			
Vinyl Chloride[11]	24-Hour	0.01 ppm (26 µg/m³)	Gas Chromatography			

Notes:

1. California standards for ozone, carbon monoxide (except 8-hour Lake Tahoe), sulfur dioxide (1 and 24 hour), nitrogen dioxide, and particulate matter (PM10, PM2.5, and visibility reducing particles), are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.

2. National standards (other than ozone, particulate matter, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over three years, is equal to or less than the standard. For PM10, the 24 hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 µg/m³ is equal to or less than one. For PM2.5, the 24 hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard. Contact the U.S. EPA for further clarification and current national policies.

3. Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.

4. Any equivalent measurement method which can be shown to the satisfaction of the ARB to give equivalent results at or near the level of the air quality standard may be used.

5. National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.

6. National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.

7. Reference method as described by the U.S. EPA. An “equivalent method” of measurement may be used but must have a “consistent relationship to the reference method” and must be approved by the U.S. EPA.

8. On December 14, 2012, the national annual PM2.5 primary standard was lowered from 15 µg/m^3 to 12.0 µg/m^3. The existing national 24-hour PM2.5 standards (primary and secondary) were retained at 35 µg/m^3, as was the annual secondary standard of 15 µg/m^3. The existing 24-hour PM10 standards (primary and secondary) of 150 µg/m^3 also were retained. The form of the annual primary and secondary standards is the annual mean, averaged over 3 years.

9. To attain the 1-hour national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 ppb. Note that the national 1-hour standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the national 1-hour standard to the California standards the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.

10. On June 2, 2010, a new 1-hour SO2 standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO2 national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.

    Note that the 1-hour national standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the 1-hour national standard to the California standard the units can be converted to ppm. In this case, the national standard of 75 ppb is identical to 0.075 ppm.

11. The ARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.

12. The national standard for lead was revised on October 15, 2008 to a rolling 3-month average. The 1978 lead standard (1.5 µg/m^3 as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.

13. In 1989, the ARB converted both the general statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the statewide and Lake Tahoe Air Basin standards, respectively.

Several pollutants listed in Table 2 are not addressed in this analysis. Analysis of lead is not included in this report because the project is not anticipated to emit lead. Visibility-reducing particles are not explicitly addressed in this analysis because particulate matter is addressed. The project is not expected to generate or be exposed to vinyl chloride because proposed project uses do not utilize the chemical processes that create this pollutant and there are no such uses in the project vicinity. The proposed project is not expected to cause exposure to hydrogen sulfide because it would not generate hydrogen sulfide in any substantial quantity.

2.1.2 South Coast Air Quality Management District

The agency for air pollution control for the South Coast Air Basin (basin) is the South Coast Air Quality Management District (SCAQMD). SCAQMD is responsible for controlling emissions primarily from stationary sources. SCAQMD maintains air quality monitoring stations throughout the basin. SCAQMD, in coordination with the Southern California Association of Governments, is also responsible for developing, updating, and implementing the Air Quality Management Plan (AQMP) for the basin. An AQMP is a plan prepared and implemented by an air pollution district for a county or region designated as nonattainment of the federal and/or California ambient air quality standards. The term nonattainment area is used to refer to an air basin where one or more ambient air quality standards are exceeded.

Every three (3) years the SCAQMD prepares a new AQMP, updating the previous plan and having a 20-year horizon.

On March 23, 2017 CARB approved the 2016 AQMP. The 2016 AQMP is a regional blueprint for achieving the federal air quality standards and healthful air.

The 2016 AQMP includes both stationary and mobile source strategies to ensure that rapidly approaching attainment deadlines are met, that public health is protected to the maximum extent feasible, and that the region is not faced with burdensome sanctions if the Plan is not approved or if the NAAQS are not met on time. As with every AQMP, a comprehensive analysis of emissions, meteorology, atmospheric chemistry, regional growth projections, and the impact of existing control measures is updated with the latest data and methods. The most significant air quality challenge in the Basin is to reduce nitrogen oxide (NOx) emissions sufficiently to meet the upcoming ozone standard deadlines. The primary goal of this Air Quality Management Plan is to meet clean air standards and protect public health, including ensuring benefits to environmental justice and disadvantaged communities. Now that the plan has been approved by CARB, it has been forwarded to the U.S. Environmental Protection Agency for its review. If approved by EPA, the plan becomes federally enforceable

South Coast AQMD adopted the 2022 AQMP on December 2, 2022, to address the attainment of the 2015 8-hour ozone standard (70 ppb) for South Coast Air Basin and Coachella Valley. To meet this standard, the AQMP determined NOx emissions must be reduced by 67% percent more than is required by adopted rules and regulations by 2037. The control strategy for the 2022 AQMP includes aggressive new regulations and the development of incentive programs to support early deployment of advanced technologies. The two key areas for incentive programs are (1) promoting widespread deployment of available zero-emission (ZE) and low NOx technologies and (2) developing new ZE and ultra-low NOx technologies for use in cases where the technology is not currently available. South Coast AQMD will prioritize distribution of incentive funding in environmental justice areas and seek opportunities to focus benefits on the most disadvantaged communities. Cost-effectiveness and affordability will be further considered during the rulemaking or incentive program development process.

South Coast Air Quality Management District Rules

The AQMP for the basin establishes a program of rules and regulations administered by SCAQMD to obtain attainment of the state and federal standards. Some of the rules and regulations that apply to this Project include, but are not limited to, the following:

SCAQMD Rule 402 prohibits a person from discharging from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.

SCAQMD Rule 403 governs emissions of fugitive dust during construction and operation activities. Compliance with this rule is achieved through application of standard Best Management Practices, such as application of water or chemical stabilizers to disturbed soils, covering haul vehicles, restricting vehicle speeds on unpaved roads to 15 miles per hour, sweeping loose dirt from paved site access

roadways, cessation of construction activity when winds exceed 25 mph, and establishing a permanent ground cover on finished sites.

Rule 403 requires that fugitive dust be controlled with best available control measures so that the presence of such dust does not remain visible in the atmosphere beyond the property line of the emission source. In addition, Rule 403 requires implementation of dust suppression techniques to prevent fugitive dust from creating a nuisance off site. Applicable suppression techniques are indicated below and include but are not limited to the following:

- Apply nontoxic chemical soil stabilizers according to manufacturers' specifications to all inactive construction areas (previously graded areas in active for 10 days or more).
- Water active sites at least three times daily.
- Cover all trucks hauling dirt, san, soil, or other loose materials, or maintain at least 2 feet of freeboard in accordance with the requirements of California Vehicle Code (CVC) section 23114.
- Pave construction access roads at least 100 feet onto the site from the main road.
- Reduce traffic speeds on all unpaved roads to 15 mph or less.
- Suspension of all grading activities when wind speeds (including instantaneous wind gusts) exceed 25 mph.
- Bumper strips or similar best management practices shall be provided where vehicles enter and exit the construction site onto paved roads or wash off trucks and any equipment leaving the site each trip.
- Replanting disturbed areas as soon as practical.
- During all construction activities, construction contractors shall sweep on-site and off-iste streets if silt is carried to adjacent public thoroughfares, to reduce the amount of particulate matter on public streets.

SCAQMD Rule 1113 governs the sale, use, and manufacturing of architectural coating and limits the VOC content in paints and paint solvents. This rule regulates the VOC content of paints available during construction. Therefore, all paints and solvents used during construction and operation of project must comply with Rule 1113.

Idling Diesel Vehicle Trucks – Idling for more than 5 minutes in any one location is prohibited within California borders.

Rule 2702. The SCAQMD adopted Rule 2702 on February 6, 2009, which establishes a voluntary air quality investment program from which SCAQMD can collect funds from parties that desire certified GHG emission reductions, pool those funds, and use them to purchase or fund GHG emission reduction projects within two years, unless extended by the Governing Board. Priority will be given to projects that result in co-benefit emission reductions of GHG emissions and criteria or toxic air pollutants within environmental justice areas. Further, this voluntary program may compete with the cap-and-trade program identified for implementation in CARB's Scoping Plan, or a Federal cap and trade program.

2.1.3 Local

Local jurisdictions, such as the County of Riverside and City of San Jacinto, have the authority and responsibility to reduce air pollution through their police power and decision-making authority. Specifically, the County and City are responsible for the assessment and mitigation of air emissions resulting from its land use decisions. The County and City are also responsible for the implementation of transportation control measures as outlined in the 2022 AQMP. Examples of such measures include bus turnouts, energy-efficient streetlights, and synchronized traffic signals. In accordance with CEQA requirements and the CEQA review process, the County and City assess the air quality impacts of new development projects, requires mitigation of potentially significant air quality impacts by conditioning discretionary permits, and monitors and enforces implementation of such mitigation.

The County and City rely on the expertise of the SCAQMD and utilizes the SCAQMD CEQA Air Quality Handbook as the guidance document for the environmental review of plans and development proposals within its jurisdiction.

County of Riverside General Plan

The Air Quality Element of the County of Riverside General Plan summarizes air quality issues in the Basin, air quality-related plans and programs administered by federal, state, and special purpose agencies, and establishes goals and policies to improve air quality. These goals and policies in the Air Quality Element that relate to the proposed project include:

Multi-jurisdictional Cooperation:

AQ 1.1 Promote and participate with regional and local agencies, both public and private, to protect and improve air quality.

AQ 1.2 Support the Southern California Association of Government's (SCAG) Regional Growth Management Plan by developing intergovernmental agreements with appropriate governmental entities such as the Western Riverside Council of Governments (WRCOG), the Coachella Valley Association of Governments (CVAG), sanitation districts, water districts, and those subregional entities identified in the Regional Growth Management Plan.

AQ 1.3 Participate in the development and update of those regional air quality management plans required under federal and state law, and meet all standards established for clean air in these plans.

AQ 1.4 Coordinate with the SCAQMD and MDAQMD to ensure that all elements of air quality plans regarding reduction of air pollutant emissions are being enforced.

AQ 1.5 Establish and implement air quality, land use and circulation measures that improve not only the County's environment but the entire regions.

AQ 1.6 Establish a level playing field by working with local jurisdictions to simultaneously adopt policies similar to those in this Air Quality Element.

AQ 1.7 Support legislation which promotes cleaner industry, clean fuel vehicles and more efficient burning engines and fuels.

AQ 1.8 Support the introduction of federal, state or regional enabling legislation to permit the County to promote inventive air quality programs, which otherwise could not be implemented.

AQ 1.9 Encourage, publicly recognize and reward innovative approaches that improve air quality.

AQ 1.10 Work with regional and local agencies to evaluate the feasibility of implementing a system of charges (e.g., pollution charges, user fees, congestion pricing and toll roads) that requires individuals who undertake polluting activities to bear the economic cost of their actions where possible.

AQ 1.11 Involve environmental groups, the business community, special interests, and the general public in the formulation and implementation of programs that effectively reduce airborne pollutants.

Sensitive Receptors:

AQ 2.1 The County land use planning efforts shall assure that sensitive receptors are separated and protected from polluting point sources to the greatest extent possible.

AQ 2.2 Require site plan designs to protect people and land uses sensitive to air pollution through the use of barriers and/or distance from emissions sources when possible.

AQ 2.3 Encourage the use of pollution control measures such as landscaping, vegetation and other materials, which trap particulate matter or control pollution.

Stationary Pollution Sources:

AQ 4.1 Encourage the use of building materials/methods which reduce emissions.

AQ 4.2 Require the use of all feasible efficient heating equipment and other appliances, such as water heaters, swimming pool heaters, cooking equipment, refrigerators, furnaces and boiler units.

AQ 4.3 Require centrally heated facilities to utilize automated time clocks or occupant sensors to control heating where feasible.

AQ 4.5 Require stationary pollution sources to minimize the release of toxic pollutants through:

- Design features;
- Operating procedures;
- Preventive maintenance;
- Operator training; and
- Emergency response planning

AQ 4.6 Require stationary air pollution sources to comply with applicable air district rules and control measures.

AQ 4.7 To the greatest extent possible, require every project to mitigate any of its anticipated emissions which exceed allowable emissions as established by the SCAQMD, MDAQMD, SOCAB, the Environmental Protection Agency and the California Air Resources Board.

AQ 4.8 Expand, as appropriate, measures contained in the County's Fugitive Dust Reduction Program for the Coachella Valley to the entire County.

AQ 4.9 Require compliance with SCAQMD Rules 403 and 403.1, and support appropriate future measures to reduce fugitive dust emanating from construction sites.

AQ 4.10 Coordinate with the SCAQMD and MDAQMD to create a communications plan to alert those conducting grading operations in the County of first, second, and third stage smog alerts, and when wind speeds exceed 25 miles per hour. During these instances all grading operations should be suspended.

Energy Efficiency and Conservation:

AQ 5.1 Utilize source reduction, recycling and other appropriate measures to reduce the amount of solid waste disposed of in landfills.

AQ 5.4 Encourage the incorporation of energy-efficient design elements, including appropriate site orientation and the use of shade and windbreak trees to reduce fuel consumption for heating and cooling.

Particulate Matter:

AQ 15.1 Identify and monitor sources, enforce existing regulations, and promote stronger controls to reduce particulate matter.

Multi-jurisdictional Cooperation:

AQ 16.1 Cooperate with local, regional, state and federal jurisdictions to better control particulate matter.

Control Measures:

AQ 17.1 Reduce particulate matter from agriculture, construction, demolition, debris hauling, street cleaning, utility maintenance, railroad rights-of-way, and off-road vehicles to the extent possible.

AQ 17.3 Identify and create a control plan for areas within the County prone to wind erosion of soil.

AQ 17.4 Adopt incentives, regulations and/or procedures to manage paved and unpaved roads and parking lots so they produce the minimum practicable level of particulates.

AQ 17.5 Adopt incentives and/or procedures to limit dust from agricultural lands and operations, where applicable.

AQ 17.6 Reduce emissions from building materials and methods that generate excessive pollutants, through incentives and/or regulations.

City of San Jacinto General Plan

Goal: Resource Management Goal 6: Improve air quality.

Policy 6.1: Cooperate with the South Coast Air Quality Management District, Southern California Association of Governments, and the Western Riverside Council of Governments in their efforts to implement the regional Air Quality Management Plan.

Policy 6.2: Cooperate and participate in regional air quality management planning, programs, and enforcement measures.

Policy 6.3: Achieve a greater balance between jobs and housing in San Jacinto.

Policy 6.4: Promote the growth of clean industry as a method of managing and improving air quality.

Policy 6.5: Promote energy conservation and recycling by the public and private sectors.

Policy 6.6: Encourage alternative modes of transportation to reduce vehicular emissions and improve air quality.

Policy 6.7: Encourage pedestrian scale development and pedestrian friendly access to reduce vehicle emissions.

Policy 6.8: In appropriate areas, allow mixed use development that combines housing, employment, and retail activities on one site.

Policy 6.9: Concentrate higher density development at transportation nodes and areas served by a well- developed vehicular network.

Policy 6.10: Support sustainable development patterns and green building standards that reduce energy use.

2.2 Greenhouse Gas Regulatory Setting

2.2.1 International

Many countries around the globe have made an effort to reduce GHGs since climate change is a global issue.

Intergovernmental Panel on Climate Change. In 1988, the United Nations and the World Meteorological Organization established the Intergovernmental Panel on Climate Change to assess the scientific, technical and socio-economic information relevant to understanding the scientific basis of risk of human-induced climate change, its potential impacts, and options for adaptation and mitigation.

United Nations. The United States participates in the United Nations Framework Convention on Climate Change (UNFCCC) (signed on March 21, 1994). Under the Convention, governments gather and share information on greenhouse gas emissions, national policies, and best practices; launch national strategies for addressing greenhouse gas emissions and adapting to expected impacts, including the provision of financial and technological support to developing countries; and cooperate in preparing for adaptation to the impacts of climate change.

The 2014 UN Climate Change Conference in Lima Peru provided a unique opportunity to engage all countries to assess how developed countries are implementing actions to reduce emissions.

Kyoto Protocol. The Kyoto Protocol is a treaty made under the UNFCCC and was the first international agreement to regulate GHG emissions. It has been estimated that if the commitments outlined in the Kyoto Protocol are met, global GHG emissions could be reduced by an estimated 5 percent from 1990 levels during the first commitment period of 2008 – 2012 (UNFCCC 1997). On December 8, 2012, the Doha Amendment to the Kyoto Protocol was adopted. The amendment includes: New commitments for Annex I Parties to the Kyoto Protocol who agreed to take on commitments in a second commitment period from 2013 – 2020; a revised list of greenhouse gases (GHG) to be reported on by Parties in the second commitment period; and Amendments to several articles of the Kyoto Protocol which specifically referenced issues pertaining to the first commitment period and which needed to be updated for the second commitment period.

2.2.2 National

Greenhouse Gas Endangerment. On December 2, 2009, the EPA announced that GHGs threaten the public health and welfare of the American people. The EPA also states that GHG emissions from on-road vehicles contribute to that threat. The decision was based on *Massachusetts v. EPA* (Supreme Court Case 05-1120) which argued that GHGs are air pollutants covered by the Clean Air Act and that the EPA has authority to regulate those emissions.

Clean Vehicles. Congress first passed the Corporate Average Fuel Economy law in 1975 to increase the fuel economy of cars and light duty trucks. The law has become more stringent over time. On May 19, 2009, President Obama put in motion a new national policy to increase fuel economy for all new cars and trucks sold in the United States. On April 1, 2010, the EPA and the Department of Transportation's National Highway Safety Administration announced a joint final rule establishing a national program that would reduce greenhouse gas emissions and improve fuel economy for new cars and trucks sold in the United States.

The first phase of the national program would apply to passenger cars, light-duty trucks, and medium-duty passenger vehicles, covering model years 2012 through 2016. They require these vehicles to meet an estimated combined average emissions level of 250 grams of carbon dioxide per mile, equivalent to 35.5 miles per gallon if the automobile industry were to meet this carbon dioxide level solely through fuel economy improvements. Together, these standards would cut carbon dioxide emissions by an estimated 960 million metric tons and 1.8 billion barrels of oil over the lifetime of the vehicles sold under the program (model years 2012-2016). The second phase of the national program would involve proposing new fuel economy and greenhouse gas standards for model years 2017 – 2025 by September 1, 2011.

On October 25, 2010, the EPA and the U.S. Department of Transportation proposed the first national standards to reduce greenhouse gas emissions and improve fuel efficiency of heavy-duty trucks and buses. For combination tractors, the agencies are proposing engine and vehicle standards that begin in the 2014 model year and achieve up to a 20 percent reduction in carbon dioxide emissions and fuel consumption by the 2018 model year. For heavy-duty pickup trucks and vans, the agencies are proposing separate gasoline and diesel truck standards, which phase in starting in the 2014 model year and achieve up to a 10 percent reduction for gasoline vehicles and 15 percent reduction for diesel vehicles by 2018 model year (12 and 17 percent respectively if accounting for air conditioning leakage). Lastly, for vocational vehicles, the agencies are proposing engine and vehicle standards starting in the 2014 model year which would achieve up to a 10 percent reduction in fuel consumption and carbon dioxide emissions by 2018 model year.

Mandatory Reporting of Greenhouse Gases. On January 1, 2010, the EPA started requiring large emitters of heat-trapping emissions to begin collecting GHG data under a new reporting system. Under the rule, suppliers of fossil fuels or industrial greenhouse gases, manufacturers of vehicles and engines, and facilities that emit 25,000 metric tons or more per year of greenhouse gas emissions are required to submit annual reports to the EPA.

Climate Adaption Plan. The EPA Plan identifies priority actions the Agency will take to incorporate considerations of climate change into its programs, policies, rules and operations to ensure they are effective under future climatic conditions. The following link provides more information on the EPA Plan: https://www.epa.gov/arc-x/planning-climate-change-adaptation

2.2.3 California

California Code of Regulations (CCR) Title 24, Part 6. CCR Title 24, Part 6: California's Energy Efficiency Standards for Residential and Nonresidential Buildings (Title 24) were first established in 1978 in response to a legislative mandate to reduce California's energy consumption. The standards are updated periodically to allow consideration and possible incorporation of new energy efficiency technologies and methods. Although it was not originally intended to reduce GHG emissions, electricity production by fossil fuels results in GHG emissions and energy efficient buildings require less electricity. Therefore, increased energy efficiency results in decreased GHG emissions.

The Energy Commission adopted 2008 Standards on April 23, 2008 and Building Standards Commission approved them for publication on September 11, 2008. These updates became effective on August 1, 2009. 2013 and 2016 standards have been approved and became effective July 1, 2014 and January 1, 2016, respectively.

California Code of Regulations (CCR) Title 24, Part 11. All buildings for which an application for a building permit is submitted on or after January 1, 2023 must follow the 2022 standards. Energy efficient buildings require less electricity; therefore, increased energy efficiency reduces fossil fuel consumption and decreases greenhouse gas emissions. The following links provide more information on Title 24, Part 11:
https://www.dgs.ca.gov/BSC/Codes
https://www.energy.ca.gov/programs-and-topics/programs/building-energy-efficiency-standards/2022-building-energy-efficiency

California Green Building Standards. On January 12, 2010, the State Building Standards Commission unanimously adopted updates to the California Green Building Standards Code, which went into effect on January 1, 2011. The Housing and Community Development (HCD) updated CALGreen through the 2015 Triennial Code Adoption Cycle, during the 2016 to 2017 fiscal year. During the 2022-2023 fiscal year, the Department of Housing and Community Development (HCD) updated CALGreen through the 2023 Triennial Code Adoption Cycle.

The Code is a comprehensive and uniform regulatory code for all residential, commercial and school buildings. CCR Title 24, Part 11: California Green Building Standards (Title 24) became effective in 2001 in response to continued efforts to reduce GHG emissions associated with energy consumption. CCR Title 24, Part 11 now require that new buildings reduce water consumption, employ building commissioning to increase building system efficiencies, divert construction waste from landfills, and install low pollutant-emitting finish materials. One focus of CCR Title 24, Part 11 is water conservation measures, which reduce GHG emissions by reducing electrical consumption associated with pumping and treating water. CCR Title 24, Part 11 has approximately 52 nonresidential mandatory measures

and an additional 130 provisions for optional use. Some key mandatory measures for commercial occupancies include specified parking for clean air vehicles, a 20 percent reduction of potable water use within buildings, a 50 percent construction waste diversion from landfills, use of building finish materials that emit low levels of volatile organic compounds, and commissioning for new, nonresidential buildings over 10,000 square feet.

The CEC estimates that over 30 years the 2022 Energy Code will provide $1.5 billion in consumer benefits and reduce 10 million metric tons of GHG. Changes compared to the 2019 Energy Code include increases to on-site renewable energy generation from solar, increases to electric load flexibility to support grid reliability, reduction of emissions from newly constructed buildings, reduction of air pollution for improved public health, and increased adoption of environmentally beneficial efficient electric technologies.

The California Green Building Standards Code does not prevent a local jurisdiction from adopting a more stringent code as state law provides methods for local enhancements. The Code recognizes that many jurisdictions have developed existing construction and demolition ordinances, and defers to them as the ruling guidance provided, they provide a minimum 50-percent diversion requirement. The code also provides exemptions for areas not served by construction and demolition recycling infrastructure. State building code provides the minimum standard that buildings need to meet in order to be certified for occupancy. Enforcement is generally through the local building official. The following link provides more on CalGreen Building Standards:
http://www.bsc.ca.gov/Home/CALGreen.aspx

Executive Order S-3-05. California Governor issued Executive Order S-3-05, GHG Emission, in June 2005, which established the following targets:

- By 2010, California shall reduce greenhouse gas emissions to 2000 levels;
- By 2020, California shall reduce greenhouse gas emissions to 1990 levels.
- By 2050, California shall reduce greenhouse gas emissions to 80 percent below 1990 levels.

The executive order directed the secretary of the California Environmental Protection Agency (CalEPA) to coordinate a multi-agency effort to reduce GHG emissions to the target levels. To comply with the Executive Order, the secretary of CalEPA created the California Climate Action Team (CAT), made up of members from various state agencies and commissions. The team released its first report in March 2006. The report proposed to achieve the targets by building on the voluntary actions of businesses, local governments, and communities and through State incentive and regulatory programs.

Executive Order S-01-07. Executive Order S-1-07 was issued in 2007 and proclaims that the transportation sector is the main source of GHG emissions in the State, since it generates more than 40 percent of the State's GHG emissions. It establishes a goal to reduce the carbon intensity of transportation fuels sold in the State by at least ten percent by 2020. This Order also directs CARB to determine whether this Low Carbon Fuel Standard (LCFS) could be adopted as a discrete early-action measure as part of the effort to meet the mandates in AB 32.

On April 23, 2009 CARB approved the proposed regulation to implement the low carbon fuel standard. The low carbon fuel standard is anticipated to reduce GHG emissions by about 16 MMT per year by 2020. The low carbon fuel standard is designed to provide a framework that uses market mechanisms to spur the steady introduction of lower carbon fuels. The framework establishes performance standards that fuel producers and importers must meet each year beginning in 2011. Separate standards are established for gasoline and diesel fuels and the alternative fuels that can replace each. The standards are "back-loaded", with more reductions required in the last five years, than the first five years. This schedule allows for the development of advanced fuels that are lower in carbon than today's fuels and the market penetration of plug-in hybrid electric vehicles, battery electric vehicles, fuel cell vehicles, and flexible fuel vehicles. It is anticipated that compliance with the low carbon fuel standard will be based on a combination of both lower carbon fuels and more efficient vehicles.

Reformulated gasoline mixed with corn-derived ethanol at ten percent by volume and low sulfur diesel fuel represent the baseline fuels. Lower carbon fuels may be ethanol, biodiesel, renewable diesel, or blends of these fuels with gasoline or diesel as appropriate. Compressed natural gas and liquefied natural gas also may be low carbon fuels. Hydrogen and electricity, when used in fuel cells or electric vehicles are also considered as low carbon fuels for the low carbon fuel standard.

SB 97. Senate Bill 97 (SB 97) was adopted August 2007 and acknowledges that climate change is a prominent environmental issue that requires analysis under CEQA. SB 97 directed the Governor's Office of Planning and Research (OPR), which is part of the State Resource Agency, to prepare, develop, and transmit to CARB guidelines for the feasible mitigation of GHG emissions or the effects of GHG emissions, as required by CEQA, by July 1, 2009. The Resources Agency was required to certify and adopt those guidelines by January 1, 2010.

Pursuant to the requirements of SB 97 as stated above, on December 30, 2009 the Natural Resources Agency adopted amendments to the state CEQA guidelines that address GHG emissions. The CEQA Guidelines Amendments changed 14 sections of the CEQA Guidelines and incorporate GHG language throughout the Guidelines. However, no GHG emissions thresholds of significance are provided and no specific mitigation measures are identified. The GHG emission reduction amendments went into effect on March 18, 2010 and are summarized below:

- Climate action plans and other greenhouse gas reduction plans can be used to determine whether a project has significant impacts, based upon its compliance with the plan.
- Local governments are encouraged to quantify the greenhouse gas emissions of proposed projects, noting that they have the freedom to select the models and methodologies that best meet their needs and circumstances. The section also recommends consideration of several qualitative factors that may be used in the determination of significance, such as the extent to which the given project complies with state, regional, or local GHG reduction plans and policies. OPR does not set or dictate specific thresholds of significance. Consistent with existing CEQA Guidelines, OPR encourages local governments to develop and publish their own thresholds of significance for GHG impacts assessment.

- When creating their own thresholds of significance, local governments may consider the thresholds of significance adopted or recommended by other public agencies, or recommended by experts.
- New amendments include guidelines for determining methods to mitigate the effects of greenhouse gas emissions in Appendix F of the CEQA Guidelines.
- OPR is clear to state that "to qualify as mitigation, specific measures from an existing plan must be identified and incorporated into the project; general compliance with a plan, by itself, is not mitigation."
- OPR's emphasizes the advantages of analyzing GHG impacts on an institutional, programmatic level. OPR therefore approves tiering of environmental analyses and highlights some benefits of such an approach.
- Environmental impact reports (EIRs) must specifically consider a project's energy use and energy efficiency potential.

AB 32. The California State Legislature enacted AB 32, the California Global Warming Solutions Act of 2006. AB 32 requires that greenhouse gases emitted in California be reduced to 1990 levels by the year 2020. "Greenhouse gases" as defined under AB 32 include carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride. ARB is the state agency charged with monitoring and regulating sources of greenhouse gases. AB 32 states the following:

Global warming poses a serious threat to the economic well-being, public health, natural resources, and the environment of California. The potential adverse impacts of global warming include the exacerbation of air quality problems, a reduction in the quality and supply of water to the state from the Sierra snowpack, a rise in sea levels resulting in the displacement of thousands of coastal businesses and residences, damage to marine ecosystems and the natural environment, and an increase in the incidences of infectious diseases, asthma, and other human health-related problems.

The ARB Board approved the 1990 greenhouse gas emissions level of 427 million metric tons of carbon dioxide equivalent (MMTCO2e) on December 6, 2007 (California Air Resources Board 2007). Therefore, emissions generated in California in 2020 are required to be equal to or less than 427 MMTCO2e. Emissions in 2020 in a "business as usual" scenario are estimated to be 596 MMTCO2e.

Under AB 32, the ARB published its Final Expanded List of Early Action Measures to Reduce Greenhouse Gas Emissions in California. Discrete early action measures are currently underway or are enforceable by January 1, 2010. The ARB has 44 early action measures that apply to the transportation, commercial, forestry, agriculture, cement, oil and gas, fire suppression, fuels, education, energy efficiency, electricity, and waste sectors. Of these early action measures, nine are considered discrete early action measures, as they are regulatory and enforceable by January 1, 2010. The ARB estimates that the 44 recommendations are expected to result in reductions of at least 42 MMTCO2e by 2020, representing approximately 25 percent of the 2020 target.

The ARB's Climate Change Scoping Plan (Scoping Plan) contains measures designed to reduce the State's emissions to 1990 levels by the year 2020 (California Air Resources Board 2008). The Scoping Plan identifies recommended measures for multiple greenhouse gas emission sectors and the associated emission reductions needed to achieve the year 2020 emissions target—each sector has a

different emission reduction target. Most of the measures target the transportation and electricity sectors. As stated in the Scoping Plan, the key elements of the strategy for achieving the 2020 greenhouse gas target include:

- Expanding and strengthening existing energy efficiency programs as well as building and appliance standards;
- Achieving a statewide renewables energy mix of 33 percent;
- Developing a California cap-and-trade program that links with other Western Climate Initiative partner programs to create a regional market system;
- Establishing targets for transportation-related greenhouse gas emissions for regions throughout California and pursuing policies and incentives to achieve those targets;
- Adopting and implementing measures pursuant to existing State laws and policies, Including California's clean car standards, goods movement measures, and the Low Carbon Fuel Standard; and
- Creating targeted fees, including a public goods charge on water use, fees on high global warming potential gases, and a fee to fund the administrative costs of the State's long-term commitment to AB 32 implementation.

In addition, the Scoping Plan differentiates between "capped" and "uncapped" strategies. "Capped" strategies are subject to the proposed cap-and-trade program. The Scoping Plan states that the inclusion of these emissions within the cap-and trade program will help ensure that the year 2020 emission targets are met despite some degree of uncertainty in the emission reduction estimates for any individual measure. Implementation of the capped strategies is calculated to achieve a sufficient amount of reductions by 2020 to achieve the emission target contained in AB 32. "Uncapped" strategies that will not be subject to the cap-and-trade emissions caps and requirements are provided as a margin of safety by accounting for additional greenhouse gas emission reductions.[4]

The 2022 Scoping Plan was adopted by CARB in November 2022 and expands upon earlier plans with a target of reducing GHG emissions to 85% below 1990 levels by 2045.

Senate Bill 100. Senate Bill 100 (SB 100) requires 100 percent of total retail sales of electricity in California to come from eligible renewable energy resources and zero-carbon resources by December 31, 2045. SB 100 was adopted September 2018.

The interim thresholds from prior Senate Bills and Executive Orders would also remain in effect. These include Senate Bill 1078 (SB 1078), which requires retail sellers of electricity, including investor-owned utilities and community choice aggregators, to provide at least 20 percent of their supply from renewable sources by 2017. Senate Bill 107 (SB 107) which changed the target date to 2010. Executive Order S-14-08, which was signed on November 2008 and expanded the State's Renewable Energy Standard to 33 percent renewable energy by 2020. Executive Order S-21-09 directed the CARB to adopt regulations by July 31, 2010 to enforce S-14-08. Senate Bill X1-2 codifies the 33 percent renewable energy requirement by 2020.

SB 375. Senate Bill 375 (SB 375) was adopted September 2008 and aligns regional transportation planning efforts, regional GHG emission reduction targets, and land use and housing allocation. SB 375 requires Metropolitan Planning Organizations (MPO) to adopt a sustainable communities strategy (SCS) or alternate planning strategy (APS) that will prescribe land use allocation in that MPOs Regional Transportation Plan (RTP). CARB, in consultation with each MPO, will provide each affected region with reduction targets for GHGs emitted by passenger cars and light trucks in the region for the years 2020 and 2035. These reduction targets will be updated every eight years but can be updated every four years if advancements in emissions technologies affect the reduction strategies to achieve the targets. CARB is also charged with reviewing each MPO's sustainable communities strategy or alternate planning strategy for consistency with its assigned targets.

The proposed project is located within the Southern California Association of Governments (SCAG), which has authority to develop the SCS or APS. For the SCAG region, the targets set by CARB are at eight percent below 2005 per capita GHG emissions levels by 2020 and 13 percent below 2005 per capita GHG emissions levels by 2035. On April 4, 2012, SCAG adopted the 2012-2035 Regional Transportation Plan / Sustainable Communities Strategy (RTP/SCS), which meets the CARB emission reduction requirements. The Housing Element Update is required by the State to be completed within 18 months after RTP/SCS adoption or by October 2013.

City and County land use policies, including General Plans, are not required to be consistent with the RTP and associated SCS or APS. However, new provisions of CEQA would incentivize, through streamlining and other provisions, qualified projects that are consistent with an approved SCS or APS and categorized as "transit priority projects."

Assembly Bill 939 and Senate Bill 1374. Assembly Bill 939 (AB 939) requires that each jurisdiction in California to divert at least 50 percent of its waste away from landfills, whether through waste reduction, recycling or other means. Senate Bill 1374 (SB 1374) requires the California Integrated Waste Management Board to adopt a model ordinance by March 1, 2004 suitable for adoption by any local agency to require 50 to 75 percent diversion of construction and demolition of waste materials from landfills.

Executive Order S-13-08. Executive Order S-13-08 indicates that "climate change in California during the next century is expected to shift precipitation patterns, accelerate sea level rise and increase temperatures, thereby posing a serious threat to California's economy, to the health and welfare of its population and to its natural resources." Pursuant to the requirements in the order, the 2009 California Climate Adaptation Strategy (California Natural Resource Agency 2009) was adopted, which is the "… first statewide, multi-sector, region-specific, and information-based climate change in California, identifying and exploring strategies to adapt to climate change, and specifying a direction for future research.

Executive Order B-30-15. Executive Order B-30-15, establishing a new interim statewide greenhouse gas emission reduction target to reduce greenhouse gas emissions to 40 percent below 1990 levels by 2030, was signed by Governor Brown in April 2015.

Executive Order B-29-15. Executive Order B-29-15, mandates a statewide 25% reduction in potable water usage and was signed into law on April 1, 2015.

Executive Order B-37-16. Executive Order B-37-16, continuing the State's adopted water reduction, was signed into law on May 9, 2016. The water reduction builds off the mandatory 25% reduction called for in EO B-29-15.

2.2.4 South Coast Air Quality Management District

The Project is within the South Coast Air Basin, which is under the jurisdiction of the South Coast Air Quality Management District (SCAQMD). SCAQMD Regulation XXVII currently includes three rules:

- The purpose of Rule 2700 is to define terms and post global warming potentials.
- The purpose of Rule 2701, SoCal Climate Solutions Exchange, is to establish a voluntary program to encourage, quantify, and certify voluntary, high quality certified greenhouse gas emission reductions in the SCAQMD.
- Rule 2702, Greenhouse Gas Reduction Program, was adopted on February 6, 2009. The purpose of this rule is to create a Greenhouse Gas Reduction Program for greenhouse gas emission reductions in the SCAQMD. The SCAQMD will fund projects through contracts in response to requests for proposals or purchase reductions from other parties.

SCAQMD Threshold Development

The SCAQMD has established recommended significance thresholds for greenhouse gases for local lead agency consideration ("SCAQMD draft local agency threshold"). SCAQMD has published a five-tiered draft GHG threshold which includes a 10,000 metric ton of CO_2e per year for stationary/industrial sources and 3,000 metric tons of CO_2e per year significance threshold for residential/commercial projects (South Coast Air Quality Management District 2010c). Tier 3 is anticipated to be the primary tier by which the SCAQMD will determine significance for projects. The Tier 3 screening level for stationary sources is based on an emission capture rate of 90 percent for all new or modified projects. A 90-precent emission capture rate means that 90 percent of total emissions from all new or modified stationary source projects would be subject to CEQA analysis. The 90-percent capture rate GHG significance screening level in Tier 3 for stationary sources was derived using the SCAQMD's annual Emissions Reporting Program.

The current draft thresholds consist of the following tiered approach:

- Tier 1 consists of evaluating whether or not the project qualifies for any applicable exemption under CEQA.
- Tier 2 consists of determining whether or not the project is consistent with a greenhouse gas reduction plan. If a project is consistent with a qualifying local greenhouse gas reduction plan, it does not have significant greenhouse gas emissions.

- Tier 3 consists of screening values, which the lead agency can choose but must be consistent. A project's construction emissions are averaged over 30 years and are added to a project's operational emissions. If a project's emissions are under one of the following screening thresholds, then the project is less than significant:
  - All land use types: 3,000 MTCO2e per year
  - Based on land use types: residential is 3,500 MTCO2e per year; commercial is 1,400 MTCO2e per year; mixed use is 3,000 MTCO2e per year; and industrial is 10,000 MTCO2e per year
- Tier 4 has the following options:
  - Option 1: Reduce emissions from business as usual by a certain percentage; this percentage is currently undefined
  - Option 2: Early implementation of applicable AB 32 Scoping Plan measures
  - Option 3: Year 2020 target for service populations (SP), which includes residents and employees: 4.8 MTCO2e/SP/year for projects and 6.6 MTCO2e/SP/year for plans;
  - Option 3, 2035 target: 3.0 MTCO2e/SP/year for projects and 4.1 MTCO2e/SP/year for plans
- Tier 5 involves mitigation offsets to achieve target significance threshold.

2.2.5 Local

WRCOG Subregional Climate Action Plan

The City of San Jacinto is part of the Western Riverside Council of Government (WRCOG). The WRCOG adopted the WRCOG Subregional Climate Action Plan (CAP) in September 2014. Twelve cities in the subregion joined efforts to develop the Subregional CAP, which set forth a subregional emissions reduction target, emissions reduction measures, and action steps to assist each community to demonstrate consistency with California's Global Warming Solutions Act of 2006 (Assembly Bill [AB] 32). The CAP consists of an emissions reduction target of 15% below 2010 levels by 2020, and 49% below 2010 levels by 2035. As indicated in the CAP the emission reduction target of 15% from 2010 levels equates to a GHG emissions reduction of nearly 2,330,647 metric tons below business-as-usual (BAU) conditions by 2020. In order to reach these goals, the CAP provides feasible strategies, while affording its communities other economic and environmental benefits.

Therefore, to determine whether the project's GHG emissions are significant, this analysis uses the WRCOG CAP.

The project will be subject to the latest requirements of the California Green Building and Title 24 Energy Efficiency Standards (currently 2022) which would reduce project-related greenhouse gas emissions.

3.0 Setting

3.1 Existing Physical Setting

The project site is located in the City of San Jacinto, which is part of the South Coast Air Basin (SCAB) that includes all of Orange County as well as the non-desert portions of Los Angeles, Riverside, and San Bernardino Counties. The South Coast Air Basin is located on a coastal plain with connecting broad valleys and low hills to the east. Regionally, the South Coast Air Basin is bounded by the Pacific Ocean to the southwest and high mountains to the east forming the inland perimeter.

3.1.1 Local Climate and Meteorology

Dominant airflows provide the driving mechanism for transport and dispersion of air pollution. The mountains surrounding the region form natural horizontal barriers to the dispersion of air contaminants. Air pollution created in the coastal areas and around the Los Angeles area is transported inland until it reaches the mountains where the combination of mountains and inversion layers generally prevent further dispersion. This poor ventilation results in a gradual degradation of air quality from the coastal areas to inland areas. Air stagnation may occur during the early evening and early morning periods of transition between day and nighttime flows. The region also experiences periods of hot, dry winds from the desert, known as Santa Ana winds. If the Santa Ana winds are strong, they can surpass the sea breeze, which blows from the ocean to the land, and carry the suspended dust and pollutants out to the ocean. If the winds are weak, they are opposed by the sea breeze and cause stagnation, resulting in high pollution events.

The annual average temperature varies little throughout much of the basin, ranging from the low to middle 60s, measured in degrees Fahrenheit (°F). With more pronounced oceanic influence, coastal areas show less variability in annual minimum and maximum temperatures than inland areas where the project site is located. The majority of the annual rainfall in the basin occurs between November and April. Summer rainfall is minimal and is generally limited to scattered thunderstorms in the coastal regions and slightly heavier showers in the eastern portion of the basin along the coastal side of the mountains. Year-to-year patterns in rainfall are unpredictable because of fluctuations in the weather.

Temperature inversions limit the vertical depth through which pollution can be mixed. Among the most common temperature inversions in the basin are radiation inversions, which form on clear winter nights when cold air off mountains sink to the valley floor while the air aloft over the valley remains warm. These inversions, in conjunction with calm winds, trap pollutants near the source. Other types of temperature inversions that affect the basin include marine, subsidence, and high-pressure inversions.

Summers are often periods of hazy visibility and occasionally unhealthful air. Strong temperature inversions may occur that limit the vertical depth through which air pollution can be dispersed. Air pollutants concentrate because they cannot rise through the inversion layer and disperse. These inversions are more common and persistent during the summer months. Over time, sunlight produces photochemical reactions within this inversion layer that creates ozone, a particularly harmful air

pollutant. Occasionally, strong thermal convections occur which allows the air pollutants to rise high enough to pass over the mountains and ultimately dilute the smog cloudtrap pollutants such as automobile exhaust near their source. While these inversions may lead to air pollution "hot spots" in heavily developed coastal areas of the basin, there is not enough traffic in inland valleys to cause any winter air pollution problems. Despite light wind conditions, especially at night and in the early morning, winter is generally a period of good air quality in the project vicinity.

In the winter, light nocturnal winds result mainly from the drainage of cool air off of the mountains toward the valley floor while the air aloft over the valley remains warm. This forms a type of inversion known as a radiation inversion. Such winds are characterized by stagnation and poor local mixing and trap pollutants such as automobile exhaust near their source. While these inversions may lead to air pollution "hot spots" in heavily developed coastal areas of the basin, there is not enough traffic to cause any winter air pollution problems. Despite light wind conditions, especially at night and in the early morning, winter is generally a period of good air quality in the project vicinity.

The temperature and precipitation levels for the City of San Jacinto are in Table 3. Table 3 shows that August is typically the warmest month and December is typically the coolest month. Rainfall in the project area varies considerably in both time and space. Almost all the annual rainfall comes from the fringes of mid-latitude storms from late November to early April, with summers being almost completely dry.

Table 3: Meteorological Summary

Month	Temperature (˚F)		Average Precipitation (inches)
	Average High	Average Low	
January	67.0	37.9	2.6
February	67.6	39.6	2.6
March	70.6	42.4	1.9
April	77.2	45.8	0.8
May	83.2	51.0	0.4
June	90.9	55.2	0.1
July	97.1	60.6	0.2
August	98.4	61.5	0.2
September	93.3	57.8	0.3
October	84.0	50.2	0.6
November	73.9	41.6	0.9
December	67.2	36.1	1.6
Annual Average	**80.9**	**48.3**	**12.2**

3.1.2 Local Air Quality

The SCAQMD is divided into 38 air-monitoring areas with a designated ambient air monitoring station representative of each area. The project site is located in the City of San Jacinto in the Hemet/San Jacinto Valley Source Receptor Area (Area 28). The nearest air monitoring station to the project site is

the Banning Airport Station. The Banning Airport Station is located approximately 13 miles northeast of the project site, at 200 S Hathaway Street, Banning; however this location does not provide all ambient weather data. Therefore, additional data was pulled from the SCAQMD historical data for the Hemet/San Jacinto Area (Area 28) for both sulfur dioxide and carbon monoxide to provide the existing levels. Table 4 presents the monitored pollutant levels within the vicinity. However, it should be noted that due to the air monitoring station distance from the project site, recorded air pollution levels at the air monitoring station reflect with varying degrees of accuracy, local air quality conditions at the project site.

Table 4: Local Area Air Quality Levels from the Banning Monitoring Stations

Pollutant (Standard)[2]	Year		
	2020	**2021**	**2022**
Ozone:			
Maximum 1-Hour Concentration (ppm)	0.150	0.139	0.116
Days > CAAQS (0.09 ppm)	**29**	**41**	**30**
Maximum 8-Hour Concentration (ppm)	0.115	0.116	0.100
Days > NAAQS (0.07 ppm)	**68**	**80**	**56**
Days > CAAQS (0.070 ppm)	**71**	**82**	**59**
Carbon Monoxide:			
Maximum 1-Hour Concentration (ppm)	*	*	*
Days > NAAQS (20 ppm)	*	*	*
Maximum 8-Hour Concentration (ppm)	*	*	*
Days > NAAQS (9 ppm)	*	*	*
Nitrogen Dioxide:			
Maximum 1-Hour Concentration (ppm)	0.051	0.057	0.052
Days > NAAQS (0.25 ppm)	0	0	0
Sulfur Dioxide:			
Maximum 1-Hour Concentration (ppm)	*	*	*
Days > CAAQS (0.25 ppm)	*	*	*
Inhalable Particulates (PM10):			
Maximum 24-Hour Concentration (ug/m^3)	69.3	48.6	52.4
Days > NAAQS (150 ug/m^3)	0	0	0
Days > CAAQS (50 ug/m^3)	1	0	0
Annual Average (ug/m^3)	21.2	21.2	22.5
Annual > NAAQS (50 ug/m^3)	No	No	No
Annual > CAAQS (20 ug/m^3)	**Yes**	**Yes**	**Yes**
Ultra-Fine Particulates (PM2.5):			
Maximum 24-Hour Concentration (ug/m^3)	46.7	40.9	37.9
Days > NAAQS (35 ug/m^3)	-	-	-
Annual Average (ug/m^3)	10.5	11.7	9.4
Annual > NAAQS (15 ug/m3)	No	No	No
Annual > CAAQS (12 ug/m^3)	No	No	No

[1.] Source: obtained from https://www.aqmd.gov/home/air-quality/air-quality-data-studies/historical-data-by-year and /or https://www.arb.ca.gov/adam/topfour/topfour1.php

[2] CAAQS = California Ambient Air Quality Standard; NAAQS = National Ambient Air Quality Standard; ppm = parts per million

[3] No data available.

The monitoring data presented in Table 4 shows that ozone and particulate matter (PM10) are the air pollutants of primary concern in the project area, which are detailed below.

Ozone
During the 2020 to 2022 monitoring period, the State 1-hour concentration standard for ozone has been exceeded between 29 and 41 days each year at the Banning Airport Station. The State 8-hour ozone standard has been exceeded between 59 and 82 days each year over the past three years at the Banning Airport Station. The Federal 8-hour ozone standard has been exceeded between 56 and 80 days each year over the past three years at the Banning Airport Station.

Ozone is a secondary pollutant as it is not directly emitted. Ozone is the result of chemical reactions between other pollutants, most importantly hydrocarbons and NO_2, which occur only in the presence of bright sunlight. Pollutants emitted from upwind cities react during transport downwind to produce the oxidant concentrations experienced in the area. Many areas of the SCAQMD contribute to the ozone levels experienced at the monitoring station, with the more significant areas being those directly upwind.

Carbon Monoxide
CO is another important pollutant that is due mainly to motor vehicles. The Hemet/San Jacinto Area did not record an exceedance of the state or federal 1-hour or 8-hour CO standards for the last three years.

Nitrogen Dioxide
The Banning Airport Station did not record an exceedance of the State or Federal NO_2 standards for the last three years.

Sulfur Dioxide
The Hemet/San Jacinto Area did not record an exceedance of the State SO_2 standards for the last three years.

Particulate Matter
During the 2020 to 2022 monitoring period, the Banning Airport Station did not record an exceedance of the Federal 24-hour concentration standards for PM10, while State 24-hour concentration standards for PM10 were exceeded each year.

During the 2020 to 2022 monitoring period, there was insufficient data for the Federal 24-hour standard for PM2.5 at the Banning Airport Station.

According to the EPA, some people are much more sensitive than others to breathing fine particles (PM10 and PM2.5). People with influenza, chronic respiratory and cardiovascular diseases, and the elderly may suffer worsening illness and premature death due to breathing these fine particles. People with bronchitis can expect aggravated symptoms from breathing in fine particles. Children may experience decline in lung function due to breathing in PM10 and PM2.5. Other groups considered

sensitive are smokers and people who cannot breathe well through their noses. Exercising athletes are also considered sensitive, because many breathe through their mouths during exercise.

3.1.3 Attainment Status

The EPA and the ARB designate air basins where ambient air quality standards are exceeded as "nonattainment" areas. If standards are met, the area is designated as an "attainment" area. If there is inadequate or inconclusive data to make a definitive attainment designation, they are considered "unclassified." National nonattainment areas are further designated as marginal, moderate, serious, severe, or extreme as a function of deviation from standards. Each standard has a different definition, or 'form' of what constitutes attainment, based on specific air quality statistics. For example, the Federal 8-hour CO standard is not to be exceeded more than once per year; therefore, an area is in attainment of the CO standard if no more than one 8-hour ambient air monitoring values exceeds the threshold per year. In contrast, the federal annual $PM_{2.5}$ standard is met if the three-year average of the annual average $PM_{2.5}$ concentration is less than or equal to the standard. Table 5 lists the attainment status for the criteria pollutants in the basin.

Table 5: South Coast Air Basin Attainment Status

Pollutant	Averaging Time	National Standards[1]	Attainment Date[2]	California Standards[3]
1979 1-Hour Ozone[4]	1-Hour (0.12 ppm)	Nonattainment (Extreme)	11/15/2010 (Not attained[4])	Extreme Nonattainment
1997 8-Hour Ozone[5]	8-Hour (0.08 ppm)	Nonattainment (Extreme)	6/15/2024	Nonattainment
2008 8-Hour Ozone	8-Hour (0.075 ppm)	Nonattainment (Extreme)	12/31/2032	
2015 8-Hour Ozone	8-Hour (0.070 ppm)	Designations Pending	~2037	
CO	1-Hour (35 ppm) 8-Hour (9 ppm)	Attainment (Maintenance)	6/11/2007 (Attained)	Maintenance
NO_2[6]	1-Hour (100 ppb) Annual (0.053 ppm)	Attainment (Maintenance)	9/22/1998 (Attained)	Attainment
SO_2[7]	1-Hour (75 ppb)	Designations Pending	Pending	Attainment
	24-Hour (0.14 ppm) Annual (0.03 ppm)	Unclassifiable/ Attainment	3/19/1979 (Attained)	
PM10	24-Hour (150 µg/m^3)	Nonattainment (Serious)[8]	12/31/2006 (Redesignation request submitted)[8]	Nonattainment
PM2.5	24-Hour (35 µg/m^3)	Nonattainment	12/31/2006 (Redesignation request submitted)[8]	Unclassified
Lead	3-Months Rolling (0.15 µg/m^3)	Nonattainment (Partial)[9]	12/31/2015	Nonattainment (Partial)[9]

Notes:
[1] Obtained from Draft 2012 AQMP, SCAQMD, 2012. EPA often only declares Nonattainment areas; everywhere else is listed as Unclassified/Attainment or Unclassifiable.
[2] A design value below the NAAQS for data through the full year or smog season prior to the attainment date is typically required for attainment demonstration.
[3] Obtained from http://www.arb.ca.gov/desig/adm/adm.htm.
[4] 1-hour O_3 standard (0.13 ppm) was revoked, effective June 15, 2005; however, the Basin has not attained this standard based on 2008-2010 data has some continuing obligations under the former standard.
[5] 1997 8-hour O_3 standard (0.08 ppm) was reduced (0.075 ppm), effective May 27, 2008; the 1997 O3 standard and most related implementation rules remain in place until the 1997 standard is revoked by U.S. EPA.
[6] New NO_2 1-hour standard, effective August 2, 2010; attainment designations June, 2013; annual NO_2 standard retained.
[7] The 1971 annual and 24-hour SO_2 standards were revoked, effective August 23, 2010; however, these 1971 standards will remain in effect until one year after U.S. EPA promulgates area designations for the 2010 SO_2 1-hour standard. Area designations expected in 2012, with SSAB designated Unclassifiable/Attainment.
[8] Annual PM10 standard was revoked, effective December 18, 2006; redesignation request to Attainment of the 24-hour PM10 standard is pending with U.S. EPA
[9] Partial Nonattainment designation - Los Angeles County portion of Basin only.

3.2 Greenhouse Gases

Constituent gases of the Earth's atmosphere, called atmospheric greenhouse gases (GHG), play a critical role in the Earth's radiation amount by trapping infrared radiation emitted from the Earth's surface, which otherwise would have escaped to space. Prominent greenhouse gases contributing to this process include carbon dioxide (CO_2), methane (CH_4), ozone, water vapor, nitrous oxide (N_2O), and chlorofluorocarbons (CFCs). This phenomenon, known as the Greenhouse Effect, is responsible for maintaining a habitable climate. Anthropogenic (caused or produced by humans) emissions of these greenhouse gases in excess of natural ambient concentrations are responsible for the enhancement of the Greenhouse Effect and have led to a trend of unnatural warming of the Earth's natural climate, known as global warming or climate change. Emissions of gases that induce global warming are attributable to human activities associated with industrial/manufacturing, agriculture, utilities, transportation, and residential land uses. Transportation is responsible for 41 percent of the State's greenhouse gas emissions, followed by electricity generation. Emissions of CO_2 and nitrous oxide (NO_2) are byproducts of fossil fuel combustion. Methane, a potent greenhouse gas, results from off-gassing associated with agricultural practices and landfills. Sinks of CO_2, where CO_2 is stored outside of the atmosphere, include uptake by vegetation and dissolution into the ocean. Table 6 provides a description of each of the greenhouse gases and their global warming potential.

Additional information is available: https://www.arb.ca.gov/cc/inventory/data/data.htm

<Table 6 on next page>

Table 6: Description of Greenhouse Gases

Greenhouse Gas	Description and Physical Properties	Sources
Nitrous oxide	Nitrous oxide (N_20),also known as laughing gas is a colorless gas. It has a lifetime of 114 years. Its global warming potential is 298.	Microbial processes in soil and water, fuel combustion, and industrial processes. In addition to agricultural sources, some industrial processes (nylon production, nitric acid production) also emit N_20.
Methane	Methane (CH_4) is a flammable gas and is the main component of natural gas. It has a lifetime of 12 years. Its global warming potential is 25.	A natural source of CH_4 is from the decay of organic matter. Methane is extracted from geological deposits (natural gas fields). Other sources are from the decay of organic material in landfills, fermentation of manure, and cattle farming.
Carbon dioxide	Carbon dioxide (CO_2) is an odorless, colorless, natural greenhouse gas. Carbon dioxide's global warming potential is 1. The concentration in 2005 was 379 parts per million (ppm), which is an increase of about 1.4 ppm per year since 1960.	Natural sources include decomposition of dead organic matter; respiration of bacteria, plants, animals, and fungus; evaporation from oceans; and volcanic outgassing. Anthropogenic sources are from burning coal, oil, natural gas, and wood.
Chlorofluorocarbons	CFCs are nontoxic, nonflammable, insoluble, and chemically unreactive in the troposphere (the level of air at the earth's surface). They are gases formed synthetically by replacing all hydrogen atoms in methane or methane with chlorine and/or fluorine atoms. Global warming potentials range from 3,800 to 8,100.	Chlorofluorocarbons were synthesized in 1928 for use as refrigerants, aerosol propellants, and cleaning solvents. They destroy stratospheric ozone, therefore their production was stopped as required by the Montreal Protocol.
Hydrofluorocarbons	Hydrofluorocarbons (HFCs) are a group of greenhouse gases containing carbon, chlorine, and at least one hydrogen atom. Global warming potentials range from 140 to 11,700.	Hydrofluorocarbons are synthetic manmade chemicals used as a substitute for chlorofluorocarbons in applications such as automobile air conditioners and refrigerants.
Perfluorocarbons	Perfluorocarbons (PFCs) have stable molecular structures and only break down by ultraviolet rays about 60 kilometers above the Earth's surface. They have a lifetime 10,000 to 50,000 years. They have a global warming potential range of 6,200 to 9,500.	Two main sources of perfluorocarbons are primary aluminum production and semiconductor manufacturing.
Sulfur hexafluoride	Sulfur hexafluoride (SF_6) is an inorganic, odorless, colorless, and nontoxic, nonflammable gas. It has a lifetime of 3,200 years. It has a high global warming potential, 23,900.	This gas is manmade and used for insulation in electric power transmission equipment, in the magnesium industry, in semiconductor manufacturing, and as a tracer gas for leak detection.

4.0 Modeling Parameters and Assumptions

4.1 Construction

Typical emission rates from construction activities were obtained from CalEEMod Version 2022.1.1.20 CalEEMod is a computer model published by the SCAQMD for estimating air pollutant emissions. The CalEEMod program uses the EMFAC2014 computer program to calculate the emission rates specific for the southwestern portion of Riverside County for construction-related employee vehicle trips and the OFFROAD2011 computer program to calculate emission rates for heavy truck operations. EMFAC2014 and OFFROAD2011 are computer programs generated by CARB that calculates composite emission rates for vehicles. Emission rates are reported by the program in grams per trip and grams per mile or grams per running hour. Using CalEEMod, the peak daily air pollutant emissions were calculated and presented below. These emissions represent the highest level of emissions for each of the construction phases in terms of air pollutant emissions.

The analysis assesses the emissions associated with the construction of the proposed project as indicated in Table 1. The project was modeled to be operational in 2024 and begin construction in early 2024. The phases of the construction activities which have been analyzed below are: 1) site preparation, 2) grading, 3) building, 4) paving, and 5) architectural coating. For details on construction modeling and construction equipment for each phase, please see Appendix A.

The project will be required to comply with existing SCAQMD rules for the reduction of fugitive dust emissions. SCAQMD Rule 403 establishes these procedures. Compliance with this rule is achieved through application of standard best management practices in construction and operation activities, such as application of water or chemical stabilizers to disturbed soils, managing haul road dust by application of water, covering haul vehicles, restricting vehicle speeds on unpaved roads to 15 mph, sweeping loose dirt from paved site access roadways, cessation of construction activity when winds exceed 25 mph and establishing a permanent, stabilizing ground cover on finished sites. In addition, projects that disturb 50 acres or more of soil or move 5,000 cubic yards of materials per day are required to submit a Fugitive Dust Control Plan or a Large Operation Notification Form to SCAQMD. Based on the size of the Project area (disturbance area of approximately 14.5 acres) and the fact that the project won't export more than 5,000 cubic yards of material a day a Fugitive Dust Control Plan or Large Operation Notification would not be required.

SCAQMD's Rule 403 minimum requirements require that the application of the best available dust control measures are used for all grading operations and include the application of water or other soil stabilizers in sufficient quantity to prevent the generation of visible dust plumes. Compliance with Rule 403 would require the use of water trucks during all phases where earth moving operations would occur. Compliance with Rule 403 is required.

4.2 Operations

Operational or long-term emissions occur over the life of the Project. Both mobile and area sources generate operational emissions. Area source emissions arise from consumer product usage, heaters that consume natural gas, gasoline-powered landscape equipment, and architectural coatings

(painting). Mobile source emissions from motor vehicles are the largest single long-term source of air pollutants from the operation of the Project. Small amounts of emissions would also occur from area sources such as the consumption of natural gas for heating, hearths, from landscaping emissions, and consumer product usage. The operational emissions were estimated using the latest version of CalEEMod.

Mobile Sources
Mobile sources include emissions from the additional vehicle miles generated from the proposed project. The vehicle trips associated with the proposed project are based upon the trip generation rates given in the ITE trip generation manual. The traffic analysis shows a trip generation rate of approximately 11,772 trips per day.

The program then applies the emission factors for each trip which is provided by the EMFAC2017 model to determine the vehicular traffic pollutant emissions. The CalEEMod default trip lengths were used in this analysis. Please see CalEEMod output comments sections in Appendix A for details.

Area Sources
Area sources include emissions from consumer products, landscape equipment and architectural coatings. Landscape maintenance includes fuel combustion emissions from equipment such as lawn mowers, rototillers, shredders/grinders, blowers, trimmers, chain saws, and hedge trimmers, as well as air compressors, generators, and pumps. As specifics were not known about the landscaping equipment fleet, CalEEMod defaults were used to estimate emissions from landscaping equipment.

Per SCAQMD Rule 1113 as amended on June 3, 2011, the architectural coatings that would be applied after January 1, 2014 will be limited to an average of 50 grams per liter or less and the CalEEMod model default was utilized as the new model takes this rule into account.

Energy Usage
2022.1.1.20 CalEEMod defaults were utilized.

4.3 Localized Construction Analysis

The SCAQMD has published a "Fact Sheet for Applying CalEEMod to Localized Significance Thresholds" (South Coast Air Quality Management District 2011b). CalEEMod calculates construction emissions based on the number of equipment hours and the maximum daily disturbance activity possible for each piece of equipment. In order to compare CalEEMod reported emissions against the localized significance threshold lookup tables, the CEQA document should contain in its project design features or its mitigation measures the following parameters:

1. The off-road equipment list (including type of equipment, horsepower, and hours of operation) assumed for the day of construction activity with maximum emissions.
2. The maximum number of acres disturbed on the peak day.
3. Any emission control devices added onto off-road equipment.
4. Specific dust suppression techniques used on the day of construction activity with maximum emissions.

The construction equipment showing the equipment associated with the maximum area of disturbance is shown in Table 7.

Table 7: Construction Equipment Assumptions[1]

Activity	Equipment	Number	Acres/8hr-day	Total Acres
Site Preparation	Rubber Tired Dozers	3	0.5	1.5
	Tractors/Loaders/Backhoes	4	0.5	2.0
Total Per Phase				**3.5**
Grading	Graders	1	0.5	0.5
	Rubber Tired Dozers	1	0.5	0.5
	Scrapers	2	1.0	2.0
	Tractors/Loaders/Backhoes	2	0.5	1.0
Total Per Phase				**4.0**

Notes:

[1.] Source: South Coast AQMD, Fact Sheet for Applying CalEEMod to Localized Significance Thresholds. http://www.aqmd.gov/docs/default-source/ceqa/handbook/localized-significance-thresholds/caleemod-guidance.pdf?sfvrsn=2

As shown in Table 7, the maximum number of acres disturbed in a day would be 4.0 acres during grading.

The local air quality emissions from construction were analyzed using the SCAQMD's Mass Rate Localized Significant Threshold Look-up Tables and the methodology described in Localized Significance Threshold Methodology, prepared by SCAQMD, revised July 2008. The Look-up Tables were developed by the SCAQMD in order to readily determine if the daily emissions of CO, NOx, PM10, and PM2.5 from the proposed project could result in a significant impact to the local air quality. The emission thresholds were based on the Hemet/San Jacinto Valley source receptor area (SRA 28) and a disturbance of 4 acres per day at a distance of 25 meters (82 feet). The closest receptors are located 7 meters to the south of the site. The 4-acre threshold is interpolated from the 2- and 5-acre thresholds.

4.4 Localized Operational Analysis

For operational emissions, the screening tables for a disturbance area of 5 acres per day, as the project 14.5 acres, and a distance of 25 meters were used to determine significance. The tables were compared to the project's onsite operational emissions.

5.0 Thresholds of Significance

5.1 Air Quality Thresholds of Significance

5.1.1 CEQA Guidelines for Air Quality

The CEQA Guidelines define a significant effect on the environment as "a substantial, or potentially substantial, adverse change in the environment." To determine if a project would have a significant impact on air quality, the type, level, and impact of emissions generated by the project must be evaluated.

The following air quality significance thresholds are contained in Appendix G of the CEQA Guidelines. A significant impact would occur if the project would:

a) Conflict with or obstruct implementation of the applicable air quality plan;

b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable national or state ambient air quality standard;

c) Expose sensitive receptors to substantial pollutant concentrations; or

d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

While the final determination of whether a project is significant is within the purview of the Lead Agency pursuant to Section 15064(b) of the CEQA Guidelines, SCAQMD recommends that its quantitative air pollution thresholds be used to determine the significance of project emissions. If the Lead Agency finds that the project has the potential to exceed these air pollution thresholds, the project should be considered to have significant air quality impacts. There are daily emission thresholds for construction and operation of a proposed project in the basin.

5.1.2 Regional Significance Thresholds for Construction Emissions

The following CEQA significance thresholds for construction emissions are established for the Basin:

- 75 pounds per day (lbs/day) of VOC
- 100 lbs/day of NO_x
- 550 lbs/day of CO
- 150 lbs/day of PM_{10}
- 55 lbs/day of $PM_{2.5}$
- 150 lbs/day of SO_2

Projects in the basin with construction-related emissions that exceed any of the emission thresholds are considered to be significant under SCAQMD guidelines.

5.1.3 Regional Significance Thresholds for Operational Emissions

The daily operational emissions significance thresholds for the basin are as follows:

- 55 pounds per day (lbs/day) of VOC
- 55 lbs/day of NO_x
- 550 lbs/day of CO
- 150 lbs/day of PM_{10}
- 55 lbs/day of $PM_{2.5}$
- 150 lbs/day of SO_2

Local Microscale Concentration Standards The significance of localized project impacts under CEQA depends on whether ambient CO levels in the vicinity of the project are above or below State and federal CO standards. If ambient levels are below the standards, a project is considered to have a significant impact if project emissions result in an exceedance of one or more of these standards. If ambient levels already exceed a State or federal standard, project emissions are considered significant if they increase 1-hour CO concentrations by 1.0 ppm or more or 8-hour CO concentrations by 0.45 ppm or more. The following are applicable local emission concentration standards for CO:

- California State 1-hour CO standard of 20.0 ppm
- California State 8-hour CO standard of 9.0 ppm

5.1.4 Thresholds for Localized Significance

Project-related construction air emissions may have the potential to exceed the State and Federal air quality standards in the project vicinity, even though these pollutant emissions may not be significant enough to create a regional impact to the South Coast Air Basin. In order to assess local air quality impacts the SCAQMD has developed Localized Significant Thresholds (LSTs) to assess the project-related air emissions in the project vicinity. The SCAQMD has also provided Final Localized Significant Threshold Methodology (LST Methodology), June 2003, which details the methodology to analyze local air emission impacts. The Localized Significant Threshold Methodology found that the primary emissions of concern are NO2, CO, PM10, and PM2.5.

The emission thresholds were calculated based on the Hemet/San Jacinto Valley source receptor area (SRA 28) and a disturbance of 4 acres per day at a distance of 25 meters (82 feet), for construction and 5 acres a day for screening of localized operational emissions.

5.2 Greenhouse Gas Thresholds of Significance

5.2.1 CEQA Guidelines for Greenhouse Gas

CEQA Guidelines define a significant effect on the environment as “a substantial, or potentially substantial, adverse change in the environment.” To determine if a project would have a significant impact on greenhouse gases, the type, level, and impact of emissions generated by the project must be evaluated.

The following greenhouse gas significance thresholds are contained in Appendix G of the CEQA Guidelines, which were amendments adopted into the Guidelines on March 18, 2010, pursuant to SB 97. A significant impact would occur if the project would:

(a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment; or

(b) Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases.

However, despite this, currently neither the CEQA statutes, OPR guidelines, nor the draft proposed changes to the CEQA Guidelines prescribe thresholds of significance or a particular methodology for performing an impact analysis; as with most environmental topics, significance criteria are left to the judgment and discretion of the Lead Agency. As previously discussed (Section 2.2.5 of this report), the City of San Jacinto participates in the WRCOG Subregional CAP. The project was compared to the goals of the WRCOG CAP for this analysis.

6.0 Air Quality Emissions Impact

6.1 Construction Air Quality Emissions Impact

The latest version of CalEEMod was used to estimate the onsite and offsite construction emissions. The emissions incorporate Rule 402 and 403. Rule 402 and 403 (fugitive dust) are not considered mitigation measures as the project by default is required to incorporate these rules during construction.

6.1.1 Regional Construction Emissions

The construction emissions for the project would not exceed the SCAQMD's daily emission thresholds at the regional level as demonstrated in Table 8, and therefore would be considered less than significant.

Table 8: Regional Significance - Construction Emissions (pounds/day)

Activity	Pollutant Emissions (pounds/day)					
	VOC	NOx	CO	SO_2	PM10	PM2.5
Site Preparation

[3] Off-site emissions from equipment operated on public roads.
[4] Construction, architectural coatings and paving phases may overlap.

6.1.2 Localized Construction Emissions

The data provided in Table 9 shows that none of the analyzed criteria pollutants would exceed the local emissions thresholds at the nearest sensitive receptors. Therefore, a less than significant local air quality impact would occur from construction of the proposed project.

Table 9: Localized Significance – Construction

Phase	On-Site Pollutant Emissions (pounds/day)[1]			
	NOx	**CO**	**PM10**	**PM2.5**
Site Preparation	36.00	32.90	6.71	4.10
Grading	34.30	30.20	3.85	2.28
Building Construction	11.20	13.10	0.50	0.46
Paving	7.81	10.00	0.39	0.36
Architectural Coating	0.91	1.15	0.03	0.03
Total of overlapping phases	19.92	24.25	0.92	0.85
SCAQMD Threshold for 25 meters (82 feet) or less[2]	**325**	**1,677**	**11.0**	**6.7**
Exceeds Threshold?	No	No	No	No

Notes:
[1] Source: Calculated from CalEEMod and SCAQMD's Mass Rate Look-up Tables for one acre in Hemet/San Jacinto Valley Source Receptor Area (SRA 28). Project will disturb a maximum of 4.0 acres per day (see Table 7).
[2] The nearest sensitive receptor is located 7 meters south; therefore, the 25-meter threshold has been used.

6.1.3 Odors

Potential sources that may emit odors during construction activities include the application of materials such as asphalt pavement. The objectionable odors that may be produced during the construction process are of short-term in nature and the odor emissions are expected cease upon the drying or hardening of the odor producing materials. Diesel exhaust and VOCs would be emitted during construction of the project, which are objectionable to some; however, emissions would disperse rapidly from the project site and therefore should not reach an objectionable level at the nearest sensitive receptors. Due to the short-term nature and limited amounts of odor producing materials being utilized, no significant impact related to odors would occur during construction of the proposed project.

The SCAQMD recommends that odor impacts be addressed in a qualitative manner. Such an analysis shall determine whether the project would result in excessive nuisance odors, as defined under the California Code of Regulations and Section 41700 of the California Health and Safety Code, and thus would constitute a public nuisance related to air quality.

Potential sources that may emit odors during the on-going operations of the proposed project would include odor emissions from the fueling station, trash storage areas, and vehicle emissions. Due to the distance of the nearest receptors from the project site and through compliance with SCAQMD's Rule 402 no significant impact related to odors would occur during the on-going operations of the proposed project.

6.1.4 Construction-Related Toxic Air Contaminant Impact

The greatest potential for toxic air contaminant emissions would be related to diesel particulate emissions associated with heavy equipment operations during construction of the proposed project. The Office of Environmental Health Hazard Assessment (OEHHA) has issued the Air Toxic Hot Spots Program Risk Assessment Guidelines and Guidance Manual for the Preparation of Health Risk Assessments, February 2015 to provide a description of the algorithms, recommended exposure variates, cancer and noncancer health values, and the air modeling protocols needed to perform a health risk assessment (HRA) under the Air Toxics Hot Spots Information and Assessment Act of 1987. Hazard identification includes identifying all substances that are evaluated for cancer risk and/or non-cancer acute, 8-hour, and chronic health impacts. In addition, identifying any multi-pathway substances that present a cancer risk or chronic non-cancer hazard via non-inhalation routes of exposure.

Given the relatively limited number of heavy-duty construction equipment and construction schedule, the proposed project would not result in a long-term substantial source of toxic air containment emissions and corresponding individual cancer risk. Furthermore, construction-based particulate matter (PM) emissions (including diesel exhaust emissions) do not exceed any local or regional thresholds. Therefore, no significant short-term toxic air contaminant impacts would occur during construction of the proposed project.

6.2 Operational Air Quality Emissions Impact

6.2.1 Regional Operational Emissions

The operations-related criteria air quality impacts created by the proposed project have been analyzed through the use of CalEEMod model. The operating emissions were based on year 2024. The summer and winter emissions created by the proposed project's long-term operations were calculated and the highest emissions from either summer or winter are summarized in Table 10.

Table 10: Regional Significance - Unmitigated Operational Emissions (lbs/day)

Activity	Pollutant Emissions (pounds/day)[1]					
	VOC	**NOx**	**CO**	**SO2**	**PM10**	**PM2.5**
Area Sources[2]	3.64	0.04	4.98	0.00	0.01	0.01
Energy Usage[3]	0.03	0.60	0.50	0.00	0.05	0.05
Mobile Sources[4]	49.70	47.30	400.00	0.95	81.60	21.20
Total Emissions	**53.37**	**47.94**	**405.48**	**0.95**	**81.66**	**21.26**
SCAQMD Thresholds	**55**	**55**	**550**	**150**	**150**	**55**
Exceeds Threshold?	No	No	No	No	No	No

Notes:
[1] Source: CalEEMod Version 2022.1.1.20
[2] Area sources consist of emissions from consumer products, architectural coatings, and landscaping equipment.
[3] Energy usage consists of emissions from on-site natural gas usage.
[4] Mobile sources consist of emissions from vehicles and road dust.

Table 10 provides the Project's unmitigated operational emissions. Table 10 shows that the Project does not exceed the SCAQMD daily emission threshold and regional operational emissions are considered to be less than significant.

6.2.2 Localized Operational Emissions

Table 11 shows the calculated emissions for the proposed operational activities compared with appropriate LSTs. The LST analysis only includes on-site sources; however, the CalEEMod software outputs do not separate on-site and off-site emissions for mobile sources. For a worst-case scenario assessment, the emissions shown in Table 11 include all on-site project-related stationary sources and 10% of the project-related new mobile sources. This percentage is an estimate of the amount of project-related new vehicle traffic that will occur on-site.

Table 11: Localized Significance – Unmitigated Operational Emissions

On-Site Emission Source	On-Site Pollutant Emissions (pounds/day)[1]			
	NOx	**CO**	**PM10**	**PM2.5**
Area Sources[2]	0.04	4.98	0.01	0.01
Energy Usage[3]	0.60	0.50	0.05	0.05
On-Site Vehicle Emissions[4]	1.58	13.33	2.72	0.71
Total Emissions	**2.22**	**18.81**	**2.78**	**0.77**
SCAQMD Threshold for 25 meters (82 feet) or less[2]	**371**	**1,965**	**4**	**2**
Exceeds Threshold?	No	No	No	No

Notes:
[1] Source: Calculated from CalEEMod and SCAQMD's Mass Rate Look-up Tables for 5 acres in Hemet/San Jacinto Valley Source Receptor Area (SRA 28). Project will be approximately 14.5 acres.
[2] Area sources consist of emissions from consumer products, architectural coatings, and landscaping equipment.
[3] Energy usage consists of emissions from generation of electricity and on-site natural gas usage.
[4] On-site vehicular emissions based on 1/10 of the gross vehicular emissions and road dust.
[5] The nearest sensitive receptor is located 7 meters south; therefore, the 25-meter threshold has been used.

Table 11 indicates that the local operational emission would not exceed the LST thresholds at the nearest sensitive receptors, located adjacent to the project. Therefore, the project will not result in significant Localized Operational emissions.

6.3 CO Hot Spot Emissions

CO is the pollutant of major concern along roadways because the most notable source of CO is motor vehicles. For this reason, CO concentrations are usually indicative of the local air quality generated by a roadway network and are used as an indicator of potential local air quality impacts. Local air quality impacts can be assessed by comparing future without and with project CO levels to the State and Federal CO standards which were presented in above in Section 5.0.

To determine if the proposed project could cause emission levels in excess of the CO standards discussed above in Section 5.0, a sensitivity analysis is typically conducted to determine the potential for CO "hot spots" at a number of intersections in the general project vicinity. Because of reduced speeds and vehicle queuing, "hot spots" potentially can occur at high traffic volume intersections with a Level of Service E or worse.

Micro-scale air quality emissions have traditionally been analyzed in environmental documents where the air basin was a non-attainment area for CO. However, the SCAQMD has demonstrated in the CO attainment redesignation request to EPA that there are no "hot spots" anywhere in the air basin, even at intersections with much higher volumes, much worse congestion, and much higher background CO levels than anywhere in Riverside County. If the worst-case intersections in the air basin have no "hot spot" potential, any local impacts will be below thresholds.

The traffic analysis showed that the project would generate 11,772 trips per day. The 1992 Federal Attainment Plan for Carbon Monoxide (1992 CO Plan) showed that an intersection which has a daily traffic volume of approximately 100,000 vehicles per day would not violate the CO standard. The volume of traffic at project buildout would be well below 100,000 vehicles and below the necessary volume to even get close to causing a violation of the CO standard. Therefore no CO "hot spot" modeling was performed and no significant long-term air quality impact is anticipated to local air quality with the on-going use of the proposed project.

6.4 Cumulative Regional Air Quality Impacts

Cumulative projects include local development as well as general growth within the project area. However, as with most development, the greatest source of emissions is from mobile sources, which travel well out of the local area. Therefore, from an air quality standpoint, the cumulative analysis would extend beyond any local projects and when wind patterns are considered, would cover an even larger area. Accordingly, the cumulative analysis for the project's air quality must be generic by nature.

The Project area is out of attainment for both ozone and PM10 particulate matter. Construction and operation of cumulative projects will further degrade the local air quality, as well as the air quality of the South Coast Air Basin. The greatest cumulative impact on the quality of regional air cell will be the incremental addition of pollutants mainly from increased traffic from residential, commercial, and industrial development and the use of heavy equipment and trucks associated with the construction of these projects. Air quality will be temporarily degraded during construction activities that occur separately or simultaneously. However, in accordance with the SCAQMD methodology, projects that do not exceed the SCAQMD criteria or can be mitigated to less than criteria levels are not significant and do not add to the overall cumulative impact. The Project does not exceed any of the thresholds of significance and therefore is considered less than significant.

6.5 Air Quality Compliance

The California Environmental Quality Act (CEQA) requires a discussion of any inconsistencies between a proposed project and applicable General Plans and Regional Plans (CEQA Guidelines Section 15125). The regional plan that applies to the proposed project includes the SCAQMD Air Quality Management Plan (AQMP). Therefore, this section discusses any potential inconsistencies of the proposed project with the AQMP.

The purpose of this discussion is to set forth the issues regarding consistency with the assumptions and objectives of the AQMP and discuss whether the proposed project would interfere with the region's ability to comply with Federal and State air quality standards. If the decision-makers determine that

the proposed project is inconsistent, the lead agency may consider project modifications or inclusion of mitigation to eliminate the inconsistency.

The SCAQMD CEQA Handbook states that "New or amended General Plan Elements (including land use zoning and density amendments), Specific Plans, and significant projects must be analyzed for consistency with the AQMP." Strict consistency with all aspects of the plan is usually not required A proposed project should be considered to be consistent with the AQMP if it furthers one or more policies and does not obstruct other policies. The SCAQMD CEQA Handbook identifies two key indicators of consistency:

(1) Whether the project will result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, or delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP.

(2) Whether the project will exceed the assumptions in the AQMP in 2016 or increments based on the year of project buildout and phase.

Both of these criteria are evaluated in the following sections.

A. Criterion 1 - Increase in the Frequency or Severity of Violations

Based on the air quality modeling analysis contained in this Air Analysis, short-term construction impacts will not result in significant impacts based on the SCAQMD regional and local thresholds of significance. This Air Analysis also found that, long-term operations impacts would result in significant impacts based on the SCAQMD regional thresholds of significance.

Therefore, the proposed Project is not projected to contribute to the exceedance of any air pollutant concentration standards and is found to be consistent with the AQMP for the first criterion.

B. Criterion 2 - Exceed Assumptions in the AQMP?

Consistency with the AQMP assumptions is determined by performing an analysis of the proposed project with the assumptions in the AQMP. The emphasis of this criterion is to ensure that the analyses conducted for the proposed project are based on the same forecasts as the AQMP. The 2020-2045 Regional Transportation/Sustainable Communities Strategy, prepared by SCAG, 2020, includes chapters on: the challenges in a changing region, creating a plan for our future, and the road to greater mobility and sustainable growth. These chapters currently respond directly to federal and state requirements placed on SCAG. Local governments are required to use these as the basis of their plans for purposes of consistency with applicable regional plans under CEQA. For this project, the City of San Jacinto Land Use Plans define the assumptions that are represented in the AQMP.

The City of San Jacinto General Plan identifies the land use designation of the site as Community Commercial.

The proposed project is a commercial and retail development. Therefore, the proposed project would not result in an inconsistency with the land use designation in the City's General Plan. Therefore, the

proposed project is not anticipated to exceed the AQMP assumptions for the project site and is found to be consistent with the AQMP for the second criterion.

Based on the above, the proposed Project will not result in an inconsistency with the SCAQMD AQMP. Therefore, a less than significant impact will occur.

7.0 Greenhouse Gas Impact Analysis

7.1 Construction Greenhouse Gas Emissions Impact

The greenhouse gas emissions from project construction equipment and worker vehicles are shown in Table 12. The emissions are from all phases of construction. The total construction emissions amortized over a period of 30 years are estimated at 5.22 metric tons of CO_2e per year. Annual CalEEMod output calculations are provided in Appendix A.

Table 12: Construction Greenhouse Gas Emissions

Activity	Emissions ($MTCO_2e$)[1]		
	Onsite	Offsite	Total
Site Preparation	24.10	1.08	25.18
Grading	42.00	11.73	53.73
Building Construction	142.00	66.40	208.40
Paving	5.50	1.33	6.83
Coating	1.09	0.84	1.93
Total	214.69	81.38	296.07
Averaged over 30 years[2]	7.16	2.71	9.87

Notes:
[1.] $MTCO_2e$=metric tons of carbon dioxide equivalents (includes carbon dioxide, methane and nitrous oxide).
[2.] The emissions are averaged over 30 years because the average is added to the operational emissions, pursuant to SCAQMD.
* CalEEMod output (Appendix A)

7.2 Operational Greenhouse Gas Emissions Impact

Operational emissions occur over the life of the project. The operational emissions for the project are 16,594 metric tons of CO_2e per year as shown in Table 13.

Table 13: Opening Year Unmitigated Project-Related Greenhouse Gas Emissions

Category	Greenhouse Gas Emissions (Metric Tons/Year)[1]						
	Bio-CO2	NonBio-CO_2	CO_2	CH_4	N_2O	R	CO_2e
Area Sources[2]	0.00	2.32	2.32	0.00	0.00	0.00	2.33
Energy Usage[3]	0.00	599.00	599.00	0.04	0.00	0.00	601.00
Mobile Sources[4]	0.00	15,292.00	15,292.00	0.70	0.76	26.20	15,561.00
Solid Waste[5]	23.10	0.00	23.10	2.31	0.00	0.00	81.00
Water[6]	3.53	18.30	21.80	0.36	0.01	0.00	33.50
Refrigeration	0.00	0.00	0.00	0.00	0.00	305.00	305.00
Construction[7]	0.00	9.77	9.77	0.00	0.00	0.00	9.87
Total Emissions	26.63	15,921.39	15,947.99	3.41	0.77	331.20	**16,593.70**

Notes:

[2] Area sources consist of GHG emissions from consumer products, architectural coatings, and landscape equipment.
[3] Energy usage consist of GHG emissions from electricity and natural gas usage.
[4] Mobile sources consist of GHG emissions from vehicles.
[5] Solid waste includes the CO_2 and CH_4 emissions created from the solid waste placed in landfills.
[6] Water includes GHG emissions from electricity used for transport of water and processing of wastewater.
[7] Construction GHG emissions based on a 30-year amortization rate.

7.3 Greenhouse Gas Plan Consistency

The proposed project would have the potential to conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs. The City of San Jacinto is participating the Western Riverside Council of Governments (WRCOG) Subregional Climate Action Plan. The WRCOG Subregional CAP establishes a community-wide emissions reduction target of 15% below 2010, following guidance from CARB and the Governor's Office of Planning and Research. CARB and the California Attorney General have determined this approach to be consistent with the state-wide AB 32 goal of reducing emissions to 1990 levels.

As shown in Table 14, the project is consistent with applicable local reduction measures identified in the WRCOG Subregional CAP and would result in a less than significant impact.

CARB Scoping Plan Consistency

The ARB Board approved a Climate Change Scoping Plan in December 2008. The Scoping Plan outlines the State's strategy to achieve the 2020 greenhouse gas emissions limit. The Scoping Plan "proposes a comprehensive set of actions designed to reduce overall greenhouse gas emissions in California, improve our environment, reduce our dependence on oil, diversify our energy sources, save energy, create new jobs, and enhance public health" (California Air Resources Board 2008). The measures in the Scoping Plan have been in place since 2012.

This Scoping Plan calls for an "ambitious but achievable" reduction in California's greenhouse gas emissions, cutting approximately 30 percent from business-as-usual emission levels projected for 2020, or about 10 percent from today's levels. On a per-capita basis, that means reducing annual emissions of 14 tons of carbon dioxide for every man, woman and child in California down to about 10 tons per person by 2020.

In May 2014, CARB released its *First Update to the Climate Change Scoping Plan* (CARB 2014). This *Update* identifies the next steps for California's leadership on climate change. While California continues on its path to meet the near-term 2020 greenhouse gas limit, it must also set a clear path toward long-term, deep GHG emission reductions. This report highlights California's success to date in reducing its GHG emissions and lays the foundation for establishing a broad framework for continued emission reductions beyond 2020, on the path to 80 percent below 1990 levels by 2050.

In November 2017, CARB release the 2017 Scoping Plan. This Scoping Plan incorporates, coordinates, and leverages many existing and ongoing efforts and identifies new policies and actions to accomplish the State's climate goals, and includes a description of a suite of specific actions to meet the State's 2030 GHG limit. In addition, Chapter 4 provides a broader description of the many actions and proposals being explored across the sectors, including the natural resources sector, to achieve the State's mid and long-term climate goals.

Guided by legislative direction, the actions identified in the 2017 Scoping Plan reduce overall GHG emissions in California and deliver policy signals that will continue to drive investment and certainty in

a low carbon economy. The 2017 Scoping Plan builds upon the successful framework established by the Initial Scoping Plan and First Update, while identifying new, technologically feasible, and cost-effective strategies to ensure that California meets its GHG reduction targets in a way that promotes and rewards innovation, continues to foster economic growth, and delivers improvements to the environment and public health, including in disadvantaged communities. The Plan includes policies to require direct GHG reductions at some of the State's largest stationary sources and mobile sources. These policies include the use of lower GHG fuels, efficiency regulations, and the Cap-and Trade Program, which constrains and reduces emissions at covered sources.

As the latest, 2017 Scoping Plan builds upon previous versions, project consistency with applicable strategies of both the 2008 and 2017 Plan are assessed in Table 15. As shown in Table 15, the project is consistent with the applicable strategies and would result in a less than significant impact.

Therefore, the project would not conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases. Furthermore, the project will also comply with applicable Green Building Standards and City of San Jacinto's policies regarding sustainability (as dictated by the City's General Plan). With incorporation of regulatory compliance and credit for reductions due to CAPCOA location-based efficiency measures, impacts are considered to be less than significant, further analysis is not warranted.

Table 14: Applicable WRCOG Subregional CAP Local Reduction Measure Project Comparison[1]

WRCOG Local Reduction Measure	Measure Description	Project Compliance with Measure
E-1: Energy Action Plan	Improve municipal and community wide energy efficiency and reduce energy consumption through the adoption of local Energy Action Plans (EAP).	Not directly applicable to the project; however, the project will be compliant with the current Title 24 standards.
E-3: Shade Trees	Strategically plant trees to reduce the urban heat island effect.	The proposed project is to include trees per City requirements for new developments.
T-2: Bicycle Parking	Provide additional options for bicycle parking.	The proposed project will follow City requirements for bicycle parking.
T-8: Density	Improve jobs-housing balance and reduce vehicle miles traveled by increasing household and employment densities.	The proposed project is commercial and located within 0.25 miles of a residential community.
T-10: Design/Site Planning	Design neighborhoods and sites to reduce VMT.	The proposed project is commercial and located within 0.25 miles of a residential community.
T-14: Voluntary Transportation Demand Management	Reduce demand for roadway travel through incentives for alternative modes of transportation and disincentives for driving	The proposed project is commercial and located within 0.25 miles of a residential community.
SW-1: Yard Waste Collection	Provide green waste collection bins community-wide.	The project will be required to comply with City programs, such as City's recycling and waste reduction program, which comply, with the 75 percent reduction required by 2020 per AB 341.

WRCOG Local Reduction Measure	Measure Description	Project Compliance with Measure
SW-2: Food Scrap and Paper Division	Divert food and paper waste from landfills by implementing collection system.	The project will be required to comply with City programs, such as City's recycling and waste reduction program, which comply, with the 75 percent reduction required by 2020 per AB 341.

[1] Source: WRCOG Subregional Climate Action Plan (2014).

Table 15: Project Consistency with CARB Scoping Plan Policies and Measures1

2008 Scoping Plan Measures to Reduce Greenhouse Gas Emissions	Project Compliance with Measure
California Light-Duty Vehicle Greenhouse Gas Standards – Implement adopted standards and planned second phase of the program. Align zero-emission vehicle, alternative and renewable fuel and vehicle technology programs with long-term climate change goals.	Consistent. These are CARB enforced standards; vehicles that access the project that are required to comply with the standards will comply with the strategy.
Energy Efficiency – Maximize energy efficiency building and appliance standards; pursue additional efficiency including new technologies, policy, and implementation mechanisms. Pursue comparable investment in energy efficiency from all retail providers of electricity in California.	Consistent. The project will be compliant with the current Title 24 standards.
Low Carbon Fuel Standard – Develop and adopt the Low Carbon Fuel Standard.	Consistent. These are CARB enforced standards; vehicles that access the project that are required to comply with the standards will comply with the strategy.
Vehicle Efficiency Measures – Implement light-duty vehicle efficiency measures.	Consistent. These are CARB enforced standards; vehicles that access the project that are required to comply with the standards will comply with the strategy.
Medium/Heavy-Duty Vehicles – Adopt medium and heavy-duty vehicle efficiency measures.	Consistent. These are CARB enforced standards; vehicles that access the project that are required to comply with the standards will comply with the strategy.
Green Building Strategy – Expand the use of green building practices to reduce the carbon footprint of California's new and existing inventory of buildings.	Consistent. The California Green Building Standards Code (proposed Part 11, Title 24) was adopted as part of the California Building Standards Code in the CCR. Part 11 establishes voluntary standards, that are mandatory in the 2022 edition of the Code, on planning and design for sustainable site development, energy efficiency (in excess of the California Energy Code requirements), water conservation, material conservation, and internal air contaminants. The project will be subject to these mandatory standards.
High Global Warming Potential Gases – Adopt measures to reduce high global warming potential gases.	Consistent. CARB identified five measures that reduce HFC emissions from vehicular and commercial refrigeration systems; vehicles that access the project that are required to comply with the measures will comply with the strategy.

Recycling and Waste – Reduce methane emissions at landfills. Increase waste diversion, composting, and commercial recycling. Move toward zero-waste.	Consistent. The state is currently developing a regulation to reduce methane emissions from municipal solid waste landfills. The project will be required to comply with City programs, such as City's recycling and waste reduction program, which comply, with the 75 percent reduction required by 2020 per AB 341.
Water – Continue efficiency programs and use cleaner energy sources to move and treat water.	Consistent. The project will comply with all applicable City ordinances and CAL Green requirements.
2017 Scoping Plan Recommended Actions to Reduce Greenhouse Gas Emissions	Project Compliance with Recommended Action
Implement Mobile Source Strategy: Further increase GHG stringency on all light-duty vehicles beyond existing Advanced Clean Car regulations.	Consistent. These are CARB enforced standards; vehicles that access the project that are required to comply with the standards will comply with the strategy.
Implement Mobile Source Strategy: At least 1.5 million zero emission and plug-in hybrid light-duty electric vehicles by 2025 and at least 4.2 million zero emission and plug-in hybrid light-duty electric vehicles by 2030.	Consistent. These are CARB enforced standards; vehicles that access the project that are required to comply with the standards will comply with the strategy.
Implement Mobile Source Strategy: Innovative Clean Transit: Transition to a suite of to-be-determined innovative clean transit options. Assumed 20 percent of new urban buses purchased beginning in 2018 will be zero emission buses with the penetration of zero-emission technology ramped up to 100 percent of new sales in 2030. Also, new natural gas buses, starting in 2018, and diesel buses, starting in 2020, meet the optional heavy-duty low-NOX standard.	Consistent. These are CARB enforced standards; vehicles that access the project that are required to comply with the standards will comply with the strategy.
Implement Mobile Source Strategy: Last Mile Delivery: New regulation that would result in the use of low NOX or cleaner engines and the deployment of increasing numbers of zero-emission trucks primarily for class 3-7 last mile delivery trucks in California. This measure assumes ZEVs comprise 2.5 percent of new Class 3–7 truck sales in local fleets starting in 2020, increasing to 10 percent in 2025 and remaining flat through 2030.	Consistent. These are CARB enforced standards; vehicles that access the project that are required to comply with the standards will comply with the strategy.
Implement SB 350 by 2030: Establish annual targets for statewide energy efficiency savings and demand reduction that will achieve a cumulative doubling of statewide energy efficiency savings in electricity and natural gas end uses by 2030.	Consistent. The project will be compliant with the current Title 24 standards.
By 2019, develop regulations and programs to support organic waste landfill reduction goals in the SLCP and SB 1383.	Consistent. The project will be required to comply with City programs, such as City's recycling and waste reduction program, which comply, with the 75 percent reduction required by 2020 per AB 341.

8.0 Energy Analysis

Information from the CalEEMod 2022.1.1.20 Daily and Annual Outputs contained in the air quality and greenhouse gas analyses above was utilized for this analysis. The CalEEMod outputs detail project related construction equipment, transportation energy demands, and facility energy demands.

8.1 Construction Energy Demand

8.1.1 Construction Equipment Electricity Usage Estimates

Electrical service will be provided by Southern California Edison (SCE). Based on the 2017 National Construction Estimator, Richard Pray (2017)[1], the typical power cost per 1,000 square feet of building construction per month is estimated to be $2.32. The project plans to develop the site with 114,523 square feet of new commercial space over the course of approximately 8 months. Based on Table 16, the total power cost of the on-site electricity usage during the construction of the proposed project is estimated to be approximately $2,125.55. As shown in Table 16, the total electricity usage from Project construction related activities is estimated to be approximately 38,646 kWh.[2]

Table 16: Project Construction Power Cost and Electricity Usage

Power Cost (per 1,000 square foot of building per month of construction)	Total Building Size (1,000 Square Foot)[1]	Construction Duration (months)	Total Project Construction Power Cost
$2.32	114.523	8	$2,125.55

Cost per kWh	Total Project Construction Electricity Usage (kWh)
$0.06	38,646

* Assumes the project will be under the GS-1 General Service rate under SCE.

[1] Pray, Richard. 2017 National Construction Estimator. Carlsbad: Craftsman Book Company, 2017.
[2] LADWP's Small Commercial & Multi-Family Service (A-1) is approximately $0.06 per kWh of electricity Southern California Edison (SCE). 8.1.2 Construction Equipment Fuel Estimates

Using the CalEEMod data input, the project's construction phase would consume electricity and fossil fuels as a single energy demand, that is, once construction is completed their use would cease. CARB's 2017 Emissions Factors Tables show that on average aggregate fuel consumption (gasoline and diesel fuel) would be approximately 18.5 hp-hr-gal.[3] As presented in Table 17 below, project construction activities would consume an estimated 21,687 gallons of diesel fuel.

Table 17: Construction Equipment Fuel Consumption Estimates

Phase	Number of Days	Offroad Equipment Type	Amount	Usage Hours	Horse Power	Load Factor	HP hrs/ day	Total Fuel Consumption (gal diesel fuel)[1]
Site Preparation	10	Rubber Tired Dozers	3	8	367	0.4	3,523	1,904
	10	Tractors/Loaders/Backhoes	4	8	84	0.37	995	538

Architectural Coating	18	Air Compressors	1	6	37	0.48	107	104
CONSTRUCTION FUEL DEMAND (gallons of diesel fuel)								**21,687**

Notes:
[1]Using Carl Moyer Guidelines Table D-21 Fuel consumption rate factors (bhp-hr/gal) for engines less than 750 hp.
(Source: https://www.arb.ca.gov/msprog/moyer/guidelines/2017gl/2017_gl_appendix_d.pdf)

[3] Aggregate fuel consumption rate for all equipment was estimated at 18.5 hp-hr/day (from CARB's 2017 Emissions Factors Tables and fuel consumption rate factors as shown in Table D-21 of the Moyer Guidelines: (https://www.arb.ca.gov/msprog/moyer/guidelines/2017gl/2017_gl_appendix_d.pdf).

8.1.3 Construction Worker Fuel Estimates

It is assumed that all construction worker trips are from light duty autos (LDA) along area roadways. With respect to estimated VMT, the construction worker trips would generate an estimated 104,314 VMT. Vehicle fuel efficiencies for construction workers were estimated in the air quality and greenhouse gas analysis using information generated using CARB's EMFAC model (see Appendix B for details). Table 18 shows that an estimated 3,365 gallons of fuel would be consumed for construction worker trips.

Table 18: Construction Worker Fuel Consumption Estimates

Phase	Number of Days	Worker Trips/Day	Trip Length (miles)	Vehicle Miles Traveled	Average Vehicle Fuel Economy (mpg)	Estimated Fuel Consumption (gallons)
Site Preparation	10	17.5	18.5	3,238	30.95	105
Grading	14	20.0	18.5	5,180	31.95	162
Building Construction	130	37.9	18.5	91,152	30.95	2,945
Paving	8	15.0	18.5	2,220	30.95	72
Architectural Coating	18	7.6	18.5	2,524	30.95	82
Total Construction Worker Fuel Consumption						**3,365**

Notes:
[1]Assumptions for the worker trip length and vehicle miles traveled are consistent with CalEEMod 2022.1.1.20 defaults.

8.1.4 Construction Vendor/Hauling Fuel Estimates

Tables 19 and 20 show the estimated fuel consumption for vendor and hauling during building construction and architectural coating. With respect to estimated VMT, the vendor and hauling trips would generate an estimated 31,297 VMT. For the architectural coatings it is assumed that the contractors would be responsible for bringing coatings and equipment with them in their light duty vehicles.[4] Tables 19 and 20 show that an estimated 3,519 gallons of fuel would be consumed for vendor and hauling trips.

<Tables 19 and 20, next page>

[4] Vendors delivering construction material or hauling debris from the site during grading would use medium to heavy duty vehicles with an average fuel consumption of 9.22 mpg for medium heavy-duty trucks and 6.74 mpg for heavy heavy-duty trucks (see Appendix B for details).

Table 19: Construction Vendor Fuel Consumption Estimates (MHD Trucks)[1]

Phase	Number of Days	Vendor Trips/Day	Trip Length (miles)	Vehicle Miles Traveled	Average Vehicle Fuel Economy (mpg)	Estimated Fuel Consumption (gallons)
Site Preparation	10	0	10.2	0	9.22	0
Grading	14	0	10.2	0	10.22	0
Building Construction	130	18.8	10.2	24,889	9.22	2,699
Paving	8	5.0	10.2	408	9.22	44
Architectural Coating	18	0	10.2	0	9.22	0
Total Vendor Fuel Consumption						**2,744**

Notes:
[1] Assumptions for the vendor trip length and vehicle miles traveled are consistent with CalEEMod 2022.1.1.20 defaults.

Table 20: Construction Hauling Fuel Consumption Estimates (HHD Trucks)[1]

Phase	Number of Days	Hauling Trips/Day	Trip Length (miles)	Vehicle Miles Traveled	Average Vehicle Fuel Economy (mpg)	Estimated Fuel Consumption (gallons)
Site Preparation	10	0	20	0	6.74	0
Grading	14	21.4	20	6,000	7.74	775
Building Construction	130	0	20	0	6.74	0
Paving	8	0	20	0	6.74	0
Architectural Coating	18	0	20	0	6.74	0
Total Construction Hauling Fuel Consumption						**775**

Notes:
[1]Assumptions for the hauling trip length and vehicle miles traveled are consistent with CalEEMod 2022.1.1.20 defaults.

8.1.5 Construction Energy Efficiency/Conservation Measures

Construction equipment used over the approximately 8-month construction phase would conform to CARB regulations and California emissions standards and is evidence of related fuel efficiencies. In addition, the CARB Airborne Toxic Control Measure limits idling times of construction vehicles to no more than five minutes, thereby minimizing unnecessary and wasteful consumption of fuel due to unproductive idling of construction equipment. Furthermore, the project has been designed in compliance with California's Energy Efficiency Standards and 2022 CALGreen Standards.

Construction of the proposed commercial development would require the typical use of energy resources. There are no unusual project characteristics or construction processes that would require the use of equipment that would be more energy intensive than is used for comparable activities; or equipment that would not conform to current emissions standards (and related fuel efficiencies). Equipment employed in construction of the project would therefore not result in inefficient wasteful, or unnecessary consumption of fuel.

8.2 Operational Energy Demand

Energy consumption in support of or related to project operations would include transportation energy demands (energy consumed by employee and patron vehicles accessing the project site) and facilities energy demands (energy consumed by building operations and site maintenance activities).

8.2.1 Transportation Fuel Consumption

The largest source of operational energy use would be vehicle operation of customers. The site is located in an urbanized area just in close proximity to transit stops. Using the CalEEMod output, it is assumed that an average trip length would be 9.7 miles. To show a worst-case analysis, as the proposed project is a commercial project, it was assumed that vehicles would operate 365 days per year. Table 21 shows the worst-case estimated annual fuel consumption for all classes of vehicles from autos to heavy-heavy trucks.[5] Table 21 shows that an estimated 2,257,495 gallons of fuel would be consumed per year for the operation of the proposed project.

Table 21: Estimated Vehicle Operations Fuel Consumption[1]

Vehicle Type	Vehicle Mix	Number of Vehicles	Average Trip (miles)[2]	Daily VMT	Average Fuel Economy (mpg)	Total Gallons per Day	Total Annual Fuel Consumption (gallons)
Light Auto	Automobile	3,907	9.7	37,894	31.82	1190.90	434,677
Light Truck	Automobile	683	9.7	6,626	27.16	243.95	89,044
Light Truck	Automobile	2,104	9.7	20,409	25.6	797.23	290,988
Medium Truck	Automobile	1,681	9.7	16,310	20.81	783.77	286,077
Light Heavy Truck	2-Axle Truck	315	9.7	3,053	13.81	221.06	80,688
Light Heavy Truck 10,000 lbs +	2-Axle Truck	1,766	9.7	17,128	14.18	1207.92	440,890
Medium Heavy Truck	3-Axle Truck	139	9.7	1,349	9.58	140.81	51,396
Heavy Heavy Truck	4-Axle Truck	1,177	9.7	11,419	7.14	1599.28	583,736
Total		11,772	--	114,188	--	6184.92	--
Total Annual Fuel Consumption							**2,257,495**

Notes:
[1] The project is to generate 11,772 total net new trips after reduction of existing uses. Default CalEEMod vehicle fleet mix utilized.
[2] Based on the size of the site and relative location, trips were assumed to be local rather than regional.

Trip generation generated by the proposed project are consistent with other similar commercial uses of similar scale and configuration as reflected in the traffic data. That is, the proposed project does not propose uses or operations that would inherently result in excessive and wasteful vehicle trips, nor associated excess and wasteful vehicle energy consumption. Therefore, project transportation energy consumption would not be considered inefficient, wasteful, or otherwise unnecessary.

[5] Average fuel economy based on aggregate mileage calculated in EMFAC 2017 for opening year (2023). See Appendix B for EMFAC output.

8.2.2 Facility Energy Demands (Electricity and Natural Gas)

The annual natural gas and electricity demands were provided per the CalEEMod output and are provided in Table 22.

Table 22: Project Unmitigated Annual Operational Energy Demand Summary[1]

Natural Gas Demand	kBTU/year
Convenience Market with Gas Pumps	87,247
Strip Mall	551,917
Automobile Care Center	154,149
Fast Food Restaurant with Drive Thru	1,430,412
Total	2,223,725
Electricity Demand	**kWh/year**
Convenience Market with Gas Pumps	166,750
Strip Mall	909,434
Automobile Care Center	34,343
Fast Food Restaurant with Drive Thru	440,376
Parking Lot	440,731
Total	1,991,634

Notes:
[1]Taken from the CalEEMod 2022.1.1.20 annual output.

As shown in Table 22, the estimated electricity demand for the proposed project is approximately 1,991,634 kWh per year. In 2022, the non-residential sector of the County of Riverside consumed approximately 8,720 million kWh of electricity.[6] In addition, the estimated natural gas consumption for the proposed project is approximately 2,223,725 kBTU per year. In 2022, the non-residential sector of the County of Riverside consumed approximately 147 million therms of gas.[7] Therefore, the increase in both electricity and natural gas demand from the proposed project is insignificant compared to the County's 2022 demand.

8.3 Renewable Energy and Energy Efficiency Plan Consistency

Regarding federal transportation regulations, the project site is located in an already developed area. Access to/from the project site is from existing roads. These roads are already in place so the project would not interfere with, nor otherwise obstruct intermodal transportation plans or projects that may be proposed pursuant to the ISTEA because SCAG is not planning for intermodal facilities in the project area.

Regarding the State's Energy Plan and compliance with Title 24 CCR energy efficiency standards, the applicant is required to comply with the California Green Building Standard Code requirements for

[6] California Energy Commission, Electricity Consumption by County. https://ecdms.energy.ca.gov/elecbycounty.aspx
[7] California Energy Commission, Gas Consumption by County. http://ecdms.energy.ca.gov/gasbycounty.aspx

energy efficient buildings and appliances as well as utility energy efficiency programs implemented by the SCE and Southern California Gas Company.

Regarding the State's Renewable Energy Portfolio Standards, the project would be required to meet or exceed the energy standards established in the California Green Building Standards Code, Title 24, Part 11 (CALGreen). CalGreen Standards require that new buildings reduce water consumption, employ building commissioning to increase building system efficiencies, divert construction waste from landfills, and install low pollutant-emitting finish materials.

9.0 Health Risk Assessment

CARB (and CAPCOA) recommend a 50-foot separation between gas stations and sensitive receptors; therefore, the separation of over 350 feet from the property line of the single-family residential dwelling unit to the south to the fueling canopy as well as the underground storage tanks should be more than adequate. Furthermore, the attached (Appendix C) SCAQMD gasoline station HRA screening tables show that the MICR at residential receptors 100 meters (the fueling canopy is located approximately 107 meters away) from the fuel source would not even exceed 0.603 in a million (per 1,000,000 gallons of throughput). Given the size of the proposed project and the number of pumps, a conservative assumption would be an estimated annual through put per year of approximately 10MM gallons of gasoline, which equates to an approximate 6.03 in a million MICR, at a conservative distance of 100 meters. The risk is below SCAQMD's 10 in a million threshold and therefore no additional mitigation is required.

Furthermore, the project includes the construction and operation of a convenience market with 26 fuel pumps. The fuel pump-portion of the project will be permitted by SCAQMD and fuel-related emissions will be regulated by the SCAQMD Rule 461 and be required to obtain a Permit To Operate. Gasoline dispensing facilities are required to use Phase I/II EVR (enhanced vapor recovery) systems. Phase II EVR have an average efficiency of 95.1 percent and Phase I EVR have an average efficiency of 98 percent. Therefore, the potential for fugitive VOC or TAC emissions from the gasoline pumps is negligible. As such, the project will not be a source of toxic air contaminants or fugitive VOC emissions and sensitive receptors (located as close as approximately 820 feet from the proposed gasoline fueling pumps) would not be exposed to toxic sources of air pollution. The separating distance between the gas station and closest sensitive receptors is greater than the SCAQMD's minimum 50-foot separation.

According to the ARB's: *Revised Emission Factors for Gasoline Marketing Operations at California Gasoline Dispensing Facilities (12/23/2013)*[8], both Phase I and Phase II EVR systems have a minimum 95.1% efficiency at capturing emissions. Emission inventory is based upon two (2) factors: 8.4 lbs of TOG per thousand gallons dispensed (lbs/kgal) and 0.74 lbs/kgal for Gasoline Dispensing Facilities with Phase II pre-EVR vapor recovery.

These factors are based upon pre-EVR vapor recovery systems. Assuming a 95% vapor recovery rate, the majority of the emissions would be captured and the additional VOCs that would potentially escape these mandatory recovery systems is anticipated to be relatively small. Per Table 10, the project's operational VOC emissions are 53.37 lbs/day. The vehicle fueling emissions factor with ORVR and Phase II EVR in place is 0.021 lbs per thousand gallons which equates to 0.575 lbs/day at 27,397 gallons per day. This puts total VOC emissions at 53.95 lbs/day, below the VOC threshold of significance. Therefore, the impact is less than significant. Furthermore, both ORVR and Phase II EVRs are required per regulation in California.

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.1.2. Mitigated

Mobile source emissions results are presented in Sections 2.5. No further detailed breakdown of emissions is available.

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	23.3	annual days of extreme heat
Extreme Precipitation	3.30	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	8.49	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	3	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	3	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	95.3
AQ-PM	39.1
AQ-DPM	28.6
Drinking Water	5.94
Lead Risk Housing	31.7

Pesticides	78.9
Toxic Releases	19.7
Traffic	17.3
Effect Indicators	—
CleanUp Sites	59.0
Groundwater	2.72
Haz Waste Facilities/Generators	50.1
Impaired Water Bodies	0.00
Solid Waste	0.00
Sensitive Population	—
Asthma	83.1
Cardio-vascular	98.3
Low Birth Weights	26.9
Socioeconomic Factor Indicators	—
Education	70.4
Housing	43.9
Linguistic	35.3
Poverty	69.8
Unemployment	94.5

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	32.86282561
Employed	8.700115488
Median HI	38.82971898

Education	—
Bachelor's or higher	11.36917747
High school enrollment	18.20864879
Preschool enrollment	34.72346978
Transportation	—
Auto Access	64.27563198
Active commuting	17.55421532
Social	—
2-parent households	48.1714359
Voting	33.85089183
Neighborhood	—
Alcohol availability	86.93699474
Park access	21.80161684
Retail density	10.57359168
Supermarket access	33.06813807
Tree canopy	2.515077634
Housing	—
Homeownership	75.87578596
Housing habitability	87.02681894
Low-inc homeowner severe housing cost burden	78.49351983
Low-inc renter severe housing cost burden	77.50545361
Uncrowded housing	55.19055563
Health Outcomes	—
Insured adults	32.84999358
Arthritis	0.0
Asthma ER Admissions	17.6
High Blood Pressure	0.0

Cancer (excluding skin)	0.0
Asthma	0.0
Coronary Heart Disease	0.0
Chronic Obstructive Pulmonary Disease	0.0
Diagnosed Diabetes	0.0
Life Expectancy at Birth	35.5
Cognitively Disabled	32.0
Physically Disabled	5.0
Heart Attack ER Admissions	1.8
Mental Health Not Good	0.0
Chronic Kidney Disease	0.0
Obesity	0.0
Pedestrian Injuries	19.6
Physical Health Not Good	0.0
Stroke	0.0
Health Risk Behaviors	—
Binge Drinking	0.0
Current Smoker	0.0
No Leisure Time for Physical Activity	0.0
Climate Change Exposures	—
Wildfire Risk	0.0
SLR Inundation Area	0.0
Children	14.1
Elderly	45.2
English Speaking	51.5
Foreign-born	27.3
Outdoor Workers	15.6

Climate Change Adaptive Capacity	—
Impervious Surface Cover	81.2
Traffic Density	13.6
Traffic Access	23.0
Other Indices	—
Hardship	65.8
Other Decision Support	—
2016 Voting	39.1

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	56.0
Healthy Places Index Score for Project Location (b)	25.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Per site plan
Construction: Construction Phases	No demolition required. Adjusted for 8 month construction schedule.

Section 1: Summary

This report contains the results of a Habitat Assessment (HA), burrowing owl survey and Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) Consistency Analysis conducted by Phoenix Biological Consulting on a 14 acre project site located in the City of San Jacinto, Riverside County, California. The purpose of this Habitat Assessment is to identify potential impacts to biological recourses associated with the construct a 99 Cent Only Store. The project site contains non-native ruderal vegetation and non-native trees along the perimeter. There are no anticipated impacts to sensitive species.

Section 2: Introduction

At the request of the Rich Development, LLC, Phoenix conducted a habitat assessment and MSHCP Consistency Analysis for the 99 Cent Only Store Project located at the southeast corner of Ramona Expressway and State Street in the City of San Jacinto, California, hereafter referred to as project site or site.

2.1 Project Location

The project site is generally located in the northern portion of San Jacinto, along Ramona Expressway which borders the northern boundary of the site. Mt San Jacinto College is located just to the north of the site. State Street borders the western boundary of the site. There are existing residential tracts to the east and a small open disturbed lot to the south of approximately 8.5 acres (Exhibit 1). The north and west sides are bound by existing paved roads; Romana and State Street. The site is located within Section 27; Township 4 South, Range 1 West, USGS San Jacinto 7.5' topographic quadrangle.

2.2 Project Description

This number should be updated to be consistent with new site plan.

The project consists of a neighborhood oriented retail shopping center on approximately 14.5 acres of commercially zoned land in the city of San Jacinto. The area consists of approximately 120,000 square feet of retail, office, banking, service and restaurant tenants typically found in similar shopping centers in Riverside County.

Section 3: Methods

Prior to conducting a field site visit, the Regional Conservation Authority (RCA) Multi-Species Conservation Program (MSHCP) was queried to determine a general desktop analysis habitat assessment and potential survey requirements for the project site.

The MSHCP query results indicate that burrowing owl surveys are the only biological survey requirements for the project site. There are no criteria cells in close proximity nor are there any

defined waterways.

3.1 Western Riverside County MSHCP Consistency Analysis

Geographic Information System (GIS) software was utilized to map the project site in relation to the MSHCP areas including Criteria Cells, Core Habitat, Linkages, and areas proposed for conservation. RCA MSHCP online mapping program was queried to determine habitat assessment and potential survey requirements for the project site. According to the MSHCP, the project area lies within the burrowing owl survey requirement area. There are no other potential sensitive species or sensitive habitat identified in the online RCA MSHCP database query.

3.2 Literature Review

Prior to the field visit, a literature review was conducted of the environmental setting of the project site. Literature reviewed includes the United States Department of Agriculture (USDA 2022) Soil Survey for the project site, and the California Natural Diversity Database (CNDDB 2022). The closest recorded location of sensitive species was determined through a seven-mile radius query of the CNDDB (2022). The CNDDB ArcGIS database was utilized, together with ArcGIS software, to locate the previously recorded locations of sensitive plant and wildlife occurrences and determine the distance from the project site (Exhibit E). Additionally, the Riverside County MSHCP was reviewed for additional information on known occurrences of the species within Riverside County.

3.3 Plant Communities

The plant communities were mapped using aerial photography and ground truthed by pedestrian surveys of the sites. The plant communities within the project site were classified according to the California Department of Fish and Wildlife (CDFWs) List of Terrestrial Natural Communities (2003) and also cross-referenced to descriptions provided in Holland's Preliminary Descriptions of the Terrestrial Natural Communities of California (1986). When the conditions did not fit the descriptions provided by CDFW or Holland, Phoenix's biologist classified the habitat.

3.4 Riparian and Riverine Habitat and Jurisdictional Areas

Phoenix staff reviewed aerial photography, queried the United States Fish and Wildlife Wetland Inventory Mapper (USFWS, 2022) and the RCA MSHCP database prior to conducting general surveys. The information was used to locate and inspect any potential natural drainage features and water bodies that may be considered riparian/riverine habitat or under the jurisdiction of either the U.S. Army Corps of Engineers (USACE) and/or CDFW. In general, surface drainage features indicated as blue-line streams on USGS maps that are observed or expected to exhibit evidence of flow are considered potentially riparian/riverine habitat and may be subject to State and federal regulatory authority as

"waters" of the U.S.

Based on the MSHCP, riparian/riverine habitat is defined as lands which contain habitat dominated by trees, shrubs, persistent emergent vegetation, or emergent mosses and lichens, which occur close to or which depend upon soil moisture from a nearby fresh water source; or areas with fresh water flow during all or a portion of the year.

3.5 Field Investigation

Phoenix biologist, Ryan Young, conducted the survey of the project site on May 17, 2022 from 9:00 a.m. to 14:00 p.m. and June 27, 2022 from 7:00 a.m. to 3:00 p.m. The weather conditions during the surveys included mostly sunny skies with an average temperature of 89° F and 94° F (degrees Fahrenheit) for the two days. The biologist systematically walked the entire site and covered 100% of the project area using belt transects that were uploaded onto a hand-held Garmin GPS device. The entire project site was assessed to determine the extent of plant communities and to evaluate the presence of jurisdictional features, and riparian/riverine habitat. The burrowing owl surveys included walking parallel 20 meter transects throughout the site while looking for any potential burrows that would serve as refuge for burrowing owls. Additionally, the biologist looked for the presence of owl feathers, white wash and owl pellets. Buffer surveys were only conducted on the southern boundary where suitable habitat was present. Other considerations included documenting soil conditions, presence of indicator species, slope, aspect and hydrology.

3.6 Plants

During the field survey, plant species were identified by visual characteristics and morphology in the field and recorded in a field notebook. Unusual and less familiar plants were identified off-site using taxonomical guides. A soils map was used to identify areas of the site, which contain suitable soils to support sensitive plant species. A list of all species observed on the project site was compiled from the survey data (Appendix B). Taxonomic nomenclature used in this study follows the California Native Plant Society (CNPS 2008). In this report, scientific names are noted immediately following common names of plant species (first reference only).

3.7 Wildlife

Wildlife species observed during field surveys were identified by sight, calls, tracks, scat, or other signs and recorded in a field notebook. When necessary, field guides were used to assist with identification of species during surveys and included the Sibley Field Guide to Birds of Western North America (2003) for birds, and Burt and Grossenheider (1980) for mammals. Although common names of wildlife species are fairly well standardized, scientific names are used in this report and are provided in Appendix B for reference.

Section 4: Existing Conditions

4.1 Environmental Setting

The project site is relatively flat with elevation at 1,519 feet above mean sea level (msl). The project does not a have any noticeable slope. The project area is highly disturbed dirt lot that is dominated by weeds and non-native herbs. There are no trees present on the site.

4.2 Soils

Exhibit D depicts soils that are mapped within the project site. USDA online soils data mapper was utilized to download shapefiles of the pertinent soil layers related to project boundary (USDA, 2022). The soils of the project site are comprised of Arlington fine sandy loam and Hanford fine sandy loam.

Each of the sandy loam series are well drained, and have slow to medium drainage. These soils are developed in alluvium consisting mainly of granitic materials. The project site has been highly modified in the past by commercial and residential development. None of these soils are listed as sensitive in the MSHCP or provide suitable habitat for any sensitive plant species.

4.3 Plant Communities

The proposed project potentially affects one distinct vegetation communities or land features described below (Exhibit G). There were no native plant species observed within the project site. A full floral compendium is included in Appendix A.

Ruderal

Areas mapped as ruderal or non-native grassland, per the MSHCP GIS layers, are characterized as disturbed areas that are dominated by non-native plant species adapted to disturbance. The common species observed in the ruderal community include leporinum barley (*Hordeum murinum* ssp. *leporinum*), tumbleweed (*Salsola sp*), ragweed (*Ambrosia artemisiifolia)*, red-stemmed stork's bill (*Erodium cicutarium*), horseweed (*Conyza canadensis*), and bur clover (*Medicago polymorpha*).

4.4 Jurisdictional Waters

The United States Army Corps of Engineers (USACE) regulates discharges of dredged or fill material into waters of the United States. The State of California also regulates waters of the State and streambeds under the Regional Board and CDFW jurisdiction. These waters include wetlands and non- wetland bodies of water that meet specific criteria. The project site does not contain features that are jurisdictional under the Clean Water Act or State regulation for isolated waters or streambeds.

4.5 Nesting Birds

The project site contains suitable ground nesting habitat for avian species. The MSHCP does not cover impacts to nesting birds, however, they are protected under section 3503 of CDFW code and the Migratory Bird Treaty Act (MBTA). Several common bird species were observed within the project area during the survey. No inactive or active nests were observed. All bird species observed are included in the faunal compendium in Appendix A.

4.6 MSHCP

The project site is within APN 434-080-025 & -026 within the Cities of San Jacinto. The project site is not within a Cell or any designated survey areas for sensitive species other than the burrowing owl. The project site does not contain any riverine/riparian habitat, vernal pools or Urban/Wildlands interface areas.

Section 5 – Project Impacts

5.1 Impacts per Plant Community

The flowing table provides the quantities for each habitat type within the project area:

Table 1: Impacts per Habitat Type

Habitat Type	Acres
Ruderal	14.44

5.2 Nesting Birds

There is a potential for nesting birds to utilize the non-native shrubs and ground nesting within the project site. There are no trees present on site. Potential impacts to nesting birds can be eliminated if vegetation suitable for nesting activity is removed outside of the nesting bird season. The nesting bird season is typically February to the end of August.

5.3 Burrowing Owls

Burrowing owl surveys were negative for the project area and surrounding buffer. There are several California ground squirrel (CGS) burrows present on site but none of the CGS burrows had any sign of burrowing owls such as feathers, tracks, whitewash, pellets or owls. The majority of the CGS burrows were active with CGS and fresh tracks of CGS. Numerous CGS were spotted perched near burrows

mounds or running across the project area during the pedestrian surveys.

Section 6: Western Riverside County MSHCP Consistency Analysis

6.1 MSHCP Requirements

The proposed project site is located in City of San Jacinto and is not within an MSHCP Criteria Cell (Exhibit H). The MSHCP also establishes habitat assessment requirements for certain species of plants, birds, mammals, and amphibians. Since the project is not within a mammal, amphibian survey area or riparian/riverine area, no additional analysis is required beyond the burrowing owl survey requirement for this project.

6.1.1 - Urban/Wildlands Interface Guidelines

According to the MSHCP, the Urban/Wildlands Interface Guidelines are intended to address indirect effects associated with locating development in proximity to the MSHCP Conservation Area (MSHCP, p 6-42). The project site is not within the vicinity of a conservation area (Exhibit H) and the Urban/Wildlife Interface Guidelines are not applicable.

6.1.2 - Sensitive Plant Species

The project site is not within the MSHCP Narrow Endemic Plant Species (NEPS) or Criteria Area Species (CAS) Survey Areas. There were no rare plants found within the project area and there is no suitable habitat for rare plants.

6.2 Jurisdictional Waters

There are no jurisdictional drainages within the project area.

6.2.1 - Riparian/Riverine Habitat

There is no riparian/riverine habitat found within the project site.

6.2.2 - Riparian/Riverine Species

None of the riparian/riverine species listed in Section 6.1.2 of the MSHCP were found within the project site.

6.2.3 - Vernal Pools/Fairy Shrimp Habitat

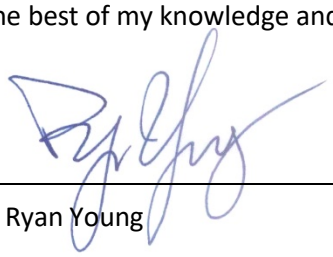
No depressions or areas where water would pool were observed within the project site. No vernal pools occur on the project site and there is no suitable habitat for fairy shrimp to occur.

Section 7 Recommendations

7.1 Nesting Birds & Burrowing Owls

Due to the presence of numerous CGS burrows on site, a preconstruction survey for burrowing owl is recommended prior to ground disturbance to ensure no burrowing owls have moved onto the site since the burrowing owl survey was completed.

Ground disturbing and vegetation removal activities should be conducted outside of the nesting bird season. If these activities must occur during the nesting season, a nesting bird survey should be conducted within 7 days prior to any ground disturbing activities to determine if any nesting birds occur within the project site. If nesting birds are not found within the project site, no further actions are required. If nesting birds are observed on site, no impacts shall occur within 250 feet (500 feet for raptors) of any active nests. Construction activity may only occur within 250 feet of an active nest at the discretion of a biological monitor.



Section 8 Conclusions

No sensitive species of habitats were observed within the project site. The project site does not contain any riverine/riparian habitat, vernal pools or Urban/Wildlands interface areas. There are no sensitive plant or animal species present. The following recommended actions will ensure that the project is consistent with the MSHCP.

1) Preconstruction nesting bird survey if vegetation removal is conducted between February and August.
2) Burrowing owl preconstruction survey, thirty days prior to any ground disturbance.

Section 9 Certification

I hereby certify that the statements furnished above and in the attached exhibits present data and information required for this biological evaluation, and that the facts, statements, and information presented are true and correct to the best of my knowledge and belief.

Appendix C: Regulatory Background

REGULATORY BACKGROUND

Special status species are native species that have been afforded special legal or management protection because of concern for their continued existence. There are several categories of protection at both federal and State levels, depending on the magnitude of the threat to continued existence and existing knowledge of population levels.

FEDERAL ENDANGERED SPECIES ACT

The U.S. Fish and Wildlife Service (USFWS) administers the federal Endangered Species Act (FESA) that provides a process for listing species as either threatened or endangered, and the methods of protecting listed species. The FESA defines as "endangered" any plant or animal species that is in danger of extinction throughout all or a significant portion of its range. A "threatened" species is a species that is likely to become endangered in the near future. A "proposed" species is one that has been officially proposed by USFWS for addition to the federal threatened and endangered species list.

Section 9 of the FESA prohibits "take" of threatened or endangered species. The term "take" means to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in such conduct. The presence of any federally threatened or endangered species that are in a project area generally imposes severe constraints on development, particularly if development would result in "take" of the species or its habitat. Under the regulations of the FESA, the USFWS may authorize "take" when it is incidental to, but not the purpose of, an otherwise lawful act.

CALIFORNIA ENDANGERED SPECIES ACT

The CDFG administers the California Endangered Species Act (CESA). The State of California considers an endangered species as one whose prospects of survival and reproduction are in immediate jeopardy. A threatened species is considered as one present in such small numbers throughout its range that it is likely to become an endangered species in the near future in the absence of special protection or management. A rare species is one that is considered present in such small numbers throughout its range that it may become endangered if its present environment worsens.

State threatened and endangered species are fully protected against take, as defined above.

SECTION 3503 AND 3511 OF CALIFORNIA FISH AND GAME CODE

The CDFG administers the California Fish and Game Code. There are particular sections of the Code that are applicable to natural resource management. For example, section 3503 of the Code states it is unlawful to take, possess, or needlessly destroy the nest or eggs of any bird. Section 3511 of the Code lists fully protected bird species, where the CDFG is unable to authorize the issuance of permits or licenses to take these species. Pertinent species that are fully protected by the State include golden eagle (*Aquila chrysaetos*) and white-tailed kite (*Elanus leucurus*).

MIGRATORY BIRD TREATY ACT

The Migratory Bird Treaty Act (MBTA) makes it unlawful to pursue, capture, kill, or possess or attempt to do the same to any migratory bird or part, nest, or egg of any such bird listed in wildlife protection treaties between the United States, Great Britain, Mexico, Japan, and the countries of the former Soviet Union.

WESTERN RIVERSIDE COUNTY MSHCP

The MSHCP is a comprehensive, multi-jurisdictional Habitat Conservation Plan (HCP) focusing on conservation of species and their associated habitats in western Riverside County. The goal of the MSHCP is to maintain biological and ecological diversity within a rapidly urbanizing region.

The approval of the MSHCP and execution of the Implementing Agreement (IA) by the wildlife agencies allows signatories of the IA to issue "take" authorizations for all species covered by the MSHCP, including State- and federal-listed species as well as other identified sensitive species and/or their habitats. Each city or local jurisdiction will impose a Development Mitigation Fee for projects within their jurisdiction. With payment of the mitigation fee to the County and compliance with the survey requirements of the MSHCP where required, full mitigation in compliance with the California Environmental Quality Act (CEQA), National Environmental Policy Act (NEPA), CESA, and FESA will be granted. The Development Mitigation Fee varies according to project size and project description. The fee for residential development ranges from approximately $800 per unit to $1,600 per unit depending on development density (County Ordinance 810.2). Payment of the mitigation fee and compliance with the requirements of Section 6.0 of the MSHCP are intended to provide full mitigation under CEQA, NEPA, CESA, and FESA for impacts to the species and habitats covered by the MSHCP pursuant to agreements with the USFWS, the CDFG, and/or any other appropriate participating regulatory agencies and as set forth in the IA for the MSHCP.

December 2023

MANAGEMENT SUMMARY

IMG LLC retained LSA to conduct a cultural resources assessment for the proposed construction of the Rich Development LLC Project (project) in San Jacinto, Riverside County, California. This cultural resources assessment was completed pursuant to the California Environmental Quality Act (CEQA).

A cultural resources records search, additional research, and a field survey were conducted for the project area. Although a resource was previously documented within the project area, it is a marginal historic-period site (remnant foundations and refuse) that was previously evaluated as not a "historical resource" under CEQA, and the current study results do not change that determination. Therefore, due to the nature of the cultural resource within the project area (not significant) and the lack of prehistoric resources within 1 mile, there is little to no potential for significant impacts to cultural resources and no further investigations or archaeological monitoring are recommended.

In the event previously undocumented archaeological resources are identified during earthmoving activities, further work in the area should be halted until a qualified archaeologist has assessed the nature of the find(s) and has determined appropriate treatment.

If human remains are encountered, State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to Public Resources Code Section 5097.98. The County Coroner must be notified of the find immediately. If the remains are determined to be prehistoric, the County Coroner will notify the Native American Heritage Commission (NAHC), which will determine and notify a Most Likely Descendant (MLD). With the permission of the landowner or his/her authorized representative, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC. The MLD may recommend scientific removal and nondestructive analysis of human remains and items associated with Native American burials.

APPENDICES

A: RECORDS SEARCH RESULTS
B: DPR SITE RECORD UPDATE

INTRODUCTION

IMG LLC retained LSA to conduct a cultural resources assessment for the proposed construction of the Rich Development LLC Project (project) in San Jacinto, Riverside County, California. The assessment included a records search, additional research, and a field survey of the project area. This assessment report documents the potential for cultural resources to be present within the project area and whether those resources will be affected by construction of the project. This assessment addresses the requirements of the California Environmental Quality Act (CEQA; as amended January 1, 2016); Public Resources Code (PRC), Division 13 (Environmental Quality), Chapter 2.6 Section 21083.2 (Archaeological Resources) and Section 21084.1 (Historical Resources); and the *Guidelines for CEQA* (as amended December 1, 2015), California Code of Regulations (CCR) Title 14, Chapter 3, Article 5 Section 15064.5 (Determining the Significance of Impacts on Historical and Unique Archaeological Resources).

The project area is on the southeast corner of West Ramona Expressway and North State Street. It is bounded by commercial and residential development to the north, vacant land and residential development to the south, commercial and residential development to the east, and commercial development to the west. The project area is depicted on the United States Geological Survey (USGS) *San Jacinto, California* 7.5-minute topographic map in an unsectioned area of Township 4 South, Range 1 West, San Bernardino Baseline and Meridian (USGS 1979) (Figure 1). The project area encompasses Assessor's Parcel Numbers (APNs) 434-080-025-2 and 434-080-026-3. The project proposes to construct a commercial building and associated parking.

NATURAL SETTING

CLIMATE, WATERSHED AND BIOLOGY

At an average elevation of 1,520 feet, the project is within the Sonoran Life Zone of California (Schoenherr 1992), which ranges from below sea level to an elevation of approximately 3,500 feet. The project region is characterized by a semi-arid climate, with dry, hot summers and moderate winters. Rainfall averages 5–15 inches annually (Beck and Haase 1974). The project area is approximately 0.93 mile southwest of the San Jacinto River. Although the native vegetation of the project area has been largely removed, common wild plants observed included mustard, puncture vine, Russian thistle, and hare oat. Common animals include deer, coyotes, foxes, rabbits, rodents, ravens, raptors, reptiles, and insects.

Geology

The project area is at the northern end of the Peninsular Ranges Geomorphic Province, a 900-mile-long northwest-southeast trending structural block that extends from the Transverse Ranges to the tip of Baja California and includes the Los Angeles Basin (California Geological Survey 2002; Norris and Webb, 1976). The total width of this province is approximately 225 miles, extending from the Colorado Desert in the east, across the continental shelf to the Southern Channel Islands (Santa Barbara, San Nicolas, Santa Catalina, and San Clemente) in the west (Sharp 1976). This province is characterized by a series of mountain ranges separated by northwest-trending valleys subparallel to faults branching from the San Andreas fault (California Geological Survey 2002). It contains extensive pre-Cretaceous (older than 145 million years ago [Ma]) igneous and metamorphic rocks covered by limited exposures of post-Cretaceous (younger than 66 Ma) sedimentary deposits (Norris and Webb 1976). Within this province, the project is on the Perris Block, a fault-bounded structural block that extends from the southern foot of the San Gabriel and San Bernardino mountains southeast to the vicinity of Bachelor Mountain and Polly Butte (Morton and Miller 2006; Kenney 1999). It is bounded on the northeast by the San Jacinto fault and on the southwest by the Elsinore Fault Zone (Morton and Miller 2006).

CULTURAL SETTING

PREHISTORY

Chronologies of prehistoric cultural change in Southern California area have been attempted numerous times, and several are reviewed in Moratto (2004). No single description is universally accepted as the various chronologies are based primarily on material developments identified by researchers familiar with sites in a particular region and variation exists essentially due to the differences in those items found at the sites. Small differences occur over time and space, which combine to form patterns that are variously interpreted.

Currently, two primary regional culture chronology syntheses are commonly referenced in the archaeological literature. The first, Wallace (1955), describes four cultural horizons or time periods: Horizon I – Early Man (9000–6000 BC), Horizon II – Milling Stone Assemblages (6000–3000 BC), Horizon III – Intermediate Cultures (3000 BC–AD 500), and Horizon IV – Late Prehistoric Cultures (AD 500–historic contact). This chronology was refined (Wallace 1978) using absolute chronological dates obtained after 1955.

The second cultural chronology (Warren 1968) is based broadly on Southern California prehistoric cultures and was also revised (Warren 1984; Warren and Crabtree 1986). Warren's (1984:340–430) chronology includes five periods in prehistory: Lake Mojave (7000–5000 BC), Pinto (5000–2000 BC), Gypsum (2000 BC–AD 500), Saratoga Springs (AD 500–1200), and Protohistoric (AD 1200–historic contact). Changes in settlement pattern and subsistence focus are viewed as cultural adaptations to a changing environment, which begins with gradual environmental warming in the late Pleistocene, continues with the desiccation of the desert lakes, followed by a brief return to pluvial conditions, and concludes with a general warming and drying trend, with periodic reversals that continue to the present (Warren 1986).

ETHNOHISTORY

The project is within the traditional territorial boundary of the Cahuilla (Kroeber 1925; Bean 1978). Tribal territories were somewhat fluid and changed over time. The first written accounts of these Southern California tribes are attributed to Spanish explorers and mission fathers, and later documentation was by others indicated below.

Cahuilla

The territory of the Cahuilla ranged from the San Bernardino Mountains south to Borrego Springs and the Chocolate Mountains, from Orocopia Mountain to the east, to the San Jacinto Plain and Palomar Mountain to the west (Kroeber 1908). Cahuilla territory lies within the geographic center of Southern California and encompassed diverse environments ranging from inland river valleys and foothills to mountains and desert (Bean 1978).

Cahuilla villages, generally located near water sources within canyons or near alluvial fans, comprised groups of related individuals, generally from a single lineage, and the territory around the village was owned by the villagers (Bean 1978). Like other Native American groups in Southern

California, the Cahuilla were semi-nomadic peoples leaving their villages and using temporary campsites to exploit seasonably available plant and animal resources (James 1960).

Cahuilla subsistence was based primarily on acorns, honey mesquite, screw beans, piñon nuts, and cactus fruit, supplemented by a variety of wild fruits and berries, tubers, roots, and greens (Kroeber 1925; Heizer and Elsasser 1980). Hunting deer, rabbit, antelope, bighorn sheep, reptiles, small rodents, quail, doves, ducks, and reptiles by means of bows, throwing sticks, traps, and communal drives is documented (James 1960).

The Cahuilla were documented by Barrows (1900), Kroeber (1908), Hooper (1920), and Strong (1929), among others.

HISTORY

In California, the historic era is generally divided into three periods: the Spanish Period (1769–1821), the Mexican Period (1821–1848), and the American Period (1848–present). Since the cultural resource documented within the project area dates to the latter half of the 20th century (see below), the Spanish and Mexican periods are not particularly relevant and therefore are not discussed further. Instead, this historical summary focuses on the city of San Jacinto and the resource itself (Woodhead/Quandt Ranch).

San Jacinto

The community was established in the 1850s on a portion of the *San Jacinto Nuevy y Potrero Rancho* (granted to José Antonio Estudillo in 1846). By 1870, it was well established with a post office, a store, and 23 residences. In 1883, the community was moved north to its present location by the San Jacinto Land Association, which purchased land from the Estudillo family and laid out a new town site (Gunther 1984). In 1886, the population numbered in excess of 1,500. The San Jacinto Valley Railway branch line from Perris was completed in 1888, and San Jacinto was incorporated as a city the same year. When Riverside County was formed, the community was designated 1 of the 12 original judicial townships (Gunther 1984). By the beginning of World War I, San Jacinto had a diversified economic base that included not only expansive cattle/dairy ranching but also apiaries and extensive cultivation of fruit, vegetables, grain, alfalfa, and grain crops over thousands of acres (McGroarty 1914). Agriculture sustained growth in the 20th century, which was enhanced by tourists visiting the local hot springs (Bernasconi, Eden, and Gilman Hot Springs).

Woodhead/Quandt Ranch (33-024106, see below)

In 1873, Charles B. Woodhead and others of the American Livestock Company acquired 1,000 acres roughly bounded by the San Jacinto River to the north, Idyllwild Drive to the south, San Jacinto Avenue to the east, and State Street to the west (including the entire project area on the southeast corner of West Ramona Expressway and North State Street) (Peterson 2014). The Woodhead family initially established a carriage horse ranch on the land and subsequently ran a dairy from the 1910s into the 1930s (HSJGS 1989). By the mid-1940s, periodic floods and a depleted water table had made the dairy operation unprofitable, and Mrs. Ida G. Woodhead sold the ranch to Carl H. Quandt, who had leased the ranch from the Woodheads since the late 1930s (HSJGS 1989). Quandt diversified the ranch with cattle and a variety of crops, persevering into the early 1960s (HSJGS

1989). The ranch ultimately gave way to other land uses, including a sand and gravel pit on the San Jacinto River (Quandt Materials), a college campus (Mt. San Jacinto Community College), a trailer park, and a strip mall.

METHODS

RECORDS SEARCH

On November 21, 2023, a cultural resources records search was completed for the project area and a mile radius around it at the Eastern Information Center (EIC) of the California Historical Resources Information System at the University of California, Riverside. The objectives of this research were (1) to establish the status and extent of previously recorded cultural resources sites, surveys, and studies; (2) to note the likelihood of encountering cultural resources and their type(s) based on previously recorded resources within 1 mile of the project area; and (3) to uncover relevant historical contexts. Data sources consulted at the EIC include archaeological site records and reports from previous studies.

ADDITIONAL RESEARCH

In November 2023, Archaeologist/Senior Cultural Resources Manager Riordan Goodwin reviewed previous research conducted for the 2014 Ramona Expressway Widening Phase II project and the resource record of the remnant features/deposit of the Woodhead/Quandt Ranch (33-024106) previously recorded by LSA in 2014, as well as online aerial photographs.

FIELD SURVEY

On November 17, 2023, LSA Archaeologist Christopher Morgan conducted a pedestrian survey of the project area. The entire project area was surveyed in systematic parallel transects spaced by approximately 10 meters (approximately 33 feet). The purpose of this survey was to identify and document any cultural resources that might be exposed and locate areas within the project area that might be sensitive for cultural resources prior to the beginning of ground-disturbing activities.

RESULTS

RECORDS SEARCH

Data from the EIC indicated 35 cultural resources studies have been conducted within a 1-mile radius, three of which included the entirety of the project area (Shephard 2007; Goodwin 2015; Stever and Duke 2017). One resource was documented within the project parcels (see below), and another 35 built environment properties were recorded within 1 mile, including mostly residences with several churches and commercial buildings (see the Record Search Results in Appendix A). No prehistoric resources were documented within 1 mile.

ADDITIONAL RESEARCH

Review of historic topographic maps and aerial photographs indicated the historic-period buildings, associated features, and landscaping dating to the 1940s or later were removed from the project parcels sometime between the mid-1980s and mid-1990s (Historic Aerials var.; USGS 1952, 1955).

FIELD SURVEY

Visibility was good (approximately 85 percent) with little obstruction by vegetation. The project site has been moderately to severely disturbed by agricultural and vegetation abatement activities. Soils are silty alluvium. The following is a summary of the resource previously documented within the project area.

33-024106 (Portion of Woodhead/Quandt Ranch)

This resource was initially noted in the late 2000s but not documented (Shephard 2007). LSA formally documented a portion of this resource (two remnant slabs and temporally ambiguous refuse) in the mid-2010s (Goodwin 2014).The survey for the current project (99 Cents Only Store) noted the condition was generally consistent with that of the previous site description and indicated so on the site record, with four additional (undocumented) features identified (concrete steps and Slabs “C,” “D,” and “E”; see the Department of Parks and Recreation [DPR] site record update in Appendix B for details).

DISCUSSION

The resource within the project area (33-024106) was previously evaluated as not a “historical resource” under CEQA (Goodwin 2015). The previously undocumented features are marginal, all date to the 1940s (decades after the period of significance for the City, during its formative era of 1869–1888), there is no historic-period refuse within the project area, and the previous evaluation of this portion of the resource (within APNs 434-080-025-2 and 434-080-026-3) as not a “historical resource” under CEQA remains valid (Shephard 2007; Goodwin 2014). Therefore, any impacts to the resource are not significant and it does not need to be considered further in project planning.

RECOMMENDATIONS

A cultural resources records search, additional research, and a field survey were conducted for the project area. Although a resource was previously documented within the project area, it is a marginal historic-period site (remnant foundations and refuse) that was previously evaluated as not a "historical resource" under CEQA, and the current study results do not change that determination. Therefore, due to the nature of the cultural resource within the project area (not significant) and the lack of prehistoric resources within 1 mile, there is little to no potential for significant impacts to cultural resources and no further investigations or archaeological monitoring are recommended.

STANDARD CONDITIONS

In the event previously undocumented archaeological resources are identified during earthmoving activities, further work in the area should be halted until a qualified archaeologist has assessed the nature of the find(s) and has determined appropriate treatment.

If human remains are encountered, State Health and Safety Code Section 7050.5 states that no further disturbance shall take place until the County Coroner has made a determination of origin and disposition pursuant to PRC Section 5097.98. The County Coroner must be notified of the find immediately. If the remains are determined to be prehistoric, the Coroner will notify the NAHC, which will determine and notify a Most Likely Descendant (MLD). With the permission of the landowner or his/her authorized representative, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC. The MLD may recommend scientific removal and nondestructive analysis of human remains and items associated with Native American burials.

*Recorded by Chris Morgan *Date: 11/17/2023 ___ Continuation X Update

This resource was initially noted in the late 2000s, but not documented. LSA formally documented a portion of this resource (two remnant slabs and temporally ambiguous refuse) in 2014.The survey for the current project (Rich Development LLC) noted the condition was generally consistent with that of the initial site description and indicated on the site record, with four additional (undocumented) features identified (concrete steps and Slabs 'C', 'D' and 'E'). These features all appear to date to the 1940s (decades after the period of significance for the City during its formative era of1869-1888), there is no historic period refuse within the project area, and therefore the previous evaluation of this portion of the resource (within APNs 434-080-025-2 and 434-080-026-3) as not a "historical resource" under CEQA remains valid.

SUBJECT: GEOTECHNICAL ENGINEERING INVESTIGATION WITH GEOLOGIC HAZARD STUDY PROPOSED COMMERCIAL DEVELOPMENT SEC STATE STREET & RAMONA EXPRESSWAY SAN JACINTO, CALIFORNIA

Dear Mr. Johnson:

At your request and authorization, SALEM Engineering Group, Inc. (SALEM) has prepared this Geotechnical Engineering Investigation with Geologic Hazard Study report for the Proposed Commercial Development to be located at the subject site.

The accompanying report presents our findings, conclusions, and recommendations regarding the geotechnical aspects of designing and constructing the project as presently proposed. In our opinion, the proposed project is feasible from a geotechnical viewpoint provided our recommendations are incorporated into the design and construction of the project.

We appreciate the opportunity to assist you with this project. Should you have questions regarding this report or need additional information, please contact the undersigned at (909) 980-6455.

Respectfully Submitted,

SALEM ENGINEERING GROUP, INC.

GEOTECHNICAL ENGINEERING INVESTIGATION WITH GEOLOGIC HAZARD STUDY PROPOSED COMMERCIAL DEVELOPMENT SEC STATE STREET & RAMONA EXPRESSWAY SAN JACINTO, CALIFORNIA

1. PURPOSE AND SCOPE

This report presents the results of our Geotechnical Engineering Investigation with Geologic Hazard Study for the proposed Commercial Development to be located at the southeast corner of State Street and Ramona Expressway in the city of San Jacinto, California (see Figure 1, Vicinity Map).

The purpose of our geotechnical engineering investigation was to observe and sample the subsurface conditions encountered at the site, and provide conclusions and recommendations relative to the geotechnical aspects of constructing the project as presently proposed.

The scope of this investigation included a field exploration, percolation testing, laboratory testing, engineering analysis and the preparation of this report. Our field exploration was performed on April 21, 2022, and included the drilling of fourteen (14) small-diameter soil borings to a maximum depth of 51½ feet below existing grade at the site. Additionally, three (3) percolation tests were performed at depths of approximately 5 to 10 feet below existing grade for determination of the infiltration rate. The locations of the soil borings and percolation tests are depicted on the Site Plan, Figure 2. A detailed discussion of our field investigation, exploratory boring logs and percolation test results are presented in Appendix A.

Laboratory tests were performed on selected soil samples obtained during the investigation to evaluate pertinent physical properties for engineering analyses. Appendix B presents the laboratory test results in tabular and graphic format. The recommendations presented herein are based on analysis of the data obtained during the investigation and our experience with similar soil and geologic conditions. If project details vary significantly from those described herein, SALEM should be contacted to determine the necessity for review and possible revision of this report. Earthwork and Pavement Specifications are presented in Appendix C. If text of the report conflict with the specifications in Appendix C, the recommendations in the text of the report have precedence.

2. PROJECT DESCRIPTION

Based on the Site Plan provided to us, we understand that the proposed development of the site will include construction of a commercial center on a 14-acre vacant land. The development will include five (5) 3,400 square-foot restaurant buildings, a 4,600 square-foot restaurant building with drive-thru, a 5,000 square-foot Shops building with drive-thru, a 5,200 square-foot convenience store, an 8-pump fuel canopy with underground storage tanks, an approximately 3,600 square-foot automated carwash drive-thru, a 16,000 square-foot Major 1 building, a 2-story 35,520 square-foot Major 2 building, a 25,000 square-foot Major 3

building, and trash enclosure. Parking and landscaping are also planned to be associated with the development. Maximum wall load is expected to be on the order of 3 kips per linear foot. Maximum column load is expected to be on the order of 50 kips. Floor slab soil bearing pressure is expected to be on the order of 150 psf.

A site grading plan was not available at the time of preparation of this report. As the existing project area is relatively flat, we anticipate that cuts and fills during the earthwork will be minimal and limited to providing level building pads and positive site drainage. In the event that changes occur in the nature or design of the project, the conclusions and recommendations contained in this report will not be considered valid unless the changes are reviewed and the conclusions of our report are modified.

3. SITE LOCATION AND DESCRIPTION

The site is rectangular in shape and encompasses approximately 14.1 acres. The site is located on the southeast corner of the intersection of N. State Street and W. Ramona Expressway in the city of San Jacinto, California (see Vicinity Map, Figure 1).

The site is currently a vacant land with sparse weeds. Two concrete driveway approach aprons are located along Ramona Expressway as part of street widening in 2013. The site gently sloping down to the west with elevations ranging between approximately 1,530 to 1,521 feet above mean sea level based on Google Earth imagery.

4. FIELD EXPLORATION

Our field exploration consisted of site surface reconnaissance and subsurface exploration. The exploratory test borings (B-1 through B-14) were drilled on April 21, 2022 in the areas shown on the Site Plan, Figure 2. The test borings were advanced with 6½-inch diameter hollow stem augers rotated by a truck-mounted CME 75 drill rig. The test borings were extended to a maximum depth of 51½ feet below existing grade.

The materials encountered in the test borings were visually classified in the field, and logs were recorded by a field engineer and stratification lines were approximated on the basis of observations made at the time of drilling. Visual classification of the materials encountered in the test borings were generally made in accordance with the Unified Soil Classification System (ASTM D2488). A soil classification chart and key to sampling is presented on the Unified Soil Classification Chart, in Appendix "A." The logs of the test borings are presented in Appendix "A." The Boring Logs include the soil type, color, moisture content, dry density, and the applicable Unified Soil Classification System symbol.

The location of the test borings were determined by measuring from features shown on the Site Plan, provided to us. Hence, accuracy can be implied only to the degree that this method warrants. The actual boundaries between different soil types may be gradual and soil conditions may vary. For a more detailed description of the materials encountered, the Boring Logs in Appendix "A" should be consulted.

Soil samples were obtained from the test borings at the depths shown on the logs of borings. The MCS samples were recovered and capped at both ends to preserve the samples at their natural moisture content; SPT samples were recovered and placed in a sealed bag to preserve their natural moisture content. The borings were backfilled with soil cuttings after completion of the drilling.

5. LABORATORY TESTING

Laboratory tests were performed on selected soil samples to evaluate their physical characteristics and engineering properties. The laboratory-testing program was formulated with emphasis on the evaluation of natural moisture, in-situ density, shear strength, consolidation potential, maximum density and optimum moisture determination, and gradation of the materials encountered.

In addition, chemical tests were performed to evaluate the corrosivity of the soils to buried concrete and metal. Details of the laboratory test program and the results of laboratory test are summarized in Appendix "B." This information, along with the field observations, was used to prepare the final boring logs in Appendix "A."

6. GEOLOGIC SETTING

The subject site is located within the northern part of the Peninsular Ranges Geomorphic Province of California. The province varies in width from approximately 30 miles to 100 miles in width. In general, the province consists of rugged mountains underlain by Jurassic metavolcanic and metasedimentary rocks and Cretaceous igneous rocks of the Southern California batholith. The Peninsular Ranges Province is divided into three northwest-trending fault-bounded structural blocks – from west to east – the Santa Ana Mountains, Perris, and San Jacinto Mountains (Morton and Miller, 2006). The Santa Ana Mountains block (west of the subject site) extends from the coast to the Elsinore Fault zone. The western margin of the Perris structural block underlies the subject site.

Paleocene to Pliocene sedimentary rocks underlie the western portion of the Santa Ana Mountains structural block. The eastern portion, a highly faulted structural anticline, is cored by a basement assemblage of Mesozoic metasedimentary and Cretaceous batholithic and volcanic rocks. A thick section of primarily upper Cretaceous marine and Paleogene marine and nonmarine rocks overly this basement. The Perris structural block is a large mass of granitic rock generally bounded by the San Jacinto Fault, the Elsinore Fault, the Santa Ana River and a non-defined southeast boundary. The Perris Block has had a history of vertical land movements of several thousand feet due to shifts in the Elsinore and San Jacinto Faults.

6.1 Local Geologic Setting

The subject site lies near the southwest face of the San Jacinto Mountains in the Perris structural block. The site is in an area of relatively low relief between the San Jacinto Mountains to the northeast, the Santa Ana Mountains to the southwest. The Perris block is underlain by lithologically diverse prebatholithic metasedimentary rocks intruded by plutons of the Cretaceous Peninsular Ranges batholith. Supra-batholithic volcanic rocks are preserved in the western part of the block. Several erosional and depositional surfaces are developed on the Perris block and thin to relatively thick sections of nonmarine, mainly Quaternary sediments discontinuously cover the basement.

Surficial deposits in the vicinity of the subject site are indicated on regional geologic maps (Dibblee, 2003) to be comprised predominately of Quaternary alluvium. Specifically, formational materials mapped at the subject site are surficial sediments (Qa) on the Regional Geologic Map, Figure 3A. The surficial sediment deposits are composed of alluvial deposits along the valley floors and consists of alluvial sand and clay of valley areas, covered by gray soil, and includes stream channel gravel and sand in mountain

areas. Deposits encountered on the subject site during exploratory drilling are consistent with those mapped in the area. For approximate depths and more detailed descriptions, please refer to the enclosed logs of soil borings (Appendix A). The materials were visually classified in accordance with the Unified Soils Classification System.

7. GEOLOGIC HAZARDS

7.1 Faulting and Seismicity

Based on the proximity of several dominant active faults and seismogenic structures, as well as the historic seismic record, the area of the subject site is considered subject to relatively high seismicity. The seismic hazard most likely to impact the site is ground-shaking due to a large earthquake on one of the major active regional faults. Moderate to large earthquakes have affected the area of the subject site within historic time.

There are no known active fault traces in the project vicinity. The project area is not within an Alquist-Priolo Earthquake Fault (Special Studies) Zone and will not require a special site investigation by an Engineering Geologist. Soils on site are classified as Site Class D in accordance with Chapter 16 of the California Building Code. The proposed structures are determined to be in Seismic Design Category **E.**

To determine the distance of known active faults within 100 miles of the site, we used the United States Geological Survey (USGS) web-based application *2008 National Seismic Hazard Maps - Fault Parameters*. Site latitude is 33.8007° North; site longitude is 116.9685° West. The ten closest active faults are summarized below in Table 7.1.

TABLE 7.1
REGIONAL FAULT SUMMARY

Fault Name	Distance to Site (miles)	Maximum Earthquake Magnitude, M_w
San Jacinto; SBV+SJV+A+CC+B+SM	0.6	7.9
San Jacinto; SBV+SJV	1.2	7.4
San Jacinto; A+CC+B+SM	1.6	7.6
S. San Andreas; PK+CH+CC+BB+NM+SM+NSB+SSB+BG+CO	13.8	8.2
S. San Andreas; BG+CO	14.2	7.4
Elsinore; W+GI	21.4	7.3
San Jacinto; SBV	21.5	7.1
Elsinore; W+GI+T+J+CM	21.5	7.9
Pinto Mtn	22.6	7.3
S. San Andreas; PK+CH+CC+BB+NM+SM+NSB	28.2	8.0

The faults tabulated above and numerous other faults in the region are sources of potential ground motion. However, earthquakes that might occur on other faults throughout California are also potential generators of significant ground motion and could subject the site to intense ground shaking.

7.2 Surface Fault Rupture

The site is not within a currently established State of California Earthquake Fault Zone for surface fault rupture hazards (Figure 4, Fault Map). No active faults with the potential for surface fault rupture are known to pass directly beneath the site. Therefore, the potential for surface rupture due to faulting occurring beneath the site during the design life of the proposed development is considered low.

7.3 Ground Shaking

Seismic coefficients and spectral response acceleration values were developed based on the 2019 California Building Code (CBC). The CBC methodology for determining design ground motion values is based on the Office of Statewide Health Planning and Development (OSHPD) Seismic Design Maps, which incorporate both probabilistic and deterministic seismic ground motion.

Based on the 2019 CBC, a Site Class D represents the on-site soil conditions with standard penetration resistance, N-values, averaging greater than 15 blow per foot but less than 50 blows per foot in the upper 100 feet below site grade. A table providing the recommended design acceleration parameters for the project site, based on a Site Class D designation, is included in Section 9.2.1 of this report.

Based on the Office of Statewide Health Planning and Development (OSHPD) Seismic Design Maps, the estimated design peak ground acceleration adjusted for site class effects (PGA_M) was determined to be 1.103g (based on both probabilistic and deterministic seismic ground motion).

7.4 Liquefaction

Soil liquefaction is a state of soil particles suspension caused by a complete loss of strength when the effective stress drops to zero. Liquefaction normally occurs under saturated conditions in soils such as sand in which the strength is purely frictional. Primary factors that trigger liquefaction are: moderate to strong ground shaking (seismic source), relatively clean, loose granular soils (primarily poorly graded sands and silty sands), and saturated soil conditions (shallow groundwater). Due to the increasing overburden pressure with depth, liquefaction of granular soils is generally limited to the upper 50 feet of a soil profile. However, liquefaction has occurred in soils other than clean sand.

The soils encountered within the depth of 51½ feet on the project site consisted predominately of loose to dense silty sand, sand with various amounts of silt or clay, and poorly graded sand with various amounts of silt; and firm to very stiff sandy silt with various amounts of clay. Free groundwater was not encountered during this investigation. The historically highest groundwater is estimated to be at a depth of 40 feet below ground surface based on the County of Riverside Geologic Hazards Map (2004) and regional groundwater data. The Riverside County Office of Information Technology GIS website shows the subject site to be in a moderate liquefaction potential area (Figure 5, Liquefaction Potential Map).

The potential for soil liquefaction during a seismic event was evaluated using LiqIT computer program (version 4.7.5) developed by GeoLogismiki of Greece. For the analysis, a maximum earthquake magnitude of 8.2 M_w, a peak horizontal ground surface acceleration of 1.10g (PGA_M) and a groundwater depth of 40 feet were considered appropriate for the liquefaction analysis. The analysis indicated that the on-site soils had a low potential for liquefaction and that the total liquefaction-induced settlement was calculated to be negligible. The liquefaction analysis is included in Appendix A.

7.5 Seismic Densification (Dry Seismic Settlement)

One common phenomena during seismic shaking accompanying any earthquake is the induced settlement of loose unconsolidated soils. Based on site subsurface conditions and the high seismicity of the region, any loose granular materials at the site could be vulnerable to this potential hazard. Analysis of dynamic densification of "dry" soil in the upper 50 feet of the existing soil profile was performed.

For the analysis, an earthquake magnitude of 7.9 M_w and a design horizontal ground surface acceleration of 0.735g (2/3 of PGA_M based on both probabilistic and deterministic seismic ground motion) were considered appropriate for the analysis. The seismic densification of dry to damp alluvial sandy soils due to onsite seismic activity is calculated to have a total settlement of approximately 1.39 inches. For the relatively uniform site conditions, the differential seismic settlement is estimated to be half of the total seismic settlement. The differential seismic settlement, along a 30-foot exterior wall footing or between adjoining column footings, is estimated to be approximately 0.7 inches. Documentation of the settlement analysis is included in Appendix A.

7.6 Lateral Spreading

Lateral spreading is a phenomenon in which soils move laterally during seismic shaking and is often associated with liquefaction. The amount of movement depends on the soil strength, duration and intensity of seismic shaking, topography, and free face geometry. Due to the relatively flat site topography, we judge the likelihood of lateral spreading to be low.

7.7 Subsidence

The Riverside County Office of Information Technology GIS website shows the subject site to be in an active subsidence potential area (Figure 7, Subsidence Potential Map). Based on the existence of relatively medium dense to dense soil conditions, the geologic hazard potential due to subsidence is considered to be low.

7.8 Collapsible/Expansive or Hydroconsolidatable Soils

Test data in this geotechnical report show that soil samples consolidated from approximately 3½ to 6 percent after a maximum 12.8 ksf load. Hydroconsolidation (collapse upon wetting) at a load of 1.6 ksf was approximately ½ to 1¼ percent. The potential for collapse should be considered moderate. Soil samples collected from surface to the proposed foundation depths are considered to have a very low to low expansion potential. The proposed site preparation methods recommended on our geotechnical report should address these geotechnical issues.

7.9 Flood and Dam Inundation

The County of Riverside GIS website shows the subject site is not located in a flood zone (Figure 6, Flood Zone Map). Based on the Riverside County General Plan, Chapter 6 – Safety Element, Figure 4, "Flood Hazard Zone", the subject site is located in a 500-Year Flood Zone with Reduced Risk from Levees.

Based on the Riverside County General Plan, Chapter 6 – Safety Element, Figure 5, "Dam Hazard Inundation", the subject site is located in a Dam Inundation Area.

7.10 Landslides/Slope Instability/Debris Flow

The subject site is on a gently (<5%) sloping grade, over 1 mile from the nearest significant topographic change. As such, landslide/slope instability/rock fall issues pose a very low risk. Due to the site's distance from significant topography, topography-related debris flows are a low risk.

7.11 Wind and Water Erosion

Based on SALEM's soil boring logs for the subject site, surface soils consist predominantly of loose to dense silty sand, sand with various amounts of silt or clay, and poorly graded sand with various amounts of silt; and firm to very stiff sandy silt with various amounts of clay. Soils of this consistency have been shown to possess relatively good resistance to wind and water erosion. The site is essentially flat, minimizing the potential for water erosion. The site will be completely covered by buildings, pavement or landscaping after development, minimizing long-term wind erosion potential.

7.12 Tsunamis and Seiches

The site is not located within a coastal area. Therefore, tsunamis (seismic sea waves) are not considered a significant hazard at the site. Seiches are large waves generated in enclosed bodies of water in response to ground shaking. No major water-retaining structures are located immediately up gradient from the project site. Flooding from a seismically-induced seiche is considered unlikely.

8. SOIL AND GROUNDWATER CONDITIONS

8.1 Subsurface Conditions

The subsurface conditions encountered appear typical of those found in the geologic region of the site. In general, the soils within the depth of exploration consisted of alluvium deposits of loose to dense silty sand, sand with various amounts of silt or clay, and poorly graded sand with various amounts of silt; and firm to very stiff sandy silt with various amounts of clay.

No significant fill material was encountered in our borings. Undocumented fill materials are not suitable to support any future structures and should be replaced with Engineered Fill. The extent and consistency of the fills should be verified during site construction. Prior to fill placement, Salem Engineering Group, Inc. should inspect the bottom of the excavation to verify the fill condition.

The soils were classified in the field during the drilling and sampling operations. The stratification lines were approximated by the field engineer on the basis of observations made at the time of drilling. The actual boundaries between different soil types may be gradual and soil conditions may vary. For a more detailed description of the materials encountered, the Boring Logs in Appendix "A" should be consulted.

The Boring Logs include the soil type, color, moisture content, dry density, and the applicable Unified Soil Classification System symbol. The locations of the test borings were determined by measuring from feature shown on the Site Plan, provided to us. Hence, accuracy can be implied only to the degree that this method warrants.

8.2 Groundwater

The test boring locations were checked for the presence of groundwater during and after the drilling operations. Free groundwater was not encountered during this investigation. The historically highest groundwater is estimated to be at a depth of approximately 40 feet below ground surface according to the County of Riverside Geologic Hazards Map (2004) and regional groundwater well data.

It should be recognized that water table elevations may fluctuate with time, being dependent upon seasonal precipitation, irrigation, land use, localized pumping, and climatic conditions as well as other factors. Therefore, water level observations at the time of the field investigation may vary from those encountered during the construction phase of the project. The evaluation of such factors is beyond the scope of this report.

8.3 Soil Corrosion Screening

Excessive sulfate in either the soil or native water may result in an adverse reaction between the cement in concrete and the soil. The 2014 Edition of ACI 318 (ACI 318) has established criteria for evaluation of sulfate and chloride levels and how they relate to cement reactivity with soil and/or water.

A soil sample was obtained from the project site and was tested for the evaluation of the potential for concrete deterioration or steel corrosion due to attack by soil-borne soluble salts and soluble chloride.

The water-soluble sulfate concentration in the saturation extract from the soil sample was detected to be 180 mg/kg. ACI 318 Tables 19.3.1.1 and 19.3.2.1 outline exposure categories, classes, and concrete requirements by exposure class. ACI 318 requirements for site concrete based upon soluble sulfate are summarized in Table 8.3 on the next page.

TABLE 8.3
WATER SOLUBLE SULFATE EXPOSURE REQUIREMENTS

Water Soluble Sulfate (SO_4) in Soil, Percentage by Weight	Exposure Severity	Exposure Class	Maximum w/cm Ratio	Minimum Concrete Compressive Strength	Cementations Materials Type
0.018	Not Severe	S0	N/A	2,500 psi	No Restriction

The water-soluble chloride concentration detected in saturation extract from the soil samples was 32 mg/kg. This level of chloride concentration is considered to be mildly corrosive.

It is recommended that a qualified corrosion engineer be consulted regarding protection of buried steel or ductile iron piping and conduit or, at a minimum, applicable manufacturer's recommendations for corrosion protection of buried metal pipe be closely followed.

8.4 Percolation Testing

Three (3) percolation tests (P-1 through P-3) were performed within assumed infiltration areas and were conducted in accordance with the guidelines established by the County of Riverside. The approximate locations of the percolation tests are shown on the attached Site Plan, Figure 2.

The boreholes were advanced to the depths shown on the percolation test worksheets. The holes were pre-saturated before percolation testing commenced. Percolation rates were measured by filling the test holes with clean water and measuring the water drops at a certain time interval. The percolation rate data are presented in tabular format at the end of this Report. The difference in the percolation rates are reflected by the varied type of soil materials at the bottom of the test holes. The test results are shown on the table below.

PERCOLATION TEST RESULTS

Test No.	Depth (feet)	Tested Infiltration Rate[1] (inch/hour)	Design Infiltration Rate[2] (inch/hour)	Soil Type[3]
P-1[4]	5.0	**4.84**	**1.61**	Silty SAND/SAND (SM/SP)
P-2	9.6	**0.08**	**0.03**	Sandy SILT (ML)
P-3	4.7	**5.36**	**1.78**	SAND with Silt (SP-SM)

[1] Tested infiltration Rate = (ΔH 60 r) / (Δt(r + 2H$_{avg}$))
[2] FS=3 according to the Riverside County – Low Impact Development BMP Design Handbook
[3] At bottom of drilled holes
[4] Boring B-12 collapsed and a new hole was drilled to 5 feet deep for percolation testing

The soil infiltration or percolation rates are based on tests conducted with clear water. The infiltration/percolation rates may vary with time as a result of soil clogging from water impurities. The infiltration/percolation rates will deteriorate over time due to the soil conditions and an appropriate factor of safety (FS) should be applied. According to the Riverside County – Low Impact Development BMP Design Handbook, the minimum required factor of safety is 3 (FS=3). The owner or civil engineer may elect to use a lower FS for the design; however, more frequent maintenance will be expected. The soils may also become less permeable to impermeable if the soil is compacted. Thus, periodic maintenance consisting of clearing the bottom of the drainage system of clogged soils should be expected.

The infiltration/percolation rate may become slower if the surrounding soil is wet or saturated due to prolonged rainfalls. Additional percolation tests may be conducted at bottom of the drainage system during construction to verify the infiltration/percolation rate. Groundwater, if closer to the bottom of the drainage system, will also reduce the infiltration/percolation rate.

The scope of our services did not include a groundwater study and was limited to the performance of percolation testing and soil profile description, and the submitted data only. Our services did not include those associated with septic system design. Neither did services include an Environmental Site Assessment for the presence or absence of hazardous and/or toxic materials in the soil, groundwater, or atmosphere; or the presence of wetlands.

Any statements, or absence of statements, in this report or on any boring logs regarding odors, unusual or suspicious items, or conditions observed, are strictly for descriptive purposes and are not intended to convey engineering judgment regarding potential hazardous and/or toxic assessment. The geotechnical engineering information presented herein is based upon professional interpretation utilizing standard engineering practices. The work conducted through the course of this investigation, including the preparation of this report, has been performed in accordance with the generally accepted standards of geotechnical engineering practice, which existed in the geographic area at the time the report was written. No other warranty, express or implied, is made.

Please be advised that when performing percolation testing services in relatively small diameter borings, that the testing may not fully model the actual full scale long term performance of a given site. This is particularly true where percolation test data is to be used in the design of large infiltration system such as may be proposed for the site. The measured percolation rate includes dispersion of the water at the sidewalls of the boring as well as into the underlying soils. Subsurface conditions, including percolation rates, can change over time as fine-grained soils migrate. It is not warranted that such information and interpretation cannot be superseded by future geotechnical engineering developments. We emphasize that this report is valid for the project outlined above and should not be used for any other sites.

9. CONCLUSIONS AND RECOMMENDATIONS

9.1 General

9.1.1 Based upon the data collected during this investigation, and from a geotechnical engineering standpoint, it is our opinion that the site is suitable for the proposed construction of improvements at the site as planned, provided the recommendations contained in this report are incorporated into the project design and construction. Conclusions and recommendations provided in this report are based on our review of available literature, analysis of data obtained from our field exploration and laboratory testing program, and our understanding of the proposed development at this time.

9.1.2 The primary geotechnical constraints identified in our investigation is the presence of potentially compressible (collapsible) soils at the site. Recommendations to mitigate the effects of these soils are provided in this report.

9.1.3 Based on the Riverside County General Plan, Chapter 6 – Safety Element, Figure 4, "Flood Hazard Zone", the subject site is located in a 500-Year Flood Zone with Reduced Risk from Levees. Based on the Riverside County General Plan, Chapter 6 – Safety Element, Figure 5, "Dam Hazard Inundation", the subject site is located in a Dam Inundation Area. f

9.1.4 No significant fill material was encountered in our borings. Fill materials may be present onsite between our boring locations. Undocumented fill materials are not suitable to support any future structures and should be excavated and recompacted in accordance with section 9.5 of this report. The extent and consistency of the fills should be verified during site construction. Prior to fill placement, Salem Engineering Group, Inc. should inspect the bottom of the excavation to verify the fill condition.

9.1.5 Site demolition activities shall include removal of all surface obstructions not intended to be incorporated into final site design. In addition, underground buried structures and/or utility lines encountered during demolition and construction should be properly removed and the resulting excavations backfilled with Engineered Fill. It is suspected that possible demolition activities of the existing structures may disturb the upper soils. After demolition activities, it is recommended that disturbed soils be removed and/or recompacted.

9.1.6 The near-surface onsite soils are moisture-sensitive and are moderately compressible (collapsible soil) under saturated conditions. Excessive post-construction settlement may be experienced by proposed structures if the foundation soils become near saturated. The collapsible or weak soils should be removed and re-compacted according to the recommendations in the Grading section of this report (Section 9.5).

9.1.7 Based on the subsurface conditions at the site and the anticipated structural loading, we anticipate that the proposed buildings may be supported using conventional shallow foundations, and that the canopies can be supported using provided that the recommendations presented herein are incorporated in the design and construction of the project.

9.1.8 Provided the site is graded in accordance with the recommendations of this report and foundations constructed as described herein, we estimate that total settlement due to static and seismic loads utilizing conventional shallow foundations for the proposed building will be within 2 inches and the corresponding differential settlement, along a 30-foot exterior wall footing or between adjoining column footings, should be 1 inch, producing an angular distortion of 0.003.

9.1.9 All references to relative compaction and optimum moisture content in this report are based on ASTM D 1557 (latest edition).

9.1.10 SALEM shall review the project grading and foundation plans prior to final design submittal to assess whether our recommendations have been properly implemented and evaluate if additional analysis and/or recommendations are required. If SALEM is not provided plans and specifications for review, we cannot assume any responsibility for the future performance of the project.

9.1.11 SALEM shall be present at the site during site demolition and preparation to observe site clearing/demolition, preparation of exposed surfaces after clearing, and placement, treatment and compaction of fill material.

9.1.12 SALEM's observations should be supplemented with periodic compaction tests to establish substantial conformance with these recommendations. Moisture content of footings and slab subgrade should be tested immediately prior to concrete placement. SALEM should observe foundation excavations prior to placement of reinforcing steel or concrete to assess whether the actual bearing conditions are compatible with the conditions anticipated during the preparation of this report.

9.2 Seismic Design Criteria

9.2.1 For seismic design of the structures, and in accordance with the seismic provisions of the 2016 CBC, our recommended parameters are shown below. These parameters are based on Probabilistic Ground Motion of 2% Probability of Exceedance in 50 years. The Site Class was determined based on the results of our field exploration.

TABLE 9.2.1
SEISMIC DESIGN PARAMETERS

*** Determined per ASCE Table 11.4-2 for use in calculating T_S only.**

9.2.2 Site Specific Ground Motion Analysis was not included in the scope of this investigation. Per ASCE 11.4.8, structures on Site Class D with S_1 greater than or equal to 0.2 may require Site Specific Ground Motion Analysis. However, a site specific motion analysis may not be required based on Exceptions listed in ASCE 11.4.8. The Structural Engineer should verify whether

Exception No. 2 of ASCE 7-16, Section 11.4.8, is valid for the site. In the event that a site specific ground motion analysis is required, SALEM should be contacted for these services.

9.2.3 Conformance to the criteria in the above table for seismic design does not constitute any kind of guarantee or assurance that significant structural damage or ground failure will not occur if a large earthquake occurs. The primary goal of seismic design is to protect life, not to avoid all damage, since such design may be economically prohibitive.

9.3 Soil and Excavation Characteristics

9.3.1 Based on the soil conditions encountered in our soil borings, the onsite soils can be excavated with moderate to laborious effort using conventional heavy-duty earthmoving equipment.

9.3.2 It is the responsibility of the contractor to ensure that all excavations and trenches are properly shored and maintained in accordance with applicable Occupational Safety and Health Administration (OSHA) rules and regulations to maintain safety and maintain the stability of adjacent existing improvements.

9.3.3 The upper soils are moisture-sensitive and moderately collapsible under saturated conditions. These soils, in their present condition, possess moderate risk to construction in terms of possible post-construction movement of the foundations and floor systems if no mitigation measures are employed. Accordingly, measures are considered necessary to reduce anticipated collapse potential. As recommended in Section 9.5, the collapsible soils should be overexcavated and recompacted. Mitigation measures will not eliminate post-construction soil movement, but will reduce the soil movement. Success of the mitigation measures will depend on the thoroughness of the contractor in dealing with the soil conditions.

9.3.4 The near surface soils identified as part of our investigation are, generally, dry to slightly moist. Earthwork operations may encounter dry collapsible unstable soils which may require removal to a stable bottom. Exposed native soils exposed as part of site grading operations shall not be allowed to dry out and should be kept continuously moist prior to placement of subsequent fill.

9.4 Materials for Fill

9.4.1 Excavated soils generated from cut operations at the site are suitable for use as general Engineered Fill in structural areas, provided they do exhibit an Expansion Index greater than 20 (EI>20) and do not contain deleterious matter, organic material, or rock material larger than 3 inches in maximum dimension.

9.4.2 The preferred materials specified for Engineered Fill are suitable for most applications with the exception of exposure to erosion. Project site winterization and protection of exposed soils during the construction phase should be the sole responsibility of the Contractor, since they have complete control of the project site.

9.4.3 Import soil intended for use as Non-Expansive Engineered Fill soil shall be well-graded, slightly cohesive silty fine sand or sandy silt, with relatively impervious characteristics when compacted. A clean sand or very sandy soil is not acceptable for this purpose. This material should be

approved by the Engineer prior to use and should typically possess the soil characteristics summarized below in Table 9.4.3.

TABLE 9.4.3
IMPORT FILL REQUIREMENTS

Minimum Percent Passing No. 200 Sieve	10
Maximum Percent Passing No. 200 Sieve	50
Minimum Percent Passing No. 4 Sieve	80
Maximum Particle Size	3"
Maximum Plasticity Index	12
Maximum CBC Expansion Index	20

9.4.4 Environmental characteristics and corrosion potential of import soil materials should also be considered.

9.4.5 Proposed import materials should be sampled, tested, and approved by SALEM prior to its transportation to the site.

9.5 Grading

9.5.1 A representative of our firm should be present during all site clearing and grading operations to test and observe earthwork construction. This testing and observation is an integral part of our service as acceptance of earthwork construction is dependent upon compaction of the material and the stability of the material. The Geotechnical Engineer may reject any material that does not meet compaction and stability requirements. Further recommendations of this report are predicated upon the assumption that earthwork construction will conform to recommendations set forth in this section as well as other portions of this report.

9.5.2 A preconstruction conference should be held at the site prior to the beginning of grading operations with the owner, contractor, civil engineer and geotechnical engineer in attendance.

9.5.3 Site preparation should begin with removal of existing surface/subsurface structures, underground utilities (as required), any existing uncertified fill, and debris. Excavations or depressions resulting from site clearing operations, or other existing excavations or depressions, should be restored with Engineered Fill in accordance with the recommendations of this report.

9.5.4 Surface vegetation consisting of grasses and other similar vegetation should be removed by stripping to a sufficient depth to remove organic-rich topsoil. The upper 6 to 10 inches of the soils containing, vegetation, roots and other objectionable organic matter encountered at the time of grading should be stripped and removed from the surface. Deeper stripping may be required in localized areas. The stripped vegetation, will not be suitable for use as Engineered Fill or within 5 feet of building pads or within pavement areas. However, stripped topsoil may be stockpiled and reused in landscape or non-structural areas or exported from the site.

9.5.5 Tree root systems in proposed improvement areas should be removed to a minimum depth of 3 feet and to such an extent which would permit removal of all roots greater than ½ inch in diameter. Tree roots removed in parking areas may be limited to the upper 1½ feet of the ground surface. Backfill of tree root excavations is not permitted until all exposed surfaces have been inspected and the Soils Engineer is present for the proper control of backfill placement and compaction. Burning in areas which are to receive fill materials shall not be permitted.

9.5.6 Any undocumented and uncompacted fill materials encountered during grading should be removed and replaced with Engineered Fill. The actual depth of the overexcavation and recompaction should be determined by our field representative during construction.

9.5.7 Structural building pad areas should be considered as areas extending a minimum of 5 feet horizontally beyond the outside dimensions of building, including footings and non-cantilevered overhangs carrying structural loads.

9.5.8 To minimize post-construction soil movement and provide uniform support for the proposed buildings, overexcavation and recompaction within the proposed building areas should be performed to a minimum depth of **four (4) feet** below existing grade or **three (3) feet** below proposed footing bottom, whichever is deeper. The extent of the overexcavation and recompaction should be verified during site grading. The overexcavation and recompaction should also extend laterally to a minimum of 5 feet beyond the outside dimensions of building.

9.5.9 Within pavement areas, it is recommended overexcavation and recompaction be performed to a minimum depth of **one and one-half (1½) feet** below existing grade or proposed grade, whichever is deeper. The overexcavation and recompaction should also extend laterally to a minimum of 2 feet beyond the pavement.

9.5.10 Prior to placement of fill soils, the upper 12 inches of native subgrade soils should be scarified, moisture-conditioned to no less than the optimum moisture content and recompacted to a minimum of 95 percent of the maximum dry density based on ASTM D1557-07 Test Method.

9.5.11 All Engineered Fill (including scarified ground surfaces and backfill) should be placed in thin lifts to allow for adequate bonding and compaction (typically 6 to 8 inches in loose thickness).

9.5.12 Engineered Fill soils should be placed, moisture conditioned to near optimum moisture content, and compacted to at least 95% relative compaction.

9.5.13 An integral part of satisfactory fill placement is the stability of the placed lift of soil. If placed materials exhibit excessive instability as determined by a SALEM field representative, the lift will be considered unacceptable and shall be remedied prior to placement of additional fill material. Additional lifts should not be placed if the previous lift did not meet the required dry density or if soil conditions are not stable.

9.5.14 Final pavement subgrade should be finished to a smooth, unyielding surface. We further recommend proof-rolling the subgrade with a loaded water truck (or similar equipment with high contact pressure) to verify the stability of the subgrade prior to placing aggregate base.

9.5.15 The most effective site preparation alternatives will depend on site conditions prior to grading. We should evaluate site conditions and provide supplemental recommendations immediately prior to grading, if necessary.

9.5.16 We do not anticipate groundwater or seepage to adversely affect construction if conducted during the drier months of the year (typically summer and fall). However, groundwater and soil moisture conditions could be significantly different during the wet season (typically winter and spring) as surface soil becomes wet; perched groundwater conditions may develop. Grading during this time period will likely encounter wet materials resulting in possible excavation and fill placement difficulties.

Project site winterization consisting of placement of aggregate base and protecting exposed soils during construction should be performed. If the construction schedule requires grading operations during the wet season, we can provide additional recommendations as conditions warrant.

9.5.17 Wet soils may become non conducive to site grading as the upper soils yield under the weight of the construction equipment. Therefore, mitigation measures should be performed for stabilization. Typical remedial measures include: discing and aerating the soil during dry weather; mixing the soil with dryer materials; removing and replacing the soil with an approved fill material or placement of slurry, crushed rocks or aggregate base material; or mixing the soil with an approved lime or cement product. The most common remedial measure of stabilizing the bottom of the excavation due to wet soil condition is to reduce the moisture of the soil to near the optimum moisture content by having the subgrade soils scarified and aerated or mixed with drier soils prior to compacting. However, the drying process may require an extended period of time and delay the construction operation.

To expedite the stabilizing process, slurry or crushed rock may be utilized for stabilization provided this method is approved by the owner for the cost purpose. If the use of slurry, crushed rock is considered, it is recommended that the upper soft and wet soils be replaced by 6 to 24 inches of 2-sack slurry or ¾-inch to 1-inch crushed rocks. The thickness of the slurry or rock layer depends on the severity of the soil instability. The recommended 6 to 24 inches of crushed rock material will provide a stable platform.

It is further recommended that lighter compaction equipment be utilized for compacting the crushed rock. A layer of geofabric is recommended to be placed on top of the compacted crushed rock to minimize migration of soil particles into the voids of the crushed rock, resulting in soil movement. Although it is not required, the use of geogrid (e.g. Tensar TX7) below the slurry or crushed rock will enhance stability and reduce the required thickness of crushed rock necessary for stabilization.

Our firm should be consulted prior to implementing remedial measures to provide appropriate recommendations.

9.6 Shallow Foundations

9.6.1 The site is suitable for use of conventional shallow foundations consisting of continuous footings and isolated pad footings bearing in properly compacted Engineered Fill.

9.6.2 The bearing wall footings considered for the structures should be continuous with a minimum width of 15 inches and extend to a minimum depth of 18 inches below the lowest adjacent grade. Isolated column footings should have a minimum width of 24 inches and extend a minimum depth of 18 inches below the lowest adjacent grade. The bottom of footing excavations should be maintained free of loose and disturbed soil. Footing concrete should be placed into a neat excavation.

9.6.3 Footings proportioned as recommended above may be designed for the maximum allowable soil bearing pressures shown in the table below.

Loading Condition	Allowable Bearing
Dead Load Only	2,000 psf
Dead-Plus-Live Load	2,500 psf
Total Load, Including Wind or Seismic Loads	3,325 psf

9.6.4 For design purposes, total settlement due to static and seismic loadings on the order of 2 inches may be assumed for shallow footings. Differential settlement due to static and seismic loadings, along a 30-foot exterior wall footing or between adjoining column footings, should be 1 inch, producing an angular distortion of 0.003. Additional post-construction settlement may occur if the foundation soils are flooded or saturated. The footing excavations should not be allowed to dry out any time prior to pouring concrete.

9.6.5 Resistance to lateral footing displacement can be computed using an allowable coefficient of friction factor of 0.38 acting between the base of foundations and the supporting native subgrade.

9.6.6 Lateral resistance for footings can alternatively be developed using an allowable equivalent fluid passive pressure of 320 pounds per cubic foot acting against the appropriate vertical native footing faces. The frictional and passive resistance of the soil may be combined without reduction in determining the total lateral resistance. An increase of one-third is permitted when using the alternate load combination in CBC that includes wind or earthquake loads.

9.6.7 Underground utilities running parallel to footings should not be constructed in the zone of influence of footings. The zone of influence may be taken to be the area beneath the footing and within a 1:1 plane extending out and down from the bottom edge of the footing.

9.6.8 The foundation subgrade should be sprinkled as necessary to maintain a moist condition without significant shrinkage cracks as would be expected in any concrete placement. Prior to placing rebar reinforcement, foundation excavations should be evaluated by a representative of SALEM for appropriate support characteristics and moisture content. Moisture conditioning may be

required for the materials exposed at footing bottom, particularly if foundation excavations are left open for an extended period.

9.7 Caisson Foundations for Canopy Structures

9.7.1 It is recommended that the caisson foundation should have a minimum diameter of 24 inches and a minimum depth of 7 feet below the lowest adjacent grade.

9.7.2 The caissons may be designed using an allowable sidewall friction of 150 psf. This value is for dead-plus-live loads. An allowable end bearing capacity of 3,000 psf may be used provided that the bottom of the caisson is cleaned with the use of a clean-out bucket or equivalent and inspected by our representative prior to placement of reinforcement and concrete. An increase of one-third is permitted when using the alternate load combination that includes wind or earthquake loads.

9.7.3 Uplift loads can be resisted by caissons using an allowable sidewall friction of 100 psf of the surface area and the weight of the caisson.

9.7.4 The total static settlement of the caisson footing is not expected to exceed 1 inch. Differential static settlement should be less than ½ inch. Most of the settlement is expected to occur during construction as the loads are applied.

9.7.5 The drilled caissons may be designed for a lateral capacity of 320 pounds per square foot per foot of depth below the lowest adjacent grade to a maximum of 4,800 psf.

9.7.6 The top one-foot of adjacent subgrade should be deleted from the passive pressure computation.

9.7.7 Sandy soils were encountered at the site. Casing of the drilled caisson will be required if caving is encountered or the drilled hole has to be left open for an extended period of time.

9.8 Concrete Slabs-on-Grade

9.8.1 Slab thickness and reinforcement should be determined by the structural engineer based on the anticipated loading. We recommend that non-structural slabs-on-grade be at least 4 inches thick and underlain by six (6) inches of clean crushed aggregate base (CAB) compacted to at least 95% relative compaction. The CAB should meet the Greenbook specifications and requirements.

9.8.2 Crushed Miscellaneous or Recycled Base (CMB) containing recycled materials should not be used as granular aggregate subbase within the building areas.

9.8.3 We recommend reinforcing slabs, at a minimum, with No. 3 reinforcing bars placed 18 inches on center, each way.

9.8.4 Slabs subject to structural loading may be designed utilizing a modulus of subgrade reaction K of 170 pounds per square inch per inch. The K value was approximated based on inter-relationship of soil classification and bearing values (Portland Cement Association, Rocky Mountain Northwest).

9.8.5 The spacing of crack control joints should be designed by the project structural engineer. In order to regulate cracking of the slabs, we recommend that construction joints or control joints be provided at a maximum spacing of 15 feet in each direction for 5-inch thick slabs and 12 feet for 4-inch thick slabs.

9.8.6 Crack control joints should extend a minimum depth of one-fourth the slab thickness and should be constructed using saw-cuts or other methods as soon as practical after concrete placement. The exterior floors should be poured separately in order to act independently of the walls and foundation system.

9.8.7 It is recommended that the utility trenches within the structure be compacted, as specified in our report, to minimize the transmission of moisture through the utility trench backfill. Special attention to the immediate drainage and irrigation around the structures is recommended.

9.8.8 Moisture within the structure may be derived from water vapors, which were transformed from the moisture within the soils. This moisture vapor penetration can affect floor coverings and produce mold and mildew in the structure. To minimize moisture vapor intrusion, it is recommended that a vapor retarder be installed in accordance with manufacturer's recommendations and/or ASTM guidelines, whichever is more stringent. In addition, ventilation of the structure is recommended to reduce the accumulation of interior moisture.

9.8.9 In areas where it is desired to reduce floor dampness where moisture-sensitive coverings are anticipated, construction should have a suitable waterproof vapor retarder (a minimum of 15 mils thick polyethylene vapor retarder sheeting, Raven Industries "VaporBlock 15, Stego Industries 15 mil "StegoWrap" or W.R. Meadows Sealtight 15 mil "Perminator") incorporated into the floor slab design. The water vapor retarder should be decay resistant material complying with ASTM E96 not exceeding 0.04 perms, ASTM E154 and ASTM E1745 Class A. The vapor barrier should be placed between the concrete slab and the compacted granular aggregate subbase material. The water vapor retarder (vapor barrier) should be installed in accordance with ASTM Specification E 1643-94.

9.8.10 The concrete maybe placed directly on vapor retarder. The vapor retarder should be inspected prior to concrete placement. Cut or punctured retarder should be repaired using vapor retarder material lapped 6 inches beyond damaged areas and taped.

9.8.11 The recommendations of this report are intended to reduce the potential for cracking of slabs due to soil movement. However, even with the incorporation of the recommendations presented herein, foundations, stucco walls, and slabs-on-grade may exhibit some cracking due to soil movement. This is common for project areas that contain expansive soils since designing to eliminate potential soil movement is cost prohibitive. The occurrence of concrete shrinkage cracks is independent of the supporting soil characteristics. Their occurrence may be reduced and/or controlled by limiting the slump of the concrete, proper concrete placement and curing, and by the placement of crack control joints at periodic intervals, in particular, where re-entrant slab corners occur.

9.8.12 Proper finishing and curing should be performed in accordance with the latest guidelines provided by the American Concrete Institute, Portland Cement Association, and ASTM.

9.9 Lateral Earth Pressures and Frictional Resistance

9.9.1 Active, at-rest and passive unit lateral earth pressures against footings and walls are summarized in the table below:

Lateral Pressure Drained and Level Backfill Conditions	**Equivalent Fluid Pressure, pcf**
Active Pressure	40
At-Rest Pressure	60
Passive Pressure	320
Related Parameters	
Allowable Coefficient of Friction	0.38
In-Place Soil Density (lbs/ft^3)	120

9.9.2 Active pressure applies to walls, which are free to rotate. At-rest pressure applies to walls, which are restrained against rotation. The preceding lateral earth pressures assume sufficient drainage behind retaining walls to prevent the build-up of hydrostatic pressure.

9.9.3 The top one-foot of adjacent subgrade should be deleted from the passive pressure computation.

9.9.4 A safety factor consistent with the design conditions should be included in the usage of the values presented in the above table.

9.9.5 For stability against lateral sliding, which is resisted solely by the passive pressure, we recommend a minimum safety factor of 1.5.

9.9.6 For stability against lateral sliding, which is resisted by the combined passive and frictional resistance, a minimum safety factor of 2.0 is recommended.

9.9.7 For lateral stability against seismic loading conditions, we recommend a minimum safety factor of 1.1.

9.9.8 For dynamic seismic lateral loading the following equation shall be used:

Dynamic Seismic Lateral Loading Equation
Dynamic Seismic Lateral Load = $\frac{3}{8}\gamma K_h H^2$
Where: γ = In-Place Soil Density
K_h = Horizontal Acceleration = $\frac{2}{3}PGA_M$
H = Wall Height

9.10 Retaining Walls

9.10.1 Retaining and/or below grade walls should be drained with either perforated pipe encased in free-draining gravel or a prefabricated drainage system. The gravel zone should have a minimum width of 12 inches wide and should extend upward to within 12 inches of the top of the wall. The upper 12 inches of backfill should consist of native soils, concrete, asphaltic-concrete or other suitable backfill to minimize surface drainage into the wall drain system. The gravel should be completely wrapped in nonwoven polypropylene geotextiles (filter fabric) to minimize migration of soil particles into the voids of the crushed rock.

9.10.2 Prefabricated drainage systems, such as Miradrain®, Enkadrain®, or an equivalent substitute, are acceptable alternatives in lieu of gravel provided they are installed in accordance with the manufacturer's recommendations. If a prefabricated drainage system is proposed, our firm should review the system for final acceptance prior to installation.

9.10.3 Drainage pipes should be placed with perforations down and should discharge in a non-erosive manner away from foundations and other improvements. The top of the perforated pipe should be placed at or below the bottom of the adjacent floor slab or pavements. The pipe should be placed in the center line of the drainage blanket and should have a minimum diameter of 4 inches. Slots should be no wider than 1/8-inch in diameter, while perforations should be no more than ¼-inch in diameter.

9.10.4 If retaining walls are less than 5 feet in height, the perforated pipe may be omitted in lieu of weep holes on 4 feet maximum spacing. The weep holes should consist of 2-inch minimum diameter holes (concrete walls) or unmortared head joints (masonry walls) and placed no higher than 18 inches above the lowest adjacent grade. Two 8-inch square overlapping patches of geotextile fabric (conforming to the CalTrans Standard Specifications for "edge drains") should be affixed to the rear wall opening of each weep hole to retard soil piping.

9.10.5 During grading and backfilling operations adjacent to any walls, heavy equipment should not be allowed to operate within a lateral distance of 5 feet from the wall, or within a lateral distance equal to the wall height, whichever is greater, to avoid developing excessive lateral pressures. Within this zone, only hand operated equipment ("whackers," vibratory plates, or pneumatic compactors) should be used to compact the backfill soils.

9.11 Temporary Excavations

9.11.1 We anticipate that the majority of the sandy site soils will be classified as Cal-OSHA "Type C" soil when encountered in excavations during site development and construction. Excavation sloping, benching, the use of trench shields, and the placement of trench spoils should conform to the latest applicable Cal-OSHA standards. The contractor should have a Cal-OSHA-approved "competent person" onsite during excavation to evaluate trench conditions and make appropriate recommendations where necessary.

9.11.2 It is the contractor's responsibility to provide sufficient and safe excavation support as well as protecting nearby utilities, structures, and other improvements which may be damaged by earth movements. All onsite excavations must be conducted in such a manner that potential surcharges

from existing structures, construction equipment, and vehicle loads are resisted. The surcharge area may be defined by a 1:1 projection down and away from the bottom of an existing foundation or vehicle load.

9.11.3 Temporary excavations and slope faces should be protected from rainfall and erosion. Surface runoff should be directed away from excavations and slopes.

9.11.4 Open, unbraced excavations in undisturbed soils should be made according to the slopes presented in the following table:

RECOMMENDED EXCAVATION SLOPES

Depth of Excavation (ft)	Slope (Horizontal : Vertical)
0-5	1½:1
5-10	2½:1

9.11.5 If, due to space limitation, excavations near property lines or existing structures are performed in a vertical position, slot cuts, braced shorings or shields may be used for supporting vertical excavations. Therefore, in order to comply with the local and state safety regulations, a properly designed and installed shoring system would be required to accomplish planned excavations and installation. A Specialty Shoring Contractor should be responsible for the design and installation of such a shoring system during construction.

9.11.6 Braced shorings should be designed for a maximum pressure distribution of 30H, (where H is the depth of the excavation in feet). The foregoing does not include excess hydrostatic pressure or surcharge loading. Fifty percent of any surcharge load, such as construction equipment weight, should be added to the lateral load given herein. Equipment traffic should concurrently be limited to an area at least 3 feet from the shoring face or edge of the slope.

9.11.7 The excavation and shoring recommendations provided herein are based on soil characteristics derived from the borings within the area. Variations in soil conditions will likely be encountered during the excavations. SALEM Engineering Group, Inc. should be afforded the opportunity to provide field review to evaluate the actual conditions and account for field condition variations not otherwise anticipated in the preparation of this recommendation. Slope height, slope inclination, or excavation depth should in no case exceed those specified in local, state, or federal safety regulation, (e.g. OSHA) standards for excavations, 29 CFR part 1926, or Assessor's regulations.

9.12 Underground Utilities

9.12.1 Underground utility trenches should be backfilled with properly compacted material. The material excavated from the trenches should be adequate for use as backfill provided it does not contain deleterious matter, vegetation or rock larger than 3 inches in maximum dimension. Trench backfill should be placed in loose lifts not exceeding 8 inches and compacted to at least 95% relative compaction at no less than the optimum moisture content.

9.12.2 Bedding and pipe zone backfill typically extends from the bottom of the trench excavations to approximately 6 to 12 inches above the crown of the pipe. Pipe bedding and backfill material should conform to the requirements of the governing utility agency.

9.12.3 It is suggested that underground utilities crossing beneath new or existing structures be plugged at entry and exit locations to the buildings or structures to prevent water migration. Trench plugs can consist of on-site clay soils, if available, or sand cement slurry. The trench plugs should extend 2 feet beyond each side of individual perimeter foundations.

9.12.4 The contractor is responsible for removing all water-sensitive soils from the trench regardless of the backfill location and compaction requirements. The contractor should use appropriate equipment and methods to avoid damage to the utilities and/or structures during fill placement and compaction.

9.13 Surface Drainage

9.13.1 Proper surface drainage is critical to the future performance of the project. Uncontrolled infiltration of irrigation excess and storm runoff into the soils can adversely affect the performance of the planned improvements. Saturation of a soil can cause it to lose internal shear strength and increase its compressibility, resulting in a change to important engineering properties. Proper drainage should be maintained at all times.

9.13.2 The ground immediately adjacent to the foundation shall be sloped away from the building at a slope of not less than 5 percent for a minimum distance of 10 feet.

9.13.3 Impervious surfaces within 10 feet of the building foundation shall be sloped a minimum of 2 percent away from the building and drainage gradients maintained to carry all surface water to collection facilities and off site. These grades should be maintained for the life of the project. Ponding of water should not be allowed adjacent to the structure. Over-irrigation within landscaped areas adjacent to the structure should not be performed.

9.13.4 Roof drains should be installed with appropriate downspout extensions out-falling on splash blocks so as to direct water a minimum of 5 feet away from the structures or be connected to the storm drain system for the development.

9.14 Pavement Design

9.14.1 Based on site soil conditions, an R-value of 40 was used for the preliminary flexible asphaltic concrete pavement design. The R-value may be verified during grading of the pavement areas.

9.14.2 The asphaltic concrete (flexible pavement is based on a 20-year pavement life for traffic indexes of 5.0 and 6.5. If higher traffic loading is anticipated, SALEM should be contacted to provide revised pavement thickness recommendations.

TABLE 9.14.2
ASPHALT CONCRETE PAVEMENT

Traffic Index	Asphaltic Concrete	Clean Crushed Aggregate Base*	Compacted Subgrade*
5.0 (Parking and Vehicle Drive Areas)	3.0"	4.0"	24.0"
6.5 (Heavy Truck Areas)	4.0"	5.0"	24.0"

95% compaction based on ASTM D1557 Test Method

9.14.3 The following recommendations are for light-duty and heavy-duty Portland Cement Concrete pavement sections.

TABLE 9.14.3
PORTLAND CEMENT CONCRETE PAVEMENT

Traffic Index	Portland Cement Concrete*	Clean Crushed Aggregate Base**	Compacted Subgrade**
5.0 (Light Duty)	5.0"	4.0"	24.0"
6.5 (Heavy Duty)	6.0"	5.0"	24.0"

**** Min. Compressive Strength of 4,000 psi, Min. Reinforcement of No. 4 bars at 18 inches o.c. each way***
***** 95% compaction based on ASTM D1557 Test Method***

10. PLAN REVIEW, CONSTRUCTION OBSERVATION AND TESTING

10.1 Plan and Specification Review

10.1.1 SALEM should review the project grading and foundation plans and specifications prior to final design submittal to assess whether our recommendations have been properly implemented and evaluate if additional analysis and/or recommendations are required.

10.2 Construction Observation and Testing Services

10.2.1 The recommendations provided in this report are based on the assumption that we will continue as Geotechnical Engineer of Record throughout the construction phase. It is important to maintain continuity of geotechnical interpretation and confirm that field conditions encountered are similar to those anticipated during design. If we are not retained for these services, we cannot assume

any responsibility for others interpretation of our recommendations, and therefore the future performance of the project.

10.2.2 SALEM should be present at the site during site preparation to observe site clearing, preparation of exposed surfaces after clearing, and placement, treatment and compaction of fill material.

10.2.3 SALEM's observations should be supplemented with periodic compaction tests to establish substantial conformance with these recommendations. Moisture content of footings and slab subgrade should be tested immediately prior to concrete placement. SALEM should observe foundation excavations prior to placement of reinforcing steel or concrete to assess whether the actual bearing conditions are compatible with the conditions anticipated during the preparation of this report.

11. LIMITATIONS AND CHANGED CONDITIONS

The analyses and recommendations submitted in this report are based upon the data obtained from the test borings drilled at the approximate locations shown on the Site Plan, Figure 1. The report does not reflect variations which may occur between borings. The nature and extent of such variations may not become evident until construction is initiated.

If variations then appear, a re-evaluation of the recommendations of this report will be necessary after performing on-site observations during the excavation period and noting the characteristics of such variations. The findings and recommendations presented in this report are valid as of the present and for the proposed construction. If site conditions change due to natural processes or human intervention on the property or adjacent to the site, or changes occur in the nature or design of the project, or if there is a substantial time lapse between the submission of this report and the start of the work at the site, the conclusions and recommendations contained in our report will not be considered valid unless the changes are reviewed by SALEM and the conclusions of our report are modified or verified in writing.

The validity of the recommendations contained in this report is also dependent upon an adequate testing and observations program during the construction phase. Our firm assumes no responsibility for construction compliance with the design concepts or recommendations unless we have been retained to perform the on-site testing and review during construction. SALEM has prepared this report for the exclusive use of the owner and project design consultants.

SALEM does not practice in the field of corrosion engineering. It is recommended that a qualified corrosion engineer be consulted regarding protection of buried steel or ductile iron piping and conduit or, at a minimum, that manufacturer’s recommendations for corrosion protection be closely followed. Further, a corrosion engineer may be needed to incorporate the necessary precautions to avoid premature corrosion of concrete slabs and foundations in direct contact with native soil.

The importation of soil and or aggregate materials to the site should be screened to determine the potential for corrosion to concrete and buried metal piping. The report has been prepared in accordance with generally accepted geotechnical engineering practices in the area. No other warranties, either express or implied, are made as to the professional advice provided under the terms of our agreement and included in this report.

If you have any questions, or if we may be of further assistance, please do not hesitate to contact our office at (909) 980-6455.

Respectfully Submitted,

APPENDIX

A

APPENDIX A
FIELD EXPLORATION

Fieldwork for our investigation (drilling) was conducted on April 21, 2022, and included a site visit, subsurface exploration, and soil sampling. Percolation testing was performed on April 21 and April 22 of 2022. The locations of the exploratory borings and percolation tests are shown on the Site Plan, Figure 2. Boring logs for our exploration are presented in figures following the text in this appendix. Percolation data tables are presented in this appendix as well. Borings were located in the field using existing reference points. Therefore, actual boring locations may deviate slightly.

In general, our borings were performed using a truck-mounted CME 75 drill rig equipped with 6½-inch diameter hollow stem augers. Sampling in the borings was accomplished using a hydraulic 140-pound hammer with a 30-inch drop. Samples were obtained with a 3-inch outside-diameter (OD), split spoon (California Modified) sampler, and a 2-inch OD, Standard Penetration Test (SPT) sampler. The number of blows required to drive the sampler the last 12 inches (or fraction thereof) of the 18-inch sampling interval were recorded on the boring logs. The blow counts shown on the boring logs should not be interpreted as standard SPT "N" values; corrections have not been applied. Upon completion, the borings were backfilled with drill cuttings.

Subsurface conditions encountered in the exploratory borings were visually examined, classified and logged in general accordance with the American Society for Testing and Materials (ASTM) Practice for Description and Identification of Soils (Visual-Manual Procedure D2488). This system uses the Unified Soil Classification System (USCS) for soil designations. The logs depict soil and geologic conditions encountered and depths at which samples were obtained. The logs also include our interpretation of the conditions between sampling intervals. Therefore, the logs contain both observed and interpreted data. We determined the lines designating the interface between soil materials on the logs using visual observations, drill rig penetration rates, excavation characteristics and other factors. The transition between materials may be abrupt or gradual. Where applicable, the field logs were revised based on subsequent laboratory testing.

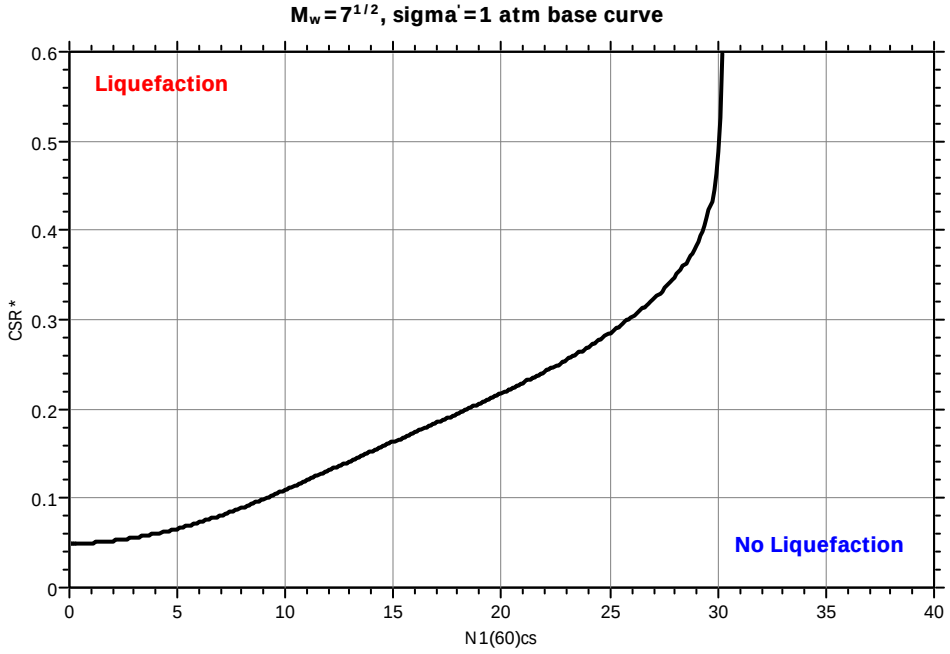
LIQUEFACTION ANALYSIS REPORT



Project title : 3-222-0383

Project subtitle : San Jacinto

Input parameters and analysis data

In-situ data type:	Standard Penetration Test	Depth to water table:	40.00 ft
Analysis type:	Deterministic	Earthquake magnitude M_w:	8.20
Analysis method:	NCEER 1998	Peak ground accelaration:	1.10 g
Fines correction method:	Idriss & Seed	User defined F.S.:	1.30

:: Field input data ::

Point ID	Depth (ft)	Field N_{SPT} (blows/feet)	Unit weight (pcf)	Fines content (%)
1	2.00	12.00	120.00	5.00
2	5.00	11.00	120.00	5.00
3	10.00	14.00	120.00	18.00
4	15.00	20.00	120.00	5.00
5	20.00	13.00	120.00	19.00
6	25.00	29.00	120.00	5.00
7	30.00	14.00	120.00	55.00
8	35.00	42.00	120.00	5.00
9	40.00	32.00	120.00	30.00
10	45.00	22.00	120.00	37.00
11	50.00	24.00	120.00	30.00

Depth : Depth from free surface, at which SPT was performed (ft)
Field SPT : SPT blows measured at field (blows/feet)
Unit weight : Bulk unit weight of soil at test depth (pcf)
Fines content : Percentage of fines in soil (%)

:: Cyclic Stress Ratio calculation (CSR fully adjusted and normalized) ::

Point ID	Depth (ft)	Sigma (tsf)	u (tsf)	Sigma' (tsf)	r_d	CSR	MSF	$CSR_{eq,M=7.5}$	K_{sigma}	CSR^*

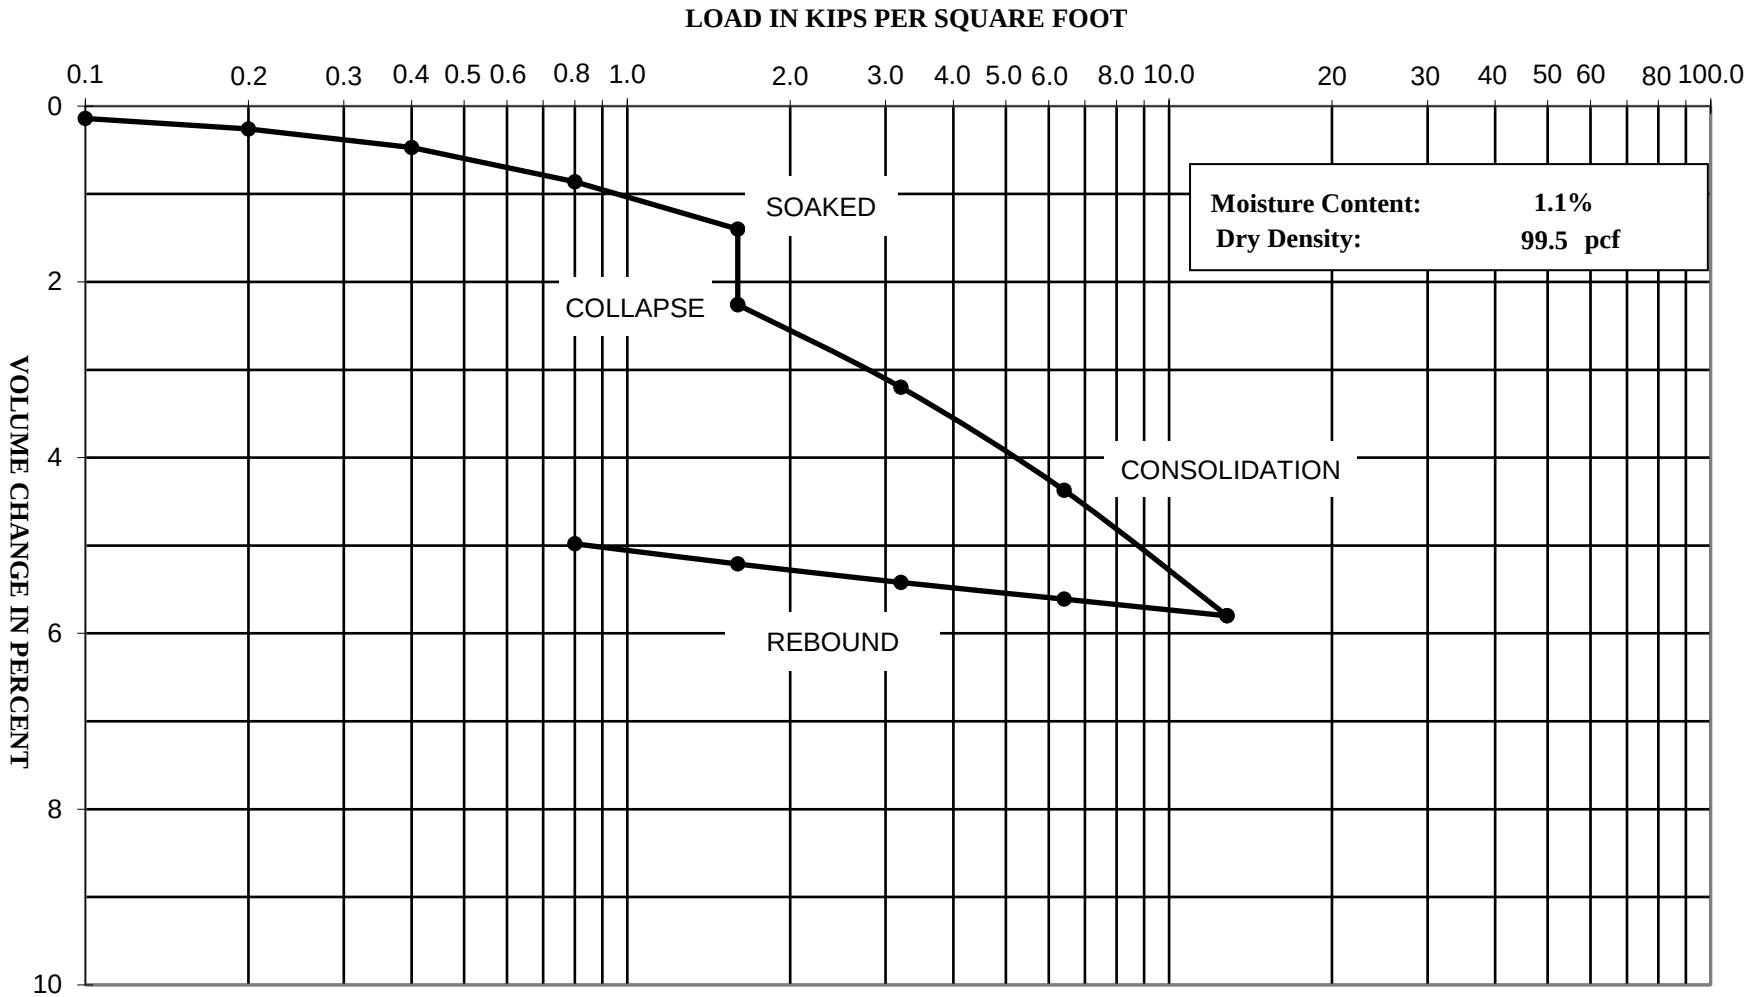
The total seismic-induced settlement calculation is based on a water table depth of ***50*** ***feet below grade***

*Layers that will be compacted based on remedial grading are excluded
**Silt layer is excluded from the settlement analysis



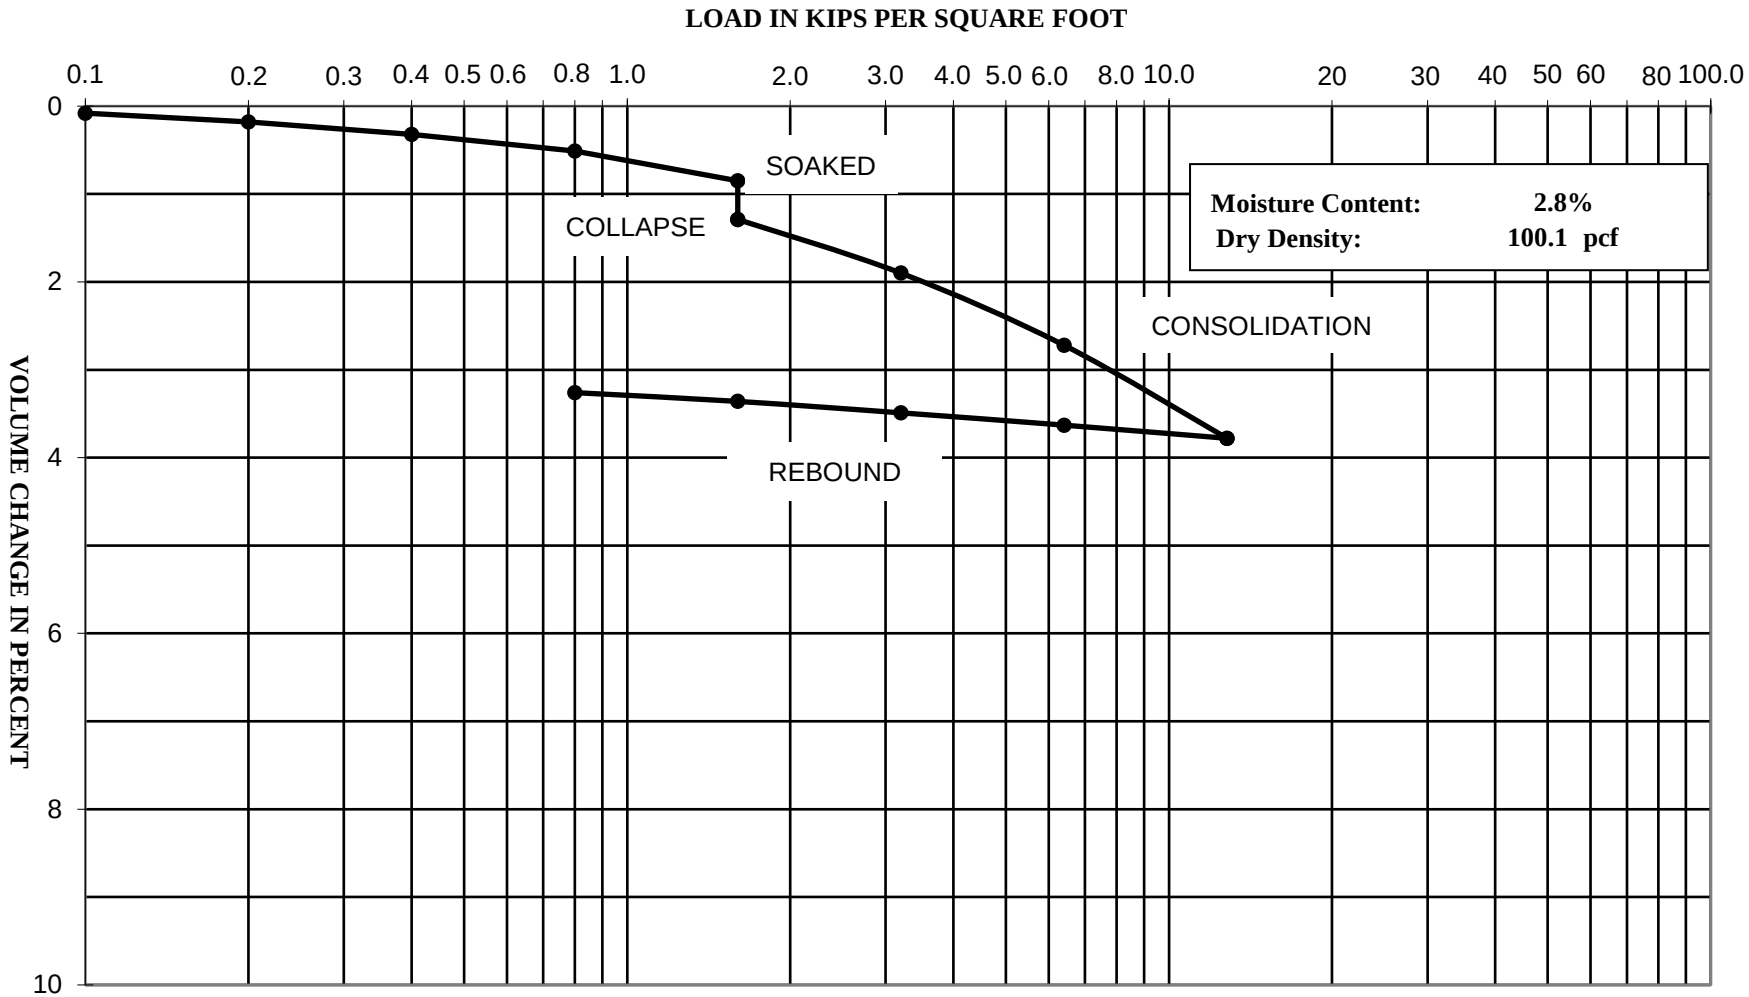
APPENDIX

B

APPENDIX B
LABORATORY TESTING

Laboratory tests were performed in accordance with generally accepted test methods of the American Society for Testing and Materials (ASTM), Caltrans, or other suggested procedures. Selected samples were tested for in-situ dry density and moisture content, corrosivity, consolidation, shear strength, maximum dry density and optimum moisture content and grain size distribution. The results of the laboratory tests are summarized in the following figures.

CONSOLIDATION - PRESSURE TEST DATA
ASTM D2435



Project Name: Proposed Commercial Development - San Jacinto, CA

Project Number: 3-222-0383

Boring: B-6 @ 2

SALEM engineering group, inc.

APPENDIX

C

APPENDIX C
GENERAL EARTHWORK AND PAVEMENT SPECIFICATIONS

When the text of the report conflicts with the general specifications in this appendix, the recommendations in the report have precedence.

1.0 SCOPE OF WORK: These specifications and applicable plans pertain to and include all earthwork associated with the site rough grading, including, but not limited to, the furnishing of all labor, tools and equipment necessary for site clearing and grubbing, stripping, preparation of foundation materials for receiving fill, excavation, processing, placement and compaction of fill and backfill materials to the lines and grades shown on the project grading plans and disposal of excess materials.

2.0 PERFORMANCE: The Contractor shall be responsible for the satisfactory completion of all earthwork in accordance with the project plans and specifications. This work shall be inspected and tested by a representative of SALEM Engineering Group, Incorporated, hereinafter referred to as the Soils Engineer and/or Testing Agency. Attainment of design grades, when achieved, shall be certified by the project Civil Engineer. Both the Soils Engineer and the Civil Engineer are the Owner's representatives. If the Contractor should fail to meet the technical or design requirements embodied in this document and on the applicable plans, he shall make the necessary adjustments until all work is deemed satisfactory as determined by both the Soils Engineer and the Civil Engineer. No deviation from these specifications shall be made except upon written approval of the Soils Engineer, Civil Engineer, or project Architect.

No earthwork shall be performed without the physical presence or approval of the Soils Engineer. The Contractor shall notify the Soils Engineer at least 2 working days prior to the commencement of any aspect of the site earthwork.

The Contractor shall assume sole and complete responsibility for job site conditions during the course of construction of this project, including safety of all persons and property; that this requirement shall apply continuously and not be limited to normal working hours; and that the Contractor shall defend, indemnify and hold the Owner and the Engineers harmless from any and all liability, real or alleged, in connection with the performance of work on this project, except for liability arising from the sole negligence of the Owner or the Engineers.

3.0 TECHNICAL REQUIREMENTS: All compacted materials shall be densified to no less that 95 percent relative compaction based on ASTM D1557 Test Method (latest edition), UBC or CAL-216, or as specified in the technical portion of the Soil Engineer's report. The location and frequency of field density tests shall be determined by the Soils Engineer. The results of these tests and compliance with these specifications shall be the basis upon which satisfactory completion of work will be judged by the Soils Engineer.

4.0 SOILS AND FOUNDATION CONDITIONS: The Contractor is presumed to have visited the site and to have familiarized himself with existing site conditions and the contents of the data presented in the Geotechnical Engineering Report. The Contractor shall make his own interpretation of the data contained in the Geotechnical Engineering Report and the Contractor shall not be relieved of liability for any loss sustained as a result of any variance between conditions indicated by or deduced from said report and the actual conditions encountered during the progress of the work.

5.0 DUST CONTROL: The work includes dust control as required for the alleviation or prevention of any dust nuisance on or about the site or the borrow area, or off-site if caused by the Contractor's operation either during the performance of the earthwork or resulting from the conditions in which the Contractor leaves the site. The Contractor shall assume all liability, including court costs of codefendants, for all claims related to dust or wind-blown materials attributable to his work. Site preparation shall consist of site clearing and grubbing and preparation of foundation materials for receiving fill.

6.0 CLEARING AND GRUBBING: The Contractor shall accept the site in this present condition and shall demolish and/or remove from the area of designated project earthwork all structures, both surface and subsurface, trees, brush, roots, debris, organic matter and all other matter determined by the Soils Engineer to be deleterious. Such materials shall become the property of the Contractor and shall be removed from the site.

Tree root systems in proposed improvement areas should be removed to a minimum depth of 3 feet and to such an extent which would permit removal of all roots greater than 1 inch in diameter. Tree roots removed in parking areas may be limited to the upper 1½ feet of the ground surface. Backfill of tree root excavations is not permitted until all exposed surfaces have been inspected and the Soils Engineer is present for the proper control of backfill placement and compaction. Burning in areas which are to receive fill materials shall not be permitted.

7.0 SUBGRADE PREPARATION: Surfaces to receive Engineered Fill and/or building or slab loads shall be prepared as outlined above, scarified to a minimum of 12 inches, moisture-conditioned as necessary, and recompacted to 95 percent relative compaction.

Loose soil areas and/or areas of disturbed soil shall be moisture-conditioned as necessary and recompacted to 95 percent relative compaction. All ruts, hummocks, or other uneven surface features shall be removed by surface grading prior to placement of any fill materials. All areas which are to receive fill materials shall be approved by the Soils Engineer prior to the placement of any fill material.

8.0 EXCAVATION: All excavation shall be accomplished to the tolerance normally defined by the Civil Engineer as shown on the project grading plans. All over-excavation below the grades specified shall be backfilled at the Contractor's expense and shall be compacted in accordance with the applicable technical requirements.

9.0 FILL AND BACKFILL MATERIAL: No material shall be moved or compacted without the presence or approval of the Soils Engineer. Material from the required site excavation may be utilized for construction site fills, provided prior approval is given by the Soils Engineer. All materials utilized for constructing site fills shall be free from vegetation or other deleterious matter as determined by the Soils Engineer.

10.0 PLACEMENT, SPREADING AND COMPACTION: The placement and spreading of approved fill materials and the processing and compaction of approved fill and native materials shall be the responsibility of the Contractor. Compaction of fill materials by flooding, ponding, or jetting shall not be permitted unless specifically approved by local code, as well as the Soils Engineer. Both cut and fill shall be surface-compacted to the satisfaction of the Soils Engineer prior to final acceptance.

11.0 SEASONAL LIMITS: No fill material shall be placed, spread, or rolled while it is frozen or thawing, or during unfavorable wet weather conditions. When the work is interrupted by heavy rains, fill

operations shall not be resumed until the Soils Engineer indicates that the moisture content and density of previously placed fill is as specified.

12.0 DEFINITIONS - The term "pavement" shall include asphaltic concrete surfacing, untreated aggregate base, and aggregate subbase. The term "subgrade" is that portion of the area on which surfacing, base, or subbase is to be placed. The term “Standard Specifications”: hereinafter referred to, is the most recent edition of the Standard Specifications of the State of California, Department of Transportation. The term "relative compaction" refers to the field density expressed as a percentage of the maximum laboratory density as determined by ASTM D1557 Test Method (latest edition) or California Test Method 216 (CAL-216), as applicable.

13.0 PREPARATION OF THE SUBGRADE - The Contractor shall prepare the surface of the various subgrades receiving subsequent pavement courses to the lines, grades, and dimensions given on the plans. The upper 12 inches of the soil subgrade beneath the pavement section shall be compacted to a minimum relative compaction of 95 percent relative compaction based upon ASTM D1557. The finished subgrades shall be tested and approved by the Soils Engineer prior to the placement of additional pavement courses.

14.0 AGGREGATE BASE - The aggregate base material shall be spread and compacted on the prepared subgrade in conformity with the lines, grades, and dimensions shown on the plans. The aggregate base material shall conform to the requirements of Section 26 of the Standard Specifications for Class II material, ¾-inch or 1½-inches maximum size. The aggregate base material shall be compacted to a minimum relative compaction of 95 percent based upon CAL-216. The aggregate base material shall be spread in layers not exceeding 6 inches and each layer of aggregate material course shall be tested and approved by the Soils Engineer prior to the placement of successive layers.

15.0 AGGREGATE SUBBASE - The aggregate subbase shall be spread and compacted on the prepared subgrade in conformity with the lines, grades, and dimensions shown on the plans. The aggregate subbase material shall conform to the requirements of Section 25 of the Standard Specifications for Class II Subbase material. The aggregate subbase material shall be compacted to a minimum relative compaction of 95 percent based upon CAL-216, and it shall be spread and compacted in accordance with the Standard Specifications. Each layer of aggregate subbase shall be tested and approved by the Soils Engineer prior to the placement of successive layers.

16.0 ASPHALTIC CONCRETE SURFACING - Asphaltic concrete surfacing shall consist of a mixture of mineral aggregate and paving grade asphalt, mixed at a central mixing plant and spread and compacted on a prepared base in conformity with the lines, grades, and dimensions shown on the plans. The viscosity grade of the asphalt shall be PG 64-10, unless otherwise stipulated or local conditions warrant more stringent grade. The mineral aggregate shall be Type A or B, ½ inch maximum size, medium grading, and shall conform to the requirements set forth in Section 39 of the Standard Specifications. The drying, proportioning, and mixing of the materials shall conform to Section 39. The prime coat, spreading and compacting equipment, and spreading and compacting the mixture shall conform to the applicable chapters of Section 39, with the exception that no surface course shall be placed when the atmospheric temperature is below 50 degrees F. The surfacing shall be rolled with a combination steel-wheel and pneumatic rollers, as described in the Standard Specifications. The surface course shall be placed with an approved self-propelled mechanical spreading and finishing machine.

Subject: **AAI PHASE I ENVIRONMENTAL SITE ASSESSMENT**
Proposed Commercial Development
SEC State Street & West Ramona Expressway
San Jacinto, CA

Dear Mr. Johnson:

At your request and authorization, SALEM Engineering Group, Inc. (SALEM) has conducted this Phase I Environmental Site Assessment (ESA) of the Proposed Commercial Development located on the southeast corner State Street and West Ramona Expressway in San Jacinto, California (subject property). During the course of this assessment, SALEM identified no evidence of a Recognized Environmental Condition (REC) in connection with the subject property as defined by ASTM E1527-13.

We appreciate the opportunity to assist you with this project. If you have any questions, or if we may be of further assistance, please do not hesitate to contact our office at (909) 980-6455.

Respectfully submitted,

SALEM Engineering Group, Inc.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

PROPOSED COMMERCIAL DEVELOPMENT
SEC STATE STREET & WEST RAMONA EXPRESSWAY
SAN JACINTO, CALIFORNIA

1.0 EXECUTIVE SUMMARY

SALEM Engineering Group, Inc. (SALEM) has conducted a Phase I Environmental Site Assessment (ESA) of the Proposed Commercial Development site located on the southeast corner State Street and West Ramona Expressway in San Jacinto, California (subject property). The subject property comprises two contiguous rectangular-shaped parcels of land totaling approximately 14.44 acres (Riverside County Assessor's Parcel Numbers [APNS] 434-080-025 and -026). SALEM conducted this Phase I ESA of the subject property in conformance with the American Society for Testing and Materials (ASTM) E1527-13 *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.* The U.S. Environmental Protection Agency (USEPA) has determined that the ASTM E1527-13 Standard is consistent with the requirements for conducting an "All Appropriate Inquiry" under 40 C.F.R. Part 312. Thus, this Phase I ESA constitutes All Appropriate Inquiry (AAI) designed to identify Recognized Environmental Conditions (RECs) in connection with the previous ownership and uses of the subject property as defined by ASTM E1527-13 and 40 C.F.R. Part 312.

ASTM E1527-13 Section 1.1.1 *Recognized Environmental Conditions* – The term *recognized environmental conditions* is defined as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment." The term as further defined by ASTM "is not intended to include de minimis conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies." Conditions determined to be *de minimis* are not *recognized environmental conditions*.

SALEM identified no evidence of Recognized Environmental Conditions (RECs) in connection with the subject property as defined by ASTM E1527-13.

2.0 PURPOSED AND SCOPE OF ASSESSMENT

2.1 Purpose

According to ASTM E1527-13, the purpose of this practice is to define good commercial and customary practice in the United States of America for conducting an *environmental site assessment* of a parcel of *commercial real estate* with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) and *petroleum products.* As such, this practice is intended to permit a *user* to satisfy one of the requirements to qualify for the *innocent landowner, contiguous property owner,* or *bona fide prospective purchaser* limitation on CERCLA liability (hereinafter, the *"landowner liability protections,"* or *"LLPs"*): that is, the practice that constitutes *"all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35) (B).

The Phase I ESA was conducted to identify 'Recognized Environmental Conditions' (RECs), 'Controlled Recognized Environmental Conditions' (CRECs) and 'Historical RECs' (HRECs) as defined by the American Society for Testing and Materials (ASTM) *Designation E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.* Section 1.1.1 of the ASTM *Designation E1527-13* defines an REC as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment." The term as further defined by ASTM "is not intended to include de minimis conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies." Section 3.2.18 defines a CREC as a "recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)." Section 3.2.42 defines HREC as a "past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and land use limitations, institutional controls, or engineering controls)."

2.2 Scope of Work

The objective of the SALEM Phase I ESA scope of work is to provide an evaluation of RECs at the subject property and potential off-site sources. The scope of work for this Phase I ESA conforms to ASTM E1527-13. SALEM was provided written authorization to conduct the Phase I ESA by Mr. Tab Johnson with Rich Development Enterprises, LLC on April 19, 2022, in accordance with the scope of work outlined in SALEM's Proposal No. P3-422-0503. In fulfillment of the SALEM scope of work for this Phase I ESA, SALEM was retained to perform the following tasks:

- Acquire readily available information regarding land-use history and property development by reviewing historical aerial photographs, pertinent building permit records, historic city directories, as well as reviewing recent and historic topographic land-use maps of the subject property and surrounding area.

- Reviewing readily available local, state, and federal regulatory agency databases listed in ASTM E1527-13 and compiled by Environmental Data Resources, Inc. (EDR), including but not limited to CERCLA and NPL lists for sites within one mile of the subject property. State databases, including but not limited to CALSITES, Hazardous Substance Account Act, Cortese, SWIS, SWAT, Well Investigation Program (AB1803), and LUFT, were reviewed for sites within one mile of the subject property.

- Performing a reconnaissance of the subject property and surrounding areas (up to one-half mile beyond site boundary), with regard to potential off-site sources of degradation to the subject property, which included photograph documentation of subject property conditions, and identification of potential environmental concerns. Interviews with persons knowledgeable of the previous and current ownership and uses of the subject property.

- Identifying aboveground storage tanks and/or indications of underground storage tanks on-site.

- In addition to ASTM E1527-13, SALEM recognizes ASTM *Standard Guide for Vapor Encroachment Screening (VES) on Property Involved in Real Estate Transactions* (ASTM E2600-15) as an industry-accepted guideline to determine if a Vapor Encroachment Condition (VEC) exists at the target property. A VES consists of reviewing the Phase I ESA data combined with the application of professional judgment. SALEM evaluates the regulatory agency databases to determine if there are known or suspect contaminated sites within a minimum search distance of the target property. In addition, SALEM attempted to determine whether soil and/or groundwater have been impacted within the critical distances outlined in ASTM E2600-15.

- Preparing this report of SALEM's findings and recommendations if warranted.

3.0 SITE DESCRIPTION

The subject property comprises two contiguous rectangular-shaped parcels of land totaling approximately 14.44 acres located on the southeast corner of State Street and West Ramona Expressway in San Jacinto, California (Riverside County APNS 434-080-025 and -026). At the time of SALEM's May 3, 2022 site reconnaissance the subject property was vacant land with portions covered by native vegetation. The subject property is located in Section 27, Township 4 South, Range 1 West, San Bernardino Baseline and Meridian, United States Geological Survey (U.S.G.S.) 7.5 Minute Topographic Map, San Jacinto, California Quadrangle dated 2018.

4.0 PHYSIOGRAPHY AND HYDROGEOLOGIC CONDITIONS

The subject site is located within the northern part of the Peninsular Ranges Geomorphic Province of California. The province varies in width from approximately 30 miles to 100 miles in width. In general, the province consists of rugged mountains underlain by Jurassic metavolcanic and metasedimentary rocks and Cretaceous igneous rocks of the Southern California batholith. The Peninsular Ranges Province is divided into three northwest-trending fault-bounded structural blocks – from west to east – the Santa Ana Mountains, Perris, and San Jacinto Mountains (Morton and Miller, 2006). The Santa Ana Mountains block (west of the subject site) extends from the coast to the Elsinore Fault zone. The western margin of the Perris structural block underlies the subject site.

Paleocene to Pliocene sedimentary rocks underlie the western portion of the Santa Ana Mountains structural block. The eastern portion, a highly faulted structural anticline, is cored by a basement assemblage of Mesozoic metasedimentary and Cretaceous batholithic and volcanic rocks. A thick section of primarily upper Cretaceous marine and Paleogene marine and nonmarine rocks overly this basement. The Perris structural block is a large mass of granitic rock generally bounded by the San Jacinto Fault, the Elsinore Fault, the Santa Ana River, and a non-defined southeast boundary. The Perris Block has had a history of vertical land movements of several thousand feet due to shifts in the Elsinore and San Jacinto Faults.

According to California Regional Water Quality Control Board (RWQCB) records for the Rice Development leaking underground storage tank (LUST) site on the northeast corner of State Street and North Ramona Boulevard, located approximately 0.40 miles south of the subject property, depth to groundwater beneath the LUST site is reported to be first encountered at over 120 feet below ground surface (bgs). Based upon SALEM's topographic map interpretation, the general direction of groundwater flow in the vicinity of the subject property is toward the southwest. However, local groundwater level and flow direction may vary due to seasonal fluctuations in precipitation, usage demands, geology, and/or surface topography.

5.0 SITE RECONNAISSANCE

A site reconnaissance, which included a visual observation of the subject property and properties within the subject area, was conducted by SALEM's environmental assessor on May 3, 2022. The objective of the site reconnaissance is to identify RECs, including the storage and handling of hazardous substances and petroleum products on or in the vicinity of the subject property which have the potential to environmentally impact on-site soils, surface water and groundwater.

5.1 Observations

Table I summarizes the visual observations made during our site reconnaissance. A discussion of the physical observations follows Table I. Refer to the Site Map (Figure 1) and color photographs following the text for the locations of the features discussed in this section of the report.

TABLE I
Summary of Observations during Site Reconnaissance

FEATURE	OBSERVED	NOT OBSERVED
Structures (existing)		X
Evidence of past uses		X
Hazardous substances and/or petroleum products (including containers)		X
Aboveground storage tanks (ASTs)		X
Underground storage tanks (USTs) or evidence of USTs		X
Strong, pungent, or noxious odors		X
Pools of liquid likely to be hazardous materials or petroleum products		X
Drums		X
Unidentified substance containers		X
Pad-mounted/Pole-mounted transformers/capacitors/other PCB-containing equipment		X
Subsurface hydraulic equipment		X
Heating/ventilation/air conditioning (HVAC)		X
Stains or corrosion on floors, walls, or ceilings		X
Floor drains and sumps		X
Pits, ponds, or lagoons		X
Stained soil and/or pavement		X
Stressed vegetation		X
Waste or wastewater discharges to surface or surface waters on subject property (including stormwater)		X
Wells (irrigation, domestic, dry, injection, abandoned, monitoring wells)		X
Septic Systems		X

The subject property comprises two rectangular-shaped parcels of land totaling approximately 14.44 acres located on the southeast corner State Street and West Ramona Expressway in San Jacinto, California (Riverside County APNs 434-080-025 and -026). At the time of SALEM's site reconnaissance, the subject property was vacant land with portions covered by native vegetation.

- During visual observations of the subject property, no hazardous substances or petroleum products were observed to be stored or handled on the subject property. Exposed surface soils did not exhibit obvious signs of discoloration. No other obvious evidence (vent pipes, fill pipes, dispensers, etc.) of USTs was noted within the area observed. No standing water or major depressions were observed on the subject property. No indications of former structures, such as foundations, were observed on the subject property.

- Several piles of debris including concrete rubble were observed in various areas within the central portion of the subject property. No evidence of staining or spills was observed on the soil in the vicinity of the piles of debris.

5.2 Adjacent Streets and Property Usage

Table II summarizes the adjacent streets and properties uses observed during the SALEM's site reconnaissance.

TABLE II
Adjacent Streets and Property Use

DIRECTION	ADJACENT STREET	ADJACENT PROPERTY USE
North	West Ramon Expressway	Village at San Jacinto Commercial Development (1171-1191 N. State Street) and Single-Family Residential Development
East	Eagle Road	Single-Family Residential Development
South	None	Vacant Land
West	North State Street/CA-79	Chevron/Extra Mile Gasoline Station (720 N. State Street/CA-79); Castaneda's Mexican Food (1040 N. State Street); Bid Daddy's BBQ (1020 N. State Street)

Based on the observed uses of the properties located immediately adjacent to the subject property, it is unlikely that significant quantities of hazardous substances or petroleum products are stored or handled at the adjoining properties with the exception of the Chevron/Extra Mile Gasoline Station, adjoining the subject property to the west across North State Street, which stored large quantities of gasoline. The Chevron/Extra Mile gasoline station at 720 North State Street/CA-79 was not identified on any government databases of known and reported unauthorized releases of hazardous substances and/or petroleum products to the subsurface. Based upon the absence of reported unauthorized releases, the Chevron/Extra Mile gasoline station is deemed to presently have a low potential to environmentally impact the subject property and therefore, does not present an REC to the subject property.

5.3 Potable Water Source

The water purveyor for the subject property is the City of San Jacinto Water and Wastewater Department (SJWWD). The SJWWD's water quality monitoring is an on-going program with water samples obtained on a regular basis. It is the responsibility of the SJWWD to provide customers with potable water in compliance with the California State Maximum Contaminant Levels (MCLs) for primary drinking water constituents in water supplied to the public. Water sampling was not conducted to verify water quality.

Additionally, SALEM's review of the ALTA/ACSM Land Title Survey prepared by ATC Design Group, dated September 10, 2020 indicates that a domestic water well/pump was located near the central portion of the subject property. It is unknown if the domestic water well is currently located on-site. A water well was not observed during SALEM's site reconnaissance. If the water well is identified during the redevelopment of the subject property, it/they should be properly destroyed in accordance with state and local guidelines.

5.4 Sewage Disposal System

The SJWWD was also contacted regarding sewer service for the subject property. According to a representative with the SJWWD, sewer service is not provided to the subject property. SALEM's review of historical aerial photographs indicates that various structures were formerly located on the subject property. A septic system was likely associated with the former on-site structures. However, it is unknown if a septic system is currently located in the vicinity of the former on-site structures. However, the presence of a septic system is not anticipated to adversely impact the subject property due to its presumed use for domestic purposes only. If a septic system is identified during the redevelopment of the subject property, it should be properly abandoned/closed or destroyed in accordance with state and local guidelines.

5.5 Heating and Cooling Source

No structures are located on the subject property. Therefore, no heating or cooling sources exist at those parcels. No documentation of fuel oil use was identified during review of reasonably ascertainable records and no visual evidence of fuel oil use was identified during the site reconnaissance. Therefore, it is unlikely for a former fuel oil UST to have been used at the subject property and for a release to have occurred.

6.0 USER-PROVIDED INFORMATION

A review of the user-provided Title report and a Phase I ESA User Questionnaire was conducted in order to help identify pertinent information regarding potential environmental impacts associated with the subject property.

6.1 Preliminary Title Report

On April 18, 2022, a Preliminary Title Report for the subject property by Chicago Title Company, dated February 5, 2021, was provided to SALEM by Ms. Kristine Simmons with Rich Development Enterprises, LLC. The Preliminary Title Report was reviewed to identify potential deed restrictions, environmental liens or activity and use limitations (AULs) which may have occurred on or exist in connection with the subject property as indicated by the Preliminary Title Report. SALEM's review of the Preliminary Title Report indicated no deed restrictions, environmental liens, or AULs for the subject property. Please refer to Appendix A for a copy of the Preliminary Title Report.

6.2 Phase I Environmental Site Assessment User Questionnaire

On April 27, 2022, a completed Phase I ESA User Questionnaire was received from Mr. Bart Hollander with Rich Development Enterprises, LLC.

In order to quality for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments"*), the *user* must provide the following information (if available) to the *environmental professional*. Failure to provide this information could result in a determination that *"all appropriate inquiry"* is not complete. The user is asked to provide information or knowledge of the following:

- Environmental cleanup liens that are filed or recorded against the site.
- Activity and land use limitations that are in place on the site or that have been filed or recorded in a registry.
- Specialized knowledge or experience of the person seeking to quality for the LLPs.
- Relationship of the purchase price to the fair market value of the *property* if it were not contaminated.
- Commonly known or *reasonably ascertainable* information about the *property*.
- The degree of obviousness of the presence or likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation.

According to Mr. Hollander, to the best of his knowledge as the user of this Phase I ESA, no environmental cleanup liens and no activity or land use limitations have been filed or recorded against the subject property. Mr. Hollander indicated that he did not have knowledge of the past or current spills or chemical releases or environmental cleanups at the subject property. Additionally, Mr. Hollander indicated that the purchase price of the subject property reasonably reflects fair market value. Please refer to Appendix B for a copy of the completed Phase I ESA User Questionnaire.

7.0 SITE USAGE SURVEY

In order to assess the subject property's history, SALEM reviewed a Phase I ESA Owner Questionnaire, historical aerial photographs, building department records, city directories, planning department records and SFIMs.

7.1 Phase I Environmental Site Assessment Owner Questionnaire

As of the date of issuance of this report, a completed Phase I ESA Owner Questionnaire had not been provided to SALEM. The Phase I ESA Owner Questionnaire is designed to provide pertinent information regarding potential environmental and historical impacts associated with the subject property. Upon receipt of a completed Phase I ESA Owner Questionnaire, and if the Phase I ESA Owner Questionnaire responses alter the conclusions and recommendations of the Phase I ESA, SALEM will issue an addendum to this report summarizing the Phase I ESA Owner Questionnaire responses. Please refer to Appendix C for a blank copy of the Phase I ESA Owner Questionnaire.

7.2 Historical Aerial Photograph Review

Historical aerial photographs of the subject property and vicinity dated 1938, 1949, 1953, 1961, 1967, 1975, 1979, 1985, 1989, 1996, 2002, 2006, 2009, 2012, and 2016 were reviewed to evaluate changes in land use for the subject property. The historical aerial photographs were supplied by EDR. Refer to Appendix D for a copy of the EDR-provided aerial photographs. A summary of the aerial photographs is provided below:

- **1938 Aerial Photograph**
  The northern half of the subject property appears to be utilized for agricultural purposes for the cultivation of hay. The southern portion of the subject property is vacant land. A single-lane unpaved road (present-day Ramona Expressway) adjoins the subject property to the north, beyond which is a residential dwellings and vacant land. Vacant land and agricultural land adjoin the subject property to the east and south. A two-lane paved road (present-day State Street/State Highway 79) adjoins the subject property to the west, beyond which is agricultural land.

- **1949 Aerial Photograph**
  The western portion of the subject property is occupied by agricultural land. Several structures that appear to be associated with the agricultural use of the site occupy the central portion of the subject property. The eastern portion of the subject property is occupied by vacant land and an unpaved road extending off-site to the east. What appears to be a residential dwelling is observed along the southern property boundary. All adjoining properties appear similar to the 1938 aerial photograph with increased agricultural land observed.

- **1953 Aerial Photograph**
  The subject property appears as it did in the 1949 aerial photograph, with the exception of the addition of a long rectangular-shaped structure on the eastern portion of the subject property. All adjoining properties appear similar to the 1949 aerial photograph.

- **1961 Aerial Photograph**
  The subject property and all adjoining properties appear similar to the 1953 aerial photograph.

- **1967 Aerial Photograph**
  The subject property and all adjoining properties appear similar to the 1961 aerial photograph.

- **1975 Aerial Photograph**
  The subject property and all adjoining properties appear similar to the 1967 aerial photograph.

- **1979 Aerial Photograph**
  The subject property appears as it did in the 1975 aerial photograph, with the exception of the western portion of the site which is no longer utilized for agricultural purposes. All adjoining properties appear to be vacant land.

- **1985 Aerial Photograph**
  The subject property appears as it did in the 1979 aerial photograph, with the exception of the absence of several structures formerly located on the central and eastern portions of the subject property. All adjoining properties appear to be vacant land. Single-family residential development is observed in the vicinity of the subject property to the north and northwest.

- **1989 Aerial Photograph**
  The subject property and all adjoining properties appear as they did in the 1985 aerial photograph, with the exception of increased residential development observed to the northeast of the subject property. Additionally, the adjoining streets to the north and west (present-day Ramona Expressway and State Street, respectively) appear to be improved into two-lane asphalt paved roads.

- **1996 Aerial Photograph**
  The subject property is vacant land with no visible structures. The adjoining property to the north, beyond Ramona Expressway, is vacant graded land and single-family residential development. Single-family residential development adjoins the subject property to the east. Vacant land and single-family residential development adjoin the subject property to the south. A rectangular-shaped structure, similar to the Chevron gasoline station observed during SALEM's site reconnaissance, adjoins the subject property to the west across State Street.

- **2002 Aerial Photograph**
  The subject property and all adjoining properties appear similar to the 1996 aerial photograph.

- **2006 Aerial Photograph**
  The subject property and all adjoining properties appear similar to the 2002 aerial photograph, with the exception of two structures (similar in size and shape as the Castaneda's Mexican Food and Big Daddy's BBQ observed during SALEM's site reconnaissance) adjoin the subject property to the west, across State Street.

- **2009 Aerial Photograph**
  The subject property and all adjoining properties appear similar to the 2006 aerial photograph, with the exception of the adjoining property to the north, which is occupied with a retail shopping center (similar to the Village at San Jacinto shopping center observed during SALEM's site reconnaissance).

- **2012 Aerial Photograph**
  The subject property and all adjoining properties appear similar to the 2009 aerial photograph.

- **2016 Aerial Photograph**
  The subject property and all adjoining properties appear similar to the 2012 aerial photograph.

7.3 Building Department Records Review

On May 3, 2022, a records request was made to the City of San Jacinto Building Department (SJBD) for the subject property APNs 434-080-025 and -026 for construction permits, demolition permits, and certifications of occupancy. According to a representative of the SJBD, building permit records are filed by street address, and a street address has not been assigned to the subject property. Therefore, no building permits for items of environmental concern including, USTs, ASTs, septic systems, demolition, or previous structures were on file for the subject property.

7.4 City Directory Image Report

On April 28, 2022, SALEM contracted with EDR to provide a City Directory Image Report dated 1971 through 2017 for the subject property and adjoining properties. The subject property was not listed in the City Directory Image Report. The listed occupants of the adjoining properties did not appear likely to store or handle significant quantities of hazardous substance or petroleum products that may present an REC to the subject property. Please refer to Appendix E for a copy of the EDR-provided City Directory Image Report.

7.5 Sanborn Fire Insurance Maps

SALEM reviews SFIMs to evaluate prior land use at the subject property and adjacent properties. SFIMs typically exist for cities with populations of 2,000 or more, the coverage dependent on the location of the property. On April 26, 2022, SALEM contracted with EDR to provide a Fire Insurance Map Abstract indicating the availability of historic SFIMs for the subject property and adjacent properties as far back as 1867. EDR's search of collections at the Library of Congress, University Publications of America, and various public and local sources revealed no coverage for the subject property and adjacent properties. Please refer to Appendix F for a copy of the EDR SFIM No Coverage Certification.

7.6 Agricultural Chemicals

Review of historical aerial photographs dating to 1938 reveals that the subject property has not been utilized for agricultural purposes since at least 1979. Based upon the length of time since the subject property was last used for agricultural purposes, it is not anticipated that elevated concentrations of environmentally persistent pesticides would be found in the near-surface soils of the subject property. SALEM's sampling and analysis of surface soils from properties with similar histories has typically yielded non-detectable concentrations of environmentally persistent pesticides. It is not anticipated that elevated concentrations of environmentally persistent pesticides would be found in the near-surface soils of the subject property and therefore, the former agricultural use of the subject property does not present an REC to the subject property.

7.7 Phase I Environmental Site Assessment Interview - Previous Owner

SALEM attempted to interview the previous owner of the subject property to provide pertinent information regarding potential environmental and historical impacts associated with the subject property. However, a Phase I ESA interview with the previous owner of the subject property was not reasonably ascertainable.

7.8 Previous Environmental Reports

SALEM was not provided with additional environmental reports for the subject property.

8.0 REGULATORY AGENCY RECORDS REVIEW

SALEM conducted a review of regulatory agency records for the purpose of determining if hazardous substances and/or petroleum products or hazardous wastes have been stored or handled on the subject property and area properties of environmental concern. The most current records available were reviewed.

California Environmental Protection Agency, Department of Toxic Substances Control

SALEM's May 4, 2022 review of the California Environmental Protection Agency (Cal-EPA), Department of Toxic Substances Control (DTSC) EnviroStor database available via the DTSC website (https://www.envirostor.dtsc.ca.gov/public), which tracks federal superfund sites, state response sites, voluntary cleanup sites, and school cleanup sites, indicated that no records of cleanup sites are on file with the DTSC for the subject property or adjoining properties.

California Regional Water Quality Control Board
SALEM's May 4, 2022 review of the RWQCB GeoTracker leaking underground storage tank (LUST) database available via the RWQCB website (https://geotracker.waterboards.ca.gov) indicated that no records of LUSTs are on file with the RWQCB for the subject property or adjoining properties.

California Division of Oil, Gas, and Geothermal Resources
On May 4, 2022, SALEM reviewed the California Geologic Energy Management Division (CalGEM) website (https://maps.conservation.ca.gov/doggr/wellfinder) to evaluate the potential for existing/former oil, gas, or geothermal wells on the subject property or adjoining properties. The subject property vicinity is not located within a geothermal or oil/gas field. The review of CalGEM information does not indicate that an oil, gas, or geothermal well has been drilled on the subject or adjoining properties.

South Coast Air Quality Management District
On May 4, 2022, the South Coast Air Quality Management District (SCAQMD) website (https://xappprod.aqmd.gov/find) was reviewed to identify any records of historical hazardous/flammable permits, hazardous substances and/or petroleum products handling, registered USTs, and/or unauthorized releases of hazardous substances and/or petroleum products for the subject property APNs. According to the SCAQMD website, no records regarding hazardous substances and/or petroleum products handling practices were on file for the subject property.

Riverside County Fire Department-Hazardous Materials Division
On May 4, 2022, the Riverside County Fire Department – Hazardous Material Division (SBCFD-HMD) was contacted regarding records of historical hazardous/flammable permits, hazardous materials handling, hazardous/flammable incidents, and/or registered USTs for the subject property APNs. According to a representative of the SBCFD records, no records were on file for the subject property.

Local Area Tribal Records
According to the EDR Radius Map Report, no tribal records are listed for the subject property or adjoining properties.

8.1 Standard Environmental Record Sources

EDR performed a search of federal, state, and local regulatory agency databases for the subject property and surrounding area. The various search distances as required by ASTM E1527-13 extended up to one mile from the subject property. Several agencies have published documents that list businesses or properties which have handled hazardous materials or hazardous waste, or may have had a documented release of hazardous substances or petroleum products. The databases consulted in the course of this assessment were compiled by EDR on April 26, 2022 and represent reasonably ascertainable current listings. SALEM did not verify the locations and distances of every site listed by EDR. SALEM verified locations and distances of the sites SALEM deemed as having a potential to environmentally impact the subject property. The actual location of the off-site properties identified may differ from the EDR listing. Table III summarizes the listed properties located within the specified ASTM Search Radii. The EDR Radius Map report is included in Appendix G.

0 = No sites in radius identified
--- = Not Searched

The subject property was identified in the EDR-provided government database report on the NPDES and CIWQS databases. The 99 Cents Only Store was identified on these databases for construction related permitting pertaining to stormwater pollution protection, however the permits appear to have been terminated. No NOVs regarding hazardous material/hazardous waste storage and handling practices were identified. The subject property was not listed on any government databases of known or reported releases of hazardous substances or petroleum products to the subsurface. Therefore, the listing of 99 Cents Only Stores listing on these databases does not present an REC to the subject property.

No sites with reported releases of hazardous substances or petroleum products to the subsurface were reported within a one-quarter-mile radius of the subject property.
In general, only hazardous substances or petroleum products released from facilities located approximately up-gradient and within a few hundred feet of the subject property, or in a cross-gradient direction close to the subject property, are judged to have a reasonable potential of migrating to the subject property. This opinion is based on the assumption that hazardous substances and petroleum products generally do not migrate large distances laterally within the soil, but rather tend to migrate with groundwater in the general direction of groundwater flow.

One orphan site was identified in the EDR-provided government database report. Based upon SALEM's visual observations made during our site reconnaissance, as well as various influencing factors including approximate distance from the subject property, the orphan site is deemed to have a low potential to environmentally impact the subject property.

No engineering control sites, sites with institutional controls, or sites with deed restrictions were listed for the subject property, adjoining, or vicinity properties in the EDR-provided government database report.

No Indian reservations or LUSTs on Indian land were reported on the subject property, adjoining, or vicinity properties in the EDR-provided government database report.

The remaining properties identified by EDR within the specified search radius of the subject property, which appeared on local, state, or federally published lists of sites that use of have had releases of hazardous substances or petroleum products, were determined through SALEM's field observations to be of sufficient distance and/or situated hydraulically cross/down-gradient of the subject property, such that impacts to the subject property are not likely.

9.0 POTENTIAL VAPOR ENCROACHMENT CONDITION

Vapor intrusion is a way by which chemicals in soil and groundwater can migrate into indoor air. Chemical vapors moving up through soil and into a building are a potential source of indoor air contamination and may pose a risk to human health. In evaluating the potential for a vapor encroachment condition (VEC) on the subject property, SALEM attempted to determine if there was information indicating that chemicals of concern were located within the "critical distance," defined as the lineal distance between the nearest edge of a contaminated plume and the nearest target property boundary. Based on ASTM E 2600-10 *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*, the "critical distance" is equal to 100 feet, with the exception of dissolved petroleum hydrocarbons, which have a "critical distance" of 30 feet. If non-aqueous phase petroleum hydrocarbons are present, the 100-foot "critical distance" is utilized.

9.1 Vapor Encroachment Screening

SALEM has performed a Vapor Encroachment Screening (Tier 1) in general accordance with the scope and limitations of ASTM Standard Practice E2600-15 for the subject property. SALEM utilized site and site vicinity specific criteria including groundwater gradient, distance of area properties of environmental concern from the subject property, and the types of constituents of concern which were released to evaluate potential vapor encroachment issues. The purpose of this Vapor Encroachment Screening (Tier 1) is to identify the existing or potential Vapor Encroachment Conditions (VEC), (as defined by ASTM E2600-15) affecting the subject property. As part of the screening, SALEM has completed the following questionnaire, as duplicated from Section X3 of ASTM E2600-15.

TABLE IV
Vapor Encroachment Questionnaire

QUESTION	RESPONSE	COMMENTS
1. Property Type?	Vacant	
2. Are there buildings/structures on the subject property?	No	
3. Will buildings/structures be constructed on the subject property in the future?	Yes	
4. If buildings exist or are proposed, do/will they have elevators?	No	
5. Type of level below grade (existing or proposed)?	Slab-on-Grade (proposed)	
6. Is there ventilation below grade?	No	
7. Sump pumps, floor drains, or trenches (existing or proposed)?	No	
8. Radon or methane mitigation system installed?	No	
9. Heating system type (existing or proposed)?	Unknown	
10. Type of fuel energy (existing or proposed)?	Unknown	
11. Have there ever been any environmental problems at the subject property?	No	
12. Does/will a gas station operate anywhere on the subject property?	No	
13. Do any tenants use hazardous chemicals in relatively large quantities on the subject property?	No	
14. Have any tenants ever complained about odors in the building or experience health-related problems that may have been associated with the building?	No	
15. Are the operations (or proposed operations to be performed) on the subject property OSHA regulated?	No	
16. Are there any existing or proposed underground storage tanks (USTs) or aboveground storage tanks (ASTs) located on the subject property?	No	
17. Are there any sensitive receptors (children, elderly, people in poor health, etc.) that occupy or will occupy the subject property?	No	

TABLE V
Additional VEC Criteria

QUESTION	RESPONSE	COMMENTS
1. Is the subject property known to have current or past contamination?	No	
2. Is contamination of the subject property suspected?	No	
3. Is an adjacent property known to have current or past contamination which may have impacted the subject property?	No	
4. Is a nearby property known to have current or past contamination which may have impacted the subject property?	No	
5. Is regional groundwater contamination known to exist beneath the subject property?	No	
6. Are you aware of other conditions which may result in vapor intrusion at the subject property?	No	

Based upon the results of SALEM's Tier 1 VES, it is SALEM's opinion that a potential VEC "likely does not exist" at the subject property. As such, no further assessment is recommended.

10.0 BUSINESS ENVIRONMENTAL RISKS

10.1 Asbestos-Containing Building Materials

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. Asbestos is commonly used as an acoustic insulator, thermal insulation, fire proofing and in other building materials. Friable asbestos-containing material (ACM), when dry, can be crumbled, pulverized, or reduced to powder by hand pressure. Non-friable ACM can be crumbled, pulverized, or reduced to powder during machining, cutting, drilling, or other abrasive procedures. Friable ACM is more likely to release fibers when disturbed or damaged than non-friable ACM. Exposure to airborne friable asbestos may result in a potential health risk because persons breathing the air may breathe in asbestos fibers. Continued exposure can increase the amount of fibers that remain in the lung. Fibers embedded in lung tissue over time may cause serious lung diseases including: asbestosis, lung cancer, or mesothelioma. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be *presumed* to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building constructed prior to 1981 and have not been appropriately tested are "presumed asbestos-containing material" (PACM).

During SALEM's site reconnaissance, no structures were observed on the subject property. Therefore, ACMs are not considered an on-site environmental concern at this time.

10.2 Lead-Based Paint

Lead is a highly toxic metal that affects virtually every system of the body. While adults can suffer from excessive lead exposures, the groups most at risk are fetuses, infants, and children under 6. The Consumer Product Safety Commission banned the use of lead in paint in 1978. Most manufactures, however, had ceased using lead well before this time. Paint applied after 1978 is not considered suspect LBP. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as "Title X," to protect families from exposure to lead from paint, dust, and soil. Section 1018 of this law directed the Housing and Urban Development (HUD) and the US EPA to require the disclosure of known information on lead-based paint (LBP) and LBP hazards before the sale or lease of most housing built before 1978. Sellers, landlords, and their agents are responsible for providing this information to the buyer or renter before sale or lease.

According to Section 1017 of Title X, "LBP hazard is any condition that causes exposure to lead from lead-contaminated dust; bare, lead-contaminated soil; or LBP that is deteriorated or intact LBP present on accessible surfaces, friction surfaces, or impact surfaces that would result in adverse human health effects." Therefore, under Title X intact lead-based paint on most walls and ceilings is not considered a "hazard," although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated. LBP is defined as any paint, varnish, stain, or other applied coating that has 1.0 mg/cm2 (or 5,000 µg/g by weight) or more of lead.

During SALEM's site reconnaissance, no structures were observed on the subject property. Therefore, LBP is not considered an on-site environmental concern at this time.

10.3 Radon

Radon is a naturally occurring gaseous substance resulting from the radioactive decay of uranium to radium and then to radon. Uranium is a common element found in many geologic formations and substrates, particularly igneous and metamorphic rocks. Radon has a half-life of only 3.8 days and decays to its daughter elements (polonium 218, polonium 214, bismuth 214, and lead 214). It is these daughter elements that represent the health hazard commonly associated with radon. Radon gas can enter a building through cracks in the foundation and walls and become attached to dust particles and inhaled which could cause damage to human lung tissue. Radon is measured in picocuries per liter of air (pCi/L). The EPA has an established safe radon level of 4 pCi/L. Based on the EPA Radon Zone Map of California, the subject Property is located within **EPA Zone 2**, which has a predicted indoor radon screening between 2 pCi/L and 4 pCi/L (Low Potential). The EDR-provided radon data cites Riverside County as having 100% of 22 1st floor spaces with <4 pCi/L. However, radon levels may vary from one area to another and the only way to accurately assess radon gas levels on the subject property is to conduct a radon gas survey.

10.4 Mold

Molds are microscopic organisms found virtually everywhere, indoors, and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g.in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding). Mold growths often appear as discoloration, staining, or fuzzy growth on building materials or furnishings and are varied colors of white, gray, brown, black, yellow, and green. In large quantities, molds can cause allergic symptoms when inhaled or through the toxins the molds emit.

During SALEM's site reconnaissance, no structures were observed on the subject property. Therefore, mold is not considered an on-site environmental concern at this time.

11.0 DISCUSSION OF FINDINGS

Historical Uses

The subject property comprises two rectangular-shaped parcels of land totaling approximately 14.44 acres located on the southeast corner of State Street and West Ramona Expressway in San Jacinto, California (Riverside County APNS 434-080-025 and -026). SALEM's review of historical aerial photographs, historical city directories, and SJBD records indicates that the subject property was utilized for agricultural purposes, possibly for the cultivation of hay, from at least 1938 until approximately 1979. Several structures likely associated with the agricultural use of the site occupied the central and eastern portions of the site from at least 1949 until they were demolished by 1985. By 1996, the subject property was vacant land.

Based on SALEM's site reconnaissance, and contacts with state and local regulatory agencies, the potential for RECs to exist in connection with the historical use of the subject property appears to be low.

Current Uses
At the time of SALEM's site reconnaissance, the subject property was vacant land with portions covered by native vegetation.

During the visual observations of the subject property, no hazardous substances or petroleum products were observed to be stored or handled on the subject property. Exposed surface soils did not exhibit obvious signs of discoloration. No other obvious evidence (vent pipes, fill pipes, dispensers, etc.) of USTs was noted within the area observed. No standing water or major depressions were observed on the subject property. Several piles of debris including concrete rubble were observed in various areas within the central portion of the subject property. No evidence of staining or spills was observed on the soil in the vicinity of the piles of debris.

Based on SALEM's, field observations, and contacts with state and local regulatory agencies, the potential for adverse environmental impacts to the subject property associated with current site use appears to be low and therefore, there is a low potential for RECs to exist in connection with the current use of the subject property.

Adjoining Properties
Based on SALEM's field observations, review of the EDR Radius Map Report and consultation with state and local regulatory agencies, the potential for RECs to exist in connection with the subject property from adjoining property uses appears to be low.

11.1 Evaluation of Data Gaps/Data Failure

In accordance with ASTM E1527-13 guidance, data gaps represent a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice. Data failure represents the failure to achieve the historical research objects of this practice even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful. Data failure is one type of data gap. The following is a summary of data gaps encountered in the process of preparing this report including an observation as the presumed significance of that data gap to the conclusions of this assessment.

- Some of the intervals between documented sources exceeded five years.

However, taken in consideration with the available information obtained in the course of preparing this report in conjunction with professional experience, there is no evidence to suggest that these data gaps might alter the conclusions of this assessment.

12.0 SUMMARY AND CONCLUSIONS

We have performed a *Phase I Environmental Site Assessment* in conformance with the scope and limitations of ASTM Practice E1527-13 for the Proposed Commercial Development located on the southeast corner of State Street and West Ramona Expressway in San Jacinto, California (Riverside County APNS 434-080-025 and -026) the *property*. Any exceptions to, or deletions from, this practice are described in Section 13 of this *report*. During the course of this assessment, SALEM identified no evidence of RECs in connection with the subject property as defined by ASTM E1527-13.

13.0 LIMITATIONS

This Phase I ESA Report has been prepared for the exclusive use of **Rich Development Enterprises, LLC** and their subsidiaries and affiliates. Unauthorized use of or reliance on the information contained in this report, unless given express written consent by SALEM and **Rich Development Enterprises, LLC** is strictly prohibited. The following limitations and exceptions apply:

- The scope of work completed was designed solely to meet the needs of SALEM's client. SALEM shall not be liable for any unintended usage of this report by another party. In addition, based on the ASTM guidelines, the ESA is only valid if completed within 180 days of an acquisition or the transaction necessitating the ESA.

- No ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. This ESA was designed to reduce, but not eliminate the potential for RECs at the subject property, within reasonable limits of time and cost. The ESA is not intended to be exhaustive or all-inclusive and does not represent a guarantee of the identification of all possible environmental risk.

- An ESA is intended to be a non-intrusive investigation and generally does not include sampling or testing of air, soil, water or building materials. No destructive testing was completed and concealed areas, such as behind walls or within machinery, were not accessed. Testing, if any, is designed solely to meet the needs of the ESA, not to meet any local, state, or federal regulations and should not be utilized as such.

- Information in this report is based on personal interviews, government records, published resources, and various historical documents. Accuracy and completeness of information varies among information sources and is often inaccurate or incomplete. The information utilized in this ESA is from sources deemed to be reliable; however, no representation or warranty is made as to the accuracy thereof. SALEM will have no ongoing obligation to obtain and include information that was not reasonably ascertainable, practically reviewable or provided to SALEM in a reasonable timeframe to formulate an opinion and complete the assessment by the agreed upon due date.

- Unless specifically identified in the scope of work, the ESA excludes consideration of non-ASTM scope issues including, but not limited to, lead in drinking water, asbestos, lead-based paint, industrial hygiene, health and safety, endangered species, wetlands, indoor air quality, vapor intrusion, electromagnetic fields, biological agents, or mold.

- The ESA includes some information that may be relevant to regulatory compliance, but is not intended and shall not be construed as a compliance audit and cannot be considered a verification of regulatory compliance. While the general environmental setting of the subject property is described, this assessment is not intended to be a formal flood plain or wetland determination, and no warranty is made thereof. Depending on its past, present, or future intended use, the property under review may or may not be subject to regulation and permitting under environmental and health and safety laws, such as, but not limited to, the Clean Air Act, the Clean Water Act, the Solid Waste Disposal Act, the Occupational Safety and Health Act, and other federal, state, and local regulations. SALEM assumes no responsibility or liability respecting regulatory permitting or compliance issues.

- Client is advised that if the ESA is obtained with the intent of qualifying the purchaser as an innocent landowner, contiguous property owner, or bona fide prospective purchaser under CERCLA, there

will be continuing obligations of due care and responsiveness and additional legal requirements that likely apply to such status. SALEM accepts and undertakes no responsibility as to such requirements and advises that counsel be separately consulted with respect to such requirements.

- The findings and conclusions presented in this Phase I ESA Report are based on field review and observations and on data obtained from the sources listed in the report. The findings of this report are valid as of the present. The passage of time, natural processes or human intervention on the subject property or adjacent properties and changes in the regulations can cause changed conditions which can invalidate the findings and conclusions presented in this report.

14.0 QUALIFICATIONS

This Phase I ESA was conducted under the supervision or responsible charge of SALEM's undersigned environmental professional with oversight from the undersigned registered engineer. The work was conducted in accordance with ASTM E1527-13, generally accepted industry standards for environmental due diligence in place at the time of the preparation of this report, and SALEM's quality-control policies.

We declare that, to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in §312.10 of 40 CFR 312 and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

PRELIMINARY REPORT

In response to the application for a policy of title insurance referenced herein, ***Chicago Title Company*** *hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a policy or policies of title insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an exception herein or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations or Conditions of said policy forms.*

The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said policy or policies are set forth in Attachment One. The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. Limitations on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Attachment One. Copies of the policy forms should be read. They are available from the office which issued this report.

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

The policy(s) of title insurance to be issued hereunder will be policy(s) of Chicago Title Insurance Company, a Florida corporation.

Please read the exceptions shown or referred to herein and the exceptions and exclusions set forth in Attachment One of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered.

It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects and encumbrances affecting title to the land.

PRELIMINARY REPORT

EFFECTIVE DATE: **February 5, 2021 at 7:30 a.m.**

ORDER NO.: 00109105-994-LT2-JC

The form of policy or policies of title insurance contemplated by this report is:

1. THE ESTATE OR INTEREST IN THE LAND HEREINAFTER DESCRIBED OR REFERRED TO COVERED BY THIS REPORT IS:

   Fee Estate

2. TITLE TO SAID ESTATE OR INTEREST AT THE DATE HEREOF IS VESTED IN:

   99 CENTS ONLY STORES, LLC, a California limited liability company formerly known as 99¢ Only Stores, a California corporation

3. THE LAND REFERRED TO IN THIS REPORT IS DESCRIBED AS FOLLOWS:

   See Exhibit A attached hereto and made a part hereof.

EXHIBIT "A"

LEGAL DESCRIPTION

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE CITY OF SAN JACINTO, IN THE COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

PARCELS 1 AND 2 AND LETTERED LOT B, IN THE CITY OF SAN JACINTO, COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, AS SHOWN BY PARCEL MAP 22092 RECORDED IN BOOK 147, PAGES 43 AND 44 OF PARCEL MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF RIVERSIDE COUNTY, CALIFORNIA.

EXCEPTING THEREFROM ALL WATER, OIL, MINERAL, GAS AND OTHER HYDROCARBON SUBSTANCES BELOW A DEPTH OF 250 FEET UNDER THE LAND PROPERTY DESCRIBED ON EXHIBIT 1 ATTACHED HERETO AND INCORPORATED HEREIN REFERENCE WITHOUT THE RIGHT OF SURFACE ENTRY, AS QUITCLAIMED CARL H. QUANDT, AN UNMARRIED MAN BY DOCUMENT RECORDED APRIL 14, 1987 AS INSTRUMENT NO. 102895 OF OFFICIAL RECORDS OF RIVERSIDE COUNTY, CALIFORNIA.

APN: **434-080-025 & 026**

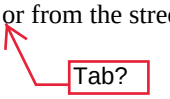
EXCEPTIONS

AT THE DATE HEREOF, ITEMS TO BE CONSIDERED AND EXCEPTIONS TO COVERAGE IN ADDITION TO THE PRINTED EXCEPTIONS AND EXCLUSIONS IN SAID POLICY FORM WOULD BE AS FOLLOWS:

A. Property taxes, which are a lien not yet due and payable, including any assessments collected with taxes to be levied for the fiscal year 2021-2022.

B. Property taxes, including any personal property taxes and any assessments collected with taxes, are as follows:

Tax Identification No.:	434-080-025-2
Fiscal Year:	2020-2021
1st Installment:	$1,747.00, paid.
2nd Installment:	$1,747.00, Unpaid (Delinquent by April 10, 2021)
Penalty and Cost:	$212.76
Homeowners Exemption:	$-None-
Code Area:	010-029



C. Property taxes, including any personal property taxes and any assessments collected with taxes, are as follows:

Tax Identification No.:	434-080-026-3
Fiscal Year:	2019-2020
1st Installment:	$10,740.97, paid.
2nd Installment:	$10,740.97, Unpaid (Delinquent by April 10, 2021)
Penalty and Cost:	$1,112.16
Homeowners Exemption:	$-None-
Code Area:	010-029

D. The lien of supplemental or escaped assessments of property taxes, if any, made pursuant to the provisions of Chapter 3.5 (commencing with Section 75) or Part 2, Chapter 3, Articles 3 and 4, respectively, of the Revenue and Taxation Code of the State of California as a result of the transfer of title to the vestee named in Schedule A or as a result of changes in ownership or new construction occurring prior to Date of Policy.

1. Water rights, claims or title to water, whether or not disclosed by the public records.

2. The ownership of said Land does not include rights of access to or from the street, highway, or freeway abutting said Land, such rights having been relinquished by the document,

Recording Date:	August 30, 1983
Recording No:	83-176739, Official Records
Affects:	That portion of said land abutting Ramona Expressway

3. Easement(s) for the purpose(s) shown below and rights incidental thereto, as granted in a document:

Granted to:	City of San Jacinto, a California Municipality
Purpose:	public utilities, wells site and waterlines
Recording Date:	December 12, 1985
Recording No:	85-279922, Official Records
Affects:	A portion of said land.

EXCEPTIONS
(Continued)

4. Easement(s) for the purpose(s) shown below and rights incidental thereto, as granted in a document:

Granted to:	City of San Jacinto, a California Municipality
Purpose:	sanitary sewer purposes
Recording Date:	October 11, 1986
Recording No:	86-252625, Official Records
Affects:	A portion of said land.

5. Easement(s) for the purpose(s) shown below and rights incidental thereto, as granted in a document:

Granted to:	City of San Jacinto, a California Municipality
Purpose:	public utilities and sewer
Recording Date:	November 21, 1986
Recording No:	86-296240, Official Records
Affects:	A portion of said land.

Link has expired.

6. The effect of a Declaration of Dedication as shown by the Owners Certificate on Parcel Map No. 22092, purporting to irrevocably dedicate in perpetuity for public road purposes, including public utility and public service uses, the property described therein.

7. Easement(s) for the purpose(s) shown below and rights incidental thereto, as delineated on or as offered for dedication on

Map/Plat:	Parcel Map 22092
Recording No:	in Book 147, Pages 43 and 44 of Parcel Maps
Purpose:	storm drain and access
Affects:	That portion of said land as shown on said parcel map.

Link has expired

8. The Land described herein is included within a project area of the Redevelopment Agency shown below, and that proceedings for the redevelopment of said project have been instituted under the Redevelopment Law (such redevelopment to proceed only after the adoption of the Redevelopment Plan) as disclosed by a document.

Redevelopment Agency:	San Jacinto Redevelopment Project Amendment No. 1
Recording Date:	December 29, 1993
Recording No:	520075, Official Records

Site is in an RDA. City has not raised any issues.

9. The Land described herein is included within a project area of the Redevelopment Agency shown below, and that proceedings for the redevelopment of said project have been instituted under the Redevelopment Law (such redevelopment to proceed only after the adoption of the Redevelopment Plan) as disclosed by a document.

Redevelopment Agency:	San Jacinto Redevelopment Project Area
Recording Date:	December 26, 2007
Recording No:	2007-0764103, Official Records

Link has expired

10. The effect of State Highway right of way vicinity map depicting the proposed relinquishment to the City of San Jacinto, that portion of the Ramona Expressway (State Highway 79) lying adjacent to said land, filed in Book 11, Pages 65 through 69, inclusive of State Highway Maps, recorded June 6, 2007 as Instrument No. 2007-0372192 of Official Records.

Tab?

11. Please be advised that our search did not disclose any open Deeds of Trust of record. If you should have knowledge of any outstanding obligation, please contact the Title Department immediately for further review prior to closing.

EXCEPTIONS
(Continued)

12. Any easements not disclosed by the public records as to matters affecting title to real property, whether or not said easements are visible and apparent.

13. Matters which may be disclosed by an inspection and/or by a correct ALTA/NSPS Land Title Survey of said Land that is satisfactory to the Company, and/or by inquiry of the parties in possession thereof.

14. Any rights of the parties in possession of a portion of, or all of, said Land, which rights are not disclosed by the public records.

    The Company will require, for review, a full and complete copy of any unrecorded agreement, contract, license and/or lease, together with all supplements, assignments and amendments thereto, before issuing any policy of title insurance without excepting this item from coverage.

    The Company reserves the right to except additional items and/or make additional requirements after reviewing said documents.

PLEASE REFER TO THE "INFORMATIONAL NOTES" AND "REQUIREMENTS" SECTIONS WHICH FOLLOW FOR INFORMATION NECESSARY TO COMPLETE THIS TRANSACTION.

END OF EXCEPTIONS

REQUIREMENTS SECTION

1. Unrecorded matters which may be disclosed by an Owner's Affidavit or Declaration. A form of the Owner's Affidavit/Declaration is attached to this Preliminary Report/Commitment. This Affidavit/Declaration is to be completed by the record owner of the land and submitted for review prior to the closing of this transaction. Your prompt attention to this requirement will help avoid delays in the closing of this transaction. Thank you.

   The Company reserves the right to add additional items or make further requirements after review of the requested Affidavit/Declaration.

2. The Company will require the following documents for review prior to the issuance of any title insurance predicated upon a conveyance or encumbrance from the entity named below:

   Limited Liability Company: 99 CENTS ONLY STORES, LLC, a California limited liability company

   a) A copy of its operating agreement, if any, and all amendments, supplements and/or modifications thereto, certified by the appropriate manager or member.

   b) If a domestic Limited Liability Company, a copy of its Articles of Organization and all amendments thereto with the appropriate filing stamps.

   c) If the Limited Liability Company is member-managed, a full and complete current list of members certified by the appropriate manager or member.

   d) A current dated certificate of good standing from the proper governmental authority of the state in which the entity is currently domiciled.

   e) If less than all members, or managers, as appropriate, will be executing the closing documents, furnish evidence of the authority of those signing.

   f) If Limited Liability Company is a Single Member Entity, a Statement of Information for the Single Member will be required.

   g) Each member and manager of the LLC without an Operating Agreement must execute in the presence of a notary public the Certificate of California LLC (Without an Operating Agreement) Status and Authority form.

END OF REQUIREMENTS

INFORMATIONAL NOTES SECTION

1. None of the items shown in this report will cause the Company to decline to attach ALTA Endorsement Form 9 to an Extended Coverage Loan Policy, when issued.

2. The Company is not aware of any matters which would cause it to decline to attach CLTA Endorsement Form 116 indicating that there is located on said Land Commercial properties, known as 788 W. Ramona Expressway, located within the city of San Jacinto, California, , to an Extended Coverage Loan Policy.

3. Note: The policy of title insurance will include an arbitration provision. The Company or the insured may demand arbitration. Arbitrable matters may include, but are not limited to, any controversy or claim between the Company and the insured arising out of or relating to this policy, any service of the Company in connection with its issuance or the breach of a policy provision or other obligation. Please ask your escrow or title officer for a sample copy of the policy to be issued if you wish to review the arbitration provisions and any other provisions pertaining to your Title Insurance coverage.

4. Notice: Please be aware that due to the conflict between federal and state laws concerning the cultivation, distribution, manufacture or sale of marijuana, the Company is not able to close or insure any transaction involving Land that is associated with these activities.

5. Pursuant to Government Code Section 27388.1, as amended and effective as of 1-1-2018, a Documentary Transfer Tax (DTT) Affidavit may be required to be completed and submitted with each document when DTT is being paid or when an exemption is being claimed from paying the tax. If a governmental agency is a party to the document, the form will not be required. DTT Affidavits may be available at a Tax Assessor-County Clerk-Recorder.

6. Due to the special requirements of SB 50 (California Public Resources Code Section 8560 et seq.), any transaction that includes the conveyance of title by an agency of the United States must be approved in advance by the Company's State Counsel, Regional Counsel, or one of their designees.

7. Note: There are NO conveyances affecting said Land recorded within 24 months of the date of this report.

END OF INFORMATIONAL NOTES

Jordan Curiel (LA/Comm)/od

Wire Fraud Alert

This Notice is not intended to provide legal or professional advice. If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. DO NOT use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the phone number of relevant parties to the transaction as soon as an escrow account is opened**. DO NOT send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do NOT reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

FIDELITY NATIONAL FINANCIAL, INC.
PRIVACY NOTICE

Effective January 1, 2020

Fidelity National Financial, Inc. and its majority-owned subsidiary companies (collectively, "FNF," "our," or "we") respect and are committed to protecting your privacy. This Privacy Notice explains how we collect, use, and protect personal information, when and to whom we disclose such information, and the choices you have about the use and disclosure of that information.

A limited number of FNF subsidiaries have their own privacy notices. If a subsidiary has its own privacy notice, the privacy notice will be available on the subsidiary's website and this Privacy Notice does not apply.

Collection of Personal Information

FNF may collect the following categories of Personal Information:

- contact information (*e.g.*, name, address, phone number, email address);
- demographic information (*e.g.*, date of birth, gender, marital status);
- identity information (*e.g.* Social Security Number, driver's license, passport, or other government ID number);
- financial account information (*e.g.* loan or bank account information); and
- other personal information necessary to provide products or services to you.

We may collect Personal Information about you from:

- information we receive from you or your agent;
- information about your transactions with FNF, our affiliates, or others; and
- information we receive from consumer reporting agencies and/or governmental entities, either directly from these entities or through others.

Collection of Browsing Information

FNF automatically collects the following types of Browsing Information when you access an FNF website, online service, or application (each an "FNF Website") from your Internet browser, computer, and/or device:

- Internet Protocol (IP) address and operating system;
- browser version, language, and type;
- domain name system requests; and
- browsing history on the FNF Website, such as date and time of your visit to the FNF Website and visits to the pages within the FNF Website.

Like most websites, our servers automatically log each visitor to the FNF Website and may collect the Browsing Information described above. We use Browsing Information for system administration, troubleshooting, fraud investigation, and to improve our websites. Browsing Information generally does not reveal anything personal about you, though if you have created a user account for an FNF Website and are logged into that account, the FNF Website may be able to link certain browsing activity to your user account.

Other Online Specifics

Cookies. When you visit an FNF Website, a "cookie" may be sent to your computer. A cookie is a small piece of data that is sent to your Internet browser from a web server and stored on your computer's hard drive. Information gathered using cookies helps us improve your user experience. For example, a cookie can help the website load properly or can customize the display page based on your browser type and user preferences. You can choose whether or not to accept cookies by changing your Internet browser settings. Be aware that doing so may impair or limit some functionality of the FNF Website.

Web Beacons. We use web beacons to determine when and how many times a page has been viewed. This information is used to improve our websites.

Do Not Track. Currently our FNF Websites do not respond to "Do Not Track" features enabled through your browser.

Links to Other Sites. FNF Websites may contain links to unaffiliated third-party websites. FNF is not responsible for the privacy practices or content of those websites. We recommend that you read the privacy policy of every website you visit.

Use of Personal Information

FNF uses Personal Information for three main purposes:

- To provide products and services to you or in connection with a transaction involving you.
- To improve our products and services.
- To communicate with you about our, our affiliates', and others' products and services, jointly or independently.

When Information Is Disclosed

We may disclose your Personal Information and Browsing Information in the following circumstances:

- to enable us to detect or prevent criminal activity, fraud, material misrepresentation, or nondisclosure;
- to nonaffiliated service providers who provide or perform services or functions on our behalf and who agree to use the information only to provide such services or functions;

Copyright © 2017. Fidelity National Financial, Inc. All Rights Reserved

- to nonaffiliated third party service providers with whom we perform joint marketing, pursuant to an agreement with them to jointly market financial products or services to you;
- to law enforcement or authorities in connection with an investigation, or in response to a subpoena or court order; or
- in the good-faith belief that such disclosure is necessary to comply with legal process or applicable laws, or to protect the rights, property, or safety of FNF, its customers, or the public.

The law does not require your prior authorization and does not allow you to restrict the disclosures described above. Additionally, we may disclose your information to third parties for whom you have given us authorization or consent to make such disclosure. We do not otherwise share your Personal Information or Browsing Information with nonaffiliated third parties, except as required or permitted by law. We do share Personal Information among affiliates (other companies owned by FNF) to directly market to you. Please see "Choices with Your Information" to learn how to restrict that sharing.

We reserve the right to transfer your Personal Information, Browsing Information, and any other information, in connection with the sale or other disposition of all or part of the FNF business and/or assets, or in the event of bankruptcy, reorganization, insolvency, receivership, or an assignment for the benefit of creditors. By submitting Personal Information and/or Browsing Information to FNF, you expressly agree and consent to the use and/or transfer of the foregoing information in connection with any of the above described proceedings.

Security of Your Information
We maintain physical, electronic, and procedural safeguards to protect your Personal Information.

Choices With Your Information
If you do not want FNF to share your information among our affiliates to directly market to you, you may send an "opt out" request by email, phone, or physical mail as directed at the end of this Privacy Notice. We do not share your Personal Information with nonaffiliates for their use to direct market to you.

Whether you submit Personal Information or Browsing Information to FNF is entirely up to you. If you decide not to submit Personal Information or Browsing Information, FNF may not be able to provide certain services or products to you.

For California Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties, except as permitted by California law. For additional information about your California privacy rights, please visit the "California Privacy" link on our website (https://fnf.com/pages/californiaprivacy.aspx) or call (888) 413-1748.

For Nevada Residents: You may be placed on our internal Do Not Call List by calling (888) 934-3354 or by contacting us via the information set forth at the end of this Privacy Notice. Nevada law requires that we also provide you with the following contact information: Bureau of Consumer Protection, Office of the Nevada Attorney General, 555 E. Washington St., Suite 3900, Las Vegas, NV 89101; Phone number: (702) 486-3132; email: BCPINFO@ag.state.nv.us.
For Oregon Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties for marketing purposes, except after you have been informed by us of such sharing and had an opportunity to indicate that you do not want a disclosure made for marketing purposes.

For Vermont Residents: We will not disclose information about your creditworthiness to our affiliates and will not disclose your personal information, financial information, credit report, or health information to nonaffiliated third parties to market to you, other than as permitted by Vermont law, unless you authorize us to make those disclosures.

Information From Children
The FNF Websites are not intended or designed to attract persons under the age of eighteen (18).We do not collect Personal Information from any person that we know to be under the age of thirteen (13) without permission from a parent or guardian.

International Users
FNF's headquarters is located within the United States. If you reside outside the United States and choose to provide Personal Information or Browsing Information to us, please note that we may transfer that information outside of your country of residence. By providing FNF with your Personal Information and/or Browsing Information, you consent to our collection, transfer, and use of such information in accordance with this Privacy Notice.

FNF Website Services for Mortgage Loans
Certain FNF companies provide services to mortgage loan servicers, including hosting websites that collect customer information on behalf of mortgage loan servicers (the "Service Websites"). The Service Websites may contain links to both this Privacy Notice and the mortgage loan servicer or lender's privacy notice. The sections of this Privacy Notice titled When Information is Disclosed, Choices with Your Information, and Accessing and Correcting Information do not apply to the Service Websites. The mortgage loan servicer or lender's privacy notice governs use, disclosure, and access to your Personal Information. FNF does not share Personal Information collected through the Service Websites, except as required or authorized by contract with the mortgage loan servicer or lender, or as required by law or in the good-faith belief that such disclosure is necessary: to comply with a legal process or applicable law, to enforce this Privacy Notice, or to protect the rights, property, or safety of FNF or the public.

Your Consent To This Privacy Notice; Notice Changes; Use of Comments or Feedback
By submitting Personal Information and/or Browsing Information to FNF, you consent to the collection and use of the information in accordance with this Privacy Notice. We may change this Privacy Notice at any time. The Privacy Notice's effective date will show the

 Copyright © 2017. Fidelity National Financial, Inc. All Rights Reserved

last date changes were made. If you provide information to us following any change of the Privacy Notice, that signifies your assent to and acceptance of the changes to the Privacy Notice. We may use comments or feedback that you submit to us in any manner without notice or compensation to you.

Accessing and Correcting Information; Contact Us

If you have questions, would like to correct your Personal Information, or want to opt-out of information sharing for affiliate marketing, send your requests to privacy@fnf.com, by phone to (888) 934-3354, or by mail to:

Notice of Available Discounts

Pursuant to Section 2355.3 in Title 10 of the California Code of Regulations Fidelity National Financial, Inc. and its subsidiaries ("FNF") must deliver a notice of each discount available under our current rate filing along with the delivery of escrow instructions, a preliminary report or commitment. Please be aware that the provision of this notice does not constitute a waiver of the consumer's right to be charged the field rate. As such, your transaction may not qualify for the below discounts.

You are encouraged to discuss the applicability of one or more of the below discounts with a Company representative. These discounts are generally described below; consult the rate manual for a full description of the terms, conditions and requirements for each discount. These discounts only apply to transaction involving services rendered by the FNF Family of Companies. This notice only applies to transactions involving property improved with a one-to-four family residential dwelling.

FNF Underwritten Title Company
CTC - Chicago Title Company

FNF Underwriter
CTIC - Chicago Title Insurance Company

Available Discounts

CREDIT FOR PRELIMINARY REPORTS AND/OR COMMITMENTS ON SUBSEQUENT POLICIES (CTIC)
Where no major change in the title has occurred since the issuance of the original report or commitment, the order may be reopened within 12 months and all or a portion of the charge previously paid for the report or commitment may be credited on a subsequent policy charge within the following time period from the date of the report.

DISASTER LOANS (CTIC)
The charge for a lender's Policy (Standard or Extended coverage) covering the financing or refinancing by an owner of record, within 24 months of the date of a declaration of a disaster area by the government of the United States or the State of California on any land located in said area, which was partially or totally destroyed in the disaster, will be 50% of the appropriate title insurance rate.

CHURCHES OR CHARITABLE NON-PROFIT ORGANIZATIONS (CTIC)
On properties used as a church or for charitable purposes within the scope of the normal activities of such entities, provided said charge is normally the church's obligation the charge for an owner's policy shall be 50% to 70% of the appropriate title insurance rate, depending on the type of coverage selected. The charge for a lender's policy shall be 40% to 50% of the appropriate title insurance rate, depending on the type of coverage selected.

EMPLOYEE RATE (CTC and CTIC)
No charge shall be made to employees (including employees on approved retirement) of the Company or its underwritten, subsidiary title companies for policies or escrow services in connection with financing, refinancing, sale or purchase of the employees' bona fide home property. Waiver of such charges is authorized only in connection with those costs which the employee would be obligated to pay, by established custom, as a party to the transaction.

CALIFORNIA LAND TITLE ASSOCIATION
STANDARD COVERAGE POLICY – 1990

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims or other matters:
   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
   (c) resulting in no loss or damage to the insured claimant;
   (d) attaching or created subsequent to Date of Policy; or
   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any claim, which arises out of the transaction vesting in the insured the estate of interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
   Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.
3. Easements, liens or encumbrances, or claims thereof, not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

CLTA HOMEOWNER'S POLICY OF TITLE INSURANCE (12-02-13)
ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE

EXCLUSIONS

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:
   a. building;
   b. zoning;
   c. land use;
   d. improvements on the Land;
   e. land division; and
   f. environmental protection.
   This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.
2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.
3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.
4. Risks:
   a. that are created, allowed, or agreed to by You, whether or not they are recorded in the Public Records;
   b. that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the Policy Date;

c. that result in no loss to You; or
d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.

5. Failure to pay value for Your Title.
6. Lack of a right:
   a. to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
   b. in streets, alleys, or waterways that touch the Land.

   This Exclusion does not limit the coverage described in Covered Risk 11 or 21.
7. The transfer of the Title to You is invalid as a preferential transfer or as a fraudulent transfer or conveyance under federal bankruptcy, state insolvency, or similar creditors' rights laws.
8. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
9. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:

- For Covered Risk 16, 18, 19, and 21 Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

	Your Deductible Amount	Our Maximum Dollar Limit of Liability
Covered Risk 16:	1.00% % of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 10,000.00
Covered Risk 18:	1.00% % of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 19:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 21:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 5,000.00

2006 ALTA LOAN POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13 or 14); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

(Except as provided in Schedule B - Part II,(t(or T)his policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:

(PART I

(The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the Public Records.

PART II

In addition to the matters set forth in Part I of this Schedule, the Title is subject to the following matters, and the Company insures against loss or damage sustained in the event that they are not subordinate to the lien of the Insured Mortgage:)

2006 ALTA OWNER'S POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

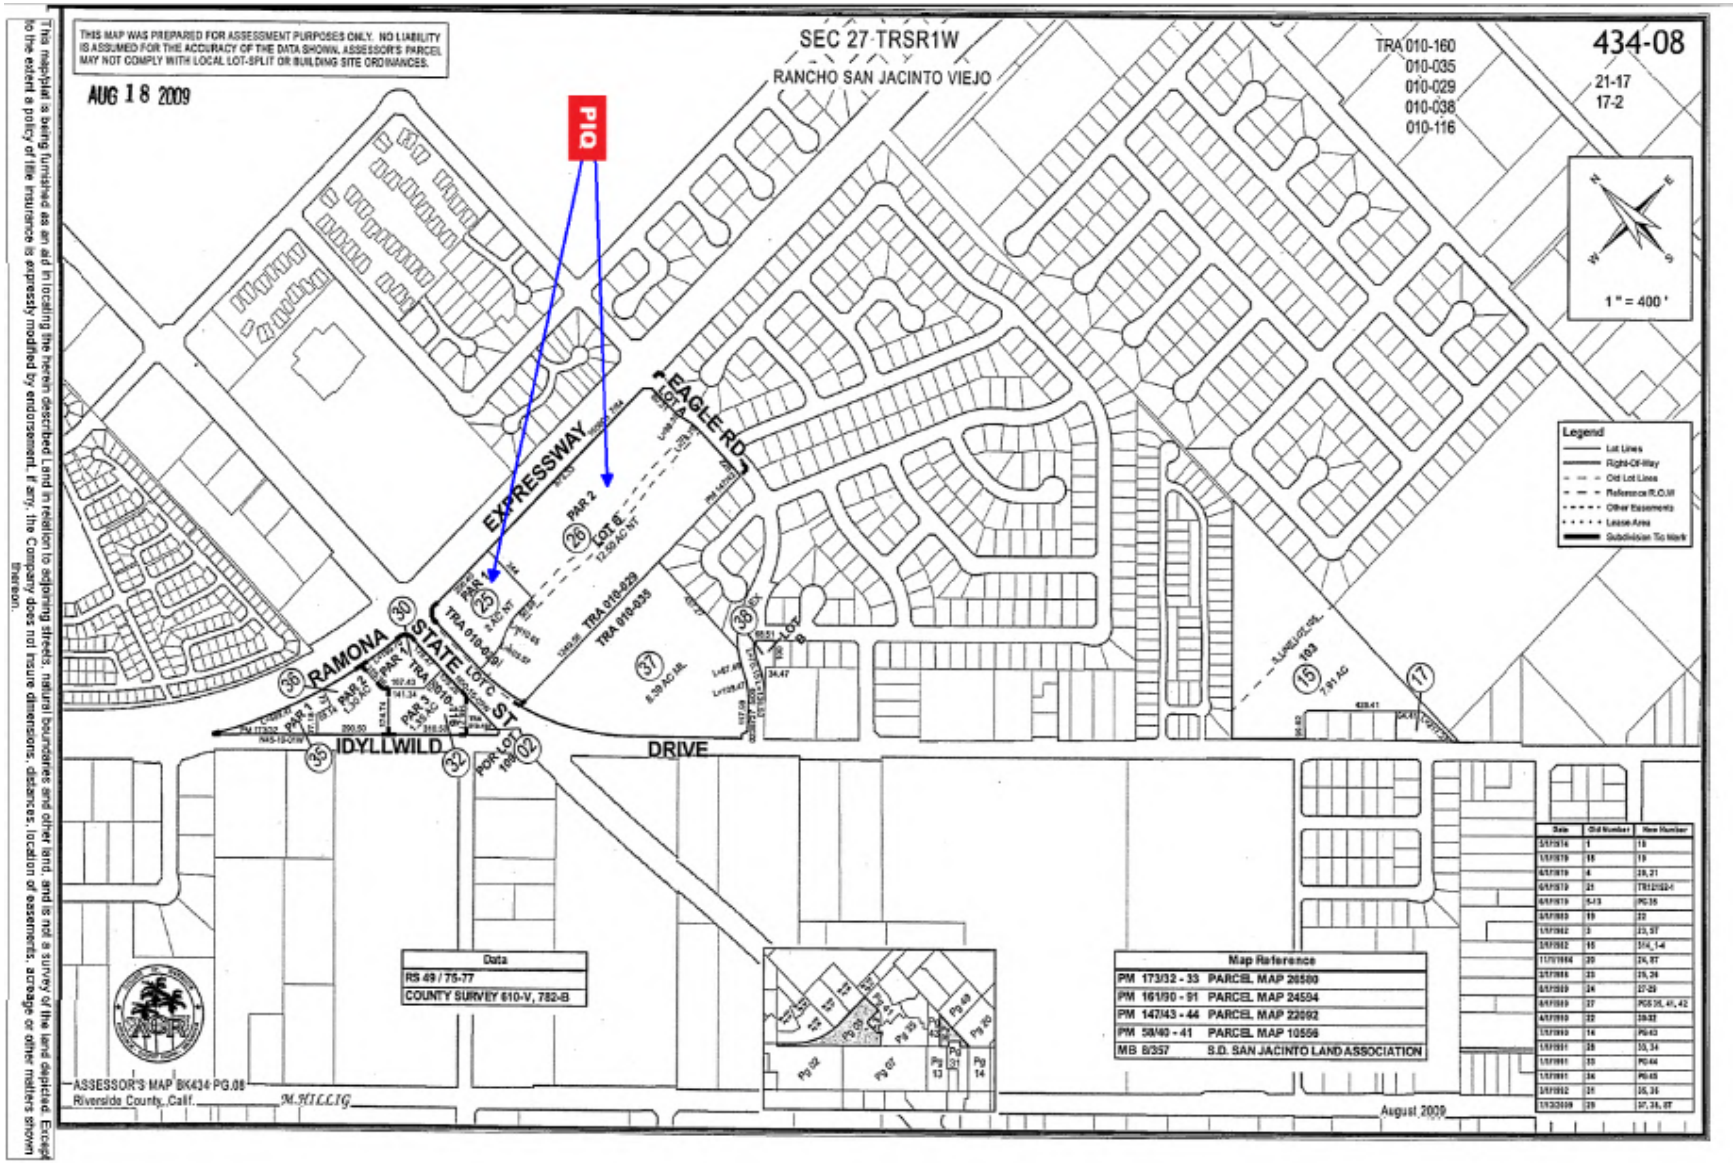
1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 and 10); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
   (a) a fraudulent conveyance or fraudulent transfer; or
   (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:

(The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:



1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown in the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and that are not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the Public Records.
7. (Variable exceptions such as taxes, easements, CC&R's, etc. shown here.)

ALTA EXPANDED COVERAGE RESIDENTIAL LOAN POLICY (12-02-13)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 16, 17, 18, 19, 20, 21, 22, 23, 24, 27 or 28); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury, or any consumer credit protection or truth-in-lending law. This Exclusion does not modify or limit the coverage provided in Covered Risk 26.
6. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to Advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching subsequent to Date of Policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11(b) or 25.
8. The failure of the residential structure, or any portion of it, to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This Exclusion does not modify or limit the coverage provided in Covered Risk 5 or 6.
9. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 27(b) of this policy.
10. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
11. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

This map/plat is being furnished as an aid in locating the herein described Land in relation to adjoining streets, natural boundaries and other land, and is not a survey of the land depicted. Except to the extent a policy of title insurance is expressly modified by endorsement, if any, the Company does not insure dimensions, distances, location of easements, acreage or other matters shown thereon.

OWNER'S DECLARATION

Escrow No.: 00109105-994-LT2-JC
Property Address: 788 W. Ramona Expressway
San Jacinto, CA

The undersigned hereby declares as follows:

1. (Fill in the applicable paragraph and strike the other)

   a. Declarant ("Owner") is the owner or lessee, as the case may be, of certain premises located at 788 W. Ramona Expressway, San Jacinto, CA, further described as follows: See Preliminary Report/Commitment No. for full legal description (the "Land").

   b. Declarant is the _____ of _____ ("Owner"), which is the owner or lessee, as the case may be, of certain premises located at 788 W. Ramona Expressway, San Jacinto, CA, further described as follows: See Preliminary Report/Commitment No. for full legal description (the "Land").

2. (Fill in the applicable paragraph and strike the other)

   a. During the period of six months immediately preceding the date of this declaration no work has been done, no surveys or architectural or engineering plans have been prepared, and no materials have been furnished in connection with the erection, equipment, repair, protection or removal of any building or other structure on the Land or in connection with the improvement of the Land in any manner whatsoever.

   b. During the period of six months immediately preceding the date of this declaration certain work has been done and materials furnished in connection with _____ upon the Land in the approximate total sum of $_____, but no work whatever remains to be done and no materials remain to be furnished to complete the construction in full compliance with the plans and specifications, nor are there any unpaid bills incurred for labor and materials used in making such improvements or repairs upon the Land, or for the services of architects, surveyors or engineers, except as follows: _____. Owner, by the undersigned Declarant, agrees to and does hereby indemnify and hold harmless Chicago Title Company against any and all claims arising therefrom.

3. Owner has not previously conveyed the Land; is not a debtor in bankruptcy (and if a partnership, the general partner thereof is not a debtor in bankruptcy); and has not received notice of any pending court action affecting the title to the Land.

4. Except as shown in the above-referenced Preliminary Report/Commitment, there are no unpaid or unsatisfied mortgages, deeds of trust, Uniform Commercial Code financing statements, regular assessments, special assessments, periodic assessments or any assessment from any source, claims of lien, special assessments, or taxes that constitute a lien against the Land or that affect the Land but have not been recorded in the public records. There are no violations of the covenants, conditions and restrictions as shown in the above-referenced Preliminary Report/Commitment.

5. The Land is currently in use as _____; _____ occupy/occupies the Land; and the following are all of the leases or other occupancy rights affecting the Land:

   _____

6. There are no other persons or entities that assert an ownership interest in the Land, nor are there unrecorded easements, claims of easement, or boundary disputes that affect the Land.

7. There are no outstanding options to purchase or rights of first refusal affecting the Land.

8. Between the most recent Effective Date of the above-referenced Preliminary Report/Commitment and the date of recording of the Insured Instrument(s), Owner has not taken or allowed, and will not take or allow, any action or inaction to encumber or otherwise affect title to the Land.

This declaration is made with the intention that Chicago Title Company (the "Company") and its policy issuing agents will rely upon it in issuing their title insurance policies and endorsements. Owner, by the undersigned Declarant, agrees to indemnify the Company against loss or damage (including attorneys fees, expenses, and costs) incurred by the Company as a result of any untrue statement made herein.

I declare under penalty of perjury that the foregoing is true and correct and that this declaration was executed on _____ at _____.

USER QUESTIONNAIRE

PROPOSED COMMERCIAL DEVELOPMENT
SEC STATE STREET & RAMONA EXPRESSWAY
SAN JACINTO, CALIFORNIA

Date: 4/26/22 Site Address: SEC State St & Ramona Expwy

Respondent Name: Bart Hollander **Phone No. (required):** 714-835-3305

Company Name & Address: Rich Development Enterprises, LLC
600 N Tustin Ave #150, Santa Ana, CA 92705

Introduction

"In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfield Revitalization Act of 2001 (the 'Brownfields Amendments'), the user must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that 'all appropriate inquiry' is not completed" - American Society for Testing and Materials (ASTM) E1527-13 Appendix X3: User Questionnaire

1. Are you aware of any environmental cleanup liens against the subject property that are filed or recorded under federal, tribal, state, or local law?

No

2. Are you aware of any activity use limitations (AULs) such as engineering controls, land use restrictions, or institutional controls that are in place at the subject property and/or have been filed or recorded in a registry under federal, tribal, state, or local law?

No

3. As the user of the Phase I Environmental Site Assessment (ESA), do you have any specialized knowledge or experience related to the subject property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the subject property or an adjacent property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

No

4. Does the purchase price being paid for the subject property reasonably reflect the fair market value of the subject property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the subject property?

Yes

5. Are you aware of commonly known or reasonably ascertainable information about the subject property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example:

A. Do you know the past uses of the subject property?

Vacant land

B. Do you know of specific chemicals that are present or once were present at the subject property?

No

C. Do you know of spills or other chemical releases that have taken place at the subject property?

No

D. Do you know of any environmental cleanups that have taken place at the subject property?

No

6. As the user of the Phase I ESA, based on your knowledge and experience related to the subject property, are there any obvious indicators that point to the presence or likely presence of contamination at the subject property?

None based on my knowledge

I, the user of this Phase I ESA (or authorized representative of the User), do hereby attest that I have carefully considered the questions herein and have presented answers to the best of my knowledge and ability based upon the Responsibilities of the User as required within ASTM E1527-13 guidance.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Certified Sanborn® Map Report

04/26/22

Site Name:

Proposed Retail Center
SEC State Street and W Ramo
San Jacinto, CA 92583
EDR Inquiry # 6955806.3

Client Name:

Salem Engineering Group
4729 West Jacquelyn Ave
Fresno, CA 93722
Contact: Maria G. Ruvalcaba

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Salem Engineering Group were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 79A5-4459-A395

PO # 3-422-0439

Project 3-422-0439

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 79A5-4459-A395

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Salem Engineering Group (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL ---- National Priority List
Proposed NPL ---- Proposed National Priority List Sites
NPL LIENS ---- Federal Superfund Liens

Lists of Federal Delisted NPL sites

Delisted NPL ---- National Priority List Deletions

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY ---- Federal Facility Site Information listing
SEMS ---- Superfund Enterprise Management System

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE ---- Superfund Enterprise Management System Archive

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS ---- Corrective Action Report

Lists of Federal RCRA TSD facilities

RCRA-TSDF ---- RCRA - Treatment, Storage and Disposal

Lists of Federal RCRA generators

RCRA-VSQG ---- RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

Federal institutional controls / engineering controls registries

LUCIS ---- Land Use Control Information System
US ENG CONTROLS ---- Engineering Controls Sites List
US INST CONTROLS ---- Institutional Controls Sites List

EXECUTIVE SUMMARY

Federal ERNS list

ERNS ---------- Emergency Response Notification System

Lists of state- and tribal (Superfund) equivalent sites

RESPONSE ---------- State Response Sites

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF ---------- Solid Waste Information System

Lists of state and tribal leaking storage tanks

INDIAN LUST ---------- Leaking Underground Storage Tanks on Indian Land
CPS-SLIC ---------- Statewide SLIC Cases

Lists of state and tribal registered storage tanks

FEMA UST ---------- Underground Storage Tank Listing
AST ---------- Aboveground Petroleum Storage Tank Facilities
INDIAN UST ---------- Underground Storage Tanks on Indian Land

Lists of state and tribal voluntary cleanup sites

VCP ---------- Voluntary Cleanup Program Properties
INDIAN VCP ---------- Voluntary Cleanup Priority Listing

Lists of state and tribal brownfield sites

BROWNFIELDS ---------- Considered Brownfieds Sites Listing

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS ---------- A Listing of Brownfields Sites

Local Lists of Landfill / Solid Waste Disposal Sites

WMUDS/SWAT ---------- Waste Management Unit Database
SWRCY ---------- Recycler Database
HAULERS ---------- Registered Waste Tire Haulers Listing
INDIAN ODI ---------- Report on the Status of Open Dumps on Indian Lands
DEBRIS REGION 9 ---------- Torres Martinez Reservation Illegal Dump Site Locations
ODI ---------- Open Dump Inventory
IHS OPEN DUMPS ---------- Open Dumps on Indian Land

Local Lists of Hazardous waste / Contaminated Sites

US HIST CDL ---------- Delisted National Clandestine Laboratory Register
HIST Cal-Sites ---------- Historical Calsites Database
CDL ---------- Clandestine Drug Labs

Toxic Pits	Toxic Pits Cleanup Act Sites

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/28/2022 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
RITE AID #6486 EPA ID:: CAR000254482	1180 N STATE STREET	WNW 0 - 1/8 (0.082 mi.)	D14	91
STATER BROS MARKETS EPA ID:: CAL000334457	1271 N STATE ST	NNW 1/8 - 1/4 (0.181 mi.)	E22	126

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/28/2022 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal

Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/24/2022 has revealed that there are 6 ENVIROSTOR sites within approximately 1 mile of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

SCH: This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category. depending on the level of threat to public health and safety or the. environment they pose.

A review of the SCH list, as provided by EDR, and dated 01/24/2022 has revealed that there is 1 SCH site within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/28/2022 has revealed that there are 4 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR

researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Site ID: 18346
Site Name: Chevron SS #1483/200374
Violation Date: 01-11-2018
Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665
Violation Description: Failure to comply with one or more of the following: Failure to install or maintain a liquid-tight spill bucket. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill bucket/spill container. Be resistant to galvanic corrosion.
Violation Notes: Returned to compliance on 02/02/2018.
Violation Division: Riverside County Department of Env Health
Violation Program: UST
Violation Source: CERS,

Site ID: 18346
Site Name: Chevron SS #1483/200374
Violation Date: 06-18-2020
Citation: HSC 6.7 25291(a)(2) - California Health and Safety Code, Chapter 6.7, Section(s) 25291(a)(2)
Violation Description: Failure to maintain secondary containment (e.g., failure of secondary containment testing).
Violation Notes: Returned to compliance on 11/06/2020. OBSERVATION: SB 989 testing conducted on 06/03/2020 revealed failed secondary components. The following components failed testing: UDC 1/2, UDC 3/4, UDC 5/6, 87 Main and 91 Tightness Test and secondary piping. Arrived on site and technician Juan Martinez of Wayne Perry is on site completing diagnostics. CORRECTIVE ACTION: Owner/operator shall make the necessary repairs to the failed secondary components and re-test failed components to ensure secondary containment is maintained tight. Note: Plans may be required for repairs; check with the HMMB area plan checker to determine if the submission of plans is necessary prior to starting repairs.

Violation Description: Failure of the leak detection equipment to have an audible and visual alarm as required.
Violation Notes: Returned to compliance on 12/30/2014.
Violation Division: Riverside County Department of Env Health

CHEVRON #200374 (Continued) **S101590158**

Violation Program: UST
Violation Source: CERS,

Site ID: 18346
Site Name: Chevron SS #1483/200374
Violation Date: 10-10-2018
Citation: HSC 6.7 25292.1(a) - California Health and Safety Code, Chapter 6.7, Section(s) 25292.1(a)
Violation Description: Failure to operate the UST system to prevent unauthorized releases including leaks, spills, and/or overfills.
Violation Notes: Returned to compliance on 01/29/2019. OBSERVATION: Observed liquid collected in the 87 East STP sump. Work order dated 8/14/18 stated that the technician "removed 3-1/2 gallons of fuel from center 87 stp sump" and "Need to replace center tank STP pump and all components will need to give chevron bid". D/O reports dated 9/12/18 and 8/13/18 documented removal of liquid from 87 East STP sump. Manager on duty confirmed with corporate that plans to replace failing components in the 87 East STP sump are being processed. CORRECTIVE ACTION: Owner/operator shall immediately make the necessary repairs to the components in the 87 East STP sump to eliminate the unauthorized discharge of fuel into the sump. Owner/operator shall clean and maintain the 87 East STP sump free of fuel and contaminated debris and record the unauthorized release on the spill log. Submit plans to this department.
Violation Division: Riverside County Department of Env Health
Violation Program: UST
Violation Source: CERS,

Site ID: 18346
Site Name: Chevron SS #1483/200374
Violation Date: 10-08-2019
Citation: 23 CCR 16 2641(h) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(h)
Violation Description: Failure to have an approved UST Monitoring Plan.
Violation Notes: Returned to compliance on 11/18/2019. OBSERVATION: Observed UST Monitoring Plan(s) for Tanks 1, 2, and 3 to be inaccurate. Specifically, the "Under Dispenser Containment (UDC) Monitoring" section has "Yes" checked for "Detection of Leak into UDC Triggers Audible and Visual Alarms." The Electronic stand-alone Beaudreau sensors were observed not to trigger an audible and visual alarm at the time of inspection. CORRECTIVE ACTION: Owner/operator shall make the following corrections to the UST Monitoring Plan(s) and submit in CERS. Check "No" for "Detection of Leak into UDC Triggers Audible and Visual Alarms" in the "Under Dispenser Containment (UDC) Monitoring" section.
Violation Division: Riverside County Department of Env Health
Violation Program: UST
Violation Source: CERS,

Site ID: 18346
Site Name: Chevron SS #1483/200374
Violation Date: 10-08-2019
Citation: 23 CCR 16 2641(j) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(j)
Violation Description: Failure of the leak detection equipment to be installed, calibrated, operated, and/or maintained properly.
Violation Notes: Returned to compliance on 01/14/2020. OBSERVATION: Service technician

CHEVRON #200374 (Continued) **S101590158**

unable to pull out annular sensor located in the 87 Siphon Tank to properly test its functionality. CORRECTIVE ACTION: Owner/operator shall pull out or replace annular sensor in the 87 Siphon Tank and certify that equipment functions properly. Contractor was planning on acquiring a new sensor to replace the annual sensor today. Like-for-like sensors do not require a permit with our department.

Violation Division: Riverside County Department of Env Health
Violation Program: UST
Violation Source: CERS,

Site ID: 18346
Site Name: Chevron SS #1483/200374
Violation Date: 12-10-2018
Citation: HSC 6.7 25292.1(a) - California Health and Safety Code, Chapter 6.7, Section(s) 25292.1(a)
Violation Description: Failure to operate the UST system to prevent unauthorized releases including leaks, spills, and/or overfills.
Violation Notes: Returned to compliance on 01/29/2019. OBSERVATION: Reinspection conducted today. At initial inspection on 10/10/18, liquid was observed in the 87 East STP Sump. Work orders indicated repairs may be necessary. Spoke with assistant manager Jessica and store manager Andy who stated repairs are being scheduled and a permit is being sought from this department. CORRECTIVE ACTION: Owner/operator shall make the necessary repairs to the failing components in the 87 East STP Sump to eliminate the unauthorized discharge of fuel into the sump. Once repairs are scheduled, submit plans to this department. A permit may be required.

Site ID: 18346
Site Name: Chevron SS #1483/200374
Violation Date: 10-11-2017
Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665
Violation Description: Failure to comply with one or more of the following: Failure to install or maintain a liquid-tight spill bucket. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill bucket/spill container. Be resistant to galvanic corrosion.
Violation Notes: Returned to compliance on 02/02/2018. Middle 87 spill bucket
Violation Division: Riverside County Department of Env Health
Violation Program: UST
Violation Source: CERS,

Site ID: 18346
Site Name: Chevron SS #1483/200374
Violation Date: 10-05-2021
Citation: 23 CCR 16 2636(f)(1) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(1)
Violation Description: Failure of the double-walled pressurized piping to be continuously monitored with a system that activates an audible and visual alarm or stops flow at the dispenser when a leak is detected.
Violation Notes: Returned to compliance on 10/05/2021. OBSERVATION: Observed liquid sensor in UDC 3/4 fail to stop flow of product at the dispenser when tested. Technician attempted to repair sensor and was unsuccessful.

CHEVRON #200374 (Continued) **S101590158**

Technician replaced sensor with a like for like change, and new sensor was retested and functioned properly. CORRECTIVE ACTION: Owner/operator shall replace the inoperable sensor in UDC 3/4 and certify sensor functionality. This violation was corrected on site.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Date:	05-02-2019
Citation:	23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes:	Returned to compliance on 05/02/2019. OBSERVATION: An overfill equipment inspection was not completed by the October 13, 2018 deadline. CORRECTIVE ACTION: Owner/operator shall immediately schedule and complete an overfill equipment inspection providing the required 48 hour notification prior to conducting the inspection. Inspection results and all supporting documentation (inspection procedures used, tank charts, printouts, etc.) must be submitted to this Department within 30 days upon completion of the inspection.

Citation:	HSC 6.7 Multiple Sections - California Health and Safety Code, Chapter 6.7, Section(s) Multiple Sections
Violation Description:	UST Program - Operations/Maintenance - General
Violation Notes:	Returned to compliance on 07/03/2013. The VPH sensor box provided positive shut down in the 91 STP sump but not the 87 STP sump. Upon reviewing the monitoring plan I learned that both tanks were supposed to be programmed identically and provide positive shut down when either a high liquid alarm or a vacuum loss alarm was triggered. The tech on site reprogrammed the system and we tested to make sure both tanks were in compliance with the monitoring plan during the inspection.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 05-04-2021
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Facility is a retail store that generates retail hazardous waste. Facility opened April 2021 and has not generated any waste or had any pickups. Procedures are in place to properly handle hazardous waste when they occur. Various sections marked as Not Applicable due to not having generated any hazardous waste yet.
Eval Division: Riverside County Department of Env Health
Eval Program: HW

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 01/25/2022
Date Data Arrived at EDR: 02/03/2022
Date Made Active in Reports: 02/22/2022
Number of Days to Update: 19

Source: EPA
Telephone: N/A
Last EDR Contact: 04/01/2022
Next Scheduled EDR Contact: 07/11/2022
Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 01/25/2022
Date Data Arrived at EDR: 02/03/2022
Date Made Active in Reports: 02/22/2022

Next Scheduled EDR Contact: 07/11/2022
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994

Data Release Frequency: No Update Planned

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 01/25/2022

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/25/2021
Date Data Arrived at EDR: 06/24/2021

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

PROPOSED RETAIL CENTER
SEC STATE STREET AND W RAMONA EXPRESSWAY
SAN JACINTO, CA 92583

TARGET PROPERTY COORDINATES

Latitude (North):	33.800944 - 33ˆ 48’ 3.40’’
Longitude (West):	116.969695 - 116ˆ 58’ 10.90’’
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	502805.2
UTM Y (Meters):	3739892.0
Elevation:	1527 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	12002892 SAN JACINTO, CA
Version Date:	2018

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

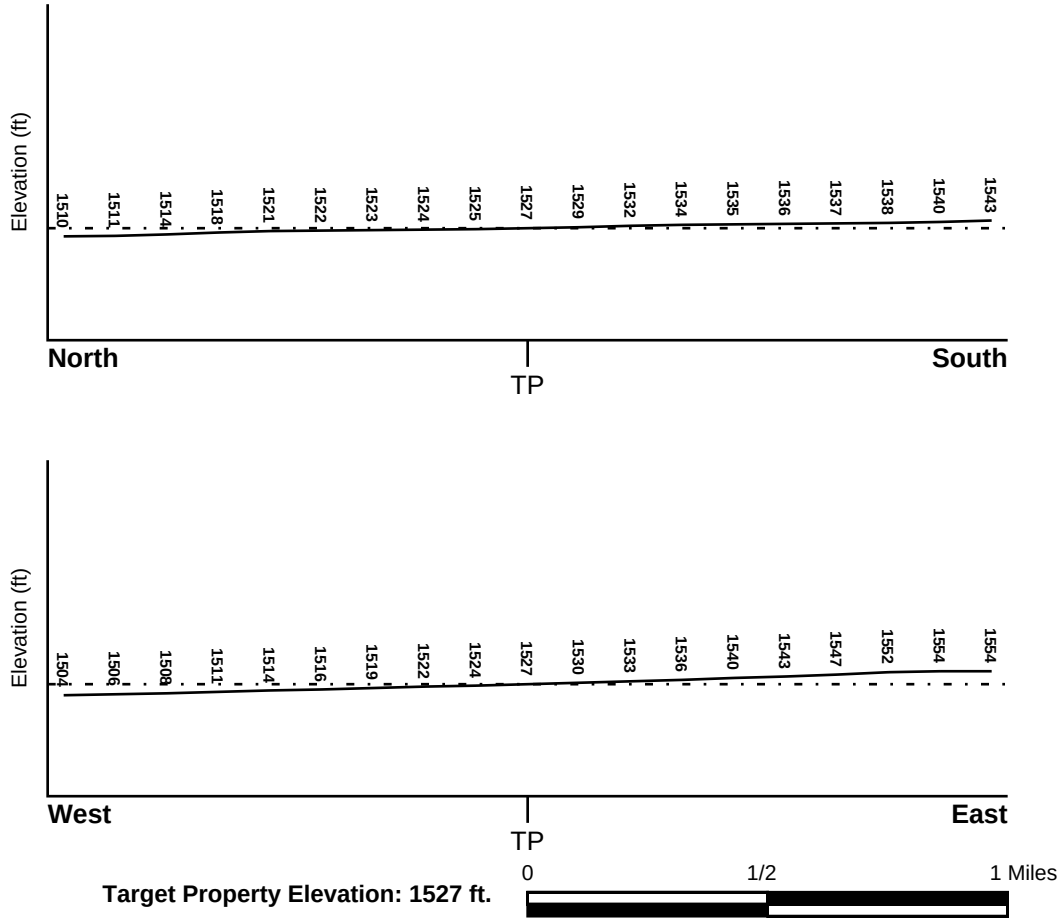
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 1527 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06065C1490G	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06065C1480G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
SAN JACINTO	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: DELLO

Soil Surface Texture: loamy fine sand

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	loamy fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Well-graded sand.	Max: 141 Min: 42	Max: 8.4 Min: 6.6
2	7 inches	35 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Well-graded sand.	Max: 141 Min: 42	Max: 8.4 Min: 6.6
3	35 inches	59 inches	gravelly coarse sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Well-graded sand.	Max: 141 Min: 42	Max: 8.4 Min: 6.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: DELLO

Soil Surface Texture: loamy sand

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)

Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
2	7 inches	61 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.4

Soil Map ID: 8

Soil Component Name: GRANGEVILLE

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	35 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 8.4 Min: 6.6
2	35 inches	64 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 8.4 Min: 6.6

Soil Map ID: 9

Soil Component Name: GRANGEVILLE

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

CLARENCE JIANG

Senior Geotechnical Engineer

REGISTRATION

Registered Geotechnical Engineer – California
Registered Civil Engineer - California
Registered Grading Inspector – Los Angeles

CERTIFICATION

OSHA 40-Hour Hazardous Waste Operations and Emergency Response Training (29 CFR 110.120) (HAZWOPER)
Certified Hazardous Materials Manager

EDUCATION

Masters of Science in Geotechnical Engineering, Utah State University, Logan, Utah
Bachelor of Science in Civil Engineering, Chung-Yuan University, Chung-Li, Taiwan

EXPERIENCE

2007 to Present – Senior Geotechnical Engineer, Salem Engineering Group, Inc., Rancho Cucamonga, California
2003 to 2007 – Senior Engineer, Krazan & Associates, Inc., Ontario, California
1994 to 2003 – Senior Engineer/Vice President, Morhol, Inc., Anaheim, California
1988 to 1994 – Project Engineer, Leighton & Associates, Inc., Irvine, California

PROFESSIONAL BACKGROUND

Geotechnical Investigations: Responsible for staff supervision, client relations, technical review, budget preparations, and profit/loss statements. Provided project management for geotechnical engineering projects for industrial plants, school and hospital sites, wastewater treatment plants, bridges and culverts, sewer lines, stadiums, embankments, service stations, commercial developments, industrial facilities, and landfills. Experienced in a broad range of geotechnical engineering applications such as shallow and deep foundation investigation, slope stability, pavement design, liquefaction potential, ground improvement, soil suitability and availability assessment, soil-cement treatment, soil-lime stabilization, erosion control, landfill construction, septic system design, as well as field and laboratory soil testing.

Construction Testing & Inspection Services: Responsible for overseeing Special Inspectors, testing laboratory personnel and procedures, client relations, technical review of reports, and insure conscientious cost management. Oversee the testing of concrete, post-tension cables, soil, welding, and construction materials to insure conformance to current building standards and codes. Report the results of materials tested to the appropriate agencies and companies.

Environmental Engineering: Provide detailed Phase I investigative site reports. Conduct environmental audits and provide recommendations for corrective measures. Extensive experience in lithologic logging and sampling in consolidated and unconsolidated material for environmental exploration. Provide recommendations for the management of underground storage tanks and hazardous waste.

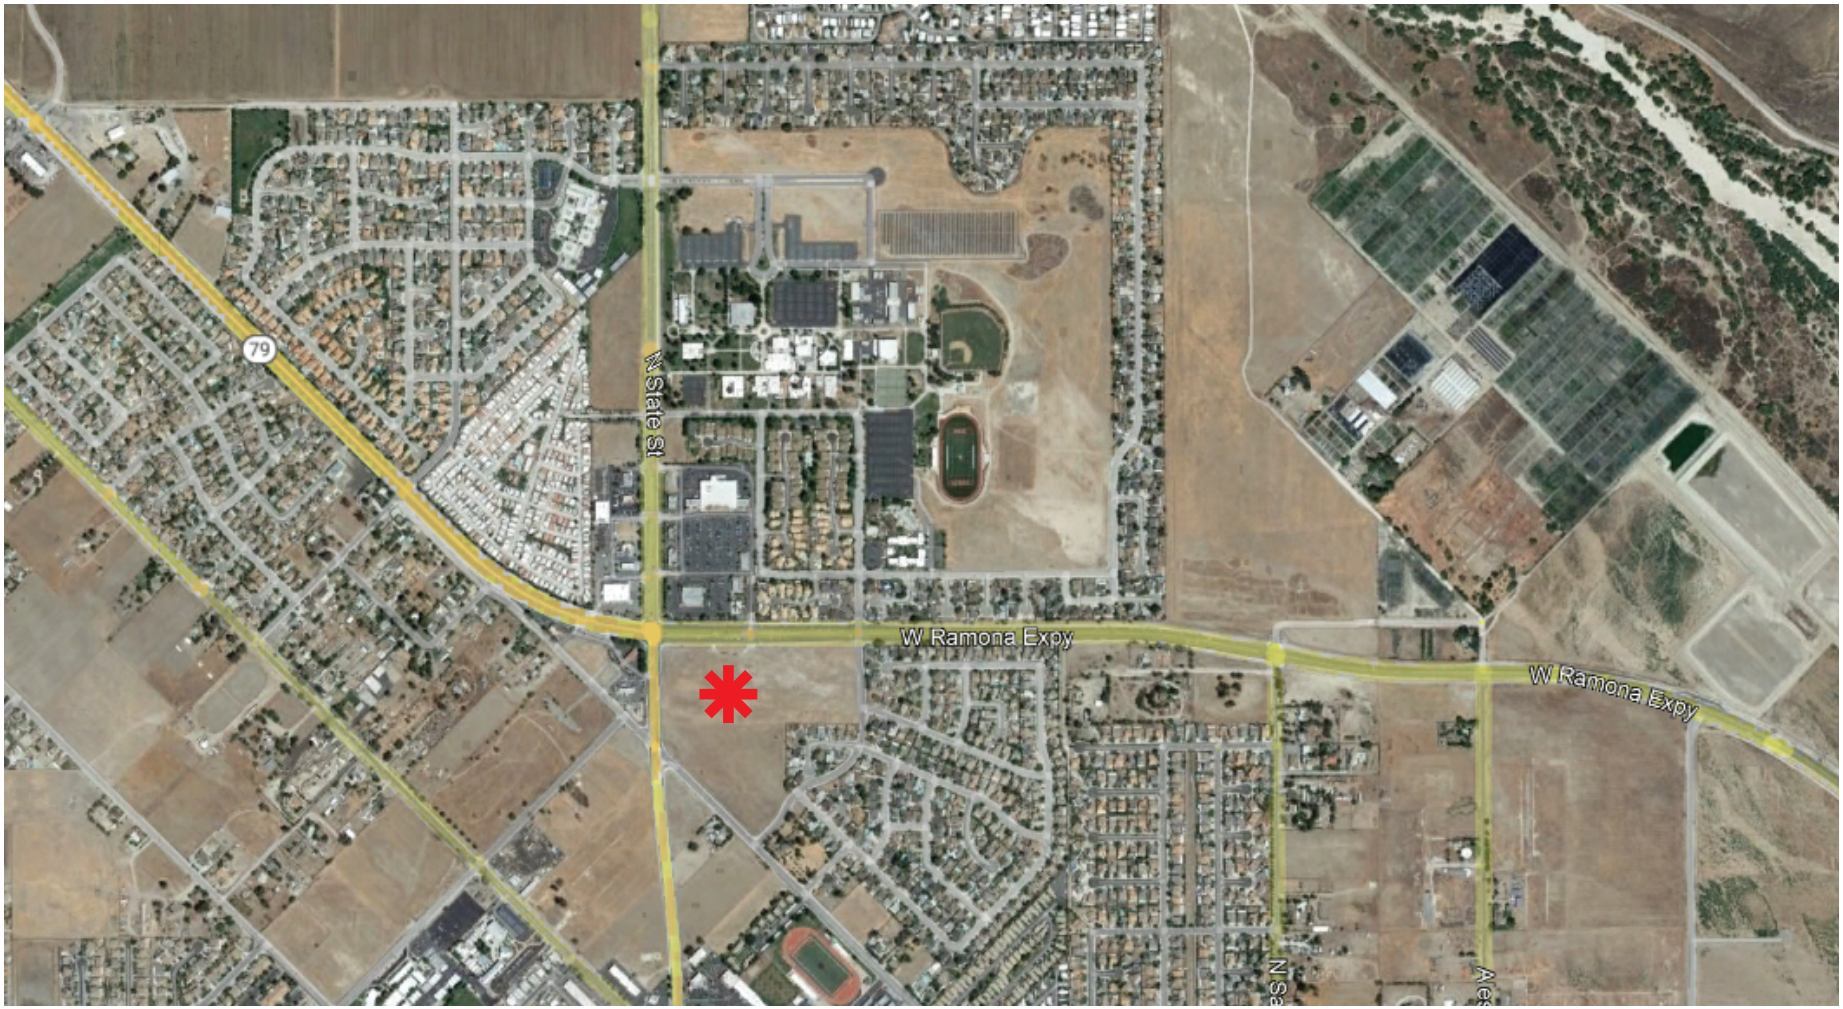
1.0 INTRODUCTION & PROJECT DESCRIPTION

1.1 Purpose of Report & Study Objectives

This Noise Impact Study has been prepared to determine the offsite and onsite noise impacts associated with the proposed Southeast corner of Ramona Expressway and State Street Commercial Project (project). The following is provided in this report:

- A description of the study area and the proposed project.
- Information regarding the fundamentals of noise.
- Information regarding the fundamentals of vibration.
- A description of the local noise guidelines and standards.
- An evaluation of the current noise environment.
- An analysis of the potential short-term construction-related noise and vibration impacts from the proposed project.
- An analysis of long-term operations-related noise impacts from the proposed project.

1.2 Site Location & Project Description



The project site is located on the Southeast corner of Ramona Expressway and State Street, in the City of San Jacinto and is currently vacant. The project site is surrounded by existing residential uses to the north, east and southeast and commercial uses to the north and west.

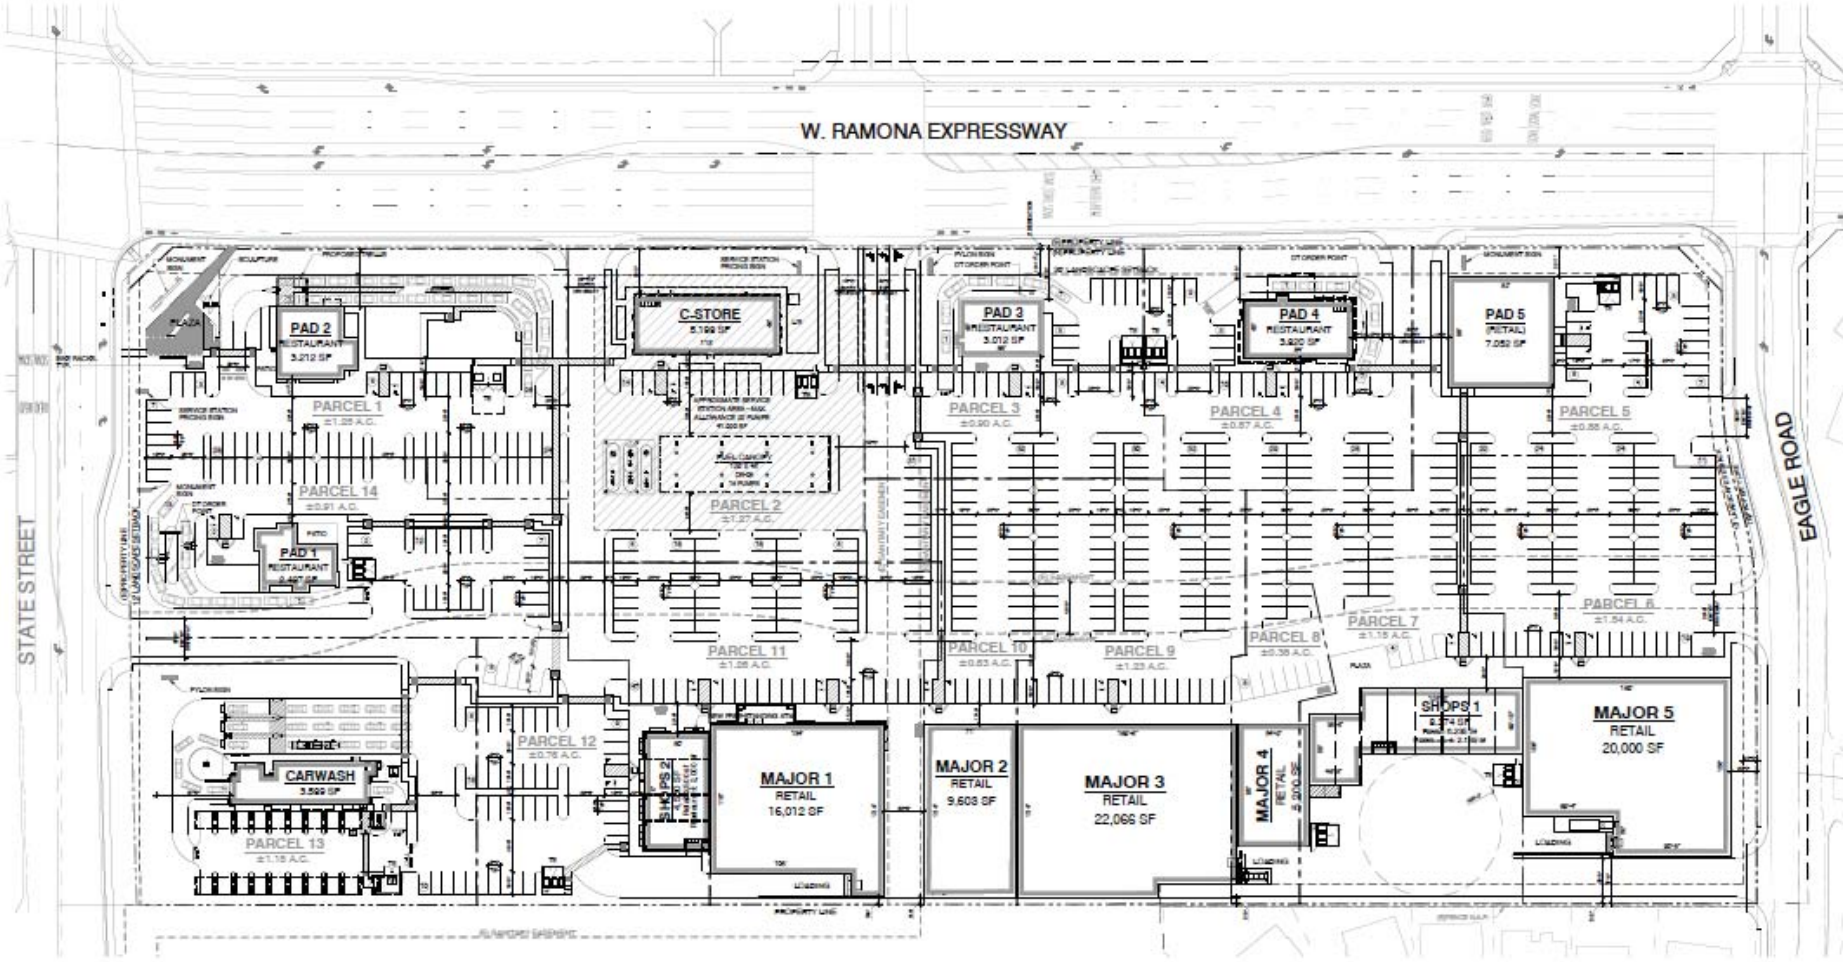
The proposed project consists of construction and operation of approximately 94,490 square feet of retail commercial use, approximately 257,130 square feet of Gasoline Service Station with Convenience Store and approximately 3,589 square feet of automated car wash. The project construction activities are expected to begin in May 2024 and would occur over a period of eight months. The project will be operational in the year 2025.

Exhibit A shows the project site location. Exhibit B shows the proposed site plan.

1.3 Sensitive Receptors

Noise-sensitive land uses are generally considered to include those uses where noise exposure could result in health-related risks to individuals, as well as places where quiet is an essential

Legend:



Site Location

ENGINEERING, INC.

Location

Exhibit A

Not to Scale

ENGINEERING, INC.

Site Plan

Exhibit B

element of their intended purpose. Residential dwellings are of primary concern because of the potential for increased and prolonged exposure of individuals to both interior and exterior noise levels.

Several sensitive land uses are located surrounding the project site. The closest existing sensitive receptors to the project site are the single-family residential uses located immediately to the southeast of the project site. Single-family residential uses are also located at approximately 55 feet to the east and approximately 125 feet to the north of the project site.

2.0 FUNDAMENTAL OF NOISE

2.1 Noise

Noise is defined as unwanted sound. Sound becomes unwanted when it interferes with normal activities, when it causes actual physical harm or when it has adverse effects on health. Sound is produced by the vibration of sound pressure waves in the air. Sound pressure levels are used to measure the intensity of sound and are described in terms of decibels. The decibel (dB) is a logarithmic unit, which expresses the ratio of the sound pressure level being measured to a standard reference level. A-weighted decibels (dBA) approximate the subjective response of the human ear to a broad frequency noise source by discriminating against very low and very high frequencies of the audible spectrum. They are adjusted to reflect only those frequencies that are audible to the human ear.

2.1.1 Noise Description

Noise equivalent sound levels are not measured directly but are calculated from sound pressure levels typically measured in dBA. The equivalent sound level (Leq) represents a steady state sound level containing the same total energy as a time varying signal over a given sample period. The peak traffic hour Leq is the noise metric used by California Department of Transportation (Caltrans) for all traffic noise impact analyses.

The Day-Night Average Sound Level (Ldn) is the weighted average of the intensity of a sound, with corrections for time of day, and averaged over 24 hours. The time-of-day corrections require the addition of ten decibels to sound levels at night between 10 p.m. and 7 a.m. While the Community Noise Equivalent Level (CNEL) is like the Ldn, except that it has another addition of 4.77 dB to sound levels during the evening hours between 7 p.m. and 10 p.m. These additions are made to the sound levels at these times because during the evening and nighttime hours, when compared to daytime hours, there is a decrease in the ambient noise levels, which creates an increased sensitivity to sounds. For this reason, the sound is perceived to be louder in the evening and nighttime hours and is weighted accordingly. Many cities rely on the CNEL noise standard to assess transportation- related impacts on noise sensitive land uses.

Another noise descriptor that is used primarily for the assessment of aircraft noise impacts is the Sound Exposure Level, which is also called the Single Event Level (SEL). The SEL descriptor represents the acoustic energy of a single event (i.e., an aircraft overflight) normalized to one-second event duration. This is useful for comparing the acoustical energy of different events involving different durations of the noise sources. The SEL is based on an integration of the noise during the period when the noise first rises within 10 dBA of its maximum value and last falls below 10 dBA of its maximum value. The SEL is often 10 dBA greater, or more, than the LMAX since the SEL logarithmetically adds the Leq for each second of the duration of the noise.

2.1.2 Tone Noise

A pure tone noise is a noise produced at a single frequency and laboratory tests have shown the humans are more perceptible to changes in noise levels of a pure tone (Caltrans 1998). For a noise source to contain a “pure tone,” there must be a significantly higher A-weighted sound energy in a given frequency band than in the neighboring bands, thereby causing the noise source to “stand out” against other noise sources. A pure tone occurs if the sound pressure level in the one-third octave band with the tone exceeds the average of the sound pressure levels of the two contagious one-third octave bands by: 5 dB for center frequencies of 500 Hertz (Hz) and above; by 8 dB for center frequencies between 160 and 400 Hz; and by 15 dB for center frequencies of 125 Hz or less (Department of Health Services 1977).

2.1.3 Noise Propagation

From the noise source to the receiver, noise changes both in level and frequency spectrum. The most obvious is the decrease in noise as the distance from the source increases. The manner in which noise reduces with distance depends on whether the source is a point or line source as well as ground absorption, atmospheric effects and refraction, and shielding by natural and manmade features.

Sound from point sources, such as air conditioning condensers, radiate uniformly outward as it travels away from the source in a spherical pattern. The noise drop-off rate associated with this geometric spreading is 6 dBA per each doubling of the distance (dBA/DD). Transportation noise sources such as roadways are typically analyzed as line sources, since at any given moment the receiver may be impacted by noise from multiple vehicles at various locations along the roadway. Because of the geometry of a line source, the noise drop-off rate associated with the geometric spreading of a line source is 3 dBA/DD.

2.1.4 Ground Absorption

The sound drop-off rate is highly dependent on the conditions of the land between the noise source and receiver. To account for this ground-effect attenuation (absorption), two types of site conditions are commonly used in traffic noise models: soft-site and hard-site conditions. Soft-site conditions account for the sound propagation loss over natural surfaces such as normal earth and ground vegetation. For point sources, a drop-off rate of 7.5 dBA/DD is typically observed over soft ground with landscaping, as compared with a 6.0 dBA/DD drop-off rate over hard ground such as asphalt, concrete, stone and very hard packed earth. For line sources a 4.5 dBA/DD is typically observed for soft-site conditions compared to the 3.0 dBA/DD drop-off rate for hard-site conditions. To be conservative, hard-site conditions were used in this analysis.

2.1.5 Traffic Noise Prediction

The level of traffic noise depends on the three primary factors: (1) the volume of the traffic, (2) the speed of the traffic, and (3) the number of trucks in the flow of traffic. Generally, the loudness of traffic noise is increased by heavier traffic volumes, higher speeds, and greater number of trucks.

Vehicle noise is a combination of the noise produced by the engine, exhaust, and tires. Because of the logarithmic nature of traffic noise levels, a doubling of the traffic volume (assuming that the speed and truck mix do not change) results in a noise level increase of 3 dBA. Based on the FHWA community noise assessment criteria, this change is "barely perceptible," for reference a doubling of perceived noise levels would require an increase of approximately 10 dBA. However, the 1992 findings of Federal Interagency Committee on Noise (FICON), which assessed changes in ambient noise levels resulting from aircraft operations, found that noise increases as low as 1.5 dB can cause annoyance, when the existing noise levels are already greater than 65 dB. The truck mix on a given roadway also has an effect on community noise levels. As the number of heavy trucks increases and becomes a larger percentage of the vehicle mix, adjacent noise levels increase.

2.2 Vibration Fundamentals

Groundborne vibrations consist of rapidly fluctuating motions within the ground that have an average motion of zero. The effects of groundborne vibrations typically only cause a nuisance to people, but at extreme vibration levels, damage to buildings may occur. Although groundborne vibration can be felt outdoors, it is typically only an annoyance to people indoors where the associated effects of the shaking of a building can be notable. Groundborne noise is an effect of groundborne vibration and only exists indoors, since it is produced from noise radiated from the motion of the walls and floors of a room and may also consist of the rattling of windows or dishes on shelves.

2.2.1 Vibration Description

Several different methods are used to quantify vibration amplitude such as the maximum instantaneous peak in the vibrations velocity, which is known as the peak particle velocity (PPV) or the root mean square (RMS) amplitude of the vibration velocity. Because of the typically small amplitudes of vibrations, vibration velocity is often expressed in decibels and is denoted as LV and is based on the RMS velocity amplitude. A commonly used abbreviation is VdB, which in this text, is when vibration level (LV) is based on the reference quantity of 1 microinch per second.

2.2.2 Vibration Perception

Typically, developed areas are continuously affected by vibration velocities of 50 VdB or lower. These continuous vibrations are not noticeable to humans whose threshold of perception is around 65 VdB. Offsite sources that may produce perceptible vibrations are usually caused by construction equipment, steel-wheeled trains, and traffic on rough roads, while smooth roads rarely produce perceptible groundborne noise or vibration.

2.2.3 Vibration Propagation

The propagation of groundborne vibration is not as simple to model as airborne noise. This is because noise in the air travels through a relatively uniform median, while groundborne vibrations travel through the earth, which may contain significant geological differences. There are three main types of vibration propagation: surface, compression, and shear waves. Surface waves, or Rayleigh waves, travel along the ground's surface. These waves carry most of their energy along an expanding circular wave front, similar to ripples produced by throwing a rock into a pool of water. P-waves, or compression waves, are body waves that carry their energy along an expanding spherical wave front. The particle motion in these waves is longitudinal (i.e., in a "push-pull" fashion). P-waves are analogous to airborne sound waves. S-waves, or shear waves, are also body waves that carry energy along an expanding spherical wave front. However, unlike P-waves, the particle motion is transverse, or side-to-side and perpendicular to the direction of propagation.

As vibration waves propagate from a source, the vibration energy decreases in a logarithmic nature and the vibration levels typically decrease by 6 VdB per doubling of the distance from the vibration source. As stated above, this drop-off rate can vary greatly depending on the soil but has been shown to be effective enough for screening purposes, in order to identify potential vibration impacts that may need to be studied through actual field tests.

2.2.4 Construction Related Vibration Level Prediction

Construction activity can result in varying degrees of ground vibration, depending on the equipment used on the site. Operation of construction equipment causes ground vibrations that spread through the ground and diminish in strength with distance. Buildings in the vicinity of the construction site respond to these vibrations with varying results ranging from no perceptible effects at the low levels to slight damage at the highest levels. Table 1 gives approximate vibration levels for particular construction activities. The data in Table 1 provides a reasonable estimate for a wide range of soil conditions.

Table 1
Vibration Source Levels for Construction Equipment

Equipment	Peak Particle Velocity (inches/second) at 25 feet	Approximate Vibration Level (LV) at 25 feet
Pile driver (impact)	1.518 (upper range) 0.644 (typical)	112 104
Pile driver (sonic)	0.734 upper range 0.170 typical	105 93
Clam shovel drop (slurry wall)	0.202	94
Hydromill (slurry wall)	0.008 in soil 0.017 in rock	66 75
Vibratory Roller	0.210	94
Hoe Ram	0.089	87
Large bulldozer	0.089	87
Caisson drill	0.089	87
Loaded trucks	0.076	86
Jackhammer	0.035	79
Small bulldozer	0.003	58

3.0 REGULATORY SETTING

The proposed project is located in the City of San Jacinto and noise regulations are addressed through the efforts of various federal, State, and local government agencies. The agencies responsible for regulating noise are discussed below.

3.1 Federal Regulations

The adverse impact of noise was officially recognized by the federal government in the Noise Control Act of 1972, which serves three purposes:

- Promulgating noise emission standards for interstate commerce.
- Assisting state and local abatement efforts.
- Promoting noise education and research.

The Federal Office of Noise Abatement and Control (ONAC) was initially tasked with implementing the Noise Control Act. However, the ONAC has since been eliminated, leaving the development of federal noise policies and programs to other federal agencies and interagency committees. For example, the Occupational Safety and Health Administration (OSHA) agency limits noise exposure of workers to 90 dB Leq or less for 8 continuous hours or 105 dB Leq or less for 1 continuous hour.

The Department of Transportation (DOT) assumed a significant role in noise control through its various operating agencies. The Federal Aviation Administration (FAA) regulates noise of aircraft and airports. Surface transportation system noise is regulated by a host of agencies, including the Federal Transit Administration (FTA). Transit noise is regulated by the federal Urban Mass Transit Administration (UMTA), while freeways that are part of the interstate highway system are regulated by the Federal Highway Administration (FHWA). Finally, the federal government actively advocates that local jurisdiction use their land use regulatory authority to arrange new development in such a way that “noise sensitive” uses are either prohibited from being sited adjacent to a highway or, alternately that the developments are planned and constructed in such a manner that potential noise impacts are minimized.

Since the federal government has preempted the setting of standards for noise levels that can be emitted by the transportation sources, the City is restricted to regulating the noise generated by the transportation system through nuisance abatement ordinances and land use planning.

3.2 State Regulations

Though not adopted by law, the State of California General Plan Guidelines 2017, published by the California Governor's Office of Planning and Research (OPR) (OPR Guidelines), provides guidance for the compatibility of projects within areas of specific noise exposure. The OPR Guidelines identify the suitability of various types of construction relative to a range of outdoor noise levels and provide each local community some flexibility in setting local noise standards that allow for the variability in community preferences. Findings presented in the Levels of Environmental Noise Document (EPA 1974) influenced the recommendations of the OPR Guidelines, most importantly in the choice of noise exposure metrics (i.e., Ldn or CNEL) and in the upper limits for the normally acceptable outdoor exposure of noise-sensitive uses.

The OPR Guidelines include a Noise and Land Use Compatibility Matrix which identifies acceptable and unacceptable community noise exposure limits for various land use categories. Where the "normally acceptable" range is used, any special acoustical is defined as the highest noise level that should be considered for the construction of the buildings which do not incorporate treatment or noise mitigation. The "conditionally acceptable" or "normally unacceptable" ranges include conditions calling for detailed acoustical study prior to the construction or operation of the proposed project. The City of Indio has adopted their own version of the State Land Use Compatibility Guidelines for land use planning and to assess potential transportation noise impacts to proposed land uses (see Table 2). Title 24, Chapter 1, Article 4 of the California Administrative Code (California Noise Insulation Standards) requires noise insulation in new hotels, motels, apartment houses, and dwellings (other than single-family detached housing) that provides an annual average noise level of no more than 45 dBA CNEL. When such structures are located within a 60-dBA CNEL (or greater) noise contour, an acoustical analysis is required to ensure that interior levels do not exceed the 45-dBA CNEL annual threshold. In addition, Title 21, Chapter 6, Article 1 of the California Administrative Code requires that all habitable rooms, hospitals, convalescent homes, and places of worship shall have an interior CNEL of 45 dB or less due to aircraft noise.

Government Code Section 65302 mandates that the legislative body of each county and city in California adopt a noise element as part of its comprehensive general plan. The local noise element must recognize the land use compatibility guidelines published by the State Department of Health Services. The guidelines rank noise land use compatibility in terms of normally acceptable, conditionally acceptable, normally unacceptable and clearly unacceptable.

3.3 Local Regulations

3.3.1 City of San Jacinto Noise Regulations

The City of San Jacinto outlines their noise regulations and standards within the General Plan 2040 Noise Element and the Municipal Code, Chapter 8.40, Noise Control. The Municipal Code

establishes the residential noise standards for code enforcement purposes during construction and operation.

City of San Jacinto Municipal Code Noise Ordinance

Section 8.040.090 (A) of the City of San Jacinto Municipal Code allows construction activities between the hours of 7:00 a.m. and 7:00 p.m. Monday through Saturday. No construction is allowed on Sunday or federal holidays. Construction occurring consistent with these provisions is exempt from noise regulations.

Section 8.040.040 (A) of the San Jacinto Municipal Code states the maximum exterior noise level for single-family residences is 65 dBA Leq from 7:00 a.m. and 10:00 p.m. and 45 dBA Leq from 10:00 p.m. to 7:00 a.m. Section 8.040.050 (A) states the maximum interior noise level for single family residences is 45 dBA Leq from 7:00 a.m. and 10:00 p.m. and 40 dBA Leq from 10:00 p.m. to 7:00 a.m.

4.0 EXISTING NOISE CONDITIONS

To determine the existing noise level environment, long-term noise measurements were taken in the project study area at three locations in the project vicinity and surrounding receptors. The following describes the measurement procedures, measurement locations, and the noise measurement results.

4.1 Measurement Procedure & Criteria

To ascertain the existing noise at the project site, field monitoring was conducted on November 15, 2023. The field survey noted that noise within the proposed project area is generally characterized by traffic noise propagating from Ramona Expressway, Eagle Road and State Street.

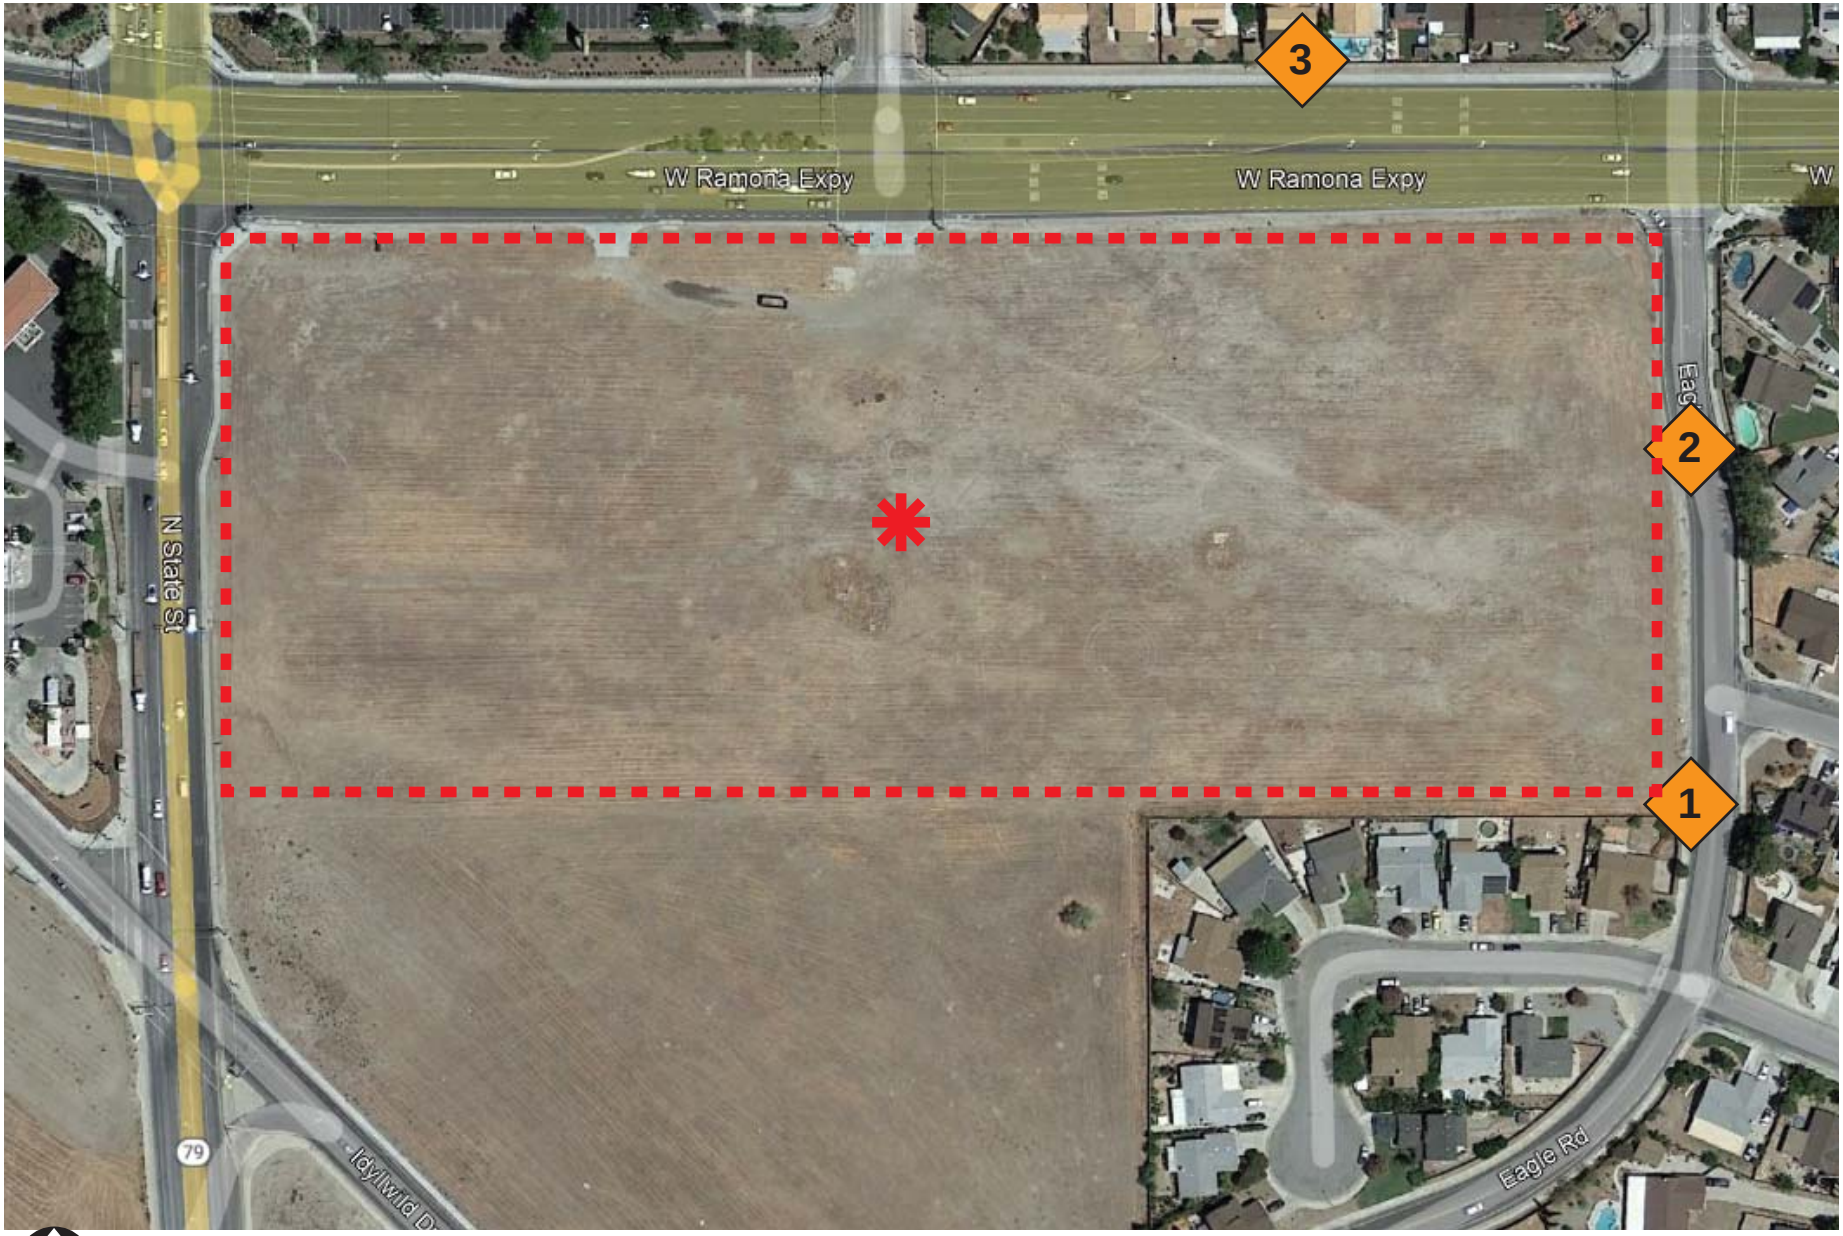
4.2 Measurement Equipment

Noise monitoring was performed using a Piccolo Type-2 sound level meter. The sound level meter was programmed in “slow” mode to record the sound pressure level at one second intervals for in A-weighted form.

The sound level meters and microphones were mounted approximately five feet above the ground and equipped with a windscreen during all measurements. The sound level meter was calibrated before monitoring. The noise level measurement equipment meets American National Standards Institute (ANSI) specifications for sound level meters.

4.3 Measurement Locations

The noise monitoring locations were selected in order to obtain noise measurements of the current noise sources impacting the vicinity of the project site and the surroundings to provide a baseline for the existing noise levels. The noise measurement locations are shown in Exhibit C.



4.4 Noise Measurement and Results

The noise measurements were taken at three locations surrounding the project site near the existing noise sensitive receptors. The results of the noise level measurements are provided below in Table 2.

Table 2
Measured Noise Levels

Site No.	Location	Time	L_{eq} (dBA)	L_{max} (dBA)	L_{min} (dBA)
1	At the Southeastern corner of the project site	11:12 a.m.	62.3	75.8	45.1
2	Along Eagle Road, behind 497 Cambridge Drive	11:33 a.m.	63.7	74.7	47.7
3	Along Ramona Freeway, behind 556 Cumbre Court	12:08 p.m.	74.5	89.2	53.6

Meteorological conditions consisted of cloudy skies, mild temperatures, with light wind speeds (5 miles per hour), and low humidity. Measured daytime noise levels ranged from 62.3 to 74.5 dBA L_{eq}. The results of the field measurements are included in Appendix A. Refer to Exhibit C for the noise measurement locations.

5.0 NOISE AND VIBRATION ANALYSES

Consistent with the California Environmental Quality Act (CEQA) and the CEQA Guidelines, a significant impact related to noise would occur if a proposed project were determined to result in:

a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.

b) Generation of excessive groundborne vibration or groundborne noise levels.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels.

According to the CEQA checklist, to determine whether impacts to noise resources are significant environmental effects, the following thresholds are analyzed and evaluated:

- Exceedance of noise standards for construction and operational noise
- Groundborne vibration.
- Operational noise.
- Short-term construction noise.

Each of these thresholds is analyzed below.

5.1 Impact Analyses

This impact discussion analyzes the potential for project construction noise to cause an exposure of persons to or generation of noise levels in excess of established City of San Jacinto noise standards or applicable standards of other agencies. Noise levels in the project area would be influenced by construction activities.

a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.

5.1.1 Construction Noise

Construction activities generally are temporary and have a short duration, resulting in periodic increases in the ambient noise environment. Construction activities would occur over approximately eight months and would include the following phases: grading, building construction, paving, and architectural coating. Ground-borne noise and other types of construction-related noise impacts typically occur during the initial demolition and grading phase. This phase of construction has the potential to create the highest levels of noise. Typical noise levels generated by construction equipment are shown in Table 3, Maximum Construction Noise Levels. It should be noted that the noise levels identified in Table 3 are maximum sound levels (L_{max}), which are the highest individual sound occurring at an individual time period. Operating cycles for these types of construction equipment may involve one or two minutes of full power operation followed by three to four minutes at lower power settings. Other primary sources of acoustical disturbance would be due to random incidents, which would last less than one minute (such as dropping large pieces of equipment or the hydraulic movement of machinery lifts).

Table 3
Maximum Construction Noise Levels

Type of Equipment	Acoustical Use Factor[1]	L_{max} at 50 Feet (dBA)[2]	L_{max} at 10 Feet (dBA)
Backhoe	40	78	92
Compressor	40	78	92
Concrete Saw	20	90	104
Dozer	40	82	96
Dump Truck	40	76	90
Excavator	40	81	95
Flatbed Truck	40	74	88
Grader	40	85	99
Loader	40	79	93
Paver	50	77	91
Roller	20	80	94
Scraper	40	85	99
Tractor	40	84	98
Water Truck	40	80	89
Welder	40	74	88

Note:
1. Acoustical Use Factor (percent): Estimates the fraction of time each piece of construction equipment is operating at full power (i.e., its loudest condition) during a construction operation.
2. These noise levels represent the A-weighted maximum sound level (L_{max}) measured at a distance of 50 feet from the construction equipment.
Source: Federal Highway Administration, Roadway Construction Noise Model (FHWA-HEP-05-054), January 2006.

As shown, the highest noise levels from construction are predicted to range from approximately 88 dBA Lmax to 104 dBA Lmax at the nearest receivers at 10 feet to the southeast. These maximum noise levels are considered to be a peak exposure, applicable to not more than 10%–15% of the total construction period, only while the construction activity is taking place along the property boundary closest to these nearest off-site receivers. The City does not have established numerical noise standards for construction noise if the construction activities occur within the allowable hours specified by the Municipal Code. Section 8.040.090 (A) of the City of San Jacinto Municipal Code allows construction activities between the hours of 7:00 a.m. and 7:00 p.m. Monday through Saturday. No construction is allowed on Sunday or federal holidays. Construction occurring consistent with these provisions is exempt from noise regulations described in the City of San Jacinto's Noise Ordinance.

5.2 Operational Noise

5.2.1 Stationary Noise Source

Stationary noise sources associated with the project would include the operation of mechanical equipment, parking lot activities, and car wash activities.

Mechanical Equipment Noise

Implementation of the project would result in changes to existing noise levels on and around the project site by developing new stationary sources of noise, including introduction of Heating, ventilation, and air conditioning (HVAC) equipment. These sources may affect noise-sensitive vicinity land uses off the project site. HVAC units would be installed on the roof of the proposed commercial buildings. Typically, mechanical equipment noise is approximately 66 dBA at 3 feet from the source.[1] Based upon the Inverse Square Law, sound levels decrease by 6 dBA for each doubling of distance from the source.[2] The nearest sensitive receptor to the project site is the single-family residences located adjacent to the southeast. However, HVAC units would be located at the center of the rooftop and would be located approximately 72 feet from the nearest sensitive receptor to the southeast. Noise from the proposed HVAC units would be approximately 38 dBA at 72 feet and would not be audible above the existing noise levels. In addition, the proposed HVAC units would be shielded by a screen, which would further attenuate operational noise from the HVAC units. Therefore, the proposed HVAC units would not generate noise levels in excess of City of San Jacinto's maximum exterior noise level of 65 dBA L_{eq} during daytime and 45 dBA L_{eq} during nighttime. Thus, the proposed project would not result in significant noise impacts from HVAC units at the nearest sensitive receptor, and stationary noise levels from the proposed HVAC units would comply with the City's Municipal Code Noise Ordinance. Impacts in this regard would be less than significant.

[1] Elliott H. Berger, Rick Neitzel, and Cynthia A. Kladden, *Noise Navigator Sound Level Database with Over 1700 Measurement Values*, June 26, 2015.
[2] Cyril M. Harris, *Noise Control in Buildings*, 1994.

Parking Lot Noise

Traffic associated with parking lots is typically not of sufficient volume to exceed community noise standards, which are based on a time-averaged scale such as the CNEL scale. However, the instantaneous maximum sound levels generated by a car door slamming, engine starting up, and car pass-bys may be an annoyance to adjacent noise-sensitive receptors.

The project proposes 532 parking spaces within the project site. The nearest sensitive receptor (single-family uses) to the proposed parking lot would be located approximately 55 feet to the east of the project site. Parking lot noise levels could range between 53 dBA and 63 dBA at 50 feet.[3] However, there is an existing seven-foot noise barrier wall along the western property line of the residential uses to the east which would shield the parking lot noise. Further, parking lot noise would be partially masked by background noise from traffic along Eagle Road and Ramona Expressway. As such, parking lot noise levels would not exceed the City's day-night average exterior sound level standard for residential use (65 dBA) and the City's nighttime noise standards (45 dBA). As such, the noise impacts from parking lot activities would be less than significant.

Car Wash Activity Noise

The proposed automated carwash facility including a machine dryer would be a total of 110 feet long and would be located at the southwestern side of the project site. Typical measured noise level from the car wash activities is approximately 78 dBA at 45 feet from the car wash exit.[4] The nearest sensitive receptor to the project site is the single-family residence located approximately 600 feet to the east of the proposed car wash exit. Noise from the proposed car wash activities would be approximately 55 dBA at 600 feet and would not exceed the City's daytime noise standard of 65 dBA for single-family residential uses. The proposed car wash would not be operational during the nighttime hours. Thus, the proposed project would not result in significant noise impacts from car wash activities to the nearest sensitive receptor, and stationary noise levels from the proposed car wash activities would comply with the City's Municipal Code Noise Ordinance. Impacts in this regard would be less than significant.

5.2.2 Project Generated Traffic Noise Levels

Based on the Trip Generation Data received from LINSCOTT, LAW & GREENSPAN, engineers, the proposed project is expected to generate approximately 11,265 average daily trips (ADT). The project is expected to provide access along Ramona Expressway and State Street. Based on the City of San Jacinto General Plan Noise Impact Study, prepared by MD Acoustics, LLC dated July 15, 2022, existing traffic volumes along Ramona Expressway and State Street would be approximately 20,150 and 22,050 respectively. As a conservative analysis, the proposed

[3] Kariel, H. G., Noise in Rural Recreational Environments, Canadian Acoustics 19(5), 3-10, 1991

[4] Dudek, *Noise Study Report – Splash n Dash Car Wash 222 East Donovan Road, Santa Maria*, September 24, 2014.

project ADT would represent approximately 55 percent and 51 percent increase in the daily traffic compared to the existing traffic conditions on the Ramona Expressway and State Street respectively. According to Caltrans, a doubling of Traffic (100 percent increase) on a roadway would result in a perceptible increase in traffic noise levels (3 dBA)[5].

As a result, project-related increase in traffic volume would not significantly increase the existing traffic noise levels. Thus, project's operational traffic noise levels are not expected to be significant.

b) Generation of excessive groundborne vibration or groundborne noise levels.

5.3 Groundborne Vibration

This impact discussion analyzes the potential for the proposed project to cause an exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels. Vibration levels in the project area would be influenced by construction activities.

5.3.1 Construction Vibration

Project construction can generate varying degrees of groundborne vibration, depending on the construction procedure and the construction equipment used. Operation of construction equipment generates vibrations that spread through the ground and diminish in amplitude with distance from the source. The effect on buildings in the vicinity of a construction site often varies depending on soil type, ground strata, and construction characteristics of the receiver building(s). The Caltrans Transportation and Construction Vibration Manual identifies various vibration damage criteria for different building classes. This evaluation uses the Caltrans architectural damage criterion for continuous vibrations at residential buildings of 0.2 inch-per-second (inch/second) PPV. The types of construction vibration impacts include human annoyance and building damage. Table 4 displays vibration levels for typical construction equipment.

Based on the site plan, construction activities would likely take place as near as approximately 15 feet from the nearest residential uses to the southeast of the project. However, it is acknowledged that construction activities would occur throughout the project site and would not be concentrated at the point closest to the nearest structure.

[5] California Department of Transportation, technical Noise Supplement to the Traffic Noise Analysis Protocol, September 2013.

Table 4
Project Typical Construction Equipment Vibration Levels

Equipment	Approximate peak particle velocity at 15 feet (inches/second)[1]
Large Bulldozer	0.1915
Loaded Trucks	0.1635
Small Bulldozers	0.0065

Source: Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual, September 2018.

Based on the vibration levels presented in Table 4, ground vibration generated by heavy-duty equipment would range from approximately 0.0065 to 0.1915 in/sec PPV at 15 feet from the source of activity. As such, the nearest residential buildings located 15 feet southeast of the project site would not be exposed to vibration levels exceeding the Caltrans 0.2 in/sec PPV significance threshold for vibration. Additionally, groundborne vibration during construction would be a temporary impact and would cease completely when construction ends. Once operational, the project would not be a source of groundborne vibration. Impacts would be less than significant.

The project would not involve operation of trains or heavy trucks, as such operational vibration impacts from the project would be less than significant.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels.

The nearest airports are Hemet-Ryan Airport located at approximately 5.2 miles to the southwest of the project site. Furthermore, the project site is not located within the private or public airports within 2 miles radius. Impacts would be less than significant.

TRAFFIC IMPACT ANALYSIS REPORT

RAMONA EXPRESSWAY AND STATE STREET SHOPPING CENTER

San Jacinto, California
January 25, 2024
(Revision of March 30, 2023 Report)

1.0 INTRODUCTION

This traffic impact analysis addresses the potential traffic impacts and circulation needs associated with the proposed Ramona Expressway and State Street Shopping Center Project (hereinafter referred to as Project). The proposed Project site is located on the southeast corner of the intersection of State Street and Ramona Expressway in the City of San Jacinto, California. The proposed Project will consist of a maximum of 114,135 square foot (SF) shopping center with 105,348 SF of retail/grocery/food uses, a gas station with 16 vehicle fueling positions and a 5,198 SF convenience market, and a 3,589 SF express car wash with a 110-foot wash tunnel.

This traffic report documents the findings and recommendations of a traffic impact analysis conducted by Linscott, Law & Greenspan Engineers (LLG) to determine the potential impacts associated with the proposed Project. The traffic analysis evaluates the operating conditions at seven (7) key study intersections within the Project vicinity, estimates the trip generation potential of the proposed project, and forecasts future operating conditions without and with the proposed Project. Where necessary, intersection improvements are identified.

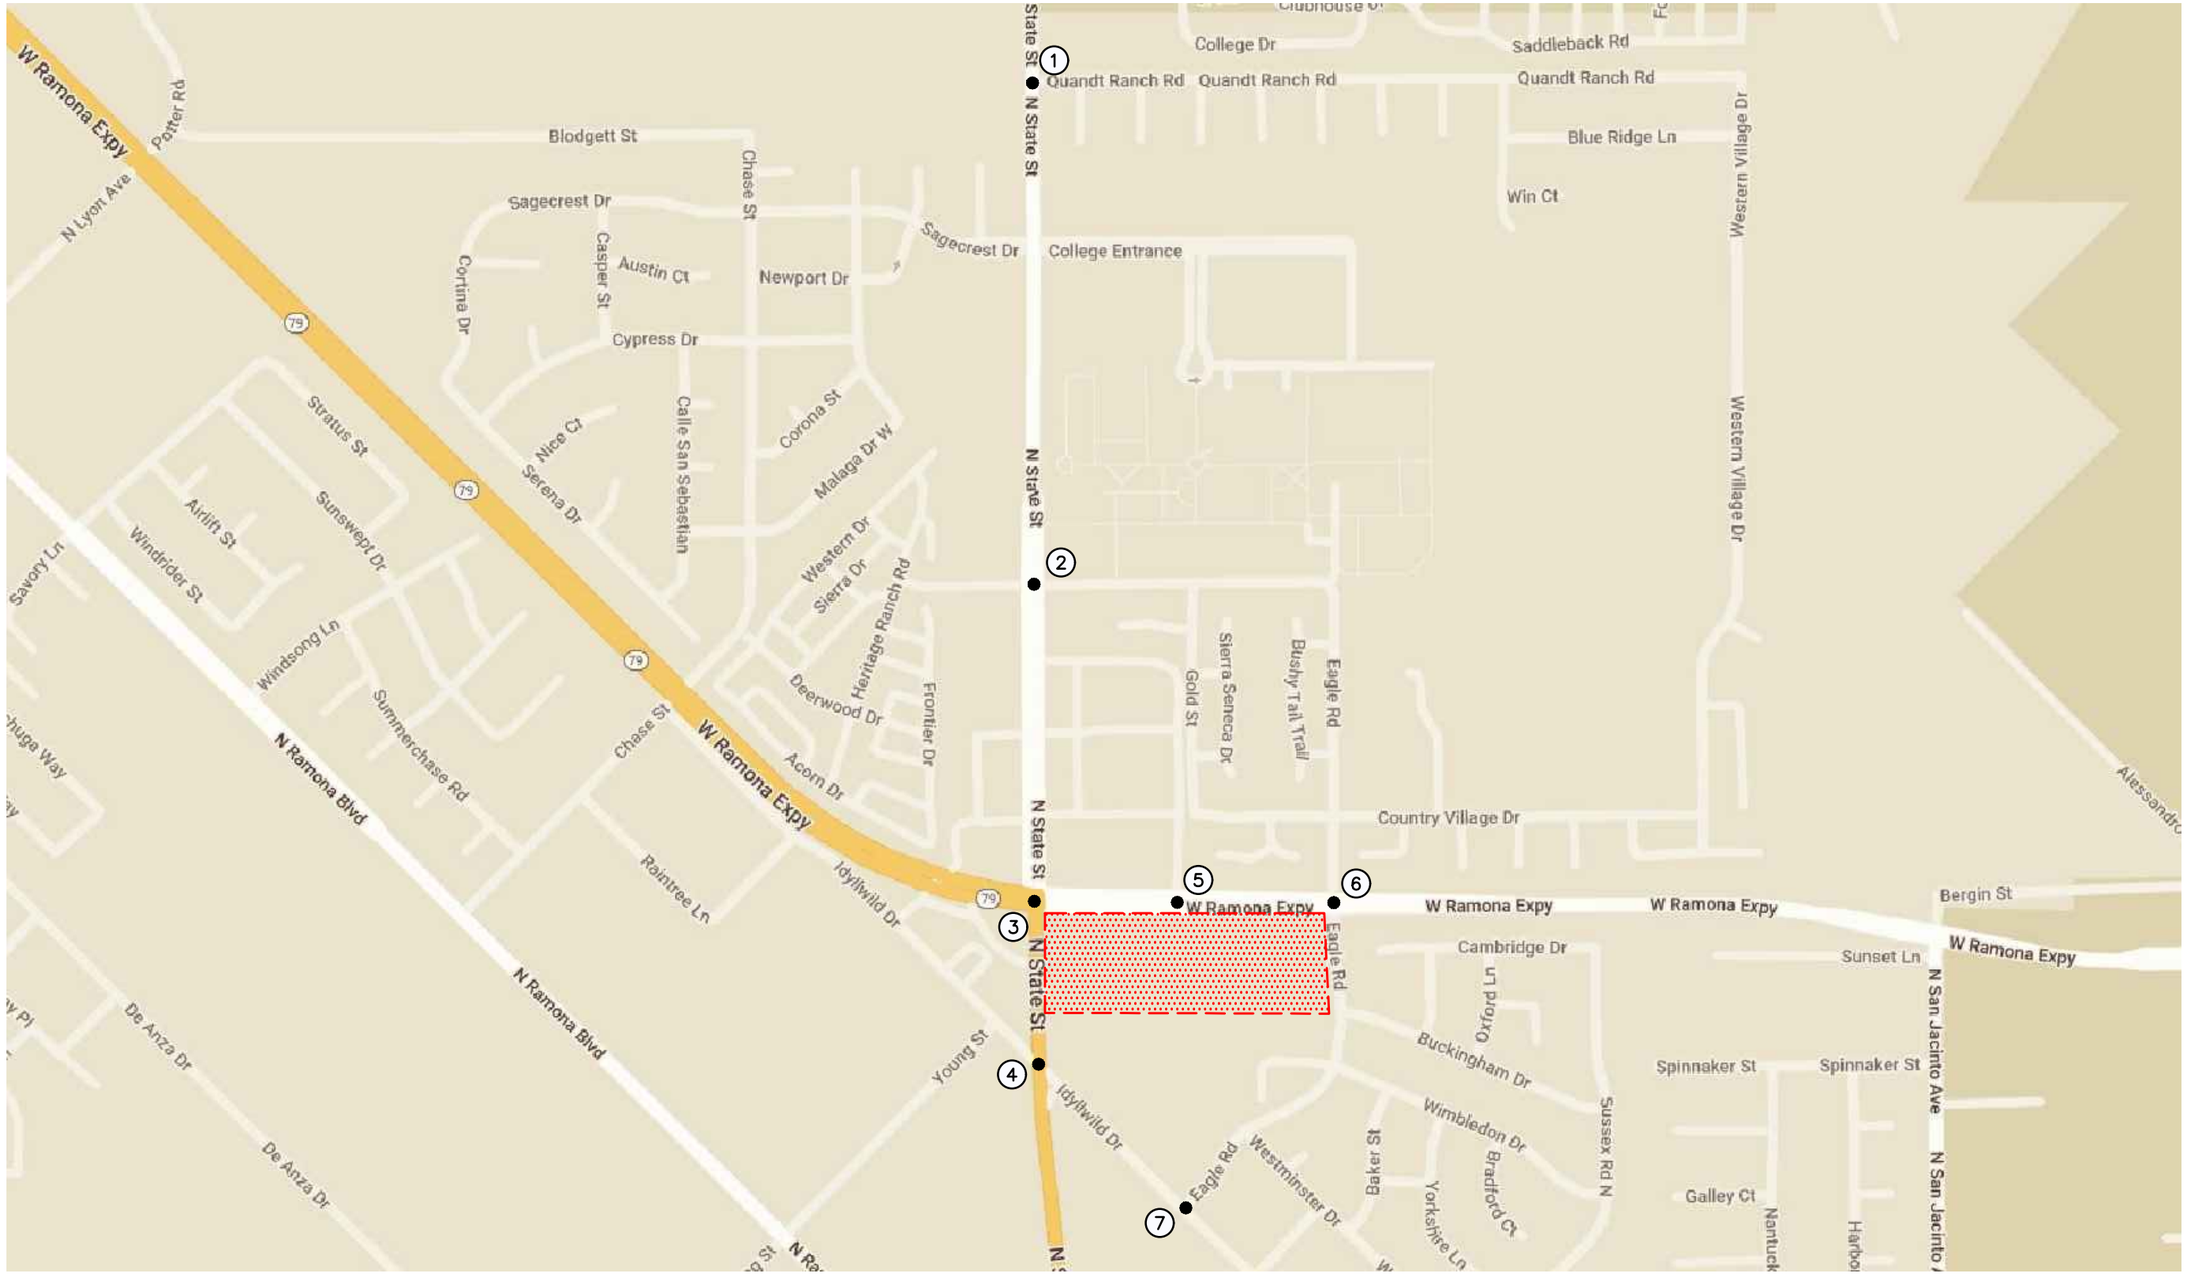
This traffic report satisfies the *City of San Jacinto Traffic Impact Analysis Guidelines for Vehicle Miles Traveled and Level of Service Assessment*, dated June 2020. The Scope of Work for this traffic study, which is included in ***Appendix A***, was developed in conjunction with City of San Jacinto staff.

The Project site has been visited and an inventory of adjacent area roadways and intersections was performed. Existing weekday traffic count information has been collected at seven (7) key study intersections for use in the preparation of intersection level of service calculations. Information concerning cumulative projects (planned and/or approved) in the vicinity of the proposed Project has been researched at the City of San Jacinto. Based on our research, there are thirty-one (31) cumulative projects in the City of San Jacinto within the vicinity of the subject site. These thirty-one (31) planned and/or approved cumulative projects were considered in the cumulative traffic analysis for this project.

This traffic report analyzes existing and future weekday AM peak hour and PM peak hour traffic conditions for a near-term (Year 2026) traffic setting upon completion of the proposed Project. Peak hour traffic forecasts for the Year 2026 horizon year have been projected by increasing existing traffic volumes by an annual growth rate of 2.0% per year and adding traffic volumes generated by thirty-one (31) cumulative projects, which provides a conservative forecast.

1.1 Study Area

Seven (7) key study intersections were selected for evaluation based on discussions with City of San Jacinto staff. The intersections listed below provide local access to the study area and define the extent of the boundaries for this traffic impact investigation.



Key Study Intersections

1. State Street at Quandt Ranch Road
2. State Street at Community College Drive
3. State Street at Ramona Expressway
4. State Street at Idyllwild Drive
5. Village at San Jacinto/Project Driveway No. 3 at Ramona Expressway
6. Eagle Road at Ramona Expressway
7. Eagle Road at Idyllwild Drive

Figure 1-1 presents a Vicinity Map, which illustrates the general location of the project and depicts the study locations and surrounding street system. The Level of Service (LOS) investigations at these key locations were used to evaluate the potential traffic-related impacts associated with area growth, cumulative projects and the proposed Project. When necessary, this report recommends intersection and/or roadway improvements that may be required to accommodate future traffic volumes and restore/maintain an acceptable Level of Service and/or improve the impact of the project.

Included in this Traffic Impact Analysis are:

- Existing traffic counts,
- Estimated Project traffic generation/distribution/assignment,
- Estimated cumulative project traffic generation/distribution/assignment,
- AM and PM peak hour capacity analyses for existing conditions,
- AM and PM peak hour capacity analyses for existing plus ambient growth to the Year 2026 plus Project plus cumulative projects traffic conditions (i.e. cumulative traffic conditions),
- Traffic Signal Warrant Analysis,
- Site Access and Internal Circulation Evaluation,
- Area-Wide Traffic Improvements,
- Project-Related Fair-Share Contributions,
- Multimodal Circulation, and
- Vehicle Miles Traveled (VMT) Analysis.

2.0 PROJECT DESCRIPTION AND LOCATION

The proposed Project site is located on the southeast corner of the intersection of State Street and Ramona Expressway in the City of San Jacinto, California. ***Figure 2-1*** presents an aerial depiction of the existing site, which is currently vacant.

Figure 2-2 presents the proposed site plan for the proposed Project, prepared by MCG Architecture. Review of the proposed site plan indicates that the proposed Project will consist of a maximum of 114,135 square foot (SF) shopping center with 105,348 SF of retail/grocery/food uses, a gas station with 16 vehicle fueling positions and a 5,198 SF convenience market, and a 3,589 SF express car wash with a 110-foot wash tunnel. The proposed Project is anticipated to be completed by the Year 2026.

2.1 Site Access

Access to the proposed Project will be provided via one (1) right-turn in/right-turn out only unsignalized driveway located along State Street (i.e. Project Driveway No. 1), two (2) right-turn in/right-turn out only unsignalized driveways located along Ramona Expressway (i.e. Project Driveway No. 2 and Project Driveway No. 4), one (1) full access signalized driveway located along Ramona Expressway, located directly opposite Village at San Jacinto (i.e. Project Driveway No. 3) and two (2) full-access unsignalized driveways located along Eagle Road (i.e. Project Driveway No. 5 and Project Driveway No. 6). It should be noted that there is one additional driveway located at the southeast corner of the project site along Eagle Road that will provide truck access to Major 3, Major 4 and Major 5.

2.2 Project-Specific Access Improvements

The following Project features will be constructed by the proposed Project to ensure that adequate ingress and egress to the Project site is provided along Ramona Expressway and State Street:

- Intersection No. 3 – State Street at Ramona Expressway: Restripe the south leg of the intersection to provide the northbound approach with a second northbound left-turn lane and convert the northbound right-turn lane to a shared northbound through/right-turn lane. Modify the existing traffic signal, as necessary. The installation of this improvement is subject to the approval of the City of San Jacinto.

- Intersection No. 5 – Village at San Jacinto/Project Driveway No. 3 at Ramona Expressway: Construct the project driveway, located directly opposite Village at San Jacinto and provide one inbound lane and three outbound lanes (i.e. dual northbound left-turn lanes and one northbound shared through/right-turn lane). Stripe crosswalks on the south, west, and east legs. Modify the existing traffic signal, as necessary. The installation of this improvement is subject to the approval of the City of San Jacinto.

3.0 EXISTING CONDITIONS

3.1 Existing Street System

The principal local network of streets serving the proposed project site is State Street, Ramona Expressway and Eagle Road. The following discussion provides a brief synopsis of these key area streets. The descriptions are based on an inventory of existing roadway conditions.

State Street is generally a four-lane, divided roadway north of Ramona Expressway and generally a four-lane, undivided roadway south of Ramona Expressway, oriented in the north-south direction. State Street borders the Project site to the west and will provide access to the project site via one (1) right-turn in/right-turn out only unsignalized driveway. On-street parking is generally not permitted along State Street in the vicinity of the Project site. The posted speed limit on State Street is 45 miles per hour (mph). Traffic signals control the study intersections of State Street at Ramona Expressway and Idyllwild Drive. The study intersections of State Street at Quandt Ranch Road and Community College Drive are stop controlled.

Ramona Expressway is generally a six-lane, divided roadway west of Eagle Road and generally a four-lane, divided roadway east of Eagle Road, oriented in the east-west direction. Ramona Expressway borders the Project site to the north and will provide access to the project site via two (2) right-turn in /right run out only unsignalized driveways and one (1) signalized driveway, located directly opposite Village at San Jacinto. On-street parking is generally not permitted along Ramona Expressway in the vicinity of the Project site. The posted speed limit on Ramona Expressway is 55 mph. Traffic signals control the study intersections of Ramona Expressway at State Street, Village at San Jacinto/Project Driveway No. 3 and Eagle Road.

Eagle Road is a two-lane, undivided roadway, oriented in the north-south direction. Eagle Road borders the Project site to the east and will provide access to the project site via two (2) full access unsignalized driveways. On-street parking is generally not permitted along Eagle Road in the vicinity of the Project site. The posted speed limit on Eagle Road is 30 mph. A traffic signal controls the study intersection of Eagle Road at Ramona Expressway. The study intersection of Eagle Road at Idyllwild Drive is stop controlled.

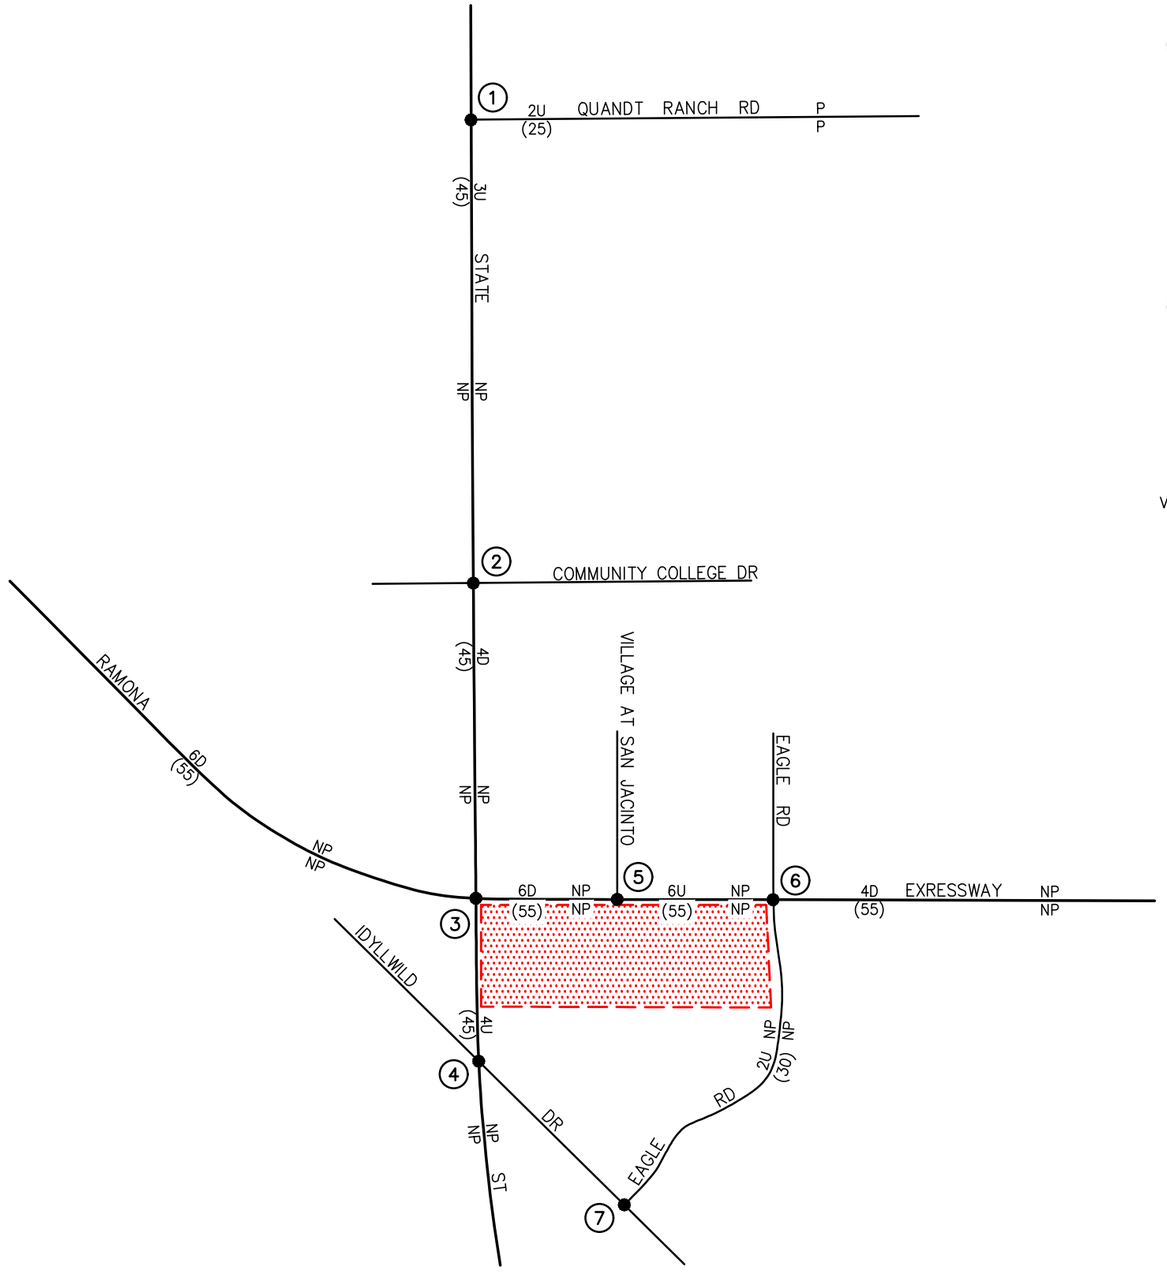

Figure 3-1 presents an inventory of the existing roadway conditions for the arterials and intersections evaluated in this report. This figure identifies the number of travel lanes for key arterials, as well as intersection configurations and controls for the key area study intersections.

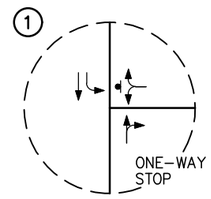
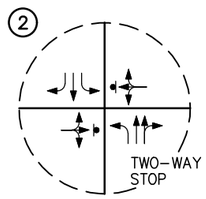


3.2 Existing Public Transit

The Riverside Transit Agency (RTA) operates within the study area. A description of the transit services within the Project vicinity are described on the following page:



City Route 31:

- Route 31 provides service from San Jacinto to Hemet; via Hemet Valley Mall, State & Acacia (Post Office), State & Fruitvale, Mt. San Jacinto College, Beaumont Walmart,

Sun Lakes at Village, Super Walmart at Moreno Beach Drive, Riverside University Medical Center, San Jacinto Senior Center and San Jacinto Mall.

- The route traverses the cities of San Jacinto, Beaumont, Banning, San Jacinto, and Hemet.
- During the weekday and weekend AM and PM peak hours, Route 31 has approximate headways between 60 and 70 minutes in the northbound and southbound directions.

City Route 32:

- Route 32 provides service from Hemet to San Jacinto; via Hemet Valley Mall, State & Stetson, San Jacinto & Mayberry, Esplanade & San Jacinto, Main & Mistletoe, Idyllwild Dr & Attenborough, and Mt. San Jacinto College San Jacinto.
- The route traverses the cities of Hemet and San Jacinto
- During the weekday and weekend AM and PM peak hours, Route 32 has approximate headways between 60 and 70 minutes in the northbound and southbound directions.

City Route 44:

- Route 44 provides service from Hemet to San Jacinto; via Hemet Valley Mall, State & Esplanade, Mt. San Jacinto College San Jacinto, San Jacinto & Sixth, and Hemet Valley Mall
- The route traverses the cities of Hemet and San Jacinto
- During the weekday and weekend AM and PM peak hours, Route 44 has approximate headways between 60 and 70 minutes in the northbound and southbound directions.

City Route 74:

- Route 74 provides service from Perris to San Jacinto, via Perris Station Transit Center, Cherry Hills & Bradley, Mt. San Jacinto College Menifee, Simpson & Winchester, Hemet Valley Mall, and Mt. San Jacinto College San Jacinto.
- The route traverses the cities of Perris, Menifee, Hemet, and San Jacinto
- During the weekday AM and PM peak hours, Route 74 has approximate headways between 80 and 100 minutes in the eastbound and westbound directions. During the weekends Route 74 has headways between 70 and 90 minutes.

City Route 79:

- Route 79 provides service from Temecula to San Jacinto, via Pujol & Main, County Center Drive, Promenade Mall, Winchester & Nicolas, Southwest Justice Center, Winchester & Pourroy, Simpson & Winchester, Hemet Valley Mall, Mt. San Jacinto College San Jacinto
- The route traverses the cities of Temecula, Murrieta, Hemet, and San Jacinto
- During the weekday and weekend AM and PM peak hours, Route 79 has approximate headways between 80 and 90 minutes in the northbound and southbound directions.

3.3 Bicycle and Pedestrian Facilities

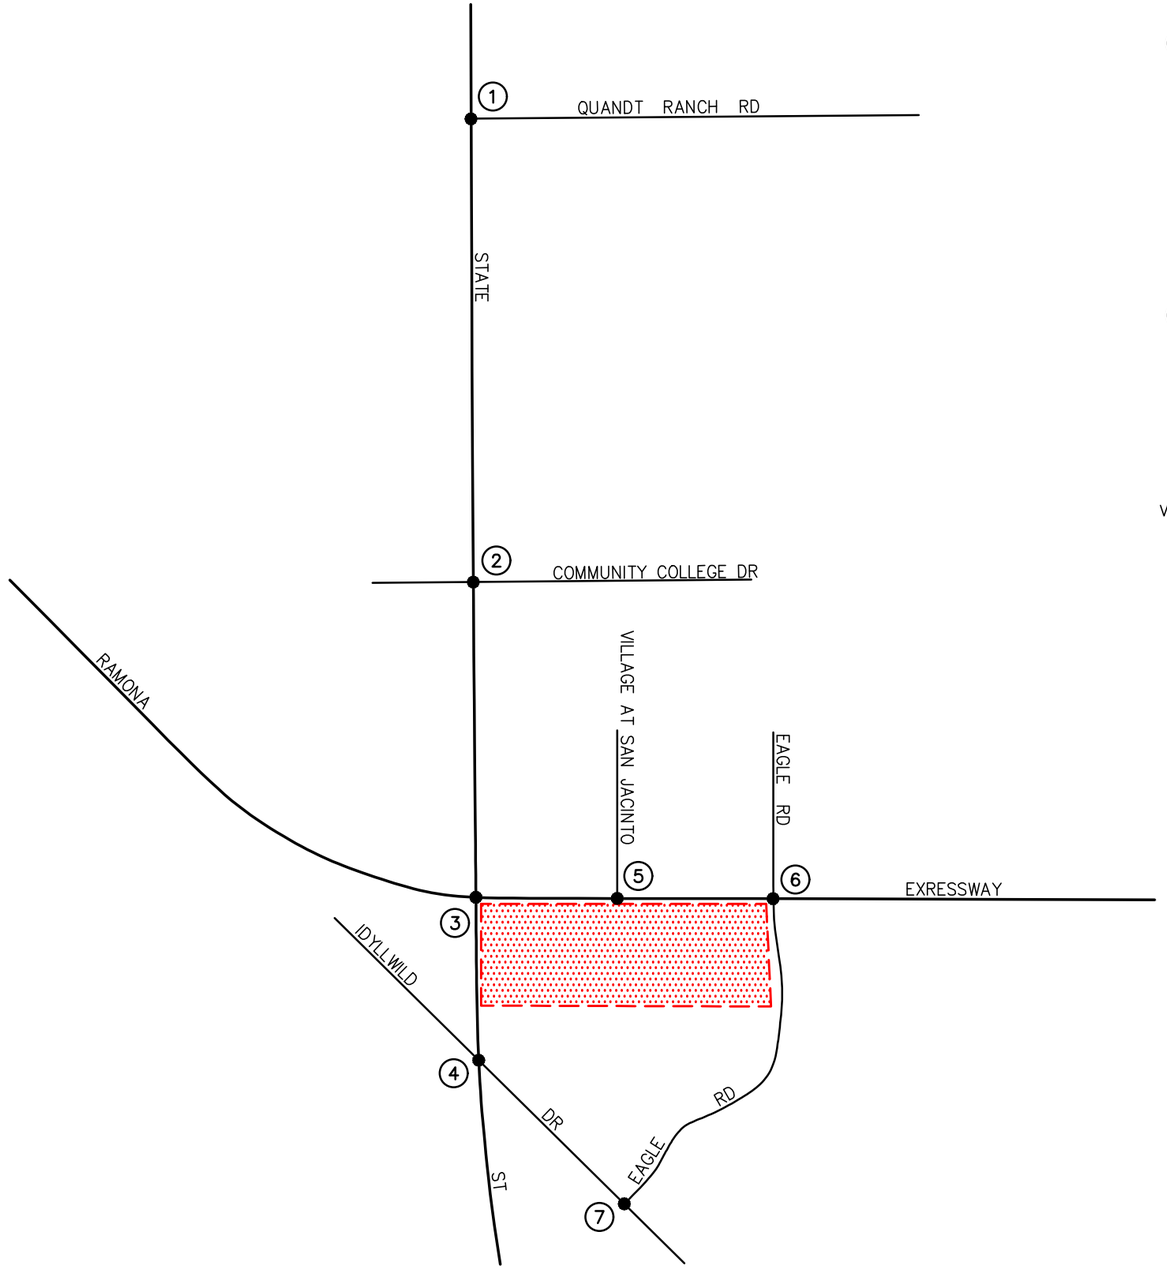
The Federal and State transportation system recognizes three primary bikeway facilities: Bicycle Paths (Class I), Bicycle Lanes (Class II), and Bicycle Routes (Class III). Bicycle Paths (Class I) are exclusive car free facilities that are typically not located within a roadway area. Bicycle Lanes (Class II) are part of the street design that is dedicated only for bicycles and identified by a striped lane separating vehicle lanes from bicycle lanes. Bicycle Routes (Class III) are preferably located on collector and lower volume arterial streets. The following bicycle facilities are located within the vicinity of the project site.

- A Class II Bike Lane currently exists along Ramona Expressway (i.e. on both sides of the street), west and east of State Street. A Class II Bike Lane also currently exists along Eagle Road (i.e. on both sides of the street), north and south of Ramona Expressway.

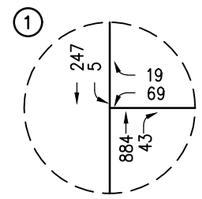
Pedestrian connection to the surrounding residential, commercial, college developments, as well as nearby public transit stops, is provided via existing sidewalks along the Project frontage on State Street. Sidewalks are also existing along most streets within the Project vicinity and the project will construct sidewalk along the Project frontage on Ramona Expressway and Eagle Road.

3.4 Existing Traffic Volumes

Seven (7) key study intersections have been identified as the locations at which to evaluate existing and future traffic operating conditions. Some portion of project-related traffic will pass through these intersections and their analysis will reveal the expected relative impacts of the project. These key study intersections were selected for evaluation based on discussions with City of San Jacinto staff.

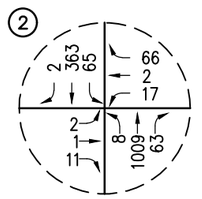


Existing AM and PM peak hour traffic volumes for the seven (7) key study intersections evaluated in this report were obtained from manual peak hour turning movement counts conducted by *Counts Unlimited, Inc.* in August 2022. It should be noted that the traffic counts were conducted when local area schools, including Mt. San Jacinto College were back in session. ***Figures 3-2*** and ***3-3*** illustrate the existing AM and PM peak hour traffic volumes at the seven (7) key study intersections evaluated in this report, respectively. ***Appendix B*** contains the detailed peak hour count sheets for the key intersections evaluated in this report.



3.5 Existing Intersection Conditions

In conformance with City of San Jacinto requirements, existing AM and PM peak hour operating conditions for the signalized and unsignalized intersections were evaluated using the *Highway Capacity Manual 7th Edition* (HCM 7) methodology.



3.5.1 Highway Capacity Manual (HCM) Method of Analysis (Signalized Intersections)

Based on the HCM operations method of analysis, level of service for signalized intersections is defined in terms of control delay, which is a measure of driver discomfort, frustration, fuel consumption, and lost travel time. The delay experienced by a motorist is made up of a number of factors that relate to control, geometries, traffic, and incidents. Total delay is the difference between

FIGURE 3-3

EXISTING PM PEAK HOUR TRAFFIC VOLUMES

RAMONA EXPRESSWAY AND STATE STREET SHOPPING CENTER, SAN JACINTO

the travel time actually experienced and the reference travel time that would result during ideal conditions: in the absence of traffic control, in the absence of geometric delay, in the absence of any incidents, and when there are no other vehicles on the road.

In Chapter 19 of the HCM, only the portion of total delay attributed to the control facility is quantified. This delay is called *control delay.* Control delay includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. In contrast, in previous versions of the HCM (1994 and earlier), delay included only stopped delay. Specifically, LOS criteria for traffic signals are stated in terms of the average control delay per vehicle. The six qualitative categories of Level of Service that have been defined along with the corresponding HCM control delay value range for signalized intersections are shown in ***Table 3-1***.

3.5.2 Highway Capacity Manual (HCM) Method of Analysis (Unsignalized Intersections)

The HCM unsignalized methodology for stop-controlled intersections was utilized for the analysis of the unsignalized intersections. LOS criteria for unsignalized intersections differ from LOS criteria for signalized intersections as signalized intersections are designed for heavier traffic and therefore a greater delay.

Two-way stop-controlled intersections are comprised of a major street, which is uncontrolled, and a minor street, which is controlled by stop signs. Level of service for a two-way stop-controlled intersection is determined by the computed or measured control delay. The control delay by movement, by approach, and for the intersection as a whole is estimated by the computed capacity for each movement. LOS is determined for each minor-street movement (or shared movement) as well as major-street left turns. The worst side street approach delay is reported. LOS is not defined for the intersection as a whole or for major-street approaches, as it is assumed that major-street through vehicles experience zero delay. The HCM control delay value range for two-way stop-controlled intersections is shown in ***Table 3-2.***

3.6 Level of Service Standards

According to the *City of San Jacinto Traffic Impact Analysis Guidelines for Vehicle Miles Traveled and Level of Service Assessment*, dated June 2020, LOS D is the minimum acceptable condition that should be maintained during the peak commute hours.

3.7 Existing Level of Service Results

Table 3-3 summarizes the existing peak hour service level calculations for the seven (7) key study intersections based on existing traffic volumes and current street geometry. Review of *Table 3-3* indicates that the intersections of State Street at Community College Drive and Eagle Road at Idyllwild Drive currently operate at unacceptable LOS E during the AM peak hour. The remaining five (5) key study intersections currently operate at an acceptable level of service during the AM and PM peak hours.

Appendix C presents the Existing peak hour HCM/LOS calculation worksheets for the seven (7) key study intersections.

TABLE 3-1

LEVEL OF SERVICE CRITERIA FOR SIGNALIZED INTERSECTIONS (HCM 7 METHODOLOGY)[1]

Level of Service (LOS)	Control Delay Per Vehicle (seconds/vehicle)	Level of Service Description
A	$\leq$ 10.0	This level of service occurs when progression is extremely favorable and most vehicles arrive during the green phase. Most vehicles do not stop at all. Short cycle lengths may also contribute to low delay.
B	> 10.0 and $\leq$ 20.0	This level generally occurs with good progression, short cycle lengths, or both. More vehicles stop than with LOS A, causing higher levels of average delay.
C	> 20.0 and $\leq$ 35.0	Average traffic delays. These higher delays may result from fair progression, longer cycle lengths, or both. Individual cycle failures may begin to appear at this level. The number of vehicles stopping is significant at this level, though many still pass through the intersection without stopping.
D	> 35.0 and $\leq$ 55.0	Long traffic delays At level D, the influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle lengths, or high *v/c* ratios. Many vehicles stop, and the proportion of vehicles not stopping declines. Individual cycle failures are noticeable.
E	> 55.0 and $\leq$ 80.0	Very long traffic delays This level is considered by many agencies to be the limit of acceptable delay. These high delay values generally indicate poor progression, long cycle lengths, and high *v/c* ratios. Individual cycle failures are frequent occurrences.
F	$\geq$ 80.0	Severe congestion This level, considered to be unacceptable to most drivers, often occurs with over saturation, that is, when arrival flow rates exceed the capacity of the intersection. It may also occur at high *v/c* ratios below 1.0 with many individual cycle failures. Poor progression and long cycle lengths may also be major contributing factors to such delay levels.

[1] Source: *Highway Capacity Manual 7*, Chapter 19: Signalized Intersections.

TABLE 3-2

LEVEL OF SERVICE CRITERIA FOR UNSIGNALIZED INTERSECTIONS (HCM 7 METHODOLOGY)[2]

Level of Service (LOS)	Highway Capacity Manual Delay Value (sec/veh)	Level of Service Description
A	≤ 10.0	Little or no delay
B	> 10.0 and ≤ 15.0	Short traffic delays
C	> 15.0 and ≤ 25.0	Average traffic delays
D	> 25.0 and ≤ 35.0	Long traffic delays
E	> 35.0 and ≤ 50.0	Very long traffic delays
F	> 50.0	Severe congestion

[2] Source: *Highway Capacity Manual 7*, Chapter 20: Two-Way Stop-Controlled Intersections. The LOS criteria apply to each lane on a given approach and to each approach on the minor street. LOS is not calculated for major-street approaches or for the intersection as a whole.

TABLE 3-3
EXISTING PEAK HOUR LEVELS OF SERVICE

	Key Intersection	Time Period	Minimum Acceptable LOS	Control Type	HCM	LOS
1.	State Street at	AM	D	One-Way	24.9 s/v	C
	Quandt Ranch Road	PM		Stop	19.1 s/v	C
2.	State Street at	AM	D	Two-Way	**39.0 s/v**	**E**
	Community College Drive	PM		Stop	31.6 s/v	D
3.	State Street at	AM	D	8Ø Traffic	35.2 s/v	D
	Ramona Expressway	PM		Signal	40.6 s/v	D
4.	State Street at	AM	D	8Ø Traffic	27.7 s/v	C
	Idyllwild Drive	PM		Signal	17.1 s/v	B
5.	Village at San Jacinto/Project Dwy No. 3 at	AM	D	5Ø Traffic	6.5 s/v	A
	Ramona Expressway	PM		Signal	10.0 s/v	A
6.	Eagle Road at	AM	D	5Ø Traffic	30.8 s/v	C
	Ramona Expressway	PM		Signal	30.1 s/v	C
7.	Eagle Road at	AM	D	One-Way	**41.3 s/v**	**E**
	Idyllwild Drive	PM		Stop	12.2 s/v	B

Notes:

- LOS = Level of Service, please refer to *Table 3-1* and *Table 3-2* for the LOS definitions
- **Bold Delay/LOS** values indicate adverse service levels
- s/v = seconds per vehicle

4.0 TRAFFIC FORECASTING METHODOLOGY

In order to estimate the traffic impact characteristics of the proposed Project, a multi-step process has been utilized. The first step is traffic generation, which estimates the total arriving and departing traffic on a peak hour and daily basis. The traffic generation potential is forecast by applying the appropriate vehicle trip generation equations and/or rates to the Project development tabulation.

The second step of the forecasting process is traffic distribution, which identifies the origins and destinations of inbound and outbound Project traffic. These origins and destinations are typically based on demographics and existing/expected future travel patterns in the study area.

The third step is traffic assignment, which involves the allocation of Project traffic to study area streets and intersections. Traffic assignment is typically based on minimization of travel time, which may or may not involve the shortest route, depending on prevailing operating conditions and travel speeds. Traffic distribution patterns are indicated by general percentage orientation, while traffic assignment allocates specific volume forecasts to individual roadway segments and intersection turning movements throughout the study area.

With the forecasting process complete and project traffic assignments developed, the impact of the Project is isolated by comparing operational (LOS) conditions at the selected key intersection using expected future traffic volumes with and without forecast project traffic. If necessary, the need for site-specific and/or cumulative local area traffic improvements can then be evaluated, and the significance of the project's impacts identified.

5.0 PROJECT TRAFFIC CHARACTERISTICS

5.1 Project Traffic Generation

Traffic generation is expressed in vehicle trip ends, defined as one-way vehicular movements, either entering or exiting the generating land use. Generation equations and/or rates used in the traffic forecasting procedure are found in the 11th Edition of *Trip Generation*, published by the Institute of Transportation Engineers (ITE) [Washington D.C., 2021].

Table 5-1 summarizes the trip generation rates used in forecasting the vehicular trips generated by the proposed Project and also presents the forecast daily and peak hour project traffic volumes for a "typical" weekday. As shown in this table, the trip generation potential for the proposed Project was forecast using ITE Land Use Code 821: Shopping Plaza (40k – 150k With Supermarket) trip rates and ITE Land Use Code 945: Gasoline Service Station With Convenience Store (GFA 4 – 5.5k) trip rates. The express wash trip rates are based on driveway traffic counts conducted on Friday (2/7/2014) at Victorville Speedwash (12147 Industrial Boulevard, Victorville).

Review of the last row of *Table 5-1* indicates that the proposed Project is forecast to generate approximately 11,265 daily trips, with 479 trips (282 inbound, 197 outbound) forecast during the AM peak hour and 737 trips (356 inbound, 381 outbound) forecast during the PM peak hour. It should be noted that the aforementioned overall Project trip generation includes adjustments for pass-by per the *Trip Generation Manual, 11th Edition*, published by ITE, to account for trips that are already in the everyday traffic stream on the adjoining streets (i.e. State Street and Ramona Expressway) and will stop as they pass by the Project site as a matter of convenience on their path to another destination. The pass-by reduction factors for all land uses are summarized in the footnotes of *Table 5-1*. It should also be noted that the trip generation methodology and forecasts were approved by City of San Jacinto staff prior to proceeding with further analysis.

5.2 Project Traffic Distribution and Assignment

The Project directional trip distribution pattern is presented in ***Figure 5-1***. Project traffic volumes both entering and exiting the site have been distributed and assigned to the adjacent street system based on the following considerations:

- the site's proximity to major traffic carriers (i.e. State Street, Ramona Expressway, etc.),
- expected localized traffic flow patterns based on adjacent street channelization and presence of traffic signals,
- existing intersection traffic volumes, and
- ingress/egress availability at the Project site.

It should be noted that the Project trip distribution pattern was submitted to City staff for their review and approval prior to proceeding with further analyses. The anticipated AM and PM peak hour traffic volumes associated with the Project are presented in ***Figures 5-2*** and ***5-3***, respectively. The traffic volume assignments presented in *Figures 5-2* and *5-3* reflect the traffic distribution characteristics shown in *Figure 5-1* and the traffic generation forecast presented in *Table 5-1*.

TABLE 5-1

PROJECT TRIP GENERATION RATES AND FORECAST[3]

ITE Land Use Code / Project Description	Daily 2-Way	AM Peak Hour			PM Peak Hour

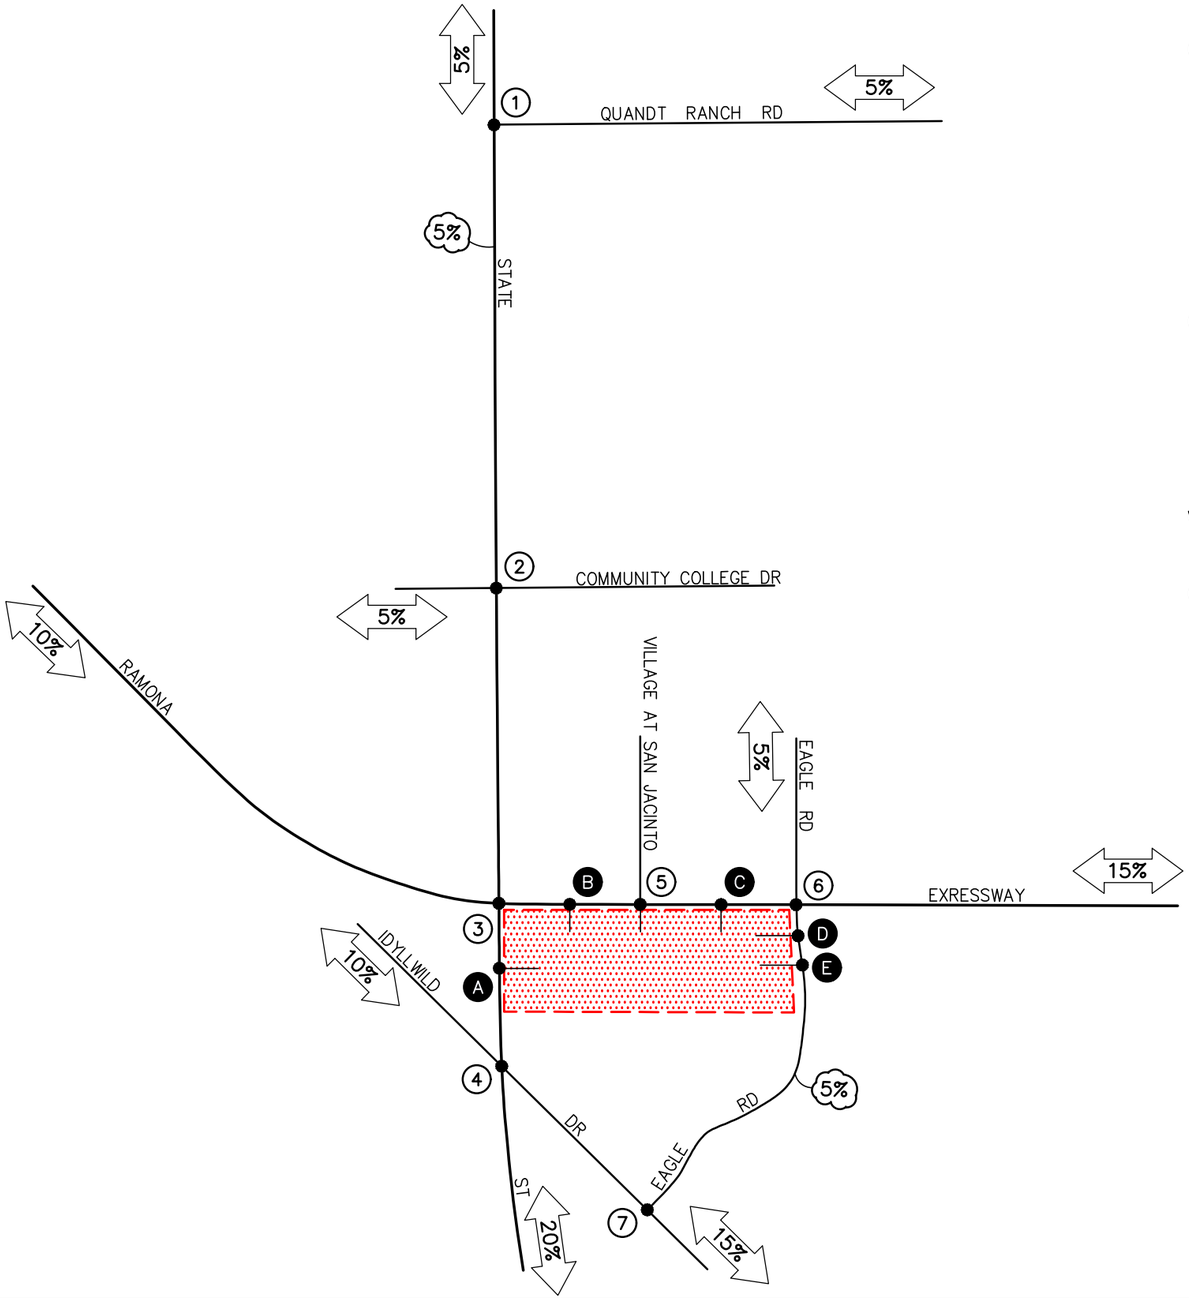
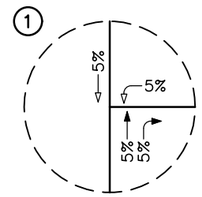
Generation Rates:							
▪ 821: Shopping Plaza [40k – 150k With Supermarket] (TE/TSF)	94.49	62%	38%	3.53	48%	52%	9.03
▪ 945: Gasoline Service Station With Convenience Store [GFA 4 – 5.5k] (TE/VFP) [4]	257.13	50%	50%	27.04	50%	50%	22.76
▪ Express Car Wash (TE/LFWT)[5]	8.663	0.275	0.204	0.479	0.450	0.463	0.913
Proposed Project Generation Forecast:							
▪ Retail (105,348 SF)	9,954	231	141	372	456	495	951
Pass-By (Daily: 25%, AM: 10%, PM: 40%)[6]	-2,489	-23	-14	-37	-182	-198	-380
Subtotal	*7,465*	*208*	*127*	*335*	*274*	*297*	*571*
▪ Gas Station with Convenience Store (16 VFP)	4,114	216	217	433	182	182	364
Pass-By (Daily: 25%, AM: 76%, PM: 75%)[6]	-1,029	-164	-165	-329	-137	-136	-273
Subtotal	*3,085*	*52*	*52*	*104*	*45*	*46*	*91*
▪ Express Wash (110 Feet)	953	30	23	53	50	50	100
Pass-By (Daily: 25%, AM: 25%, PM: 25%)[6]	-238	-8	-5	-13	-13	-12	-25
Subtotal	*715*	*22*	*18*	*40*	*37*	*38*	*75*
Total Net Proposed Project Trip Generation Forecast	**11,265**	**282**	**197**	**479**	**356**	**381**	**737**

Note:

- TE/TSF = Trip End per Thousand Square Feet
- TE/VFP = Trip End per Vehicle Fueling Position
- TE/LFWT = Trip End per Linear Feet Wash Tunnel

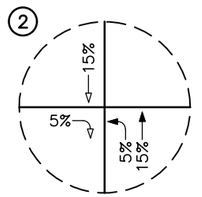


3 Source*: Trip Generation, 11th Edition*, Institute of Transportation Engineers, (ITE) [Washington, D.C. (2021)].



4 The proposed convenience store is 5,198 SF.

5 *Trip Generation Manual, 11th Edition* does not include trip generation rates for the express car wash land use. The trip rates are derived from traffic counts conducted on Friday, February 7, 2014 at the Victorville Speedwash located at 12147 Industrial Boulevard, Victorville.



6 Pass-By Trips are trips made as intermediate stops on the way from an origin to a primary trip destination. Pass-by trips are attracted from traffic passing the site on adjacent streets, which contain direct access to the generator. For this analysis, the following pass-by reduction factors were used (Source: *Trip Generation Manual, 11th Edition*, ITE 2021):

- 821: Shopping Plaza: Daily/AM peak hour/PM peak hour = 25% (assumed)/10% (assumed)/40%
- 945: Gas Station with Convenience Store: Daily/AM peak hour/PM peak hour = 25% (assumed)/76%/75%
- Express Wash: Daily/AM peak hour/PM peak hour = 25% (assumed)/25% (assumed)/25% (assumed)

FIGURE 5-3

PM PEAK HOUR PROJECT TRAFFIC VOLUMES

RAMONA EXPRESSWAY AND STATE STREET SHOPPING CENTER, SAN JACINTO

6.0 FUTURE TRAFFIC CONDITIONS

6.1 Ambient Traffic Growth

Horizon year, background traffic growth estimates have been calculated using an ambient growth factor. The ambient traffic growth factor is intended to include unknown and future cumulative projects in the study area, as well as account for regular growth in traffic volumes due to the development of projects outside the study area. The future growth in traffic volumes has been calculated at two percent (2.0%) per year. Applied to existing Year 2022 traffic volumes results in an eight percent (8.0%) growth in existing volumes to horizon Year 2026.

6.2 Cumulative Projects Traffic Characteristics

In order to make a realistic estimate of future on-street conditions prior to implementation of the proposed Project, the status of other known development projects (cumulative projects) has been researched at the City of San Jacinto. With this information, the potential impact of the proposed Project can be evaluated within the context of the cumulative impact of all ongoing development. Based on our research, there are thirty-one (31) cumulative projects in the City of San Jacinto within the vicinity of the Project site. These thirty-one (31) planned and/or approved cumulative projects have been included as part of the cumulative background setting.

Table 6-1 provides the location and a brief description for each of the thirty-one (31) cumulative projects. ***Figure 6-1*** graphically illustrates the location of the cumulative projects. These cumulative projects are expected to generate vehicular traffic, which may affect the operating conditions of the key study intersections.

Table 6-2 presents the development totals and resultant trip generation for the thirty-one (31) cumulative projects. As shown in *Table 6-2*, the cumulative projects are forecast to generate a total of 49,369 daily trips, with 3,225 trips (1,390 inbound and 1,835 outbound) forecast during the AM peak hour and 3,897 trips (2,171 inbound and 1,726 outbound) forecast during the PM peak hour.

The AM and PM peak hour traffic volumes associated with thirty-one (31) cumulative projects are presented in ***Figures 6-2*** and ***6-3***, respectively.

6.3 Year 2026 Traffic Volumes

Figures 6-4 and ***6-5*** illustrate the Year 2026 forecast AM and PM peak hour cumulative traffic volumes, respectively. ***Figures 6-6*** and ***6-7*** illustrate the Year 2026 cumulative forecast AM and PM peak hour traffic volumes, with the inclusion of the trips generated by the proposed Project, respectively.

TABLE 6-1
LOCATION AND DESCRIPTION OF CUMULATIVE PROJECTS[7]

No.	Cumulative Project	Location/Address	Description
City of San Jacinto			
1.	Luiseno Village Shopping Center	East of San Jacinto Avenue and south of E. Commonwealth Avenue	16 VFP Gas Station with 4,650 SF Convenience Store 23,943 SF Retail 2,800 SF and 3,200 Fast Food Restaurant with Drive Through

YEAR 2026 CUMULATIVE PLUS PROJECT PM PEAK HOUR TRAFFIC VOLUMES

RAMONA EXPRESSWAY AND STATE STREET SHOPPING CENTER, SAN JACINTO

7.0 TRAFFIC IMPACT ANALYSIS METHODOLOGY

The relative impact of the proposed Project during the AM peak hour and PM peak hour was evaluated based on analysis of future operating conditions at the seven (7) key study intersections, without, then with the proposed Project. The previously discussed capacity analysis procedures were utilized to investigate the future volume-to-capacity relationships and service level characteristics at each study intersection. The significance of the potential impacts of the Project at each key intersection was then evaluated using the following traffic impact criteria.

7.1 Impact Criteria and Thresholds

According to the *City of San Jacinto Traffic Impact Analysis Guidelines for Vehicle Miles Traveled and Level of Service Assessment*, dated June 2020, LOS D is the minimum acceptable condition that should be maintained during the peak commute hours. Improvements at a signalized intersection shall be identified if either of the following are met:

- Any signalized study intersection operating at an acceptable LOS D or better without project traffic in which the addition of project traffic causes the intersection to degrade to a LOS E or F shall identify improvements to improve operations to LOS D or better; OR

- Any signalized study intersection that is operating at LOS E or F without project traffic where the project increases delay by 5.0 or more seconds shall identify improvements to offset the increase in delay.

An operational improvement would be required at an unsignalized intersection if the study determines that either section A or both sections B and C occur:

A. The addition of project related traffic causes the intersection to degrade from an acceptable LOS D or better to LOS E or F; OR

B. The project adds 5.0 seconds or more of delay to an intersection that is already projected to operate without project traffic at a LOS E or F, AND

C. The intersection meets the peak hour traffic signal warrant after the addition of project traffic.

7.2 Traffic Impact Analysis Scenarios

The following scenarios are those for which volume/capacity calculations have been performed at the seven (7) key study intersections for Existing and near-term (Year 2026) traffic conditions:

A. Existing Traffic Conditions;

B. Year 2026 Cumulative Traffic Conditions;

C. Year 2026 Cumulative Plus Project Traffic Conditions; and

D. Scenario (D) with Improvements, if necessary.

8.0 YEAR 2026 CUMULATIVE PLUS PROJECT ANALYSIS

Table 8-1 summarizes the peak hour Level of Service results at the seven (7) key study intersections for Year 2026 Cumulative Plus Project traffic conditions. The first column (1) of HCM/LOS values in *Table 8-1* presents a summary of existing AM and PM peak hour traffic conditions (which were also presented in *Table 3-3)*. The second column (2) presents forecast Year 2026 Cumulative traffic conditions (existing plus ambient growth plus cumulative projects). The third column (3) presents forecast Year 2026 Cumulative traffic conditions with the addition of Project traffic. The fourth column (4) indicates whether the traffic associated with the Project will cause an operational deficiency based on the LOS criteria defined in this report. The fifth column (5) indicates the anticipated operating conditions with implementation of recommended improvements.

8.1 Year 2026 Cumulative Traffic Conditions

A review of column (2) indicates that for Year 2026 Cumulative traffic conditions, two (2) of the seven (7) key study intersections are forecast to operate at an adverse level of service during the AM and/or PM peak hour when compared to the target LOS criteria mentioned in this report. The remaining five (5) key study intersections are forecast to continue to operate at acceptable levels of service during the AM and PM peak hours with the addition of ambient traffic growth and cumulative project traffic. The locations projected to operate at an adverse LOS are as follows:

	AM Peak Hour		PM Peak Hour	
Key Intersection	HCM	LOS	HCM	LOS
2. State Street at Community College Drive	43.7 s/v	E	--	--
3. State Street at Ramona Expressway	--	--	62.6 s/v	E

8.2 Year 2026 Cumulative Plus Project Traffic Conditions

Review of columns (3) and (4) of *Table 8-1* indicates that traffic associated with the proposed Project will adversely impact two (2) of the seven (7) key study intersections when compared to the LOS criteria defined in this report. The remaining five (5) key study intersections are forecast to continue to operate at an acceptable LOS during the AM and PM peak hours with the addition of Project generated traffic in the horizon Year 2026. The locations that will be adversely impacted are as follows:

	AM Peak Hour		PM Peak Hour	
Key Intersection	HCM	LOS	HCM	LOS
2. State Street at Community College Drive	54.7 s/v	F	42.7 s/v	E
3. State Street at Ramona Expressway	--	--	69.8 s/v	E

As shown in column (5) of *Table 8-1*, the implementation of recommended improvements at the deficient locations improves these intersections to acceptable service levels. ***Appendix D*** presents the Year 2026 Cumulative and Year 2026 Cumulative Plus Project HCM/LOS calculations for the seven (7) key study intersections.

TABLE 8-1

YEAR 2026 CUMULATIVE PLUS PROJECT PEAK HOUR INTERSECTION CAPACITY ANALYSIS SUMMARY

Key Intersection		Time Period	Control Type	Minimum Acceptable LOS	(1) Existing Traffic Conditions		(2) Year 2026 Cumulative Traffic Conditions		(3) Year 2026 Cumulative Plus Project Traffic Conditions		(4) Operational Deficiency		(5) Year 2026 Cumulative Plus Project With Improvements	
					HCM (s/v)	LOS	HCM (s/v)	LOS	HCM (s/v)	LOS	Increase (s/v)	Yes/No	HCM (s/v)	LOS
1.	State Street at	AM	One-Way	D	24.9 s/v	C	25.5 s/v	D	28.1 s/v	D	2.6 s/v	No	--	--
	Quandt Ranch Road	PM	Stop		19.1 s/v	C	18.7 s/v	C	20.8 s/v	C	2.1 s/v	No	--	--
2.	State Street at	AM	Two-Way	D	**39.0 s/v**	**E**	**43.7** s/v	**E**	**54.7 s/v**	**F**	**11.0 s/v**	**Yes**	10.1 s/v	B
	Community College Drive	PM	Stop		31.6 s/v	D	30.9 s/v	D	**42.7 s/v**	**E**	**11.8 s/v**	**Yes**	11.0 s/v	B
3.	State Street at	AM	8Ø Traffic	D	35.2 s/v	D	41.6 s/v	D	45.6 s/v	D	4.0 s/v	No	34.9 s/v	C

Notes:

- s/v = seconds per vehicle (delay)
- LOS = Level of Service
- **Bold HCM/LOS values** indicate adverse service levels based on the LOS standards defined in this report

9.0 TRAFFIC SIGNAL WARRANT ANALYSIS

The level of service analyses at the key unsignalized impacted study intersections that are recommended to be signalized are supplemented with an assessment of the need for signalization of those intersections. This assessment is made on the basis of signal warrant criteria adopted by Caltrans. For this study, the need for signalization is assessed on the basis of the peak-hour traffic signal warrant, Warrant #3 described in the *California Manual on Uniform Traffic Control Devices (MUTCD)*. Warrant #3 has two parts: 1) Part A evaluates peak hour vehicle delay for traffic on the minor street approach with the highest delay and 2) Part B evaluates peak-hour traffic volumes on the major and minor streets. This method provides an indication of whether peak-hour traffic conditions or peak-hour traffic volume levels are, or would be, sufficient to justify installation of a traffic signal. Other traffic signal warrants are available; however, they cannot be checked under future conditions because they rely on data for which forecasts are not available (such as accidents, pedestrian volume, and four- or eight-hour vehicle volumes).

The decision to install a traffic signal should not be based purely on the warrants alone. Instead, the installation of a signal should be considered, and further analysis performed when one or more of the warrants are satisfied. Additionally, engineering judgment is exercised on a case-by-case basis to evaluate the effect a traffic signal will have on certain types of accidents and traffic conditions at the subject intersection as well as at adjacent intersections.

9.1 Existing Traffic Conditions

The results of the peak-hour traffic signal warrant analysis for Existing traffic conditions are summarized in column (1) of ***Table 9-1***. The results indicate that the intersection of State Street at Community College Drive has existing traffic conditions that would exceed the volume thresholds of Warrant #3, Part B for the AM peak hour.

9.2 Year 2026 Cumulative Traffic Conditions

The results of the peak-hour traffic signal warrant analysis for Year 2026 Cumulative traffic conditions are summarized in column (2) of *Table 9-1*. The results indicate that the intersection of State Street at Community College Drive has future traffic conditions that would exceed the volume thresholds of Warrant #3, Part B for the AM peak hour.

9.3 Year 2026 Cumulative Plus Project Traffic Conditions

The results of the peak-hour traffic signal warrant analysis for Year 2026 Cumulative Plus Project traffic conditions are summarized in column (3) of *Table 9-1*. The results indicate that the intersection of State Street at Community College Drive has future traffic conditions that would exceed the volume thresholds of Warrant #3, Part B for the AM peak hour.

The analysis and the recommended improvements show that the above-mentioned intersection under Year 2026 Cumulative Plus Project traffic conditions is recommended to be signalized. With signalization of this intersection, which is warranted under existing traffic conditions, this intersection is forecast to operate at acceptable service levels during the AM and PM peak hours.

Thus, it is concluded from *Table 9-1* that a traffic signal is justified at the above mentioned unsignalized intersection.

The Traffic Signal Warrant Analysis worksheets for the intersection of State Street at Community College Drive are contained in ***Appendix E***.

TABLE 9-1

INTERSECTION TRAFFIC SIGNAL WARRANT ANALYSIS SUMMARY[12]

Key Intersection	Time Period	(1) Existing Traffic Conditions		(2) Year 2026 Cumulative Traffic Conditions		(3) Year 2026 Cumulative Plus Project Traffic Conditions	
		Part A of Warrant 3 Satisfied?	**Part B of Warrant 3 Satisfied?**	**Part A of Warrant 3 Satisfied?**	**Part B of Warrant 3 Satisfied?**	**Part A of Warrant 3 Satisfied?**	**Part B of Warrant 3 Satisfied?**
2. State Street at Community College Drive	AM	No	**Yes**	No	**Yes**	No	**Yes**
	PM	No	No	No	No	No	No

Notes:

- Signal Warrant checks based on Warrant 3, Part A - Peak-Hour Delay Warrant and Part B - Peak-Hour Volume Warrant contained in the *California MUTCD.*

[12] *Appendix G* contains the Traffic Signal Warrant Analysis worksheets for the key unsignalized impacted study intersections.

10.0 SITE ACCESS AND INTERNAL CIRCULATION EVALUATION

10.1 Level of Service Analysis For Project Access Locations

As shown previously in *Figure 2-2,* vehicular access to the proposed Project will be provided via one (1) right-turn in/right-turn out only unsignalized driveway located along State Street (i.e. Project Driveway No. 1), two (2) right-turn in/right-turn out only unsignalized driveways located along Ramona Expressway (i.e. Project Driveway No. 2 and Project Driveway No. 4), one (1) full access signalized driveway located along Ramona Expressway, located directly opposite Village at San Jacinto (i.e. Project Driveway No. 3) and two (2) full-access unsignalized driveways located along Eagle Road (i.e. Project Driveway No. 5 and Project Driveway No. 6). It should be noted that there is one additional driveway located at the southeast corner of the project site along Eagle Road that will provide truck access to Major 3, Major 4 and Major 5.

Table 10-1 summarizes the intersection operations at the proposed project driveways under Year 2026 Cumulative Plus Project traffic conditions. It should be noted that the values for the intersection of Village at San Jacinto/Project Driveway No. 3 at Ramona Expressway are the same as the values previously reported in *Table 8-1.* Review of *Table 10-1* shows that all six (6) Project Driveways are forecast to operate at an acceptable LOS C or better during the AM and PM peak hours for Year 2026 Cumulative Plus Project traffic conditions. As such, project access will be adequate.

Appendix F presents the Year 2026 Cumulative Plus Project level of service calculation worksheets for the six (6) proposed Project driveways.

10.2 Project Driveway Queuing Analysis

Table 10-2 presents the project driveway queuing analysis results for the six (6) Project driveways as well as for the proposed dual northbound left-turn lanes at the intersection of State Street at Ramona Expressway for Year 2026 Cumulative Plus Project traffic conditions. Review of *Table 10-2* indicates that adequate storage will be provided to accommodate the forecast 95th percentile queues under Year 2026 Cumulative Plus Project traffic conditions for all outbound movements at the six (6) Project driveways. Although the 95th percentile queue for the dual northbound left-turn lanes at the intersection of State Street at Ramona Expressway is not accommodated during the AM and PM peak hours, it should be noted that the average queue is accommodated during both the AM and PM peak hours. It should also be noted that Project Driveway No. 5 and No. 6 along Eagle Road are adequately spaced and that queuing into the Project site at these driveways is not anticipated to affect vehicles entering/exiting Buckingham Drive.

As requested by City staff, the need for an eastbound right-turn deceleration lane and an eastbound departure acceleration lane at Project Driveway No. 2, Village at San Jacinto/Project Driveway No. 3, and Project Driveway No. 4 along Ramona Expressway was evaluated. Per the *Highway Capacity Manual 2000,* "an exclusive right-turn lane should be considered if the right-turn volume exceeds 300 veh/h and the adjacent mainline volume exceeds 300 veh/h/ln." Based on review of the forecast peak hour right-turning volumes (i.e. less than 300 right-turns) and the peak hour level of service

calculations, an eastbound deceleration lane is not needed at Project Driveways No. 2, No. 3 and No. 4. Furthermore, due to the close project driveway spacing along the Ramona Expressway project frontage, an acceleration lane is not feasible, due to the required transition length and potential conflicting weaving movements between the driveways.

10.3 Internal Circulation Evaluation

The on-site circulation layout of the proposed Project as illustrated in *Figure 2-2* on an overall basis is adequate. Curb return radii have been confirmed and are generally adequate for small service/delivery (FedEx, UPS) trucks, trash trucks and fueling trucks.

TABLE 10-1
PROJECT DRIVEWAY PEAK HOUR LEVELS OF SERVICE SUMMARY

Project Driveway	Time Period	Intersection Control	Year 2026 Cumulative Plus Project Traffic Conditions	
			HCM (s/v)	LOS
A. State Street at Project Driveway No. 1	AM	One–Way	14.7 s/v	B
	PM	Stop	19.2 s/v	C
B. Project Driveway No. 2 at Ramona Expressway	AM	One–Way	12.5 s/v	B
	PM	Stop	18.0 s/v	C
5. Village at San Jacinto/Project Dwy No. 3 at Ramona Expressway	AM	5Ø Traffic	14.9 s/v	B
	PM	Signal	22.8 s/v	C
C. Project Driveway No. 4 at Ramona Expressway	AM	One–Way	12.3 s/v	B
	PM	Stop	17.3 s/v	C
D. Eagle Road at Project Driveway No. 5	AM	One–Way	9.4 s/v	A
	PM	Stop	9.1 s/v	A
E. Eagle Road at Project Driveway No. 6	AM	One–Way	10.7 s/v	B
	PM	Stop	10.6 s/v	B

Note:

- s/v = seconds per vehicle

TABLE 10-2
PROJECT DRIVEWAY PEAK HOUR QUEUING ANALYSIS[13]

Key Intersection	Provided/ Proposed Storage (feet)	Year 2026 Cumulative Plus Project Traffic Conditions			
		AM Peak Hour		PM Peak Hour	
		Max. Queue (feet)	Adequate Storage (Yes / No)	Max. Queue (feet)	Adequate Storage (Yes / No)
3. State Street at Ramona Expressway					
Dual Northbound Left-Turn Lanes	165’	232’	No [a]	312’	No [a]
A. State Street at Project Driveway No. 1					
Westbound Right-Turn Lane	190’	25’	Yes	43’	Yes
B. Project Driveway No. 2 at Ramona Expressway					
Northbound Right-Turn Lane	120’	25’	Yes	25’	Yes
5. Village at San Jacinto/Project Driveway No. 3 at Ramona Expressway					
Dual Northbound Left-Turn Lanes	120’	91’	Yes	170’	Yes [b]
Northbound Shared Through/Right-Turn Lane	120’	43’	Yes	75’	Yes
Westbound Left-Turn Lane	250’	100’	Yes	156’	Yes
C. Project Driveway No. 4 at Ramona Expressway					
Northbound Right-Turn Lane	135’	25’	Yes	25’	Yes
D. Eagle Road at Project Driveway No. 5					
Eastbound Shared Left-Turn/Right-Turn Lane	40’	25’	Yes	25’	Yes
E. Eagle Road at Project Driveway No. 6					
Eastbound Shared Left-Turn/Right-Turn Lane	65’	25’	Yes	25’	Yes

Note:

[a] Although the 95th percentile queue exceeds the proposed left-turn pocket storage, it should be noted that the average queue of 136’ in the AM peak hour and 198’ in the PM peak hour can be accommodated. It should be noted that a portion of the 198’ PM peak hour average queue will be accommodated within the turn pockets 120’ transition area.

[b] Although the queue exceeds the proposed left-turn pocket storage, additional throated storge is provided to accommodate the ±50 feet of additional left-turn queuing.

[13] Queue is based on the *95th Percentile Queue* and is reported in total queue length (feet) per lane.

11.0 AREA-WIDE TRAFFIC IMPROVEMENTS

For those intersections where projected traffic volumes are expected to result in operational deficiencies, this report recommends traffic improvements that change the intersection geometry to increase capacity. These capacity improvements involve roadway widening and/or re-striping to reconfigure (add lanes) roadways to specific approaches of a key intersection. The identified improvements are expected to:

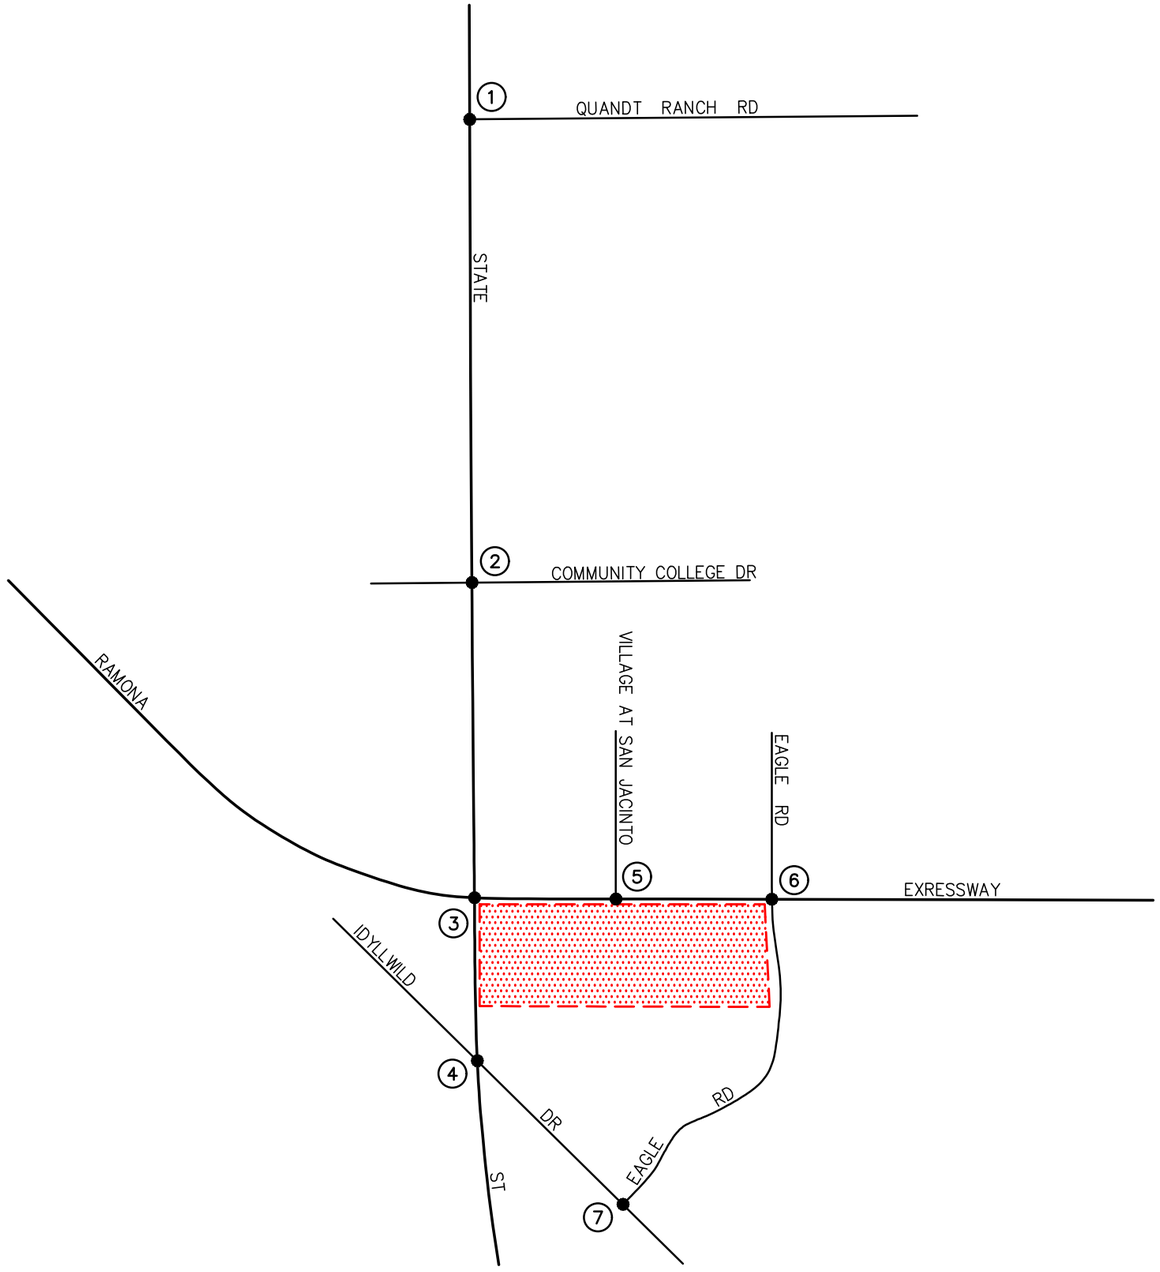
1. Address the impact of existing traffic, Project traffic and future non-project (ambient traffic growth and related projects) traffic, and
2. Improve Levels of Service to an acceptable range and/or to pre-project conditions.

11.1 Project-Specific Access Improvements

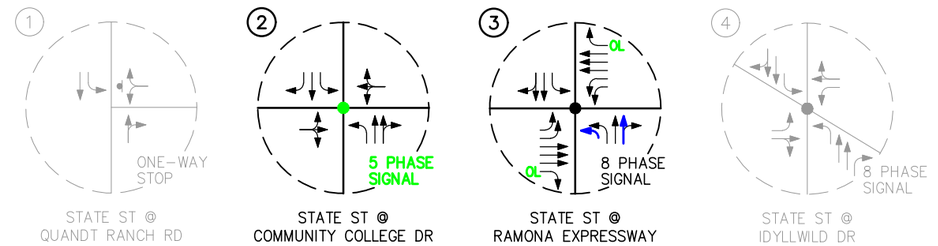
The following Project features will be constructed by the proposed Project to ensure that adequate ingress and egress to the Project site is provided along Ramona Expressway and State Street:

- Intersection No. 3 – State Street at Ramona Expressway: Restripe the south leg of the intersection to provide the northbound approach with a second northbound left-turn lane and convert the northbound right-turn lane to a shared northbound through/right-turn lane. Modify the existing traffic signal, as necessary. The installation of this improvement is subject to the approval of the City of San Jacinto.

- Intersection No. 5 – Village at San Jacinto/Project Driveway No. 3 at Ramona Expressway: Construct the project driveway, located directly opposite Village at San Jacinto and provide one inbound lane and three outbound lanes (i.e. dual northbound left-turn lanes and one northbound shared through/right-turn lane). Stripe crosswalks on the south, west, and east legs. Modify the existing traffic signal, as necessary. The installation of this improvement is subject to the approval of the City of San Jacinto.



11.2 Year 2026 Recommended Improvements



The results of Year 2026 Plus Project traffic conditions indicate that two (2) of the seven (7) key study intersections are forecast to operate at an adverse level of service during the AM and/or PM peak hour when compared to the LOS criteria defined in this report. The improvements listed below have been identified at the deficient locations to improve these intersections to either acceptable service levels or offsets the increase in delay due to the Project:

- Intersection No. 2 – State Street at Community College Drive: Install a traffic signal and design for five-phase operation with protected left-turn phasing on State Street. Stripe crosswalks on all legs. The installation of these improvements is subject to the approval of the City of San Jacinto.

- Intersection No. 3 – State Street at Ramona Expressway: Modify the existing traffic signal to provide an eastbound right-turn overlap and a westbound right-turn overlap. The installation of these improvements is subject to the approval of the City of San Jacinto.

Figure 11-1 graphically illustrates the recommended improvements for Year 2026 Cumulative Plus Project traffic conditions. This figure also shows the project-specific access improvements at the intersection of Village at San Jacinto/Project Driveway No. 3 at Ramona Expressway.

12.0 PROJECT FAIR SHARE ANALYSIS

The transportation impacts associated with the development of the proposed Project were determined based on the future conditions analysis with the proposed Project. The key study locations forecast to operate at adverse levels of service are discussed below. As such, the proposed Project's "fair share" of the recommended improvements has been calculated for the key study locations that are forecast to operate at adverse levels of service.

12.1 Year 2026 Cumulative Plus Project Traffic Conditions

Table 12-1 presents the AM and PM peak hours Project fair share percentages at the key study intersections that are forecast to operate at adverse levels of service in Year 2026 Cumulative Plus Project traffic conditions. As presented in *Table 12-1*, the first column (1) presents the Project only traffic volume. The second column (2) presents the existing traffic volume at the intersection. The third column (3) presents the Year 2026 Cumulative Plus Project traffic volumes. The fourth column (4) represents the Project fair share based on the following formula:

- Project Fair Share (4) = Column (1)/[Column (3) – Column (2)]*100

The Project fair share percentages (most adverse time period) for the two (2) adverse intersections for Year 2026 Cumulative Plus Project traffic conditions that require physical improvements are shown below:

- 2. State Street at Community College Drive 50.34%
- 3. State Street at Ramona Expressway 26.46%

TABLE 12-1
YEAR 2026 CUMULATIVE PLUS PROJECT TRAFFIC CONDITIONS
FAIR SHARE CONTRIBUTION

Key Intersection		Impacted Time Period	(1) Project Only Volume	(2) Existing Volume	(3) Year 2026 Cumulative Plus Project Volume	(4) Project Fair Share Responsibility
2.	State Street at	AM	96	1,609	1,862	37.94%
	Community College Drive	PM	147	1,418	1,710	**50.34%**
3.	State Street at	AM	--	--	--	--
	Ramona Expressway	PM	335	3,506	4,772	**26.46%**

Notes:

- Project Fair Share (4) = Column (1) / [Column (3) – Column (2)]
- **Bold Project Fair Share Responsibility** is based on worse case

13.0 MULTIMODAL CIRCULATION

The on-site circulation layout of the proposed Project as illustrated in *Figure 2-2* on an overall basis is adequate for drivers, pedestrians, bicycles, and public transit users.

Pedestrian Circulation

Pedestrian circulation would be provided via existing public sidewalks located along the State Street project frontage and proposed sidewalks located along the Ramona Expressway and Eagle Road project frontages, which will connect to the Project's internal walkways. The Project will protect the existing sidewalk along the State Street Project frontage and if necessary, repair or reconstruct sidewalks along the project frontage per the City's request. The intersection of Village at San Jacinto/Project Driveway No. 3 at Ramona Expressway will provide crosswalks along all legs with construction of the proposed Project, which will provide pedestrians convenient access from the Project site across Ramona Expressway. The existing sidewalk system within the Project vicinity provides direct connectivity to the surrounding residential communities, as well as public transit along State Street.

Bike Lanes

A Class II Bike Lane currently exists along Ramona Expressway (i.e. on both sides of the street), west and east of State Street. A Class II Bike Lane also currently exists along Eagle Road (i.e. on both sides of the street), north and south of Ramona Expressway.

Public Transit

Public transit bus service is provided in the Project area by the Riverside Transit Agency (RTA). ***Section 3.2*** contains descriptions for the following transit route:

- *City Route 44*

The bus stops nearest to the Project site are located along State Street on the west side just north of Idyllwild Drive, and on the east side just north of Ramona Expressway.

14.0 VEHICLE MILES TRAVELED (VMT) ANALYSIS

On December 28, 2018, the California Natural Resources Agency adopted revised CEQA Guidelines. Among the changes to the guidelines was the removal of vehicle delay and LOS from consideration for transportation impacts under CEQA. With the adopted guidelines, transportation impacts are to be evaluated based on a project's effect on vehicle miles traveled. Lead agencies are allowed to continue using their current impact criteria, or to opt into the revised transportation guidelines. However, the new guidelines must be used starting July 1, 2020, as required in CEQA section 15064.3. The City of San Jacinto recently adopted new traffic impact criteria in June 2020 to be consistent with the CEQA revisions. These new guidelines are contained within the *City of San Jacinto Traffic Impact Analysis Guidelines for Vehicle Miles Traveled and Level of Service Assessment*, dated June 2020 and provide screening criteria and methodology for VMT analysis.

Per the *Traffic Impact Analysis Guidelines for Vehicle Miles Traveled and Level of Service Assessment*, there are three types of screening to screen projects from project-level VMT assessments. The three screening steps are described below. The results of each screening step applied to the proposed Project is also discussed. It should be noted that the project only needs to satisfy one of the three screening steps.

Step 1: Transit Priority Area (TPA) Screening

Projects located within a transit priority area (TPA) may be presumed to have a less than significant impact absent substantial evidence to the contrary. This presumption may ***NOT*** be appropriate if the project:

1. Has a Floor Area Ratio (FAR) of less than 0.75;
2. Includes 5% or more parking for use by residents, customers, or employees of the project than required by the City;
3. Is inconsistent with the applicable Sustainable Communities Strategy; or
4. Replaces affordable residential units with a smaller number of moderate- or high-income residential units.

- *Based on the WRCOG screening tool, the project site is not located within a Transit Priority Area (TPA). Therefore, Project Screening Step 1: Transit Priority Area (TPA) Screening is not satisfied.*

Step 2: Low VMT Area Screening

Residential and office projects located within a low VMT-generating area may be presumed to have a less than significant impact absent substantial evidence to the contrary. In addition, other employment-related and mixed-use land use projects may qualify for the use of screening if the project can reasonably be expected to generate VMT per resident, per worker, or per service population that is similar to the existing land uses in the low VMT area. To identify if the project is in a low-VMT-generating area, the analyst may review the WRCOG screening tool and apply the appropriate threshold.

- *Based on the WRCOG screening tool, the project site is located within Traffic Analysis Zone (TAZ) #2184. Per the WRCOG screening tool, the Project TAZ VMT/service population is 26.1 VMT per service population and the jurisdiction average VMT/service population is 34.7 VMT per service population. Comparison of the two VMT values indicates that the Project TAZ VMT is lower than the jurisdiction VMT average. Therefore, Project Screening Step 2: Low VMT Area Screening is satisfied.*

Appendix G contains the WRCOG VMT Screening Tool Data.

Step 3: Project Type Screening

Local serving retail projects less than 150,000 square feet may be presumed to have a less than significant impact absent substantial evidence to the contrary. Local serving retail generally improves the convenience of shopping close to home and has the effect of reducing vehicle travel.

- *As stated in Section 2.0, the proposed Project will consist of a maximum of 114,135 square foot (SF) shopping center with 105,348 SF of retail/grocery/food uses, a gas station with 16 vehicle fueling positions and a 5,198 SF convenience market, and a 3,589 SF express car wash with a 110-foot wash tunnel. Therefore, based on the Step 3: Project Type Screening criteria, this project could be screened from a VMT analysis, and could be presumed to have a less than significant impact on VMT per the City's guidelines.*

14.1 VMT Analysis Conclusion

Based on the City's guidelines, the proposed Project satisfies Step 2: Low VMT Area Screening and Step 3: Project Type Screening. Therefore, this project could be screened from a VMT analysis, and could be presumed to have a less than significant impact on VMT per the City's guidelines.

15.0 SUMMARY OF FINDINGS AND CONCLUSIONS

- ***Project Description*** – The proposed Project site, which is currently vacant, is located on the southeast corner of the intersection of State Street and Ramona Expressway in the City of San Jacinto, California. The proposed Project will consist of a maximum of 114,135 square foot (SF) shopping center with 105,348 SF of retail/grocery/food uses, a gas station with 16 vehicle fueling positions and a 5,198 SF convenience market, and a 3,589 SF express car wash with a 110-foot wash tunnel. The proposed Project is anticipated to be completed by the Year 2026.

  Vehicular access to the proposed Project will be provided via one (1) right-turn in/right-turn out only unsignalized driveway located along State Street (i.e. Project Driveway No. 1), two (2) right-turn in/right-turn out only unsignalized driveways located along Ramona Expressway (i.e. Project Driveway No. 2 and Project Driveway No. 4), one (1) full access signalized driveway located along Ramona Expressway, located directly opposite Village at San Jacinto (i.e. Project Driveway No. 3) and two (2) full-access unsignalized driveways located along Eagle Road (i.e. Project Driveway No. 5 and Project Driveway No. 6). It should be noted that there is one additional driveway located at the southeast corner of the project site along Eagle Road that will provide truck access to Major 3, Major 4 and Major 5.

- ***Study Scope*** – The following seven (7) key study intersections were selected for detailed peak hour level of service analyses under Existing Traffic Conditions, Year 2026 Cumulative Traffic Conditions, and Year 2026 Cumulative Plus Project Traffic Conditions.

  Key Study Intersections

  1. State Street at Quandt Ranch Road
  2. State Street at Community College Drive
  3. State Street at Ramona Expressway
  4. State Street at Idyllwild Drive
  5. Village at San Jacinto/Project Driveway No. 3 at Ramona Expressway
  6. Eagle Road at Ramona Expressway
  7. Eagle Road at Idyllwild Drive

- ***Existing Traffic Conditions*** – The intersections of State Street at Community College Drive and Eagle Road at Idyllwild Drive currently operate at unacceptable LOS E during the AM peak hour. The remaining five (5) key study intersections currently operate at an acceptable level of service during the AM and PM peak hours.

- ***Project Trip Generation*** – The proposed Project is forecast to generate approximately 11,265 daily trips, with 479 trips (282 inbound, 197 outbound) forecast during the AM peak hour and 737 trips (356 inbound, 381 outbound) forecast during the PM peak hour.

- ***Cumulative Projects Trip Generation*** – The thirty-one (31) cumulative projects are forecast to generate a total of 49,369 daily trips, with 3,225 trips (1,390 inbound and 1,835 outbound) forecast during the AM peak hour and 3,897 trips (2,171 inbound and 1,726 outbound) forecast during the PM peak hour.

- ***Year 2026 Cumulative Plus Project Traffic Conditions*** – The proposed Project will adversely impact two (2) of the seven (7) key study intersections when compared to the LOS criteria defined in this report. The remaining five (5) key study intersections are forecast to continue to operate at an acceptable LOS during the AM and PM peak hours with the addition of Project generated traffic in the horizon Year 2026. The locations that will be adversely impacted are as follows:

	AM Peak Hour		PM Peak Hour	
Key Intersection	HCM	LOS	HCM	LOS
2. State Street at Community College Drive	54.7 s/v	F	42.7 s/v	E
3. State Street at Ramona Expressway	--	--	69.8 s/v	E

  The implementation of recommended improvements at the deficient locations improves these intersections to acceptable service levels.

- ***Traffic Signal Warrant Analysis*** – The results of the peak-hour traffic signal warrant analysis indicate that the intersection of State Street at Community College Drive has existing traffic conditions that would exceed the volume thresholds of Warrant #3, Part B for the AM peak hour. The results of the peak-hour traffic signal warrant analysis for Year 2026 Cumulative Plus Project traffic conditions also indicate that the intersection of State Street at Community College Drive has future traffic conditions that would exceed the volume thresholds of Warrant #3, Part B for the AM peak hour. The analysis and the recommended improvements show that the above-mentioned intersection under Year 2026 Cumulative Plus Project traffic conditions is recommended to be signalized. With signalization of this intersection, which is warranted under existing traffic conditions, this intersection is forecast to operate at acceptable service levels during the AM and PM peak hours. Thus, it is concluded that a traffic signal is justified at the above mentioned unsignalized intersection.

- ***Site Access and Internal Circulation Evaluation*** – All six (6) Project Driveways are forecast to operate at an acceptable LOS C or better during the AM and PM peak hours for Year 2026 Cumulative Plus Project traffic conditions. As such, project access will be adequate.

  Adequate storage will be provided to accommodate the forecast 95th percentile queues under Year 2026 Cumulative Plus Project traffic conditions for all outbound movements at the six (6) Project driveways. Although the 95th percentile queue for the dual northbound left-turn lanes at the intersection of State Street at Ramona Expressway is not accommodated during the AM and PM peak hours, it should be noted that the average queue is accommodated during both the AM and PM peak hours. It should also be noted that Project Driveway No. 5 and No. 6 along Eagle

Road are adequately spaced and that queuing into the Project site at these driveways is not anticipated to affect vehicles entering/exiting Buckingham Drive.

As requested by City staff, the need for an eastbound right-turn deceleration lane and an eastbound departure acceleration lane at Project Driveway No. 2, Village at San Jacinto/Project Driveway No. 3, and Project Driveway No. 4 along Ramona Expressway was evaluated. Per the *Highway Capacity Manual 2000,* "an exclusive right-turn lane should be considered if the right-turn volume exceeds 300 veh/h and the adjacent mainline volume exceeds 300 veh/h/ln." Based on review of the forecast peak hour right-turning volumes (i.e. less than 300 right-turns) and the peak hour level of service calculations, an eastbound deceleration lane is not needed at Project Driveways No. 2, No. 3 and No. 4. Furthermore, due to the close project driveway spacing along the Ramona Expressway project frontage, an acceleration lane is not feasible, due to the required transition length and potential conflicting weaving movements between the driveways.

The on-site circulation layout of the proposed Project on an overall basis is adequate. Curb return radii have been confirmed and are generally adequate for small service/delivery (FedEx, UPS) trucks, trash trucks and fueling trucks.

- ***Project-Specific Access Improvements*** **–** The following Project features will be constructed by the proposed Project to ensure that adequate ingress and egress to the Project site is provided along Ramona Expressway:

  - Intersection No. 3 – State Street at Ramona Expressway: Restripe the south leg of the intersection to provide the northbound approach with a second northbound left-turn lane and convert the northbound right-turn lane to a shared northbound through/right-turn lane. Modify the existing traffic signal, as necessary. The installation of this improvement is subject to the approval of the City of San Jacinto.

  - Intersection No. 5 – Village at San Jacinto/Project Driveway No. 3 at Ramona Expressway: Construct the project driveway, located directly opposite Village at San Jacinto and provide one inbound lane and three outbound lanes (i.e. dual northbound left-turn lanes and one northbound shared through/right-turn lane). Stripe crosswalks on the south, west, and east legs. Modify the existing traffic signal, as necessary. The installation of this improvement is subject to the approval of the City of San Jacinto.

- ***Year 2026 Cumulative Plus Project Traffic Improvements*** **–** The results of Year 2026 Plus Project traffic conditions indicate that two (2) of the seven (7) key study intersections are forecast to operate at an adverse level of service during the AM and/or PM peak hour when compared to the LOS criteria defined in this report. The improvements listed below have been identified at the deficient locations to improve these intersections to either acceptable service levels or offsets the increase in delay due to the Project:

- Intersection No. 2 – State Street at Community College Drive: Install a traffic signal and design for five-phase operation with protected left-turn phasing on State Street. Stripe crosswalks on all legs. The installation of these improvements is subject to the approval of the City of San Jacinto.

- Intersection No. 3 – State Street at Ramona Expressway: Modify the existing traffic signal to provide an eastbound right-turn overlap and a westbound right-turn overlap. The installation of these improvements is subject to the approval of the City of San Jacinto.

- ***Year 2026 Cumulative Plus Project Fair Share Analysis –*** The Project fair share percentages (most adverse time period) for the two (2) adverse intersections for Year 2026 Cumulative Plus Project traffic conditions that require physical improvements are shown below:

  - 2. State Street at Community College Drive 50.34%
  - 3. State Street at Ramona Expressway 26.46%

- ***Vehicle Miles Traveled (VMT) Analysis*** – Based on the City's guidelines, the proposed Project satisfies Step 2: Low VMT Area Screening and Step 3: Project Type Screening. Therefore, this project could be screened from a VMT analysis, and could be presumed to have a less than significant impact on VMT per the City's guidelines.

APPENDIX A

TRAFFIC STUDY SCOPE OF WORK

Exhibit B

SCOPING AGREEMENT FOR TRAFFIC IMPACT STUDY

This letter acknowledges the Riverside County Transportation Department requirements for traffic impact analysis of the following project. The analysis must follow the Riverside County Transportation Department Traffic Study Guidelines dated December 2020.

E. Other Jurisdictional Impacts

Is this project within a City's Sphere of Influence or one-mile radius of City boundaries? ☑ Yes ☐ No

If so, name of City Jurisdiction: Riverside County

F. Site Plan (please attach reduced copy) See attached Figure 3 Proposed Site Plan.

G. Specific issues to be addressed in the Study (in addition to the standard analysis described in the Guideline) (To be filled out by Transportation Department)
(NOTE: If the traffic study states that "a traffic signal is warranted" (or "a traffic signal appears to be warranted," or similar statement) at an existing unsignalized intersection under existing conditions, 8-hour approach traffic volume information must be submitted in addition to the peak hourly turning movement counts for that intersection.)

VMT Screening Analysis, On-Site Circulation, Driveway LOS Calculations, Evaluate the need for acceleration/deceleration lanes at Ramona Expressway driveways

H. Existing Conditions

Traffic count data must be new or recent. Provide traffic count dates if using other than new counts.
Date of counts New traffic counts will be conducted to reflect existing baseline conditions.

***NOTE* Traffic Study Submittal Form and appropriate fee must be submitted with, or prior to submittal of this form. Transportation Department staff will not process the Scoping Agreement prior to receipt of the fee.**

Subtotal	*715*	*22*	*18*	*40*	*37*	*38*	*75*
Total Net Proposed Project Trip Generation Forecast	**11,301**	**283**	**198**	**481**	**357**	**383**	**740**

Note:

- TE/TSF = Trip End per Thousand Square Feet
- TE/VFP = Trip End per Vehicle Fueling Position
- TE/LFWT = Trip End per Linear Feet Wash Tunnel

1 Source*: Trip Generation, 11th Edition*, Institute of Transportation Engineers, (ITE) [Washington, D.C. (2021)].

2 The proposed convenience store is 5,200 SF.

3 *Trip Generation Manual, 11th Edition* does not include trip generation rates for the express car wash land use. The trip rates are derived from traffic counts conducted on Friday, February 7, 2014 at the Victorville Speedwash located at 12147 Industrial Boulevard, Victorville.

4 Pass-By Trips are trips made as intermediate stops on the way from an origin to a primary trip destination. Pass-by trips are attracted from traffic passing the site on adjacent streets, which contain direct access to the generator. For this analysis, the following pass-by reduction factors were used (Source: *Trip Generation Manual, 11th Edition*, ITE 2021):

- 821: Shopping Plaza: Daily/AM peak hour/PM peak hour = 25% (assumed)/10% (assumed)/40%
- 945: Gas Station with Convenience Store: Daily/AM peak hour/PM peak hour = 25% (assumed)/76%/75%
- Express Wash: Daily/AM peak hour/PM peak hour = 25% (assumed)/25% (assumed)/25% (assumed)

Section 1 Introduction and Background

The Rich Development Company has retained Tait & Associates (Tait) to prepare the drainage design for the Magnet development. The Magnet development is approximately 14.4 acres and it is located in the City of San Jacinto (City), California at the southeast corner of State Street and Romana Expressway. The proposed project Vicinity Map is provided in Figure 1 below. The Hydrology & Hydraulics Report studies the existing and proposed condition drainage system and patterns. This study follows the requirements of the Riverside County Flood Control and Water Conservation District (RCFCWD) and the Riverside County Hydrology Manual (RCHM), dated 1978 and was prepared for the 10- and 100-year storm events for both the existing and proposed condition. The following sections include the general project characteristics, the drainage design, criteria and methodology.

1.1 Project Description

The Magnet development is proposed for commercial uses. The project will develop a total of 14.4 acres that will include 13 new commercial buildings, paved parking areas, and landscape planter areas along with all associated improvements such as gas, electric, and water utilities. Immediately west of the project is State Street, on the east side is Eagle Drive, on the north side is Ramona Expressway and on the south side the project is bound by undeveloped land.

Figure 1 – Vicinity Map (Not To Scale)

Section 2 Hydrology and Hydraulics Design Criteria, Methodology, and Analysis

2.1 Hydrology Design Criteria and Methodology

The RCHM uses the Rational Method to determine the runoff flow for watershed areas that are less than 300 acres in size. The Synthetic Unit Hydrograph is used for watershed areas larger than 300 to 500 acres. The Rational Method is based on the equation $Q = C \times I \times A$

where:
Q = peak discharge (cfs)
C = runoff coefficient representing the ratio of runoff to rainfall
I = the time-averaged rainfall intensity in inches per hour corresponding to the time of concentration (in/hr)
A = drainage area (acres).

The runoff coefficient is determined from the soil characteristics and the land use types. The time of concentration is the time it takes for the entire watershed to contribute runoff to the concentration point, and it is determined based on the longest flow path. The total drainage area for the site is 14.51 acres, thus only the Rational Method analysis was required. The precipitation depth and intensity was determined per NOAA Atlas 14 is provided in Appendix A. The Rational Method was prepared using the Advance Engineering Software (AES) RATSCX software which is approved by Riverside County for the Rational Method.

In addition to the onsite hydrology analyses, an offsite study was conducted that analyzed the existing Master Plan of the Public Drainage facilities that surround the site. The offsite hydrology analysis consists of a total of 204 acres, thus only the Rational Method analysis is required. The precipitation depth and intensity was determined per NOAA Atlas 14 for the offsite hydrology study.

Per the USDA Natural Resources Conservation Service Soil Survey (USDA NRCS), published in 2006, the project site is located within the hydrology soil group of D. Group D Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist of clays that have a high shrink-swell potential, soils that have a high-water table, soils that have a clay layer at or near the surface. The project site location is shown on the USDA Soil Resource map, included in Appendix B.

2.2 Hydraulics Design Criteria and Methodology

The Water Surface Pressure Gradient (WSPGW) software developed by the Los Angeles County Flood Control District and approved by the County of Riverside was used to calculate the Hydraulic Grade Line (HGL) for the offsite drainage facilities. The WSPG software uses the Bernoulli equation to calculate the HGL for each storm drain line utilizing the flow and the boundary conditions. Boundary conditions were set at the downstream end of the study based on the as-builts for Storm Drain Line H; refer to Section 3 for further information. HGL calculations were conducted to reflect the flows produced from the 10- and 100-year storm events. The storm drain sizing and design was based on an HGL that lies 2-feet below ground surface for the 10-year storm event.

Section 3 Hydrology Study

The following sections present the hydrologic analysis of the project site in the existing and proposed condition as well as the findings of the offsite hydrology study in the existing condition.

3.1 Onsite Existing Condition Hydrology Analysis

The project site is located within Zone 4 of the RCFCD drainage system (Riverside County Flood Control District). The project discharges to county storm drain Line H which discharges to an open channel that runs from Ramona Expressway and discharges to San Jacinto River. San Jacinto River conveys flows to Canyon Lake and then to Lake Elsinore. Lake Elsinore discharges to Temescal Creek which connects to Prado Basin, then to Santa Ana River and ultimately discharges to the Pacific Ocean. See Appendix C for Watershed and Downstream Tributary Maps. The topography of the project site is relatively flat with slopes varying from 0.1 %to 0.6%. Site elevations range from 1520-1528 feet above Mean Sea Level. The existing site is a vacant lot of barren dirt with two existing concrete driveways along Ramona Expressway.

The runoff produced in the existing condition sheet flows from the southeast corner of the site to the northwest corner of the site and discharges onto Ramona Expressway where it is captured by an existing catch basin that conveys the flows to an open channel via an underground 4'x8' reinforced concrete box (RCB). Flows from the vacant lot to the south of the project also run on to the site location. However, these flows are neglected in the existing condition analysis as they will be diverted away from the site in the proposed condition. Thus, the overall onsite hydrologic analysis will compare the flows generated from the same acreage of land from existing to proposed condition. The Existing Onsite Hydrology Map is provided in Appendix D and it depicts drainage subareas, elevations, flow lengths and slopes used for the hydrology calculations. The existing condition 10- and 100-year storm events Rational Method Analysis results are also included in Appendix D.

3.2 Onsite Proposed Condition Hydrology Analysis

The proposed site will mimic existing drainage patterns with flow going from the southeast corner to the northwest corner of the site. Runoff will sheet flow to a proposed storm drain system that discharges to two underground infiltration basins with a total storage volume of 30,723 CF to treat the required Design Capture Volume for the project. Manholes with weirs are proposed downstream of the basins for the high flows which will conveyed to a private storm drain system and ultimately discharge to a proposed 48-inch RCP beneath State St. via a new on-site storm drain facility. The southern boundary of the proposed site will contain a retaining curb that will effectively divert the flows coming towards the site from the adjacent vacant lot. The rest of the project site is relatively flat with slopes varying from 0.5% to 3%. Site

elevations range from 1518-1527 feet above Mean Sea Level. The proposed site includes 13 new buildings with associated parking areas and commercial landscape areas. The overall site will contain mostly asphalt or concrete surfaces with an approximate imperviousness of 90%.

The Proposed Onsite Hydrology Map is provided in Appendix E and it depicts drainage subareas, elevations, flow lengths and slopes used for the hydrology calculations. The proposed condition 10- and 100-year storm events Rational Method analysis results are also included in Appendix E.

3.3 Offsite Hydrology Study

This Section describes the hydrologic conditions of the area surrounding the project and the flows that are expected to be conveyed by the public offsite storm drain facilities. Appendix F provides an exhibit detailing all storm drain facilities referenced in the following sections.

3.3.1 Offsite Study Background and Purpose

The San Jacinto Valley Master Drainage Plan Update (SJMDPU) prepared in 2010 by Webb & Associates analyzed the hydrologic and hydraulic conditions of proposed Master Plan facility Line H. The study is based on the 1982 Master Plan prepared by Riverside County Flood Control & Water Quality District (RCFC&WCD) that depicts Line H to be a 60-inch Reinforced Concrete Pipe with one tributary Master Plan facility Line H-1. In 2012, the City built three storm drain lines at the intersection of Ramona Expressway and State Street, Master Plan Facility Lines: H, H-2, and H-3. Per communications with the City, no Hydrology studies were prepared at the time these lines were built. Additionally, Ramona Expressway was widened in 2014 and along with this improvement was the construction of a 24-inch storm drain line, located east of the intersection of Ramona Expressway and Eagle Road that connects to Line H-3.

With the development of the Magnet, the City has requested the extension of Line H-2 along State Street within the limits of the project as well as the construction of Master Plan facility Line H-1. These lines were analyzed in this study and the narrative below provides a summary of the findings for each proposed storm drain line.

3.3.2 Master Plan Line H

Per the as-built plans prepared by the City in 2012, Line H is an 8'x4' RCB that begins at an earthen channel along State Street and terminates at a 28-foot catch basin at the corner of State Street and Ramona Expressway. This line was designed to convey 283 cfs of flow from the 100-year storm event. Connecting to this line are storm drain Lines H-2 and H-3. This study analyzed the hydrology for the 100-year storm event to the most upstream end of Line H. However, the hydraulics of Line H was not analyzed in this study and the HGL was taken from the as-builts.

3.3.3 Master Plan Line H-1

Per the SJMPDU, Line H-1 was a proposed 48-inch RCP that would convey approximately 105 acres of area from the housing tracts East of Eagle Road. During the review of current existing drainage patterns, about 8.5 acres of undeveloped private property south of the Magnet would drain towards the proposed location of Line H-1. The residential developments east of Eagle Road were found to drain mostly to Ramona Expressway and Line H-3, with a portion of the development draining to Idyllwild Drive that ultimately flows to Line H-2. Construction of Line H-1 is found to be unnecessary since the existing drainage facility Lines H-2 and H-3 currently convey the flows originally tabled for Line H-1.

3.3.4 Master Plan Line H-2

Per the as-built plans prepared by the City in 2012, Line H-2 is a 48-inch RCP that connects to Line H and runs along State Street, terminating at a junction structure with a 24-inch RCP lateral that connects to a 28-foot catch basin. The drainage delineation conducted in this study shows that approximately 127 acres of surface runoff, which includes the 14.5-acre Magnet development, flow towards Line H-2. The Proposed Offsite Hydrology Map in Appendix G includes the flows paths, drainage areas, land types, and soil types that are tributary to this Line. The Offsite Rational Method study results show that approximately 99.24 cfs of flow drains to Line H-2 in the 10-year storm event (Appendix G).

3.3.5 Master Plan Line H-3

The 2012 plans prepared by the City show Line H-3 as a 36-inch RCP that connects to Line H. It is located on the east side of the intersection of Ramona Expressway and State Street, terminating at a junction structure that connects to an 18-inch RCP lateral. This lateral connects to a 12-foot catch basin located north of the project site. As part of the 2014 widening of Ramona Expressway, a 24-inch RCP extension was constructed that discharges to the existing 14’ catch basin and runs easterly on Ramona Expressway. The 24-inch line has three 4-foot catch basins that collect surface runoff from the street. Approximately 58.7 acres of area is tributary to Line H-3 which generates 49.59 cfs of flow in the 10-yr storm event. See Appendix G for Offsite Rational Method Calculations.

Section 4 Hydraulics Study

The following sections summarize the Hydraulic analysis prepared for Lines H-2 and H-3. All WSPG calculation inputs and outputs, and the HGL profiles can be found in Appendix H.

4.1 Master Plan Line H-2 Hydraulic Study

The Hydraulic conditions of Master Plan Line H-2 was analyzed under its existing condition as well as the proposed extension per request of the City. The WSPG calculations for the 48-inch Line H-2 show an HGL for the 10-year storm event that lies beneath the existing surface with 12-inches of freeboard. The Hydraulic calculations for Line H-2 utilized the existing off-site flows and the proposed Magnet development flows.

4.2 Master Plan Line H-3 Hydraulic Study

The Hydraulic conditions of Master Plan Line H-3 was analyzed under its existing condition for the 10-year storm event. The WSPG calculations for Line H-3 indicate that the 36” RCP was size adequately for the 10 year flows; however, upstream of the 36” line , the line does not have the capacity for the 10 year flows due to an existing 18” RCP lateral connecting the 24” RCP and the 36” RCP. Additionally the 24” RCP constructed as part of Ramona widening in 2014 does not have the capacity to convey 10 year flows. The Magnet Development will not discharge any flows to Line H-3; therefore, no improvements are proposed for this line.

Section 5 Summary of Results and Conclusions

5.1 Onsite Study

The Onsite Hydrology study was conducted for the 10- and 100-year storm events for both the existing and the proposed conditions. The proposed site contains a higher imperviousness than the existing site which increases the flows being discharged off-site in the final condition. Rational Method results are shown in the table below:

Table 1: Onsite Flow Summary

Condition	10-year Flows (cfs)	100-year Flows (cfs)
Existing	11.97	27.87
Proposed	18.06	36.95

5.2 Offsite Study

The Offsite Rational Method analyses was conducted to determine the proposed flows that are conveyed to Master Plan Lines H-2 and H-3. The calculations were conducted for the 10- and 100-year storm events and the results are listed below:

Table 1: Offsite Flow Summary

Line	10-year Flows (cfs)	100-year Flows (cfs)	Tributary Area (ac)
H-2	99.24	223.39	134.39
H-3	49.59	106.61	51.53

5.3 Conclusions

The proposed Magnet development will cause an increase in peak flows in both the 10- and 100-yr storm events. The WSPG analysis shows that the proposed 48-inch RCP extension to Line H-2 will have capacity to convey the 10-yr storm event without the need for onsite flow mitigation. The developer's construction of the Line H-2 extension will be provided to capture the onsite flows from the Magnet Development and to benefit the City in the future plans to complete the Master Plan of Drainage facilities that would alleviate potential flooding within the surface.

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Western Riverside Area, California
Survey Area Data: Version 15, Sep 6, 2022

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Mar 15, 2022—May 28, 2022

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Hydrologic Soil Group

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
DgB	Dello loamy sand, 0 to 5 percent slopes	A/D	8.5	2.0%

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

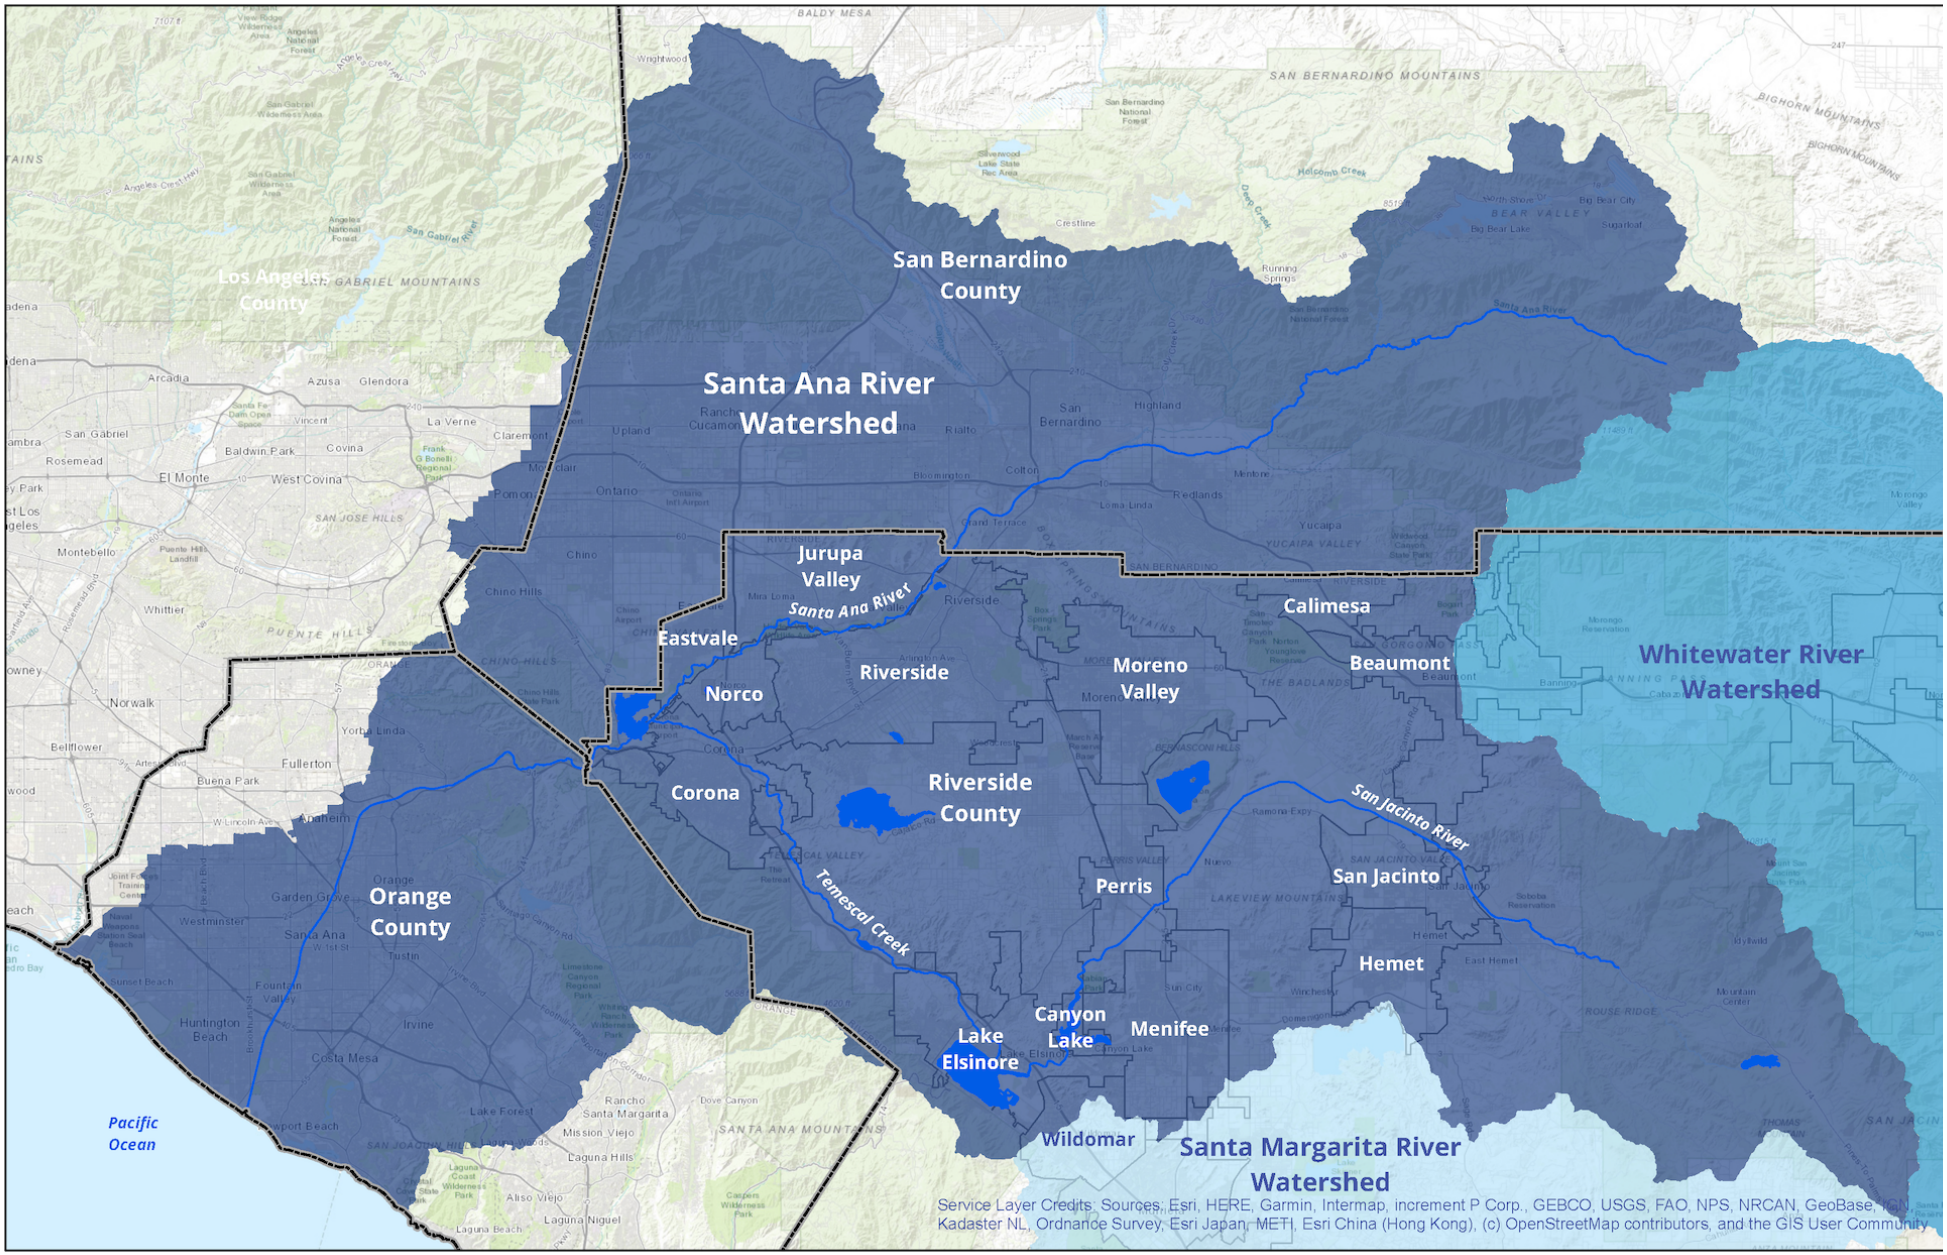
Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

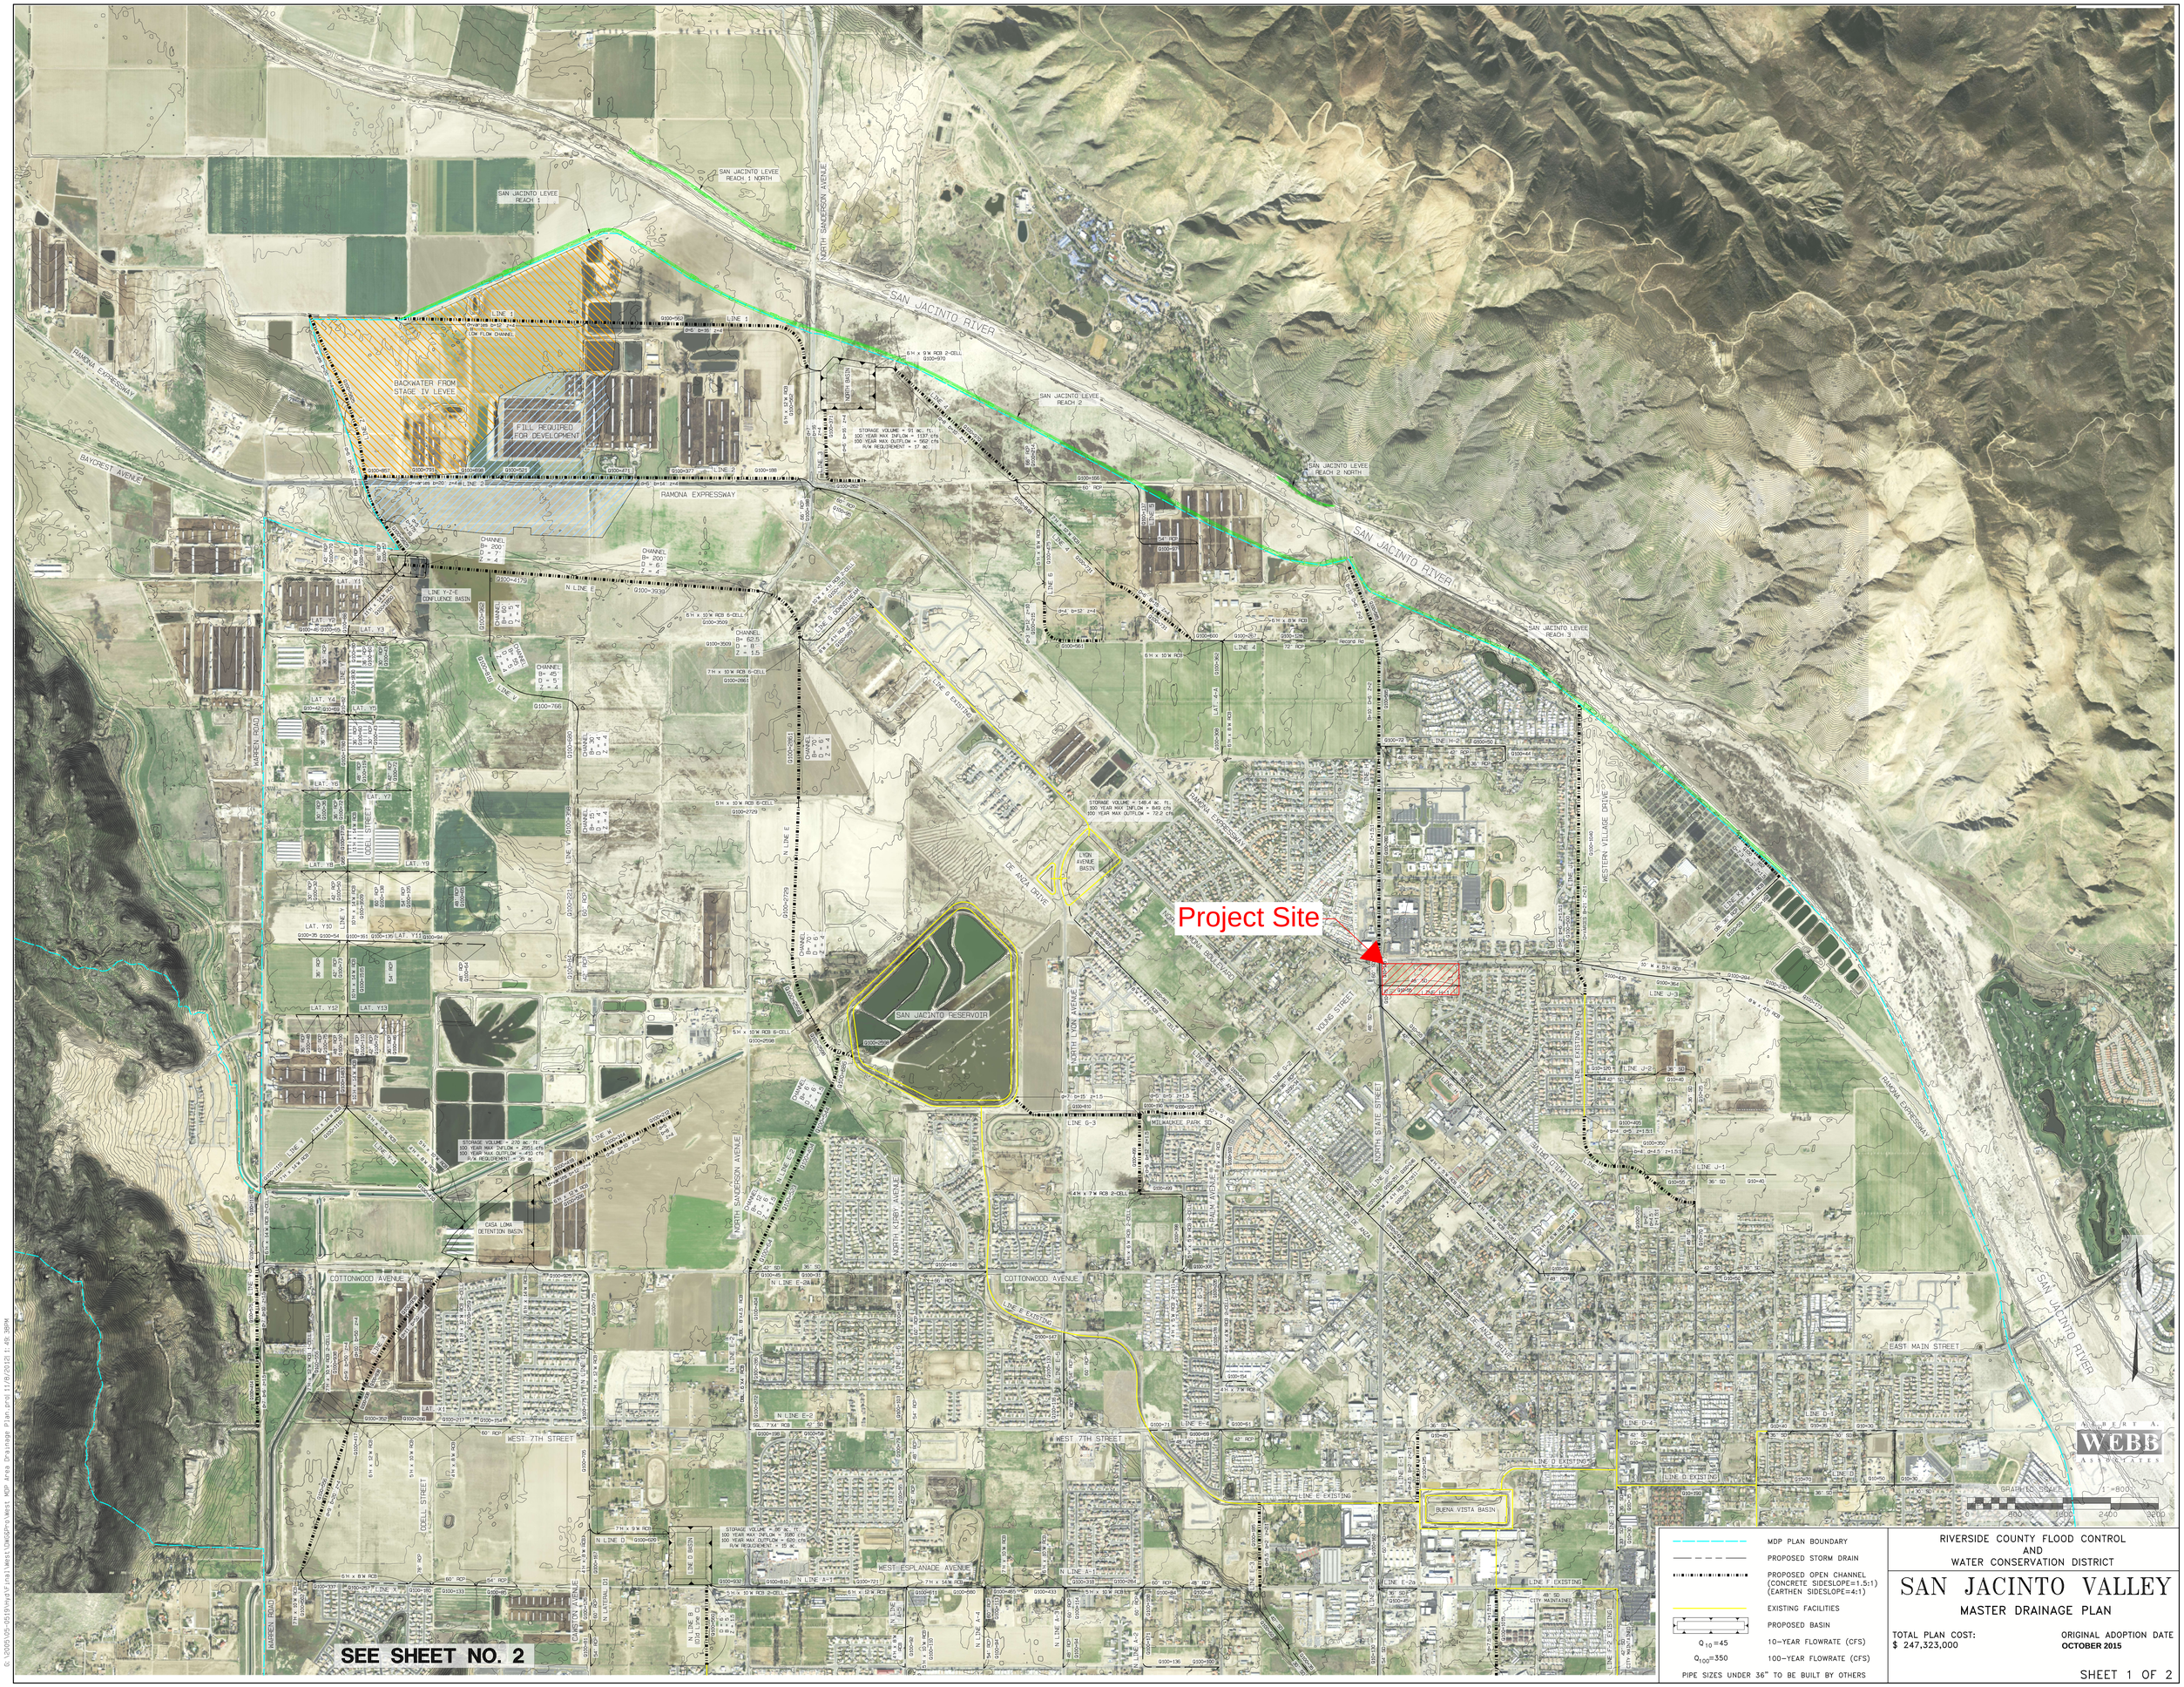
Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.



Rating Options



Aggregation Method: Dominant Condition

UNAUTHORIZED CHANGES & USES

THE ENGINEER PREPARING THESE PLANS WILL NOT BE RESPONSIBLE FOR, OR LIABLE FOR, UNAUTHORIZED CHANGES TO OR USES OF THESE PLANS. ALL CHANGES OF THESE PLANS MUST BE IN WRITING AND MUST BE APPROVED BY THE PREPARER OF THESE PLANS PRIOR TO CONSTRUCTION. CONSTRUCTION CONTRACTOR AGREES THAT IN ACCORDANCE WITH GENERALLY ACCEPTED CONSTRUCTION PRACTICES, CONSTRUCTION CONTRACTOR WILL BE REQUIRED TO ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOB SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THE PROJECT, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY, THAT THIS REQUIREMENT SHALL BE MADE TO APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS, AND CONSTRUCTION CONTRACTOR FURTHER AGREES TO DEFEND, INDEMNIFY AND HOLD DESIGN PROFESSIONAL HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT, EXCEPTING LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF DESIGN PROFESSIONAL.

811 Know what's below Call before you dig.

ENGINEERS NOTE TO CONTRACTOR

THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITIES, PIPES, AND/OR STRUCTURES SHOWN ON THESE PLANS WERE OBTAINED BY A SEARCH OF AVAILABLE RECORDS. THERE MAYBE EXISTING UTILITIES NOT SHOWN ON THESE PLANS. THE CONTRACTOR SHALL ASCERTAIN THE TRUE VERTICAL AND HORIZONTAL LOCATION OF THOSE UNDERGROUND UTILITIES TO BE USED PRIOR TO CONSTRUCTION AND SHALL BE RESPONSIBLE FOR ANY DAMAGE TO ANY PUBLIC OR PRIVATE UTILITIES, SHOWN OR NOT SHOWN HEREON.

BASIS OF BEARINGS:
THE CENTERLINE OF IDYLLWILD DRIVE BEING NORTH 45°17'48" WEST PER TRACT NO. 22882-1 M.B. 203 / 77-81

BENCH MARK:
U.S.C. & G.S. DESIGNATION V 1143

DESCRIPTION: NEAREST TOWN: SAN JACINTO COUNTY: RIVERSIDE
DISTANCE AND DIRECTION FROM NEAREST TOWN 2.35 MILES NORTHWEST
CHARACTER OF MARK C&GS BENCHMARK DISK STAMPED V1143 1961

ELEVATION: 1505.492 (NAVD 1929)

Irvine CA 92612

RE: Preconstruction Survey APN 434-080-025 & 026

Mr. Uranga

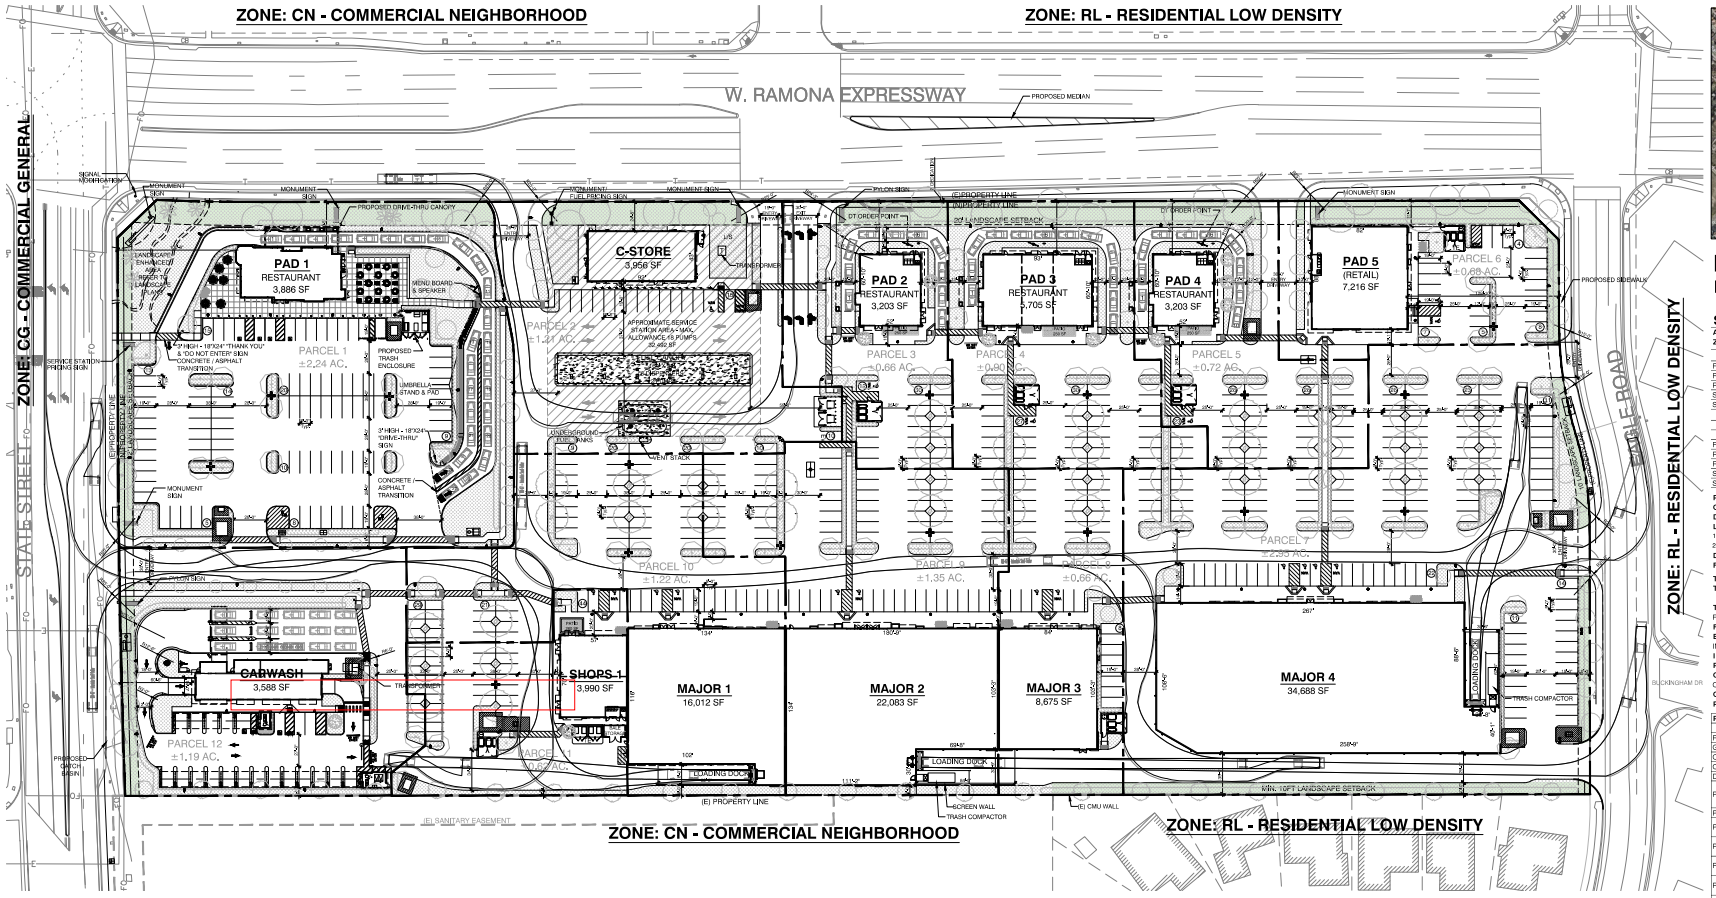
Phoenix Biological Consulting (PBC) conducted a follow-up, preconstruction survey to determine the current conditions for APN 434-080-025 & 026 in City of San Jacinto, Riverside County, California. The purpose of the preconstruction survey was to document current conditions, determine if any potential sensitive species are present, including but not limited to burrowing owl, nesting birds and rare plants.

Site Description/Location:

The project area is located at the southeast corner of Ramona Expressway and State Street in the northern portion of San Jacinto. The site remains in the same general condition as when it was surveyed in May-July, 2022. The project area is highly disturbed dirt lot that is dominated by weeds and non-native herbs. There are no trees present on the site.

Table 2: Photo Point Log- Current Conditions

Photo #	Comments	
1	Northeast Corner. Facing southwest	
2	South East Corner. Facing northwest	
3	South West Corner. Facing northeast	



4	North West Corner Facing southeast	

Conclusion:

The site is in the same general condition as when it was originally reviewed and the recommendations remain the same as those stated in the Habitat Assessment and MSHCP Consistency Analysis prepared by Phoenix Biological Consulting August 17, 2022..

If you have any questions or need any further assistance please feel free to contact Phoenix at the number below.

July 21, 2026

TO:	City Council
REQUESTED BY:	Kimberly Ganimian, Finance Director
APPROVED BY:	Travis Randel, Interim City Manager
SUBJECT:	Proposed Resolution Confirming the Inclusion of CR&R 2025 Delinquent Solid Waste Charges on the County Property Tax Roll for FY 2026-2027

RECOMMENDATION:

Staff recommends that the City Council:

1. **CONDUCT** the Public Hearing;
2. **ADOPT** Resolution No. 4140, confirming the inclusion of CR&R 2025 Delinquent Solid Waste Charges on the County Property Tax Roll for FY 2026-2027;
3. **DETERMINE** the amount of delinquent, unpaid residential solid waste charges billed during calendar year 2025;
4. **DETERMINE** that the delinquent charges constitute a special assessment and lien against the affected parcels; and
5. **DIRECT** that the delinquent charges be collected on the Riverside County secured property tax roll for FY 2026–2027.

DISCUSSION:

CR&R provides routine notices to customers with delinquent accounts, including information regarding potential placement of unpaid charges on the secured tax roll. When an account becomes 90 days delinquent, and the account is held in a name other than the property owner, CR&R also issues a notice to the property owner advising that the delinquent charges are subject to placement on the tax roll.

In addition to these standard notifications, CR&R mailed a Notice of Public Hearing to all affected property owners in June 2026. CR&R has submitted to the City a list of parcels with unpaid 2025 residential solid waste charges, which is included as Exhibit A to **Resolution No. 4140**.

Placement of delinquent solid waste charges on the secured tax roll is an established process that ensures recovery of unpaid fees and maintains the financial stability of the City's solid waste program.

FISCAL IMPACT:

There is no fiscal impact associated with this action.

RESOLUTION NO. 4140

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF SAN JACINTO, CALIFORNIA, ADOPTING A REPORT DETERMINING THE AMOUNT OF DELINQUENT RESIDENTIAL SOLID WASTE CHARGES BILLED DURING CALENDAR YEAR 2025 AND UNPAID; DETERMINING THAT SUCH DELINQUENT CHARGES CONSTITUTE A SPECIAL ASSESSMENT AND LIEN; AND DIRECTING THAT SUCH CHARGES BE COLLECTED VIA THE RIVERSIDE COUNTY TAX ROLL

WHEREAS, pursuant to Sections 38790.1 and 25831 of the California Government Code and Section 8.32.150(C) of the San Jacinto Municipal Code, the City of San Jacinto is authorized to collect delinquent residential solid waste charges, including any accrued penalties (the "Delinquent Charges") on the Riverside County property tax roll; and

WHEREAS, pursuant to Sections 38790.1 and 25831 of the California Government Code and Section 8.32.150(C) of the San Jacinto Municipal Code, as applicable, the City Council desires to recover such Delinquent Charges that were billed at any time during Calendar Year 2025, and which remain unpaid, by forwarding them to the Riverside County Recorder/Clerk and Riverside County Auditor-Controller/Treasurer/Tax Collector to be recorded as a lien and collected as a special assessment on the tax roll in the same manner, by the same persons and at the same time, together with and not separate from, the general taxes, and has caused a written report ("Report"), a copy of which is attached hereto as Exhibit "A" and by this reference incorporated herein, to be prepared and filed with the City Clerk containing the description of each residential real property parcel which is subject to the Delinquent Charges and the amount of Delinquent Charges that remain unpaid by each such residential real property parcel; and

WHEREAS, the City caused a notice of the filing of this Report and of the time and place of the public hearing thereon to be mailed to the record owner of each residential real property parcel subject to the Delinquent Charges, all in accordance with Sections 38790.1 and 25831 of the California Government Code and Section 8.32.150(C) of the San Jacinto Municipal Code; and

WHEREAS, at the time stated in the notice on the 21st day of July 2026, at 6:30 p.m., the City Council conducted the public hearing on the Written Report and heard and considered all objections or protests thereto, and has overridden said objections and protests; and

WHEREAS, the Delinquent Charges and costs of lien shall constitute a lien and special assessment against the parcel or parcels of land described in the Report in accordance with Sections 38790.1 and 25831 of the California Government Code and Section 8.32.150(C) of the San Jacinto Municipal Code.

NOW, THEREFORE, BE IT RESOLVED, determined, and ordered by the City Council of the City of San Jacinto, California, as follows**:**

SECTION 1: The City Council hereby finds and determines that the above Recitals are true and correct and are incorporated herein.

SECTION 2: The Report filed with the City Clerk contains the description of each residential real property parcel, which is subject to the Delinquent Charges, and the amount of Delinquent Charges to be imposed thereon, which were billed during Calendar Year 2025 and which remain unpaid, together with any accrued penalties, and the Report is therefore approved and adopted.

SECTION 3: The Report with Delinquent Charges for Calendar Year 2025 shall be forwarded to the Riverside County Recorder/Clerk for recording of a lien, and forwarded to the Riverside County Auditor-Controller/Treasurer/Tax Collector for collection on the tax roll in the same manner, by the same person, at the same time, together with and not separate from the general taxes, as special assessments against the property to which they relate, and shall constitute liens on the property in the amount of the assessment to be added to the tax bill next levied against the property.

SECTION 4: On or before the 14th day of August, 2026, the City Clerk is hereby directed to file with the Riverside County Recorder/Clerk and the Riverside County Auditor-Controller/Treasurer/Tax Collector a copy of the Report, with a statement endorsed thereon over his or her signature that this has been fully adopted by the City Council, together with a certified copy of this Resolution, and shall request that the Delinquent Charges be recorded as a lien against the parcels and collected on the tax bills as a special assessment for the taxable parcels in the City identified in the Report along with the ordinary *ad valorem* taxes to be levied on and collected from owners of said parcels.

SECTION 5: The special assessment for the Delinquent Charges authorized herein is levied without regard to the valuation of the subject residential real properties.

SECTION 6: If any provision of this Resolution or the application thereof to any person or circumstance is held invalid, such invalidity shall not affect other provisions or applications, and to this end, the provisions of this Resolution are declared to be severable.

List of Assessments

July 21, 2026

TO:	City Council
REQUESTED BY:	Kimberly Ganimian, Finance Director
APPROVED BY:	Travis Randel, Interim City Manager
SUBJECT:	Proposed Resolution Confirming the Collection and Assessment of Time and Materials Charges Associated with Unpaid Nuisance Abatement Actions and Administrative Citations for Inclusion on the County Property Tax Roll for FY 2026-2027

RECOMMENDATION:

Staff recommends that the City Council:

1. **CONDUCT** the Public Hearing;
2. **ADOPT Resolution No. 4139,** confirming the collection and assessment of time and material charges associated with unpaid nuisance abatement actions and administrative citations for inclusion on the County Property Tax Roll for FY 2026-2027;
3. **DETERMINE** the time and material charges associated with unpaid nuisance abatement actions and administrative citations;
4. **DETERMINE** that these charges constitute a special assessment and lien against the affected parcels; and
5. **DIRECT** that the confirmed charges be included on the Riverside County secured property tax roll for FY 2026–2027.

DISCUSSION:

Code Enforcement issues administrative citations and conducts nuisance abatement actions when conditions on private property pose a threat to public health, safety, or welfare. All affected property owners received notice in accordance with the Municipal Code, and the Community Preservation Committee (CPC) reviewed and approved the associated fines at its special meeting on June 23, 2026.

Staff completed a cost-recovery analysis to determine the fully burdened hourly rate for Code Enforcement inspections and the direct expenses associated with each case. The methodology incorporates the current fully burdened hourly rate, average inspection time, and recoverable time-and-materials costs, including certified mailings, tax roll administration, and, when applicable, abatement and legal services.

The attached list identifies parcels with administrative citations and nuisance abatement costs that remain unpaid as of the preparation of this report. Parcels will be removed if payment is received prior to submission to the County or upon further action by the CPC. The Municipal Code authorizes placement of time and materials charges associated with unpaid nuisance abatement actions and administrative citations.

FISCAL IMPACT:

Approximately $136,950 will be levied on the property tax roll. This amount reflects the City’s fully burdened inspection rate and recoverable time-and-materials expenses and will offset Code Enforcement program costs that would otherwise be borne by the General Fund.

RESOLUTION NO. 4139

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF SAN JACINTO, CALIFORNIA, APPROVING THE COLLECTION AND ASSESSMENT OF TIME AND MATERIALS CHARGES ASSOCIATED WITH UNPAID NUISANCE ABATEMENT ACTIONS AND ADMINISTRATIVE CITATIONS FOR INCLUSION ON THE COUNTY PROPERTY TAX ROLL FOR FISCAL YEAR 2026-2027

WHEREAS, the City of San Jacinto declares its intent to have minimum maintenance of property in the City and to identify and remedy conditions found to exist in land within the City that is considered to be detrimental to public health, safety or welfare or which interfere with the reasonable enjoyment of life or property, and thereby create a public nuisance; and

WHEREAS, the City of Jacinto has initiated proceedings for nuisance abatements under Chapter 8.44 et.seq. under the City of San Jacinto Municipal Code; and

WHEREAS, the City of San Jacinto has issued administrative citations for code violations under Chapter 1.28 under the City of San Jacinto Municipal Code; and

WHEREAS, the City has duly given notice of a Declaration of Public Nuisance in accordance with M.C. 8.44.070 to the owner, occupant or person in control of the property in accordance with M.C. 8.44.100 and followed all proper procedures as required under the Municipal Code to address the abatement of a nuisance by duly noticing the owner, occupant or person in control of the property; and

WHEREAS, the City has issued administrative citations and has abated property due to a declared emergency abatement in those cases where a condition constituting an immediate hazard or threat of harm and the City has abated property due to a failure to voluntarily abate a declared notice in a reasonable time or reasonable manner by the owner, occupant or person in control of the property; and

WHEREAS, costs incurred by the City for property abatement and related time and materials, resulting from unpaid administrative citations, have been imposed against the respective subject properties; and

WHEREAS, pursuant to San Jacinto Municipal Code Sections 8.44.220 and 1.28.110, such costs shall constitute a special assessment against each affected parcel. Upon recordation with the County Recorder, the assessment shall become a lien on the property in the amount of the charges, consistent with Government Code Sections 38773.5 and 53069.4; and

WHEREAS, the City Council hereby requests that the County, acting for the City, add the amounts of the respective assessments to the next regular tax bills levied against the respective lots and parcels of land, and thereafter the amounts shall be collected at the same time and in the same manner as ordinary municipal taxes are collected and shall be subject to the same procedure under foreclosure and sale in case of delinquency as provided for ordinary municipal taxes; and

WHEREAS, the assessments proposed for the 2026-2027 Fiscal Year are exempt from Proposition 218; and

WHEREAS, the adoption of this Resolution, among other things, is required to levy the proposed special assessment for Fiscal Year 2026-2027 for the City;

NOW, THEREFORE, BE IT RESOLVED, determined and ordered by the City Council of the City of San Jacinto, as follows:

SECTION 1: Following notice duly given to the owner, occupant or person in control of the property before the Community Preservation Committee, the City Council fully considered the levy of the proposed special assessments within the City, for costs remaining unpaid as of July 21, 2026, to reimburse the City for the costs and expenses of abating property and time and material as a result of any unpaid administrative citations. All interested persons were afforded the opportunity to hear and be heard before the Community Preservation Committee.

SECTION 2: The City Council hereby confirms the special assessments set forth in Exhibit A. The City Council hereby requests that the County, acting for the City, add the amounts of the respective assessments to the next regular tax bills levied against the respective lots and parcels of land, and thereafter the amounts shall be collected at the same time and in the same manner as ordinary municipal taxes are collected and shall be subject to the same procedure under foreclosure and sale in case of delinquency as provided for ordinary municipal taxes. Administrative citation and abatement amounts may be removed from the tax roll, if such citations are paid following the adoption of this Resolution, or if in the opinion of the City Manager and City Attorney such removal is warranted.

SECTION 3: The adoption of this Resolution constitutes the levy of an assessment for the Fiscal Year commencing July 1, 2026, and ending June 30, 2027. Said assessment is levied without regard to property valuation.

SECTION 4: The County Auditor of Riverside County shall enter on the County Assessment Roll opposite each lot or parcel of land the amount of the assessment and such assessment shall then be collected at the same time and in the same manner as the County taxes are collected. After collection by the County, the net amount of the assessments shall be paid to the City Treasurer.

SECTION 5: The City Treasurer shall deposit all moneys representing assessments collected by the County to the credit of a special fund known as San Jacinto Code Violations Fund 68-2803FC.

SECTION 6: The City Clerk is hereby authorized and directed to file the assessment with the County Auditor-Controller, together with a certified copy of this Resolution upon its adoption.
